6	**VERIFY BSM CONTROL MODULE POWER SUPPLY VOLTAGE** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Display PID VPWR_IG1 using the M-MDS. (See 09-02H-33 PID/DATA MONITOR INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the C/U IG1 15 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the fuse. • If a fuse is damaged: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness which has an open circuit. Go to the next step.

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

Step	Inspection		Action
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear BSM control module DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform the DTC inspection for the BSM control module using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is DTC U3003:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module, then go to the next step. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02H-6 DTC TABLE [BLIND SPOT MONITORING (BSM)].)
		No	DTC troubleshooting completed.

DTC U3003:17 [BLIND SPOT MONITORING (BSM)]

id0902i3394100

System malfunction location	**BSM control module high power supply voltage input (16 V or more)**
Detection condition	• BSM control module power supply voltage of **16 V or more** is detected for **10 s or more**.
Fail-safe	• BSM is stopped.
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • BSM control module malfunction
System wiring diagram	—

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Replace the battery, then go to Step 4. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to the next step. (See 01-17A-17 GENERATOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear BSM control module DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform the DTC inspection for the BSM control module using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is DTC U3003:17 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module, then go to the next step. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02H-6 DTC TABLE [BLIND SPOT MONITORING (BSM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

PID/DATA MONITOR INSPECTION [BLIND SPOT MONITORING (BSM)]

id0902i3960600

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “BSML” or “BSMR”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

PID/DATA MONITOR TABLE [BLIND SPOT MONITORING (BSM)]

id0902i3960700

BSM Control Module (LH)

—: Not applicable

PID name	Unit/Status	Data contents	Inspection item(s)
BSM_ST	On/Off	• On: BSM is operated. • Off: BSM is not operated.	BSM control module (LH)
DTC_CNT	—	Number of DTCs stored in the BSM control module (LH) is displayed.	BSM control module (LH)
SHIFT_R	Not_R/R	ATX: • Not_R: Selector lever is in position other than R. • R: Selector lever is in R position. MTX: • Not_R: Shift lever is in position other than reverse. • R: Shift lever is in reverse position.	ATX: • Transaxle range sensor (TCM) MTX: • Back-up light switch
SWA_POS	° (deg)	Steering angle is displayed.	Steering angle sensor
TURN_SW_L	On/Off	• On: Turn switch is in LH position. • Off: Turn switch is in position other than LH.	Turn Switch
TURN_SW_R	On/Off	• On: Turn switch is in RH position. • Off: Turn switch is in position other than RH.	Turn Switch
VPWR_IG1	V	BSM control module (LH) power supply voltage is displayed.	• BSM control module (LH) • IG1 relay • Battery
VSPD	KPH, MPH	Vehicle speed is displayed.	—
WRN_IND_L	Off/On	• Off: BSM indicator light (LH) is not illuminated. • On: BSM indicator light (LH) is illuminated.	BSM indicator light (LH)

BSM Control Module (RH)

—: Not applicable

PID name	Unit/Status	Data contents	Inspection item(s)
BSM_OFF_IL	On/Off	• On: BSM OFF indicator light is illuminated. • Off: BSM OFF indicator light is not illuminated.	• BSM OFF switch • Instrument cluster
BSM_ST	On/Off	• On: BSM is operated. • Off: BSM is not operated.	BSM control module (RH)
Buzzer	On/Off	• On: BSM buzzer is operated. • Off: BSM buzzer is not operated.	• BSM control module • Instrument cluster
DTC_CNT	—	Number of DTCs stored in the BSM control module (RH) is displayed.	BSM control module (RH)

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

PID name	Unit/Status	Data contents	Inspection item(s)
SHIFT_R	Not_R/R	ATX: • Not_R: Selector lever is in position other than R. • R: Selector lever is in R position. MTX: • Not_R: Shift lever is in position other than reverse. • R: Shift lever is in reverse position.	ATX: • Transaxle range sensor (TCM) MTX: • Back-up light switch
SWA_POS	° (deg)	Steering angle is displayed.	Steering angle sensor
TURN_SW_L	On/Off	• On: Turn switch is in LH position. • Off: Turn switch is in position other than LH.	Turn Switch
TURN_SW_R	On/Off	• On: Turn switch is in RH position. • Off: Turn switch is in position other than RH.	Turn Switch
VPWR_IG1	V	BSM control module (RH) power supply voltage is displayed.	• BSM control module (RH) • IG1 relay • Battery
VSPD	KPH, MPH	Vehicle speed is displayed.	—
WRN_IND_R	Off/On	• Off: BSM indicator light (RH) is not illuminated. • On: BSM indicator light (RH) is illuminated.	BSM indicator light (RH)

ACTIVE COMMAND MODES INSPECTION [BLIND SPOT MONITORING (BSM)]

id0902i3960800

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “BSML” or “BSMR”.
3. Select the simulation items from the PID table.
4. Perform the active command modes function, inspect the operations for each parts.
   - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

ACTIVE COMMAND MODES TABLE [BLIND SPOT MONITORING (BSM)]

id0902i3960900

BSM Control Module (LH)

Command name	Unit/ Operation	Data contents	Output part name
VSPD	OFF/ON	• OFF: Does not input vehicle speed. • ON: Inputs vehicle speed of **34 km/h {21 mph}**.	BSM control module (LH)
WRN_IND_L	Off/On	• Off: Turns off BSM indicator light (LH). • On: Illuminates BSM indicator light (LH).	BSM indicator light (LH)

BSM Control Module (RH)

Command name	Unit/ Operation	Data contents	Output part name
BSM_OFF_IL	On/Off	• On: Illuminates BSM OFF indicator light. • On: Turns off BSM OFF indicator light.	BSM OFF indicator light (Instrument cluster)
Buzzer	On/Off	• On: Operates BSM warning alarm. • Off: Stops BSM warning alarm.	BSM warning alarm (Instrument cluster)
VSPD	OFF/ON	• OFF: Does not input vehicle speed. • ON: Inputs vehicle speed of **34 km/h {21 mph}**.	BSM control module (RH)
WRN_IND_R	Off/On	• Off: Turns off BSM indicator light (RH). • On: Illuminates BSM indicator light (RH).	BSM indicator light (RH)

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

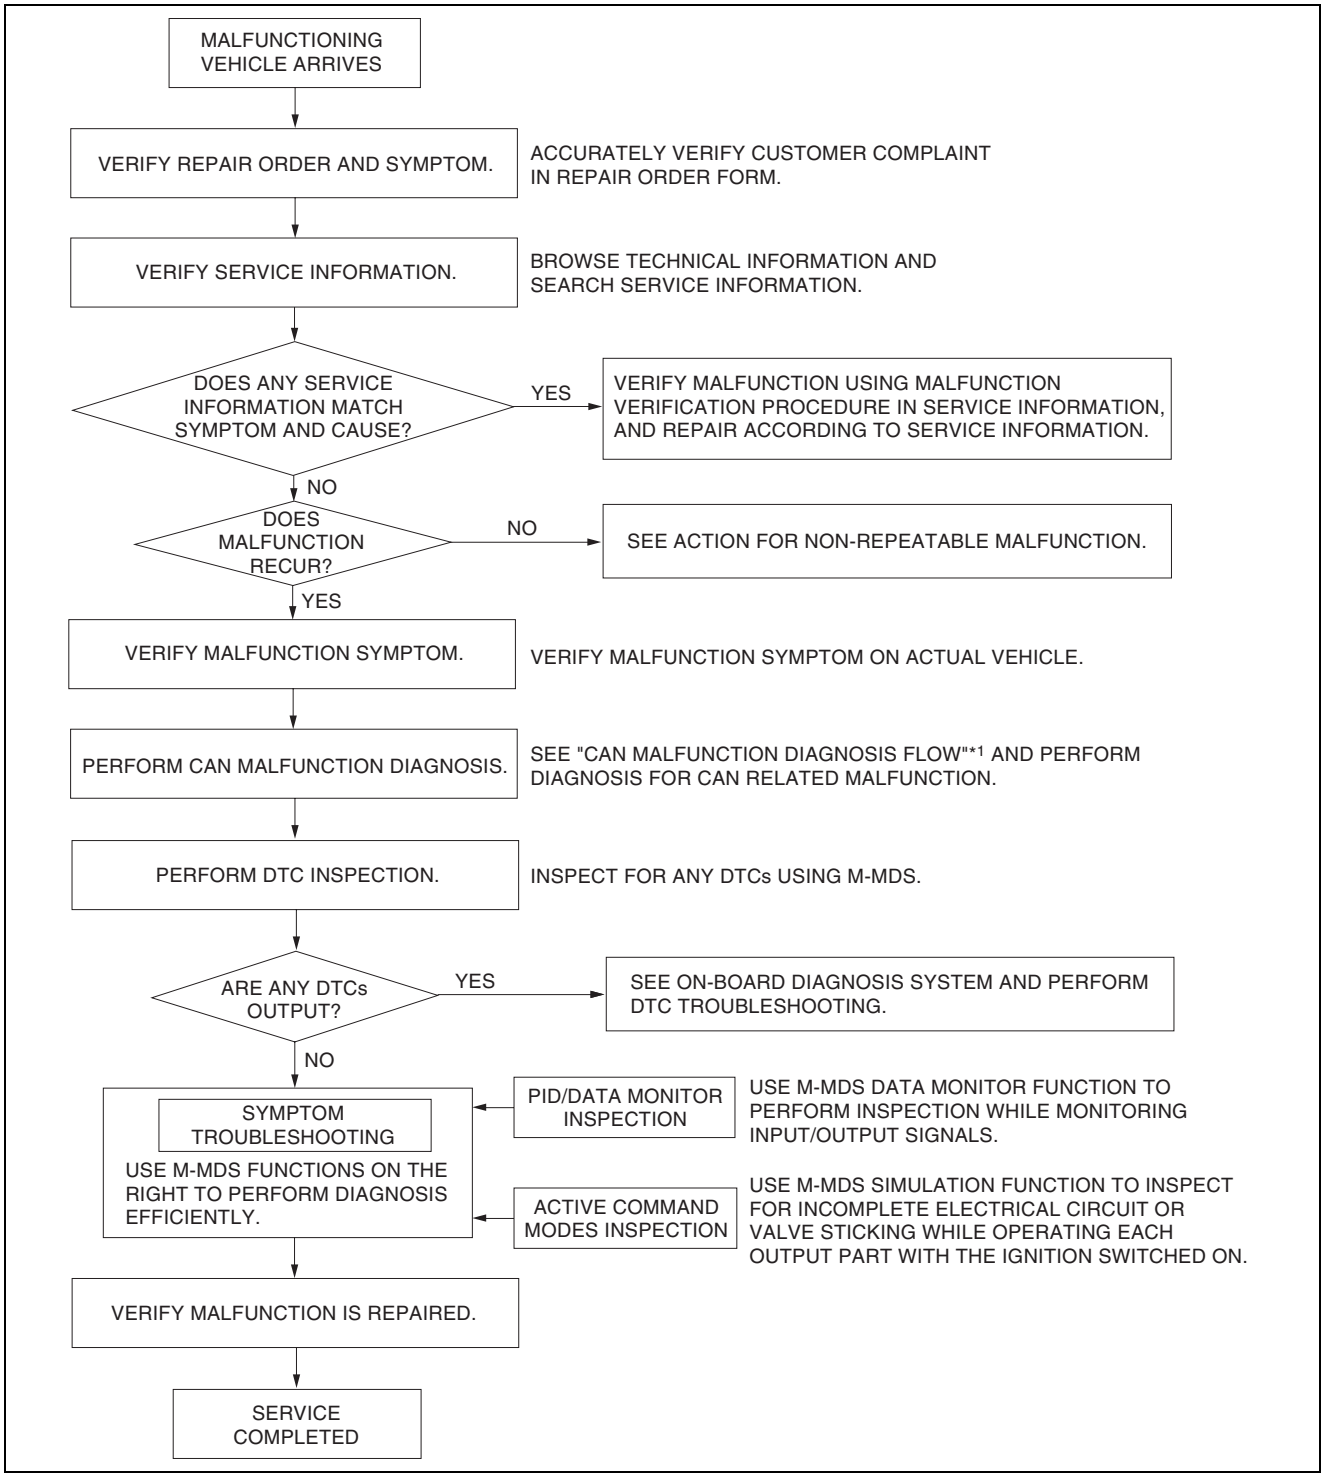
FOREWORD [REAR VEHICLE MONITORING SYSTEM]

id0902z2960100

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



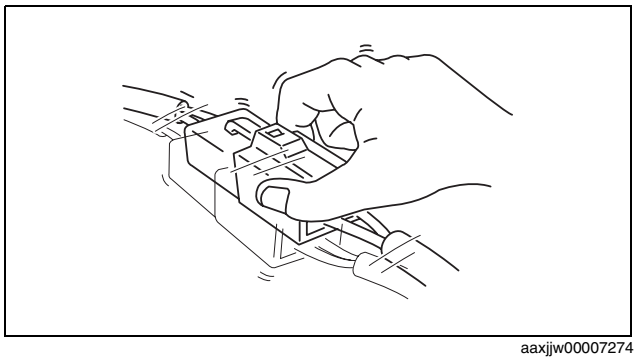
am3zzw0001242

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)]/10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)]/10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)]/10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

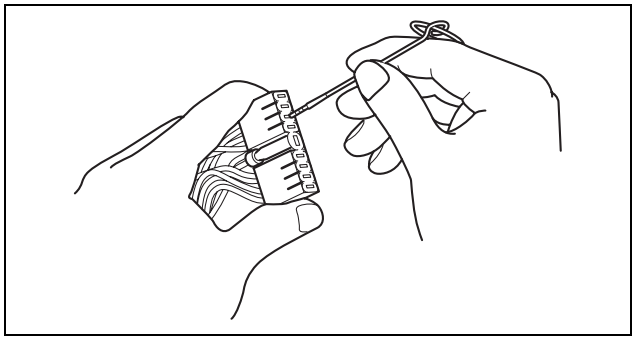
Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM]

id0902z2345400

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the rear vehicle monitoring control module. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “RVM”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the rear vehicle monitoring control module. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].)

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

CLEARING DTC [REAR VEHICLE MONITORING SYSTEM]

id0902z2400300

CMDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].)
8. Verify that no DTCs are displayed.

ODDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “RVM”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].)
8. Verify that no DTCs are displayed.

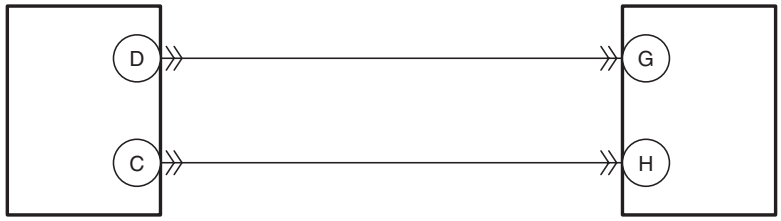
DTC B11CB:11 [REAR VEHICLE MONITORING SYSTEM]

id0902z2886200

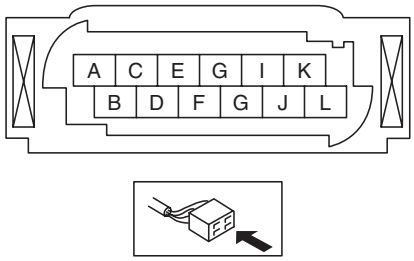
System malfunction location	**RVM warning indicator light (RH) circuit malfunction**
Detection condition	• Rear vehicle monitoring control module (LH) detects short to ground in RVM warning indicator light (RH).
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• RVM warning indicator light (RH) connector or terminal malfunction • Rear vehicle monitoring control module (LH) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — Rear vehicle monitoring control module (LH) terminal D and RVM warning indicator light (RH) terminal G — Rear vehicle monitoring control module (LH) terminal C and RVM warning indicator light (RH) terminal H • RVM warning indicator light (RH) malfunction • Rear vehicle monitoring control module (LH) malfunction

REAR VEHICLE MONITORING CONTROL MODULE (LH)

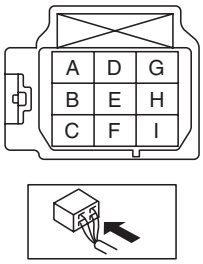


RVM WARNING INDICATOR LIGHT (RH)

REAR VEHICLE MONITORING CONTROL MODULE (LH) WIRING HARNESS-SIDE CONNECTOR



RVM WARNING INDICATOR LIGHT (RH) WIRING HARNESS-SIDE CONNECTOR



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT RVM WARNING INDICATOR LIGHT (RH) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the RVM warning indicator light (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

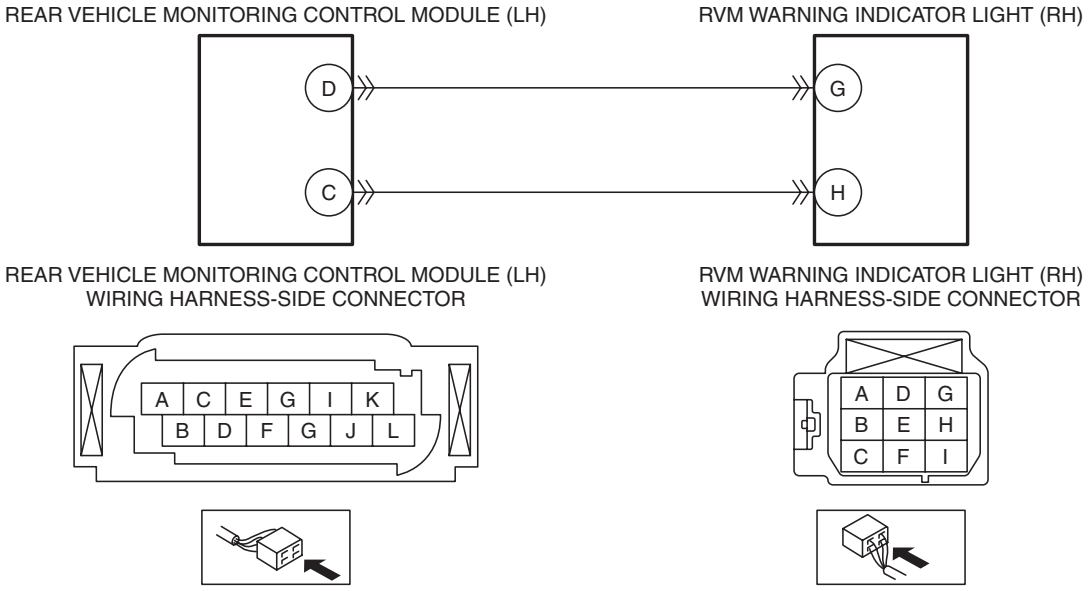
Step	Inspection		Action
2	**INSPECT REAR VEHICLE MONITORING CONTROL MODULE (LH) CONNECTOR** • Disconnect the rear vehicle monitoring control module (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**INSPECT RVM WARNING INDICATOR LIGHT (RH) CIRCUIT FOR SHORT TO GROUND** • Verify that the rear vehicle monitoring control module (LH) connector and RVM warning indicator light (RH) connector are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — RVM warning indicator light (RH) terminal G — RVM warning indicator light (RH) terminal H • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 5.
		No	Go to the next step.
4	**INSPECT RVM WARNING INDICATOR LIGHT (RH)** • Inspect the RVM warning indicator light (RH). (See 09-22-92 RVM WARNING INDICATOR LIGHT INSPECTION.) • Is the RVM warning indicator light (RH) normal?	Yes	Go to the next step.
		No	Replace the RVM warning indicator light (RH), then go to the next step. (See 09-22-92 RVM WARNING INDICATOR LIGHT REMOVAL/INSTALLATION.)
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Illuminate the RVM warning indicator light (RH) using the simulation item WRN_IND_R. (See 09-02I-48 ACTIVE COMMAND MODES INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC B11CB:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear vehicle monitoring control module (LH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

DTC B11CB:15 [REAR VEHICLE MONITORING SYSTEM]

id0902z2886300

System malfunction location	**RVM warning indicator light (RH) circuit malfunction**
Detection condition	• Rear vehicle monitoring control module (LH) detects an open or short circuit to ground in RVM warning indicator light (RH) power supply circuit.
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• RVM warning indicator light (RH) connector or terminal malfunction • Rear vehicle monitoring control module (LH) connector or terminal malfunction • Short to power supply in wiring harness between the following terminals: — Rear vehicle monitoring control module (LH) terminal D and RVM warning indicator light (RH) terminal G — Rear vehicle monitoring control module (LH) terminal C and RVM warning indicator light (RH) terminal H • RVM warning indicator light (RH) malfunction • Open circuit in wiring harness between the following terminals: — Rear vehicle monitoring control module (LH) terminal D and RVM warning indicator light (RH) terminal G — Rear vehicle monitoring control module (LH) terminal C and RVM warning indicator light (RH) terminal H • Rear vehicle monitoring control module (LH) malfunction



ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT RVM WARNING INDICATOR LIGHT (RH) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the RVM warning indicator light (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT REAR VEHICLE MONITORING CONTROL MODULE (LH) CONNECTOR** • Disconnect the rear vehicle monitoring control module (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT RVM WARNING INDICATOR LIGHT (RH) CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the rear vehicle monitoring control module (LH) connector and RVM warning indicator light (RH) connector are disconnected. • Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). — RVM warning indicator light (RH) terminal G — RVM warning indicator light (RH) terminal H • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which is shorted to power supply, then go to Step 6.
4	**INSPECT RVM WARNING INDICATOR LIGHT (RH)** • Inspect the RVM warning indicator light (RH). (See 09-22-92 RVM WARNING INDICATOR LIGHT INSPECTION.) • Is the RVM warning indicator light (RH) normal?	Yes	Go to the next step.
		No	Replace the RVM warning indicator light (RH), then go to Step 6. (See 09-22-92 RVM WARNING INDICATOR LIGHT REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

Step	Inspection		Action
5	**INSPECT RVM WARNING INDICATOR LIGHT (RH) CIRCUIT FOR OPEN CIRCUIT** • Verify that the rear vehicle monitoring control module (LH) connector and RVM warning indicator light (RH) connector are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — Rear vehicle monitoring control module (LH) terminal D and RVM warning indicator light (RH) terminal G — Rear vehicle monitoring control module (LH) terminal C and RVM warning indicator light (RH) terminal H • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Illuminate the RVM warning indicator light (RH) using the simulation item WRN_IND_R. (See 09-02I-48 ACTIVE COMMAND MODES INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC B11CB:15 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear vehicle monitoring control module (LH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

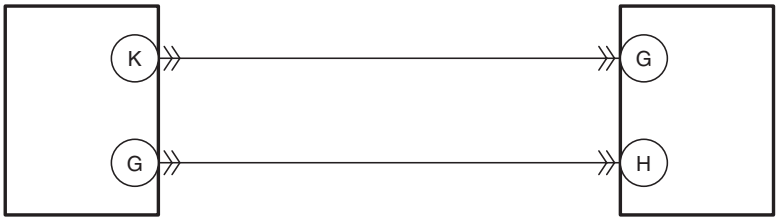
ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

DTC B11D3:11 [REAR VEHICLE MONITORING SYSTEM]

id0902z2886400

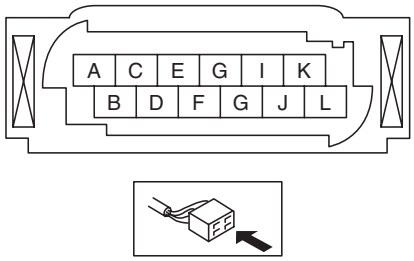
System malfunction location	**RVM warning indicator light (LH) circuit malfunction**
Detection condition	• Rear vehicle monitoring control module (LH) detects short to ground in RVM warning indicator light (LH).
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• RVM warning indicator light (LH) connector or terminal malfunction • Rear vehicle monitoring control module (LH) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — Rear vehicle monitoring control module (LH) terminal K and RVM warning indicator light (LH) terminal G — Rear vehicle monitoring control module (LH) terminal G and RVM warning indicator light (LH) terminal H • RVM warning indicator light (LH) malfunction • Rear vehicle monitoring control module (LH) malfunction

REAR VEHICLE MONITORING CONTROL MODULE (LH)

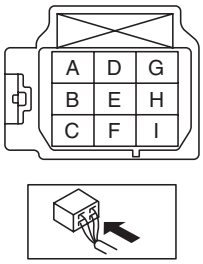


RVM WARNING INDICATOR LIGHT (LH)

REAR VEHICLE MONITORING CONTROL MODULE (LH) WIRING HARNESS-SIDE CONNECTOR



RVM WARNING INDICATOR LIGHT (LH) WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT RVM WARNING INDICATOR LIGHT (LH) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the RVM warning indicator light (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT REAR VEHICLE MONITORING CONTROL MODULE (LH) CONNECTOR** • Disconnect the rear vehicle monitoring control module (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**INSPECT RVM WARNING INDICATOR LIGHT (LH) CIRCUIT FOR SHORT TO GROUND** • Verify that the rear vehicle monitoring control module (LH) connector and RVM warning indicator light (LH) connector are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — RVM warning indicator light (LH) terminal G — RVM warning indicator light (LH) terminal H • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 5.
		No	Go to the next step.
4	**INSPECT RVM WARNING INDICATOR LIGHT (LH)** • Inspect the RVM warning indicator light (LH). (See 09-22-92 RVM WARNING INDICATOR LIGHT INSPECTION.) • Is the RVM warning indicator light (LH) normal?	Yes	Go to the next step.
		No	Replace the RVM warning indicator light (LH), then go to the next step. (See 09-22-92 RVM WARNING INDICATOR LIGHT REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

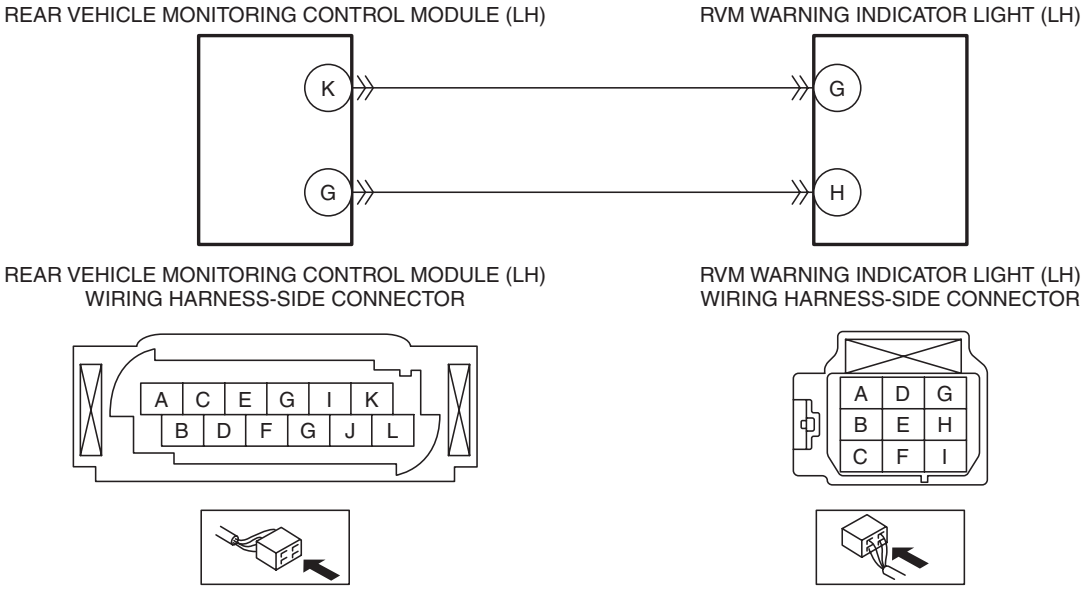
Step	Inspection		Action
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Illuminate the RVM warning indicator light (LH) using the simulation item WRN_IND_L. (See 09-02I-48 ACTIVE COMMAND MODES INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC B11D3:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear vehicle monitoring control module (LH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

DTC B11D3:15 [REAR VEHICLE MONITORING SYSTEM]

id0902z2886500

System malfunction location	**RVM warning indicator light (LH) circuit malfunction**
Detection condition	• Rear vehicle monitoring control module (LH) detects an open or short circuit to ground in RVM warning indicator light (LH) power supply circuit.
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• RVM warning indicator light (LH) connector or terminal malfunction • Rear vehicle monitoring control module (LH) connector or terminal malfunction • Short to power supply in wiring harness between the following terminals: — Rear vehicle monitoring control module (LH) terminal K and RVM warning indicator light (LH) terminal G — Rear vehicle monitoring control module (LH) terminal G and RVM warning indicator light (LH) terminal H • RVM warning indicator light (LH) malfunction • Open circuit in wiring harness between the following terminals: — Rear vehicle monitoring control module (LH) terminal K and RVM warning indicator light (LH) terminal G — Rear vehicle monitoring control module (LH) terminal G and RVM warning indicator light (LH) terminal H • Rear vehicle monitoring control module (LH) malfunction



ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT RVM WARNING INDICATOR LIGHT (LH) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the RVM warning indicator light (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT REAR VEHICLE MONITORING CONTROL MODULE (LH) CONNECTOR** • Disconnect the rear vehicle monitoring control module (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT RVM WARNING INDICATOR LIGHT (LH) CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the rear vehicle monitoring control module (LH) connector and RVM warning indicator light (LH) connector are disconnected. • Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). — RVM warning indicator light (LH) terminal G — RVM warning indicator light (LH) terminal H • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which is shorted to power supply, then go to Step 6.
4	**INSPECT RVM WARNING INDICATOR LIGHT (LH)** • Inspect the RVM warning indicator light (LH). (See 09-22-92 RVM WARNING INDICATOR LIGHT INSPECTION.) • Is the RVM warning indicator light (LH) normal?	Yes	Go to the next step.
		No	Replace the RVM warning indicator light (LH), then go to Step 6. (See 09-22-92 RVM WARNING INDICATOR LIGHT REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

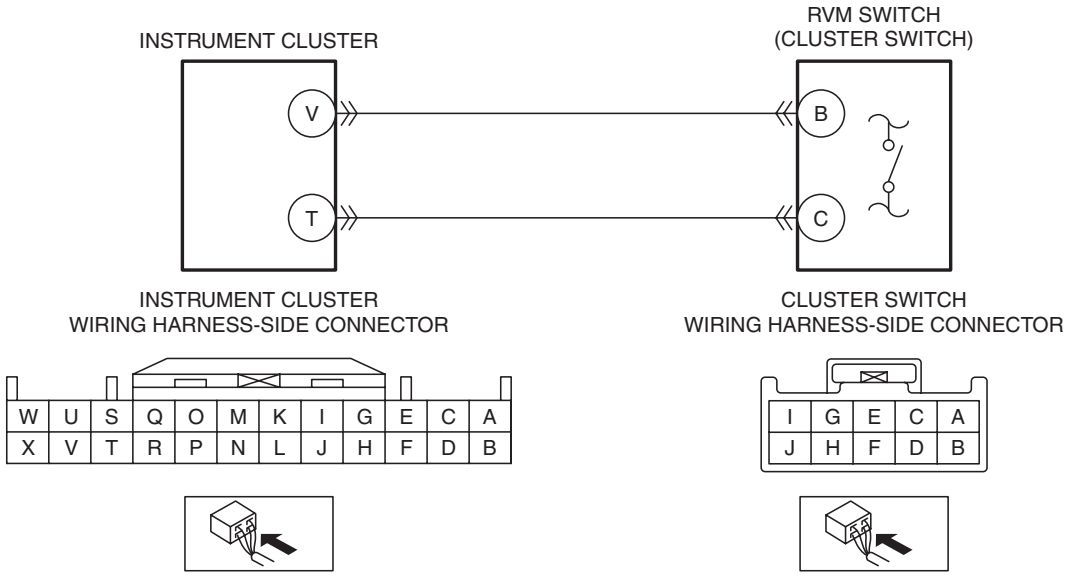
Step	Inspection		Action
5	**INSPECT RVM WARNING INDICATOR LIGHT (LH) CIRCUIT FOR OPEN CIRCUIT** • Verify that the rear vehicle monitoring control module (LH) connector and RVM warning indicator light (LH) connector are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — Rear vehicle monitoring control module (LH) terminal K and RVM warning indicator light (LH) terminal G — Rear vehicle monitoring control module (LH) terminal G and RVM warning indicator light (LH) terminal H • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Illuminate the RVM warning indicator light (LH) using the simulation item WRN_IND_L. (See 09-02I-48 ACTIVE COMMAND MODES INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC B11D3:15 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear vehicle monitoring control module (LH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

DTC B11F2:23 [REAR VEHICLE MONITORING SYSTEM]

id0902z2885300

System malfunction location	**RVM switch circuit malfunction**
Detection condition	• The rear vehicle monitoring control module (RH) receives RVM switch ON signal from the instrument cluster for **2 min or more**.
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• DTCs are stored in the instrument cluster. • Cluster switch connector or terminal malfunction • RVM switch malfunction • Instrument cluster connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — Instrument cluster terminal V and cluster switch terminal B — Instrument cluster terminal T and cluster switch terminal C • Instrument cluster malfunction • Rear vehicle monitoring control module (RH) malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**INSPECT CLUSTER SWITCH CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the cluster switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

Step	Inspection		Action
3	**INSPECT RVM SWITCH** • Inspect the RVM switch. (See 09-22-91 RVM SWITCH INSPECTION.) • Is the RVM switch normal?	Yes	Go to the next step.
		No	Replace the cluster switch, then go to Step 7. (See 09-17-18 SWITCH PANEL REMOVAL/INSTALLATION.)
4	**INSPECT INSTRUMENT CLUSTER CONNECTOR** • Disconnect the instrument cluster connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
5	**INSPECT RVM SWITCH CIRCUIT FOR SHORT TO GROUND** • Verify that the cluster switch connector and instrument cluster connector are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — Cluster switch terminal B — Cluster switch terminal C • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 7.
		No	Go to the next step.
6	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is the instrument cluster normal?	Yes	Go to the next step.
		No	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **2 min or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC B11F2:23 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear vehicle monitoring control module (RH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

DTC U0001:88/U0100:00/U0121:00/U0155:00/U0214:00 [REAR VEHICLE MONITORING SYSTEM]

id0902z2841700

System malfunction location	**U0001:88** • **Unit communication error (MS-CAN)** **U0100:00** • **Communication error with PCM** **U0121:00** • **Communication error with DSC HU/CM** **U0155:00** • **Communication error with instrument cluster** **U0214:00** • **Communication error with start stop unit**
Detection condition	• U0001:88 — The rear vehicle monitoring control module (RH) detects a CAN bus communication line (MS-CAN) malfunction. • U0100:00 — The rear vehicle monitoring control module (RH) cannot receive CAN signal from the PCM for **2 s or more**. • U0121:00 — Rear vehicle monitoring control module (RH) cannot receive CAN signal from the DSC HU/CM for **2 s or more**. • U0155:00 — The rear vehicle monitoring control module (RH) cannot receive CAN signal from the instrument cluster for **2 s or more**. • U0214:00 — The rear vehicle monitoring control module (RH) cannot receive CAN signal from the start stop unit for **2 s or more**.
Fail-safe	• U0001:88 — Inhibits the rear vehicle monitoring system. • U0100:00 — Inhibits the rear vehicle monitoring system. • U0121:00 — Inhibits the rear vehicle monitoring system. • U0155:00 — Inhibits the rear vehicle monitoring system. • U0214:00 — Inhibits the rear vehicle monitoring system.
Possible cause	• Malfunction in CAN bus communication line • Malfunction in CAN communication line between PCM and rear vehicle monitoring control module (RH) — Instrument cluster communication error (vehicle speed signal is not sent via instrument cluster from PCM) • Malfunction in CAN line between the DSC HU/CM and rear vehicle monitoring control module (RH) — Instrument cluster communication error (yaw rate signal is not sent via instrument cluster from DSC HU/CM) • Malfunction in CAN communication line between instrument cluster and rear vehicle monitoring control module (RH) • Malfunction in CAN communication line between start stop unit and rear vehicle monitoring control module (RH) — Instrument cluster communication error (turn switch signal is not sent via instrument cluster from start stop unit)
System wiring diagram	—

Diagnostic Procedure

- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See 10-02A-1 FOREWORD [SKYACTIV-G 2.0 (L.H.D.)].) (See 10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)].) (See 10-02C-1 FOREWORD [SKYACTIV-D 2.2 (L.H.D.)].) (See 10-02D-1 FOREWORD [SKYACTIV-D 2.2 (R.H.D.)].)

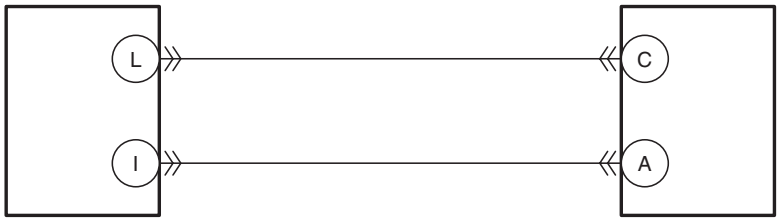
ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

DTC U0028:87 [REAR VEHICLE MONITORING SYSTEM]

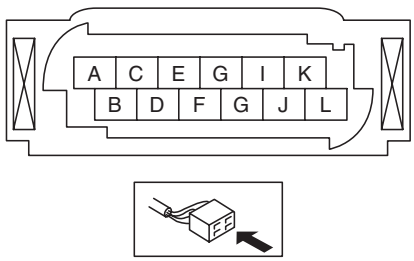
id0902z2886700

System malfunction location	**Rear vehicle monitoring control module (LH) and (RH) communication error**
Detection condition	• No communication between rear vehicle monitoring control modules (LH) and (RH) for **1 s or more**.
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• Rear vehicle monitoring control module (LH) connector or terminal malfunction • Rear vehicle monitoring control module (RH) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — Rear vehicle monitoring control module (LH) terminal L to rear vehicle monitoring control module (RH) terminal C — Rear vehicle monitoring control module (LH) terminal I to rear vehicle monitoring control module (RH) terminal A • Short to power supply in wiring harness between the following terminals: — Rear vehicle monitoring control module (LH) terminal L to rear vehicle monitoring control module (RH) terminal C — Rear vehicle monitoring control module (LH) terminal I to rear vehicle monitoring control module (RH) terminal A • Open circuit in wiring harness between the following terminals: — Rear vehicle monitoring control module (LH) terminal L to rear vehicle monitoring control module (RH) terminal C — Rear vehicle monitoring control module (LH) terminal I to rear vehicle monitoring control module (RH) terminal A • Rear vehicle monitoring control module (LH) malfunction • Rear vehicle monitoring control module (RH) malfunction

REAR VEHICLE MONITORING CONTROL MODULE (LH) REAR VEHICLE MONITORING CONTROL MODULE (RH)



REAR VEHICLE MONITORING CONTROL MODULE (LH)/(RH)
WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT REAR VEHICLE MONITORING CONTROL MODULE (LH) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the rear vehicle monitoring control module (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT REAR VEHICLE MONITORING CONTROL MODULE (RH) CONNECTOR** • Disconnect the rear vehicle monitoring control modules (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FOR SHORT TO GROUND IN CAN COMMUNICATION CIRCUIT BETWEEN REAR VEHICLE MONITORING CONTROL MODULES (LH) AND (RH)** • Verify that the rear vehicle monitoring control module (LH) and (RH) connectors are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — Rear vehicle monitoring control module (LH) terminal L — Rear vehicle monitoring control module (LH) terminal I • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

Step	Inspection		Action
4	**INSPECT FOR SHORT TO POWER SUPPLY IN CAN COMMUNICATION CIRCUIT BETWEEN REAR VEHICLE MONITORING CONTROL MODULES (LH) AND (RH)** • Verify that the rear vehicle monitoring control module (LH) and (RH) connectors are disconnected. • Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). — Rear vehicle monitoring control module (LH) terminal L — Rear vehicle monitoring control module (LH) terminal I • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which is shorted to power supply, then go to Step 6.
5	**INSPECT FOR OPEN CIRCUIT IN CAN COMMUNICATION CIRCUIT BETWEEN REAR VEHICLE MONITORING CONTROL MODULES (LH) AND (RH)** • Verify that the rear vehicle monitoring control module (LH) and (RH) connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — Rear vehicle monitoring control module (LH) terminal L to rear vehicle monitoring control module (RH) terminal C — Rear vehicle monitoring control module (LH) terminal I to rear vehicle monitoring control module (RH) terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

Step	Inspection		Action
6	**PERFORM DTC INSPECTION AND VERIFY REAR VEHICLE MONITORING CONTROL MODULE (LH) MALFUNCTION** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **1.5 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U0028:87 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear vehicle monitoring control module (LH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to Step 8.
7	**PERFORM DTC INSPECTION AND VERIFY REAR VEHICLE MONITORING CONTROL MODULE (RH) MALFUNCTION** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **1.5 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U0028:87 displayed?	Yes	Replace the rear vehicle monitoring control module (RH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

DTC U0401:68 [REAR VEHICLE MONITORING SYSTEM]

id0902z2885600

System malfunction location	**Error signal received from PCM**
Detection condition	• The rear vehicle monitoring control module (RH) receives malfunction signal from the PCM for **2 s or more**.
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• DTCs are stored in the PCM. • DTCs are stored in the instrument cluster. • Instrument cluster malfunction • PCM malfunction • Rear vehicle monitoring control module (RH) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
3	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is the instrument cluster normal?	Yes	Go to the next step.
		No	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
4	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS PCM** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **2 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U0401:68 displayed?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **2 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U0401:68 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear vehicle monitoring control module (RH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

Step	Inspection		Action
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

DTC U0415:68 [REAR VEHICLE MONITORING SYSTEM]

id0902z2885500

System malfunction location	**Error signal received from DSC HU/CM**
Detection condition	• The rear vehicle monitoring control module (RH) receives malfunction signal from the DSC HU/CM for **2 s or more**.
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• DSC HU/CM stores DTCs. • DTCs are stored in the instrument cluster. • Instrument cluster malfunction • DSC HU/CM malfunction • Rear vehicle monitoring control module (RH) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY DSC HU/CM DTCs** • Perform the DTC inspection for the DSC HU/CM using the M-MDS. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
3	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is the instrument cluster normal?	Yes	Go to the next step.
		No	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
4	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS DSC HU/CM** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **2 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U0415:68 displayed?	Yes	Replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to Step 6.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

Step	Inspection		Action
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **2 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U0415:68 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear vehicle monitoring control module (RH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

DTC U0423:68 [REAR VEHICLE MONITORING SYSTEM]

id0902z2888900

System malfunction location	**Error signal received from instrument cluster**
Detection condition	• The rear vehicle monitoring control module (RH) receives malfunction signal from the instrument cluster for **2 s or more**.
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• DTCs are stored in the instrument cluster. • Instrument cluster malfunction • Rear vehicle monitoring control module (RH) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is the instrument cluster normal?	Yes	Go to the next step.
		No	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
3	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS INSTRUMENT CLUSTER** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **2 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U0423:68 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to Step 5.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

Step	Inspection		Action
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **2 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U0423:68 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear vehicle monitoring control module (RH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

DTC U0515:68 [REAR VEHICLE MONITORING SYSTEM]

id0902z2842200

System malfunction location	**Error signal received from start stop unit**
Detection condition	• The rear vehicle monitoring control module (RH) receives malfunction signal from the start stop unit for **2 s or more**.
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• DTCs are stored in the start stop unit. • DTCs are stored in the instrument cluster. • Instrument cluster malfunction • Start stop unit malfunction • Rear vehicle monitoring control module (RH) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY START STOP UNIT DTCs** • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].)
		No	Go to the next step.
2	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
3	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is the instrument cluster normal?	Yes	Go to the next step.
		No	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

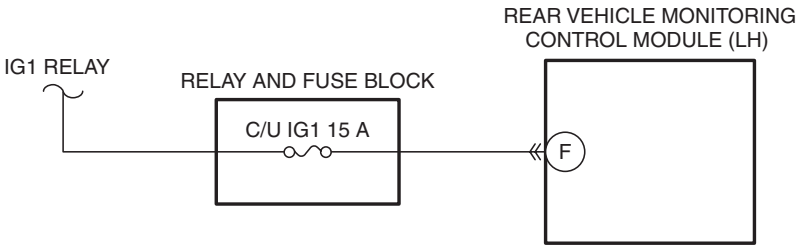
Step	Inspection		Action
4	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS START STOP UNIT** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **2 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U0515:68 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **2 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U0515:68 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear vehicle monitoring control module (RH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

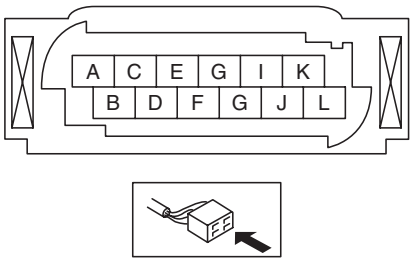
DTC U1A4B:16 [REAR VEHICLE MONITORING SYSTEM]

id0902z2950200

System malfunction location	**Rear vehicle monitoring control module (LH) low power supply voltage input**
Detection condition	• Power supply circuit voltage of **9 V or less** is detected in rear vehicle monitoring control module (LH) for **1 s or more**.
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • Rear vehicle monitoring control module (LH) connector or terminal malfunction • Rear vehicle monitoring control module (LH) power supply circuit malfunction — Short to ground in wiring harness between C/U IG1 15 A fuse and rear vehicle monitoring control module (LH) terminal F — C/U IG1 15 A fuse malfunction — Open circuit in wiring harness between IG1 relay and rear vehicle monitoring control module (LH) terminal F • Rear vehicle monitoring control module (LH) malfunction



REAR VEHICLE MONITORING CONTROL MODULE (LH) WIRING HARNESS-SIDE CONNECTOR



Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 6. (See 01-17A-10 BATTERY RECHARGING [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

Step	Inspection		Action
3	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 6. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4	**INSPECT REAR VEHICLE MONITORING CONTROL MODULE (LH) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the rear vehicle monitoring control module (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**VERIFY REAR VEHICLE MONITORING CONTROL MODULE (LH) POWER SUPPLY VOLTAGE** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Display PID VPWR_L using the M-MDS. (See 09-02I-47 PID/DATA MONITOR INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the C/U IG1 15 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the fuse. • If a fuse is damaged: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness which has an open circuit. Go to the next step.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **1.5 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U1A4B:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear vehicle monitoring control module (LH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

DTC U1A4B:17 [REAR VEHICLE MONITORING SYSTEM]

id0902z2888500

System malfunction location	**Rear vehicle monitoring control module (LH) high power supply voltage input**
Detection condition	• Power supply circuit voltage of **16 V or more** is detected in rear vehicle monitoring control module (LH) for **1 s or more**.
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • Rear vehicle monitoring control module (LH) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Replace the battery, then go to Step 4. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

Step	Inspection		Action
3	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to the next step. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **1.5 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U1A4B:17 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear vehicle monitoring control module (LH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

DTC U1A4B:43, U1A4B:44, U1A4B:45, U1A4B:46, U1A4B:47, U1A4B:48, U1A4B:49, U1A4B:96 [REAR VEHICLE MONITORING SYSTEM]

id0902z2887800

System malfunction location	Rear vehicle monitoring control module (LH) malfunction
Detection condition	• U1A4B:43 — Rear vehicle monitoring control module (LH) external RAM malfunction detected. • U1A4B:44 — Rear vehicle monitoring control module (LH) internal RAM malfunction detected. • U1A4B:45 — Rear vehicle monitoring control module (LH) ROM malfunction detected. • U1A4B:46 — Rear vehicle monitoring control module (LH) EEPROM malfunction detected. • U1A4B:47 — Rear vehicle monitoring control module (LH) monitoring system malfunction detected. • U1A4B:48 — Rear vehicle monitoring control module (LH) communication circuit malfunction detected. • U1A4B:49 — Rear vehicle monitoring control module (LH) voltage control circuit malfunction detected. • U1A4B:96 — Rear vehicle monitoring control module (LH) internal circuit malfunction detected.
Fail-safe	• U1A4B:43 — Inhibits the rear vehicle monitoring system. • U1A4B:44 — Inhibits the rear vehicle monitoring system. • U1A4B:45 — Inhibits the rear vehicle monitoring system. • U1A4B:46 — Inhibits the rear vehicle monitoring system. • U1A4B:47 — Inhibits the rear vehicle monitoring system. • U1A4B:48 — Inhibits the rear vehicle monitoring system. • U1A4B:49 — Inhibits the rear vehicle monitoring system. • U1A4B:96 — Inhibits the rear vehicle monitoring system.
Possible cause	• Rear vehicle monitoring control module (LH) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY REAR VEHICLE MONITORING CONTROL MODULE (LH) MALFUNCTION** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **1.5 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Are DTCs U1A4B:43/U1A4B:44/U1A4B:45/U1A4B:46/U1A4B:47/U1A4B:48/U1A4B:49/U1A4B:96 displayed?	Yes	Replace the rear vehicle monitoring control module (LH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

DTC U1A4B:54 [REAR VEHICLE MONITORING SYSTEM]

id0902z2668600

System malfunction location	**Radar aiming is not performed or radar sensor axis is deviated (rear vehicle monitoring control module (LH))**
Detection condition	• Malfunction in radar aiming of rear vehicle monitoring control module (LH) detected for **1 s or more**.
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• Rear vehicle monitoring control module (LH) radar aiming was not performed. • Deviation of rear vehicle monitoring control module (LH) radar sensor axis • Rear vehicle monitoring control module (LH) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM REAR VEHICLE MONITORING CONTROL MODULE (LH) RADAR AIMING** • Perform the rear vehicle monitoring control module (LH) radar aiming. PERFORM REAR VEHICLE MONITORING CONTROL MODULE (LH) RADAR AIMING (See 09-22-83 REAR VEHICLE MONITORING RADAR AIMING.) • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **1.5 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U1A4B:54 displayed?	Yes	Perform the rear vehicle monitoring control module (LH) radar aiming again, then go to the next step. (See 09-22-83 REAR VEHICLE MONITORING RADAR AIMING.)
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **1.5 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U1A4B:54 displayed?	Yes	Replace the rear vehicle monitoring control module (LH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

DTC U2100:00 [REAR VEHICLE MONITORING SYSTEM]

id0902z2462600

System malfunction location	**Rear vehicle monitoring control module (RH) configuration error**
Detection condition	• Rear vehicle monitoring control module (RH) configuration error detected.
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• Rear vehicle monitoring control module (RH) configuration error • Rear vehicle monitoring control module (RH) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM REAR VEHICLE MONITORING CONTROL MODULE (RH) CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the rear vehicle monitoring control module (RH) configuration with the As-Built data. (See 09-22-83 REAR VEHICLE MONITORING CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA).) • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U2100:00 displayed?	Yes	Using the M-MDS, re-perform the rear vehicle monitoring control module (RH) configuration using the As-Built data, then go to the next step. (See 09-22-83 REAR VEHICLE MONITORING CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U2100:00 displayed?	Yes	Replace the rear vehicle monitoring control module (RH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

DTC U3000:43, U3000:44, U3000:45, U3000:46, U3000:47, U3000:48, U3000:49, U3000:96 [REAR VEHICLE MONITORING SYSTEM]

id0902z2888300

System malfunction location	Rear vehicle monitoring control module (RH) malfunction
Detection condition	• U3000:43 — Rear vehicle monitoring control module (RH) external RAM malfunction detected. • U3000:44 — Rear vehicle monitoring control module (RH) internal RAM malfunction detected. • U3000:45 — Rear vehicle monitoring control module (RH) ROM malfunction detected. • U3000:46 — Rear vehicle monitoring control module (RH) EEPROM malfunction detected. • U3000:47 — Rear vehicle monitoring control module (RH) monitoring system malfunction detected. • U3000:48 — Rear vehicle monitoring control module (RH) communication circuit malfunction detected. • U3000:49 — Rear vehicle monitoring control module (RH) voltage control circuit malfunction detected. • U3000:96 — Rear vehicle monitoring control module (RH) internal circuit malfunction detected.
Fail-safe	• U3000:43 — Inhibits the rear vehicle monitoring system. • U3000:44 — Inhibits the rear vehicle monitoring system. • U3000:45 — Inhibits the rear vehicle monitoring system. • U3000:46 — Inhibits the rear vehicle monitoring system. • U3000:47 — Inhibits the rear vehicle monitoring system. • U3000:48 — Inhibits the rear vehicle monitoring system. • U3000:49 — Inhibits the rear vehicle monitoring system. • U3000:96 — Inhibits the rear vehicle monitoring system.
Possible cause	• Rear vehicle monitoring control module (RH) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY REAR VEHICLE MONITORING CONTROL MODULE (RH) MALFUNCTION** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **1.5 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Are DTCs U3000:43/U3000:44/U3000:45/U3000:46/U3000:47/U3000:48/U3000:49/U3000:96 displayed?	Yes	Replace the rear vehicle monitoring control module (RH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

DTC U3000:4B [REAR VEHICLE MONITORING SYSTEM]

id0902z2888400

System malfunction location	**Temperature temporarily increases depending on various external and environmental factors (rear vehicle monitoring control module (LH) or (RH))**
Detection condition	• Rear vehicle monitoring control module internal temperature of **85°C {185 °F} or more** detected for **10 s or more**.
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• Temporary rise in temperature due to some external environment factor • Rear vehicle monitoring control module (LH) malfunction • Rear vehicle monitoring control module (RH) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR VEHICLE MONITORING CONTROL MODULE INTERNAL TEMPERATURE** • Using the M-MDS, display the following PIDs. (See 09-02I-47 PID/DATA MONITOR INSPECTION [REAR VEHICLE MONITORING SYSTEM].) — INTNL_TMP_L — INTNL_TMP_R • Is the monitor value **85 °C {185 °F} or more**?	Yes	Replace the malfunctioning rear vehicle monitoring control module, then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS REAR VEHICLE MONITORING CONTROL MODULE (LH)** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U3000:4B displayed?	Yes	Replace the rear vehicle monitoring control module (LH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to Step 4.
3	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS REAR VEHICLE MONITORING CONTROL MODULE (RH)** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U3000:4B displayed?	Yes	Replace the rear vehicle monitoring control module (RH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

DTC U3000:54 [REAR VEHICLE MONITORING SYSTEM]

id0902z2569200

System malfunction location	**Radar aiming is not performed or radar sensor axis is deviated (rear vehicle monitoring control module (RH))**
Detection condition	• Malfunction in radar aiming of rear vehicle monitoring control module (RH) detected for **1 s or more**.
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• Rear vehicle monitoring control module (RH) radar aiming was not performed. • Deviation of rear vehicle monitoring control module (RH) radar sensor axis • Rear vehicle monitoring control module (RH) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM REAR VEHICLE MONITORING CONTROL MODULE (RH) RADAR AIMING** • Perform the rear vehicle monitoring control module (RH) radar aiming. (See 09-22-83 REAR VEHICLE MONITORING RADAR AIMING.) • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **1.5 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U3000:54 displayed?	Yes	Perform the rear vehicle monitoring control module (RH) radar aiming again, then go to the next step. (See 09-22-83 REAR VEHICLE MONITORING RADAR AIMING.)
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **1.5 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U3000:54 displayed?	Yes	Replace the rear vehicle monitoring control module (RH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

DTC U3000:97 [REAR VEHICLE MONITORING SYSTEM]

id0902z2885200

System malfunction location	**Radar sensor sensitivity temporarily decreases depending on various external and environmental factors (rear vehicle monitoring control module (LH) or (RH))**
Detection condition	• Radar sensor sensitivity in rear vehicle monitoring control module (LH) or (RH) temporarily decreases
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• Rear bumper soiling or foreign material (reflective object) is adhered. • Dirt or foreign material (reflective object) on rear vehicle monitoring control module (LH) or (RH) • Concavity and convexity on the surface of the repaired rear bumper • Rear vehicle monitoring control module (LH) malfunction • Rear vehicle monitoring control module (RH) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT REAR BUMPER SURFACE** • Visually inspect the rear bumper surface for the following: — Dirt — Adhered foreign material (reflective object) • Is the rear bumper normal?	Yes	Go to the next step.
		No	Remove dirt or foreign material (reflective object), then go to Step 4.
2	**INSPECT AREA AROUND REAR VEHICLE MONITORING CONTROL MODULE (LH/RH)** • Visually inspect the area around the rear vehicle monitoring control module (LH/RH) for the following. — Dirt — Adhered foreign material (reflective object) • Is the area around the rear vehicle monitoring control module (LH/RH) normal?	Yes	Go to the next step.
		No	Remove dirt or foreign material (reflective object), then go to Step 4.
3	**VERIFY REAR BUMPER REPAIR HISTORY** • Verify if the rear bumper had been repaired or repainted before. • Is there a problem with the repair? (Is the paint Mazda genuine?)	Yes	Go to the next step.
		No	Replace the rear bumper, then go to the next step. (See 09-10-24 REAR BUMPER REMOVAL/INSTALLATION.)
4	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS REAR VEHICLE MONITORING CONTROL MODULE (LH)** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Drive the vehicle at **40 km/h or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U3000:97 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear vehicle monitoring control module (LH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to Step 6.

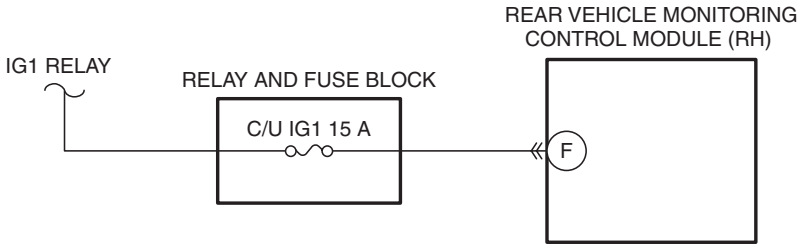
ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

Step	Inspection		Action
5	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS REAR VEHICLE MONITORING CONTROL MODULE (RH)** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Drive the vehicle at **40 km/h or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U3000:97 displayed?	Yes	Replace the rear vehicle monitoring control module (RH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

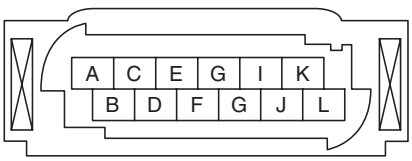
DTC U3003:16 [REAR VEHICLE MONITORING SYSTEM]

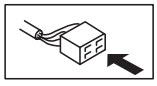
id0902z2888800

System malfunction location	**Rear vehicle monitoring control module (RH) low power supply voltage input**
Detection condition	• Power supply circuit voltage of **9 V or less** is detected in rear vehicle monitoring control module (RH) for **1 s or more**.
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • Rear vehicle monitoring control module (RH) connector or terminal malfunction • Rear vehicle monitoring control module (RH) power supply circuit malfunction — Short to ground in wiring harness between C/U IG1 15 A fuse and rear vehicle monitoring control module (RH) terminal F — C/U IG1 15 A fuse malfunction — Open circuit in wiring harness between IG1 relay and rear vehicle monitoring control module (RH) terminal F • Rear vehicle monitoring control module (RH) malfunction



REAR VEHICLE MONITORING CONTROL MODULE (RH) WIRING HARNESS-SIDE CONNECTOR





ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 6. (See 01-17A-10 BATTERY RECHARGING [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 6. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4	**INSPECT REAR VEHICLE MONITORING CONTROL MODULE (RH) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the rear vehicle monitoring control modules (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**VERIFY REAR VEHICLE MONITORING CONTROL MODULE (RH) POWER SUPPLY VOLTAGE** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Display PID VPWR_R using the M-MDS. (See 09-02I-47 PID/DATA MONITOR INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the C/U IG1 15 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the fuse. • If a fuse is damaged: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness which has an open circuit. Go to the next step.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **1.5 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U3003:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear vehicle monitoring control module (RH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

DTC U3003:17 [REAR VEHICLE MONITORING SYSTEM]

id0902z2888700

System malfunction location	**Rear vehicle monitoring control module (RH) high power supply voltage input**
Detection condition	• Power supply circuit voltage of **16 V or more** is detected in rear vehicle monitoring control module (RH) for **1 s or more**.
Fail-safe	• Inhibits the rear vehicle monitoring system.
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • Rear vehicle monitoring control module (RH) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Replace the battery, then go to Step 4. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to the next step. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the DTC for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-5 CLEARING DTC [REAR VEHICLE MONITORING SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **1.5 s or more**. • Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Is DTC U3003:17 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear vehicle monitoring control module (RH), then go to the next step. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

PID/DATA MONITOR INSPECTION [REAR VEHICLE MONITORING SYSTEM]

id0902z2960600

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “RVM”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

PID/DATA MONITOR TABLE [REAR VEHICLE MONITORING SYSTEM]

id0902z2960700

—: Not applicable

PID name	Unit/Status	Data contents	Inspection item(s)
AIM_ANGL_L	° (deg)	Displays rear vehicle monitoring control module (LH) radar aiming angle.	Rear vehicle monitoring control module (LH)
AIM_ANGL_R	° (deg)	Displays rear vehicle monitoring control module (RH) radar aiming angle.	Rear vehicle monitoring control module (RH)
Buzzer	Off/On	• Off: Rear vehicle monitoring warning alarm does not sound. • On: Rear vehicle warning alarm sounds.	Instrument cluster
INTNL_TMP_L	°C,°F	Displays rear vehicle monitoring control module (LH) internal temperature.	Rear vehicle monitoring control module (LH)
INTNL_TMP_R	°C,°F	Displays rear vehicle monitoring control module (RH) internal temperature.	Rear vehicle monitoring control module (RH)
MAIN_SW	Off/On	• Off: RVM switch not pressed • On: RVM switch pressed	RVM switch
OP_BRT_L	—	Displays the RVM warning indicator light (LH) output brightness.	RVM warning indicator light (LH)
OP_BRT_R	—	Displays the RVM warning indicator light (RH) output brightness.	RVM warning indicator light (RH)
RVM_SYS_ST	Off/ Passive_On/ Active_On/ Failure	• Off: Rear vehicle monitoring system does not operate. • Passive_On: Rear vehicle monitoring system is on standby. • Active_On: Rear vehicle monitoring system operates. • Failure: Rear vehicle monitoring system malfunction	Rear vehicle monitoring control module
TURN_SW_L	Off/On	• Off: Turn switch is in position other than LH. • On: Turn switch is in LH position.	Turn Switch
TURN_SW_R	Off/On	• Off: Turn switch is in position other than RH. • On: Turn switch is in RH position.	Turn Switch
VPWR_L	V	Displays rear vehicle monitoring control module (LH) power supply voltage.	Rear vehicle monitoring control module (LH)
VPWR_R	V	Displays rear vehicle monitoring control module (RH) power supply voltage.	Rear vehicle monitoring control module (RH)
VSPD	KPH, MPH	Vehicle speed is displayed.	—
YAW_RATE	°/s	• —: Vehicle is stopped or while moving straight ahead. • Exceeds 0°/s: Vehicle tilted left. • Less than 0°/s: Vehicle tilted right.	SAS control module

ON-BOARD DIAGNOSTIC [REAR VEHICLE MONITORING SYSTEM]

ACTIVE COMMAND MODES INSPECTION [REAR VEHICLE MONITORING SYSTEM]

id0902z2960800

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “RVM”.
3. Select the simulation items from the PID table.
4. Perform the active command modes function, inspect the operations for each parts.
   - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

ACTIVE COMMAND MODES TABLE [REAR VEHICLE MONITORING SYSTEM]

id0902z2960900

Command name	Unit/ Operation	Data contents	Output part name
Buzzer	Off/On	• Off: Rear vehicle monitoring warning alarm does not sound. • On: Rear vehicle monitoring warning alarm sounds.	Rear vehicle monitoring warning alarm (instrument cluster)
WRN_IND_L	Off/On	• Off: Turns off the RVM warning indicator light (LH). • On: Illuminates the RVM warning indicator light (LH).	RVM warning indicator light (LH)
WRN_IND_R	Off/On	• Off: Turns off the RVM warning indicator light (RH). • On: Illuminates the RVM warning indicator light (RH).	RVM warning indicator light (RH)

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

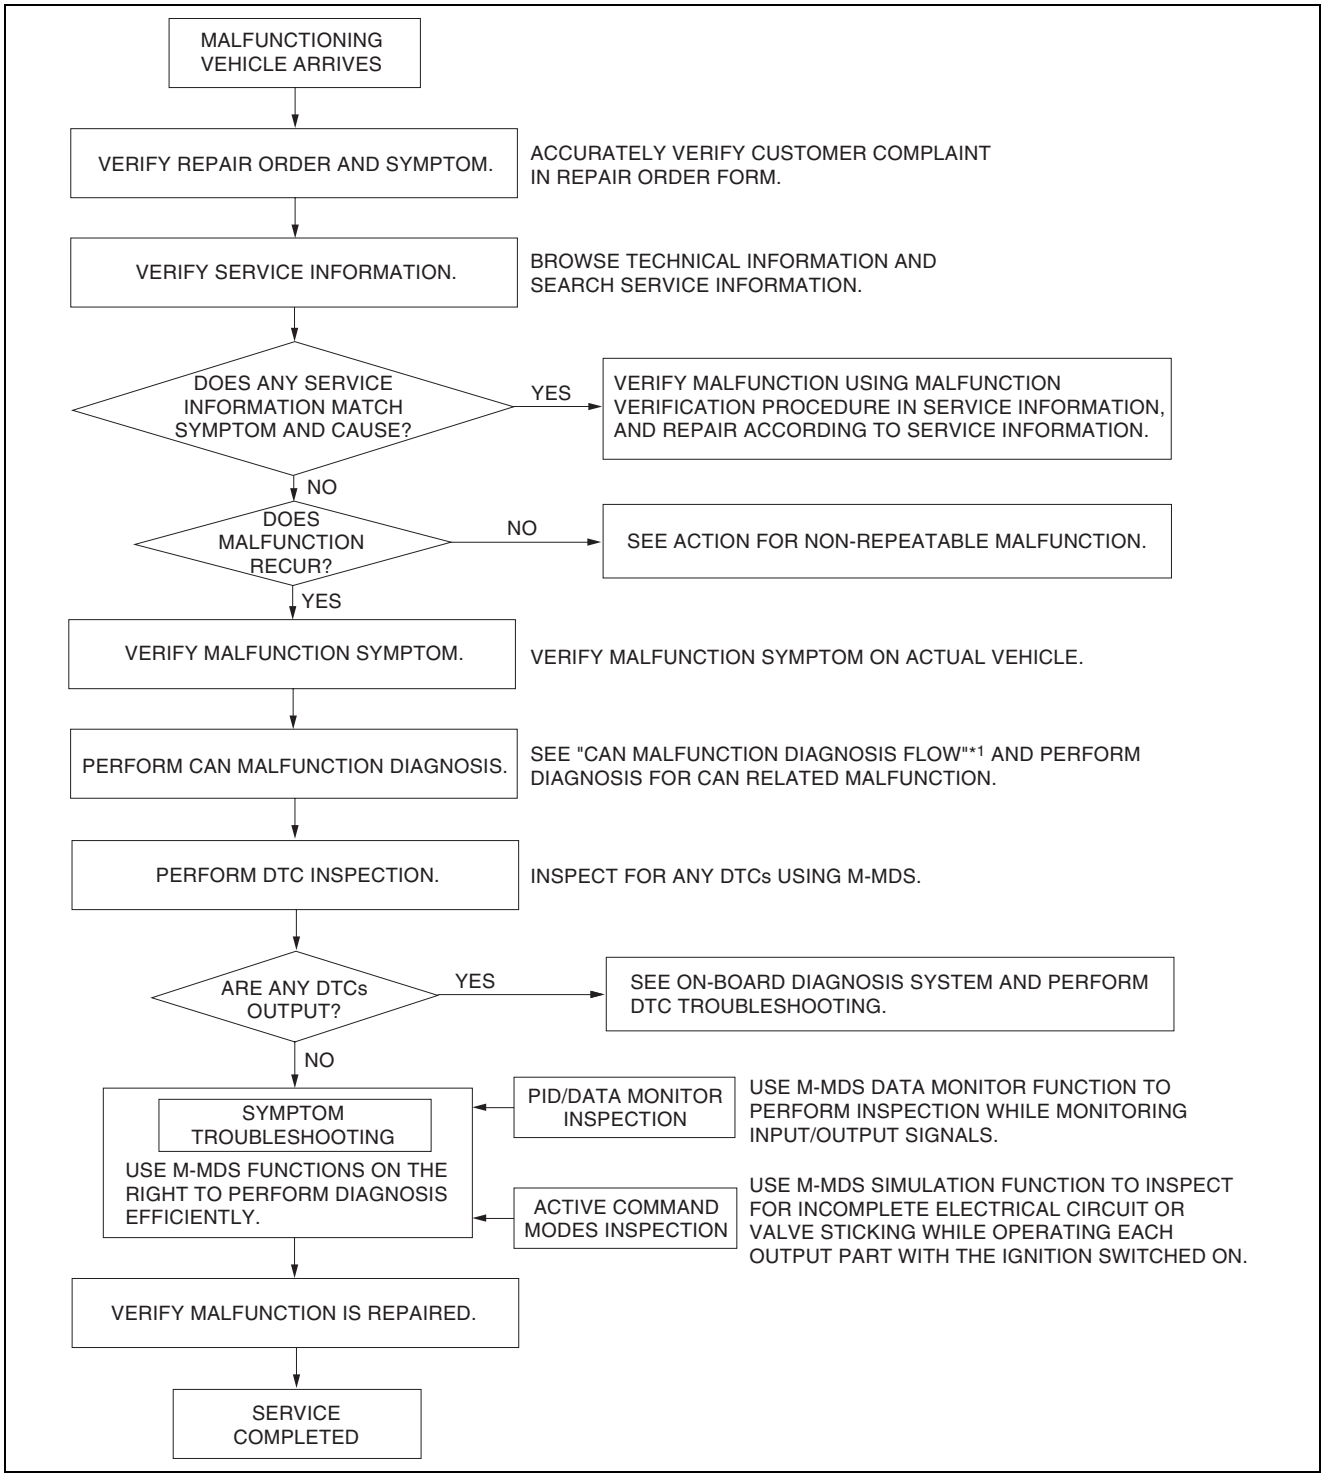
FOREWORD [FORWARD SENSING CAMERA (FSC)]

id0902p9029100

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



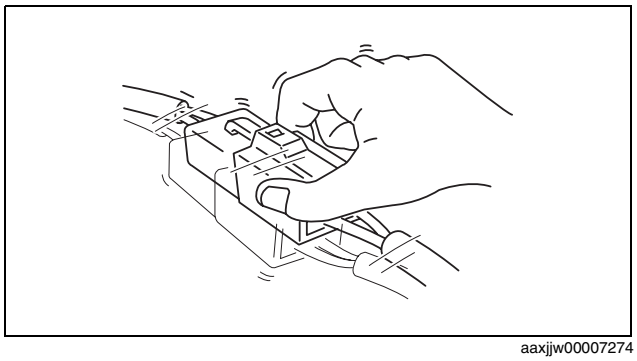
am3zzw0001242

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)]/10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)]/10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)]/10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

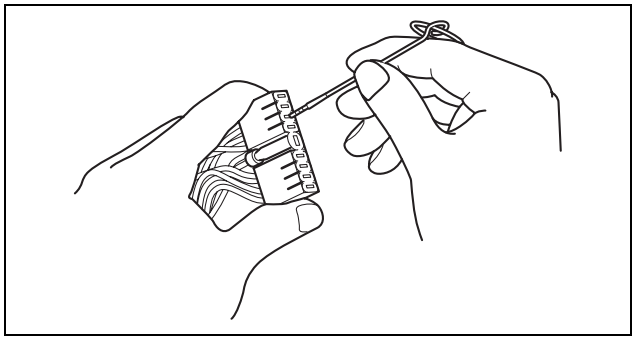
Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

DTC INSPECTION [FORWARD SENSING CAMERA (FSC)]

id0902p9029200

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the forward sensing camera (FSC). (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “FSC”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the forward sensing camera (FSC). (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].)

Snapshot data

- The data for all DTCs currently detected is stored.

—: Not applicable

Snapshot data item	Unit		Data contents	Corresponding data monitor items
IG-ON_TIMER	hh:mm:ss		Elapsed time since ignition switched ON (engine off or on)	—
OPE_MODE	Normal/CALIBRATION/ EMERGENCY		Operation Mode	—
ECU_IN_TMP	°C	°F	ECU Internal Temperature	—
VSPD	KPH	MPH	Vehicle speed status	VSPD

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

CLEARING DTC [FORWARD SENSING CAMERA (FSC)]

id0902p9029300

CMDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].)
8. Verify that no DTCs are displayed.

ODDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “FSC”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].)
8. Verify that no DTCs are displayed.

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

DTC B115E:54 [FORWARD SENSING CAMERA (FSC)]

id0902p9029500

System malfunction location	**Forward sensing camera (FSC) aiming not completed**
Detection condition	• Forward sensing camera (FSC) aiming not completed is detected.
Fail-safe	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control system (HBC).
Possible cause	• Forward sensing camera (FSC) aiming not performed. • Forward sensing camera (FSC) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM FORWARD SENSING CAMERA (FSC) AIMING** • Perform the forward sensing camera (FSC) aiming. (See 09-22-106 FORWARD SENSING CAMERA (FSC) AIMING.) • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC B115E:54 displayed?	Yes	Perform the forward sensing camera (FSC) aiming again, then go to the next step. (See 09-22-106 FORWARD SENSING CAMERA (FSC) AIMING.)
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC B115E:54 displayed?	Yes	Replace the forward sensing camera (FSC), then go to the next step. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

DTC B13A6:11 [FORWARD SENSING CAMERA (FSC)]

id0902p9029600

System malfunction location	**LDWS switch circuit malfunction**
Detection condition	• Forward sensing camera (FSC) detects that LDWS switch is held pressed for **10 s or more**
Fail-safe	• Inhibits the lane departure warning system (LDWS).
Possible cause	• DTCs are stored in the instrument cluster. • LDWS switch malfunction • Instrument cluster malfunction • Forward sensing camera (FSC) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**INSPECT LDWS SWITCH** • Inspect the LDWS switch. (See 09-22-118 LDWS SWITCH INSPECTION.) • Is the LDWS switch normal?	Yes	Go to the next step.
		No	Replace the cluster switch, then go to Step 4. (See 09-17-18 SWITCH PANEL REMOVAL/INSTALLATION.)
3	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS INSTRUMENT CLUSTER** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC B13A6:11 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to Step 5.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC B13A6:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC), then go to the next step. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

DTC C1001:92 [FORWARD SENSING CAMERA (FSC)]

id0902p9029700

System malfunction location	**Poor functioning of forward sensing camera (FSC)**
Detection condition	• With the LDWS switch on or the high beam control (HBC) system operating, it is detected that the area around the forward sensing camera (FSC) is excessively bright, and the system is inoperable for **10 min**.
Fail-safe	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control system (HBC).
Possible cause	• Windshield fogging • Forward sensing camera (FSC) lens fogging • Forward sensing camera (FSC) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY WINDSHIELD FOGGING** • Verify if the windshield is fogged. • Is the windshield fogged?	Yes	Clear the fogging, then go to Step 3.
		No	Go to the next step.
2	**VERIFY FOGGING ON FORWARD SENSING CAMERA (FSC) LENS AREA** • Verify if there is any fogging on the forward sensing camera (FSC) lens. • Is the forward sensing camera (FSC) lens fogged?	Yes	Clear the fogging from the forward sensing camera (FSC) lens, then go to the next step.
		No	Go to the next step.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Drive the vehicle at a vehicle speed of **20 km/h {12 mph} or more** for **3 min** or more. • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC C1001:92 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC), then go to the next step. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

DTC C1001:97 [FORWARD SENSING CAMERA (FSC)]

id0902p9029800

System malfunction location	**Forward sensing camera (FSC) poor visibility**
Detection condition	• With the LDWS switch on or the high beam control (HBC) system operating, it is detected that the forward sensing camera (FSC) field of view is obstructed for **10 min**.
Fail-safe	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control system (HBC).
Possible cause	• Windshield soiled • Forward sensing camera (FSC) lens soiled • Forward sensing camera (FSC) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY WINDSHIELD SOILING** • Verify if the windshield is soiled. • Is the windshield soiled?	Yes	Remove the soiling from the windshield, then go to Step 3.
		No	Go to the next step.
2	**VERIFY FORWARD SENSING CAMERA (FSC) LEN SOILING** • Verify if the forward sensing camera (FSC) lens is soiled. • Is the forward sensing camera (FSC) lens soiled?	Yes	Remove the soiling on the forward sensing camera (FSC) lens, then go to the next step.
		No	Go to the next step.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Drive the vehicle at a vehicle speed of **20 km/h {12 mph} or more** for **3 min** or more. • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC C1001:97 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC), then go to the next step. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

DTC U0001:88/U0100:00/U0121:00/U0131:00/U0140:00/U0155:00/U0214:00 [FORWARD SENSING CAMERA (FSC)]

id0902p9029900

System malfunction location	**U0001:88** • **Module communication error (HS-CAN)** **U0100:00** • **Communication error with PCM** **U0121:00** • **Communication error with DSC HU/CM** **U0131:00** • **Communication error with EPS control module** **U0140:00** • **Communication error with front body control module (FBCM)** **U0155:00** • **Communication error with instrument cluster** **U0214:00** • **Communication error with start stop unit**
Detection condition	• U0001:88 — Forward sensing camera (FSC) cannot receive CAN bus communication signal (HS-CAN) for **1 s or more**. — Forward sensing camera (FSC) detects CAN bus communication line (HS-CAN) malfunction **10 times** continuously. • U0100:00 — Forward sensing camera (FSC) cannot receive CAN signal from the PCM for **1 s or more**. • U0121:00 — Forward sensing camera (FSC) cannot receive CAN signal from the DSC HU/CM for **1 s or more**. • U0131:00 — Forward sensing camera (FSC) cannot receive CAN signal from the EPS control module for **1 s or more**. • U0140:00 — Forward sensing camera (FSC) cannot receive CAN signal from front body control module (FBCM) for **5 s or more**. • U0155:00 — Forward sensing camera (FSC) cannot receive CAN signal from instrument cluster for **5 s or more**. • U0214:00 — Forward sensing camera (FSC) cannot receive CAN signal from the start stop unit for **1 s or more**.
Fail-safe	• U0001:88 — Inhibits the lane departure warning system (LDWS). — Inhibits the high beam control system (HBC). • U0100:00 — Inhibits the lane departure warning system (LDWS). — Inhibits the high beam control system (HBC). • U0121:00 — Inhibits the lane departure warning system (LDWS). — Inhibits the high beam control system (HBC). • U0131:00 — Inhibits the lane departure warning system (LDWS). • U0140:00 — Inhibits the lane departure warning system (LDWS). — Inhibits the high beam control system (HBC). • U0155:00 — Inhibits the lane departure warning system (LDWS). — Inhibits the high beam control system (HBC). • U0214:00 — Inhibits the lane departure warning system (LDWS). — Inhibits the high beam control system (HBC).
Possible cause	• Malfunction in CAN bus communication line • Malfunction in CAN line between the PCM and forward sensing camera (FSC) • Malfunction in CAN line between the DSC HU/CM and forward sensing camera (FSC) • Malfunction in CAN line between the EPS control module and forward sensing camera (FSC) • Malfunction in CAN line between the front body control module (FBCM) and forward sensing camera (FSC) • Malfunction in CAN line between the instrument cluster and forward sensing camera (FSC) • Malfunction in CAN line between the start stop unit and forward sensing camera (FSC)
System wiring diagram	—

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

Diagnostic Procedure

- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See 10-02A-1 FOREWORD [SKYACTIV-G 2.0 (L.H.D.)].) (See 10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)].) (See 10-02C-1 FOREWORD [SKYACTIV-D 2.2 (L.H.D.)].) (See 10-02D-1 FOREWORD [SKYACTIV-D 2.2 (R.H.D.)].)

DTC U0401:68 [FORWARD SENSING CAMERA (FSC)]

id0902p9030000

System malfunction location	Error signal received from PCM
Detection condition	• Forward sensing camera (FSC) receives error signal from the PCM for **1 s or more**.
Fail-safe	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control system (HBC).
Possible cause	• DTCs are stored in the PCM. • PCM malfunction • Forward sensing camera (FSC) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS PCM** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Switch the ignition ON (engine off or on) and wait for **2.5 s or more**. • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC U0401:68 displayed?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Switch the ignition ON (engine off or on) and wait for **2.5 s or more**. • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC U0401:68 displayed?	Yes	Replace the forward sensing camera (FSC), then go to the next step. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

DTC U0415:68 [FORWARD SENSING CAMERA (FSC)]

id0902p9030100

System malfunction location	**Error signal received from DSC HU/CM**
Detection condition	• Forward sensing camera (FSC) receives error signal from the DSC HU/CM for **1 s or more**.
Fail-safe	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control system (HBC).
Possible cause	• DSC HU/CM stores DTCs. • DSC HU/CM malfunction • Forward sensing camera (FSC) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY DSC HU/CM DTCs** • Perform the DTC inspection for the DSC HU/CM using the M-MDS. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS DSC HU/CM** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Switch the ignition ON (engine off or on) and wait for **2.5 s or more**. • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC U0415:68 displayed?	Yes	Replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Switch the ignition ON (engine off or on) and wait for **2.5 s or more**. • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC U0415:68 displayed?	Yes	Replace the forward sensing camera (FSC), then go to the next step. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

DTC U0420:68 [FORWARD SENSING CAMERA (FSC)]

id0902p9030200

System malfunction location	**Error signal received from EPS control module**
Detection condition	• Forward sensing camera (FSC) receives error signal from the EPS control module for **1 s or more**.
Fail-safe	• Inhibits the lane departure warning system (LDWS).
Possible cause	• DTCs are stored in the EPS control module. • EPS control module malfunction • Forward sensing camera (FSC) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY EPS CONTROL MODULE DTCs** • Perform the DTC inspection for the EPS control module using the M-MDS. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS EPS CONTROL MODULE** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Switch the ignition ON (engine off or on) and wait for **2.5 s or more**. • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC U0420:68 displayed?	Yes	Replace the EPS control module, then go to the next step. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Switch the ignition ON (engine off or on) and wait for **2.5 s or more**. • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC U0420:68 displayed?	Yes	Replace the forward sensing camera (FSC), then go to the next step. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

DTC U0423:68 [FORWARD SENSING CAMERA (FSC)]

id0902p9030300

System malfunction location	**Error signal received from instrument cluster**
Detection condition	• Forward sensing camera (FSC) receives error signal from the instrument cluster for **5 s or more**.
Fail-safe	• Inhibits the lane departure warning system (LDWS).
Possible cause	• DTCs are stored in the instrument cluster. • Instrument cluster malfunction • Forward sensing camera (FSC) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS INSTRUMENT CLUSTER** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Switch the ignition ON (engine off or on) and wait for **6.5 s or more**. • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is the DTC U0423:68 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Switch the ignition ON (engine off or on) and wait for **6.5 s or more**. • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is the DTC U0423:68 displayed?	Yes	Replace the forward sensing camera (FSC), then go to the next step. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

DTC U0515:68 [FORWARD SENSING CAMERA (FSC)]

id0902p9030400

System malfunction location	**Error signal received from start stop unit**
Detection condition	• Forward sensing camera (FSC) receives error signal from the start stop unit for **1 s or more**.
Fail-safe	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control system (HBC).
Possible cause	• DTCs are stored in the start stop unit. • Start stop unit malfunction • Forward sensing camera (FSC) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY START STOP UNIT DTCs** • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS START STOP UNIT** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Switch the ignition ON (engine off or on) and wait for **2.5 s or more**. • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC U0515:68 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Switch the ignition ON (engine off or on) and wait for **2.5 s or more**. • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC U0515:68 displayed?	Yes	Replace the forward sensing camera (FSC), then go to the next step. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

DTC U2005:86 [FORWARD SENSING CAMERA (FSC)]

id0902p9030500

System malfunction location	**Error signal received from PCM**
Detection condition	• Forward sensing camera (FSC) receives vehicle speed signal error from the PCM for **1 s or more**.
Fail-safe	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control system (HBC).
Possible cause	• DTCs are stored in the PCM. • PCM malfunction • Forward sensing camera (FSC) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS PCM** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Switch the ignition ON (engine off or on) and wait for **2.5 s or more**. • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is the DTC U2005:86 displayed?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Switch the ignition ON (engine off or on) and wait for **2.5 s or more**. • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is the DTC U2005:86 displayed?	Yes	Replace the forward sensing camera (FSC), then go to the next step. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

DTC U2100:00 [FORWARD SENSING CAMERA (FSC)]

id0902p9030600

System malfunction location	**Forward sensing camera (FSC) configuration error**
Detection condition	• Forward sensing camera (FSC) configuration not completed is detected.
Fail-safe	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control system (HBC).
Possible cause	• Forward sensing camera (FSC) configuration error • Forward sensing camera (FSC) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the forward sensing camera (FSC) configuration with the As-Built data. (See 09-22-118 FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING AS-BUILT DATA).) • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC U2100:00 displayed?	Yes	Perform the configuration of the forward sensing camera (FSC) using the As-Built data again, then go to the next step. (See 09-22-118 FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC U2100:00 displayed?	Yes	Replace the forward sensing camera (FSC), then go to the next step. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

DTC U2101:00 [FORWARD SENSING CAMERA (FSC)]

id0902p9030700

System malfunction location	**Forward sensing camera (FSC) configuration error**
Detection condition	• Detects that forward sensing camera (FSC) has unsupported configuration data.
Fail-safe	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control system (HBC).
Possible cause	• Forward sensing camera (FSC) configuration error
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the forward sensing camera (FSC) configuration with the As-Built data. (See 09-22-118 FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING AS-BUILT DATA).) • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC U2101:00 displayed?	Yes	Perform the configuration of the forward sensing camera (FSC) using the As-Built data again, then go to the next step. (See 09-22-118 FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC U2101:00 displayed?	Yes	Replace the forward sensing camera (FSC), then go to the next step. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

DTC U3000:04/U3000:09/U3000:42/U3000:49 [FORWARD SENSING CAMERA (FSC)]

id0902p9030800

System malfunction location	Forward sensing camera (FSC) internal malfunction
Detection condition	• U3000:04 — The front body control module (FBCM) detects an error in the image-related circuit in the forward sensing camera (FSC) with the ignition switched ON (engine off or on). • U3000:09 — The front body control module (FBCM) detects an internal temperature sensor malfunction in the forward sensing camera (FSC) with the ignition switched ON (engine off or on). • U3000:42 — The front body control module (FBCM) detects a NVRAM error in the forward sensing camera (FSC) with the ignition switched ON (engine off or on). • U3000:49 — The front body control module (FBCM) detects a malfunction in the forward sensing camera (FSC) with the ignition switched ON (engine off or on).
Fail-safe	• U3000:04 — Inhibits the lane departure warning system (LDWS). — Inhibits the high beam control system (HBC). • U3000:09 — Inhibits the lane departure warning system (LDWS). — Inhibits the high beam control system (HBC). • U3000:42 — Inhibits the lane departure warning system (LDWS). — Inhibits the high beam control system (HBC). • U3000:49 — Inhibits the lane departure warning system (LDWS). — Inhibits the high beam control system (HBC).
Possible cause	• Forward sensing camera (FSC) malfunction
System wiring diagram	—

Diagnostic Procedure

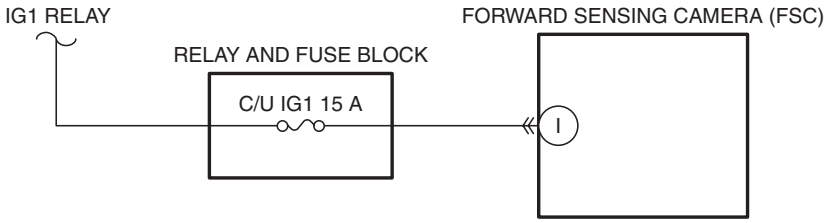
Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY FORWARD SENSING CAMERA (FSC) MALFUNCTION** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Are DTCs U3000:04/U3000:09/U3000:42/U3000:49 displayed?	Yes	Replace the forward sensing camera (FSC), then go to the next step. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

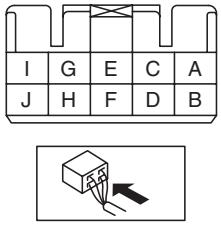
DTC U3003:16 [FORWARD SENSING CAMERA (FSC)]

id0902p9030900

System malfunction location	**Forward sensing camera (FSC) low power supply voltage input**
Detection condition	• Forward sensing camera (FSC) power supply circuit voltage of **7.2 V or less** is detected for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control system (HBC).
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • Forward sensing camera (FSC) connector or terminal malfunction • Forward sensing camera (FSC) power supply circuit malfunction — Short to ground in wiring harness between C/U IG1 15 A fuse and forward sensing camera (FSC) terminal I — C/U IG1 15 A fuse malfunction — Open circuit in wiring harness between IG1 relay and forward sensing camera (FSC) terminal I • Forward sensing camera (FSC) malfunction



FORWARD SENSING CAMERA (FSC)
WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 6. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 6. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4	**INSPECT FORWARD SENSING CAMERA (FSC) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the forward sensing camera (FSC) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**VERIFY FORWARD SENSING CAMERA (FSC) POWER SUPPLY VOLTAGE** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Display PID VPWR_IG1 using the M-MDS. (See 09-02J-25 PID/DATA MONITOR INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is the voltage B+?	Yes	Go to the next step.
		No	Inspect the C/U IG1 15 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the fuse. • If a fuse is damaged: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness which has an open circuit. Go to the next step.

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Switch the ignition ON (engine off or on) and wait for **6.5 s or more**. • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC U3003:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC), then go to the next step. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].)
		No	DTC troubleshooting completed.

DTC U3003:17 [FORWARD SENSING CAMERA (FSC)]

id0902p9031000

System malfunction location	**Forward sensing camera (FSC) high power supply input**
Detection condition	• Forward sensing camera (FSC) power supply circuit voltage of **16.8 V or more** is detected for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	• Inhibits the lane departure warning system (LDWS). • Inhibits the high beam control system (HBC).
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • Forward sensing camera (FSC) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Replace the battery, then go to Step 4. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

Step	Inspection		Action
3	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to the next step. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the forward sensing camera (FSC) DTCs using the M-MDS. (See 09-02J-5 CLEARING DTC [FORWARD SENSING CAMERA (FSC)].) • Switch the ignition ON (engine off or on) and wait for **6.5 s or more**. • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is DTC U3003:17 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the forward sensing camera (FSC), then go to the next step. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].)
		No	DTC troubleshooting completed.

PID/DATA MONITOR INSPECTION [FORWARD SENSING CAMERA (FSC)]

id0902p9032500

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “FSC”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

PID/DATA MONITOR TABLE [FORWARD SENSING CAMERA (FSC)]

id0902p9032600

—: Not applicable

PID	Unit/ Operation	Data contents	Inspection item(s)
A_ANG_PITCH	° (deg)	Displays forward sensing camera (FSC) aiming angle (pitch).	Forward sensing camera (FSC)
A_ANG_ROLL	° (deg)	Displays forward sensing camera (FSC) aiming angle (roll).	Forward sensing camera (FSC)
A_ANG_YAW	° (deg)	Displays forward sensing camera (FSC) aiming angle (yaw).	Forward sensing camera (FSC)
BRAKE_SW	Off/On	• Off: Brake switch (No. 2) is off. (Brake pedal is depressed.) • On: Brake switch (No. 2) is on. (Brake pedal is not depressed.)	Brake switch

ON-BOARD DIAGNOSTIC [FORWARD SENSING CAMERA (FSC)]

PID	Unit/ Operation	Data contents	Inspection item(s)
DSP_LANE_ST	Off/ Dash_Lane/ Solid_Lane	• Off: Vehicle lanes not displayed in TFT LCD display • DashLane: Displays broken lines in TFT LCD display. • Lane: Displays actual lanes in TFT LCD display.	TFT LCD display (instrument cluster)
DSP_WRN_ST	Off/ LDWS_Left/ LDWS_Right/ LDWS_Fail/ HBC_Fail/ Camera_BLK/FSC_Fail/ Camera_DRDT	• Off: Warning not displayed in TFT LCD display • LDWS_Left: Warning related to lane departure on vehicle left side is displayed in TFT LCD display. • LDWS_Right: Warning related to lane departure on vehicle right side is displayed in TFT LCD display. • LDWS_Fail: Warning related to malfunction in lane departure warning system (LDWS) is displayed in TFT LCD display. • LDWS_Fail: Warning related to malfunction in high beam control (HBC) system is displayed in TFT LCD display. • Camera_BLK: Warning related to soiling of the forward sensing camera (FSC) is displayed in the TFT LCD display. • FSC_Fail: Warning related to malfunction in forward sensing camera (FSC) is displayed in the TFT LCD display. • Camera_DRDT: Warning related to soiling of the forward sensing camera (FSC) is displayed in the TFT LCD display.	TFT LCD display (instrument cluster)
HBC_H/ L_CS	Hi_Request/ Low_Request/Invalid	• HiRequest: HI beam switch signal received • Low_Request: LO beam switch signal received • Invalid: Error in HI/LO beam switch request signal	Forward sensing camera (FSC)
IL_ST_HBC	Off/ Green_On/ Green_Flash/ Amber_On/ Amber_Flash	• On: HBC indicator light illuminated • Green_On: HBC indicator light (green) is illuminated. • Green_Flash: HBC indicator light (green) is flashing. • Amber_On: HBC indicator light (amber) is illuminated. • Amber_Flash: HBC indicator light (amber) is flashing.	HBC indicator light (instrument cluster)
IL_ST_LDWS	Off/ Green_On/ Green_Flash/ Amber_On/ Amber_Flash	• On: LDWS indicator light illuminated • Green_On: LDWS indicator light (green) illuminated • Green_Flash: LDWS indicator light (green) is flashing. • Amber_On: LDWS indicator light (amber) is illuminated. • Amber_Flash: LDWS indicator light (amber) is flashing.	LDWS indicator light (instrument cluster)
LDWS_BUZZER	Off/On	• Off: LDWS warning alarm does not sound. • On: LDWS warning alarms sounds.	LDWS warning alarm (instrument cluster)
LDWS_SW	Off/On	• Off: LDWS switch is off. • On: LDWS switch is on.	LDWS switch
RS_SOUND_CS	Off/Left/ Right	• Off: Rumble strip sound is not heard. • Left: Left side rumble strip sound heard • Right: Right side rumble strip sound heard	Audio unit
VPWR_IG1	V	Displays forward sensing camera (FSC) power supply voltage.	Forward sensing camera (FSC)
VSPD	KPH, MPH	Vehicle speed is displayed.	—

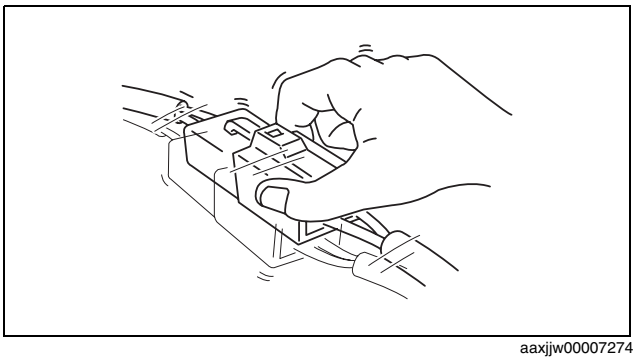
*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)] /10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)]/10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)] 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

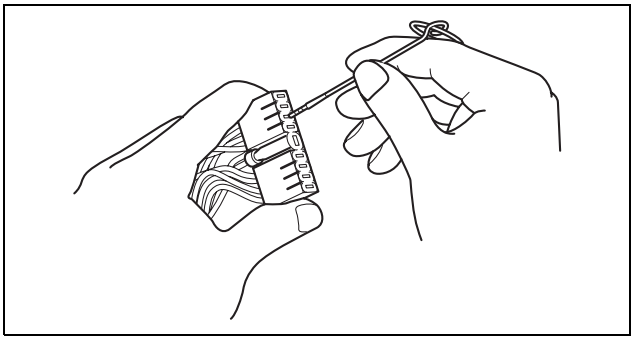
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2006100

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. Verify the following vehicle conditions:
   - All the switches are turned off (except the ignition switch).
   - All the doors, bonnet, and liftgate are closed.
   - All the doors, and liftgate re unlocked.
   - All the seat belts are unbuckled.
   - Parking brake lever is pulled.
3. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
4. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the front body control module (FBCM). (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. Verify the following vehicle conditions:
   - All the switches are turned off (except the ignition switch).
   - All the doors, bonnet, and liftgate are closed.
   - All the doors, and liftgate re unlocked.
   - All the seat belts are unbuckled.
   - Parking brake lever is pulled.
3. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “F_BCM”.
4. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the front body control module (FBCM). (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].)

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Snapshot data

- The data for all DTCs currently detected is stored.

Snapshot data table

Snapshot data item	Unit		Data contents	Corresponding data monitor items
AAT	°C	°F	Ambient temperature	-
APP_STATUS	Accelerator Pedal Off/Under20%/ Over20%/FAIL		Accelerator pedal position status	-
CFG_STATUS	Config Complete/Not Configured/Config Error		Configuration status	-
ECT_STATUS	Under 0 degrees C/ 0-Under 80 degrees C/ Over 80 degrees C/FAIL		Engine coolant temperature status	-
IC_VPWR	V		Instrument cluster power supply voltage	-
IG-ON_TIMER	hh:mm:ss		Elapsed time since ignition switched ON (engine off or on)	-
PWR_MODE_KEY	Key Out/Key Recently Out/ Key Approved (Position 0)/ Post Accessory (Position 0)/ Accessory (Position 1)/ Post Ignition (Position 1)/ ignition On (Position 2)/ Running (Position 2)/ Running - Starting In Progress (Position 2)/Crank (Position 3)		Push button start power position switching status	-
RPM_STATUS	Engine Stop/Under1500rpm/ Over1500rpm/FAIL		Engine speed status	-
SHIFT_STATUS	P/N/D/R/FAIL		Selector lever position status	-
TOTAL_DIST	Km	miles	Accumulated total traveled distance since vehicle completion	-
TOTAL_TIME	hh:mm:ss		Accumulated total elapsed time since vehicle completion **Note** • When the ROOM fuse is removed, or the ignition is switched off (LOCK), the time is not included in the elapsed time.	-
VPWR	V		Front body control module (FBCM) power supply malfunction	VPWR_IG
VSPD_STATUS	Stop/ 0-10km/h/ Over10km/h/ FAIL		Vehicle speed status	VSPD

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2006200

CMDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].)
8. Verify that no DTCs are displayed.

ODDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “F_BCM”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].)
8. Verify that no DTCs are displayed.

DTC B1008:02 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2006400

System malfunction location	**Windshield wiper control signal mismatch**
Detection condition	• The front body control module (FBCM) receives error signals from the start stop unit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Start stop unit malfunction • Front body control module (FBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS START STOP UNIT** • Clear DTC for the front body control module (FBCM) using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the DTC inspection for the front body control module (FBCM) using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1008:02 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-53 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1008:02 displayed?	Yes	replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

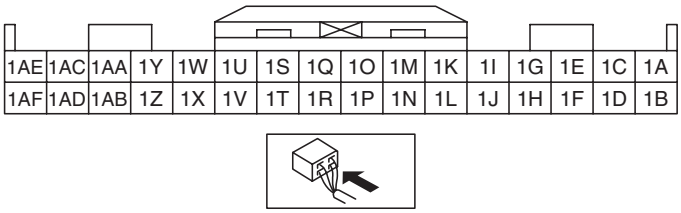
ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B1008:62 [FRONT BODY CONTROL MODULE (FBCM)]

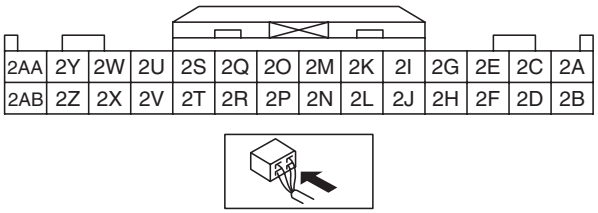
id0902p2006500

System malfunction location	**Windshield wiper LO switch signal mismatch**
Detection condition	• The front body control module (FBCM) and start stop unit signals are compared and it is detected that the signals do not match for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Start stop unit malfunction • Wiper switch malfunction • Short circuit to ground in wiring harness between start stop unit and front body control module (FBCM) • Open circuit in wiring harness between start stop unit and front body control module (FBCM) • Short to power supply in wiring harness between start stop unit and front body control module (FBCM) • Front body control module (FBCM) malfunction

START STOP UNIT
WIRING HARNESS-SIDE CONNECTOR



FBCM
WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT IF MALFUNCTION CAUSE IS START STOP UNIT OR FRONT BODY CONTROL MODULE (FBCM)** • Display start stop unit PID WIP_F_LOW using the M-MDS. (See 09-02C-151 PID/DATA MONITOR INSPECTION [START STOP UNIT].) • Verify the PID while operating the wiper switch. • Is the PID WIP_F_LOW displayed normally?	Yes	Go to Step 3.
		No	Go to the next step.
2	**INSPECT WIPER SWITCH** • Inspect the wiper switch. (See 09-19-47 WINDSHIELD WIPER AND WASHER SWITCH INSPECTION.) • Is the wiper switch normal?	Yes	Replace the start stop unit, then go to Step 7. (See 09-14-53 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Replace the wiper and washer switch, then go to Step 7. (See 09-19-45 WIPER AND WASHER SWITCH REMOVAL/INSTALLATION.)
3	**INSPECT IF MALFUNCTION CAUSE IS FRONT BODY CONTROL MODULE (FBCM) OR WIRING HARNESS** • Display the front body control module (FBCM) PID WIP_F using the M-MDS. (See 09-02K-153 PID/DATA MONITOR INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Verify the PID while operating the wiper switch. • Is the PID WIP_F displayed normally?	Yes	Go to the next step.
		No	• Perform the CAN malfunction diagnosis flow and inspect the CAN for a malfunction. (See 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)].) (See 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)].) (See 10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)].) (See 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)].) • If there is no malfunction in the CAN, replace the front body control module (FBCM), then go to Step 7. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
4	**INSPECT FOR SHORT TO GROUND BETWEEN WIPER SWITCH AND FRONT BODY CONTROL MODULE (FBCM)** • Switch the wiper switch off. • Inspect for continuity between front body control module (FBCM) terminal 2Y and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 7.
		No	Go to the next step.
5	**INSPECT WIRING HARNESS BETWEEN WIPER SWITCH AND FRONT BODY CONTROL MODULE (FBCM) FOR OPEN CIRCUIT** • Disconnect the front body control module (FBCM) connector. • Disconnect the start stop unit connector. • Inspect for continuity between front body control module (FBCM) terminal 2Y and start stop unit terminal 1V. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 7.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

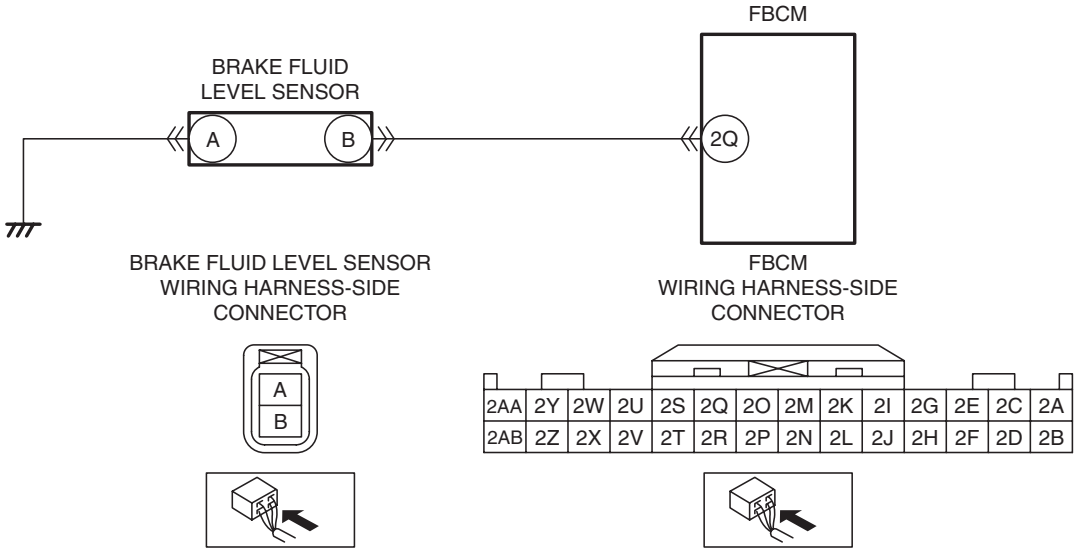
Step	Inspection		Action
6	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN WIPER SWITCH AND FRONT BODY CONTROL MODULE (FBCM)** • Verify that the front body control module (FBCM) and start stop unit connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at front body control module (FBCM) terminal 2Y (vehicle wiring harness side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness and go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1008:62 displayed?	Yes	Replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B1048:7B [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2006600

System malfunction location	**Brake fluid level sensor circuit malfunction**
Detection condition	• The front body control module (FBCM) detected that the brake fluid level is less than MIN with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Insufficient brake fluid level • Brake fluid level sensor connector or terminal malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between brake fluid level sensor terminal B and front body control module (FBCM) terminal 2Q • Brake fluid level sensor malfunction • Front body control module (FBCM) malfunction



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear DTC for the front body control module (FBCM) using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the DTC inspection for the front body control module (FBCM) using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1048:7B displayed?	Yes	Go to the next step.
		No	Go to Step 8.
2	**INSPECT BRAKE FLUID LEVEL** • Inspect the brake fluid level. (See 04-11-4 BRAKE FLUID INSPECTION.) • Is the brake fluid level normal?	Yes	Go to the next step.
		No	Add genuine brake fluid, then go to Step 7.
3	**INSPECT BRAKE FLUID LEVEL SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the brake fluid level sensor connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
4	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
5	**INSPECT BRAKE FLUID LEVEL SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the brake fluid level sensor and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between rear body control module (FBCM) terminal 2Q (vehicle wiring harness) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 7.
		No	Go to the next step.
6	**INSPECT BRAKE FLUID LEVEL SENSOR** • Inspect the brake fluid level sensor. (See 04-11-14 BRAKE FLUID LEVEL SENSOR INSPECTION.) • Is the brake fluid level sensor normal?	Yes	Go to the next step.
		No	Replace the brake fluid level sensor, then go to the next step. (See 04-11-11 MASTER CYLINDER REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the front body control module (FBCM) using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the DTC inspection for the front body control module (FBCM) using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1048:7B displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B1087:88 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2006700

System malfunction location	**LIN communication error**
Detection condition	• LIN bus communication line malfunction detected for **1 s or more**
Fail-safe	—
Possible cause	• Malfunction in LIN bus communication line • Front body control module (FBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1087:88 displayed?	Yes	A malfunction in LIN bus communication line can be considered. • Repair or replace the wiring harness between the DC-DC converter and front body control module (FBCM), then go to the next step. • Repair or replace the wiring harness between the current sensor and front body control module (FBCM), then go to the next step.
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1087:88 displayed?	Yes	Replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B1088:88 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2006800

System malfunction location	**LIN communication error**
Detection condition	• LIN bus communication line malfunction detected for **1 s or more**
Fail-safe	—
Possible cause	• Malfunction in LIN bus communication line • Front body control module (FBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1088:88 displayed?	Yes	A malfunction in LIN bus communication line can be considered. • Repair or replace the wiring harness between the climate control unit and front body control module (FBCM), then go to the next step. (With manual A/C) • Repair or replace the wiring harness between the auto-light sensor/rain sensor and front body control module (FBCM), then go to the next step. (With Auto Light System)
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1088:88 displayed?	Yes	Replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B1095:72/B1095:73 [FRONT BODY CONTROL MODULE (FBCM)]

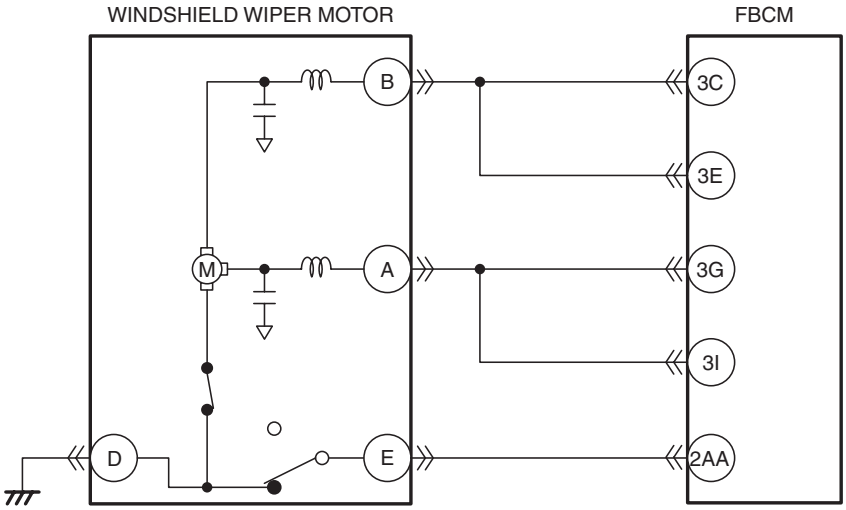
id0902p2007000

System malfunction location	**Autostop switch circuit malfunction**
Detection condition	• The front body control module (FBCM) detects that the autostop switch is stuck closed with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Windshield wiper motor connector or terminal malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — L.H.D. • Windshield wiper motor terminal B and front body control module (FBCM) terminal 3C • Windshield wiper motor terminal B and front body control module (FBCM) terminal 3E • Windshield wiper motor terminal A and front body control module (FBCM) terminal 3G • Windshield wiper motor terminal A and front body control module (FBCM) terminal 3I • Windshield wiper motor terminal E and front body control module (FBCM) terminal 2AA — R.H.D. • Windshield wiper motor terminal E and front body control module (FBCM) terminal 3C • Windshield wiper motor terminal E and front body control module (FBCM) terminal 3E • Windshield wiper motor terminal D and front body control module (FBCM) terminal 3G • Windshield wiper motor terminal D and front body control module (FBCM) terminal 3I • Windshield wiper motor terminal A and front body control module (FBCM) terminal 2AA • Open circuit in wiring harness between the following terminals: — L.H.D. • Windshield wiper motor terminal B and front body control module (FBCM) terminal 3C • Windshield wiper motor terminal B and front body control module (FBCM) terminal 3E • Windshield wiper motor terminal A and front body control module (FBCM) terminal 3G • Windshield wiper motor terminal A and front body control module (FBCM) terminal 3I • Windshield wiper motor terminal E and front body control module (FBCM) terminal 2AA — R.H.D. • Windshield wiper motor terminal E and front body control module (FBCM) terminal 3C • Windshield wiper motor terminal E and front body control module (FBCM) terminal 3E • Windshield wiper motor terminal D and front body control module (FBCM) terminal 3G • Windshield wiper motor terminal D and front body control module (FBCM) terminal 3I • Windshield wiper motor terminal A and front body control module (FBCM) terminal 2AA • Windshield wiper motor malfunction • Front body control module (FBCM) malfunction

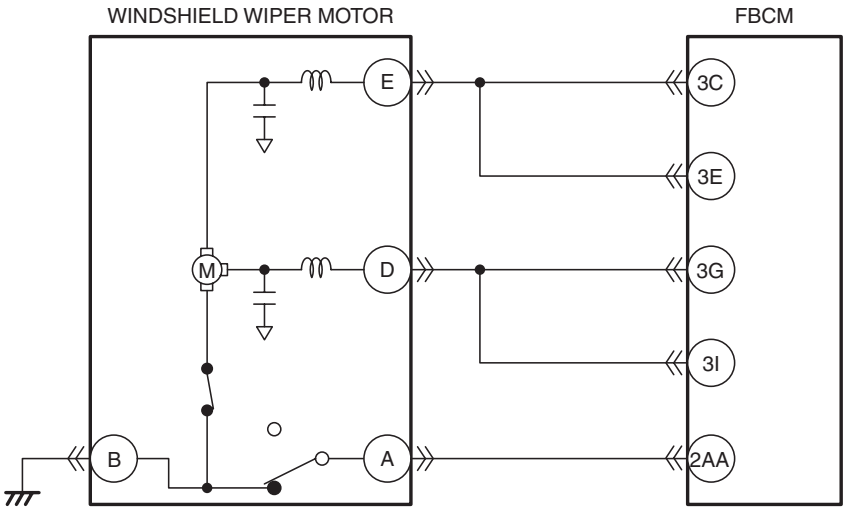
ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

System malfunction location	Autostop switch circuit malfunction

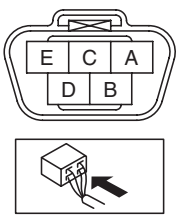
(L.H.D.)



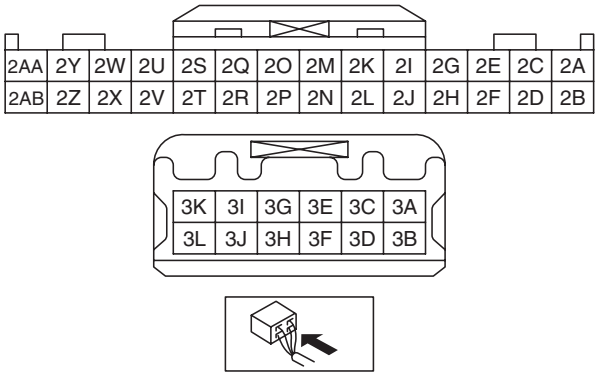
(R.H.D.)



WINDSHIELD WIPER MOTOR WIRING HARNESS-SIDE CONNECTOR



FBCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC B1095:72, or B1095:73 also present?	Yes	Go to the next step.
		No	Go to Step 8.
2	**INSPECT WINDSHIELD WIPER MOTOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the windshield wiper motor connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
4	**INSPECT WINDSHIELD WIPER MOTOR CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the windshield wiper motor and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — Front body control module (FBCM) terminal 3C — Front body control module (FBCM) terminal 3E — Front body control module (FBCM) terminal 3G — Front body control module (FBCM) terminal 3I — Front body control module (FBCM) terminal 2AA • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 7.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
5	**INSPECT WINDSHIELD WIPER MOTOR CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the windshield wiper motor and front body control module (FBCM) connectors are disconnected. • Switch the ignition to off. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — L.H.D. • Windshield wiper motor terminal B and front body control module (FBCM) terminal 3C • Windshield wiper motor terminal B and front body control module (FBCM) terminal 3E • Windshield wiper motor terminal A and front body control module (FBCM) terminal 3G • Windshield wiper motor terminal A and front body control module (FBCM) terminal 3I • Windshield wiper motor terminal E and front body control module (FBCM) terminal 2AA — R.H.D. • Windshield wiper motor terminal E and front body control module (FBCM) terminal 3C • Windshield wiper motor terminal E and front body control module (FBCM) terminal 3E • Windshield wiper motor terminal D and front body control module (FBCM) terminal 3G • Windshield wiper motor terminal D and front body control module (FBCM) terminal 3I • Windshield wiper motor terminal A and front body control module (FBCM) terminal 2AA • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 7.
6	**INSPECT WINDSHIELD WIPER MOTOR** • Inspect the windshield wiper motor. (See 09-19-14 WINDSHIELD WIPER MOTOR INSPECTION.) • Is the windshield wiper motor normal?	Yes	Go to the next step.
		No	Replace the windshield wiper motor, then go to the next step. (See 09-19-9 WINDSHIELD WIPER MOTOR AND LINK REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

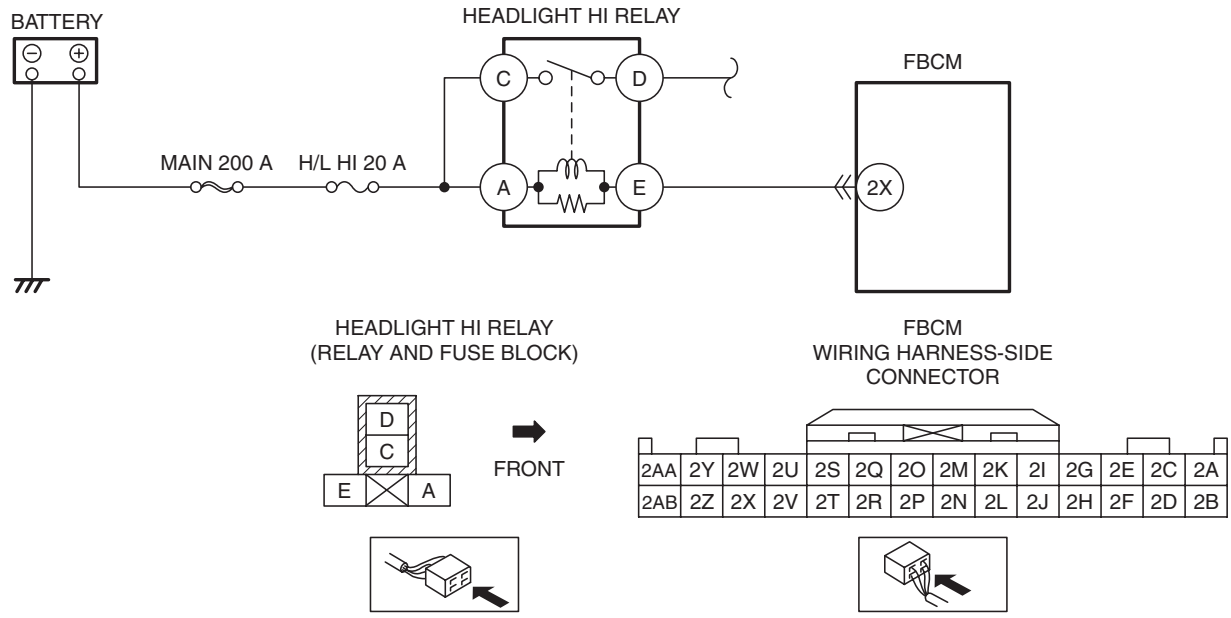
Step	Inspection		Action
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the DTC inspection for the front body control module (FBCM) using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC B1095:72, or B1095:73 also present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B109A:12 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2007200

System malfunction location	**Headlight HI relay circuit malfunction**
Detection condition	• The front body control module (FBCM) detects a short to power supply in the headlight HI relay circuit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Headlight HI relay malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to power supply in the wiring harness between headlight HI relay terminal E and front body control module (FBCM) terminal 2X • Front body control module (FBCM) malfunction



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B109A:12 displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT HEADLIGHT HI RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the headlight HI relay. • Inspect the headlight HI relay. (See 09-21-29 RELAY INSPECTION.) • Is the headlight HI relay normal?	Yes	Go to the next step.
		No	Replace the headlight HI relay, then go to Step 5.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT HEADLIGHT HI RELAY CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the headlight HI relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at front body control module (FBCM) terminal 2X (vehicle wiring harness side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness and go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

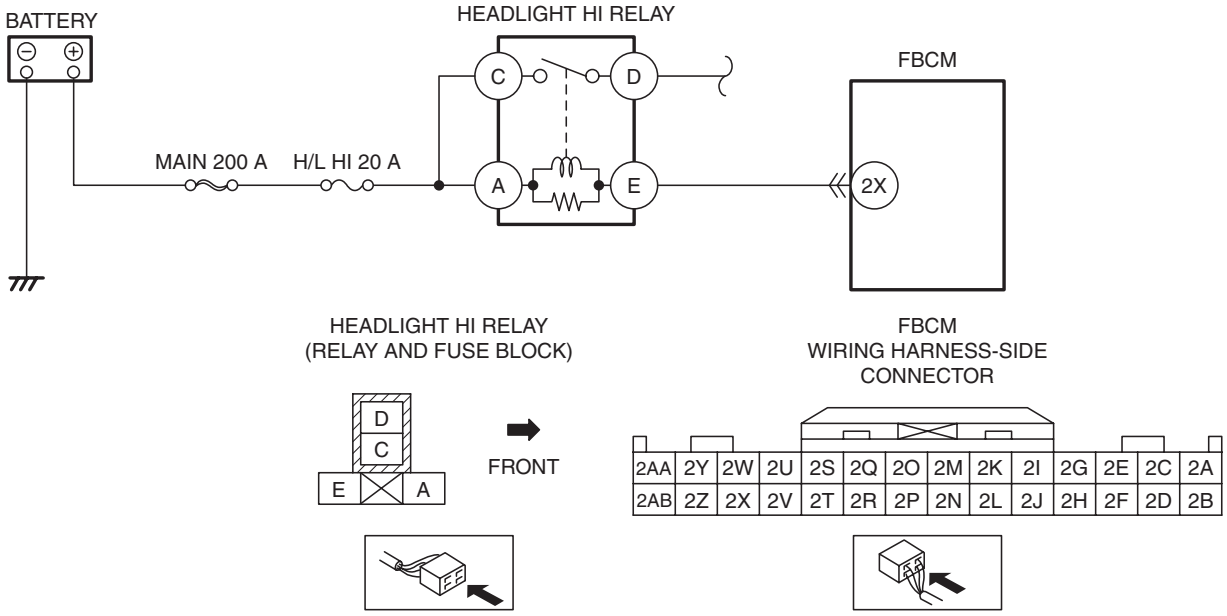
Step	Inspection		Action
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Operate the light switch in HEAD position and the dimmer switch in HI position. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B109A:12 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B109A:14 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2007300

System malfunction location	**Headlight HI relay circuit malfunction**
Detection condition	• The front body control module (FBCM) detects an open or short to ground in the headlight HI relay circuit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Headlight HI relay malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between headlight HI relay terminal E and front body control module (FBCM) terminal 2X • Open circuit in wiring harness between headlight HI relay terminal E and front body control module (FBCM) terminal 2X • Front body control module (FBCM) malfunction



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B109A:14 displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT HEADLIGHT HI RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the headlight HI relay. • Inspect the headlight HI relay. (See 09-21-29 RELAY INSPECTION.) • Is the headlight HI relay normal?	Yes	Go to the next step.
		No	Replace the headlight HI relay, then go to Step 6.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT HEADLIGHT HI RELAY CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the headlight HI relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Inspect for continuity between front body control module (FBCM) terminal 2X (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 6.
		No	Go to the next step.
5	**INSPECT HEADLIGHT HI RELAY CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the headlight HI relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Inspect the wiring harness for continuity between headlight HI relay terminal E (vehicle wiring harness side) and front body control module (FBCM) terminal 2X (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness and go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Operate the light switch in OFF position. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B109A:14 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B10A6:64 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2008300

System malfunction location	**Light switch error signal received**
Detection condition	• The front body control module (FBCM) receives error signals from the start stop unit for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Start stop unit malfunction • Light switch malfunction • Front body control module (FBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

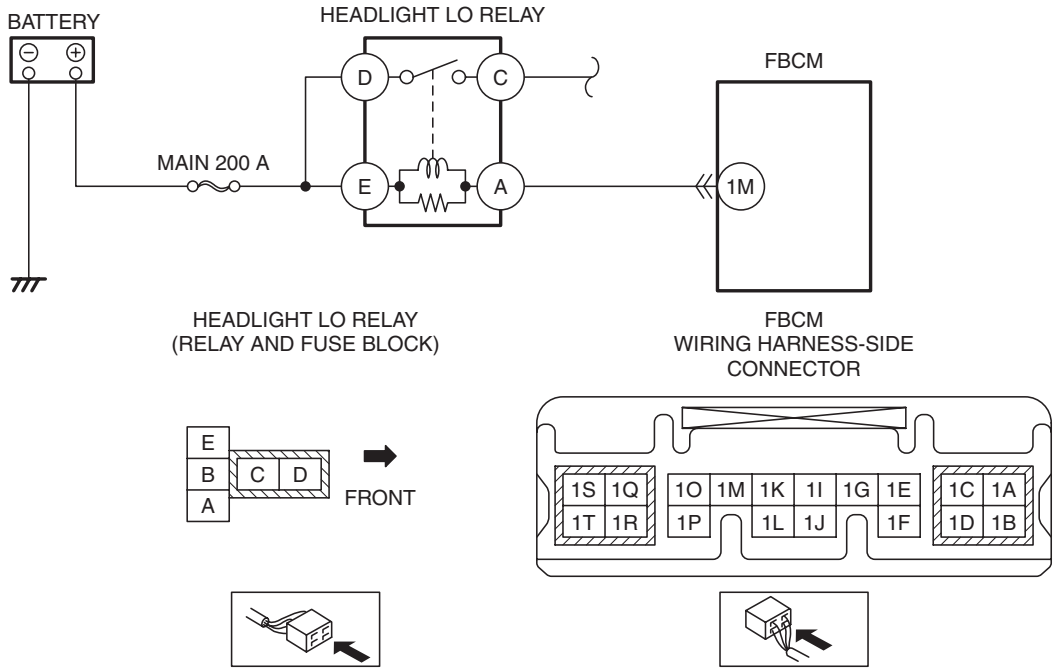
Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B10A6:64 displayed?	Yes	Go to the next step.
		No	Go to Step 4.
2	**INSPECT LIGHT SWITCH** • Inspect the light switch. (See 09-18-86 LIGHT SWITCH INSPECTION.) • Is the light switch normal?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-53 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Replace the light switch, then go to the next step. (See 09-18-84 LIGHT SWITCH REMOVAL/INSTALLATION.)
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B10A6:64 displayed?	Yes	Replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B10A8:12 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2007400

System malfunction location	**Headlight LO relay circuit malfunction**
Detection condition	• The front body control module (FBCM) detects a short to power supply in the headlight LO relay circuit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Headlight LO relay malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to power supply in the wiring harness between headlight LO relay terminal A and front body control module (FBCM) terminal 1M • Front body control module (FBCM) malfunction



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B10A8:12 displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT HEADLIGHT LO RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the headlight LO relay. • Inspect the headlight LO relay. (See 09-21-29 RELAY INSPECTION.) • Is the headlight LO relay normal?	Yes	Go to the next step.
		No	Replace the headlight LO relay, then go to Step 5.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT HEADLIGHT LO RELAY CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the headlight LO relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at front body control module (FBCM) terminal 1M (vehicle wiring harness side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness and go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B10A8:12 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B10AD:86 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2007500

System malfunction location	**Error signal received from auto-light sensor/rain sensor**
Detection condition	• The front body control module (FBCM) receives error signals from the auto-light sensor/rain sensor **10 times** continuously with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Auto-light sensor/rain sensor malfunction • Front body control module (FBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

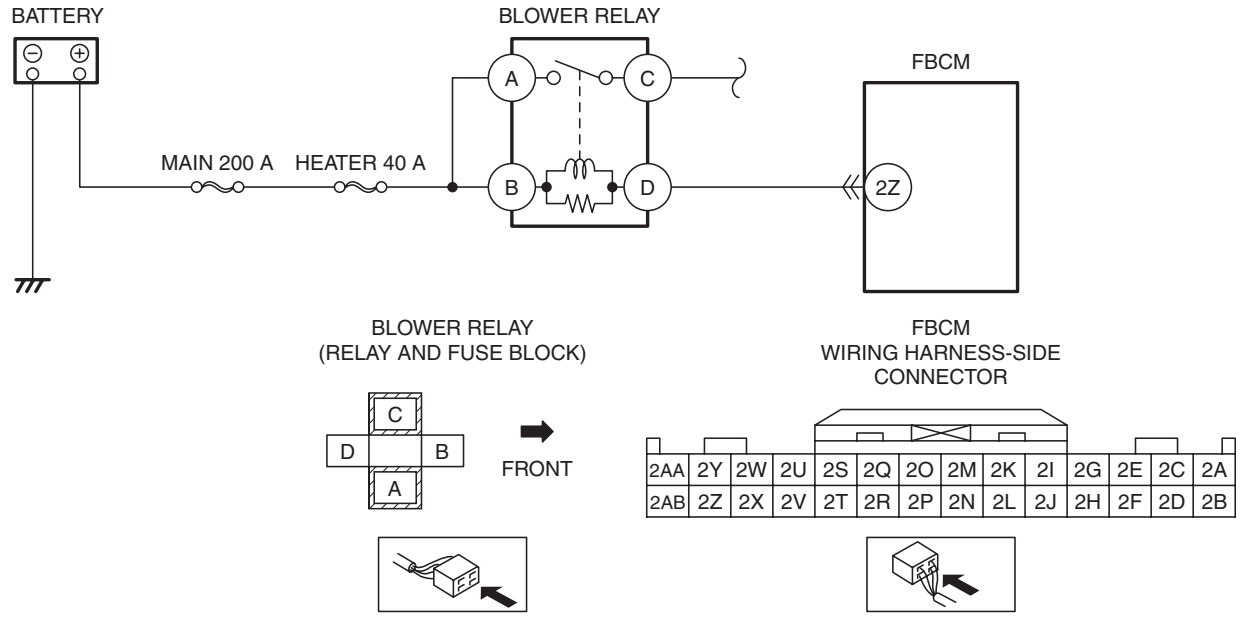
Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS AUTO-LIGHT SENSOR/RAIN SENSOR** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B10AD:86 displayed?	Yes	Replace the auto-light sensor/rain sensor, then go to the next step. (See 09-19-58 RAIN SENSOR REMOVAL/INSTALLATION.)
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B10AD:86 displayed?	Yes	Replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B10AF:12 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2007600

System malfunction location	**Blower relay circuit malfunction**
Detection condition	• The front body control module (FBCM) detects a short to power supply in the blower relay circuit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Blower relay malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to power supply in the wiring harness between blower relay terminal D and front body control module (FBCM) terminal 2Z • Front body control module (FBCM) malfunction



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B10AF:12 displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT BLOWER RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the blower relay. • Inspect the blower relay. (See 09-21-29 RELAY INSPECTION.) • Is the blower relay normal?	Yes	Go to the next step.
		No	Replace the blower relay, then go to Step 5.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT BLOWER RELAY CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the blower relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at front body control module (FBCM) terminal 2Z (vehicle wiring harness side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness and go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

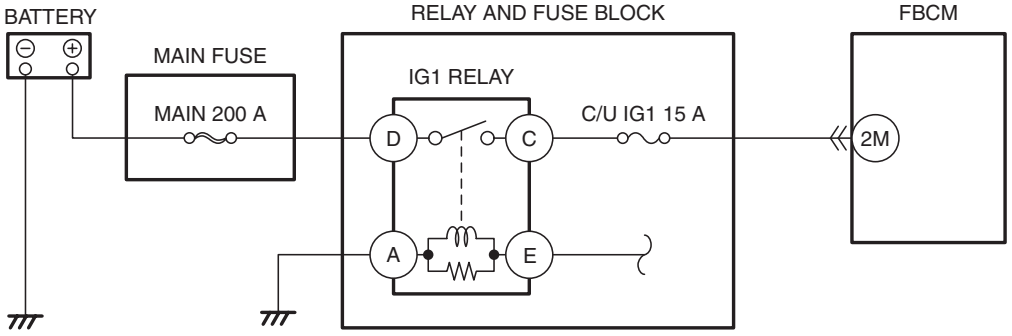
Step	Inspection		Action
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B10AF:12 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

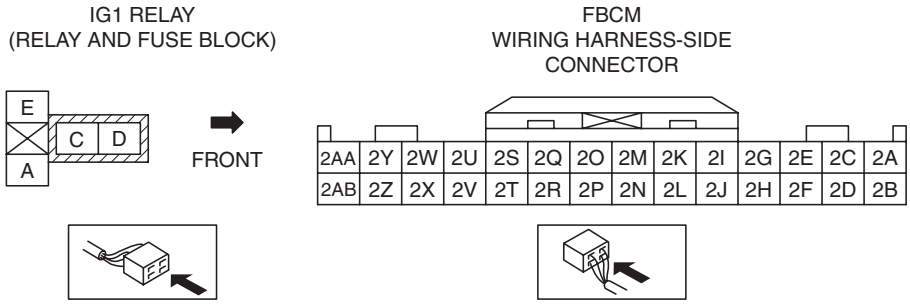
ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B1142:13 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2007700

System malfunction location	**Front body control module (FBCM) power supply voltage (+IG1 power supply) input circuit malfunction**
Detection condition	• The front body control module (FBCM) detects an open circuit in the IG1 relay circuit for **2 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• IG1 relay malfunction • Front body control module (FBCM) connector or terminal malfunction • C/U IG1 15 A fuse malfunction • Open circuit in the wiring harness between IG1 relay terminal C and front body control module (FBCM) terminal 2M • Front body control module (FBCM) malfunction





ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **2 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1142:13 displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT IG1 RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the IG1 relay. • Inspect the IG1 relay. (See 09-21-29 RELAY INSPECTION.) • Is the IG1 relay normal?	Yes	Go to the next step.
		No	Replace the IG1 relay, then go to Step 6.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT C/U IG1 15 A FUSE FOR MALFUNCTION** • Remove the C/U IG1 15 A fuse. • Inspect the C/U IG1 15 A fuse. • Is the C/U IG1 15 A fuse normal?	Yes	Install the C/U IG1 15 A fuse, then go to the next step.
		No	If a fuse is burnt out: • Repair or replace the wiring harness which is shorted to ground. • Replace the fuse. If a fuse is damaged: • Replace the fuse. Go to Step 6.
5	**INSPECT FRONT BODY CONTROL MODULE (FBCM) POWER SUPPLY VOLTAGE (+IG1 POWER SUPPLY) INPUT CIRCUIT FOR OPEN CIRCUIT** • Verify that the IG1 relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Inspect the wiring harness for continuity between IG1 relay terminal C (vehicle wiring harness side) and front body control module (FBCM) terminal 2M (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness and go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

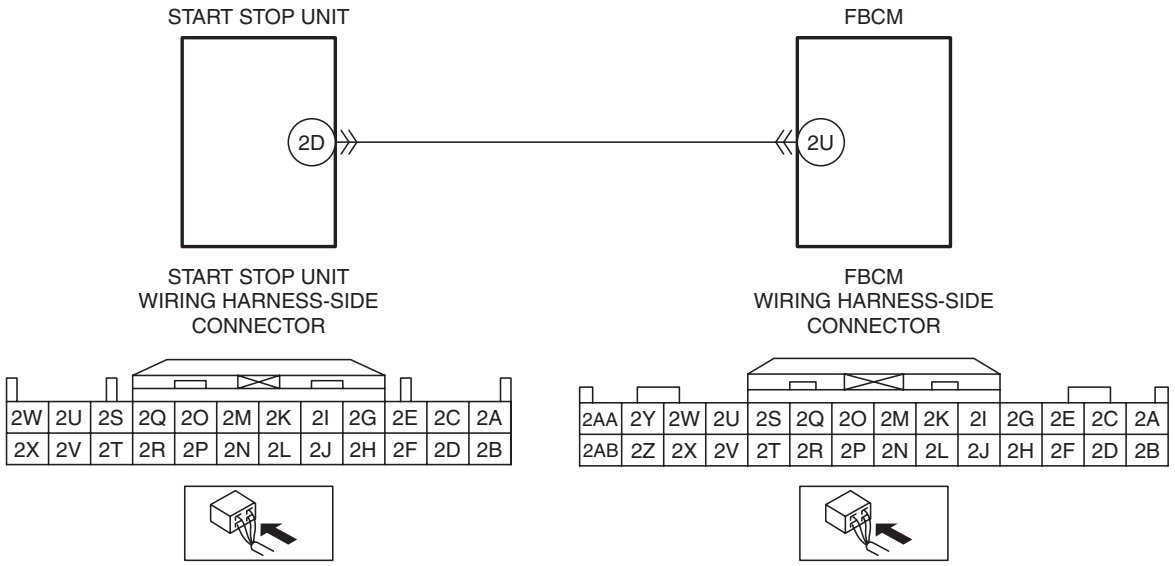
Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **2 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1142:13 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B1143:13 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2007800

System malfunction location	**IG2 power supply control circuit malfunction**
Detection condition	• The front body control module (FBCM) detects an open circuit in the start stop unit circuit for **2 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Start stop unit connector or terminal malfunction • Start stop unit malfunction • Front body control module (FBCM) connector or terminal malfunction • Open circuit in the wiring harness between start stop unit terminal 2D and front body control module (FBCM) terminal 2U • Front body control module (FBCM) malfunction



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **2 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1143:13 displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT START STOP UNIT** • Inspect the start stop unit. (See 09-14-55 START STOP UNIT INSPECTION.) • Is the start stop unit normal?	Yes	Go to the next step.
		No	Replace the start stop unit, then go to Step 6. (See 09-14-53 START STOP UNIT REMOVAL/INSTALLATION.)
4	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT FRONT BODY CONTROL MODULE (FBCM) IG2 POWER SUPPLY CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the start stop unit and front body control module (FBCM) connectors are disconnected. • Inspect the wiring harness for continuity between start stop unit terminal 2D (vehicle wiring harness side) and front body control module (FBCM) terminal 2U (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness and go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **2 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1143:13 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

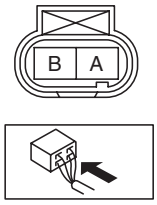
ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B11DB:86 [FRONT BODY CONTROL MODULE (FBCM)]

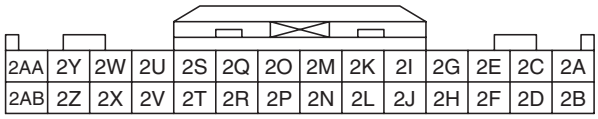
id0902p2007900

System malfunction location	**Error signal received from current sensor**
Detection condition	• The front body control module (FBCM) receives error signals from the current sensor for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Current sensor connector or terminal malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between current sensor terminal B and front body control module (FBCM) terminal 2E • Short to power supply in wiring harness between current sensor terminal B and front body control module (FBCM) terminal 2E • Open circuit in wiring harness between current sensor terminal B and front body control module (FBCM) terminal 2E • Current sensor malfunction • Front body control module (FBCM) malfunction

CURRENT SENSOR
WIRING HARNESS-SIDE CONNECTOR



FBCM
WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B11DB:86 displayed?	Yes	Go to the next step.
		No	Go to Step 9.
2	**INSPECT CURRENT SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the current sensor connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
4	**INSPECT CURRENT SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the current sensor and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between front body control module (FBCM) terminal 2E (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 8.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
5	**INSPECT CURRENT SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the current sensor and front body control module (FBCM) connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at front body control module (FBCM) terminal 2E (vehicle wiring harness side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which is shorted to power supply, then go to Step 8.
6	**INSPECT CURRENT SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the current sensor and front body control module (FBCM) connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the wiring harness for continuity between current sensor terminal B (vehicle wiring harness side) and front body control module (FBCM) terminal 2E (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 8.
7	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS CURRENT SENSOR** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B11DB:86 displayed?	Yes	Replace the current sensor, then go to the next step. (See 01-40-65 CURRENT SENSOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 9.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B11DB:86 displayed?	Yes	Replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B1314:11 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2008000

System malfunction location	**Illumination output circuit malfunction**
Detection condition	• The front body control module (FBCM) detects a short to ground in the illumination output circuit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Front body control module (FBCM) connector or terminal malfunction • Illuminations malfunction • Short to ground in front body control module (FBCM) illumination output circuit • Front body control module (FBCM) malfunction
System wiring diagram	—

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1314:11 displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs** • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	Go to the next step.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT FRONT BODY CONTROL MODULE (FBCM) ILLUMINATION OUTPUT CIRCUIT FOR SHORT TO GROUND** • Verify that the front body control module (FBCM) connector is disconnected. • Turn the light switch to the TNS position. • Inspect for continuity between front body control module (FBCM) terminal 3J and body ground. • Is there continuity?	Yes	Inspect the illuminations. • If there is any malfunction: — Replace the malfunctioning illuminations, then go to the next step. • If there is no malfunction: — Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1314:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B134D:02 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2008100

System malfunction location	**Headlight control signal error**
Detection condition	• Error start stop unit signal is detected for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Start stop unit malfunction • Front body control module (FBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B134D:02 displayed?	Yes	Go to the next step.
		No	Go to Step 4.
2	**VERIFY START STOP UNIT DTCs** • Perform the start stop unit DTC inspection using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	Go to the next step.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B134D:02 displayed?	Yes	Replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

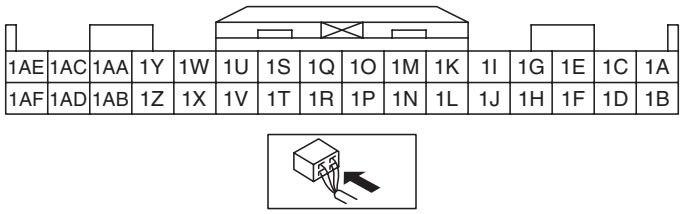
ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B13AF:62 [FRONT BODY CONTROL MODULE (FBCM)]

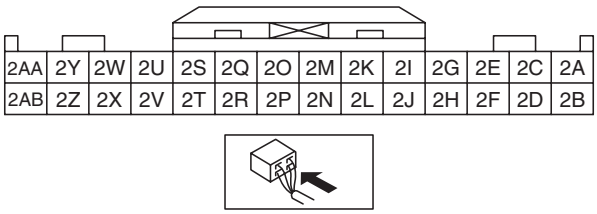
id0902p2008200

System malfunction location	**Headlight LO signal mismatch**
Detection condition	• The condition in which the CAN and module signals are compared and no match is detected between the signals for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Start stop unit malfunction • Light switch malfunction • Front body control module (FBCM) malfunction • Short circuit to ground in wiring harness between start stop unit and front body control module (FBCM) • Open circuit in wiring harness between start stop unit and front body control module (FBCM) • Short circuit to power supply in wiring harness between start stop unit and front body control module (FBCM)

START STOP UNIT
WIRING HARNESS-SIDE CONNECTOR



FBCM
WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT IF MALFUNCTION CAUSE IS START STOP UNIT OR FRONT BODY CONTROL MODULE (FBCM)** • Display start stop unit PID H/L_SW_LOW using the M-MDS. (See 09-02C-151 PID/DATA MONITOR INSPECTION [START STOP UNIT].) • Verify the PID while operating the light switch. • Is the display of PID H/L_SW_LOW normal?	Yes	Go to Step 3.
		No	Go to the next step.
2	**INSPECT LIGHT SWITCH** • Inspect the light switch. (See 09-18-86 LIGHT SWITCH INSPECTION.) • Is the light switch normal?	Yes	Replace the start stop unit, then go to Step 7. (See 09-14-53 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Replace the light switch, then go to Step 7. (See 09-18-84 LIGHT SWITCH REMOVAL/INSTALLATION.)
3	**INSPECT IF MALFUNCTION CAUSE IS FRONT BODY CONTROL MODULE (FBCM) OR WIRING HARNESS** • Display front body control module (FBCM) PID H/L_SW_LOW1 using the M-MDS. (See 09-02K-153 PID/DATA MONITOR INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Verify the PID while operating the light switch. • Is the display of PID H/L_SW_LOW1 normal?	Yes	Go to the next step.
		No	• Perform the CAN malfunction diagnosis flow and inspect the CAN for a malfunction. (See 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)].) (See 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)].) (See 10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)].) (See 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)].) • If there is no malfunction in CAN, replace the front body control module (FBCM), then go to Step 7. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
4	**INSPECT FOR SHORT TO GROUND BETWEEN LIGHT SWITCH AND FRONT BODY CONTROL MODULE (FBCM)** • Switch the light switch off. • Inspect for continuity between front body control module (FBCM) terminal 2W and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 7.
		No	Go to the next step.
5	**INSPECT WIRING HARNESS BETWEEN LIGHT SWITCH AND FRONT BODY CONTROL MODULE (FBCM) FOR OPEN CIRCUIT** • Disconnect the front body control module (FBCM) connector. • Disconnect the start stop unit connector. • Inspect for continuity between front body control module (FBCM) terminal 2W and start stop unit terminal 1X. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 7.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
6	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN LIGHT SWITCH AND FRONT BODY CONTROL MODULE (FBCM)** • Verify that the start stop unit and front body control module (FBCM) connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at front body control module (FBCM) terminal 2W. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness and go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B13AF:62 displayed?	Yes	Replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B13CF:19 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2008400

System malfunction location	**IG2 power supply output circuit malfunction**
Detection condition	• The front body control module (FBCM) detects over-current in IG2 power supply output circuit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Front body control module (FBCM) connector or terminal malfunction • Short to ground in front body control module (FBCM) IG2 power supply output circuit • Front body control module (FBCM) malfunction
System wiring diagram	—

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B13CF:19 displayed?	Yes	Go to the next step.
		No	Go to Step 5.
2	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) IG2 POWER SUPPLY OUTPUT CIRCUIT FOR SHORT TO GROUND** • Verify that the front body control module (FBCM) connector is disconnected. • Inspect for continuity between front body control module (FBCM) terminal 1C and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B13CF:19 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

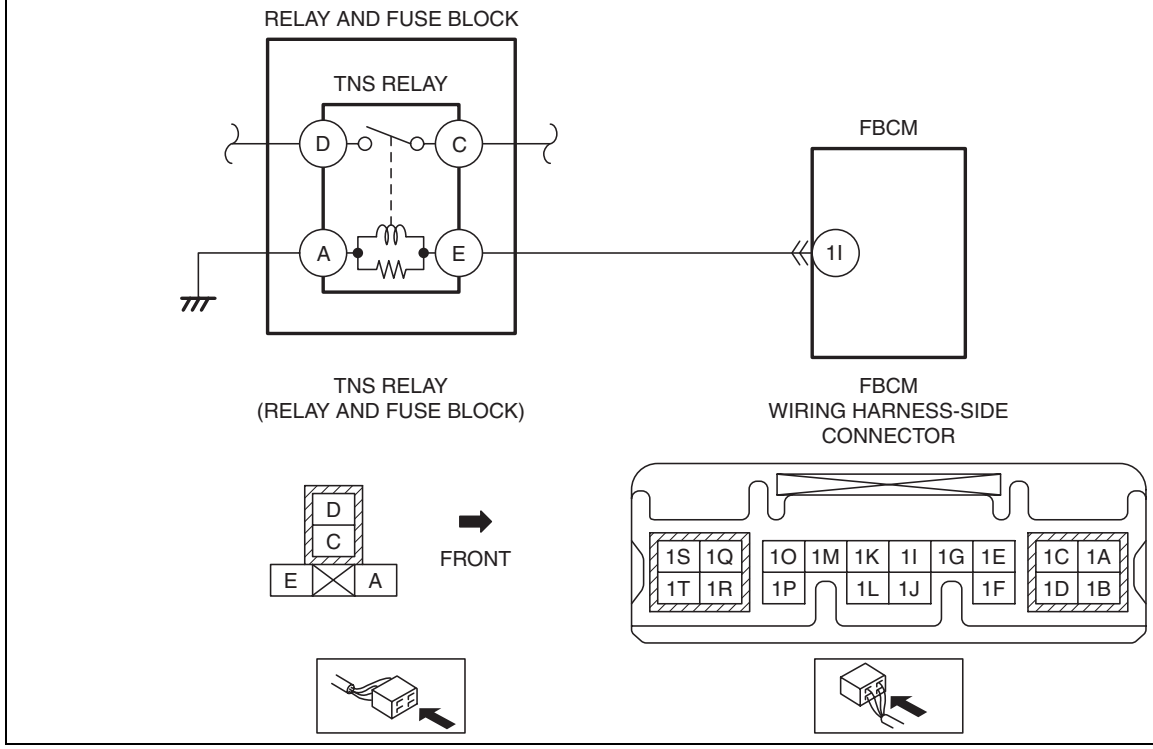
Step	Inspection		Action
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B13D0:11 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2008500

System malfunction location	**TNS circuit malfunction**
Detection condition	• The front body control module (FBCM) detects a short to ground in the TNS relay circuit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• TNS relay malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between TNS relay terminal E and front body control module (FBCM) terminal 1I • Front body control module (FBCM) malfunction



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B13D0:11 displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT TNS RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the TNS relay. • Inspect the TNS relay. (See 09-21-29 RELAY INSPECTION.) • Is the TNS relay normal?	Yes	Go to the next step.
		No	Replace the TNS relay, then go to Step 5.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT TNS RELAY CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the TNS relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Inspect for continuity between front body control module (FBCM) terminal 1I (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness and go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

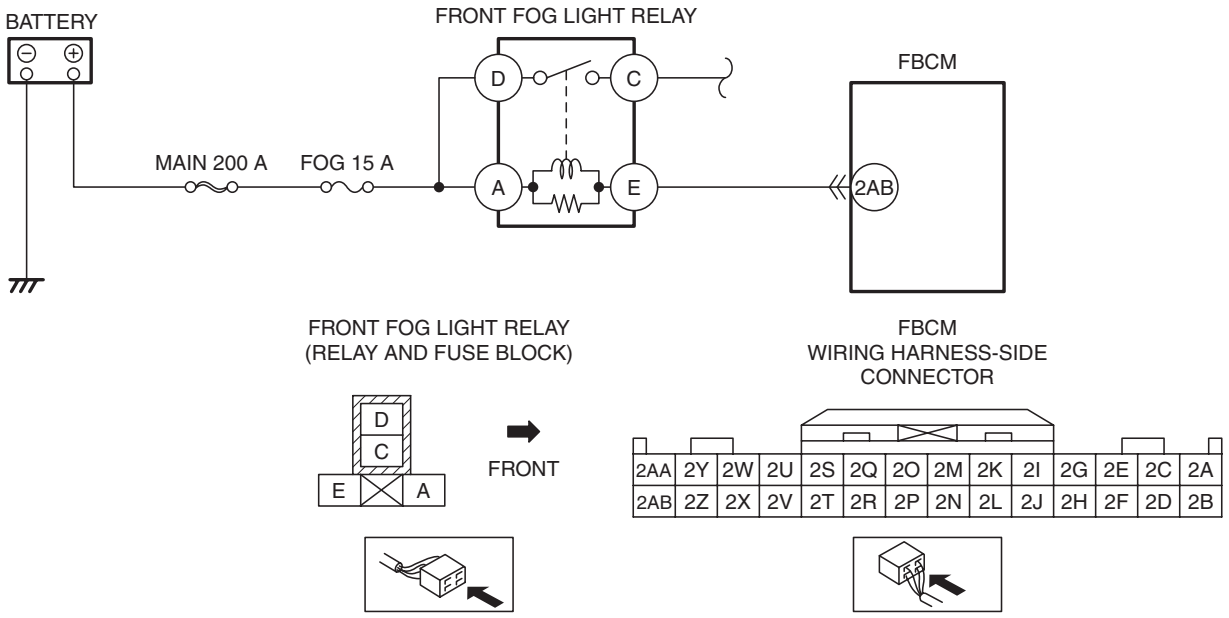
Step	Inspection		Action
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Operate the light switch in TNS position. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B13D0:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B13D2:12 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2008700

System malfunction location	**Front fog light relay circuit malfunction**
Detection condition	• The front body control module (FBCM) detects a short to power supply in the front fog light relay circuit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Front fog light relay malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to power supply in wiring harness between front fog light relay terminal E and front body control module (FBCM) terminal 2AB • Front body control module (FBCM) malfunction



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B13D2:12 displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT FRONT FOG LIGHT RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the front fog light relay. • Inspect the front fog light relay. (See 09-21-29 RELAY INSPECTION.) • Is the front fog light relay normal?	Yes	Go to the next step.
		No	Replace the front fog light relay, then go to Step 5.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT FRONT FOG LIGHT RELAY CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the front fog light relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at front body control module (FBCM) terminal 2AB (vehicle wiring harness side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness and go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

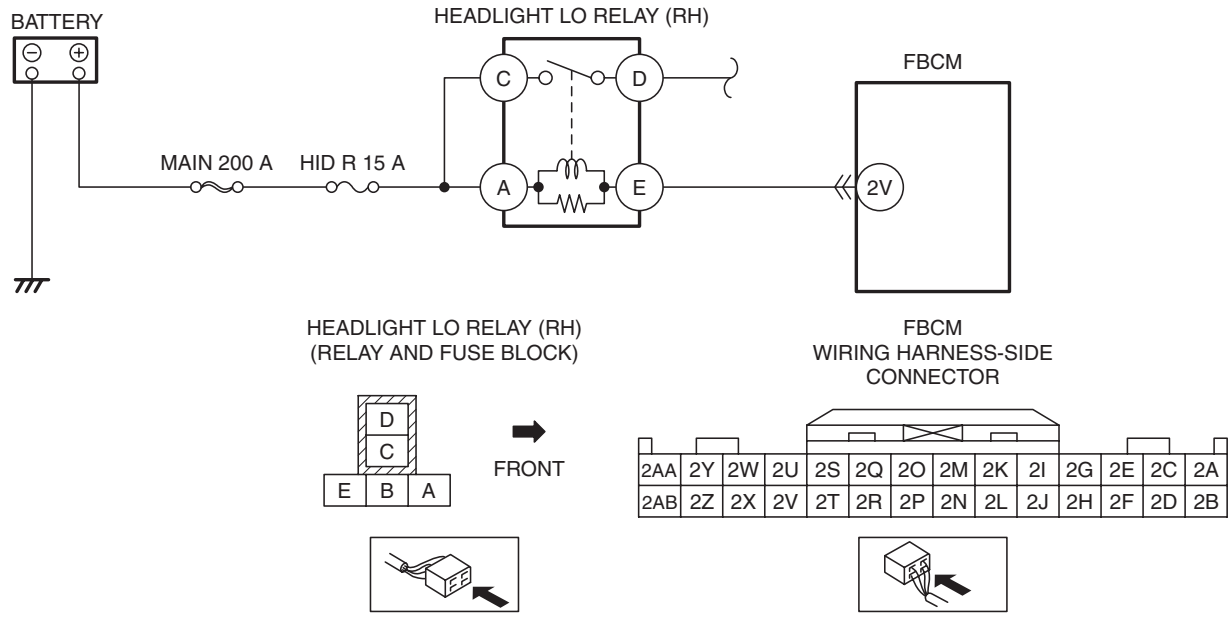
Step	Inspection		Action
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Operate the light switch in HEAD position and fog light switch in F.FOG position. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B13D2:12 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B13FE:12 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2008800

System malfunction location	**Headlight LO relay (RH) circuit malfunction**
Detection condition	• The front body control module (FBCM) detects a short to power supply in the headlight LO relay (RH) circuit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Headlight LO relay (RH) malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to power supply in the wiring harness between headlight LO relay (RH) terminal E and front body control module (FBCM) terminal 2V • Front body control module (FBCM) malfunction



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B13FE:12 displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT HEADLIGHT LO RELAY (RH) FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the headlight LO relay (RH). • Inspect the headlight LO relay (RH). (See 09-21-29 RELAY INSPECTION.) • Is the headlight LO relay (RH) normal?	Yes	Go to the next step.
		No	Replace the headlight LO relay (RH), then go to Step 5.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT HEADLIGHT LO RELAY (RH) CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the headlight LO relay (RH) is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Operate the light switch in HEAD position. • Measure the voltage at FCBCM terminal 2V (vehicle wiring harness side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness and go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

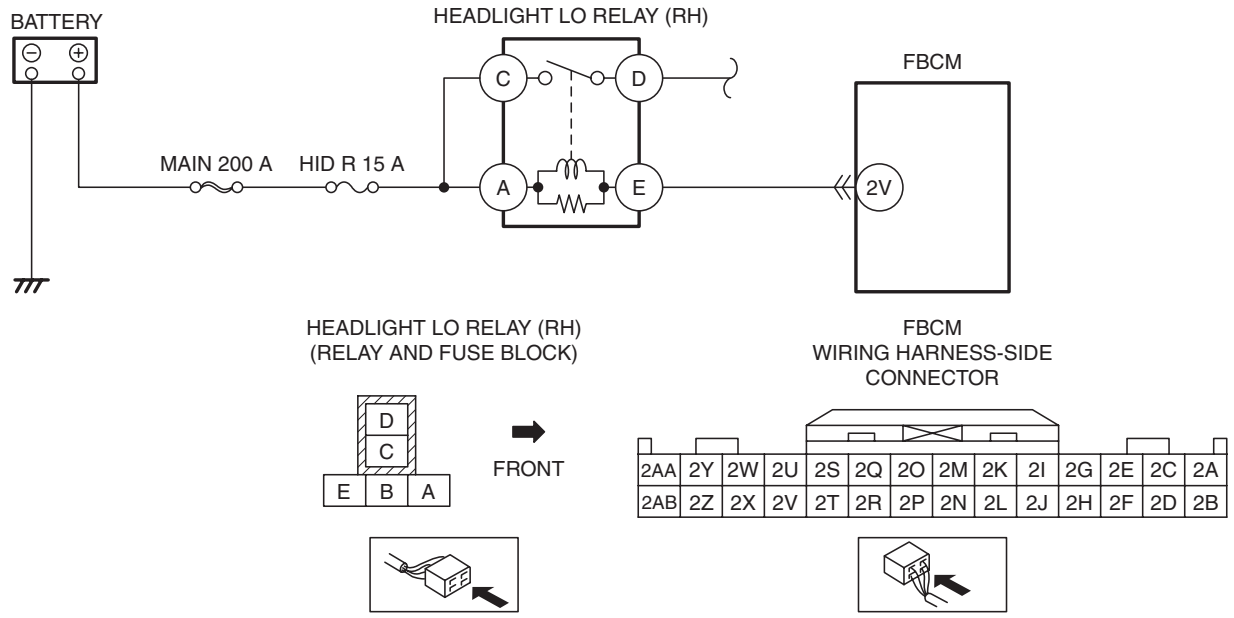
Step	Inspection		Action
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B13FE:12 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B13FE:14 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2009000

System malfunction location	**Headlight LO relay (RH) circuit malfunction**
Detection condition	• The front body control module (FBCM) detects an open or short circuit to ground in the headlight LO relay (RH) circuit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Headlight LO relay (RH) malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in the wiring harness between headlight LO relay (RH) terminal E and front body control module (FBCM) terminal 2V • Open circuit in the wiring harness between headlight LO relay (RH) terminal E and front body control module (FBCM) terminal 2V • Front body control module (FBCM) malfunction



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B13FE:14 displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT HEADLIGHT LO RELAY (RH) FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the headlight LO relay (RH). • Inspect the headlight LO relay (RH). (See 09-21-29 RELAY INSPECTION.) • Is the headlight LO relay (RH) normal?	Yes	Go to the next step.
		No	Replace the headlight LO relay (RH), then go to Step 6.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT HEADLIGHT LO RELAY (RH) CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the headlight LO relay (RH) is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Inspect for continuity between front body control module (FBCM) terminal 2V (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 6.
		No	Go to the next step.
5	**INSPECT HEADLIGHT LO RELAY (RH) CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the headlight LO relay (RH) is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Inspect the wiring harness for continuity between headlight LO relay (RH) terminal E (vehicle wiring harness side) and front body control module (FBCM) terminal 2V (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness and go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

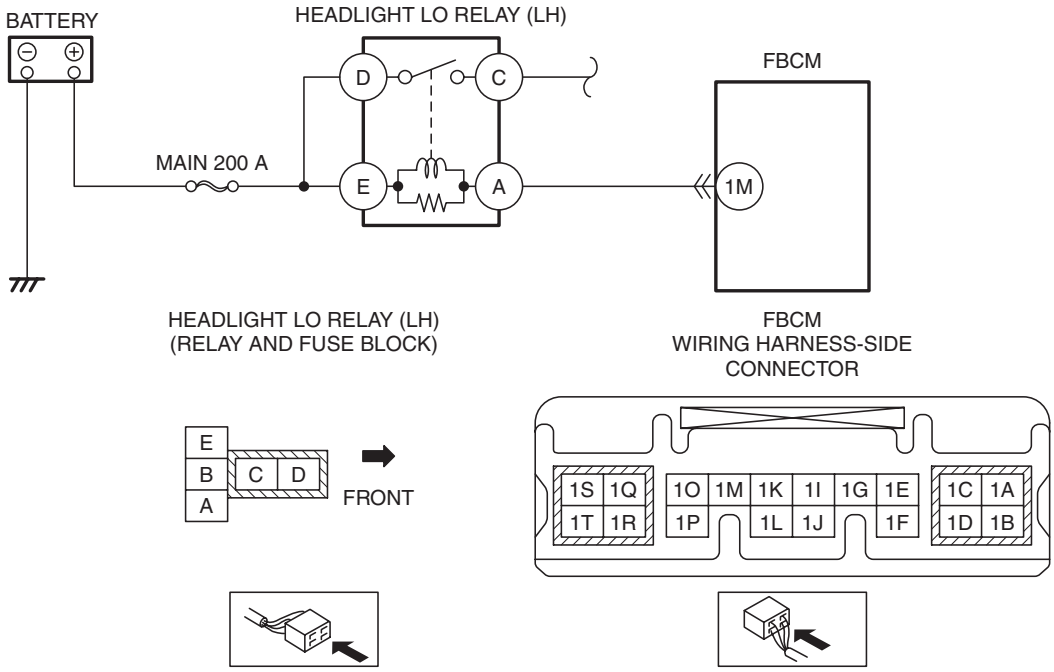
Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B13FE:14 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B141E:12 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2008900

System malfunction location	**Headlight LO relay (LH) circuit malfunction**
Detection condition	• The front body control module (FBCM) detects a short to power supply in the headlight LO relay (LH) circuit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Headlight LO relay (LH) malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to power supply in the wiring harness between headlight LO relay (LH) terminal A and front body control module (FBCM) terminal 1M • Front body control module (FBCM) malfunction



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B141E:12 displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT HEADLIGHT LO RELAY (LH) FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the headlight LO relay (LH). • Inspect the headlight LO relay (LH). (See 09-21-29 RELAY INSPECTION.) • Is the headlight LO relay (LH) normal?	Yes	Go to the next step.
		No	Replace the headlight LO relay (LH), then go to Step 5.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT HEADLIGHT LO RELAY (LH) CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the headlight LO relay (LH) is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at front body control module (FBCM) terminal 1M (vehicle wiring harness side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness and go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Operate the light switch in HEAD position. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B141E:12 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B1C79:97 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2009100

System malfunction location	**Washer motor switch circuit malfunction**
Detection condition	• The front body control module (FBCM) detects a malfunction in the washer motor switch circuit for **2 min or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Start stop unit malfunction • Wiper switch malfunction • Front body control module (FBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **2 min or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1C79:97 displayed?	Yes	Go to the next step.
		No	Go to Step 4.
2	**INSPECT WIPER SWITCH** • Inspect the wiper switch. (See 09-19-47 WINDSHIELD WIPER AND WASHER SWITCH INSPECTION.) • Is the wiper switch normal?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-53 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Replace the wiper and washer switch, then go to the next step. (See 09-19-45 WIPER AND WASHER SWITCH REMOVAL/INSTALLATION.)
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **2 min or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1C79:97 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B1C82:97 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2009200

System malfunction location	**Headlight cleaner motor switch circuit malfunction**
Detection condition	• The front body control module (FBCM) detects a malfunction in headlight cleaner motor switch circuit for **2 min or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Start stop unit malfunction • Wiper switch malfunction • Front body control module (FBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

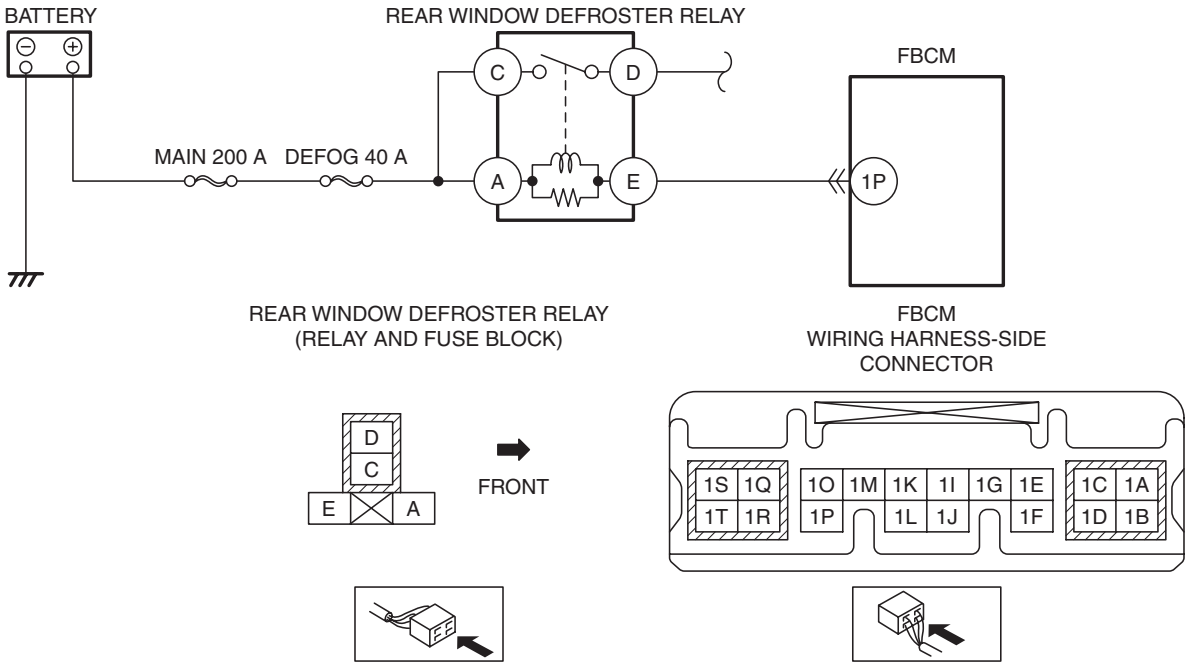
Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **2 min or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1C82:97 displayed?	Yes	Go to the next step.
		No	Go to Step 4.
2	**INSPECT WIPER SWITCH** • Inspect the wiper switch. (See 09-19-47 WINDSHIELD WIPER AND WASHER SWITCH INSPECTION.) • Is the wiper switch normal?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-53 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Replace the wiper and washer switch, then go to the next step. (See 09-19-45 WIPER AND WASHER SWITCH REMOVAL/INSTALLATION.)
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **2 min or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1C82:97 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B1C84:12 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2009300

System malfunction location	**Rear window defroster circuit malfunction**
Detection condition	• The front body control module (FBCM) detects a short to power supply in the rear window defroster relay circuit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Rear window defroster relay malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to power supply in wiring harness between rear window defroster relay terminal E and front body control module (FBCM) terminal 1P • Front body control module (FBCM) malfunction



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1C84:12 displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT REAR WINDOW DEFROSTER RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the rear window defroster relay. • Inspect the rear window defroster relay. (See 09-21-29 RELAY INSPECTION.) • Is the rear window defroster relay normal?	Yes	Go to the next step.
		No	Replace the rear window defroster relay, then go to Step 5.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT REAR WINDOW DEFROSTER RELAY CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the rear window defroster relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at front body control module (FBCM) terminal 1P (vehicle wiring harness side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness and go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

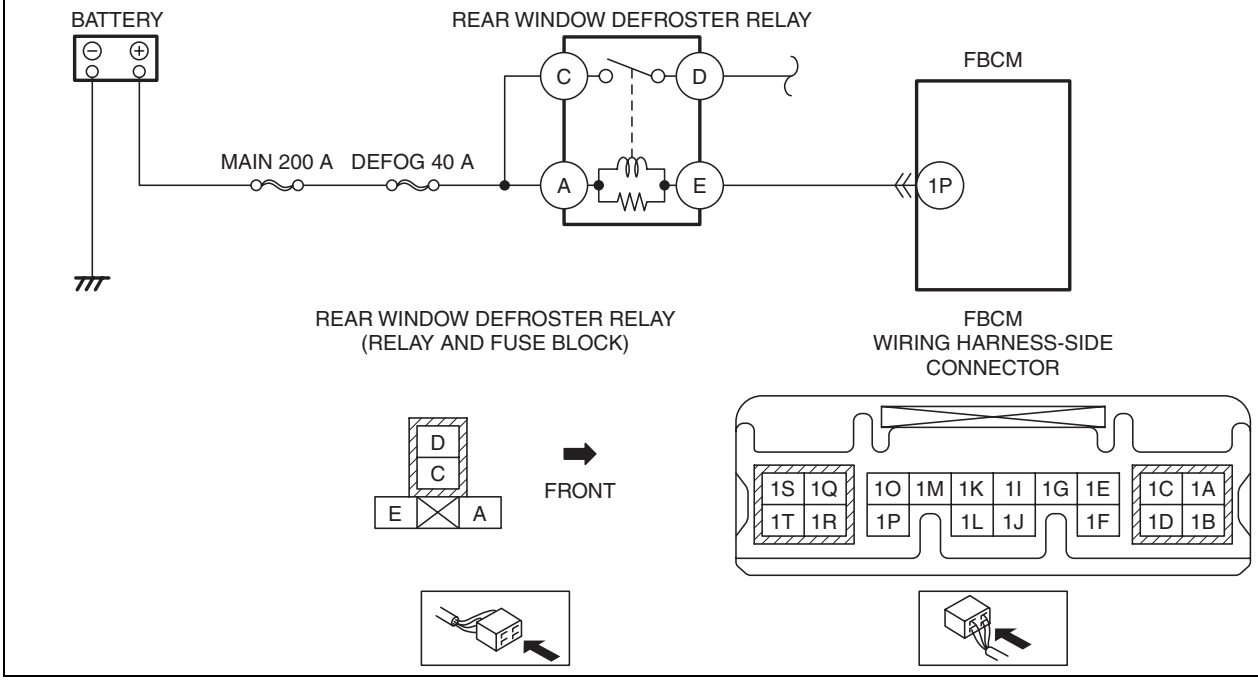
Step	Inspection		Action
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Operate the rear window defroster by pushing rear window defroster switch. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1C84:12 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B1C84:14 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2009400

System malfunction location	**Rear window defroster circuit malfunction**
Detection condition	• The front body control module (FBCM) detects an open or short to ground in the rear window defroster relay circuit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Rear window defroster relay malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between rear window defroster relay terminal E and front body control module (FBCM) terminal 1P • Open circuit in wiring harness between rear window defroster relay terminal E and front body control module (FBCM) terminal 1P • Front body control module (FBCM) malfunction



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1C84:14 displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT REAR WINDOW DEFROSTER RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the rear window defroster relay. • Inspect the rear window defroster relay. (See 09-21-29 RELAY INSPECTION.) • Is the rear window defroster relay normal?	Yes	Go to the next step.
		No	Replace the rear window defroster relay, then go to Step 6.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT REAR WINDOW DEFROSTER RELAY CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the rear window defroster relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Inspect for continuity between front body control module (FBCM) terminal 1P (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 6.
		No	Go to the next step.
5	**INSPECT REAR WINDOW DEFROSTER RELAY CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the rear window defroster relay is removed. • Verify that the front body control module (FBCM) connector is disconnected. • Inspect the wiring harness for continuity between rear window defroster relay terminal E (vehicle wiring harness side) and front body control module (FBCM) terminal 1P (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness and go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1C84:14 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

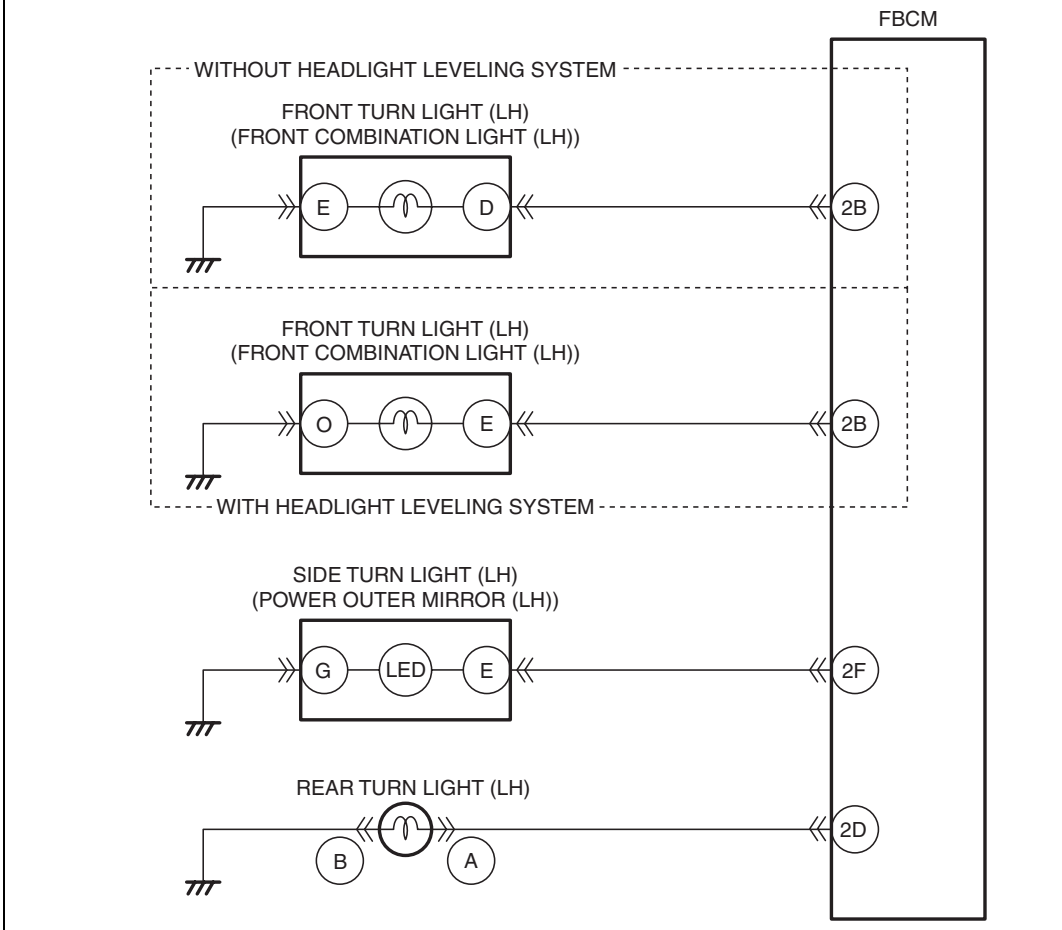
DTC B1D06:11 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2009500

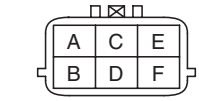
System malfunction location	**Turn light (LH) circuit malfunction**
Detection condition	• The front body control module (FBCM) detects a short to ground in the turn light (LH) circuit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Front combination light (LH) connector or terminal malfunction • Front turn light bulb (LH) malfunction • Rear turn light (LH) connector or terminal malfunction • Rear turn light bulb (LH) malfunction • Malfunction in power outer mirror (LH) connector or terminal • Side turn light (LH) malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — Front combination light (LH) terminal D and front body control module (FBCM) terminal 2B (without headlight leveling system) — Front combination light (LH) terminal E and front body control module (FBCM) terminal 2B (with headlight leveling system) — Power outer mirror (LH) terminal E and front body control module (FBCM) terminal 2F — Rear turn light (LH) terminal A and front body control module (FBCM) terminal 2D • Front body control module (FBCM) malfunction

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

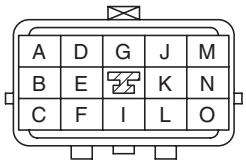
System malfunction location	Turn light (LH) circuit malfunction



FRONT COMBINATION LIGHT (LH) WIRING HARNESS-SIDE CONNECTOR

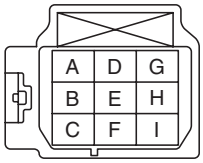


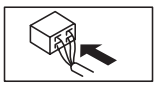
(WITHOUT HEADLIGHT LEVELING SYSTEM)



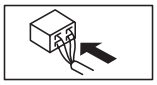
(WITH HEADLIGHT LEVELING SYSTEM)

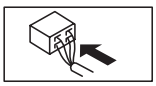
POWER OUTER MIRROR (LH) WIRING HARNESS-SIDE CONNECTOR



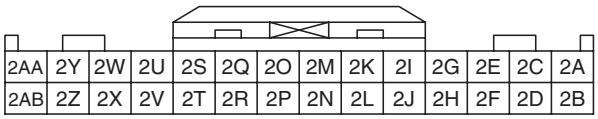


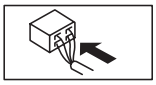
REAR TURN LIGHT (LH) WIRING HARNESS-SIDE CONNECTOR





FBCM WIRING HARNESS-SIDE CONNECTOR





ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Operate the turn switch in LH position. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1D06:11 displayed?	Yes	Go to the next step.
		No	Go to Step 11.
2	**INSPECT FRONT COMBINATION LIGHT (LH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front combination light (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
3	**INSPECT FRONT TURN LIGHT BULB (LH)** • Inspect the front turn light bulb (LH). • Is the front turn light bulb (LH) normal?	Yes	Go to the next step.
		No	Replace the front turn light bulb (LH), then go to Step 10. (See 09-18-39 FRONT TURN LIGHT BULB REMOVAL/INSTALLATION.)
4	**INSPECT REAR TURN LIGHT (LH) CONNECTOR CONDITION** • Disconnect the rear turn light (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
5	**INSPECT REAR TURN LIGHT BULB (LH)** • Inspect the rear turn light bulb (LH). • Is the rear turn light bulb (LH) normal?	Yes	Go to the next step.
		No	Replace the rear turn light bulb (LH), then go to Step 10. (See 09-18-57 REAR TURN LIGHT BULB REMOVAL/INSTALLATION.)
6	**INSPECT POWER OUTER MIRROR (LH) CONNECTOR CONDITION** • Disconnect the power outer mirror (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
7	**INSPECT SIDE TURN LIGHT (LH)** • Inspect the side turn light (LH). (See 09-18-52 SIDE TURN LIGHT INSPECTION.) • Is the side turn light (LH) normal?	Yes	Go to the next step.
		No	Replace the side turn light (LH), then go to Step 10. (See 09-18-52 SIDE TURN LIGHT REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
8	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
9	**INSPECT TURN LIGHT (LH) CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the front combination light (LH), rear turn light (LH), power outer mirror (LH) and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — Front body control module (FBCM) terminal 2B — Front body control module (FBCM) terminal 2F — Front body control module (FBCM) terminal 2D • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
10	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Operate the turn switch in LH position. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1D06:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
11	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B1D06:13 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2009600

System malfunction location	Turn light (LH) circuit malfunction
Detection condition	• The front body control module (FBCM) detects an open or short to power supply in the turn light (LH) circuit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Front combination light (LH) connector or terminal malfunction • Front turn light bulb (LH) malfunction • Rear turn light (LH) connector or terminal malfunction • Rear turn light bulb (LH) malfunction • Malfunction in power outer mirror (LH) connector or terminal • Side turn light (LH) malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to power supply in wiring harness between the following terminals: — Front combination light (LH) terminal D and front body control module (FBCM) terminal 2B (without headlight leveling system) — Front combination light (LH) terminal E and front body control module (FBCM) terminal 2B (with headlight leveling system) — Power outer mirror (LH) terminal E and front body control module (FBCM) terminal 2F — Rear turn light (LH) terminal A and front body control module (FBCM) terminal 2D • Open circuit in wiring harness between the following terminals: — Front combination light (LH) terminal D and front body control module (FBCM) terminal 2B (without headlight leveling system) — Front combination light (LH) terminal E and front body control module (FBCM) terminal 2B (with headlight leveling system) — Power outer mirror (LH) terminal E and front body control module (FBCM) terminal 2F — Rear turn light (LH) terminal A and front body control module (FBCM) terminal 2D • Front body control module (FBCM) malfunction

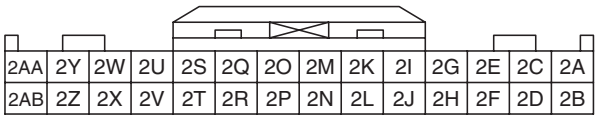
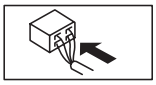
FBCM WIRING HARNESS-SIDE CONNECTOR





ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear DTC for the front body control module (FBCM) using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the DTC inspection for the front body control module (FBCM) using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1D06:13 displayed?	Yes	Go to the next step.
		No	Go to Step 12.
2	**INSPECT FRONT COMBINATION LIGHT (LH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front combination light (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 11.
3	**INSPECT FRONT TURN LIGHT BULB (LH)** • Inspect the front turn light bulb (LH). • Is the front turn light bulb (LH) normal?	Yes	Go to the next step.
		No	Replace the front turn light bulb (LH), then go to Step 11. (See 09-18-39 FRONT TURN LIGHT BULB REMOVAL/INSTALLATION.)
4	**INSPECT REAR TURN LIGHT (LH) CONNECTOR CONDITION** • Disconnect the rear turn light (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 11.
5	**INSPECT REAR TURN LIGHT BULB (LH)** • Inspect the rear turn light bulb (LH). • Is the rear turn light bulb (LH) normal?	Yes	Go to the next step.
		No	Replace the rear turn light bulb (LH), then go to Step 11. (See 09-18-57 REAR TURN LIGHT BULB REMOVAL/INSTALLATION.)
6	**INSPECT POWER OUTER MIRROR (LH) CONNECTOR CONDITION** • Disconnect the power outer mirror (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 11.
7	**INSPECT SIDE TURN LIGHT (LH)** • Inspect the side turn light (LH). (See 09-18-52 SIDE TURN LIGHT INSPECTION.) • Is the side turn light (LH) normal?	Yes	Go to the next step.
		No	Replace the side turn light (LH), then go to Step 11. (See 09-18-52 SIDE TURN LIGHT REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
8	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 11.
9	**INSPECT TURN LIGHT (LH) CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the front combination light (LH), rear turn light (LH), power outer mirror (LH) and front body control module (FBCM) connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). — Front body control module (FBCM) terminal 2B — Front body control module (FBCM) terminal 2F — Front body control module (FBCM) terminal 2D • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT TURN LIGHT (LH) CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the front combination light (LH), rear turn light (LH), power outer mirror (LH) and front body control module (FBCM) connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — Front combination light (LH) terminal D and front body control module (FBCM) terminal 2B (without headlight leveling system) — Front combination light (LH) terminal E and front body control module (FBCM) terminal 2B (with headlight leveling system) — Power outer mirror (LH) terminal E and front body control module (FBCM) terminal 2F — Rear turn light (LH) terminal A and front body control module (FBCM) terminal 2D • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
11	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1D06:13 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
12	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC B1D07:11 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2009700

System malfunction location	**Turn light (RH) circuit malfunction**
Detection condition	• The front body control module (FBCM) detects a short to ground in the turn light (RH) circuit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Front combination light (RH) connector or terminal malfunction • Front turn light bulb (RH) malfunction • Rear turn light (RH) connector or terminal malfunction • Rear turn light bulb (RH) malfunction • Malfunction in power outer mirror (RH) connector or terminal • Side turn light (RH) malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — Front combination light (RH) terminal D and front body control module (FBCM) terminal 1G (without headlight leveling system) — Front combination light (RH) terminal E and front body control module (FBCM) terminal 1G (with headlight leveling system) — Power outer mirror (RH) terminal E and front body control module (FBCM) terminal 1F — Rear turn light (RH) terminal A and front body control module (FBCM) terminal 1E • Front body control module (FBCM) malfunction

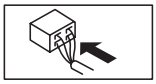
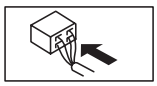
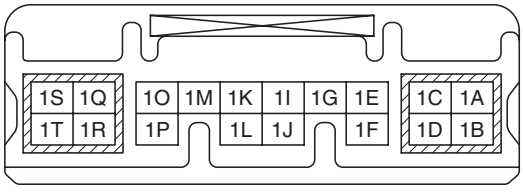
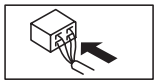
REAR TURN LIGHT (RH) WIRING HARNESS-SIDE CONNECTOR





FBCM WIRING HARNESS-SIDE CONNECTOR





ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Operate the turn switch in RH position. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1D07:11 displayed?	Yes	Go to the next step.
		No	Go to Step 11.
2	**INSPECT FRONT COMBINATION LIGHT (RH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front combination light (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
3	**INSPECT FRONT TURN LIGHT BULB (RH)** • Inspect the front turn light bulb (RH). • Is the front turn light bulb (RH) normal?	Yes	Go to the next step.
		No	Replace the front turn light bulb (RH), then go to Step 10. (See 09-18-39 FRONT TURN LIGHT BULB REMOVAL/INSTALLATION.)
4	**INSPECT REAR TURN LIGHT (RH) CONNECTOR CONDITION** • Disconnect the rear turn light (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
5	**INSPECT REAR TURN LIGHT BULB (RH)** • Inspect the rear turn light bulb (RH). • Is the rear turn light bulb (RH) normal?	Yes	Go to the next step.
		No	Replace the rear turn light bulb (RH), then go to Step 10. (See 09-18-57 REAR TURN LIGHT BULB REMOVAL/INSTALLATION.)
6	**INSPECT POWER OUTER MIRROR (RH) CONNECTOR CONDITION** • Disconnect the power outer mirror (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
7	**INSPECT SIDE TURN LIGHT (RH)** • Inspect the side turn light (RH). (See 09-18-52 SIDE TURN LIGHT INSPECTION.) • Is the side turn light (RH) normal?	Yes	Go to the next step.
		No	Replace the side turn light (RH), then go to Step 10. (See 09-18-52 SIDE TURN LIGHT REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
8	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
9	**INSPECT TURN LIGHT (RH) CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the front combination light (RH), rear turn light (RH), power outer mirror (RH) and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — Front body control module (FBCM) terminal 1G — Front body control module (FBCM) terminal 1F — Front body control module (FBCM) terminal 1E • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
10	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Operate the turn switch in RH position. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1D07:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
11	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

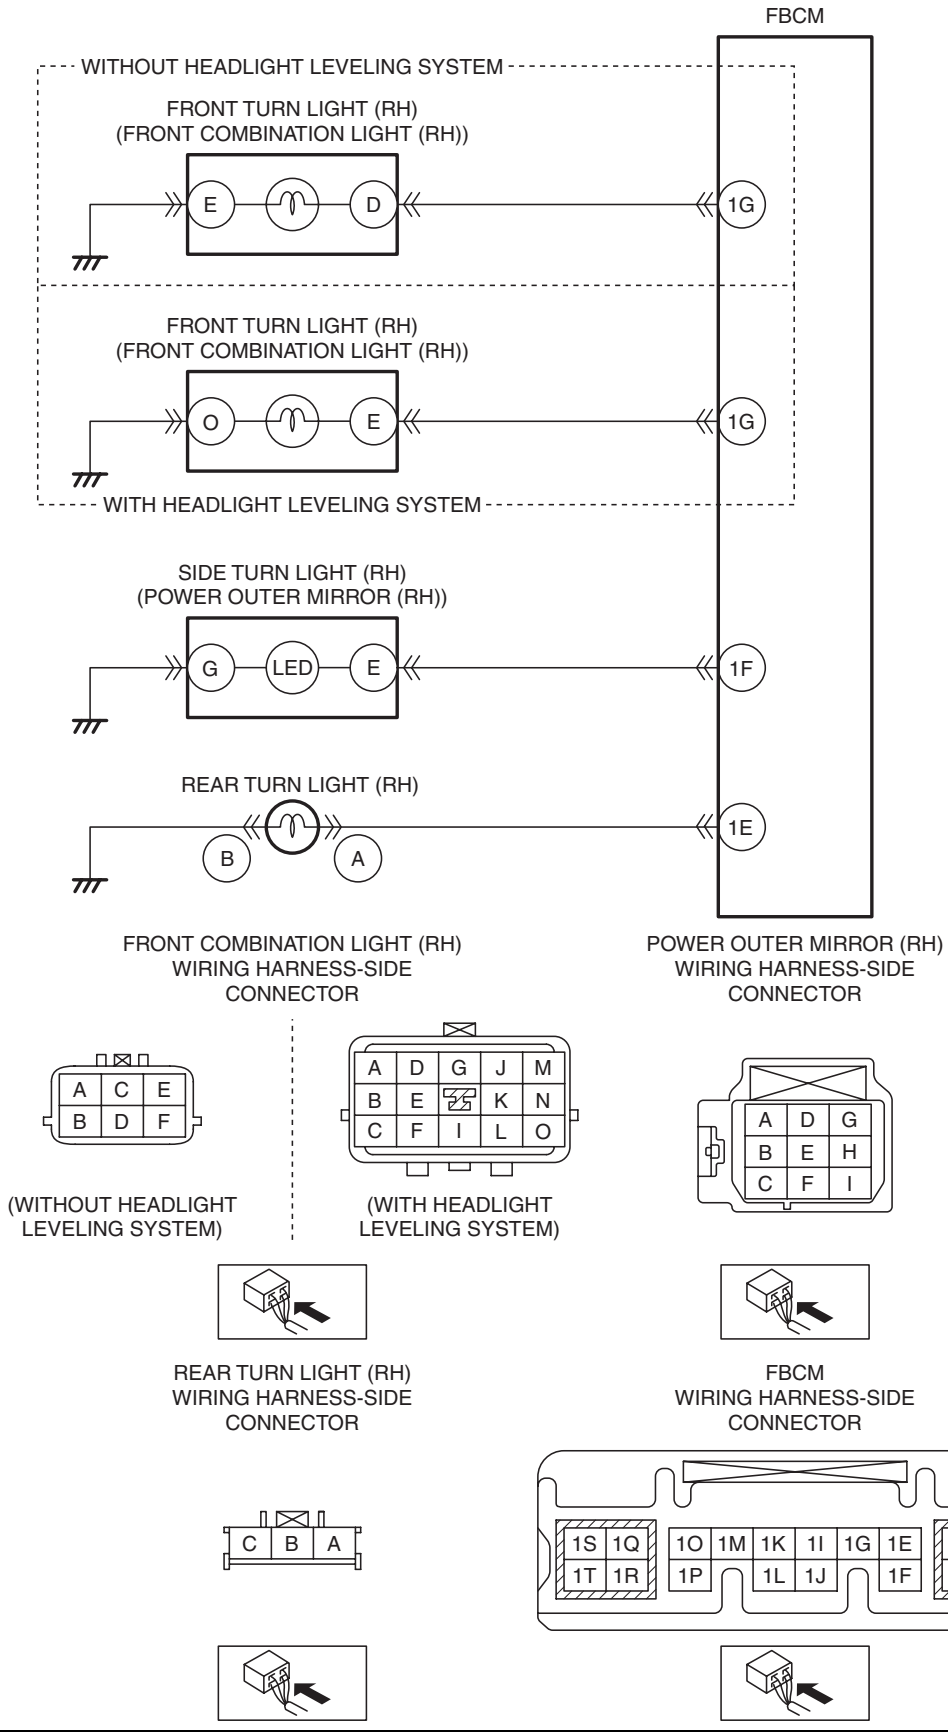
DTC B1D07:13 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2009800

System malfunction location	**Turn light (RH) circuit malfunction**
Detection condition	• The front body control module (FBCM) detects an open or short to power supply in the turn light (RH) circuit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Front combination light (RH) connector or terminal malfunction • Front turn light bulb (RH) malfunction • Rear turn light (RH) connector or terminal malfunction • Rear turn light bulb (RH) malfunction • Malfunction in power outer mirror (RH) connector or terminal • Side turn light (RH) malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to power supply in wiring harness between the following terminals: — Front combination light (RH) terminal D and front body control module (FBCM) terminal 1G (without headlight leveling system) — Front combination light (RH) terminal E and front body control module (FBCM) terminal 1G (with headlight leveling system) — Power outer mirror (RH) terminal E and front body control module (FBCM) terminal 1F — Rear turn light (RH) terminal A and front body control module (FBCM) terminal 1E • Open circuit in wiring harness between the following terminals: — Front combination light (RH) terminal D and front body control module (FBCM) terminal 1G (without headlight leveling system) — Front combination light (RH) terminal E and front body control module (FBCM) terminal 1G (with headlight leveling system) — Power outer mirror (RH) terminal E and front body control module (FBCM) terminal 1F — Rear turn light (RH) terminal A and front body control module (FBCM) terminal 1E • Front body control module (FBCM) malfunction

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

System malfunction location	Turn light (RH) circuit malfunction



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear DTC for the front body control module (FBCM) using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the DTC inspection for the front body control module (FBCM) using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1D07:13 displayed?	Yes	Go to the next step.
		No	Go to Step 12.
2	**INSPECT FRONT COMBINATION LIGHT (RH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front combination light (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 11.
3	**INSPECT FRONT TURN LIGHT BULB (RH)** • Inspect the front turn light bulb (RH). • Is the front turn light bulb (RH) normal?	Yes	Go to the next step.
		No	Replace the front turn light bulb (RH), then go to Step 11. (See 09-18-39 FRONT TURN LIGHT BULB REMOVAL/INSTALLATION.)
4	**INSPECT REAR TURN LIGHT (RH) CONNECTOR CONDITION** • Disconnect the rear turn light (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 11.
5	**INSPECT REAR TURN LIGHT BULB (RH)** • Inspect the rear turn light bulb (RH). • Is the rear turn light bulb (RH) normal?	Yes	Go to the next step.
		No	Replace the rear turn light bulb (RH), then go to Step 11. (See 09-18-57 REAR TURN LIGHT BULB REMOVAL/INSTALLATION.)
6	**INSPECT POWER OUTER MIRROR (RH) CONNECTOR CONDITION** • Disconnect the power outer mirror (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 11.
7	**INSPECT SIDE TURN LIGHT (RH)** • Inspect the side turn light (RH). (See 09-18-52 SIDE TURN LIGHT INSPECTION.) • Is the side turn light (RH) normal?	Yes	Go to the next step.
		No	Replace the side turn light (RH), then go to Step 11. (See 09-18-52 SIDE TURN LIGHT REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
8	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 11.
9	**INSPECT TURN LIGHT (RH) CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the front combination light (RH), rear turn light (RH), power outer mirror (RH) and front body control module (FBCM) connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). — Front body control module (FBCM) terminal 1G — Front body control module (FBCM) terminal 1F — Front body control module (FBCM) terminal 1E • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT TURN LIGHT (RH) CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the front combination light (RH), rear turn light (RH), power outer mirror (RH) and front body control module (FBCM) connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — Front combination light (RH) terminal D and front body control module (FBCM) terminal 1G (without headlight leveling system) — Front combination light (RH) terminal E and front body control module (FBCM) terminal 1G (with headlight leveling system) — Power outer mirror (RH) terminal E and front body control module (FBCM) terminal 1F — Rear turn light (RH) terminal A and front body control module (FBCM) terminal 1E • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
11	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC B1D07:13 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
12	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC C1126:11 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2009900

System malfunction location	**Parking light (LH/RH) circuit malfunction**
Detection condition	• The front body control module (FBCM) detects a short to ground in the parking light (LH/RH) circuit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Front combination light (LH/RH) connector or terminal malfunction • Parking light bulb (LH/RH) malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — Front combination light (LH/RH) terminal C and front body control module (FBCM) terminal 1J (without headlight leveling system) — Front combination light (LH/RH) terminal D and front body control module (FBCM) terminal 1J (with headlight leveling system) • Front body control module (FBCM) malfunction

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

FBCM WIRING HARNESS-SIDE CONNECTOR

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC C1126:11 displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT FRONT COMBINATION LIGHT (LH/RH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front combination light (LH/RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT PARKING LIGHT BULB (LH/RH)** • Inspect the parking light bulb (LH/RH). • Is the parking light bulb (LH/RH) normal?	Yes	Go to the next step.
		No	Replace the parking light bulb (LH/RH), then go to Step 6. (See 09-18-36 PARKING LIGHT BULB REMOVAL/INSTALLATION.)
4	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT PARKING LIGHT (LH/RH) CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the front combination light (LH/RH) and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between front body control module (FBCM) terminal 1J (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC C1126:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Operate the light switch in TNS position. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC C1126:13 displayed?	Yes	Go to the next step.
		No	Go to Step 8.
2	**INSPECT FRONT COMBINATION LIGHT (LH/RH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front combination light (LH/RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT PARKING LIGHT BULB (LH/RH)** • Inspect the parking light bulb (LH/RH). • Is the parking light bulb (LH/RH) normal?	Yes	Go to the next step.
		No	Replace the parking light bulb (LH/RH), then go to Step 7. (See 09-18-36 PARKING LIGHT BULB REMOVAL/INSTALLATION.)
4	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
5	**INSPECT PARKING LIGHT (LH/RH) CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the front combination light (LH/RH) and front body control module (FBCM) connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at front body control module (FBCM) 1J terminal (vehicle wiring harness side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 7.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
6	**INSPECT PARKING LIGHT (LH/RH) CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the front combination light (LH/RH) and front body control module (FBCM) connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — Front combination light (LH/RH) terminal C and front body control module (FBCM) terminal 1J (without headlight leveling system) — Front combination light (LH/RH) terminal D and front body control module (FBCM) terminal 1J (with headlight leveling system) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Operate the light switch in TNS position. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC C1126:13 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC U0001:88/U0100:00/U0101:00/U0121:00/U0155:00/U0214:00/U023A:00/U0515:00 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2010100

System malfunction location	**U0001:88** • **Module communication error (HS-CAN)** **U0100:00** • **Communication error with PCM** **U0101:00** • **Communication error with TCM** **U0121:00** • **Communication error with DSC HU/CM** **U0155:00** • **Communication error with instrument cluster** **U0214:00** • **Communication error with start stop unit** **U023A:00** • **Communication error with forward sensing camera (FSC)** **U0515:00** • **SAS control module communication error**
Detection condition	• U0001:88 — The front body control module (FBCM) detects CAN bus communication line (HS-CAN) malfunction **10 times** continuously. • U0100:00 — The front body control module (FBCM) could not receive CAN signal from the PCM for **5 s or more**. • U0101:00 — The front body control module (FBCM) could not receive CAN signal from the TCM for **5 s or more**. • U0121:00 — The front body control module (FBCM) could not receive CAN signal from the DSC HU/CM for **5 s or more**. • U0155:00 — The front body control module (FBCM) could not receive CAN signal from the instrument cluster for **5 s or more**. • U0214:00 — The front body control module (FBCM) could not receive CAN signal from the start stop unit for **5 s or more**. • U023A:00 — The front body control module (FBCM) could not receive CAN signal from the forward sensing camera (FSC) for **5 s or more**. • U0515:00 — The front body control module (FBCM) could not receive CAN signal from the SAS control module for **5 s or more**.
Fail-safe	• U0001:88 — Control at the default signal value after holding the previous value for 5 s. • U0100:00 — Control at the default signal value after holding the previous value for 5 s. • U0101:00 — Control at the default signal value after holding the previous value for 5 s. • U0121:00 — Control at the default signal value after holding the previous value for 5 s. • U0155:00 — Control at the default signal value after holding the previous value for 5 s. • U0214:00 — Control at the default signal value after holding the previous value for 5 s. • U023A:00 — Control at the default signal value after holding the previous value for 5 s. • U0515:00 — Control at the default signal value after holding the previous value for 5 s.
Possible cause	• Malfunction in CAN bus communication line • Malfunction in CAN line between the PCM and front body control module (FBCM) • Malfunction in CAN line between the TCM and front body control module (FBCM) • Malfunction in CAN line between the DSC HU/CM and front body control module (FBCM) • Malfunction in CAN line between the instrument cluster and front body control module (FBCM) • Malfunction in CAN line between the start stop unit and front body control module (FBCM) • Malfunction in CAN line between the forward sensing camera (FSC) and front body control module (FBCM) • Malfunction in CAN line between the SAS control module and front body control module (FBCM)
System wiring diagram	—

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

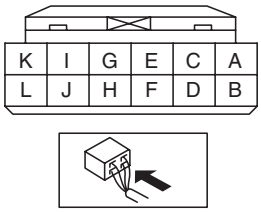
- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See 10-02A-1 FOREWORD [SKYACTIV-G 2.0 (L.H.D.)].) (See 10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)].) (See 10-02C-1 FOREWORD [SKYACTIV-D 2.2 (L.H.D.)].) (See 10-02D-1 FOREWORD [SKYACTIV-D 2.2 (R.H.D.)].)

DTC U0164:68 [FRONT BODY CONTROL MODULE (FBCM)]

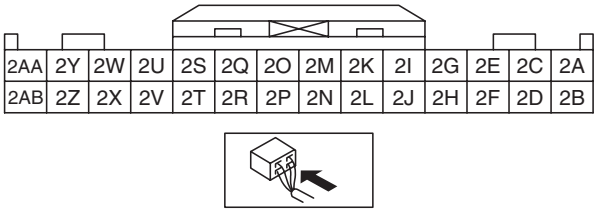
id0902p2010200

System malfunction location	Communication error between climate control unit
Detection condition	• The front body control module (FBCM) could not receive signals from the climate control unit for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Climate control unit connector or terminal malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between climate control unit terminal K and front body control module (FBCM) terminal 2J • Short to power supply in wiring harness between climate control unit terminal K and front body control module (FBCM) terminal 2J • Open circuit in wiring harness between climate control unit terminal K and front body control module (FBCM) terminal 2J • Climate control unit malfunction • Front body control module (FBCM) malfunction

CLIMATE CONTROL UNIT
WIRING HARNESS-SIDE CONNECTOR



FBCM
WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U0164:68 displayed?	Yes	Go to the next step.
		No	Go to Step 9.
2	**INSPECT CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the climate control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
4	**INSPECT CLIMATE CONTROL UNIT CIRCUIT FOR SHORT TO GROUND** • Verify that the climate control unit and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between front body control module (FBCM) terminal 2J (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 8.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
5	**INSPECT CLIMATE CONTROL UNIT CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the climate control unit and front body control module (FBCM) connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at front body control module (FBCM) terminal 2J (vehicle wiring harness side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which is shorted to power supply, then go to Step 8.
6	**INSPECT CLIMATE CONTROL UNIT CIRCUIT FOR OPEN CIRCUIT** • Verify that the climate control unit and front body control module (FBCM) connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the wiring harness for continuity between climate control unit terminal K (vehicle wiring harness side) and front body control module (FBCM) terminal 2J (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 8.
7	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS CLIMATE CONTROL UNIT** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U0164:68 displayed?	Yes	Replace the climate control unit, then go to the next step. (See 07-40B-16 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].)
		No	Go to Step 9.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U0164:68 displayed?	Yes	Replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

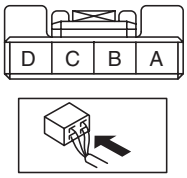
ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC U0231:68 [FRONT BODY CONTROL MODULE (FBCM)]

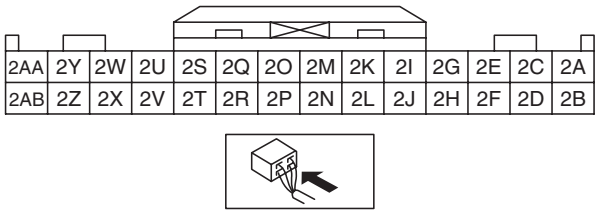
id0902p2010300

System malfunction location	**Communication error with auto-light sensor/rain sensor**
Detection condition	• The front body control module (FBCM) receives error signals from the auto-light sensor/rain sensor for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Auto-light sensor/rain sensor connector or terminal malfunction • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between auto-light sensor/rain sensor terminal A and front body control module (FBCM) terminal 2G • Short to power supply in wiring harness between auto-light sensor/rain sensor terminal A and front body control module (FBCM) terminal 2G • Open circuit in wiring harness between auto-light sensor/rain sensor terminal A and front body control module (FBCM) terminal 2G • Auto-light sensor/rain sensor malfunction • Front body control module (FBCM) malfunction

AUTO LIGHT SENSOR /
RAIN SENSOR
WIRING HARNESS-SIDE CONNECTOR



FBCM
WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U0231:68 displayed?	Yes	Go to the next step.
		No	Go to Step 9.
2	**INSPECT AUTO-LIGHT SENSOR/RAIN SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the auto-light sensor/rain sensor connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
4	**INSPECT AUTO-LIGHT SENSOR/RAIN SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the auto-light sensor/rain sensor and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between front body control module (FBCM) terminal 2G (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 8.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
5	**INSPECT AUTO-LIGHT SENSOR/RAIN SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the auto-light sensor/rain sensor and front body control module (FBCM) connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at front body control module (FBCM) terminal 2G (vehicle wiring harness side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which is shorted to power supply, then go to Step 8.
6	**INSPECT AUTO-LIGHT SENSOR/RAIN SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the auto-light sensor/rain sensor and front body control module (FBCM) connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the wiring harness for continuity between auto-light sensor/rain sensor terminal A (vehicle wiring harness side) and front body control module (FBCM) terminal 2G (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 8.
7	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS AUTO-LIGHT SENSOR/RAIN SENSOR** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U0231:68 displayed?	Yes	Replace the auto-light sensor/rain sensor, then go to the next step. (See 09-19-58 RAIN SENSOR REMOVAL/ INSTALLATION.)
		No	Go to Step 9.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U0231:68 displayed?	Yes	replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

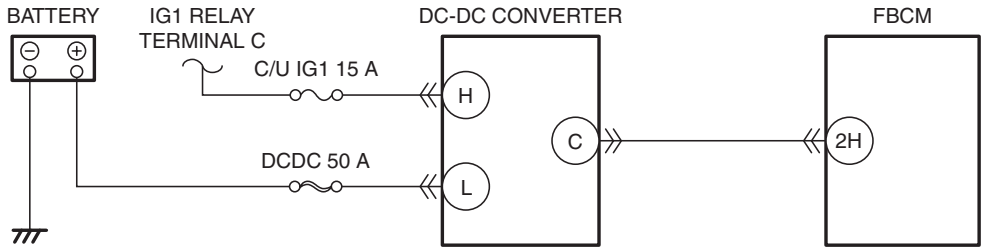
ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC U0298:68 [FRONT BODY CONTROL MODULE (FBCM)]

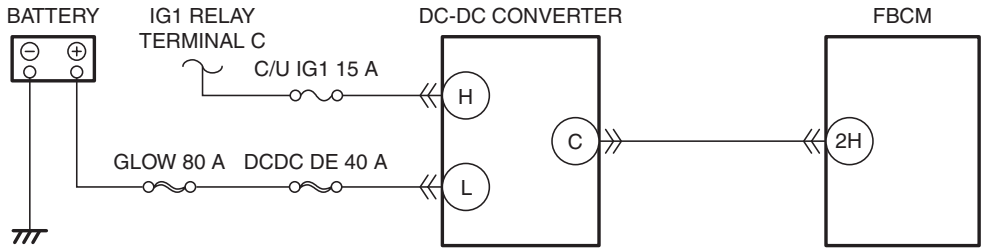
id0902p2010400

System malfunction location	**Communication error with DC-DC converter**
Detection condition	• The front body control module (FBCM) detects a communication error with the DC-DC converter.
Fail-safe	—
Possible cause	• Malfunction in communication line between front body control module (FBCM) and DC-DC converter • DC-DC converter connector terminal malfunction • Open or short to ground in DC-DC converter power supply circuit — Short to ground in wiring harness between battery positive terminal and DC-DC converter terminal L — DCDC 50 A fuse malfunction (SKYACTIV-G 2.0) — DCDC DE 40 A fuse malfunction (SKYACTIV-D 2.2) — GLOW 80 A fuse malfunction (SKYACTIV-D 2.2) — Open circuit in wiring harness between battery positive terminal and DC-DC converter terminal L • Open or short to ground in DC-DC converter power supply circuit — Short to ground in wiring harness between IG1 relay terminal C and DC-DC converter terminal H — C/U IG1 15 A fuse malfunction — Open circuit in wiring harness between IG1 relay terminal C and DC-DC converter terminal H • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between DC-DC converter terminal C and front body control module (FBCM) terminal 2H • Open circuit in wiring harness between DC-DC converter terminal C and front body control module (FBCM) terminal 2H • DC-DC converter malfunction • Front body control module (FBCM) malfunction

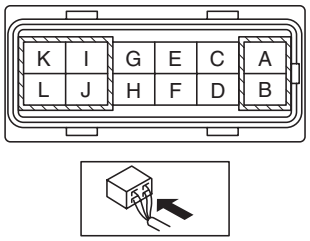
SKYACTIV-G 2.0



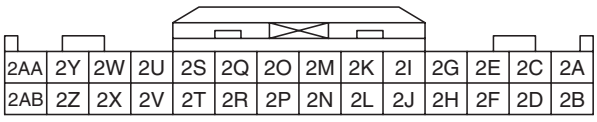
SKYACTIV-D 2.2



DC-DC CONVERTER
WIRING HARNESS-SIDE CONNECTOR



FBCM
WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U0298:68 displayed?	Yes	Go to the next step.
		No	Go to Step 10.
2	**INSPECT DC-DC CONVERTER CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the DC-DC converter connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
3	**INSPECT DC-DC CONVERTER POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Verify that the DC-DC connector is disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Measure the voltage at DC-DC converter terminal L (vehicle wiring harness side). • Is the voltage B+?	Yes	Go to the next step.
		No	Inspect the following fuses: • DCDC 50 A fuse (SKYACTIV-G 2.0) • DCDC DE 40 A fuse (SKYACTIV-D 2.2) • GLOW 80 A fuse (SKYACTIV-D 2.2) — If a fuse is burnt out: • Repair or replace the wiring harness which is shorted to ground. • Replace the fuse. — If a fuse is damaged: • Replace the fuse. — If the fuse is normal: • Repair or replace the wiring harness which has an open circuit. Go to Step 9.
4	**INSPECT DC-DC CONVERTER POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Verify that the DC-DC connector is disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at DC-DC converter terminal H (vehicle wiring harness side). • Is the voltage B+?	Yes	Go to the next step.
		No	Inspect the C/U IG1 15 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the fuse. • If a fuse is damaged: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness which has an open circuit. Go to Step 9.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
5	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
6	**INSPECT DC-DC CONVERTER LIN COMMUNICATION CIRCUIT FOR SHORT TO GROUND** • Verify that the DC-DC converter and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between DC-DC converter terminal C (vehicle wiring harness) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 9.
		No	Go to the next step.
7	**INSPECT DC-DC CONVERTER LIN COMMUNICATION CIRCUIT FOR OPEN CIRCUIT** • Verify that the DC-DC converter and front body control module (FBCM) connectors are disconnected. • Inspect the wiring harness for continuity between DC-DC converter terminal C (vehicle wiring harness side) and front body control module (FBCM) terminal 2H (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 9.
8	**INSPECT DC-DC CONVERTER** • Inspect the DC-DC converter. (See 01-17A-27 DC-DC CONVERTER INSPECTION [SKYACTIV-G 2.0].) • Is the DC-DC converter normal?	Yes	Go to the next step.
		No	Replace the DC-DC converter, then go to the next step. (See 01-17A-26 DC-DC CONVERTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-22 DC-DC CONVERTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
9	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U0298:68 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
10	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC U0338:09 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2010500

System malfunction location	**Error light switch signal received from start stop unit**
Detection condition	• The front body control module (FBCM) receives CAN error signals from the start stop unit **3 times** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Light switch malfunction • Start stop unit malfunction • Front body control module (FBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U0338:09 displayed?	Yes	Go to the next step.
		No	Go to Step 5.
2	**INSPECT LIGHT SWITCH** • Inspect the light switch. (See 09-18-86 LIGHT SWITCH INSPECTION.) • Is the light switch normal?	Yes	Go to the next step.
		No	Replace the light switch, then go to Step 4. (See 09-18-84 LIGHT SWITCH REMOVAL/INSTALLATION.)
3	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS START STOP UNIT** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U0338:09 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-53 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to Step 5.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on). • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U0338:09 displayed?	Yes	replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC U0401:68 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2010600

System malfunction location	**Error signal received from PCM**
Detection condition	• The front body control module (FBCM) receives error ECT sensor or ambient temperature sensor signals from the PCM for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• ECT sensor malfunction • Ambient temperature sensor malfunction • PCM malfunction • Front body control module (FBCM) malfunction
System wiring diagram	—

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U0401:68 displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is the ECT sensor normal?	Yes	Go to the next step.
		No	Replace the ECT sensor, then go to Step 5. (See 01-40-41 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3	**INSPECT AMBIENT TEMPERATURE SENSOR** • Inspect the ambient temperature sensor. (See 07-40B-11 AMBIENT TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) (See 07-40A-23 AMBIENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is the ambient temperature sensor normal?	Yes	Go to the next step.
		No	Replace the ambient temperature sensor, then go to Step 5. (See 07-40B-11 AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) (See 07-40A-22 AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
4	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS PCM** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U0401:68 displayed?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U0401:68 displayed?	Yes	replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC U0415:68 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2010700

System malfunction location	**Error signal received from DSC HU/CM**
Detection condition	• The front body control module (FBCM) receives error Low-G (XY) sensor (built-into SAS control module) signals from the DSC HU/CM for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Low-G (XY) sensor (built-into SAS control module) malfunction • DSC HU/CM malfunction • Front body control module (FBCM) malfunction
System wiring diagram	—

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U0415:68 displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**VERIFY DSC HU/CM DTCs** • Perform the DTC inspection for the DSC HU/CM using the M-MDS. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
3	**VERIFY SAS CONTROL MODULE DTCs** • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 08-02-11 DTC TABLE.)
		No	Go to the next step.
4	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS DSC HU/CM** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U0415:68 displayed?	Yes	Replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U0415:68 displayed?	Yes	replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC U053B:68 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2010800

System malfunction location	**Error signal received from forward sensing camera (FSC)**
Detection condition	• The front body control module (FBCM) receives error signals from the forward sensing camera (FSC) for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Forward sensing camera (FSC) malfunction • Front body control module (FBCM) malfunction
System wiring diagram	—

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U053B:68 displayed?	Yes	Go to the next step.
		No	Go to Step 5.
2	**VERIFY FORWARD SENSING CAMERA (FSC) DTCs** • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].)
		No	Go to the next step.
3	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS FORWARD SENSING CAMERA (FSC)** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U053B:68 displayed?	Yes	Replace the forward sensing camera (FSC), then go to the next step. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
		No	Go to Step 5.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U053B:68 displayed?	Yes	replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC U0599:68 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2010900

System malfunction location	**Error signal received from DC-DC converter**
Detection condition	• The front body control module (FBCM) receives error signals from the DC-DC converter for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• DC-DC converter malfunction • Front body control module (FBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

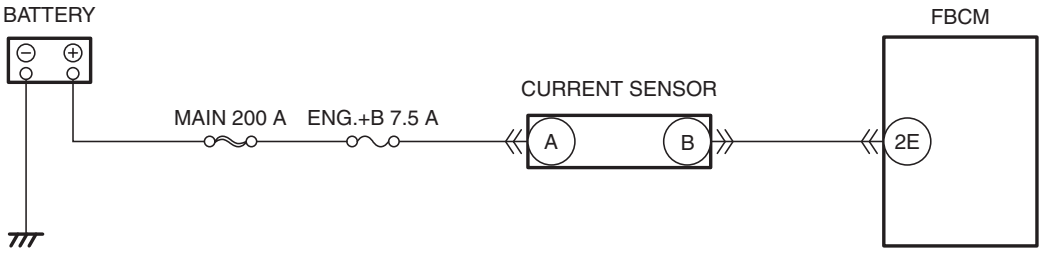
Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS DC-DC CONVERTER** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U0599:68 displayed?	Yes	Replace the DC-DC converter, then go to the next step. (See 01-17A-26 DC-DC CONVERTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-22 DC-DC CONVERTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U0599:68 displayed?	Yes	replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

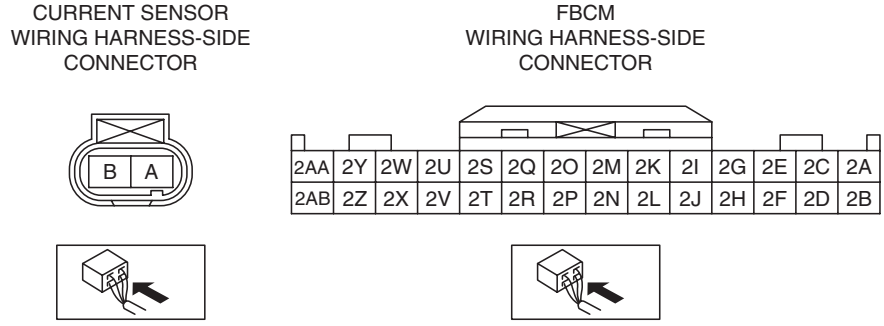
ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC U1007:68 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2011000

System malfunction location	**Communication error with current sensor**
Detection condition	• The front body control module (FBCM) detects communication error with the current sensor for **5 s**.
Fail-safe	—
Possible cause	• Malfunction in communication line between front body control module (FBCM) and current sensor • Current sensor connector or terminal malfunction • Short to ground or open circuit in current sensor power supply circuit — Short to ground in wiring harness between battery positive terminal and current sensor terminal A — MAIN 200 A fuse malfunction — ENG.+B 7.5 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and current sensor terminal A • Front body control module (FBCM) connector or terminal malfunction • Short to ground in wiring harness between current sensor terminal B and front body control module (FBCM) terminal 2E • Open circuit in wiring harness between current sensor terminal B and front body control module (FBCM) terminal 2E • Current sensor malfunction • Front body control module (FBCM) malfunction





ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U1007:68 displayed?	Yes	Go to the next step.
		No	Go to Step 9.
2	**INSPECT CURRENT SENSOR CONNECTOR** • Switch the ignition to off. • Disconnect the current sensor connector. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
3	**INSPECT CURRENT SENSOR POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Verify that the current sensor connector is disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Measure the voltage at current sensor terminal A (vehicle wiring harness side). • Is the voltage B+?	Yes	Go to the next step.
		No	INSPECT MAIN 200 A FUSE AND ENG.+B 7.5 A FUSE • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the burnt out fuse. • If a fuse is damaged: — Replace the damaged fuse. • All fuses are normal: — Repair or replace the wiring harness which has an open circuit. Go to Step 8.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
4	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
5	**INSPECT CURRENT SENSOR LIN COMMUNICATION CIRCUIT FOR SHORT TO GROUND** • Verify that the current sensor and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between current sensor terminal B (vehicle wiring harness) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 8.
		No	Go to the next step.
6	**INSPECT CURRENT SENSOR LIN COMMUNICATION CIRCUIT FOR OPEN CIRCUIT** • Verify that the current sensor and front body control module (FBCM) connectors are disconnected. • Inspect the wiring harness for continuity between current sensor terminal B (vehicle wiring harness side) and front body control module (FBCM) terminal 2E (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 8.
7	**INSPECT CURRENT SENSOR** • Inspect the current sensor. (See 01-40-66 CURRENT SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is the current sensor normal?	Yes	Go to the next step.
		No	Replace the current sensor, then go to the next step. (See 01-40-65 CURRENT SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U1007:68 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC U2005:68 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2011100

System malfunction location	**Error vehicle speed signal received from PCM**
Detection condition	• The front body control module (FBCM) receives vehicle speed signal error from the PCM for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• PCM malfunction • Front body control module (FBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U2005:68 displayed?	Yes	Go to the next step.
		No	Go to Step 5.
2	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS PCM** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U2005:68 displayed?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 5.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC U2005:68 displayed?	Yes	replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC U2100:00 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2011200

System malfunction location	**Front body control module (FBCM) configuration error**
Detection condition	• Front body control module (FBCM) configuration error detected.
Fail-safe	—
Possible cause	• Front body control module (FBCM) configuration error • Front body control module (FBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U2100:00 displayed?	Yes	Go to the next step.
		No	Go to Step 4.
2	**PERFORM FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (AS-BUILT DATA USE)** • Perform the front body control module (FBCM) configuration using the M-MDS. (See 09-40-9 FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING AS-BUILT DATA).) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Perform the DTC inspection for the front body control module (FBCM) using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U2100:00 displayed?	Yes	Using the M-MDS, re-perform the front body control module (FBCM) configuration using the As-Built data, then go to the next step. (See 09-40-9 FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U2100:00 displayed?	Yes	replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC U2101:00 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2011300

System malfunction location	**Front body control module (FBCM) configuration error**
Detection condition	• Front body control module (FBCM) configuration error detected.
Fail-safe	—
Possible cause	• Front body control module (FBCM) configuration error • Front body control module (FBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U2101:00 displayed?	Yes	Go to the next step.
		No	Go to Step 4.
2	**PERFORM FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION** • Perform the front body control module (FBCM) configuration using the M-MDS. (See 09-40-9 FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING AS-BUILT DATA).) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U2101:00 displayed?	Yes	Using the M-MDS, re-perform the front body control module (FBCM) configuration, then go to the next step. (See 09-40-9 FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the front body control module (FBCM) using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U2101:00 displayed?	Yes	replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC U3000:49 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2011400

System malfunction location	**Front body control module (FBCM) internal malfunction**
Detection condition	• Malfunction inside front body control module (FBCM) detected.
Fail-safe	—
Possible cause	• Front body control module (FBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS FRONT BODY CONTROL MODULE (FBCM)** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U3000:49 displayed?	Yes	replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC U3000:56 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2011500

System malfunction location	**Front body control module (FBCM) configuration error**
Detection condition	• Front body control module (FBCM) configuration error detected.
Fail-safe	—
Possible cause	• Front body control module (FBCM) configuration error • Front body control module (FBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U3000:56 displayed?	Yes	Go to the next step.
		No	Go to Step 4.
2	**PERFORM FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION** • Perform the front body control module (FBCM) configuration using the M-MDS. (See 09-40-9 FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING AS-BUILT DATA).) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U3000:56 displayed?	Yes	Using the M-MDS, re-perform the front body control module (FBCM) configuration, then go to the next step. (See 09-40-9 FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U3000:56 displayed?	Yes	replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

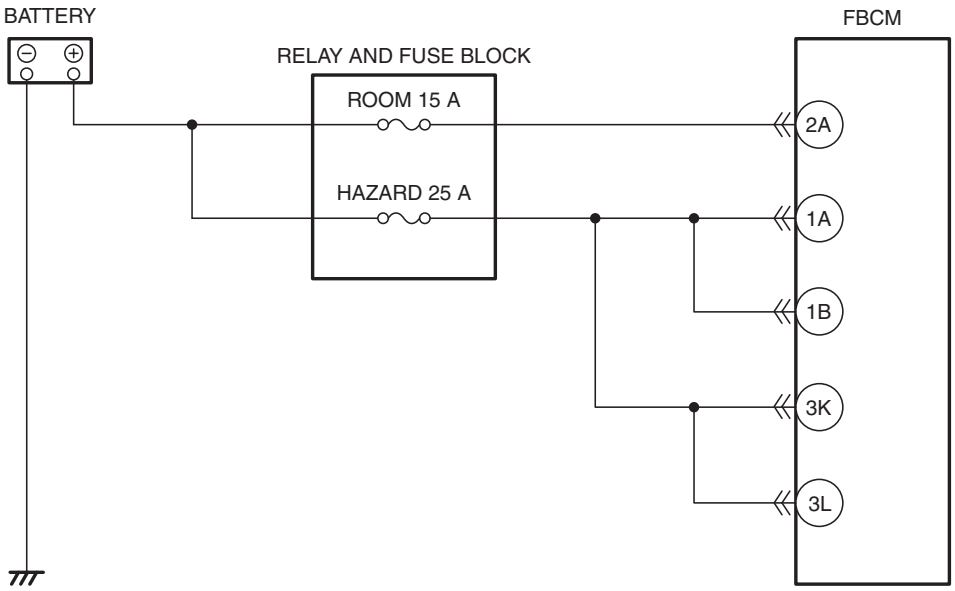
DTC U3003:16 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2011600

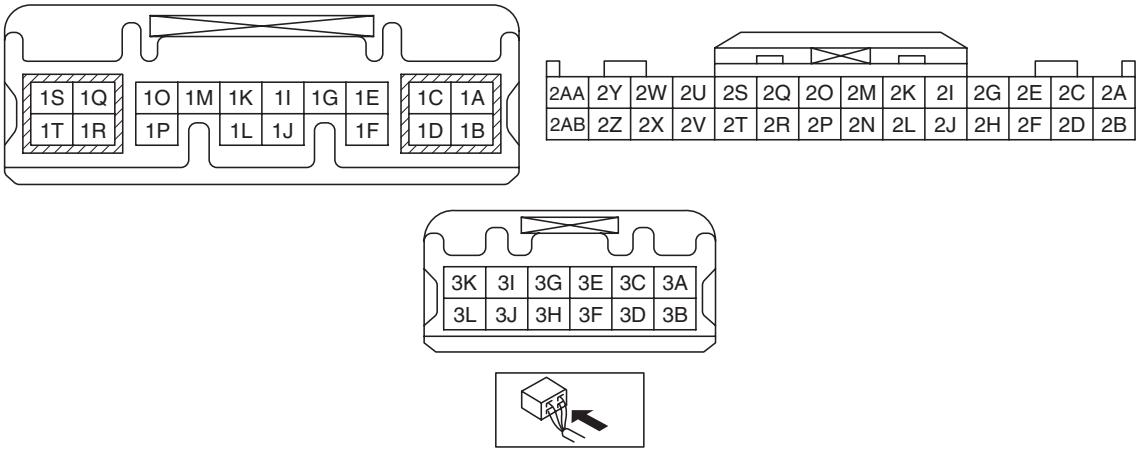
System malfunction location	**Front body control module (FBCM) power supply voltage (+B power supply) low input**
Detection condition	• Front body control module (FBCM) power supply circuit voltage of **8.8 V or less** is detected for **10 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • Front body control module (FBCM) connector or terminal malfunction • Front body control module (FBCM) power supply circuit malfunction — Short to ground in the wiring harness between ROOM 15 A fuse and front body control module (FBCM) terminal 2A — Short to ground in the wiring harness between HAZARD 25 A fuse and front body control module (FBCM) terminal 1A — Short to ground in the wiring harness between HAZARD 25 A fuse and front body control module (FBCM) terminal 1B — Short to ground in the wiring harness between HAZARD 25 A fuse and front body control module (FBCM) terminal 3K — Short to ground in the wiring harness between HAZARD 25 A fuse and front body control module (FBCM) terminal 3L — ROOM 15 A fuse malfunction — HAZARD 25 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and front body control module (FBCM) terminal 2A — Open circuit in wiring harness between battery positive terminal and front body control module (FBCM) terminal 1A — Open circuit in wiring harness between battery positive terminal and front body control module (FBCM) terminal 1B — Open circuit in wiring harness between battery positive terminal and front body control module (FBCM) terminal 3K — Open circuit in wiring harness between battery positive terminal and front body control module (FBCM) terminal 3L • Front body control module (FBCM) malfunction

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

System malfunction location	Front body control module (FBCM) power supply voltage (+B power supply) low input



FBCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U3003:16 displayed?	Yes	Go to the next step.
		No	Go to Step 8.
2	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 7. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 7. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
6	**VERIFY FRONT BODY CONTROL MODULE (FBCM) POWER SUPPLY VOLTAGE** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Display PID VPWR_B using the M-MDS. (See 09-02K-153 PID/DATA MONITOR INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the voltage B+?	Yes	Go to the next step.
		No	Inspect the ROOM 15 A, and HAZARD 25 A fuses. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the burnt out fuse. • If a fuse is damaged: — Replace the damaged fuse. • All fuses are normal: — Repair or replace the wiring harness which has an open circuit. Go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U3003:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

DTC U3003:17 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2011700

System malfunction location	**Front body control module (FBCM) power supply voltage (+B power supply) high input**
Detection condition	• Front body control module (FBCM) power supply circuit voltage of **14.2 V or more** is detected for **10 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • Front body control module (FBCM) malfunction
System wiring diagram	—

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U3003:17 displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Replace the battery, then go to Step 5. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to the next step. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U3003:17 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

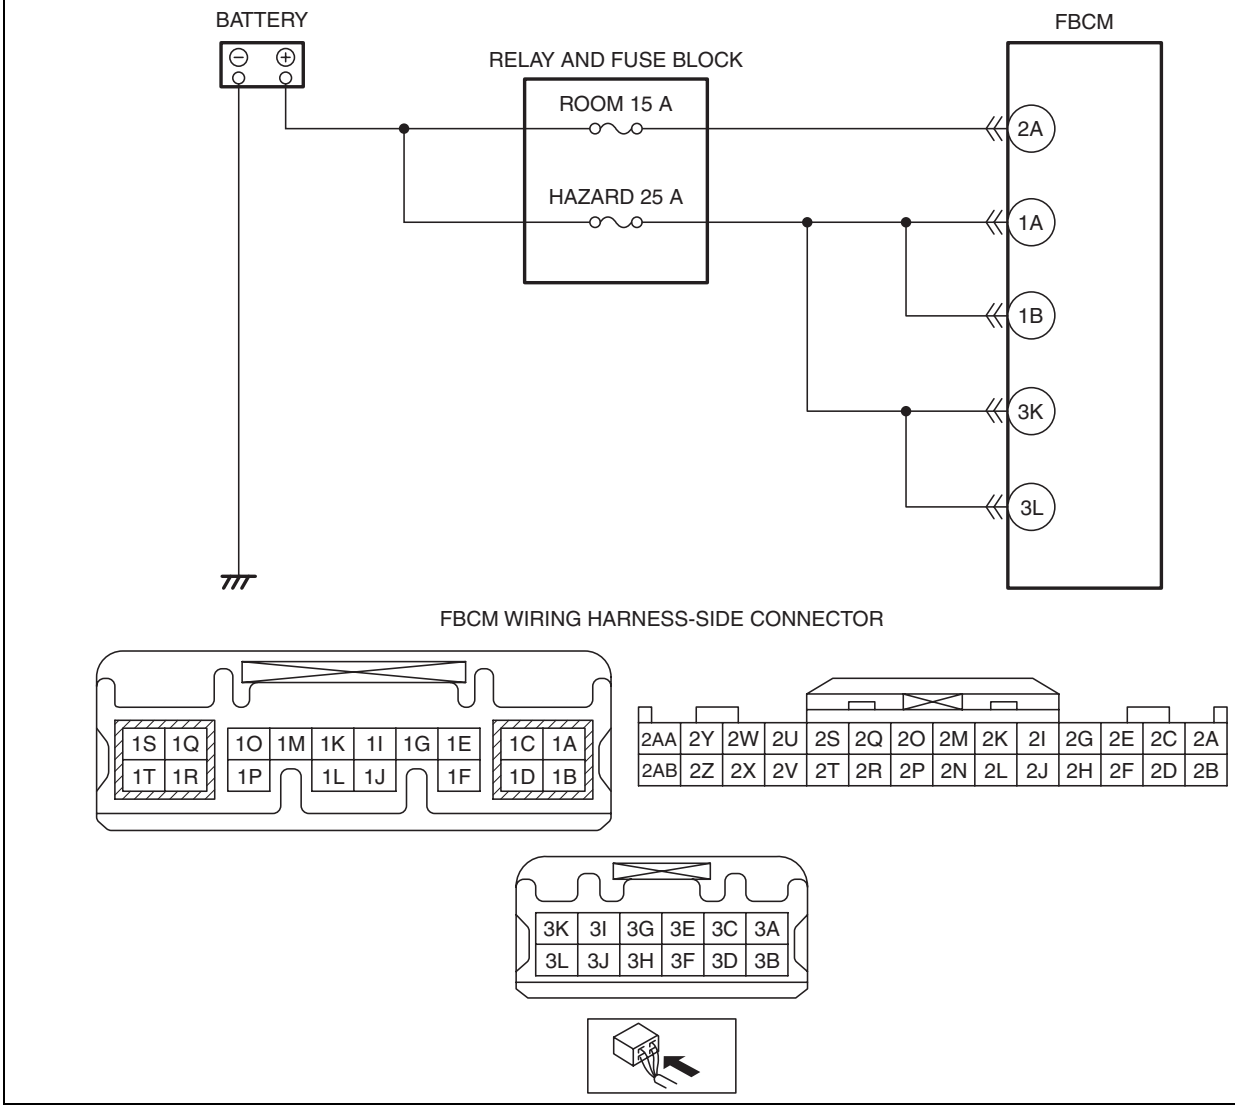
DTC U3006:62 [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2011800

System malfunction location	**Front body control module (FBCM) power supply voltage mismatch**
Detection condition	• Front body control module (FBCM) terminal 1A, 1B, 3K, and 3L voltages of **2 V or more** lower than the voltage of terminal 2A are detected for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Front body control module (FBCM) connector or terminal malfunction • Front body control module (FBCM) power supply circuit malfunction — Short to ground in the wiring harness between ROOM 15 A fuse and front body control module (FBCM) terminal 2A — Short to ground in the wiring harness between HAZARD 25 A fuse and front body control module (FBCM) terminal 1A — Short to ground in the wiring harness between HAZARD 25 A fuse and front body control module (FBCM) terminal 1B — Short to ground in the wiring harness between HAZARD 25 A fuse and front body control module (FBCM) terminal 3K — Short to ground in the wiring harness between HAZARD 25 A fuse and front body control module (FBCM) terminal 3L — ROOM 15 A fuse malfunction — HAZARD 25 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and front body control module (FBCM) terminal 2A — Open circuit in wiring harness between battery positive terminal and front body control module (FBCM) terminal 1A — Open circuit in wiring harness between battery positive terminal and front body control module (FBCM) terminal 1B — Open circuit in wiring harness between battery positive terminal and front body control module (FBCM) terminal 3K — Open circuit in wiring harness between battery positive terminal and front body control module (FBCM) terminal 3L • Front body control module (FBCM) malfunction

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

System malfunction location	Front body control module (FBCM) power supply voltage mismatch



ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs AGAIN** • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U3006:62 displayed?	Yes	Go to the next step.
		No	Go to Step 6.
2	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs** • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	Go to the next step.
3	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**VERIFY FRONT BODY CONTROL MODULE (FBCM) POWER SUPPLY VOLTAGE** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Display PID VPWR_B using the M-MDS. (See 09-02K-153 PID/DATA MONITOR INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the voltage B+?	Yes	Go to the next step.
		No	Inspect the ROOM 15 A and HAZARD 25 A fuses. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the burnt out fuse. • If a fuse is damaged: — Replace the damaged fuse. • All fuses are normal: — Repair or replace the wiring harness which has an open circuit. Go to the next step.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

Step	Inspection		Action
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear front body control module (FBCM) DTCs using the M-MDS. (See 09-02K-12 CLEARING DTC [FRONT BODY CONTROL MODULE (FBCM)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is DTC U3006:62 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	DTC troubleshooting completed.

PID/DATA MONITOR INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2011900

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “F_BCM”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

PID/DATA MONITOR TABLE [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2012000

PID	Unit/ Operation	Data contents	Inspection item(s)
ABK_CS_BG	Off/On	• Off: Theft-deterrent system answer-back signal is not received. • On: Theft-deterrent system answer-back signal is received.	• Front body control module (FBCM) • Rear body control module (RBCM) • Start stop unit
ABK_CS_KEY*1	Off/On	• Off: Advanced keyless entry system answer-back signal is not received. • On: Advanced keyless entry system answer-back signal is received.	• Front body control module (FBCM) • Rear body control module (RBCM) • Start stop unit
ABK_HN_KEY*1	Off/On	• Off: Keyless entry system horn answer-back signal is not received. • On: Keyless entry system horn answer-back signal is received.	• Front body control module (FBCM) • Rear body control module (RBCM) • Start stop unit
BAT_SOC	%	Battery charge condition is displayed.	Battery
BAT_TMP	°C, °F	Battery temperature is displayed.	Battery
BG_ALARM_CS*2	Off/On	• Off: Theft-deterrent system alarm signal is not received. • On: Theft-deterrent system alarm signal is received.	• Front body control module (FBCM) • Rear body control module (RBCM)
BLWR_MT_RY	Off/On	• Off: Blower relay is off. • On: Blower relay is on.	Blower relay
BRAKE_SW	Off/On	• Off: Brake switch (No. 2) is off. (Brake pedal is depressed.) • On: Brake switch (No. 2) is on. (Brake pedal is not depressed.)	• Brake switch • PCM • TCM
BRK_F_L_SW	Normal/Low/ Reserved/ Unknown	• Normal: Brake fluid level is between MAX and MIN. • Low: Brake fluid level is lower than MIN. • Reserved: - • Unknown: Brake fluid level is not determined.	Brake fluid level sensor
C_IG_OFF	A	Back-up current when ignition is switched off previously is displayed.	• Front body control module (FBCM) • CURRENT SENSOR
C_T_IG_OFF	—	Cumulative back-up current (unit: Ah) when ignition is switched off previously is displayed.	• Front body control module (FBCM) • CURRENT SENSOR
C_T_IG_ON	—	Cumulative charging/discharging current (unit: Ah) when ignition is switched ON (engine off or on) is displayed.	• Front body control module (FBCM) • CURRENT SENSOR
DCDC_CVT_ST	Wake_Up/ Bypass/ Boost_1/ Boost_2/ Boost_3/ Error/Default	DC-DC converter status	DC-DC converter
DCDC_VLT_I	V	DC-DC converter input voltage is displayed.	DC-DC converter
DCDC_VLT_O	V	DC-DC converter output voltage is displayed.	DC-DC converter
DEFOG_R_CS	Off/On	• Off: Rear window defroster control signal is not received. • On: Rear window defroster control signal is received.	• Front body control module (FBCM) • Climate control unit
ENG_C_TMP	°C, °F	Engine coolant temperature is displayed.	• ECT sensor • PCM
ESS_ST	Off/On	• Off: ESS is not operated. • On: ESS is operated.	• Front body control module (FBCM) • DSC HU/CM
F_FOG_LMP*3	Off/On	• Off: Front fog light is turned off. • On: Front fog light is turned on.	Front fog light

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

PID	Unit/ Operation	Data contents	Inspection item(s)
F_FOG_SW *3	Off/On	• Off: Front fog light switch ON signal is received. • On: Front fog light switch OFF signal is received.	• Front fog light switch • Start stop unit
H/L	OFF/ DRL*11/ TNS/H/ L_LOW/H/ L_HI	• OFF: Headlight is turned off. • DRL: Running light is turned on. • TNS: TNS is turned on. • H/L_LOW: Headlight (LO) is turned on. • H/L_HI: Headlight (HI) is turned on.	• Headlight relay (HI/LO) • Parking light • Taillight • License plate light • Running light
H/ L_CLN_RY* 4	Off/On	• Off: Headlight cleaner relay is off. • On: Headlight cleaner relay is on.	• Front body control module (FBCM) • Headlight cleaner relay
H/ L_CS_RLS	Off/ TNS_On/ TNS+H/ L_On	• Off: TNS and headlight on request signal is not received from auto-light sensor. • TNS_On: TNS on signal is received from auto-light sensor. • TNS+H/L_On: TNS and headlight LO on signal is received from auto-light sensor.	Auto-light sensor
H/L_HI	Off/On	• Off: Headlight HI is turned off. • On: Headlight HI is turned on.	Headlight HI
H/L_SW_HI	Off/On	• Off: Light switch does not receives ON signal of HI. • On: Light switch receives ON signal of HI.	• Light switch • Start stop unit
H/ L_SW_LOW 1	Off/On	• Off: Light switch does not receives ON signal of LO. • On: Light switch receives ON signal of LO.	• Light switch • Start stop unit
H/ L_SW_LOW 2	Off/On	• Off: Light switch is not in LO position. • On: Light switch is in LO position.	• Light switch • Start stop unit
H/ L_SW_OFF	Off/On	• Off: Light switch OFF signal is dose not received. • On: Light switch OFF signal is received.	• Light switch • Start stop unit
H/ L_SW_PAS S	Off/On	• Off: Light switch passing signal is dose not received. • On: Light switch passing signal is received.	• Light switch • Start stop unit
H/ L_SW_TNS	Off/On	• Off: Light switch does not receives ON signal of TNS. • On: Light switch receives ON signal of TNS.	• Light switch • Start stop unit
H/L_TNS	Off/On	• Off: TNS is turned off. • On: TNS is turned on.	• Parking light • Taillight • License plate lights
HAZARD_L MP	Off/On	• Off: Hazard light is turned off. • On: Hazard light is flashing.	• Front turn light • Side turn lights • Rear turn light
HAZARD_S W	Off/On/ Unknown	• Off: Hazard warning switch is not pressed. • Off: Hazard warning switch is pressed. • Unknown: Hazard warning switch on/off is not determined.	• Hazard warning switch • Start stop unit
HBC_CS*6	Off/On/ Invalid	• Off: High beam control (HBC) system signal is not received. • On: High beam control (HBC) system signal is received. • Invalid: High beam control (HBC) system signal has error.	Forward sensing camera (FSC)
HBC_ST*6	Off/On	• Off: High beam control (HBC) system is not operated. • On: High beam control (HBC) system is operated.	Forward sensing camera (FSC)
IG_ST	Off/On	• Off: IG1 is off. • On: IG1 is on.	• IG1 relay • PCM • Start stop unit
L_OFF_AUT O*12	Off/On	• Off: TNS or headlight off control by auto-light off system is not operated. • On: TNS or headlight off control by auto-light off system is operated.	• Front body control module (FBCM) • Auto light sensor
L_OFF_BS	Off/On	**Note** • Displays in the M-MDS but it does not operate.	Front body control module (FBCM)
OIL_P_SW	Off(Normal)/ On(Low)	**Note** • Displays in the M-MDS but it does not operate.	Oil pressure switch
OUT_CAR_ TMP	°C, °F	Ambient temperature is displayed.	• Ambient temperature sensor • PCM

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

PID	Unit/ Operation	Data contents	Inspection item(s)
P_BRAKE_ SW	Off/On	• Off: Parking brake switch is off. (Parking brake lever is not pulled.) • On: Parking brake switch is on. (Parking brake lever is pulled.)	• Parking brake switch • Instrument cluster
PNC_CS	Off/On	• Off: Panic control signal is not received. • On: Panic control signal is received.	• Front body control module (FBCM) • Rear body control module (RBCM)
R_FOG_LM P*7	Off/On	• Off: Rear fog light is turned off. • On: Rear fog light is turned on.	• Rear fog light • Instrument cluster • Front body control module (FBCM) • Rear body control module (RBCM)
R_FOG_SW *7	Off/On	• Off: Rear fog light switch does not receives ON signal of R.FOG. • On: Rear fog light switch receives ON signal of R.FOG.	• Rear fog light switch • Start stop unit
RLS_FLT*5	O.K./FAULT	• OK: Rain sensor is normal. • FAULT: Rain sensor has a malfunction.	Rain sensor
S_HT_CUT* 8	No_Request /Cut	• No_Request: Except below • Cut: Seat warmer is turned off or lowered.	Front body control module (FBCM)
SHIFT_L_P OS*9	Between/P/ R/N/D/S(2)// L(1)	• Between: Selector lever receives signal between two positions. • P: Selector lever receives P position signal. • R: Selector lever receives R position signal. • N: Selector lever receives N position signal. • D: Selector lever receives D position signal. • S (2): Selector lever receives D position 2nd gear signal. • L (1): Selector lever receives D position 1st gear signal.	TCM
TURN_L_L	Off/On	• Off: Turn light (LH) is turned off. • On: Turn light (LH) is turned on.	• Front turn light • Side turn lights • Rear turn light
TURN_L_R	Off/On	• Off: Turn light (RH) is turned off. • On: Turn light (RH) is turned on.	• Front turn light • Side turn lights • Rear turn light
TURN_SW	Off/ Turn_R_On/ Turn_L_On/ Unknown	• Off: Turn switch receives OFF signal. • Turn_R_On: Turn switch receives RH signal. • Turn_L_On: Turn switch receives LH signal. • Unknown: Turn switch receives signal not determined.	• Turn Switch • Start stop unit
VPWR_B	V	Front body control module (FBCM) power supply voltage is displayed.	Front body control module (FBCM)
VSPD	KPH, MPH	Vehicle speed is displayed.	PCM
WAS_FLUI D_L*10	Normal/Low/ Reserved/ Unknown	• Normal: Washer fluid level is normal. • Low: Washer fluid level is low. • Reserved: — • Unknown: Washer fluid level is not determined.	Washer fluid-level sensor
WAS_MT_R Y_F	Off/On	• Off: Front washer motor relay is off. • On: Front washer motor relay is on.	Front body control module (FBCM)
WAS_MT_R Y_R	Off/On	• Off: Rear washer motor relay is off. • On: Rear washer motor relay is on.	Front body control module (FBCM)
WASHER_F	Off/On	• Off: Front washer receives OFF signal. • On: Front washer receives ON signal.	• Windshield washer switch • Start stop unit
WASHER_R	Off/On	• Off: Rear wiper and washer switch receives OFF signal of rear washe. • On: Rear wiper and washer switch receives ON signal of rear washer.	• Rear wiper and washer switch • Start stop unit

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

PID	Unit/ Operation	Data contents	Inspection item(s)
WIP_CS_RLS*5	Off/ Single_Wipe / F_Wiper_LOW/ F_Wiper_HI/ Failure	• Off: Wiper operation signal is not received from rain sensor. • Single_Wipe: Signal to operate wiper once is received from rain sensor. • F_Wiper_LOW: Signal to operate wiper at low speed is received from rain sensor. • F_Wiper_HI: Signal to operate wiper at high speed is received from rain sensor. • Failure: Communication with rain sensor is failed.	Rain sensor
WIP_F	OFF/LOW/ HI/INT / AUTO	• OFF: Windshield wiper switch receives OFF signal. • LOW: Windshield wiper switch ireceives LO signal. • HI: Windshield wiper switch receives HI signal. • INT / AUTO: Windshield wiper switch receives INT or AUTO signal.	• Windshield wiper switch • Start stop unit
WIP_F_INT_L	%	Received value that windshield wiper INT level signal.	• Windshield wiper switch • Start stop unit
WIP_F_LOW	Off/On	• Off: Windshield wiper switch is not in LO position. • On: Windshield wiper switch is in LO position.	• Windshield wiper switch • Start stop unit
WIP_F_MST	Stop/Move	• Stop: Autostop switch is on. • Move: Autostop switch is off.	Windshield wiper motor
WIP_F_RY_HI	Off/On	• Off: Windshield wiper high relay is off. • On: Windshield wiper high relay is on.	Front body control module (FBCM)
WIP_F_RY_LO	Off/On	• Off: Windshield wiper low relay is off. • On: Windshield wiper low relay is on.	Front body control module (FBCM)
WIP_R	OFF/LOW/ INT	• OFF: Rear wiper switch receives OFF signal. • LOW: Rear wiper switch receives ON signal. • INT: Rear wiper switch receive INT signal.	• Rear wiper switch • Start stop unit
WIP_R_RY	Off/On	• Off: Rear wiper motor is not operated. • On: Rear wiper motor is operated.	• Rear wiper motor • Instrument cluster • Rear body control module (RBCM)

*1 : Vehicles with advanced keyless entry system
*2 : With theft-deterrent system
*3 : With front fog lights
*4 : With headlight cleaner
*5 : With auto-light sensor
*6 : With high beam control (HBC) system
*7 : Vehicles with rear fog light
*8 : With seat warmer
*9 : ATX
*10 : With washer fluid-level sensor
*11 : With running light
*12 : With auto light system

ON-BOARD DIAGNOSTIC [FRONT BODY CONTROL MODULE (FBCM)]

ACTIVE COMMAND MODES INSPECTION [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2012100

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “F_BCM”.
3. Select the active command modes from the PID table.
4. Perform the active command modes function, inspect the operations for each parts.
   - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

ACTIVE COMMAND MODES TABLE [FRONT BODY CONTROL MODULE (FBCM)]

id0902p2012200

Simulation item	Unit/ Operation	Data contents	Output part name
DEFOG_R_ST	Off/On	• Off: Stops rear window defroster. • On: Operates rear window defroster.	Filament
ESS_ST	Off/On	• Off: Stops ESS. • On: Operates ESS.	Front body control module (FBCM)
F_FOG_LMP*1	Off/On	• Off: Turns off front fog light. • On: Illuminates front fog light.	Front fog light
H/L	OFF/DRL/ TNS/H/ L_LOW/H/ L_HI	• Off: Turns off headlights. • DRL: Illuminates running light.*3 • TNS: Illuminates TNS. • H/L_LOW: Illuminates headlights LO. • H/L_HI: Illuminates headlights HI.	• Headlight LO/HI • Parking light • Taillight • License plate light • Running light
H/L_CLN_RY*2	Off/On	• Off: Turns headlight cleaner relay off. • On: Turns headlight cleaner relay on.	Front body control module (FBCM)
HAZARD_LMP	Off/On	• Off: Turns off hazard warning light. • On: Flashes hazard warning light.	• Front turn light • Side turn lights • Rear turn light
WAS_MT_RY_F	Off/On	• Off: Turns front washer motor relay off. • On: Turns front washer motor relay on.	Front body control module (FBCM)
WAS_MT_RY_R	Off/On	• Off: Turns rear washer motor relay off. • On: Turns rear washer motor relay on.	Front body control module (FBCM)

*1 : With front fog lights
*2 : With headlight cleaner
*3 : With running light

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

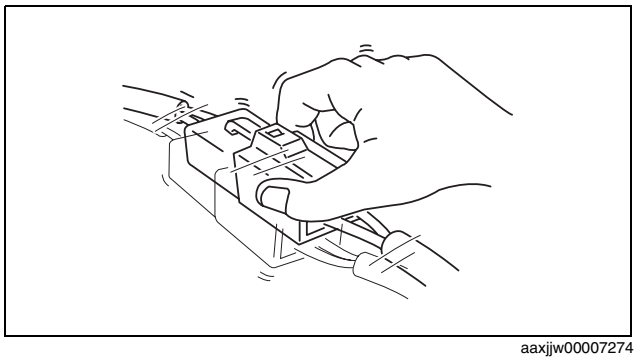
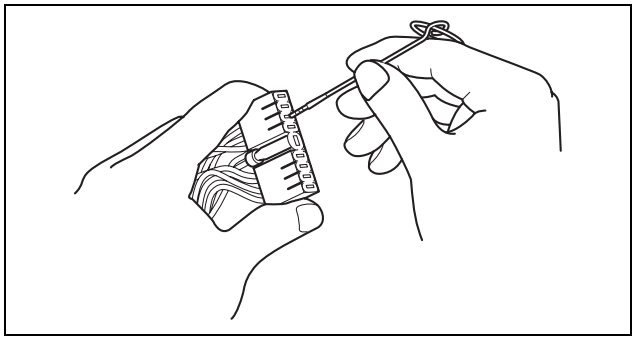
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)]

id0902p4012500

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. Verify the following vehicle conditions:
   - All the switches are turned off (except the ignition switch).
   - All the doors, bonnet, and liftgate are closed.
   - All the doors, and liftgate re unlocked.
   - All the seat belts are unbuckled.
   - Parking brake lever is pulled.
3. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
4. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the rear body control module (RBCM). (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. Verify the following vehicle conditions:
   - All the switches are turned off (except the ignition switch).
   - All the doors, bonnet, and liftgate are closed.
   - All the doors, and liftgate are unlocked.
   - All the seat belts are unbuckled.
   - Parking brake lever is pulled.
3. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “R_BCM”.
4. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the rear body control module (RBCM). (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].)

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Snapshot data

- The data for all DTCs currently detected is stored.

Snapshot data table

Snapshot data item	Unit		Data contents	Corresponding data monitor items
AAT	°C	°F	Ambient temperature	-
APP_STATUS	Accelerator Pedal Off/Under20%/ Over20%/FAIL		Accelerator pedal position status	-
CFG_STATUS	Config Complete/Not Configured/Config Error		Configuration status	-
ECT_STATUS	Under 0 degrees C/ 0-Under 80 degrees C/ Over 80 degrees C/FAIL		Engine coolant temperature status	-
IC_VPWR	V		Instrument cluster power supply voltage	-
IG-ON_TIMER	hh:mm:ss		Elapsed time since ignition switched ON (engine off or on)	-
PWR_MODE_KEY	Key Out/Key Recently Out/ Key Approved (Position 0)/ Post Accessory (Position 0)/ Accessory (Position 1)/ Post Ignition (Position 1)/ ignition On (Position 2)/ Running (Position 2)/ Running - Starting In Progress (Position 2)/Crank (Position 3)		Push button start power position switching status	-
RPM_STATUS	Engine Stop/Under1500rpm/ Over1500rpm/FAIL		Engine speed status	-
SHIFT_STATUS	P/N/D/R/FAIL		Selector lever position status	-
TOTAL_DIST	Km	miles	Accumulated total traveled distance since vehicle completion	-
TOTAL_TIME	hh:mm:ss		Accumulated total elapsed time since vehicle completion **Note** • When the ROOM fuse is removed, or the ignition is switched off (LOCK), the time is not included in the elapsed time.	-
VPWR	V		Rear body control module (RBCM) power supply malfunction	VPWR_IG
VSPD_STATUS	Stop/ 0-10km/h/ Over10km/h/ FAIL		Vehicle speed status	VSPD

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)]

id0902p4012700

CMDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].)
8. Verify that no DTCs are displayed.

ODDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “R_BCM”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].)
8. Verify that no DTCs are displayed.

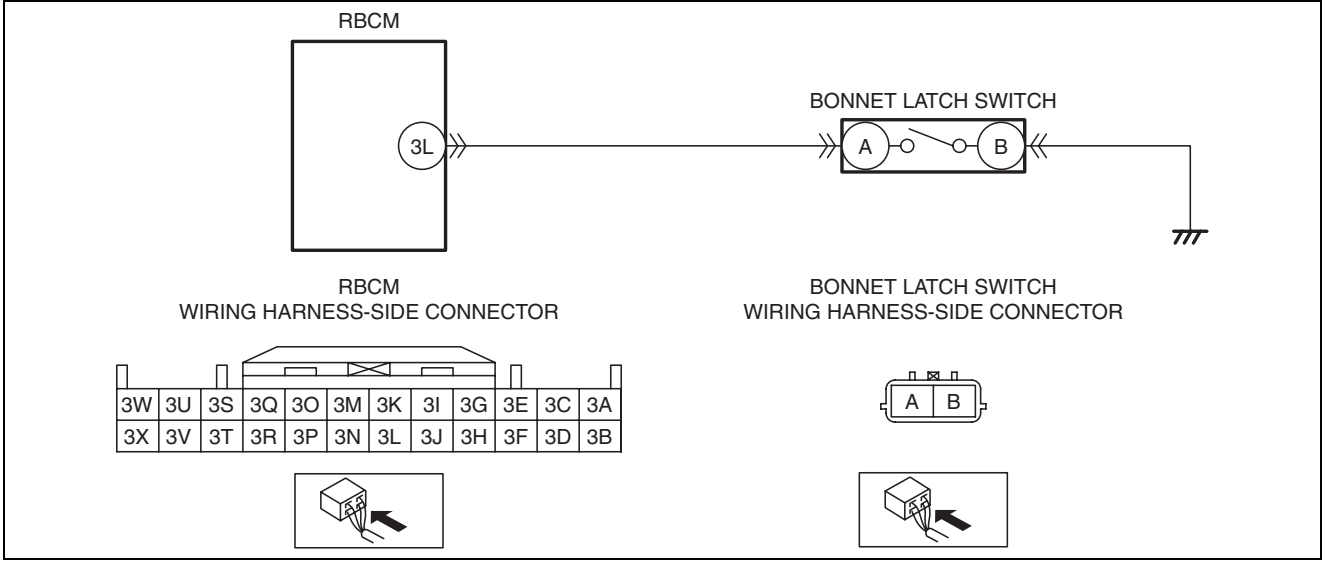
DTC B1079:13 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4012600

System malfunction location	**Bonnet latch switch circuit malfunction**
Detection condition	• Rear body control module (RBCM) detects open circuit in bonnet latch switch circuit.
Fail-safe	—
Possible cause	• Bonnet latch switch connector or terminal malfunction • Open circuit in wiring harness between bonnet latch switch terminal B and body ground • Bonnet latch switch malfunction • Rear body control module (RBCM) connector or terminal malfunction • Open circuit in wiring harness between rear body control module (RBCM) terminal 3L and bonnet latch switch terminal A • Rear body control module (RBCM) malfunction



ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B1079:13 displayed?	Yes	Go to the next step.
		No	Go to Step 8.
2	**INSPECT BONNET LATCH SWITCH CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the bonnet latch switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT BONNET LATCH SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the bonnet latch switch connector is disconnected. • Inspect for continuity between bonnet latch switch terminal B (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 7.
4	**INSPECT BONNET LATCH SWITCH** • Inspect the bonnet latch switch. (See 09-14-21 BONNET LATCH SWITCH INSPECTION.) • Is the bonnet latch switch normal?	Yes	Go to the next step.
		No	Replace the bonnet latch switch, then go to Step 7. (See 09-14-17 BONNET LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
5	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
6	**INSPECT BONNET LATCH SWITCH CIRCUIT FOR OPEN CIRCUIT** • Verify that the bonnet latch switch and rear body control module (RBCM) connectors are disconnected. • Inspect the wiring harness for an open circuit between rear body control module (RBCM) terminal 3L (vehicle wiring harness side) and bonnet latch switch terminal A (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

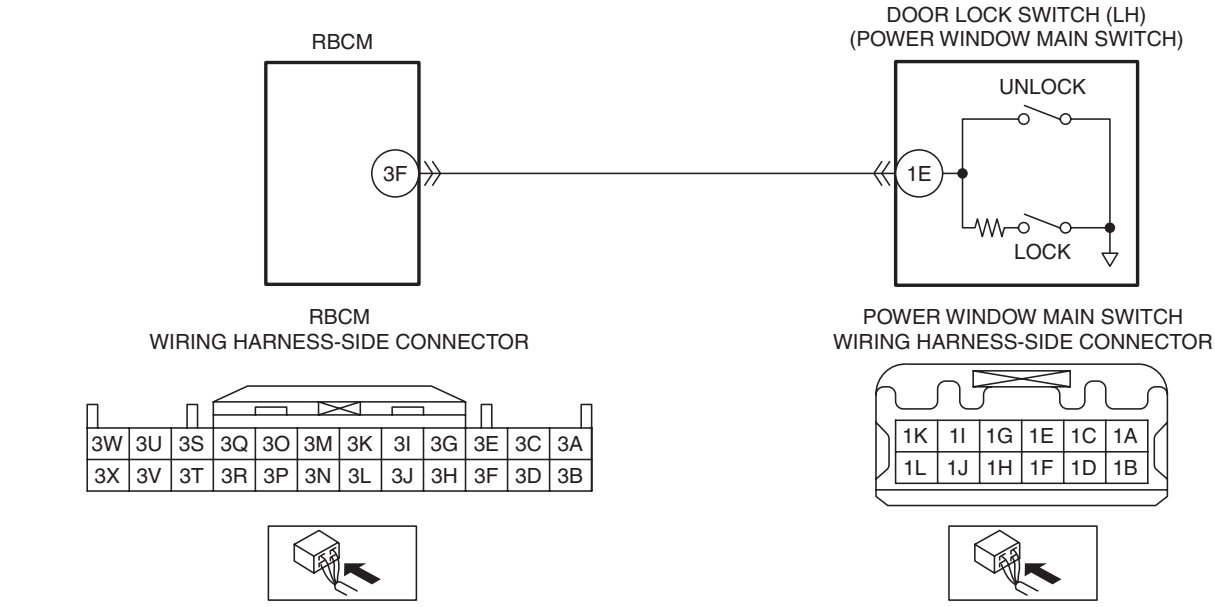
Step	Inspection		Action
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B1079:13 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B108F:16 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4012900

System malfunction location	**Door lock switch (LH) circuit malfunction**
Detection condition	• With the door lock switch off, the rear body control module (RBCM) detects door lock switch circuit voltage of **4 V or less**.
Fail-safe	—
Possible cause	• Power window main switch connector or terminal malfunction • Door lock switch (LH) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 3F and power window main switch terminal 1E • Rear body control module (RBCM) malfunction



ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B108F:16 displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**POWER WINDOW MAIN SWITCH CONNECTOR INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the power window main switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT DOOR LOCK SWITCH (LH)** • Inspect the door lock switch (LH). (See 09-12-54 POWER WINDOW MAIN SWITCH INSPECTION.) • Is the door lock switch (LH) normal?	Yes	Go to the next step.
		No	Replace the power window main switch, then go to Step 6. (See 09-12-52 POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT DOOR LOCK SWITCH CIRCUIT FOR SHORT TO GROUND** • Verify the rear body control module (RBCM) connector and power window main switch connector are disconnected. • Inspect for continuity between rear body control module (RBCM) terminal 3F (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

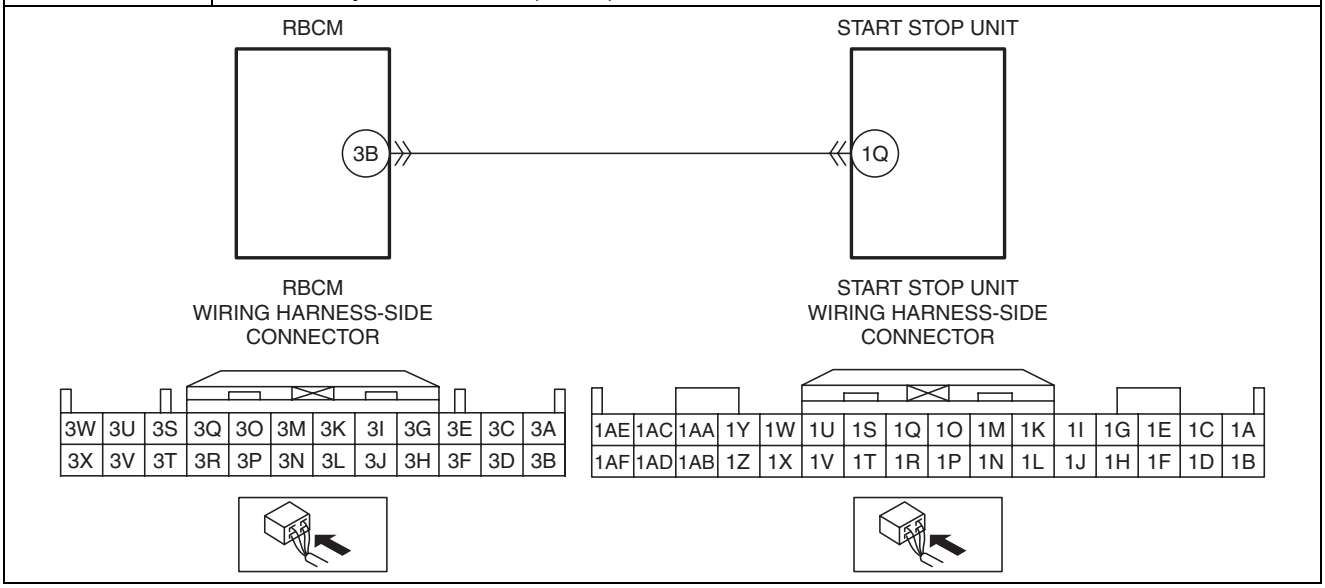
Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B108F:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B109E:87 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4013000

System malfunction location	**Communication error with start stop unit**
Detection condition	• Rear body control module (RBCM) detects communication error with start stop unit for **10 times continuously**.
Fail-safe	—
Possible cause	• Start stop unit connector or terminal malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 3B and start stop unit terminal 1Q • Open circuit in wiring harness between rear body control module (RBCM) terminal 3B and start stop unit terminal 1Q • Start stop unit malfunction • Rear body control module (RBCM) malfunction



ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B109E:87 displayed?	Yes	Go to the next step.
		No	Go to Step 8.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
4	**INSPECT START STOP UNIT CIRCUIT FOR SHORT TO GROUND** • Verify that the rear body control module (RBCM) connector and start stop unit connector are disconnected. • Inspect for continuity between start stop unit terminal 1Q (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 7.
		No	Go to the next step.
5	**INSPECT START STOP UNIT CIRCUIT FOR OPEN CIRCUIT** • Verify that the rear body control module (RBCM) connector and start stop unit connector are disconnected. • Inspect the wiring harness for an open circuit between rear body control module (RBCM) terminal 3B (vehicle wiring harness side) and start stop unit terminal 1Q (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 7.
6	**INSPECT START STOP UNIT** • Inspect the start stop unit. (See 09-14-56 START STOP UNIT INSPECTION.) • Is the start stop unit normal?	Yes	Go to the next step.
		No	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Step	Inspection		Action
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B109E:87 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B109F:49 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4013100

System malfunction location	**Intruder sensor internal malfunction**
Detection condition	• Rear body control module (RBCM) detects intruder sensor internal malfunction for **1.5 s or more**.
Fail-safe	—
Possible cause	• Intruder sensor malfunction • Rear body control module (RBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Lock the door to go on theft-deterrent system standby. • Unlock the door to cancel theft-deterrent standby. • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B109F:49 displayed?	Yes	Go to the next step.
		No	Go to Step 4.
2	**INSPECT INTRUDER SENSOR** • Inspect the intruder sensor. (See 09-14-92 INTRUDER SENSOR INSPECTION.) • Is the intruder sensor normal?	Yes	Go to the next step.
		No	Replace the intruder sensor, then go to the next step. (See 09-14-91 INTRUDER SENSOR REMOVAL/INSTALLATION.)
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Lock the door to go on theft-deterrent system standby. • Unlock the door to cancel theft-deterrent standby. • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B109F:49 displayed?	Yes	Replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B109F:86 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4013200

System malfunction location	**Intruder sensor signal error**
Detection condition	• Rear body control module (RBCM) receives error signal from intruder sensor for **1.5 s or more**.
Fail-safe	—
Possible cause	• Intruder sensor malfunction • Rear body control module (RBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

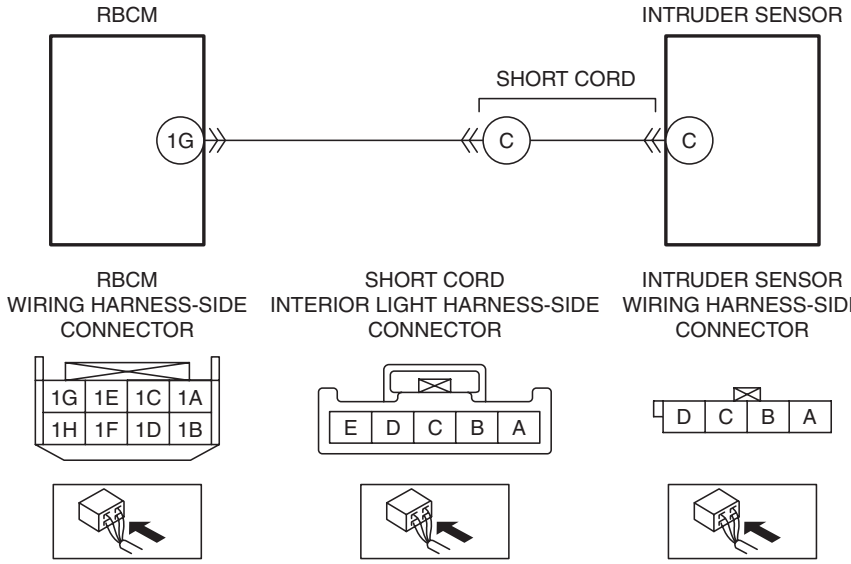
Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Switch the ignition ON (engine on) and wait for **3 s or more**. • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B109F:86 displayed?	Yes	A malfunction in LIN bus communication line can be considered. • Repair or replace the wiring harness between the rear body control module (RBCM) and the intruder sensor, then go to the next step.
		No	Go to Step 4.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS INTRUDER SENSOR** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Switch the ignition ON (engine on) and wait for **3 s or more**. • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B10A5:86 displayed?	Yes	Replace the intruder sensor, then go to the next step. (See 09-14-91 INTRUDER SENSOR REMOVAL/INSTALLATION.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Switch the ignition ON (engine on) and wait for **3 s or more**. • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B109F:86 displayed?	Yes	Replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B109F:87 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4013300

System malfunction location	**Communication error with intruder sensor**
Detection condition	• Rear body control module (RBCM) cannot receive signal from intruder sensor for **1.5 s or more**.
Fail-safe	—
Possible cause	• Short cord connector or terminal malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 1G and short cord terminal C • Open circuit in wiring harness between rear body control module (RBCM) terminal 1G and short cord terminal C • Intruder sensor malfunction • Rear body control module (RBCM) malfunction



ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Switch the ignition ON (engine off or on) and wait for **3 s or more**. • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B109F:87 displayed?	Yes	Go to the next step.
		No	Go to Step 8.
2	**SHORT CORD CONNECTOR INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the short cord connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
4	**INSPECT INTRUDER SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the short cord and rear body control module (RBCM) connectors are disconnected. • Inspect for continuity between short cord terminal C (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 7.
		No	Go to the next step.
5	**INSPECT INTRUDER SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the short cord and rear body control module (RBCM) connectors are disconnected. • Inspect the wiring harness for an open circuit between rear body control module (RBCM) terminal 1G (vehicle wiring harness side) and short cord terminal C (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 7.
6	**INSPECT INTRUDER SENSOR** • Inspect the intruder sensor. (See 09-14-92 INTRUDER SENSOR INSPECTION.) • Is the intruder sensor normal?	Yes	Go to the next step.
		No	Replace the intruder sensor, then go to the next step. (See 09-14-91 INTRUDER SENSOR REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Step	Inspection		Action
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Switch the ignition ON (engine off or on) and wait for **3 s or more**. • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B109F:87 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B10A5:49 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4013400

System malfunction location	**Theft-deterrent siren internal malfunction**
Detection condition	• Rear body control module (RBCM) detects theft-deterrent siren internal malfunction for **1.5 s or more**.
Fail-safe	—
Possible cause	• Theft-deterrent siren malfunction • Rear body control module (RBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Switch the ignition ON (engine on) and wait for **3 s or more**. • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B10A5:49 displayed?	Yes	Go to the next step.
		No	Go to Step 4.
2	**INSPECT THEFT-DETERRENT SIREN** • Inspect the theft-deterrent siren. (See 09-14-89 THEFT-DETERRENT SIREN INSPECTION.) • Is the theft-deterrent siren normal?	Yes	Go to the next step.
		No	Replace the theft-deterrent siren, then go to the next step. (See 09-14-87 THEFT-DETERRENT SIREN REMOVAL/INSTALLATION.)
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Switch the ignition ON (engine on) and wait for **3 s or more**. • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B10A5:49 displayed?	Yes	Replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B10A5:86 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4013500

System malfunction location	**Theft-deterrent siren signal error**
Detection condition	• Rear body control module (RBCM) receives error signal from theft-deterrent siren for **1.5 s or more**.
Fail-safe	—
Possible cause	• Theft-deterrent siren malfunction • Rear body control module (RBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

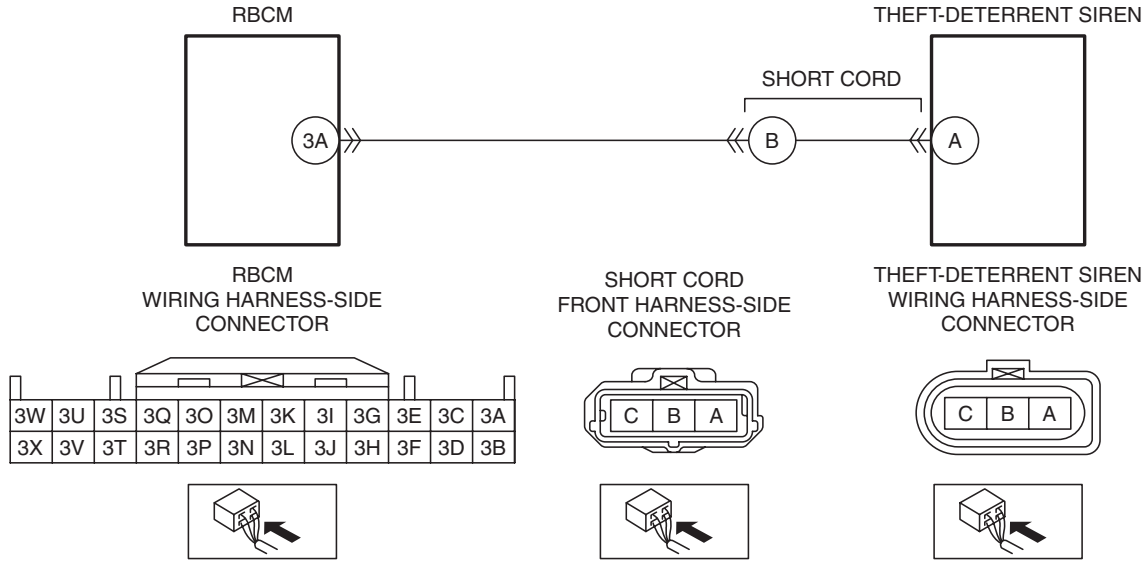
Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Switch the ignition ON (engine on) and wait for **3 s or more**. • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B10A5:86 displayed?	Yes	A malfunction in LIN bus communication line can be considered. • Repair or replace the wiring harness between the rear body control module (RBCM) and theft-deterrent siren, then go to the next step.
		No	Go to Step 4.
2	**PERFORM DTC INSPECTION AND VERIFY IF THEFT-DETERRENT SIREN IS MALFUNCTIONING PART** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Switch the ignition ON (engine on) and wait for **3 s or more**. • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B10A5:86 displayed?	Yes	Replace the theft-deterrent siren, then go to the next step. (See 09-14-87 THEFT-DETERRENT SIREN REMOVAL/INSTALLATION.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Switch the ignition ON (engine on) and wait for **3 s or more**. • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B10A5:86 displayed?	Yes	Replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B10A5:87 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4013600

System malfunction location	**Communication error with theft-deterrent siren**
Detection condition	• Rear body control module (RBCM) cannot receive signal from theft-deterrent siren for **1.5 s or more**.
Fail-safe	—
Possible cause	• Short cord connector or terminal malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 3A and short cord terminal B • Open circuit in wiring harness between rear body control module (RBCM) terminal 3A and short cord terminal B • Theft-deterrent siren malfunction • Rear body control module (RBCM) malfunction



ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Switch the ignition ON (engine on) and wait for **3 s or more**. • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B10A5:87 displayed?	Yes	Go to the next step.
		No	Go to Step 8.
2	**INSPECT SHORT CORD CONNECTOR** • Unlock the door to cancel theft-deterrent standby. • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the short cord connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
4	**INSPECT THEFT-DETERRENT SIREN CIRCUIT FOR SHORT TO GROUND** • Verify that the short cord and rear body control module (RBCM) connectors are disconnected. • Inspect for continuity between short cord terminal B (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 7.
		No	Go to the next step.
5	**INSPECT THEFT-DETERRENT SIREN CIRCUIT FOR OPEN CIRCUIT** • Verify that the short cord and rear body control module (RBCM) connectors are disconnected. • Inspect the wiring harness for an open circuit between rear body control module (RBCM) terminal 3A (vehicle wiring harness side) and short cord terminal B (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 7.
6	**INSPECT THEFT-DETERRENT SIREN** • Inspect the theft-deterrent siren. (See 09-14-89 THEFT-DETERRENT SIREN INSPECTION.) • Is the theft-deterrent siren normal?	Yes	Go to the next step.
		No	Replace the theft-deterrent siren, then go to the next step. (See 09-14-87 THEFT-DETERRENT SIREN REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

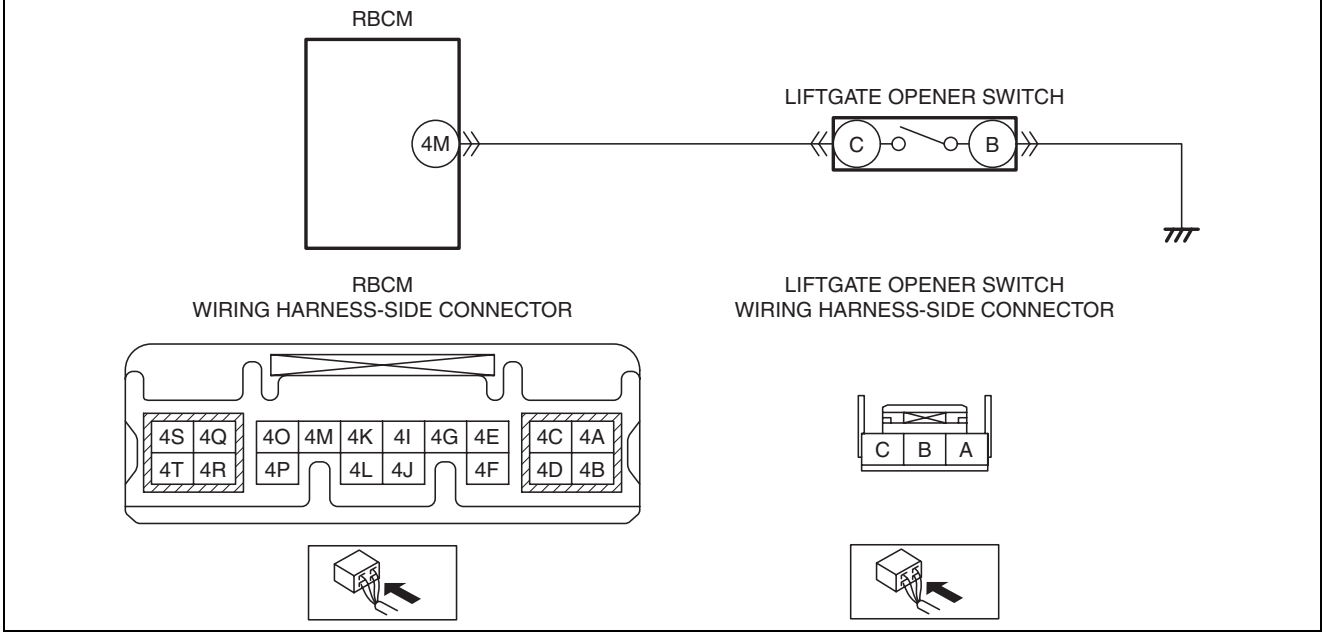
Step	Inspection		Action
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Switch the ignition ON (engine on) and wait for **3 s or more**. • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B10A5:87 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B113E:11 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4013700

System malfunction location	**Liftgate opener switch circuit malfunction**
Detection condition	• Rear body control module (RBCM) detects short to ground in liftgate opener switch circuit
Fail-safe	—
Possible cause	• Liftgate opener switch connector or terminal malfunction • Request opener switch malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 4M and liftgate opener switch terminal C • Rear body control module (RBCM) malfunction



ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B113E:11 displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT LIFTGATE OPENER SWITCH CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the liftgate opener switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT LIFTGATE OPENER SWITCH** • Inspect the liftgate opener switch. (See 09-14-53 LIFTGATE OPENER SWITCH INSPECTION.) • Is the liftgate opener switch normal?	Yes	Go to the next step.
		No	Replace the liftgate opener switch, then go to Step 6. (See 09-14-53 LIFTGATE OPENER SWITCH REMOVAL/INSTALLATION.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT LIFTGATE OPENER SWITCH CIRCUIT FOR SHORT TO GROUND** • Verify that the liftgate opener switch and rear body control module (RBCM) connectors are disconnected. • Inspect for continuity between liftgate opener switch terminal C (vehicle wiring harness) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B113E:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B1172:11 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4013800

System malfunction location	**Front door lock-link switch (driver's side) unlock circuit malfunction**
Detection condition	• With the front door lock-link switch (driver's side) locked, the rear body control module (RBCM) detects a short to ground in the front door lock-link switch (driver's side) unlock circuit.
Fail-safe	—
Possible cause	• Front door latch and lock actuator (driver's side) connector or terminal malfunction • Front door lock-link switch (driver's side) malfunction • rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — L.H.D.: • Rear body control module (RBCM) terminal 3M and front door latch and lock actuator (LH) terminal B — R.H.D.: • Rear body control module (RBCM) terminal 3M and front door latch and lock actuator (RH) terminal L • Rear body control module (RBCM) malfunction

WIRING HARNESS-SIDE CONNECTOR

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Lock the front door lock-link switch (driver's side). • Is DTC B1172:11 displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER'S DOOR) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front door latch and lock actuator (driver's side) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FRONT DOOR LOCK-LINK SWITCH (DRIVER'S DOOR)** • Inspect the front door lock-link switch (driver's door). (See 09-14-41 DOOR LOCK-LINK SWITCH INSPECTION.) • Is the front door lock-link switch (driver's door) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (driver's side), then go to Step 6. (See 09-14-36 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT FRONT DOOR LOCK-LINK SWITCH (DRIVER'S SIDE) CIRCUIT FOR SHORT TO GROUND** • Verify that the rear body control module (RBCM) connector and front door latch and lock actuator (driver's side) connector are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — L.H.D.: • Front door latch and lock actuator (LH) terminal B — R.H.D.: • Front door latch and lock actuator (RH) terminal L • Is there continuity?	Yes	Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Lock the front door lock-link switch (driver's side). • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B1172:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B1172:13 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4013900

System malfunction location	**Front door lock-link switch (driver's side) unlock circuit malfunction**
Detection condition	• Rear body control module (RBCM) detects open circuit in front door lock-link switch (driver's side) unlock side circuit with front door lock-link switch (driver's side) unlocked.
Fail-safe	—
Possible cause	• Front door latch and lock actuator (driver's side) connector or terminal malfunction • Open circuit in wiring harness between the following terminals: — L.H.D.: • Front door latch and lock actuator (LH) terminal J and body ground — R.H.D.: • Front door latch and lock actuator (RH) terminal D and body ground • Front door lock-link switch (driver's side) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Open circuit in wiring harness between the following terminals: — L.H.D.: • Rear body control module (RBCM) terminal 3M and front door latch and lock actuator (LH) terminal B — R.H.D.: • Rear body control module (RBCM) terminal 3M and front door latch and lock actuator (RH) terminal L • Rear body control module (RBCM) malfunction

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B1172:13 displayed?	Yes	Go to the next step.
		No	Go to Step 8.
2	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER'S DOOR) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front door latch and lock actuator (driver's side) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT FOR OPEN CIRCUIT IN FRONT DOOR LOCK-LINK SWITCH (DRIVER'S SIDE) GROUND CIRCUIT** • Verify that the front door latch and lock actuator (driver's side) connector is disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — L.H.D.: • Front door latch and lock actuator (LH) terminal J and body ground — R.H.D.: • Front door latch and lock actuator (RH) terminal D and body ground • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 7.
4	**INSPECT FRONT DOOR LOCK-LINK SWITCH (DRIVER'S DOOR)** • Inspect the front door lock-link switch (driver's door). (See 09-14-41 DOOR LOCK-LINK SWITCH INSPECTION.) • Is the front door lock-link switch (driver's door) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (driver's side), then go to Step 7. (See 09-14-36 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
5	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Step	Inspection		Action
6	**INSPECT FOR OPEN CIRCUIT IN FRONT DOOR LOCK-LINK SWITCH (DRIVER'S SIDE) CIRCUIT** • Verify that the rear body control module (RBCM) connector and front door latch and lock actuator (driver's side) connector are disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — L.H.D.: • Rear body control module (RBCM) terminal 3M and front door latch and lock actuator (LH) terminal B — R.H.D.: • Rear body control module (RBCM) terminal 3M and front door latch and lock actuator (RH) terminal L • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B1172:13 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B1174:11 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4014000

System malfunction location	**Front door lock-link switch (passenger's side)/rear door lock-link switch (LH)/(RH) unlock circuit malfunction**
Detection condition	• With the front door lock-link switch (passenger's side)/rear door lock-link switch (LH)/(RH) locked, the rear body control module (RBCM) detects a short to ground in the door lock-link switch unlock circuit.
Fail-safe	—
Possible cause	• Front door latch and lock actuator (passenger's side) connector or terminal malfunction • Front door lock-link switch (passenger's side) malfunction • Rear door latch and lock actuator (LH) connector or terminal malfunction • Rear door lock-link switch (LH) malfunction • Rear door latch and lock actuator (RH) connector or terminal malfunction • Rear door lock-link switch (RH) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — L.H.D.: • Rear body control module (RBCM) terminal 3J and front door latch and lock actuator (RH) terminal L/rear door latch and lock actuator (LH) terminal B/rear door latch and lock actuator (RH) terminal L — R.H.D.: • Rear body control module (RBCM) terminal 3J and front door latch and lock actuator (LH) terminal B/rear door latch and lock actuator (LH) terminal B/rear door latch and lock actuator (RH) terminal L • Rear body control module (RBCM) malfunction

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B1174:11 displayed?	Yes	Go to the next step.
		No	Go to Step 11.
2	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (PASSENGER'S DOOR) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front door latch and lock actuator (passenger's side) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
3	**INSPECT FRONT DOOR LOCK-LINK SWITCH (PASSENGER'S DOOR)** • Inspect the front door lock-link switch (passenger's door). (See 09-14-41 DOOR LOCK-LINK SWITCH INSPECTION.) • Is the front door lock-link switch (passenger's door) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (passenger's side), then go to Step 10. (See 09-14-36 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
4	**INSPECT REAR DOOR LATCH ACTUATOR (LH) CONNECTOR** • Disconnect the rear door latch and lock actuator (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
5	**INSPECT REAR DOOR LOCK-LINK SWITCH (LH)** • Inspect the rear door lock-link switch (LH). (See 09-14-41 DOOR LOCK-LINK SWITCH INSPECTION.) • Is the rear door lock-link switch (LH) normal?	Yes	Go to the next step.
		No	Replace the rear door latch and lock actuator (LH), then go to Step 10. (See 09-14-43 REAR DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
6	**INSPECT REAR DOOR LATCH ACTUATOR (RH) CONNECTOR** • Disconnect the rear door latch and lock actuator (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Step	Inspection		Action
7	**INSPECT REAR DOOR LOCK-LINK SWITCH (RH)** • Inspect the rear door lock-link switch (RH). (See 09-14-41 DOOR LOCK-LINK SWITCH INSPECTION.) • Is the rear door lock-link switch (RH) normal?	Yes	Go to the next step.
		No	Replace the rear door latch and lock actuator (RH), then go to Step 10. (See 09-14-43 REAR DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
8	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 10.
9	**INSPECT FRONT DOOR LOCK-LINK SWITCH (PASSENGER'S SIDE)/REAR DOOR LOCK-LINK SWITCH (LH)/(RH) CIRCUIT FOR SHORT TO GROUND** • Verify that the rear body control module (RBCM) connector, front door latch and lock actuator (passenger's side) connector, rear door latch and lock actuator (LH) connector, and rear door latch and lock actuator (RH) connector are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — L.H.D.: • Front door latch and lock actuator (RH) terminal L — R.H.D.: • Front door latch and lock actuator (LH) terminal B • Is there continuity?	Yes	Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.
10	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B1174:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
11	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B1174:13 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4014100

System malfunction location	**Front door lock-link switch (passenger's side)/rear door lock-link switch (LH)/(RH) unlock circuit malfunction**
Detection condition	• With the front door lock-link switch (passenger's side)/rear door lock-link switch (LH)/(RH) unlocked, the rear body control module (RBCM) detects an open circuit in the door lock-link switch unlock circuit.
Fail-safe	—
Possible cause	• Front door latch and lock actuator (passenger's side) connector or terminal malfunction • Open circuit in wiring harness between the following terminals: — L.H.D.: • Front door latch and lock actuator (RH) terminal D and body ground — R.H.D.: • Front door latch and lock actuator (LH) terminal J and body ground • Front door lock-link switch (passenger's side) malfunction • Rear door latch and lock actuator (LH) connector or terminal malfunction • Open circuit in wiring harness between rear door latch and lock actuator (LH) terminal J and body ground • Rear door lock-link switch (LH) malfunction • Rear door latch and lock actuator (RH) connector or terminal malfunction • Open circuit in wiring harness between rear door latch and lock actuator (RH) terminal D and body ground • Rear door lock-link switch (RH) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Open circuit in wiring harness between the following terminals: — L.H.D.: • Rear body control module (RBCM) terminal 3J and front door latch and lock actuator (RH) terminal L/rear door latch and lock actuator (LH) terminal B/rear door latch and lock actuator (RH) terminal L — R.H.D.: • Rear body control module (RBCM) terminal 3J and front door latch and lock actuator (LH) terminal B/rear door latch and lock actuator (LH) terminal B/rear door latch and lock actuator (RH) terminal L • Rear body control module (RBCM) malfunction

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B1174:13 displayed?	Yes	Go to the next step.
		No	Go to Step 14.
2	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (PASSENGER'S DOOR) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front door latch and lock actuator (passenger's side) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 13.
3	**INSPECT FOR OPEN CIRCUIT IN FRONT DOOR LOCK-LINK SWITCH (PASSENGER'S SIDE) GROUND CIRCUIT** • Verify that the front door latch and lock actuator (passenger's side) connector is disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — L.H.D.: • Front door latch and lock actuator (RH) terminal D and body ground — R.H.D.: • Front door latch and lock actuator (LH) terminal J and body ground • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 13.
4	**INSPECT FRONT DOOR LOCK-LINK SWITCH (PASSENGER'S DOOR)** • Inspect the front door lock-link switch (passenger's door). (See 09-14-41 DOOR LOCK-LINK SWITCH INSPECTION.) • Is the front door lock-link switch (passenger's door) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (passenger's side), then go to Step 13. (See 09-14-36 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
5	**INSPECT REAR DOOR LATCH AND LOCK ACTUATOR (LH) CONNECTOR** • Disconnect the rear door latch and lock actuator (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 13.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Step	Inspection		Action
6	**INSPECT FOR OPEN CIRCUIT IN REAR DOOR LOCK-LINK SWITCH (LH) GROUND CIRCUIT** • Verify that the rear door latch and lock actuator (LH) connector is disconnected. • Inspect the wiring harness for continuity between rear door latch and lock actuator (LH) terminal J (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 13.
7	**INSPECT REAR DOOR LOCK-LINK SWITCH (LH)** • Inspect the rear door lock-link switch (LH). (See 09-14-41 DOOR LOCK-LINK SWITCH INSPECTION.) • Is the rear door lock-link switch (LH) normal?	Yes	Go to the next step.
		No	Replace the rear door latch and lock actuator (LH), then go to Step 13. (See 09-14-43 REAR DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
8	**INSPECT REAR DOOR LATCH AND LOCK ACTUATOR (RH) CONNECTOR** • Disconnect the rear door latch and lock actuator (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 13.
9	**INSPECT FOR OPEN CIRCUIT IN REAR DOOR LOCK-LINK SWITCH (RH) GROUND CIRCUIT** • Verify that the rear door latch and lock actuator (RH) connector is disconnected. • Inspect the wiring harness for continuity between rear door latch and lock actuator (RH) terminal D (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 13.
10	**INSPECT REAR DOOR LOCK-LINK SWITCH (RH)** • Inspect the rear door lock-link switch (RH). (See 09-14-41 DOOR LOCK-LINK SWITCH INSPECTION.) • Is the rear door lock-link switch (RH) normal?	Yes	Go to the next step.
		No	Replace the rear door latch and lock actuator (RH), then go to Step 13. (See 09-14-43 REAR DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
11	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 13.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

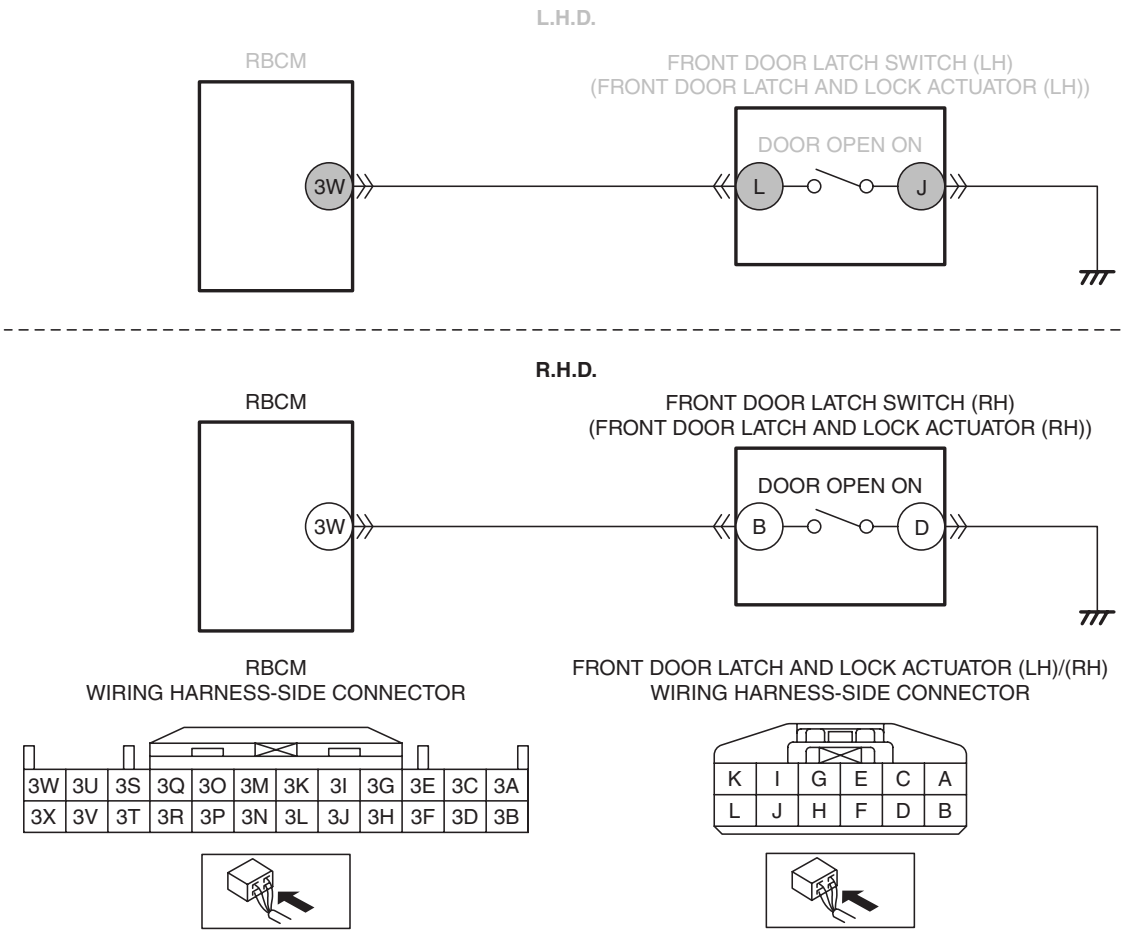
Step	Inspection		Action
12	**INSPECT FRONT DOOR LOCK-LINK SWITCH (PASSENGER'S SIDE)/REAR DOOR LINK SWITCH (LH)/(RH) CIRCUIT FOR OPEN CIRCUIT** • Verify that the rear body control module (RBCM) connector, front door latch and lock actuator (passenger's side) connector, rear door latch and lock actuator (LH) connector, and rear door latch and lock actuator (RH) connector are disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — L.H.D.: • Rear body control module (RBCM) terminal 3J and front door latch and lock actuator (RH) terminal L • Rear body control module (RBCM) terminal 3J and rear door latch and lock actuator (LH) terminal B • Rear body control module (RBCM) terminal 3J and rear door latch and lock actuator (RH) terminal L — R.H.D.: • Rear body control module (RBCM) terminal 3J and front door latch and lock actuator (LH) terminal B • Rear body control module (RBCM) terminal 3J and rear door latch and lock actuator (LH) terminal B • Rear body control module (RBCM) terminal 3J and rear door latch and lock actuator (RH) terminal L • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to the next step.
13	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B1174:13 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
14	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B1175:11 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4014200

System malfunction location	**Front door latch switch (driver's side) circuit malfunction**
Detection condition	• With the front door (driver's side) closed (front door latch switch (driver's side) off, the rear body control module (RBCM) detects a short to ground in the front door latch switch (driver's side) circuit.
Fail-safe	—
Possible cause	• Front door latch and lock actuator (driver's side) connector or terminal malfunction • Front door latch switch (driver's side) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — L.H.D.: • Rear body control module (RBCM) terminal 3W and front door latch and lock actuator (LH) terminal L — R.H.D.: • Rear body control module (RBCM) terminal 3W and front door latch and lock actuator (RH) terminal B • Rear body control module (RBCM) malfunction



ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B1175:11 displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER'S DOOR) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front door latch and lock actuator (driver's side) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FRONT DOOR LATCH SWITCH (DRIVER'S DOOR)** • Inspect the front door latch switch (driver's door). (See 09-14-41 FRONT DOOR LATCH SWITCH INSPECTION.) • Is the front door latch switch (driver's door) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (driver's side), then go to Step 6. (See 09-14-36 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT FRONT DOOR LATCH SWITCH (DRIVER'S SIDE) CIRCUIT FOR SHORT TO GROUND** • Verify that the rear body control module (RBCM) connector and front door latch and lock actuator (driver's side) connector are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — L.H.D.: • Front door latch and lock actuator (LH) terminal L — R.H.D.: • Front door latch and lock actuator (RH) terminal B • Is there continuity?	Yes	Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B1175:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B1176:11 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4014300

System malfunction location	**Front door latch switch (passenger's side) circuit malfunction**
Detection condition	• With the front door (passenger's side) closed (front door latch switch (passenger's side) off, the rear body control module (RBCM) detects a short to ground in the front door latch switch (passenger's side) circuit.
Fail-safe	—
Possible cause	• Front door latch and lock actuator (passenger's side) connector or terminal malfunction • Front door latch switch (passenger's side) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — L.H.D.: • Rear body control module (RBCM) terminal 3U and front door latch and lock actuator (RH) terminal B — R.H.D.: • Rear body control module (RBCM) terminal 3U and front door latch and lock actuator (LH) terminal L • Rear body control module (RBCM) malfunction

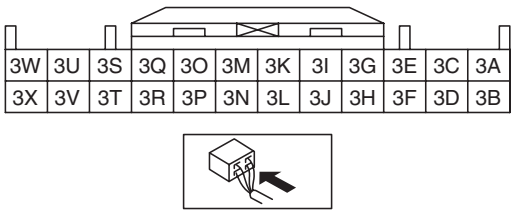
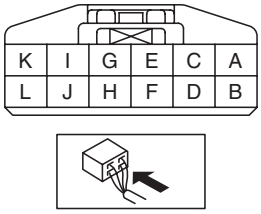
WIRING HARNESS-SIDE CONNECTOR



FRONT DOOR LATCH AND LOCK ACTUATOR (LH)/(RH)
WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B1176:11 displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (PASSENGER'S DOOR) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front door latch and lock actuator (passenger's side) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FRONT DOOR LATCH SWITCH (PASSENGER'S DOOR)** • Inspect the front door latch switch (passenger's door). (See 09-14-41 FRONT DOOR LATCH SWITCH INSPECTION.) • Is the front door latch switch (passenger's door) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (passenger's side), then go to Step 6. (See 09-14-36 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT FRONT DOOR LATCH SWITCH (PASSENGER'S SIDE) CIRCUIT FOR SHORT TO GROUND** • Verify that the rear body control module (RBCM) connector and front door latch and lock actuator (passenger's side) connector are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — L.H.D.: • Front door latch and lock actuator (RH) terminal B — R.H.D.: • Front door latch and lock actuator (LH) terminal L • Is there continuity?	Yes	Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

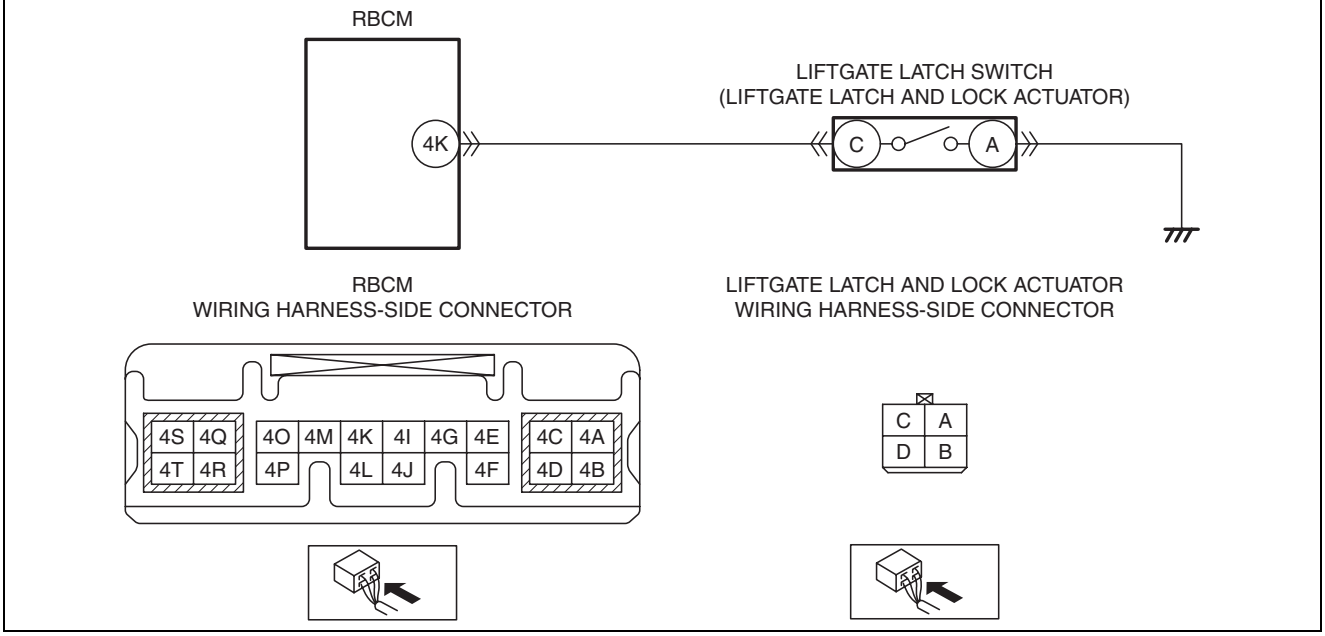
Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B1176:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B1178:11 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4014400

System malfunction location	**Liftgate latch switch circuit malfunction**
Detection condition	• With the liftgate closed (liftgate latch switch off), rear body control module (RBCM) detects short to ground in liftgate latch switch circuit.
Fail-safe	—
Possible cause	• Liftgate latch and lock actuator connector or terminal malfunction • Liftgate latch switch malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 4K and liftgate latch and lock actuator terminal C • Rear body control module (RBCM) malfunction



ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B1178:11 displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT LIFTGATE LATCH AND LOCK ACTUATOR CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the liftgate latch and lock actuator connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT LIFTGATE LATCH SWITCH** • Inspect the liftgate latch switch. (See 09-14-51 LIFTGATE LATCH SWITCH INSPECTION.) • Is the liftgate latch switch normal?	Yes	Go to the next step.
		No	Replace the liftgate latch and lock actuator, then go to Step 6. (See 09-14-49 LIFTGATE LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT LIFTGATE LATCH SWITCH CIRCUIT FOR SHORT TO GROUND** • Verify that the rear body control module (RBCM) connector and liftgate latch and lock actuator connector are disconnected. • Inspect for continuity between liftgate latch and lock actuator terminal C (vehicle wiring harness) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B1178:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B11DA:16 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4014500

System malfunction location	**Front door key cylinder switch (driver's side) circuit malfunction**
Detection condition	• With the front door key cylinder switch (driver's side) off, the rear body control module (RBCM) detects front door key cylinder switch (driver's side) voltage of **4 V or less**.
Fail-safe	—
Possible cause	• Front door latch and lock actuator (driver's side) connector or terminal malfunction • Front door key cylinder switch (driver's side) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — L.H.D.: • Rear body control module (RBCM) terminal 3H and front door latch and lock actuator (LH) terminal H — R.H.D.: • Rear body control module (RBCM) terminal 3H and front door latch and lock actuator (RH) terminal F • Rear body control module (RBCM) malfunction

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B11DA:16 displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER'S DOOR) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front door latch and lock actuator (driver's side) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT FRONT DOOR KEY CYLINDER SWITCH (DRIVER'S DOOR)** • Inspect the front door key cylinder switch (driver's door). (See 09-14-33 FRONT DOOR KEY CYLINDER SWITCH INSPECTION.) • Is the front door key cylinder switch (driver's side) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (driver's side), then go to Step 6. (See 09-14-36 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT FRONT DOOR KEY CYLINDER SWITCH (DRIVER'S SIDE) CIRCUIT FOR SHORT TO GROUND** • Verify that the rear body control module (RBCM) connector and front door latch and lock actuator (driver's side) connector are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — L.H.D.: • Front door latch and lock actuator (LH) terminal H — R.H.D.: • Front door latch and lock actuator (RH) terminal F • Is there continuity?	Yes	Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

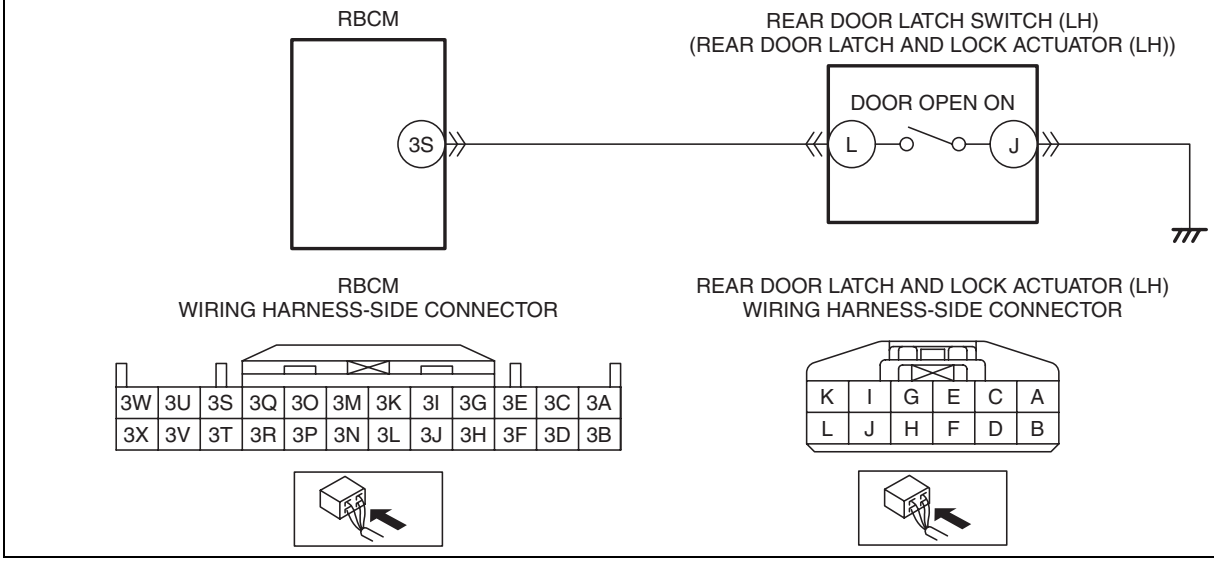
Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B11DA:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B11E9:11 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4014600

System malfunction location	**Rear door latch switch (LH) circuit malfunction**
Detection condition	• With the rear door (LH) closed (rear door latch switch (LH) off), the rear body control module (RBCM) detects a short to ground in the rear door latch switch (LH) cylinder.
Fail-safe	—
Possible cause	• Rear door latch and lock actuator (LH) connector or terminal malfunction • Rear door latch switch (LH) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 3S and rear door latch and lock actuator (LH) terminal L • Rear body control module (RBCM) malfunction



ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B11E9:11 displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT REAR DOOR LATCH AND LOCK ACTUATOR (LH) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the rear door latch and lock actuator (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT REAR DOOR LATCH SWITCH (LH)** • Inspect the rear door latch switch (LH). (See 09-14-47 REAR DOOR LATCH SWITCH INSPECTION.) • Is the rear door latch switch (LH) normal?	Yes	Go to the next step.
		No	Replace the rear door latch and lock actuator (LH), then go to Step 6. (See 09-14-43 REAR DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT REAR DOOR LATCH SWITCH (LH) CIRCUIT FOR SHORT TO GROUND** • Verify that the rear body control module (RBCM) connector and rear door latch and lock actuator (LH) connector are disconnected. • Inspect for continuity between rear door latch and lock actuator (LH) terminal L (vehicle wiring harness) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

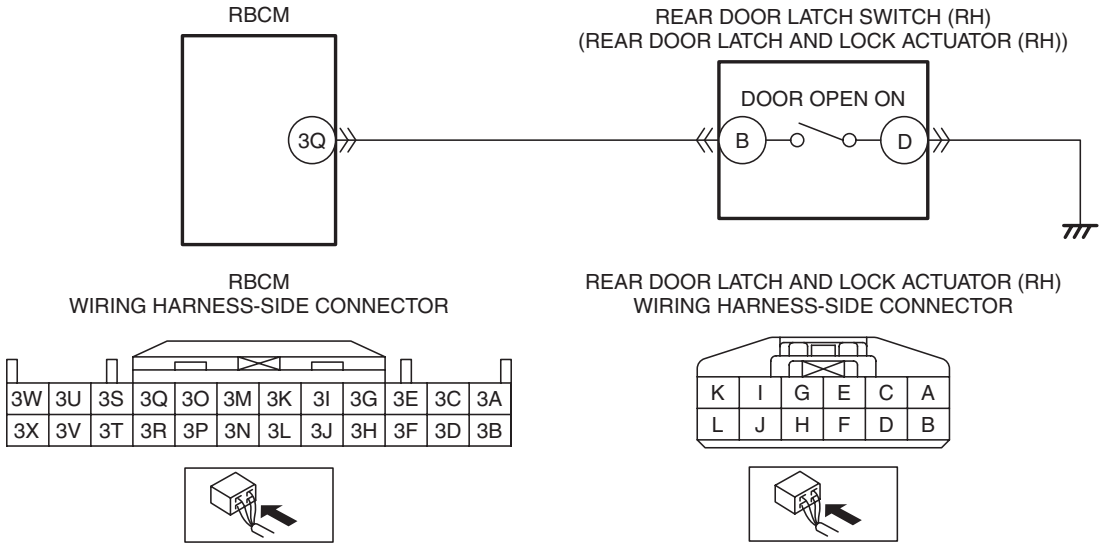
Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B11E9:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B11EA:11 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4014700

System malfunction location	**Rear door latch switch (RH) circuit malfunction**
Detection condition	• With the rear door (RH) closed (rear door latch switch (RH) off), the rear body control module (RBCM) detects a short to ground in the rear door latch switch (RH) cylinder.
Fail-safe	—
Possible cause	• Rear door latch and lock actuator (RH) connector or terminal malfunction • Rear door latch switch (RH) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between rear body control module (RBCM) terminal 3Q and rear door latch and lock actuator (RH) terminal B • Rear body control module (RBCM) malfunction



ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B11EA:11 displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT REAR DOOR LATCH AND LOCK ACTUATOR (RH) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the rear door latch and lock actuator (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT REAR DOOR LATCH SWITCH (RH)** • Inspect the rear door latch switch (RH). (See 09-14-47 REAR DOOR LATCH SWITCH INSPECTION.) • Is the rear door latch switch (RH) normal?	Yes	Go to the next step.
		No	Replace the rear door latch and lock actuator (RH), then go to Step 6. (See 09-14-43 REAR DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT REAR DOOR LATCH SWITCH (RH) CIRCUIT FOR SHORT TO GROUND** • Verify that the rear body control module (RBCM) connector and rear door latch and lock actuator (RH) connector are disconnected. • Inspect for continuity between rear door latch and lock actuator (RH) terminal B (vehicle wiring harness) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B11EA:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B126A:11 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4014800

System malfunction location	**Front door lock-link switch (driver's side) lock circuit malfunction**
Detection condition	• With the front door lock-link switch (driver's side) unlocked, the rear body control module (RBCM) detects a short to ground in the front door lock-link switch (driver's side) lock circuit.
Fail-safe	—
Possible cause	• Front door latch and lock actuator (driver's side) connector or terminal malfunction • Front door lock-link switch (driver's side) malfunction • Start stop unit connector or terminal malfunction • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — L.H.D.: • Start stop unit terminal 1P and front door latch and lock actuator (LH) terminal D • Rear body control module (RBCM) terminal 3O and front door latch and lock actuator (LH) terminal D — R.H.D.: • Start stop unit terminal 1P and front door latch and lock actuator (RH) terminal J • Rear body control module (RBCM) terminal 3O and front door latch and lock actuator (RH) terminal J • Start stop unit malfunction • Rear body control module (RBCM) malfunction

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

System malfunction location	Front door lock-link switch (driver's side) lock circuit malfunction

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B126A:11 displayed?	Yes	Go to the next step.
		No	Go to Step 9.
2	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER'S DOOR) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front door latch and lock actuator (driver's side) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
3	**INSPECT FRONT DOOR LOCK-LINK SWITCH (DRIVER'S DOOR)** • Inspect the front door lock-link switch (driver's door). (See 09-14-41 DOOR LOCK-LINK SWITCH INSPECTION.) • Is the front door lock-link switch (driver's door) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (driver's side), then go to Step 8. (See 09-14-36 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
5	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Step	Inspection		Action
6	**INSPECT FRONT DOOR LOCK-LINK SWITCH (DRIVER'S SIDE) CIRCUIT FOR SHORT TO GROUND** • Verify that the rear body control module (RBCM) connector, start stop unit connector, and front door latch and lock actuator (driver's side) connector are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — L.H.D.: • Front door latch and lock actuator (LH) terminal D — R.H.D.: • Front door latch and lock actuator (RH) terminal J • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 8.
		No	Go to the next step.
7	**INSPECT START STOP UNIT** • Inspect the start stop unit. (See 09-14-56 START STOP UNIT INSPECTION.) • Is the start stop unit normal?	Yes	Go to the next step.
		No	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B126A:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B126A:13 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4014900

System malfunction location	**Front door lock-link switch (driver's side) lock circuit malfunction**
Detection condition	• Rear body control module (RBCM) detects open circuit in front door lock-link switch (driver's side) lock side circuit with front door lock-link switch (driver's side) locked.
Fail-safe	—
Possible cause	• Front door latch and lock actuator (driver's side) connector or terminal malfunction • Open circuit in wiring harness between the following terminals: — L.H.D.: • Front door latch and lock actuator (LH) terminal J and body ground — R.H.D.: • Front door latch and lock actuator (RH) terminal D and body ground • Front door lock-link switch (driver's side) malfunction • Rear body control module (RBCM) connector or terminal malfunction • Open circuit in wiring harness between the following terminals: — L.H.D.: • Rear body control module (RBCM) terminal 3O and front door latch and lock actuator (LH) terminal D — R.H.D.: • Rear body control module (RBCM) terminal 3O and front door latch and lock actuator (RH) terminal J • Rear body control module (RBCM) malfunction

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Lock the front door lock-link switch (driver's side). • Is DTC B126A:13 displayed?	Yes	Go to the next step.
		No	Go to Step 8.
2	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER'S DOOR) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front door latch and lock actuator (driver's side) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT FOR OPEN CIRCUIT IN FRONT DOOR LOCK-LINK SWITCH (DRIVER'S SIDE) GROUND CIRCUIT** • Verify that the front door latch and lock actuator (driver's side) connector is disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — L.H.D.: • Front door latch and lock actuator (LH) terminal J and body ground — R.H.D.: • Front door latch and lock actuator (RH) terminal D and body ground • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 7.
4	**INSPECT FRONT DOOR LOCK-LINK SWITCH (DRIVER'S DOOR)** • Inspect the front door lock-link switch (driver's door). (See 09-14-41 DOOR LOCK-LINK SWITCH INSPECTION.) • Is the front door lock-link switch (driver's door) normal?	Yes	Go to the next step.
		No	Replace the front door latch and lock actuator (driver's side), then go to Step 7. (See 09-14-36 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
5	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

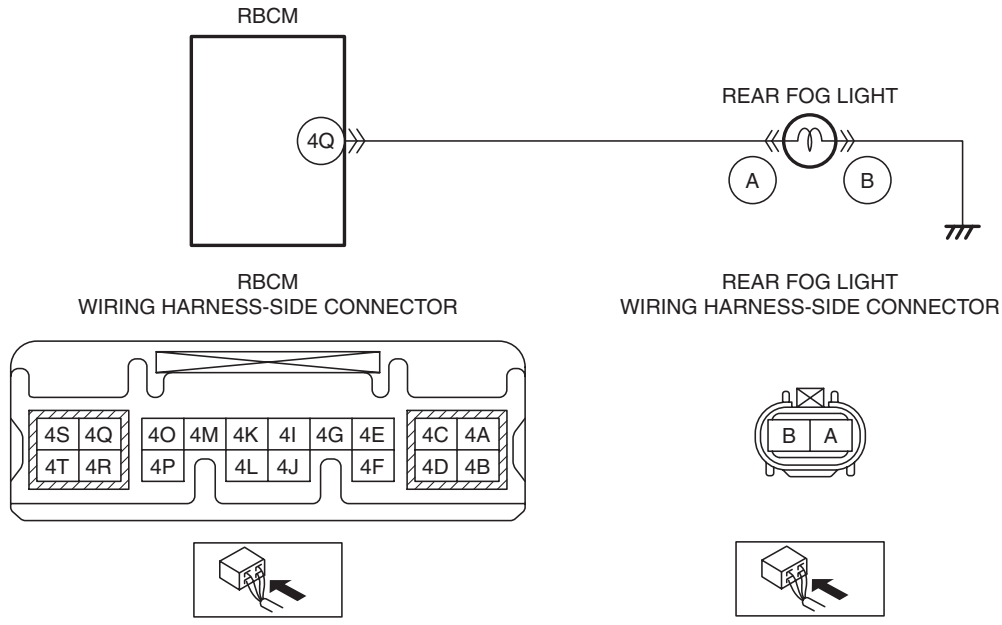
Step	Inspection		Action
6	**INSPECT FOR OPEN CIRCUIT IN FRONT DOOR LOCK-LINK SWITCH (DRIVER'S SIDE) CIRCUIT** • Verify that the rear body control module (RBCM) connector and front door latch and lock actuator (driver's side) connector are disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — L.H.D.: • Rear body control module (RBCM) terminal 3O and front door latch and lock actuator (LH) terminal D — R.H.D.: • Rear body control module (RBCM) terminal 3O and front door latch and lock actuator (RH) terminal J • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Lock the front door lock-link switch (driver's side). • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B126A:13 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC B1A79:13 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4015000

System malfunction location	**Rear fog light circuit malfunction**
Detection condition	• Rear body control module (RBCM) detects open circuit in rear fog light circuit.
Fail-safe	—
Possible cause	• Rear fog light connector or terminal malfunction • Rear fog light bulb malfunction • Open circuit in wiring harness between rear fog light terminal B and body ground • Rear body control module (RBCM) connector or terminal malfunction • Open circuit in wiring harness between rear body control module (RBCM) terminal 4Q and rear fog light terminal A • Rear body control module (RBCM) malfunction



ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B1A79:13 displayed?	Yes	Go to the next step.
		No	Go to Step 8.
2	**INSPECT REAR FOG LIGHT CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the rear fog light connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**REAR FOG LIGHT BULB INSPECTION** • Inspect the rear fog light bulb. • Is the rear fog light bulb normal?	Yes	Go to the next step.
		No	Replace the rear fog light bulb, then go to Step 7. (See 09-18-74 REAR FOG LIGHT BULB REMOVAL/INSTALLATION.)
4	**INSPECT REAR FOG LIGHT GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the rear fog light connector is disconnected. • Inspect for continuity between rear fog light terminal B (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 7.
5	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
6	**INSPECT REAR FOG LIGHT CIRCUIT FOR OPEN CIRCUIT** • Verify that the rear body control module (RBCM) connector and rear fog light connector are disconnected. • Inspect the wiring harness for an open circuit between rear body control module (RBCM) terminal 4Q (vehicle wiring harness side) and rear fog light terminal A (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Step	Inspection		Action
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC B1A79:13 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

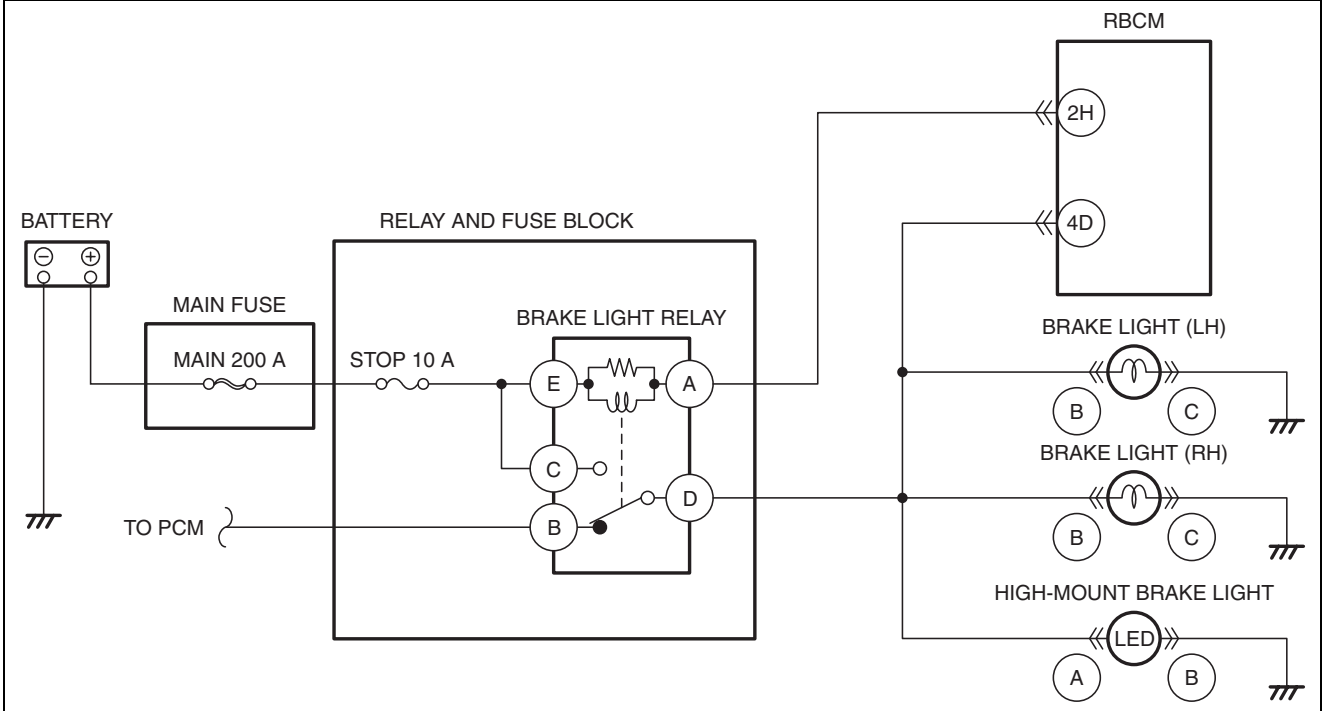
DTC C0023:14 [REAR BODY CONTROL MODULE (RBCM)]

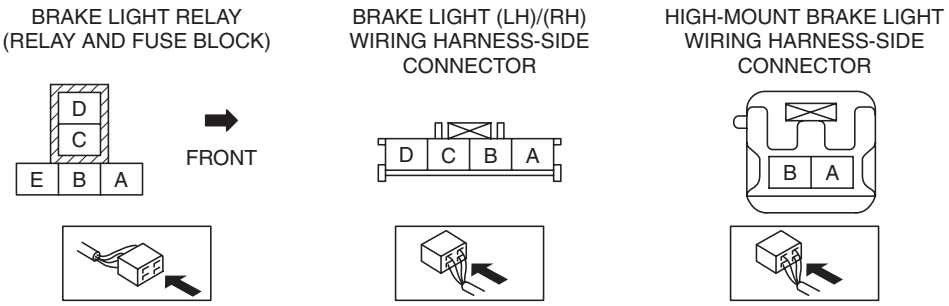
id0902p4015100

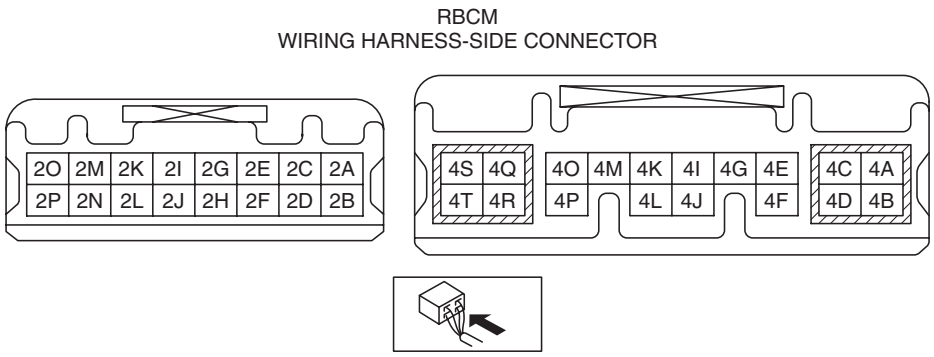
System malfunction location	**Rear body control module (RBCM) internal malfunction (brake light drive circuit)**
Detection condition	• Rear body control module (RBCM) detects open circuit in brake light circuit.
Fail-safe	—
Possible cause	• DTCs are stored in the PCM. • Laser sensor stores DTCs. • Brake light relay malfunction • Short to ground or open circuit in brake light relay power supply circuit — Short to ground in wiring harness between battery positive terminal and brake light relay terminal E — Short to ground in wiring harness between battery positive terminal and brake light relay terminal C — MAIN 200 A fuse malfunction — STOP 10 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and brake light relay terminal E — Open circuit in wiring harness between battery positive terminal and brake light relay terminal C • Brake light (LH) connector or terminal malfunction • Brake light bulb (LH) malfunction • Open circuit in wiring harness between brake light (LH) terminal C and body ground • Brake light (RH) connector or terminal malfunction • Brake light bulb (RH) malfunction • Open circuit in wiring harness between brake light (RH) terminal C and body ground • High-mount brake light connector or terminal malfunction • Open circuit in wiring harness between high-mount brake light terminal B and body ground • Rear body control module (RBCM) connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — Brake light relay terminal A and rear body control module (RBCM) terminal 2H — Rear body control module (RBCM) terminal 4D and brake light (LH) terminal B — Rear body control module (RBCM) terminal 4D and brake light (RH) terminal B — Rear body control module (RBCM) terminal 4D and high-mount brake light terminal A • Short to power supply in wiring harness between the following terminals: — Brake light relay terminal A and rear body control module (RBCM) terminal 2H — Rear body control module (RBCM) terminal 4D and brake light (LH) terminal B — Rear body control module (RBCM) terminal 4D and brake light (RH) terminal B — Rear body control module (RBCM) terminal 4D and high-mount brake light terminal A • Open circuit in wiring harness between the following terminals: — Brake light relay terminal A and rear body control module (RBCM) terminal 2H — Brake light relay terminal D and rear body control module (RBCM) terminal 4D — Rear body control module (RBCM) terminal 4D and brake light (LH) terminal B — Rear body control module (RBCM) terminal 4D and brake light (RH) terminal B — Rear body control module (RBCM) terminal 4D and high-mount brake light terminal A • High-mount brake light malfunction • Rear body control module (RBCM) malfunction

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

System malfunction location	Rear body control module (RBCM) internal malfunction (brake light drive circuit)







ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC C0023:14 displayed?	Yes	Go to the next step.
		No	Go to Step 20.
2	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**VERIFY LASER SENSOR DTCs** • Perform the DTC inspection for the laser sensor using the M-MDS. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].)
		No	Go to the next step.
4	**INSPECT BRAKE LIGHT RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the brake light relay. (See 09-21-28 RELAY LOCATION.) • Inspect the brake light relay. (See 09-21-29 RELAY INSPECTION.) • Is the brake light relay normal?	Yes	Go to the next step.
		No	Replace the brake light relay, then go to Step 19. (See 09-21-28 RELAY LOCATION.)
5	**INSPECT BRAKE LIGHT RELAY POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Verify that the brake light relay is removed. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). — Brake light relay terminal E — Brake light relay terminal C • Is the voltage **B+**?	Yes	Install the brake light relay, then go to the next step.
		No	Inspect the MAIN 200 A fuse and STOP 10 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the burnt out fuse. • If a fuse is damaged: — Replace the damaged fuse. • All fuses are normal: — Repair or replace the wiring harness which has an open circuit. Go to Step 19.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Step	Inspection		Action
6	**INSPECT BRAKE LIGHT (LH) CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the brake light (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 19.
7	**INSPECT BRAKE LIGHT BULB (LH)** • Inspect the brake light bulb (LH). • Is the brake light bulb (LH) normal?	Yes	Go to the next step.
		No	Replace the brake/taillight bulb (LH), then go to Step 19. (See 09-18-59 BRAKE/TAILLIGHT BULB REMOVAL/INSTALLATION.)
8	**INSPECT BRAKE LIGHT (LH) GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the brake light (LH) connector is disconnected. • Inspect for continuity between brake light (LH) terminal C (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness and go to Step 19.
9	**INSPECT BRAKE LIGHT (RH) CONNECTOR** • Disconnect the brake light (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 19.
10	**INSPECT BRAKE LIGHT BULB (RH)** • Inspect the brake light bulb (RH). • Is the brake light bulb (RH) normal?	Yes	Go to the next step.
		No	Replace the brake/taillight bulb (RH), then go to Step 19. (See 09-18-59 BRAKE/TAILLIGHT BULB REMOVAL/INSTALLATION.)
11	**INSPECT BRAKE LIGHT (RH) GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the brake light (RH) connector is disconnected. • Inspect for continuity between brake light (RH) terminal C (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness and go to Step 19.
12	**INSPECT HIGH-MOUNT BRAKE LIGHT CONNECTOR** • Disconnect the high-mount brake light connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 19.
13	**INSPECT HIGH-MOUNT BRAKE LIGHT GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the high-mount brake light connector is disconnected. • Inspect for continuity between high-mount brake light terminal B (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness and go to Step 19.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Step	Inspection		Action
14	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 19.
15	**INSPECT BRAKE LIGHT DRIVE CIRCUIT FOR SHORT TO GROUND** • Verify that the brake light (LH)/(RH) connector, high-mount brake light connector, and rear body control module (RBCM) connector are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — Rear body control module (RBCM) terminal 2H — Brake light (LH) terminal B — Brake light (RH) terminal B — High-mount brake light terminal A • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 19.
		No	Go to the next step.
16	**INSPECT BRAKE LIGHT DRIVE CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the brake light (LH)/(RH) connector, high-mount brake light connector, and rear body control module (RBCM) connector are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). — Rear body control module (RBCM) terminal 2H — Brake light (LH) terminal B — Brake light (RH) terminal B — High-mount brake light terminal A • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which is shorted to power supply, then go to Step 19.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Step	Inspection		Action
17	**INSPECT BRAKE LIGHT DRIVE CIRCUIT FOR OPEN CIRCUIT** • Verify that the brake light (LH)/(RH) connector, high-mount brake light connector, and rear body control module (RBCM) connector are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — Brake light relay terminal A and rear body control module (RBCM) terminal 2H — Brake light relay terminal D and rear body control module (RBCM) terminal 4D — Rear body control module (RBCM) terminal 4D and brake light (LH) terminal B — Rear body control module (RBCM) terminal 4D and brake light (RH) terminal B — Rear body control module (RBCM) terminal 4D and high-mount brake light terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 19.
18	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS HIGH-MOUNT BRAKE LIGHT** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC C0023:14 displayed?	Yes	Replace the high-mount brake light, then go to the next step. (See 09-18-75 HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION.)
		No	Go to Step 20.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Step	Inspection		Action
19	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC C0023:14 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
20	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC U0010:88/U0155:00 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4015200

System malfunction location	**U0010:88** • **Unit communication error (MS-CAN)** **U0155:00** • **Communication error with instrument cluster**
Detection condition	• U0010:88 — With the ignition switched ON (engine off or on), the rear body control module (RBCM) detects a CAN communication line (MS-CAN) error. • U0155:00 — The rear body control module (RBCM) cannot receive CAN signals from the instrument cluster for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Malfunction in CAN bus communication line • Malfunction in CAN line between the instrument cluster and rear body control module (RBCM)
System wiring diagram	—

Diagnostic Procedure

- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See 10-02A-1 FOREWORD [SKYACTIV-G 2.0 (L.H.D.)].) (See 10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)].) (See 10-02C-1 FOREWORD [SKYACTIV-D 2.2 (L.H.D.)].) (See 10-02D-1 FOREWORD [SKYACTIV-D 2.2 (R.H.D.)].)

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC U0447:86 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4015300

System malfunction location	**Communication error between front body control module (FBCM) and instrument cluster**
Detection condition	• The rear body control module (RBCM) receives error signals from the instrument cluster for **10 s or more continuously** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• DTCs are stored in the instrument cluster. • Rear body control module (RBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is the DTC U0447:86 displayed?	Yes	Go to the next step.
		No	Go to Step 4.
2	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is the DTC U0447:86 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC U2100:00 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4015400

System malfunction location	**Rear body control module (RBCM) configuration error**
Detection condition	• Rear body control module (RBCM) configuration error detected.
Fail-safe	—
Possible cause	• Rear body control module (RBCM) configuration error • Rear body control module (RBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC U2100:00 displayed?	Yes	Go to the next step.
		No	Go to Step 4.
2	**PERFORM REAR BODY CONTROL MODULE (RBCM) CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the rear body control module (RBCM) configuration with the As-Built data. (See 09-40-16 REAR BODY CONTROL MODULE (RBCM) CONFIGURATION (USING AS-BUILT DATA).) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC U2100:00 displayed?	Yes	Using the M-MDS, re-perform the rear body control module (RBCM) configuration using the As-Built data, then go to the next step. (See 09-40-16 REAR BODY CONTROL MODULE (RBCM) CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC U2100:00 displayed?	Yes	Replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

DTC U3000:49 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4015500

System malfunction location	**Rear body control module (RBCM) internal malfunction**
Detection condition	• Malfunction inside rear body control module (RBCM) detected.
Fail-safe	—
Possible cause	• Rear body control module (RBCM) malfunction
System wiring diagram	—

Diagnostic Procedure

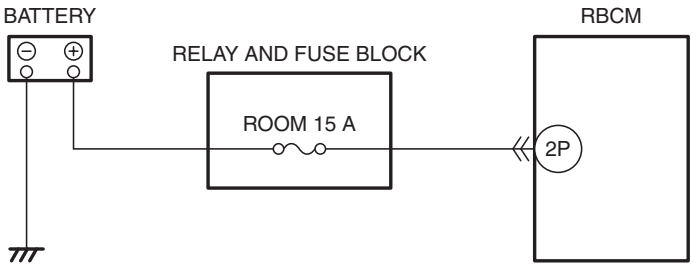
Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS REAR BODY CONTROL MODULE (RBCM)** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC U3000:49 displayed?	Yes	Replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

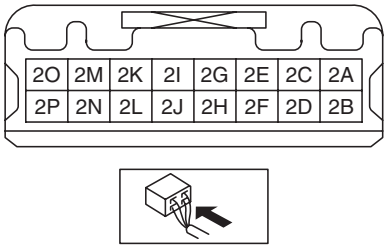
DTC U3003:16 [REAR BODY CONTROL MODULE (RBCM)]

id0902p4015600

System malfunction location	**Rear body control module (RBCM) power supply voltage (+B power supply) low input**
Detection condition	• Rear body control module (RBCM) power supply circuit voltage of **5 V or more, less than 9 V** is detected for **10 s or more**.
Fail-safe	—
Possible cause	• Battery malfunction • Generator malfunction • Rear body control module (RBCM) connector or terminal malfunction • Malfunction between battery (+) terminal and rear body control module (RBCM) terminal 2P • Rear body control module (RBCM) malfunction



RBCM
WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY REAR BODY CONTROL MODULE (RBCM) DTCs AGAIN** • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC U3003:16 displayed?	Yes	Go to the next step.
		No	Go to Step 7.
2	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 6. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 6. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

Step	Inspection		Action
5	**VERIFY REAR BODY CONTROL MODULE (RBCM) POWER SUPPLY VOLTAGE** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Display PID VPWR_B_R using the M-MDS. (See 09-02L-93 PID/DATA MONITOR INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is the voltage **5 V or more, 9 V or less**?	Yes	Go to the next step.
		No	Inspect wiring harness between battery (+) and rear body control module (RBCM) terminal 2P (vehicle wiring harness side). • If there is any malfunction: — If there is a malfunction, repair or replace the wiring harness, then go to the next step. • If there is no malfunction: — Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear rear body control module (RBCM) DTCs using the M-MDS. (See 09-02L-11 CLEARING DTC [REAR BODY CONTROL MODULE (RBCM)].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is DTC U3003:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

PID/DATA MONITOR INSPECTION [REAR BODY CONTROL MODULE (RBCM)]

id0902p4015700

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “R_BCM”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

PID/DATA MONITOR TABLE [REAR BODY CONTROL MODULE (RBCM)]

id0902p4015800

—: Not applicable

PID	Unit/ Operation	Data contents	Inspection item(s)
AT_DL_IG	Off/On	• Off: Door lock actuator does not operate to unlock in conjunction with ignition off. • On: Door lock actuator operates to unlock in conjunction with ignition off.	Door lock actuator
AT_DL_SHIFT	Off/On	• Off: Door lock actuator does not operate to lock or unlock in conjunction with shifting. • On: Door lock actuator does not operate to lock or unlock in conjunction with shifting.	Door lock actuator
AT_DL_VSPD	Off/On	• Off: Door lock actuator does not operate to lock in conjunction with vehicle speed. • On: Door lock actuator operates to lock in conjunction with vehicle speed.	Door lock actuator
BG_HORN_RLY*1	Off/On	• Off: Theft-deterrent horn relay is off. • On: Theft-deterrent horn relay is on.	• Theft-deterrent horn relay • Rear body control module (RBCM)
BRAKE_SW*2	Off/On	• Off: Brake switch (No. 1 signal) is off (brake pedal is not depressed). • On: Brake switch (No. 1 signal) is on (brake pedal is depressed).	Brake switch
C_DL_SW_LK*3	Off/On	• Off: Door lock switch is not in lock. • On: Door lock switch is in lock.	Door lock switch
C_DL_SW_UNL*3	Off/On	• Off: Door lock switch is not in unlock. • On: Door lock switch is in unlock.	Door lock switch
CNT_S_COMM	—	Count number of serial communication signal received from start stop unit is displayed. **Note** • Display returns to 0 if the number of times exceeds 15.	Start stop unit
DL_MT_A_LK	Off/On	• Off: All door lock actuators are not operated to lock. • On: All door lock actuators are operated to lock.	Door lock actuator
DL_MT_A_UNL	Off/On	• Off: All door lock actuators are not operated to unlock. • On: All door lock actuators are operated to unlock.	Door lock actuator
DL_MT_D_UNL*4	Off/On	• Off: Front door lock actuator (driver's side) is not operated to unlock. • On: Front door lock actuator (driver's side) is operated to unlock.	Front door lock actuator (driver's side)
DL_MT_S-LK*5	Off/On	• Off: Double locking system is not operated. • On: Double locking system is operated.	Door lock actuator
DOOR_ALL	Close/ OPEN	• Close: All doors are closed. • OPEN: Any door is open.	Door latch switch
DOOR_D	Close/ OPEN	• Close: Driver's door is closed. • OPEN: Driver's door is open.	Front door latch switch (driver's door)
ELAT_MT_RLY	Off/On	• Off: Liftgate latch is not operated to unlock. • Off: Liftgate latch is operated to unlock.	Liftgate latch and lock actuator
ELAT_UNL	Off/On	• Off: Liftgate latch is not operated to unlock. • Off: Liftgate latch is operated to unlock.	Liftgate latch and lock actuator
FUEL_SEN_M	V	Fuel gauge sender unit input voltage is displayed.	Fuel gauge sender unit
FUEL_SEN_S*6	V	Fuel gauge sender unit (SUB) input voltage is displayed.	Fuel gauge sender unit (SUB)
FUEL_SEN_SV	V	Fuel gauge sender unit power supply voltage is displayed.	• Fuel gauge sender unit • Fuel gauge sender unit (SUB)
HOOD*7	Close/ OPEN	• Close: Bonnet is closed. • OPEN: Bonnet is open.	Bonnet latch switch
IG1_SW	Off/On	• Off: IG1 relay is off. • On: IG1 relay is on.	IG1 relay
KC_SW_D_LK	Off/On	• Off: Front door key cylinder switch is not in lock. • On: Front door key cylinder switch is in lock.	Front door key cylinder switch

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

PID	Unit/ Operation	Data contents	Inspection item(s)
KC_SW_D_UNL	Off/On	• Off: Front door key cylinder switch is not in unlock. • On: Front door key cylinder switch is in unlock.	Front door key cylinder switch
LL_P/R*7	Unlock/ Other	• Unlock: Front door lock-link switch (passenger's side), rear door lock-link switch (LH), rear door lock-link switch (RH) are in unlock. • Other: Front door lock-link switch (passenger's side), rear door lock-link switch (LH), rear door lock-link switch (RH) are in lock.	• Front door lock-link switch (passenger's door) • Rear door lock-link switch (LH) • Rear door lock-link switch (RH)
LL_SW_D_LK	Off/On	• Off: Front door lock-link switch (driver's side) is in unlock. • On: Front door lock-link switch (driver's side) is in lock.	Front door lock-link switch (driver's door)
LL_SW_D_UNL	Off/On	• Off: Front door lock-link switch (driver's side) is in lock. • On: Front door lock-link switch (driver's side) is in unlock.	Front door lock-link switch (driver's door)
R_FOG_L_CS*8	Off/On	• Off: Rear fog light on signal is not received. • On: Rear fog light on signal is received.	Front body control module (FBCM)
R_FOG_LMP*8	Off/On	• Off: Rear fog light is turned off. • On: Rear fog light is turned on.	Rear fog light
R_LMP	Off/On	• Off: Back-up light is turned off. • On: Back-up light is turned on.	Back-up light
R_LMP_CS	Off/On/ Unknown/ Fault	• Off: Back-up light off signal is received. • On: Back-up light on signal is received. • Unknown: Back-up light off signal not determined • Fault: Communication with instrument cluster is failed.	• Instrument cluster • Back-up light
R_WIP_MT_LO	Off/On	• Off: Rear wiper motor is not operated. • On: Rear wiper motor is operated.	Rear wiper motor
ROOM_LMP	Off/On	• Off: Map light is turned off. • On: Map light is turned on.	• Front map light • Rear map light
SEAT_B_2C*9	Unbuckled/ Buckled	• Unbuckled: Second-row center seat belt is not fastened. • Buckled: Second-row center seat belt is fastened.	Rear center buckle switch
SEAT_B_2L*9	Unbuckled/ Buckled	• Unbuckled: Second-row left-side seat belt is not fastened. • Buckled: Second-row left-side seat belt is fastened.	Rear buckle switch (LH)
SEAT_B_2R*9	Unbuckled/ Buckled	• Unbuckled: Second-row right-side seat belt is not fastened. • Buckled: Second-row right-side seat belt is fastened.	Rear buckle switch (RH)
STOP_LMP*2	Off/On	• Off: Brake light is turned off. • On: Brake light is turned on.	Brake light
STOP_LMP_CS*2	Off/On	• Off: Brake light off signal is received. • On: Brake light on signal is received.	• Instrument cluster • Brake light
T_ROOM_LMP	Off/On	• Off: Cargo compartment light is turned off. • On: Cargo compartment light is turned on.	Cargo compartment light
T_UNL_SW	Off/On	• Off: Liftgate opener switch is not pressed. • On: Liftgate opener switch is pressed.	Liftgate opener switch
TRUNK	Close/ OPEN	• Close: Liftgate is closed. • OPEN: Liftgate is open.	Liftgate latch switch
VPWR_B_R	V	Voltage at rear body control module (RBCM) terminal 2P (+B power supply) is displayed.	Battery
VPWR_IG1	V	Voltage at rear body control module (RBCM) terminal 2I (IG1 power supply) is displayed.	• IG1 relay • Battery

*1 : With theft-deterrent horn
*2 : With smart city brake support
*3 : With door lock switch
*4 : With 2-step unlocking
*5 : With double locking system
*6 : 4WD

*8 : With rear fog light
*9 : With rear seat belt reminder system

ON-BOARD DIAGNOSTIC [REAR BODY CONTROL MODULE (RBCM)]

ACTIVE COMMAND MODES INSPECTION [REAR BODY CONTROL MODULE (RBCM)]

id0902p4015900

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “R_BCM”.
3. Select the simulation items from the PID table.
4. Perform the active command modes function, inspect the operations for each parts.
   - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

ACTIVE COMMAND MODES TABLE [REAR BODY CONTROL MODULE (RBCM)]

id0902p4016000

Simulation item	Unit/ Operation	Data contents	Output part name
BG_HORN_RLY*1	Off/On	• Off: Stops theft-deterrent horn. • On: Sounds the theft-deterrent horn.	Rear body control module (RBCM)
DL_MT_A	Lock/Unlock	• Lock: Locks all of the doors. • Unlock: Unlocks all of the doors.	Door lock actuater
ELAT_MT_RLY	Off/On	• Off: Stops the liftgate latch release operation. • On: Releases the liftgate latch.	Liftgate latch and lock actuator
ELAT_UNL	Off/On	• Off: Stops the liftgate latch release operation. • On: Releases the liftgate latch.	Liftgate latch and lock actuator
R_FOG_LMP*2	Off/On	• Off: Turns off rear fog light. • On: Illuminates rear fog light.	Rear fog light
R_LMP	Off/On	• Off: Turns off back-up light. • On: Illuminates back-up light.	Back-up light
R_WIP_MT_LO	Off/On	• Off: Stops rear wiper motor. • On: Operates rear wiper motor.	Rear wiper motor
STOP_LMP_CS*3	Off/On	• Off: Turns off brake light. • On: Illuminates brake light.	Brake light

*1 : With theft-deterrent horn
*2 : With rear fog light
*3 : With smart city brake support

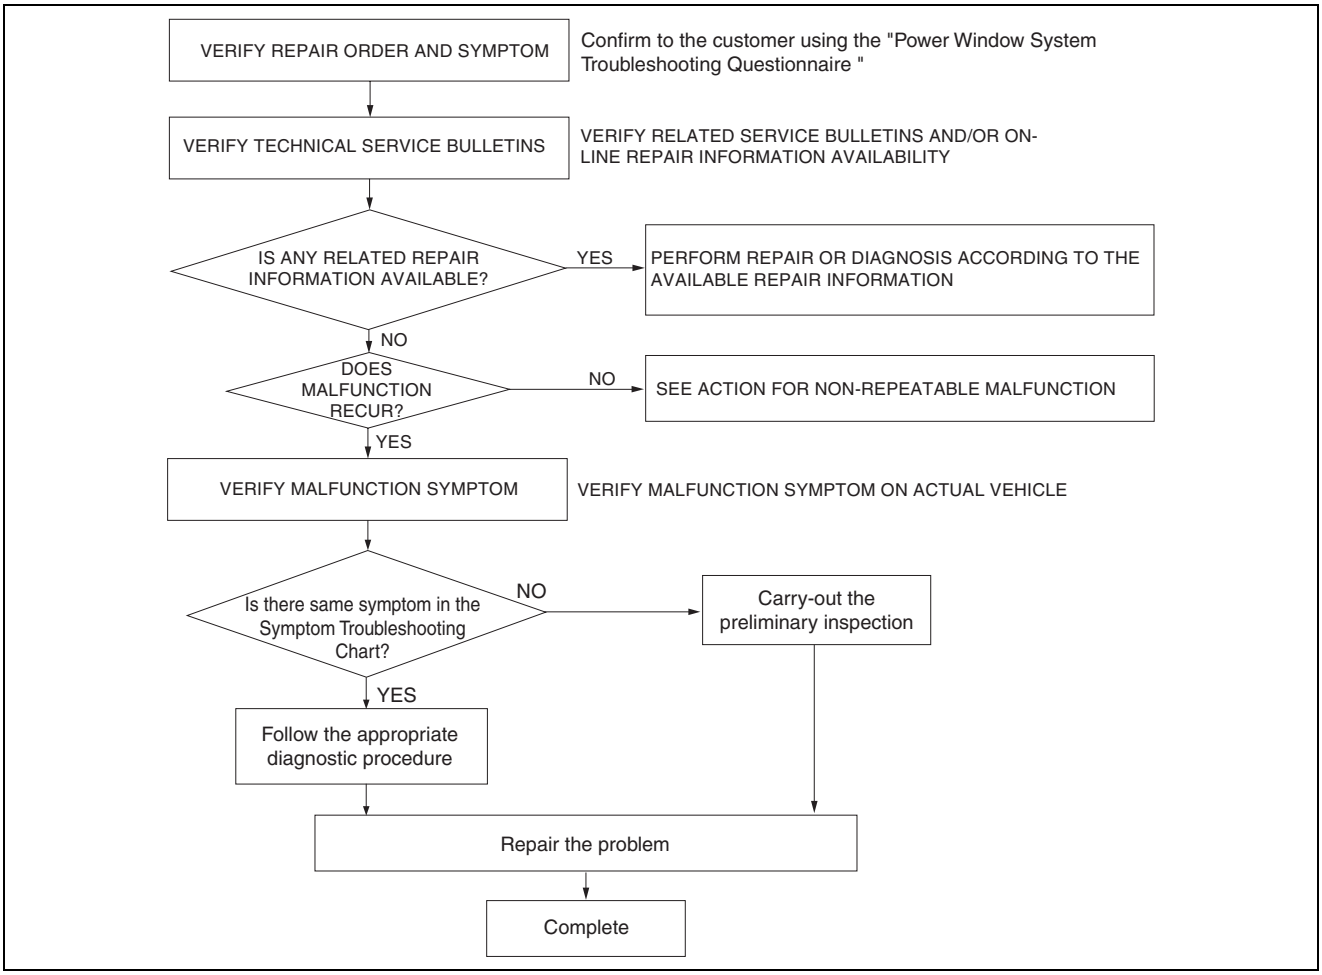
id0903608054j5

- Always perform basic power window system inspection before troubleshooting.

Troubleshooting Procedure



ac5uuw00002300

- Slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions.

Caution

- **If any of the following conditions continues indefinitely, the power window motor will heat up causing the protection circuit (integrated in power window motor) to operate. If this occurs, the operation of the power window motor protection circuit temporarily disables the power windows.**
  - **— Continuous up and down operation of the power window.**
  - **— Continuously pulling up the power window switch while the window glass is fully closed.**
  - **— Continuously pressing the power window switch while the window glass fully opened.**
- **If the power window motor has a temporary malfunction and the power window main switch is operated, the power window system transfers to malfunction mode by the power window control module.**
- **While the power window system is in malfunction mode, the power windows cannot be operated using the auto open/close function.**
- **The power window system reverts to normal operation after performing the Power Window Initialization Procedure.**

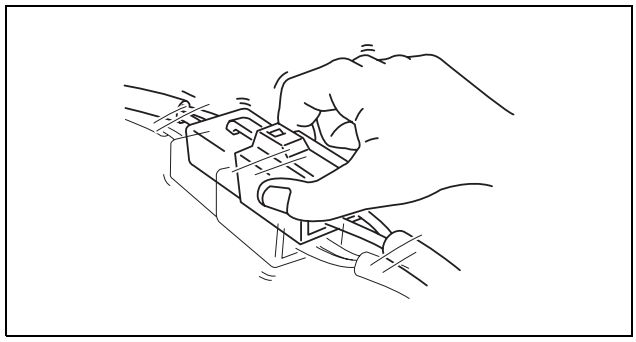
Note

- If the following operations have been performed, initial setting is reset, and auto up/down operation is disabled. Therefore, performing the initial setting is necessary.
  - — Negative battery cable disconnected
  - — Power window main switch connector disconnected
  - — Power window system power supply fuse removed

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/ CLOSE FUNCTION)]

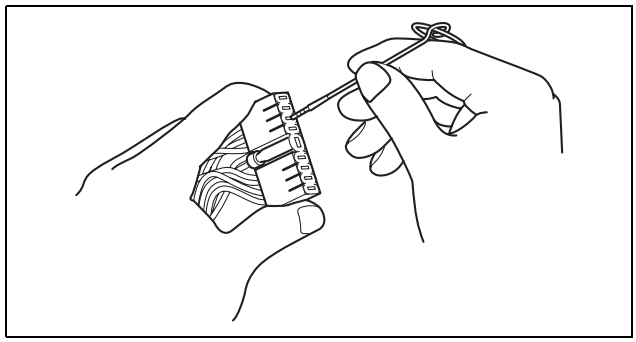
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as power window main switch and power window motor circuit voltage) at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction.



ac5uuw00002301

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



ac5uuw00002302

Power Window System Initial Setting

1. Switch the ignition ON (engine off or on).
2. Press the driver-side power window main switch and fully open the driver-side front door glass.
3. Pull up the driver-side power window main switch to the manual-up position to fully close the driver-side front door glass, and keep holding the switch up at the position for **approx. 2 s**.

POWER WINDOW SYSTEM TROUBLESHOOTING QUESTIONNAIRE [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR DRIVER-SIDE)]

id0903608355j5

Date :

When did the malfunction first occur ?			
Weather conditions	☐Fair weather ☐Cloudy ☐Rain ☐Snow ☐Other ( )	Outside temperature	Approx. F°
Driving conditions	☐ Driving ☐Stopped (Engine is : ☐Running ☐ Stopped)		
Duplicate symptom?	☐YES ☐ NO	Frequency	☐ Always ☐ Sometimes (times/month)
Road conditions	☐ City ☐Outer city ☐ Freeway ☐Other ( ) / ☐Paved ☐ Dirt road		

*Follow the appropriate diagnostic procedures shown below or perform the basic troubleshooting flow.

☐ (No.1) The auto open/close function on the driver-side power window inoperative.

☐ (No.2) The driver-side power window is inoperative.

☐ (No.3) All power windows other than driver-side do not operate using the power window subswitch.

☐ (No.4) All power windows other than driver-side do not operate using the power window main switch.

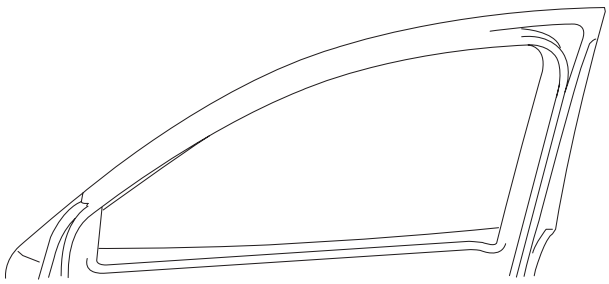
☐ (No.5) All power windows are inoperative.

☐ (No.6) Door glass reverses even though the glass does not encounter a foreign object while it is moving up in automatic mode.

Please clarify the position where the driver side front door glass opens automatically. ☐ Completely closed position
☐ Approx. ( )mm lower than completely closed position ☐ Approx. ( )mm upper than the completely open position.

☐ (No.7) Abnormal noise while the door glass is opening or closing.

☐Other (Describe the symptom below if the symptom does not appear in the above list.)



Please describe the conditions when the malfunction occurs.
(Example) : When the outer mirrors are operated

Please describe the conditions under which the system returns to normal operation after malfunctioning.
(Example) : The ignition switch is turned to the ON position after inserting the ignition key into the key cylinder

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)]

BASIC POWER WINDOW SYSTEM INSPECTION [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR DRIVER-SIDE)]

id0903608055j5

Manual Open/close Function Inspection

STEP	INSPECTION		ACTION
1	• Switch the ignition ON (engine off or on). • Operate the power window using the manual open/close function on the power window main switch. • Does the power window operate properly?	Yes	Go to the next step.
		No	• Inspect the power window main switch and the wiring harness. • Repair or replace malfunctioning parts.
2	• Set the power cut switch to the UNLOCK position. • Operate the power window using the power window subswitch. • Does the power window operate properly?	Yes	Go to the next step.
		No	• Inspect the power window subswitch and the wiring harness. • Repair or replace malfunctioning parts.
3	• Set the power cut switch to the LOCK position. • Operate all power windows other than the driver-side. • Does the power window operate properly?	Yes	• Inspect the power cut switch and the wiring harness. • Replace the power window main switch.
		No	• Manual open/close function is normal. • Perform the auto open/close function inspection.

Auto Open/close Function (Driver-side) Inspection

STEP	INSPECTION		ACTION
1	• Switch the ignition ON (engine off or on). • Operate the power window using the auto open / close function on the power window main switch. • Does the power window operate properly?	Yes	Go to the next step.
		No	**If the power window automatically opens during the closing operation:** • Go to 09-03A-33 DOOR GLASS REVERSES EVEN THOUGH THE GLASS DOES NOT ENCOUNTER A FOREIGN OBJECT WHILE IT IS MOVING UP IN AUTOMATIC MODE [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR DRIVER-SIDE)] [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)]. **Others:** • Go to 09-03A-28 THE AUTO OPEN/CLOSE FUNCTION ON THE DRIVER-SIDE POWER WINDOW IS INOPERATIVE [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR DRIVER-SIDE)] [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)].
2	• Operate the power window main switch to the close position while the power window is opening. • Does the power window operation stop?	Yes	Go to the next step.
		No	Replace the power window main switch (power window control unit is malfunctioning.)
3	• Operate the power window main switch to the open position while the power window is closing. • Does the power window operation stop?	Yes	• Auto open/close function is normal. • Perform the IG-OFF timer function inspection.
		No	Replace the power window main switch (power window control unit is malfunctioning.)

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/ CLOSE FUNCTION)]

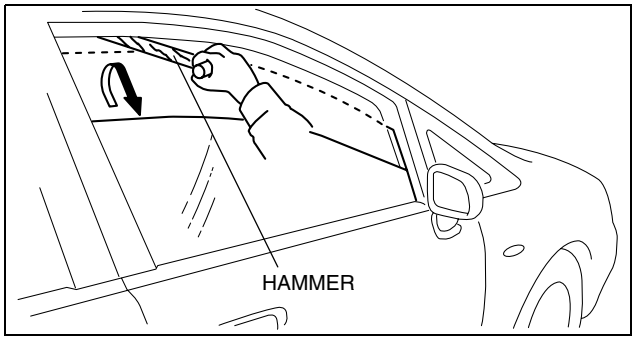
IG-OFF Timer Function Inspection

STEP	INSPECTION		ACTION
1	• Close all doors. • Switch the ignition from ON (engine off or on) to off (LOCK). • Operate the power window main switch **within 40 s** after switching the ignition to off (LOCK). • Does the power window operate?	Yes	Go to the next step.
		No	• Inspect the door switches and related wiring harness. • If above parts are okay, replace the power window main switch, then go to the next step. • If above parts are incorrect repair or replace malfunction part (s), then go to the next step.
2	• Open any door. • Switch the ignition from ON (engine off or on) to off (LOCK). • Operate the power window main switch **within 40 s** after switching the ignition to off (LOCK). • Does the power window operate?	Yes	• Inspect the door switches and related wiring harness. • If above parts are okay, replace the power window main switch, then go to the next step. • If above parts are incorrect repair or replace malfunction part (s), then go to the next step.
		No	Go to the next step.
3	• Close all doors. • Switch the ignition from ON (engine off or on) to off (LOCK). • Operate the power window main switch **within 60 s** after switching the ignition to off (LOCK). • Does the power window operate?	Yes	Replace the power window main switch (power window control unit is malfunctioning.)
		No	• IG-OFF timer function operation is normal. • Perform the auto reverse pinch protection function inspection.

Auto Reverse Pinch Protection Function Inspection

STEP	INSPECTION		ACTION
1	• Switch the ignition ON (engine off or on). • Fully open the driver-side power window. • Set the hammer (thickness: **10 mm {0.39 in} or more**) as shown below. Then, close the power window. • Verify that the power window opens approx. **200 mm {2.87 in}** after contacting the hammer and the operation stops. • Does auto reverse pinch protection function operate properly?	Yes	Auto reverse pinch protection function is normal.
		No	Go to the next step.
2	• Does power window open before contacting the hammer?	Yes	Go to 09-03A-33 DOOR GLASS REVERSES EVEN THOUGH THE GLASS DOES NOT ENCOUNTER A FOREIGN OBJECT WHILE IT IS MOVING UP IN AUTOMATIC MODE [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR DRIVER-SIDE)] [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)].
		No	Initialize the power window main switch. **Note** • Before initializing the power window main switch, cut off the power supply to the power window main switch for approx. **60 s**. Then, reconnect it again after **approx. 60 s**: — Disconnect the negative battery cable. — Disconnect the power window main switch connector. — Remove the fuse for the power window system.

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/ CLOSE FUNCTION)]



am2zzw0000022

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)]

BASIC POWER WINDOW SYSTEM INSPECTION [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR ALL WINDOWS)]

id0903608211j6

Manual Mode Function Inspection

STEP	INSPECTION		ACTION
1	• Switch the ignition ON (engine off or on). • Turn the power-cut switch to UNLOCK. • Does each door glass move up and down in manual mode using the power window subswitch?	Yes	Go to the next step.
		No	• Inspect the following items: — Power window main switch (power-cut switch system malfunction) — Power window subswitch power supply fuses — Power window subswitch ground wiring harness — Power window subswitch power supply wiring harnesses — Wiring harness between power window subswitch and power window motor — Power window subswitch — Power window motor • Repair or replace the malfunctioning part, then go to the next step.
2	• Does the driver-side door glass move up and down in manual mode using the power window main switch?	Yes	Go to the next step.
		No	• Inspect the following items: — Power window main switch power supply fuses — Power window main switch ground wiring harness — Power window main switch power supply wiring harnesses — Wiring harness between power window main switch and power window motor — Power window main switch • Repair or replace the malfunctioning part, then go to the next step.
3	• Does each other door glass other than the driver-side door glass move up and down in manual mode using the power window main switch?	Yes	Go to the next step.
		No	• Perform the power window initialization procedure for any door glass that does not move up and down, and reinspect. (See 09-12-66 POWER WINDOW SYSTEM INITIALIZATION PROCEDURE.) • If it does not move up and down upon reinspection, inspect the following: — Wiring harness between power window main switch and subswitch • Repair or replace the malfunctioning part, then go to the next step.
4	• Turn the power-cut switch to LOCK. • Push/pull the power window main switch (switches for all windows in manual mode). • Does only driver-side front door glass move up and down?	Yes	• Manual mode function is normal. • Go to the automatic mode function inspection.
		No	Replace the power window main switch, then go to the automatic mode function inspection. (power-cut switch system malfunction)

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/ CLOSE FUNCTION)]

Automatic Mode Function Inspection

Note
- Perform the following inspection for the power window main switch and the power window subswitches for each window.

STEP	INSPECTION		ACTION
1	• Switch the ignition ON (engine off or on). • Operate the each power window switch in automatic mode. • Does the each door glass move up and down in automatic mode?	Yes	Go to the next step.
		No	• Door glass does not move up and down in automatic mode: — Go to Step 1 of 09-03A-20 DOOR GLASS DOES NOT MOVE UP AND DOWN IN AUTOMATIC MODE [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/ CLOSE FUNCTION FOR ALL WINDOWS)] [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)]. • Door glass moves up and down in automatic mode, but door glass reverses: — Go to Step 1 of 09-03A-25 DOOR GLASS REVERSES EVEN THOUGH THE GLASS DOES NOT ENCOUNTER A FOREIGN OBJECT WHILE IT IS MOVING UP IN AUTOMATIC MODE [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR ALL WINDOWS)] [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)].
2	• Gently pull the each power window switch while the door glass is moving down in automatic mode. • Does the glass stop?	Yes	Go to the next step.
		No	Replace the suspected power window switch, then go to the automatic door glass return function inspection.
3	• Gently press the each power window switch while the door glass is moving up in automatic mode. • Does the glass stop?	Yes	• Automatic mode function is normal. • Go to the automatic door glass return function inspection.
		No	Replace the suspected power window switch, then go to the automatic door glass return function inspection.

Automatic Door Glass Return Function Inspection

Note
- Perform the following inspection for the power window main switch and the power window subswitches for each window.
- With the switch held at auto-up, the door glass does not automatically reverse even when a foreign object is encountered.

STEP	INSPECTION		ACTION
1	• Switch the ignition ON (engine off or on). • Lower the door glass completely. • Use the power window switch to close the door glass in automatic mode. • Does the door glass automatically reverse even though the glass does not encounter a foreign object while it is moving up in automatic mode?	Yes	Go to Step 1 of 09-03A-25 DOOR GLASS REVERSES EVEN THOUGH THE GLASS DOES NOT ENCOUNTER A FOREIGN OBJECT WHILE IT IS MOVING UP IN AUTOMATIC MODE [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR ALL WINDOWS)] [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)].
		No	Go to the next step.
2	• Lower the door glass completely. • Take a hammer and hold it against the inside of the top of the window frame so that the door glass will hit its handle when it is closed. • Raise the door glass using automatic mode. • When the door glass hits the hammer handle, does it immediately reverse and move down to **approx.200 mm {7.87 in}** from the completely closed position?	Yes	• Automatic door glass return function inspection is normal. • Go to the IG OFF timer function inspection.
		No	Go to Step 1 of 09-03A-24 DOOR GLASS DOES NOT REVERSE, EVEN WHEN ENCOUNTERING A FOREIGN OBJECT IN IT IS PATH [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR ALL WINDOWS)] [POWER WINDOW SYSTEMS (AUTO-OPEN/ CLOSE FUNCTION)].

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/ CLOSE FUNCTION)]

IG OFF Timer Function Inspection

STEP	INSPECTION		ACTION
1	• Close all doors. • Switch the ignition ON (engine off or on). • In automatic mode, push down the power window main switch for the driver-side front door glass. The door glass should move down **within approx. 40 s** after ignition switch off (LOCK). • In manual mode (finger continuously depressing the power window main switch), the door glass should move down **within approx. 40 s** after ignition switch off (LOCK). • Does the driver-side front door glass move down?	Yes	Go to the next step.
		No	• Perform the driver-side power window initialization procedure, and reinspect. (See 09-12-66 POWER WINDOW SYSTEM INITIALIZATION PROCEDURE.) • If it does not move up and down upon reinspection, inspect the following: — Wiring harness for the door open/close signal system — Latch switch • Repair or replace the malfunctioning part, and reinspect. — If operation is not normal, replace the power window main switch, and then go to the next step.
2	• Switch the ignition ON (engine off or on). • In automatic mode, pull up the power window main switch and subswitch for the all doors glass. The door glass does not move up **within approx. 40 s** after ignition switch off (LOCK). • Verify that driver-side all doors glass does not operate. • Does the driver-side all doors glass move up?	Yes	• Perform the suspect power window initialization procedure, and reinspect. (See 09-12-66 POWER WINDOW SYSTEM INITIALIZATION PROCEDURE.) — If operation is not normal, replace the suspect power window switch, then go to the next step.
		No	Go to the next step.
3	• Switch the ignition ON (engine off or on). • Perform the following for all doors. — Lower the driver-side front door glass completely. — Take a hammer and hold it against the inside of the top of the door glass frame so that the door glass will hit its handle when it is closing. — Raise the door glass using manual mode. • When the door glass hits the hammer handle, does it immediately reverse and move down to **approx. 200 mm {7.87 in}** from the completely closed position?	Yes	Go to the next step.
		No	• Perform the suspect power window initialization procedure, and reinspect. (See 09-12-66 POWER WINDOW SYSTEM INITIALIZATION PROCEDURE.) — If operation is not normal, replace the suspect power window switch, then go to the next step.
4	• Open any door. • Switch the ignition ON (engine off or on). • Push/pull the power window main switch or subswitch for all door glass **within approx. 40 s** after ignition switch off (LOCK). • Verify that the door glass does not move up or down. • Does the door glass move up or down?	Yes	• Inspect the suspect door switch and related wiring harness. • If above parts are normal, replace the suspect power window switch, then go to the next step. • If the above parts have any malfunction, repair or replace the malfunction part, then go to the next step.
		No	Go to the next step.
5	• Close all doors. • Switch the ignition ON (engine off or on). • Push/pull the power window main switch or subswitch for all door glass after **approx. 60 s** after ignition switch off (LOCK). • Verify that the door glass does not move up or down. • Does the door glass move up or down?	Yes	• Perform the suspect power window initialization procedure, and reinspect. (See 09-12-66 POWER WINDOW SYSTEM INITIALIZATION PROCEDURE.) — If operation is not normal, replace the suspect power window switch.
		No	The IG OFF timer function is normal.

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/ CLOSE FUNCTION)]

DOOR GLASS DOES NOT MOVE UP AND DOWN IN AUTOMATIC MODE [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR ALL WINDOWS)] [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)]

id090360905700

Note
- Perform the following inspection for the power window system component parts of windows where the door glass cannot be operated automatically.

1	Door glass does not move up and down in automatic mode
POSSIBLE CAUSE	• Open circuit or short to power supply in sensor 1 signal, ground signal from wiring harness (between power window switch and power window motor), inner power window switch, or inner motor: Steps 4–7 • Open circuit or short to power supply/ground in sensor 2 signal from wiring harness (between power window switch and power window motor), inner power window switch, or inner motor: Steps 8–12 **Note** • The automatic function and the IG OFF timer function do not operate while the power window switch is in fail-safe mode. The fail-safe operates when sensor 1, and/or sensor 2, and/or the sensor power supply malfunctions. • Sensor 1 and/or 2 malfunction — When the door glass is moving up and down, the power window switch cannot sense a pulse signal from sensor 1 during the time it senses 5 pulses (2.5 cycles) from sensor 2. — When the door glass is moving up and down, the switch cannot sense a pulse signal from sensor 2 during the time it senses 5 pulses (2.5 cycles) from sensor 1. — There are three abnormal pulses in a pulse signal while the door glass is moving up or down. — There are 20 cycle pulses from a closed position while the door glass is moving up. — There is no pulse signal for 1 s after the door glass is moved down.

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/ CLOSE FUNCTION)]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT WHETHER POWER WINDOW SWITCH ENTERS FAIL-SAFE MODE OR NOT** • Switch the ignition to off (LOCK) for 3 minutes. • Switch the ignition ON (engine off or on). • Initialize the power window system. • Operate the auto open/close function. • Does the power window operate properly?	Yes	System is normal. The power window system auto open/close function does not operate temporarily for any of the following reasons: • The power window switch is operated while the power window motor protection circuit (integrated in power window motor) is operating. • The power window main switch power supply is cut off by disconnection of the negative battery cable or removing the fuse.
		No	Go to the next step.
2	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN POWER WINDOW SWITCH AND POWER WINDOW MOTOR) OR ELSEWHERE** • Switch the ignition ON (engine off or on). • Inspect the voltage at the following power window switch terminals (sensor 1 signal): — Driver-side (at power window main switch): 2D — Except driver-side (at suspected door's power window subswitch): F • Is the voltage **approx.12 V** when the door glass is moving up and down?	Yes	Go to step 7.
		No	Go to the next step.
3	**VERIFY SENSOR 1 OUTPUT SIGNAL** • Switch the ignition ON (engine off or on). • Inspect the voltage at the following power window motor terminals B (sensor 1 signal): • Is the voltage **approx.12 V** when the door glass is moving up and down in manual mode?	Yes	Go to the next step.
		No	Replace the power window motor, then go to Step 12.
4	**INSPECT WIRING HARNESS BETWEEN POWER WINDOW SWITCH AND POWER WINDOW MOTOR FOR CONTINUITY** • Switch the ignition to off (LOCK). • Disconnect the power window switch connector. • Is there continuity between the following power window switch terminals (for driver's door at power window main switch, for except driver's door at suspected door's power window subswitch) and power window motor terminals? — Driver-side: • 2D–B (sensor 1 signal) • 1A–D (sensor power supply) • 1I–C (ground signal) — Except driver-side: • F–B (sensor 1 signal) • J–D (sensor power supply) • L–C (ground signal)	Yes	Go to the next step.
		No	Repair the wiring harness between the power window switch and power window motor, then go to Step 12.

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/ CLOSE FUNCTION)]

STEP	INSPECTION		ACTION
5	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN POWER WINDOW SWITCH AND POWER WINDOW MOTOR) OR POWER WINDOW SWITCH** • Switch the ignition ON (engine off or on). • Inspect the voltage at the following power window switch terminals (for driver's door at power window main switch, for except driver's door at suspected door's power window subswitch): — Driver-side • 2D (sensor 1 signal) • 1I (ground signal) — Except driver-side • F (sensor 1 signal) • L (ground signal) • Is the voltage **approx.12 V**?	Yes	Repair the wiring harness between the power window switch and power window motor, then go to Step 11.
		No	Replace the power window switch (open circuit or short to power supply in power window switch).
6	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN POWER WINDOW SWITCH AND POWER WINDOW MOTOR) OR ELSEWHERE** • Is there continuity between the following power window switch terminals (wiring harness-side) (for driver's door at power window main switch, for except driver's door at suspected door's power window subswitch) and ground? — Driver-side • 2D (sensor 1 signal) • 1I (sensor power supply) — Except driver-side • F (sensor 1 signal) • L (sensor power supply)	Yes	Replace the wiring harness between the power window switch and power window motor, then go to Step 12.
		No	Go to the next step.
7	**VERIFY WHETHER MALFUNCTION IS IN POWER WINDOW SWITCH OR ELSEWHERE** • Switch the ignition ON (engine off or on). • Inspect the voltage at the following power window switch terminals (sensor 2 signal) (for driver's door at power window main switch, for except driver's door at suspected door's power window subswitch): — Driver-side: 2F — Except driver-side: D • Is the voltage **approx.6 V** when the door glass is moving up and down?	Yes	Replace the power window switch (malfunction in power window switch automatic mode control), then go to Step 11.
		No	Go to the next step.
8	**VERIFY SENSOR 2 OUTPUT SIGNAL** • Switch the ignition ON (engine off or on). • Inspect the voltage at power window motor terminal A (sensor 2 signal). • Is the voltage **approx.12 V** when door glass is moving up and down?	Yes	Go to the next step.
		No	Replace the power window motor, then go to Step 12.

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/ CLOSE FUNCTION)]

STEP	INSPECTION		ACTION
9	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN POWER WINDOW SWITCH AND POWER WINDOW MOTOR) OR ELSEWHERE** • Switch the ignition to off (LOCK). • Disconnect the power window switch connector and power window motor connector. • Is there continuity between the following power window switch terminals (for driver's door at power window main switch, for except driver's door at suspected door's power window subswitch) and power window motor terminals? — Driver-side: 2F and A (sensor 2 signal) — Except driver-side: D and A (sensor 2 signal)	Yes	Go to the next step.
		No	Repair the wiring harness between the power window switch and power window motor, then go to Step 12.
10	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN POWER WINDOW SWITCH AND POWER WINDOW MOTOR) OR ELSEWHERE** • Is there continuity between the following power window switch terminals (sensor 2 signal) (for driver's door at power window main switch, for except driver's door at suspected door's power window subswitch) and ground? — Driver-side: 2F — Except driver-side: D	Yes	Repair the wiring harness between the power window switch and power window motor, then go to Step 12.
		No	Go to the next step.
11	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN POWER WINDOW SWITCH AND POWER WINDOW MOTOR) OR POWER WINDOW SWITCH** • Switch the ignition ON (engine off or on). • Measure the voltage at the following power window switch terminals (sensor 2 signal) (for driver's door at power window main switch, for except driver's door at suspected door's power window subswitch): — Driver-side: 2F — Except driver-side: D • Is the voltage **approx. 12 V**?	Yes	Repair the wiring harness between the power window switch and front driver-side power window motor, then go to the next step.
		No	Replace the power window switch (open circuit or short to power supply/ground in power window switch), then go to the next step.
12	**REINSPECT MALFUNCTION SYMPTOM AFTER REPAIR** • Is malfunction no longer present?	Yes	• Troubleshooting completed. • Explain repairs to the customer.
		No	Reinspect malfunction symptoms, then repeat from Step 1 if malfunction recurs.

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)]

DOOR GLASS DOES NOT REVERSE, EVEN WHEN ENCOUNTERING A FOREIGN OBJECT IN IT IS PATH [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR ALL WINDOWS)] [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)]

id090360909800

Note
- Perform the following inspection for the power window system component parts of the windows where the door glass does not reverse, even when encountering a foreign object in its path.

2	**Door glass does not reverse, even when encountering a foreign object in its path.**
POSSIBLE CAUSE	Automatic window return range did not reset after battery disconnection: Step 2

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY CUSTOMER COMPLAINT** • Did the customer complain that the door glass did not reverse when near complete closed position?	Yes	• The system is normal. • Explain to the customer that automatic window return power window system does not operate when near complete closed position.
		No	Go to the next step.
2	**RESET REVERSE AREA STORED IN DOOR GLASS MOTOR** • Perform the power window system initial setting procedure. • Did malfunction disappear?	Yes	• Troubleshooting completed. • Explain to the customer that misadjustment of automatic window return range was the problem.
		No	Replace the power window switch. • Verify auto-up/down operation and if the automatic function does not operate, go to Step 1 of 09-03A-20 DOOR GLASS DOES NOT MOVE UP AND DOWN IN AUTOMATIC MODE [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR ALL WINDOWS)] [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)]. • If the automatic function operates, replace the power window switch.

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/ CLOSE FUNCTION)]

DOOR GLASS REVERSES EVEN THOUGH THE GLASS DOES NOT ENCOUNTER A FOREIGN OBJECT WHILE IT IS MOVING UP IN AUTOMATIC MODE [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR ALL WINDOWS)] [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)]

id090360921800

Note

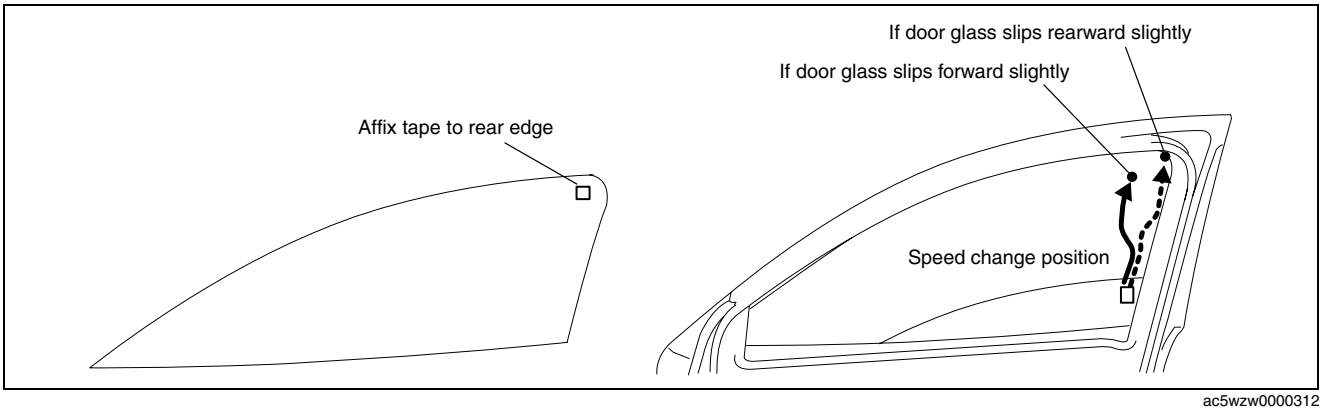
- Perform the following inspection for the power window system component parts of windows where the door glass reverses even though the glass does not encounter a foreign object while it is moving up in automatic mode.

3	**Door glass reverses even though the glass does not encounter a foreign object while it is moving up in automatic mode.**
POSSIBLE CAUSE	• Extreme change in the sliding resistance of the glass while the door glass is closing. — Improper installation of the acrylic door visor. — Power window motor malfunction. — Object caught between the glass run channel and the door glass. — Insufficient tightening of the door glass to the carrier plate. — Glass run channel malfunction. — Glass guide related malfunction. **Note** • The auto-reverse pinch protection function is a mechanism that automatically reverses (opens) the door glass while it is closing when the power window main switch detects the signal from the power window motor indicating that an object is obstructing the door glass movement. • The auto-reverse pinch protection function may operate if the sliding resistance of the door glass increases causing the closing speed to decrease. • If the door glass closing speed has changed, concentrate the inspection on the following locations: (Slip occurrence) — If the door glass is slipping forward, inspect the front side of the glass guide or glass run channel. — If the door glass is slipping rearward, inspect the rear side of the glass guide or glass run channel.

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/ CLOSE FUNCTION)]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT MALFUNCTION SYMPTOM** • Does the malfunction symptom occur only under the following special conditions?: — Driving over railroad tracks. — Driving on bumpy roads. — Opening/closing the door.	Yes	The system is normal. (Explain to the customer that this does not indicate a malfunction because the system is designed to reverse the door glass while it is closing if it receives vibration when the vehicle is crossing railroad tracks, driving on a bumpy road, or when the door is opened/closed.)
		No	Go to the next step.
2	**INSPECT ACRYLIC DOOR VISOR INSTALLATION CONDITION** • Is the acrylic door visor normal?	Yes	Go to the next step.
		No	Install the side visor properly, then go to the next step.
3	**INSPECT DOOR GLASS CLOSING SPEED** • Affix tape to the rear edge of the door glass as shown in the figure for placing marks (to facilitate seeing the door glass movement). • Start the engine and idle it (to ensure a stabilized operational voltage). • Does the door glass hesitate only once while its closing?	Yes	Mark the point where the door glass closing speed changed, then go to Step 5.
		No	Go to the next step.
4	**REINSPECT DOOR GLASS CLOSING SPEED** • Does the door glass hesitate periodically (5—6 times) while it is closing?	Yes	Replace the power window motor, then go to Step 8. (See 09-12-45 POWER WINDOW MOTOR REMOVAL/ INSTALLATION.)
		No	Go to Step 8.
5	**INSPECT GLASS RUN CHANNEL AND DOOR GLASS SLIDING SURFACE** • Is there an object caught between the glass run channel and the door glass, or is there roughness on the sliding surface (rubber surface)?	Yes	**Object is caught between glass run channel and door glass:** • Remove the object. **Roughness on the sliding surface (rubber surface):** • Replace the glass run channel. After performing one of the above actions, reinspect. If the malfunction is not corrected, go to Step 3.
		No	Go to the next step.
6	**INSPECT TIGHTENING OF DOOR GLASS TO CARRIER PLATE** • Is it normal?	Yes	Go to the next step.
		No	After tightening correctly, reinspect. If the malfunction is not corrected, go to Step 3.
7	**INSPECT CONDITION OF GLASS RUN CHANNEL AND DOOR GLASS** • Is it normal?	Yes	Go to the next step.
		No	Assemble the glass run channel and door glass securely, and reinspect. If the malfunction is not corrected, go to Step 3.
8	**INSPECT DOOR GLASS CLOSING SPEED** • Does the door glass hesitate at any location?	Yes	Repeat the inspection from Step 3.
		No	Troubleshooting completed.



ac5wzw0000312

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/ CLOSE FUNCTION)]

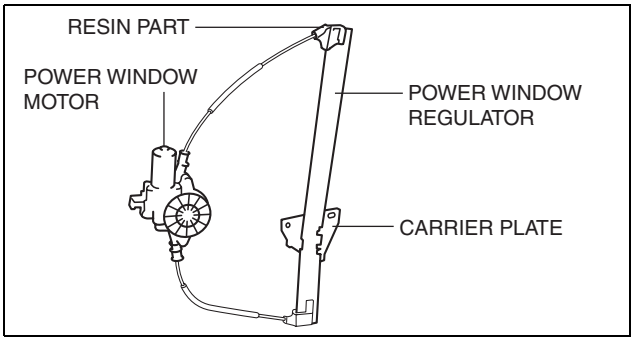
CLOSE FUNCTION)]

id090360933400

4	Abnormal noise while the door glass is opening or closing
POSSIBLE CAUSE	• Installation screw is loose between the door glass and carrier plate. • Deformity in the power window regulator plastic part due to use. — Scratching, wear marks to the power window regulator resin part due to twisting of the cable. — Gear deformity in the power window motor. **Note** • Identify the location of the noise using a stethoscope or similar device.

Diagnostic procedure

Noise type	Time of occurrence	Possible cause	Location of noise	Action
Clanking noise	Door glass begins to move	Insufficiently tightened installation screw between the door glass and carrier plate.	Between door glass lower edge and carrier plate.	Securely tighten the installation screw.
Groaning noise (Sound increases due to use)	While door glass is operating	Vibration caused by wear on the resin part from cable twisting due to use of the power window regulator. **Note** • Noise does not occur if a roller is equipped to power window regulator resin part.	Power window regulator	Replace the power window regulator (See 09-12-39 FRONT POWER WINDOW REGULATOR REMOVAL/ INSTALLATION.) (See 09-12-42 REAR POWER WINDOW REGULATOR REMOVAL/ INSTALLATION.)
Whining noise		Gear inside power window motor is deformed due to use.	Gear in power window motor	Replace the power window motor (See 09-12-45 POWER WINDOW MOTOR REMOVAL/ INSTALLATION.)
Clicking noise (Periodic noise)				



ac5wzw0000312

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)]

THE AUTO OPEN/CLOSE FUNCTION ON THE DRIVER-SIDE POWER WINDOW IS INOPERATIVE [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR DRIVER-SIDE)] [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)]

id090360931000

1	The auto open/close function on the driver's power window is inoperative
POSSIBLE CAUSE	• Power window system in fail-safe function (Power window motor heat protection circuit is operating) • No power supply to power window main switch • Power window main switch malfunction (power window control unit malfunction, auto switch malfunction) • Power window motor malfunction (Sensor inside motor malfunction) • Malfunction in wiring harness between power window motor (sensor) and power window main switch

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Switch the ignition to off (LOCK) for 3 min. • Switch the ignition ON (engine off or on). • Initialize the power window system. • Operate the auto open/close function. • Dose the power window operate properly?	Yes	System is normal. The power window system auto open/close function dose not operate temporarily for any of the following reasons: • The power window switch is operated while the power window motor protection circuit (integrated in power window motor) is operating. • The power window main switch power supply is cut off by disconnection of the negative battery cable or removing the fuse.
		No	Go to the next step.
2	• Does the sensor built into the power window motor send pulse signals while the power window motor is operating? • Inspect the voltage at the following power window motor terminals: — B (sensor 1 signal) — A (sensor 2 signal) • Is the voltage **approx. 6 V**?	Yes	Go to the next step.
		No	Replace the power window motor. (See 09-12-45 POWER WINDOW MOTOR REMOVAL/INSTALLATION.)
3	• Does the sensor built into the power window motor send pulse signals while the power window motor is operating? • Inspect the voltage at the following power window main switch (14-pin connector) terminals: — 2D (sensor 1 signal) — 2F (sensor 2 signal) • Is the voltage **approx. 6 V**?	Yes	Replace the power main switch. (See 09-12-52 POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION.)
		No	Inspect for an open or short circuit in wiring between the power window motor (sensor) and the power window main switch. Inspect the connection of the power window motor and power window main switch connectors. (damaged/pulled-out pins, corrosion) Repair of replace necessary.

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/ CLOSE FUNCTION)]

THE DRIVER-SIDE POWER WINDOW IS INOPERATIVE [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/ CLOSE FUNCTION FOR DRIVER-SIDE)] [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)]

id090360907000

2	The driver's power window is inoperative
POSSIBLE CAUSE	• Power supply circuit or ground circuit malfunction — Burnt fuse (B+) — Open or short circuit in wiring harness between fuse (B+) and power window main switch — Open or short circuit in wiring harness between power window main switch and power window motor — Open or short circuit in wiring harness between power window main switch and ground • Power window main switch malfunction • Power window motor malfunction • Power window regulator malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Switch the ignition ON (engine off or on). • Does the LED on the power window main switch illuminate?	Yes	Go to Step 6.
		No	Go to the next step.
2	• Operate all power windows other than the driver's window using the power window main switch. • Does the power window operate properly?	Yes	Go to the next step.
		No	Inspect for an open or short circuit in the following wiring harnesses. Inspect the connector connections (damage/ pulled-out pins, corrosion): • P.WINDOW1 30 A fuse—Power window main switch terminal 1K • Power window main switch terminal 2A—ground. Repair or replace if necessary.
3	• Is the P.WINDOW2 25 A fuse normal?	Yes	Go to Step 5.
		No	Inspect the following: • Short circuit in B+ power supply wiring harness • Short circuit in power window motor Repair or replace if necessary. Replace with the appropriate standard fuse. Then, go to the next step.
4	• Initialize the power window system. • Operate the power window system. • Do the power windows operate properly?	Yes	Troubleshooting is completed.
		No	Re-confirm the symptom and go to Step 1.
5	• Measure the voltage at the power window main switch terminal 1L. • Is the voltage B+?	Yes	Replace the power window main switch. (See 09-12-52 POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION.)
		No	Inspect for an open or short circuit in the power window main switch wiring harness (battery power supply). Inspect the power window main switch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary.
6	• Measure the voltage at the power window main switch. (power window motor output terminal) while operating the power window using the power window main switch. • Is the voltage B+? (Open: terminal 1H (L.H.D.), 1F (R.H.D.)/ close: terminal 1J (L.H.D.), 1H (R.H.D.))	Yes	Go to the next step.
		No	Replace the power window main switch. (See 09-12-52 POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION.)
7	• Measure the voltage at the power window motor. (battery power supply terminal) while operating the power window using the power window motor. • Is the voltage B+? (Open: terminal F/ close: terminal E)	Yes	Go to the next step.
		No	Inspect for an open or short circuit in the wiring harness between the power window main switch and the power window motor. Inspect the power window main switch and power window motor connector connections. (damage/pulled-out pins, corrosion) Repair or replace if necessary.

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/ CLOSE FUNCTION)]

STEP	INSPECTION		ACTION
8	• Operate the driver's power window using the power window main switch. • Does the power window motor operate (rotate)? **Caution** • **If the power window motor temperature is high, the motor may not rotate due to the motor internal bimetal function. Leave it untouched for about 3 min. to cool it down, then reinspect.**	Yes	Go to the next step.
		No	Replace the power window motor. (See 09-12-45 POWER WINDOW MOTOR REMOVAL/ INSTALLATION.)
9	• Remove the door glass from the carrier plate. • Make sure that the door glass moves smoothly using your hand. • Does the door glass move smoothly?	Yes	Replace the power window regulator. (See 09-12-39 FRONT POWER WINDOW REGULATOR REMOVAL/INSTALLATION.) (See 09-12-42 REAR POWER WINDOW REGULATOR REMOVAL/INSTALLATION.)
		No	Inspect for a bent regulator guide or other possible malfunction. If normal, replace the door glass run-channel.

ALL POWER WINDOWS OTHER THAN DRIVER-SIDE DO NOT OPERATE USING THE POWER WINDOW SUBSWITCH [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR DRIVER-SIDE)] [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)]

id090360931200

3	**All power windows other than driver-side do not operate using the power window subswitch**
POSSIBLE CAUSE	• Open or short circuit in power window subswitch wiring harness (battery power supply circuit). • Power window subswitch malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Switch the ignition ON (engine off or on). • Set the power cut-switch to the UNLOCK position. • Measure the voltage at the power window subswitch terminal C. • Is the voltage B+?	Yes	Replace the power window subswitch. (See 09-12-61 POWER WINDOW SUBSWITCH REMOVAL/INSTALLATION.)
		No	Inspect for an open or short circuit in the wiring harness at power window subswitch (battery power supply). Inspect the power window subswitch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary.

ALL POWER WINDOWS OTHER THAN DRIVER-SIDE DO NOT OPERATE USING THE POWER WINDOW MAIN SWITCH [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR DRIVER-SIDE)] [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)]

id090360931300

4	**All power windows other than driver's side do not operate using the power window main switch**
POSSIBLE CAUSE	• Open or short circuit in wiring harness between ignition switch (IG1) and power window main switch (IG1). • Power window main switch malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Switch the ignition ON (engine off or on). • Set the power cut-switch to the UNLOCK position. • Operate all power windows other than the driver's side using the power window main switch. • Do any power windows operate?	Yes	Replace the power window main switch. (See 09-12-52 POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION.)
		No	Inspect for an open or short circuit in the power window main switch wiring harness (battery power supply). Inspect the power window main switch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary.

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/

ALL POWER WINDOWS ARE INOPERATIVE [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR DRIVER-SIDE)] [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)]

id090360931400

5	All power windows are inoperative
POSSIBLE CAUSE	• Power supply circuit or ground circuit malfunction — Burnt fuse (IG1) — Open or short circuit in wiring harness between ignition switch (IG1) and power window main switch — Open or short circuit in wiring harness between power window main switch and power window subswitch — Open or short circuit in wiring harness between power window main switch and power window motor — Open or short circuit in wiring harness between power window main switch and ground • Power window main switch malfunction (power cut-off switch malfunction, switch malfunction) • Power window subswitch malfunction • Power window motor malfunction • Power window regulator malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Switch the ignition ON (engine off or on). • Set the power cut-off switch to the UNLOCK position. • Inspect the power window system operation again. • Does the system operate properly?	Yes	System is now normal. (power cut-off switch is not set properly.)
		No	Go to the next step.
2	• Operate all power windows other than driver's window using the power window main switch. • Does any power window operate?	Yes	Go to Step 6.
		No	Go to the next step.
3	• Operate the driver's power window using the power window main switch. • Does the power window operate?	Yes	Go to the next step.
		No	Inspect for an open circuit in the wiring harness between the power window main switch and the body ground. Inspect the power window main switch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary.
4	• Is the P.WINDOW1 30 A fuse normal?	Yes	Replace with the appropriate standard fuse. If the fuse is melted, inspect the wiring harness for a short to ground. Repair or replace the wiring harness, then replace the fuse.
		No	Go to the next step.
5	• Measure the voltage at the power window main switch terminal 1L. • Is the voltage B+?	Yes	Replace the power window main switch. (See 09-12-52 POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION.)
		No	Inspect for an open or short circuit in the power window main switch wiring harness (battery power supply). Inspect the power window main switch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary.
6	• Identify the inoperative power window. • Measure the voltage at the suspect power window motor (battery power supply) while operating the power window motor using the suspect power window subswitch. • Is the voltage B+? (Open: terminal F/ close: terminal E)	Yes	Go to the next step.
		No	Go to Step 9.
7	• Operate the power window using the power window subswitch. • Does the power window motor operate (rotate)? **Caution** • **If the power window motor temperature is high, the motor may not rotate due to the motor internal bimetal function. Leave it untouched for about 3 min. to cool it down, then reinspect.**	Yes	Go to the next step.
		No	Replace the power window motor. (See 09-12-45 POWER WINDOW MOTOR REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/ CLOSE FUNCTION)]

STEP	INSPECTION		ACTION
8	• Remove the door glass from the carrier plate. • Make sure that the door glass moves smoothly using your hand. • Does the door glass move smoothly?	Yes	Replace the power window regulator guide.
		No	Inspect for a bent regulator guide or other possible malfunction. If normal, replace the glass run channel.
9	• Measure the voltage at the power window subswitch (power window motor output) while operating the power window subswitch. • Is the voltage B+? (Open: terminal A/ close: terminal D)	Yes	Inspect for an open or short circuit in the wiring harness between the power window subswitch and power window motor. Inspect the power window subswitch and power window motor connector connections. (damage/pulled-out pins, corrosion) Repair or replace if necessary.
		No	Go to the next step.
10	**Note** • Do not operate the power window subswitch during the following inspection. • Inspect the continuity between power window subswitch terminal B (vehicle harness-side) and ground. • Is there continuity?	Yes	Go to the next step.
		No	Inspect for an open or short circuit in the power window subswitch wiring harness. Inspect the power window subswitch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary. Then go to Step 12.
11	**Note** • Do not operate the power window subswitch during the following inspection. • Inspect the continuity between power window subswitch terminal E and ground. • Is there continuity?	Yes	Replace the power window subswitch. (See 09-12-61 POWER WINDOW SUBSWITCH REMOVAL/INSTALLATION.)
		No	Inspect for an open or short circuit in the power window subswitch wiring harness. Inspect the power window subswitch connector connection. (damage/pulled-out pins, corrosion) Repair or replace if necessary. Then go to Step 12.
12	**Note** • Do not operate the power window main switch during the following inspection. • Inspect the continuity between power window main switch terminal (close; 1B (L.H.D.), 1D (R.H.D.), 1A, 1G) and ground. • Is there continuity?	Yes	Go to the next step.
		No	Replace the power window main switch. (See 09-12-52 POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION.)
13	**Note** • Do not operate the power window main switch during the following inspection. • Inspect the continuity between power window main switch terminal (open; 1D(L.H.D.), 1J (R.H.D.), 1C, 1I) and ground. • Is there continuity?	Yes	Inspect for an open or short circuit in the wiring harness between the power window main switch and power window subswitch. Inspect the power window main switch and subswitch connector connections. (damage/pulled-out pins, corrosion) Repair or replace if necessary.
		No	Replace the power window main switch. (See 09-12-52 POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/

DOOR GLASS REVERSES EVEN THOUGH THE GLASS DOES NOT ENCOUNTER A FOREIGN OBJECT WHILE IT IS MOVING UP IN AUTOMATIC MODE [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR DRIVER-SIDE)] [POWER WINDOW SYSTEMS (AUTO-OPEN/CLOSE FUNCTION)]

id090360931500

Note

- Perform the following inspection for the power window system component parts of windows where the door glass reverses even though the glass does not encounter a foreign object while it is moving up in automatic mode.

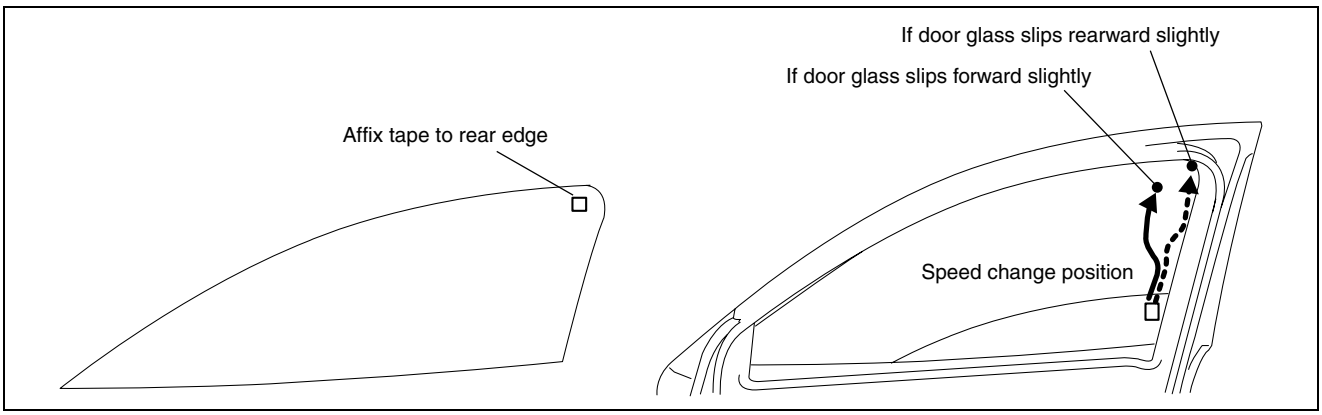
6	**Door glass reverses even though the glass does not encounter a foreign object while it is moving up in automatic mode**
POSSIBLE CAUSE	• Extreme change in the sliding resistance of the glass while the door glass is closing. — Improper installation of the acrylic door visor. — Power window motor malfunction. — Object caught between the glass run channel and the door glass. — Insufficient tightening of the door glass to the carrier plate. — Glass run channel malfunction. — Glass guide related malfunction. **Note** • The auto-reverse pinch protection function is a mechanism that automatically reverses (opens) the door glass while it is closing when the power window main switch detects the signal from the power window motor indicating that an object is obstructing the door glass movement. • The auto-reverse pinch protection function may operate if the sliding resistance of the door glass increases causing the closing speed to decrease. • If the door glass closing speed has changed, concentrate the inspection on the following locations: (Slip occurrence) — If the door glass is slipping forward, inspect the front side of the glass guide or glass run channel. — If the door glass is slipping rearward, inspect the rear side of the glass guide or glass run channel.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Inspect malfunction symptom. • Does the malfunction symptom occur only under the following special conditions?: — Driving over railroad tracks. — Driving on bumpy roads. — Opening/closing the door.	Yes	The system is normal. (Explain to the customer that this does not indicate a malfunction because the system is designed to reverse the door glass while it is closing if it receives vibration when the vehicle is crossing railroad tracks, driving on a bumpy road, or when the door is opened/closed.)
		No	Go to the next step.
2	• Inspect acrylic door visor installation condition. • Is the acrylic door visor normal?	Yes	Go to the next step.
		No	Install the side visor properly, then go to the next step.
3	• Inspect door glass closing speed. • Affix tape to the rear edge of the door glass as shown in the figure for placing marks. (to facilitate seeing the door glass movement) • Start the engine and idle it (to ensure a stabilized operational voltage). • Does the door glass hesitate only once while its closing?	Yes	Mark the point where the door glass closing speed changed, then go to Step 5.
		No	Go to the next step.
4	• Reinspect door glass closing speed. • Does the door glass hesitate periodically while it is closing?	Yes	Replace the power window motor, then go to Step 8. (See 09-12-45 POWER WINDOW MOTOR REMOVAL/ INSTALLATION.)
		No	Go to Step 8.
5	• Inspect glass run channel and door glass sliding surface. • Is there an object caught between the glass run channel and the door glass, or is there roughness on the sliding surface (rubber surface)?	Yes	**Object is caught between glass run channel and door glass:** • Remove the object. **Roughness on the sliding surface (rubber surface):** • Replace the glass run channel. After performing one of the above actions, reinspect. If the malfunction is not corrected, go to Step 3.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [POWER WINDOW SYSTEMS (AUTO-OPEN/ CLOSE FUNCTION)]

STEP	INSPECTION		ACTION
6	• Inspect tightening of door glass to carrier plate. • Is it normal?	Yes	Go to the next step.
		No	After tightening correctly, reinspect. If the malfunction is not corrected, go to Step 3.
7	• Inspect condition of glass run channel and door glass. • Is it normal?	Yes	Go to the next step.
		No	Assemble the glass run channel and door glass securely, and reinspect. If the malfunction is not corrected, go to Step 3.
8	• Inspect door glass closing speed. • Does the door glass hesitate at any location?	Yes	Repeat the inspection from Step 3.
		No	Troubleshooting completed.



ac5wzw0000312

ABNORMAL NOISE WHILE THE DOOR GLASS IS OPENING OR CLOSING [POWER WINDOW SYSTEMS (WITH AUTO-OPEN/CLOSE FUNCTION FOR DRIVER-SIDE)] [POWER WINDOW SYSTEMS (AUTO-OPEN/ CLOSE FUNCTION)]

id090360931600

7	**Abnormal noise while the door glass is opening or closing**
POSSIBLE CAUSE	• Installation screw is loose between the door glass and carrier plate. • Deformity in the power window regulator plastic part due to use. — Scratching, wear marks to the power window regulator resin part due to twisting of the cable. — Gear deformity in the power window motor. **Note** • Identify the location of the noise using a stethoscope or similar device.

Diagnostic procedure

Noise type	Time of occurrence	Possible cause	Location of noise	Action
Clanking noise	Door glass begins to move	Insufficiently tightened installation screw between the door glass and carrier plate.	Between door glass lower edge and carrier plate.	Securely tighten the installation screw.
Groaning noise (Sound increases due to use)	While door glass is operating	Vibration caused by wear on the resin part from cable twisting due to use of the power window regulator. **Note** • Noise does not occur if a roller is equipped to power window regulator resin part.	Power window regulator	Replace the power window regulator (See 09-12-39 FRONT POWER WINDOW REGULATOR REMOVAL/ INSTALLATION.) (See 09-12-42 REAR POWER WINDOW REGULATOR REMOVAL/ INSTALLATION.)
Whining noise		Gear inside power window motor is deformed due to use.	Gear in power window motor	Replace the power window motor (See 09-12-45 POWER WINDOW MOTOR REMOVAL/ INSTALLATION.)
Clicking noise (Periodic noise)

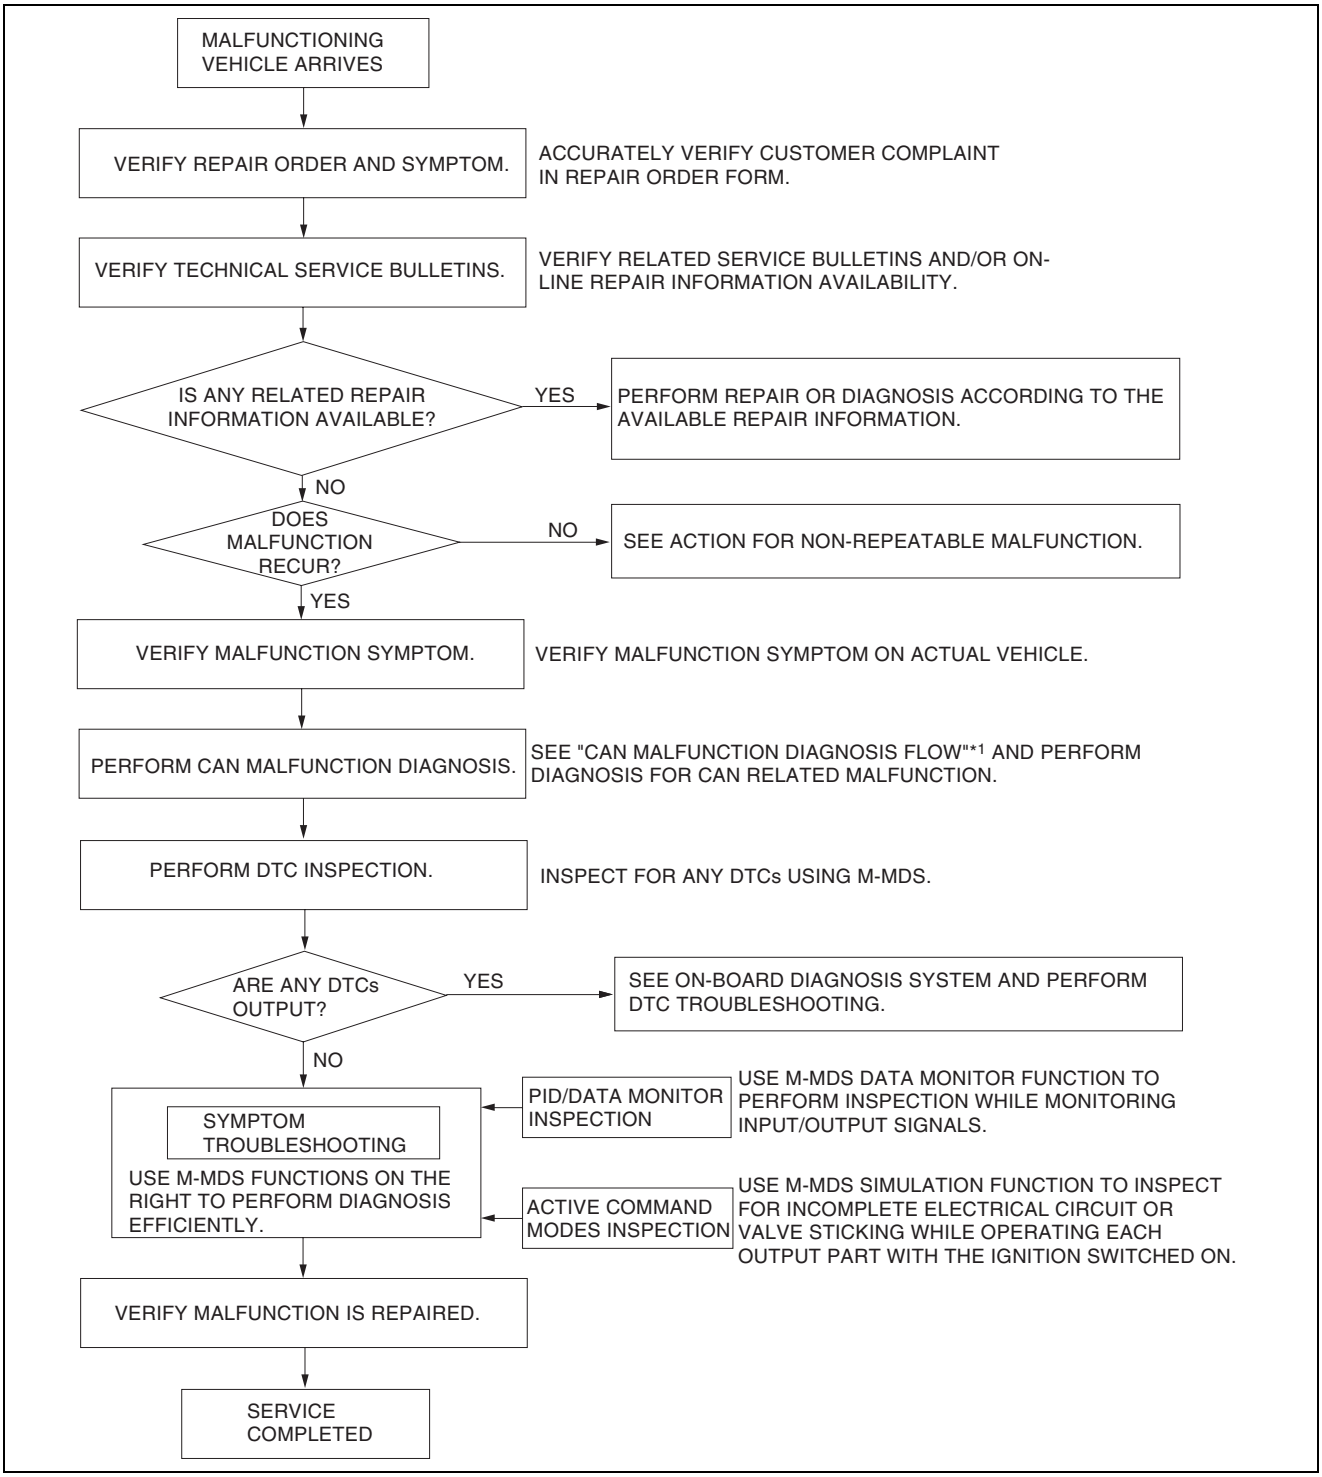
SYMPTOM TROUBLESHOOTING [SECURITY AND LOCKS]

FOREWORD [SECURITY AND LOCKS]

id0903k7378400

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



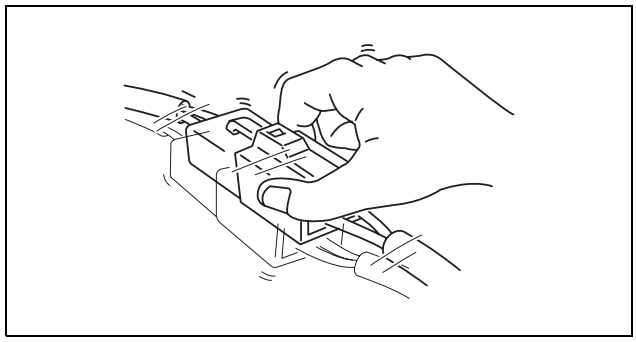
ac5wzw0000282

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)] /10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)]/10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)]/10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

SYMPTOM TROUBLESHOOTING [SECURITY AND LOCKS]

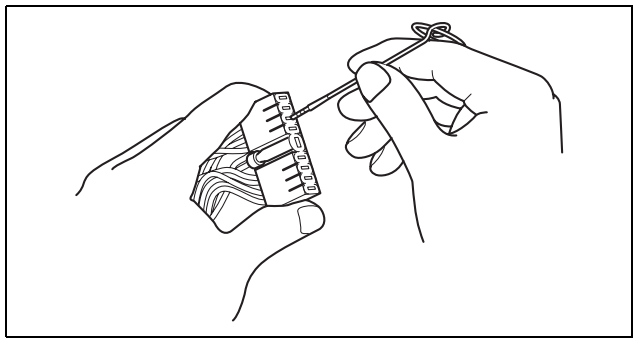
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as rear body control module (RBCM) and start stop unit circuit voltage) at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



ac5wzw0000282

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



ac5wzw0000282

SYMPTOM TROUBLESHOOTING [SECURITY AND LOCKS]

DOOR LOCK DOES NOT OPERATE [SECURITY AND LOCKS]

id0903k7012400

Description

- Door cannot be locked/unlocked using the front door key cylinder.
- All doors cannot be locked/unlocked using the driver's door lock knob. (without door lock switch)
- All doors cannot be locked/unlocked using the door lock switch. (with door lock switch)

Possible cause

- Door latch switch malfunction
- Door lock actuator malfunction
- Front door key cylinder switch malfunction
- Open circuit in wiring harness between the following terminals:
  - — Front door latch and lock actuator terminal H (L.H.D.) / F (R.H.D.) and rear body control module (RBCM) terminal 3H
  - — Power window main switch terminal 1E and rear body control module (RBCM) terminal 3F

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DOOR LATCH SWITCH STUCK OFF OR OPEN CIRCUIT** • Open each door and verify that the door ajar warning light in the instrument cluster illuminates. • Does the door ajar warning light illuminate?	Yes	Go to the next step.
		No	• Inspect the door latch switch on the door in which the ajar warning light did not illuminate and for an open circuit in the wiring harness between the rear body control module (RBCM) and ground. (See 09-14-41 FRONT DOOR LATCH SWITCH INSPECTION.) (See 09-14-47 REAR DOOR LATCH SWITCH INSPECTION.) • After inspection, go to Step 7.
2	**DETERMINE IF MALFUNCTION CAUSE IS DOOR LOCK ACTUATOR** • Perform the lock/unlock operation using lock knob for each door. • Is door locked/unlocked?	Yes	Go to the next step.
		No	• Inspect the door lock actuator for the door which could not lock/unlock. (See 09-14-39 FRONT DOOR LOCK ACTUATOR INSPECTION.) (See 09-14-46 REAR DOOR LOCK ACTUATOR INSPECTION.) • After inspection, go to Step 7.
3	**DETERMINE IF MALFUNCTION CAUSE IS DOOR KEY CYLINDER** • Insert the auxiliary key into the door key cylinder and perform the lock/unlock operation using the auxiliary key. • Does the lock knob switch between lock and unlock?	Yes	Go to the next step.
		No	• Inspect the front door key cylinder switch. (See 09-14-33 FRONT DOOR KEY CYLINDER SWITCH INSPECTION.) • After inspection, go to Step 7.

SYMPTOM TROUBLESHOOTING [SECURITY AND LOCKS]

Step	Inspection		Action
4	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN FRONT DOOR KEY CYLINDER SWITCH AND REAR BODY CONTROL MODULE (RBCM)** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front door latch and lock actuator connector. • Disconnect the rear body control module (RBCM) connector. • Inspect for continuity between the following terminals (vehicle wiring harness). — Front door latch and lock actuator terminal H (L.H.D.) / F (R.H.D.) and rear body control module (RBCM) terminal 3H • Is there continuity?	Yes	• Go to Step 7. (without door lock switch) • Go to the next step. (with door lock switch)
		No	• Repair or replace the wiring harness for an open circuit. • After repair procedure, go to Step 7.
5	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN DOOR LOCK SWITCH AND REAR BODY CONTROL MODULE (RBCM)** • Disconnect the door lock switch connector. • Inspect for continuity between the following terminals (vehicle wiring harness). — Power window main switch terminal 1E and rear body control module (RBCM) terminal 3F • Is there continuity?	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair procedure, go to Step 7.
6	**DETERMINE IF MALFUNCTION CAUSE IS DOOR LOCK SWITCH** • Perform the lock/unlock operation using the door lock switch. • Does the lock knob switch between lock and unlock?	Yes	Go to the next step.
		No	• Inspect the door lock switch. (See 09-14-17 DOOR LOCK SWITCH INSPECTION.) • After inspection, go to the next step.
7	**VERIFY IF MALFUNCTION CAUSE WAS CORRECTED** • Has the malfunction symptom been eliminated?	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	Verify the malfunction symptom in the symptom troubleshooting chart and perform the applicable other malfunction diagnosis. (See 09-03B-6 SYMPTOM TROUBLESHOOTING ITEM TABLE [SECURITY AND LOCKS].)

SYMPTOM TROUBLESHOOTING [SECURITY AND LOCKS]

ADVANCED KEYLESS ENTRY SYSTEM DOES NOT OPERATE [SECURITY AND LOCKS]

id0903k7012100

Description

- The door locking operation using the door request switch is not possible.
- The liftgate cannot be open using the liftgate opener switch.

Possible cause

- Liftgate opener switch malfunction
- Open circuit in wiring harness between the following terminals:
  - — Rear body control module (RBCM) terminal 4M and liftgate opener switch terminal C
  - — LF control unit terminal G and request switch (LF) terminal D
  - — LF control unit terminal E and request switch (RF) terminal D
  - — LF control unit terminal A and request switch (liftgate) terminal I
  - — Start stop unit terminal 1P and door lock link switch (driver's side) terminal D (L.H.D.) / J (R.H.D.)
  - — Start stop unit terminal 1AF and ground
  - — Start stop unit terminal 2B and ground
- Short to ground in wiring harness between start stop unit terminal 1P and door lock link switch (driver's side) terminal D (L.H.D.) / J (R.H.D.)
- Connector poor contact or terminal damage
- Customer's mis-operation or misunderstanding

Diagnostic Procedure

Step	Inspection		Action
1	**DETERMINE IF MALFUNCTION CAUSE IS DOOR LOCK** • Refer to "door lock does not operate" symptom troubleshooting and perform the inspection. (See 09-03B-8 DOOR LOCK DOES NOT OPERATE [SECURITY AND LOCKS].) • Is the advanced keyless entry system operating normally?	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS OPERATION OTHER THAN OPERATION PERMISSION CONDITION** • Verify the advanced keyless operation by operating each request switch and the liftgate opener switch with all the following conditions met. — All doors and liftgate closed — Ignition switched off (LOCK) — Remote transmitter is within reception area (80 cm radius from driver's door, front passenger's door, and liftgate) • Is the advanced keyless entry system operating normally?	Yes	System is normal. (Explain to customer about operation range of advanced keyless entry system)
		No	Go to the next step.
3	**VERIFY MALFUNCTION SYMPTOM** • Does the liftgate open using the liftgate opener switch operation?	Yes	Go to Step 6.
		No	Go to the next step.
4	**DETERMINE IF MALFUNCTION CAUSE IS LIFTGATE OPENER SWITCH** • Measure the voltage at rear body control module (RBCM) terminal 4M. • Is the voltage normal? **Specification** Liftgate opener switch pressed: 1.0 or less Except above: 4.5 V	Yes	Go to Step 11.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SECURITY AND LOCKS]

Step	Inspection		Action
5	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN REAR BODY CONTROL MODULE (RBCM) AND LIFTGATE OPENER SWITCH** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the rear body control module (RBCM) and liftgate opener switch connector. • Inspect for continuity between the following terminals (vehicle wiring harness). — Liftgate opener switch terminal C and rear body control module (RBCM) terminal 4M • Is there continuity?	Yes	• Inspect the liftgate opener switch. If there is any malfunction, replace it. (See 09-14-53 LIFTGATE OPENER SWITCH INSPECTION.) • If the liftgate opener switch inspection is normal, inspect or repair the following: — Liftgate latch and actuator (See 09-14-50 LIFTGATE LATCH AND LOCK ACTUATOR INSPECTION.) • After repair procedure, go to Step 11.
		No	• Repair or replace the wiring harness for an open circuit. • After repair procedure, go to Step 11.
6	**VERIFY MALFUNCTION SYMPTOM** • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Verify the lock/unlock operation for all doors and liftgate using the request switch operation. • Is door locked/unlocked?	Yes	Go to Step 11.
		No	Go to the next step.
7	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN START STOP UNIT AND DOOR LOCK LINK SWITCH (DRIVER-SIDE)** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the start stop unit and the front door latch and lock actuator (driver's side) connector. • Inspect for continuity between the following terminals (vehicle wiring harness). — Start stop unit terminal 1P and front door lock link switch terminal D (L.H.D.) / J (R.H.D.) • Is there continuity?	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair procedure, go to Step 11.

SYMPTOM TROUBLESHOOTING [SECURITY AND LOCKS]

Step	Inspection		Action
8	**INSPECT IF MALFUNCTION CAUSE IS SHORT TO GROUND IN WIRING HARNESS BETWEEN START STOP UNIT AND DOOR LOCK LINK SWITCH (DRIVER-SIDE)** • Verify that the start stop unit connector is disconnected. • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. — Start stop unit terminal 1P and ground • Is there continuity?	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair procedure, go to Step 11.
9	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN START STOP UNIT AND GROUND** • Verify that the start stop unit connector is disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness). — Start stop unit terminal 1AF and ground — Start stop unit terminal 2B and ground • Is there continuity?	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair, go to Step 11.
10	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN REQUEST SWITCH AND LF CONTROL UNIT** • Disconnect the LF control unit and request switch connector. • Inspect for continuity between the following terminals (vehicle wiring harness). — Request switch (LF) terminal G and LF control unit terminal D — Request switch (RF) terminal E and LF control unit terminal D — Request switch (liftgate) terminal A and LF control unit terminal I • Is there continuity?	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair, go to the next step.
11	**VERIFY IF MALFUNCTION CAUSE WAS CORRECTED** • Does the advanced keyless entry system operate normally?	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	If the malfunction has not been resolved, repeat the inspection from Step 1.

SYMPTOM TROUBLESHOOTING [SECURITY AND LOCKS]

LOCK/UNLOCK OPERATION NOT POSSIBLE USING REMOTE TRANSMITTER [SECURITY AND LOCKS]

id0903k7012200

Description

- The door lock/unlock operation using the remote transmitter button is not possible.

Possible cause

- Keyless receiver malfunction
- Remote transmitter malfunction
- Open circuit in wiring harness between the following terminals:
  - — Keyless receiver terminal A and start stop unit terminal 2Q
  - — Keyless receiver terminal B and start stop unit terminal 2R
  - — Start stop unit terminal 1AF and ground
  - — Start stop unit terminal 2B and ground
- Connector poor contact or terminal damage
- Customer's mis-operation or misunderstanding
- Effect of non-standard equipment (any control unit with built-in micro computer such as radio set, mobile telephone, and TV)

Diagnostic Procedure

Step	Inspection		Action
1	**DETERMINE IF MALFUNCTION CAUSE IS DOOR LOCK** • Refer to "door lock does not operate" malfunction diagnosis and perform the inspection. (See 09-03B-8 DOOR LOCK DOES NOT OPERATE [SECURITY AND LOCKS].) • Is the lock/unlock operation performed using the remote transmitter?	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS EXTRINSIC NOISE** • Ask the customer malfunction condition. • Does the malfunction occur at the specified place where extrinsic noise is received such as a TV tower, electric power station, or a broadcast station?	Yes	System is normal. (Explain the customer that operation cannot be performed caused by extrinsic noise.)
		No	Go to the next step.
3	**VERIFY IF MALFUNCTION CAUSE IS OPERATION OTHER THAN OPERATION PERMISSION CONDITION** • Did the customer operate the remote transmitter with all the following conditions met? — All doors and liftgate are closed. — Ignition switched off (LOCK)	Yes	Go to the next step.
		No	System is normal. (Explain the customer operation condition.)
4	**DETERMINE IF MALFUNCTION CAUSE IS NON-STANDARD EQUIPMENT** • Did the malfunction occur after installing the following non-standard equipment? — Mobile telephone or radio set — Part with built-in micro computer — Remote engine starter — TV	Yes	Go to the next step.
		No	Go to Step 6.
5	**DETERMINE IF MALFUNCTION CAUSE IS NON-STANDARD EQUIPMENT** • Disconnect the connector for non-standard equipment. • Perform the lock/unlock operation using the remote transmitter. • Does it operate normally?	Yes	System is normal. (Explain to the customer that noise from the non-standard equipment affected the operation.)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SECURITY AND LOCKS]

Step	Inspection		Action
6	**VERIFY REMOTE TRANSMITTER BATTERY CONDITION** • Visually inspect the remote transmitter battery for the following: — Method of battery insertion (polarity) — Battery type (CR2025) — Corrosion, soiling, deformation of battery terminals (plus/minus terminals). — Contact malfunction between the battery terminal and battery when battery is inserted • Is there any malfunction?	Yes	**Battery insertion direction, battery type is incorrect:** • Properly install the battery or replace the battery with a specified one (CR2025), then go to the next step. **Battery terminal malfunction:** • Clean corrosion and soiling, or repair or replace the terminal, then go to the next step.
		No	Go to Step 8.
7	**VERIFY REMOTE TRANSMITTER OPERATION** • Perform the lock/unlock operation using the remote transmitter. • Is the lock/unlock operation performed normally?	Yes	Troubleshooting completed.
		No	Go to the next step.
8	**DETERMINE IF MALFUNCTION CAUSE IS REMOTE TRANSMITTER** **Note** • For a monitor battery, use a new battery or one which operates normally on another vehicle. • Replace the battery in all the remote transmitters with a monitor-use battery. (See 09-14-76 REMOTE TRANSMITTER DISASSEMBLY/ASSEMBLY.) • For each remote transmitter, verify that the remote transmitter operation indicator light (LED) illuminates when a button is operated. • Does operation indicator light (LED) for each remote transmitter operate?	Yes	Go to the next step.
		No	If the operation indicator light (LED) does not illuminate, replace the remote transmitter, then go to the Step 12.
9	**DETERMINE IF MALFUNCTION CAUSE IS BATTERY** **Note** • Inspect for all remote transmitters. • Inspect while the batteries for all of the remote transmitters are replaced with monitor-use batteries. • Perform the lock/unlock operation using all the remote transmitters. • Is the lock/unlock operation performed normally?	Yes	Replace the battery, then go to Step 12. (See 09-14-76 REMOTE TRANSMITTER DISASSEMBLY/ASSEMBLY.)
		No	Go to the next step.
10	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN START STOP UNIT AND GROUND** • Verify that the start stop unit connector is disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness). — Start stop unit terminal 1AF and ground — Start stop unit terminal 2B and ground • Is there continuity?	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair, go to Step 12.

SYMPTOM TROUBLESHOOTING [SECURITY AND LOCKS]

Step	Inspection		Action
11	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN KEYLESS RECEIVER AND START STOP UNIT OR KEYLESS RECEIVER** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the keyless receiver and start stop unit connector. • Inspect for continuity between the following terminals (vehicle wiring harness). — Keyless receiver terminal A and start stop unit terminal 2Q — Keyless receiver terminal B and start stop unit terminal 2R • Is there continuity?	Yes	• Inspect the keyless receiver. If there is any malfunction, replace it. (See 09-14-75 KEYLESS RECEIVER INSPECTION.) • After repair, go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair, go to the next step.
12	**VERIFY IF MALFUNCTION CAUSE WAS CORRECTED** • Perform the lock/unlock operation using all the remote transmitters. • Is the lock/unlock operation performed normally?	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	If the malfunction has not been resolved, repeat the inspection from Step 1.

ANSWER-BACK BUZZER DOES NOT SOUND [SECURITY AND LOCKS]

id0903k7012500

Description

- The keyless beeper does not sound when door lock/unlock operation is performed using the remote transmitter button.

Possible cause

- Keyless beeper malfunction
- Short to power supply in wiring harness between the following terminals:
  — Keyless beeper terminal A and LF control unit terminal L
  — Keyless beeper terminal B and LF control unit terminal N
- Short to ground in wiring harness between the following terminals:
  — Keyless beeper terminal A and LF control unit terminal L
  — Keyless beeper terminal B and LF control unit terminal N
- Open circuit in wiring harness between the following terminals:
  — Keyless beeper terminal A and LF control unit terminal L
  — Keyless beeper terminal B and LF control unit terminal N
  — Start stop unit terminal 1AF and ground
  — Start stop unit terminal 2B and ground
- Personalization feature not set

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PERSONALIZATION FEATURES SETTING** • Verify the volume of the keyless beeper for the personalization features. (See 09-14-63 SECURITY AND LOCKS PERSONALIZATION FEATURES SETTING PROCEDURE.) • Has the volume of the keyless beeper been set to off?	Yes	Set the volume so that the keyless beeper sounds and verify the operation. **Operation is verified:** • Troubleshooting completed. (Explain the servicing contents to the customer.) **Operation is not verified:** • Go to the next step.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SECURITY AND LOCKS]

Step	Inspection		Action
2	**INSPECT IF MALFUNCTION CAUSE IS SHORT TO GROUND IN WIRING HARNESS BETWEEN KEYLESS BEEPER AND LF CONTROL UNIT** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the LF control unit connector. • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. — LF control unit terminal L and ground — LF control unit terminal N and ground • Is there continuity?	Yes	• Repair or replace the wiring harness which is shorted to ground. • After repair procedure, go to Step 6.
		No	Go to the next step.
3	**INSPECT IF MALFUNCTION CAUSE IS SHORT TO POWER SUPPLY IN WIRING HARNESS BETWEEN KEYLESS BEEPER AND LF CONTROL UNIT** • Verify that the LF control unit connector is disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Measure the voltage at the following terminals (vehicle wiring harness). — LF control unit terminal L — LF control unit terminal N • Is there any voltage?	Yes	• Repair or replace the wiring harness which is shorted to power supply. • After repair procedure, go to Step 6.
		No	Go to the next step.
4	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN START STOP UNIT AND GROUND** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Verify that the start stop unit connector is disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness). — Start stop unit terminal 1AF and ground — Start stop unit terminal 2B and ground • Is there continuity?	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair, go to Step 6.

SYMPTOM TROUBLESHOOTING [SECURITY AND LOCKS]

Step	Inspection		Action
5	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN KEYLESS BEEPER AND LF CONTROL UNIT OR KEYLESS BEEPER** • Disconnect the keyless beeper connector • Inspect for continuity between the following terminals (vehicle wiring harness). — Keyless beeper terminal A and LF control unit terminal L — Keyless beeper terminal B and LF control unit terminal N • Is there continuity?	Yes	• Replace the keyless beeper. (See 09-14-73 KEYLESS BEEPER REMOVAL/INSTALLATION.) • After replacement, go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair, go to the next step.
6	**VERIFY IF MALFUNCTION CAUSE WAS CORRECTED** • Does the keyless beeper sound?	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	If the malfunction has not been resolved, repeat the inspection from Step 1.

PUSH BUTTON START SYSTEM DOES NOT OPERATE [SECURITY AND LOCKS]

id0903k7012600

Description

- When the push button start is pressed, the ignition cannot be switched to ACC or ON (engine off).

Possible cause

- Open circuit in wiring harness between the following terminals:
  - — Start stop unit terminal 1H and push button start terminal C
  - — Start stop unit terminal 2J and push button start terminal I
  - — Start stop unit terminal 1AF and ground
  - — Start stop unit terminal 2B and ground
  - — Start stop unit terminal 2A and ground

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN START STOP UNIT AND PUSH BUTTON START** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the Start stop unit and push button start connector. • Inspect for continuity between the following terminals (vehicle wiring harness). — Start stop unit terminal 1H and push button start terminal C — Start stop unit terminal 2J and push button start terminal I • Is there continuity?	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair procedure, go to Step 3.

SYMPTOM TROUBLESHOOTING [SECURITY AND LOCKS]

Step	Inspection		Action
2	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN START STOP UNIT AND GROUND** • Verify that the start stop unit connector is disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness). — Start stop unit terminal 1AF and ground — Start stop unit terminal 2B and ground — Start stop unit terminal 2A and ground • Is there continuity?	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair, go to the next step.
3	**VERIFY IF MALFUNCTION CAUSE WAS CORRECTED** • Does the push button start button operate correctly?	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	If the malfunction has not been resolved, repeat the inspection from Step 1.

STEERING LOCK FUNCTION DOES NOT OPERATE [SECURITY AND LOCKS]

id0903k7012700

Description

- Switch the ignition from ON (engine off or on) to OFF and do not lock the steering when opening/closing the door.

Possible cause

- Open circuit in wiring harness between the following terminals:
  — Start stop unit terminal 1P and front door lock link switch (driver's side) terminal D (L.H.D.) / J (R.H.D.)
  — Start stop unit terminal 2A and ground
- Short to ground in wiring harness between start stop unit terminal 1P and front door lock link switch (driver's side) terminal D (L.H.D.) / J (R.H.D.)

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN START STOP UNIT AND DOOR LOCK LINK SWITCH (DRIVER-SIDE)** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the start stop unit and front door latch and lock actuator connector. • Inspect for continuity between the following terminals (vehicle wiring harness). — Start stop unit terminal 1P and front door lock link switch terminal J (L.H.D.) / D (R.H.D.) • Is there continuity?	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair procedure, go to Step 4.

SYMPTOM TROUBLESHOOTING [SECURITY AND LOCKS]

Step	Inspection		Action
2	**INSPECT IF MALFUNCTION CAUSE IS SHORT TO GROUND IN WIRING HARNESS BETWEEN START STOP UNIT AND DOOR LOCK LINK SWITCH (DRIVER-SIDE)** • Verify that the start stop unit connector is disconnected. • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. — Start stop unit terminal 1P and ground • Is there continuity?	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair procedure, go to Step 4.
3	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS BETWEEN START STOP UNIT AND GROUND** • Verify that the start stop unit connector is disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness). — Start stop unit terminal 2A and ground • Is there continuity?	Yes	Go to the next step.
		No	• Repair or replace the wiring harness for an open circuit. • After repair, go to the next step.
4	**VERIFY IF MALFUNCTION CAUSE WAS CORRECTED** • Is the steering lock operation normal?	Yes	Troubleshooting completed. (Explain the contents of the servicing to the customer.)
		No	If the malfunction has not been resolved, repeat the inspection from Step 1.

09-03C SYMPTOM TROUBLESHOOTING [THEFT-DETERRENT SYSTEM]

FOREWORD
[THEFT-DETERRENT SYSTEM]. 09-03C–2
Troubleshooting Procedure 09-03C–2
Action for non-repeatable malfunction. 09-03C–3

THEFT-DETERRENT SYSTEM
[THEFT-DETERRENT SYSTEM] 09-03C–3
Description 09-03C–3
Possible cause 09-03C–3
Diagnostic Procedure 09-03C–3

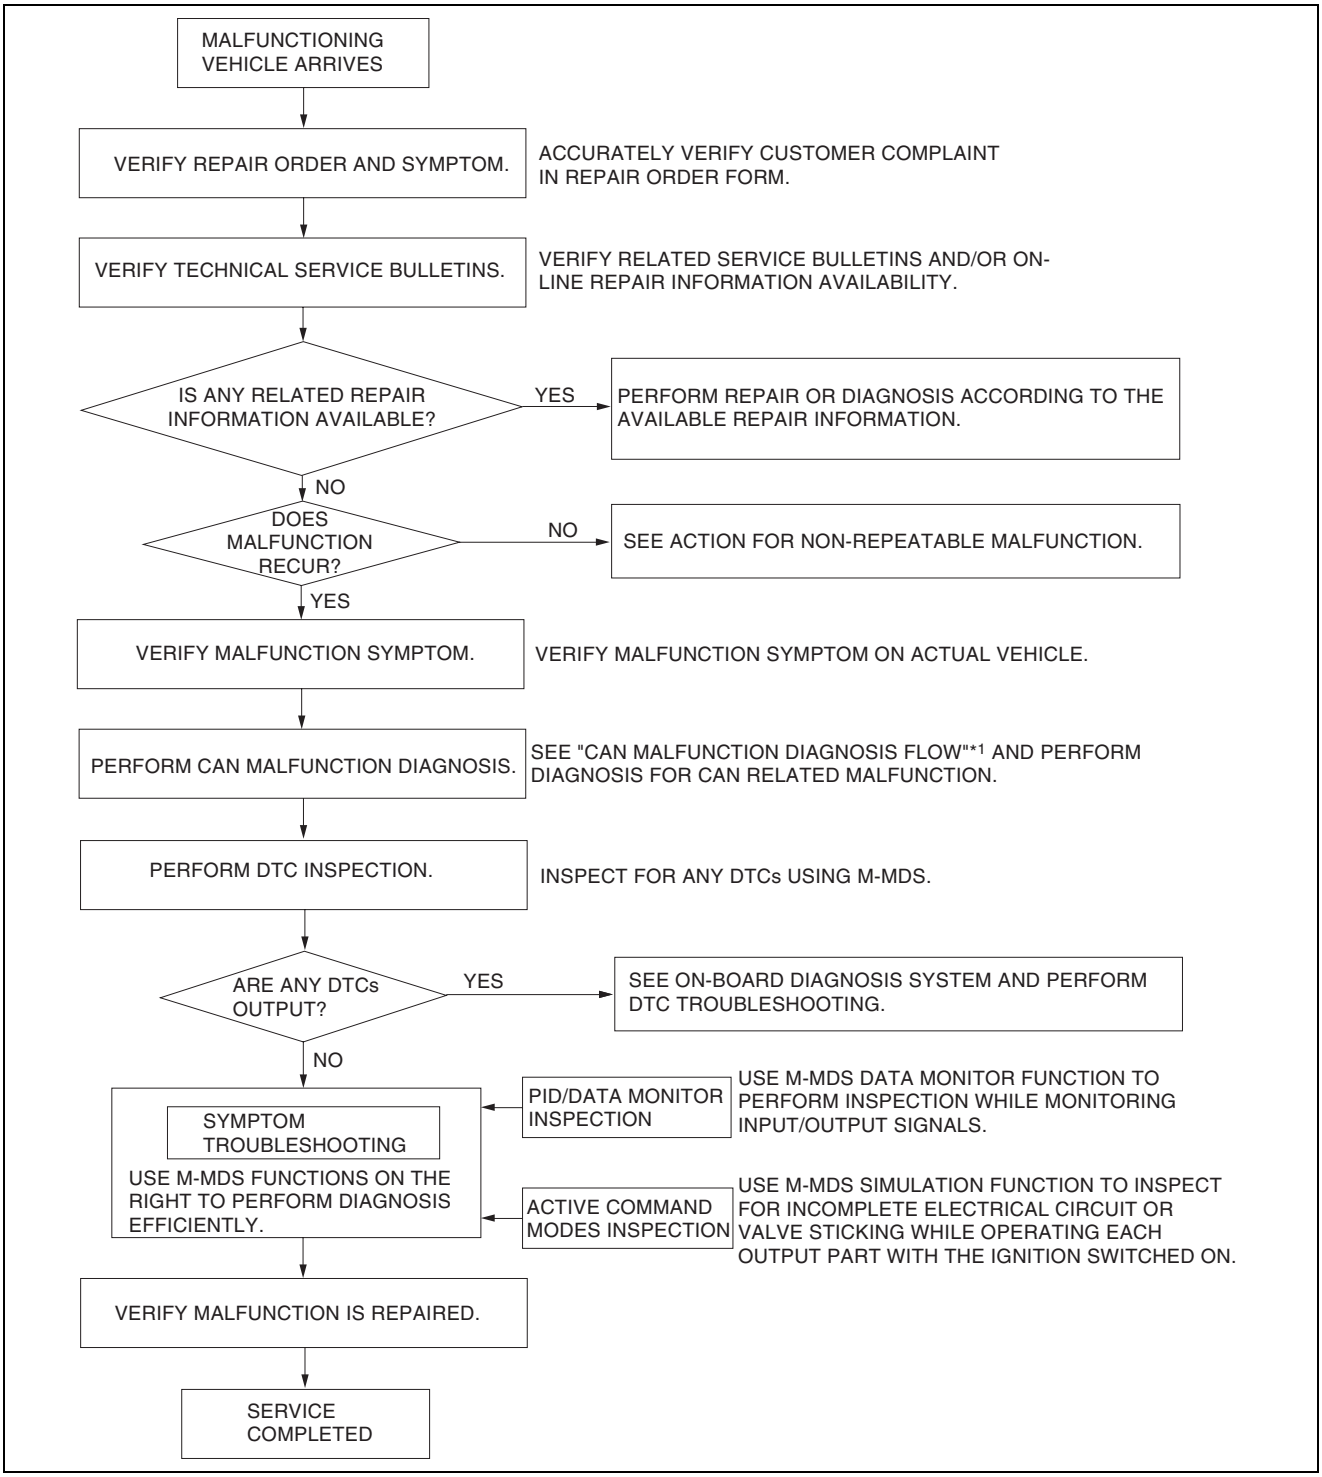
SYMPTOM TROUBLESHOOTING [THEFT-DETERRENT SYSTEM]

FOREWORD [THEFT-DETERRENT SYSTEM]

id0903I1378400

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



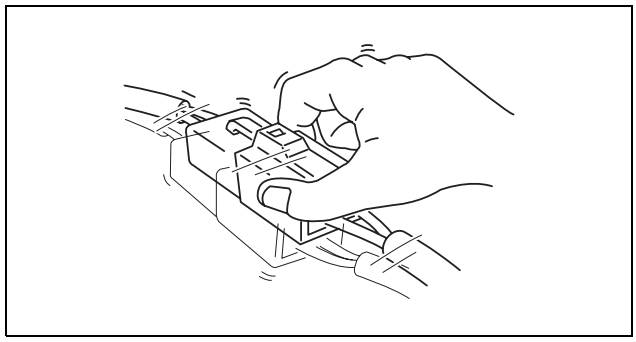
ac5wzw0000282

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)] /10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)]/10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)]/10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

SYMPTOM TROUBLESHOOTING [THEFT-DETERRENT SYSTEM]

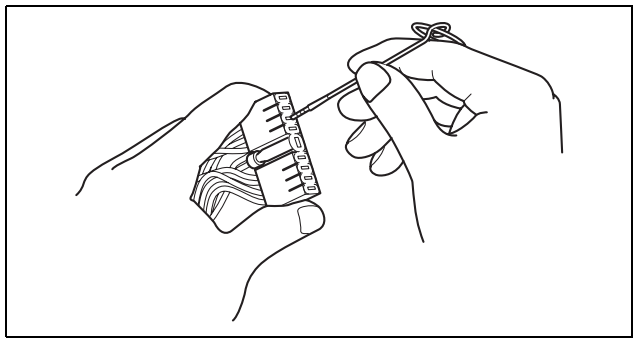
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as rear body control module (RBCM) circuit voltage) at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



ac5wzw0000282

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



ac5wzw0000282

THEFT-DETERRENT SYSTEM [THEFT-DETERRENT SYSTEM]

id0903l1112700

Description

- Theft-deterrent siren or theft-deterrent horn sounded.

Possible cause

- Wiring harness malfunction
- Malfunction in switch which triggers system
- Rear body control module (RBCM) malfunction
- Customer's mis-operation or misunderstanding

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY DTCs** • Perform the DTC inspection for the rear body control module (RBCM) using the M-MDS. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].) • Are any DTCs displayed?	Yes	Go to the applicable DTC inspection. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	Go to the next step.
2	**VERIFY OPERATION RECORD** • Has the operation record been stored? (See 09-14-94 THEFT-DETERRENT SYSTEM OPERATION RECORD.)	Yes	Go to the next step.
		No	Diagnosis completed (theft-deterrent system does not operate).
3	**VERIFY CONDITION DURING THEFT-DETERRENT SYSTEM OPERATION** • Is the condition during theft-deterrent operation "Alarm" or "Arming" ?	Yes	Go to the next step.
		No	Inspect the rear body control module (RBCM). If there is any malfunction, replace it. (See 09-40-11 REAR BODY CONTROL MODULE (RBCM) INSPECTION.)
4	**DETERMINE IF MALFUNCTION CAUSE IS SYSTEM** • Verify what triggered the theft-deterrent system according to the trigger record, and inspect the switch which triggered the system and the related wiring harness. • Is the switch or related wiring harness normal?	Yes	System is normal (explain to the customer that the cause is customer's mis-operation).
		No	Replace the malfunctioning part.

SYMPTOM TROUBLESHOOTING [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

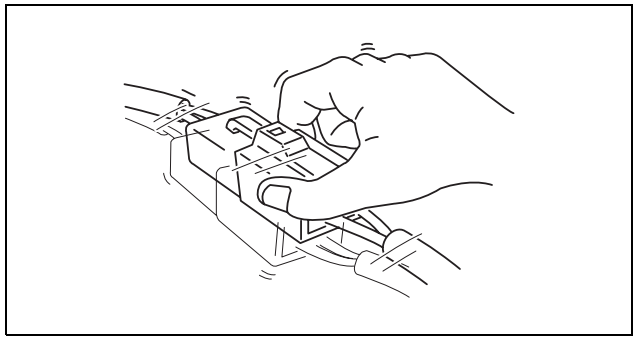
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Verify that a DTC has been recorded in the memory. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.

SYMPTOM TROUBLESHOOTING [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id0903k9378800

No.	Troubleshooting item	Description
1	09-03D-4 AFS OFF INDICATOR LIGHT ILLUMINATES CONTINUOUSLY [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]	• Inspect the AFS OFF indicator light with the ignition switched ON and the AFS OFF indicator light illumination off (AFS operating).
2	09-03D-5 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OPERATES EVEN THOUGH THE AFS OFF SWITCH IS TURNED ON [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]	• AFS operates with the AFS OFF switch on (system stopped condition).
3	09-03D-6 THE HEADLIGHT AUTO LEVELING SYSTEM DOES NOT OPERATE IN RESPONSE TO VEHICLE POSTURE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]	• The headlight auto leveling system does operate in response to the number of occupants, cargo load in trunk, and the fuel level. • One side of the headlight leveling actuator does not operate.

SYMPTOM TROUBLESHOOTING [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

AFS OFF INDICATOR LIGHT ILLUMINATES CONTINUOUSLY [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id0903k9013400

Note

- If there is any vehicle malfunction complaint lodged by a customer, perform 09-03D-2 FOREWORD [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)] malfunction diagnosis according to the troubleshooting procedure.

Possible malfunction

- AFS OFF switch malfunction (stuck on)
- AFS OFF control module malfunction
- Instrument cluster malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**DETERMINE IF MALFUNCTION LOCATION IS AFS OFF SWITCH** • Display the following AFS control module AFS_ST PIDs using the M-MDS. (See 09-02D-40 PID/DATA MONITOR INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Inspect the PID display when the AFS OFF switch is turned on/off. • Does the PID display switch normally in conjunction with the AFS OFF switch being turned on/off?	Yes	Go to Step 3.
		No	Go to the next step.
2	**PERFORM AFS OFF SWITCH INSPECTION** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the AFS OFF switch. (See 09-18-32 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OFF SWITCH REMOVAL/INSTALLATION.) • Inspect the AFS OFF switch. (See 09-18-32 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OFF SWITCH INSPECTION.) • Is the AFS OFF switch normal?	Yes	Replace the AFS control module. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Replace the AFS OFF switch. (See 09-18-32 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OFF SWITCH REMOVAL/INSTALLATION.)
3	**VERIFY AFS DISPLAY ILLUMINATION** • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Display the following instrument cluster WL+IL simulation items using the M-MDS. (See 09-02G-38 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Does the AFS OFF indicator light illumination turn off when the warning light, indicator light illumination is operated to off?	Yes	The system is operating normally.
		No	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OPERATES EVEN THOUGH THE AFS OFF SWITCH IS TURNED ON [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id0903k9013700

Note

- If there is any vehicle malfunction complaint lodged by a customer, perform 09-03D-2 FOREWORD [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)] malfunction diagnosis according to the troubleshooting procedure.

Possible malfunction

- AFS OFF switch malfunction (stuck off)
- AFS OFF control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY AFS OFF INDICATOR LIGHT ILLUMINATION** • Display the following instrument cluster WL+IL simulation items using the M-MDS. (See 09-02G-38 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Does the AFS OFF indicator light illumination turn off when the warning light, indicator light illumination is operated to off?	Yes	Go to the next step.
		No	Perform inspection referring to the AFS OFF INDICATOR LIGHT ILLUMINATES CONTINUOUSLY On item. (See 09-03D-4 AFS OFF INDICATOR LIGHT ILLUMINATES CONTINUOUSLY [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
2	**DETERMINE IF MALFUNCTION LOCATION IS AFS OFF SWITCH** • Display the following AFS control module AFS_ST PIDs using the M-MDS. (See 09-02D-40 PID/DATA MONITOR INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Inspect the PID display when the AFS OFF switch is turned on/off. • Does the PID display switch normally in conjunction with the AFS OFF switch being turned on/off?	Yes	Replace the AFS control module. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**PERFORM AFS OFF SWITCH INSPECTION** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the AFS OFF switch. (See 09-18-32 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OFF SWITCH REMOVAL/INSTALLATION.) • Inspect the AFS OFF switch. (See 09-18-32 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OFF SWITCH INSPECTION.) • Is the AFS OFF switch normal?	Yes	The system is operating normally.
		No	Replace the AFS OFF switch. (See 09-18-32 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OFF SWITCH REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

THE HEADLIGHT AUTO LEVELING SYSTEM DOES NOT OPERATE IN RESPONSE TO VEHICLE POSTURE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id0903k9013800

Note
- If there is any vehicle malfunction complaint lodged by a customer, perform 09-03D-2 FOREWORD [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)] malfunction diagnosis according to the troubleshooting procedure.

Description
- The headlight auto-leveling system does operate in response to the number of occupants, cargo load in trunk, and the fuel level.
- One side of the headlight leveling actuator does not operate.

Possible malfunction
- Short or open circuit in the wiring harness between headlight leveling actuator and AFS control module
- Headlight leveling actuator malfunction
- AFS control module malfunction
- Poor installation of the auto leveling sensor
- Auto leveling sensor malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**DETERMINE IF MALFUNCTIONING LOCATION IS AUTO-LEVELING SENSOR** • Verify the malfunction symptom. • Do both sides of the headlight auto leveling system not operate?	Yes	Go to Step 4.
		No	Go to the next step.
2	**LEVELING OPERATION SIGNAL INSPECTION** • Verify the headlight leveling actuator operation using the M-MDS. (See 09-02D-41 HEADLIGHT LEVELING ACTUATOR OPERATION CHECK MODE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is the headlight leveling actuator normal?	Yes	Go to Step 6.
		No	Go to the next step.
3	**LEVELING OPERATION SIGNAL CIRCUIT INSPECTION** • Inspect wiring harness between AFS control module on the side of the auto leveling system which does operate and the headlight leveling actuator. **RH** — AFS control module terminal O and headlight leveling actuator terminal F **LH** — AFS control module terminal O and headlight leveling actuator terminal F • Is there any open or short circuit in the wiring harness?	Yes	Repair or replace for an open or short circuit to the wiring harness.
		No	Go to the next step.
4	**HEADLIGHT LEVELING INSPECTION** • Replace the front combination light on the side of the auto-leveling system that is not operating. (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.) • Does the auto-leveling system operate correctly?	Yes	Troubleshooting completed.
		No	Replace the AFS control module. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Step	Inspection		Action
5	**INSPECT WIRING HARNESS BETWEEN HEADLIGHT LEVELING ACTUATOR AND AFS CONTROL MODULE** • Inspect the wiring harness between the following terminals. — AFS control module terminal P and headlight leveling actuator (LH/RH) terminal I — AFS control module terminal O and headlight leveling actuator (LH/RH) terminal F — AFS control module terminal M and headlight leveling actuator (LH/RH) terminal L • Is there any open or short circuit in the wiring harness?	Yes	Repair or replace for an open or short circuit to the wiring harness.
		No	Go to the next step.
6	**VERIFY AUTO-LEVELING SENSOR INSTALLATION** • Verify the auto-leveling sensor installation condition? • Is a bracket bent, is there damage, or is a link disconnected?	Yes	Repair or replace the malfunctioning location.
		No	Go to the next step.
7	**AUTO LEVELING SENSOR INSPECTION** • Inspect the auto leveling sensor. (See 09-18-80 AUTO LEVELING SENSOR INSPECTION.) • Is the auto leveling sensor normal?	Yes	Replace the AFS control module. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Replace the auto leveling sensor. (See 09-18-79 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)

09-03E SYMPTOM TROUBLESHOOTING [EMERGENCY STOP SIGNAL SYSTEM (ESS)]

SYMPTOM TROUBLESHOOTING [EMERGENCY STOP SIGNAL SYSTEM (ESS)]

FOREWORD [EMERGENCY STOP SIGNAL SYSTEM (ESS)]

id0903j7004300

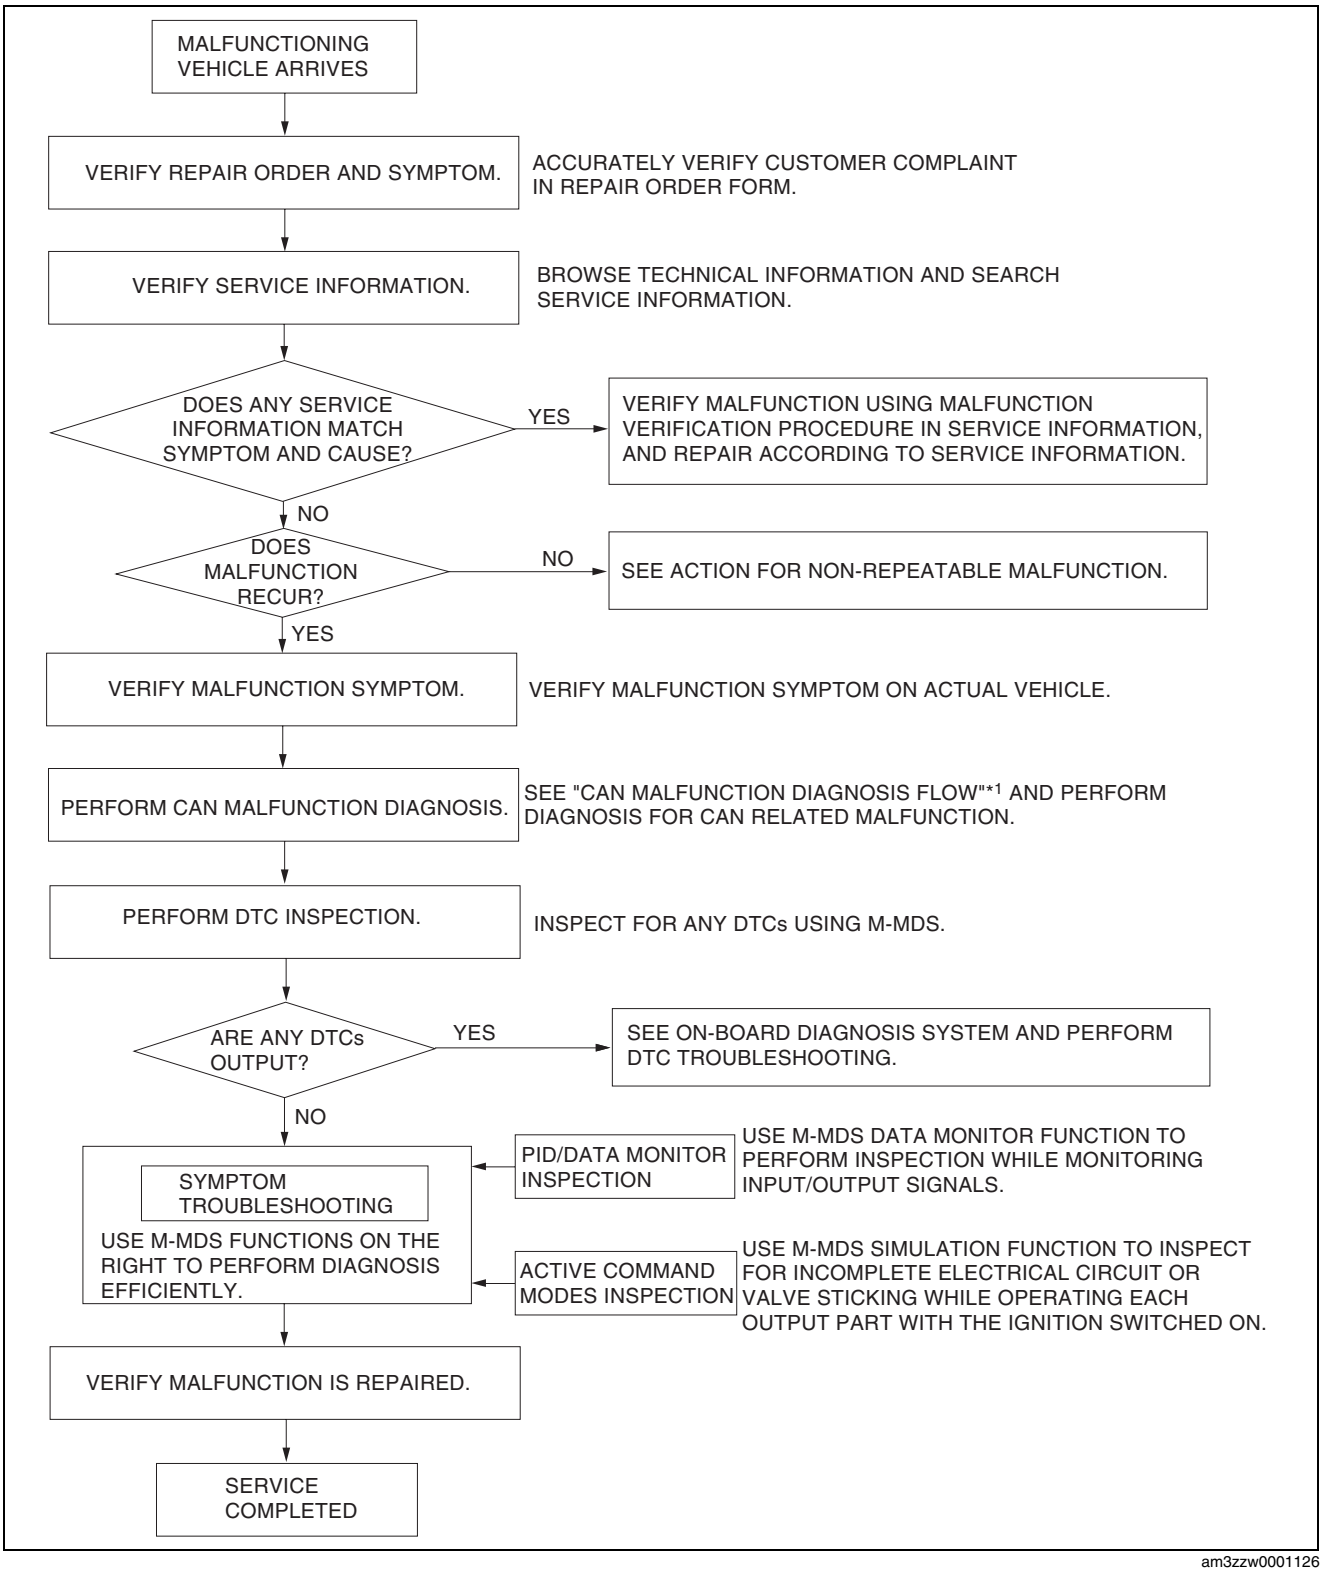
Warning

- **Do not attempt to reproduce an emergency stop signal system malfunction. Doing so will result in a remarkable loss of vehicle stability which could cause an unexpected rear-end or other type of collision and a serious accident.**
- **To prevent an accident, verify the M-MDS data monitor using two people while the vehicle is being driven (One person drives vehicle and other operates the M-MDS).**

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

SYMPTOM TROUBLESHOOTING [EMERGENCY STOP SIGNAL SYSTEM (ESS)]

Troubleshooting Procedure



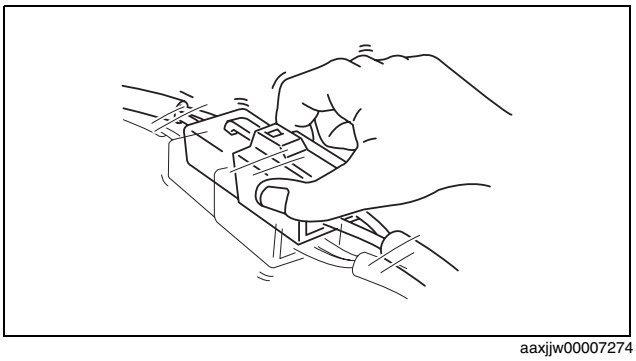
am3zzw0001126

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)] / 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)]

SYMPTOM TROUBLESHOOTING [EMERGENCY STOP SIGNAL SYSTEM (ESS)]

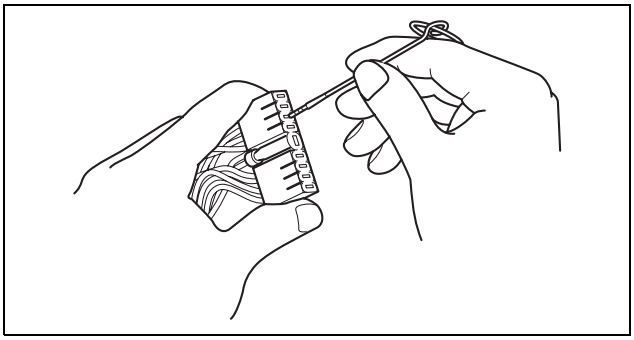
Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

TROUBLESHOOTING INDEX [EMERGENCY STOP SIGNAL SYSTEM (ESS)]

id0903j7010500

No.	Troubleshooting item	Description
1	09-03E-3 ESS (EMERGENCY STOP SIGNAL SYSTEM) DOES NOT OPERATE [EMERGENCY STOP SIGNAL SYSTEM (ESS)]	• Hazard warning lights do not flash even though the vehicle decelerates suddenly *1. • Hazard warning lights end flashing before vehicle stops (vehicle speed at **approx. 10 km/h {6.2 mph}**) while the system operates.
2	09-03E-4 ESS (EMERGENCY STOP SIGNAL SYSTEM) OPERATES WHILE NOT UNDER OPERATION CONDITIONS [EMERGENCY STOP SIGNAL SYSTEM (ESS)]	• Hazard warning lights flash while driving. • Hazard warning lights flash even though deceleration is done without decelerating*1 rapidly.

*1 : Deceleration of vehicle speed at **30 km/h {19 mph} or more** for **1 s** while vehicle speed is **60—70 km/h {38—43 mph} or more**.

ESS (EMERGENCY STOP SIGNAL SYSTEM) DOES NOT OPERATE [EMERGENCY STOP SIGNAL SYSTEM (ESS)]

id0903j7014800

Note

- If there is any vehicle malfunction complaint lodged by a customer, perform 09-03E-1 FOREWORD [EMERGENCY STOP SIGNAL SYSTEM (ESS)] malfunction diagnosis according to the troubleshooting procedure.

Description

- Hazard warning lights do not flash even though vehicle decelerates suddenly.
- Hazard warning lights end flashing before vehicle stops (emergency stop hazard warning mode, vehicle speed of **approx. 10 km/h {6.2 mph}**) while system operates.

SYMPTOM TROUBLESHOOTING [EMERGENCY STOP SIGNAL SYSTEM (ESS)]

Possible cause
- Front body control module (FBCM) malfunction

Driving road surface effect (emergency signal system (ESS) normal)
- Grip level of tires is low
  - — Driving on a low-traction surface
  - — Tire wear (hydroplaning)

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FLASHING HAZARD WARNING LIGHT CIRCUIT FOR MALFUNCTION** • Display the front body control module (FBCM) simulation HAZARD_LMP item using the M-MDS. (See 09-02K-159 ACTIVE COMMAND MODES INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Do the hazard warning lights flash?	Yes	Go to the next step.
		No	Replace the front body control module (FBCM). (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
2	**DETERMINE IF MALFUNCTION CAUSED BY ABS OPERATION MALFUNCTION** • Inspect the ABS operation at **10—20 km/h {6.3—12.0 mph}**. • Is the ABS operation normal?	Yes	Phenomenon occurring due to effect of road surface can be considered.(Emergency Signal System (ESS) normal) If the malfunction recurs, replace the front body control module (FBCM). (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	• Inspect the tires for the following: — Tire air pressure (are all four tires at recommended pressure?) — Tire wear condition (is tire wear uniform on all four tires, or is it different?) — Tire size Adjust the malfunctioning tire or replace the tire.

ESS (EMERGENCY STOP SIGNAL SYSTEM) OPERATES WHILE NOT UNDER OPERATION CONDITIONS [EMERGENCY STOP SIGNAL SYSTEM (ESS)]

id0903j7014900

Note
- If there is any vehicle malfunction complaint lodged by a customer, perform 09-03E-1 FOREWORD [EMERGENCY STOP SIGNAL SYSTEM (ESS)] malfunction diagnosis according to the troubleshooting procedure.

Description
- Hazard warning lights flash while driving
- Hazard warning lights flash even though deceleration is done without decelerating rapidly.

Possible cause
- Start stop unit malfunction
- Front body control module (FBCM) malfunction

Hazard warning light flash malfunction
- Hazard warning switch malfunction (temporary short circuit caused by shock from road surface)
  - — Hazard warning switch malfunction
  - — Short to ground in wiring harness between hazard warning switch terminal C and start stop unit terminal 1G

Sudden deceleration wheel speed is detected
- Grip level of tires is low
  - — Driving on a low-traction surface
  - — Tire wear (hydroplaning)

Diagnostic Procedure
- *When performing an asterisked(*) troubleshooting inspection, first verify the damage and connection status of the connectors and terminals, then perform the inspection while shaking the wiring harness to discover whether poor contact points are the cause of an intermittent malfunction. If there is a malfunction in the connectors or terminals, securely connect, repair, or perform replacement.

SYMPTOM TROUBLESHOOTING [EMERGENCY STOP SIGNAL SYSTEM (ESS)]

Step	Inspection		Action
1*	**DETERMINE IF MALFUNCTION CAUSED BY HAZARD WARNING SWITCH SIGNAL ERROR** • Display the start stop unit PID HAZARD_SW item using the M-MDS. (See 09-02C-151 PID/DATA MONITOR INSPECTION [START STOP UNIT].) • Verify the PID/data monitor display while operating the hazard warning switch. • Does the PID/data monitor display switch?	Yes	Go to Step 4.
		No	Go to the next step.
2	**INSPECT HAZARD WARNING SWITCH FOR MALFUNCTION** • Remove the hazard warning switch. (See 09-18-90 HAZARD WARNING SWITCH REMOVAL/INSTALLATION.) • Inspect the hazard warning switch. (See 09-18-91 HAZARD WARNING SWITCH INSPECTION.) • Is the hazard warning switch normal?	Yes	Go to the next step.
		No	Replace the hazard warning switch. (See 09-18-90 HAZARD WARNING SWITCH REMOVAL/INSTALLATION.)
3*	**INSPECT FOR SHORT TO GROUND IN WIRING HARNESS BETWEEN HAZARD WARNING SWITCH AND START STOP UNIT** • Inspect for continuity between hazard warning switch connector terminal C and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness between hazard warning switch terminal C and start stop unit terminal 1G.
		No	Replace the start stop unit. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
4*	**DETERMINE IF MALFUNCTION CAUSE IS FRONT BODY CONTROL MODULE (FBCM)** • Display the front body control module (FBCM) PID HAZARD_SW item using the M-MDS. (See 09-02K-154 PID/DATA MONITOR INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Verify the PID/data monitor while operating the hazard warning switch. • Does the PID/data monitor display switch?	Yes	Go to the next step.
		No	Replace the front body control module (FBCM). (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
5	**INSPECT TIRES FOR MALFUNCTION** • Inspect the tires for the following: — Tire air pressure (are all four tires at recommended pressure?) — Tire wear condition (is tire wear uniform on all four tires, or is it different?) — Tire size • Are the tires normal?	Yes	Phenomenon occurring due to effect of road surface can be considered. (Emergency Signal System (ESS) normal) If the malfunction recurs, replace the front body control module (FBCM). (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Adjust the malfunctioning tire or replace the tire.

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

CONFIRMATION STEP 1: AUDIO PANEL SWITCH CONFIRMATION [ENTIRE AUDIO SYSTEM]

id0903e2802800

- Verify the customer complaint and identify either the audio panel malfunction or audio unit malfunction.

How to activate audio panel switch inspection mode

1. Launch the switch inspection mode. (See 09-02E-39 DIAGNOSTIC ASSIST FUNCTION [AUDIO].)
2. The audio panel switch inspection mode is now activated.

STEP	INSPECTION		ACTION
1	• Press each switch on the audio panel. • Does buzzer sound when pressing each switch?	Yes	Verify the customer complaint and then go to the appropriate symptom troubleshooting procedure.
		No	Go to the next step.
2	• Disassemble and reassemble the audio panel and audio unit. • Activate the audio panel switch confirmation mode. • Does buzzer sound when pressing each switch?	Yes	Go to the next step.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
3	Does the audio system operate properly?	Yes	The system is normal.
		No	Verify the customer complaint and then go to the appropriate symptom troubleshooting procedure.

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

CONFIRMATION STEP 2: STEERING SWITCH CONFIRMATION [ENTIRE AUDIO SYSTEM]

id0903e2833000

- Verify the customer complaint and identify either the steering switch malfunction or audio unit malfunction.

STEP	INSPECTION		ACTION
1	Is the symptom related to either the steering switch or audio panel operation?	Yes	Verify the customer complaint and then go to the appropriate symptom troubleshooting procedure.
		No	**The symptom is related to the audio panel operation:** • Follow the “Confirmation Step 1”. (See 09-03F-7 CONFIRMATION STEP 1: AUDIO PANEL SWITCH CONFIRMATION [ENTIRE AUDIO SYSTEM].) **The symptom is related to the steering switch operation:** • Go to the next step.
2	• Disconnect the audio unit connector (24-pin). • Inspect both the audio unit and wiring harness-side connectors for poor connection (such as damaged/pulled-out pins, corrosion). — Terminal 1N (ST SW1) — Terminal 1P (ST SW2) • Are all the pins normal?	Yes	Go to the next step.
		No	**If the audio unit side connector is wrong:** • Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector.
3	• Inspect the continuity between the audio unit wiring harness-side connector terminal 1N and 1P while operating the steering switch. • Does the resistance change?	Yes	Verify the customer complaint and then go to the appropriate symptom troubleshooting procedure.
		No	Go to the next step.
4	• Switch the ignition to off. • Remove the steering switch. (See 09-20-54 STEERING SWITCH REMOVAL/INSTALLATION.) • Inspect the continuity between the audio unit wiring harness-side connector (24-pin) terminal and the steering switch wiring harness-side connector (16-pin) terminal. — Terminal 1N (24-pin) — Terminal H (14-pin) — Terminal 1P (24-pin) — Terminal J (14-pin) • Is there the continuity?	Yes	Replace the steering switch. (See 09-20-54 STEERING SWITCH REMOVAL/INSTALLATION.)
		No	Repair or replace the suspect wiring harness.

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

AF NOISE OR POP NOISE AT ALL SOURCES (RADIO, CD) [ENTIRE AUDIO SYSTEM]

id0903e2100500

<table>
<tr><td rowspan="3">Possible DTC</td><td colspan="2">AF noise or POP noise on all sources (Radio, CD)</td></tr>
<tr><td>Using the M-MDS</td><td>U3000:09</td></tr>
<tr><td>Without using M-MDS (On-board diagnostic test mode)</td><td>09:Er21</td></tr>
<tr><td>Possible cause</td><td colspan="2">• Electronic jamming from outside, or inferior condition of broadcasting station radio wave
• Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation)
• Vibration while vehicle is driven
• Low vehicle battery voltage.
• Jammed radio signals from after market equipment.
• Speaker malfunction (e.g., any foreign material, broken)
• Improper speaker installation
• Poor connection of audio unit connector, terminal damage
• Antenna malfunction (e.g., poor ground)
• Audio unit malfunction
• Poor connection of audio amplifier connector, terminal damage (with Bose®)
• Audio amplifier malfunction (with Bose®)

Note
• AF noise is a snapping noise that generally occurs during ON/OFF switching operations of electrical equipment other than the audio unit, or a continual rasping noise that occurs when electrical equipment is operated. This is caused by noise interference in the power supply wiring, signal wiring, speaker cable or head of cassette deck. Therefore noise can be heard regardless of radio wave conditions or the audio volume position. The noise will start after one click from the minimum position of the volume button but normally does not change even when volume is turned to a higher position.
• POP noise is snapping or popping noise that occurs during ON/OFF switching operation of the audio unit, or when switching from radio to CD. Even a normal audio unit sometimes emits a little noise depending on the conditions.</td></tr>
</table>

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Does the noise occur only while in radio mode?	Yes	Go to the next step.
		No	Go to Step 3.
2	• Can the location where the noise occurs be specified?	Yes	The system is normal. Explain to the customer that the noise is caused by radio wave disturbances or broadcast wave conditions from the outside.
		No	Go to Step 6.
3	• Does the noise occur only while in CD mode?	Yes	Go to the next step.
		No	Go to Step 6.
4	• Can the disc in which the noise occurs be specified?	Yes	The system is normal. Explain to the customer that the cause is a disc that is damaged or dirty on the playback side, or warped.
		No	Go to the next step.
5	• Drive the vehicle and verify the malfunction symptom. • Does noise occur while driving on an unlevel road or under other driving conditions (sudden curve, quick operation)?	Yes	The system is normal. Explain to the customer that the cause is vibration while the vehicle is driven.
		No	Go to the next step.
6	• Inspect the vehicle battery voltage. • Is the vehicle battery voltage normal? **Specification:** Switch the ignition to ON.: **11.5 V or more** Idle: **12.5 V or more**	Yes	Go to the next step.
		No	Charge the battery, then go to the next step.
7	• Is any of the following after-market equipment installed? (Inspect especially near the antenna.) — Radar — Remote engine starter — Anti-theft device — Other	Yes	Go to the next step.
		No	Go to Step 9.
8	• Remove the after-market equipment. • Turn the audio system to ON. • Is there any noise?	Yes	Go to the next step.
		No	The system is normal. The after-market electrical devices might make a noise.
9	• Is there the noise from all speakers?	Yes	Go to Step 11.
		No	Go to the next step.
10	• Inspect the suspect speaker. • Is the speaker normal?	Yes	Go to the next step.
		No	**If there is any foreign material on the speaker:** • Remove the foreign material from the speaker. **If the speaker is malfunctioning:** • Replace the speaker. **If the speaker is not installed properly:** • Install the speaker properly.
11	• Attempt to duplicate the symptom on the other vehicle. • Is the noise better than the customer's vehicle?	Yes	Go to the next step.
		No	The system is normal. Explain the noise generation mechanism to the customer. **Note** • The noise may be heard depends on the operating speed of audio power and/or mode switch.
12	• Switch the ignition to off. • Remove the audio unit. • Inspect the connection of the audio unit connector (24-pin) (for sound signal line). • Is the connector connected securely?	Yes	Go to the next step.
		No	**If poor connection of audio unit connector:** • Securely connect the audio unit connector. **If the audio unit side connector is wrong:** • Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector. After treating either the above-mentioned, then go to the next step.
13	• Inspect the ground condition of the antenna. • Is the ground condition normal?	Yes	Go to the next step.
		No	Repair or replace the ground. Go to the next step.

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

STEP	INSPECTION		ACTION
14	• Is there any noise?	Yes	• If noise occurs from the speaker of a specific channel, or the volume is minimized and the noise occurs: — Replace the audio amplifier. (See 09-20-12 AUDIO AMPLIFIER REMOVAL/ INSTALLATION.) • If noise occurs from the speaker of two or more channels or the volume is minimized and the noise dose not occurs. — Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/ INSTALLATION.)
		No	The system is normal.

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

AUDIO POWER IS NOT AVAILABLE OR SWITCHED ON OR OFF AUTOMATICALLY [ENTIRE AUDIO SYSTEM]

id0903e2100600

Possible DTC	**Audio power is not available or switched on or off automatically**	
	Using the M-MDS	**U3003:16**
	Without using M-MDS (On-board diagnostic test mode)	**09:Er20**
Possible cause	• Speaker muted by Bluetooth system (hands-free telephone (HF/TEL) system) operation • Mis-operation of steering switches • Burnt fuse (B+) • Burnt fuse (ACC) • Open or short circuit in power supply (B+) wiring harness • Open or short circuit in power supply (ACC) wiring harness • Poor connection of audio unit connector, terminal damage • Audio unit malfunction	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Does the malfunction occur while the Bluetooth system is operating?	Yes	The system is normal. Explain to the customer that the speaker is muted while the Bluetooth system is operating.
		No	Go to the next step.
2	• Do the steering switches operate?	Yes	The system is normal. Explain to the customer that the cause is mis-operation of the steering switches.
		No	Go to the next step.
3	• Switch the ignition to off. • Inspect the following fuses: — AUDIO1 15 A — AUDIO2 7.5 A • Are the fuse normal?	Yes	Go to the next step.
		No	Replace with the appropriate standard fuse. • If the fuse is melted, inspect the wiring harness for short to ground. Repair or replace the wiring harness, then replace the fuse.
4	• Remove the audio unit. • Inspect the connection of the audio unit (24-pin). • Are the connectors securely connected?	Yes	• Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Securely connect the audio unit and car navigation unit connectors, then go to the next step.
5	• Verify the malfunction symptom. • Is the malfunction improved?	Yes	Troubleshooting completed.
		No	Go to the next step.
6	• Remove the audio unit (with audio system). • Inspect the connection of the audio unit connector (24-pin). • Disconnect the audio unit connector and inspect both the audio unit and wiring harness-side connectors for poor connection (such as damaged/pulled-out pins, corrosion). — Terminal 1B (B+) — Terminal 1R (ACC) — Terminal 1W (GND) • Are all the pins normal?	Yes	Go to the next step.
		No	**If poor connection of audio unit connector:** • Securely connect the audio unit connector. **If the audio unit side connector is wrong:** • Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector.
7	• Connect the audio unit connector. • Inspect the voltage for the power supply line (B+, ACC). **Specification:** Switch the ignition to ON: **11.5 V or more** Idle: **12.5 V or more** • Is the voltage normal?	Yes	Go to the next step.
		No	Inspect and repair or replace the suspect wiring harness. Charge the battery, if necessary.
8	• Switch the ignition to off. • Remove the audio unit connector (24-pin). • Inspect the continuity between the audio unit wiring harness-side connector terminal 1W (GND) and the ground. • Is there the continuity?	Yes	• Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness.

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

NO SOUND FROM ALL SPEAKERS [ENTIRE AUDIO SYSTEM]

id0903e2100700

Without Bose®

Possible DTC	**No sound from all speakers**	
	Using the M-MDS	**U3003:16, U3000:09**
	Without using M-MDS (On-board diagnostic test mode)	**09:Er20, 09:Er21**
Possible cause	• Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Glass antenna malfunction • Antenna feeder malfunction • Center roof antenna malfunction • Speaker muted by Bluetooth system (hands-free telephone (HF/TEL) system) operation • Poor connection of music device • Volume adjustment of music device is at minimum • Poor connection at audio unit connector, terminal damage • Audio unit malfunction • Short circuit in wiring harness between audio unit and speaker • Open circuit in wiring harness between audio unit and speaker • Short circuit inside speaker • Speaker malfunction	

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• It sound not output from the speaker only while in radio mode?	Yes	Go to the next step.
		No	Go to Step 6.
2	• Does noise occur?	Yes	Go to the next step.
		No	Go to Step 8.
3	• Can the location where the noise occurs be specified?	Yes	The system is normal. Explain to the customer that the noise is caused by radio wave disturbances or broadcast wave conditions from the outside.
		No	Go to the next step.
4	• Compare the radio broadcast reception condition on another vehicle of the same model (model/unit) in the location where the noise occurs. • Compared to another vehicle of the same model, is the reception worse?	Yes	Go to the next step.
		No	Go to Step 6.
5	• Inspect the glass antenna and antenna feeder. • Are the glass antenna and antenna feeder normal?	Yes	Go to the next step.
		No	Repair or replace the glass antenna and/or the antenna feeder.
6	• Does the Bluetooth system (hands-free telephone (HF/TEL) system) operate?	Yes	The system is normal. Explain to the customer that the Bluetooth system (hands-free telephone (HF/TEL) system) operates and the speaker is muted.
		No	Go to the next step.
7	• Does the AUX mode operate?	Yes	Verify the volume of the music device which has been connected. If sound is output, go to the next step.
		No	Go to the next step.
8	• Connect the audio unit connector. • Inspect the voltage for the power supply line (B+, ACC). **Specification:** Switch the ignition to ON: **11.5 V or more** Idle: **12.5 V or more** • Is the voltage normal?	Yes	Go to the next step.
		No	Charge the battery, then go to the next step.
9	• Play the CD or Radio. • Adjust the volume between”10” to “15”. • Is there sound?	Yes	The system is normal.
		No	Go to the next step.
10	• Switch the ignition to off. • Remove the audio unit. • Disconnect the audio unit connector (24-pin). • Inspect the continuity between the audio unit wiring harness-side connector terminal and ground: **For front door speaker** — Terminal 1A (LH+)—GND — Terminal 1C (LH-)—GND — Terminal 1D (RH+)—GND — Terminal 1F (RH-)—GND **For rear door speaker** — Terminal 1S (LH+)—GND — Terminal 1U (LH-)—GND — Terminal 1V (RH+)—GND — Terminal 1X (RH-)—GND • Disconnect the front door speaker connector (4-pin) • Inspect the continuity between the front door speaker wiring harness-side connector terminal and ground: **For tweeter** — Terminal 1A (LH+)—GND — Terminal 1C (LH-)—GND — Terminal 1D (RH+)—GND — Terminal 1F (RH-)—GND • Is there continuity?	Yes	Repair or replace the suspect wiring harness or speaker unit. **Note** • If there is a short circuit between the speaker harness or speaker lead wire and ground, the protector circuit inside the audio unit operates to cut the sound.
		No	• Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

With Bose®

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

Possible DTC	**No sound from all speakers**	
	Using the M-MDS	**U3003:16, U3000:09**
	Without using M-MDS (On-board diagnostic test mode)	**09:Er20, 09:Er21**
Possible cause	• Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Glass antenna malfunction • Antenna feeder malfunction • Center roof antenna malfunction • Speaker muted by Bluetooth system (hands-free telephone (HF/TEL) system) operation • Poor connection of music device • Volume adjustment of music device is at minimum • Speaker malfunction • Audio amplifier malfunction • Audio unit malfunction • Open or short circuit in wiring harness between audio amplifier and audio unit • Poor connection of audio unit or audio amplifier connector, terminal damage • CAN signal wiring harness malfunction • Short circuit inside speaker • Open or short circuit in wiring harness between audio amplifier and speaker	

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• It sound not output from the speaker only while in radio mode?	Yes	Go to the next step.
		No	Go to Step 6.
2	• Does noise occur?	Yes	Go to the next step.
		No	Go to Step 8.
3	• Can the location where the noise occurs be specified?	Yes	The system is normal. Explain to the customer that the noise is caused by radio wave disturbances or broadcast wave conditions from the outside.
		No	Go to the next step.
4	• Compare the radio broadcast reception condition on another vehicle of the same model (model/unit) in the location where the noise occurs. • Compared to another vehicle of the same model, is the reception worse?	Yes	Go to the next step.
		No	Go to Step 6.
5	• Inspect the glass antenna and antenna feeder. • Are the glass antenna and antenna feeder normal?	Yes	Go to the next step.
		No	Repair or replace the glass antenna and/or the antenna feeder.
6	• Does the Bluetooth system (hands-free telephone (HF/TEL) system) operate?	Yes	The system is normal. Explain to the customer that the Bluetooth system (hands-free telephone (HF/TEL) system) operates and the speaker is muted.
		No	Go to the next step.
7	• Does the AUX mode operate?	Yes	Verify the volume of the music device which has been connected. If sound is output, go to the next step.
		No	Go to the next step.
8	• Connect the audio unit connector. • Inspect the voltage for the power supply line (B+, ACC). **Specification:** Switch the ignition to ON: **11.5 V or more** Idle: **12.5 V or more** • Is the voltage normal?	Yes	Go to the next step.
		No	Charge the battery, then go to the next step.
9	• Play CD or radio. • Adjust the volume between “10” and “15”. • Is there sound?	Yes	The system is normal.
		No	Go to the next step.
10	• Measure the voltage at the audio amplifier terminal 3A. (8-pin, vehicle harness-side) • Is the voltage B+?	Yes	Go to the next step.
		No	Repair or replace wiring harness between the audio amplifier and fuse. (See 09-20-12 AUDIO AMPLIFIER REMOVAL/ INSTALLATION.) Go to the next step.
11	• Inspect the connection of audio unit connector (24-pin) and audio amplifier connectors for poor connection (such as damaged/pulled-out pins, corrosion). • Are all pins normal?	Yes	Go to the next step.
		No	Repair or replace the pins and/or the connector.

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

STEP	INSPECTION		ACTION
12	• Switch the ignition to off. • Disconnect the audio amplifier connector. • Inspect continuity between the following terminals of the audio amplifier connector and speaker connector. **For front door speaker (LH)** — Terminal 3F (L.H.D.)/3C (R.H.D.)—Terminal C — Terminal 3E (L.H.D.)/3D (R.H.D.)—Terminal B **For front door speaker (RH)** — Terminal 3C (L.H.D.)/3F (R.H.D.)—Terminal C — Terminal 3D (L.H.D.)/3E (R.H.D.)—Terminal B **For tweeter (LH)** — Terminal 2G (L.H.D.)/2C (R.H.D.)—Terminal B — Terminal 2I (L.H.D.)/2E (R.H.D.)—Terminal A **For tweeter (RH)** — Terminal 2C (L.H.D.)/2G (R.H.D.)—Terminal B — Terminal 2E (L.H.D.)/2I (R.H.D.)—Terminal A **For rear door speaker (LH)** — Terminal 2O (L.H.D.)/2M (R.H.D.)—Terminal C — Terminal 2P (L.H.D.)/2K (R.H.D.)—Terminal B **For rear door speaker (RH)** — Terminal 2M (L.H.D.)/2O (R.H.D.)—Terminal C — Terminal 2K (L.H.D.)/2P (R.H.D.)—Terminal B **For front center speaker** — Terminal 3G—Terminal B — Terminal 3H—Terminal A **For D-pillar speaker** — Terminal 2A—Terminal B — Terminal 2B—Terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the repair related wiring harnesses.

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

STEP	INSPECTION		ACTION
13	• Switch the ignition to off. • Disconnect the audio amplifier connector. • Inspect the continuity between the audio amplifier connector and ground: **For front door speaker (LH)** — Terminal 3F (L.H.D.)/3C (R.H.D.)—GND — Terminal 3E (L.H.D.)/3D (R.H.D.)—GND **For front door speaker (RH)** — Terminal 3C (L.H.D.)/3F (R.H.D.)—GND — Terminal 3D (L.H.D.)/3E (R.H.D.)—GND **For tweeter (LH)** — Terminal 2G (L.H.D.)/2C (R.H.D.)—GND — Terminal 2I (L.H.D.)/2E (R.H.D.)—GND **For tweeter (RH)** — Terminal 2C (L.H.D.)/2G (R.H.D.)—GND — Terminal 2E (L.H.D.)/2I (R.H.D.)—GND **For rear door speaker (LH)** — Terminal 2O (L.H.D.)/2M (R.H.D.)—GND — Terminal 2P (L.H.D.)/2K (R.H.D.)—GND **For rear door speaker (RH)** — Terminal 2M (L.H.D.)/2O (R.H.D.)—GND — Terminal 2K (L.H.D.)/2P (R.H.D.)—GND **For front center speaker** — Terminal 3G—GND — Terminal 3H—GND **For D-pillar speaker** — Terminal 2A—GND — Terminal 2B—GND • Is there continuity?	Yes	Repair or replace the related wiring harness or speaker. (See 09-20-15 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09-20-23 TWEETER REMOVAL/INSTALLATION.) (See 09-20-19 REAR DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09-20-22 FRONT CENTER SPEAKER REMOVAL/INSTALLATION.) (See 09-20-25 D-PILLAR SPEAKER REMOVAL/INSTALLATION.) **Note** • If there is a short circuit between the speaker harness or speaker lead wire and ground, the protector circuit inside the audio unit operates to cut the sound.
		No	Go to the next step.
14	• Switch the ignition to off. • Disconnect the audio amplifier connector and audio unit connector (24-pin). • Inspect the continuity between the audio amplifier terminal 2F (16-pin, vehicle harness-side) and audio unit terminal 1J (24-pin, vehicle harness- side). • Is there continuity?	Yes	Replace the audio amplifier. (See 09-20-12 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the audio amplifier and audio unit. Then go to the next step.
15	• Is there any sound?	Yes	The system is normal.
		No	Replace the audio amplifier. (See 09-20-12 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

NO SOUND FROM SOME SPEAKERS [ENTIRE AUDIO SYSTEM]

id0903e2100800

Without Bose®

Possible DTC	No sound from some speakers
	—
Possible cause	• Speaker muted by audio unit sound adjustment • Short or short circuit in wiring harness between audio unit and speaker • Open or short circuit in wiring harness between audio unit and speaker • Speaker malfunction (e.g., any foreign material, broken) • Short circuit inside speaker • Audio unit malfunction

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Verify the audio unit sound adjustment. • Does the fader/balance operate?	Yes	The system is normal. Explain to the customer that the speaker is muted by the audio unit sound setting.
		No	Go to the next step.
2	• Switch the ignition to off. • Inspect the connection of the audio unit connector (24-pin). (for sound signal line) • Is the connector connected securely?	Yes	Go to the next step.
		No	Connect the audio unit connector (24-pin) securely.
3	• Switch the ignition to off. • Remove the audio unit. • Disconnect the audio unit connector (24-pin). • Inspect the continuity between the audio unit wiring harness-side connector terminal and ground: **For front door speaker** — Terminal 1A (LH+)—GND — Terminal 1C (LH-)—GND — Terminal 1D (RH+)—GND — Terminal 1F (RH-)—GND **For rear door speaker** — Terminal 1S (LH+)—GND — Terminal 1U (LH-)—GND — Terminal 1V (RH+)—GND — Terminal 1X (RH-)—GND • Disconnect the front door speaker connector (4-pin) • Inspect the continuity between the front door speaker wiring harness-side connector terminal and ground: **For tweeter** — Terminal 1A (LH+)—GND — Terminal 1C (LH-)—GND — Terminal 1D (RH+)—GND — Terminal 1F (RH-)—GND • Is there continuity?	Yes	Repair or replace the suspect wiring harness or speaker unit.
		No	Go to the next step. **Note** • If there is a short circuit between the speaker harness or speaker lead wire and ground, the protector circuit inside the audio unit operates to cut the sound.
4	• Disconnect the speaker connector (4-pin), tweeter connector (2-pin) and inspect the resistance of speaker. • Inspect the continuity between the audio unit wiring harness-side connector terminal and speaker wiring harness-side connector: **Audio unit—front door speaker** — Terminal 1A (LH+)—terminal C — Terminal 1C (LH-)—terminal B — Terminal 1D (RH+)—terminal C — Terminal 1F (RH-)—terminal B **Audio unit—rear door speaker** — Terminal 1S (LH+)—terminal C — Terminal 1U (LH-)— terminal B — Terminal 1V (RH+)—terminal C — Terminal 1X (RH-)—terminal B **Audio unit—tweeter** — Terminal 1A (LH+)—terminal B — Terminal 1C (LH-)—terminal A — Terminal 1D (RH+)—terminal B — Terminal 1F (RH-)—terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspect wiring harness or speaker unit.
5	• Inspect the suspect speaker. • Is the speaker normal? **Note** • If the speaker lead wire contacts to either ground or vehicle frame, replace the speaker.	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Replace the speaker. (See 09-20-15 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09-20-19 REAR DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09-20-23 TWEETER REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

Possible DTC	**No sound from some speakers**
	—
Possible cause	• Speaker muted by audio unit sound adjustment • Poor connection of audio unit connector, terminal damage • Poor connection of audio amplifier connector • Open or short circuit in wiring harness between audio amplifier and audio unit • Open or short circuit in wiring harness between audio amplifier and speaker • Audio unit malfunction • Short circuit inside speaker • Speaker malfunction (e.g., foreign material, broken)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Verify the audio unit sound adjustment. • Does the fader/balance operate?	Yes	The system is normal. Explain to the customer that the speaker is muted by the audio unit sound setting.
		No	Go to the next step.
2	• Does the same speaker have no sound if changing the sound source? (Radio, CD)	Yes	Go to the next step.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) **Note** • If the different speaker has no sound now, the audio unit is malfunctioning.
3	• Switch the ignition to off. • Inspect the connection of the audio unit connector (24-pin). (for sound signal line) • Is the connector connected securely?	Yes	Go to the next step.
		No	Connect the audio unit connector (24-pin) securely.
4	• Switch the ignition to off. • Remove the audio unit. • Disconnect the audio unit connector (24-pin). • Inspect the continuity between the audio unit wiring harness-side connector and ground. — Terminal 1A (LH+)—GND — Terminal 1C (LH-)—GND — Terminal 1D (RH+)—GND — Terminal 1F (RH-)—GND — Terminal 1S (LH+)—GND — Terminal 1U (LH-)—GND — Terminal 1V (RH+)—GND — Terminal 1X (RH-)—GND • Is there continuity?	Yes	Repair or replace the related wiring harness **Note** • If there is a short to ground in wiring harness between the audio unit and audio amplifier, the protector circuit inside the audio unit operates to cut the sound.
		No	Go to the next step.
5	• Inspect the continuity between the following terminals of the audio amplifier wiring harness-side connector (16-pin) and the audio unit wiring harness-side connector (24-pin). — Terminal 1A (LH+)—Terminal 1F (L.H.D.)/ 1G (R.H.D.) — Terminal 1C (LH-)—Terminal 1E (L.H.D.)/ 1H (R.H.D.) — Terminal 1D (RH+)—Terminal 1G (L.H.D.)/1F (R.H.D.) — Terminal 1F (RH-)—Terminal 1H (L.H.D.)/ 1E (R.H.D.) — Terminal 1S (LH+)— Terminal 1J (L.H.D.)/ 1K (R.H.D.) — Terminal 1U (LH-)— Terminal 1I (L.H.D.)/ 1L(R.H.D.) — Terminal 1V (RH+)— Terminal 1K (L.H.D.)/1J (R.H.D.) — Terminal 1X (RH-)— Terminal 1L (L.H.D.)/ 1I (R.H.D.) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the related wiring harness between the audio amplifier and the audio unit. Then go to the next step. **Note** • If there is a open in wiring harness between the audio unit and audio amplifier, the protector circuit inside the audio unit operates to cut the sound.
6	• Inspect the connection of the audio amplifier connector. • Is the connector connected securely?	Yes	Go to the next step.
		No	Connect the audio amplifier securely.

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

STEP	INSPECTION		ACTION
7	• Switch the ignition to off. • Disconnect the audio amplifier connector. • Inspect continuity between the following terminals of the audio amplifier connector and speaker connector. **For front door speaker (LH)** — Terminal 3F (L.H.D.)/3C (R.H.D.)— Terminal C — Terminal 3E (L.H.D.)/3D (R.H.D.)— Terminal B **For front door speaker (RH)** — Terminal 3C (L.H.D.)/3F (R.H.D.)— Terminal C — Terminal 3D (L.H.D.)/3E (R.H.D.)— Terminal B **For tweeter (LH)** — Terminal 2G (L.H.D.)/2C (R.H.D.)— Terminal B — Terminal 2I (L.H.D.)/2E (R.H.D.)— Terminal A **For tweeter (RH)** — Terminal 2C (L.H.D.)/2G (R.H.D.)— Terminal B — Terminal 2E (L.H.D.)/2I (R.H.D.)— Terminal A **For rear door speaker (LH)** — Terminal 2O (L.H.D.)/2M (R.H.D.)— Terminal C — Terminal 2P (L.H.D.)/2K (R.H.D.)— Terminal B **For rear door speaker (RH)** — Terminal 2M (L.H.D.)/2O (R.H.D.)— Terminal C — Terminal 2K (L.H.D.)/2P (R.H.D.)— Terminal B **For front center speaker** — Terminal 3G—Terminal B — Terminal 3H—Terminal A **For D-pillar speaker** — Terminal 2A—Terminal B — Terminal 2B—Terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the repair related wiring harnesses.

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

STEP	INSPECTION		ACTION
8	• Switch the ignition to off. • Disconnect the audio amplifier connector. • Inspect the continuity between the audio amplifier connector and ground: **For front door speaker (LH)** — Terminal 3F (L.H.D.)/3C (R.H.D.)—GND — Terminal 3E (L.H.D.)/3D (R.H.D.)—GND **For front door speaker (RH)** — Terminal 3C (L.H.D.)/3F (R.H.D.)—GND — Terminal 3D (L.H.D.)/3E (R.H.D.)—GND **For tweeter (LH)** — Terminal 2G (L.H.D.)/2C (R.H.D.)—GND — Terminal 2I (L.H.D.)/2E (R.H.D.)—GND **For tweeter (RH)** — Terminal 2C (L.H.D.)/2G (R.H.D.)—GND — Terminal 2E (L.H.D.)/2I (R.H.D.)—GND **For rear door speaker (LH)** — Terminal 2O (L.H.D.)/2M (R.H.D.)—GND — Terminal 2P (L.H.D.)/2K (R.H.D.)—GND **For rear door speaker (RH)** — Terminal 2M (L.H.D.)/2O (R.H.D.)—GND — Terminal 2K (L.H.D.)/2P (R.H.D.)—GND **For front center speaker** — Terminal 3G—GND — Terminal 3H—GND **For D-pillar speaker** — Terminal 2A—GND — Terminal 2B—GND • Is there continuity?	Yes	Repair or replace the related wiring harness or speaker. (See 09-20-15 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09-20-23 TWEETER REMOVAL/INSTALLATION.) (See 09-20-19 REAR DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09-20-22 FRONT CENTER SPEAKER REMOVAL/INSTALLATION.) (See 09-20-25 D-PILLAR SPEAKER REMOVAL/INSTALLATION.) **Note** • If there is a short circuit between the speaker harness or speaker lead wire and ground, the protector circuit inside the audio unit operates to cut the sound.
		No	Go to the next step.
9	• Inspect the suspect speaker. • Is the speaker normal? **Note** • If the speaker lead wire contacts to either ground or vehicle frame, replace the speaker.	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Replace the speaker. (See 09-20-15 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09-20-23 TWEETER REMOVAL/INSTALLATION.) (See 09-20-19 REAR DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09-20-22 FRONT CENTER SPEAKER REMOVAL/INSTALLATION.) (See 09-20-25 D-PILLAR SPEAKER REMOVAL/INSTALLATION.)

SOUND BREAK-UP OR POOR SOUND QUALITY [ENTIRE AUDIO SYSTEM]

id0903e2100900

Possible DTC	**Sound break-up or poor sound quality**	
	Using the M-MDS	**U3000:09**
	Without using M-MDS (On-board diagnostic test mode)	**09:Er21**
Possible cause	• Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Tuning error with radio station • Poor connection of music device • Volume adjustment of music device is at minimum • Improper speaker installation • Vibration of door trim and/or package trim • Speaker malfunction (e.g., any foreign material, broken) • Audio unit malfunction • Audio unit malfunction (with Bose®)	

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Verify the malfunction symptom. • Is there sound distortion?	Yes	Go to the next step.
		No	Go to Step 6.
2	• Does the sound distortion occur only while in radio mode?	Yes	Go to the next step.
		No	Go to Step 5.
3	• Can the location where the sound distortion occurs be specified?	Yes	The system is normal. Explain to the customer that the noise is caused by radio wave disturbances or broadcast wave conditions from the outside.
		No	Go to the next step.
4	• Does the sound distortion occur after selecting a radio station?	Yes	The system is normal. Explain to the customer that the sound distortion is caused by a tuning error with the radio station.
		No	Go to the next step.
5	• Does the AUX mode operate?	Yes	Verify the connection condition and volume of the music device. If the connection condition is normal and sound is output, go to the next step.
		No	Go to the next step.
6	• Inspect the sound while adjusting the sound volume. • Is there broken sound or poor sound quality between “30” and “40”?	Yes	Go to the next step.
		No	The system is normal.
7	• Inspect the BASS/TREB. • Is there poor sound quality at “-3 — +3” of “BASS/TREB”? **Note** • The speaker from which the sound is not emitted is specified using by that the speaker voice changes.	Yes	Go to the next step.
		No	If there is broken sound at “-6 — +6” of BASS/TREB with the maximum volume, the system is normal.
8	• Identify the speaker with broken sound by adjusting BAL/FADE. • Is the speaker installed properly?	Yes	Go to the next step.
		No	Install the speaker properly.
9	• Remove the speaker. • Is there any foreign material or damage on the speaker?	Yes	Repair or replace the suspect speaker.
		No	Go to the next step.
10	• Inspect the sound again. • Is there broken sound?	Yes	Go to the next step.
		No	Inspect the vibration from the door trim and/or package trim. Repair or replace the suspect trim as necessary.

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

STEP	INSPECTION		ACTION
11	• Replace with the speaker known to be good. (e.g., swap right and left speakers) • Does the broken sound appear at the same location?	Yes	**Without Bose®** • Replace the audio unit. (See 09-20-12 AUDIO AMPLIFIER REMOVAL/ INSTALLATION.) **With Bose®** • If noise occurs from the speaker of a specific channel, or the volume is minimized and the noise occurs: — Replace the audio amplifier. (See 09-20-12 AUDIO AMPLIFIER REMOVAL/ INSTALLATION.) • If noise occurs from the speaker of two or more channels or the volume is minimized and the noise dose not occurs: — Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/ INSTALLATION.)
		No	**Without Bose®** • Replace the speaker. (See 09-20-15 FRONT DOOR SPEAKER REMOVAL/ INSTALLATION.) (See 09-20-23 TWEETER REMOVAL/INSTALLATION.) (Six-speaker type) (See 09-20-19 REAR DOOR SPEAKER REMOVAL/ INSTALLATION.) **With Bose®** • Replace the speaker. (See 09-20-15 FRONT DOOR SPEAKER REMOVAL/ INSTALLATION.) (See 09-20-23 TWEETER REMOVAL/INSTALLATION.) (See 09-20-19 REAR DOOR SPEAKER REMOVAL/ INSTALLATION.) (See 09-20-22 FRONT CENTER SPEAKER REMOVAL/ INSTALLATION.) (See 09-20-25 D-PILLAR SPEAKER REMOVAL/ INSTALLATION.)

VOLUME INCREASES/DECREASES WHILE DRIVING THE VEHICLE [ENTIRE AUDIO SYSTEM]

id0903e2101000

Possible DTC	Volume increases/decreases while driving the vehicle
	—
Possible cause	• Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Sound level difference between audio modes • Mis-operation of steering switches • Audio unit malfunction (without Bose®) • Audio amplifier malfunction (with Bose®) **Note** • Inspect the ALC function (without Bose®)/AudioPilot®2 function (with Bose®) while driving the vehicle with playing the CD, etc.

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Does the audio volume change only while in radio mode?	Yes	Go to the next step.
		No	Go to Step 3.
2	• Can the location where the audio volume change be specified?	Yes	The system is normal. Explain to the customer that the noise is caused by radio wave disturbances or broadcast wave conditions from the outside.
		No	Go to Step 5.
3	• Does the audio volume change when changing the mode?	Yes	The system is normal. Explain to the customer that the volume change is caused by sound level differences between audio modes.
		No	Go to the next step.
4	• Do the steering switches operate?	Yes	The system is normal. Explain to the customer that the volume change is caused by a mis-operation of the steering switches.
		No	Go to the next step.
5	• Does the ALC (Without Bose®)/AudioPilot®2 function (With Bose®) turn on?	Yes	Go to the next step.
		No	**Without Bose®:** • Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) **With Bose®:** • Replace the audio amplifier. (See 09-20-12 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)
6	• Turn off the ALC (Without Bose®)/AudioPilot®2 function (With Bose®). • Does the sound change while driving the vehicle?	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	The system is normal. Explains the ALC (Without Bose®)/AudioPilot®2 function (with Bose®) to the customer.

ALC FUNCTION IS INOPERATIVE [ENTIRE AUDIO SYSTEM]

id0903e2101100

Possible DTC	**ALC function is inoperative**	
	Using the M-MDS	**U0155:00, U0010:88**
	Without using M-MDS (On-board diagnostic test mode)	**16:Er12, 17:Er11**
Possible cause	• Open or short circuit in vehicle speed signal wiring harness (e. g., instrument cluster) • CAN signal wiring harness malfunction • Audio unit malfunction **Note** • Inspect the ALC function while driving the vehicle with playing the CD.	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the ALC function to ON. • Inspect the ALC function operation when driving the vehicle at ALC level 3. • Does the ALC system operate properly?	Yes	The system is normal. Explains the ALC function to the customer.
		No	Go to the next step.
2	• Retrieve the DTCs from all vehicle modules using the M-MDS. • Is there the following DTC displayed? — Vehicle speed signal wiring harness — CAN signal wiring harness	Yes	Go to the appropriate DTC inspection.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

AudioPilot®2 FUNCTION IS INOPERATIVE [ENTIRE AUDIO SYSTEM]

id0903e2101200

Possible DTC	**AudioPilot®2 function is inoperative**	
	Using the M-MDS	**U0155:00, U0010:88**
	Without using M-MDS (On-board diagnostic test mode)	**16:Er12**
Possible cause	• Audio amplifier malfunction • Open or short circuit in AudioPilot®2 signal wiring harness • Open or short circuit in AudioPilot®2 microphone signal wiring harness • Open or short circuit in vehicle speed signal wiring harness (e. g., instrument cluster) **Note** • Inspect the AudioPilot®2 function while driving the vehicle and playing a CD.	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the AudioPilot®2 function on. • Inspect the AudioPilot®2 function operation while driving the vehicle. • Does the AudioPilot®2 system operation properly?	Yes	The system is normal. Explain the AudioPilot®2 function to the customer.
		No	Go to the next step.
2	• Inspect the connection of the audio amplifier connector (AudioPilot®2 microphone signal). • Inspect both the audio amplifier wiring harness-side connector terminal 1O, 1P and 2H for a poor connection (such as damaged/ pulled-out pins, corrosion). • Are all the pins normal?	Yes	Repair or replace the pins and/or the connector.
		No	Go to the next step.
3	• Inspect the connection of the AudioPilot®2 microphone connector (2-pin). • Inspect the AudioPilot®2 microphone wiring harness-side connector terminal A and B (2-pin) for poor connection (such as damaged/ pulled-out pins, corrosion). • Are all pins normal?	Yes	Repair or replace the pins and/or the connector.
		No	Go to the next step.
4	• Inspect continuity between the following terminals of the audio amplifier connector and body ground. — Terminal 1O (AudioPilot®2 microphone+) — Terminal 1P (AudioPilot®2 microphone-) — Terminal 2H (vehicle speed signal) • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground.
		No	Go to the next step.
5	• Inspect continuity between the following terminals of the audio amplifier connector and AudioPilot®2 microphone/instrument cluster connector. — Terminal 1O—AudioPilot®2 microphone terminal B (+) — Terminal 1P—AudioPilot®2 microphone terminal A (-) — Terminal 2H—Instrument cluster terminal O (vehicle speed signal) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace for open circuit.
6	• Retrieve the DTCs from all vehicle modules using the M-MDS. • Is there the following DTC displayed? — Vehicle speed signal — CAN communication	Yes	Go to the appropriate DTC inspection.
		No	Replace the audio amplifier. (See 09-20-12 AUDIO AMPLIFIER REMOVAL/ INSTALLATION.)

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

NO AUDIO SYSTEM ILLUMINATION [ENTIRE AUDIO SYSTEM]

id0903e2101400

Possible DTC	**No audio system illumination**	
	Using the M-MDS	**U3003:16**
	Without using M-MDS (On-board diagnostic test mode)	**09:Er20**
Possible cause	• Illumination turned off by panel light control switch operation • Open or short circuit in TNS signal wiring harness • Poor connection of audio unit connector, terminal damage • Audio unit malfunction	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Has the panel light control switch been operated?	Yes	Go to the next step.
		No	The system is normal. Explain to the customer that the illumination is turned off by the panel light control switch operation.
2	• Disconnect the audio unit connector (24-pin) and inspect the continuity between the audio unit wiring harness-side connector terminal 1E (TNS) and the ground. • Is there continuity?	Yes	Repair or replace the short circuit in the suspect wiring harness. After repair the harness, replace with the appropriate standard fuse.
		No	Go to the next step.
3	• Inspect the connection of the audio unit connector (24-pin). • Inspect both the audio unit and wiring harness-side connector terminal 1E for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If poor connection of audio unit connector:** • Securely connect the audio unit connector. **If the audio unit side connector is wrong:** • Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector.
4	• Connect the audio unit connector (24-pin). • Switch the ignition to ACC. • Inspect the voltage at the audio unit connector terminal 1E (TNS). • Is the voltage B+ when the light switch is turned to the TNS position?	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Repair or replace the suspect wiring harness (TNS signal).

SOUND JUMPS [ENTIRE AUDIO SYSTEM]

id0903e2101500

Possible DTC	**Sound jumps**	
	Using the M-MDS	**B1188:64**
	Without using M-MDS (On-board diagnostic test mode)	**10:Er07**
Possible cause	• Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation) • Vibration while vehicle is driven • Speaker muted by Bluetooth system (hands-free telephone (HF/TEL) system) operation (with Bluetooth system) • Open or short circuit in wiring harness between audio amplifier and audio unit • Short circuit inside speaker • Speaker malfunction • Mis-operation of steering switches • Audio unit malfunction **Note** • The CD may be malfunctioning if the sound jumps on the certain CD only. Inspect the CD player/changer operation using the CD known to be good.	

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Does the sound jump only while in the radio mode?	Yes	Go to Step 2.
		No	Go to Step 5.
2	• Does noise occur?	Yes	Go to the next step.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
3	• Can the location where the sound jumps be specified?	Yes	The system is normal. Explain to the customer that the noise is caused by radio wave disturbances or broadcast wave conditions from the outside.
		No	Go to the next step.
4	• Can the broadcast where the sound jumps be specified?	Yes	Explain to the customer that the cause is poor broadcast reception conditions.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
5	• Does the sound jump only while in the CD mode?	Yes	Go to the next step.
		No	Go to Step 8.
6	• Can the disc in which the sound jump occurs be specified?	Yes	The system is normal. Explain to the customer that the cause is a disc that is damaged or dirty on the playback side, or warped.
		No	Go to the next step.
7	• Drive the vehicle and verify the malfunction symptom. • Does noise occur while driving on an unlevel road or under other driving conditions (sudden curve, quick operation)?	Yes	The system is normal. Explain to the customer that the cause is vibration while the vehicle is driven.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
8	• Does the sound jump using the specified speaker?	Yes	**Without Bose®** • Go to the next step. **With Bose®** • Go to Step 10
		No	**With Bluetooth system** • Go to Step 13. **Without Bluetooth system** • Go to Step 14.
9	• Disconnect the speaker connector and inspect the resistance of speaker. • Inspect the continuity between the audio unit wiring harness-side connector terminal and speaker wiring harness-side connector: **Audio unit—front door speaker** — Terminal 1A (LH+)—terminal B — Terminal 1C (LH-)—terminal A — Terminal 1D (RH+)—terminal B — Terminal 1F (RH-)—terminal A **Audio unit—rear door speaker** — Terminal 1S (LH+)—terminal B — Terminal 1U (LH-)—terminal A — Terminal 1V (RH+)—terminal B — Terminal 1X (RH-)—terminal A	Yes	Go to Step 12.
		No	Repair or replace the suspect wiring harness or speaker.

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

STEP	INSPECTION		ACTION
10	• Disconnect the audio amplifier connector. • Inspect continuity between the following terminals of the audio amplifier connector and speaker connector. **For front door speaker (LH)** — Terminal 3F (L.H.D.)/3C (R.H.D.)— Terminal C — Terminal 3E (L.H.D.)/3D (R.H.D.)— Terminal B **For front door speaker (RH)** — Terminal 3C (L.H.D.)/3F (R.H.D.)— Terminal C — Terminal 3D (L.H.D.)/3E (R.H.D.)— Terminal B **For tweeter (LH)** — Terminal 2G (L.H.D.)/2C (R.H.D.)— Terminal B — Terminal 2I (L.H.D.)/2E (R.H.D.)— Terminal A **For tweeter (RH)** — Terminal 2C (L.H.D.)/2G (R.H.D.)— Terminal B — Terminal 2E (L.H.D.)/2I (R.H.D.)— Terminal A **For rear door speaker (LH)** — Terminal 2O (L.H.D.)/2M (R.H.D.)— Terminal C — Terminal 2P (L.H.D.)/2K (R.H.D.)— Terminal B **For rear door speaker (RH)** — Terminal 2M (L.H.D.)/2O (R.H.D.)— Terminal C — Terminal 2K (L.H.D.)/2P (R.H.D.)— Terminal B **For front center speaker** — Terminal 3G—Terminal B — Terminal 3H—Terminal A **For D-pillar speaker** — Terminal 2A—Terminal B — Terminal 2B—Terminal A • Is there continuity?	Yes	Go to Step 11.
		No	Repair or replace the repair related wiring harnesses.

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

STEP	INSPECTION		ACTION
11	• Disconnect the audio amplifier connector. • Inspect the continuity between the audio amplifier connector and ground: **For front door speaker (LH)** — Terminal 3F (L.H.D.)/3C (R.H.D.)—GND — Terminal 3E (L.H.D.)/3D (R.H.D.)—GND **For front door speaker (RH)** — Terminal 3C (L.H.D.)/3F (R.H.D.)—GND — Terminal 3D (L.H.D.)/3E (R.H.D.)—GND **For tweeter (LH)** — Terminal 2G (L.H.D.)/2C (R.H.D.)—GND — Terminal 2I (L.H.D.)/2E (R.H.D.)—GND **For tweeter (RH)** — Terminal 2C (L.H.D.)/2G (R.H.D.)—GND — Terminal 2E (L.H.D.)/2I (R.H.D.)—GND **For rear door speaker (LH)** — Terminal 2O (L.H.D.)/2M (R.H.D.)—GND — Terminal 2P (L.H.D.)/2K (R.H.D.)—GND **For rear door speaker (RH)** — Terminal 2M (L.H.D.)/2O (R.H.D.)—GND — Terminal 2K (L.H.D.)/2P (R.H.D.)—GND **For front center speaker** — Terminal 3G—GND — Terminal 3H—GND **For D-pillar speaker** — Terminal 2A—GND — Terminal 2B—GND • Is there continuity?	Yes	Repair or replace the related wiring harness or speaker. (See 09-20-15 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09-20-23 TWEETER REMOVAL/INSTALLATION.) (See 09-20-19 REAR DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09-20-22 FRONT CENTER SPEAKER REMOVAL/INSTALLATION.) (See 09-20-25 D-PILLAR SPEAKER REMOVAL/INSTALLATION.) **Note** • If there is a short circuit between the speaker harness or speaker lead wire and ground, the protector circuit inside the audio unit operates to cut the sound.
		No	Go to the next step.
12	• Inspect the suspect speaker. • Is the speaker normal? **Note** • If the speaker lead wire contacts to either ground or vehicle frame, replace the speaker.	Yes	**With Bluetooth system** • Go to the next step. **Without Bluetooth system** • Go to Step 14.
		No	**Without Bose®** • Replace the speaker. (See 09-20-15 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09-20-19 REAR DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09-20-23 TWEETER REMOVAL/INSTALLATION.) (Six-speaker type) **With Bose®** • Replace the speaker. (See 09-20-15 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09-20-23 TWEETER REMOVAL/INSTALLATION.) (See 09-20-19 REAR DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09-20-22 FRONT CENTER SPEAKER REMOVAL/INSTALLATION.) (See 09-20-25 D-PILLAR SPEAKER REMOVAL/INSTALLATION.)
13	• Does the malfunction occur while the Bluetooth system is operating?	Yes	The system is normal. Explain to the customer that the speaker is muted while the Bluetooth system is operating.
		No	Go to the next step.
14	• Do the steering switches operate?	Yes	The system is normal. Explain to the customer that the cause is mis-operation of the steering switches.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

DISPLAY DOES NOT CHANGE TO THE REAR MOUNT CAMERA IMAGE. [ENTIRE AUDIO SYSTEM]

id0903e2113000

Possible DTC	Display does not change to the rear mount camera image
POSSIBLE CAUSE	• Rear mount camera malfunction • Poor connection of the rear mount camera connector, terminal damage • Poor connection of the audio unit connector, terminal damage • Open or short circuit in wiring harness between audio unit and rear mount camera • Open or short circuit in reverse signal wiring harness • Audio unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Is the lens of the rear mount camera dirty or view is obstructed?	Yes	Clean the lens of the rear mount camera or remove the obstruction.
		No	Go to the next step.
2	• Does the lens of the rear mount camera have a crack and damage?	Yes	Replace the rear mount camera. (See 09-20-68 REAR MOUNT CAMERA REMOVAL/ INSTALLATION.)
		No	Go to the next step.
3	• Switch the ignition switch off (LOCK). • Remove the rear mount camera. • Inspect the connection of the rear mount camera connector (4-pin). • Disconnect the rear mount camera connector (4-pin). • Inspect both the rear mount camera and wiring harness-side connector for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If poor connection of rear mount camera connector:** • Securely connect the rear mount camera connector. **If the rear mount camera connector is wrong:** • Replace the rear mount camera. (See 09-20-68 REAR MOUNT CAMERA REMOVAL/ INSTALLATION.) **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector.
4	• Switch the ignition switch off (LOCK). • Remove the audio unit. • Inspect the connection of the Audio unit connector (4-pin). • Disconnect the Audio unit connector (4-pin). • Inspect both the audio unit connector terminal for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	**European (L.H.D. U.K.) specs.** • Go to the next step. **Except european (L.H.D. U.K.) specs.** • Go to Step 6.
		No	**If poor connection of audio unit connector:** • Securely connect the audio unit connector. **If the audio unit connector is wrong:** • Replace the audio unit. **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector.
5	• Inspect the following wiring harnesses between the audio unit and rear mount camera and between a DC-DC converter and rear mount camera. — Terminal K (12-pin, POWER)—terminal A (8-pin, POWER) — Terminal 6C (4-pin, V-GND)—terminal E (8-pin, V-GND) — Terminal 6D (4-pin, COMPOSITE)—terminal C (8-pin, COMPOSITE) • Is there open or short circuit?	Yes	Go to Step 7.
		No	Inspect the suspect wiring harness. Repair or replace if necessary.
6	• Inspect the following wiring harnesses between the audio unit and rear mount camera. — Terminal 6A (4-pin, POWER)—terminal A (5-pin, POWER) — Terminal 6B (4-pin, GND)—terminal E (5-pin, GND) — Terminal 6C (4-pin, V-GND)—terminal D (5-pin, V-GND) — Terminal 6D (4-pin, COMPOSITE)—terminal C (5-pin, COMPOSITE) • Is there open or short circuit?	Yes	Go to the next step.
		No	Inspect the suspect wiring harness. Repair or replace if necessary.

SYMPTOM TROUBLESHOOTING [ENTIRE AUDIO SYSTEM]

STEP	INSPECTION		ACTION
7	• Switch the ignition switch off (LOCK). • Remove the audio unit. (See 09-20-11 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.) • Disconnect the audio unit connector (24-pin). • Turn the ignition switch to ON. • Shift the selector lever in R range. • Inspect the voltage between the audio unit terminals 1M (24-pin, REV) and 1W (24-pin, GND). • Is the voltage **B+**?	Yes	Replace the rear mount camera, then inspect generating of malfunction symptom. (See 09-20-68 REAR MOUNT CAMERA REMOVAL/INSTALLATION.) **Even if it exchanges rear mount camera, when a fault phenomenon occurs:** • Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) • Reinspect the malfunction symptom, then repeat from Step 1 if malfunction recurs.
		No	Inspect the suspect wiring harness (reverse signal). Repair or replace if necessary.

SYMPTOM TROUBLESHOOTING [RADIO]

FOREWORD [RADIO]

id0903e3802700

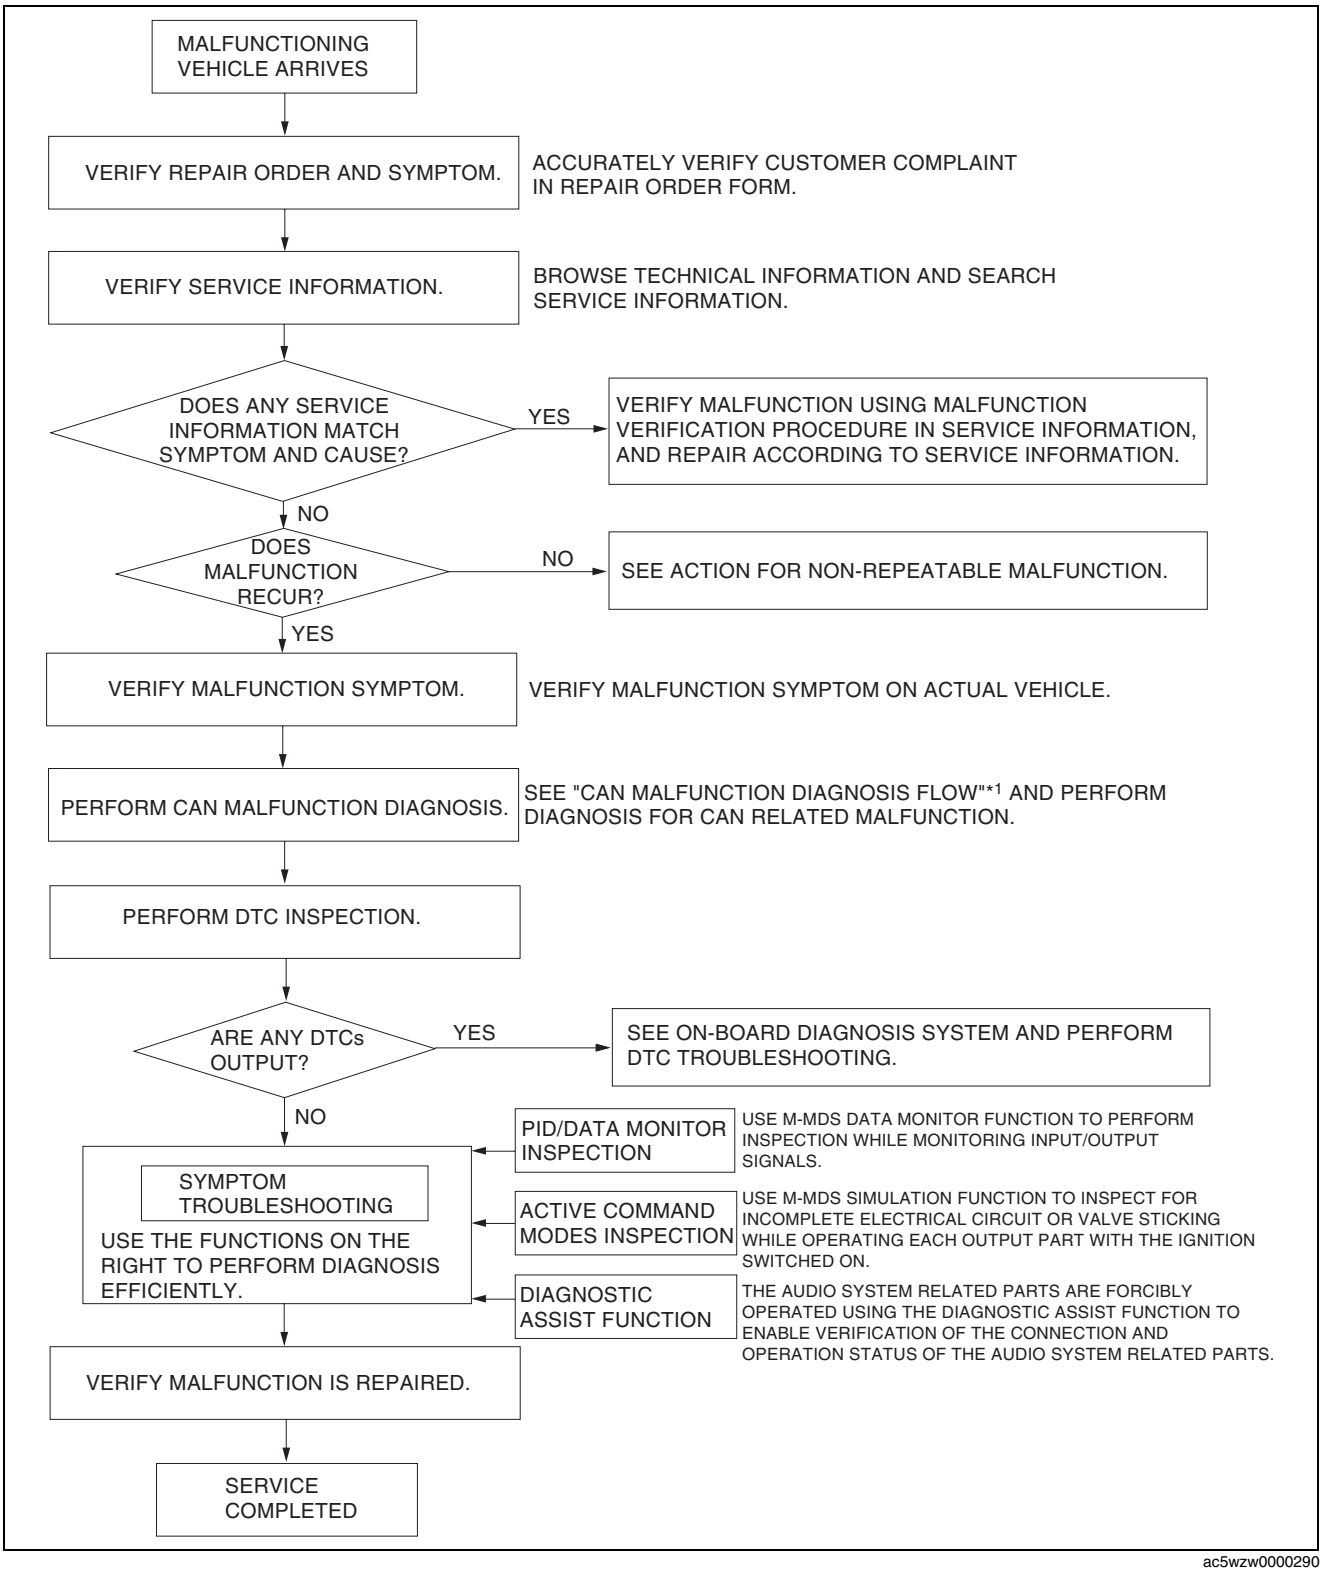
Note

- If the place, time, or radio station in which the malfunction occurred can be specified by asking the customer, it is highly possible that the malfunction cause is the radio wave reception environment. If the malfunction symptom is verified, verify under the same conditions (such as place, time, radio station) as the situation described by the customer. If the malfunction symptom cannot be verified under the same conditions as the situation described by the customer, verify the malfunction symptom at a substitute location (such as where radio wave reception is strong/weak).

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

SYMPTOM TROUBLESHOOTING [RADIO]

Troubleshooting Procedure



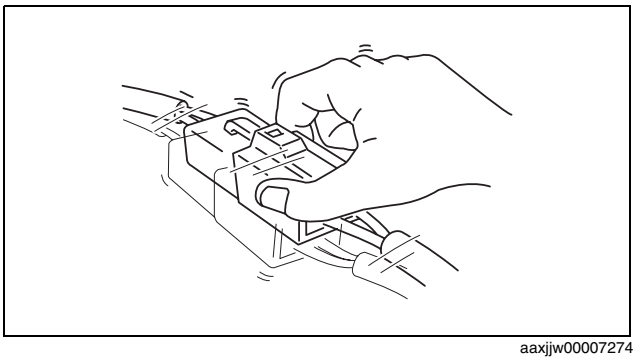
ac5wzw0000290

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)] / 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)] / 10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)] / 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

SYMPTOM TROUBLESHOOTING [RADIO]

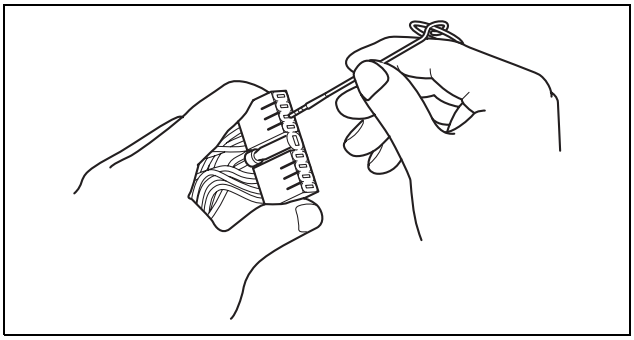
Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

TROUBLESHOOTING INDEX [RADIO]

SYMPTOM TROUBLESHOOTING [RADIO]

Quick Diagnostic Chart

X: Applicable

Possible factor / Troubleshooting item	No radio reception (AM/FM)/No or low volume	Noise from radio (AM only)	Noise from radio (FM only)	Cannot tune (SEEK does not stop)	Cannot preset (preset function does not operate)	Reception frequency of radio slips
Low vehicle battery voltage	X					
Electronic jamming from outside, or inferior condition of broadcasting station radio wave	X	X	X	X		X
Jamming from aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.)	X	X	X			
Antenna plug poor connection	X	X	X	X		
Antenna feeder malfunction	X	X	X	X		
Audio unit malfunction	X	X	X	X	X	X
Battery malfunction		X	X			
Noise from electrical system on vehicle (e.g. fuel pump)		X	X			
Charging system malfunction		X	X			
Antenna installation loosened		X	X			
Audio panel malfunction				X	X	

ac5wzw0000251

CONFIRMATION STEP 1: RECEPTION CONDITION SYMPTOM (EXAMPLE) [RADIO]

id0903e3804000

Symptom	Antenna signal condition	Source
Only a buzzing sound from the speakers	• There is no broadcasting wave. • Signals from antenna to audio unit/car-navigation unit are not transmitted.	• Electric noise caused by the operation of internal circuit from audio unit it self • Atmosphere noise
A buzzing or crunching sound and normal sound produced at the same time from the speakers	• Though signals are transmitted from antenna to audio unit, electric noise from other sources is larger.	• Electrical noise caused by operation of electrical component on vehicle • Electrical noise from high tension wire, transformer substation (factory), electrical feeder line (street car), or motorcycle.
A thumping sound and normal sound produced at the same time from the speakers (FM only)	• Noise occurs due to radio wave environment at specific places (e.g. in valleys between buildings). Noise varies when own vehicle or surrounding vehicles moves. (FM only)	• Interference between direct and reflected waves of FM signals causes noise (Multipass noise).

SYMPTOM TROUBLESHOOTING [RADIO]

CONFIRMATION STEP 2: ANTENNA SYSTEM SYMPTOM (EXAMPLE) [RADIO]

id0903e3804100

Possible cause	AM reception condition	FM reception condition
• Antenna feeder axis, open circuit • Antenna feeder plug not attached	NG: No reception	YES: Reception possible. (Sensitivity decreases, but reception is possible under strong electric field.)
• Antenna feeder axis (+) to ground (-), open circuit	NG: No reception	NG: No reception
• Antenna feeder and antenna, poor ground	YES: Reception possible (Noise may occur)	YES: Reception possible (Sensitivity decreases, but reception is possible under strong electric field.)
• Antenna feeder, jack and plug poor connection	NG: No reception (Depending on connection conditions)	YES: Reception possible (Depending on connection conditions)

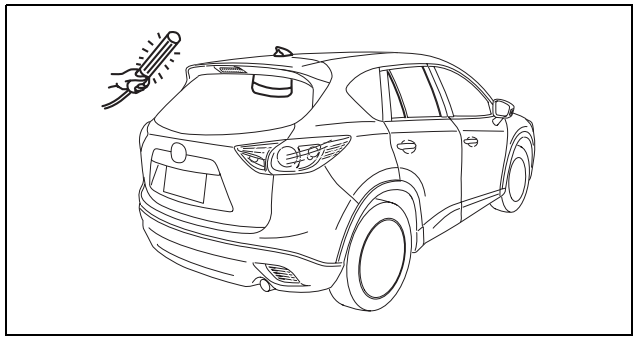
CONFIRMATION STEP 3: ANTENNA SYSTEM SIMPLE INSPECTION [RADIO]

id0903e3804200

- Because the antenna system is equipped with a capacitor, the continuity cannot be checked. Therefore proceed the following simple inspection.
  1. Turn the AM radio on.
  2. Tune to the frequency that there is no broadcast and you will hear a buzzing sound.
  3. Turn a work light on and shake it around the antenna rod (around 10—20 mm {0.40—0.78 in})

Note
- Use a fluorescent light type for the inspection. Accurate diagnostic cannot be done with a different type of light.

4. If a whirring sound from the speaker synchronized to the work light movement is confirmed, the antenna system is normal.



ac5wzw0000251

SYMPTOM TROUBLESHOOTING [RADIO]

NO RADIO RECEPTION (AM/FM)/NO OR LOW VOLUME [RADIO]

id0903e3015900

Possible DTC	**No radio reception (AM/FM)/no or low volume**	
	Using the M-MDS	**U3000:16, U3000:04**
	Without using M-MDS (On-board diagnostic test mode)	**09:Er20, 09:Er22**
Possible cause	• Low vehicle battery voltage • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Jamming from aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) • Antenna plug poor connection • Antenna feeder malfunction • Audio unit malfunction	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Can the location where the malfunction occur be specified?	Yes	The system is normal. Explain to the customer that the noise is caused by radio wave disturbances or broadcast wave conditions from the outside.
		No	Go to the next step.
2	• Measure voltage at B+ and ACC terminals. • Is voltage okay? **Specification** **With ignition switch ON: 11.5 V or more** **At idling: 12.5 V or more**	Yes	Go to the next step.
		No	Follow diagnostic procedure for symptom AUDIO POWER IS NOT AVAILABLE OR SWITCHED ON OR OFF AUTOMATICALLY [ENTIRE AUDIO SYSTEM].
3	• Set volume to 10 to 15. • Is buzzing sound or voice confirmed?	Yes	Go to the next step.
		No	Follow diagnostic procedure for symptom NO SOUND FROM ALL SPEAKERS [ENTIRE AUDIO SYSTEM] or NO SOUND FROM SOME SPEAKERS [ENTIRE AUDIO SYSTEM].
4	• Tune to local broadcasting station and check reception condition. • Is reception okay?	Yes	Go to the next step.
		No	Go to Step 6.
5	• Push PRESET switches and check preset conditions. • Has preset been stored?	Yes	The system is normal.
		No	Preset broadcasting stations.
6	• Is aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) installed? **Note** • TV antenna located closely to audio antenna can be cause of noise. Relocate TV antenna.	Yes	Go to the next step.
		No	Go to Step 8.
7	• Remove aftermarket electronic equipment. • Turn audio unit ON and check reception condition. • Is reception improved?	Yes	The system is normal. (Explain to customers that aftermarket electronic equipment is cause of noise)
		No	Go to the next step.
8	• Refer to confirmation step 3, and inspect antenna system. • Is a whirring sound present?	Yes	Replace audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	• Inspect antenna plug connection condition. • Is connection okay?	Yes	Go to the next step.
		No	Insert antenna plug securely.
10	• Switch the ignition off (LOCK). • Measure continuity between antenna feeder axis and ground. • Is there any continuity?	Yes	Replace antenna feeder.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [RADIO]

STEP	INSPECTION		ACTION
11	• Compare reception with other audio unit on same model (model/unit) under same problem conditions. • Is reception equivalent between customer's unit and compared unit? **Note** • Due to following differences, you may feel difference in reception efficiency. **(Vehicle side factor)** — Antenna installation location, height, feeder wiring routing, optional electrical equipment **(Audio unit factor)** — Volume concern type: It decreases change of volume when signals become weak. (Noise is easily noticed) — Noise decrease type: It decreases volume when signals become weak, so that noise is not noticeable.	Yes	The system is normal. (It is caused by electronic jamming from outside, or inferior broadcasting station signal condition.)
		No	Replace audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

NOISE FROM RADIO (AM ONLY) [RADIO]

id0903e3016000

Possible DTC	**Noise from radio (AM only)**	
	Using the M-MDS	**U3000:04**
	Without using M-MDS (On-board diagnostic test mode)	**09:Er22**
Possible cause	• Jamming from aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) • Battery malfunction • Noise from electrical system on vehicle (e.g. fuel pump) • Charging system malfunction • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Antenna plug poor connection • Antenna feeder malfunction • Antenna installation loosened • Audio unit malfunction	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Can the location where the noise occurs be specified?	Yes	The system is normal. (Explain to the customer that the noise is caused by radio wave disturbances or broadcast wave conditions from the outside.)
		No	Go to the next step.
2	• Tune to local broadcasting station and check reception condition. • Is reception okay?	Yes	Tune to correct frequency of broadcasting station. If not preset, preset it.
		No	Go to the next step.
3	• Is aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) installed? **Note** • TV antenna located closely to audio antenna can be cause of noise. Relocate TV antenna.	Yes	Go to the next step.
		No	Go to Step 5.
4	• Remove aftermarket electronic equipment. • Turn audio unit ON and check reception condition. • Is reception improved?	Yes	The system is normal. (Explain to customers that aftermarket electronic equipment is cause of noise)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [RADIO]

STEP	INSPECTION		ACTION
5	• Measure battery voltage. • Is battery voltage okay? **Specification:** **With ignition switch ON: 11.5 V or more** **At idling: 12.5 V or more** **Note** • Inspect that battery cables are connected to terminals securely.	Yes	Go to the next step.
		No	Charge battery. Inspect charging system, and repair or replace if necessary.
6	• Is noise occurring only when vehicle electrical system (e.g. fuel pump) operates? **Note** • Identify subject electrical component by disconnecting fuse, turning switch ON & OFF, or disconnecting & connecting connector. • It will be easy when simulation function on M-MDS is used.	Yes	Go to the next step.
		No	Go to Step 8.
7	• Inspect power supply, ground condition, and noise prevention capacitor for electrical component. • Is noise present after inspection? **Note** • Inspect following: — Power supply to electrical component for voltage drop (compare with battery voltage) — Resistance between ground of electrical component and body. (Should be close to 0 ohm) — Installation condition of noise prevention capacitor for fuel pump etc.	Yes	Go to the next step.
		No	Troubleshooting completed. **Note** • The audio unit supplies 12 V battery power to the antenna amplifier for the AM radio reception in the radio mode. The audio unit cannot receive the AM signals without the 12 V battery power to the antenna amplifier. If the AM signals become strong, the audio/unit car-navigation unit may receive the signal with noises.
8	• Inspect antenna plug connection condition. • Is connection okay?	Yes	Go to the next step.
		No	Insert antenna plug securely.
9	• Switch the ignition off (LOCK). • Measure continuity between antenna feeder axis and ground. • Is there any continuity?	Yes	Replace antenna feeder.
		No	Go to the next step.
10	• Compare reception with other audio unit on same model (model/unit) under same problem conditions. • Is reception equivalent between customer's unit and compared unit? **Note** • Due to following differences, you may feel difference in reception efficiency. **(Vehicle side factor)** — Antenna installation location, height, feeder wiring routing, optional electrical equipment **(Audio unit factor)** — Volume concern type: It decreases change of volume when signals become weak. (Noise is easily noticed) — Noise decrease type: It decreases volume when signals become weak, so that noise is not noticeable.	Yes	The system is normal (It is caused by electronic jamming from outside, or inferior broadcasting station signal condition).
		No	Replace audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [RADIO]

NOISE FROM RADIO (FM ONLY) [RADIO]

id0903e3016100

Possible DTC	**Noise from radio (FM only)**	
	Using the M-MDS	**U3000:04**
	Without using M-MDS (On-board diagnostic test mode)	**09:Er22**
Possible cause	• Jamming from aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) • Battery malfunction • Noise from electrical system on vehicle (e.g. fuel pump) • Charging system malfunction • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Antenna plug poor connection • Antenna feeder malfunction • Antenna installation loosened • Audio unit malfunction **Note** • FM broadcast has feature “sound quality is good” and “resistant to noise”, but FM broadcast has particular noises. Though audio unit is designed to reduce noise, there are times noise occurs due to conditions.	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Can the location where the noise occurs be specified?	Yes	The system is normal. (Explain to the customer that the noise is caused by radio wave disturbances or broadcast wave conditions from the outside.)
		No	Go to the next step.
2	• Tune to local broadcasting station and check reception condition. • Is reception okay?	Yes	Tune to correct frequency of broadcasting station. If not preset, preset it.
		No	Go to the next step.
3	• Is aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) installed?	Yes	Go to the next step.
		No	Go to Step 5.
4	• Remove aftermarket electronic equipment. • Turn audio unit ON and check reception condition. • Is reception improved?	Yes	The system is normal. (Explain to customers that aftermarket electronic equipment is cause of noise)
		No	Go to the next step.
5	• Measure battery voltage. • Is battery voltage okay? **Specification:** **With ignition switch ON: 11.5 V or more** **At idling: 12.5 V or more** **Note** • Inspect that battery cables are connected to terminals securely.	Yes	Go to the next step.
		No	Charge battery. Inspect charging system, and repair or replace if necessary.
6	• Is noise occurring only when vehicle electrical system (e.g. fuel pump) operates? **Note** • Identify subject electrical component by disconnecting fuse, turning switch ON & OFF, or disconnecting & connecting connector. • It will be easy when simulation function on M-MDS is used.	Yes	Go to the next step.
		No	Go to Step 8.

SYMPTOM TROUBLESHOOTING [RADIO]

STEP	INSPECTION		ACTION
7	• Inspect power supply, ground condition, and noise prevention capacitor for electrical component. • Is noise present after inspection? **Note** • Inspect following: — Power supply to electrical component for voltage drop (compare with battery voltage) — Resistance between ground of electrical component and body. (Should be close to 0 ohm) — Installation condition of noise prevention capacitor for fuel pump etc.	Yes	Go to the next step.
		No	Troubleshooting completed.
8	• Inspect antenna plug connection condition. • Is connection okay?	Yes	Go to the next step.
		No	Insert antenna plug securely.
9	• Switch the ignition off (LOCK). • Measure continuity between antenna feeder axis and ground. • Is there any continuity?	Yes	Replace antenna feeder.
		No	Go to the next step.
10	• Compare reception with other audio unit on same model (model/unit) under same problem conditions. • Is reception equivalent between customer's unit and compared unit?	Yes	The system is normal (It is caused by electronic jamming from outside, or inferior broadcasting station signal condition).
		No	Replace audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

CANNOT TUNE (SEEK DOES NOT STOP) [RADIO]

id0903e3016200

Possible DTC	**Cannot tune (seek does not stop)**	
	Using the M-MDS	**U3000:16, U3000:04**
	Without using M-MDS (On-board diagnostic test mode)	**09:Er20, 09:Er22**
Possible cause	• Audio panel malfunction • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Antenna plug poor connection • Antenna feeder malfunction • Audio unit malfunction	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Inspect if feel of SEEK switch is normal when switch is pushed and released. • Is it okay?	Yes	Go to the next step.
		No	Perform confirmation step 1: audio panel switch confirmation. Replace audio panel if necessary.
2	• Inspect indication of LCD. • Is frequency indication increased or decreased when SEEK switch is pushed?	Yes	Go to the next step.
		No	Perform confirmation step 1: audio panel switch confirmation. Replace audio panel if necessary.
3	• Manually tune to local broadcasting station and check reception condition. • Is reception okay?	Yes	Go to Step 6.
		No	Go to the next step.
4	• Inspect antenna plug connection condition. • Is connection okay?	Yes	Go to the next step.
		No	Insert antenna plug securely.
5	• Switch the ignition off (LOCK). • Measure continuity between antenna feeder axis and ground. • Is there any continuity?	Yes	Replace antenna feeder.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [RADIO]

STEP	INSPECTION		ACTION
6	• Check if number of broadcasting stations changes depending on time and place. • Does it change?	Yes	The system is normal. (Explain to customer that SEEK sometimes does not stop depending on signal reception condition.) **Note** • Signals tend to reach longer distances in the night. It is noticeable in AM signals, several audio functions may stop due to foreign broadcasting station or noise. Though the audio system restrains sensitivity of SEEK and SCAN functions in the night, the audio system may select other than desired broadcasting station when signals are considerably strong. This function is linked to the parking light. When the parking light or headlight is turned on, SEEK and SCAN may not function for weak signals.
		No	Replace audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

CANNOT PRESET (PRESET FUNCTION DOES NOT OPERATE) [RADIO]

id0903e3016300

Possible DTC	Cannot preset (preset function does not operate)
	—
Possible cause	• Audio unit malfunction • Audio panel malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Tune to desired station and push channel preset button 1 for about 2 seconds to store it. • Repeat above for other stations using PRESET switch 2 to 5. • Push channel preset switch 1 to 6 one by one. • Are stored stations present?	Yes	Go to the next step.
		No	Go to Step 3.
2	• Switch the ignition to off (LOCK) and then to ACC. • Check if preset stations are stored by pushing preset switches. • Are stations stored?	Yes	The system is normal. (Explain preset procedure to customer using Owner's Manual)
		No	Replace audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
3	• Press the POWER/VOLUME switch to turn the audio on. • Press the POWER/VOLUME switch and SEEK switch (up) simultaneously to launch the diagnostic assist function. • Input the diagnostic assist code "02" using the diagnostic input screen. • Select "ENTER". • Push all switches and check if buzzer sounds. • Is all switches okay?	Yes	The system is normal. (Explain preset procedure to customer using Owner's Manual)
		No	Replace audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [RADIO]

RECEPTION FREQUENCY OF RADIO SLIPS [RADIO]

id0903e3016400

Possible DTC	**Reception frequency of radio slip**	
	Using the M-MDS	**U3000:04**
	Without using M-MDS (On-board diagnostic test mode)	**09:Er22**
Possible cause	• Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Audio unit malfunction	

Diagnostic procedure

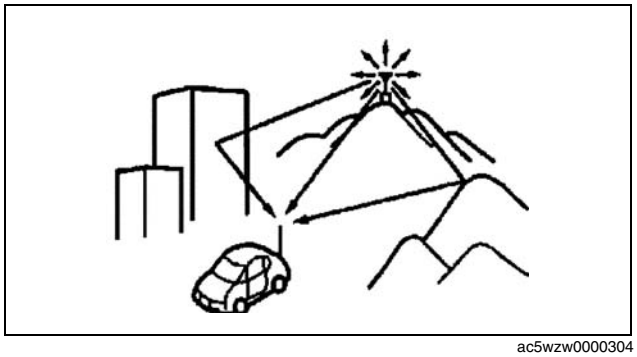
STEP	INSPECTION		ACTION
1	• Push SEEK switch and check if desired broadcasting station is tuned. • Is it okay?	Yes	Go to Step 3.
		No	Go to the next step.
2	• Check if other broadcasting station is received at certain place when indication of reception frequency stays. • Is other station received? **Note** • When you receive weak signal from one broadcasting station and come close to broadcasting antenna which emits strong signal, broadcasting with strong signal is sometimes received.	Yes	Go to the next step.
		No	Replace audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
3	• Compare reception with other audio unit on same model (model/unit) under same problem conditions. • Is reception equivalent between customer's unit and compared unit?	Yes	Troubleshooting completed.
		No	Replace audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

REFERENCE [RADIO]

id0903e3830000

1. Multipath Noise

- Signals from an FM transmitter are a high frequency and similar to beams of light because they do not bend around corners, but they do reflect. Since FM signals can be reflected by obstructions, it is possible to receive both the direct signal and the reflected signal at the same time. This causes a slight delay in reception and may be heard as a broken sound or a distortion.

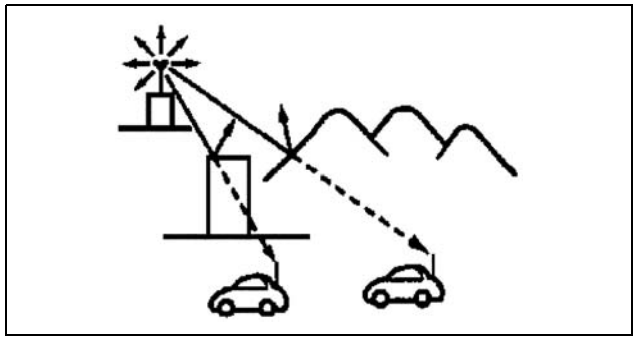


ac5wzw0000304

2. Flutter/Skip Noise

- Signals become weak in valleys between mountains, tall building, and other obstacles. When the vehicle passes through such an area, the reception conditions may change suddenly, resulting in annoying noise.

SYMPTOM TROUBLESHOOTING [RADIO]



ac5wzw0000304

3. Stereo and Monaural Receptions

- As signals become weak, noise may appear more in stereo reception. Comparing to stereo reception, noise in monaural receptions is relatively less striking.

Measures in Audio System

Separation control

- Utilizing the characteristic of monaural reception that noise is relatively less striking than stereo reception, the audio system automatically changes the reception from stereo to monaural and lessens annoying noise when signals become weak or a multipath phenomenon occurs.

High tone control

- When signals become weak or a multipath phenomenon occurs, the audio system restrains volume level in high frequency band and lessens annoying noise.

Effect Setting of Separation Control and High Tone Control

- The separation and high tone controls influence sound quality, Therefore they are specifically tuned for individual model. (Comparison of characteristic must be done on the same models)

High tone setting	⇨	Less effective range	⇨	Noise is conspicuous
Noise restraint setting	⇨	Wider effective range	⇨	Noise is less conspicuous

acxuuw00001936

Remarks

- Signals tend to reach longer distances at night. It is conspicuous in AM signals, several audio functions may stop due to foreign broadcasting station or noise. Though the audio system restrains sensitivity of SEEK and SCAN functions at night, the audio system may select other than desired broadcasting station when signals are considerably strong. This function is linked to the parking light. When the parking light or headlight is turned on, SEEK and SCAN may not function for weak signals.

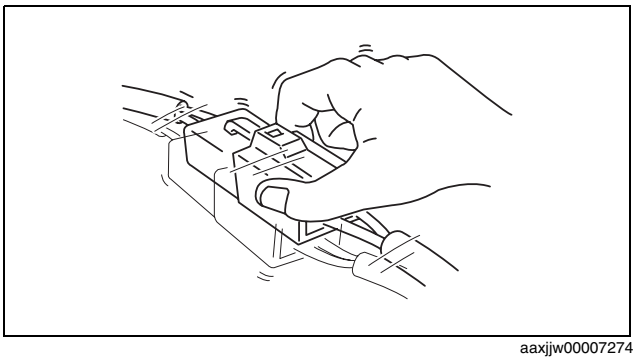
*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)] / 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)] / 10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)] / 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

SYMPTOM TROUBLESHOOTING [CAR-NAVIGATION SYSTEM]

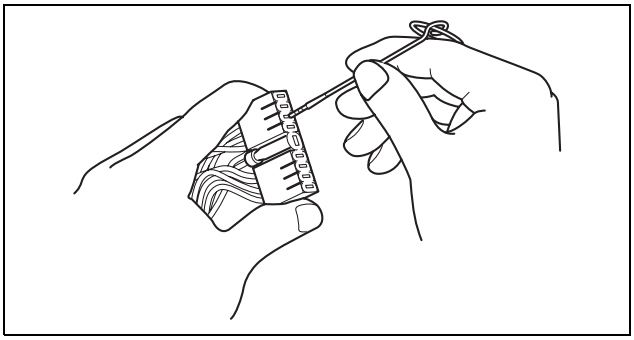
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as CAN circuit voltage) at that time, and detect the malfunction cause.
  - — Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

SYMPTOM TROUBLESHOOTING [CAR-NAVIGATION SYSTEM]

id0903e8378800

Symptom	Description
09-03H-5 CAR-NAVIGATION SYSTEM DOSE NOT START OPERATION [CAR-NAVIGATION SYSTEM]	• Even if the NAVI mode is selected, the car navigation system screen does not display
09-03H-6 CAR-NAVIGATION SYSTEM DOES NOT OPERATION [CAR-NAVIGATION SYSTEM]	• Even if the map screen is touched, the car navigation system cannot be operated
09-03H-6 VEHICLE POSITION DEVIATES FROM THE ROUTE MAP [CAR-NAVIGATION SYSTEM]	• The vehicle position on the map screen deviates from the actual vehicle position.
09-03H-8 NO VOICE NAVIGATION [CAR-NAVIGATION SYSTEM]	• Even if the route guidance mode is initiated, there is no voice guidance
09-03H-9 DISPLAY SCREEN DOES NOT CHANGE TO THE NIGHT MODE [CAR-NAVIGATION SYSTEM]	• Does not switch to the night screen even though the light switch is in the TNS position.

SYMPTOM TROUBLESHOOTING [CAR-NAVIGATION SYSTEM]

Quick Diagnostic Chart

X: Applicable

SYMPTOM TROUBLESHOOTING [CAR-NAVIGATION SYSTEM]

CAR-NAVIGATION SYSTEM DOSE NOT START OPERATION [CAR-NAVIGATION SYSTEM]

id0903e8100000

Possible DTC	Even if the NAVI mode is selected, the car-navigation system screen does not display.
POSSIBLE CAUSE	• NAVI switch malfunction • Power supply fuse (+B, ACC) burnt out • Open or short circuit in power supply (+B, ACC, GND) wiring harness • Open or short circuit in power supply (+B, ACC, GND) wiring harness • Open or short circuit in wiring harness between audio unit and car-navigation unit communication system • Car-navigation unit malfunction • Audio unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY MALFUNCTION SYMPTOM** • Switch the ignition ON (engine off or on). • Turn the audio unit power supply on and select the NAVI mode. • Does the car-navigation system launch and the map screen display?	Yes	Go to Step 6.
		No	Go to the next step.
2	**DETERMINE IF MALFUNCTION CAUSE IS SWITCH** • Operate switches other than the NAVI switch. • Do the modes other than the NAVI mode switch normally?	Yes	Go to the next step.
		No	Inspect the switch referring to the switch inspection procedure of the diagnostic assist function. (See 09-02E-39 DIAGNOSTIC ASSIST FUNCTION [AUDIO].)
3	**INSPECT CAR-NAVIGATION UNIT POWER SUPPLY** • Switch the ignition to ACC. • Measure the voltage at the following terminals: — Terminal 1H (+B) — Terminal 1G (ACC) • Is the voltage value the battery voltage?	Yes	Go to the next step.
		No	• Inspect the AUDIO1 15 A or AUDIO2 7.5 A fuse. **If the fuse is burned out:** • Inspect for a short to ground in the wiring harness between the AUDIO1 15A fuse and car- navigation unit terminal 1H, or the AUDIO2 7.5 A fuse and car-navigation unit terminal 1G, and perform repairs. **If the fuse is not damaged or burned out:** • Inspect for an open circuit in the wiring harness between the battery and car-navigation unit terminal 1H or 1G.
4	**INSPECT CAR-NAVIGATION UNIT GROUND** • Switch the ignition off (LOCK). • Disconnect the audio unit connector. • Verify the continuity between ground and the following terminal connectors 1A, 1B, 1C, and 1D on the wiring harness side. • Is there continuity?	Yes	Go to the next step.
		No	Inspect and repair the ground point for looseness, disengagement, or lifting. Inspect and repair the wiring harness for an open circuit.
5	**INSPECT CAR-NAVIGATION UNIT COMMUNICATION** • Switch the ignition off (LOCK). • Disconnect the audio unit connector. • Inspect for malfunction between the following wiring harnesses. — Audio unit terminal 5A and car-navigation unit terminal 2A — Audio unit terminal 5B and car-navigation unit terminal 2B — Audio unit terminal 5C and car-navigation unit terminal 2C — Audio unit terminal 5D and car-navigation unit terminal 2D • Is any malfunction verified?	Yes	Inspect and repair the wiring harness.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [CAR-NAVIGATION SYSTEM]

Step	Inspection		Action
6	**DETERMINE IF MALFUNCTION CAUSE IS car-navigation UNIT** • Switch the ignition ON (engine off or on). • Launch the audio unit diagnostic assist function. (See 09-02E-39 DIAGNOSTIC ASSIST FUNCTION [AUDIO].) • Select diagnostic assist code 16 external device connection information clearing. • Switch the ignition off (LOCK). • Switch the ignition ON (engine off or on). • Launch the audio unit diagnostic assist function. (See 09-02E-39 DIAGNOSTIC ASSIST FUNCTION [AUDIO].) • Select diagnostic assist code 15 vehicle NAVI signal verification. • Is NAVI (USB) NG displayed?	Yes	Replace the car-navigation unit. (See 09-20-11 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/ INSTALLATION.)

CAR-NAVIGATION SYSTEM DOES NOT OPERATION [CAR-NAVIGATION SYSTEM]

id0903e8100100

Possible DTC	Even if the map screen is touched, the car-navigation system cannot be operated
POSSIBLE CAUSE	• Audio unit malfunction (bad LCD panel) • Car-navigation unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**DETERMINE IF MALFUNCTION CAUSE IS AUDIO UNIT LCD PANEL** • Switch the ignition ON and launch the audio unit diagnostic assist function. (See 09-02E-39 DIAGNOSTIC ASSIST FUNCTION [AUDIO].) • Select diagnostic assist code 01 display inspection. • Is the display normal?	Yes	Go to the next step.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/ INSTALLATION.)
2	**DETERMINE IF MALFUNCTION CAUSE IS CAR-NAVIGATION UNIT** • Select diagnostic assist code 16 external device connection information clearing. • Switch the ignition off (LOCK). • Switch the ignition ON (engine off or on). • Launch the audio unit diagnostic assist function. (See 09-02E-39 DIAGNOSTIC ASSIST FUNCTION [AUDIO].) • Select diagnostic assist code 15 vehicle NAVI signal verification. • Is NAVI (USB) NG displayed?	Yes	Replace the car-navigation unit. (See 09-20-11 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/ INSTALLATION.)

VEHICLE POSITION DEVIATES FROM THE ROUTE MAP [CAR-NAVIGATION SYSTEM]

id0903e8100200

Possible DTC	The vehicle position on the map screen deviates from the actual vehicle position.
POSSIBLE CAUSE	• GPS antenna malfunction • Car-navigation unit malfunction • Audio unit malfunction • Poor GPS antenna connection • Poor reception due to object obstructing GPS antenna • Poor connection of vehicle wiring harness (vehicle signal) connector, bad pins. • Open or short circuit in vehicle wiring harness (vehicle signal)

SYMPTOM TROUBLESHOOTING [CAR-NAVIGATION SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY GPS ANTENNA RECEPTION CONDITION** • Stop the vehicle and leave it idling for 5 min in an area with clear visibility (no buildings or trees surrounding). • Does the GPS mark display at the top left area of the map screen?	Yes	Go to Step 3.
		No	Go to the next step.
2	**VERIFY IF GPS ANTENNA RECEPTION IS OBSTRUCTED** • Is there an object on the dashboard which is interfering with GPS reception (such as devices installed by customer after installation)?	Yes	After explaining to the customer that device installed by the customer on the dashboard after the installation is interfering with GPS reception, remove the device. After servicing, go to the next step.
		No	Go to the next step.
3	**VERIFY THE GPS ANTENNA RECEPTION SIGNAL** • Launch the audio unit diagnostic assist function. (See 09-02E-39 DIAGNOSTIC ASSIST FUNCTION [AUDIO].) • Select diagnostic assist code 15 vehicle NAVI signal verification. • Is NAVI GPS ANT NG displayed?	Yes	Go to the next step.
		No	Go to Step 5.
4	**VERIFY VEHICLE SPEED SIGNAL** • Verify SPEED on the vehicle NAVI signal verification screen. • Is the vehicle speed displayed when the vehicle is driven?	Yes	Replace the car-navigation unit. (See 09-20-11 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
		No	Go to Step 10.
5	**VERIFY GPS ANTENNA CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the GPS antenna connector. • Inspect the connector and terminals (connection condition, corrosion, damage, pin disconnection). • Are the connectors and terminals normal?	Yes	Go to the next step.
		No	Repair or replace the pins, connectors.
6	**VERIFY CAR-NAVIGATION UNIT CONNECTOR CONDITION** • Disconnect the car-navigation unit connector. • Inspect the connector and terminals (connection condition, corrosion, damage, pin disconnection). • Are the connectors and terminals normal?	Yes	Go to the next step.
		No	Repair or replace the pins, connectors.
7	**INSPECT FOR SHORT TO GROUND IN WIRING HARNESS BETWEEN GPS ANTENNA AND CAR-NAVIGATION UNIT** • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — GPS antenna terminal A • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 10.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [CAR-NAVIGATION SYSTEM]

Step	Inspection		Action
8	**INSPECT FOR OPEN CIRCUIT IN WIRING HARNESS BETWEEN GPS ANTENNA AND CAR-NAVIGATION UNIT** • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — GPS antenna terminal A and car-navigation unit terminal B (2-pin) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 10.
9	**INSPECT FOR SHORT TO POWER SUPPLY IN WIRING HARNESS BETWEEN GPS ANTENNA AND CAR-NAVIGATION UNIT** • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). — GPS antenna terminal A • Is the voltage 0 V?	Yes	Replace the GPS antenna. (See 09-20-54 GLOBAL POSITIONING SYSTEM (GPS) ANTENNA REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness, then go to the next step.
10	**INSPECT VEHICLE SPEED SIGNAL** • Jack up the vehicle and drive at low speed. • Measure the voltage at the following audio unit (24-pin) terminal. — Vehicle speed signal (terminal 1I) • Is the terminal voltage **approx. 2.5 V** (average)? **Note** • The vehicle speed signal repeatedly pulses between **approx. 0 V** and **approx. 5 V**.	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Replace the vehicle speed signal wiring harness.

NO VOICE NAVIGATION [CAR-NAVIGATION SYSTEM]

id0903e8100300

Possible DTC	Even if the route guidance mode is initiated, there is no voice guidance
POSSIBLE CAUSE	• Route guidance mode setting mistake • Poor volume adjustment of audio system • Car-navigation unit malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY MALFUNCTION SYMPTOM** • Switch the ignition ON (engine off or on). • Turn the audio unit power on and select NAVI mode. • Operate the route guidance mode. • Is voice output?	Yes	System is normal. (Explain to the customer that voice guidance only begins if the route guidance mode is activated.)
		No	Go to the next step.
2	**DETERMINE IF MALFUNCTION CAUSE IS POOR AUDIO VOLUME ADJUSTMENT** • Turn the audio unit power on and select radio mode. • Operate the POWER/VOLUME switch and change the audio unit volume. • Is audio output?	Yes	Go to the next step.
		No	Perform inspection referring to NO SOUND FROM ALL SPEAKERS [ENTIRE AUDIO SYSTEM] (See 09-03F-13 NO SOUND FROM ALL SPEAKERS [ENTIRE AUDIO SYSTEM].)

SYMPTOM TROUBLESHOOTING [CAR-NAVIGATION SYSTEM]

Step	Inspection		Action
3	**DETERMINE IF MALFUNCTION CAUSE IS CAR-NAVIGATION UNIT** • Switch the ignition ON and launch the audio unit diagnostic assist function. (See 09-02E-39 DIAGNOSTIC ASSIST FUNCTION [AUDIO].) • Select diagnostic assist code 16 external device connection information clearing. • Switch the ignition off (LOCK). • Switch the ignition ON (engine off or on). • Turn the audio unit power on and select NAVI mode. • Operate the route guidance mode. • Is audio output?	Yes	Troubleshooting completed.
		No	Replace the car-navigation unit. (See 09-20-11 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)

DISPLAY SCREEN DOES NOT CHANGE TO THE NIGHT MODE [CAR-NAVIGATION SYSTEM]

id0903e8100400

Possible DTC	Does not switch to the night screen even though the light switch is in the TNS position.
POSSIBLE CAUSE	• Car-navigation unit malfunction • TNS signal malfunction — Open, short circuit in car-navigation unit terminal 1E

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY TNS SIGNAL** • Launch the audio unit diagnostic assist function. (See 09-02E-39 DIAGNOSTIC ASSIST FUNCTION [AUDIO].) • Select diagnostic assist code 15 vehicle NAVI signal verification. • Does the TNS display OFF?	Yes	Go to the next step.
		No	Go to Step 3.
2	**INSPECT TNS SIGNAL** • Measure the terminal voltage at audio unit connector (24-pin) terminal 1E. • Is the voltage normal? **Specification** **TNS ON: Approx. 12. V** **TNS OFF: Approx. 0 V**	Yes	Go to the next step.
		No	Inspect the applicable (TNS signal system) vehicle panel and repair or replace.
3	**VERIFY IF SYSTEM SWITCHES TO NIGHT SCREEN** • Turn the light switch to the TNS position. • Does the audio unit screen switch to the night screen?	Yes	System is normal.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

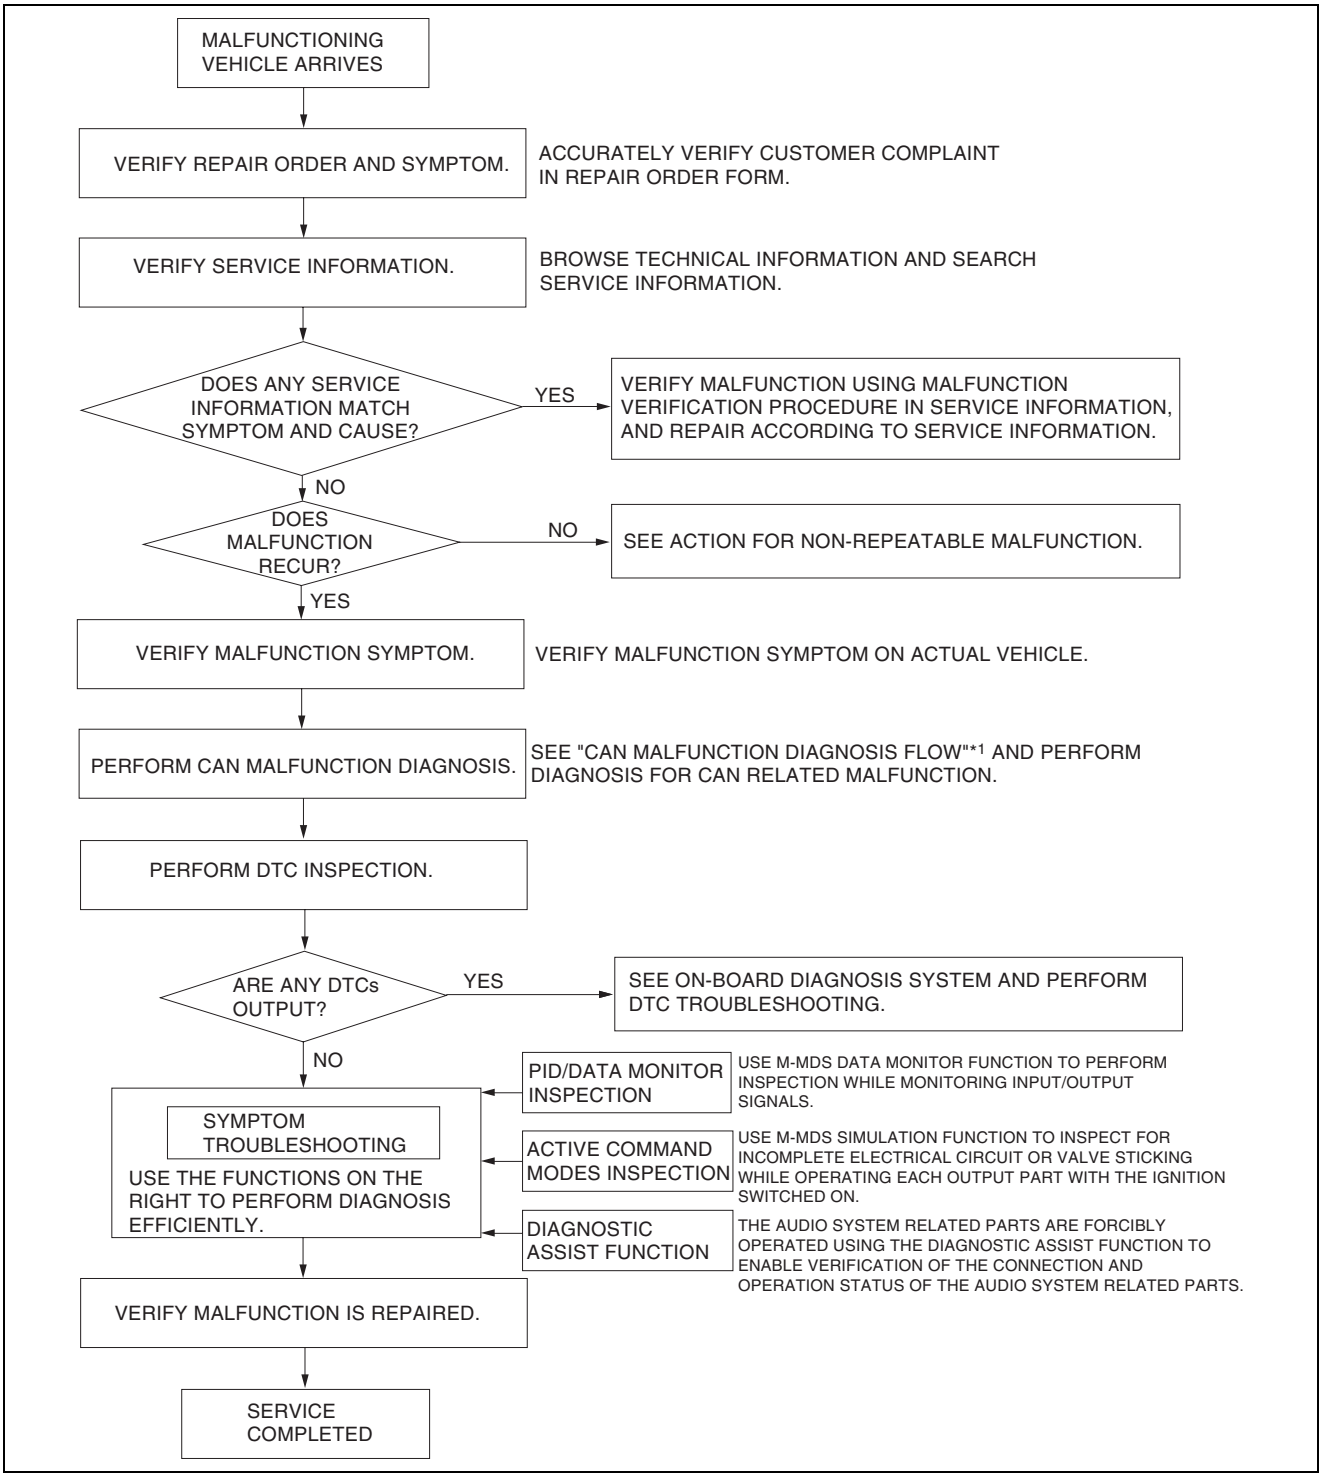
id0903h5844600

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



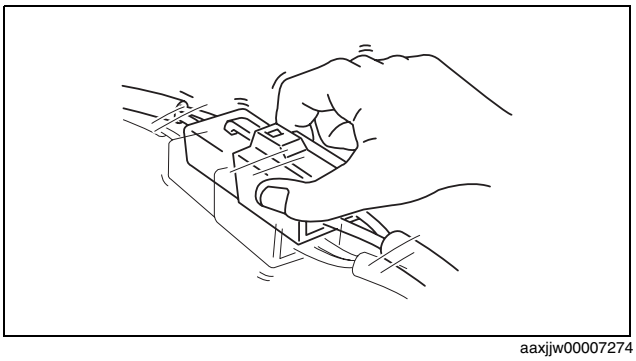
ac5wzw0000291

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)] / 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)] / 10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)] / 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

SYMPTOM TROUBLESHOOTING [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

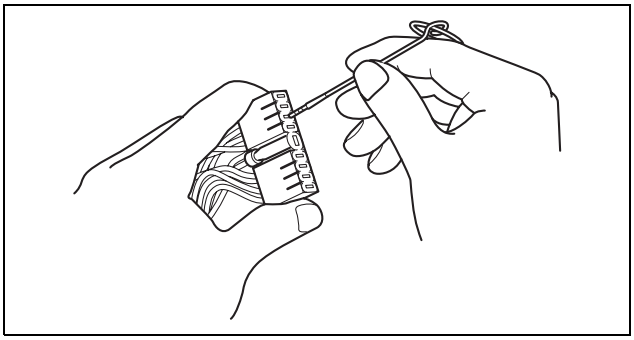
Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

SYMPTOM TROUBLESHOOTING [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

HANDS-FREE TELEPHONE SYSTEM DOES NOT RECEIVE/TRANSMIT CALLS, DOES NOT CONNECT [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

id0903h5017500

Possible DTC	**Hands-free telephone system does not receive/transmit calls, does not connect**	
	Using the M-MDS	**B116A:12, B116A:13, B116A:44**
	Without using M-MDS (On-board diagnostic test mode)	**26:Er81, 26:Er82, 26:Er86**
Possible cause	• Problem in cellular phone — A cellular phone other than a hands-free telephone system-enabled models is used — Cellular phone is outside of the signal transmission area — Cellular phone does not operate (low battery voltage, power off) — Cellular phone does not set up to Bluetooth system — Bluetooth does not operate • Malfunction in microphone related parts — Poor connection in the connector — Open or short circuit in the wiring harness between the microphone and Bluetooth unit — Microphone malfunction • Malfunction in steering switch related parts — Poor connection in the connector — Open or short circuit in the wiring harness between the Hang-up/Pick-up/Talk switch and Bluetooth unit — Hang-up/Pick-up/Talk switch malfunction • Malfunction in audio system — Poor connection in the connector — CAN communication error between the audio unit and Bluetooth unit — Open or short circuit in the wiring harness between the Bluetooth unit and the speaker through the audio unit (without Bose®) — Open or short circuit in the wiring harness between the Bluetooth unit and the speaker through the audio amplifier (with Bose®) • Bluetooth unit does not respond — Poor connection in the connector — Open or short circuit in the wiring harness between the Bluetooth unit and the audio unit (without Bose®) — Open or short circuit in the wiring harness between the Bluetooth unit and the audio amplifier (with Bose®) — Open or short circuit in the wiring harness of the Bluetooth unit power supply or ground circuit — Bluetooth unit malfunction • Bluetooth unit electric field disturbance due to metallic device around Bluetooth unit	

SYMPTOM TROUBLESHOOTING [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

Diagnostic procedure

- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, verify that the connectors, terminals and wiring harness are connected correctly and undamaged.

STEP	INSPECTION		ACTION
1	• Verify if the customer's cellular phone is a Hands-free telephone system-enabled model by referring to http://www.mazdausa.com/MusaWeb/displayPage.action?pageParameter=bluetoothHandsFreeSystem . • Is the customer's cellular phone a Hands-free telephone system-enabled model?	Yes	Go to the next step.
		No	Explain to the customer that the customer's cellular phone is not a Hands-free telephone system-enabled model.
2	• Verify that the cellular phone is communicating with the Bluetooth unit. • Does the cellular phone connect to the Bluetooth unit via Bluetooth when the Hands-free telephone system is activated?	Yes	Enter a cellular phone signal transmission area and reinspect the Bluetooth system operation.
		No	Go to the next step.
3	• Inspect the cellular phone condition while the hands free phone does not operate. • Can the following conditions be verified? — Low battery voltage — Power is off — Out of signal transmission area	Yes	Enter a cellular phone signal transmission area and reinspect the Bluetooth system operation.
		No	Go to the next step.
4	• Does the cellular phone set up to the Bluetooth unit?	Yes	Go to the next step.
		No	Set up the cellular phone to the Bluetooth unit.
5	• Is the audio system sound output normal?	Yes	Go to the next step.
		No	Perform the audio system troubleshooting procedure.
6	• Perform the Bluetooth system (hands-free telephone (HF/TEL) system) DTC inspection. • Are the following DTC displayed? — B116A:12/26:Er81 — B116A:13/26:Er82 — B116A:44/26:Er86	Yes	Go to the next step.
		No	Go to Step 8.
7*	• Inspect for open or short circuits in the following wiring harnesses and connectors, and inspect the connector connections. — Between microphone terminal A and audio unit terminal 2L — Between microphone terminal B and audio unit terminal 2N — Between microphone terminal C and audio unit terminal 2R — Between microphone terminal D and audio unit terminal 2P — Between microphone terminal E and audio unit terminal 2T • Are the harnesses and connector connections normal?	Yes	Replace the microphone. (See 09-20-65 MICROPHONE REMOVAL/INSTALLATION.)
		No	Repair or replace malfunctioning parts.
8	• Perform the Bluetooth system (hands-free telephone (HF/TEL) system) DTC inspection. • Is 26:Er81 displayed?	Yes	Inspect and repair the audio system CAN communication.
		No	Go to the next step.
9	• Inspect the Hang-up/Pick-up/Talk switch. (See 09-20-54 STEERING SWITCH REMOVAL/INSTALLATION.) • Is the Hang-up/Pick-up/Talk switch normal?	Yes	Go to the next step.
		No	Replace the steering switch. (See 09-20-54 STEERING SWITCH REMOVAL/INSTALLATION.)
10*	• Inspect for open or short circuits in the following wiring harnesses and connectors, and inspect the connector connections. — Between clock spring terminal B and audio unit terminal 1H — Between clock spring terminal E and audio unit terminal 1P • Are the harnesses and connector connections normal?	Yes	Go to the next step.
		No	Repair or replace malfunctioning parts.

SYMPTOM TROUBLESHOOTING [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

STEP	INSPECTION		ACTION
11	• Call the hands-free cell phone using another cellular phone. • Do the same symptoms appear?	Yes	Go to the next step.
		No	The cellular phone Bluetooth system is malfunctioning.
12	• Is there any metallic device around the Bluetooth unit?	Yes	Remove the metallic device around the Bluetooth unit, then go to the next step.
		No	Go to the next step.
13	• Verify the malfunction symptom. • Is the malfunction improved?	Yes	Troubleshooting completed.
		No	Go to the next step.
14	• Replace the Bluetooth unit and verify the malfunction symptom. (See 09-20-67 Bluetooth UNIT REMOVAL/INSTALLATION.) • Is the malfunction improved?	Yes	Troubleshooting completed.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

CALLER'S VOICE VOLUME TOO LOW, OR NOISE INTERRUPTS CALL [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

id0903h5017600

Possible DTC	**Caller's voice volume too low, or noise interrupts call**	
	Using the M-MDS	**—**
	Without using M-MDS (On-board diagnostic test mode)	**26:Er81**
Possible cause	• Problem in the cellular phone — A cellular phone other than a Hands-free telephone system-enabled models is used — Vehicle is in a place where signal transmission is weak — Bluetooth does not operate • Influence due to vehicle driving conditions — Noise while driving is loud (engine, tire noise, blower fan noise) — Windows and/or sunroof are open • Bluetooth unit does not receive the vehicle speed signal — CAN communication error • Malfunction in the microphone related parts — Poor connection in the connector — Open or short circuit in the wiring harness between the microphone and the Bluetooth unit — Microphone malfunction • Malfunction in the Hang-up/Pick-up/Talk switch — Poor connection in the connector — Open or short circuit in the wiring harness between the Hang-up/Pick-up/Talk switch and the Bluetooth unit — Hang-up/Pick-up/Talk switch malfunction • Malfunction in the audio system — Steering switch (+) and/or related circuit malfunction • Bluetooth unit malfunction	

Diagnostic procedure

- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, verify that the connectors, terminals and wiring harness are connected correctly and undamaged.

STEP	INSPECTION		ACTION
1	• Verify if the customer's cellular phone is a Hands-free telephone system-enabled model by referring to http://www.mazdausa.com/MusaWeb/displayPage.action?pageParameter=bluetoothHandsFreeSystem. • Is the customer's cellular phone a Hands-free telephone system-enabled model?	Yes	Go to the next step.
		No	Explain to the customer that the customer's cellular phone is not a Hands-free telephone system-enabled model.
2*	• Can the audio volume be controlled using steering switch?	Yes	Go to the next step.
		No	Inspect and repair the steering switch and related wiring harness.

SYMPTOM TROUBLESHOOTING [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

STEP	INSPECTION		ACTION
3	• Does the symptom appear under following conditions? — Windows and/or sunroof are open — Noise while driving is loud (engine, tire noise, blower fan noise)	Yes	The system is normal. (Influence due to vehicle driving conditions)
		No	Go to the next step.
4	• Perform the Bluetooth system (hands-free telephone (HF/TEL) system) DTC inspection. • Is 26:Er81 displayed?	Yes	Inspect and repair the audio system CAN communication.
		No	Go to the next step.
5*	• Inspect for open or short circuits in the following wiring harnesses and connectors, and inspect the connector connections. — Between microphone terminal A and audio unit terminal 2L — Between microphone terminal B and audio unit terminal 2N — Between microphone terminal C and audio unit terminal 2R — Between microphone terminal D and audio unit terminal 2P — Between microphone terminal E and audio unit terminal 2T • Are the harnesses and connector connections normal?	Yes	Go to the next step.
		No	Repair or replace malfunctioning parts.
6	• Inspect the following switches. (See 09-20-57 STEERING SWITCH INSPECTION.) — Hung-up switch — Pic-up switch — Talk switch • Are the switches normal?	Yes	Go to the next step.
		No	Replace the steering switch. (See 09-20-54 STEERING SWITCH REMOVAL/INSTALLATION.)
7*	• Inspect for open or short circuits in the following wiring harnesses and connectors, and inspect the connector connections. — Between clock spring terminal B and audio unit terminal 1H — Between clock spring terminal E and audio unit terminal 1P • Are the harnesses and connector connections normal?	Yes	Go to the next step.
		No	Repair or replace malfunctioning parts.
8	• Make a call with the cellular phone without using Bluetooth system. • Does the same symptom appear?	Yes	Cellular phone related problem.
		No	Go to the next step.
9	• Call the hands-free cell phone using another cellular phone. • Does the same symptom appear?	Yes	Go to the next step.
		No	The cellular phone Bluetooth system is malfunctioning.
10	• Replace the microphone. (See 09-20-65 MICROPHONE REMOVAL/INSTALLATION.) • Does the same symptom appear?	Yes	Replace the Bluetooth unit. (See 09-20-67 Bluetooth UNIT REMOVAL/INSTALLATION.)
		No	Troubleshooting is completed. (The microphone is malfunctioning.)

SYMPTOM TROUBLESHOOTING [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

ADDRESSEE'S VOICE VOLUME TOO LOW, OR NOISE INTERRUPTS CALL [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

id0903h5017700

Possible DTC	**Addressee's voice volume too low, or noise interrupts call**	
	Using the M-MDS	**—**
	Without using M-MDS (On-board diagnostic test mode)	**26:Er81**
Possible cause	• Problem in the cellular phone — A cellular phone other than a Hands-free telephone system-enabled models is used — Vehicle is in a place where signal transmission is weak — Bluetooth does not operate • The volume of the Hands-free telephone system is set at a low level or zero • Bluetooth unit does not receive the vehicle speed signal — CAN communication error • Malfunction in the audio system — Poor connection in the connector — Open or short circuit in the wiring harness between the Bluetooth unit and the speaker through the audio amplifier (with Bose® system) — Open or short circuit in the wiring harness between the Bluetooth unit and the speaker through the audio unit (without Bose®) — Steering switch (+) and/or related circuit malfunction • Bluetooth unit malfunction	

Diagnostic procedure

- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, verify that the connectors, terminals and wiring harness are connected correctly and undamaged.

STEP	INSPECTION		ACTION
1	• Verify if the customer's cellular phone is a Hands-free telephone system-enabled model by referring to http://www.mazdausa.com/MusaWeb/displayPage.action?pageParameter=bluetoothHandsFreeSystem . • Is the customer's cellular phone a Hands-free telephone system-enabled model?	Yes	Go to the next step.
		No	Explain to the customer that the customer's cellular phone is not a Hands-free telephone system-enabled model.
2	• Verify the volume setting of the Hands-free telephone system. • Is the volume set at a low level or zero?	Yes	• Verify if the malfunction symptom is eliminated after the volume is set to a higher level. • If the malfunction is not resolved, go to the next step. • If the malfunction is resolved, explain to the customer that the malfunction occurred due to an inappropriate volume setting.
		No	Go to the next step.
3	• Is the audio system sound output normal?	Yes	Go to the next step.
		No	Perform the audio system troubleshooting procedure.
4	• Can the audio volume be controlled using steering switch?	Yes	Go to the next step.
		No	Inspect and repair the steering switch and related wiring harness.
5	• Perform the Bluetooth system (hands-free telephone (HF/TEL) system) DTC inspection. • Is 26:Er81 displayed?	Yes	Inspect and repair the audio system CAN communication.
		No	Go to the next step.
6*	• Inspect for open or short circuits in the following wiring harnesses and connectors, and inspect the connector connections. — Between Bluetooth unit (28-pin) terminal J and audio unit (24-pin) terminal 2D — Between Bluetooth unit (28-pin) terminal I and audio unit (24-pin) terminal 2C — Between Bluetooth unit (28-pin) terminal N and audio unit (24-pin) terminal 2B — Between Bluetooth unit (28-pin) terminal M and audio unit (24-pin) terminal 2A • Are the harnesses and connector connections normal?	Yes	Go to the next step.
		No	Repair or replace malfunctioning parts.

SYMPTOM TROUBLESHOOTING [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

STEP	INSPECTION		ACTION
7	• Make a call with the cellular phone without using Bluetooth system. • Does the same symptom appear?	Yes	Cellular phone related problem.
		No	Go to the next step.
8	• Call the hands-free cell phone using another cellular phone. • Does the same symptom appear?	Yes	Replace the Bluetooth unit. (See 09-20-67 Bluetooth UNIT REMOVAL/INSTALLATION.)
		No	The cellular phone Bluetooth system is malfunctioning.

SYMPTOM TROUBLESHOOTING [CD PLAYER]

CD PLAYER DOES NOT LOAD THE CD OR EJECTS THE CD IMMEDIATELY [CD PLAYER]

id0903k3016500

Possible DTC	**CD player does not load the CD or ejects the CD immediately**	
	Using the M-MDS	**B1D19:79**
	Without using M-MDS (On-board diagnostic test mode)	**10:Er01**
Possible cause	• Insertion angle of disc incorrect • CD is inserted upside down • Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation) • Non-conventional discs (e.g., 8 cm (3 in) disc adapter, heart-shaped disc, octagonal disc) • Deformed disc is used (e.g., out of specification (thickness), bent disc) • Poor connection of audio unit connector or terminal (e.g., damaged, bent, pulled-out pin, corrosion) • Audio unit malfunction	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Verify the insertion angle of the disc. • Does a malfunction occur only when the insertion angle is tilted?	Yes	The system is normal. (Explain to the customer that the cause is the insertion angle.)
		No	Go to the next step.
2	• Can the disc in which a malfunction occurs be specified?	Yes	The system is normal. (Explain to the customer that the cause is a disc that is damaged or dirty on the playback side, or warped.)
		No	Go to the next step.
3	• Is CD inserted properly, label-side up?	Yes	Go to the next step.
		No	Explain to the customer that CD should be inserted into the slot, label-side up.
4	• Switch the ignition off (LOCK). • Inspect the connection of the audio unit connector (24-pin). • Inspect both audio unit connector and wiring harness-side connector for poor connection. (such as damaged/bent/pulled-out pins, corrosion) • All the pins and connector normal?	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	**If the audio unit connector/pin is wrong:** • Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector/pin is wrong:** • Repair or replace the pins and/or the connector.

CD PLAYER DOES NOT EJECT THE CD [CD PLAYER]

id0903k3016600

Possible DTC	**CD player does not eject the CD**	
	Using the M-MDS	**B1D19:79**
	Without using M-MDS (On-board diagnostic test mode)	**10:Er01**
Possible cause	• Defective CD. (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation) • Non-conventional discs (e.g., 8 cm (3 in) disc adapter, heart-shaped disc, octagonal disc) • Poor connection of audio unit connector or terminal (e.g., damaged, bent, pulled-out pin, corrosion) • Deformed disc is used (e.g., out of specification (thickness), bent disc). • Multiple CDs are inserted into the CD player at the same time • Audio unit malfunction **Note** • The CD may be malfunctioning if the CD player does not eject the certain CD only. Inspect the CD player operation using the CD known to be good.	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Can the disc in which the malfunction occurs be specified?	Yes	The system is normal. (Explain to the customer that the cause is a disc that is damaged or dirty on the playback side, or warped.)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [CD PLAYER]

STEP	INSPECTION		ACTION
2	• Switch the ignition off (LOCK). • Inspect the connection of the audio unit connector (24-pin). • Inspect both audio unit connector and wiring harness-side connector for poor connection. (such as damaged/bent/pulled-out pins, corrosion) • All the pins and connector normal?	Yes	Go to the next step.
		No	**If the audio unit connector/pin is wrong:** • Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector/pin is wrong:** • Repair or replace the pins and/or the connector.
3	• Insert the CD into the CD player. • Does the CD insert into the CD player smoothly?	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Install the audio panel and/or CD cover properly, then go to the next step.
4	• Is the CD ejected from the CD player?	Yes	Troubleshooting completed. Explain repairs to the customers.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

CD PLAYER DOES NOT PLAY THE CD/NO SOUND [CD PLAYER]

id0903k3016700

Possible DTC	**CD player does not play the CD/No sound**	
	Using the M-MDS	**B1188:64**
	Without using M-MDS (On-board diagnostic test mode)	**10:Er07**
Possible cause	• CD is inserted upside down • Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation) • Non-conventional discs (e.g., 8 cm (3 in) disc adapter, heart-shaped disc, octagonal disc) • Audio unit malfunction	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Can the disc in which the malfunction occurs be specified?	Yes	The system is normal. (Explain to the customer that the cause is a disc that is damaged or dirty on the playback side, or warped.)
		No	Go to the next step.
2	• Turn the radio ON and inspect that there is sound. • Is there sound? **Note** • Check for the volume dial position.	Yes	Go to the next step.
		No	Go to the symptom troubleshooting NO SOUND FROM ALL SPEAKERS [ENTIRE AUDIO SYSTEM].
3	• Was CD inserted properly, label-side up?	Yes	Go to the next step.
		No	Explain to the customer that CD should be inserted into the slot, label-side up.
4	• Visually inspect the CD. — Is there any dirt, scratch or deformation on the CD? — Is the CD a non-conventional disc? — Is there a CD in MP3/WMA recording?	Yes	Explain to the customer that the defective CD or non-conventional disc cannot be use.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [CD PLAYER]

SOUND JUMPS [CD PLAYER]

id0903k3016800

Possible DTC	**Sound jumps**	
	Using the M-MDS	**B1188:64**
	Without using M-MDS (On-board diagnostic test mode)	**10:Er07**
Possible cause	• Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation) • Improper audio unit installation (e.g., rattle, loose) • Inadequate tire pressure • Audio unit malfunction **Note** • The CD may be malfunctioning if the sound jumps on the certain CD only. Inspect the CD player/changer operation using the CD known to be good.	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Does the sound skip when pressing the SCAN button?	Yes	The system is normal. (Explain to the customer that the sound skips during SCAN.)
		No	Go to the next step.
2	• Can the disc in which the malfunction occurs be specified?	Yes	The system is normal. (Explain to the customer that the cause is a disc that is damaged or dirty on the playback side, or warped.)
		No	Go to the next step.
3	• Does the sound jump when the vehicle is stopped?	Yes	Go to Step 8.
		No	Go to the next step.
4	• Drive the vehicle. • Does the sound jump when driving over uneven surfaces?	Yes	Go to the next step.
		No	Go to Step 8.
5	• Is the audio unit installed securely?	Yes	Go to the next step.
		No	Install the audio unit securely.
6	• Inspect the tire pressure. • Is the tire pressure normal?	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	• Adjust the tire pressure within specification. • Does the sound jump when driving the vehicle?	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Audio system is normal. Explain repairs to the customers.
8	• Replace the CD known to be good. • Does the sound jump when driving the vehicle?	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Audio system is normal. Explain to the customer that the CD is malfunctioning.

CD PLAYER SCRATCHES ON THE CD [CD PLAYER]

id0903k3016900

Possible DTC	**CD player scratches on the CD**	
	Using the M-MDS	**B1188:64**
	Without using M-MDS (On-board diagnostic test mode)	**10:Er07**
Possible cause	• Deformed disc is used (e.g., out of specification (thickness), bent disc) • Multiple CDs are inserted into the CD player at the same time • Audio unit malfunction	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Were the multiple CDs inserted into the CD player at the same time?	Yes	Explain to the customer to insert a CD one by one.
		No	Go to the next step.
2	• Visually inspect the CD. • Is the CD a deformed disc (e.g., out of specification (thickness), bent disc)?	Yes	Audio system is normal. Explain to the customer that the CD is malfunctioning.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [CD PLAYER]

CD PLAYER DOES NOT PLAY THE MP3/WMA-FORMATTED FILE [CD PLAYER]

id0903k3017000

Possible DTC	**CD player does not play the MP3/WMA-formatted file**	
	Using the M-MDS	**B1188:64**
	Without using M-MDS (On-board diagnostic test mode)	**10:Er07**
Possible cause	• CD-R/RW written format is out of specification • MP3/WMA and other format data are in the CD-R/RW • File extension for MP3/WMA-formatted file is incorrect (Correct. ".mp3"/".wma", incorrect: e.g., RIFF) • Defective CD-R/RW (e.g. dirty CD, scratch) • Audio unit malfunction **Note** • The free-software for the MP3/WMA-formatted file in the field may cause the deterioration of sound quality, noise, or defective play, so that the CD player won't play the customer made MP3/WMA-formatted file. • The CD player may not play the CD-R/RW properly due to the disc condition. • If there are MP3/WMA-formatted file and other file in the same disc, the CD player may not play the disc. • If there are MP3/WMA-formatted file and audio data in the same disc, the CD player loads and plays the first session of the data only.	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Inspect the written format of the recorded data on the CD-R/RW. • Is the written format correct?	Yes	Go to the next step.
		No	Write the CD-R/RW with the correct specification.
2	• Inspect the recorded data in the CD-R/RW. • Is there MP3/WMA and other format data in the CD-R/RW.	Yes	Replace with the CD-R/RW known to be good (MP3/WMA-formatted file data only), then inspect the CD player operation. **If the CD player plays the MP3/WMA-formatted file:** • Audio system is normal. Explain to the customer that the CD player does not operate properly if the MP3/WMA and other format data are in the CD-R/RW. **If the CD player does not play the MP3/WMA-formatted file:** • Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	• Inspect the CD-R/RW written format. • Is the written format within the specification (".mp3" /".wma" is the correct file extension)?	Yes	Replace with the CD-R/RW using the ".mp3" /".wma" file extension, then inspect the CD player operation. **If the CD player plays the MP3/WMA-formatted file:** • Audio system is normal. Explain to the customer that the CD player does not operate properly if the correct file extension is not used. **If the CD player does not play the MP3/WMA-formatted file:** • Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	• Visually inspect the CD-R/RW. • Is there any dirt or scratch on the CD-R/RW?	Yes	Clean the disc or replace with the CD-R/RW known to be good.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [CD PLAYER]

MP3/WMA-FORMATTED FILE FOLDER SELECTION IS INOPERATIVE/TRACK SEARCH IS INOPERATIVE [CD PLAYER]

id0903k3017100

Possible DTC	**MP3/WMA-formatted file folder selection is inoperative/Track search is inoperative**	
	Using the M-MDS	**B1D19:71**
	Without using M-MDS (On-board diagnostic test mode)	**10:Er02**
Possible cause	• Defective CD-R/RW (e.g. dirty CD, scratch) • Conflict of ID tag version for CD-R/RW (MP3) • Improper folder and/or music title in CD-R/RW • The number of characters of folder/audio file name in CD-R/RW exceeds the maximum number of characters • Improper encode in CD-R/RW • Audio unit malfunction	

Note

- ID3 is a tagging format for MP3-formatted file. ID3 allows metadata (e.g., title, artist, track number, etc.) to be added to the MP3-formatted file.
- There are two versions in the ID tag.
  - — ID3v1: This is the most widespread standard tag formats and most software is compatible with this version. There is a limitation on the maximum number of characters for the text data.
  - — ID3v2: There are a variety of version in V2, but there is no interchangeability among the versions.

Limitation on the maximum number of characters for the text data (ID3v1)

Item	Maximum number of characters	Description
Title	30	Music title
Artist	30	Artist name
Album	30	Album title
Year	4	Album produced year/CD wholesale year
Genre	—	Music category selection
Comment	30	Free comment
Track	3	Track number

- In a WMA file, the track name, artist name and album name are recorded with data called “WMA-Tag”, and the information can be displayed.
- WMA files which do not comply with the specific standard may not be played correctly or its file and folder name may not be displayed correctly.
- The file extension may not be provided depending on the computer operating system, version, software, or setting. In this case, add the file extension “.wma” to the end of the file name, and then write the disc.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Visually inspect the CD-R/RW. • Is there any dirt or scratch on the CD-R/RW?	Yes	Clean the disc or replace with the CD-R/RW known to be good.
		No	Go to the next step. (MP3)/Go to the step 3.(WMA)
2	• Inspect the ID tag version. • Is ID tag correct?	Yes	Go to the next step.
		No	Write the CD-R/RW with the correct ID tag version.
3	• Inspect folder and audio file name. • Are all file name input correctly?	Yes	Go to the next step.
		No	Use the CD-R/RW that a folder and audio file name is input correctly.
4	• Inspect the encode for the folder and audio file name in the CD-R/RW. • Is the encode correct? **Note** • Unreadable characters may be displayed if incorrect encode is used.	Yes	Go to the next step.
		No	Use the correct encode.
5	• Inspect the number of characters for the folder and audio file name. • Is the number of characters within the maximum number of characters?	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Input the folder and audio file name within the maximum number of characters.

SYMPTOM TROUBLESHOOTING [CD PLAYER]

CD PLAYER DOES NOT INDICATE THE MP3/WMA TITLE TEXT [CD PLAYER]

id0903k3017200

Possible DTC	**CD player does not indicate the MP3/WMA title text**	
	Using the M-MDS	**B1D19:71, B1188:64**
	Without using M-MDS (On-board diagnostic test mode)	**10:Er02, 10:Er07**
Possible cause	• Defective CD-R/RW (e.g. dirty CD, scratch) • Conflict of ID tag version for CD-R/RW (MP3) • The number of characters of folder/audio file name in CD-R/RW exceeds the maximum number of characters • Improper encode in CD-R/RW • No title input in CD-R/RW • Input title text by 2-bytes characters • Audio unit malfunction	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Visually inspect the CD-R/RW. • Is there any dirt or scratch on the CD-R/RW?	Yes	Clean the disc or replace with the CD-R/RW known to be good.
		No	Go to the next step.
2	• Inspect the display the LCD. • Is the CD (other than MP3/WMA compatible) displayed on the LCD?	Yes	Go to the next step. (MP3)/Go to the step 4. (WMA)
		No	Replace the audio panel. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
3	• Inspect the ID tag version. • Is the ID tag correct?	Yes	Go to the next step.
		No	Write the CD-R/RW with the correct ID tag version.
4	• Is the title text input into the CD-R/RW?	Yes	Go to the next step.
		No	Input the title text. **Note** • Do not input the title text by two-bytes character.
5	• Inspect the encode for the folder and audio file name in the CD-R/RW. • Is the encode correct?	Yes	Go to the next step.
		No	Use the correct encode.
6	• Inspect the number of characters for the folder and audio file name. • Is the number of characters within the maximum number of characters?	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Input the folder and audio file name within the maximum number of characters.

CD PLAYER DOES NOT PLAY THE AUDIO DATA (CDDA) [CD PLAYER]

id0903k3017300

Possible DTC	**CD player does not play the audio data (CDDA)**	
	Using the M-MDS	**B1D19:71, B1188:64**
	Without using M-MDS (On-board diagnostic test mode)	**10:Er02, 10:Er07**
Possible cause	• CD-R/RW written format is out of specification • Defective CD-R/RW (e.g., dirty CD, scratch) • Data other than the audio data is in CD-R/RW • Audio unit malfunction **Note** • The CD player may not play the CD-R/RW properly due to the disc condition. • If there are MP3/WMA-formatted file and audio data in the same disc, the CD player loads and plays the first session of the data only.	

SYMPTOM TROUBLESHOOTING [CD PLAYER]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Replace with the audio-CD known to be good. • Does the CD player play the audio-CD properly?	Yes	Go to the next step.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
2	• Inspect the written format of the recorded data on the CD-R/RW. • Is the written format correct?	Yes	Go to the next step.
		No	Write the CD-R/RW with the correct specification.
3	• Inspect the recorded data in the CD-R/RW. • Is any data other than the audio data recorded in the CD-R/RW?	Yes	Replace with the CD-R/RW known to be good (record audio data only), then inspect the CD player operation. **If the CD-R/RW plays:** • Audio system is normal. Explain to the customer that the CD player does not operate properly if the audio data and other data are recorded in the CD-R/RW. **If the CD-R/RW does not play:** • Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	• Visually inspect the CD-R/RW. • Is there any dirt or scratch on the CD-R/RW?	Yes	Clean the disc or replace with the CD-R/RW known to be good.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

TRACK CHANGE IS INOPERATIVE [CD PLAYER]

id0903k3017400

Possible DTC	**Track change is inoperative**	
	Using the M-MDS	**B1D19:71**
	Without using M-MDS (On-board diagnostic test mode)	**10:Er02**
Possible cause	• Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation) • Non-conventional discs (e.g., 8 cm (3 in) disc adapter, heart-shaped disc, octagonal disc) • Audio panel switch malfunction • Audio unit malfunction	

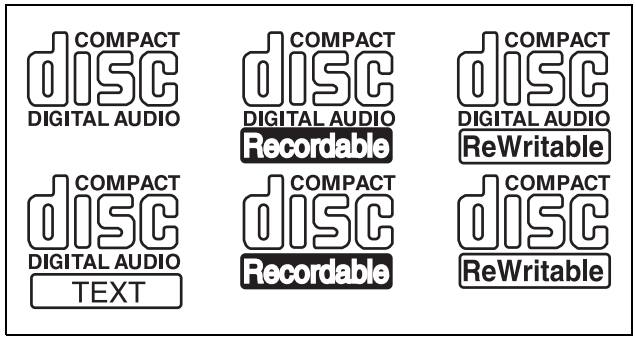
Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Replace the CD known to be good. • Does the CD player change the track?	Yes	Explain to the customer that the defective CD or non-conventional disc cannot be used.
		No	Go to the next step.
2	• Inspect the panel switch installation. • Does the CD player change the track number on the display when pressing the track up or down switch?	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the “No.1 Audio panel switch inspection” in this section. Replace the audio panel as necessary.

REFERENCE [CD PLAYER]

id0903k3830000

- The CD player/changer has been designed to play CDs bearing the identification logo, COMPACT DISC DIGITAL AUDIO, as shown. No other discs can be played on the CD player/changer other than MP3/WMA applicable one.
- The CD player/changer may not play the following CD:
  - — Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD condensation)
  - — CDs accessories (e.g., 8 cm (3 in) disc adapter (with CD player), sticker, label, disc ring and protective sealant)
  - — Nonstandard CD (e.g., Diameter/thickness is out of specification)
    Specification: 119.7—120.3 mm (4.668—4.692 in) of diameter, 1.2+0.3 or -0.1 mm (0.047+0.012 or 0.004 in) of thickness



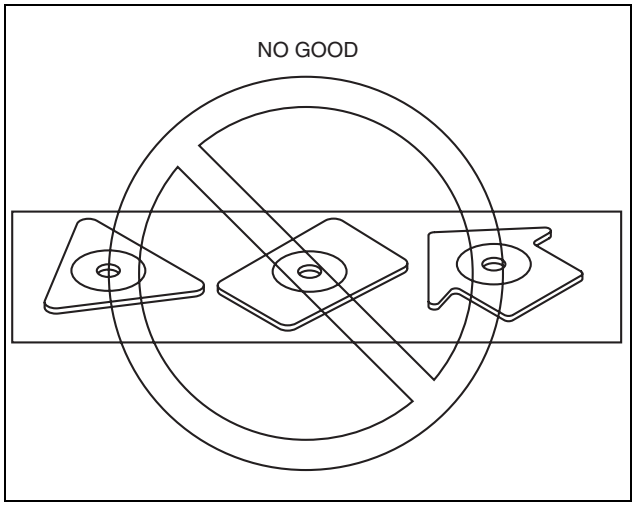
am6zzw0000663

SYMPTOM TROUBLESHOOTING [CD PLAYER]

- Do not use non-conventional discs. The CD player/changer could be damaged.

Examples:

- Although the same physical size as the compact disc, SACD uses a different kind of digital audio signal, Direct Stream Digital.
- The CD player/changer may not play the CD-R/RW properly due to the disc condition (excluding the MP3/WMA).



am6zzw0000664

MP3/WMA-Formatted File
Outline of CD-R and CD-RW

- Definition
  - — CD-R: The CD-R is a non-rewritable version. Once a section of a CD-R is written, it cannot be erased or rewritten.
  - — CD-RW: The CD-RW is a re-writable version of CD-ROM and can be written the data an unlimited number of times.
  - — Since a reflected laser beam amount of the CD-R/RW is less than the reflected laser beam amount of the conventional CD media, the CD player/changer may not play the CD-R/RW or have the sound jumped.
  - — Since the recording quality of the CD-R/RW vary widely, some CD-R/RW may not be played.

Recording method

- There are two methods for recording.
- Classification by recorder
  - — Record the audio data in the audio-CD by audio recorder
    - The price of the audio recorder and original audio-CD includes the copyright fee.
  - — Recorded the audio data in the conventional data-CD by the personal computer
    - The data-CD is cheaper than the audio-CD. But, there is a CD with the low quality.
- Classification by audio data uncompression/compression
  - — Uncompressed audio data
    - The CD-R/RW player can play the uncompressed audio data.
  - — Compressed audio data
    - It is possible to record the large quantity of music in a disc. The sound quality varies depends on the audio data compression format. The compressed audio data can be played on the applicable player only.
  - — Type of compression format:
    - MP3: MPEG Audio Layer 3 — Mazda genie MP3 applicable CD player is available.
    - WMA: Windows Media Audio — Mazda genie WMA applicable CD player is available.
    - ATRAG: Adaptive TRansform Acoustic Coding

MP3

- The following condition should be met in order to record the MP3-formatted data on the MP3 applicable CD player:

Media	Applicable to the CD-R/RW
Logical format	ISO 9660 level 1&2 / Joliet / Romeo
Number of directly	8 directly
Number of files	Maximum 255 as a total number of file and folder Maximum 155 for folder
ID3 TAG	Applicable to Ver1.1, 2.3 and 2.4
File extension	MP3
Packet writing	Not applicable
Bit rate	8 kbps—320 kbps/VBR
Sampling rate	11.025 kHz—48 kHz

SYMPTOM TROUBLESHOOTING [CD PLAYER]

WMA (Windows media audio)

- CD-R and CD-RW including WMA files can be played with this unit. Discs which conform to the following formats can be played.
  Playable WMA files are as follows:

Item		Content
Specification		Windows Media Audio Version 7.0, 8.0, 9.0
Sampling frequency	Bit rate	32kHz — 32, 40, 48 kbps
		44.1kHz — 32, 48, 64, 80, 96, 128, 160, 192, 256, 320 kbps
		48kHz — 64, 96, 128, 160, 192 kbps
VBR (Variable Bit Rate)		Supported
Channel mode		Stereo/Monaural
WMA tag		Title, artist name, album name

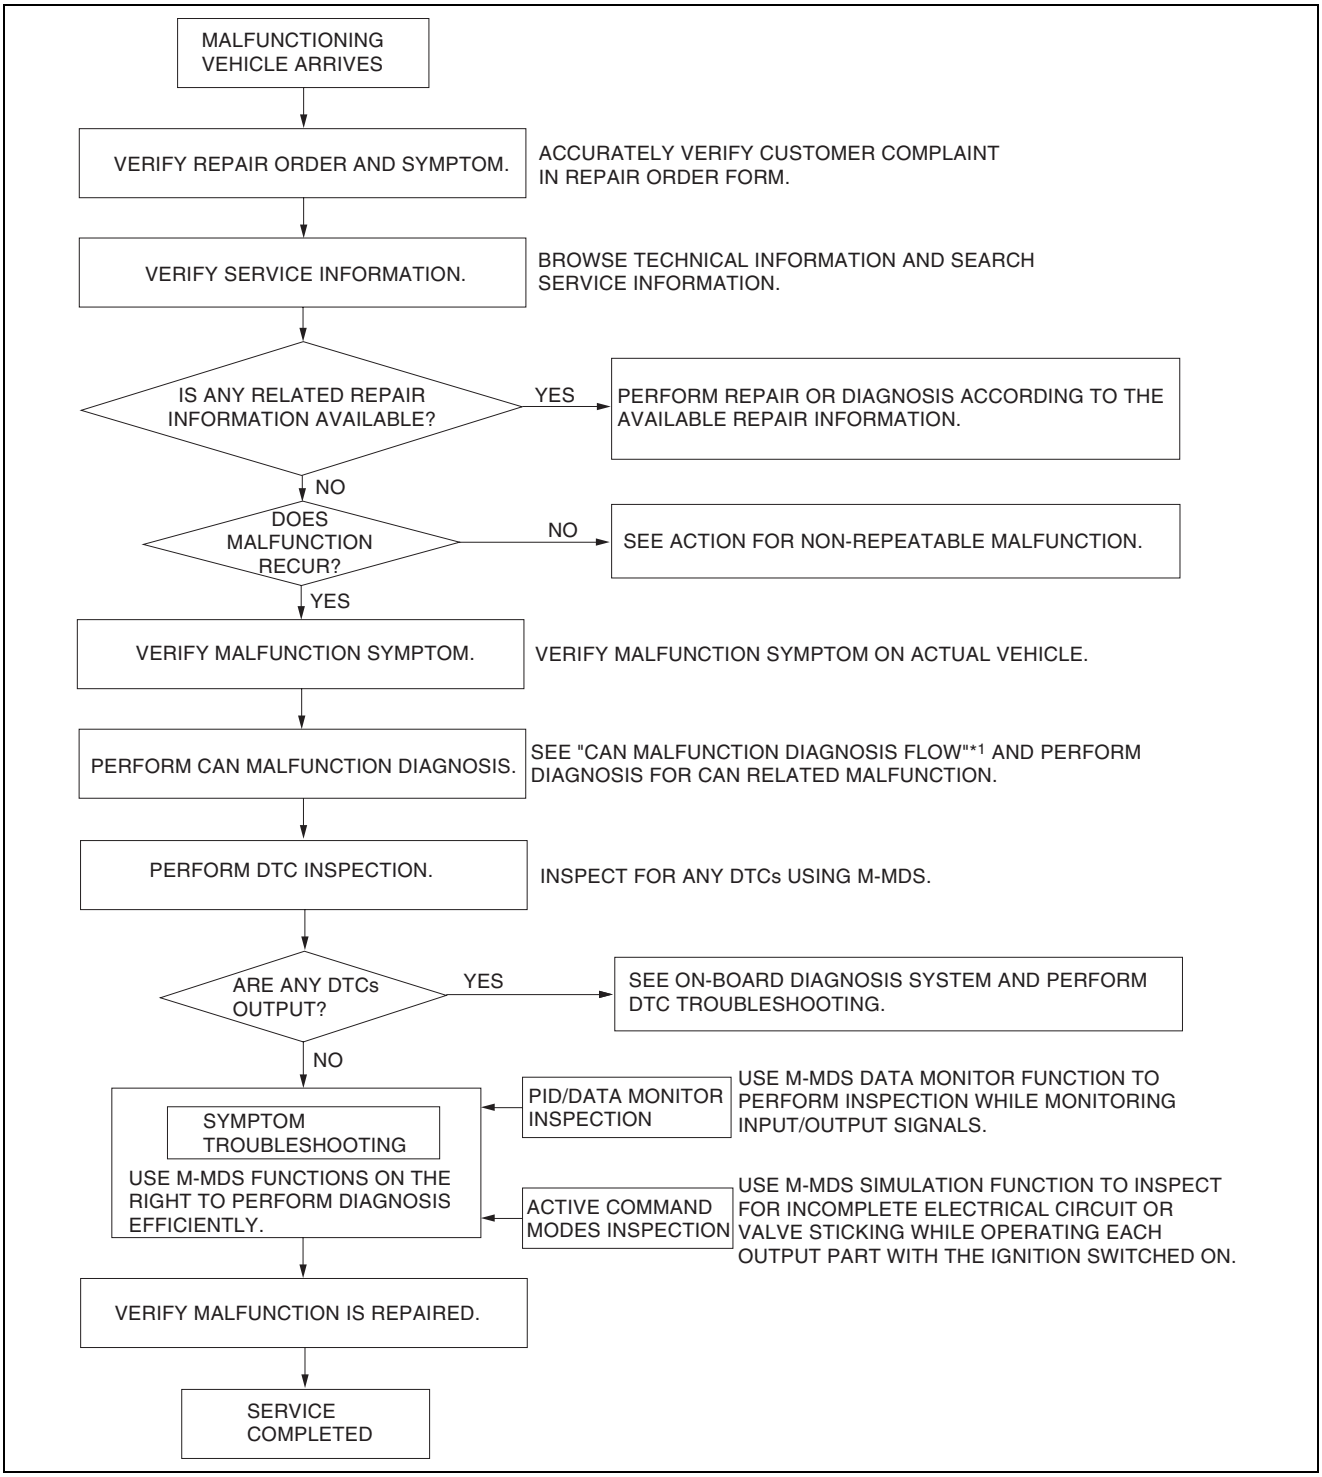
SYMPTOM TROUBLESHOOTING [INSTRUMENT CLUSTER]

FOREWORD [INSTRUMENT CLUSTER]

id0903d5715000

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



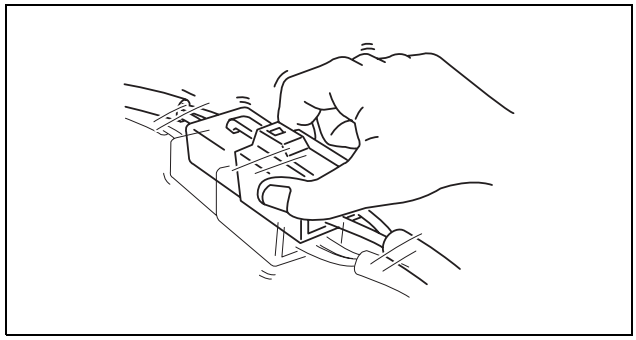
ac5wzw0000290

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)]/10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)]/10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)]/10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

SYMPTOM TROUBLESHOOTING [INSTRUMENT CLUSTER]

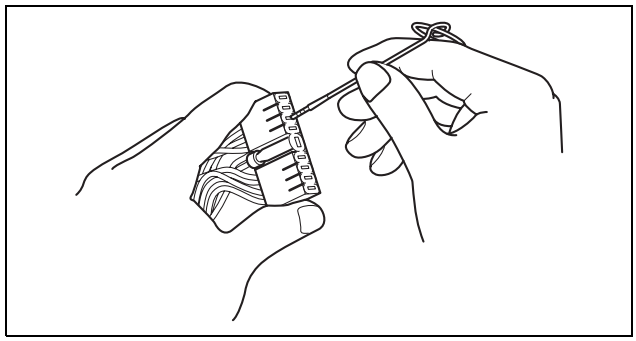
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Verify that a DTC has been recorded in the memory. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].)
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

SYMPTOM TROUBLESHOOTING [INSTRUMENT CLUSTER]

09-03K-3 FUEL GAUGE READING IS NOT CORRECT [INSTRUMENT CLUSTER]
09-03K-4 LOW ENGINE COOLANT TEMPERATURE INDICATOR LIGHT/HIGH ENGINE COOLANT TEMPERATURE WARNING LIGHT ILLUMINATES OR FLASHES CONTINUOUSLY [INSTRUMENT CLUSTER]

FUEL GAUGE READING IS NOT CORRECT [INSTRUMENT CLUSTER]

id0903d5012800

Possible cause

2WD

- Instrument cluster malfunction
- Rear body control module (RBCM) malfunction
- Fuel gauge sender unit malfunction
- Open or short circuit in wiring harness between fuel gauge sensor unit and rear body control module (RBCM)

4WD

- Instrument cluster malfunction
- Rear body control module (RBCM) malfunction
- Fuel gauge sender unit (main/sub) malfunction
- Open or short circuit in wiring harness between fuel gauge sender unit (main/sub) and rear body control module (RBCM)

SYMPTOM TROUBLESHOOTING [INSTRUMENT CLUSTER]

Diagnostic Procedure

Step	Inspection	Action	
1	**PERFORM CAN MALFUNCTION DIAGNOSIS AND DTC INSPECTION** • Perform the CAN malfunction diagnosis according to the recommendation of 09-03K-2 FOREWORD [INSTRUMENT CLUSTER] malfunction diagnosis, and if there is no CAN malfunction, perform inspection for DTCs. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Go to the applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**Inspection of instrument cluster** • Perform inspection of the fuel gauge/LCD display referring to the instrument cluster inspection. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is the display normal?	Yes	Go to the next step.
		No	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
3	**DETERMINE IF MALFUNCTION CAUSE IS FUEL GAUGE SENDER** • Display the following rear body control module (RBCM) PIDs using the M-MDS. — FUEL_SEN_M — FUEL_SEN_S (4WD) • Verify the voltage in the display monitor while shaking the vehicle. • Does the voltage change?	Yes	Go to the next step.
		No	Go to Step 5.
4	**DETERMINE IF MALFUNCTION CAUSE IS REAR BODY CONTROL MODULE (RBCM)** • Display the following instrument cluster PIDs using the M-MDS. — FUEL_SEN_M — FUEL_SEN_S (4WD) • Verify the resistance in the display monitor while shaking the vehicle. • Does the resistance change?	Yes	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Replace the rear body control module (RBCM). (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
5	**INSPECT FUEL GAUGE SENDER UNIT** • Switch the ignition off (LOCK). • Inspect the fuel gauge sender unit (2WD) or the fuel gauge sender unit (main/sub) (4WD). (See 09-22-34 FUEL GAUGE SENDER UNIT INSPECTION [2WD].) (See 09-22-36 FUEL GAUGE SENDER UNIT INSPECTION [4WD].) • Is the fuel gauge sender unit (2WD) or the fuel gauge sender unit (main/sub) (4WD) normal?	Yes	Inspect the wiring harness between the fuel gauge sender unit (2WD) or the fuel gauge sender unit (main/sub) (4WD) and the rear body control module (RBCM), and repair or replace the malfunctioning part.
		No	Replace the fuel gauge sender unit (2WD) or the fuel gauge sender unit (main/sub) (4WD). (See 09-22-23 FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION [2WD].) (See 09-22-27 FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION [4WD].)

LOW ENGINE COOLANT TEMPERATURE INDICATOR LIGHT/HIGH ENGINE COOLANT TEMPERATURE WARNING LIGHT ILLUMINATES OR FLASHES CONTINUOUSLY [INSTRUMENT CLUSTER]

id0903d5013300

Possible cause

- ECT sensor malfunction
- Instrument cluster malfunction

SYMPTOM TROUBLESHOOTING [INSTRUMENT CLUSTER]

Diagnostic Procedure

Step	Inspection	Action	
1	**PERFORM CAN MALFUNCTION DIAGNOSIS AND DTC INSPECTION** • Perform the CAN malfunction diagnosis according to the recommendation of 09-03K-2 FOREWORD [INSTRUMENT CLUSTER] malfunction diagnosis, and if there is no CAN malfunction, perform inspection for DTCs. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Go to the applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**VERIFY THE MALFUNCTION SYMPTOM** • Cool down the engine. • When the ignition is switched ON, does the engine coolant temperature warning light illuminate or flash?	Yes	Go to Step 4.
		No	Go to the next step.
3	**VERIFY ILLUMINATION OF LOW ENGINE COOLANT TEMPERATURE INDICATOR LIGHT** • Start the engine. • Monitor the PID ECT using the M-MDS. • Verify that the low engine coolant temperature indicator light illuminates when the ECT monitor value is **55 °C {131 °F} or more**. • Does the low engine coolant temperature indicator light illuminate?	Yes	Go to the next step.
		No	The system is operating normally.
4	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is the ECT sensor normal?	Yes	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Replace the ECT sensor. (See 01-40-41 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

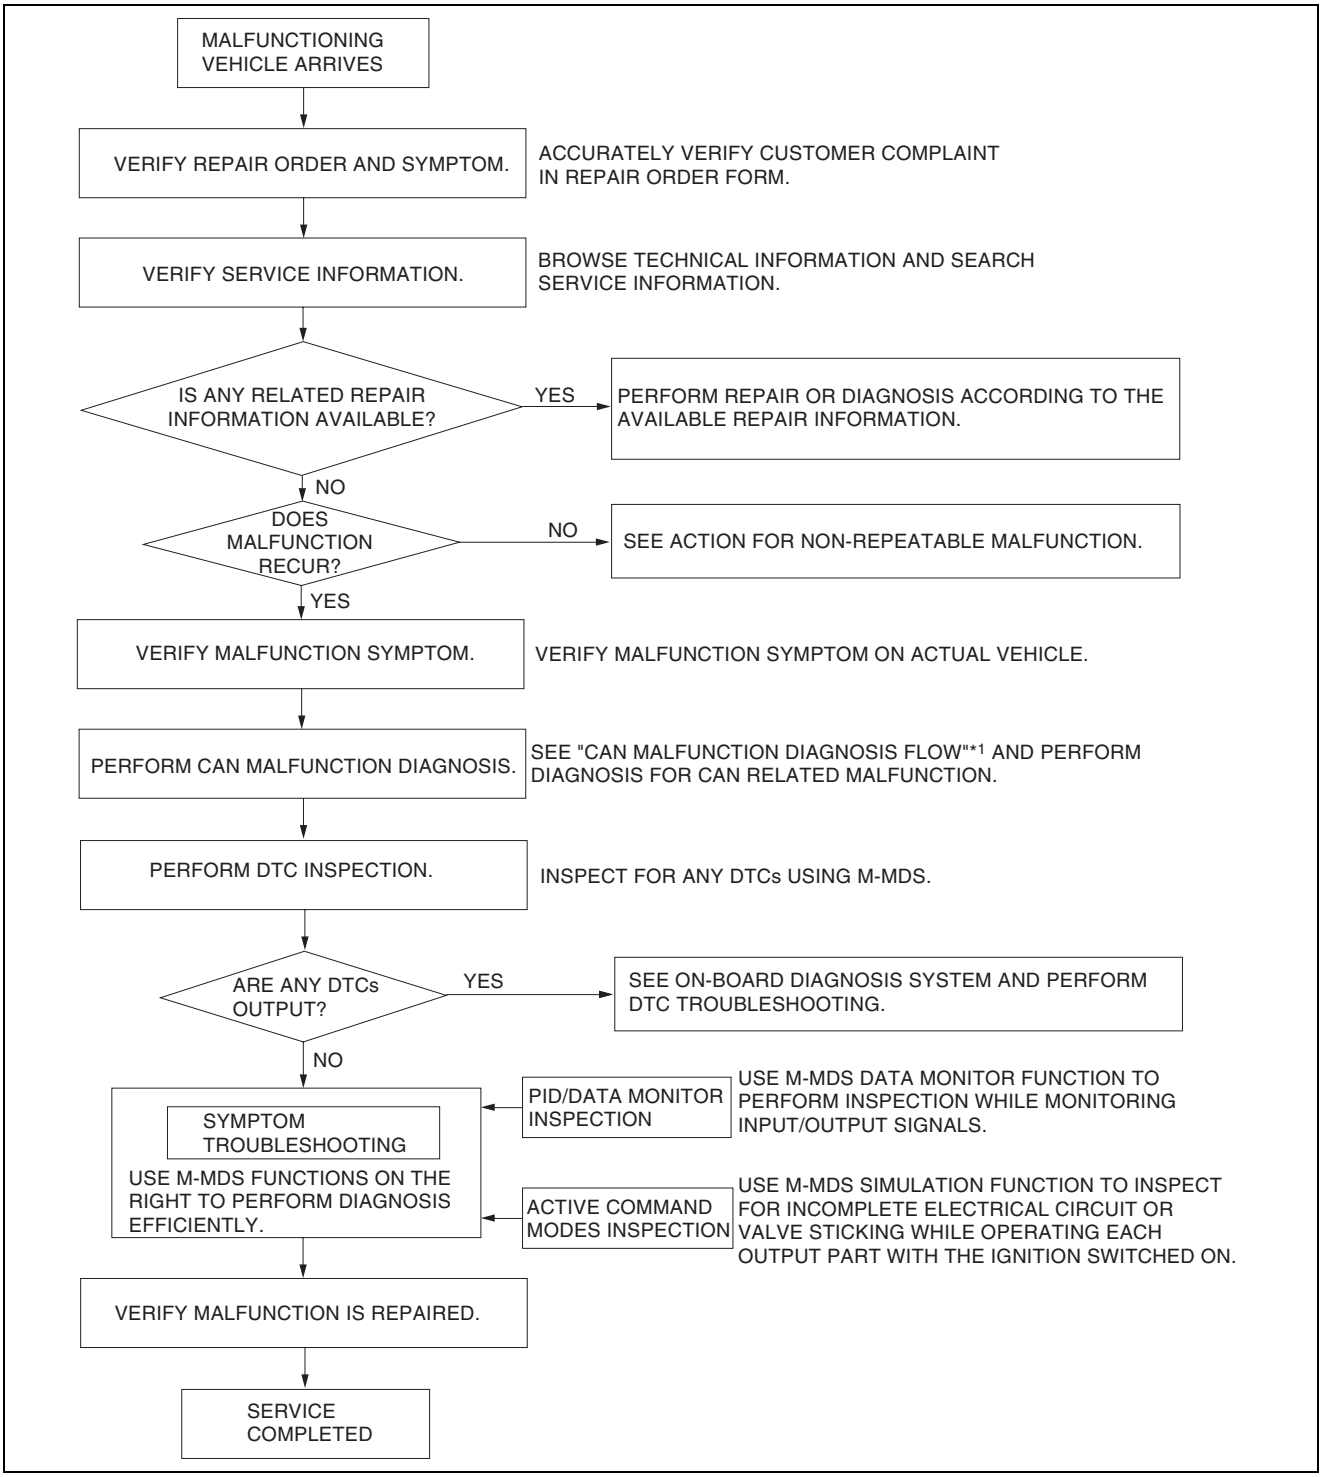
SYMPTOM TROUBLESHOOTING [PARKING SENSOR]

FOREWORD [PARKING SENSOR]

id0903z4011300

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



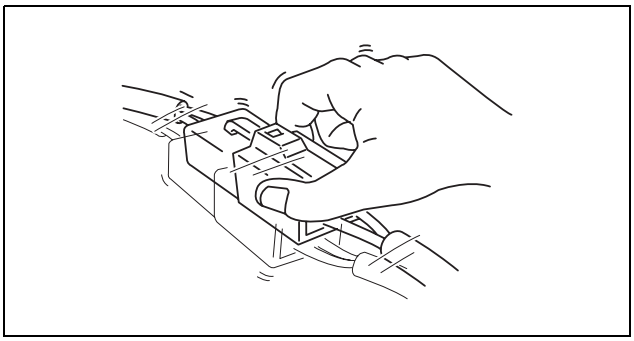
ac5wzw0000289

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)]/10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)]/10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)]/10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

SYMPTOM TROUBLESHOOTING [PARKING SENSOR]

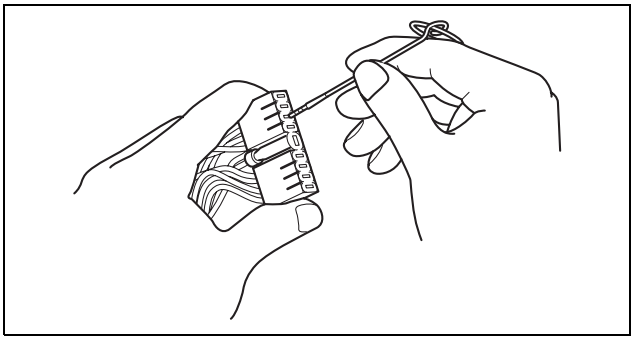
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

SYMPTOM TROUBLESHOOTING [PARKING SENSOR]

TROUBLESHOOTING INDEX [PARKING SENSOR]

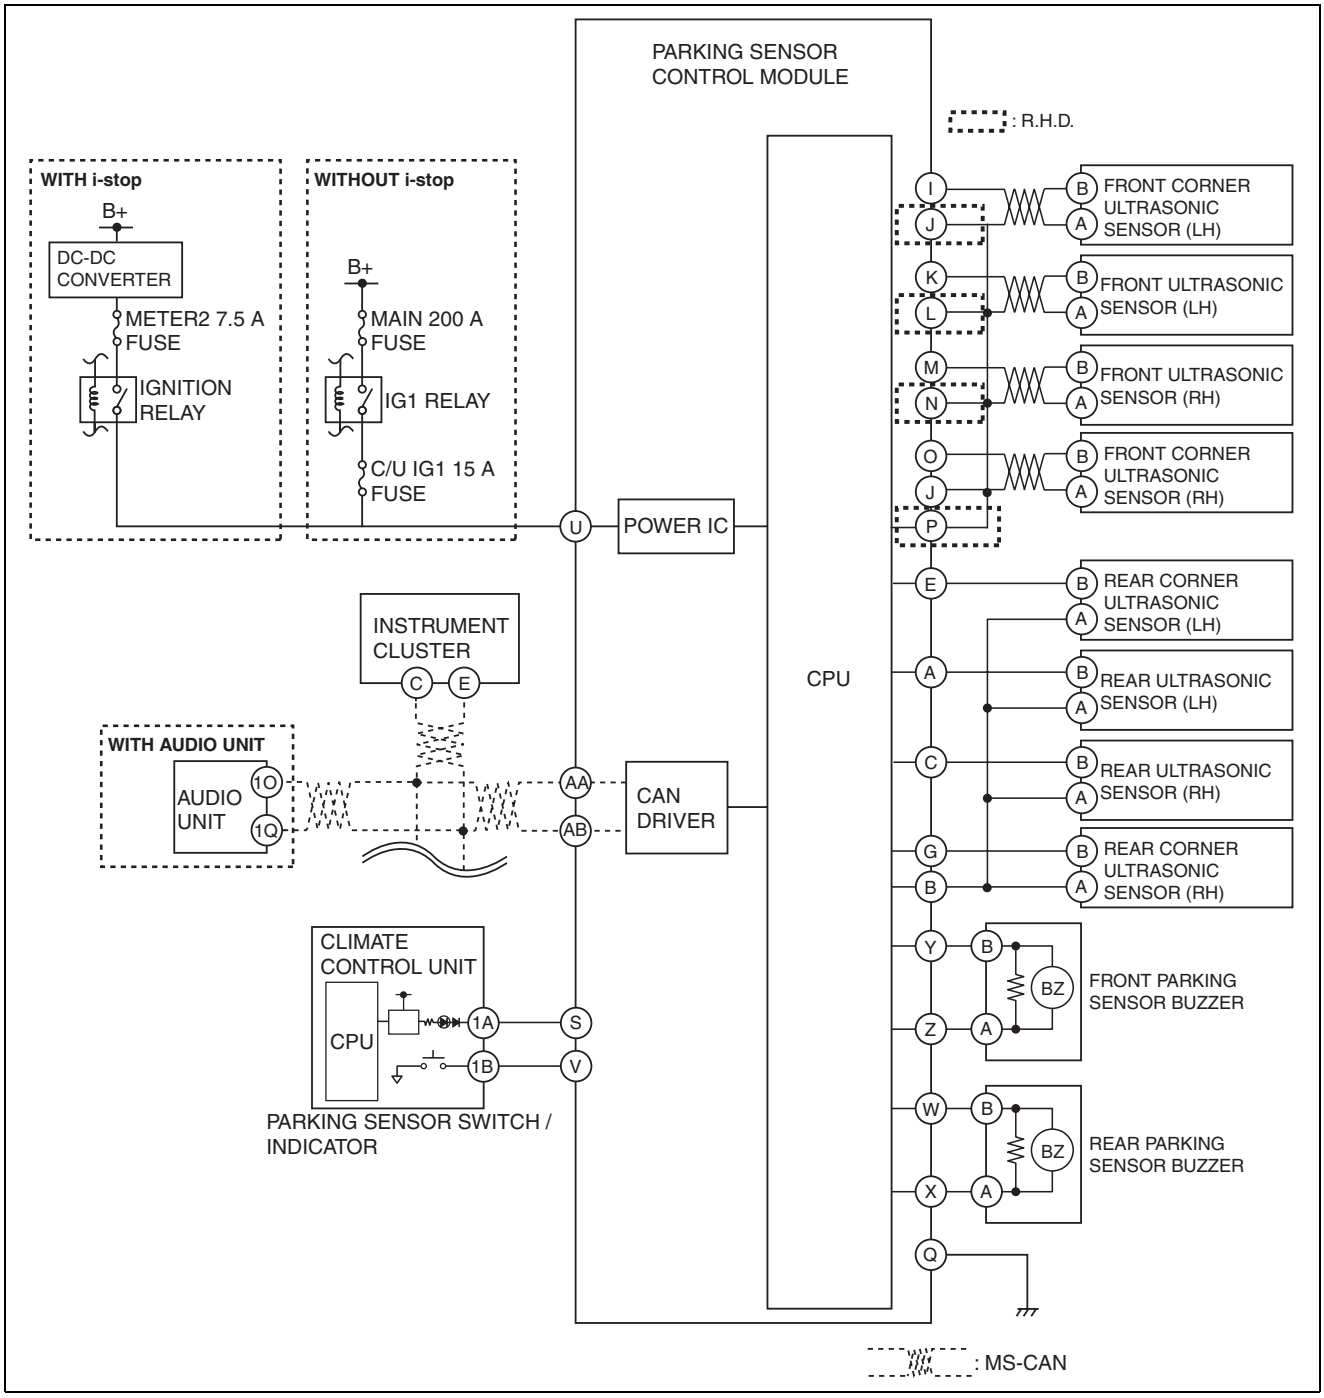
id0903z4668500

No	Troubleshooting item	Description
1	09-03L-6 SYSTEM DOES NOT OPERATE [PARKING SENSOR]	• Buzzer does not sound and the parking sensor indicator does not illuminate even if the parking sensor switch is turned on.
2	09-03L-8 MALFUNCTION DETECTION SOUND ACTIVATED [PARKING SENSOR]	• Buzzer sounds after turning the parking sensor switch/ indicator on.
3	09-03L-11 NO DETECTION SOUND/LOW VOLUME [PARKING SENSOR]	• Buzzer does not sound (parking sensor indicator illumination is normal) after turning the parking sensor switch/indicator on. • The volume of the detection sound from the buzzer decreases.
4	09-03L-12 INDICATOR LIGHT DOES NOT ILLUMINATE [PARKING SENSOR]	• The parking sensor indicator does not illuminate (buzzer is normal) when the parking sensor switch/indicator is turned on. • The parking sensor indicator does not illuminate (buzzer is normal) even though the detection condition is met.

SYMPTOM TROUBLESHOOTING [PARKING SENSOR]

PARKING SENSOR SYSTEM WIRING DIAGRAM [PARKING SENSOR]

id0903z4668400



ac5wzw0000304

SYMPTOM TROUBLESHOOTING [PARKING SENSOR]

SYSTEM DOES NOT OPERATE [PARKING SENSOR]

id0903z4829300

Note
- If there is any vehicle malfunction complaint lodged by a customer, perform 09-03L-2 FOREWORD [PARKING SENSOR] malfunction diagnosis according to the troubleshooting procedure.

Description
- Buzzer does not sound and the parking sensor indicator does not illuminate even if the parking sensor switch is turned on.

Possible malfunction
- Parking sensor control module power supply malfunction
  With i-stop system
  — Open circuit in wiring harness between IGNITION relay and parking sensor control module terminal U
  — Short to ground in wiring harness between IGNITION relay and parking sensor control module terminal U
  Without i-stop system
  — Open circuit in wiring harness between IG1 relay and parking sensor control module terminal U
  — Short to ground in wiring harness between IG1 relay and parking sensor control module terminal U
  — C/U IG1 15 A fuse damage, burnt out
- Parking sensor switch/indicator malfunction
  — Open circuit or short to ground in wiring harness between climate control unit terminal 1B and parking sensor control module terminal V
  — Open circuit or short to ground in wiring harness between control unit terminal 1A and parking sensor control module terminal S
  — Parking sensor switch/indicator malfunction (parking sensor switch/indicator stuck open)
- Malfunction in parking sensor control module ground
  — Open circuit in wiring harness between parking sensor control module terminal Q and body ground
  — Ground point lifting or loosening
- Parking sensor control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY MALFUNCTION SYMPTOM** • Switch the ignition ON (engine off or on). • Turn the parking sensor switch/indicator ON. • Does the parking sensor indicator illuminate and does the buzzer sound?	Yes	**Did the buzzer sound after the parking sensor indicator illuminated?** • System is normal. **Buzzer does not sound** • Perform troubleshooting according to the 09-03L-8 MALFUNCTION DETECTION SOUND ACTIVATED [PARKING SENSOR]. **Indicator does not illuminate** • Perform troubleshooting according to the 09-03L-12 INDICATOR LIGHT DOES NOT ILLUMINATE [PARKING SENSOR].
		No	Go to the next step.
2	**INSPECT PARKING SENSOR CONTROL MODULE POWER SUPPLY** • Switch the ignition ON (engine off or on). • Measure the voltage at parking sensor control module terminal U. • Is the voltage B+?	Yes	Go to the next step.
		No	**With i-stop** • Inspect and repair the following wiring harness for an open circuit or short to ground. — IGNITION relay terminal C and parking sensor control module terminal U **Without i-stop** • Inspect the C/U IG1 15 A fuse. **If the fuse is burned out:** • Inspect and repair the wiring harness between the C/U IG1 15 A fuse and parking sensor control module terminal U for a short circuit to the ground system. **If the fuse is not damaged or burned out:** • Inspect and repair the following wiring harness for an open circuit: — Between IG relay terminal 1B and parking sensor control module terminal U

SYMPTOM TROUBLESHOOTING [PARKING SENSOR]

Step	Inspection		Action
3	**INSPECT PARKING SENSOR CONTROL MODULE GROUND CIRCUIT** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the parking sensor control module connector. • Verify the continuity between connector terminal Q on parking sensor control module vehicle side and body ground. • Is there continuity?	Yes	Inspect and repair the ground point for looseness, disengagement, or lifting. Repair or replace the wiring harness.
		No	Go to the next step.
4	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN PARKING SENSOR SWITCH/ INDICATOR SIGNAL WIRING HARNESS** • Disconnect the seat warmer control unit connector. • Inspect for continuity between the following wiring harnesses: — Climate control unit terminal 1B and parking sensor control module terminal V — Climate control unit terminal 1A and parking sensor control module terminal S • Is there continuity?	Yes	Go to the next step.
		No	Repair for an open circuit in the wiring harness.
5	**INSPECT IF MALFUNCTION CAUSE IS SHORT TO GROUND IN PARKING SENSOR SWITCH/INDICATOR SIGNAL WIRING HARNESS** • Inspect for continuity between the following wiring harnesses: — Parking sensor control module terminal V and ground — Parking sensor control module terminal S and ground • Is there continuity?	Yes	Repair or replace the wiring harness.
		No	Go to the next step.
6	**INSPECT PARKING SENSOR SWITCH/ INDICATOR** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltages at parking sensor control module terminals S and V when the parking sensor switch is turned off (indicator turns off). • Is terminal S battery voltage and is terminal V approx. 5 V?	Yes	Replace the climate control unit removal/installation. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/ INSTALLATION [FULL-AUTO AIR CONDITIONER].) **Note** • The parking sensor switch/indicator is integrated with the climate control unit.
		No	Replace the parking sensor control module. (See 09-22-59 PARKING SENSOR CONTROL MODULE INSPECTION.)

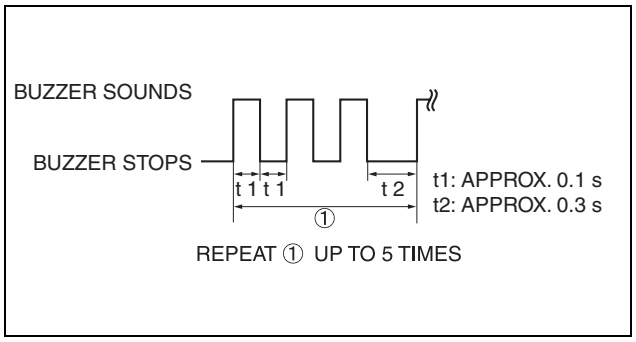
SYMPTOM TROUBLESHOOTING [PARKING SENSOR]

MALFUNCTION DETECTION SOUND ACTIVATED [PARKING SENSOR]

id0903z4829400

Note
- If there is any vehicle malfunction complaint lodged by a customer, perform 09-03L-2 FOREWORD [PARKING SENSOR] malfunction diagnosis according to the troubleshooting procedure.

Description
- Buzzer sounds after turning the parking sensor switch/indicator on.



ac5wzw0000281

Possible malfunction
- Front ultrasonic sensor, front corner ultrasonic sensor, rear ultrasonic sensor, and rear corner ultrasonic sensor malfunction
  - — Dirt, damage (scratch, deformation), or freezing of sensor
  - — Connector connection malfunction
  - — Sensor malfunction
- Wiring harness malfunction
  - Front ultrasonic sensor and front corner ultrasonic sensor signal malfunction
    - — Open circuit or short to ground in wiring harness between parking sensor control module terminal I and front corner ultrasonic sensor (LH) terminal B
    - — Open circuit or short to ground in wiring harness between parking sensor control module terminal O and front corner ultrasonic sensor (RH) terminal B
    - — Open circuit or short to ground in wiring harness between parking sensor control module terminal K and front ultrasonic sensor (LH) terminal B
    - — Open circuit or short to ground in wiring harness between parking sensor control module terminal M and front ultrasonic sensor (RH) terminal B
  - Front ultrasonic sensor and front corner ultrasonic sensor ground system malfunction

    L.H.D.
    - — Open circuit in wiring harness between parking sensor control module terminal J and terminal A for each sensor

    R.H.D.
    - — Open circuit or short to ground in wiring harness between parking sensor control module terminal J and front corner ultrasonic sensor (LH) terminal A
    - — Open circuit or short to ground in wiring harness between parking sensor control module terminal P and front corner ultrasonic sensor (RH) terminal A
    - — Open circuit or short to ground in wiring harness between parking sensor control module terminal L and front ultrasonic sensor (LH) terminal A
    - — Open circuit or short to ground in wiring harness between parking sensor control module terminal N and front ultrasonic sensor (RH) terminal A
  - Rear ultrasonic sensor and rear corner ultrasonic sensor signal malfunction
    - — Open circuit or short to ground in wiring harness between parking sensor control module terminal E and rear corner ultrasonic sensor (LH) terminal B
    - — Open circuit or short to ground in wiring harness between parking sensor control module terminal G and rear corner ultrasonic sensor (RH) terminal B
    - — Open circuit or short to ground in wiring harness between parking sensor control module terminal A and rear ultrasonic sensor (LH) terminal B
    - — Open circuit or short to ground in wiring harness between parking sensor control module terminal C and rear ultrasonic sensor (RH) terminal B
  - Rear ultrasonic sensor and rear corner ultrasonic sensor ground system malfunction
    - — Open circuit in wiring harness between parking sensor control module terminal B and terminal A for each sensor
- Parking sensor control module malfunction

SYMPTOM TROUBLESHOOTING [PARKING SENSOR]

Diagnostic Procedure

Step	Inspection		Action
1	**IDENTIFY MALFUNCTION LOCATION** • Verify that the buzzer sounds from the parking sensor buzzer on either the front or rear. • Does the buzzer sound from the front parking sensor buzzer?	Yes	Go to the next step.
		No	Go to Step 7.
2	**VERIFY FRONT ULTRASONIC SENSOR CONDITION** • Visually inspect the front ultrasonic sensor condition. • Is there any dirt, damage (scratch, deformation), and freezing on the sensor?	Yes	Remove dirt, and then go to the next step.
		No	Go to the next step.
3	**INSPECT CONNECTOR CONNECTION CONDITION** • Verify the connector connection conditions of the parking sensor control module, front ultrasonic sensor short-cord, and front ultrasonic sensor. • Are the connection conditions normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
4	**INSPECT WIRING HARNESS BETWEEN PARKING SENSOR CONTROL MODULE AND FRONT ULTRASONIC SENSOR FOR OPEN CIRCUIT** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the connectors of the front ultrasonic sensor and parking sensor control module. • Inspect for continuity between the following wiring harnesses: **L.H.D.** — Parking sensor control module terminal I and front corner ultrasonic sensor (LH) terminal B — Parking sensor control module terminal O and front corner ultrasonic sensor (RH) terminal B — Parking sensor control module terminal K and front ultrasonic sensor (LH) terminal B — Parking sensor control module terminal M and front ultrasonic sensor (RH) terminal B — Parking sensor control module terminal J and terminal A for each sensor **R.H.D.** — Parking sensor control module terminal I and front corner ultrasonic sensor (LH) terminal B — Parking sensor control module terminal O and front corner ultrasonic sensor (RH) terminal B — Parking sensor control module terminal K and front ultrasonic sensor (LH) terminal B — Parking sensor control module terminal M and front ultrasonic sensor (RH) terminal B — Parking sensor control module terminal J and front corner ultrasonic sensor (LH) terminal A — Parking sensor control module terminal P and front corner ultrasonic sensor (RH) terminal A — Parking sensor control module terminal L and front ultrasonic sensor (LH) terminal A — Parking sensor control module terminal N and front ultrasonic sensor (RH) terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair for an open circuit in the wiring harness.
5	**INSPECT WIRING HARNESS BETWEEN PARKING SENSOR CONTROL MODULE AND FRONT ULTRASONIC SENSOR FOR SHORT TO GROUND** • Inspect for continuity between the following wiring harnesses: — Parking sensor control module terminal I and ground — Parking sensor control module terminal O and ground — Parking sensor control module terminal K and ground — Parking sensor control module terminal M and ground • Is there continuity?	Yes	Repair or replace the wiring harness.
		No	Go to Step 10.

SYMPTOM TROUBLESHOOTING [PARKING SENSOR]

Step	Inspection		Action
6	**VERIFY REAR ULTRASONIC SENSOR CONDITION** • Visually inspect the rear ultrasonic sensor condition. • Is there any dirt, damage (scratch, deformation), and freezing on the sensor?	Yes	Remove dirt, then go to the next step.
		No	Go to the next step.
7	**INSPECT CONNECTOR CONNECTION CONDITION** • Verify the connector connection conditions of the parking sensor control module, rear ultrasonic sensor short-cord, and rear ultrasonic sensor. • Are the connection conditions normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
8	**INSPECT WIRING HARNESS BETWEEN PARKING SENSOR CONTROL MODULE AND REAR ULTRASONIC SENSOR FOR OPEN CIRCUIT** • Switch the ignition off (LOCK). • Disconnect the connectors of the rear ultrasonic sensor and parking sensor control module. • Inspect for continuity between the following wiring harnesses: — Parking sensor control module terminal E and rear corner ultrasonic sensor (LH) terminal B — Parking sensor control module terminal G and rear corner ultrasonic sensor (RH) terminal B — Parking sensor control module terminal A and rear ultrasonic sensor (LH) terminal B — Parking sensor control module terminal C and rear ultrasonic sensor (RH) terminal B — Parking sensor control module terminal B and terminal A for each sensor • Is there continuity?	Yes	Go to the next step.
		No	Repair for an open circuit in the wiring harness.
9	**INSPECT WIRING HARNESS BETWEEN PARKING SENSOR CONTROL MODULE AND REAR ULTRASONIC SENSOR FOR SHORT TO GROUND** • Inspect for continuity between the following wiring harnesses: — Parking sensor control module terminal E and ground — Parking sensor control module terminal G and ground — Parking sensor control module terminal A and ground — Parking sensor control module terminal C and ground • Is there continuity?	Yes	Repair or replace the wiring harness.
		No	Go to the next step.
10	**DETERMINE IF MALFUNCTION CAUSE IS ULTRASONIC SENSOR OR PARKING SENSOR CONTROL MODULE** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Turn the parking sensor switch/indicator on. • Refer to the parking sensor control module inspection and verify the generated pulse for each sensor. (See 09-22-59 PARKING SENSOR CONTROL MODULE INSPECTION.) • Can the generated pulse be verified?	Yes	Replace the parking sensor control module. (See 09-22-57 PARKING SENSOR CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Replace the ultrasonic sensor. (See 09-22-42 FRONT ULTRASONIC SENSOR REMOVAL/INSTALLATION.) (See 09-22-46 REAR ULTRASONIC SENSOR REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [PARKING SENSOR]

NO DETECTION SOUND/LOW VOLUME [PARKING SENSOR]

id0903z4829500

Note
- If there is any vehicle malfunction complaint lodged by a customer, perform 09-03L-2 FOREWORD [PARKING SENSOR] malfunction diagnosis according to the troubleshooting procedure.

Description
- Buzzer does not sound (parking sensor indicator illumination is normal) after turning the parking sensor switch/ indicator on.
- The volume of the detection sound from the buzzer decreases.

Possible malfunction
- Volume adjustment of buzzer is at minimum
- Buzzer circuit malfunction

  Front
  - — Open or short circuit in wiring harness between parking sensor control module terminal Y and front parking sensor buzzer terminal B
  - — Open circuit in wiring harness between parking sensor control module terminal Z and front parking sensor buzzer terminal A

  Rear
  - — Open or short circuit in wiring harness between parking sensor control module terminal W and rear parking sensor buzzer terminal B
  - — Open circuit in wiring harness between parking sensor control module terminal X and rear parking sensor buzzer terminal A
- Parking sensor buzzer malfunction
- Parking sensor control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**ADJUST BUZZER VOLUME** • Adjust the buzzer volume. (See 09-22-65 BEEP SOUND ADJUSTMENT.) • Was the malfunction corrected?	Yes	Inspection completed (buzzer volume adjustment malfunction).
		No	Go to the next step.
2	**INSPECT WIRING HARNESS BETWEEN PARKING SENSOR CONTROL MODULE AND PARKING SENSOR BUZZER FOR OPEN CIRCUIT** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the connectors of the parking sensor buzzer and parking sensor control module. • Inspect for continuity between the following wiring harnesses: **Front** — Parking sensor control module terminal Y and front parking sensor buzzer terminal B — Parking sensor control module terminal Z and front parking sensor buzzer terminal A **Rear** — Parking sensor control module terminal W and rear parking sensor buzzer terminal B — Parking sensor control module terminal X and rear parking sensor buzzer terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair for an open circuit in the wiring harness.

SYMPTOM TROUBLESHOOTING [PARKING SENSOR]

Step	Inspection		Action
3	**INSPECT WIRING HARNESS BETWEEN PARKING SENSOR CONTROL MODULE AND PARKING SENSOR BUZZER FOR SHORT TO GROUND** • Inspect for continuity between the following wiring harnesses: **Front** — Parking sensor control module terminal Y and front parking sensor buzzer terminal B **Rear** — Parking sensor control module terminal W and rear parking sensor buzzer terminal B • Is there continuity?	Yes	Repair or replace the wiring harness.
		No	Go to the next step.
4	**DETERMINE IF MALFUNCTION CAUSE IS PARKING SENSOR BUZZER OR PARKING SENSOR CONTROL MODULE** • Inspect the parking sensor buzzer. (See 09-22-63 FRONT PARKING SENSOR BUZZER INSPECTION.) (See 09-22-64 REAR PARKING SENSOR BUZZER INSPECTION.) • Is the parking sensor buzzer normal?	Yes	Replace the parking sensor control module. (See 09-22-57 PARKING SENSOR CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Replace the parking sensor buzzer. (See 09-22-62 FRONT PARKING SENSOR BUZZER REMOVAL/INSTALLATION.) (See 09-22-64 REAR PARKING SENSOR BUZZER REMOVAL/INSTALLATION.)

INDICATOR LIGHT DOES NOT ILLUMINATE [PARKING SENSOR]

id0903z4829600

Note
- If there is any vehicle malfunction complaint lodged by a customer, perform 09-03L-2 FOREWORD [PARKING SENSOR] malfunction diagnosis according to the troubleshooting procedure.

Description
- The parking sensor indicator does not illuminate (buzzer is normal) when the parking sensor switch/indicator is turned on.
- The parking sensor indicator does not illuminate (buzzer is normal) even though the detection condition is met.

Possible malfunction
- Parking sensor switch/indicator malfunction
  - — Open circuit or short to ground in wiring harness between climate control unit terminal 1B and parking sensor control module terminal V
  - — Open circuit or short to ground in wiring harness between climate control unit terminal 1A and parking sensor control module terminal S
  - — Parking sensor switch/indicator malfunction (parking sensor switch/indicator stuck open)
- Parking sensor switch/indicator malfunction
- Parking sensor control module malfunction

SYMPTOM TROUBLESHOOTING [PARKING SENSOR]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN PARKING SENSOR SWITCH/INDICATOR SIGNAL WIRING HARNESS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the connectors of the seat warmer control unit and parking sensor control module. • Inspect for continuity between the following wiring harnesses: — Climate control unit terminal 1B and parking sensor control module terminal V — Climate control unit terminal 1A and parking sensor control module terminal S • Is there continuity?	Yes	Go to the next step.
		No	Repair for an open circuit in the wiring harness.
2	**INSPECT IF MALFUNCTION CAUSE IS SHORT TO GROUND IN PARKING SENSOR SWITCH/INDICATOR SIGNAL WIRING HARNESS** • Inspect for continuity between the following wiring harnesses: — Parking sensor control module terminal V and ground — Parking sensor control module terminal S and ground • Is there continuity?	Yes	Repair or replace the wiring harness.
		No	Go to the next step.
3	**INSPECT PARKING SENSOR SWITCH/INDICATOR** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltages at parking sensor control module terminals S and V when the parking sensor switch is turned off (indicator turns off). • Is terminal S battery voltage and is terminal V approx. 5 V?	Yes	Replace the climate control unit. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) **Note** • The parking sensor switch/indicator is integrated with the climate control unit.
		No	Replace the parking sensor control module. (See 09-22-57 PARKING SENSOR CONTROL MODULE REMOVAL/INSTALLATION.)

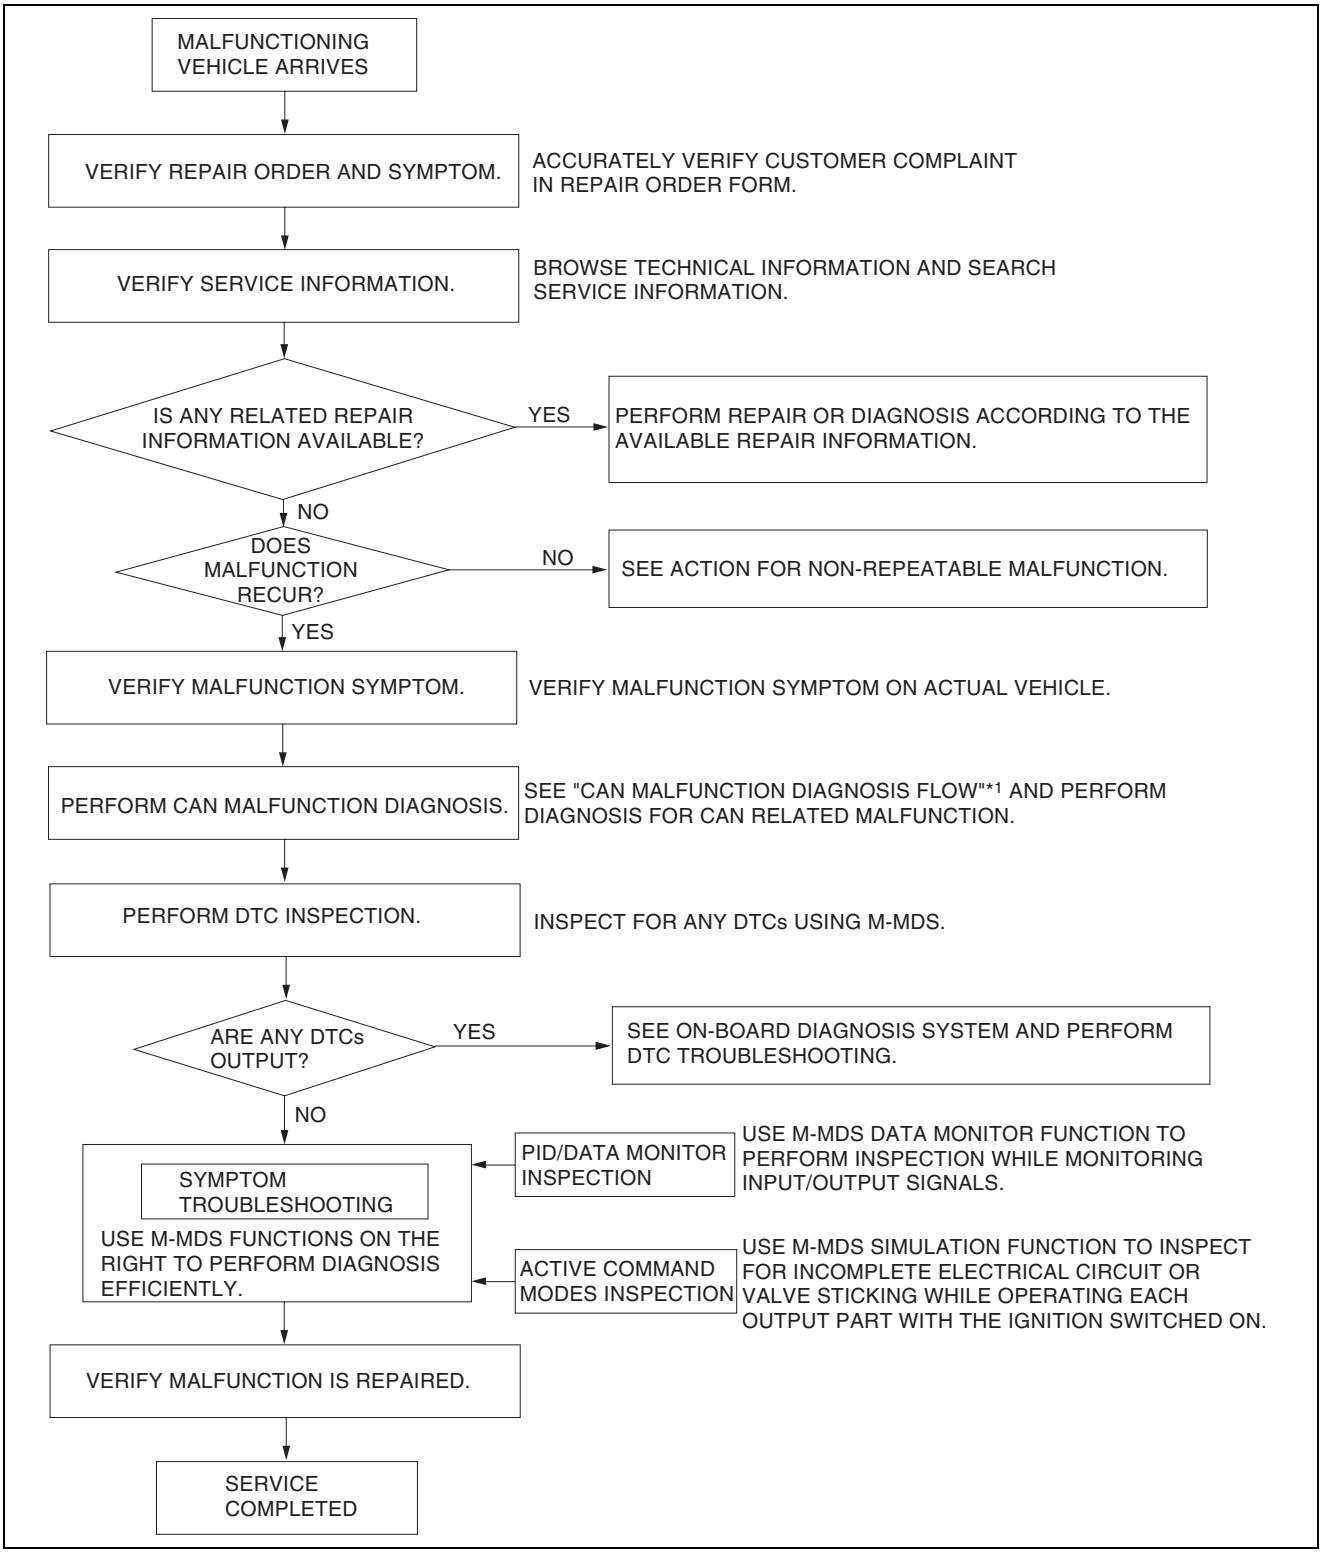
SYMPTOM TROUBLESHOOTING [BLIND SPOT MONITORING (BSM)]

FOREWORD [BLIND SPOT MONITORING (BSM)]

id0903d9990100

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



ac5wzw0000287

*1 : 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)]/10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

SYMPTOM TROUBLESHOOTING [BLIND SPOT MONITORING (BSM)]

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — When the BSM OFF indicator light is flashing (BSM malfunction is detected by its on-board diagnostic function), perform the On-board Diagnostic Inspection. To inspect the DTC, follow the DTC Inspection steps. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].)
  - — Before performing the steps in Symptom Troubleshooting, perform the On-board Diagnostic Inspection. To inspect the DTC, follow the DTC Inspection steps. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].)
  - — When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, inspect to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.
  - — The Blind Spot Monitoring (BSM) System is a warning device which monitors the vehicle's rear on both sides for approaching vehicles using radar emitted from the BSM control module the radar reflects off a vehicle that enters a warning zone and is then transmitted back to the BSM control module.

Warning

- **The BSM is not a substitute for the driver in confirming safety. The driver is responsible for assuring the safety of lane changes and other maneuvers. Do not rely completely on the BSM and always confirm the safety around the vehicle visually before changing lanes.**
- **Dirt, ice or snow adhering to the areas near the BSM control module could obstruct the radar and prevent the system from adequately or completely detecting a target vehicle. Always pay attention to the direction in which the vehicle is traveling and the vehicle’s surroundings.**
- **Do not block the area around the BSM control module on the rear bumper with foreign material (such as bumper stickers) so as not to affect the BSM’s functions.**
- **Always have the BSM control module inspected at an Authorized Mazda Dealer if any shock or impact has occurred in the rear bumper area, even that from a minor accident. Otherwise, the BSM may not operate correctly.**
- **The BSM may not operate normally under the following conditions:**
  - **— Dirt, ice or snow is adhering to the rear bumper surface.**
  - **— The vehicle is driven in heavy rain or snowfall, or under conditions where water on the road is sprayed by the vehicle.**
  - **— The vehicle accelerates from a standing-start with a target vehicle alongside.**
  - **— A target vehicle moves laterally from a lane two lanes over to the adjacent lane.**
  - **— The difference in vehicle speed between the vehicle and a target vehicle is higher with the target vehicle passing through the alert area in a very short period.**
  - **— On a steep incline, or if there is a difference in height between lanes.**
- **Although the system may detect objects on the road side such as parked vehicles or guardrails and operate the warning light/beep, it does not indicate a malfunction.**
- **The BSM control module may not detect all types of vehicles. In particular, detection of the following types of vehicles may not occur:**
  - **— A vehicle driving at a low speed**
  - **— Small vehicles such as motorcycles**
  - **— Vehicles with body shapes that may not reflect radar such as unloaded trailers**
  - **— Vehicles with lower body height**
- **On a road with a narrower lane width, the system could detect vehicles on a lane next to the adjacent lane and cause the warning light/beep to operate. On a road with a wider lane width, the system may not detect vehicles on the adjacent lane and may not operate the warning light/beep.**

SYMPTOM TROUBLESHOOTING [BLIND SPOT MONITORING (BSM)]

TROUBLESHOOTING INDEX [BLIND SPOT MONITORING (BSM)]

id0903d9990200

No.	Troubleshooting item	Description
1	09-03M-6 BSM OFF INDICATOR LIGHT DOES NOT ILLUMINATE WHEN THE IGNITION IS SWITCHED TO ON [BLIND SPOT MONITORING (BSM)]	• The BSM OFF indicator light does not illuminate when the ignition is switched to ON. • The BSM control module does not communicate with the M-MDS.
2	09-03M-7 BSM OFF INDICATOR LIGHT DOES NOT ILLUMINATE WHILE BSM SYSTEM IS OFF [BLIND SPOT MONITORING (BSM)]	• The BSM indicator light does not illuminate after the BSM OFF switch turns off the system when the ignition is switched to ON.
3	09-03M-7 BSM OFF INDICATOR LIGHT ILLUMINATES CONTINUOUSLY [BLIND SPOT MONITORING (BSM)]	• The BSM OFF indicator light illuminates for 4 s or more without the BSM OFF switch turning off the system when the ignition is switched to ON.
4	09-03M-8 BSM INDICATOR LIGHT ILLUMINATES WHILE NOT UNDER LIGHT-ILLUMINATION CONDITIONS [BLIND SPOT MONITORING (BSM)]	• The BSM indicator light illuminates, but the conditions to illuminate the BSM indicator light are not satisfied (vehicle speed above 32 km/h {20 mph} or more, turn signals off, and vehicle in warning zone).
5	09-03M-9 BSM INDICATOR LIGHT DOES NOT ILLUMINATE WHILE UNDER BSM INDICATOR LIGHT-ILLUMINATION CONDITIONS [BLIND SPOT MONITORING (BSM)]	• The BSM indicator light does not illuminate despite satisfying the conditions to illuminate the BSM indicator light (vehicle speed above 32 km/h {20 mph} or more, turn signals off, and vehicle in warning zone).
6	09-03M-11 BSM INDICATOR LIGHT FLASHES WHILE NOT UNDER BSM INDICATOR LIGHT-FLASHING CONDITIONS (NO COMBINATION SWITCH OPERATION (TURN SIGNAL SWITCH)) [BLIND SPOT MONITORING (BSM)]	• The BSM indicator light flashes despite not satisfying the BSM indicator light flashing conditions (vehicle speed above 32 km/h {20 mph} or more, turn signal on, and vehicle in warning zone). • The BSM indicator light flashes, but the turn signals are off.
7	09-03M-12 BSM INDICATOR LIGHT DOES NOT FLASH WHILE UNDER BSM INDICATOR LIGHT-FLASHING CONDITIONS (WITH COMBINATION SWITCH OPERATION (TURN SIGNAL SWITCH)) [BLIND SPOT MONITORING (BSM)]	• The BSM indicator light does not flash or illuminate continuously, but the conditions to flash the BSM indicator light are satisfied (vehicle speed above 32 km/h {20 mph} or more, turn signal on, and vehicle in warning zone).
8	09-03M-13 THE BSM INDICATOR LIGHT DOES NOT FLASH OR ILLUMINATE CONTINUOUSLY, BUT A TURN SIGNAL IS ON [BLIND SPOT MONITORING (BSM)]	• BSM warning alarm sounds but BSM indicator light does not flash. • The BSM warning alarm is triggered on the side opposite to the direction in which the turn signal is operated. • The M-MDS is communicating with only the left or right BSM control module.
9	09-03M-14 BSM WARNING ALARM DOES NOT SOUND WHILE BSM INDICATOR LIGHT FLASHES [BLIND SPOT MONITORING (BSM)]	• The BSM control module recognizes that a vehicle is in the warning zone on the side in which the turn signal is operated, but the BSM warning alarm does not sound despite the BSM indicator light flashing.

SYMPTOM TROUBLESHOOTING [BLIND SPOT MONITORING (BSM)]

BLIND SPOT MONITORING (BSM) WIRING DIAGRAM [BLIND SPOT MONITORING (BSM)]

SYMPTOM TROUBLESHOOTING [BLIND SPOT MONITORING (BSM)]

BSM OFF INDICATOR LIGHT DOES NOT ILLUMINATE WHEN THE IGNITION IS SWITCHED TO ON [BLIND SPOT MONITORING (BSM)]

id0903d9015000

Description	**BSM OFF indicator light does not illuminate when the ignition is switched to ON** • BSM OFF indicator light does not illuminate when the ignition is switched to ON. • The BSM control module does not communicate with the M-MDS.
Possible Causes	• BSM control module (RH) does not initiate — Open or short circuit in BSM control module (RH) power supply circuit (open or short to ground circuit in wiring harness between push button start and BSM control module (RH) terminal B) — Open circuit in BSM control module (RH) ground circuit (open circuit in wiring harness between BSM control module (RH) and ground, poor contact at ground point) — BSM control module (RH) malfunction • Instrument cluster does not illuminate BSM OFF indicator light — Instrument cluster malfunction

Diagnostic Procedure

Step	Inspection	Result	Action
1*	**INSPECT BSM CONTROL MODULE (RH) POWER SUPPLY VOLTAGE** • Switch the ignition ON (engine off or on). • Measure the voltage at BSM control module (RH) terminal B. • Is the voltage B+?	Yes	Go to the next step.
		No	Inspect and repair for the following: • Inspect the condition of fuses between the push button start and the BSM control module (RH), and perform repairs at the location where the fuse is blown. • Inspect for an open circuit in the wiring harness between the or push button start and the BSM control module (RH).
2*	**INSPECT BSM CONTROL MODULE (RH) GROUND CIRCUIT** • Switch the ignition to off (LOCK). • Verify that there is continuity between the BSM control module (RH) terminal E and ground. • Is there continuity?	Yes	Go to the next step.
		No	Inspect and repair the ground point. Repair or replace for an open circuit between the BSM control module (RH) and ground.
3	**INSPECT IF MALFUNCTION IS IN INSTRUMENT CLUSTER OR BSM CONTROL MODULE (RH)** • Turn off the BSM OFF indicator light using the M-MDS instrument cluster active command modes WL+IL. (See 09-02G-38 ACTIVE COMMAND MODES TABLE [INSTRUMENT CLUSTER].) • Does the BSM OFF indicator light turn on according to the active command modes?	Yes	Replace the BSM control module (RH). (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [BLIND SPOT MONITORING (BSM)]

BSM OFF INDICATOR LIGHT DOES NOT ILLUMINATE WHILE BSM SYSTEM IS OFF [BLIND SPOT MONITORING (BSM)]

id0903d9015100

Description	**BSM OFF indicator light does not illuminate while BSM system is off** • BSM indicator light does not illuminate even though BSM OFF switch turns off the system after ignition switch is turned to ON position.
Possible Causes	• Malfunction in BSM OFF switch related parts — BSM OFF switch malfunction (stuck at off) • Instrument cluster does not illuminate BSM OFF indicator light — BSM control module (RH) malfunction — Instrument cluster malfunction

Diagnostic Procedure

Step	Inspection	Result	Action
1	**INSPECT IF MALFUNCTION IS IN BSM OFF SWITCH OR INSTRUMENT CLUSTER** • Monitor the BSM control module (RH) PID BSM_OFF_IL using the M-MDS. (See 09-02H-33 PID/DATA MONITOR INSPECTION [BLIND SPOT MONITORING (BSM)].) • Turn the BSM OFF switch on and off. • Does the PID BSM_OFF_IL monitoring value turn on and off according to the BSM OFF switch operation?	Yes	Go to Step 3.
		No	Go to the next step.
2	**INSPECT BSM OFF SWITCH** • Inspect the BSM OFF switch. (See 09-22-76 BLIND SPOT MONITORING (BSM) OFF SWITCH INSPECTION.) • Is the BSM OFF switch normal?	Yes	Go to the next step.
		No	Replace the BSM OFF switch. (See 09-22-76 BLIND SPOT MONITORING (BSM) OFF SWITCH REMOVAL/INSTALLATION.)
3	**INSPECT IF MALFUNCTION IS IN INSTRUMENT CLUSTER OR BSM CONTROL MODULE (RH)** • Turn on the BSM OFF indicator light using the M-MDS instrument cluster active command modes WL+IL. (See 09-02G-38 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Does the BSM OFF indicator light illuminate according to the active command modes?	Yes	Replace the BSM control module (RH). (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

BSM OFF INDICATOR LIGHT ILLUMINATES CONTINUOUSLY [BLIND SPOT MONITORING (BSM)]

id0903d9015200

Description	**BSM OFF indicator light illuminates continuously** • The BSM OFF indicator light illuminates for 4 s or more without the BSM OFF switch turning off after the ignition switch is turned to the ON position.
Possible Causes	• Malfunction in BSM OFF switch related parts — BSM OFF switch malfunction (stuck at on) • Instrument cluster does not turn off BSM indicator light — BSM control module (RH) malfunction — Instrument cluster malfunction

Diagnostic Procedure

Step	Inspection	Result	Action
1	**INSPECT IF MALFUNCTION IS IN BSM OFF SWITCH OR INSTRUMENT CLUSTER** • Monitor the BSM control module (RH) PID BSM_OFF_IL using the M-MDS. (See 09-02H-33 PID/DATA MONITOR INSPECTION [BLIND SPOT MONITORING (BSM)].) • Turn the BSM OFF switch on and off. • Does the PID BSM_OFF_IL monitoring value turn on and off according to the BSM OFF switch operation?	Yes	Go to Step 3.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [BLIND SPOT MONITORING (BSM)]

Step	Inspection	Result	Action
2	**INSPECT BSM OFF SWITCH** • Inspect the BSM OFF switch. (See 09-22-76 BLIND SPOT MONITORING (BSM) OFF SWITCH INSPECTION.) • Is the BSM OFF switch normal?	Yes	Go to the next step.
		No	Replace the BSM OFF switch. (See 09-22-76 BLIND SPOT MONITORING (BSM) OFF SWITCH REMOVAL/INSTALLATION.)
3	**INSPECT IF MALFUNCTION IS IN INSTRUMENT CLUSTER OR BSM CONTROL MODULE (RH)** • Turn off the BSM OFF indicator light using the M-MDS instrument cluster active command modes WL+IL. (See 09-02G-38 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Does the BSM OFF indicator light turn off according to the active command modes?	Yes	Replace the BSM control module (RH). (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

BSM INDICATOR LIGHT ILLUMINATES WHILE NOT UNDER LIGHT-ILLUMINATION CONDITIONS [BLIND SPOT MONITORING (BSM)]

id0903d9015300

Description	**BSM indicator light illuminates while not under light-illumination conditions** • The BSM indicator light illuminates, but the conditions to illuminate the BSM indicator light are not satisfied (vehicle speed above 32 km/h {20 mph} or more, turn signals off, and vehicle in warning zone).
Possible Causes	• The BSM control module recognizes a vehicle as being inside the warning zone when it is actually outside of it. — Radar (BSM control module integrated) is emitted outside of warning zone (deviates from warning zone) • Damage, deformity or looseness to installation bracket or vehicle frame (including moderate impacts) • Malfunction in steering angle signal (instrument cluster or EPS control module malfunction) • Problem with rear bumper such as soiling to radar emitting/receiving area, application of stickers (including transparent types), repairs using putty application. — After-market electrical parts interfere with BSM system • Malfunction in BSM indicator light related parts — Short to power supply circuit in wiring harness between BSM control module and BSM indicator light

Diagnostic Procedure

Step	Inspection	Result	Action
1	**INSPECT IF MALFUNCTION IS IN INPUT SIGNAL OR BSM CONTROL MODULE** • Monitor the following PIDs on the suspected side of the BSM control module using the M-MDS. (See 09-02H-33 PID/DATA MONITOR INSPECTION [BLIND SPOT MONITORING (BSM)].) — SWA_POS • Are the monitoring values normal?	Yes	Go to Step 3.
		No	Go to the next step.
2	**INSPECT STEERING ANGLE SIGNAL** • Monitor the PID STR_ANG for the EPS control module using the M-MDS. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the monitoring value normal?	Yes	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Replace the EPS control module. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
3	**INSPECT REAR BUMPER** • Inspect the rear bumper at the BSM installation area for the following: — Installation condition — Sticker adhesion — Excessive soiling — Repairs using putty • Is the rear bumper condition normal?	Yes	Go to the next step.
		No	Repair or replace malfunctioning parts, or replace the rear bumper. (See 09-10-24 REAR BUMPER REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [BLIND SPOT MONITORING (BSM)]

Step	Inspection	Result	Action
4	**VERIFY THE CONDITION OF THE BSM CONTROL MODULE** • Remove the rear bumper. (See 09-10-24 REAR BUMPER REMOVAL/ INSTALLATION.) • Inspect the BSM control module for the following: — Looseness — Damage or deformity to the bracket — Distortion at vehicle installation surface • Is the BSM control module installation condition normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
5	**VERIFY IF CAUSE OF TROUBLE IS IN AFTER-MARKET ELECTRICAL PRODUCT OR ELSEWHERE** • Remove the after-market electrical product. • Verify that the malfunction symptom recurs as stated by the customer. • Does the malfunction symptom recur?	Yes	Go to the next step.
		No	The after-market electrical product is causing the malfunction.
6	**INSPECT BSM CONTROL MODULE (RADAR)** • Perform the BSM radar test. (See 09-22-71 BLIND SPOT MONITORING (BSM) RADAR TEST.) • Is “TEST PASSED” displayed?	Yes	Temporary malfunction with the radar echo-back. If the same symptom recurs repeatedly, replace the BSM control module. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	Repair or replace malfunctioning part according to inspection result. (See 09-22-71 BLIND SPOT MONITORING (BSM) RADAR TEST.)

BSM INDICATOR LIGHT DOES NOT ILLUMINATE WHILE UNDER BSM INDICATOR LIGHT-ILLUMINATION CONDITIONS [BLIND SPOT MONITORING (BSM)]

id0903d9015400

Description	**BSM indicator light does not illuminate while under BSM indicator light-illumination conditions** • The BSM indicator light does not illuminate despite satisfying the conditions to illuminate the BSM indicator light (vehicle speed above 32 km/h {20 mph} or more, turn signals off, and vehicle in warning zone).
Possible Causes	• The BSM control module mistakenly recognizes a vehicle as being outside of the warning zone when it actually inside of it. — Radar (BSM control module integrated) is not emitted inside of warning zone (unable to emit radar inside warning zone) • Damage, deformity or looseness to installation bracket or vehicle frame (including moderate impacts) • Malfunction in steering angle sensor ((instrument cluster or EPS control module malfunction) • Problem with rear bumper such as soiling to radar emitting/receiving area, application of stickers (including transparent types), repairs using putty application. — BSM control module does not receive echo-back correctly • BSM control module (radar) malfunction • Problem with rear bumper such as soiling to radar emitting/receiving area, application of stickers (including transparent types), repairs using putty application. **Note** • Rear bumper problem such defective installation of rear bumper, excessive soiling on the radar emitting/receiving area, sticker adhesion (including transparent types), repairs to rear bumper using putty • Non-genuine bumper, paint, or installation of after-market parts negatively affecting radar echo-back ability — After-market electrical parts interfere with BSM system • Malfunction in BSM indicator light related parts — Open circuit in wiring harness between BSM indicator light and BSM control module — Open circuit in wiring harness or poor ground between BSM control module and ground — BSM indicator light malfunction

SYMPTOM TROUBLESHOOTING [BLIND SPOT MONITORING (BSM)]

Diagnostic Procedure

Step	Inspection	Result	Action
1	**INSPECT IF MALFUNCTION IS IN INPUT SIGNAL OR BSM CONTROL MODULE** • Monitor the following PIDs on the suspected side of the BSM control module using the M-MDS. (See 09-02H-33 PID/DATA MONITOR INSPECTION [BLIND SPOT MONITORING (BSM)].) — SWA_POS • Are the monitoring values normal?	Yes	Go to Step 3.
		No	Go to the next step.
2	**INSPECT STEERING ANGLE SIGNAL** • Monitor the PID STR_ANG for the EPS control module using the M-MDS. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the monitoring value normal?	Yes	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Replace the EPS control module. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
3	**INSPECT REAR BUMPER** • Inspect the rear bumper at the BSM installation area for the following: — Installation condition — Sticker adhesion — Excessive soiling — Repairs using putty • Is the rear bumper condition normal?	Yes	Go to the next step.
		No	Repair or replace malfunctioning parts, or replace the rear bumper. (See 09-10-24 REAR BUMPER REMOVAL/INSTALLATION.)
4	**VERIFY THE CONDITION OF THE BSM CONTROL MODULE** • Remove the rear bumper. (See 09-10-24 REAR BUMPER REMOVAL/INSTALLATION.) • Inspect the BSM control module for the following: — Looseness — Damage or deformity to the bracket — Distortion at vehicle installation surface • Is the BSM control module installation condition normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part.
5	**VERIFY IF CAUSE OF MALFUNCTION IS IN AFTER-MARKET ELECTRICAL PRODUCT OR ELSEWHERE** • Remove the after-market electrical product. • Verify that the malfunction symptom recurs as stated by the customer. • Does the malfunction symptom recur?	Yes	Go to the next step.
		No	The after-market electrical product is causing the malfunction.
6	**INSPECT BSM CONTROL MODULE (RADAR)** • Perform the BSM radar test. (See 09-22-71 BLIND SPOT MONITORING (BSM) RADAR TEST.) • Is “TEST PASSED” displayed?	Yes	Temporary malfunction with the radar echo-back. If the same symptom recurs repeatedly, replace the BSM control module. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Repair or replace malfunctioning part according to inspection result. (See 09-22-71 BLIND SPOT MONITORING (BSM) RADAR TEST.)

SYMPTOM TROUBLESHOOTING [BLIND SPOT MONITORING (BSM)]

BSM INDICATOR LIGHT FLASHES WHILE NOT UNDER BSM INDICATOR LIGHT-FLASHING CONDITIONS (NO COMBINATION SWITCH OPERATION (TURN SIGNAL SWITCH)) [BLIND SPOT MONITORING (BSM)]

id0903d9015500

Description	**BSM indicator light flashes while not under BSM indicator light-flashing conditions (no combination switch operation (turn signal switch)** • The BSM indicator light flashes despite not satisfying the BSM indicator light flashing conditions (vehicle speed above 32 km/h {20 mph} or more, turn signal on, and vehicle in warning zone)). • The BSM indicator light flashes, but the turn signals are off.
Possible Causes	**Note** • This malfunction symptom is basically the same as symptom “BSM indicator light while not under BSM indicator light-illumination conditions”. • BSM control module recognizes a vehicle as being inside the warning zone when it is actually outside of it. — Radar (BSM control module integrated) is emitted outside of warning zone (deviates from warning zone) • Damage, deformity or looseness to installation bracket or vehicle frame (including moderate impacts). • Malfunction in steering angle signal (communication error between rear body control module (RBCM) and BSM control module, or EPS control module malfunction). • Problem with rear bumper such as soiling to radar emitting/receiving area, application of stickers (including transparent types), repairs using putty application. — After-market electrical parts interfere with BSM system • BSM does not recognize vehicle speed correctly (BSM control module mistakenly recognizes vehicle speed as being above 32 km/h {20 mph} or more — PCM communication error with BSM control module — Malfunction in ABS wheel speed sensor related parts • BSM control module mistakenly recognizes that turn signals have been operated — Short to ground circuit in wiring harness between combination switch (turn signal switch) and rear body control module (RBCM) — Communication error between rear body control module (RBCM) and BSM control module — BSM control module malfunction

Diagnostic Procedure

Step	Inspection	Result	Action
1	**VERIFY MALFUNCTION SYMPTOM** • BSM indicator light illuminates while under light-off conditions.	Yes	Go to the symptom troubleshooting procedure, “ BSM indicator light illuminates while not under BSM indicator light-off conditions”. (See 09-03M-8 BSM INDICATOR LIGHT ILLUMINATES WHILE NOT UNDER LIGHT-ILLUMINATION CONDITIONS [BLIND SPOT MONITORING (BSM)].)
		No	Go to the next step.
2	**INSPECT IF MALFUNCTION IS IN REAR BODY CONTROL MODULE (RBCM) INPUT SIGNAL OR BSM** • Monitor the following PIDs on the suspected side of the BSM control module using the M-MDS. (See 09-02H-33 PID/DATA MONITOR TABLE [BLIND SPOT MONITORING (BSM)].) — TURN_SW_L — TURN_SW_R • Are the monitoring values normal?	Yes	Replace the BSM control module. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Retrieve DTCs from the start stop unit, instrument cluster, and BSM control module using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].)

SYMPTOM TROUBLESHOOTING [BLIND SPOT MONITORING (BSM)]

BSM INDICATOR LIGHT DOES NOT FLASH WHILE UNDER BSM INDICATOR LIGHT-FLASHING CONDITIONS (WITH COMBINATION SWITCH OPERATION (TURN SIGNAL SWITCH)) [BLIND SPOT MONITORING (BSM)]

id0903d9015600

Description	**BSM indicator light does not flash while under BSM indicator light-flashing conditions (with combination switch operation (turn signal switch))** • The BSM indicator light does not flash or illuminate continuously, but the conditions to flash the BSM indicator light are satisfied (vehicle speed above 32 km/h {20 mph} or more, turn signal on, and vehicle in warning zone). • BSM indicator light does not flash or illuminate continuously, but turn signals are off.
Possible Causes	**Note** • This malfunction symptom is basically the same as symptom “BSM indicator light does not illuminate while under BSM indicator light-illumination conditions”. • The BSM control module mistakenly recognizes a vehicle as being outside of the warning zone when it is actually inside of it. — Radar (BSM control module integrated) is not emitted inside of warning zone (unable to emit radar inside warning zone) • Damage, deformity or looseness to installation bracket or vehicle frame (including moderate impacts). • Malfunction in steering angle signal (communication error between rear body control module (RBCM) and BSM control module, or EPS control module malfunction). • Problem with rear bumper such as soiling to radar emitting/receiving area, application of stickers (including transparent types), repairs using putty application. — BSM control module does not receive echo-back correctly • BSM control module (radar) malfunction • Problem with rear bumper such as soiling to radar emitting/receiving area, application of stickers (including transparent types), repairs using putty application. **Note** • Rear bumper problems such defective installation of rear bumper, excessive soiling on radar emitting/receiving area, sticker adhesion (including transparent types), repairs to rear bumper using putty • Non-genuine bumper or paint, or installation of after-market parts negatively affecting radar echo-back ability — After-market electrical parts interfere with BSM system • BSM does not recognize vehicle speed correctly (BSM control module mistakenly recognizes vehicle speed as being within 32 km/h {20 mph} or more — PCM communication error with BSM control module — Malfunction in ABS wheel speed sensor related parts • Malfunction in BSM indicator light related parts — Open circuit in wiring harness between BSM indicator light and BSM control module — Open circuit in wiring harness or poor ground between BSM control module and ground — BSM indicator light malfunction • Signal is not input for turn signal — Combination switch (turn signal switch) malfunction — Open circuit in wiring harness between combination switch (turn signal switch) and rear body control module (RBCM) — Communication error between rear body control module (RBCM) and BSM control module — BSM control module malfunction

SYMPTOM TROUBLESHOOTING [BLIND SPOT MONITORING (BSM)]

Diagnostic Procedure

Step	Inspection	Result	Action
1	**VERIFY MALFUNCTION SYMPTOM** • BSM indicator light illuminates while under light-off conditions.	Yes	Go to the next step.
		No	Go to the symptom troubleshooting procedure, ”BSM indicator light does not illuminate while under BSM indicator light-illumination conditions”. (See 09-03M-9 BSM INDICATOR LIGHT DOES NOT ILLUMINATE WHILE UNDER BSM INDICATOR LIGHT-ILLUMINATION CONDITIONS [BLIND SPOT MONITORING (BSM)].)
2	**INSPECT IF MALFUNCTION IS IN REAR BODY CONTROL MODULE (RBCM) INPUT SIGNAL OR BSM** • Monitor the following PIDs on the suspected side of the BSM control module using the M-MDS. (See 09-02H-33 PID/DATA MONITOR TABLE [BLIND SPOT MONITORING (BSM)].) — TURN_SW_L — TURN_SW_R • Are the monitoring values normal?	Yes	Replace the BSM control module. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Retrieve DTCs from the start stop unit, instrument cluster, and BSM control module using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].)

THE BSM INDICATOR LIGHT DOES NOT FLASH OR ILLUMINATE CONTINUOUSLY, BUT A TURN SIGNAL IS ON [BLIND SPOT MONITORING (BSM)]

id0903d9015700

Description	**The BSM indicator light does not flash or illuminate continuously, but a turn signal is ON** • BSM warning alarm sounds but BSM indicator light does not flash • BSM warning alarm is triggered on side opposite to the direction in which turn signal is operated
Possible Causes	• Instrument cluster receives incorrect BSM warning alarm request signal — Communication error between BSM control module and instrument cluster — Instrument cluster malfunction

Diagnostic Procedure

Step	Inspection	Result	Action
1	**INSPECT BSM WARNING ALARM** • Turn off the BSM using the M-MDS instrument cluster active command modes ALARM. (See 09-02G-38 ACTIVE COMMAND MODES TABLE [INSTRUMENT CLUSTER].) • Does the BSM turn off according to the active command models?	Yes	Go to the next step.
		No	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
2	**VERIFY DTCs** • Retrieve DTCs from the BSM control module and instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Are any DTCs displayed?	Yes	Go to the applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].) (See 09-02H-6 DTC TABLE [BLIND SPOT MONITORING (BSM)].)
		No	Go to the next step.
3	**VERIFY BSM INDICATOR LIGHT CONDITION** • Verify the BSM indicator light illumination condition while under the BSM indicator light-illumination conditions (vehicle speed above 32 km/h {20 mph} or more, turn signals off, and vehicle in warning zone). • Does the BSM indicator light illuminate normally?	Yes	Replace the BSM control module. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the symptom troubleshooting procedure, ”BSM indicator light does not illuminate while under BSM indicator light-illumination conditions”. (See 09-03M-9 BSM INDICATOR LIGHT DOES NOT ILLUMINATE WHILE UNDER BSM INDICATOR LIGHT-ILLUMINATION CONDITIONS [BLIND SPOT MONITORING (BSM)].)

SYMPTOM TROUBLESHOOTING [BLIND SPOT MONITORING (BSM)]

BSM WARNING ALARM DOES NOT SOUND WHILE BSM INDICATOR LIGHT FLASHES [BLIND SPOT MONITORING (BSM)]

id0903d9015800

Description	**BSM warning alarm does not sound while BSM indicator light flashes** • The BSM control module recognizes that vehicle is in warning zone on side in which turn signal is operated, but BSM warning alarm does not sound despite BSM indicator light flashing.
Possible Causes	• Instrument cluster receives incorrect BSM warning alarm request signal — Instrument cluster malfunction — BSM control module malfunction

Diagnostic Procedure

Step	Inspection	Result	Action
1	**VERIFY MALFUNCTION SYMPTOM** • Verify the malfunction symptoms for each side. • Is there a malfunction symptom on each side (BSM warning alarm sounds)?	Yes	Go to Step 3.
		No	Go to the next step.
2	**INSPECT BSM WARNING ALARM REQUEST SIGNAL** • Monitor the PID BUZZER on the suspected side of the BSM control module using the M-MDS while the BSM indicator light is flashing. (See 09-02H-33 PID/DATA MONITOR INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is the PID BUZZER on when the BSM indicator light is flashing?	Yes	Replace the applicable BSM control module. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**INSPECT BSM WARNING ALARM** • Turn off the BSM using the M-MDS instrument cluster active command modes ALARM. (See 09-02G-38 ACTIVE COMMAND MODES TABLE [INSTRUMENT CLUSTER].) • Does the BSM turn off according to the active command models?	Yes	Replace the applicable BSM control module. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [REAR VEHICLE MONITORING SYSTEM]

FOREWORD [REAR VEHICLE MONITORING SYSTEM]

id0903z7378400

- When performing an asterisked (*) troubleshooting inspection, first verify the damage and connection status of the connectors and terminals, then perform the inspection while shaking the wiring harness to discover whether poor contact points are the cause of an intermittent malfunction. If there is a malfunction in the connectors or terminals, securely connect, repair, or perform replacement.
- When the system component parts are replaced/removed/installed, the rear vehicle monitoring configuration and rear vehicle monitoring radar aiming for the radar sensor must be performed. Perform the relevant initial setting servicing referring to the corresponding removal/installation procedure.
- The rear vehicle monitoring system is a control device which monitors the vehicle's rear for approaching vehicles using radio waves emitted from the radar sensor which reflect off the detected vehicle and return to the radio sensor part of the control module. The rear vehicle monitoring system may not operate normally under the following conditions:
  Effects of weather conditions
  — Vehicle is driven in rain, snow, or fog.
  Effects of driving conditions
  — Vehicle does not approach even though the vehicle enters the detection area from the rear of the detecting vehicle
  — Vehicles which are traveling at nearly the same speed as the detecting vehicle for long periods
  — Vehicles in an adjacent lane on a road with a wider lane width (detection area for radar sensor is set for highway width)
  Effects of vehicle equipment conditions
  — Rear bumper around radar sensor is deformed.
  — Ice, snow or dirt is adhering to the rear bumper radar sensors.
  Effects of vehicle approaching from the rear
  — Small motorcycle
  — Vehicles with body shapes that may not reflect radar (unloaded trailers with low vehicle height, sports cars)
  Effects of road conditions

SYMPTOM TROUBLESHOOTING [REAR VEHICLE MONITORING SYSTEM]

SYMPTOM TROUBLESHOOTING [REAR VEHICLE MONITORING SYSTEM]

id0903z7378800

No.	Troubleshooting item	Description
1	09-03N-6 RVM INDICATOR LIGHT (GREEN)/RVM WARNING INDICATOR LIGHT DOES NOT ILLUMINATE WHEN IGNITION IS SWITCHED ON [REAR VEHICLE MONITORING SYSTEM]	• The RVM indicator light (green) does not illuminate when the ignition is switched ON. • The RVM warning indicator light does not illuminate when the ignition is switched ON. • No communication with M-MDS.
2	09-03N-8 RVM INDICATOR LIGHT (GREEN) DOES NOT TURN OFF WHEN REAR VEHICLE MONITORING SYSTEM IS OFF [REAR VEHICLE MONITORING SYSTEM]	• The RVM indicator light (green) does not turn off even though the RVM switch turns off after the ignition is switched ON.
3	09-03N-9 RVM INDICATOR LIGHT (GREEN) DOES NOT ILLUMINATE [REAR VEHICLE MONITORING SYSTEM]	• The RVM indicator light (green) does not illuminate even though the RVM switch turns on after the ignition is switched ON.
4	09-03N-10 RVM WARNING INDICATOR LIGHT ILLUMINATES WHILE NOT UNDER ILLUMINATION CONDITIONS [REAR VEHICLE MONITORING SYSTEM]	• The RVM warning indicator light illuminates without satisfying its illumination conditions (**vehicle speed is 30 km/h {19 mph} or more**, turn switch is off, and a vehicle is in the detection area).
5	09-03N-12 RVM WARNING INDICATOR LIGHT DOES NOT ILLUMINATE UNDER ILLUMINATION CONDITIONS [REAR VEHICLE MONITORING SYSTEM]	• The RVM warning indicator light flashes/does not illuminate while under the illumination conditions (**Vehicle speed above 30 km/h {19 mph}**, turn switch is off, and vehicle in detection area).
6	09-03N-14 RVM WARNING INDICATOR LIGHT FLASHES WHILE NOT UNDER FLASHING CONDITIONS (TURN SIGNALS OFF, OR NO VEHICLE IN ALERT AREA) [REAR VEHICLE MONITORING SYSTEM]	• The RVM warning indicator light flashes while not under the flash conditions (**Vehicle speed above 30 km/h {19 mph}**, turn switch is on, and vehicle in detection area). • RVM warning indicator light flashes even though turn switch is off.
7	09-03N-15 RVM WARNING INDICATOR LIGHT DOES NOT FLASH WHILE UNDER FLASHING CONDITIONS (TURN SIGNAL IS BEING OPERATED) [REAR VEHICLE MONITORING SYSTEM]	• The RVM warning indicator light does not flash/ remains illuminated while under the flash conditions (**vehicle speed 30 km/h {19 mph} or more**, turn switch is on, and vehicle in detection area). • RVM warning indicator light does not flash/ illuminates as is even though turn switch is on.
8	09-03N-16 REAR VEHICLE MONITORING WARNING ALARM DOES NOT SOUND WHILE RVM WARNING INDICATOR LIGHT IS FLASHING [REAR VEHICLE MONITORING SYSTEM]	• The rear vehicle monitoring warning chime does not sound when the vehicle is in the detection area on the side in which the turn switch is on, and the RVM warning indicator light is flashing.
9	09-03N-17 BRIGHTNESS LEVEL OF RVM WARNING INDICATOR LIGHTS IS TOO HIGH OR LOW [REAR VEHICLE MONITORING SYSTEM]	• RVM warning indicator light illumination brightness is weak during the afternoon (headlights off). (Appropriate brightness during nighttime) • RVM warning indicator light illumination brightness is strong during the night (headlights on). (Appropriate brightness at night)

SYMPTOM TROUBLESHOOTING [REAR VEHICLE MONITORING SYSTEM]

RVM INDICATOR LIGHT (GREEN)/RVM WARNING INDICATOR LIGHT DOES NOT ILLUMINATE WHEN IGNITION IS SWITCHED ON [REAR VEHICLE MONITORING SYSTEM]

id0903z7013900

Note
- If there is any vehicle malfunction complaint lodged by a customer, perform 09-03N-2 FOREWORD [REAR VEHICLE MONITORING SYSTEM] malfunction diagnosis according to the troubleshooting procedure.

Description
- The RVM indicator light (green) does not illuminate when the ignition is switched ON.
- RVM warning indicator light does not illuminate when ignition is switched ON.

Possible malfunction
- Rear vehicle monitoring control module (RH) does not initiate.
  - — Open circuit in wiring harness between IG1 relay and rear vehicle monitoring control module (RH) terminal F
  - — C/U IG1 15 A fuse damage, burnt out
  - — Open circuit in wiring harness between rear vehicle monitoring control module (RH) terminal H and ground
  - — Poor ground (looseness, disengagement)
  - — Rear vehicle monitoring control module malfunction (internal malfunction)
- Rear vehicle monitoring control module (LH) does not initiate.
  - — Open circuit in wiring harness between IG1 relay and rear vehicle monitoring control module (LH) terminal F
  - — C/U IG1 15 A fuse damage, burnt out
  - — Open circuit in wiring harness between rear vehicle monitoring control module (LH) terminal H and ground
  - — Poor ground (looseness, disengagement)
  - — Rear vehicle monitoring control module malfunction (internal malfunction)
- RVM warning indicator light illumination circuit disabled.
  - — RVM warning indicator light malfunction
  - — Open or short circuit in wiring harness between rear vehicle monitoring control module (LH) and RVM warning indicator light
  - — Rear vehicle monitoring control module (LH) internal malfunction (RVM warning indicator light illumination circuit disabled)
- Instrument cluster does not illuminate RVM indicator light (green).
  - — Instrument cluster internal malfunction (RVM indicator light (green) illumination circuit disabled)

Diagnostic Procedure

Step	Inspection		Action
1	**DETERMINE IF MALFUNCTION CAUSE IS RVM INDICATOR LIGHT (GREEN) OR RVM WARNING INDICATOR LIGHT ILLUMINATION CIRCUIT** • Switch the ignition ON (engine off or on). • Verify RVM indicator light (green) condition. • Does the RVM indicator light (green) illuminate?	Yes	Go to Step 3.
		No	Go to the next step.
2	**DETERMINE IF MALFUNCTION CAUSE IS REAR VEHICLE MONITORING CONTROL MODULE OR INSTRUMENT CLUSTER RELATED** • Illuminate all the indicator lights and warning lights in the instrument cluster using the simulation function WL+IL in the M-MDS instrument cluster. (See 09-02G-38 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Does the RVM indicator light (green) illuminate?	Yes	Replace the rear vehicle monitoring control module (RH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [REAR VEHICLE MONITORING SYSTEM]

Step	Inspection		Action
3*	**DETERMINE IF MALFUNCTION CAUSE IS REAR VEHICLE MONITORING CONTROL MODULES OR RVM WARNING INDICATOR LIGHTS** • Inspect the following: **RVM warning indicator light (RH) related:** — RVM warning indicator light (RH) — Wiring harness between RVM warning indicator light (RH) terminal G and rear vehicle monitoring control module (LH) terminal D — Wiring harness between RVM warning indicator light (RH) terminal H and rear vehicle monitoring control module (LH) terminal C **RVM warning indicator light (LH) related:** — RVM warning indicator light (LH) — Wiring harness between RVM warning indicator light (LH) terminal G and rear vehicle monitoring control module (LH) terminal K — Wiring harness between RVM warning indicator light (LH) terminal H and rear vehicle monitoring control module (LH) terminal G • Is any malfunction verified?	Yes	Repair or replace the malfunctioning location.
		No	Replace the rear vehicle monitoring control module (LH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
4*	**INSPECT REAR VEHICLE MONITORING CONTROL MODULE (RH) POWER SUPPLY SYSTEM** • Switch the ignition ON (engine off or on). • Measure the voltage at rear vehicle monitoring control module (RH) terminal F. • Is the voltage B+?	Yes	Go to the next step.
		No	Inspect the C/U IG1 15 A fuse. **If the fuse is burned out:** • Inspect and repair the wiring harness between the C/U IG1 15 A fuse and rear vehicle monitoring control modules (RH/LH) terminal F for a short circuit to the ground system. **If the fuse is not damaged or burned out:** • Inspect and repair the following wiring harness for an open circuit: — Between IG relay terminal 1B (IG1 relay) and rear vehicle monitoring control modules (RH/LH) terminal F
5*	**INSPECT REAR VEHICLE MONITORING CONTROL MODULE (RH) GROUND SYSTEM** • Switch the ignition off (LOCK). • Disconnect the rear vehicle monitoring control module (RH) connector. • Verify continuity between rear vehicle monitoring control module (RH) vehicle wiring harness-side connector terminal H and ground. • Is there continuity?	Yes	Replace the rear vehicle monitoring control module (RH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Inspect and repair the ground point for looseness, disengagement, or lifting. Inspect and repair the wiring harness for an open circuit.

SYMPTOM TROUBLESHOOTING [REAR VEHICLE MONITORING SYSTEM]

RVM INDICATOR LIGHT (GREEN) DOES NOT TURN OFF WHEN REAR VEHICLE MONITORING SYSTEM IS OFF [REAR VEHICLE MONITORING SYSTEM]

id0903z7014000

Note
- If there is any vehicle malfunction complaint lodged by a customer, perform 09-03N-2 FOREWORD [REAR VEHICLE MONITORING SYSTEM] malfunction diagnosis according to the troubleshooting procedure.

Description
- The RVM indicator light (green) does not turn off even though the RVM switch turns off after the ignition is switched ON.

Possible malfunction
- Rear vehicle monitoring control module (RH) does not recognize the RVM switch on/off status.
  - — RVM switch malfunction (stuck switch, internal malfunction)
  - — Rear vehicle monitoring control module (RH) malfunction
- Instrument cluster does not turn off RVM indicator light (green).
  - — Instrument cluster internal malfunction (RVM indicator light (green) illumination circuit disabled)

Diagnostic Procedure

Step	Inspection		Action
1*	**DETERMINE IF MALFUNCTION CAUSE IS RVM SWITCH OR RVM INDICATOR LIGHT (GREEN) RELATED** • Monitor the rear vehicle monitoring system PID MAIN_SW using the M-MDS. (See 09-02I-47 PID/DATA MONITOR INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Turn the RVM switch on and off. • Does the PID MAIN_SW monitoring value turn on and off according to the RVM switch operation?	Yes	Go to Step 3.
		No	Go to the next step.
2	**INSPECT RVM SWITCH** • Inspect the RVM switch. (See 09-22-91 RVM SWITCH INSPECTION.) • Is the RVM switch normal?	Yes	Go to the next step.
		No	Replace the RVM switch. (See 09-22-91 RVM SWITCH REMOVAL/INSTALLATION.)
3	**DETERMINE IF MALFUNCTION CAUSE IS INSTRUMENT CLUSTER OR REAR VEHICLE MONITORING CONTROL MODULE (RH)** • Turn off all the indicator lights and warning lights in the instrument cluster using the simulation function WL+IL of the M-MDS instrument cluster. (See 09-02G-38 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Does the RVM indicator light (green) turn off?	Yes	Replace the rear vehicle monitoring control module (RH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [REAR VEHICLE MONITORING SYSTEM]

RVM INDICATOR LIGHT (GREEN) DOES NOT ILLUMINATE [REAR VEHICLE MONITORING SYSTEM]

id0903z7014100

Note

- If there is any vehicle malfunction complaint lodged by a customer, perform 09-03N-2 FOREWORD [REAR VEHICLE MONITORING SYSTEM] malfunction diagnosis according to the troubleshooting procedure.

Description

- The RVM indicator light (green) does not illuminate even though the RVM switch turns on after the ignition is switched ON.

Possible malfunction

- Rear vehicle monitoring control module (RH) does not recognize the RVM switch on/off status.
  - — RVM switch malfunction (stuck switch, internal malfunction)
  - — Rear vehicle monitoring control module (RH) malfunction
- Instrument cluster does not illuminate RVM indicator light (green).
  - — Instrument cluster internal malfunction (RVM indicator light (green) illumination circuit disabled)

Diagnostic Procedure

Step	Inspection		Action
1	**DETERMINE IF MALFUNCTION CAUSE IS RVM SWITCH OR RVM INDICATOR LIGHT (GREEN) RELATED** • Display the rear vehicle monitoring system PID MAIN_SW item using the M-MDS. (See 09-02I-47 PID/DATA MONITOR INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Turn the RVM switch on and off. • Does the PID MAIN_SW monitoring value turn on and off according to the RVM switch operation?	Yes	Go to Step 3.
		No	Go to the next step.
2	**INSPECT RVM SWITCH** • Inspect the RVM switch. (See 09-22-91 RVM SWITCH INSPECTION.) • Is the RVM switch normal?	Yes	Go to the next step.
		No	Replace the RVM switch. (See 09-22-91 RVM SWITCH REMOVAL/INSTALLATION.)
3	**DETERMINE IF MALFUNCTION CAUSE IS INSTRUMENT CLUSTER OR REAR VEHICLE MONITORING CONTROL MODULE (RH)** • Illuminate all the indicator lights and warning lights in the instrument cluster using the simulation function WL+IL in the M-MDS instrument cluster. (See 09-02G-38 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Does the RVM indicator light (green) illuminate?	Yes	Replace the rear vehicle monitoring control module (RH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [REAR VEHICLE MONITORING SYSTEM]

RVM WARNING INDICATOR LIGHT ILLUMINATES WHILE NOT UNDER ILLUMINATION CONDITIONS [REAR VEHICLE MONITORING SYSTEM]

id0903z7014200

Note
- If there is any vehicle malfunction complaint lodged by a customer, perform 09-03N-2 FOREWORD [REAR VEHICLE MONITORING SYSTEM] malfunction diagnosis according to the troubleshooting procedure.

Description
- The RVM warning indicator light illuminates without satisfying its illumination conditions (**vehicle speed is 30 km/h {19 mph} or more**, turn-signals are off, and a vehicle is in the detection area).

Possible malfunction
- Rear vehicle monitoring control modules false-detect that a vehicle is inside detection area when it is actually outside of it, or cannot determine that a vehicle is entering blind-spot area.
  - — Rear vehicle monitoring control module radar is not emitted inside detection area (deviates from blind-spot area or adjacent lanes)
    - Damage, deformity or looseness to rear vehicle monitoring bracket or vehicle frame (including moderate impacts)
    - Incorrect installation of rear bumper, soiling to radar emitting/receiving area, application of stickers (including transparent types), repairs using putty application
  - — Effect of non-genuine, after-market electronic device installation

Note
- The radar sensor cannot receive echo-back correctly if there is a thick moisture film (such as condensation) or excessive soiling covering the rear bumper radar emitting/receiving areas.
- Non-genuine rear bumper or paint, or installation of after-market parts may negatively affect radar echo-back ability.

- RVM warning indicator light illumination circuit disabled
  - — Rear vehicle monitoring control module (LH) internal malfunction (RVM warning indicator light illumination circuit disabled)
  - — Rear vehicle monitoring control module (RH) malfunction (outputs incorrect illumination request)

SYMPTOM TROUBLESHOOTING [REAR VEHICLE MONITORING SYSTEM]

Diagnostic Procedure

Warning

- **When performing a road test, always verify the safety of the surrounding area before performing the test.**
- **Do not perform a road test at a speed which exceeds the legal speed limit.**
- **To assure safety, perform a road test using two people when the vehicle is being driven. (One drives the vehicle and the other operates the M-MDS.)**

Step	Inspection		Action
1	**VERIFY REAR BUMPER CONDITION** • Inspect the rear bumper at the rear vehicle monitoring control modules installation areas for the following: — Installation condition — Application of stickers (including transparent types) — Excessive soiling — Repairs using putty • Is the rear bumper condition normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part, or replace the rear bumper. (See 09-10-24 REAR BUMPER REMOVAL/ INSTALLATION.)
2	**VERIFY INSTALLATION CONDITION OF REAR VEHICLE MONITORING CONTROL MODULES** • Remove the rear bumper. (See 09-10-24 REAR BUMPER REMOVAL/ INSTALLATION.) • Inspect the installation condition of the rear vehicle monitoring control modules for the following: — Looseness — Damage or deformity to the bracket — Distortion at vehicle installation surface • Is the rear vehicle monitoring control modules installation condition normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning location.
3	**VERIFY IF MALFUNCTION CAUSE IS AFTER-MARKET ELECTRONIC DEVICE INSTALLATION** • Disconnect the non-genuine, after-market electronic device connectors. • Verify if malfunction symptom recurs as stated by customer. • Does the malfunction recur?	Yes	Go to the next step.
		No	Explain to the customer that the malfunction occurred due to the after-market electronic device installation.
4	**VERIFY IF MALFUNCTION CAUSE IS RVM PROXIMITY INDICATOR LIGHT ILLUMINATION CIRCUIT RELATED** • Turn the following rear vehicle monitoring system simulation function items on and off using the M-MDS simulation function. (See 09-02I-48 ACTIVE COMMAND MODES INSPECTION [REAR VEHICLE MONITORING SYSTEM].) — WRN_IND_R — WRN_IND_L • Does the RVM warning indicator light illuminate/ turn off?	Yes	Go to Step 6.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [REAR VEHICLE MONITORING SYSTEM]

Step	Inspection		Action
5	**DETERMINE IF MALFUNCTION CAUSE IS REAR VEHICLE MONITORING CONTROL MODULES OR RVM WARNING INDICATOR LIGHTS** • Inspect the following: **RVM warning indicator light (RH) related:** — RVM warning indicator light (RH) — Wiring harness between RVM warning indicator light (RH) terminal G and rear vehicle monitoring control module (LH) terminal D — Wiring harness between RVM warning indicator light (RH) terminal H and rear vehicle monitoring control module (LH) terminal C **RVM warning indicator light (LH) related:** — RVM warning indicator light (LH) — Wiring harness between RVM warning indicator light (LH) terminal G and rear vehicle monitoring control module (LH) terminal K — Wiring harness between RVM warning indicator light (LH) terminal H and rear vehicle monitoring control module (LH) terminal G • Is any malfunction verified?	Yes	Repair or replace the malfunctioning location.
		No	Replace the rear vehicle monitoring control module (LH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
6	**INSPECT REAR VEHICLE MONITORING CONTROL MODULES** • Inspect the malfunctioning rear vehicle monitoring control module. (See 09-22-79 REAR VEHICLE MONITORING CONTROL MODULE INSPECTION.) • Is the rear vehicle monitoring control module normal?	Yes	Temporary malfunction with the radar echo-back. If the same symptom recurs repeatedly, replace the rear vehicle monitoring control module. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Replace the applicable rear vehicle monitoring control module. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)

RVM WARNING INDICATOR LIGHT DOES NOT ILLUMINATE UNDER ILLUMINATION CONDITIONS [REAR VEHICLE MONITORING SYSTEM]

id0903z7014300

Note
- If there is any vehicle malfunction complaint lodged by a customer, perform 09-03N-2 FOREWORD [REAR VEHICLE MONITORING SYSTEM] malfunction diagnosis according to the troubleshooting procedure.

Description
- The RVM warning indicator light flashes/does not illuminate while under the illumination conditions (**Vehicle speed above 30 km/h {19 mph}**, turn-signals off, and vehicle in detection area).

Possible malfunction
- Rear vehicle monitoring control modules false-detect that a vehicle is outside detection area when it is actually inside of it, or cannot determine that no vehicle is entering blind-spot area.
  - — Rear vehicle monitoring control module radar is not emitted inside detection area (deviates from blind-spot area or adjacent lanes)
    - Damage, deformity or looseness to installation bracket or vehicle frame (including moderate impacts)
    - Incorrect installation of rear bumper, soiling to radar emitting/receiving area, application of stickers (including transparent types), repairs using putty application
  - — Rear vehicle monitoring control module radar does not receive echo-back correctly
    - Rear vehicle monitoring control module malfunction
    - Incorrect installation of rear bumper, soiling to radar emitting/receiving area, application of stickers (including transparent types), repairs using putty application
  - — Effect of non-genuine, after-market electronic device installation

SYMPTOM TROUBLESHOOTING [REAR VEHICLE MONITORING SYSTEM]

Note
- The radar sensor cannot receive echo-back correctly if there is a thick moisture film (such as condensation) or excessive soiling covering the rear bumper radar emitting/receiving areas.
- Non-genuine rear bumper or paint, or installation of after-market parts may negatively affect radar echo-back ability.

- RVM warning indicator light illumination disabled
  - — RVM warning indicator light malfunction
  - — Rear vehicle monitoring control module (LH) malfunction (RVM warning indicator light illumination circuit malfunction)

Diagnostic Procedure

Warning
- **When performing a road test, always verify the safety of the surrounding area before performing the test.**
- **Do not perform a road test at a speed which exceeds the legal speed limit.**
- **To assure safety, perform a road test using two people when the vehicle is being driven. (One drives the vehicle and the other operates the M-MDS.)**

Step	Inspection		Action
1	**DETERMINE IF MALFUNCTION CAUSE IS RVM WARNING LIGHT (ORANGE) OR RVM WARNING INDICATOR LIGHT ILLUMINATION CIRCUIT** • Turn the following rear vehicle monitoring system simulation items on and off using the M-MDS. (See 09-02I-48 ACTIVE COMMAND MODES INSPECTION [REAR VEHICLE MONITORING SYSTEM].) — WRN_IND_R — WRN_IND_L • Does the RVM warning indicator light illuminate/turn off?	Yes	Go to Step 3.
		No	Go to the next step.
2	**DETERMINE IF MALFUNCTION CAUSE IS REAR VEHICLE MONITORING CONTROL MODULES OR RVM WARNING INDICATOR LIGHTS** • Inspect the following: **RVM warning indicator light (RH) related:** — RVM warning indicator light (RH) — Wiring harness between RVM warning indicator light (RH) terminal G and rear vehicle monitoring control module (LH) terminal D — Wiring harness between RVM warning indicator light (RH) terminal H and rear vehicle monitoring control module (LH) terminal C **RVM warning indicator light (LH) related:** — RVM warning indicator light (LH) — Wiring harness between RVM warning indicator light (LH) terminal G and rear vehicle monitoring control module (LH) terminal K — Wiring harness between RVM warning indicator light (LH) terminal H and rear vehicle monitoring control module (LH) terminal G • Is any malfunction verified?	Yes	Repair or replace the malfunctioning location.
		No	Replace the rear vehicle monitoring control module (LH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [REAR VEHICLE MONITORING SYSTEM]

Step	Inspection		Action
3	**VERIFY REAR BUMPER CONDITION** • Inspect the rear bumper at the rear vehicle monitoring control modules installation areas for the following: — Installation condition — Application of stickers (including transparent types) — Excessive soiling — Repairs using putty • Is the rear bumper condition normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part, or replace the rear bumper. (See 09-10-24 REAR BUMPER REMOVAL/ INSTALLATION.)
4	**VERIFY INSTALLATION CONDITION OF REAR VEHICLE MONITORING CONTROL MODULES** • Remove the rear bumper. (See 09-10-24 REAR BUMPER REMOVAL/ INSTALLATION.) • Inspect the installation condition of the rear vehicle monitoring control modules for the following: — Looseness — Damage or deformity to the bracket — Distortion at vehicle installation surface • Is the rear vehicle monitoring control modules installation condition normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning location.
5	**VERIFY IF MALFUNCTION CAUSE IS AFTER-MARKET ELECTRONIC DEVICE INSTALLATION** • Verify if malfunction symptom recurs as stated by customer. • Does the malfunction recur?	Yes	Go to the next step.
		No	Explain to the customer that the malfunction occurred due to the after-market electronic device installation.
6	**INSPECT REAR VEHICLE MONITORING CONTROL MODULES** • Inspect the malfunctioning rear vehicle monitoring control module. • Is the rear vehicle monitoring control module normal?	Yes	Temporary malfunction with the radar echo-back. If the same symptom recurs repeatedly, replace the rear vehicle monitoring control module. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Replace the applicable rear vehicle monitoring control module. (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)

RVM WARNING INDICATOR LIGHT FLASHES WHILE NOT UNDER FLASHING CONDITIONS (TURN SIGNALS OFF, OR NO VEHICLE IN ALERT AREA) [REAR VEHICLE MONITORING SYSTEM]

id0903z7014400

Note
- If there is any vehicle malfunction complaint lodged by a customer, perform 09-03N-2 FOREWORD [REAR VEHICLE MONITORING SYSTEM] malfunction diagnosis according to the troubleshooting procedure.

Description
- RVM warning indicator light flashes although the RVM warning indicator light illumination conditions (**vehicle speed 30 km/h {19 mph} or more**, turn signals on, and vehicle in detection area) are not satisfied.
- The RVM warning indicator light flashes while the turn signals are off.

Note
- This malfunction symptom is basically the same as the symptom, "RVM warning indicator light illuminates while not under the illumination conditions".

Possible malfunction
- Rear vehicle monitoring control modules false-detect a vehicle as being inside detection area when it is actually outside of it, or cannot determine that a vehicle is entering blind-spot area.
  - — Rear vehicle monitoring control module radar is not emitted inside detection area (deviates from blind-spot area or adjacent lanes)
    - Damage, deformity or looseness to rear vehicle monitoring bracket or vehicle frame (including moderate impacts)

SYMPTOM TROUBLESHOOTING [REAR VEHICLE MONITORING SYSTEM]

- Incorrect installation of rear bumper, soiling to radar emitting/receiving area, application of stickers (including transparent types), repairs using putty application

— Effect of non-genuine, after-market electronic device installation

Note
- The radar sensor cannot receive echo-back correctly if there is a thick moisture film (such as condensation) or excessive soiling covering the rear bumper radar emitting/receiving areas.
- Non-genuine rear bumper or paint, or installation of after-market parts may negatively affect radar echo-back ability.

- Rear vehicle monitoring control modules false-detect that turn signals are on.
  — Rear vehicle monitoring control module (RH) malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY MALFUNCTION SYMPTOM** • Do the RVM warning indicator light and RVM warning light (orange) illuminate with the illumination conditions not satisfied?	Yes	Go the symptom troubleshooting procedure, "RVM warning indicator light illuminates while not under the illumination conditions". (See 09-03N-10 RVM WARNING INDICATOR LIGHT ILLUMINATES WHILE NOT UNDER ILLUMINATION CONDITIONS [REAR VEHICLE MONITORING SYSTEM].)
		No	Go to the next step.
2	**DETERMINE IF MALFUNCTION CAUSE IS INPUT SIGNAL OR REAR VEHICLE MONITORING CONTROL MODULE RELATED** • Monitor the following rear vehicle monitoring system PIDs using the M-MDS: (See 09-02I-47 PID/DATA MONITOR INSPECTION [REAR VEHICLE MONITORING SYSTEM].) — TURN_SW_R — TURN_SW_L • Does the monitoring value turn on and off according to the turn signal switch operation?	Yes	Replace the rear vehicle monitoring control module (RH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Perform the start stop unit, instrument cluster and rear vehicle monitoring control module DTC inspection again.

RVM WARNING INDICATOR LIGHT DOES NOT FLASH WHILE UNDER FLASHING CONDITIONS (TURN SIGNAL IS BEING OPERATED) [REAR VEHICLE MONITORING SYSTEM]

id0903z7014500

Note
- If there is any vehicle malfunction complaint lodged by a customer, perform 09-03N-2 FOREWORD [REAR VEHICLE MONITORING SYSTEM] malfunction diagnosis according to the troubleshooting procedure.

Description
- The RVM warning indicator light does not flash/remains illuminated while under the flash conditions (**vehicle speed 30 km/h {19 mph} or more**, turn-signals on, and vehicle in detection area).
- The RVM warning indicator light does not flash/remains illuminated while the turn signals are on.

Note
- This malfunction symptom is basically the same as the symptom, "RVM warning indicator light does not illuminates while under the illumination conditions".

Possible malfunction
- Rear vehicle monitoring control modules false-detect a vehicle as being outside blind-spot area when it is actually inside of it, or cannot determine that no vehicle is entering blind-spot area.
  — Rear vehicle monitoring control module radar is not emitted inside detection area (deviates from blind-spot area or adjacent lanes)
    - Damage, deformity or looseness to rear vehicle monitoring bracket or vehicle frame (including moderate impacts)
    - Incorrect installation of rear bumper, soiling to radar emitting/receiving area, application of stickers (including transparent types), repairs using putty application
  — Rear vehicle monitoring control module radar does not receive echo-back correctly.

SYMPTOM TROUBLESHOOTING [REAR VEHICLE MONITORING SYSTEM]

  - Rear vehicle monitoring control module malfunction
  - Incorrect installation of rear bumper, soiling to radar emitting/receiving area, application of stickers (including transparent types), repairs using putty application
- — Effect of non-genuine, after-market electronic device installation

Note
- The radar sensor cannot receive echo-back correctly if there is a thick moisture film (such as condensation) or excessive soiling covering the rear bumper radar emitting/receiving areas.
- Non-genuine rear bumper or paint, or installation of after-market parts may negatively affect radar echo-back ability.

- RVM warning indicator light illumination related malfunction
  - — RVM warning indicator light malfunction
  - — Open or short circuit in wiring harness between RVM warning indicator light and rear vehicle monitoring control module (LH)
  - — Rear vehicle monitoring control module (LH) malfunction (RVM warning indicator light illumination circuit malfunction)
- Rear vehicle monitoring control modules do not detect turn signal operation.
  - — Rear vehicle monitoring control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY MALFUNCTION SYMPTOM** • Does the RVM warning indicator light illuminate when the illumination conditions are satisfied?	Yes	Go to the next step.
		No	Go the symptom troubleshooting procedure, "RVM warning indicator light does not illuminates while under the illumination conditions". (See 09-03N-12 RVM WARNING INDICATOR LIGHT DOES NOT ILLUMINATE UNDER ILLUMINATION CONDITIONS [REAR VEHICLE MONITORING SYSTEM].)
2	**DETERMINE IF MALFUNCTION CAUSE IS INPUT SIGNAL OR REAR VEHICLE MONITORING CONTROL MODULE RELATED** • Monitor the following rear vehicle monitoring system PIDs using the M-MDS: (See 09-02I-47 PID/DATA MONITOR INSPECTION [REAR VEHICLE MONITORING SYSTEM].) — TURN_SW_R — TURN_SW_L • Does the monitoring value turn on and off according to the turn signal switch operation?	Yes	Replace the rear vehicle monitoring control module (RH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Perform the start stop unit, instrument cluster and rear vehicle monitoring control module DTC inspection again.

REAR VEHICLE MONITORING WARNING ALARM DOES NOT SOUND WHILE RVM WARNING INDICATOR LIGHT IS FLASHING [REAR VEHICLE MONITORING SYSTEM]

id0903z7014600

Note
- If there is any vehicle malfunction complaint lodged by a customer, perform 09-03N-2 FOREWORD [REAR VEHICLE MONITORING SYSTEM] malfunction diagnosis according to the troubleshooting procedure.

Description
- Rear vehicle monitoring warning chime does not sound even though rear vehicle monitoring system recognizes a vehicle in detection area on side in which turn signal is operated or one entering blind-spot area from rear, and RVM warning indicator light is flashing.

Possible malfunction
- Instrument cluster receives incorrect beeper sound request signal
  - — Instrument cluster malfunction
  - — Rear vehicle monitoring control module (RH) malfunction

SYMPTOM TROUBLESHOOTING [REAR VEHICLE MONITORING SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT ALARM** • Implement the instrument cluster simulation ALARM using the M-MDS, and sound all the warning alarms in the instrument cluster. (See 09-02G-38 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Does the rear vehicle monitoring warning beeper sound?	Yes	Go to the next step.
		No	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
2	**DETERMINE IF MALFUNCTION CAUSE IS BUZZER SOUND RELATED CIRCUIT** • Implement the rear vehicle monitoring system simulation buzzer item using the M-MDS. (See 09-02I-48 ACTIVE COMMAND MODES INSPECTION [REAR VEHICLE MONITORING SYSTEM].) • Does the buzzer sound?	Yes	Go to the next step.
		No	Replace the rear vehicle monitoring control module (RH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
3	**VERIFY RVM WARNING INDICATOR LIGHT ILLUMINATION CONDITION** • Verify the illumination of the RVM warning indicator lights when the illumination conditions (**vehicle speed of 30 km/h {19 mph} or more**, turn signals off, and vehicle detected in blind-spot area or entering blind-spot area from rear) are satisfied. • Is the RVM warning indicator lights illumination normal?	Yes	Replace the rear vehicle monitoring control module (RH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go the symptom troubleshooting procedure, "RVM warning indicator light does not illuminates while under the illumination conditions". (See 09-03N-12 RVM WARNING INDICATOR LIGHT DOES NOT ILLUMINATE UNDER ILLUMINATION CONDITIONS [REAR VEHICLE MONITORING SYSTEM].)

BRIGHTNESS LEVEL OF RVM WARNING INDICATOR LIGHTS IS TOO HIGH OR LOW [REAR VEHICLE MONITORING SYSTEM]

id0903z7014700

Note
- If there is any vehicle malfunction complaint lodged by a customer, perform 09-03N-2 FOREWORD [REAR VEHICLE MONITORING SYSTEM] malfunction diagnosis according to the troubleshooting procedure.

Description
- The brightness level of the RVM warning indicator light is low in the daytime (headlights off) (correct level at night).
- The brightness level of the RVM warning indicator light is high at night (headlights on) (correct level in the daytime).

Possible malfunction
- The rear view monitoring control module (RH) cannot receive the TNS switch signal.
  - — TNS switch (light switch) malfunction (stuck)
  - — Instrument cluster malfunction
  - — Rear vehicle monitoring control module malfunction

SYMPTOM TROUBLESHOOTING [REAR VEHICLE MONITORING SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	**DETERMINE IF MALFUNCTION CAUSE IS RVM WARNING INDICATOR LIGHT ILLUMINATION CIRCUIT** • Monitor the following rear vehicle monitoring system PIDs using the M-MDS: (See 09-02I-47 PID/DATA MONITOR INSPECTION [REAR VEHICLE MONITORING SYSTEM].) — OP_BRT_R — OP_BRT_L • Turn the headlight switch (TNS switch) on/off. **Note** • While the headlights turned on, the PID monitoring value increases (brighter). • Does the PID display value change according to the operation of the headlight switch?	Yes	Replace the rear vehicle monitoring control module (LH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**INSPECT LIGHT SWITCH** • Inspect the light switch. (See 09-18-86 LIGHT SWITCH INSPECTION.) • Is the light switch normal?	Yes	Go to the next step.
		No	Replace the light switch. (See 09-18-84 LIGHT SWITCH REMOVAL/INSTALLATION.)
3	**DETERMINE IF MALFUNCTION CAUSE IS INSTRUMENT CLUSTER OR REAR VEHICLE MONITORING CONTROL MODULE (RH)** • Display the instrument cluster PID I_ILLUMI_M item using the M-MDS. (See 09-02G-37 PID/DATA MONITOR INSPECTION [INSTRUMENT CLUSTER].) • Turn the headlight switch (TNS switch) on/off. • Does the PID/data monitor display switch normally?	Yes	Replace the rear vehicle monitoring control module (LH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

BODY PANELS

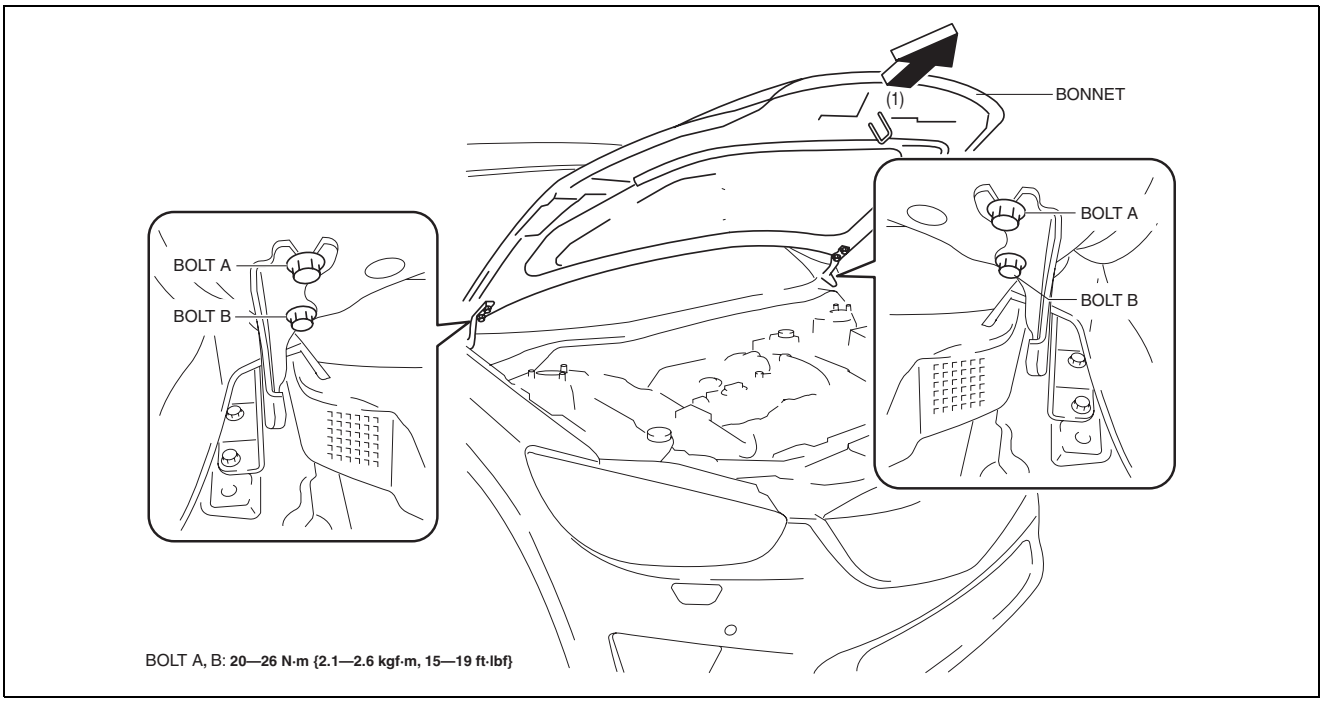
BONNET REMOVAL/INSTALLATION

id091000407200

Warning

- **Removing the bonnet without supporting it could cause the bonnet to fall and cause serious injury. Always perform the procedure with at least another person to prevent the bonnet from falling.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Front over fender (See 09-10-31 FRONT OVER FENDER REMOVAL/INSTALLATION.)
   (2) Front bumper (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
   (3) Front combination light (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (4) Front fender panel (See 09-10-30 FRONT FENDER PANEL REMOVAL/INSTALLATION.)
3. Loosen bolts A.
4. Remove bolts B.

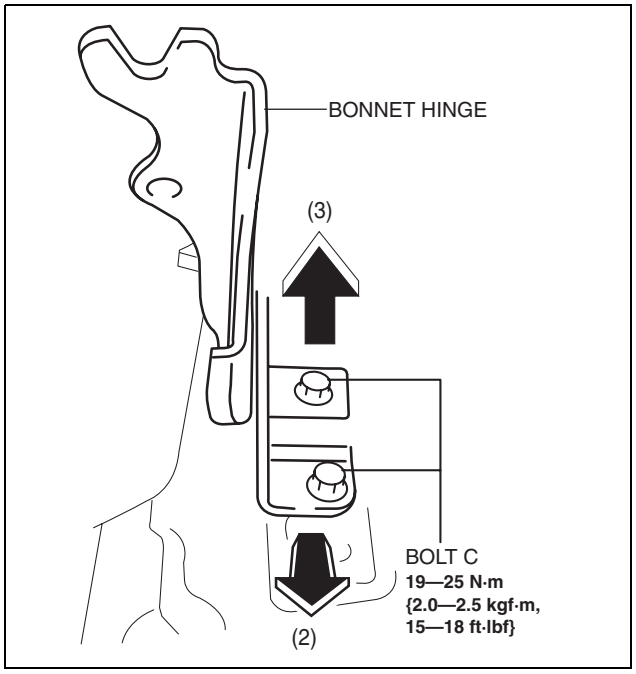


ac5wzw0000247

5. Remove the bonnet in the direction of the arrow(1) shown in the figure.

BODY PANELS

6. Remove bolts C.
7. Move the bonnet hinge in the direction of the arrow (2), (3) shown in the figure, while remove it.
8. Install in the reverse order of removal.
9. Adjust the headlight aiming. (See 09-18-18 HEADLIGHT AIMING.)
10. Adjust the front fog light aiming. (with front fog lights) (See 09-18-48 FRONT FOG LIGHT AIMING.)
11. Perform the bonnet adjustment. (See 09-10-6 BONNET ADJUSTMENT.)



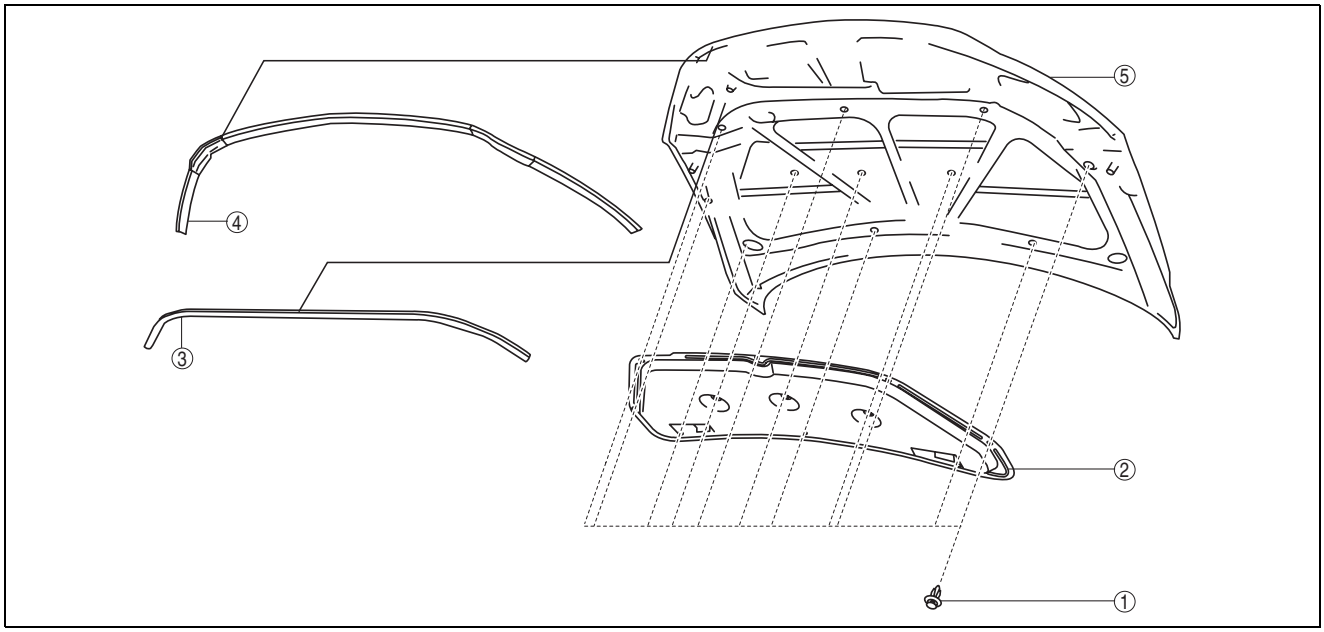
ac5wzw0000247

BODY PANELS

BONNET DISASSEMBLY/ASSEMBLY

id091000899800

1. Disassemble in the order indicated in the table.



ac5wzw0000289

1	Fastener
2	Bonnet insulator
3	Shroud seaming welt
4	Weather strip parting seal
5	Bonnet component

2. Assemble in the reverse order of disassembly.

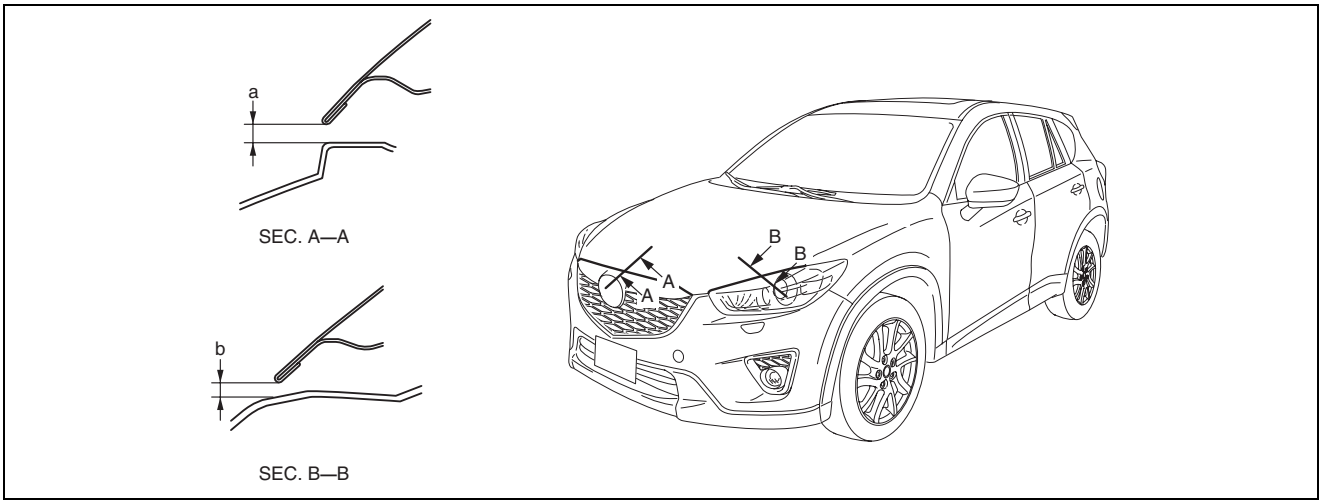
BODY PANELS

BONNET ADJUSTMENT

id091000407300

Height Difference Adjustment

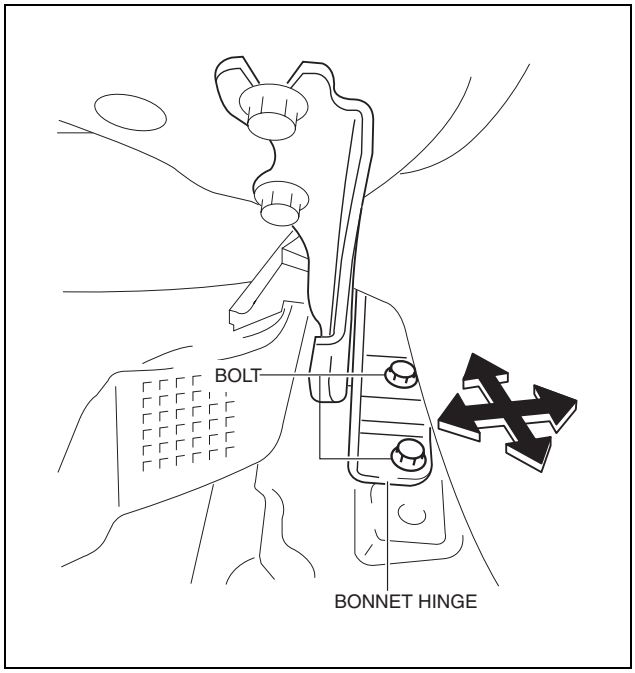
1. Verify that the height difference between the bonnet and the body is within the specification.



ac5wzw0000247

Standard clearance
a: 2.7—6.9 mm {0.11—0.27 in}
b: 4.1—8.0 mm {0.17—0.31 in}

2. Disconnect the negative battery cable.
3. Remove the following parts:
   (1) Front over fender (See 09-10-31 FRONT OVER FENDER REMOVAL/INSTALLATION.)
   (2) Front bumper (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
   (3) Front combination light (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (4) Front bumper slider (See 09-10-17 BUMPER SLIDER REMOVAL/INSTALLATION.)
   (5) Front fender panel (See 09-10-30 FRONT FENDER PANEL REMOVAL/INSTALLATION.)
4. Loosen bolts and adjust the bonnet.
5. Tighten bolts. (See 09-10-3 BONNET REMOVAL/INSTALLATION.)
6. Install the following parts:
   (1) Front fender panel (See 09-10-30 FRONT FENDER PANEL REMOVAL/INSTALLATION.)
   (2) Front bumper slider (See 09-10-17 BUMPER SLIDER REMOVAL/INSTALLATION.)
   (3) Front combination light (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (4) Front bumper (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
   (5) Front over fender (See 09-10-31 FRONT OVER FENDER REMOVAL/INSTALLATION.)
7. Connect the negative battery cable (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
8. Adjust the headlight aiming. (See 09-18-18 HEADLIGHT AIMING.)
9. Adjust the front fog light aiming. (with front fog lights) (See 09-18-48 FRONT FOG LIGHT AIMING.)

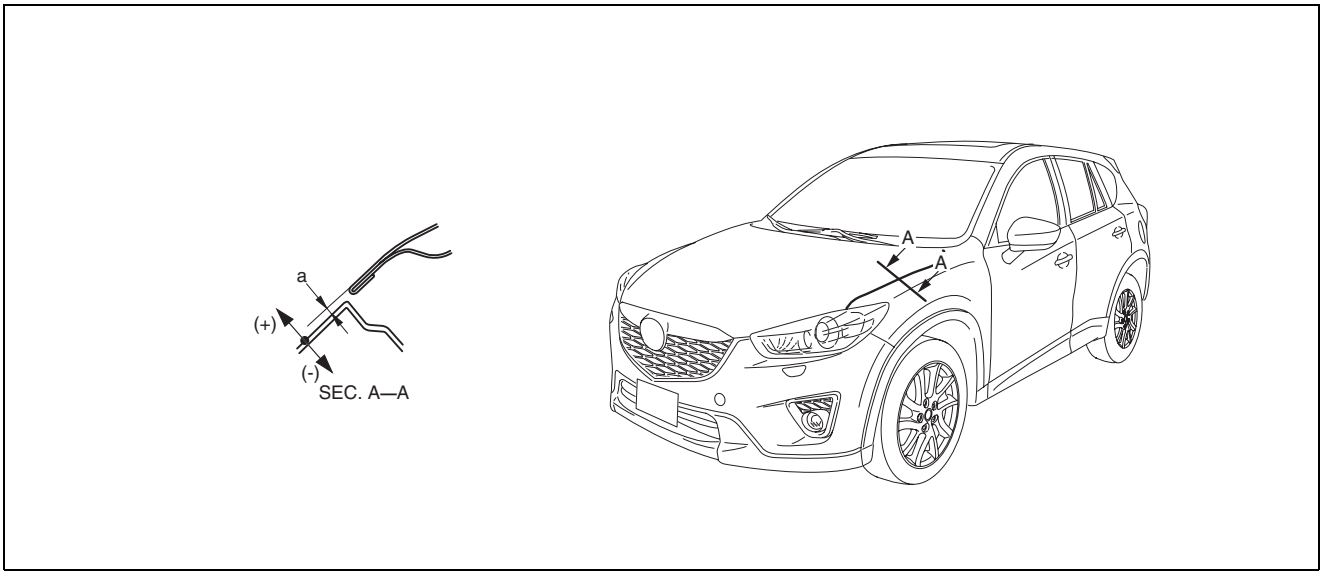


ac5wzw0000247

BODY PANELS

Gap Adjustment

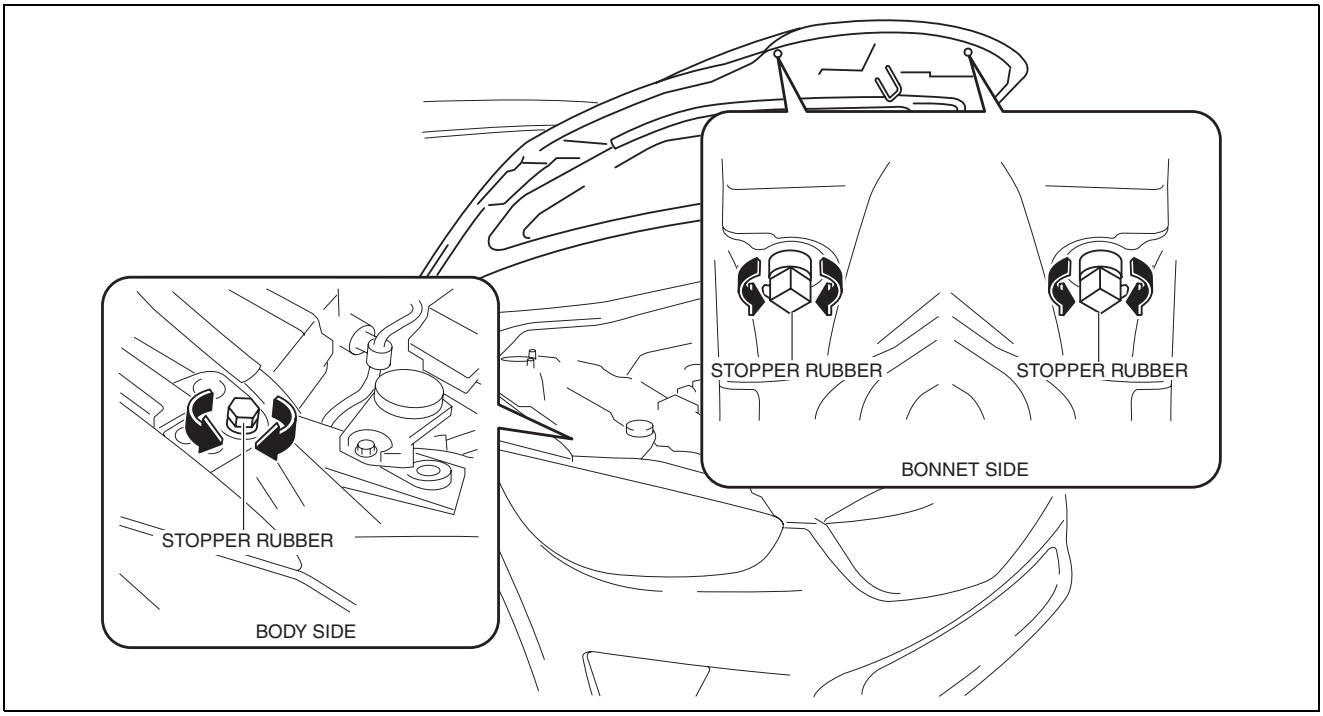
1. Verify that the gap between the bonnet and the body is within the specification.



ac5wzw0000462

Standard clearance
a: -1.2—1.2 mm {-0.047—0.047 in}

2. Turn the stopper rubber to adjust the height of the bonnet.



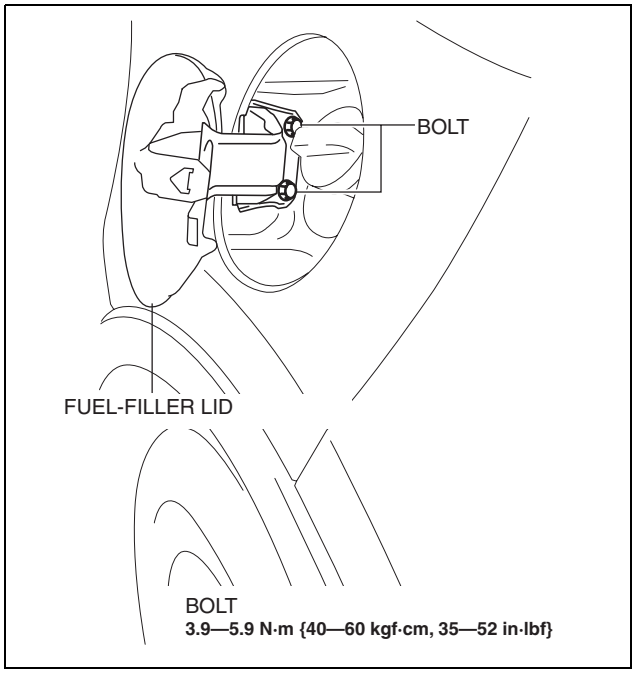
ac5wzw0000247

BODY PANELS

FUEL-FILLER LID REMOVAL/INSTALLATION

1. Remove bolts.
2. Remove the fuel-filler lid.
3. Install in the reverse order of removal.
4. Adjust the fuel-filler lid. (See 09-10-9 FUEL-FILLER LID ADJUSTMENT.)

id091000800100



ac5wzw0000114

BODY PANELS

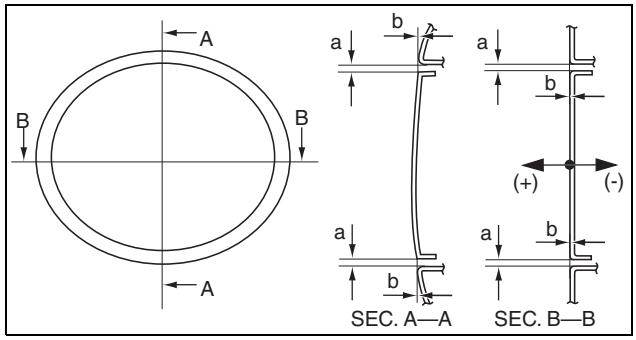
FUEL-FILLER LID ADJUSTMENT

id091000800200

1. Verify that the gap and height difference between the fuel-filler lid and body.
2. Loosen the bolts and adjust the fuel-filler lid.

   Standard clearance
   a: 1.7—3.7 mm {0.07—0.14 in}
   b: –0.5—1.5 mm {–0.01—0.05 in}

3. Tighten the bolts. (See 09-10-8 FUEL-FILLER LID REMOVAL/INSTALLATION.)



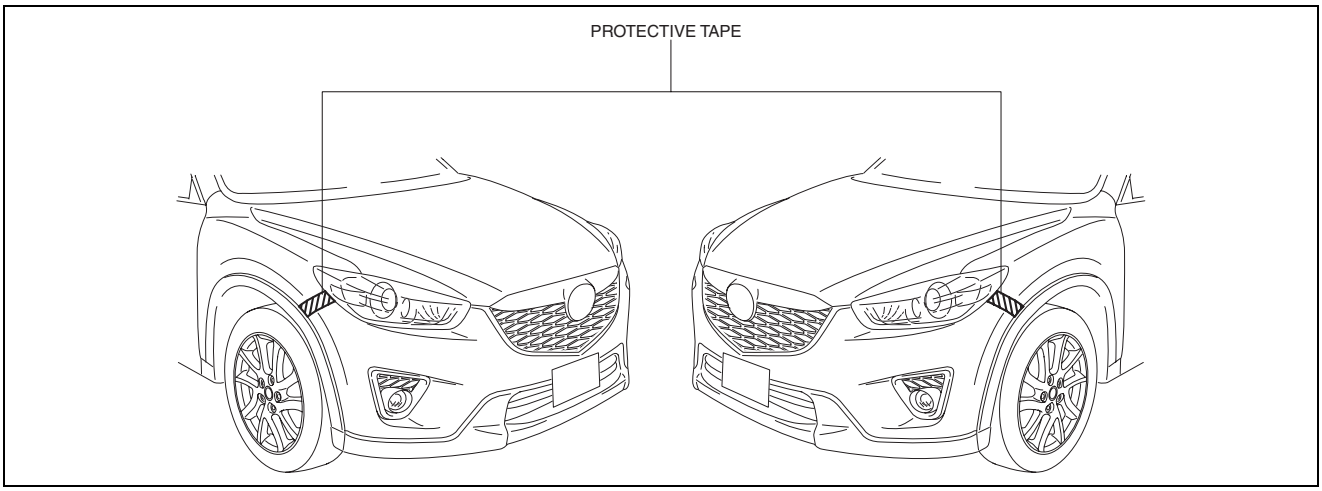
ac5wzw0000462

BODY PANELS

FRONT BUMPER REMOVAL/INSTALLATION

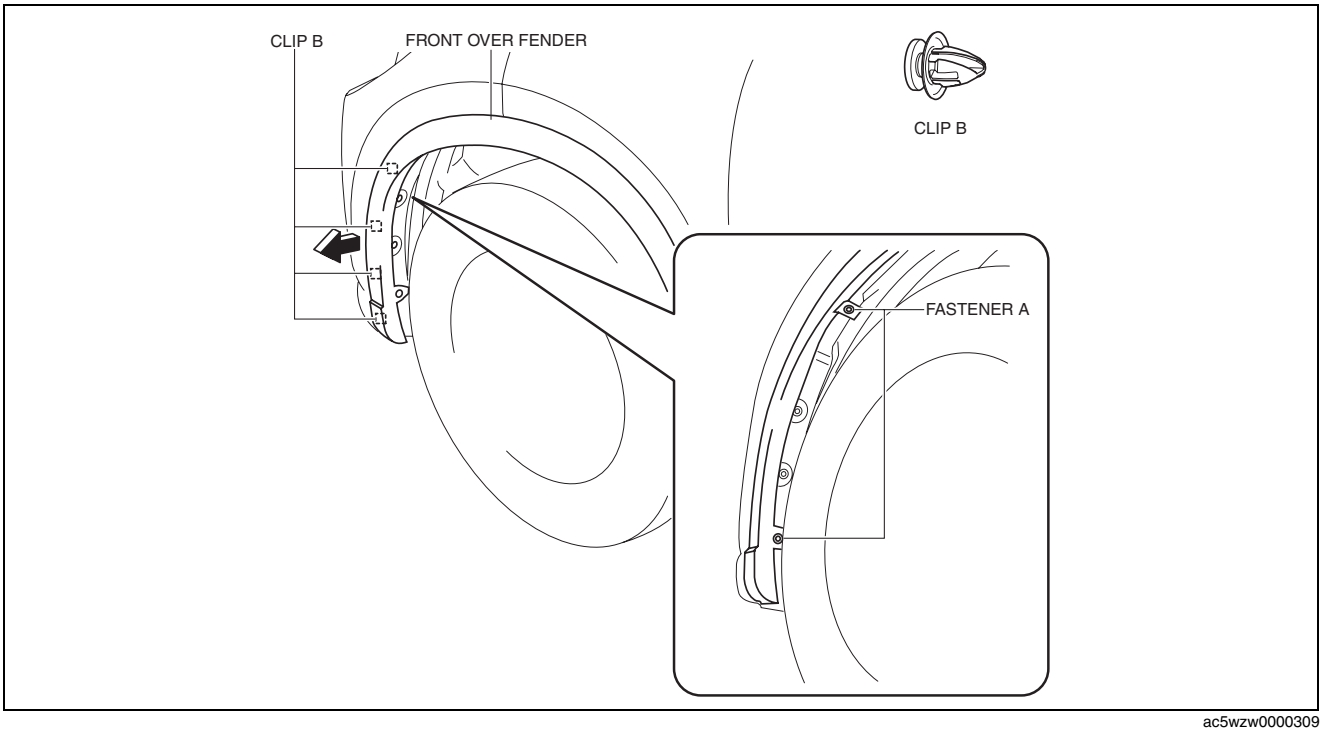
id091000800300

Caution
- **Affix the protective tape to the position (vehicle body side) shown in the figure to prevent scratches and damage.**



ac5wzw0000288

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove fasteners A.



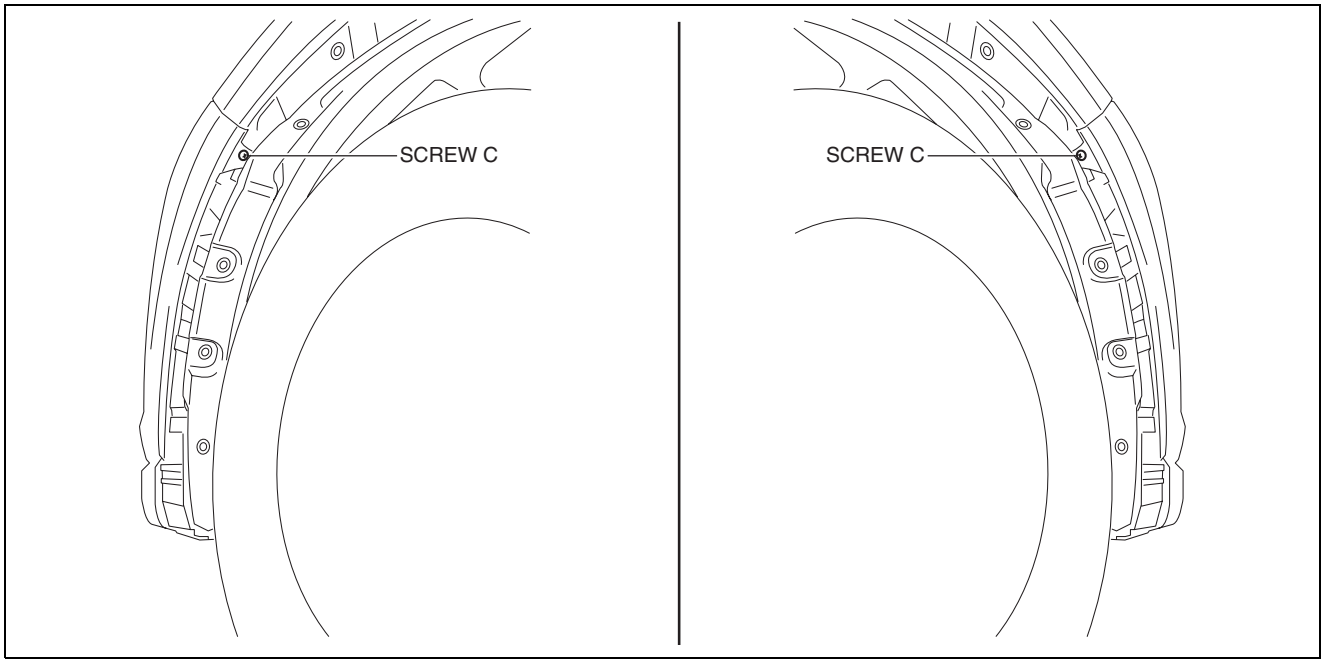
ac5wzw0000309

3. Pull the front over fender in the direction of the arrow shown in the figure, set the front over fender out of the way while detaching clips B.

Caution
- **After removing clips B, insert a rag between the front fender panel and the front over fender to prevent the front fender panel and clips B from being damaged.**

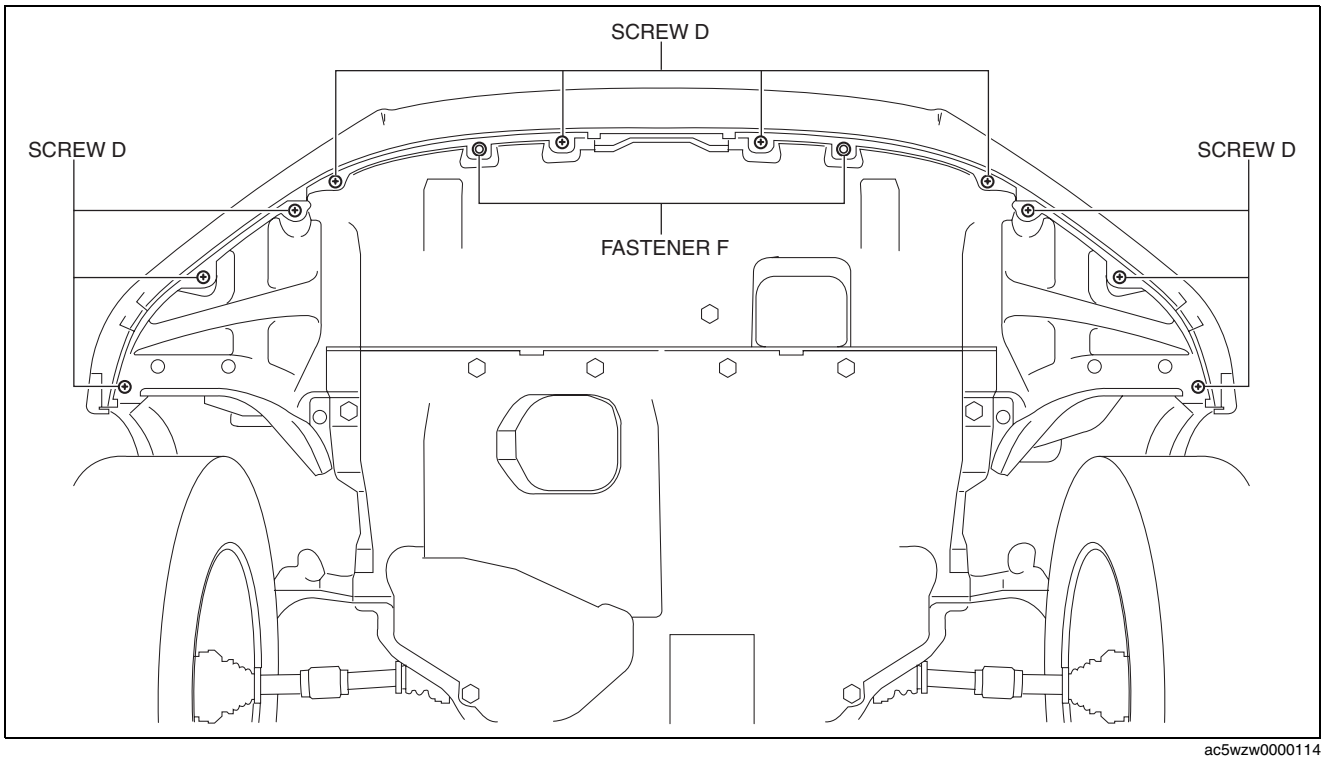
BODY PANELS

4. Remove screws C.



ac5wzw0000114

5. Remove screws D.

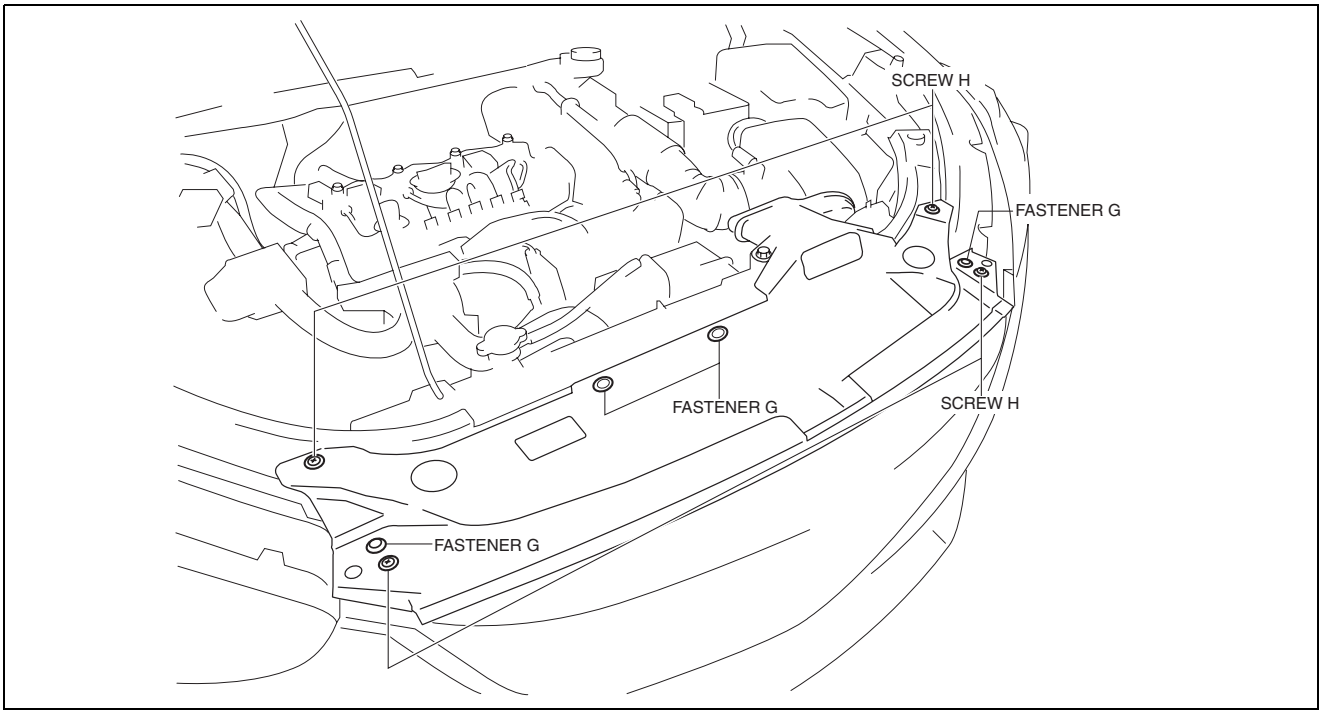


ac5wzw0000114

6. Remove fasteners F.
7. Remove the seal board upper. (See 09-10-34 SEAL BOARD UPPER REMOVAL/INSTALLATION.)

BODY PANELS

8. Remove fasteners G.

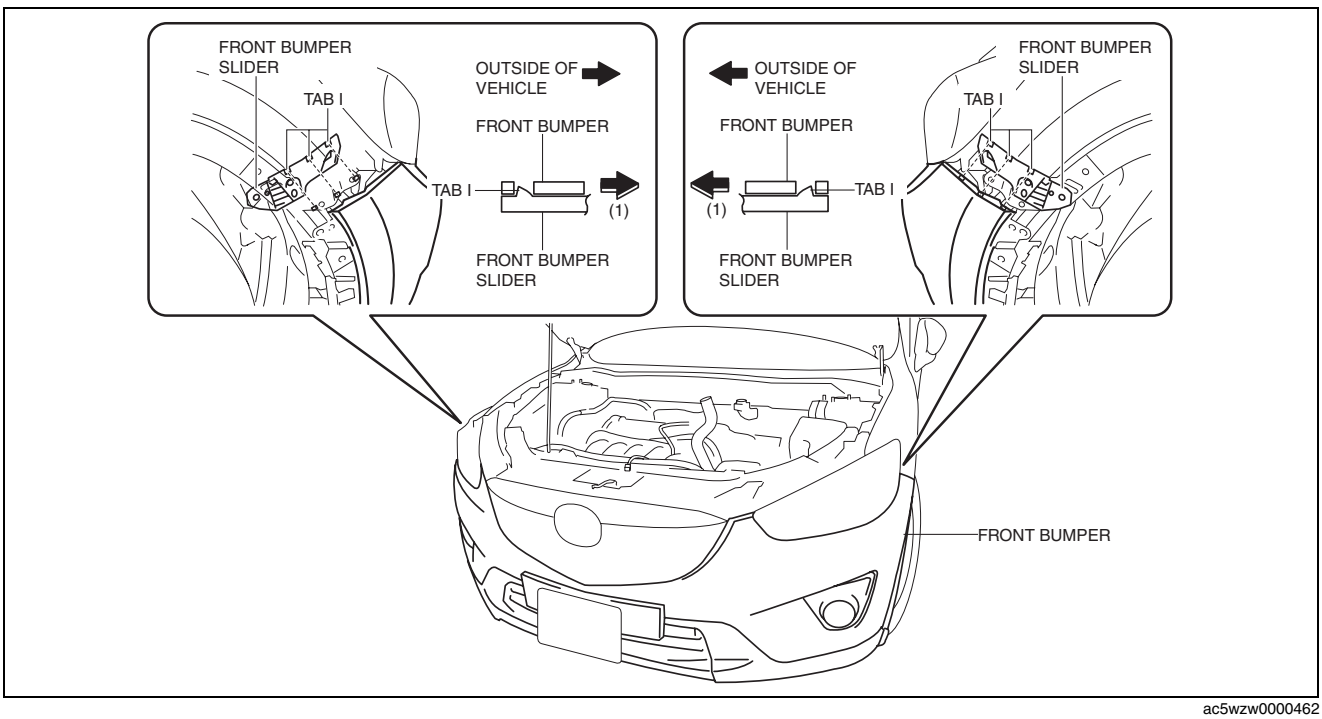


ac5wzw0000309

9. Remove screws H.
10. Pull the front bumper in the direction of the arrow (1) shown in the figure, then remove tabs I.

Caution

- **The front bumper and front bumper slider are engaged firmly. If they are disengaged forcibly the bumper could fall and be damaged. Perform the servicing carefully when disengaging the front bumper from the front bumper slider.**
- **When disengaging the front bumper from the front bumper slider, the front bumper could fall and be damaged. Support the front bumper so that it does not fall.**

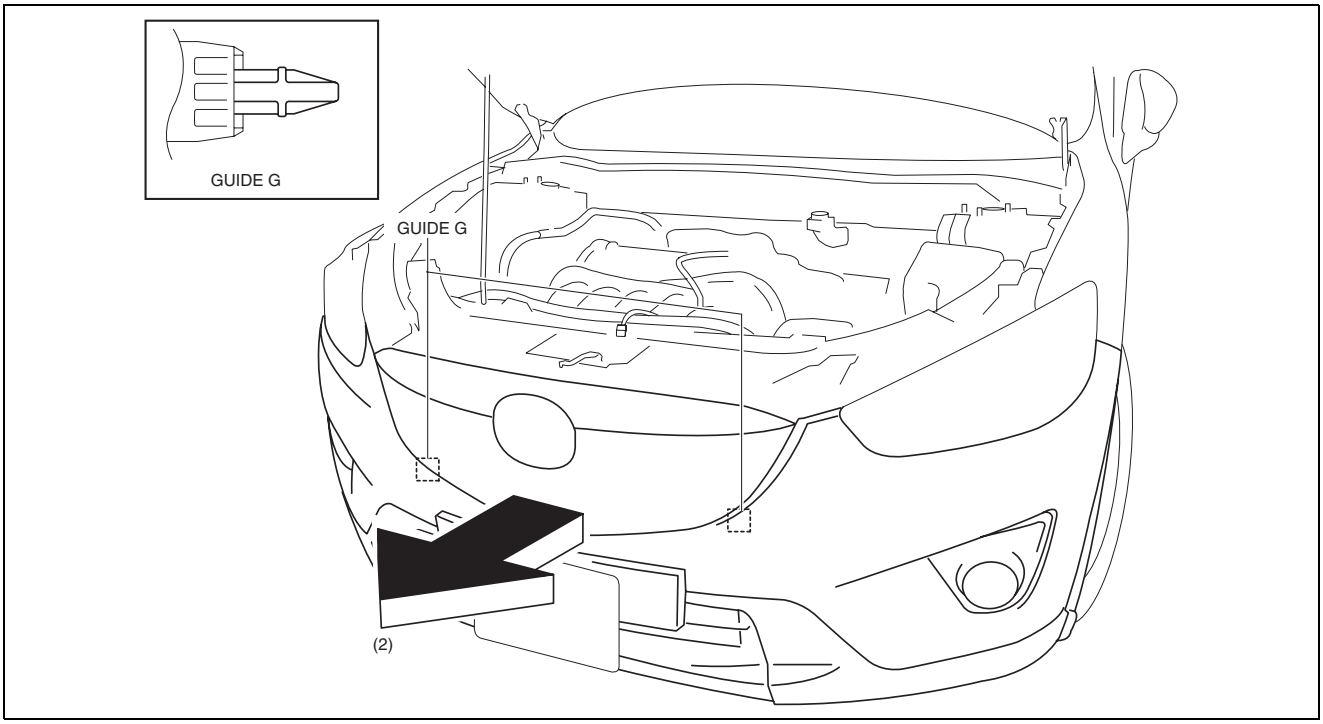


ac5wzw0000462

11. Remove the front bumper from the front bumper slider.

BODY PANELS

12. Pull the front bumper in the direction of the arrow (2) shown in the figure and remove it while detaching guides G.

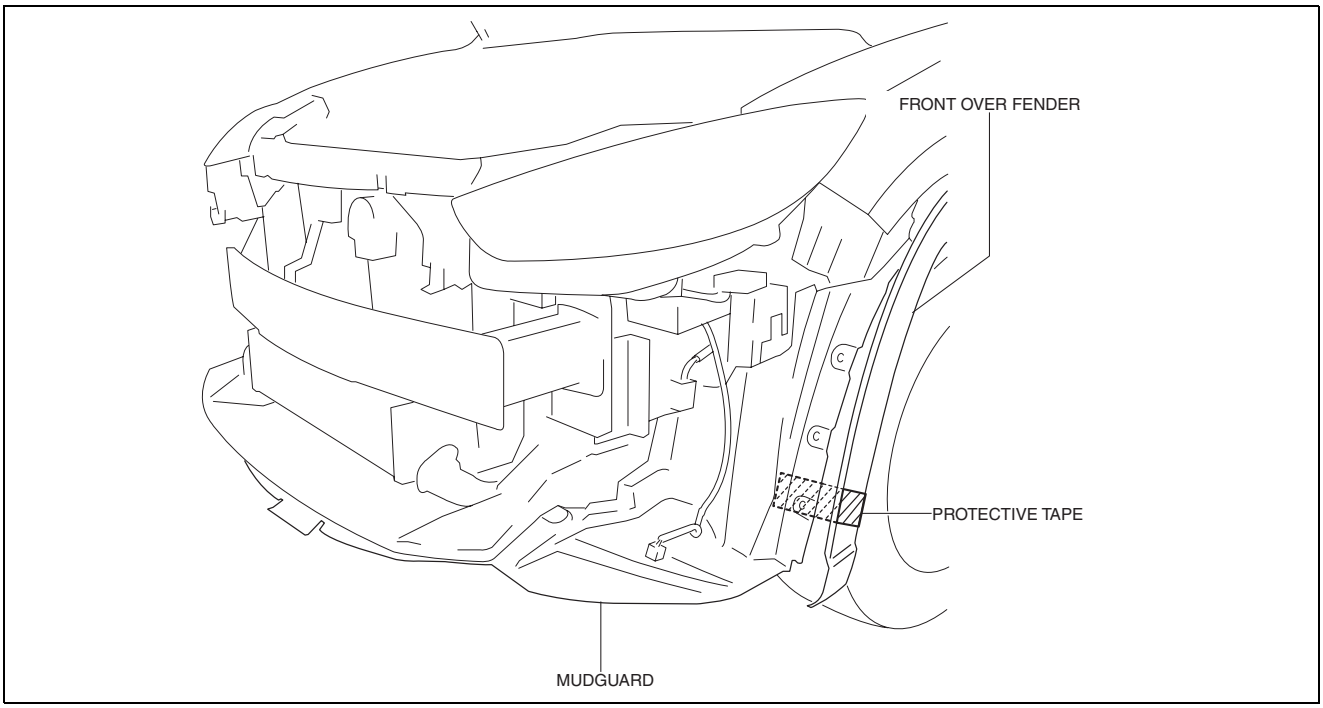


ac5wzw0000462

13. Disconnect the front fog light connector. (with front fog lights)
14. Disconnect the front ultrasonic sensor connector. (with parking sensor system)
15. Disconnect the front headlight cleaner hose (with headlight cleaner)

Caution

- **After removing front bumper, it may hit the front over fender and cause a damage and/or injury. Perform the following procedure to prevent the front over fender from being damaged.**
  - **— Fix the front over fender and front fender panel with protective tape.**



ac5uuw00002028

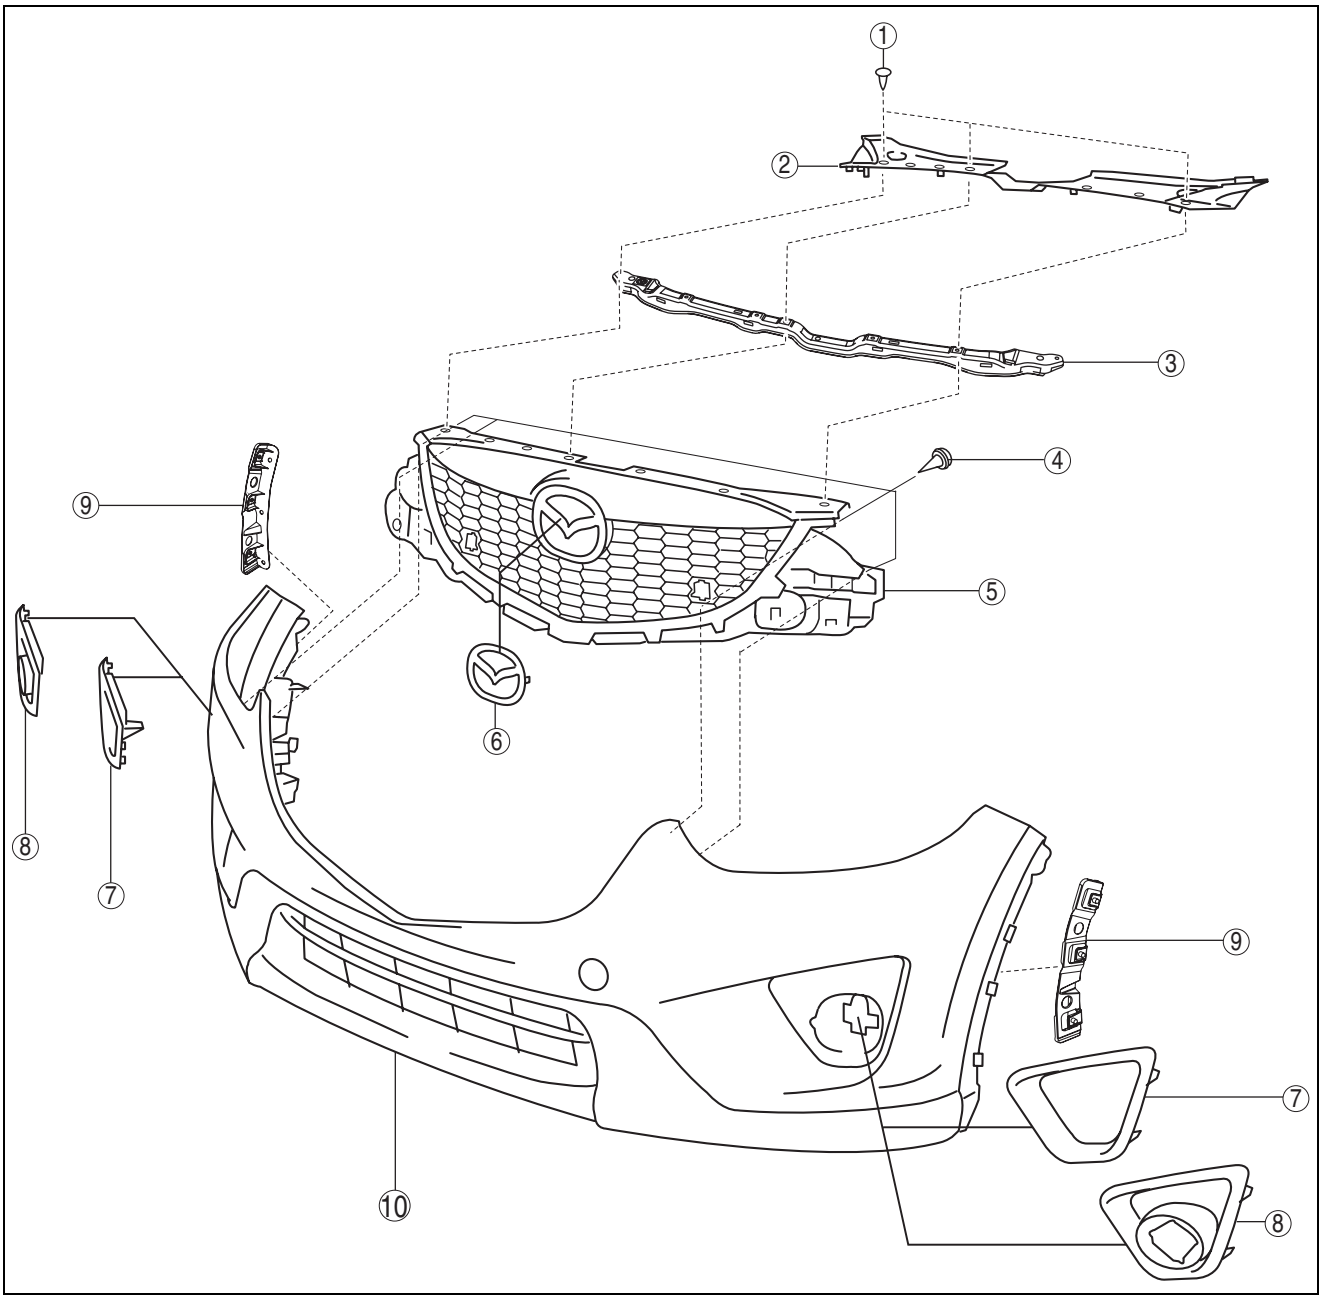
16. Install in the reverse order of removal.
17. Adjust the front fog light aiming. (with front fog lights) (See 09-18-48 FRONT FOG LIGHT AIMING.)

BODY PANELS

FRONT BUMPER DISASSEMBLY/ASSEMBLY

id091000800400

1. Disassemble in the order indicated in the table.



ac5wzw0000307

1	Rivet
2	Grille bracket
3	Front bumper retainer
4	Screw
5	Radiator grille

6	Ornament
7	Front fog light hole cover (without front fog lights)
8	Front fog light hole cover (with front fog lights)
9	Bracket
10	Front bumper

2. Assemble in the reverse order of disassembly.

BODY PANELS

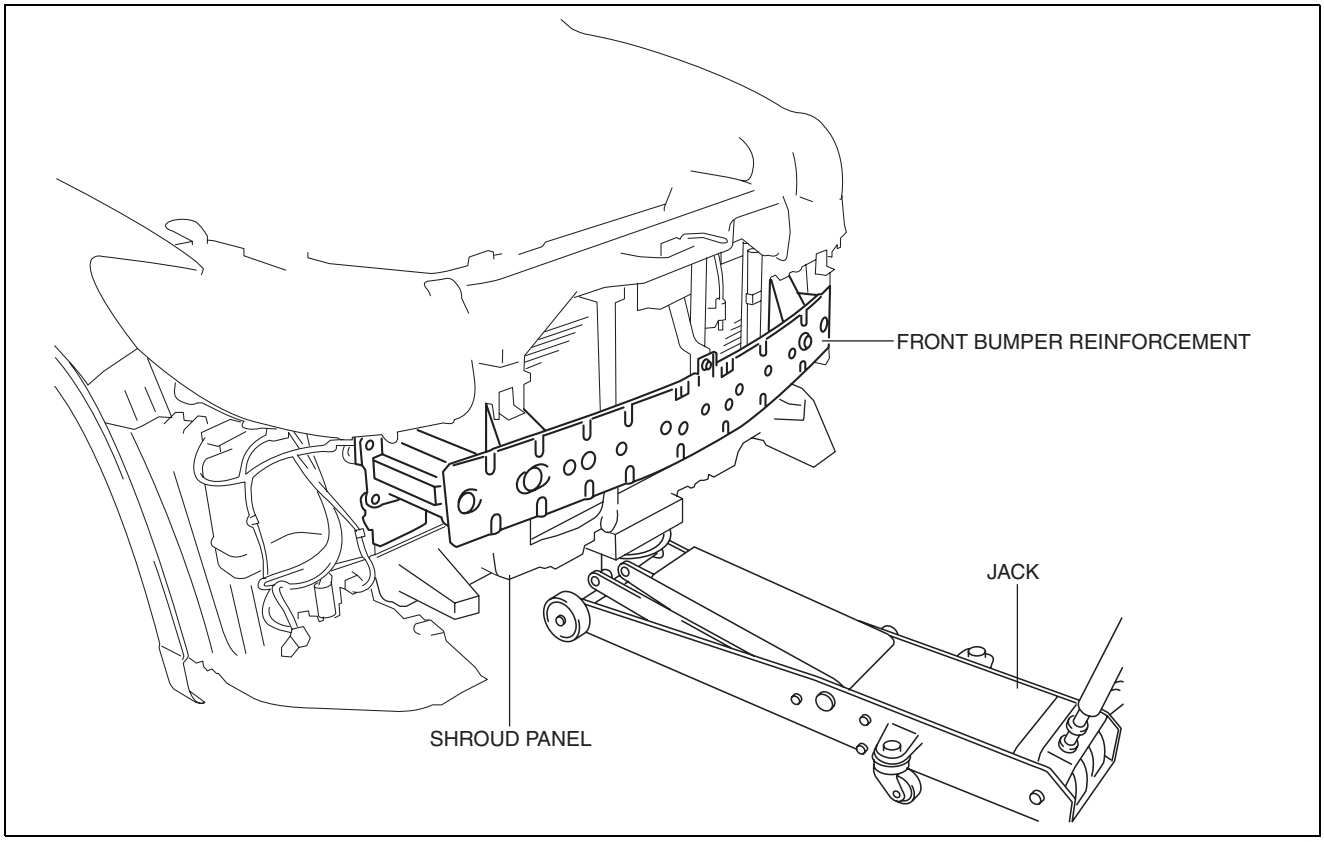
FRONT BUMPER REINFORCEMENT REMOVAL/INSTALLATION

id091000800600

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Seal board upper (See 09-10-34 SEAL BOARD UPPER REMOVAL/INSTALLATION.)
   (2) Front bumper (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
   (3) Front combination light (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (4) Set plate (See 09-10-23 SET PLATE REMOVAL/INSTALLATION.)
   (5) Energy-absorbing form (See 09-10-19 ENERGY-ABSORBING FORM REMOVAL/INSTALLATION.)
   (6) Front under cover No.1 (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
   (7) Bumper stiffener lower (See 09-10-20 BUMPER STIFFENER LOWER REMOVAL/INSTALLATION.)
3. Support the shroud panel using a jack.

Caution

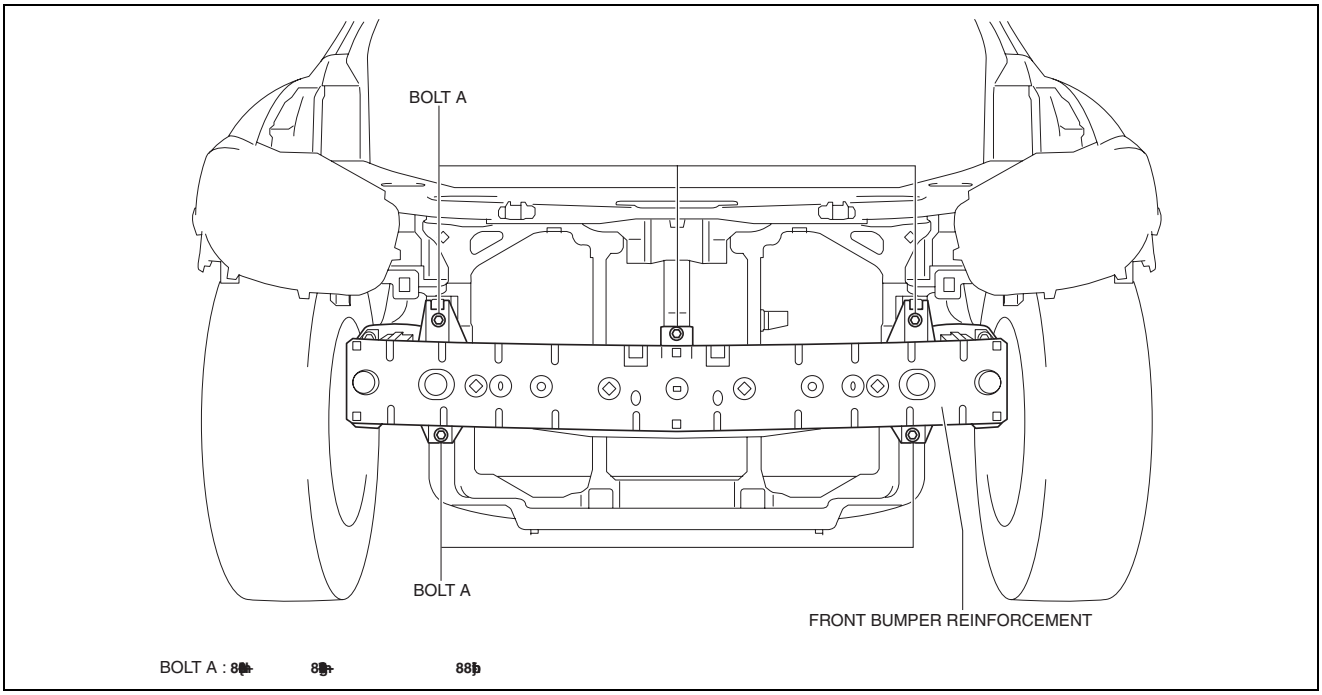
- **Because the shroud panel is installed to the bumper reinforcement, support the shroud panel using a jack before removing the bumper reinforcement so as not to apply excessive force to the shroud panel.**



ac5wzw0000313

BODY PANELS

4. Remove bolts A.

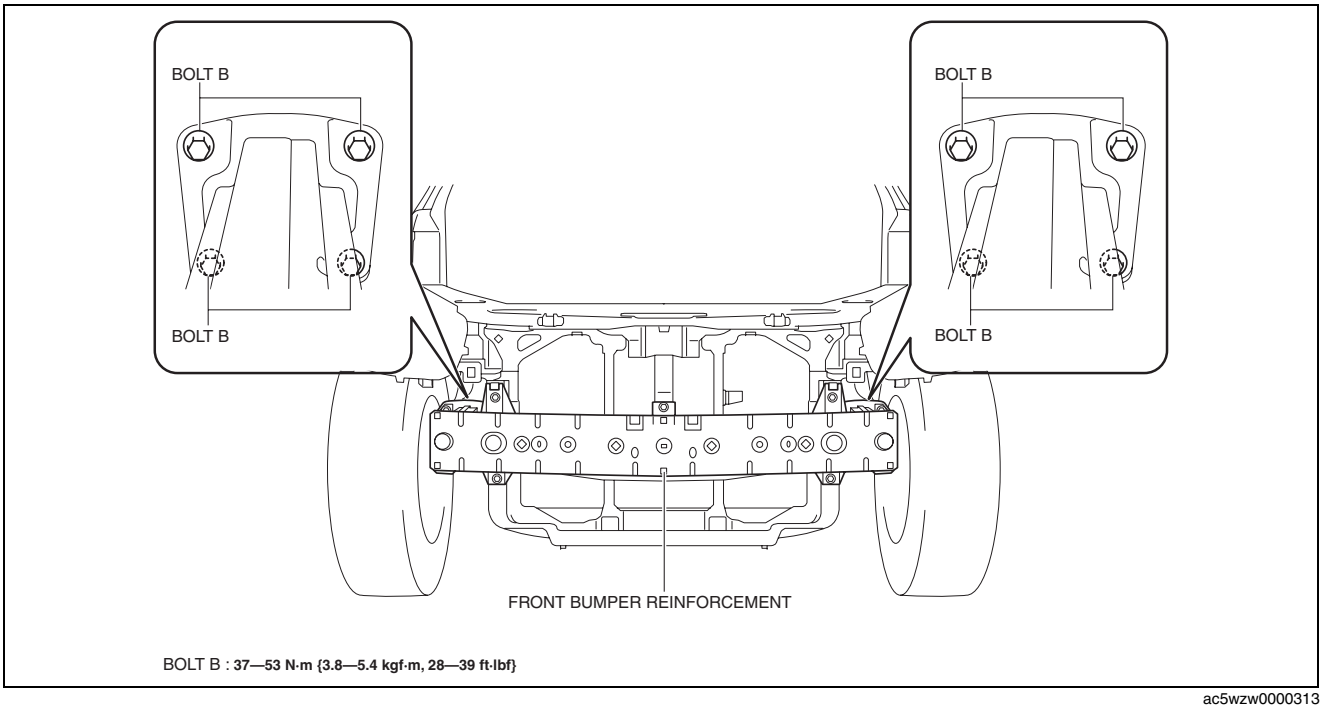


ac5wzw0000313

5. Remove bolts B.

Caution

- **Removing the front bumper reinforcement without supporting it could cause the front bumper reinforcement to fall and cause serious injury. Always perform the procedure with at least another person to prevent the front bumper reinforcement from falling.**



ac5wzw0000313

6. Remove the front bumper reinforcement.
7. Install in the reverse order of removal.
8. Adjust the headlight aiming. (See 09-18-18 HEADLIGHT AIMING.)
9. Adjust the front fog light aiming. (with front fog lights) (See 09-18-48 FRONT FOG LIGHT AIMING.)

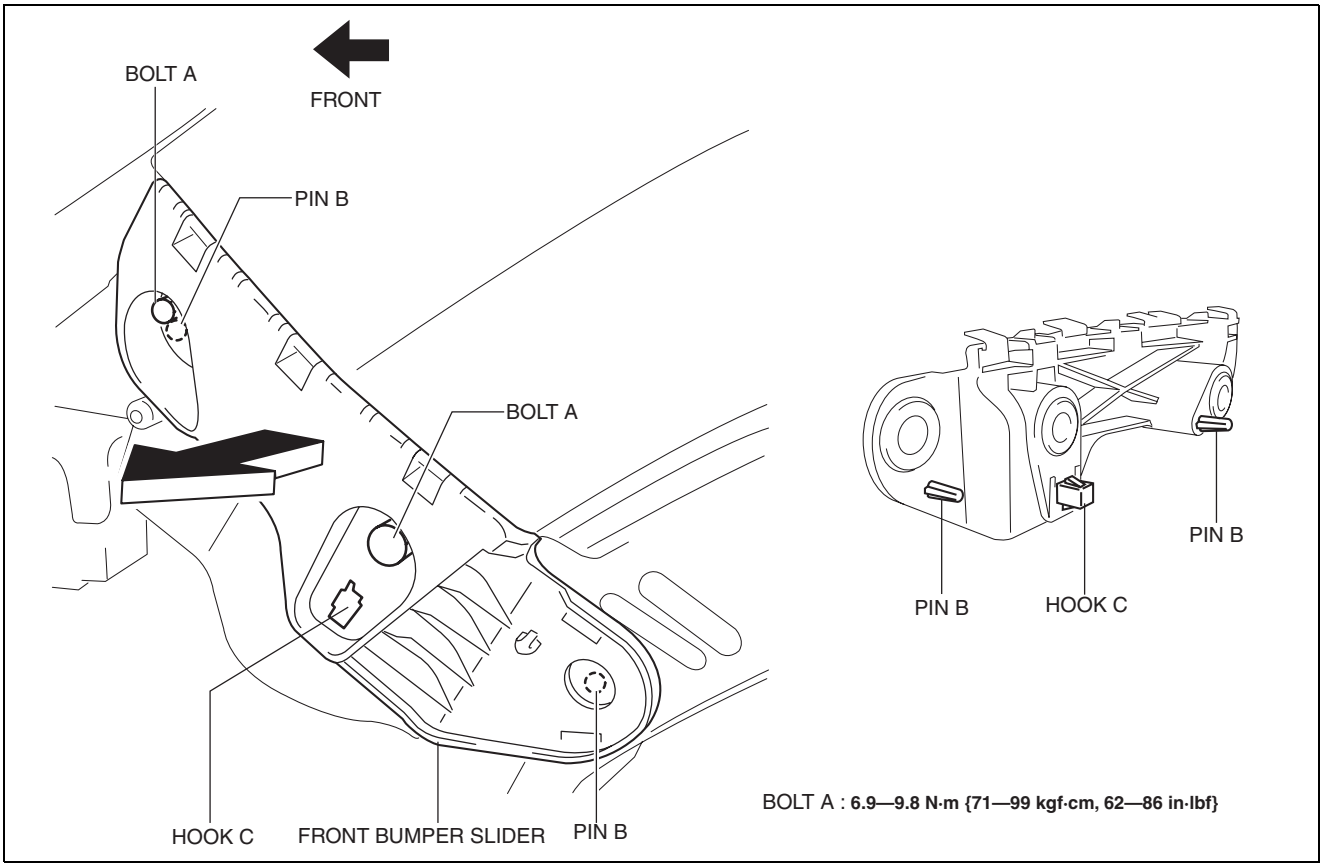
BODY PANELS

BUMPER SLIDER REMOVAL/INSTALLATION

id091000822500

Front Bumper Slider

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the seal board upper. (See 09-10-34 SEAL BOARD UPPER REMOVAL/INSTALLATION.)
3. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
4. Remove bolts A.



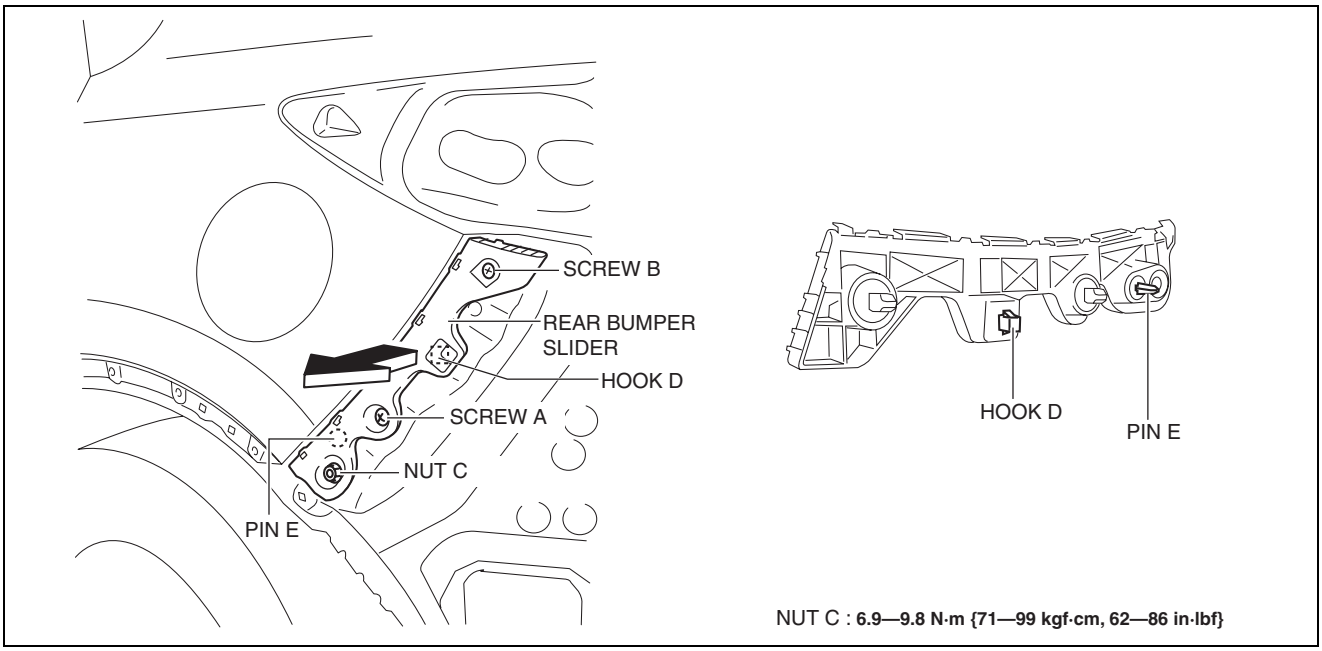
ac5wzw0000309

5. Pull the front bumper slider in the direction of the arrow while detaching pins B and hook C.
6. Install in the reverse order of removal.
7. Adjust the headlight aiming. (See 09-18-18 HEADLIGHT AIMING.)
8. Adjust the front fog light aiming. (with front fog lights) (See 09-18-48 FRONT FOG LIGHT AIMING.)

BODY PANELS

Rear Bumper Slider

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the rear combination light. (See 09-18-54 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
3. Remove the rear splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
4. Remove the rear bumper. (See 09-10-24 REAR BUMPER REMOVAL/INSTALLATION.)
5. Remove screw A.



ac5wzw0000309

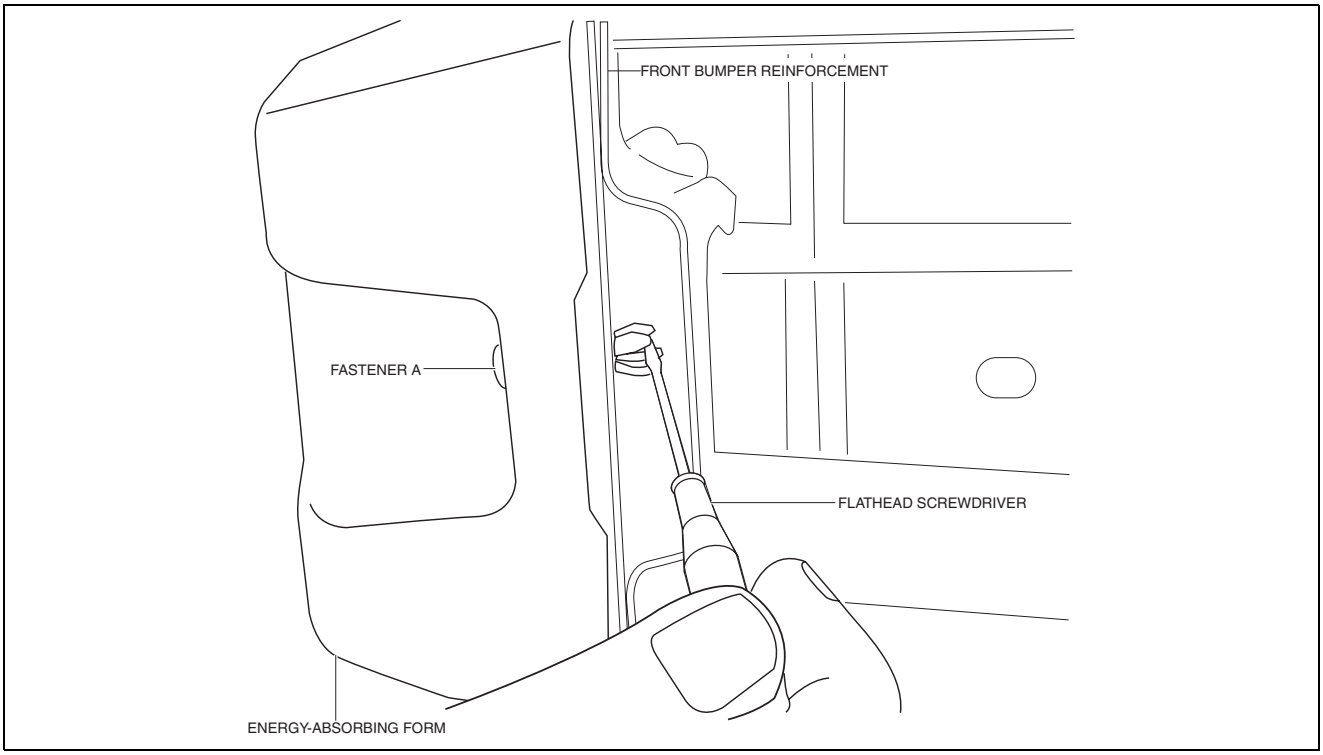
6. Remove screw B.
7. Remove nut C.
8. Pull the rear bumper slider in the direction of the arrow while detaching hook D and pin E.
9. Install in the reverse order of removal.

BODY PANELS

ENERGY-ABSORBING FORM REMOVAL/INSTALLATION

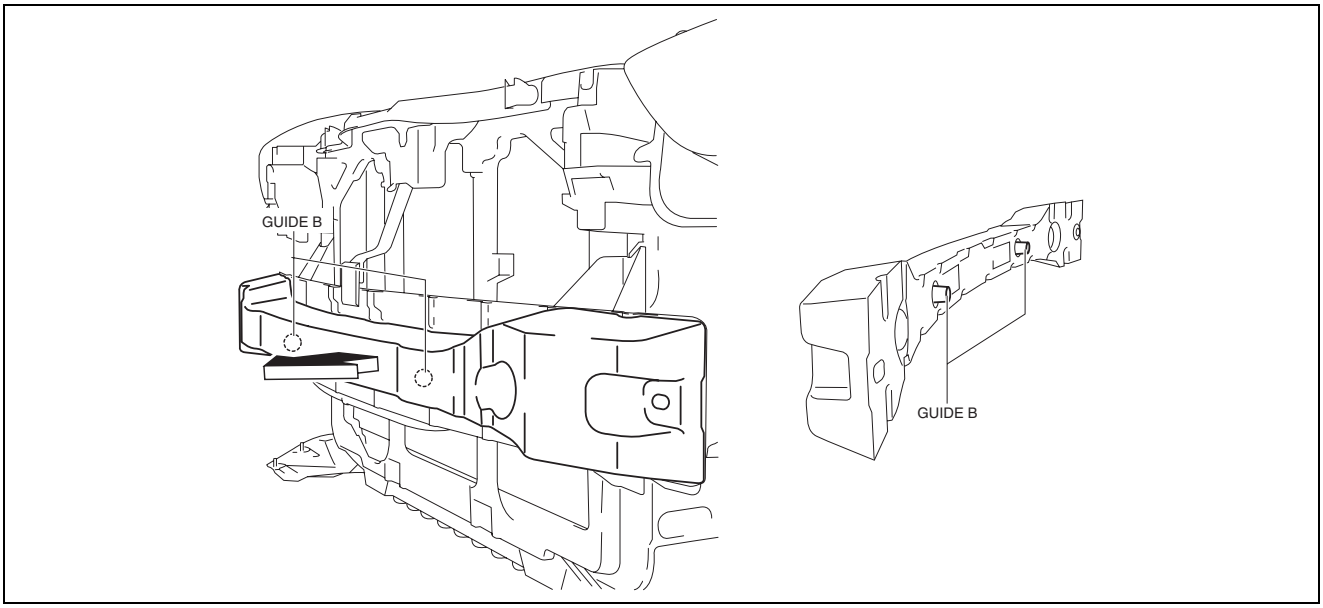
id091000888800

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the seal board upper. (See 09-10-34 SEAL BOARD UPPER REMOVAL/INSTALLATION.)
3. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
4. Insert the flathead screwdriver shown in the figure, push fasteners A for back side of front bumper reinforcement.



ac5wzw0000223

5. Pull the energy-absorbing form in the direction of the arrow shown in the figure while detaching guides B



ac5wzw0000132

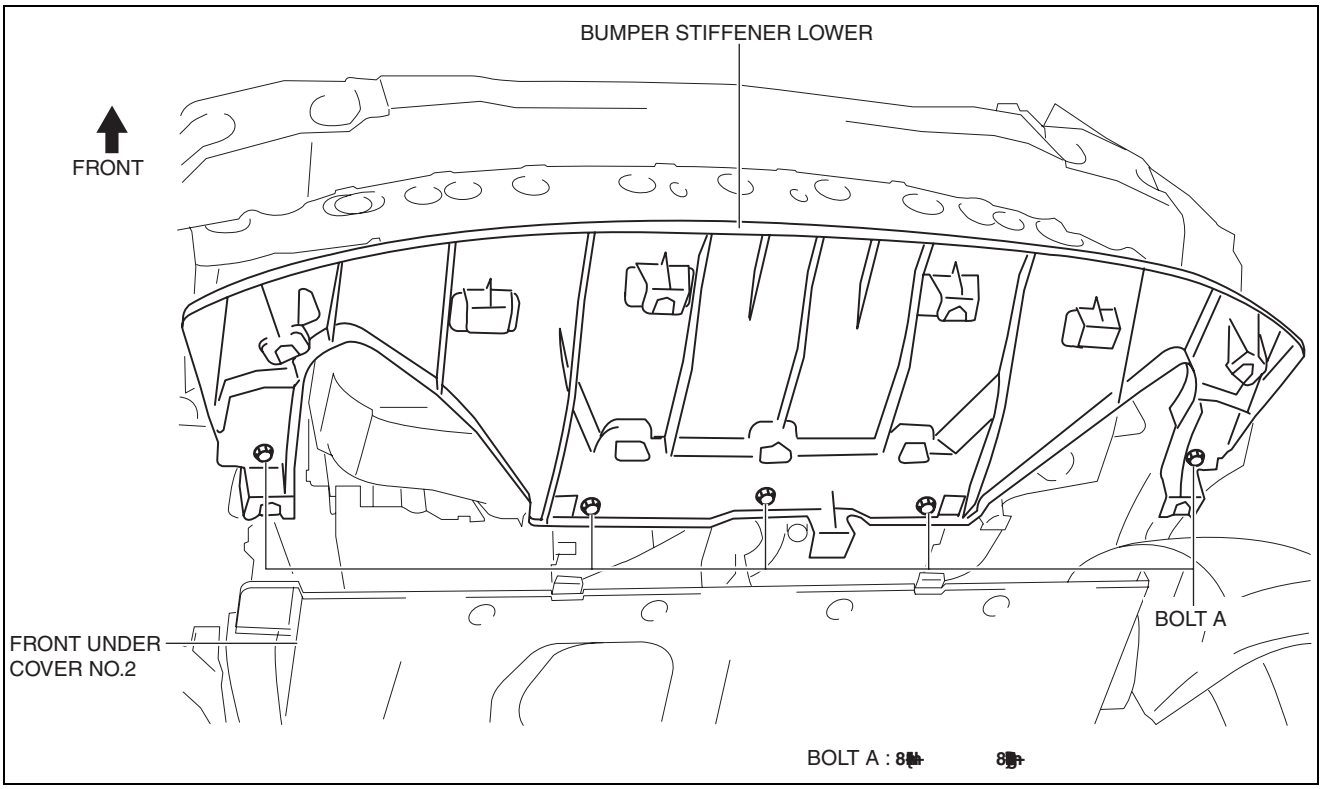
6. Install in the reverse order of removal.
7. Adjust the headlight aiming. (See 09-18-18 HEADLIGHT AIMING.)
8. Adjust the front fog light aiming. (with front fog lights) (See 09-18-48 FRONT FOG LIGHT AIMING.)

BODY PANELS

BUMPER STIFFENER LOWER REMOVAL/INSTALLATION

id091000888900

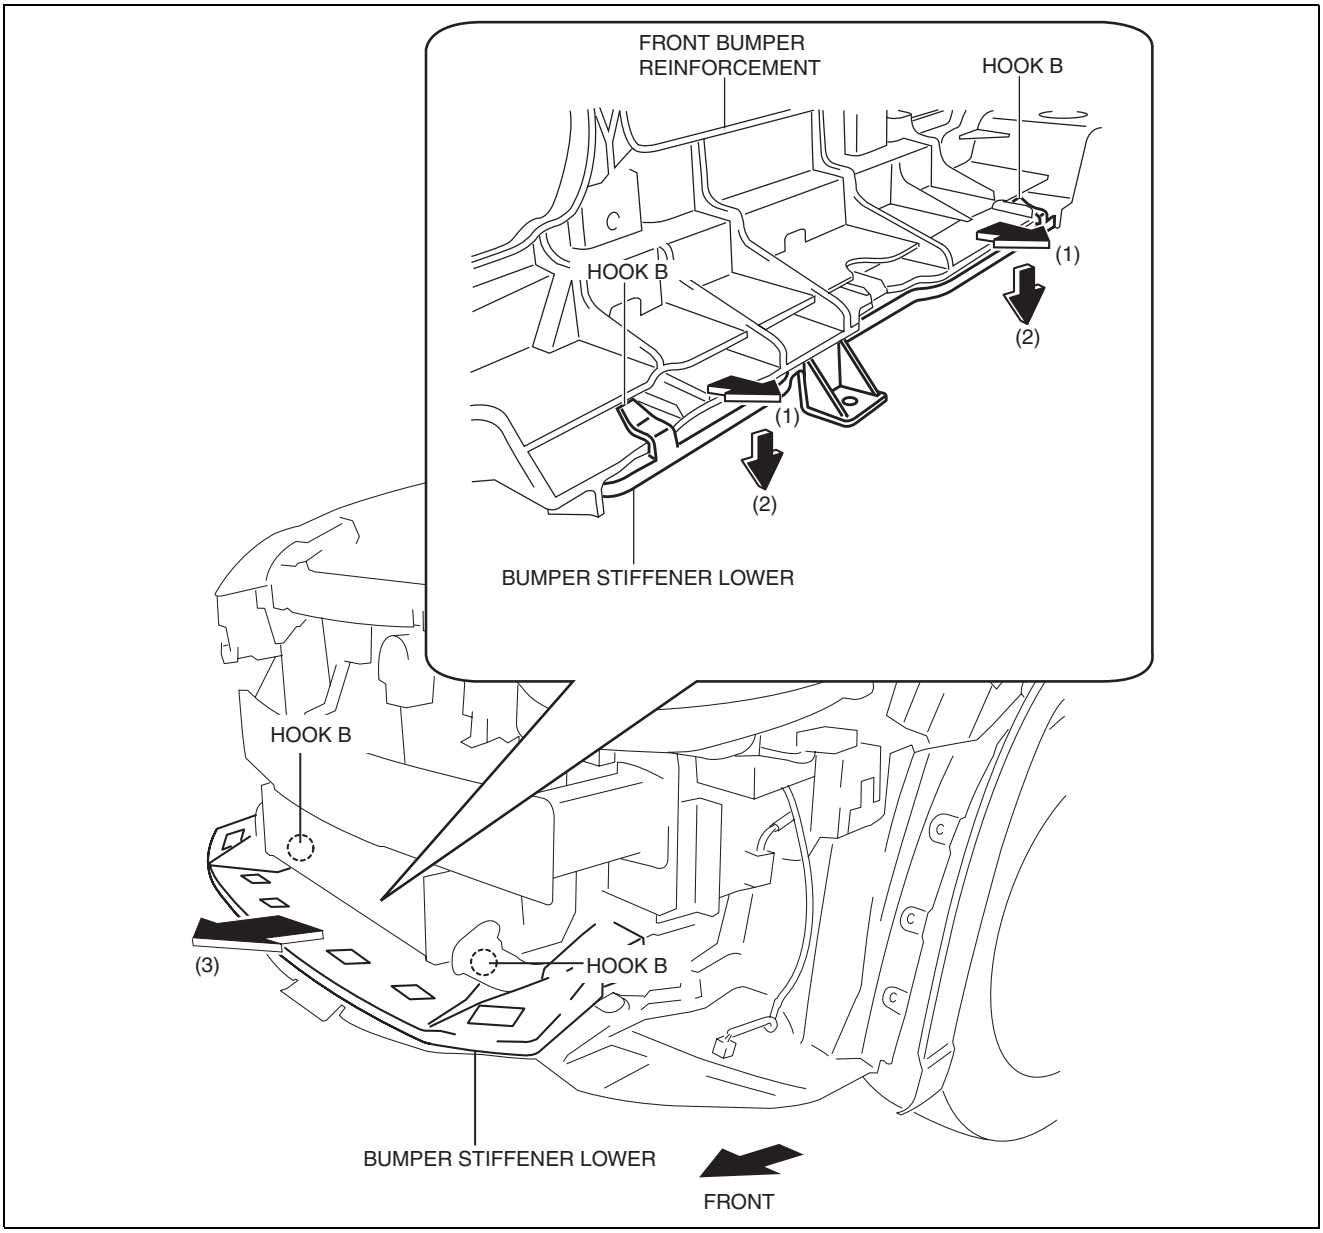
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Seal board upper (See 09-10-34 SEAL BOARD UPPER REMOVAL/INSTALLATION.)
   (2) Front bumper (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
   (3) Seal plate (See 09-10-22 SEAL PLATE REMOVAL/INSTALLATION.)
   (4) Front under cover No.1 (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
3. Remove bolts A.



ac5uuw00002032

BODY PANELS

4. Pull the bumper stiffener lower in the direction of the arrow (1), (2) shown in the figure, detach hooks B.



ac5uuw00001821

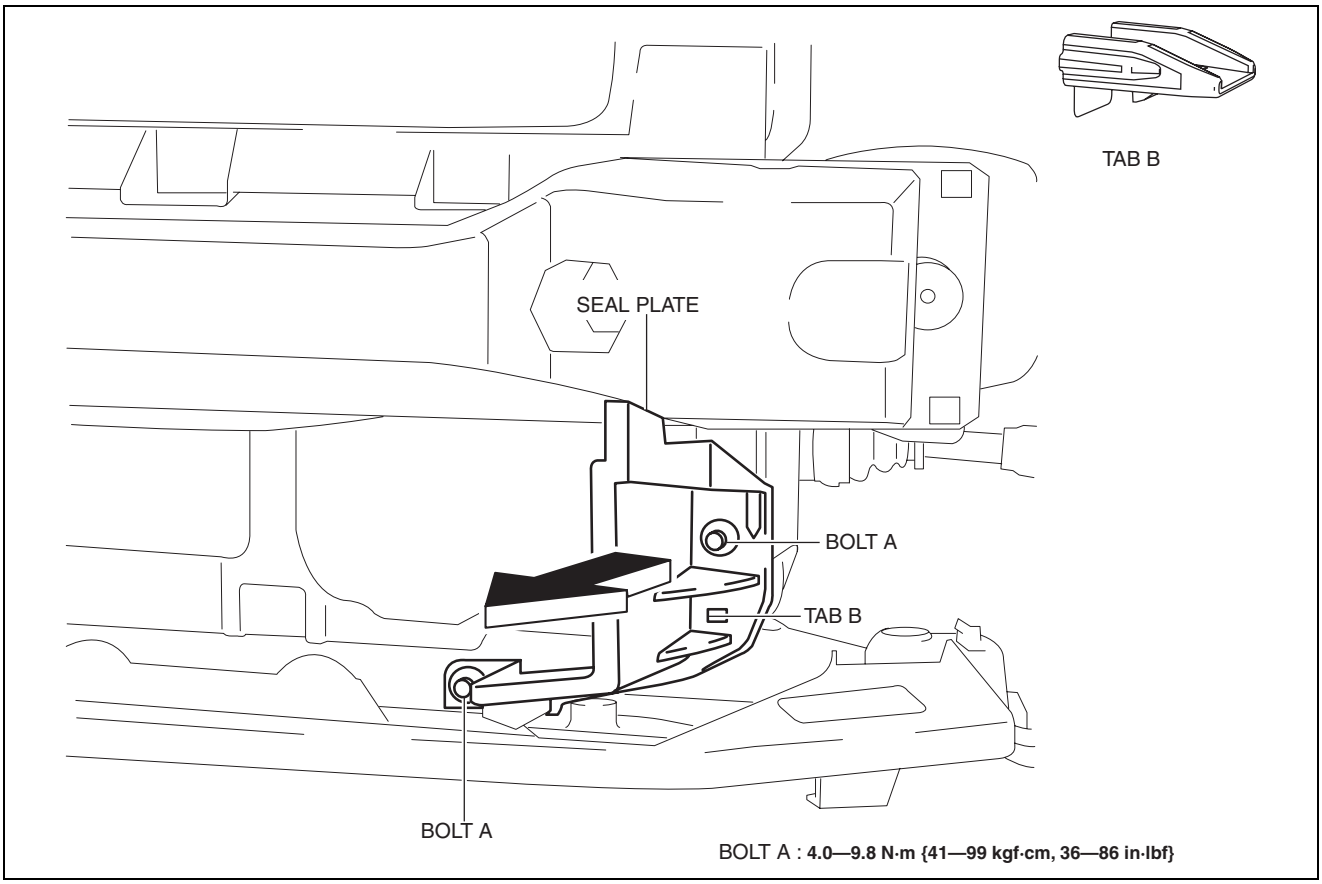
5. Remove the bumper stiffener lower in the direction of the arrow (3) shown in the figure.
6. Install in the reverse order of removal.
7. Adjust the headlight aiming. (See 09-18-18 HEADLIGHT AIMING.)
8. Adjust the front fog light aiming. (with front fog lights) (See 09-18-48 FRONT FOG LIGHT AIMING.)

BODY PANELS

SEAL PLATE REMOVAL/INSTALLATION

id091000889000

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the seal board upper. (See 09-10-34 SEAL BOARD UPPER REMOVAL/INSTALLATION.)
3. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
4. Remove bolts A.



ac5wzw0000310

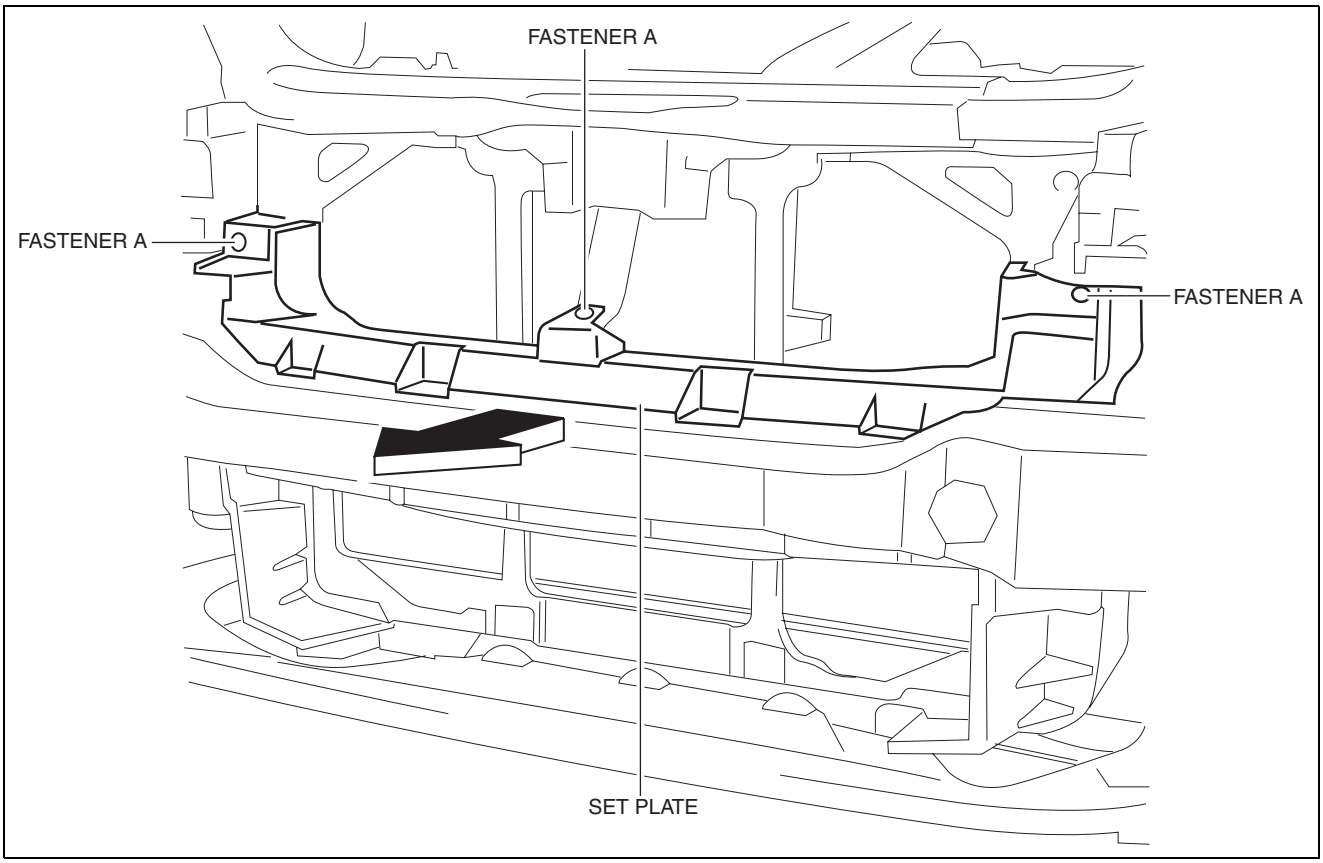
5. Remove the seal plate in the direction of the arrow shown in the figure while detaching tab B.
6. Install in the reverse order of removal.
7. Adjust the headlight aiming. (See 09-18-18 HEADLIGHT AIMING.)
8. Adjust the front fog light aiming. (with front fog lights) (See 09-18-48 FRONT FOG LIGHT AIMING.)

BODY PANELS

SET PLATE REMOVAL/INSTALLATION

id091000878900

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the seal board upper. (See 09-10-34 SEAL BOARD UPPER REMOVAL/INSTALLATION.)
3. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
4. Remove fasteners A.



ac5wzw0000131

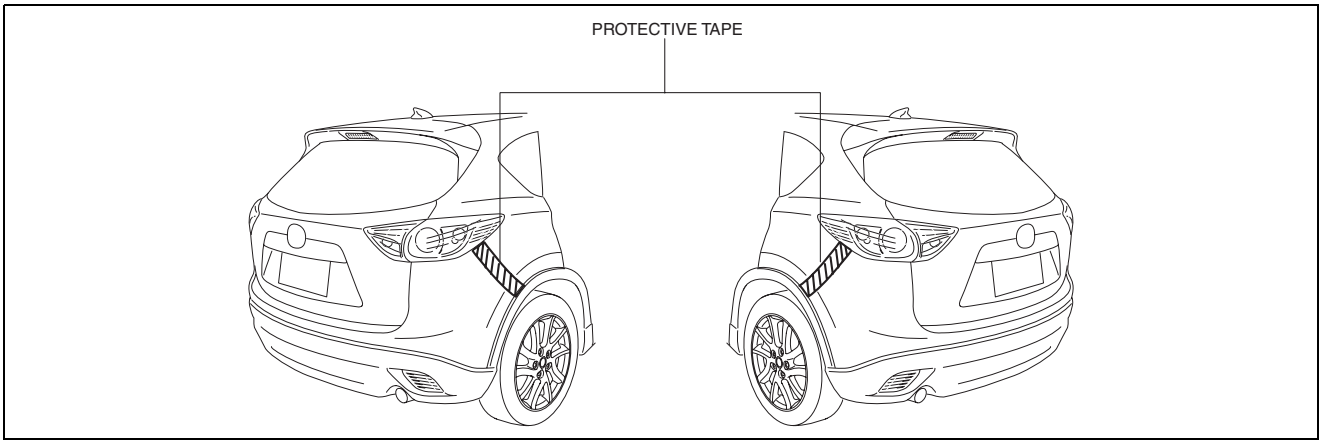
5. Remove the set plate in the direction of the arrow shown in the figure.
6. Install in the reverse order of removal.
7. Adjust the headlight aiming. (See 09-18-18 HEADLIGHT AIMING.)
8. Adjust the front fog light aiming. (with front fog lights) (See 09-18-48 FRONT FOG LIGHT AIMING.)

BODY PANELS

REAR BUMPER REMOVAL/INSTALLATION

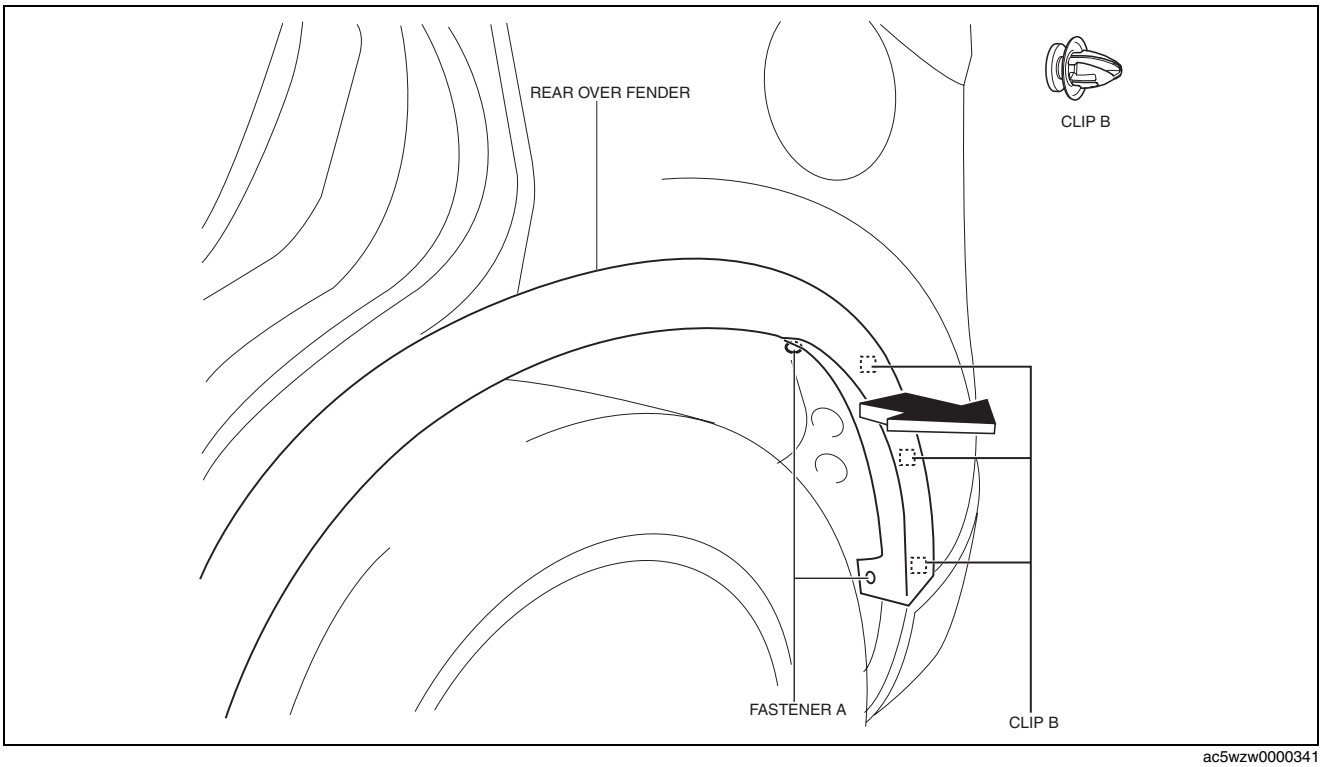
id091000800700

Caution
- **Affix the protective tape to the position (body side) shown in the figure.**



ac5uuw00001960

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the rear combination light. (See 09-18-54 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
3. Remove fasteners A.



ac5wzw0000341

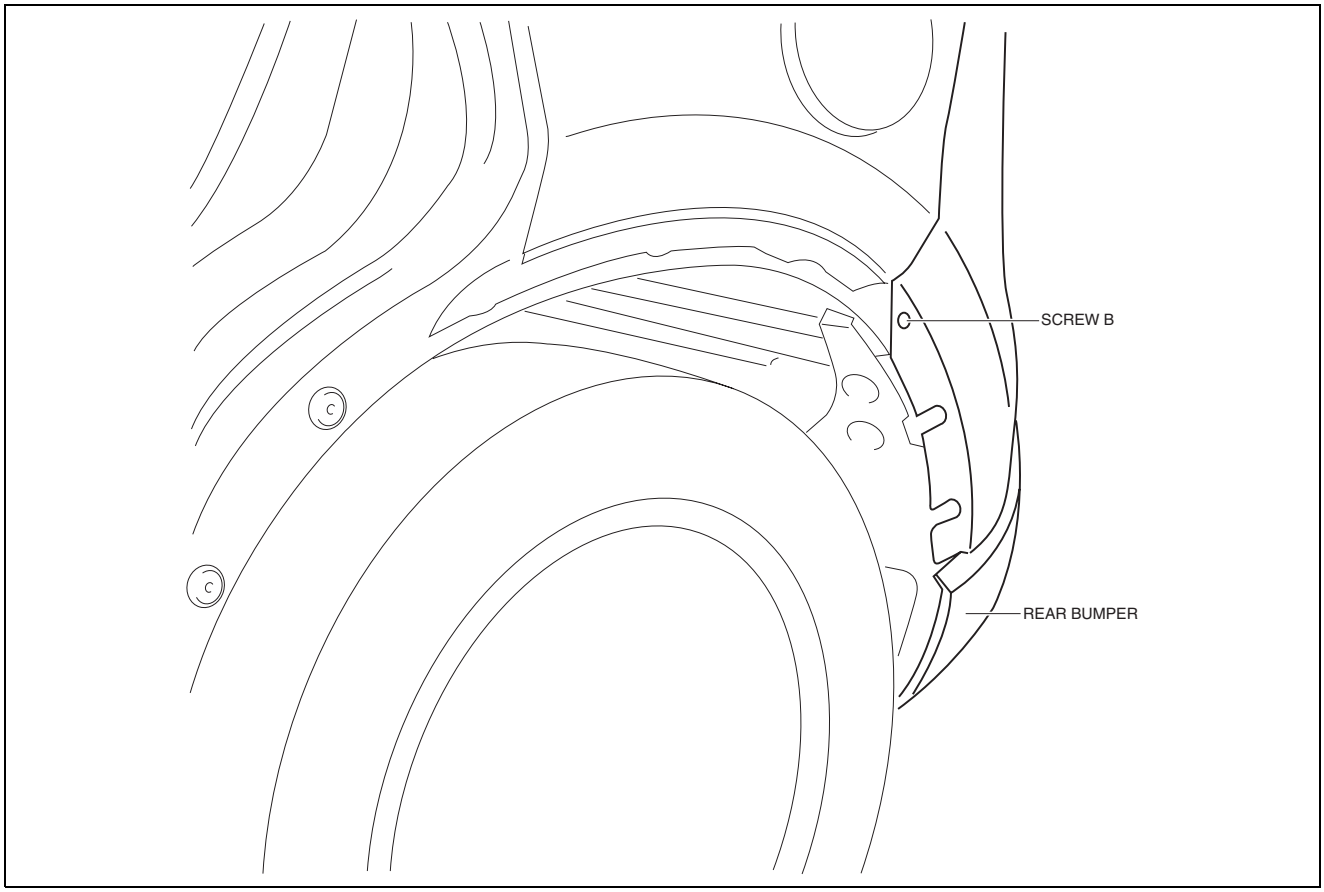
4. Pull the rear over fender in the direction of the arrow shown in the figure above, then peel it back while removing clips B.

Caution
- **After removing clips B, insert a rag between the rear fender panel and the rear over fender to prevent the rear fender panel and clips B from being damaged.**

5. Remove the rear splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)

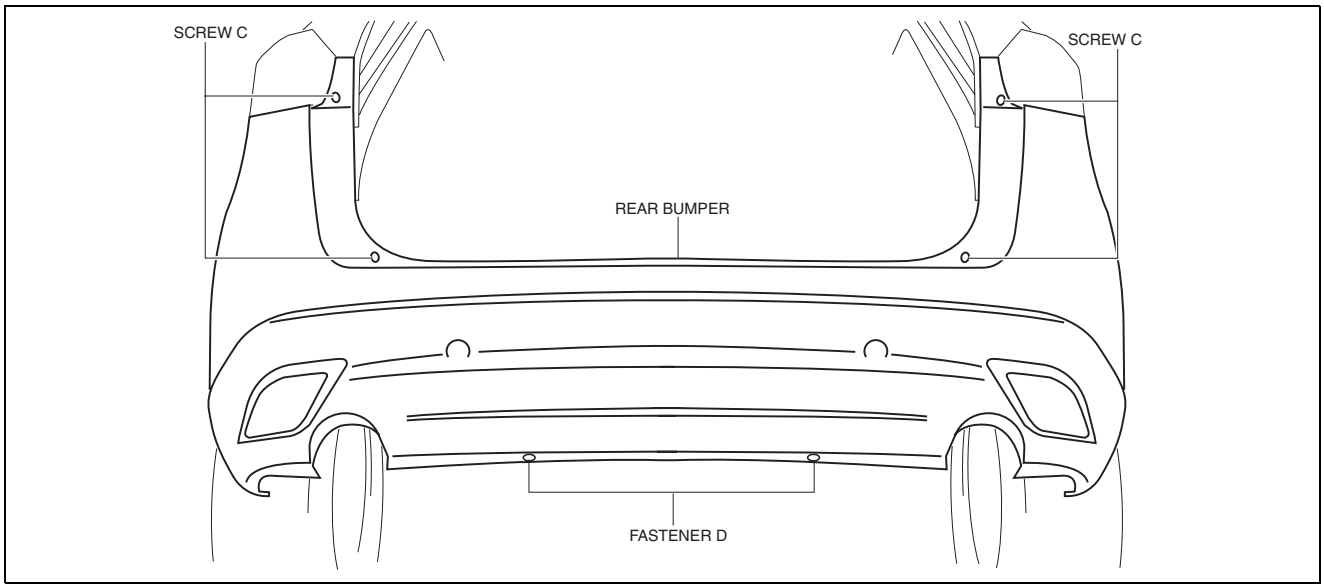
BODY PANELS

6. Remove screw B.



ac5wzw0000115

7. Remove screws C.



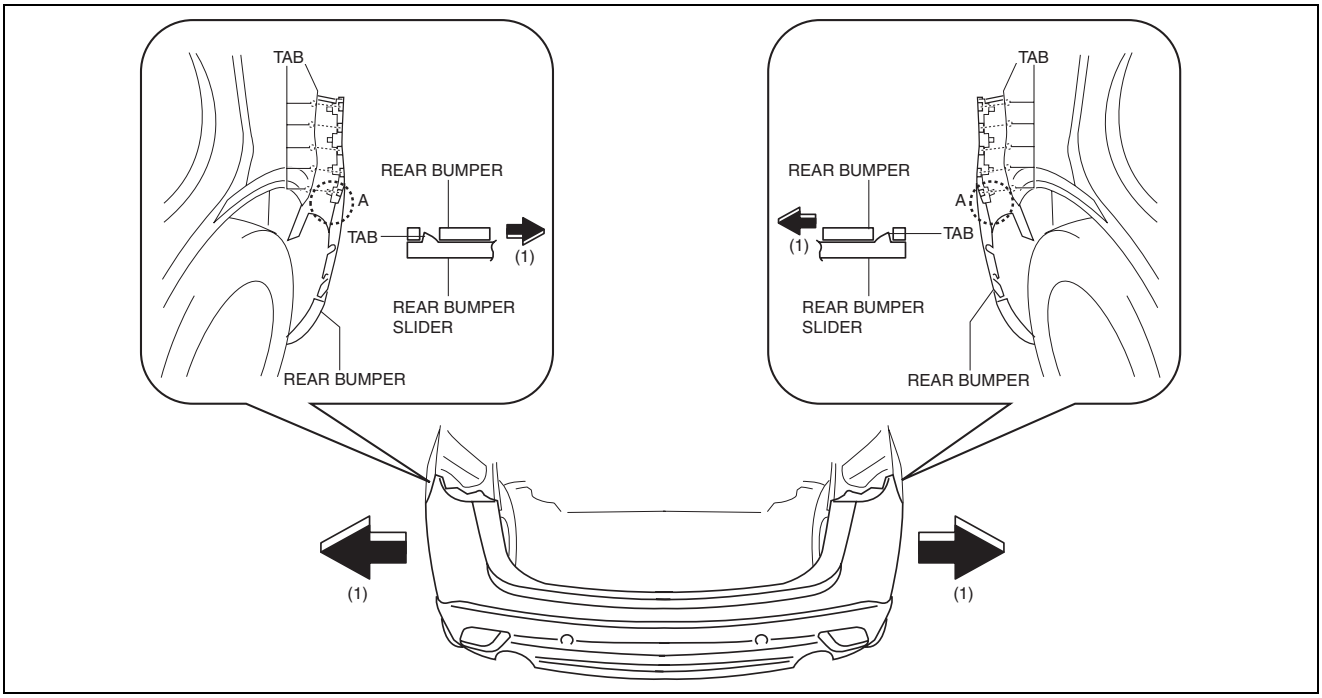
ac5wzw0000115

8. Remove fasteners D.
9. Pull the end of the rear bumper (A) in the direction of the arrow (1) shown in the figure, while removing tabs.

Caution

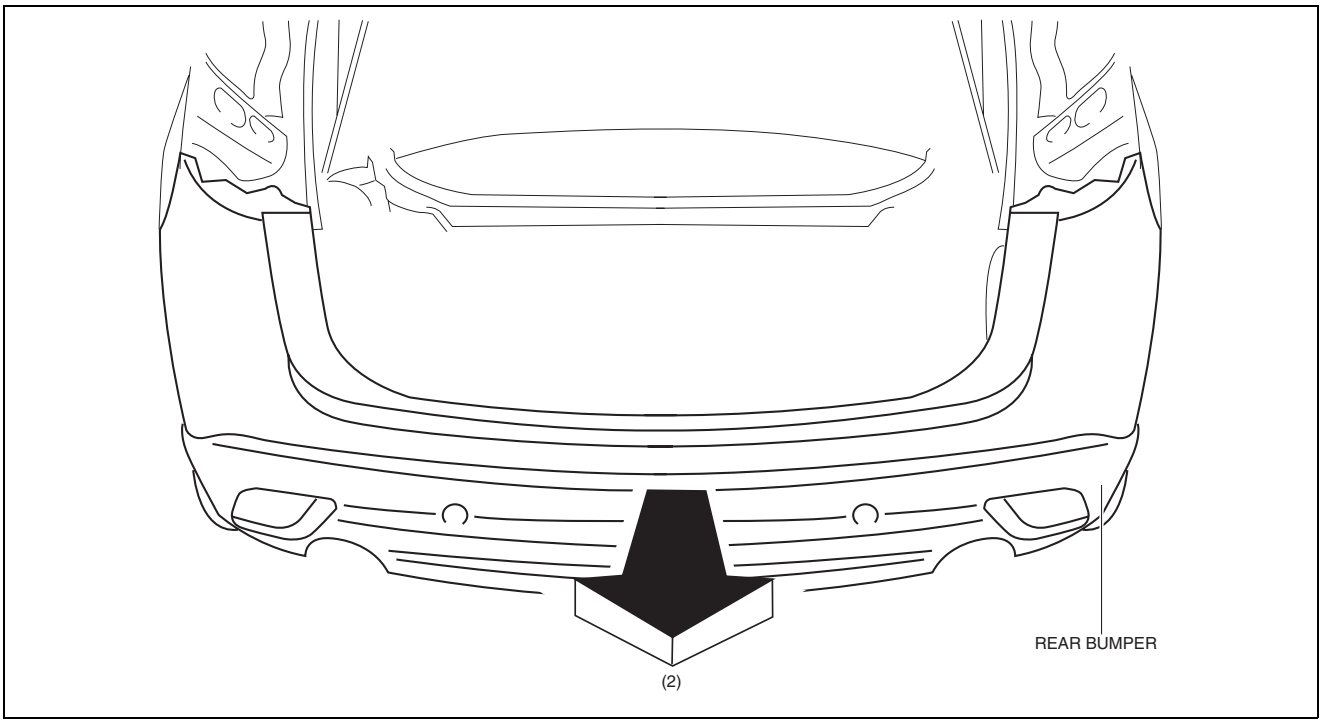
- **The rear bumper and rear bumper slider are engaged firmly. If they are disengaged forcibly the bumper could fall and be damaged. Perform the servicing carefully when disengaging the rear bumper from the rear bumper slider.**
- **When disengaging the rear bumper from the rear bumper slider, the rear bumper could fall and be damaged. Support the front bumper so that it does not fall.**

BODY PANELS



ac5uuw00001815

10. Remove the rear bumper from rear bumper slider.
11. Remove the rear bumper in the direction of the arrow (2) shown in the figure.



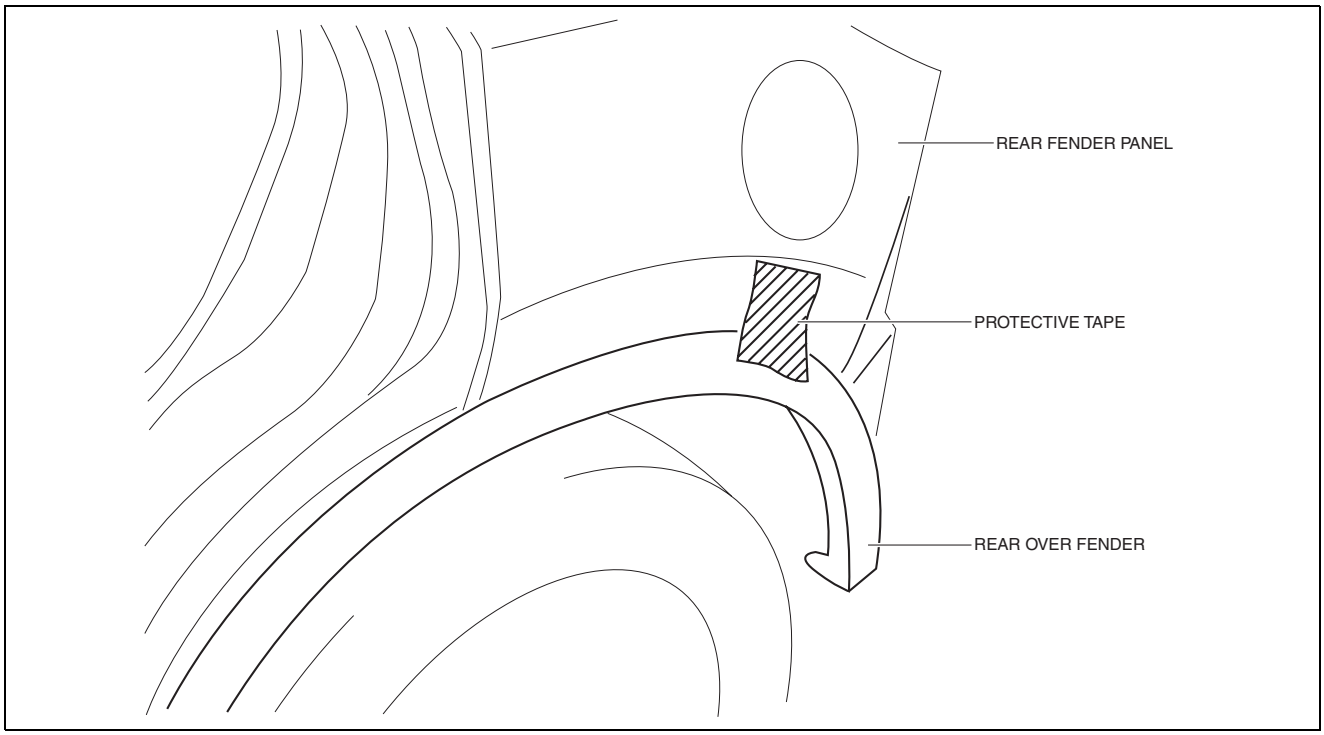
ac5uuw00001816

12. Disconnect the rear fog light connector. (with rear fog light)
13. Disconnect the rear ultrasonic sensor connector. (with parking sensor system)

BODY PANELS

Caution

- **After removing rear bumper, it may hit the rear over fender and cause a damage and/or injury. Perform the following procedure to prevent the rear over fender from being damaged.**
  - **— Fix the rear over fender and rear fender panel with protective tape.**



ac5uuw00001961

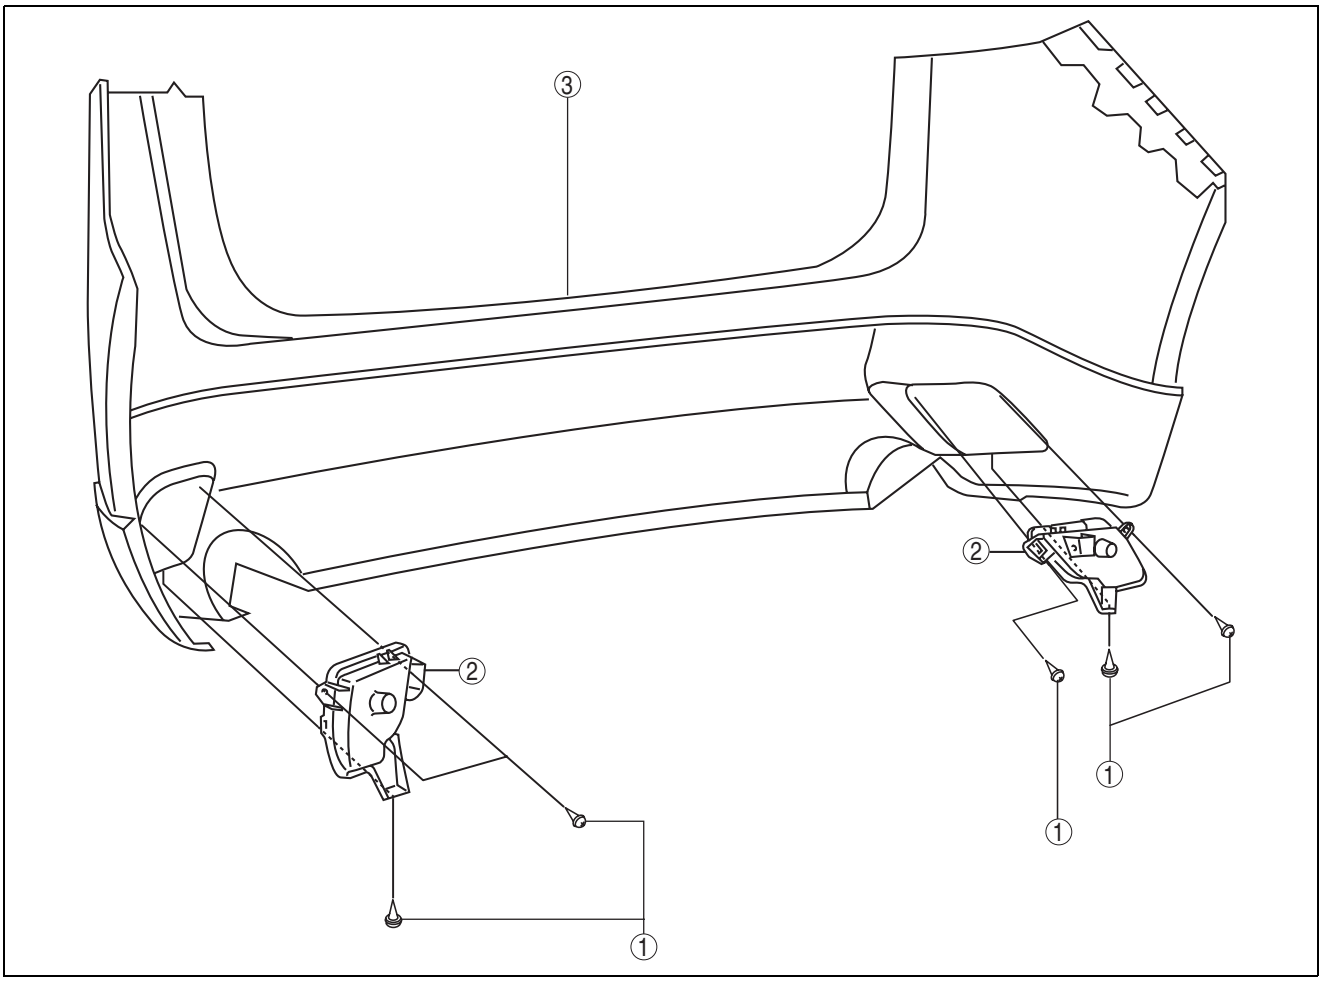
14. Install in the reverse order of removal.

BODY PANELS

REAR BUMPER DISASSEMBLY/ASSEMBLY

id091000800800

1. Disassemble in the order indicated in the table.



ac5wzw0000309

1	Screw
2	Reflector (without rear fog light)

3	Rear bumper face

2. Assemble in the reverse order of disassembly.

BODY PANELS

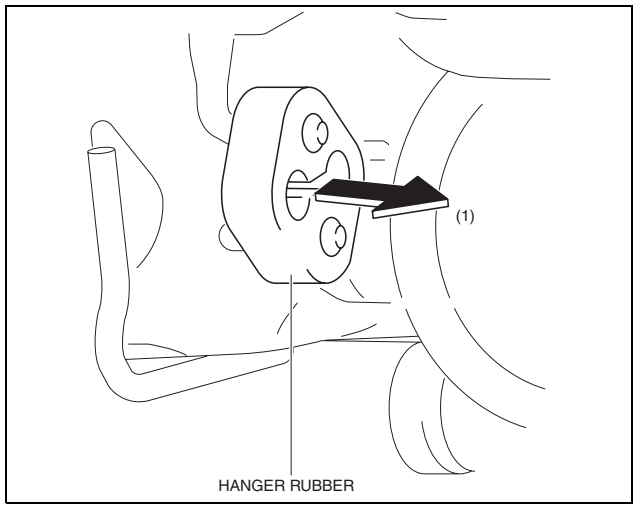
REAR BUMPER REINFORCEMENT REMOVAL/INSTALLATION

id091000800900

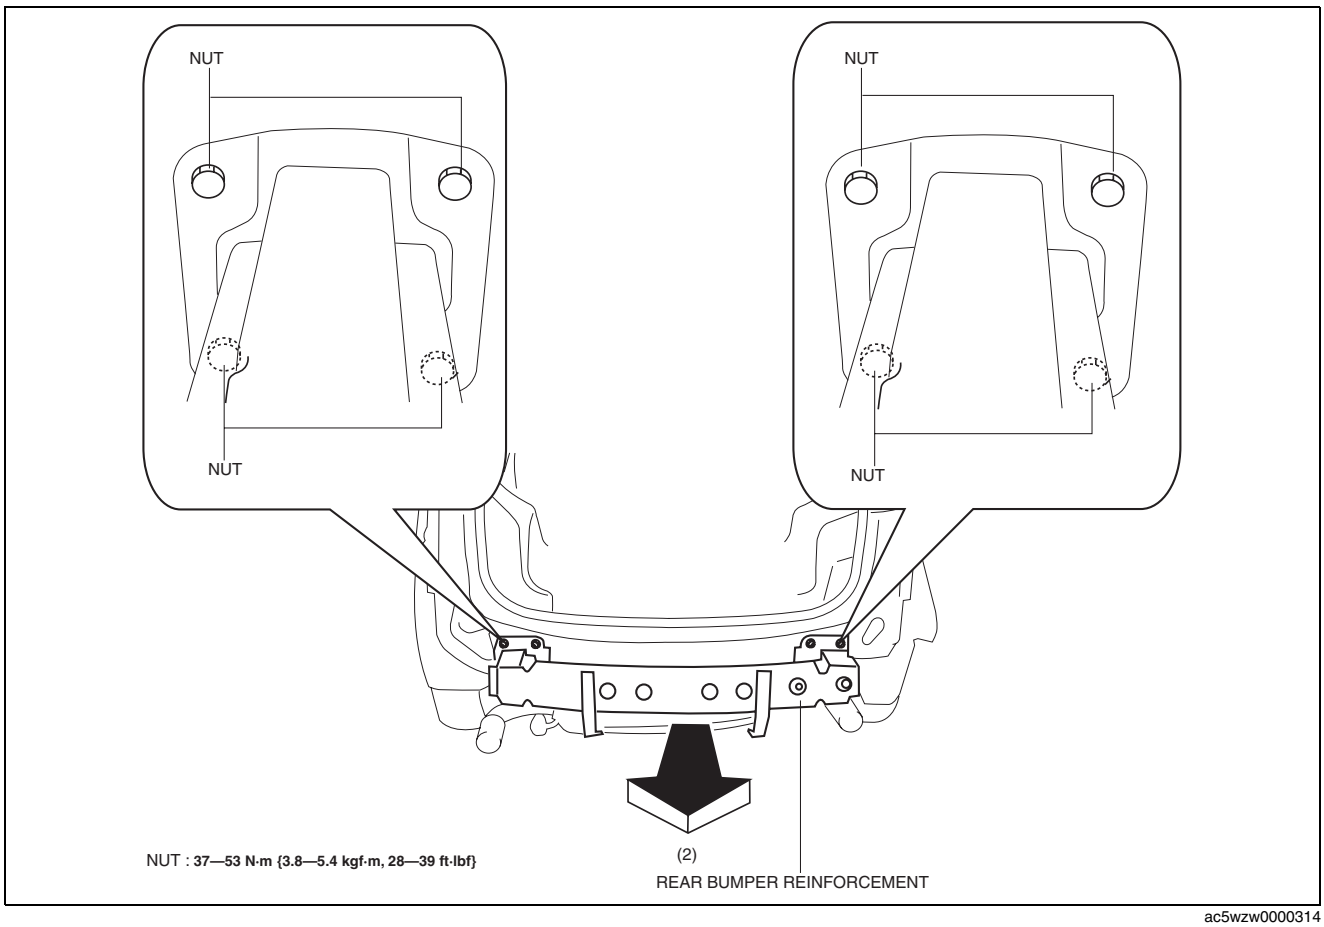
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Rear splash shield (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
   (2) Rear combination light (See 09-18-54 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (3) Rear bumper (See 09-10-24 REAR BUMPER REMOVAL/INSTALLATION.)
3. Remove the hanger rubber in the direction of the arrow (1) shown in the figure.
4. Remove nuts.

Caution

- **Removing the rear bumper reinforcement without supporting it could cause the rear bumper reinforcement to fall and cause serious injury. Always perform the procedure with at least another person to prevent the rear bumper reinforcement from falling.**



ac5wzw0000314



ac5wzw0000314

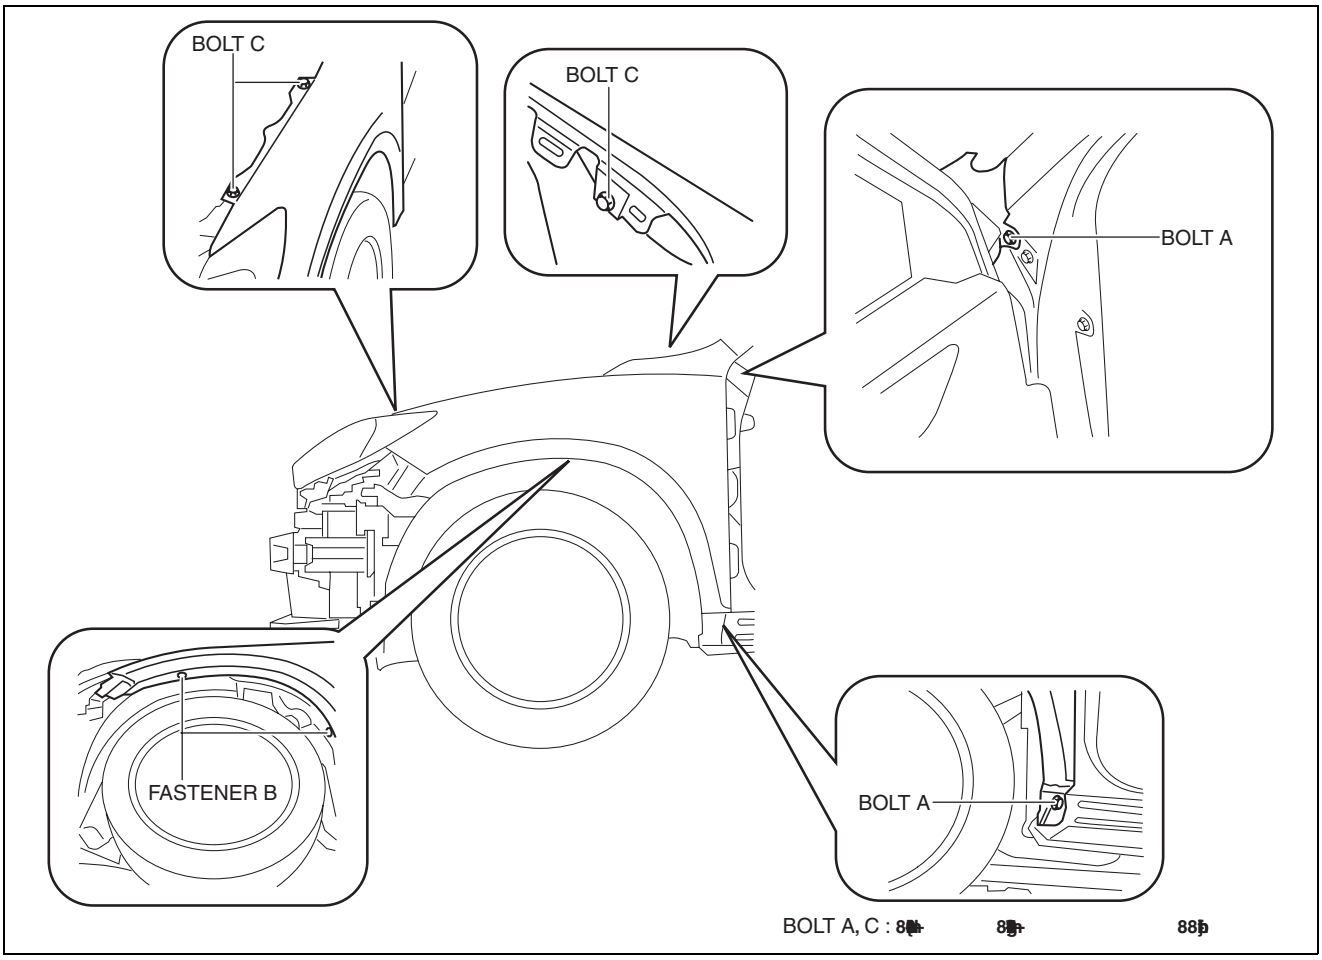
5. Remove the rear bumper reinforcement in the direction of the arrow (2) shown in the figure.
6. Install in the reverse order of removal.

BODY PANELS

FRONT FENDER PANEL REMOVAL/INSTALLATION

id091000801000

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Front bumper (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
   (2) Front combination light (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (3) Front bumper slider (See 09-10-17 BUMPER SLIDER REMOVAL/INSTALLATION.)
   (4) Front over fender (See 09-10-31 FRONT OVER FENDER REMOVAL/INSTALLATION.)
3. Remove bolts A and fasteners B.



ac5wzw0000116

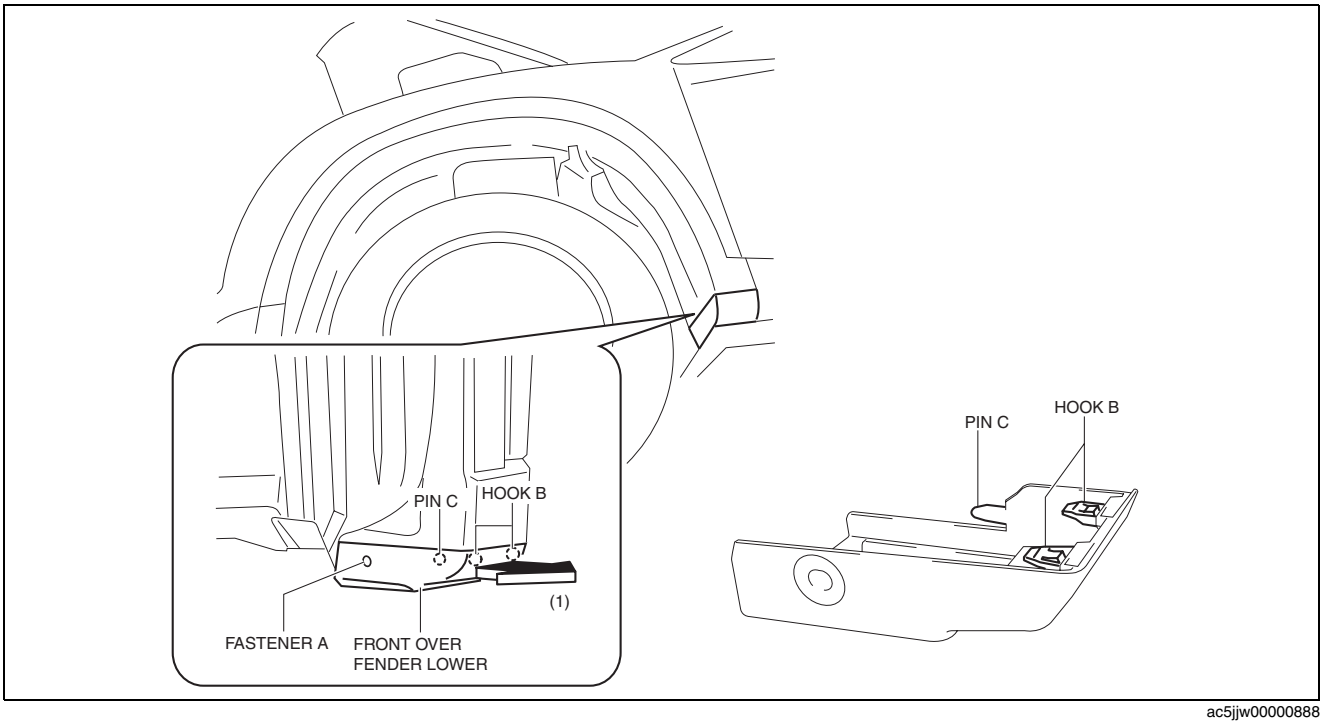
4. Remove bolts C.
5. Remove the front fender panel.
6. Install in the reverse order of removal.
7. Adjust the headlight aiming. (See 09-18-18 HEADLIGHT AIMING.)
8. Adjust the front fog light aiming. (with front fog lights) (See 09-18-48 FRONT FOG LIGHT AIMING.)

BODY PANELS

FRONT OVER FENDER REMOVAL/INSTALLATION

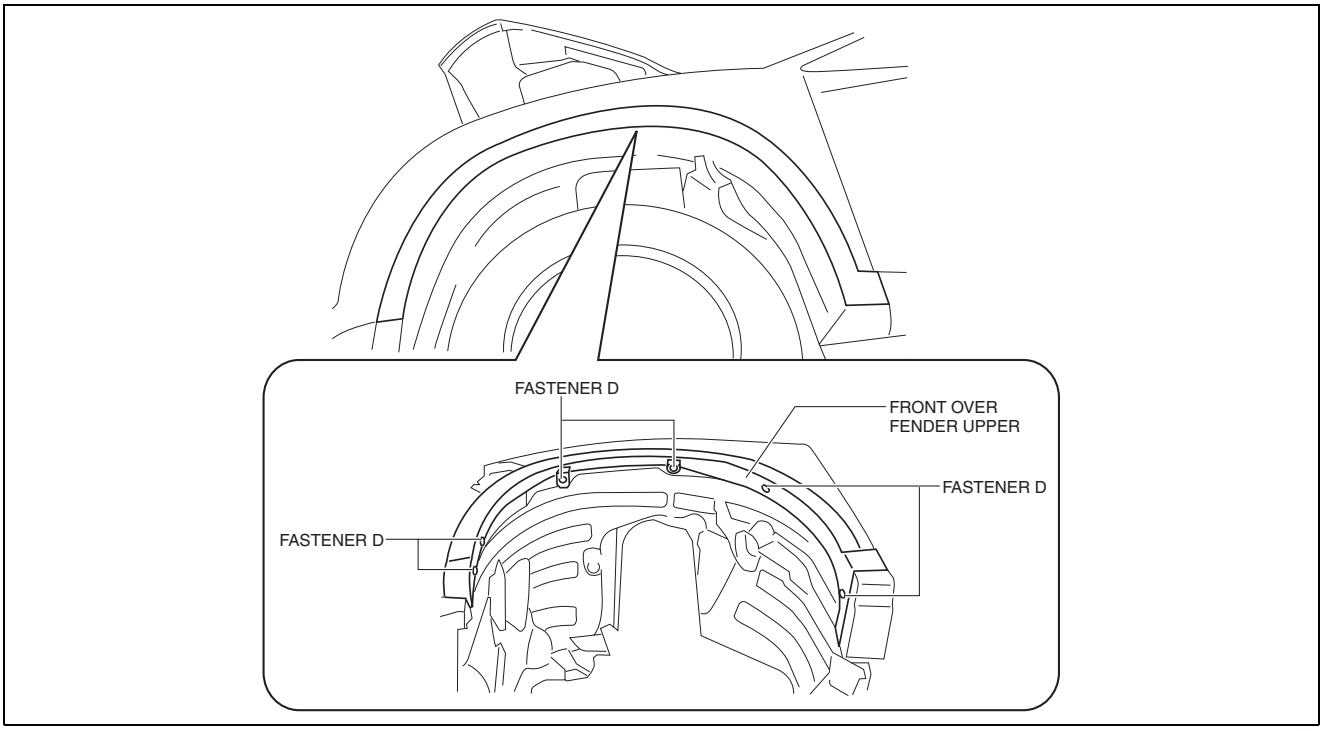
id091000878700

1. Remove fastener A.



ac5jjw00000888

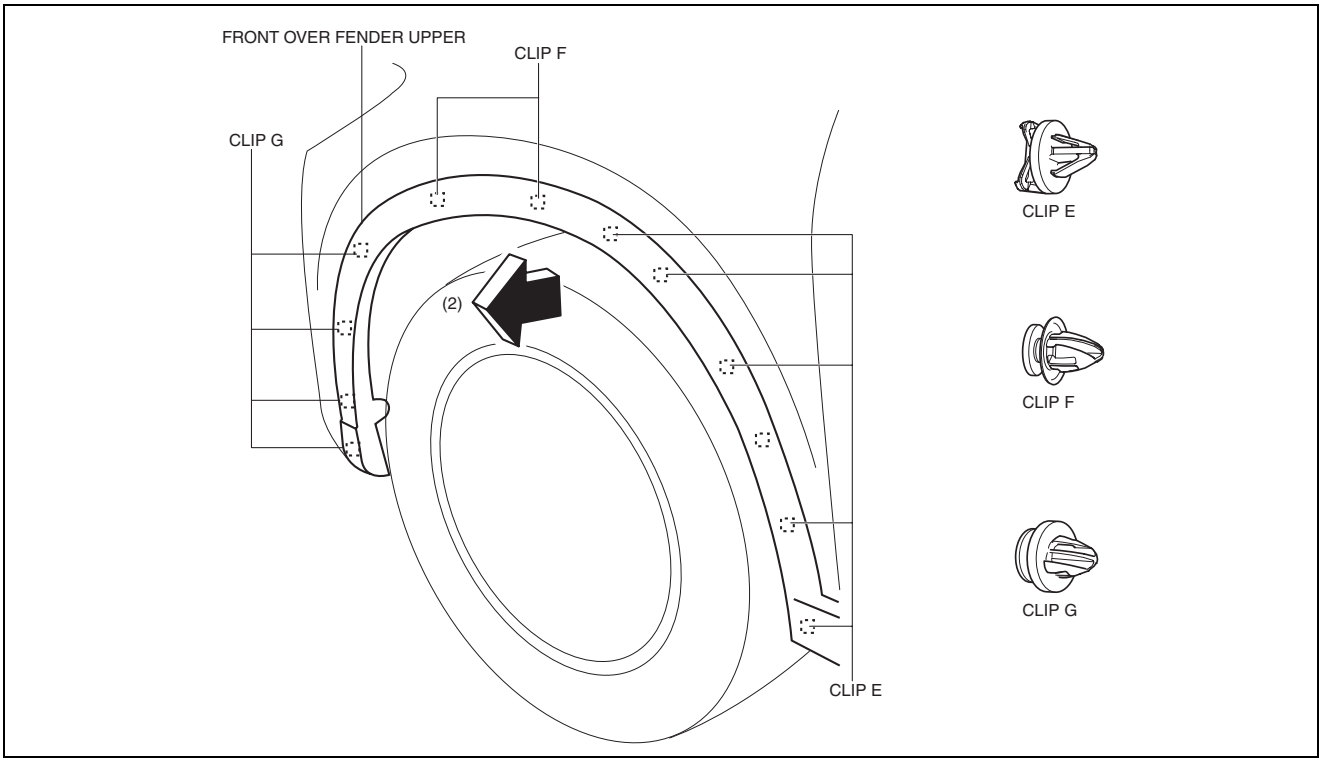
2. Pull the front over fender lower in the direction of the arrow (1) while removing hook B and pin C.
3. Remove fasteners D.



ac5wzw0000117

BODY PANELS

4. Pull the front over fender upper in the direction of the arrow (2) while removing clips E, F and G.



ac5uuw00001820

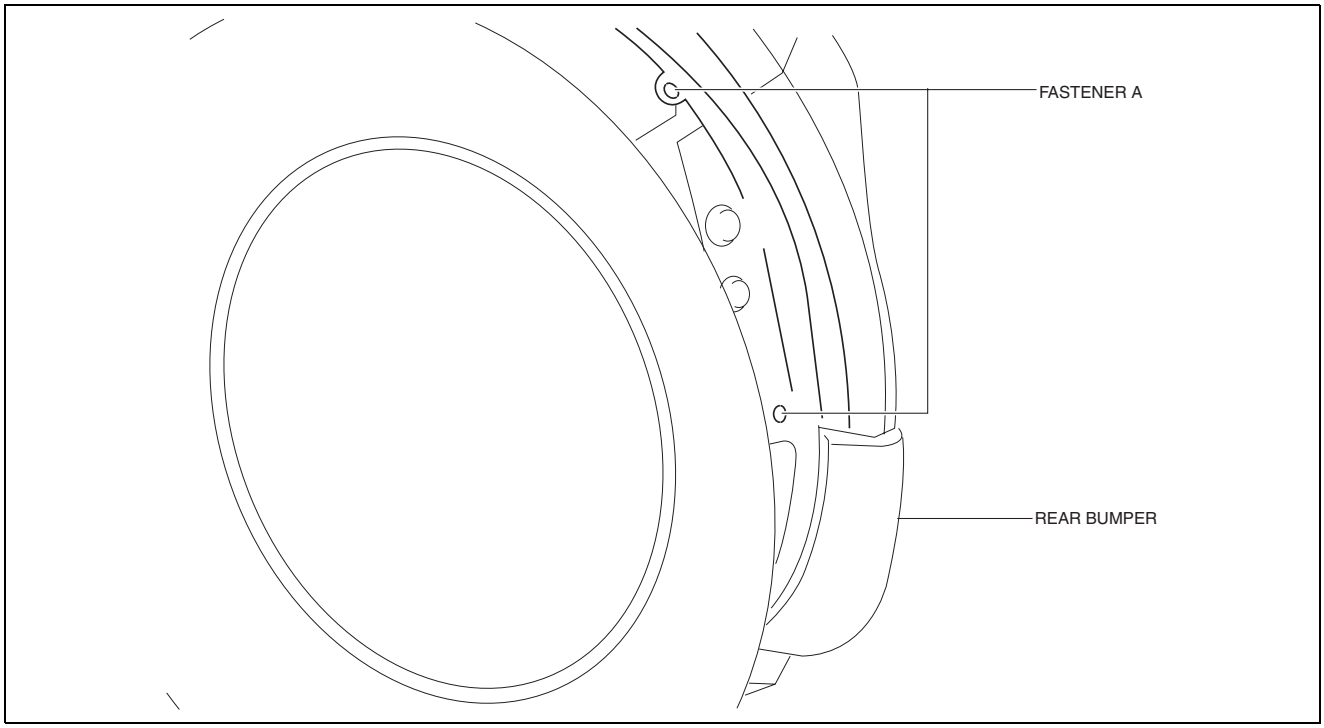
5. Install in the reverse order of removal.

BODY PANELS

REAR OVER FENDER REMOVAL/INSTALLATION

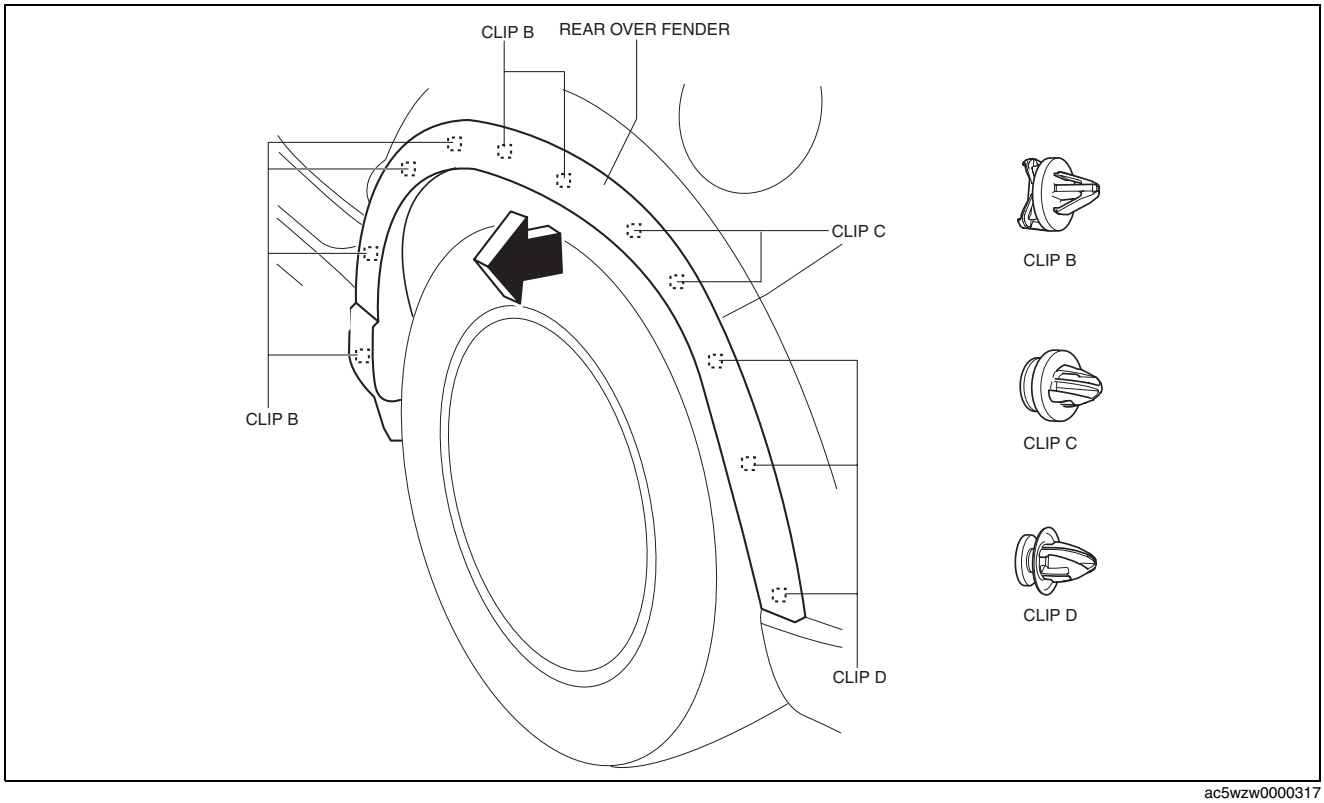
id091000878800

1. Remove fasteners A.



ac5wzw0000117

2. Pull the rear over fender in the direction of the arrow (2) while removing clips B, C and D.



ac5wzw0000317

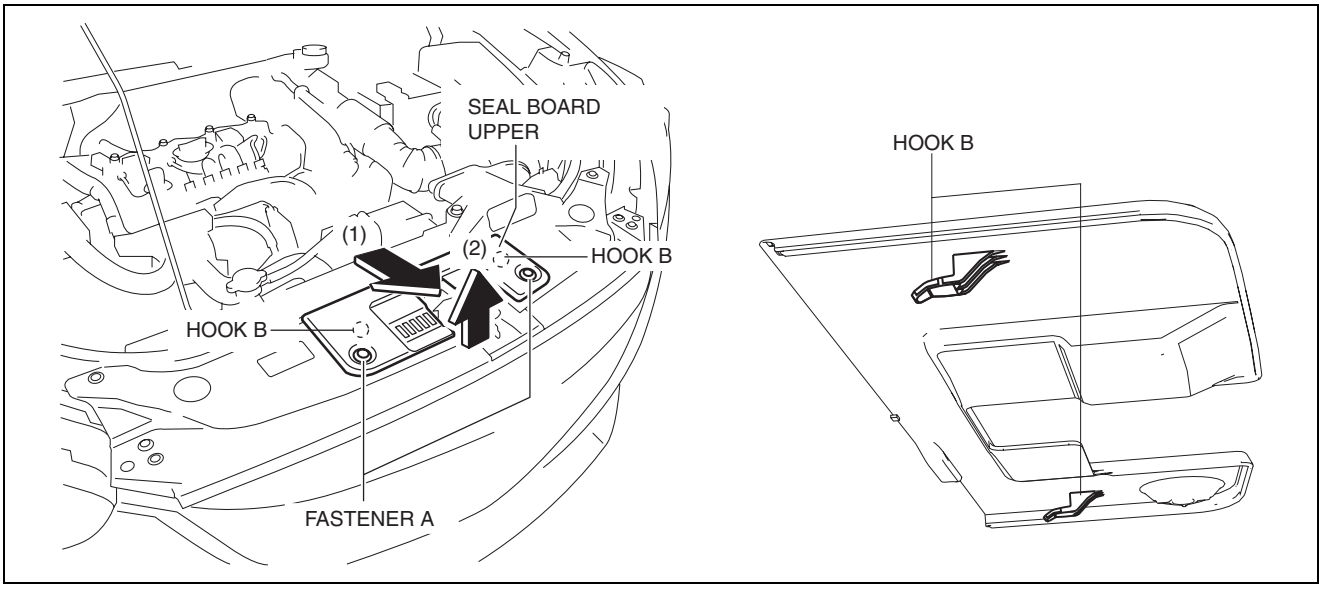
3. Install in the reverse order of removal.

BODY PANELS

SEAL BOARD UPPER REMOVAL/INSTALLATION

id091000466600

1. Remove fasteners A.



ac5wzw0000309

2. Pull the seal board upper in the direction of the arrow in the order of (1), (2) and remove it while detaching hooks B.
3. Install in the reverse order of removal.

BODY PANELS

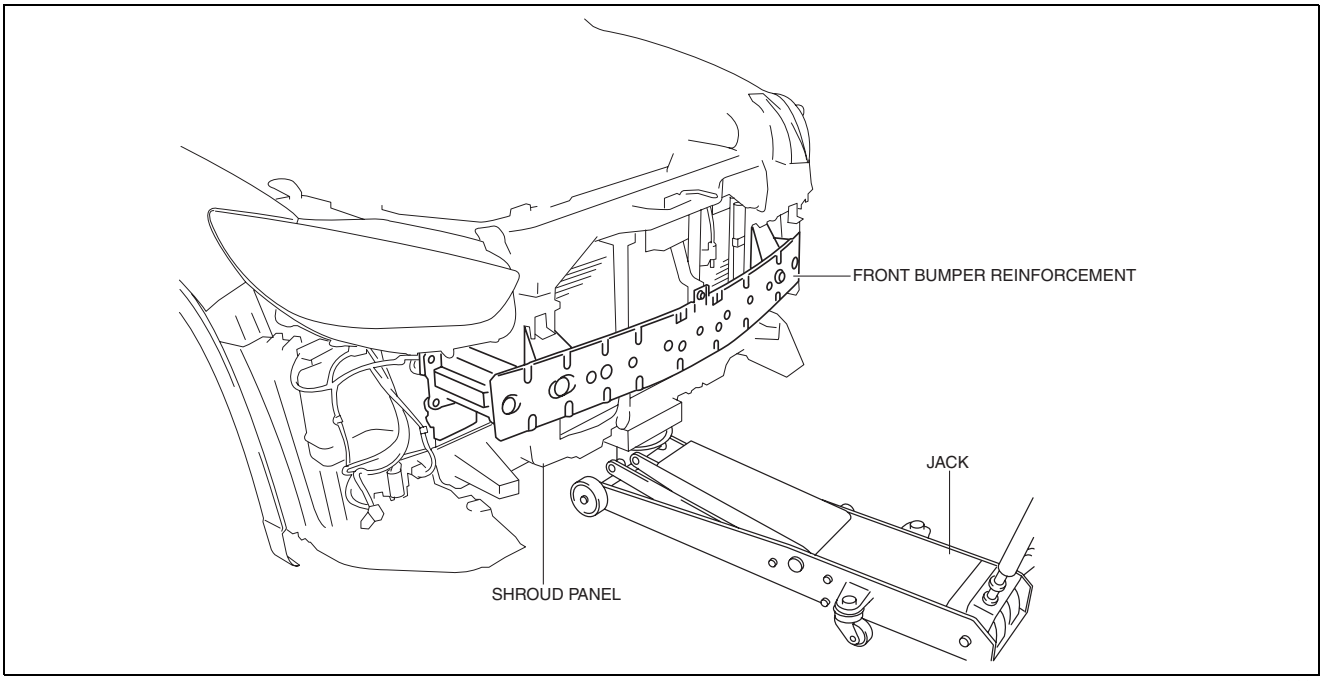
SHROUD PANEL REMOVAL/INSTALLATION

id091000801900

Caution
- **Since the servicing is performed with the bonnet open, secure the bonnet using a piece of wood to prevent it from falling.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Seal board upper (See 09-10-34 SEAL BOARD UPPER REMOVAL/INSTALLATION.)
   (2) Front bumper (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
   (3) Front combination light (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (4) Shroud upper member (See 09-10-40 SHROUD UPPER MEMBER REMOVAL/INSTALLATION.)
   (5) Set plate (See 09-10-23 SET PLATE REMOVAL/INSTALLATION.)
   (6) Energy-absorbing form (See 09-10-19 ENERGY-ABSORBING FORM REMOVAL/INSTALLATION.)
   (7) Front under cover No.1 (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
   (8) Bumper stiffener lower (See 09-10-20 BUMPER STIFFENER LOWER REMOVAL/INSTALLATION.)
3. Support the shroud panel using a jack.

Caution
- **Because the shroud panel is installed to the bumper reinforcement, support the shroud panel using a jack before removing the bumper reinforcement so as not to apply excessive force to the shroud panel.**

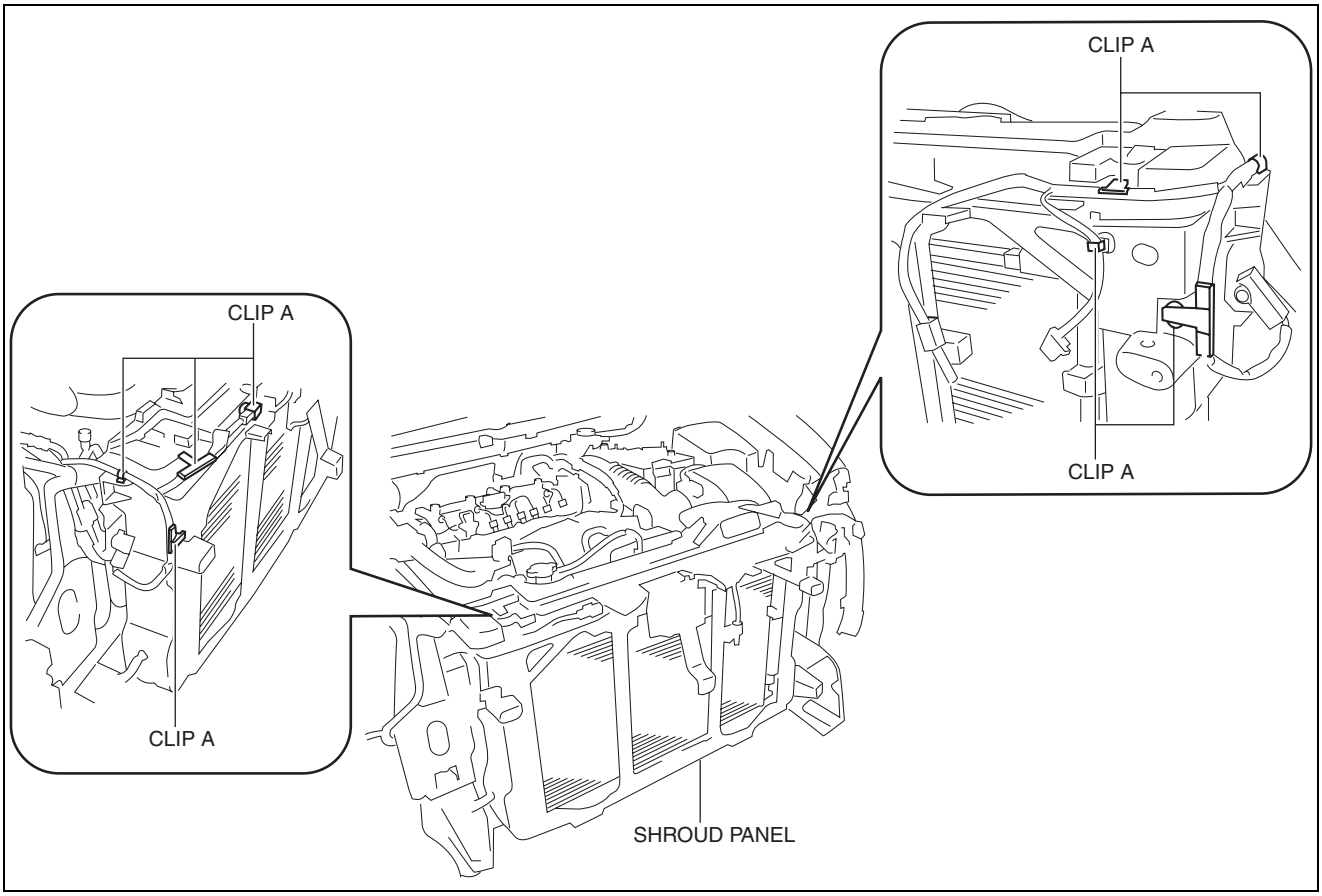


ac5wzw0000116

4. Remove the following parts:
   (1) Front bumper reinforcement (See 09-10-15 FRONT BUMPER REINFORCEMENT REMOVAL/INSTALLATION.)
   (2) Seal plate (See 09-10-22 SEAL PLATE REMOVAL/INSTALLATION.)
   (3) Bonnet latch (See 09-14-17 BONNET LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
   (4) Crash zone sensor (See 08-10-19 CRASH ZONE SENSOR REMOVAL/INSTALLATION.)
   (5) Ambient temperature sensor (See 07-40A-22 AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) (See 07-40B-11 AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].)
   (6) Horn (See 09-22-41 HORN REMOVAL/INSTALLATION.)
   (7) Air cleaner cover (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

BODY PANELS

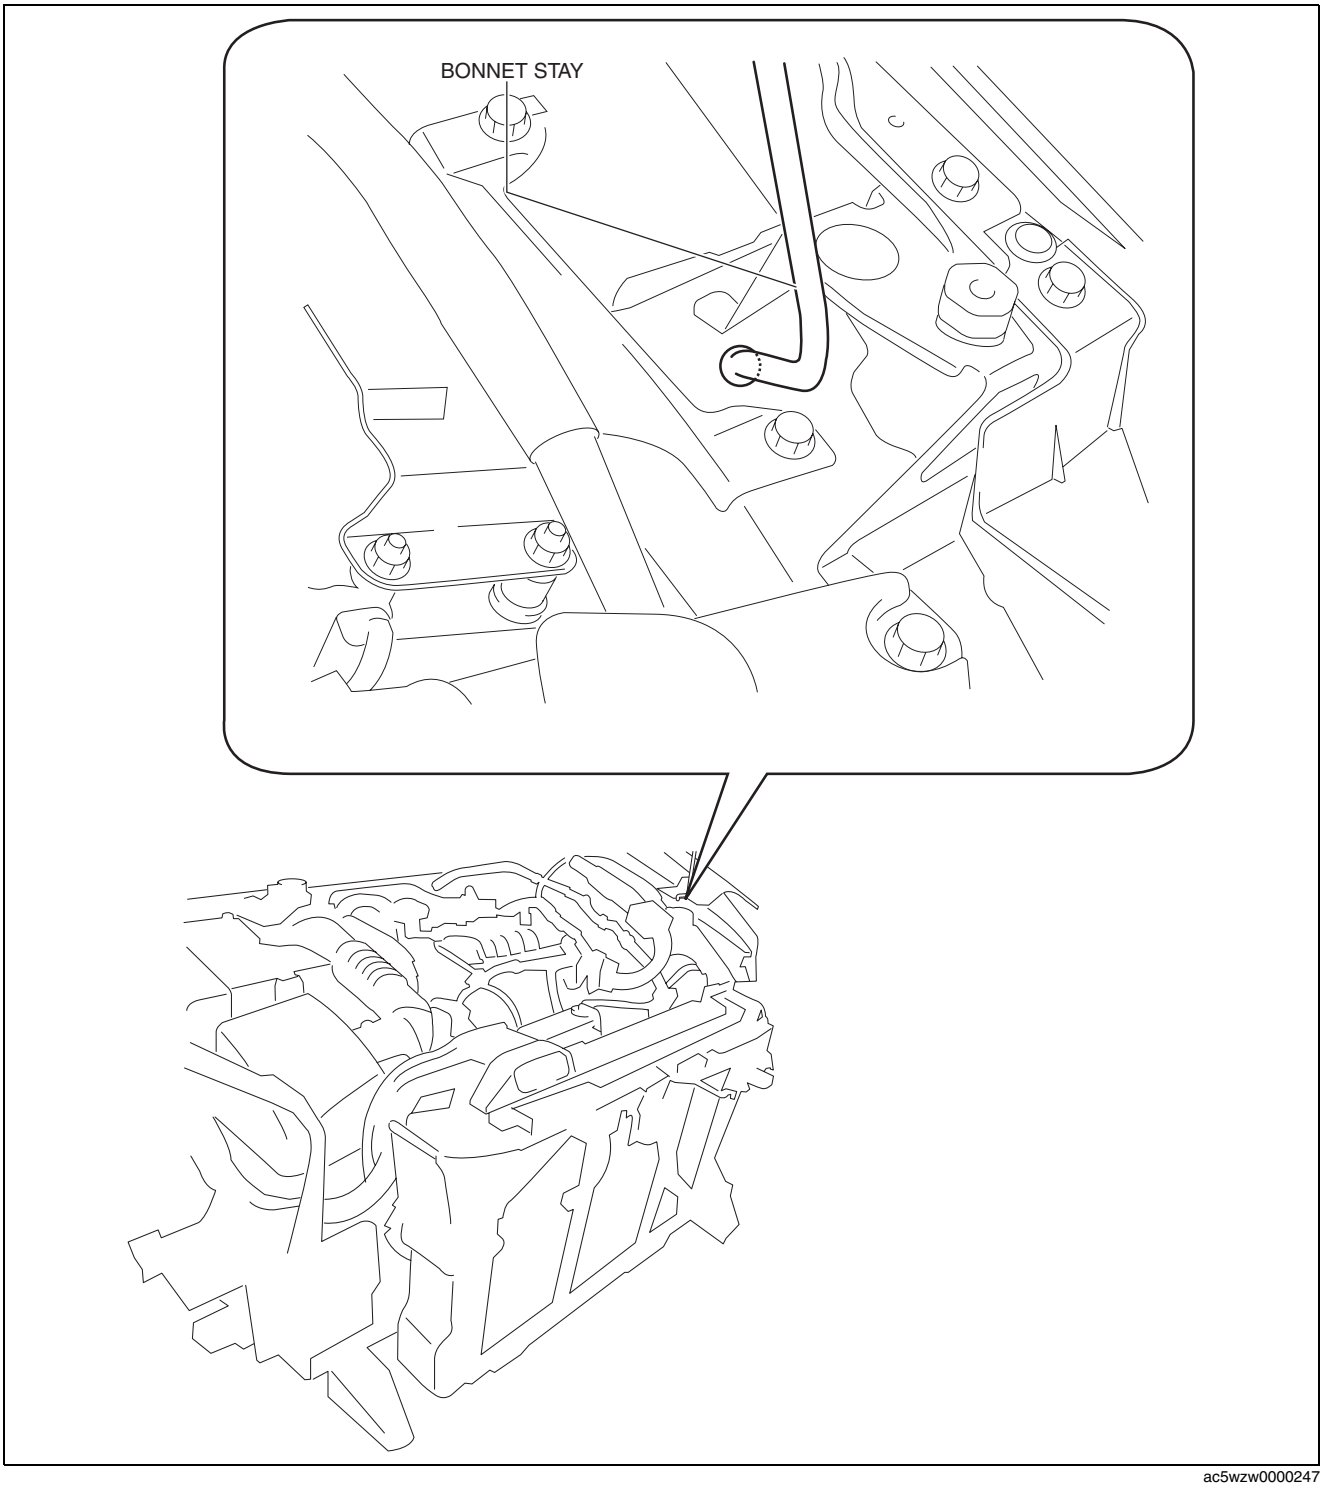
5. Remove clips A.



ac5wzw0000116

BODY PANELS

6. Remove the hood stay from the shroud panel, wrap the hood stay with protective tape, and install it as shown in the figure to support the hood.



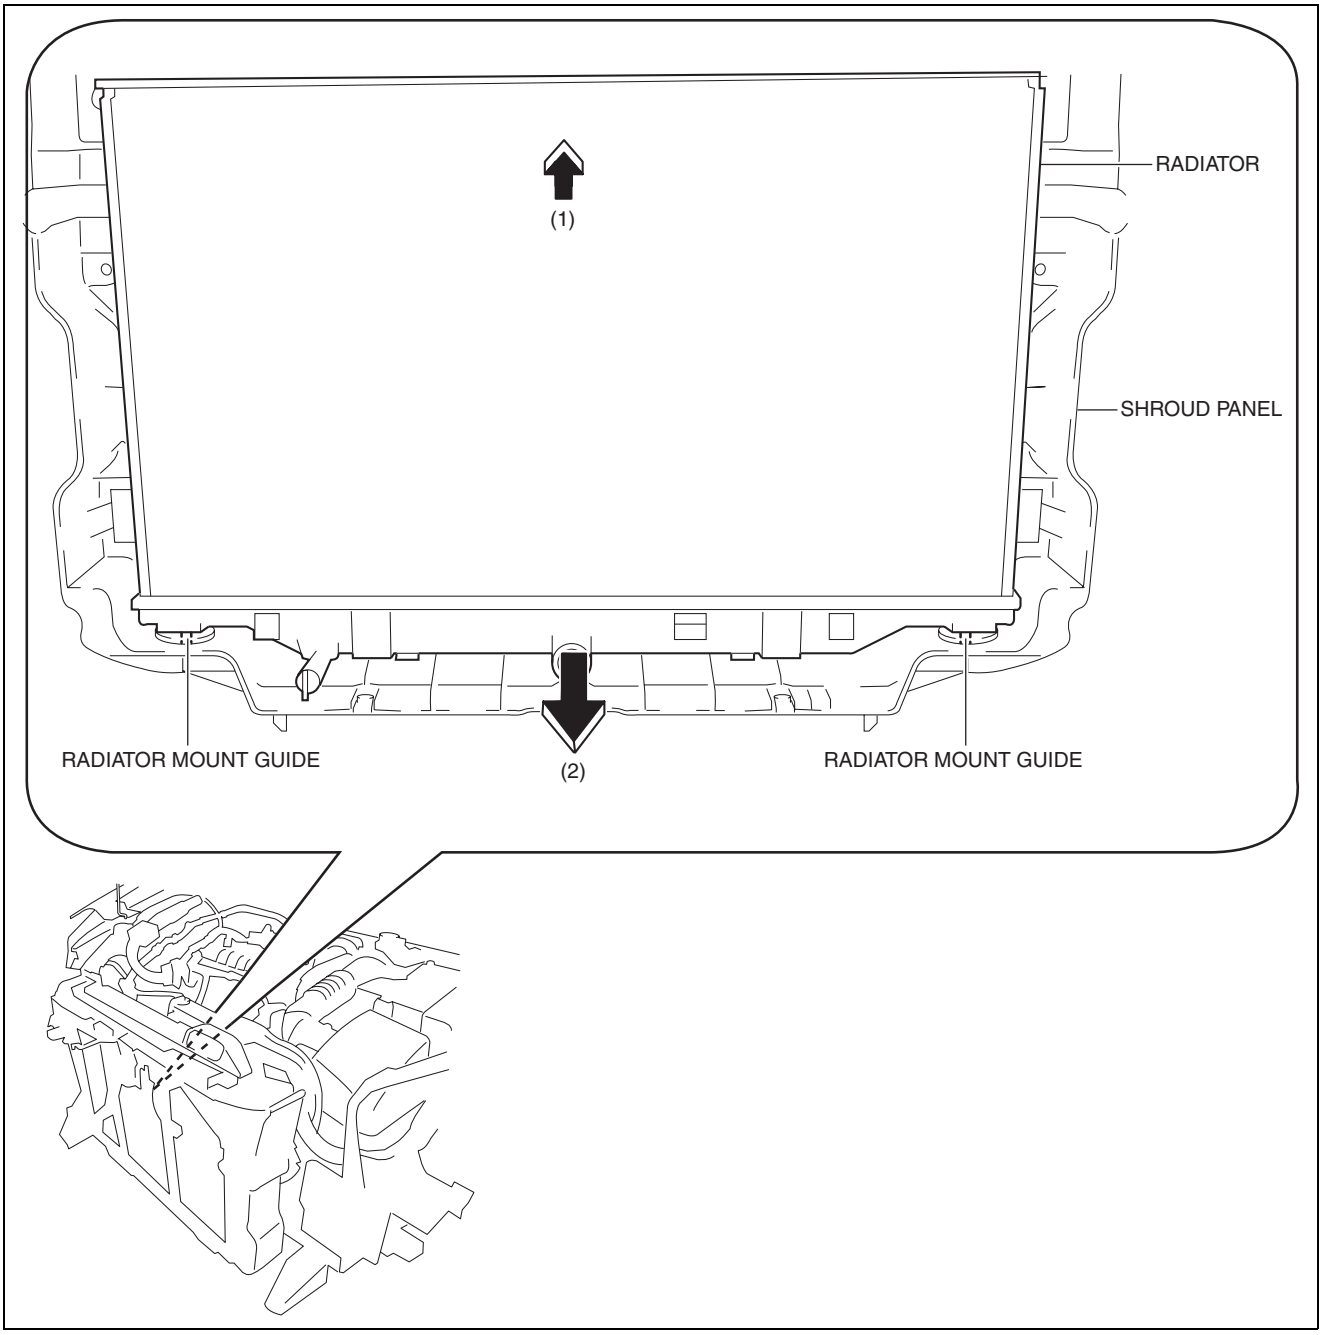
ac5wzw0000247

7. Pull up the radiator in the direction of the arrow (1) shown in the figure.

Caution

- **Removing the shroud panel without supporting it could cause the shroud panel to fall and cause serious injury. Always perform the procedure with at least another person to prevent the shroud panel from falling.**

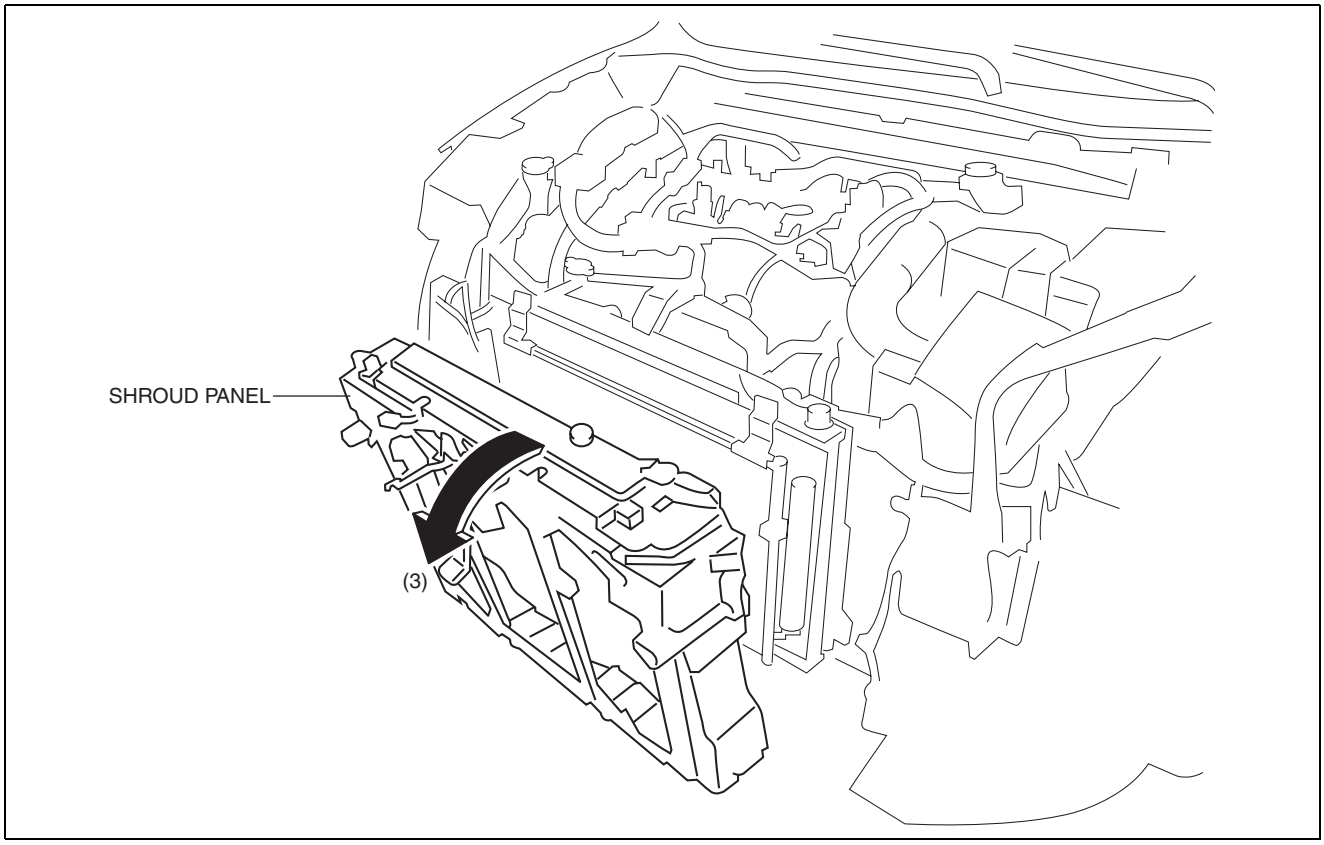
BODY PANELS



ac5uuw00001818

8. Pull down the shroud panel in the direction of the arrow (2) shown in the figure, then remove it from the radiator mount guide.
9. Remove the shroud panel in the direction of the arrow (3) shown in the figure.

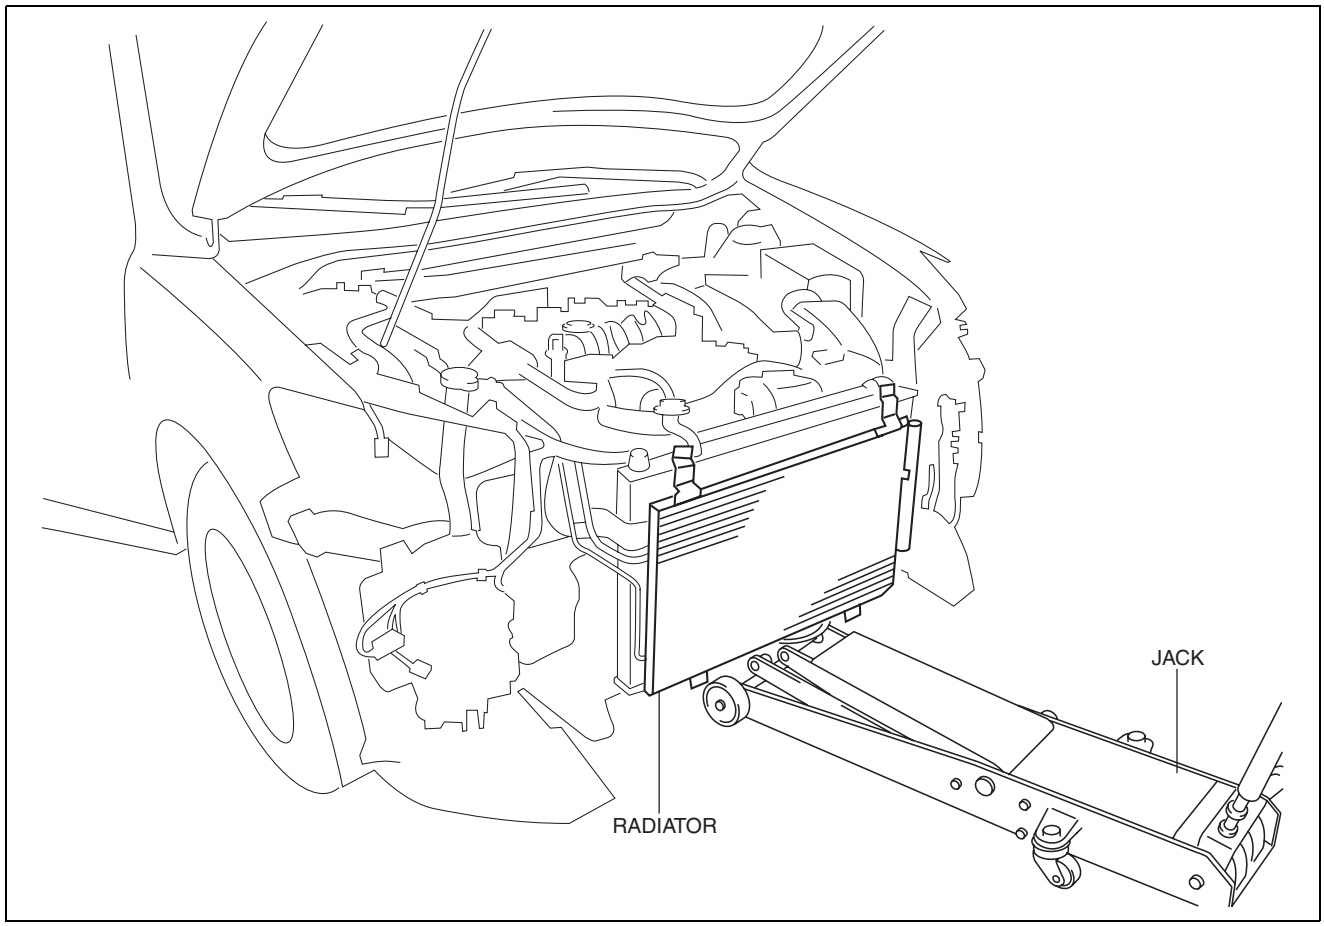
BODY PANELS



ac5wzw0000116

BODY PANELS

Caution
- **Support the lower surface of the radiator with a jack to prevent the radiator from falling off after the shroud panel is removed.**



ac5wzw0000116

10. Install in the reverse order of removal.
11. Adjust the headlight aiming. (See 09-18-18 HEADLIGHT AIMING.)
12. Adjust the front fog light aiming. (with front fog lights) (See 09-18-48 FRONT FOG LIGHT AIMING.)

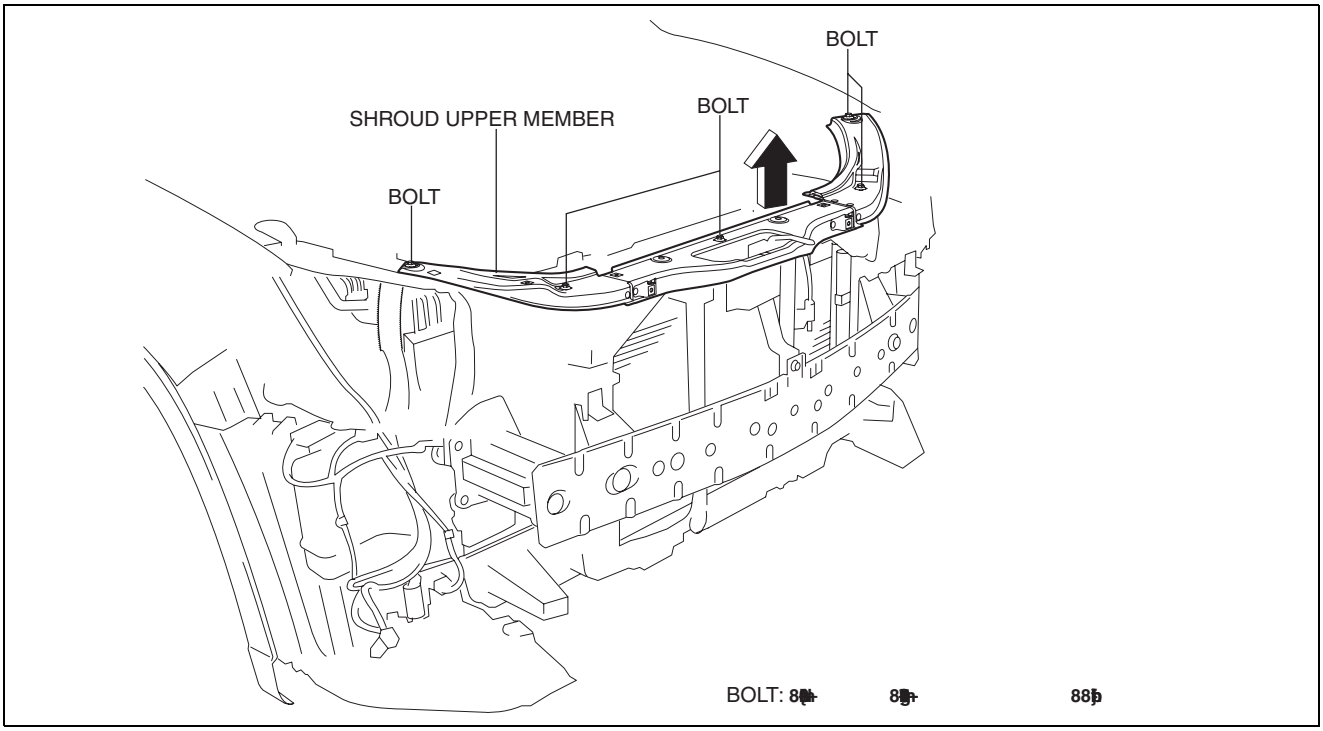
SHROUD UPPER MEMBER REMOVAL/INSTALLATION

id091000889800

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the seal board upper. (See 09-10-34 SEAL BOARD UPPER REMOVAL/INSTALLATION.)
3. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
4. Remove the front combination light (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)

BODY PANELS

5. Remove bolts.



ac5uuw00001822

6. Remove the shroud upper member in the direction of the arrow shown in the figure.
7. Install in the reverse order of removal.
8. Adjust the headlight aiming. (See 09-18-18 HEADLIGHT AIMING.)
9. Adjust the front fog light aiming. (with front fog lights) (See 09-18-48 FRONT FOG LIGHT AIMING.)

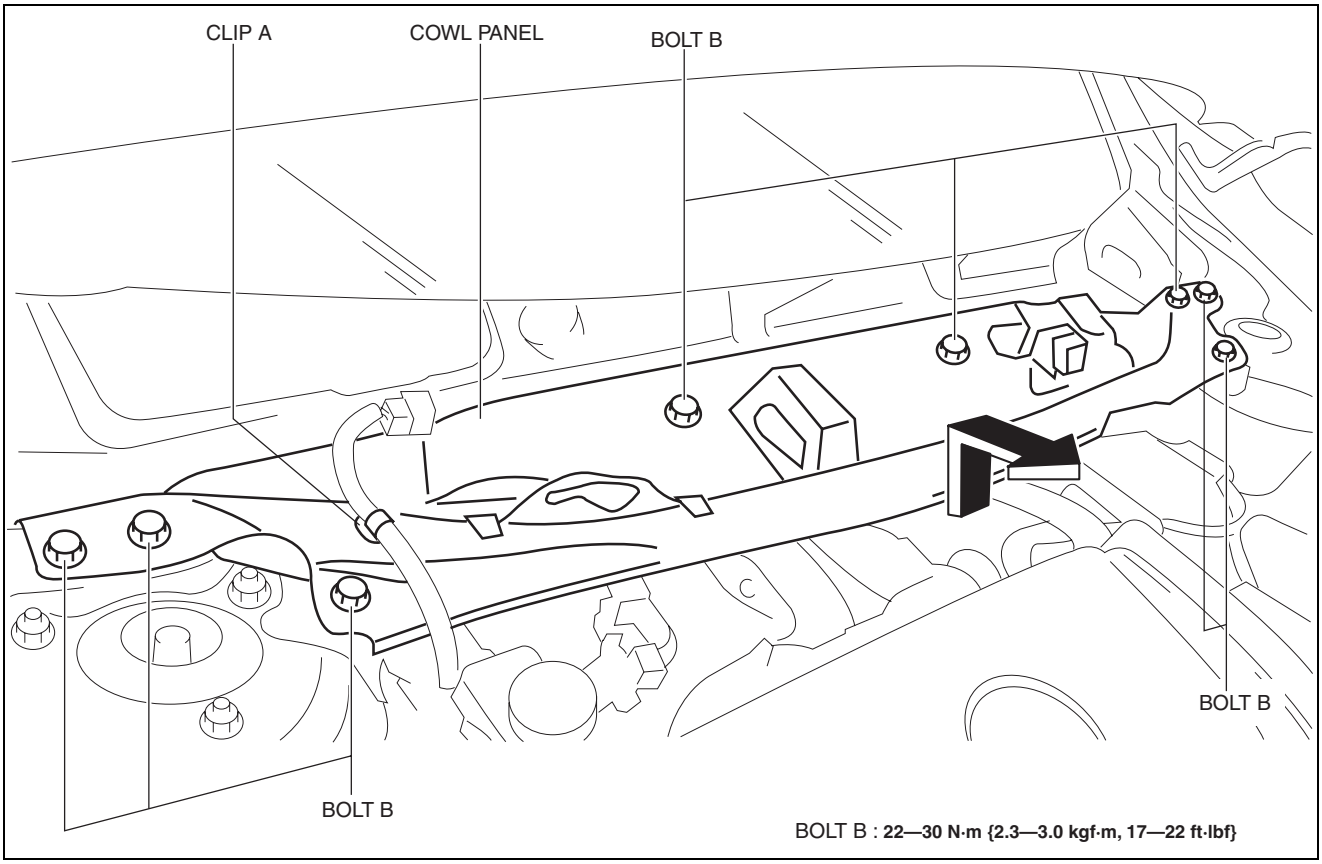
COWL PANEL REMOVAL/INSTALLATION

id091000802000

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Windshield wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
   (2) Cowl grille (See 09-16-3 COWL GRILLE REMOVAL/INSTALLATION.)
   (3) Windshield wiper motor (See 09-19-9 WINDSHIELD WIPER MOTOR AND LINK REMOVAL/INSTALLATION.)
   (4) Keyless beeper (See 09-14-73 KEYLESS BEEPER REMOVAL/INSTALLATION.)

BODY PANELS

3. Remove clips A.



ac5wzw0000301

4. Remove bolts B.
5. Remove the cowl panel in the direction of the arrow shown in the figure.
6. Install in the reverse order of removal.

DOORS AND LIFTGATE

FRONT DOOR REMOVAL/INSTALLATION

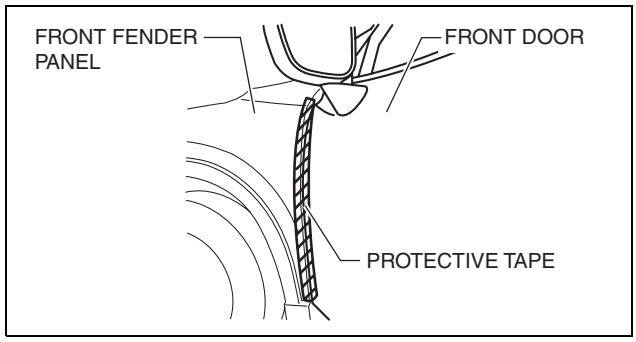
id091100520100

Warning

- **Removing the front door without supporting it could cause the front door to fall and cause serious injury. Always perform the procedure with at least one other person to prevent the front door from falling.**

Caution

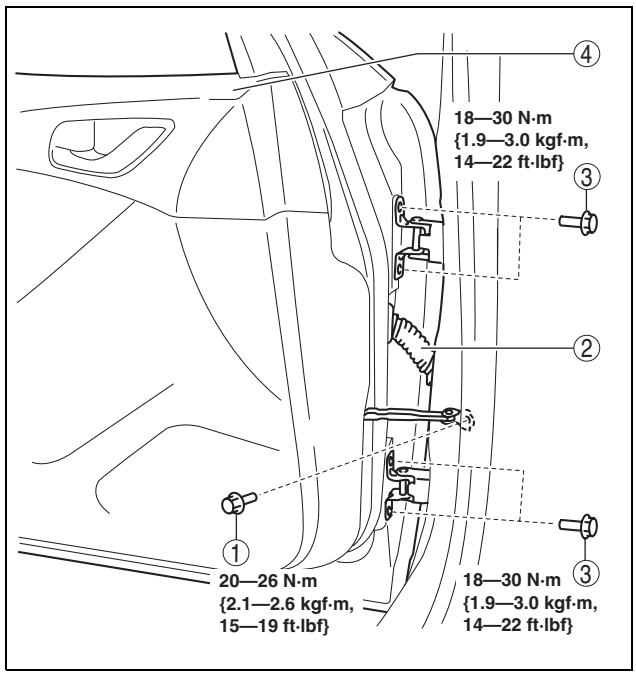
- **When the front door checker securing bolts are removed, the front door may open until it contacts the front fender panel causing the front door and the front fender panel to be damaged. Before removing the front door, overlap and adhere the protective tape to the position shown in the figure and be careful no to damage the front door and the front fender panel.**



ac5uuw00000836

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove in the order shown in the figure.

1	Bolt A
2	Connector (See 09-11-4 Connector Removal Note.)
3	Bolt B
4	Front door



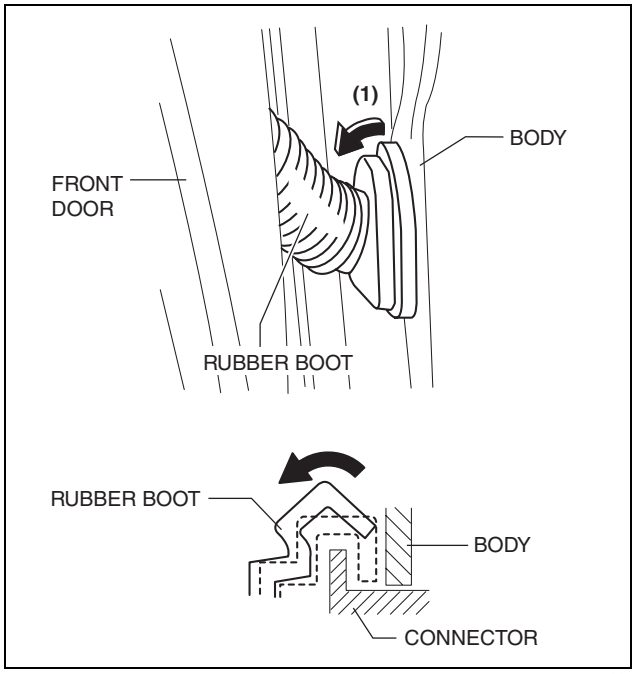
ac5uuw00000837

3. Install in the reverse order of removal.
4. Adjust the front door. (See 09-11-17 DOOR ADJUSTMENT.)

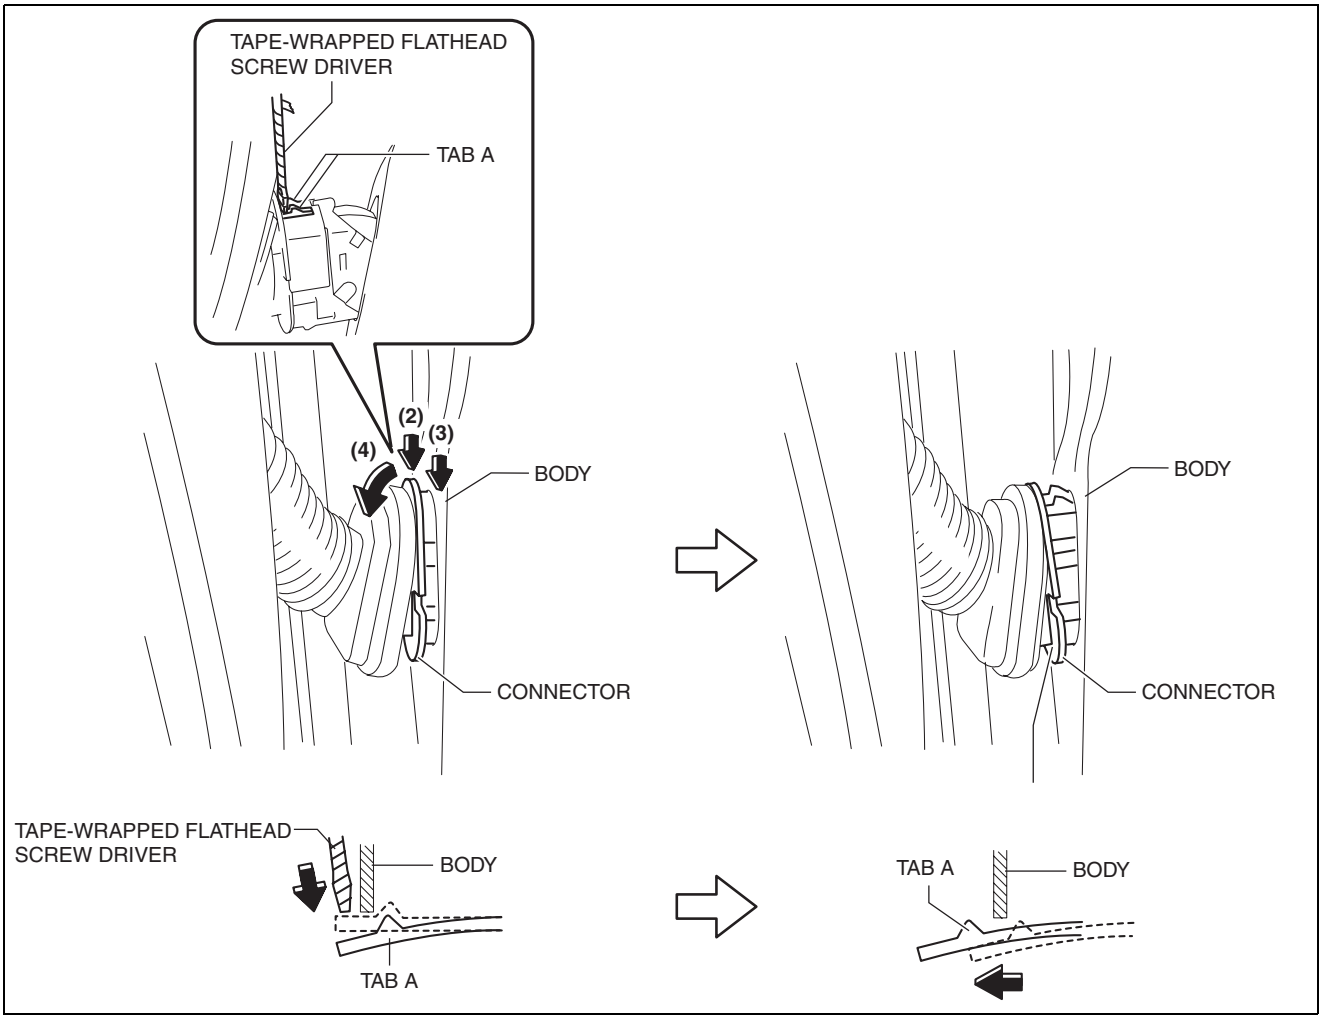
DOORS AND LIFTGATE

Connector Removal Note

1. Partially peel back the rubber boot in the direction of arrow (1) shown in the figure and remove it from the connector.
2. Using a tape-wrapped flathead screwdriver, press tabs A in the directions of arrows (2) and (3) shown in the figure and remove the upper part of the connector from the body in the direction of arrow (4).



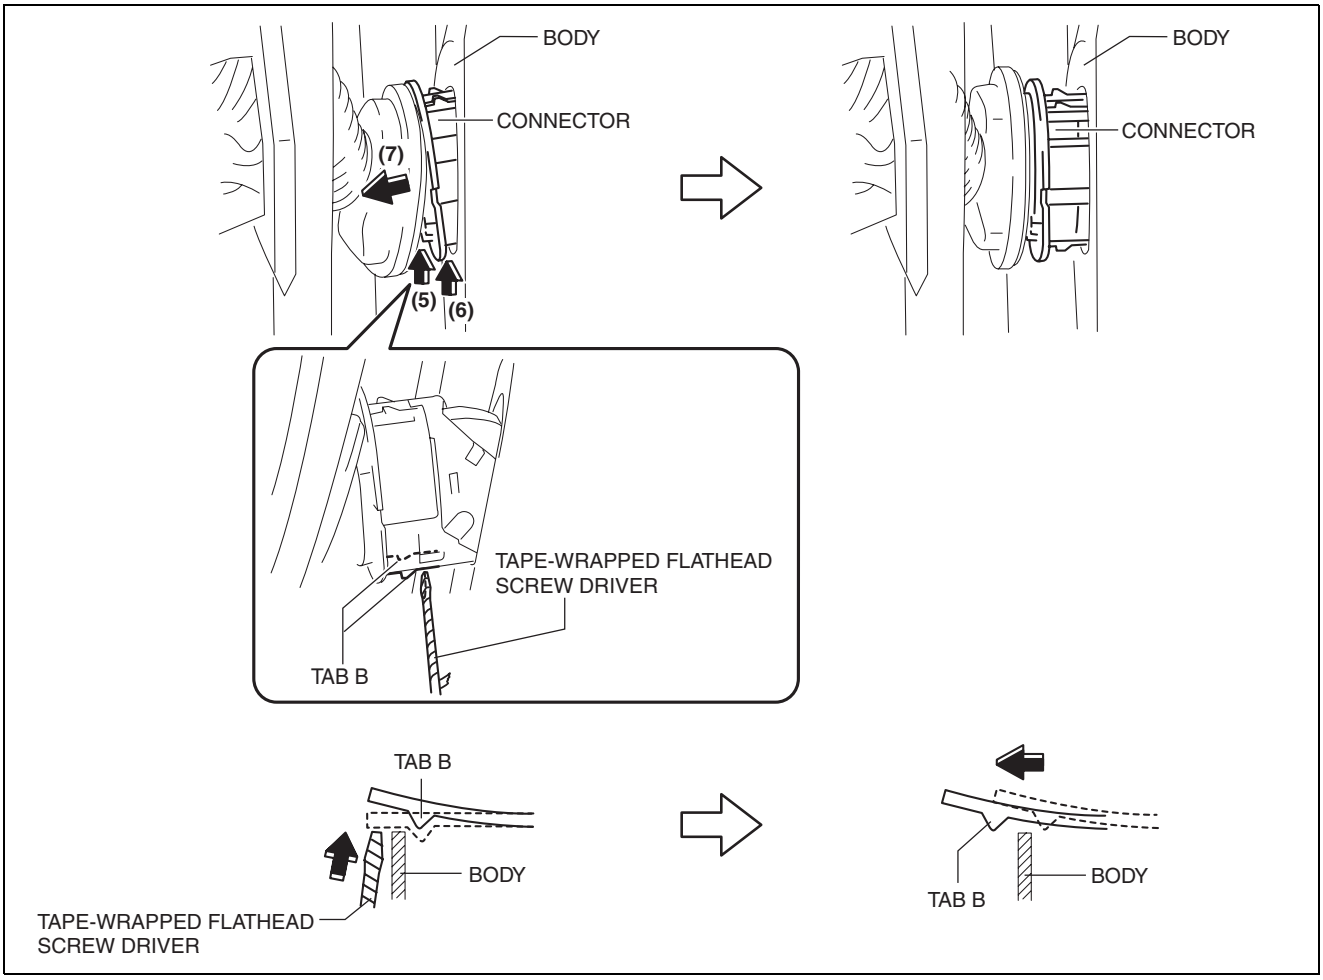
ac5wzw0000118



ac5wzw0000309

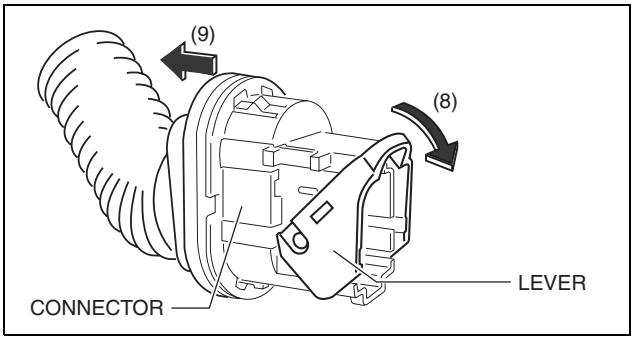
DOORS AND LIFTGATE

3. Using a tape-wrapped flathead screwdriver, press tabs B in the directions of arrows (5) and (6) shown in the figure and remove the connector from the body in the direction of arrow (7).



ac5wzw0000309

4. Lower the lever in the direction of arrow (8), and disconnect the connector in the direction of arrow (9).



ac5uuw00000841

DOORS AND LIFTGATE

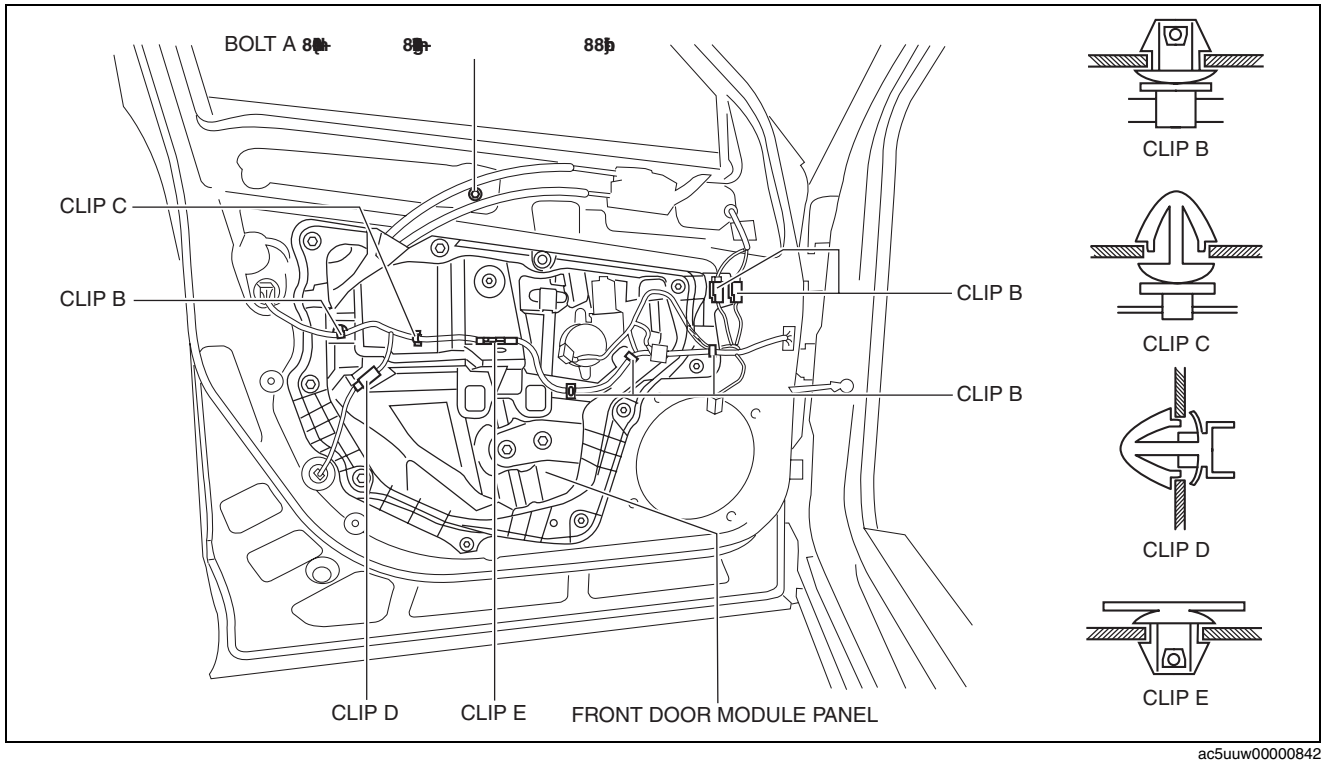
FRONT DOOR MODULE PANEL REMOVAL/INSTALLATION

id091100520200

1. Perform the front door glass preparation. (See 09-12-4 FRONT DOOR GLASS REMOVAL/INSTALLATION.)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the following parts:
   (1) Inner garnish (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)
   (2) Front door trim (See 09-17-65 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
   (3) Front door speaker (See 09-20-15 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.)
   (4) Front door glass (See 09-12-4 FRONT DOOR GLASS REMOVAL/INSTALLATION.)

Note
- After removing the front door trim, secure the inner handle using screws so that the procedure is performed smoothly.

4. Remove bolt A.

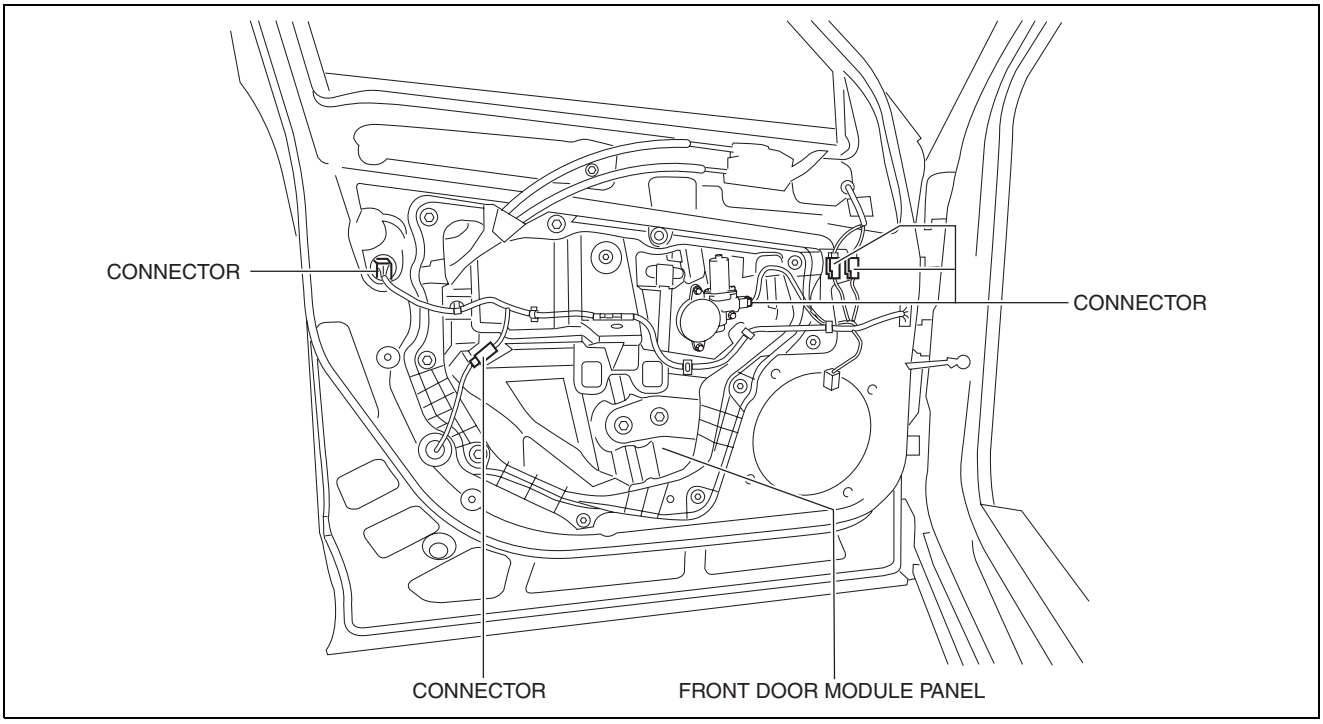


ac5uuw00000842

5. Detach front door wiring harness securing clips B, C, D and E.

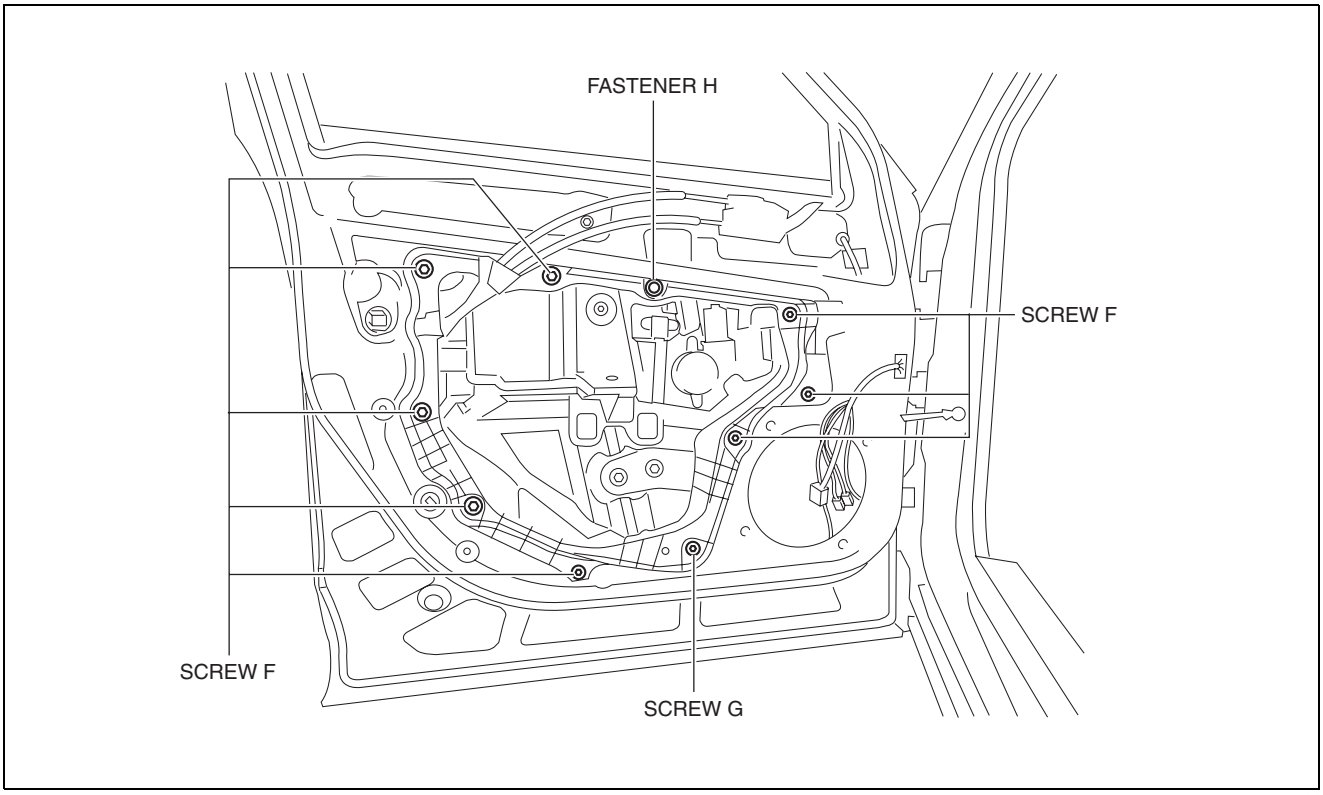
DOORS AND LIFTGATE

6. Disconnect the connectors shown in the figure.



ac5uuw00000843

7. Remove screws F.



ac5uuw00000844

8. Remove screw G.
9. Remove fastener H.
10. Pull the front door module panel in the direction of arrow (1) shown in the figure and remove the protector and pin from the front door inner panel.

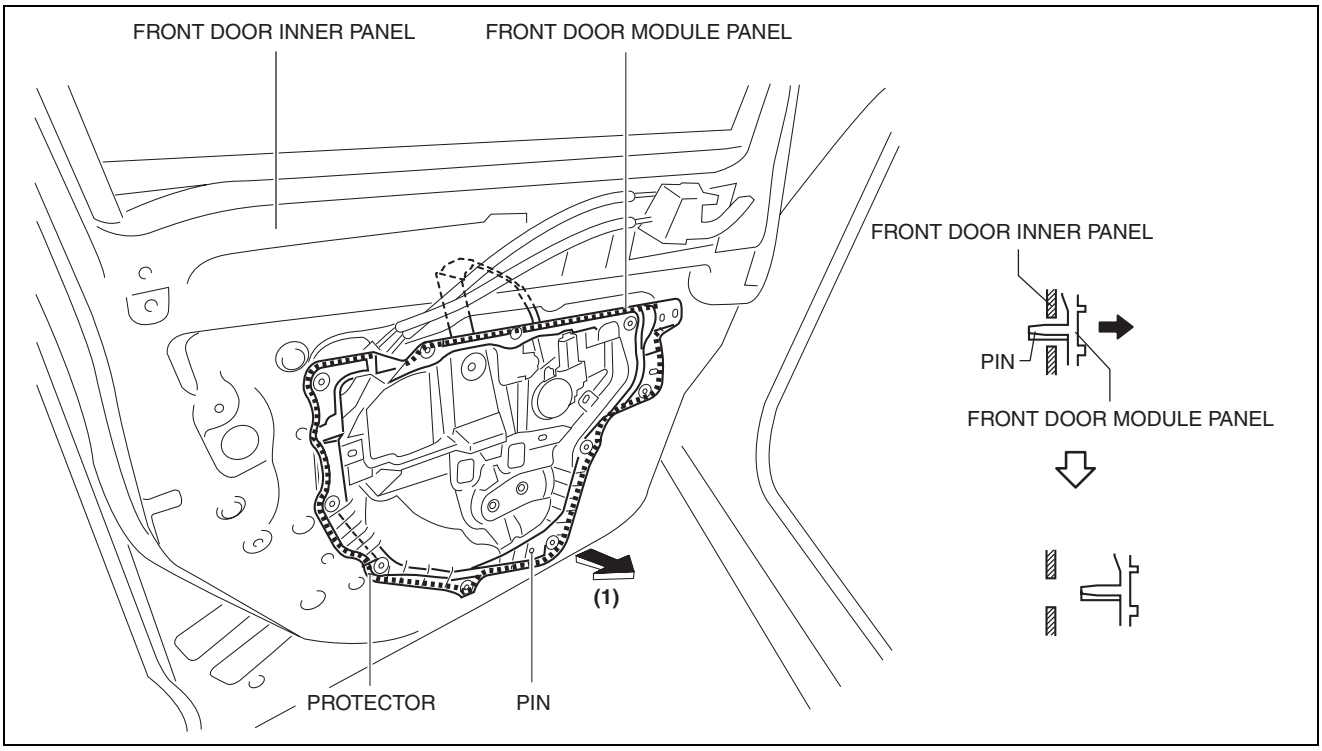
Caution

- **If the protector does not come out easily from the front door inner panel, pulling the front door module panel forcibly may cause the front door module panel to deform. If the protector does not**

DOORS AND LIFTGATE

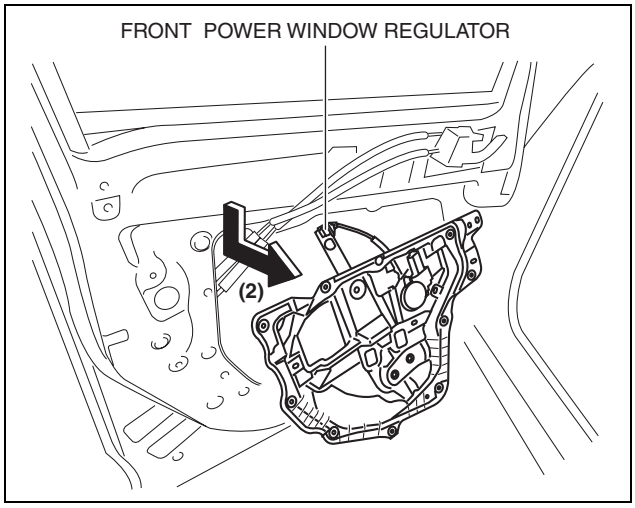
come out easily, remove the front door module panel while gradually removing the protector.

- **If the front power window regulator contacts the front door inner panel during the front door module panel removal, the coating film on the front door inner panel may get scratched, and the front door module panel and front power window regulator could be damaged. Remove the front door module panel while verifying that the front power window regulator and the front door inner panel do not contact each other.**



ac5wzw0000309

11. Move the front door module panel in the direction of arrow (2) shown in the figure so that the upper part of the front power window regulator does not contact the front door inner panel, and remove the front door module panel and the front power window regulator as a single unit.
12. Remove the front power window motor. (See 09-12-45 POWER WINDOW MOTOR REMOVAL/INSTALLATION.)
13. Remove the front power window regulator. (See 09-12-39 FRONT POWER WINDOW REGULATOR REMOVAL/INSTALLATION.)
14. Install in the reverse order of removal.



ac5uuw00000846

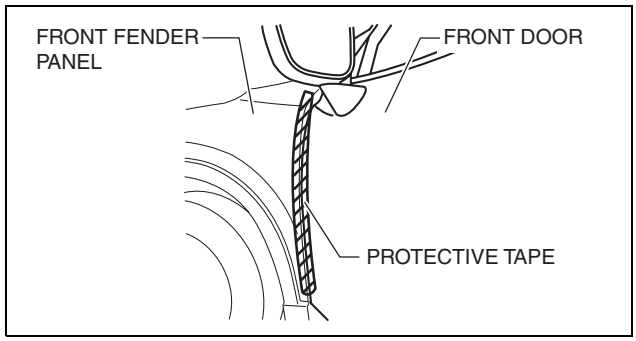
DOORS AND LIFTGATE

FRONT DOOR CHECKER REMOVAL/INSTALLATION

id091100520400

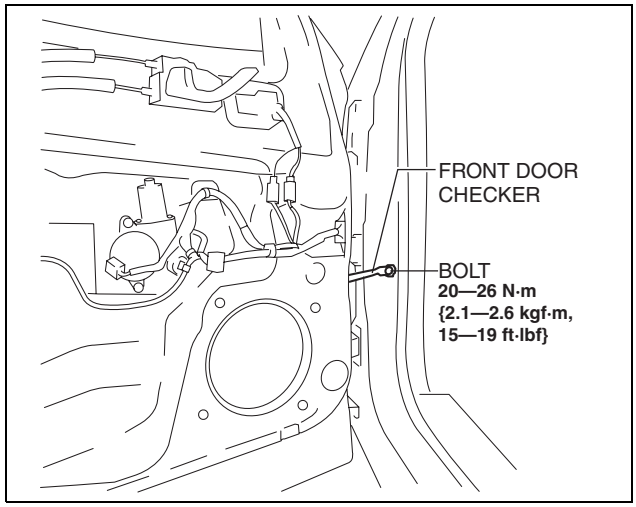
Caution

- **When the front door checker securing bolts are removed, the front door may open until it contacts the front fender panel causing the front door and the front fender panel to be damaged. Before removing the front door, overlap and adhere the protective tape to the position shown in the figure and be careful no to damage the front door and the front fender panel.**



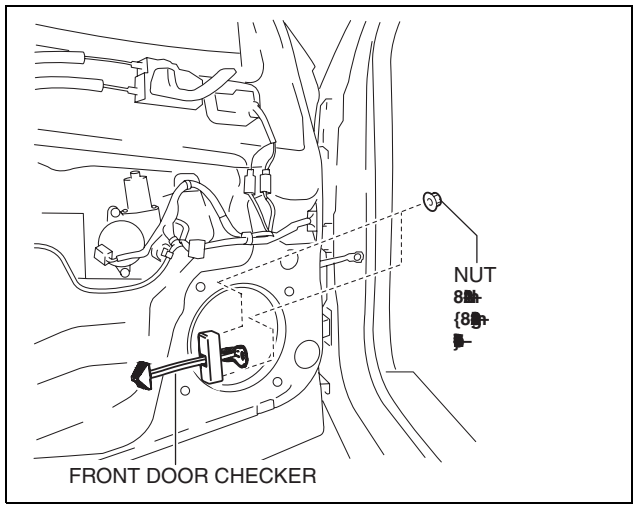
ac5uuw00000847

1. Fully close the front door glass.
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the inner garnish. (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)
4. Remove the front door trim. (See 09-17-65 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
5. Remove the front door speaker. (See 09-20-15 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.)
6. Remove bolt.



ac5wzw0000281

7. Remove nuts.
8. Pull out the front door checker from the front speaker installation hole.
9. Install in the reverse order of removal.



ac5wzw0000281

FRONT DOOR HINGE REMOVAL/INSTALLATION

id091100520500

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE

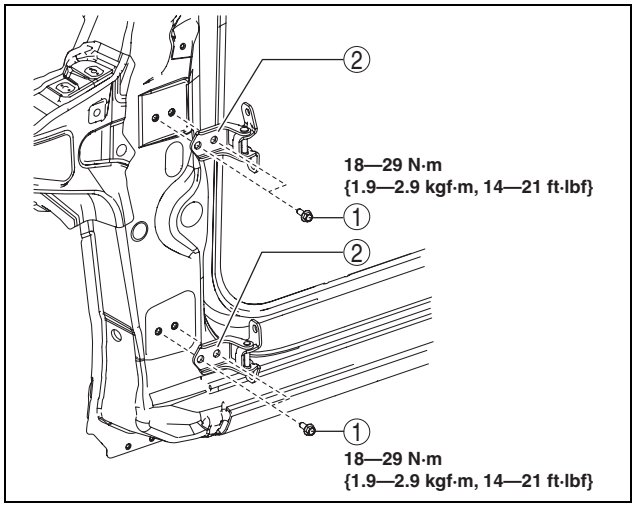
DOORS AND LIFTGATE

DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

2. Remove the following parts:
   (1) Front bumper (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
   (2) Front combination light (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (3) Front bumper slider (See 09-10-17 BUMPER SLIDER REMOVAL/INSTALLATION.)
   (4) Front over fender (See 09-10-31 FRONT OVER FENDER REMOVAL/INSTALLATION.)
   (5) Front fender panel (See 09-10-30 FRONT FENDER PANEL REMOVAL/INSTALLATION.)
   (6) Front door (See 09-11-3 FRONT DOOR REMOVAL/INSTALLATION.)
3. Remove in the order shown in the figure.

1	Bolt
2	Front door hinge

4. Install in the reverse order of removal.



ac5uuw00000850

DOORS AND LIFTGATE

REAR DOOR REMOVAL/INSTALLATION

id091100520600

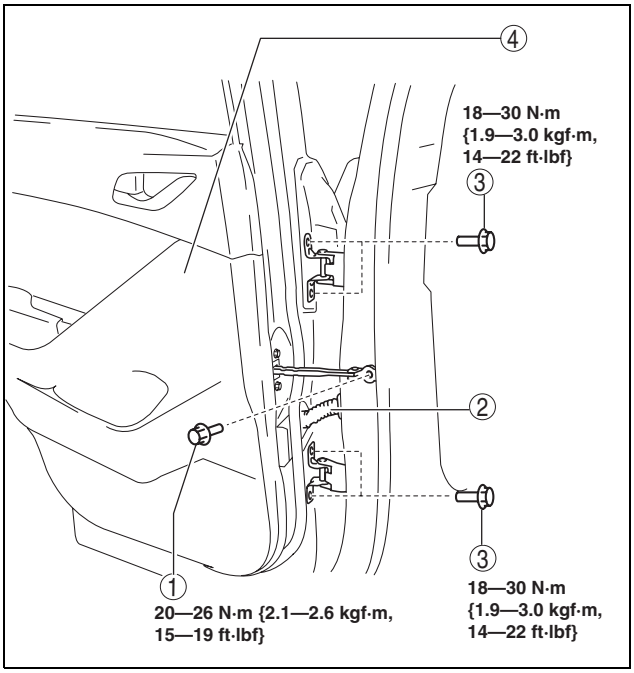
Warning

- **Removing the rear door without supporting it could cause the rear door to fall and cause serious injury. Always perform the procedure with at least one other person to prevent the rear door from falling.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove in the order shown in the figure.

1	Bolt A
2	Connector (See 09-11-11 Connector Removal Note.)
3	Bolt B
4	Rear door

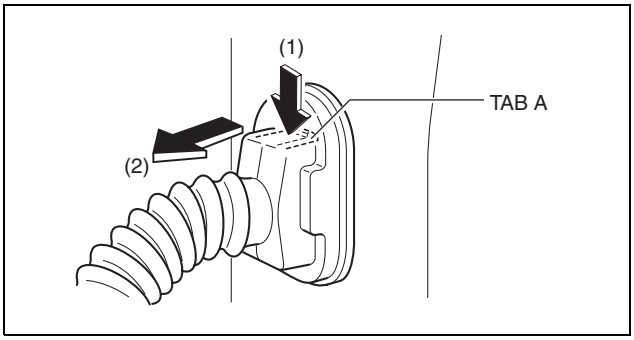
3. Install in the reverse order of removal.
4. Adjust the rear door. (See 09-11-17 DOOR ADJUSTMENT.)



ac5uuw00000851

Connector Removal Note

1. While pressing tab A in the direction of arrow (1), disconnect the connector in the direction of arrow (2).



ac5uuw00000852

DOORS AND LIFTGATE

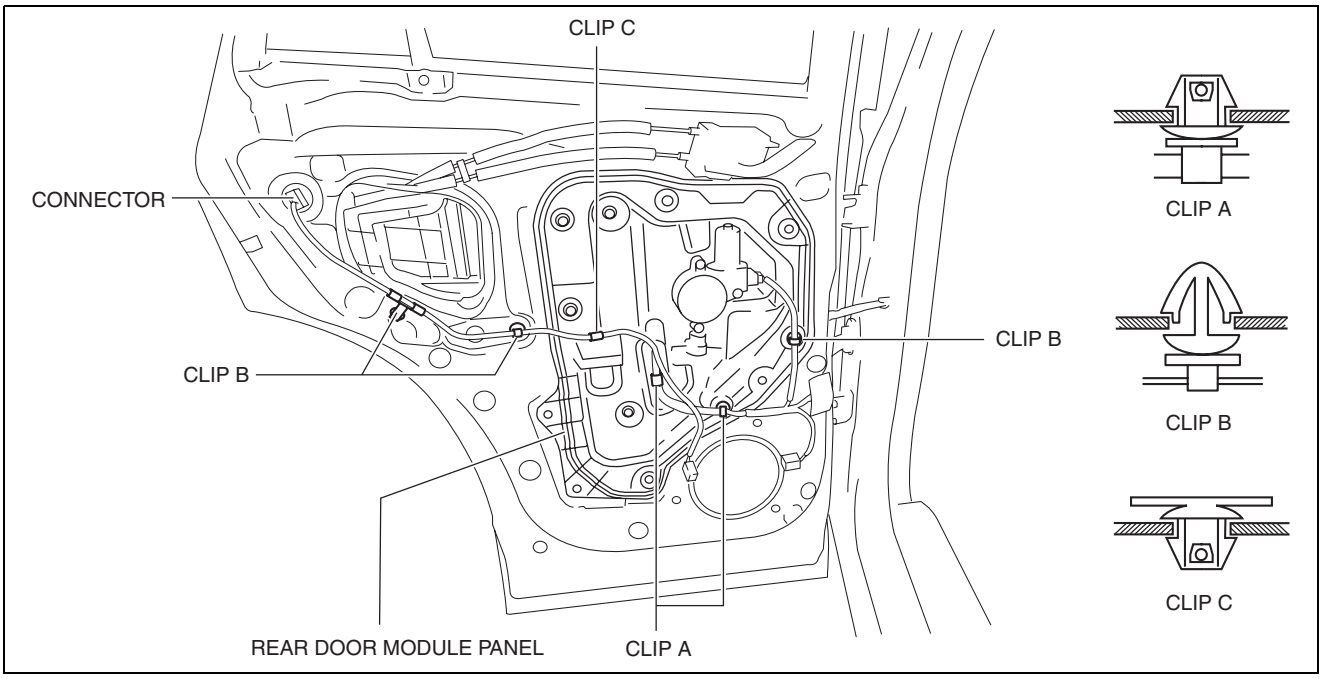
REAR DOOR MODULE PANEL REMOVAL/INSTALLATION

id091100520900

1. Fully lower the rear door glass.
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the following parts:
   (1) Rear door trim (See 09-17-74 REAR DOOR TRIM REMOVAL/INSTALLATION.)
   (2) Rear door speaker (See 09-20-19 REAR DOOR SPEAKER REMOVAL/INSTALLATION.)
   (3) Rear door quarter glass (See 09-12-9 REAR DOOR QUARTER GLASS REMOVAL/INSTALLATION.)
   (4) Remove the rear power window motor (See 09-12-45 POWER WINDOW MOTOR REMOVAL/INSTALLATION.)
   (5) Rear door glass (See 09-12-7 REAR DOOR GLASS REMOVAL/INSTALLATION.)

Note
- After removing the rear door trim, secure the inner handle using screws so that the procedure is performed smoothly.

4. Detach rear door wiring harness securing clips A, B and C.

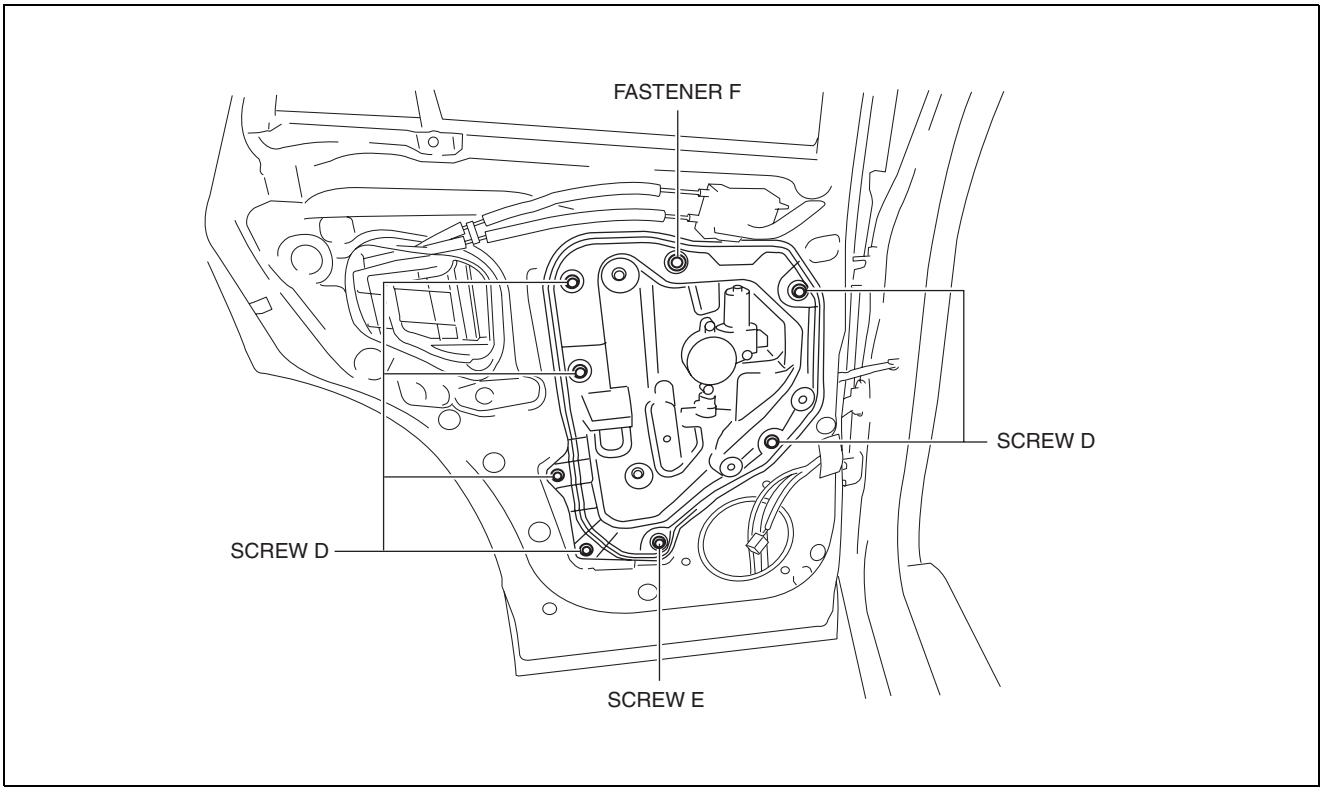


ac5uuw00000853

5. Disconnect the connector.

DOORS AND LIFTGATE

6. Remove screws D.



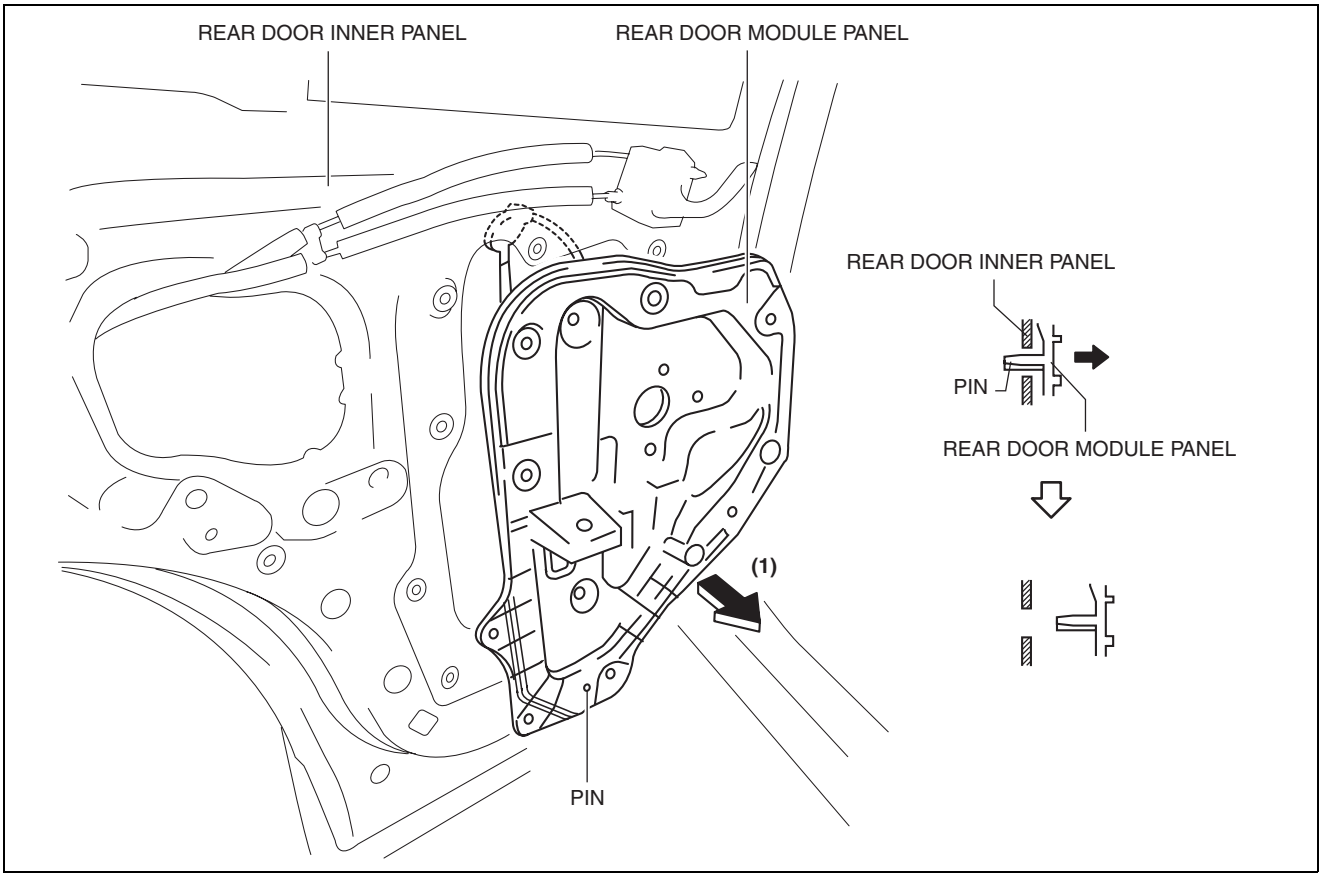
ac5uuw00000854

7. Remove screw E.
8. Remove screw F.
9. Pull the rear door module panel in the direction of arrow (1) shown in the figure and remove the protector and pin from the rear door inner panel.

Caution

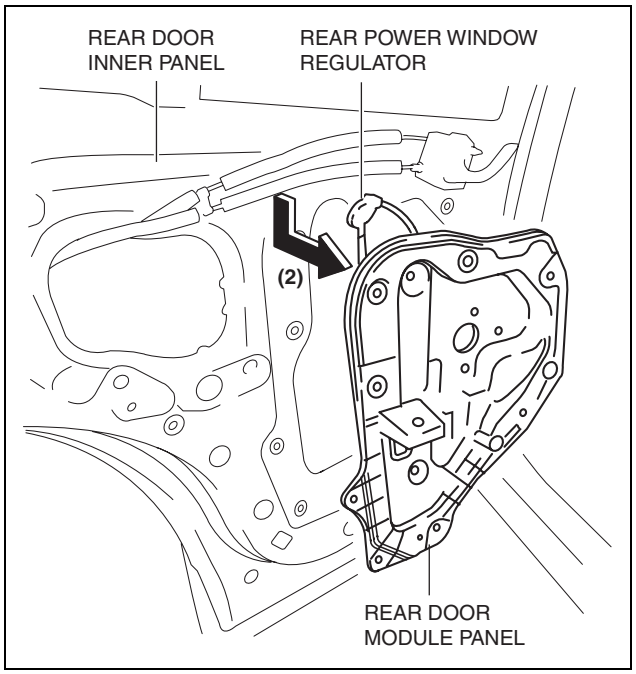
- **If the protector does not come out easily from the rear door inner panel, pulling the rear door module panel forcibly may cause the rear door module panel to deform. If the protector does not come out easily, remove the rear door module panel while gradually removing the protector.**
- **If the rear power window regulator contacts the rear door inner panel during the rear door module panel removal, the coating film on the rear door inner panel may get scratched, and the rear door module panel and rear power window regulator could be damaged. Remove the rear door module panel while verifying that the rear power window regulator and the rear door inner panel do not contact each other.**

DOORS AND LIFTGATE



ac5wzw0000308

10. Move the rear door module panel in the direction of arrow (2) shown in the figure so that the upper part of the rear power window regulator does not contact the rear door inner panel, and remove the rear door module panel and the rear power window regulator as a single unit.
11. Remove the rear power window regulator. (See 09-12-42 REAR POWER WINDOW REGULATOR REMOVAL/INSTALLATION.)
12. Install in the reverse order of removal.



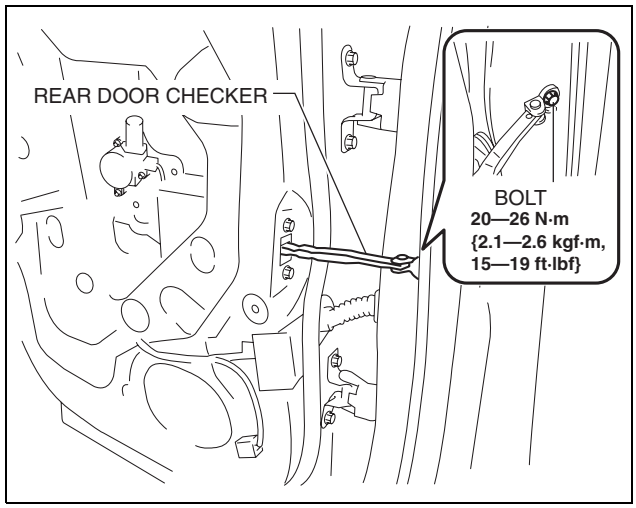
ac5uuw00000856

DOORS AND LIFTGATE

REAR DOOR CHECKER REMOVAL/INSTALLATION

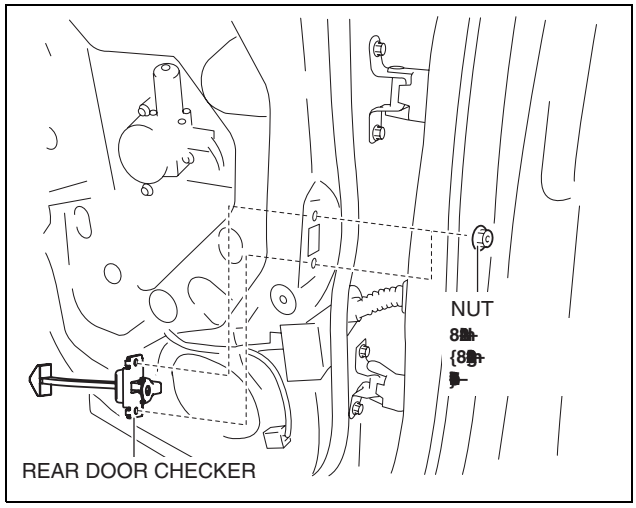
id091100520700

1. Fully close the rear door glass.
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the rear door trim. (See 09-17-74 REAR DOOR TRIM REMOVAL/INSTALLATION.)
4. Remove the rear door speaker. (See 09-20-19 REAR DOOR SPEAKER REMOVAL/INSTALLATION.)
5. Remove bolt.



ac5wzw0000308

6. Remove nuts.
7. Pull out the rear door checker from the rear speaker installation hole.
8. Install in the reverse order of removal.



ac5wzw0000308

DOORS AND LIFTGATE

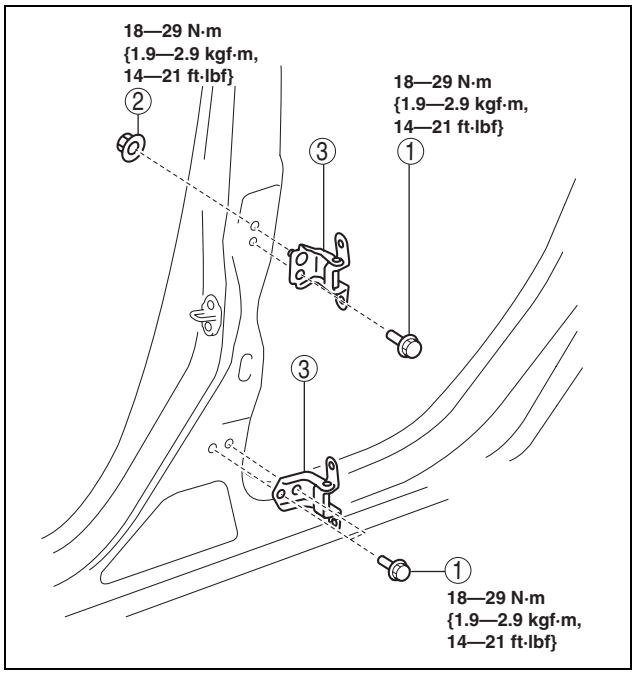
REAR DOOR HINGE REMOVAL/INSTALLATION

id091100520800

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Rear door (See 09-11-11 REAR DOOR REMOVAL/INSTALLATION.)
   (2) Front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) B-pillar lower trim (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
3. Remove in the order shown in the figure.

1	Bolt A
2	Nut B
3	Rear door hinge

4. Install in the reverse order of removal.



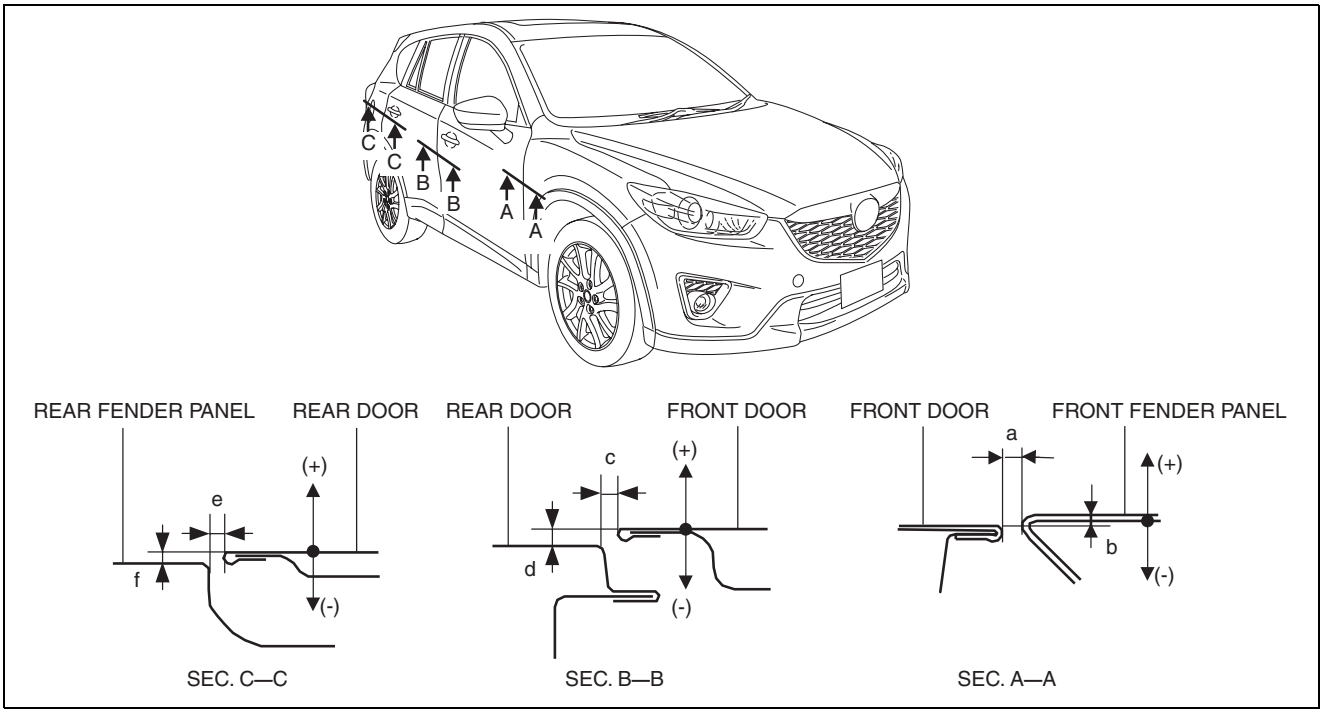
ac5uuw00000859

DOORS AND LIFTGATE

DOOR ADJUSTMENT

id091100521100

1. Measure the gap and height difference between the door and the body.
2. Loosen the door hinge installation bolts and adjust the door.



ac5uuw00000881

Standard clearance
a: 2.8—3.8 mm {0.12—0.14 in}
b: -1.0—1.0 mm {-0.039—0.039 in}
c: 2.5—4.5 mm {0.10—0.17 in}
d: -1.0—1.0 mm {-0.039—0.039 in}
e: 2.5—4.5 mm {0.10—0.17 in}
f: -1.0—1.0 mm {-0.039—0.039 in}

3. Tighten the door hinge installation bolts. (See 09-11-3 FRONT DOOR REMOVAL/INSTALLATION.) (See 09-11-11 REAR DOOR REMOVAL/INSTALLATION.)
4. If the door does not open/close smoothly, adjust it by loosening the door lock striker installation screw. (See 09-14-43 DOOR LOCK STRIKER REMOVAL/INSTALLATION.)
5. Spray or pour water on the door and surrounding area using a hose or high pressure water pressure car wash and verify that there is no water leakage.

DOORS AND LIFTGATE

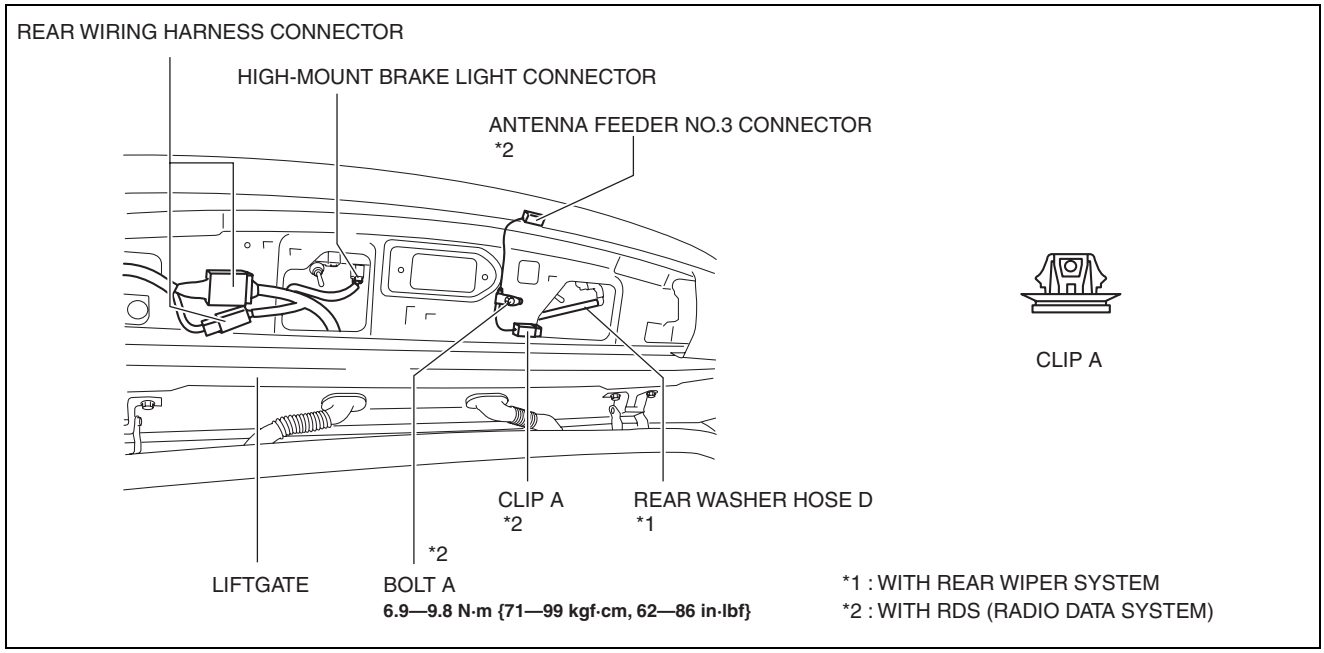
LIFTGATE REMOVAL/INSTALLATION

id091100521200

Warning

- **Removing the stay damper, liftgate hinge securing bolt, or liftgate without supporting the liftgate may cause the liftgate to fall off and injure you. When removing the stay damper, liftgate hinge, or liftgate, always use two persons to perform the work.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the liftgate upper trim. (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
3. Disconnect the connectors shown in the figure.

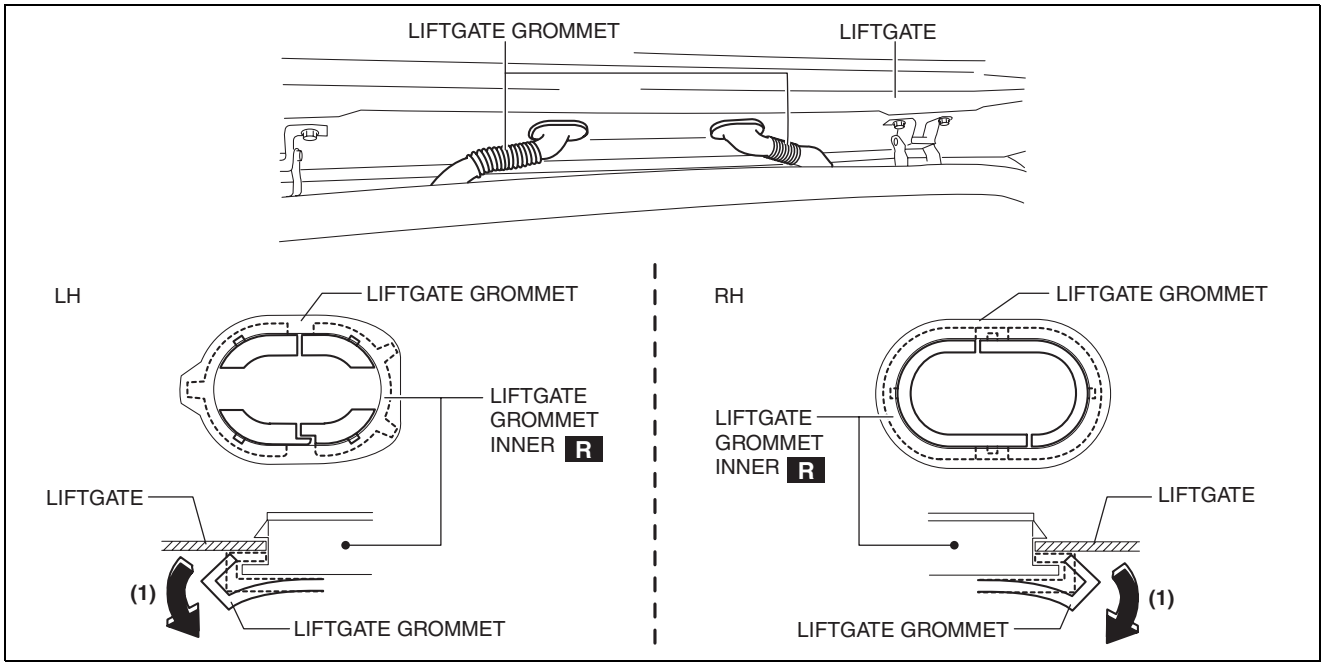


ac5wzw0000306

4. Disconnect rear washer hose D. (with rear wiper system)
5. Remove bolt A. (with RDS (radio data system))
6. Remove clip A. (with RDS (radio data system))

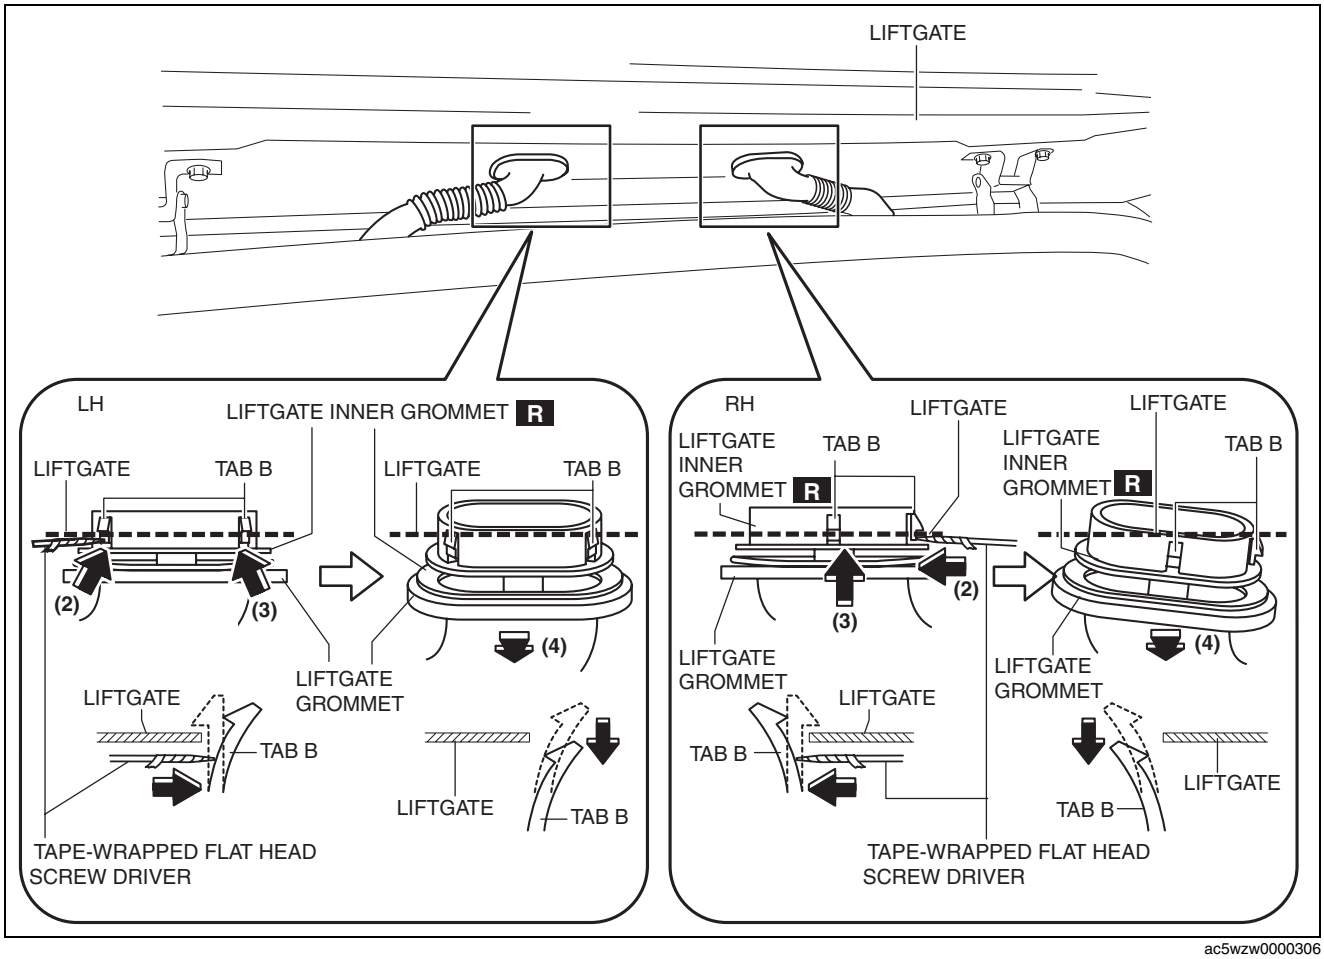
DOORS AND LIFTGATE

7. Partially peel the liftgate grommet in the direction of arrow (1) shown in the figure, and remove the liftgate grommet from the liftgate grommet inner.



ac5wzw0000486

8. Using a tape-wrapped flathead screwdriver, press the liftgate grommet inner tabs B in the directions of arrows (2) and (3) shown in the figure and remove the liftgate grommet inner from the liftgate in the direction of arrow (4).

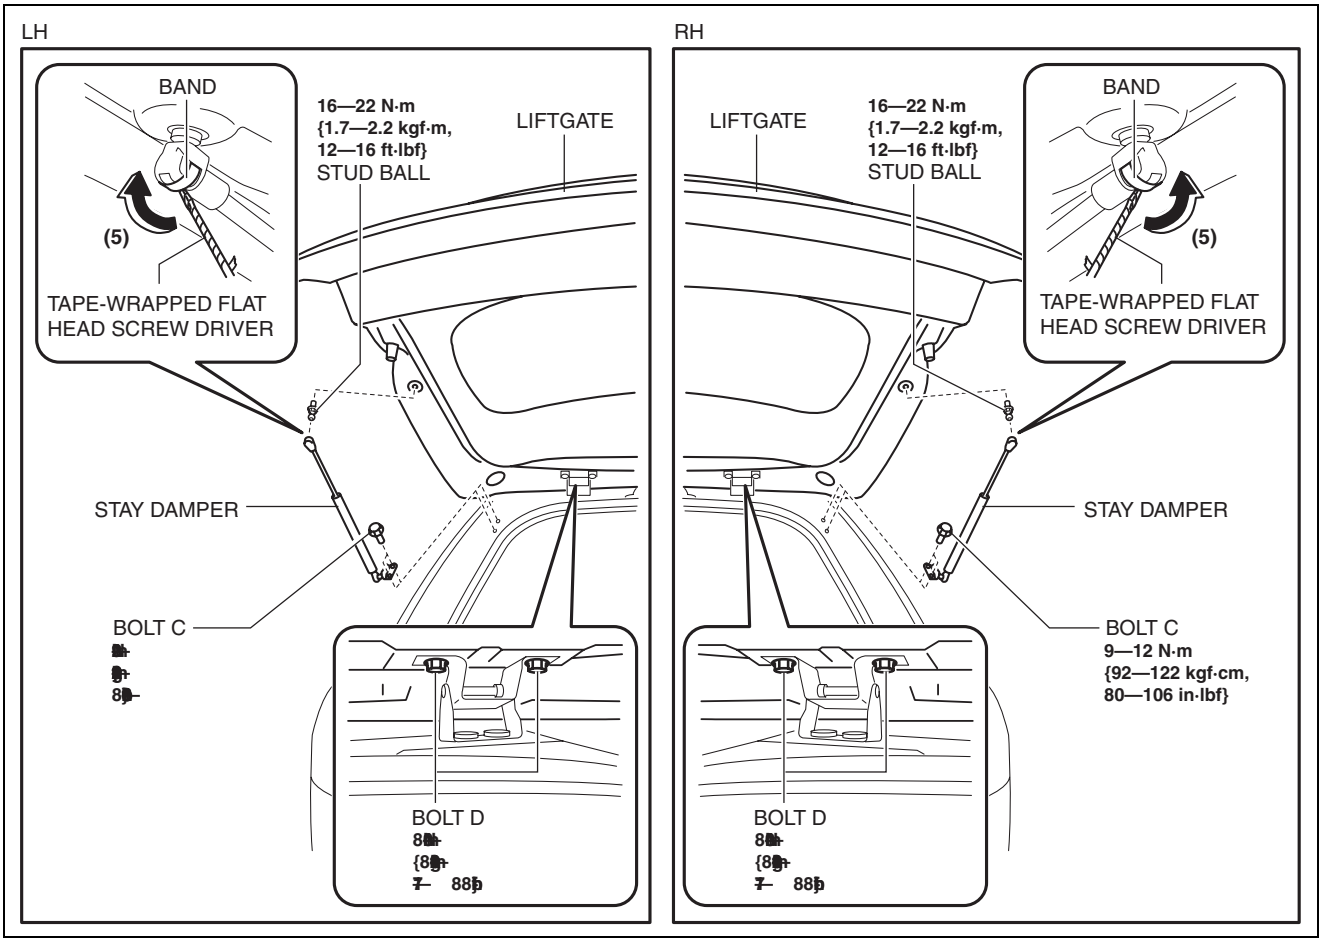


ac5wzw0000306

9. Remove rear washer hose D from the liftgate and set them aside. (with rear wiper system)
10. Remove the wiring harness from the liftgate and set them aside.

DOORS AND LIFTGATE

11. Using a tape-wrapped flathead screwdriver, remove the stay damper securing band in the direction of arrows (5) shown in the figure.



ac5wzw0000282

12. Remove bolts C.
13. Remove the stay dampers.
14. Remove the stud balls.
15. Remove bolts D.
16. Remove the liftgate.
17. Install in the reverse order of removal.
18. Adjust the liftgate. (See 09-11-23 LIFTGATE ADJUSTMENT.)

DOORS AND LIFTGATE

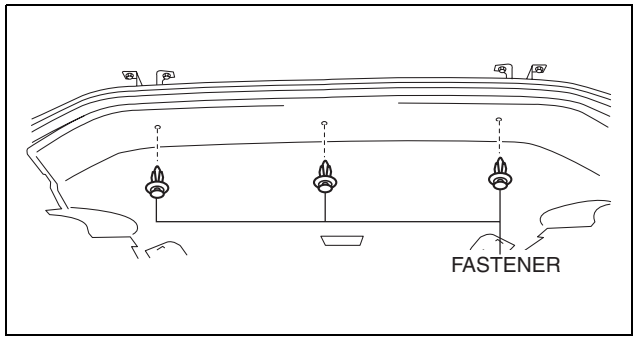
LIFTGATE HINGE REMOVAL/INSTALLATION

id091100521300

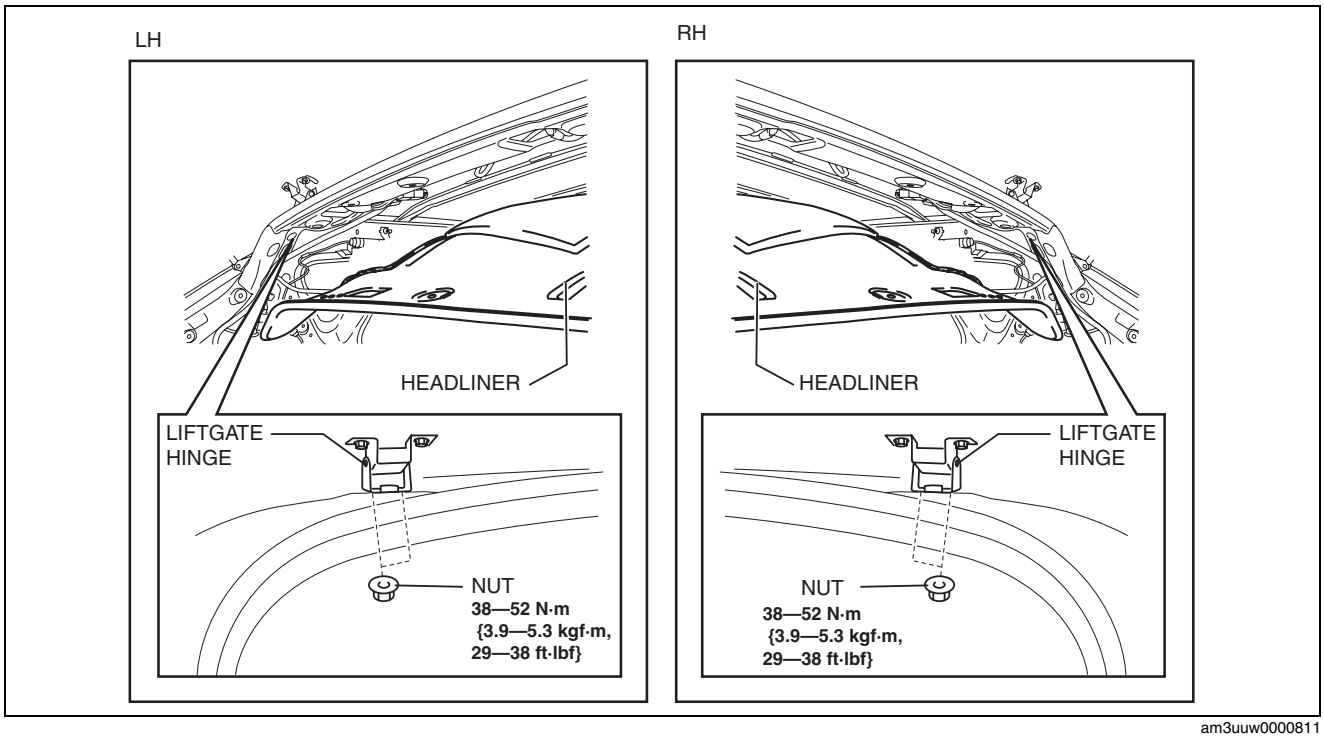
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (3) Trunk side trim (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (4) C-pillar trim (See 09-17-59 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (5) D-pillar trim (See 09-17-60 D-PILLAR TRIM REMOVAL/INSTALLATION.)
   (6) Liftgate (See 09-11-18 LIFTGATE REMOVAL/INSTALLATION.)
3. Remove fasteners.
4. While partially peeling back the rear part of the headliner, remove nuts.

Caution

- **Peeling back the headliner without supporting it may cause the headliner to bend excessively and create a fold seam. Peel back the headliner while supporting it.**



ac5wzw0000308



am3uuw0000811

5. Remove the liftgate hinges.
6. Install in the reverse order of removal.

DOORS AND LIFTGATE

STAY DAMPER DISPOSAL

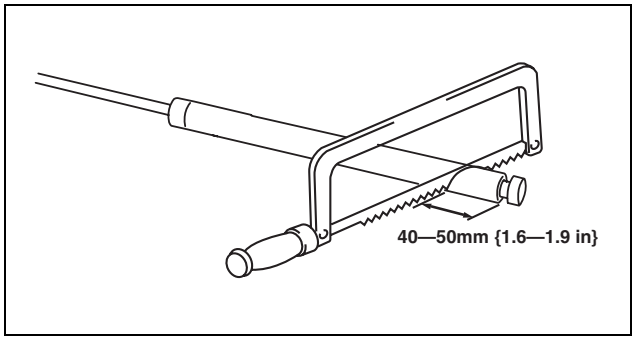
id091100521000

Note
- The stay damper contains colorless, odorless, nontoxic gas.

1. Wear protective eye wear.

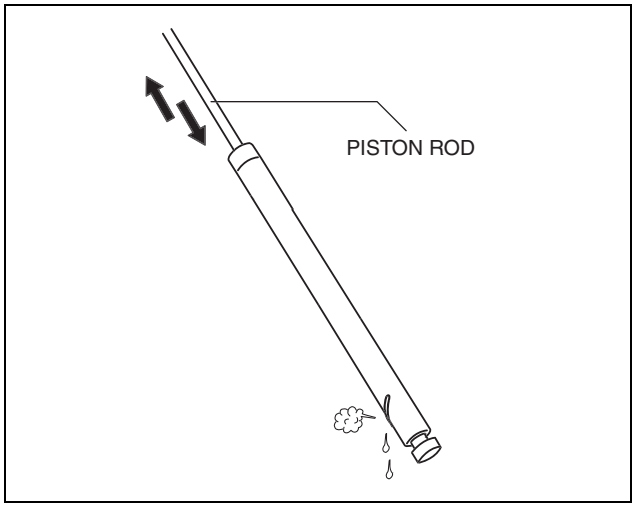
Caution
- **When cutting the stay damper, wear protective eye wear to prevent the gas or oil from getting into your eyes. Otherwise, the force of the gas and oil spraying out could lead to injury.**

2. Position the stay damper horizontally.
3. Drain gas and oil by cutting the position indicated in the figure to a **2—3 mm {0.08—0.11 in}** depth using a metal saw.



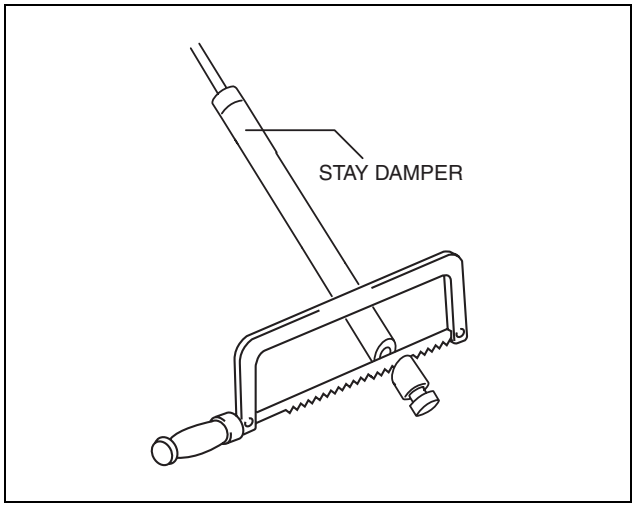
am2zzw0000043

4. Verify that the gas and oil is drained completely by pulling and pushing the piston rod several times with the cut position facing downward.



am2zzw0000043

5. Cut off the bottom of the stay damper.
6. Dispose of the stay damper.



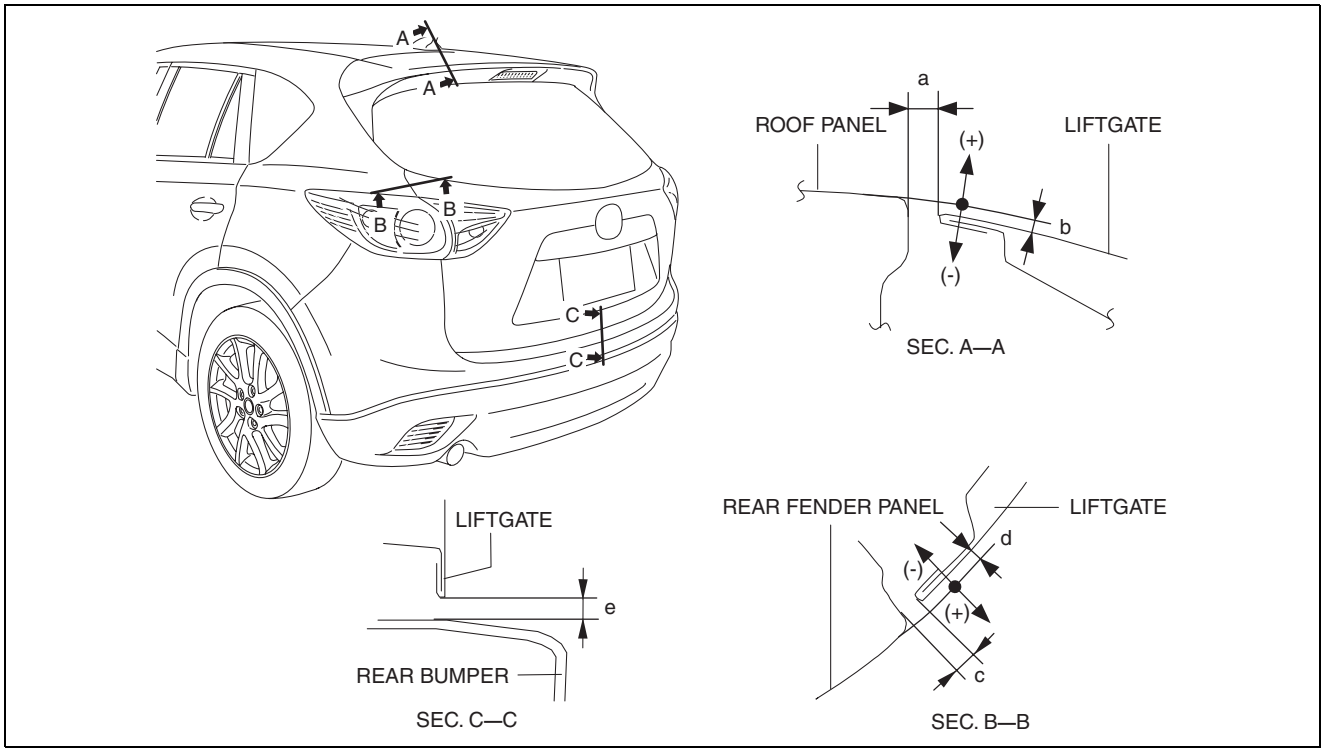
am3uuw0000798

DOORS AND LIFTGATE

LIFTGATE ADJUSTMENT

id091100521400

1. Measure the gap and height difference between the liftgate and the body.
2. Loosen the liftgate hinge installation bolts and adjust the liftgate.



ac8

Standard clearance
a: 5.2—7.2 mm {0.21—0.28 in}
b: -2.0—0 mm {-0.078—0.000 in}
c: 3.8—6.2 mm {0.15—0.24 in}
d: -1.6—0.8 mm {-0.06—0.03 in}
e: 3.8—7.8 mm {0.15—0.30 in}

3. Tighten the liftgate hinge installation bolts. (See 09-11-18 LIFTGATE REMOVAL/INSTALLATION.)
4. If the liftgate does not open/close smoothly, adjust it by loosening the liftgate lock striker installation screw. (See 09-14-52 LIFTGATE LOCK STRIKER REMOVAL/INSTALLATION.)
5. Spray or pour water on the door and surrounding area using a hose or high pressure water pressure car wash and verify that there is no water leakage.

GLASS/WINDOWS/MIRRORS

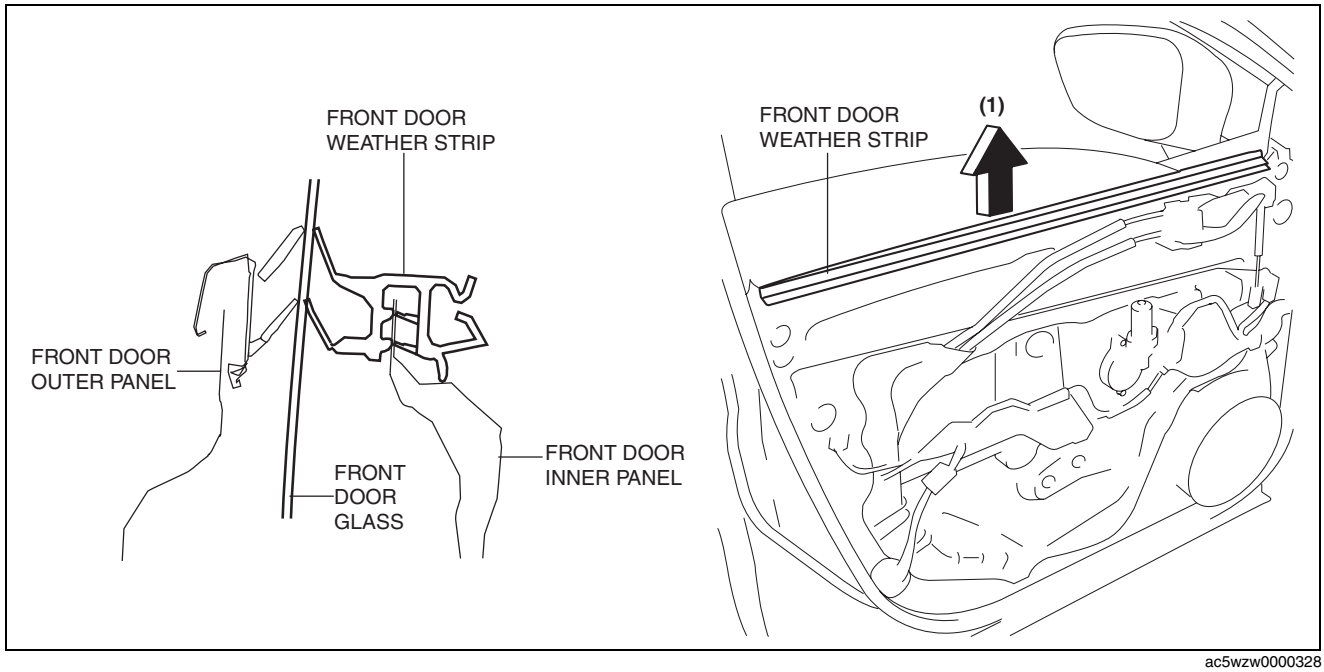
FRONT DOOR GLASS REMOVAL/INSTALLATION

id091200000100

1. Perform the front door glass preparation. (See 09-12-6 Front Door Glass Preparation.)

Note
- Before removing the front door glass, the removal procedure for the front door glass installation bolt can be facilitated by adjusting the top of the front door glass to the position **approx. 90 mm {3.5 in}** away from the upper part of the front beltline molding.

2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the following parts:
   (1) Inner garnish (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)
   (2) Front door trim (See 09-17-65 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
   (3) Front door speaker (See 09-20-15 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.)
4. Remove the weather strip arrow (1) shown in the figure.

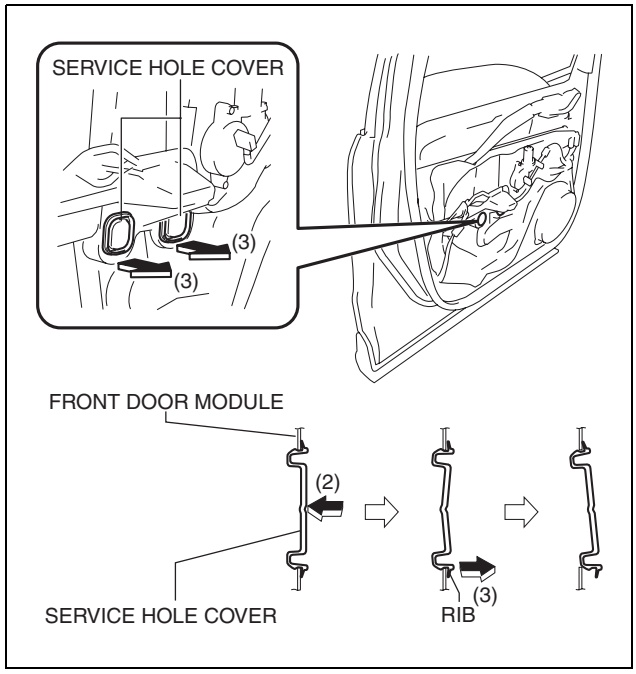


ac5wzw0000328

5. Press the center of the service hole cover in the direction of arrow (2) shown in the figure.

GLASS/WINDOWS/MIRRORS

6. Remove the service hole cover by holding its rib and partially peeling it back in the direction of arrow (3) shown in the figure.
7. Insert your hand through the front door speaker installation hole while supporting the front door glass and adjust the position of the front door glass so that the front door glass installation bolt is in a position in which it can be removed from the service hole cover opening.

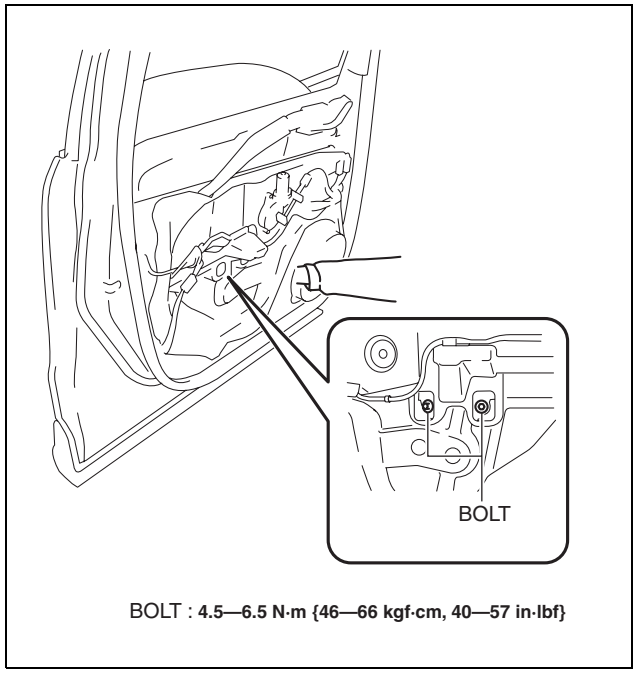


ac5uuw00001051

8. Remove bolts.

Caution

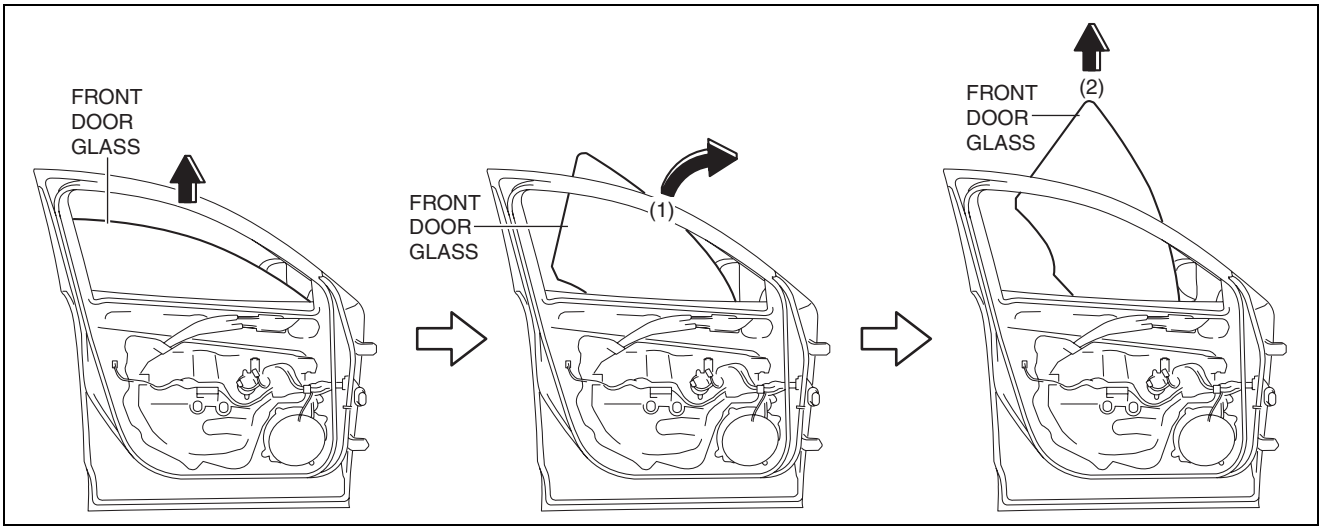
- **If the bolts are removed without supporting the front door glass, the front door glass may fall off and be damaged. Remove the bolts while inserting your hand into the front door speaker installation hole to support the front door glass.**



ac5wzw0000296

GLASS/WINDOWS/MIRRORS

9. Lift up the front door glass, tilt it in the direction of arrow (1) shown in the figure, then remove it in the direction of arrow (2).

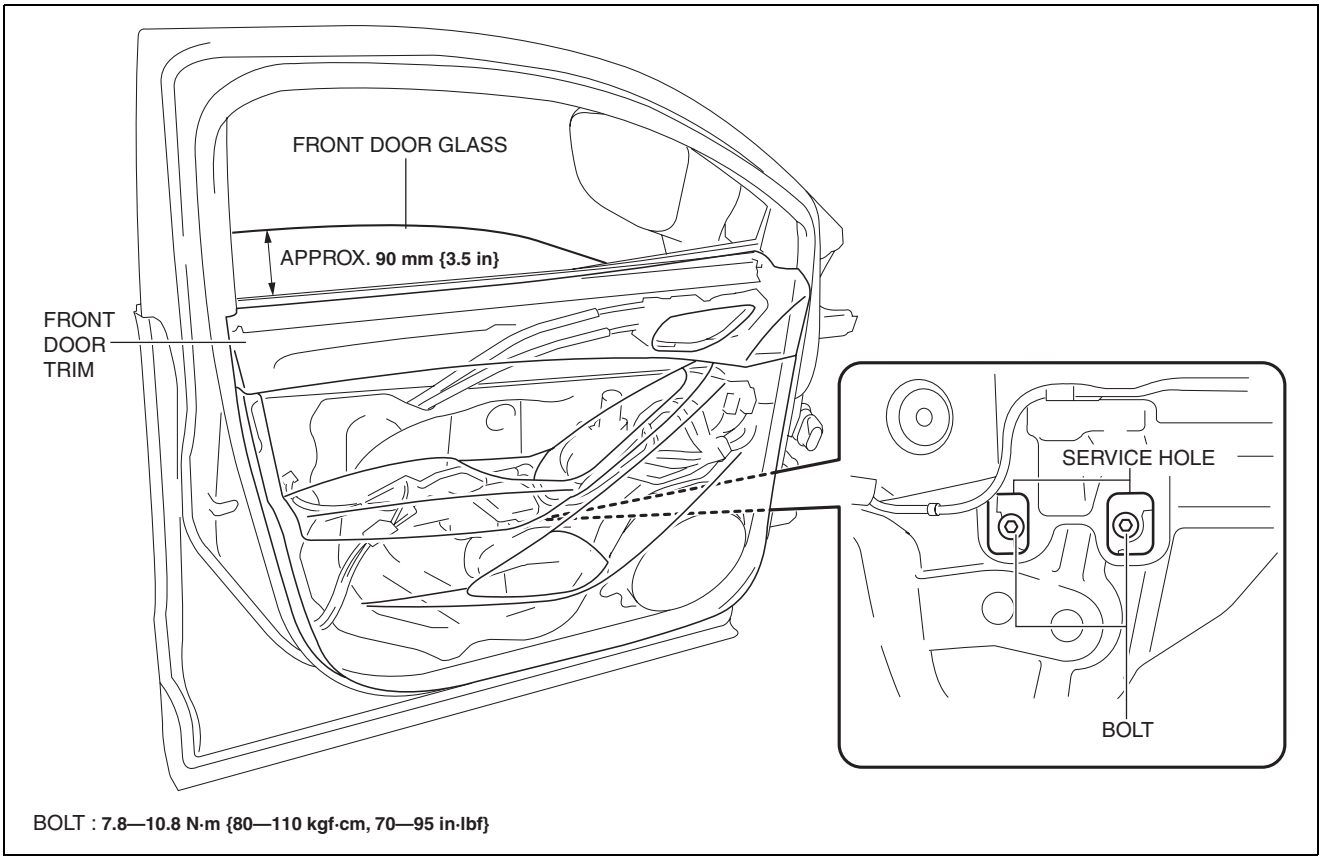


ac5uuw00001053

10. Install in the reverse order of removal.

Front Door Glass Preparation

- Perform the adjusting the top of the front door glass to the position **approx. 90 mm {3.5 in}** away from the upper part of the front door trim.



BOLT : **7.8—10.8 N·m {80—110 kgf·cm, 70—95 in·lbf}**

ac5wzw0000267

GLASS/WINDOWS/MIRRORS

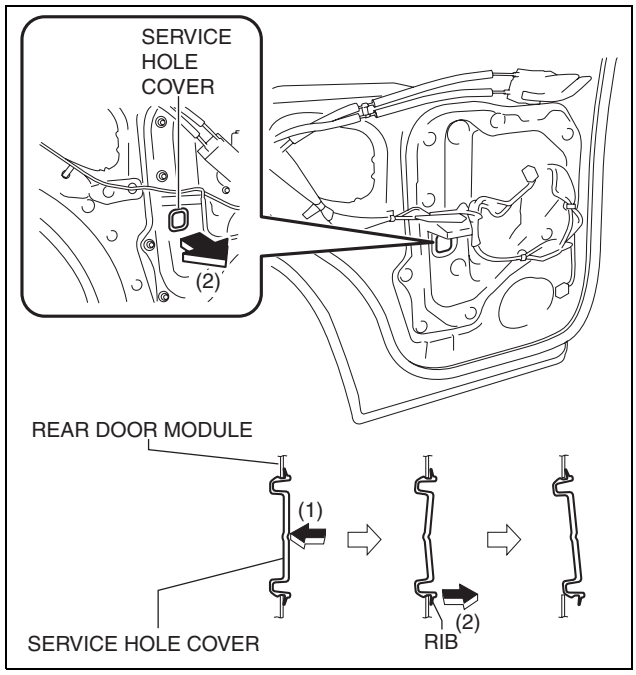
REAR DOOR GLASS REMOVAL/INSTALLATION

id091200000300

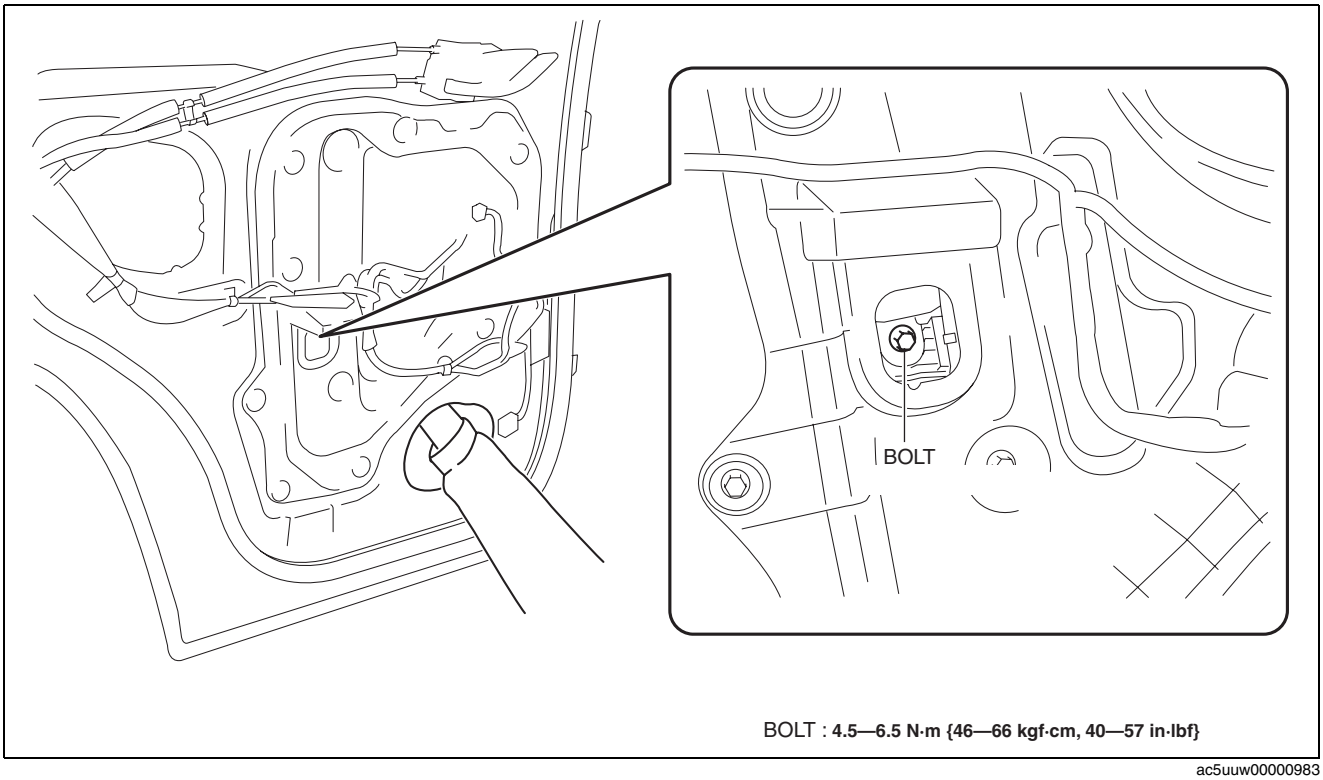
1. Fully lower the rear door glass.
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the following parts:
   (1) Rear door trim (See 09-17-74 REAR DOOR TRIM REMOVAL/INSTALLATION.)
   (2) Rear door quarter glass (See 09-12-9 REAR DOOR QUARTER GLASS REMOVAL/INSTALLATION.)
   (3) Rear door speaker (See 09-20-19 REAR DOOR SPEAKER REMOVAL/INSTALLATION.)
   (4) Rear power window motor (See 09-12-45 POWER WINDOW MOTOR REMOVAL/INSTALLATION.)
4. Press the center of the service hole cover in the direction of arrow (1) shown in the figure.
5. Remove the service hole cover by holding its rib and partially peeling it back in the direction of arrow (2) shown in the figure.
6. Remove the bolt.

Caution

- **If the bolts are removed without supporting the rear door glass, the rear door glass may fall off and be damaged. Remove the bolts while inserting your hand into the rear door speaker installation hole to support the rear door glass.**



ac5uuw00002599

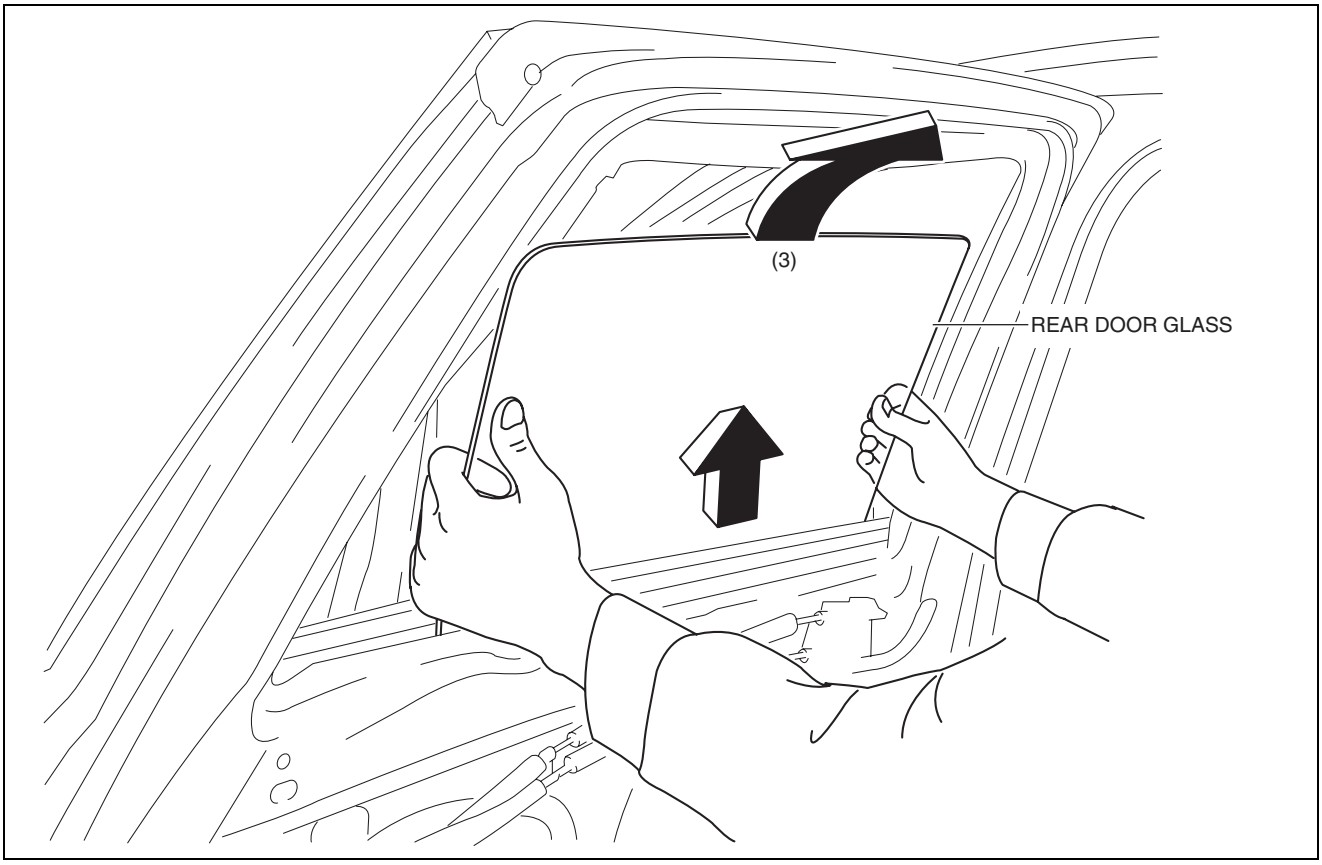


ac5uuw00000983

7. Lift the rear door glass up and remove while tilting it.

GLASS/WINDOWS/MIRRORS

8. Lift up the rear door glass, tilt it in the direction of arrow (3) shown in the figure.



ac5uuw00002600

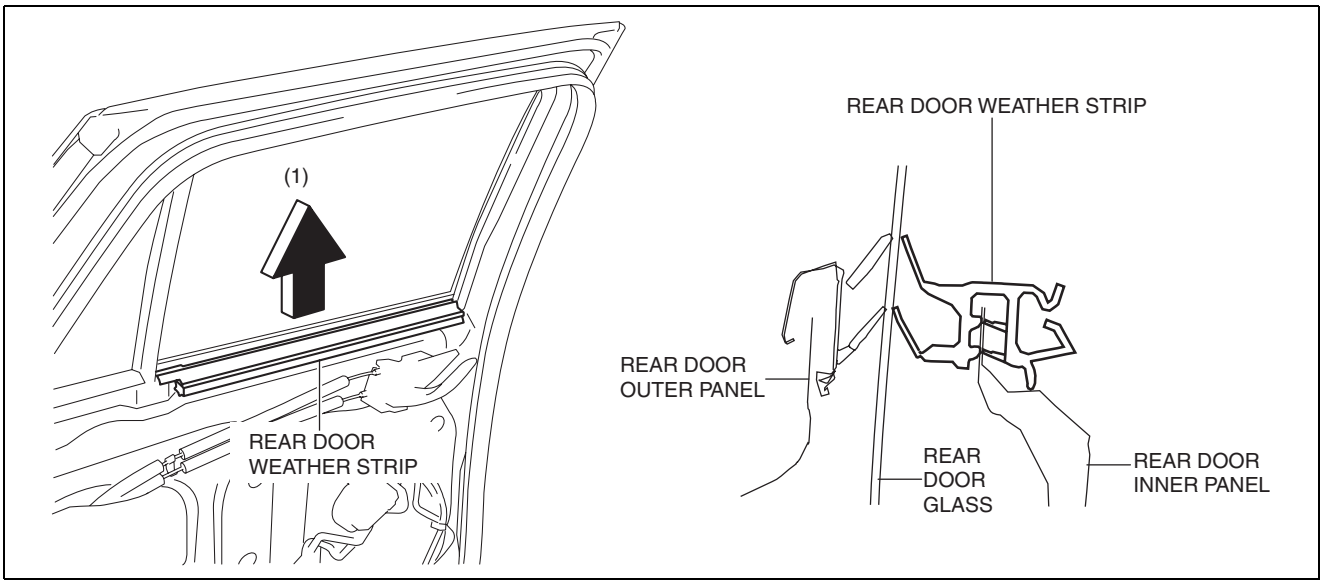
9. Install in the reverse order of removal.

GLASS/WINDOWS/MIRRORS

REAR DOOR QUARTER GLASS REMOVAL/INSTALLATION

id091200005600

1. Fully lower the rear door glass.
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the rear door trim. (See 09-17-74 REAR DOOR TRIM REMOVAL/INSTALLATION.)
4. Remove the rear door weather strip arrow (1) shown in the figure.



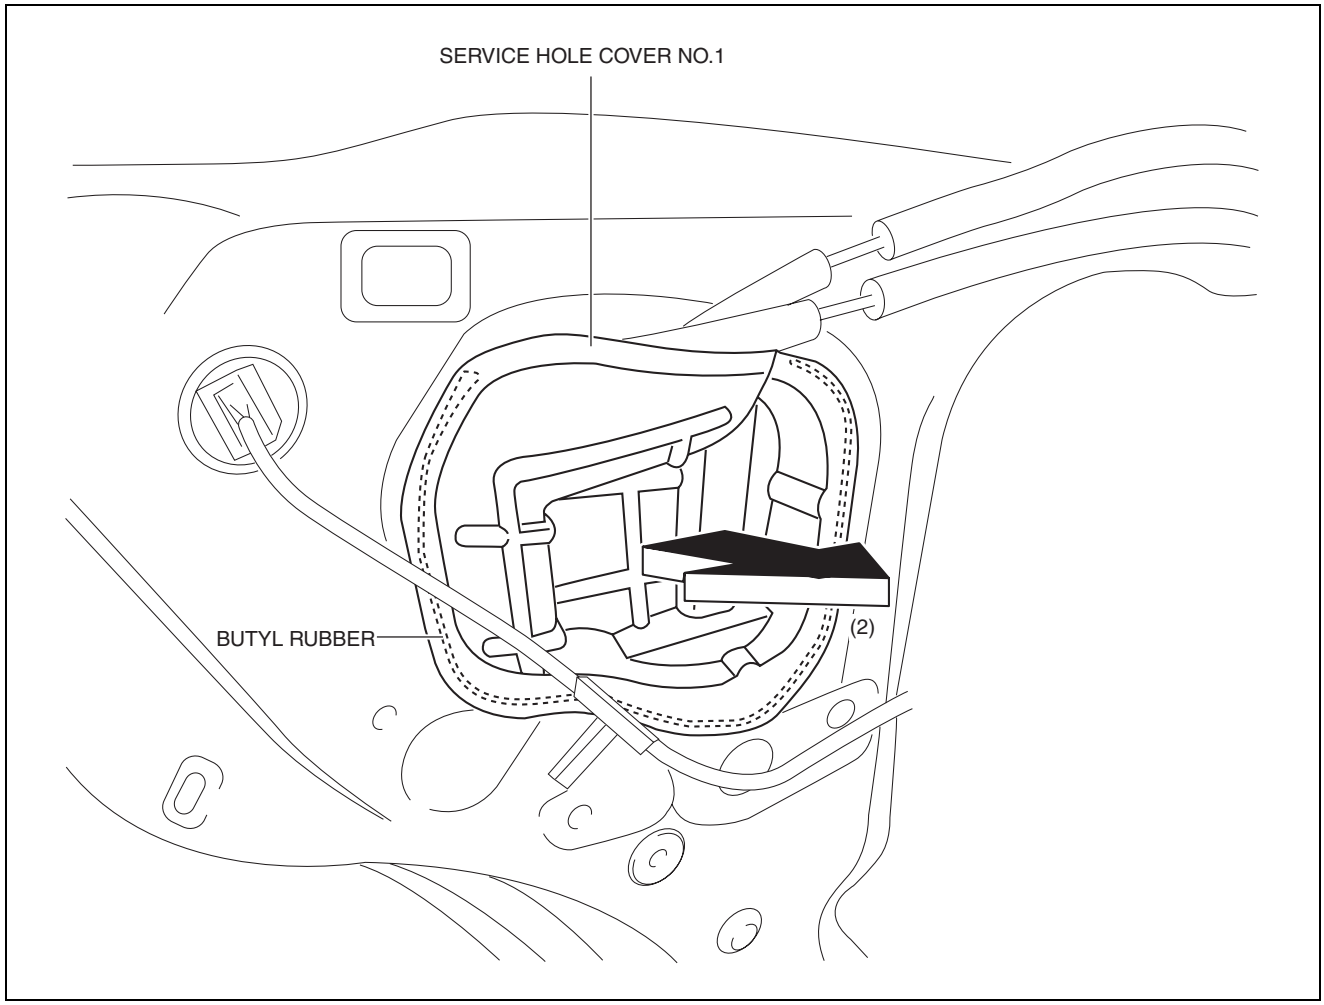
ac5uuw00001825

5. Remove the service hole cover No.1 arrow (2) shown in the figure.

Caution

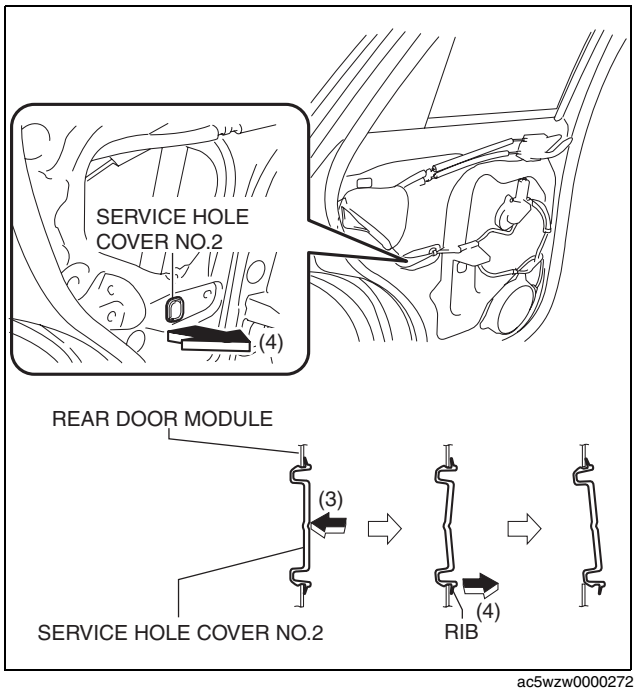
- **When removing service hole cover No.1, remove it while gradually stripping the butyl rubber.**

Otherwise service hole cover No.1 may be deformed.



ac5uuw00001973

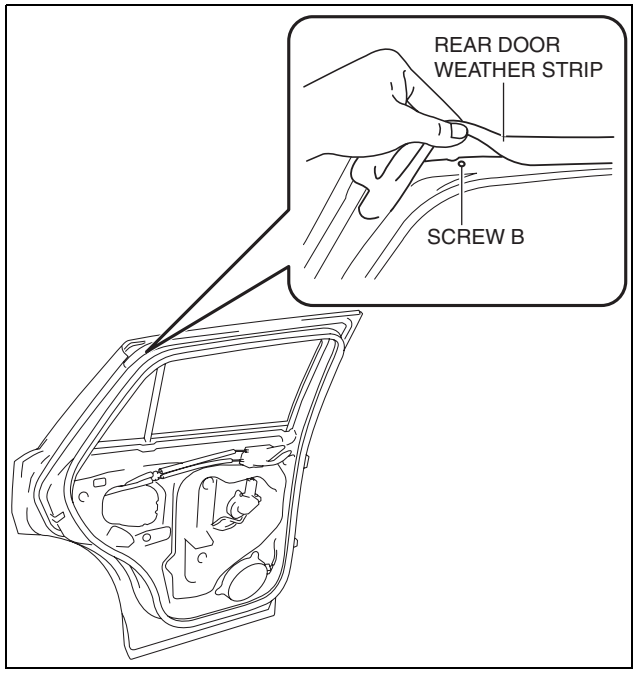
6. Remove the service hole cover No.2 arrow in the order of (3), (4) shown in the figure.



ac5wzw0000272

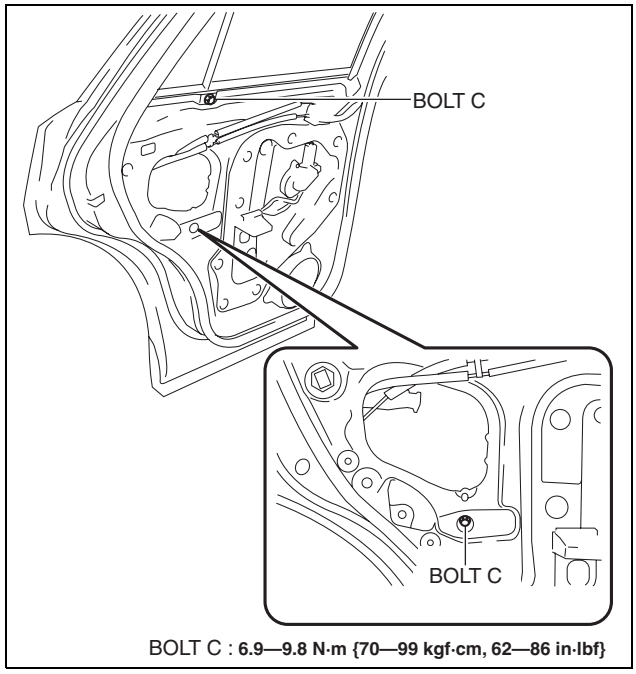
GLASS/WINDOWS/MIRRORS

7. Partially peel back rear door weather strip.
8. Remove screw B.



ac5uuw00001827

9. Remove bolts C.

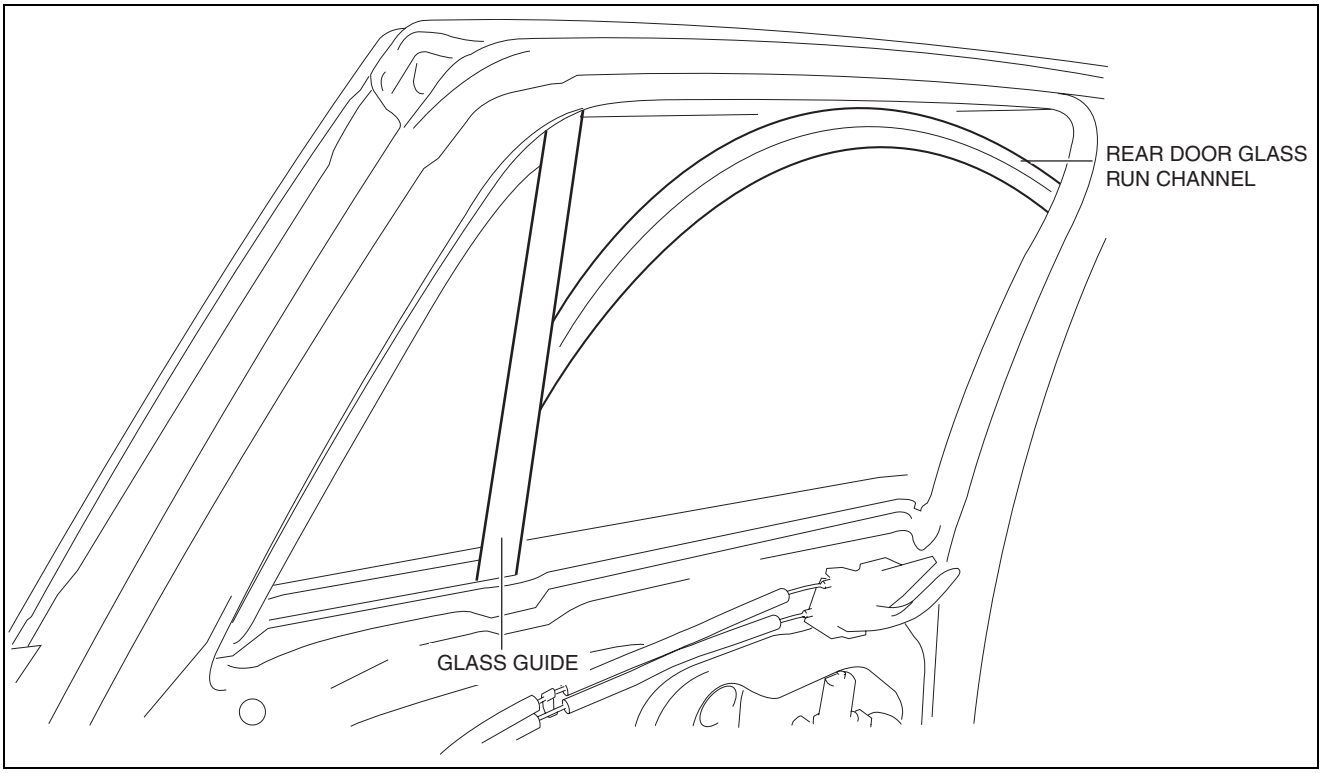


BOLT C : **6.9—9.8 N·m {70—99 kgf·cm, 62—86 in·lbf}**

ac5uuw00001974

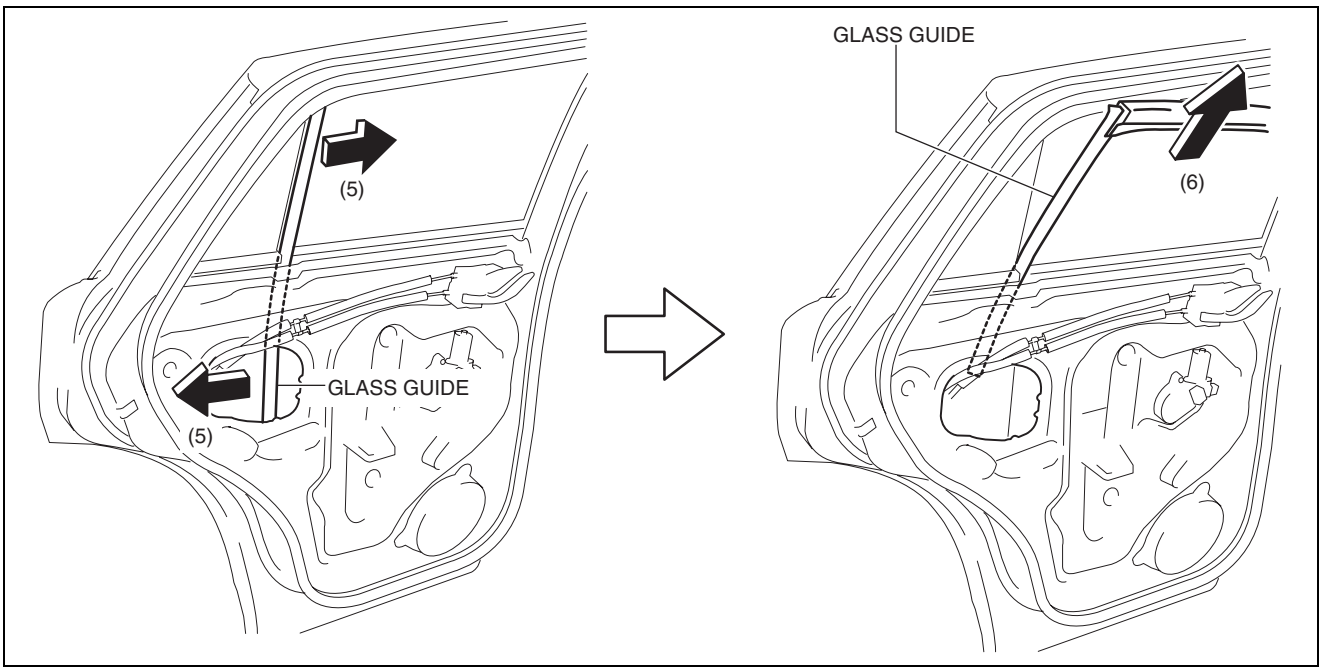
GLASS/WINDOWS/MIRRORS

10. Partially peel back the rear door glass run channel.



ac5wzw0000298

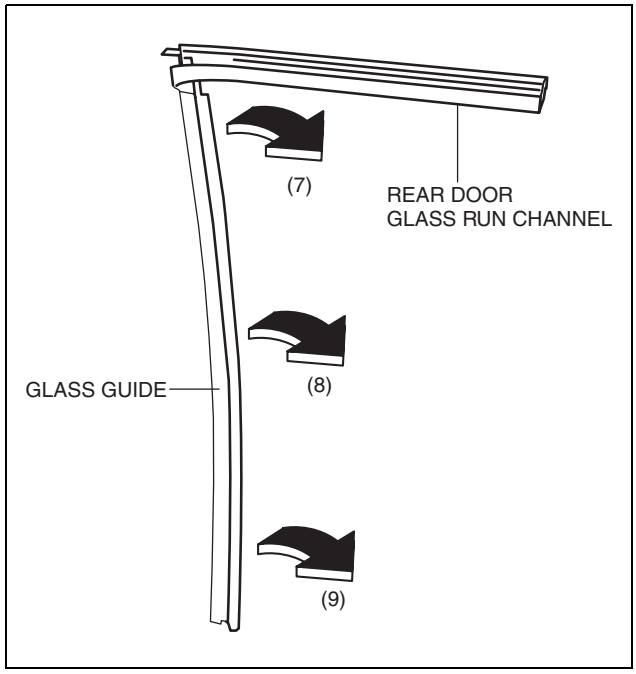
11. Pull the glass guide in the direction of the arrow (5) shown in the figure, then remove the glass guide direction of the arrow (6) shown in the figure. (See 09-12-14 Rear Door Glass Run Channel Installation Note.) (See 09-12-15 Glass Guide Installation Note.)



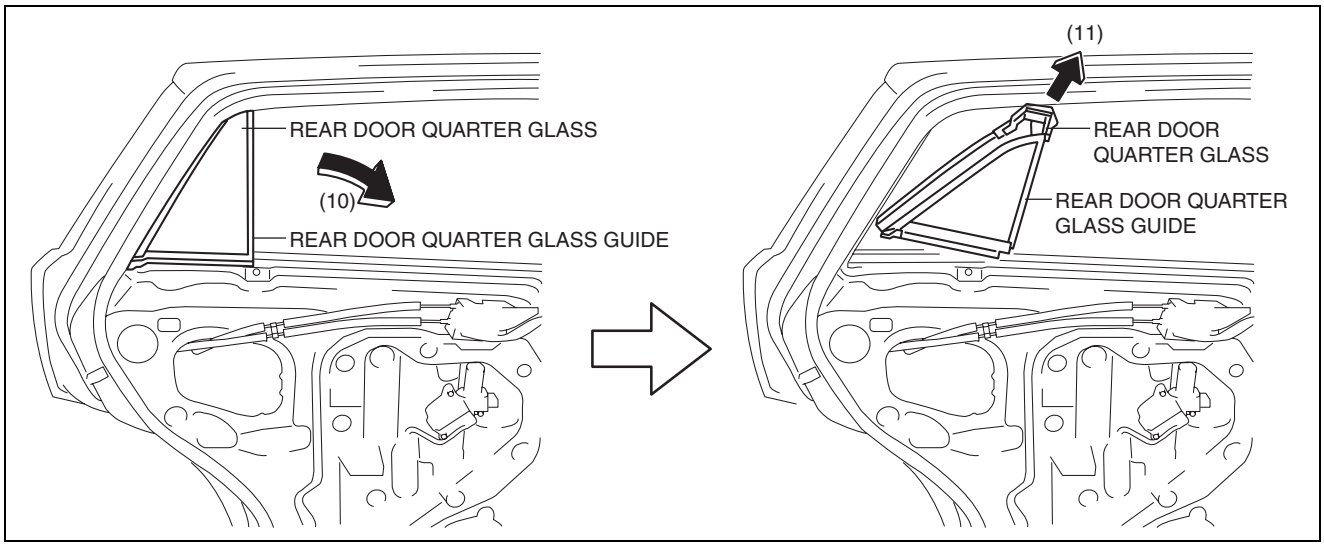
ac5wzw0000298

GLASS/WINDOWS/MIRRORS

12. Pull the rear door glass run channel in the direction of the arrow in the order of (7),(8),(9) then remove the rear door glass run channel.
13. Slide the rear door quarter glass and rear door quarter glass guide as a single unit in the direction of the arrow (10) shown in the figure.



ac5uuw00001830

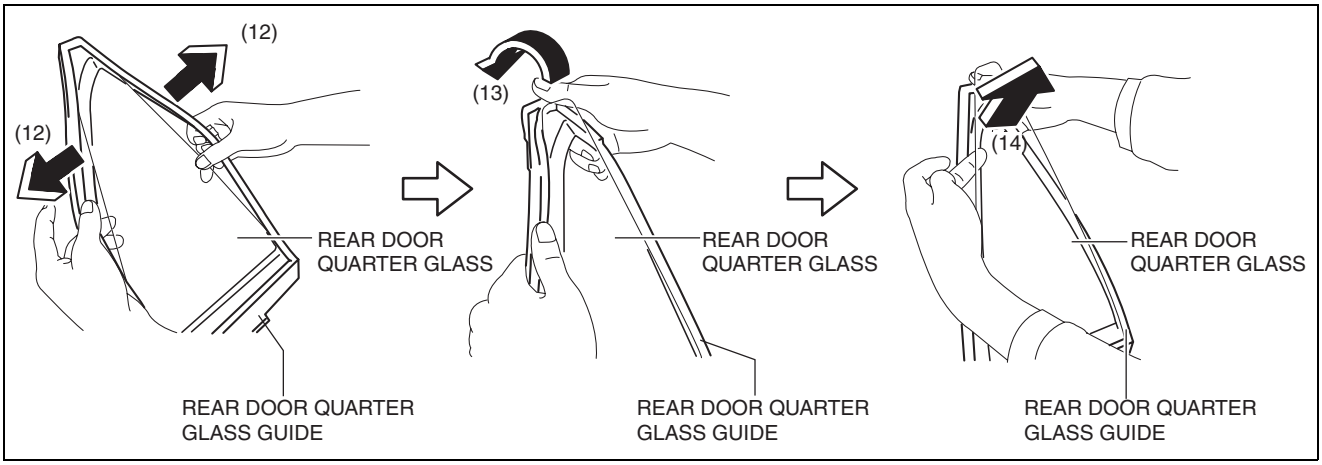


ac5uuw00001975

14. Remove the rear door quarter glass and rear door quarter glass guide as a single unit in the direction of the arrow (11) shown in the figure.

GLASS/WINDOWS/MIRRORS

15. Pull the rear door quarter glass guide in the direction of the arrow in the order of (12), (13), (14) and remove the rear door quarter glass.

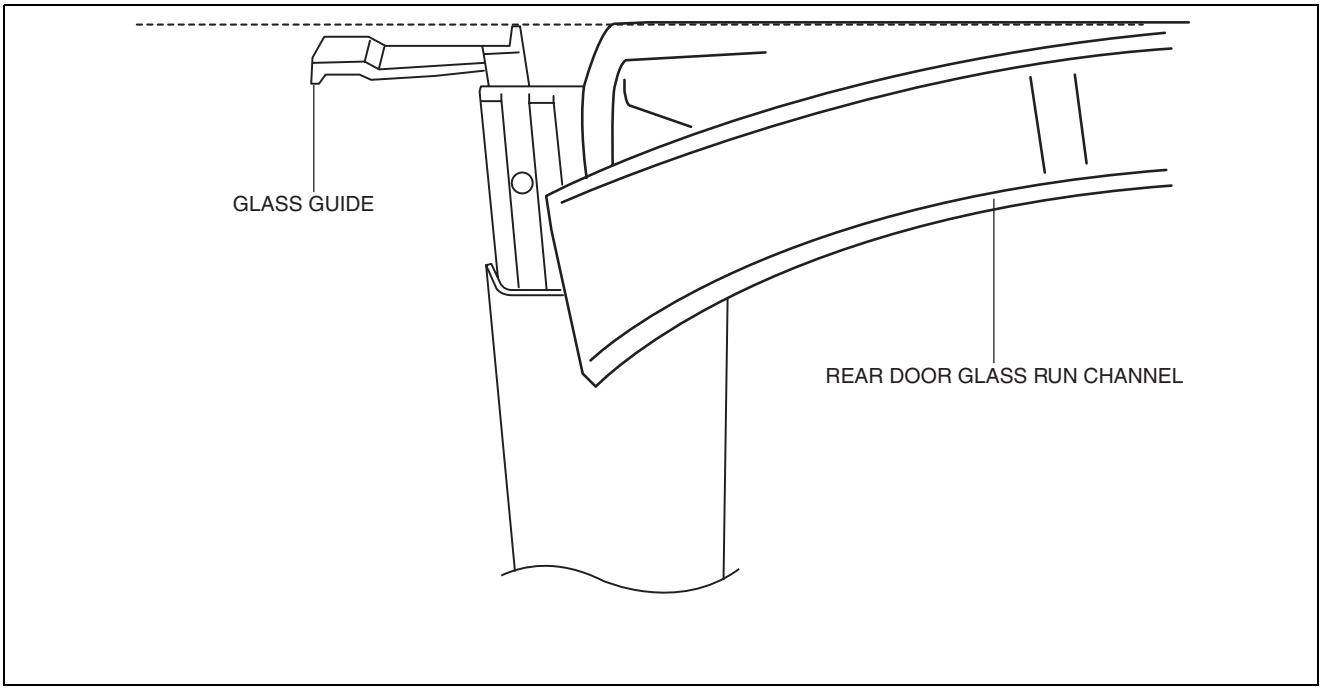


ac5uuw00001976

16. Install in the reverse order of removal.

Rear Door Glass Run Channel Installation Note

- Install the rear door glass run channel so that the glass guide is aligned with the top of the rear door glass run channel.

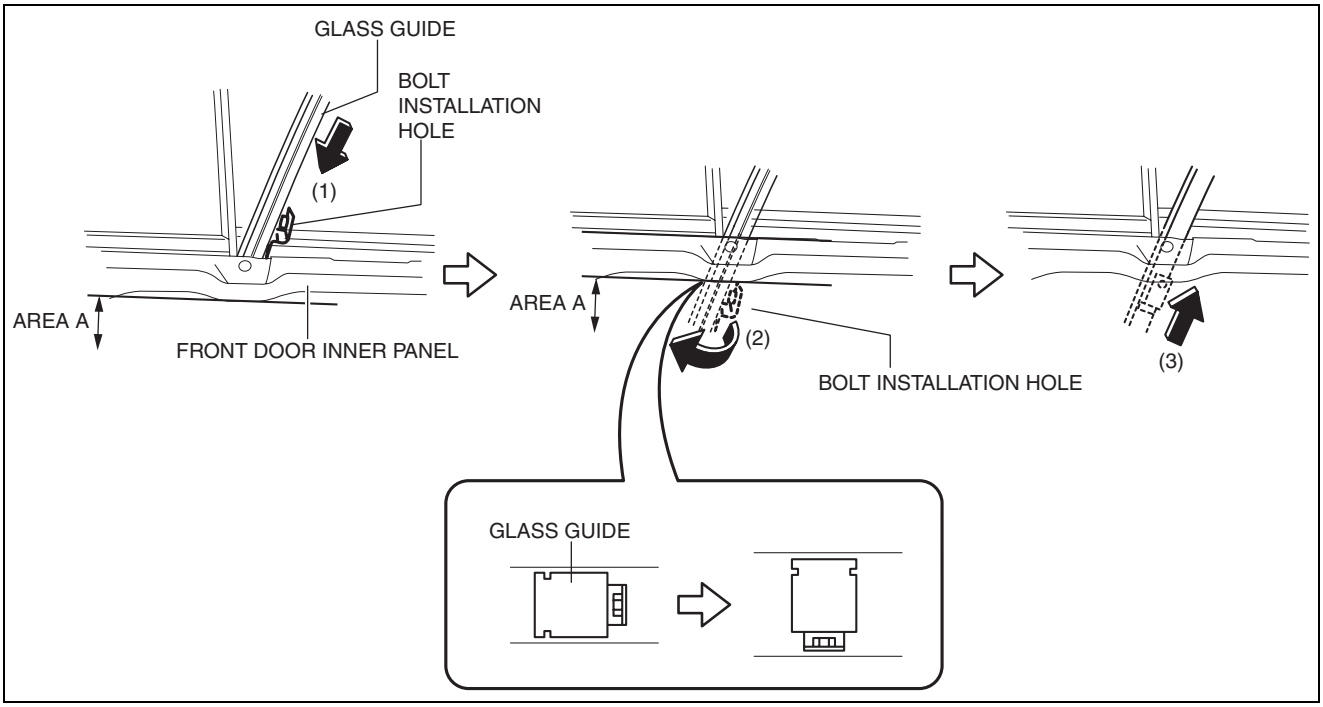


ac5uuw00001831

GLASS/WINDOWS/MIRRORS

Glass Guide Installation Note

1. Set the glass guide in the direction shown in the figure, and insert the bolt installation hole in the direction of arrow (1) until it reaches area A.

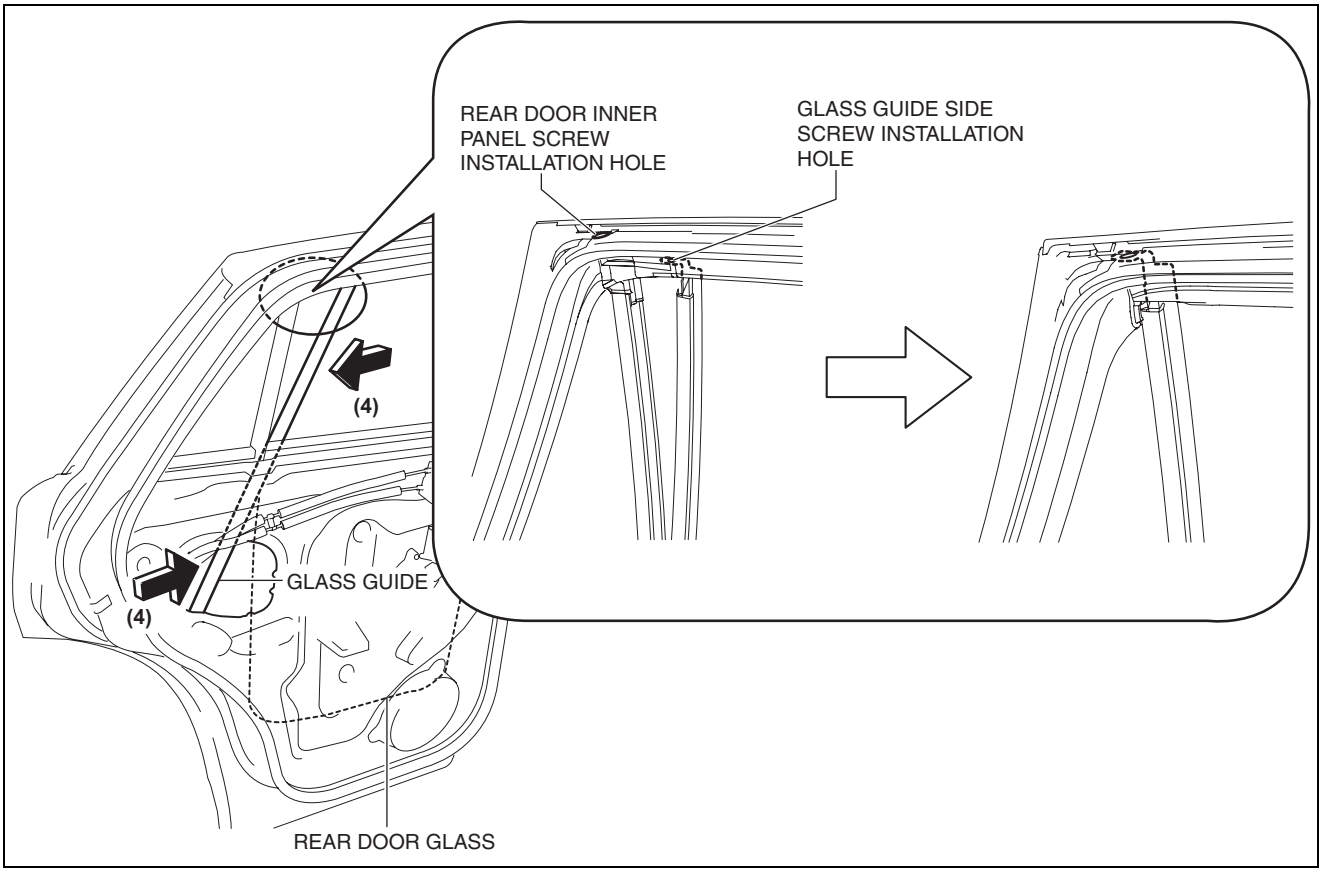


ac5uuw00001832

2. When the bolt installation hole of the glass guide reaches area A, rotate the glass guide in the direction of arrow (2) shown in the figure.
3. Move the glass guide in the direction of arrow (3) shown in the figure to adjust the position of the front door inner panel and the bolt installation holes of the glass guide.

GLASS/WINDOWS/MIRRORS

4. Move the glass guide in the direction of arrow (4) shown in the figure and while aligning it to the screw installation hole in the rear door inner panel, set it to the rear door quarter glass and the rear door glass.



ac5wzw0000298

GLASS/WINDOWS/MIRRORS

WINDSHIELD REMOVAL

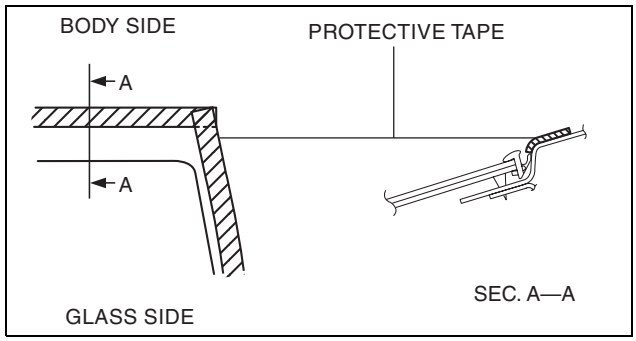
id091200000500

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Windshield wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
   (2) Cowl grille (See 09-16-3 COWL GRILLE REMOVAL/INSTALLATION.)
   (3) Cover (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
   (4) Forward sensing camera (FSC) (with high beam control (HBC) system) (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
   (5) Laser sensor (with smart city brake support (SCBS)) (See 04-15-17 LASER SENSOR REMOVAL/INSTALLATION.)
   (6) Rain sensor (with auto light/wiper system) (See 09-19-58 RAIN SENSOR REMOVAL/INSTALLATION.)
   (7) Auto-dimming mirror (with auto-dimming mirror) (See 09-12-94 AUTO-DIMMING MIRROR REMOVAL/INSTALLATION.)
   (8) Rearview mirror (without auto-dimming mirror) (See 09-12-98 REARVIEW MIRROR REMOVAL/INSTALLATION.)
   (9) A-pillar trim (See 09-17-53 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (10)Sunvisor (See 09-17-93 SUNVISOR REMOVAL/INSTALLATION.)
   (11)Front map light (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)
   (12)Assist handle (See 09-17-91 ASSIST HANDLE REMOVAL/INSTALLATION.)
3. Set the headliner out of the way.
4. Apply protective tape along the edge of the body.

Note
- Overlap and adhere the protective tape to the corners to prevent damage.

5. Remove the windshield molding by pulling it outward.

Note
- If the windshield molding is difficult to remove, warm the windshield molding using a hot air blower.
- The windshield molding is a replacement part.



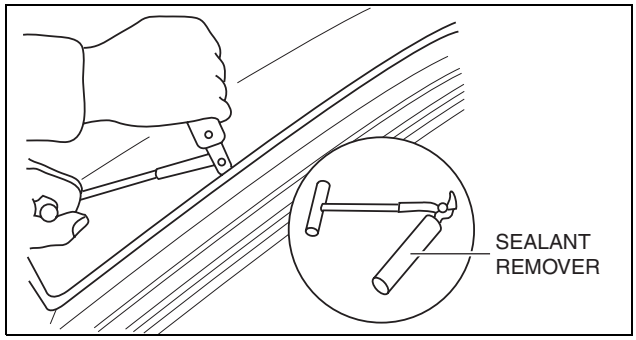
ac5uuw00001038

Not Reusing Windshield

Warning
- **Using piano wire with bare hands can cause injury. Always wear gloves when using piano wire.**

Note
- If it is difficult to cut sealant, use piano wire and follow the procedure under “Reusing Windshield”.

1. Cut out the sealant all around the glass using a sealant remover.
2. Remove the windshield.



ac5wzw0000132

GLASS/WINDOWS/MIRRORS

Reusing Windshield

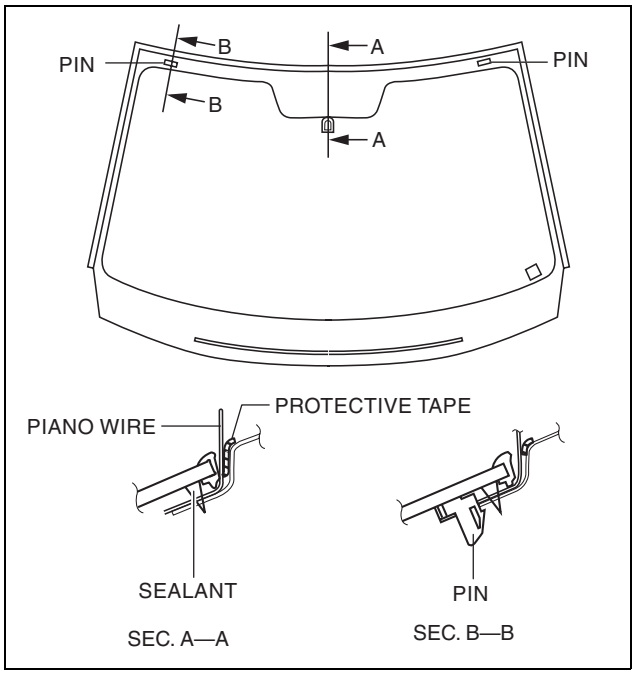
Warning
- **Using piano wire with bare hands can cause injury. Always wear gloves when using piano wire.**

Caution
- **Because the lens for rainfall/illumination level detection is integrated with the windshield, the auto light/wiper systems may not operate correctly if the lens is damaged. When removing the windshield, be careful not to damage the lens. If the lens is damaged, replace the windshield.**

Note
- Before removing the windshield from the body, mark the position of the windshield by affixing tape to the windshield and body panel.

1. Avoiding the pin on the inside of the vehicle, insert piano wire which has been cut to sufficient length.
2. Wind each end of piano wire around a bar.

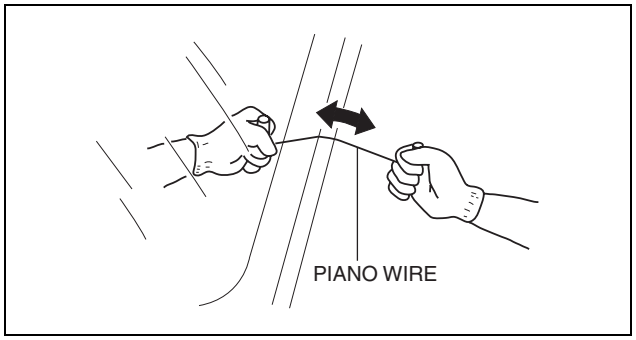
Note
- Use a long sawing action to spread the work over the whole length of piano wire to prevent it from breaking due to localized heating.



ac5uuw00001870

3. Secure one end of piano wire, and while pulling the other end, cut the sealant around the windshield.
4. Pinch the pin from the inside of the vehicle and detach it.
5. Remove the windshield.
6. If the pin is damaged, remove the pin.

Note
- Before removing the pin from the windshield glass, place an alignment mark on the windshield.



ac5wzw0000132

GLASS/WINDOWS/MIRRORS

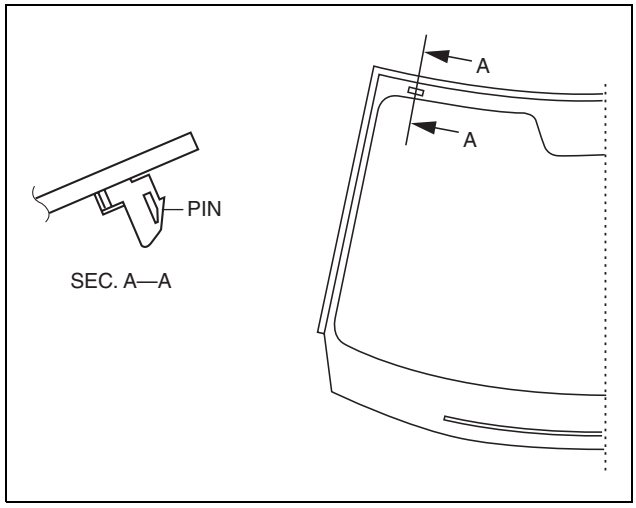
WINDSHIELD INSTALLATION

id091200000700

Warning
- **Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.**

Caution
- **If a door is opened or closed when all the window glass is closed, the resulting change in air pressure could cause the sealant to crack preventing the proper installation of the windshield. Keep the door glass opened until the windshield installation is completed.**

1. Remove the sealant along the perimeter of the glass using a utility knife. (When reusing the glass)
2. Clean and degrease an **approx. 50 mm {2.0 in}** wide strip along the perimeter of the windshield.
3. Inspect the glass for cracks. If it is cracked, chamfer it using sandpaper.
4. Align the alignment marks made before removal and install the pin to the windshield referring to the figure. (Reusing glass, pin removed)

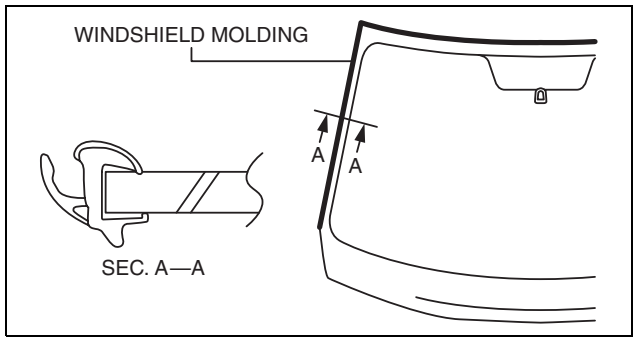


ac5wzw0000291

5. Install the windshield molding.
6. Apply glass primer on the glass as shown in the figure, then allow it to dry for **approx. 30 min**.

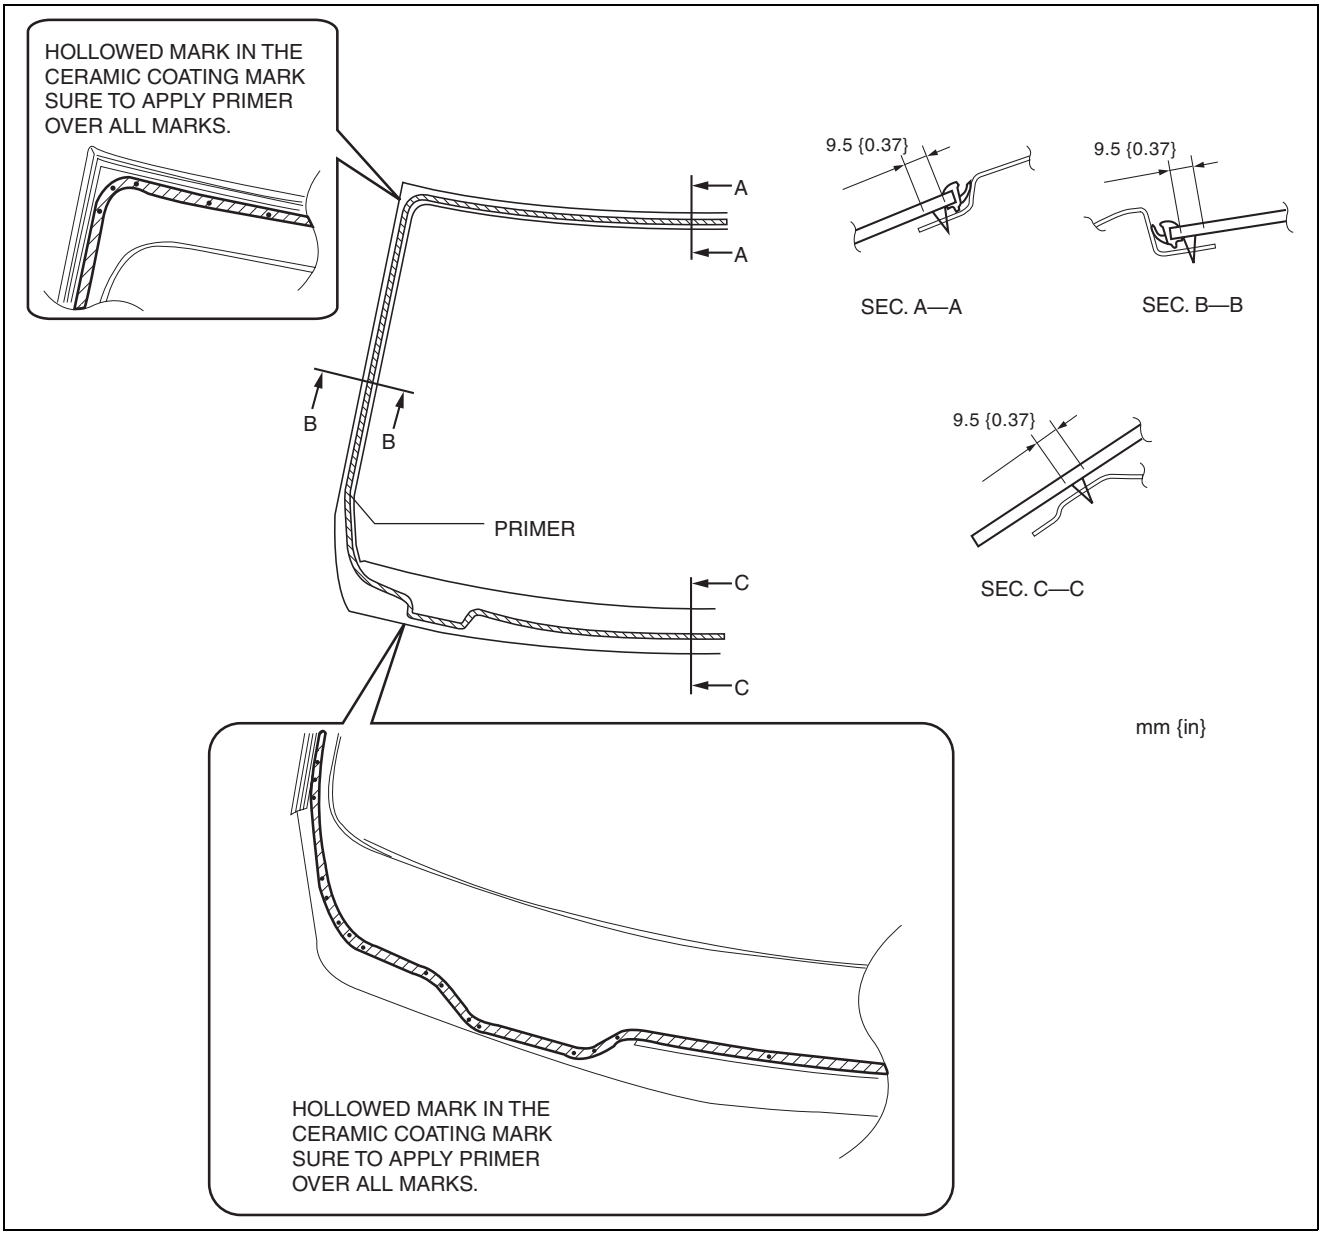
Caution
- **To prevent weakening of the primer adhesion, keep the bonding surface free of dirt, moisture, and grease. Do not touch the surface with your hand.**

Note
- Apply primer to the hollowed marks in the ceramic coating.



ac5uuw00001719

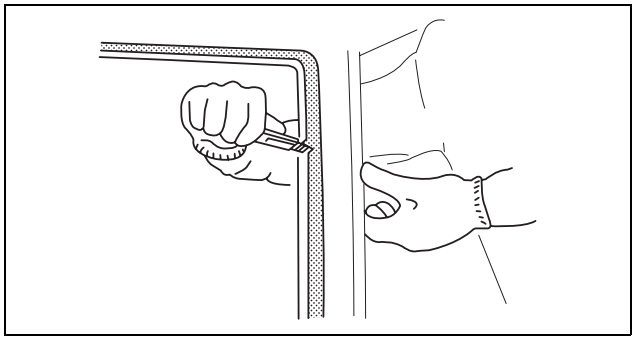
GLASS/WINDOWS/MIRRORS



ac5uuw00002633

7. Cut away the old sealant using a utility knife so that **1—2 mm {0.04—0.07 in}** thickness of sealant remains along the perimeter of the frame.
8. If the sealant has come off completely in any one place, apply some primer after degreasing, and allow it **approx. 30 min** to dry. Then **apply 2 mm {0.07 in} thickness** of new sealant.

Caution
- **To prevent weakening of the primer adhesion, keep the bonding surface free of dirt, moisture, and grease. Do not touch the surface with your hand.**



ac5uuw00001058

9. [illegible]

approx. 30 min.

Caution
- **Using the dowel for applying primer, apply primer 65 to the area shown in the figure.**

GLASS/WINDOWS/MIRRORS

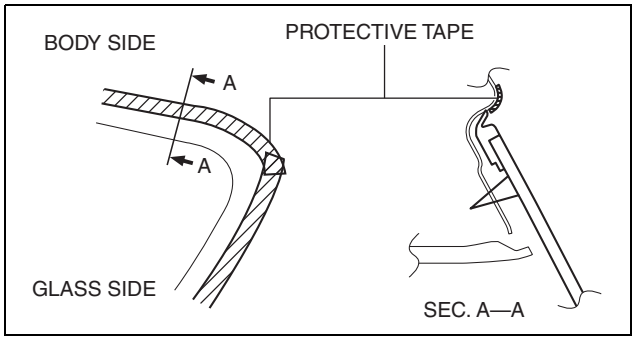
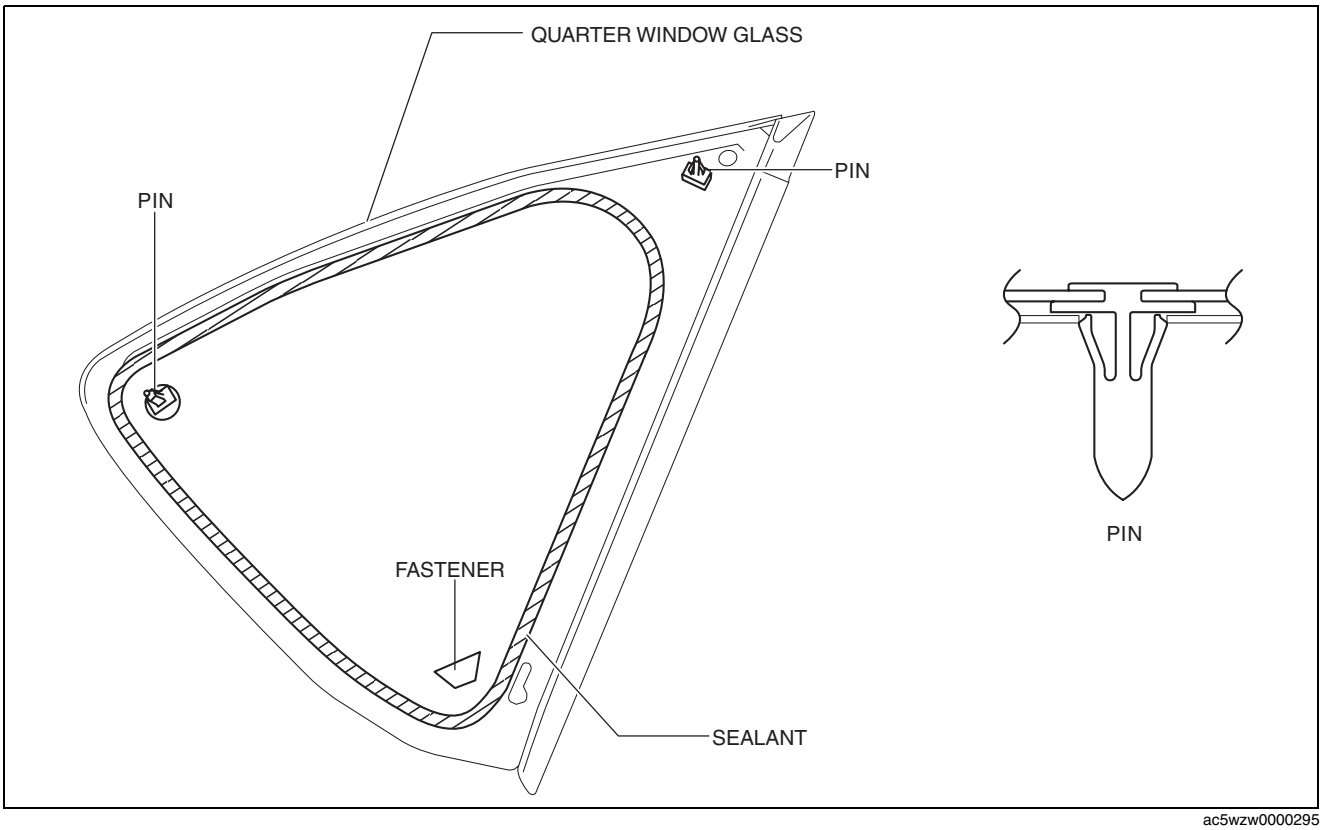
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
   (2) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) Trunk side trim (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (5) D-pillar trim (See 09-17-60 D-PILLAR TRIM REMOVAL/INSTALLATION.)
   (6) C-pillar trim (See 09-17-59 C-PILLAR TRIM REMOVAL/INSTALLATION.)
3. Apply protective tape along the edge of the body and the quarter window glass.

   Warning
   - **Using the piano wire with bare hands can cause injury. Always wear gloves when using the piano wire.**



ac5uuw00001011

4. Avoiding pins on the inside of the vehicle, insert the piano wire which has been cut to sufficient length.



ac5wzw0000295

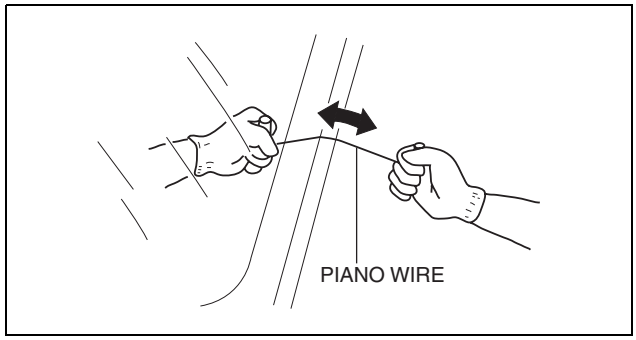
5. Wind each end of the piano wire around a bar.

   Note
   - Use a long sawing action to spread the work over the whole length of the piano wire to prevent it from breaking due to localized heating.

GLASS/WINDOWS/MIRRORS

6. Secure one end of the piano wire, and while pulling the other end, cut the sealant around the quarter window glass.
7. Pull the quarter window glass outward and detach the pins from the body.
8. If a pins or fastener is damaged, remove it.

Note
- Before removing the pins or spacers from the quarter window glass, place alignment marks on the quarter window glass.



ac5wzw0000133

GLASS/WINDOWS/MIRRORS

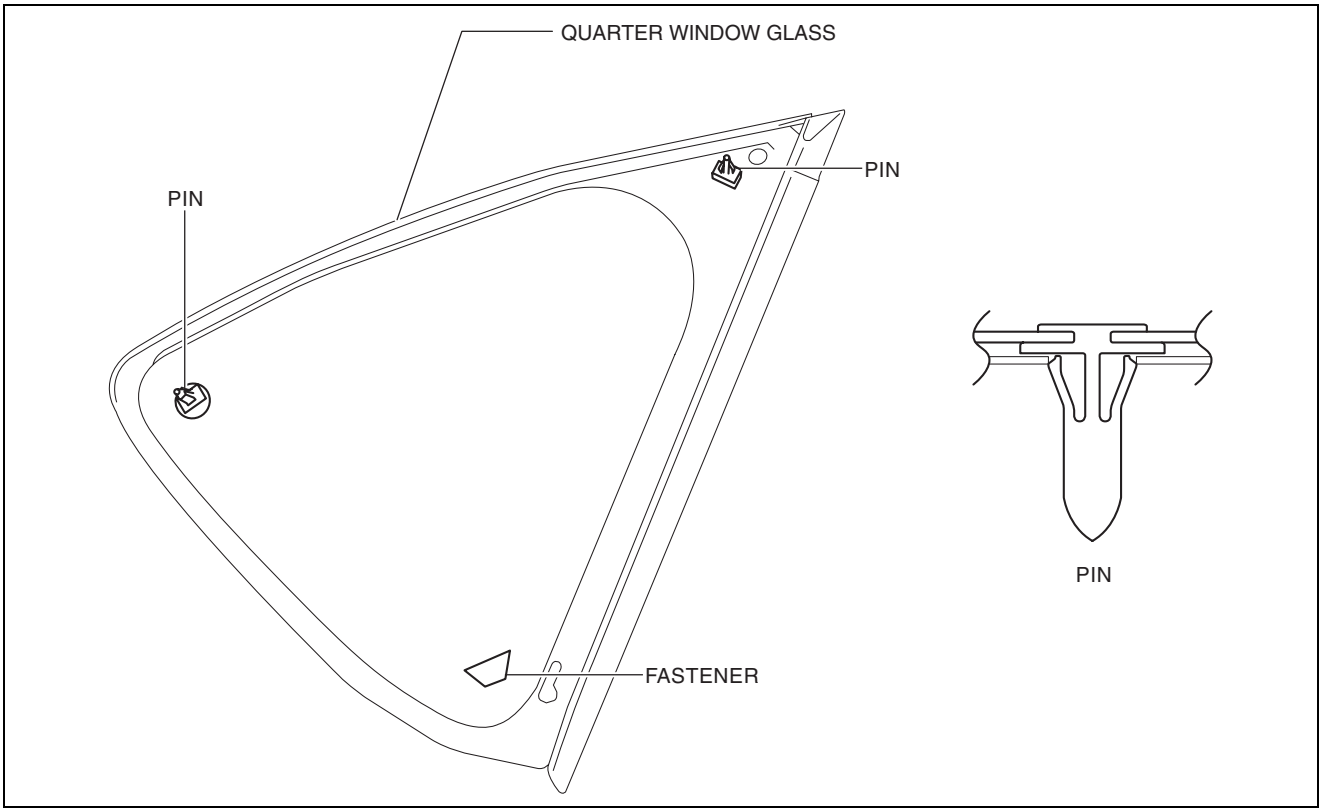
QUARTER WINDOW GLASS INSTALLATION

id091200002600

Warning
- **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**

Caution
- **If a door is opened or closed when all the window glass is closed, the resulting change in air pressure could cause the sealant to crack preventing the proper installation of the glass. Keep the door glass open until the quarter window glass installation is completed.**

1. Remove sealant along the perimeter of the glass using a razor or scraper. (when reusing the glass)
2. Clean and degrease the ceramic part along the perimeter of the glass.
3. Inspect the glass for cracks. If it is cracked, chamfer it using sandpaper.
4. If the glass is reused, attach pins and fastener to the glass as shown in the figure.



ac5wzw0000296

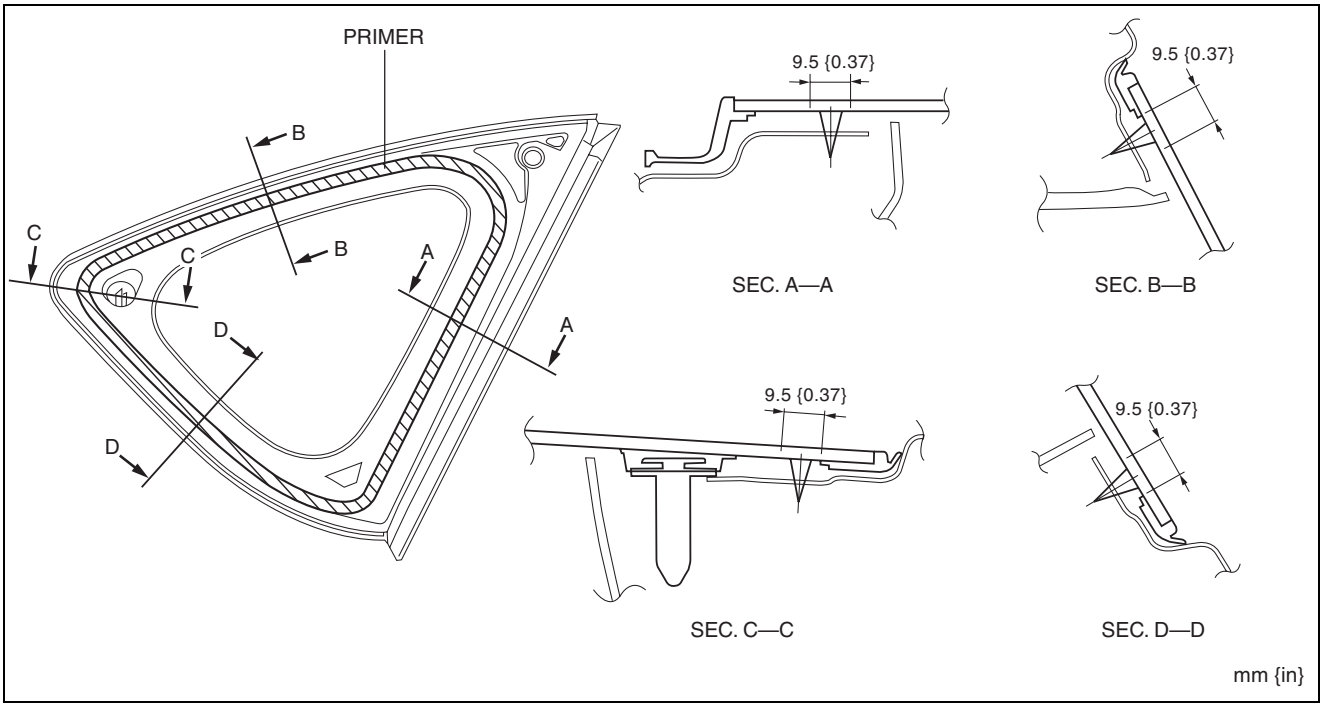
Note
- Align with the alignment marks marked before removing the glass.

5. Apply glass primer along the hollowed marks in the ceramic coating on the new glass, along the sealant tracks on the reused glass, then allow it to dry for **approx. 30 min.**

Caution
- **To prevent weakening of the primer adhesion, keep the bonding surface free of dirt, moisture, and grease. Do not touch the surface with your hand.**

Note
- Apply primer to the hollowed marks in the ceramic coating.

GLASS/WINDOWS/MIRRORS



ac5wzw0000296

6. Cut away the old sealant using a razor or scraper so that **1—2 mm {0.04—0.07 in}** thickness of sealant remains along the perimeter of the frame.

FILAMENT INSPECTION

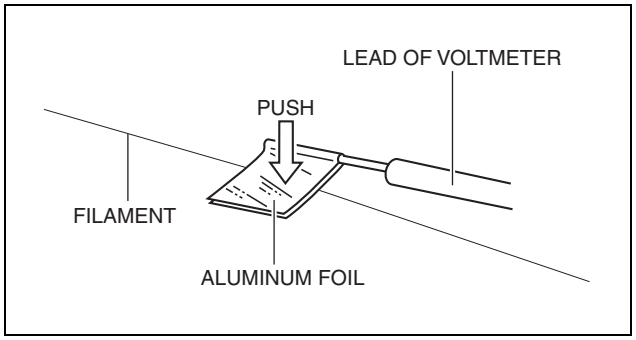
id091200003600

1. Switch the ignition ON (engine off).
2. Turn the rear window defroster switch on.

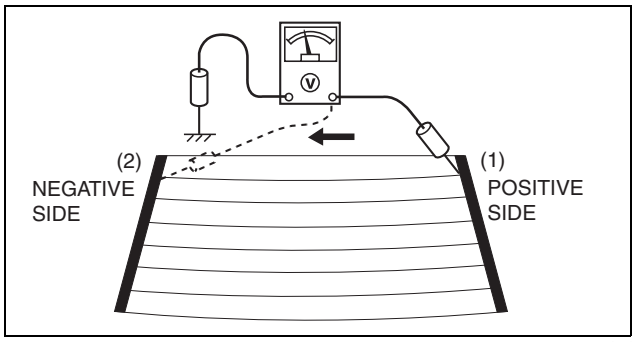
Caution
- **Directly touching the rear window defroster filament with the lead of the tester could damage it. Wrap aluminum foil around the end of the lead and inspect the filament by touching it with the aluminum foil.**

3. Connect the positive lead of the tester to the positive side of each filament and the negative lead to ground.
4. Gradually slide the positive lead from the positive side to the negative side and verify that the voltage decreases accordingly.
   - If the voltage changes rapidly, the filament has a malfunction. Repair the filament.

Measured part	Voltage (Reference)
(1) to (2)	Approx. 11 V to 0 V



ac5wzw0000134



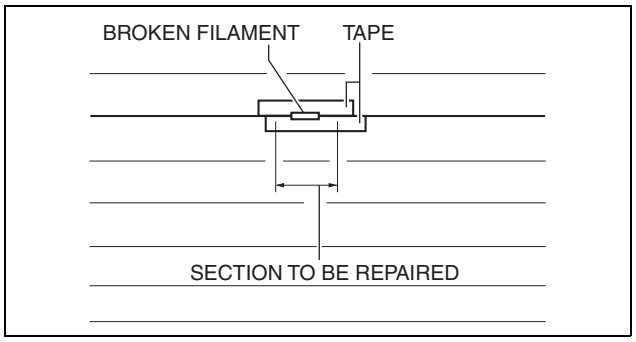
ac5wzw0000134

FILAMENT REPAIR

id091200003700

1. Clean the filament using isopropyl alcohol.
2. Attach tape to both sides of the filament.
3. Using a small brush or marking pen, apply silver paint.
4. After **2—3 min,** carefully remove the tape without damaging the applied area.

Caution
- **Do not operate the rear window defroster until the paint is completely dry. It may cause other malfunctions if it is used before the paint is dry.**



ac5wzw0000134

5. Dry the repaired part according to the following procedure.
   - When the room temperature is **25 °C {77 °F},** leave it as it is for **24 h.**
   - When a hot air blower is used, dry with the **150 °C {302 °F}** air for **30 min.**

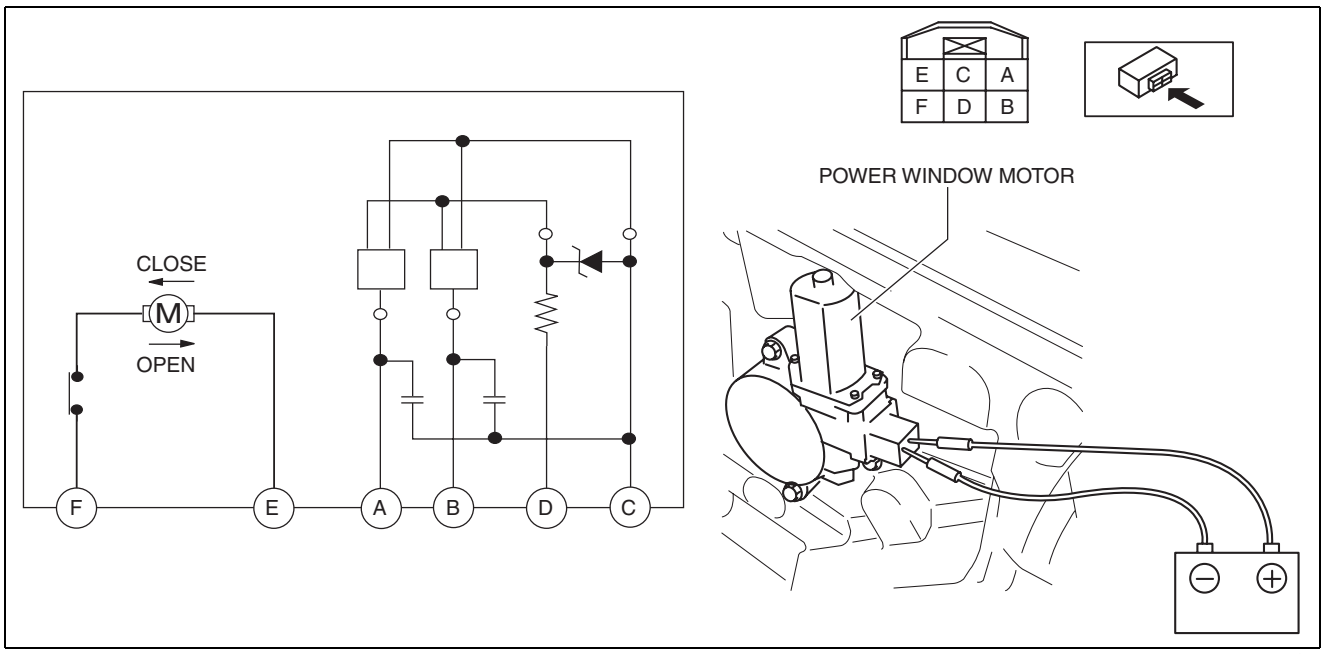
2. Remove the inner garnish. (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)
3. Remove the front door trim. (See 09-17-65 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
4. Disconnect the power window motor connector.
5. Apply battery positive voltage and connect the ground to power window motor terminals E and F, and then inspect the power window motor operation.

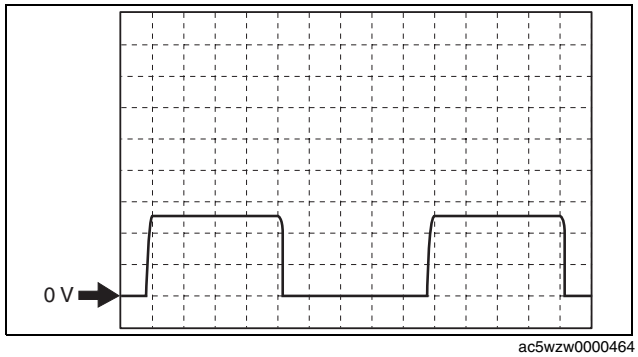


ac5wzw0000123

- If the power window motor does not operate as indicated in the table, replace it.

Operation	Terminal	
	E	F
Open	B+	Ground
Close	Ground	B+

6. Connect the battery positive voltage to power window motor terminal D and connect terminal C to ground.
7. Operate the power window motor and verify the wave patterns for terminals A and B.
   - Terminal:
     A, B(+) ⇔ ground (-)
   - Oscilloscope setting: 2 V/DIV (Y), 1 ms/DIV (X), DC range
   - If the malfunction, replace the power window motor.



ac5wzw0000464

GLASS/WINDOWS/MIRRORS

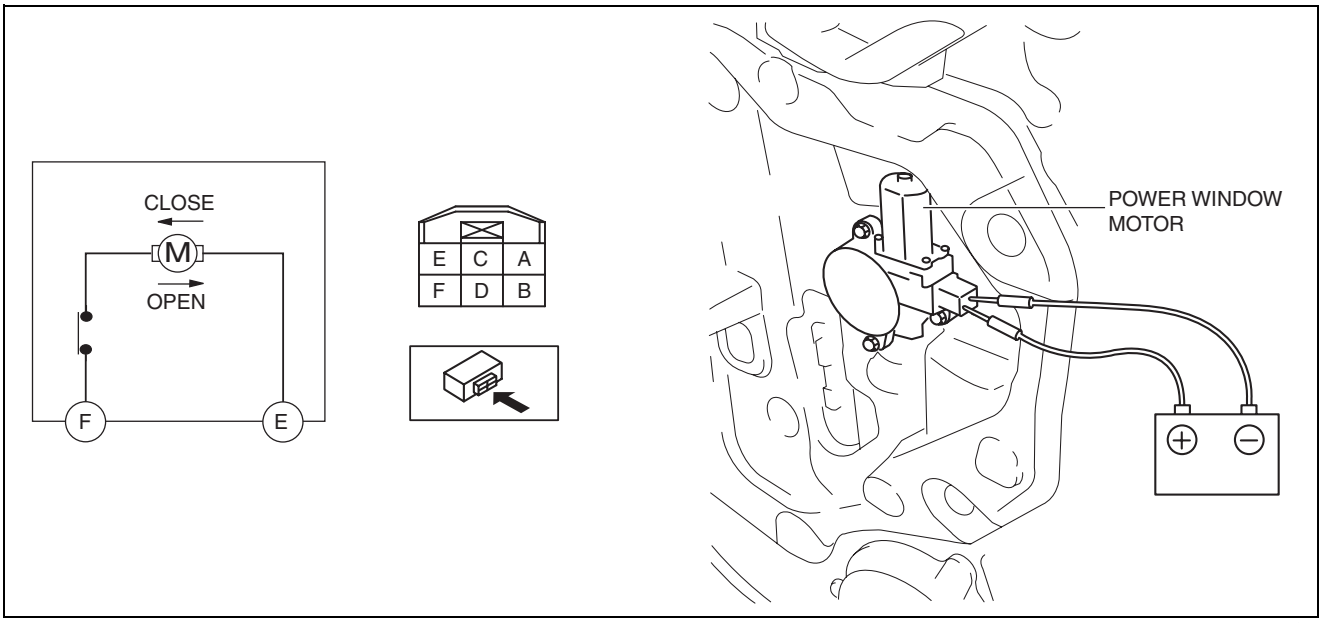
Front power window motor (for passenger-side)

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the inner garnish. (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)
3. Remove the front door trim. (See 09-17-65 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
4. Disconnect the power window motor connector.
5. Apply battery positive voltage and connect the ground to power window motor terminals E and F, and then inspect the power window motor operation.



ac5wzw0000123

- If the power window motor does not operate as indicated in the table, replace it.

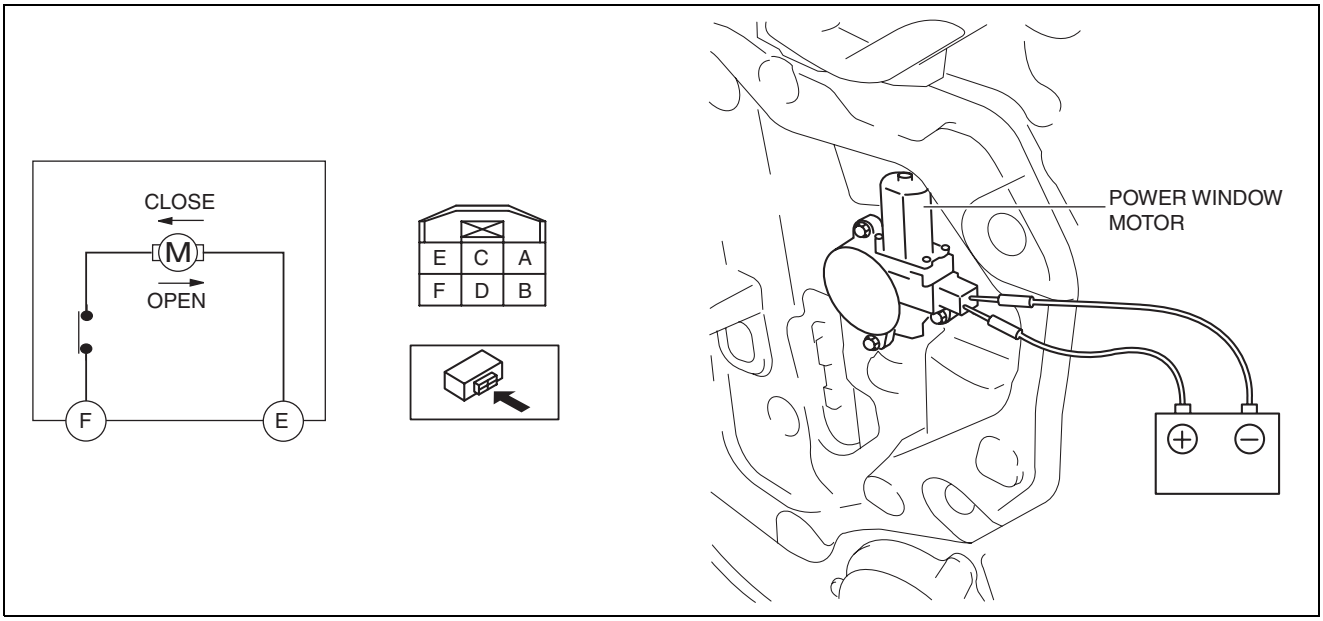
Operation	Terminal	
	E	F
Close	B+	Ground
Open	Ground	B+

Rear power window motor

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the rear door trim (See 09-17-74 REAR DOOR TRIM REMOVAL/INSTALLATION.)
3. Disconnect the power window motor connector.

GLASS/WINDOWS/MIRRORS

4. Apply battery positive voltage and connect the ground to power window motor terminals E and F, and then inspect the power window motor operation.



ac5wzw0000123

- If the power window motor does not operate as indicated in the table, replace it.

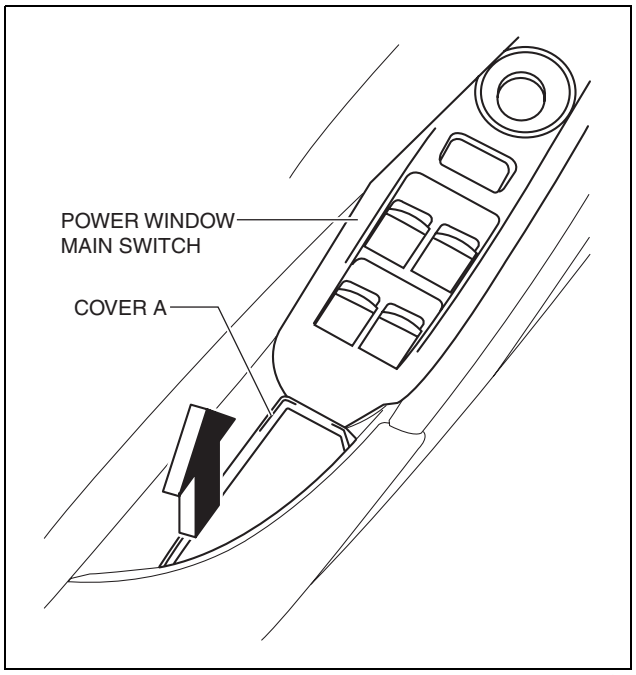
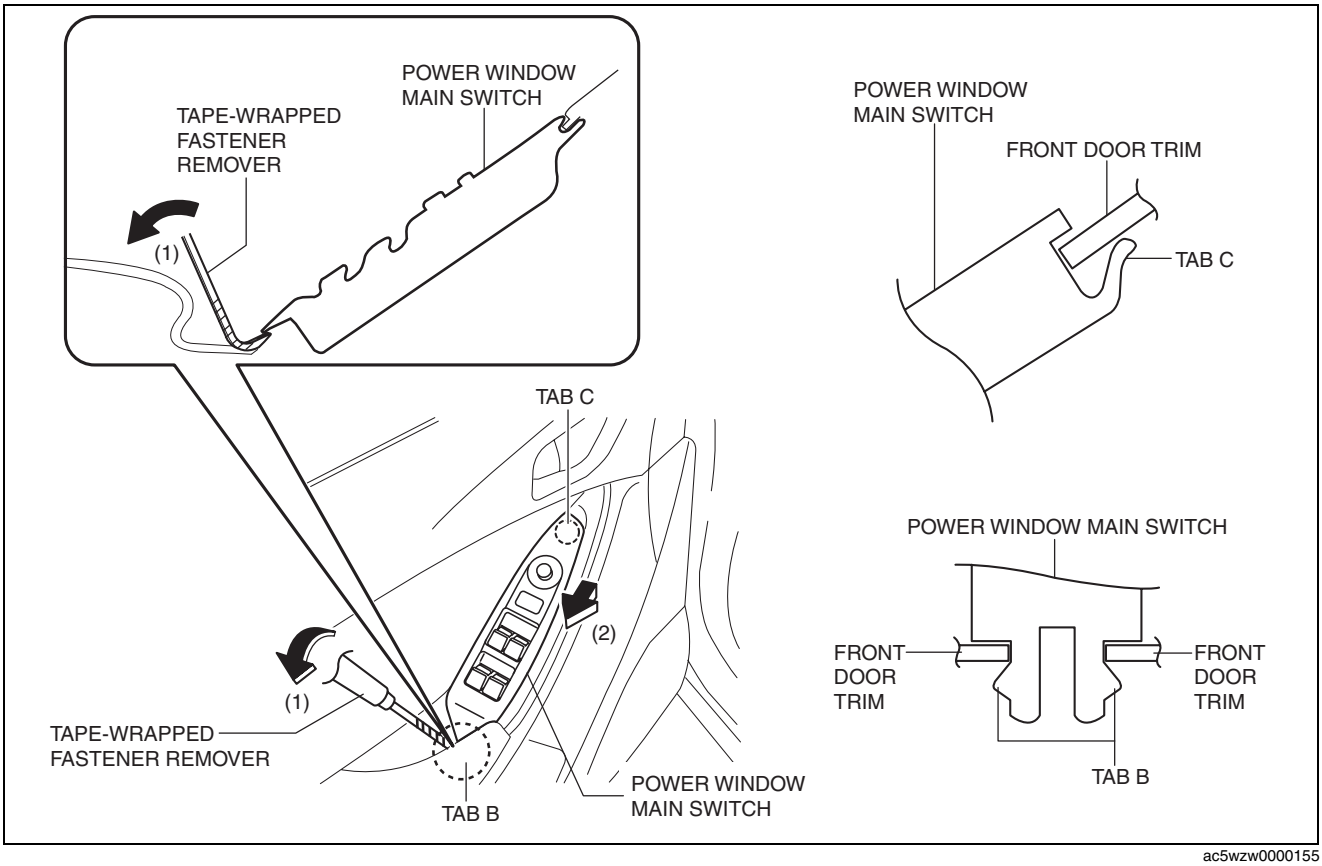
POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION

id091200002000

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the cover A.
3. Insert a tape-wrapped flathead screwdriver shown in the figure and remove the tab B in the direction of arrow (1).



ac5wzw0000123

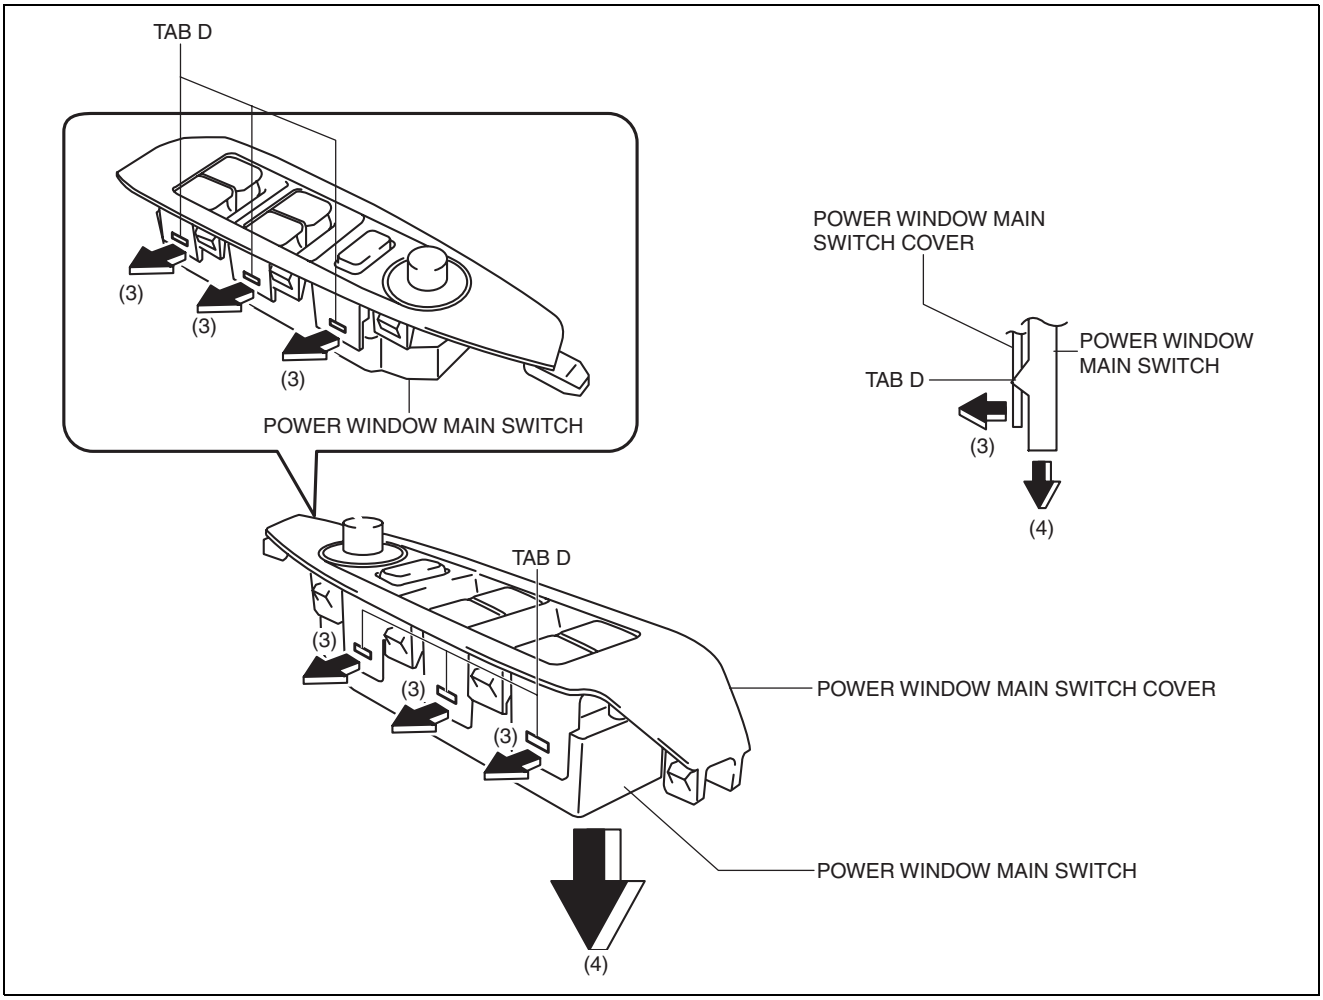


ac5wzw0000155

4. Slide the power window main switch in the direction of the arrow (2) shown in the figure and remove the tab C.
5. Disconnect the power window main switch connector.

GLASS/WINDOWS/MIRRORS

6. Pull the edge of power window main switch cover in the direction of arrow (3) and detach tabs D.



ac5wzw0000124

7. Remove the power window main switch in the direction of arrow (4) shown in the figure.
8. Install in the reverse order of removal.

GLASS/WINDOWS/MIRRORS

POWER WINDOW MAIN SWITCH INSPECTION

id091200002100

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Inner garnish. (driver's side) (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)
   (2) Front door trim. (driver's side) (See 09-17-65 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
   (3) Power window main switch (See 09-12-52 POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION.)
3. Connect the power window main switch connector.
4. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
5. Measure the voltage at each terminal.
   - If the voltage is not as specified in the terminal voltage table, inspect the parts under Inspection item (s) and related wiring harnesses.
     — If the system does not work normally even though the inspection items or related wiring harnesses do not have any malfunction, replace the power window main switch.

POWER WINDOW SYSTEM INITIALIZATION PROCEDURE

id091200004100

Note

- If the following operations have been performed, initial setting is reset, and auto up/down operation are disabled. Therefore, performing initial setting is necessary.
  - — Negative battery cable is disconnected.
  - — Power window main switch connector is disconnected.
  - — Power window system power supply fuse is removed.

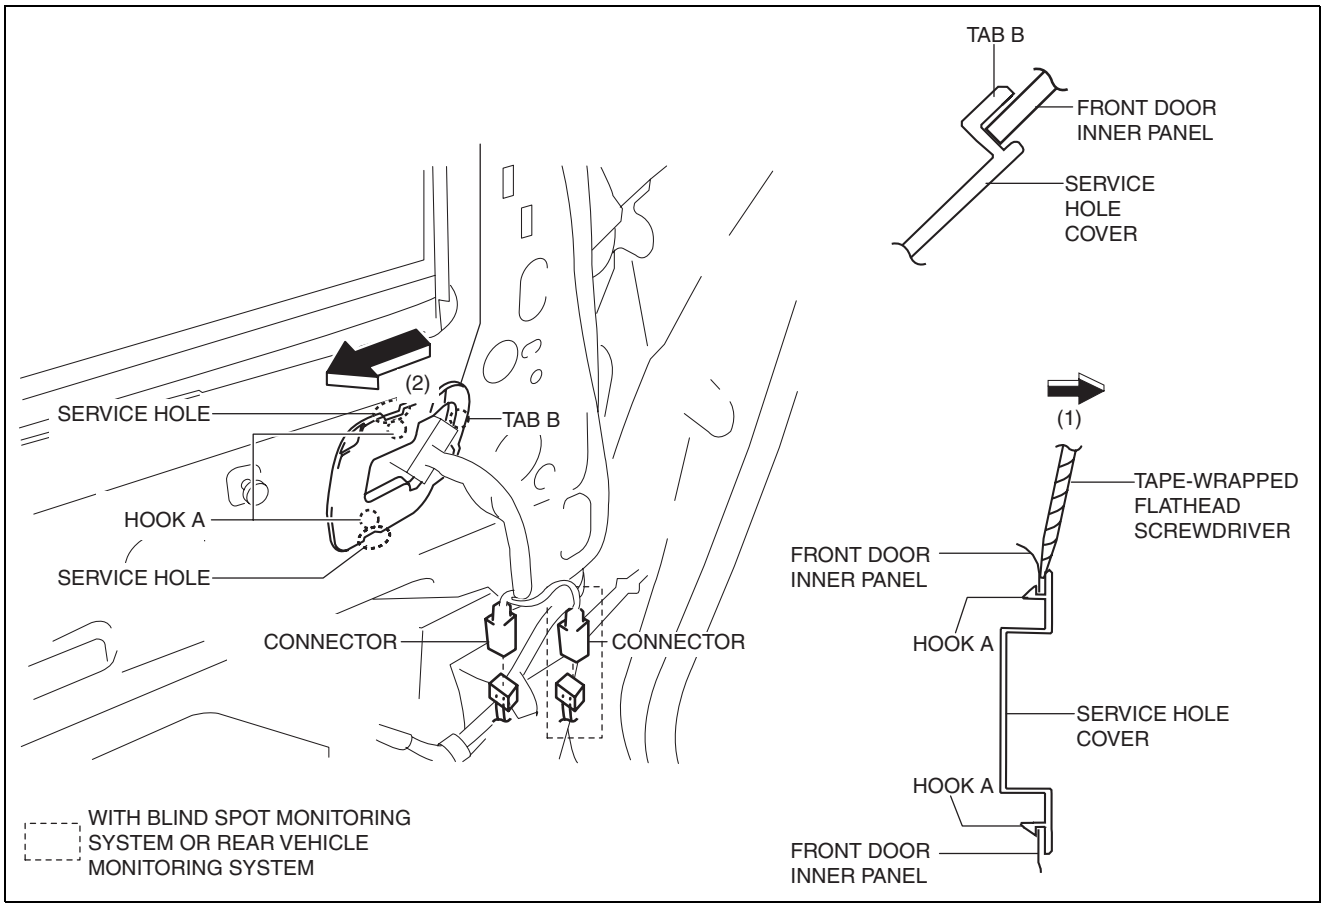
1. Switch the ignition ON (engine off).
2. Press the driver's seat switch to fully open the door glass.
3. Pull up the driver's seat switch to the manual-up position to fully close the door glass and keep holding the switch up at the position for **approx. 2 s**.

GLASS/WINDOWS/MIRRORS

POWER OUTER MIRROR REMOVAL/INSTALLATION

id091200002400

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the inner garnish. (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)
3. Remove the front door trim. (See 09-17-65 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
4. Insert a tape-wrapped flathead screwdriver into the service hole and remove hooks A in the direction of arrow (1).

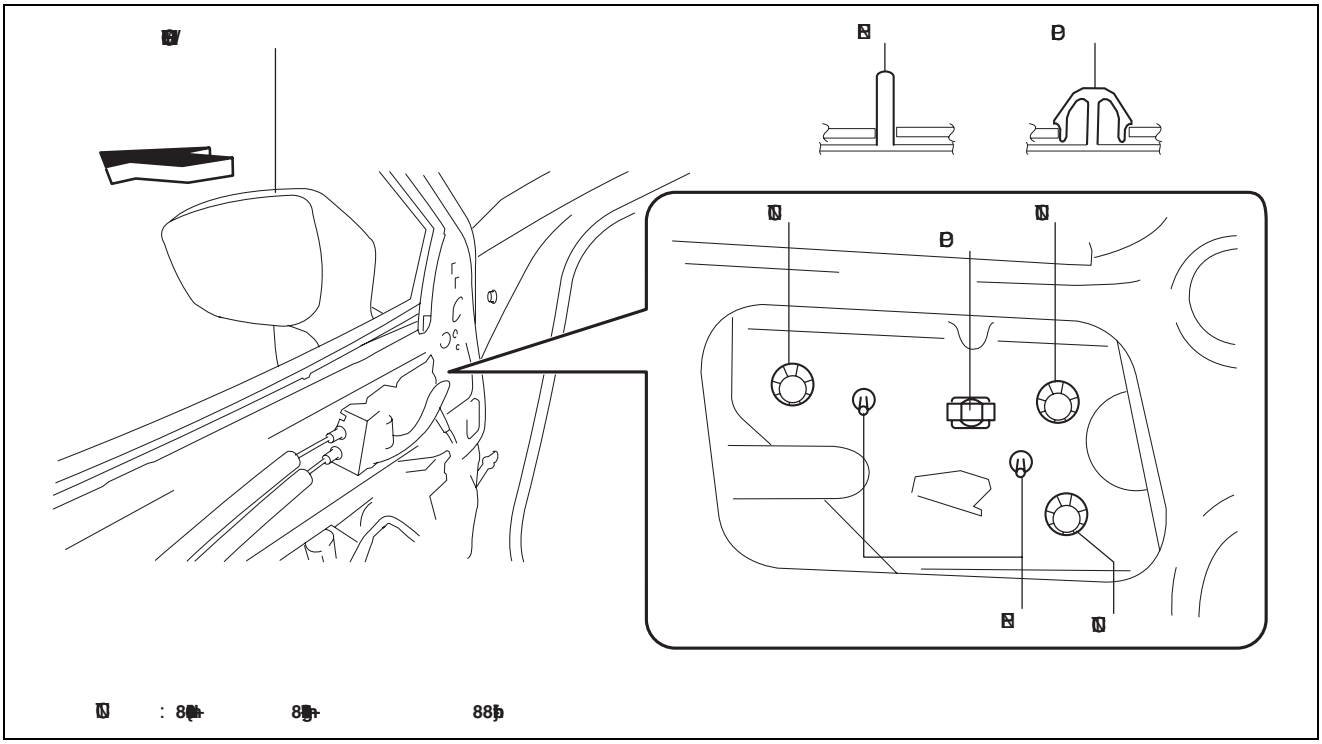


ac5wzw0000254

5. Slide the service hole cover in the direction of the arrow (2) shown in the figure and remove tabs B.
6. Disconnect the connector.

GLASS/WINDOWS/MIRRORS

7. Remove nuts C.



ac5wzw0000327

8. Pull the power outer mirror in the direction of the arrow while remove clips D, pin E.

Caution
- **If the clip D of the power outer mirror is detached, the power outer mirror may fall off and be damaged. When detaching clip D of the power outer mirror, hold the power outer mirror by hand during the servicing.**

GLASS/WINDOWS/MIRRORS

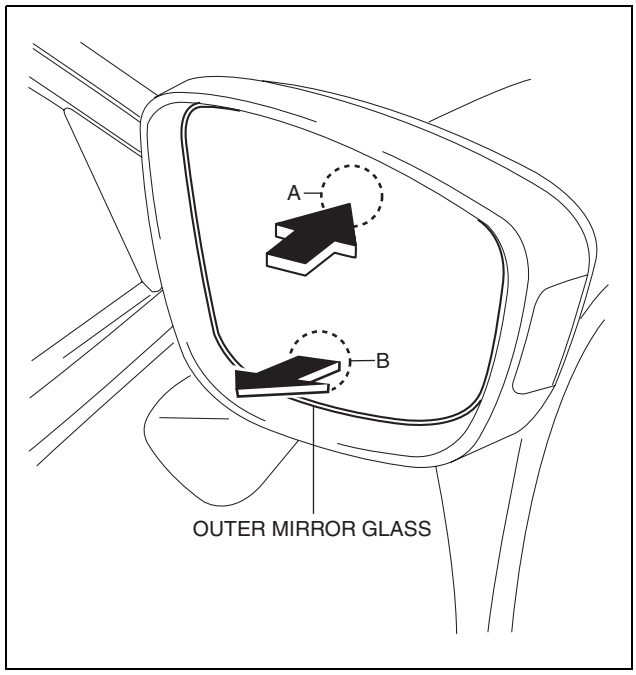
OUTER MIRROR GLASS REMOVAL

id091200002800

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Press area A of the outer mirror glass shown in the figure so that area B moves outward.
3. Put your hand on the lower part of the outer mirror glass and while supporting the hatch-marked area shown in the figure, remove pin C in the direction of the arrow (1).

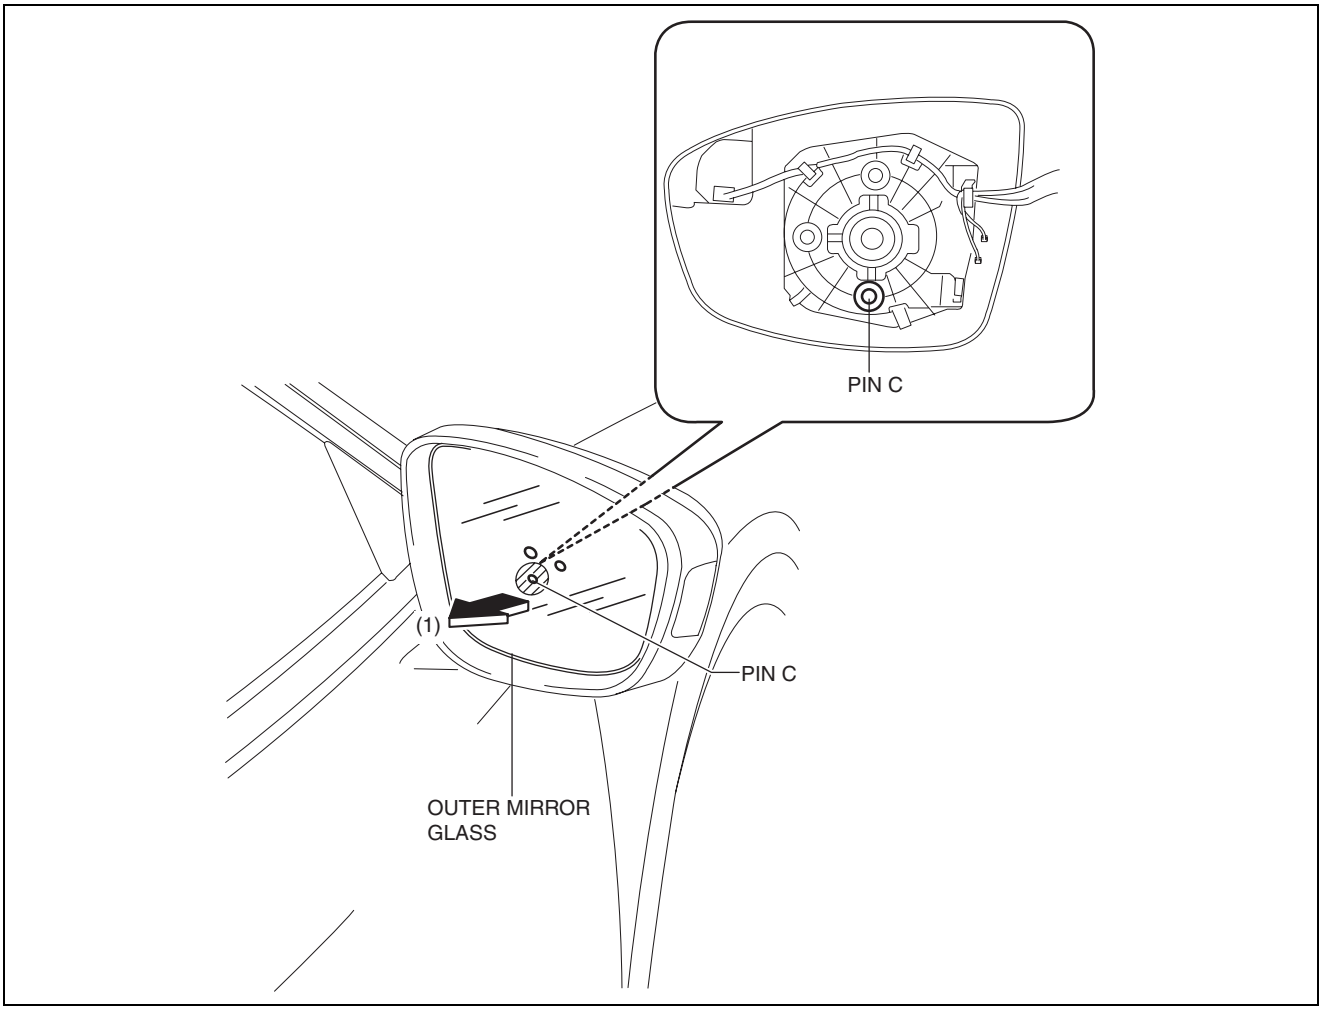
Caution

- **When removing the outer mirror glass, if excessive force is applied to the area other than cross-hatched area, the outer mirror glass could be damaged.**



ac5wzw0000327

GLASS/WINDOWS/MIRRORS

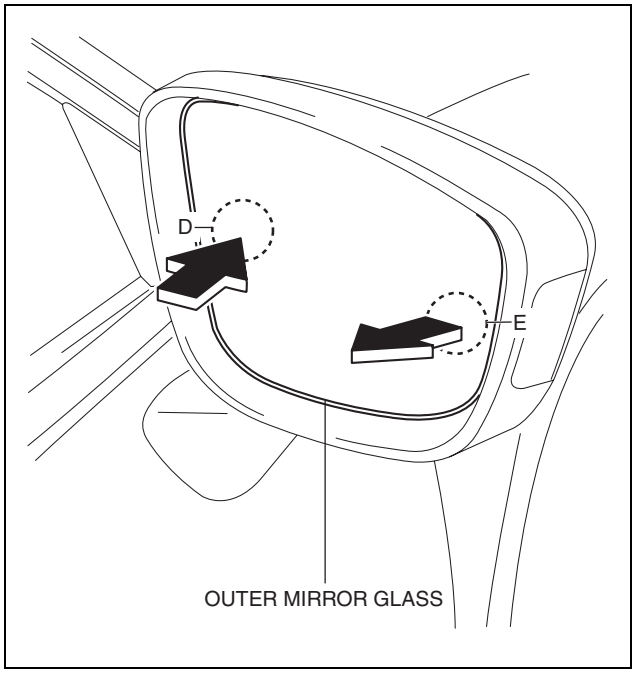


ac5wzw0000327

4. Press area D of the outer mirror glass shown in the figure so that area E moves outward.
5. Put your hand on the side part of the outer mirror glass and while supporting the hatch-marked area shown in the figure, remove pin F, pin G in the direction of the arrow (2).

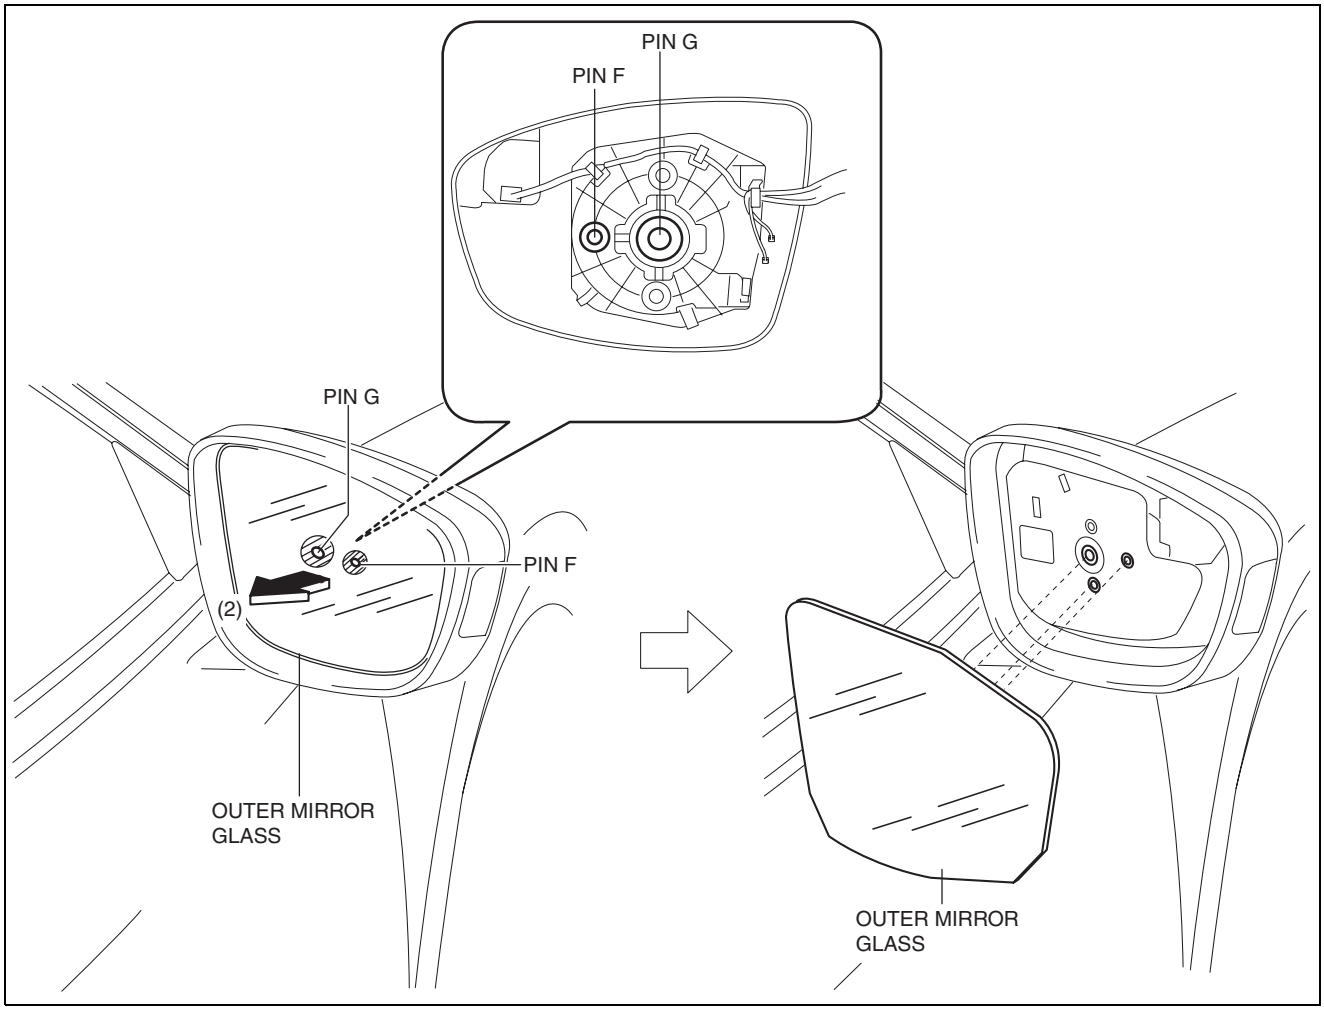
Caution

- **When removing the outer mirror glass, if excessive force is applied to the area other than cross-hatched area, the outer mirror glass could be damaged.**



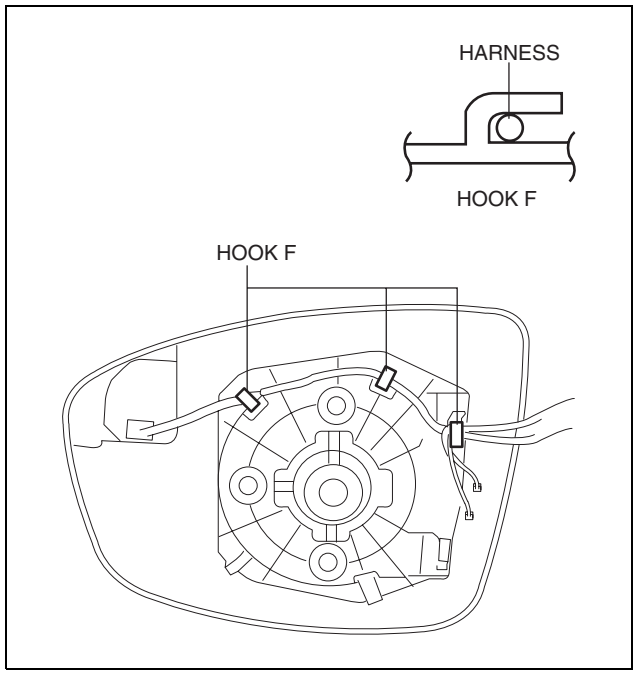
ac5uuw00002070

GLASS/WINDOWS/MIRRORS



ac5wzw0000327

6. Pull the outer mirror glass in the direction of the arrow (1) and remove it while detaching the pin E from the mirror glass holder.
7. Remove the harness from hooks F.



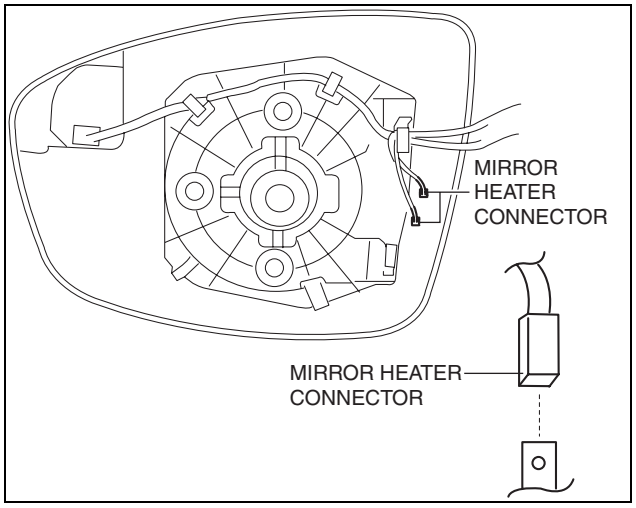
ac5wzw0000280

GLASS/WINDOWS/MIRRORS

8. Disconnect the mirror heater connectors. (with heated outer mirror)
9. Insert a tape-wrapped flathead screwdriver to the position shown in the figure, remove the RVM indicator light connector (with rear vehicle monitoring system) or BSM indicator light connector (with blind spot monitoring system).

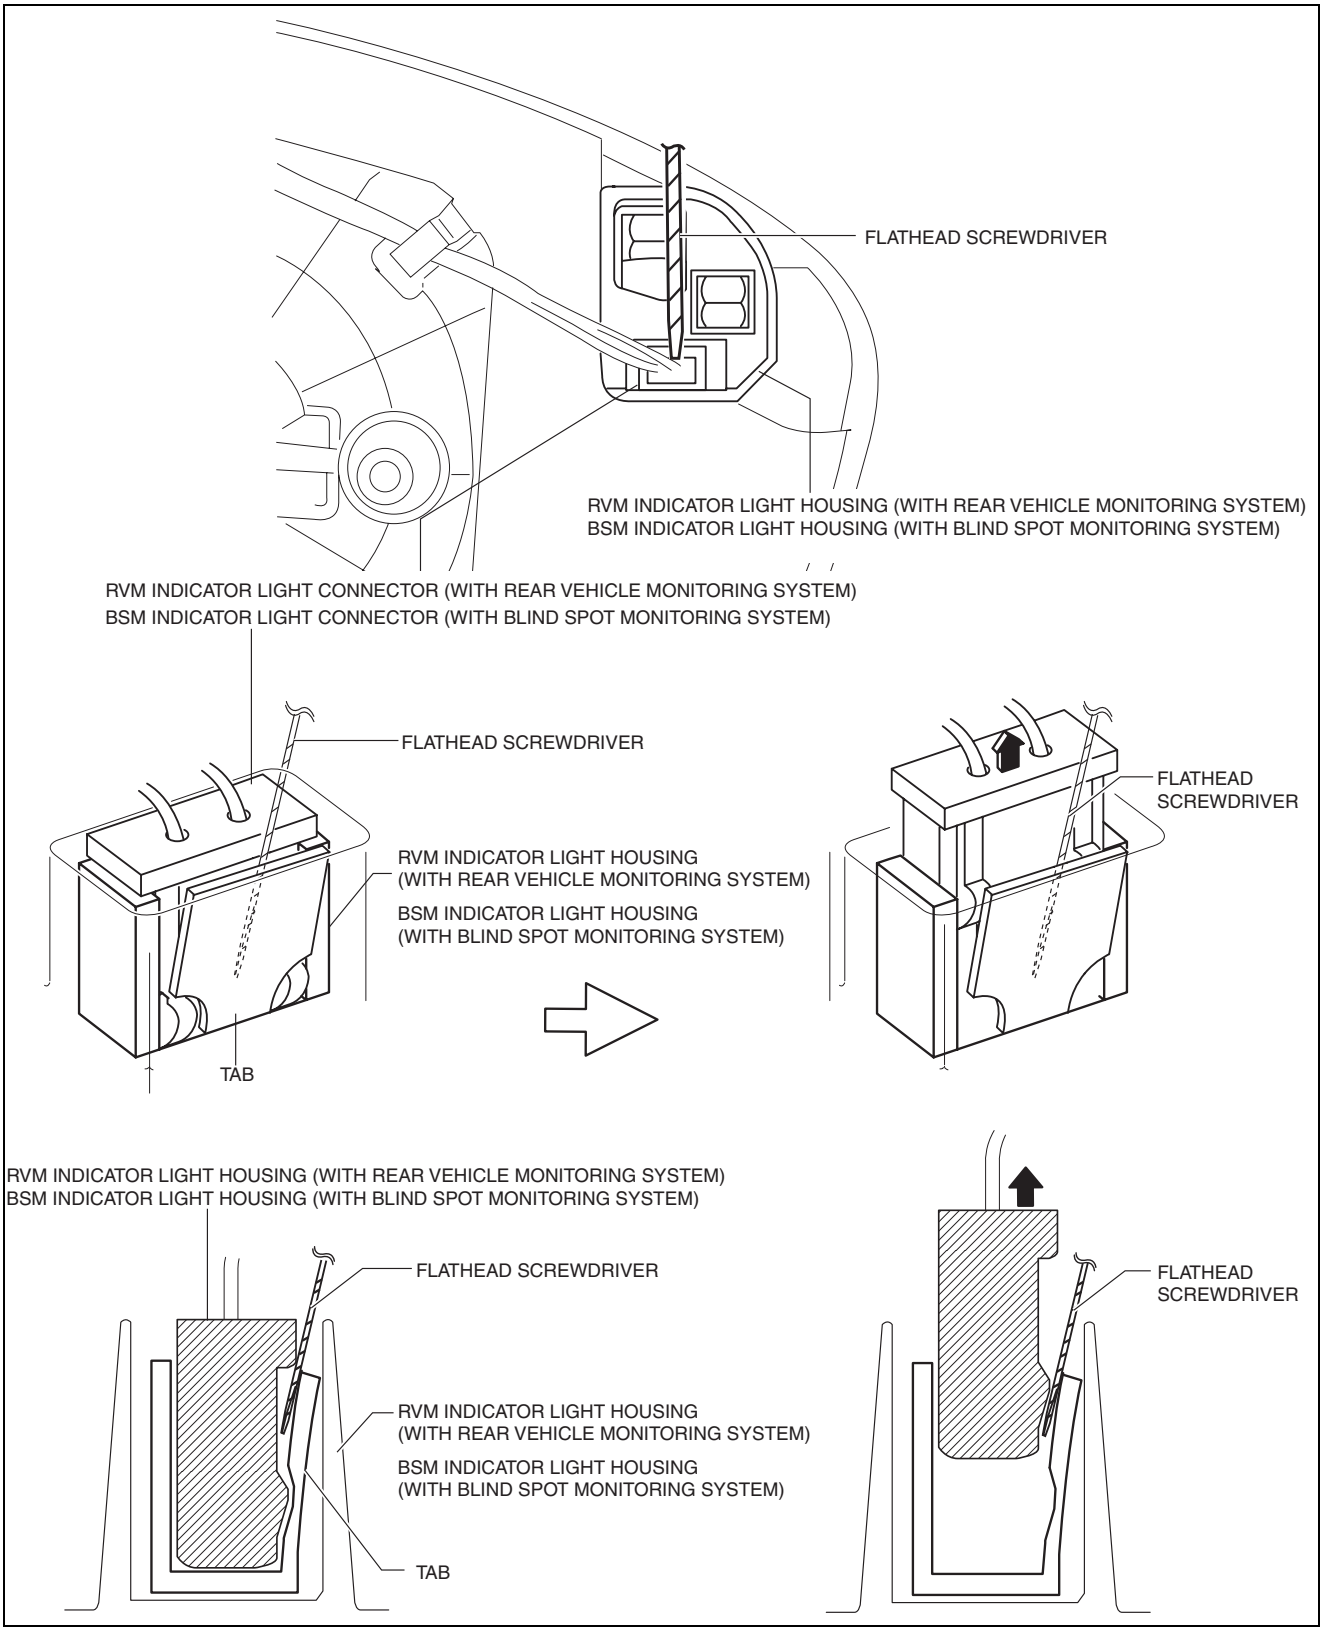
Caution

- **The connector can be easily deformed, therefore do not apply excessive force.**



ac5uuw00000995

GLASS/WINDOWS/MIRRORS



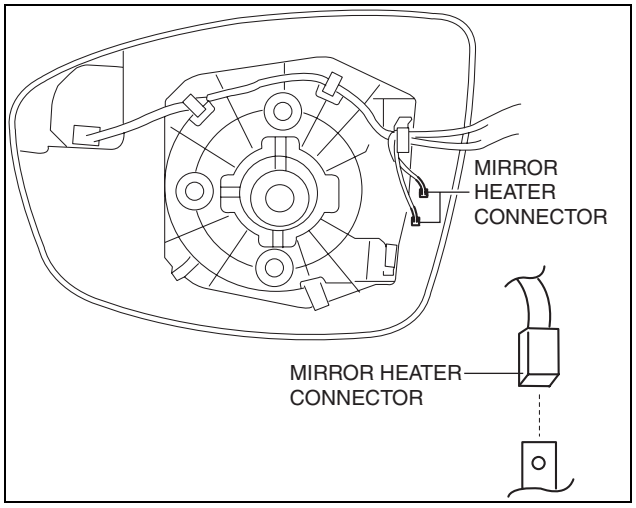
ac5wzw0000327

10. Remove the mirror glass holder and the outer mirror glass as a single unit.

GLASS/WINDOWS/MIRRORS

OUTER MIRROR GLASS INSTALLATION

id091200002900



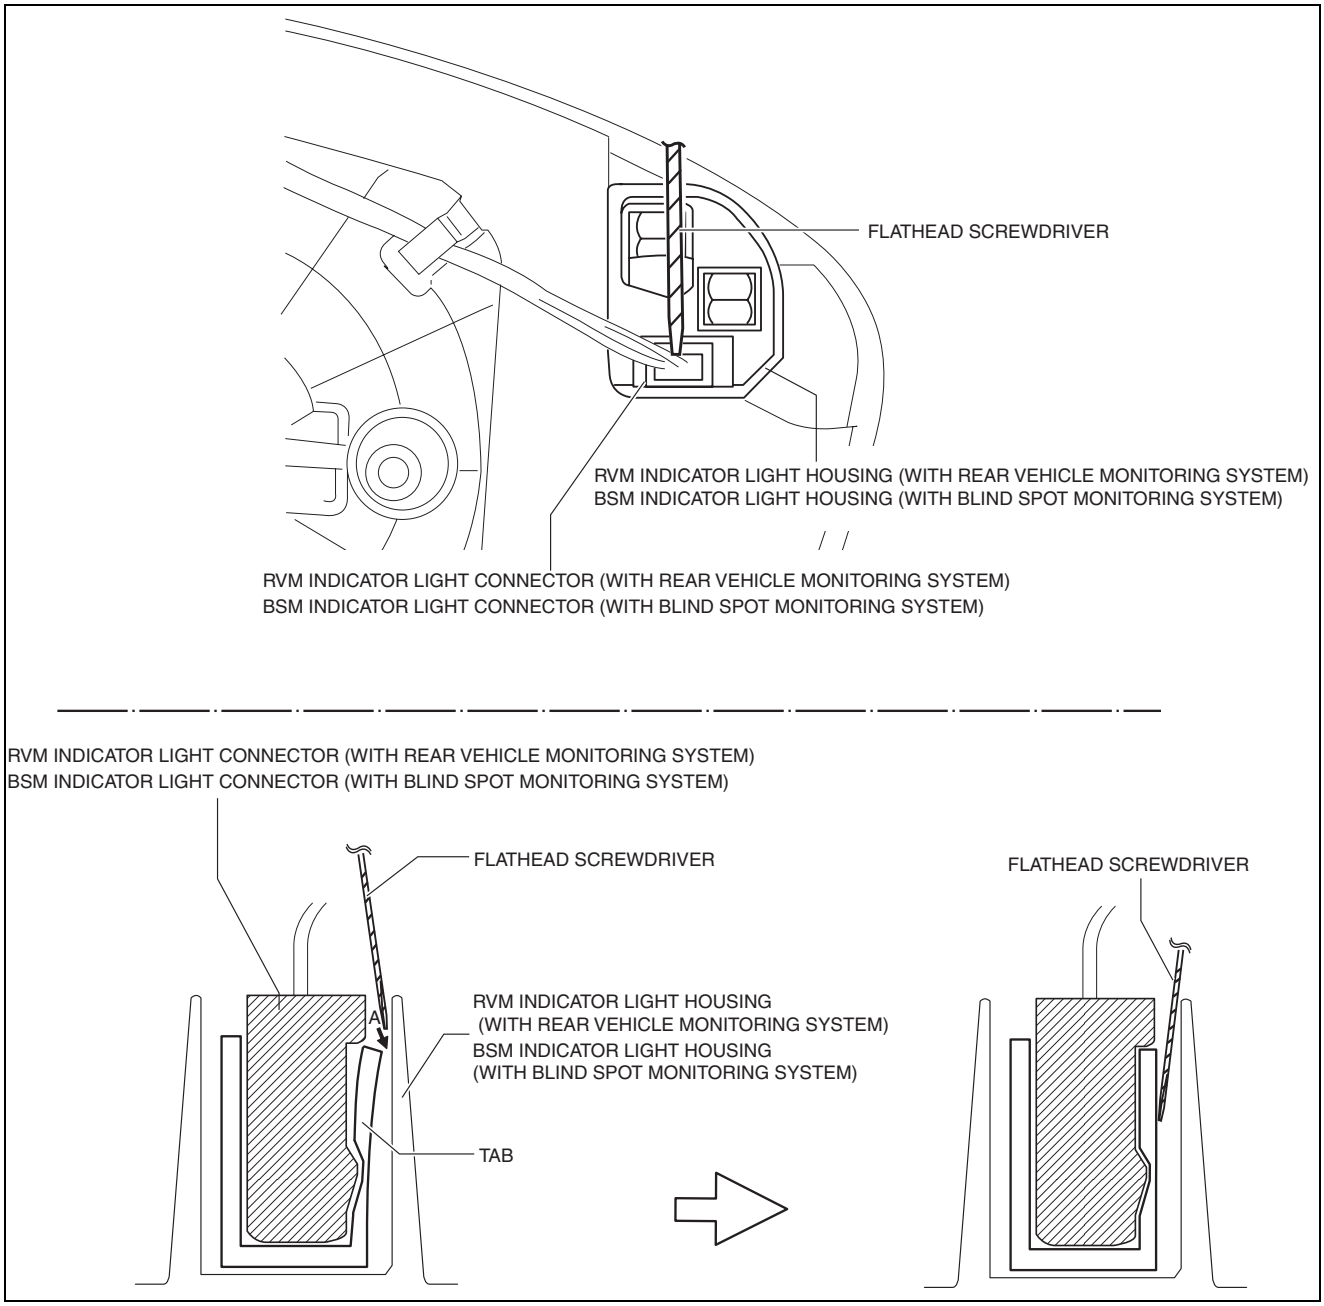
ac5uuw00000997

1. Connect the mirror heater connectors. (with heated outer mirror)
2. Connect the RVM indicator light connector (with blind spot monitoring system) or BSM indicator light connector (with blind spot monitoring system).

Note

- Lightly pull the RVM indicator light connector and verify that the RVM indicator light housing cannot be pulled off. If the connection is poor, insert a tape-wrapped flathead screwdriver into position A shown in the figure and engage the connector. (with rear vehicle monitoring system)
- Lightly pull the BSM indicator light connector and verify that the BSM indicator light housing cannot be pulled off. If the connection is poor, insert a tape-wrapped flathead screwdriver into position A shown in the figure and engage the connector. (with blind spot monitoring system)

GLASS/WINDOWS/MIRRORS



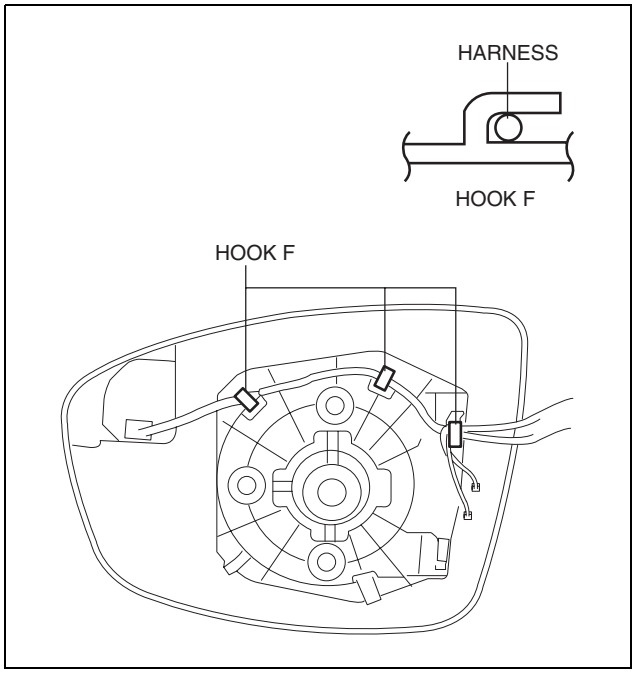
ac5wzw0000254

GLASS/WINDOWS/MIRRORS

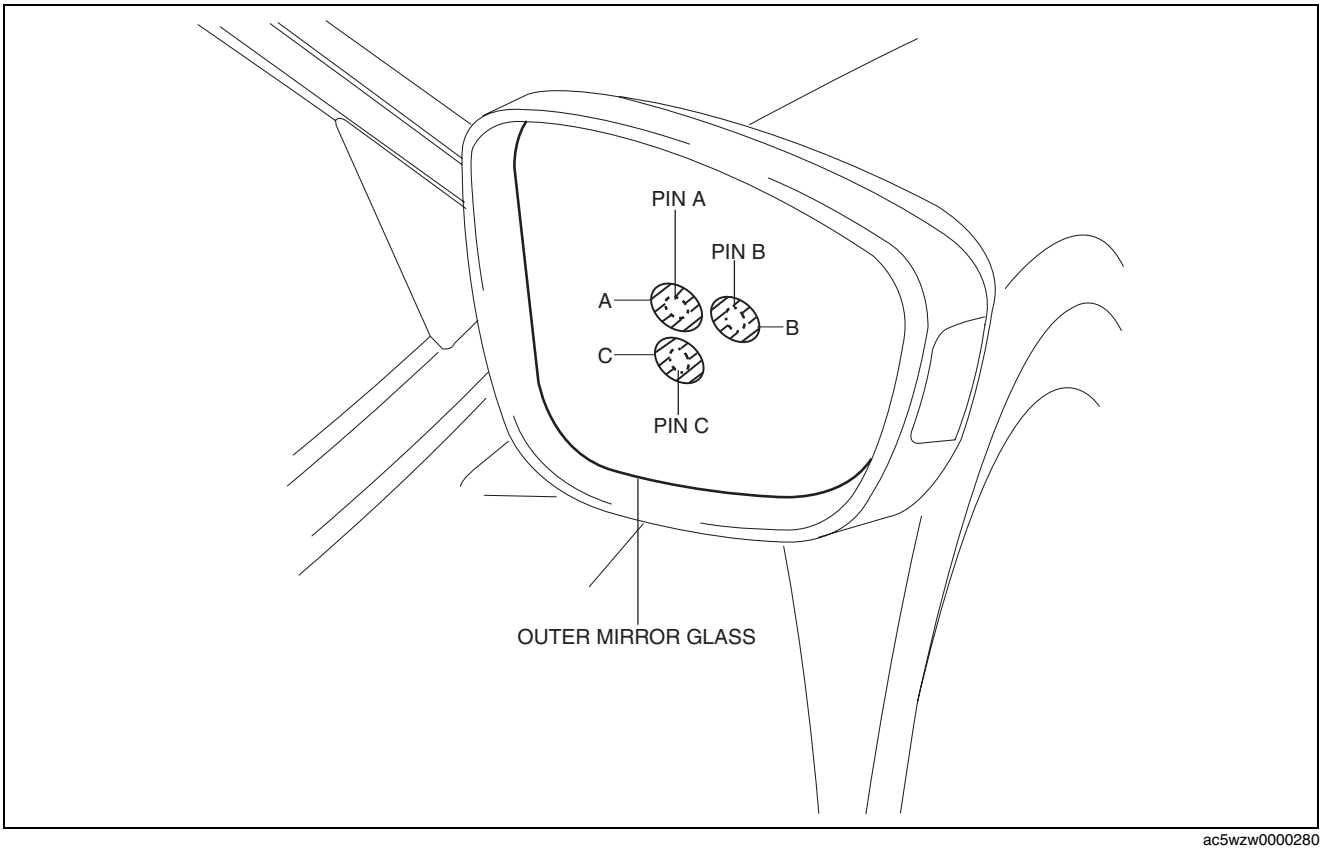
3. Install the harness from the hook.
4. Press part A on the outer mirror glass and install pin A.

Caution

- **When installing the outer mirror glass, if excessive force is applied to the area other than cross-hatched area, the outer mirror glass could be damaged.**



ac5wzw0000280



ac5wzw0000280

5. Press part B on the outer mirror glass and install pin B.
6. Press part C on the outer mirror glass and install pin C.
7. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

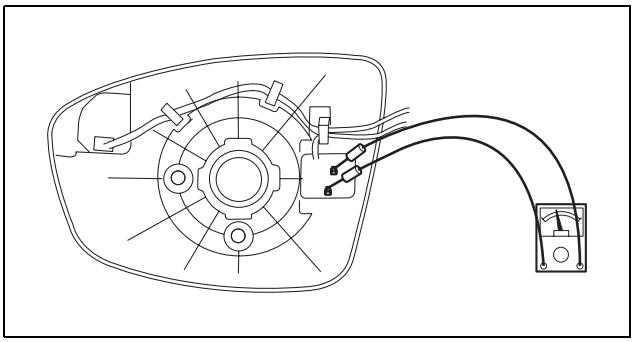
GLASS/WINDOWS/MIRRORS

OUTER MIRROR GLASS INSPECTION

id091200010400

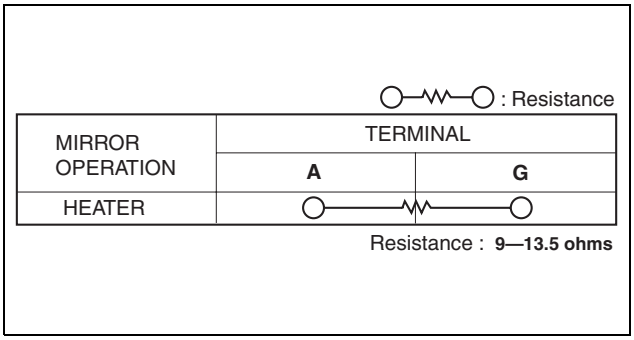
Heated Outer Mirror

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the outer mirror glass. (See 09-12-73 OUTER MIRROR GLASS REMOVAL.)(See 09-12-78 OUTER MIRROR GLASS INSTALLATION.)
3. Verify that the resistance and continuity between the heated outer mirror terminals is as indicated in the table.



ac5wzw0000298

- If not as indicated in the table, or if the resistance is not within the specification, replace the outer mirror glass.

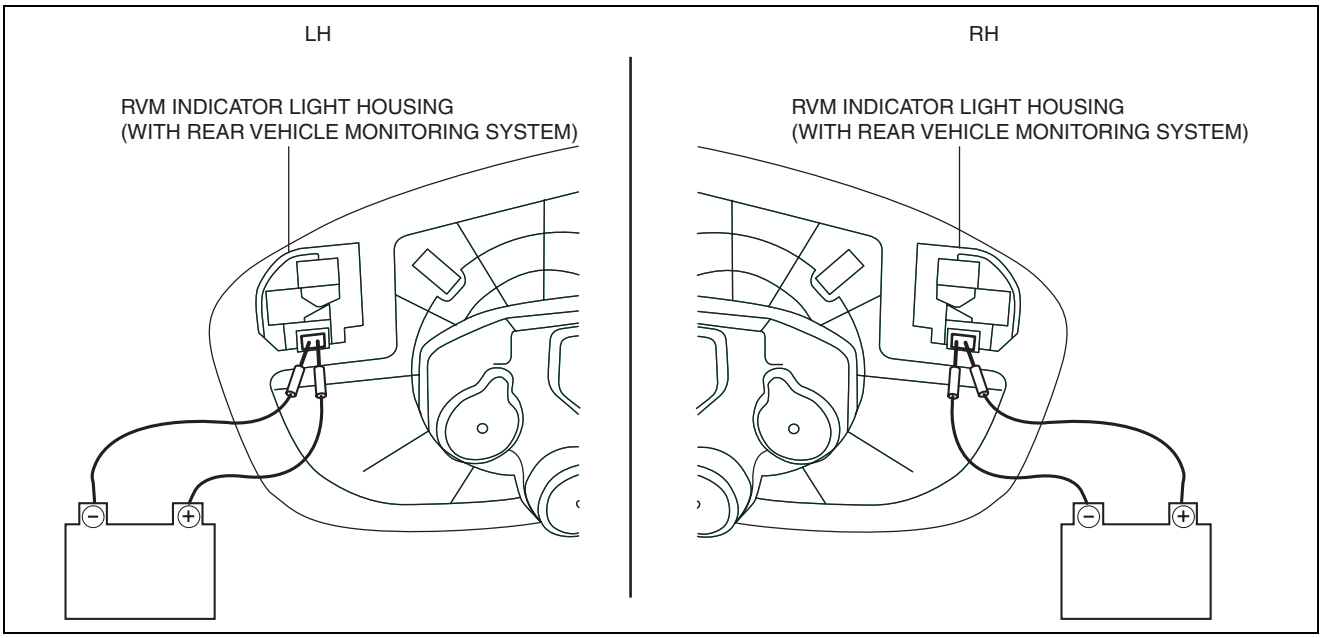


ac5uuw00001093

GLASS/WINDOWS/MIRRORS

RVM Indicator Light

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the outer mirror glass. (See 09-12-73 OUTER MIRROR GLASS REMOVAL.)(See 09-12-78 OUTER MIRROR GLASS INSTALLATION.)
3. Connect the battery voltage as shown in the figure.



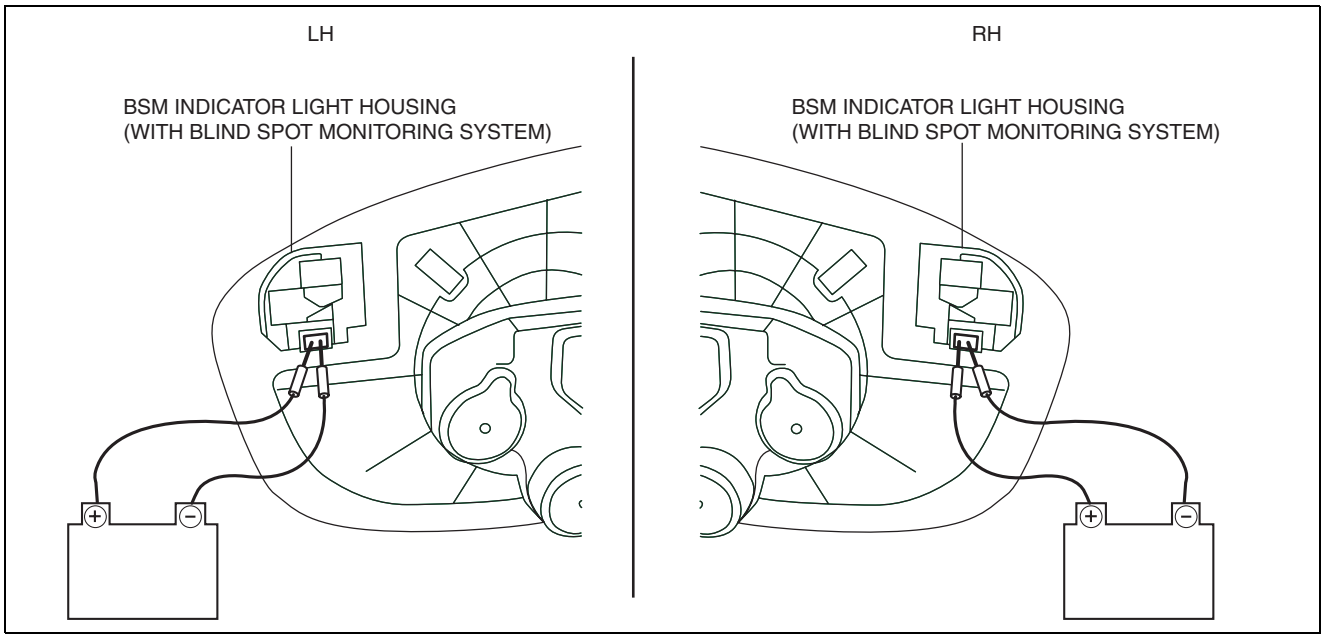
ac5wzw0000298

- If the RVM indicator light does illuminate, replace the power outer mirror.

GLASS/WINDOWS/MIRRORS

BSM Indicator Light

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the outer mirror glass. (See 09-12-73 OUTER MIRROR GLASS REMOVAL.) (See 09-12-78 OUTER MIRROR GLASS INSTALLATION.)
3. Connect the battery voltage as shown in the figure.



ac5wzw0000299

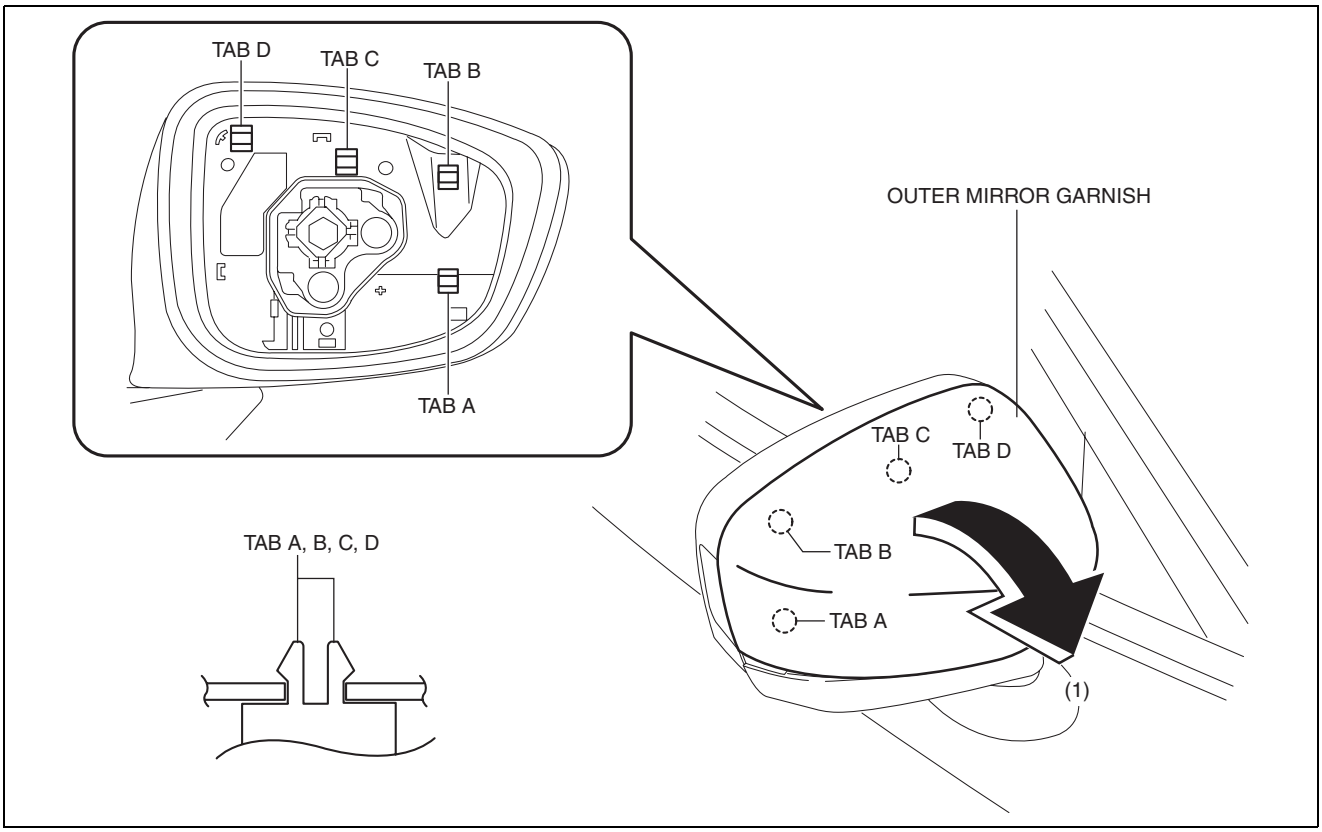
- If the BSM indicator light does illuminate, replace the power outer mirror.

GLASS/WINDOWS/MIRRORS

OUTER MIRROR GARNISH REMOVAL/INSTALLATION

id091200003000

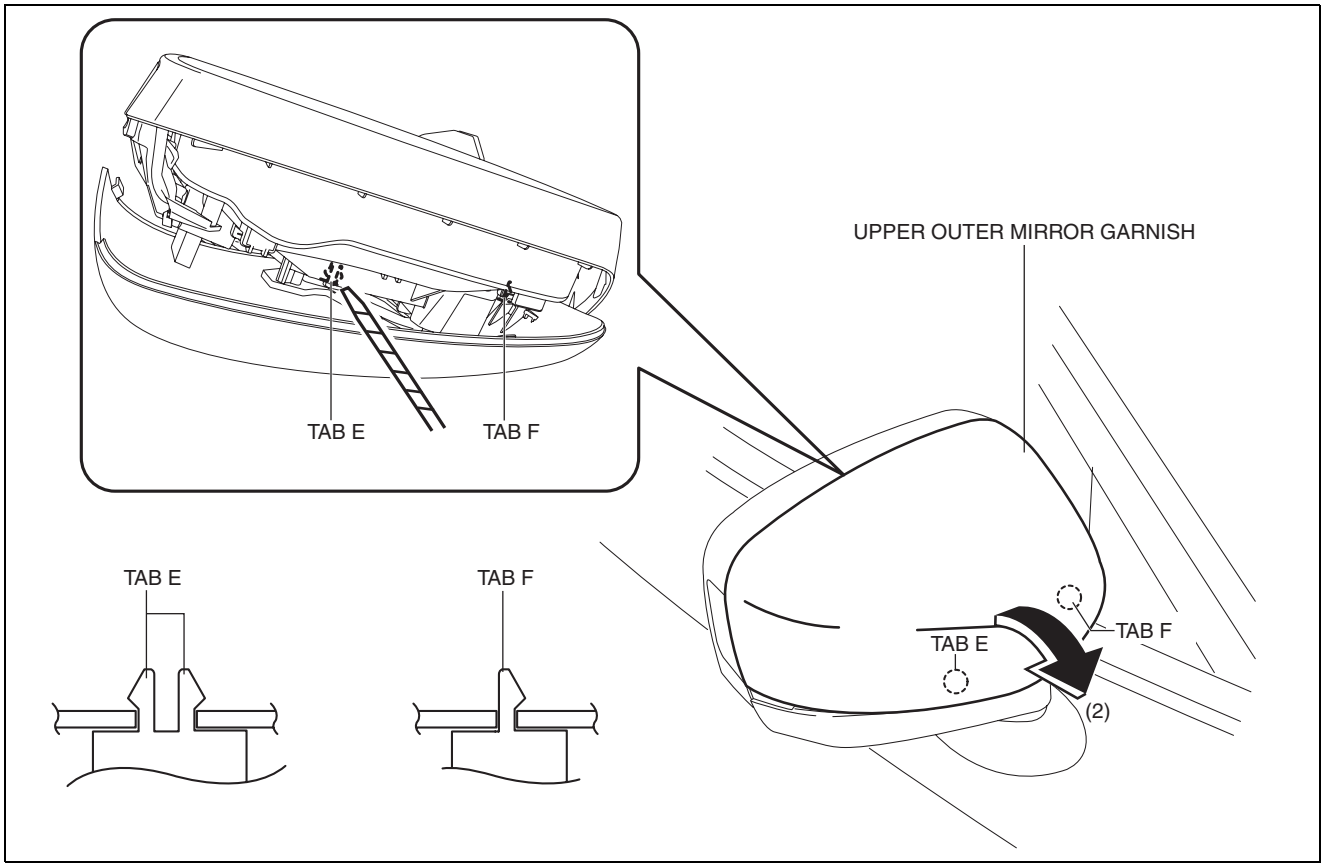
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the outer mirror glass. (See 09-12-73 OUTER MIRROR GLASS REMOVAL.) (See 09-12-78 OUTER MIRROR GLASS INSTALLATION.)
3. Insert a tape-wrapped flathead screwdriver into the upper outer mirror garnish and remove tab A, B, C, D in the direction of arrow (1).



ac5wzw0000291

GLASS/WINDOWS/MIRRORS

4. Insert a tape-wrapped flathead screwdriver into the upper outer mirror garnish and remove tab F, G in the direction of arrow (2).



ac5wzw0000291

5. Install in the reverse order of removal.

GLASS/WINDOWS/MIRRORS

POWER OUTER MIRROR SWITCH REMOVAL/INSTALLATION

id091200003500

Note
- The power outer mirror switch is integrated with the power window main switch.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the power window main switch. (See 09-12-52 POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION.)
3. Install in the reverse order of removal.

GLASS/WINDOWS/MIRRORS

POWER OUTER MIRROR SWITCH INSPECTION

id091200003400

With Retract/return Function

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the power outer mirror switch. (See 09-12-86 POWER OUTER MIRROR SWITCH REMOVAL/INSTALLATION.)
3. Verify that the continuity between the power outer mirror switch terminals is as indicated in the table.
   - If not as indicated in the table, replace the power outer mirror switch. (See 09-12-86 POWER OUTER MIRROR SWITCH REMOVAL/INSTALLATION.)

GLASS/WINDOWS/MIRRORS

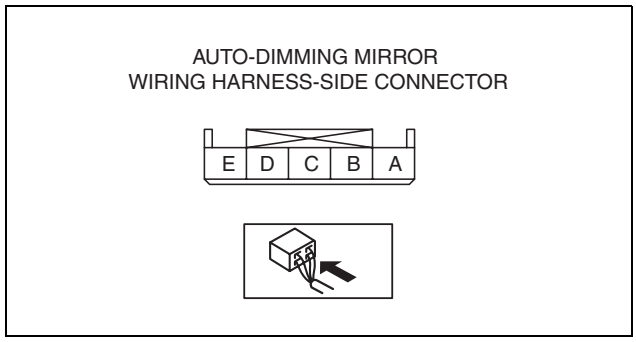
AUTO-DIMMING MIRROR INSPECTION

id091200004800

1. Remove the cover. (See 09-18-94 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
2. Measure the voltage at each terminal.
   - If the voltage is not as specified in the Terminal Voltage Table (Reference), inspect the parts under "Inspection item (s)" and related wiring harnesses.
     — If the system does not work properly even though the inspection items or related wiring harnesses do not have any malfunction, replace the auto-dimming mirror.

Terminal Voltage Table (Reference)



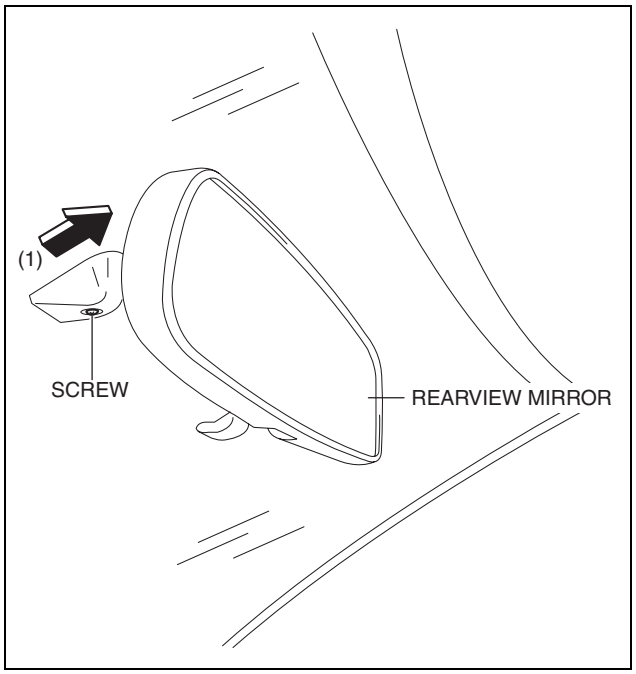
ac5wzw0000135

Terminal	Signal name	Connected to	Measured condition	Voltage (V)	Inspection item(s)
A	—	—	—	—	—
B	—	—	—	—	—
C	R position signal	Rear body control module (RBCM)	R position	B+	• Rear body control module (RBCM) • Related wiring harnesses
			Other than R position	1.0 or less	
D	GND	Body ground	Under any condition	1.0 or less	• Related wiring harnesses
E	Power supply (IG1)	• Ignition switch • C/U IG1 15A fuse	Switch the ignition ON (engine on or off)	B+	• Ignition switch • C/U IG1 15A fuse • Related wiring harnesses
			Switch the ignition OFF (LOCK)	1.0 or less	

REARVIEW MIRROR REMOVAL/INSTALLATION

id091200009200

1. Remove the screw.
2. Pull the rearview mirror in the direction of the arrow (1) shown in the figure
3. Install in the reverse order of removal.



ac5wzw0000229

GLASS/WINDOWS/MIRRORS

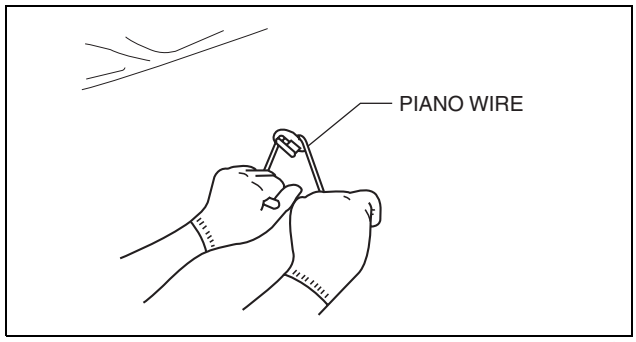
MIRROR BASE REMOVAL

id091200005300

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Rearview mirror (without auto-dimming mirror) (See 09-12-98 REARVIEW MIRROR REMOVAL/INSTALLATION.)
   (2) Cover A (with forward sensing camera) (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
   (3) Cover B (with forward sensing camera) (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
   (4) Auto-dimming mirror (with auto-dimming mirror) (See 09-12-94 AUTO-DIMMING MIRROR REMOVAL/INSTALLATION.)
3. Wind each end of a wire around a bar.

   Warning
   - **Using the piano wire with bare hands can cause injury. Always wear gloves when using the piano wire.**

   Note
   - Use a long sawing action to spread the work over the whole length of the piano wire to prevent it from breaking.



ac5wzw0000135

4. Fix one end of the piano wire, and while pulling the other end, cut the sealant to remove the base.

MIRROR BASE INSTALLATION

id091200005400

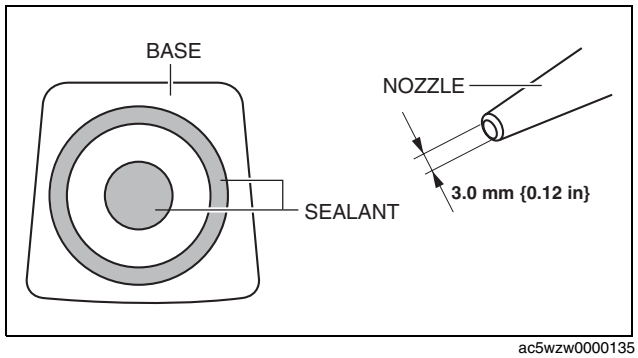
1. Cut away all of the original sealant using a razor.

   Warning
   - **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**

2. Clean and degrease the ceramic coating on the glass and the base.

   Caution
   - **Keep the area free of dirt and grease, and do not touch the surface. Otherwise, the primer may not properly bond to the surface of the glass.**

3. Apply primer to the bonding area of the glass and the base.
4. Use only glass primer on the glass, and body primer on the base. Allow the primer to dry for **approx. 30 min.**
5. Apply **3.0 mm {0.12 in}** layer of sealant to the base.

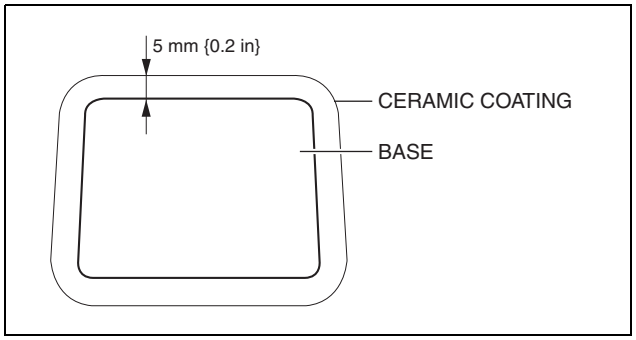


ac5wzw0000135

GLASS/WINDOWS/MIRRORS

6. Center the base in the ceramic coating and press it onto the glass.
7. Use isopropyl alcohol to remove any excess repair sealant.

Hardening time of sealant



ac5wzw0000135

Temperature	Surface hardening time	Time required until car can be put into service
5 °C {41 °F}	Approx. 1.5 h	Approx. 12 h
20 °C {68 °F}	Approx. 1 h	Approx. 4 h
35 °C {95 °F}	Approx. 10 min	Approx. 2 h

8. Install the rearview mirror. (without auto-dimming mirror) (See 09-12-98 REARVIEW MIRROR REMOVAL/INSTALLATION.)
9. Install the auto-dimming mirror. (with auto-dimming mirror) (See 09-12-94 AUTO-DIMMING MIRROR REMOVAL/INSTALLATION.)

FRONT SEAT REMOVAL/INSTALLATION

id091300800200

Warning

- **Handling a side air bag improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings/cautions in the Workshop Manual before handling the front seat (side air bag integrated). (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**
- **If the sliding mechanisms on both sides are not locked after assembling the front seat, the front seat will operate accidentally while the vehicle is driven, which could result in serious injury. After assembling the front seat, shake it up and down and verify that the sliding mechanism on the both sides are locked.**

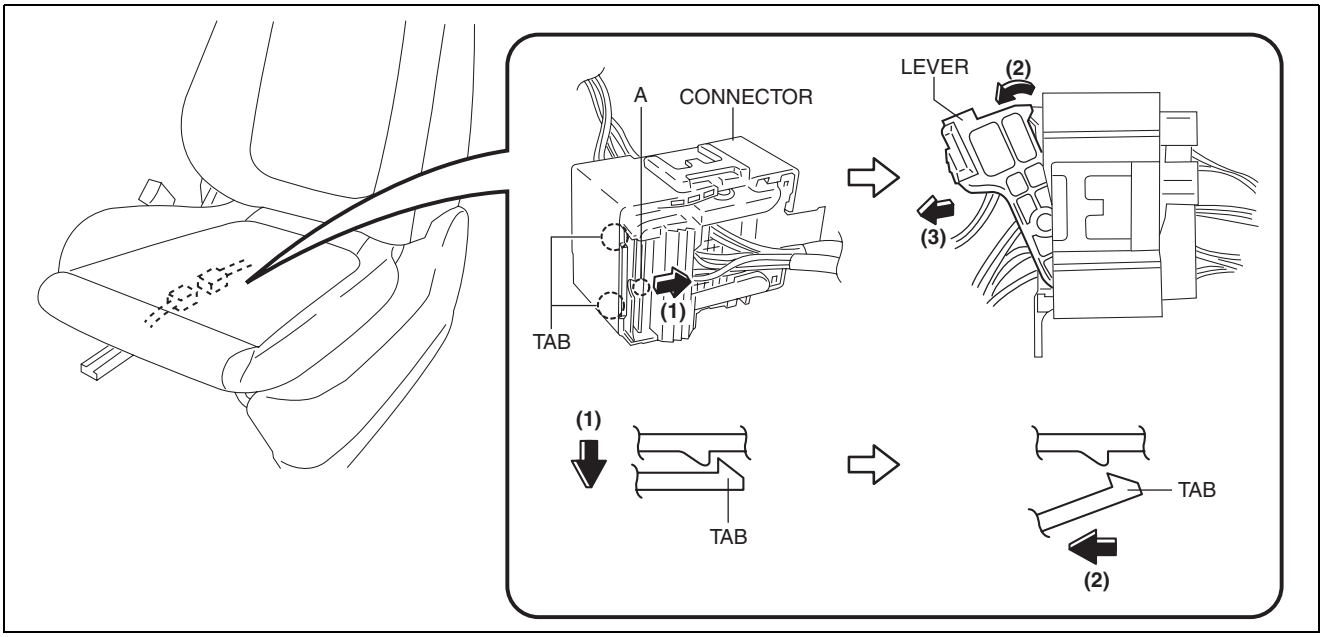
Caution

- **If the slide bar is operated after the front seat is removed, the left/right slide positions will deviate and the adjuster unit could be damaged after the front seat is installed. After removing a front seat, do not operate the slider lever.**
- **Verify that there are no malfunctions in the forward/back slide of the seat and in the adjuster unit after installing a front seat.**
- **When performing the procedure with a front seat removed from the vehicle, perform the procedure on a clean cloth so as not to damage or soil the seat.**

SEATS

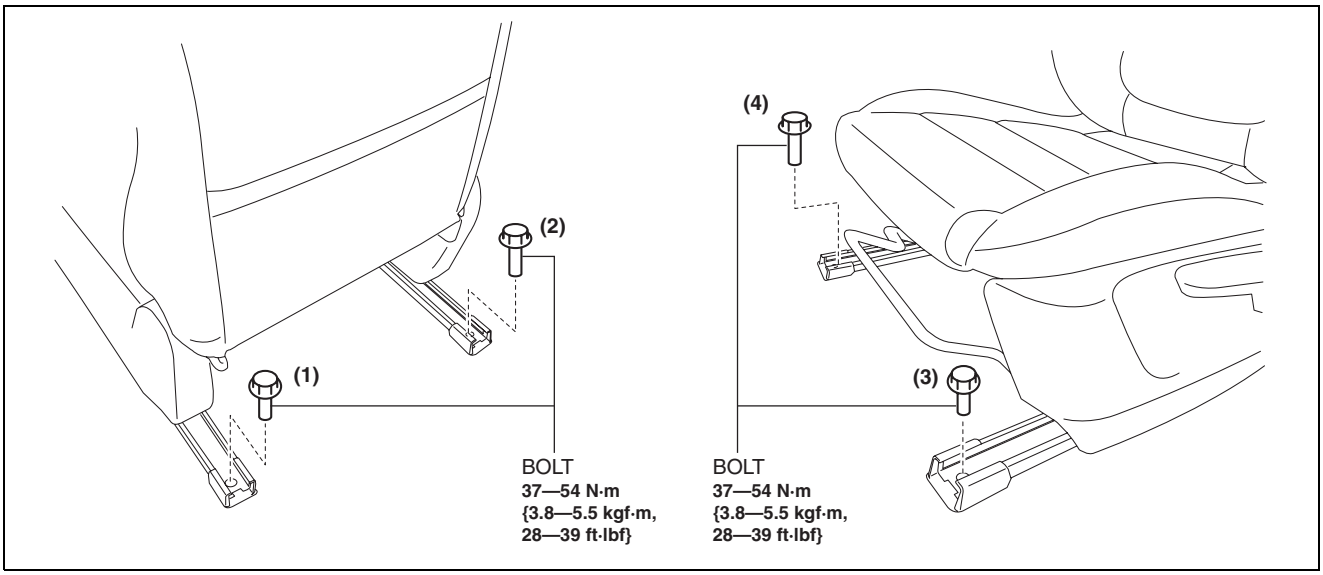
Note
- When removing the front seat from the vehicle or putting it back in, it can be performed smoothly by removing the headrest.

1. Switch the ignition off (LOCK).
2. Disconnect the negative battery cable and wait for **1 min**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Press part A in the direction of the arrow (1) shown in the figure and disengage tabs, move the lever in the direction of the arrow (2) and disconnect the connector in the direction of the arrow (3).



ac5wzw0000319

4. Remove the bolts in the order of (1), (2), (3), (4) shown in the figure, then take the front seat out from the opened front door.



ac5wzw0000310

5. Install in the reverse order of removal.

SEATS

FRONT SEAT BACK COMPONENT REMOVAL/INSTALLATION

id091300911200

Warning

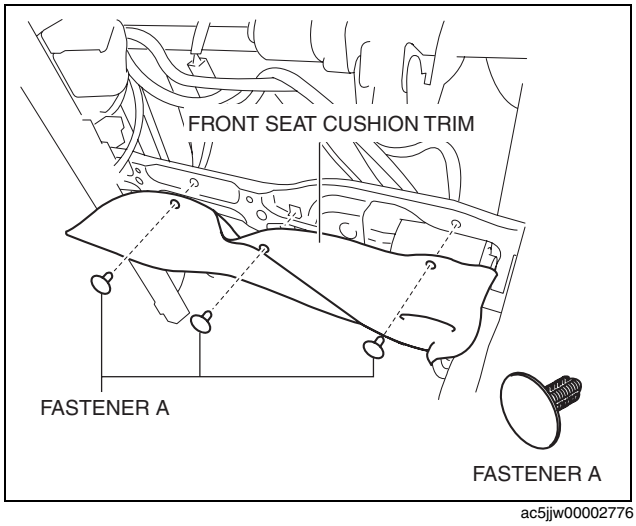
- **Handling a side air bag improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings/cautions in the Workshop Manual before handling the front seat (side air bag integrated). (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**
- **If the sliding mechanisms on both sides are not locked after assembling the front seat, the front seat will operate accidentally while the vehicle is driven, which could result in serious injury. After assembling the front seat, shake it up and down and verify that the sliding mechanism on the both sides are locked.**

Caution

- **If the slide bar is operated after the front seat is removed, the left/right slide positions will deviate and the adjuster unit could be damaged after the front seat is installed. After removing a front seat, do not operate the slider lever.**
- **Verify that there are no malfunctions in the forward/back slide of the seat and in the adjuster unit after installing a front seat.**
- **When performing the procedure with a front seat removed from the vehicle, perform the procedure on a clean cloth so as not to damage or soil the seat.**

Driver-side (with power seat system)

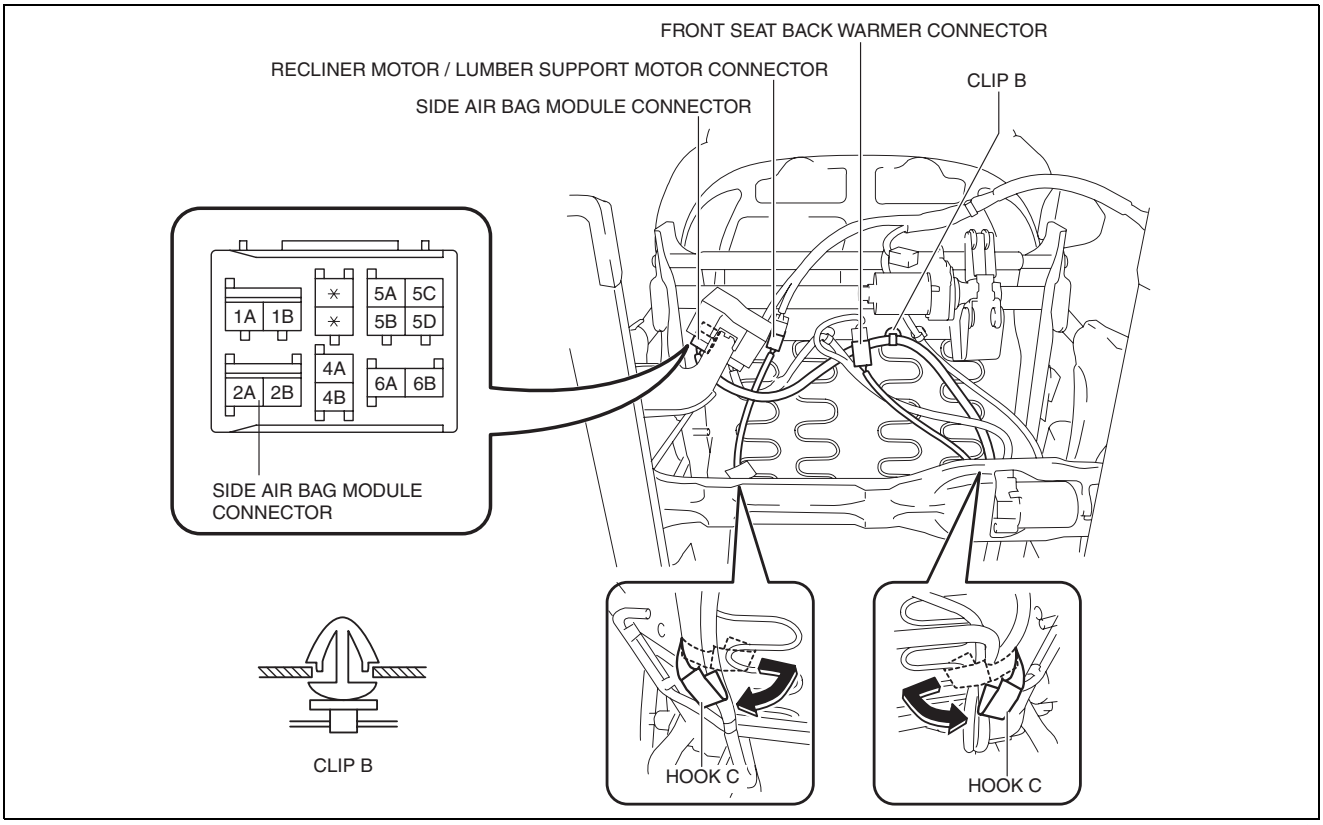
1. Switch the ignition off (LOCK).
2. Disconnect the negative battery cable and wait for **1 min**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the front seat. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.)
4. Remove the front seat side cover. (See 09-13-41 FRONT SEAT SIDE COVER REMOVAL/INSTALLATION.)
5. Remove fasteners A and set the front seat cushion trim aside.



ac5jjw00002776

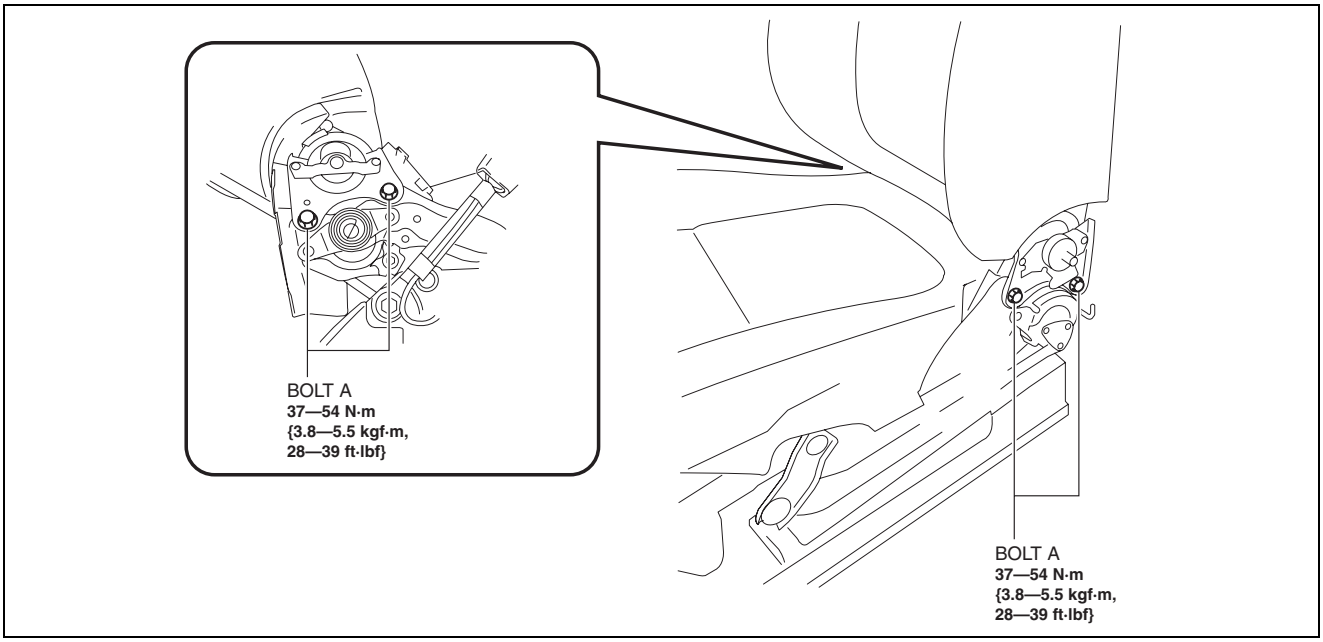
SEATS

6. Disconnect the side air bag module connector.



ac5wzw0000315

7. Disengage clip B.
8. Disconnect the front seat back warmer connector.
9. Disconnect the recliner motor/lumber support motor connectors.
10. Set hooks C aside in the direction of the arrow (1) shown in the figure.
11. Remove the bolts A, then remove the front seat back component.



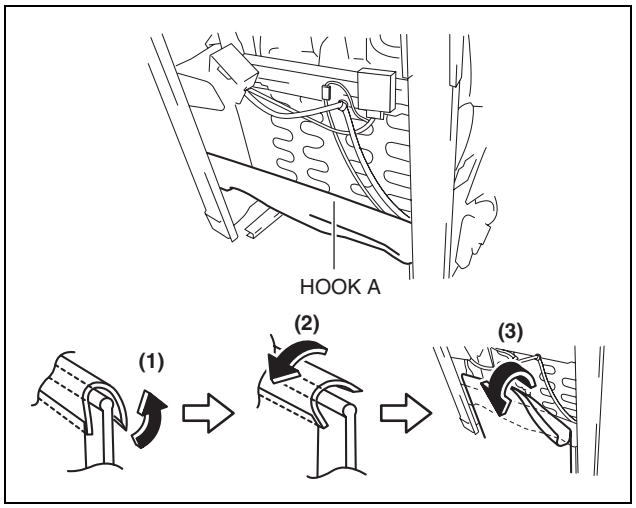
ac5jjw00002744

12. Install in the reverse order of removal.

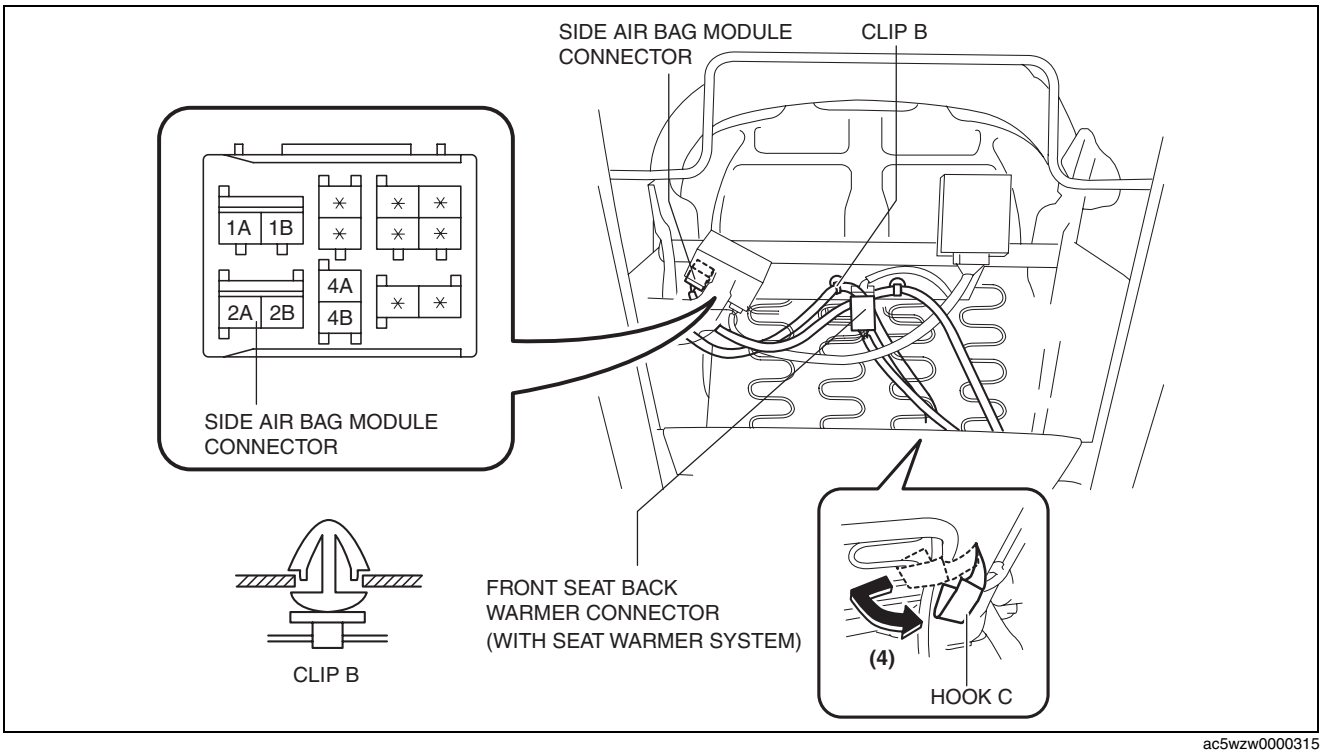
SEATS

Driver-side (without power seat system)

1. Switch the ignition off (LOCK).
2. Disconnect the negative battery cable and wait for **1 min**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the front seat. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.)
4. Remove the front seat side cover. (See 09-13-41 FRONT SEAT SIDE COVER REMOVAL/INSTALLATION.)
5. Slide hook A in the order of arrows (1), (2), (3) shown in the figure and set the front seat cushion trim aside.
6. Disconnect the side air bag module connector.



ac5wzw0000315

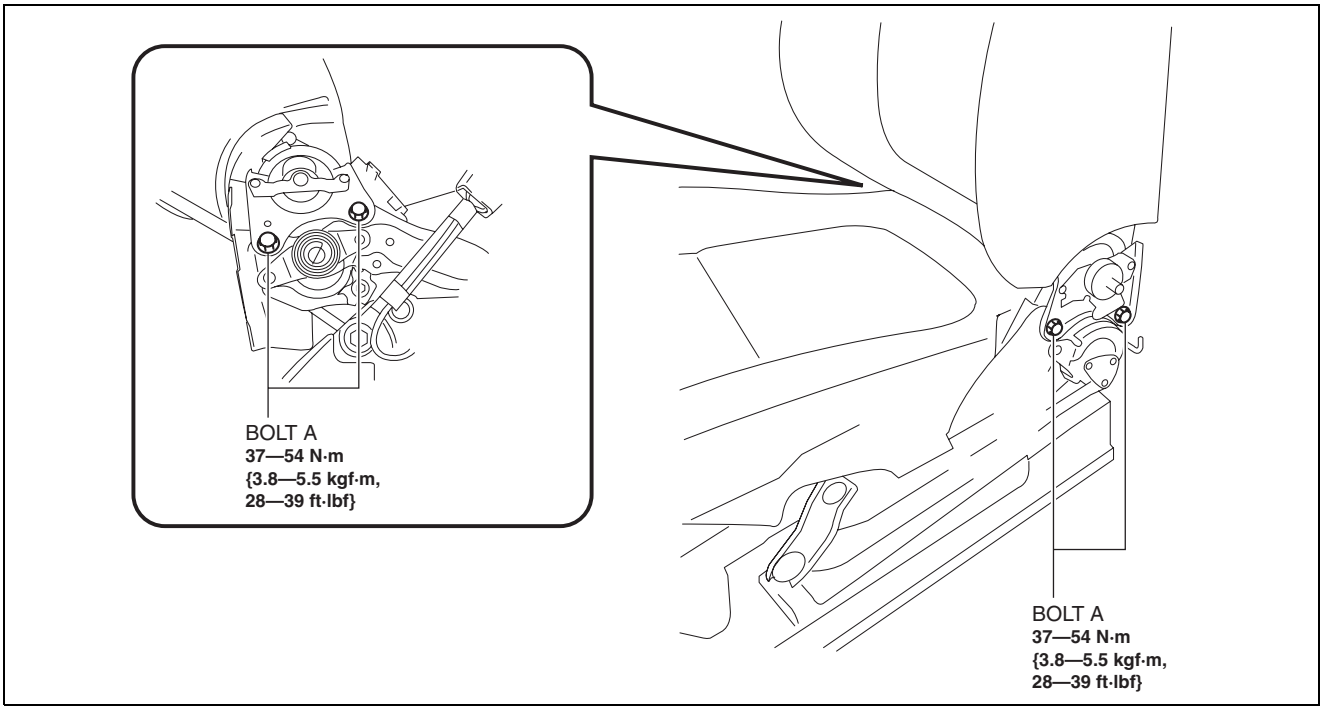


ac5wzw0000315

7. Disengage clip B.
8. Disconnect the front seat back warmer connector. (with seat warmer system)
9. Set hook C aside in the direction of the arrow (4) shown in the figure.

SEATS

10. Remove the bolts A, then remove the front seat back component.



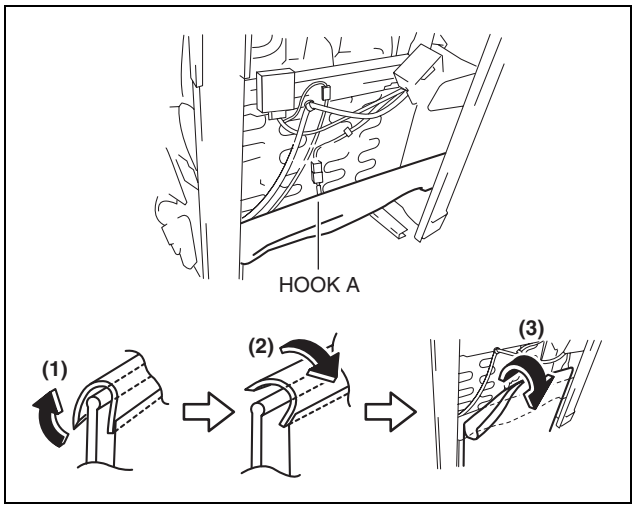
ac5jjw00002744

11. Install in the reverse order of removal.

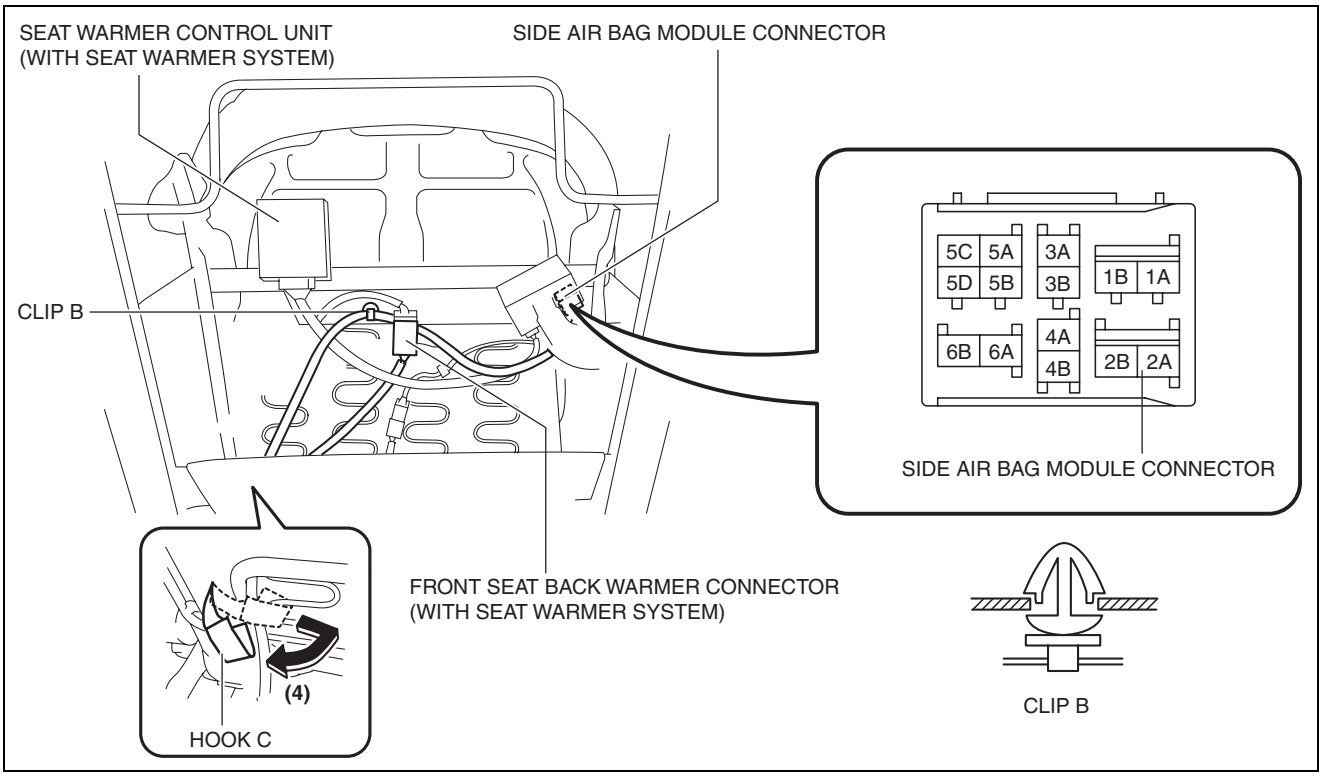
SEATS

Passenger-side

1. Switch the ignition off (LOCK).
2. Disconnect the negative battery cable and wait for **1 min**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the front seat. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.)
4. Remove the front seat side cover. (See 09-13-41 FRONT SEAT SIDE COVER REMOVAL/INSTALLATION.)
5. Slide hook A in the order of arrows (1), (2), (3) shown in the figure and set the front seat cushion trim aside.
6. Disconnect the side air bag module connector.



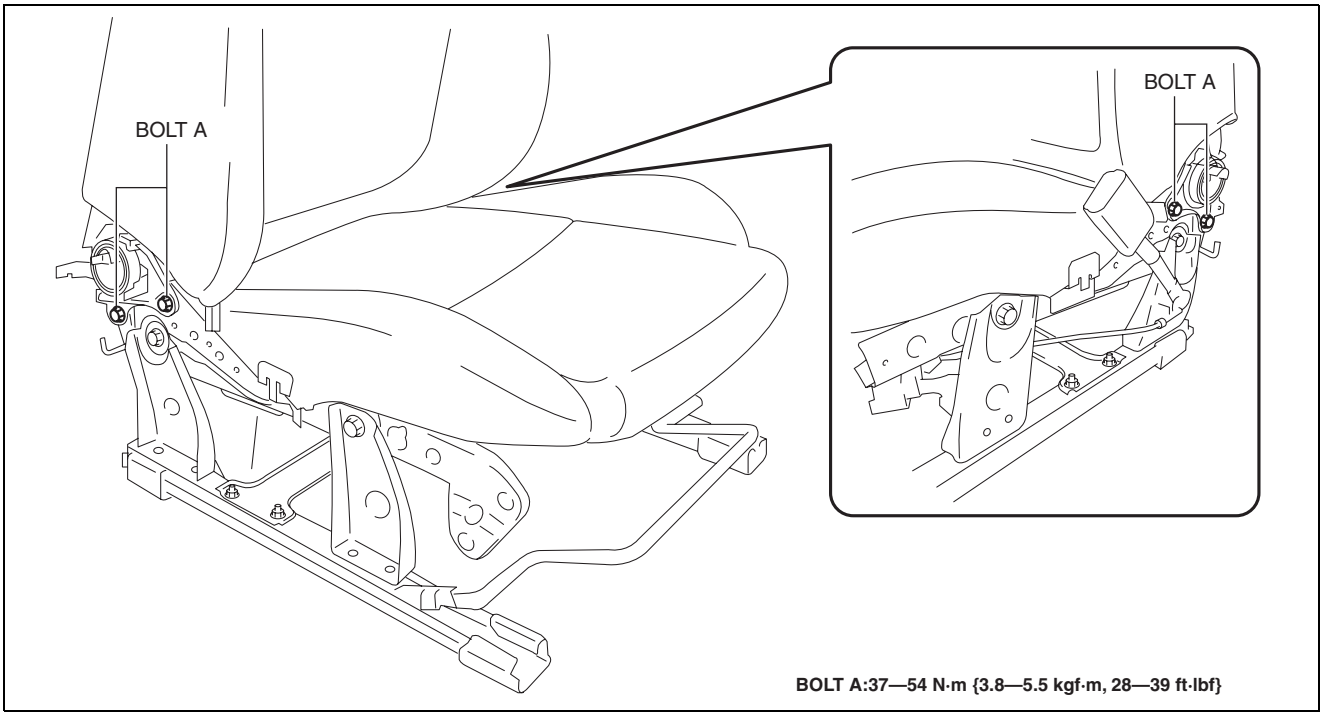
ac5wzw0000315



ac5wzw0000311

7. Disconnect the front seat back warmer connector. (With seat warmer system)
8. Disengage clip B.
9. Set hook C aside in the direction of the arrow (4) shown in the figure.

10. Remove the bolts A, then remove the front seat back component.



ac5wzw0000316

11. Install in the reverse order of removal.

FRONT SEAT BACK TRIM REMOVAL/INSTALLATION

id091300912000

Warning

- **Handling a side air bag improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings/cautions in the Workshop Manual before handling the front seat (side air bag integrated). (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**
- **If the sliding mechanisms on both sides are not locked after assembling the front seat, the front seat will operate accidentally while the vehicle is driven, which could result in serious injury. After assembling the front seat, shake it up and down and verify that the sliding mechanism on the both sides are locked.**

Caution

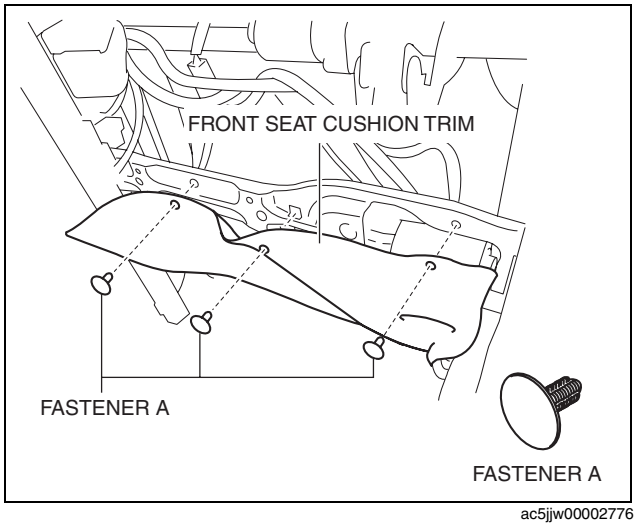
- **If the slide bar is operated after the front seat is removed, the left/right slide positions will deviate and the adjuster unit could be damaged after the front seat is installed. After removing a front seat, do not operate the slider lever.**
- **Verify that there are no malfunctions in the forward/back slide of the seat and in the adjuster unit after installing a front seat.**
- **When performing the procedure with a front seat removed from the vehicle, perform the procedure on a clean cloth so as not to damage or soil the seat.**

Driver-side (with power seat system)

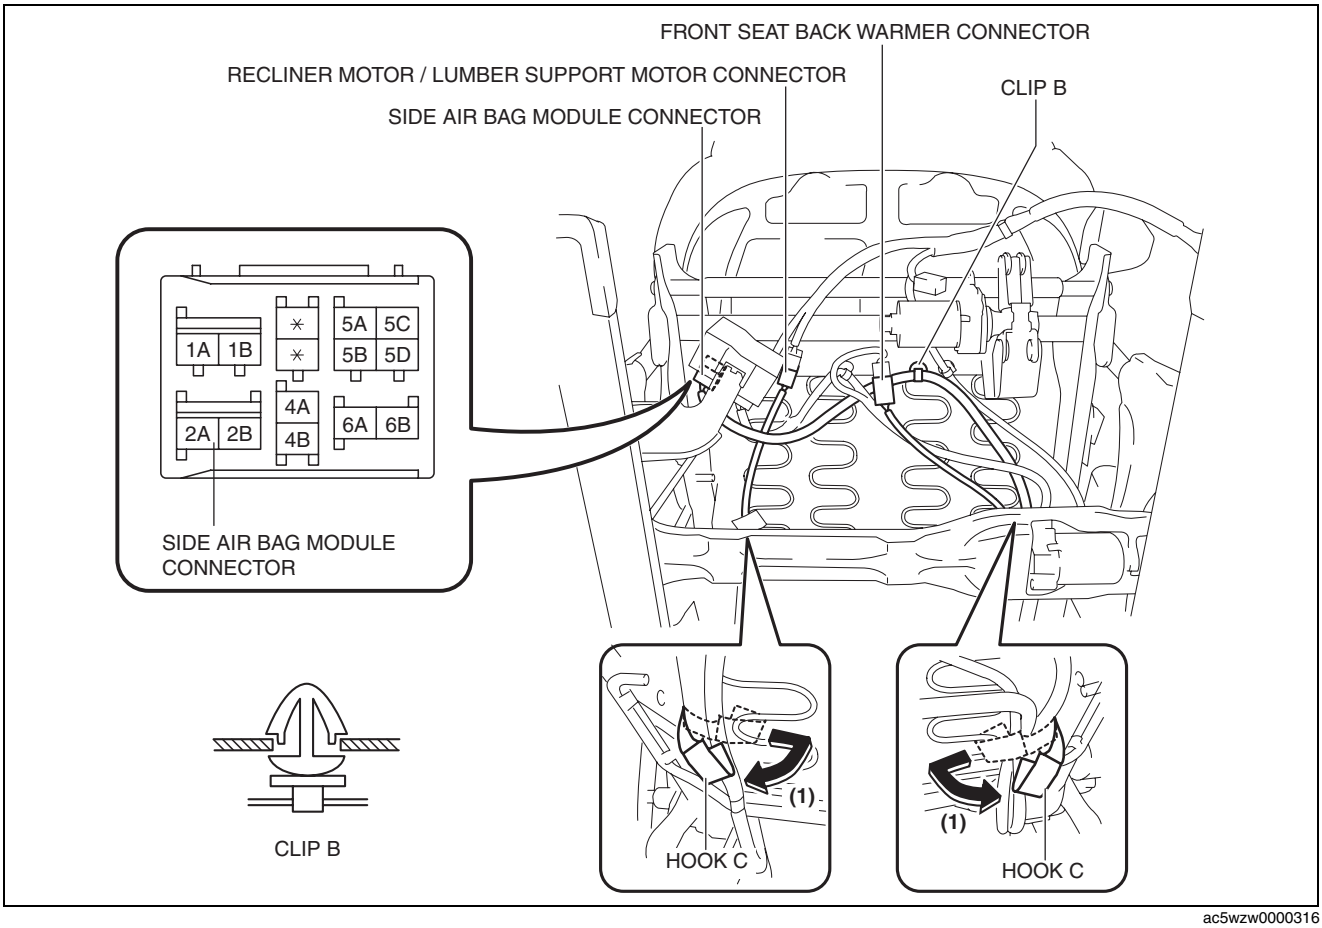
1. Switch the ignition off (LOCK).
2. Disconnect the negative battery cable and wait for **1 min**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the headrest.
4. Remove the front seat. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.)

SEATS

5. Remove fasteners A and set the front seat cushion trim aside.
6. Disconnect the side air bag module connector.



ac5jjw00002776

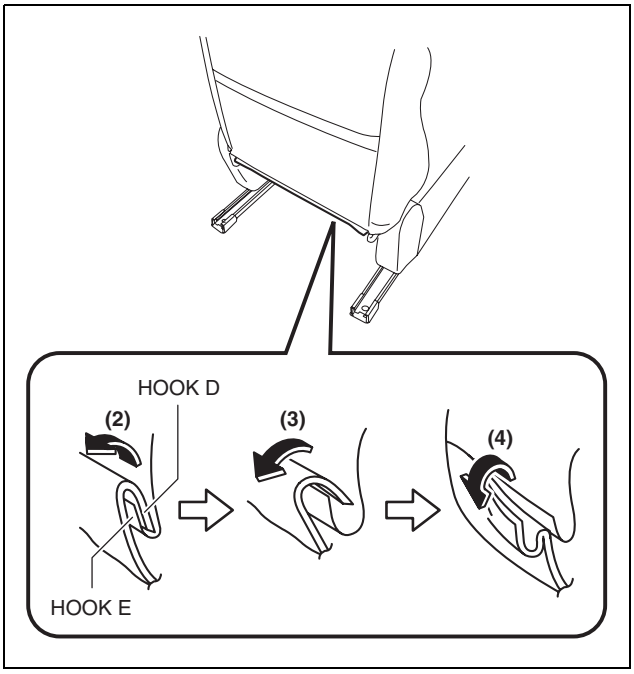


ac5wzw0000316

7. Disengage clip B.
8. Disconnect the front seat back warmer connector.
9. Disconnect the recliner motor/lumber support motor connectors.
10. Set hooks C aside in the direction of the arrow (1) shown in the figure.

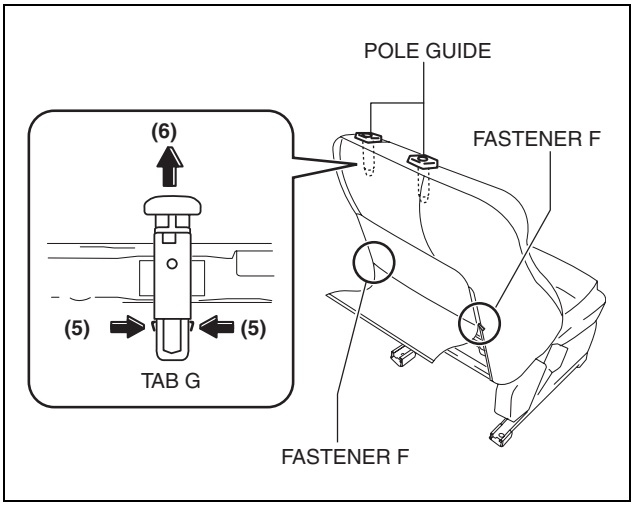
SEATS

11. Slide hook D in the order of arrows (2), (3), (4) shown in the figure and disconnect them from hook E.



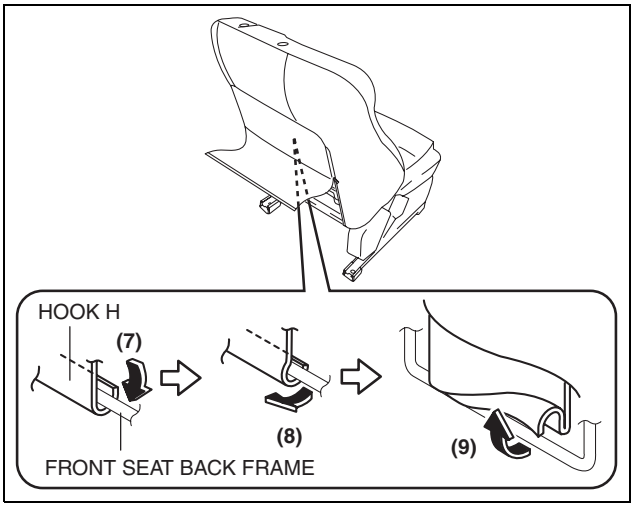
ac5wzw0000316

12. Open fasteners F.
13. Partially peel back the seat back trim, release tabs G in the direction of the arrow (5) shown in the figure and pull out the pole guide in the direction of the arrow (6).



ac5wzw0000316

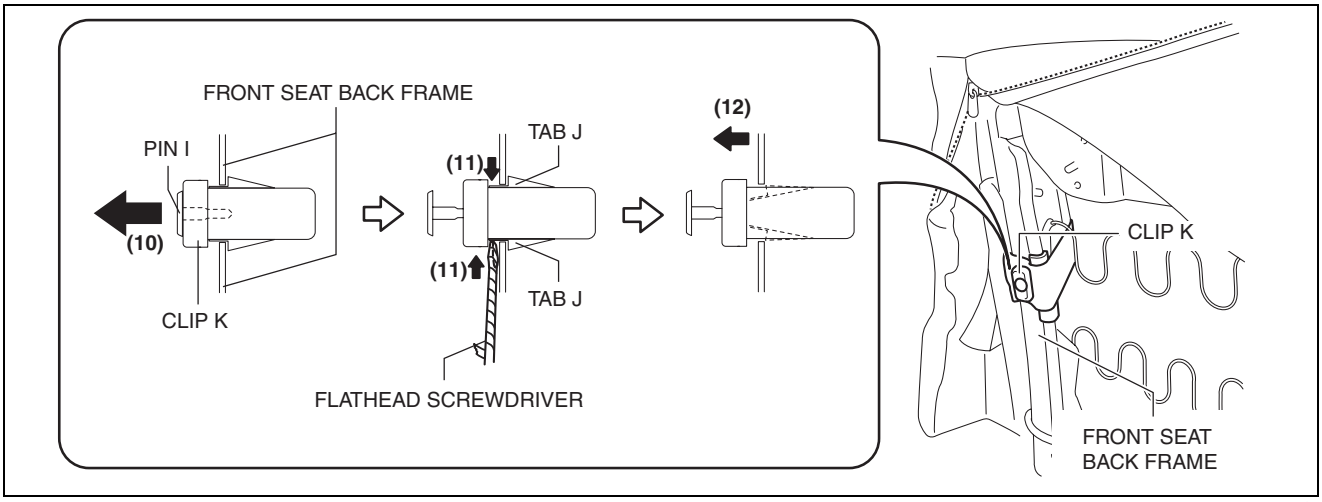
14. Partially peel back the front seat back trim and slide hook H in the order of the arrows (7), (8), and (9) shown in the figure, and remove it from the front seat back frame.



ac5wzw0000316

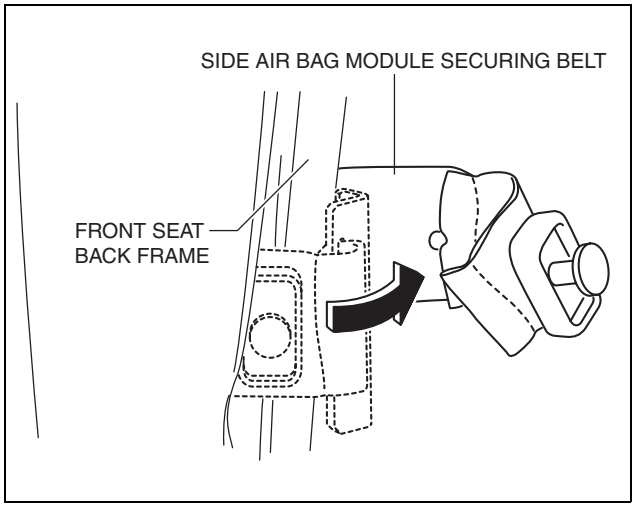
SEATS

15. Pull out pin I in the direction of the arrow (10) shown in the figure, and using a flathead screwdriver wrapped in protective tape, release the tabs J in the direction of the arrow (11) shown in the figure while removing the clip K in the direction of the arrow (12).



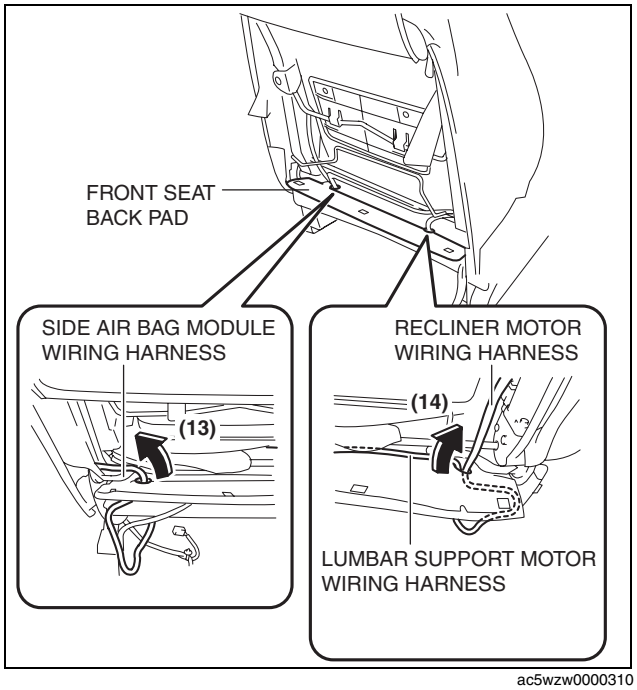
ac5wzw0000317

16. Remove the side air bag module securing belt from the front seat back frame.



ac5uuw00002092

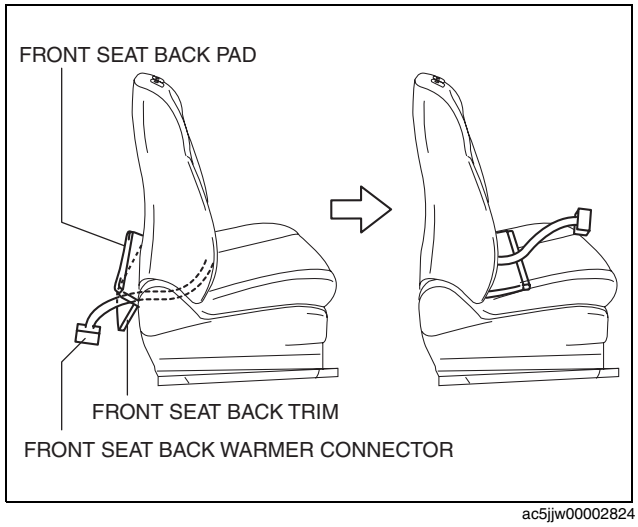
17. Pull the side air bag module wiring harness in the direction of the arrow (13) shown in the figure, and pull it out through the hole in the front seat back pad.
18. Pull the recliner motor wiring harness and lumber support wiring harness in the direction of the arrow (14) shown in the figure, and pull it out through the hole in the front seat back pad.



ac5wzw0000310

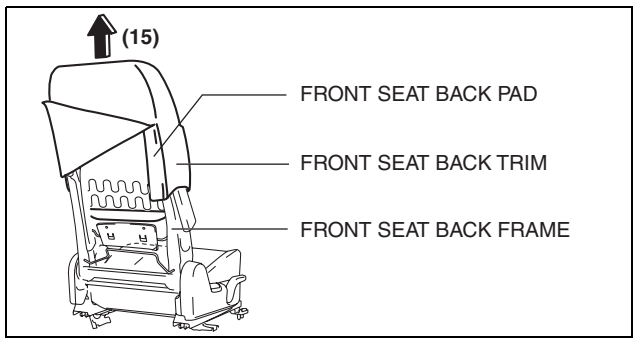
SEATS

19. Pull out the front seat back pad and front seat back trim, and the front seat back warmer connector towards the front of the front seat.



ac5jjw00002824

20. Lift up the front seat back trim and front seat back pad in the direction of the arrow (15) as a single unit and remove it from the front seat back frame.



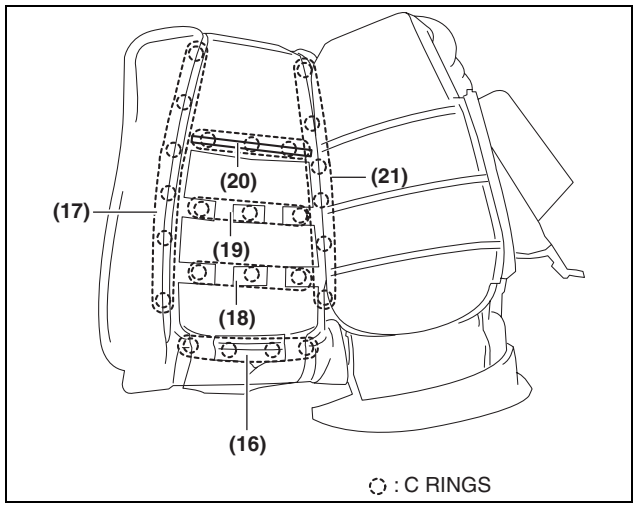
ac5wzw0000310

21. Remove the C rings in the order of (16), (17), (18), (19), (20), and (21), shown in the figure, then remove the front seat back trim from the front seat back pad.

Caution

- **If a damaged C rings are reused, it may not be possible to install the front seat back trim and front seat back pad correctly. When removing and installing C rings, be careful not to damage them.**
- **If the C rings are damaged, replace it with a new one.**

22. Install in the reverse order of removal.



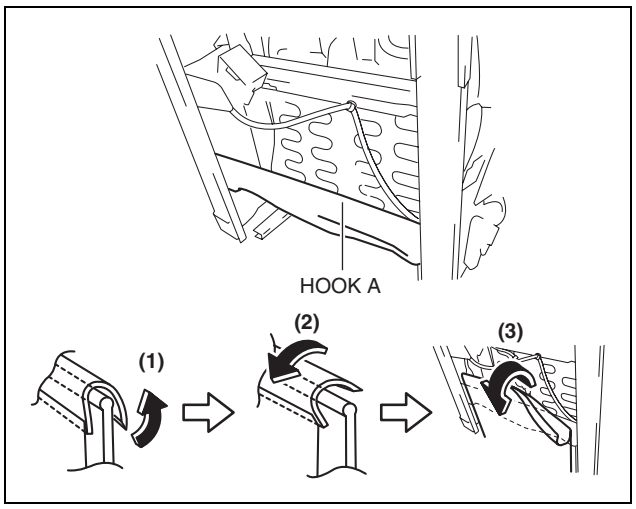
ac5wzw0000310

SEATS

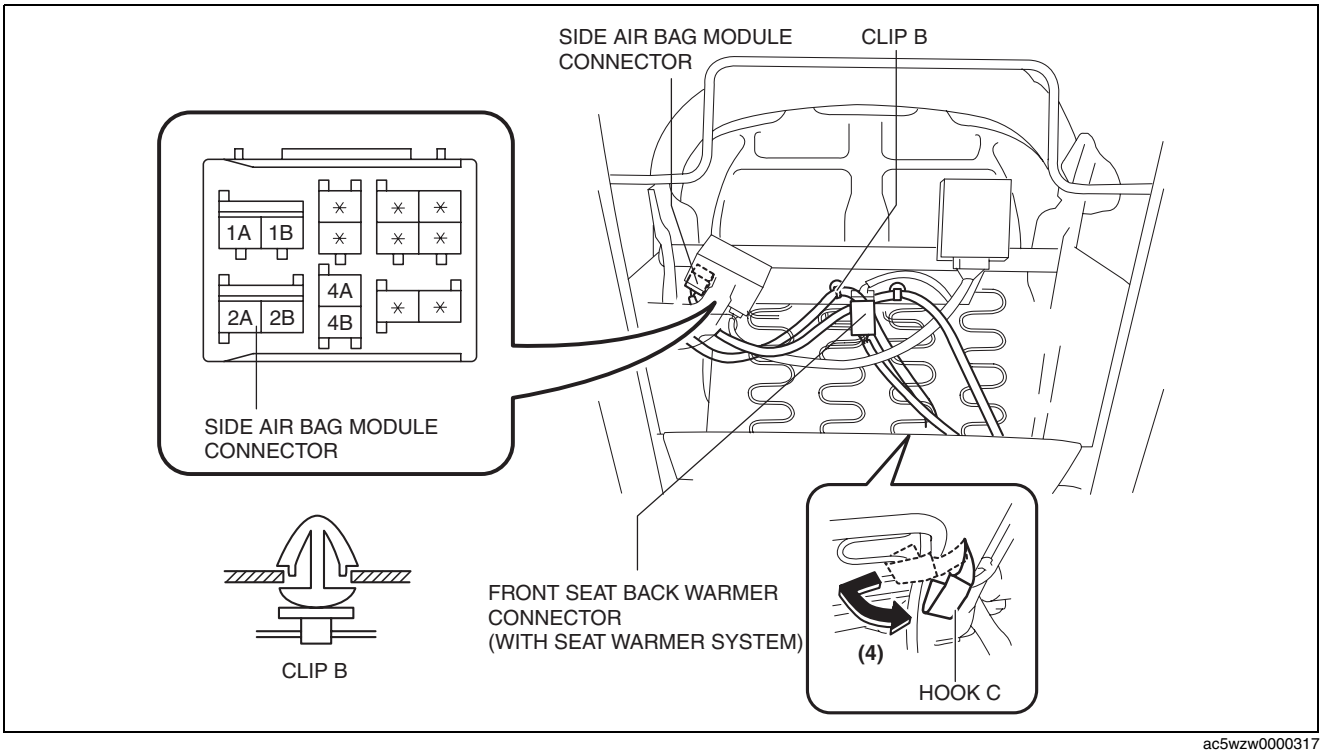
Driver-side (without power seat system)

Note
- There are two types of passenger-side front seats, A and B types. The location and the number of C-rings installed to the front seat back trim and front seat back pad differ depending on the type.

1. Switch the ignition off (LOCK).
2. Disconnect the negative battery cable and wait for **1 min**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the headrest.
4. Remove the front seat. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.)
5. Slide hook A in the order of arrows (1), (2), (3) shown in the figure and set the front seat cushion trim aside.
6. Disconnect the side air bag module connector.



ac5uuw00001914

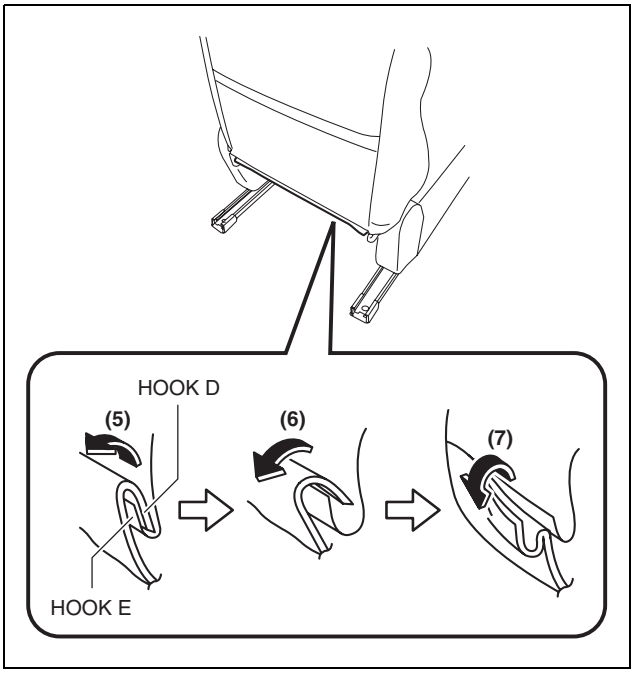


ac5wzw0000317

7. Disconnect the front seat back warmer connector. (with seat warmer system)
8. Disengage clip B.
9. Set hook C aside in the direction of the arrow (4) shown in the figure.

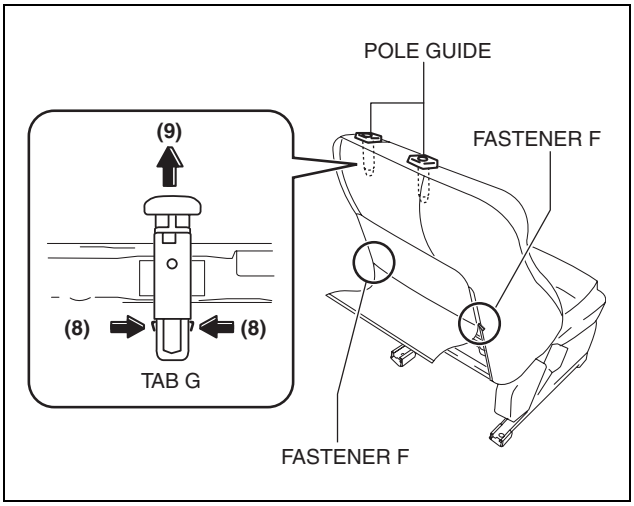
SEATS

10. Slide hook D in the order of arrows (5), (6), (7) shown in the figure and disconnect them from hook E.



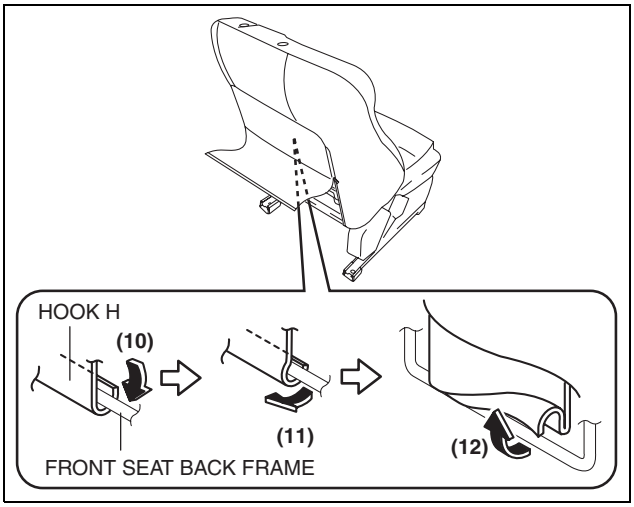
ac5uuw00002095

11. Open fasteners F.
12. Partially peel back the seat back trim, release tabs G in the direction of the arrow (8) shown in the figure and pull out the pole guide in the direction of the arrow (9).



ac5uuw00002096

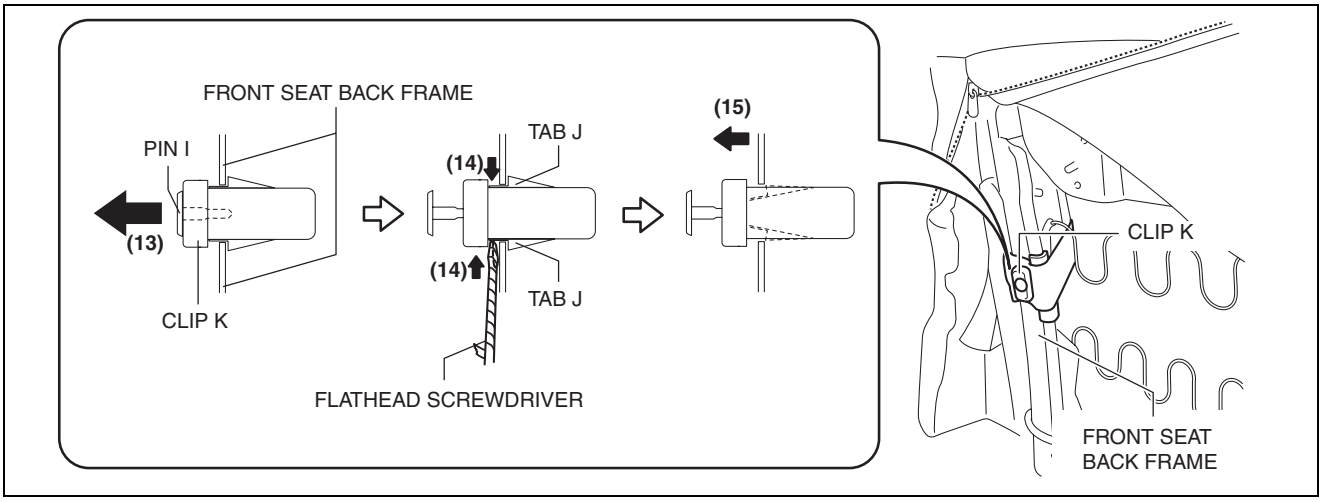
13. Partially peel back the front seat back trim and slide hook H in the order of the arrows (10), (11), and (12) shown in the figure, and remove it from the front seat back frame.



ac5uuw00002097

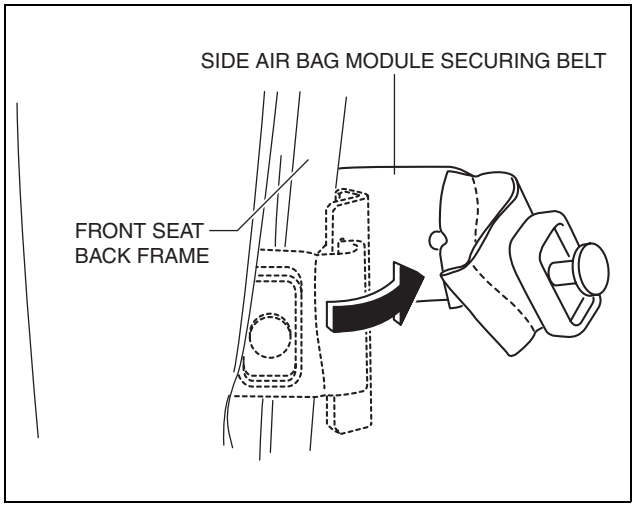
SEATS

14. Pull out pin I in the direction of the arrow (13) shown in the figure, and using a flathead screwdriver wrapped in protective tape, release the tabs J in the direction of the arrow (14) shown in the figure while removing the clip K in the direction of the arrow (15).



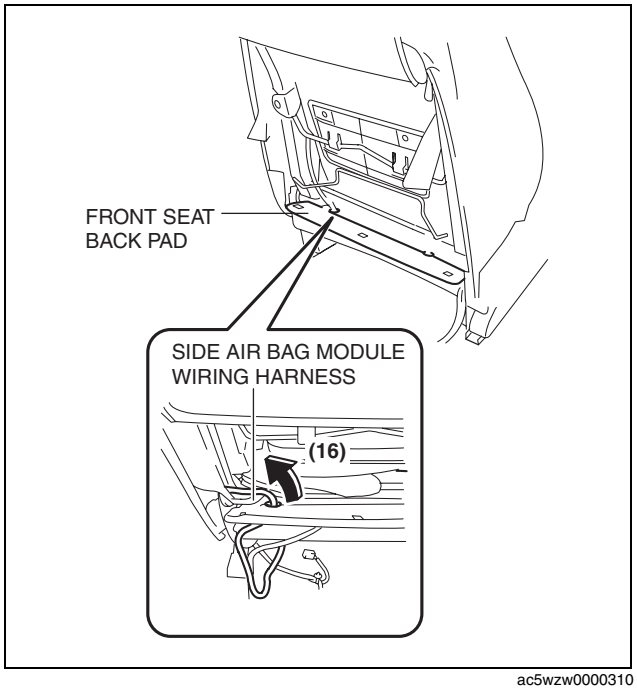
ac5wzw0000378

15. Remove the side air bag module securing belt from the front seat back frame.



ac5uuw00002092

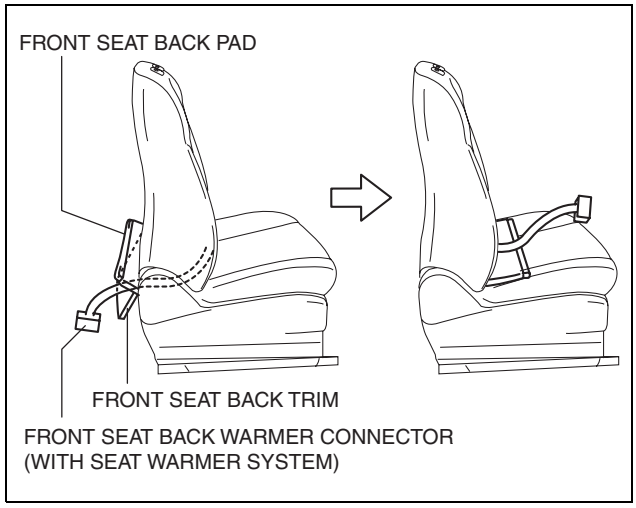
16. Pull the side air bag module wiring harness in the direction of the arrow (16) shown in the figure, and pull it out through the hole in the front seat back pad.



ac5wzw0000310

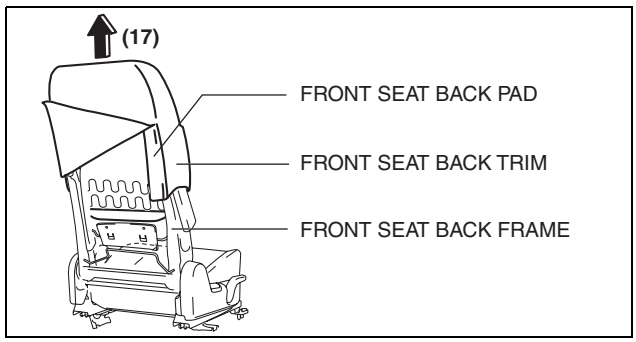
SEATS

17. Pull out the front seat back pad and front seat back trim, and the front seat back warmer connector (with seat warmer system) towards the front of the front seat.



ac5wzw0000317

18. Lift up the front seat back trim and front seat back pad in the direction of the arrow (17) as a single unit and remove it from the front seat back frame.

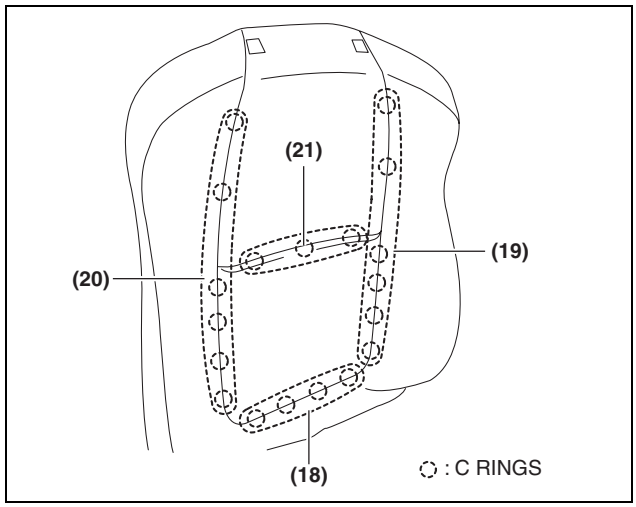


ac5wzw0000311

19. Remove the C rings in the order of (18), (19), (20), and (21) shown in the figure, and remove the front seat back trim from the front seat back pad. (type A)

Caution

- **If a damaged C rings are reused, it may not be possible to install the front seat back trim and front seat back pad correctly. When removing and installing C rings, be careful not to damage them.**
- **If a C ring are damaged, replace it with a new one.**



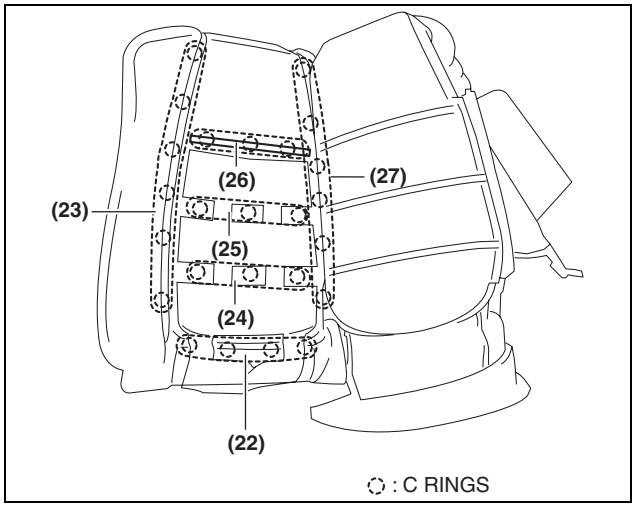
ac5uuw00002101

20. Remove the C rings in the order of (22), (23), (24), (25), (26), and (27), shown in the figure, then remove the front seat back trim from the front seat back pad. (type B)

Caution

- **If a damaged C rings are reused, it may not be possible to install the front seat back trim and front seat back pad correctly. When removing and installing C rings, be careful not to damage them.**
- **If the C rings are damaged, replace it with a new one.**

21. Install in the reverse order of removal.



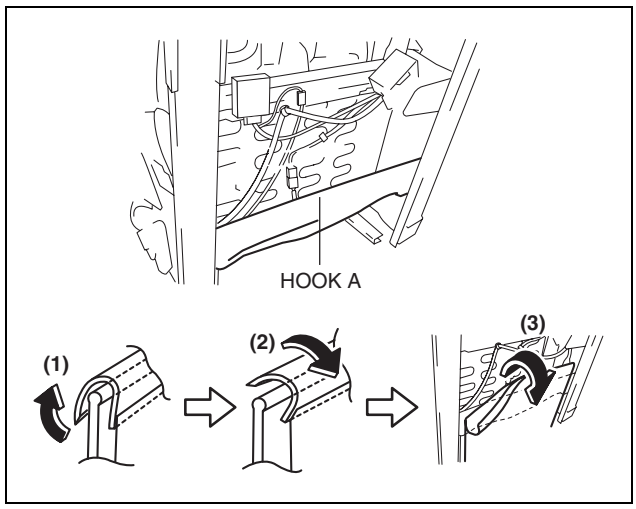
ac5wzw0000318

SEATS

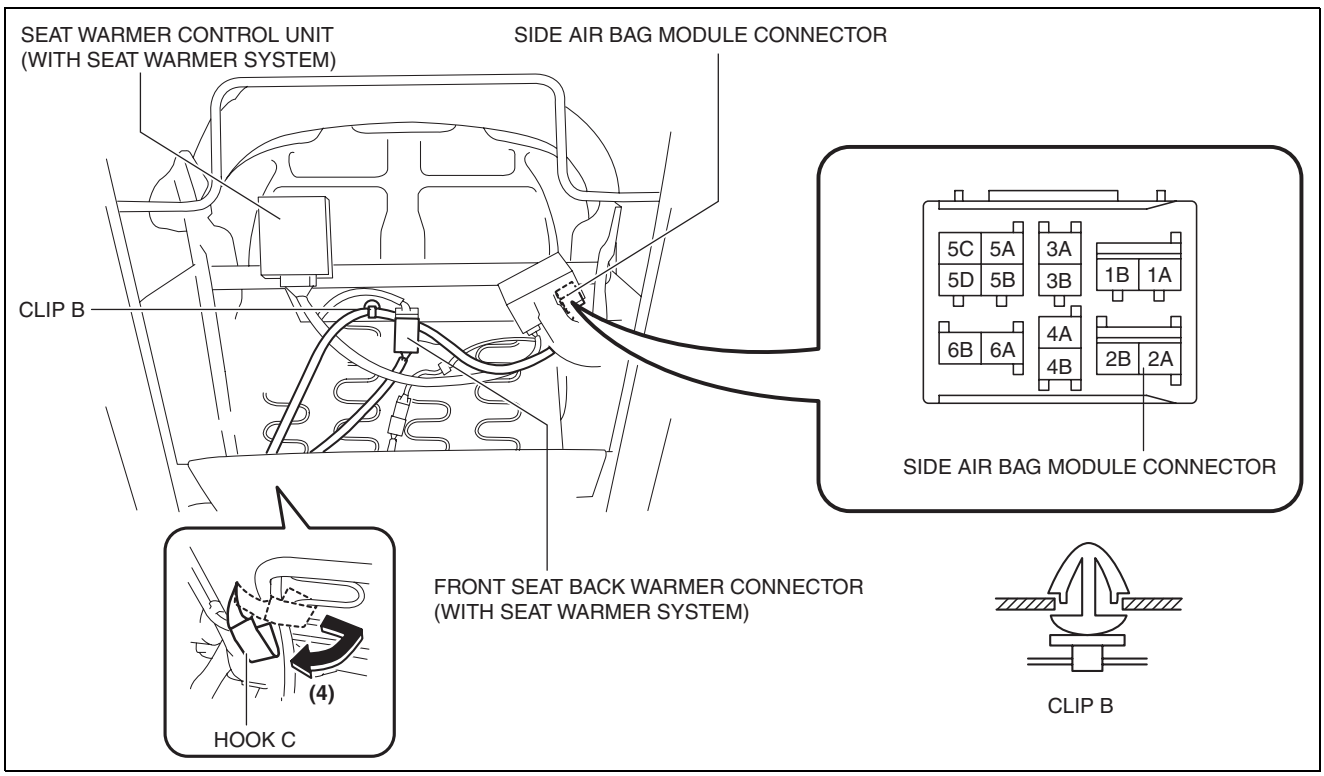
Passenger-side

Note
- There are two types of passenger-side front seats, A and B types. The location and the number of C-rings installed to the front seat back trim and front seat back pad differ depending on the type.

1. Switch the ignition off (LOCK).
2. Disconnect the negative battery cable and wait for **1 min**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the headrest.
4. Remove the front seat. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.)
5. Slide hook A in the order of arrows (1), (2), (3) shown in the figure and set the front seat cushion trim aside.
6. Disconnect the side air bag module connector.



ac5wzw0000317

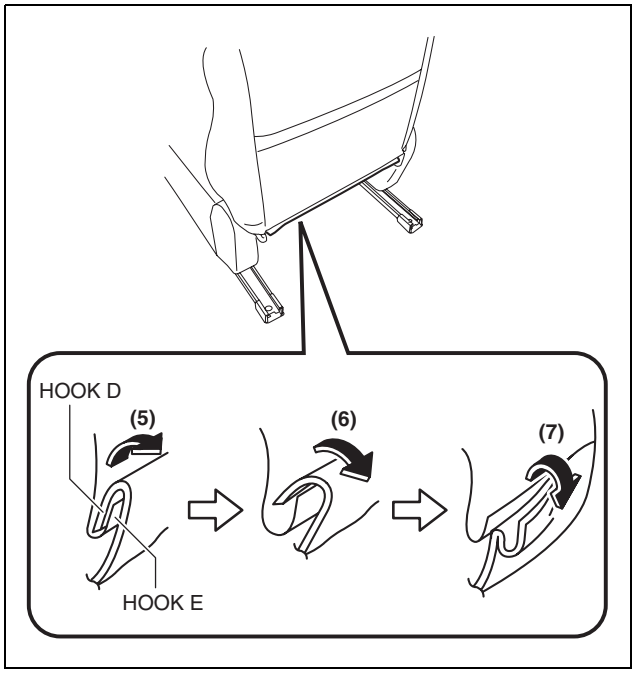


ac5wzw0000317

7. Disconnect the front seat back warmer connector. (with seat warmer system)
8. Disengage clip B.
9. Set hook C aside in the direction of the arrow (4) shown in the figure.

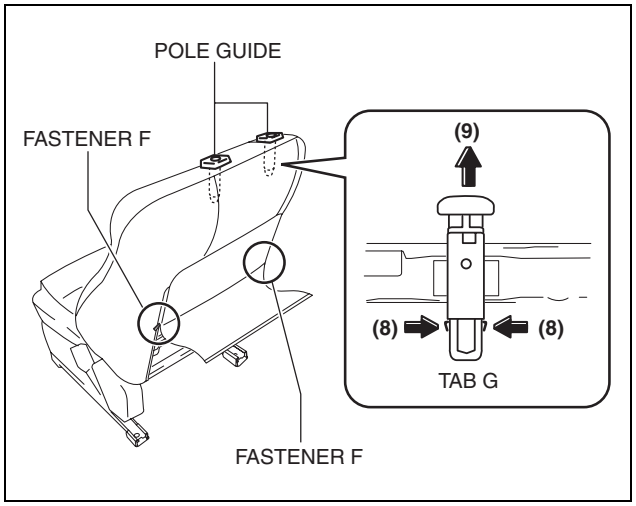
SEATS

10. Slide hook D in the order of arrows (5), (6), (7) shown in the figure and disconnect them from hook E.



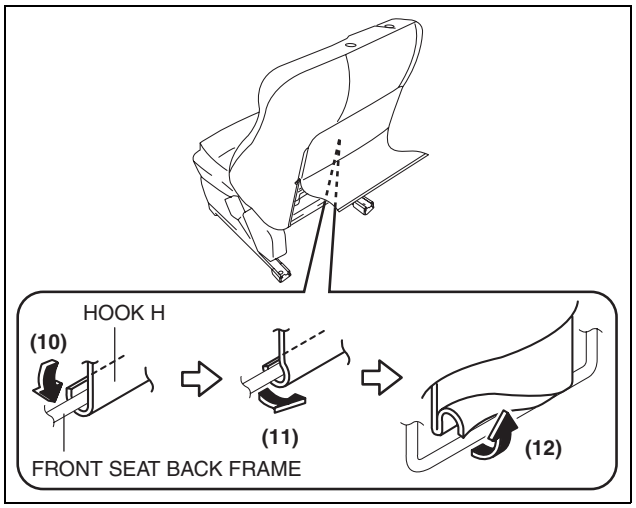
ac5uuw00002102

11. Open fasteners F.
12. Partially peel back the seat back trim, release tabs G in the direction of the arrow (8) shown in the figure and pull out the pole guide in the direction of the arrow (9).



ac5uuw00002103

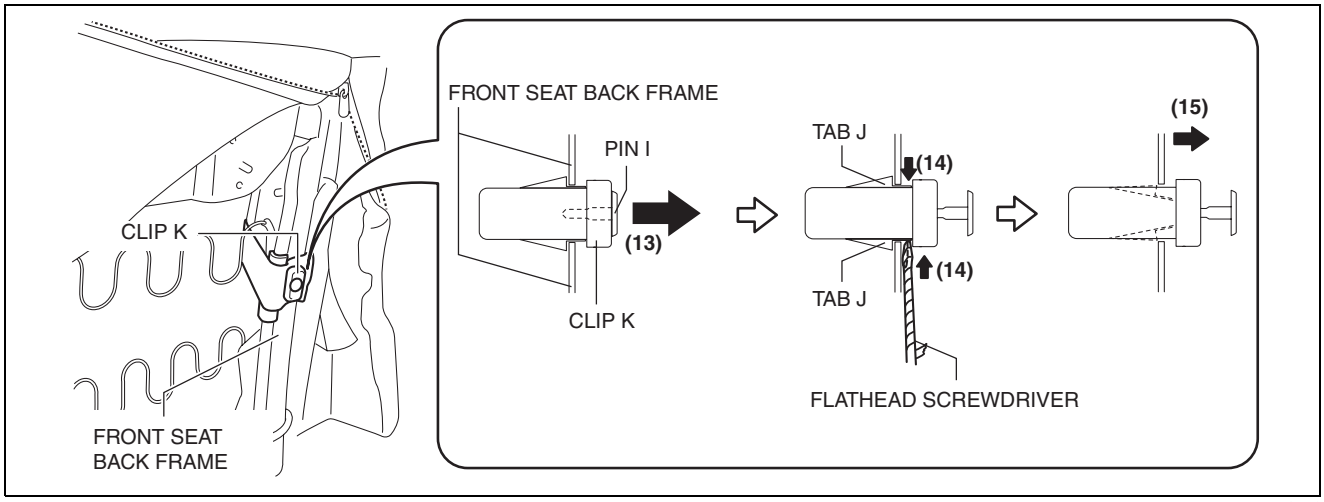
13. Partially peel back the front seat back trim and slide hook H in the order of the arrows (10), (11), and (12) shown in the figure, and remove it from the front seat back frame.



ac5uuw00001920

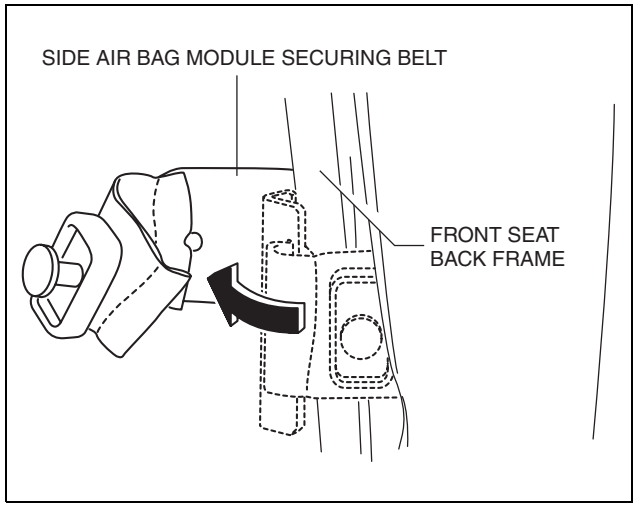
SEATS

14. Pull out pin I in the direction of the arrow (13) shown in the figure, and using a flathead screwdriver wrapped in protective tape, release the tabs J in the direction of the arrow (14) shown in the figure while removing the clip K in the direction of the arrow (15).



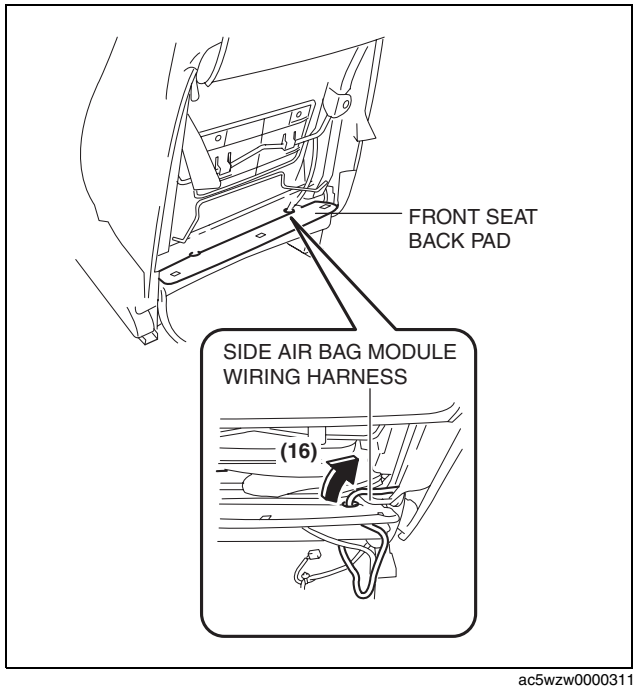
ac5uuw00001921

15. Remove the side air bag module securing belt from the front seat back frame.



ac5uuw00001922

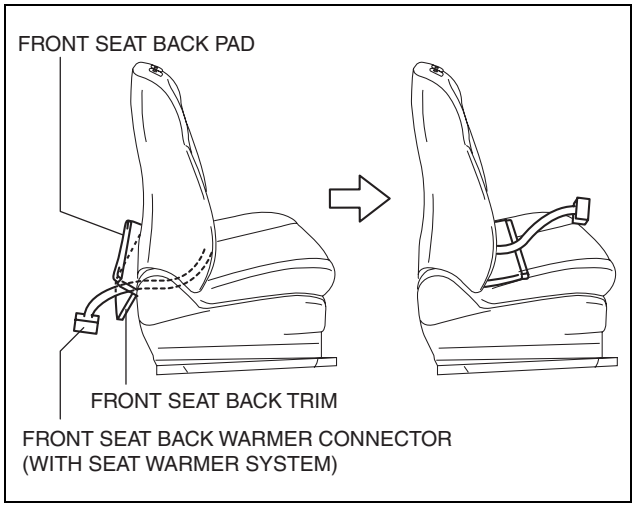
16. Pull the side air bag module wiring harness in the direction of the arrow (16) shown in the figure, and pull it out through the hole in the front seat back pad.



ac5wzw0000311

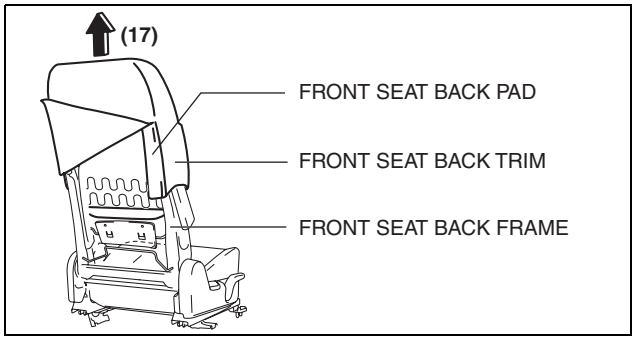
SEATS

17. Pull out the front seat back pad and front seat back trim, and the front seat back warmer connector (with seat warmer system) towards the front of the front seat.



ac5wzw0000317

18. Lift up the front seat back trim and front seat back pad in the direction of the arrow (17) as a single unit and remove it from the front seat back frame.

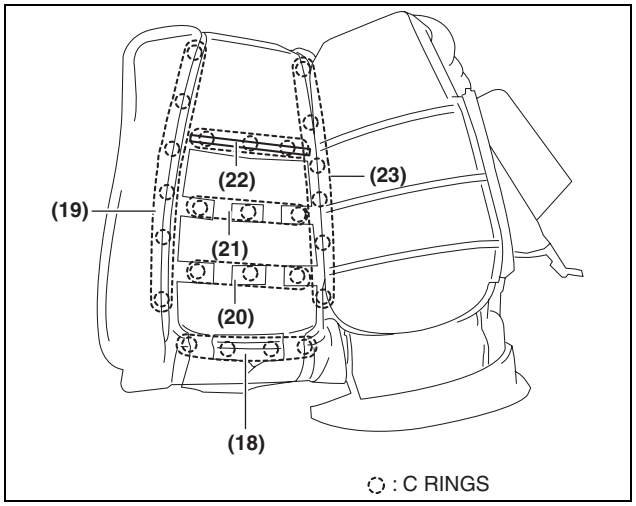


ac5wzw0000311

19. Remove the C rings in the order of (18), (19), (20), (21), (22), and (23) shown in the figure, then remove the front seat back trim from the front seat back pad. (type A)

Caution

- **If a damaged C rings are reused, it may not be possible to install the front seat back trim and front seat back pad correctly. When removing and installing C rings, be careful not to damage them.**
- **If the C rings are damaged, replace it with a new one.**



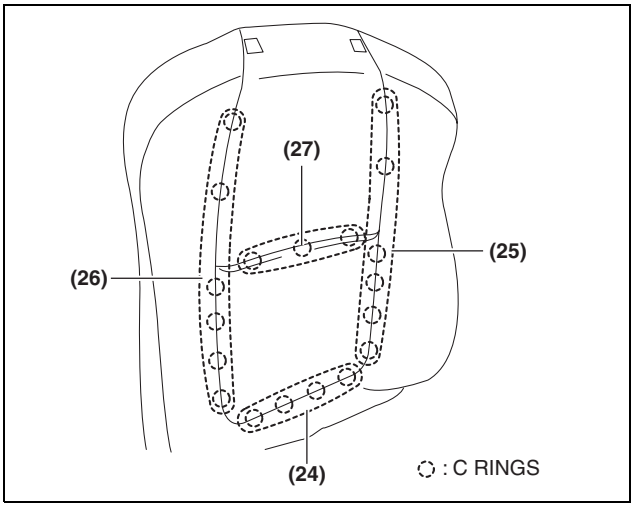
ac5wzw0000317

SEATS

20. Remove the C rings in the order of (24), (25), (26), and (27) shown in the figure, then remove the front seat back trim from the front seat back pad. (type B)

    Caution
    - **If a damaged C rings are reused, it may not be possible to install the front seat back trim and front seat back pad correctly. When removing and installing C rings, be careful not to damage them.**
    - **If the C rings are damaged, replace it with a new one.**

21. Install in the reverse order of removal.



ac5wzw0000311

FRONT SEAT CUSHION TRIM REMOVAL/INSTALLATION

id091300911700

Warning

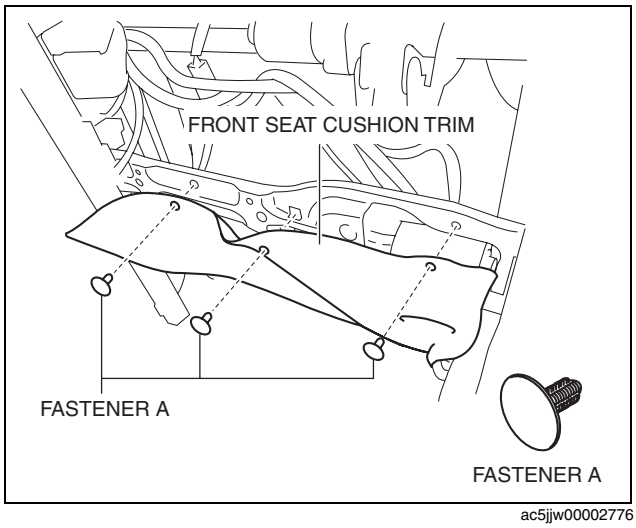
- **Handling a side air bag improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings/cautions in the Workshop Manual before handling the front seat (side air bag integrated). (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**
- **If the sliding mechanisms on both sides are not locked after assembling the front seat, the front seat will operate accidentally while the vehicle is driven, which could result in serious injury. After assembling the front seat, shake it up and down and verify that the sliding mechanism on the both sides are locked.**

Caution

- **If the slide bar is operated after the front seat is removed, the left/right slide positions will deviate and the adjuster unit could be damaged after the front seat is installed. After removing a front seat, do not operate the slider lever.**
- **Verify that there are no malfunctions in the forward/back slide of the seat and in the adjuster unit after installing a front seat.**
- **When performing the procedure with a front seat removed from the vehicle, perform the procedure on a clean cloth so as not to damage or soil the seat.**

Driver-side (with power seat system)

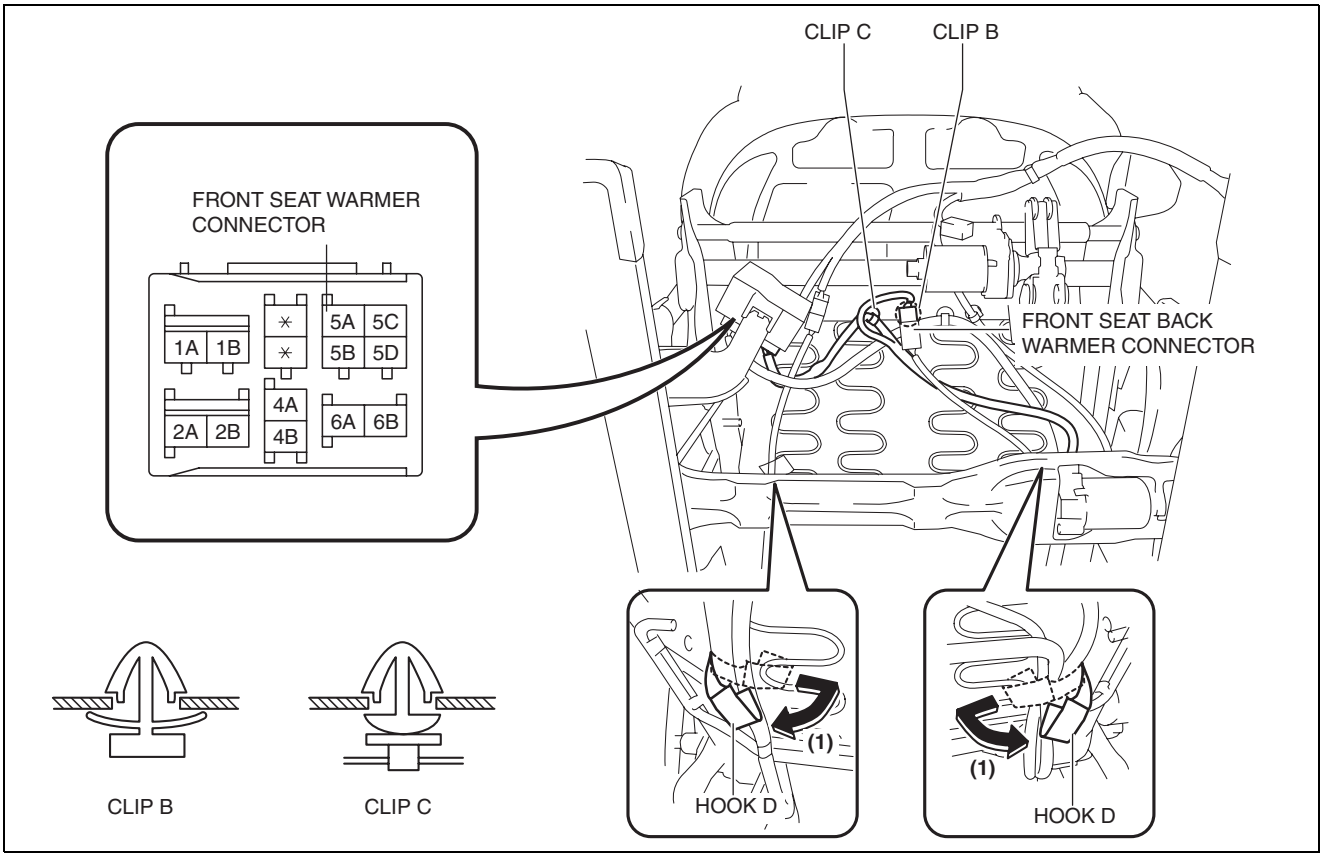
1. Switch the ignition off (LOCK).
2. Disconnect the negative battery cable and wait for **1 min**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the headrest.
4. Remove the front seat. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.)
5. Remove the front seat side cover. (See 09-13-41 FRONT SEAT SIDE COVER REMOVAL/INSTALLATION.)
6. Remove fasteners A and set the front seat cushion trim aside.



ac5jjw00002776

SEATS

7. Disconnect the front seat warmer connector.

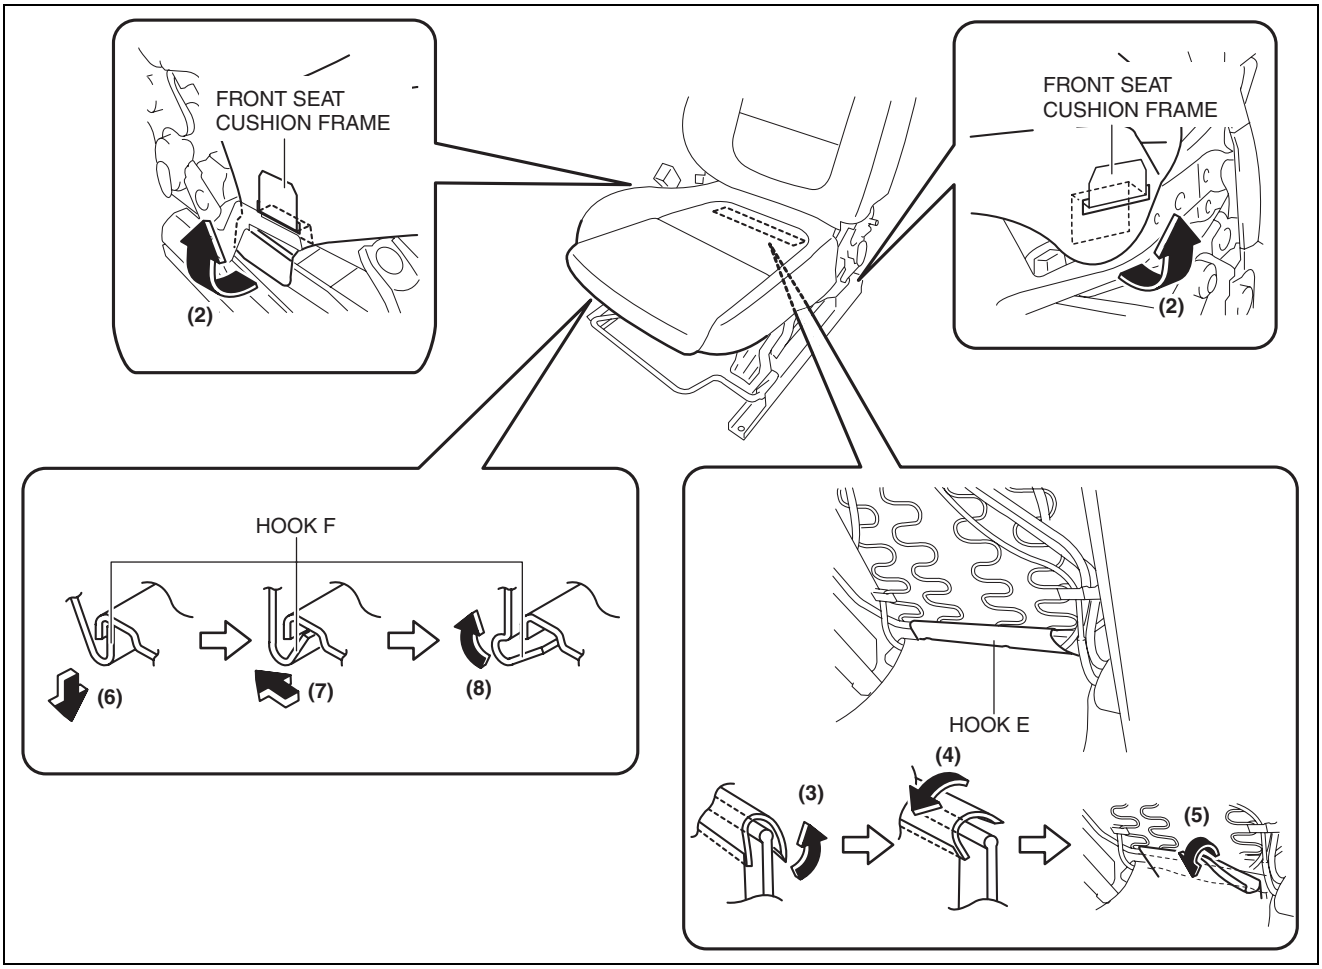


ac5uuw00001965

8. Disconnect the front seat back warmer connector.
9. Disengage clip B.
10. Disconnect clip C.
11. Set hooks D aside in the direction of the arrow (1) shown in the figure.

SEATS

12. Move the front seat cushion trim in the direction of the arrow (2) shown in the figure and set it aside.



ac5uuw00001966

13. Slide hook E in the order of arrows (3), (4), (5) shown in the figure and set the front seat cushion frame aside.
14. Slide hook F in the order of arrows (6), (7), (8) shown in the figure and set the front seat cushion frame aside.
15. Remove the C rings in the order of (9), (10), (11), (12), and (13) shown in the figure, and remove the front seat cushion trim from the front seat cushion pad.

Caution

- **If a damaged C rings are reused, it may not be possible to install the front seat cushion trim and front seat cushion pad correctly. When removing and installing C rings, be careful not to damage them.**
- **If the C rings are damaged, replace the C rings with a new one.**

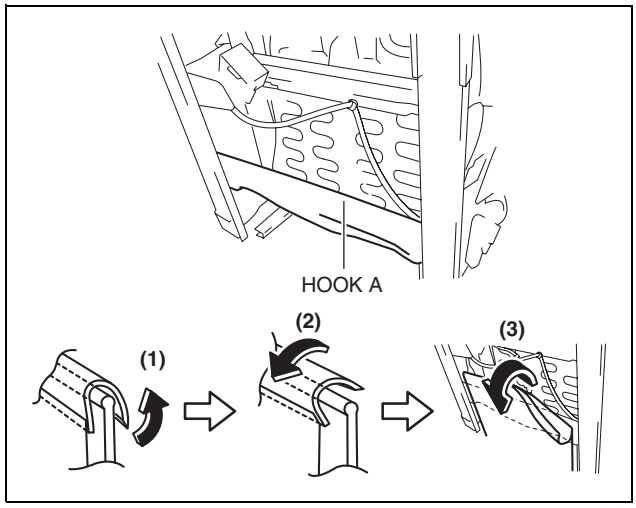
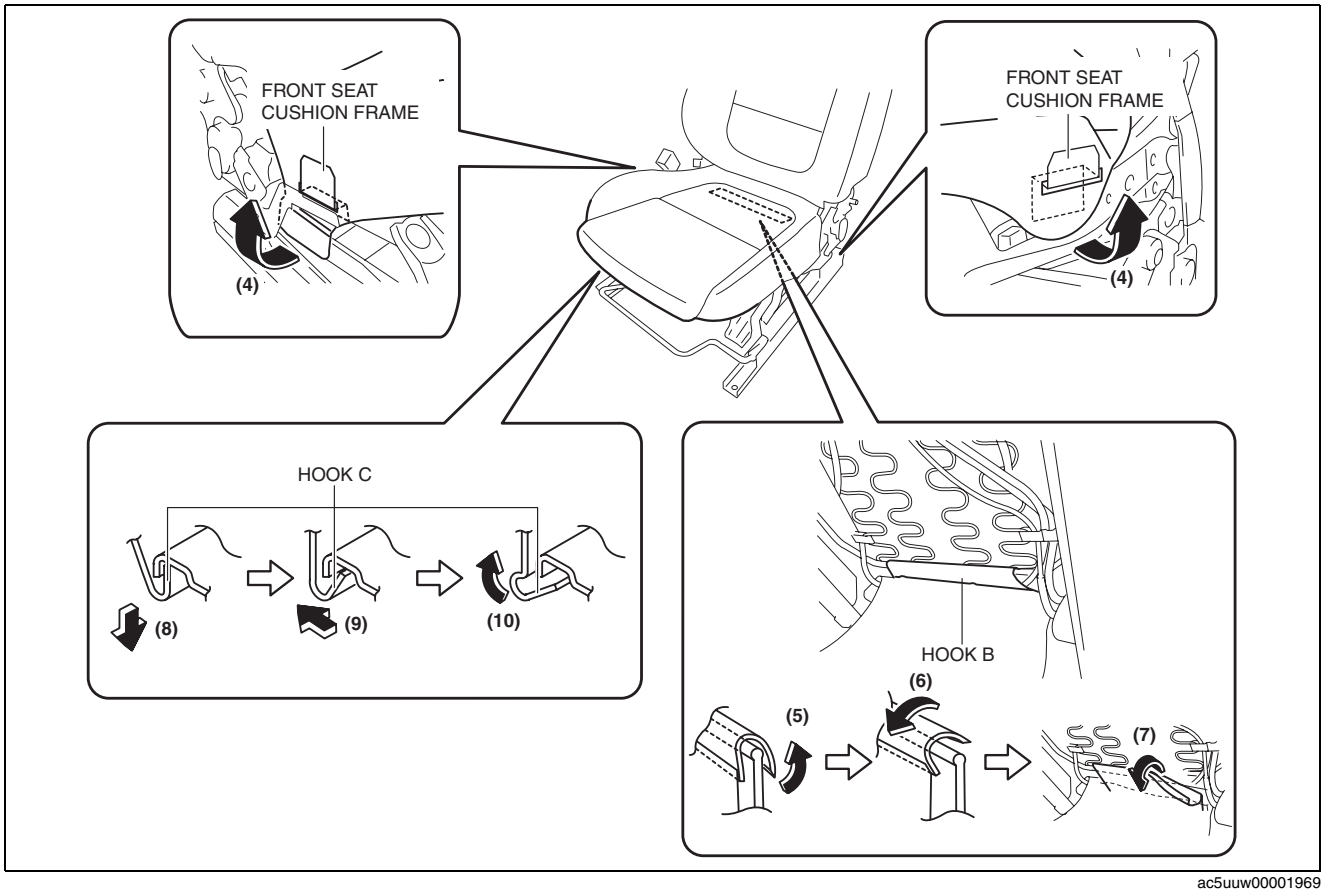
2. Disconnect the negative battery cable and wait for **1 min**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the headrest.
4. Remove the front seat. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.)
5. Remove the front seat side cover. (See 09-13-41 FRONT SEAT SIDE COVER REMOVAL/INSTALLATION.)
6. Slide hook A in the order of arrows (1), (2), (3) shown in the figure and set the front seat cushion trim aside.
7. Move the front seat cushion trim in the direction of the arrow (4) shown in the figure and set it aside.



ac5uuw00001914



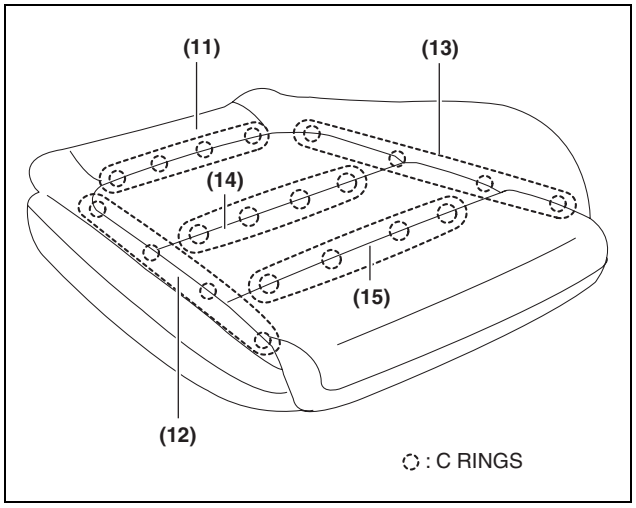
ac5uuw00001969

8. Slide hook B in the order of arrows (5), (6), (7) shown in the figure and set the front seat cushion frame aside.

SEATS

9. Slide hook C in the order of arrows (8), (9), (10) shown in the figure and set the front seat cushion frame aside. Remove the C rings in the order of (11), (12), (13), (14), and (15) shown in the figure, and remove the front seat cushion trim from the front seat cushion pad. (type A)

Caution
- **If a damaged C rings are reused, it may not be possible to install the front seat cushion trim and front seat cushion pad correctly. When removing and installing C rings, be careful not to damage them.**
- **If the C rings are damaged, replace the C rings with a new one.**

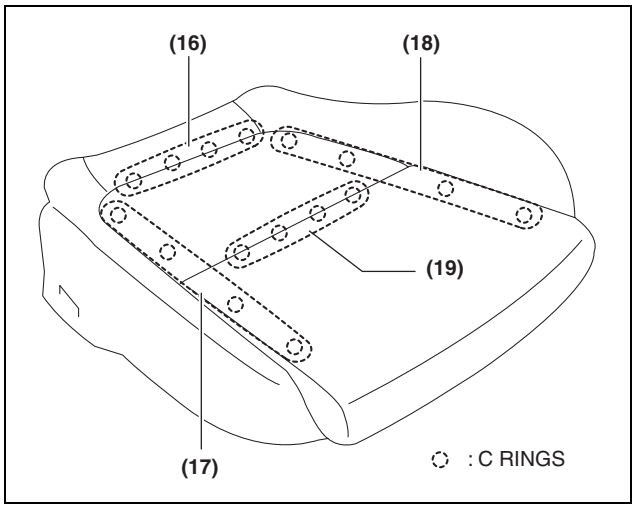


ac5wzw0000318

10. Remove the C rings in the order of (16), (17), (18), and (19) shown in the figure, and remove the front seat cushion trim from the front seat cushion pad. (type B)

Caution
- **If a damaged C rings are reused, it may not be possible to install the front seat cushion trim and front seat cushion pad correctly. When removing and installing C rings, be careful not to damage them.**
- **If the C rings are damaged, replace the C rings with a new one.**

11. Install in the reverse order of removal.



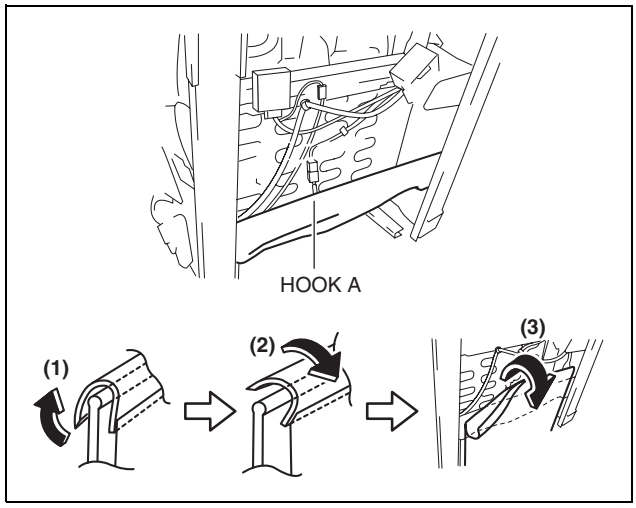
ac5wzw0000318

SEATS

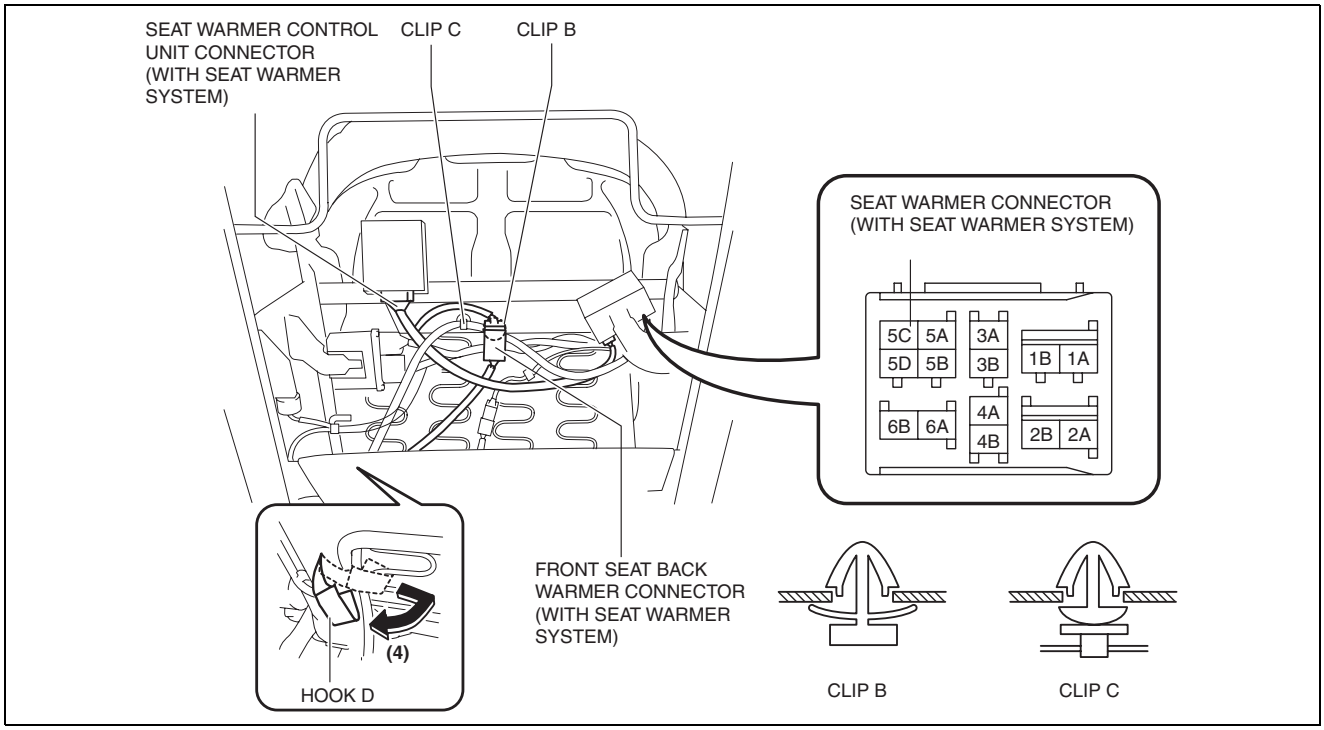
Passenger-side

Note
- There are two types of passenger-side front seats, A and B types. The location and the number of C-rings installed to the front seat back trim and front seat back pad differ depending on the type.

1. Switch the ignition off (LOCK).
2. Disconnect the negative battery cable and wait for **1 min**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the headrest.
4. Remove the front seat. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.)
5. Remove the front seat side cover. (See 09-13-41 FRONT SEAT SIDE COVER REMOVAL/INSTALLATION.)
6. Slide hook A in the order of arrows (1), (2), (3) shown in the figure and set the front seat cushion trim aside.
7. Disconnect the seat warmer connector. (With seat warmer system)



ac5wzw0000316

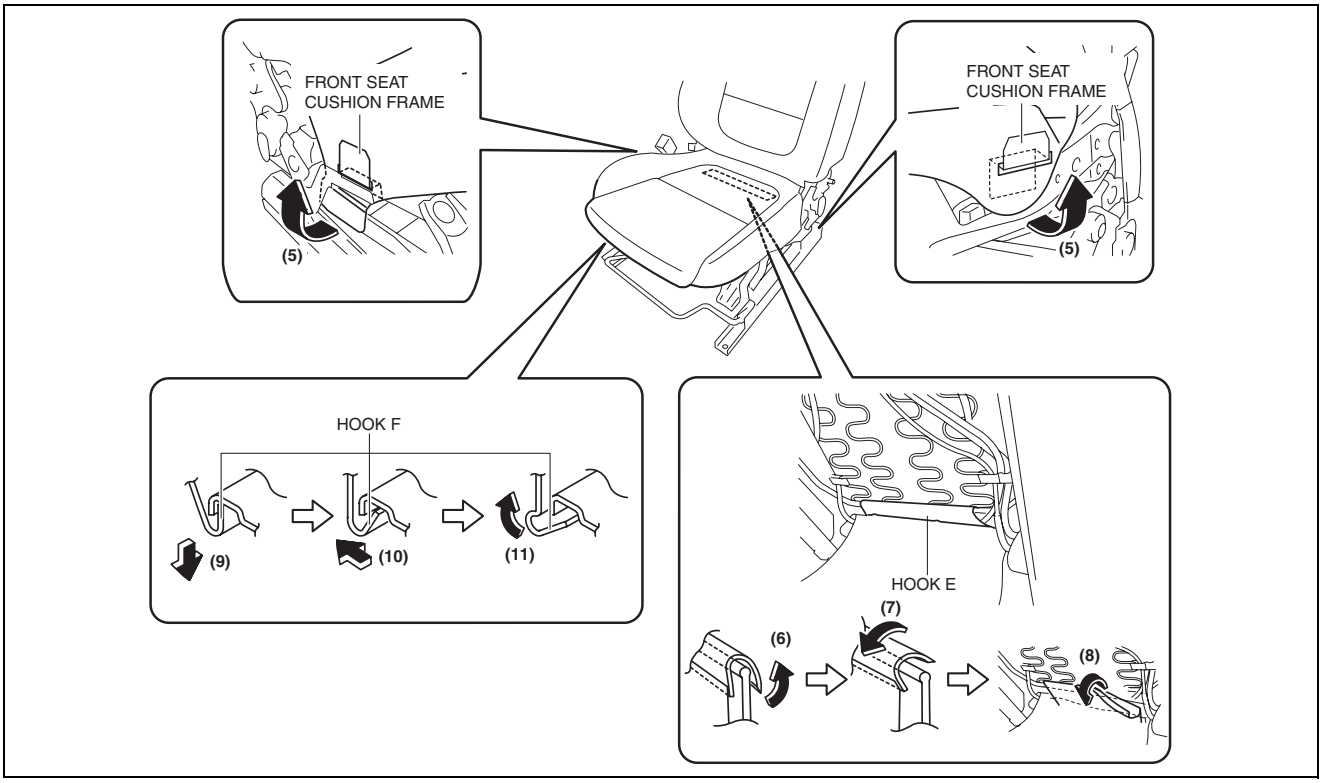


ac5uuw00001971

8. Disconnect the seat warmer control unit connector. (With seat warmer system)
9. Disconnect the front seat back warmer connector. (With seat warmer system)
10. Disengage clip B. (With seat warmer system)
11. Disconnect clip C. (With seat warmer system)
12. Set hooks D aside in the direction of the arrow (4) shown in the figure. (With seat warmer system)

SEATS

13. Move the front seat cushion trim in the direction of the arrow (5) shown in the figure and set it aside.

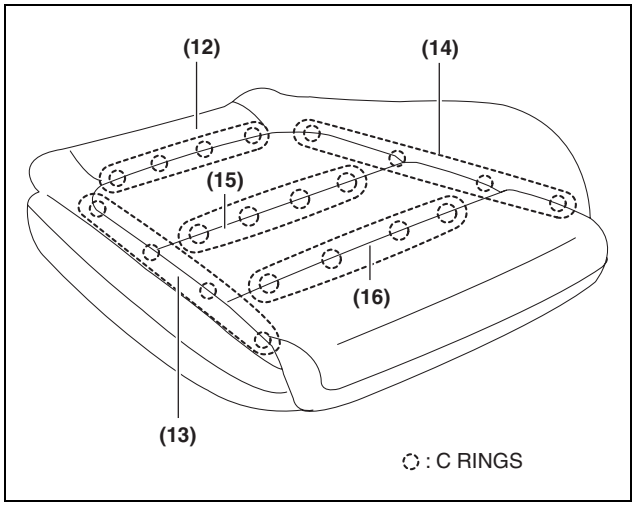


ac5uuw00001972

14. Slide hook E in the order of arrows (6), (7), (8) shown in the figure and set the front seat cushion frame aside.
15. Slide hook F in the order of arrows (9), (10), (11) shown in the figure and set the front seat cushion frame aside.
16. Remove the C rings in the order of (12), (13), (14), (15), and (16) shown in the figure, and remove the front seat cushion trim from the front seat cushion pad. (type A)

Caution

- **If a damaged C rings are reused, it may not be possible to install the front seat cushion trim and front seat cushion pad correctly. When removing and installing C rings, be careful not to damage them.**
- **If the C rings are damaged, replace the C rings with a new one.**



ac5wzw0000318

SEATS

17. Remove the C rings in the order of (17), (18), (19), and (20) shown in the figure, and remove the front seat cushion trim from the front seat cushion pad. (type B)

    Caution
    - **If a damaged C rings are reused, it may not be possible to install the front seat cushion trim and front seat cushion pad correctly. When removing and installing C rings, be careful not to damage them.**
    - **If the C rings are damaged, replace the C rings with a new one.**

18. Install in the reverse order of removal.

FRONT SEAT CUSHION FRAME REMOVAL/INSTALLATION

id091300979700

Warning

- **Handling a side air bag improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings/cautions in the Workshop Manual before handling the front seat (side air bag integrated). (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**
- **If the sliding mechanisms on both sides are not locked after assembling the front seat, the front seat will operate accidentally while the vehicle is driven, which could result in serious injury. After assembling the front seat, shake it up and down and verify that the sliding mechanism on the both sides are locked.**

Caution

- **If the slide bar is operated after the front seat is removed, the left/right slide positions will deviate and the adjuster unit could be damaged after the front seat is installed. After removing a front seat, do not operate the slider lever.**
- **Verify that there are no malfunctions in the forward/back slide of the seat and in the adjuster unit after installing a front seat.**
- **When performing the procedure with a front seat removed from the vehicle, perform the procedure on a clean cloth so as not to damage or soil the seat.**

1. Switch the ignition off (LOCK).
2. Disconnect the negative battery cable and wait for **1 min**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the following parts:
   (1) Front seat (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.)
   (2) Front seat side cover (See 09-13-41 FRONT SEAT SIDE COVER REMOVAL/INSTALLATION.)
   (3) Front seat back component (See 09-13-6 FRONT SEAT BACK COMPONENT REMOVAL/INSTALLATION.)
   (4) Front seat cushion trim (See 09-13-26 FRONT SEAT CUSHION TRIM REMOVAL/INSTALLATION.)
   (5) Front seat adjuster unit (See 09-13-35 FRONT SEAT ADJUSTER UNIT REMOVAL/INSTALLATION.)
4. Install in the reverse order of removal.

REAR SEAT REMOVAL/INSTALLATION

id091300800400

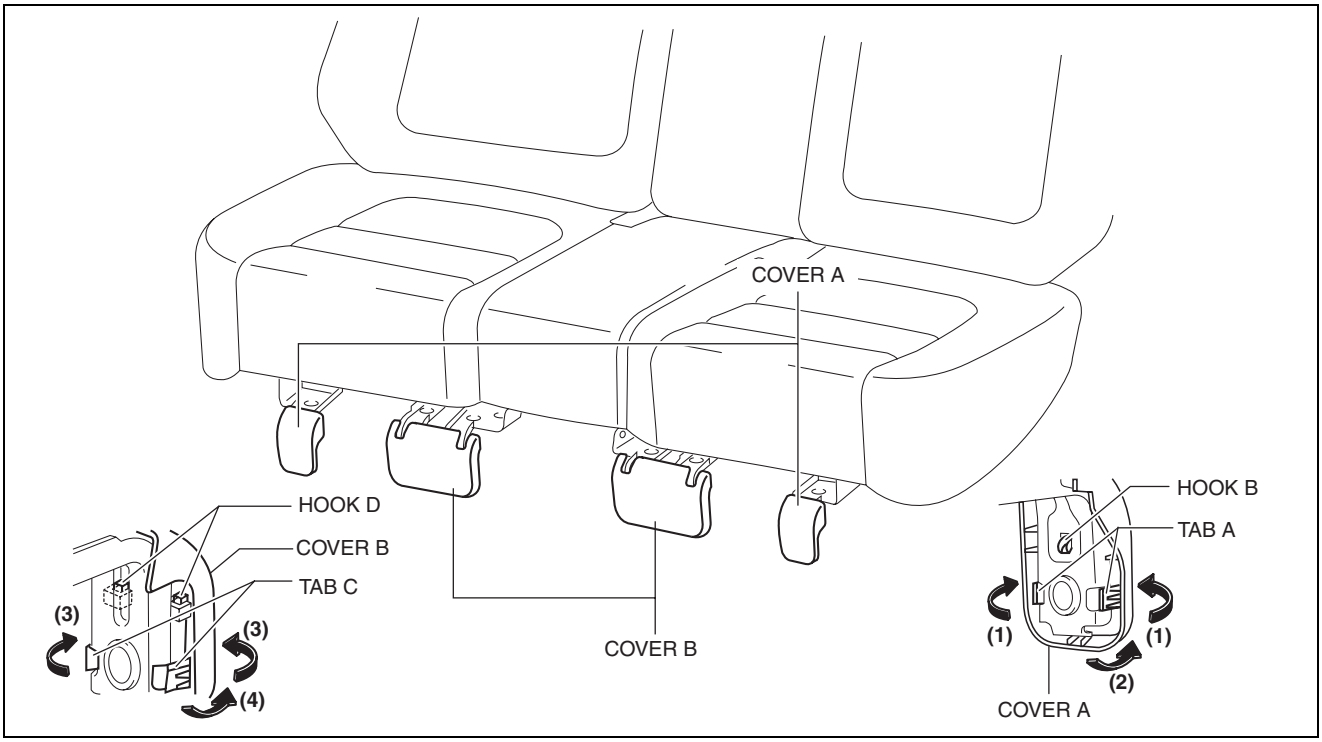
Caution

- **When removing or putting in the rear seat, contact with the surrounding areas of the vehicle could cause scratches and damage. When removing or putting in the rear seat, always use two or more persons to perform the work and be careful not to scratch or damage the rear seat and the surrounding area of the vehicle.**
- **When performing the procedure with a rear seat removed from the vehicle, perform the procedure on a clean cloth so as not to damage or soil the seat.**

Note

- When removing the rear seat from the vehicle or putting it back in, it can be performed smoothly by removing the headrest

1. Remove the trunk board. (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
2. Disconnect the remote cable on the remote handle lever side from the remote cable on the rear seat side. (See 09-13-85 REMOTE HANDLE LEVER REMOVAL/INSTALLATION.)
3. Detach tabs A in the direction of the arrow (1) shown in the figure while lifting cover A in the direction of the arrow (2), detach hook B, and then remove cover A.

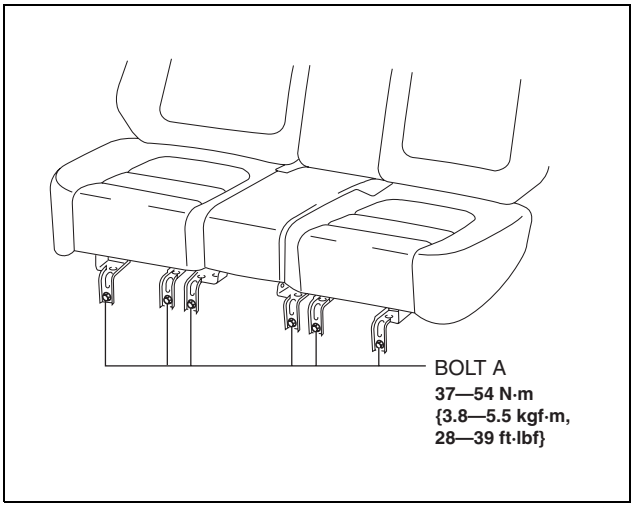


ac5uuw00001894

4. Detach tabs C in the direction of the arrow (3) shown in the figure while lifting cover B in the direction of the arrow (4), detach hook D, and then remove cover B.

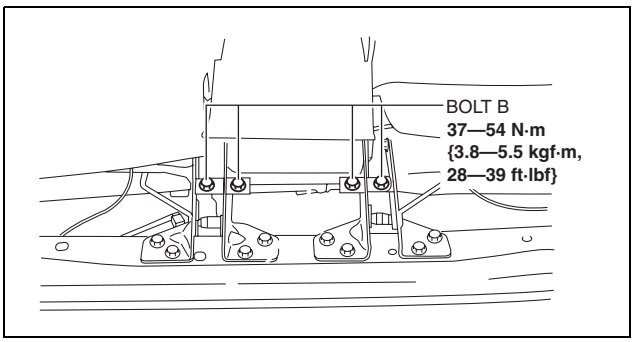
SEATS

5. Remove bolts A.
6. Press the push knob to fold the rear seat back.



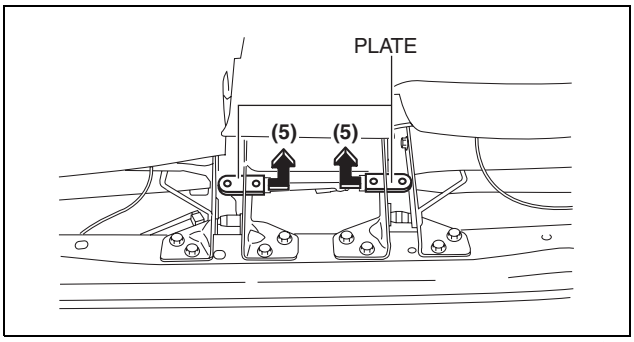
ac5uuw00001895

7. Remove bolts B.



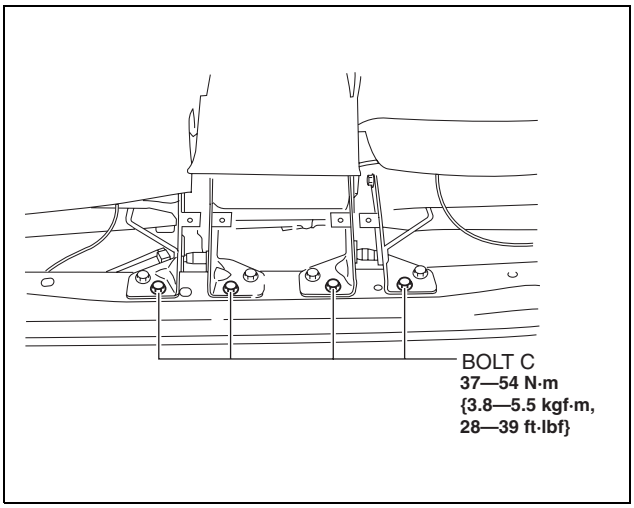
ac5uuw00001896

8. Remove the plate in the direction of the arrow (5) shown in the figure.



ac5uuw00001897

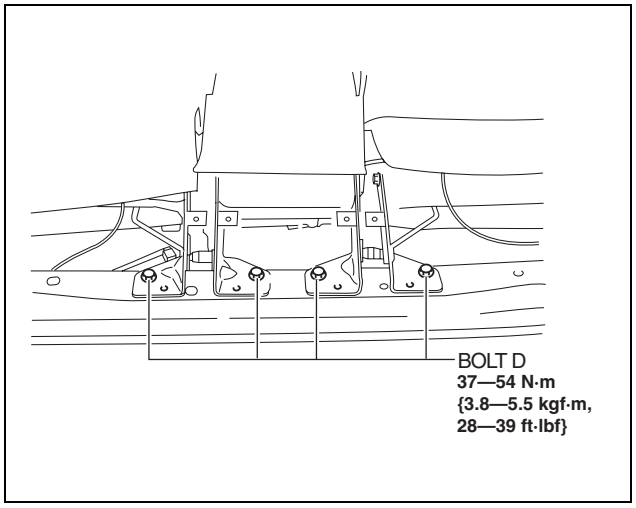
9. Remove bolts C.
10. Hold up the rear seat back.



ac5uuw00001898

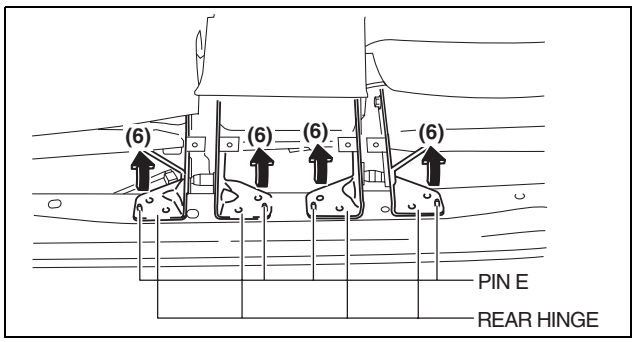
SEATS

11. Remove bolts D. (See 09-13-60 Rear Hinge Removal Note.)



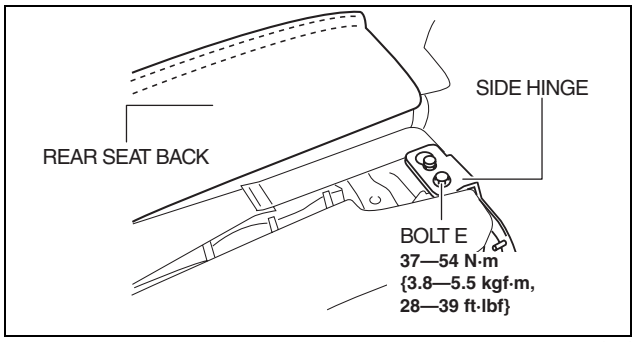
ac5uuw00001899

12. Move the rear hinge in the direction of the arrow (6) shown in the figure and disconnect pins E. (See Rear Hinge Installation Note.)



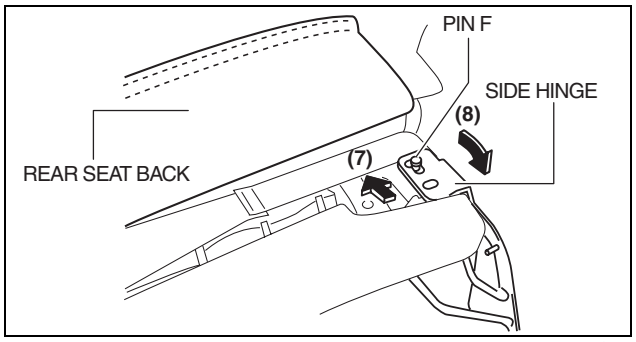
ac5uuw00001900

13. Remove bolt E.



ac5uuw00001901

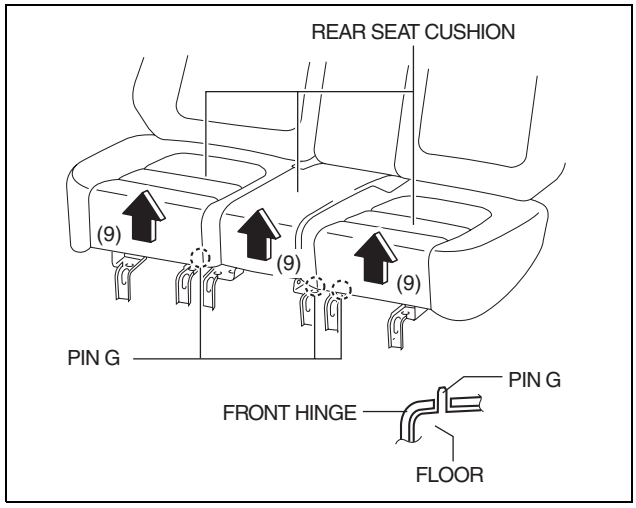
14. After moving the rear seat in the direction of the arrow (7) shown in the figure, remove pin F while moving the side hinge in the direction of the arrow (8).



ac5uuw00001902

SEATS

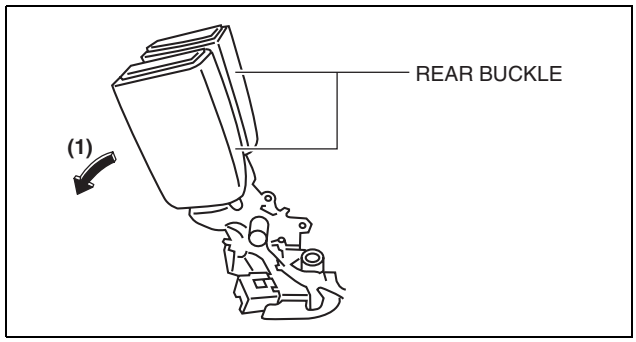
15. Lift up the rear seat cushion in the direction of the arrow (9) shown in the figure and set pins G aside from the front hinge.
16. Remove the rear seat. (See 09-13-59 Rear Seat Carry Into Vehicle Note.)
17. Install in the reverse order of removal. (See 09-13-60 Rear Seat Installation Note.)



ac5wzw0000319

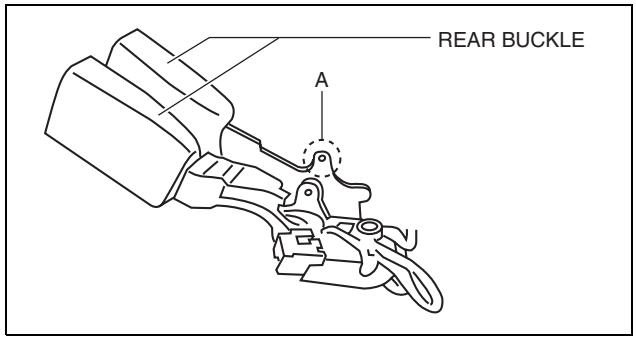
Rear Seat Carry Into Vehicle Note

1. Before carrying the rear seat into the vehicle, shift the rear buckle in the direction of the arrow (1).



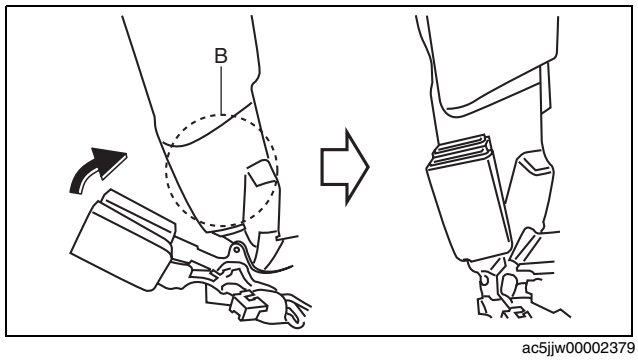
ac5uuw00002040

2. Insert a needle into area A shown in the figure and fix the rear buckle in the down condition
3. Carry the rear seat into the vehicle.



ac5uuw00002041

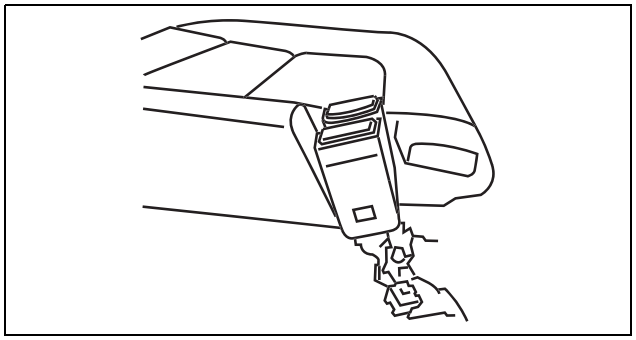
4. Remove the needle fixing the rear buckle tilted frontward, and fold the rear buckle to area B shown in the figure.



ac5jjw00002379

SEATS

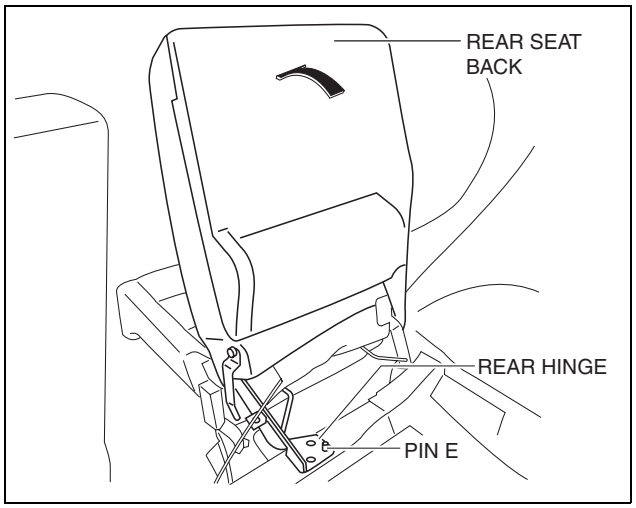
5. Fold the rear seat cushion, and verify that the rear buckle is folded into the rear seat cushion.



ac5jjw00002380

Rear Hinge Removal Note

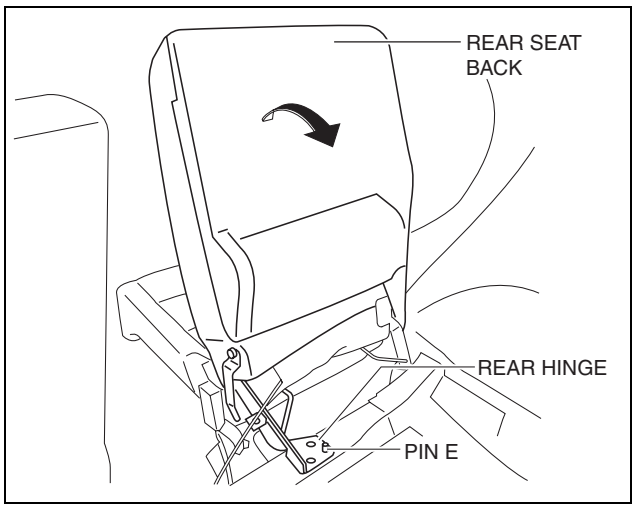
1. While moving the rear seat back in the direction of arrow shown in the figure, remove the rear hinge to pin E.



ac5wzw0000312

Rear Hinge Installation Note

1. While moving the rear seat back in the direction of arrow shown in the figure, install the rear hinge to pin E.



ac5jjw00002381

Rear Seat Installation Note

1. When installing the rear seat, temporarily tighten all of the tightening bolts.
2. After temporarily tightening all of the tightening bolts, shake the entire rear seat forward and back/left and right with the rear seat back folded to improve the installation fit of the entire seat.
3. Completely tighten the bolts in the reverse order of removal.

SEATS

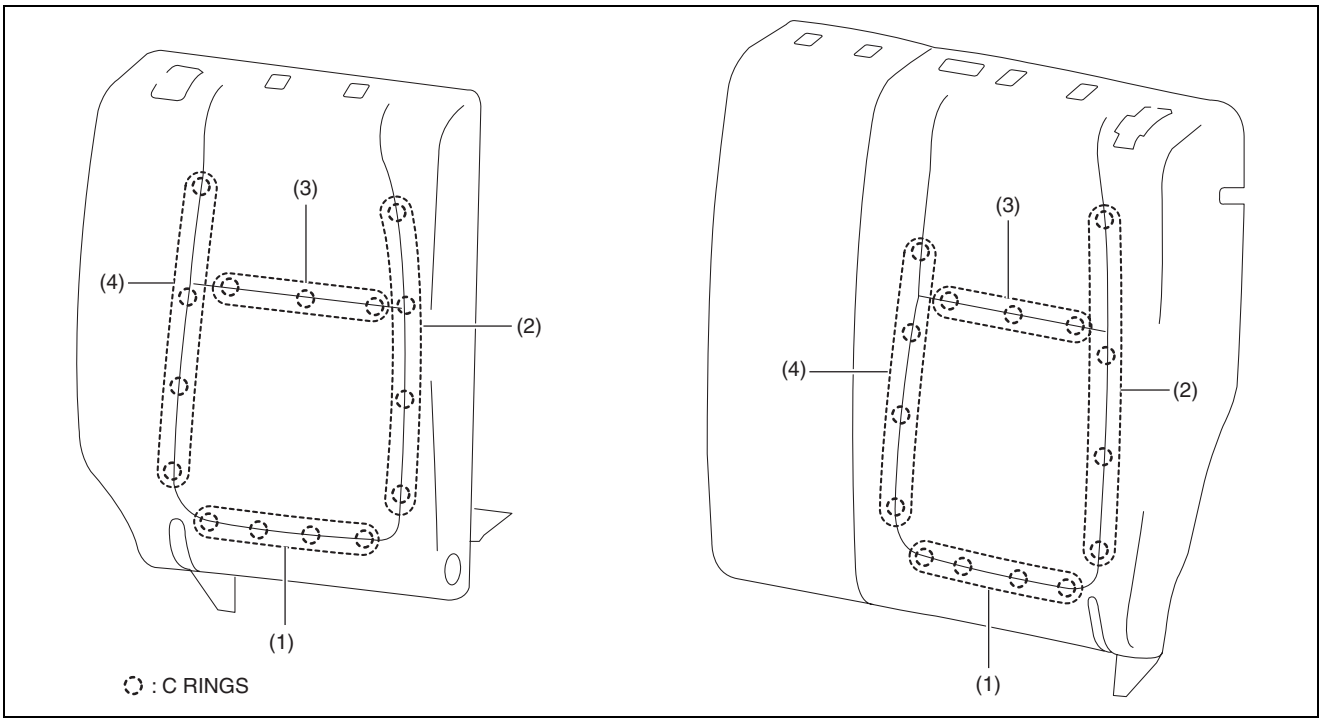
REAR SEAT BACK TRIM REMOVAL/INSTALLATION

id091300989400

6:4 Split Type

1. Remove the trunk board. (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
2. Remove the rear seat back. (See 09-13-61 REAR SEAT BACK REMOVAL/INSTALLATION.)
3. Remove the headrest.
4. Remove the rear seat back frame. (See 09-13-64 REAR SEAT BACK FRAME REMOVAL/INSTALLATION.)
5. Remove the C rings in the order of (1), (2), (3), and (4) shown in the figure, and remove the rear seat back trim from the rear seat back pad.



ac5uuw00001958

Caution

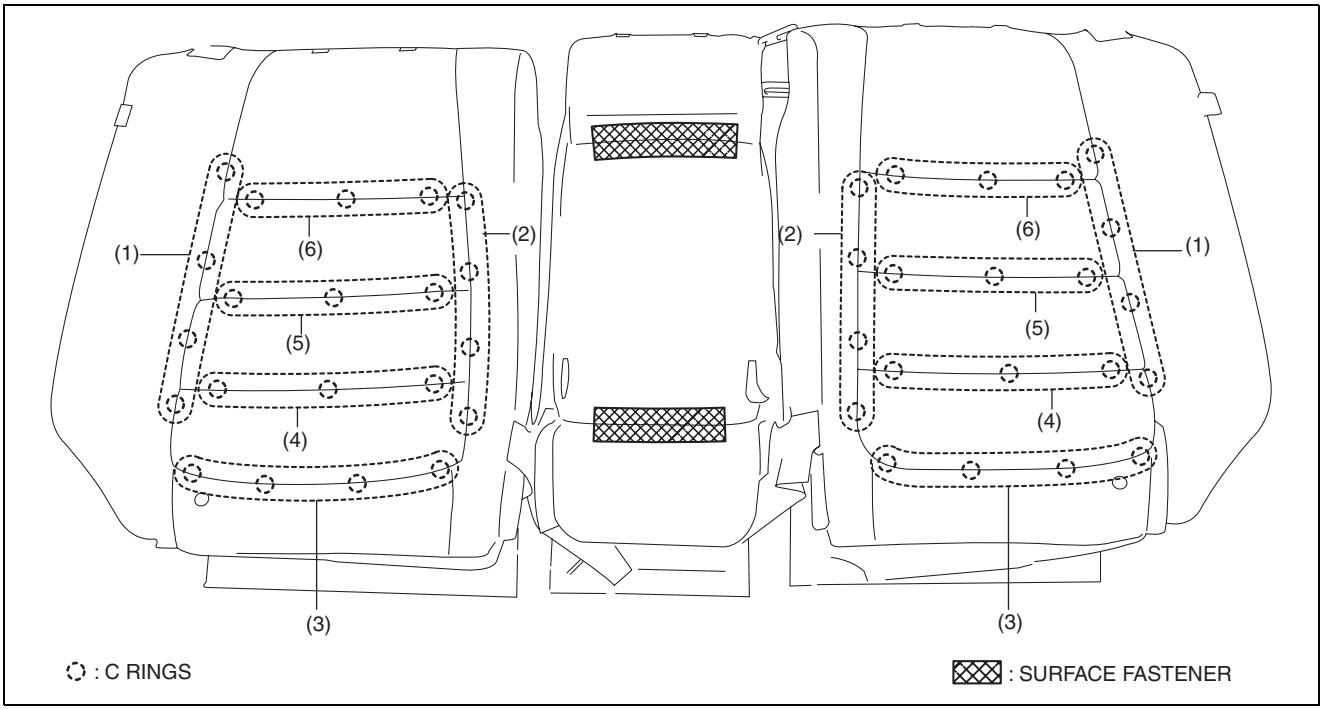
- **If a damaged C rings are reused, it may not be possible to install the rear seat back trim and rear seat back pad correctly. When removing and installing C rings, be careful not to damage them.**
- **If a C rings are damaged, replace it with a new one.**

6. Install in the reverse order of removal.

SEATS

4:2:4 Split Type

1. Remove the trunk board. (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
2. Remove the rear seat. (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)
3. Remove the rear seat back. (See 09-13-61 REAR SEAT BACK REMOVAL/INSTALLATION.)
4. Remove the headrest.
5. Remove the rear seat back frame. (See 09-13-64 REAR SEAT BACK FRAME REMOVAL/INSTALLATION.)
6. Partially peal back the rear seat back trim from the rear seat back pad, remove C rings in the order of (1), (2), (3), (4), (5), (6) shown in the figure. (LH/RH)



ac5uuw00001959

Caution

- **If a damaged C rings are reused, it may not be possible to install the rear seat back trim and rear seat back pad correctly. When removing and installing C rings, be careful not to damage them.**
- **If a C rings are damaged, replace it with a new one.**

7. Remove the surface fasteners while peeling back the rear seat back trim, and remove the rear seat back trim from the rear seat back pad.
8. Install in the reverse order of removal.

SEATS

REAR SEAT CUSHION REMOVAL/INSTALLATION

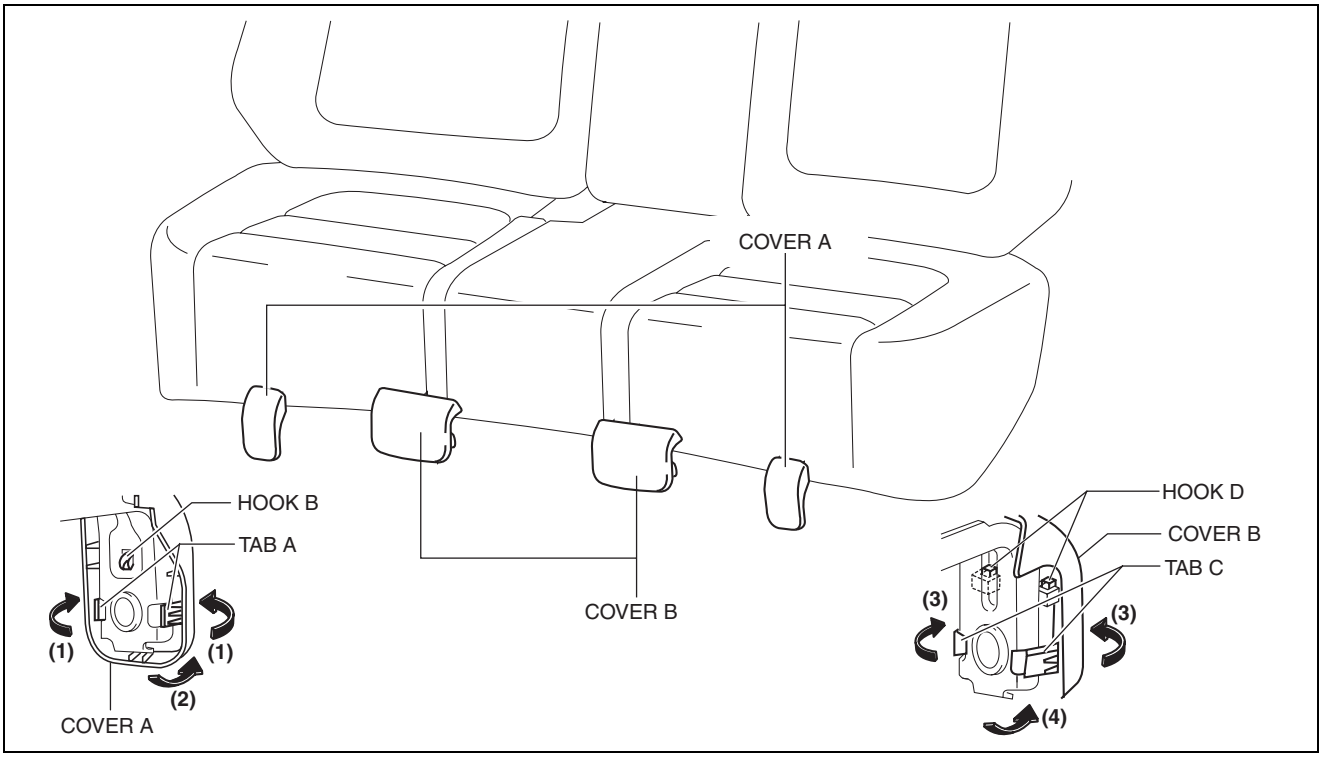
id091300912600

Caution

- **When removing or putting in the rear seat cushion, contact with the surrounding areas of the vehicle could cause scratches and damage. When removing or putting in the rear seat cushion, always use two or more persons to perform the work and be careful not to scratch or damage the rear seat cushion and the surrounding area of the vehicle.**
- **When performing the procedure with a rear seat cushion removed from the vehicle, perform the procedure on a clean cloth so as not to damage or soil the seat.**

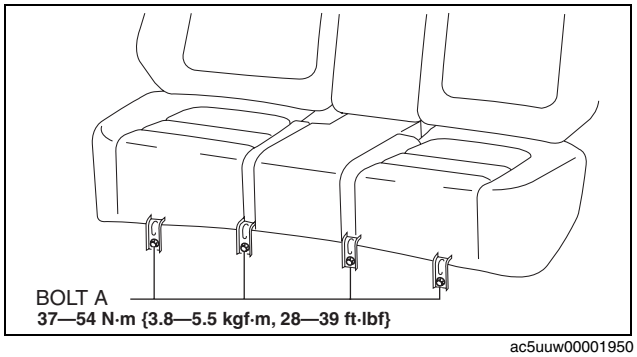
6:4 Split Type

1. Detach tabs A in the direction of the arrow (1) shown in the figure while lifting cover A in the direction of the arrow (2), detach hook B, and then remove cover A.



ac5uuw00001949

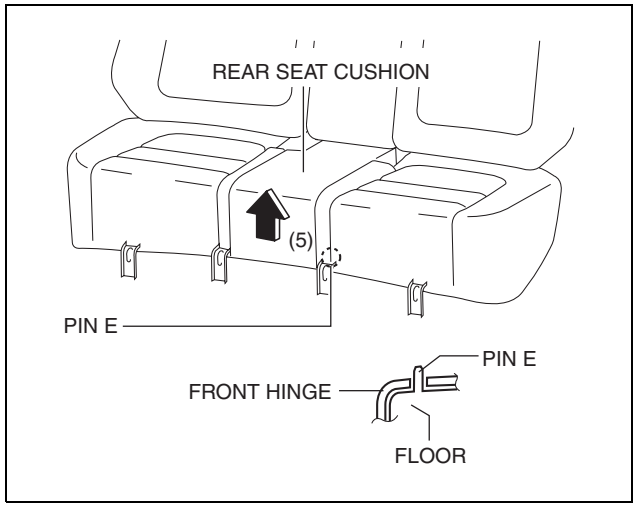
2. Detach tabs C in the direction of the arrow (3) shown in the figure while lifting cover B in the direction of the arrow (4), detach hook D, and then remove cover B.
3. Remove bolts A.



ac5uuw00001950

SEATS

4. Lift up the rear seat cushion in the direction of the arrow (5) shown in the figure and set the pin E aside from the front hinge.



ac5wxw0000320

5. Move the rear seat cushion in the direction of the arrow (6), (7)shown in the figure and set the hook F aside.
6. Remove the rear seat cushion.
7. Install in the reverse order of removal.

Warning

- **If the hook and wire are not locked, the seat may move during a collision and the occupant may be injured. After installing the rear seat cushion, verify that the hook and wire are locked.**

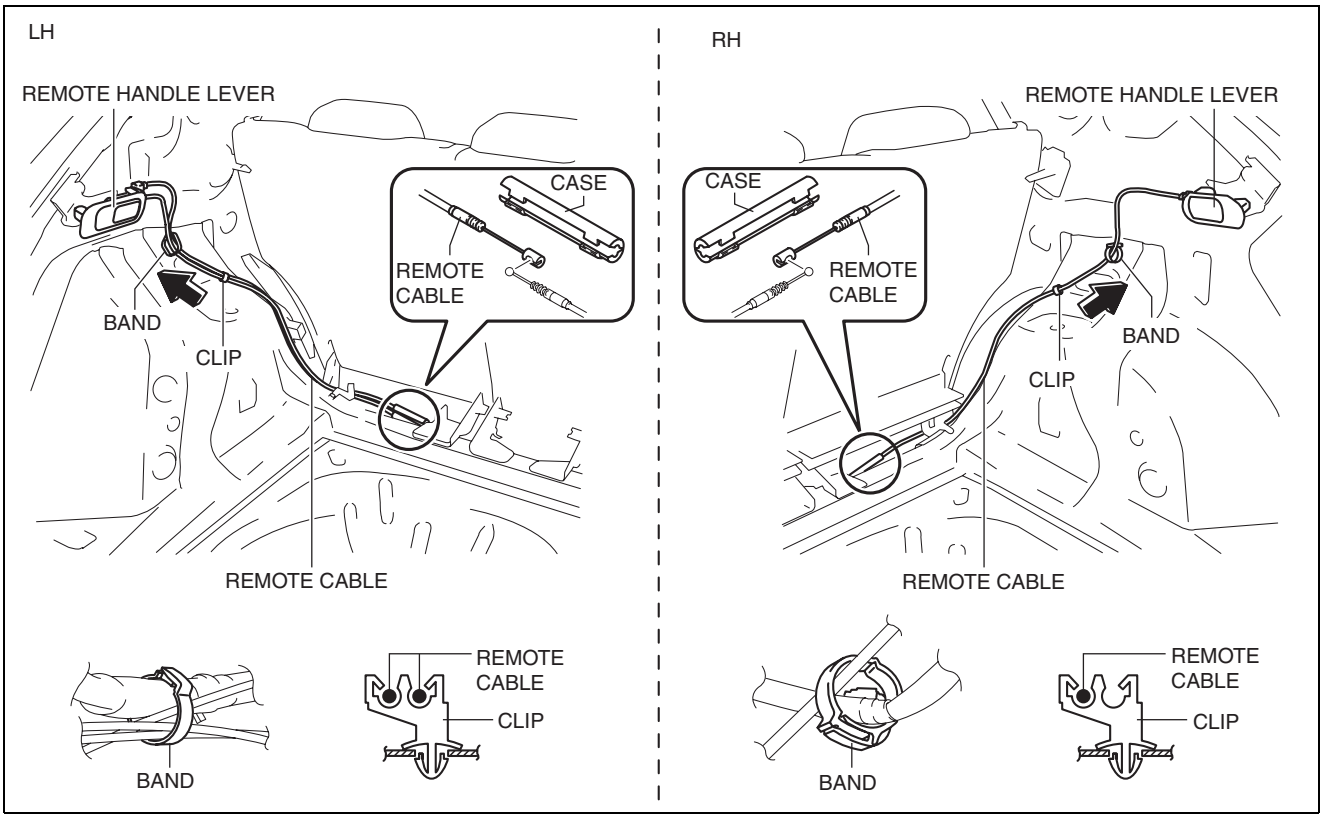
REMOTE HANDLE LEVER REMOVAL/INSTALLATION

id091300809300

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
   (2) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) Trunk side trim (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
3. Disconnect the remote cable on the remote handle lever side from the remote cable on the rear seat side.



ac5wzw0000319

4. Remove the remote cable on the remote handle lever side from the clip.
5. Pull out the remote cable on the remote handle lever side from the band in the direction of the arrow shown in the figure, and remove the remove handle lever.
6. Install in the reverse order of removal. (See 09-13-86 Remote Handle Lever Installation Note.)

SEATS

Remote Handle Lever Installation Note

1. Assemble the remote cable being careful of the following:
   - For the remote cable (center), route through the lower part of the rear hinge.
   - For the remote cable (LH/RH), route through the lower part of the ISO FIX anchor from the upper part.
   - Place the case on the mat of the rear part of the rear seat cushion.
2. After assembling the remote cable, shake the rear seat back up and down and verify that the rear seat back striker is securely locked to the rear seat back.
   - If there is a malfunction in locking, adjust the fixed position of the cable in the case.

Caution

- **If the remote cable is not installed using the correct routing, the remote seat back operation could malfunction causing the cable to break. When installing the remote cable, always install it using the route shown in the figure.**

2. Slide hooks A in the order of arrows (1), (2), (3) shown in the figure and disconnect them from hooks B.

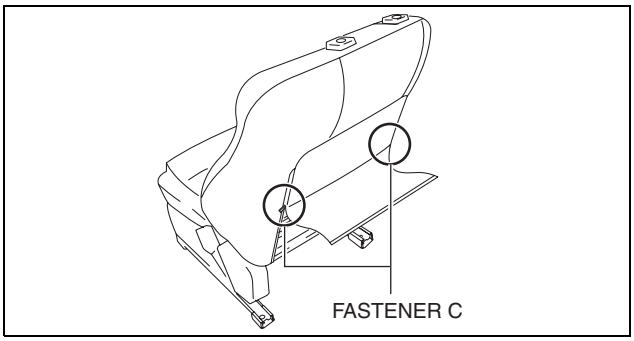
ac5uuw00002049

3. Open fasteners C.
4. Disconnect the lumber support motor connector.



ac5uuw00002050

Apply battery positive voltage to the lumber support motor terminals and inspect the front seat operation.

- If not as specified, replace the lumber support motor. (See 09-13-95 LUMBER SUPPORT MOTOR REMOVAL/INSTALLATION.)

Front seat operation	Connection	
	A	B

Warning

- **Handling a side air bag improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings in the Workshop Manual before handling the front seat (side air bag integrated). (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

1. Switch the ignition off (LOCK).
2. Disconnect the negative battery cable and wait for **1 min**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the front seat side cover. (See 09-13-41 FRONT SEAT SIDE COVER REMOVAL/INSTALLATION.)
4. Remove the screws.
5. Remove the power seat switch.
6. Install in the reverse order of removal.

Note

- The seat warmer switch are integrated into the climate control unit. (with full-auto air conditioner system)
- The seat warmer switch are integrated into the clock. (with manual air conditioner system)
- For the seat warmer switch removal/installation, refer to the climate control unit removal/installation. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) (with full-auto air conditioner system)
- For the seat warmer switch removal/installation, refer to the clock removal/installation. (See 09-22-92 CLOCK REMOVAL/INSTALLATION.) (with full-auto air conditioner system)

SEATS

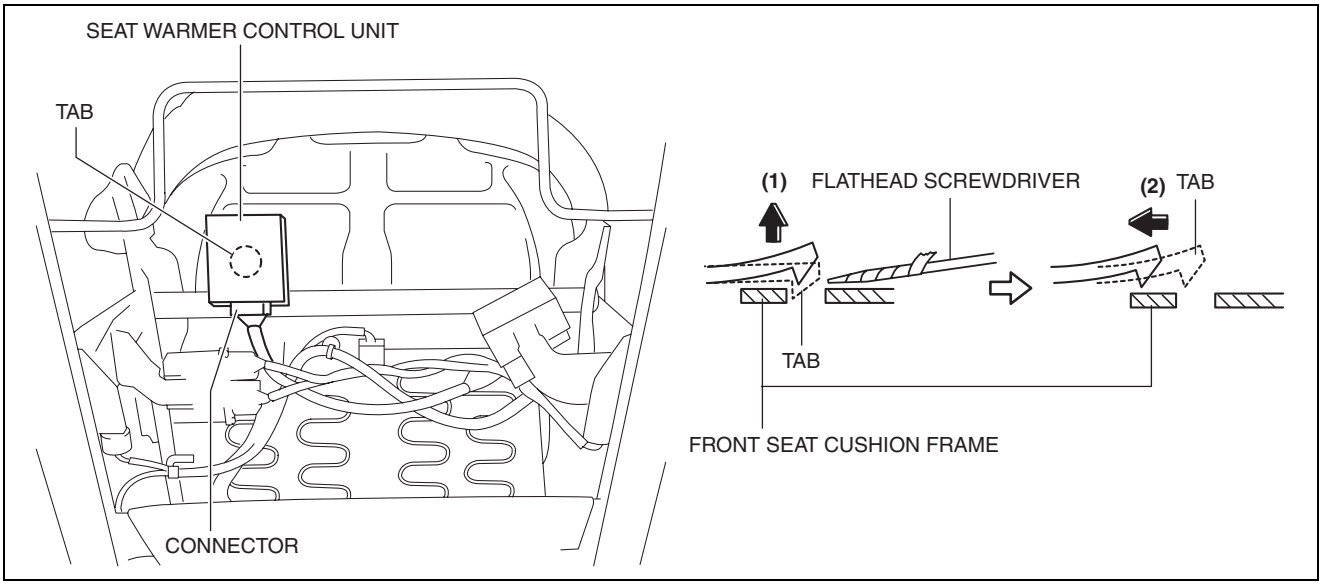
SEAT WARMER CONTROL UNIT REMOVAL/INSTALLATION

id091300977500

Warning

- **Handling a side air bag improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings/cautions in the Workshop Manual before handling the front seat (side air bag integrated). (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

1. Switch the ignition off (LOCK).
2. Disconnect the negative battery cable and wait for **1 min**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Disconnect the connector.



ac5uuw00002086

4. Using a flathead screwdriver, disconnect the seat warmer control unit in the direction of the arrow (2) while releasing tab in the direction of the arrow (1) shown in the figure.
5. Install in the reverse order of removal.

SEATS

SEAT WARMER CONTROL UNIT INSPECTION

id091300976500

Warning

- **Handling a front seat (with built-in side air bag) improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings before handling a front seat (with built-in side air bag). (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

Caution

- **After removing a front seat, do not operate the slider lever. If the slider lever is operated, the left and right slide positions will deviate, and the slide adjuster may be damaged after the front seat is installed.**
- **Verify that there are no malfunctions in the sliding mechanism after installing a front seat.**
- **When performing the procedure with a front seat removed from the vehicle, perform the procedure on a clean rag so as not to damage or soil the seat.**

Forward

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, inspect to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

SEATS

System Diagram

SEATS

Symptom Trouble Shooting Index

No.	Troubleshooting item	Description
1	Seat warmer function is inoperative (See 09-13-107 Inspection Procedure (No.1 Seat Warmer Function Is Inoperative).)	Seat warmer does not warm seat even though seat warmer switch is on
2	Seat warmer always operations (See 09-13-109 Inspection Procedure (No.2 Seat Warmer Always Operations).)	Seat warmer warms seat even though seat warmer switch is off
3	Temperature of the seat warmer cannot be adjusted (See 09-13-110 Inspection Procedure (No.3 Temperature Of Seat Warmer Cannot Be Adjusted).)	• Seat warmer does not adjust temperature even though seat warmer switch is switched between low and high • Seat warmer temperature continues to rise

Inspection Procedure (No.1 Seat Warmer Function Is Inoperative)

No.1	Seat warmer function is inoperative
DETECTION	Seat warmer does not warm seat even though seat warmer switch is on
POSSIBLE CAUSE	**The power supply is not supplied to filament of seat warmer** • Open circuit in seat warmer control unit power supply circuit: — Seat warmer control unit terminal O—Battery positive terminal — Seat warmer control unit terminal M—Battery positive terminal • SEAT WARM **20 A** fuse malfunction (Blown fuse): — Seat warmer control unit terminal O—Battery positive termina — Seat warmer control unit terminal M—Battery positive termina • Poor connect the connector: — Driver-side seat warmer unit connector—Seat warmer control unit connector — Passenger-side seat warmer unit connector—Seat warmer control unit connector • Open circuit in wiring harness between the following terminal: — Driver-side seat warmer unit terminal P—Driver-side seat warmer unit terminal A — Passenger-side seat warmer unit terminal N—Passenger-side seat warmer unit terminal B **Seat warmer control unit not operation** • Open circuit or short to ground in wiring harness between the following terminal: — FBCM terminal 1C—Seat warmer control unit terminal K — Seat warmer control unit terminal H—Body ground — Seat warmer control unit terminal G—Body ground **Seat warmer unit cannot control filament on** • Seat warmer control malfunction **Seat warmer filament does not generate heat** • Driver-side seat warmer unit (seat cushion side) malfunction • Driver-side seat warmer unit (seat back side) malfunction • Passenger-side seat warmer unit (seat cushion side) malfunction • Passenger-side seat warmer unit (seat back side) malfunction **Seat warmer control unit cannot receive operation signal** • Seat warmer control unit malfunction • Open circuit or short to ground in wiring harness between the following terminal: — Seat warmer control unit terminal I—Climate control unit terminal 1C (with full-auto air conditioner) — Seat warmer control unit terminal I—Clock terminal D (with manual air conditioner)

SEATS

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**PERFORM DTC INSPECTION** • Perform meter and climate control unit DTC inspection. • Verify the meter DTC inspection and clock output check mode. • Are DTCs and error codes output?	Yes	Perform the diagnosis according to the inspection procedure for each code.
		No	Go to the next step.
2	**DETERMINE IF THE MALFUNCTION CAUSE IS THE SEAT WARMER SWITCH** • Select either Low, Mid, or High on the seat warmer switch. • Does the seat warmer switch LED illuminate?	Yes	Go to the next step.
		No	Inspect the climate control unit or clock. (See 07-40A-33 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].) (See 09-22-95 CLOCK INSPECTION.)
3	**DETERMINE MALFUNCTIONING SYSTEM** • Are the seat warmers on both sides not operating?	Yes	Go to step 9.
		No	Go to the next step.
4	**INSPECT THE SEAT WARMER CONTROL UNIT POWER SUPPLY FUSE** • Inspect the SEAT WARM **20 A** fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	• If the fuse is deterioration: — Replace the malfunctioning fuse. • If the fuse is blown Repair the short to ground in wiring harness between the following terminals: — SEAT WARM **20 A** fuse—Seat warmer control unit O — SEAT WARM **20 A** fuse—Seat warmer control unit M
5*	**DETERMINE IF CAUSE OF MALFUNCTION IS CONTROLLER POWER SUPPLY WIRING HARNESS FOR SEAT WARMER OR OTHER CAUSE** • Switch the ignition off (LOCK). • Disconnect the seat warmer control unit connector. • Measure the voltage at the following terminal (wiring harness-side): — Seat warmer control unit terminal M — Seat warmer control unit terminal O • Is the voltage **B+**?	Yes	Go to the next step.
		No	• Repair or replace the open circuit at the following wiring harness. — SEAT WARMER 20 A fuse—Seat warmer control unit
6*	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN SEAT WARMER CONTROL UNIT POWER SUPPLY WIRING HARNESS** • Seat warmer control unit connector are disconnected. • Switch the ignition off (LOCK). • Measure the voltage at the following terminal (wiring harness-side): — Seat warmer control unit terminal K • Is the voltage **B+**?	Yes	Go to the next step.
		No	• Inspect the FBCM 1C terminal. (See 09-40-3 FRONT BODY CONTROL MODULE (FBCM) INSPECTION.) • Repair or replace the open circuit at the following wiring harness. — FBCM terminal 1C—Seat warmer control unit terminal K
7*	**VERIFY IF MALFUNCTION CAUSE IS SHORT TO GROUND IN SEAT WARMER CONTROL UNIT** • Seat warmer control unit connector on the side that is not operating is disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Seat warmer control unit terminal on the side that is not operating H—Ground — Seat warmer control unit terminal on the side that is not operating G—Ground • Is there continuity?	Yes	Go to the next step.
		No	• Inspect the open circuit following. — Seat warmer unit terminal H—GND — Seat warmer unit terminal G—GND • Inspect the GND connector terminals for poor connection. • Repair or replace the malfunction.

SEATS

STEP	INSPECTION		ACTION
8*	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS OF SEAT WARMER SWITCH SIGNAL** • Seat warmer control unit connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side): **With full-auto air conditioner** — Seat warmer control unit terminal I—Climate control terminal 1C **With manual air conditioner** — Seat warmer control unit terminal I—Clock terminal D • Is there continuity?	Yes	Go to the next step.
		No	• Inspect the open circuit following. — Seat warmer control unit terminal I—Climate control terminal 1C — Seat warmer control unit terminal I—Clock terminal D
9*	**INSPECT SEAT WARMER CONTROL UNIT AND SEAT WARMER UNIT CONNECTOR** • Disconnect the seat warmer control unit and seat warmer unit connector on the side not operating. • Inspect the seat warmer control unit and seat warmer unit connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the malfunctions.
		No	Go to the next step.
10*	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS OF SEAT WARMER UNIT CIRCUIT** • Switch the ignition off (LOCK). • Disconnect the seat warmer control unit connector. • Inspect for continuity between the following terminals (wiring harness-side): — Driver-side seat warmer unit terminal P—A — Passenger-side seat warmer unit terminal N—B • Is there continuity?	Yes	Go to the next step.
		No	Replace the seat warmer unit.
11	**DETERMINE IF THE MALFUNCTION CAUSE IS SEAT WARMER CONTROL UNIT** **With full-auto air conditioner** — Replace the climate control unit. **With manual air conditioner** — Replace the clock. • Does the seat warmer system operate?	Yes	Troubleshooting completed.
		No	Replace the seat warmer control unit.

Inspection Procedure (No.2 Seat Warmer Always Operations)

No.2	Seat warmer always operations
DETECTION	Seat warmer warms seat even though seat warmer switch is off
POSSIBLE CAUSE	**Seat warmer switch is always ON** • Seat warmer switch malfunction **Seat warmer control unit falsely detects seat warmer switch is ON** • Seat warmer control unit malfunction • Short circuit in wiring harness between the following terminal: — Seat warmer control unit terminal I—Climate control unit terminal 1C — Seat warmer control unit terminal I—Clock terminal D

SEATS

Diagnostic procedure

STEP	INSPECTION		ACTION
1*	**DETERMINE IF THE MALFUNCTION CAUSE IS THE SEAT WARMER SWITCH** • Switch the ignition off (LOCK). **With full-auto air conditioner** — Disconnect the climate control unit connector. **With manual air conditioner** — Disconnect the clock connector. • Switch the ignition ON (engine off or on). • Is the seat warmer system operating?	Yes	Go to the next step.
		No	Replace the climate control unit or clock.
2	**DETERMINE IF THE MALFUNCTION CAUSE IS THE SEAT WARMER COTROL UNIT** • Disconnect the seat warmer control unit connector. • Measure the voltage between seat warmer control unit terminal I and body ground. • Is the voltage **1.0 or more**?	Yes	Repair or replace for a short to ground in the wiring harness.
		No	Replace the seat warmer control unit. (See 09-13-104 SEAT WARMER CONTROL UNIT REMOVAL/INSTALLATION.)

Inspection Procedure (No.3 Temperature Of Seat Warmer Cannot Be Adjusted)

No.3	Temperature of seat warmer cannot be adjusted
DETECTION	• Seat warmer does not adjust temperature even though seat warmer Lo/Mid/Hi switch is switched between low and high • Seat warmer temperature continues to rise
POSSIBLE CAUSE	**Seat warmer switch does not Low/Mid/Hi switched** • Seat warmer switch malfunction **Seat warmer control unit falsely detects always seat warmer switch to Low, Mid or Hi** • Seat warmer control unit malfunction • Short to ground in wiring harness between the following terminal: — Seat warmer control unit terminal I—Climate control unit terminal 1C — Seat warmer control unit terminal I—Clock terminal D **Seat warmer control unit cannot control seat warmer unit** • Seat warmer control unit malfunction • Thermostat (Built-in seat warmer unit) malfunction • Short to ground circuit in wiring harness between the following terminal: — Driver-side seat warmer unit—Seat warmer control unit terminal C — Passenger-side seat warmer unit—Seat warmer control unit terminal D

SEATS

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**DETERMINE MALFUNCTIONING SYSTEM** • Are the seat warmers on both sides not operating?	Yes	Replace the seat warmer control unit. (See 09-13-104 SEAT WARMER CONTROL UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
2*	**VERIFY IF MALFUNCTION CAUSE IS OPEN CIRCUIT IN WIRING HARNESS OF SEAT WARMER UNIT CIRCUIT** • Switch the ignition off (LOCK). • Disconnect the seat warmer control unit connector. • Inspect for continuity between the following terminals (wiring harness-side): — Driver-side seat warmer unit terminal C—E — Passenger-side seat warmer unit terminal D—F • Is there continuity?	Yes	Go to the next step.
		No	Replace the seat warmer unit.
3*	**VERIFY IF MALFUNCTION CAUSE IS SHORT CIRCUIT IN WIRING HARNESS OF SEAT WARMER UNIT CIRCUIT** • Inspect for continuity between the following terminals (wiring harness-side): — Driver-side seat warmer unit terminal C—Body ground — Passenger-side seat warmer unit terminal D—Body ground • Is there continuity?	Yes	Repair or replace for a short to ground in the wiring harness.
		No	Replace the seat warmer control unit.

SEATS

SEAT WARMER UNIT INSPECTION

id091300801400

Warning

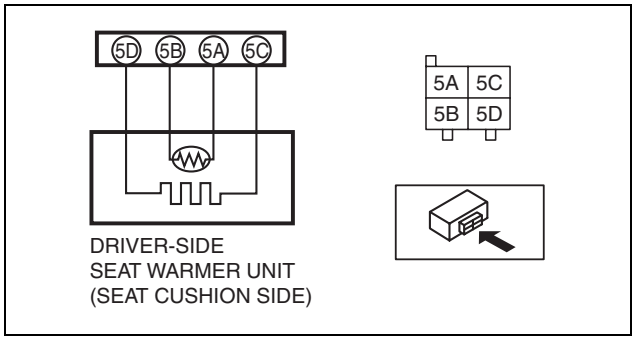
- **Handling a side air bag improperly can accidentally operate (deploy) the air bag, which may seriously injure you. Read the service warnings in the Workshop Manual before handling the front seat (side air bag integrated). (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**
- **If the sliding mechanisms on both sides are not locked after assembling the front seat, the front seat will operate accidentally while the vehicle is driven, which could result in serious injury. After assembling the front seat, shake it up and down and verify that the sliding mechanism on the both sides are locked.**

Caution

- **If the slide bar is operated after the front seat is removed, the left/right slide positions will deviate and the adjuster unit could be damaged after the front seat is installed. After removing a front seat, do not operate the slider lever.**
- **Verify that there are no malfunctions in the forward/back slide of the seat and in the adjuster unit after installing a front seat.**
- **When performing the procedure with a front seat removed from the vehicle, perform the procedure on a clean cloth so as not to damage or soil the seat.**

Driver-Side
Seat cushion side

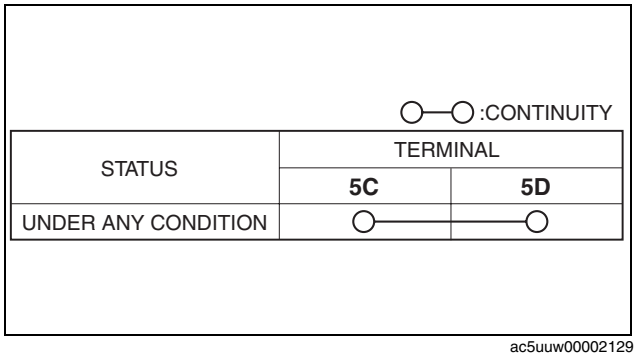
1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait **1 min. or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the front seat. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.)
4. Inspect for continuity between the seat warmer unit connector terminal 5C—5D.



DRIVER-SIDE
SEAT WARMER UNIT
(SEAT CUSHION SIDE)

ac5uuw00002128

- If not as specified, replace the front seat cushion pad. (See 09-13-26 FRONT SEAT CUSHION TRIM REMOVAL/INSTALLATION.)

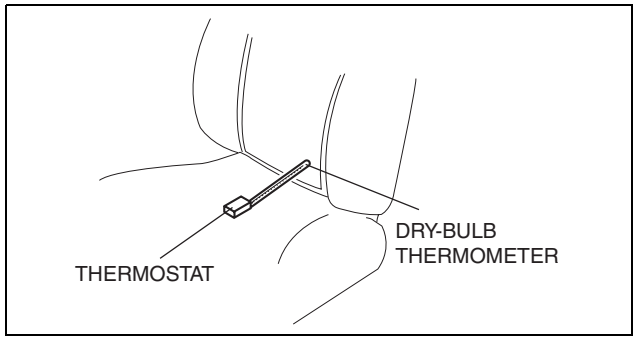


ac5uuw00002129

SEATS

5. Measure the temperature around the thermostat.

   Note
   - To make the temperature around the thermostat at the normal temperature, the seat warmer is left for 30 minutes or more while turned off.



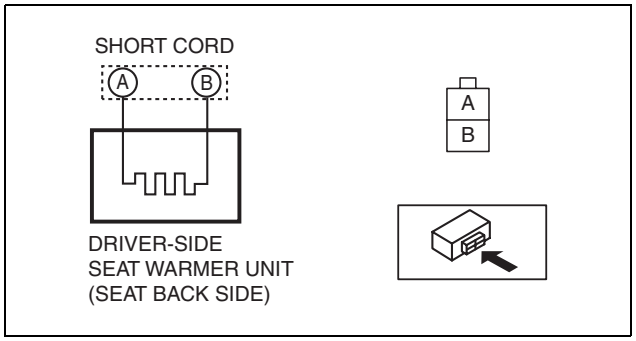
am6zzw0000756

6. Measure the resistance between the seat warmer unit connector terminal 5A—5B, records with the surrounding temperature of the thermostat measured beforehand.
7. Connect the negative battery cable.
8. Connect the seat warmer unit connector.
9. Switch the seat warmer switch to Lo position, and warm the seat warmer.
10. Measure the resistance between the seat warmer unit connector terminal 5A—5B, and record it.
11. Switch the seat warmer switch to High position, and warm the seat warmer.
12. Measure the resistance between the seat warmer unit connector terminal 5A—5B, it is confirmed that there is a change from the resistance recorded beforehand.
    - If the change in resistance cannot be confirmed, replace the front seat cushion pad. (See 09-13-26 FRONT SEAT CUSHION TRIM REMOVAL/INSTALLATION.)

SEATS

Seat back side

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait **1 min. or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the front seat. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.)
4. Inspect for continuity between the seat warmer unit connector (short code) terminal A—B.



ac5uuw00002130

- If not as specified, replace the front seat back pad. (See 09-13-11 FRONT SEAT BACK TRIM REMOVAL/INSTALLATION.)

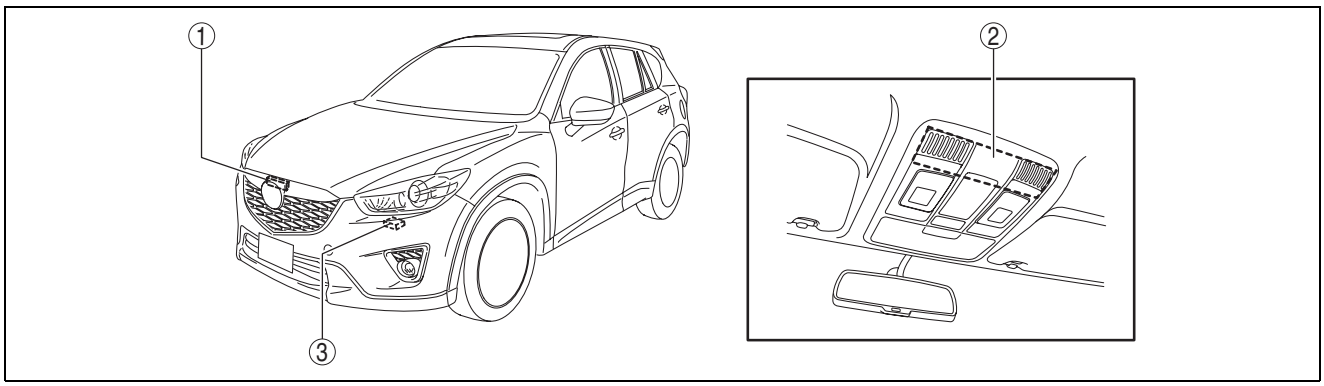
4	Keyless antenna (See 09-14-66 KEYLESS ANTENNA REMOVAL/INSTALLATION.)

Theft-deterrent System
With intruder sensor

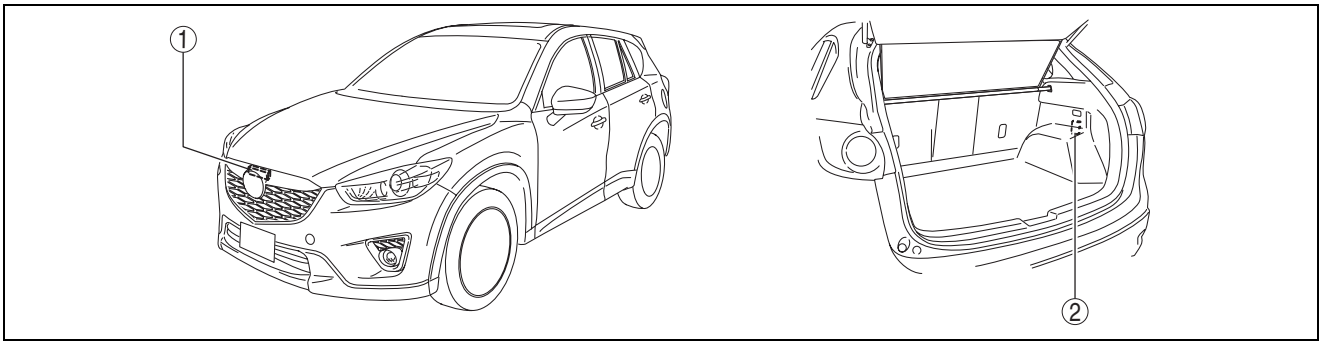


ac5wzw0000247

1	Bonnet latch switch (See 09-14-20 BONNET LATCH SWITCH INSPECTION.)
2	Intruder sensor (See 09-14-90 INTRUDER SENSOR REMOVAL/INSTALLATION.) (See 09-14-91 INTRUDER SENSOR INSPECTION.)
3	Theft-deterrent siren (See 09-14-86 THEFT-DETERRENT SIREN REMOVAL/INSTALLATION.) (See 09-14-88 THEFT-DETERRENT SIREN INSPECTION.)

SECURITY AND LOCKS

Without intruder sensor



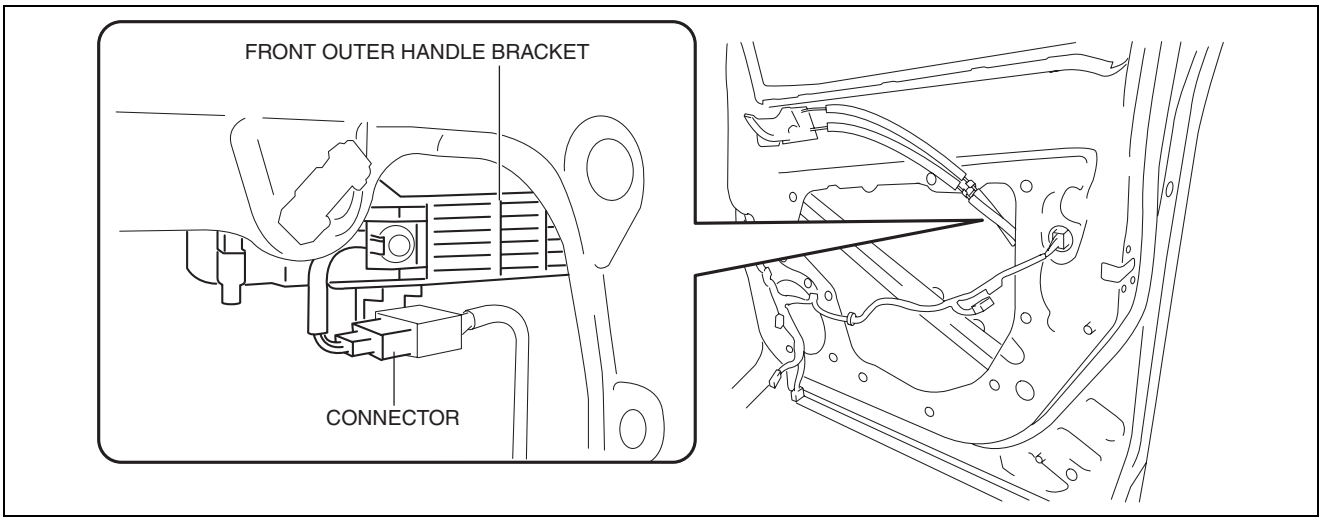
ac5wzw0000247

1	Bonnet latch switch (See 09-14-20 BONNET LATCH SWITCH INSPECTION.)
2	Theft-deterrent horn (See 09-14-92 THEFT-DETERRENT HORN REMOVAL/INSTALLATION.) (See 09-14-93 THEFT-DETERRENT HORN INSPECTION.)

FRONT OUTER HANDLE REMOVAL/INSTALLATION

id091400510100

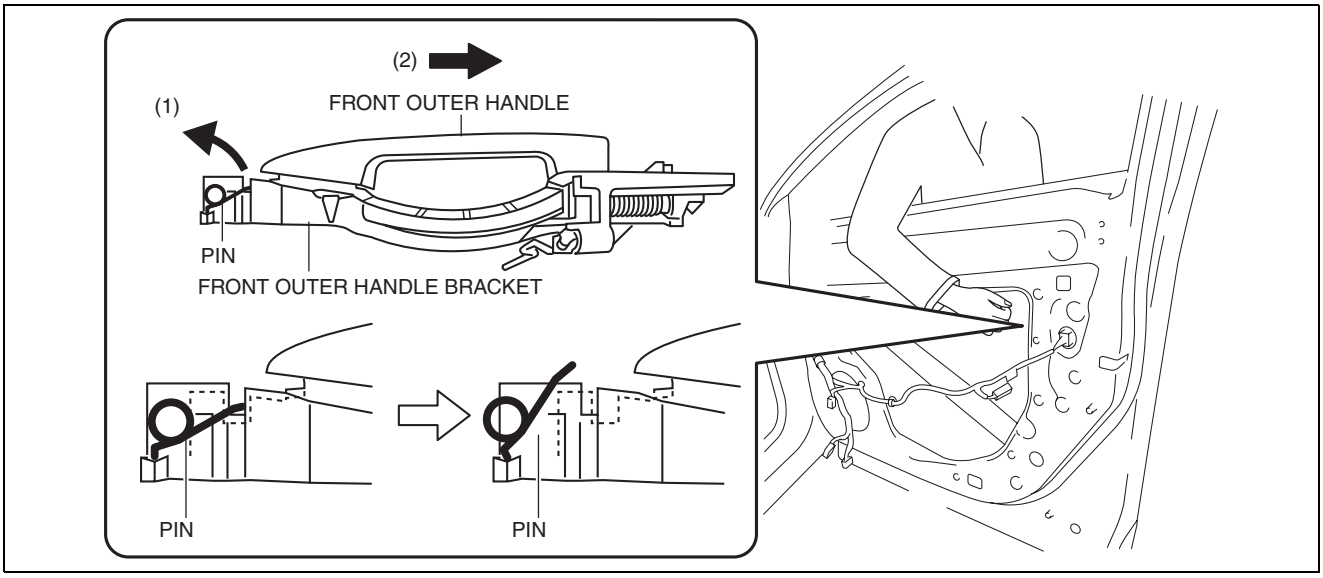
1. Perform the front door glass preparation. (See 09-12-4 FRONT DOOR GLASS REMOVAL/INSTALLATION.)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the following parts:
   (1) Inner garnish (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)
   (2) Front door trim (See 09-17-65 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
   (3) Front door glass (See 09-12-4 FRONT DOOR GLASS REMOVAL/INSTALLATION.)
   (4) Front door module panel (See 09-11-6 FRONT DOOR MODULE PANEL REMOVAL/INSTALLATION.)
   (5) Front door key cylinder (See 09-14-30 FRONT DOOR KEY CYLINDER REMOVAL/INSTALLATION.)
4. Disconnect the keyless antenna connector (With advanced keyless entry system).



ac5wzw0000095

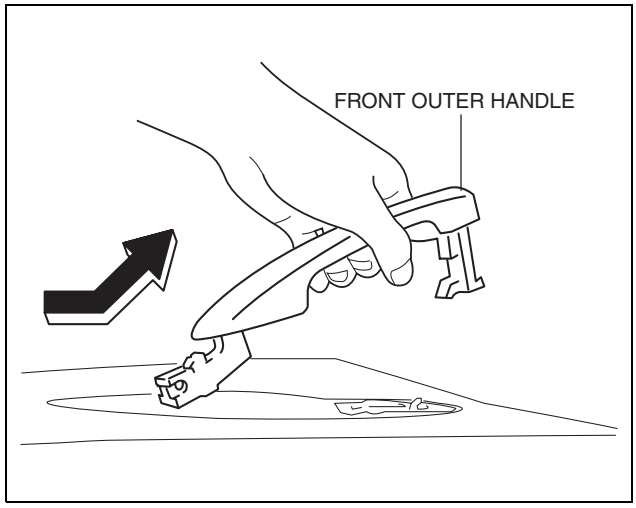
SECURITY AND LOCKS

5. While pulling the front outer handle bracket pin in the direction of arrow (1) shown in the figure, pull the front outer handle in the direction of arrow (2) to detach the front outer handle bracket pin and the front outer handle.

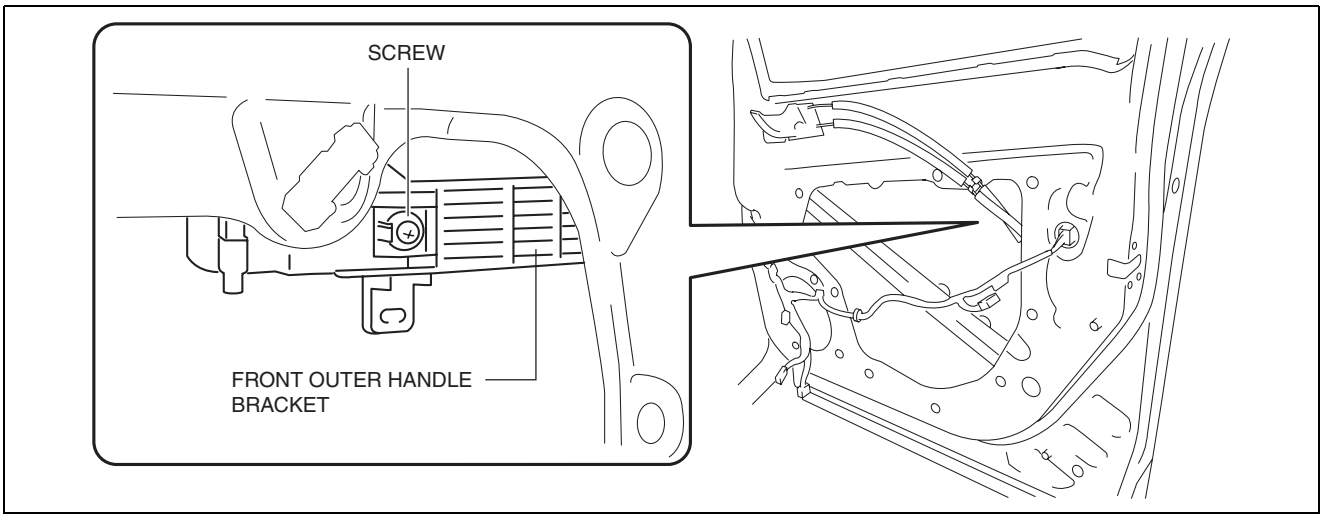


ac5wzw0000095

6. Remove the front outer handle in the direction of the arrow shown in the figure.
7. Loosen the screw securing the front outer handle bracket.



ac5wzw0000095



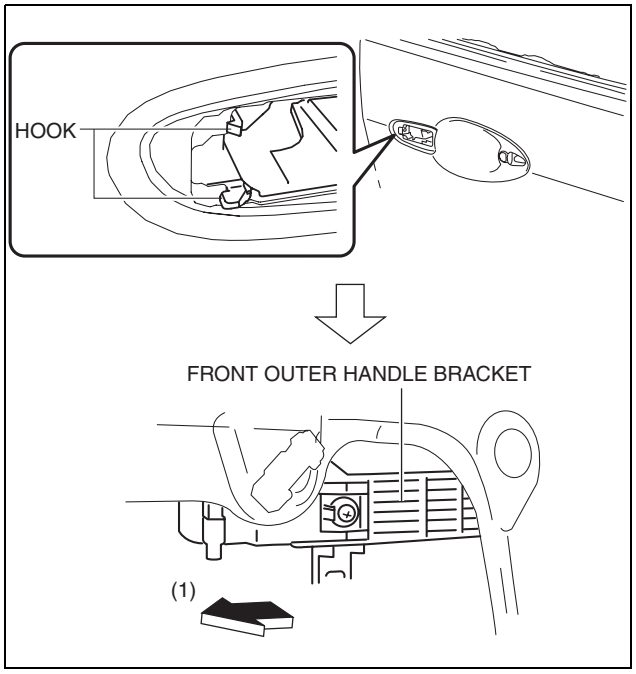
ac5wzw0000095

Note

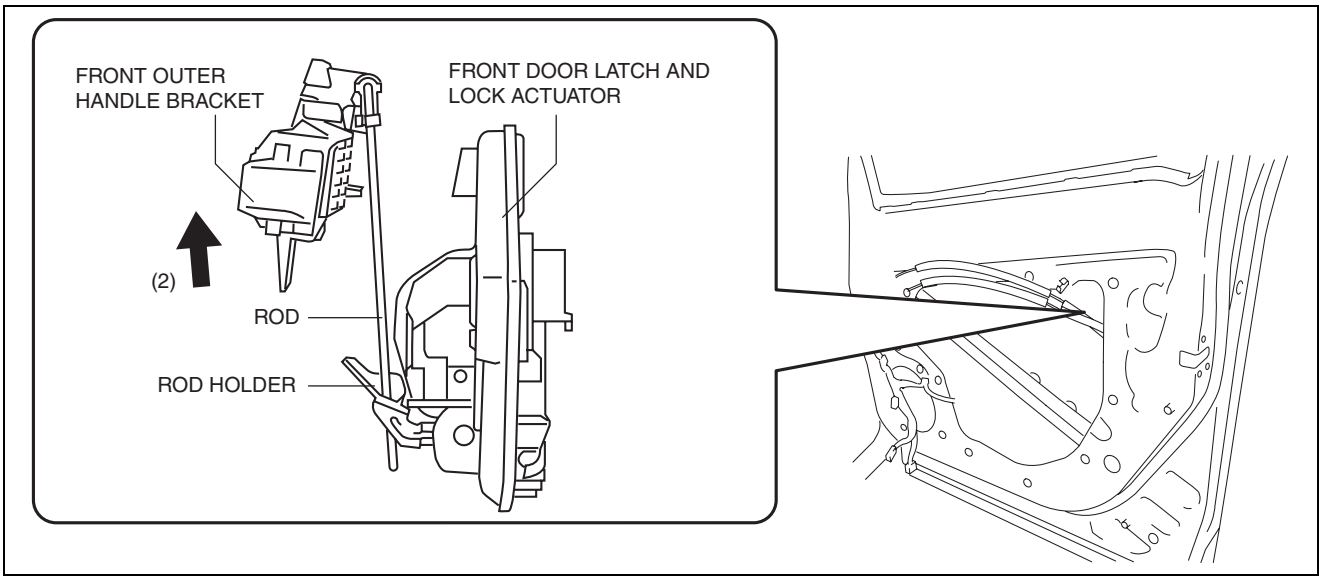
- The screw cannot be removed because the front outer handle bracket has a stopper which prevents the screw from falling.

SECURITY AND LOCKS

8. Pull the front outer handle bracket in the direction of arrow (1) shown in the figure and detach the front outer handle bracket hooks from the body.
9. Lift the front outer handle bracket in the direction of arrow (2) shown in the figure to pull the rod out of the rod holder. (See 09-14-11 Front Outer Handle Bracket Installation Note.)

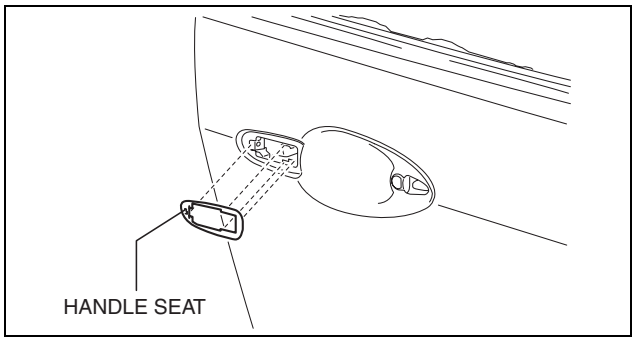


ac5wzw0000096



ac5wzw0000318

10. Remove the front outer handle bracket.
11. Remove the handle seat from the body.
12. Install in the reverse order of removal.

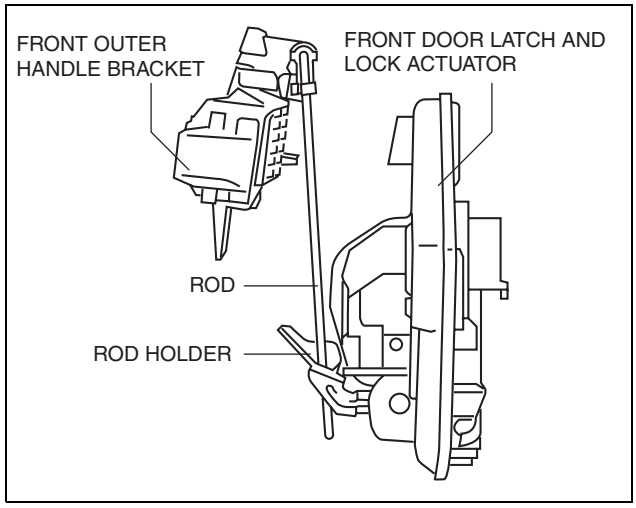


ac5wzw0000274

SECURITY AND LOCKS

Front Outer Handle Bracket Installation Note

- To assure that the rod is inserted into the rod holder hole, verify that the there is no excessive play.



ac5wzw0000275

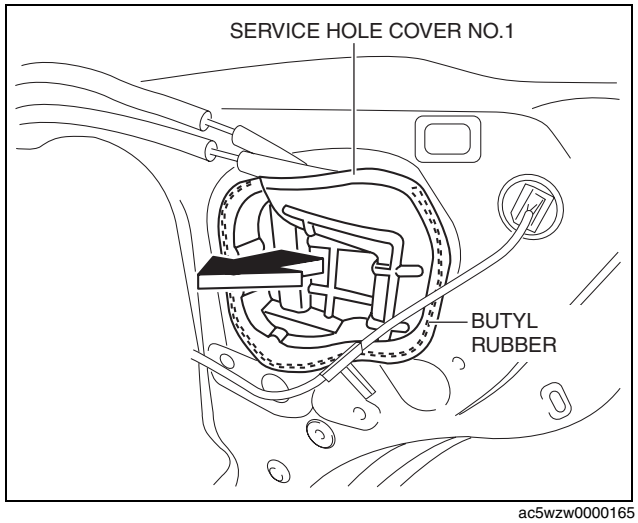
REAR OUTER HANDLE REMOVAL/INSTALLATION

id091400510200

1. To provide enough work space when removing the rear outer handle, open the rear door glass completely.
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the rear door trim. (See 09-17-74 REAR DOOR TRIM REMOVAL/INSTALLATION.)
4. Remove service hole cover No. 1 in the direction of the arrow shown in the figure.

Caution

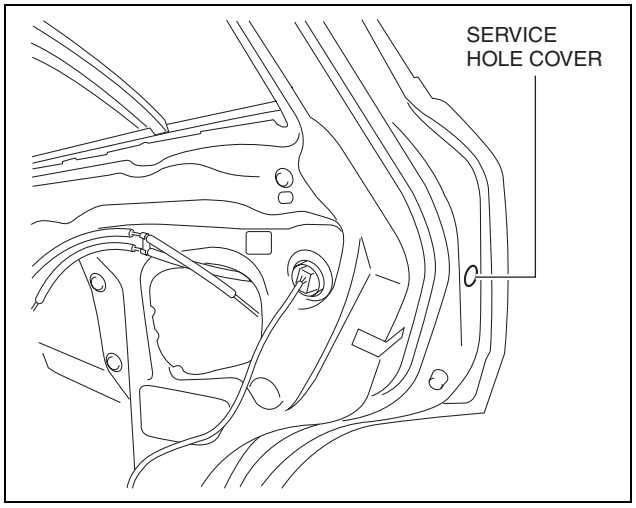
- **When removing service hole cover No.1, remove it while gradually stripping the butyl rubber. Otherwise service hole cover No.1 may be deformed.**



ac5wzw0000165

SECURITY AND LOCKS

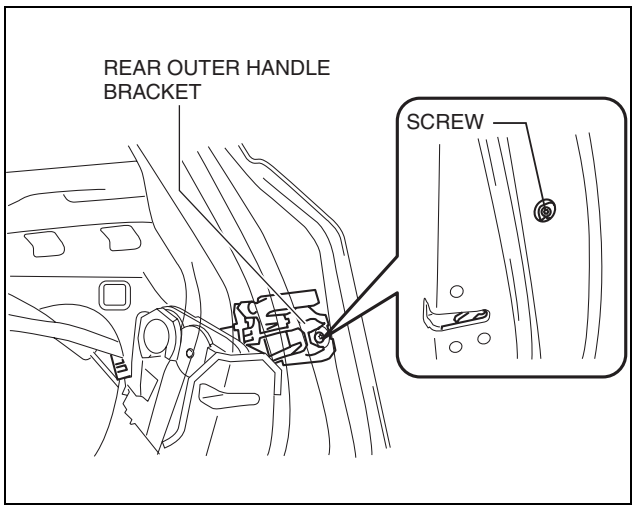
5. Remove the service hole cover.



ac5wzw0000165

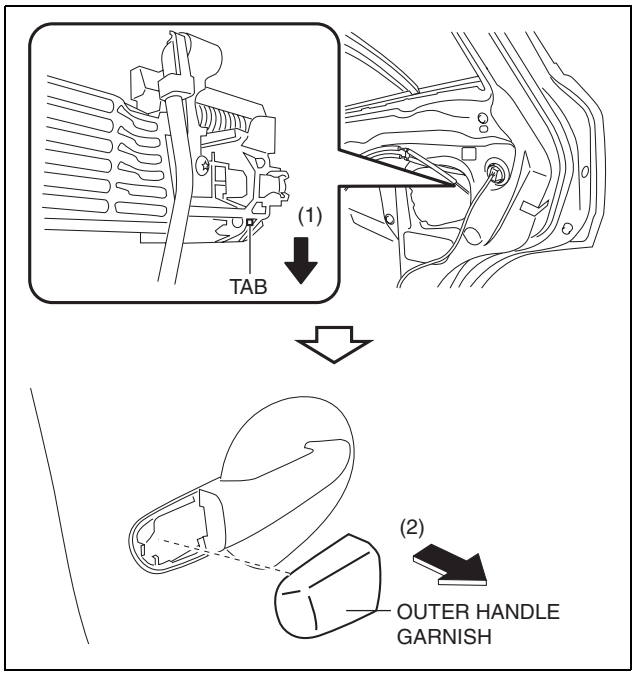
6. Loosen the screw from the rear outer handle bracket.

Note
- The screw cannot be removed because the rear outer handle bracket has a stopper which prevents the screw from falling.



ac5wzw0000165

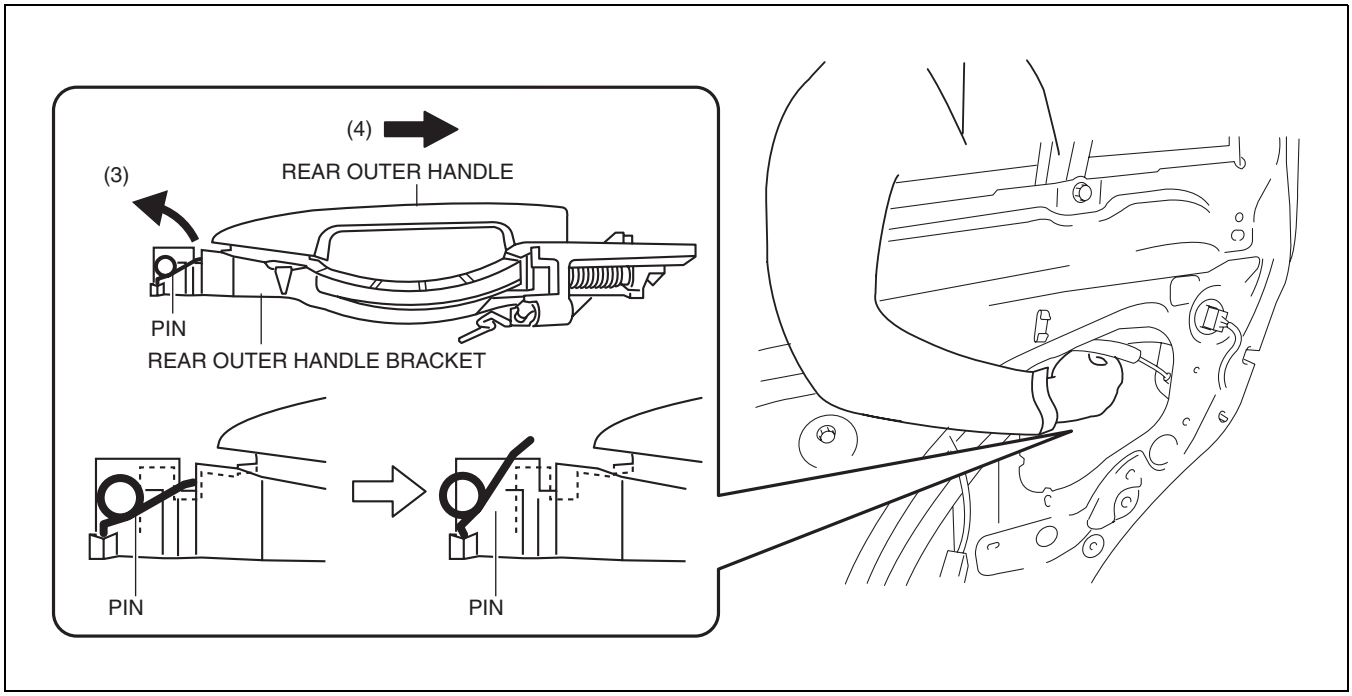
7. While pressing the rear outer handle bracket in the direction of arrow (1) shown in the figure, pull the outer handle garnish in the direction of arrow (2) to detach the rear outer handle bracket from the outer handle garnish.
8. Remove the outer handle garnish from the rear outer handle bracket.



ac5wzw0000165

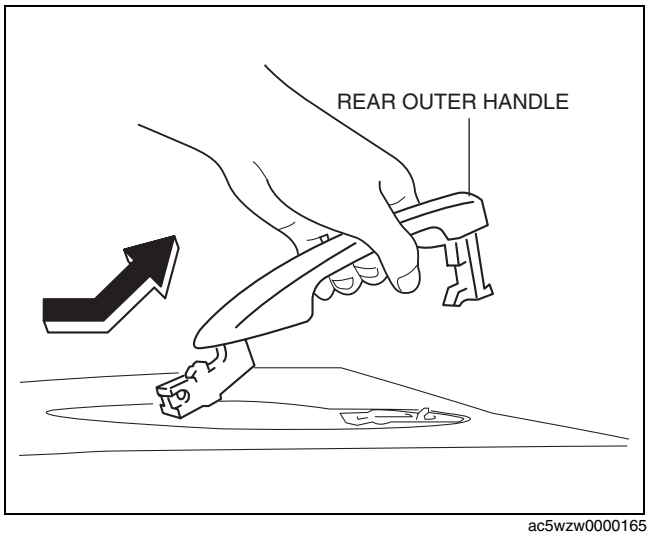
SECURITY AND LOCKS

9. While pulling the rear outer handle bracket in the direction of arrow (3) shown in the figure, pull the rear outer handle in the direction of arrow (4) to detach the rear outer handle bracket pin from the rear outer handle.

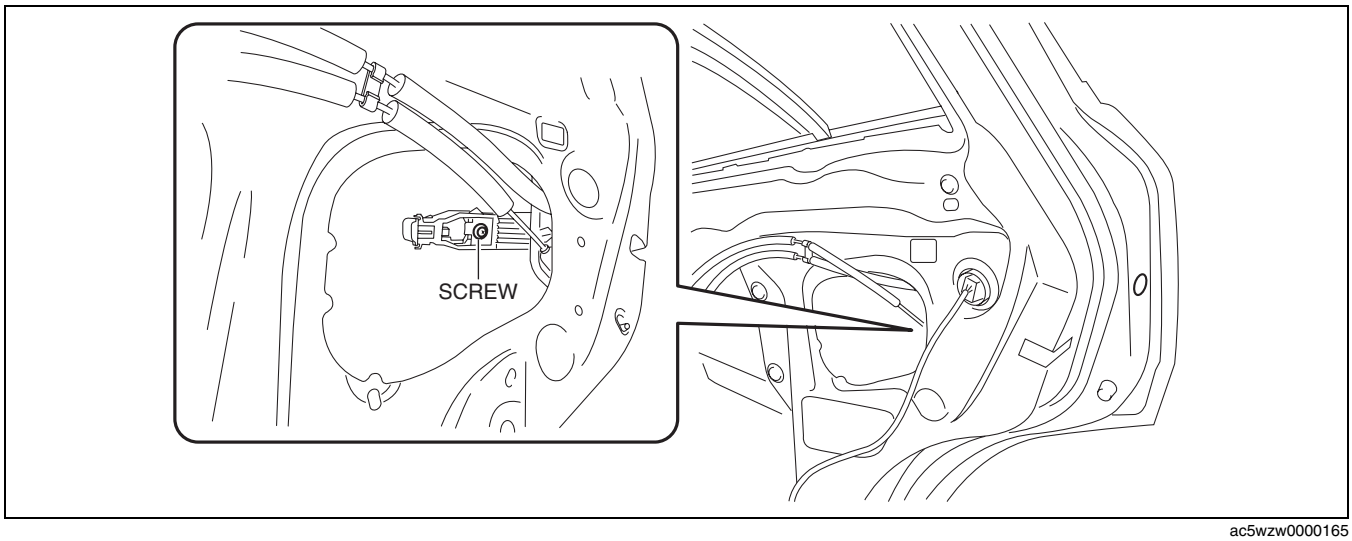


ac5wzw0000165

10. Remove the rear outer handle in the direction of the arrow shown in the figure.
11. Loosen the screw from the rear outer handle bracket.



ac5wzw0000165

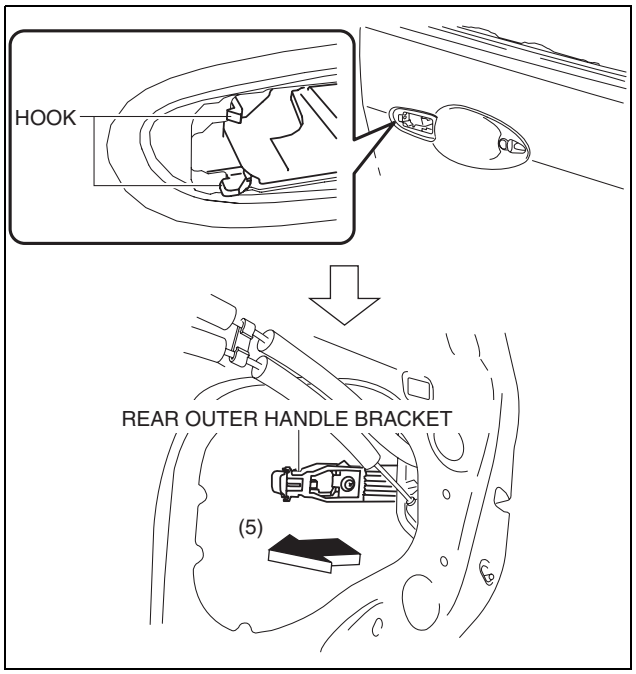


ac5wzw0000165

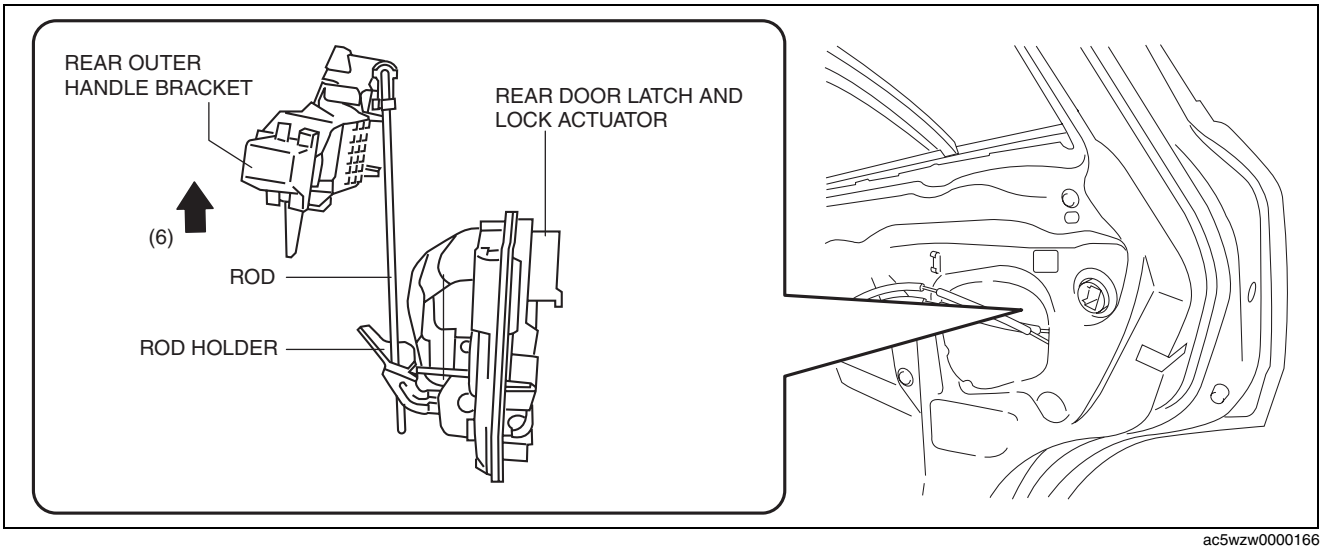
SECURITY AND LOCKS

Note
- The screw cannot be removed because the rear outer handle bracket has a stopper which prevents the screw from falling.

12. Pull the rear outer handle bracket in the direction of arrow (5) shown in the figure and detach the rear outer handle bracket hooks from the body.
13. Lift the rear outer handle bracket in the direction of arrow (6) shown in the figure to pull the rod out of the rod holder. (See 09-14-15 Rear Outer Handle Bracket Installation Note.)

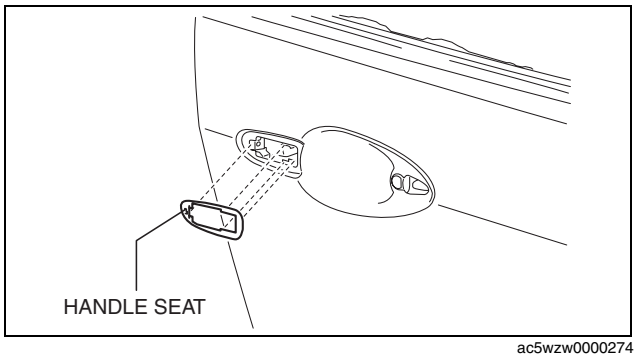


ac5wzw0000166



ac5wzw0000166

14. Remove the rear outer handle bracket.
15. Remove the handle seat from the body.
16. Install in the reverse order of removal.

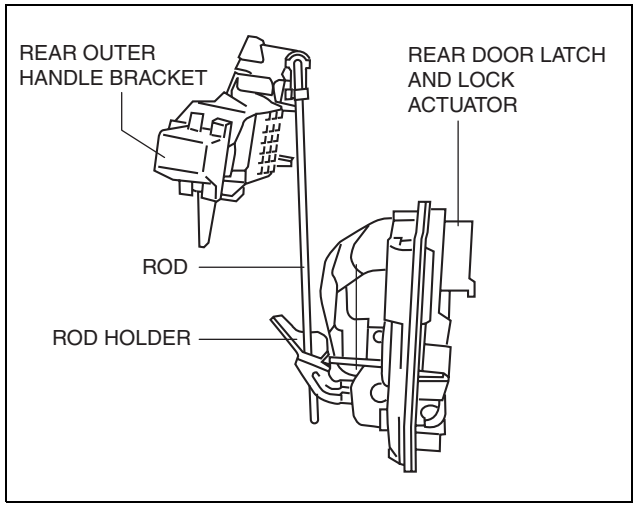


ac5wzw0000274

SECURITY AND LOCKS

Rear Outer Handle Bracket Installation Note

- To assure that the rod is inserted into the rod holder hole, verify that the there is no excessive play.



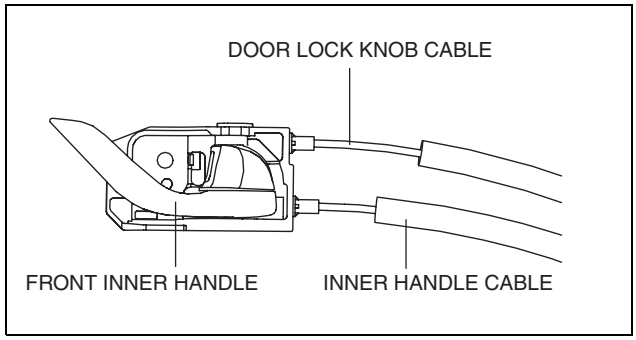
ac5wzw0000275

INNER HANDLE REMOVAL/INSTALLATION

id091400510300

Front Inner Handle

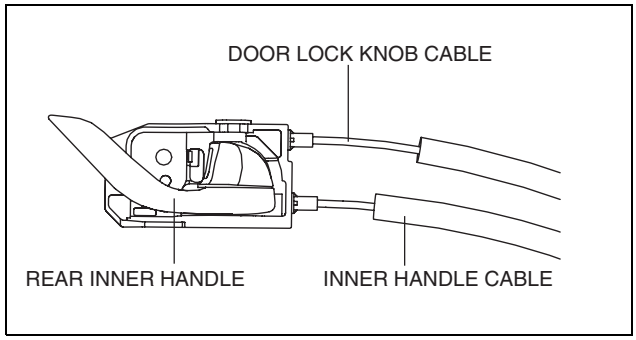
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the inner garnish. (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)
3. Remove the front door trim. (See 09-17-65 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
4. Disconnect the door lock knob cable and the inner handle cable from the front inner handle.
5. Install in the reverse order of removal.



ac5wzw0000169

Rear Inner Handle

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the rear door trim. (See 09-17-74 REAR DOOR TRIM REMOVAL/INSTALLATION.)
3. Disconnect the door lock knob cable and the inner handle cable from the rear inner handle.
4. Install in the reverse order of removal.



ac5wzw0000169

SECURITY AND LOCKS

DOOR LOCK SWITCH REMOVAL/INSTALLATION

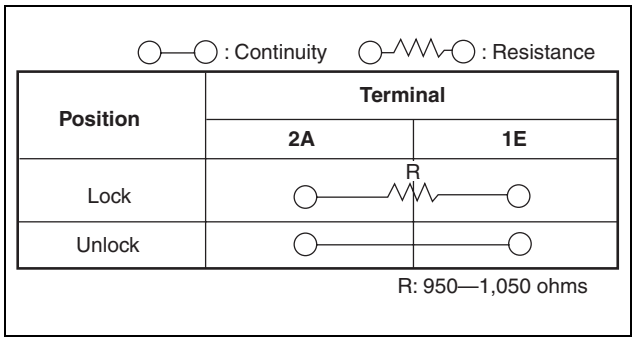
id091400518600

- The door lock switch cannot be removed as a single unit because it is built into the power window main switch. If the door lock switch is replaced, replace the power window main switch. (See 09-12-52 POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION.)

DOOR LOCK SWITCH INSPECTION

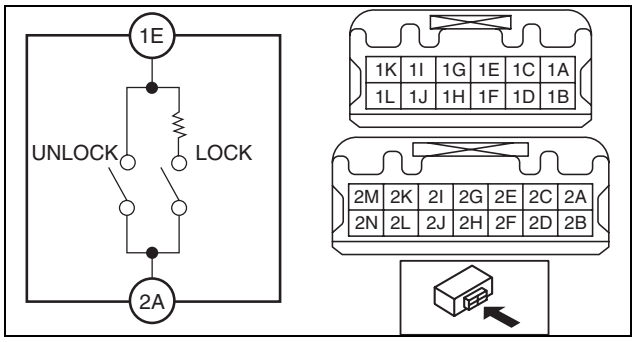
id091400518700

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the door lock switch. (See 09-12-52 POWER WINDOW MAIN SWITCH REMOVAL/INSTALLATION.)
3. Verify that the continuity is as indicated in the table.



ac5wzw0000458

- If the continuity is not as indicated in the table, replace the door lock switch.



ac5wzw0000458

BONNET LATCH AND RELEASE LEVER REMOVAL/INSTALLATION

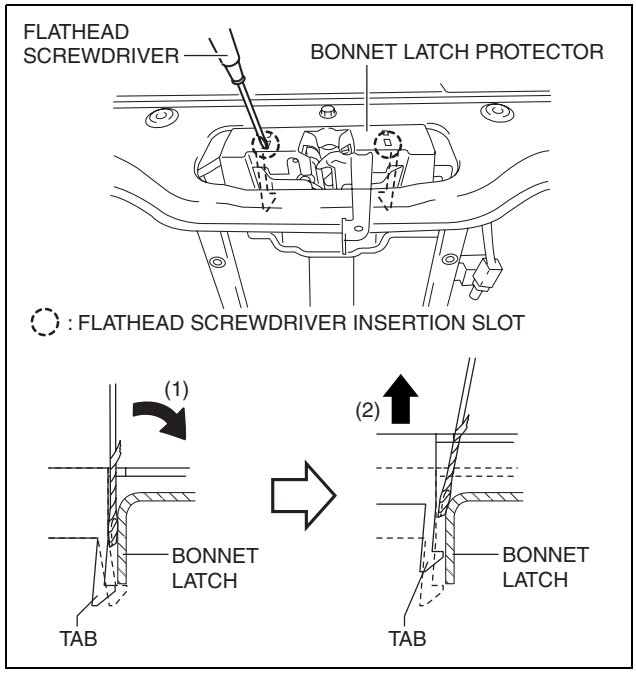
id091400510400

Bonnet Latch

1. Open the bonnet.
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)

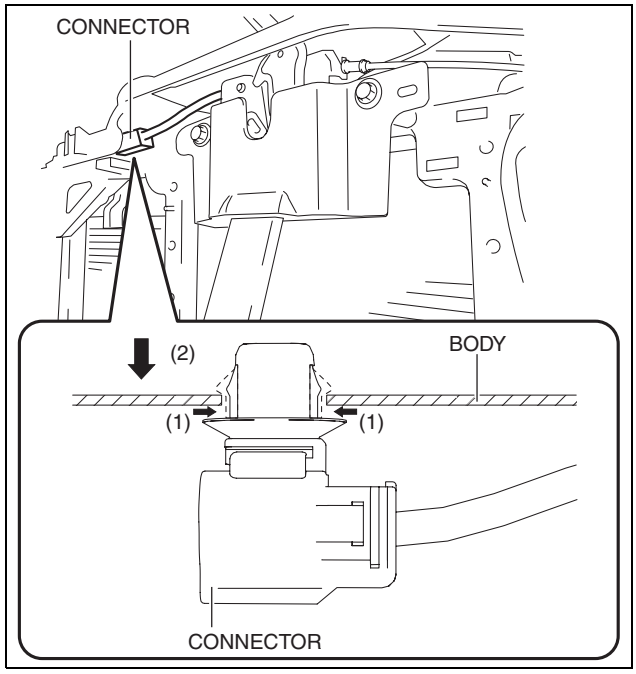
SECURITY AND LOCKS

4. Insert a tape-wrapped flathead screwdriver into the position shown in the figure.
5. Move the tape-wrapped flathead screwdriver in the direction of arrow (1) shown in the figure to press the bonnet latch protector tab, and lift the tab up in the direction of arrow (2) and detach its tab from the fuse box.
6. Detach all the bonnet latch protector tabs from the bonnet latch and remove the bonnet latch protector.



ac5wzw0000096

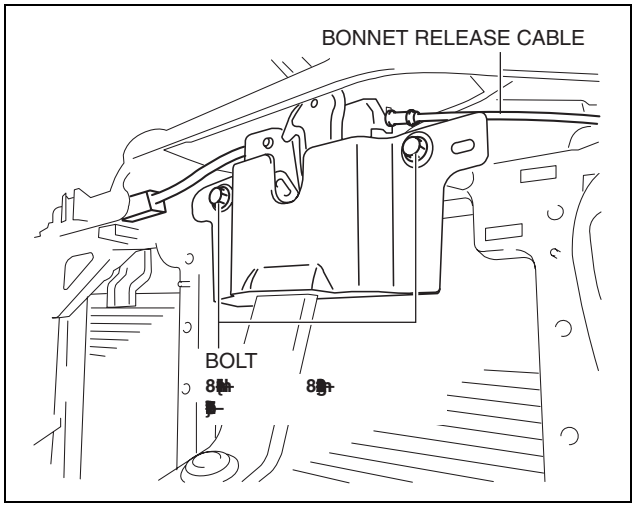
7. While pressing the tabs of the clip in the direction of arrow (1) shown in the figure, press it in the direction of arrow (2) to detach the connector tabs from the body.
8. Remove the connector antenna from the body.
9. Disconnect the connector.



ac5wzw0000069

SECURITY AND LOCKS

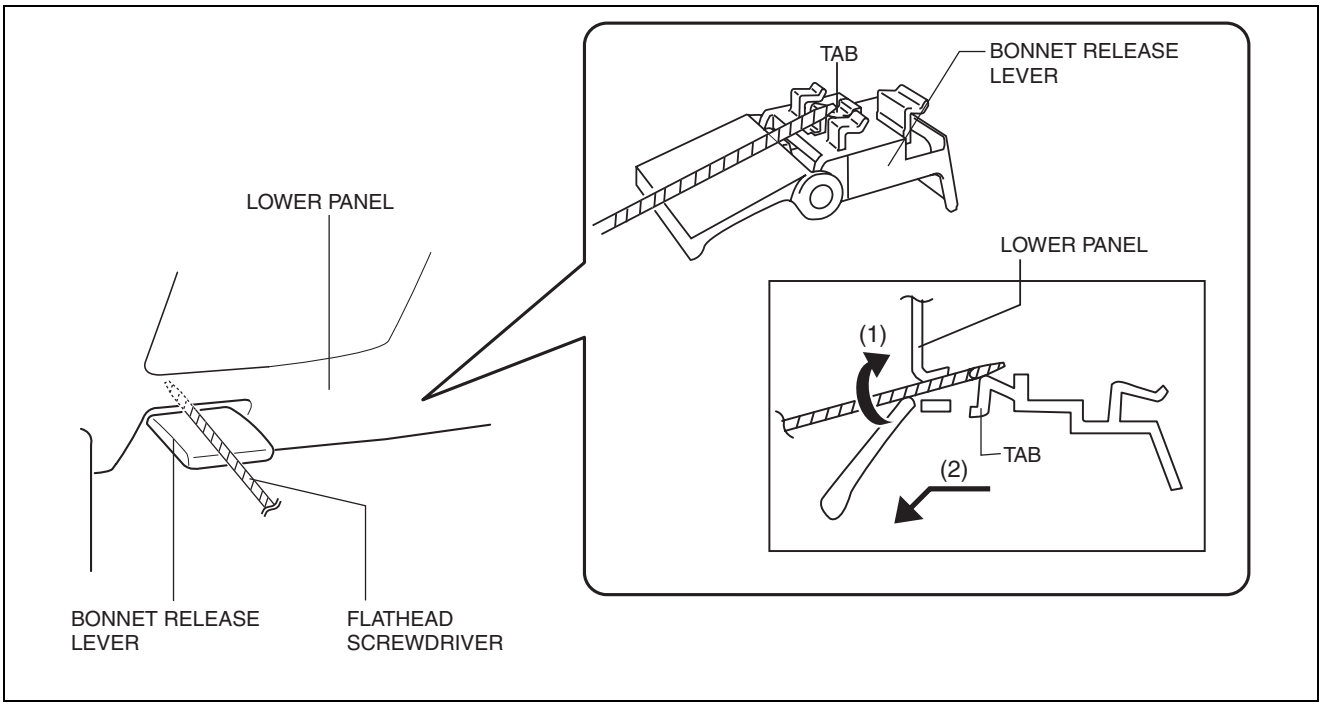
10. Disconnect the bonnet release cable.
11. Remove the bolts.
12. Remove the bonnet latch.
13. Install in the reverse order of removal.
14. Adjust the bonnet. (See 09-10-6 BONNET ADJUSTMENT.)



ac5wzw0000071

Bonnet Release Lever

1. While pulling the bonnet release lever, insert a tape-wrapped flathead screwdriver into the position shown in the figure.



ac5wzw0000096

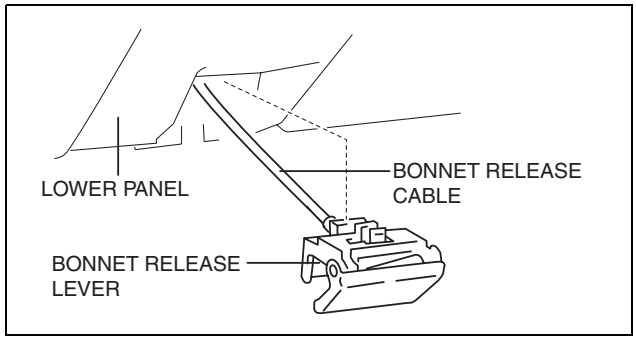
2. Move the tape-wrapped flathead screwdriver in the direction of arrow (1) shown in the figure to press the tab, and pull the bonnet release lever in the direction of arrow (2) to detach it from the lower panel.

Caution

- **Remove the bonnet release lever while being careful not to damage the bonnet release cable with the flathead screwdriver.**

SECURITY AND LOCKS

3. Pull the bonnet release lever to remove it from the lower panel.
4. Disconnect the bonnet release cable from the bonnet release lever.
5. Install in the reverse order of removal.

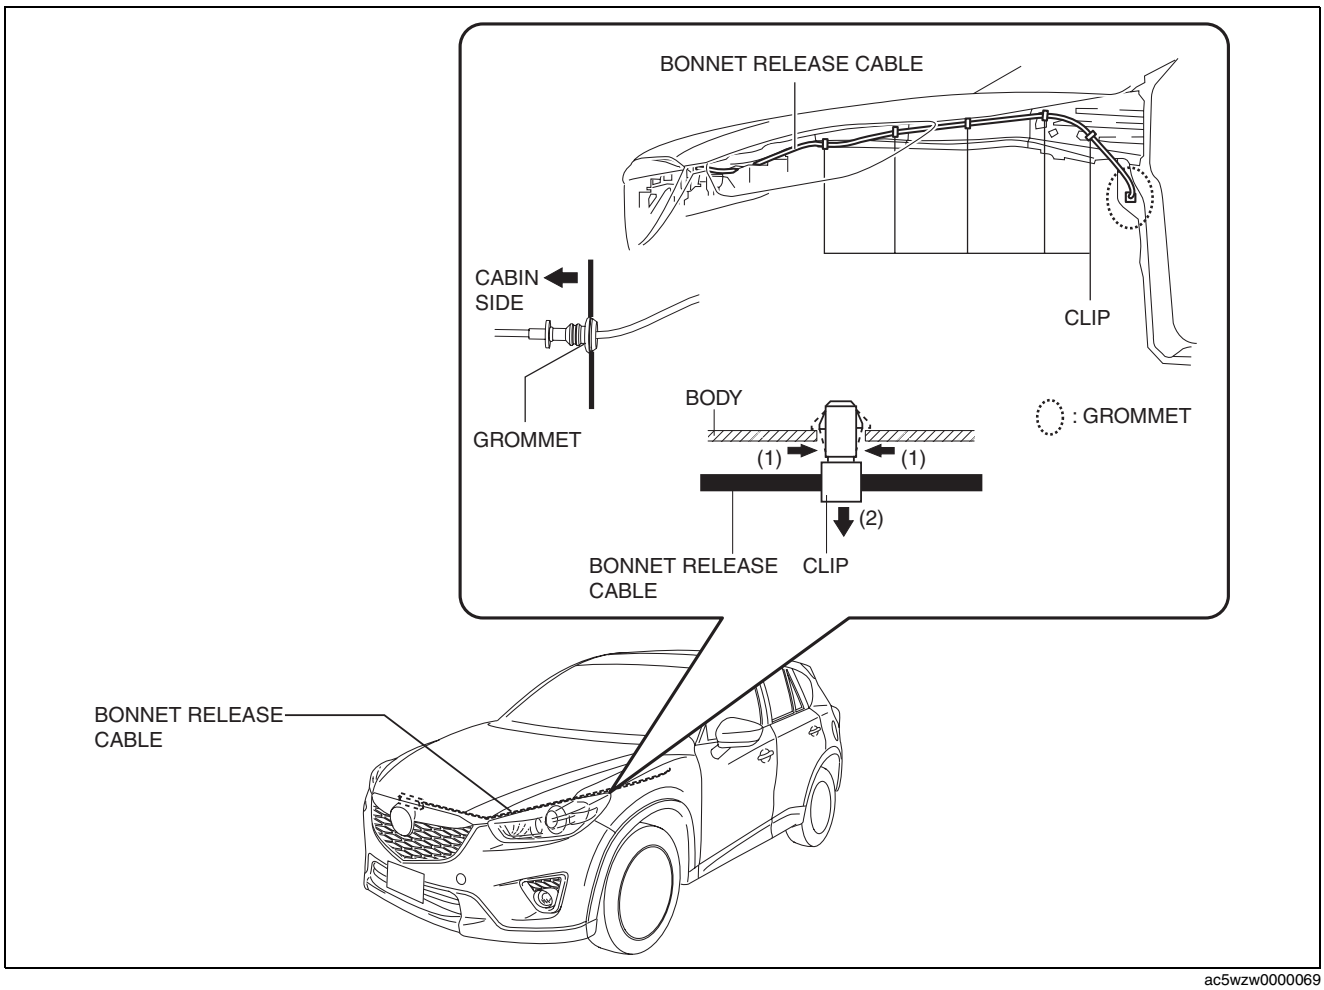


ac5wzw0000031

BONNET RELEASE CABLE REMOVAL/INSTALLATION

id091400510500

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Front bumper (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
   (2) Front combination light (Driver's side) (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (3) Front over fender (Driver's side) (See 09-10-31 FRONT OVER FENDER REMOVAL/INSTALLATION.)
   (4) Front mudguard (Driver's side) (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
   (5) Bonnet release lever (See 09-14-16 BONNET LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
3. Disconnect the bonnet release cable from the bonnet latch.
4. While pressing the tabs of the clip in the direction of arrow (1) shown in the figure, pull the clip in the direction of arrow (2) to detach it from the body.



ac5wzw0000069

5. Remove the clip from the body.
6. Press the grommet into the cabin side.

SECURITY AND LOCKS

7. Remove the bonnet release cable from the cabin side.
8. Install in the reverse order of removal.

BONNET LATCH SWITCH INSPECTION

id091400510600

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Disconnect the bonnet latch switch connector. (See 09-14-16 BONNET LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
4. Verify that the continuity is as indicated in the table.

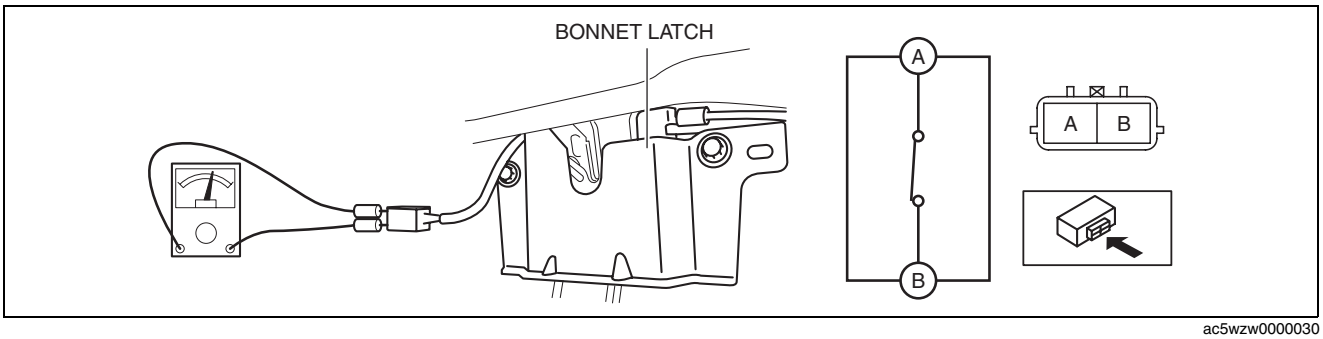
Note

- Inspect the continuity when the bonnet is open and closed.

○—○ :CONTINUITY

BONNET LATCH SWITCH (BONNET CONDITION)	TERMINAL	
	A	B
ON (CLOSE)	○	○
OFF (OPEN)		

ac5wzw0000038



ac5wzw0000030

- If the operation as indicated in the table cannot be verified, replace the bonnet latch.

FUEL-FILLER LID OPENER AND LEVER REMOVAL/INSTALLATION

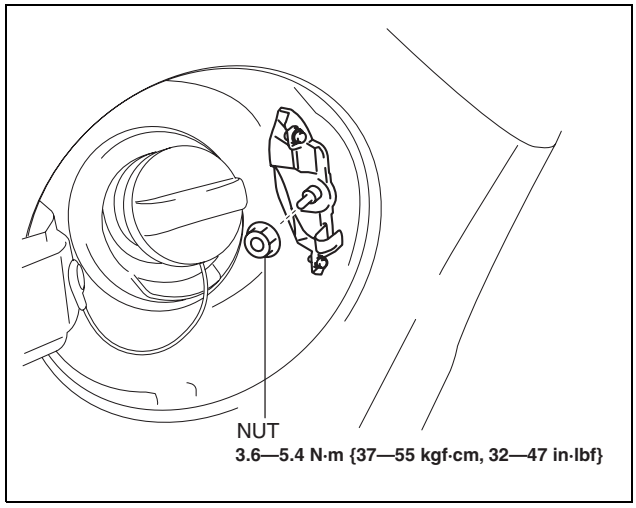
id091400510700

Fuel-filler Lid Opener

1. Open the fuel-filler lid.

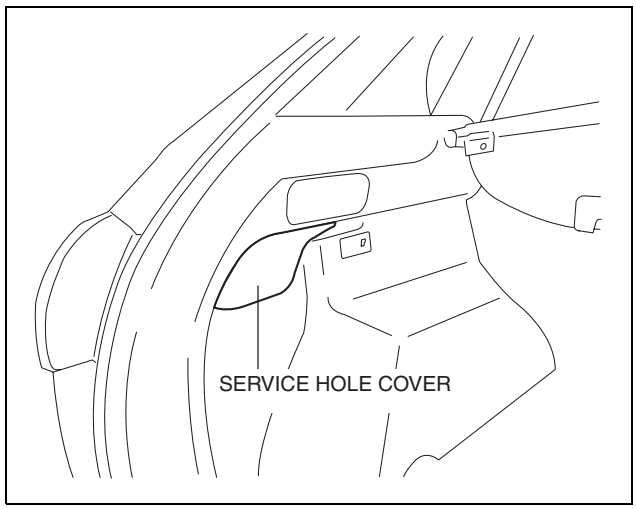
SECURITY AND LOCKS

2. Remove the nut.

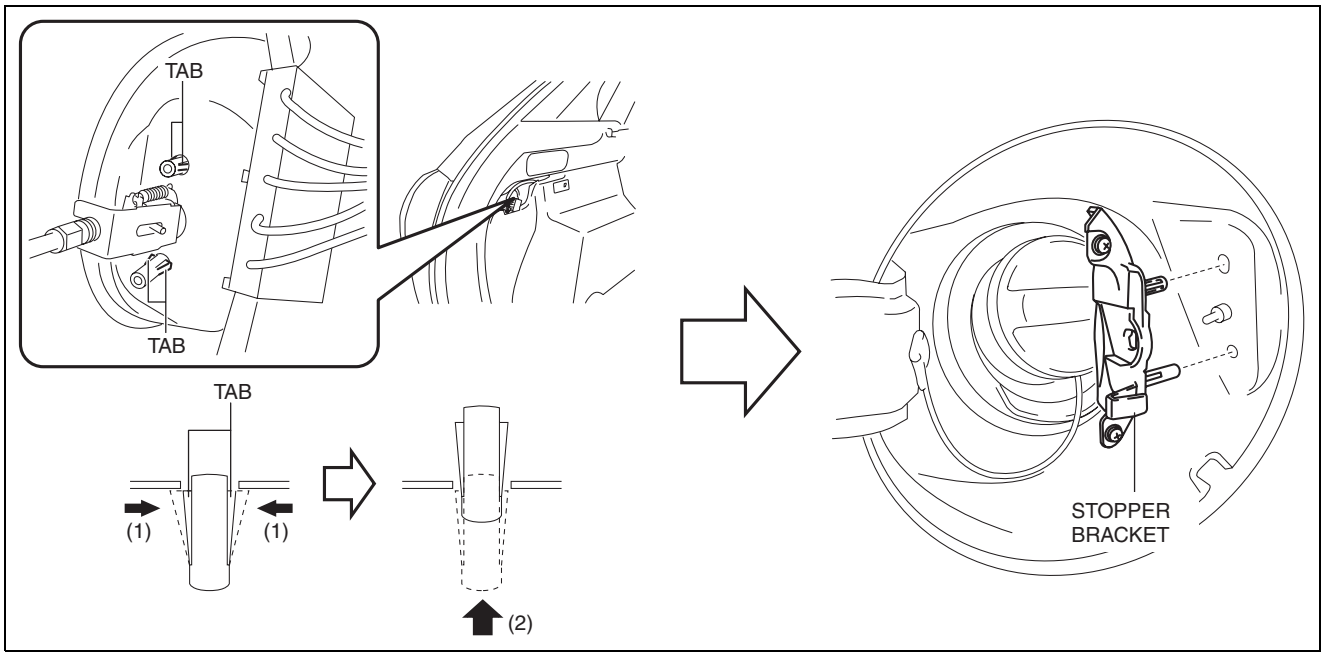


ac5wzw0000031

3. Remove the service hole cover on the trunk side trim.
4. While pressing the tabs of the stopper bracket in the direction of arrow (1) shown in the figure, press it in the direction of arrow (2) to detach it from the body.



ac5wzw0000031

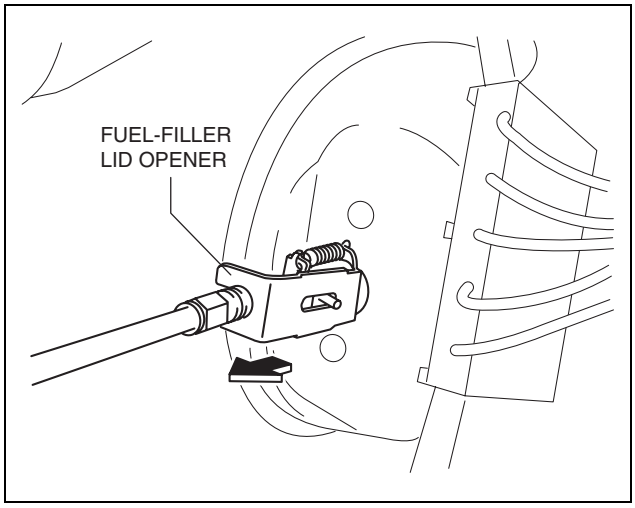


ac5wzw0000274

5. Detach all the stopper bracket tabs from the body and remove the stopper bracket.

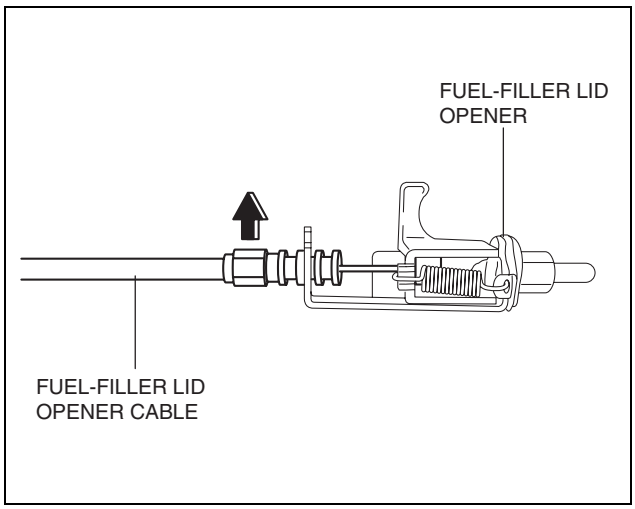
SECURITY AND LOCKS

6. Remove the fuel-filler lid opener in the direction of the arrow.



ac5wzw0000031

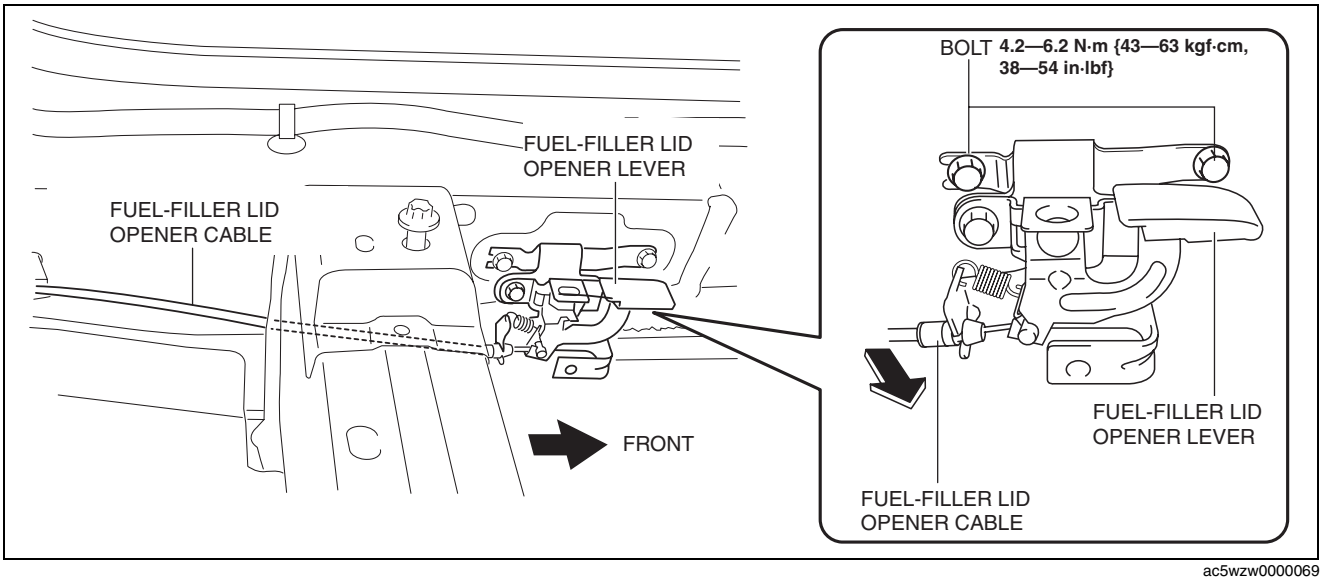
7. Disconnect the fuel-filler lid opener cable from the fuel-filler lid opener.
8. Install in the reverse order of removal.



ac5wzw0000031

Fuel-filler Lid Opener Lever

1. Remove the front scuff plate. (Driver's side) (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the front side trim. (Driver's side) (See 09-17-62 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
3. Partially peel back the floor covering.
4. Remove the bolts.



ac5wzw0000069

5. Disconnect the fuel-filler lid opener cable from the fuel-filler lid opener lever.
6. Install in the reverse order of removal.

FUEL-FILLER LID OPENER CABLE REMOVAL/INSTALLATION

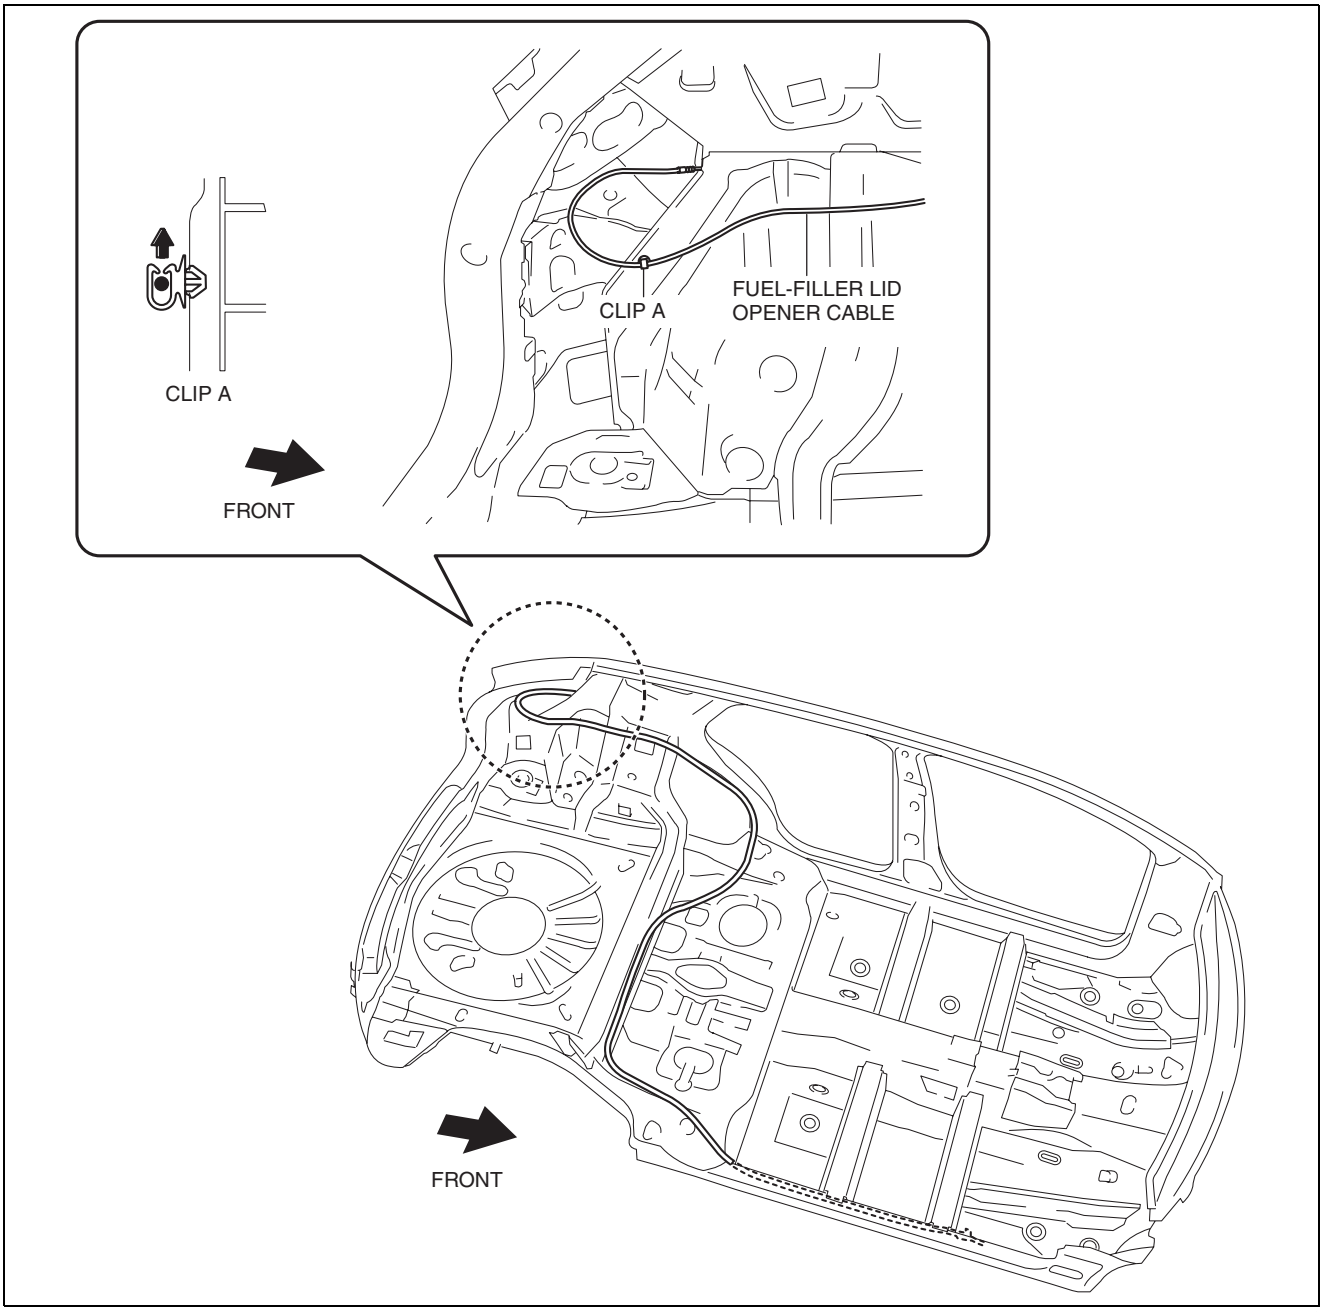
id091400510800

R.H.D.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Front scuff plate (RH) (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Front seat (RH) (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) B-pillar lower trim (RH) (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (5) Rear seat (4:2:4 split type) (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)
   (6) Rear seat cushion (6:4 split type) (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
   (7) Rear seat back (6:4 split type) (See 09-13-61 REAR SEAT BACK REMOVAL/INSTALLATION.)
   (8) D-pillar trim (See 09-17-60 D-PILLAR TRIM REMOVAL/INSTALLATION.)
   (9) C-pillar trim (See 09-17-59 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (10) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (11) Trunk side trim (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (12) Fuel-filler lid opener (See 09-14-20 FUEL-FILLER LID OPENER AND LEVER REMOVAL/INSTALLATION.)
   (13) Fuel-filler lid opener lever (See 09-14-20 FUEL-FILLER LID OPENER AND LEVER REMOVAL/INSTALLATION.)

SECURITY AND LOCKS

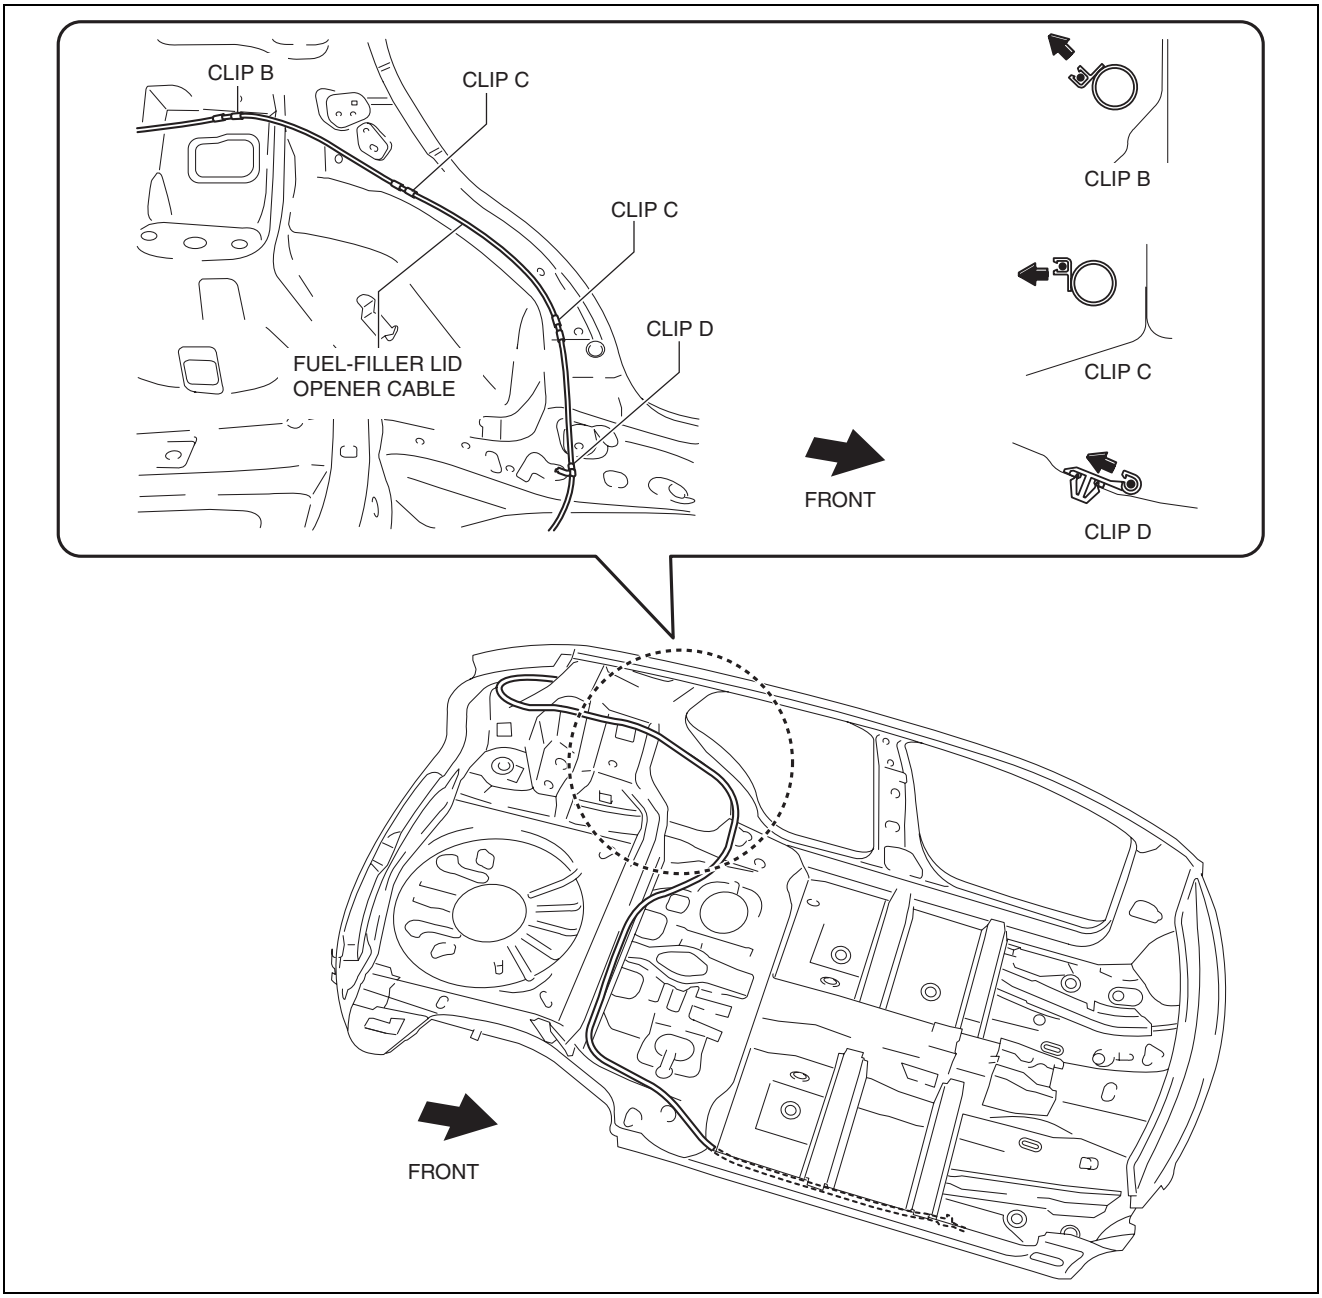
3. Remove the fuel-filler lid opener cable from clip A.



ac5wzw0000031

SECURITY AND LOCKS

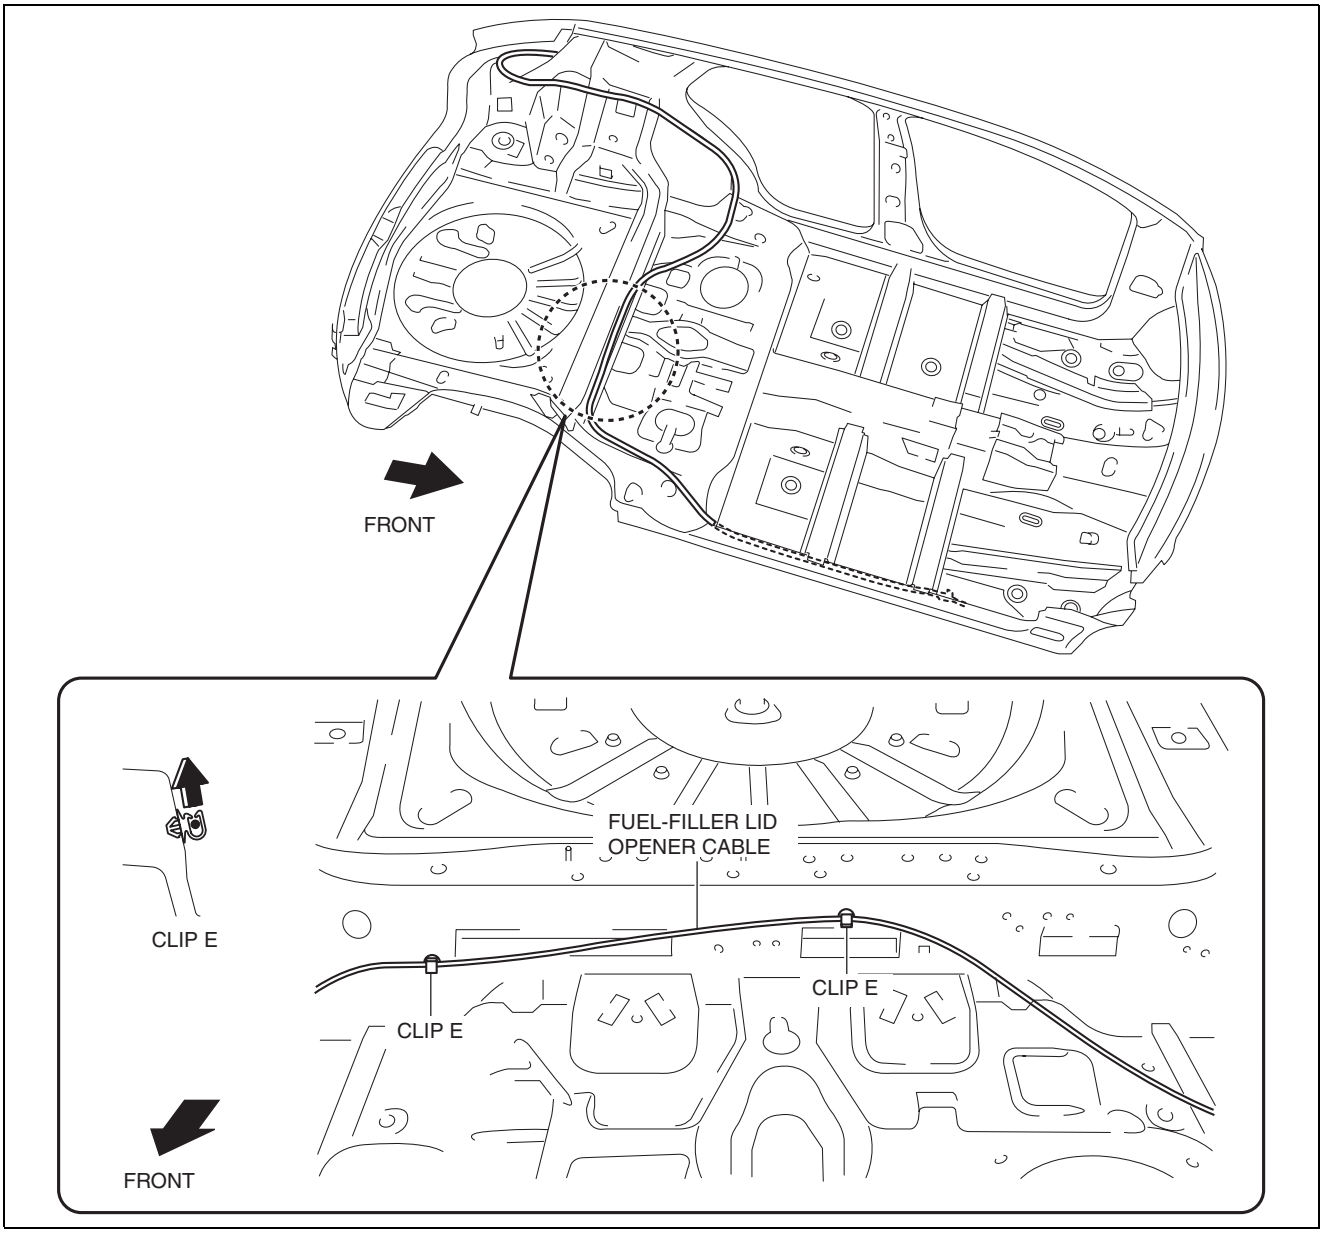
4. Remove the fuel-filler lid opener cable from clips B, C, and D.



ac5wzw0000031

SECURITY AND LOCKS

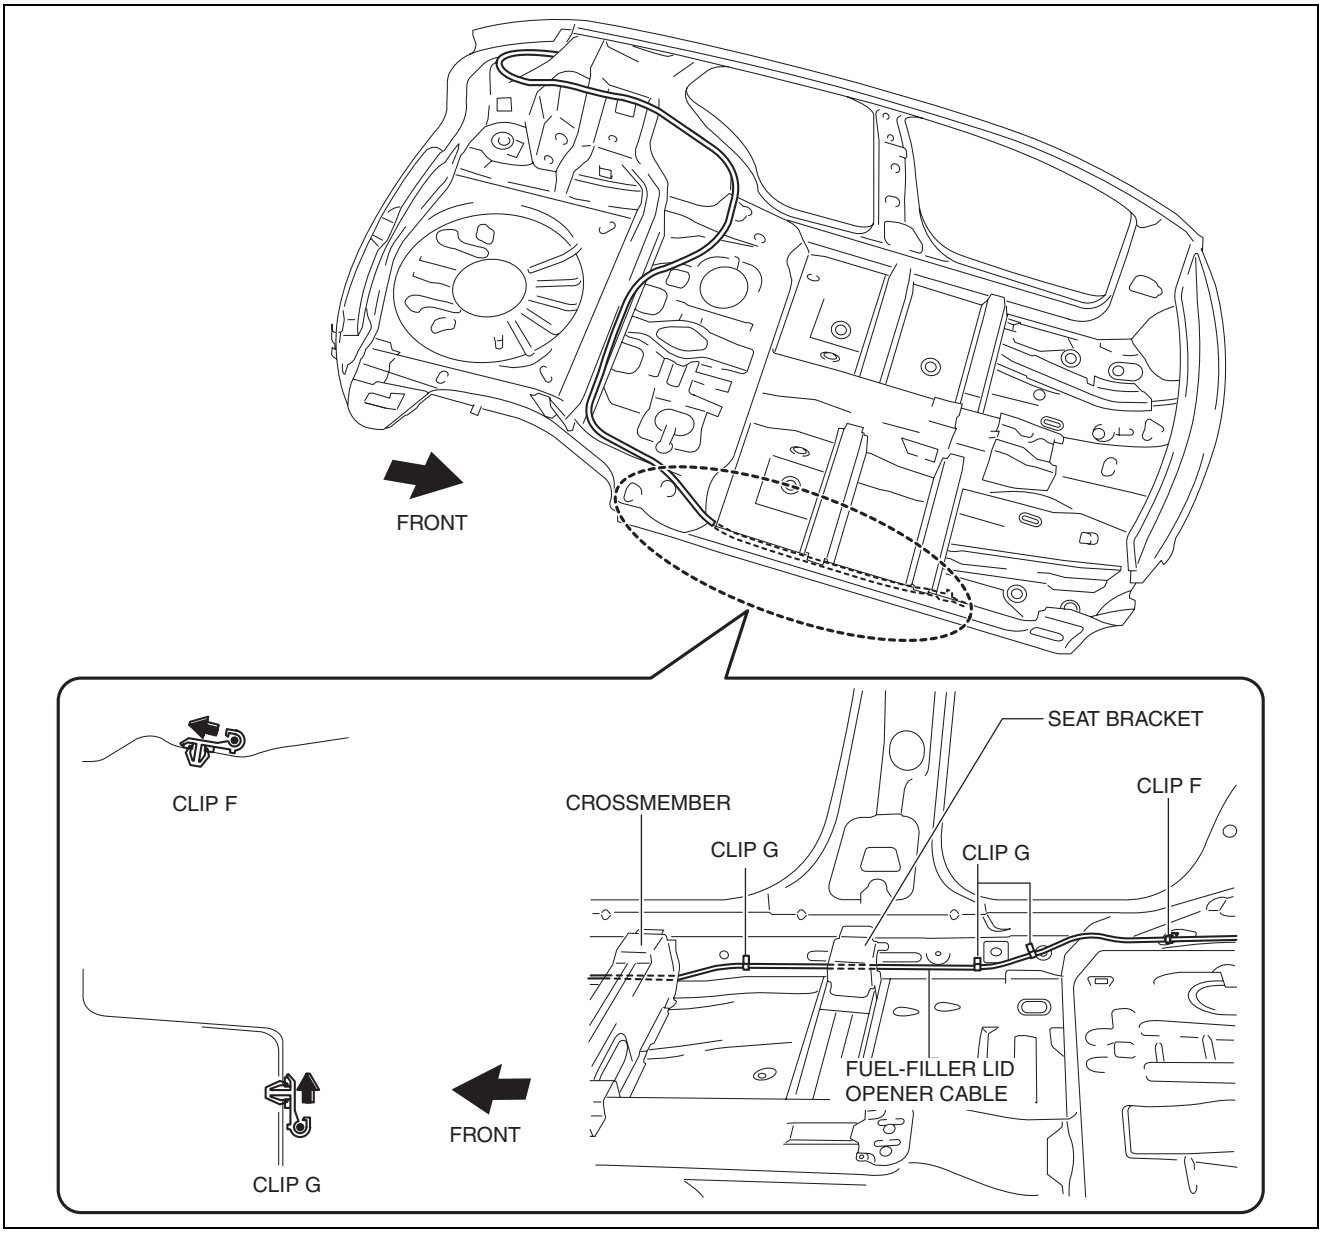
5. Remove the fuel-filler lid opener cable from clips E.



ac5wzw0000031

SECURITY AND LOCKS

6. Remove the fuel-filler lid opener cable from clips F and G.



ac5wzw0000032

7. Pull the fuel-filler lid opener cable from the crossmember and the seat bracket.
8. Install in the reverse order of removal.

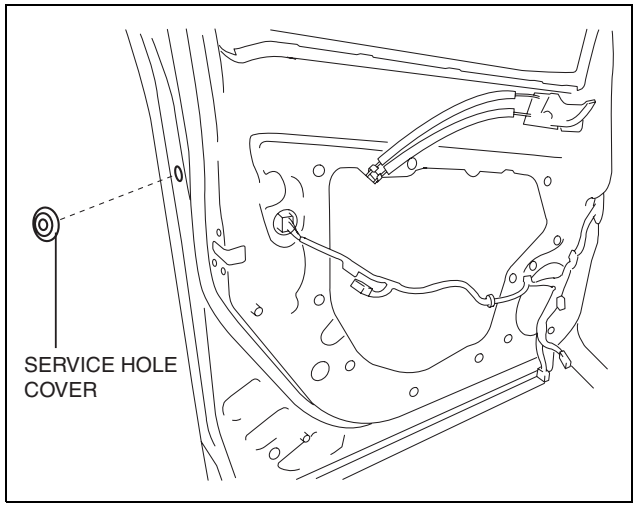
FRONT DOOR KEY CYLINDER REMOVAL/INSTALLATION

id091400510900

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

SECURITY AND LOCKS

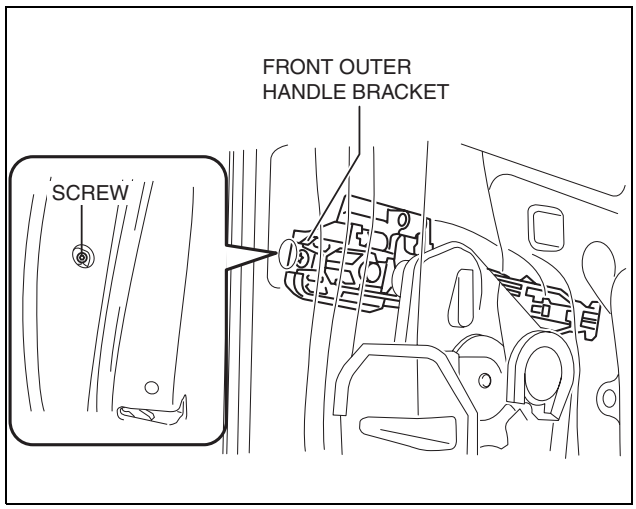
2. Remove the service hole cover.



ac5wzw0000069

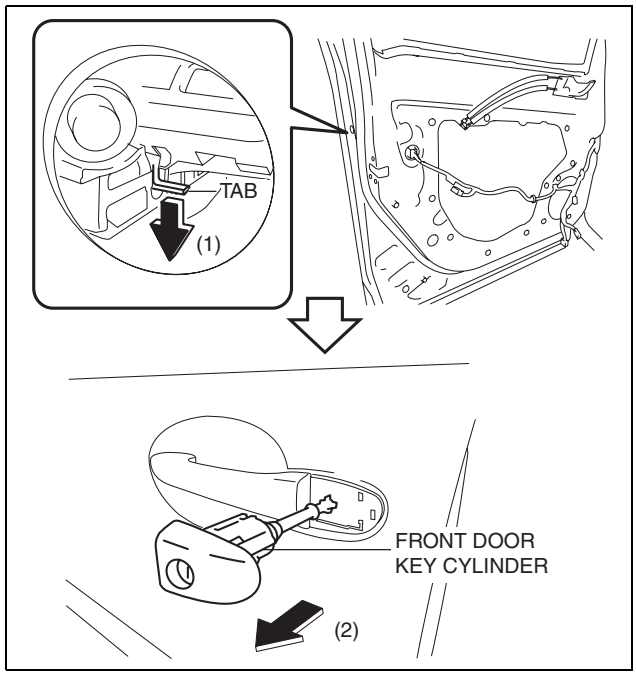
3. Detach the screw from the front door key cylinder.

Note
- The screw cannot be removed because the front outer handle bracket has a stopper which prevents the screw from falling.



ac5wzw0000069

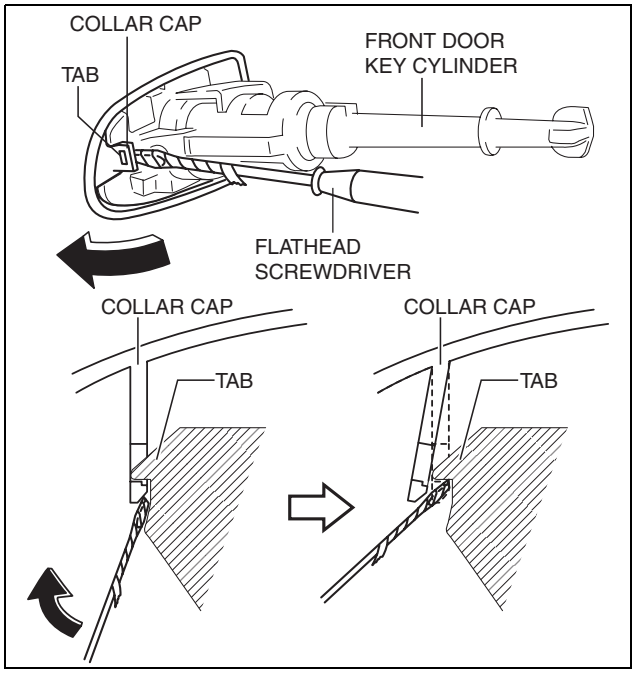
4. While pressing the outer handle bracket tab in the direction of arrow (1) shown in the figure, pull the front door key cylinder in the direction of arrow (2) to detach the outer handle bracket and the front door key cylinder.
5. Remove the front door key cylinder from the outer handle bracket.



ac5wzw0000069

SECURITY AND LOCKS

6. Insert a tape-wrapped flathead screwdriver into the position shown in the figure.
7. Move the tape-wrapped flathead screwdriver in the direction of the arrow shown in the figure to lift up the collar cap, and detach the collar cap from the front door key cylinder tab.
8. Remove the collar cap from the front door key cylinder.
9. Install in the reverse order of removal.



ac5wzw0000069

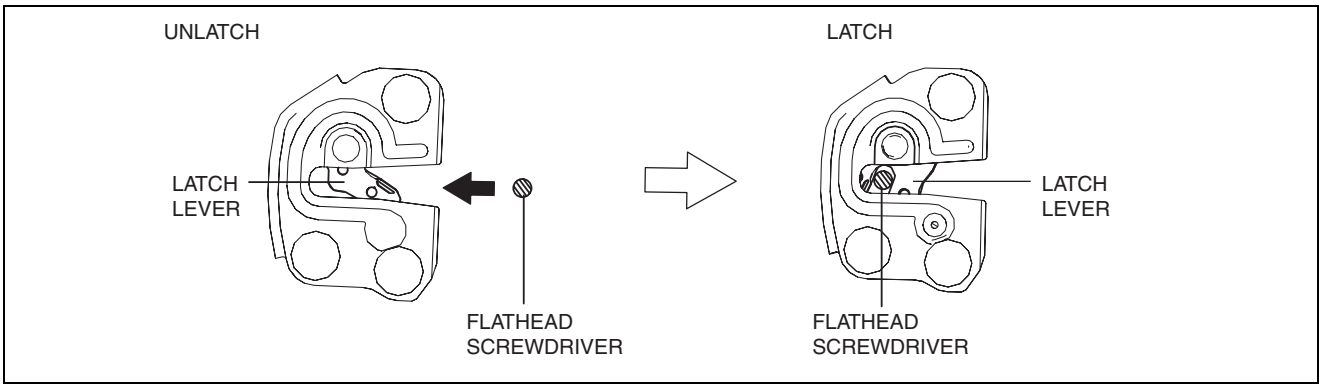
FRONT DOOR KEY CYLINDER SWITCH INSPECTION

id091400511000

1. Perform the front door glass preparation. (See 09-12-4 FRONT DOOR GLASS REMOVAL/INSTALLATION.)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the following parts:
   (1) Inner garnish (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)
   (2) Front door trim (See 09-17-65 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
   (3) Front door key cylinder (See 09-14-30 FRONT DOOR KEY CYLINDER REMOVAL/INSTALLATION.)
   (4) Front door glass (See 09-12-4 FRONT DOOR GLASS REMOVAL/INSTALLATION.)
   (5) Front door module panel (See 09-11-6 FRONT DOOR MODULE PANEL REMOVAL/INSTALLATION.)
   (6) Front door latch and lock actuator (See 09-14-35 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)

Front Door Key Cylinder Switch Lock-Side Inspection

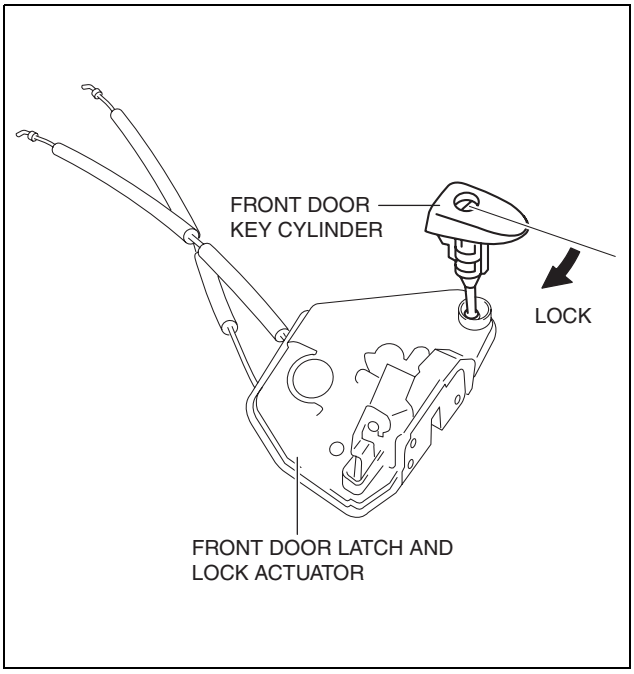
1. Press in the latch lever of the front door latch and lock actuator using a flathead screwdriver, and set it to the latched condition.



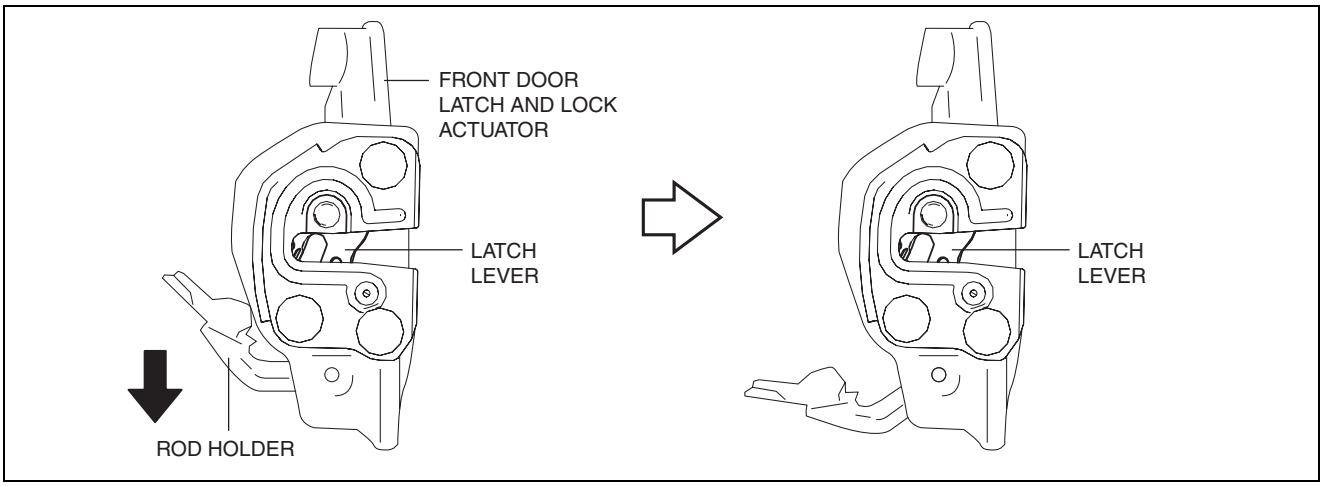
ac5wzw0000250

SECURITY AND LOCKS

2. Rotate the front door key cylinder in the direction of the arrow until it stops to set the front door key cylinder switch to the locked condition.
3. To verify that the switch is in the locked position, press down the rod holder in the direction of the arrow and verify that the latch lever does not move.



ac5wzw0000250



ac5wzw0000251

Note

- If the latch lever moves, the front door key cylinder switch is not in the locked position. Repeat the procedure from Step 1.

4. Verify that the continuity of the front door key cylinder is as indicated in the table.

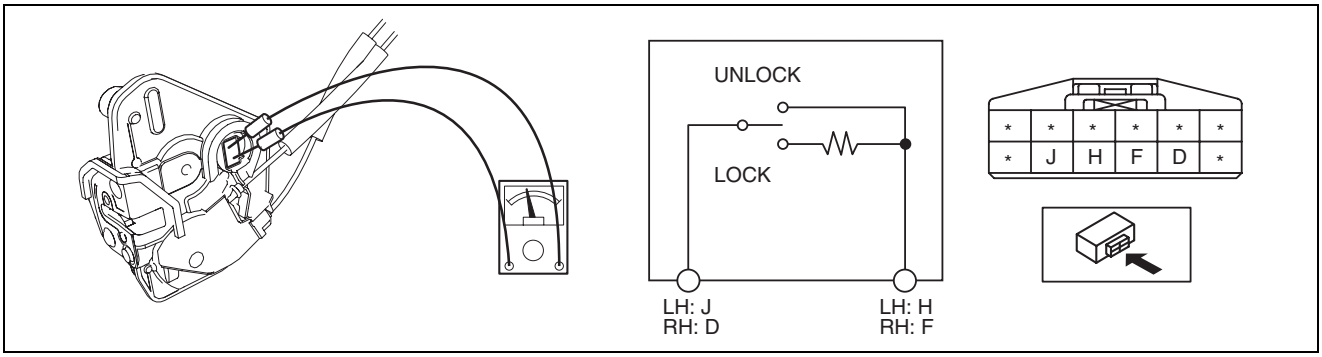
: Resistance

FRONT DOOR KEY CYLINDER SWITCH	Terminal	
	LH: J **RH: D**	**LH: H** **RH: F**
LOCK	R	

R: 1 kilohm

ac5wzw0000251

SECURITY AND LOCKS

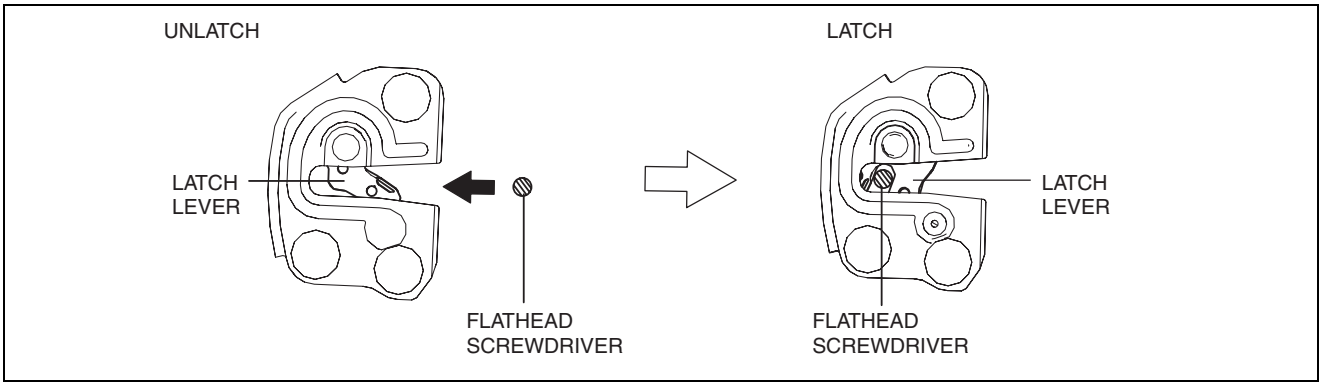


ac5wzw0000251

- If not as indicated in the table, replace the front door latch and lock actuator.

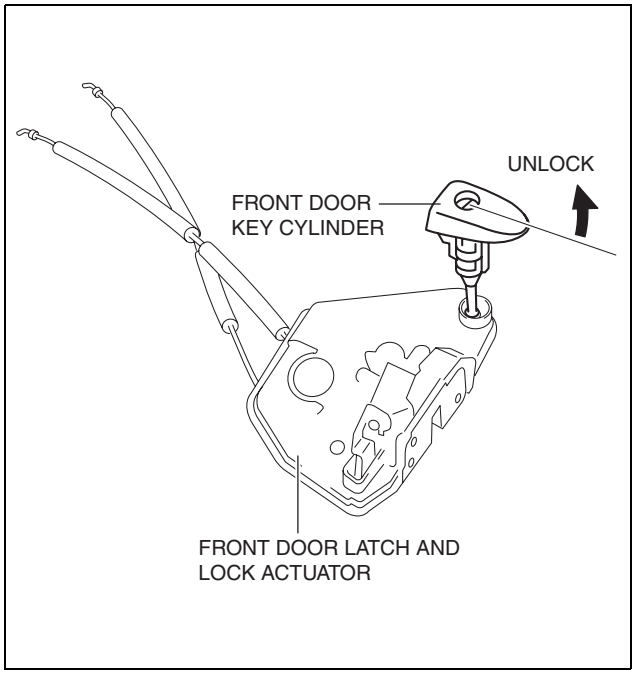
Front Door Key Cylinder Switch Unlock-Side Inspection

1. Press in the latch lever of the front door latch and lock actuator using a flathead screwdriver, and set it to the latched condition.



ac5wzw0000250

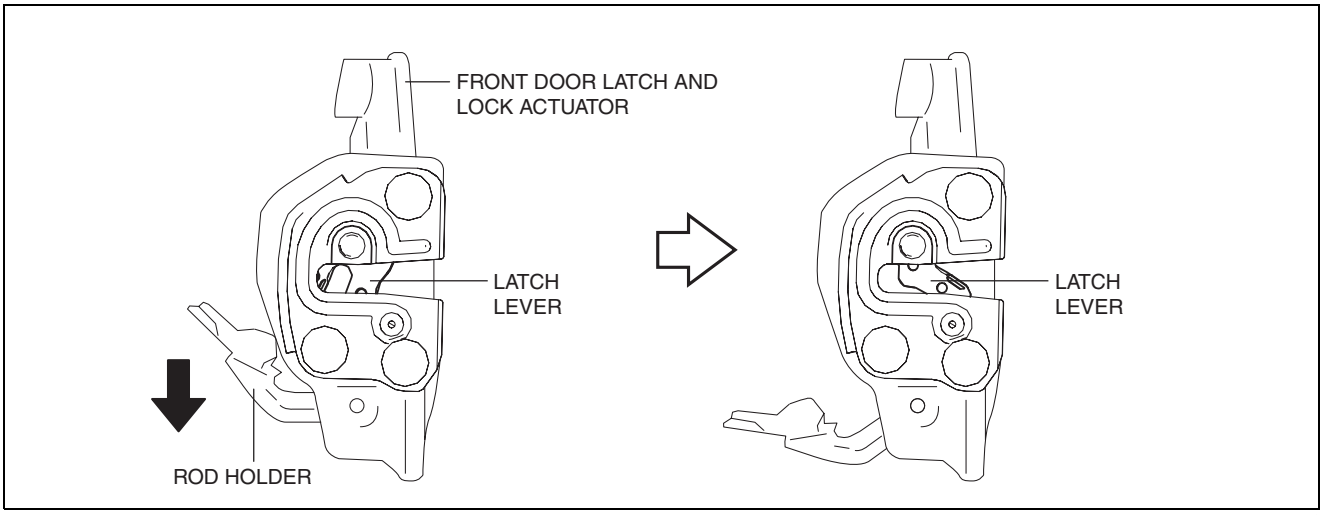
2. Rotate the front door key cylinder in the direction of the arrow until it stops to set the front door key cylinder switch to the unlocked condition.



ac5wzw0000251

SECURITY AND LOCKS

3. To verify that the switch is in the unlocked position, press down the rod holder in the direction of the arrow and verify that the latch lever moves.



ac5wzw0000251

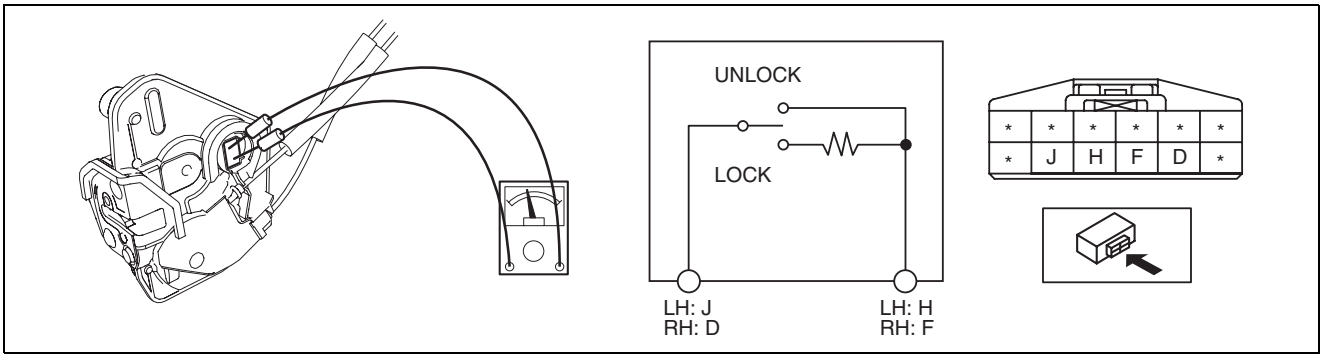
Note
- If the latch lever does not move, the front door key cylinder switch is not in the unlocked position. Repeat the procedure from Step 2.

4. Verify that the continuity of the front door key cylinder is as indicated in the table.

○—○: Continuity

FRONT DOOR KEY CYLINDER SWITCH	Terminal	
	LH: J RH: D	LH: H RH: F
UNLOCK	○	○

ac5wzw0000251



ac5wzw0000251

- If not as indicated in the table, replace the front door latch and lock actuator.

FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION

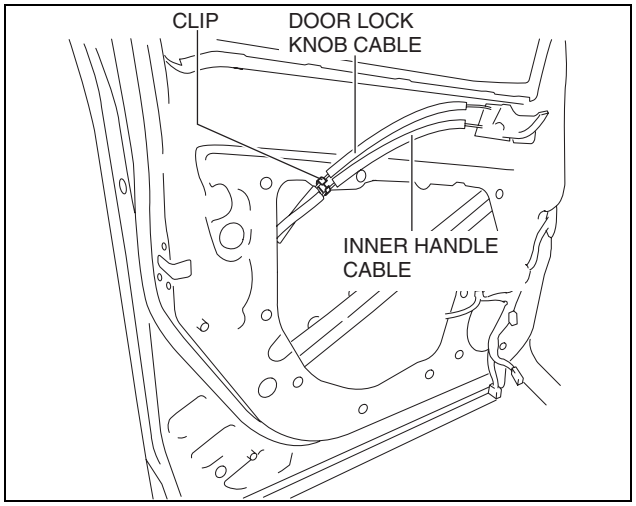
id091400511100

1. Perform the front door glass preparation. (See 09-12-4 FRONT DOOR GLASS REMOVAL/INSTALLATION.)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the following parts:
   (1) Inner garnish (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)
   (2) Front door trim (See 09-17-65 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
   (3) Inner handle (See 09-14-15 INNER HANDLE REMOVAL/INSTALLATION.)

SECURITY AND LOCKS

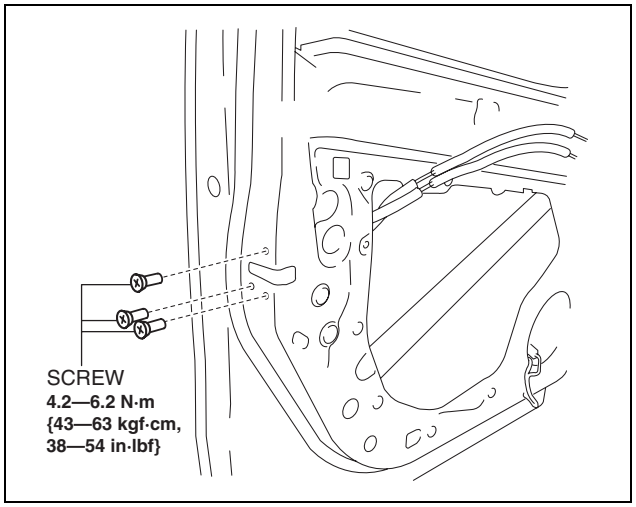
(4) Front door glass (See 09-12-4 FRONT DOOR GLASS REMOVAL/INSTALLATION.)
(5) Front door module panel (See 09-11-6 FRONT DOOR MODULE PANEL REMOVAL/INSTALLATION.)
(6) Front door key cylinder (See 09-14-30 FRONT DOOR KEY CYLINDER REMOVAL/INSTALLATION.)

4. Remove the door lock knob cable and inner handle cable from the clip.



ac5wzw0000070

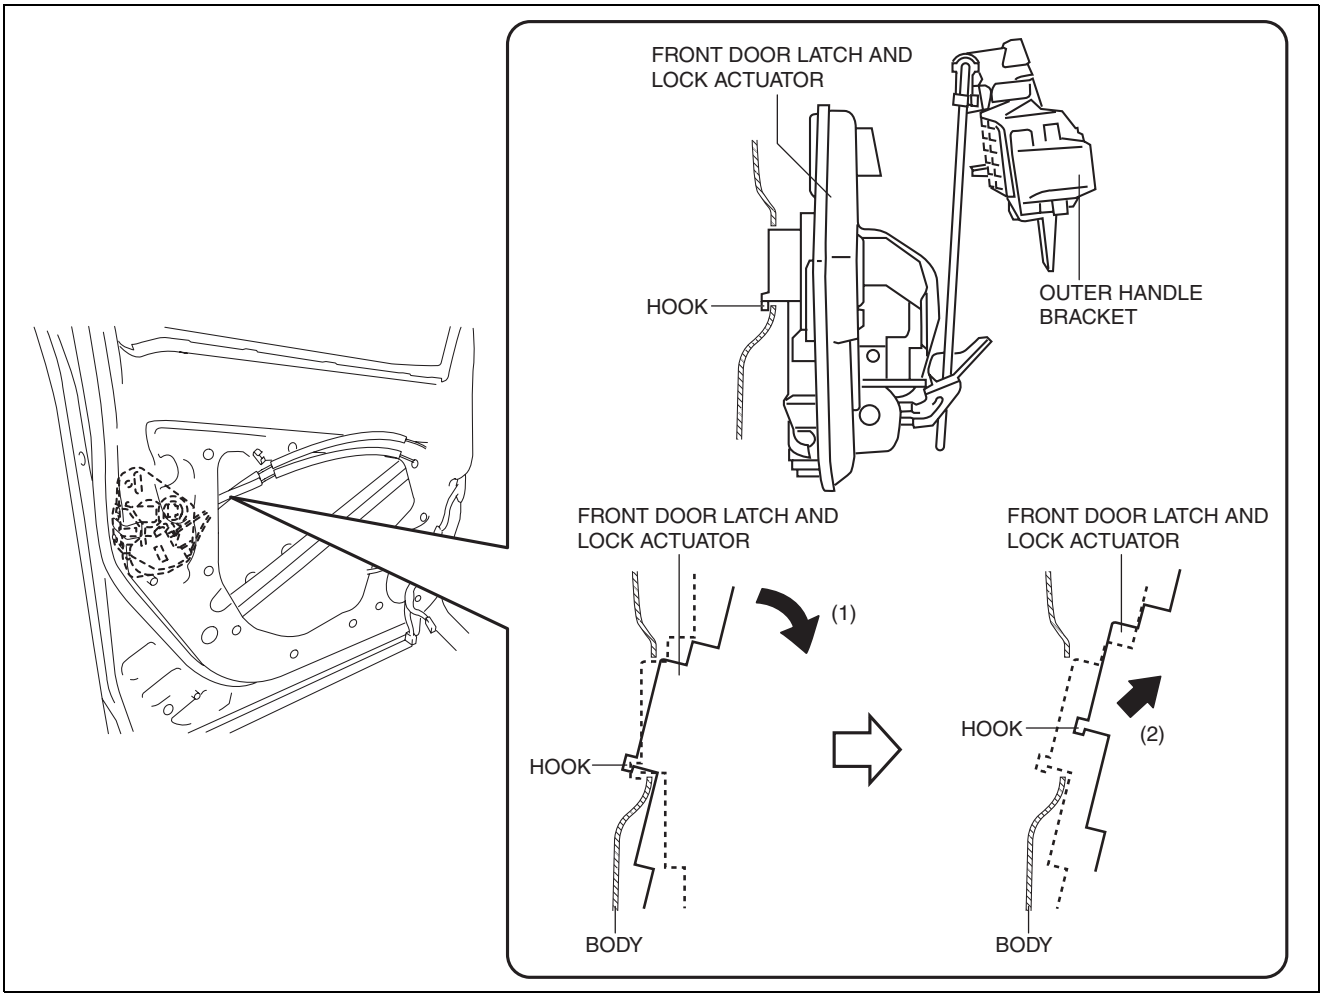
5. Remove the screws.



ac5wzw0000070

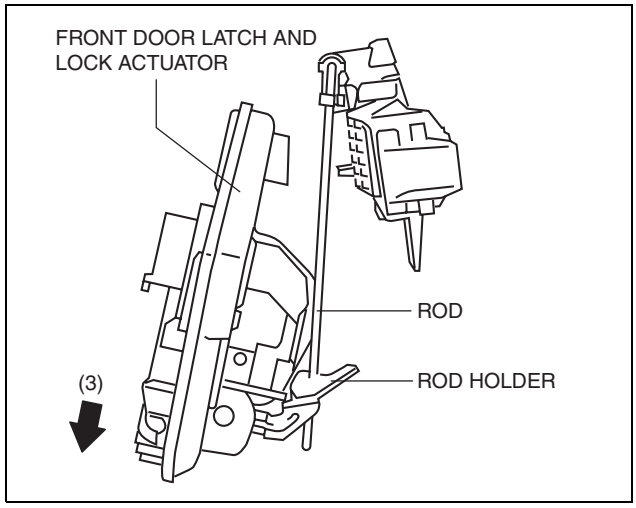
SECURITY AND LOCKS

6. Tilt the front door latch and lock actuator in the direction of arrow (1) shown in the figure and lift it in the direction of arrow (2) to detach the hook of the front door latch and lock actuator.



ac5wzw0000070

7. Move the front door latch and lock actuator down in the direction of arrow (3) shown in the figure to remove the rod from the rod holder.
8. Remove the front door latch and lock actuator.
9. Install in the reverse order of removal.



ac5wzw0000070

FRONT DOOR LATCH AND LOCK ACTUATOR INSPECTION

id091400511200

- The following actuator and switches are integrated with the front door latch and lock actuator.
- From the actuator/switch name and operation in the following table, select the actuator or switch to be inspected, and perform the inspection following the inspection procedure described in the reference.

Actuator/Switch name	Operation	Reference
Front door lock actuator	Electrically switches the lock/unlock of the front doors.	09-14-38 FRONT DOOR LOCK ACTUATOR INSPECTION

SECURITY AND LOCKS

Actuator/Switch name	Operation	Reference
Front door lock-link switch	Turns on/off in conjunction with the lock/unlock so that the lock/unlock condition is detected.	09-14-40 DOOR LOCK-LINK SWITCH INSPECTION
Front door latch switch	Turns on/off in conjunction with the latch lever operation so that the front door open/closed condition is detected.	09-14-40 FRONT DOOR LATCH SWITCH INSPECTION
Front door key cylinder switch	Turns on/off in conjunction with the lock/unlock of the front door key cylinder so that the key cylinder operation condition is detected.	09-14-32 FRONT DOOR KEY CYLINDER SWITCH INSPECTION

FRONT DOOR LOCK ACTUATOR INSPECTION

id091400511300

1. Perform the front door glass preparation. (See 09-12-4 FRONT DOOR GLASS REMOVAL/INSTALLATION.)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the following parts:
   (1) Inner garnish (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)
   (2) Front door trim (See 09-17-65 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
   (3) Front door glass (See 09-12-4 FRONT DOOR GLASS REMOVAL/INSTALLATION.)
   (4) Front door module panel (See 09-11-6 FRONT DOOR MODULE PANEL REMOVAL/INSTALLATION.)
   (5) Front door key cylinder (See 09-14-30 FRONT DOOR KEY CYLINDER REMOVAL/INSTALLATION.)
   (6) Front door latch and lock actuator (See 09-14-35 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
4. Apply battery positive voltage and connect the ground to the front door lock actuator terminals as indicated in the table and verify the operation condition.

WITH DOUBLE LOCKING SYSTEM

FRONT DOOR LOCK ACTUATOR	B+ Terminal	Ground Terminal	Operation
LH	C	G	LOCK
	A	G	DOUBLE LOCK
	G	A,C	UNLOCK
RH	I	E	LOCK
	K	E	DOUBLE LOCK

DOOR LOCK SYSTEM OPERATION RECORD

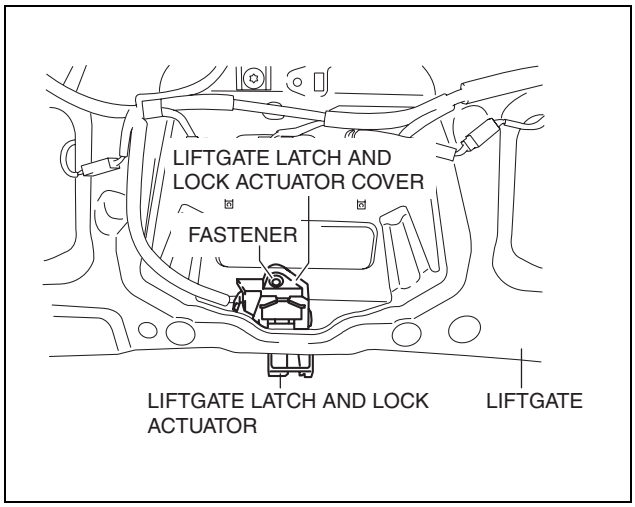
id091400005100

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initial screen.
   1. “Operational Record”
3. Then, select the following from the screen menu.
   1. “Door Lock System”
4. Display the door lock system operation history according to the screen instructions.

LIFTGATE LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION

id091400516900

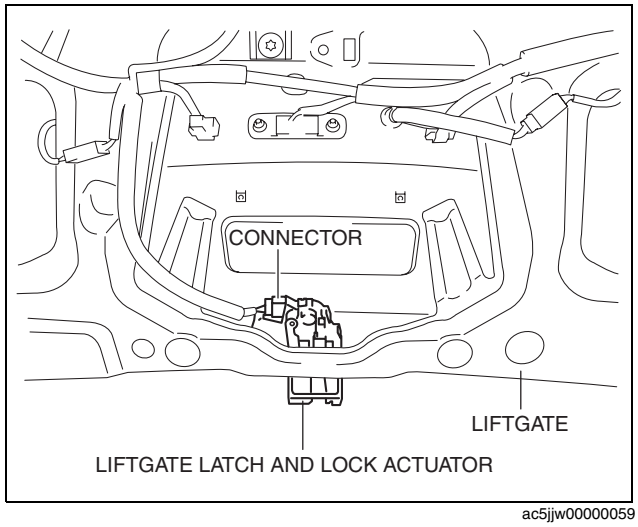
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Liftgate upper trim (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
   (2) Liftgate side trim (See 09-17-87 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Liftgate lower trim (See 09-17-89 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
3. Remove the fastener. (With liftgate latch and lock actuator cover)
4. Remove the liftgate latch and lock actuator cover. (With liftgate latch and lock actuator cover)



ac5wzw0000094

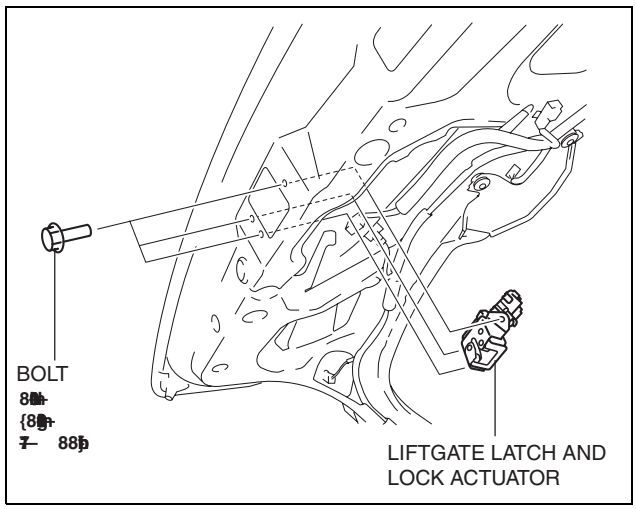
SECURITY AND LOCKS

5. Disconnect the connector.



ac5jjw00000059

6. Remove the bolts.
7. Remove the liftgate latch and lock actuator from the liftgate.
8. Install in the reverse order of removal.



ac5jjw00000060

LIFTGATE LATCH AND LOCK ACTUATOR INSPECTION

id091400517000

- The following actuator and switch are integrated with the liftgate latch and lock actuator.
- From the actuator/switch name and operation in the following table, select the actuator or switch to be inspected, and perform the inspection following the inspection procedure described in the reference.

Actuator/Switch name	Operation	Reference
Liftgate lock actuator	Electrically unlatches the liftgate based on the signal from the rear body control module (RBCM).	09-14-49 LIFTGATE LOCK ACTUATOR INSPECTION
Liftgate latch switch	Turns on/off in conjunction with the latch lever rotation so that the liftgate open/closed condition is detected.	09-14-50 LIFTGATE LATCH SWITCH INSPECTION

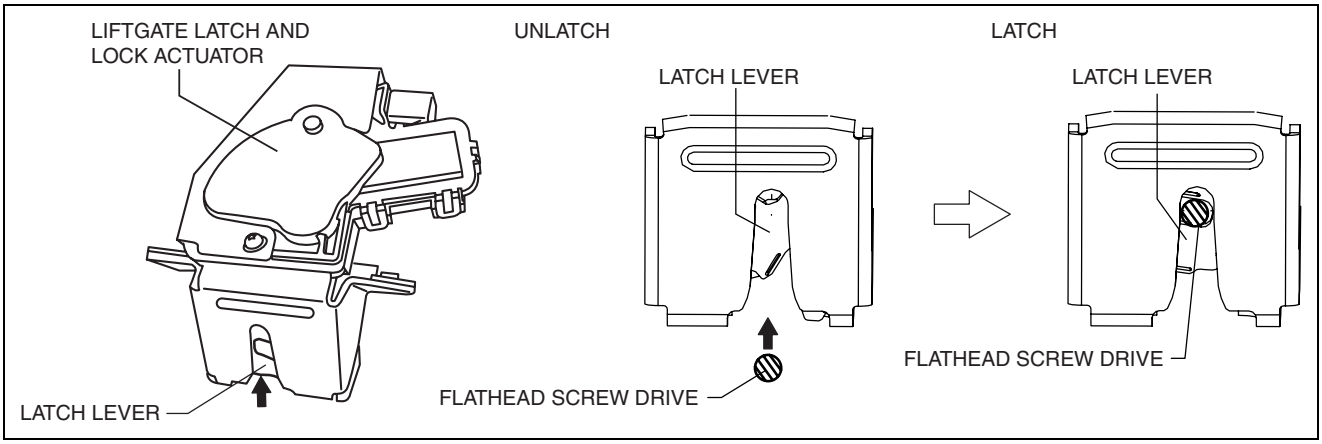
LIFTGATE LOCK ACTUATOR INSPECTION

id091400512100

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Liftgate upper trim (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
   (2) Liftgate side trim (See 09-17-87 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Liftgate lower trim (See 09-17-89 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
   (4) Liftgate latch and lock actuator (See 09-14-48 LIFTGATE LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)

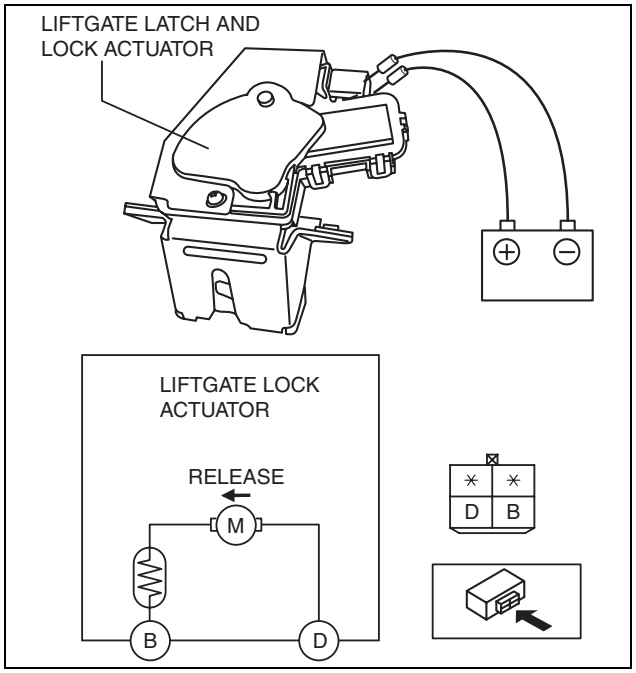
SECURITY AND LOCKS

3. Press in the latch lever of the liftgate latch and lock actuator using a flathead screwdriver, and set it to the latched condition.



ac5wzw0000077

4. Connect terminal D to the positive battery voltage, connect terminal B to the ground, and verify that the latch lever is released and the condition changes to the unlatch condition.
   - If the operation cannot be verified, replace the liftgate latch and lock actuator.



ac5jjw00000224

LIFTGATE LATCH SWITCH INSPECTION

id091400512200

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Liftgate upper trim (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
   (2) Liftgate side trim (See 09-17-87 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Liftgate lower trim (See 09-17-89 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
   (4) Liftgate latch and lock actuator (See 09-14-48 LIFTGATE LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)

SECURITY AND LOCKS

3. Verify that the continuity is as indicated in the table.

START STOP UNIT REMOVAL/INSTALLATION

id091400110300

Caution

- **Never remove bolts and screws other than the bolt in Steps 7 and 8. Otherwise, it will damage internally and the steering lock cannot be unlocked, resulting in the inability to perform the start-stop unit removal/installation.**
- **If configuration is not performed when the start stop unit is replaced with a new one, the vehicle specification information is not stored in the start stop unit and the system will not operate normally.**
- **When performing configuration, it is necessary to read the vehicle specification information from the start stop unit before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the start stop unit. The vehicle specification information is temporarily stored in the M-MDS.**

Note

- The start stop unit prior to replacement stores the vehicle specification information.
- A new start stop unit does not store any vehicle specification information.
- If the vehicle specification information from the start stop unit prior to replacement cannot be read, perform the configuration using As-Built data.

1. When replacing the start stop unit, perform the configuration. (See 09-14-58 START STOP UNIT CONFIGURATION (USING READ/WRITE FUNCTION).)
2. Switch the ignition to off.

Note

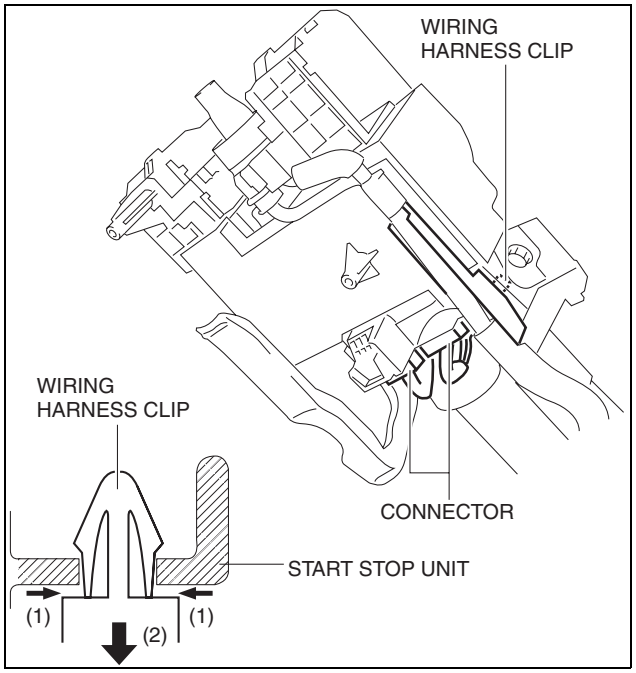
- If the ignition is switched off from ON (engine off or on) with the driver's door open, the steering lock operation can be temporarily released.

3. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
4. Remove the following parts:

SECURITY AND LOCKS

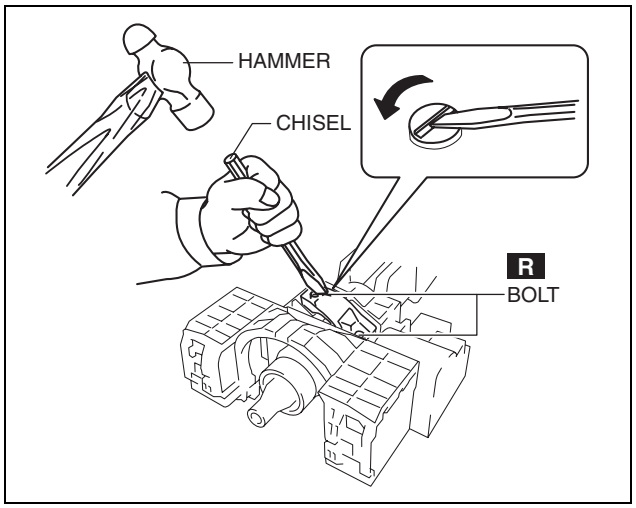
(1) Driver-side air bag module (See 08-10-6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
(2) Steering wheel (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
(3) Clock spring (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.)
(4) Column cover (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.)
(5) Wiper and washer switch (See 09-19-45 WIPER AND WASHER SWITCH REMOVAL/INSTALLATION.)
(6) Light switch (See 09-18-84 LIGHT SWITCH REMOVAL/INSTALLATION.)

5. Disconnect the connector.
6. While pressing the tabs of the clip in the direction of arrow (1) shown in the figure, press it in the direction of arrow (2) to detach the connector tabs from the start stop unit.
7. Remove the wiring harness clip from the start stop unit.



ac5wzw0000165

8. Make a groove on the bolt head by punching it with a chisel using a hammer, and remove the bolts by rotating them counterclockwise.
9. Remove the bolts.

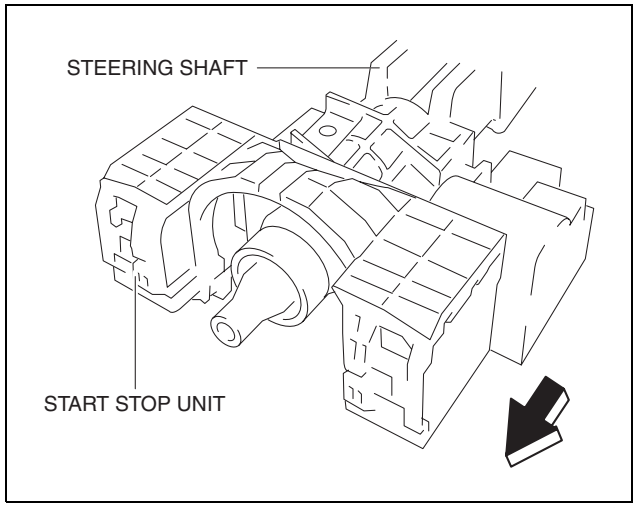


ac5wzw0000303

SECURITY AND LOCKS

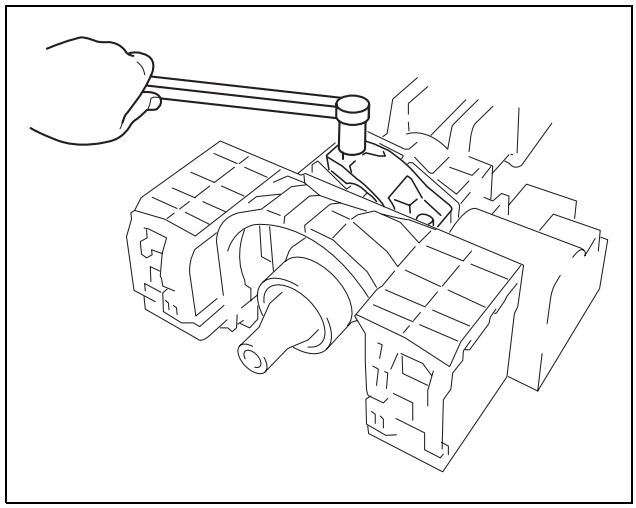
10. Remove the start stop unit from the steering shaft by pulling it in the direction of the arrow shown in the figure.
11. Install in the reverse order of removal. (See 09-14-55 Start Stop Unit Installation Note.)

Note
- If configuration cannot be performed by reading/writing of the vehicle specification information, perform the configuration using As-Built information after replacing the start stop unit. (See 09-14-59 START STOP UNIT CONFIGURATION (USING AS-BUILT DATA).)



ac5wzw0000165

Start Stop Unit Installation Note
1. Temporarily install the start stop unit to the steering shaft using new start stop unit installation bolts.
2. Tighten the start stop unit installation bolts until the heads break off.



ac5jjw00000877

START STOP UNIT INSPECTION

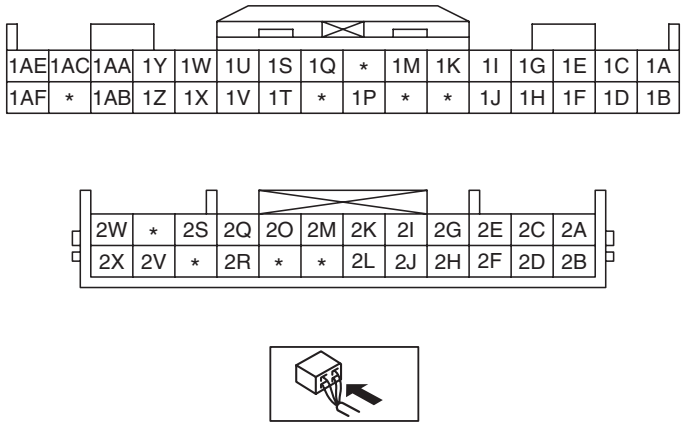
id091400110400

1. Remove the following parts:
   (1) Column cover (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.)
2. Verify that the voltages of each of the terminals are as indicated in the terminal voltage table (reference).
   - If the voltage is not as specified in the terminal voltage table (reference), inspect the parts under Inspection item(s) and related wiring harnesses.
     — If the system does not work normally even though the inspection items or related wiring harnesses do not have any malfunction, replace the start stop unit.

SECURITY AND LOCKS

Terminal Voltage Table (Reference)

START STOP UNIT
WIRING HARNESS SIDE CONNECTOR



ac5wzw0000376

Terminal	Signal name	Connected to	Measurement conditions		Voltage (V)	Inspection item(s)
1A	Power supply	ROOM 15 A fuse	Under any condition		B+	• ROOM 15 A fuse • Battery
1B	Power supply	IG1 15 A fuse	Ignition switched ON (engine off)		B+	• IG1 15 A fuse • Battery
			Ignition switched OFF (LOCK) or at ACC		1.0 or less	
1C*1	Brake switch	Brake switch	Brake pedal depressed		B+	Brake switch
			Brake pedal not depressed		1.0 or less	
1D	Starter monitor (MTX)	Starter relay	Ignition switched ON (engine off)	Clutch pedal not depressed	B+	• Starter relay • Battery
				Clutch pedal depressed	1.0 or less	
	Starter monitor (ATX)	Starter relay	Ignition switched ON (engine off)	Other than selector lever is in P or N position	B+	• Starter relay • Battery
				Selector lever is in P or N position	1.0 or less	
1E	ACC monitor	MIRROR 7.5 A fuse	Switch the ignition to ACC or ON (engine off)		B+	• MIRROR 7.5 A fuse • Battery
			Ignition switched OFF (LOCK)		1.0 or less	
1F	Starter interlock switch (MTX)	Starter interlock switch	Clutch pedal not depressed		B+	Starter interlock switch
			Clutch pedal depressed		1.0 or less	
	Selector lever position switch (ATX)	TCM	Other than selector lever is in P or N position		B+	TCM
			Selector lever is in P or N position		1.0 or less	
1G	Hazard warning switch signal	Hazard warning switch	Hazard warning switch not pressed (OFF)		B+	• MIRROR 7.5 A fuse • Battery
			Hazard warning switch pressed (ON)		1.0 or less	
1H	Push button start 1	Push button start	Push button start pressed		1.0 or less	Push button start
			Push button start not pressed		B+	
1I	Push button illumination	Push button start	Determination using terminal voltage inspection is not possible.			Push button start
1J*1	P position	Not P position switch	Selector lever is in P position		B+	Not P position switch
			Except above		1.0 or less	

SECURITY AND LOCKS

Terminal	Signal name	Connected to	Measurement conditions		Voltage (V)	Inspection item(s)
1K	Push button illumination (green)	Push button start	Engine starting conditions are met		1.0 or less	Push button start
			Except above		B+	
1M	Push button illumination (amber)	Push button start	Ignition switched to ACC or ON (engine off)		1.0 or less	Push button start
			Except above		B+	
1P	Lock input	Door lock-link switch (driver's door)	Driver's door locked		1.0 or less	Door lock-link switch (driver's door)
			Driver's door unlocked		Approx. 5	
1Q	Rear body control module (RBCM) communication	Rear body control module (RBCM)	Because this terminal is for communication, determination using terminal voltage inspection is not possible.			
1S* 5	Steering angle sensor power supply	Steering angle sensor	The specified time has elapsed since key placed outside vehicle and all doors locked		1.0 or less	Steering angle sensor
			Except above		Approx. 5	
1T* 5	Steering angle sensor ground	Steering angle sensor	Under any condition		1.0 or less	Steering angle sensor
1U* 5	Steering angle sensor (signal A/D1)	Steering angle sensor	Steering wheel is turned to left and right		4.00—4.75⇔0.25—0.75	Steering angle sensor
1V	Windshield wiper switch signal (LO)	Front body control module (FBCM)	Ignition switch ON (engine off or on)	Other than windshield wiper switch at LO and HI	B+	Front body control module (FBCM)
				Windshield wiper switch at LO	1.0 or less	
1W	Steering angle sensor (signal A/D1)	Steering angle sensor	Steering wheel is turned to left and right		4.00—4.75⇔0.25—0.75	Steering angle sensor
1X	Headlight switch signal (LO)	Front body control module (FBCM)	Light switch at position other than HEAD and passing		B+	Front body control module (FBCM)
			Light switch at HEAD position		1.0 or less	
1Y	Cruise control switch signal	Cruise control switch	RESUME switch is pressed		Approx. 1.5	Cruise control switch
			CANCEL switch is pressed		1.0 or less	
			ON switch is pressed		Approx. 1.9	
			OFF switch is pressed		1.0 or less	
			SET (+) switch is pressed			
			SET (-) switch is pressed			
			Except above		Approx. 3.6	
1Z	Cruise control switch ground	Cruise control switch	Under any condition		1.0 or less	Cruise control switch
1AA	Steering switch signal	Steering switch	Up switch is pressed		1.0 or less	Steering switch
			Down switch is pressed		Approx. 1.2	
			INFO button is pressed		Approx. 2.2	
			Except above		Approx. 3.3	
1AB	Steering switch ground	Steering switch	Under any condition		1.0 or less	Steering switch
1AC	PATS+	Coil antenna (push button start)	Because this terminal is for communication, determination using terminal voltage inspection is not possible.			
1AE	PATS-	Coil antenna (push button start)	Because this terminal is for communication, determination using terminal voltage inspection is not possible.			
1AF	GROUND	Body ground	Under any condition		1.0 or less	Body ground
2A	GROUND	Body ground	Under any condition		1.0 or less	Body ground
2B	GROUND	Body ground	Under any condition		1.0 or less	Body ground
2C	ACC relay control	ACC relay	Switch the ignition to ACC or ON (engine off or on)		B+	ACC relay
			Ignition switched OFF (LOCK)		1.0 or less	

SECURITY AND LOCKS

Terminal	Signal name	Connected to	Measurement conditions		Voltage (V)	Inspection item(s)
2D	IG2 relay control	Front body control module (FBCM)	Ignition switched ON (engine off)		B+	Front body control module (FBCM)

*4 : Without advanced keyless system
*5 : With steering angle sensor

START STOP UNIT CONFIGURATION (USING READ/WRITE FUNCTION)

id091400112500

Note

- When performing configuration, it is necessary to read the vehicle specification information from the start stop unit before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the start stop unit. The vehicle specification information is temporarily stored in the M-MDS.

SECURITY AND LOCKS

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    1. Select “Module Programming”.
3. Then, select items from the screen menu in the following order.
    1. Select “Programmable Module Installation”.
    2. Select “SSU”.
4. Perform the configuration according to the directions on the screen.

    Caution
    - **When the configuration is performed, CAN communication between the start stop unit and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.**

5. Verify the DTCs for all of the control modules connected to the CAN line.
    - If any DTC is stored, clear it.
    - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
    - If the DTC remains, perform troubleshooting according to the DTC.

START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)

id091400112600

Note
- If the configuration is performed using As-Built data, the set value of the personalization function is reset to the initial value (condition when shipped from factory). Verify the set value with the customer and perform the personalization function setting after performing the configuration using As-Built data.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    1. Select “Module Programming”.
3. Then, select items from the screen menu in the following order.
    1. Select “As-Built”.
    2. Select “SSU”.
4. Perform the configuration according to the directions on the screen.

    Caution
    - **When the configuration is performed, CAN communication between the start stop unit and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.**

5. Verify the DTCs for all of the control modules connected to the CAN line.
    - If any DTC is stored, clear it.
    - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
    - If the DTC remains, perform troubleshooting according to the DTC.

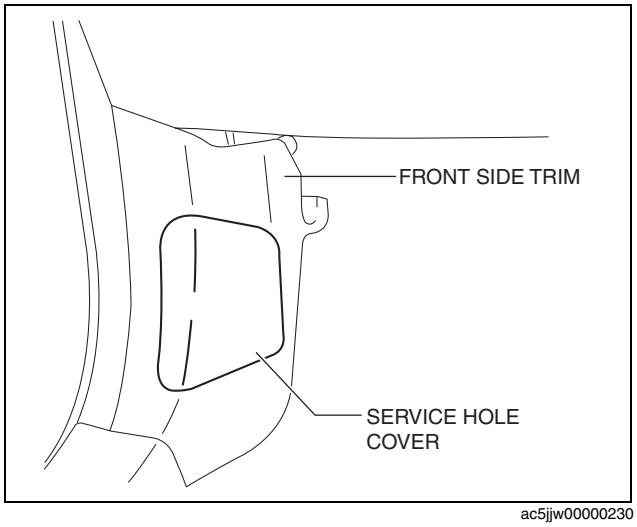
LF CONTROL UNIT REMOVAL/INSTALLATION

id091400110500

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

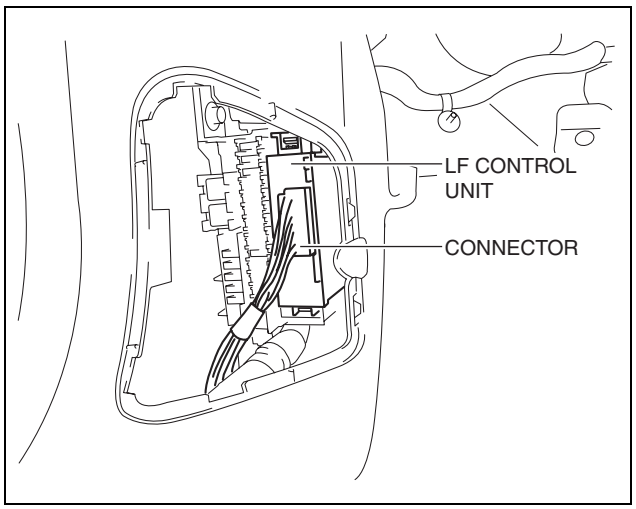
SECURITY AND LOCKS

2. Remove the service hole cover on the front side trim.



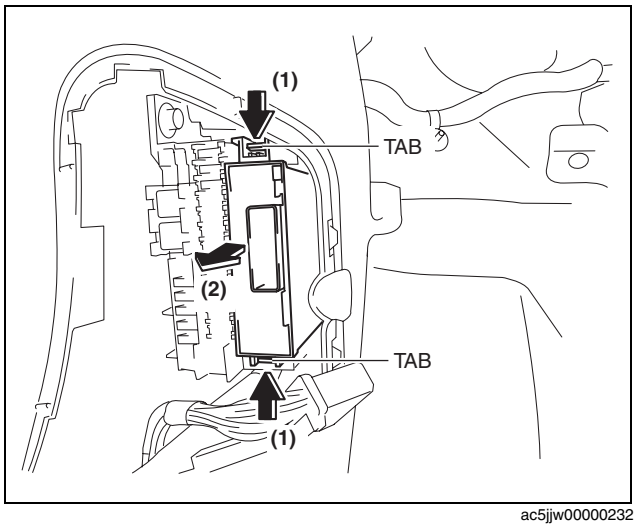
ac5jjw00000230

3. Disconnect the connector.



ac5wzw0000094

4. Pull the LF control unit in the direction of the arrow (2) shown in the figure and remove it while pressing the tab in the direction of the arrow (1).



ac5jjw00000232

LF CONTROL UNIT INSPECTION

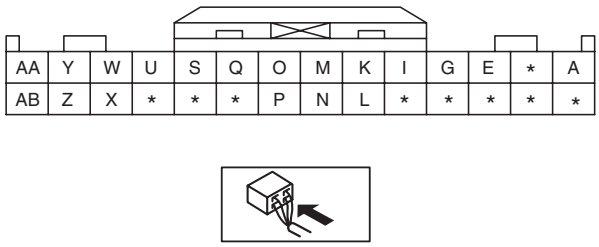
id091400110600

1. Remove the service hole cover on the front side trim. (See 09-14-59 LF CONTROL UNIT REMOVAL/INSTALLATION.)
2. Verify that the voltages of each of the terminals are as indicated in the terminal voltage table (reference).
   - If the voltage is not as specified in the terminal voltage table (reference), inspect the parts under Inspection item(s).
     — If the system does not work normally even though the inspection items are normal, replace the LF control unit.

SECURITY AND LOCKS

Terminal Voltage Table (Reference)

LF CONTROL UNIT
WIRING HARNESS SIDE CONNECTOR



ac5wzw0000094

Terminal	Signal name	Connected to	Measurement conditions	Voltage (V)	Inspection item (s)
A	Power supply	ROOM 15 A fuse	Under any condition	B+	• ROOM 15 A fuse • Battery • Related wiring harness
E	Request switch signal (Driver's side)	Request switch (RF)	When driver's side request switch is pressed	1.0 or less	• Front outer handle (driver's side) • Related wiring harness
			When driver's side request switch is not pressed	5.0	
G	Request switch signal (Passenger's side)	Request switch (LF)	When passenger's side request switch is pressed	1.0 or less	• Front outer handle (passenger's side) • Related wiring harness
			When passenger's side request switch is not pressed	5.0	
I	Request switch signal (liftgate)	Request switch (Liftgate)	When liftgate request switch is pressed	1.0 or less	• Request switch (Liftgate) • Related wiring harness
			When liftgate request switch is not pressed	5.0

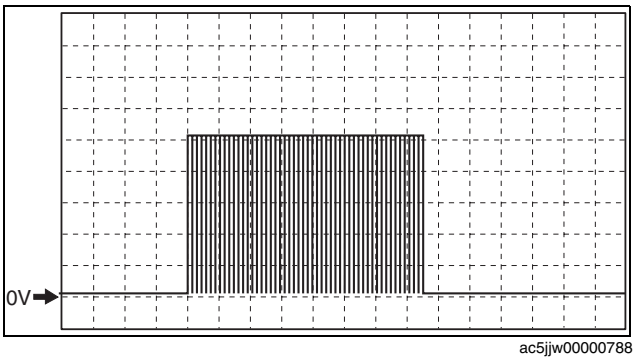
Inspection Using an Oscilloscope (Reference)
Pattern 1



ac5jjw00000788

- LF control unit: L (+) ⇔ body ground (-)
- Oscilloscope setting: 2 V/DIV (Y), 100 ms/DIV (X), DC range

SECURITY AND LOCKS PERSONALIZATION FEATURES SETTING PROCEDURE

id091400112900

Advanced Keyless Entry System
Using M-MDS

1. Connect the M-MDS to DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   1. Select the "Module Programming".
   2. Select "Programmable Parameters".
3. Select menu in the SSU.
4. Select an item name, and then select option.

M-MDS display	Function	Initial setting	Setting content	Control unit
Advanced keyless function.*1	The advanced keyless entry system and push button start system functions can be disabled.	Enabled.	Enabled. / Disabled.	Start stop unit
Walk Away Lock.	The out-of-area (reception area) type auto lock function can be set.	OFF	Not Adopted. / OFF / ON	Start stop unit
Auto Re-lock Time.	The operation start time of the auto re-lock function can be changed.	30 seconds	Not Adopted. / 30 seconds / 60 seconds / 90 seconds	Start stop unit
Lock Beep Volume.	The keyless beeper volume can be adjusted.	Medium	Not Adopted. / Off / Low / Medium / High	Start stop unit

*1 : Because the push button start system function has been disabled, to start the engine press the upper part of the remote transmitter against the center of the push button start.

Setting method by operation of remote transmitter button

- The following setting can be changed by operation of the remote transmitter button.

M-MDS display	Function	Initial setting	Setting content	Control unit
Lock Beep Volume.	The keyless beeper volume can be adjusted.	Medium	Off / Low / Medium / High	Start stop unit

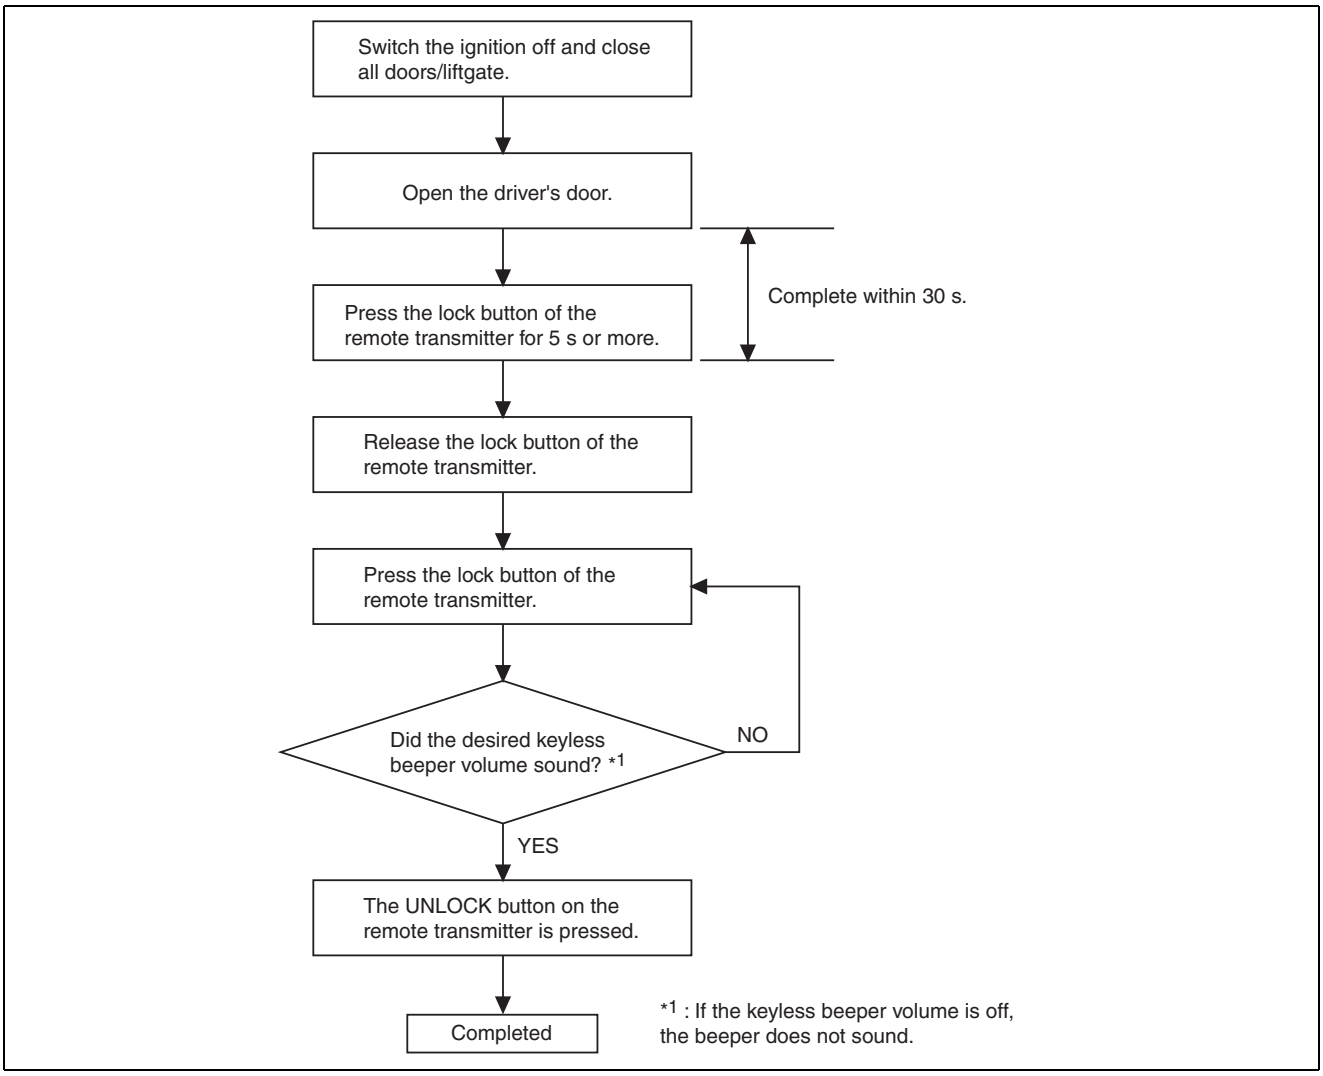
- Change the setting for the keyless beeper volume referring to the following procedure:

Note

- If any of the following conditions is met during procedure, the setting for changing the keyless beeper volume is finished.

SECURITY AND LOCKS

— The ignition is switched to ACC or ON (engine off or on).
— The driver's door is closed.
— The liftgate is open.
— The remote transmitter operation is not performed for approx. 10 s.
— The UNLOCK button on the remote transmitter is pressed.
— A request switch is pressed.



ac5wzw0000461

Using audio unit (with color LCD)

- (See 09-20-9 AUDIO UNIT PERSONALIZATION FEATURES SETTING PROCEDURE.)

Keyless Entry System
Using M-MDS

1. Connect the M-MDS to DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   1. Select the "Module Programming".
   2. Select "Programmable Parameters".
3. Select menu in the SSU.
4. Select an item name, and then select option.

M-MDS display	Function	Initial setting	Setting content	Control unit
Advanced keyless function.*1	The keyless entry system and push button start system functions can be disabled.	Enabled.	Enabled. / Disabled.	Start stop unit

SECURITY AND LOCKS

M-MDS display	Function	Initial setting	Setting content	Control unit
Auto Re-lock Time.	The operation start time of the auto re-lock function can be changed.	30 seconds	Not Adopted. / 30 seconds / 60 seconds / 90 seconds	Start stop unit

*1 : Because the push button start system function has been disabled, to start the engine press the upper part of the remote transmitter against the center of the push button start.

Using audio unit (with color LCD)
- (See 09-20-9 AUDIO UNIT PERSONALIZATION FEATURES SETTING PROCEDURE.)

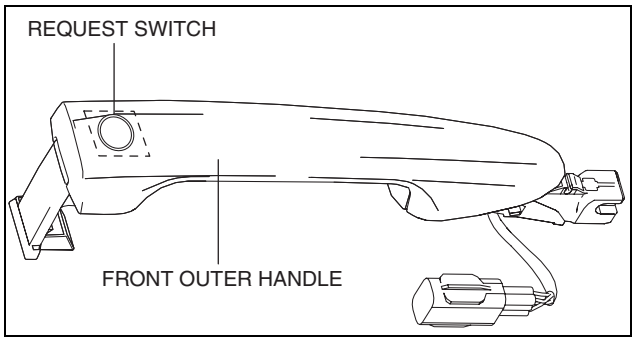
Power Door Lock System
- For the auto door lock function, refer to the personalization features for the rear body control module (RBCM). (See 09-40-16 CONTROL SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE.)

REQUEST SWITCH REMOVAL/INSTALLATION

id091400515200

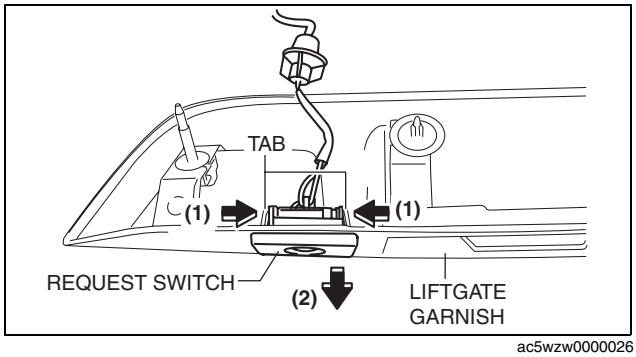
Driver's Door/Passenger's Door

Note
- The request switch cannot be removed as a single unit because it is built into the front outer handle. If the request switch is replaced, replace the front outer handle. (See 09-14-8 FRONT OUTER HANDLE REMOVAL/INSTALLATION.)



ac5wzw0000026

Liftgate
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Liftgate upper trim (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
   (2) Liftgate side trim (See 09-17-87 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Liftgate recess (See 09-17-89 LIFTGATE RECESS REMOVAL/INSTALLATION.)
   (4) Liftgate lower trim (See 09-17-89 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
   (5) Liftgate garnish (See 09-16-53 LIFTGATE GARNISH REMOVAL/INSTALLATION.)
3. Push out the request switch in the direction of the arrow (2) shown in the figure while pressing the request switch tab in the direction of the arrow (1) shown in the figure, detach the request switch tab and liftgate garnish, and then remove the request switch from the liftgate garnish.
4. Install in the reverse order of removal.



ac5wzw0000026

SECURITY AND LOCKS

REQUEST SWITCH INSPECTION

id091400515400

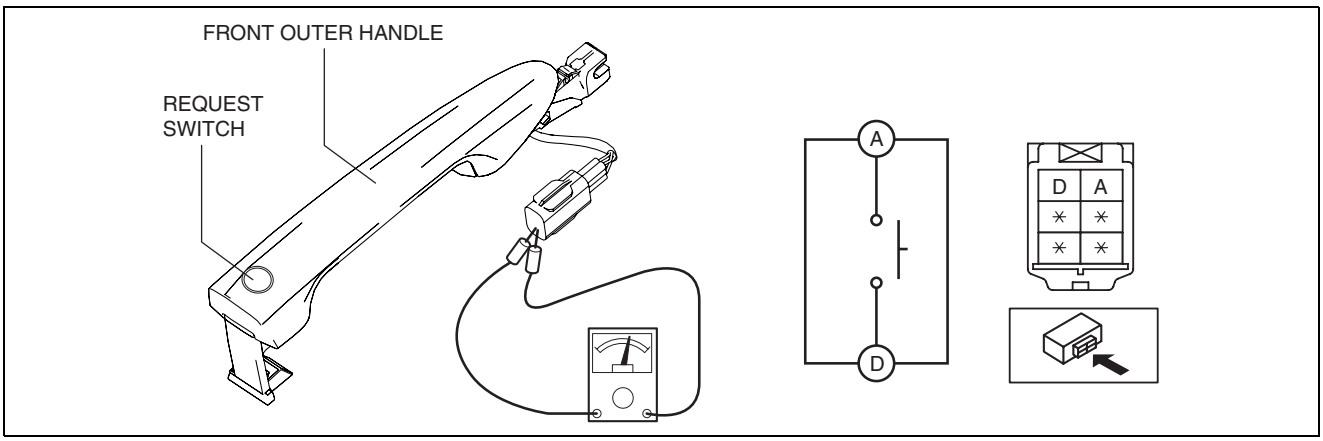
Driver's Door/Passenger's Door

1. Perform the front door glass preparation. (See 09-12-4 FRONT DOOR GLASS REMOVAL/INSTALLATION.)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the following parts:
   (1) Inner garnish (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)
   (2) Front door trim (See 09-17-65 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
   (3) Front door glass (See 09-12-4 FRONT DOOR GLASS REMOVAL/INSTALLATION.)
   (4) Front door module panel (See 09-11-6 FRONT DOOR MODULE PANEL REMOVAL/INSTALLATION.)
   (5) Front door key cylinder (driver's side) (See 09-14-30 FRONT DOOR KEY CYLINDER REMOVAL/INSTALLATION.)
   (6) Front outer handle (See 09-14-8 FRONT OUTER HANDLE REMOVAL/INSTALLATION.)
4. Verify that the continuity is as indicated in the table.

○—○ :CONTINUITY

REQUEST SWITCH (REQUEST SWITCH CONDITION)	TERMINAL	
	A	D
ON (PRESSED)	○	○
OFF (NOT PRESSED)		

ac5wzw0000094



ac5wzw0000026

- If not as indicated in the table, replace the front outer handle.

Liftgate

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Liftgate upper trim (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
   (2) Liftgate side trim (See 09-17-87 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Liftgate recess (See 09-17-89 LIFTGATE RECESS REMOVAL/INSTALLATION.)
   (4) Liftgate lower trim (See 09-17-89 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
   (5) Liftgate garnish (See 09-16-53 LIFTGATE GARNISH REMOVAL/INSTALLATION.)

SECURITY AND LOCKS

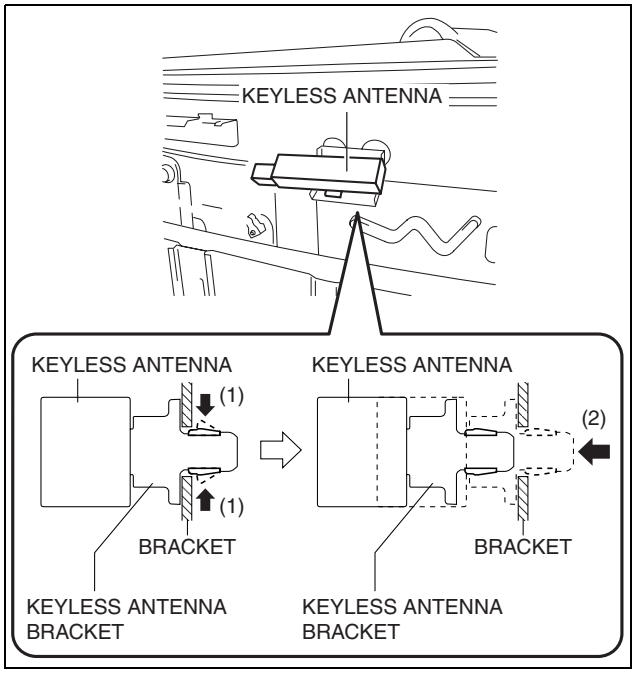
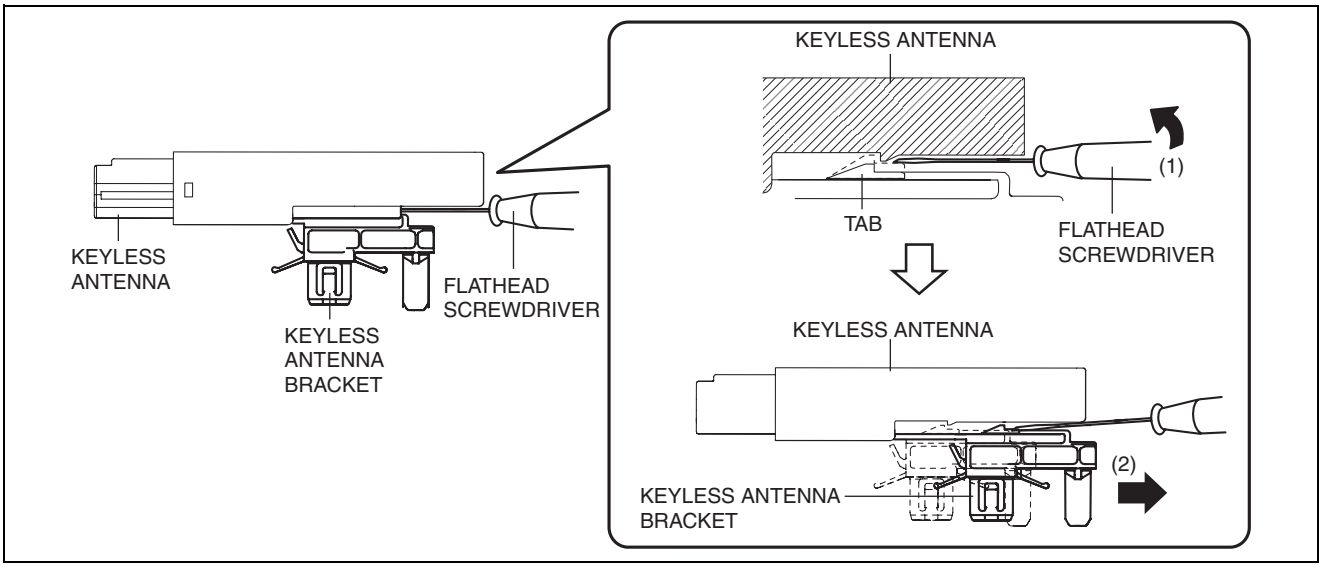
3. While pressing the keyless antenna bracket tab in the direction of arrow (1) shown in the figure, press it in the direction of arrow (2) to detach the keyless antenna bracket tab from the bracket.
4. Remove the keyless antenna from the bracket.
5. Insert a tape-wrapped flathead screwdriver into the position shown in the figure.



ac5wzw0000025



ac5wzw0000025

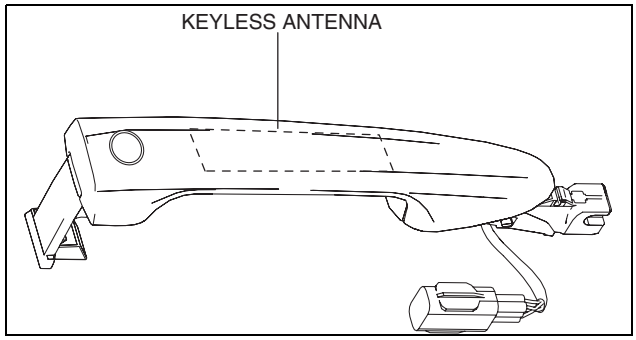
6. Move the tape-wrapped flathead screwdriver in the direction of arrow (1) shown in the figure to press the keyless antenna bracket tab, and pull it in the direction of arrow (2) to detach the keyless antenna bracket from the keyless antenna.
7. Remove the keyless antenna bracket from the keyless antenna.
8. Install in the reverse order of removal.

Vehicle exterior, driver's side/passenger's side

Note

- The keyless antenna (vehicle exterior, driver's side/passenger's side) cannot be removed as a single unit because it is built into the front outer handle. To replace the keyless antenna (vehicle exterior, driver's side/passenger's side), replace the front outer handle. (See 09-14-8 FRONT OUTER HANDLE REMOVAL/INSTALLATION.)

SECURITY AND LOCKS

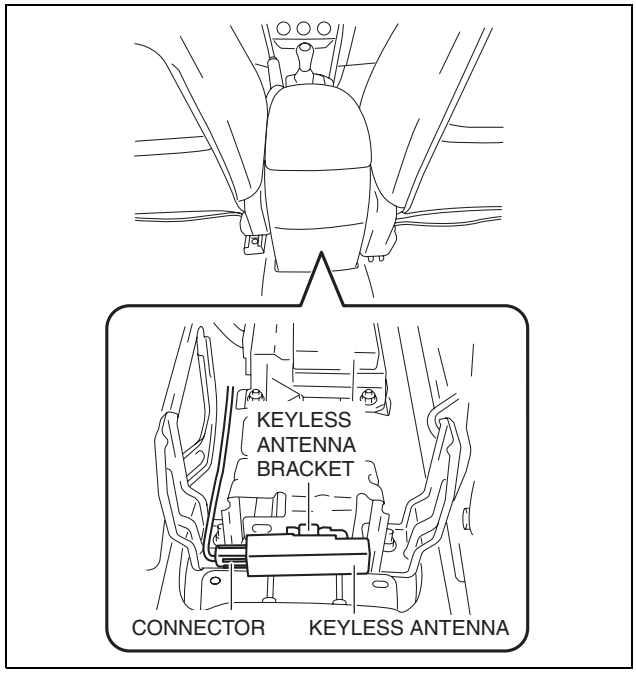


ac5wzw0000025

With Keyless Entry System
Vehicle interior, center

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (2) Shift lever knob (MTX) (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
   (3) Front console box (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)
   (4) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
   (5) Upper panel (See 09-17-44 UPPER PANEL REMOVAL/INSTALLATION.)
   (6) Rear console (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.)
3. Disconnect the connector from the keyless antenna.

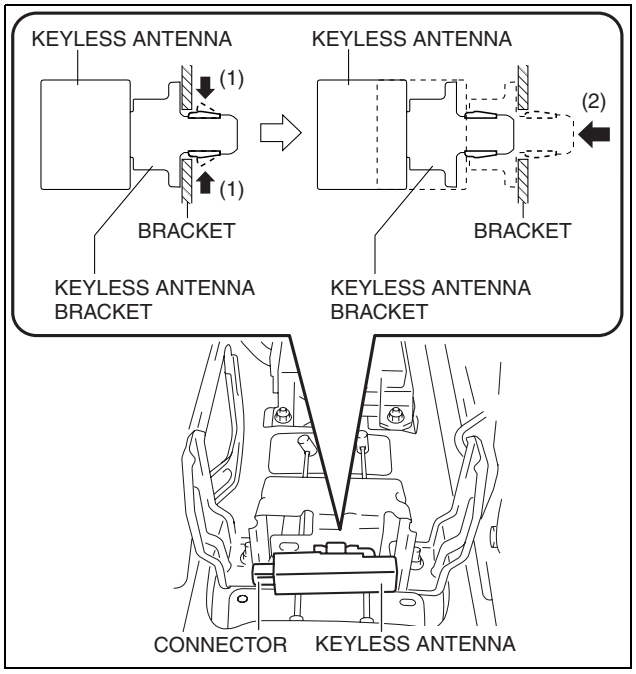
Caution
- **Disconnect the connector while holding the keyless antenna, otherwise the keyless antenna bracket could be damaged.**



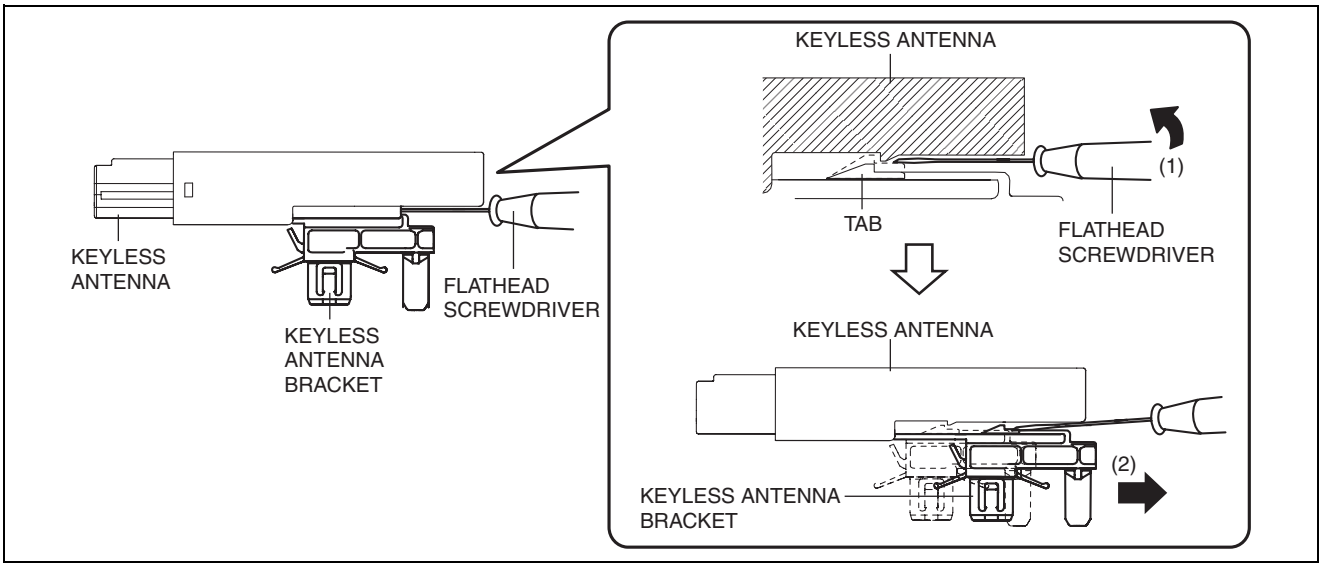
ac5wzw0000275

SECURITY AND LOCKS

4. While pressing the keyless antenna bracket tab in the direction of arrow (1) shown in the figure, press it in the direction of arrow (2) to detach the keyless antenna bracket tab from the bracket.
5. Remove the keyless antenna from the bracket.
6. Insert a tape-wrapped flathead screwdriver into the position shown in the figure.



ac5wzw0000026



ac5wzw0000025

7. Move the tape-wrapped flathead screwdriver in the direction of arrow (1) shown in the figure to press the keyless antenna bracket tab, and pull it in the direction of arrow (2) to detach the keyless antenna bracket from the keyless antenna.
8. Remove the keyless antenna bracket from the keyless antenna.
9. Install in the reverse order of removal.

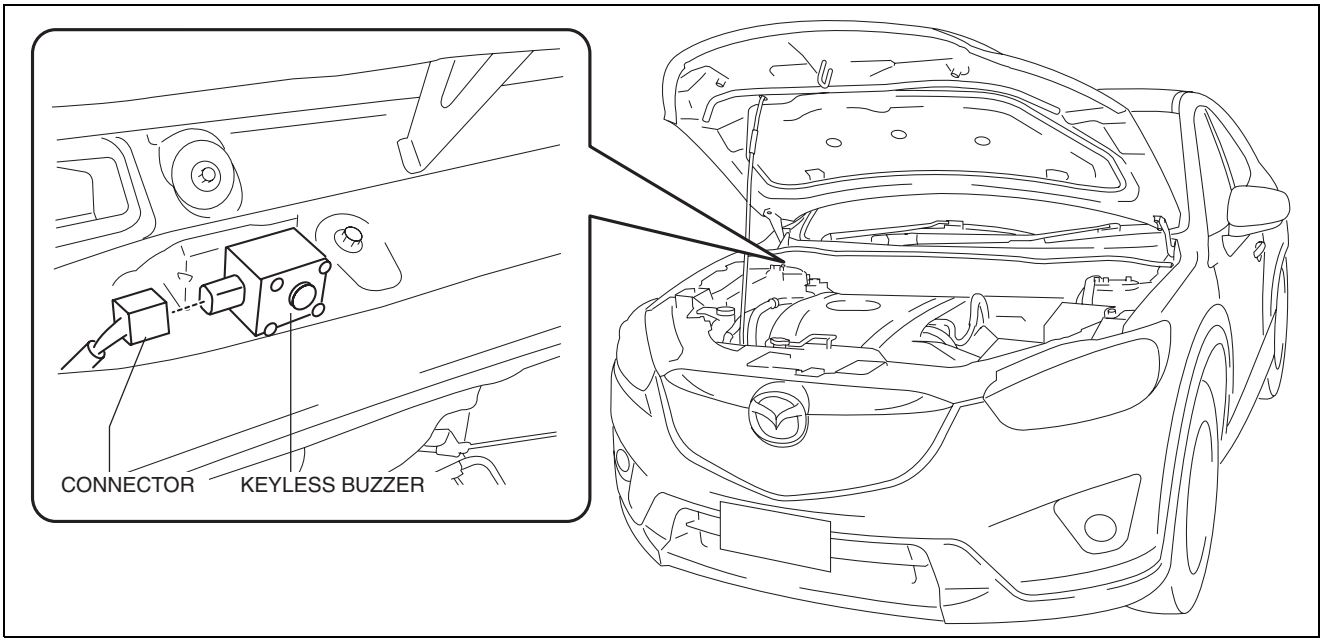
KEYLESS BEEPER REMOVAL/INSTALLATION

id091400515000

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the cowl grille. (See 09-16-3 COWL GRILLE REMOVAL/INSTALLATION.)

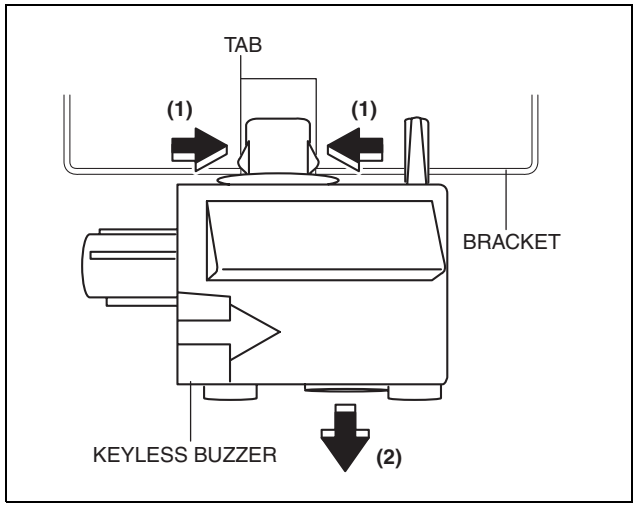
SECURITY AND LOCKS

3. Disconnect the connector.



ac5wzw0000378

4. Pull the keyless buzzer in the direction of the arrow (2) shown in the figure while pressing the keyless buzzer tab in the direction of the arrow (1) shown in the figure, detach the keyless buzzer tab and bracket, and then remove the keyless buzzer from the bracket.
5. Install in the reverse order of removal.



ac5wzw0000026

KEYLESS BEEPER INSPECTION

id091400515100

- Because no oscillation circuit is integrated in the keyless beeper, a beep sound is not heard by applying rated voltage to the keyless beeper itself. To inspect the keyless beeper, refer to symptom troubleshooting. (See 09-03B-15 ANSWER-BACK BUZZER DOES NOT SOUND [SECURITY AND LOCKS].)

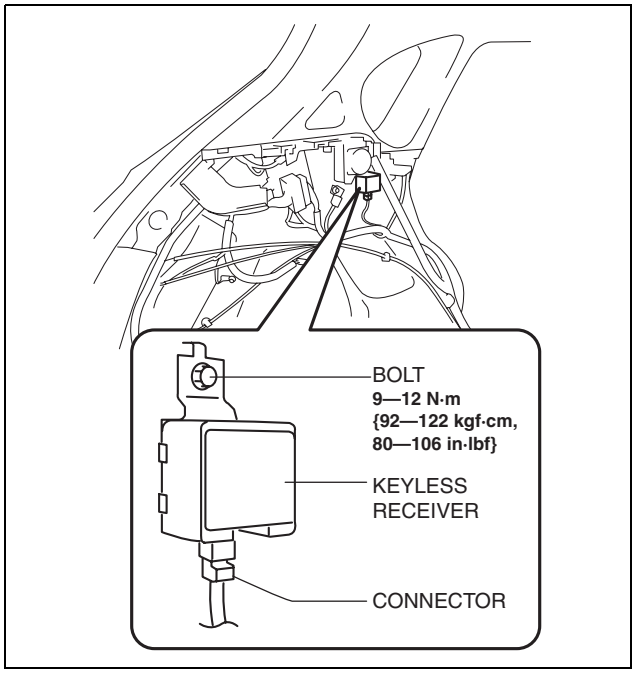
KEYLESS RECEIVER REMOVAL/INSTALLATION

id091400514300

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (LH) (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Trunk side trim (LH) (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)

SECURITY AND LOCKS

3. Disconnect the connector.
4. Remove the bolt.
5. Remove the keyless receiver.
6. Install in the reverse order of removal.



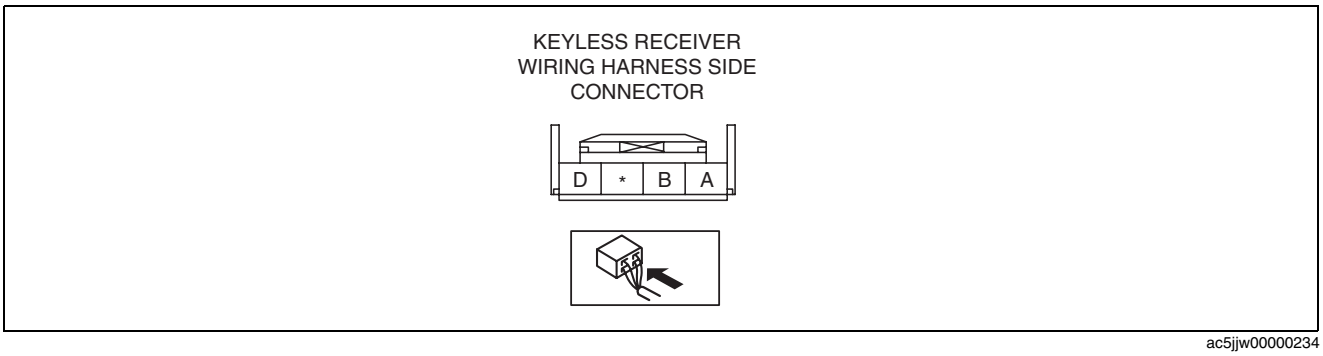
ac5jjw00000233

KEYLESS RECEIVER INSPECTION

id091400514400

1. Remove the following parts:
   (1) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (LH) (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Trunk side trim (LH) (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
2. Remove the keyless receiver with the connector still connected. (See 09-14-73 KEYLESS RECEIVER REMOVAL/INSTALLATION.)
3. Verify that the voltages of each of the terminals are as indicated in the terminal voltage table (reference).
   - If the voltage is not as specified in the terminal voltage table (reference), inspect the parts under Inspection item(s) and related wiring harnesses.
     — If the system does not operate normally even though the parts under Inspection Item(s) and related wiring harnesses do not have any malfunction, replace the keyless receiver.

Terminal Voltage Table (Reference)



ac5jjw00000234

Terminal	Signal name	Connected to	Measurement conditions	Voltage (V)	Inspection item(s)
A	Power supply	Start stop unit	Under any condition	Approx. 5	Start stop unit
B	DATA	Start stop unit	Because this terminal is for communication, determination using terminal voltage inspection is not possible.		Start stop unit
D	GND	Body ground	Under any condition	1.0 or less	Ground

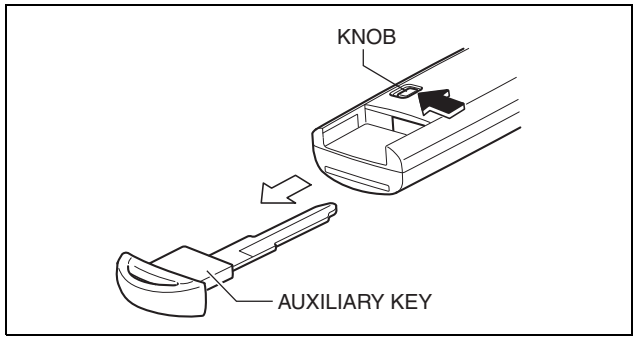
REMOTE TRANSMITTER DISASSEMBLY/ASSEMBLY

id091400112200

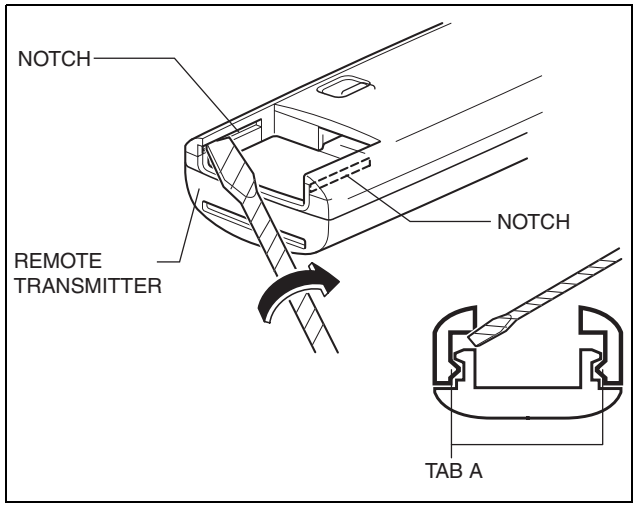
Disassembly

1. Press the knob on the remote transmitter and pull the auxiliary key out.



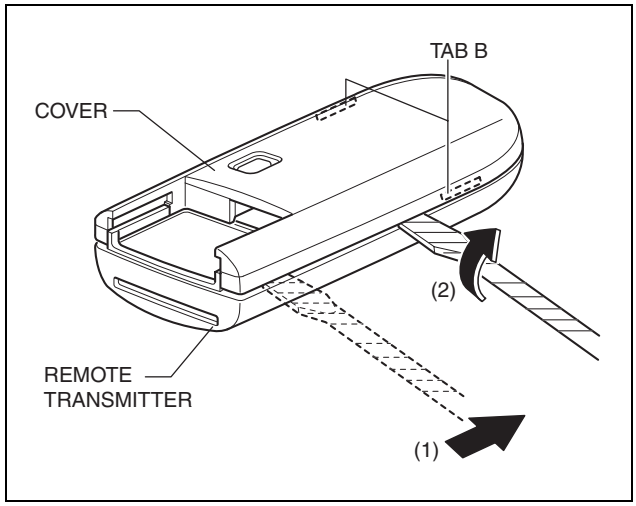
ac5wzw0000094

2. Insert a tape-wrapped flathead screwdriver into the notch on the remote transmitter and turn it in the direction of the arrow shown in the figure to detach tabs A from the remote transmitter.



ac5wzw0000094

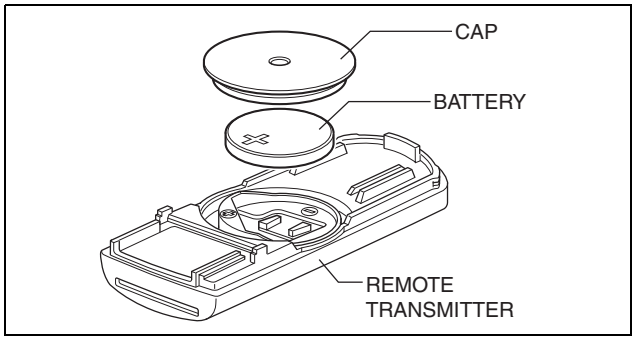
3. Insert a tape-wrapped flathead screwdriver between the remote transmitter and the cover and slide it in the direction of arrow (1) shown in the figure.
4. Turn the screwdriver in the direction of arrow (2) shown in the figure to detach tabs B of the cover from the remote transmitter.
5. Remove the cover.



ac5wzw0000095

SECURITY AND LOCKS

6. Remove the cap and the battery from the remote transmitter.

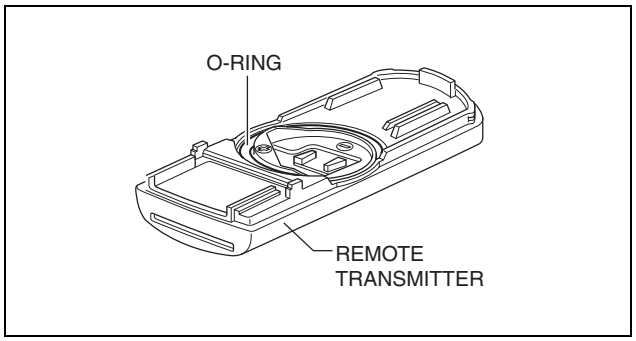


ac5wzw0000095

Assembly

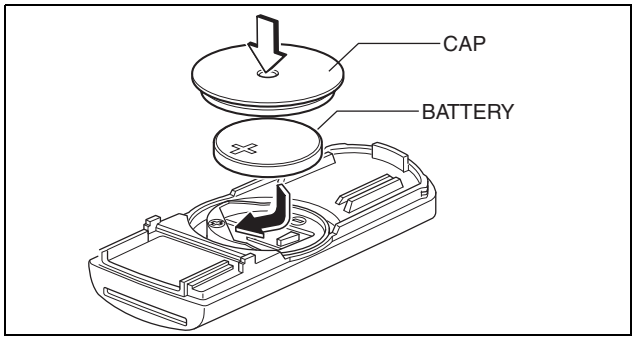
1. Verify that the O-ring is installed to the remote transmitter.

   Note
   - If the O-ring is removed, install it before installing the battery.



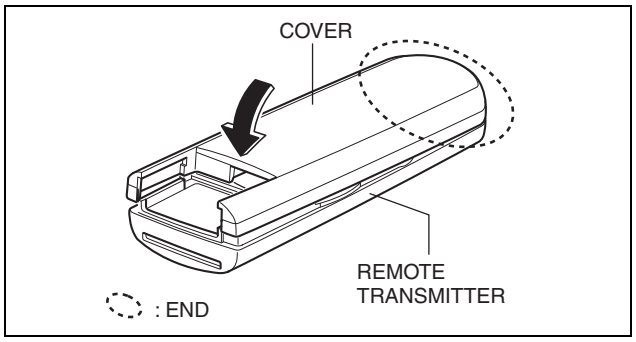
ac5wzw0000095

2. Install a new battery (CR2025) in the direction of the arrow shown in the figure with the negative pole facing down.
3. Install the cap.



ac5wzw0000095

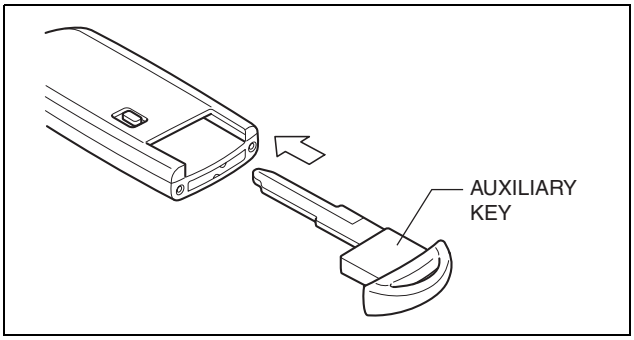
4. Align the cover to the transmitter from its end and press it in the direction of the arrow shown in the figure to engage the tabs of the cover with the remote transmitter.



ac5wzw0000095

SECURITY AND LOCKS

5. Insert the auxiliary key.



ac5wzw0000318

REMOTE TRANSMITTER ID CODE REGISTRATION

id091400112300

- When the remote transmitter is replaced or an additional remote transmitter is programmed, the remote transmitter has to be programmed to the immobilizer system-related parts. When replacing or adding a remote transmitter, refer to immobilizer system-related parts programming and perform the remote transmitter programming. (See 09-14-77 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING.)

CLEARING REMOTE TRANSMITTER

id091400112400

- The remote transmitter clearing procedure clears remote transmitters from the immobilizer system-related parts, and after the clearing procedure is implemented, all transmitters that were programmed can no longer be used.
- For the remote transmitter clearing procedure, refer to clearing of remote transmitters in programming of immobilizer system- related parts. (See 09-14-77 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING.)

REMOTE TRANSMITTER BATTERY VOLTAGE INSPECTION

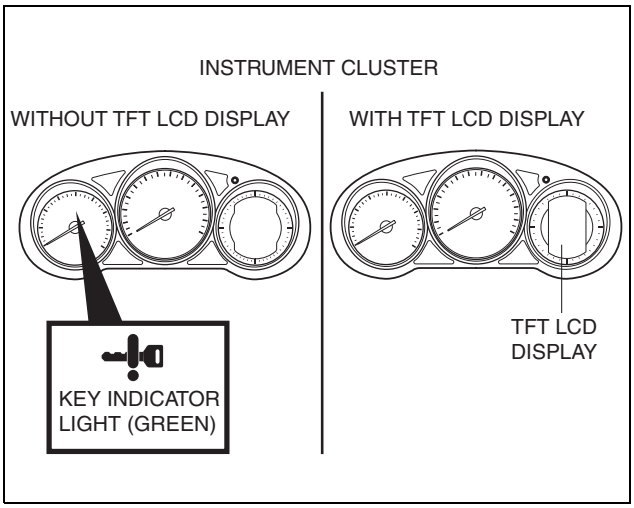
id091400111800

Note

- Because the remote transmitter battery power cannot be determined using the battery itself, determine by the remote transmitter battery low warning operation conditions.

Operation procedure for remote transmitter battery low warning

1. Place the remote transmitter inside the vehicle and close all of the doors.
2. Switch the ignition ON (engine off) and wait approx. 30 s.
3. With the brake pedal not depressed, switch the ignition off (LOCK).
4. Verify that the KEY indicator light (green) (without TFT LCD) in the instrument cluster flashes or the warning does not display in the TFT LCD (with TFT LCD).
   — KEY indicator light (green) (without TFT LCD) flashes for approx. 30 s, or warning displays in the TFT LCD (with TFT LCD): Replace the remote transmitter battery because the remote transmitter battery power is depleted. (See 09-14-75 REMOTE TRANSMITTER DISASSEMBLY/ ASSEMBLY.)



ac5jjw00002859

IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING

id091400514700

Foreword

- When replacing immobilizer system-related parts or programming an additional remote transmitter, or clearing a remote transmitter, program the immobilizer system-related parts so that the system operates normally. For immobilizer system-related parts programming, select the programming procedures according to the service. (See 09-14-78 Selection of Procedure for Immobilizer System-Related Parts Programming.)

SECURITY AND LOCKS

Caution

- **The engine cannot be started if any step or procedure for each service operation is skipped. Perform all procedures in the order of the steps.**
- **If any metallic or magnetic object is near the remote transmitter, communication between the remote transmitter and the vehicle may be obstructed, resulting in a failure to program the immobilizer system-related parts. Remove any metallic or magnetic objects, such as key holders, from the remote transmitter when programming immobilizer system-related parts.**
- **If any of the following devices are inside the vehicle, programming of immobilizer system-related parts may fail. Do not bring any of the following devices or similar products inside the vehicle when programming immobilizer system-related parts.**
  - **— M-MDS**
  - **— Personal computer**
  - **— Devices that can send/receive radio waves**
- **If the engine is started during immobilizer system-related parts programming, the programming mode cancels. Therefore, do not start the engine unless indicated in the procedure. Repeat the procedure from the beginning if the engine is started during the immobilizer system-related parts programming.**
- **If a remote transmitter is near the vehicle during immobilizer system-related parts programming, it may be programmed mistakenly. Keep the remote transmitter 1 m away from the vehicle unless indicated in the procedure.**
- **The SSU in the procedure indicates the start stop unit. In addition, the advanced key indicates the remote transmitter.**

Note

- Two or more remote transmitters must be programmed for the engine to start.
- A maximum of six remote transmitters can be programmed to one vehicle.
- The number of programmed key ID numbers can be verified using the M-MDS.
- Do not select any screen menu other than the ones indicated in the procedure during M-MDS operation.
- When programming the immobilizer system-related parts, the incode must be searched.

Selection of Procedure for Immobilizer System-Related Parts Programming

1. Verify that the ROOM fuse, AT fuse, and SRS2/ESCL fuse are installed.
2. Select the applicable programming procedure from the service content of the immobilizer system-related parts.

Immobilizer System-Related Parts Service and Programming Procedure Table

No.	Service		Programming procedure
1	Additional remote transmitter programming	Have remote transmitter that can start engine	(See 09-14-79 No.1 Additional Remote Transmitter Programming Procedure (Using the M-MDS).)
2	Programming due to PCM replacement		(See 09-14-80 No.2 Programming Procedure After PCM Replacement.)
3	Start stop unit replacement and programming due to simultaneous replacement of start stop unit/PCM		(See 09-14-82 No.3 Start stop unit replacement and programming procedure due to simultaneous replacement of start stop unit/PCM.)
4	Remote transmitter replacement or clearing		(See 09-14-84 No.4 Remote transmitter replacement or remote transmitter clearing.)

M-MDS Connecting Procedure

Note

- Do not place the M-MDS in the vehicle while programming the immobilizer system.

1. Fully lower the door glass.
2. Connect the M-MDS to the DLC-2.
3. Place the M-MDS outside the vehicle.

Caution

- **Cover the vehicle body with a rag so as not to damage the vehicle body with the cable.**

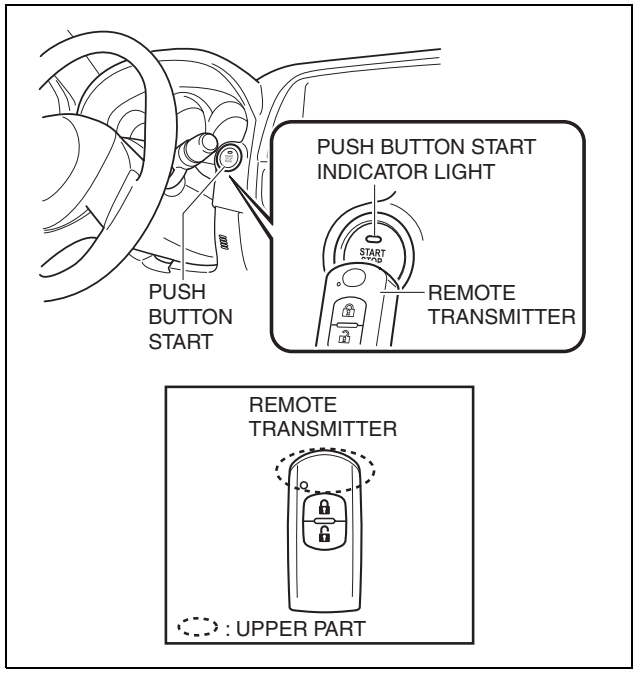
SECURITY AND LOCKS

Procedure for communication between coil antenna and remote transmitter

- While the push button start indicator light (green) is flashing, press the top part of the remote transmitter against the center of the push button start.

Note

- The coil antenna is integrated with the push button start.



ac5wzw0000292

No.1 Additional Remote Transmitter Programming Procedure (Using the M-MDS)

Caution

- **The engine cannot be started if any step or procedure is skipped. Perform all procedures in the order of the steps.**

Vehicle condition

- There is a remote transmitter that can start the engine.

Note

- If a remote transmitter cannot be programmed, verify the number of programmed remote transmitter using the M-MDS.
- Perform the DTC inspection for the start stop unit using the M-MDS.

Procedure

VALID REMOTE TRANSMITTER	 REMOTE TRANSMITTER 1
REMOTE TRANSMITTER TO BE PROGRAMMED	 REMOTE TRANSMITTER 2

ac5wzw0000238

SECURITY AND LOCKS

Step	Procedure	Action after procedure	
1	**VERIFY THAT REMOTE TRANSMITTER WHICH CAN START ENGINE IS REMOTE TRANSMITTER 1** 1. Switch the ignition ON (engine off) using remote transmitter 1. 2. Verify that the security light illuminates for approx. 3 s, and then turns off. 3. Switch the ignition off (LOCK).	Go to the next step.	
2	**PERFORM ADDITIONAL PROGRAMMING OF REMOTE TRANSMITTER 2** 1. Connect the M-MDS to the DLC-2. (See 09-14-78 M-MDS Connecting Procedure.) 2. Switch the ignition ON (engine off) using remote transmitter 1. 3. After vehicle identification, select the following from the M-MDS initial screen. 1. “Body” 2. “Security” 3. “PATS (immobilizer) function” 4. Then, select the following from the screen menu. • Additional advanced key programming 5. Input the start stop unit incode and cancel the security access according to the directions on the M-MDS screen. **Note** • "Security access permitted" is displayed on the M-MDS screen. 6. Depress the clutch (MTX) or the brakes (ATX) according to the instructions on the M-MDS, and press remote transmitter 2 against the push button start while the push button start indicator light (green) is flashing. (See 09-14-79 Procedure for communication between coil antenna and remote transmitter.) 7. Verify that the remote transmitter 2 programming is completed on the M-MDS screen, and release the clutch (MTX) or brake (ATX) pedal. 8. Are there other remote transmitters to be programmed?	Yes	Change the remote transmitter and repeat Step 2.
		No	Switch the ignition off (LOCK), then go to the next step.
3	**PERFORM IMMOBILIZER SYSTEM FUNCTION VERIFICATION** **Note** • Each remote transmitter is brought inside the vehicle one at a time to start the engine. 1. Depress the clutch (MTX)/brake (ATX) pedal. 2. After pressing remote transmitter 2 against the push button start, press the push button start to start the engine. (See 09-14-79 Procedure for communication between coil antenna and remote transmitter.) 3. Are there other remote transmitters to be programmed?	Yes	Change the key and repeat Step 3.
		No	Go to the next step.
4	**VERIFY THAT REMOTE TRANSMITTER IS PROGRAMMED** Place only the programmed remote transmitter on the passenger seat and verify that the engine can be started with the programmed key.	Go to the next step.	
5	**M-MDS COMPLETION** 1. Wait for 5 s or more after the M-MDS is completed and switch the ignition off (LOCK).	Procedure is completed.	

No.2 Programming Procedure After PCM Replacement

Caution
- **The engine cannot be started if any step or procedure is skipped. Perform all procedures in the order of the steps.**

Vehicle condition
- There is a remote transmitter that can start the engine.

SECURITY AND LOCKS

Procedure

VALID REMOTE TRANSMITTER	 REMOTE TRANSMITTER

ac5wzw0000238

Step	Procedure	Action after procedure	
1	**REPLACE PCM** Refer to PCM REMOVAL/INSTALLATION to perform PCM replacement. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)	Go to the next step.	
2	**PERFORM PARAMETER RESET** 1. Connect the M-MDS to the DLC-2. (See 09-14-78 M-MDS Connecting Procedure.) 2. Switch the ignition ON (engine off). **Note** • Although the security indicator light illuminates for approx. 3 s and then turns off or flashes, continue to perform the procedure as indicated. 3. After vehicle identification, select the following from the M-MDS initial screen. 1. “Body” 2. “Security” 3. “PATS (immobilizer) function” 4. Then, select the following from the screen menu. • “Parameter reset” 5. Input the start stop unit and PCM incode and cancel the security access according to the directions on the M-MDS screen. **Note** • "Security access permitted" is displayed on the M-MDS screen. 6. Perform the operation according to the directions on the M-MDS screen. **Note** • "Parameter reset completed" is displayed on the M-MDS screen. 7. Select "No" according to the directions on the M-MDS. **Caution** • **Because the procedure switches to the procedure for key ID number clearing, if "Yes" is selected on the M-MDS screen, select "No".**	Go to the next step.	
3	**M-MDS COMPLETION** 1. Wait for 5 s or more after the M-MDS is completed and switch the ignition off (LOCK).	Go to the next step.	
4	**PERFORM IMMOBILIZER SYSTEM FUNCTION VERIFICATION** 1. Bring each remote transmitter into the vehicle one at a time and switch the ignition ON (engine off). 2. Verify that the security indicator light illuminates, and switch the ignition off. 3. Are there other remote transmitters to be programmed?	Yes	Change the key and repeat Step 4.
		No	Go to the next step.
5	**VERIFY PARAMETER RESET IS COMPLETED** **Note** • Each remote transmitter is brought inside the vehicle one at a time to start the engine. 1. Place only the programmed remote transmitter on the passenger seat and verify that the engine starts. 2. Does engine start?	Yes	Procedure is completed.
		No	Perform the related DTC inspection to repair the malfunctioning part.

SECURITY AND LOCKS

No.3 Start stop unit replacement and programming procedure due to simultaneous replacement of start stop unit/PCM

Caution

- **The engine cannot be started if any step or procedure is skipped. Perform all procedures in the order of the steps.**
- **Because it is necessary to program two or more remote transmitters to the immobilizer system-related parts to start the engine, perform the remote transmitter programming after clearing the remote transmitter.**

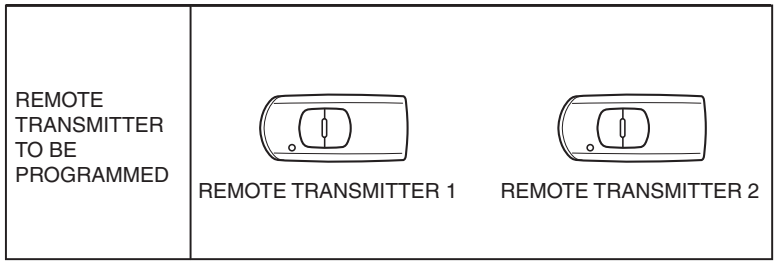
Note

- Before beginning the procedure, verify that the customer has provided all of the remote transmitters for the vehicle.
- The engine cannot be started unless two or more remote transmitters are programmed after the replacement.

Vehicle condition

- Have two or more remote transmitters to be programmed after the replacement.

Procedure



ac5wzw0000238

Step	Procedure	Action after procedure
1	**REPLACE START STOP UNIT AND REPLACE START STOP UNIT/PCM SIMULTANEOUSLY** Refer to START STOP UNIT REMOVAL/INSTALLATION to perform start stop unit replacement. (See 09-14-53 START STOP UNIT REMOVAL/INSTALLATION.) Refer to PCM REMOVAL/INSTALLATION to perform PCM replacement. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)	Go to the next step.

SECURITY AND LOCKS

Step	Procedure	Action after procedure	
2	**PERFORM PARAMETER RESET** 1. Connect the M-MDS to the DLC-2. (See 09-14-78 M-MDS Connecting Procedure.) 2. Remove the remote transmitter from the vehicle (keep them 1 m or more from the vehicle) and switch the ignition ON (engine off) according to the directions on the M-MDS screen. 3. Select the following from the M-MDS initial screen. 1. “Body” 2. “Forced ignition ON” 4. Press the push button start and switch the ignition ON (engine off) according to the instructions on the M-MDS. 5. Select the following from the M-MDS initial screen. 1. “Body” 2. “Security” 3. “PATS (immobilizer) function” 6. Then, select the following from the screen menu. • “Parameter reset” 7. Input the start stop unit and PCM incode and cancel the security access according to the directions on the M-MDS screen. **Note** • "Security access permitted" is displayed on the M-MDS screen. 8. Perform the operation according to the directions on the M-MDS screen. **Note** • "Parameter reset completed" is displayed on the M-MDS screen. 9. Select "Yes" according to the directions on the M-MDS. **Caution** • **Because the procedure will not switch to the procedure for key ID number clearing, if "No" is selected on the M-MDS screen, select "Yes".**	Go to the next step.	
3	**PERFORM KEY ID NUMBER CLEARING** 1. Perform the key ID number clearing and switch the ignition off (LOCK) according to the directions on the M-MDS screen.	Go to the next step.	
4	**PERFORM REMOTE TRANSMITTER 1 PROGRAMMING** 1. Switch the ignition ON (engine off). **Note** • Although the security indicator light illuminates for approx. 10 s and then turns off or flashes, continue to perform the procedure as indicated. 2. While the push button start indicator light (green) is flashing, press the top part of the remote transmitter 1 against the center of the push button start. (See 09-14-79 Procedure for communication between coil antenna and remote transmitter.) 3. Verify that remote transmitter 1 programming is completed on the M-MDS screen. **Note** • When the programming is completed, the security indicator light turns off and DTC 21 is displayed after approx. 1 min. • If the programming fails, the security indicator light flashes and DTC 13 is displayed after approx. 1 min.	Switch the ignition off (LOCK), then go to the next step.	
5	**PERFORM REMOTE TRANSMITTER 2 PROGRAMMING** 1. Switch the ignition ON (engine off). 2. While the push button start indicator light (green) is flashing, press the top part of the remote transmitter 2 against the center of the push button start. (See 09-14-79 Procedure for communication between coil antenna and remote transmitter.) 3. Verify that the remote transmitter 2 programming is completed on the M-MDS screen. **Note** • If the programming fails, the security indicator light flashes and DTC 13 is displayed after approx. 1 min. 4. Are there other remote transmitters to be programmed?	Yes	If other remote transmitters are programmed, repeat Step 5.
		No	Go to the next step.
6	**M-MDS COMPLETION** 1. Wait for 5 s or more after the M-MDS is completed and switch the ignition off (LOCK)	Go to the next step.	

SECURITY AND LOCKS

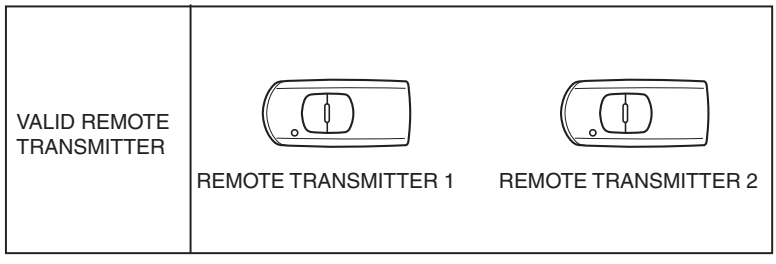
Step	Procedure	Action after procedure	
7	**PERFORM IMMOBILIZER SYSTEM FUNCTION VERIFICATION (REMOTE TRANSMITTER 1)** **Note** • Each remote transmitter is brought inside the vehicle one at a time to start the engine. 1. Depress the clutch (MTX)/brake (ATX) pedal. 2. While the push button start indicator light (green) is flashing, press the top part of the remote transmitter 1 against the center of the push button start. (See 09-14-79 Procedure for communication between coil antenna and remote transmitter.) 3. After the push button start indicator light (green) goes from flashing to illumination, press the push button start to start the engine.	Switch the ignition off (LOCK), then go to the next step.	
8	**PERFORM IMMOBILIZER SYSTEM FUNCTION VERIFICATION (REMOTE TRANSMITTER 2)** **Note** • Each remote transmitter is brought inside the vehicle one at a time to start the engine. 1. Depress the clutch (MTX)/brake (ATX) pedal. 2. While the push button start indicator light (green) is flashing, press the top part of the remote transmitter 2 against the center of the push button start. (See 09-14-79 Procedure for communication between coil antenna and remote transmitter.) 3. After the push button start indicator light (green) goes from flashing to illumination, press the push button start to start the engine.	Yes	If there are other remote transmitters to be programmed, repeat Step 7.
		No	Go to the next step.
9	**VERIFY THAT REMOTE TRANSMITTER IS PROGRAMMED** **Note** • Each remote transmitter is brought inside the vehicle one at a time to start the engine. 1. Place only the programmed remote transmitter on the passenger seat and verify that the engine starts. 2. Does engine start?	Yes	Procedure is completed.
		No	Perform the related DTC inspection to repair the malfunctioning part.

No.4 Remote transmitter replacement or remote transmitter clearing

Caution
- **The engine cannot be started if any step or procedure is skipped. Perform all procedures in the order of the steps.**
- **Because it is necessary to program two or more remote transmitters to the immobilizer system-related parts to start the engine, perform the remote transmitter programming after clearing the remote transmitter.**

Vehicle condition
- Have two remote transmitters to be programmed.

Procedure



ac5wzw0000238

SECURITY AND LOCKS

Step	Procedure	Action after procedure	
1	**PERFORM KEY ID NUMBER CLEARING** 1. Connect the M-MDS to the DLC-2. (See 09-14-78 M-MDS Connecting Procedure.) 2. Switch the ignition ON (engine off). 3. After vehicle identification, select the following from the M-MDS initial screen. 1. “Body” 2. “Security” 3. “PATS (immobilizer) function” 4. Then, select the following from the screen menu. • “Advanced key clearing” 5. Input the start stop unit incode and cancel the security access according to the directions on the M-MDS screen. **Note** • "Security access permitted" is displayed on the M-MDS screen. 6. Perform the remote transmitter clearing according to the directions on the M-MDS. **Note** • "Advanced key clearing completed" is displayed on the M-MDS screen.	Switch the ignition off (LOCK), then go to the next step.	
2	**PERFORM REMOTE TRANSMITTER 1 PROGRAMMING** 1. Switch the ignition ON (engine off). **Note** • Although the security indicator light illuminates for approx. 10 s and then turns off or flashes, continue to perform the procedure as indicated. 2. While the push button start indicator light (green) is flashing, press the top part of the remote transmitter 1 against the center of the push button start. (See 09-14-79 Procedure for communication between coil antenna and remote transmitter.) 3. Verify that the remote transmitter 1 programming is completed on the M-MDS screen. **Note** • When the programming is completed, the security indicator light turns off and DTC 21 is displayed after approx. 1 min. • If the programming fails, the security indicator light flashes and DTC 13 is displayed after approx. 1 min.	Switch the ignition off (LOCK), then go to the next step.	
3	**PERFORM REMOTE TRANSMITTER 2 PROGRAMMING** 1. Switch the ignition ON (engine off). **Note** • Although the security indicator light illuminates for approx. 10 s and then turns off or flashes, continue to perform the procedure as indicated. 2. While the push button start indicator light (green) is flashing, press the top part of the remote transmitter 2 against the center of the push button start. (See 09-14-79 Procedure for communication between coil antenna and remote transmitter.) 3. Verify that the remote transmitter 2 programming is completed on the M-MDS screen. **Note** • If the programming fails, the security indicator light flashes and DTC 13 is displayed after approx. 1 min. 4. Are there other remote transmitters to be programmed?	Yes	Change the key and repeat Step 3.
		No	Go to the next step.
4	**M-MDS COMPLETION** 1. Wait for 5 s or more after the M-MDS is completed and switch the ignition off (LOCK).	Go to the next step.	

SECURITY AND LOCKS

Step	Procedure	Action after procedure	
5	**PERFORM IMMOBILIZER SYSTEM FUNCTION VERIFICATION (REMOTE TRANSMITTER 1)** **Note** • Each remote transmitter is brought inside the vehicle one at a time to start the engine. 1. Depress the clutch (MTX)/brake (ATX) pedal. 2. While the push button start indicator light (green) is flashing, press the top part of the remote transmitter 1 against the center of the push button start. (See 09-14-79 Procedure for communication between coil antenna and remote transmitter.) 3. After the push button start indicator light (green) goes from flashing to illumination, press the push button start to start the engine.	Switch the ignition off (LOCK), then go to the next step.	
6	**PERFORM IMMOBILIZER SYSTEM FUNCTION VERIFICATION (REMOTE TRANSMITTER 2)** **Note** • Each remote transmitter is brought inside the vehicle one at a time to start the engine. 1. Depress the clutch (MTX)/brake (ATX) pedal. 2. While the push button start indicator light (green) is flashing, press the top part of the remote transmitter 2 against the center of the push button start. (See 09-14-79 Procedure for communication between coil antenna and remote transmitter.) 3. After the push button start indicator light (green) goes from flashing to illumination, press the push button start to start the engine.	Yes	If there are other remote transmitters to be programmed, repeat Step 5.
		No	Go to the next step.
7	**VERIFY THAT REMOTE TRANSMITTER IS PROGRAMMED** **Note** • Each remote transmitter is brought inside the vehicle one at a time to start the engine. 1. Place only the programmed remote transmitter on the passenger seat and verify that the engine starts. 2. Does engine start?	Yes	Procedure is completed.
		No	Perform the related DTC inspection to repair the malfunctioning part.

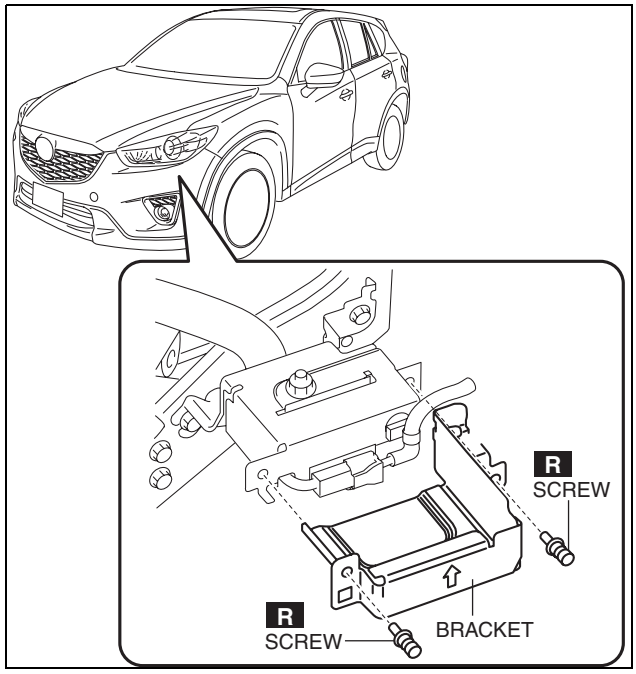
THEFT-DETERRENT SIREN REMOVAL/INSTALLATION

id091400630100

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove the front combination light (LH). (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)

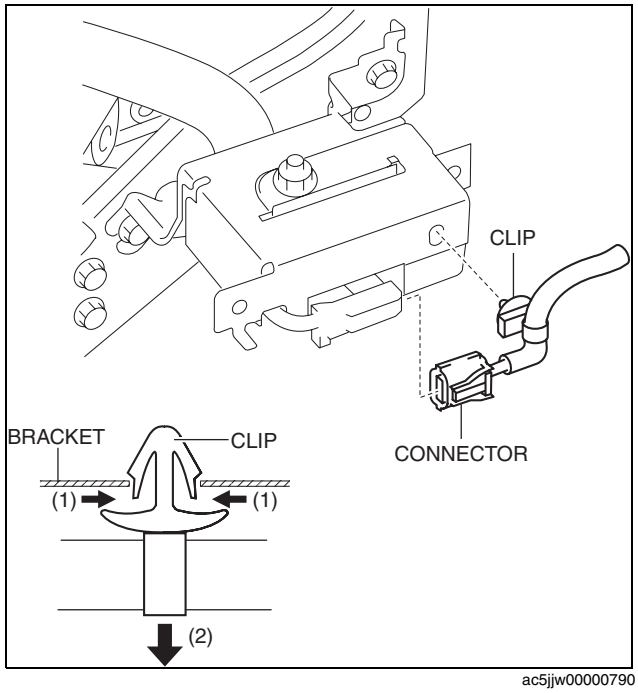
SECURITY AND LOCKS

4. Remove the screws.
5. Remove the bracket.



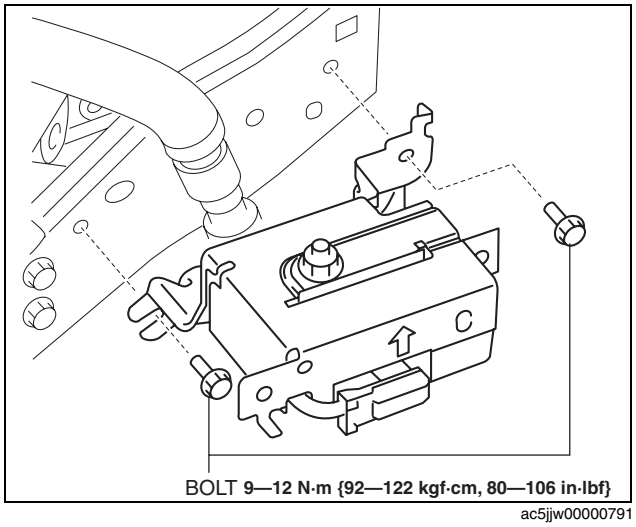
ac5wzw0000303

6. Disconnect the connector.
7. While pressing the tabs of the clip in the direction of arrow (1) shown in the figure, press it in the direction of arrow (2) to detach the clip tab from the bracket.
8. Remove the clip.



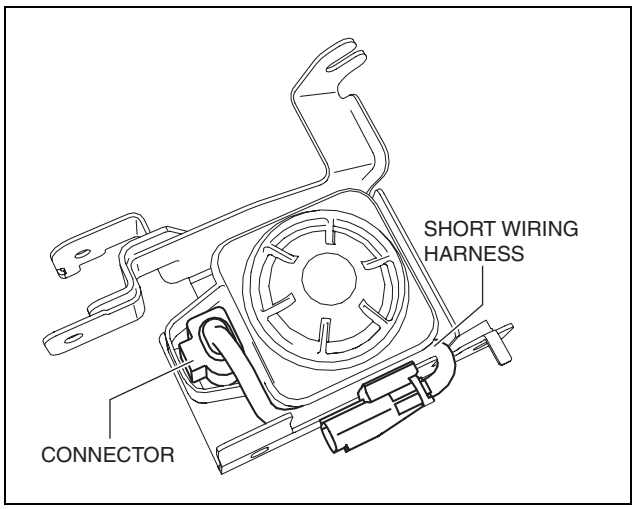
ac5jjw00000790

9. Remove the bolts.
10. Remove the theft-deterrent siren.



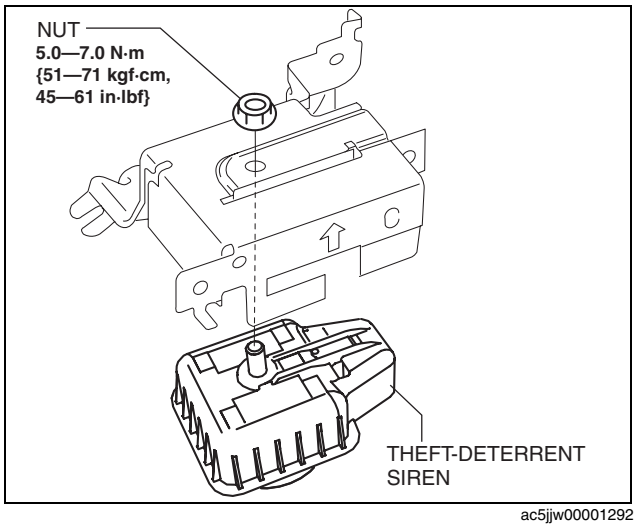
ac5jjw00000791

11. Disconnect the connector from the theft-deterrent siren.
12. Remove the short wiring harness.



ac5jjw00001284

13. Remove the nut.
14. Remove the theft-deterrent siren.
15. Install in the reverse order of removal.



ac5jjw00001292

THEFT-DETERRENT SIREN INSPECTION

id091400630200

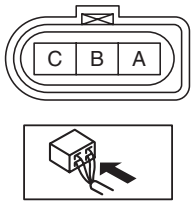
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove the front combination light (LH). (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)

SECURITY AND LOCKS

4. Remove the theft-deterrent siren bracket. (See 09-14-86 THEFT-DETERRENT SIREN REMOVAL/INSTALLATION.)
5. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
6. Verify that the voltages of each of the terminals are as indicated in the terminal voltage table (reference).
   - If the voltage is not as specified in the terminal voltage table (reference), inspect the parts under Inspection item(s) and related wiring harnesses.
     — If the system does not work normally even though the parts or related wiring harnesses do not have any malfunction, replace the theft-deterrent siren.

Terminal Voltage Table (Reference)

THEFT-DETERRENT SIREN
TERMINAL-SIDE CONNECTOR



ac5wzw0000276

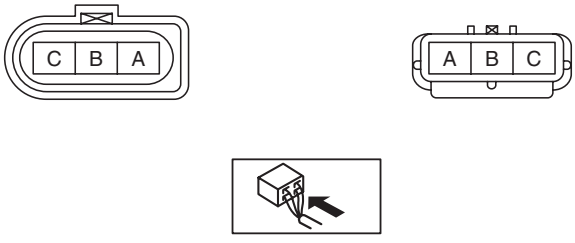
Terminal	Signal name	Connected to	Measurement condition	Voltage (V)	Inspection item(s)
A	DATA	Rear body control module (RBCM)	Because this terminal is for communication, determination using terminal voltage inspection is not possible.		
B	Ground	Body ground	Under any condition	1.0 or less	Ground
C	Power supply	ROOM 15 A fuse	Under any condition	B+	• ROOM 15 A fuse • Battery

Continuity Inspection Of Short Wiring Harness Connector

1. Verify that the continuity is as indicated in the table.

THEFT-DETERRENT SIREN
WIRING HARNESS SIDE CONNECTOR

VEHICLE WIRING HARNESS
SIDE CONNECTOR (0914-302)



○—○ : CONTINUITY

	C	B	A	A	B	C
UNDER ANY CONDITION	○			○		
		○			○	
			○			○

ac5jjw00001693

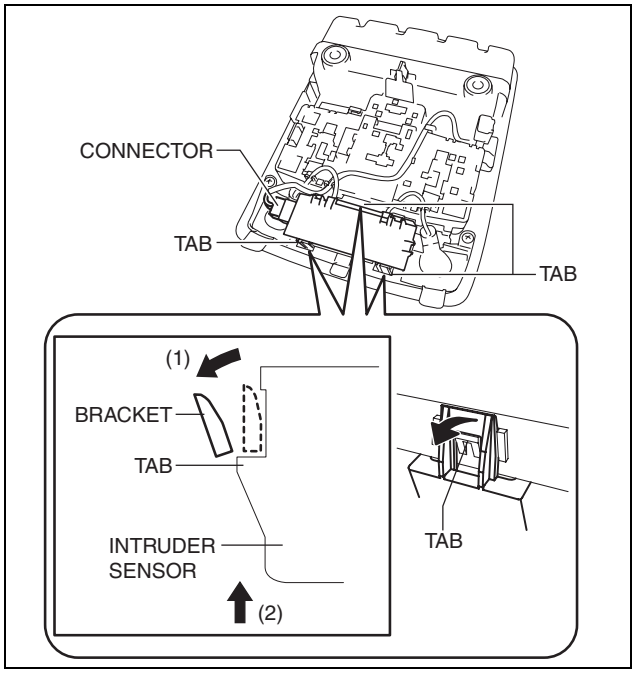
- If not as indicated in the table, replace the short wiring harness.

SECURITY AND LOCKS

INTRUDER SENSOR REMOVAL/INSTALLATION

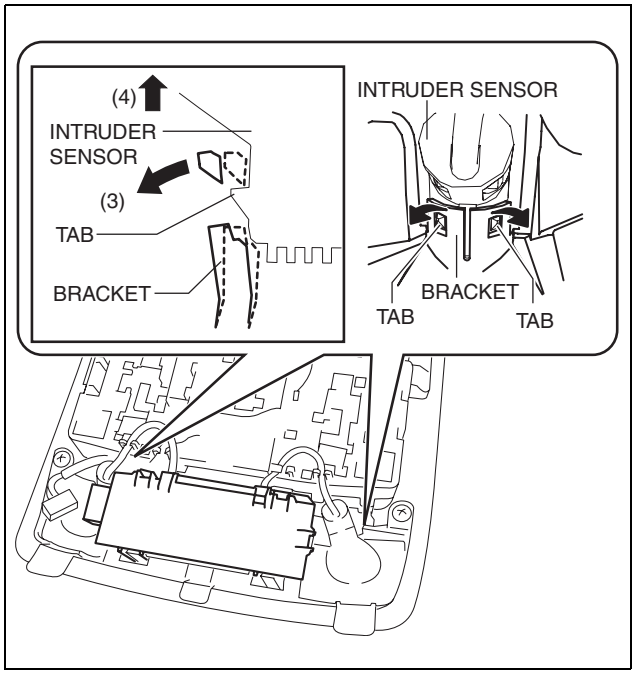
id091400517200

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front map light. (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)
3. Disconnect the connector from the intruder sensor.
4. While pulling the bracket in the direction of arrow (1) shown in the figure, pull the intruder sensor in the direction of arrow (2) shown in the figure, and detach the intruder sensor tabs from the bracket.
5. Detach all the intruder sensor tabs from the bracket.



ac5wzw0000295

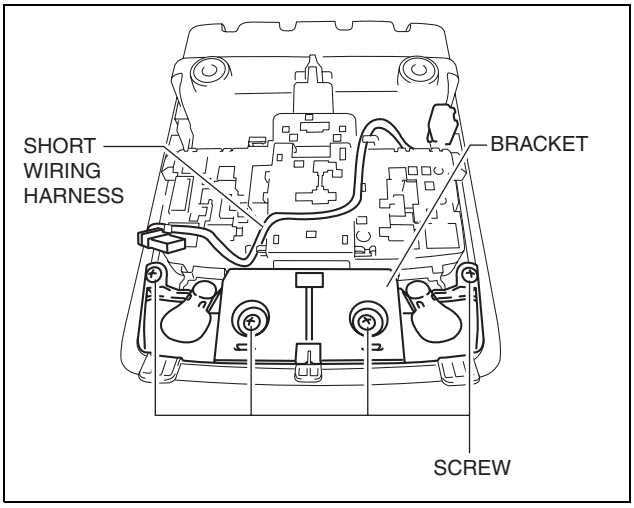
6. While pulling the bracket in the direction of arrow (3) shown in the figure, pull the intruder sensor in the direction of arrow (4) shown in the figure, and detach the intruder sensor tabs from the bracket.
7. Detach all the intruder sensor tabs from the bracket and remove the intruder sensor.



ac5wzw0000295

SECURITY AND LOCKS

8. Remove the short wiring harness.
9. Remove the screws.
10. Remove the bracket.
11. Install in the reverse order of removal.



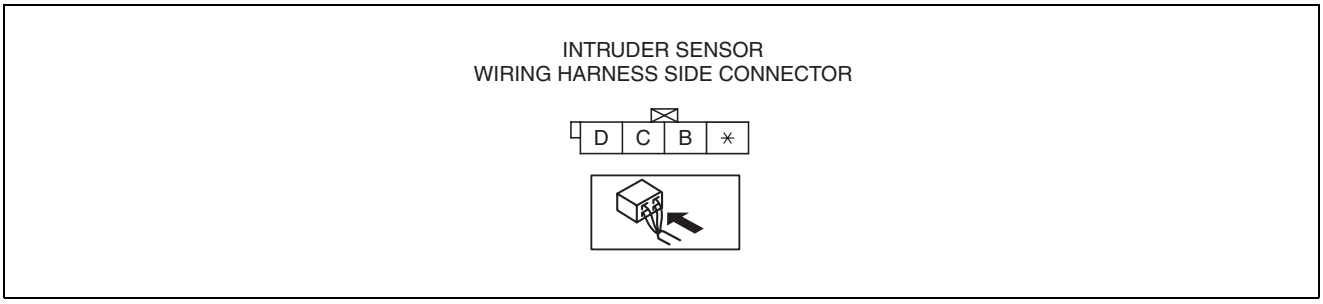
ac5wzw0000295

INTRUDER SENSOR INSPECTION

id091400517300

1. Remove the front map light. (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)
2. Remove the intruder sensor with the connector connected. (See 09-14-90 INTRUDER SENSOR REMOVAL/INSTALLATION.)
3. Verify that the voltages of each of the terminals are as indicated in the terminal voltage table (reference).
   - If the voltage is not as specified in the terminal voltage table (reference), inspect the parts under Inspection item(s) and related wiring harnesses.
     — If the system does not operate normally even though the parts under Inspection Item(s) and related wiring harnesses do not have any malfunction, replace the intruder sensor.

Terminal Voltage Table (Reference)



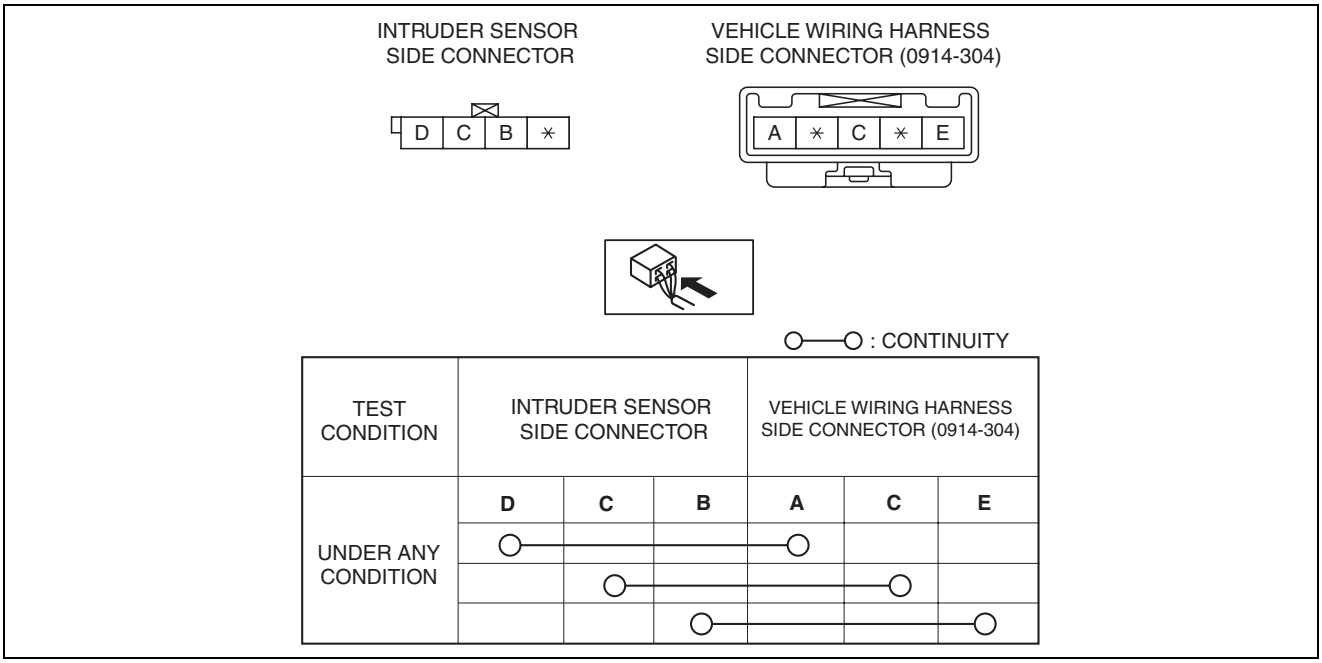
ac5wzw0000276

Terminal	Signal name	Connected to	Measurement condition	Voltage (V)	Inspection item (s)
B	Ground	Body ground	Under any condition	1.0 or less	Ground
C	DATA	Rear body control module (RBCM)	Because this terminal is for communication, determination using terminal voltage inspection is not possible.		
D	Power supply	Rear body control module (RBCM)	Under any condition	B+	Rear body control module (RBCM)

SECURITY AND LOCKS

Continuity Inspection Of Short Wiring Harness Connector

1. Verify that the continuity is as indicated in the table.



TEST CONDITION	INTRUDER SENSOR SIDE CONNECTOR			VEHICLE WIRING HARNESS SIDE CONNECTOR (0914-304)		
	D	C	B	A	C	E
UNDER ANY CONDITION	○———			○		
		○———			○	
			○———			○

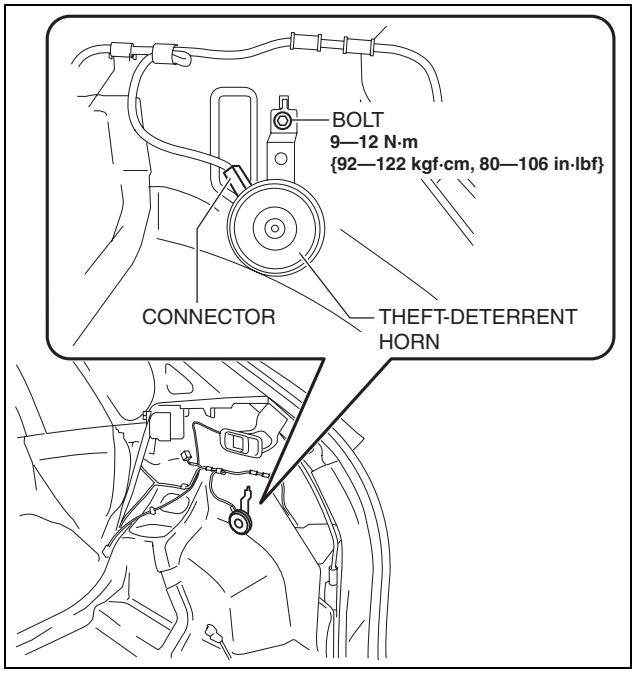
ac5jjw00001261

- If not as indicated in the table, replace the short wiring harness.

THEFT-DETERRENT HORN REMOVAL/INSTALLATION

id091400517500

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (RH) (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Trunk side trim (RH) (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
3. Disconnect the connector.
4. Remove the bolt.
5. Remove the theft-deterrent horn.
6. Install in the reverse order of removal.



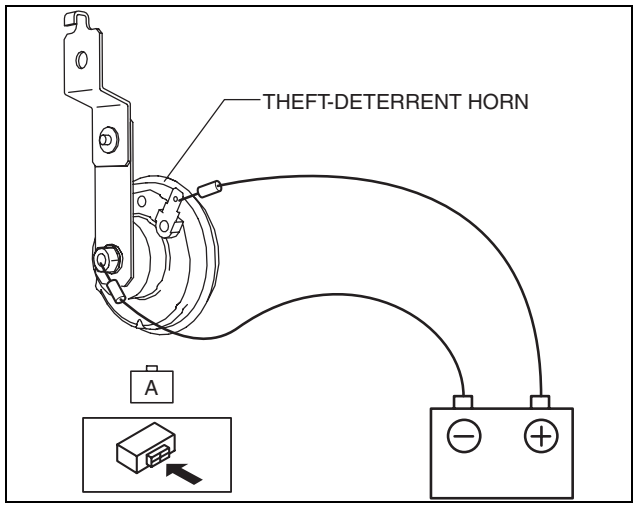
ac5jjw00001281

SECURITY AND LOCKS

THEFT-DETERRENT HORN INSPECTION

id091400004900

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (RH) (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Trunk side trim (RH) (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (4) Theft-deterrent horn (See 09-14-92 THEFT-DETERRENT HORN REMOVAL/INSTALLATION.)
3. Apply battery positive voltage to horn terminal A, and connect the horn retaining bolt to ground as shown in the figure, and then verify that the horn sounds.
   - If the horn does not sound, replace the horn.



ac5jjw00001192

THEFT-DETERRENT SYSTEM OPERATION RECORD

id091400005200

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initial screen.
   1. “Operational Record”
3. Then, select the following from the screen menu.
   1. “Burglar Alarm System”
4. Display the theft-deterrent system operation history according to the screen instructions.

SUNROOF

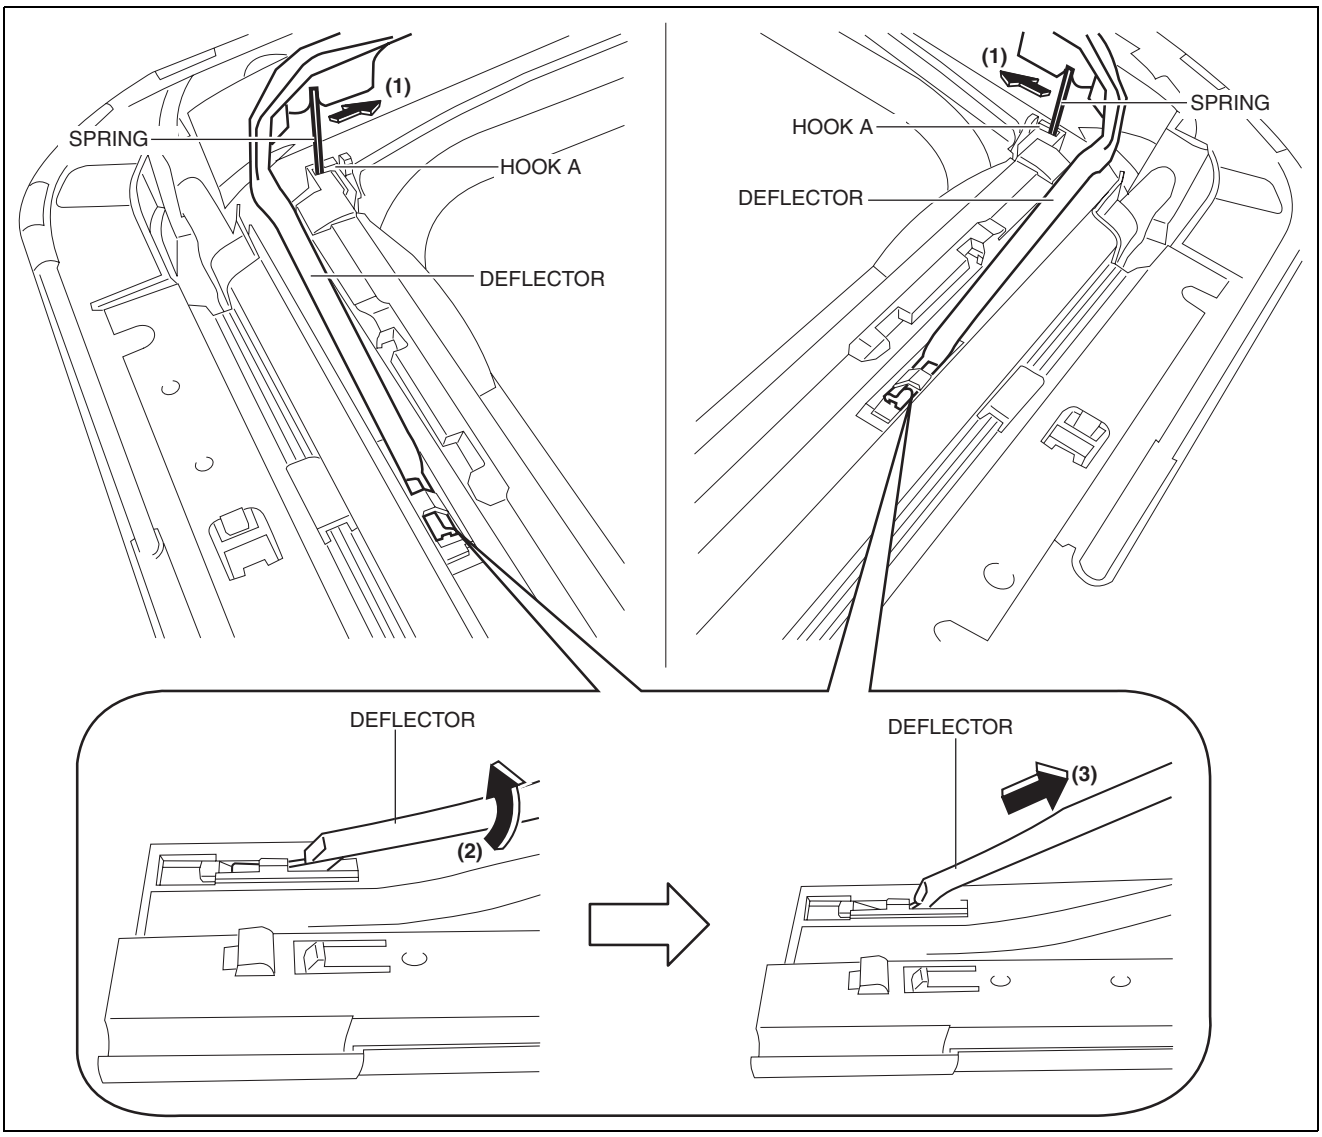
DEFLECTOR REMOVAL/INSTALLATION

id091500800400

1. Fully open the glass panel.
2. Remove the spring in the direction of the arrow (1) shown in the figure from hooks A.

Caution

- **If the spring is removed forcefully, hooks A located at the spring installation area may be damaged. Carefully remove the spring so as not to damage hooks A.**



ac5wzw0000150

3. Remove the deflector in the direction of the arrow in the order of (2), (3) shown in the figure.
4. Install in the reverse order of removal.

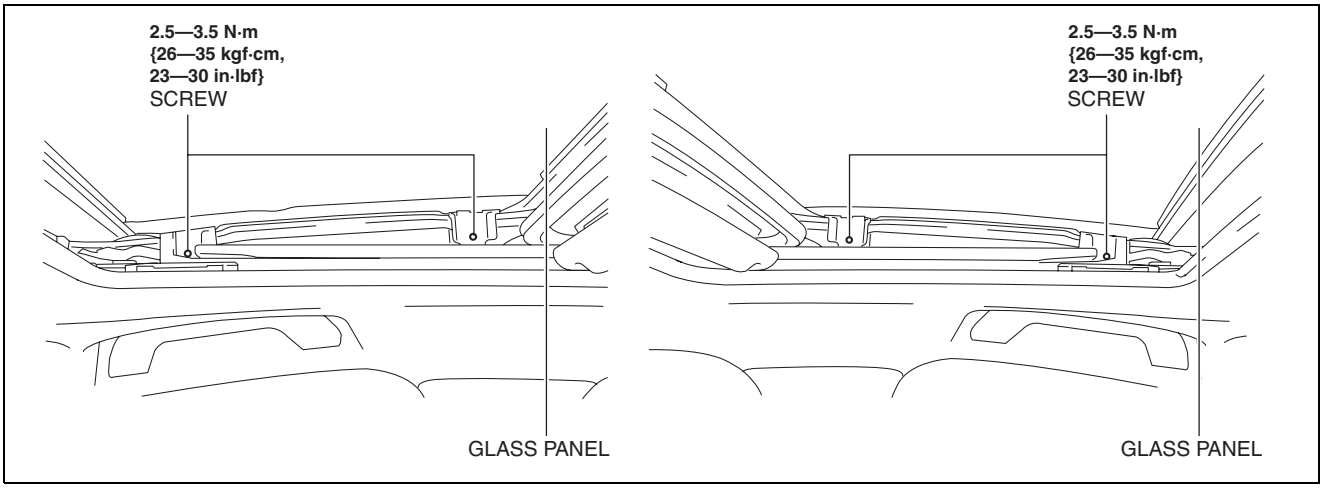
GLASS PANEL REMOVAL/INSTALLATION

id091500800500

1. Fully open the sunshade.
2. Fully close the glass panel.

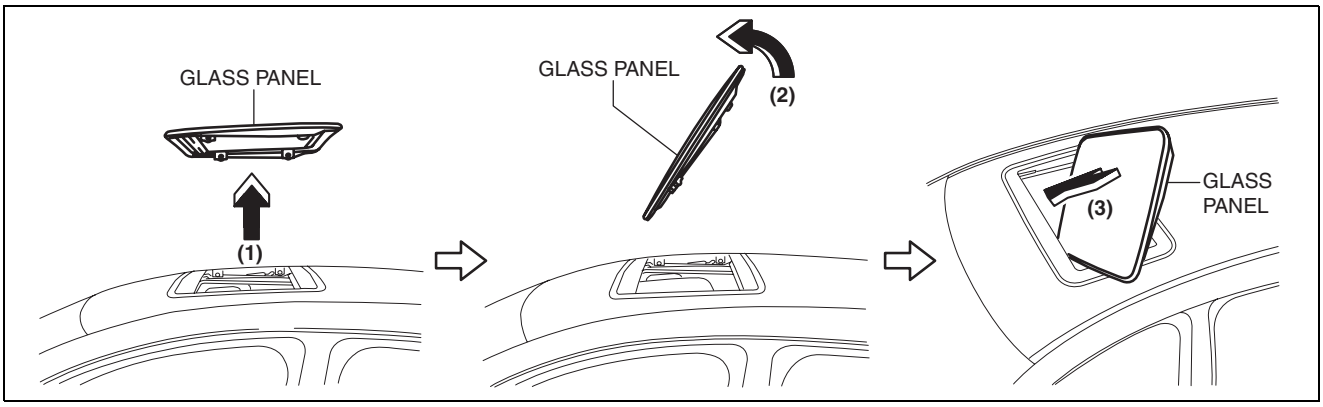
SUNROOF

3. Remove screws.



ac5wzw0000150

4. Remove the glass panel in the direction of the arrow in the order of (1), (2), (3) shown in the figure.



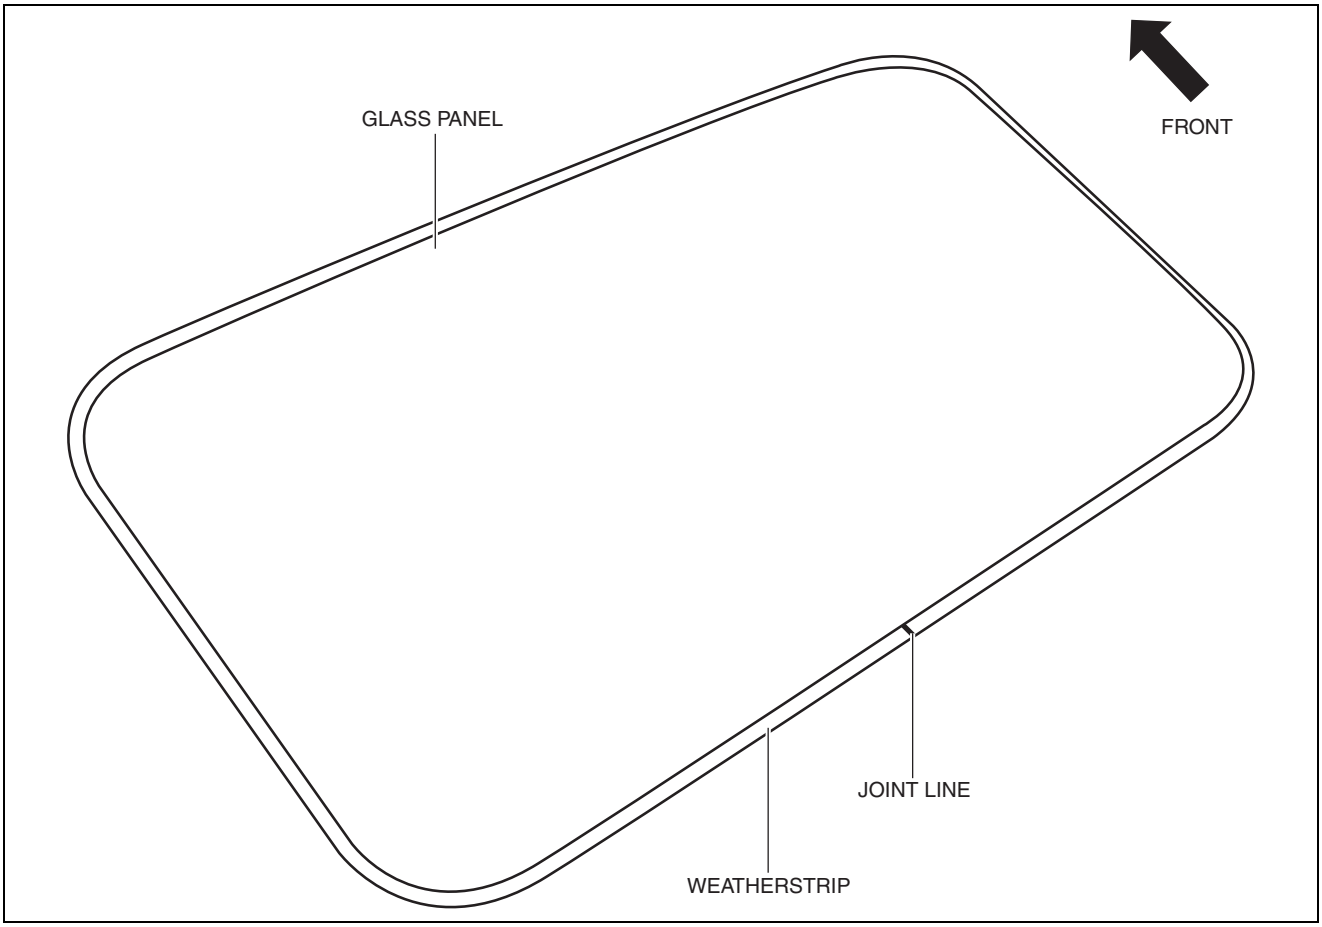
ac5wzw0000150

5. Peel the weatherstrip off the glass panel. (See 09-15-4 Weatherstrip Installation Note.)
6. Install in the reverse order of removal.

SUNROOF

Weatherstrip Installation Note

- When installing the weatherstrip to the glass panel, align the joint line to the position shown in the figure.



ac5wzw0000150

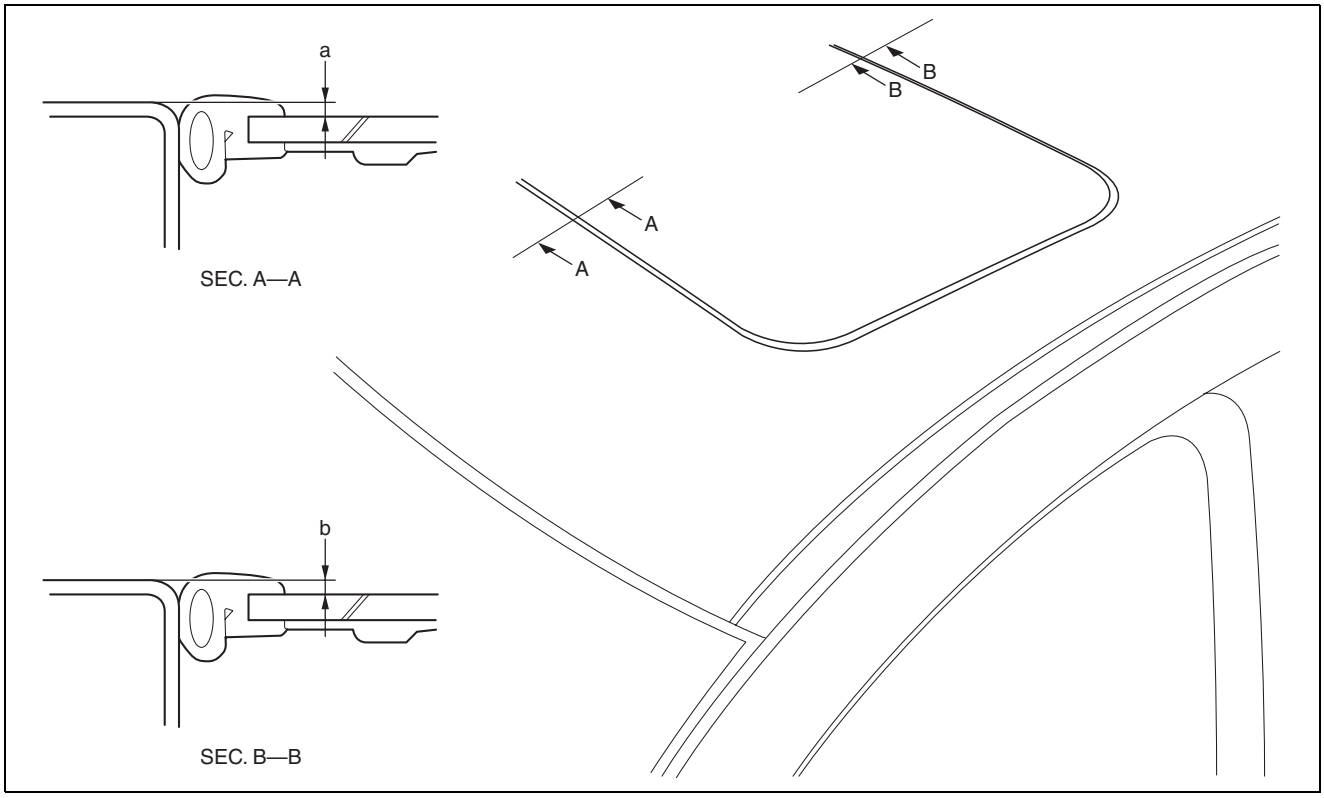
GLASS PANEL ADJUSTMENT

id091500800600

1. Fully close the glass panel.
2. Measure the gap and height between the glass panel and body.

SUNROOF

3. Loosen the installation screws and adjust the glass panel.



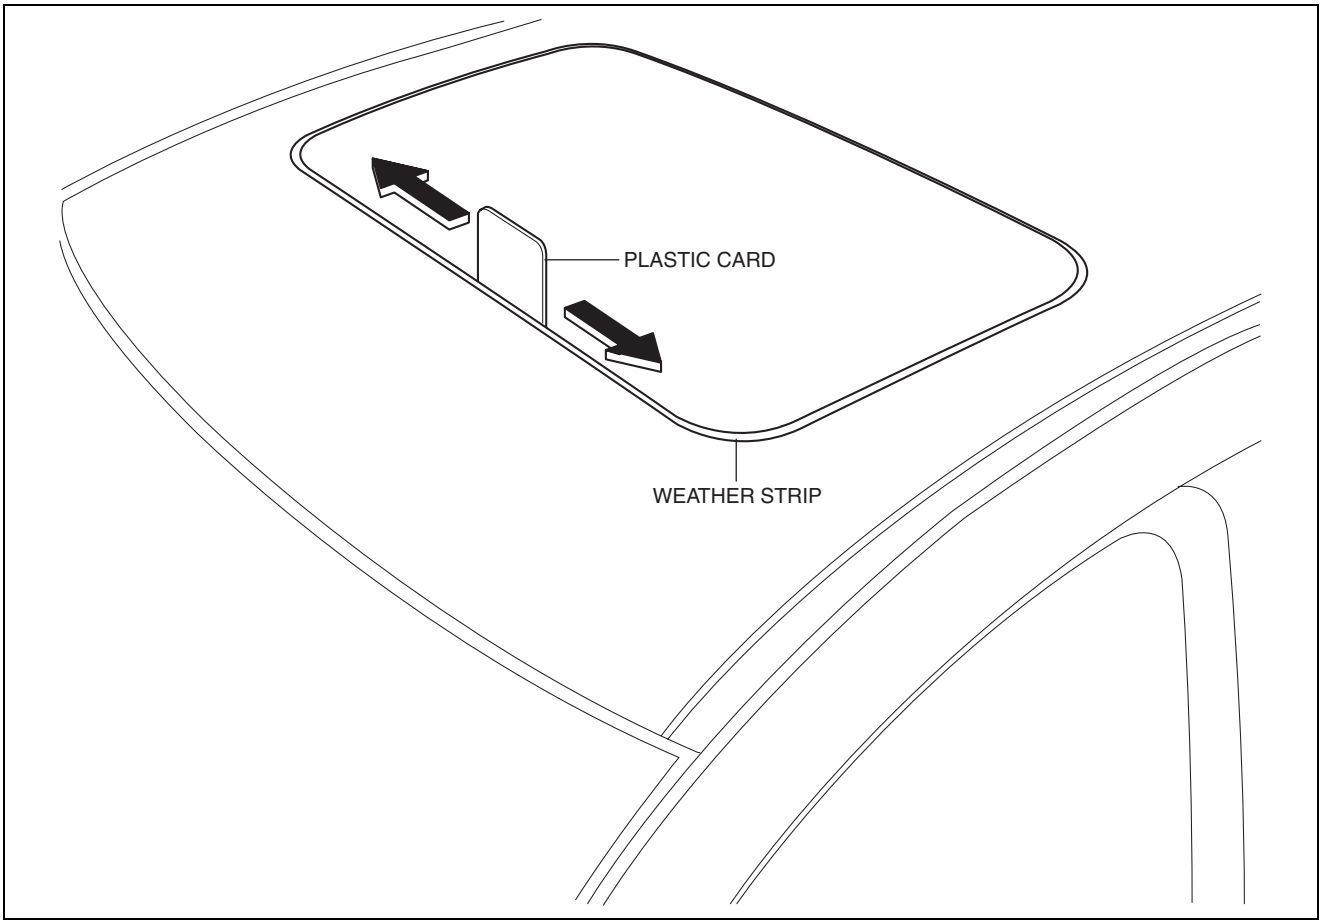
ac5wzw0000289

Standard clearance
a: -2.3—0.3 mm {-0.09—0.01 in}
b: -2.3—0.3 mm {-0.09—0.01 in}

4. Tighten the installation screws. (See 09-15-2 GLASS PANEL REMOVAL/INSTALLATION.)

SUNROOF

5. Insert a plastic card between the weatherstrip and the body of the vehicle. Verify that the sunroof is shut tightly (there is resistance when the plastic card is moved).



ac5wzw0000150

- If the sunroof is not shut tightly, readjust by performing Steps 3 and 4.

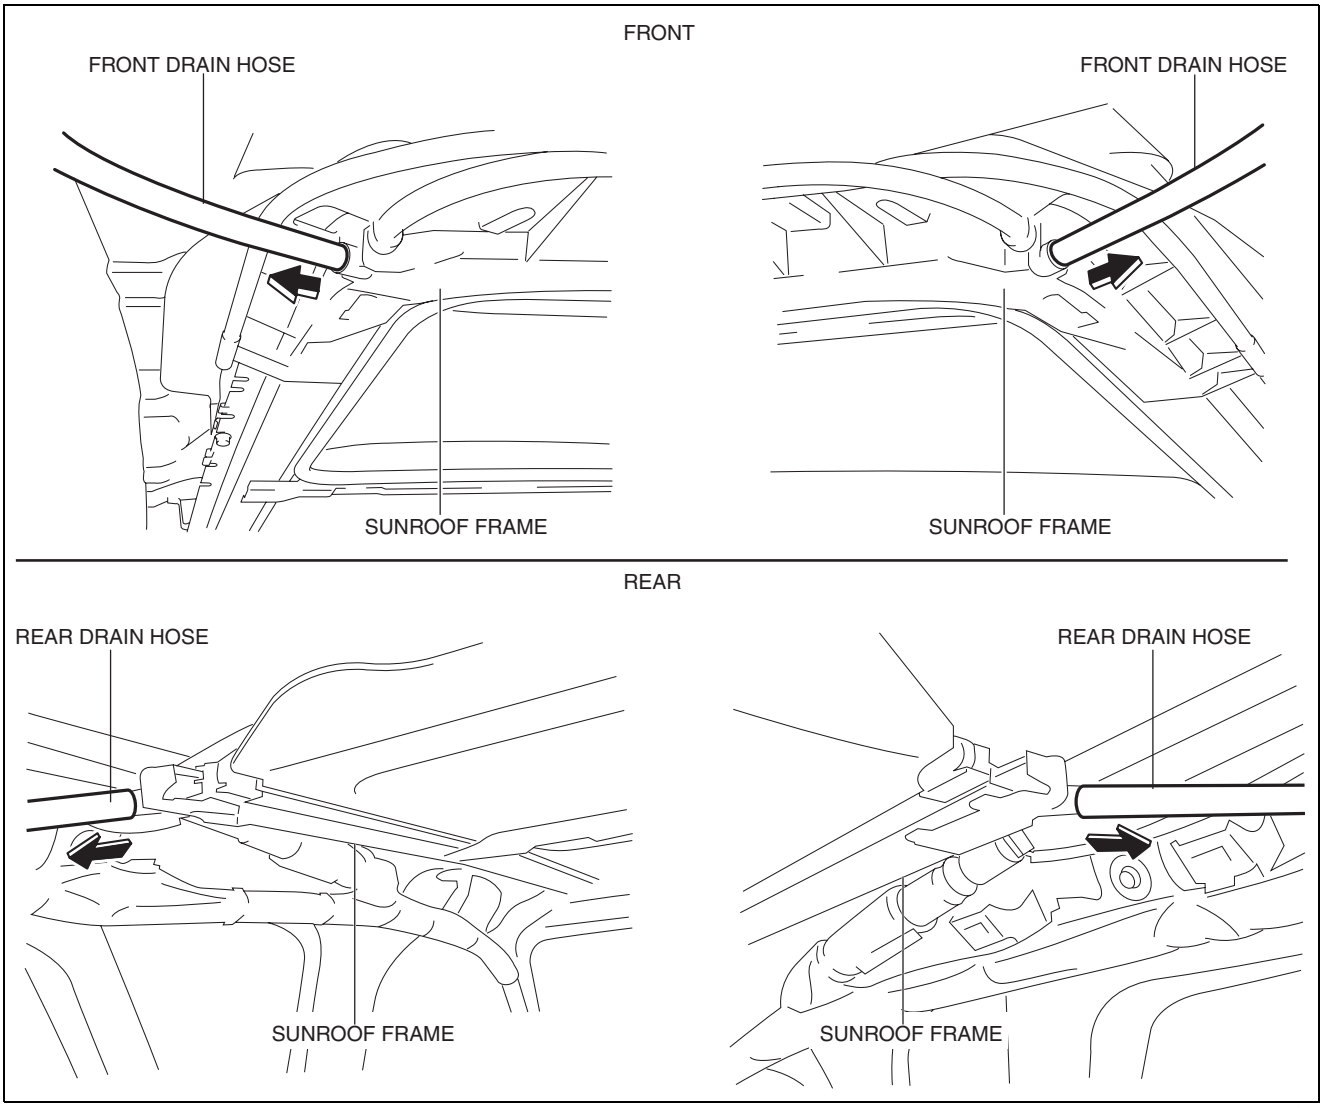
SUNROOF UNIT REMOVAL/INSTALLATION

id091500800700

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Sunroof seaming welt (See 09-15-6 SUNROOF UNIT REMOVAL/INSTALLATION.)
   (2) A-pillar trim (See 09-17-53 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (3) Map light (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)
   (4) Sunvisor (See 09-17-93 SUNVISOR REMOVAL/INSTALLATION.)
   (5) Front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (7) B-pillar lower trim (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (8) Adjust anchor cover (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (9) Upper anchor installation bolt on the seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (10) B-pillar upper trim (See 09-17-58 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (11) Assist handle (See 09-17-91 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (12) Trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
   (13) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (14) Trunk side trim (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (15) D-pillar trim (See 09-17-60 D-PILLAR TRIM REMOVAL/INSTALLATION.)
   (16) C-pillar trim (See 09-17-59 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (17) Headliner (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.)

SUNROOF

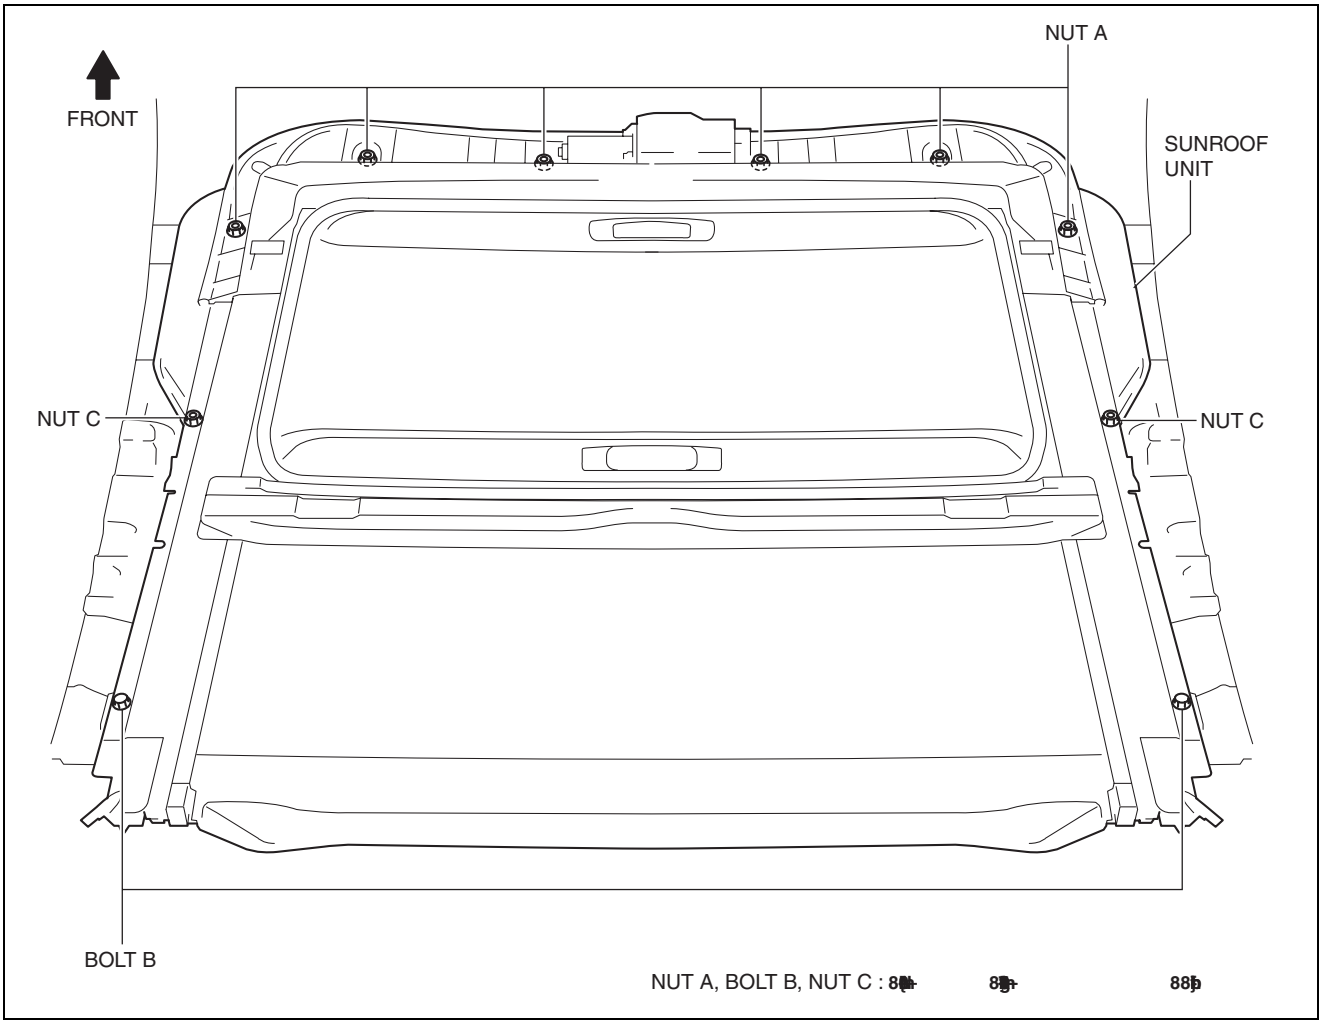
3. Disconnect the front drain hose and rear drain hose from the sunroof frame in the direction of the arrow shown in the figure.



ac5wzw0000172

SUNROOF

4. Remove nuts A shown in the figure.



ac5wzw0000151

5. Remove bolts B shown in the figure.
6. Remove nuts C shown in the figure.

Caution
- **Removing nuts C without supporting it could cause the sunroof unit to fall and cause serious injury. Always perform the procedure with at least another person to prevent the sunroof unit from falling.**

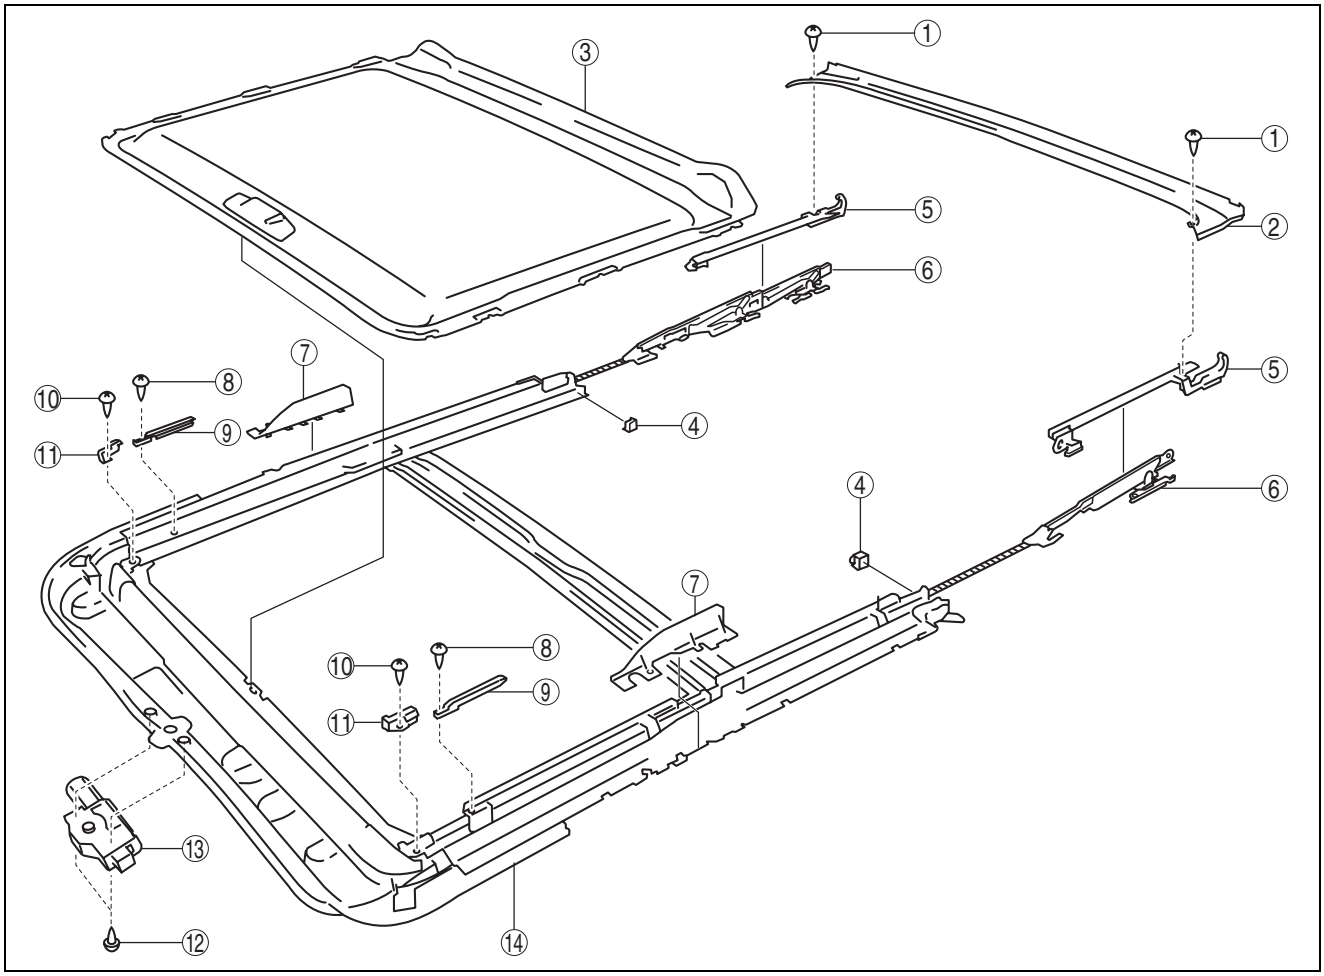
7. Take the sunroof unit off from the front driver-side door or front passenger-side door opening.
8. Install in the reverse order of removal.

SUNROOF UNIT DISASSEMBLY/ASSEMBLY

id091500800800

1. Disassemble in the order indicated in the table.

SUNROOF



ac5uuw00001725

1	Screw A
2	Drip rail
3	Sunshade (See 09-15-9 Sunshade Disassembly Note.)
4	Rear stopper
5	Front guide (See 09-15-10 Front Guide Disassembly Note.)
6	Decoration link (See 09-15-11 Decoration Link Assembly Note.)

7	Screen
8	Screw B
9	Set plate
10	Screw C
11	Front stopper
12	Screw D
13	Sunroof motor
14	Sunroof frame

2. Assemble in the reverse order of disassembly.

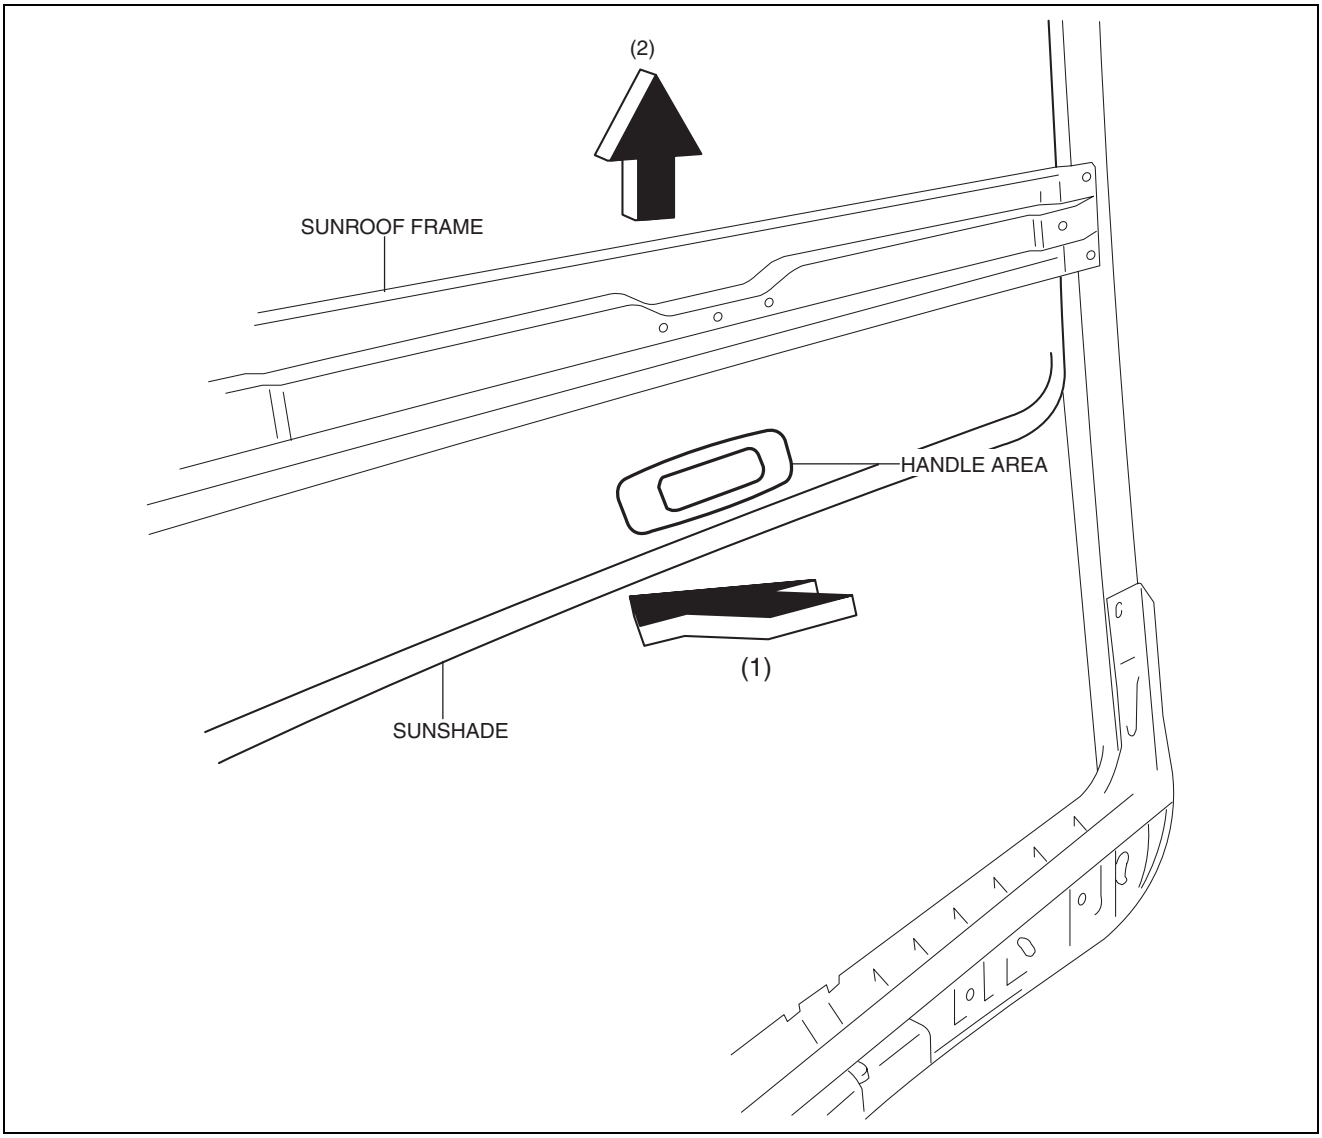
Sunshade Disassembly Note

- Pull the sunshade in the direction of the arrow in the order of (1), (2) and remove it.

Caution

- **The sunshade may contact the sunroof frame and the handle area may be damaged. Remove the sunshade by sliding it in the direction of arrow (2) shown in the figure while lifting it in the direction of arrow (1).**

SUNROOF



ac5uuw00001978

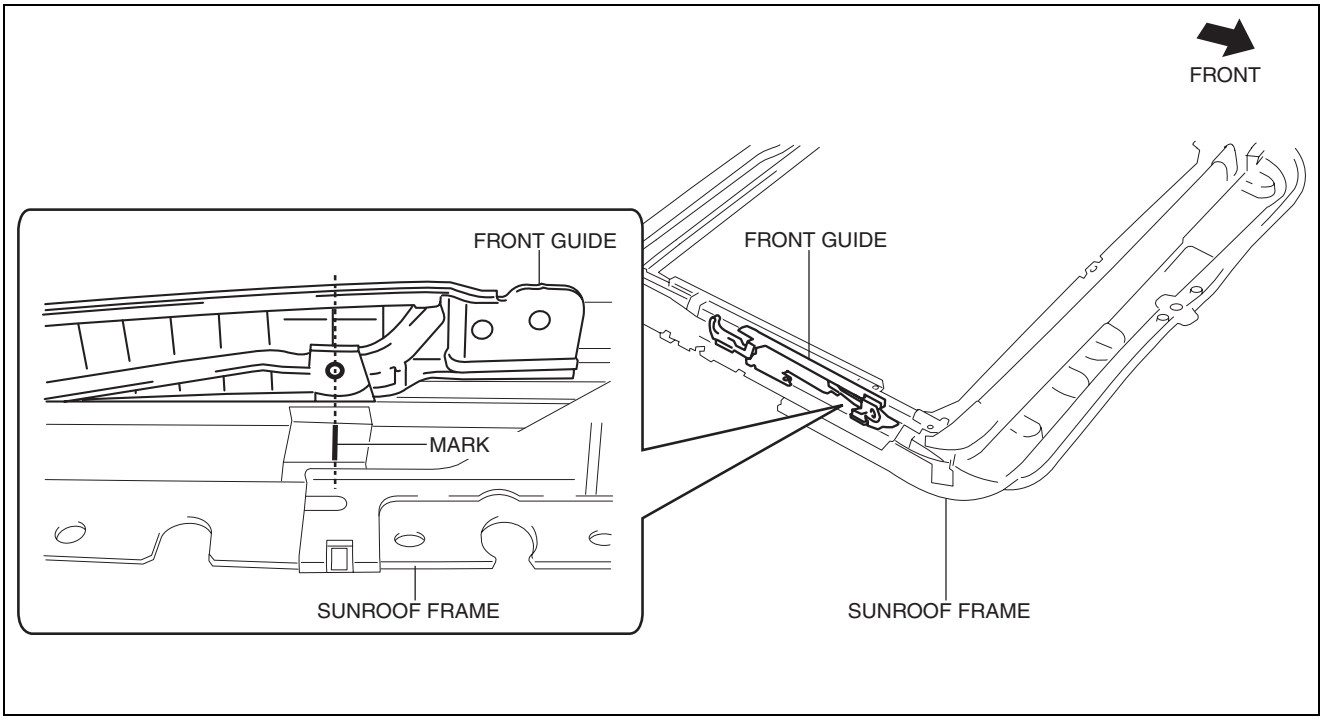
Front Guide Disassembly Note

- Perform mark the position shown in the figure for correct positioning.

Caution

- **If the front guide is assembled to a wrong position, the glass panel may stop at the wrong position and may be damaged. Before removing the front guide, mark the position shown in the figure for correct positioning.**

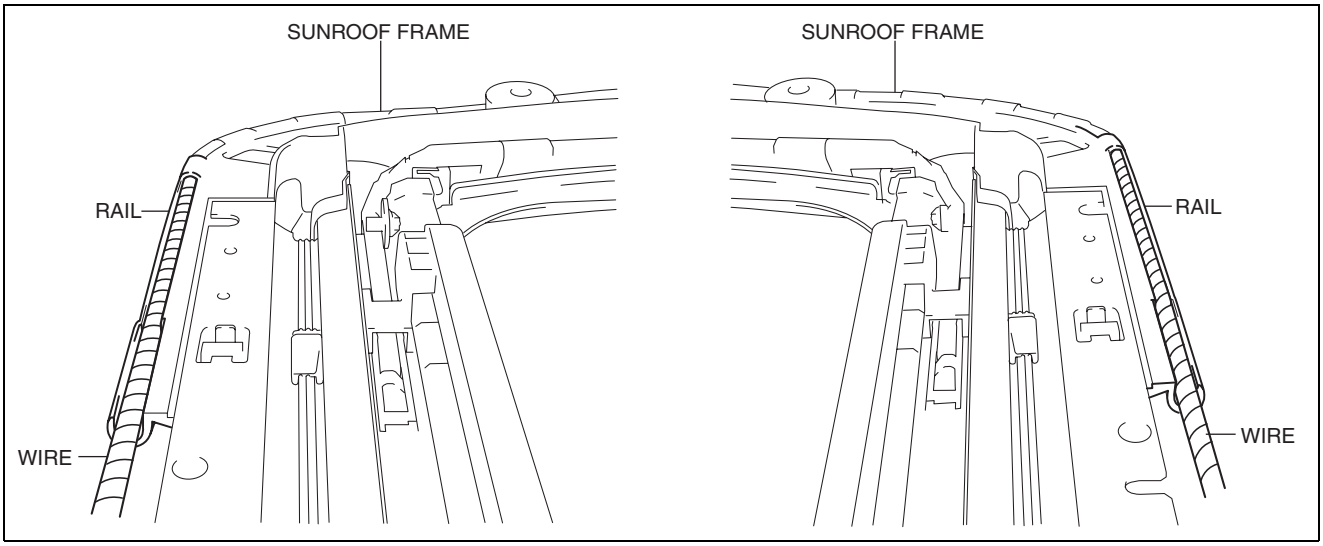
SUNROOF



ac5wzw0000172

Decoration Link Assembly Note

- To prevent the wire shown in the figure from coming off the rail, install while aligning the wire in the rail.



ac5wzw0000151

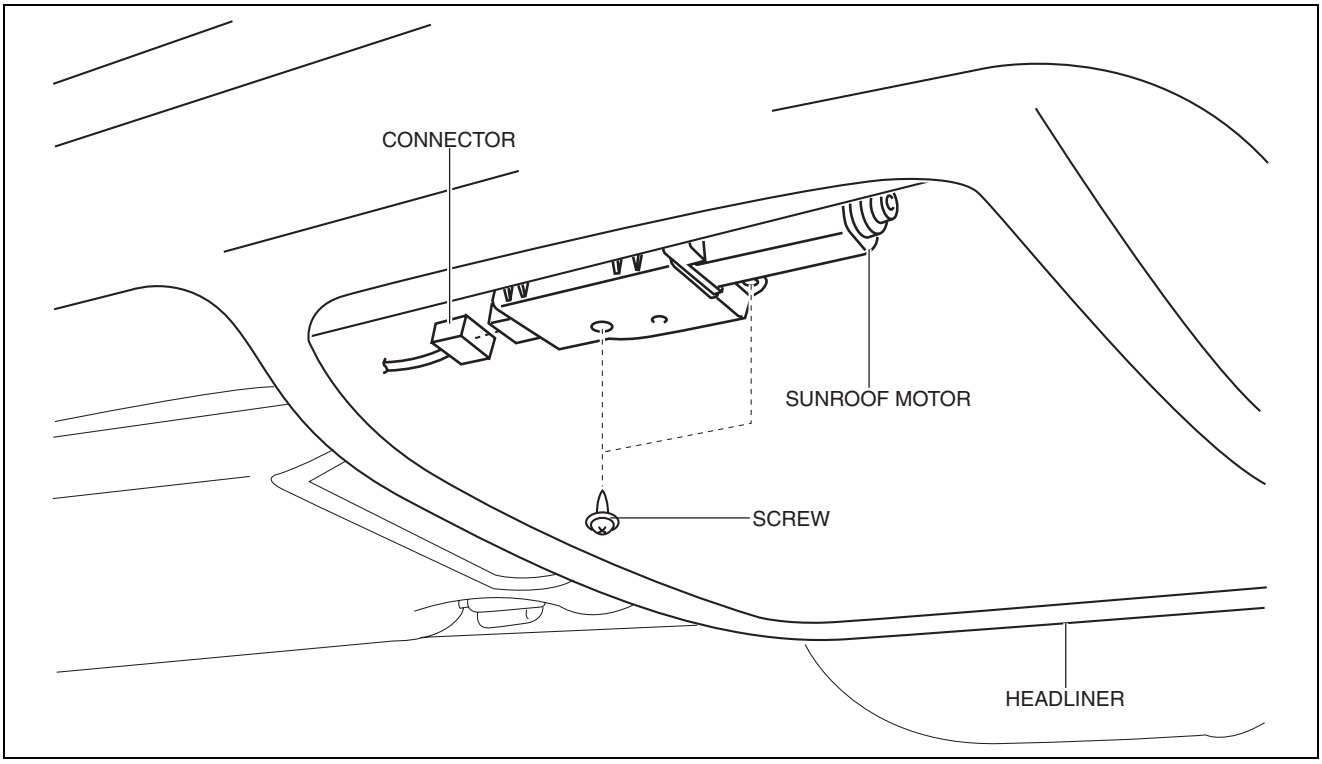
SUNROOF MOTOR REMOVAL/INSTALLATION

id091500801800

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the map light. (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)

SUNROOF

3. Remove screws.



ac5wzw0000151

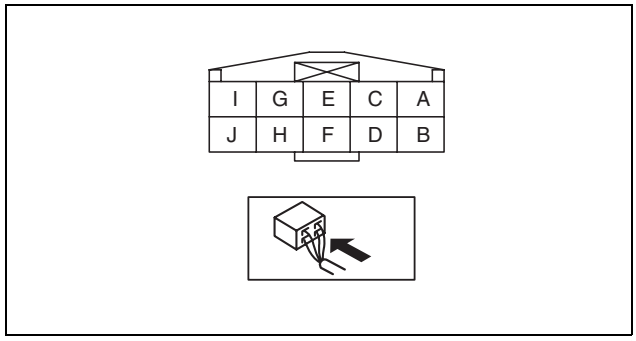
4. Disconnect the connector.
5. Remove the sunroof motor.
6. Install in the reverse order of removal.

SUNROOF MOTOR INSPECTION

id091500801100

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the map light. (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)
3. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
4. Measure the voltage at each terminal.
   - If the voltage is not as specified in the terminal voltage table, inspect the parts under Inspection item (s) and related wiring harnesses.
     — If the system does not work normally even though the inspection items or related wiring harnesses do not have any malfunction, replace the sunroof motor. (See 09-15-11 SUNROOF MOTOR REMOVAL/INSTALLATION.)

Terminal Voltage Table (Reference)



ac5uuw00002034

SUNROOF

SUNROOF SWITCH REMOVAL/INSTALLATION

id091500800200

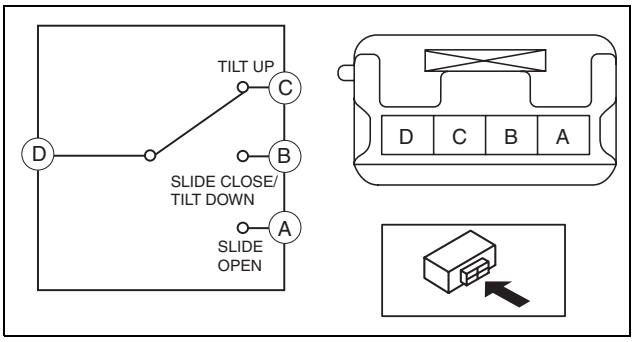
Note
- The sunroof switch is together with the front map light.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the map light. (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)
3. Install in the reverse order of removal.

SUNROOF SWITCH INSPECTION

id091500800300

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the map light. (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)
3. Verify that the continuity between the sunroof switch terminals is as indicated in the table.



ac5wzw0000299

SUNROOF

- If not as indicated in the table, replace the sunroof switch.

○—○:continuity

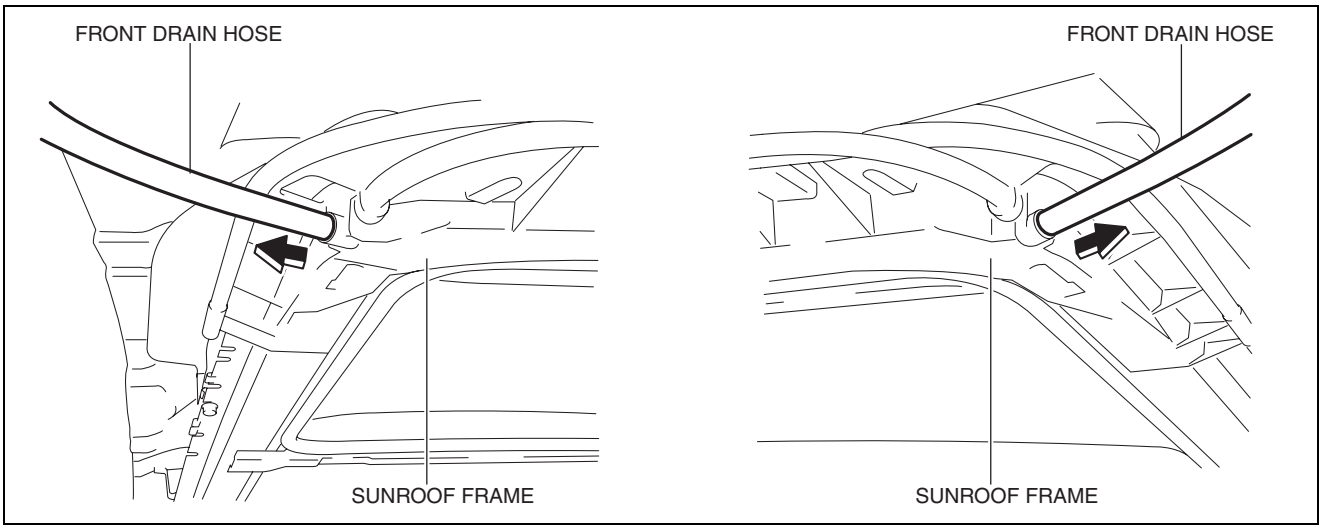
Switch position	Terminal			
	A	B	C	D
SLIDE OPEN	○			○
SLIDE CLOSE / TILT DOWN		○		○
TILT UP			○	○

ac5wzw0000172

FRONT DRAIN HOSE REMOVAL/INSTALLATION

id091500443800

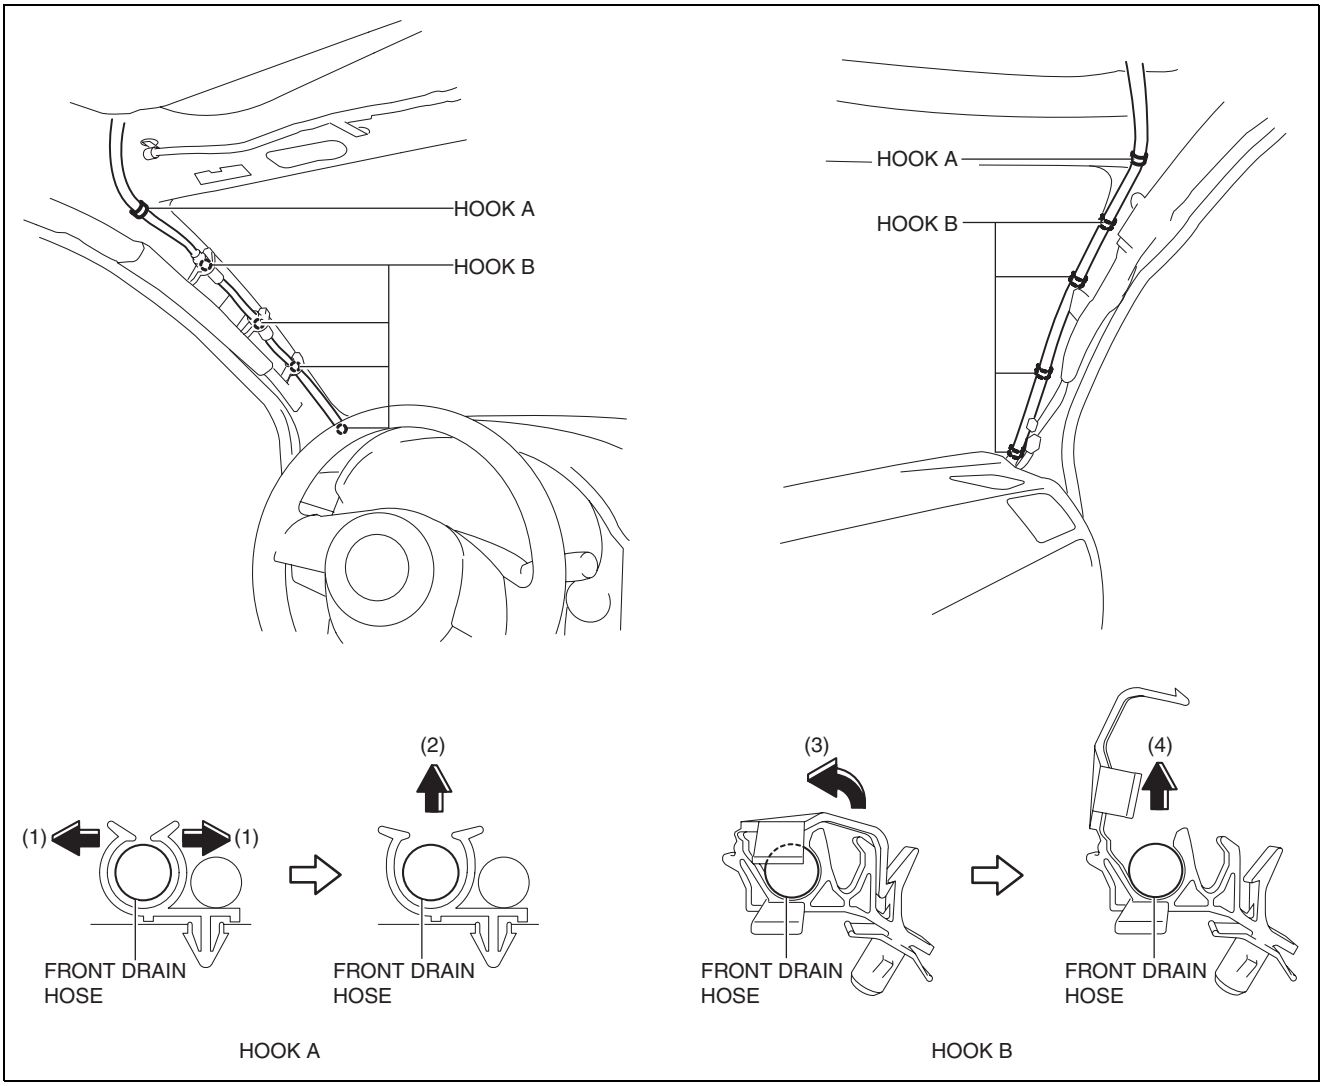
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Sunroof seaming welt (See 09-15-6 SUNROOF UNIT REMOVAL/INSTALLATION.)
   (2) A-pillar trim (See 09-17-53 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (3) Map light (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)
   (4) Sunvisor (See 09-17-93 SUNVISOR REMOVAL/INSTALLATION.)
   (5) Front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (7) B-pillar lower trim (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (8) Adjust anchor cover (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (9) Upper anchor installation bolt on the seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (10) B-pillar upper trim (See 09-17-58 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (11) Assist handle (See 09-17-91 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (12) Trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
   (13) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (14) Trunk side trim (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (15) D-pillar trim (See 09-17-60 D-PILLAR TRIM REMOVAL/INSTALLATION.)
   (16) C-pillar trim (See 09-17-59 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (17) Headliner (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.)
3. Disconnect the front drain hose from the sunroof frame.



ac5wzw0000171

SUNROOF

4. Pull the front drain hose in the direction of the arrow in the order of (1), (2) and remove it while detaching hooks A.

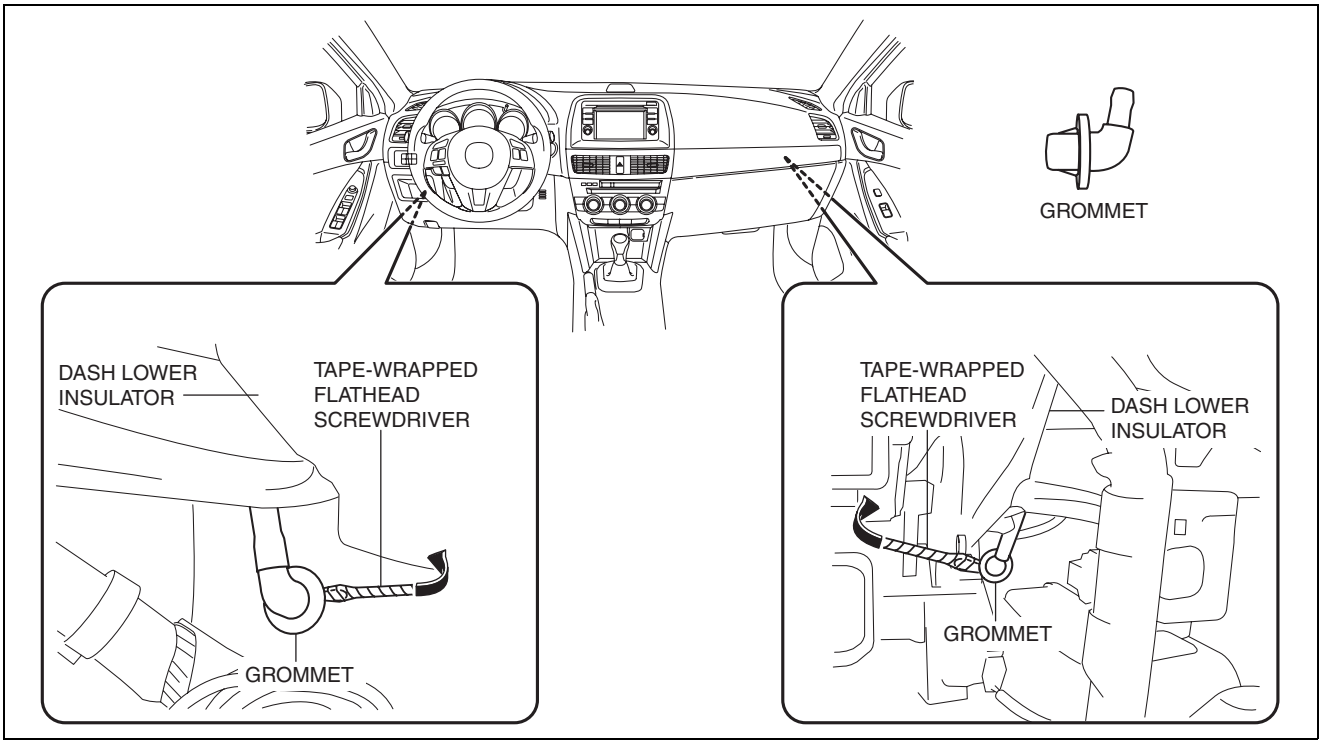


ac5wzw0000172

5. Pull the front drain hose in the direction of the arrow in the order of (3), (4) and remove it while detaching hooks B.
6. Remove the car-navigation unit. (driver-side) (See 09-20-11 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
7. Remove the glove compartment. (passenger-side) (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)

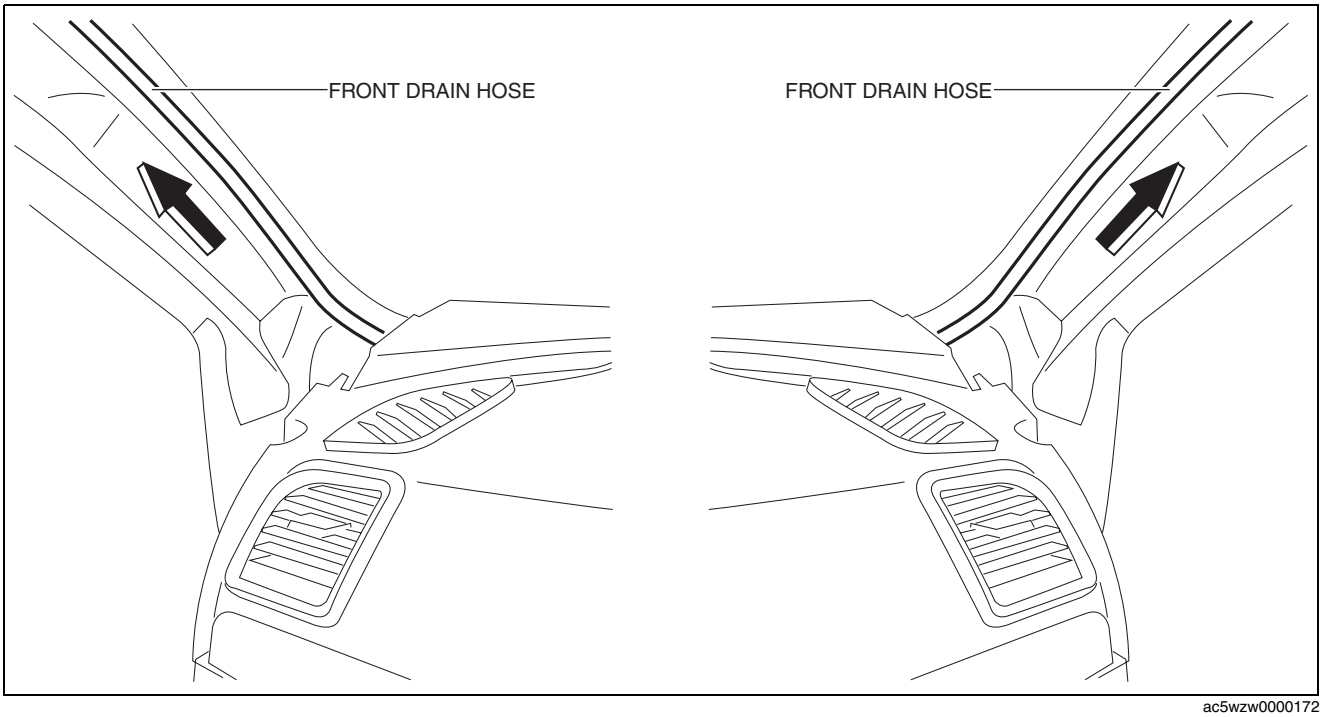
SUNROOF

8. While visually verifying from the car-navigation unit opening (driver-side) and glove component opening (passenger-side), partially peel back the dashboard lower insulator, insert a tape-wrapped flathead screwdriver into the position shown in the figure, then remove the grommet in the direction of the arrow.



ac5wzw0000150

9. Pull the front drain hose out from the A-pillar side.



ac5wzw0000172

10. Install in the reverse order of removal.

REAR DRAIN HOSE REMOVAL/INSTALLATION

id091500443900

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:

SUNROOF

(1) Sunroof seaming welt (See 09-15-6 SUNROOF UNIT REMOVAL/INSTALLATION.)
(2) A-pillar trim (See 09-17-53 A-PILLAR TRIM REMOVAL/INSTALLATION.)
(3) Map light (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)
(4) Sunvisor (See 09-17-93 SUNVISOR REMOVAL/INSTALLATION.)
(5) Front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
(6) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
(7) B-pillar lower trim (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
(8) Adjust anchor cover (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
(9) Upper anchor installation bolt on the seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
(10) B-pillar upper trim (See 09-17-58 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)

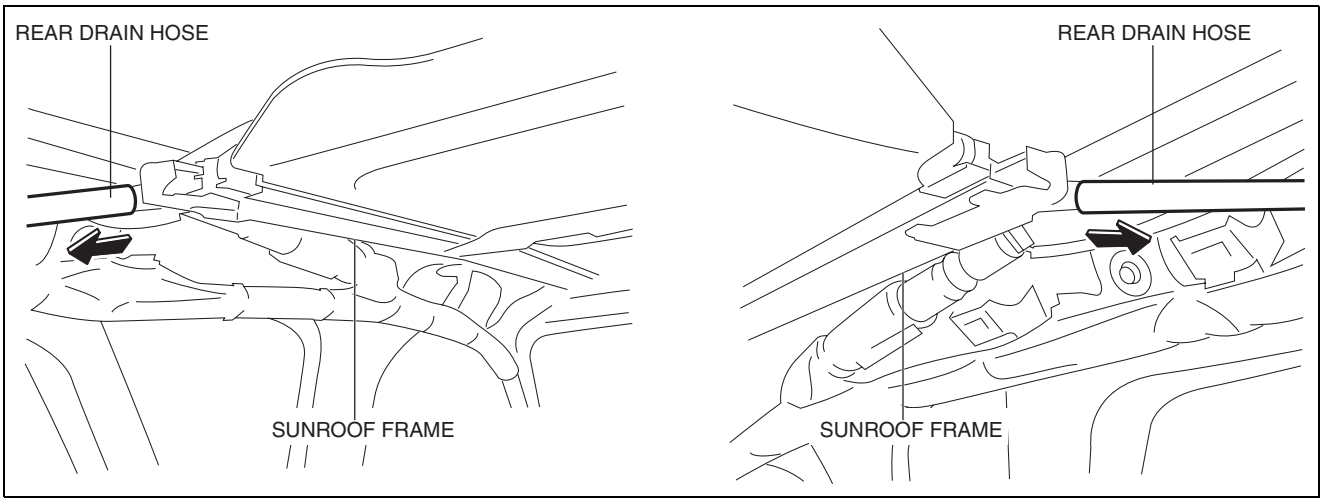
(16) C-pillar trim (See 09-17-59 C-PILLAR TRIM REMOVAL/INSTALLATION.)
(17) Headliner (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.)

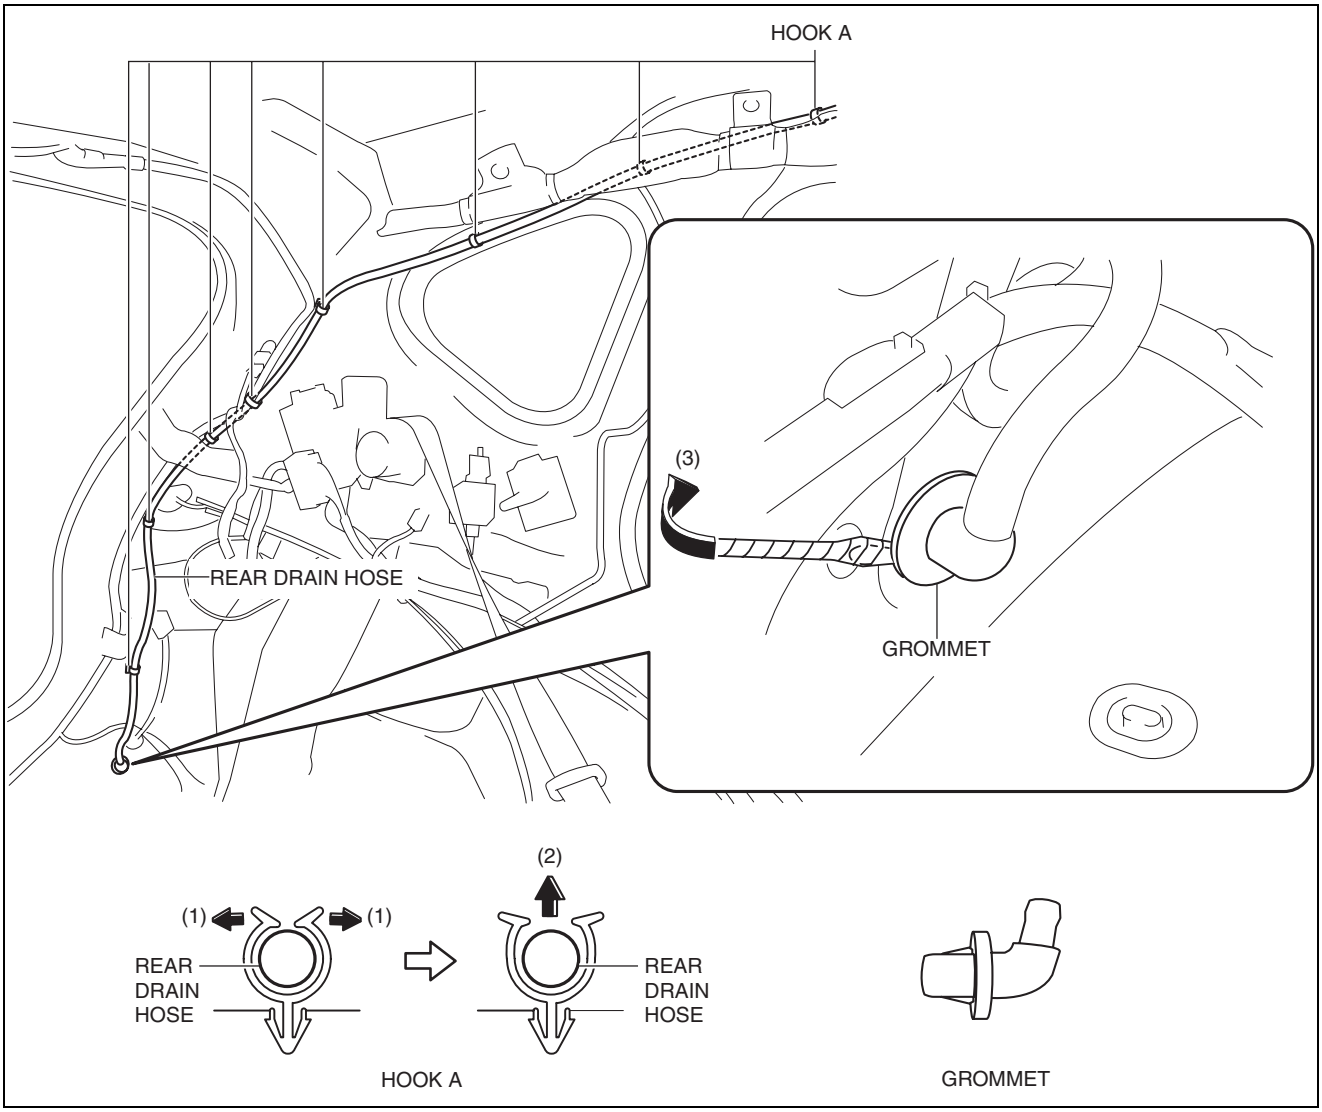
3. Disconnect the front drain hose from the sunroof frame.



ac5wzw0000172

SUNROOF

4. Pull the rear drain hose in the direction of the arrow in the order of (1), (2) shown in the figure from hooks A.



ac5uuw00001977

5. Insert a tape-wrapped flathead screwdriver into the position shown in the figure, then remove the grommet in the direction of the arrow (3).
6. Remove the rear drain hose.
7. Install in the reverse order of removal.

SUNROOF SYSTEM INITIALIZATION PROCEDURE

id091500858000

- If the following operations have been performed, initial setting is reset, and except tilt up operation are disabled. Therefore, performing initial setting is necessary.
  - — Negative battery cable is disconnected. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
  - — Sunroof switch connector is disconnected.
  - — Sunroof system power supply fuse is removed.

1. Switch the ignition ON (engine off or on).
2. Press the tilt up switch to fully tilt up the glass panel.

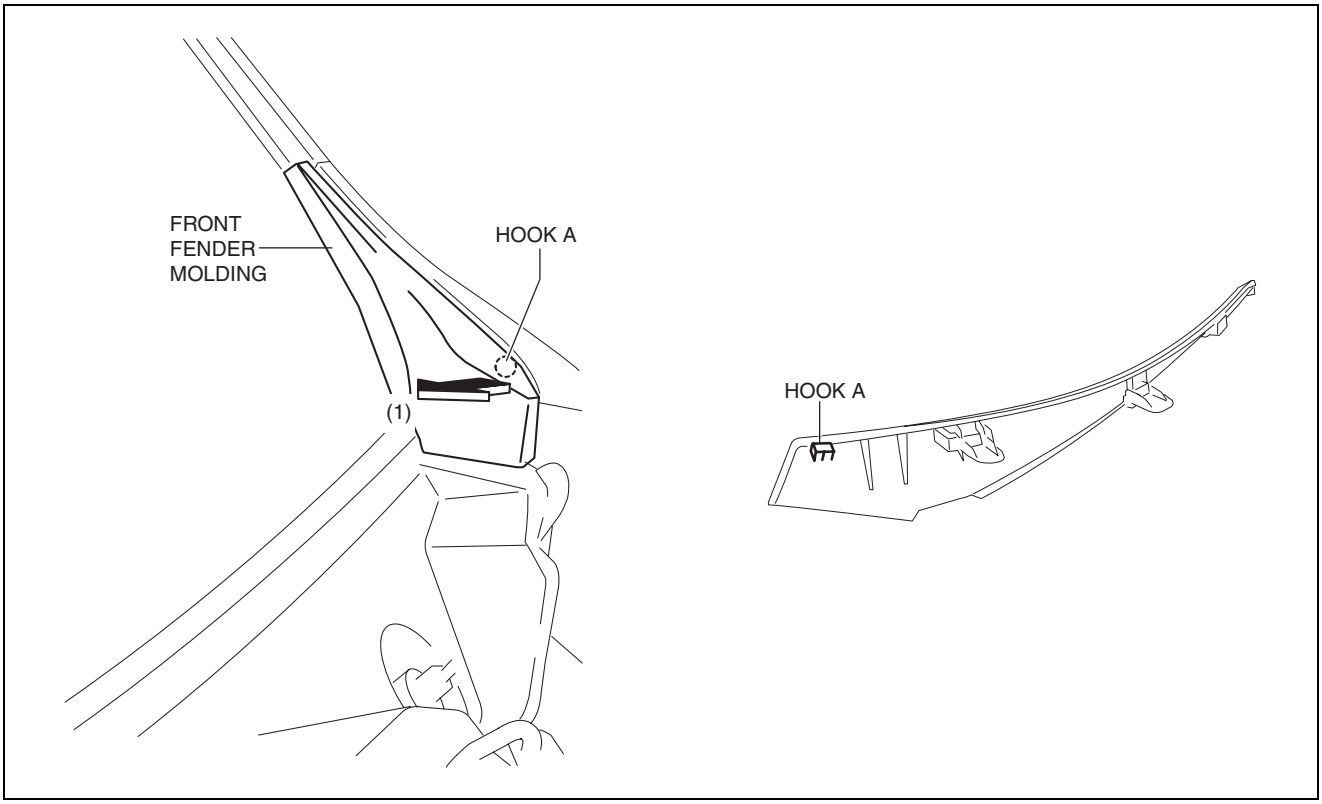
COWL GRILLE REMOVAL/INSTALLATION

id091600801000

1. Remove the windshield wiper arm and blade. (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)

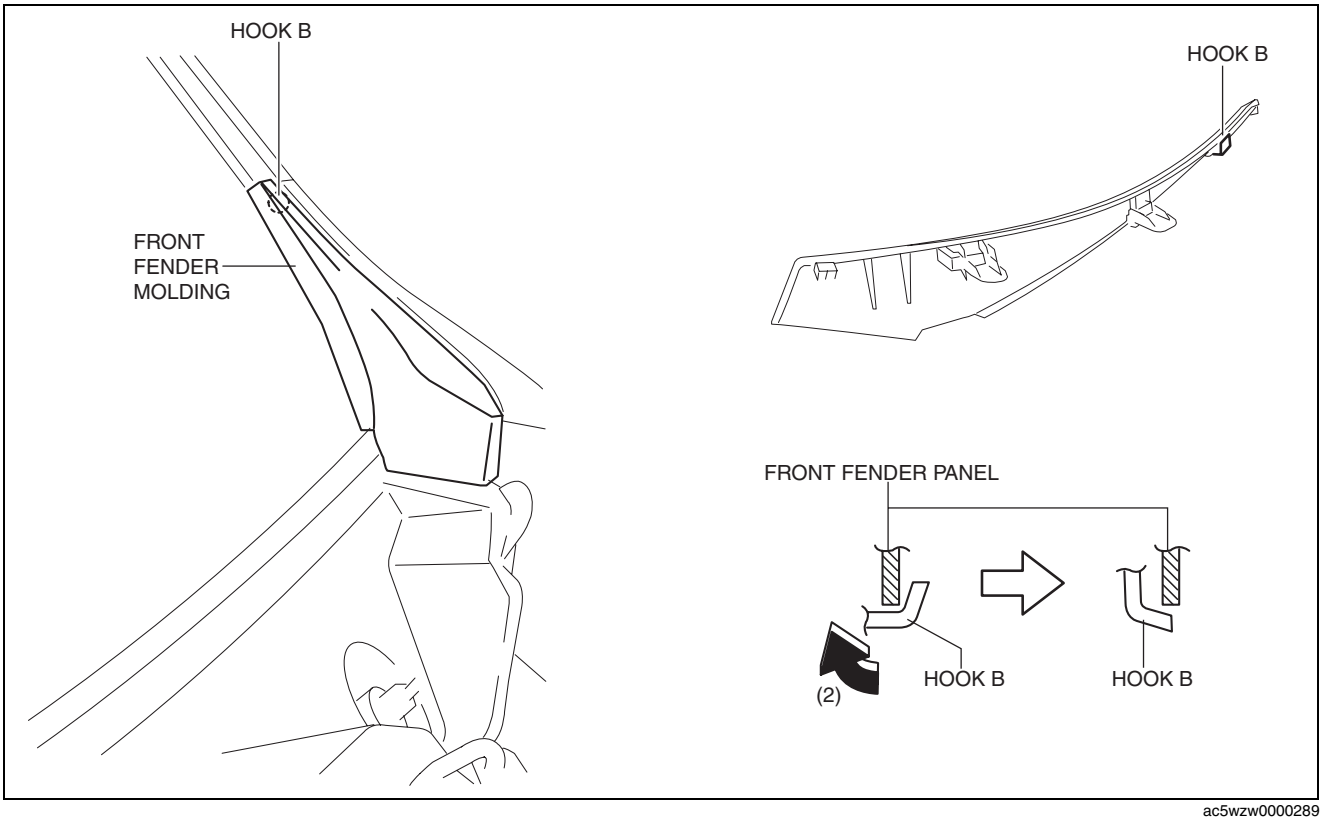
EXTERIOR TRIM

2. Pull the front fender molding in the direction of the arrow (1) while detaching hook A.



ac5wzw0000289

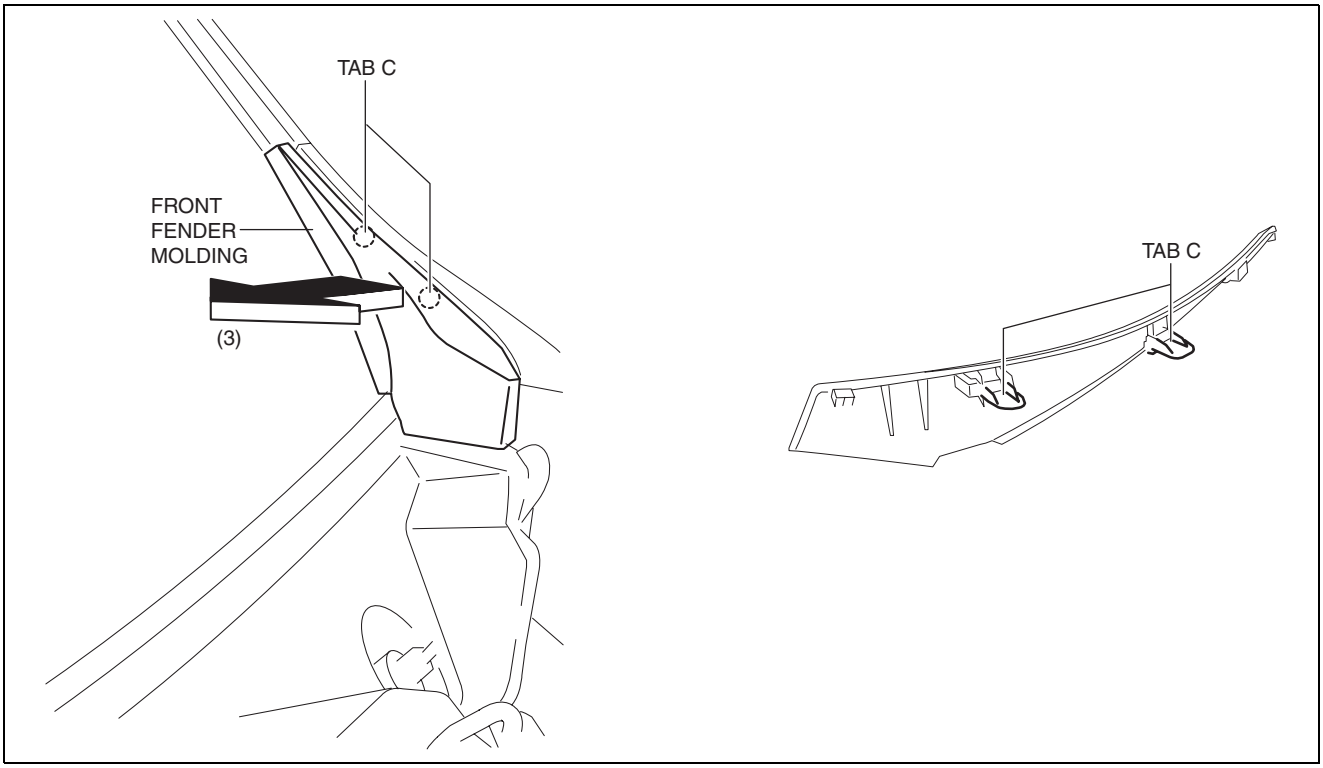
3. Pull the front fender molding in the direction of the arrow (2) while detaching hook B.



ac5wzw0000289

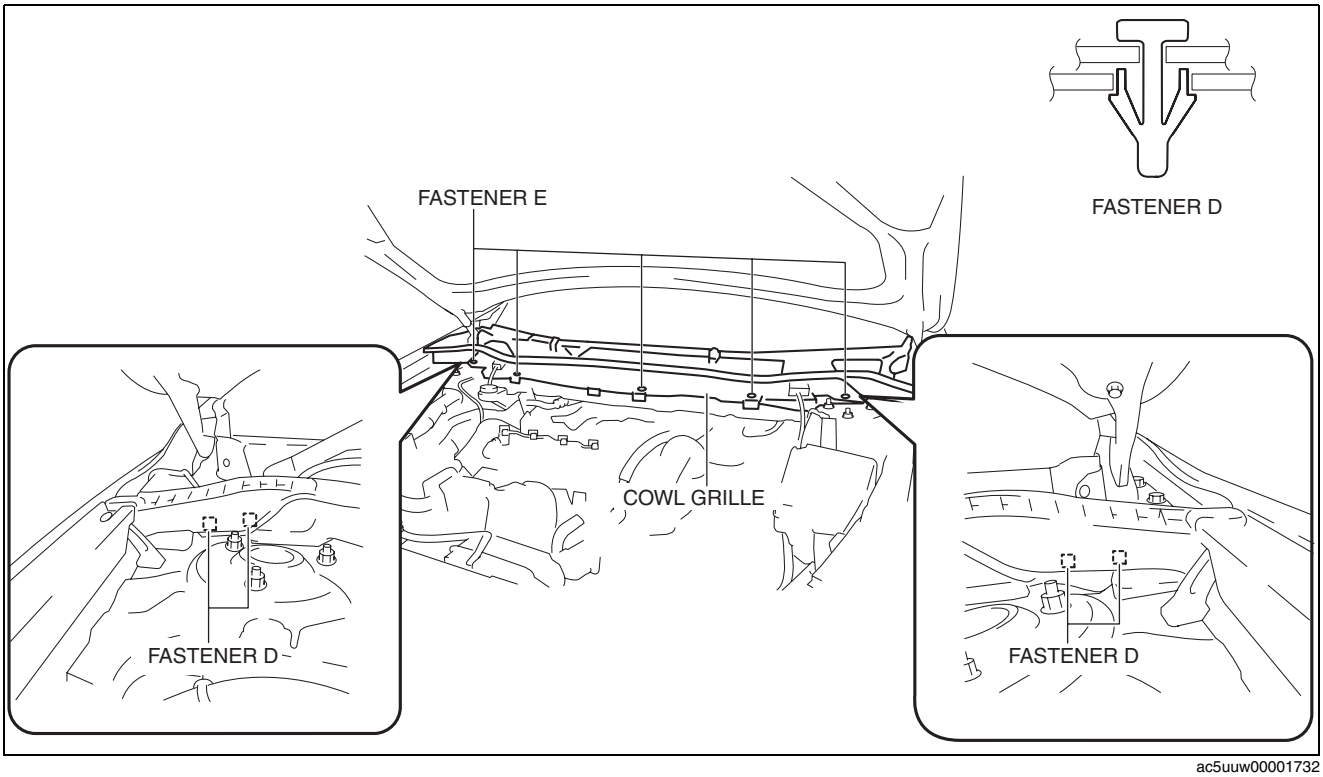
EXTERIOR TRIM

4. Pull the front fender molding in the direction of the arrow (3) and remove it while detaching tab C.



ac5wzw0000289

5. Remove fasteners D shown in the figure.

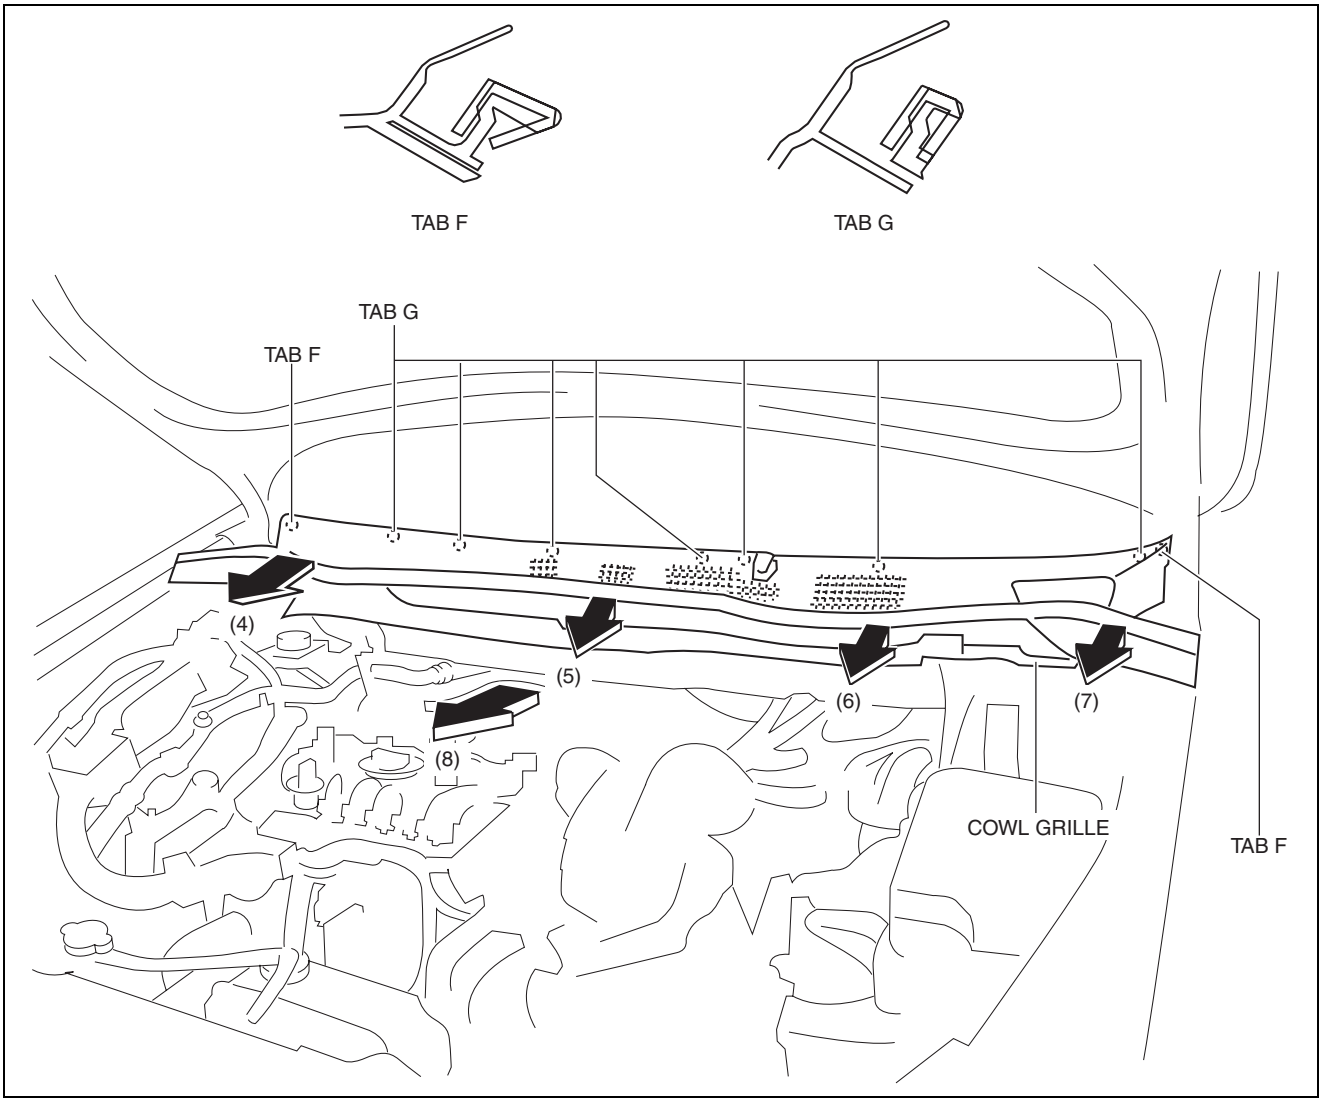


ac5uuw00001732

6. Remove fasteners E shown in the figure.
7. Disconnect the join pipe A of the windshield washer hose. (See 09-19-27 WINDSHIELD WASHER HOSE REMOVAL/INSTALLATION.)

EXTERIOR TRIM

8. Pull the cowl grille in the direction of the arrow in the order of (4), (5), (6), (7), (8) and remove it while detaching tabs F, tabs G.



ac5wzw0000289

9. Install in the reverse order of removal.

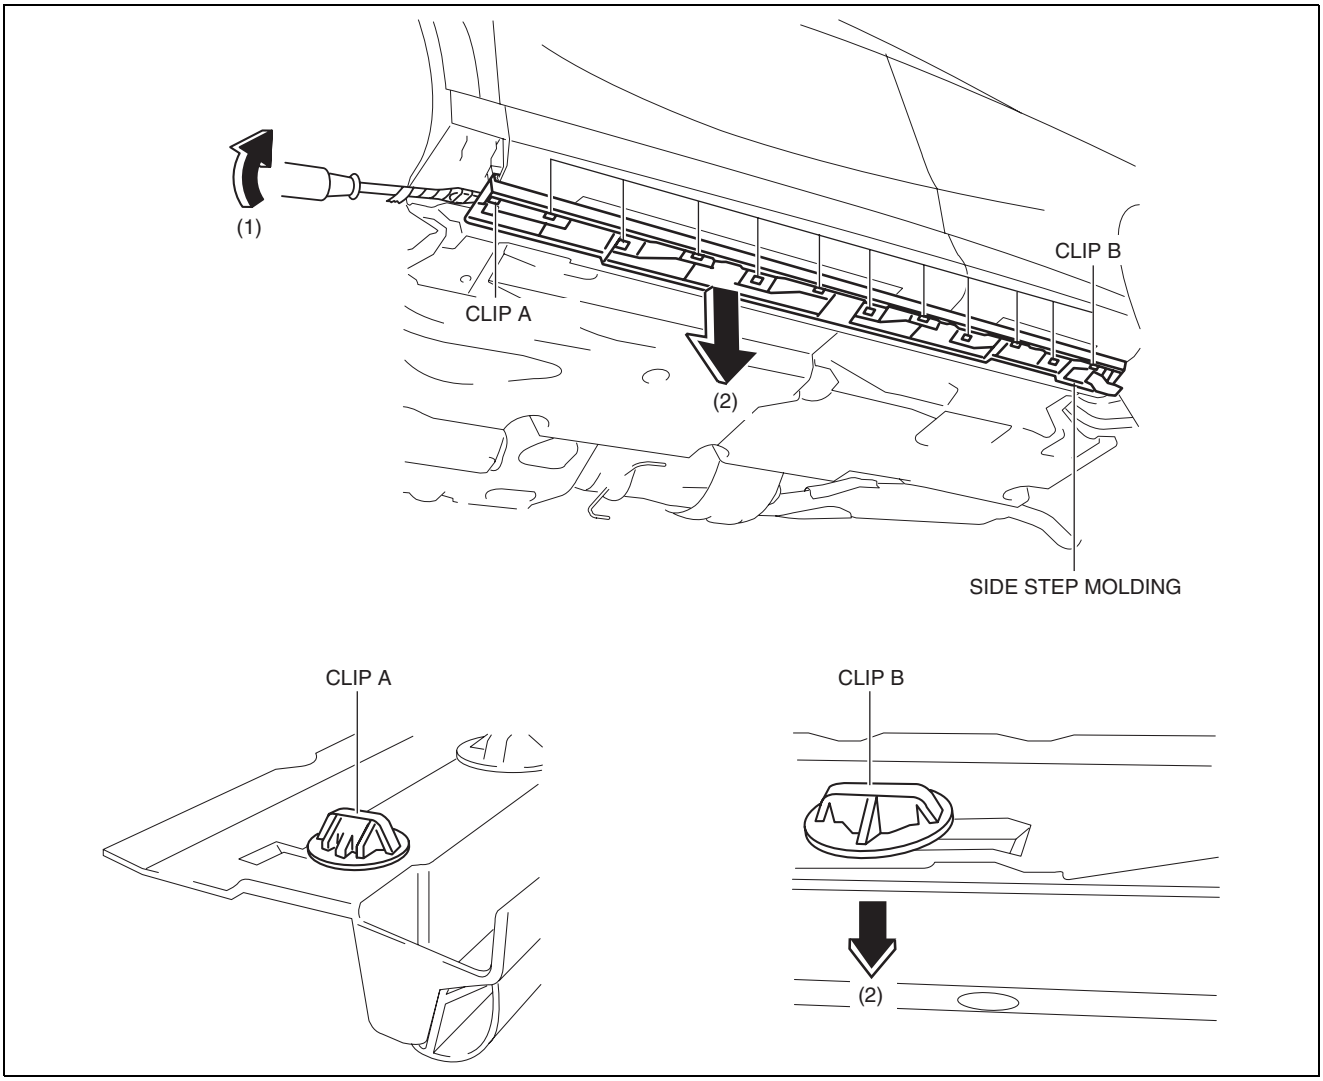
SIDE STEP MOLDING REMOVAL/INSTALLATION

id091600801800

1. Set the rear over fender aside. (See 09-10-33 REAR OVER FENDER REMOVAL/INSTALLATION.)

EXTERIOR TRIM

2. Insert a tape-wrapped flathead screwdriver shown in the figure and remove the clip A in the direction of arrow (1).



ac5wzw0000310

3. Pull the side step molding in the direction of the arrow (2) shown in the figure and remove clips B from side step molding.
4. After removing the side step molding, remove clip A, clips B from the body using a fastener remover.
5. Install clip A, clips B to the side step molding.
6. Install in the reverse order of removal.

FRONT DOOR GARNISH REMOVAL/INSTALLATION

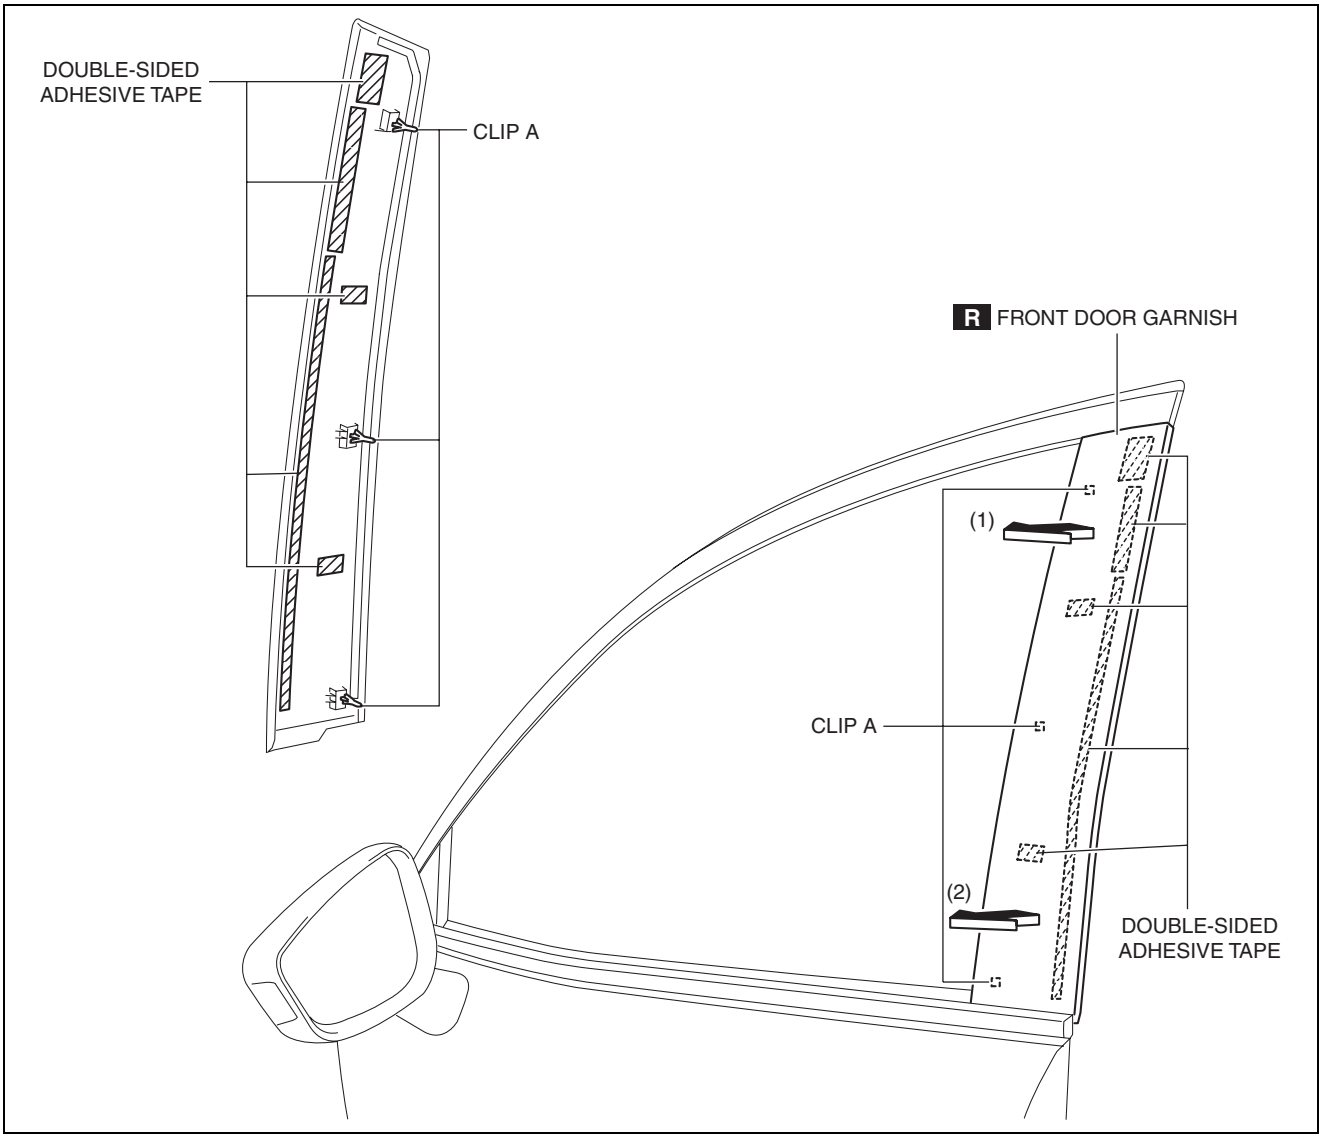
id091600446300

Warning
- **Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.**

1. Using a tape-wrapped fastener remover, remove clips A in the direction of arrow (1), (2) shown in the figure.

EXTERIOR TRIM

2. Remove the double-sided adhesive tape in the position shown in the figure using the utility knife, remove the rear door garnish from the body.



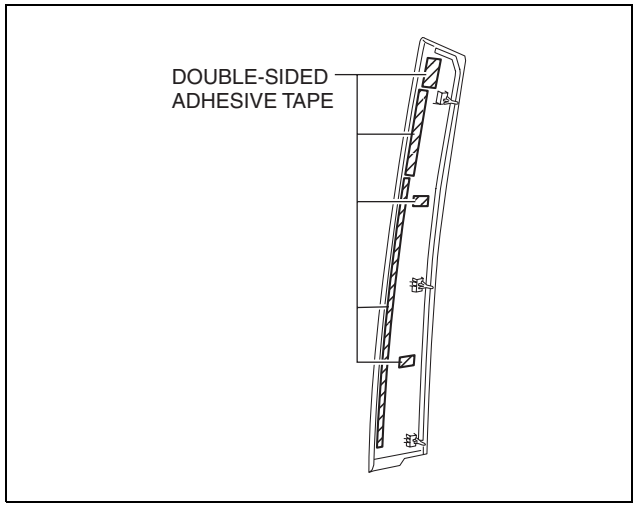
ac5wzw0000126

3. Install in the reverse order of removal. (See 09-16-8 Front Door Garnish Installation Note.)

Front Door Garnish Installation Note

1. When installing a new front door garnish, perform the following procedure:
   (1) Remove the double-sided adhesive tape on the front door sash.
   (2) Remove any grease or dirt from the affixing surface of the front door sash.

EXTERIOR TRIM

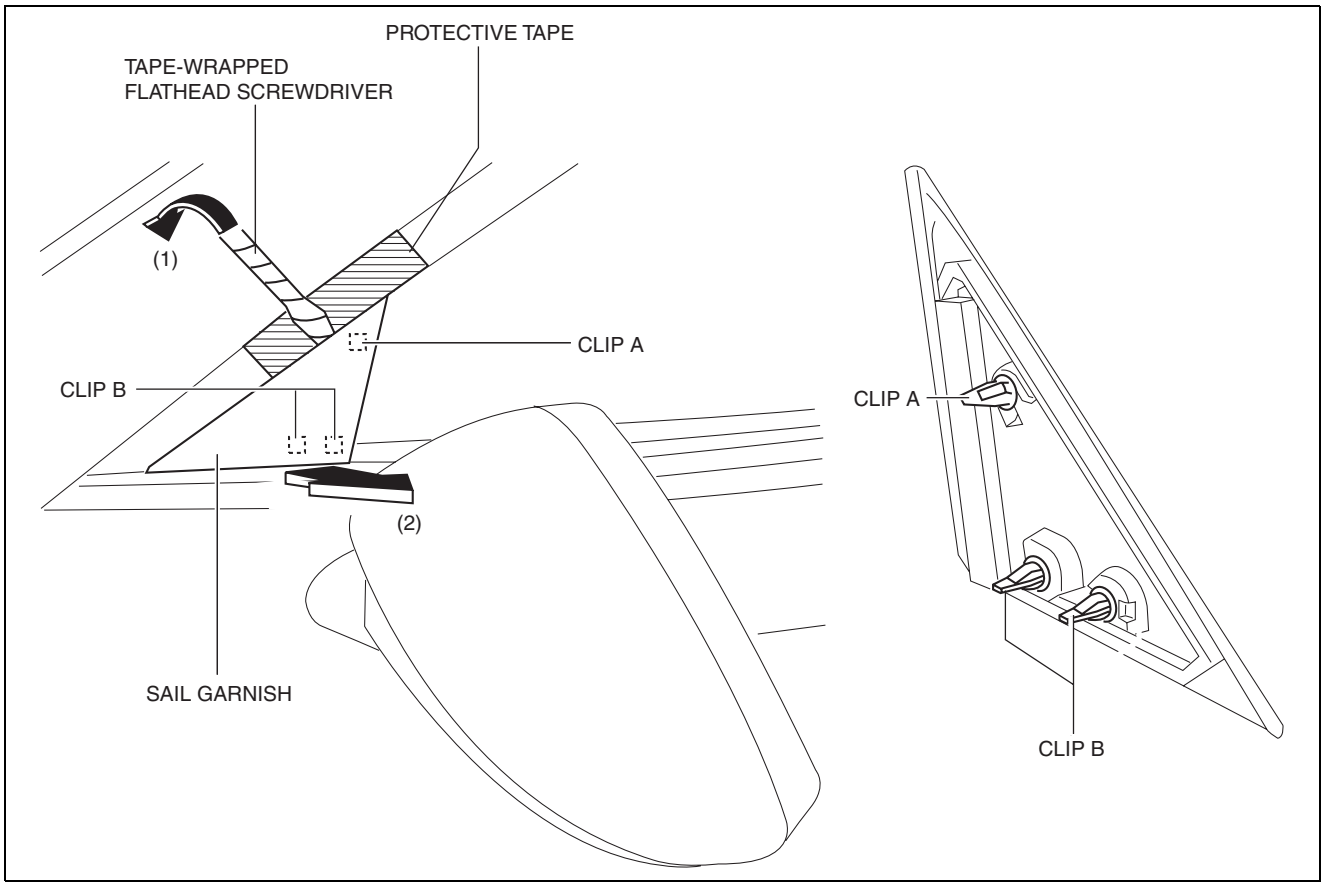


ac5wzw0000462

SAIL GARNISH REMOVAL/INSTALLATION

id091600451200

1. Open the front door.
2. Affix protective tape to the position shown in the figure.



ac5wzw0000341

3. Insert a tape-wrapped flathead screwdriver into the shown in the figure and remove the clip A in the direction of arrow (1).
4. Pull the sail garnish in the direction of the arrow (2) and remove it while detaching clips B.
5. Install in the reverse order of removal.

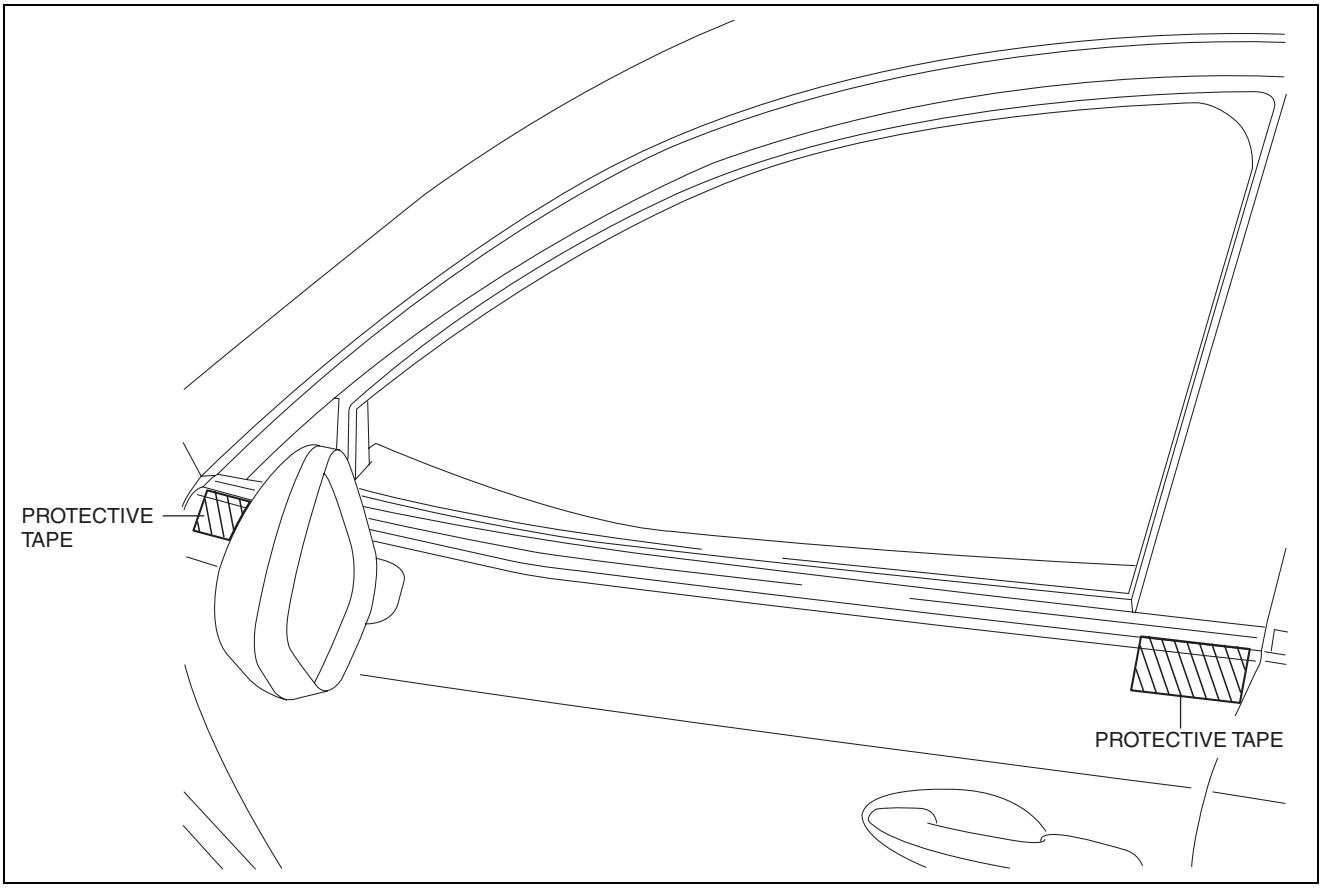
FRONT BELTLINE MOLDING REMOVAL/INSTALLATION

id091600804800

Caution

- **Affix protective tape to the position shown in the figure.**

EXTERIOR TRIM

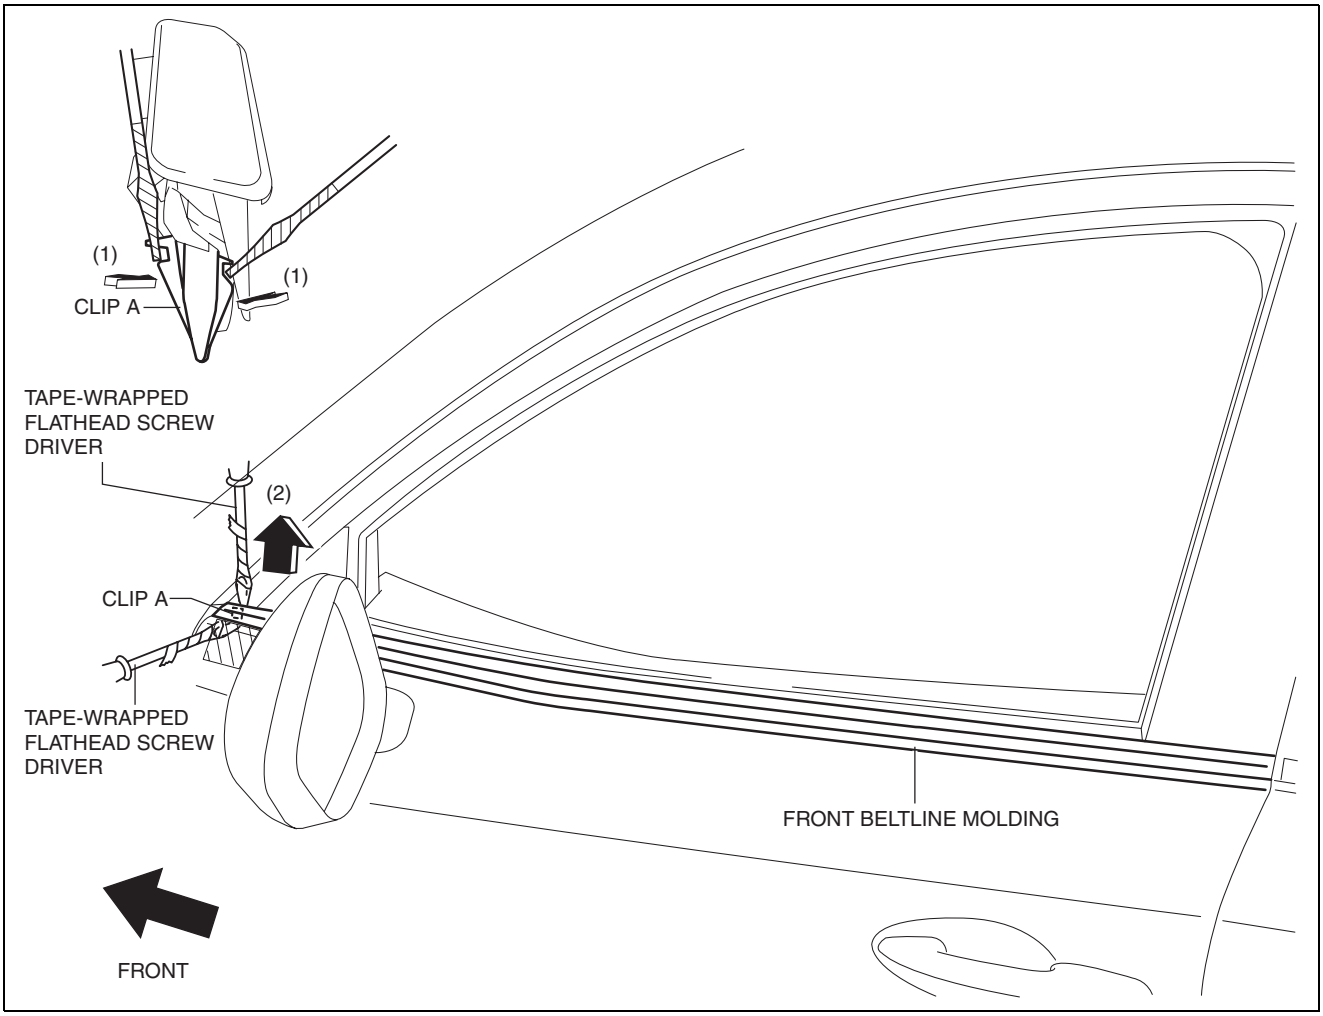


ac5wzw0000128

1. Fully open the front door glass.
2. Insert a tape-wrapped flathead screwdriver and then detach clips A in the direction of arrow (1) shown in the figure.

EXTERIOR TRIM

3. Pull up the front side of front beltline molding in the direction of arrow (2) shown in the figure.

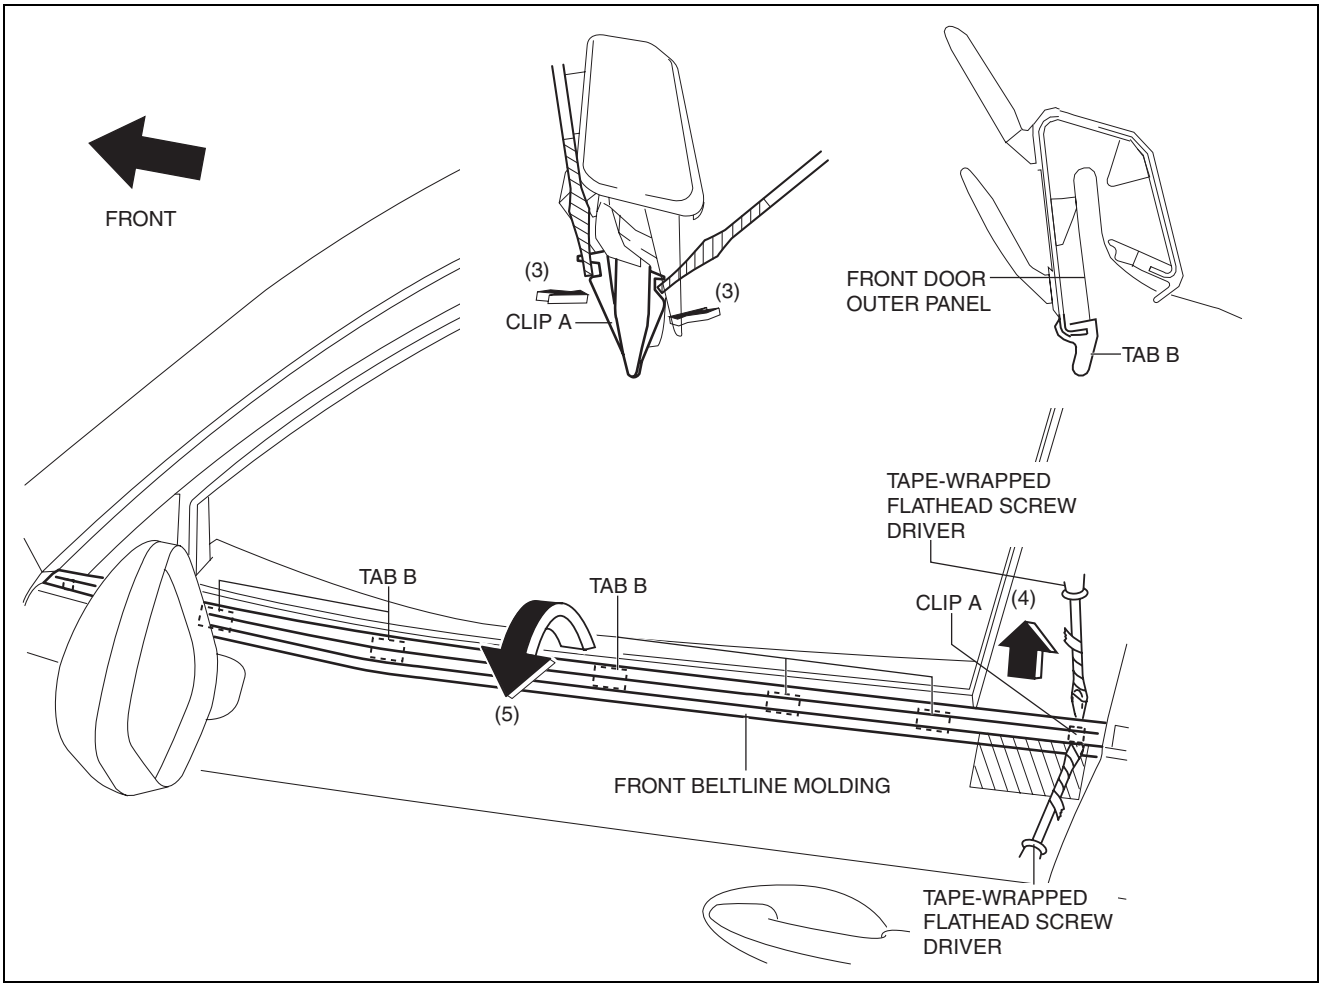


ac5wzw0000218

4. Insert a tape-wrapped flathead screwdriver and then detach clips A in the direction of arrow (3) shown in the figure.
5. Pull up the rear side of front beltline molding in the direction of arrow (4) shown in the figure.

EXTERIOR TRIM

6. Rotate the front beltline molding in the direction of the arrow (5) shown in the figure and remove it while detaching tabs B.



ac5wzw0000218

7. Install in the reverse order of removal.

FRONT SASH MOLDING REMOVAL

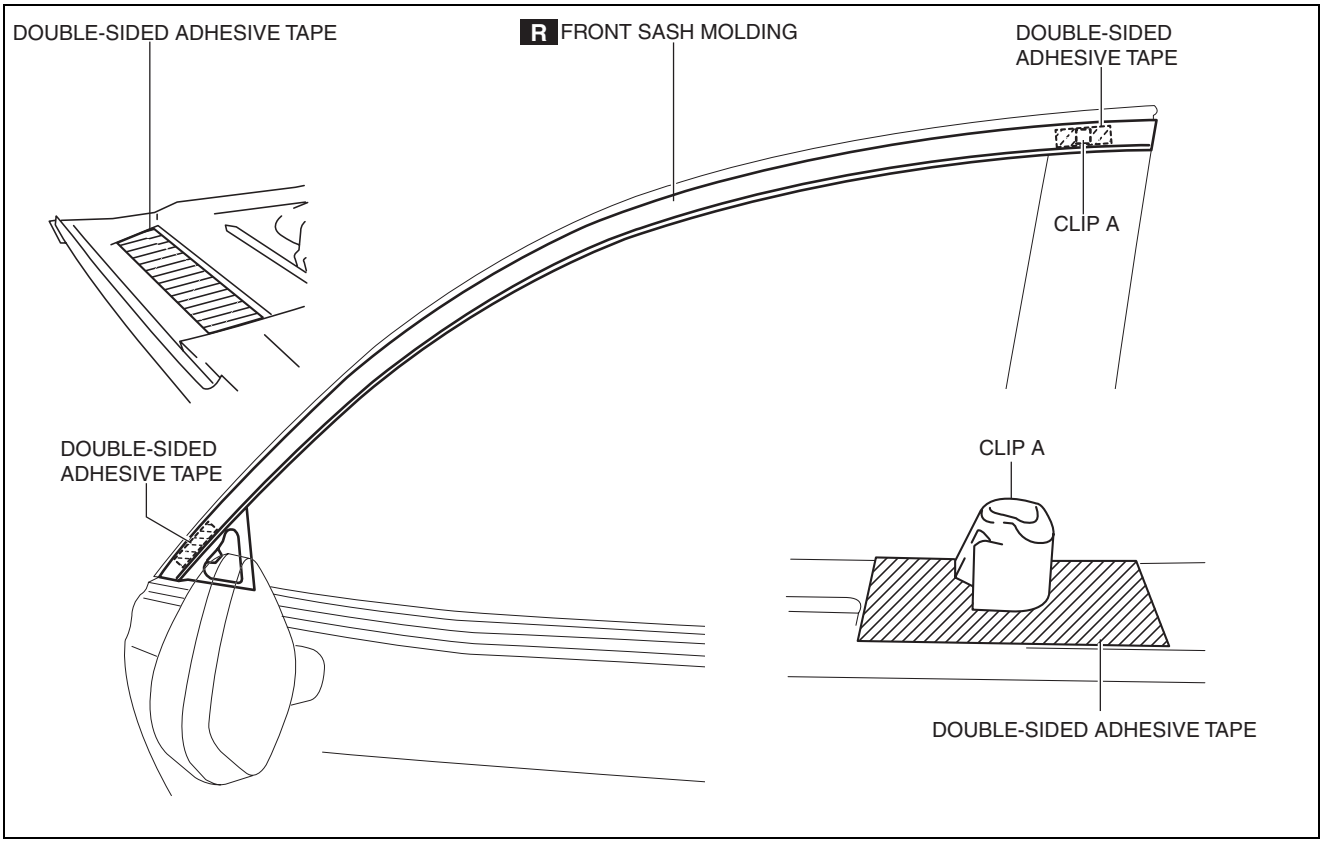
id091600805000

Warning
- **Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.**

1. Using a utility knife, carefully remove the double-sided adhesive tape in the locations shown below.

Caution
- **When removing the double-sided adhesive tape, be careful not to damage clip A.**

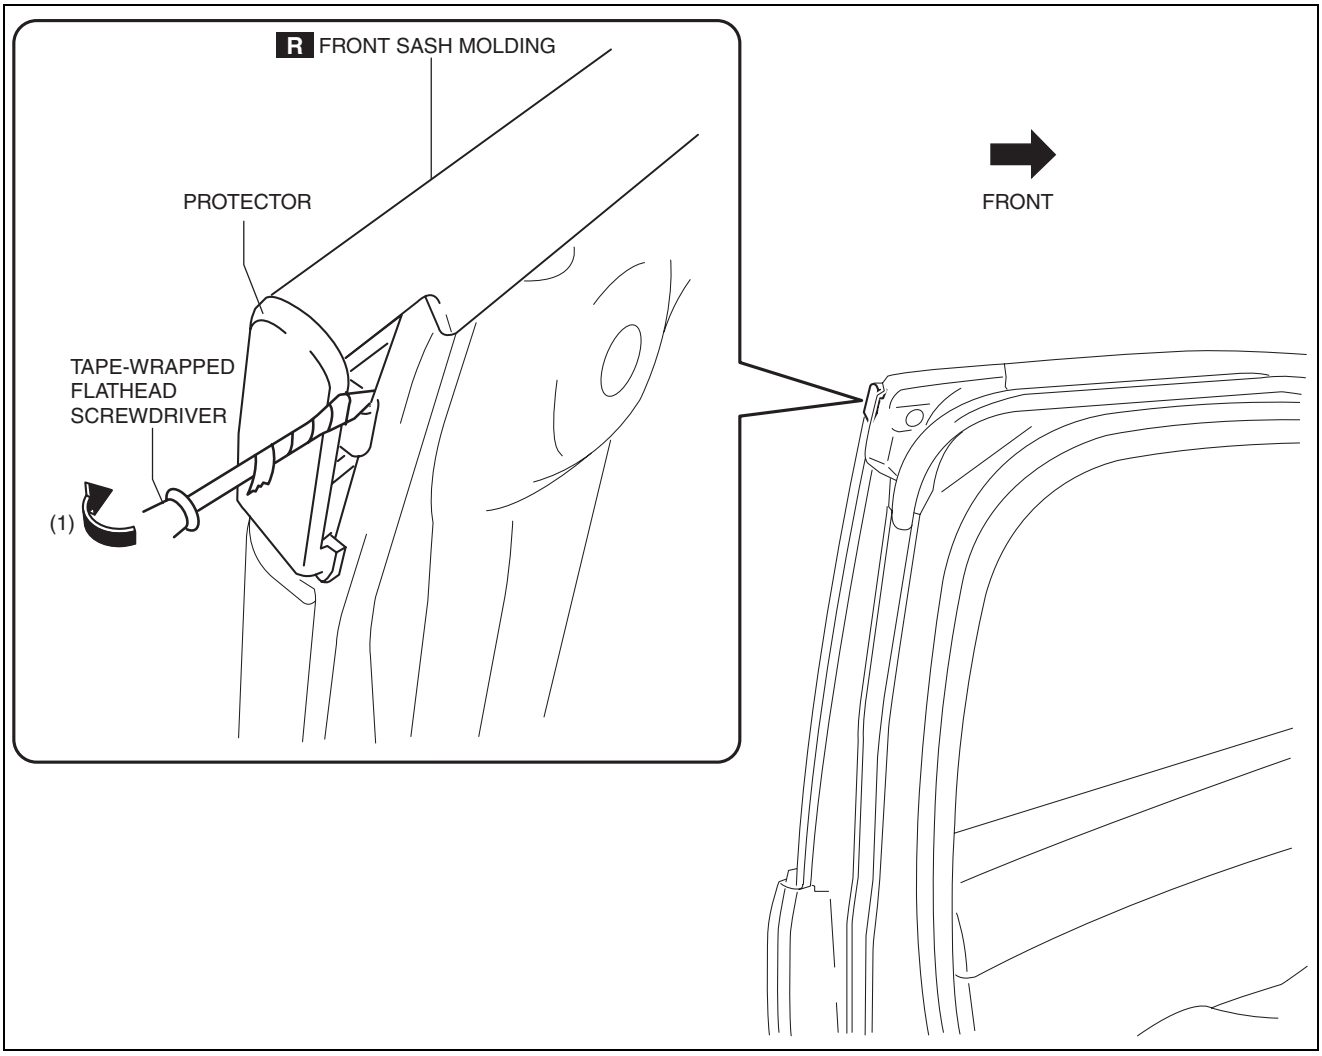
EXTERIOR TRIM



ac5wzw0000208

EXTERIOR TRIM

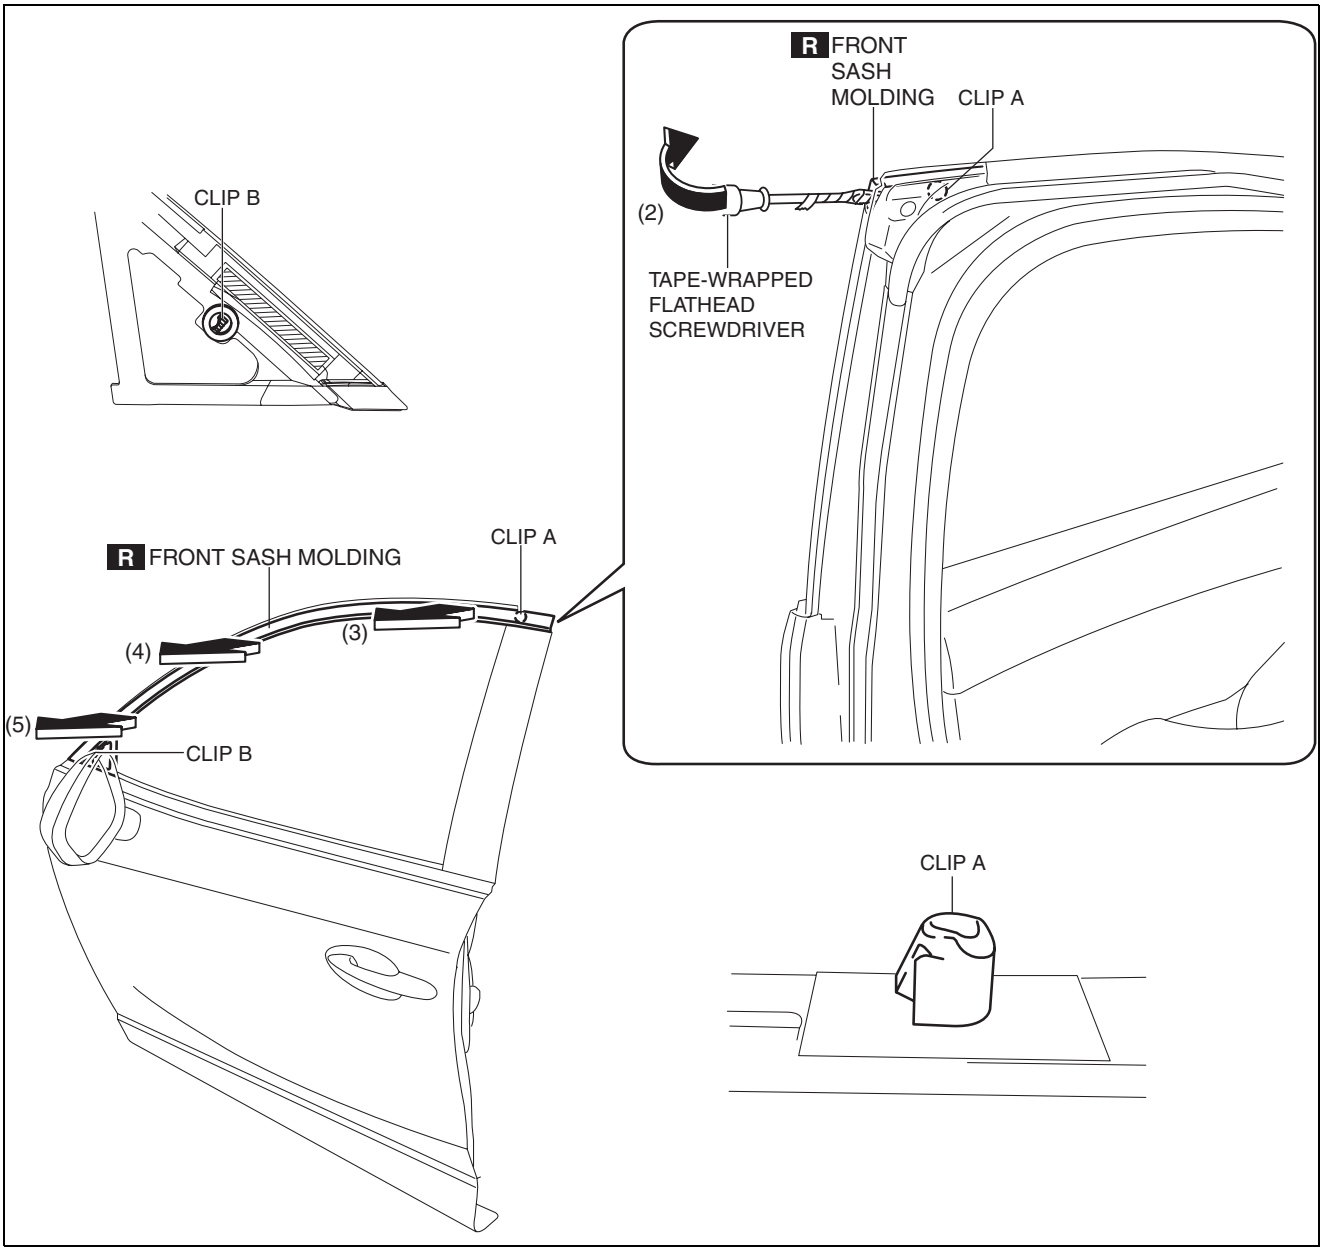
2. Insert a tape-wrapped flathead screwdriver shown in the figure and remove the protector in the direction of arrow (1).



ac5uuw00001979

EXTERIOR TRIM

3. Insert a tape-wrapped flathead screwdriver shown in the figure and remove clip A in the direction of arrow (2).



ac5uuw00001980

4. Remove the front sash molding in the direction of arrow in the order of (3), (4), (5) while detaching clip B.
5. Install in the reverse order of removal.

FRONT SASH MOLDING INSTALLATION

id091600807000

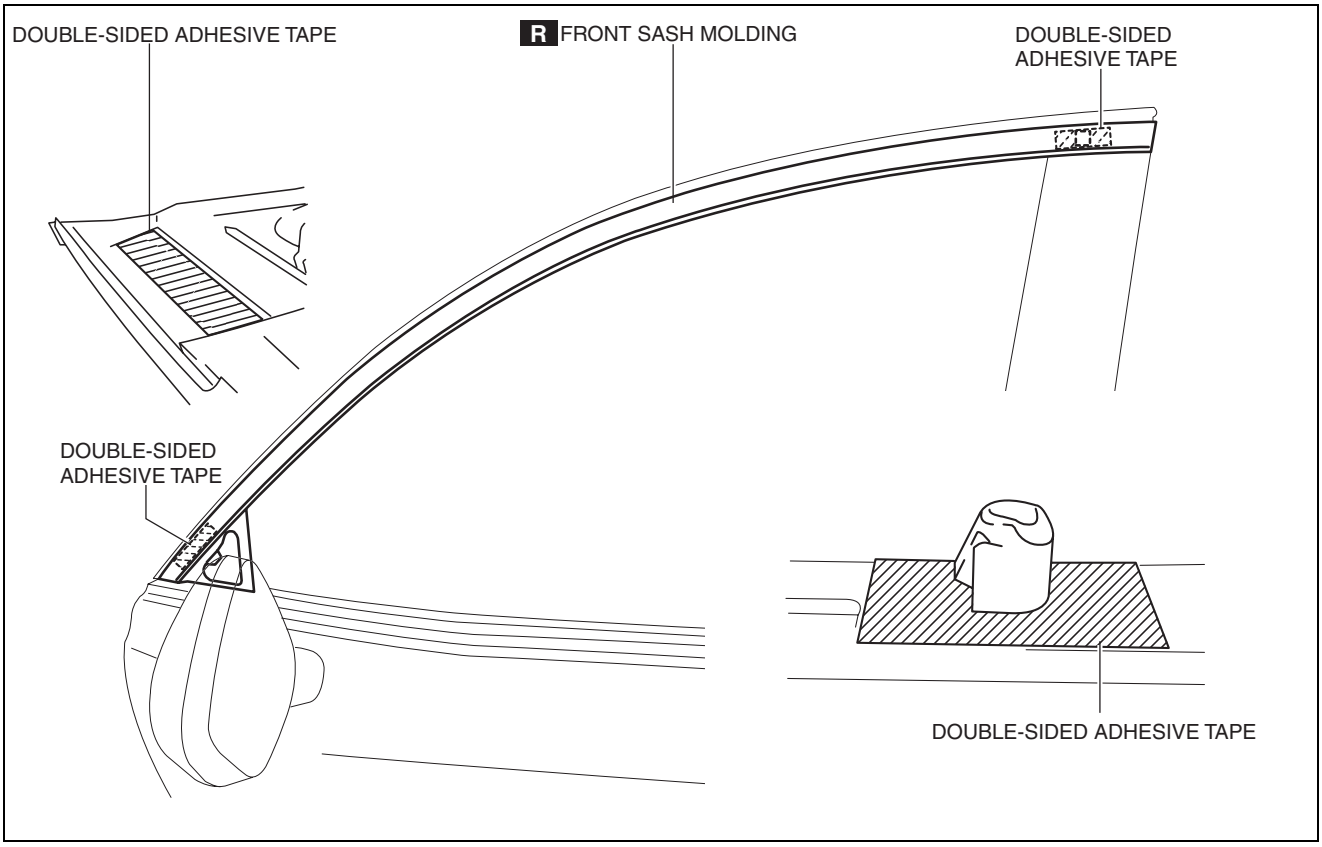
Warning
- **Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.**

Note
- Double-sided adhesive tape has already been attached to the new front sash molding.

1. When installing a new front sash molding, follow the procedure below:
   (1) Carefully remove the adhesive remaining on the body using a razor blade.
   (2) Remove any grease or dirt from the adhesion surface of the body.
2. Remove the adhesive remaining on the front sash molding and the body using a razor blade.
   (1) Remove any grease or dirt from the adhesion surface of the front sash molding and the body.
   (2) Apply primer to the bonding area of the front sash molding.

EXTERIOR TRIM

(3) Affix double-sided adhesive tape to the front sash molding as shown in the figure.



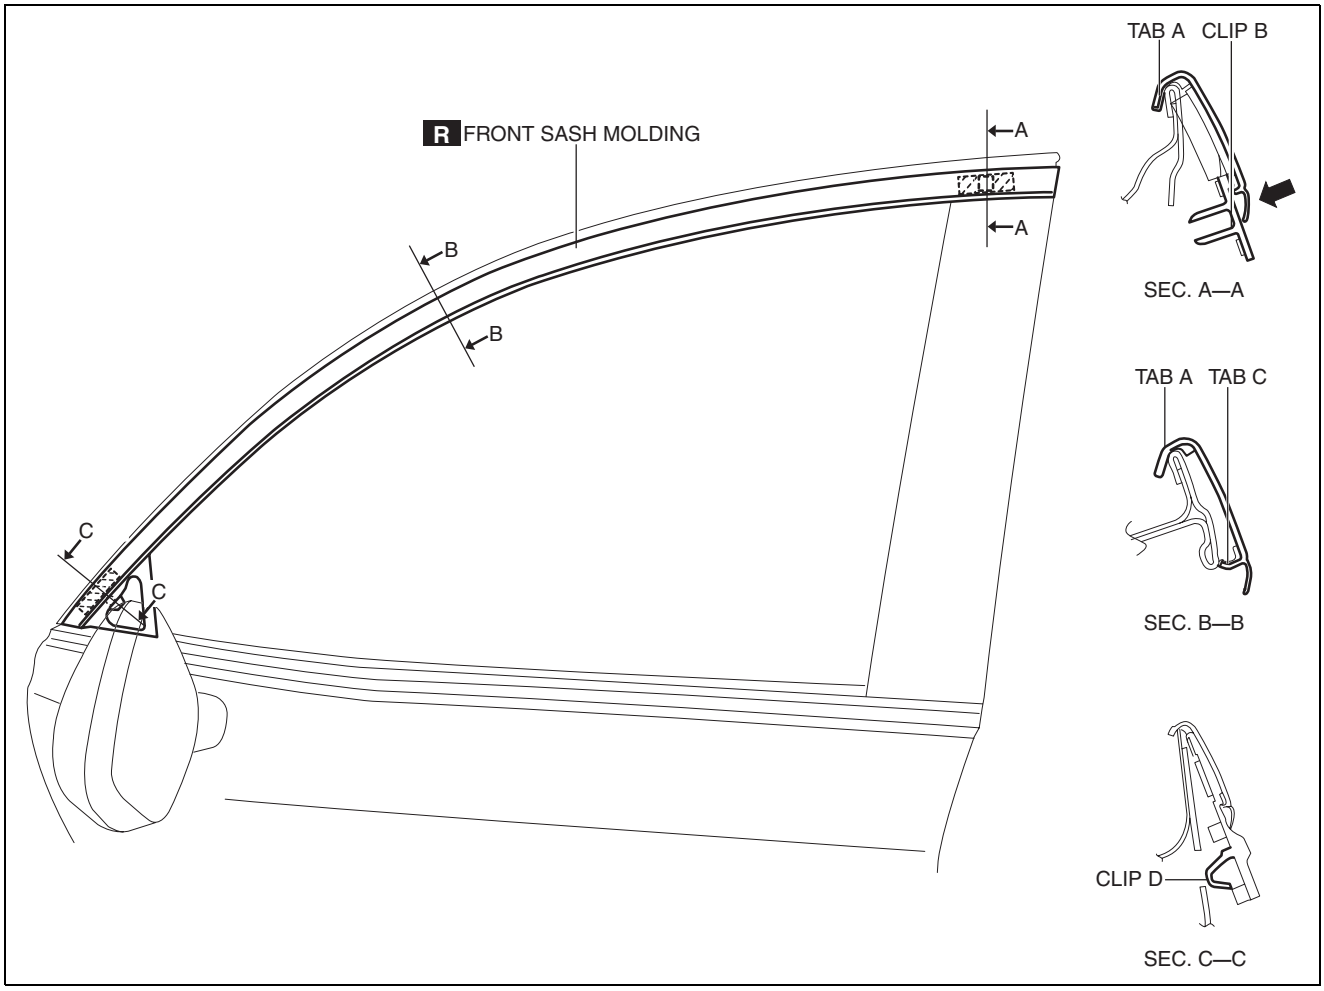
ac5wzw0000209

Note
- As for the double-sided adhesive tape, use 3M GT7120 or equivalent.

3. Peel off the backing of the double-sided adhesive tape.

EXTERIOR TRIM

4. Hook tab A to the body in the position where clip B aligns with the sash holes.



ac5wzw0000209

5. Press the front sash molding in the direction of the arrow and install clip B to the body.

Caution
- **Do not press the front sash molding in any place other than the rubber areas.**

6. Press the front sash molding from the vehicle front in the direction of the arrow and install tab C.
7. Press the front sash molding in the direction of the arrow and install clip D to the body.

Note
- After installing the front sash molding, verify that tabs A and C are connected properly to the body.

REAR DOOR GARNISH REMOVAL/INSTALLATION

id091600445700

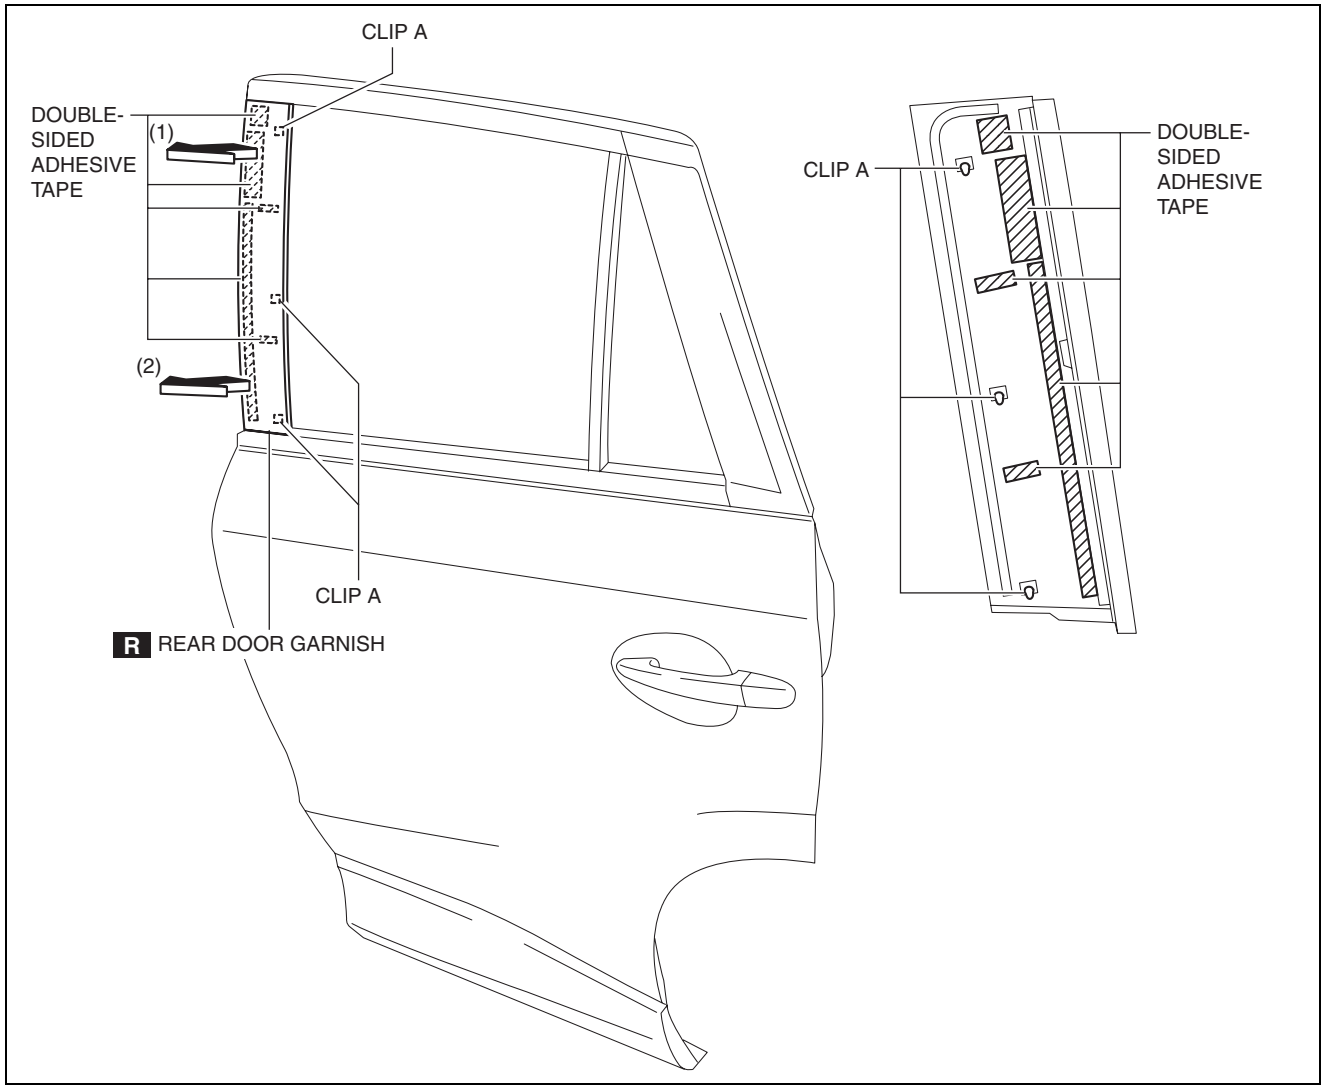
Warning
- **Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.**

Front

1. Using a tape-wrapped fastener remover, remove clips A in the direction of arrow (1), (2) shown in the figure.

EXTERIOR TRIM

2. Remove the double-sided adhesive tape in the position shown in the figure using the utility knife, remove the rear door garnish from the rear door sash.



ac5wzw0000126

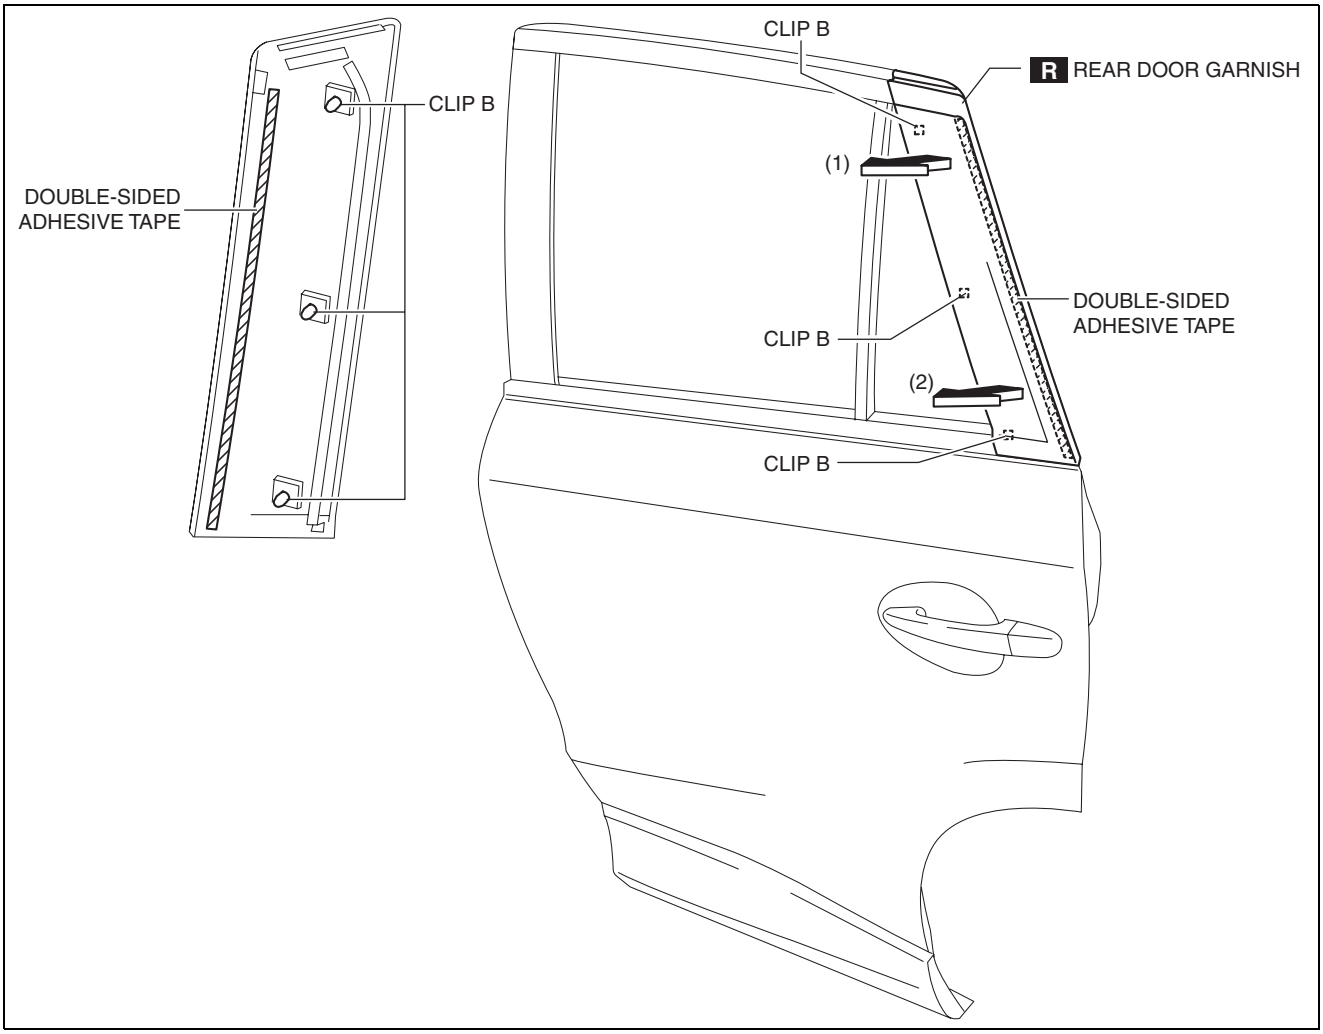
3. Install in the reverse order of removal. (See 09-16-19 Rear Door Garnish Installation Note.)

Rear

1. Using a tape-wrapped fastener remover, remove clips B in the direction of arrow (1), (2) shown in the figure.

EXTERIOR TRIM

2. Remove the double-sided adhesive tape in the position shown in the figure using the utility knife, remove the rear door garnish from the rear door sash.

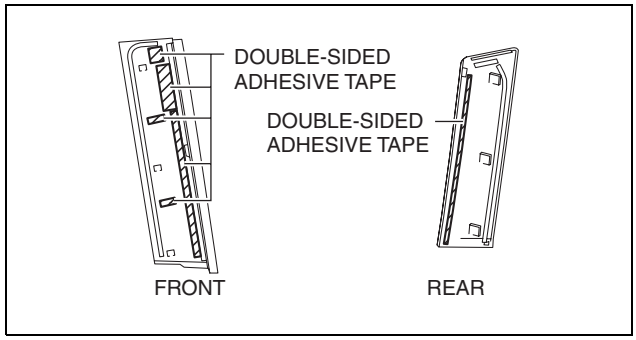


ac5wzw0000126

3. Install in the reverse order of removal. (See 09-16-19 Rear Door Garnish Installation Note.)

Rear Door Garnish Installation Note

1. When installing a new rear door garnish, perform the following procedure:
   (1) Remove the double-sided adhesive tape on the rear door sash.
   (2) Remove any grease or dirt from the affixing surface of the rear door sash.



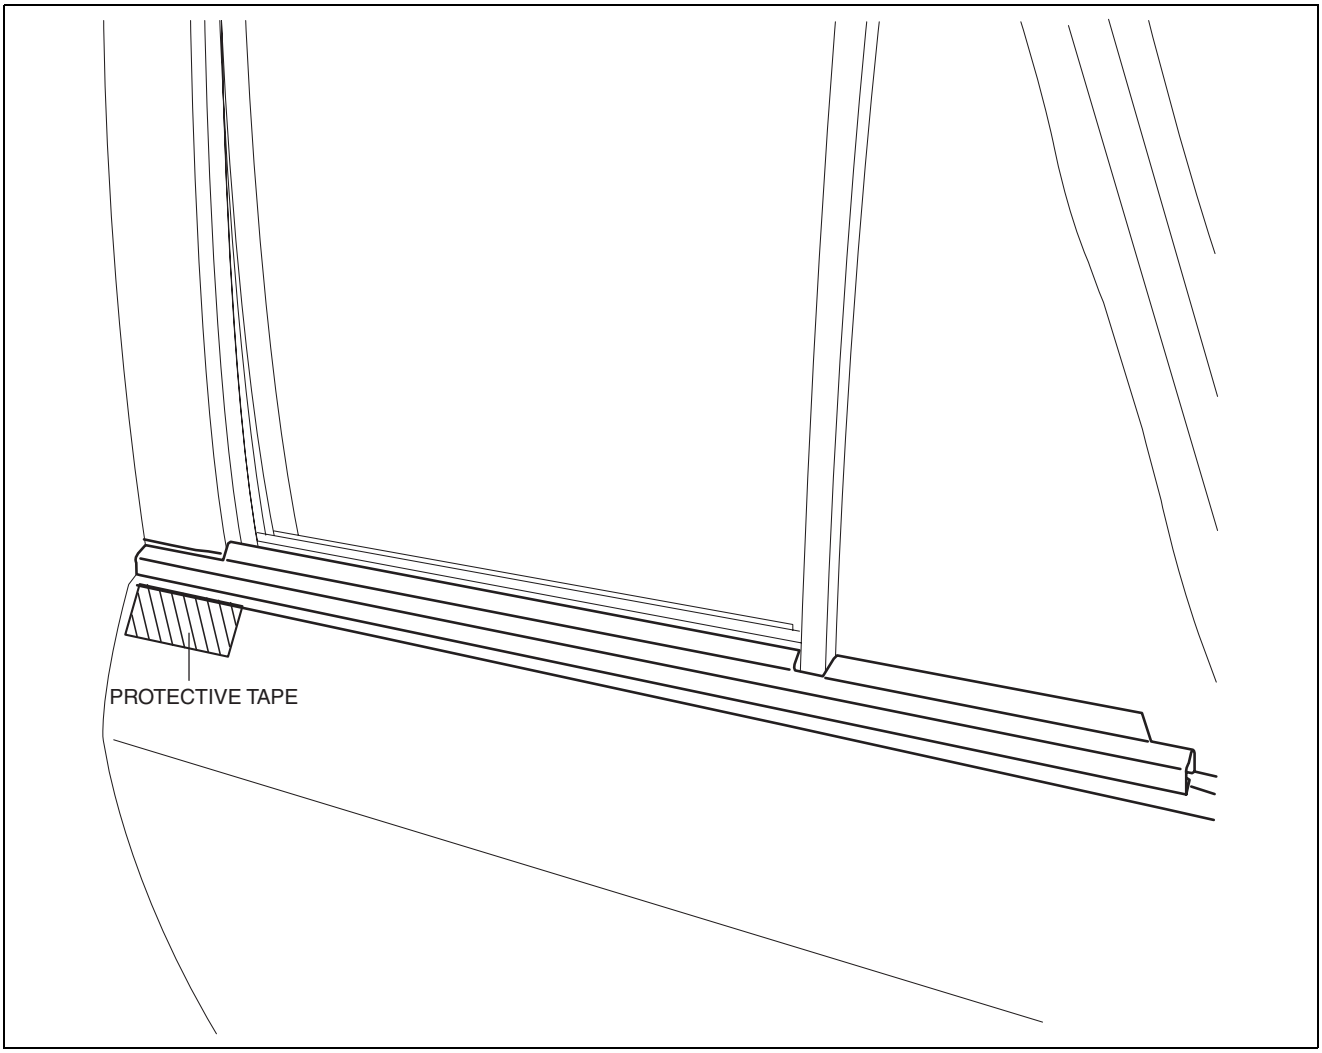
ac5wzw0000462

EXTERIOR TRIM

REAR BELTLINE MOLDING REMOVAL/INSTALLATION

id091600804700

Caution
- **Affix protective tape to the position shown in the figure.**

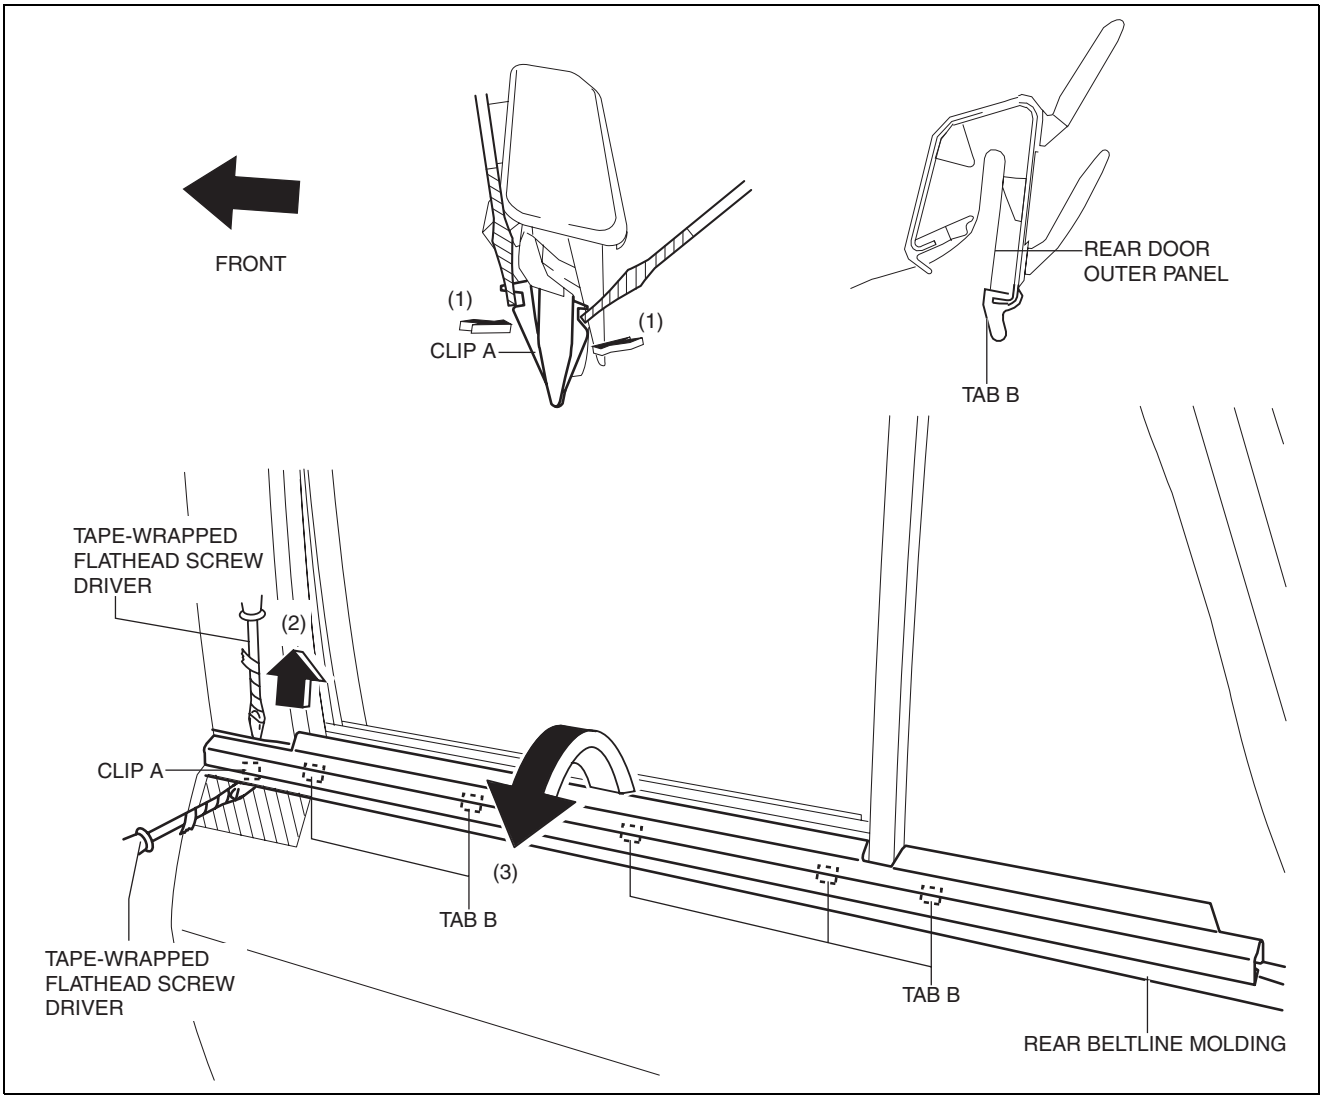


ac5wzw0000128

1. Fully open the rear door glass.
2. Insert a tape-wrapped flathead screwdriver and then detach the clip A in the direction of arrow (1) shown in the figure.
3. Pull up the rear belt line molding in the direction of arrow (2) shown in the figure.

EXTERIOR TRIM

4. Rotate the rear beltline molding in the direction of the arrow (3) shown in the figure and remove it while detaching tabs B.



ac5wzw0000217

5. Install in the reverse order of removal.

REAR SASH MOLDING REMOVAL

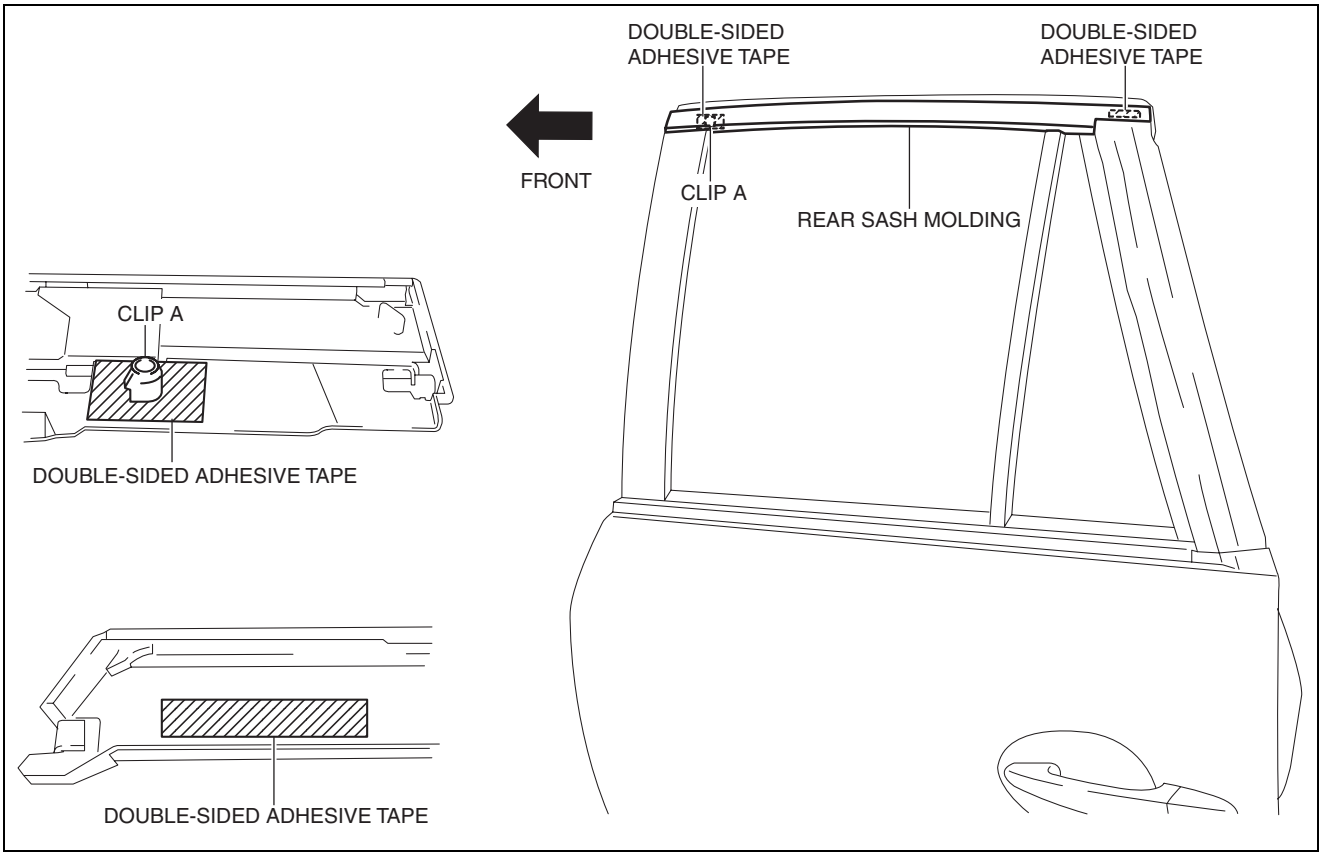
id091600805100

Warning
- **Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.**

1. Remove the rear door garnish. (rear side) (See 09-16-17 REAR DOOR GARNISH REMOVAL/INSTALLATION.)
2. Remove the double-sided adhesive tape in the position shown in the figure using the utility knife.

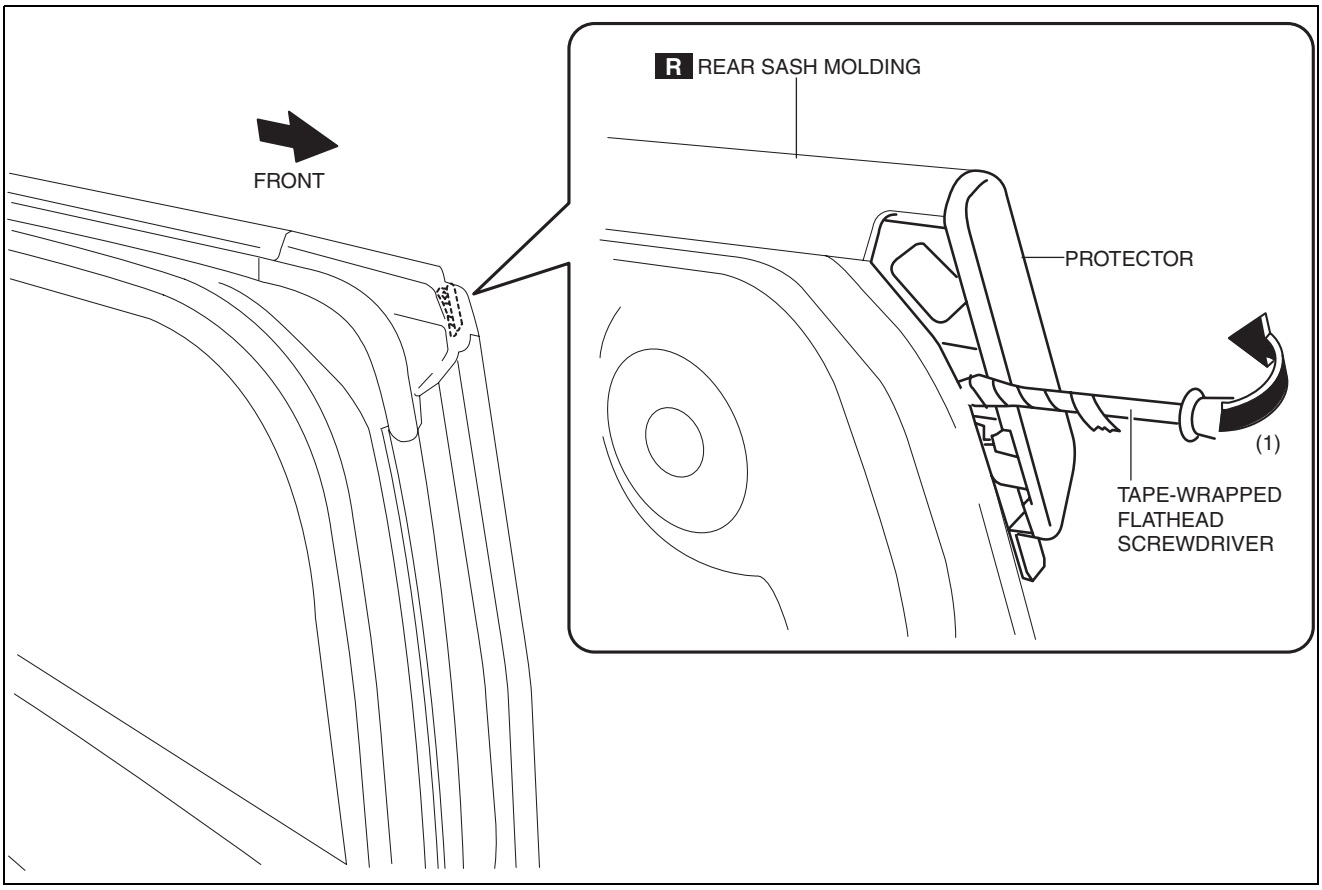
Caution
- **When remove the double-sided adhesive tape, be careful not to damage clip A.**

EXTERIOR TRIM



ac5wzw0000209

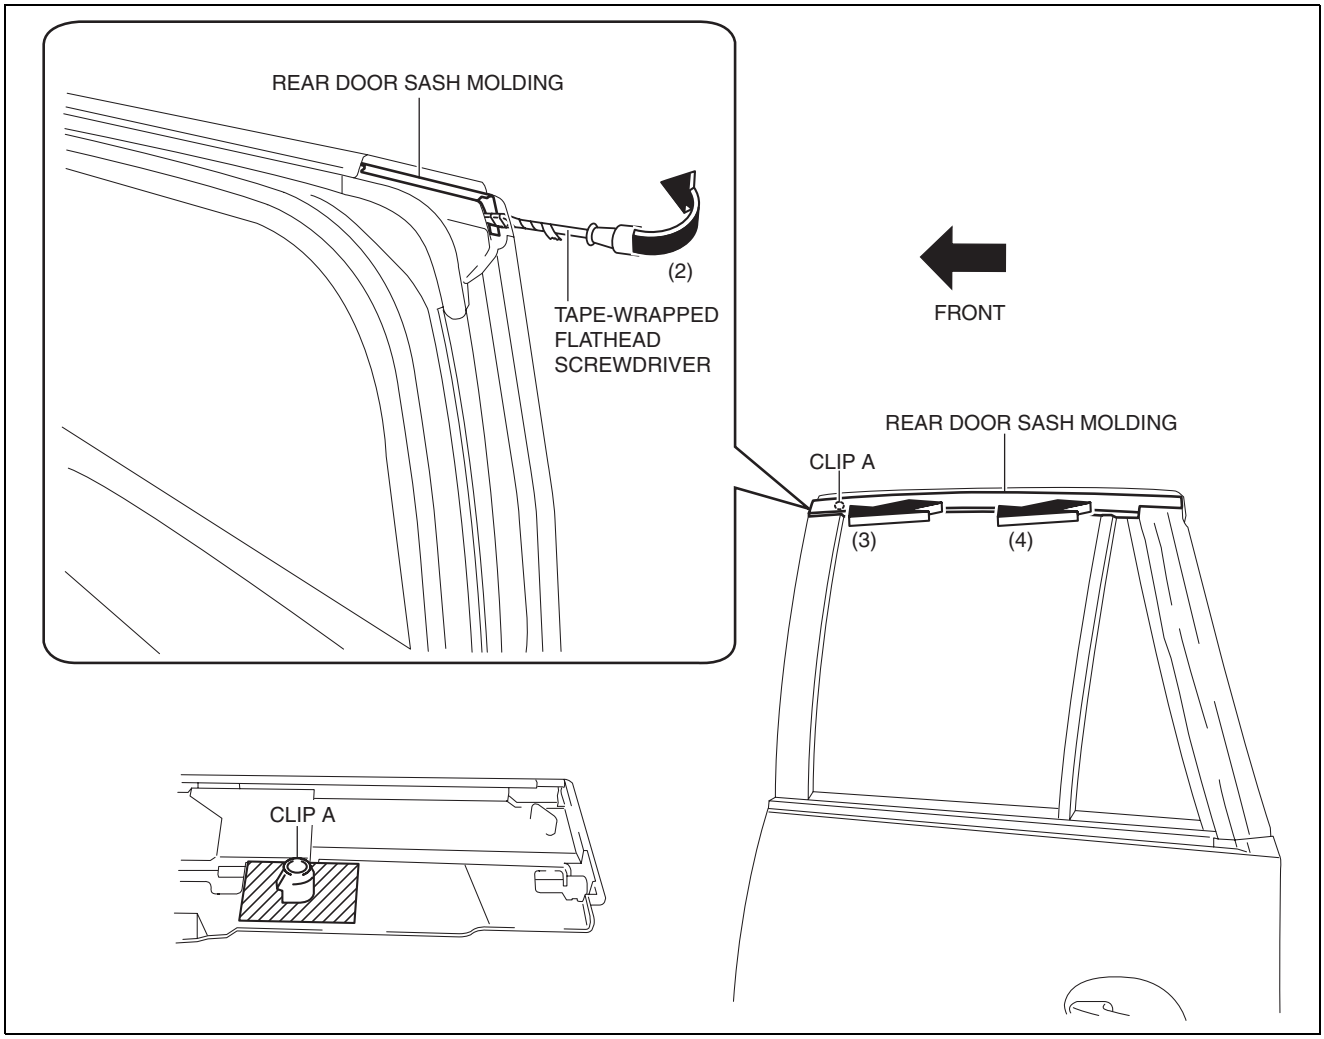
3. Insert a tape-wrapped flathead screwdriver shown in the figure and remove the protector in the direction of arrow (1).



ac5uuw00001981

EXTERIOR TRIM

4. Insert a tape-wrapped flathead screwdriver shown in the figure and remove clips A in the direction of arrow (2).



ac5uuw00001982

5. Remove the rear sash molding in the direction of arrow in the order of (3), (4) shown in the figure.

REAR SASH MOLDING INSTALLATION

id091600807100

Warning

- **Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.**

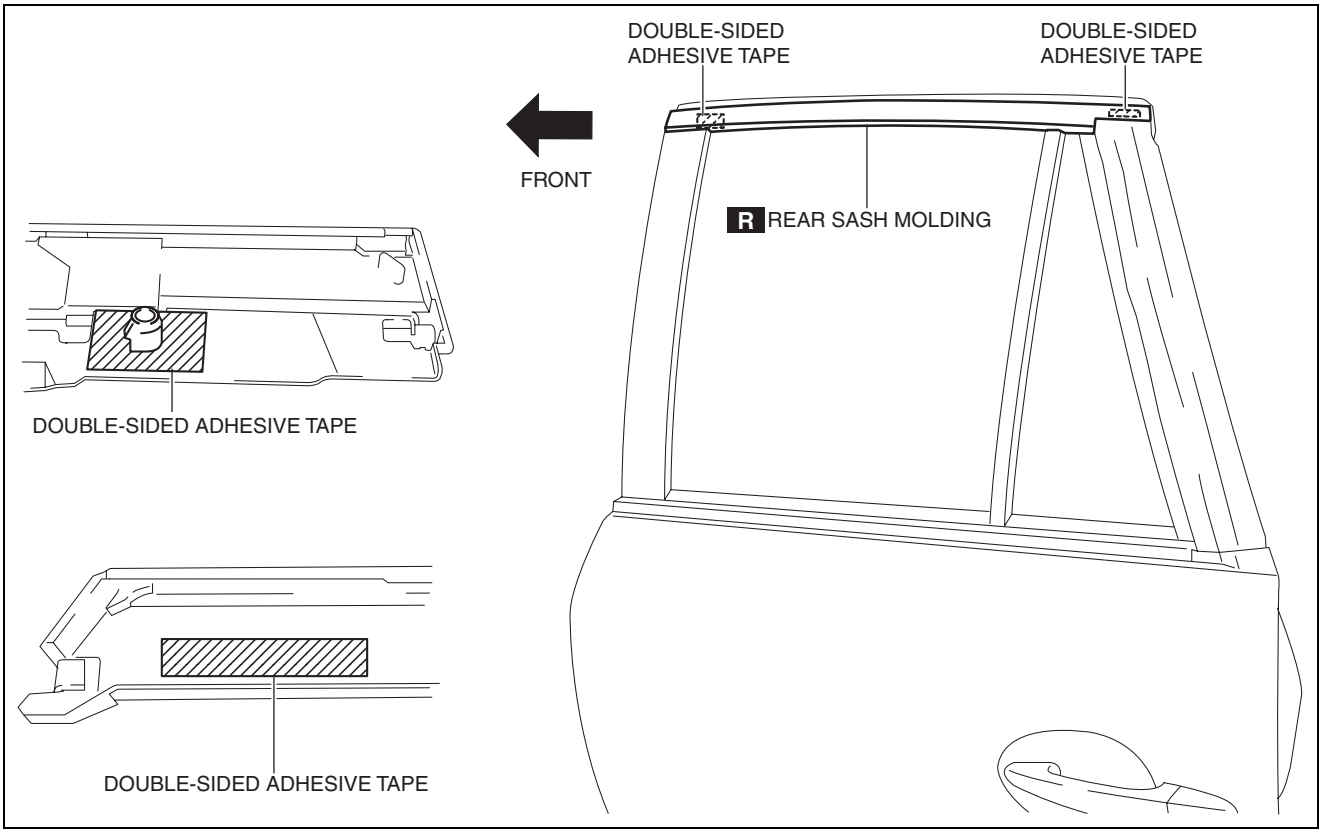
Note

- Double-sided adhesive tape has already been attached to the new rear sash molding.

1. When installing a new rear sash molding, follow the procedure below:
   (1) Carefully remove the adhesive remaining on the body using a razor blade.
   (2) Remove any grease or dirt from the adhesion surface of the body.
2. Remove the adhesive remaining on the rear sash molding and the body using a razor blade.
   (1) Remove any grease or dirt from the adhesion surface of the rear sash molding and the body.
   (2) Apply primer to the bonding area of the rear sash molding.

EXTERIOR TRIM

(3) Affix double-sided adhesive tape to the rear sash molding as shown in the figure.



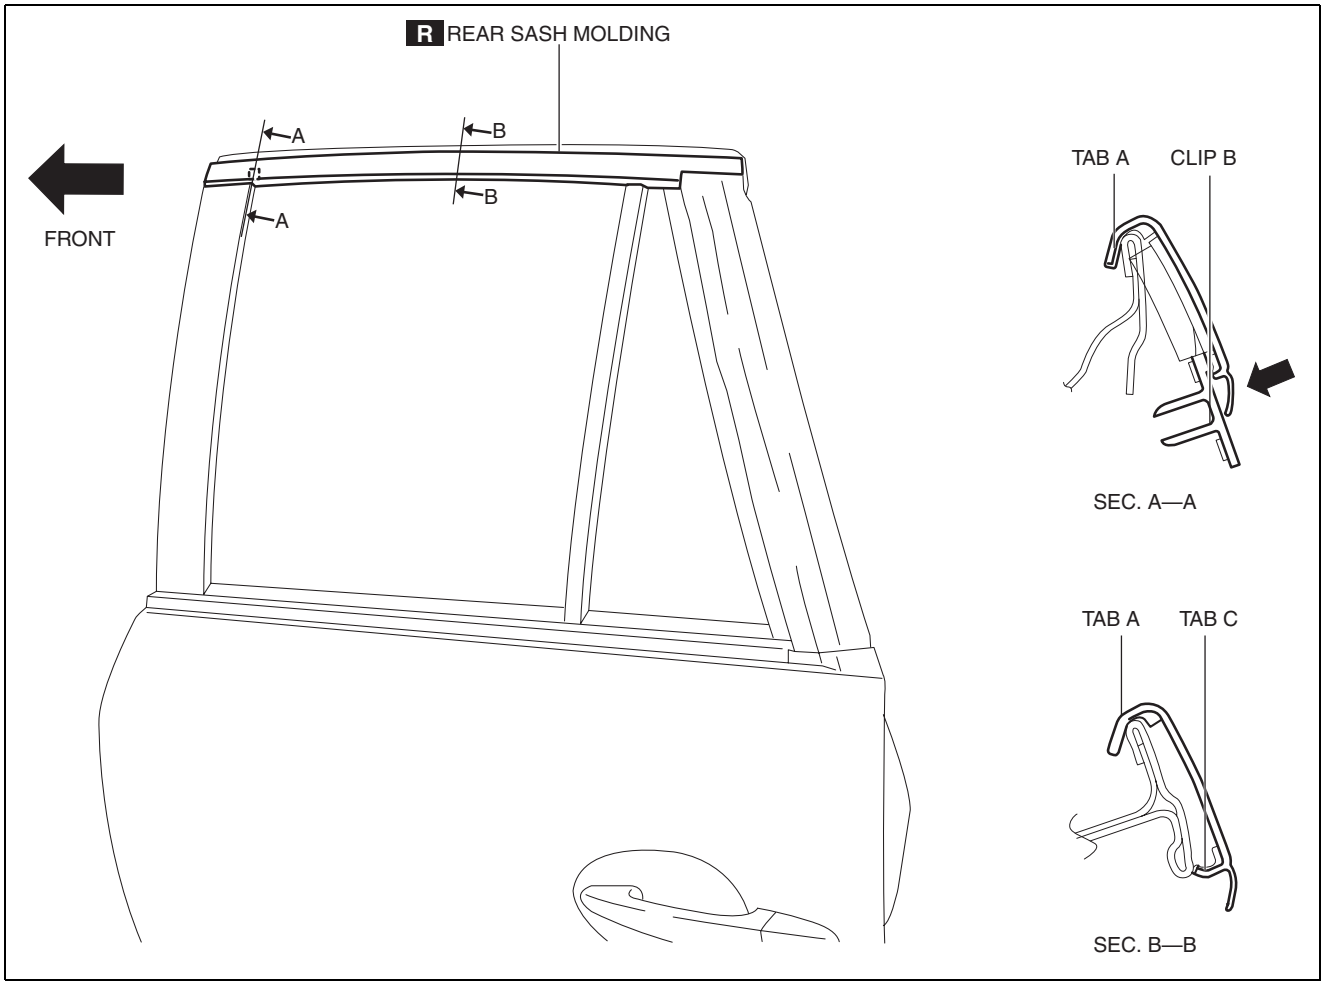
ac5wzw0000209

Note
- As for the double-sided adhesive tape, use 3M GT7120 or equivalent.

3. Peel off the backing of the double-sided adhesive tape.

EXTERIOR TRIM

4. Hook tab A to the body in the position where clip B aligns with the sash holes.



ac5wzw0000209

5. Press the rear sash molding in the direction of the arrow and install clip B to the body.

Caution
- **Do not press the rear sash molding in any place other than the rubber areas.**

6. Press the rear sash molding from the vehicle front in the direction of the arrow and install tab C.

Note
- After installing the rear sash molding, verify that tabs A and C are connected properly to the body.

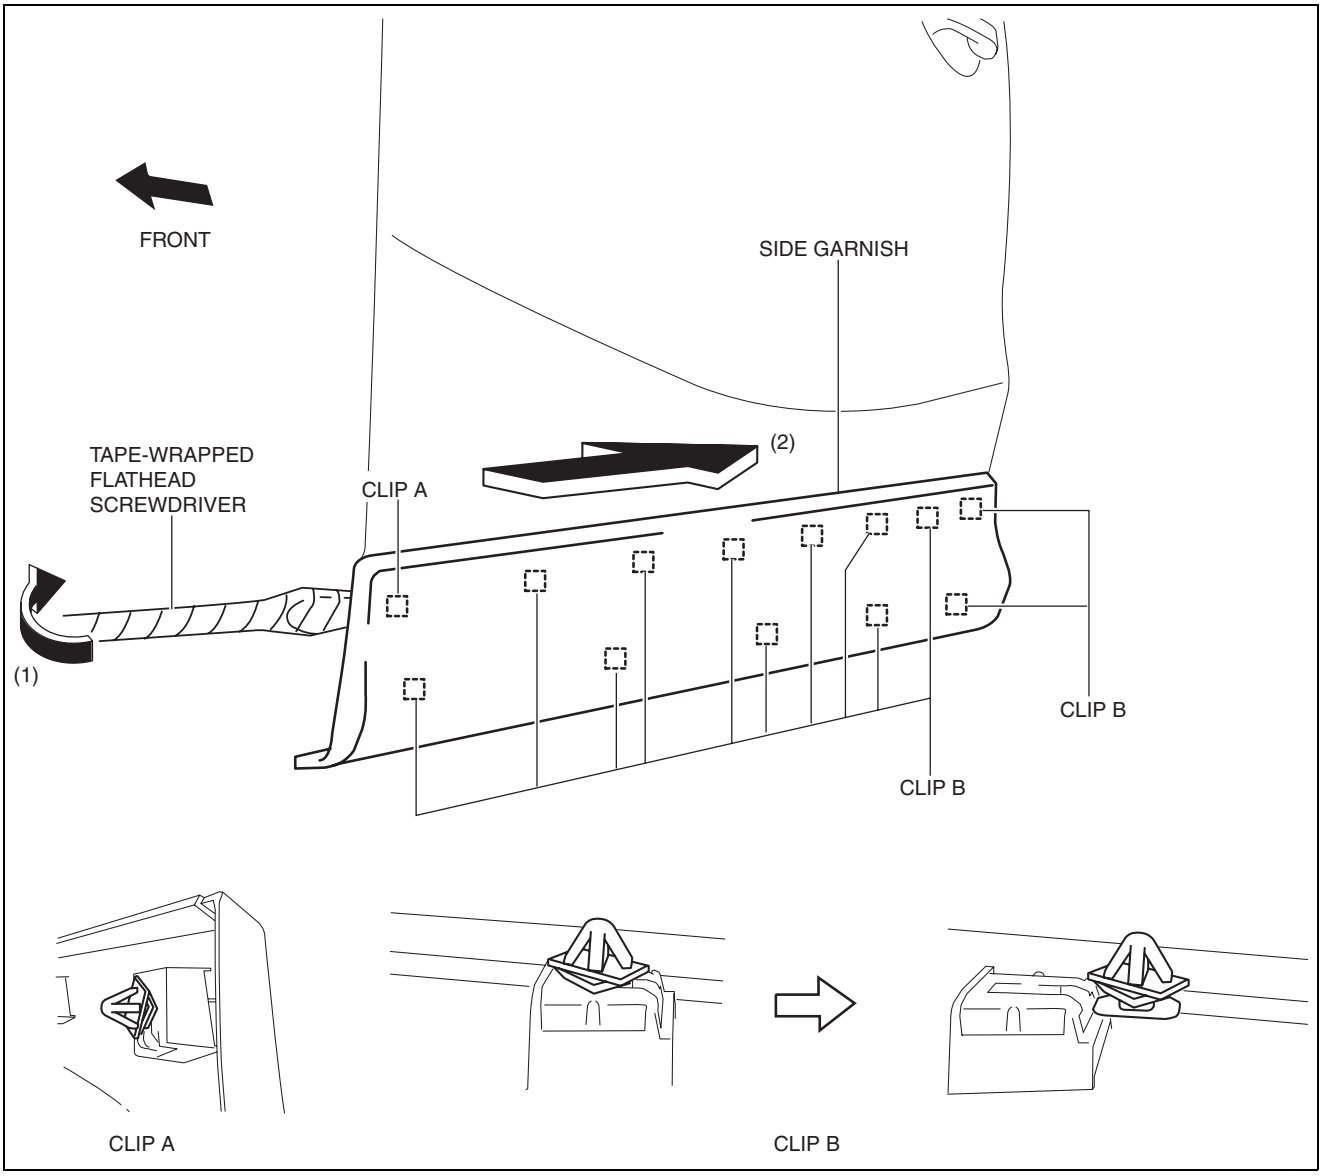
EXTERIOR TRIM

SIDE GARNISH REMOVAL

id091600453500

Front

1. Insert a tape-wrapped flathead screwdriver in the position shown in the figure, move it in the direction of the arrow (1) to remove the clip A.



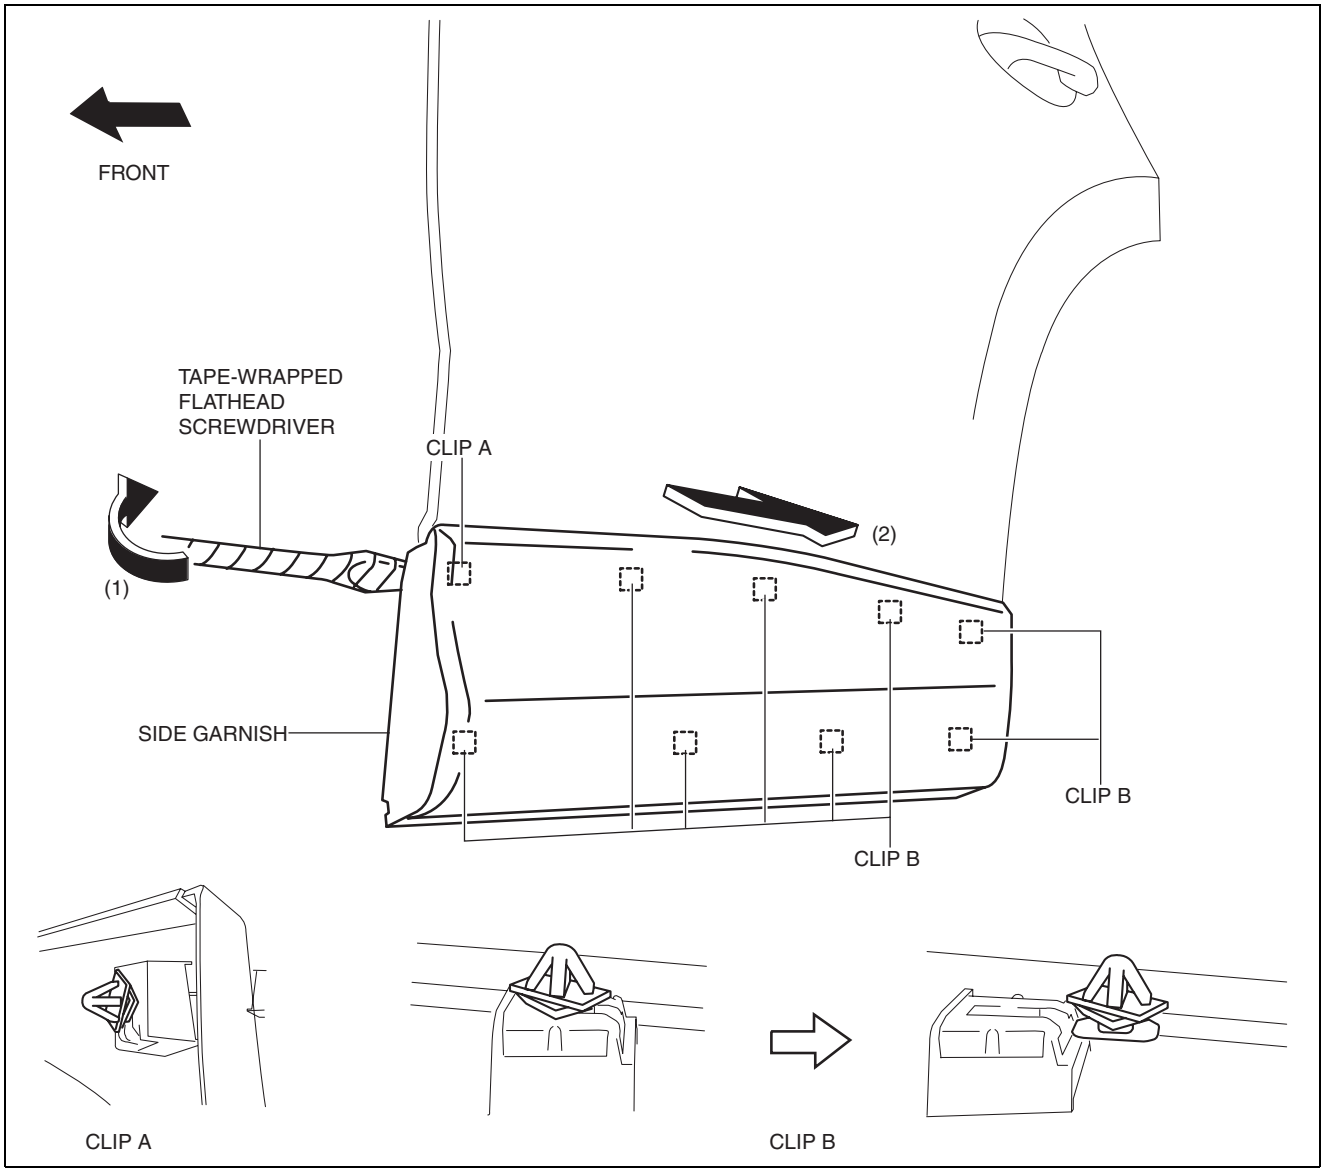
ac5uuw00001729

2. Slide the side garnish in the direction of the arrow (2) shown in the figure and remove clips B from side garnish.
3. Remove clips B from the body.
4. When reusing the side garnish, install clip A and B to the body.

EXTERIOR TRIM

Rear

1. Insert a tape-wrapped flathead screwdriver in the position shown in the figure, move it in the direction of the arrow (1) to remove the clip A.



ac5uuw00001730

2. Slide the side garnish in the direction of the arrow (2) shown in the figure and remove clips B from side garnish.
3. Install clips B to the body.
4. When reusing the side garnish, install clip A and B to the body.

SIDE GARNISH INSTALLATION

id091600453400

1. Install clip A and then clips B to the vehicle from the front side.

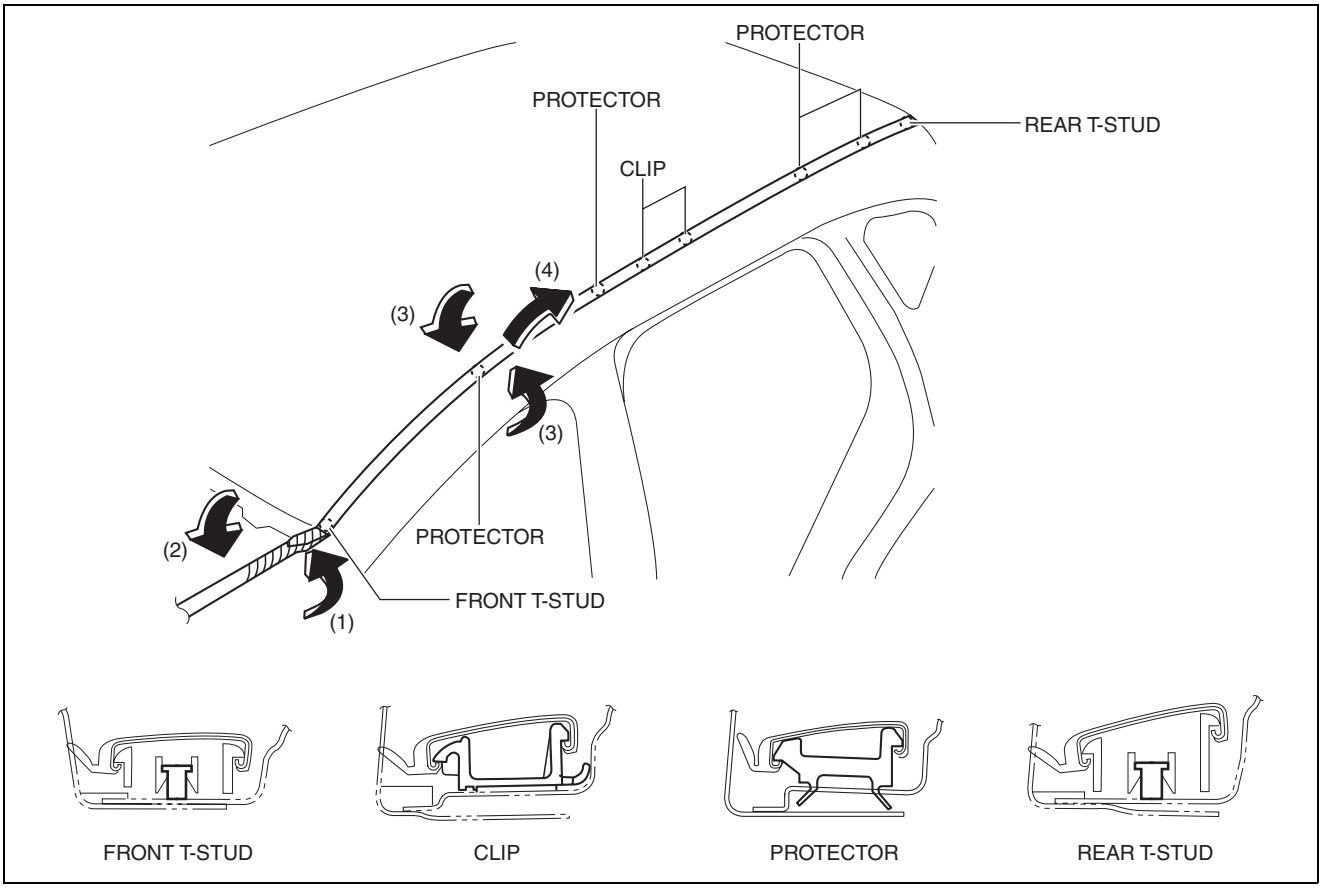
ROOF MOLDING REMOVAL

id091600447800

1. Insert a tape-wrapped flathead screwdriver in the position shown in the figure.

EXTERIOR TRIM

2. Rotate a tape-wrapped flathead screwdriver in the direction of the arrow in the order of (1), (2) shown in the figure and remove the roof molding from the front T-stud.



ac5uuw00002036

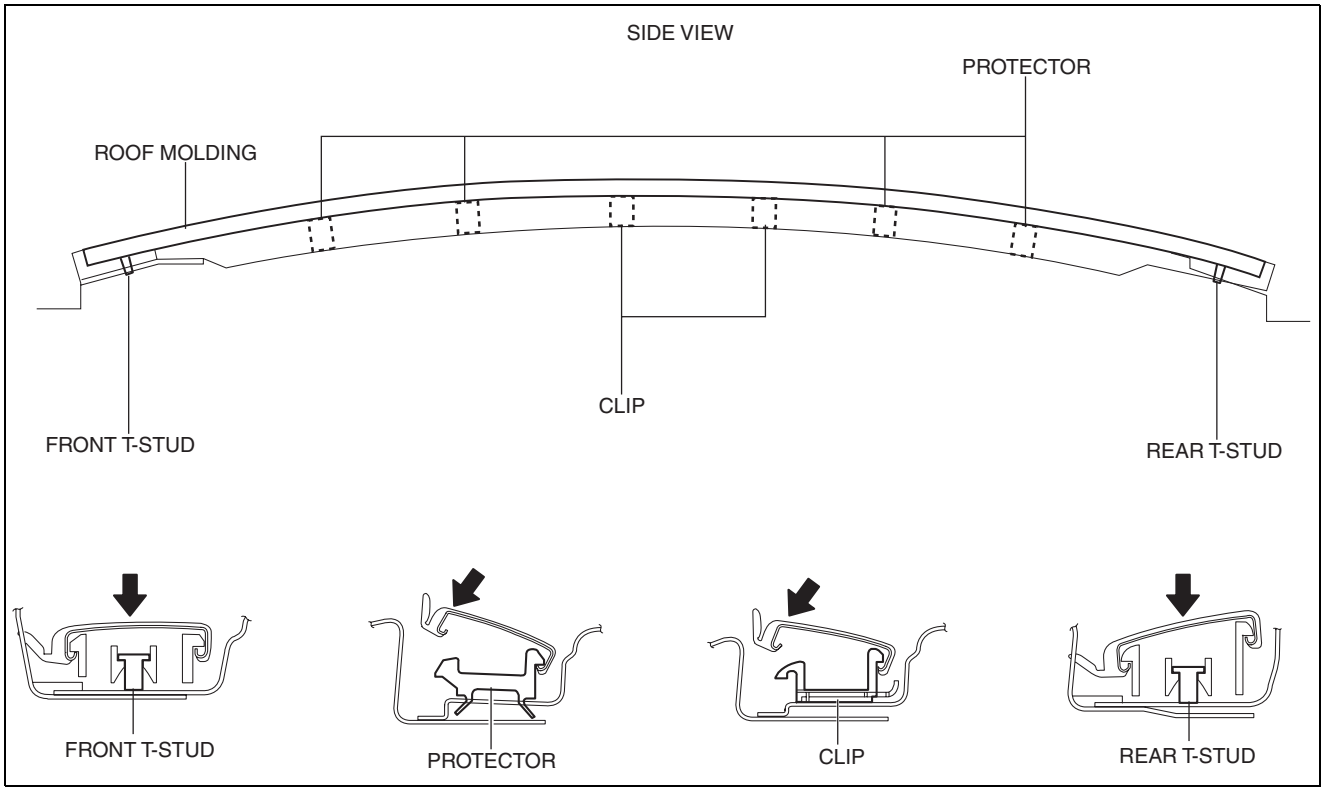
3. Rotate the roof molding in the direction of the arrow (3) shown in the figure, pull up the roof molding in the direction of the arrow (4) while detaching it from clips and protector, rear T-stud and then remove the roof molding.

EXTERIOR TRIM

ROOF MOLDING INSTALLATION

id091600447600

1. Install the roof molding to the front T-studs.



ac5uuw00002035

2. Hook the roof molding to clips and attach the roof molding while pressing it in the direction of the arrow shown in the figure.
3. Install the roof molding to the rear T-stud.
4. Press in the protectors installation positions shown in the figure and firmly adhere them to the body.

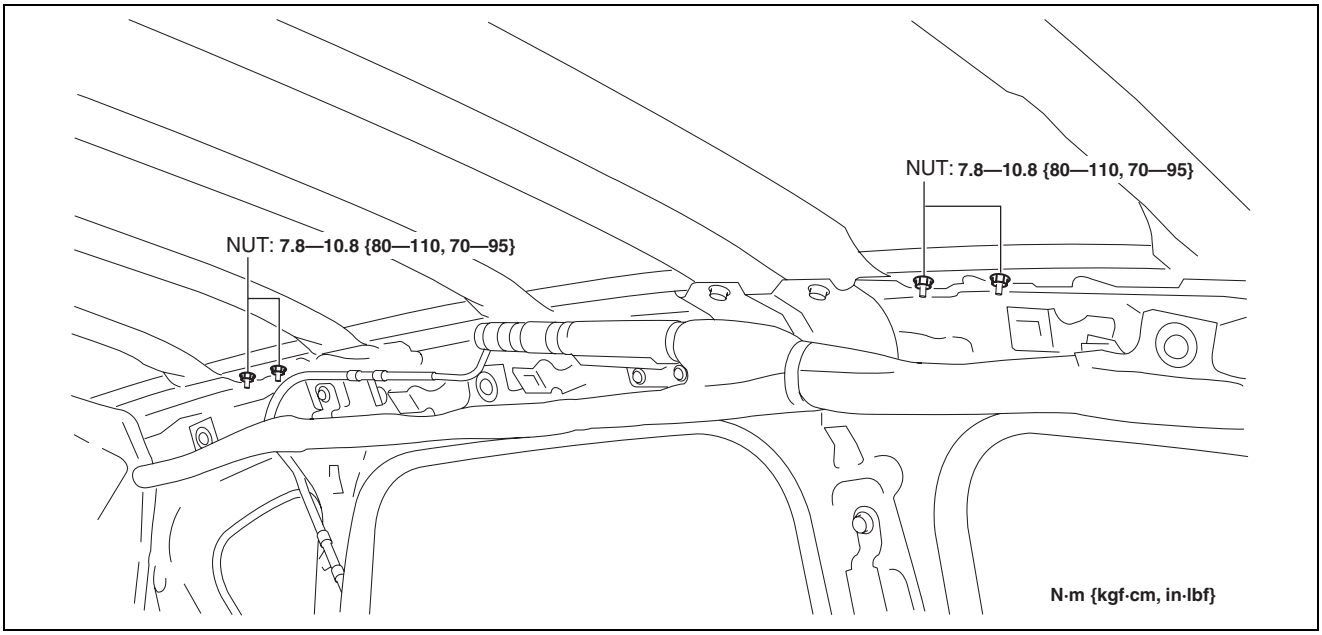
ROOF CARRIER BRACKET REMOVAL/INSTALLATION

id091600801700

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Sunroof seaming welt (with sunroof system) (See 09-15-6 SUNROOF UNIT REMOVAL/INSTALLATION.)
   (2) A-pillar trim (See 09-17-53 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (3) Map light (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)
   (4) Sunvisor (See 09-17-93 SUNVISOR REMOVAL/INSTALLATION.)
   (5) Front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (7) B-pillar lower trim (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (8) Adjust anchor cover (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (9) Upper anchor installation bolt on the seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (10) B-pillar upper trim (See 09-17-58 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (11) Assist handle (See 09-17-91 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (12) Trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
   (13) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (14) Trunk side trim (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (15) D-pillar trim (See 09-17-60 D-PILLAR TRIM REMOVAL/INSTALLATION.)
   (16) C-pillar trim (See 09-17-59 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (17) Headliner (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.)

EXTERIOR TRIM

3. Remove nuts.

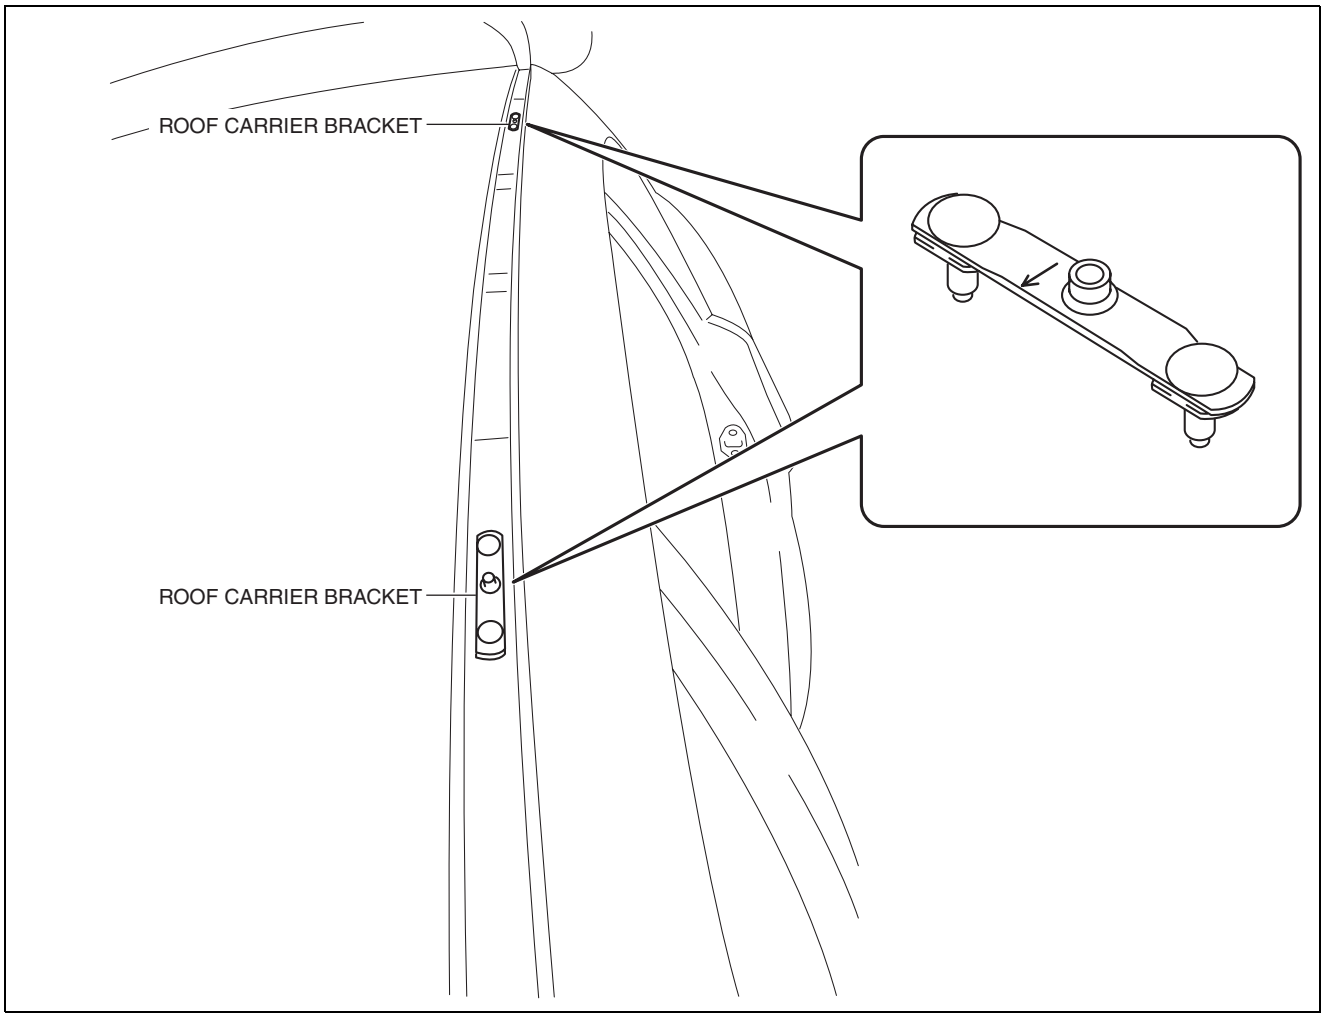


ac5wzw0000302

4. Remove the roof carrier brackets.

5. Install in the reverse order of removal.

Note
- Install the roof carrier bracket so that the arrow on it faces inward.



ac5wzw0000230

REAR SPOILER REMOVAL/INSTALLATION

id091600801600

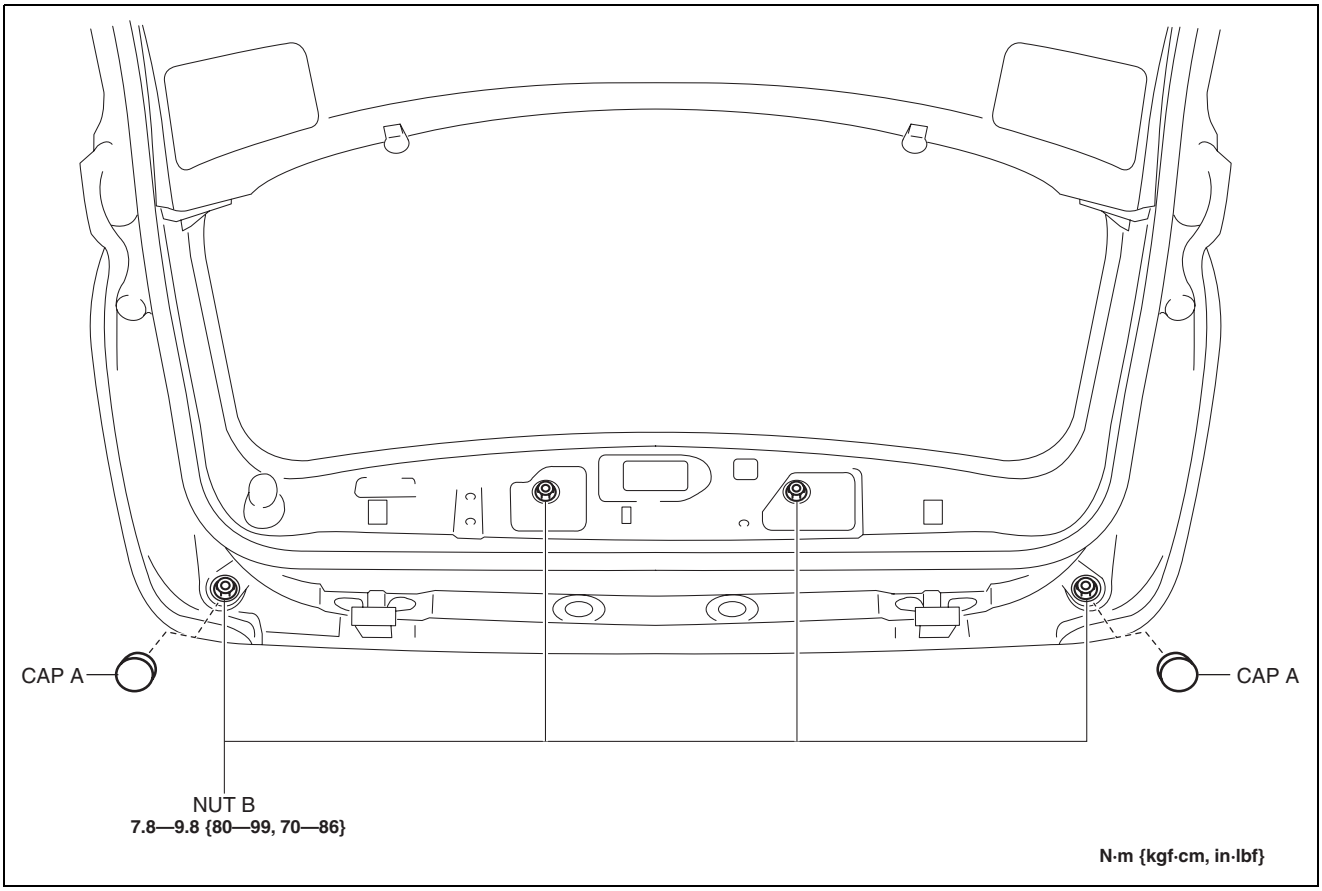
Removal

Warning
- **Using a utility knife with bare hands can cause injury. Always wear gloves when using a utility knife.**

1. Remove the liftgate upper trim (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)

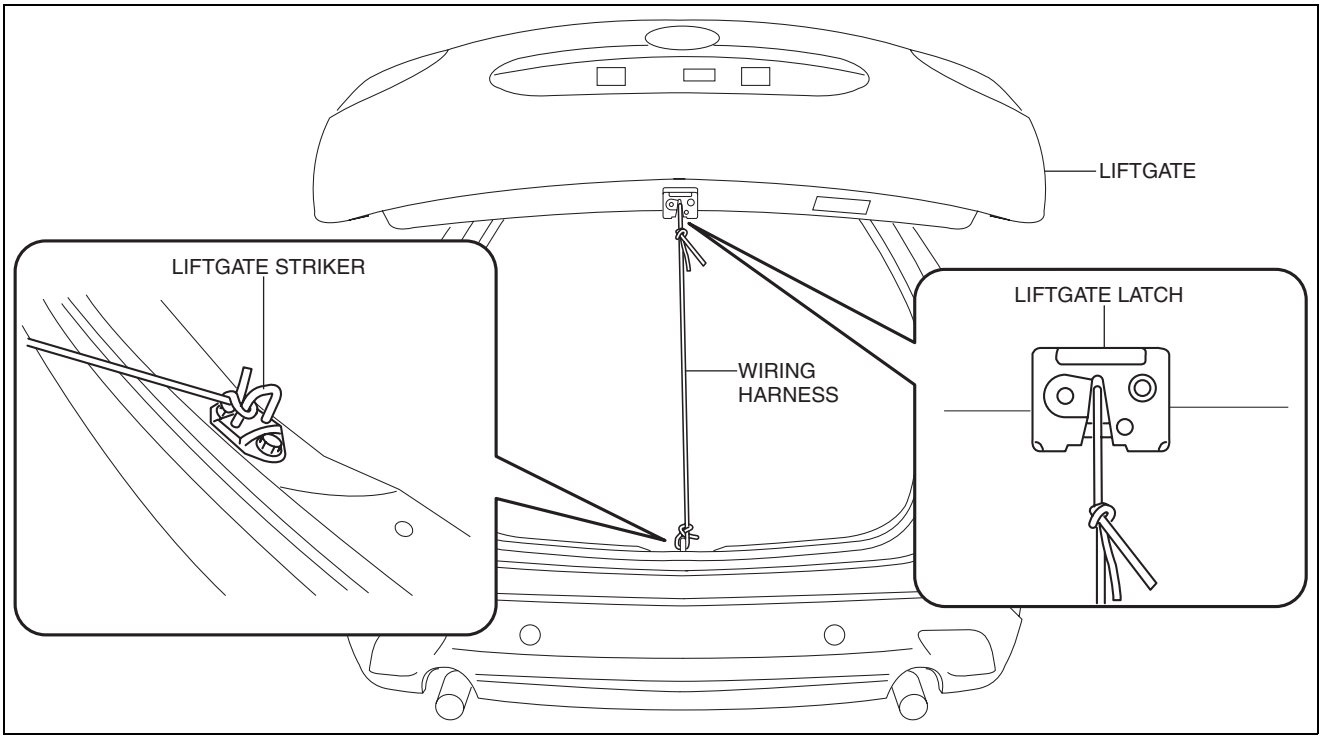
EXTERIOR TRIM

2. Remove caps A.



ac5uuw00002038

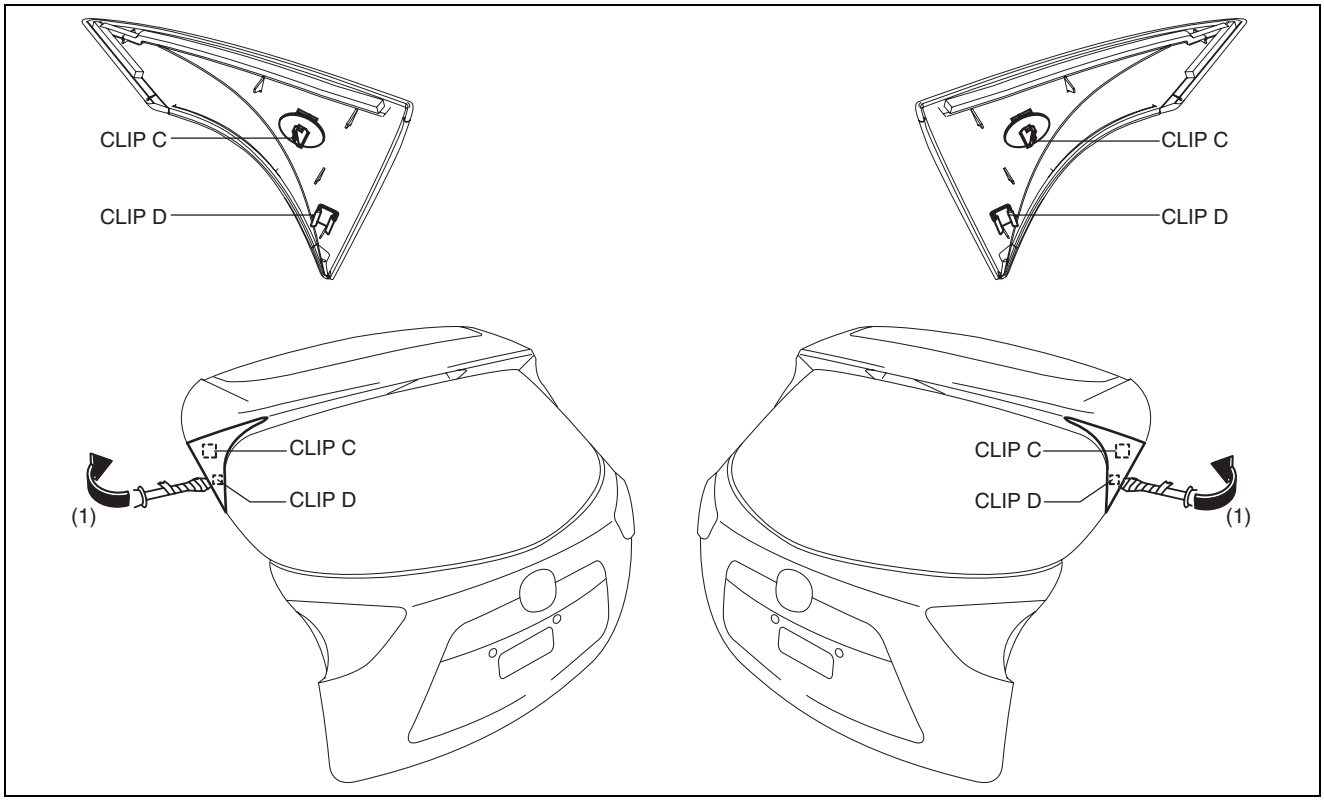
3. Remove nuts B.
4. Attach a piece of wire between the liftgate striker and liftgate latch to hold the liftgate in the half-opened position as shown below.



ac5uuw00001734

EXTERIOR TRIM

5. Insert a tape-wrapped flathead screwdriver in the locations shown below to remove clips C and D in the direction of the arrow (1).



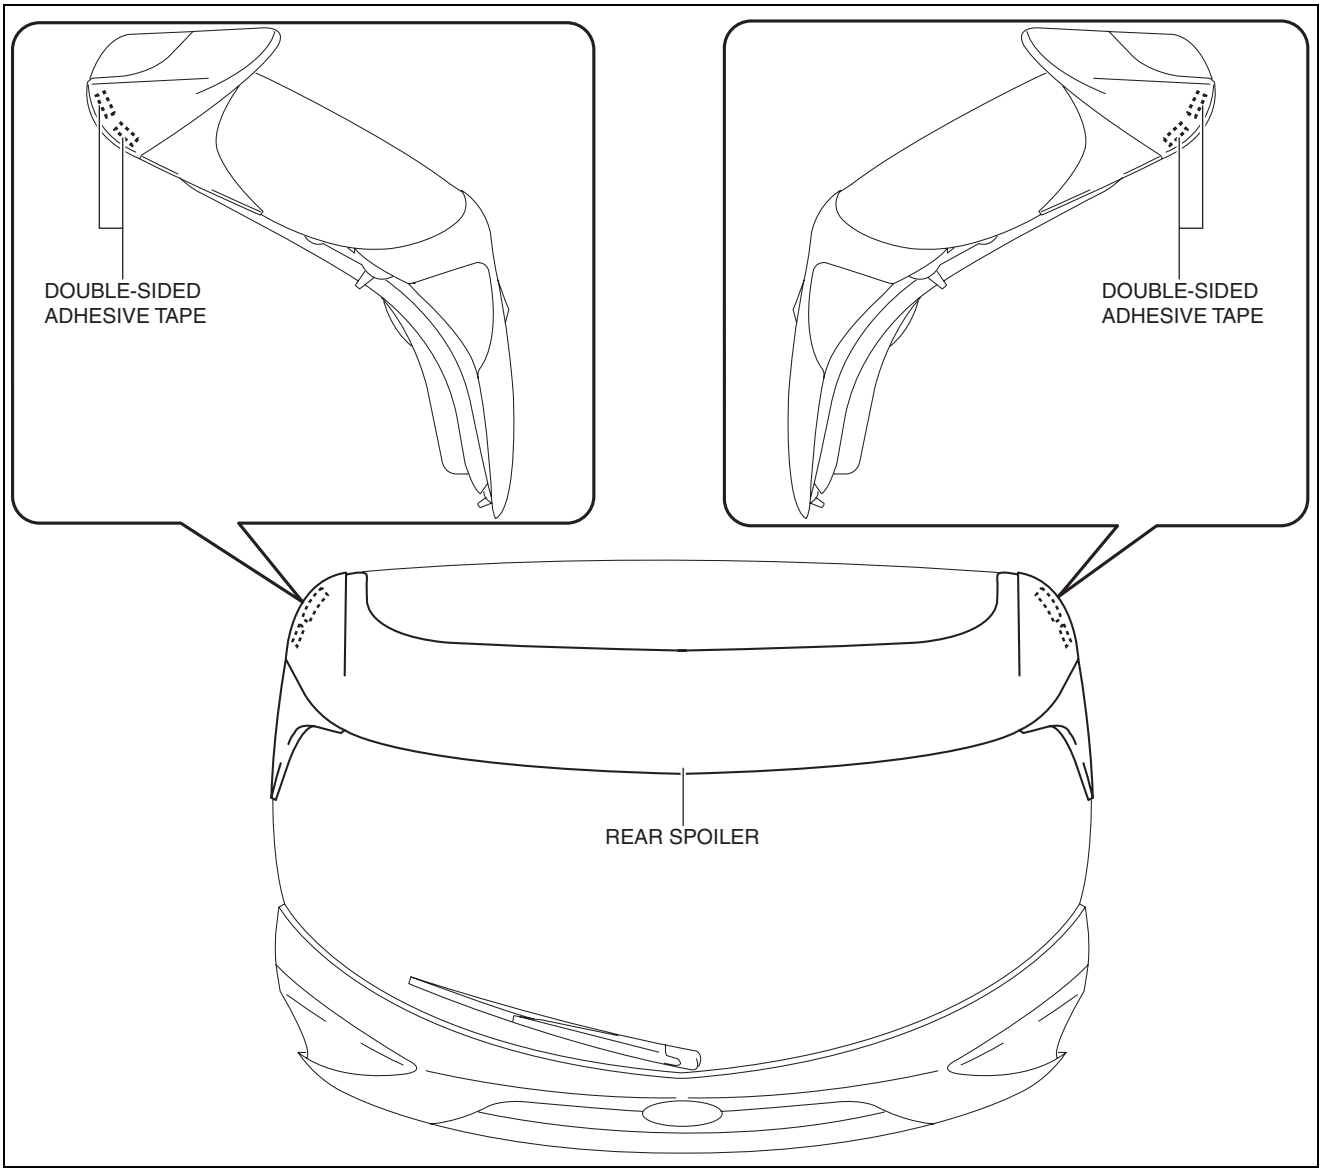
ac5wzw0000208

6. Using a utility knife, carefully remove the double-sided adhesive tape in the locations shown below.

Caution

- **Be careful not the damage the vehicle's paint during tape removal.**

EXTERIOR TRIM



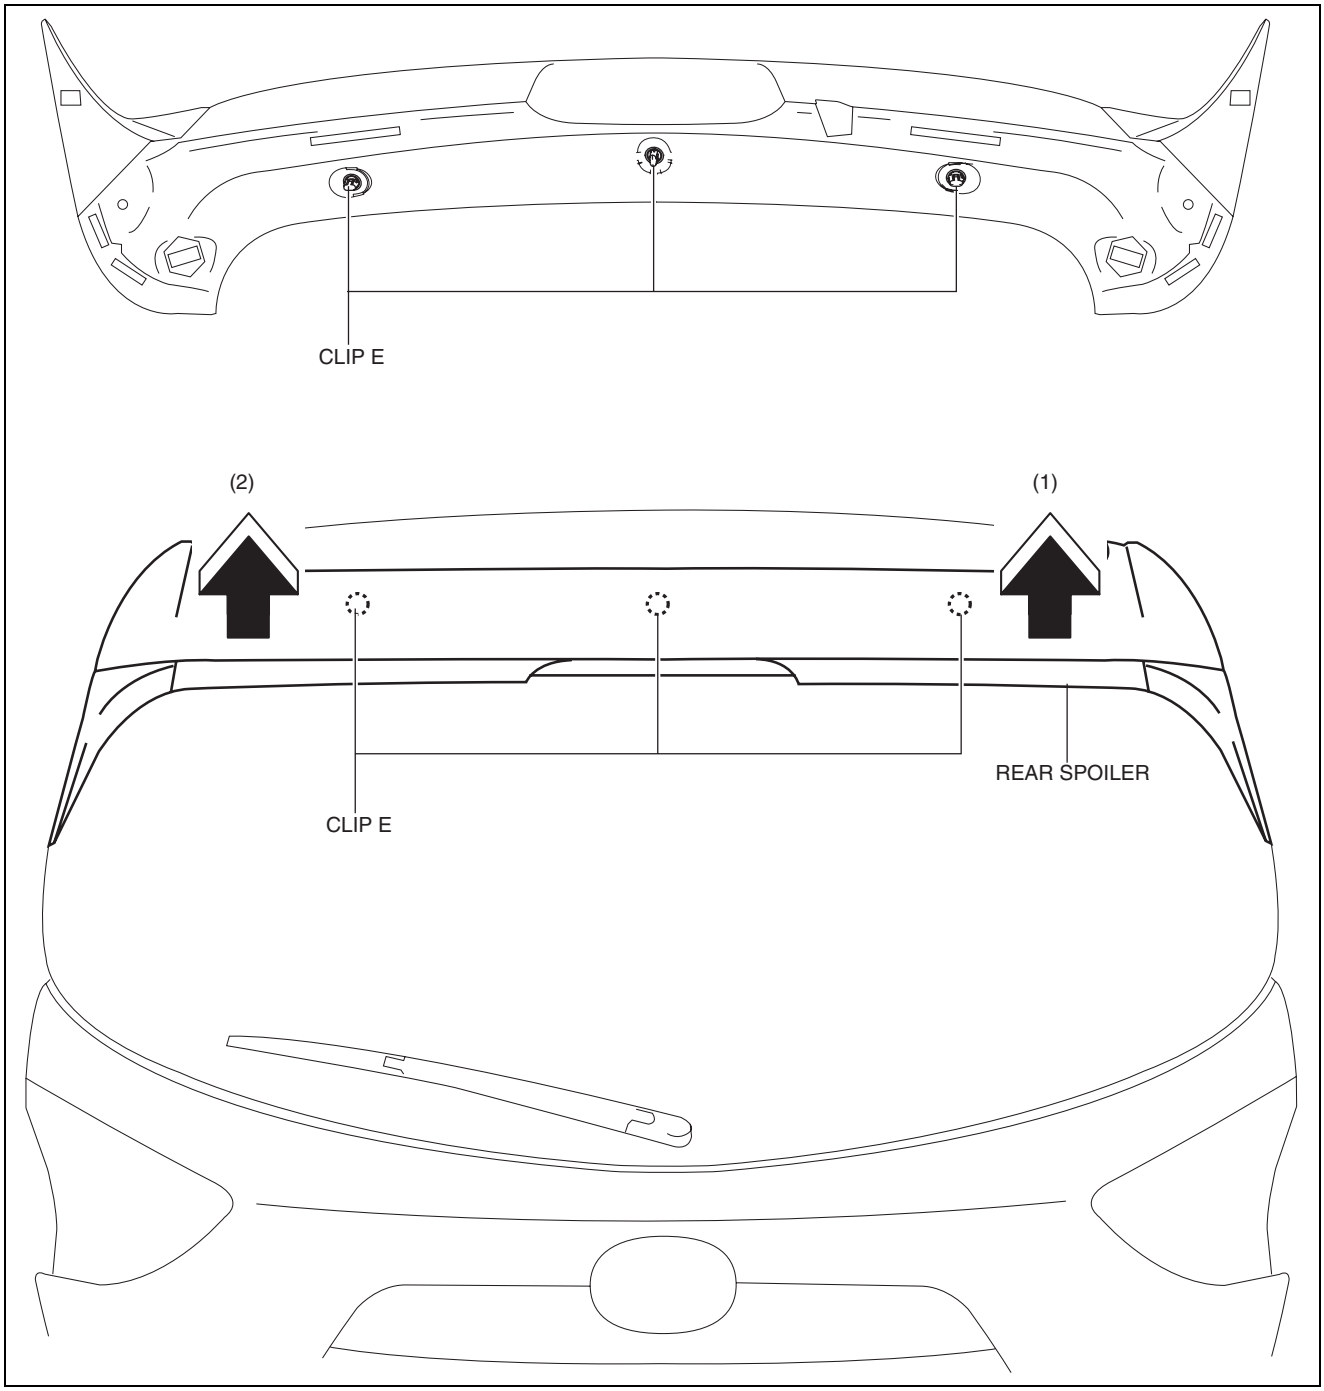
ac5wzw0000208

7. Pull the rear spoiler in the direction of the arrows in the order of (1), (2) and remove it while detaching clips E.

Caution

- **When removing the rear spoiler clips E, the rear spoiler may fall and be damaged. Perform the rear spoiler clip removal using two people.**

EXTERIOR TRIM



ac5wzw0000208

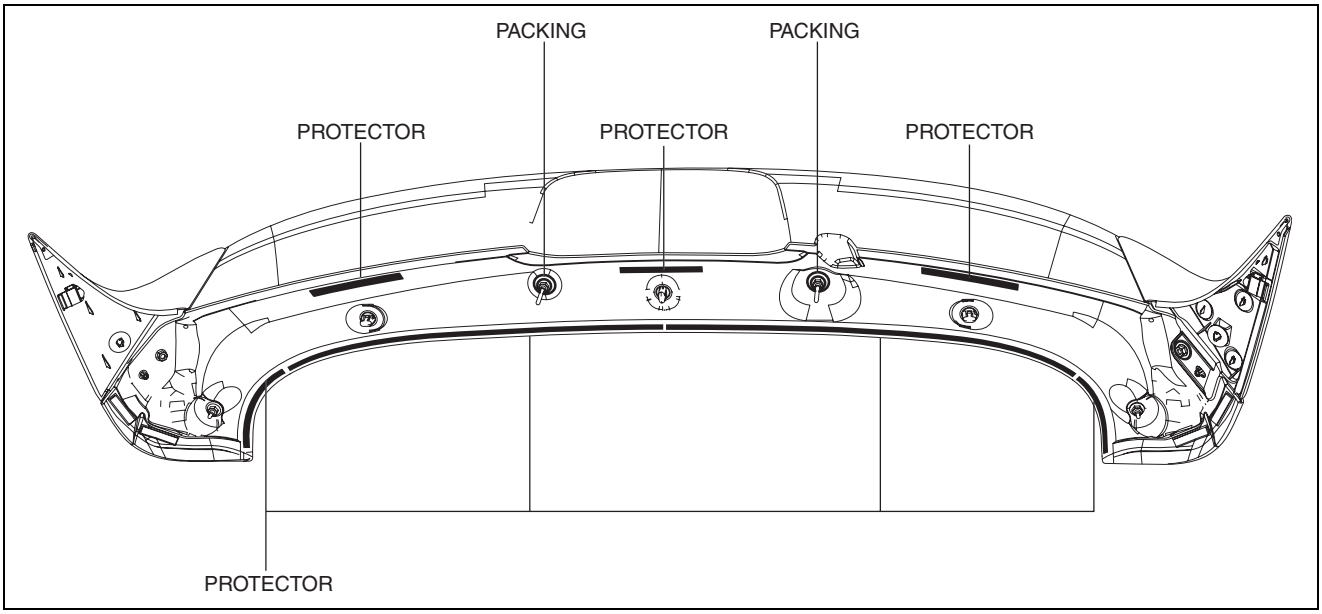
Installation

Note
- To facilitate the procedure after rear spoiler installation, peel the protective tape adhered during removal before installing the rear spoiler.

1. When a rear spoiler is to be reused, perform the following procedure:
   (1) Remove the packing and protector remaining on the rear spoiler after removal.
   (2) Remove any grease and dirt from the packing and protector affixing area.
   (3) Affix packing and protector to the position shown in the figure.

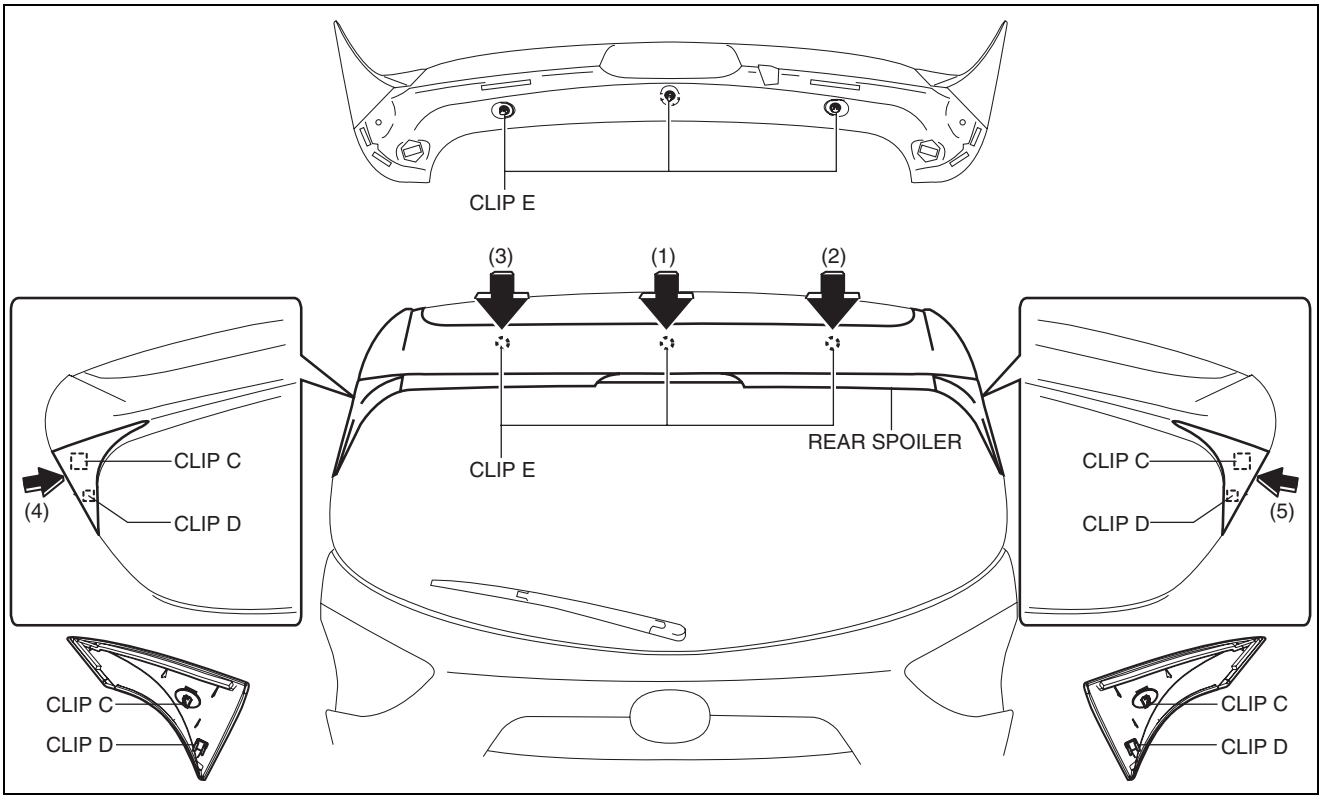
EXTERIOR TRIM

(4) If the protector is damaged, replace the part that is damaged with a new protector.



ac5wzw0000208

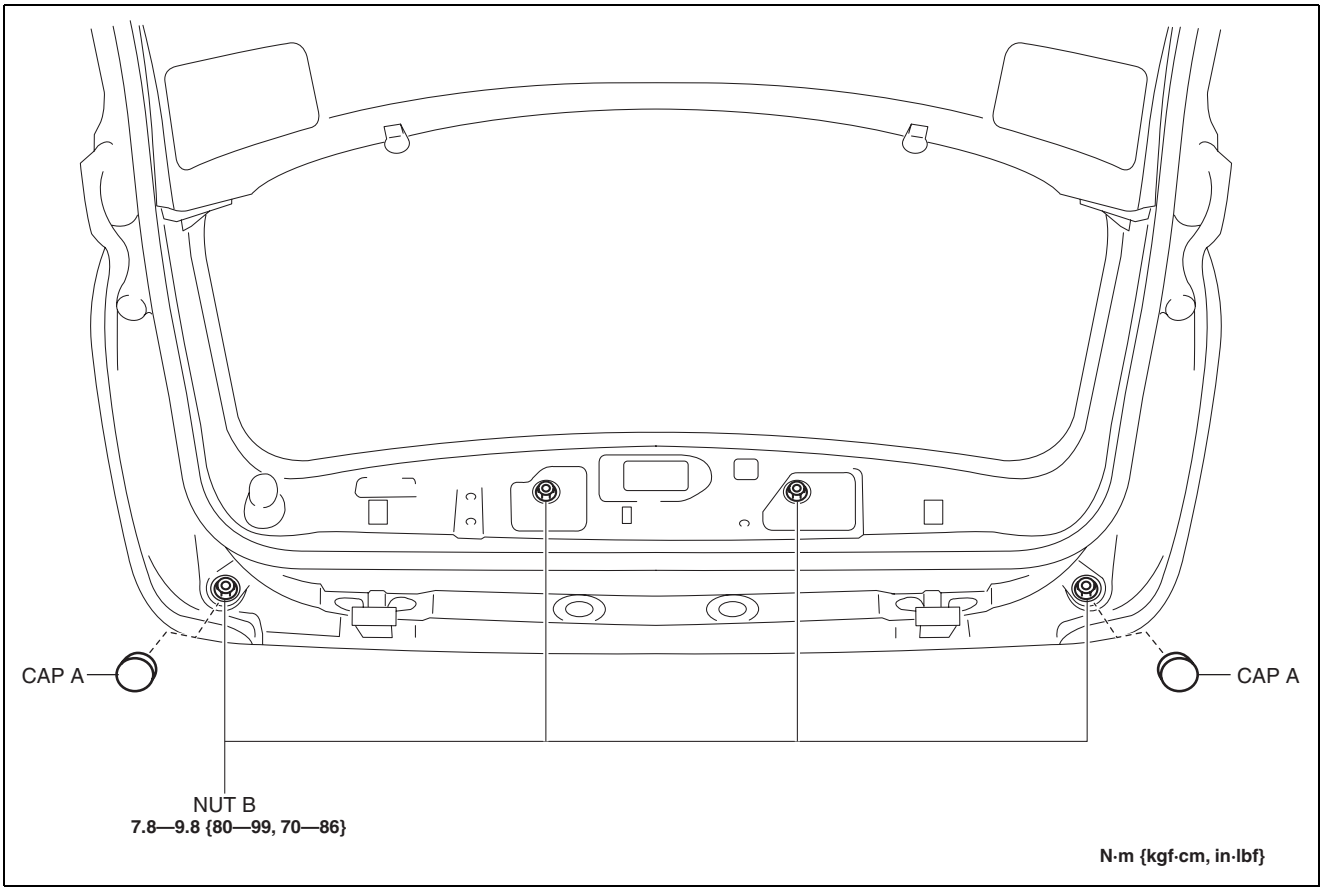
2. Push the rear spoiler in the direction of the arrows in the order of (1), (2), (3), (4), (5) and install the rear spoiler while install clips C, D and E.



ac5wzw0000462

EXTERIOR TRIM

3. Install nuts B.



ac5uuw00002038

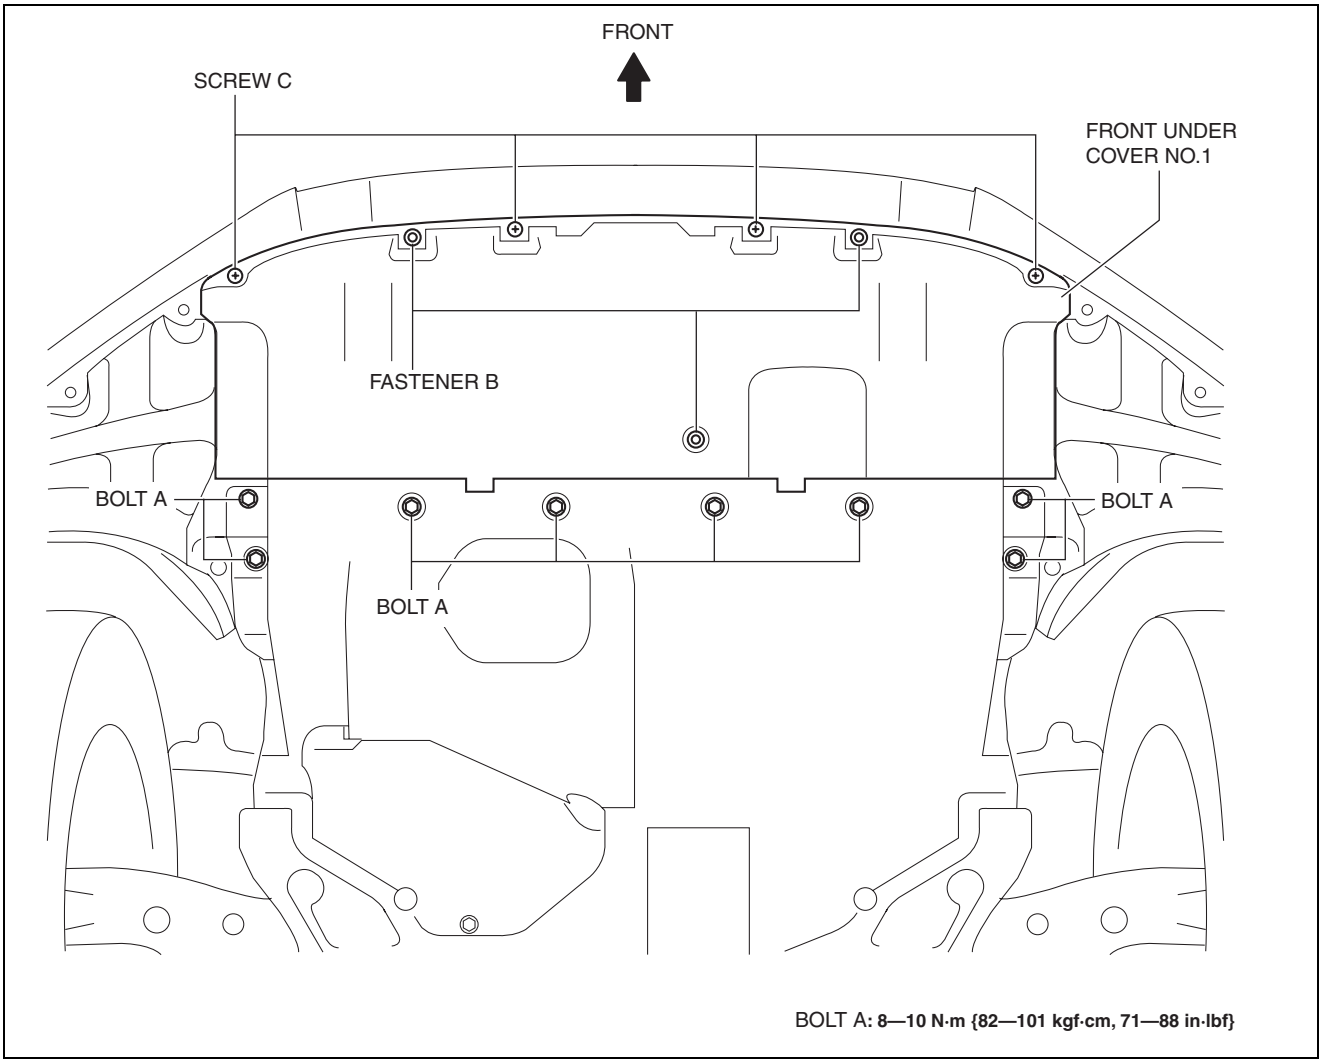
4. Install caps A.
5. Install the following parts:
   (1) Liftgate upper trim (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
   (2) Liftgate side trim (See 09-17-87 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)

EXTERIOR TRIM

FRONT UNDER COVER No.1 REMOVAL/INSTALLATION

id091600888800

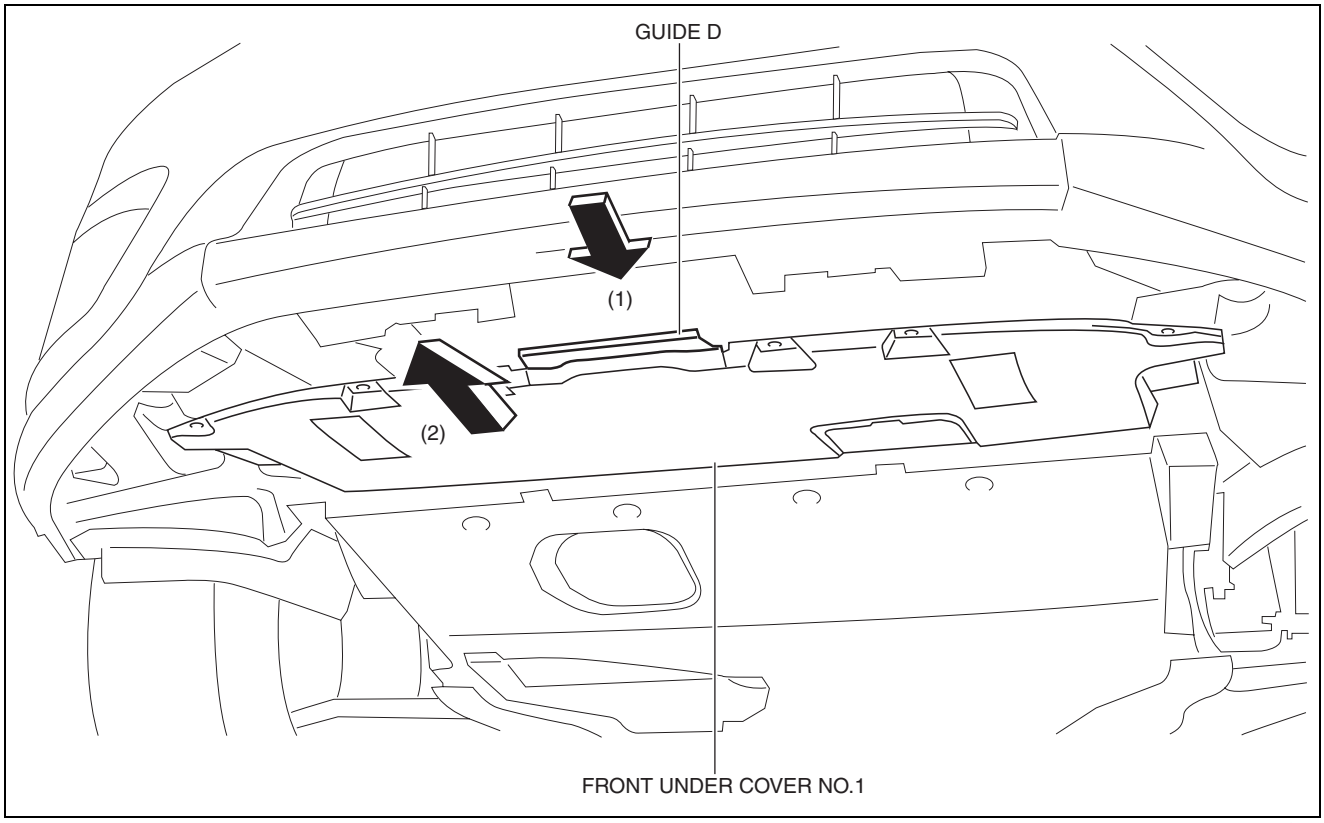
1. Remove bolts A.



ac5wzw0000129

2. Remove fasteners B.
3. Remove screws C.

4. Remove the front under cover No.1 in the direction of the arrow in the order of (1), (2) shown in the figure while detaching the guide D.



ac5uuw00001738

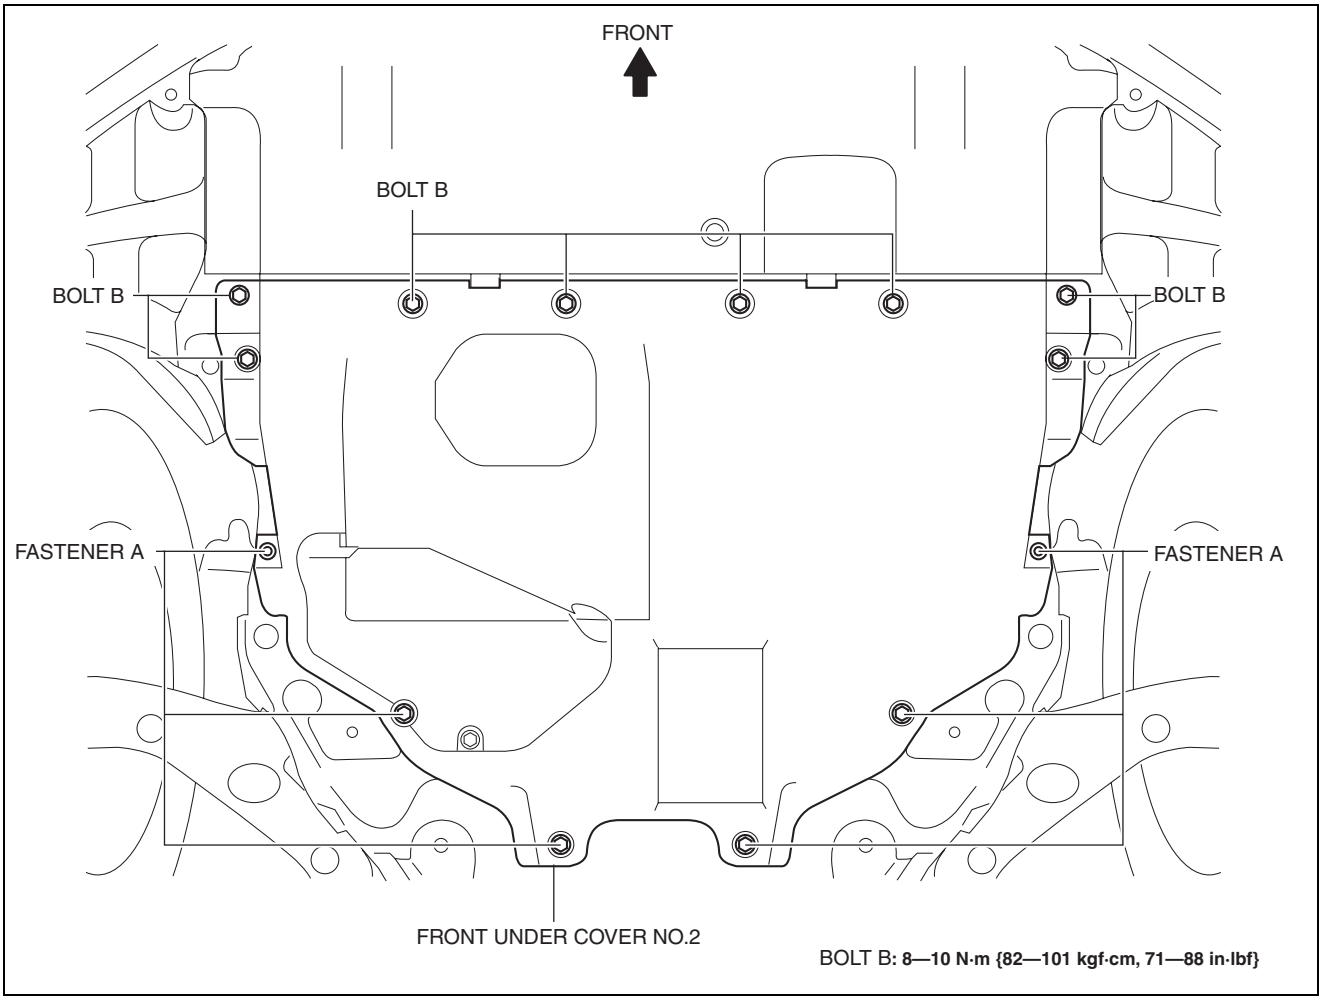
5. Install in the reverse order of removal.

FRONT UNDER COVER No.2 REMOVAL/INSTALLATION

id091600888900

1. Lift up the vehicle.
2. Remove the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)

3. Remove fasteners A.



ac5wzw0000303

4. Remove bolts B.
5. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
6. Install in the reverse order of removal.

CENTER UNDER COVER REMOVAL/INSTALLATION

id091600900200

1. Lift up the vehicle.

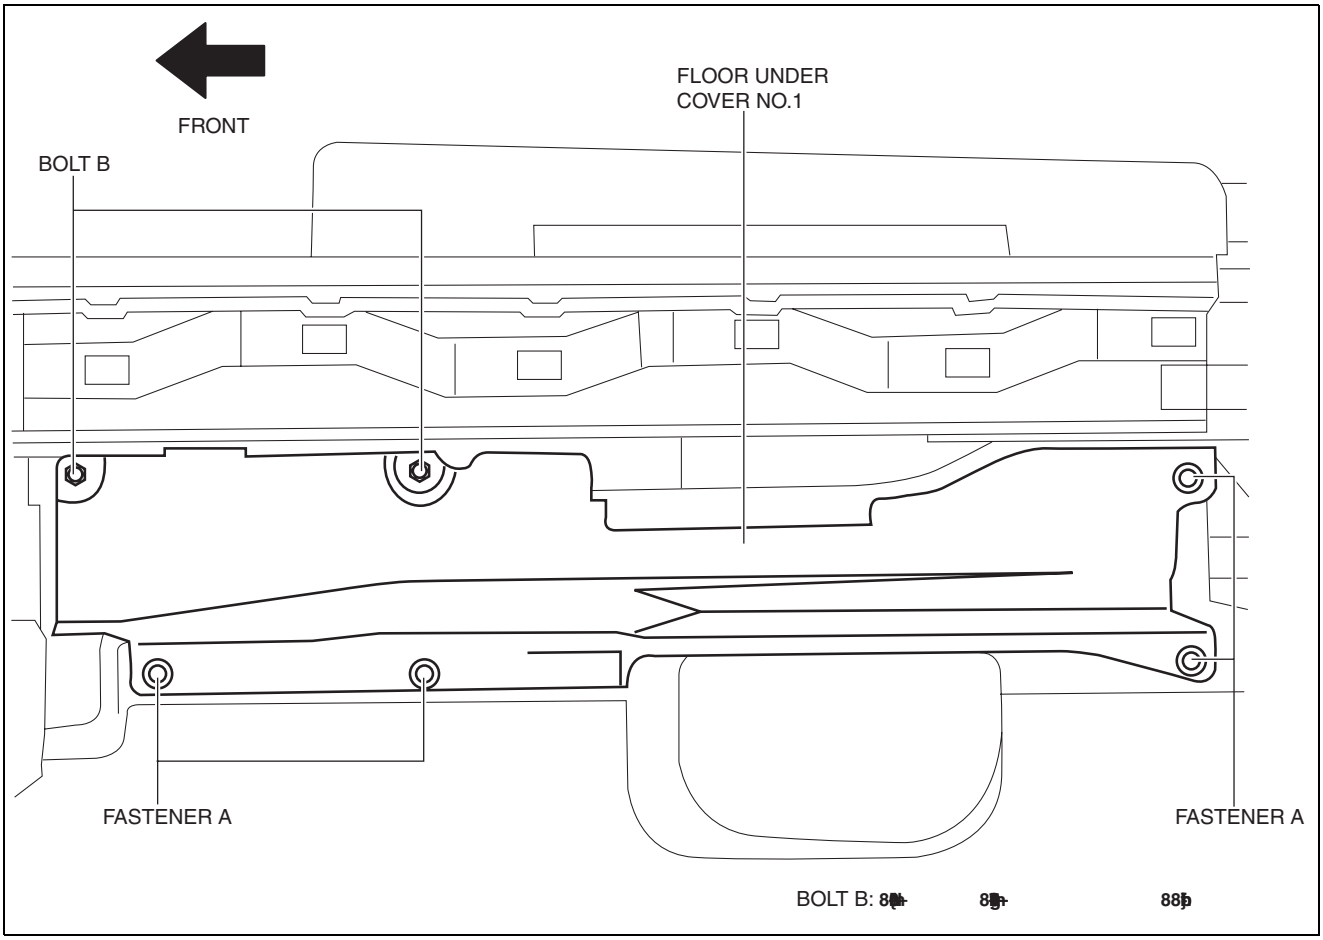
id091600820200

1. Lift up the vehicle.

EXTERIOR TRIM

2. Remove fasteners A.

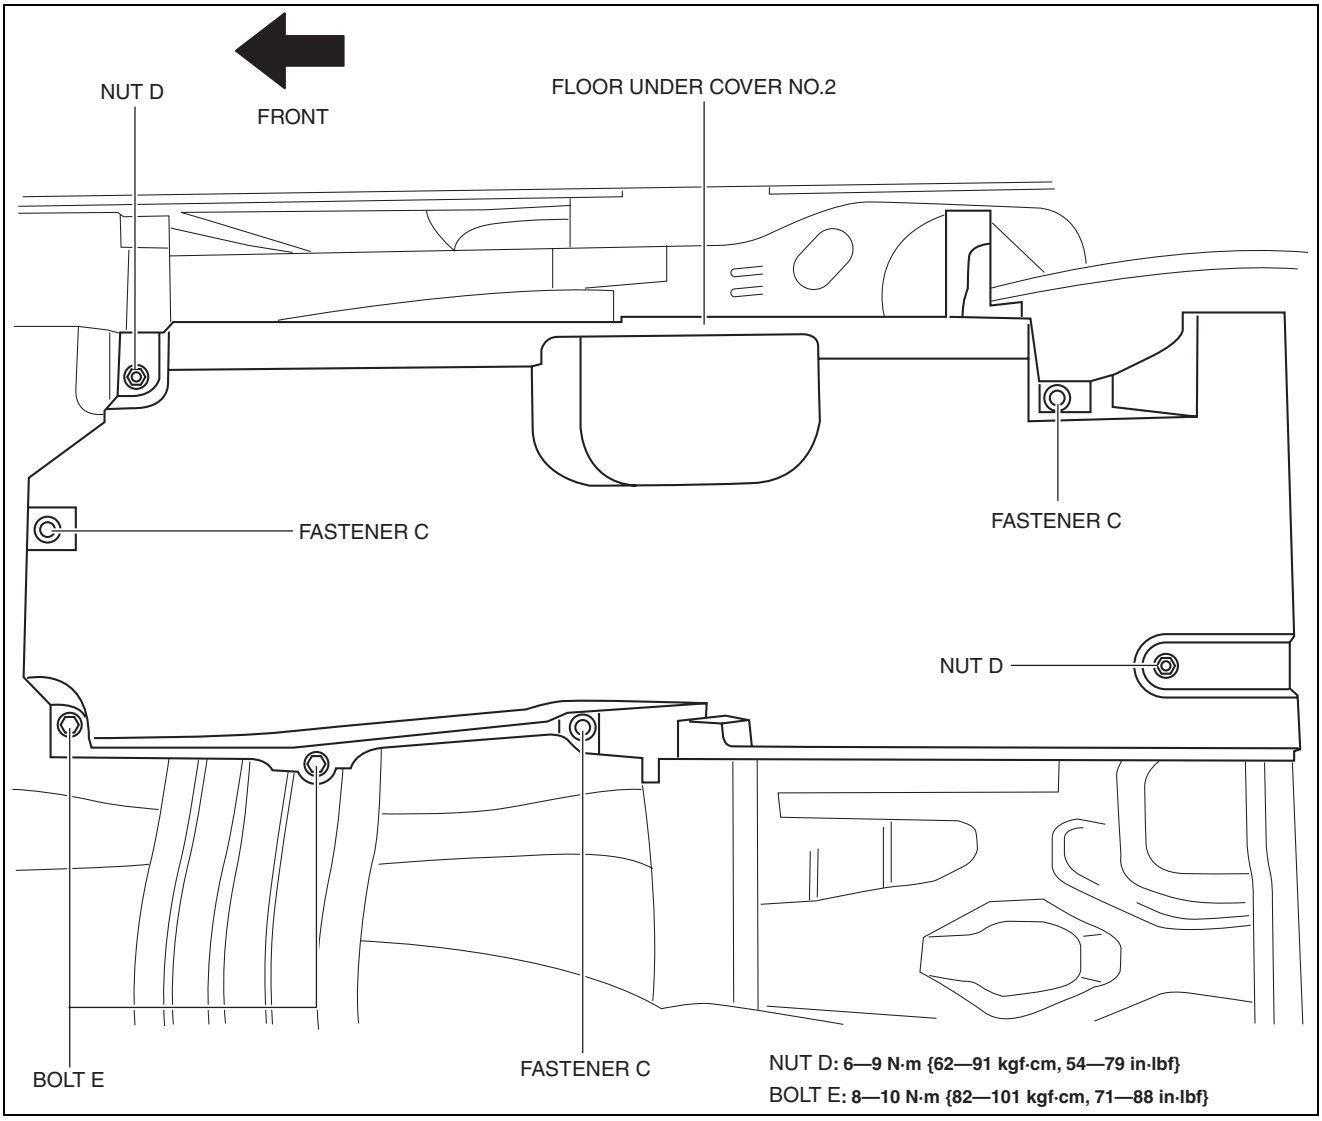


ac5wzw0000302

3. Remove bolts B.
4. Remove the floor under cover No.1.

EXTERIOR TRIM

5. Remove fasteners C.

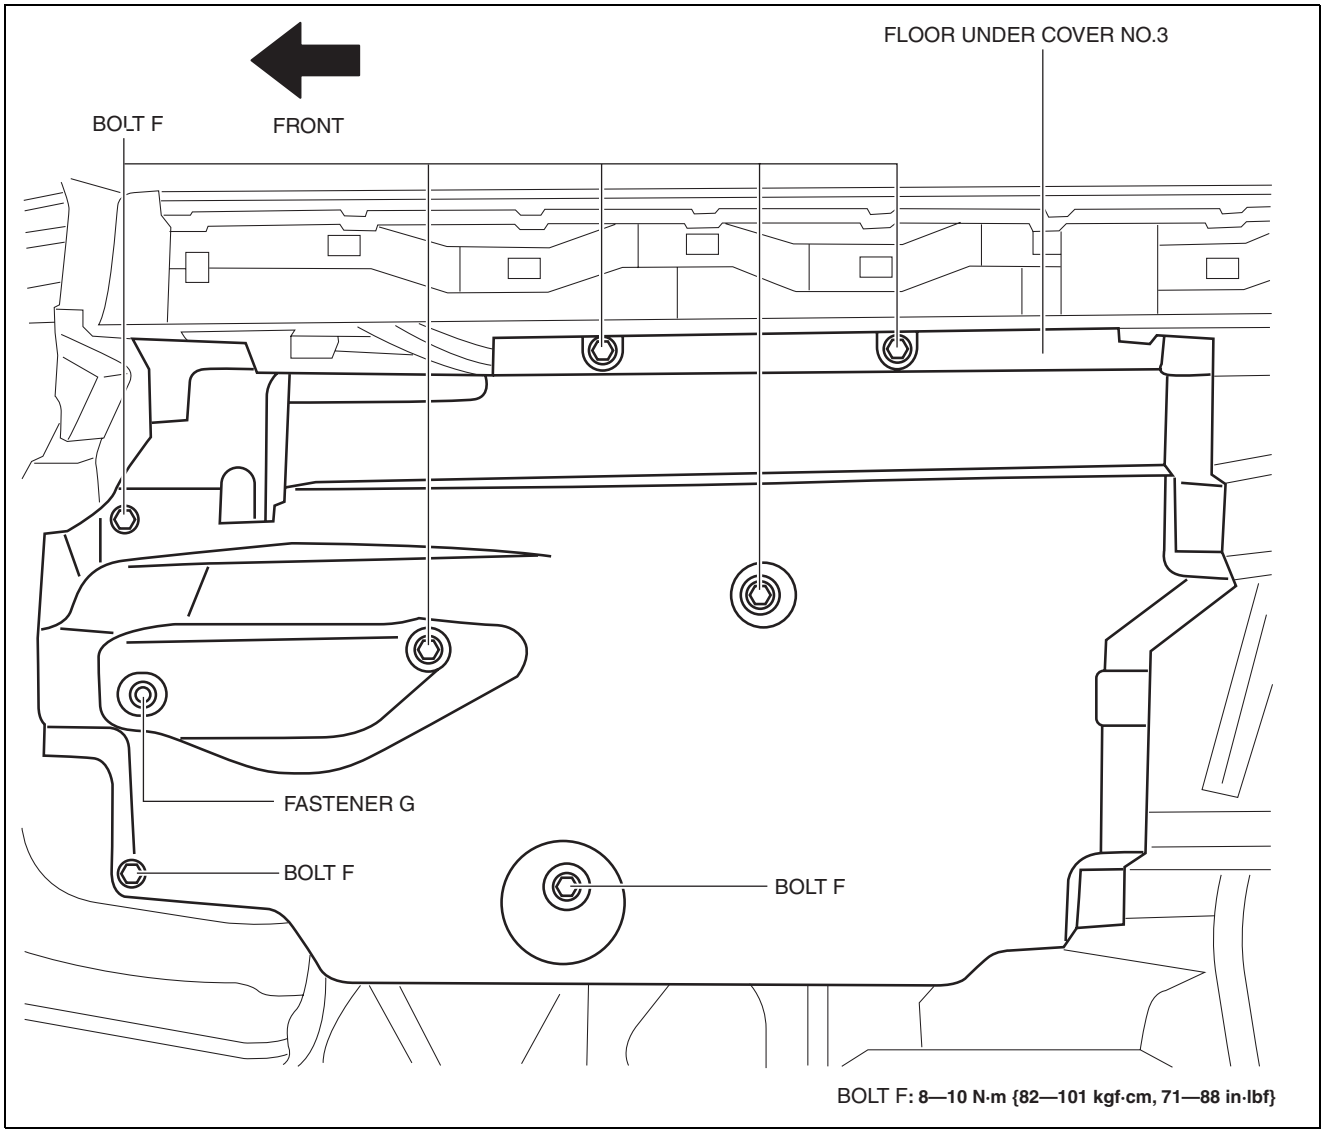


ac5wzw0000302

6. Remove nuts D.
7. Remove bolts E.
8. Remove the floor under cover No.2.

EXTERIOR TRIM

9. Remove bolts F.



ac5wzw0000302

10. Remove the fastener G.
11. Remove the floor under cover No.3.
12. Install in the reverse order of removal.

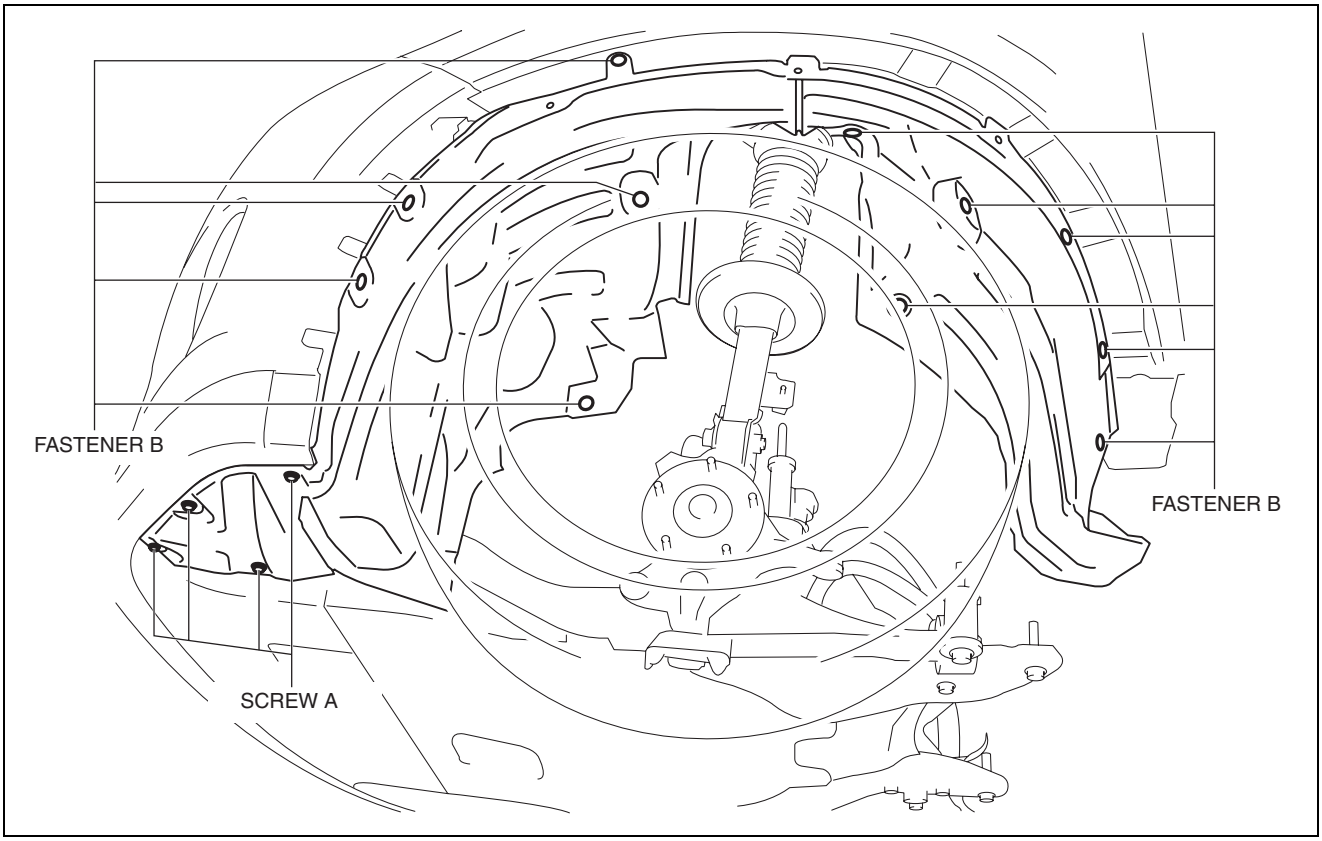
MUDGUARD REMOVAL/INSTALLATION

id091600467600

1. Remove the front over fender. (See 09-10-31 FRONT OVER FENDER REMOVAL/INSTALLATION.)

EXTERIOR TRIM

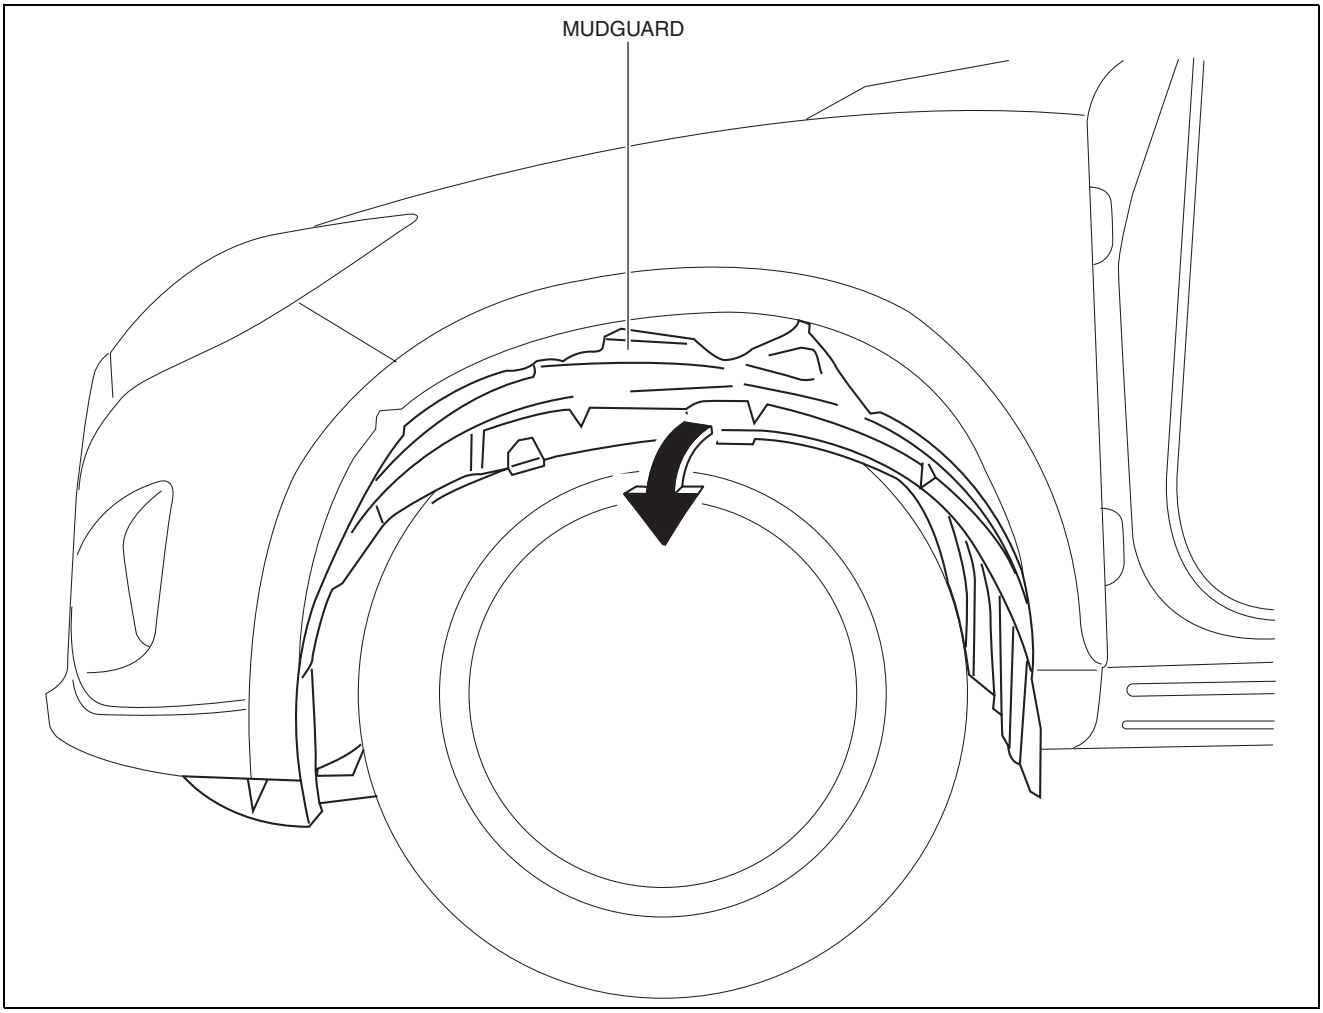
2. Remove screws A.



ac5wzw0000302

3. Remove fasteners B.

4. Pull the mudguard in the direction of the arrow shown in the figure.



ac5wzw0000127

5. Install in the reverse order of removal.

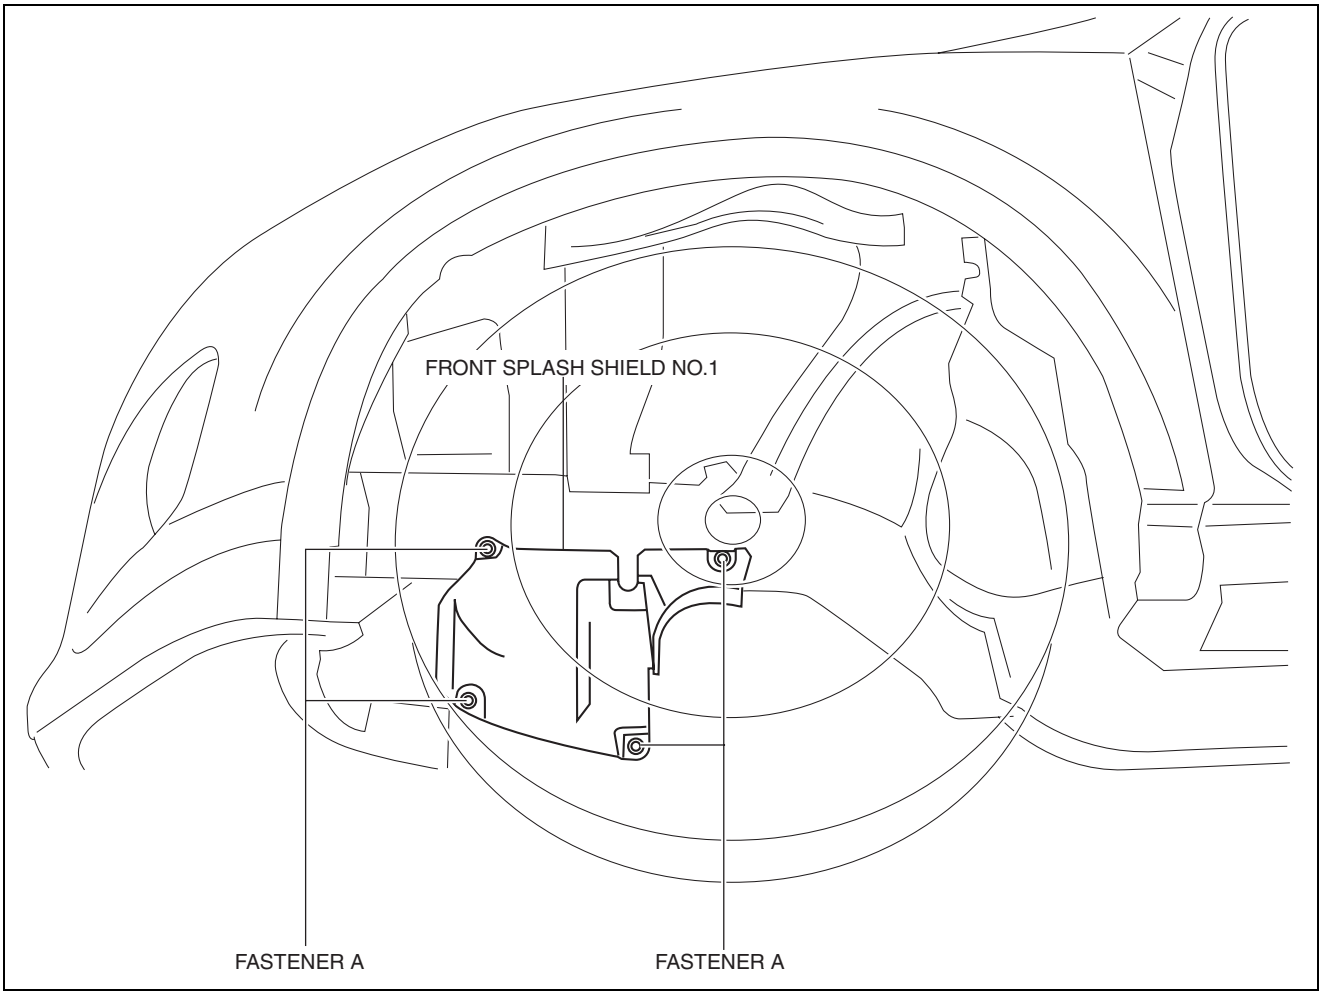
SPLASH SHIELD REMOVAL/INSTALLATION

id091600808400

Front
Front splash shield No.1

1. Set the mudguard aside. (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)

2. Remove fasteners A.



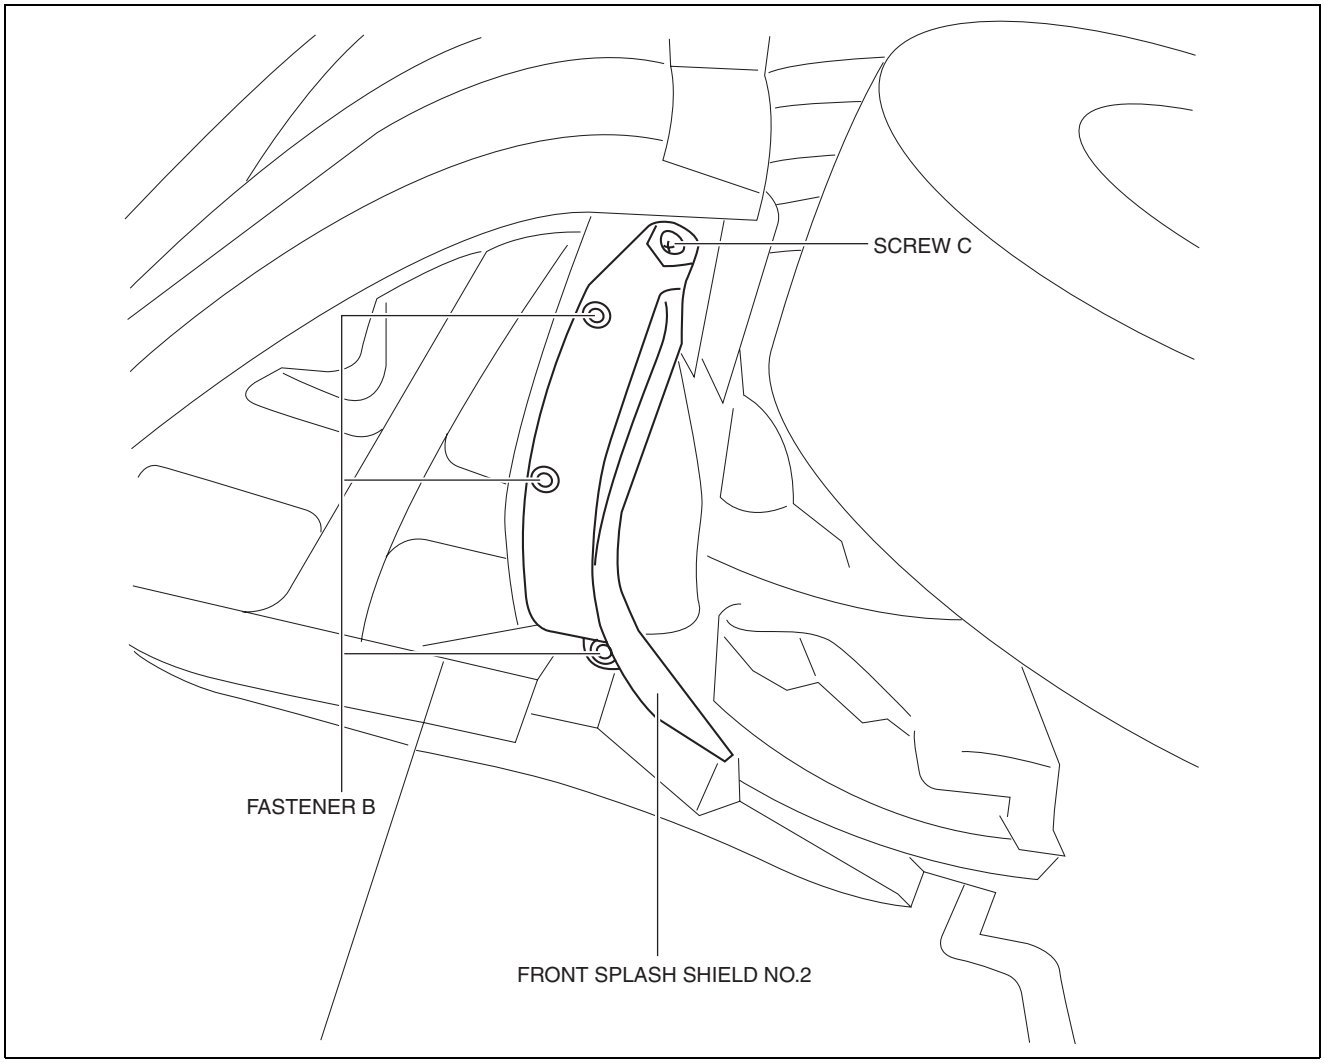
ac5wzw0000128

3. Remove the front splash shield No.1.
4. Install in the reverse order of removal.

EXTERIOR TRIM

Front splash shield No.2

1. Remove fasteners B.



ac5wzw0000128

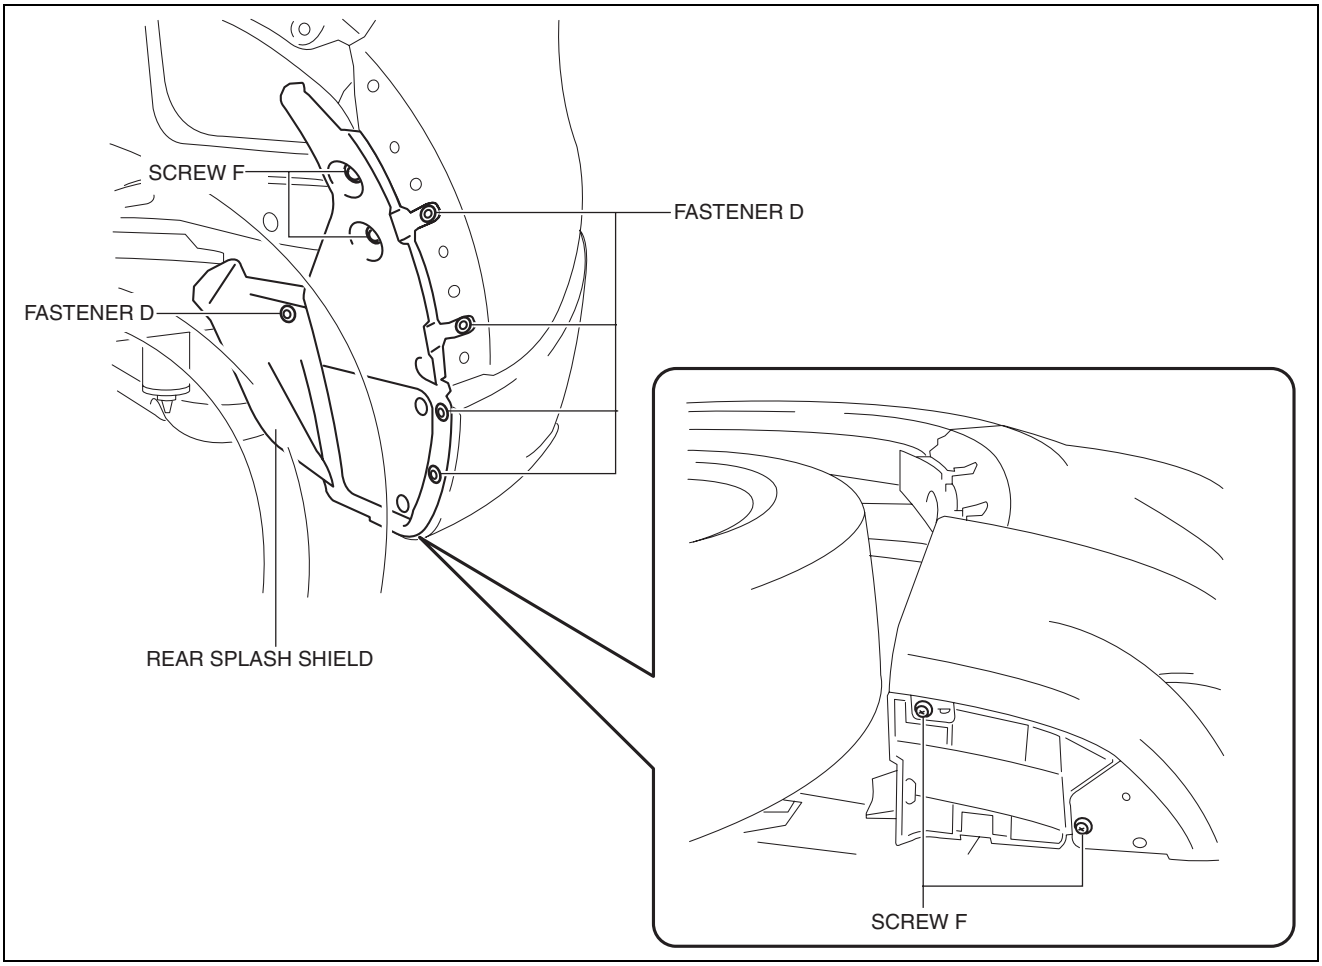
2. Remove screw C.
3. Remove the front splash shield No.2.
4. Install in the reverse order of removal.

Rear splash shield

1. Set the rear over fender aside. (See 09-10-33 REAR OVER FENDER REMOVAL/INSTALLATION.)

EXTERIOR TRIM

2. Remove fasteners D.



ac5uuw00002039

3. Remove screws F.
4. Remove the rear splash shield.
5. Install in the reverse order of removal.

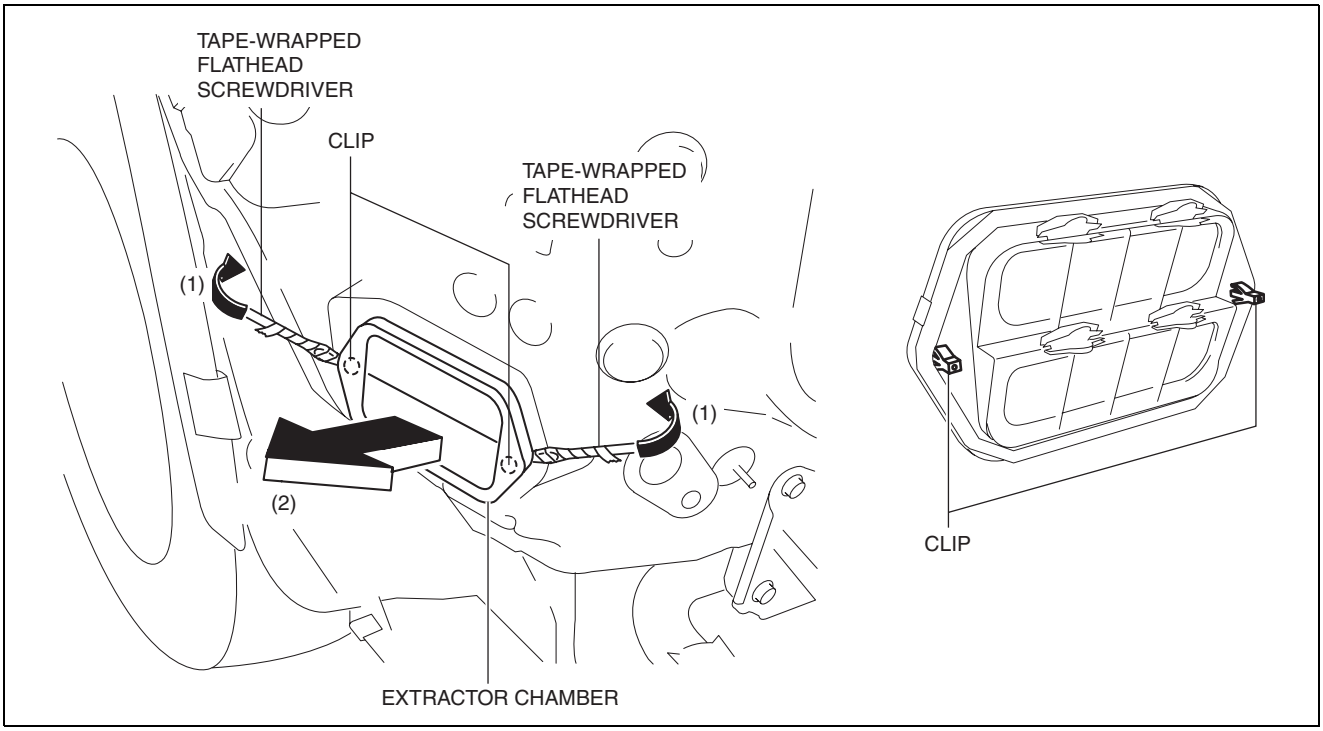
EXTRACTOR CHAMBER REMOVAL/INSTALLATION

id091600801500

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Rear splash shield (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
   (2) Rear combination light (See 09-18-54 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (3) Rear bumper (See 09-10-24 REAR BUMPER REMOVAL/INSTALLATION.)

EXTERIOR TRIM

3. Insert a tape-wrapped flathead screwdriver shown in the figure and remove clips in the direction of arrow (1).



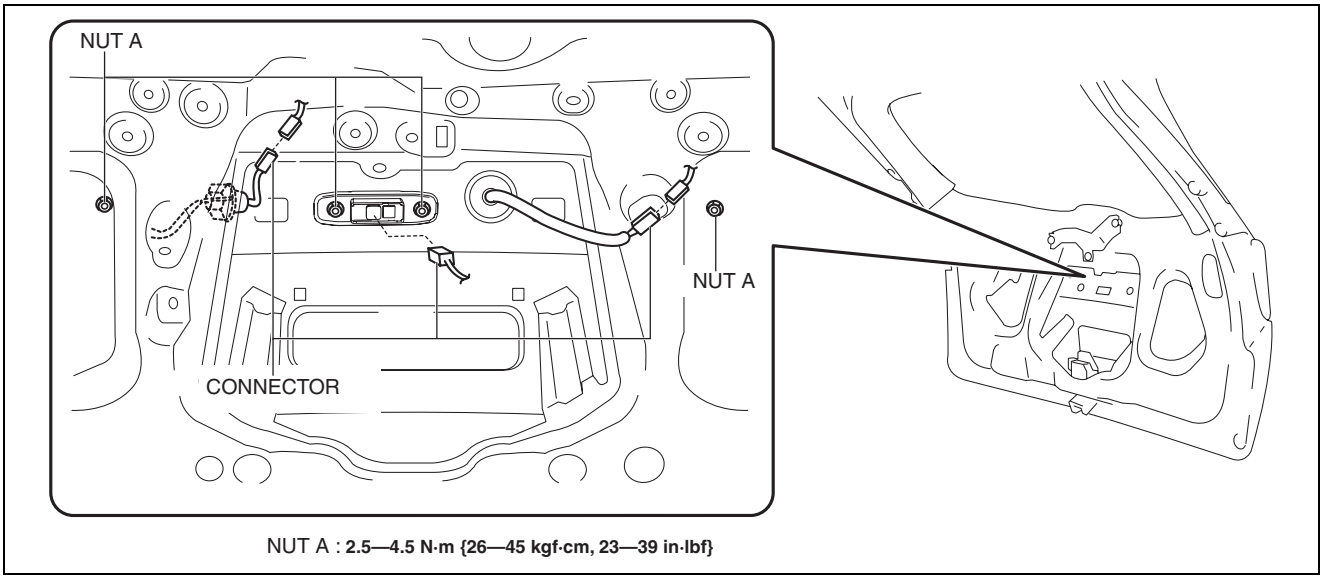
ac5wzw0000127

4. Remove the extractor chamber in the direction of arrow (2).
5. Install in the reverse order of removal.

LIFTGATE GARNISH REMOVAL/INSTALLATION

id091600445800

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Liftgate upper trim (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
   (2) Liftgate side trim (See 09-17-87 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Liftgate recess (See 09-17-89 LIFTGATE RECESS REMOVAL/INSTALLATION.)
   (4) Liftgate lower trim (See 09-17-89 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
3. Disconnect the connectors.



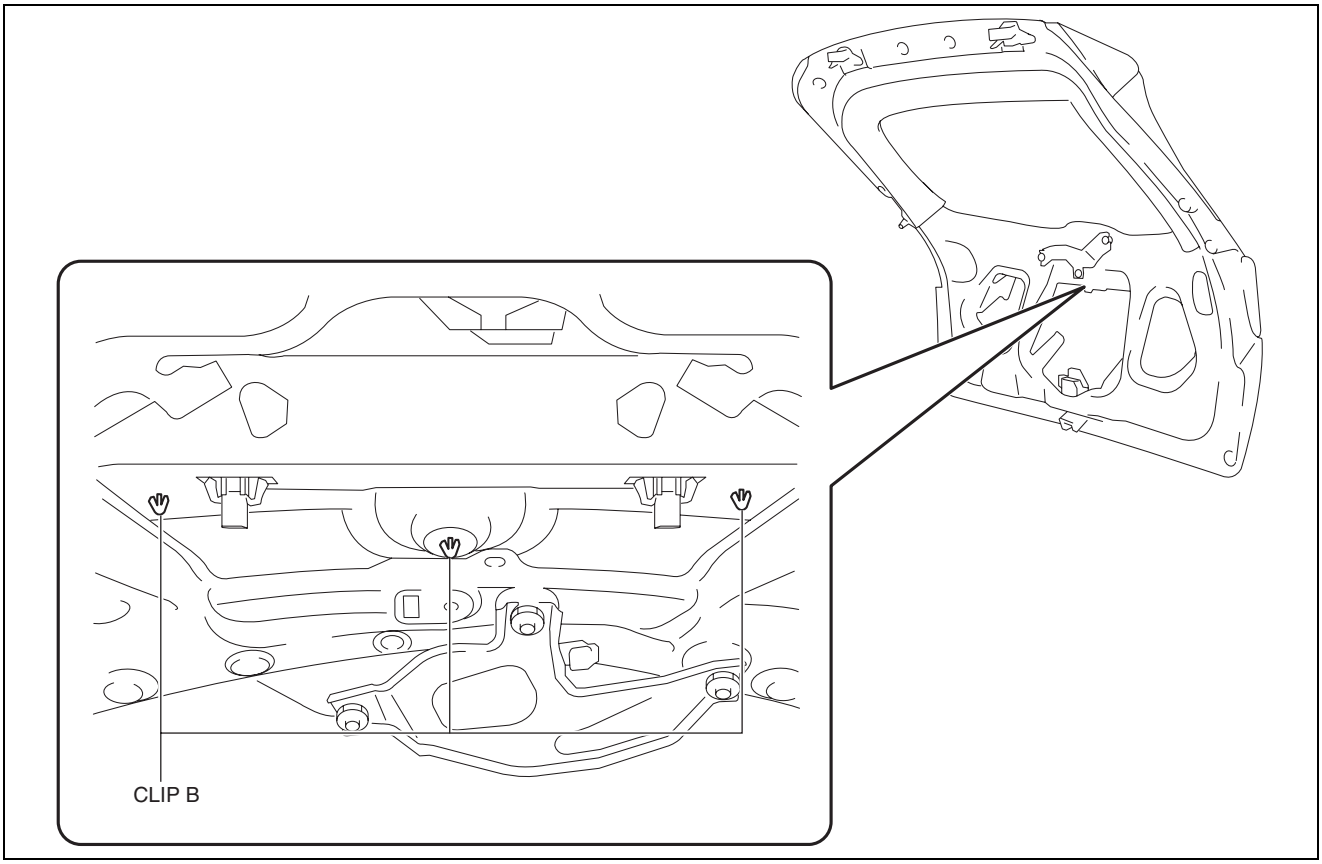
NUT A : **2.5—4.5 N·m {26—45 kgf·cm, 23—39 in·lbf}**

ac5wzw0000303

4. Remove nuts A.

EXTERIOR TRIM

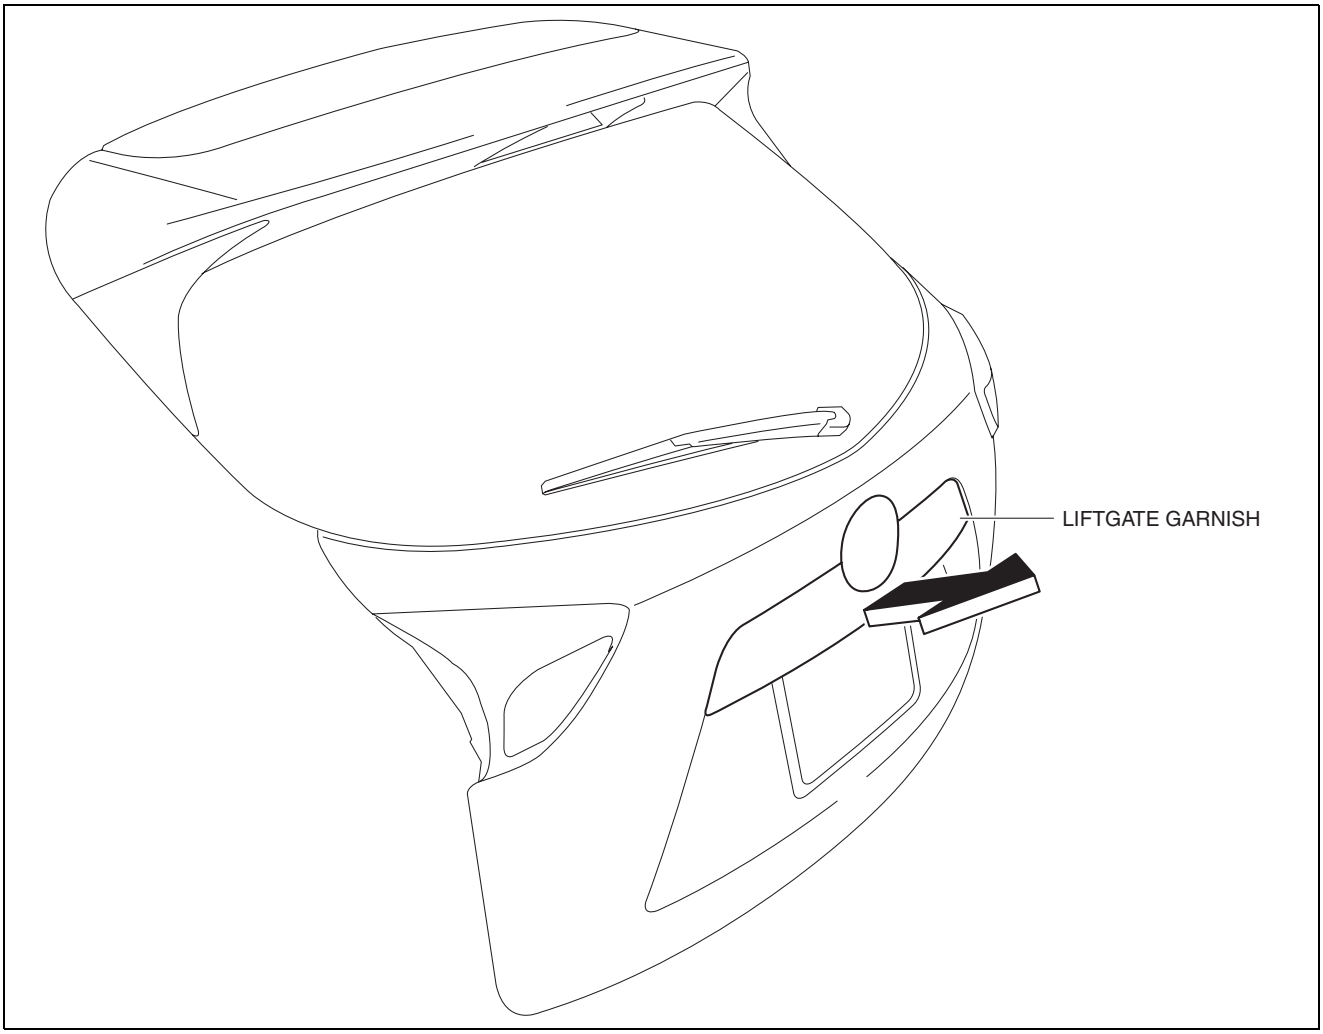
5. Detach clips B shown in the figure.



ac5wzw0000126

EXTERIOR TRIM

6. Remove the liftgate garnish shown in the figure.



ac5wzw0000126

7. Install in the reverse order of removal.

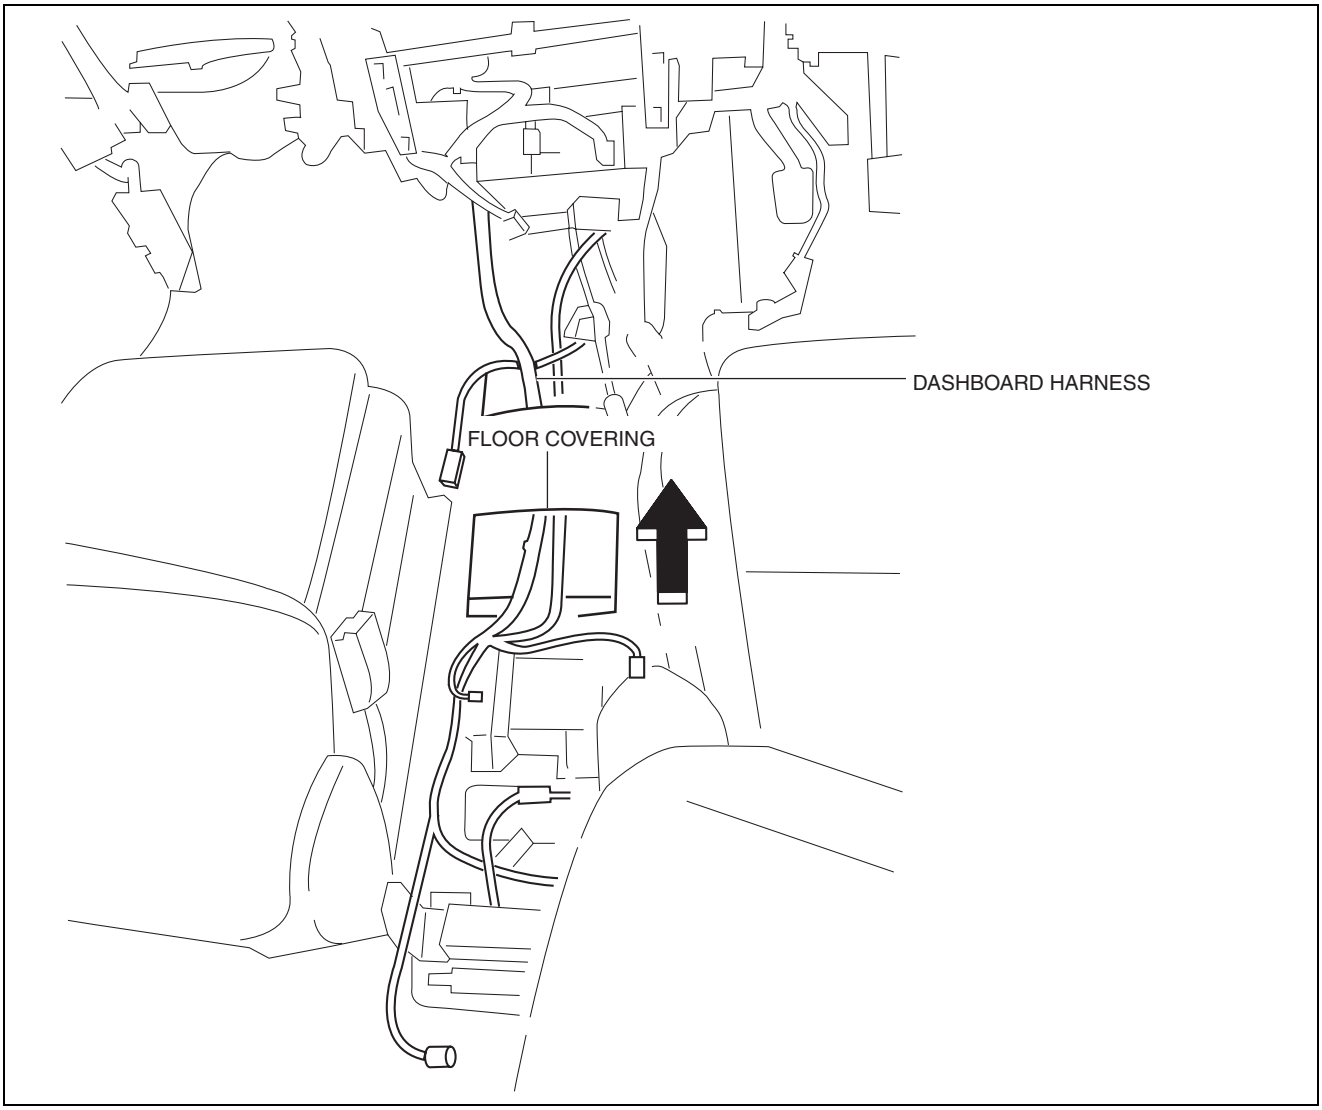
(26)Steering wheel (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
(27)Steering shaft (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
(28)Switch panel (See 09-17-18 SWITCH PANEL REMOVAL/INSTALLATION.)
(29)Meter hood (See 09-17-20 METER HOOD REMOVAL/INSTALLATION.)
(30)Instrument cluster (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
(31)A-pillar trim (See 09-17-53 A-PILLAR TRIM REMOVAL/INSTALLATION.)

3. Set the parking brake cover aside.

INTERIOR TRIM

4. Disconnect the dashboard harness connectors at the tunnel area and remove the wiring harness clip.



ac5wzw0000141

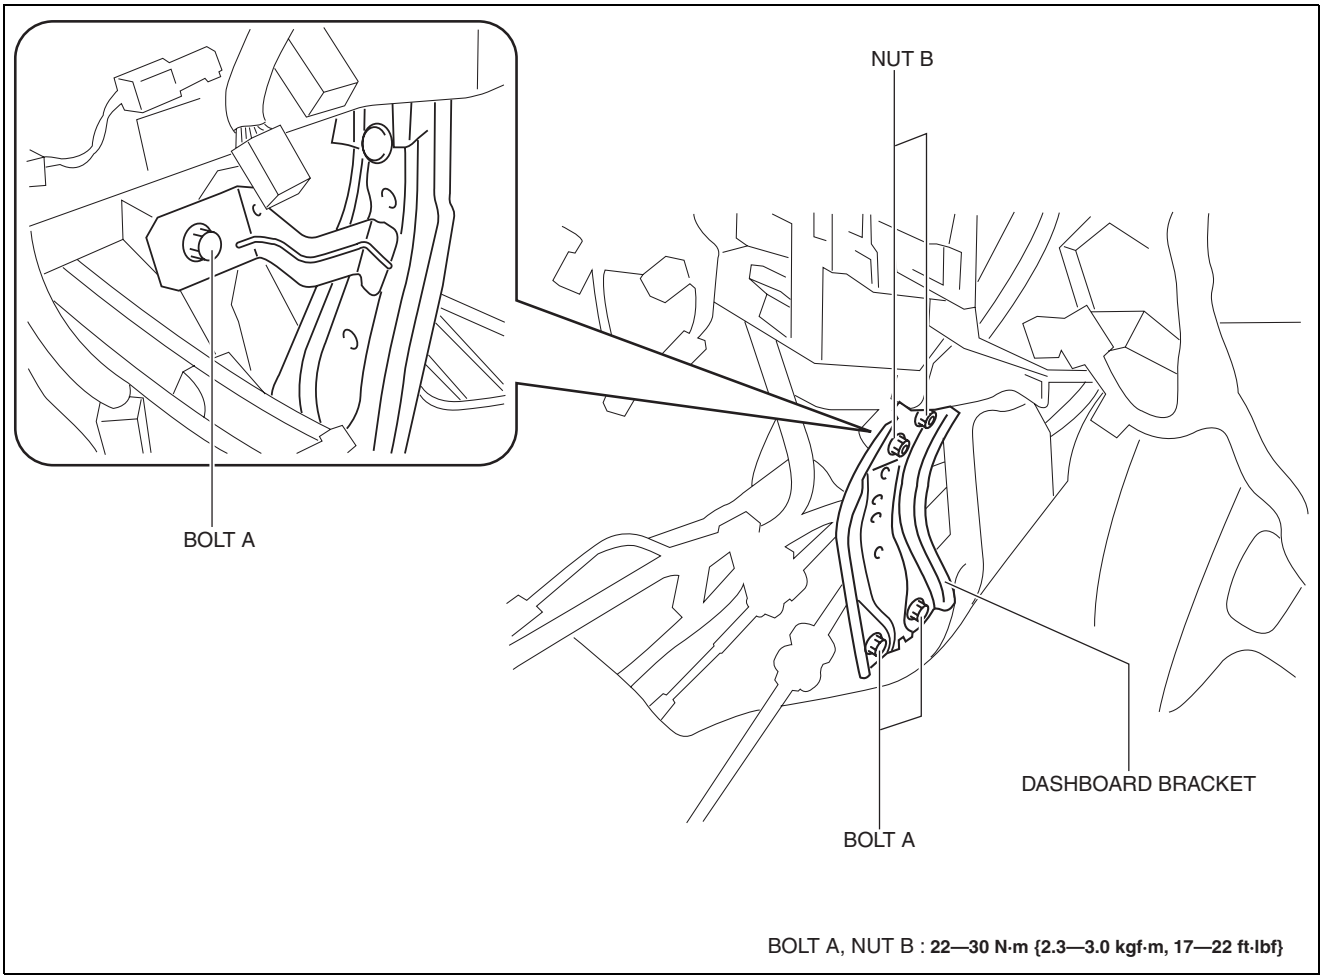
5. Pull out the dashboard harness in the direction of the arrow shown in the figure while avoiding the floor covering.

Caution

- **When pulling out the dashboard harness, if the connector is hooked to the floor mat, it may cause a short circuit in the wiring harness or the connector may be damaged. Pull out the dashboard harness while lifting the floor mat so as not to hook the connector.**

INTERIOR TRIM

6. Remove the bolts A and nut B shown in the figure.



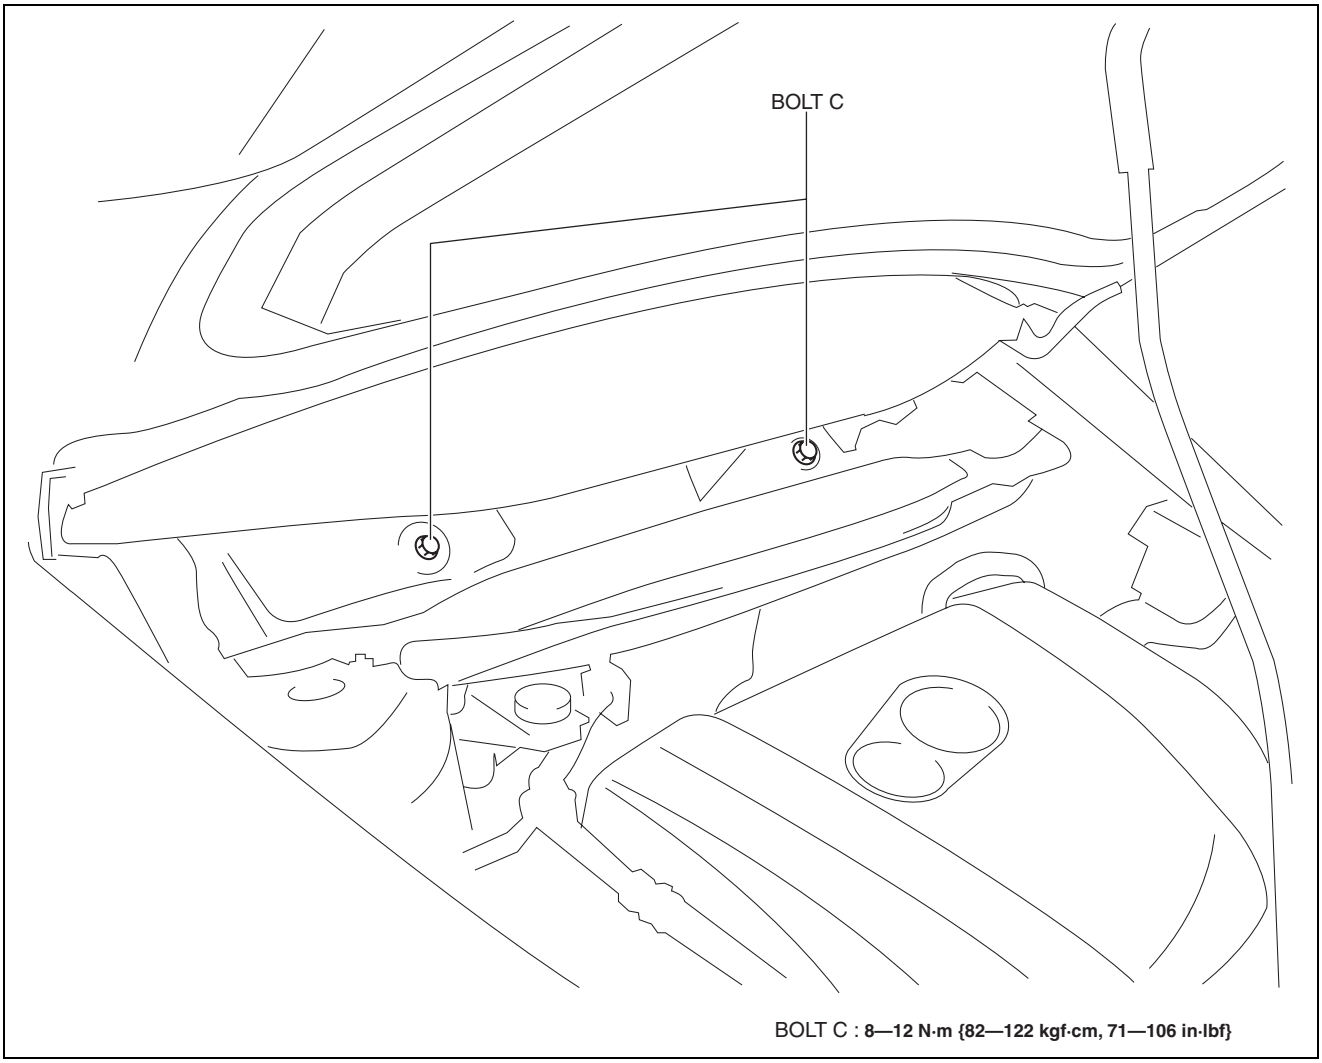
BOLT A, NUT B : **22—30 N·m {2.3—3.0 kgf·m, 17—22 ft·lbf}**

ac5wzw0000141

7. Remove the dashboard bracket.

INTERIOR TRIM

8. Remove the bolt C. (See 09-17-13 Dashboard Installation Note.)

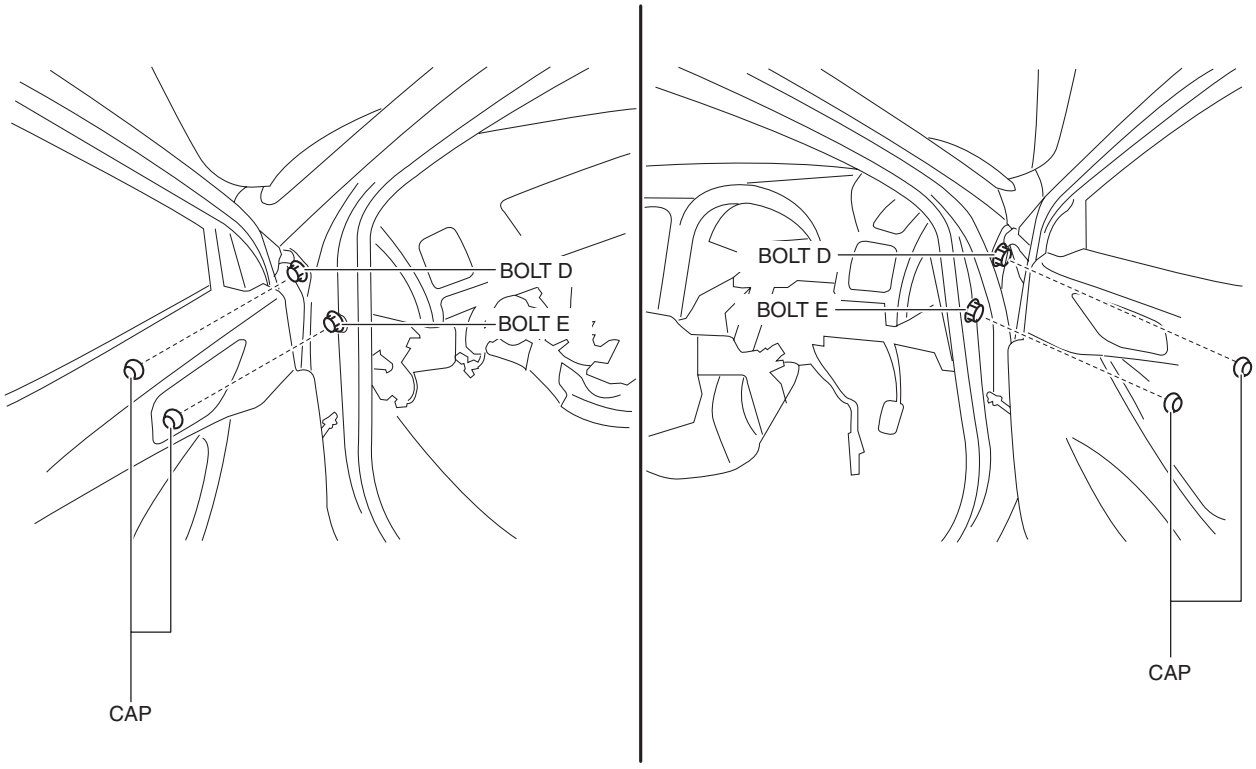


BOLT C : **8—12 N·m {82—122 kgf·cm, 71—106 in·lbf}**

ac5wzw0000141

9. Disconnect the dashboard harness connectors.
10. Remove the caps.

INTERIOR TRIM



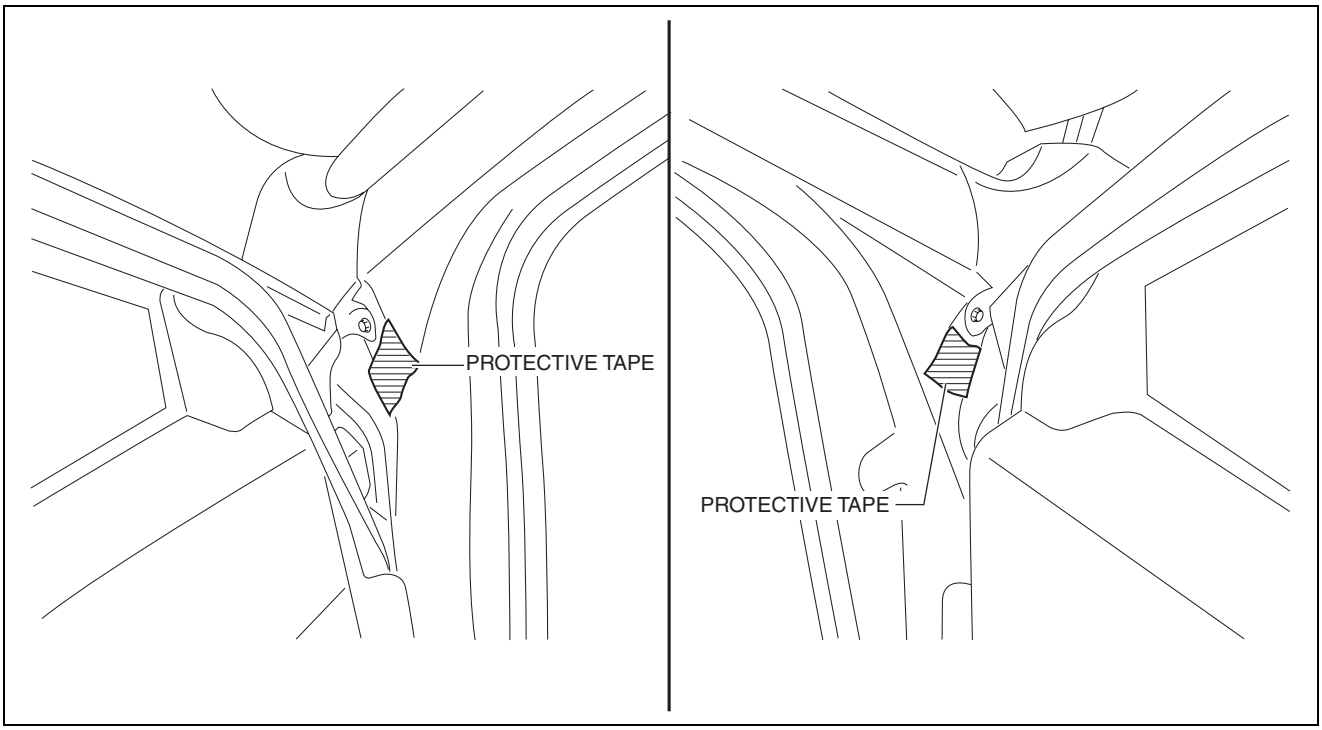
BOLT D BOLT E : **16—22 N·m {1.7—2.2 kgf·m, 12—16 ft·lbf}**

ac5wzw0000141

11. Remove the bolt D and bolt E. (See 09-17-13 Dashboard Installation Note.)

Caution

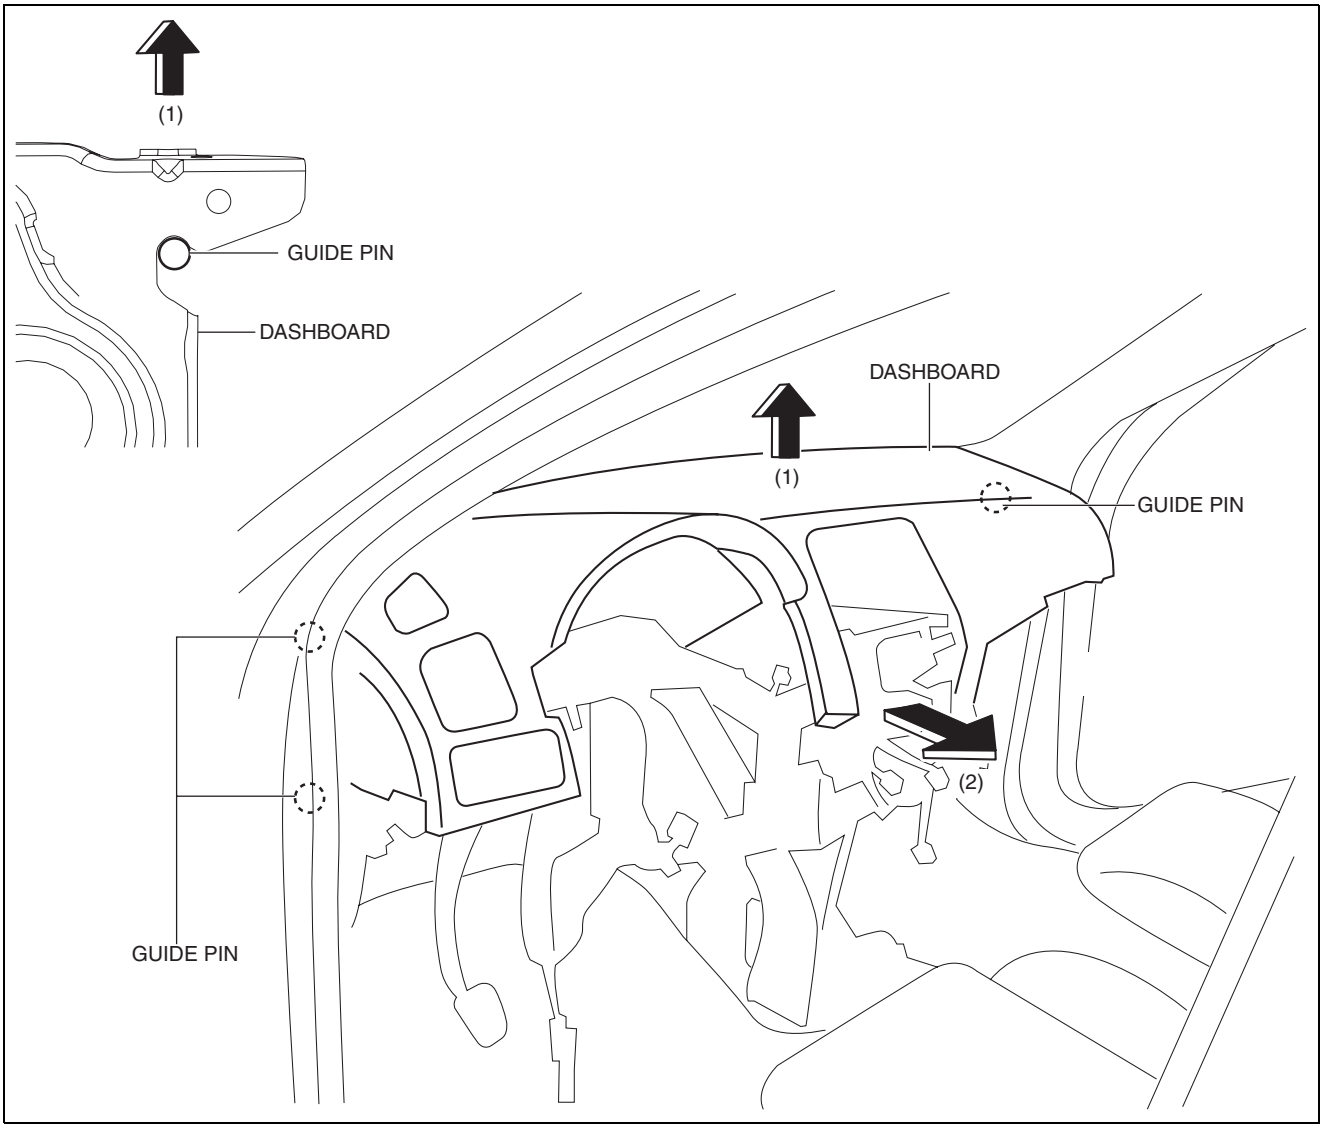
- **Bolts D cannot be removed completely because they contact the front door. If the front door is closed with the bolts D sticking out, it may cause a dent or damage to the coating film. After taking out the dashboard from the cabin, secure removed bolts D to the vehicle body using tape so that they do not stick out.**



ac5wzw0000141

INTERIOR TRIM

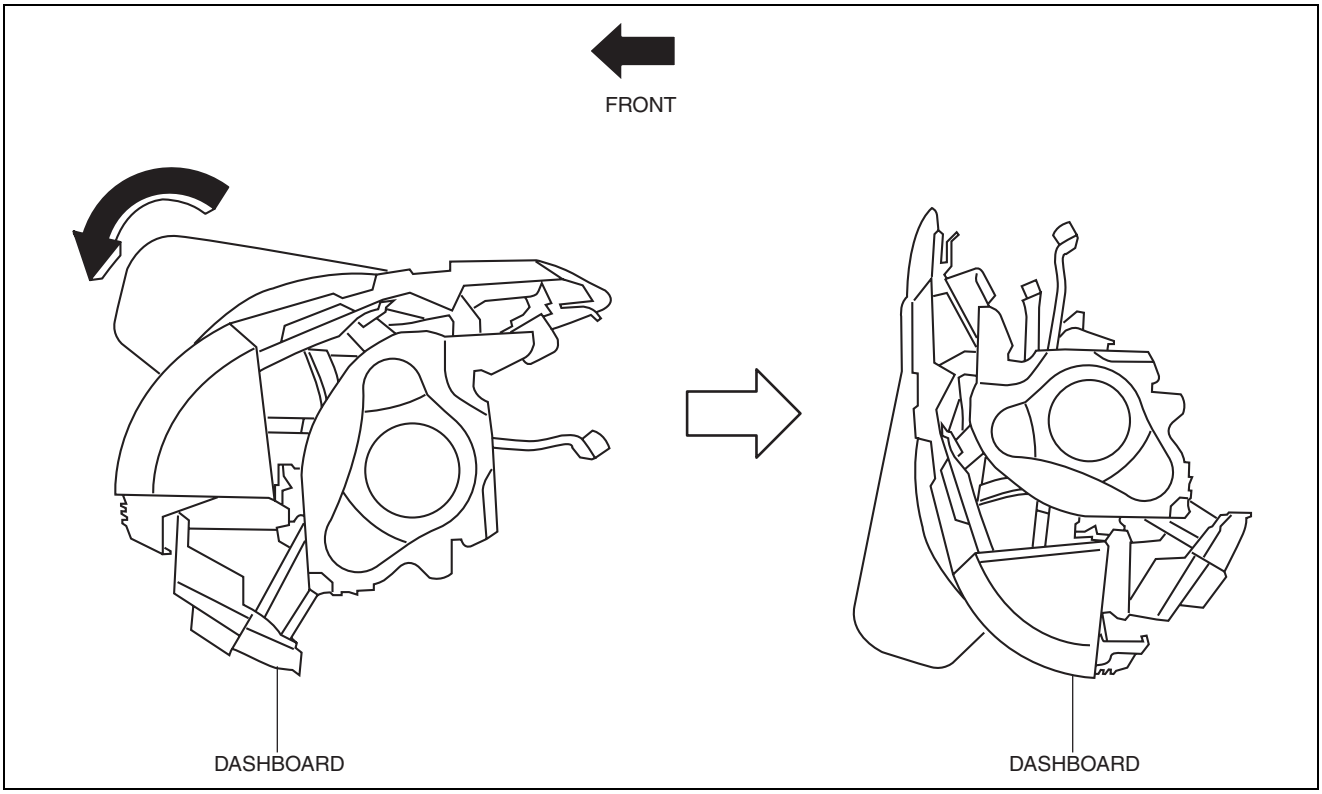
12. Pull up the dashboard in the direction shown in the direction of the arrow (1) shown in the figure, then remove the guide pin.



ac5wzw0000515

INTERIOR TRIM

13. Turn the dashboard 90°in the direction of the arrow shown in the figure.



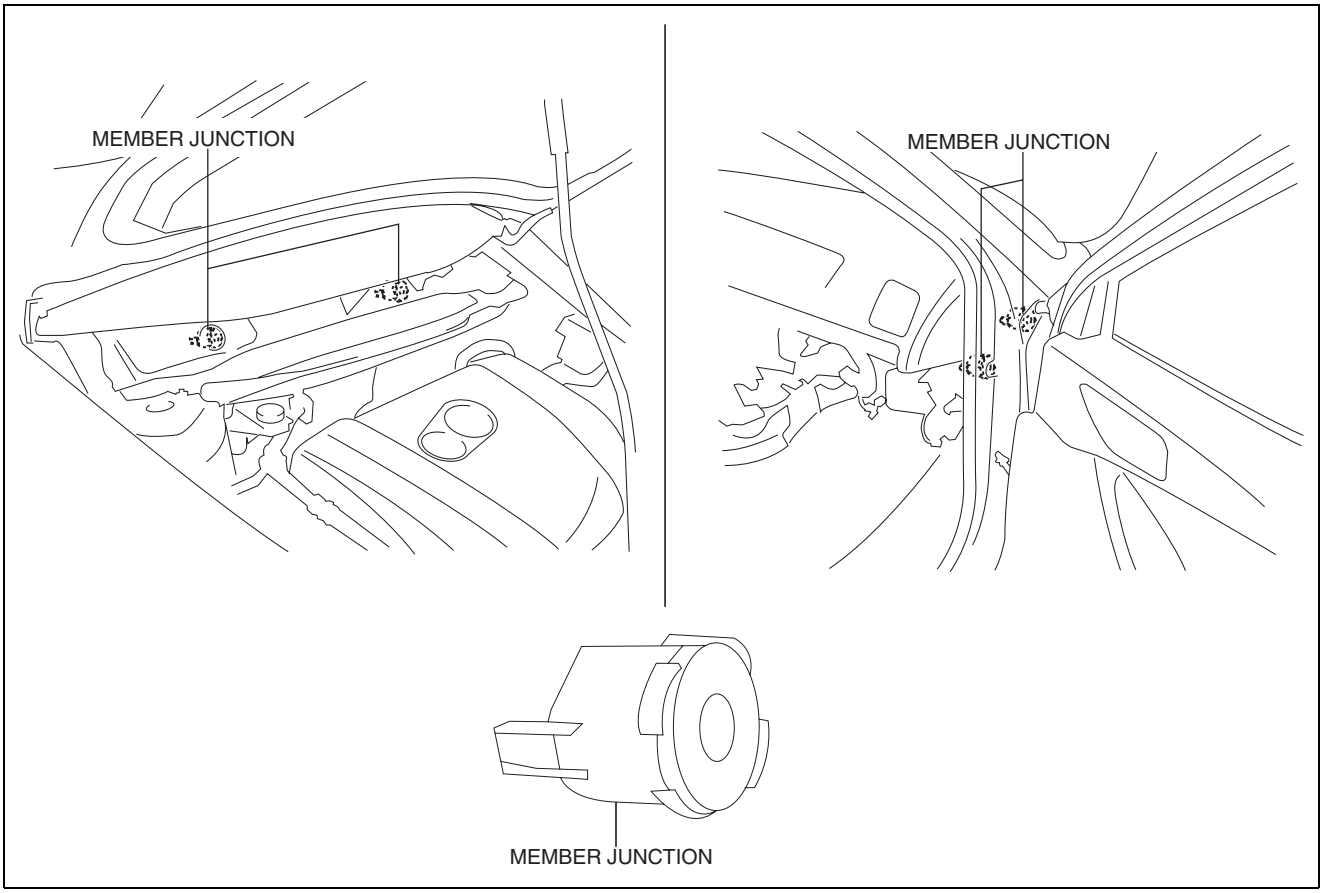
ac5wzw0000141

14. Take the dashboard off from the front driver-side door or front passenger-side door opening.
15. Install in the reverse order of removal.

INTERIOR TRIM

Dashboard Installation Note

- When installing the dashboard, if the position of the member junction is deviated, the bolts cannot be installed. Before installing the dashboard, align the member junction and bolts to the position shown in the figure.



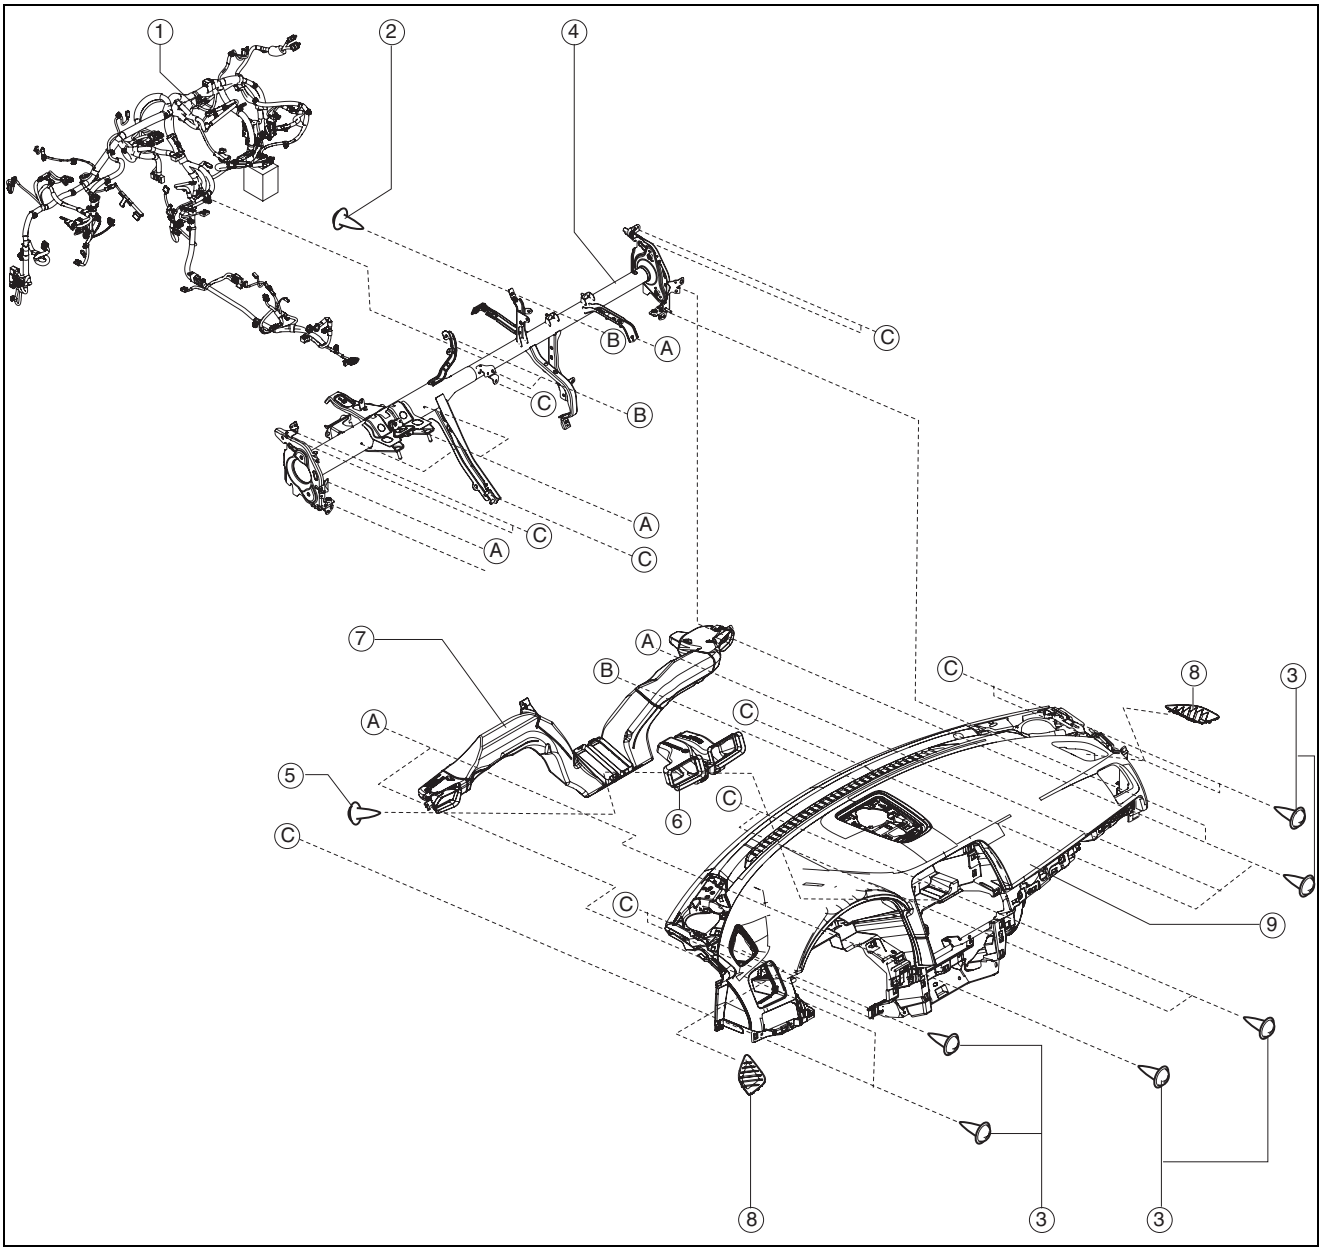
ac5wzw0000166

DASHBOARD DISASSEMBLY/ASSEMBLY

id091700800400

1. Disassemble in the order indicated in the table.

INTERIOR TRIM



ac5wzw0000299

1	Wiring harness
2	Screw A
3	Screw B
4	Dashboard member
5	Screw C

6	Duct No.1
7	Duct No.2
8	Demister grille
9	Dashboard

2. Assemble in the reverse order of disassembly.

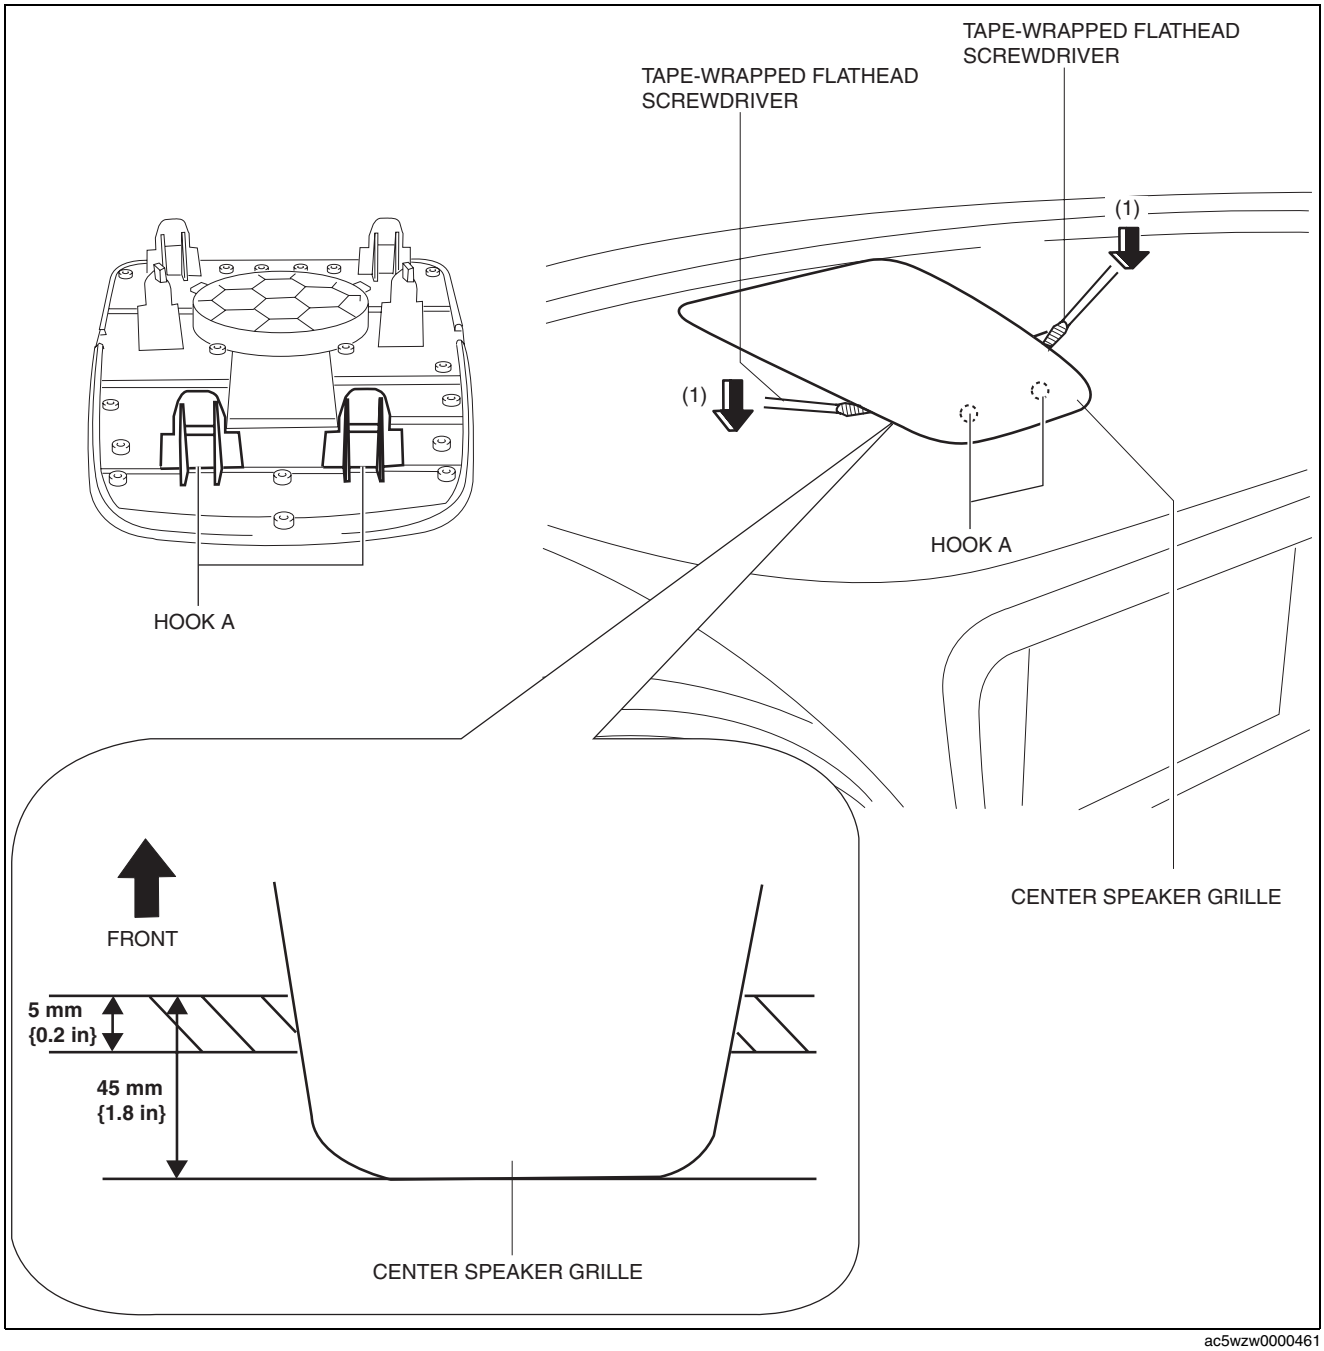
INTERIOR TRIM

SPEAKER GRILLE REMOVAL/INSTALLATION

id091700960700

Center Speaker Grille

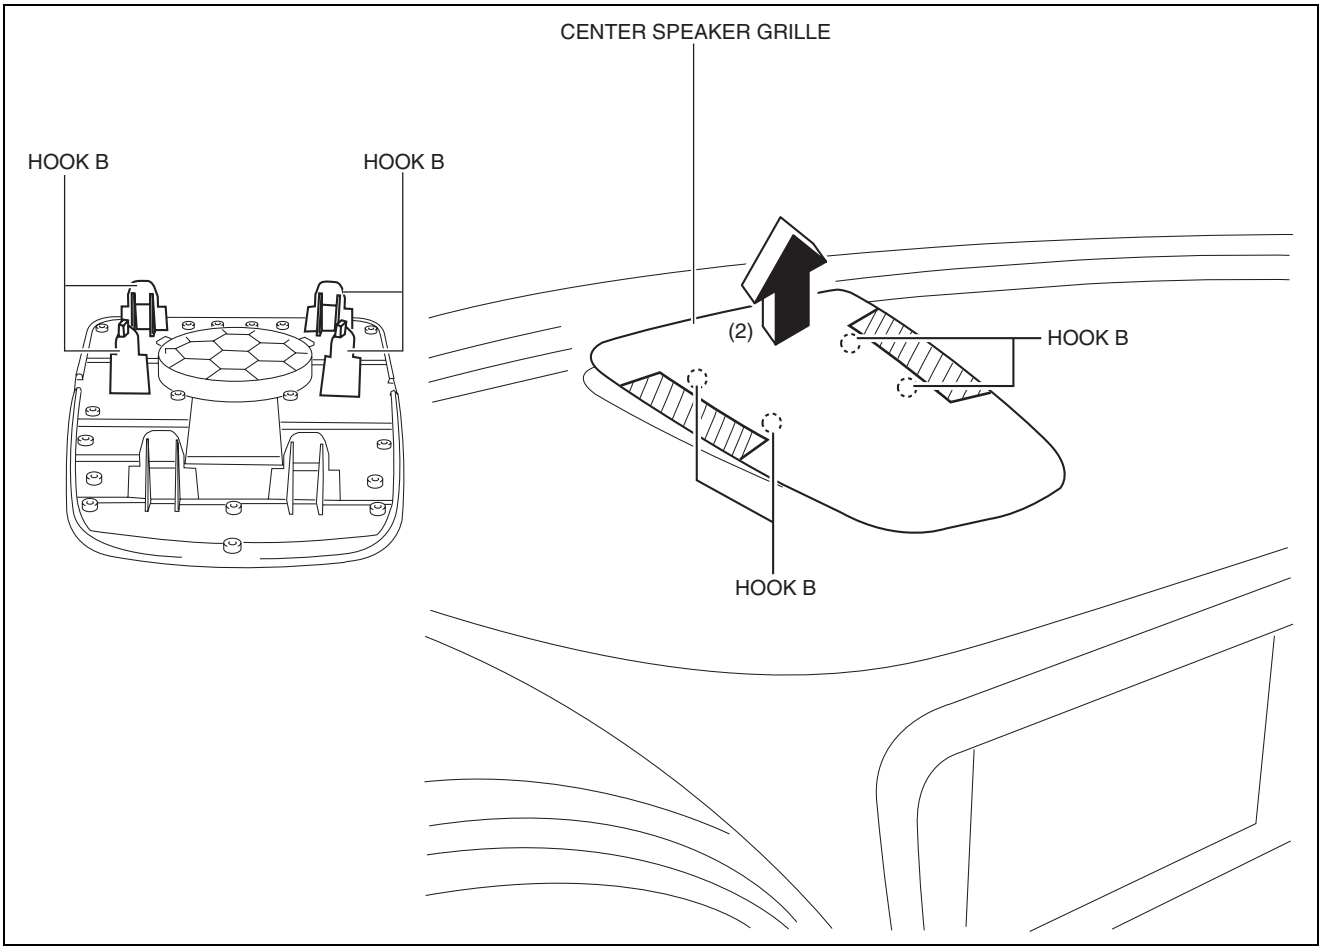
1. Insert a tape-wrapped flathead screwdriver into shown in the figure and remove hooks A in the direction of arrow (1).



ac5wzw0000461

INTERIOR TRIM

2. Take the shaded area shown in the figure, and remove the center speaker grille in the direction of arrow (2) while detaching hooks B.



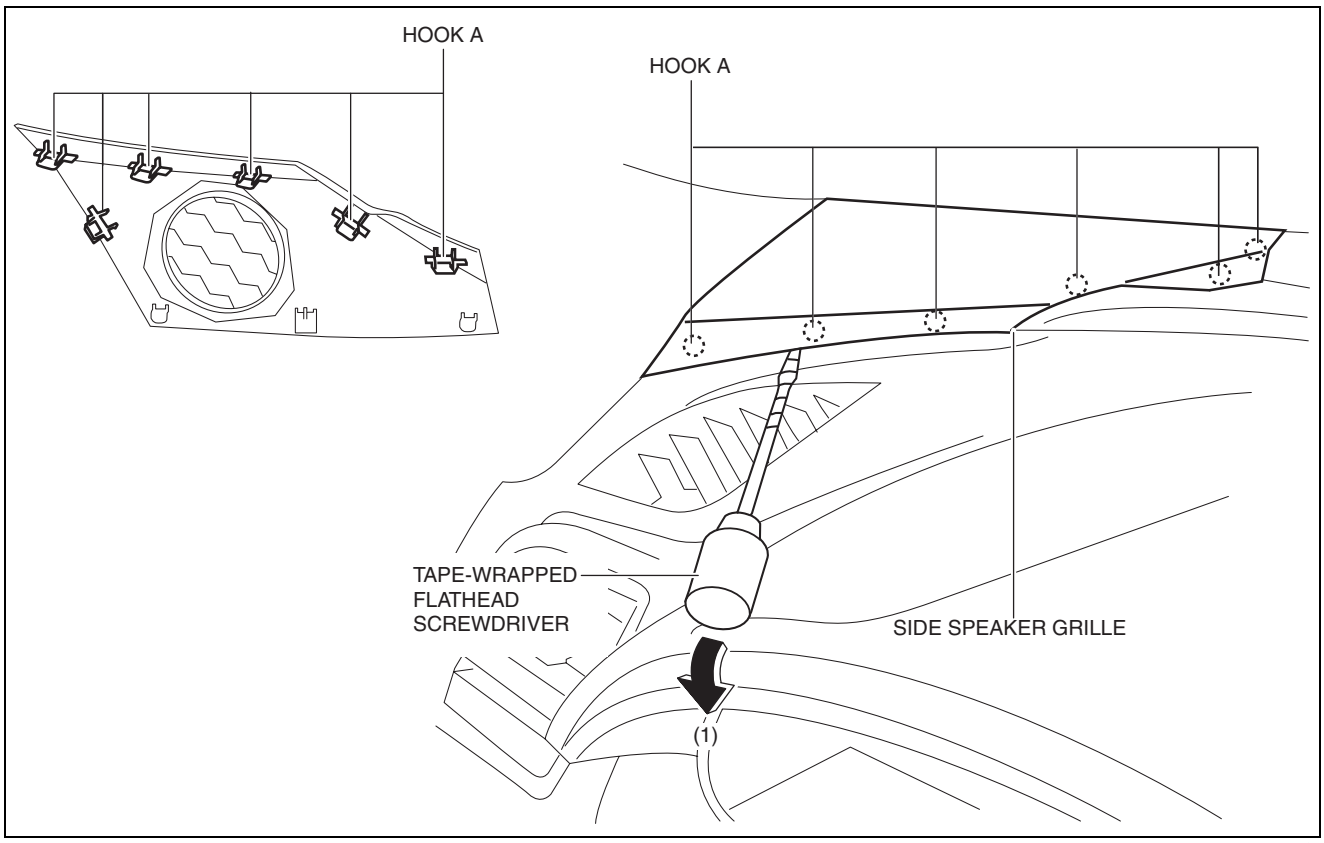
ac5wzw0000462

3. Install in the reverse order of removal.

INTERIOR TRIM

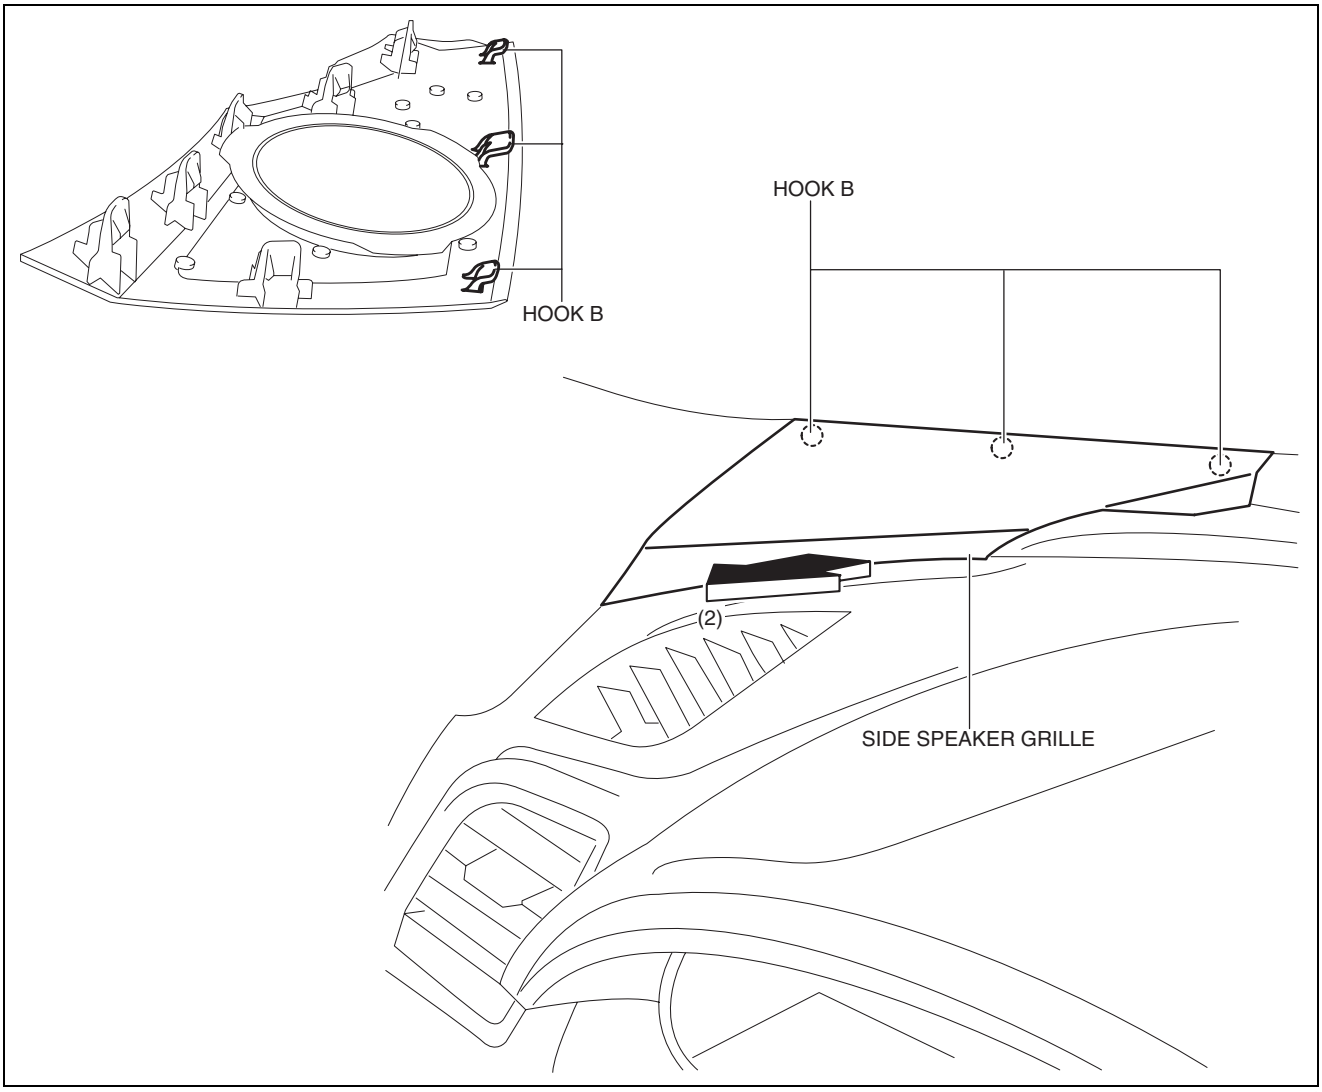
Side Speaker Grille

1. Insert a tape-wrapped flathead screwdriver into the service hole and remove hooks A in the direction of arrow (1).



ac5wzw0000515

2. Pull the side speaker grille in the direction of the arrow (2), and remove the side speaker grille while detaching hooks B.



ac5wzw0000321

3. Install in the reverse order of removal.

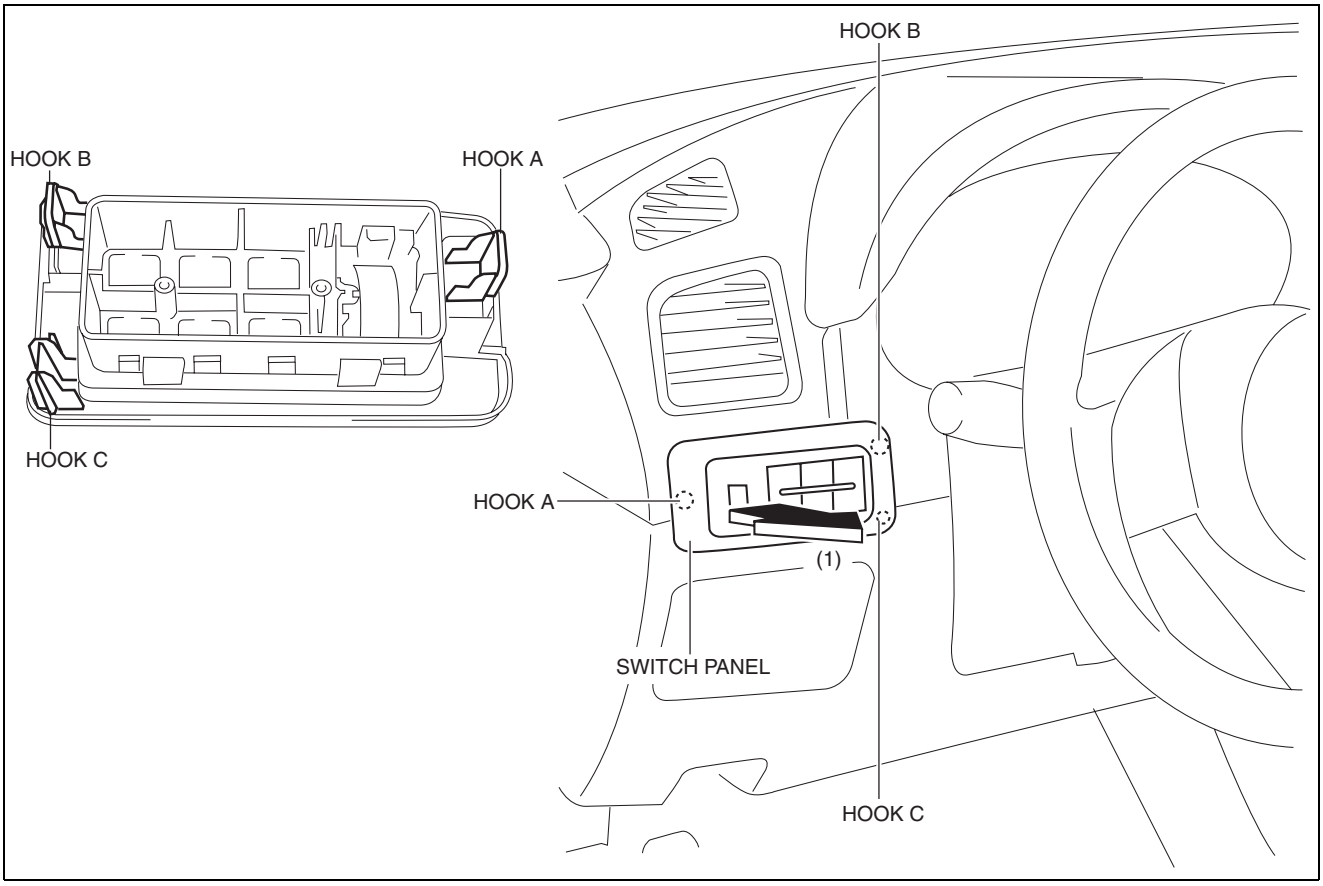
SWITCH PANEL REMOVAL/INSTALLATION

id091700460400

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the car-navigation unit. (with car-navigation system) (See 09-20-11 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)

INTERIOR TRIM

3. Insert your hand from the lower side of the lower panel (without car-navigation system) or the area where the car-navigation unit was installed (with car-navigation system), press the switch panel in the direction of the arrow (1) shown in the figure and remove it while detaching hook A and B and hook C.

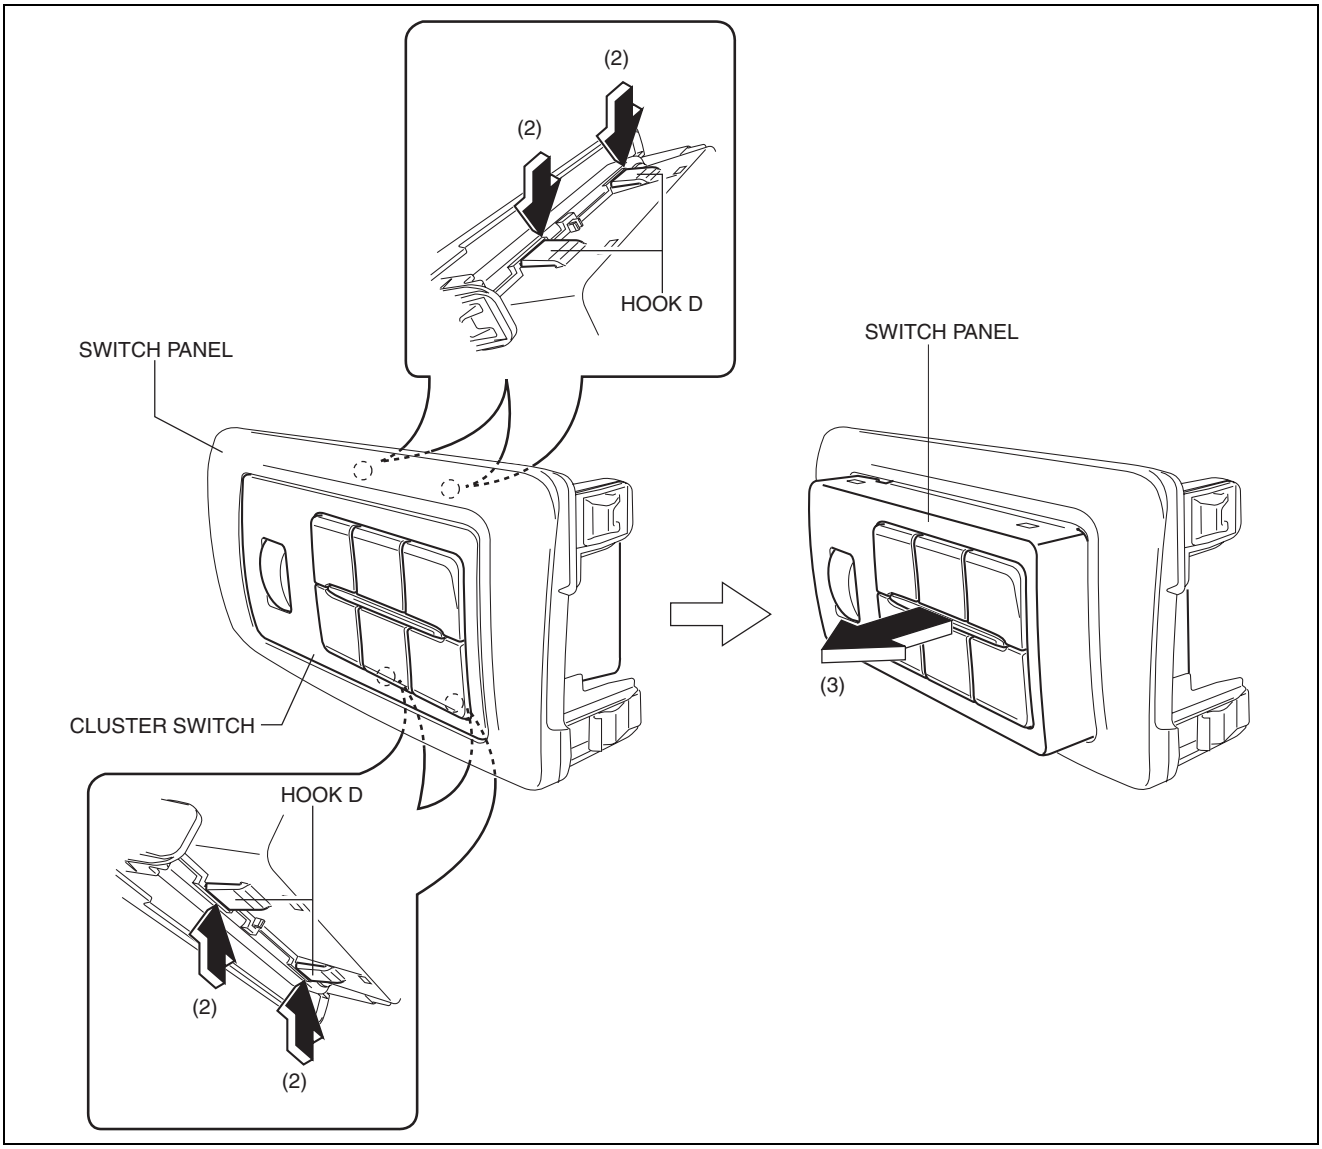


ac5wzw0000299

4. Disconnect the cluster switch connector.

INTERIOR TRIM

5. Remove the cluster switch in the direction of the arrow (3) while detaching hooks D in the direction of the arrow (2).



ac5wzw0000140

6. Install in the reverse order of removal.

METER HOOD REMOVAL/INSTALLATION

id091700800900

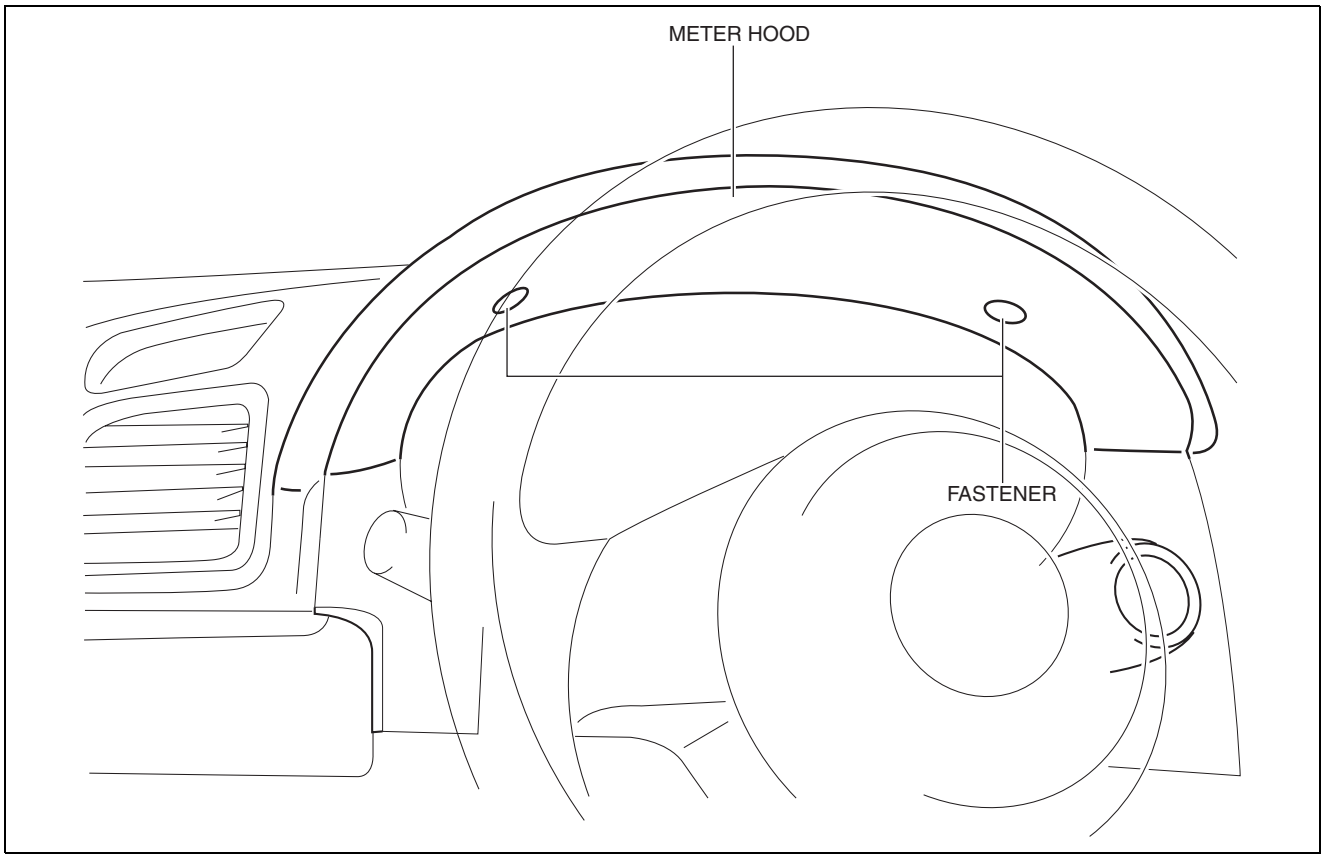
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the upper column cover (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.)

INTERIOR TRIM

3. Using a phillips screwdriver, remove fasteners.

Note

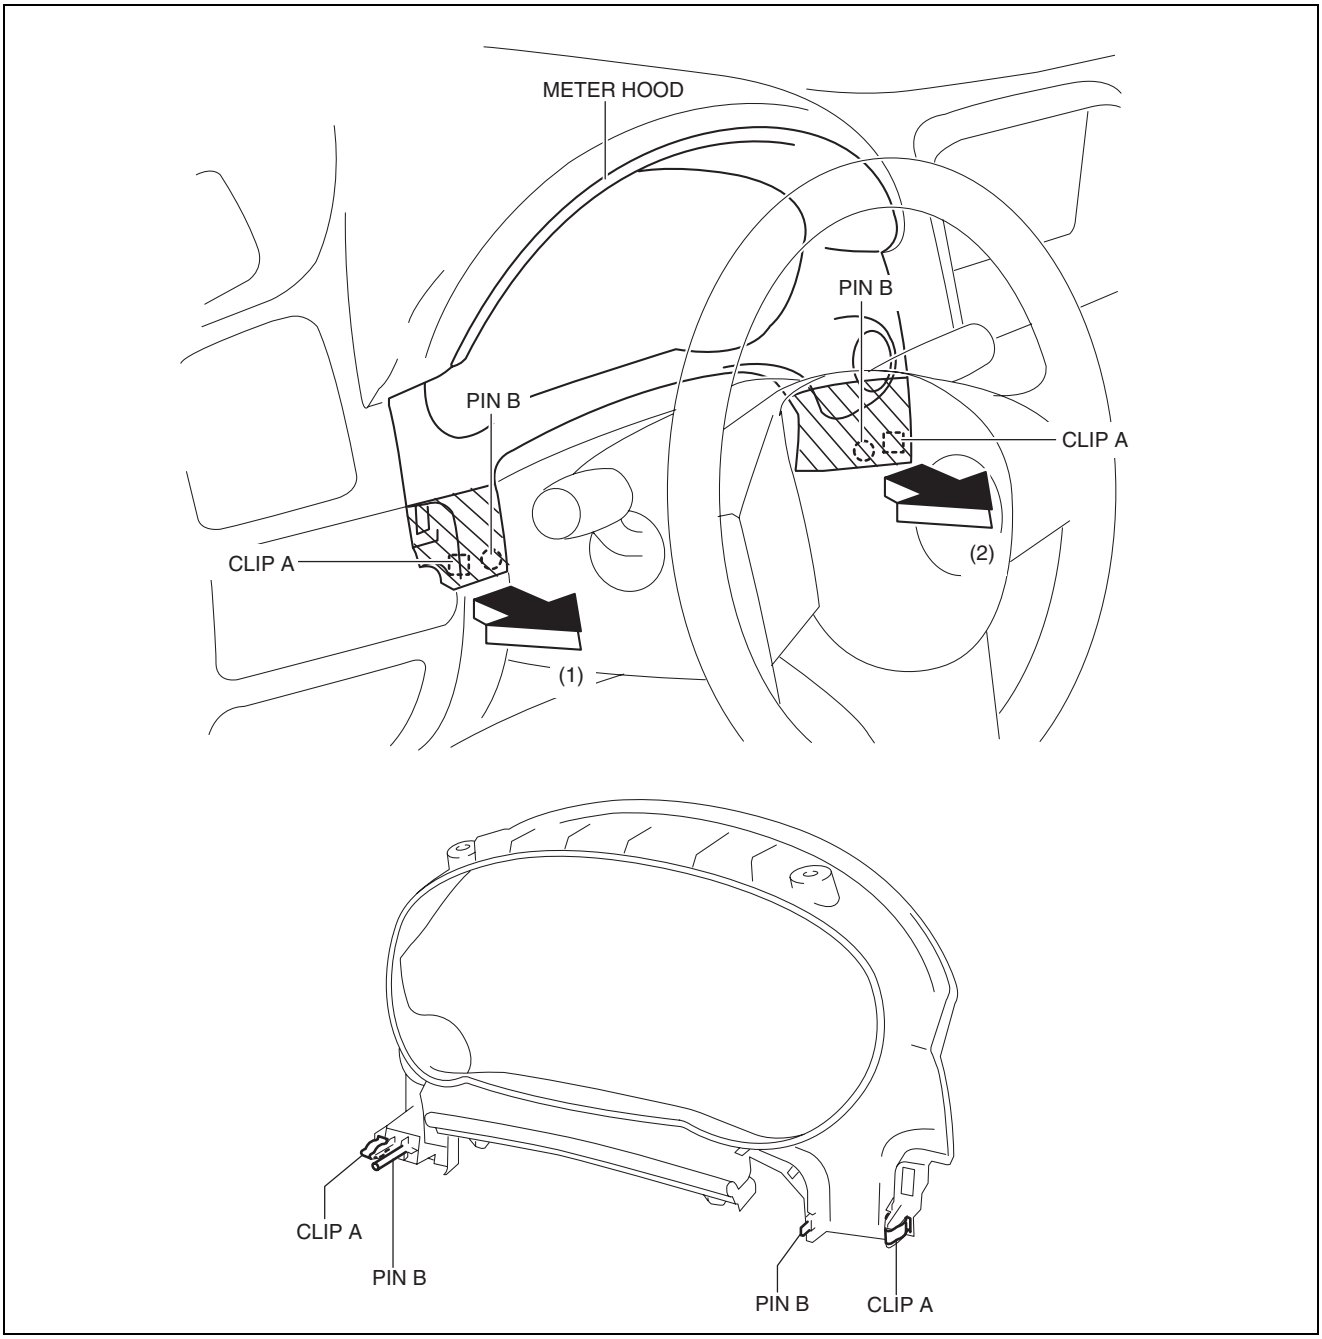
- When pulling up the shaft of fasteners using a phillips screwdriver, the shaft will not be pulled up if it is rotated by pressing the driver. To pull up the shaft of fastener, use the phillips screwdriver to lightly contact fasteners.



ac5uuw00001755

INTERIOR TRIM

4. Take the shaded area shown in the figure, and remove the meter hood in the direction of the arrow in the order of (1), (2) while detaching the clips A, pins B.



ac5uuw00001756

5. Disconnect the start switch connector
6. Install in the reverse order of removal.

VENTILATOR GRILLE REMOVAL/INSTALLATION

id091700804600

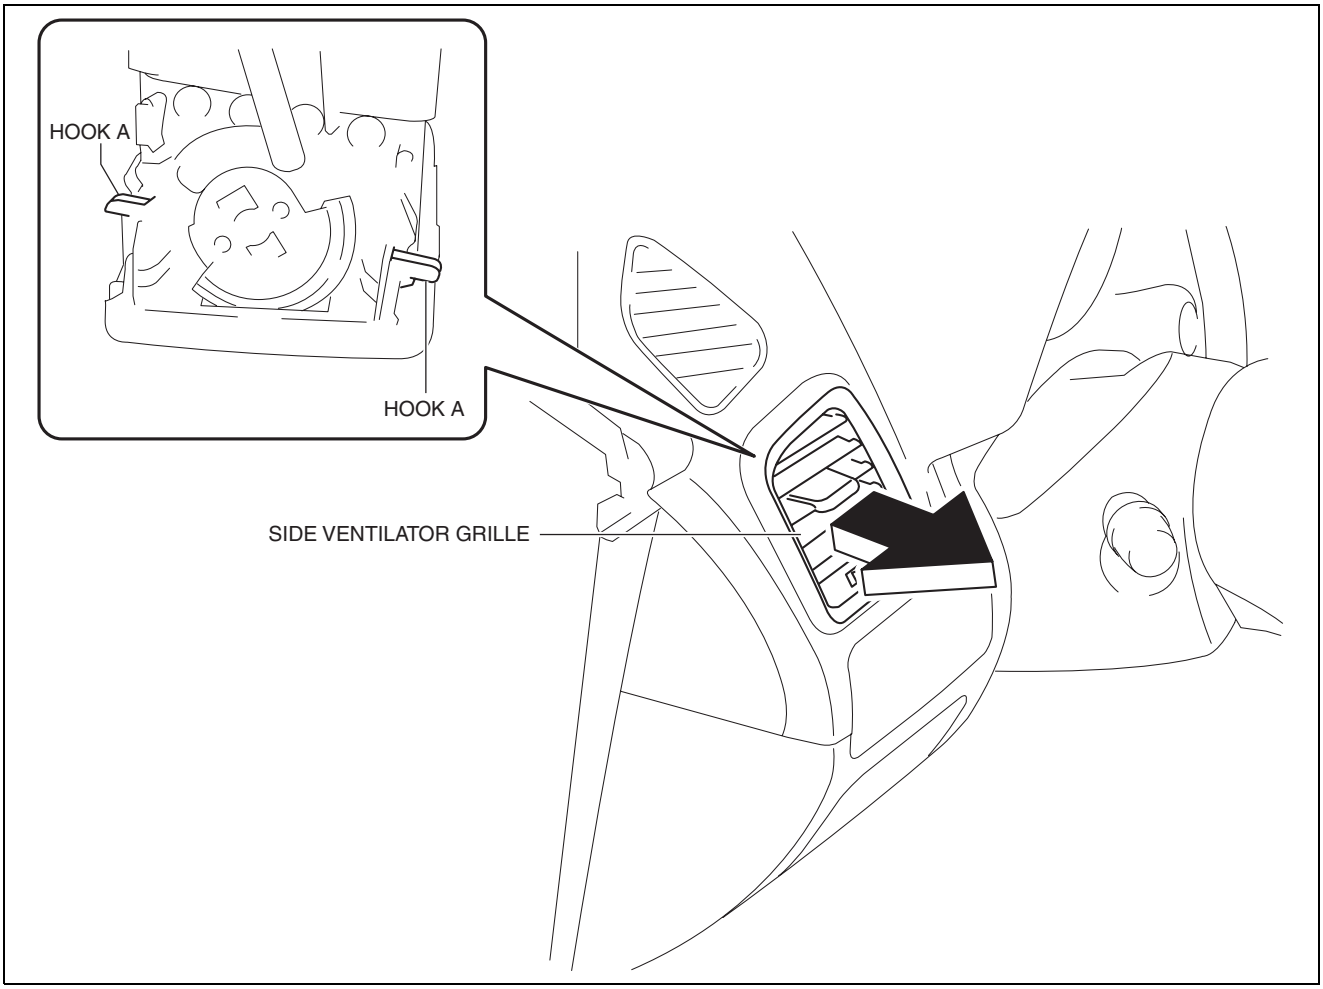
Side Ventilator Grille

Driver-side

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the switch panel. (See 09-17-18 SWITCH PANEL REMOVAL/INSTALLATION.)

INTERIOR TRIM

3. Insert your hand from the area where the switch panel was installed, remove the side ventilator grille in the direction of the arrow shown in the figure while detaching hooks A.



ac5uuw00001792

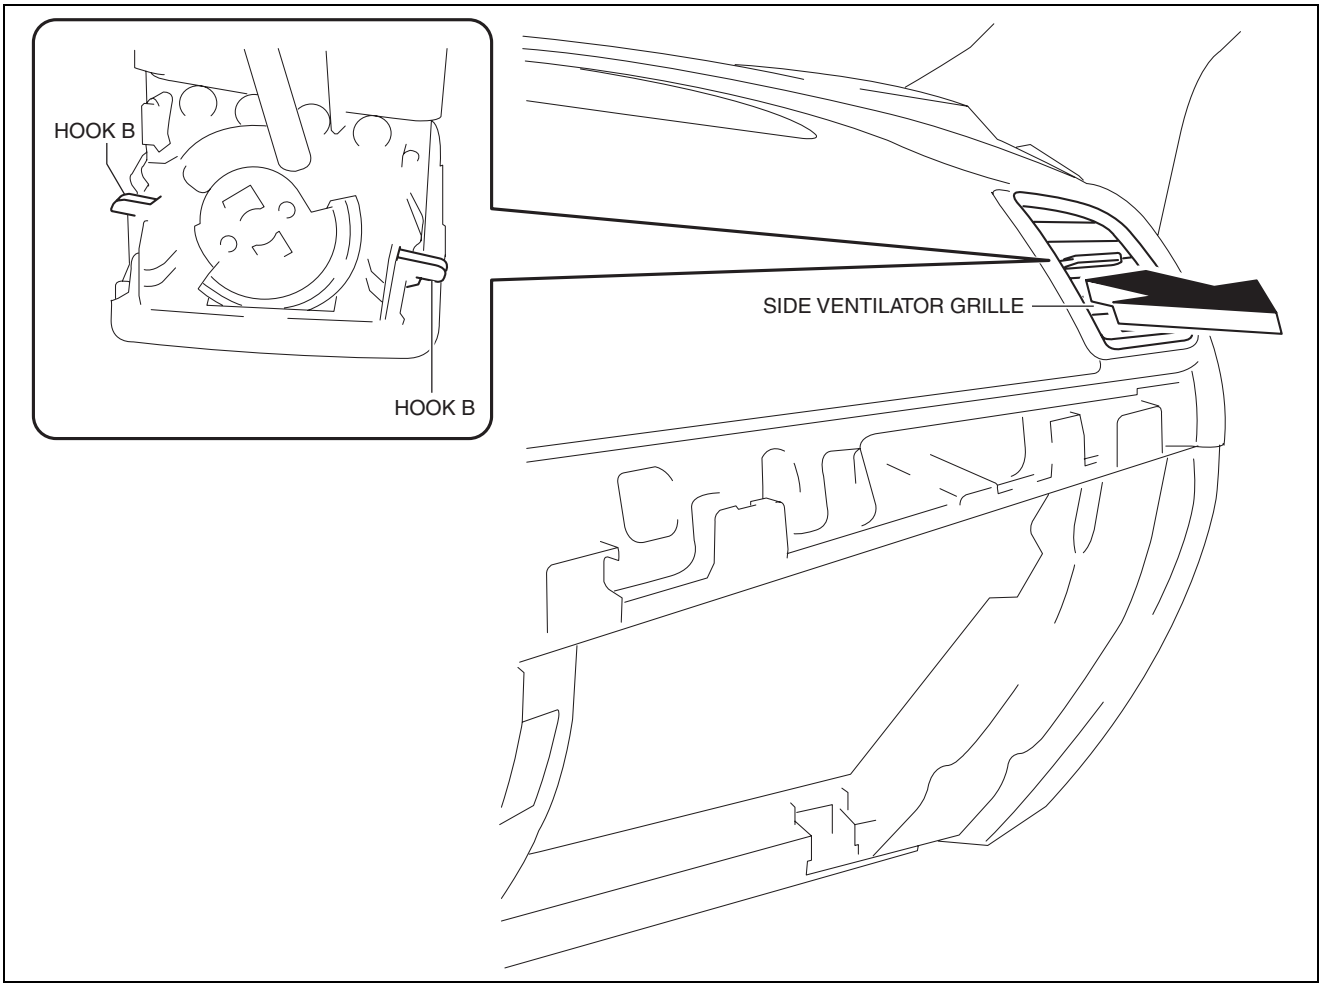
4. Install in the reverse order of removal.

Passenger-side

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Open the glove compartment.
3. Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)

INTERIOR TRIM

4. Insert your hand from the area where the glove compartment was installed, remove the side ventilator grille in the direction of the arrow shown in the figure while detaching hooks B.



ac5uuw00001793

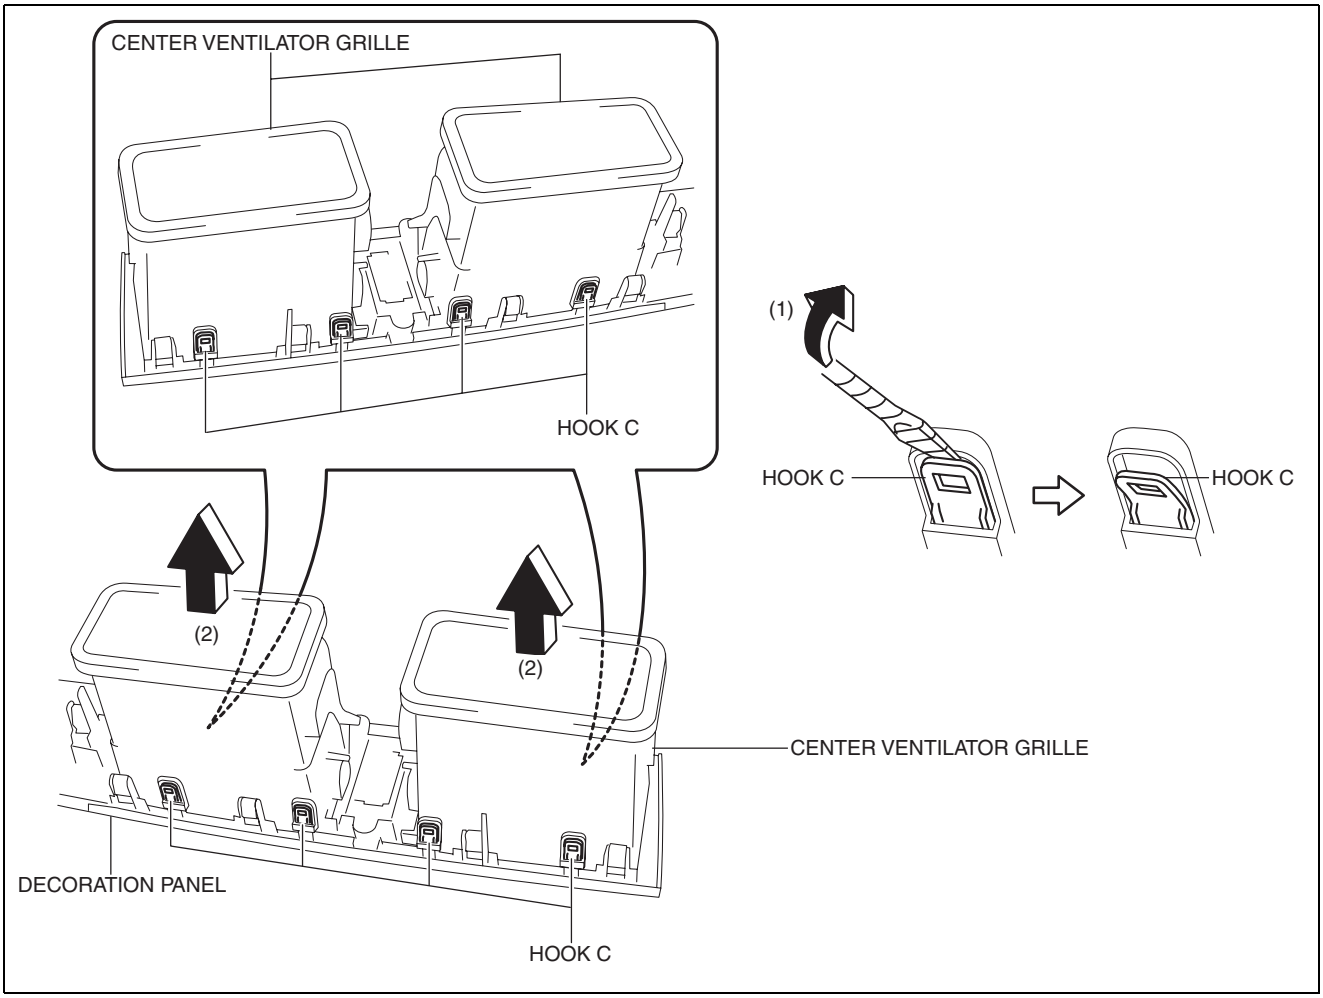
5. Install in the reverse order of removal.

Center Ventilator Grille

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the decoration panel. (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)

INTERIOR TRIM

3. Push the edge of center ventilator grille in the direction of arrow (1) and detach hooks C.



ac5uuw00001794

4. Remove the center ventilator grille in the direction of arrow (2) shown in the figure.
5. Install in the reverse order of removal.

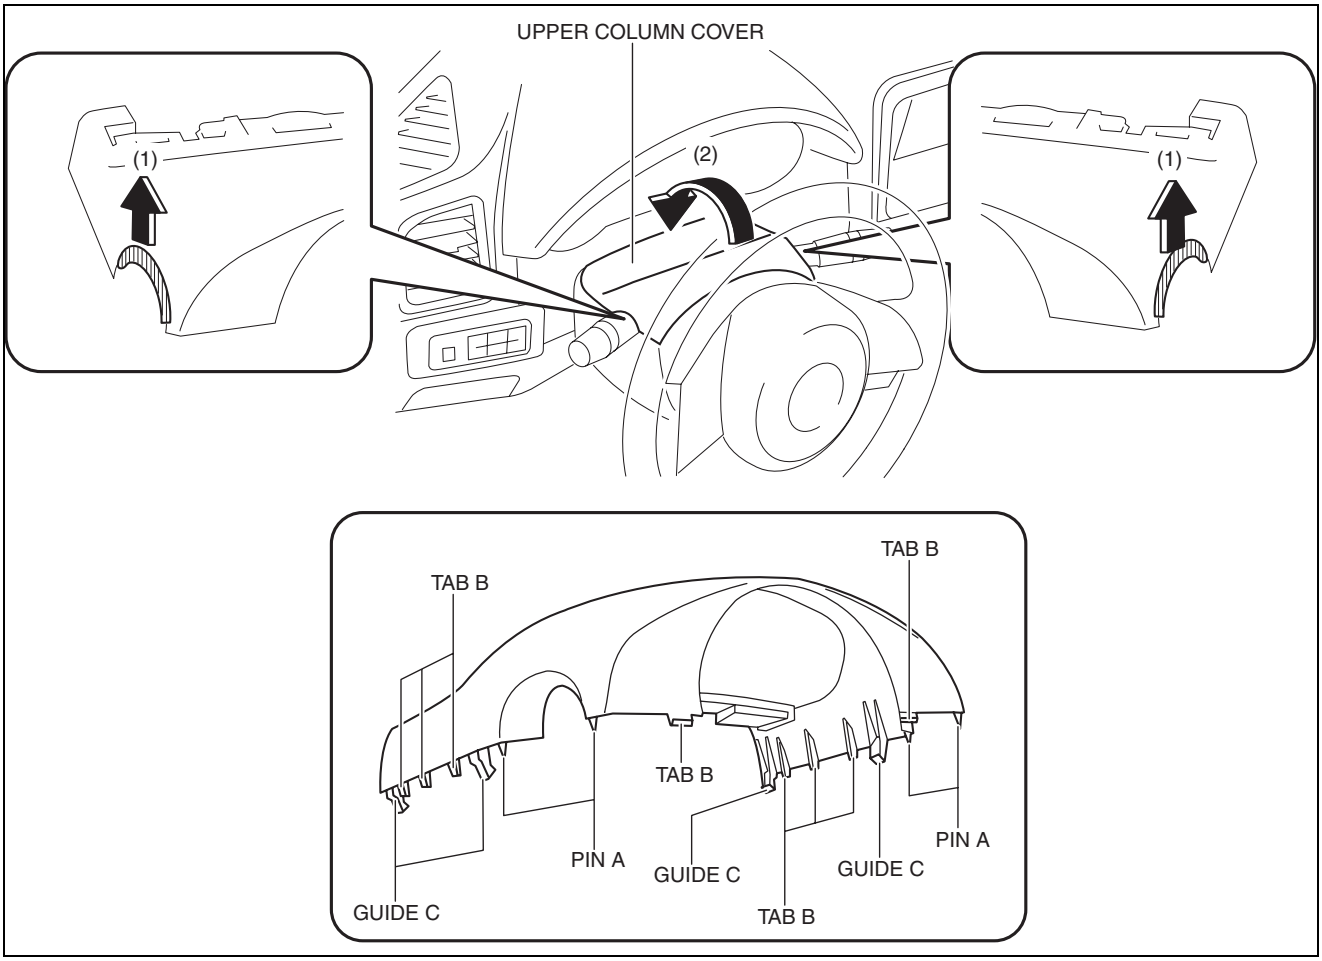
COLUMN COVER REMOVAL/INSTALLATION

id091700800800

1. Pull down the steering wheel.

INTERIOR TRIM

2. Press the shaded area shown in the figure using your thumb, and lift the upper column cover in the direction of arrow (1).



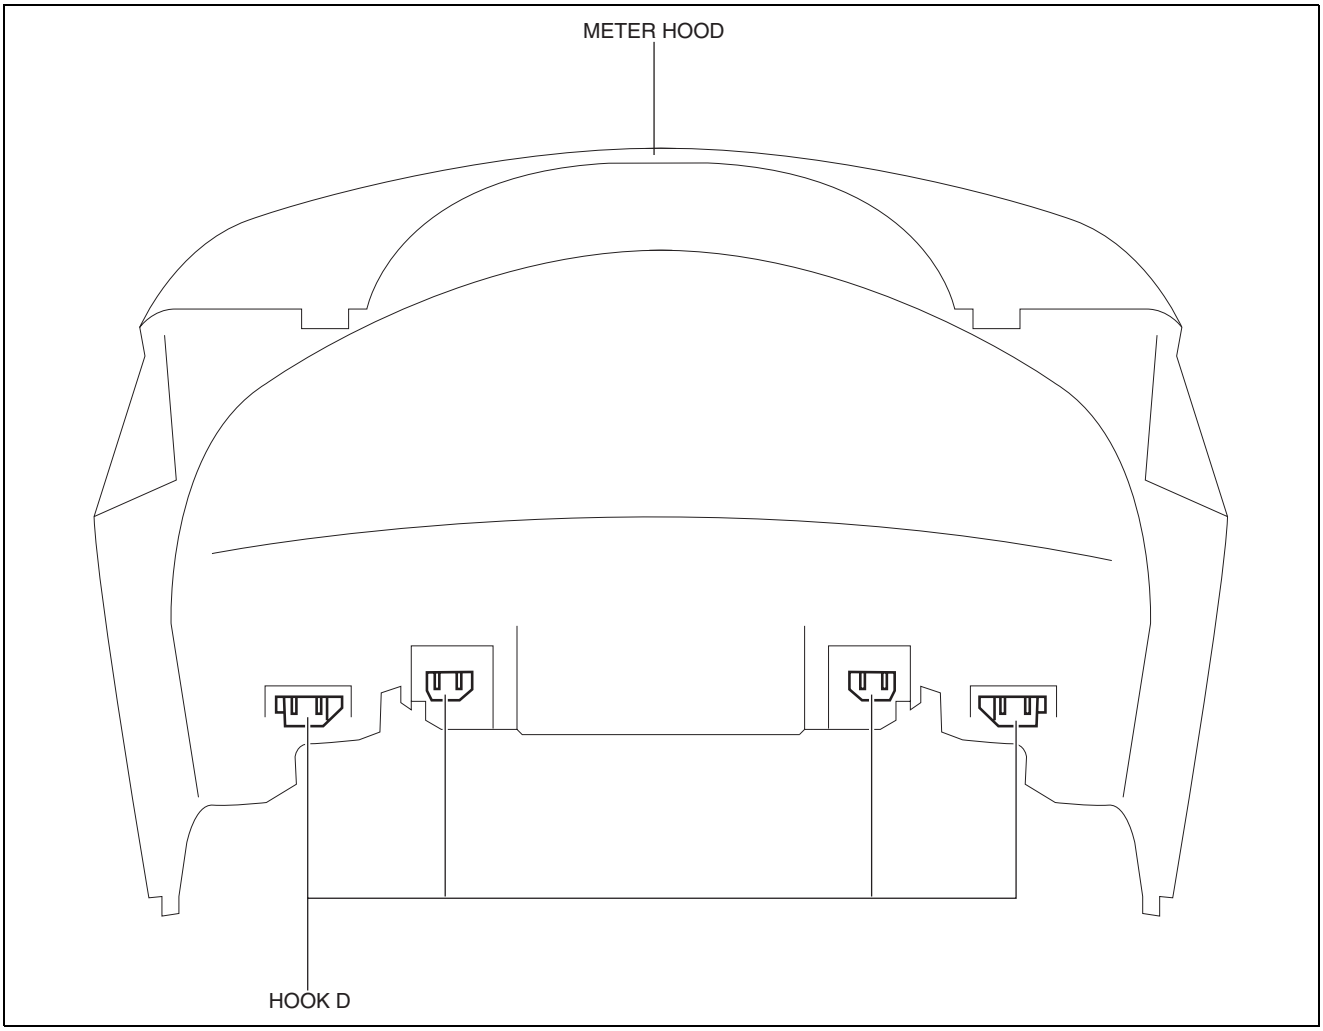
ac5uuw00001753

3. Pull the upper column cover in the direction of the arrow (2) and remove it while detaching pins A, tabs B and guides C.

4. Remove hooks D from the meter hood.

Caution

- **If the cover of the meter hood is deformed, it may not return to its original condition. When removing the cover of the meter hood, detach hooks D one by one from the upper column cover.**

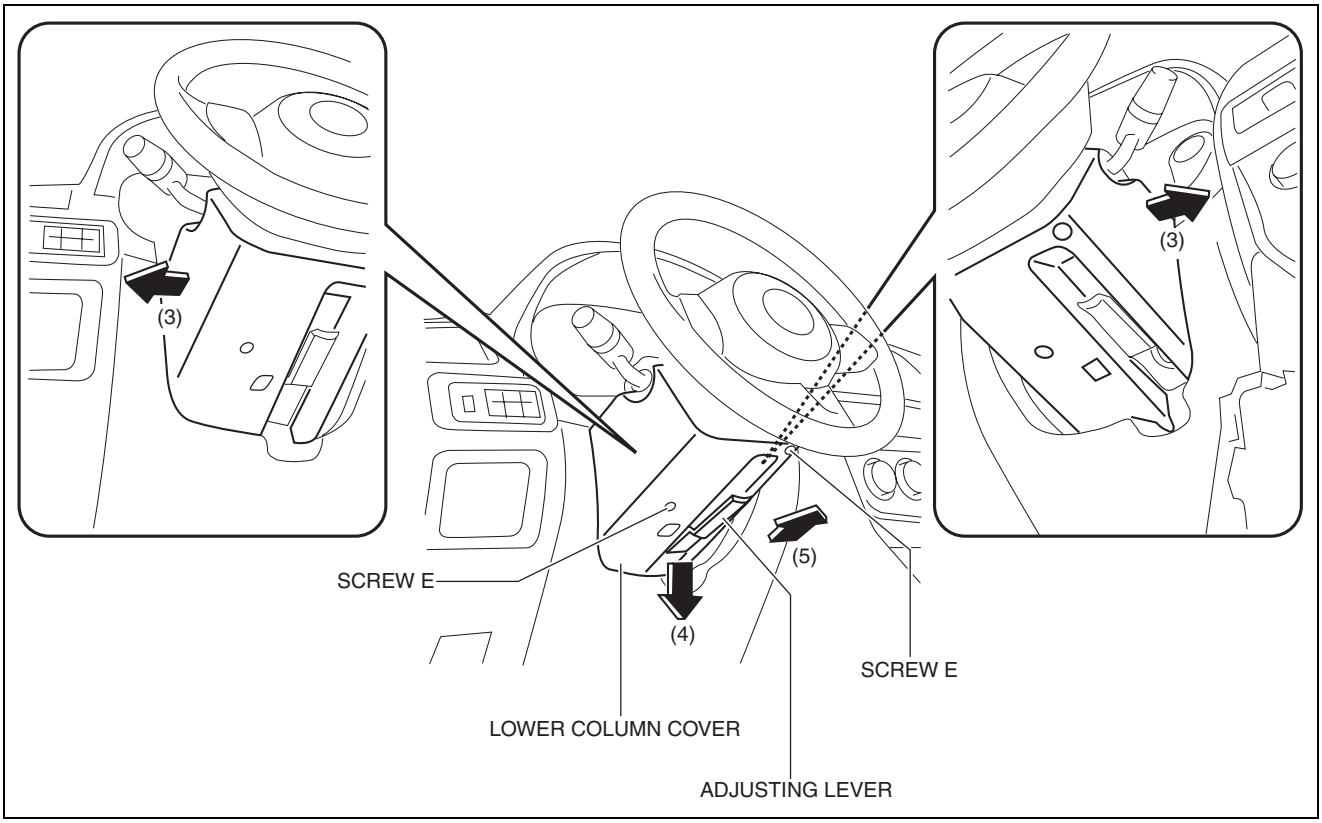


ac5wzw0000142

5. Pull up the steering wheel.

INTERIOR TRIM

6. Remove screws E.



ac5wzw0000280

7. Remove the lower column cover in the direction of the arrow (4),(5) set the adjusting lever aside while keeping it open in the direction of the arrow (3) shown in the figure.
8. Install in the reverse order of removal.

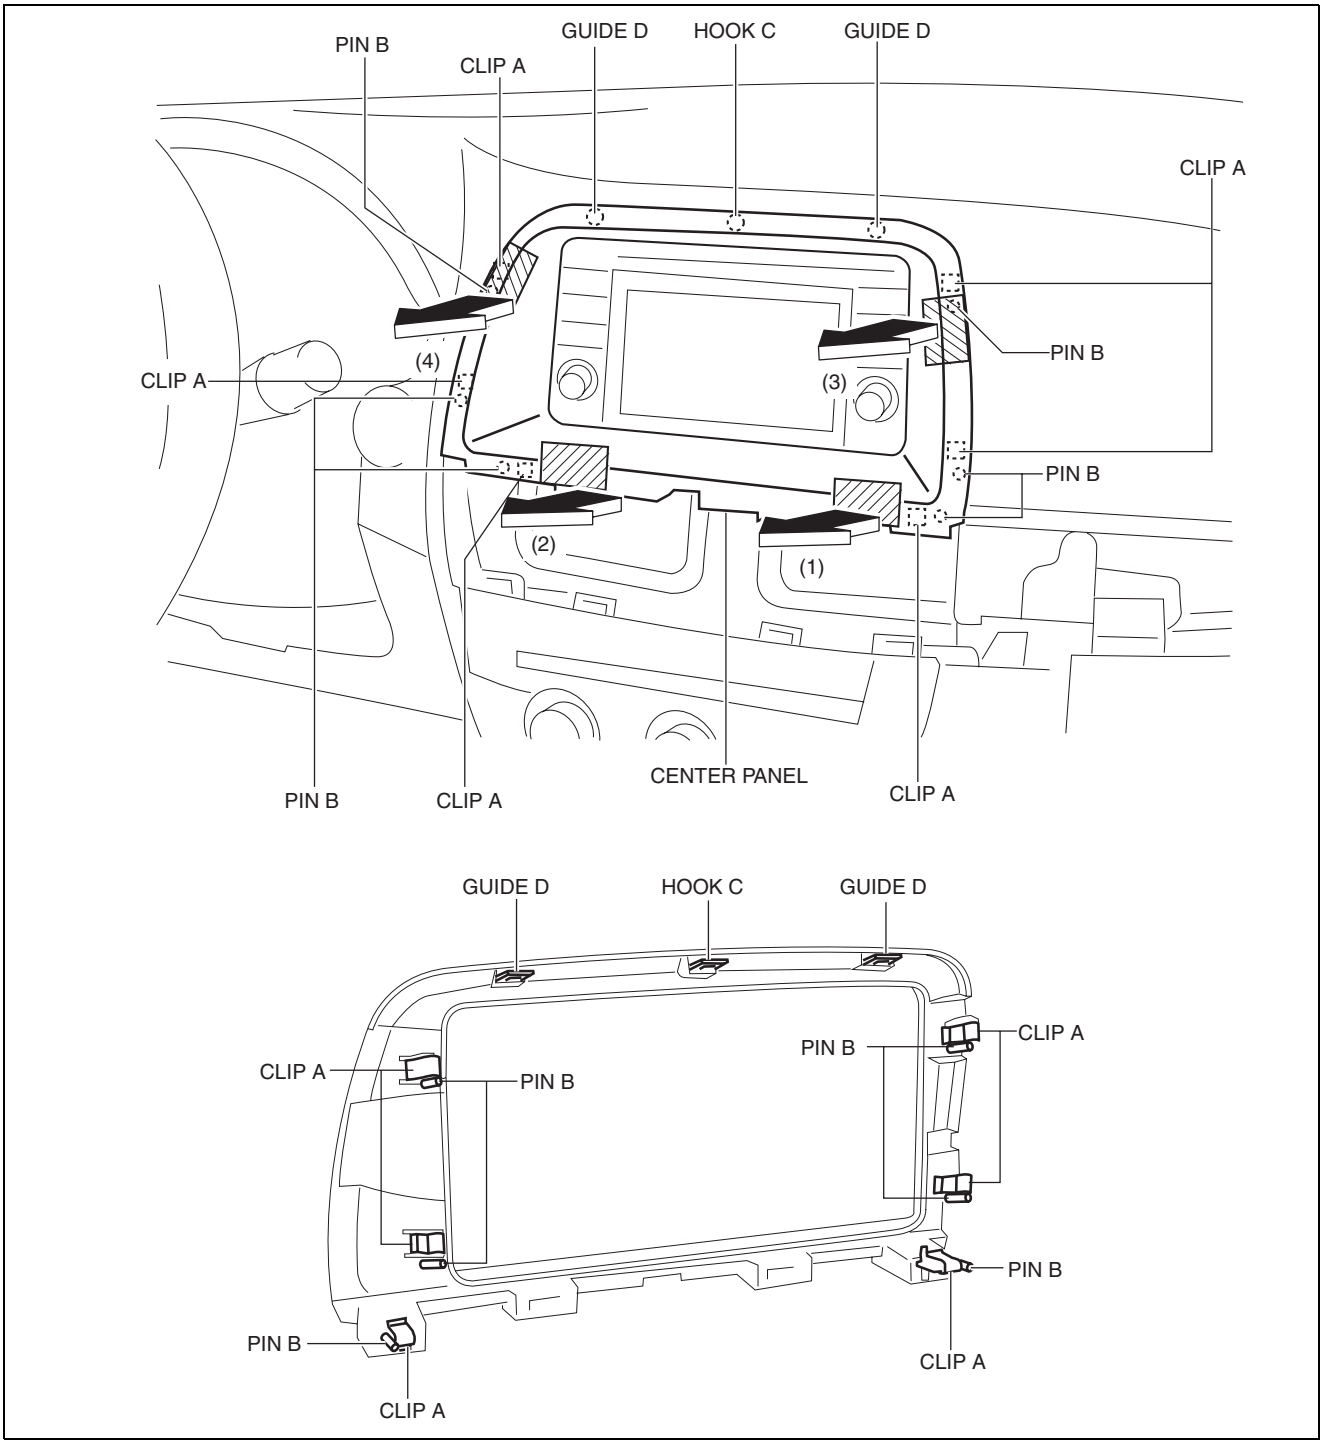
CENTER PANEL REMOVAL/INSTALLATION

id091700804500

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)

INTERIOR TRIM

3. Take the shaded area shown in the figure, and pull the center panel in the direction of the arrow in the order of (1), (2), (3), (4) and remove it while detaching clips A, pins B, hook C and guides D.



ac5wzw0000458

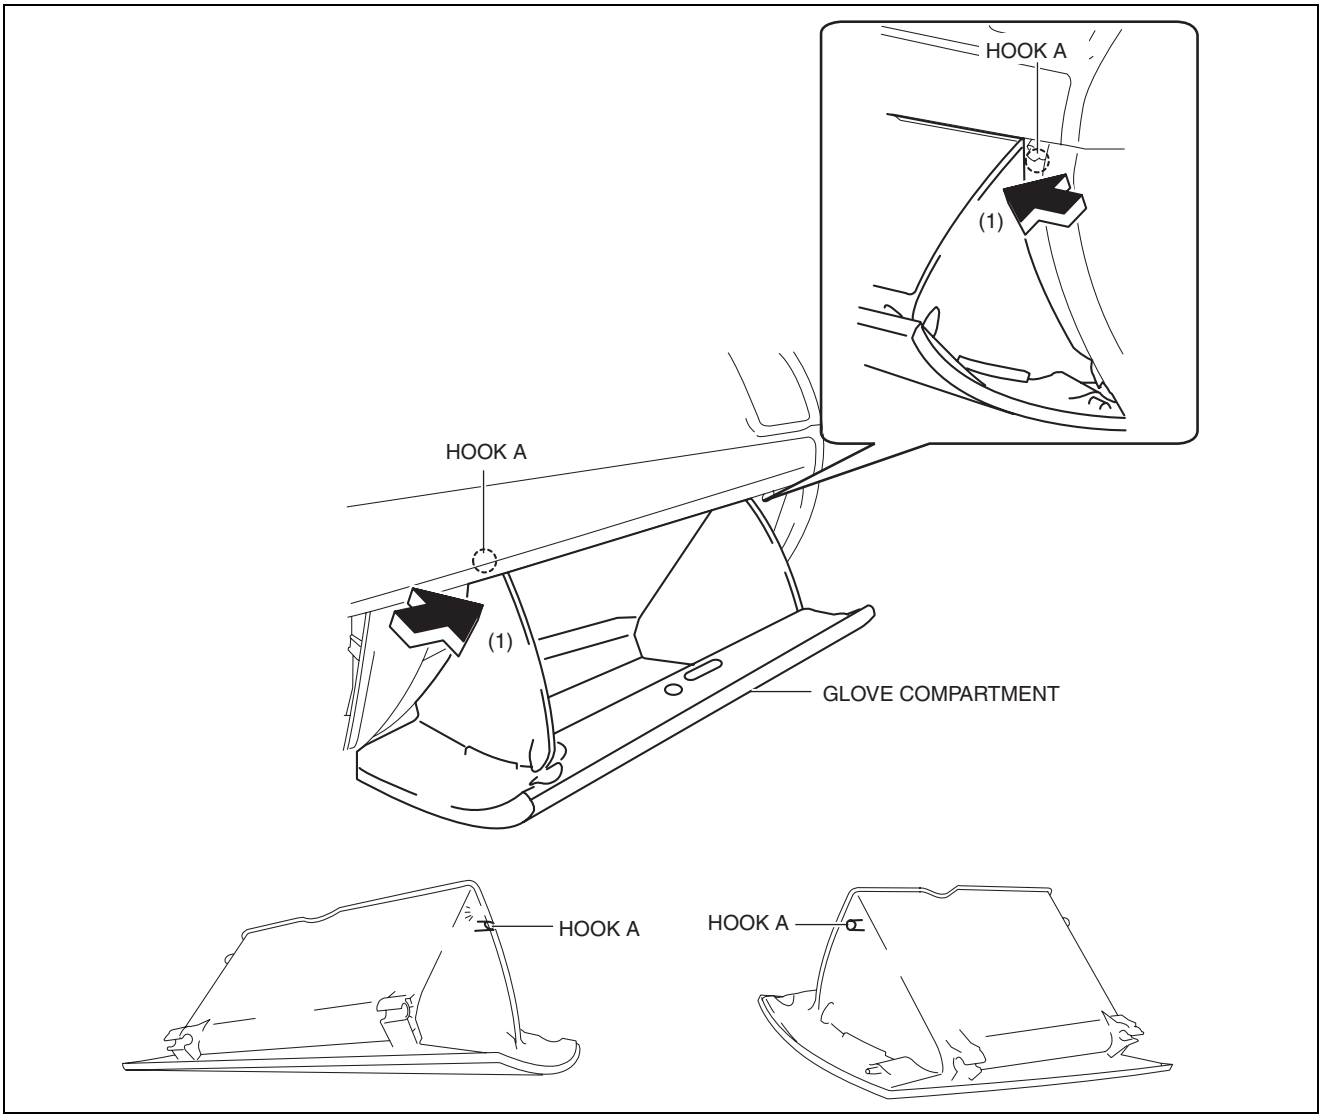
4. Install in the reverse order of removal.

INTERIOR TRIM

GLOVE COMPARTMENT REMOVAL/INSTALLATION

id091700800700

1. Push the glove compartment in the direction of the arrow (1) and remove hooks A.



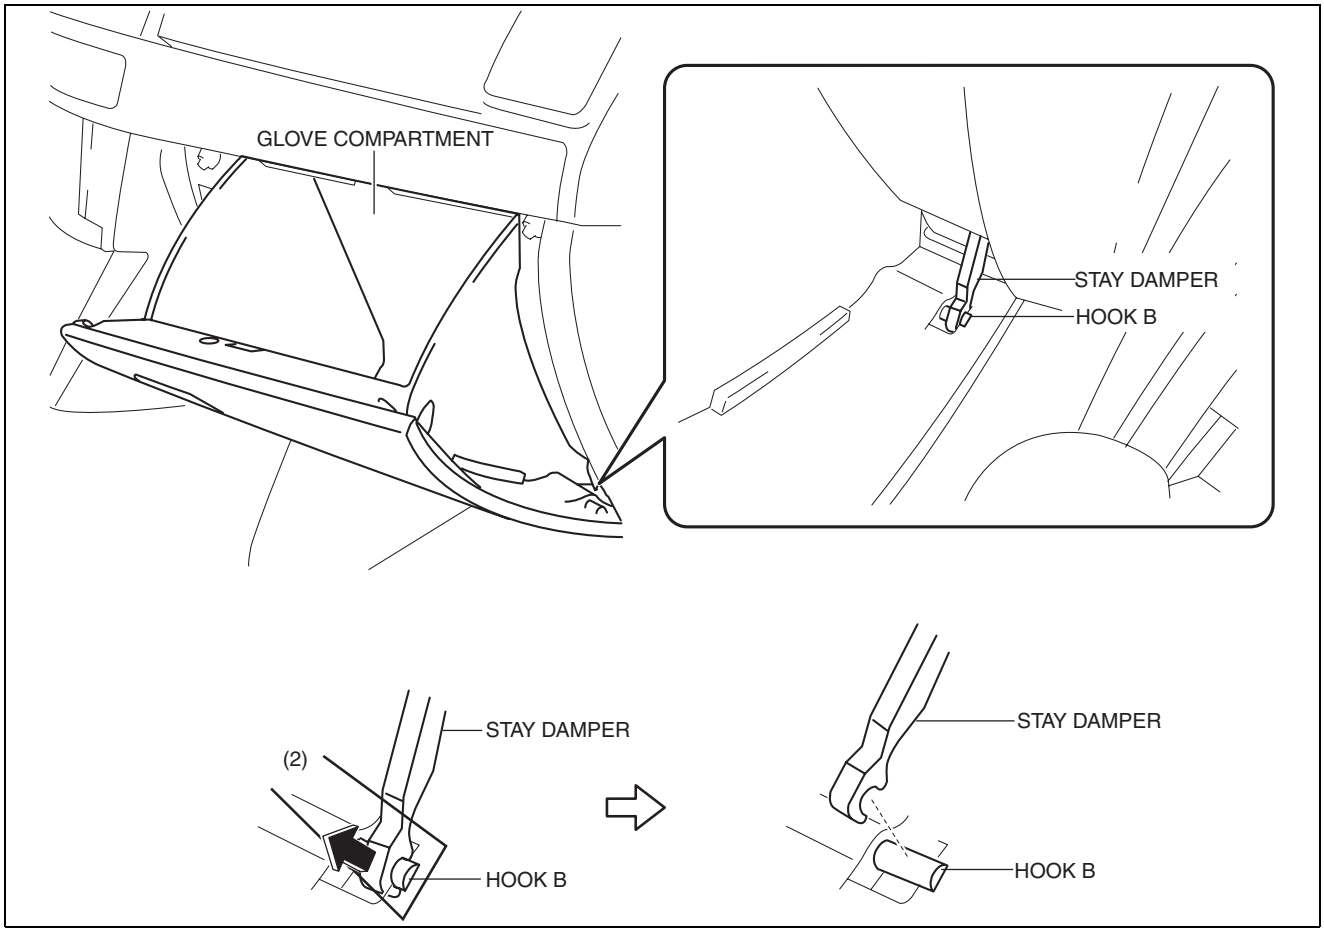
ac5uuw00001750

2. Pull the stay damper in the direction of the arrow (2) shown in the figure and remove the hook B.

Caution

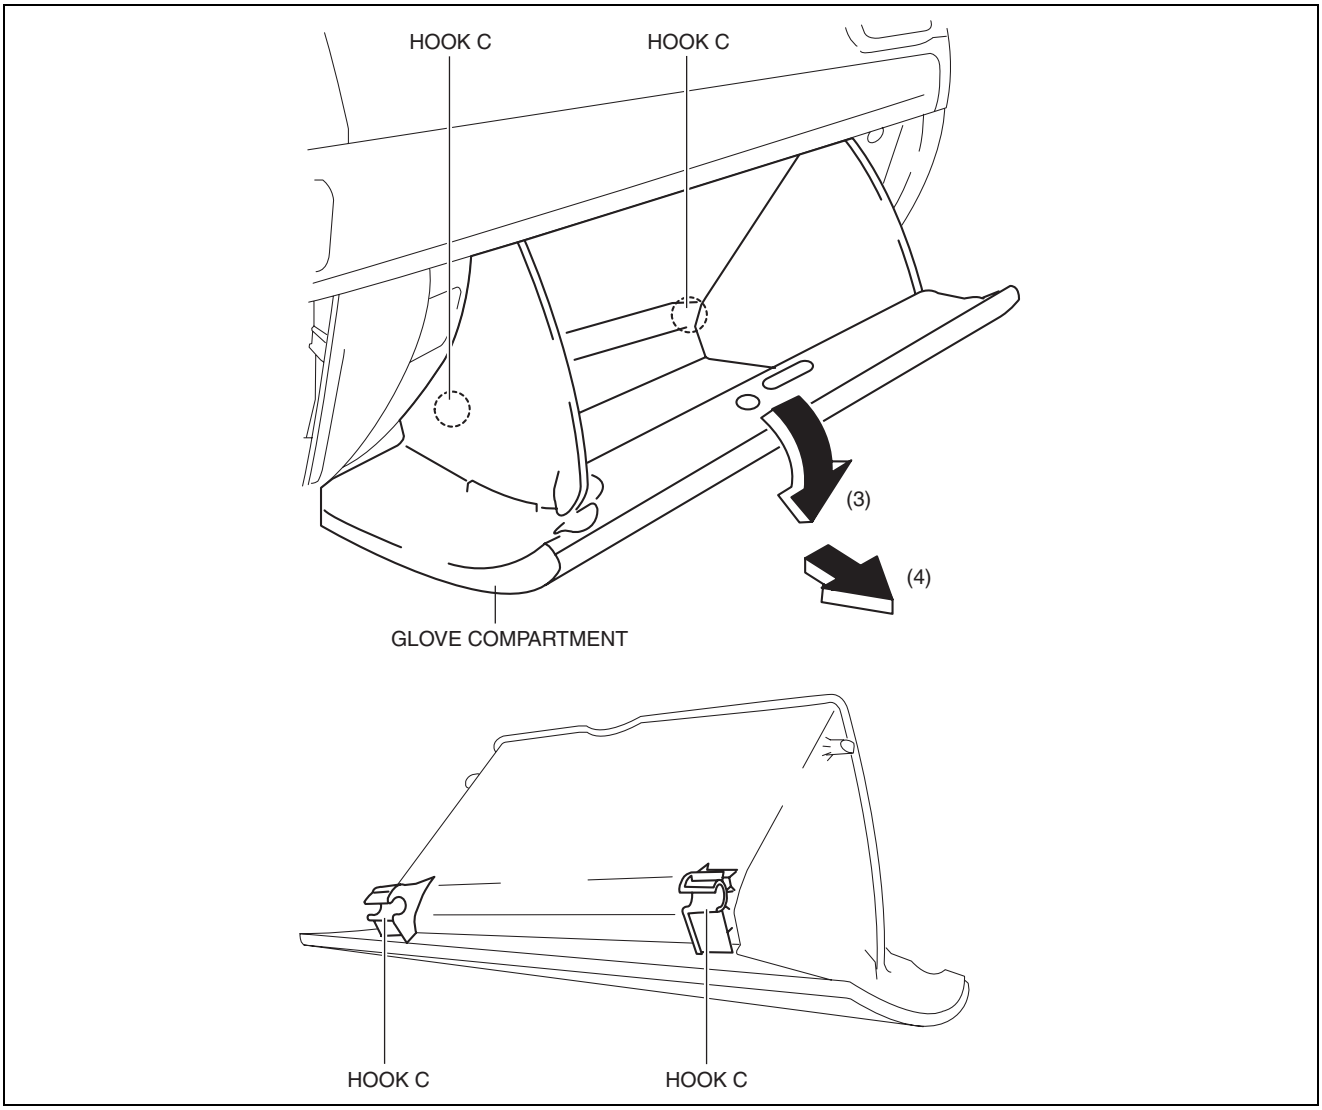
- **If the glove compartment is closed without being joined to the stay damper, the stay damper may be damaged. Verify that the stay damper is joined to the glove compartment before closing the glove compartment.**

INTERIOR TRIM



ac5wzw0000461

3. Pull down the glove compartment in the direction of the arrow (3).



ac5uuw00001752

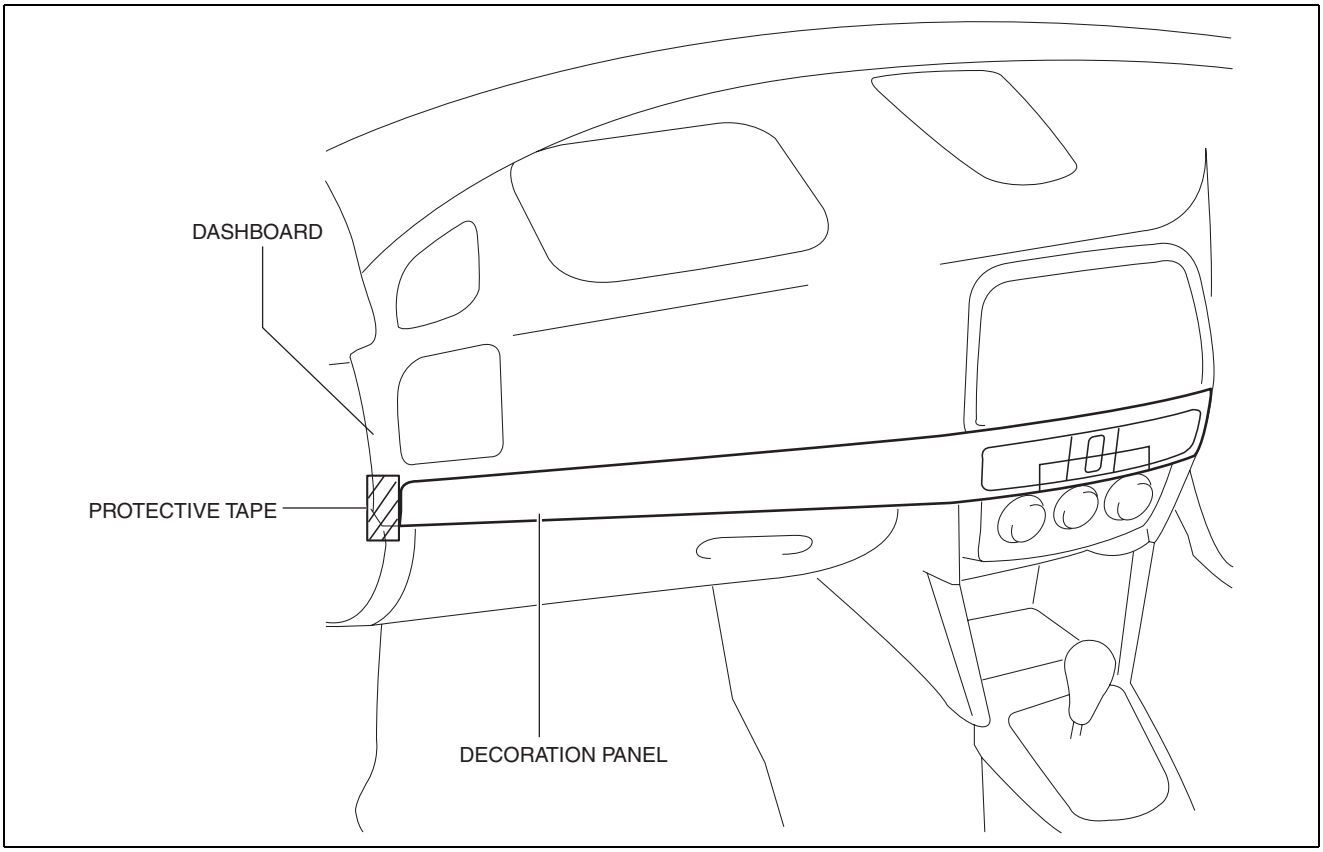
4. Pull the glove compartment in the direction of the arrow (4) and remove it while detaching hooks C.
5. Install in the reverse order of removal.

INTERIOR TRIM

DECORATION PANEL REMOVAL/INSTALLATION

id091700806600

Caution
- **Affix protective tape to the position shown in the figure.**

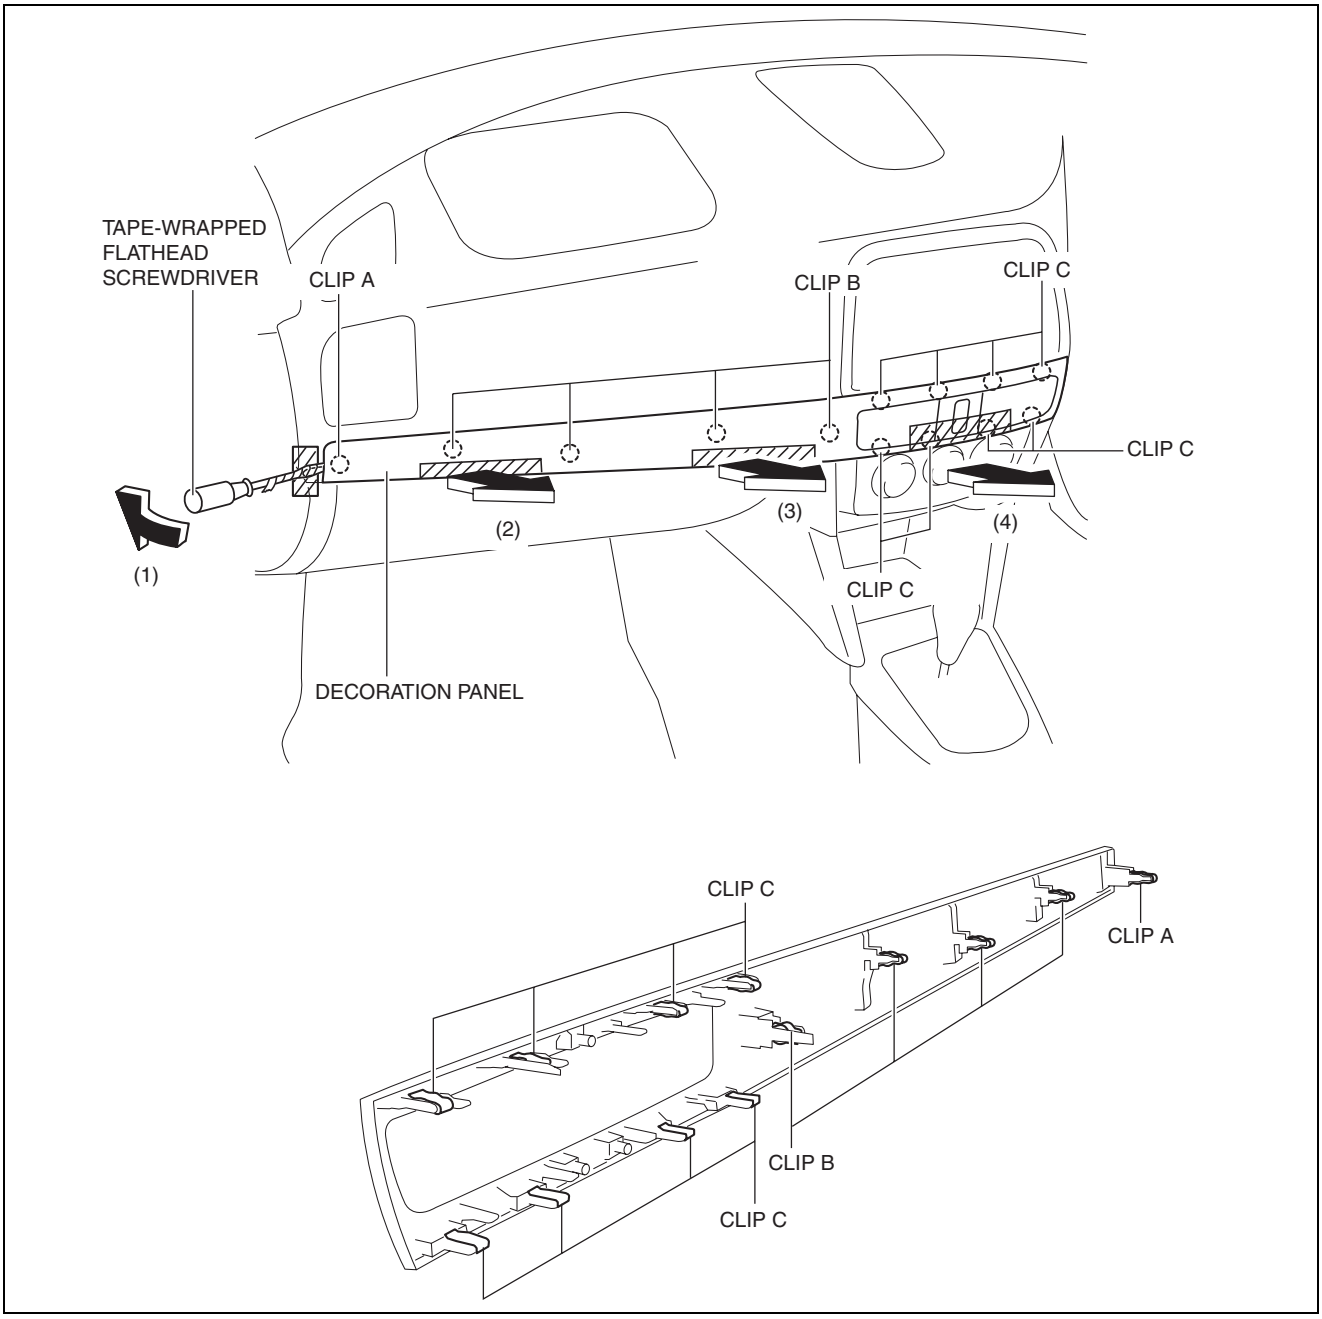


ac5uuw00002064

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Open the glove compartment.

INTERIOR TRIM

3. Insert a tape-wrapped flathead screwdriver in the position indicated by the arrow (1) in the figure and detach clip A.



ac5wzw0000300

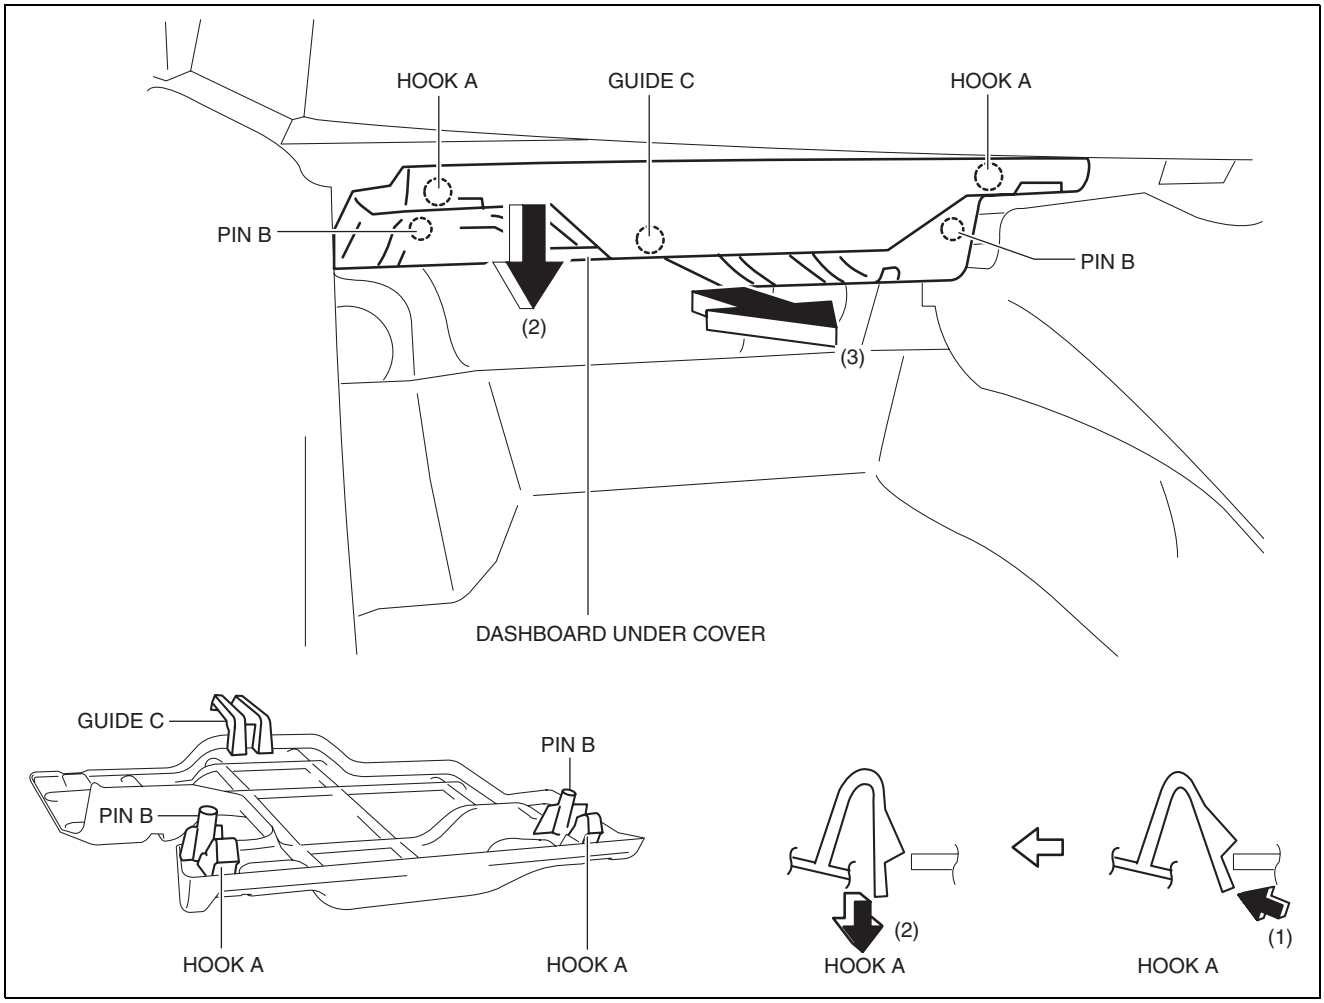
4. Take the shaded area shown in the figure, and remove the decoration panel in the direction of the arrow in the order of (2), (3), (4) while detaching clips B, clips C.
5. Disconnect the hazard switch connector.
6. Install in the reverse order of removal.

INTERIOR TRIM

DASHBOARD UNDER COVER REMOVAL/INSTALLATION

id091700807200

1. Detach hooks A in the direction of arrow (1) shown in the figure.



ac5wzw0000461

2. Pull the dashboard under cover in the direction of arrow (2) while detaching pins B.
3. Remove the dashboard under cover in the direction of the arrow (3) shown in the figure while detaching the guide C.

Caution

- **If hooks A and pins B is removed forcefully, guide C may be damaged. Carefully remove hooks A and pins B so as not to damage guide C.**

4. Install in the reverse order of removal.

LOWER PANEL REMOVAL/INSTALLATION

id091700801100

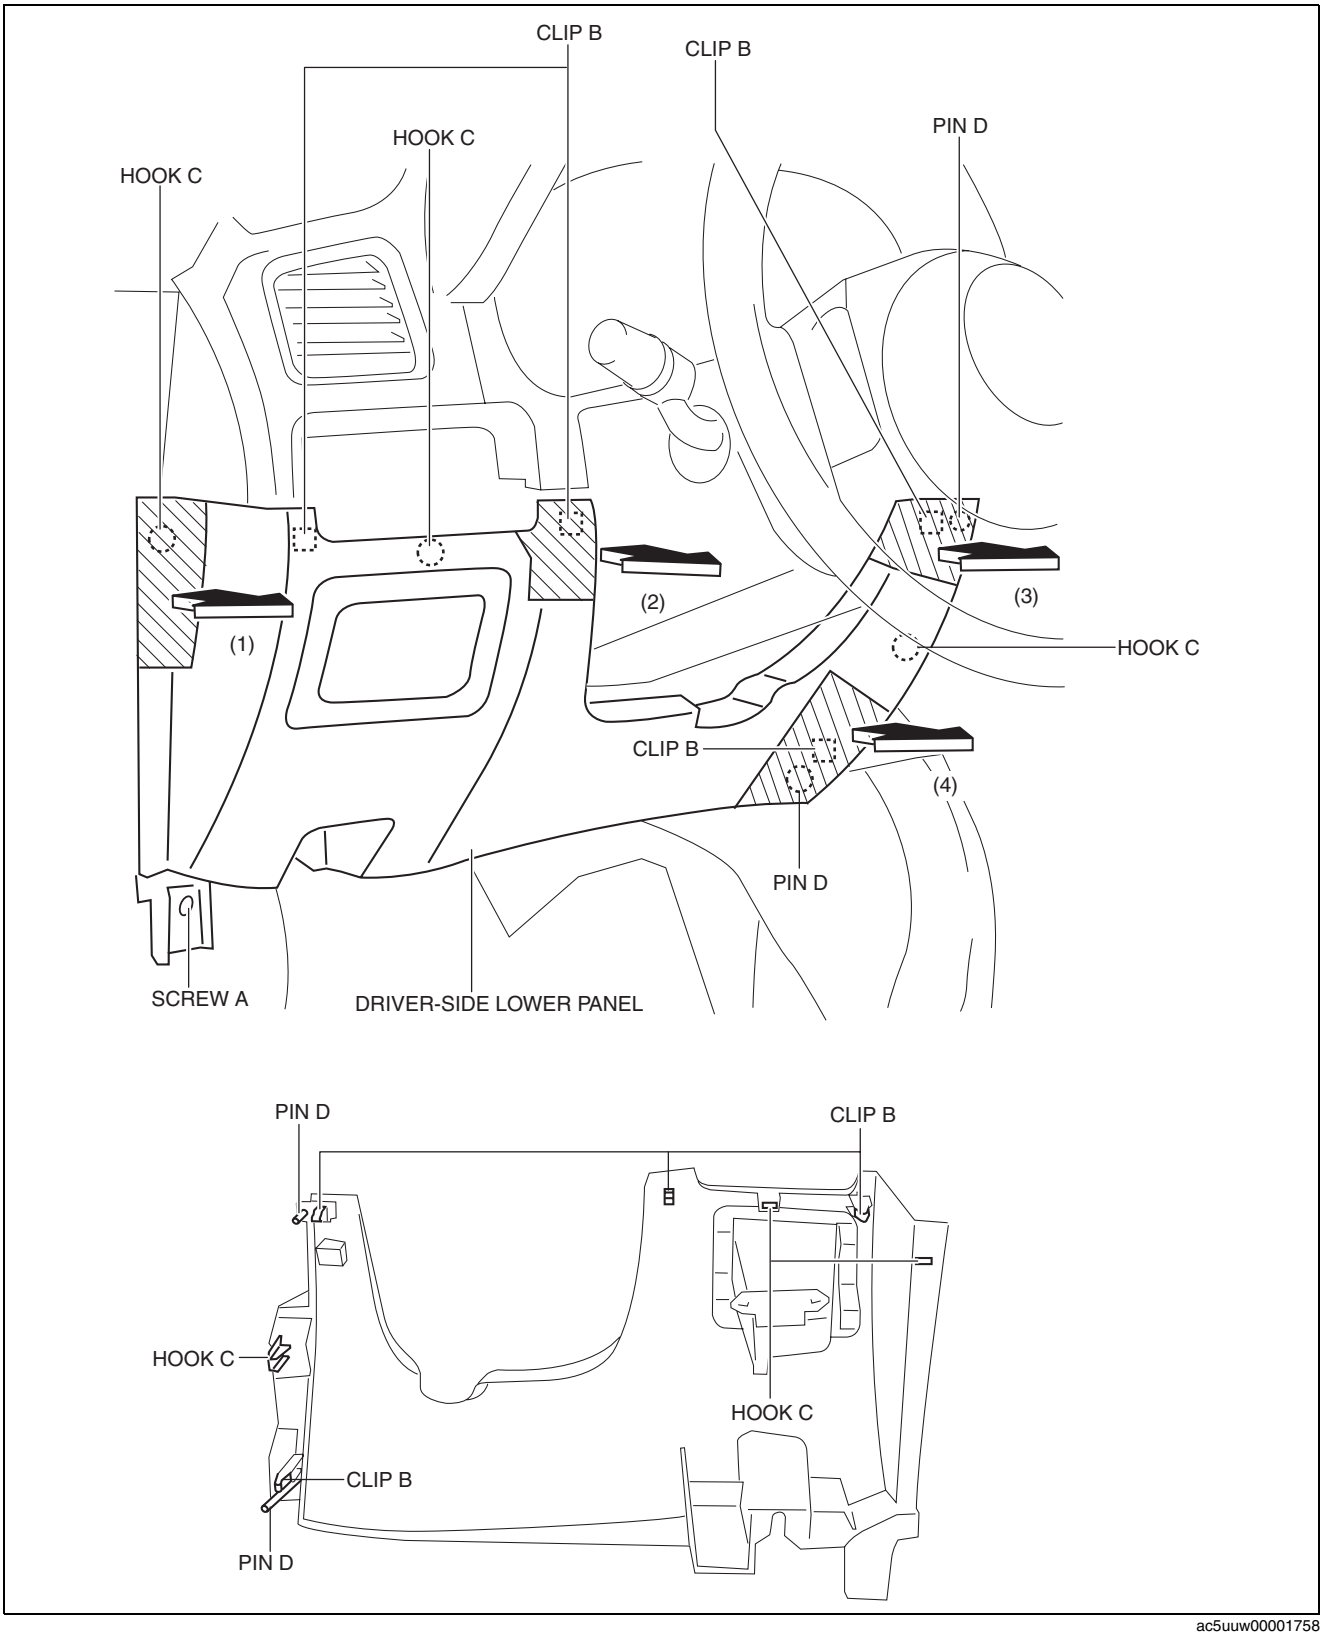
Driver-side

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Driver-side front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Driver-side front side trim (See 09-17-62 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Car-navigation unit (with car-navigation system) (See 09-20-11 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
   (4) Switch panel (See 09-17-18 SWITCH PANEL REMOVAL/INSTALLATION.)
   (5) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (6) Shift lever knob (MTX) (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)

(7) Front console box (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)
(8) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
(9) Upper panel (See 09-17-44 UPPER PANEL REMOVAL/INSTALLATION.)
(10)Rear console (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.)
(11)Side wall (See 09-17-49 SIDE WALL REMOVAL/INSTALLATION.)
(12)Front console (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
(13)Bonnet release lever (See 09-14-17 BONNET LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)

INTERIOR TRIM

3. Remove the screw A.



ac5uuw00001758

4. Take the shaded area shown in the figure, and pull the driver-side lower panel in the direction of the arrow in the order of (1), (2), (3),(4) and remove it while detaching clips B, hooks C and pins D.
5. Install in the reverse order of removal.

Passenger-side

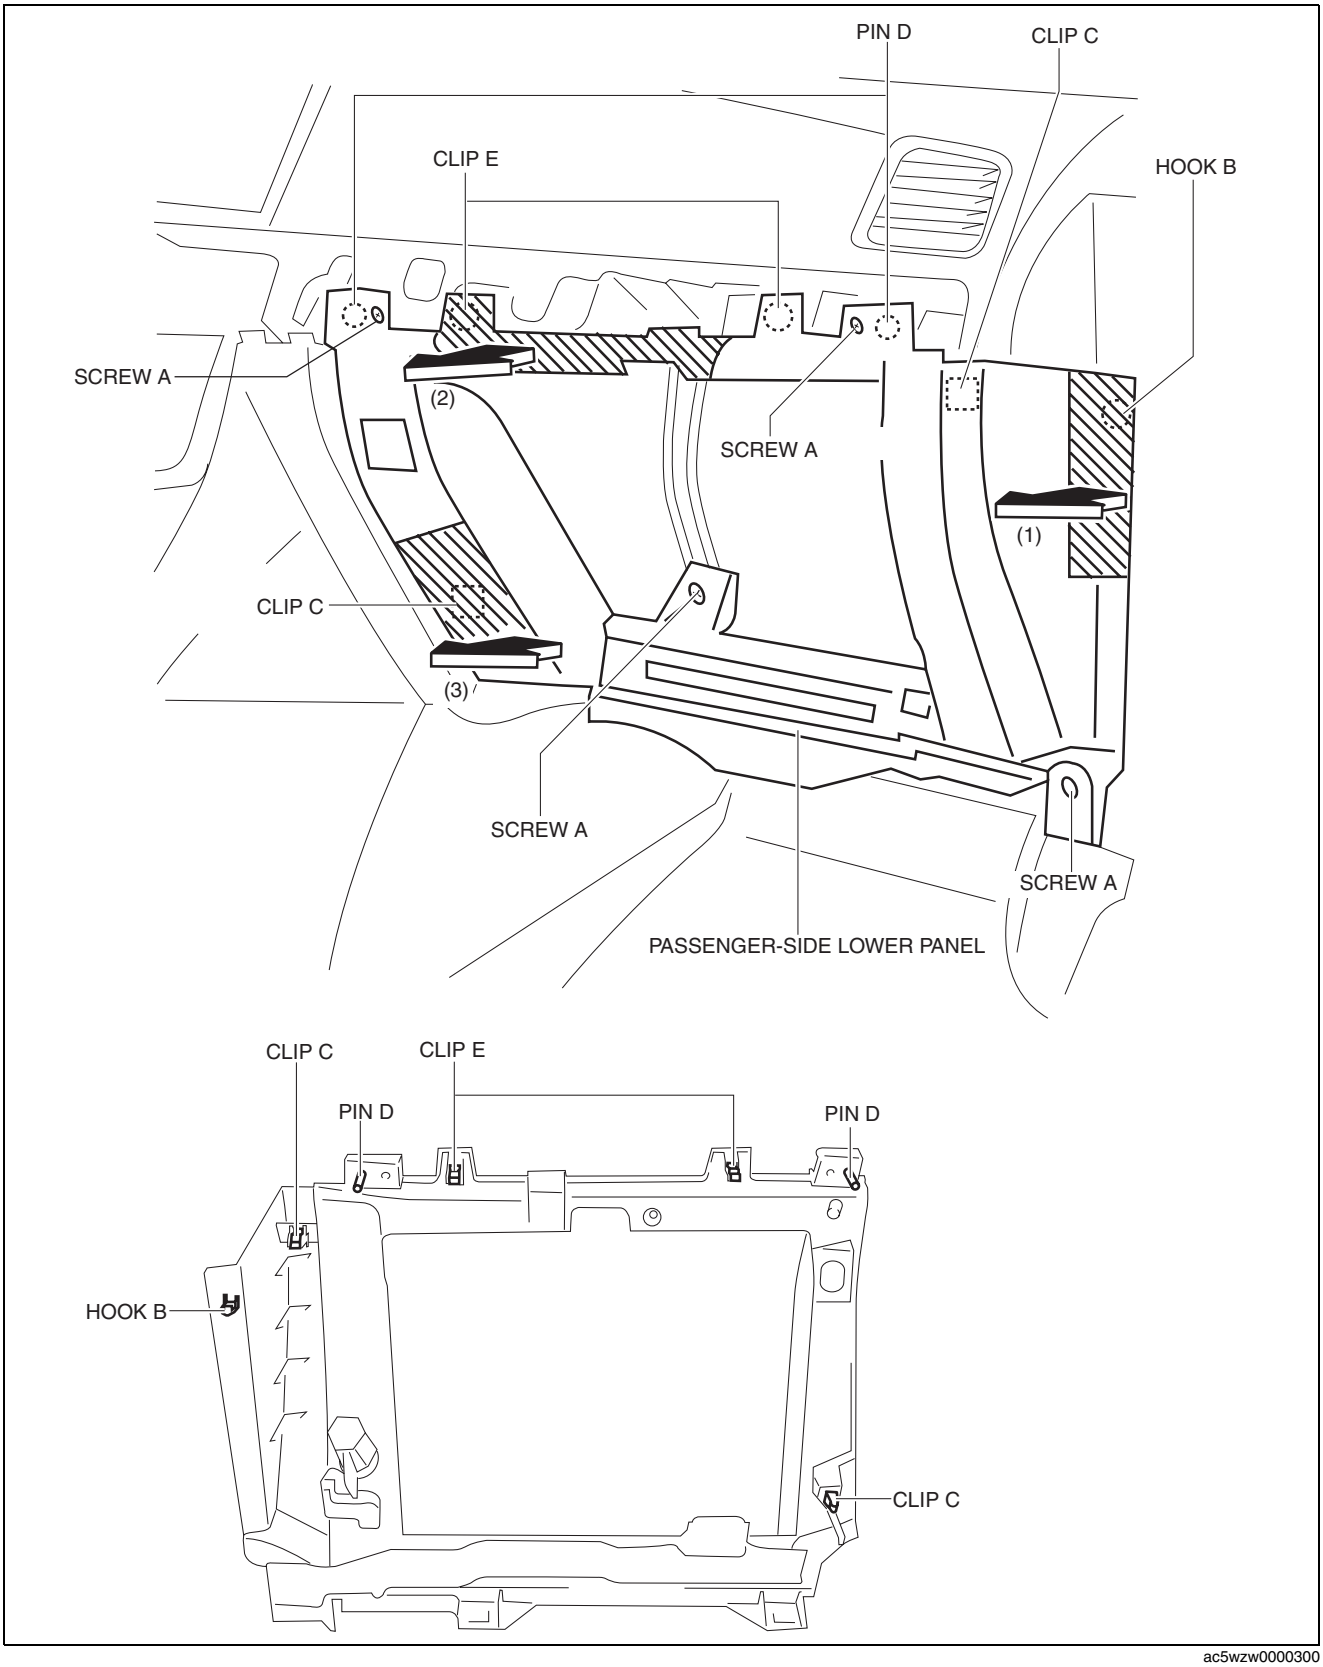
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/

CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

2. Remove the following parts:
   (1) Passenger-side front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Passenger-side front side trim (See 09-17-62 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Glove compartment (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (4) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (5) Dashboard under cover (See 09-17-35 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)

INTERIOR TRIM

3. Remove screws A.



ac5wzw0000300

4. Take the shaded area shown in the figure, and pull the passenger-side lower panel in the direction of the arrow in the order of (1), (2), (3) and remove it while detaching hook B, clips C, pins D and clips E.
5. Install in the reverse order of removal.

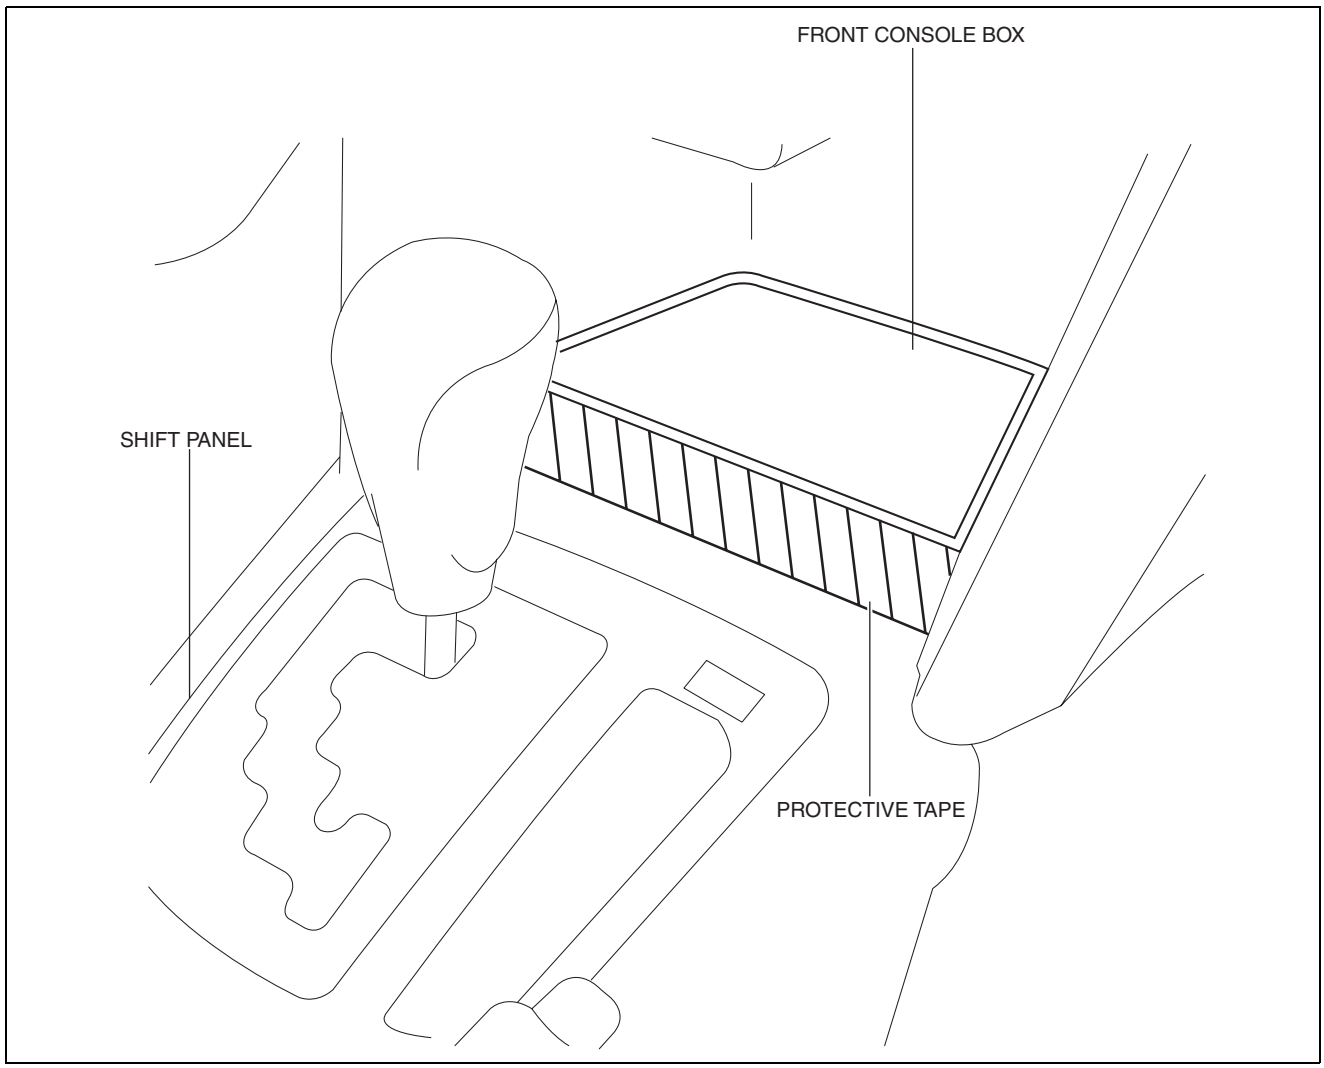
INTERIOR TRIM

FRONT CONSOLE BOX REMOVAL/INSTALLATION

id091700803900

Note

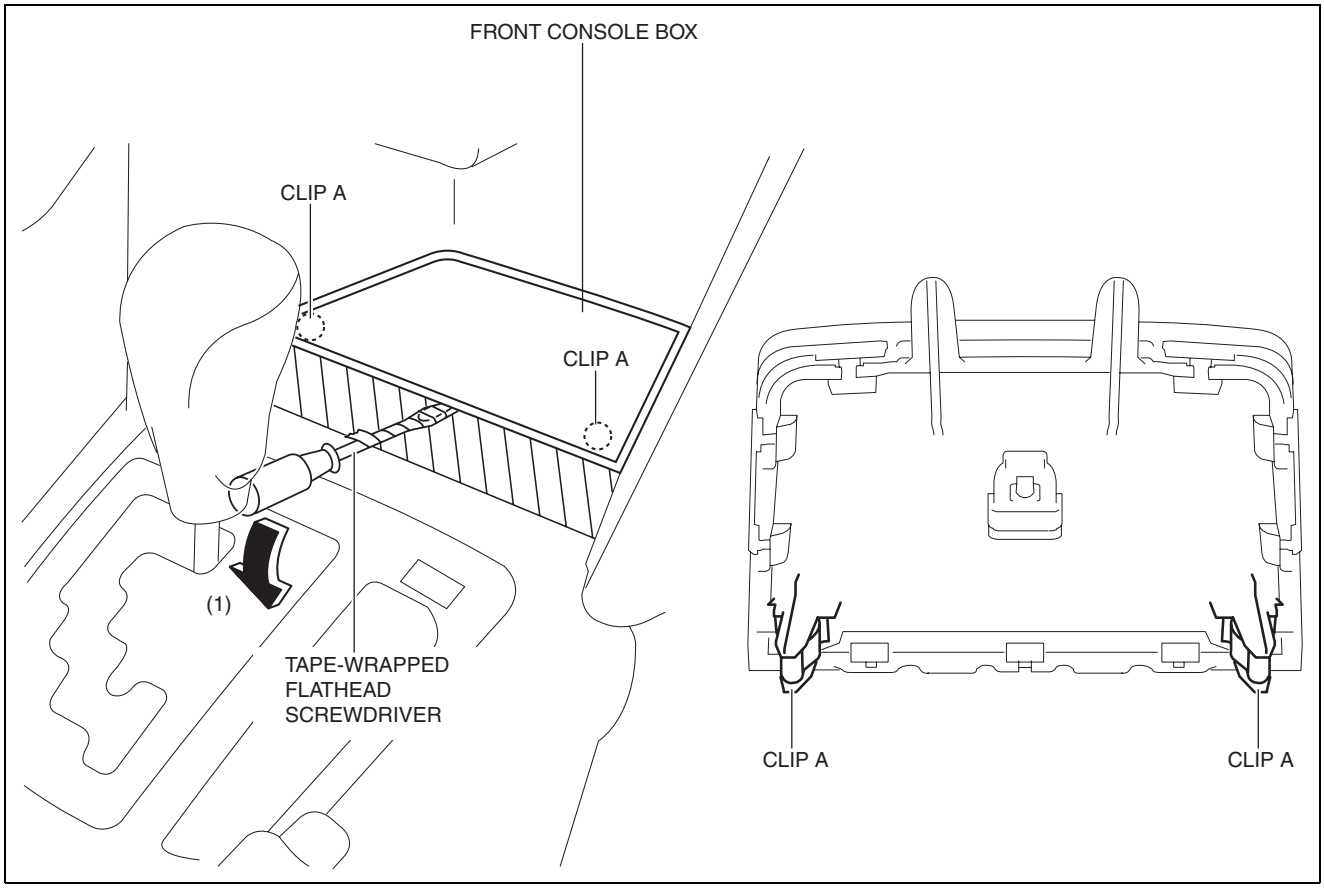
- Affix protective tape to the position shown in the figure.



ac5wzw0000144

INTERIOR TRIM

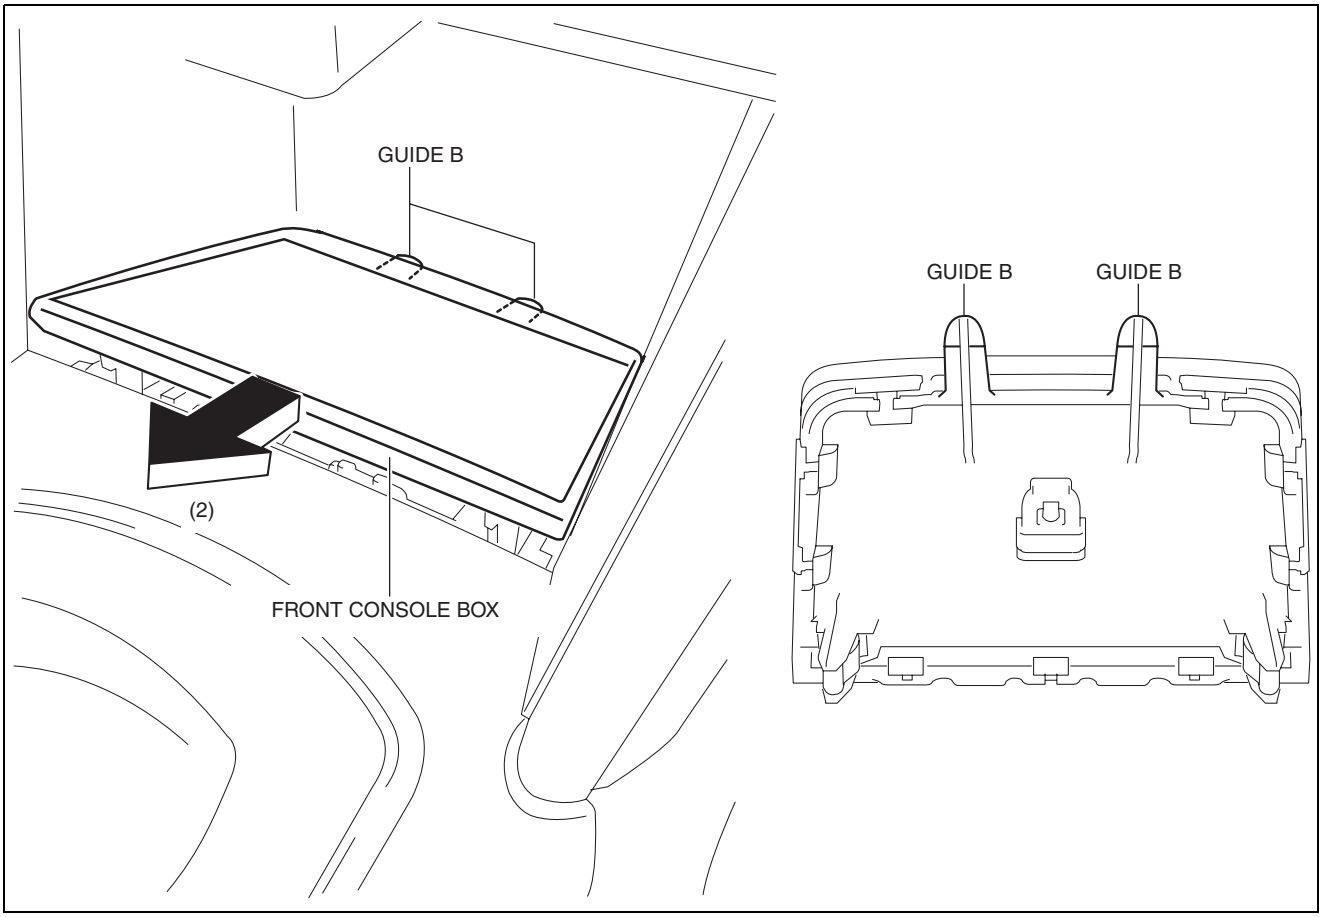
1. Insert a tape-wrapped flathead screwdriver in the position indicated by the arrow in the figure and detach clips A.



ac5wzw0000321

INTERIOR TRIM

2. Pull the front console box in the direction of the arrow (2) and remove it while detaching the guides B.



ac5uuw00001785

Note
- When the occur to gap between the front console box and shift panel, remove the shift panel then assemble to the front console box. after install the front console box and shift panel as single unit.

3. Install in the reverse order of removal.

SHIFT PANEL REMOVAL/INSTALLATION

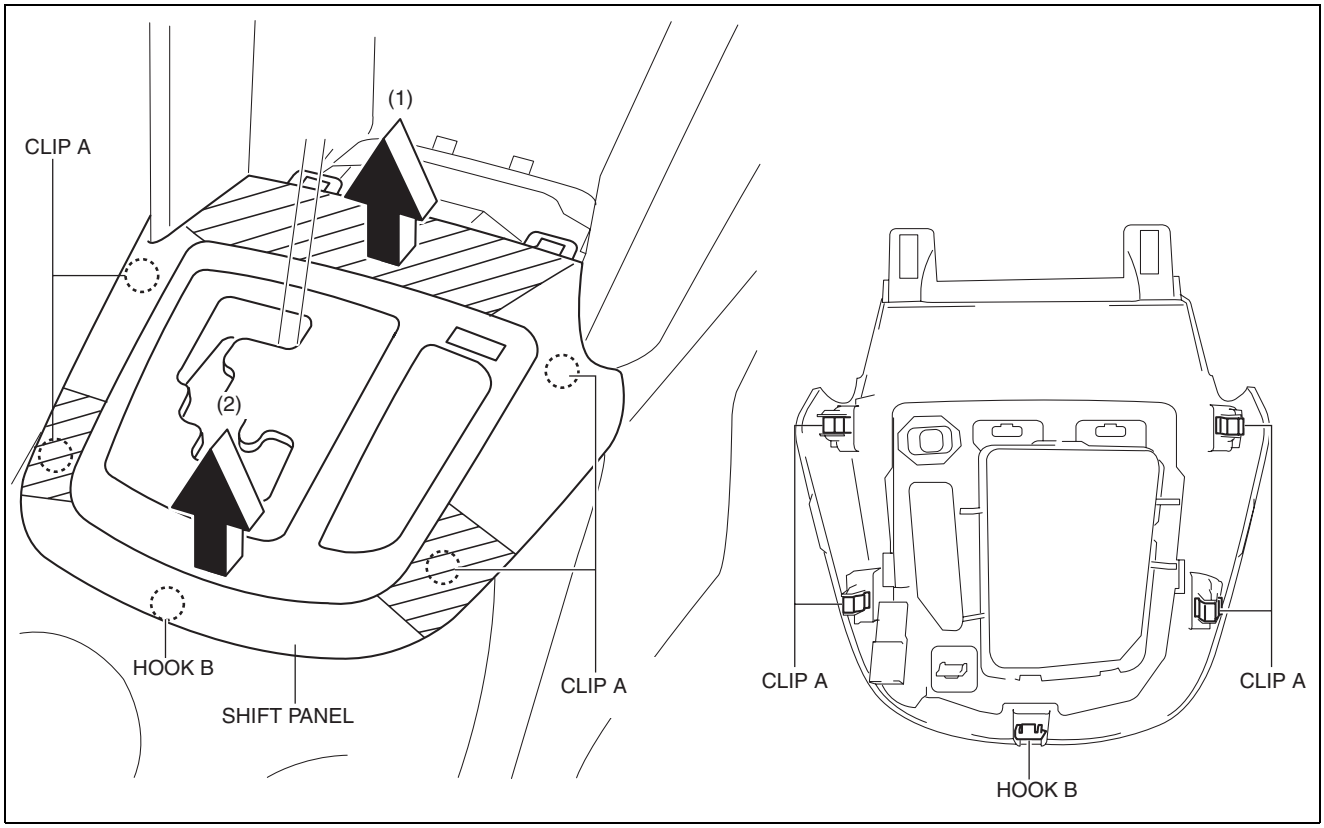
id091700898400

ATX

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Selector lever to neutral position.
3. Remove the front console box. (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)

INTERIOR TRIM

4. Take the shaded area shown in the figure, and remove the shift panel in the direction of the arrow in the order of (1), (2) while detaching clips A, hook B.



ac5uuw00001801

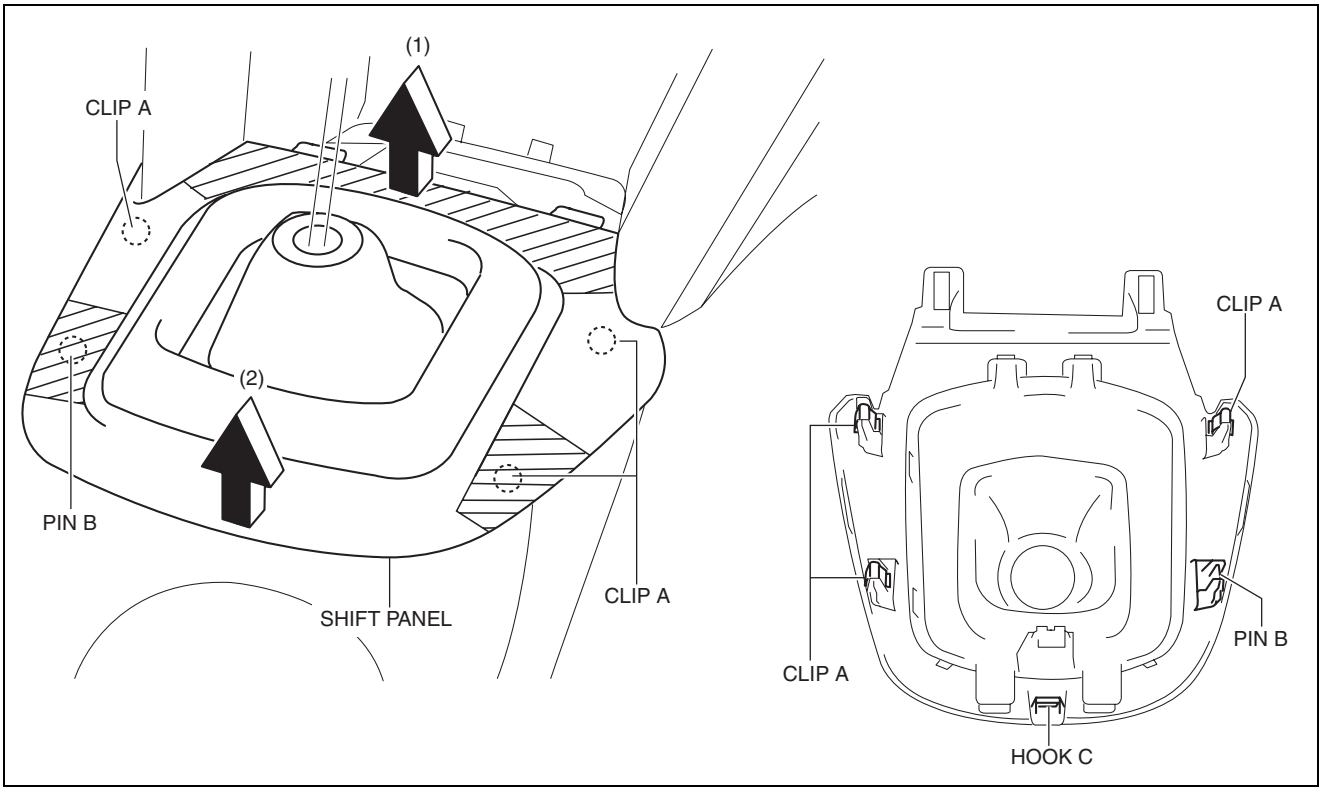
5. Disconnect the connector.
6. Install in the reverse order of removal.

MTX

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the shift lever knob. (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)

INTERIOR TRIM

3. Take the shaded area shown in the figure, and remove the shift panel in the direction of the arrow in the order of (1), (2) while detaching clips A, pin B, hook C.



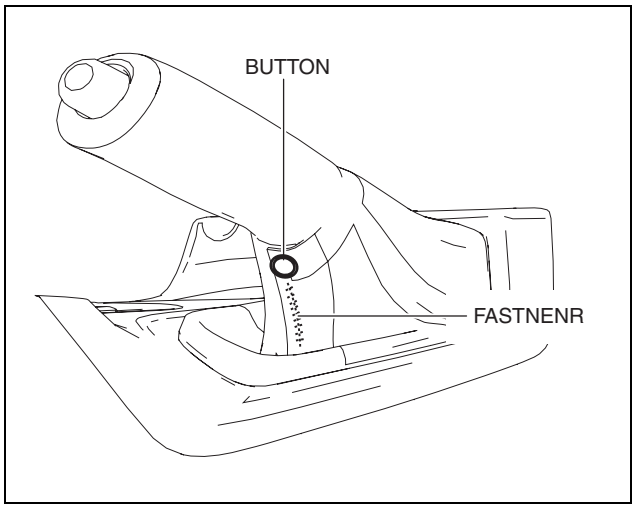
ac5uuw00001802

4. Install in the reverse order of removal.

UPPER PANEL REMOVAL/INSTALLATION

id091700898300

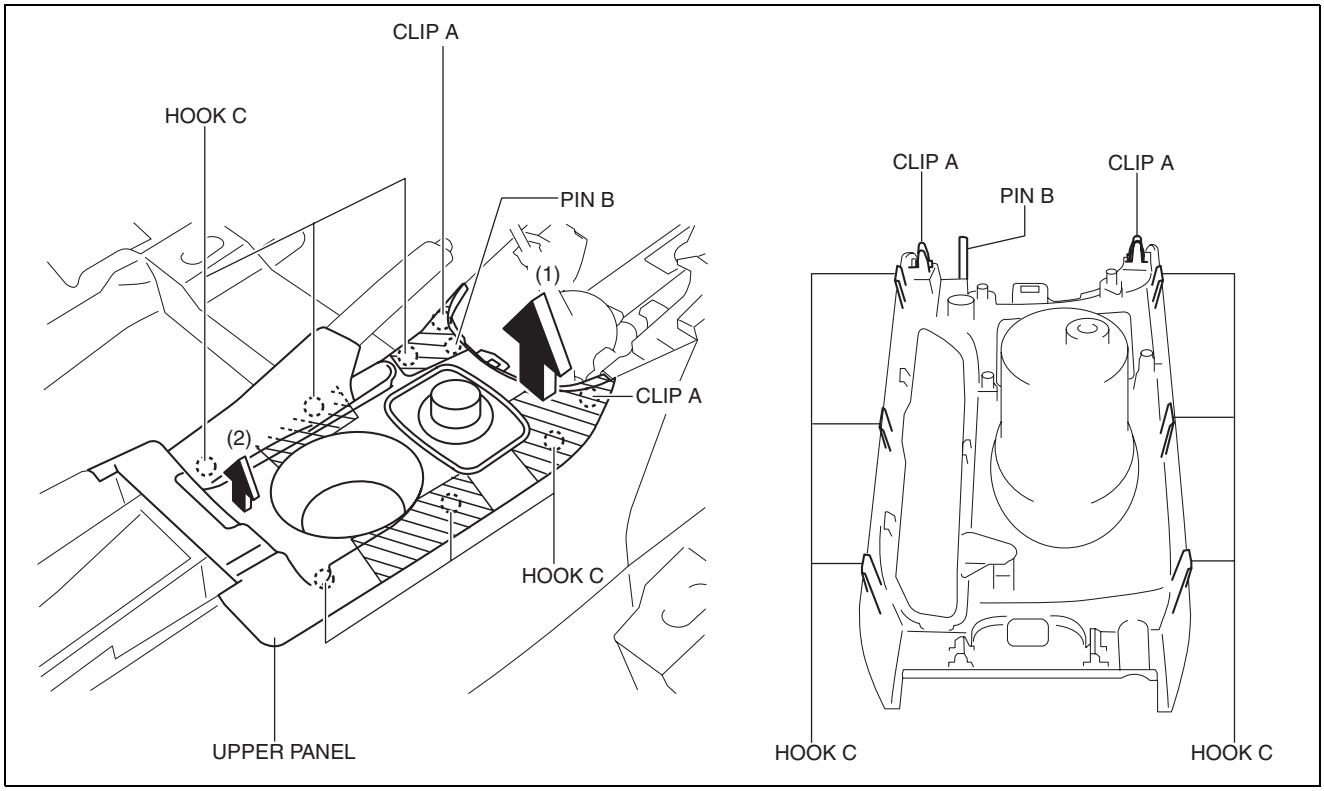
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Front console box (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)
   (2) Shift lever knob (MTX) (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
   (3) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
3. Open the console lid.
4. Remove the button, then open the fastener.



ac5wzw0000313

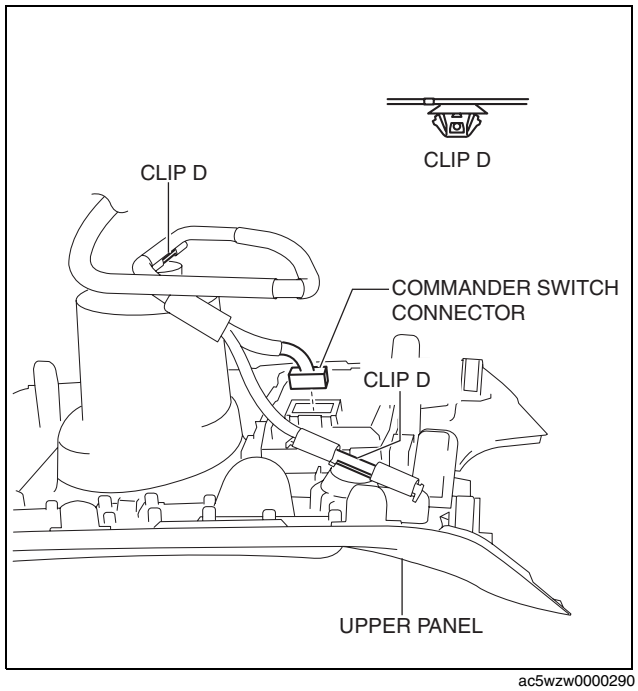
INTERIOR TRIM

5. Take the shaded area shown in the figure, and remove the upper panel in the direction of the arrow in the order of (1), (2) while detaching clips A, pin B, hooks C.



ac5wzw0000280

6. Remove clips D.
7. Disconnect the commander switch connector (with commander switch).
8. Install in the reverse order of removal.



ac5wzw0000290

REAR CONSOLE REMOVAL/INSTALLATION

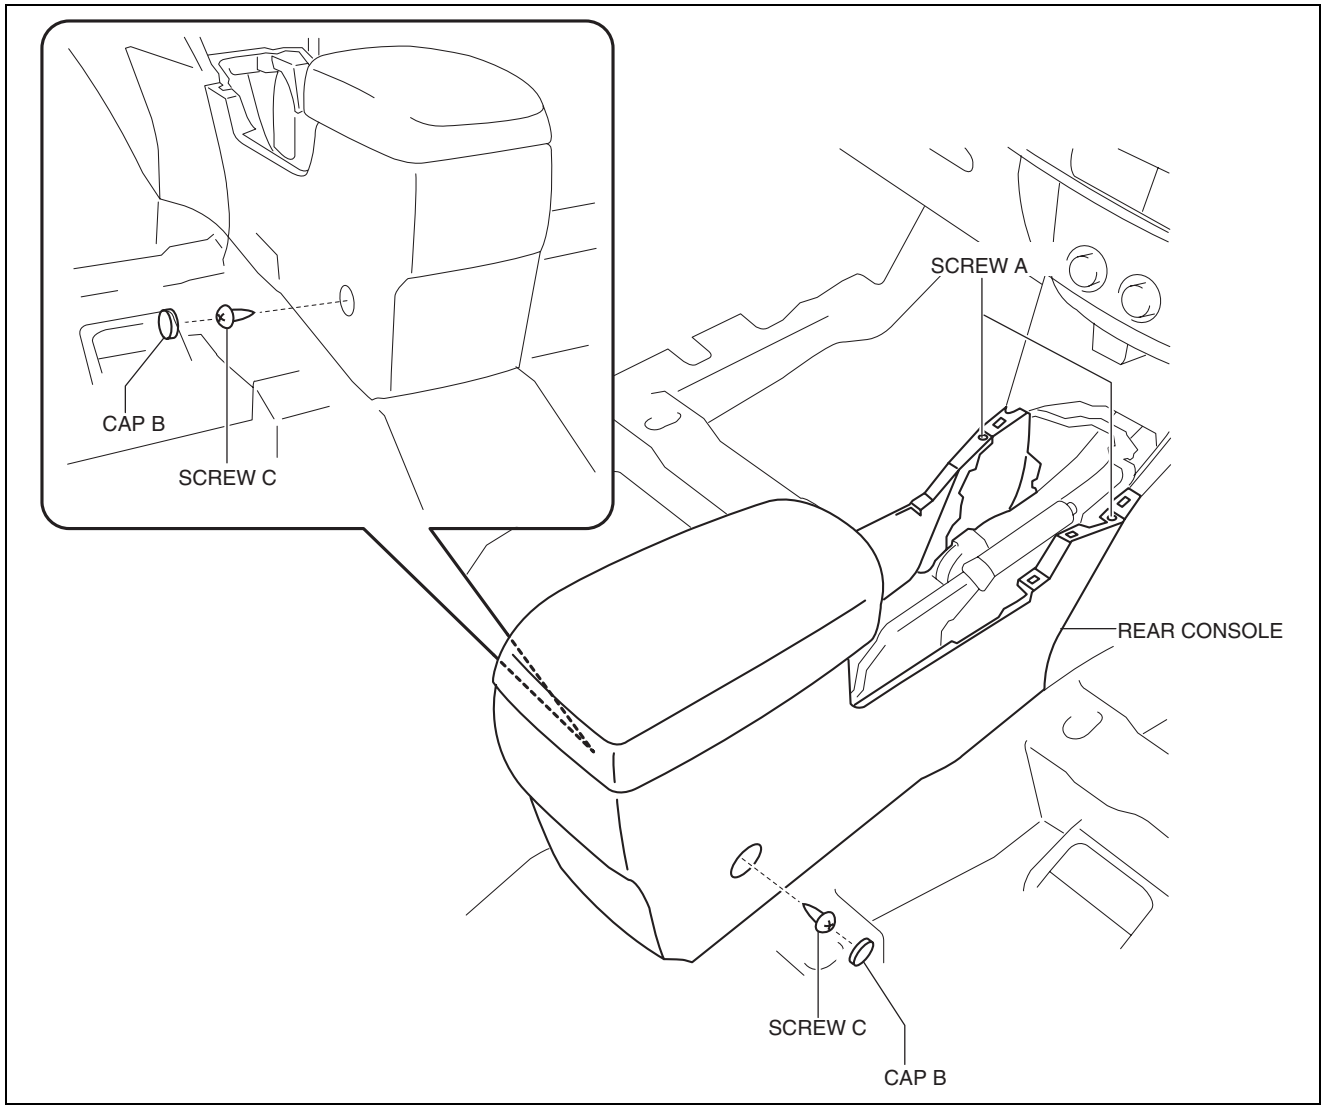
id091700898500

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Front console box (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)

INTERIOR TRIM

(2) Shift lever knob (MTX) (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
(3) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
(4) Upper panel (See 09-17-44 UPPER PANEL REMOVAL/INSTALLATION.)

3. Remove screws A.

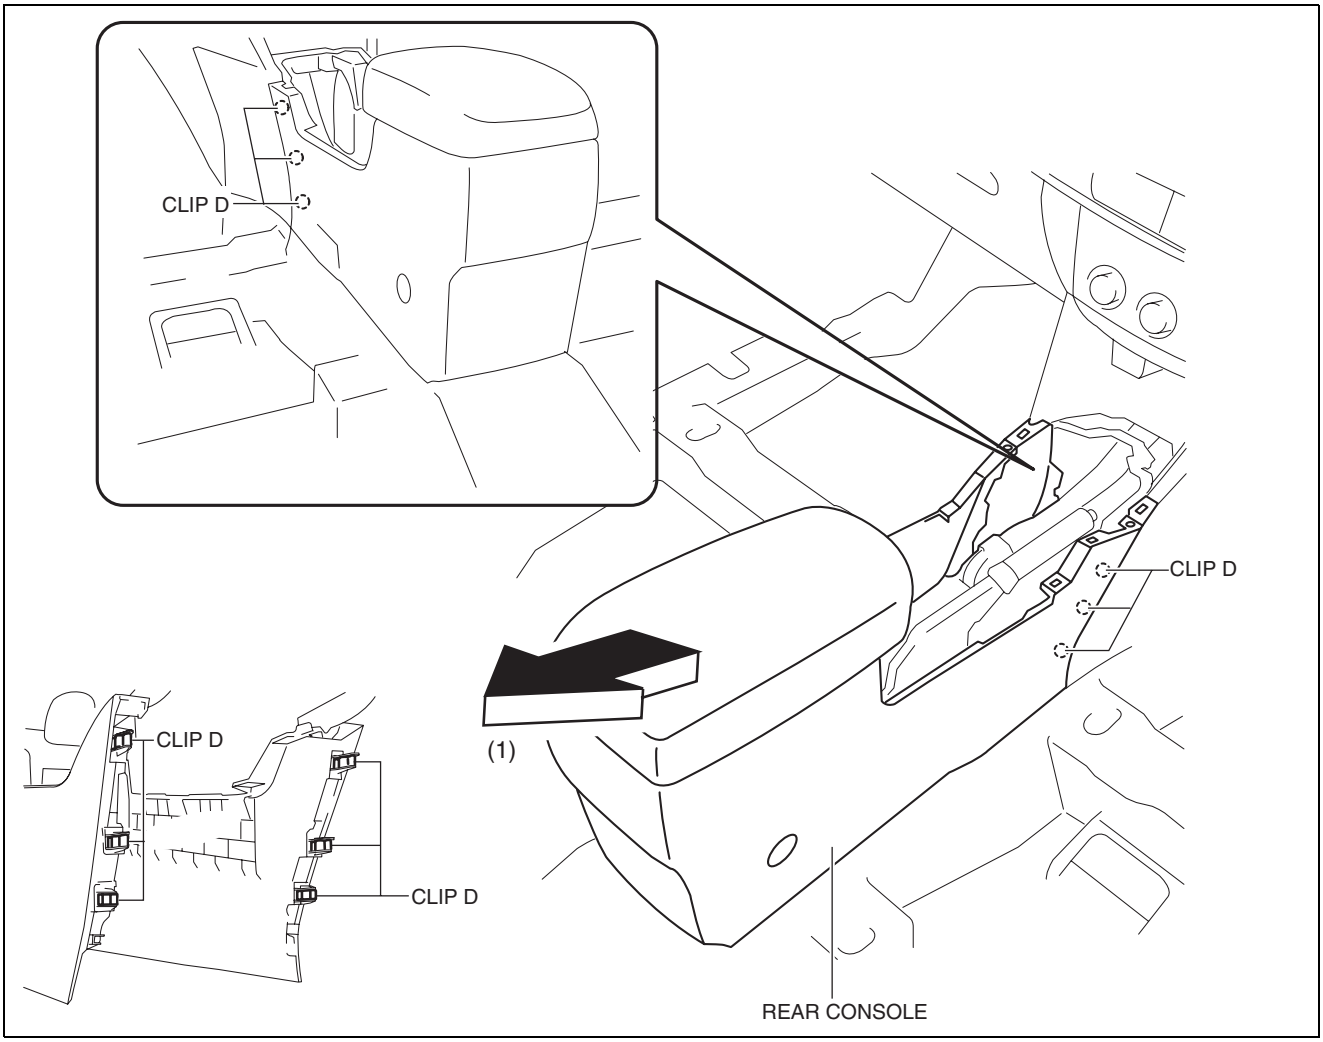


ac5wzw0000145

4. Remove caps B, then remove screws C.

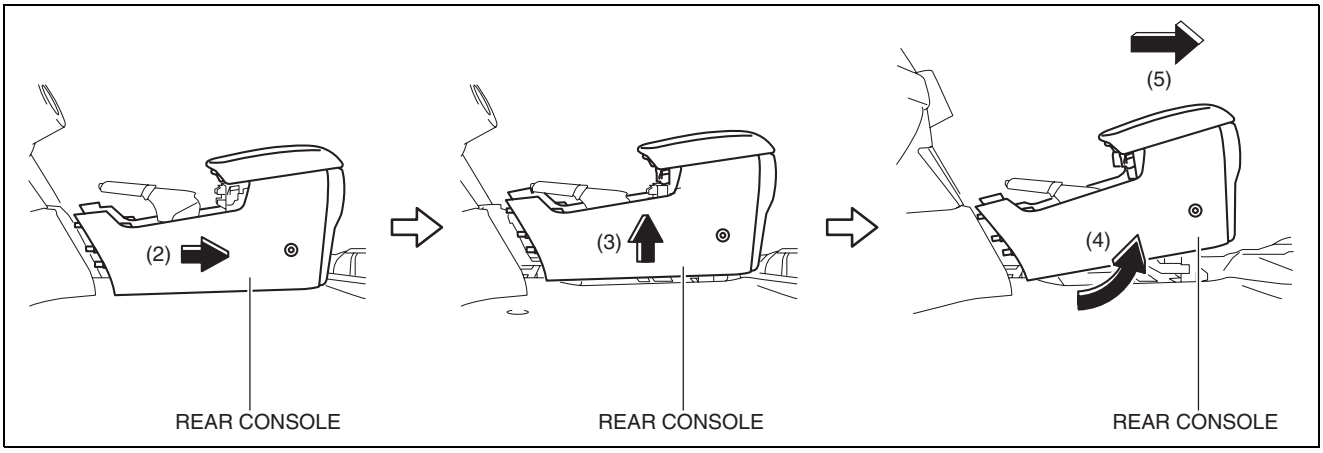
INTERIOR TRIM

5. Pull the rear console in the direction of the arrow (1) while detaching clips D.



ac5uuw00001803

6. Disconnect the center accessory socket connector and auxiliary jack / USB port connector.
7. Remove the rear console in the direction of the arrow in the order of (2), (3), (4), (5) shown in the figure.



ac5wzw0000300

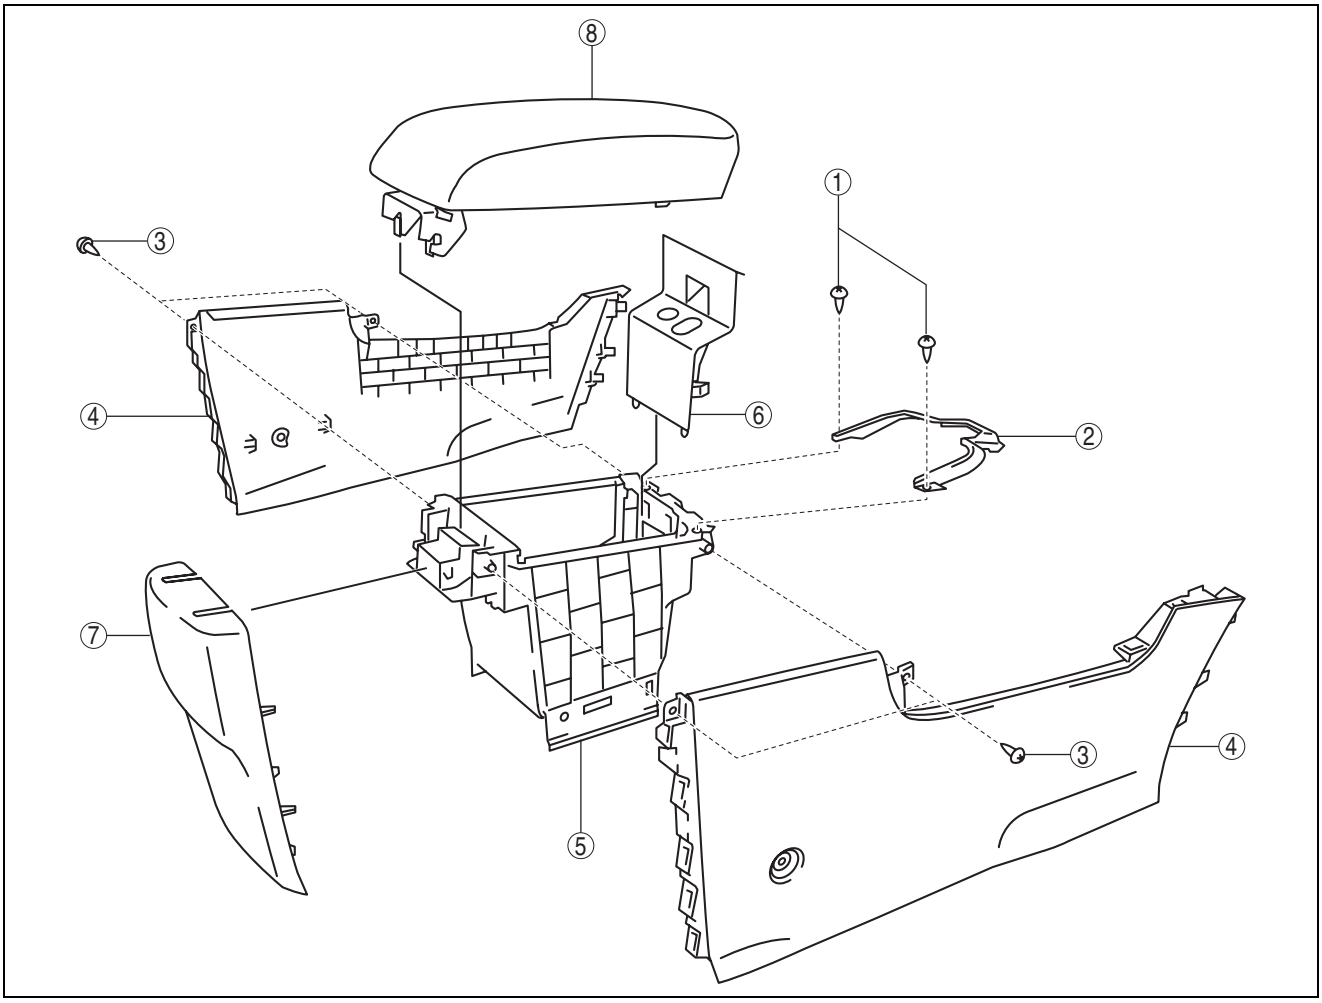
8. Install in the reverse order of removal.

REAR CONSOLE DISASSEMBLY/ASSEMBLY

id091700898600

1. Disassemble in the order indicated in the table.

INTERIOR TRIM



ac5wzw0000145

1	Screw A
2	Rear console bracket
3	Screw B
4	Side panel

5	Rear console box
6	Upper console
7	Rear console cover
8	Rear console lid

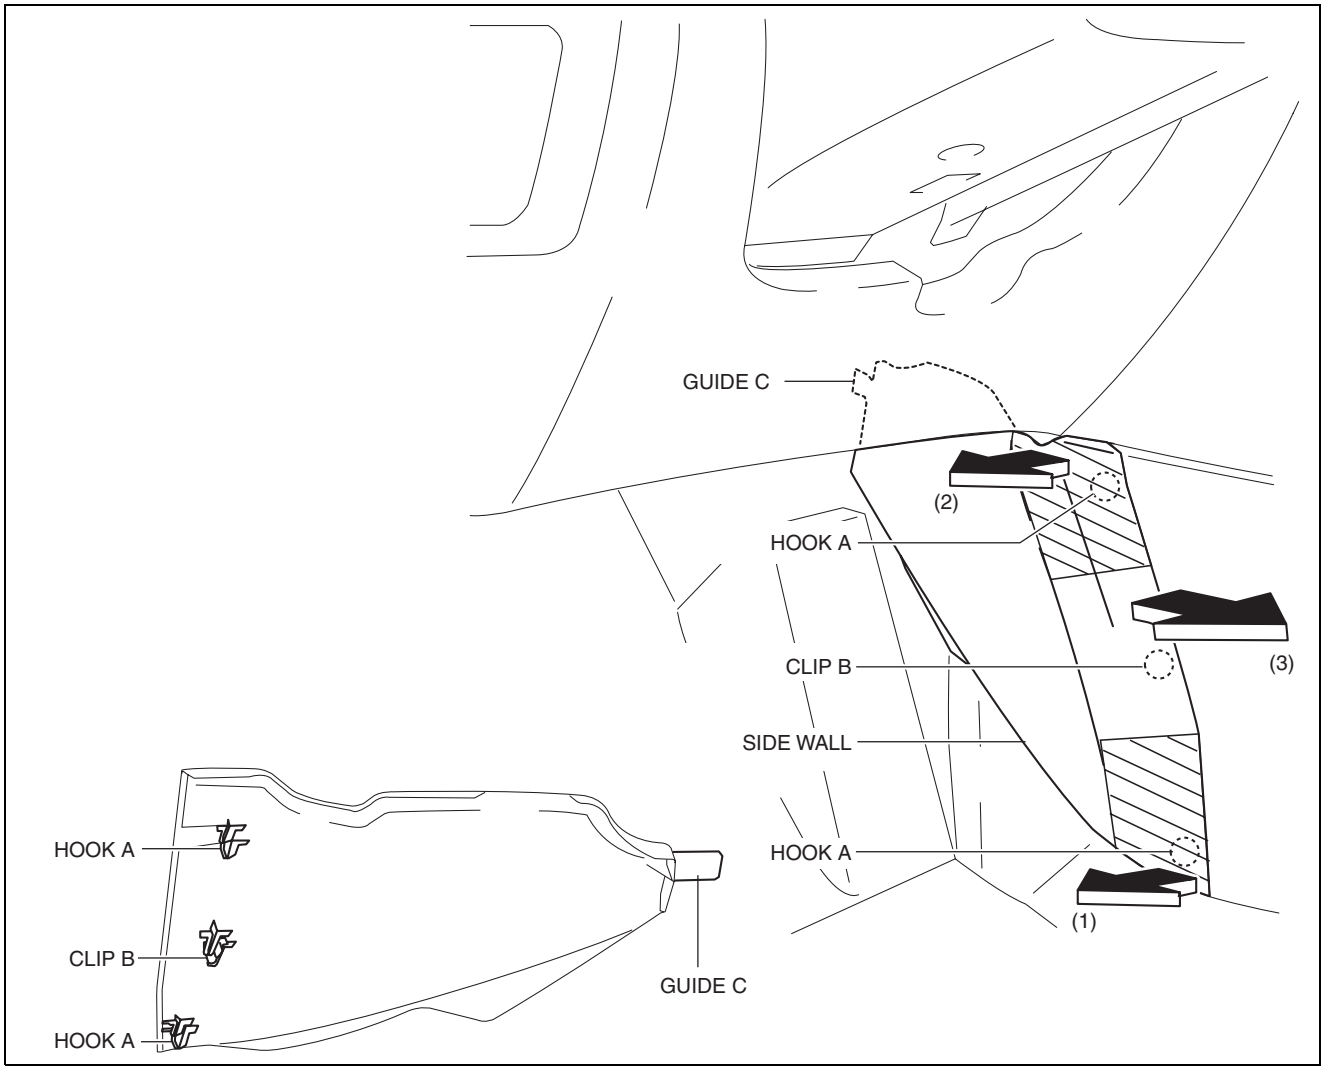
2. Assemble in the reverse order of disassembly.

INTERIOR TRIM

SIDE WALL REMOVAL/INSTALLATION

id091700805400

1. Pull the side wall in the direction of the arrow in the order of (1), (2) and remove it while detaching hooks A and clip B.



ac5uuw00001795

2. Pull the side wall in the direction of the arrow (3) and remove it while detaching the guide C.

Caution

- **If the hooks A and clip B is removed forcefully, guide C may be damaged. Carefully remove hooks A and clip B so as not to damage guide C.**

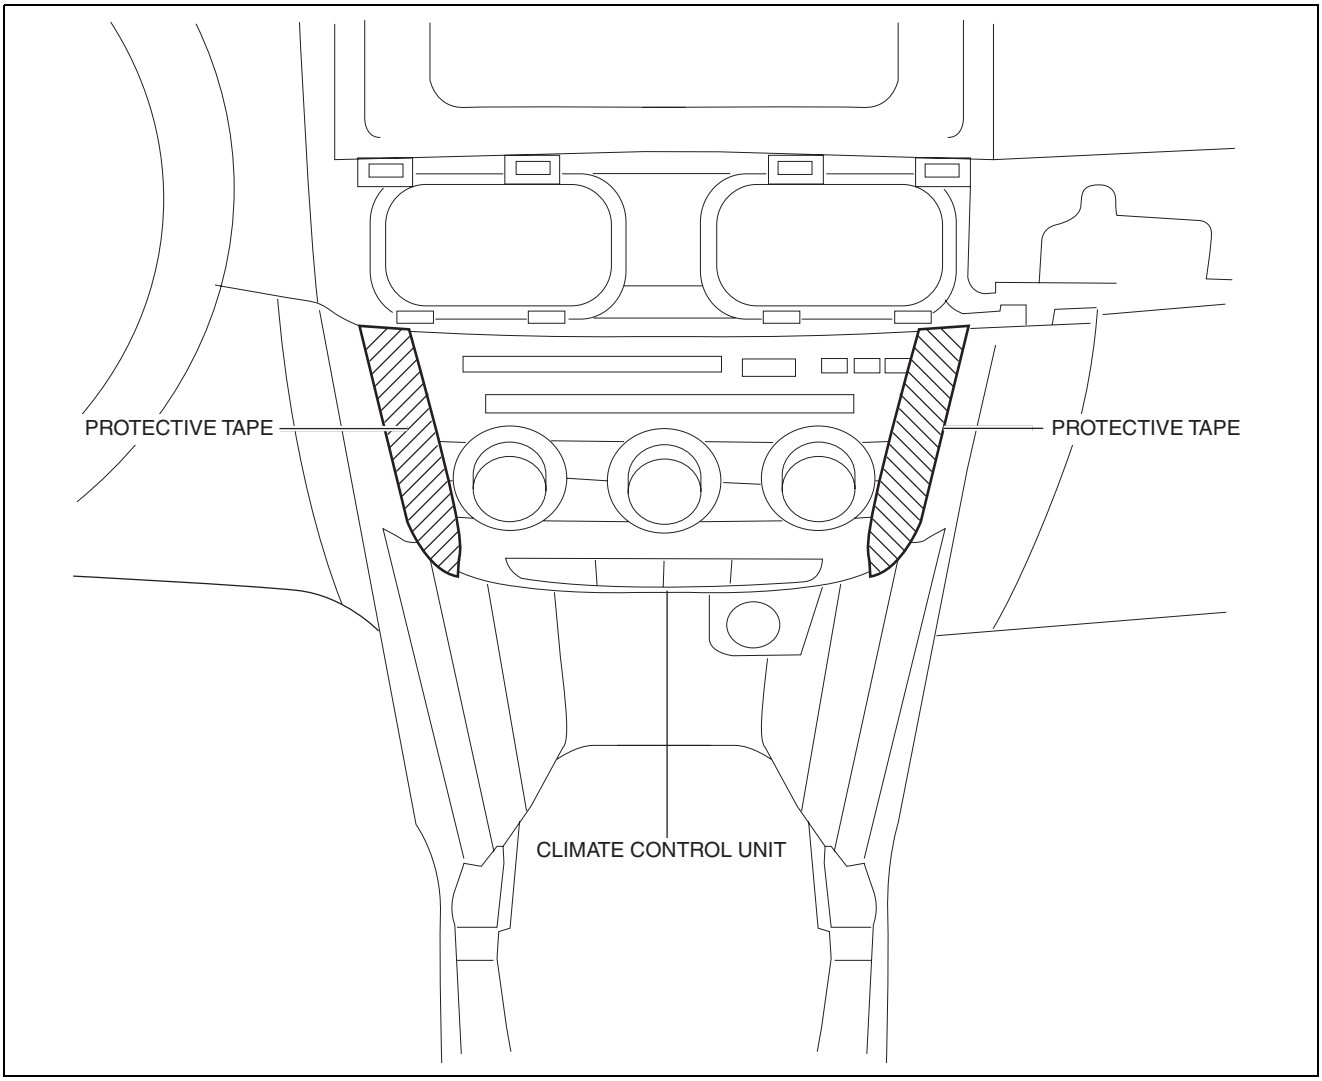
3. Install in the reverse order of removal.

INTERIOR TRIM

FRONT CONSOLE REMOVAL/INSTALLATION

id091700457400

Caution
- **Affix protective tape to the position shown in the figure.**



ac5uuw00001739

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (2) Shift lever knob (MTX) (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)

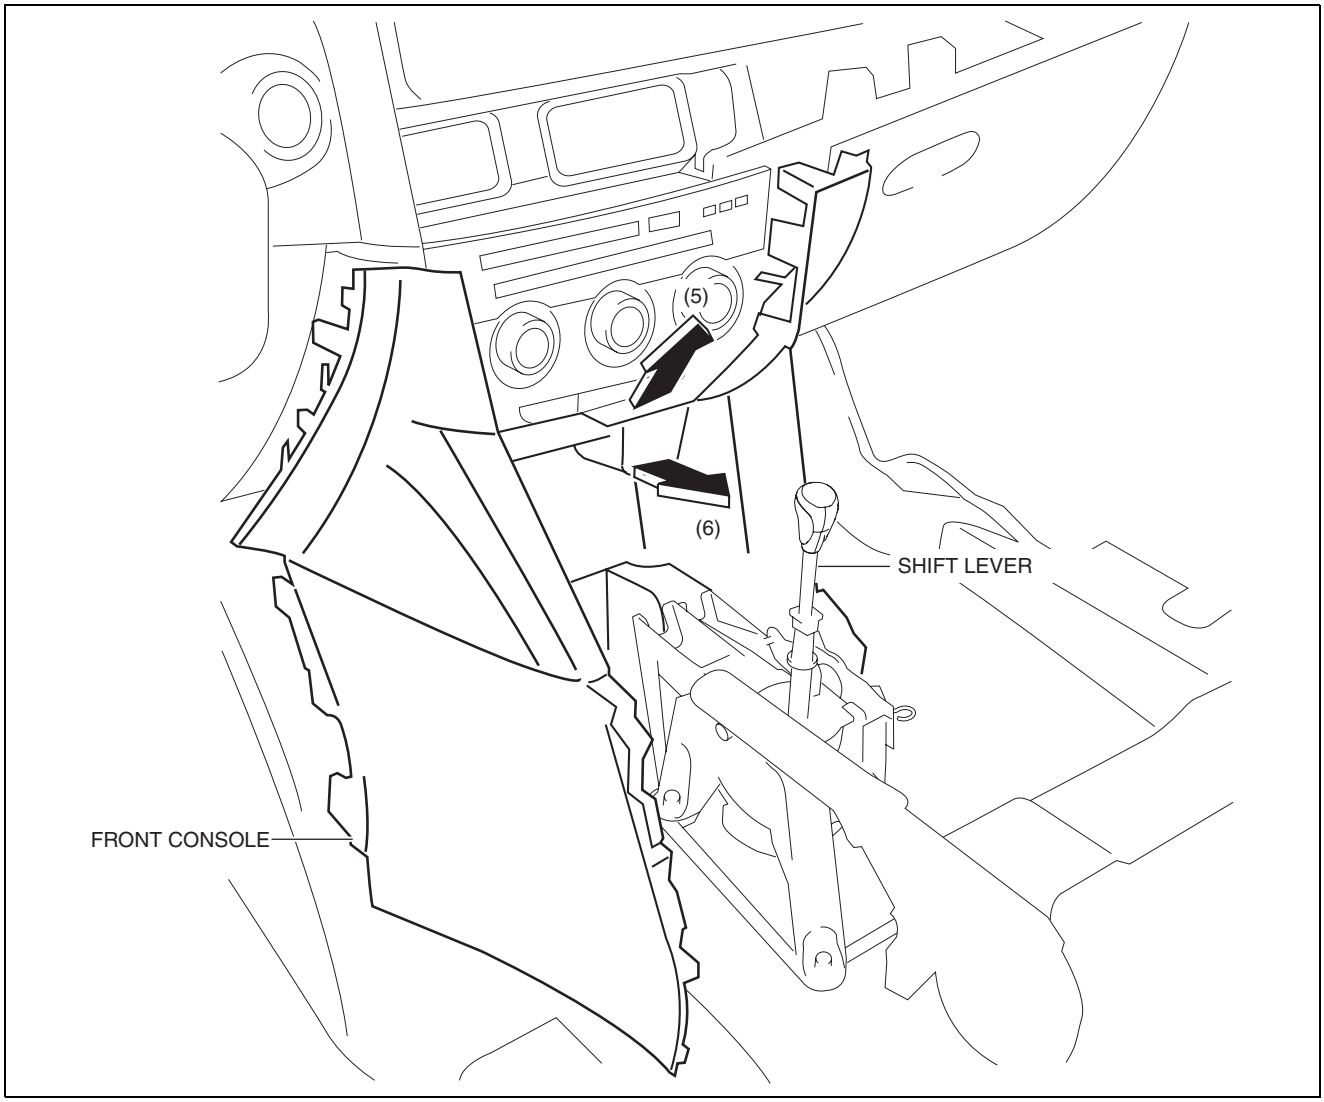
ac5wzw0000461

INTERIOR TRIM

MTX



ac5wzw0000461

6. Install in the reverse order of removal.

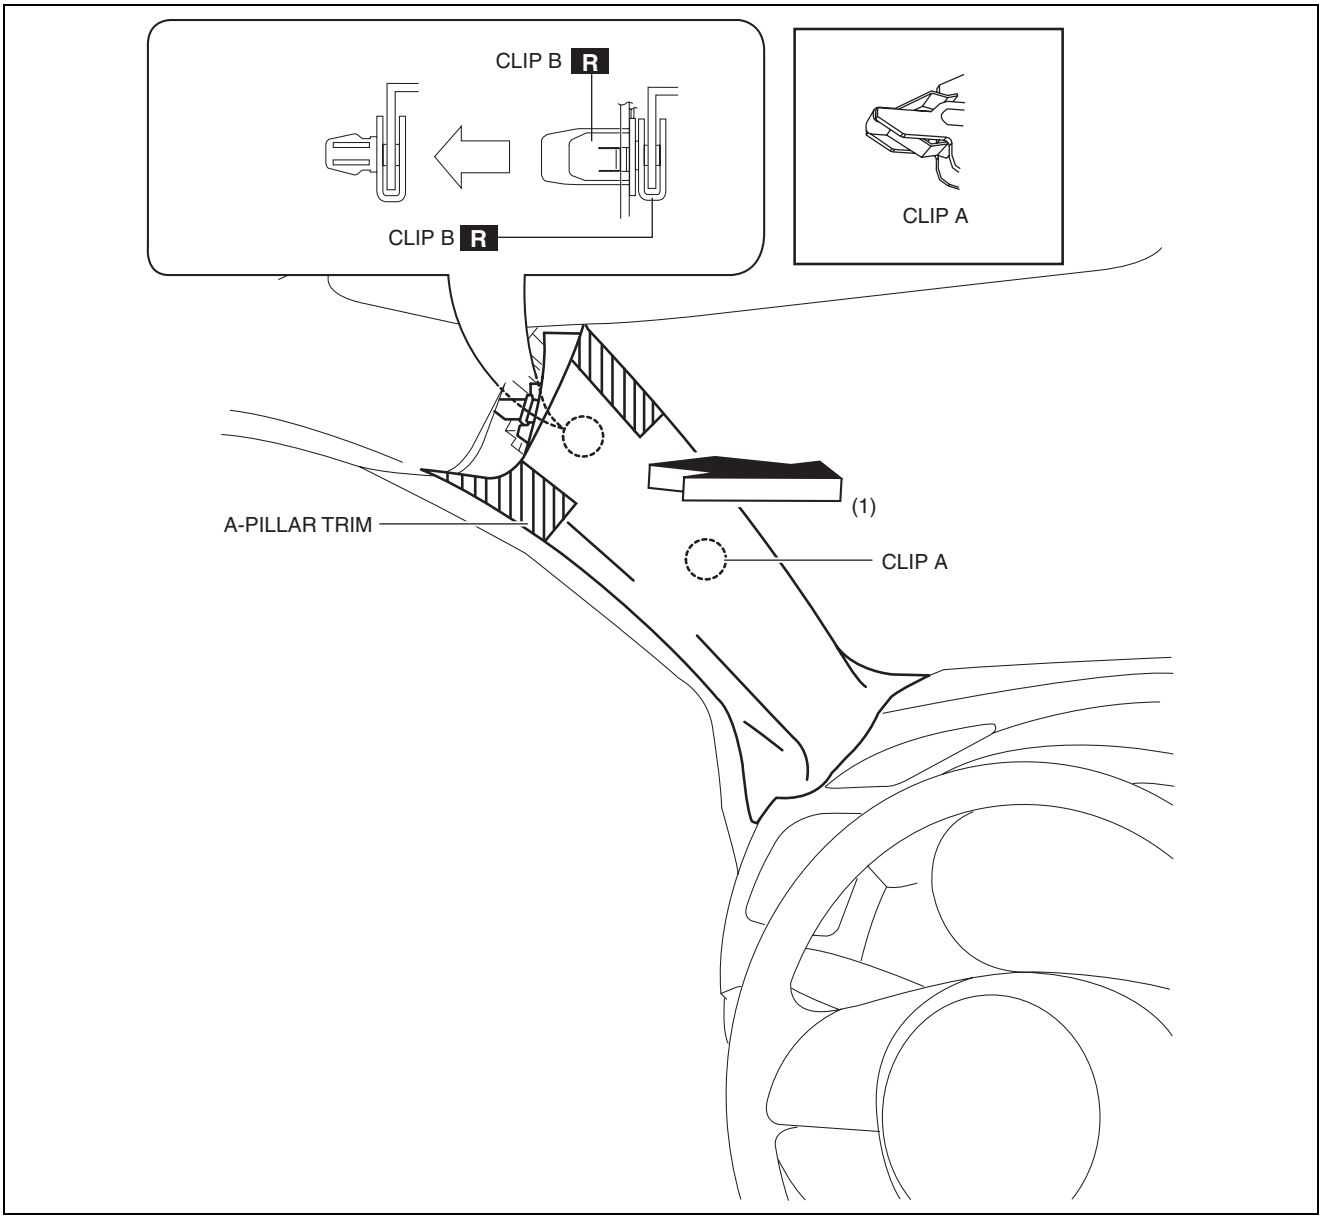
A-PILLAR TRIM REMOVAL/INSTALLATION

id091700801900

1. Partially peel back the seaming welt.

INTERIOR TRIM

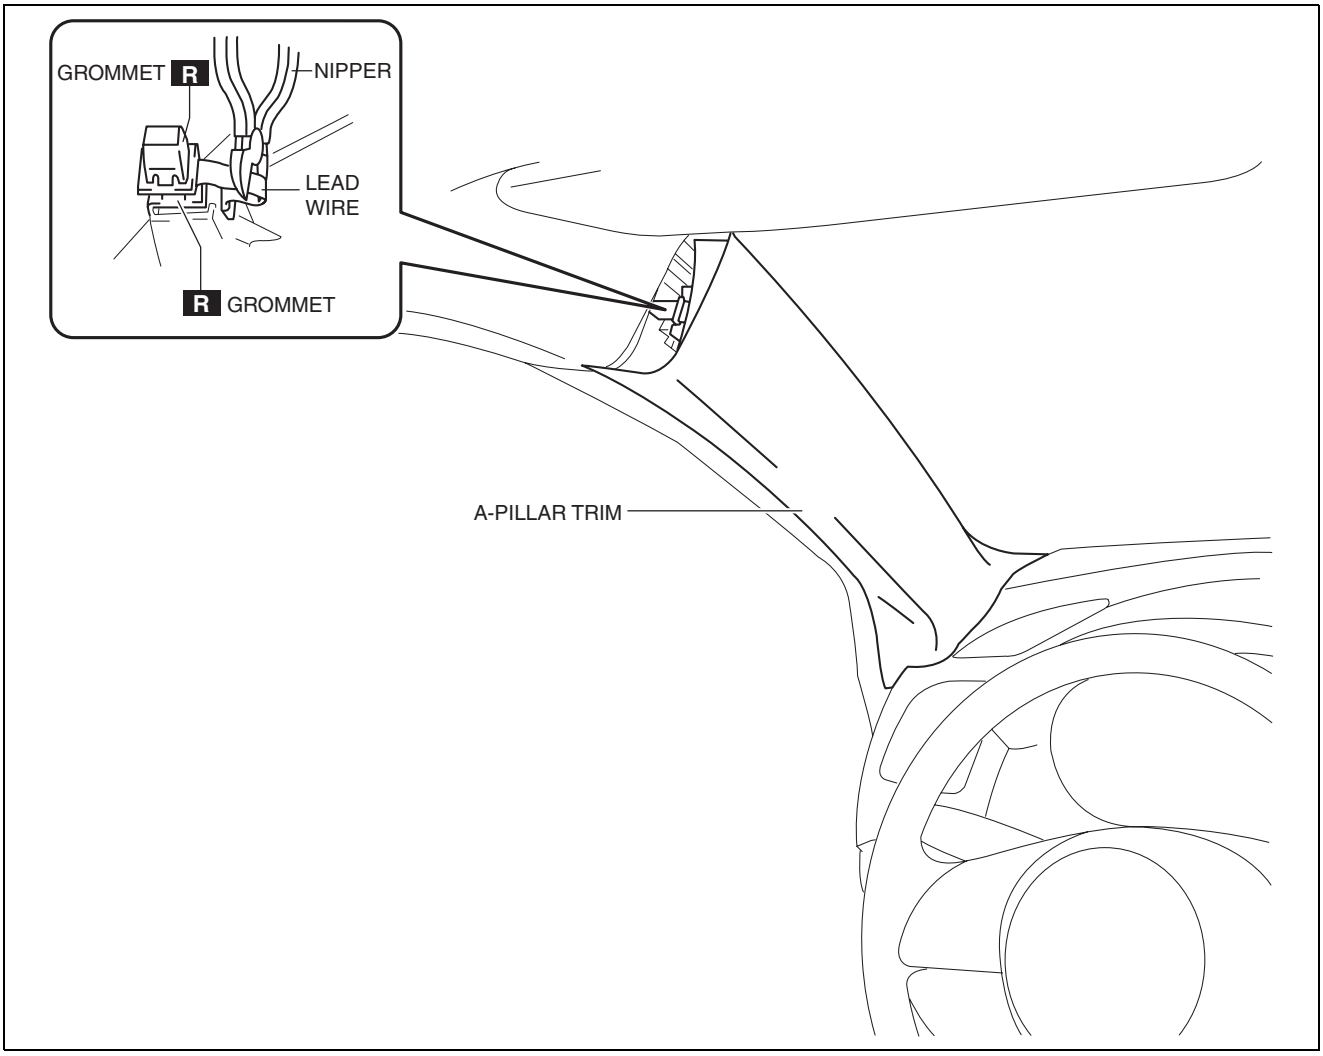
2. Take the shaded area shown in the figure, and pull the A-pillar trim in the direction of the arrow (1) while detaching clip A, clips B.



ac5uuw00001762

INTERIOR TRIM

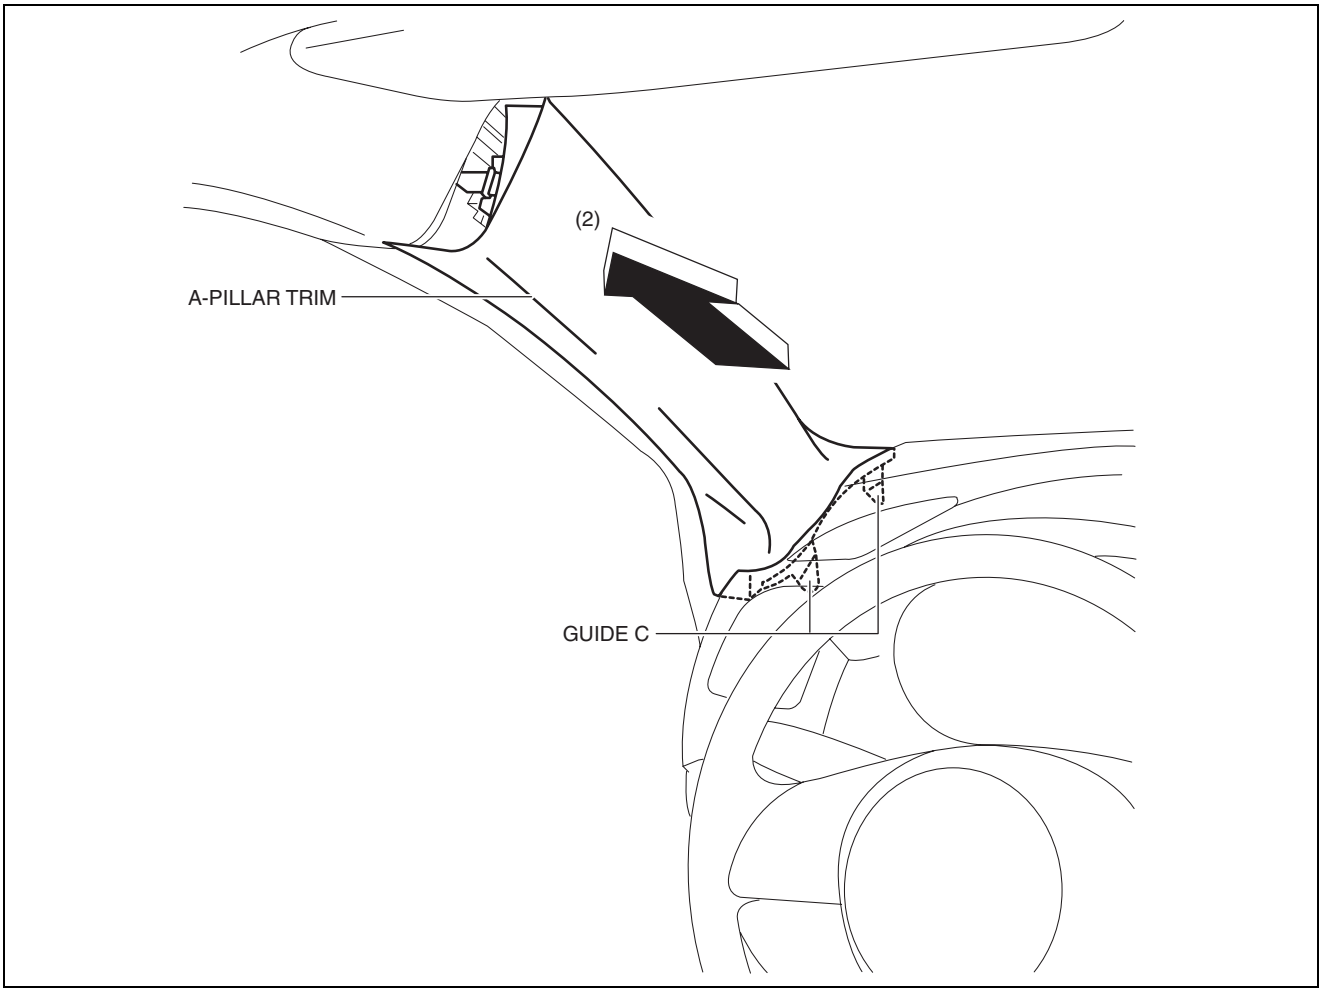
3. Cut the lead wire connecting clips B and grommet using a nipper.



ac5uuw00001763

INTERIOR TRIM

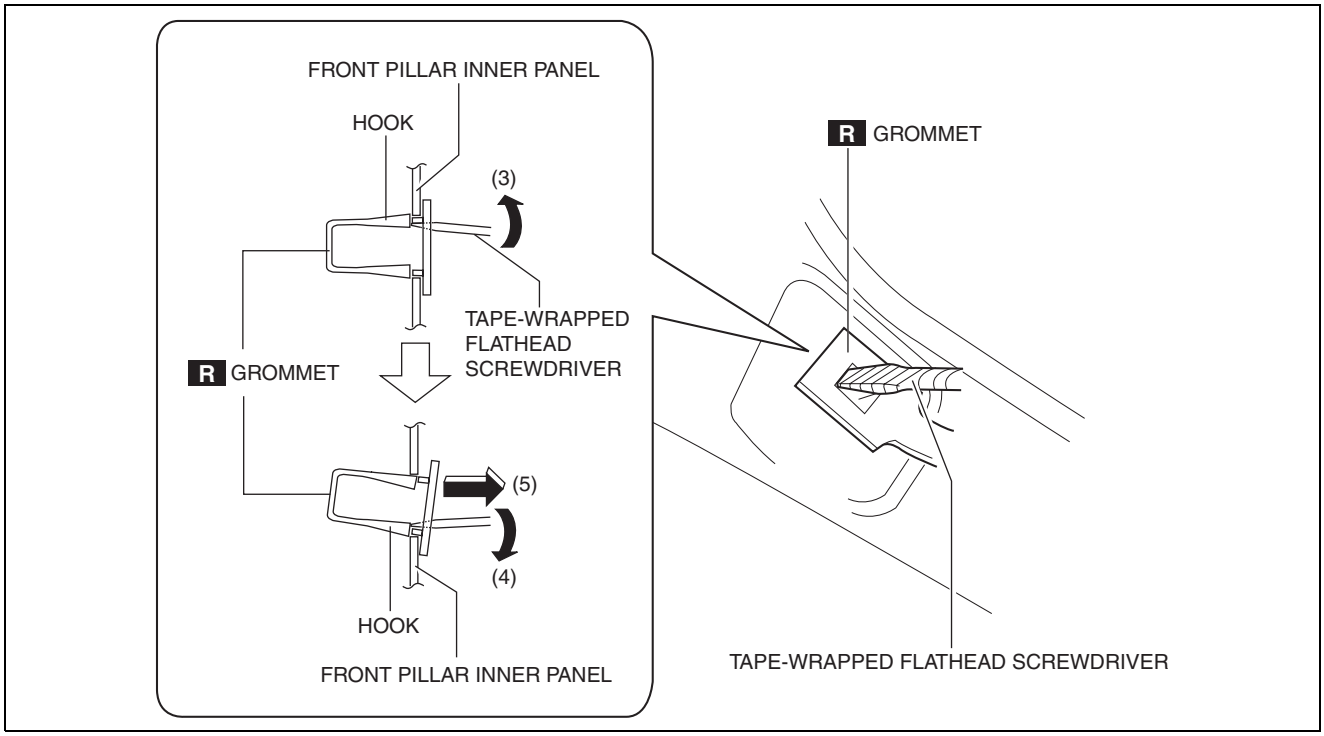
4. Pull the A-pillar trim in the direction of the arrow in the order of (2) and remove the A-pillar trim while detaching guides C.



ac5uuw00001764

INTERIOR TRIM

5. Move the hook in the direction of arrows (3) and (4) shown in the figure using a tape-wrapped flathead screwdriver and detach it from the front pillar inner panel.



ac5uuw00001765

6. Remove the grommet in the direction of the arrow (5) shown in the figure.
7. When installing the A-pillar, install new clips B and grommet to the A-pillar trim in advance.
8. Install in the reverse order of removal.

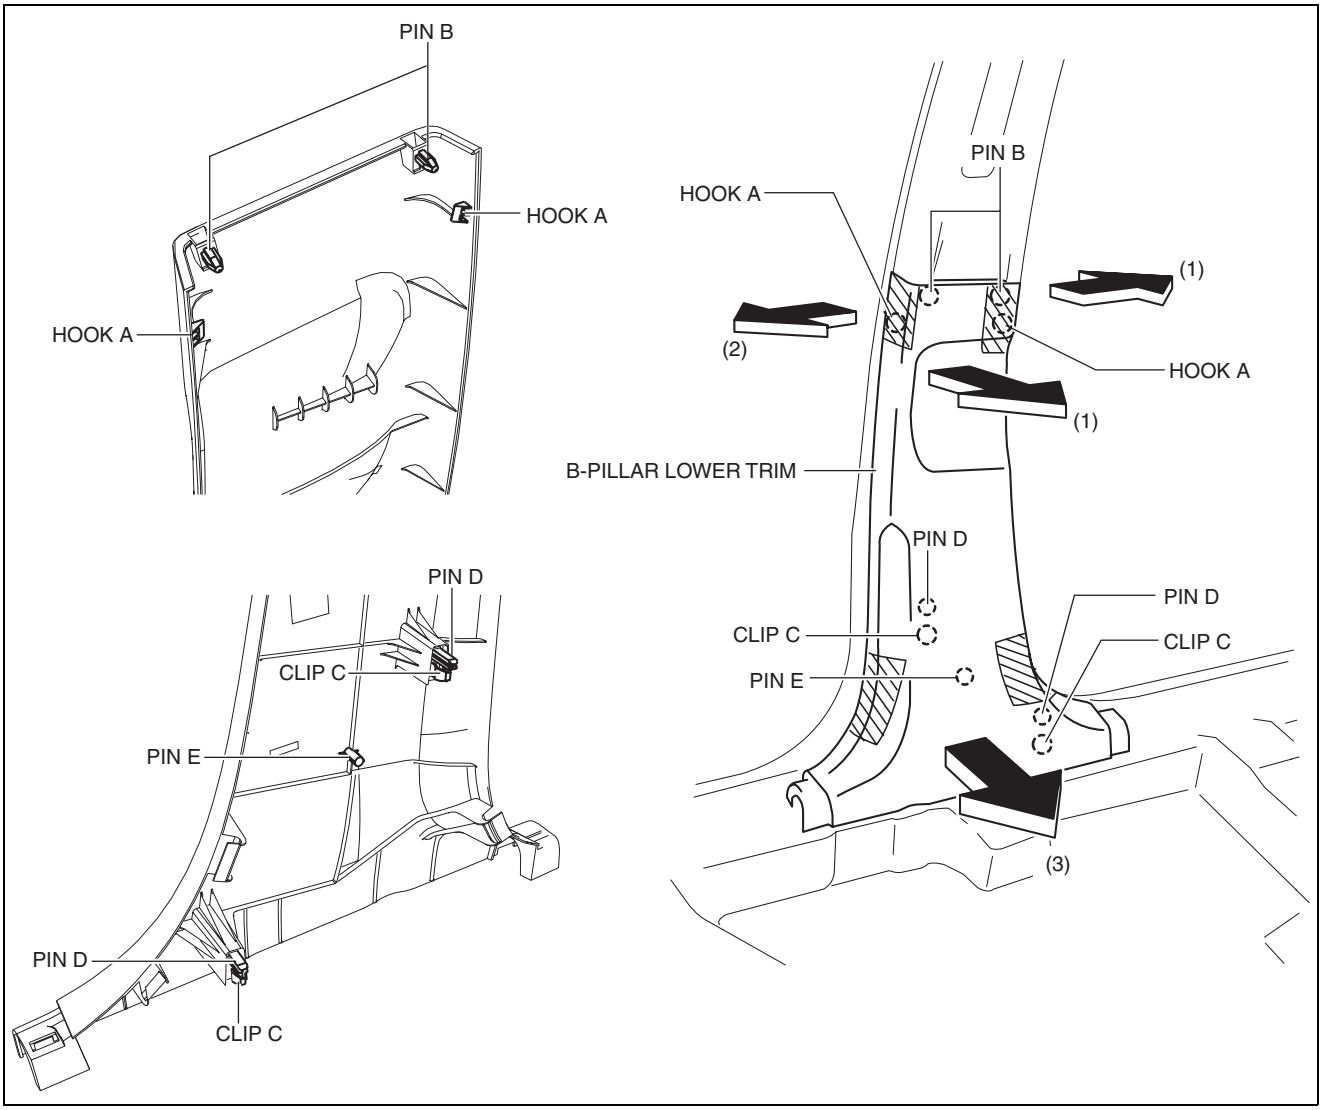
B-PILLAR LOWER TRIM REMOVAL/INSTALLATION

id091700802000

1. Remove the front scuff plate. (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the rear scuff plate. (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
3. Partially peel back the seaming welt.

INTERIOR TRIM

4. Take the shaded area shown in the figure, and pull the B-pillar lower trim in the direction of the arrow in the order of (1), (2) while detaching hooks A, pins B.



ac5uuw00001766

5. Take the shaded area shown in the figure, and pull the B-pillar lower trim in the direction of the arrow (3) while detaching the clips C, pin D, pin E.
6. Install in the reverse order of removal.

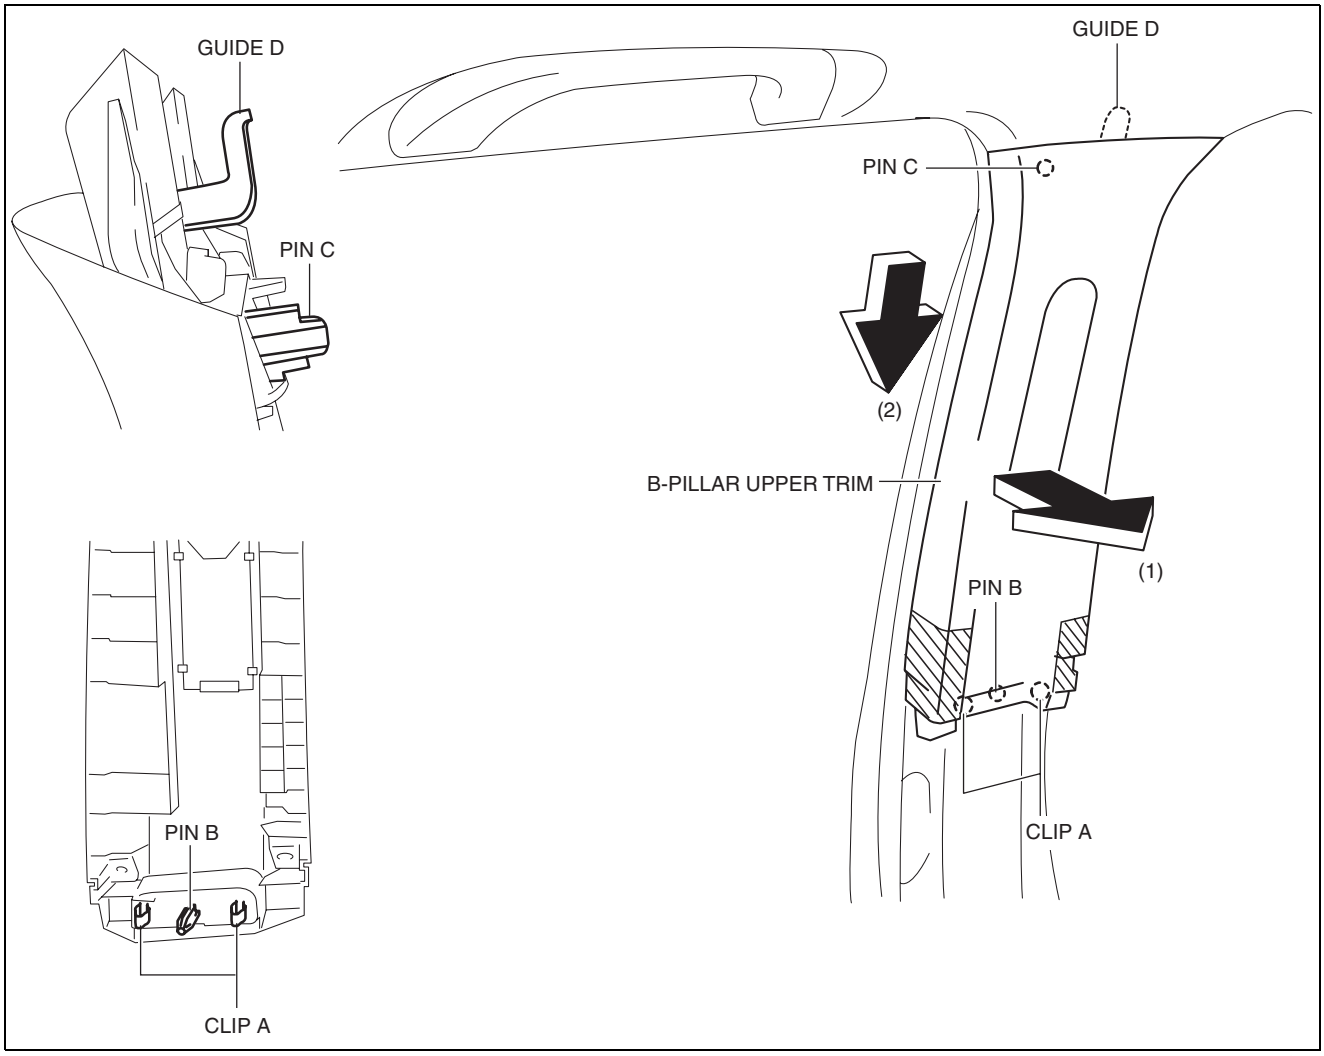
B-PILLAR UPPER TRIM REMOVAL/INSTALLATION

id091700802100

1. Remove the following parts:
   (1) Front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) B-pillar lower trim (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (4) Adjuster anchor cover (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (5) Upper anchor installation bolts on the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
2. Partially peel back the seaming welt.

INTERIOR TRIM

3. Take the shaded area shown in the figure, and pull the B-pillar upper trim in the direction of the arrow (1) while detaching clips A, pin B, pin C.



ac5uuw00001767

4. Remove the B-pillar upper trim in the direction of the arrow (2) shown in the figure while detaching the guide D.

Caution
- **If clips A, pin B and pin C is removed forcefully, guide D may be damaged. Carefully remove clips A, pin B and pin C so as not to damage guide D.**

5. Install in the reverse order of removal.

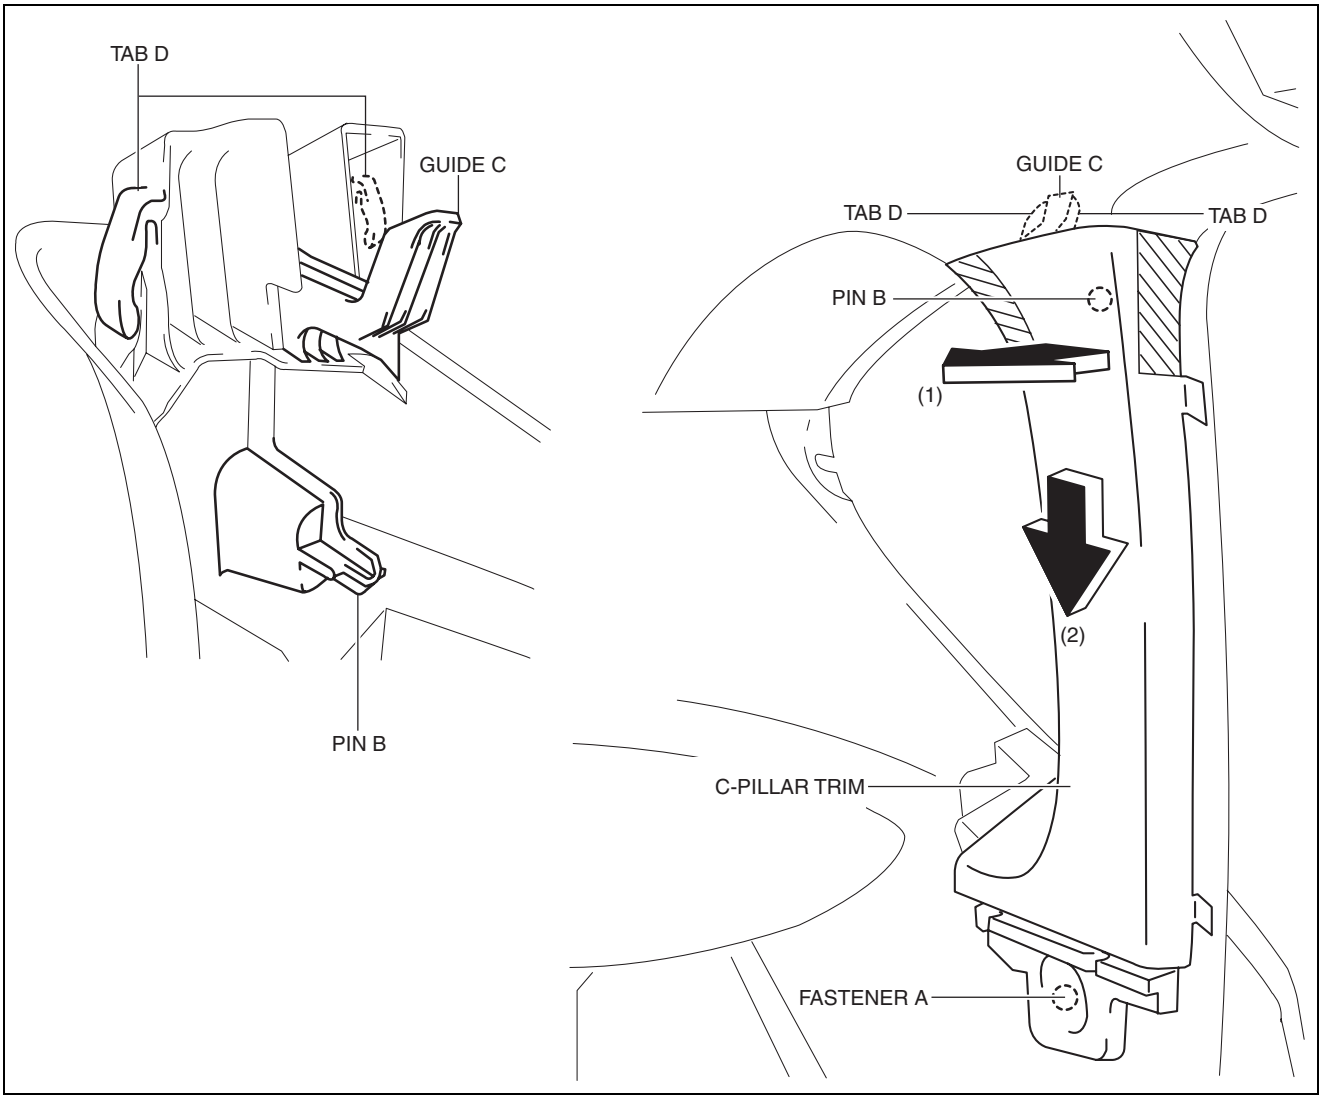
C-PILLAR TRIM REMOVAL/INSTALLATION

id091700802200

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
   (2) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) Trunk side trim (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (5) D-pillar trim (See 09-17-60 D-PILLAR TRIM REMOVAL/INSTALLATION.)
3. Partially peel back the seaming welt.

INTERIOR TRIM

4. Remove the fastener A.



ac5uuw00001768

5. Take the shaded area shown in the figure, and pull the C-pillar trim in the direction of the arrow (1) while detaching the pin B.
6. Remove the C-pillar trim in the direction of the arrow (2) shown in the figure while detaching guide C, tabs D.

Caution
- **If the C-pillar trim is pulled in the direction of the arrow (1) forcefully, guide C may be damaged. Carefully pull the C-pillar trim so as not to damage guide C.**

7. Install in the reverse order of removal.

D-PILLAR TRIM REMOVAL/INSTALLATION

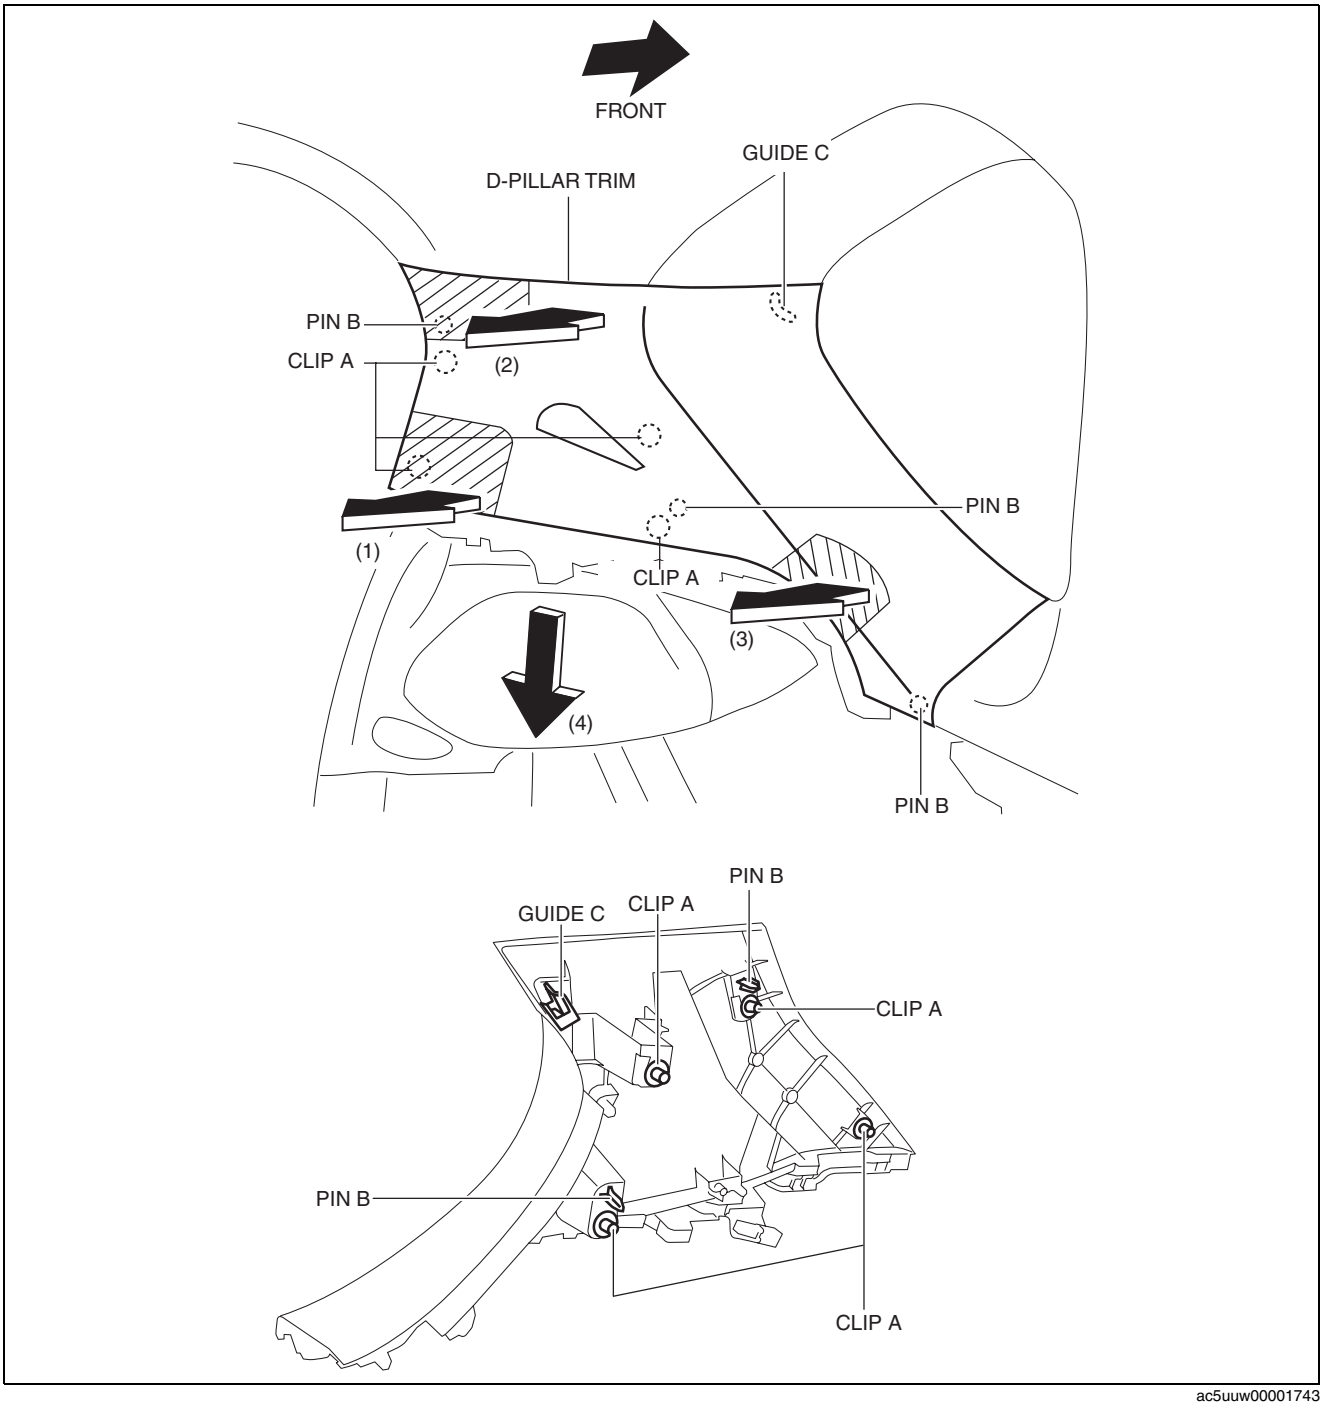
id091700459300

Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

1. Remove the following parts:
   (1) Trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
   (2) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) Trunk side trim (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)

INTERIOR TRIM

2. Take the shaded area shown in the figure, and remove the D-pillar trim in the direction of the arrow in the order of (1), (2), (3) while detaching clips A, pins B.



ac5uuw00001743

3. Pull the D-pillar trim in the direction of the arrow (4) and remove the D-pillar trim while detaching the guide C.
4. Install in the reverse order of removal.

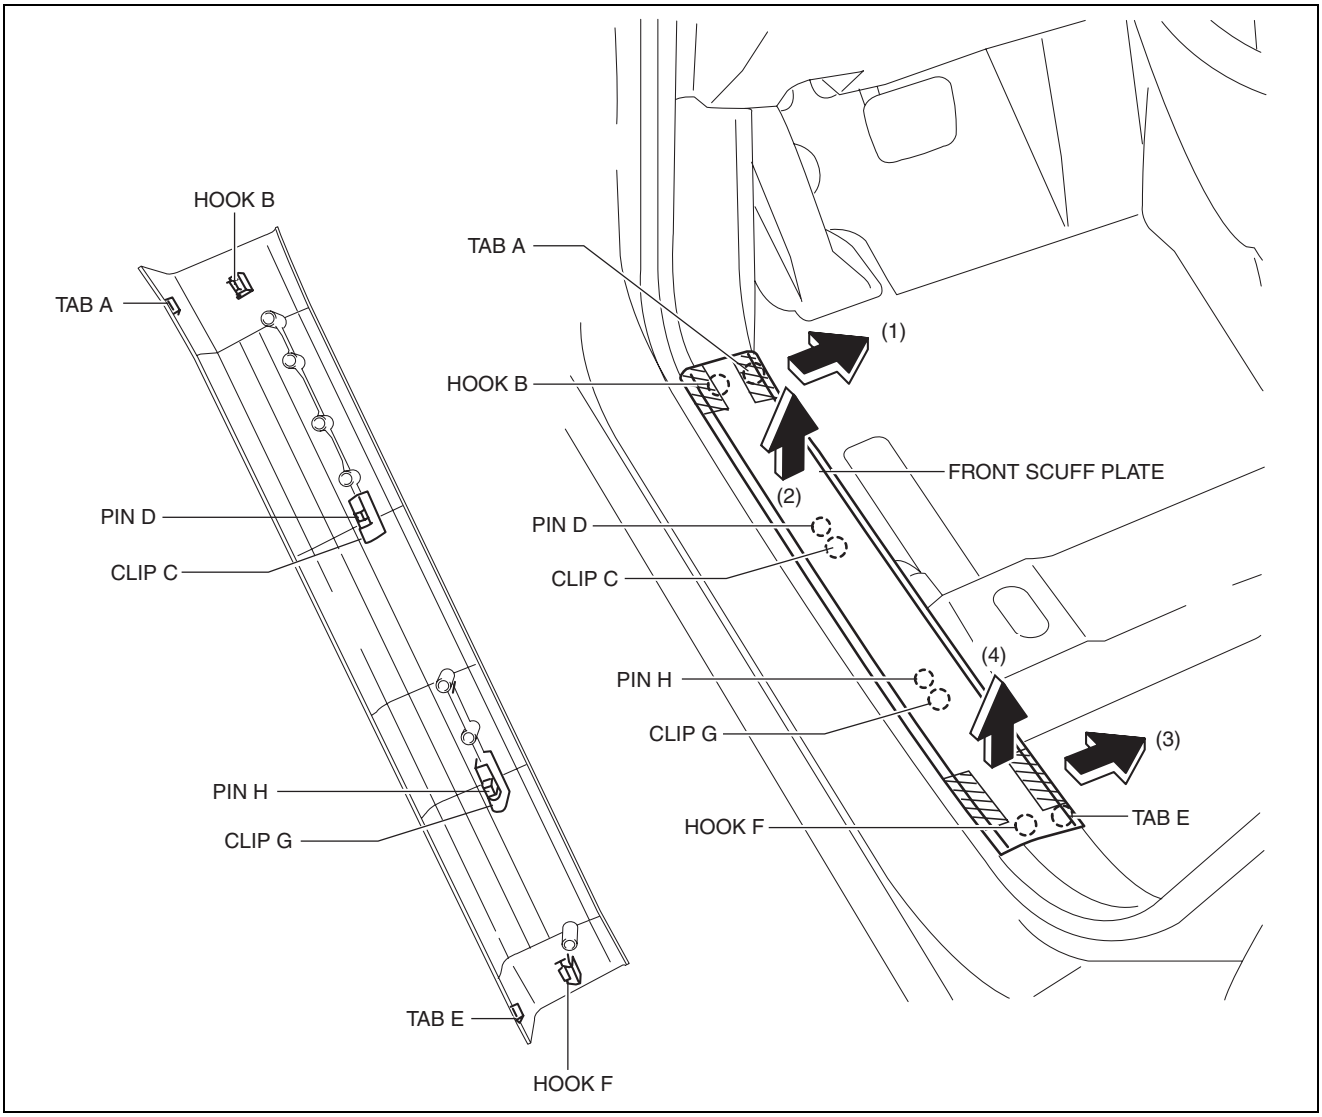
FRONT SCUFF PLATE REMOVAL/INSTALLATION

id091700801400

1. Take the shaded area shown in the figure, detach tab A while pulling the front scuff plate in the direction of the arrow (1) shown in the figure, then detach the hook B, clip C, and pin D while pulling in the direction of the arrow (2).

INTERIOR TRIM

2. Take the shaded area shown in the figure, detach tab E while pulling the front scuff plate in the direction of the arrow (3) shown in the figure, then detach the hook F, clip G and pin H while pulling in the direction of the arrow (4).



ac5uuw00001760

3. Install in the reverse order of removal.

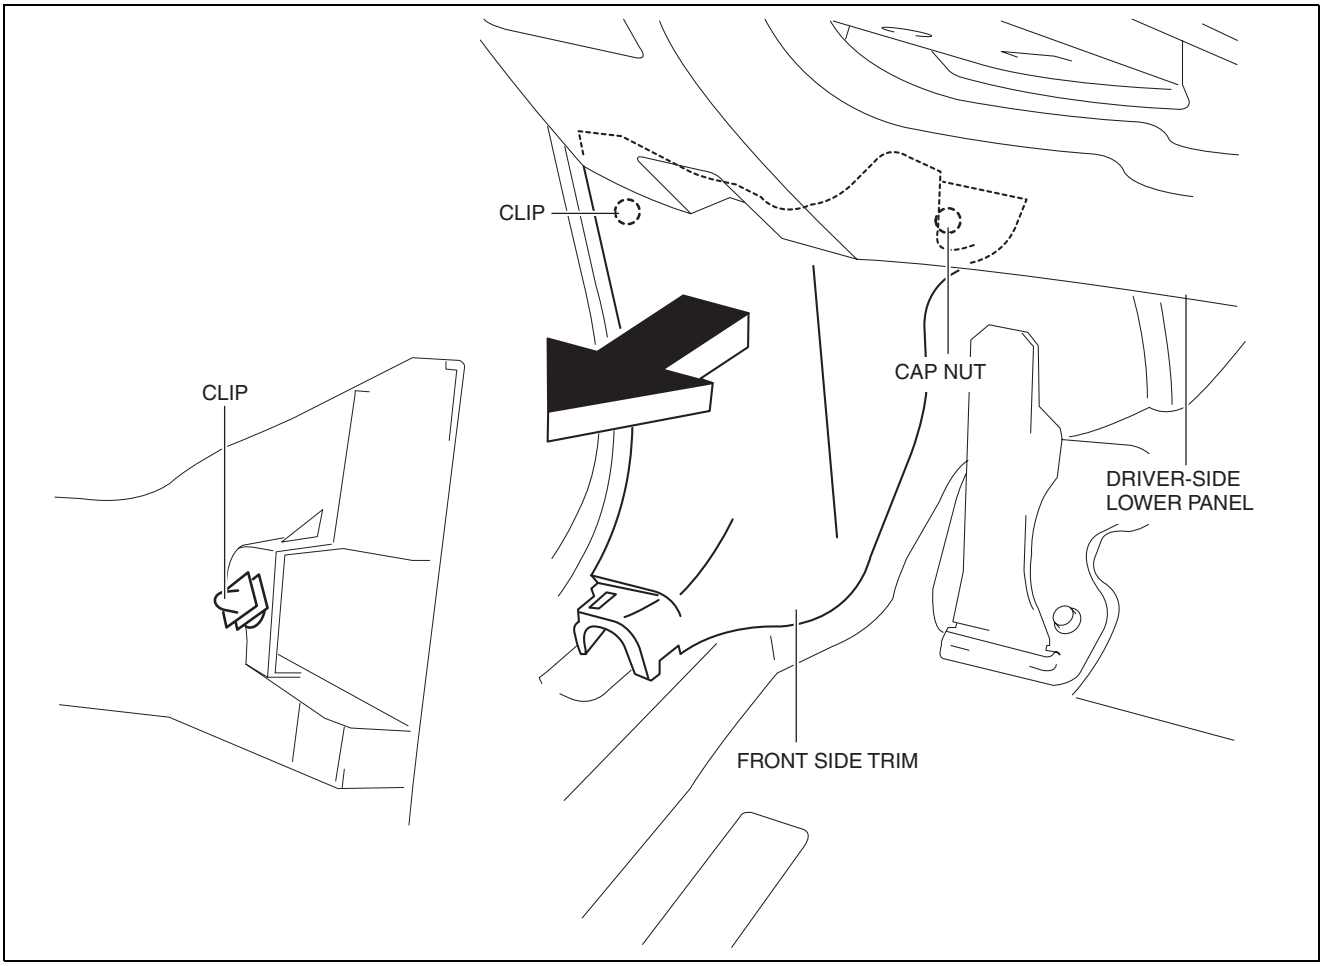
FRONT SIDE TRIM REMOVAL/INSTALLATION

id091700802400

1. Remove the front scuff plate. (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. Partially peel back the seaming welt.

INTERIOR TRIM

3. Remove the cap nut.



ac5wzw0000300

4. Pull the front side trim in the direction of the arrow shown in the figure and remove it while detaching the clip.
5. Install in the reverse order of removal.

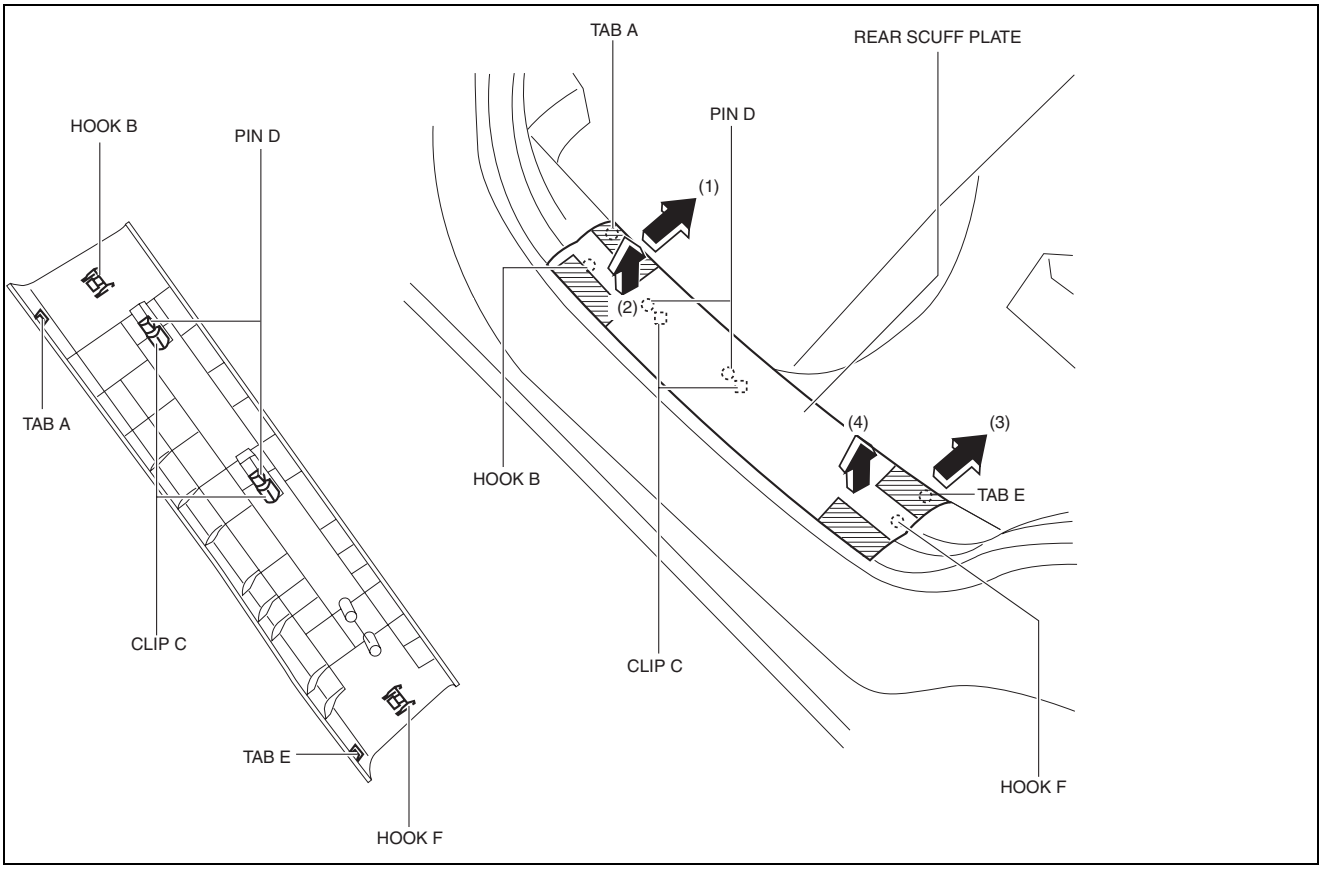
REAR SCUFF PLATE REMOVAL/INSTALLATION

id091700801500

1. Take the shaded area shown in the figure, detach tab A while pulling the rear scuff plate in the direction of the arrow (1) shown in the figure, then detach hook B, clips C, pins D while pulling in the direction of the arrow (2).

INTERIOR TRIM

2. Take the shaded area shown in the figure, detach tab E while pulling the rear scuff plate in the direction of the arrow (3) shown in the figure, then detach the hook F while pulling in the direction of the arrow (4).



ac5uuw00001761

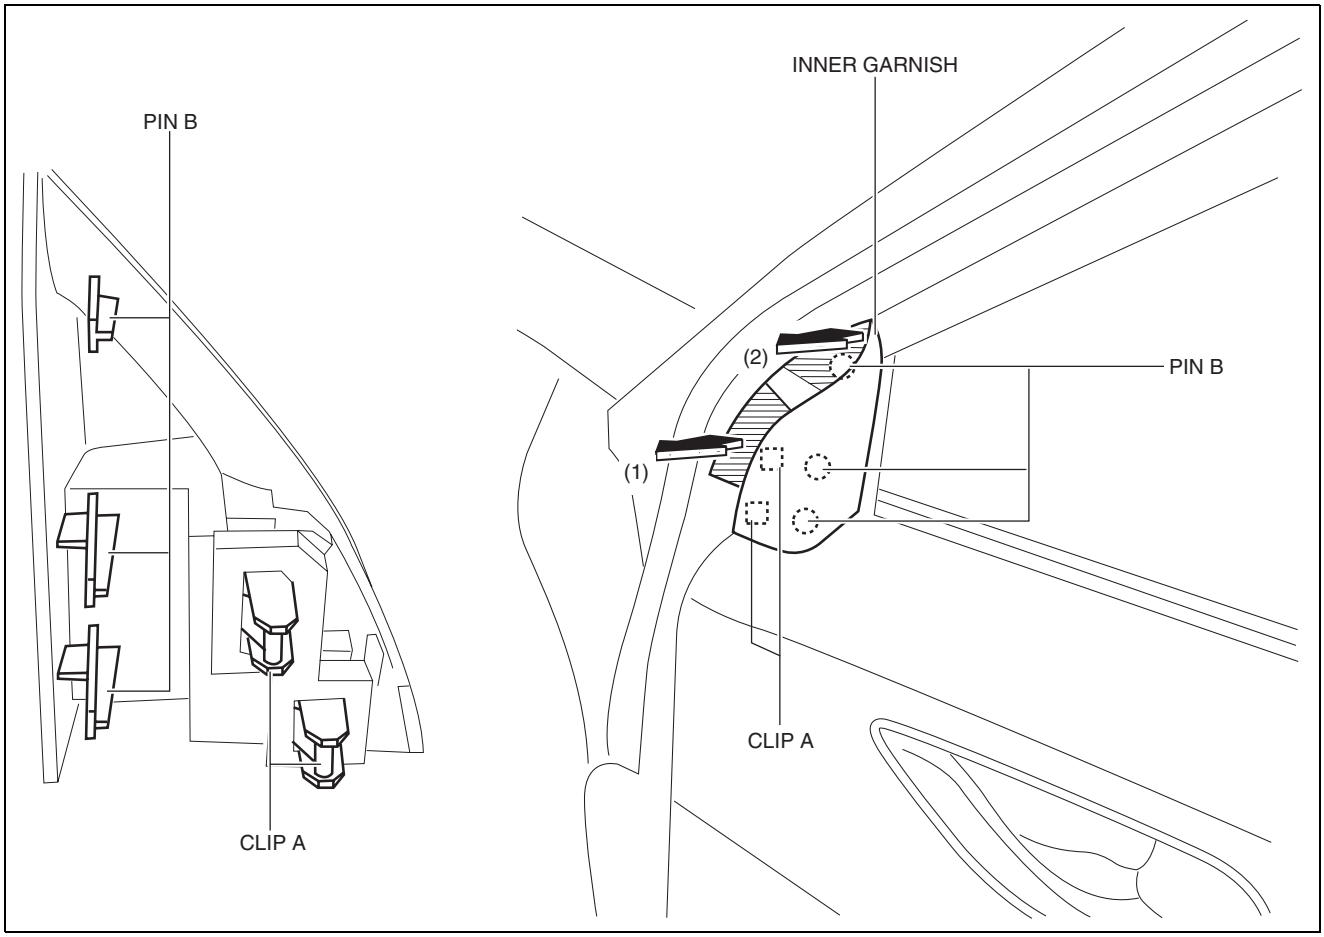
3. Install in the reverse order of removal.

INTERIOR TRIM

INNER GARNISH REMOVAL/INSTALLATION

id091700801000

1. Take the shaded area shown in the figure, and pull the inner garnish in the direction of the arrow (1) while detaching clips A.



ac5uuw00001757

2. Take the shaded area shown in the figure, and remove the inner garnish in the direction of the arrow (2) while detaching pins B.
3. Install in the reverse order of removal.

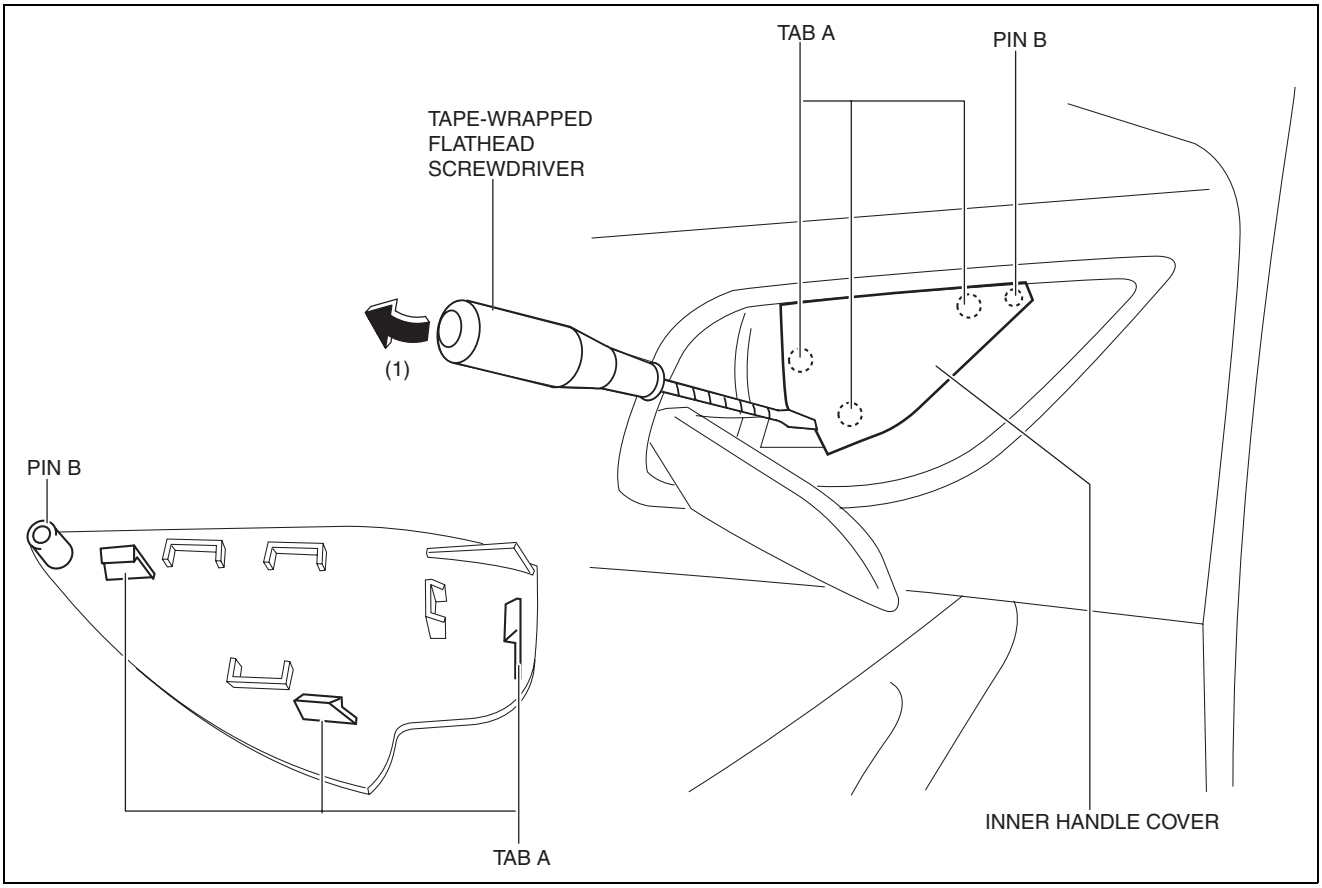
FRONT DOOR TRIM REMOVAL/INSTALLATION

id091700802500

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the inner garnish. (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)

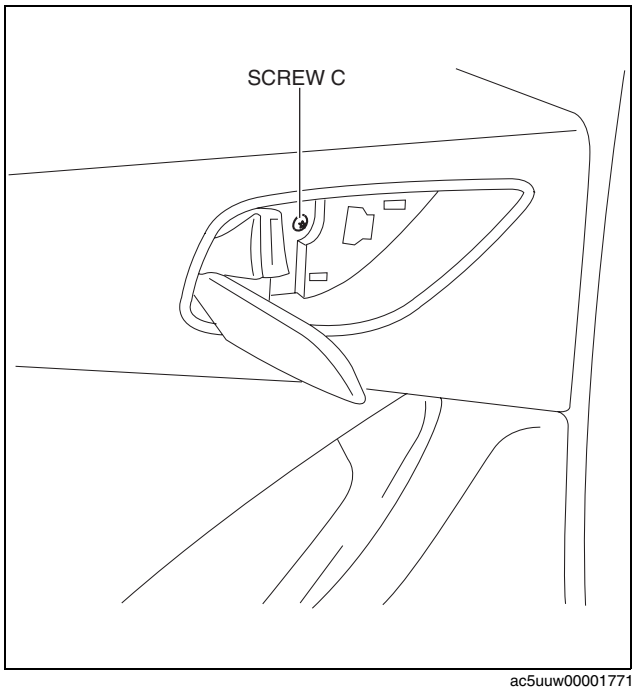
INTERIOR TRIM

3. Insert a tape-wrapped flathead screwdriver in the position indicated by the arrow (1) in the figure and remove the inner handle cover while detach tabs A, pin B.



ac5uuw00001770

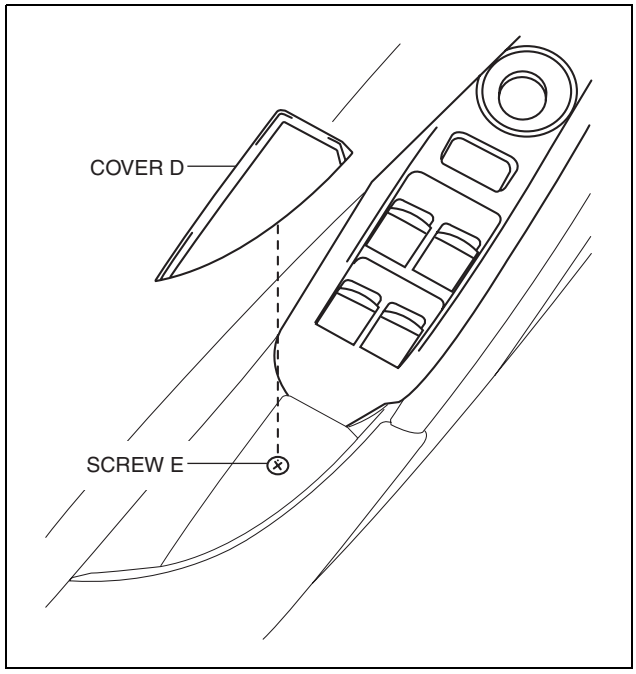
4. Remove the screw C.



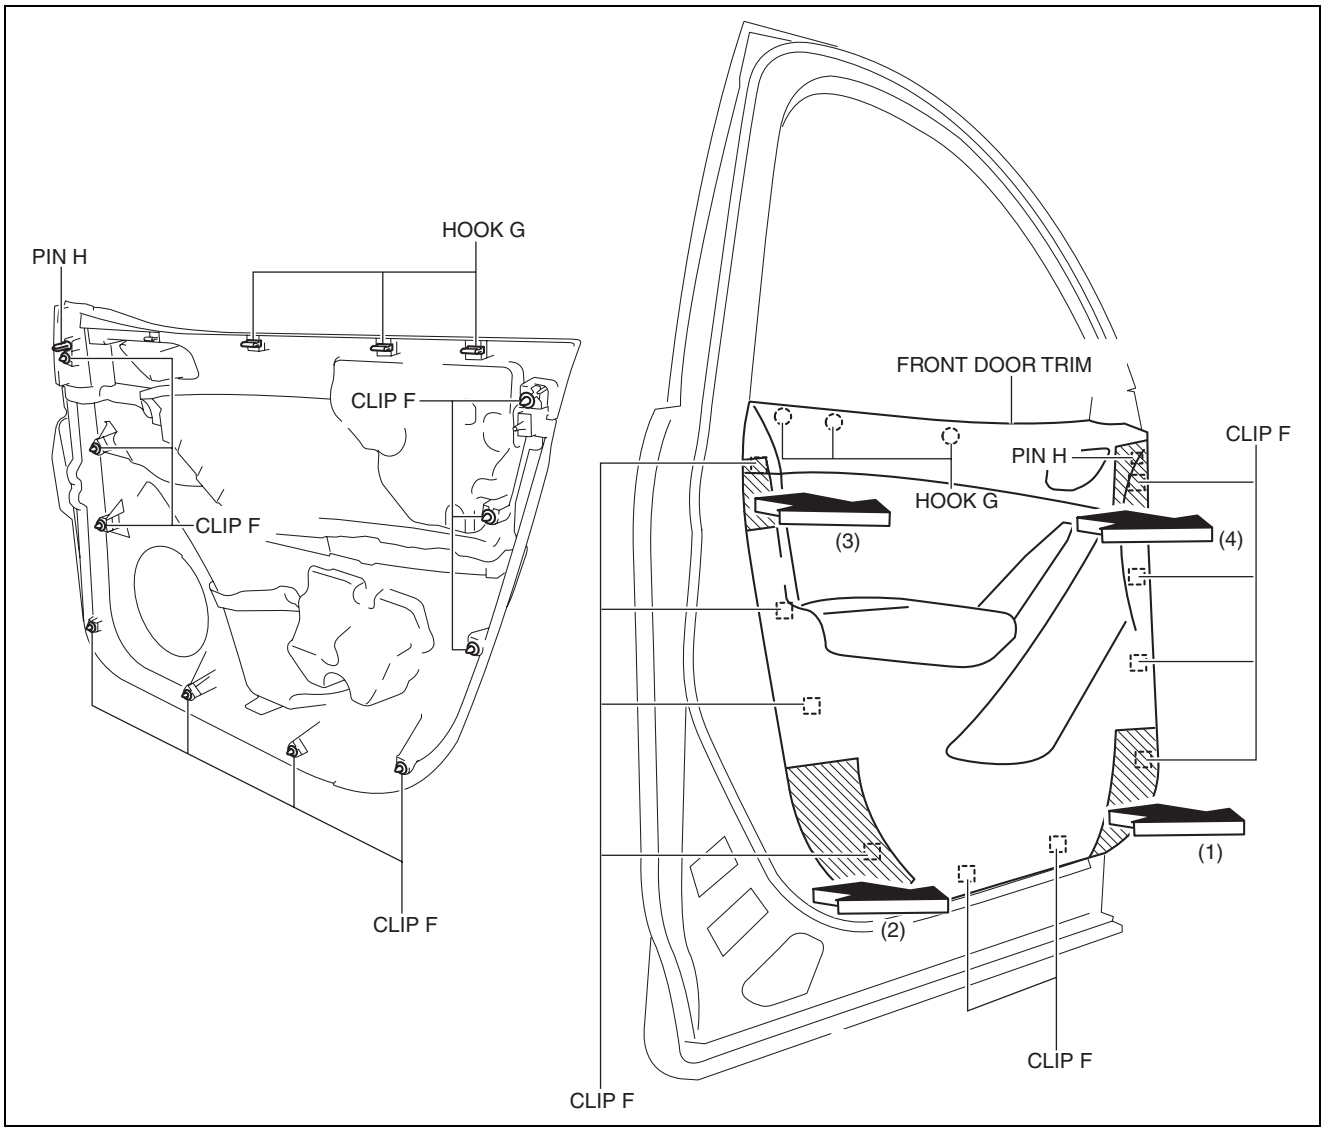
ac5uuw00001771

INTERIOR TRIM

5. Remove the cover D, then remove the screw E.
6. Take the shaded area shown in the figure, and pull the front door trim in the direction of the arrow in the order of (1), (2), (3), (4) while detaching clips F, hooks G and pin H.



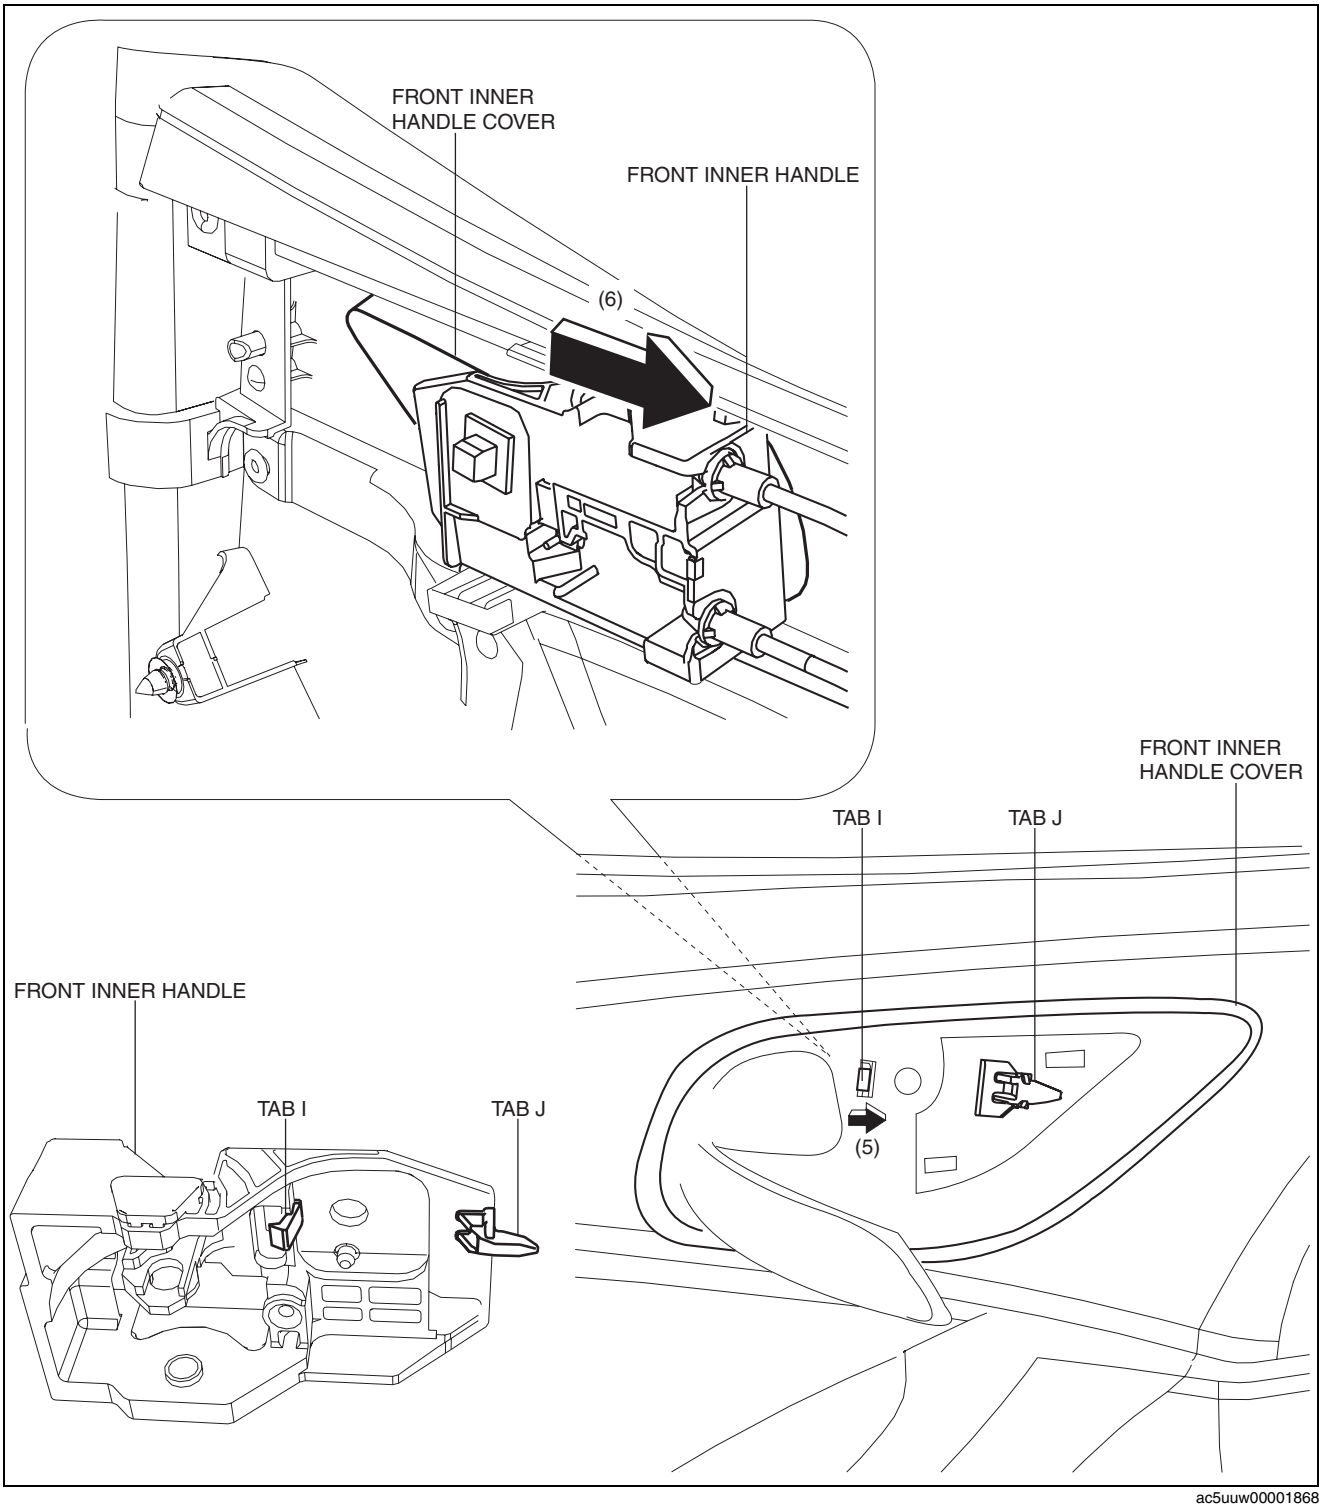
ac5uuw00001772



ac5uuw00001773

INTERIOR TRIM

7. Remove the tab I in the direction of the arrow (5) shown in the figure.



ac5uuw00001868

8. Remove the front inner handle in the direction of the arrow (6) shown in the figure while detaching the tab J.
9. Disconnect the power window main switch connector (driver-side) or power window subswitch connector (passenger-side).
10. Install in the reverse order of removal.

INTERIOR TRIM

FRONT DOOR TRIM DISASSEMBLY/ASSEMBLY

id091700804200

Driver-side

1. Disassemble in the order shown in the figure.

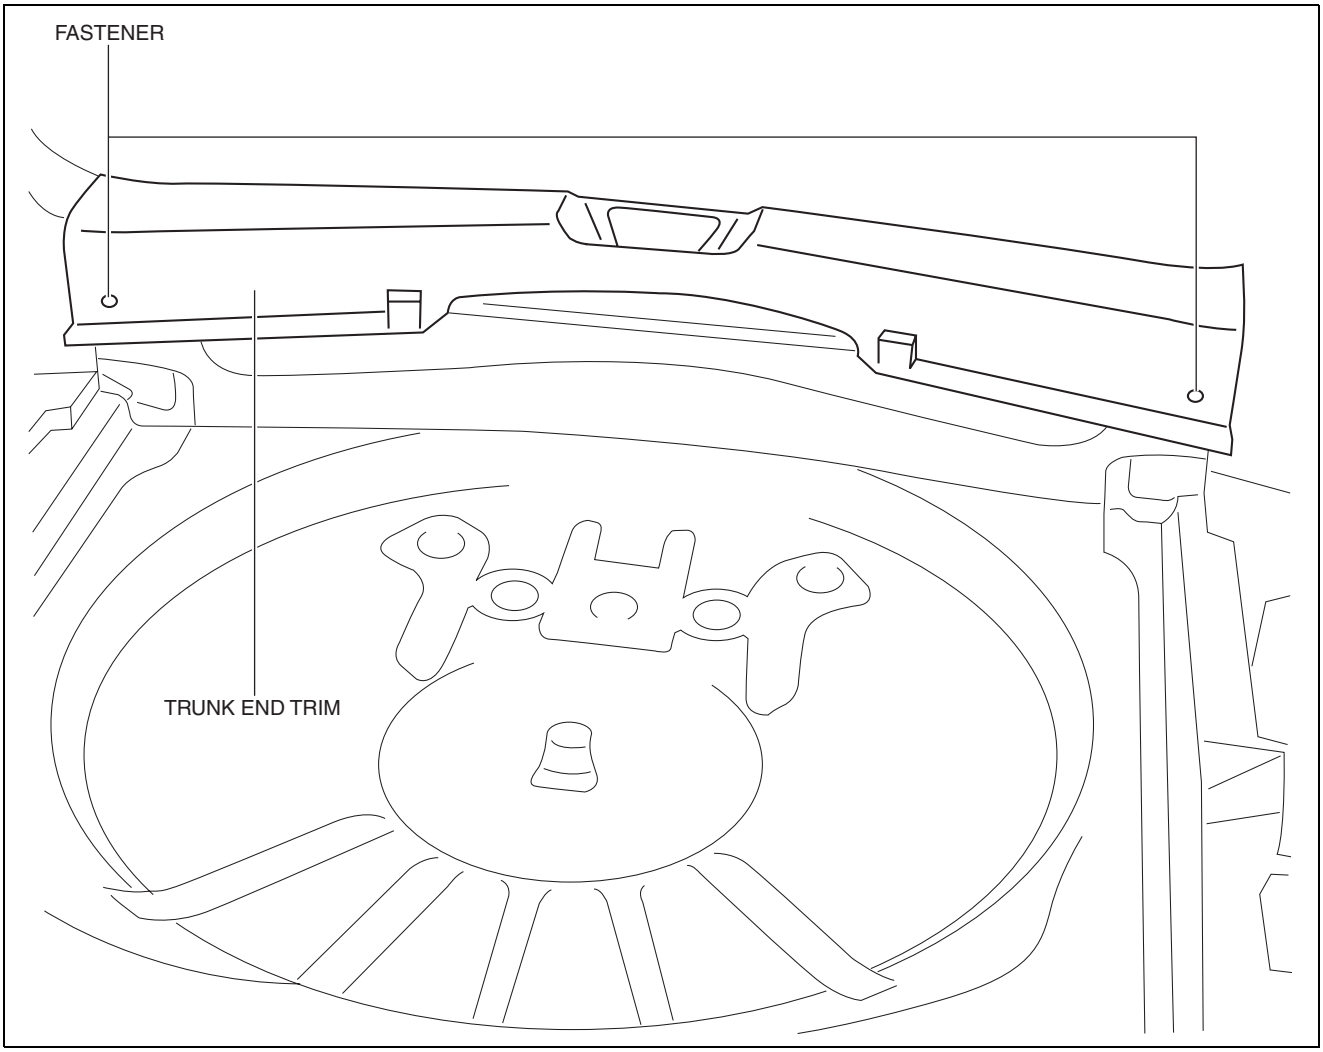
TRUNK END TRIM REMOVAL/INSTALLATION

id091700803400

1. Remove the trunk board. (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
2. Partially peel back the liftgate weather strip.

INTERIOR TRIM

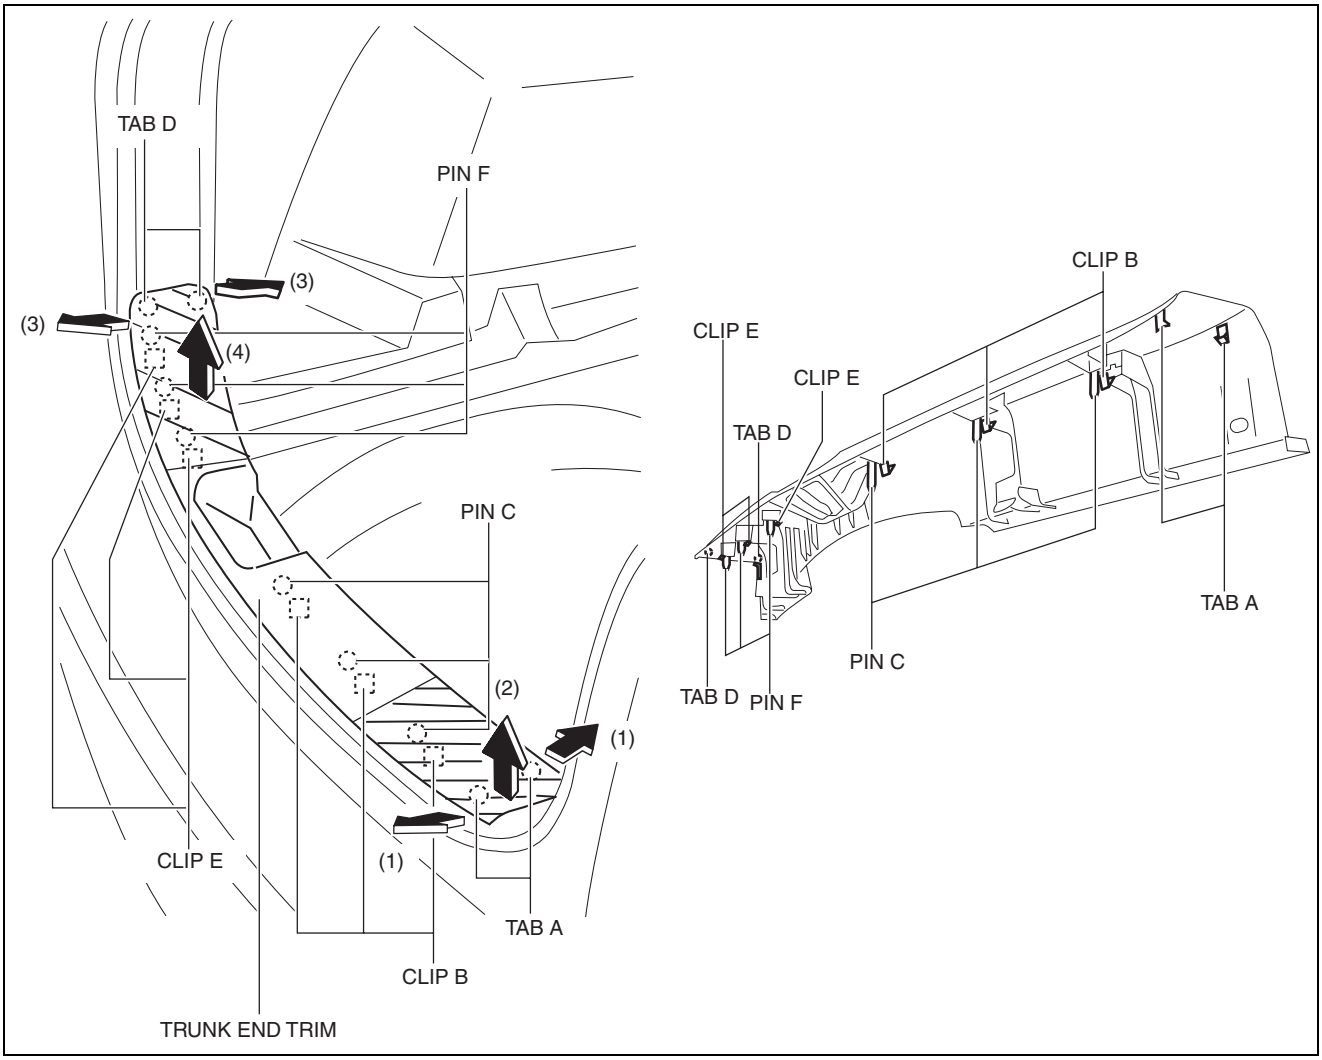
3. Remove fasteners.



ac5wzw0000147

INTERIOR TRIM

4. Take the shaded area shown in the figure, detach tabs A while pulling the trunk end trim in the direction of the arrow (1) shown in the figure, then detach clips B, pins C while pulling in the direction of the arrow (2).



ac5wzw0000147

5. Take the shaded area shown in the figure, detach tabs D while pulling the trunk end trim in the direction of the arrow (3) shown in the figure, then detach clips E, pins F while pulling in the direction of the arrow (4).
6. Install in the reverse order of removal.

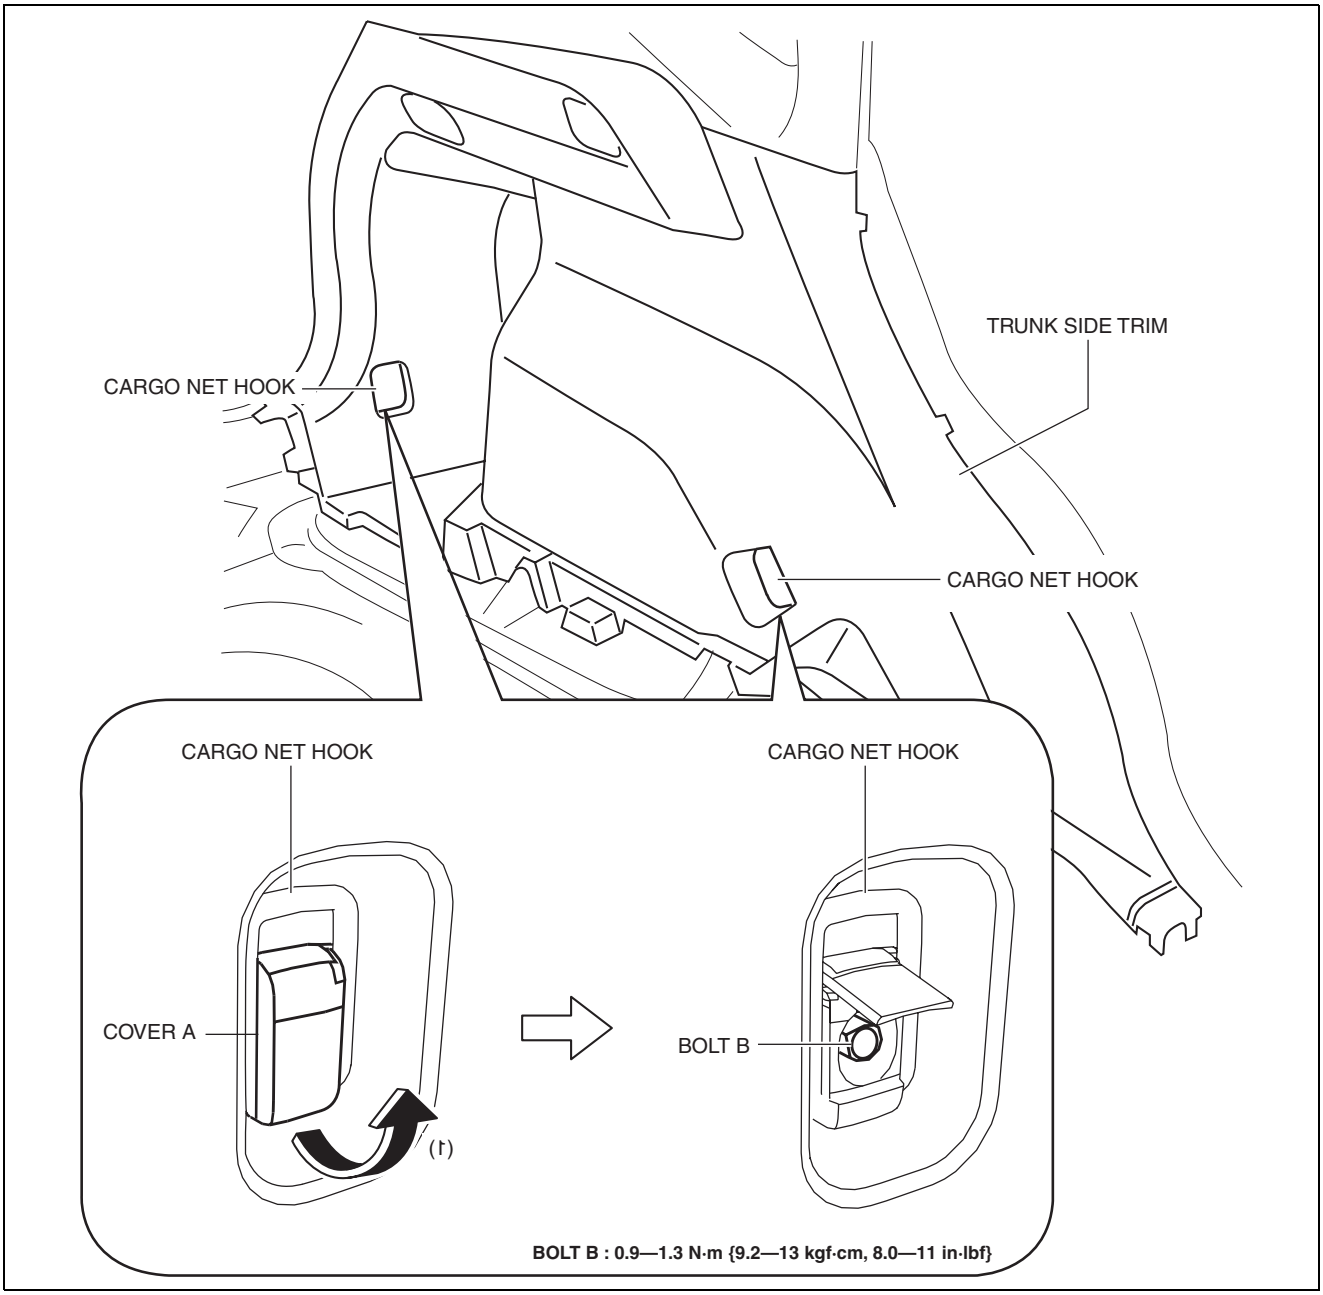
TRUNK SIDE TRIM REMOVAL/INSTALLATION

id091700803100

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
   (2) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
3. Pull up the cover A in the direction the of arrow (1) shown in the figure.

INTERIOR TRIM

4. Remove bolt B, then remove the cargo net hooks.

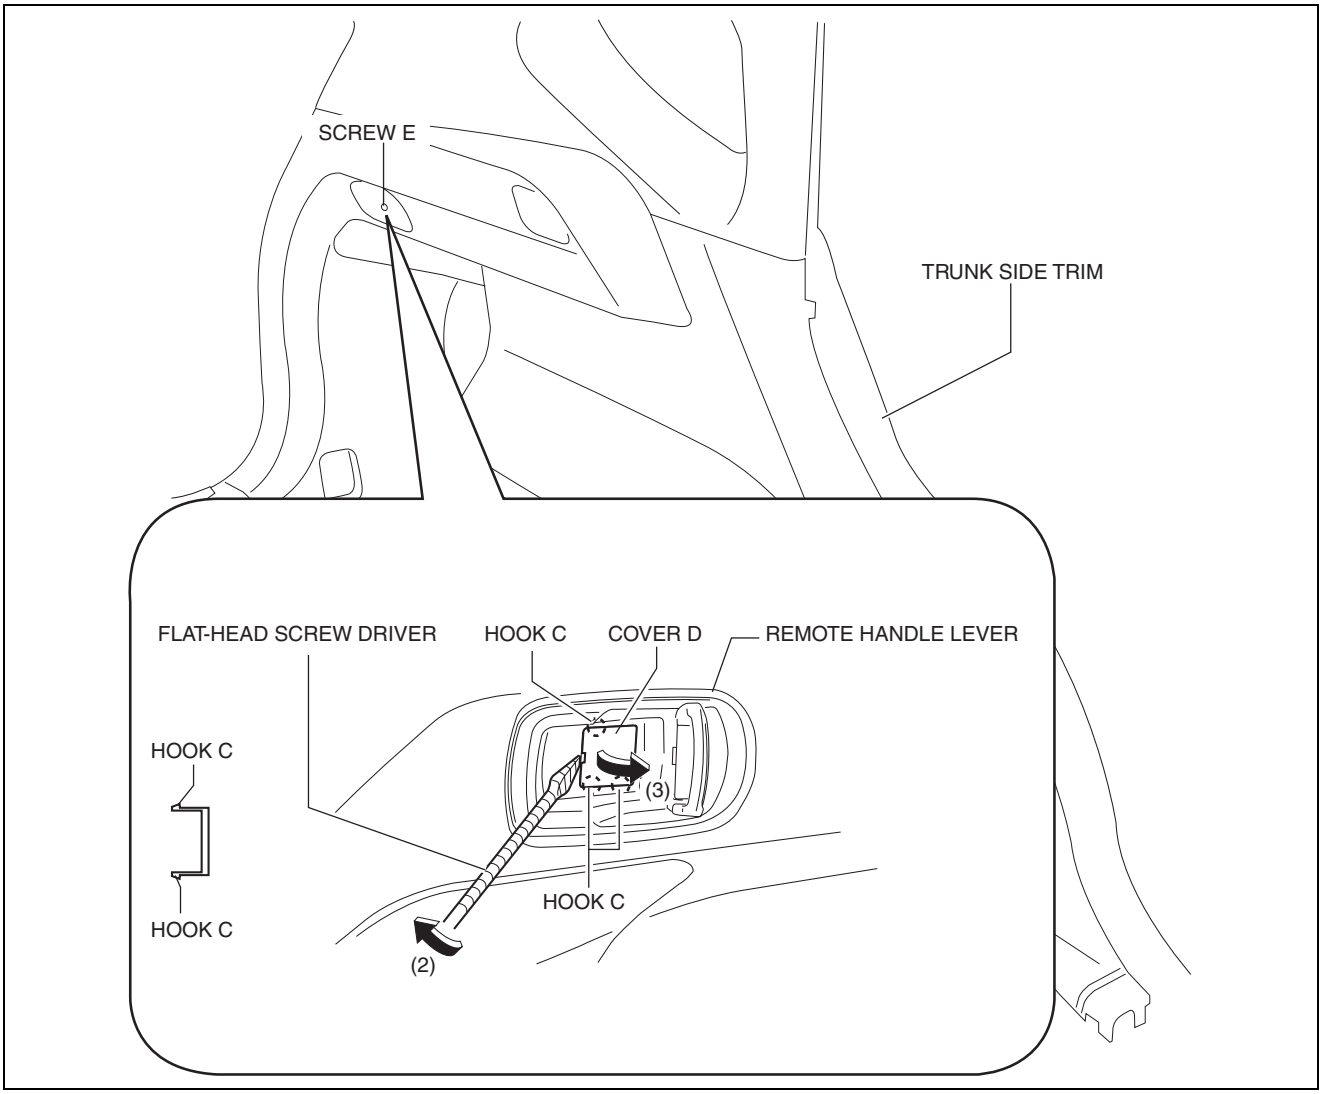


ac5wzw0000458

5. Move hooks C in the direction of arrow (2) shown in the figure using a tape-lapped flathead screwdriver.
6. Remove the cover D in the direction of arrow (3) shown in the figure.

INTERIOR TRIM

7. Remove the screw E.

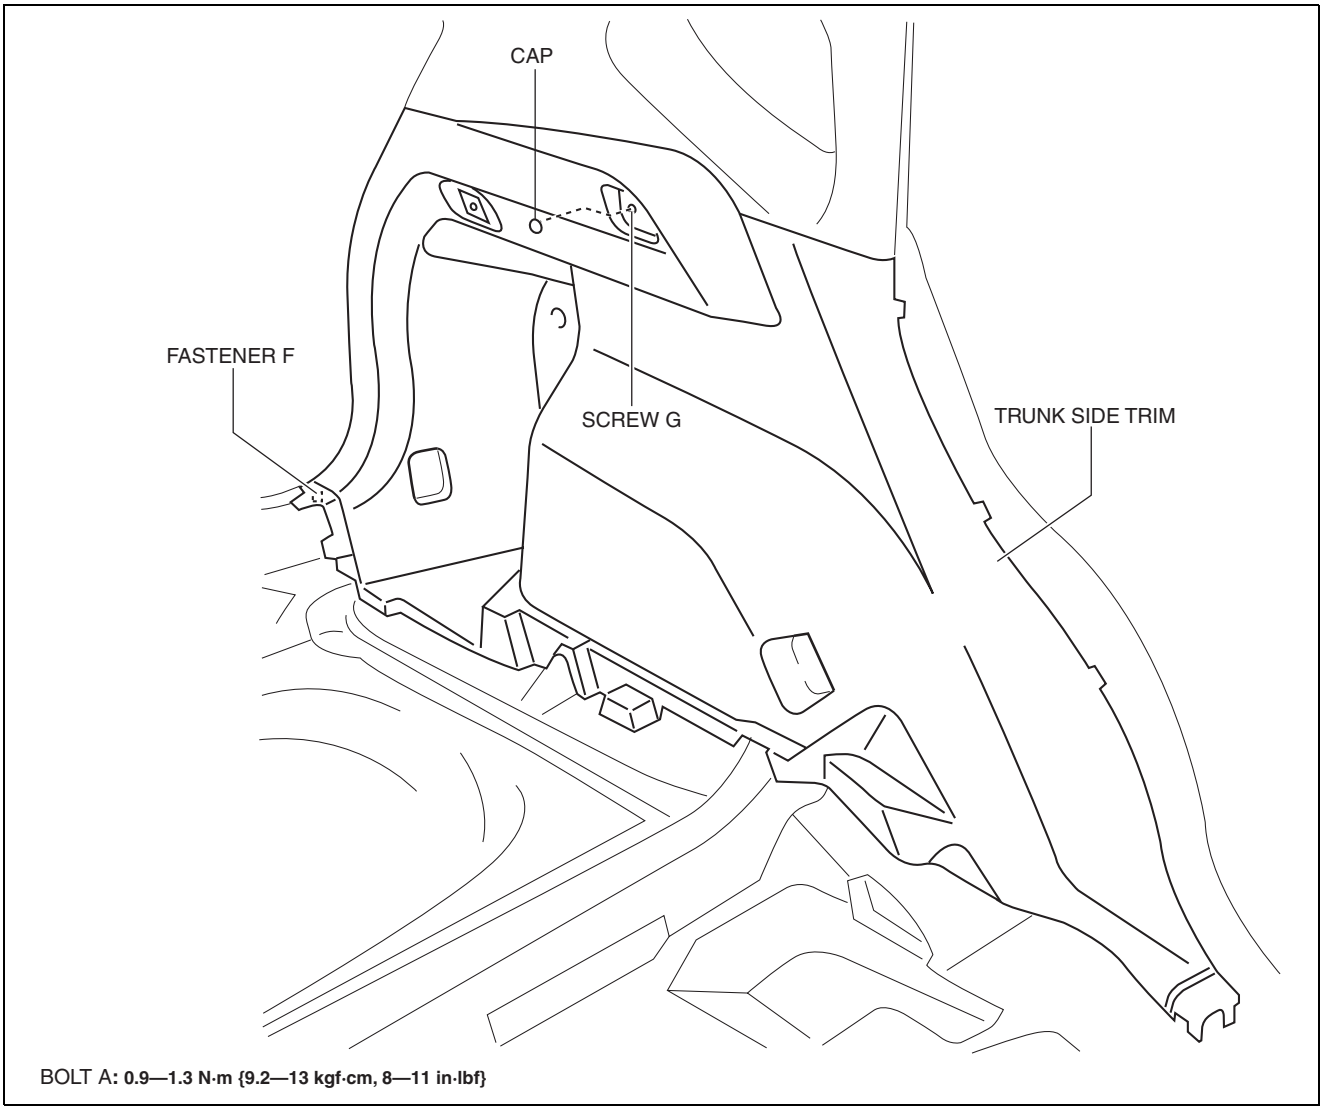


ac5wzw0000458

8. Remove the fastener F.

INTERIOR TRIM

9. Remove the cap, then remove the screw G. (4:2:4 split type)

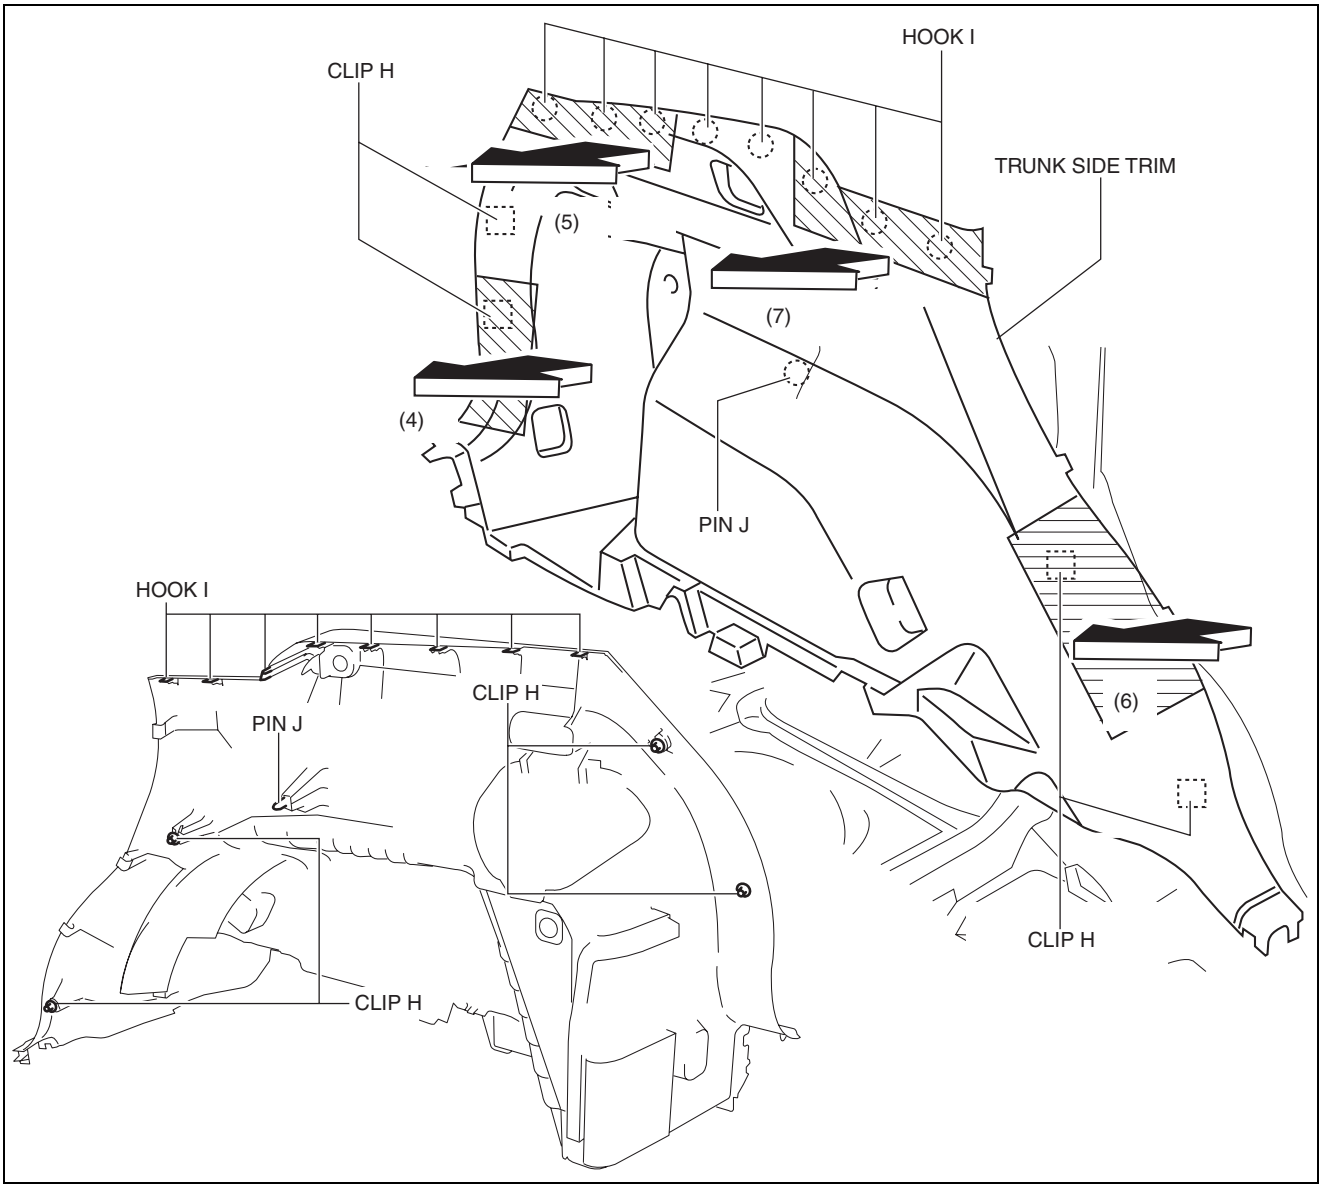


BOLT A: **0.9—1.3 N·m {9.2—13 kgf·cm, 8—11 in·lbf}**

ac5wzw0000458

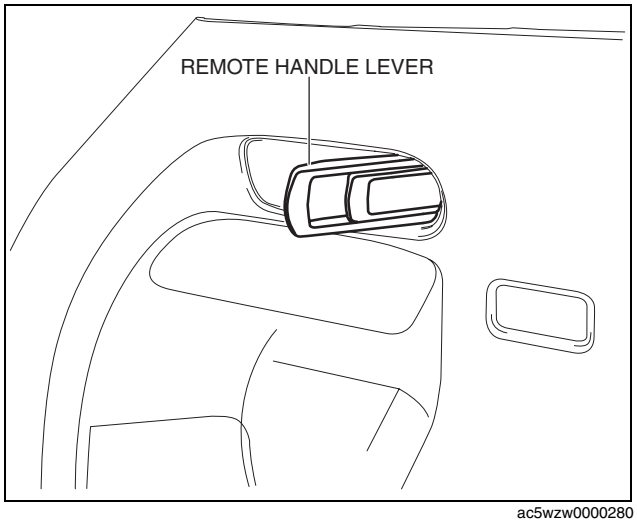
INTERIOR TRIM

10. Hold D-pillar trim with your hands and pull the trunk side trim in the direction of the arrow (4), (5), (6), (7) and remove clips H, hooks I and pin J.



ac5wzw0000458

11. Set the remote handle lever out of the way. (4:2:4 split type)
12. Disconnect the connector. (cargo room light connector, rear accessory socket connector)
13. Install in the reverse order of removal.



ac5wzw0000280

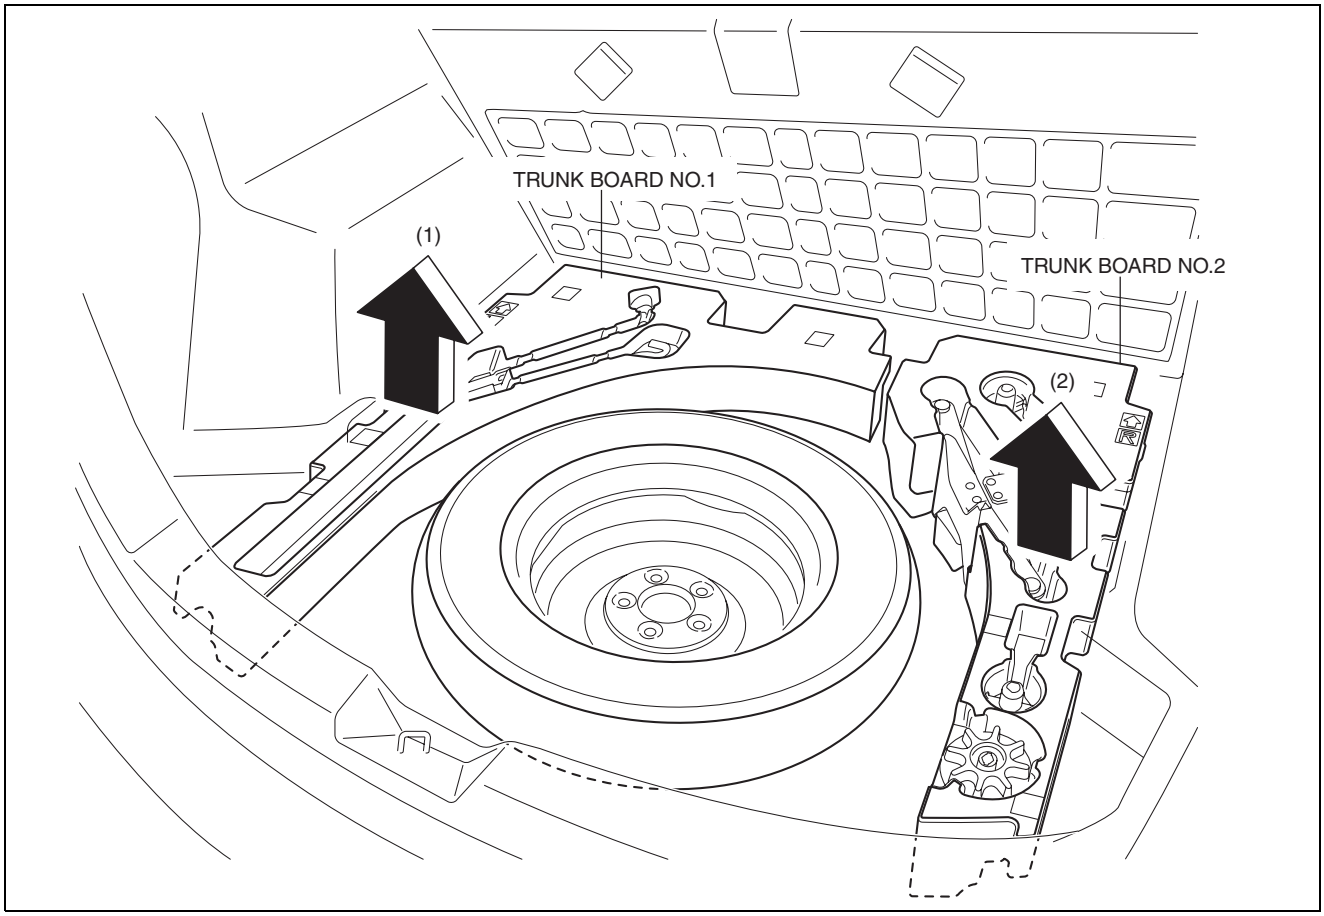
INTERIOR TRIM

TRUNK BOARD REMOVAL/INSTALLATION

id091700810000

1. Set the trunk covering aside.
2. Remove the trunk board No.1 in the direction of the arrow (1) shown in the figure.

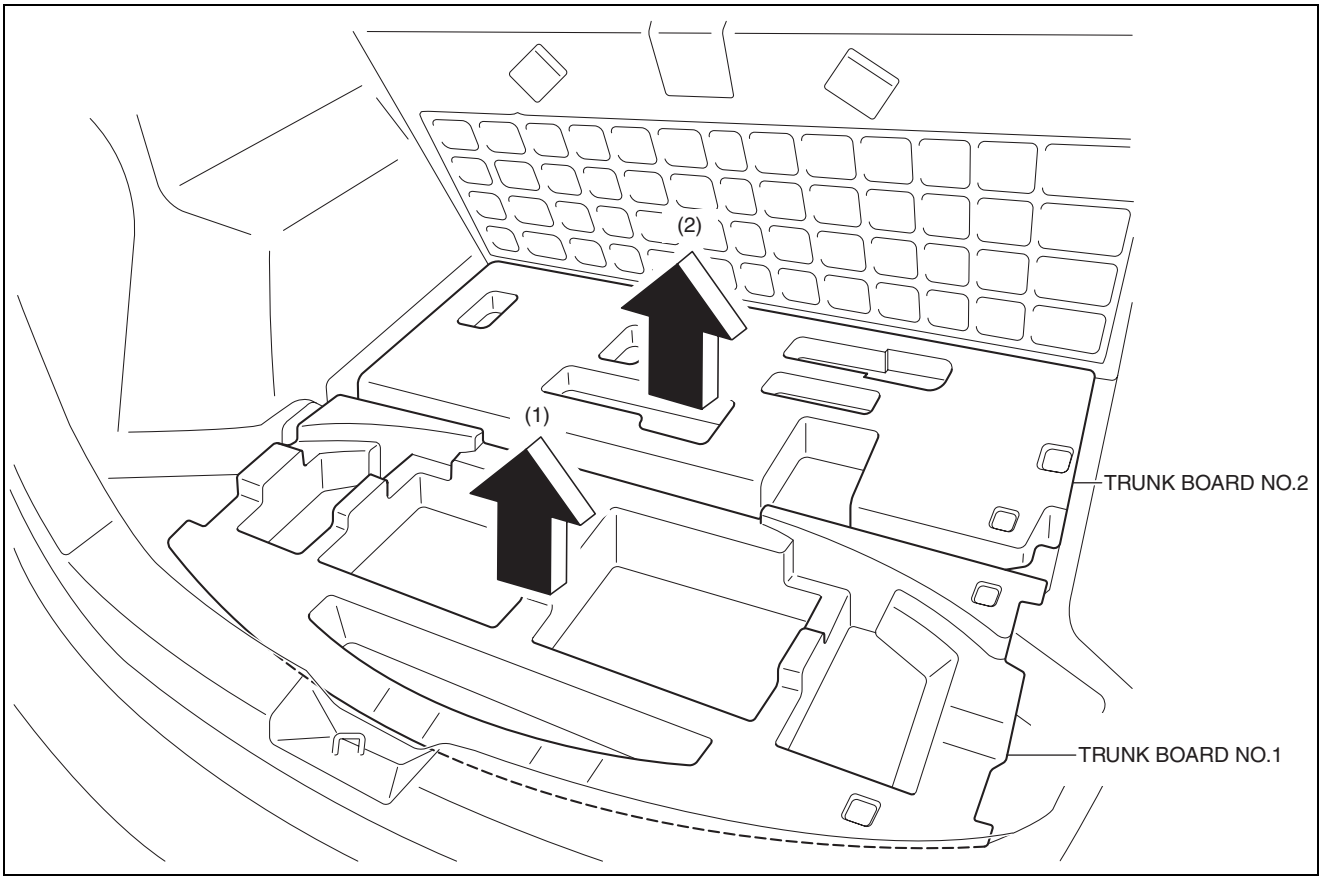
With temporary spare tire



ac5uuw00002066

INTERIOR TRIM

Without temporary spare tire



ac5uuw00002065

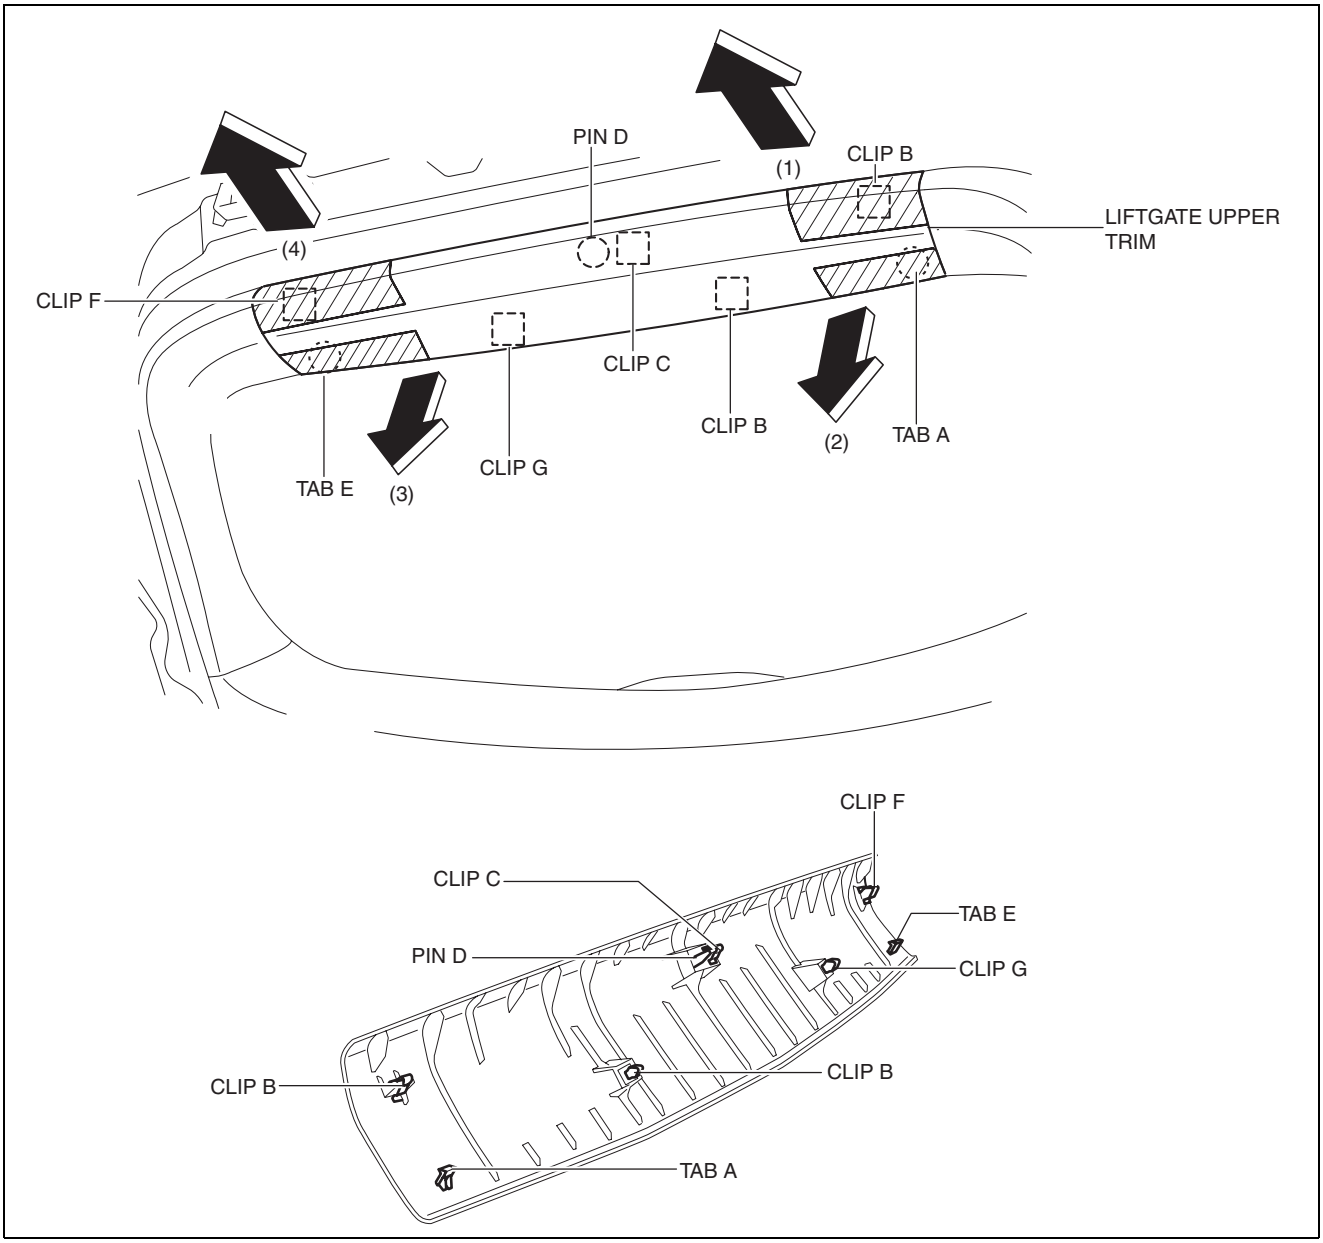
3. Remove the trunk board No.2 in the direction of the arrow (2) shown in the figure.
4. Install in the reverse order of removal.

INTERIOR TRIM

LIFTGATE UPPER TRIM REMOVAL/INSTALLATION

id091700803600

1. Take the shaded area shown in the figure, detach tab A while pulling the liftgate upper trim in the direction of the arrow (1) shown in the figure, then detach clips B, clip C and pin D while pulling in the direction of the arrow (2).



ac5uuw00001781

2. Take the shaded area shown in the figure, detach tab E while pulling the liftgate upper trim in the direction of the arrow (3) shown in the figure, then detach the clip F, clip G while pulling in the direction of the arrow (4).
3. Install in the reverse order of removal.

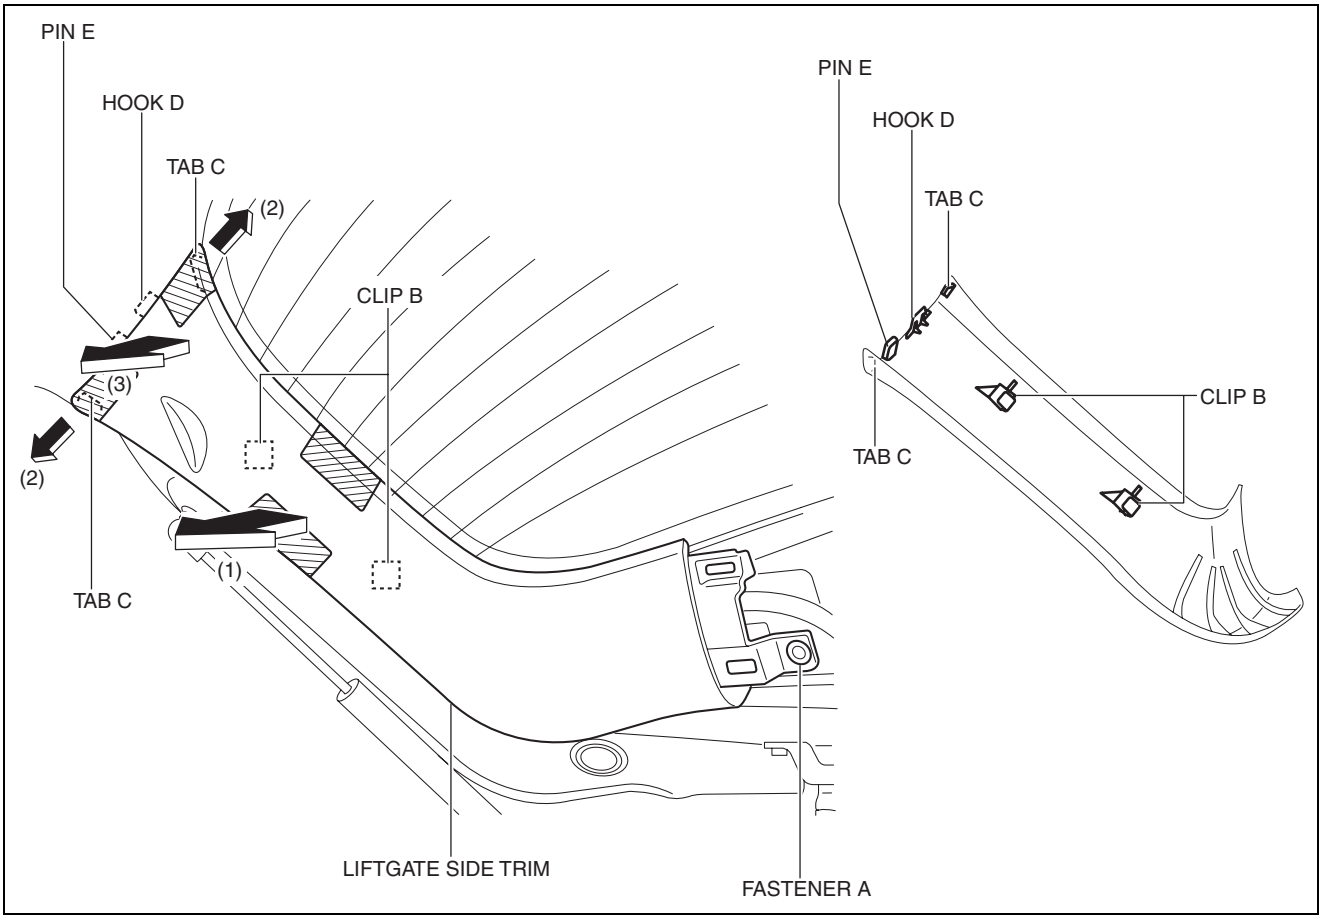
LIFTGATE SIDE TRIM REMOVAL/INSTALLATION

id091700803700

1. Remove the liftgate upper trim. (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
2. Remove the fastener A.

INTERIOR TRIM

3. Take the shaded area shown in the figure, and pull the liftgate side trim in the direction of the arrow (1) while detaching clips B.



ac5uuw00001782

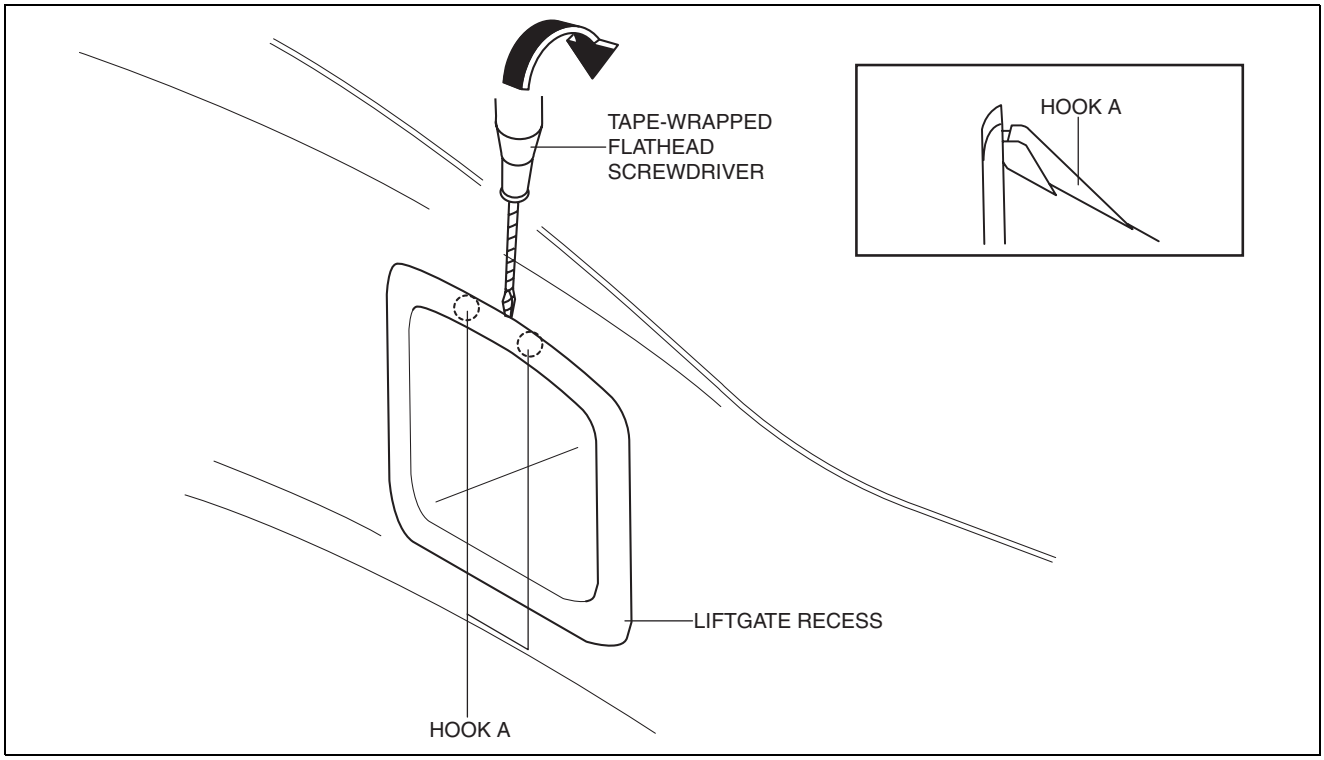
4. Take the shaded area shown in the figure, detach tabs C while pulling the liftgate side trim in the direction of the arrow (2) shown in the figure, then detach the hook D, pin E while pulling in the direction of the arrow (3).
5. Install in the reverse order of removal.

INTERIOR TRIM

LIFTGATE RECESS REMOVAL/INSTALLATION

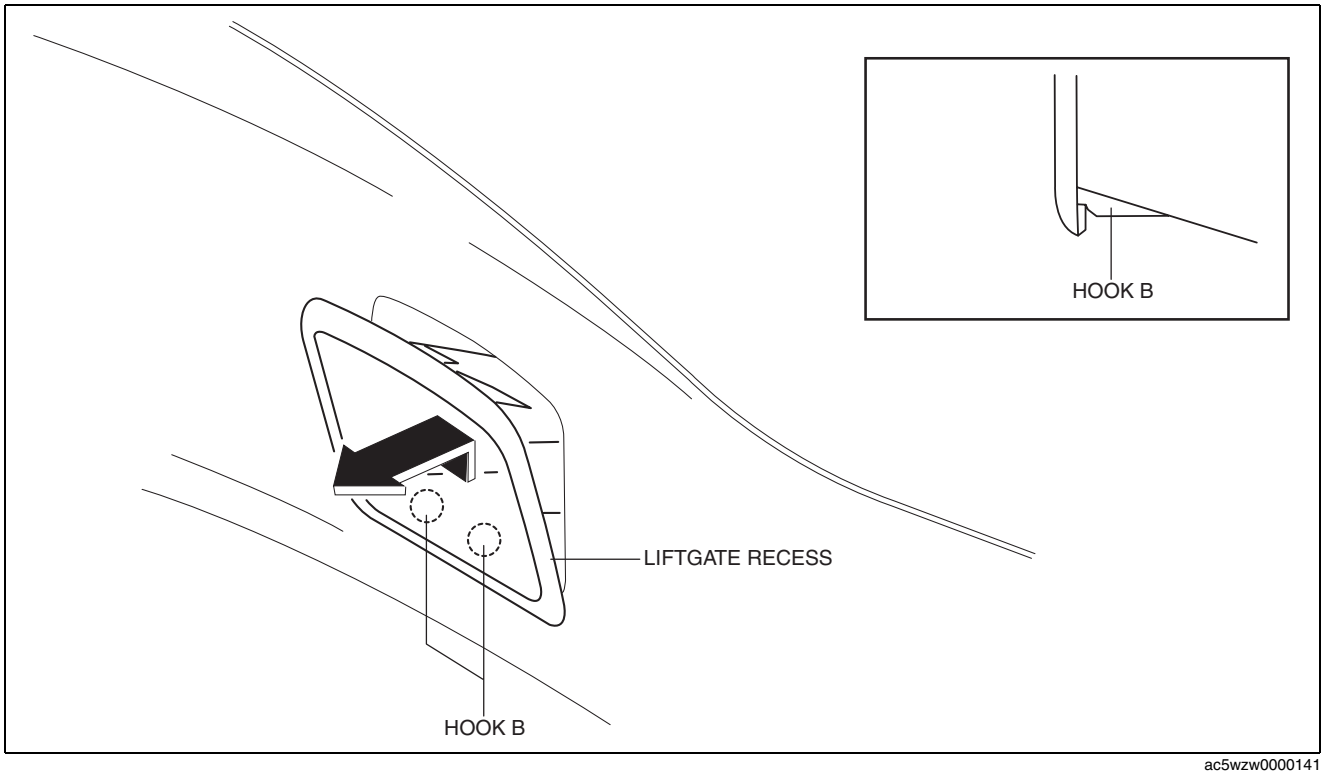
id091700467500

1. Insert a tape-wrapped flathead screwdriver in the position indicated by the arrow in the figure and detach hooks A.



ac5wzw0000141

2. Remove the liftgate recess in the direction of the arrow shown in the figure avoiding hooks B.



ac5wzw0000141

3. Install in the reverse order of removal.

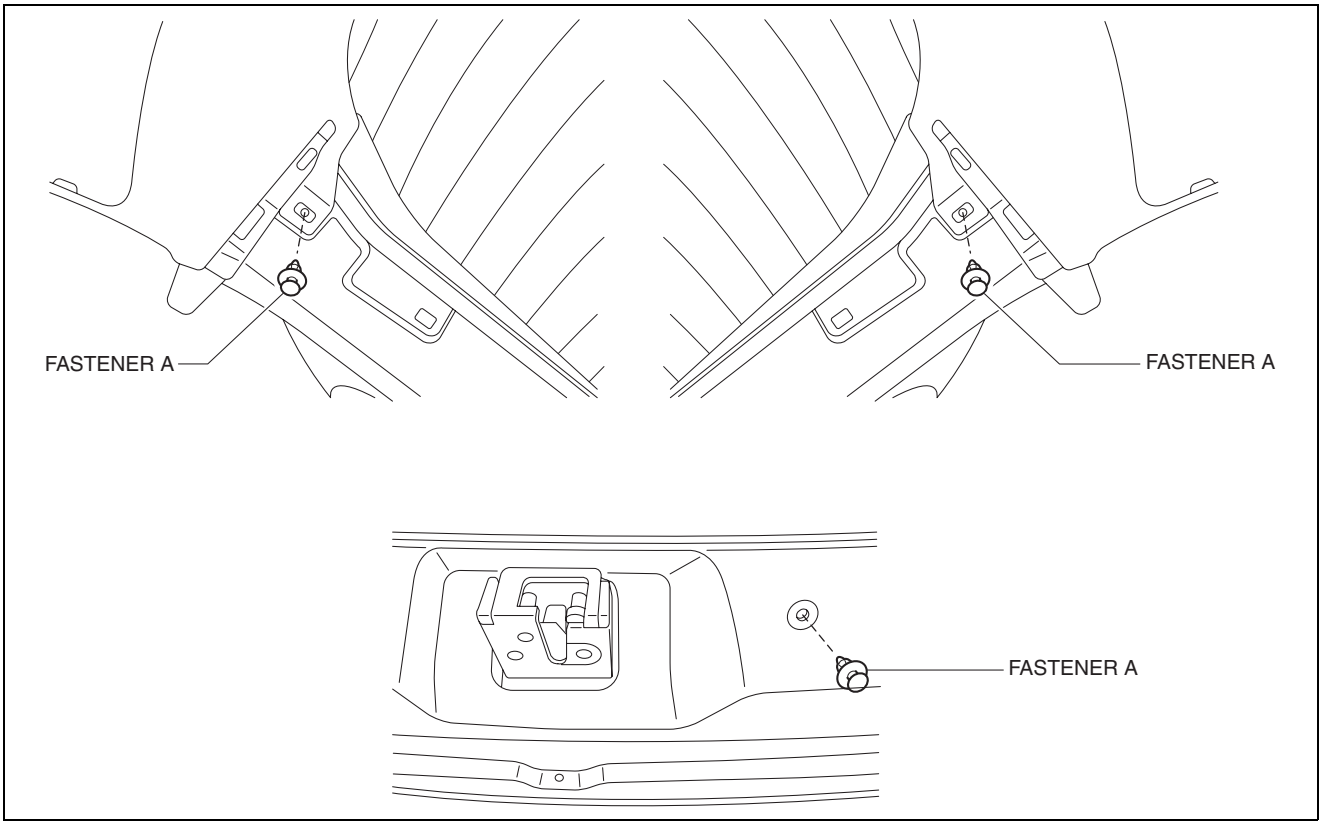
LIFTGATE LOWER TRIM REMOVAL/INSTALLATION

id091700803800

1. Remove the following parts:
   (1) Liftgate upper trim (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)

(2) Liftgate side trim (See 09-17-87 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
(3) Liftgate recess (See 09-17-89 LIFTGATE RECESS REMOVAL/INSTALLATION.)

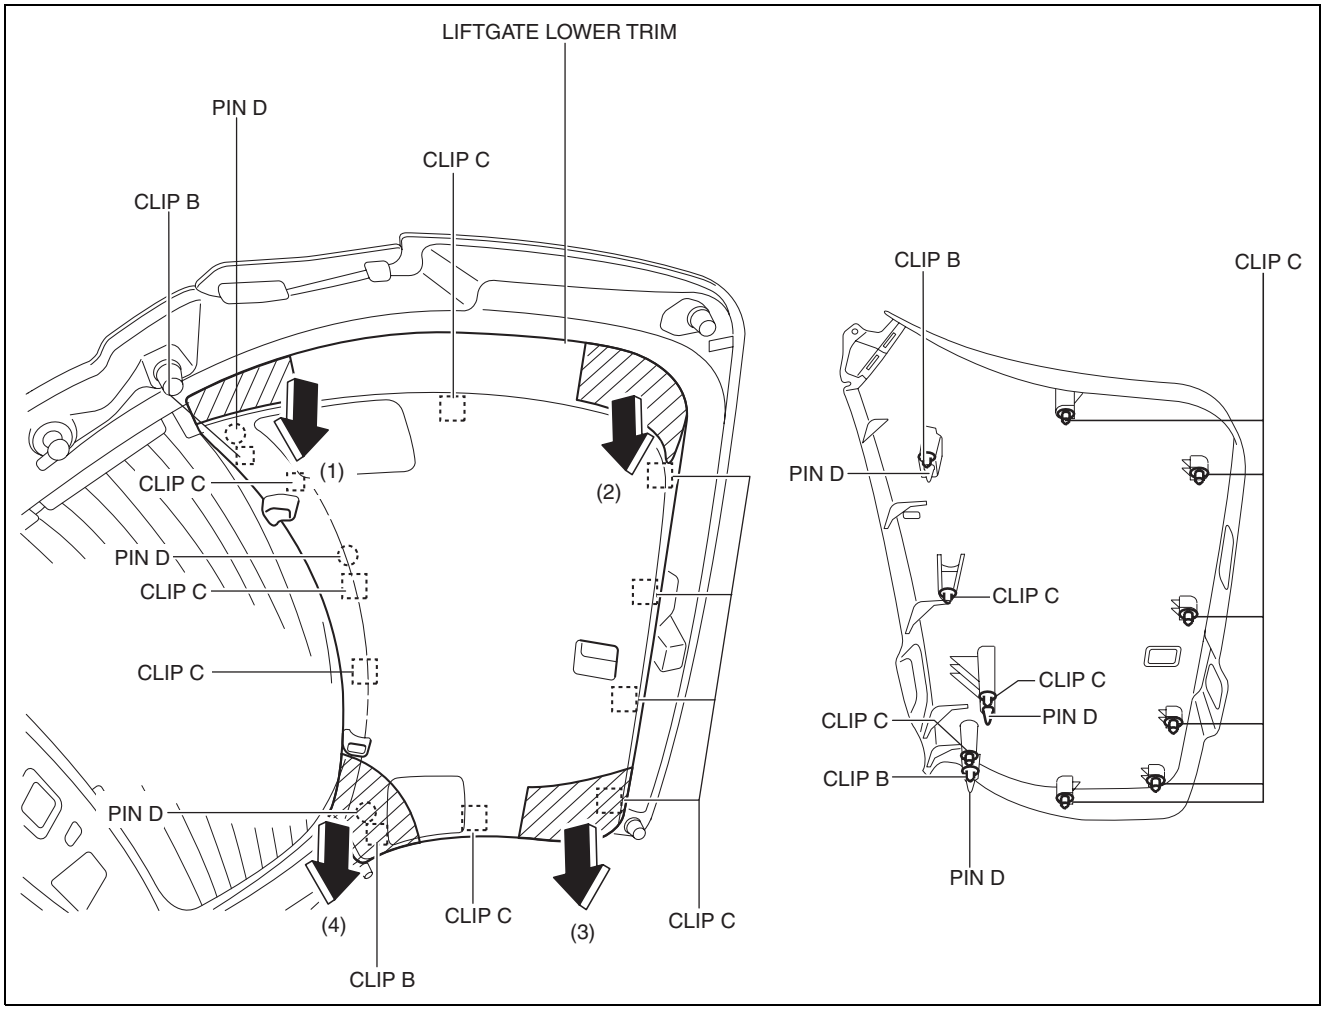
2. Remove fasteners A.



ac5wzw0000147

INTERIOR TRIM

3. Take the shaded area shown in the figure, and pull the liftgate lower trim in the direction of the arrow in the order of (1), (2), (3), (4) and remove it while detaching clips B, clips C and pins D.



ac5uuw00001783

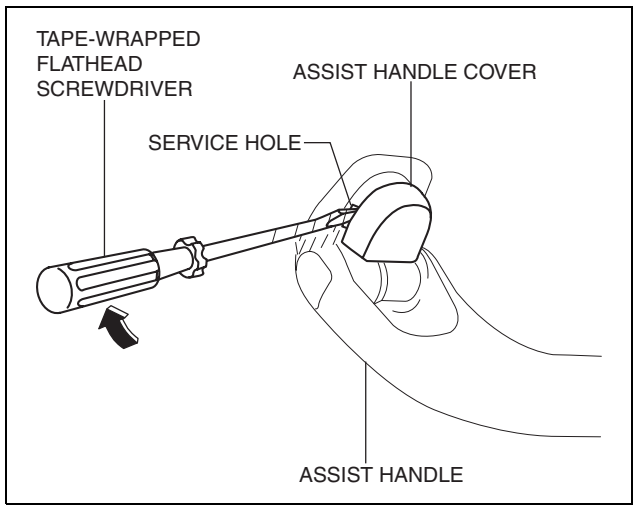
4. Install in the reverse order of removal.

ASSIST HANDLE REMOVAL/INSTALLATION

id091700801800

Removal

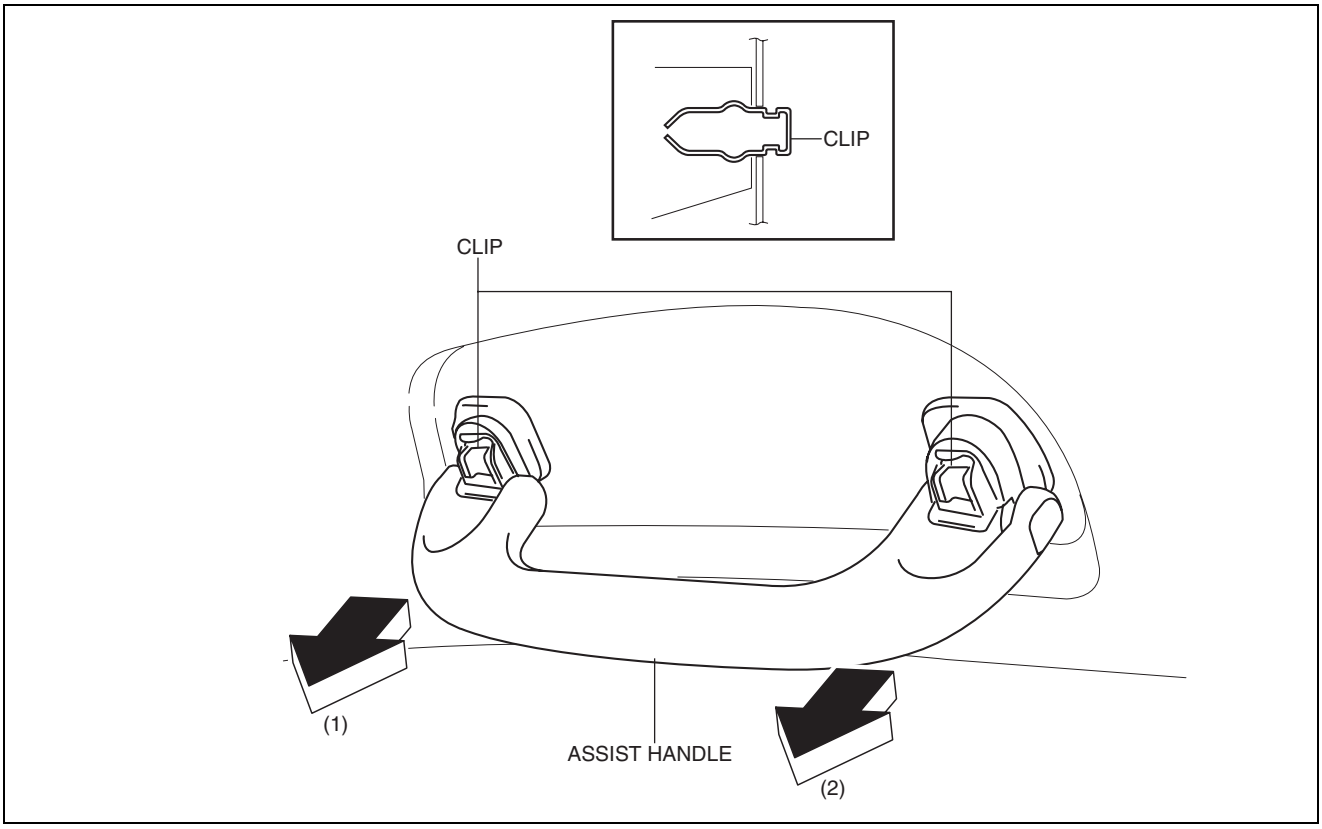
1. Insert a tape-wrapped flathead screwdriver into the service hole and remove the assist handle covers.



ac5wzw0000166

INTERIOR TRIM

2. Remove the assist handle in the direction of the arrow (1) and (2), while detach clips.



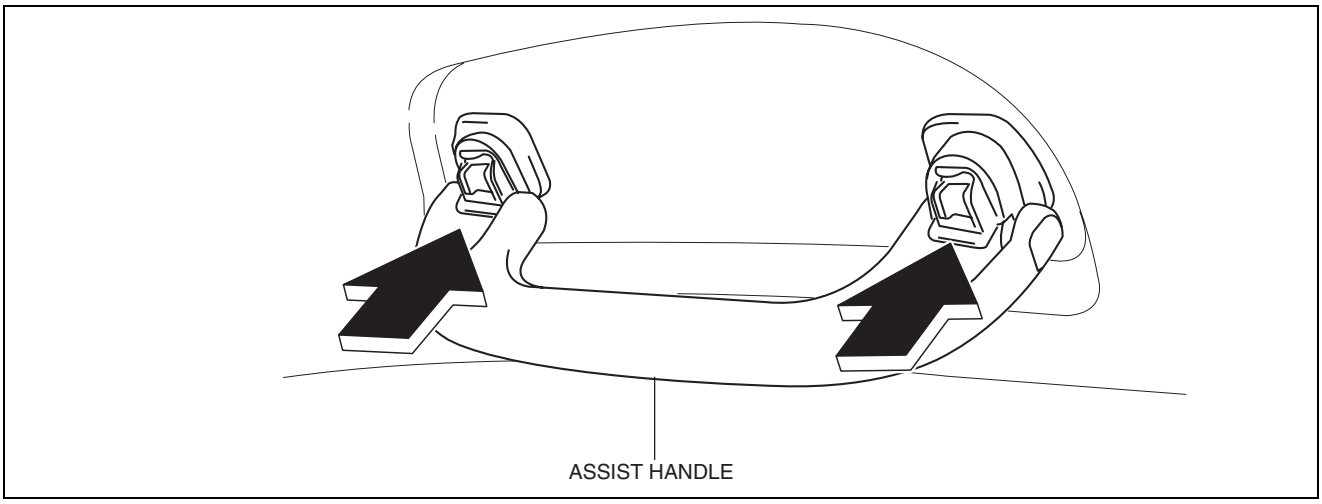
ac5wzw0000167

Note

- Remove the assist handle by shaking it up and down.

Installation

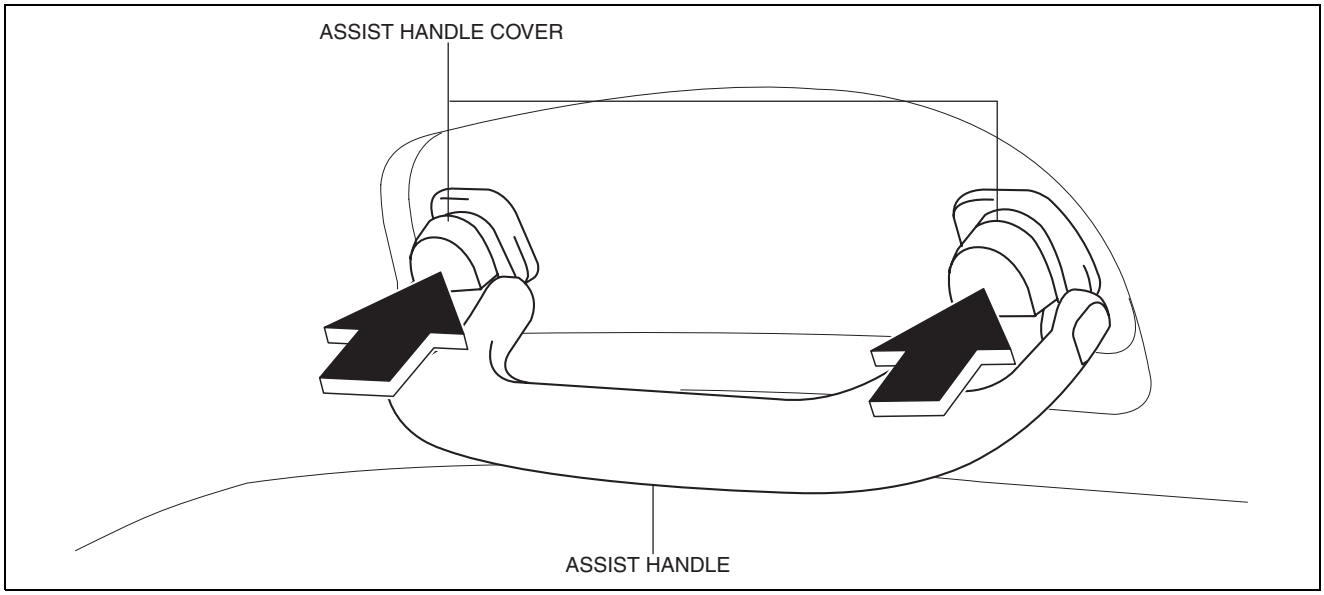
1. Push the assist handle in the direction of the arrow shown in the figure.



ac5wzw0000167

INTERIOR TRIM

2. Push the assist handle cover assembled to install the assist handle.

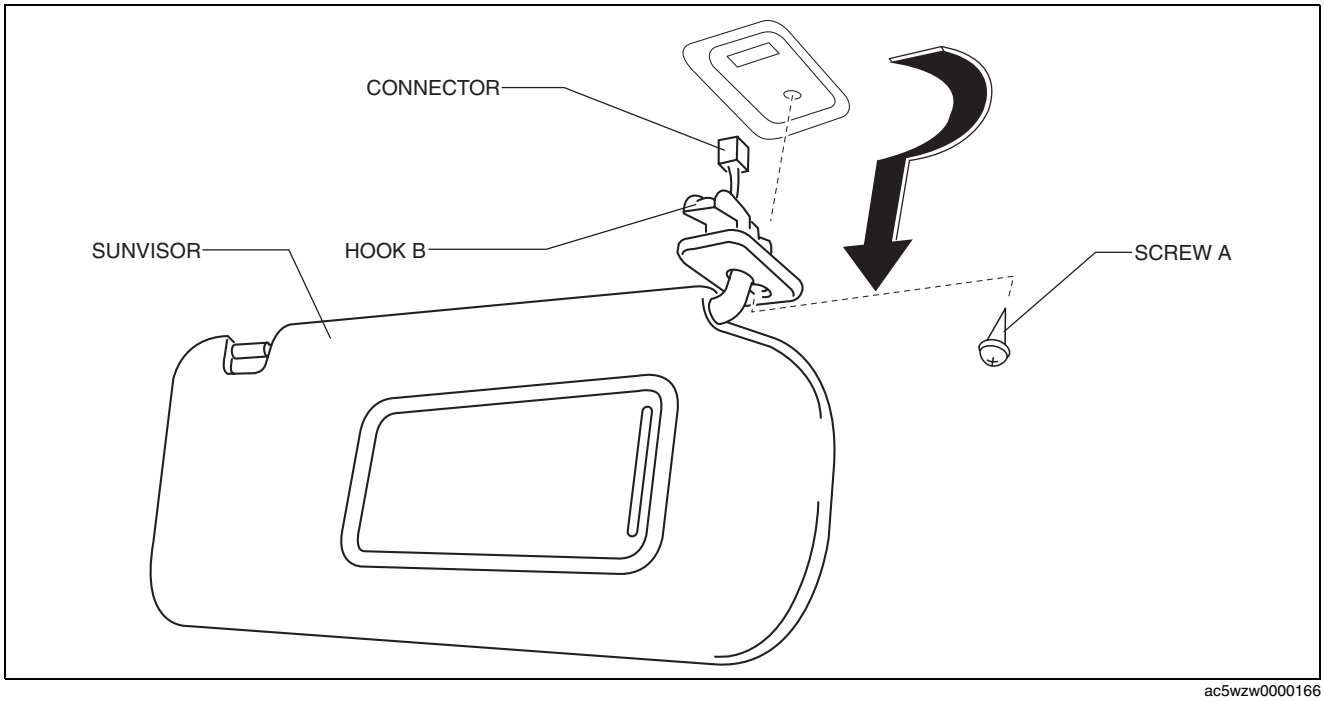


ac5wzw0000167

SUNVISOR REMOVAL/INSTALLATION

id091700801700

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the screw A.
3. Rotate the sunvisor in the direction of the arrow.

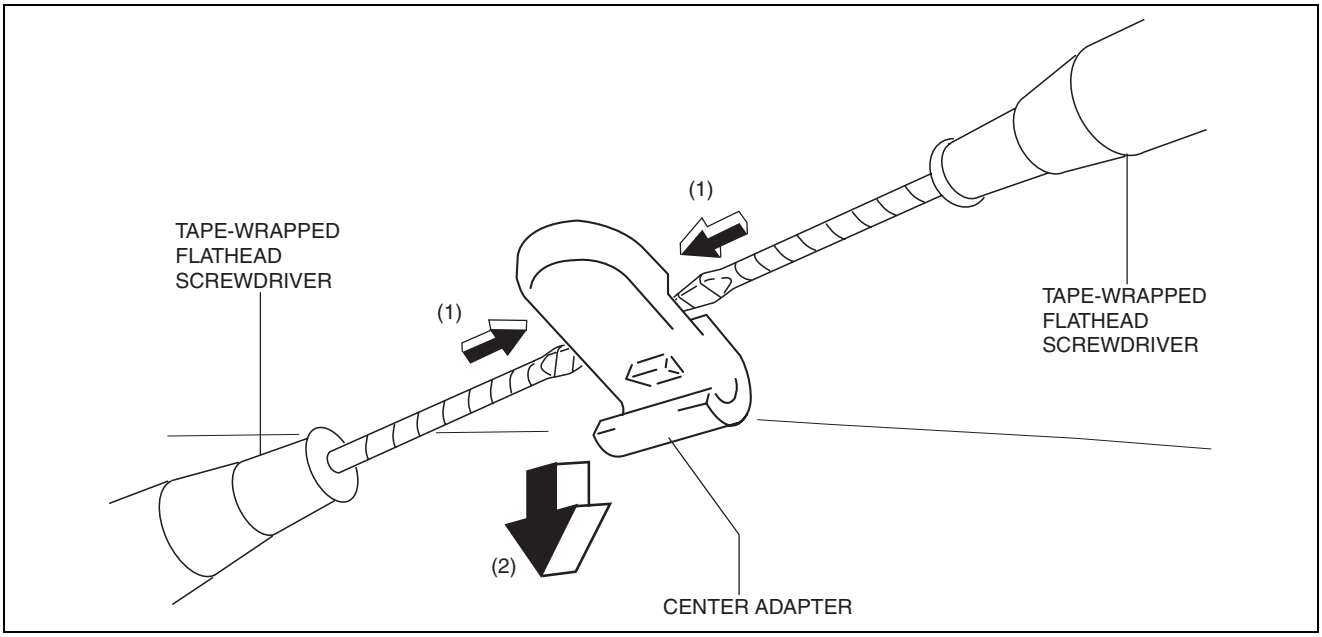


ac5wzw0000166

4. Unhook and remove the sunvisor.
5. Disconnect the vanity mirror illumination connector. (with vanity mirror illumination)

INTERIOR TRIM

6. Press the center adaptor tabs as shown in the figure using two tape-wrapped flathead screwdrivers, and remove the center adaptor.



ac5uuw00002062

7. Install in the reverse order of removal.

HEADLINER REMOVAL/INSTALLATION

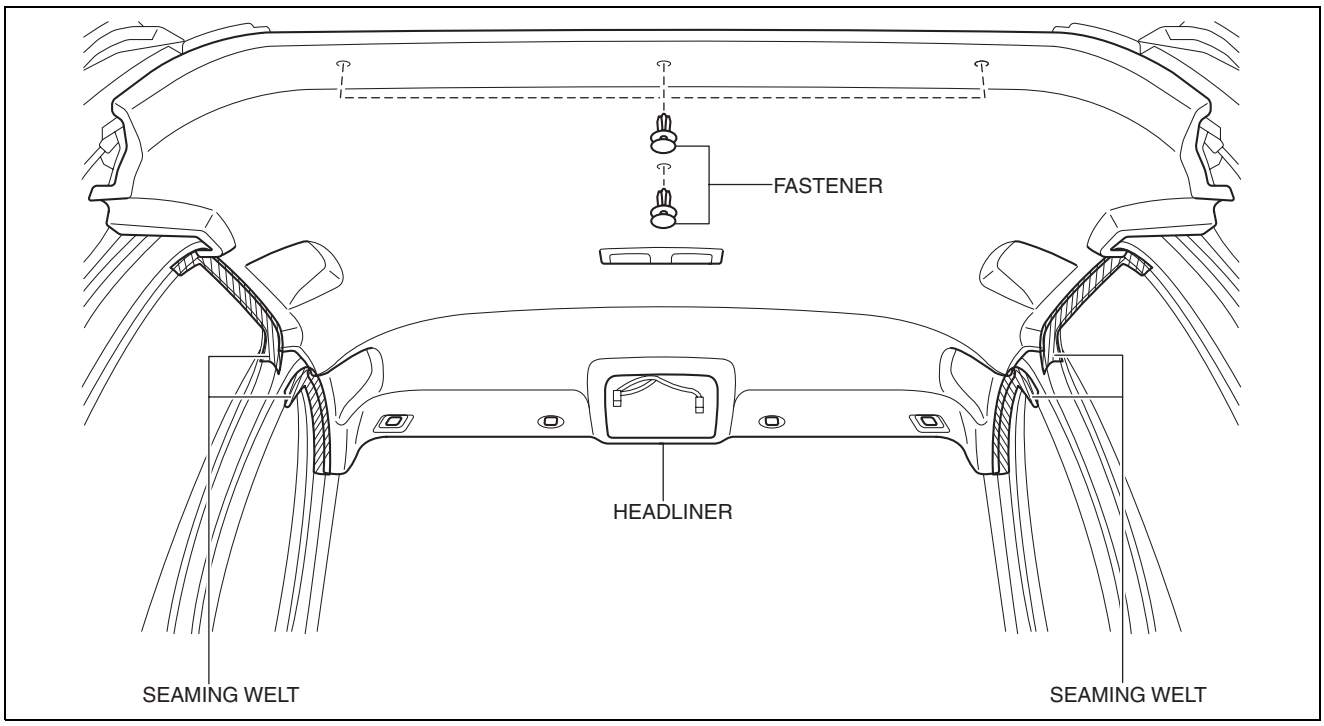
id091700801600

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Sunroof seaming welt (with sunroof system) (See 09-15-6 SUNROOF UNIT REMOVAL/INSTALLATION.)
   (2) A-pillar trim (See 09-17-53 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (3) Map light (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)
   (4) Sunvisor (See 09-17-93 SUNVISOR REMOVAL/INSTALLATION.)
   (5) Front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (7) B-pillar lower trim (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (8) Adjust anchor cover (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (9) Upper anchor installation bolt on the seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (10) B-pillar upper trim (See 09-17-58 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (11) Assist handle (See 09-17-91 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (12) Trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
   (13) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (14) Trunk side trim (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (15) D-pillar trim (See 09-17-60 D-PILLAR TRIM REMOVAL/INSTALLATION.)
   (16) C-pillar trim (See 09-17-59 C-PILLAR TRIM REMOVAL/INSTALLATION.)
3. Disconnect the roof wiring harness connector and remove the roof wiring harness connector clip from the body.
4. Disconnect the rear washer hose C. (with rear washer system) (See 09-19-40 REAR WASHER HOSE REMOVAL/INSTALLATION.)
5. Temporarily install the seaming welt shown in the figure to the headliner.

Caution

- **If fasteners are removed without temporarily installing the seaming welt, the headliner may fall off and the part may be damaged. Before removing fasteners, temporarily install the seaming welt to prevent the headliner from falling off.**

INTERIOR TRIM



ac5wzw0000166

6. Remove fasteners.
7. Partially peel back the seaming welt. Take the headliner out from the opened liftgate.
8. Install in the reverse order of removal.

FLOOR INSULATOR REMOVAL/INSTALLATION

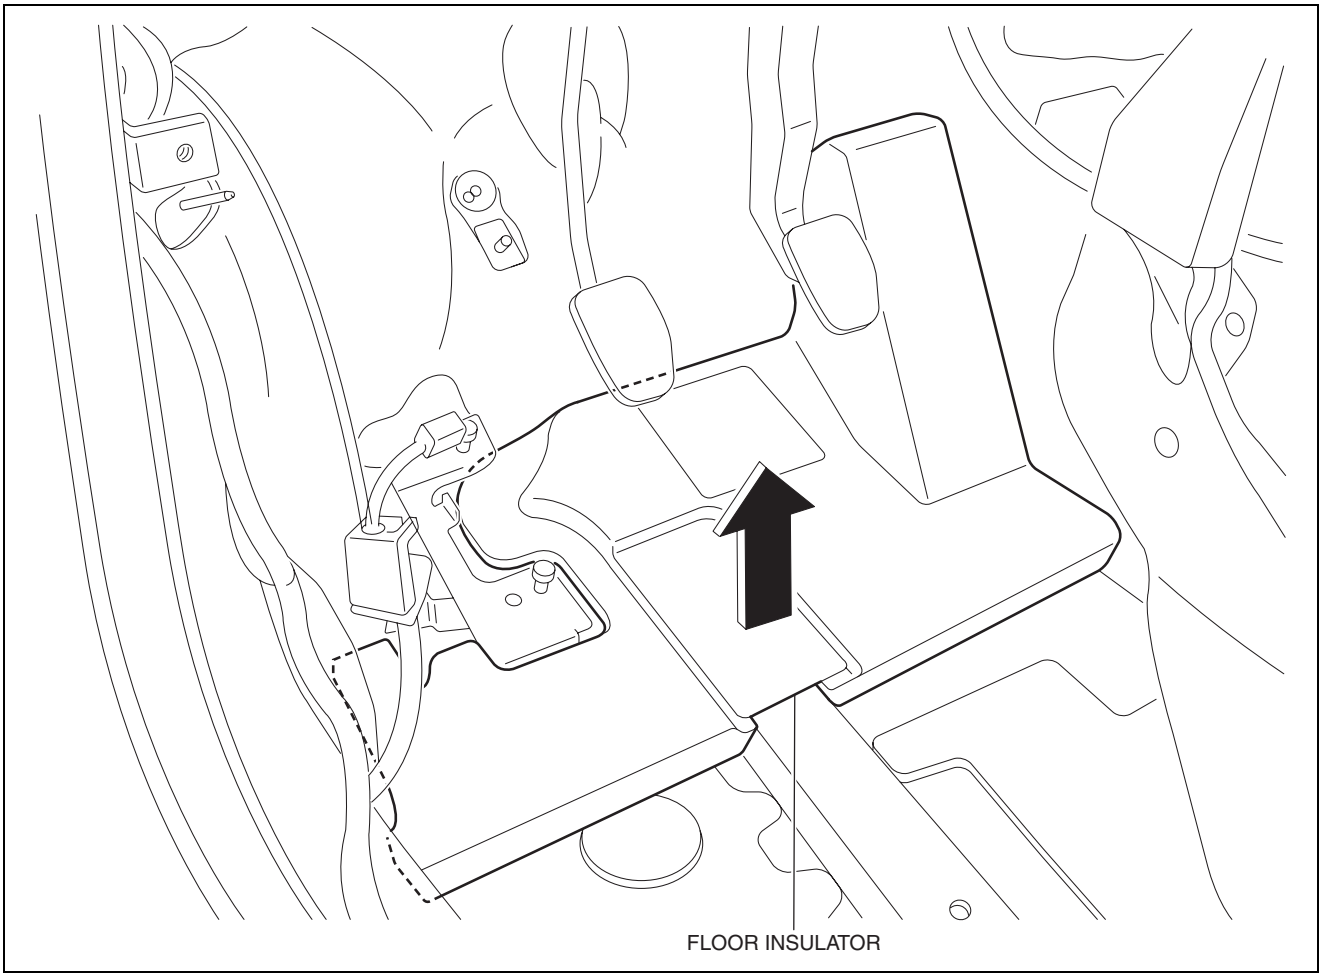
id091700889000

Driver-side

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Driver-side front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Driver-side front side trim (See 09-17-62 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (4) Shift lever knob (MTX) (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
   (5) Front console box (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)
   (6) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
   (7) Upper panel (See 09-17-44 UPPER PANEL REMOVAL/INSTALLATION.)
   (8) Rear console (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.)
   (9) Side wall (See 09-17-49 SIDE WALL REMOVAL/INSTALLATION.)
   (10) Front console (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
   (11) Accelerator pedal (See 01-13A-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Partially peel back the floor covering.

INTERIOR TRIM

4. Pull the floor insulator in the direction of the arrow and remove it.



ac5uuw00001798

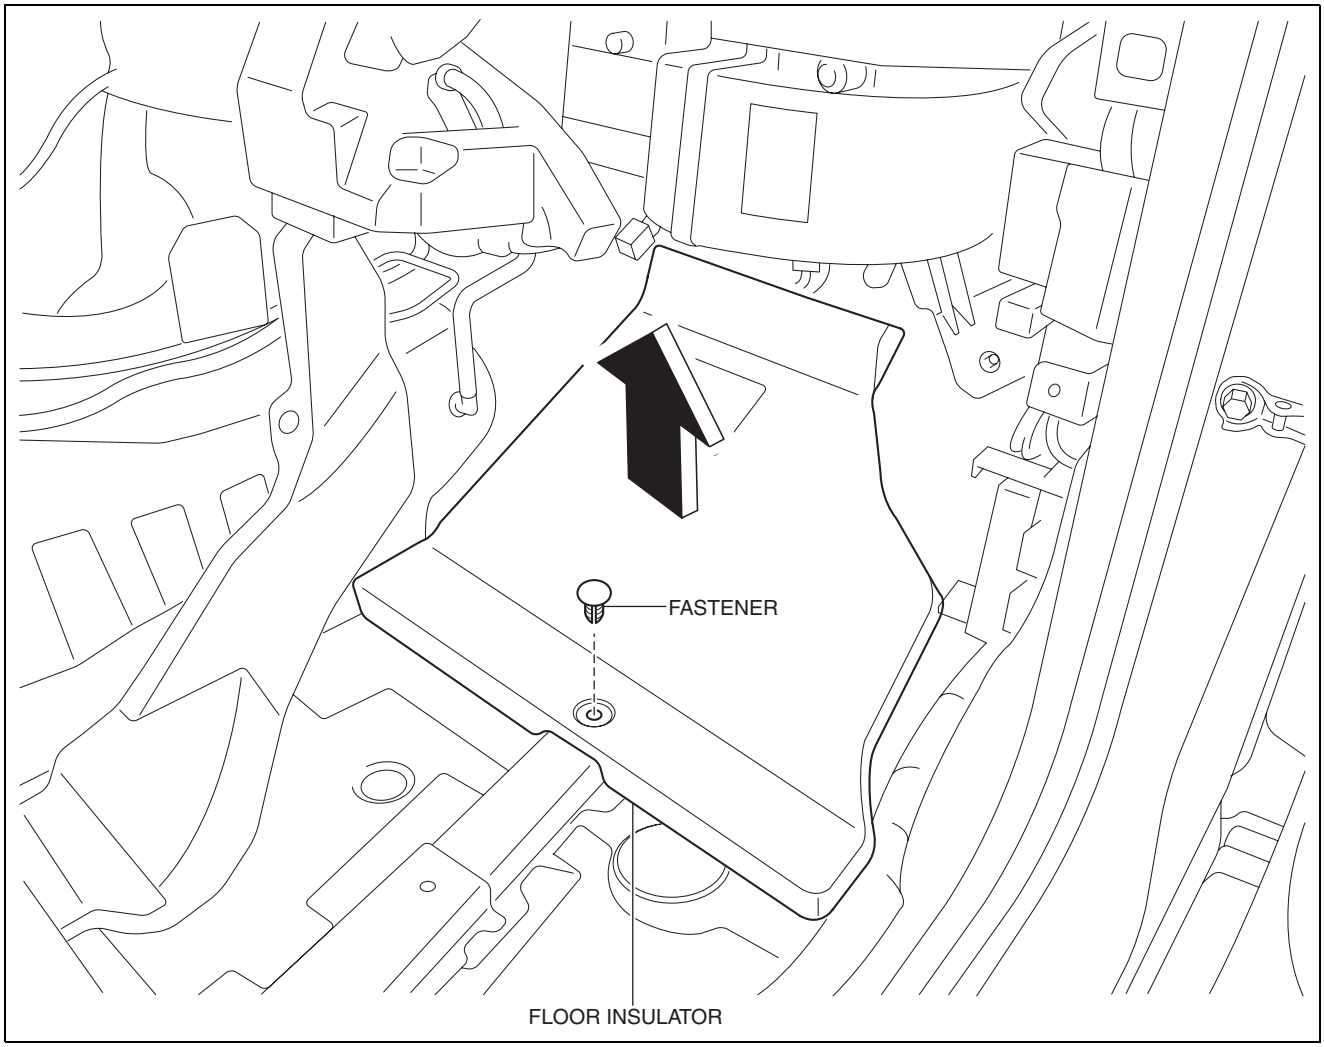
5. Install in the reverse order of removal.

Passenger-side

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Passenger-side front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Passenger-side front side trim (See 09-17-62 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Grove compartment (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (4) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (5) Shift lever knob (MTX) (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
   (6) Front console box (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)
   (7) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
   (8) Upper panel (See 09-17-44 UPPER PANEL REMOVAL/INSTALLATION.)
   (9) Rear console (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.)
   (10) Side wall (See 09-17-49 SIDE WALL REMOVAL/INSTALLATION.)
   (11) Front console (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
3. Partially peel back the floor covering.

INTERIOR TRIM

4. Remove the fastener.



ac5uuw00001799

5. Pull the floor insulator in the direction of the arrow and remove it.
6. Install in the reverse order of removal.

FLOOR COVERING REMOVAL/INSTALLATION

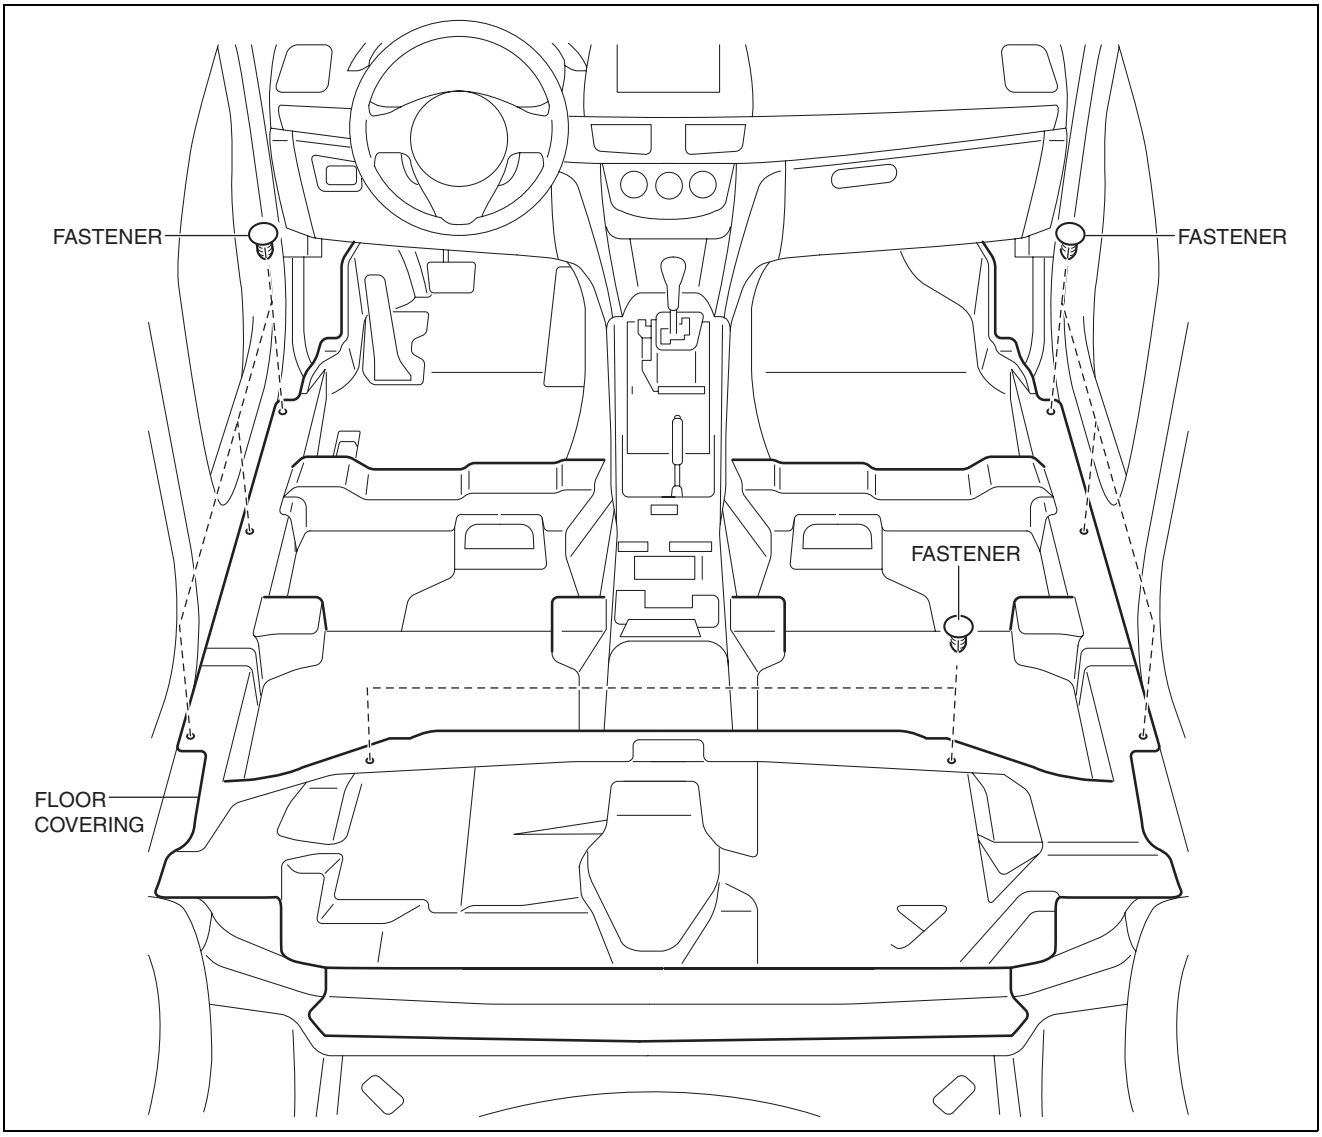
id091700803000

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Front side trim (See 09-17-62 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) B-pillar lower trim (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (5) Rear seat cushion (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
   (6) Front seat (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.)
   (7) Lower anchor of the front seat belt (without lap pre-tensioner seat belt) (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (8) Lap pre-tensioner seat belt (with lap pre-tensioner seat belt) (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (9) Shift lever knob (MTX) (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
   (10)Front console box (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)
   (11)Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
   (12)Upper panel (See 09-17-44 UPPER PANEL REMOVAL/INSTALLATION.)
   (13)Rear console (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.)

INTERIOR TRIM

(14)Side wall (See 09-17-49 SIDE WALL REMOVAL/INSTALLATION.)
(15)Front console (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
(16)SAS control module (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
(17)Parking lever (See 04-12-3 PARKING BRAKE LEVER REMOVAL/INSTALLATION.)
(18)Joint cover (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)

3. Remove fasteners.



ac5wzw0000307

4. Take the floor covering out from the opened door.
5. Install in the reverse order of removal.

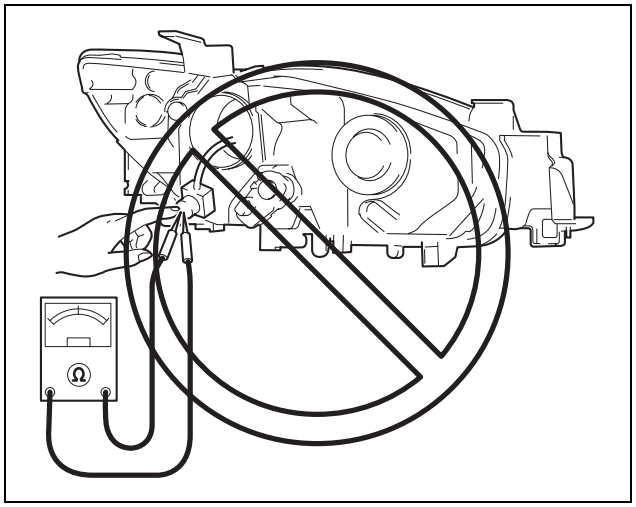
DISCHARGE HEADLIGHT SERVICE WARNINGS

id091800804900

Discharge Headlight Service Warnings

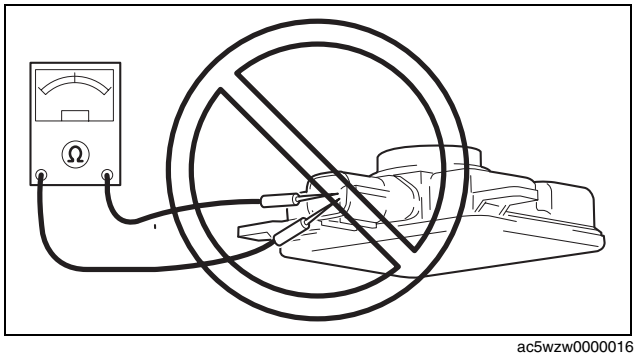
- When replacing a discharge headlight bulb, performing the servicing with the negative battery cable connected or in a wet work area could result in electrocution. When replacing a discharge headlight bulb, perform the servicing under the following conditions:
  - — Switch the ignition to off and disconnect the negative battery cable.
  - — Perform the servicing out of the rain and in a dry work area.
  - — Thoroughly dry your hands.
- Because the discharge headlight bulb connector instantly produces **approx. 25,000 V** of high voltage, inserting a finger or a tester probe could result in electrocution. When turning the light switch on, do not insert a finger or tester probe into the discharge headlight bulb connector.
- If a discharge headlight bulb is illuminated before completely assembling the discharge headlight related parts to a front combination light, it could result in electrocution. Before illuminating the discharge headlights, completely assemble the discharge headlight related parts to the front combination lights and install the front combination lights to the vehicle.



ac5wzw0000016

Discharge Headlight Control Module Servicing Warnings

- If the discharge headlight control module tester is used to do a part inspection or the discharge headlight control module is disassembled, electrocution could result from the high voltage around the module. Do not do a part inspection of or disassemble the discharge headlight control module.



ac5wzw0000016

LIGHTING SYSTEMS

Reusing Discharge Headlight Control Module

- A discharge headlight control module damaged in an accident could leak high voltage around the module and cause electrocution. In addition, even if the discharge headlights are illuminated without any exterior damage to the module, an illumination malfunction could occur after a period of time has elapsed due to internal damage of a module. If a discharge headlight control module is reused, perform the following inspection and verify that the module is not malfunctioning.
  - — Perform the tests for the discharge headlight bulb several times under cold-bulb conditions (turn off the discharge headlight bulb for **approx. 10 min** or more, then turn it on) and under warm-bulb conditions (turn on the discharge headlight bulb for **approx. 15 min** or more, turn it off for **approx. 1 min**, then turn it on again), and verify that the discharge headlight bulb turns on normally.
  - — Inspect the discharge headlight bulb illumination until it illuminates evenly directly after cold-bulb illumination for **approx. 5 min**, and verify that the discharge headlight bulb illumination has no flicker or uneven brightness level.
  - — Equip with normal discharge headlight bulbs and turn them on for **approx. 30 min**, and verify that the illumination condition is stabilized with no difference in brightness level between left and right.

FRONT COMBINATION LIGHT REMOVAL/INSTALLATION

id091800800700

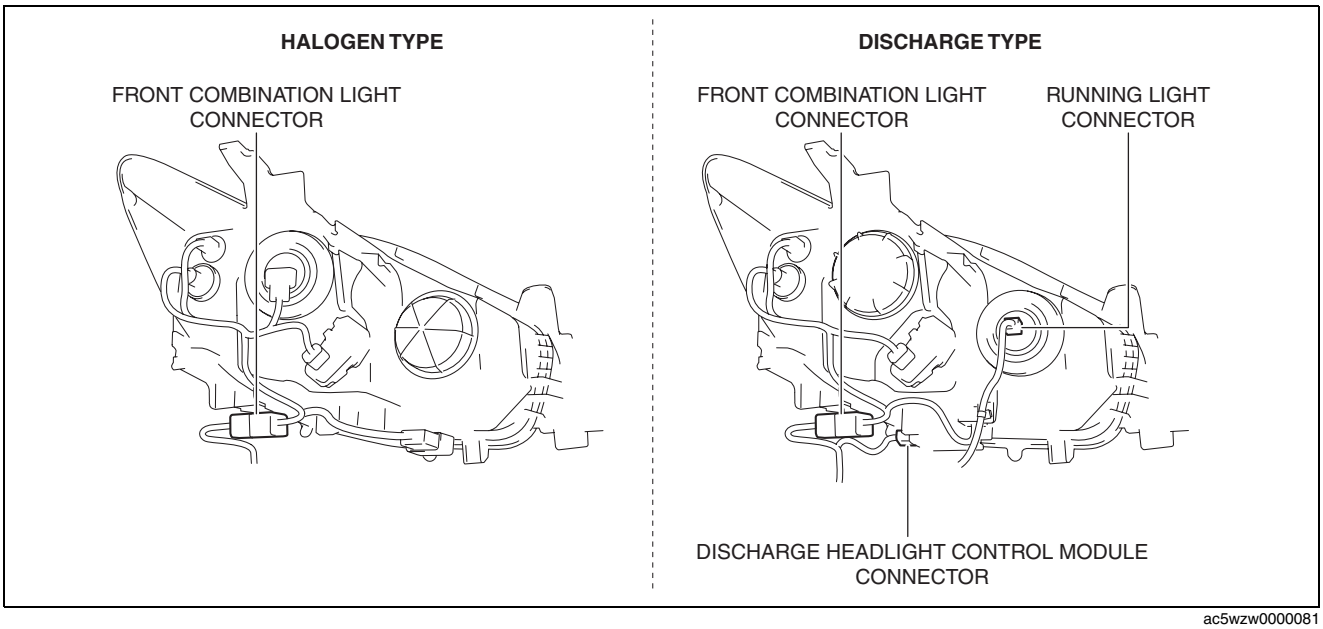
Warning

- **Incorrect servicing of the discharge headlights could result in electrical shock. Before servicing the discharge headlights, always refer to the service warnings. (See 09-18-6 DISCHARGE HEADLIGHT SERVICE WARNINGS.)**

Note

- Fogging or condensation on the inside of the front combination lights may occur due to a natural phenomenon occurring as a result of a temperature difference between the interior and exterior of the combination lights. However, it has no effect on the light performance because the temperature inside the front combination lights rises after illuminating the headlights or a period of time has elapsed.

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Disconnect the connector.



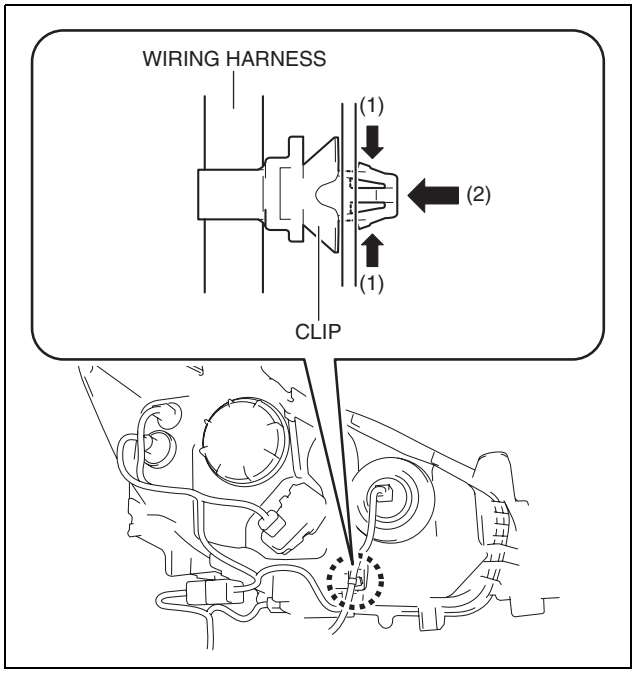
ac5wzw0000081

LIGHTING SYSTEMS

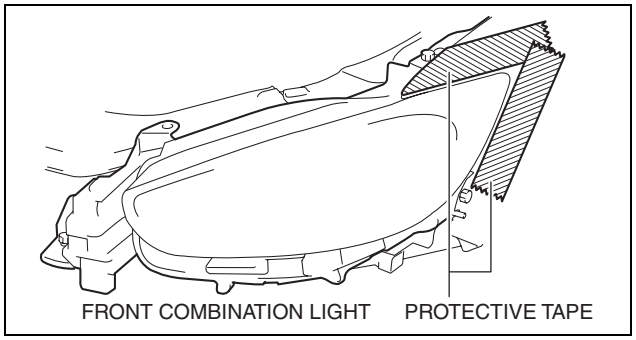
4. While pressing the clip tab in the direction of the arrows (1) shown in the figure, press the clip in the direction of the arrow (2) shown in the figure to detach the clip tab and front combination light (LH of discharge type).
5. Remove the clip (LH of discharge type).
6. To prevent scratches or damage, affix protective tape to the position shown in the figure.

Caution

- **When the front combination light is removed from the body, perform the procedure after affixing protective tape to the body. Otherwise, the body could interfere with the front combination light and cause scratching or damage to the body.**

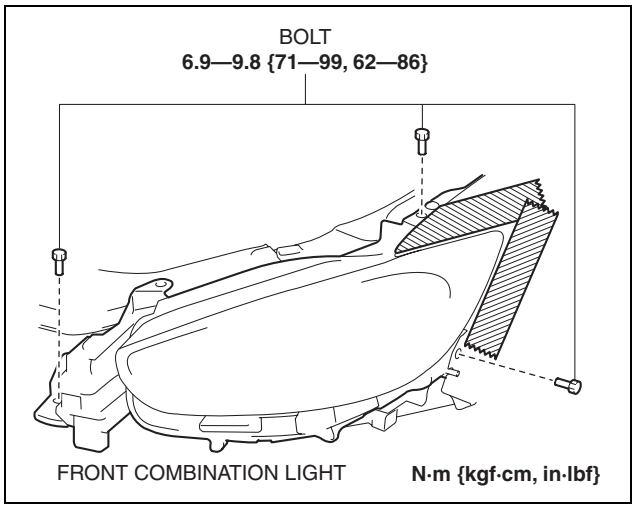


ac5wzw0000040



ac5wzw0000040

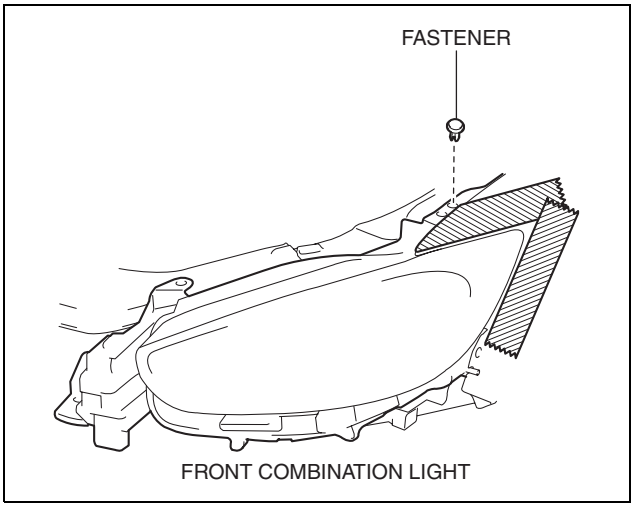
7. Remove the bolts.



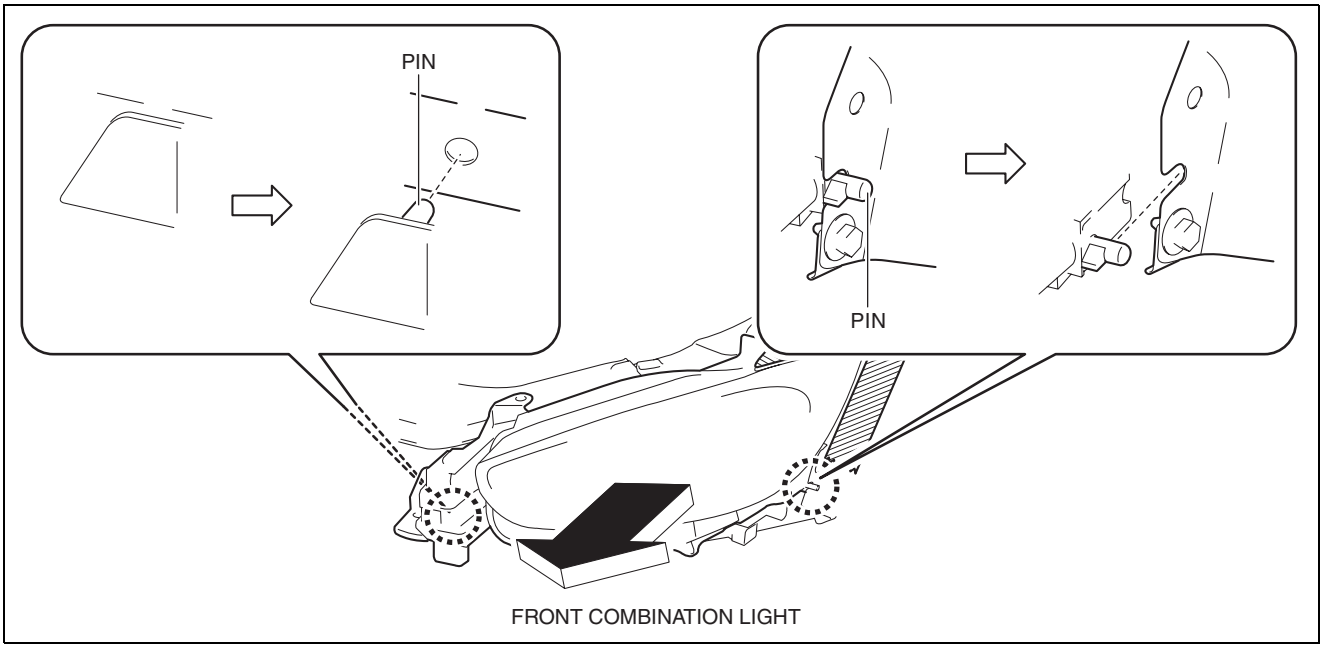
ac5wzw0000040

LIGHTING SYSTEMS

8. Remove the fastener.
9. Pull the front combination light in the direction of the arrow shown in the figure and pull out the front combination light pin from the body.



ac5wzw0000041



ac5wzw0000334

10. Remove the front combination light.
11. Install in the reverse order of removal.
12. Adjust the headlight aiming. (See 09-18-18 HEADLIGHT AIMING.)

FRONT COMBINATION LIGHT DISASSEMBLY/ASSEMBLY

id091800816000

1. Disassemble in the order shown in the figure.

LIGHTING SYSTEMS

Halogen type

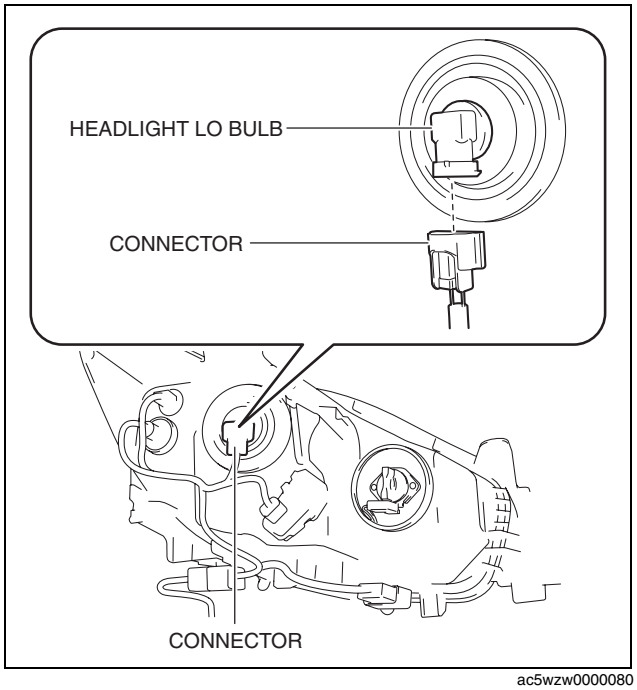
HEADLIGHT BULB REMOVAL/INSTALLATION

id091800800500

Halogen Type
Headlight LO bulb

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Disconnect the connector.

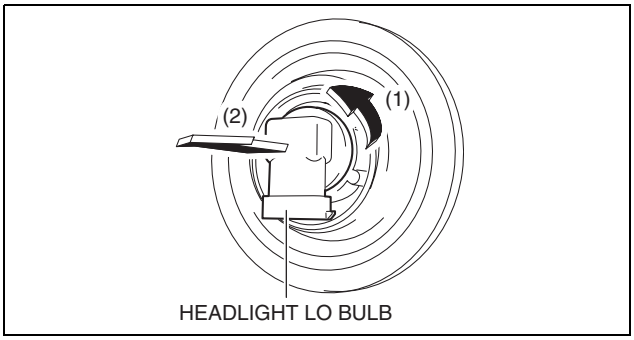


ac5wzw0000080

LIGHTING SYSTEMS

3. Rotate the headlight LO bulb in the direction of the arrow (1) shown in the figure to remove it in the direction of the arrow (2) shown in the figure.

Caution
- **A halogen bulb generates extremely high heat when it is illuminated. If the surface of the bulb is soiled, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.**

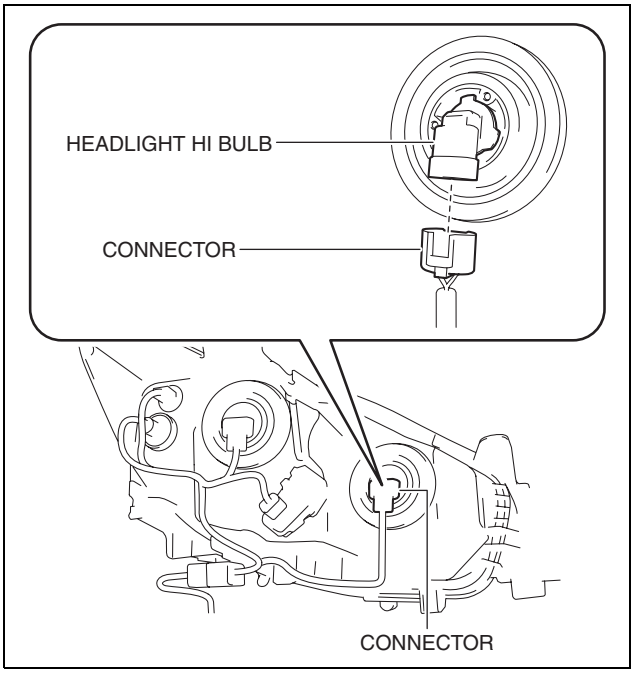


ac5wzw0000080

4. Install in the reverse order of removal.

Headlight HI bulb (Vehicles without running light system)

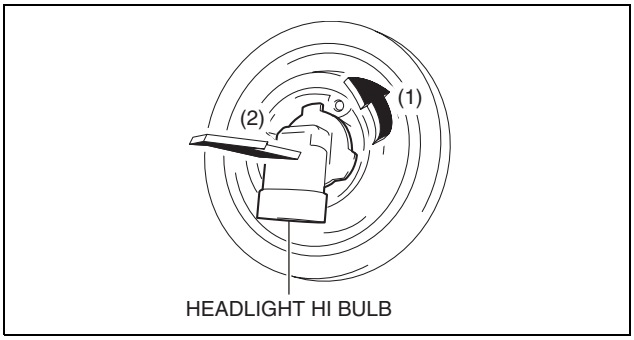
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Disconnect the connector.



ac5wzw0000080

3. Rotate the headlight HI bulb in the direction of the arrow (1) shown in the figure and remove it in the direction of the arrow (2) shown in the figure.

Caution
- **A halogen bulb generates extremely high heat when it is illuminated. If the surface of the bulb is soiled, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.**



ac5wzw0000039

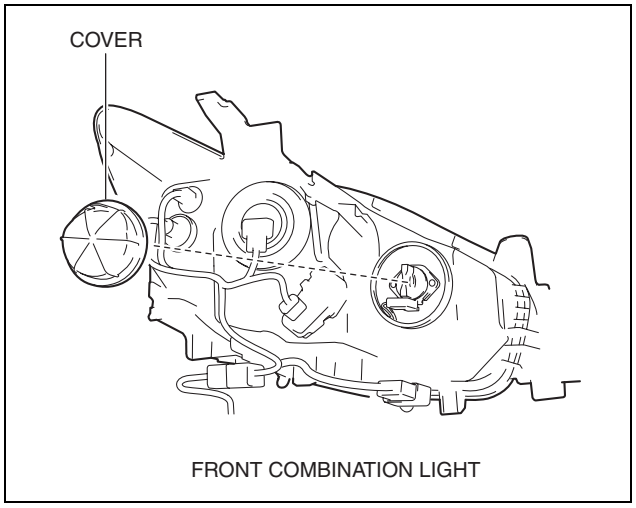
4. Install in the reverse order of removal.

Headlight HI bulb (Vehicles with running light system)

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

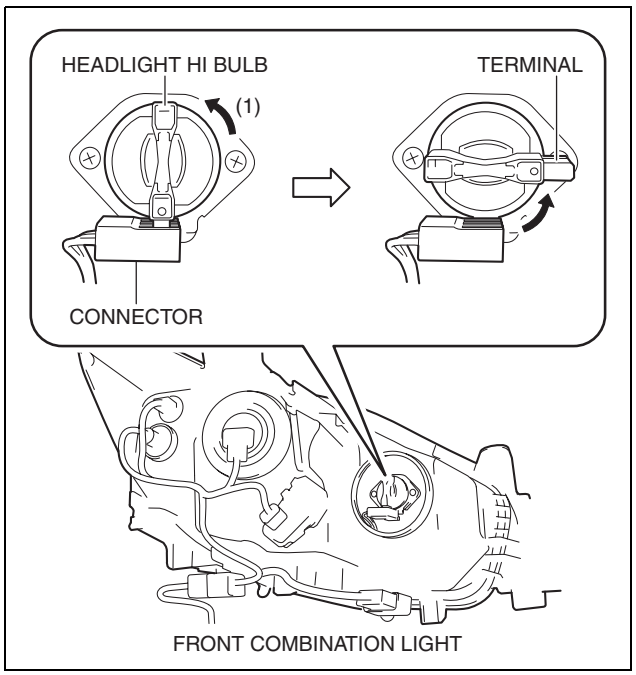
LIGHTING SYSTEMS

2. Remove the cover.



ac5wzw0000080

3. Rotate the headlight HI bulb in the direction of the arrow (1) shown in the figure to disconnect the connector.



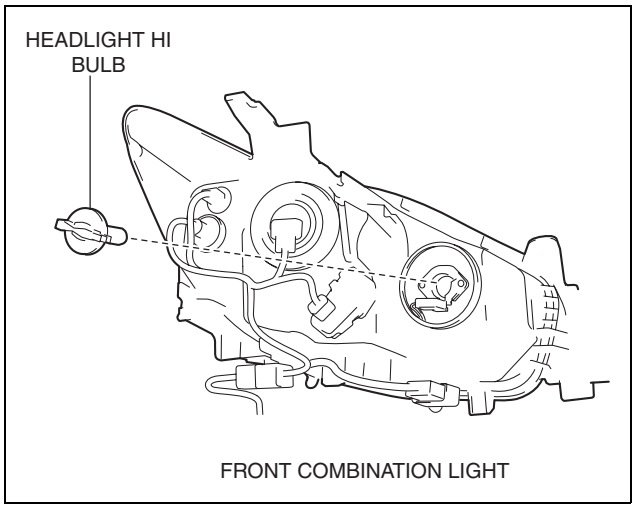
ac5wzw0000080

4. Remove the headlight HI bulb.

Caution

- **A halogen bulb generates extremely high heat when it is illuminated. If the surface of the bulb is soiled, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.**

5. Install in the reverse order of removal.



ac5wzw0000080

LIGHTING SYSTEMS

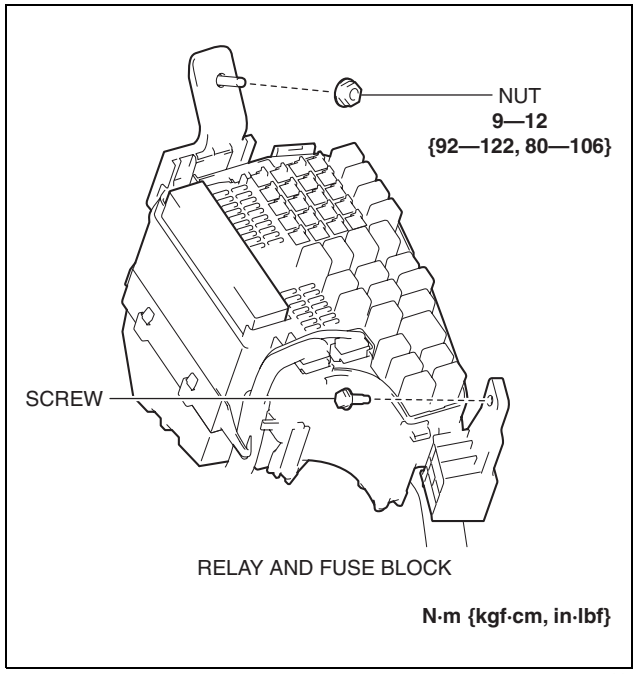
Discharge Type

Warning

- **Incorrect servicing of the discharge headlights could result in electrical shock. Before servicing the discharge headlights, always refer to the service warnings. (See 09-18-6 DISCHARGE HEADLIGHT SERVICE WARNINGS.)**

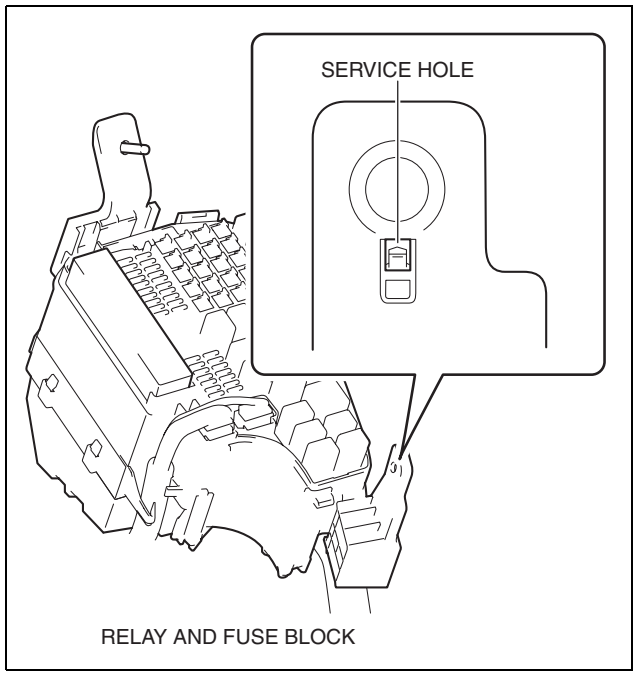
Headlight HI/LO bulb (LH)

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the air cleaner cover. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the relay and fuse block upper cover. (See 09-21-3 RELAY AND FUSE BLOCK REMOVAL/INSTALLATION.)
4. Remove the nut and screw.



ac5wzw0000118

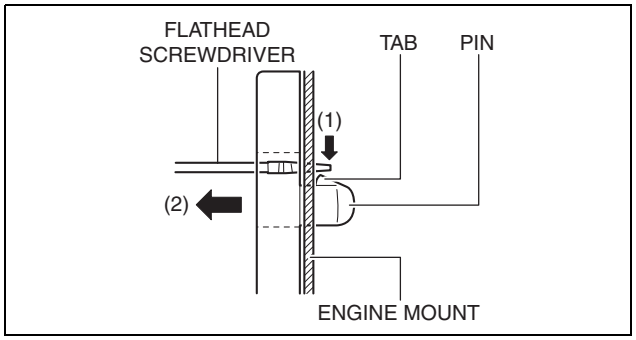
5. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.



ac5wzw0000040

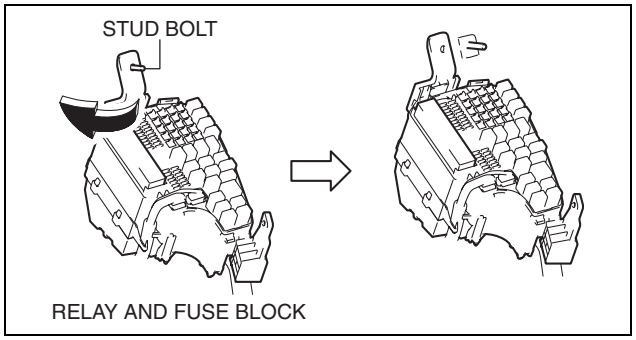
LIGHTING SYSTEMS

6. While pressing the pin tab in the direction of the arrow (1) shown in the figure using a flathead screwdriver, pull the pin in the direction of the arrow (2) shown in the figure to detach the pin tab and engine mount.



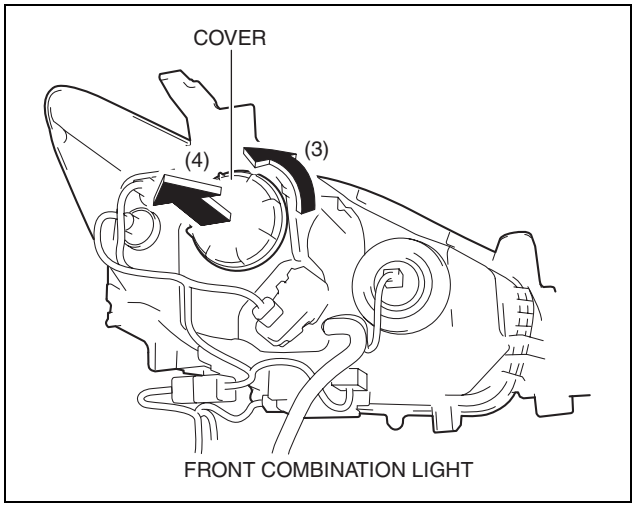
ac5wzw0000118

7. Pull out the relay and fuse block from the stud bolt and set it aside as shown in the figure.



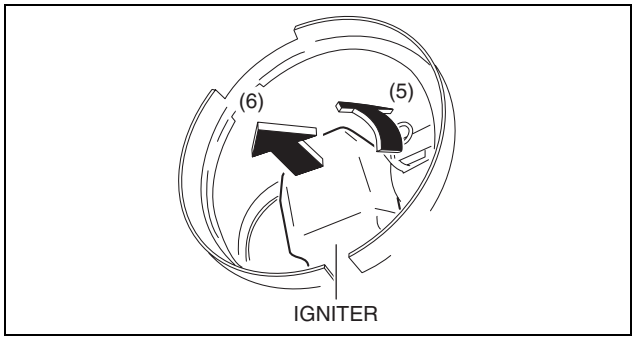
ac5wzw0000040

8. Rotate the cover in the direction of the arrow (3) shown in the figure and remove it from the front combination light in the direction of the arrow (4) shown in the figure.



ac5wzw0000015

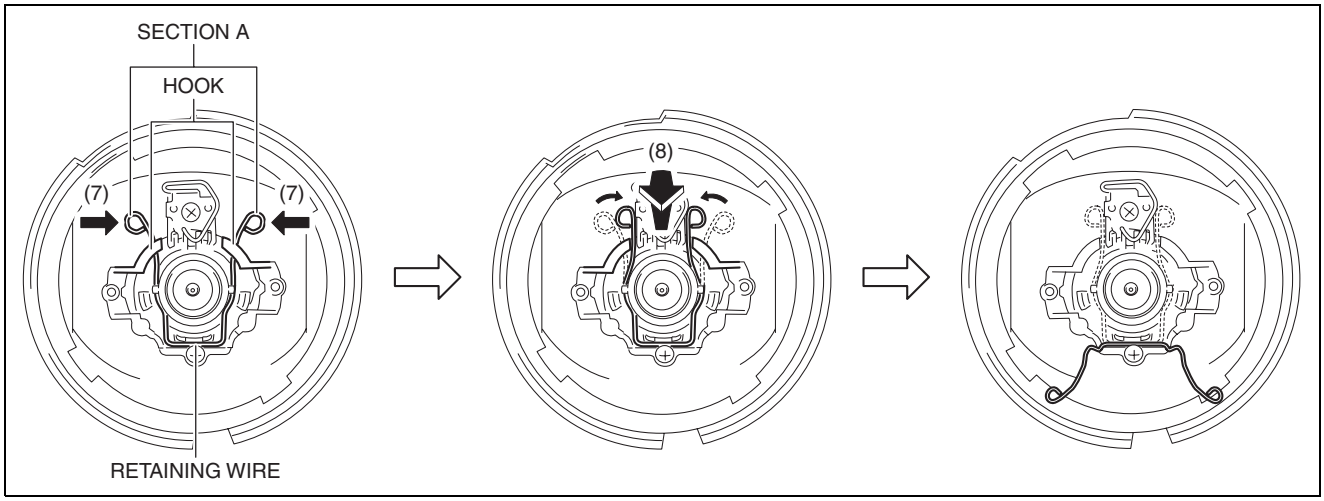
9. Rotate the igniter in the direction of the arrow (5) shown in the figure and remove it from the front combination light in the direction of the arrow (6) shown in the figure.



ac5wzw0000015

LIGHTING SYSTEMS

10. Move section A of the bulb retaining wire in the direction of the arrow (7) shown in the figure, pull it in the direction of the arrow (8) shown in the figure, and detach the bulb retaining wire and hook.



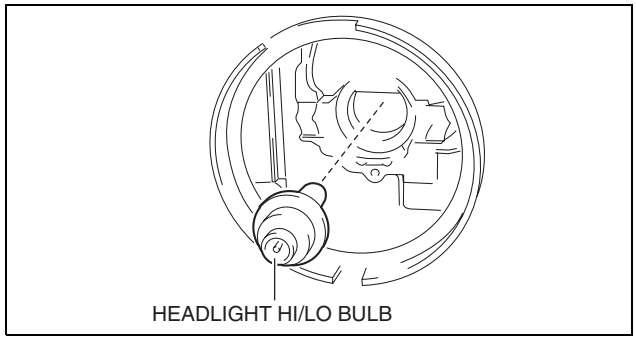
ac5wzw0000081

11. Remove the headlight HI/LO bulb.

Caution

- **A halogen bulb generates extremely high heat when it is illuminated. If the surface of the bulb is soiled, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.**

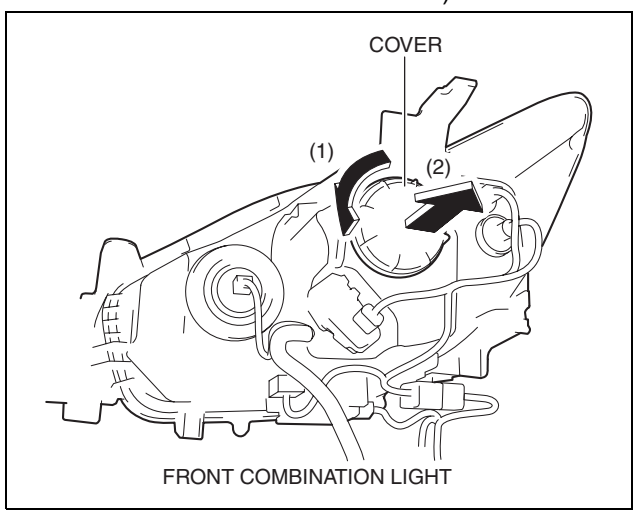
12. Install in the reverse order of removal.



ac5wzw0000040

Headlight HI/LO bulb (RH)

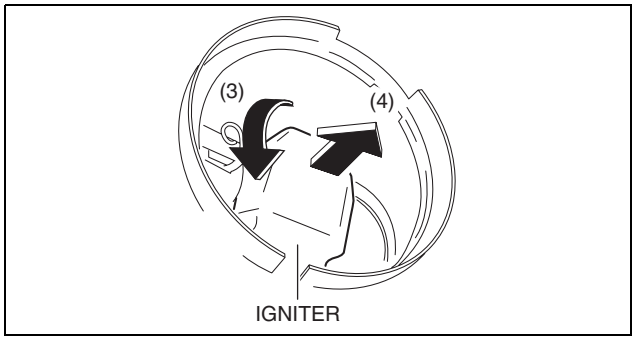
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the PCM bracket. (SKYACTIV-D 2.2)
3. Remove the washer tank bracket. (See 09-19-16 WASHER TANK REMOVAL/INSTALLATION.)
4. Rotate the cover in the direction of the arrow (1) shown in the figure and remove it from the front combination light in the direction of the arrow (2) shown in the figure.



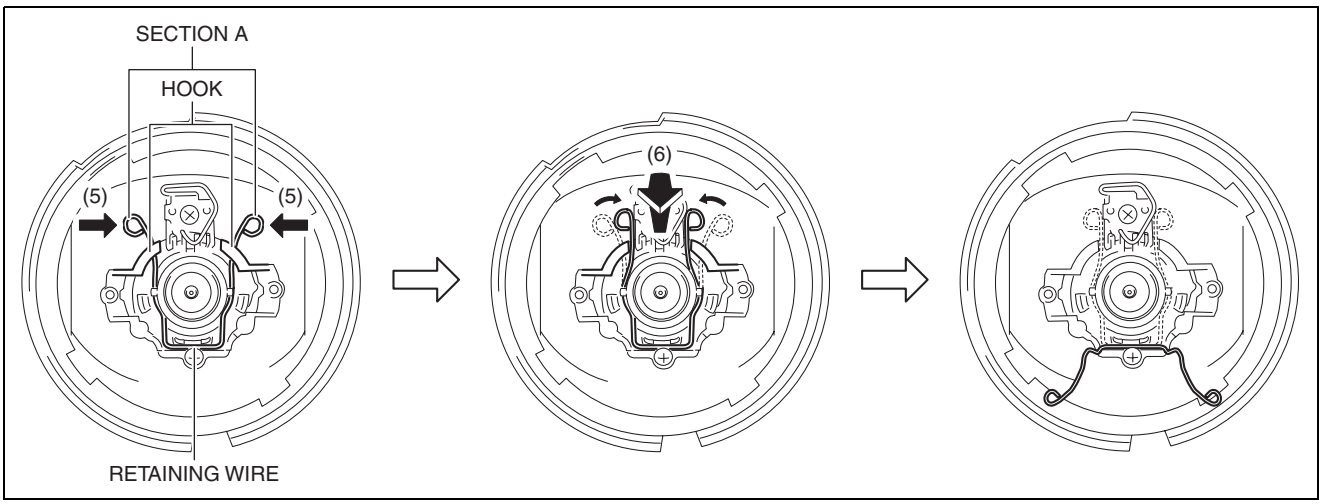
ac5wzw0000334

LIGHTING SYSTEMS

5. Rotate the igniter in the direction of the arrow (3) shown in the figure and remove it from the front combination light in the direction of the arrow (4) shown in the figure.
6. Move section A of the bulb retaining wire in the direction of the arrow (5) shown in the figure, pull it in the direction of the arrow (6) shown in the figure, and detach the bulb retaining wire and hook.

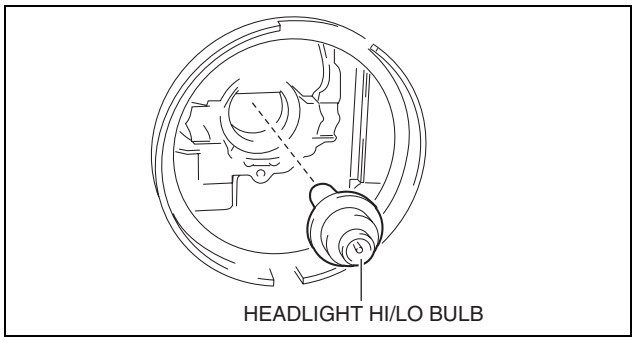


ac5wzw0000301



ac5wzw0000081

7. Remove the headlight HI/LO bulb.
8. Install in the reverse order of removal.



ac5wzw0000081

HEADLIGHT AIMING

id091800800400

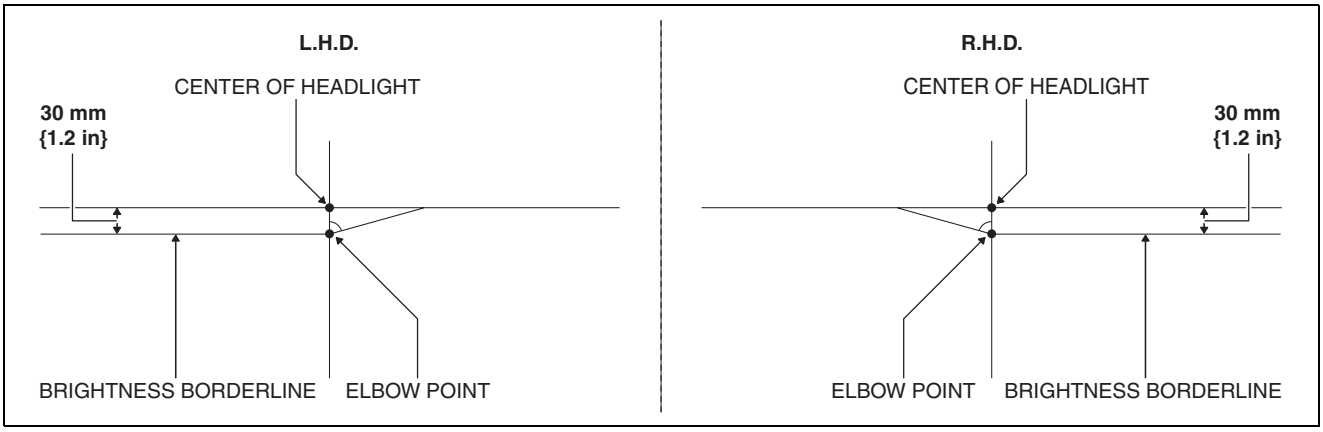
Note

- Perform headlight aiming if any of the following work is performed.
  - — Front combination light replacement
  - — Work that can affect vehicle height such as suspension replacement or removal/installation.

1. Empty the vehicle by having all occupants leave the vehicle and remove all the cargo except for the spare tire, jack and tools equipped on the vehicle.
2. Adjust the air pressure of each tire to the specified value. (See 02-12-1 WHEEL AND TIRE SPECIFICATION.)
3. Move the vehicle to level ground.

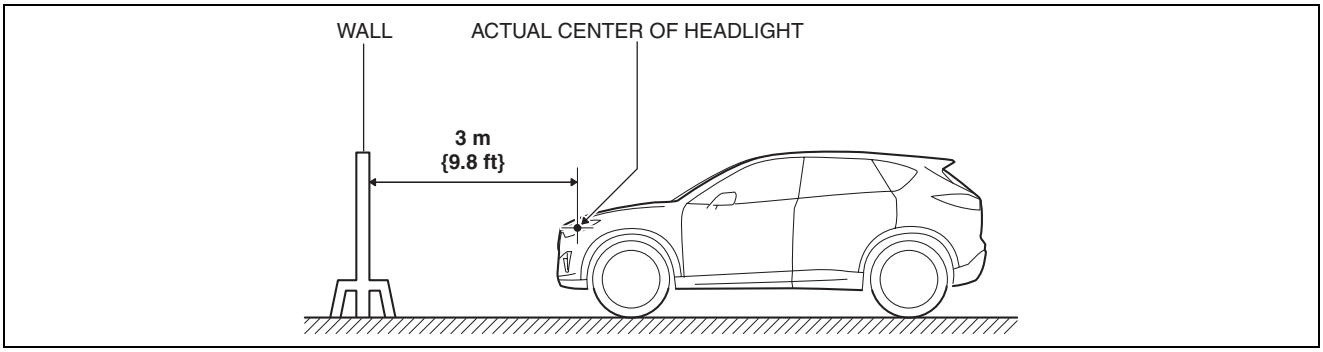
LIGHTING SYSTEMS

4. Make a screen shown in the figure using double-weight, white paper.



ac5wzw0000079

5. Line up the vehicle with the wall so that the distance to the headlights is **3 m {9.8 ft}** from the wall.

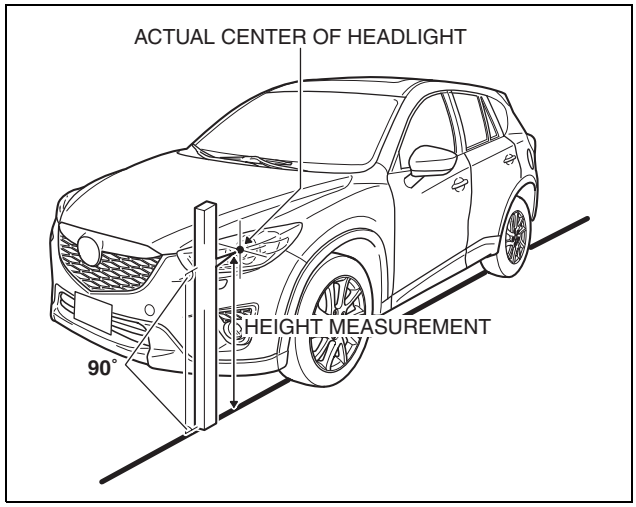


ac5wzw0000079

6. Measure the height at the center point of the headlight.

Note

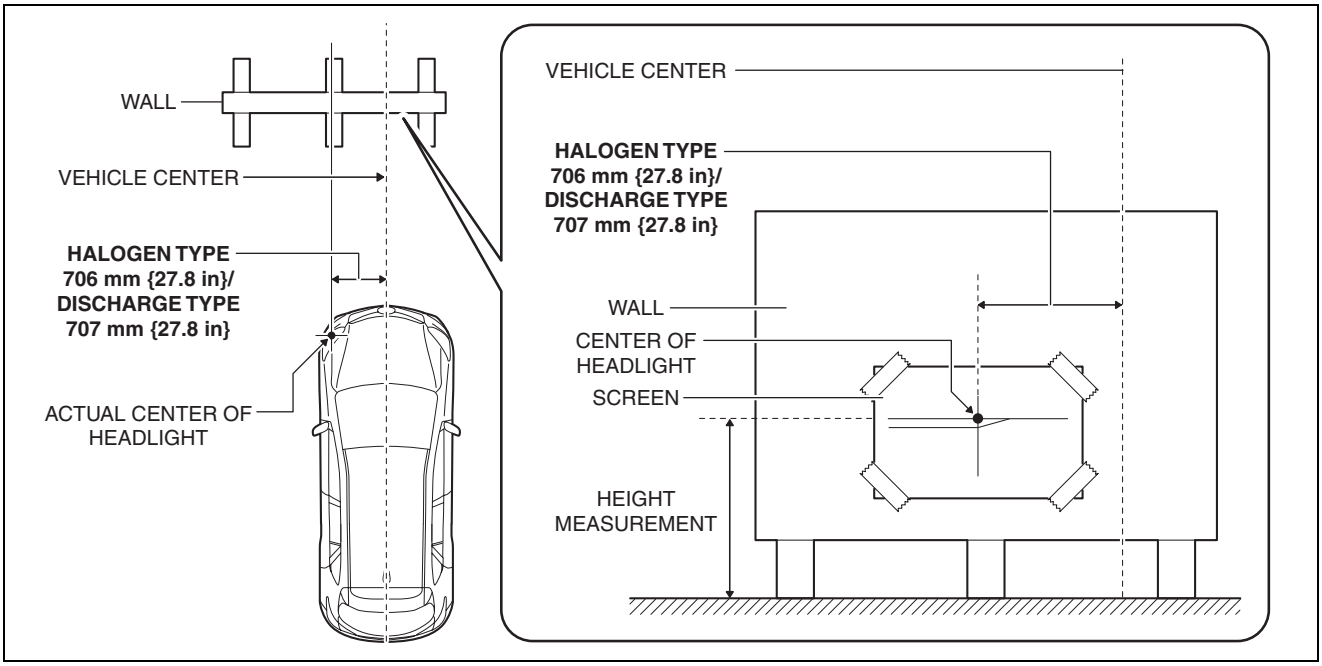
- Measure the height at the center point of the headlight in which the aiming is being adjusted because the vehicle height differs depending on vehicle conditions.



ac5wzw0000303

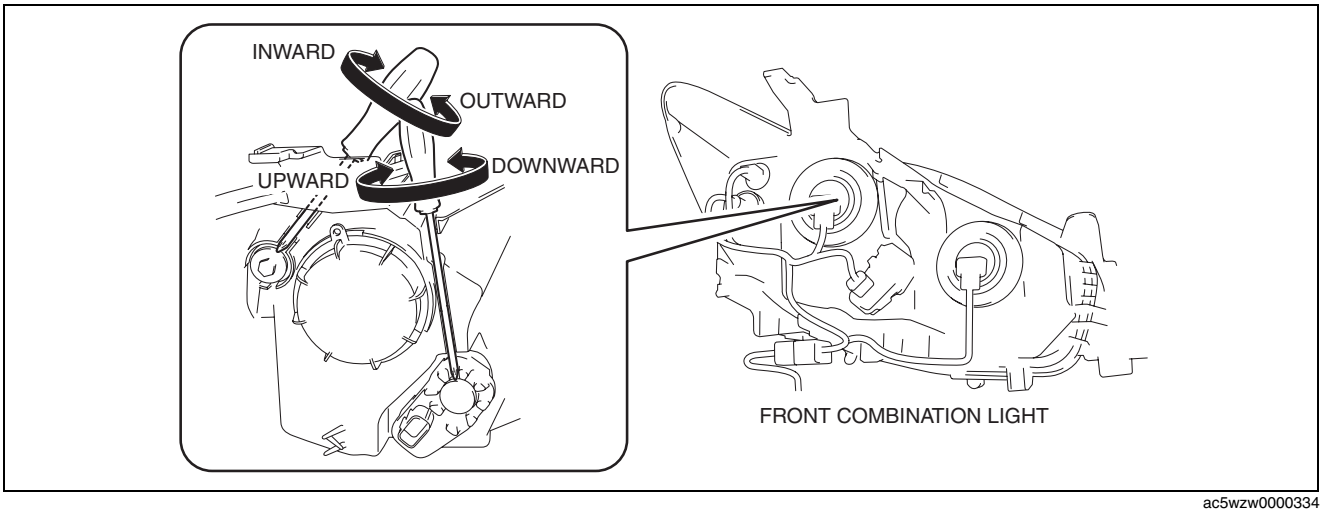
LIGHTING SYSTEMS

7. Align the center of the headlight with the center of the screen.



ac5wzw0000080

8. Set a partition in front of the headlight which is not being adjusted to block the light.
9. Start the engine and charge the battery.
10. Turn on the headlight low beams.
11. Set the headlight leveling switch to the [0] position. (With headlight manual leveling system)
12. Verify that the elbow point of the headlight is at the position indicated on the adjustment screen.
    - If the elbow point of the headlight is not at the position indicated on the adjustment screen, perform the following adjustment.
    (1) Rotate the adjustment screw to adjust the headlight.



ac5wzw0000334

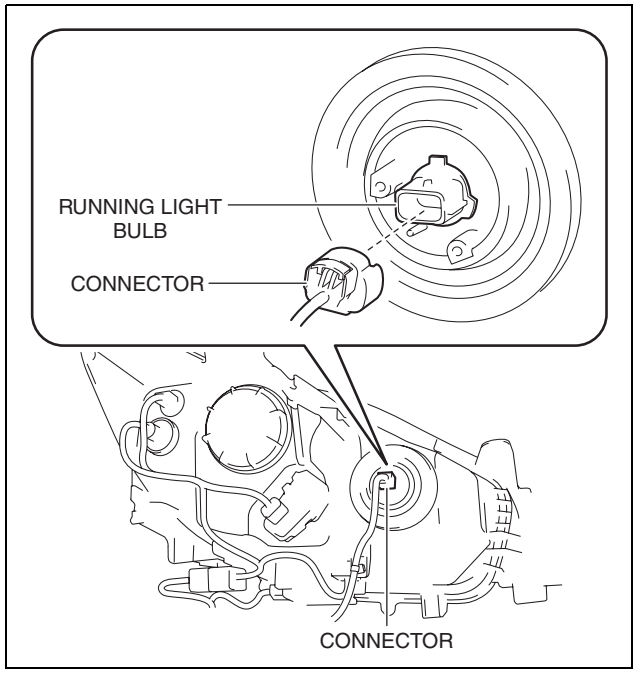
RUNNING LIGHT BULB REMOVAL/INSTALLATION

id091800450000

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

LIGHTING SYSTEMS

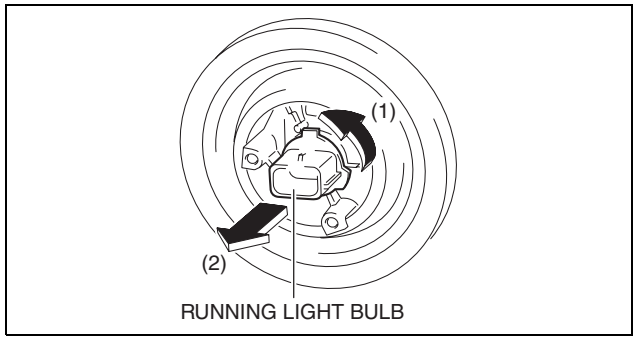
2. Disconnect the connector.



ac5wzw0000079

3. Rotate the running light bulb in the direction of the arrow (1) shown in the figure and remove it from the front combination light in the direction of the arrow (2) shown in the figure.

Caution
- **A halogen bulb generates extremely high heat when it is illuminated. If the surface of the bulb is soiled, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.**



ac5wzw0000208

4. Install in the reverse order of removal.

DISCHARGE HEADLIGHT CONTROL MODULE REMOVAL/INSTALLATION

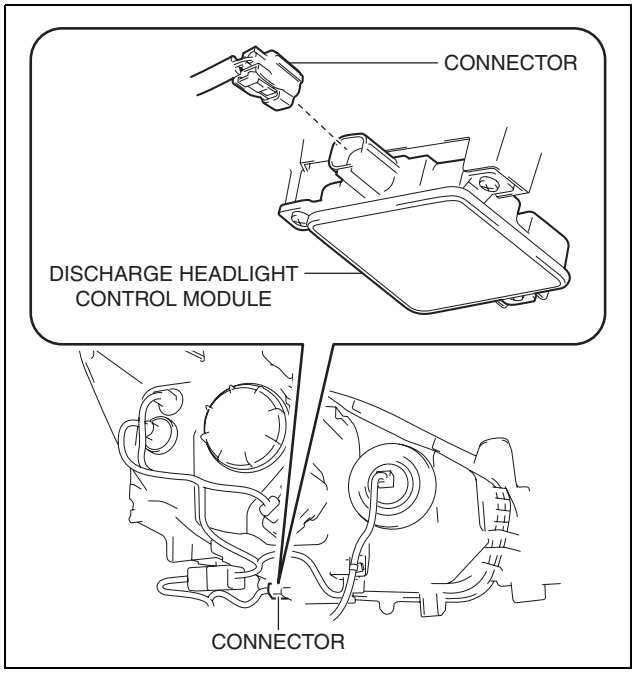
id091800805300

Warning
- **Incorrect servicing of the discharge headlights could result in electrical shock. Before servicing the discharge headlights, always refer to the service warnings. (See 09-18-6 DISCHARGE HEADLIGHT SERVICE WARNINGS.)**

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)

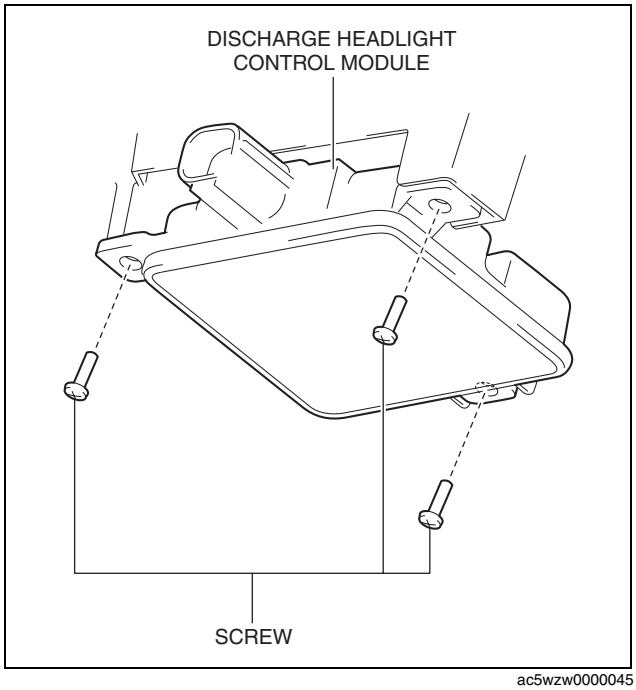
LIGHTING SYSTEMS

3. Disconnect the connector.



ac5wzw0000045

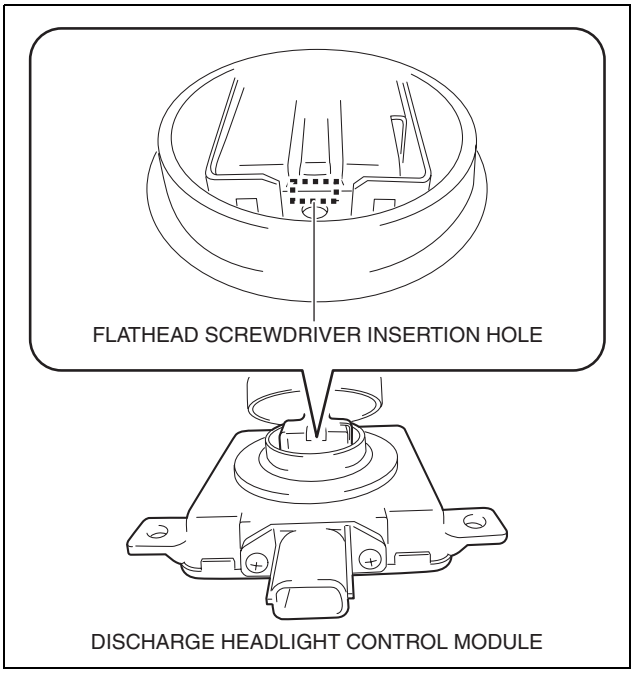
4. Remove the screws.



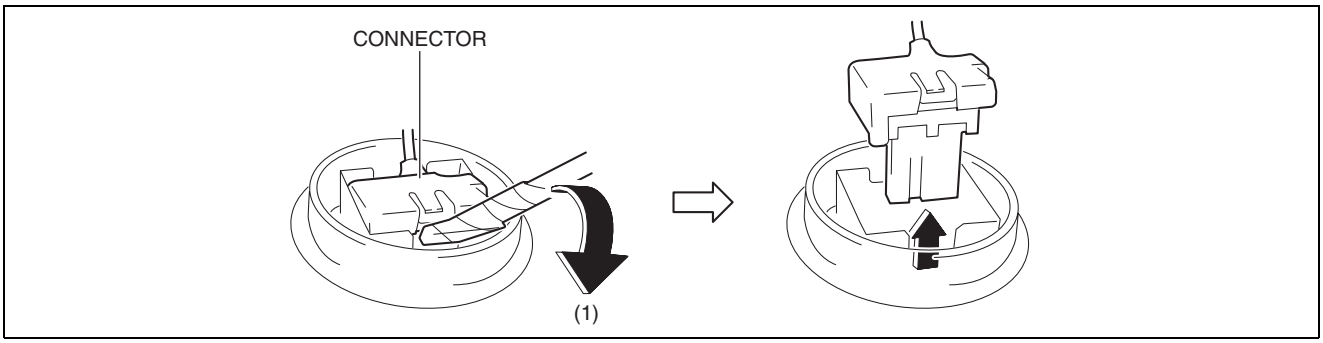
ac5wzw0000045

LIGHTING SYSTEMS

5. Insert a tape-wrapped flathead screwdriver into the clearance between the discharge headlight control module and connector shown in the figure.
6. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, lift up the connector, and disconnect it.

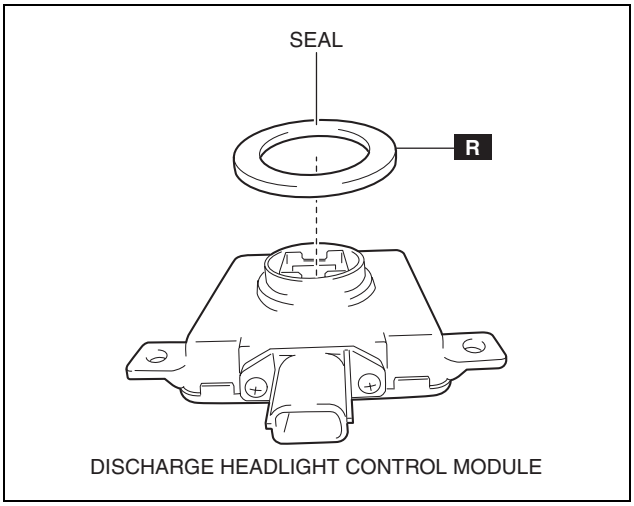


ac5wzw0000119



ac5wzw0000045

7. Remove the seal.
8. Remove the discharge headlight control module.
9. Install in the reverse order of removal.



ac5wzw0000302

DISCHARGE HEADLIGHT SYSTEM INSPECTION

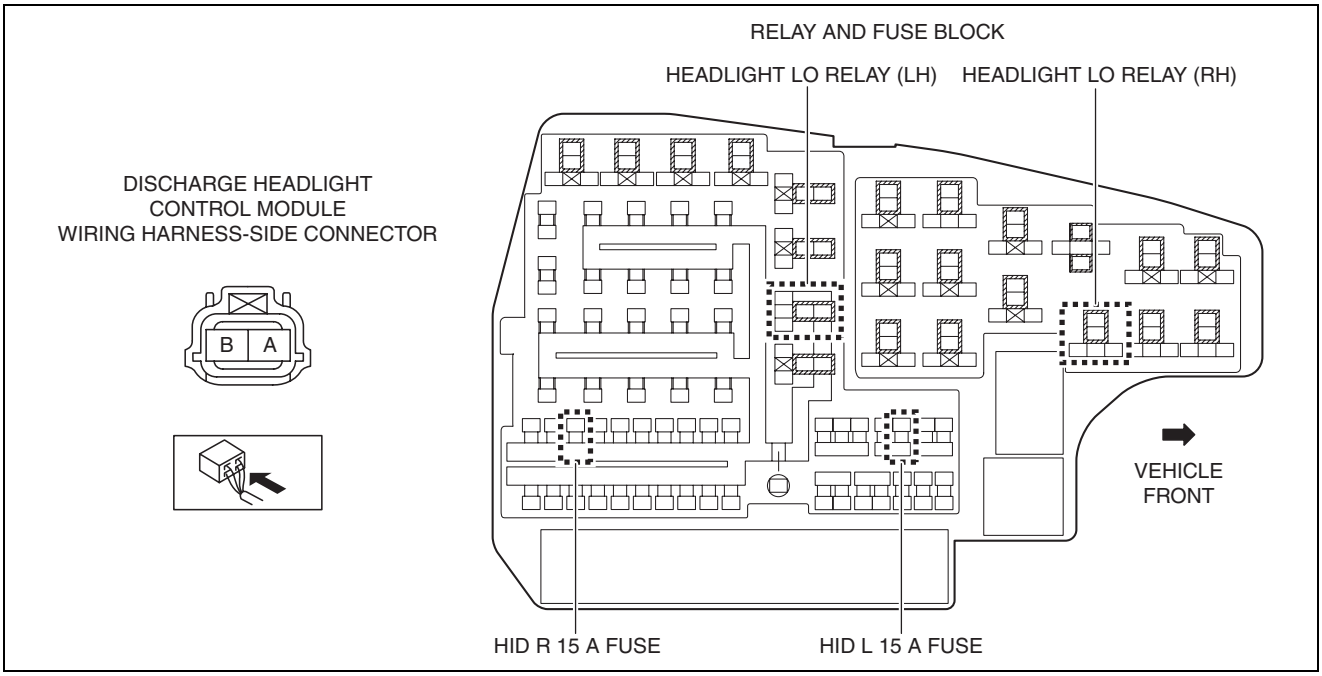
id091800805400

Warning

- **Incorrect servicing of the discharge headlights could result in electrical shock. Before servicing the discharge headlights, always refer to the service warnings. (See 09-18-6 DISCHARGE HEADLIGHT SERVICE WARNINGS.)**

LIGHTING SYSTEMS

Terminal layout



ac5wzw0000046

LIGHTING SYSTEMS

Inspection procedure

Step	Inspection		Action
1	**INSPECT RELAY** • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the following relays: (See 09-21-28 RELAY LOCATION.) — Headlight LO relay (LH) — Headlight LO relay (RH) • Inspect the relays. (See 09-21-29 RELAY INSPECTION.) • Are the relays normal?	Yes	Install the relays, then go to the next step. (See 09-21-28 RELAY LOCATION.)
		No	Replace the relay. (See 09-21-28 RELAY LOCATION.)
2	**INSPECT LIGHT SWITCH** • Inspect the light switch. (See 09-18-86 LIGHT SWITCH INSPECTION.) • Is the light switch normal?	Yes	Go to the next step.
		No	Replace the light switch. (See 09-18-84 LIGHT SWITCH REMOVAL/INSTALLATION.)
3	**INSPECT DISCHARGE HEADLIGHT CONTROL MODULE CONNECTOR** • Disconnect the discharge headlight control module connector. • Inspect the connector connection, connection condition or the terminal and verify that there is no damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector.
4	**INSPECT DISCHARGE HEADLIGHT CONTROL MODULE FOR OPEN CIRCUIT TO GROUND CIRCUIT** • Verify that the discharge headlight control module is disconnected. • Inspect the wiring harness between discharge headlight control module B (wiring harness-side) and ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit.
5	**INSPECT DISCHARGE HEADLIGHT CONTROL MODULE POWER SUPPLY CIRCUIT** • Verify that the discharge headlight control module connector is disconnected. • Reconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Turn the light switch to the HEAD position. • Measure the voltage at discharge headlight control module terminal A (wiring harness-side). • Is the voltage B+?	Yes	Turn the light switch to the OFF position, then go to the next step.
		No	Inspect the HID L 15 A fuse and HID R 15 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness for a short to ground. — Replace the fuse. • If a fuse is burnt out: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for an open circuit.

LIGHTING SYSTEMS

Step	Inspection		Action
6	**VERIFY IF HEADLIGHT HI/LO BULB IS BAD OR DISCHARGE HEADLIGHT CONTROL MODULE IS MALFUNCTIONING** • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Install a normal headlight HI/LO bulb. (See 09-18-12 HEADLIGHT BULB REMOVAL/INSTALLATION.) • Make sure to reconnect the disconnected connectors. • Reconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Turn the light switch to the HEAD position. • Do the headlights LO illuminate?	Yes	Replace the headlight HI/LO bulb. (See 09-18-12 HEADLIGHT BULB REMOVAL/INSTALLATION.)
		No	Replace the discharge headlight control module. (See 09-18-21 DISCHARGE HEADLIGHT CONTROL MODULE REMOVAL/INSTALLATION.)

IGNITER REMOVAL/INSTALLATION

id091800814200

Warning

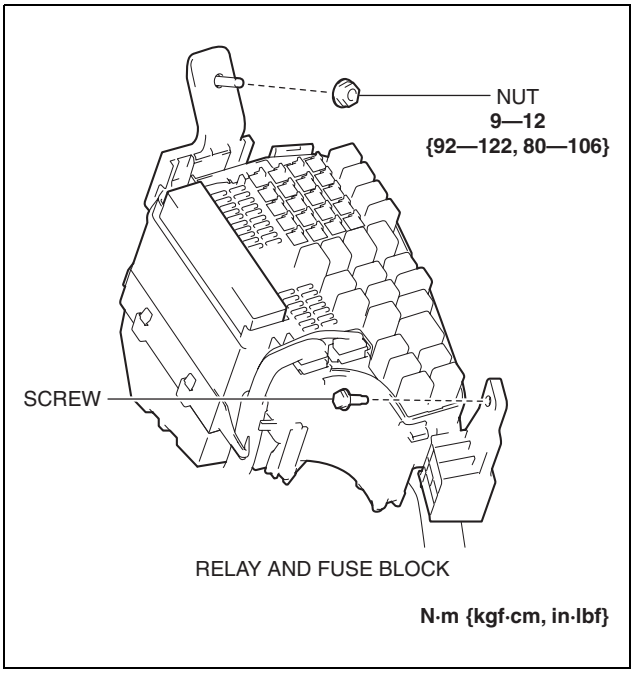
- **Incorrect servicing of the discharge headlights could result in electrical shock. Before servicing the discharge headlights, always refer to the service warnings. (See 09-18-6 DISCHARGE HEADLIGHT SERVICE WARNINGS.)**

Igniter (LH)

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the air cleaner cover. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the relay and fuse block upper cover. (See 09-21-3 RELAY AND FUSE BLOCK REMOVAL/INSTALLATION.)

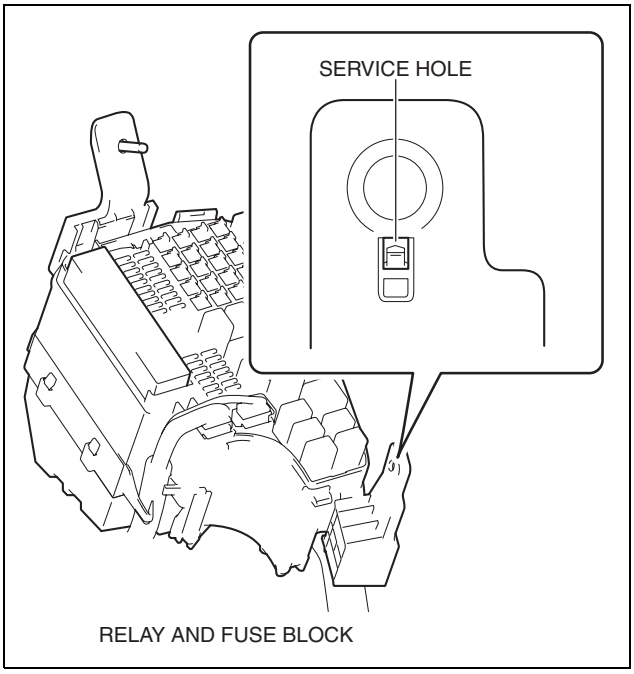
LIGHTING SYSTEMS

4. Remove the nut and screw.



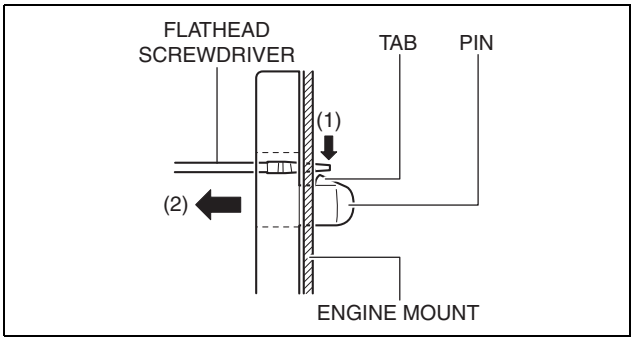
ac5wzw0000120

5. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.



ac5wzw0000050

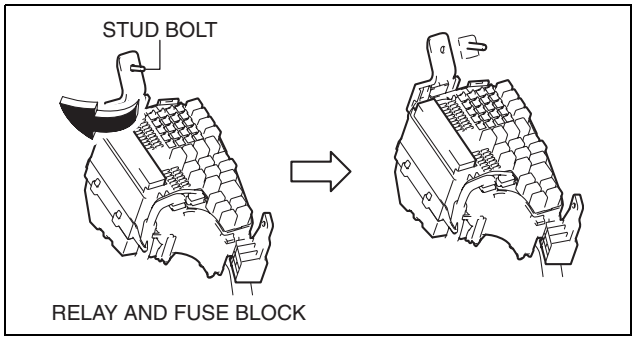
6. While pressing the pin tab in the direction of the arrow (1) shown in the figure using a flathead screwdriver, pull the pin in the direction of the arrow (2) shown in the figure to detach the pin tab and engine mount.



ac5wzw0000120

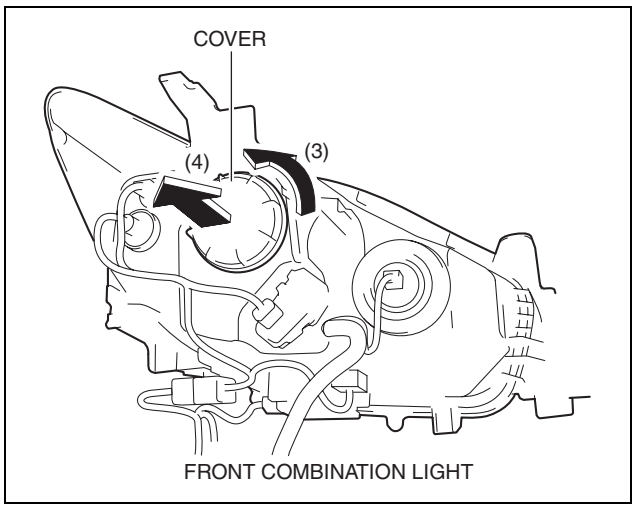
LIGHTING SYSTEMS

7. Pull out the relay and fuse block from the stud bolt and set it aside as shown in the figure.



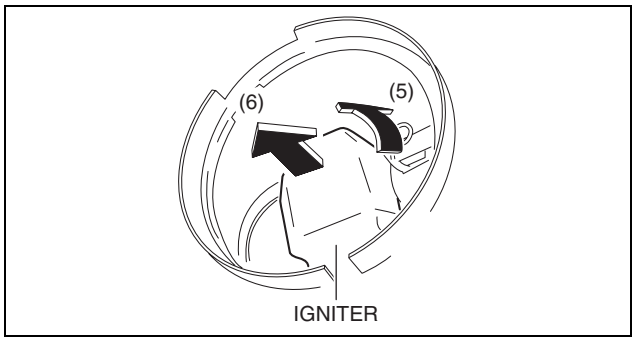
ac5wzw0000050

8. Rotate the cover in the direction of the arrow (3) shown in the figure and remove it from the front combination light in the direction of the arrow (4) shown in the figure.



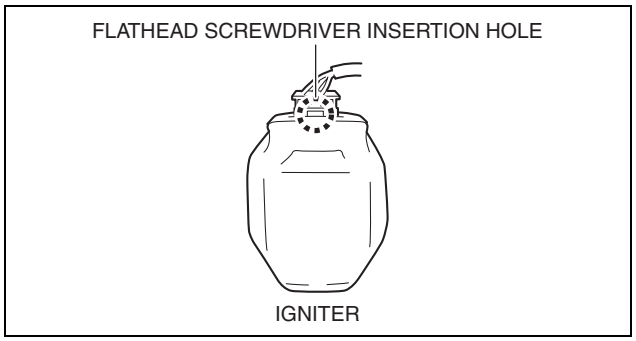
ac5wzw0000050

9. Rotate the igniter in the direction of the arrow (5) shown in the figure and remove it from the front combination light in the direction of the arrow (6) shown in the figure.



ac5wzw0000050

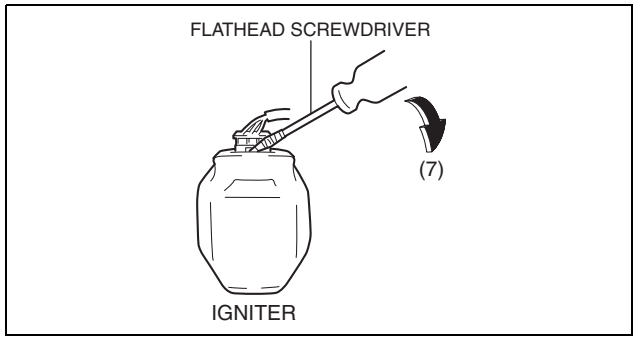
10. Insert the flathead screwdriver into the gap between the igniter and connector shown in the figure.



ac5wzw0000121

LIGHTING SYSTEMS

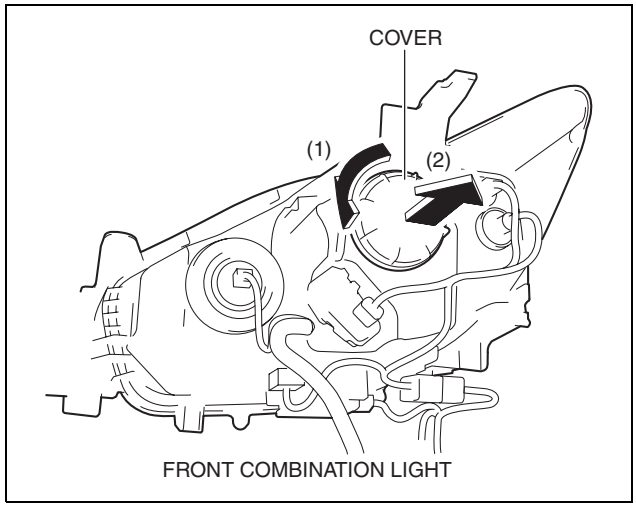
11. Move the flathead screwdriver in the direction of the arrow (7) shown in the figure, lift up the connector, and disconnect it.
12. Install in the reverse order of removal.



ac5wzw0000050

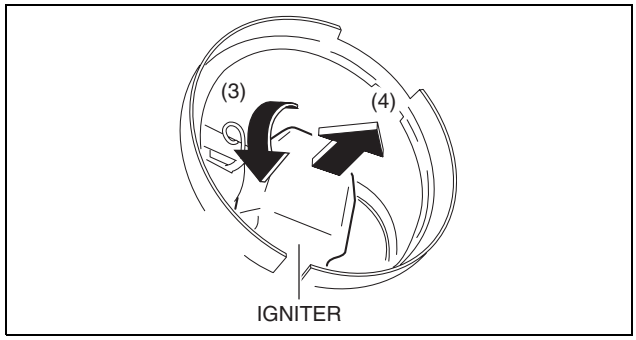
Igniter (RH)

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the PCM bracket. (SKYACTIV-D 2.2)
3. Remove the washer tank bracket. (See 09-19-16 WASHER TANK REMOVAL/INSTALLATION.)
4. Rotate the cover in the direction of the arrow (1) shown in the figure and remove it from the front combination light in the direction of the arrow (2) shown in the figure.



ac5wzw0000301

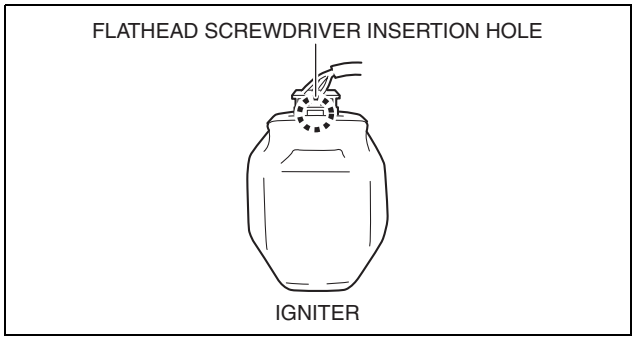
5. Rotate the igniter in the direction of the arrow (3) shown in the figure and remove it from the front combination light in the direction of the arrow (4) shown in the figure.



ac5wzw0000301

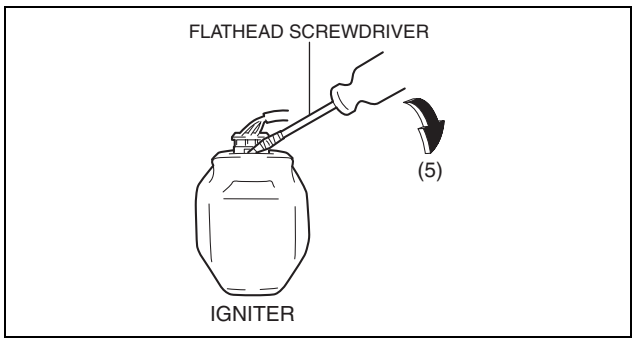
LIGHTING SYSTEMS

6. Insert the flathead screwdriver into the gap between the igniter and connector shown in the figure.



ac5wzw0000121

7. Move the flathead screwdriver in the direction of the arrow (5) shown in the figure, lift up the connector, and disconnect it.
8. Install in the reverse order of removal.



ac5wzw0000083

ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION

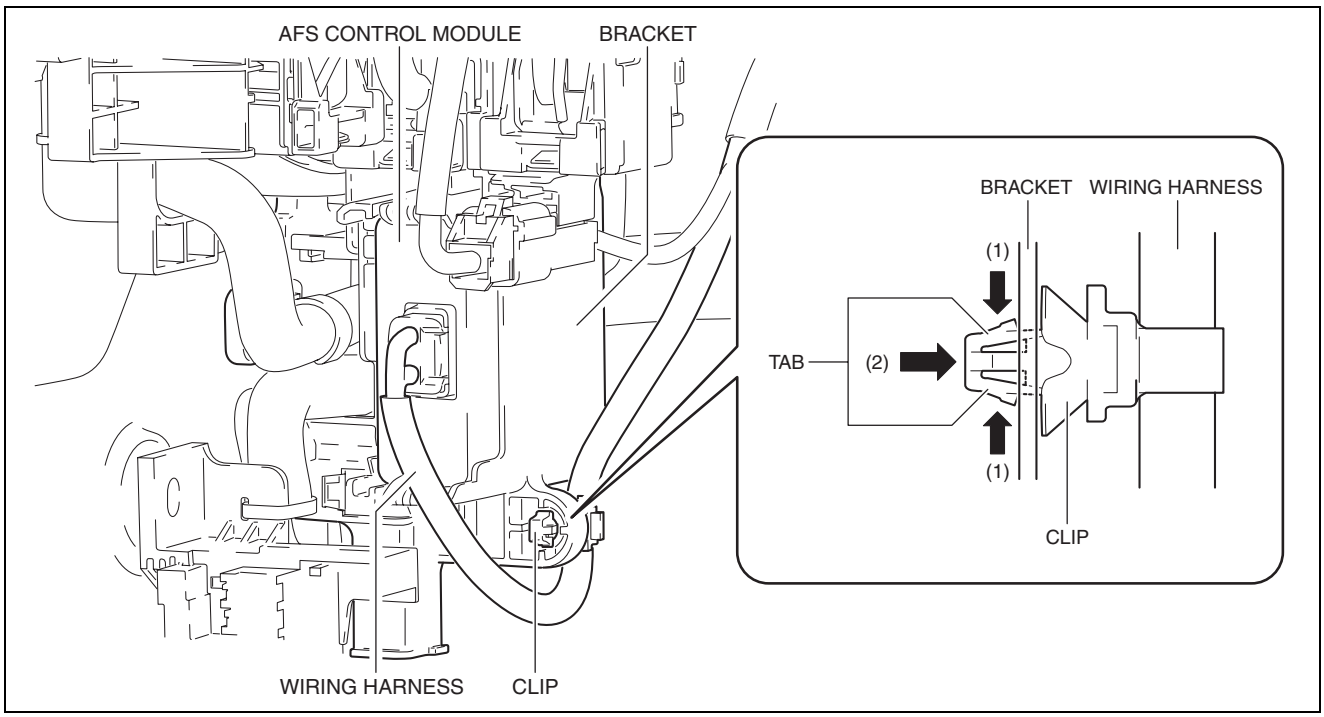
id091800112300

Note
- The AFS control module prior to replacement stores the vehicle specification information.
- A new AFS control module does not store any vehicle specification information.
- When the ignition is switched ON after the AFS control module is replaced, the AFS control module reads the vehicle specification information sent via CAN transmission from the instrument cluster using the automatic configuration function, and stores it.
- The AFS control module records the vehicle height while it is unoccupied.
- The new AFS control module does not record the vehicle height while it is unoccupied.

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front scuff plate (LH). (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
3. Remove the front side trim (LH). (See 09-17-62 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
4. While pressing the clip tab in the direction of arrows (1) shown in the figure, press the clip in the direction of arrow (2) to detach the clip tab and the bracket.

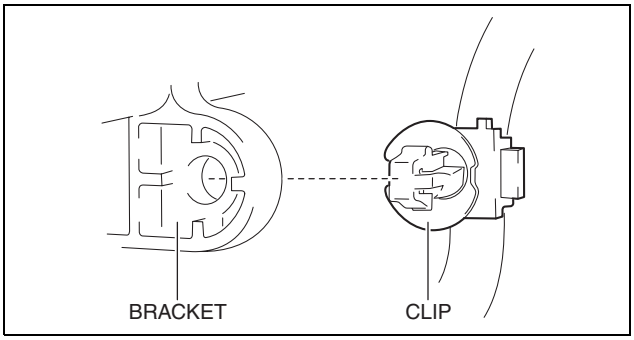
Note
- Because the AFS control module cannot be removed with the clip installed to the bracket, remove the clip from the bracket to allow for a margin length in the wiring harness.

LIGHTING SYSTEMS

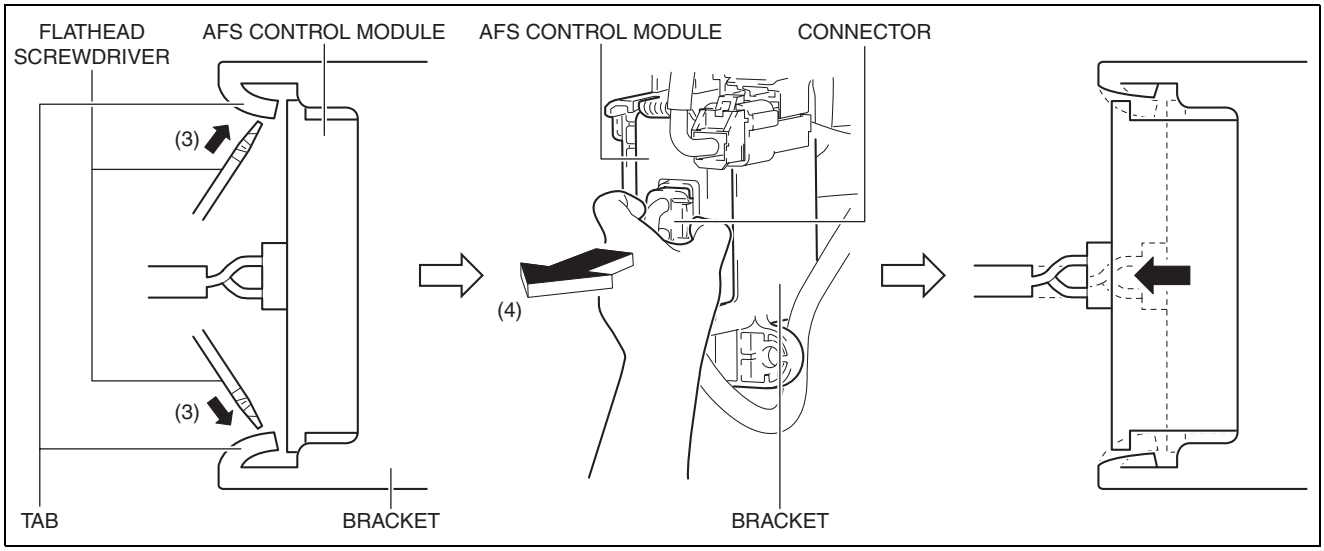


ac5wzw0000120

5. Remove the clip.
6. While pressing the bracket tab in the direction of the arrows (3) shown in the figure using a tape-wrapped flathead screwdriver, hold the connector, pull out the AFS control module in the direction of the arrow (4) shown in the figure to detach the bracket tab and AFS control module.



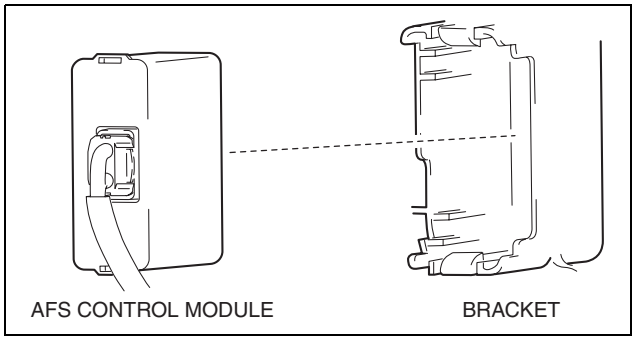
ac5wzw0000049



ac5wzw0000006

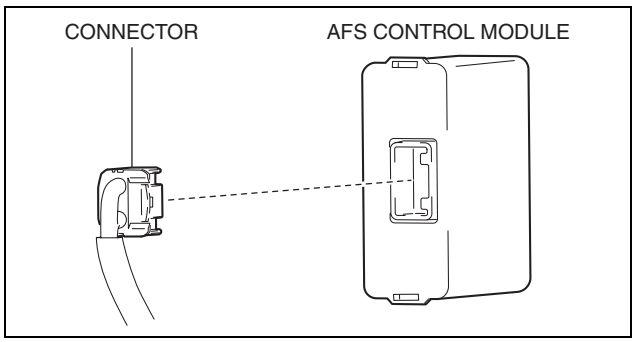
LIGHTING SYSTEMS

7. Remove the AFS control module.



ac5wzw0000049

8. Disconnect the connector.
9. Install in the reverse order of removal.
10. Switch the ignition ON (engine off or on) and perform the AFS control module automatic configuration.
11. Clear the DTCs.
12. If the AFS control module is replaced with a new one, perform the auto leveling system initial setting. (See 09-18-82 HEADLIGHT AUTO LEVELING SYSTEM INITIALIZATION.)



ac5wzw0000006

ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OFF SWITCH REMOVAL/INSTALLATION

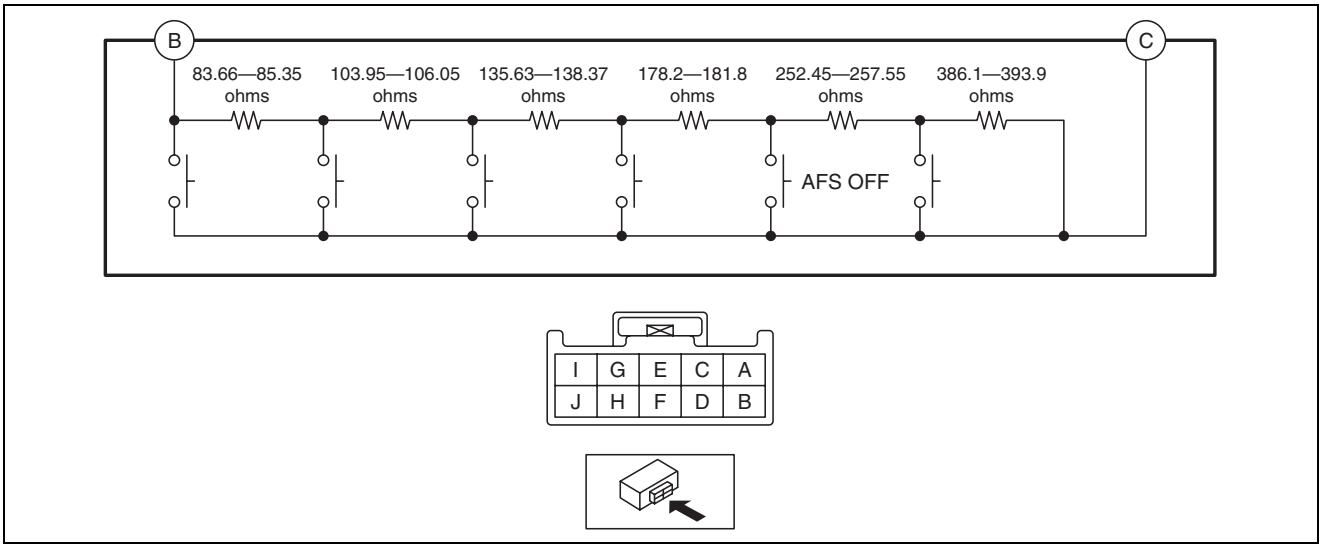
id091800112400

Note
- The AFS OFF switch is integrated with the cluster switch.
- For the cluster switch removal/installation, refer to “SWITCH PANEL REMOVAL/INSTALLATION” because the cluster switch is installed to the switch panel. (See 09-17-18 SWITCH PANEL REMOVAL/INSTALLATION.)

ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OFF SWITCH INSPECTION

id091800112500

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the switch panel. (See 09-17-18 SWITCH PANEL REMOVAL/INSTALLATION.)
3. Verify that the resistance between AFS OFF switches B and C is as indicated in the table.



ac5wzw0000300

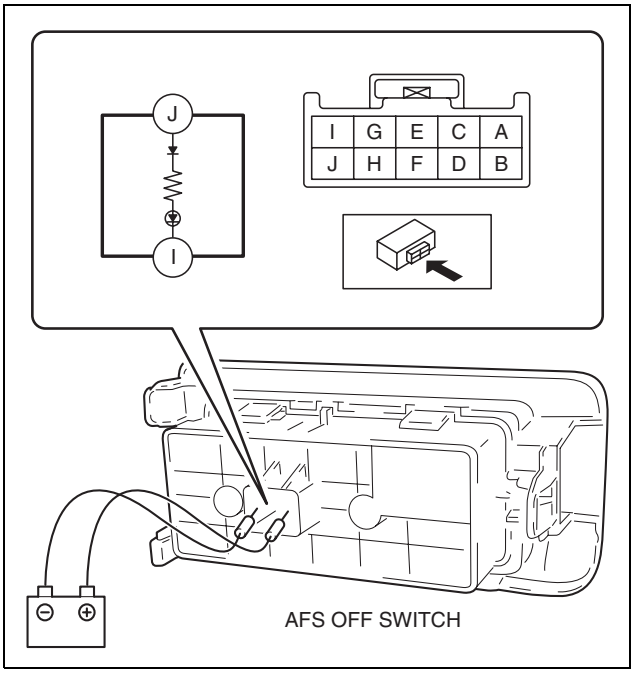
LIGHTING SYSTEMS

- If the resistance can be verified as indicated in the table, go to the next step.
- If not as indicated in the table, replace the cluster switch.

Test condition	Resistance (ohms)
AFS OFF switch pressed	501.44—511.57
All switches released	1,139.99—1,163.02

ac5wzw0000300

4. Apply battery positive voltage to AFS OFF switch terminal J, and connect terminal I to ground.
5. Verify that the LED illuminates.
   - If the LED does not illuminate, replace the cluster switch.



ac5wzw0000011

STEERING ANGLE SENSOR REMOVAL/INSTALLATION

id091800813600

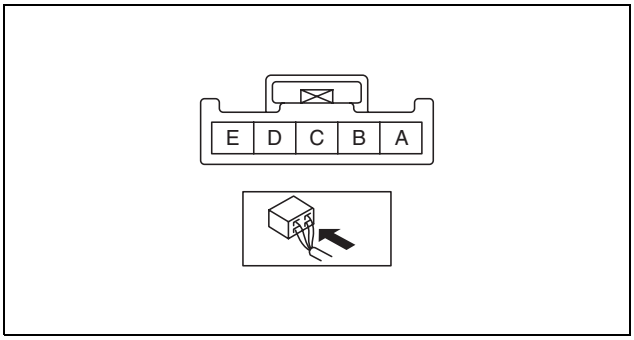
Note

- If the steering angle sensor is removed from the clock spring, the steering angle sensor absolute angle could change, therefore, do not remove the steering angle sensor from the clock spring.
- If the steering angle sensor is replaced, replace it together with the clock spring. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.)

STEERING ANGLE SENSOR INSPECTION

id091800813400

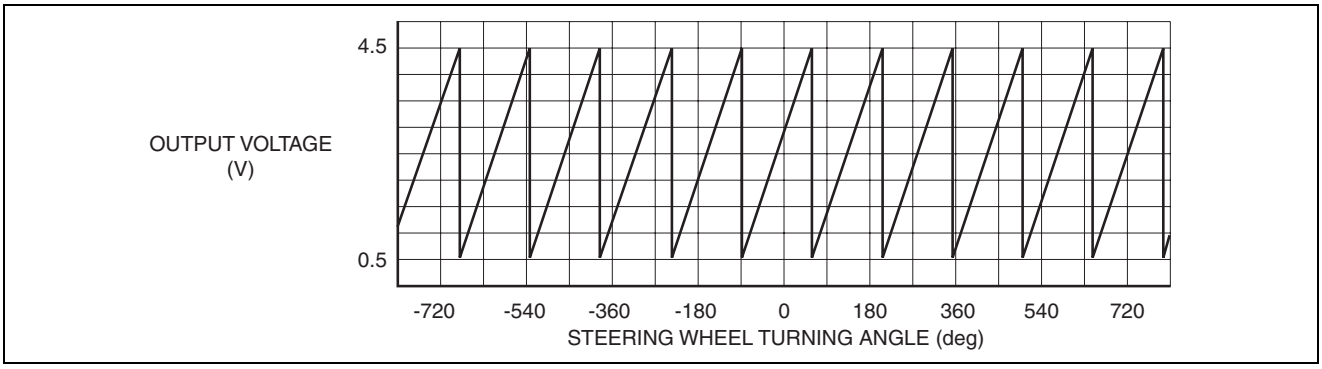
1. Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.)
2. Connect a tester to steering angle sensor terminal A and B (ground).
3. Switch the ignition ON (engine off or on).
4. Turn the steering wheel to the left and right.



ac5wzw0000084

LIGHTING SYSTEMS

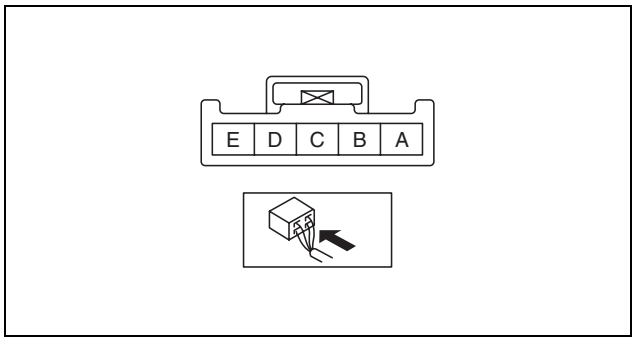
5. Verify that the voltage from steering angle sensor terminal A to B (ground) is as indicated in the table.



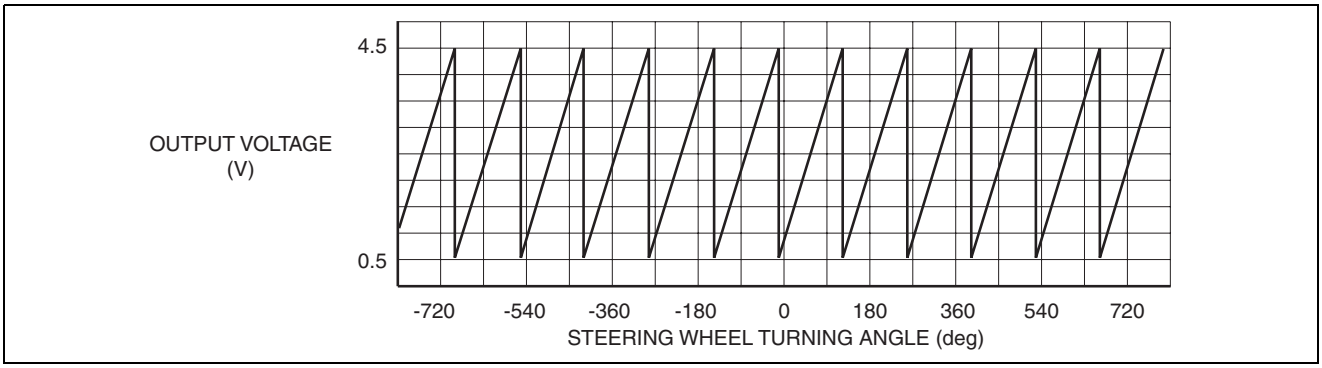
ac5wzw0000300

- If the voltage can be verified as indicated in the table, go to the next step.
- If the voltage is not as indicated in the table, replace the clock spring. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.)

6. Switch the ignition to off.
7. Connect a tester to steering angle sensor terminal C and B (ground).
8. Switch the ignition ON (engine off or on).
9. Turn the steering wheel to the left and right.
10. Verify that the voltage from steering angle sensor terminal C to B (ground) is as indicated in the table.



ac5wzw0000084



ac5wzw0000301

- If the voltage is not as indicated in the table, replace the clock spring. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.)

HEADLIGHT LEVELING ACTUATOR INSPECTION

id091800809700

Note

- The headlight leveling actuator is integrated in the front combination light.
- For the actuator inspection of the headlight auto leveling system, perform the headlight leveling actuator operation check mode. (See 09-02D-41 HEADLIGHT LEVELING ACTUATOR OPERATION CHECK MODE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)

1. Verify that the voltages of each of the terminals are as indicated in the terminal voltage table.
   - If the voltage is not as indicated in the table, inspect the parts under Inspection item(s).
     - — If the system does not work normally even though the parts or related wiring harnesses do not have any malfunction, replace the front combination light. (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)

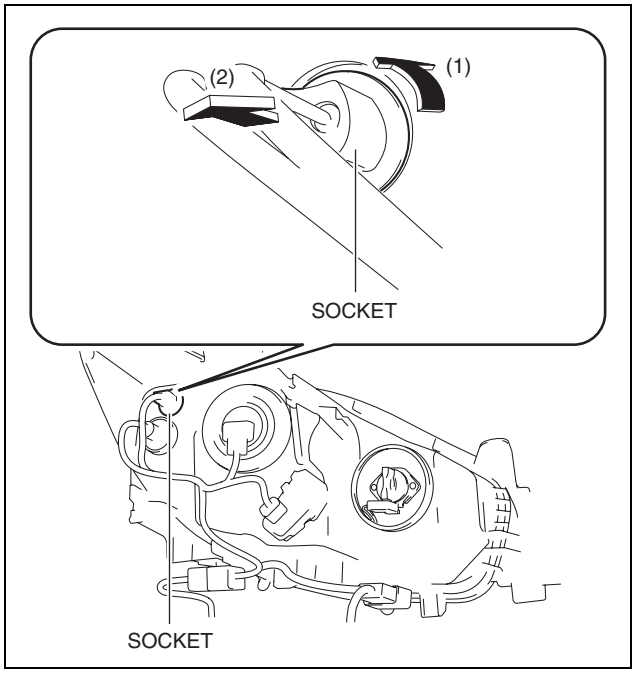
PARKING LIGHT BULB REMOVAL/INSTALLATION

id091800804200

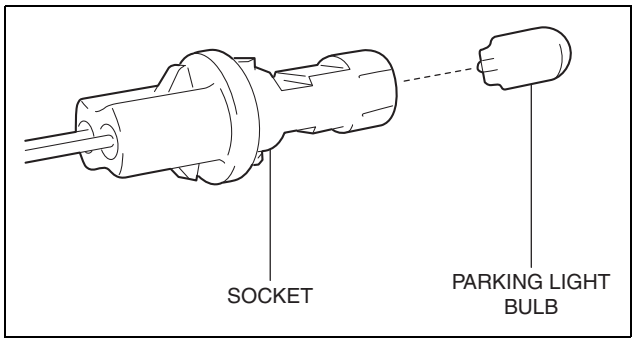
Halogen Type

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Rotate the socket in the direction of the arrow (1) shown in the figure and remove it from the front combination light in the direction of the arrow (2) shown in the figure.



ac5wzw0000210

3. Remove the parking light bulb.
4. Install in the reverse order of removal.



ac5wzw0000045

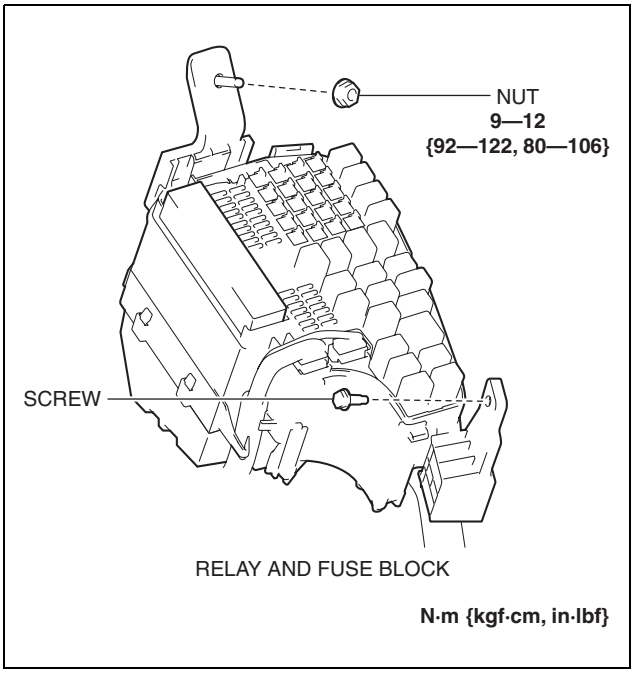
Discharge Type

Parking light bulb (LH)

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the air cleaner cover. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the relay and fuse block upper cover. (See 09-21-3 RELAY AND FUSE BLOCK REMOVAL/INSTALLATION.)

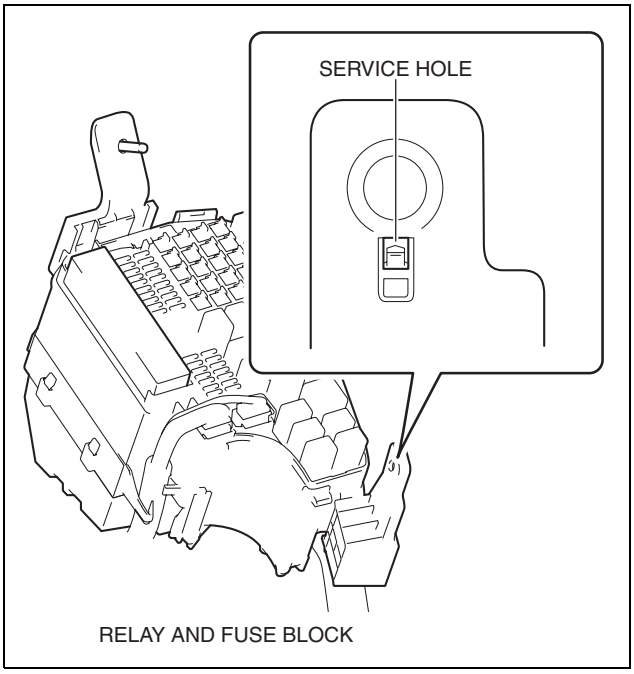
LIGHTING SYSTEMS

4. Remove the nut and screw.



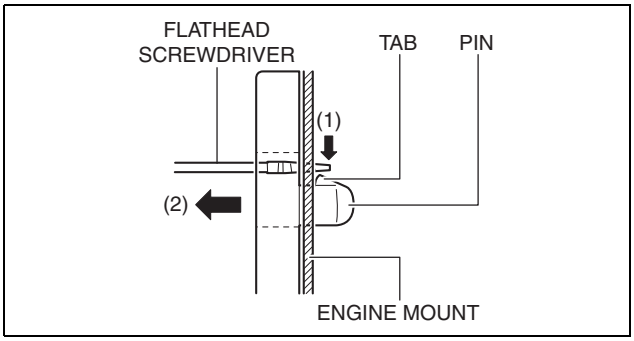
ac5wzw0000118

5. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.



ac5wzw0000040

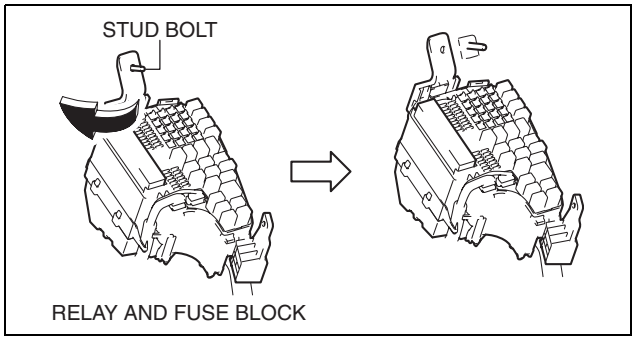
6. While pressing the pin tab in the direction of the arrow (1) shown in the figure using a flathead screwdriver, pull the pin in the direction of the arrow (2) shown in the figure to detach the pin tab and engine mount.



ac5wzw0000118

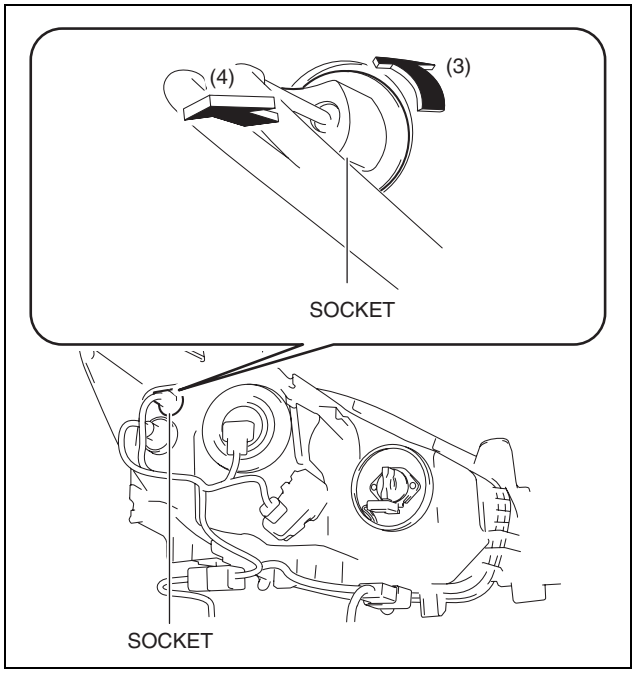
LIGHTING SYSTEMS

7. Pull out the relay and fuse block from the stud bolt and set it aside as shown in the figure.



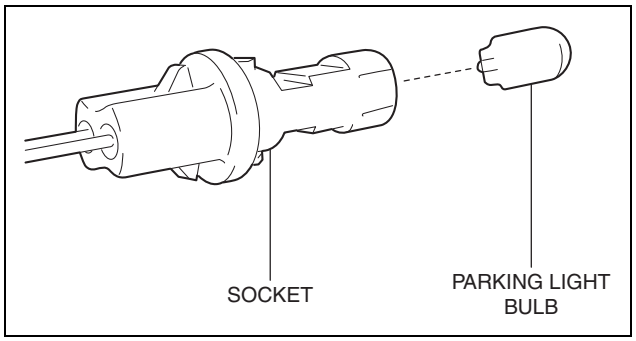
ac5wzw0000040

8. Rotate the socket in the direction of the arrow (3) shown in the figure and remove it from the front combination light in the direction of the arrow (4) shown in the figure.



ac5wzw0000171

9. Remove the parking light bulb.
10. Install in the reverse order of removal.

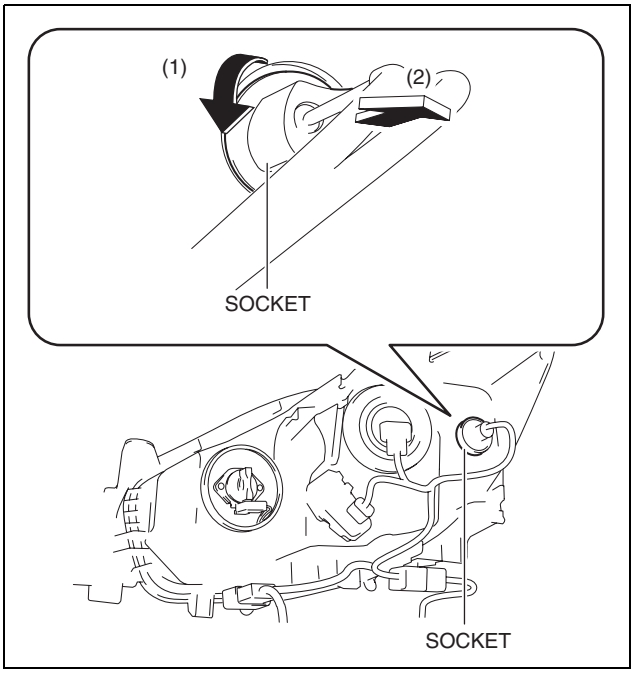


ac5wzw0000045

Parking light bulb (RH)

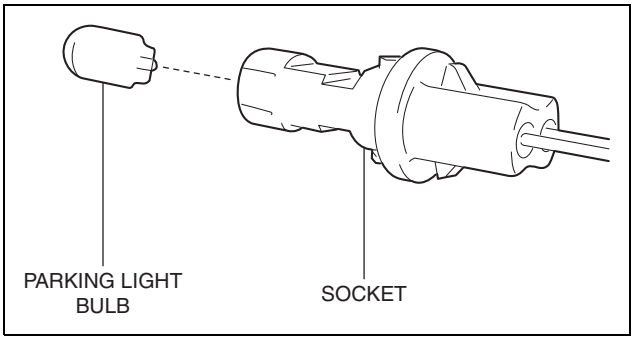
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the PCM bracket. (SKYACTIV-D 2.2)
3. Remove the washer tank bracket. (See 09-19-16 WASHER TANK REMOVAL/INSTALLATION.)

4. Rotate the socket in the direction of the arrow (1) shown in the figure and remove it from the front combination light in the direction of the arrow (2) shown in the figure.



ac5wzw0000211

5. Remove the parking light bulb.
6. Install in the reverse order of removal.



ac5wzw0000171

FRONT TURN LIGHT BULB REMOVAL/INSTALLATION

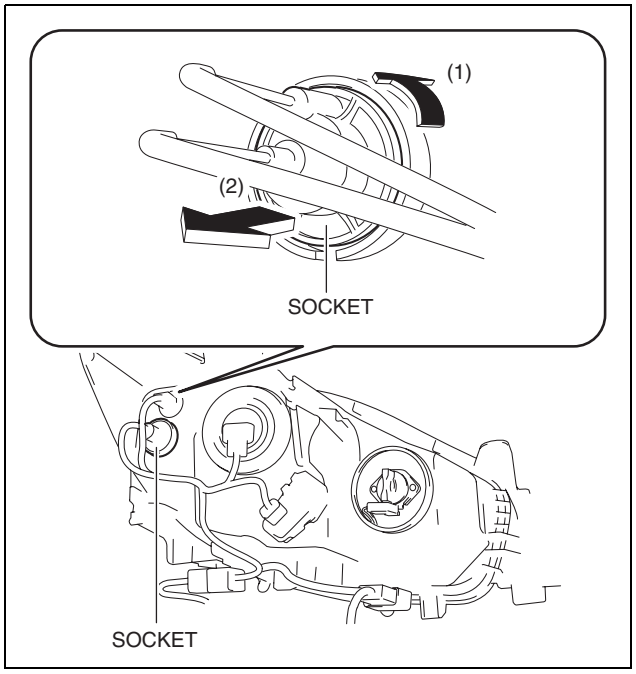
id091800805000

Halogen Type

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

LIGHTING SYSTEMS

2. Rotate the socket in the direction of the arrow (1) shown in the figure and remove it from the front combination light in the direction of the arrow (2) shown in the figure.

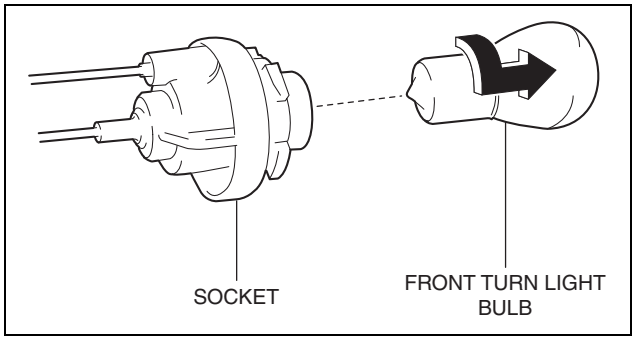


ac5wzw0000211

3. Remove the front turn light bulb.

Caution
- **A halogen bulb generates extremely high heat when it is illuminated. If the surface of the bulb is soiled, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.**

4. Install in the reverse order of removal.



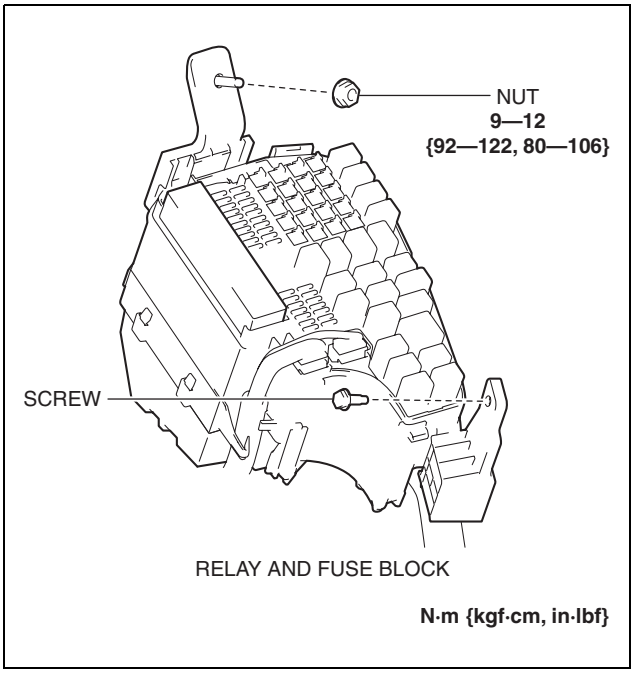
ac5wzw0000302

Discharge Type
Front turn light bulb (LH)

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the air cleaner cover. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the relay and fuse block upper cover. (See 09-21-3 RELAY AND FUSE BLOCK REMOVAL/INSTALLATION.)

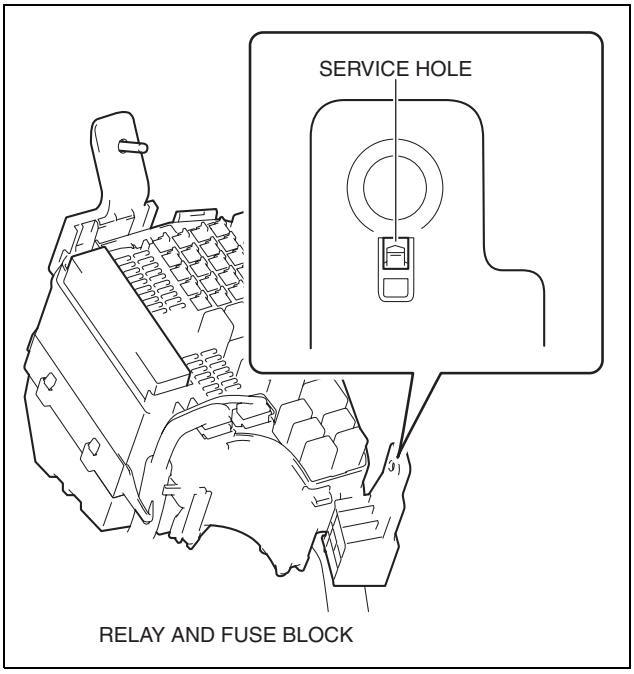
LIGHTING SYSTEMS

4. Remove the nut and screw.



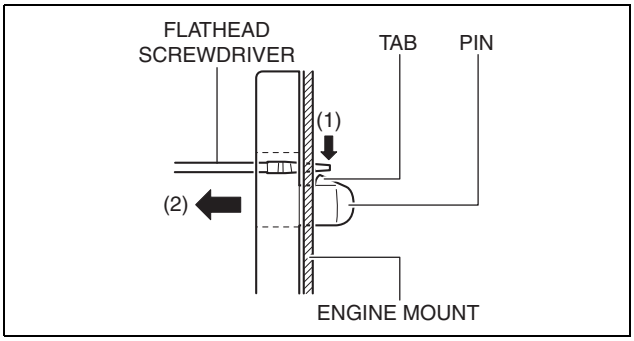
ac5wzw0000118

5. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.



ac5wzw0000040

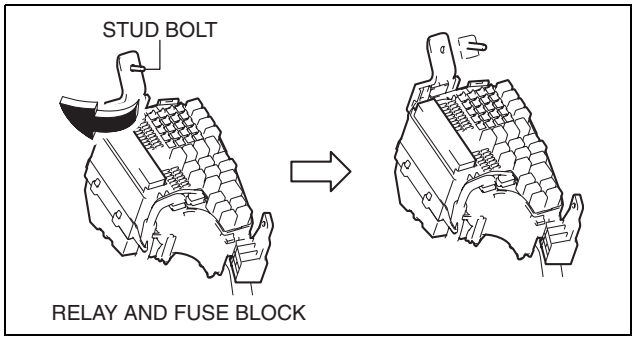
6. While pressing the pin tab in the direction of the arrow (1) shown in the figure using a flathead screwdriver, pull the pin in the direction of the arrow (2) shown in the figure to detach the pin tab and engine mount.



ac5wzw0000118

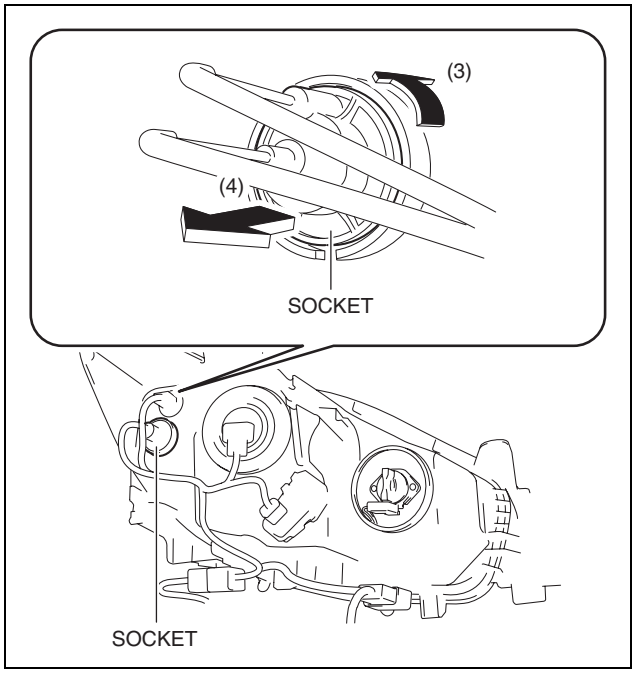
LIGHTING SYSTEMS

7. Pull out the relay and fuse block from the stud bolt and set it aside as shown in the figure.



ac5wzw0000040

8. Rotate the socket in the direction of the arrow (3) shown in the figure and remove it from the front combination light in the direction of the arrow (4) shown in the figure.

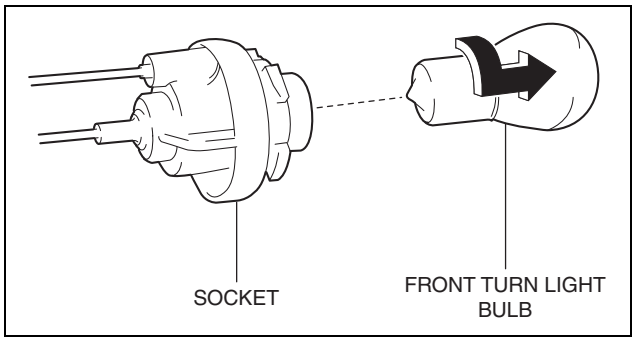


ac5wzw0000171

9. Remove the front turn light bulb.

Caution
- **A halogen bulb generates extremely high heat when it is illuminated. If the surface of the bulb is soiled, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.**

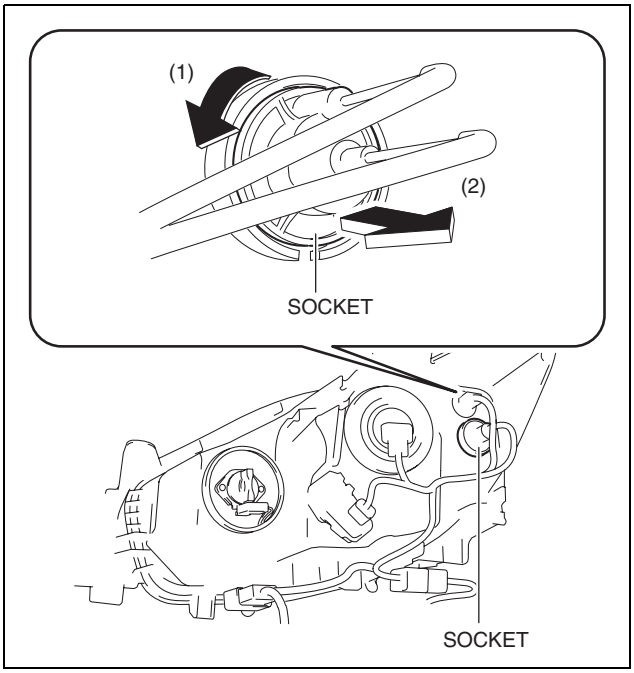
10. Install in the reverse order of removal.



ac5wzw0000302

Front turn light bulb (RH)
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the PCM bracket. (SKYACTIV-D 2.2)
3. Remove the washer tank bracket. (See 09-19-16 WASHER TANK REMOVAL/INSTALLATION.)

4. Rotate the socket in the direction of the arrow (1) shown in the figure and remove it from the front combination light in the direction of the arrow (2) shown in the figure.



ac5wzw0000211

5. Remove the front turn light bulb.

Caution

- **A halogen bulb generates extremely high heat when it is illuminated. If the surface of the bulb is soiled, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.**

6. Install in the reverse order of removal.

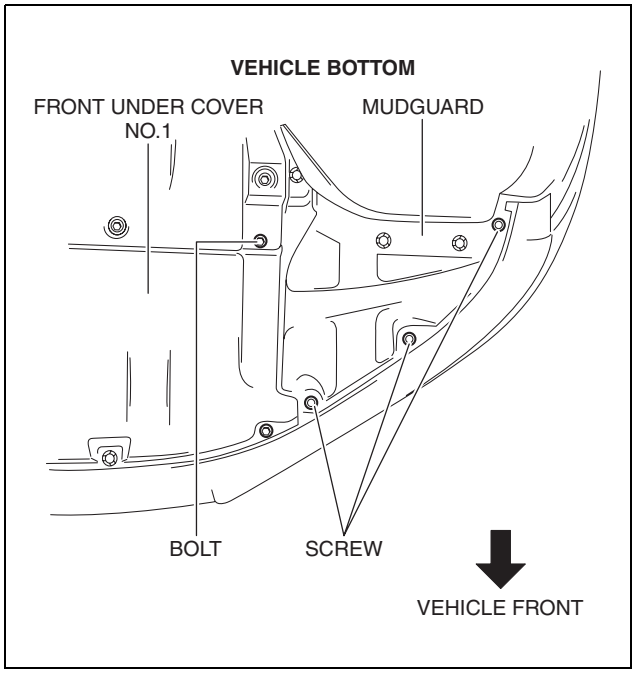
FRONT FOG LIGHT REMOVAL/INSTALLATION

id091800802100

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

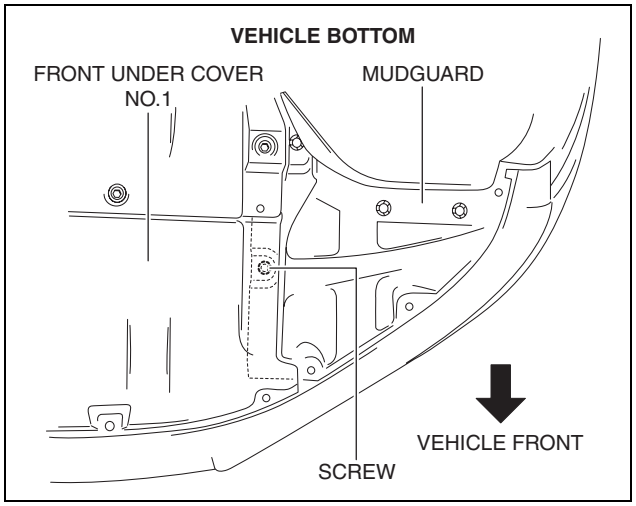
LIGHTING SYSTEMS

2. Remove the screws and bolt.



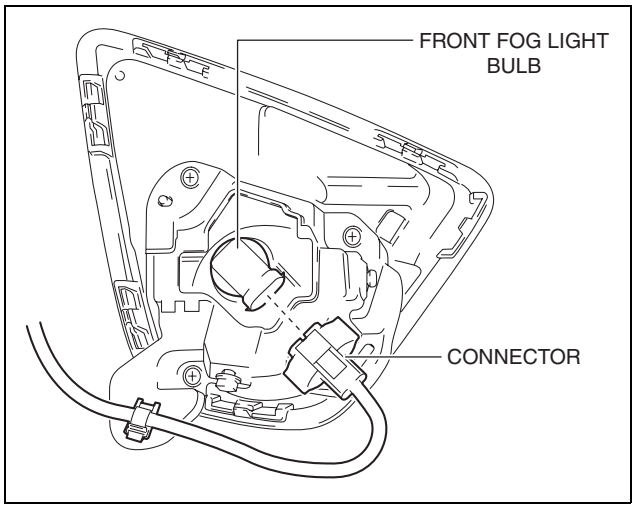
ac5wzw0000119

3. Pull up the front under cover No.1 and remove the mudguard screw shown in the figure.



ac5wzw0000119

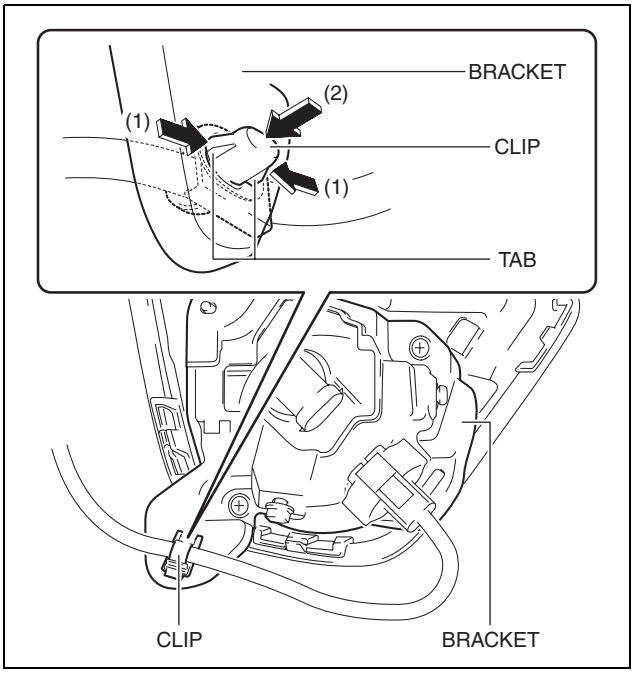
4. Disconnect the connector.



ac5wzw0000043

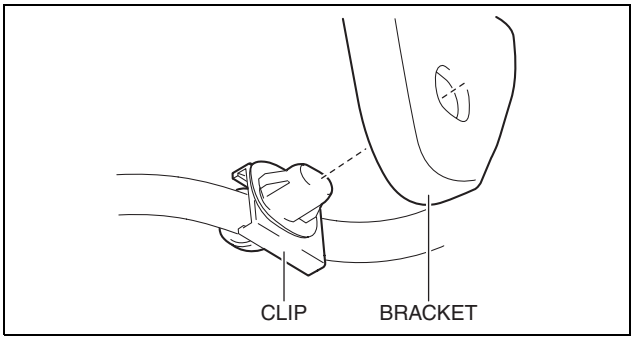
LIGHTING SYSTEMS

5. While pressing the clip tab in the direction of the arrow (1) shown in the figure, press the clip in the direction of the arrow (2) shown in the figure to detach the clip tab and bracket (vehicles without parking sensor system on LH side).



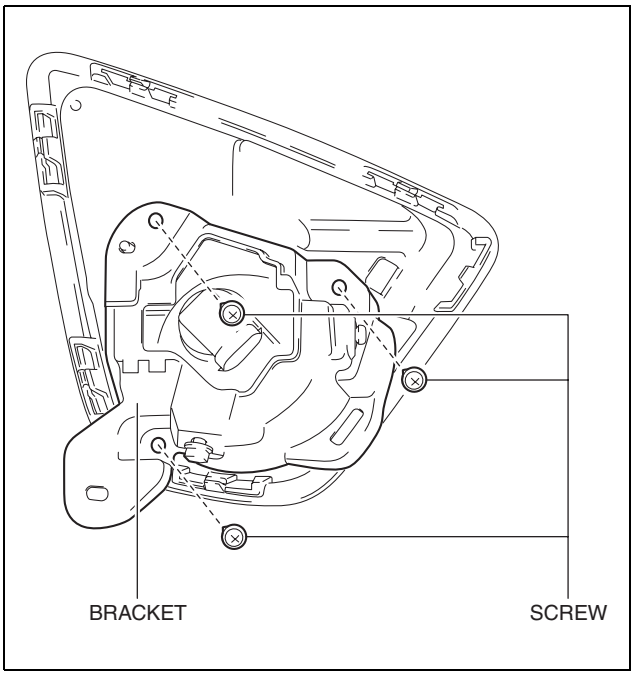
ac5wzw0000081

6. Remove the clip.



ac5wzw0000043

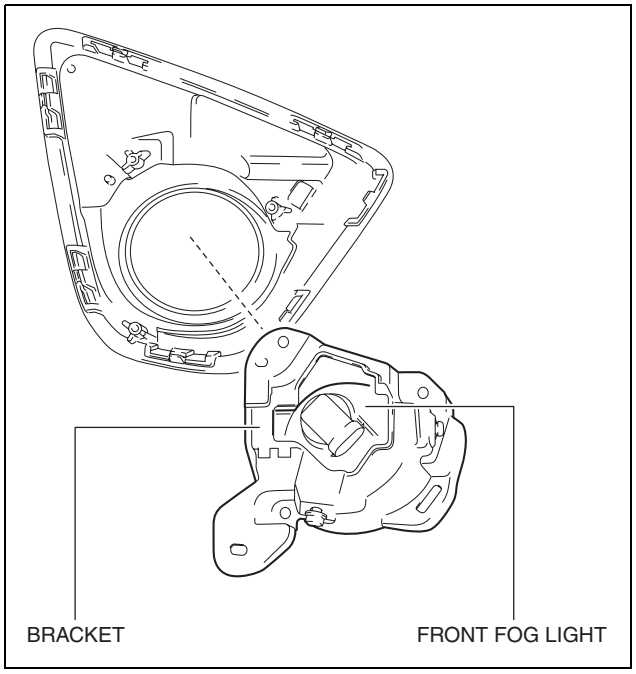
7. Remove the screws.



ac5wzw0000016

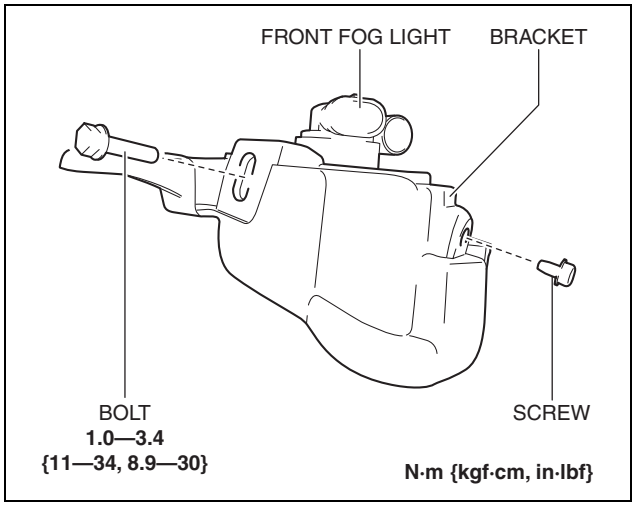
LIGHTING SYSTEMS

8. Remove the front fog light and bracket.



ac5wzw0000043

9. Remove the bolt and screw.



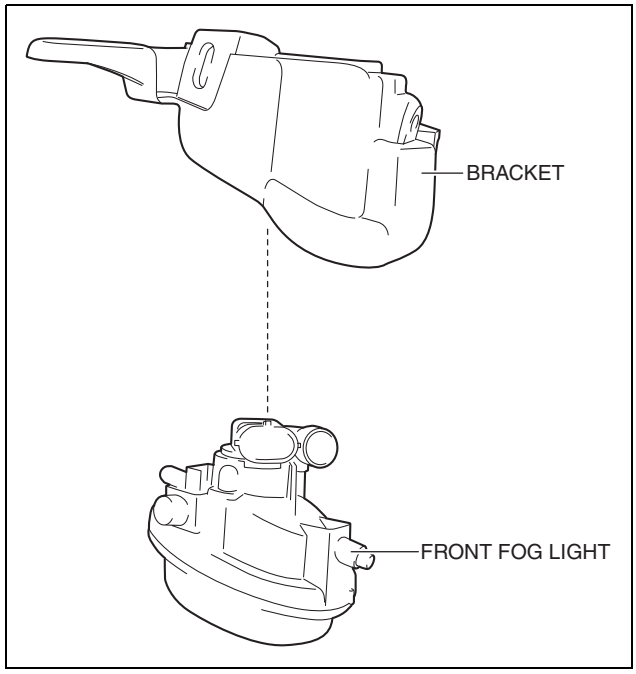
ac5wzw0000119

LIGHTING SYSTEMS

10. Remove the front fog light.

Caution
- **A halogen bulb generates extremely high heat when it is illuminated. If the surface of the bulb is soiled, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.**

11. Install in the reverse order of removal.
12. Adjust the front fog light aiming. (See 09-18-48 FRONT FOG LIGHT AIMING.)

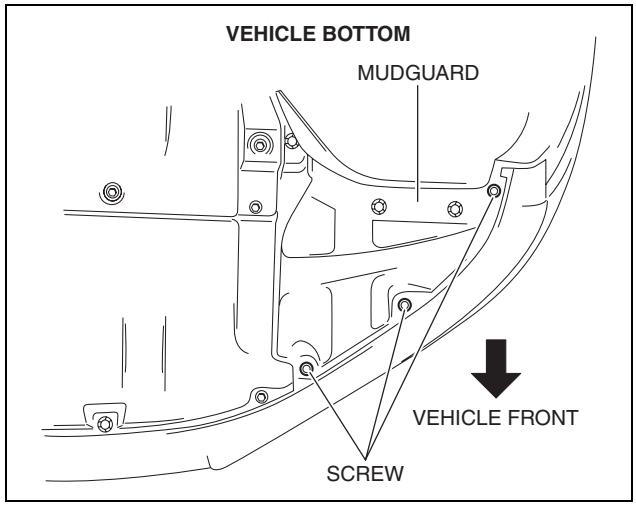


ac5wzw0000043

FRONT FOG LIGHT BULB REMOVAL/INSTALLATION

id091800802300

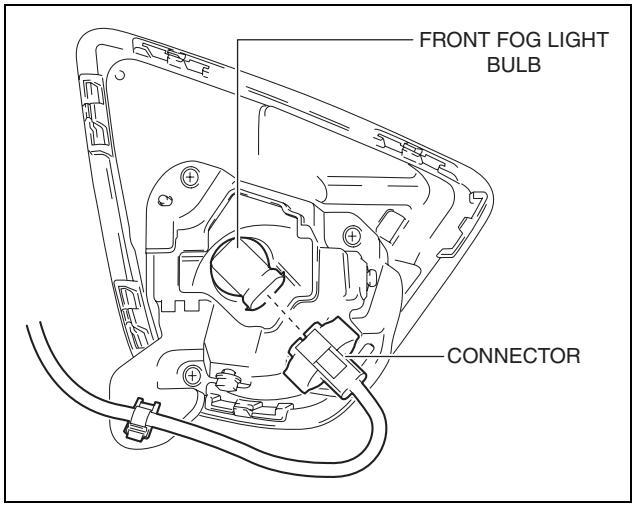
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the mudguard screws.



ac5wzw0000043

LIGHTING SYSTEMS

3. Disconnect the connector.

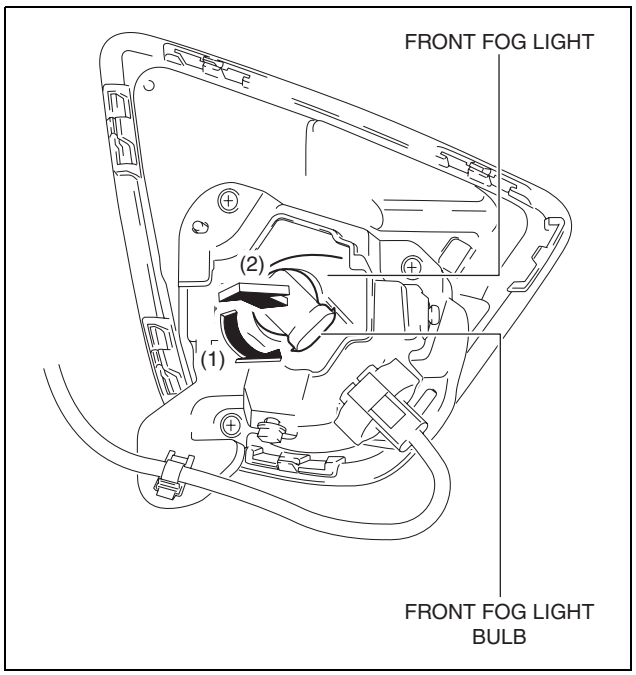


ac5wzw0000043

4. Rotate the front fog light bulb in the direction of the arrow (1) shown in the figure and remove it from the front fog light in the direction of the arrow (2) shown in the figure.

Caution
- **A halogen bulb generates extremely high heat when it is illuminated. If the surface of the bulb is soiled, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.**

5. Install in the reverse order of removal.



ac5wzw0000016

FRONT FOG LIGHT AIMING

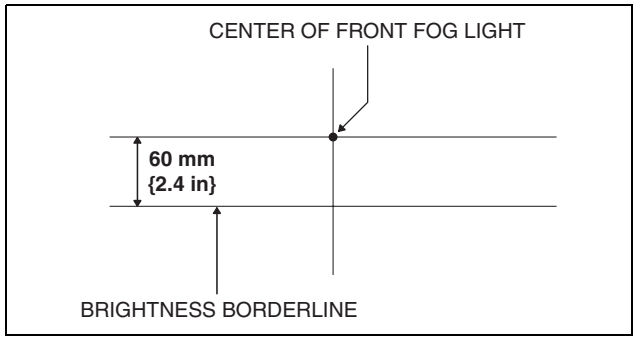
id091800802200

Note
- Perform front fog light aiming if any of the following work is performed.
  - — Front fog light replacement
  - — Work that can affect vehicle height such as suspension replacement or removal/installation.

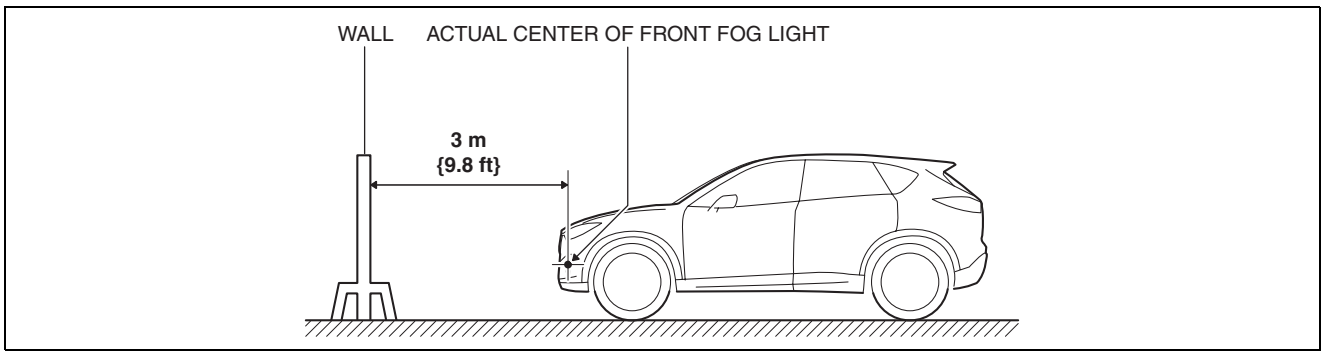
1. Empty the vehicle by having all occupants leave the vehicle and remove all the cargo except for the spare tire, jack and tools equipped on the vehicle.
2. Adjust the air pressure of each tire to the specified value. (See 02-12-1 WHEEL AND TIRE SPECIFICATION.)
3. Move the vehicle to level ground.

LIGHTING SYSTEMS

4. Make a screen shown in the figure using double-weight, white paper. (Common for right and left)
5. Line up the vehicle with the wall so that the distance to the front fog lights is **3 m {9.8 ft}** from the wall.



ac5wzw0000083

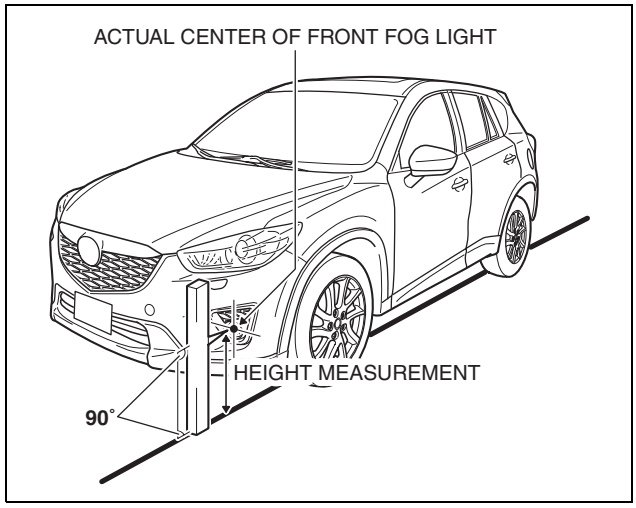


ac5wzw0000083

6. Measure the height at the center point of the front fog light.

Note

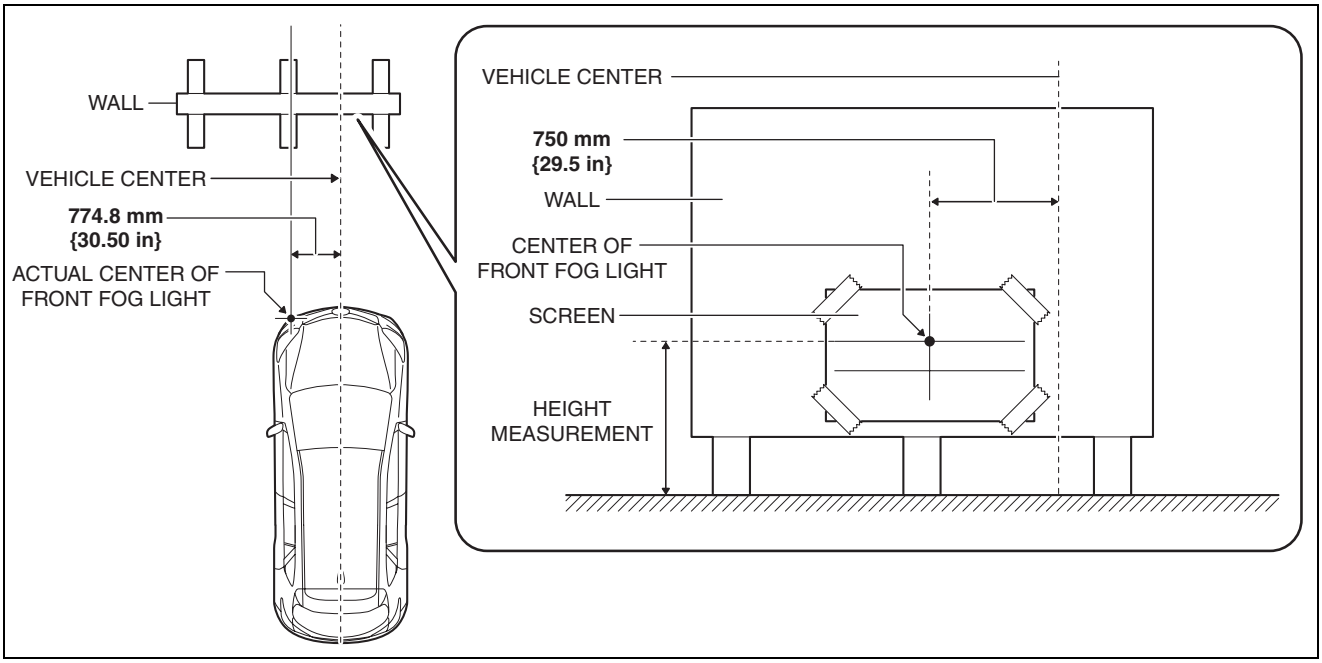
- Measure the height at the center point of the front fog light in which the aiming is being adjusted because the vehicle height differs depending on vehicle conditions.



ac5wzw0000303

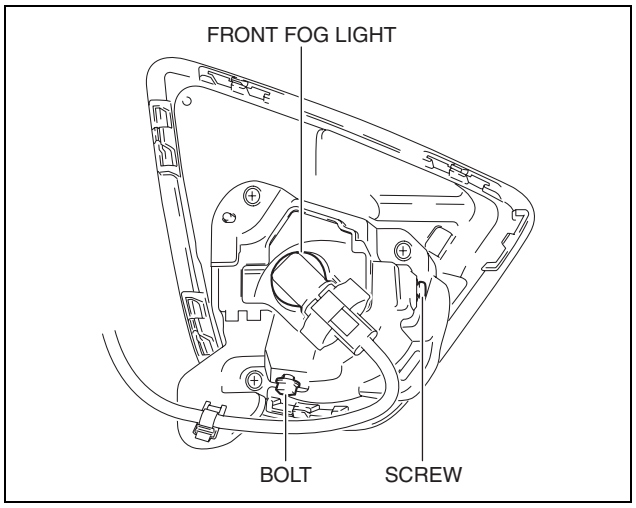
LIGHTING SYSTEMS

7. Align the center point of the front fog light with the center of the screen.



ac5wzw0000084

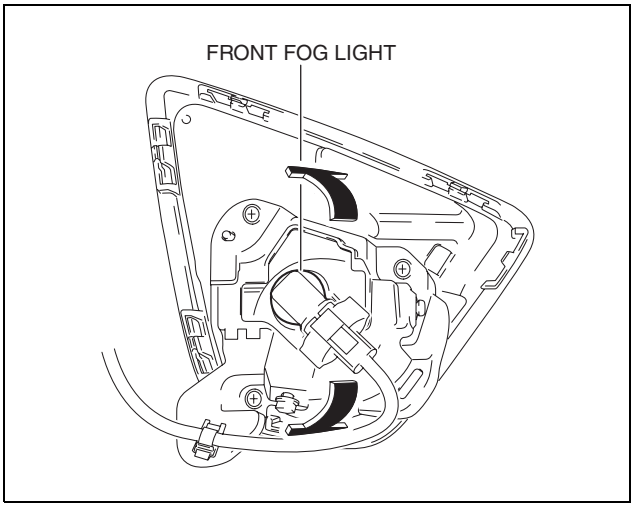
8. Set a partition in front of the front fog light which is not being adjusted to block the light.
9. Start the engine and charge the battery.
10. Turn on the front fog lights.
11. Verify that the brightness border line of the front fog light is at the position indicated on the adjustment screen.
    - If the brightness border line is not at the position indicated on the adjustment screen, perform the following adjustment.
    (1) Loosen the bolt and screw of the front fog light. (See 09-18-43 FRONT FOG LIGHT REMOVAL/INSTALLATION.)



ac5wzw0000084

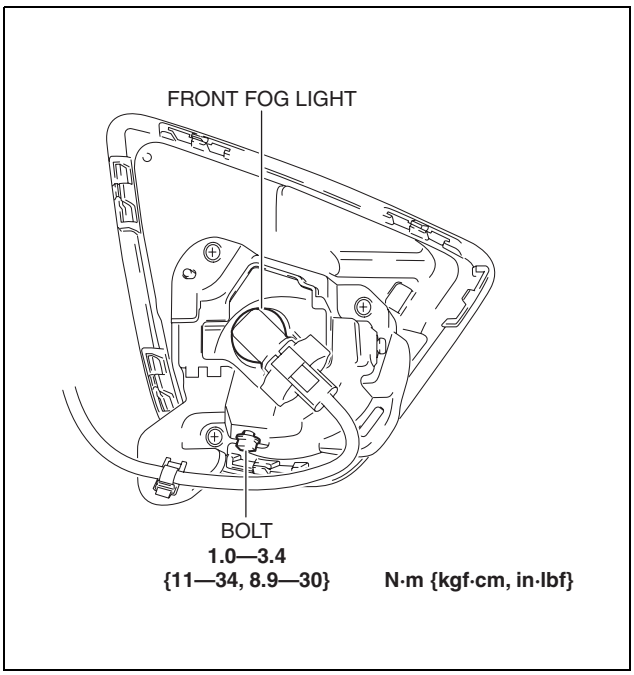
LIGHTING SYSTEMS

(2) Move the front fog light in the direction of the arrow shown in the figure to adjust the brightness border line to the position indicated on the adjustment screen.



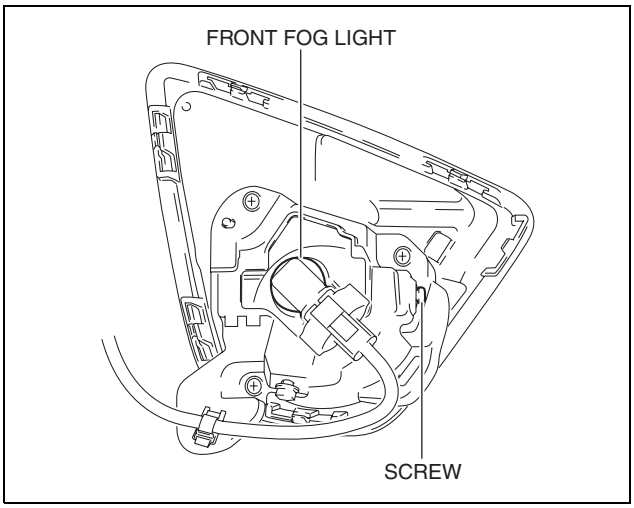
ac5wzw0000084

(3) Tighten the bolt.



ac5wzw0000084

(4) Tighten the screw.



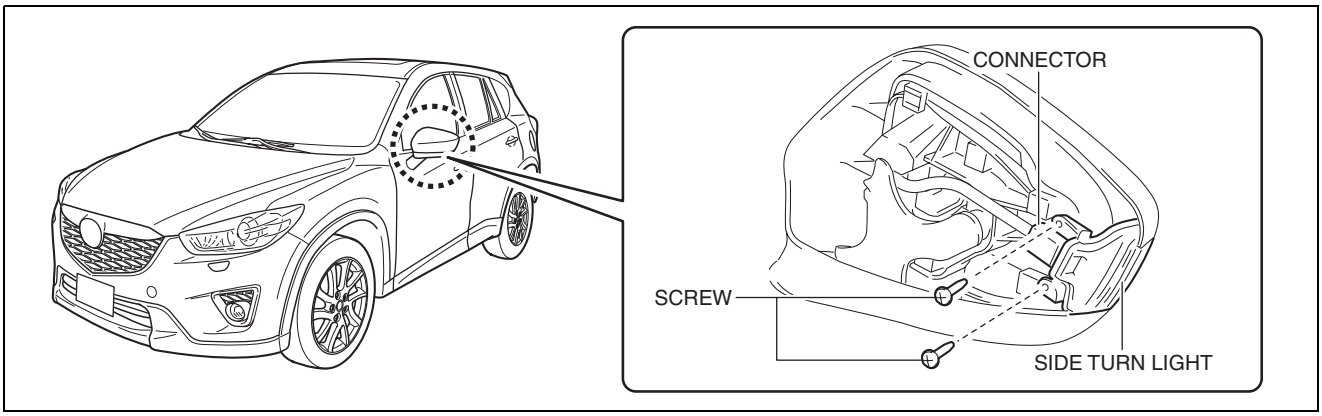
ac5wzw0000084

LIGHTING SYSTEMS

SIDE TURN LIGHT REMOVAL/INSTALLATION

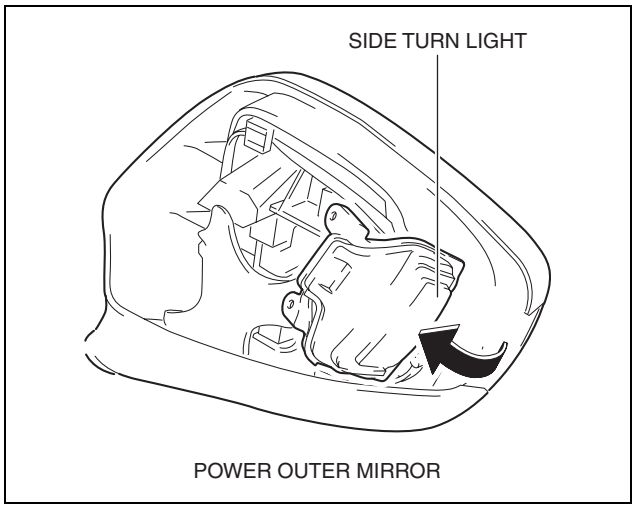
id091800811500

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Outer mirror glass (See 09-12-73 OUTER MIRROR GLASS REMOVAL.)
   (2) Outer mirror garnish (upper side) (See 09-12-84 OUTER MIRROR GARNISH REMOVAL/INSTALLATION.)
3. Remove the screws.



ac5wzw0000303

4. Disconnect the connector.
5. Remove the side turn light.
6. Install in the reverse order of removal.



ac5wzw0000303

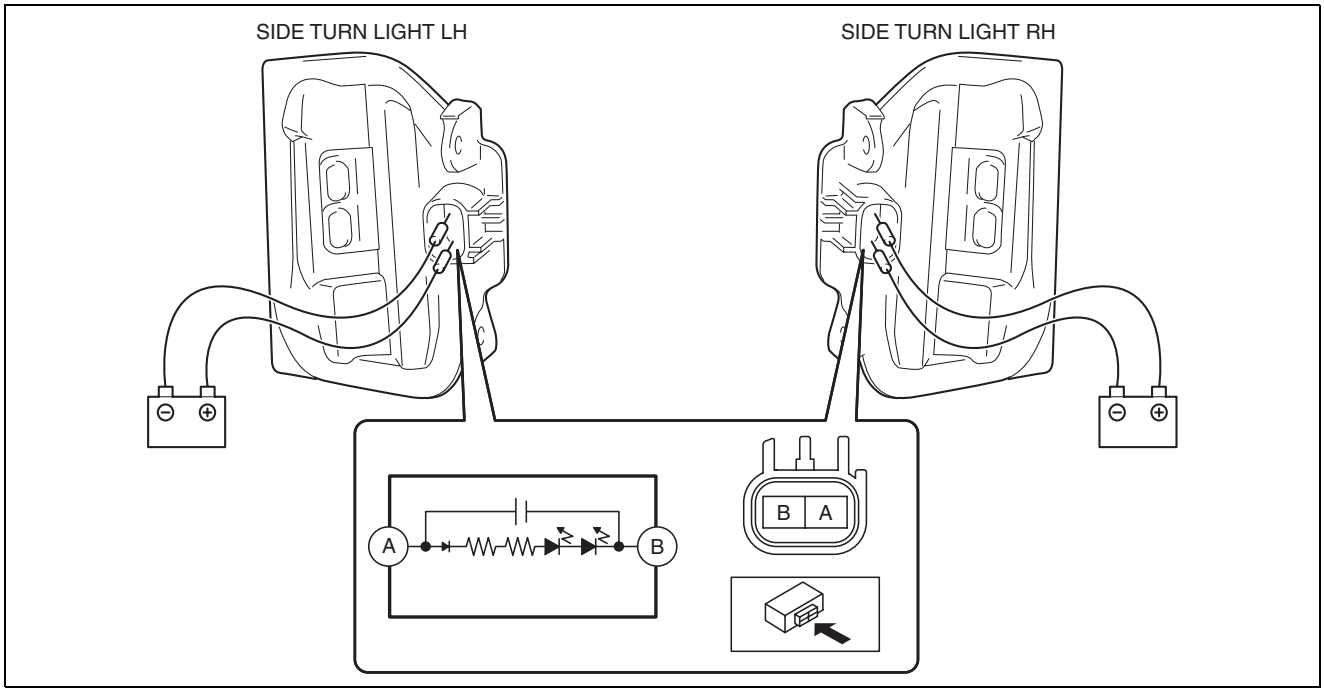
SIDE TURN LIGHT INSPECTION

id091800811600

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Outer mirror glass (See 09-12-73 OUTER MIRROR GLASS REMOVAL.)
   (2) Outer mirror garnish (upper side) (See 09-12-84 OUTER MIRROR GARNISH REMOVAL/INSTALLATION.)
   (3) Side turn light (See 09-18-52 SIDE TURN LIGHT REMOVAL/INSTALLATION.)

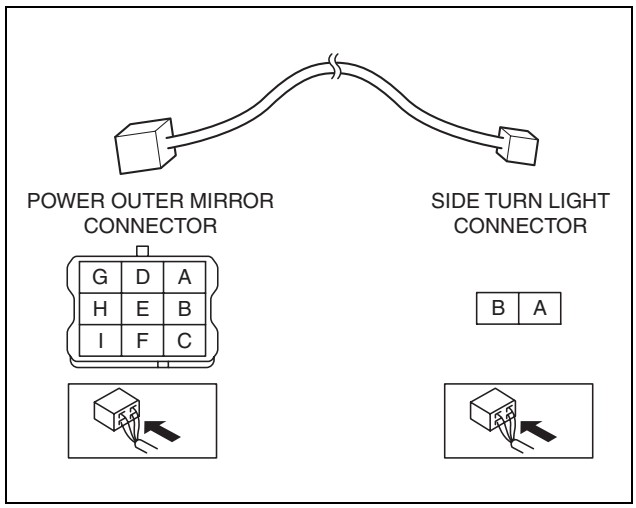
LIGHTING SYSTEMS

3. Apply battery voltage to side turn light terminal A, and connect terminal B to ground.



ac5uuw00002725

4. Verify that the LED illuminates.
   - If the LED illuminates, go to the next step.
   - If the LED does not illuminate, replace the side turn light. (See 09-18-52 SIDE TURN LIGHT REMOVAL/INSTALLATION.)
5. Remove the following parts:
   (1) Inner garnish (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)
   (2) Front door trim (See 09-17-65 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
   (3) Power outer mirror connector (See 09-12-67 POWER OUTER MIRROR REMOVAL/INSTALLATION.)
6. Verify that the continuity between the side turn light terminals from the power outer mirror is as indicated in the table.



ac5wzw0000010

LIGHTING SYSTEMS

- If not as indicated in the table, replace the power outer mirror. (See 09-12-67 POWER OUTER MIRROR REMOVAL/ INSTALLATION.)

○——○ : Continuity

Test condition	Power outer mirror terminal		Side turn light terminal	
	E	G	A	B
Under any condition	○		○	
		○		○

ac5wzw0000047

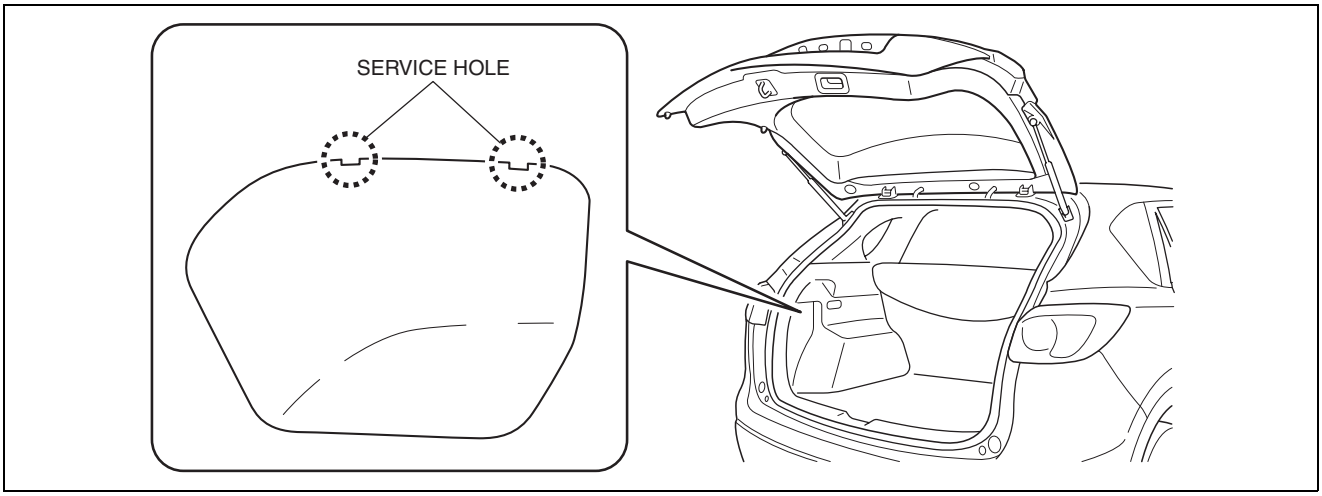
REAR COMBINATION LIGHT REMOVAL/INSTALLATION

id091800801000

Note

- Fogging or condensation on the inside of the rear combination lights may occur due to a natural phenomenon occurring as a result of a temperature difference between the interior and exterior of the combination lights. However, it has no effect on the light performance because the temperature inside the rear combination lights rises after illuminating the brake/taillight bulbs or a period of time has elapsed.

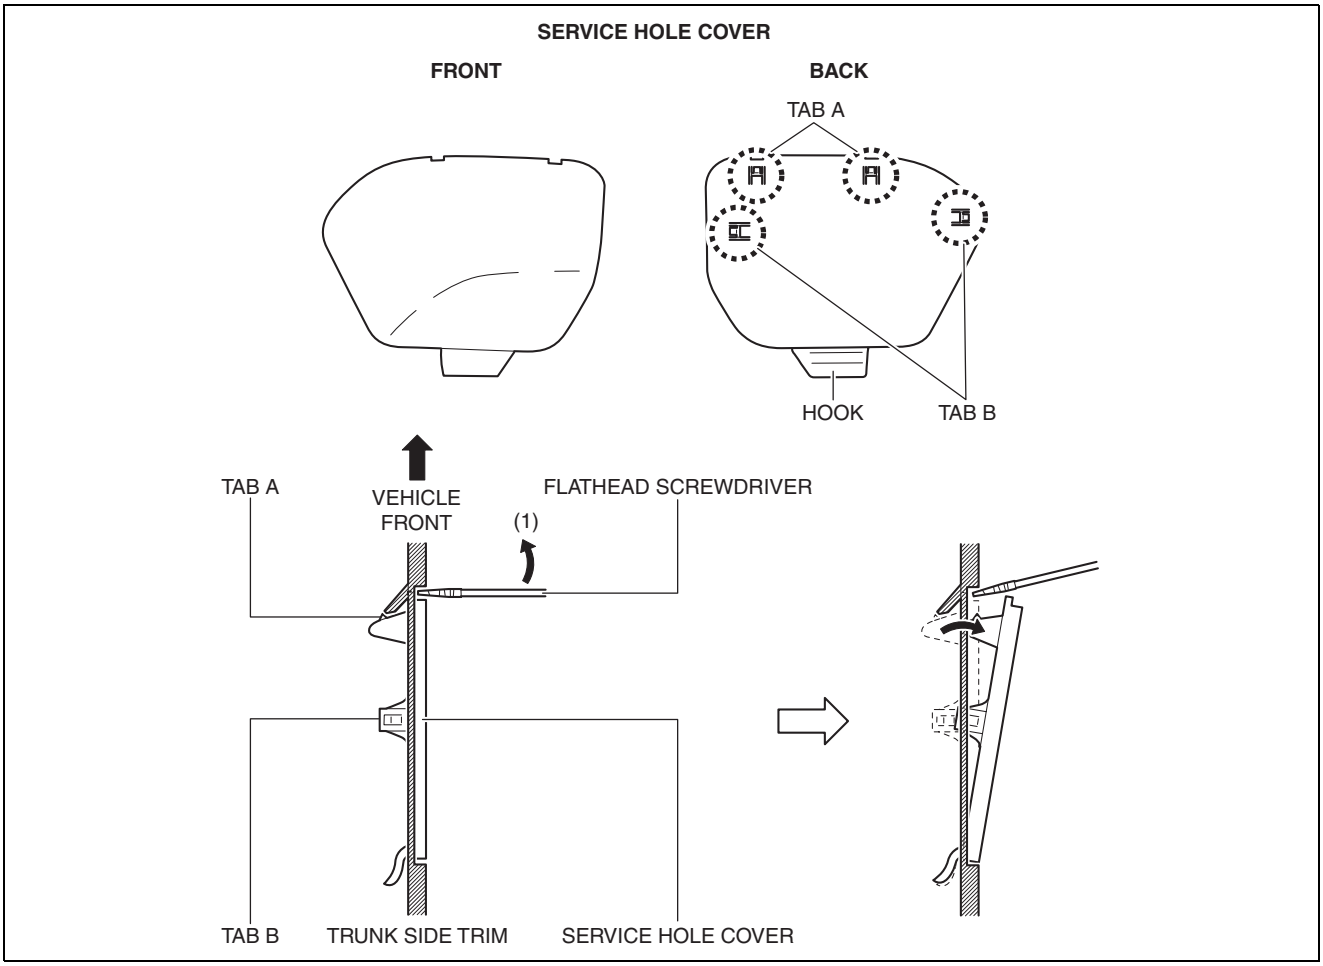
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.



ac5wzw0000041

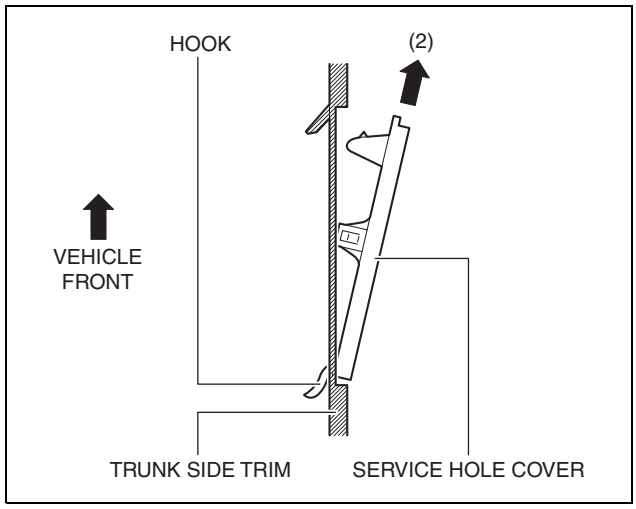
LIGHTING SYSTEMS

3. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, pull out the service hole cover, and detach the service hole cover tab and trunk side trim.



ac5wzw0000301

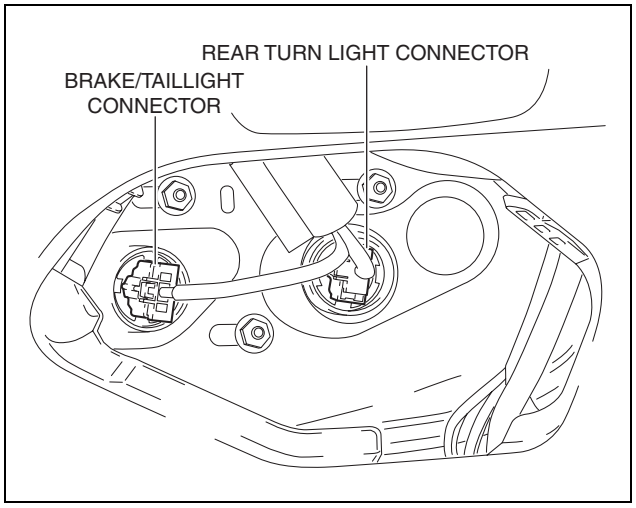
4. Pull out the service hole cover in the direction of the arrow (2) shown in the figure and pull out the service hole cover hook from the trunk side trim.
5. Remove the service hole cover.



ac5wzw0000302

LIGHTING SYSTEMS

6. Disconnect the connectors.

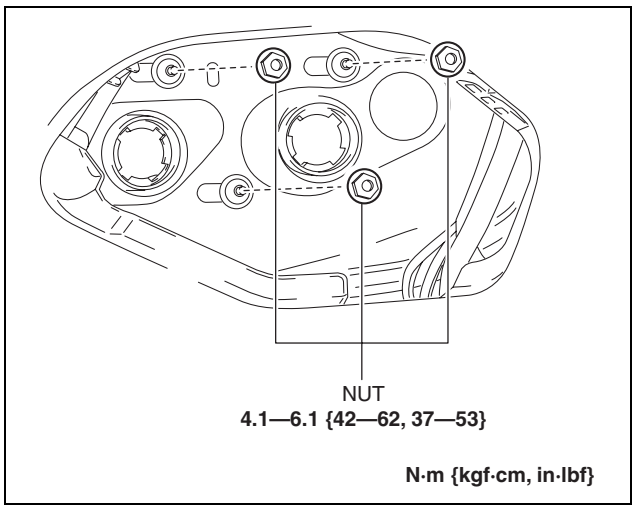


ac5wzw0000334

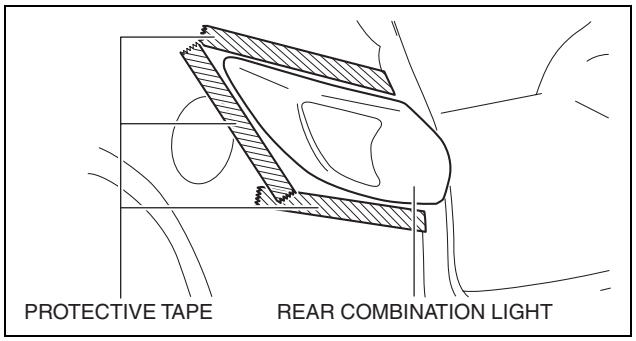
7. Remove the nuts.
8. To prevent scratches or damage, affix protective tape to the position shown in the figure.

Caution

- **When the rear combination light is removed from the body, perform the procedure after affixing protective tape to the body. Otherwise, the body could interfere with the rear combination light and cause scratching or damage to the body.**



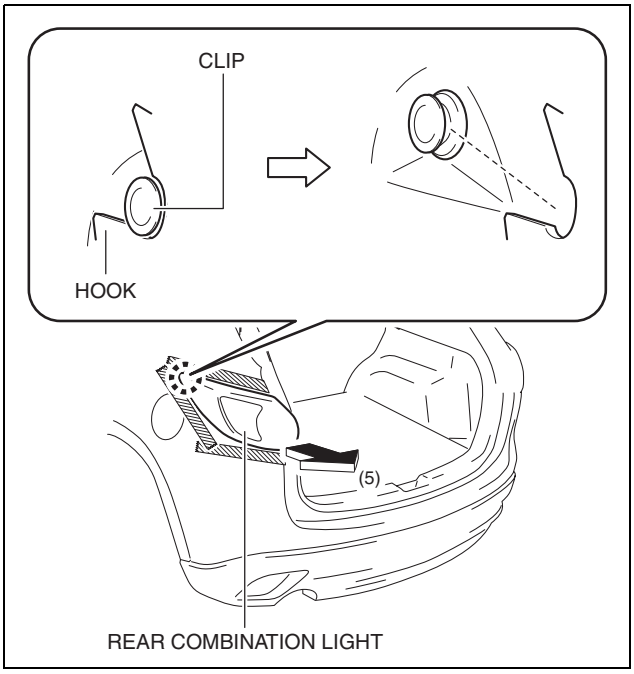
ac5wzw0000000



ac5wzw0000001

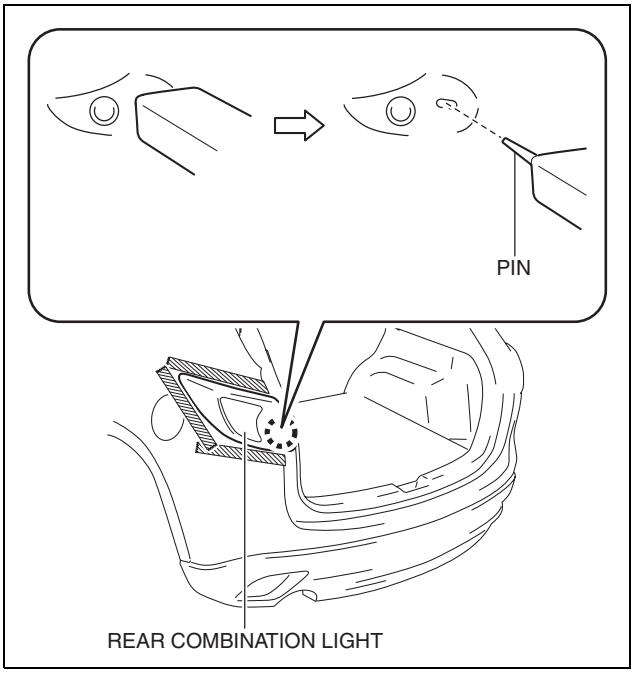
LIGHTING SYSTEMS

9. Pull the rear combination light in the direction of the arrow (5) shown in the figure and remove the rear combination light hook from the clip.



ac5wzw0000001

10. Pull out the rear combination light pin.
11. Remove the rear combination light.
12. Install in the reverse order of removal.



ac5wzw0000041

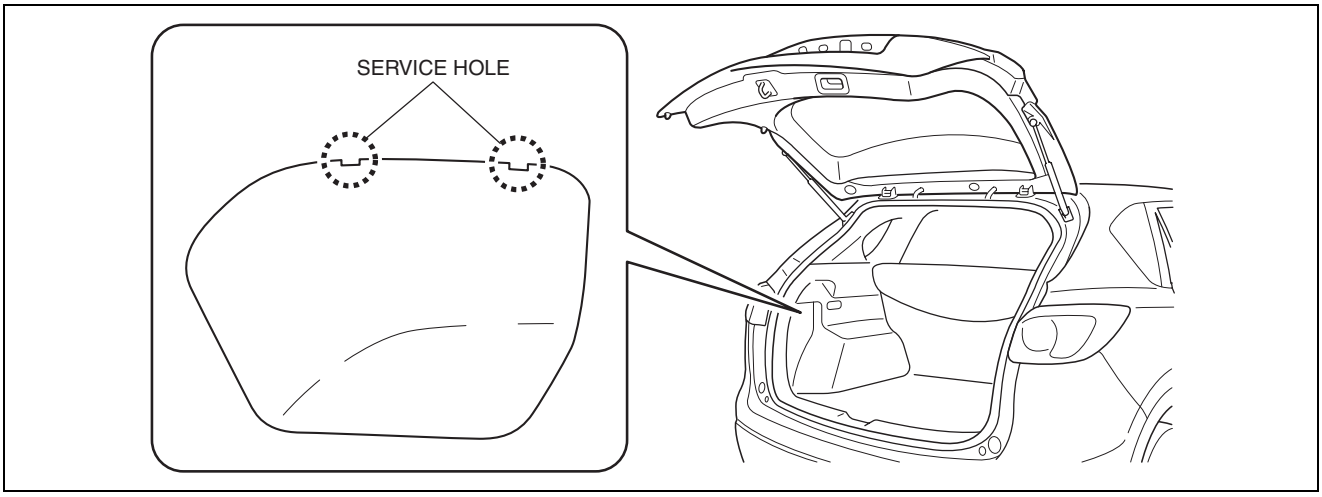
REAR TURN LIGHT BULB REMOVAL/INSTALLATION

id091800813800

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

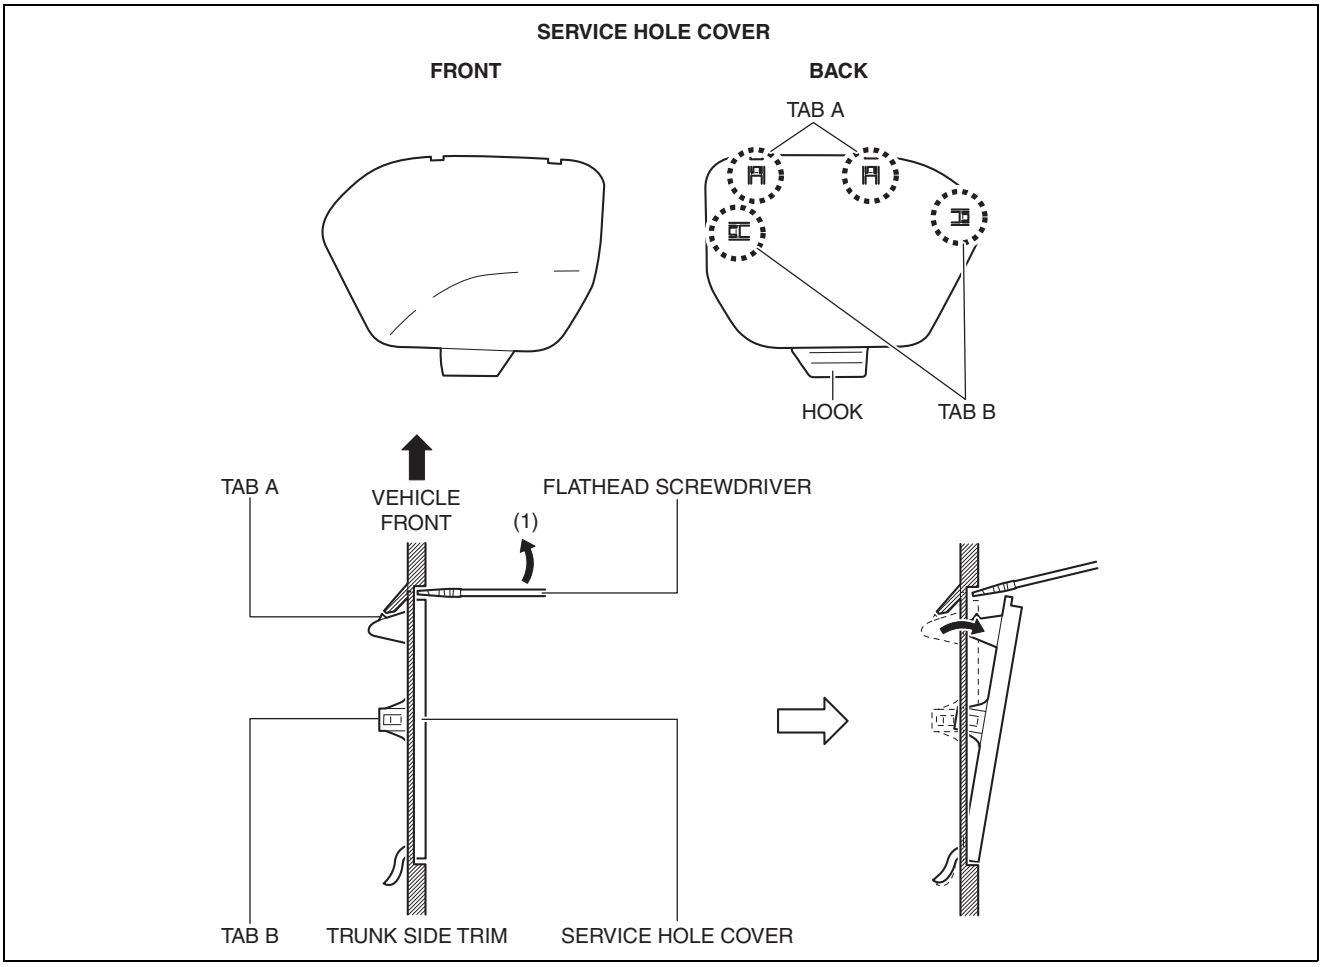
LIGHTING SYSTEMS

2. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.



ac5wzw0000049

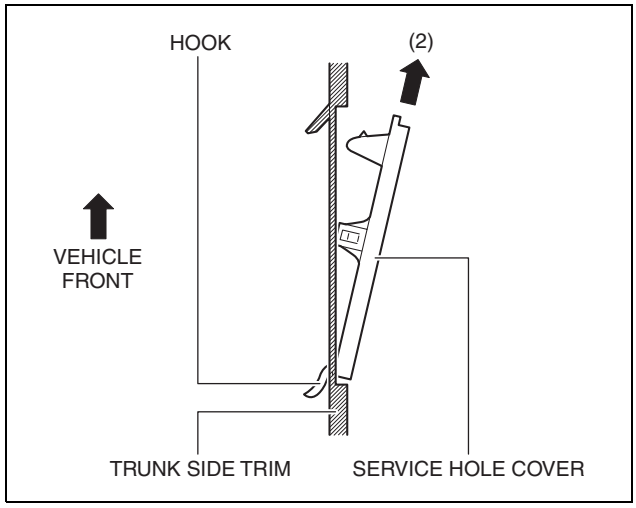
3. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, pull out the service hole cover, and detach the service hole cover tab and trunk side trim.



ac5wzw0000301

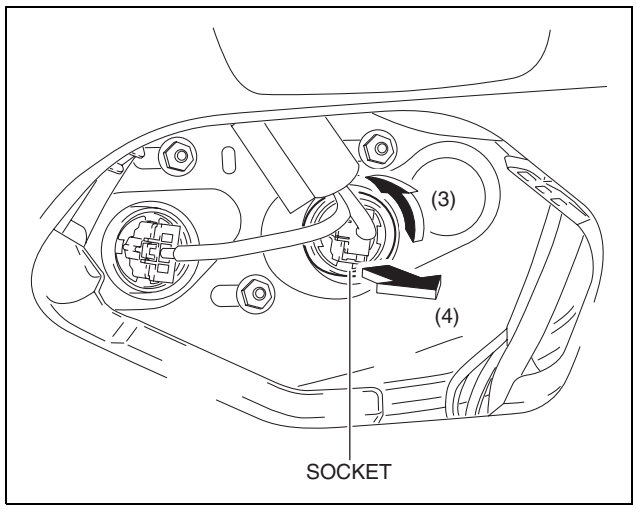
LIGHTING SYSTEMS

4. Pull out the service hole cover in the direction of the arrow (2) shown in the figure and pull out the service hole cover hook from the trunk side trim.
5. Remove the service hole cover.



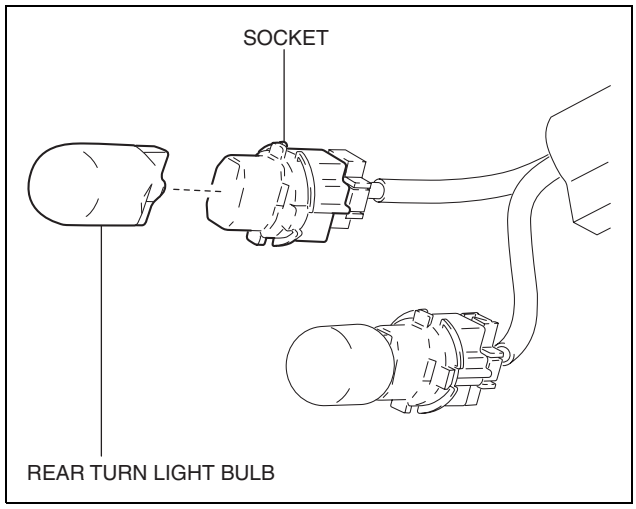
ac5wzw0000301

6. Rotate the socket in the direction of the arrow (3) shown in the figure and remove it from the rear combination light in the direction of the arrow (4) shown in the figure.



ac5wzw0000006

7. Remove the rear turn light bulb.
8. Install in the reverse order of removal.



ac5wzw0000006

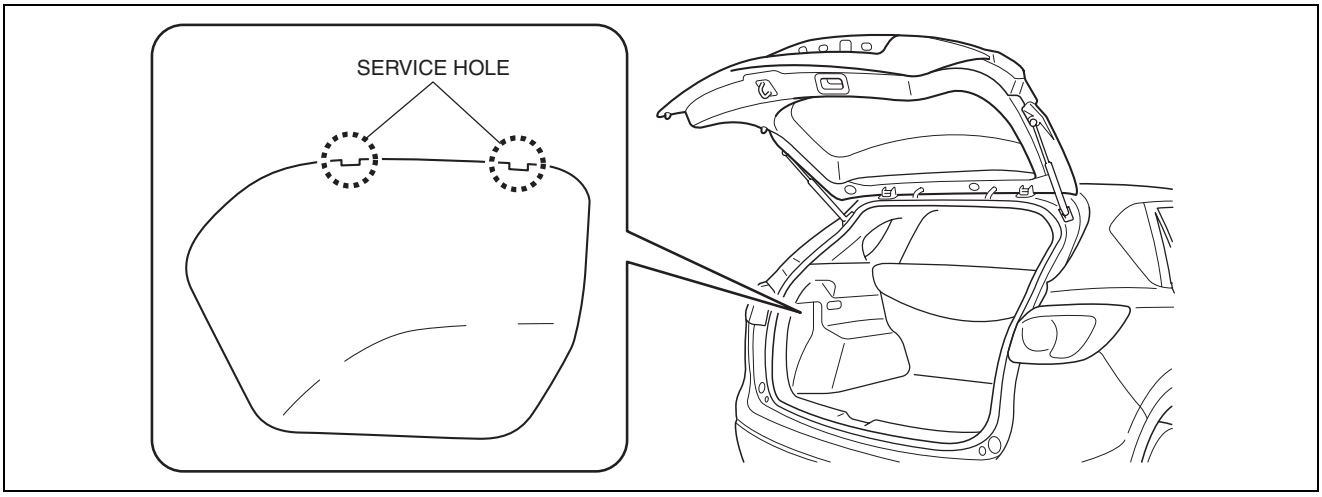
BRAKE/TAILLIGHT BULB REMOVAL/INSTALLATION

id091800813900

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

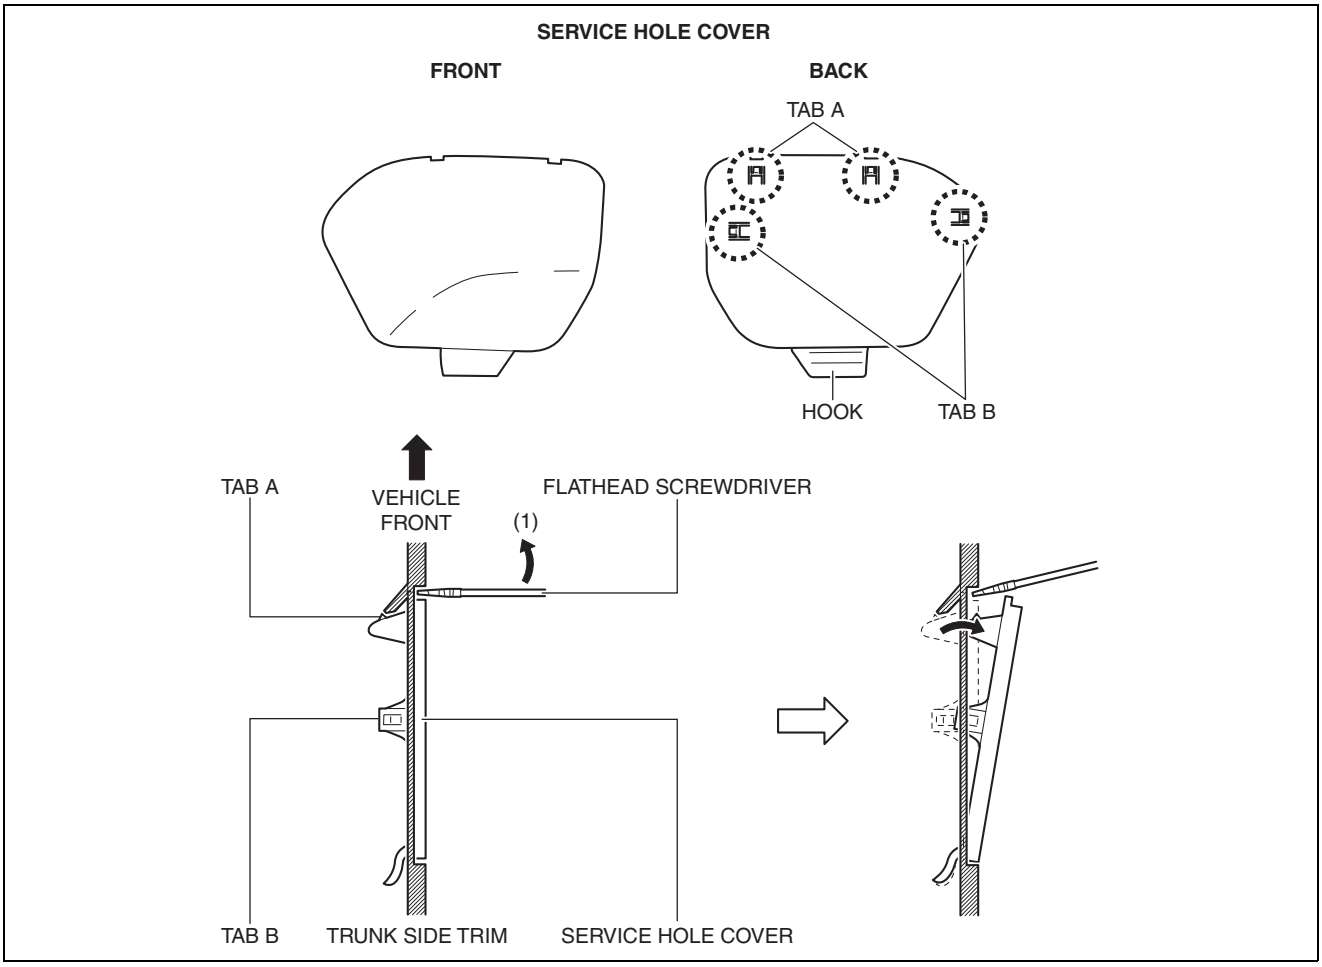
LIGHTING SYSTEMS

2. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.



ac5wzw0000049

3. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, pull out the service hole cover, and detach the service hole cover tab and trunk side trim.



ac5wzw0000301

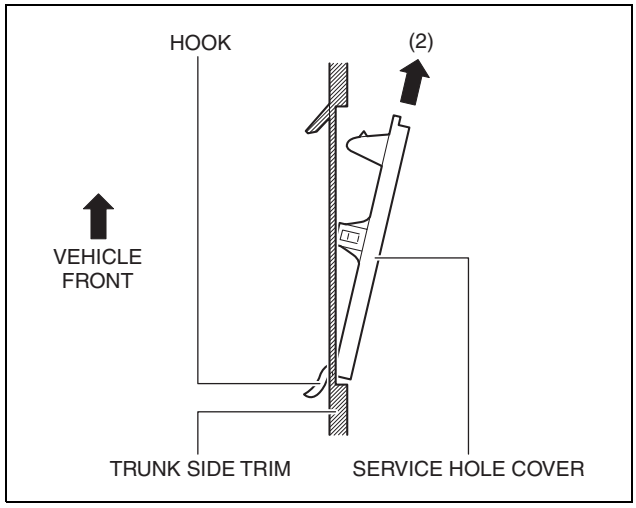
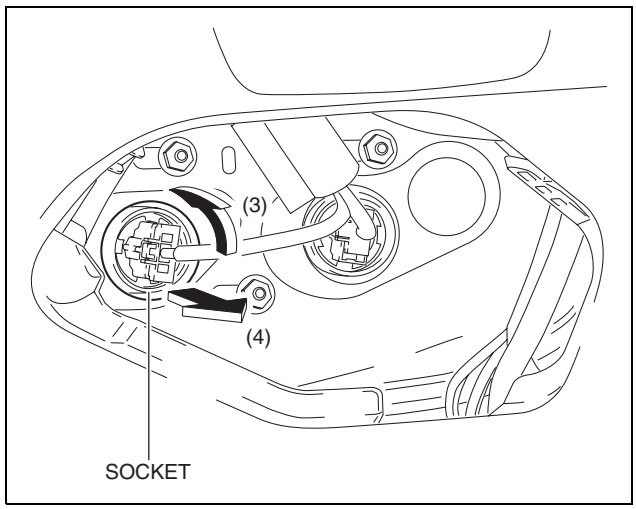
4. Pull out the service hole cover in the direction of the arrow (2) shown in the figure and pull out the service hole cover hook from the trunk side trim.
5. Remove the service hole cover.



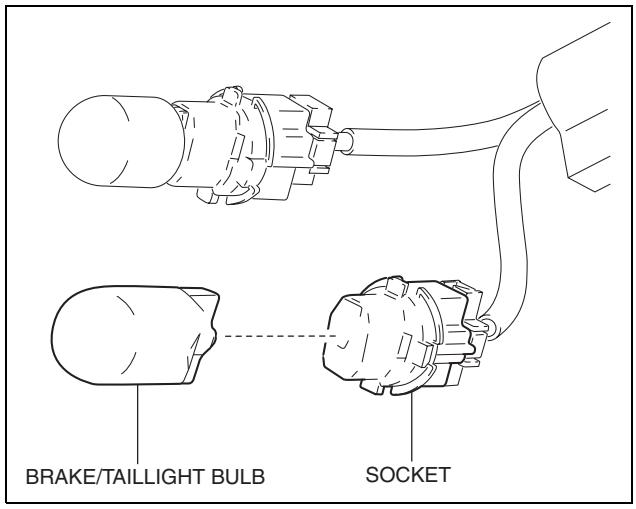
ac5wzw0000301

6. Rotate the socket in the direction of the arrow (3) shown in the figure and remove it from the rear combination light in the direction of the arrow (4) shown in the figure.



ac5wzw0000006

7. Remove the brake/taillight bulb.
8. Install in the reverse order of removal.



ac5wzw0000006

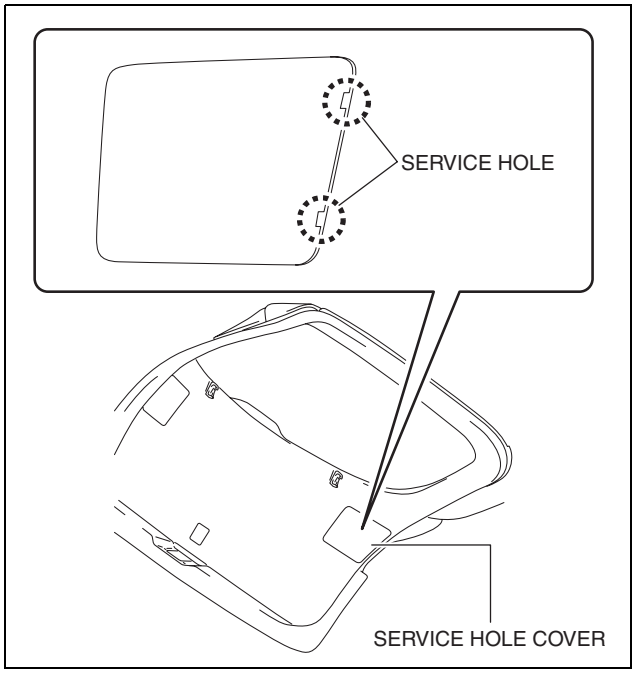
BACK-UP LIGHT BULB REMOVAL/INSTALLATION

id091800810000

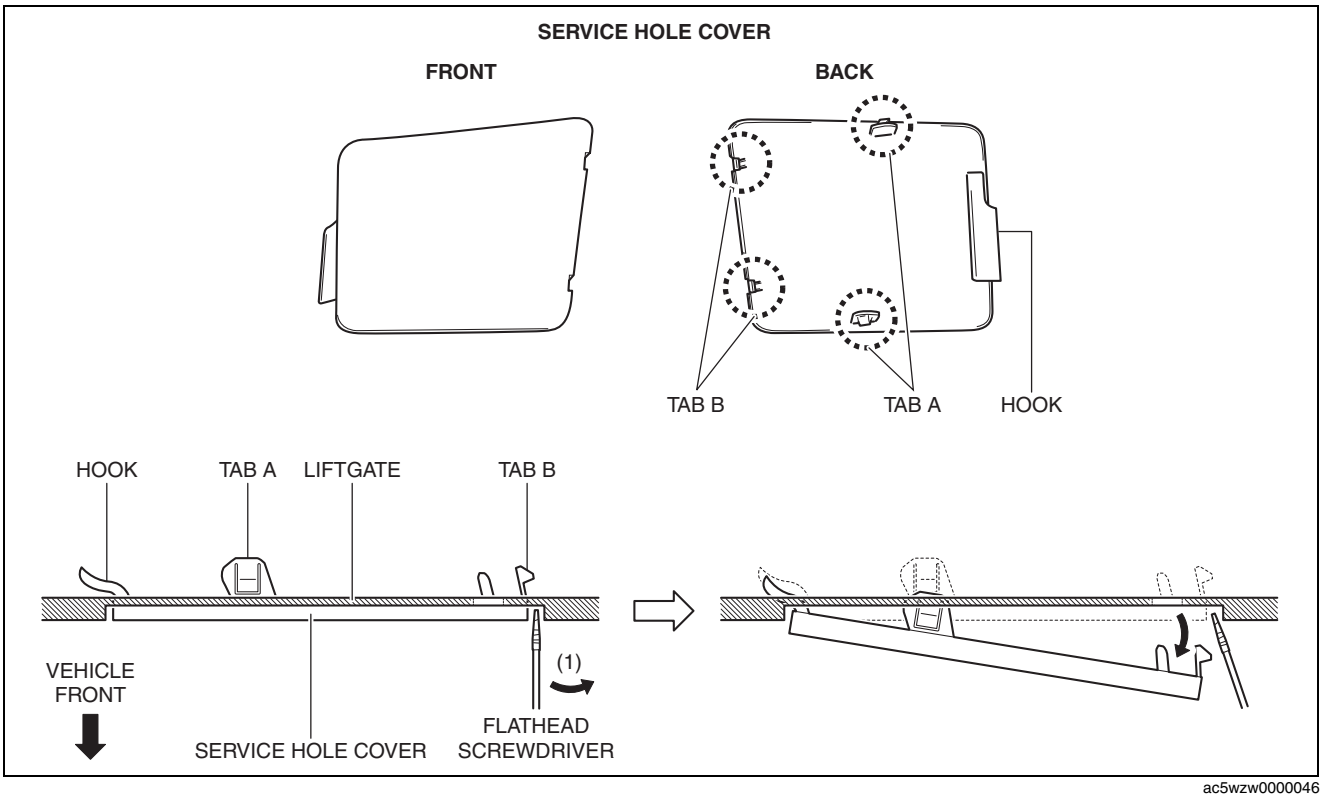
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

LIGHTING SYSTEMS

2. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.
3. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, pull out the service hole cover from the liftgate, and detach the service hole cover tabs and liftgate connections.



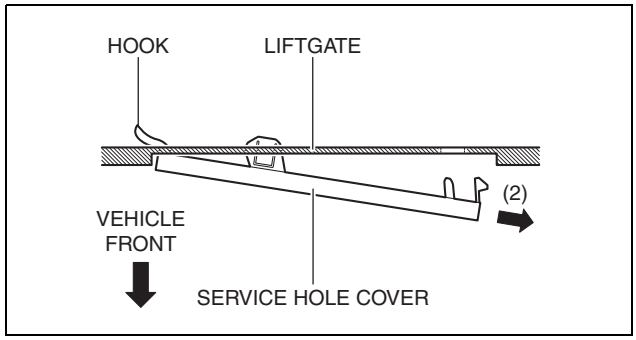
ac5wzw0000046



ac5wzw0000046

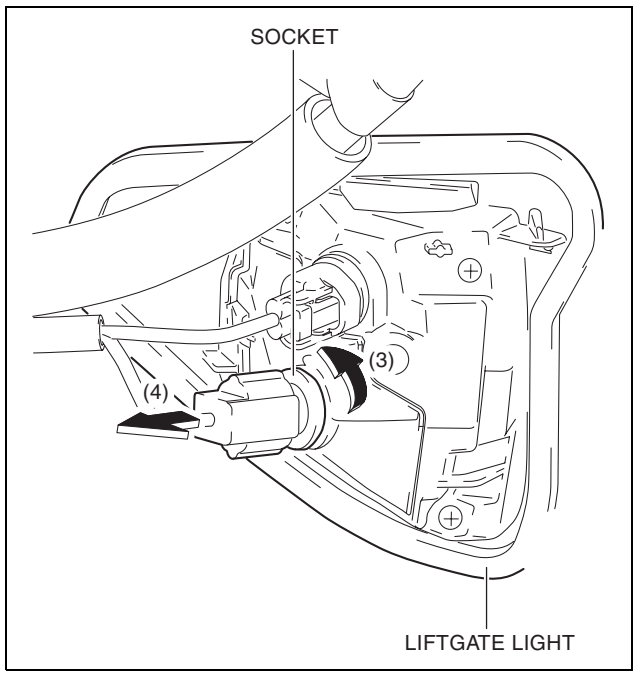
LIGHTING SYSTEMS

4. Pull out the service hole cover in the direction of the arrow (2) shown in the figure and pull out the service hole cover hook from the liftgate.
5. Remove the service hole cover.



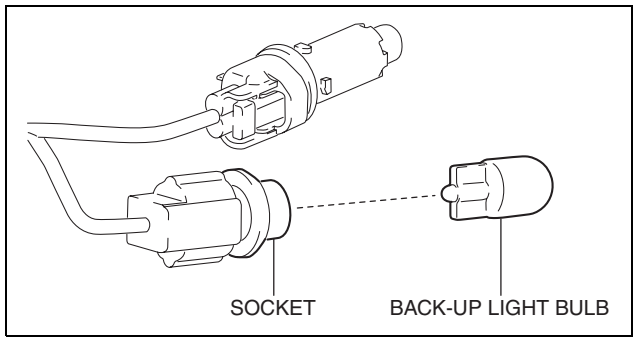
ac5wzw0000047

6. Rotate the socket in the direction of the arrow (3) shown in the figure and remove it from the liftgate light in the direction of the arrow (4) shown in the figure.



ac5wzw0000004

7. Remove the back-up light bulb.
8. Install in the reverse order of removal.



ac5wzw0000004

LIFTGATE LIGHT REMOVAL/INSTALLATION

id091800812600

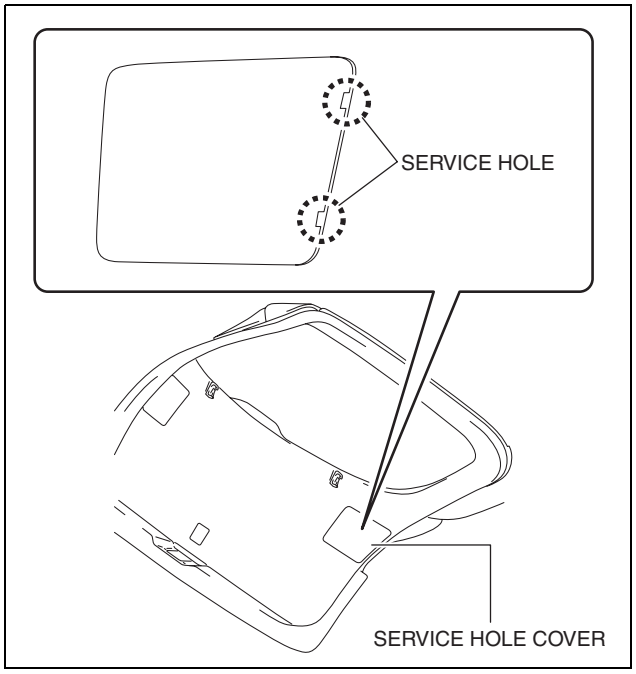
Note

- Fogging or condensation on the inside of the liftgate light may occur, however, it is a natural phenomenon occurring as a result of a temperature difference between the interior and exterior of the liftgate lights and has no effect on the light performance. Fogging or condensation will dissipate when the temperature inside the liftgate lights rises after illuminating the back-up lights and a period of time has elapsed.

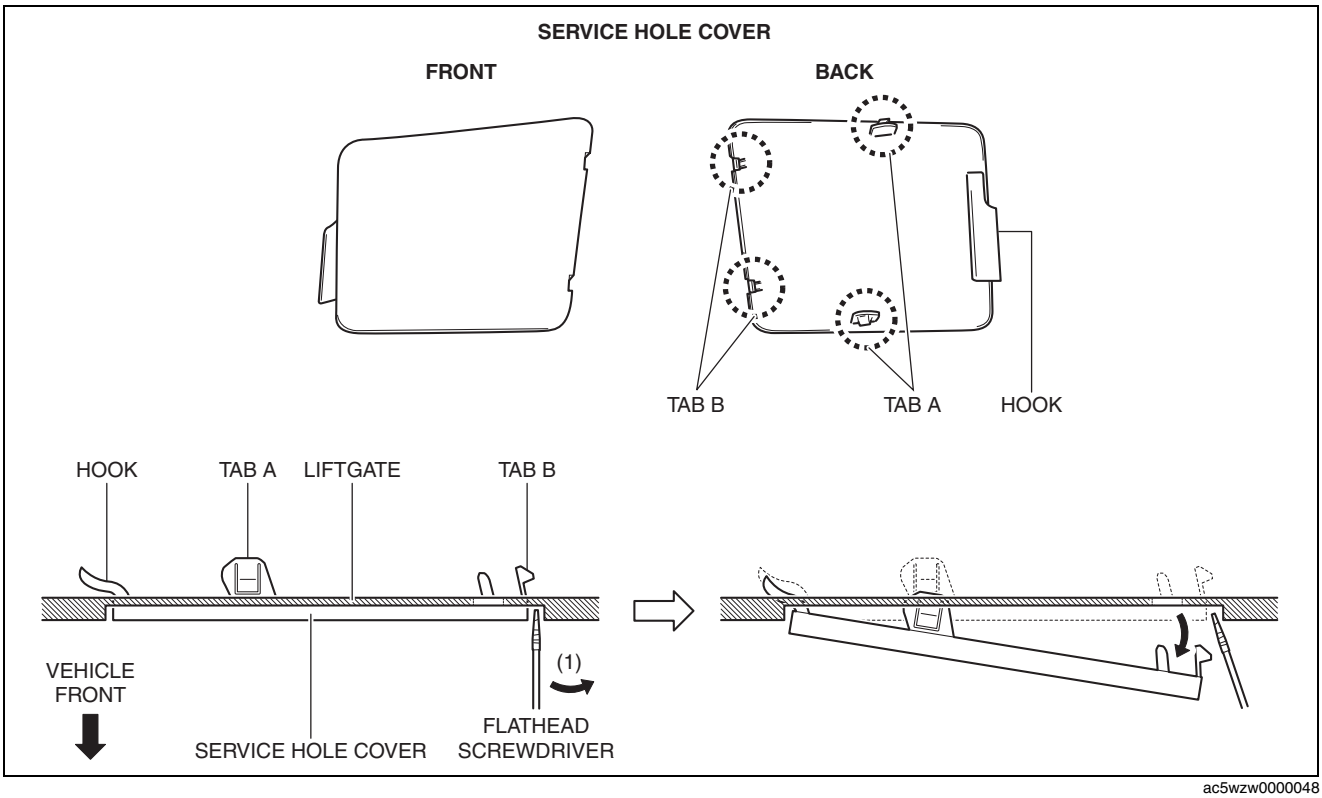
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

LIGHTING SYSTEMS

2. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.
3. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, pull out the service hole cover from the liftgate, and detach the service hole cover tab and liftgate.



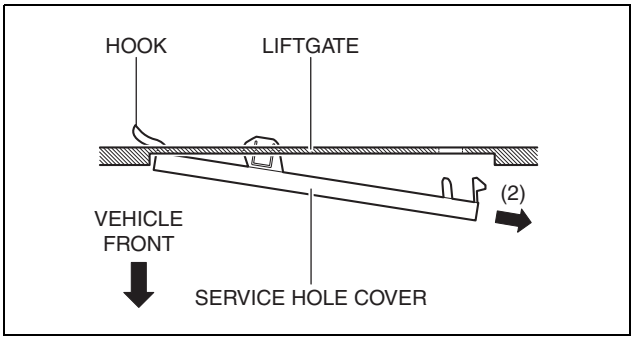
ac5wzw0000048



ac5wzw0000048

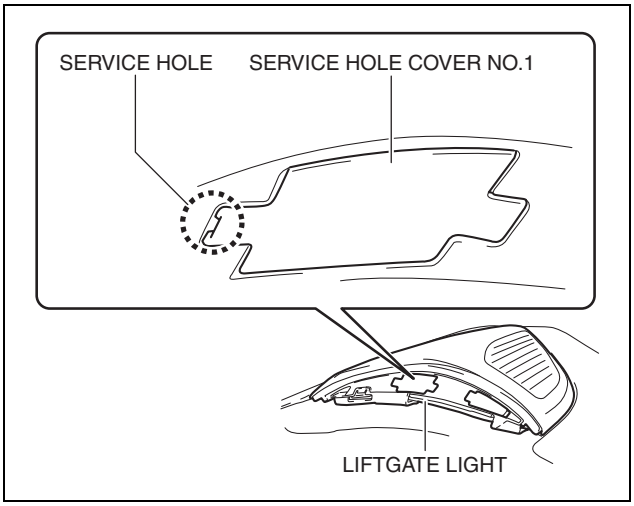
LIGHTING SYSTEMS

4. Pull out the service hole cover in the direction of the arrow (2) shown in the figure and pull out the service hole cover hook from the liftgate.
5. Remove the service hole cover.



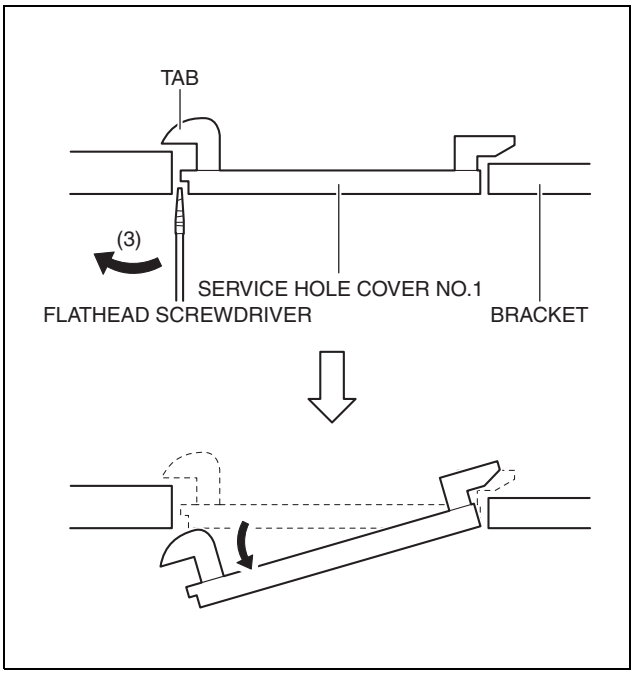
ac5wzw0000048

6. Insert a flathead screwdriver into the service hole in the position shown in the figure.



ac5wzw0000120

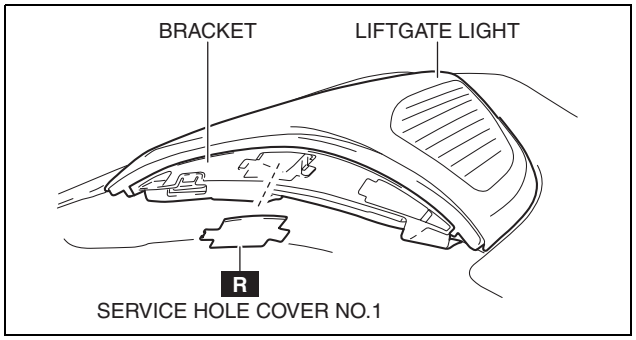
7. Move the flathead screwdriver in the direction of the arrow (3) shown in the figure, pull out the service hole cover No.1, and detach the service hole cover No.1 tab from the bracket.



ac5wzw0000017

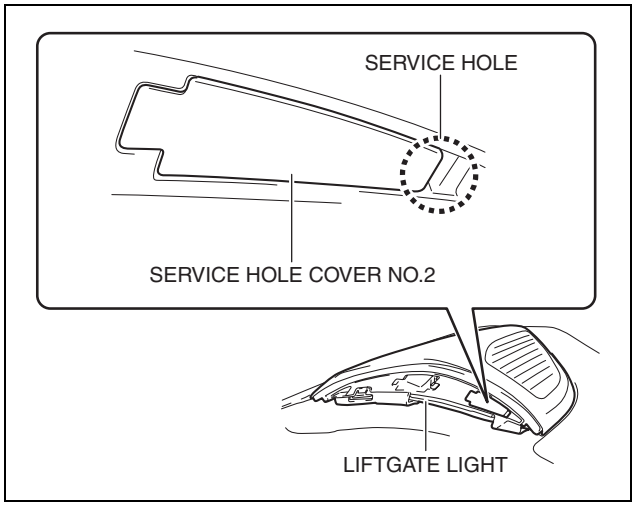
LIGHTING SYSTEMS

8. Remove the service hole cover No.1.



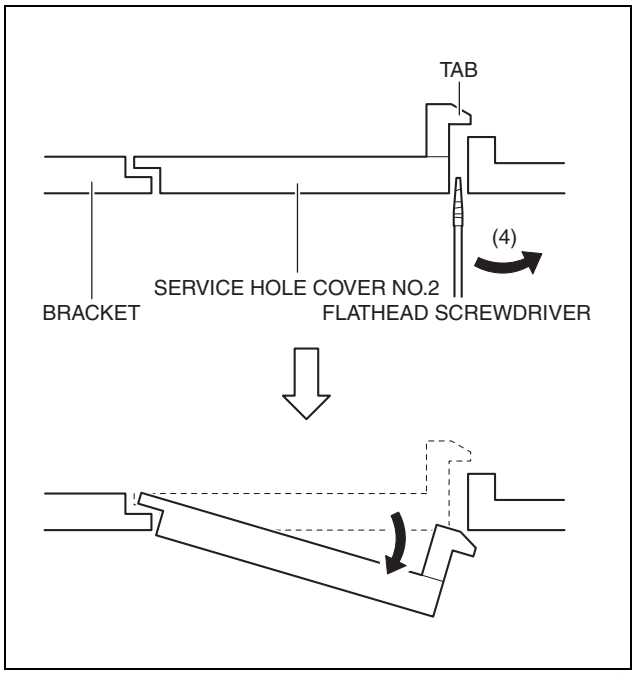
ac5wzw0000120

9. Insert a flathead screwdriver into the service hole in the position shown in the figure.



ac5wzw0000017

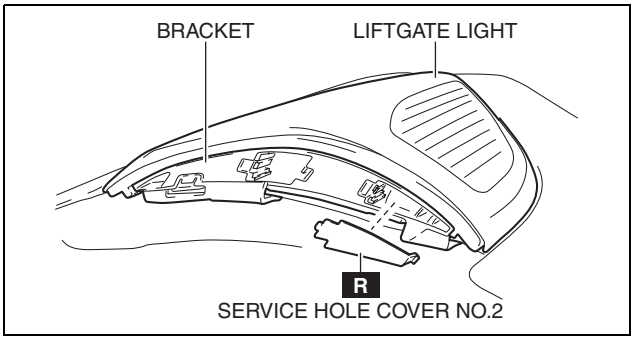
10. Move the flathead screwdriver in the direction of the arrow (4) shown in the figure, pull out the service hole cover No.2, and detach the service hole cover No.2 tab from the bracket.



ac5wzw0000017

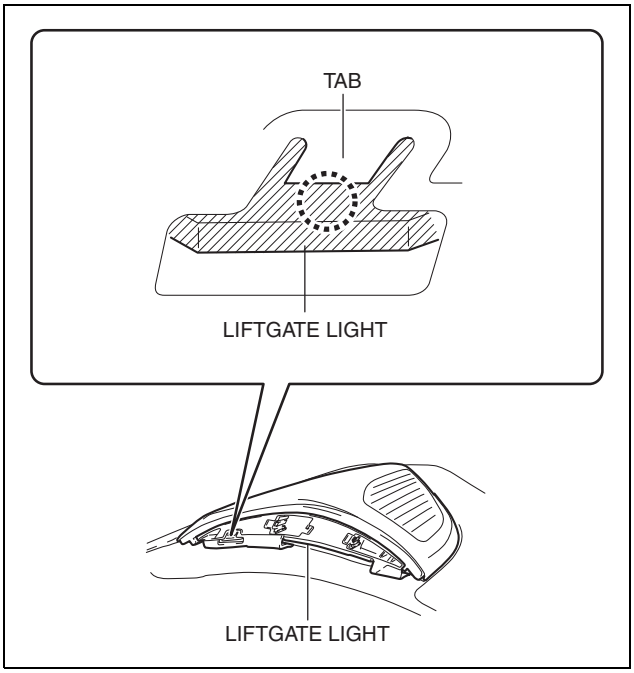
LIGHTING SYSTEMS

11. Remove the service hole cover No.2.



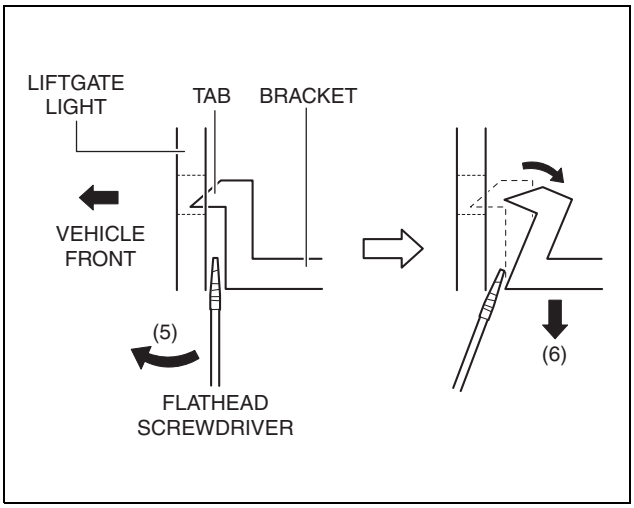
ac5wzw0000120

12. Insert the flathead screwdriver into the clearance between the bracket tab and the liftgate light shown in the figure.



ac5wzw0000082

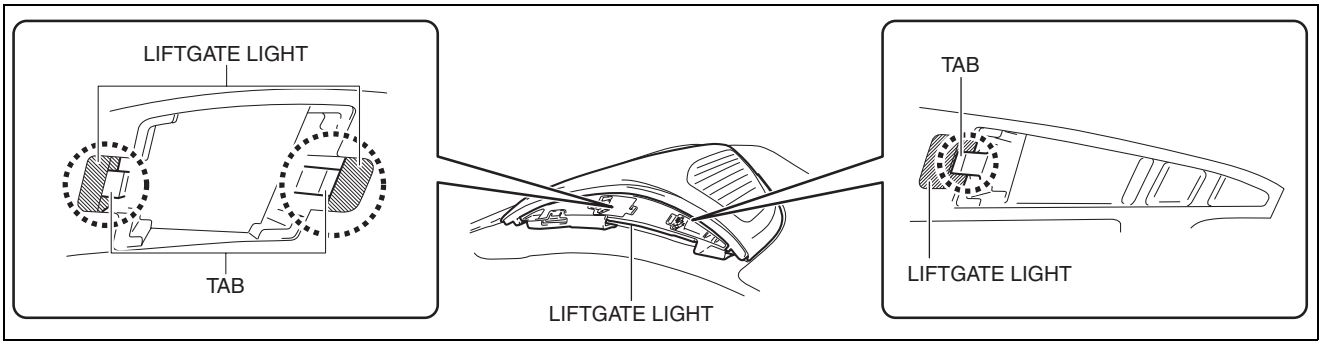
13. Move the flathead screwdriver in the direction of the arrow (5) shown in the figure, pull out the bracket in the direction of the arrow (6) shown in the figure while pressing the bracket tab, and detach the bracket tab and liftgate light.



ac5wzw0000082

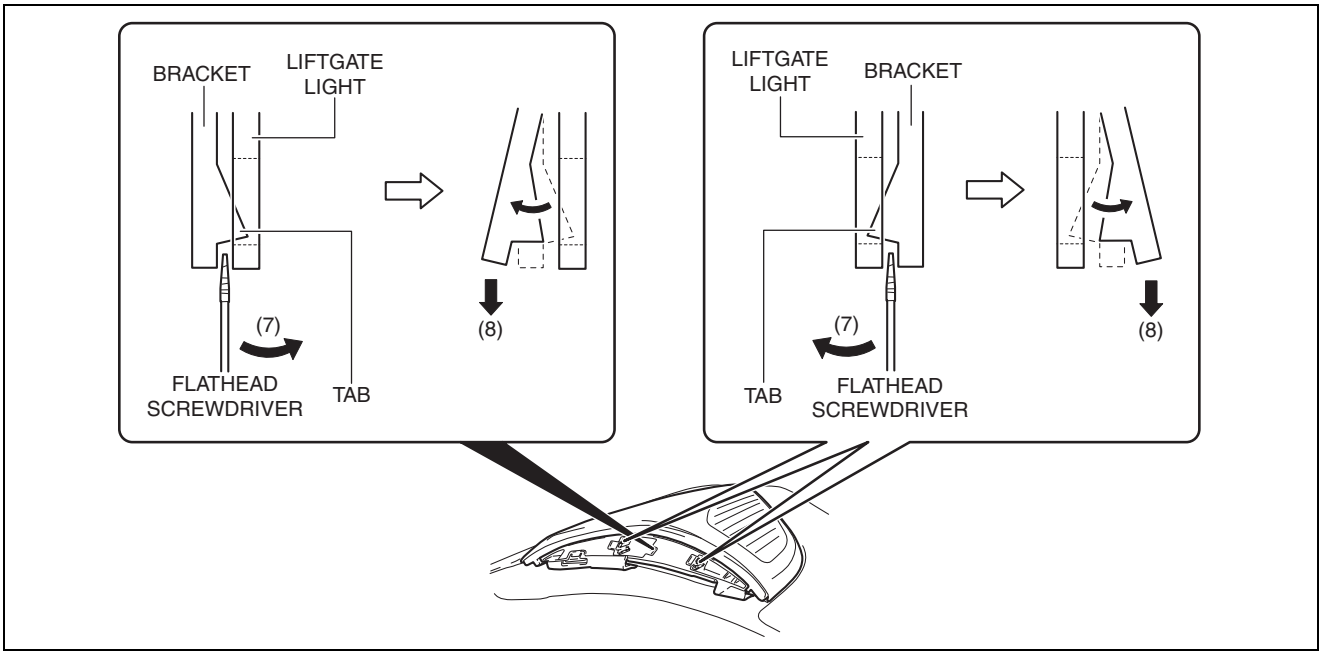
LIGHTING SYSTEMS

14. Insert the flathead screwdriver into the clearance between the bracket tab and the liftgate light shown in the figure.



ac5wzw0000082

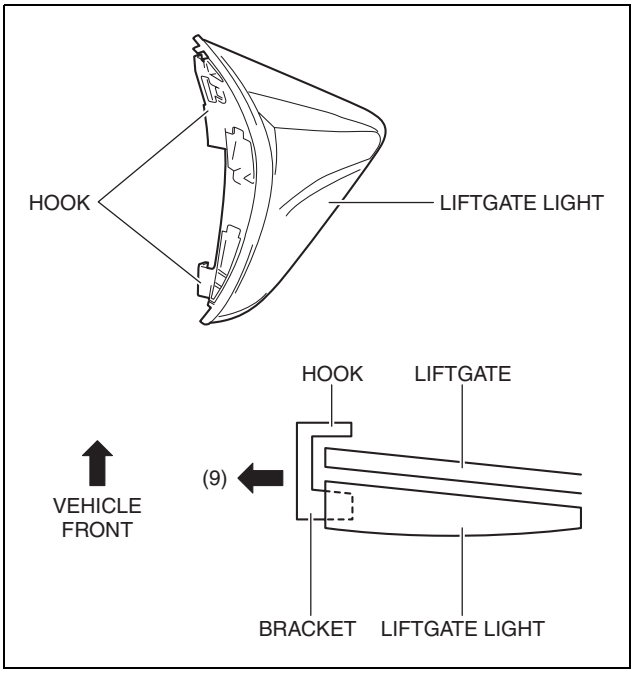
15. Move the flathead screwdriver in the direction of the arrow (7) shown in the figure, pull the bracket in the direction of the arrow (8) shown in the figure, and detach the bracket tab and liftgate light.



ac5wzw0000082

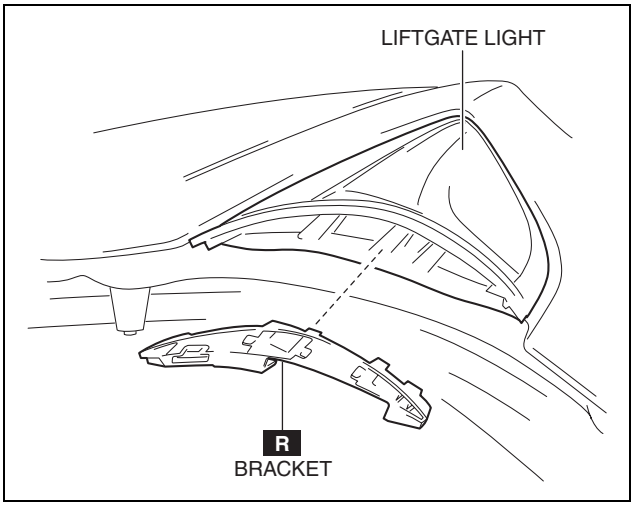
LIGHTING SYSTEMS

16. Detach all the bracket tab and liftgate light and pull out the bracket hook from the liftgate light in the direction of the arrow (9) shown in the figure.



ac5wzw0000082

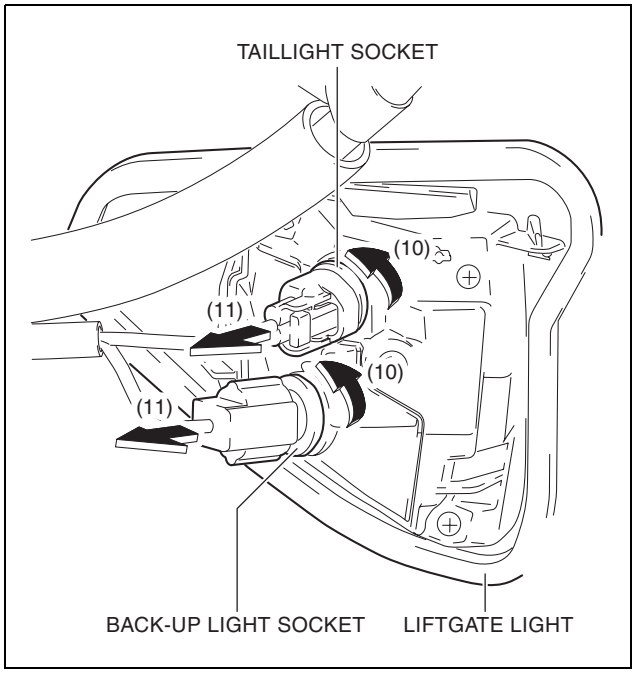
17. Remove the bracket.



ac5wzw0000120

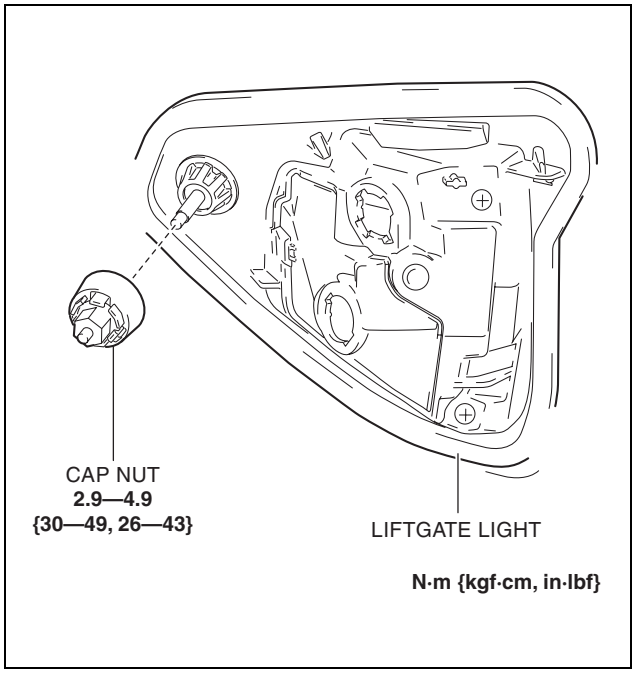
LIGHTING SYSTEMS

18. Rotate the socket in the direction of the arrow (10) shown in the figure and remove it from the liftgate light in the direction of the arrow (11) shown in the figure.



ac5wzw0000082

19. Remove the cap nut.

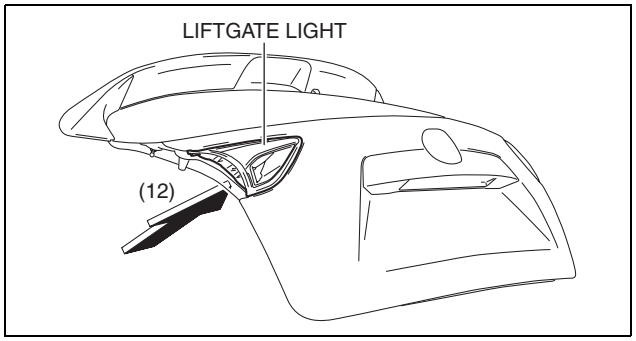


ac5wzw0000005

20. Push out the liftgate light in the direction of the arrow (12) shown in the figure and remove it from the liftgate.

Caution

- **If the liftgate light is removed from the liftgate, the liftgate light may fall off and be damaged. When removing the liftgate light from the liftgate, hold the liftgate light on the lens side with a hand during the servicing.**



ac5wzw0000082

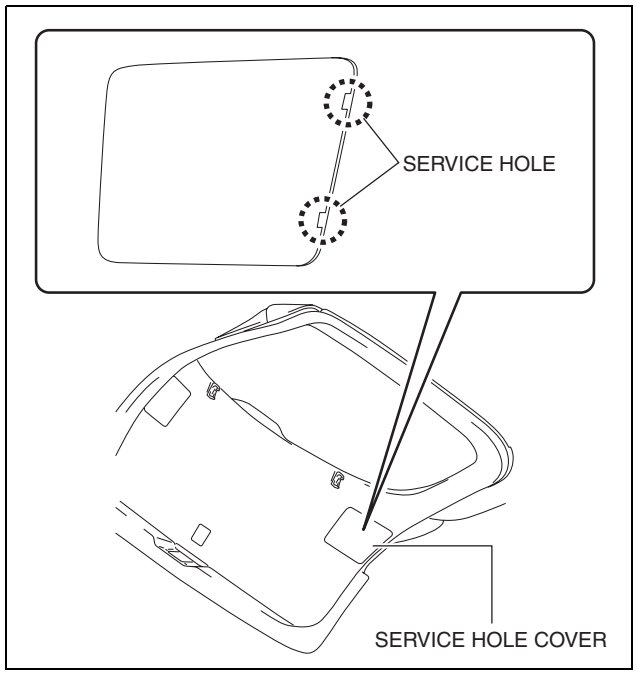
21. Install in the reverse order of removal.

LIGHTING SYSTEMS

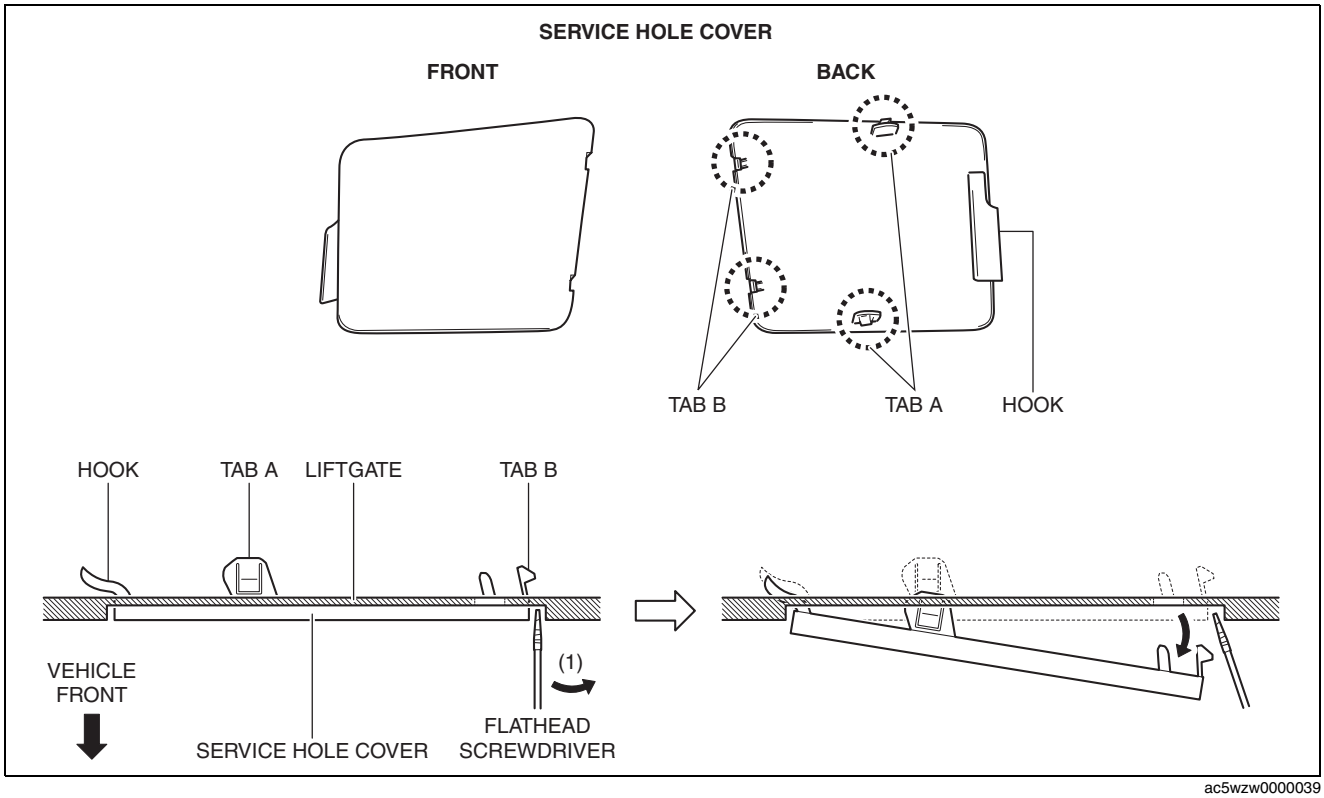
TAILLIGHT BULB REMOVAL/INSTALLATION

id091800300000

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.
3. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, pull out the service hole cover from the liftgate, and detach the service hole cover tab and liftgate.



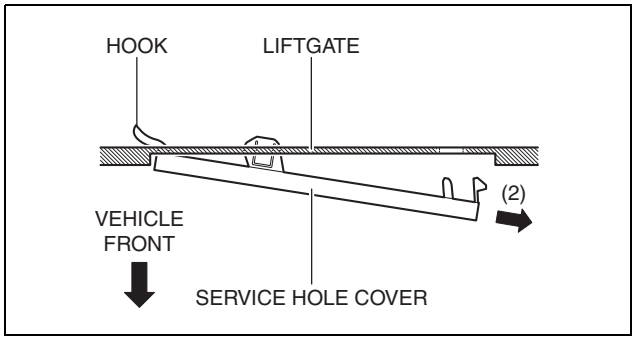
ac5wzw0000039



ac5wzw0000039

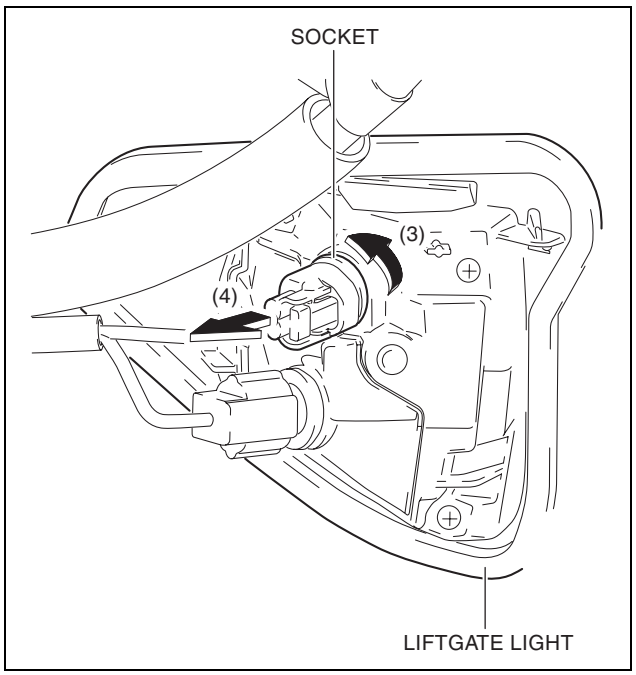
LIGHTING SYSTEMS

4. Pull out the service hole cover in the direction of the arrow (2) shown in the figure and pull out the service hole cover hook from the liftgate.
5. Remove the service hole cover.



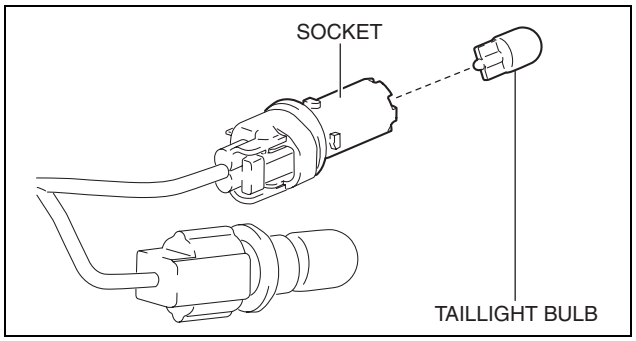
ac5wzw0000039

6. Rotate the socket in the direction of the arrow (3) shown in the figure and remove it from the liftgate light in the direction of the arrow (4) shown in the figure.



ac5wzw0000009

7. Remove the taillight bulb.
8. Install in the reverse order of removal.



ac5wzw0000009

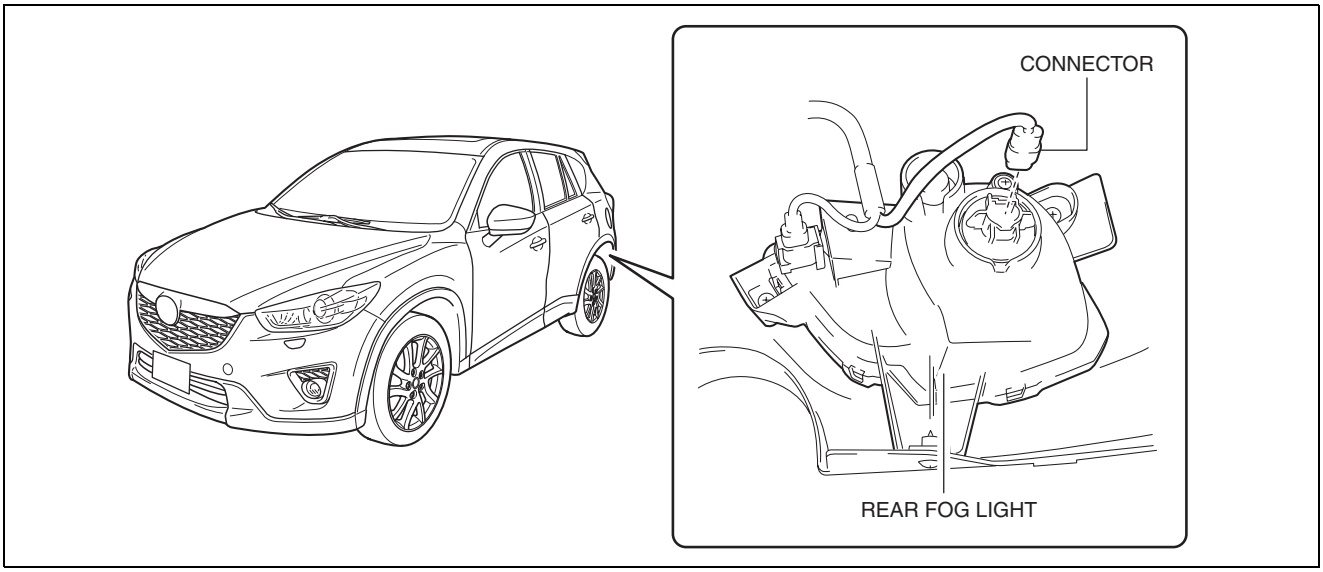
REAR FOG LIGHT REMOVAL/INSTALLATION

id091800805100

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the rear splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)

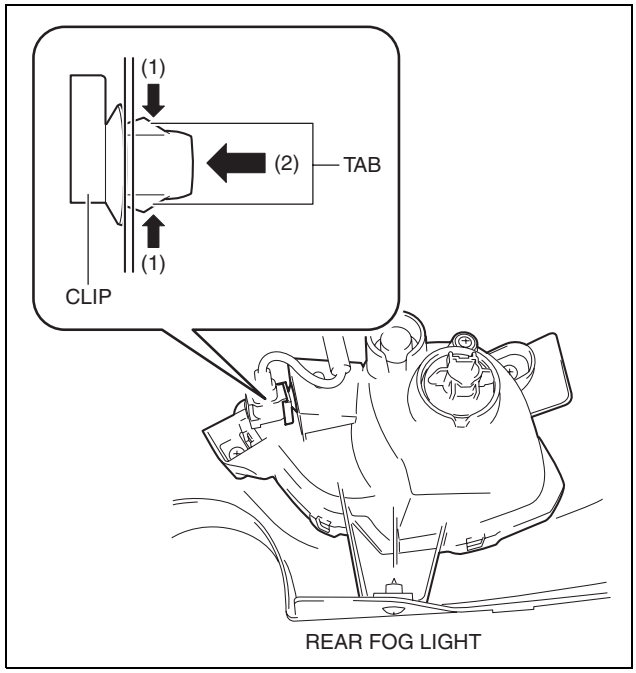
LIGHTING SYSTEMS

3. Disconnect the connector.



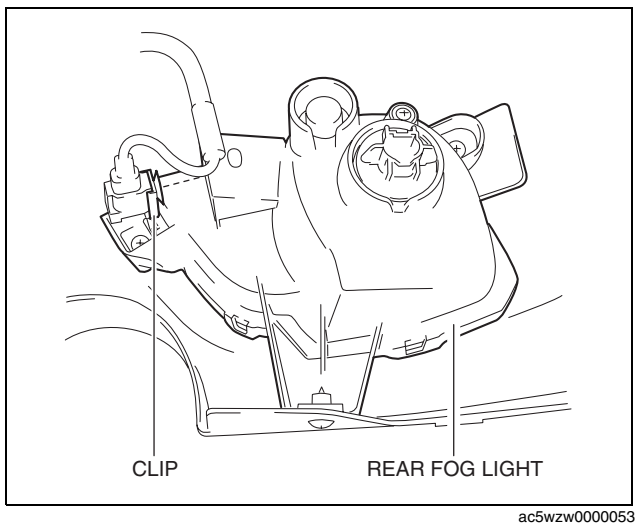
ac5wzw0000053

4. While pressing the tabs of the clip in the direction of the arrow (1) shown in the figure, press the clip in the direction of the arrow (2) to detach the tabs of the clip and rear fog light (with parking sensor system).



ac5wzw0000119

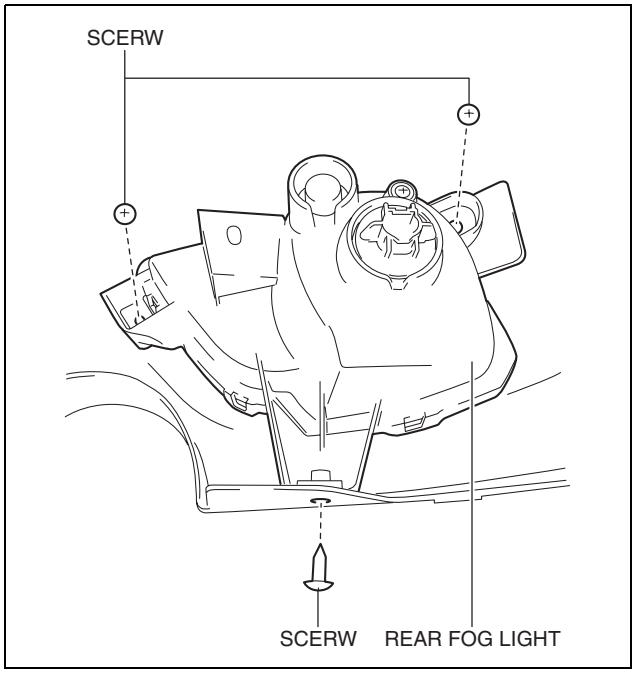
5. Remove the clip (with parking sensor system).



ac5wzw0000053

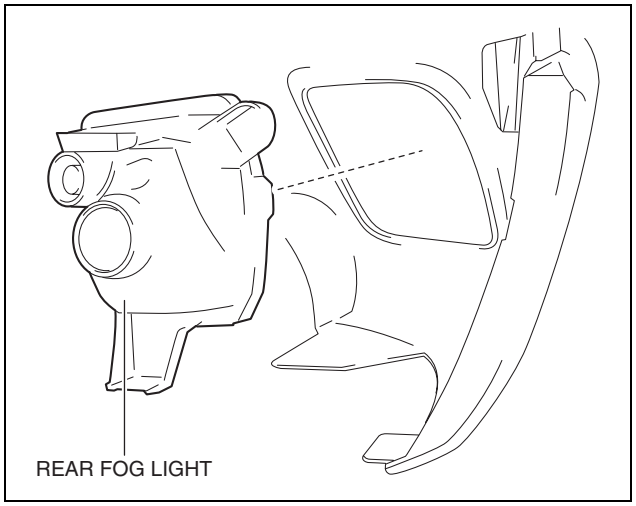
LIGHTING SYSTEMS

6. Remove the screws.



ac5wzw0000053

7. Remove the rear fog light.
8. Install in the reverse order of removal.

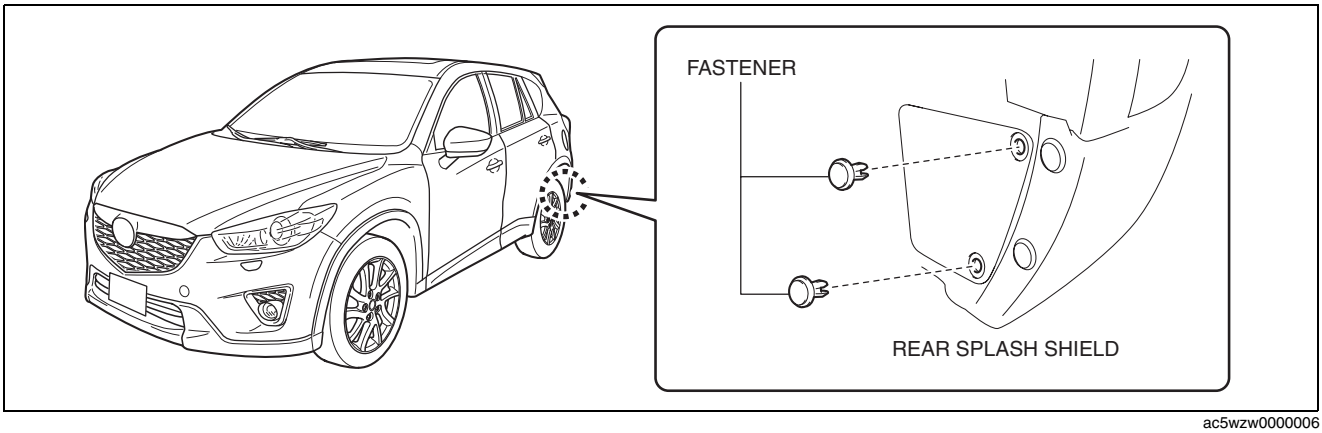


ac5wzw0000053

REAR FOG LIGHT BULB REMOVAL/INSTALLATION

id091800851300

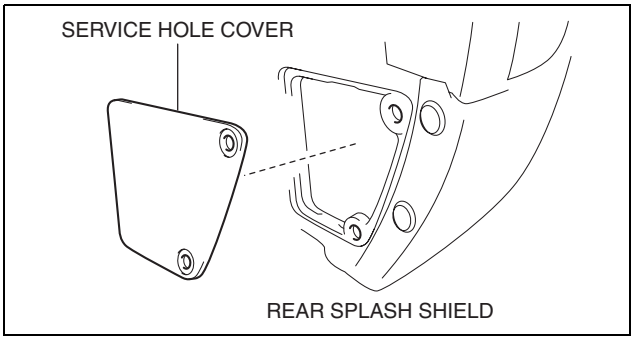
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the fastener.



ac5wzw0000006

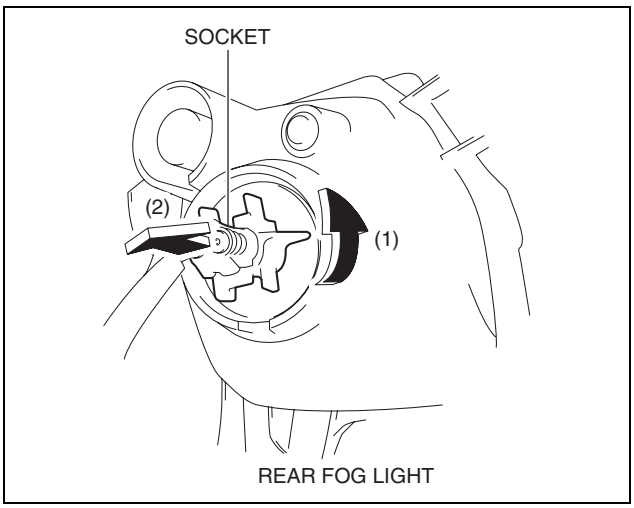
LIGHTING SYSTEMS

3. Remove the service hole cover.



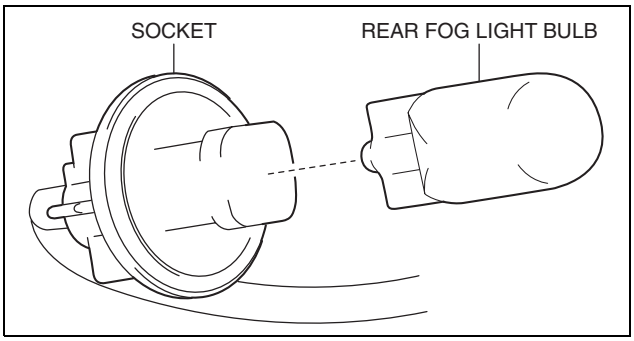
ac5wzw0000007

4. Rotate the socket in the direction of the arrow (1) shown in the figure and remove it from the rear fog light in the direction of the arrow (2) shown in the figure.



ac5wzw0000007

5. Remove the rear fog light bulb.
6. Install in the reverse order of removal.



ac5wzw0000007

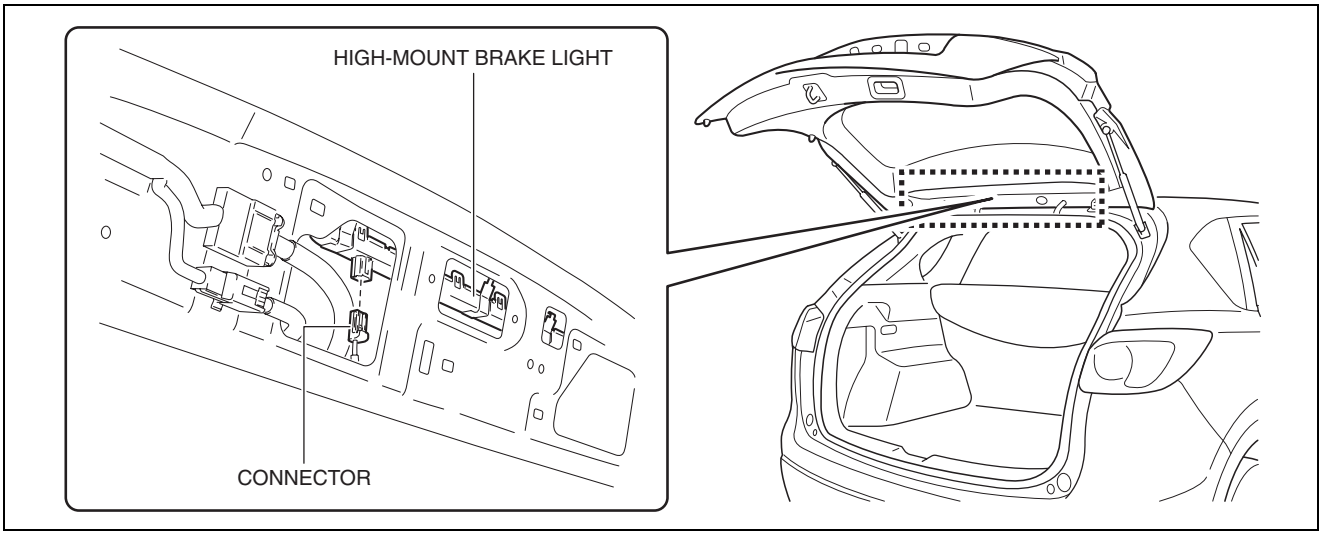
HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION

id091800802000

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the liftgate upper trim. (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
3. Remove the rear spoiler. (See 09-16-33 REAR SPOILER REMOVAL/INSTALLATION.)

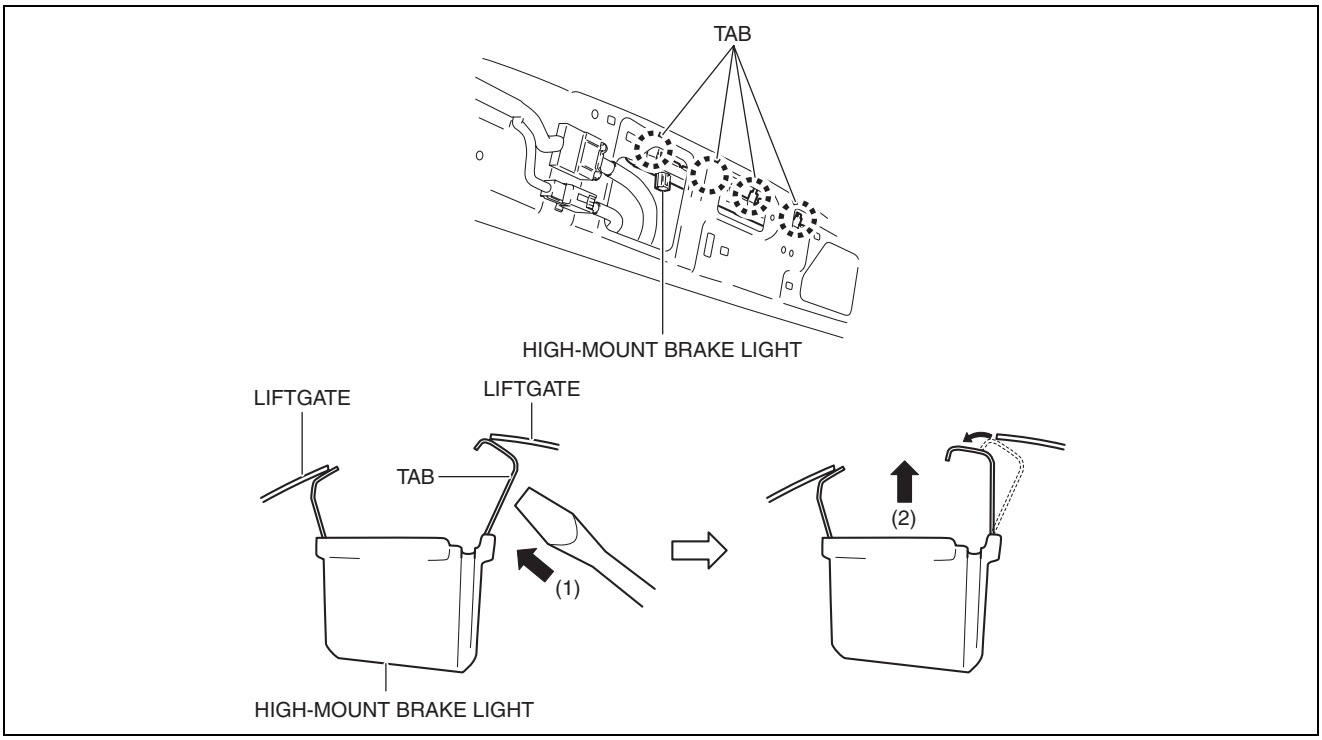
LIGHTING SYSTEMS

4. Disconnect the connector.



ac5wzw0000011

5. While pressing the high-mount brake light tab in the direction of arrow (1) shown in the figure, press the high-mount brake light in the direction of arrow (2) to detach the high-mount brake light and liftgate.

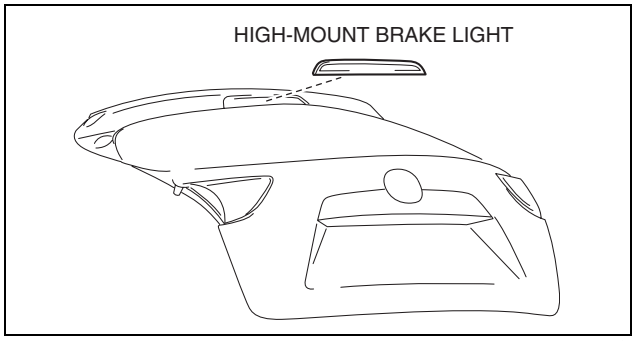


ac5wzw0000334

6. Detach all the high-mount brake light tabs and liftgate and remove the high-mount brake light from the liftgate.

Caution

- **If the high-mount brake light is removed from the liftgate, the high-mount brake light may fall off and be damaged. When removing the high-mount brake light from the liftgate, hold the high-mount brake light on the lens side with a hand during servicing.**



ac5wzw0000042

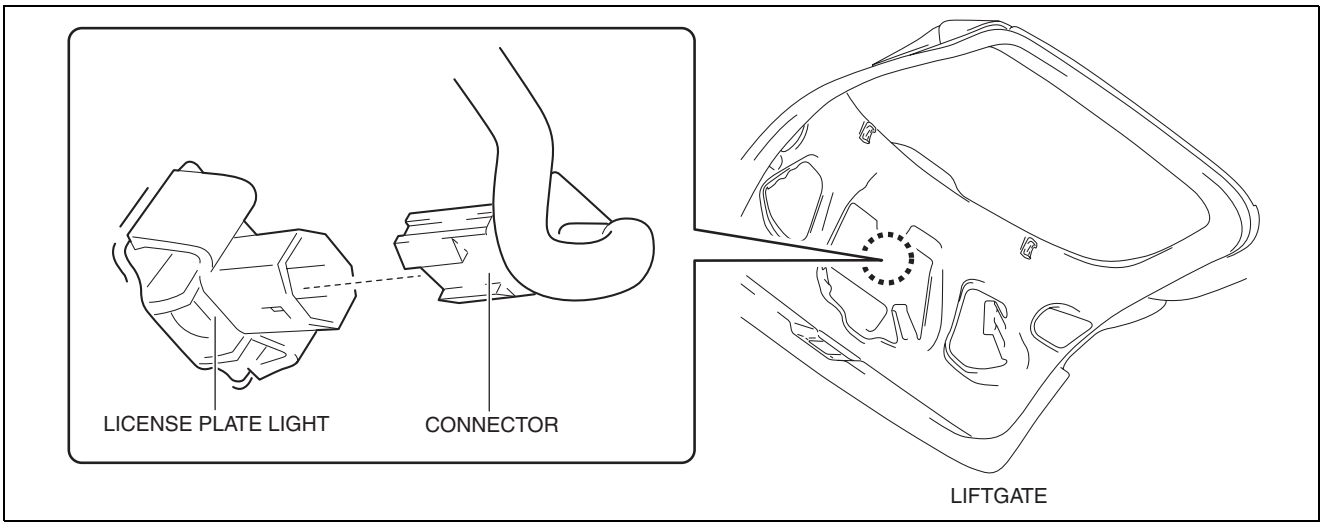
7. Install in the reverse order of removal.

LIGHTING SYSTEMS

LICENSE PLATE LIGHT REMOVAL/INSTALLATION

id091800801100

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Liftgate upper trim (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
   (2) Liftgate side trim (See 09-17-87 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Liftgate lower trim (See 09-17-89 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
3. Disconnect the connector.

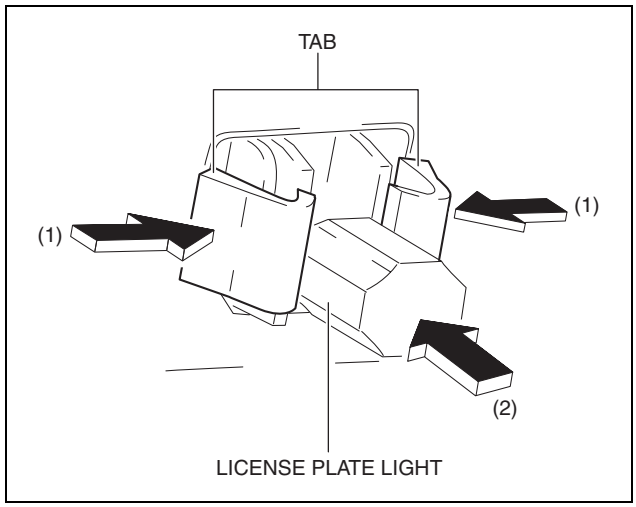


ac5wzw0000001

4. While pressing the license plate light tab in the direction of arrow (1) shown in the figure, press the license plate light in the direction of arrow (2) to detach the license plate light tab and liftgate.

Caution

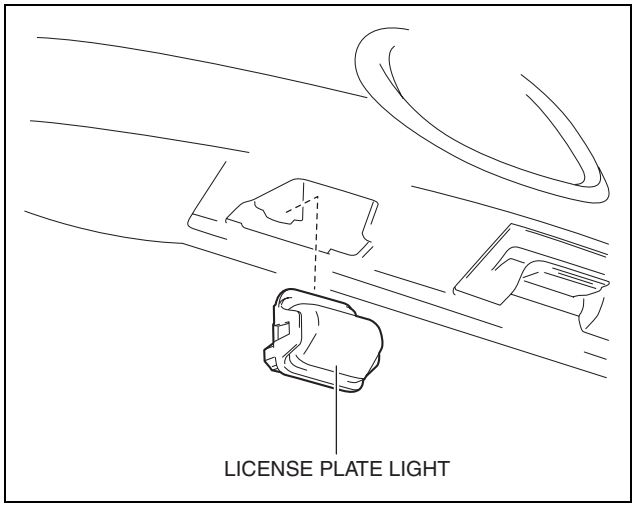
- **If the license plate light is removed from the liftgate, the license plate light may fall off and be damaged. When removing the license plate light from the liftgate, hold the license plate light on lens side with a hand during servicing.**



ac5wzw0000001

LIGHTING SYSTEMS

5. Remove the license plate light.
6. Install in the reverse order of removal.

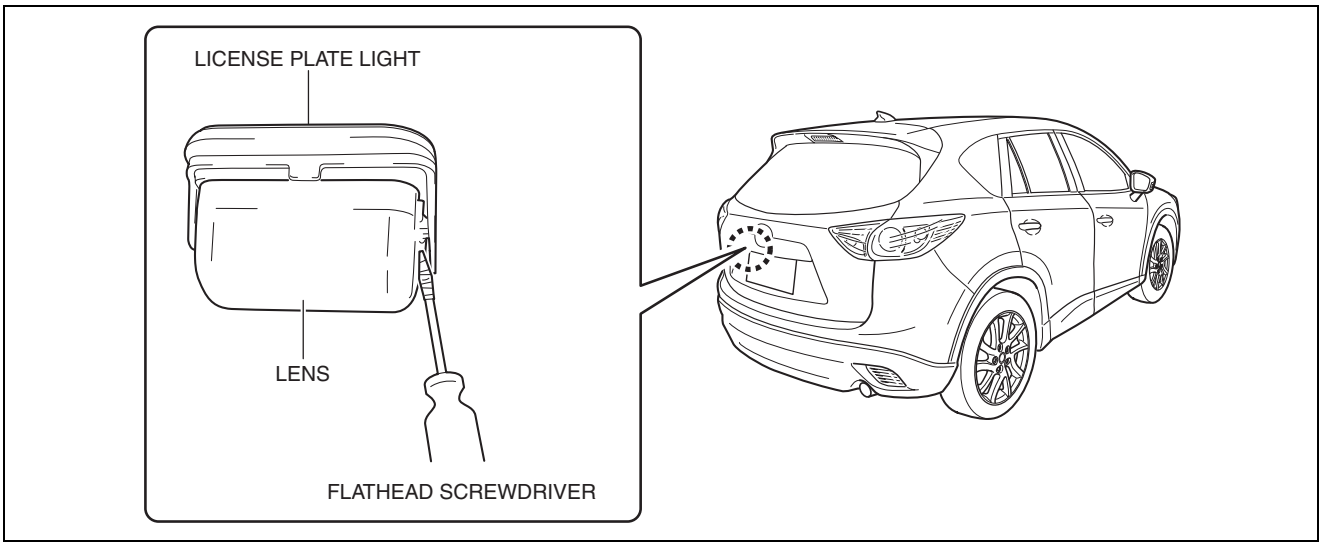


ac5wzw0000041

LICENSE PLATE LIGHT BULB REMOVAL/INSTALLATION

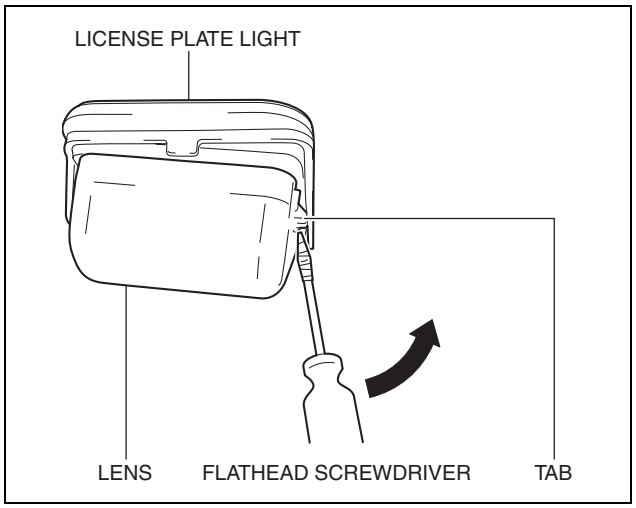
id091800857800

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Insert a tape-wrapped flathead screwdriver into the clearance between the lens and license plate light shown in the figure.



ac5wzw0000465

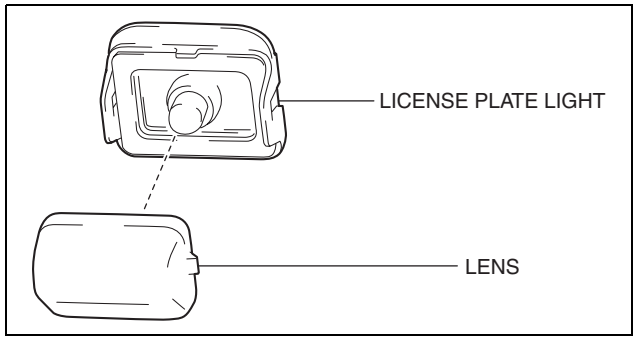
3. Move the flathead screwdriver in the direction of the arrow shown in the figure, pull out the lens from the license plate light, and detach the lens tab and license plate light.



ac5wzw0000121

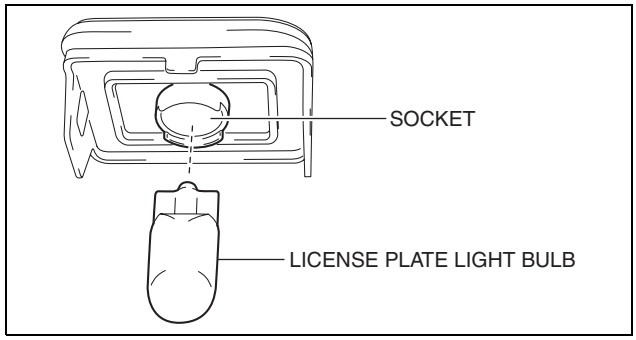
LIGHTING SYSTEMS

4. Remove the lens.



ac5wzw0000051

5. Remove the license plate light bulb.
6. Install in the reverse order of removal.

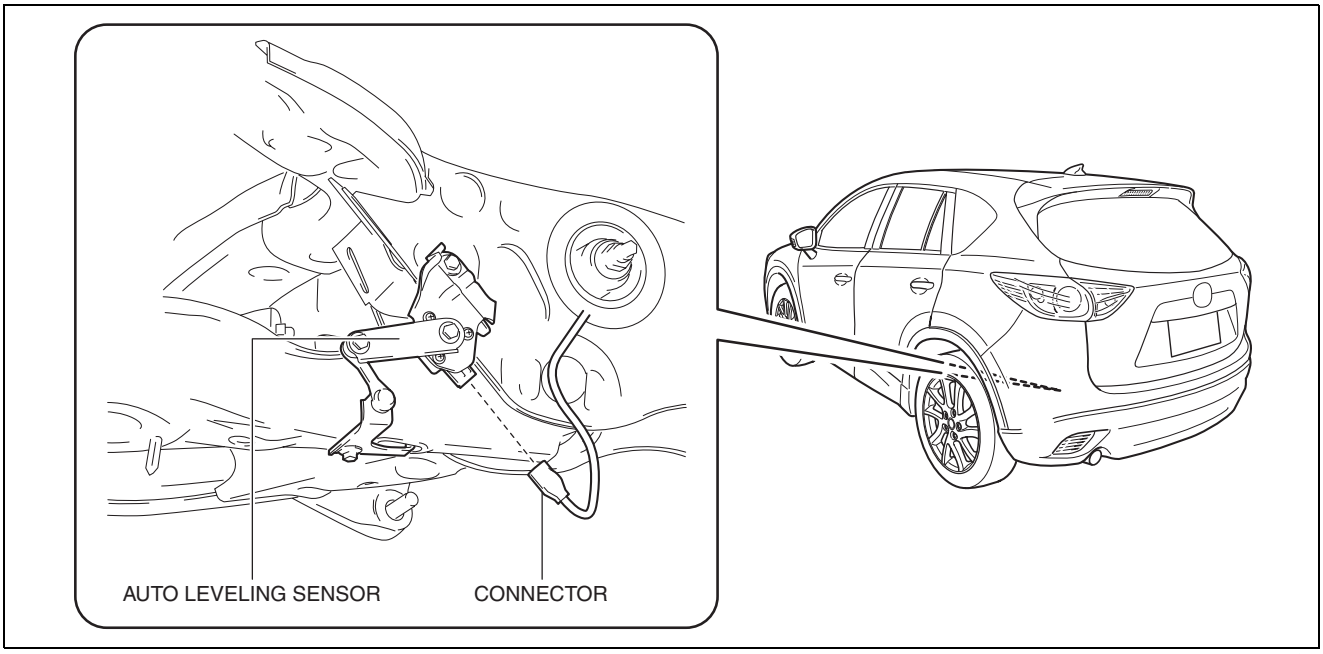


ac5wzw0000007

AUTO LEVELING SENSOR REMOVAL/INSTALLATION

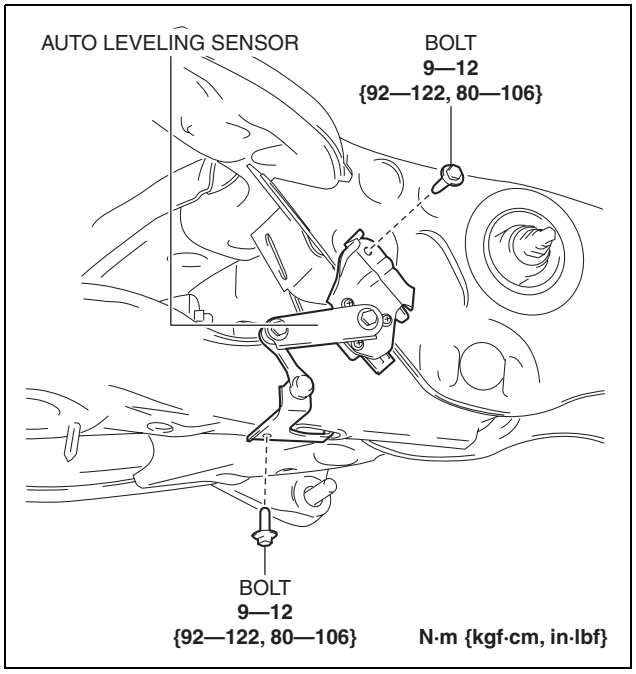
id091800805700

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Disconnect the connector.



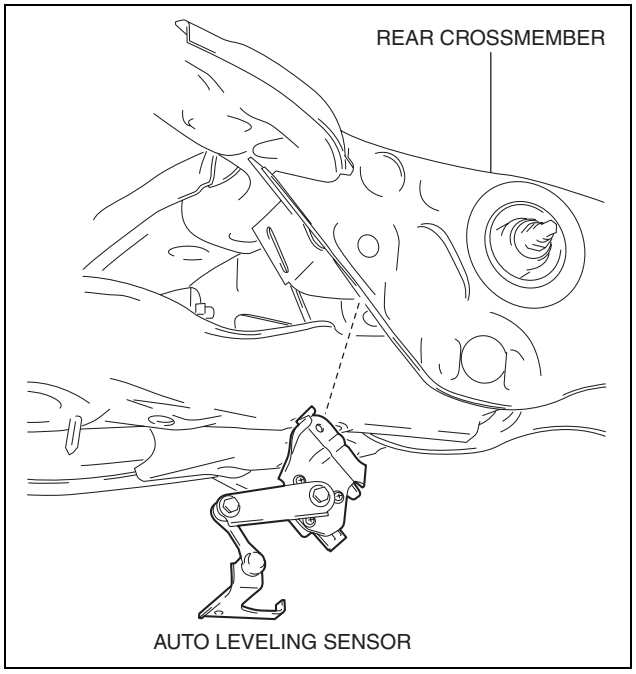
ac5wzw0000465

3. Remove the bolts.



ac5wzw0000046

4. Remove the auto leveling sensor.
5. Install in the reverse order of removal.
6. Perform the auto leveling system initial setting. (See 09-18-82 HEADLIGHT AUTO LEVELING SYSTEM INITIALIZATION.)



ac5wzw0000046

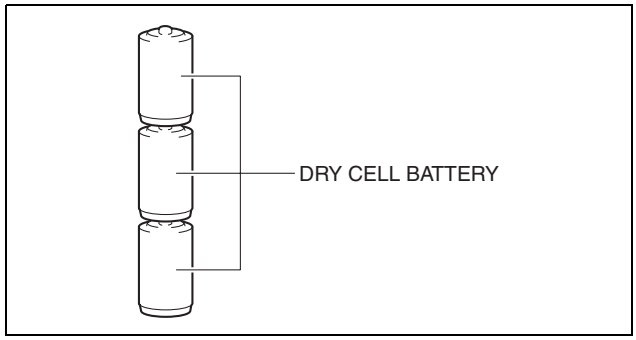
AUTO LEVELING SENSOR INSPECTION

id091800805600

1. Remove the auto leveling sensor. (See 09-18-79 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
2. Prepare three dry cell batteries (1.5 V).

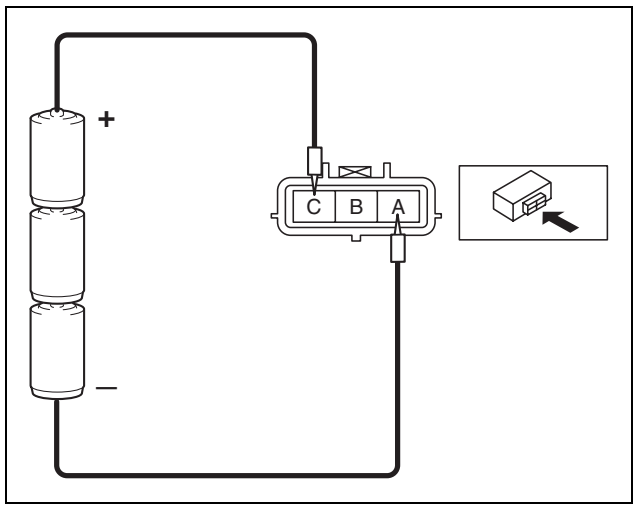
LIGHTING SYSTEMS

3. Connect the three dry cell batteries in a series.



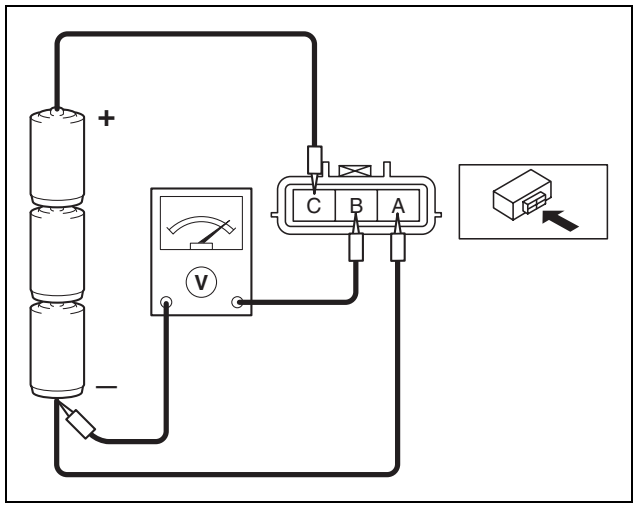
ac5wzw0000012

4. Connect the positive pole of the dry cell battery to auto leveling sensor terminal C, and the negative pole to terminal A.



ac5wzw0000012

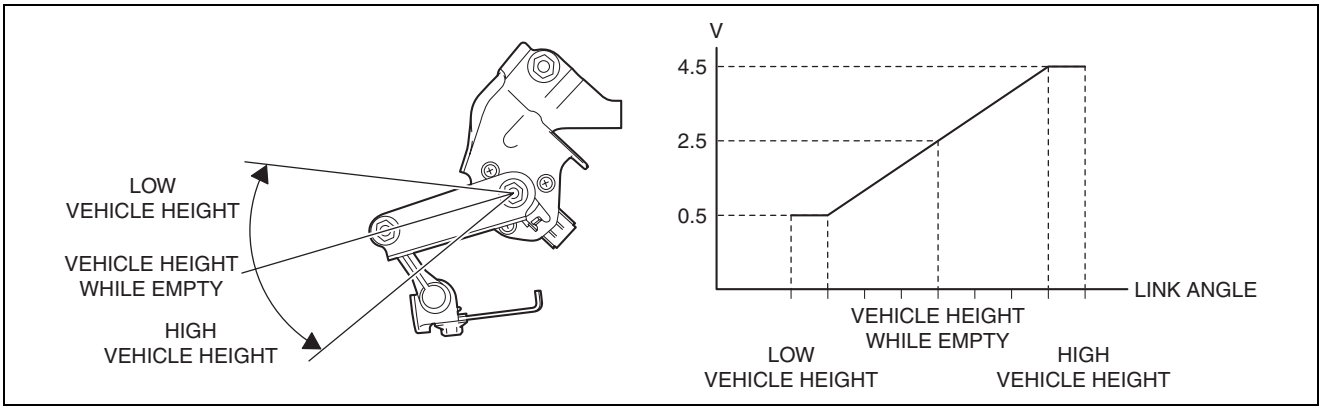
5. Connect the tester as shown in the figure with **approx. 4.5 V** of voltage applied between auto leveling sensor terminals A and C, and measure the voltage at auto leveling sensor terminal B.



ac5wzw0000012

LIGHTING SYSTEMS

6. When slowly moving the auto leveling sensor link up and down, verify that the voltage fluctuates linearly between 0**.5—4.5 V** as shown in the figure.



ac5wzw0000171

- If the voltage cannot be verified as indicated in the graph, replace the auto leveling sensor. (See 09-18-79 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)

HEADLIGHT AUTO LEVELING SYSTEM INITIALIZATION

id091800812200

Note

- The AFS control module records the vehicle height while it is unoccupied by performing the headlight auto leveling system initial setting.
- Perform headlight auto leveling system initial setting if any of the following work is performed.
  - — AFS control module replacement
  - — Auto leveling sensor replacement, removal/installation
  - — Work that can affect vehicle height such as suspension replacement or removal/installation.
- There are two types of procedures for headlight auto leveling system initial setting, one which uses the M-MDS and the other which does not use it.

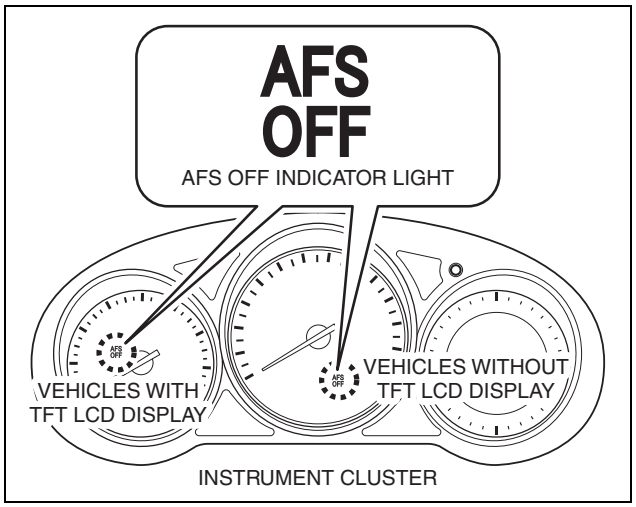
When using the M-MDS

1. Empty the vehicle by having all occupants leave the vehicle and remove all the cargo except for the spare tire, jack and tools equipped on the vehicle.
2. Adjust the air pressure of each tire to the specified value. (See 02-12-1 WHEEL AND TIRE SPECIFICATION.)
3. Move the vehicle to level ground.
4. Connect the M-MDS to the DLC-2.
5. After vehicle identification, select in the following order from the M-MDS initial screen.

Note

- The AFS OFF indicator light continues flashing during the first initial setting, however, continue the work because it does not indicate an improper procedure.

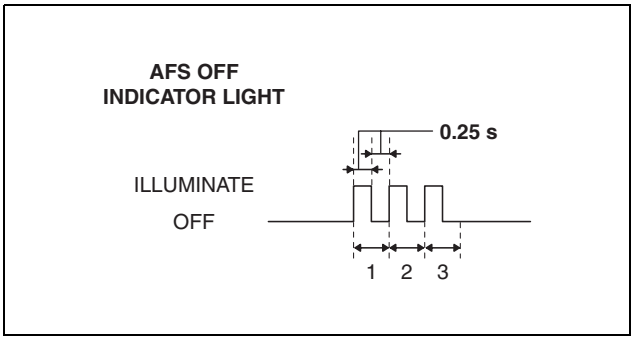
(1) "Electrical"
(2) "ExteriorLighting"
(3) "Headlamp"
(4) "Auto Leveling Sensor"
(5) "Auto Leveling Sensors Calibration"



ac5wzw0000121

LIGHTING SYSTEMS

6. Verify that the AFS OFF indicator light flashes three times at **0.25 s** intervals and turns off as shown in the figure.
7. Adjust the headlight aiming. (See 09-18-18 HEADLIGHT AIMING.)



ac5wzw0000304

When not using the M-MDS

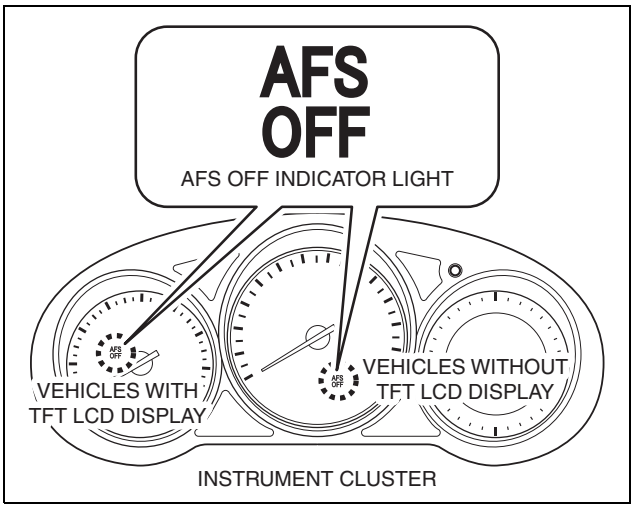
Caution
- **Perform Steps 3-4 within 30 s.**

1. Empty the vehicle by having all occupants leave the vehicle and remove all the cargo except for the spare tire, jack and tools equipped on the vehicle.
2. Adjust the air pressure of each tire to the specified value. (See 02-12-1 WHEEL AND TIRE SPECIFICATION.)
3. Switch the ignition ON (engine off or on).

Note
- The AFS OFF indicator light continues flashing during the first initial setting, however, continue the work because it does not indicate an improper procedure.

4. Using a jumper wire, connect DLC-2 terminals B and J (ground) three times at **0.5 to 1.5 s** intervals as shown in the figure.

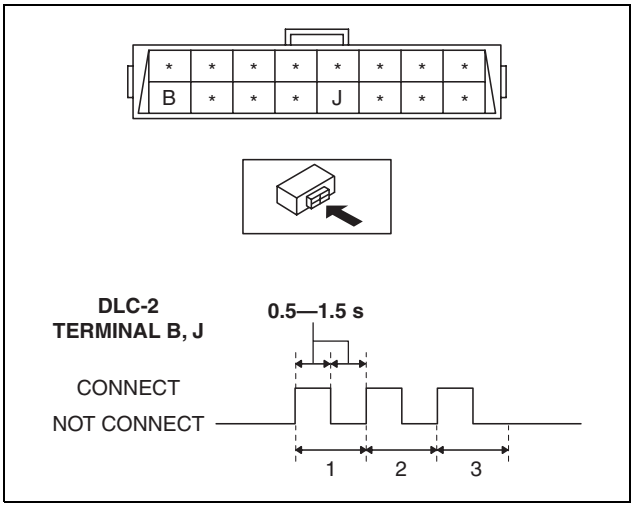
Caution



ac5wzw0000121

- **If the terminals are mistakenly connected, vehicle damage or fire could occur. When connecting with the jumper wire, thoroughly verify what terminals are being connected to prevent a miss-connection.**

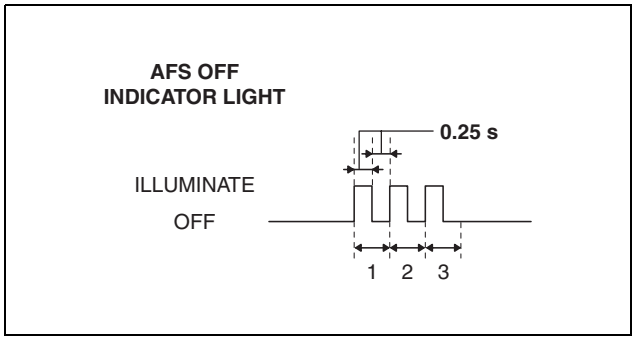
5. Verify the AFS OFF indicator light.



ac5wzw0000121

LIGHTING SYSTEMS

- If the AFS OFF indicator light flashes three times at **0.25 s** intervals and turns off as shown in the figure, the initial setting is completed. Go to the next step.
- If the AFS OFF indicator light continues flashing, the procedure may be performed incorrectly. Repeat the procedure from Step 3.
- If the AFS OFF indicator light is illuminated, the headlight auto leveling system may have a malfunction. Perform the DTC inspection. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
  - — Repair or replace the malfunctioning area, then repeat the procedure from Step 3.



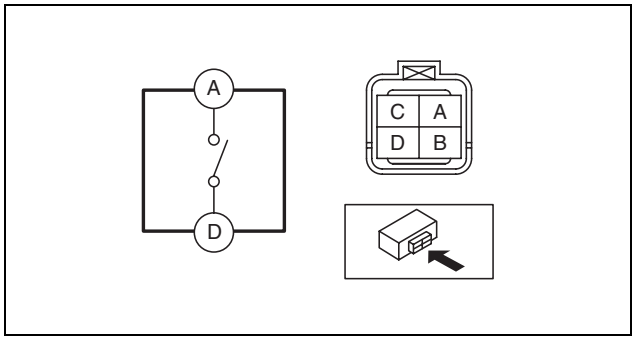
ac5wzw0000304

6. Adjust the headlight aiming. (See 09-18-18 HEADLIGHT AIMING.)

BACK-UP LIGHT SWITCH INSPECTION

id091800800300

1. Remove the back-up light switch. (See 05-15A-3 BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-15B-3 BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
2. Verify that the continuity between the back-up light switch terminals is as indicated in the table.



ac5wzw0000000

- If not as indicated in the table, replace the back-up light switch. (See 05-15A-3 BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-15B-3 BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)

LIGHT SWITCH REMOVAL/INSTALLATION

id091800802800

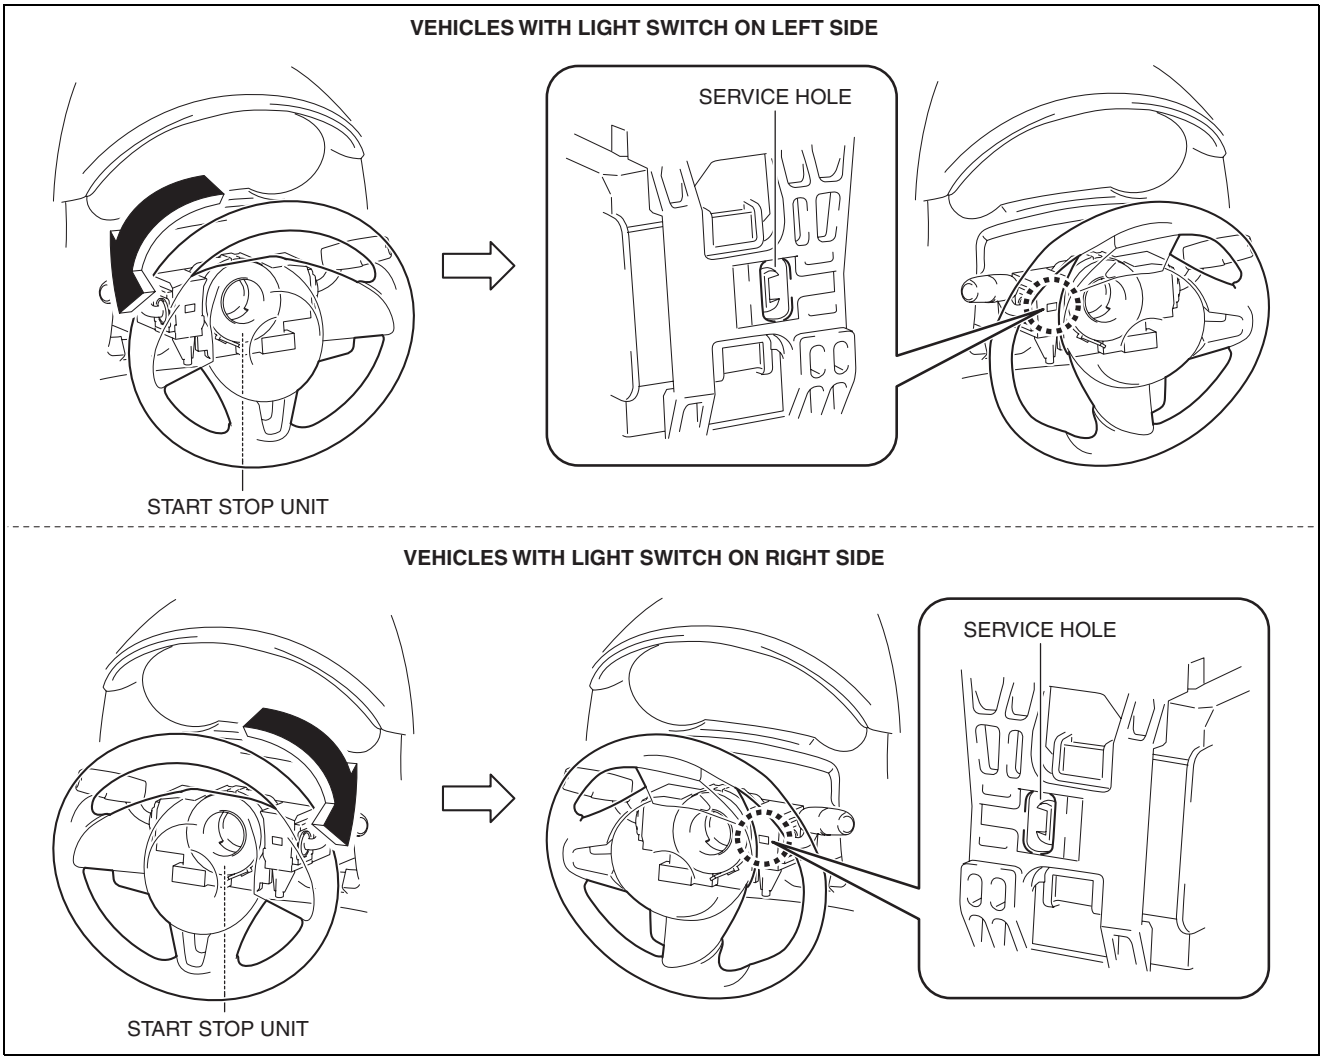
Note

- When removing the light switch, it is necessary to rotate the steering wheel. If the ignition is switched off from ON (engine on) with the driver's door closed, the steering wheel is locked. Therefore, perform the procedure in Steps 1 to 3 so that the steering wheel is not locked.

1. Switch the ignition ON (engine on).
2. Open the driver's door.
3. Switch the ignition to off.
4. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
5. Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.)

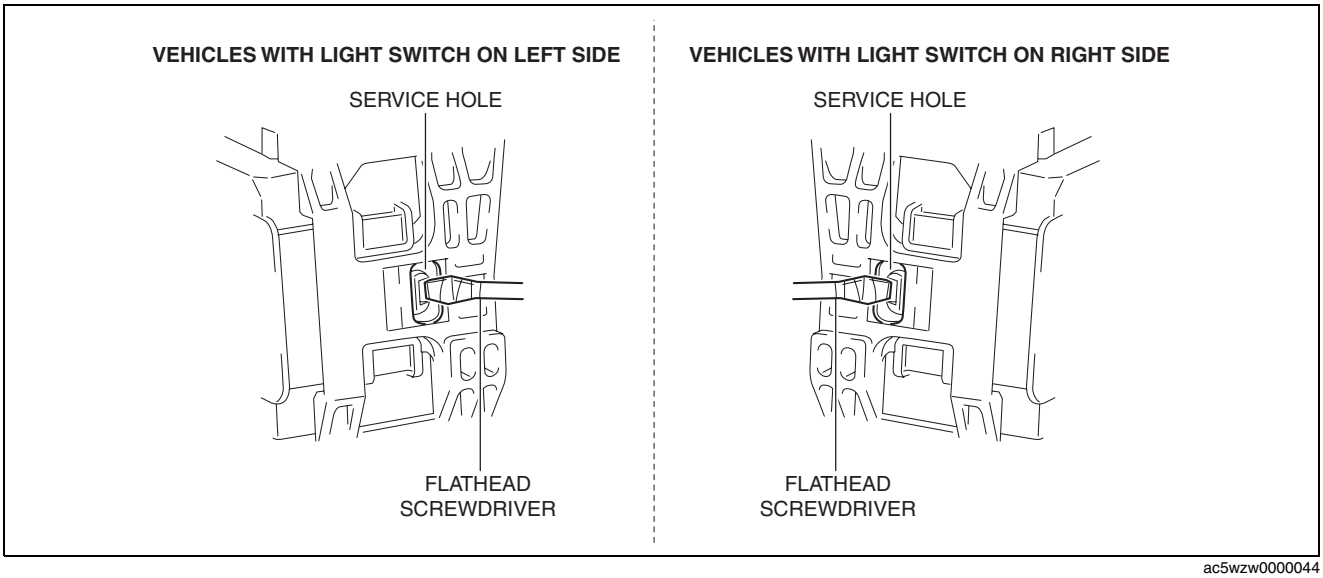
LIGHTING SYSTEMS

6. Rotate the steering wheel until the service hole in the position shown in the figure is visible.



ac5wzw0000016

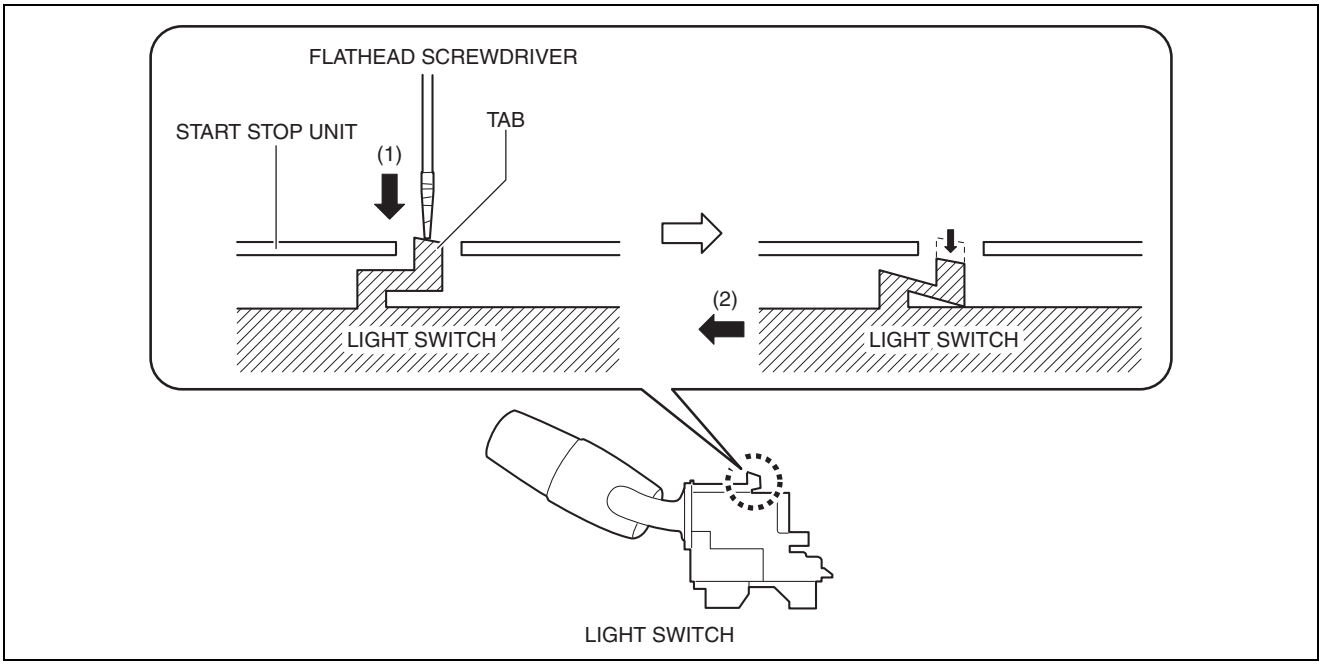
7. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.



ac5wzw0000044

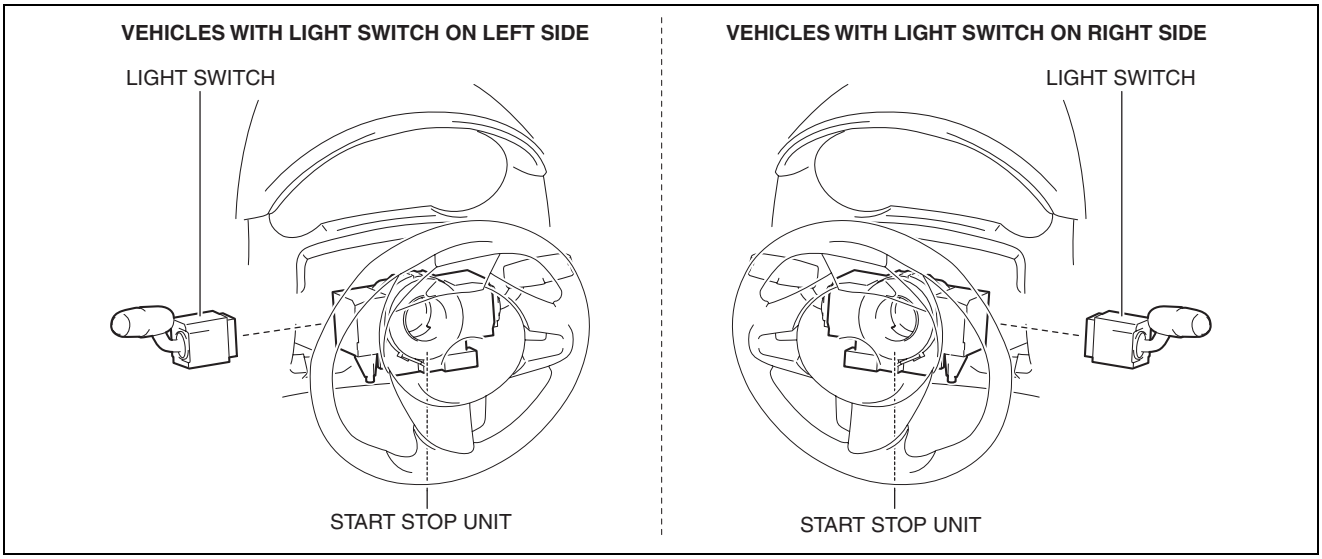
LIGHTING SYSTEMS

8. While pressing the light switch tab in the direction of the arrow (1) shown in the figure using a flathead screwdriver, pull out the light switch in the direction of the arrow (2) shown in the figure to detach the light switch tab and the start stop unit.



ac5wzw0000081

9. Remove the light switch.



ac5wzw0000044

10. Install in the reverse order of removal.

LIGHT SWITCH INSPECTION

id091800802900

Light Switch

1. Remove the light switch. (See 09-18-84 LIGHT SWITCH REMOVAL/INSTALLATION.)
2. Verify that the continuity between the light switch terminals is as indicated in the table.

FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION

id091800005300

Note

- Refer to "09-22 INSTRUMENTATION/DRIVER INFO. FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION" to remove the forward sensing camera (FSC). (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)

FORWARD SENSING CAMERA (FSC) BRACKET REMOVAL/INSTALLATION

id091800005700

Note

- Refer to "09-22 INSTRUMENTATION/DRIVER INFO. FORWARD SENSING CAMERA (FSC) BRACKET REMOVAL/INSTALLATION" to remove the forward sensing camera (FSC) bracket. (See 09-22-101 FORWARD SENSING CAMERA (FSC) BRACKET REMOVAL/INSTALLATION.)

FORWARD SENSING CAMERA (FSC) COVER REMOVAL/INSTALLATION

id091800006000

Note

- Refer to "09-22 INSTRUMENTATION/DRIVER INFO. FORWARD SENSING CAMERA (FSC) COVER REMOVAL/INSTALLATION" to remove the forward sensing camera (FSC) cover. (See 09-22-105 FORWARD SENSING CAMERA (FSC) COVER REMOVAL/INSTALLATION.)

FORWARD SENSING CAMERA (FSC) SHORT-CORD REMOVAL/INSTALLATION

id091800005800

Note

- Refer to "09-22 INSTRUMENTATION/DRIVER INFO. FORWARD SENSING CAMERA (FSC) SHORT-CORD REMOVAL/INSTALLATION" to remove the forward sensing camera (FSC) short-cord. (See 09-22-105 FORWARD SENSING CAMERA (FSC) SHORT-CORD REMOVAL/INSTALLATION.)

FORWARD SENSING CAMERA (FSC) SHORT-CORD INSPECTION

id091800005900

Note

- Refer to "09-22 INSTRUMENTATION/DRIVER INFO. FORWARD SENSING CAMERA (FSC) SHORT-CORD INSPECTION" to inspect the forward sensing camera (FSC) short-cord. (See 09-22-106 FORWARD SENSING CAMERA (FSC) SHORT-CORD INSPECTION.)

FORWARD SENSING CAMERA (FSC) AIMING

id091800005500

Note

- Refer to "09-22 INSTRUMENTATION/DRIVER INFO. FORWARD SENSING CAMERA (FSC) AIMING" to perform the forward sensing camera (FSC) aiming. (See 09-22-106 FORWARD SENSING CAMERA (FSC) AIMING.)

FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING READ/WRITE FUNCTION)

id091800006100

LIGHTING SYSTEMS

Note

- Refer to "09-22 INSTRUMENTATION/DRIVER INFO. FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING READ/WRITE FUNCTION)" to perform the forward sensing camera (FSC) configuration (using read/write function). (See 09-22-117 FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING READ/WRITE FUNCTION).)

FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING AS-BUILT DATA)

id091800006200

Note

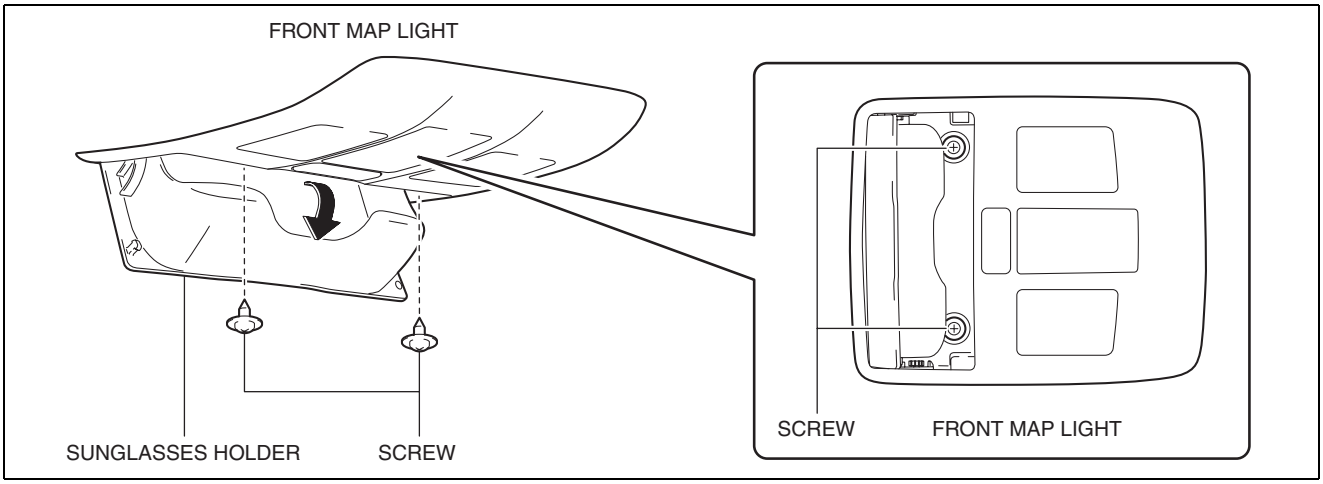
- Refer to "09-22 INSTRUMENTATION/DRIVER INFO. FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING AS-BUILT DATA)" to perform the forward sensing camera (FSC) configuration (using as-built data). (See 09-22-118 FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING AS-BUILT DATA).)

MAP LIGHT REMOVAL/INSTALLATION

id091800801200

Front Map Light

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Open the sunglasses holder.
3. Remove the screws from the front map light.



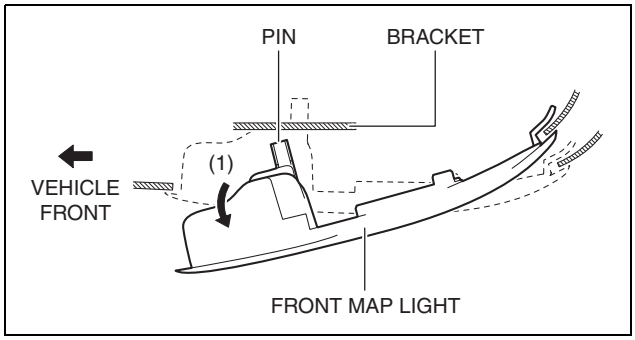
ac5wzw0000081

4. Move the front map light in the direction of the arrow (1) shown in the figure and pull out the pin from the bracket.

Caution

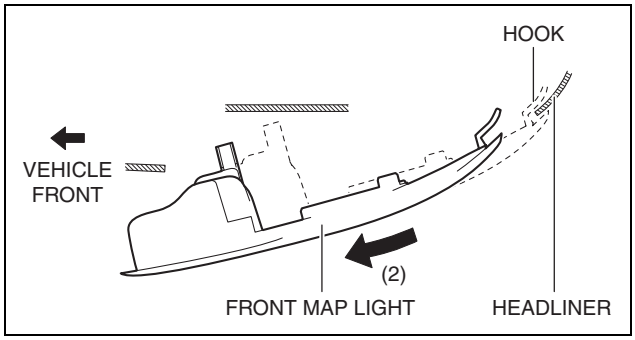
- **Be careful not to pull the connector out strongly when removing the front map light. Otherwise, the contact surface of the wiring harness secured to the headliner will come off and the wiring harness could be pulled out. If the front map light is installed with the wiring harness pulled out, the wiring harness could get caught between the headliner and front map light bracket resulting in an open or short circuit in the wiring harness.**

LIGHTING SYSTEMS

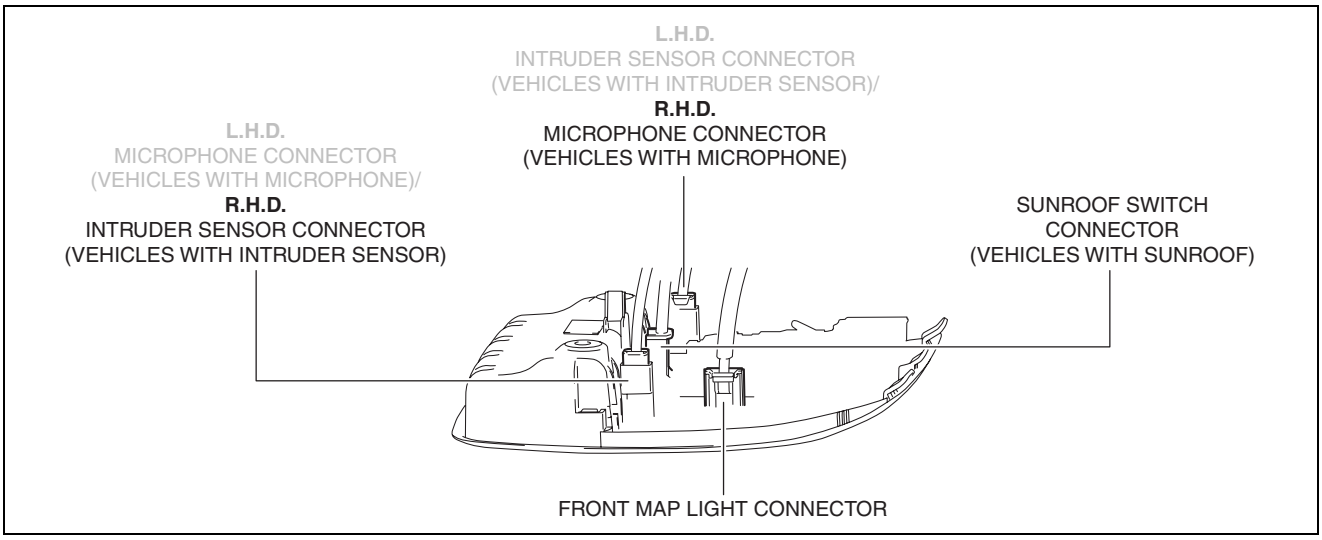


ac5wzw0000001

5. Move the front map light in the direction of the arrow (2) shown in the figure and pull out the front map light from the headliner.
6. Disconnect the connector.

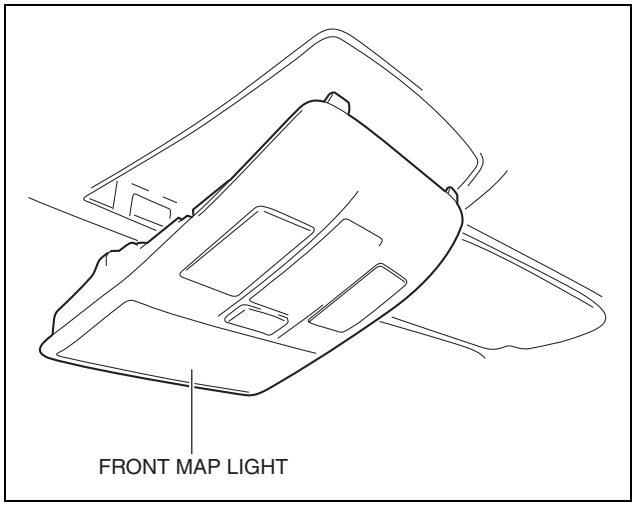


ac5wzw0000001



ac5wzw0000001

7. Remove the front map light.
8. Install in the reverse order of removal.

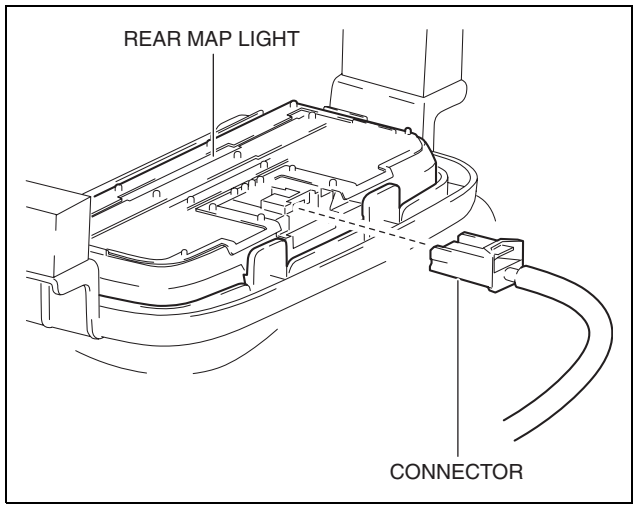


ac5wzw0000041

LIGHTING SYSTEMS

Rear Map Light

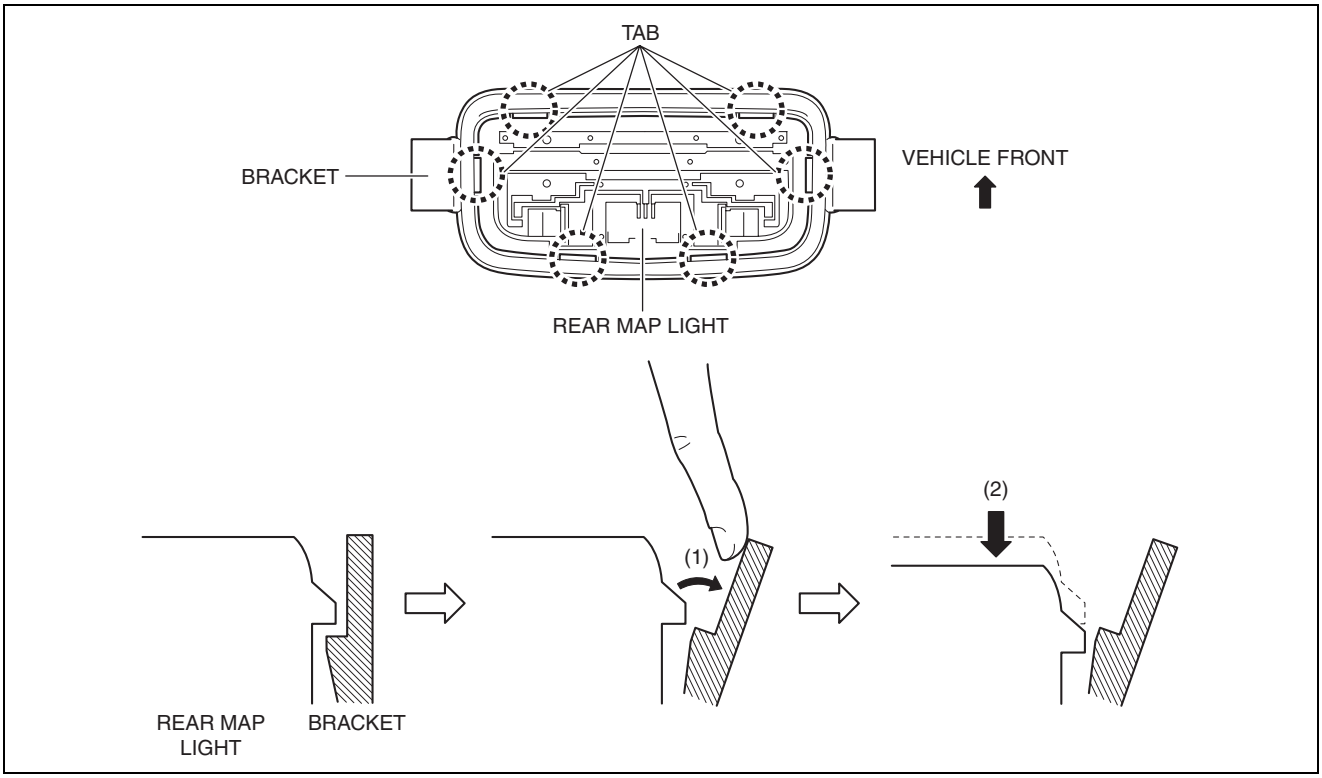
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Sunroof seaming welt (vehicels with sunroof) (See 09-15-6 SUNROOF UNIT REMOVAL/INSTALLATION.)
   (2) A-pillar trim (See 09-17-53 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (3) Sunvisor (See 09-17-93 SUNVISOR REMOVAL/INSTALLATION.)
   (4) Front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (5) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) B-pillar lower trim (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (7) Adjust anchor cover (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (8) Upper anchor installation bolt on the seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (9) B-pillar upper trim (See 09-17-58 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (10)Assist handle (See 09-17-91 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (11)Trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
   (12)Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (13)Trunk side trim (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (14)D-pillar trim (See 09-17-60 D-PILLAR TRIM REMOVAL/INSTALLATION.)
   (15)C-pillar trim (See 09-17-59 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (16)Headliner (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.)
3. Disconnect the connector.



ac5wzw0000041

LIGHTING SYSTEMS

4. Move the bracket in the direction of the arrow (1) shown in the figure, press the rear map light in the direction of the arrow (2) shown in the figure, and detach the rear map light tab and bracket.



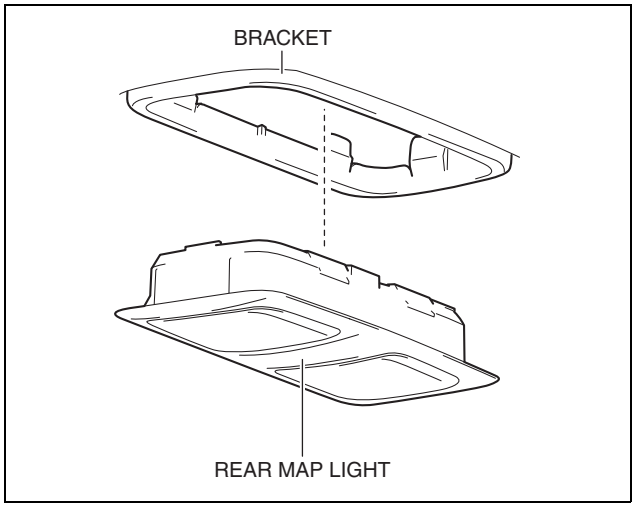
ac5wzw0000041

5. Detach all the rear map light tabs and bracket and remove the rear map light from the bracket.

Caution

- **If the rear map light is removed from the bracket, the rear map light may fall off and be damaged. When removing the rear map light from the bracket, hold the rear map light on the lens side with a hand during servicing.**

6. Install in the reverse order of removal.



ac5wzw0000042

MAP LIGHT BULB REMOVAL/INSTALLATION

id091800812500

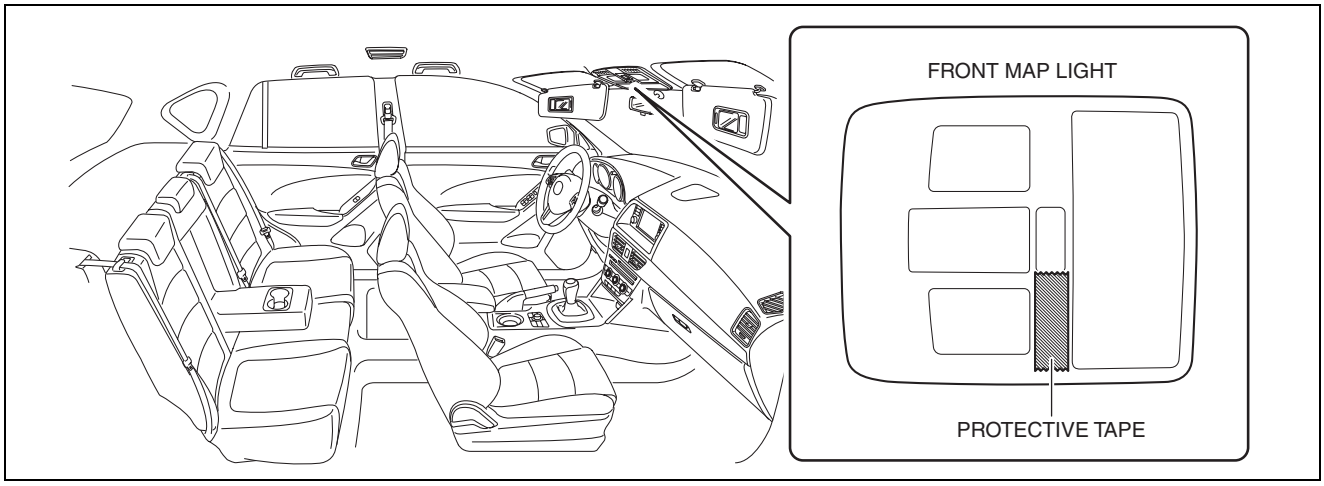
Front Map Light

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. To prevent scratches or damage, affix protective tape to the position shown in the figure.

Caution

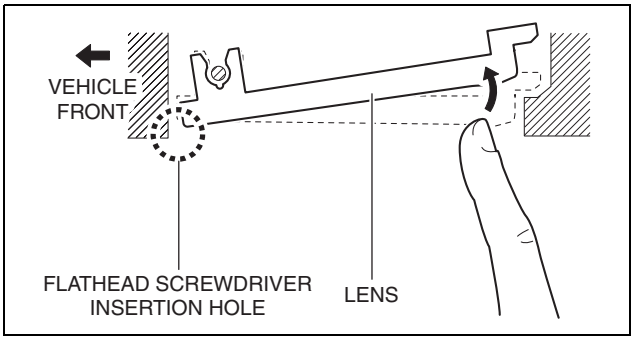
- **If a flathead screwdriver is inserted into the gap between the front map light and lens, the front map light could interfere with the flathead screwdriver resulting in damage to the front map light. When removing the lens from the front map light, perform the procedure after affixing protective tape to the front map light.**

LIGHTING SYSTEMS



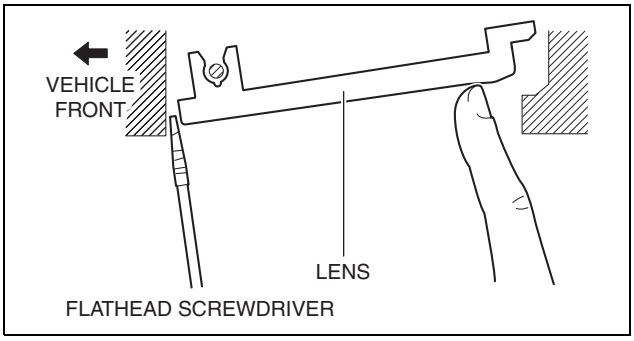
ac5wzw0000047

3. Press the lens to secure a sufficient space for inserting a flathead screwdriver.



ac5wzw0000119

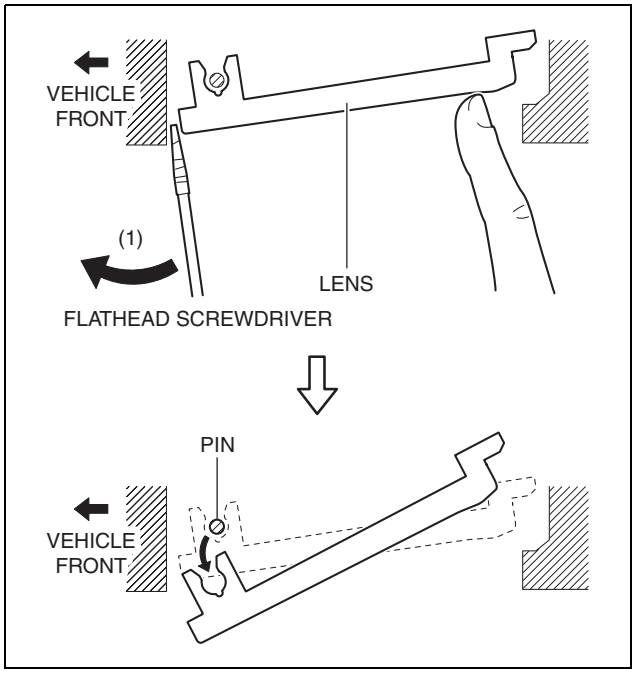
4. Insert a tape-wrapped flathead screwdriver into the gap between the lens and front map light shown in the figure.



ac5wzw0000005

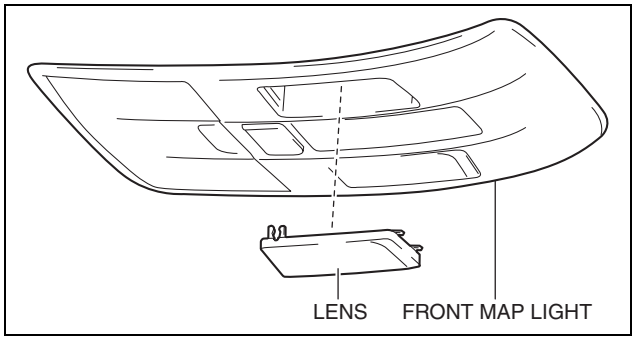
LIGHTING SYSTEMS

5. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, pull out the lens from the front map light, and detach the front map light pin and lens.



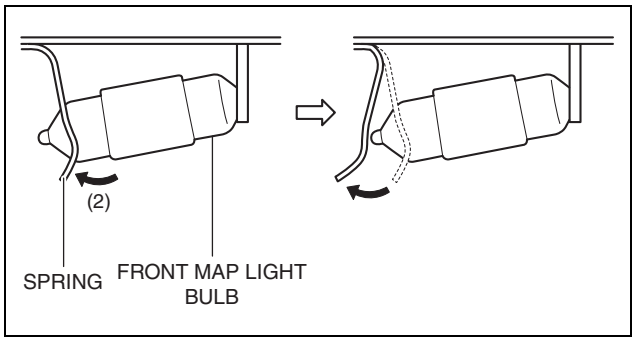
ac5wzw0000005

6. Remove the lens.



ac5wzw0000047

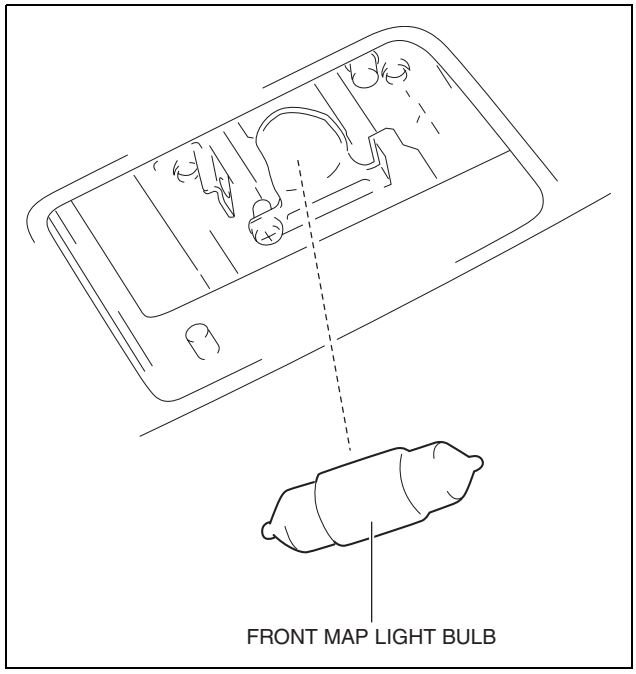
7. Press the front map light spring in the direction of the arrow (2) shown in the figure and detach the front map light spring and front map light bulb.



ac5wzw0000119

LIGHTING SYSTEMS

8. Remove the front map light bulb.
9. Install in the reverse order of removal.



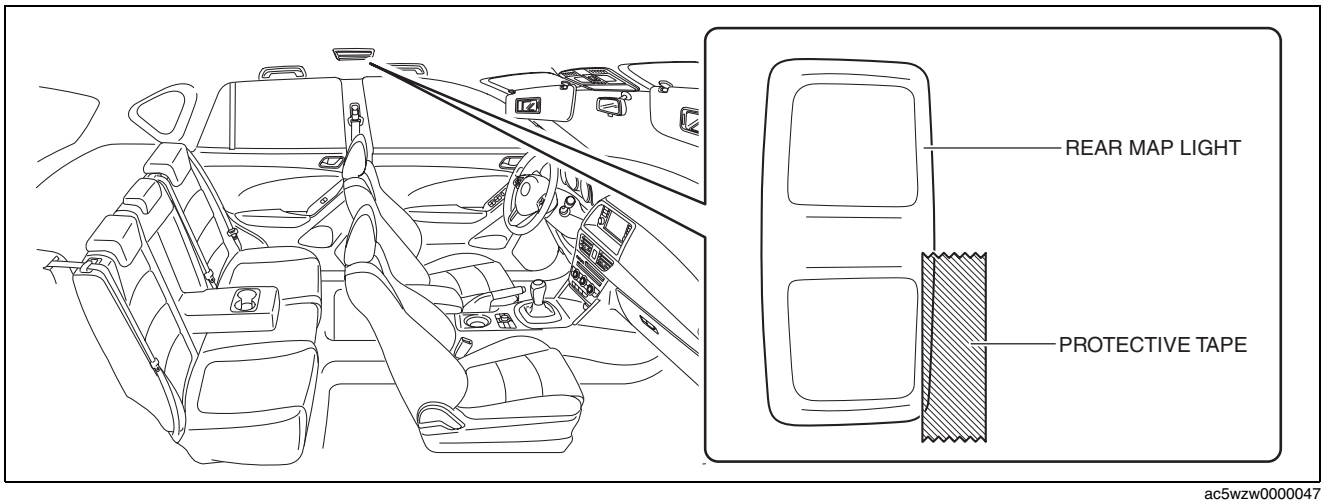
ac5wzw0000005

Rear Map Light

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. To prevent scratches or damage, affix protective tape to the position shown in the figure.

Caution

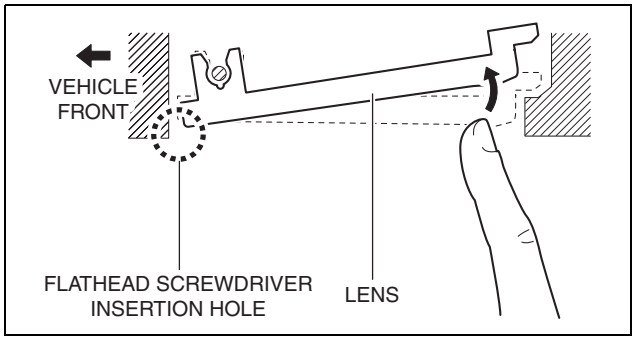
- **If a flathead screwdriver is inserted into the gap between the rear map light and lens, the rear map light could interfere with the flathead screwdriver resulting in damage to the rear map light. When removing the lens from the rear map light, perform the procedure after affixing protective tape to the rear map light.**



ac5wzw0000047

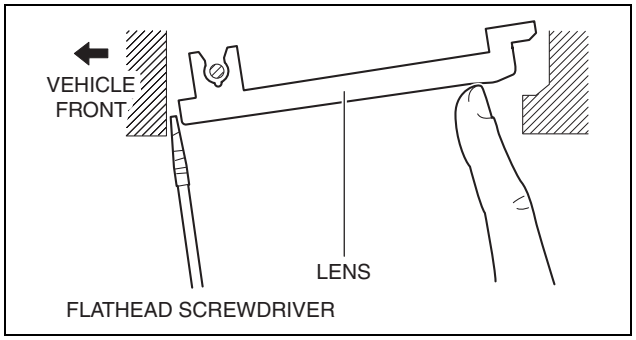
LIGHTING SYSTEMS

3. Press the lens to secure a sufficient space for inserting a flathead screwdriver.



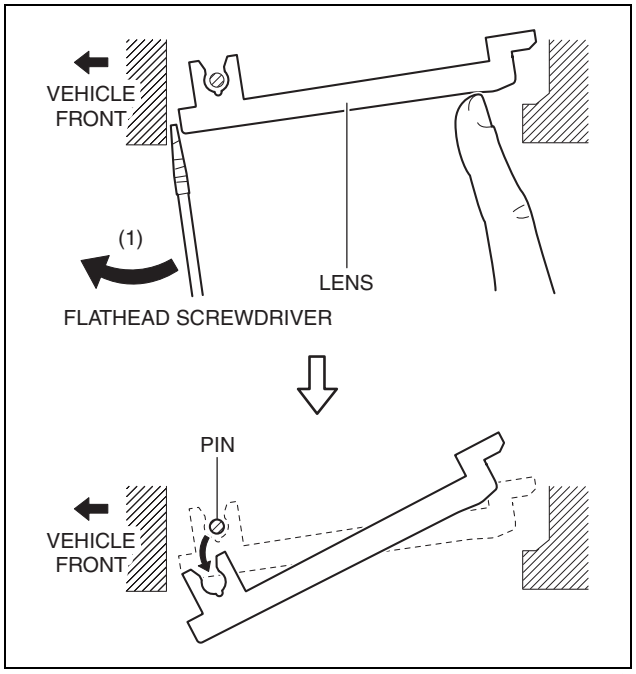
ac5wzw0000119

4. Insert a tape-wrapped flathead screwdriver into the gap between the lens and rear map light shown in the figure.



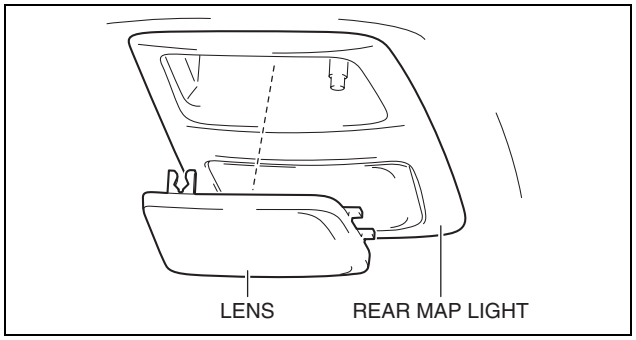
ac5wzw0000047

5. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, pull out the lens from the rear map light, and detach the rear map light pin and lens.



ac5wzw0000047

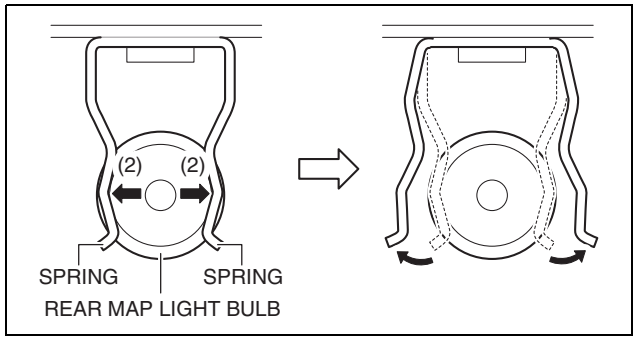
6. Remove the lens.



ac5wzw0000047

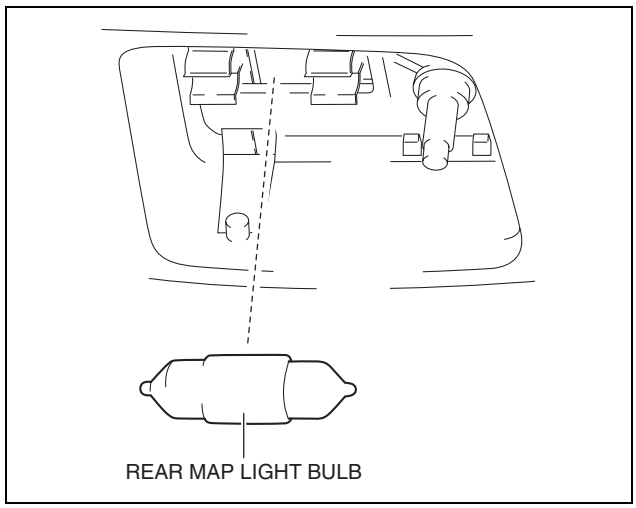
LIGHTING SYSTEMS

7. Move the rear map light spring in the direction of the arrow (2) shown in the figure and detach the rear map light spring and rear map light bulb.



ac5wzw0000120

8. Remove the rear map light bulb.
9. Install in the reverse order of removal.



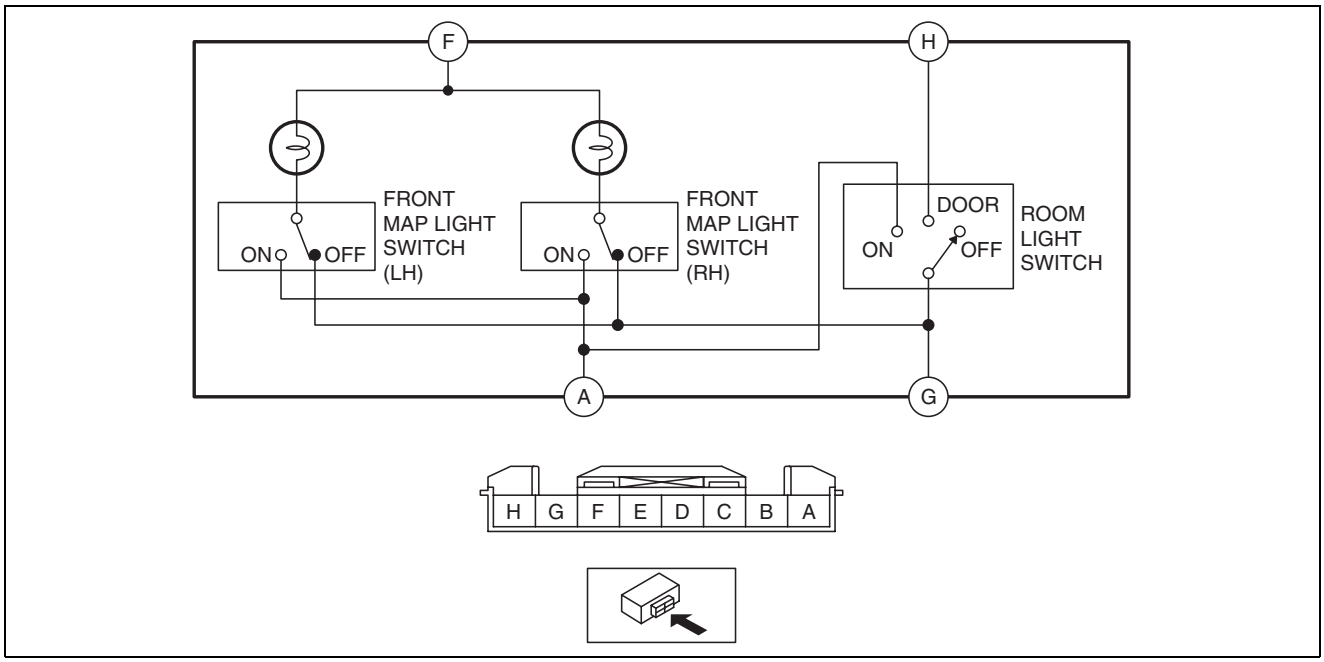
ac5wzw0000048

MAP LIGHT INSPECTION

id091800801300

Front Map Light

1. Remove the front map light. (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)
2. Verify that the continuity between the front map light terminals is as indicated in the table.



ac5wzw0000001

LIGHTING SYSTEMS

: Bulb : Continuity

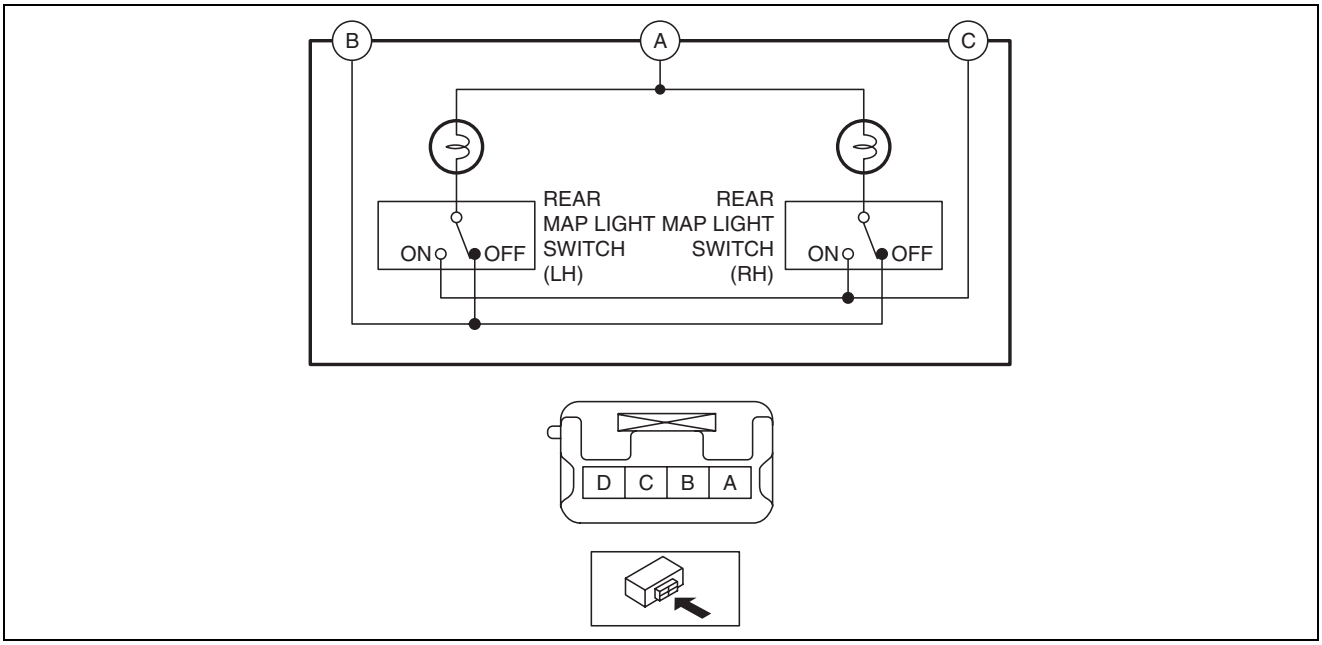
Switch position			Terminal			
Front map light switch (LH)	Front map light switch (RH)	Room light switch	A	F	G	H
OFF	OFF	OFF				
ON	OFF	OFF				
OFF	ON	OFF				
—	—	ON				
—	—	DOOR				

ac5wzw0000302

- If not as indicated in the table, replace the front map light or front map light bulb. (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.) (See 09-18-98 MAP LIGHT BULB REMOVAL/INSTALLATION.)

Rear Map Light

1. Remove the rear map light. (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)
2. Verify that the continuity between the rear map light terminals is as indicated in the table.



ac5wzw0000042

- If not as indicated in the table, replace the rear map light. (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)

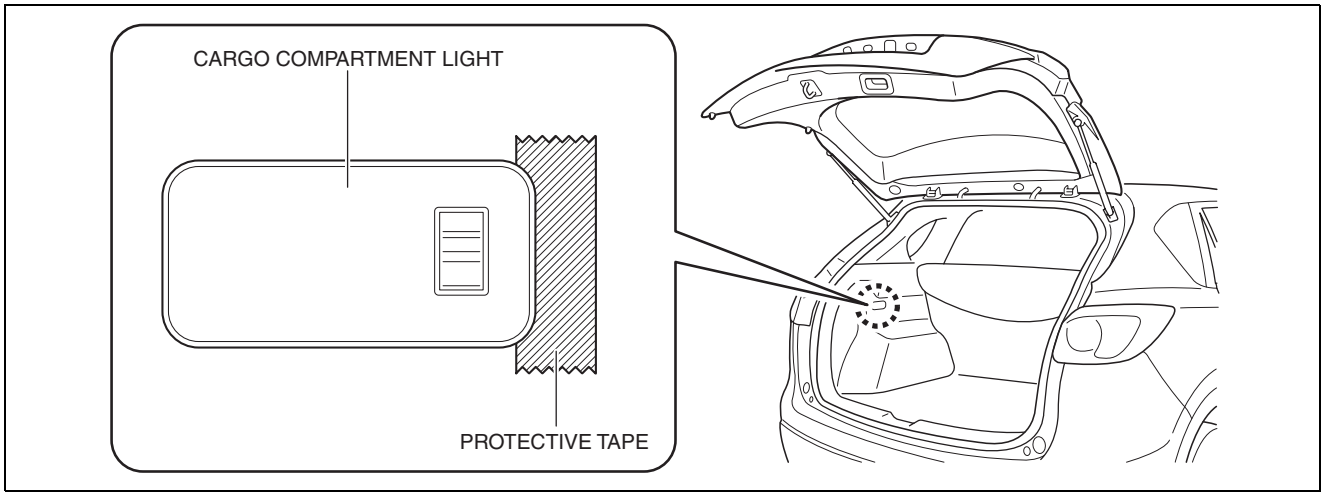
CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION

id091800801700

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. To prevent scratches or damage, affix protective tape to the position shown in the figure.

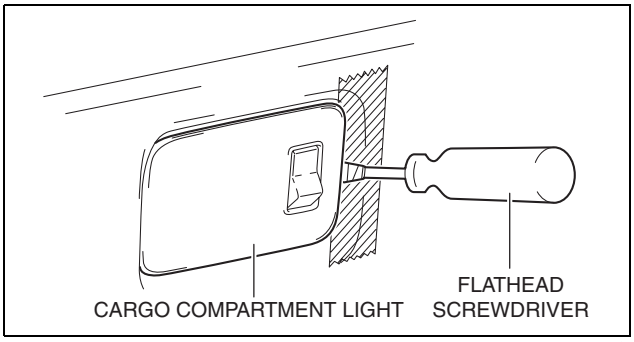
Caution

- **If a flathead screwdriver is inserted into the gap between the cargo compartment light and trunk side trim, the trunk side trim could interfere with the flathead screwdriver and be damaged. When removing the cargo compartment light from the trunk side trim, perform the procedure after affixing protective tape to the trunk side trim.**

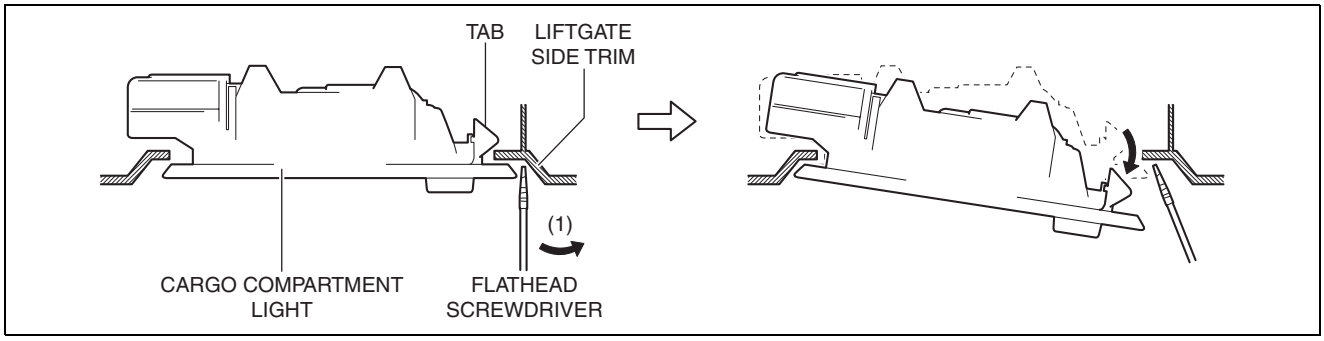


ac5wzw0000002

3. Insert a tape-wrapped flathead screwdriver into the gap between the cargo compartment light and trunk side trim shown in the figure.
4. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, pull out the cargo compartment light from the trunk side trim, and detach the cargo compartment light tab and trunk side trim.



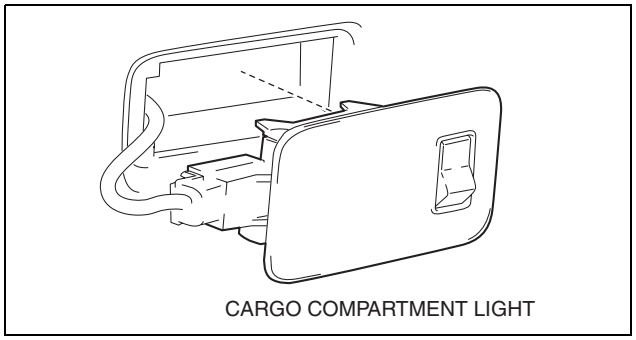
ac5wzw0000042



ac5wzw0000042

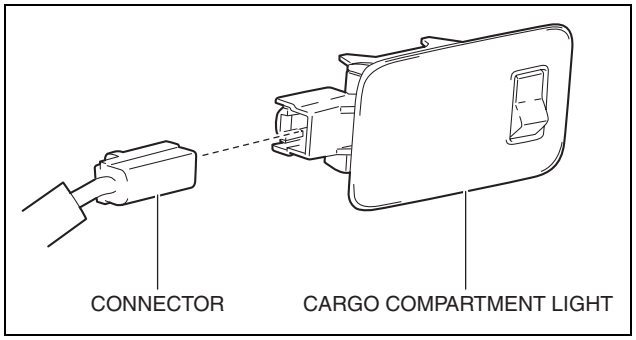
LIGHTING SYSTEMS

5. Remove the cargo compartment light.



ac5wzw0000042

6. Disconnect the connector.
7. Install in the reverse order of removal.



ac5wzw0000002

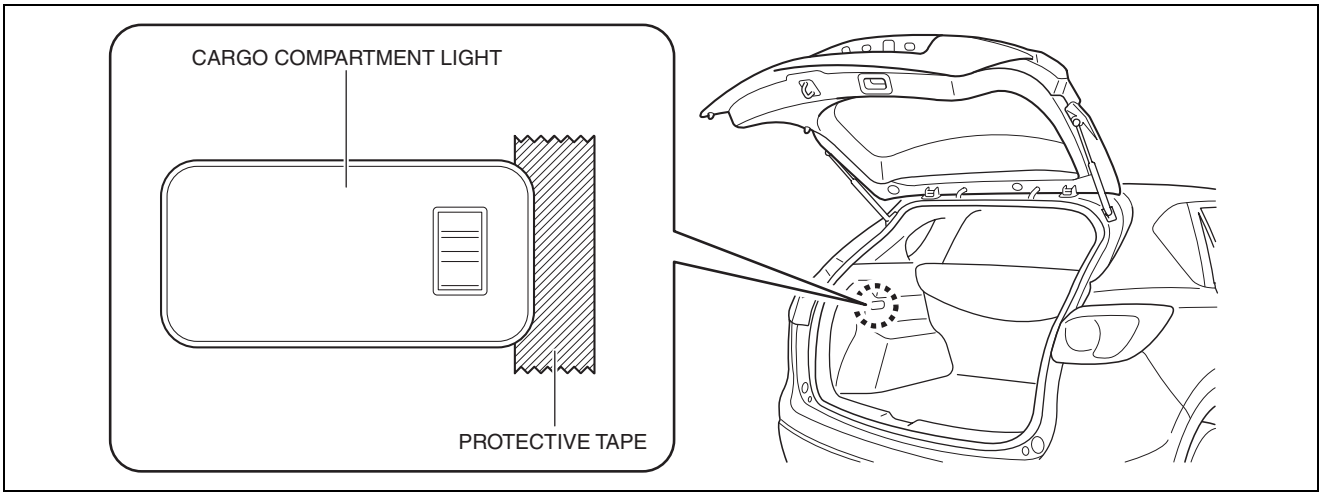
CARGO COMPARTMENT LIGHT BULB REMOVAL/INSTALLATION

id091800807800

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. To prevent scratches or damage, affix protective tape to the position shown in the figure.

Caution

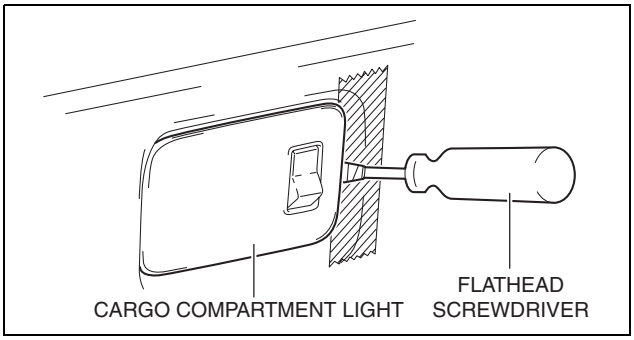
- **If a flathead screwdriver is inserted into the gap between the cargo compartment light and trunk side trim, the trunk side trim could interfere with the flathead screwdriver and be damaged. When removing the cargo compartment light from the trunk side trim, perform the procedure after affixing protective tape to the trunk side trim.**



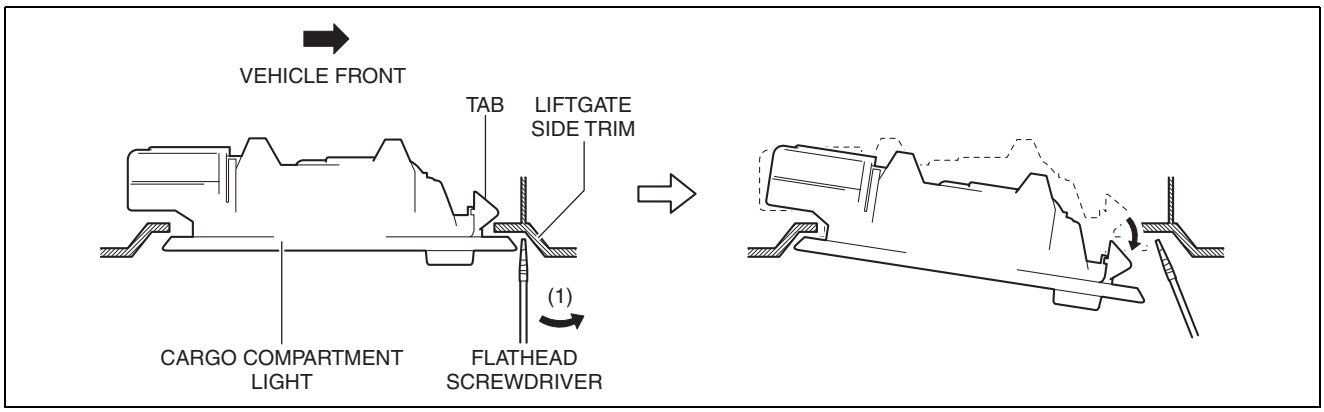
ac5wzw0000003

LIGHTING SYSTEMS

3. Insert a tape-wrapped flathead screwdriver into the gap between the cargo compartment light and trunk side trim shown in the figure.
4. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, pull out the cargo compartment light from the trunk side trim, and detach the cargo compartment light tab and trunk side trim.

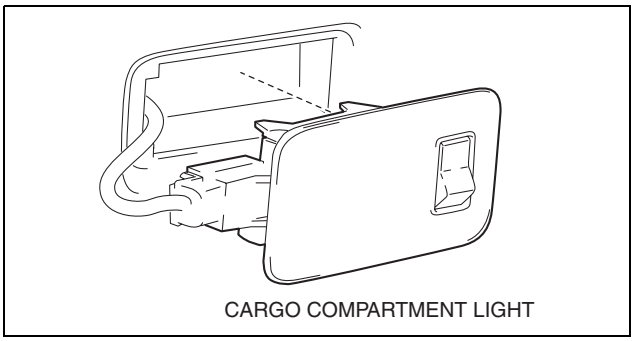


ac5wzw0000004



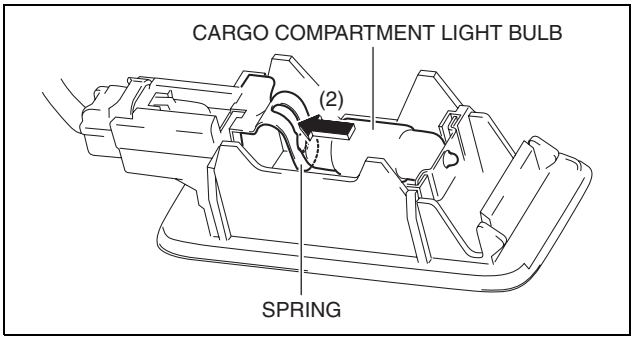
ac5wzw0000004

5. Remove the cargo compartment light.



ac5wzw0000046

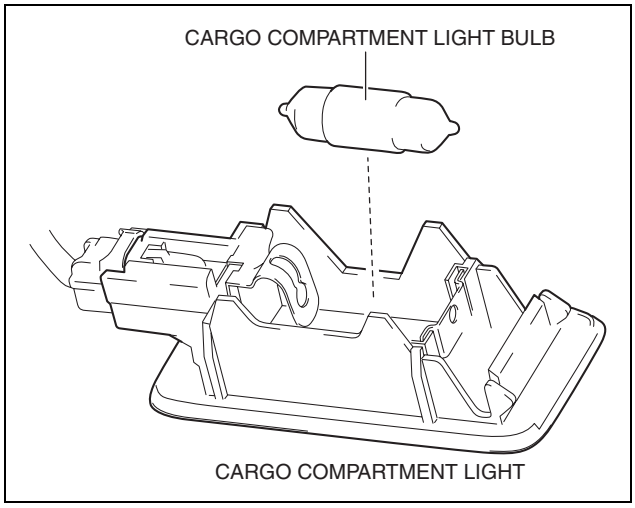
6. Press the cargo compartment light spring in the direction of the arrow (2) shown in the figure and detach it and the cargo compartment light bulb.



ac5wzw0000119

LIGHTING SYSTEMS

7. Remove the cargo compartment light bulb.
8. Install in the reverse order of removal.

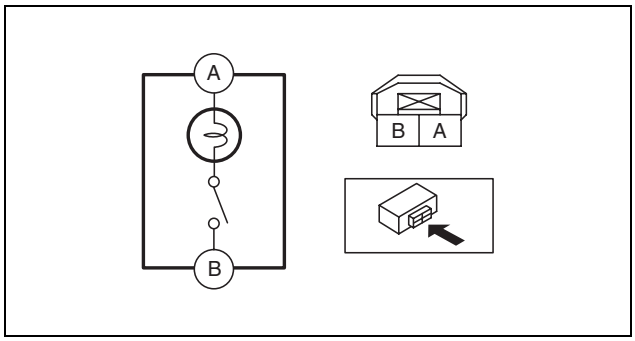


ac5wzw0000004

CARGO COMPARTMENT LIGHT INSPECTION

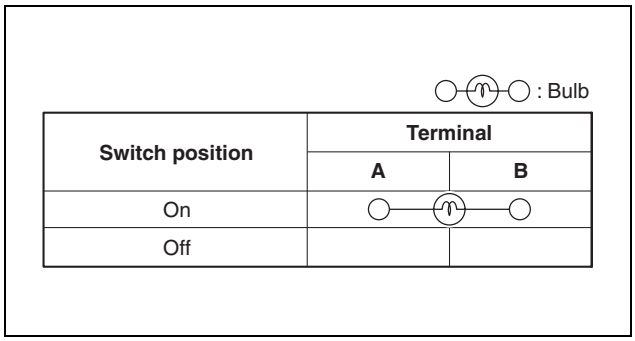
id091800801800

1. Remove the cargo compartment light. (See 09-18-105 CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION.)
2. Verify that the continuity between the cargo compartment light terminals is as indicated in the table.



ac5wzw0000002

- If not as indicated in the table, replace the cargo compartment light. (See 09-18-105 CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION.)



ac5wzw0000042

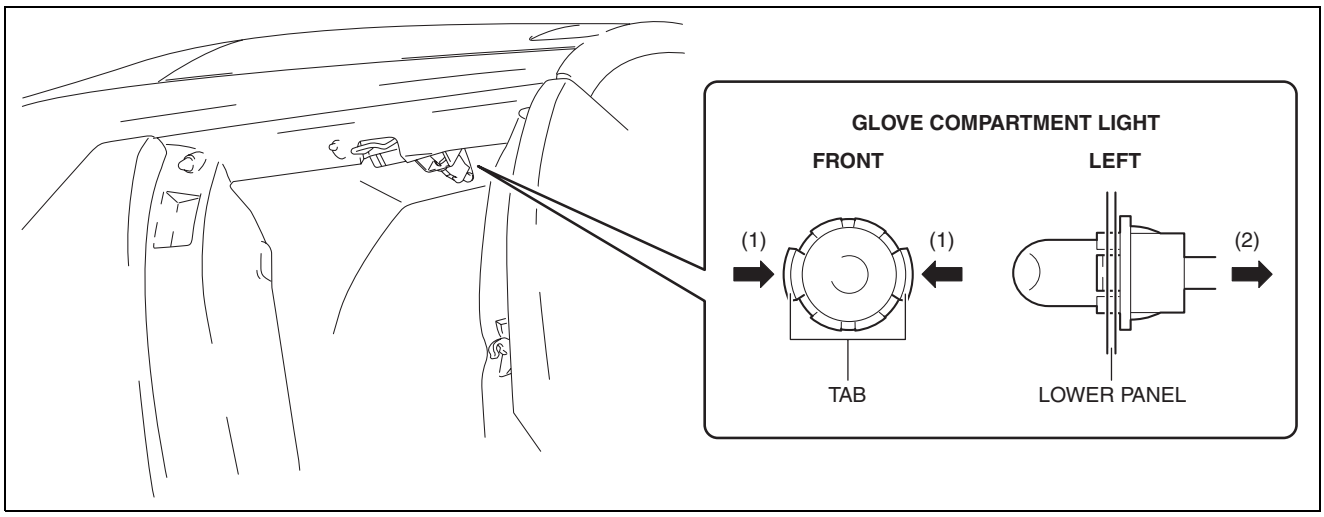
GLOVE COMPARTMENT LIGHT BULB REMOVAL/INSTALLATION

id091800801900

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Open the glove compartment.

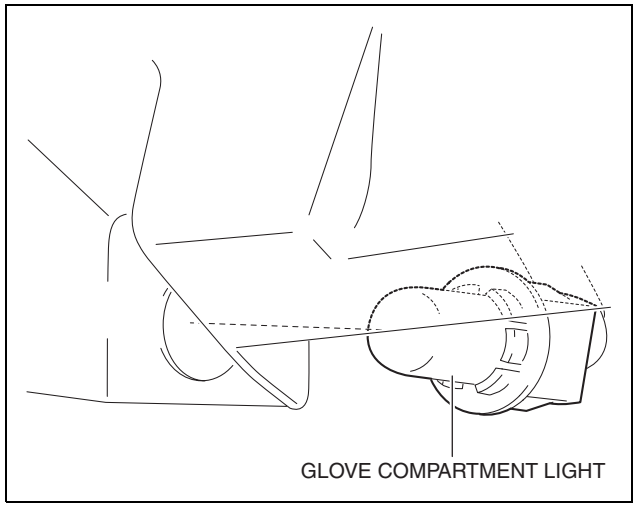
LIGHTING SYSTEMS

3. While pressing the glove compartment light tab in the direction of the arrow (1) shown in the figure, pull out the glove compartment light in the direction of the arrow (2) shown in the figure to detach the glove compartment light tab and lower panel.



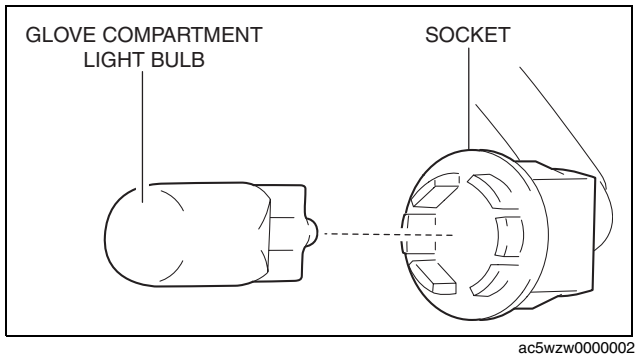
ac5wzw0000002

4. Remove the glove compartment light.



ac5wzw0000042

5. Remove the glove compartment light bulb.
6. Install in the reverse order of removal.



ac5wzw0000002

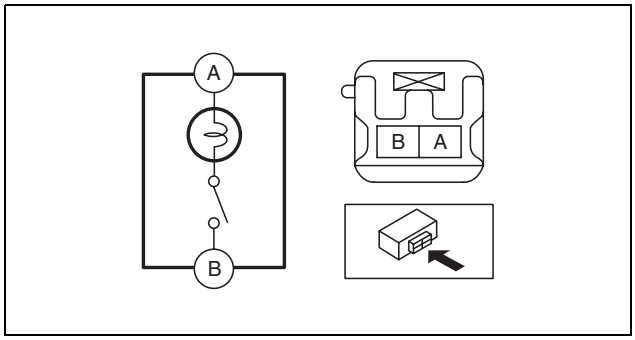
VANITY MIRROR ILLUMINATION INSPECTION

id091800808500

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the sunvisor. (See 09-17-93 SUNVISOR REMOVAL/INSTALLATION.)

LIGHTING SYSTEMS

3. Verify that the continuity between the vanity mirror illumination terminals is as indicated in the table.



ac5wzw0000004

- If not as indicated in the table, replace the sunvisor. (See 09-17-93 SUNVISOR REMOVAL/INSTALLATION.)

WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION

id091900800700

Windshield wiper arm

1. Open the bonnet.

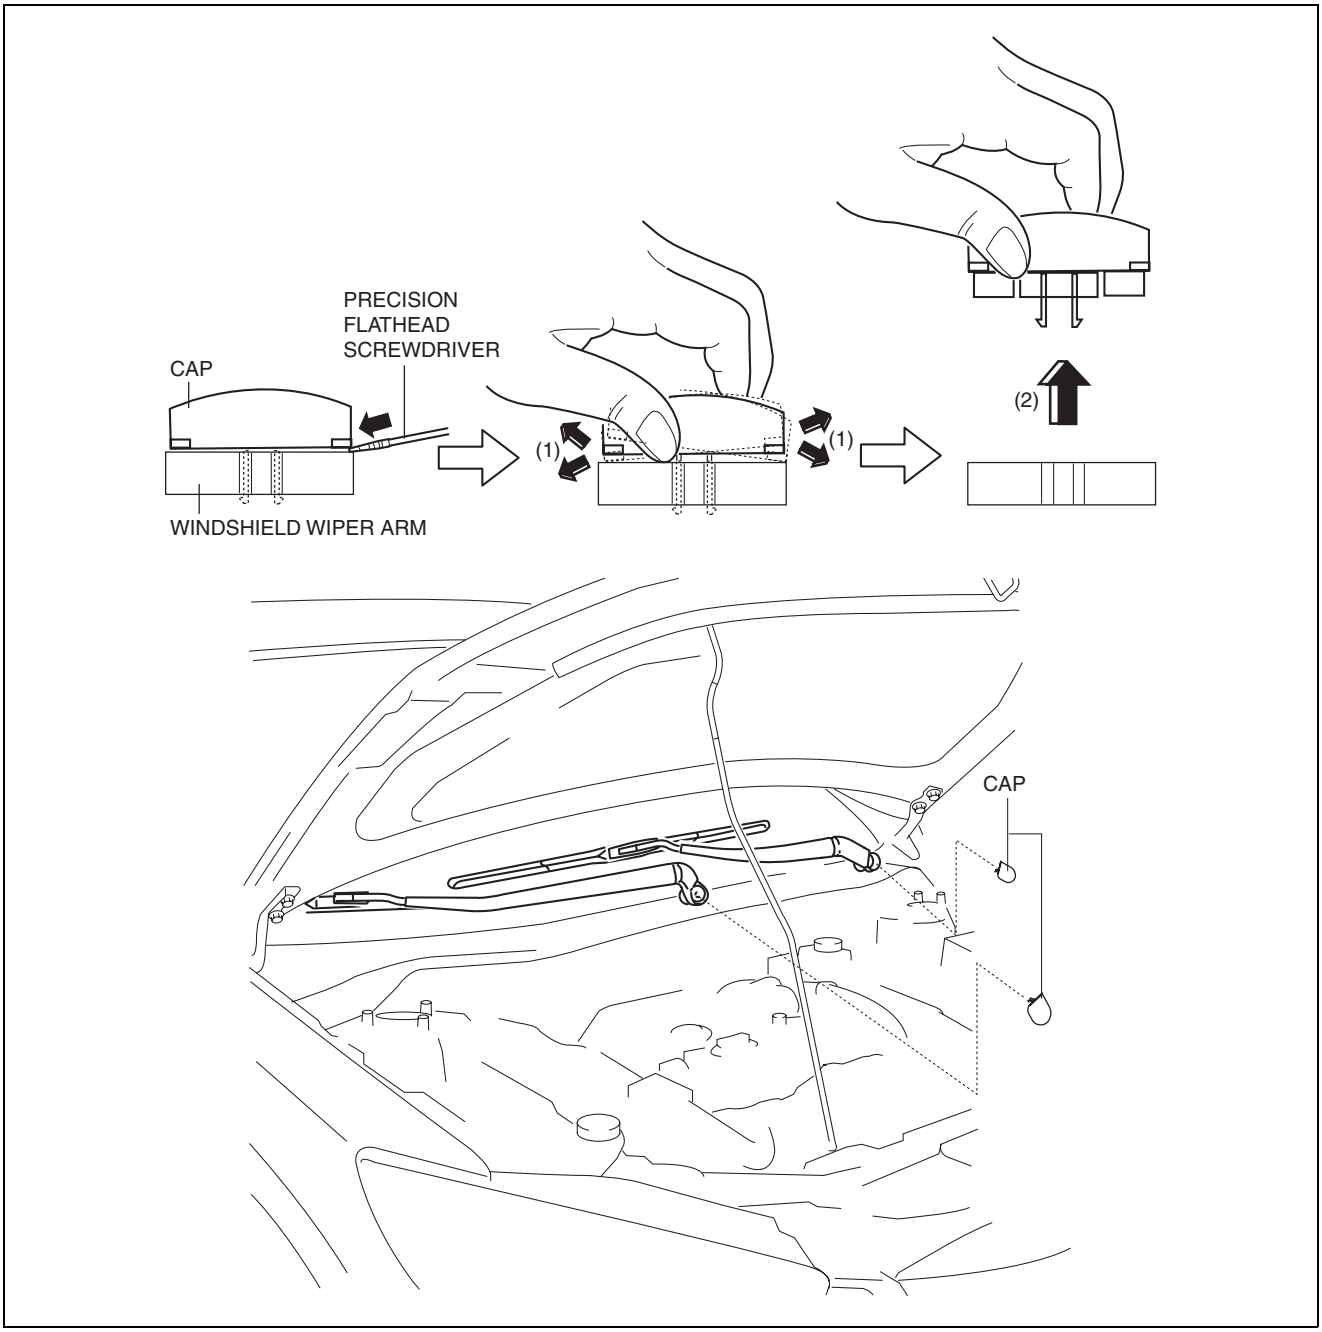
Caution

- **If excessive force is applied when removing the cap, tabs could break. Carefully remove the cap.**

2. Insert a tape-wrapped precision flathead screwdriver into the gap between the windshield wiper arm and cap, and slightly raise the cap.

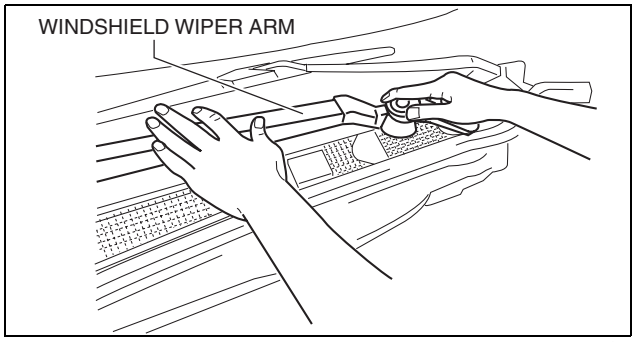
WIPER/WASHER SYSTEM

3. Detach cap tabs from the windshield wiper arm while slightly moving the cap in the direction of the arrows (1) shown in the figure, carefully pull it up in the direction of the arrow (2), and remove it.



ac5wzw0000296

4. Loosen nuts until it is jointed temporarily with the windshield wiper arm pressed as shown in the figure.
5. Close the bonnet.



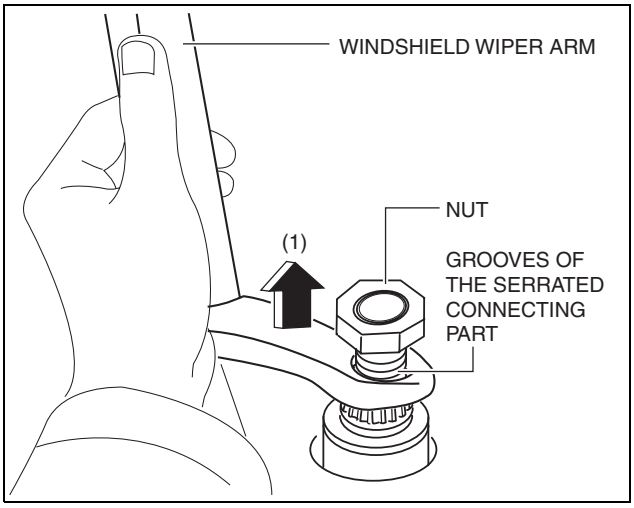
ac5wzw0000160

WIPER/WASHER SYSTEM

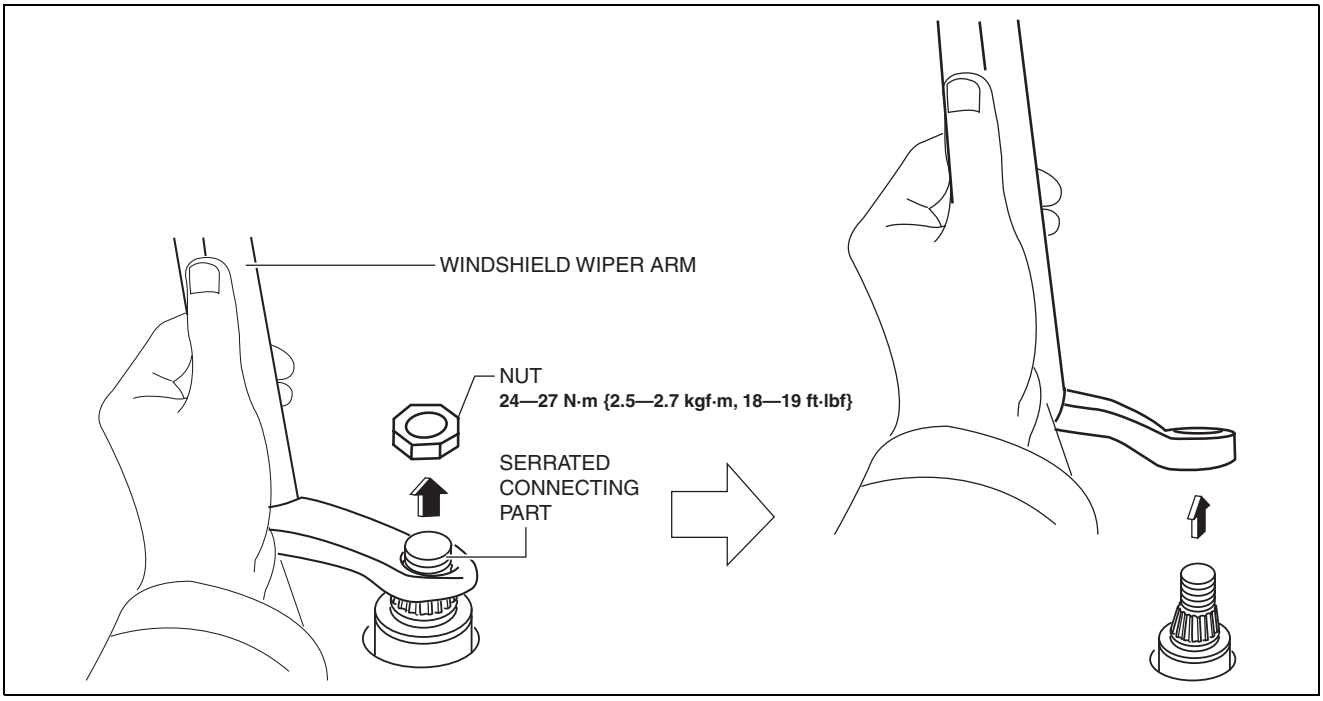
6. Raise the windshield wiper arm as shown in the figure and pull it up until the temporary joint nut points outward in the direction of the arrow (1) from the serrated connecting part.

Caution
- **Always temporarily tighten the temporary joint nut when removing the windshield wiper arm. If it is removed from the serrated connecting part without temporarily tightening the nut, the windshield wiper arm could contact the bonnet.**

7. Remove the nut.
8. Remove the windshield wiper arm. (See 09-19-5 Windshield Wiper Arm Installation Note.)



ac5wzw0000160

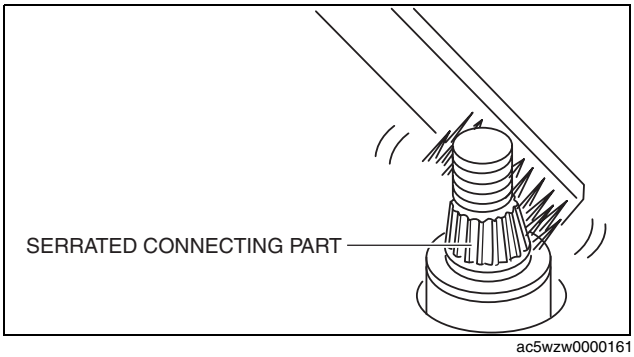


ac5wzw0000219

9. Install in the reverse order of removal.
10. Adjust the windshield wiper arm and blade. (See 09-19-7 WINDSHIELD WIPER ARM AND BLADE ADJUSTMENT.)

Windshield Wiper Arm Installation Note

1. Clean the serrated connecting part with a wire brush before installing the windshield wiper arm.



ac5wzw0000161

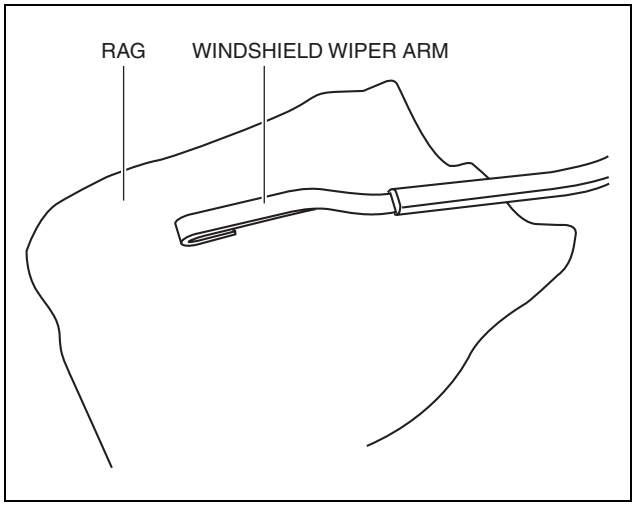
WIPER/WASHER SYSTEM

Windshield wiper blade

Caution

- **If the windshield wiper arm end is placed directly on the windshield after removing the windshield wiper blade, it could scratch the windshield. If the windshield wiper arm end is placed on the windshield, place it on a rag to protect the windshield.**

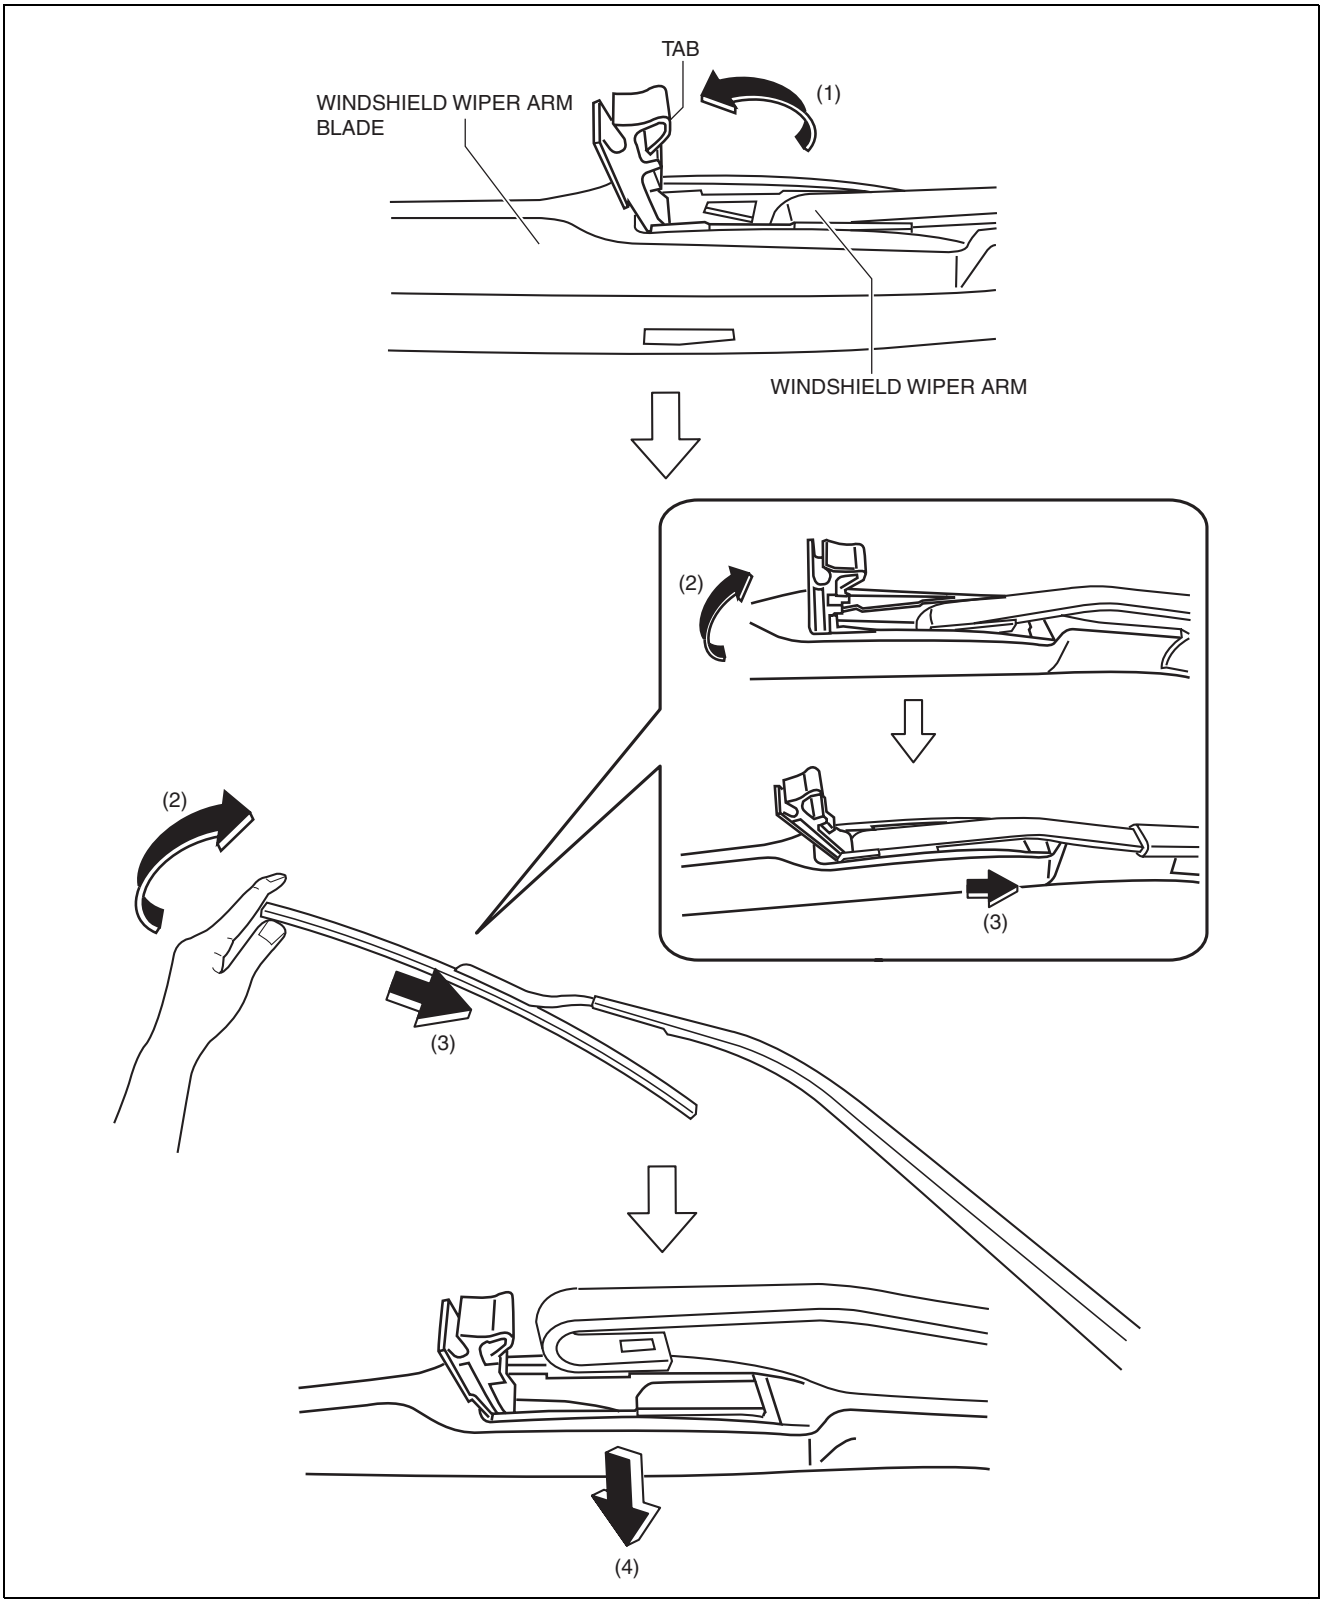
1. Pull the windshield wiper blade tab up in the direction of the arrow (1).
2. Press the windshield wiper blade end in the direction of the arrow (3) while tilting it in the direction of the arrow (2).



ac5wzw0000161

WIPER/WASHER SYSTEM

3. Remove the windshield wiper blade in the direction of the arrow (4) from the windshield wiper arm.



ac5wzw0000248

4. Install in the reverse order of removal.

WINDSHIELD WIPER ARM AND BLADE ADJUSTMENT

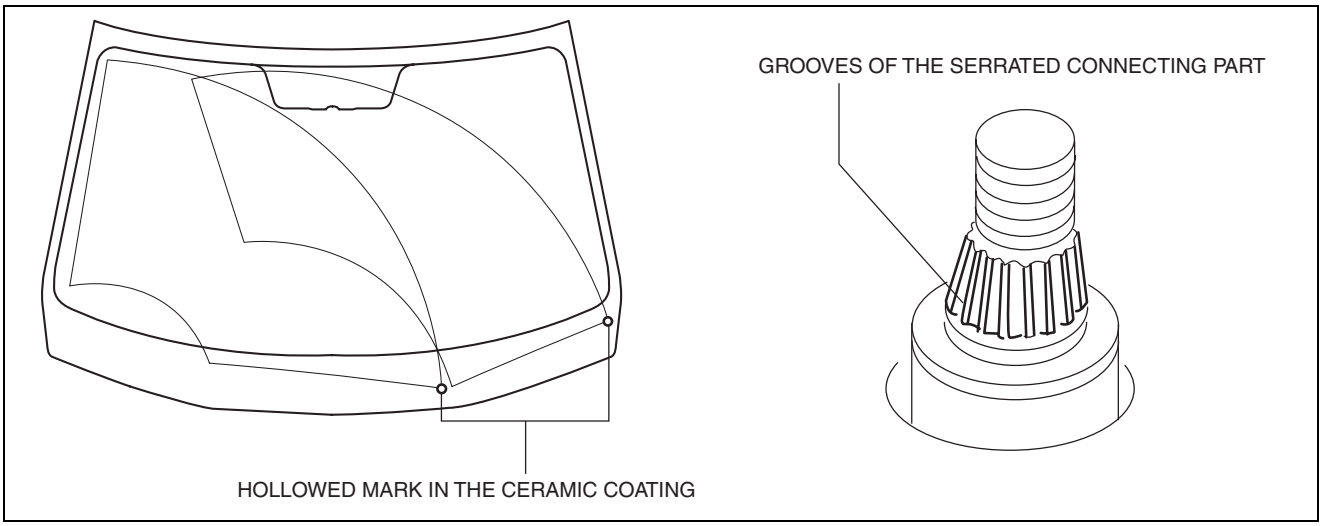
id091900800800

1. Switch the ignition ON (engine off or on).
2. Operate the windshield wiper at low speed.
3. Verify that the windshield wiper operates at low speed and stop the windshield wiper.
4. Verify that the windshield wiper stops at the auto-stop position.

WIPER/WASHER SYSTEM

5. Remove the windshield wiper arm and blade. (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
6. Install the windshield wiper arm to the serrated connecting part, adjust the windshield wiper blade so that its end is aligned with the hollowed mark in the ceramic coating while sliding the windshield wiper arm onto the grooves of the serrated connecting part one by one, and temporarily tighten the nut.

R.H.D.

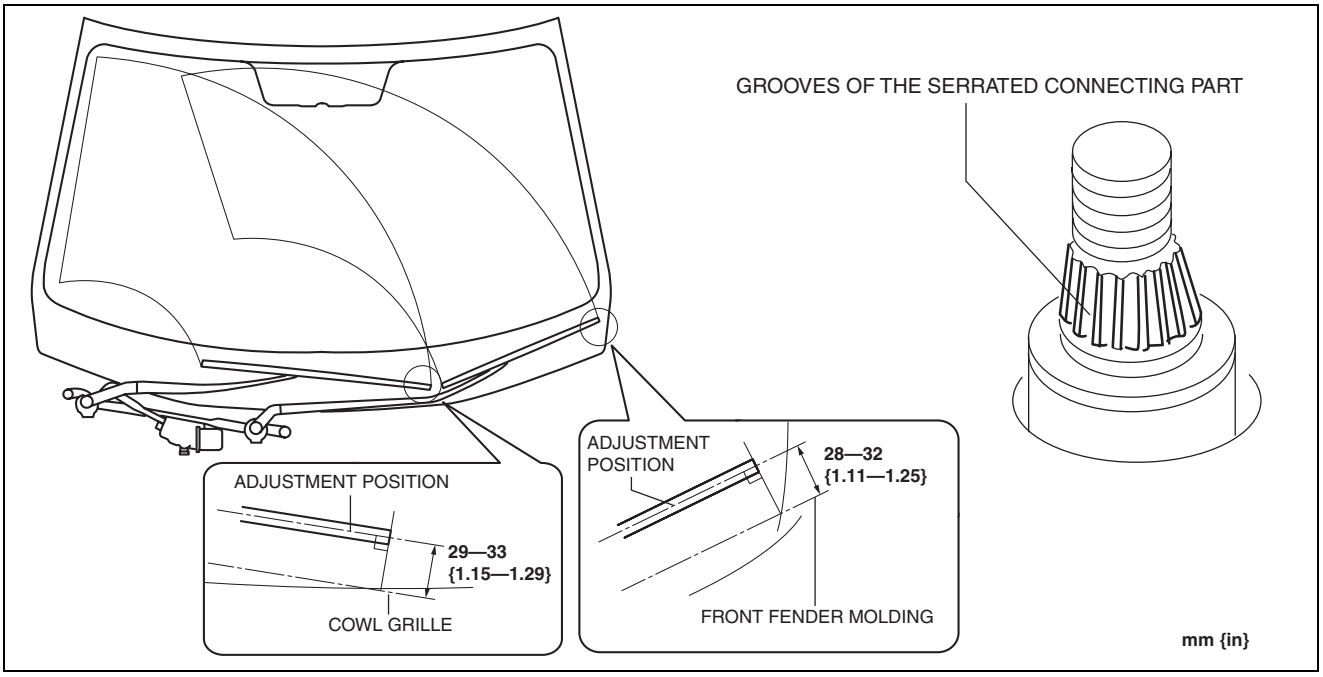


ac5wzw0000248

7. If the hollowed mark in the ceramic coating cannot be located, adjust the windshield wiper blade end to the area shown in the figure.

Note
- If the windshield wiper arm and blade is not installed to the position shown in the figure, repeat the adjustment procedure.

R.H.D.



ac5wzw0000161

8. After adjusting the windshield wiper arm and blade, tighten the nut completely. (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)

WIPER/WASHER SYSTEM

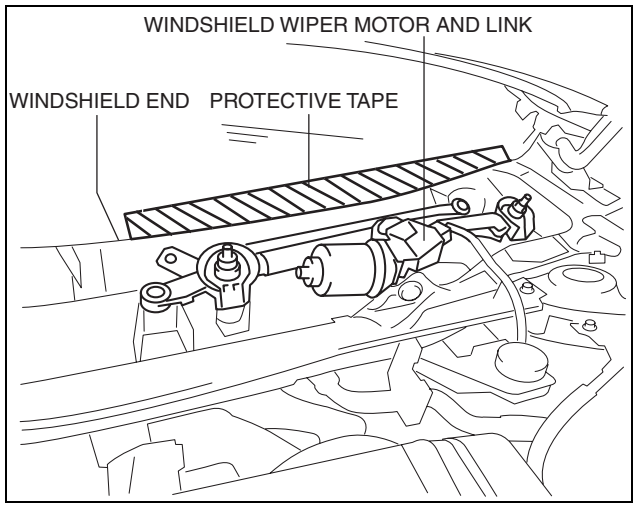
WINDSHIELD WIPER MOTOR AND LINK REMOVAL/INSTALLATION

id091900001200

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Windshield wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
   (2) Cowl grille (See 09-16-3 COWL GRILLE REMOVAL/INSTALLATION.)

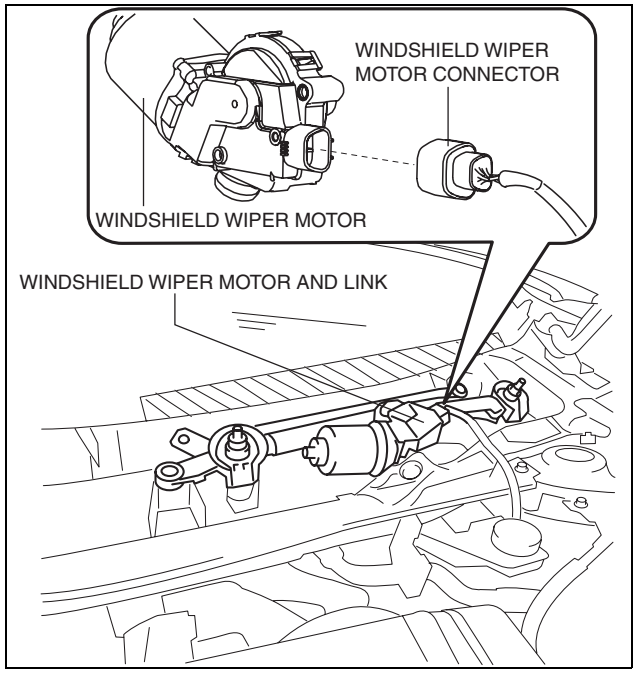
Caution
- **Always affix protective tape to the windshield end. If the windshield wiper motor and link contacts the windshield, it could damage the windshield.**

3. Affix protective tape to the area where the windshield end interferes with the windshield motor and link as shown in the figure.



ac5uuw00001105

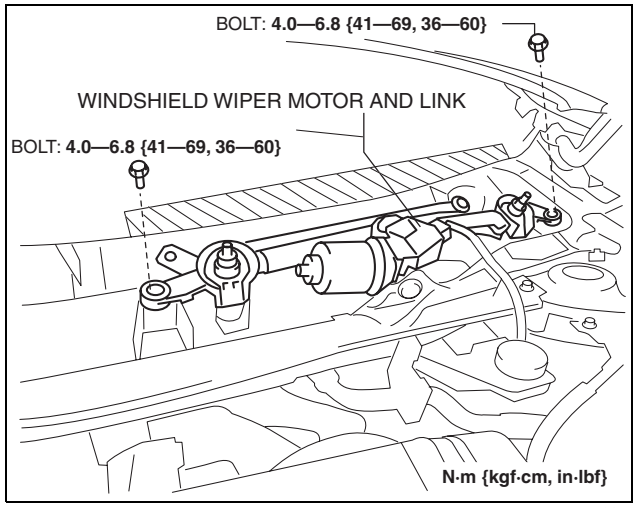
4. Disconnect the windshield wiper motor connector.



ac5wzw0000296

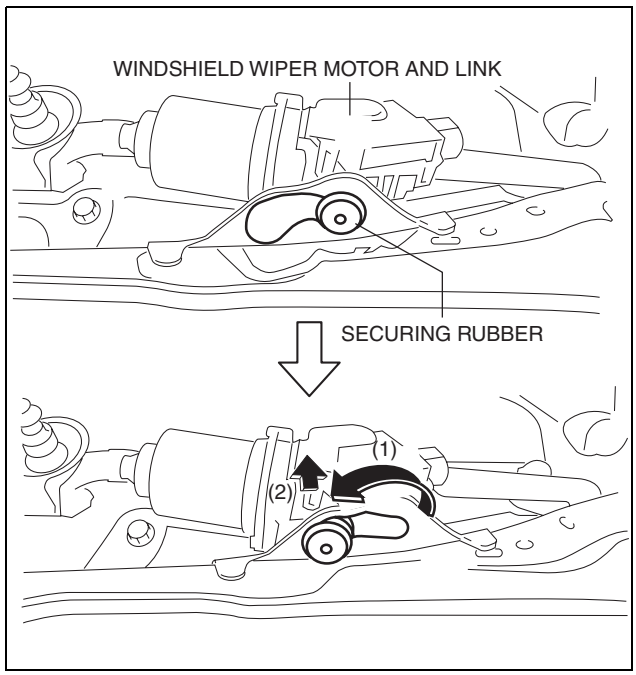
WIPER/WASHER SYSTEM

5. Remove bolts.



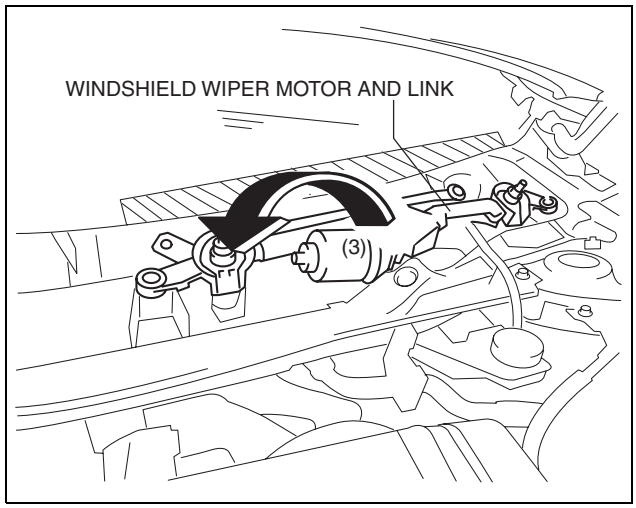
ac5uuw00001107

6. Move the windshield wiper motor and link in the order of the arrows (1) and (2) to remove the securing rubber from the vehicle.



ac5uuw00001108

7. Remove the windshield wiper motor and link from the vehicle in the direction of the arrow (3) while being careful not to allow the windshield wiper end to interfere with the windshield wiper motor and link.



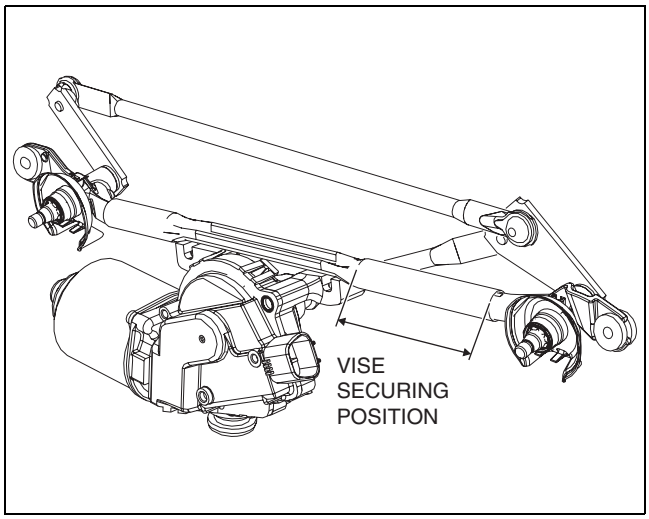
ac5uuw00001109

WIPER/WASHER SYSTEM

8. Fix the position of the windshield wiper link shown in the figure with a vise.

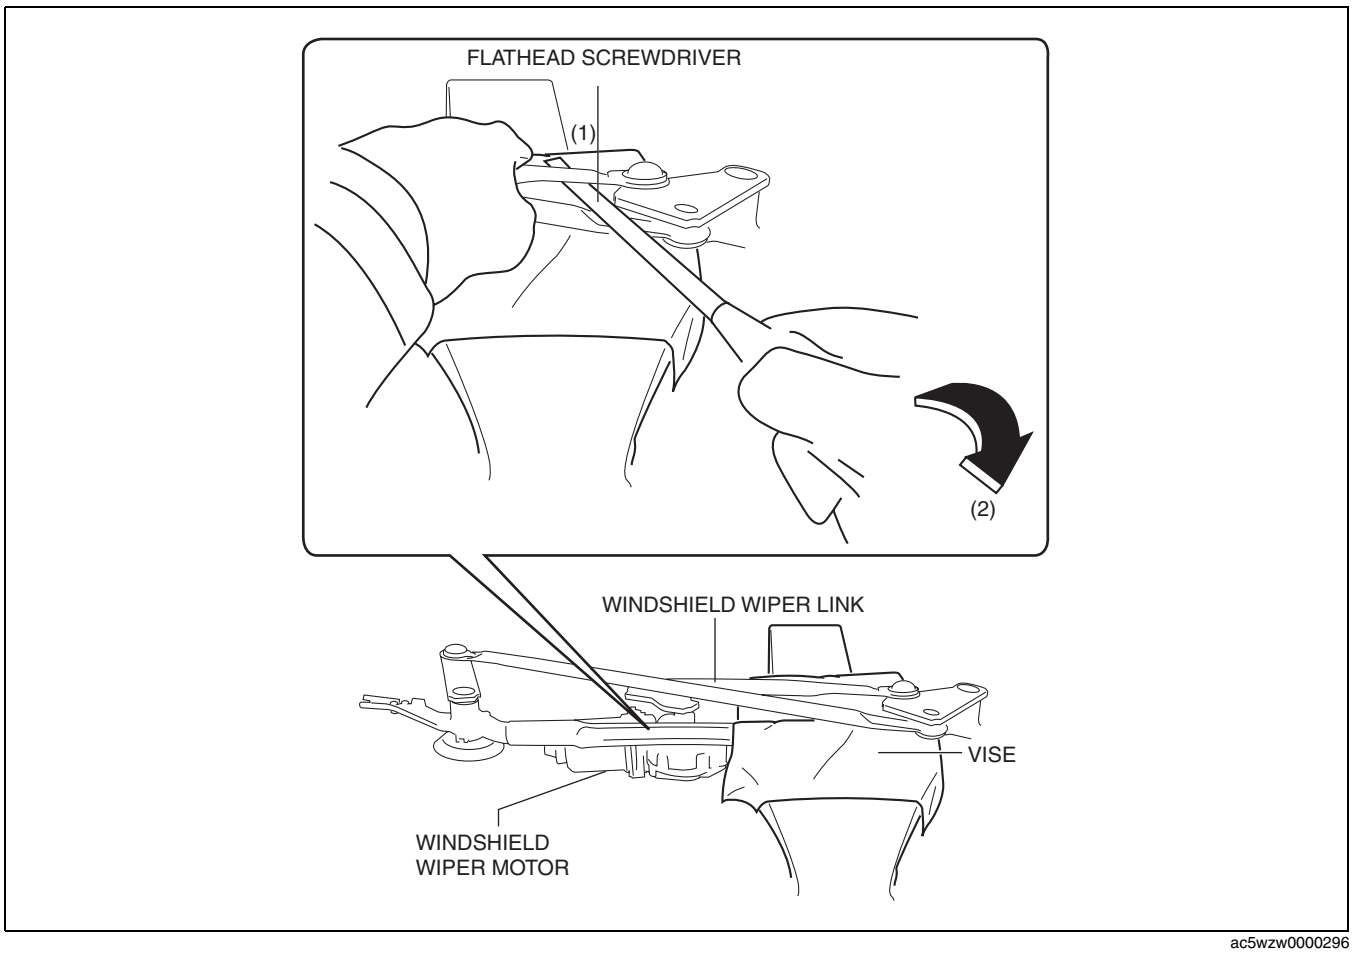
Caution

- **If the vise is tightened with excessive force, it could deform or damage the windshield wiper link. When securing the windshield wiper link in the vise, be careful not to deform or damage the windshield wiper link.**
- **Protect the windshield wiper link by placing a rag in the vise when securing it in the vise. Otherwise, it could damage the vise securing position.**



ac5uuw00001110

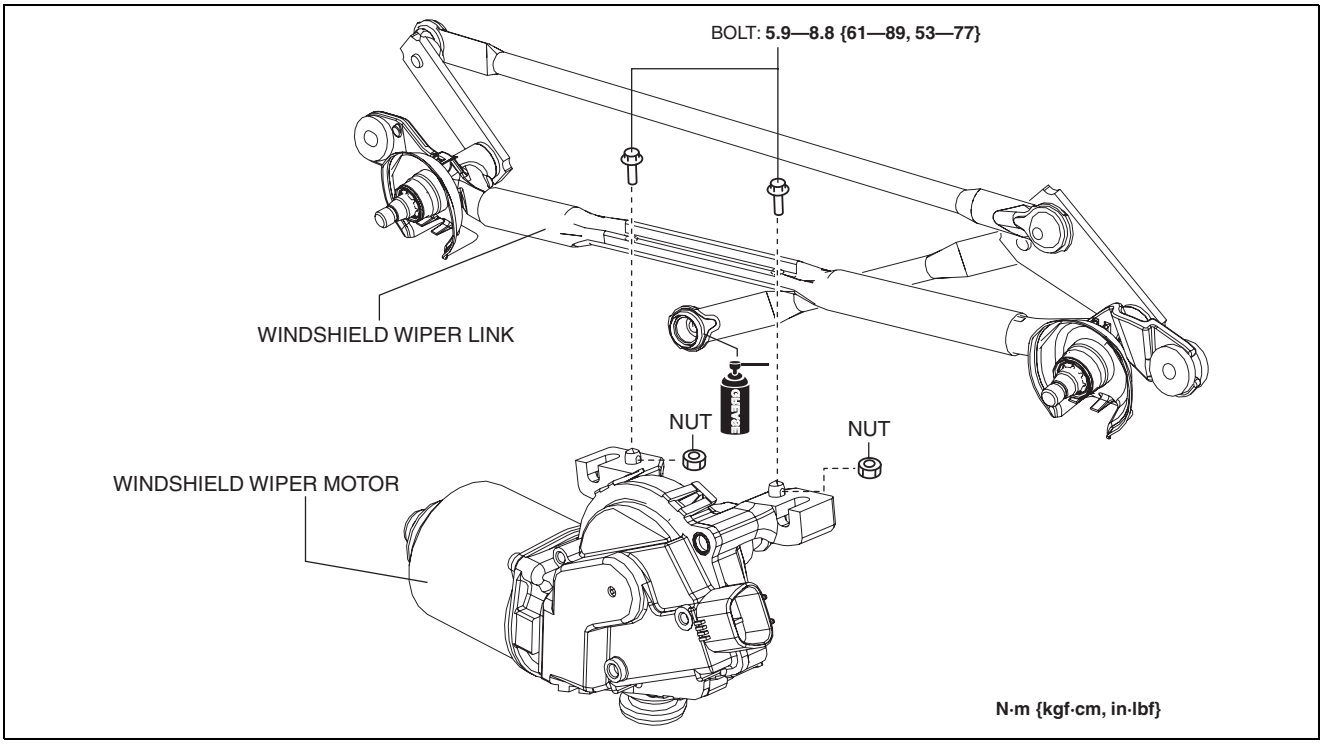
9. Insert a tape-wrapped flathead screwdriver into the (1) position, move the flathead screwdriver in the direction of the arrow (2), and remove the windshield wiper motor and ball joint for the windshield wiper link.



ac5wzw0000296

WIPER/WASHER SYSTEM

10. Remove bolts securing the windshield wiper motor and windshield wiper link, and remove nuts from windshield wiper motor.

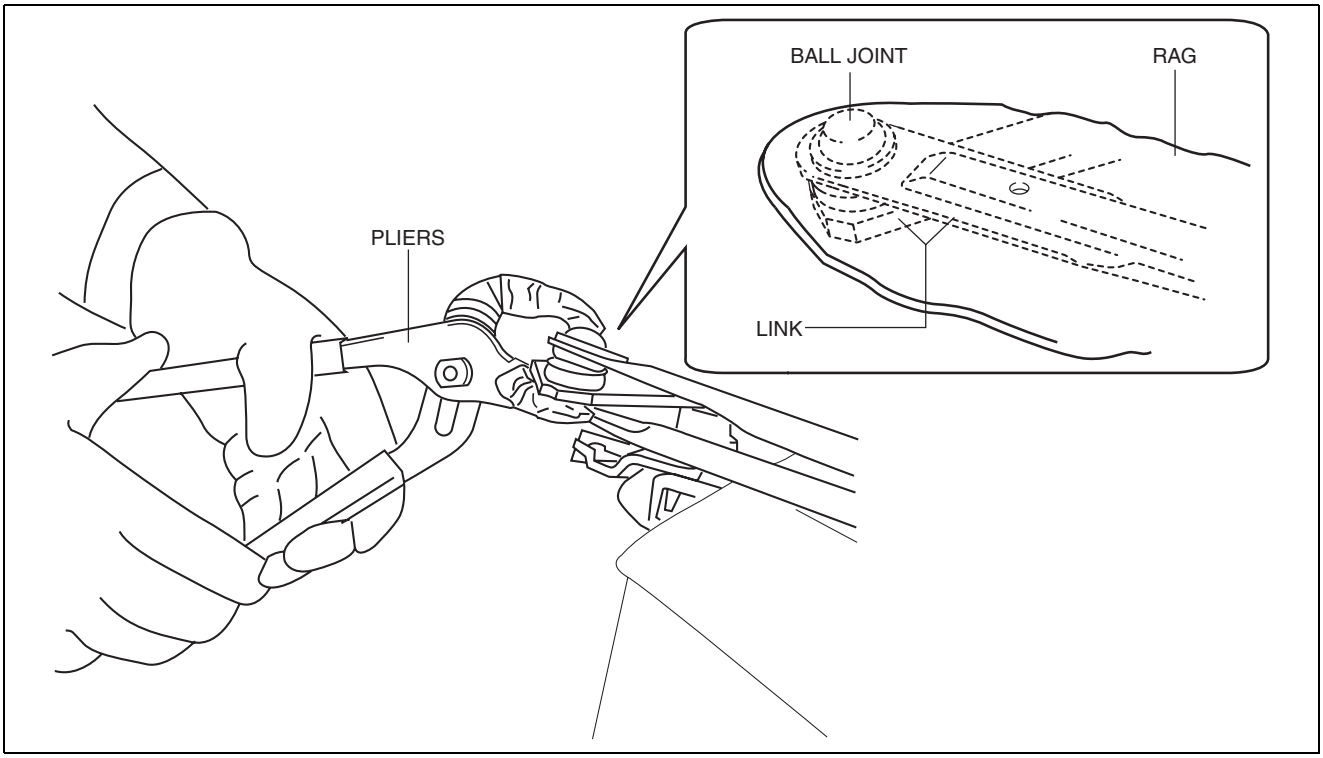


ac5uuw00001112

11. Remove the windshield wiper motor from the windshield wiper link.
12. Install in the reverse order of removal. (See 09-19-13 Ball Joint Assembly Note.)

Ball Joint Assembly Note

1. When assembling the ball joint, use a clean rag to protect the link and squeeze using a pair of protective tape-wrapped pliers.



ac5uuw00001113

WIPER/WASHER SYSTEM

WINDSHIELD WIPER MOTOR INSPECTION

id091900801100

R.H.D.

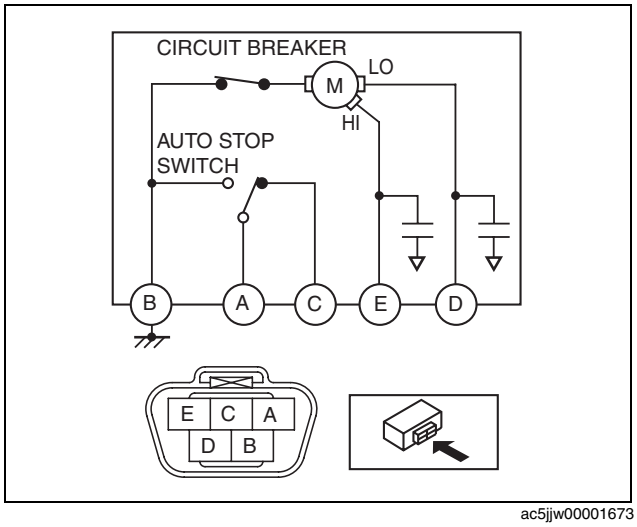
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Windshield wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
   (2) Cowl grille (See 09-16-3 COWL GRILLE REMOVAL/INSTALLATION.)

Windshield Wiper Motor Inspection

1. Apply battery positive voltage and connect the ground to the windshield wiper motor terminals as indicated in the table below and verify the operation condition.

B+	Ground	Windshield wiper motor operation status
D	B	LO
E	B	HI

- If not as indicated in the table, replace the windshield wiper motor. (See 09-19-9 WINDSHIELD WIPER MOTOR AND LINK REMOVAL/INSTALLATION.)



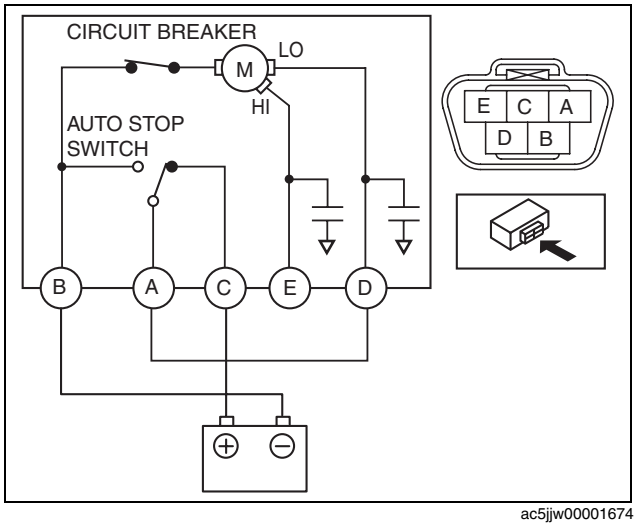
ac5jjw00001673

Auto-stop Operation Inspection

1. Connect the battery voltage to windshield wiper motor terminal D, connect the ground to motor terminal B, and operate the windshield wiper motor at low speed.
2. Disconnect the battery voltage from terminal D during windshield wiper LO operation, and stop the windshield wiper motor halfway.

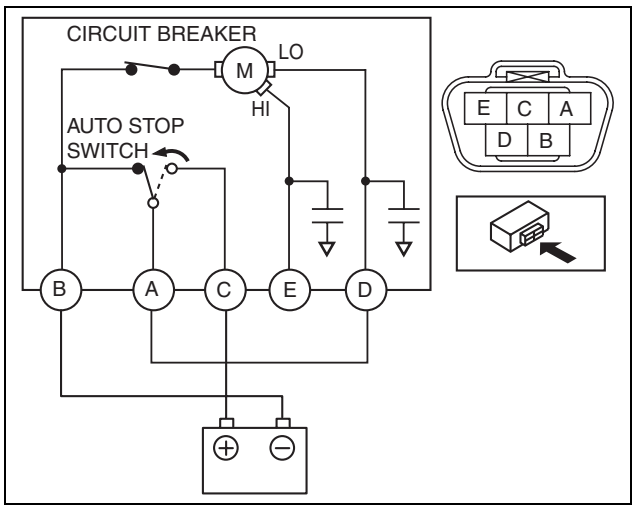
WIPER/WASHER SYSTEM

3. Connect windshield wiper motor terminals D and A using a jumper wire.
4. Connect the battery positive voltage to windshield wiper motor terminal C.



ac5jjw00001674

5. After the windshield wiper motor auto-stop operation, verify that it stops at the park position.
   - If there is any malfunction, replace the windshield wiper motor. (See 09-19-9 WINDSHIELD WIPER MOTOR AND LINK REMOVAL/INSTALLATION.)



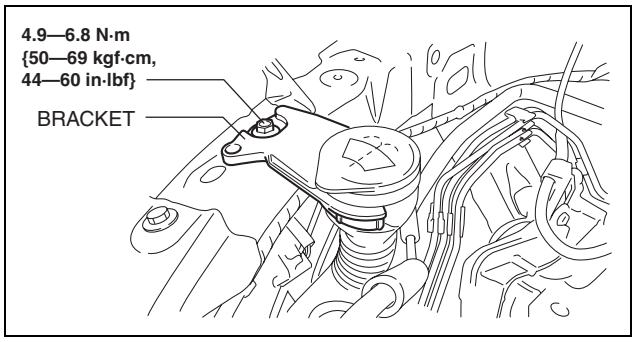
ac5wzw0000297

WASHER TANK REMOVAL/INSTALLATION

id091900801700

With Washer Fluid-level Sensor

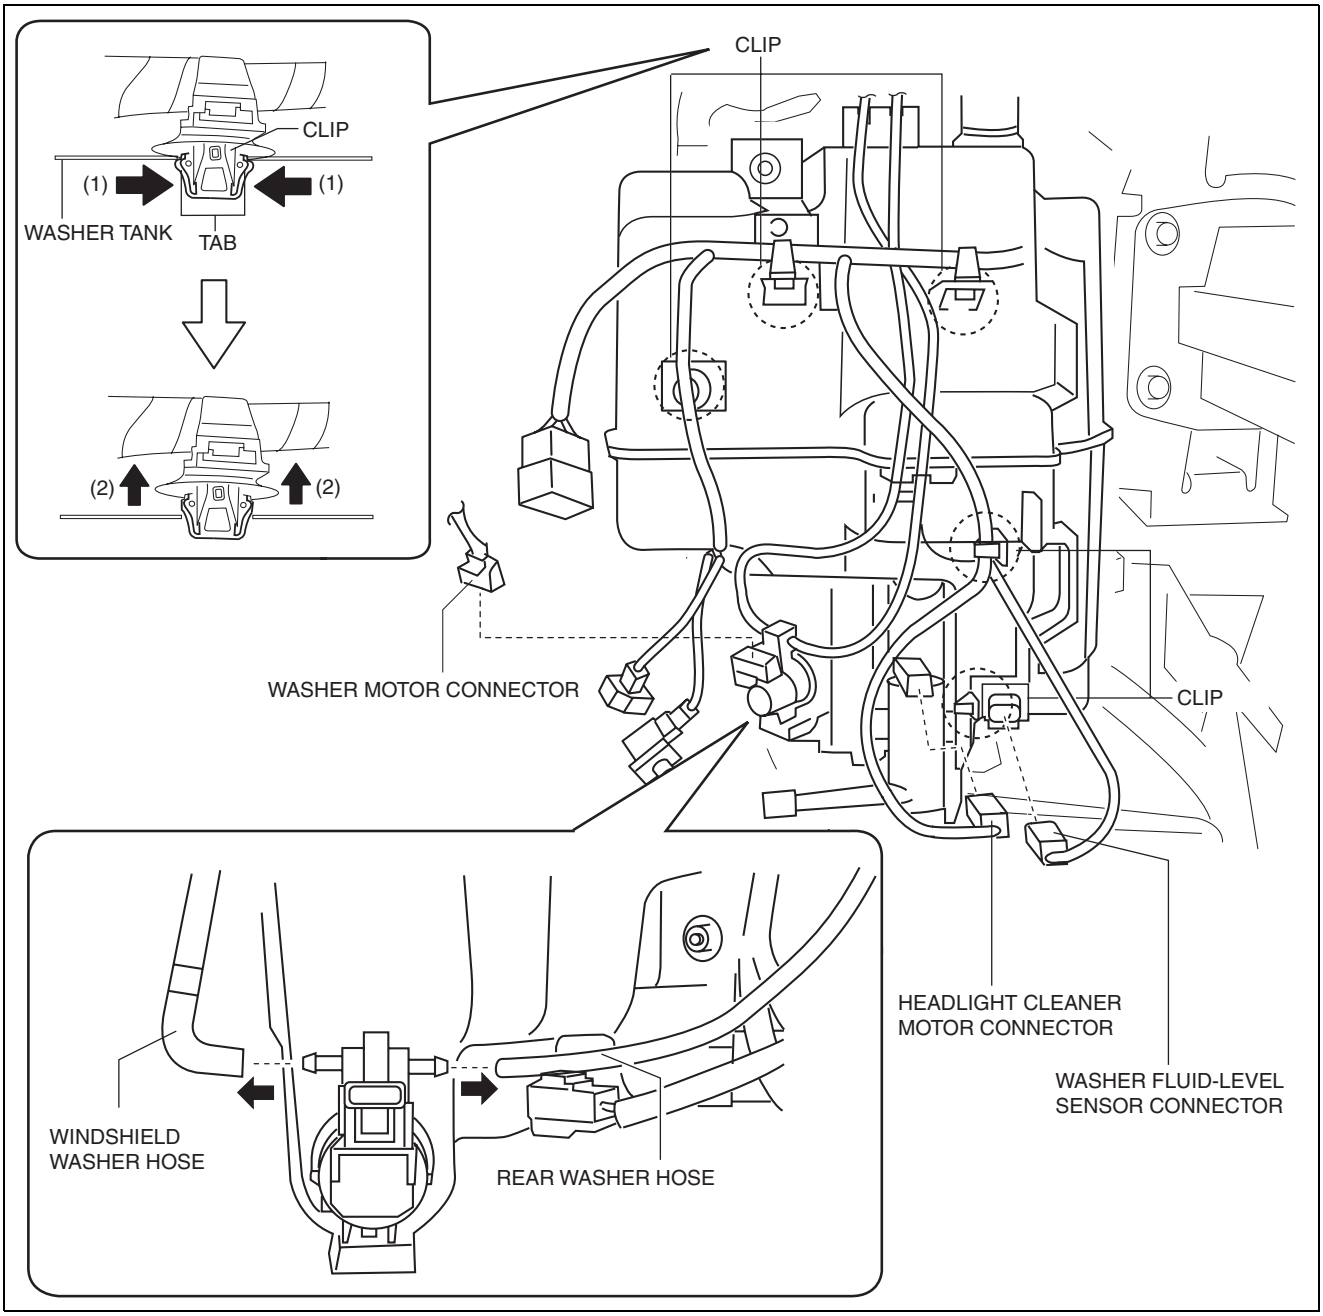
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Partially peel back the front over fender. (See 09-10-31 FRONT OVER FENDER REMOVAL/INSTALLATION.)
3. Set the mudguard (RH) aside. (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
4. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
5. Remove the bracket.
6. Disconnect the washer motor connector.
7. Disconnect the headlight cleaner motor connector.
8. Disconnect the washer fluid-level sensor connector.
9. Disconnect the windshield washer hose.
10. Disconnect the rear washer hose.



ac5wzw0000022

WIPER/WASHER SYSTEM

11. While pressing tabs of clips in the direction of the arrows (1) shown in the figure, remove it in the direction of the arrow (2).

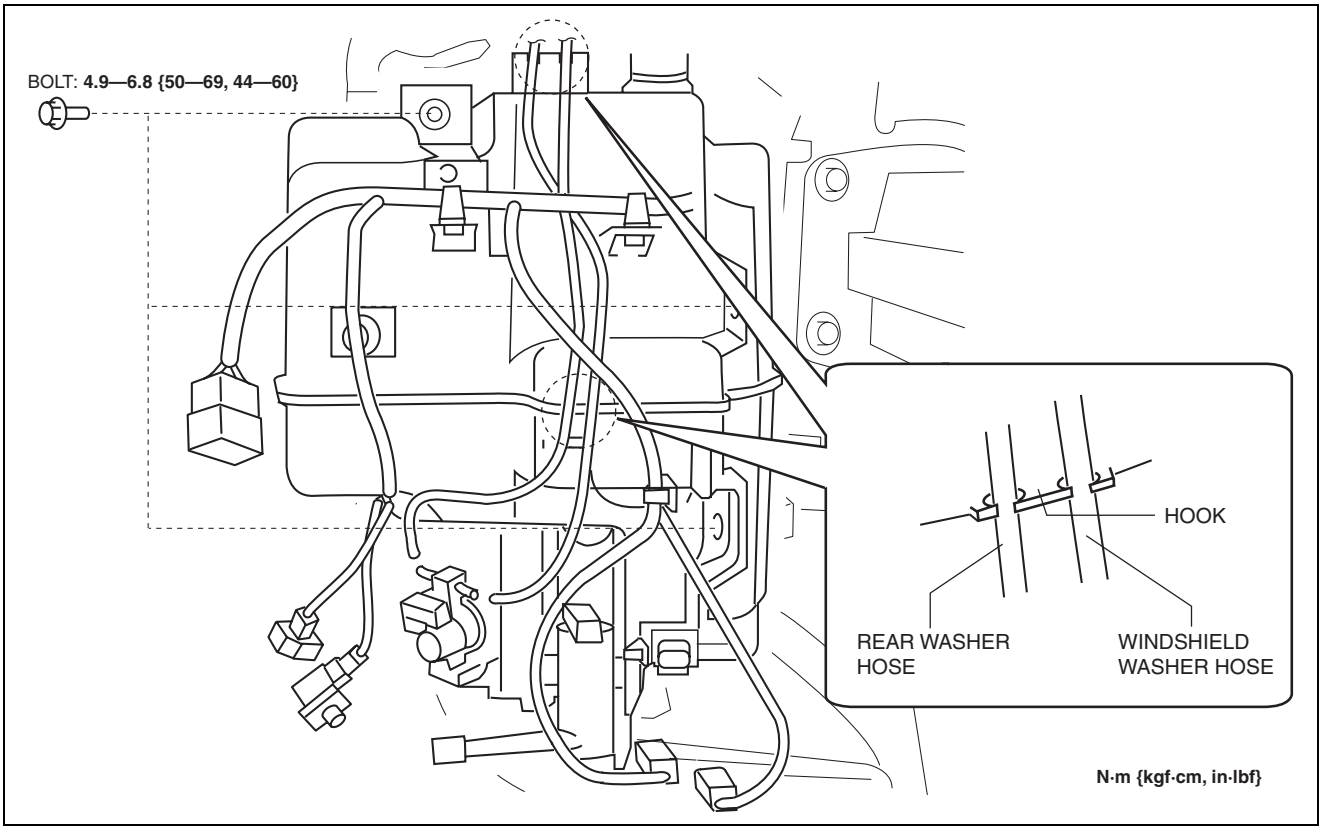


ac5wzw0000163

12. Remove the windshield washer hose from the hooks.
13. Remove the rear washer hose from the hooks.

WIPER/WASHER SYSTEM

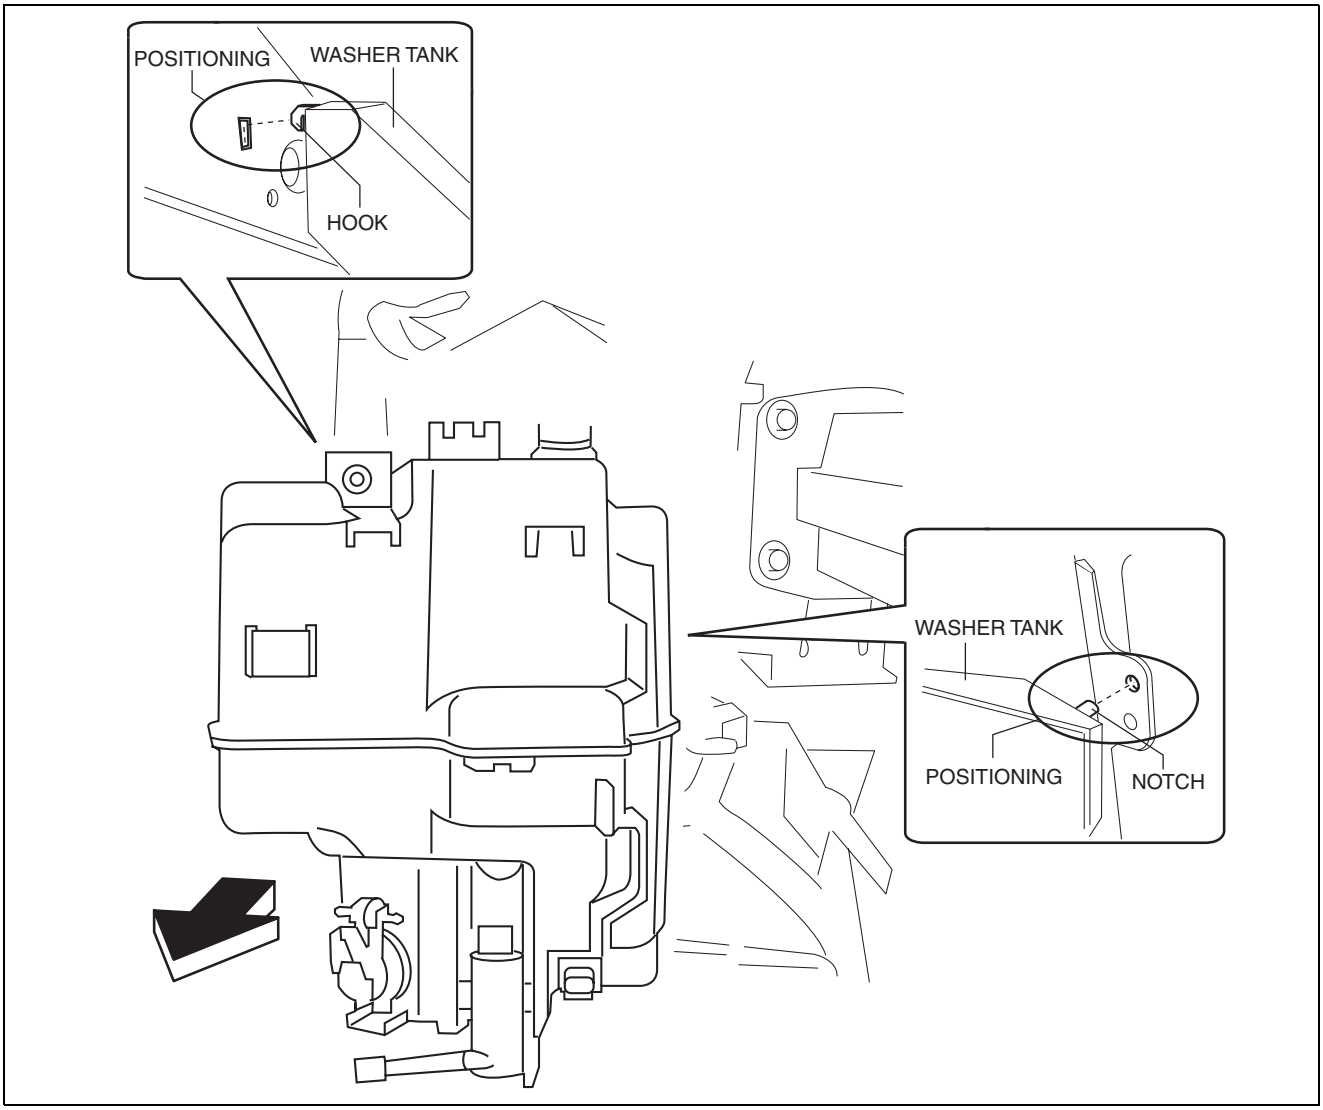
14. Remove bolts.



ac5wzw0000219

WIPER/WASHER SYSTEM

15. Remove the washer tank positioning hook and notch from the vehicle and remove the washer tank.

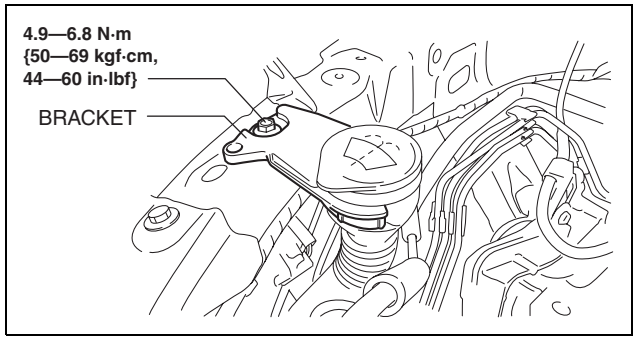


ac5wzw0000219

16. Install in the reverse order of removal.

Without Washer Fluid-level Sensor

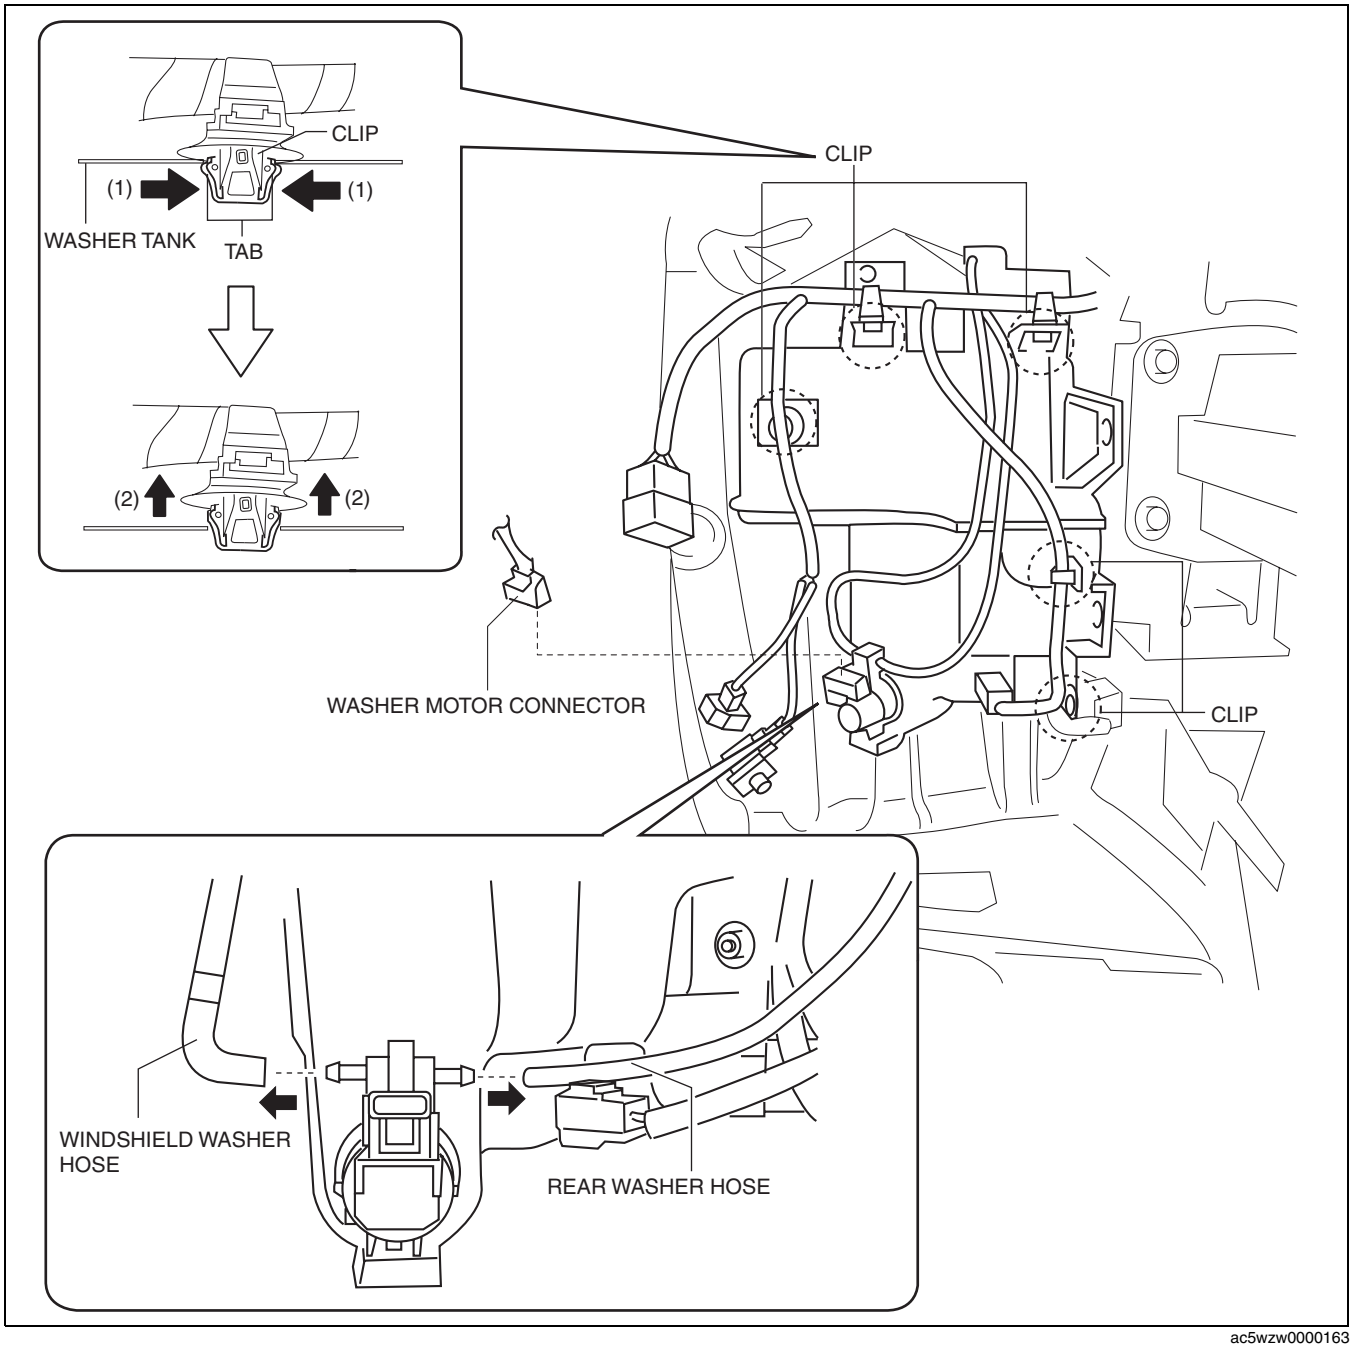
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Partially peel back the front over fender. (See 09-10-31 FRONT OVER FENDER REMOVAL/INSTALLATION.)
3. Set the mudguard (RH) aside. (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
4. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
5. Remove the bracket.
6. Disconnect the washer motor connector.
7. Disconnect the windshield washer hose.
8. Disconnect the rear washer hose.



ac5wzw0000022

WIPER/WASHER SYSTEM

9. While pressing tabs of clips in the direction of the arrows (1) shown in the figure, remove it in the direction of the arrow (2).

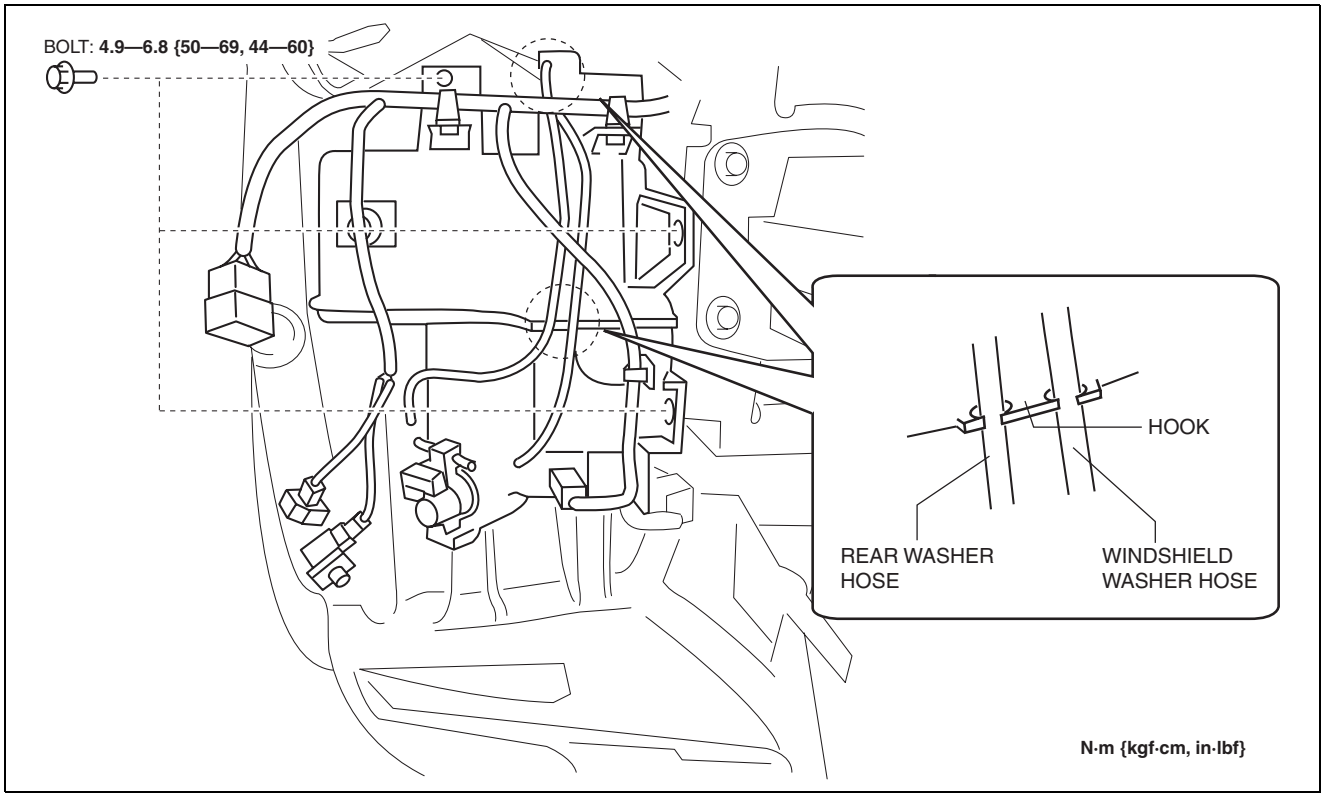


ac5wzw0000163

10. Remove the windshield washer hose from the hooks.
11. Remove the rear washer hose from the hooks.

WIPER/WASHER SYSTEM

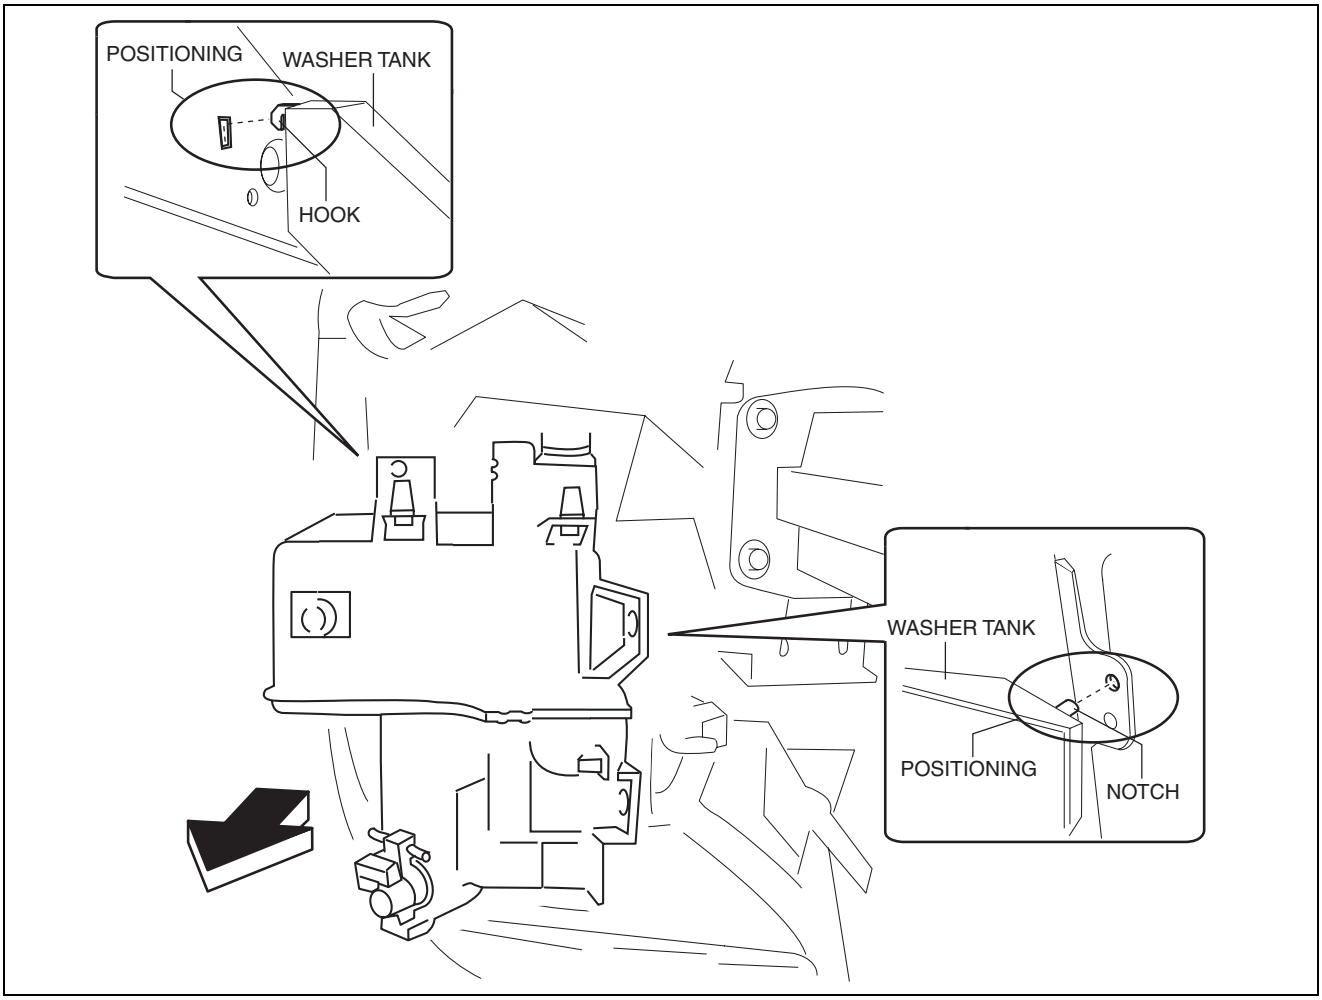
12. Remove bolts.



ac5wzw0000163

WIPER/WASHER SYSTEM

13. Remove the washer tank positioning hook and notch from the vehicle and remove the washer tank.



ac5wzw0000297

14. Install in the reverse order of removal.

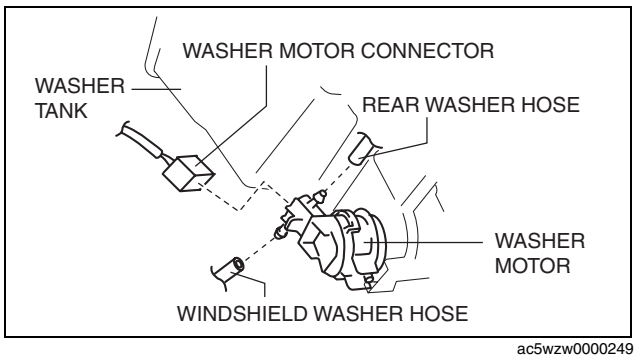
WASHER MOTOR REMOVAL/INSTALLATION

id091900805000

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Partially peel back the front over fender. (See 09-10-31 FRONT OVER FENDER REMOVAL/INSTALLATION.)
3. Set the mudguard (RH) aside. (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
4. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
5. Disconnect the washer motor connector from the washer motor.
6. Disconnect the windshield washer hose from the washer motor.
7. Disconnect the rear washer hose from the washer motor.

Note

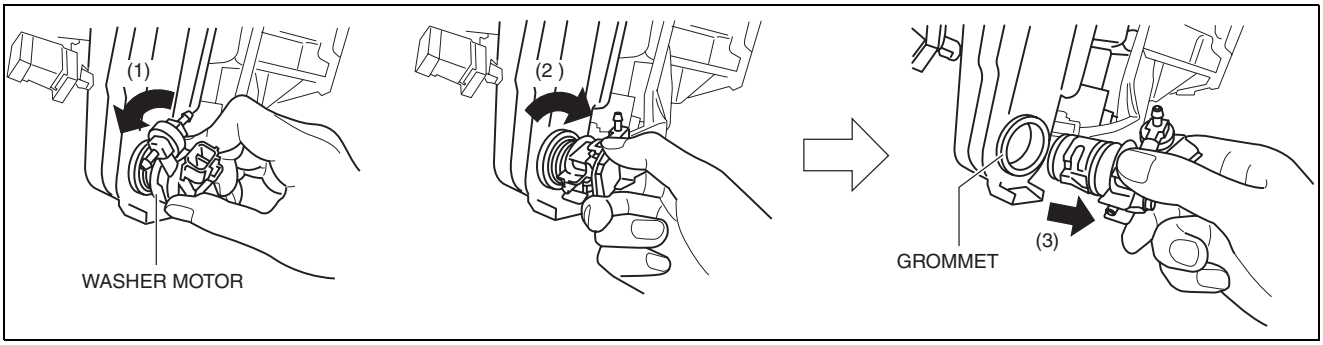
- If the washer motor is removed with washer fluid in the washer tank, the washer fluid may leak out. When removing the washer motor from the washer tank, place a container under the washer tank to collect washer fluid, and perform the procedure.



ac5wzw0000249

WIPER/WASHER SYSTEM

8. Rotate the washer motor counterclockwise/clockwise rotation repeatedly in the direction of the arrows (1) and (2) shown in the figure, and then remove it in the direction of the arrow (3).



ac5uuw00000825

9. Remove the grommet.
10. Install in the reverse order of removal.

WASHER MOTOR INSPECTION

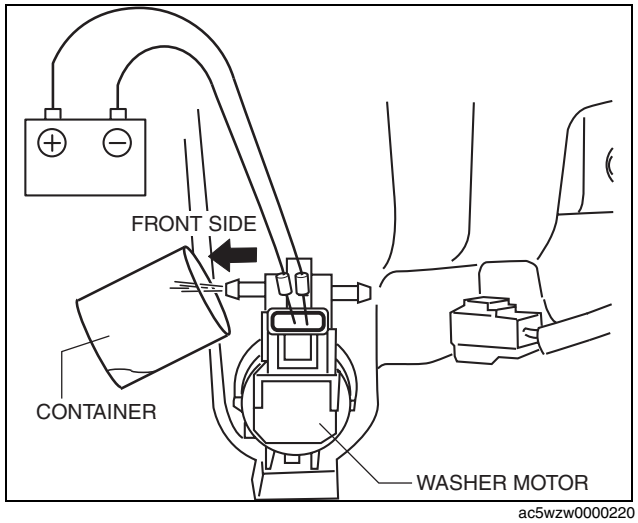
id091900805100

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Partially peel back the front over fender. (See 09-10-31 FRONT OVER FENDER REMOVAL/INSTALLATION.)
3. Set the mudguard (RH) aside. (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
4. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
5. Disconnect the washer motor connector from the washer motor.
6. Disconnect the windshield washer hose from the washer motor.
7. Disconnect the rear washer hose from the washer motor.

Warning

- **Water sprayed on the battery and ground could cause electrocution. When performing the washer motor inspection, prepare a container to collect washer fluid and be careful not to spray washer fluid.**

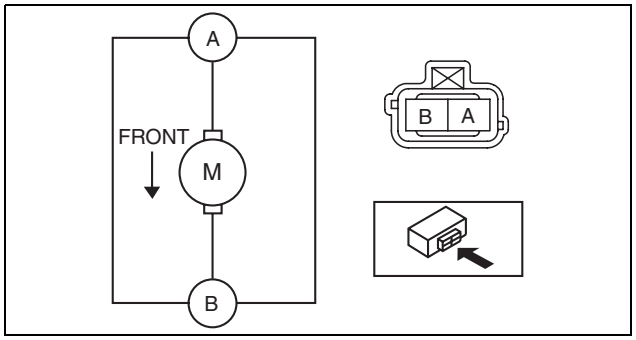
8. After connecting washer motor terminal A to the positive battery terminal, and terminal B to ground, verify that washer fluid sprays from the front side of the washer motor.



ac5wzw0000220

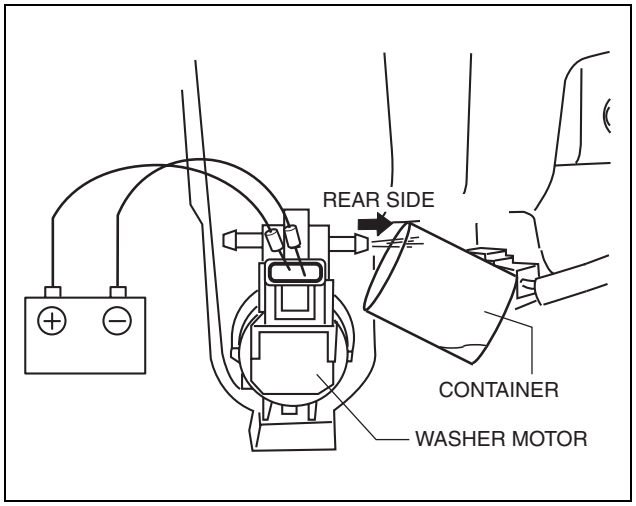
WIPER/WASHER SYSTEM

- If there is any malfunction, replace the washer motor. (See 09-19-22 WASHER MOTOR REMOVAL/INSTALLATION.)



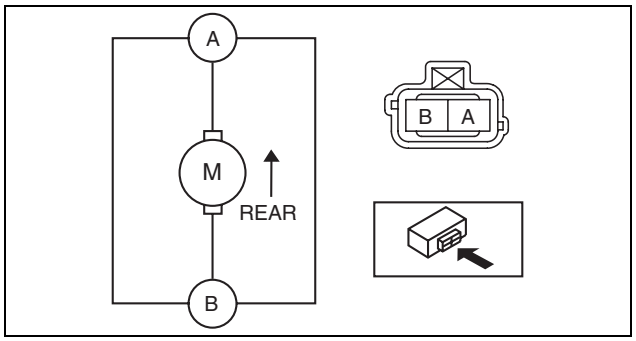
ac5uuw00000827

9. After connecting washer motor terminal B to the positive battery terminal, and washer motor terminal A to ground, verify that washer fluid sprays from the rear side of the washer motor.



ac5wzw0000220

- If there is any malfunction, replace the washer motor. (See 09-19-22 WASHER MOTOR REMOVAL/INSTALLATION.)



ac5uuw00000829

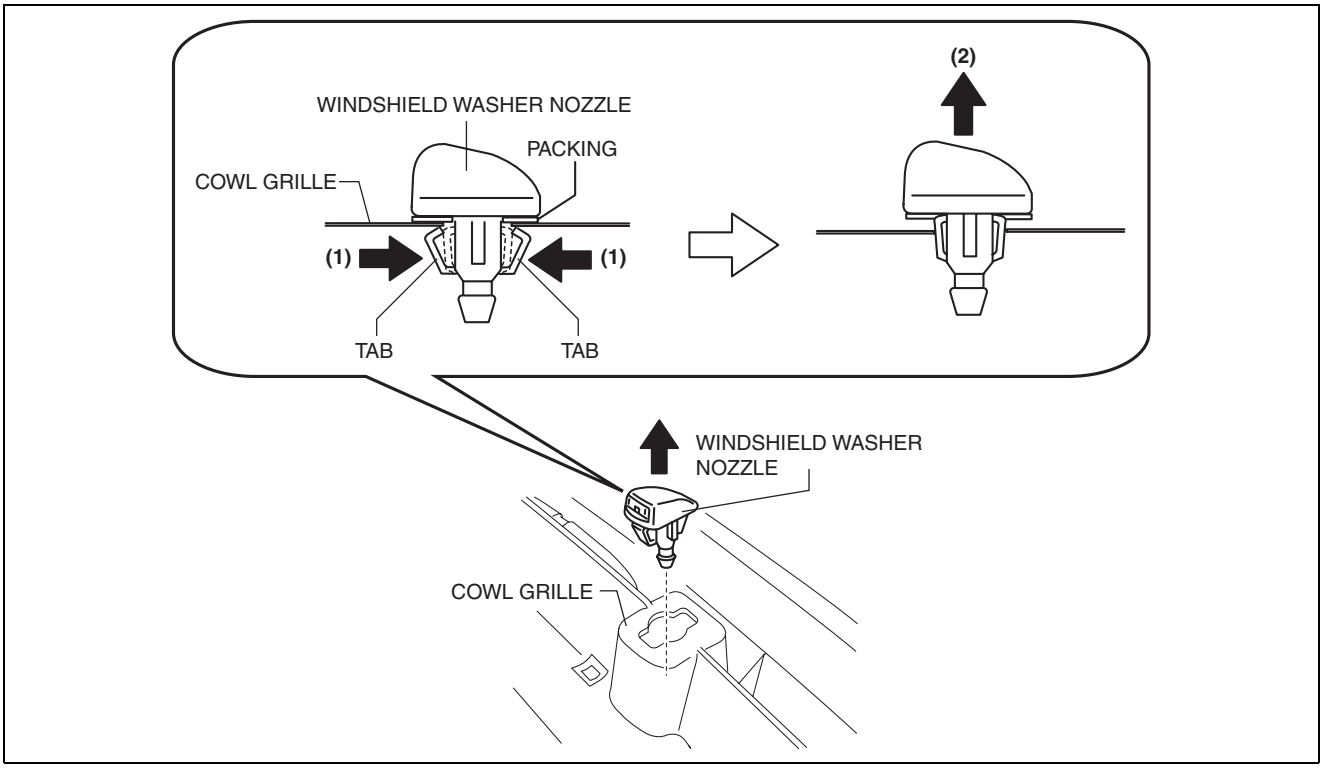
WINDSHIELD WASHER NOZZLE REMOVAL/INSTALLATION

id091900802000

1. Remove the following parts:
   (1) Windshield wiper arm and blade (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
   (2) Cowl grille (See 09-16-3 COWL GRILLE REMOVAL/INSTALLATION.)
2. Disconnect the windshield washer hose from the windshield washer nozzle. (See 09-19-27 WINDSHIELD WASHER HOSE REMOVAL/INSTALLATION.)

WIPER/WASHER SYSTEM

3. While pressing windshield washer nozzle tabs in the direction of the arrow (1) shown in the figure, pull the windshield washer nozzle in the direction of the arrow (2) to remove it from the cowl grille.



ac5wzw0000248

4. Install in the reverse order of removal.
5. Adjust the windshield washer nozzle. (See 09-19-25 WINDSHIELD WASHER NOZZLE ADJUSTMENT.)

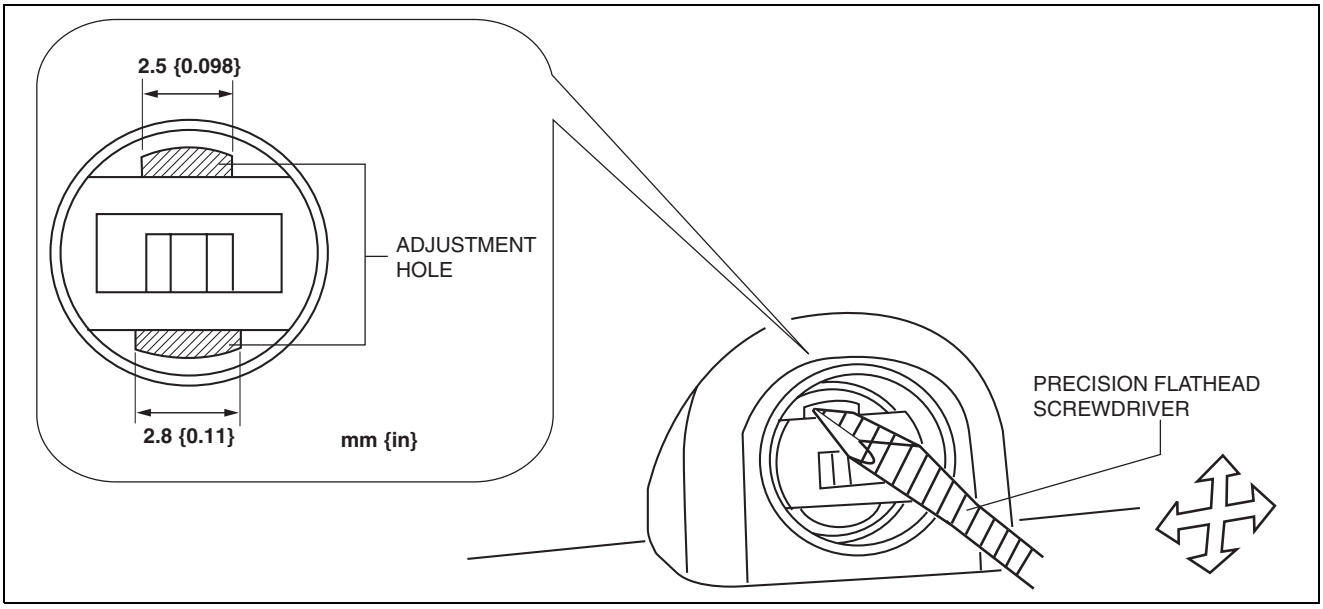
WINDSHIELD WASHER NOZZLE ADJUSTMENT

id091900476400

Caution

- **If the nozzle is adjusted by inserting a stick-like object into the nozzle, it could deform the injection nozzle and the washer fluid may not spray normally. When adjusting the nozzle, do not insert objects into the injection nozzle.**

1. Insert a tape-wrapped precision flathead screwdriver into the adjustment hole of the windshield washer nozzle and adjust it to the area where washer fluid is sprayed as shown in the figure.

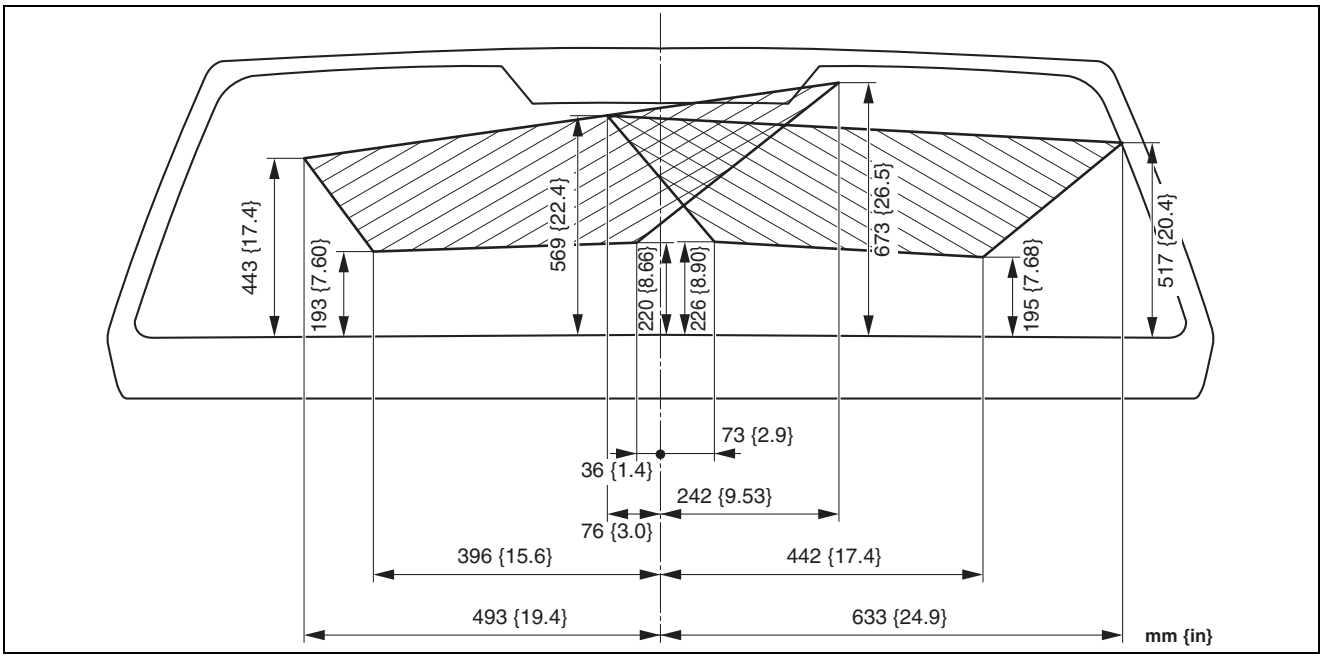


ac5wzw0000158

WIPER/WASHER SYSTEM

ac5wzw0000296

R.H.D.

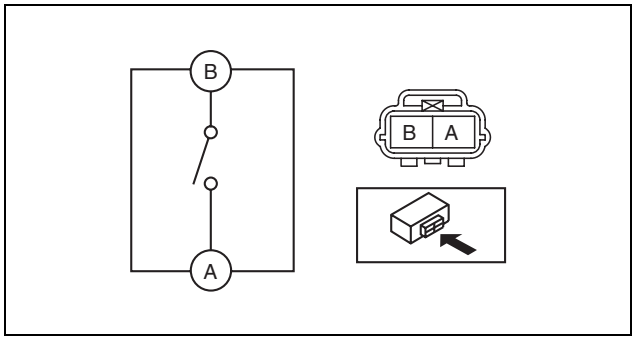


ac5wzw0000218

WASHER FLUID-LEVEL SENSOR INSPECTION

id091900801900

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Partially peel back the front over fender. (See 09-10-31 FRONT OVER FENDER REMOVAL/INSTALLATION.)
3. Set the mudguard (RH) aside. (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
4. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
5. Inspect for continuity according to washer fluid level between the washer fluid-level sensor terminals.



ac5jjw00000678

- If not as indicated in the table, replace the washer fluid-level sensor. (See 09-19-31 WASHER FLUID-LEVEL SENSOR REMOVAL/INSTALLATION.)

○—○ : Continuity

Fluid level	Terminal	
	A	B
Above low		
Below low	○	○

WIPER/WASHER SYSTEM

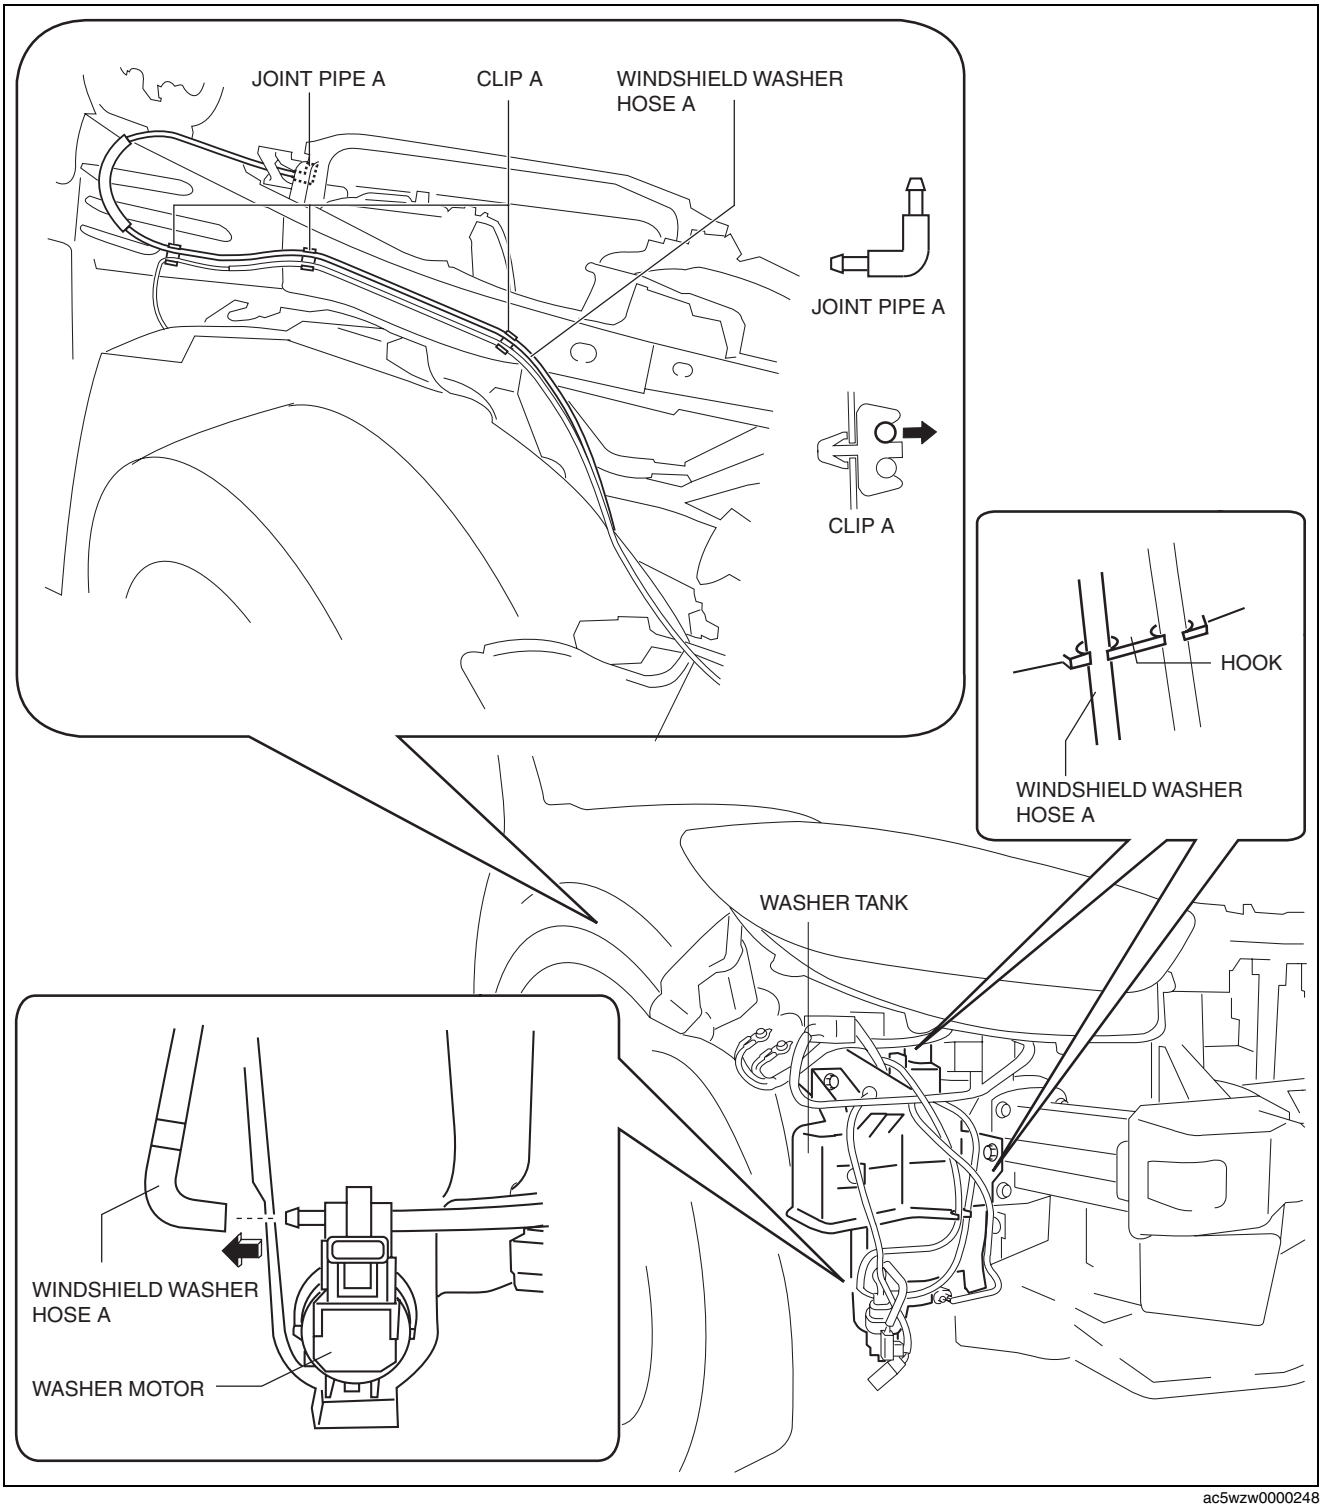
WINDSHIELD WASHER HOSE REMOVAL/INSTALLATION

id091900802100

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front over fender. (See 09-10-31 FRONT OVER FENDER REMOVAL/INSTALLATION.)
3. Remove the mudguard (RH). (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
4. Remove the windshield wiper arm and blade. (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
5. Disconnect the windshield washer hose A from the washer motor.
6. Remove the windshield washer hose A from the washer tank hook.
7. Remove the windshield washer hose A from clips A.

WIPER/WASHER SYSTEM

8. Disconnect the windshield washer hose A from the joint pipe A and remove it.

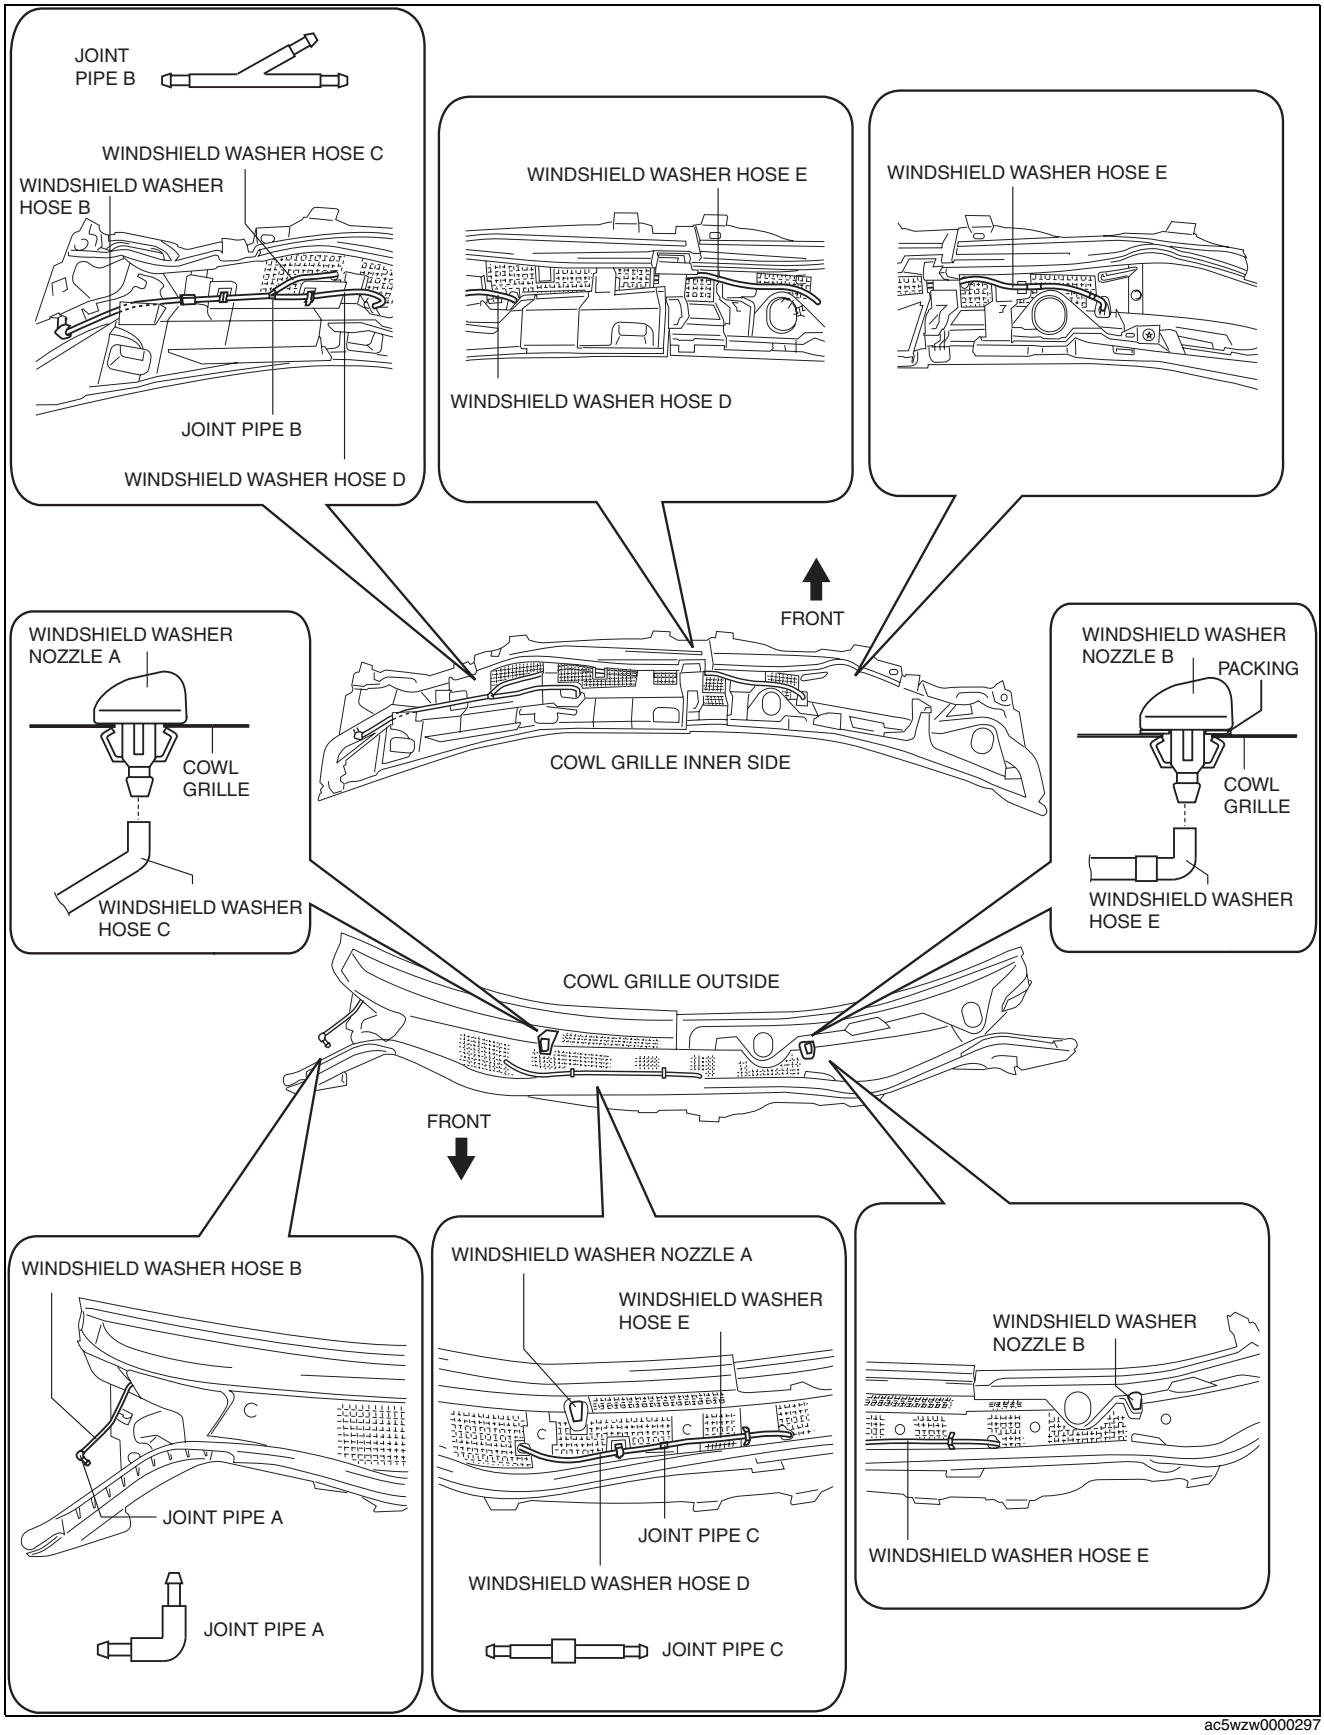


ac5wzw0000248

9. Remove the cowl grille. (See 09-16-3 COWL GRILLE REMOVAL/INSTALLATION.)
10. For L.H.D., perform the following procedure:
    (1) Disconnect the windshield washer hose B from the joint pipe A.
    (2) Disconnect the windshield washer hose B from the joint pipe B and remove it.
    (3) Disconnect the windshield washer hose C from the windshield washer nozzle A.
    (4) Disconnect the windshield washer hose C from the joint pipe B and remove it.
    (5) Disconnect the windshield washer hose D from the joint pipe B.
    (6) Disconnect the windshield washer hose D from the joint pipe C and remove it.
    (7) Disconnect the windshield washer hose E from the windshield washer nozzle B.

WIPER/WASHER SYSTEM

(8) Disconnect the windshield washer hose E from the joint pipe C and remove it.

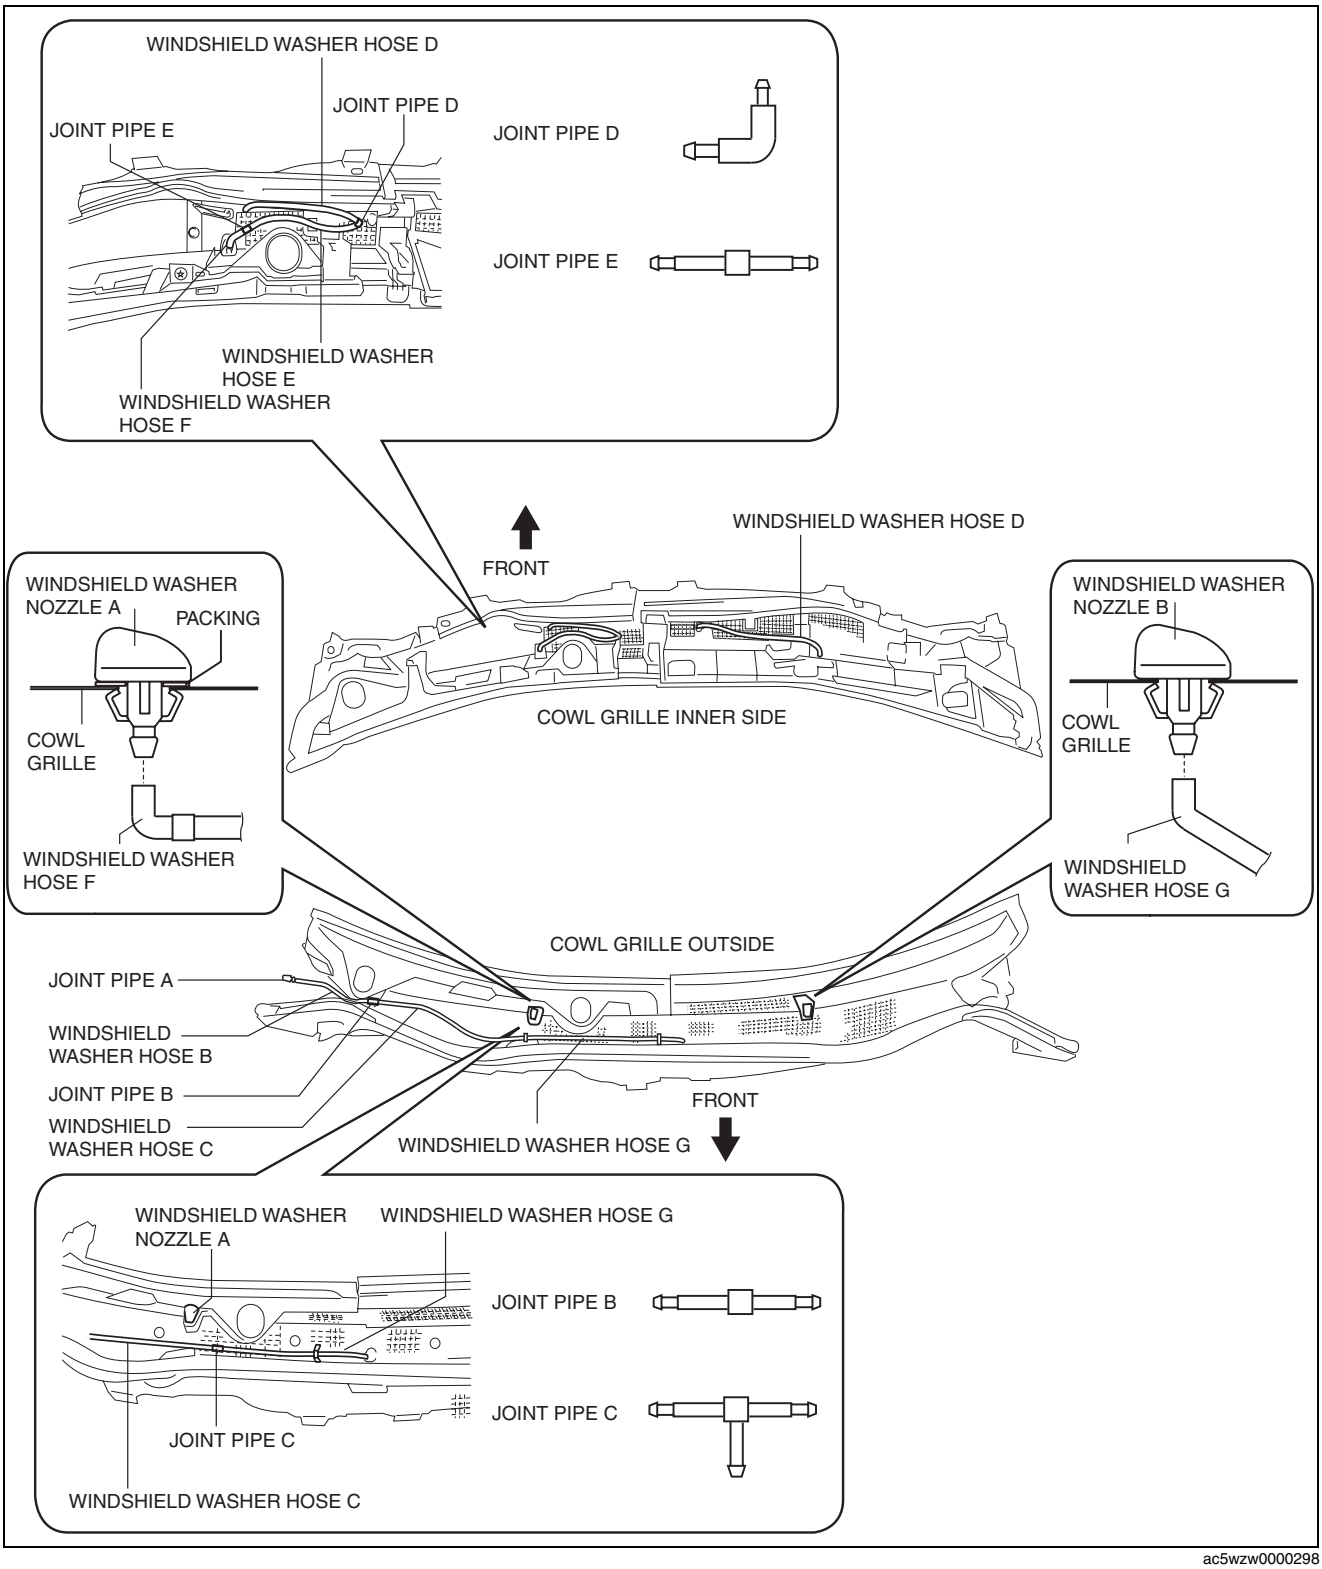


ac5wzw0000297

11. For R.H.D., perform the following procedure:
    (1) Disconnect the windshield washer hose B from the joint pipe A.
    (2) Disconnect the windshield washer hose B from the joint pipe B and remove it.

WIPER/WASHER SYSTEM

(3) Disconnect the windshield washer hose C from the joint pipe B.
(4) Disconnect the windshield washer hose C from the joint pipe C and remove it.
(5) Disconnect the windshield washer hose D from the joint pipe C.
(6) Disconnect the windshield washer hose D from the joint pipe D and remove it.
(7) Disconnect the windshield washer hose E from the joint pipe D.
(8) Disconnect the windshield washer hose E from the joint pipe E and remove it.
(9) Disconnect the windshield washer hose F from the windshield washer nozzle A.
(10) Disconnect the windshield washer hose F from the joint pipe E and remove it.
(11) Disconnect the windshield washer hose G from the windshield washer nozzle B.
(12) Disconnect the windshield washer hose G from the joint pipe C and remove it.



ac5wzw0000298

WIPER/WASHER SYSTEM

12. Install in the reverse order of removal.

WASHER FLUID-LEVEL SENSOR REMOVAL/INSTALLATION

id091900801800

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Partially peel back the front over fender. (See 09-10-31 FRONT OVER FENDER REMOVAL/INSTALLATION.)
3. Set the mudguard (RH) aside. (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
4. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
5. Disconnect the washer fluid-level sensor connector.
6. Remove the washer fluid-level sensor.

Note

- If the washer fluid-level sensor is removed with washer fluid in the washer tank, the washer fluid may leak out. When removing the washer fluid-level sensor from the washer tank, place a container under the washer tank to collect washer fluid, and perform the procedure.

7. Remove the grommet.
8. Install in the reverse order of removal.

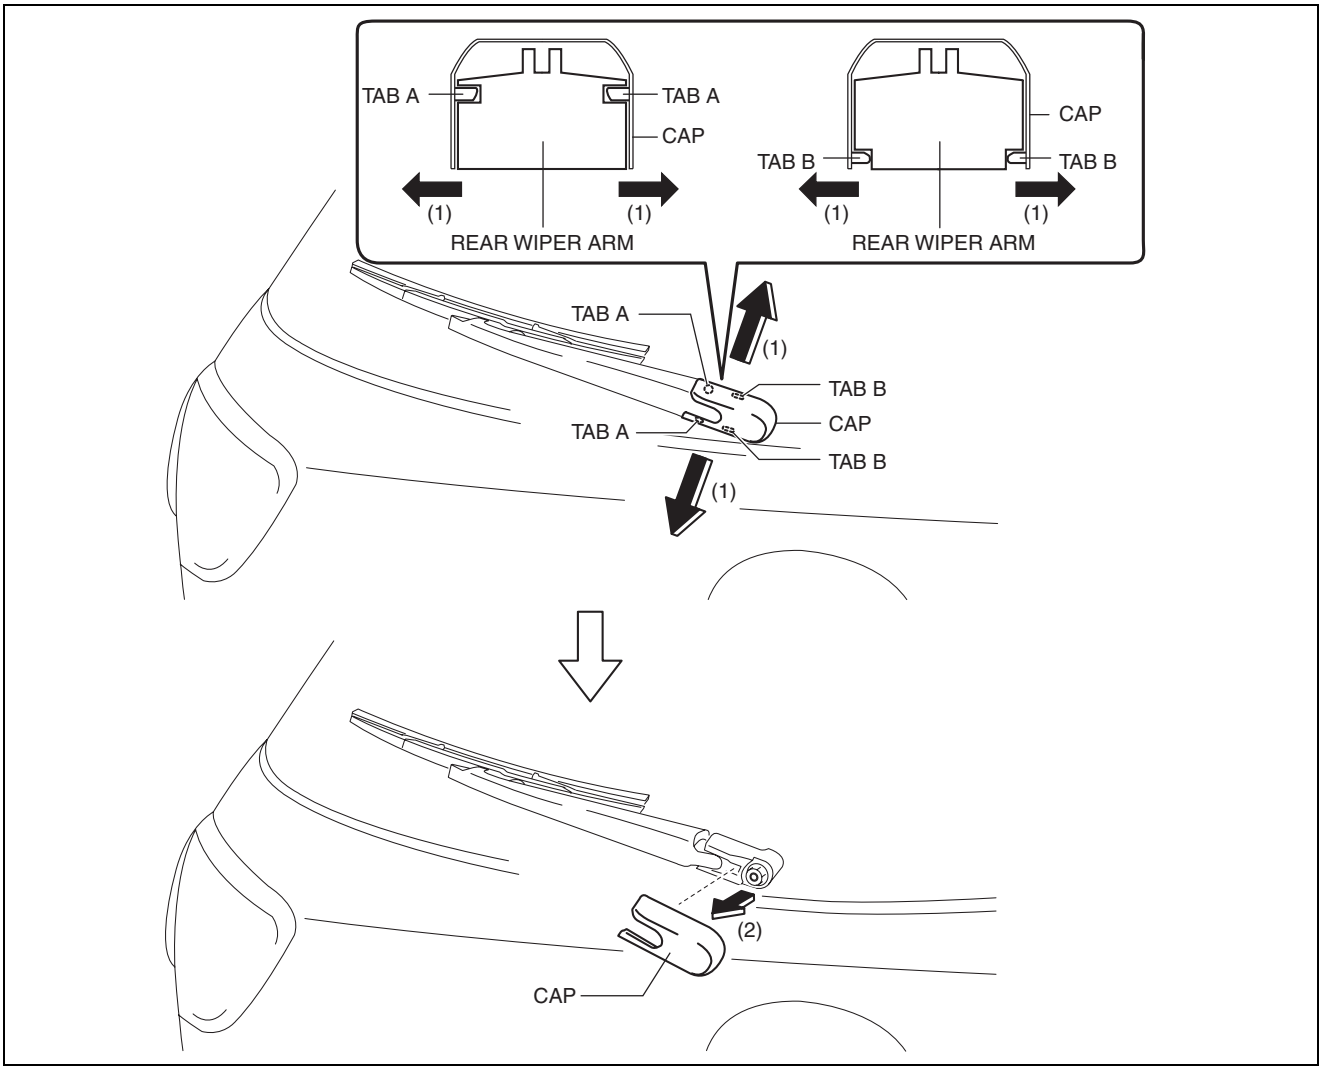
WIPER/WASHER SYSTEM

REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION

id091900801200

Rear Wiper Arm

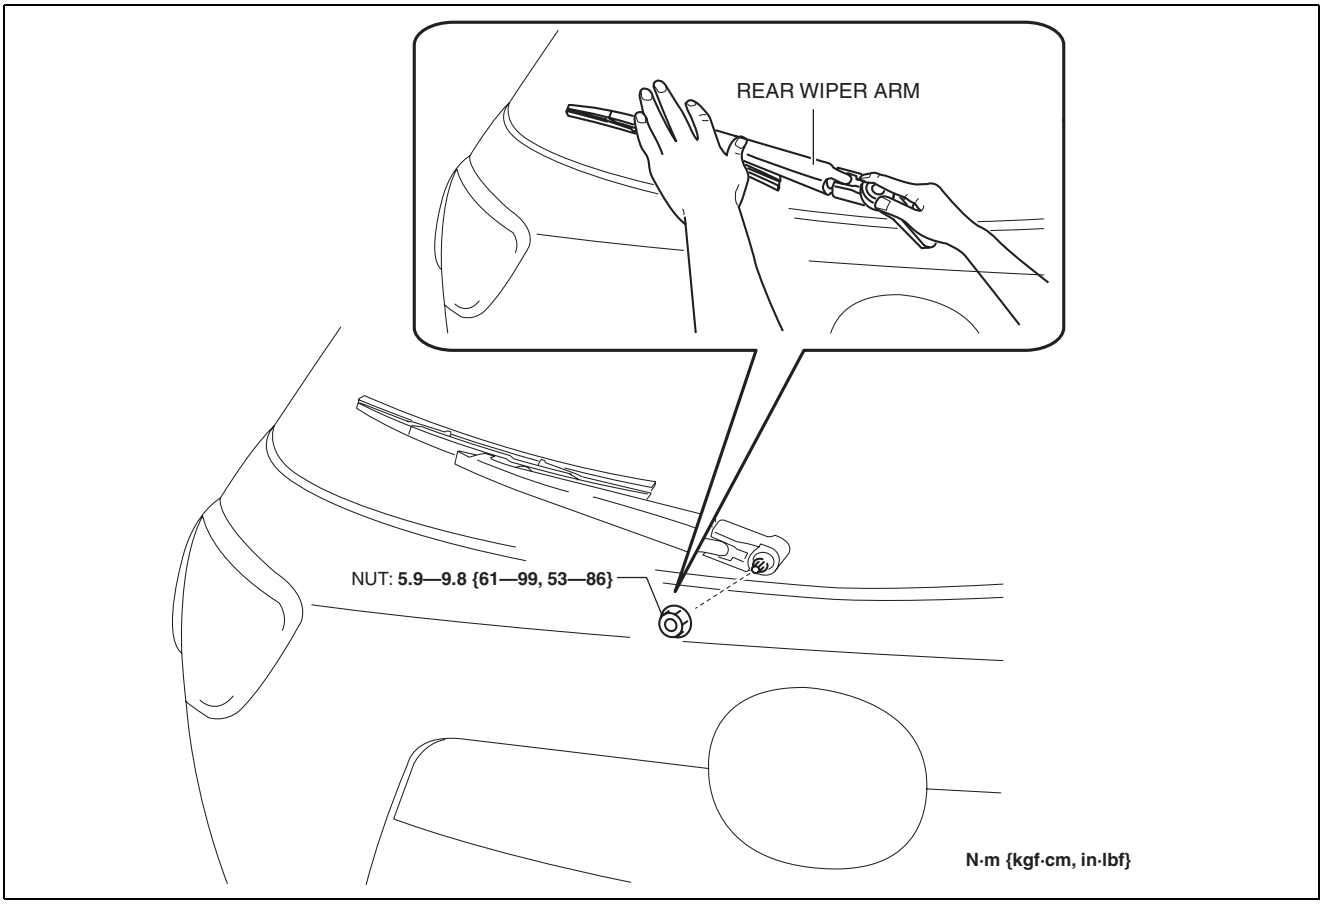
1. Pull the cap in the direction of the arrows (1) shown in the figure and remove it in the direction of the arrow (2) with tabs A, B released.



ac5wzw0000463

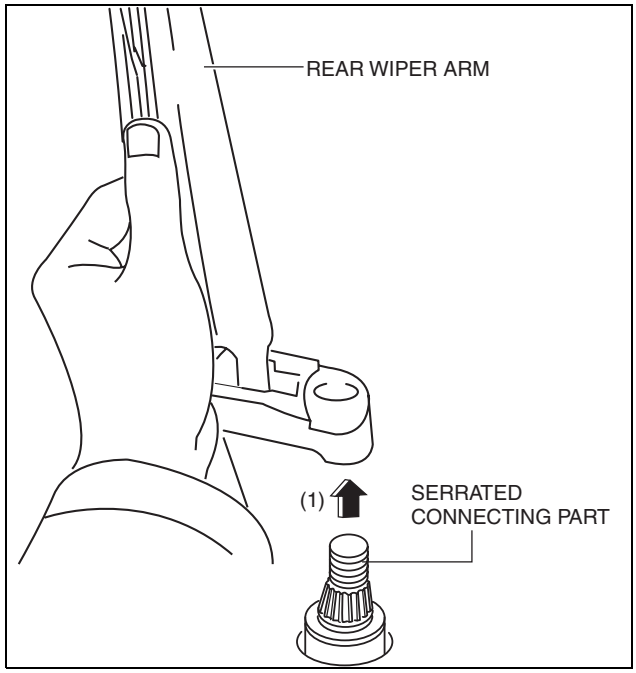
WIPER/WASHER SYSTEM

2. Remove the nut with the rear wiper arm and blade pressed.



ac5wzw0000328

3. Raise the rear wiper arm and detach it from the serrated connecting part in the direction of the arrow (1) shown in the figure.
4. Install in the reverse order of removal.
5. Adjust the rear wiper arm and blade. (See 09-19-34 REAR WIPER ARM AND BLADE ADJUSTMENT.)

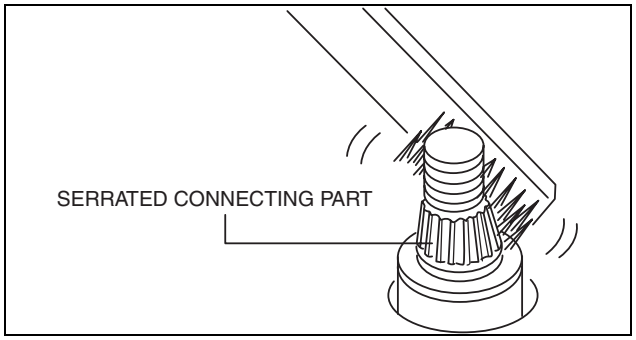


ac5wzw0000328

WIPER/WASHER SYSTEM

Rear Wiper Arm Installation Note

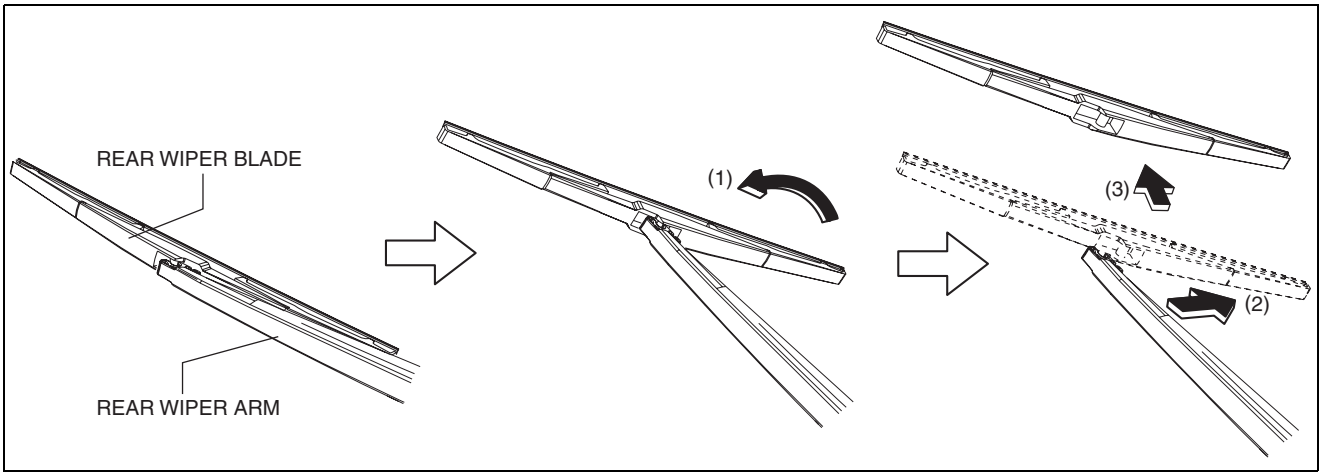
1. Clean the serrated connecting part with a wire brush before installing the rear wiper arm.



ac5wzw0000161

Rear Wiper Blade

1. Move the rear wiper blade in the direction of the arrow (1) shown in the figure to detach the rear wiper blade from the rear wiper arm.
2. Move the rear wiper blade in the direction of the arrow (2) and remove it from the rear wiper arm in the direction of the arrow (3).



ac5wzw0000161

3. Install in the reverse order of removal.

REAR WIPER ARM AND BLADE ADJUSTMENT

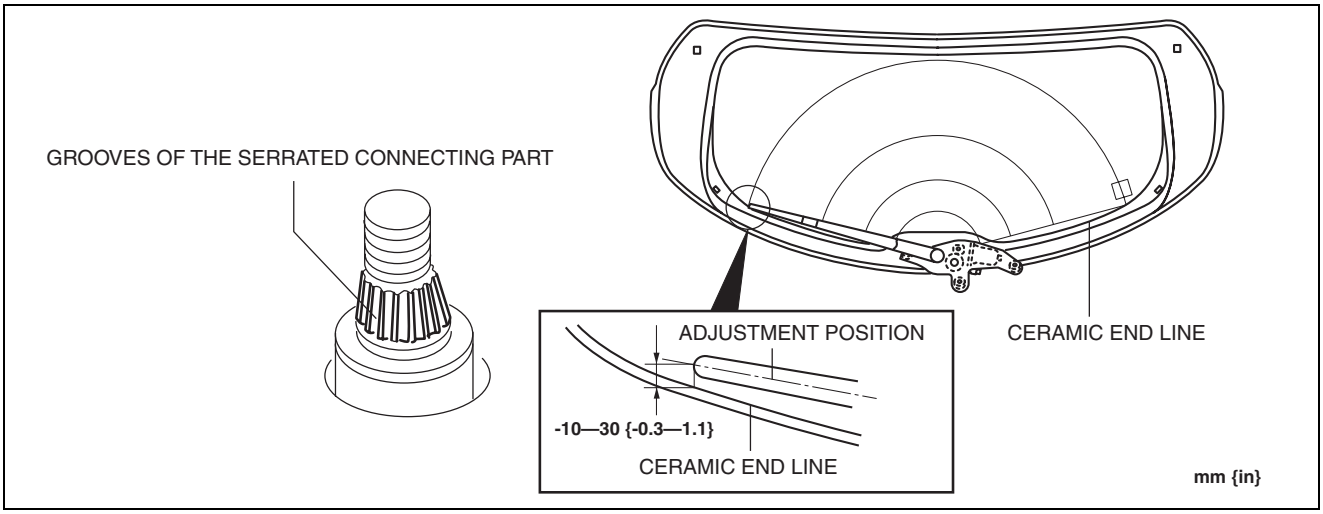
id091900801300

1. Switch the ignition ON (engine off or on).
2. Operate the rear wiper.
3. Verify that the rear wiper is operating and stop the rear wiper.
4. Verify that the rear wiper is stopped at the auto-stop position.
5. Remove the rear wiper arm and blade. (See 09-19-32 REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
6. Install the rear wiper arm to the serrated connecting part, adjust the rear wiper blade end to the area shown in the figure while sliding the rear wiper arm onto the grooves of the serrated connecting part one by one, and temporarily tighten the nut.

Note

- If the rear wiper arm and blade is not installed to the position shown in the figure, repeat the adjustment procedure.

WIPER/WASHER SYSTEM



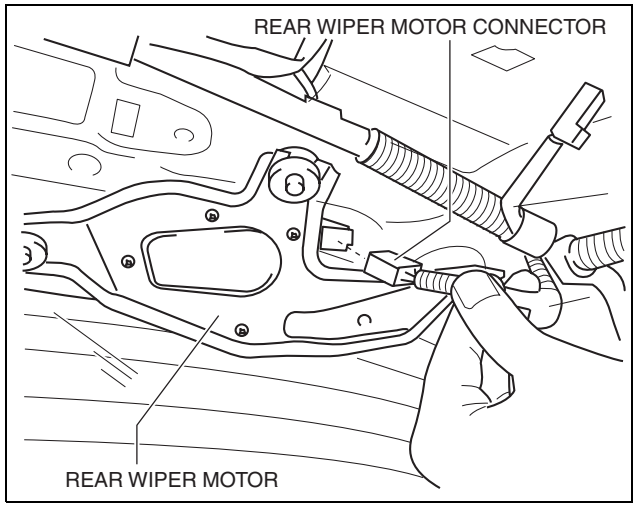
ac5wzw0000162

7. After adjusting the rear wiper arm and blade, tighten the nut completely. (See 09-19-32 REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION.)

REAR WIPER MOTOR REMOVAL/INSTALLATION

id091900801400

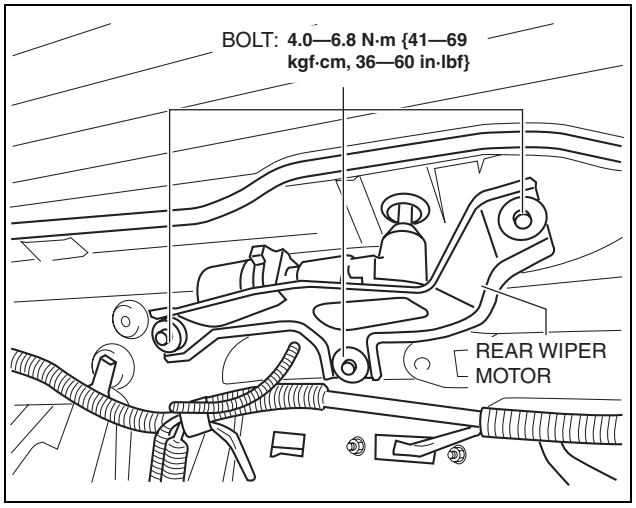
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Rear wiper arm and blade (See 09-19-32 REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
   (2) Liftgate upper trim (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
   (3) Liftgate side trim (See 09-17-87 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
   (4) Liftgate recess (See 09-17-89 LIFTGATE RECESS REMOVAL/INSTALLATION.)
   (5) Liftgate lower trim (See 09-17-89 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
3. Remove the rear wiper motor connector.



ac5uuw00000809

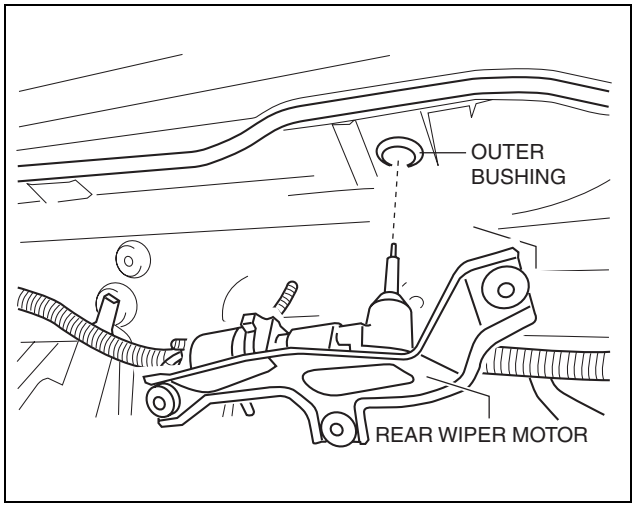
WIPER/WASHER SYSTEM

4. Remove bolts shown in the figure.



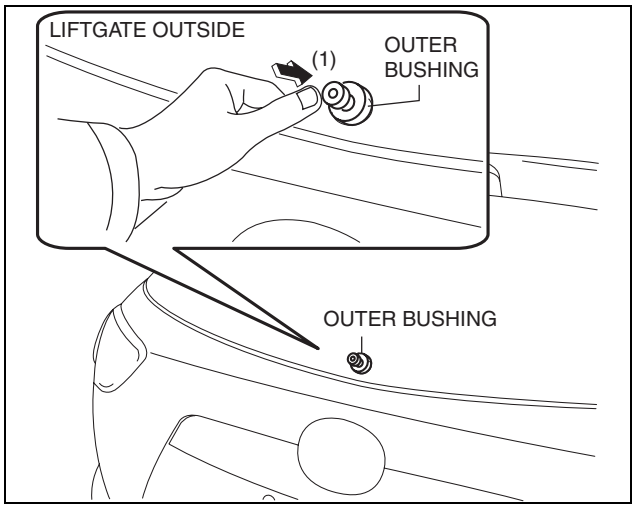
ac5wzw0000118

5. Pull out the rear wiper motor from the outer bushing hole and remove it.



ac5wzw0000248

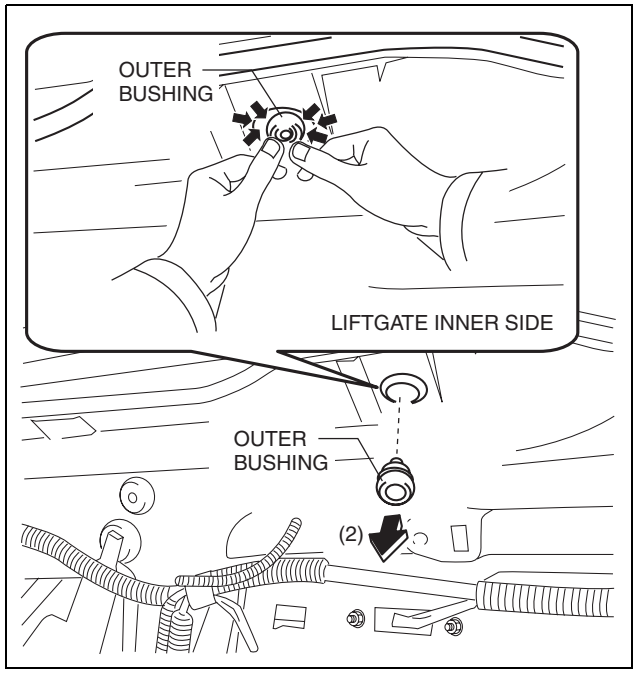
6. Press in the outer bushing from the outside of the liftgate in the direction of the arrow (1) shown in the figure.



ac5wzw0000248

WIPER/WASHER SYSTEM

7. Detach the liftgate and outer bushing while pressing the outer bushing in the direction of the arrows shown in the figure, pull the outer bushing from the inside of the liftgate in the direction of the arrow (2), and remove it.
8. Install in the reverse order of removal.

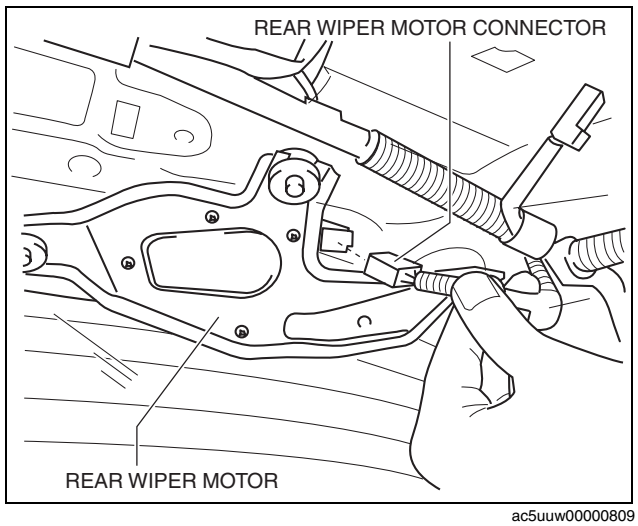


ac5wzw0000248

REAR WIPER MOTOR INSPECTION

id091900801500

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Open the liftgate.
3. Remove the following parts:
   (1) Rear wiper arm and blade (See 09-19-32 REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
   (2) Liftgate upper trim (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
   (3) Liftgate side trim (See 09-17-87 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
   (4) Liftgate recess (See 09-17-89 LIFTGATE RECESS REMOVAL/INSTALLATION.)
   (5) Liftgate lower trim (See 09-17-89 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
4. Remove the rear wiper motor connector.



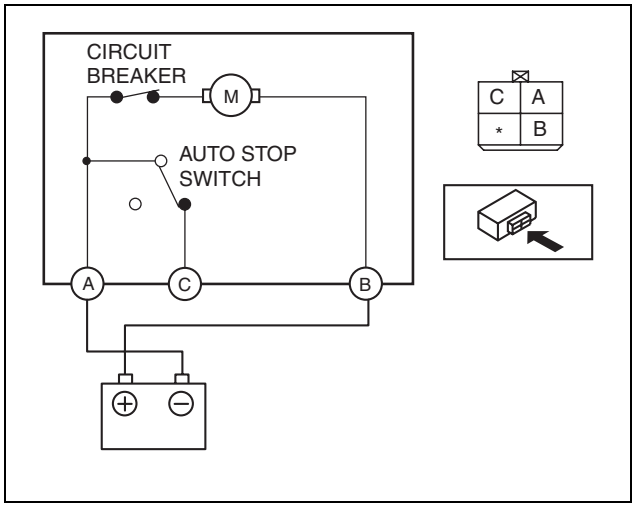
ac5uuw00000809

Rear Wiper Motor Operation Inspection

1. Apply battery positive voltage to rear wiper motor connector terminal B, and connect terminal A to the ground.

WIPER/WASHER SYSTEM

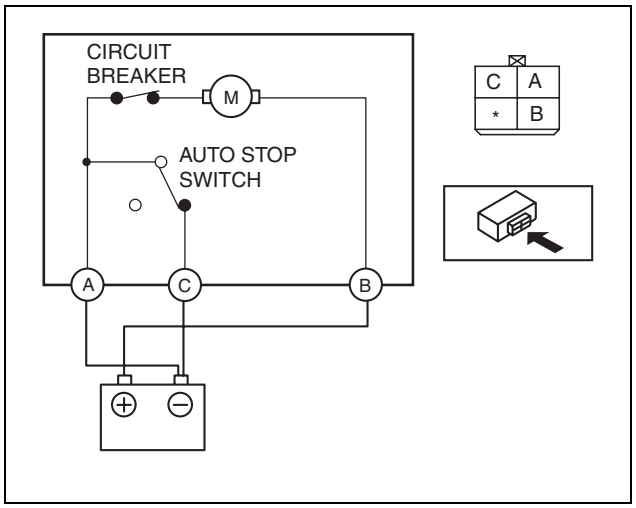
2. Verify that the rear wiper motor operates normally.
   - If there is any malfunction, replace the rear wiper motor. (See 09-19-35 REAR WIPER MOTOR REMOVAL/INSTALLATION.)



ac5wzw0000297

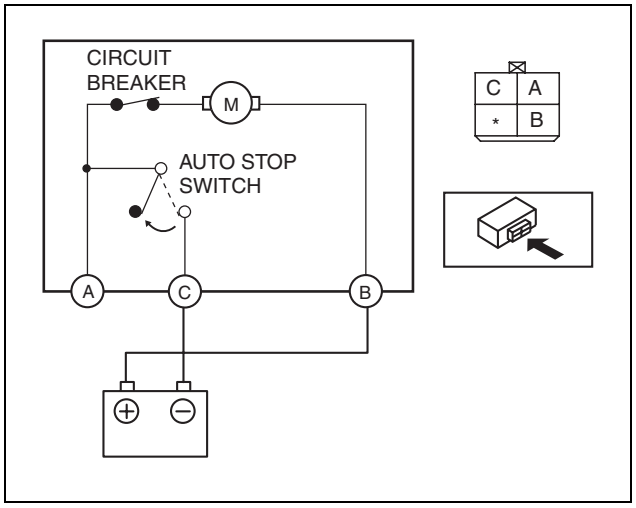
Auto-stop Operation Inspection

1. Apply battery positive voltage to rear wiper motor connector terminal B, and connect terminals A and C to the ground.
2. Disconnect the ground from rear wiper motor connector terminal A while the rear wiper is operating.



ac5wzw0000297

3. After the windshield wiper motor auto-stop operation, verify that it stops at the park position.
   - If there is any malfunction, replace the rear wiper motor. (See 09-19-35 REAR WIPER MOTOR REMOVAL/INSTALLATION.)



ac5wzw0000297

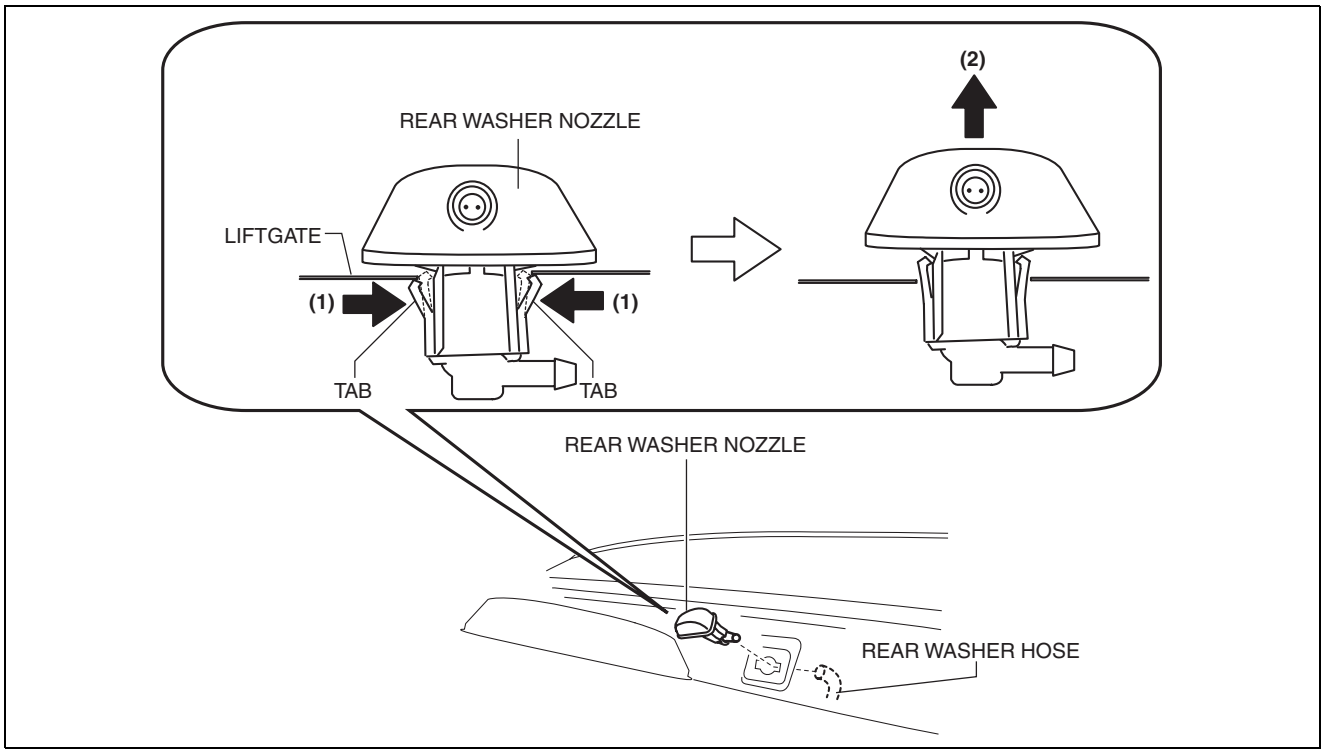
REAR WASHER NOZZLE REMOVAL/INSTALLATION

id091900802200

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the liftgate upper trim. (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)

WIPER/WASHER SYSTEM

3. Remove the rear spoiler. (See 09-16-33 REAR SPOILER REMOVAL/INSTALLATION.)
4. Disconnect the rear washer hose from the rear washer nozzle. (See 09-19-40 REAR WASHER HOSE REMOVAL/INSTALLATION.)
5. While pressing tabs of the rear washer nozzle in the direction of the arrows (1) shown in the figure, pull the rear washer nozzle in the direction of the arrow (2) to remove it from the liftgate.



ac5wzw0000249

6. Install in the reverse order of removal.
7. Adjust the rear washer nozzle. (See 09-19-39 REAR WASHER NOZZLE ADJUSTMENT.)

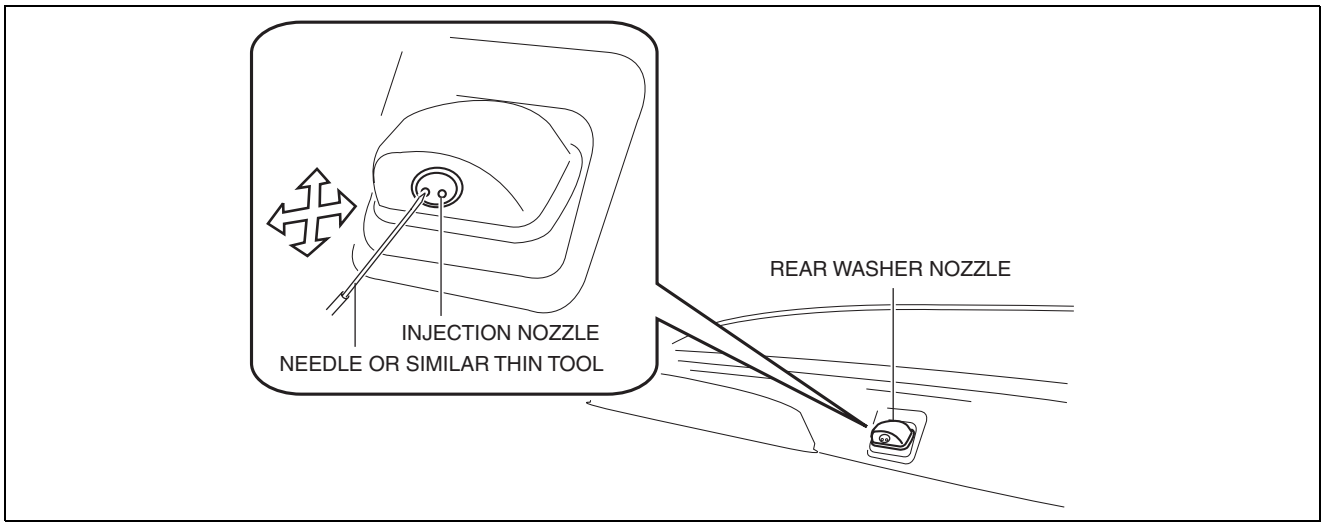
REAR WASHER NOZZLE ADJUSTMENT

id091900802300

Caution

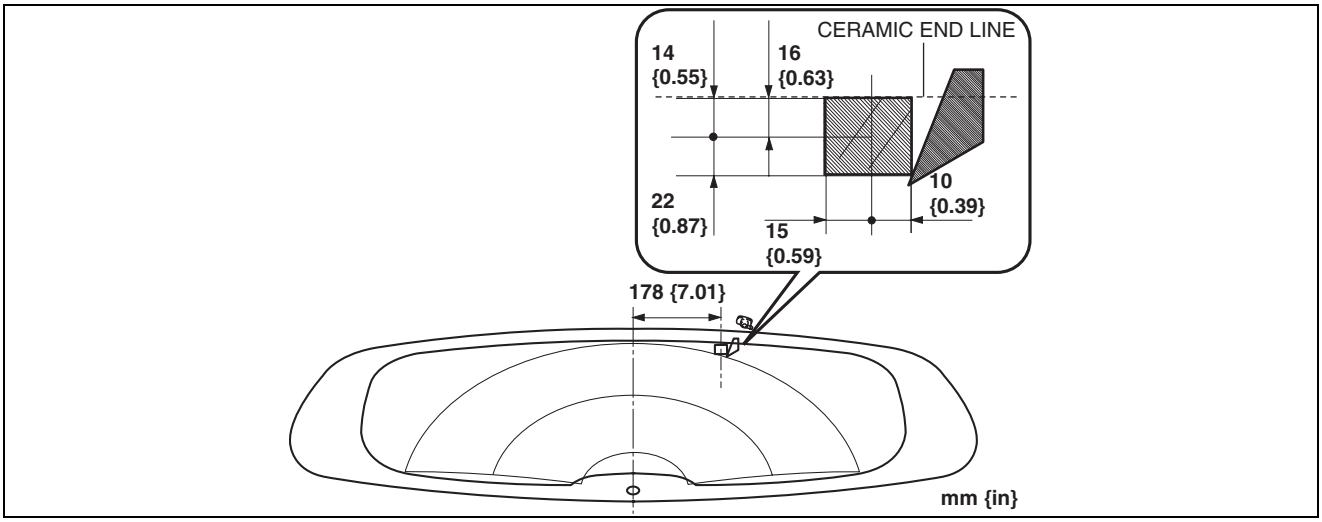
- **If the nozzle angle is adjusted with excessive force by strongly inserting a needle or similar thin tool into the injection nozzle of rear washer nozzle, it could damage the nozzle internally. When adjusting the nozzle, be careful not to apply excessive force.**

1. Insert a needle or similar thin tool into the injection nozzle of the rear washer nozzle and adjust the area where washer fluid injected from the rear washer nozzle is sprayed as shown in the figure.



ac5wzw0000164

WIPER/WASHER SYSTEM



ac5wzw0000298

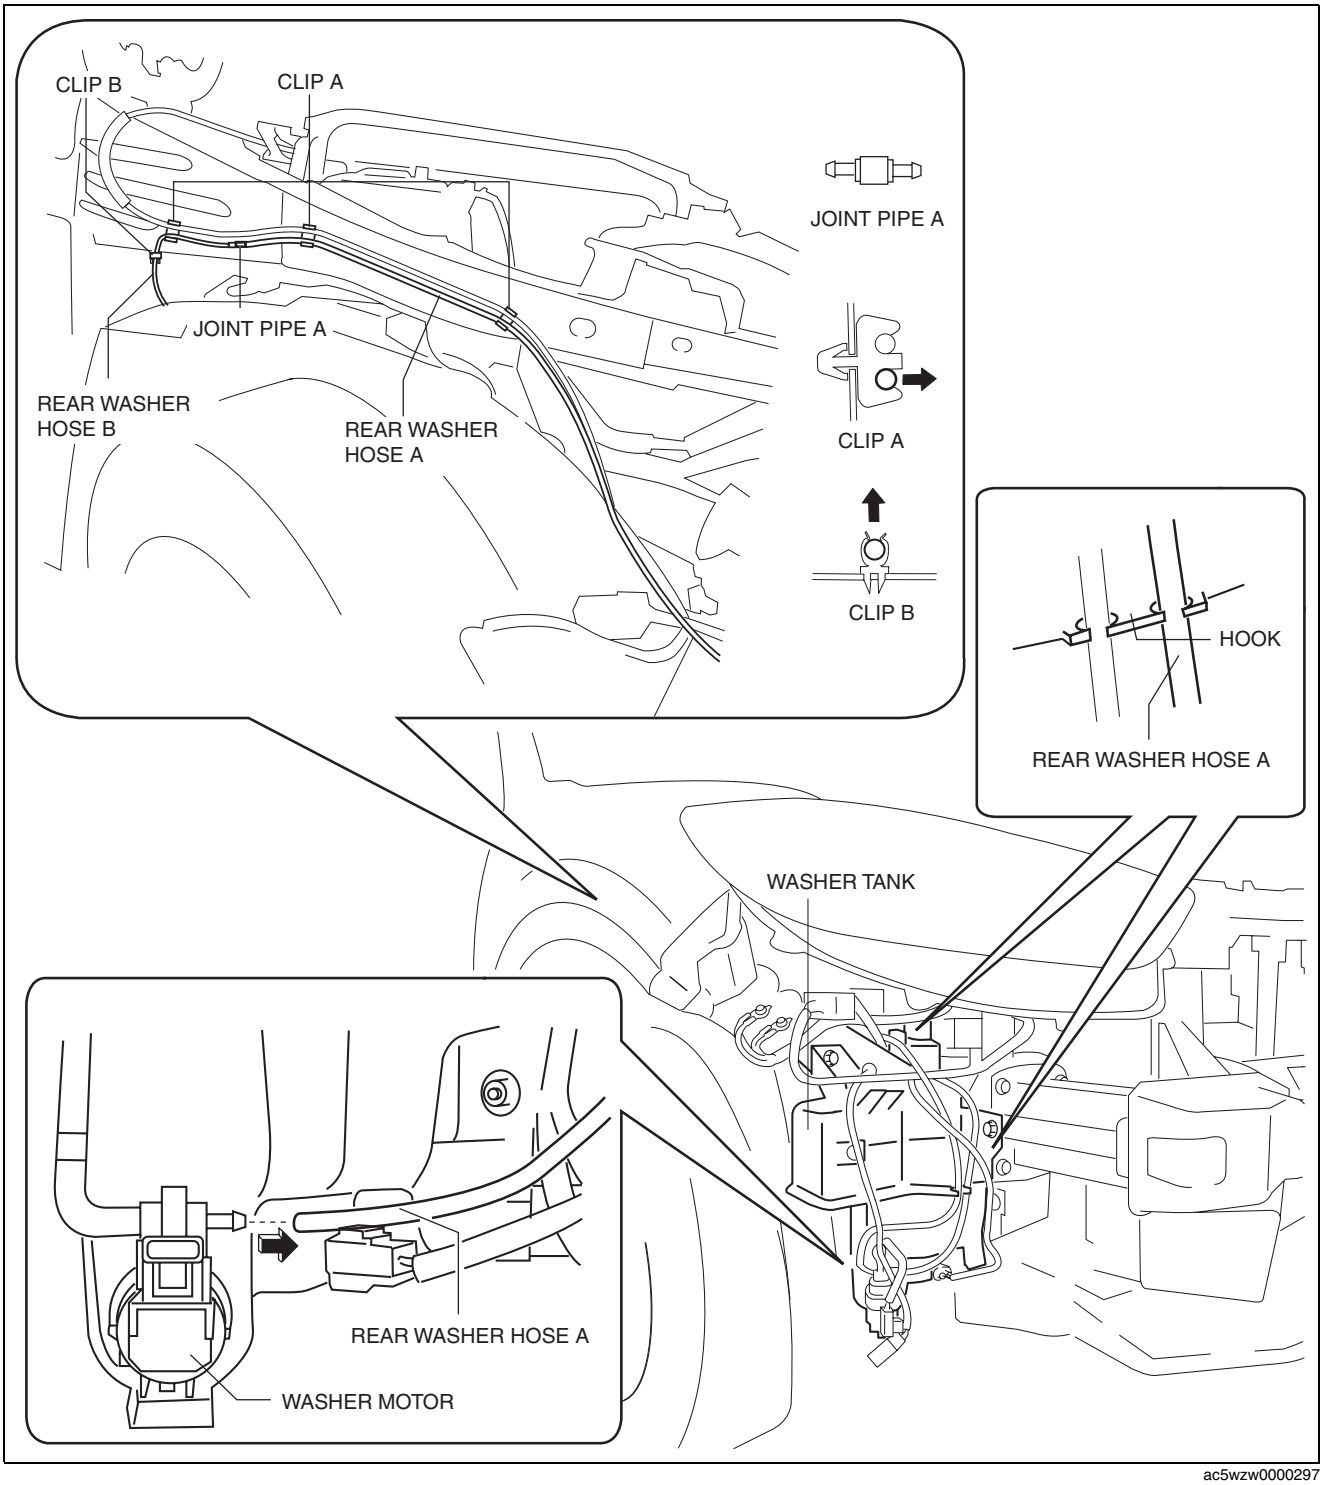
REAR WASHER HOSE REMOVAL/INSTALLATION

id091900801600

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front over fender. (See 09-10-31 FRONT OVER FENDER REMOVAL/INSTALLATION.)
3. Remove the mudguard (RH). (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
4. Disconnect the rear washer hose A from the washer motor.
5. Remove the rear washer hose A from the washer tank hook.
6. Remove the rear washer hose A from clips A and B.
7. Disconnect the rear washer hose A from the joint pipe A and remove it.

WIPER/WASHER SYSTEM

8. Disconnect the rear washer hose B from the joint pipe A.

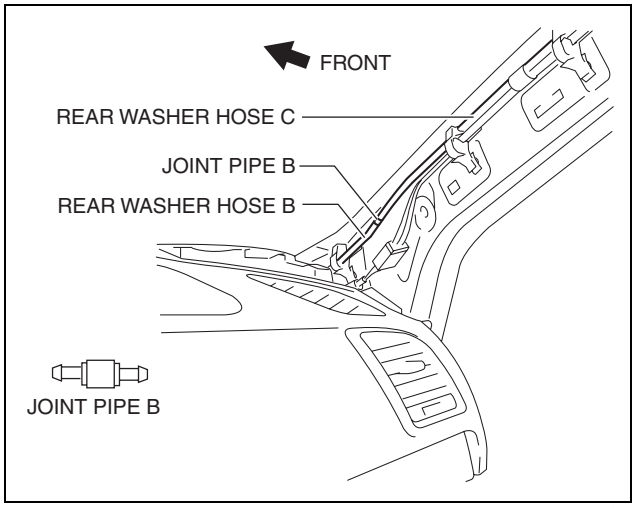


ac5wzw0000297

9. Remove the sunroof seaming welt. (with sunroof) (See 09-15-6 SUNROOF UNIT REMOVAL/INSTALLATION.)
10. Remove the A pillar trim. (See 09-17-53 A-PILLAR TRIM REMOVAL/INSTALLATION.)
11. Disconnect the rear washer hose B from the joint pipe B and remove it.

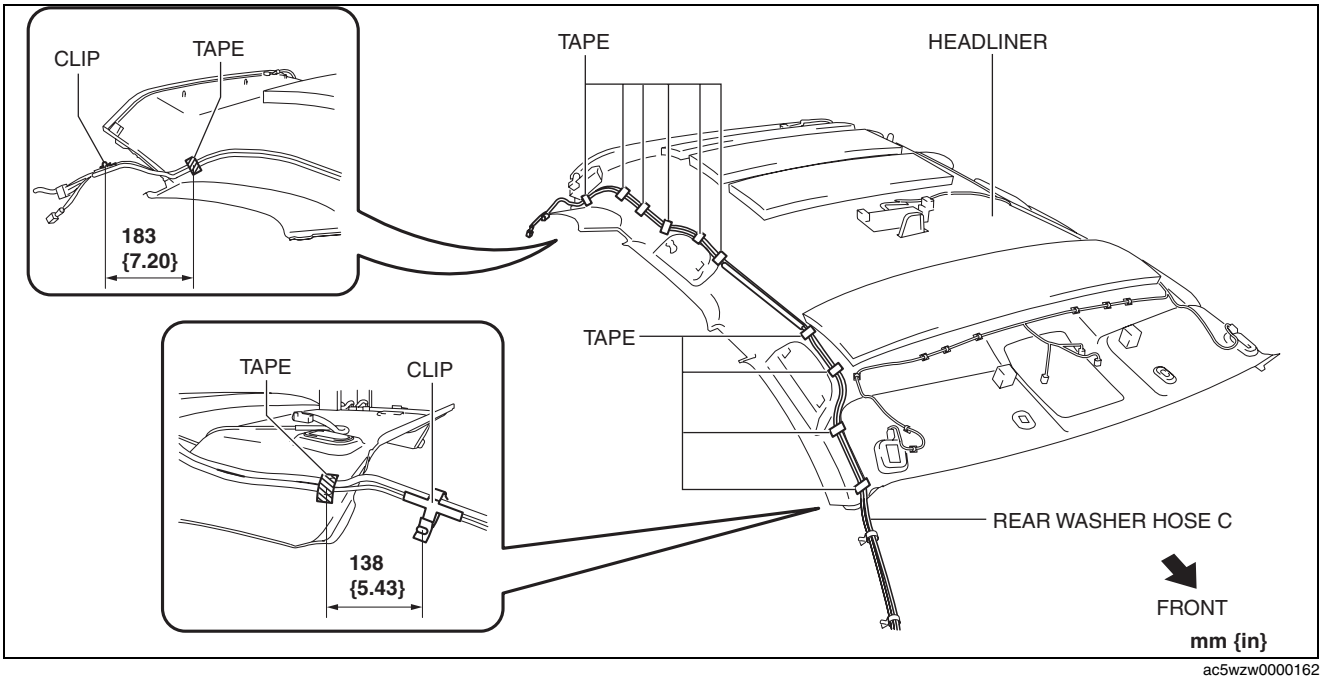
WIPER/WASHER SYSTEM

12. Disconnect the rear washer hose C from the joint pipe B.
13. Remove the following parts:
    (1) Front map light (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)
    (2) Sunvisor (See 09-17-93 SUNVISOR REMOVAL/INSTALLATION.)
    (3) Front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
    (4) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
    (5) B-pillar lower trim (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
    (6) Front seat belt adjusting cover (See 08-11-2 FRONT SEAT BELT REMOVAL/ INSTALLATION.)
    (7) Front seat belt upper anchor installation bolt (See 08-11-2 FRONT SEAT BELT REMOVAL/ INSTALLATION.)
    (8) B-pillar upper trim (See 09-17-58 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
    (9) Assist handle (See 09-17-91 ASSIST HANDLE REMOVAL/INSTALLATION.)
    (10)Trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
    (11)Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
    (12)Trunk side trim (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
    (13)D-pillar trim (See 09-17-60 D-PILLAR TRIM REMOVAL/INSTALLATION.)
    (14)C-pillar trim (See 09-17-59 C-PILLAR TRIM REMOVAL/INSTALLATION.)
    (15)Headliner (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.)
14. Remove the tape and clips shown in the figure.



ac5wzw0000162

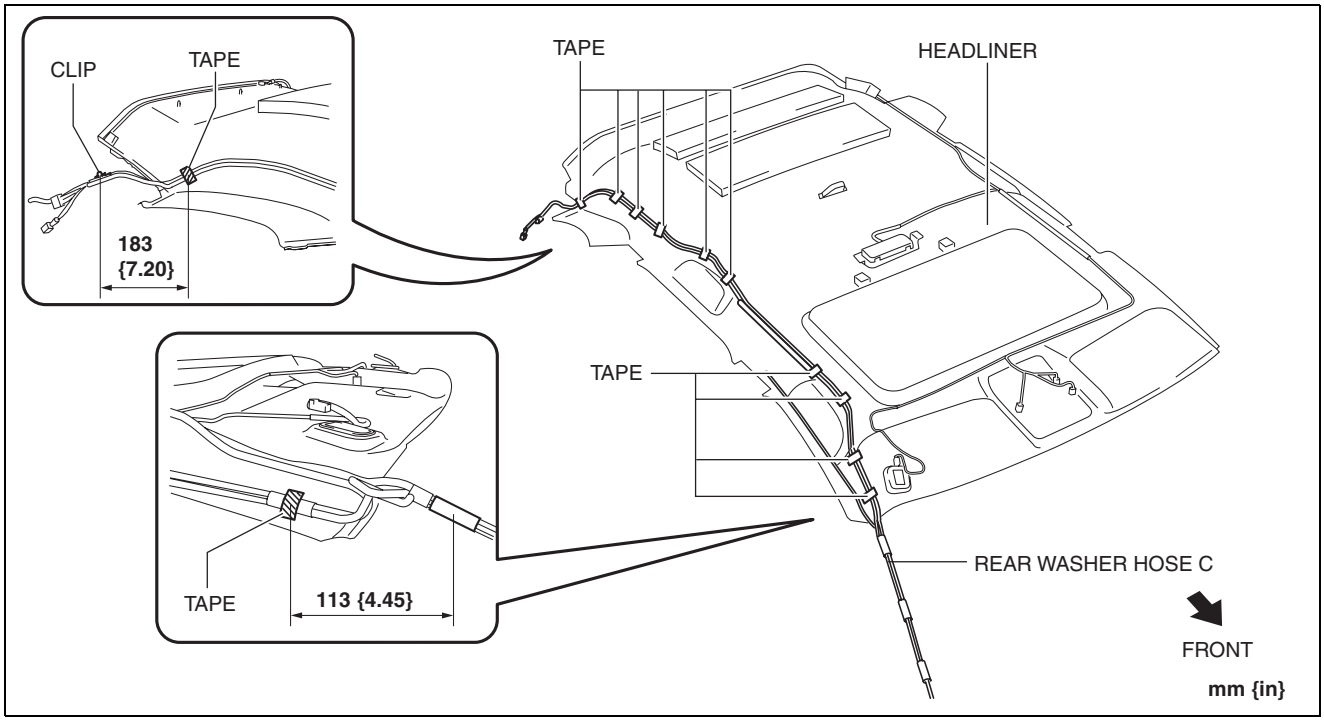
Without sunroof



ac5wzw0000162

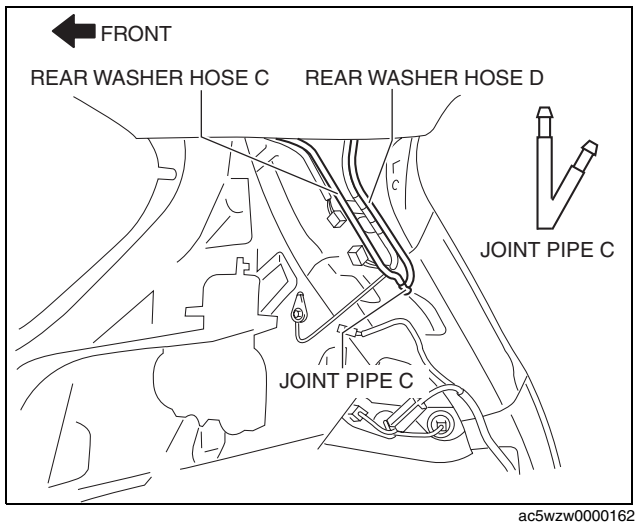
WIPER/WASHER SYSTEM

With sunroof



ac5wzw0000162

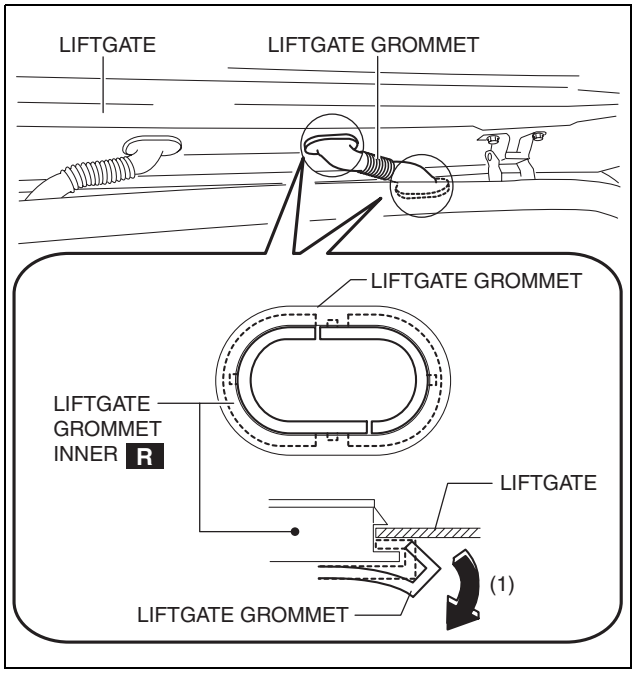
15. Disconnect the rear washer hose C from the joint pipe C and remove it.
16. Disconnect the rear washer hose D from the joint pipe C.
17. Remove the liftgate upper trim. (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/ INSTALLATION.)



ac5wzw0000162

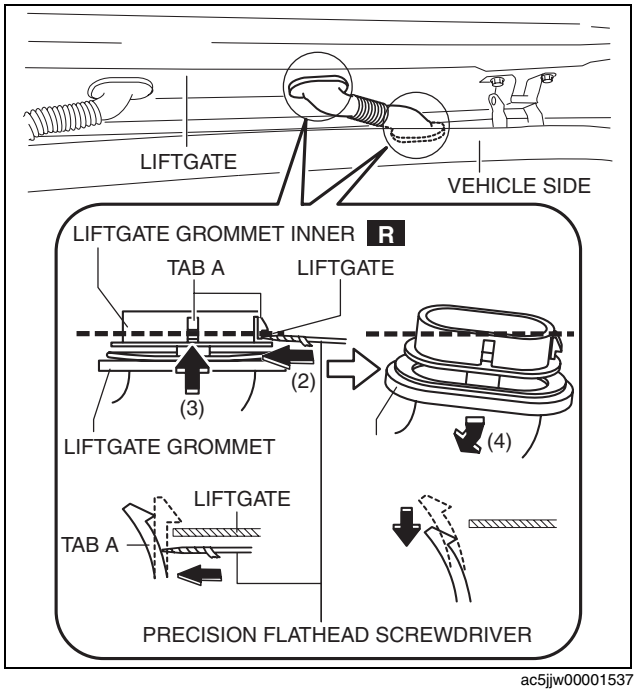
WIPER/WASHER SYSTEM

18. Partially peel the liftgate grommet in the direction of arrow (1) shown in the figure, and remove the liftgate grommet from the liftgate grommet inner.



ac5wzw0000463

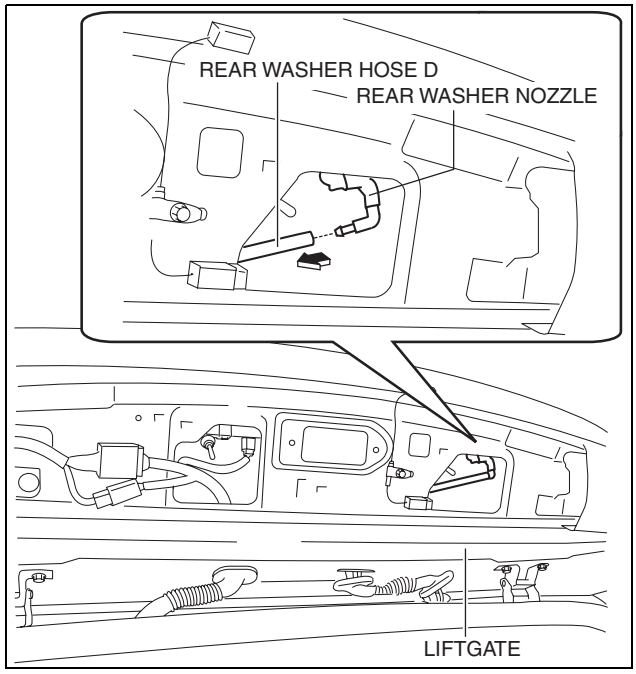
19. Using a tape-wrapped precision flathead screwdriver, press the liftgate grommet inner tabs in the directions of arrows (2) and (3) shown in the figure and remove each liftgate grommet inner from the liftgate and vehicle side in the direction of arrow (4).



ac5jjw00001537

WIPER/WASHER SYSTEM

20. Disconnect the rear washer hose D from the rear washer nozzle and remove it.
21. Install in the reverse order of removal.



ac5wzw0000163

WIPER AND WASHER SWITCH REMOVAL/INSTALLATION

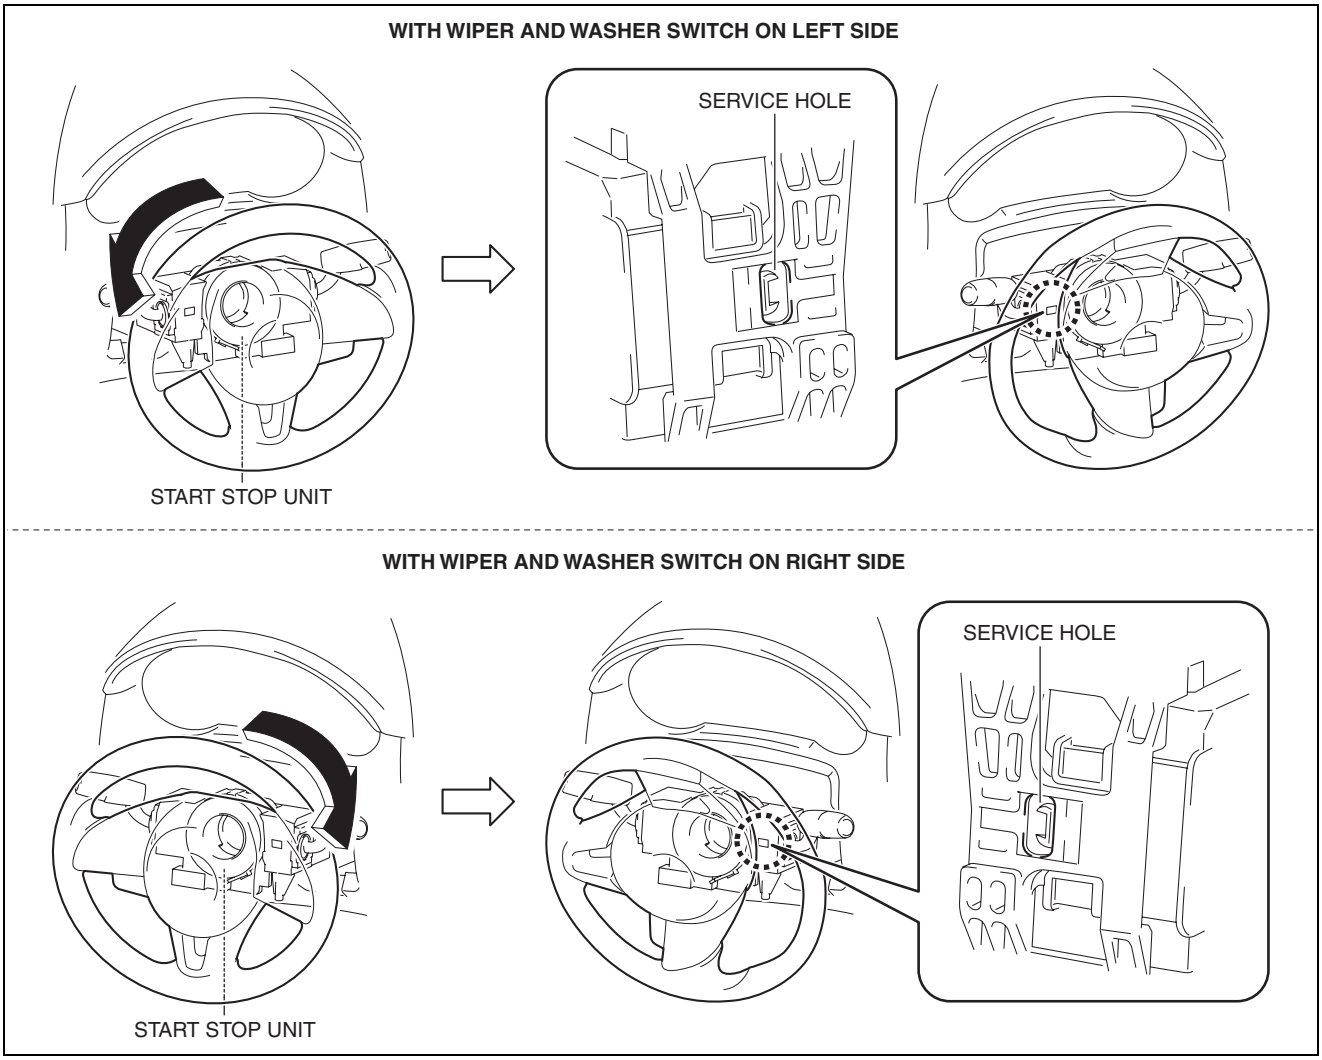
id091900800200

Note
- If the ignition has been switched OFF (LOCK) with the driver's door closed, the wiper and washer switch cannot be removed because the steering will be locked and the service hole cannot be accessed.

1. Switch the ignition ON (engine off or on).
2. Open the driver's door.
3. Switch the ignition OFF (LOCK).
4. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
5. Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.)

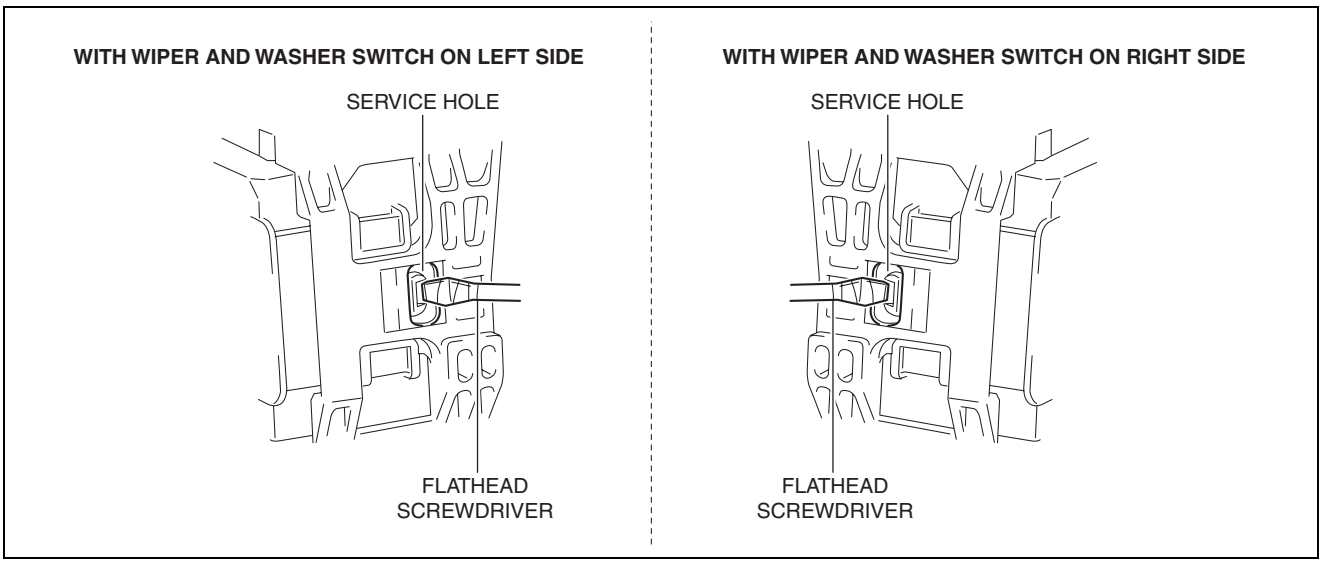
WIPER/WASHER SYSTEM

6. Rotate the steering wheel in the direction of the arrow shown in the figure to the angle where the service hole is visible.



ac5wzw0000168

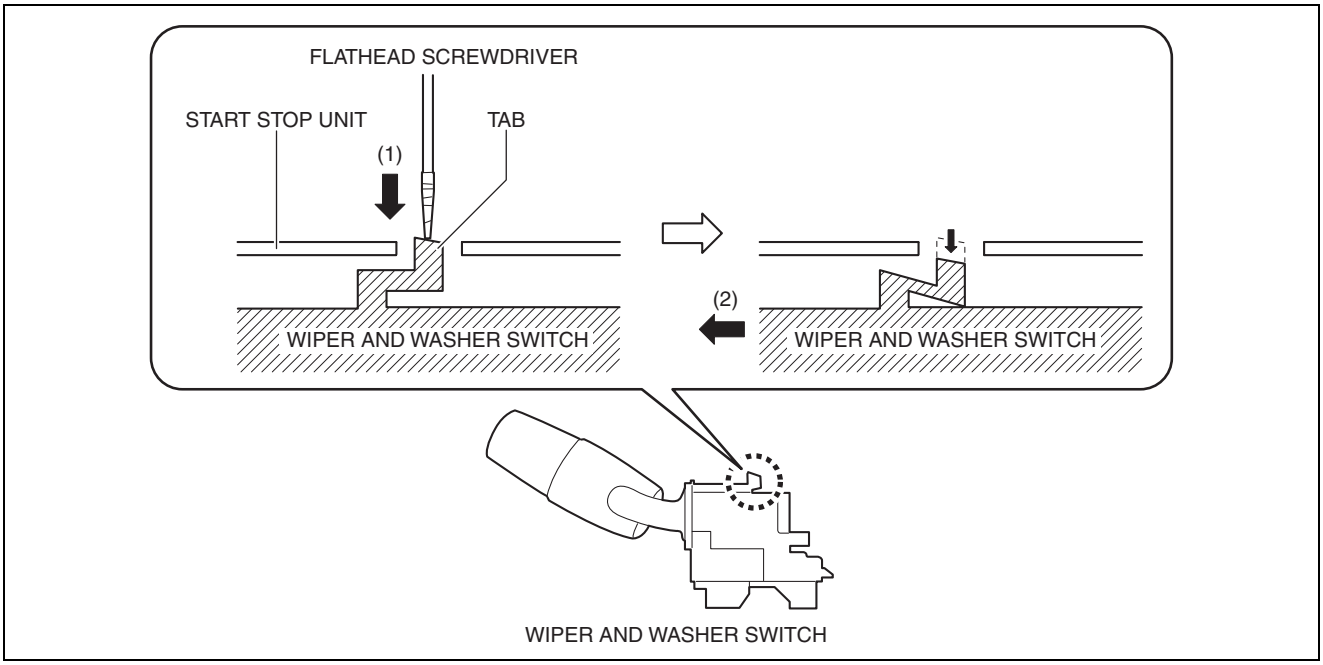
7. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.



ac5wzw0000164

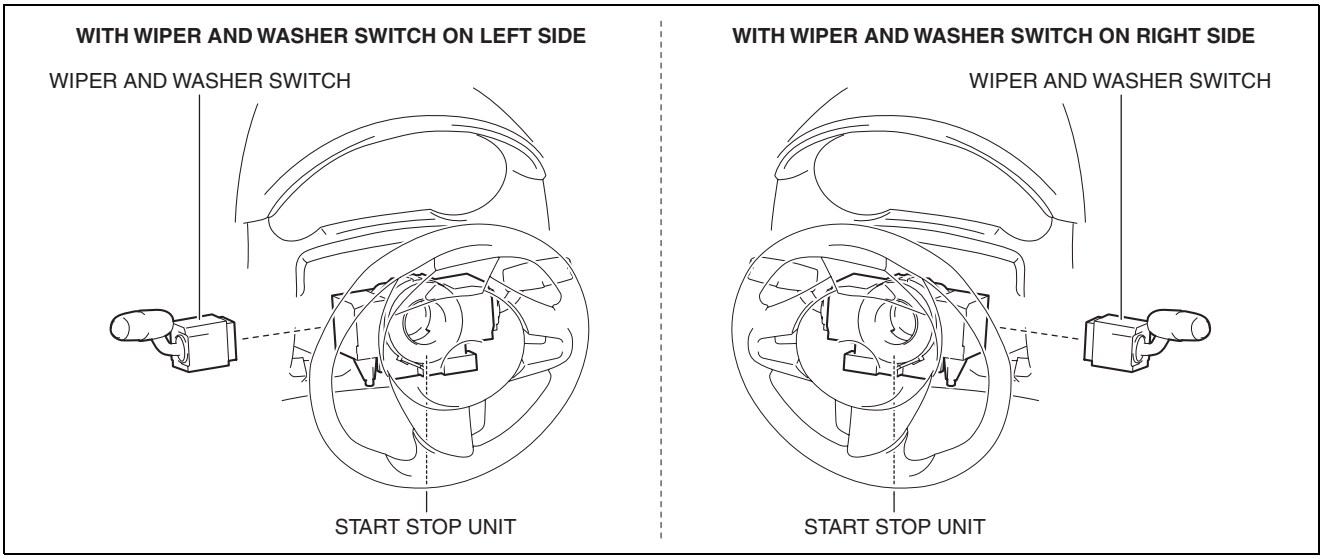
WIPER/WASHER SYSTEM

8. While pressing the wiper and washer switch tab in the direction of the arrow (1) shown in the figure using a flathead screwdriver, pull out the wiper and washer switch in the direction of the arrow (2) shown in the figure to detach the wiper and washer switch tab and the start stop unit.



ac5wzw0000168

9. Remove the wiper and washer switch from the start stop unit.



ac5wzw0000168

10. Install in the reverse order of removal.

WINDSHIELD WIPER AND WASHER SWITCH INSPECTION

id091900800300

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Column cover (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.)
   (2) Wiper and washer switch (See 09-19-45 WIPER AND WASHER SWITCH REMOVAL/INSTALLATION.)
3. Verify that the continuity between the windshield wiper and washer switch terminals is as indicated in the table.
   - If the continuity is not as indicated in the table, replace the windshield wiper and washer switch. (See 09-19-45 WIPER AND WASHER SWITCH REMOVAL/INSTALLATION.)

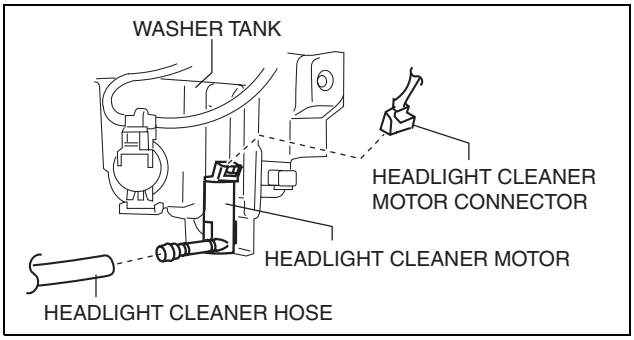
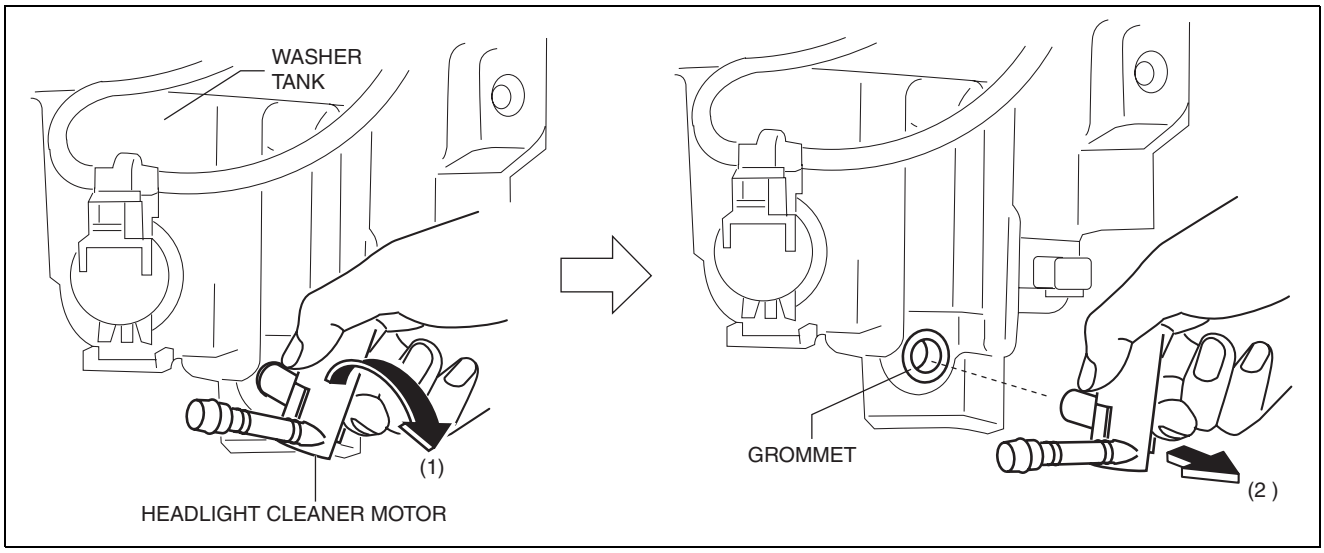
HEADLIGHT CLEANER MOTOR REMOVAL/INSTALLATION

id091900803300

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Partially peel back the front over fender. (See 09-10-31 FRONT OVER FENDER REMOVAL/INSTALLATION.)
3. Set the mudguard (RH) aside. (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
4. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
5. Disconnect the headlight cleaner motor connector.
6. Disconnect the headlight cleaner hose from the headlight cleaner motor.
7. Tilt the upper part of the headlight cleaner motor in the direction of the arrow (1) shown in the figure and remove the headlight cleaner motor from the washer tank in the direction of the arrow (2).
8. Remove the grommets from the washer tank.



ac5uuw00000822



ac5uuw00000823

9. Install in the reverse order of removal.

WIPER/WASHER SYSTEM

HEADLIGHT CLEANER MOTOR INSPECTION

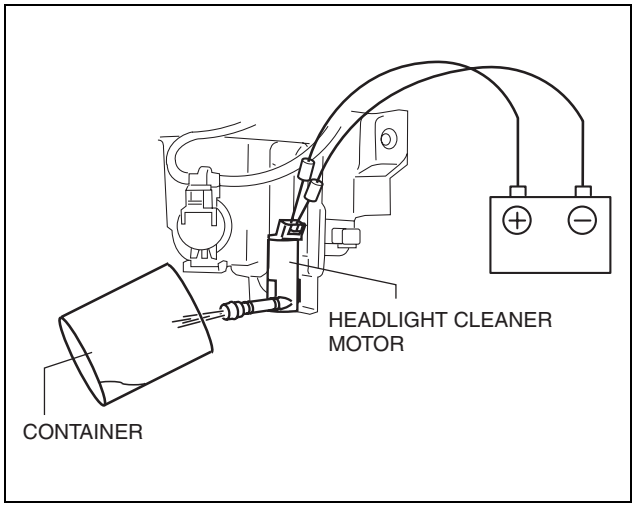
id091900803200

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Set the mudguard (RH) aside. (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
3. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
4. Disconnect the headlight cleaner motor connector from the headlight cleaner motor. (See 09-19-51 HEADLIGHT CLEANER MOTOR REMOVAL/INSTALLATION.)
5. Disconnect the headlight cleaner hose from the headlight cleaner motor. (See 09-19-51 HEADLIGHT CLEANER MOTOR REMOVAL/INSTALLATION.)

Warning

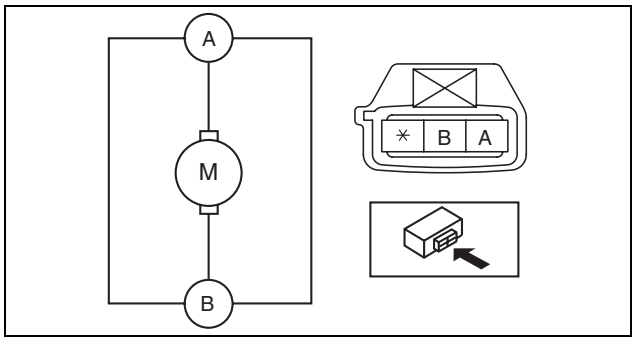
- **Water sprayed on the battery and ground could cause electrocution. When performing the headlight cleaner motor inspection, prepare a container to collect washer fluid and be careful not to spray washer fluid.**

6. After connecting headlight cleaner motor terminal B to the positive battery terminal, and terminal A to the ground, verify that washer fluid sprays from the front of the headlight cleaner motor.



ac5wzw0000220

- If there is any malfunction, replace the headlight cleaner motor. (See 09-19-51 HEADLIGHT CLEANER MOTOR REMOVAL/INSTALLATION.)



ac5jjw00000443

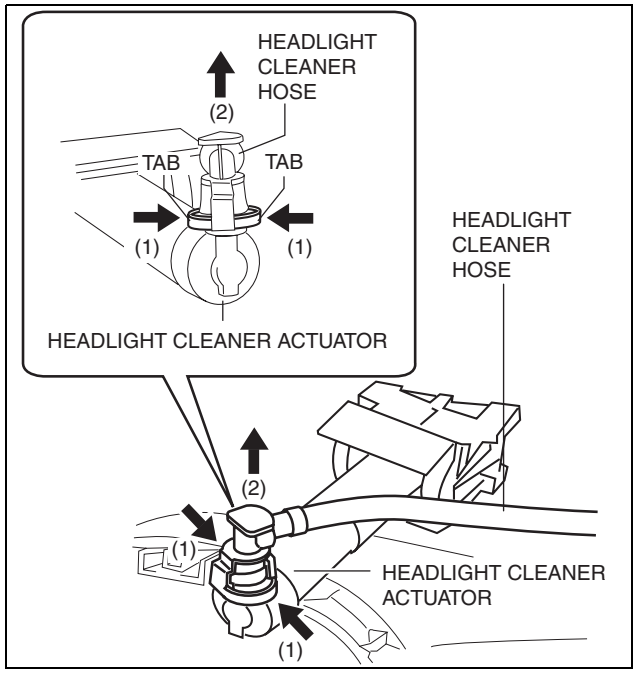
HEADLIGHT CLEANER ACTUATOR REMOVAL/INSTALLATION

id091900803000

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Partially peel back the front over fender. (See 09-10-31 FRONT OVER FENDER REMOVAL/INSTALLATION.)
3. Set the mudguard (RH) aside. (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
4. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
5. Remove the headlight cleaner cover. (See 09-19-55 HEADLIGHT CLEANER COVER REMOVAL/INSTALLATION.)

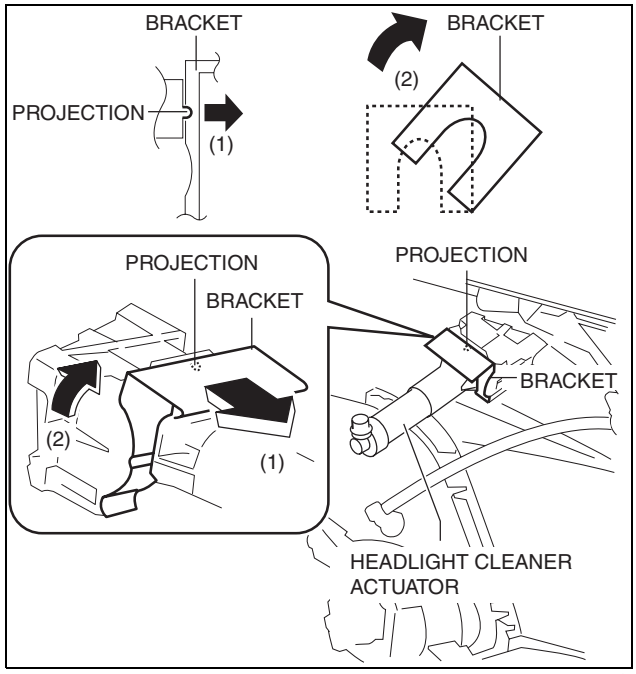
WIPER/WASHER SYSTEM

6. While pressing tabs in the direction of the arrows (1) shown in the figure, pull up the headlight cleaner hose in the direction of the arrow (2) to remove it from the headlight cleaner actuator.



ac5uuw00000818

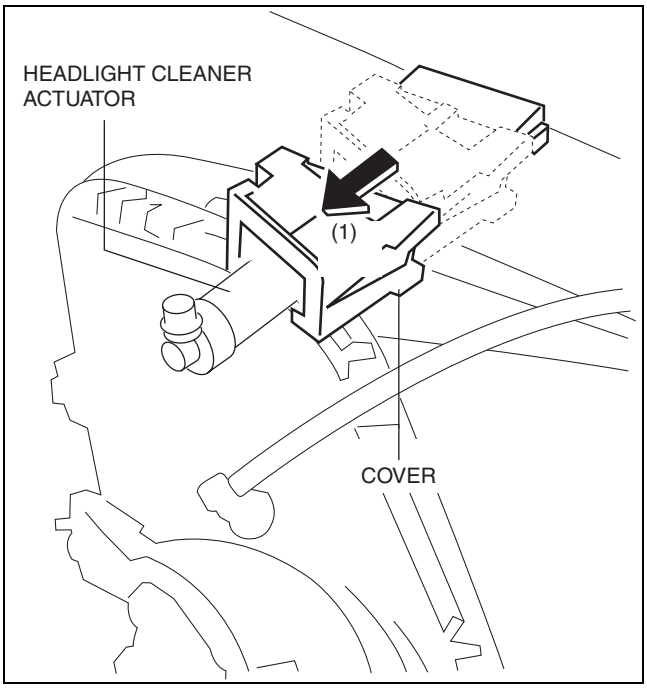
7. Avoid the projection by pushing the bracket in the direction of arrow (1) shown in the figure.
8. Move the bracket in the direction of the arrow (2) to remove it from the headlight cleaner actuator.



ac5uuw00000819

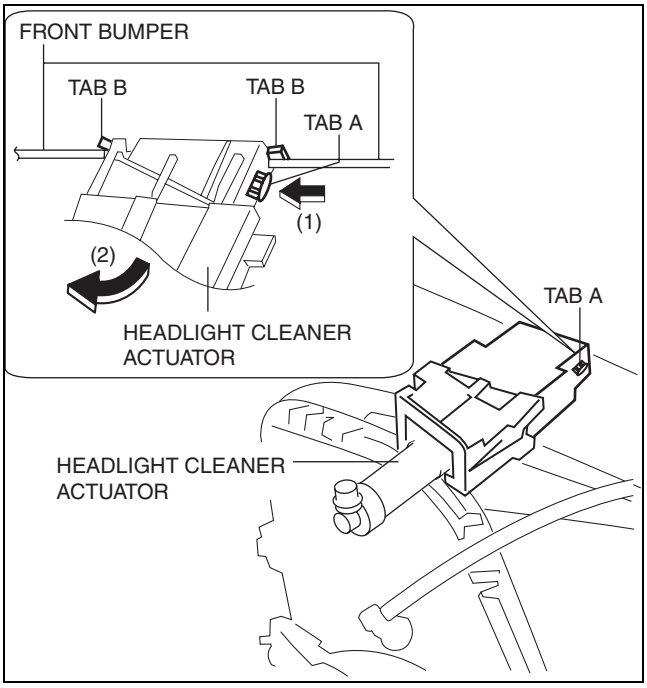
WIPER/WASHER SYSTEM

9. Remove the cover in the direction of the arrow (1) shown in the figure.



ac5uuw00000820

10. Press tab A of the headlight cleaner actuator in the direction of the arrow (1) shown in the figure and remove the headlight actuator from the front bumper in the direction of the arrow (2) while detaching the engagement of tabs B.
11. Install in the reverse order of removal.



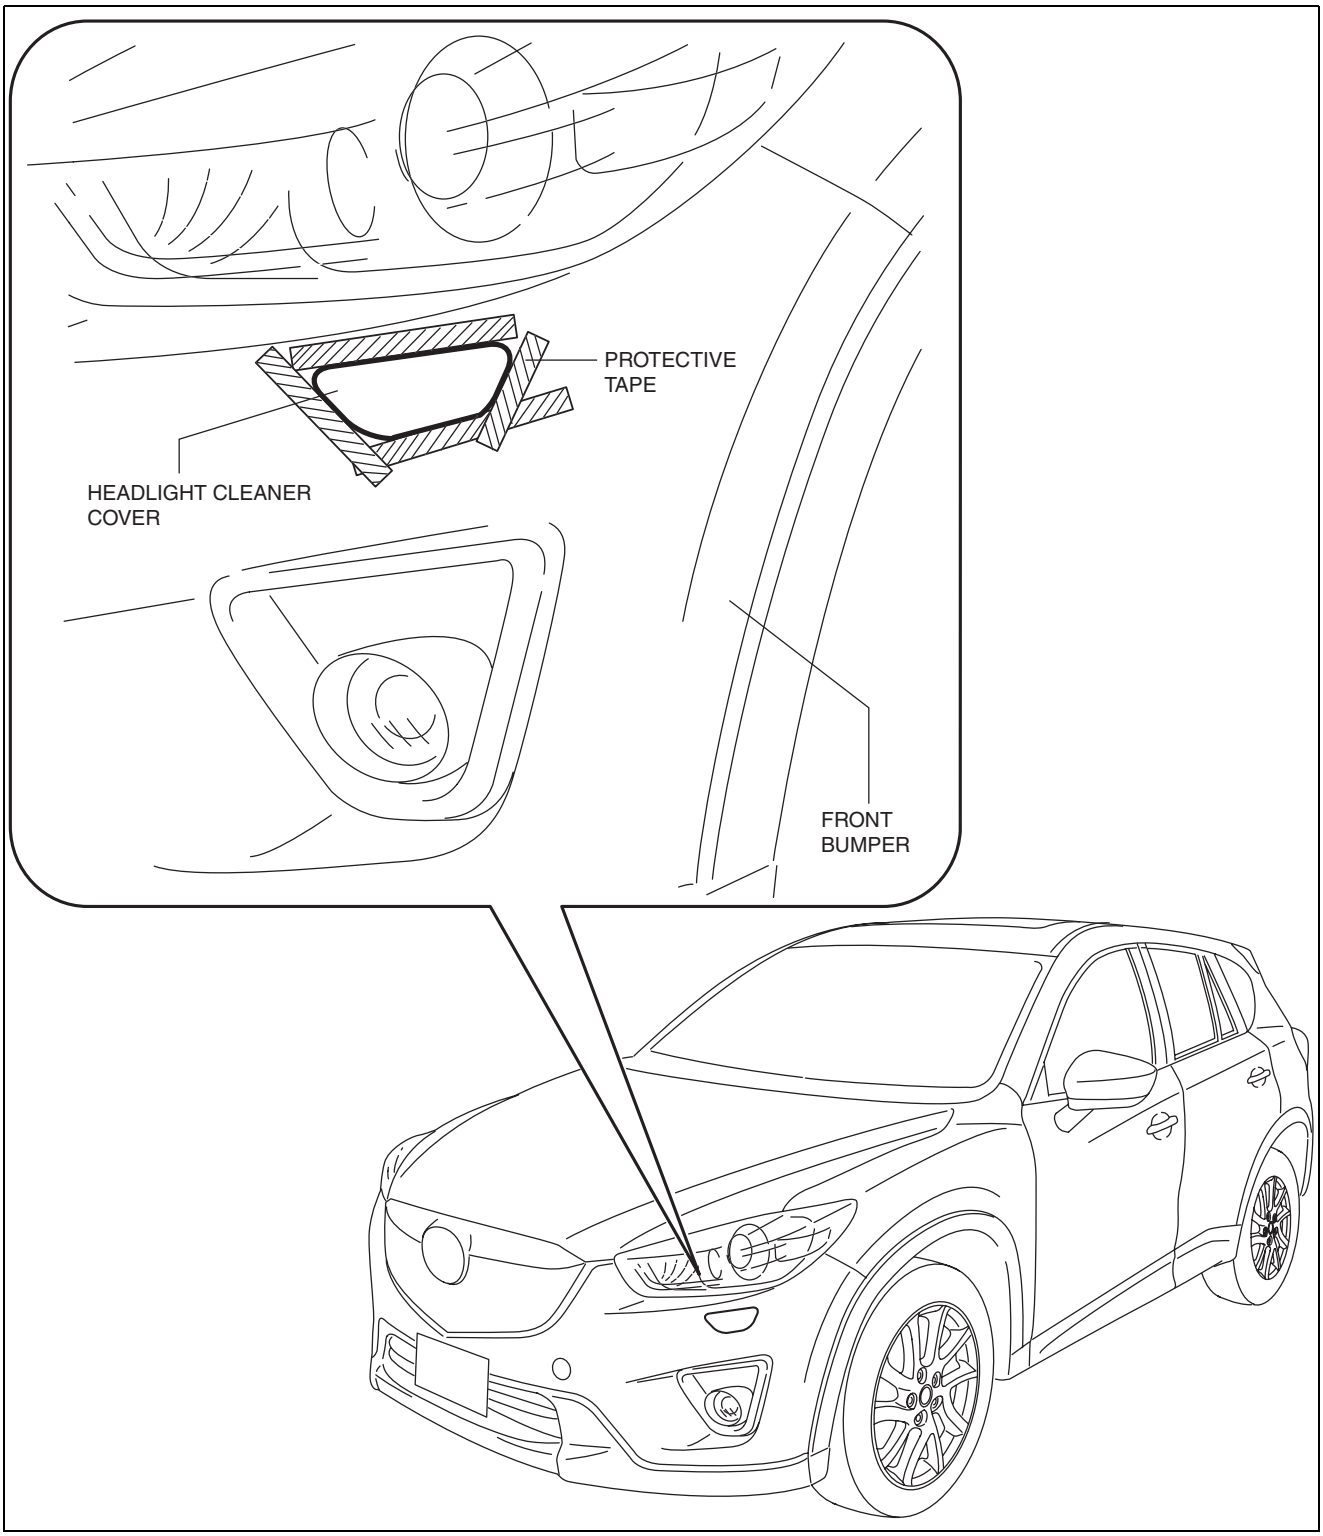
ac5uuw00000821

WIPER/WASHER SYSTEM

HEADLIGHT CLEANER COVER REMOVAL/INSTALLATION

id091900814100

Caution
- **Before removing the headlight cleaner cover, affix protective tape to the positions shown in the figure. Otherwise, it could damage the front bumper.**

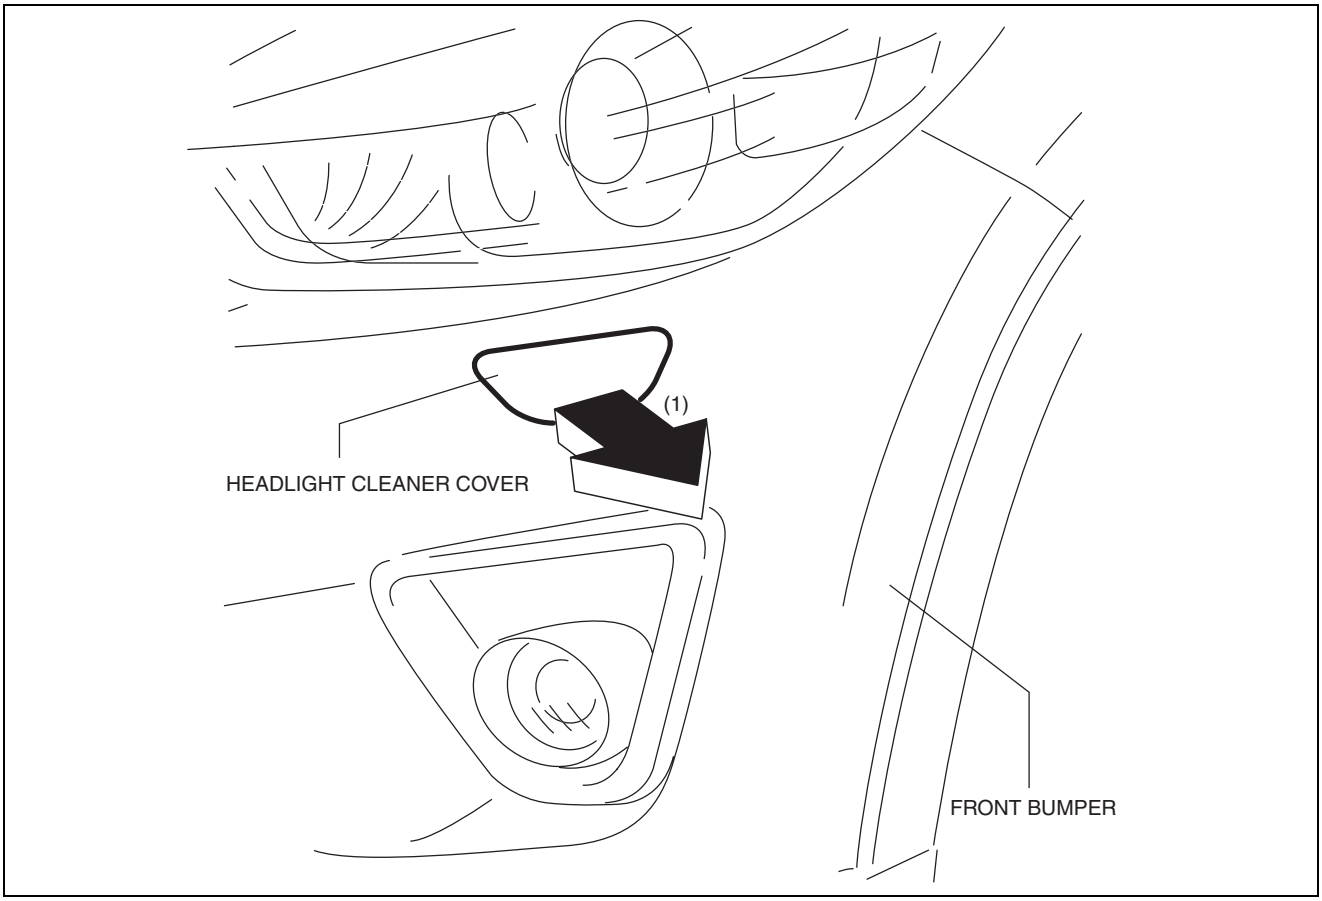


ac5uuw00000830

Caution
- **Forcefully pulling the headlight cleaner cover could damage it. Be careful when pulling the headlight cleaner cover.**

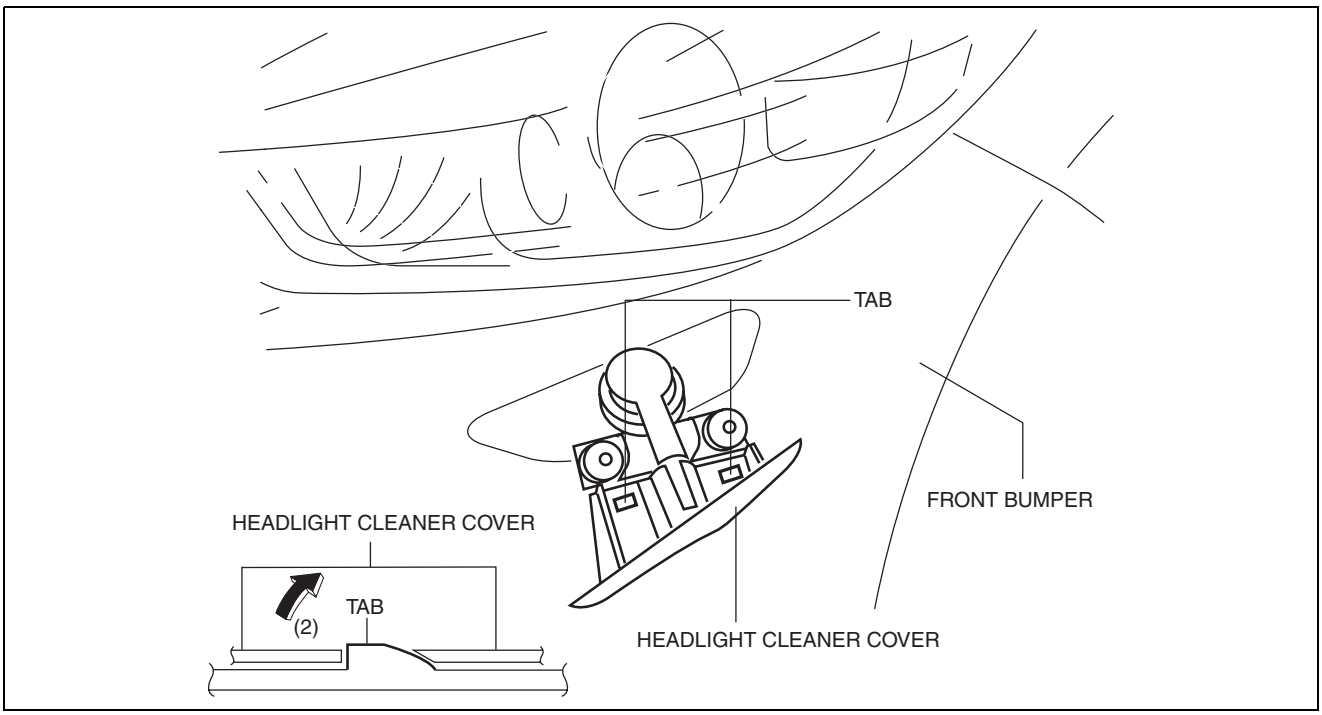
WIPER/WASHER SYSTEM

1. Pull out the headlight cleaner cover in the direction of the arrow (1) shown in the figure.



ac5uuw00000831

2. While the headlight cleaner cover is pulled out, disengage tabs in the direction of the arrow (2) and remove them.



ac5uuw00000832

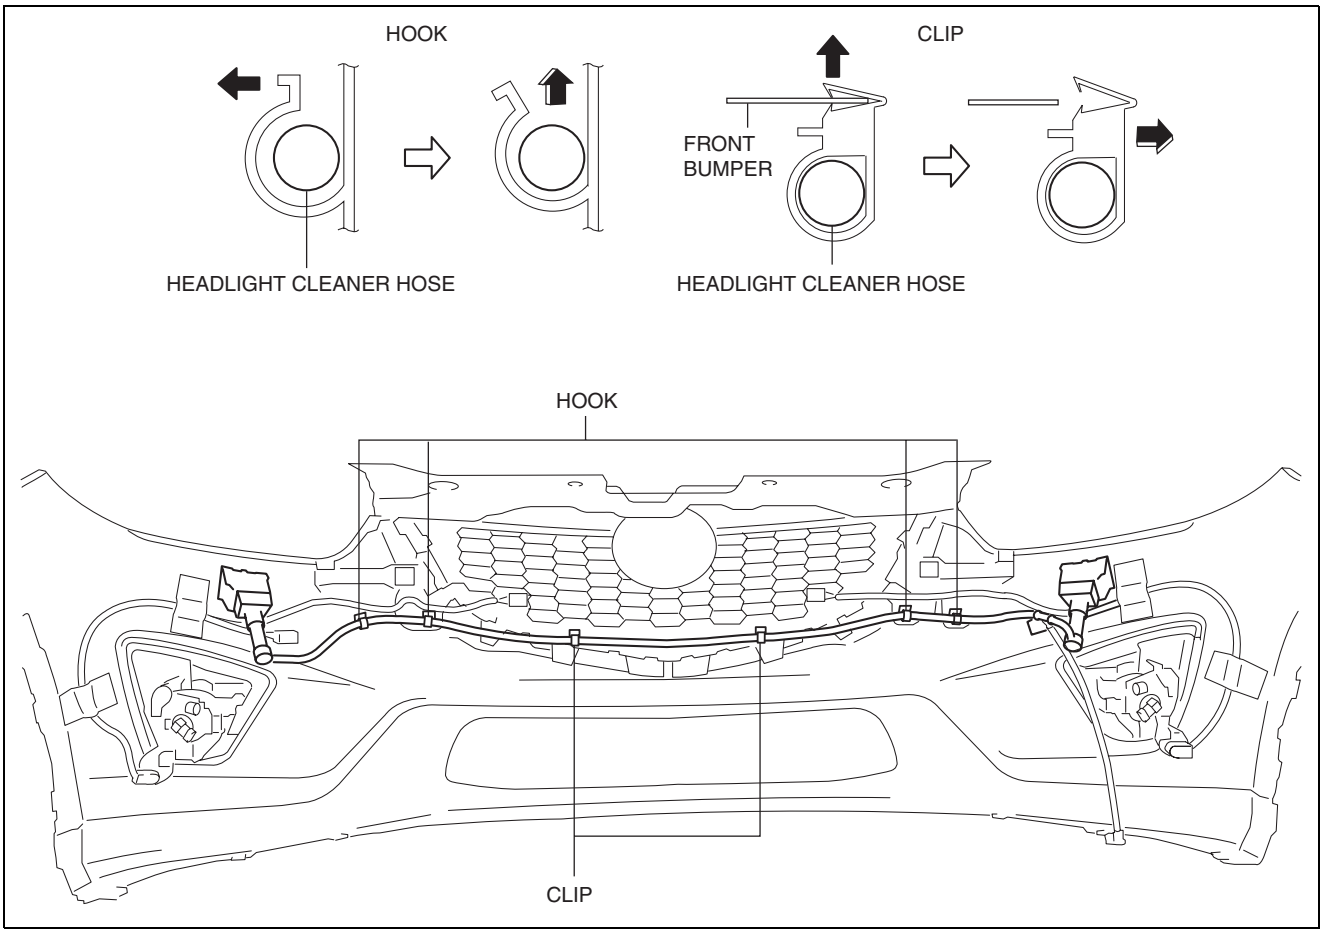
3. Install in the reverse order of removal.

WIPER/WASHER SYSTEM

HEADLIGHT CLEANER HOSE REMOVAL/INSTALLATION

id091900803100

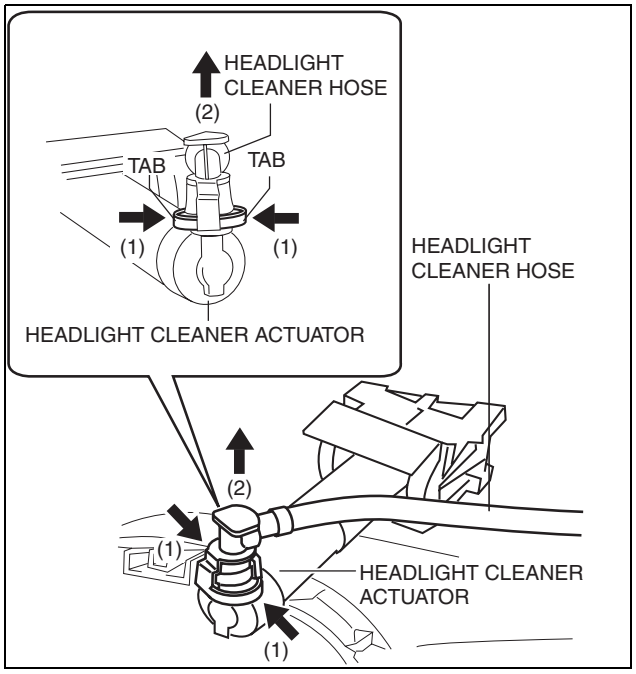
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Partially peel back the front over fender. (See 09-10-31 FRONT OVER FENDER REMOVAL/INSTALLATION.)
3. Set the mudguard aside. (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
4. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
5. Remove the headlight cleaner hose from hooks.
6. Remove clips and headlight cleaner hose as a single unit from the front bumper.



ac5wzw0000164

WIPER/WASHER SYSTEM

7. While pressing tabs in the direction of the arrows (1) shown in the figure, pull up the headlight cleaner hose in the direction of the arrow (2) to remove it from the headlight cleaner actuator.
8. Install in the reverse order of removal.



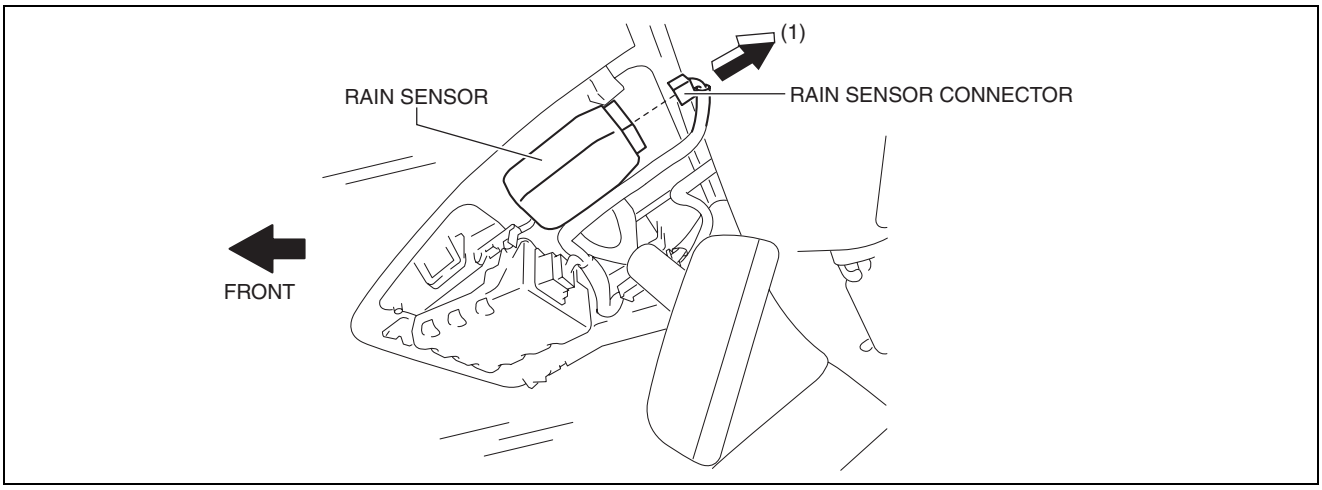
ac5wzw0000164

RAIN SENSOR REMOVAL/INSTALLATION

id091900800500

With Forward Sensing Camera (FSC) Or Smart City Brake Support (SCBS)

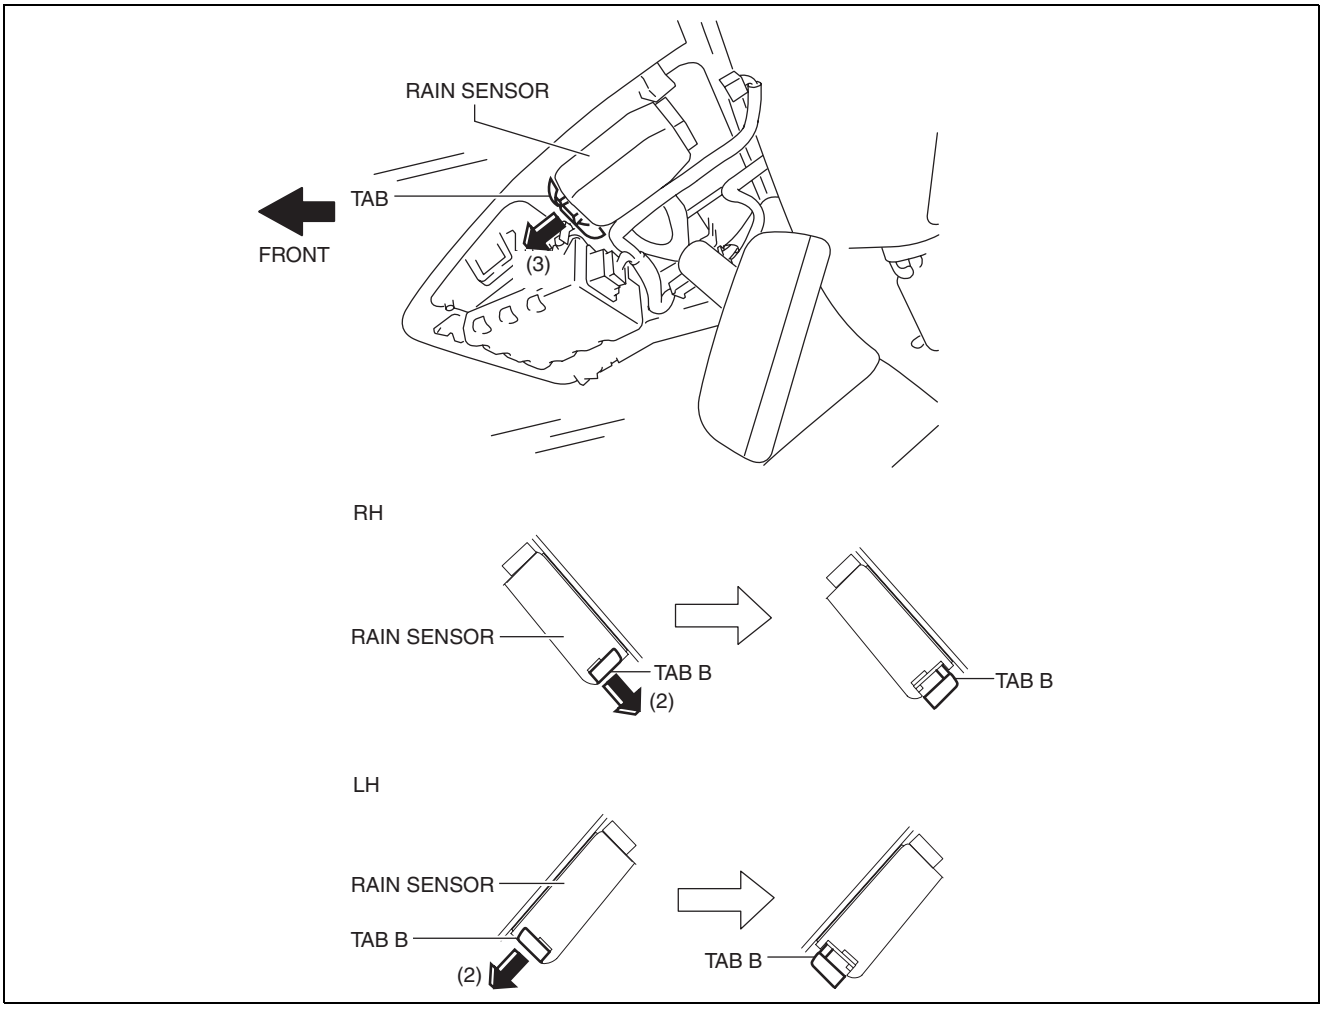
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the cover. (See 09-18-94 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
3. Disconnect the rain sensor connector in the direction of the arrow (1).



ac5wzw0000159

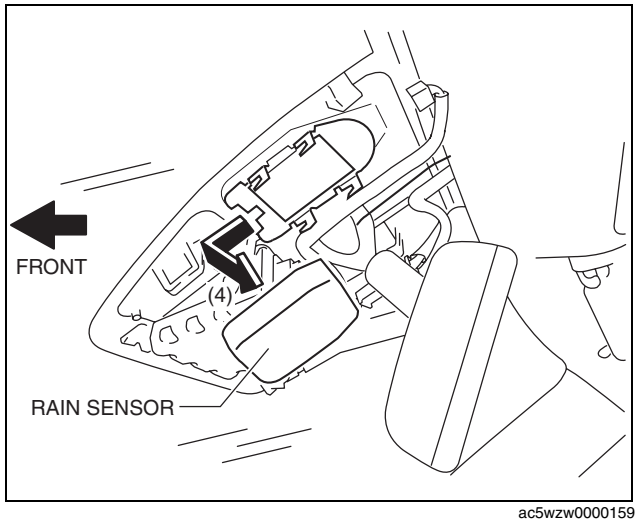
WIPER/WASHER SYSTEM

4. Slide rain sensor tabs B in the direction of the arrow (2) shown in the figure, detach the engagement, and pull tab B in the direction of the arrow (3).



ac5wzw0000159

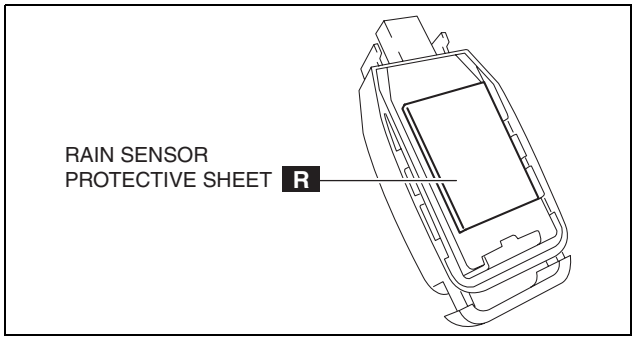
5. Remove the rain sensor in the direction of the arrow (4) shown in the figure.



ac5wzw0000159

WIPER/WASHER SYSTEM

6. Peel off the rain sensor protective sheet from the rain sensor.
7. Install in the reverse order of removal. (See 09-19-62 Rain Sensor Installation Note.)
8. Perform headlight auto light setting. (See 09-18-93 LIGHTING SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE.)



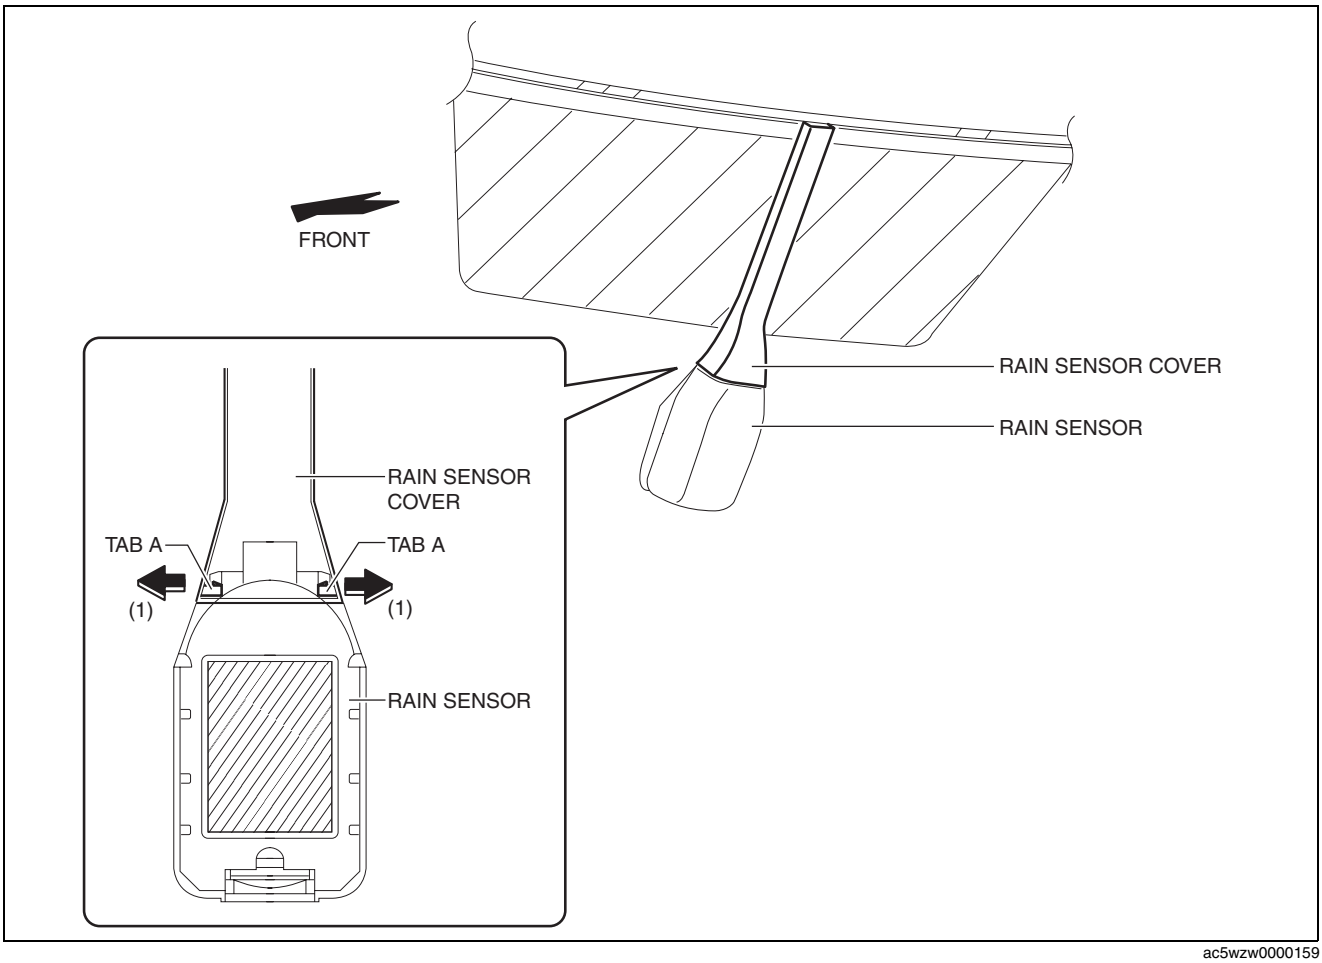
ac5wzw0000169

Caution

- **If the rain sensor is replaced, the auto light system may not operate normally because the auto light sensitivity setting is initialized. If the rain sensor is replaced, perform the auto light sensitivity setting.**
- **If the auto light sensitivity setting before replacing the rain sensor was "Medium", and the following sensitivity setting procedure is not performed, the sensor will be unable to detect the illumination level correctly and the auto light system will not operate normally. If the rain sensor is replaced, perform the following sensitivity setting procedure.**
  1. **Except for "Medium" sensitivity setting.**
  2. **Re-setting to "Medium".**

Without FSC Or SCBS

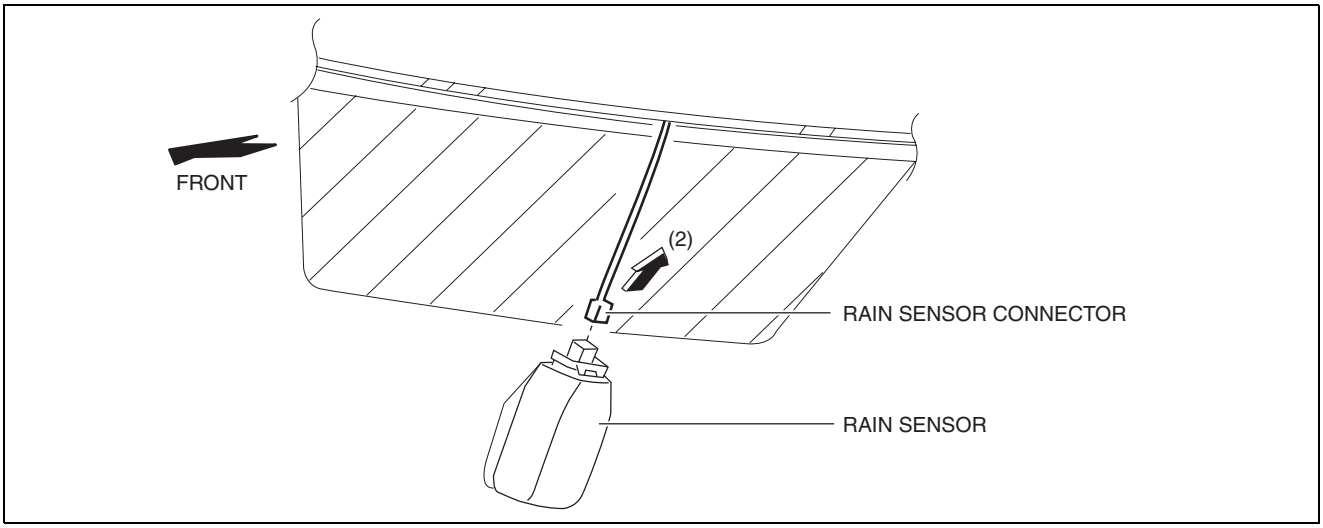
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Spread open the rain sensor cover in the direction of the arrows (1) and disengage tabs A to remove it.



ac5wzw0000159

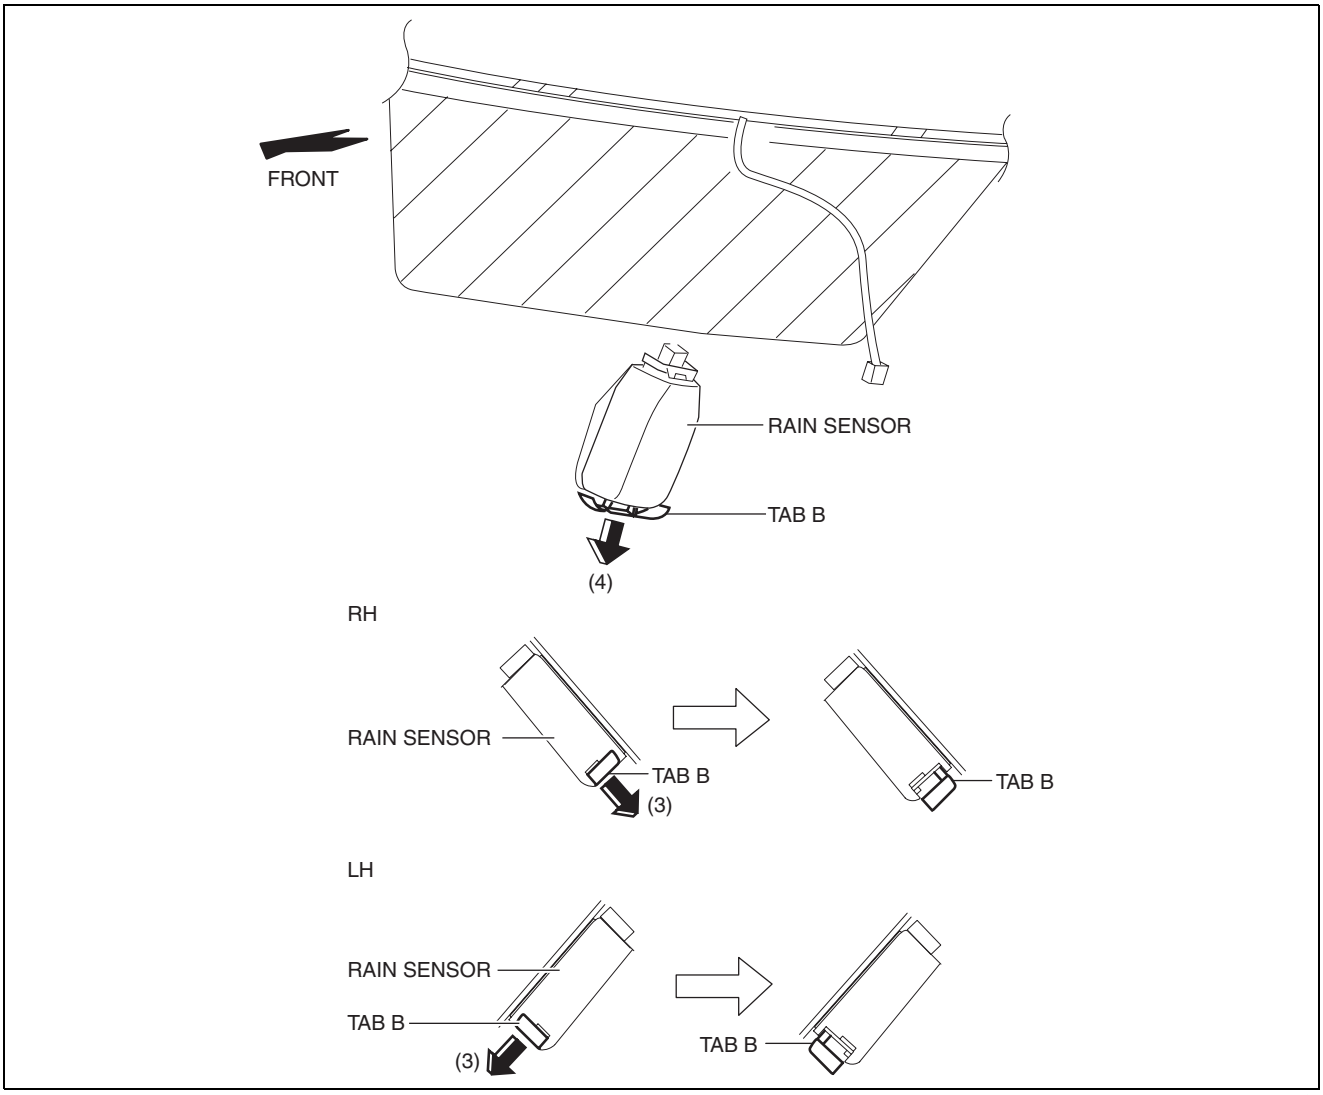
WIPER/WASHER SYSTEM

3. Disconnect the rain sensor connector in the direction of the arrow (2).



ac5wzw0000159

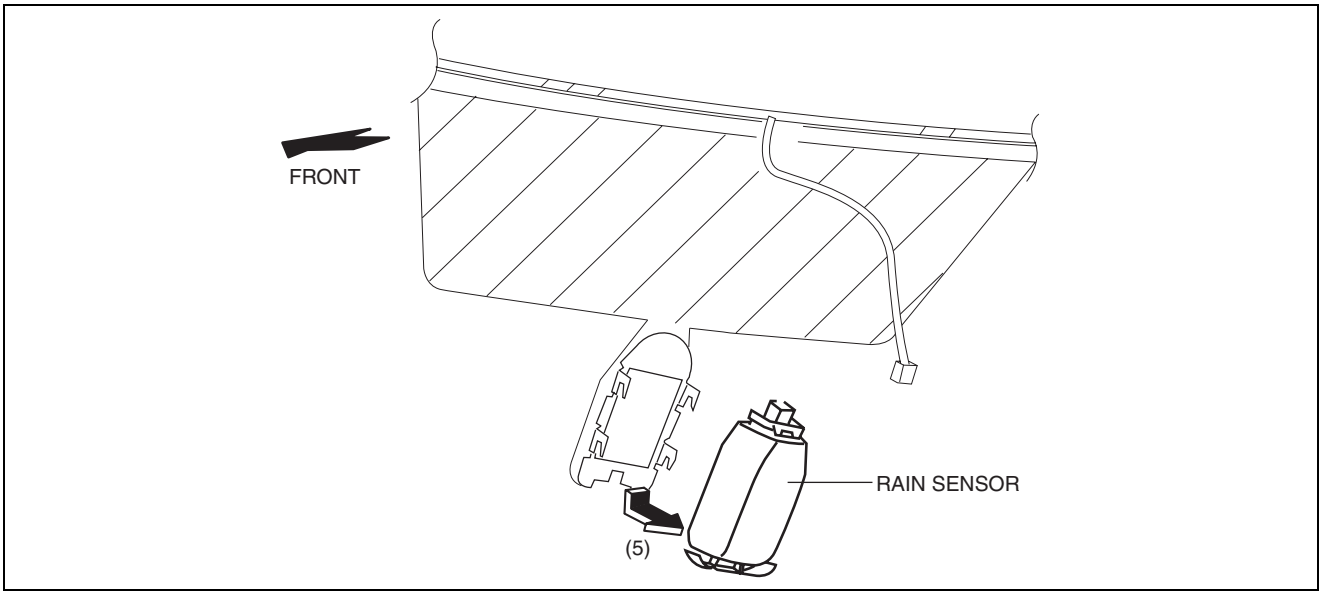
4. Slide rain sensor tabs B in the direction of the arrow (3) shown in the figure, detach the engagement, and pull tab B in the direction of the arrow (4).



ac5wzw0000219

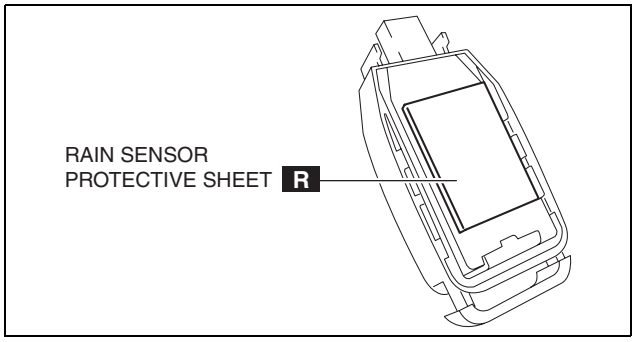
WIPER/WASHER SYSTEM

5. Remove the rain sensor in the direction of the arrow (5) shown in the figure.



ac5wzw0000159

6. Peel off the rain sensor protective sheet from the rain sensor.
7. Install in the reverse order of removal. (See 09-19-62 Rain Sensor Installation Note.)
8. Perform headlight auto light setting. (See 09-18-93 LIGHTING SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE.)



ac5wzw0000169

Caution

- **If the rain sensor is replaced, the auto light system may not operate normally because the auto light sensitivity setting is initialized. If the rain sensor is replaced, perform the auto light sensitivity setting.**
- **If the auto light sensitivity setting before replacing the rain sensor was "Medium", and the following sensitivity setting procedure is not performed, the sensor will be unable to detect the illumination level correctly and the auto light system will not operate normally. If the rain sensor is replaced, perform the following sensitivity setting procedure.**
  1. **Except for "Medium" sensitivity setting.**
  2. **Re-setting to "Medium".**

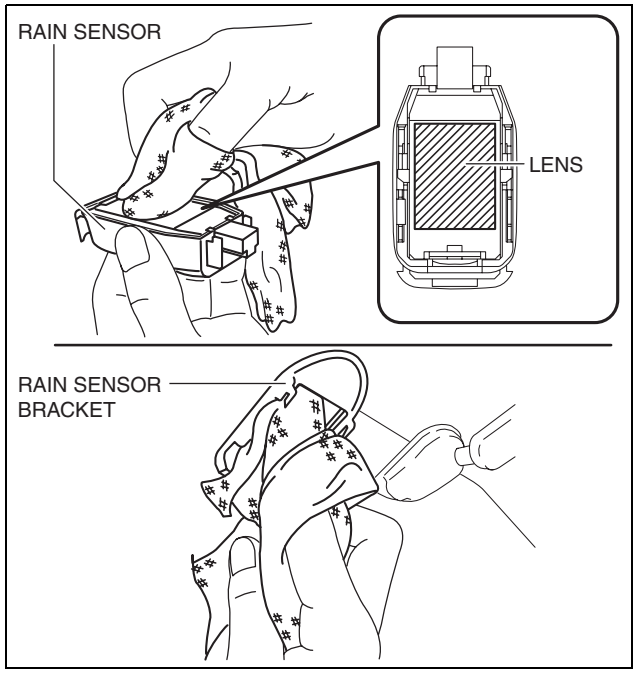
Rain Sensor Installation Note

Caution

- **If the rate at which the rain sensor reflects or transmits infrared light between the rain sensor and the windshield, or through the protective sheet is changed, the rain sensor will determine that there is a malfunction in the rain detection function and stop auto wiper system control. Be careful of the following when installing the rain sensor:**
  - **— Do not reuse the rain sensor protective sheet**
  - **— Do not touch the rain sensor lens, rain sensor protective sheet, and sensor installation area on windshield with your fingers**
  - **— Verify that there is no air bubble after installing the rain sensor**

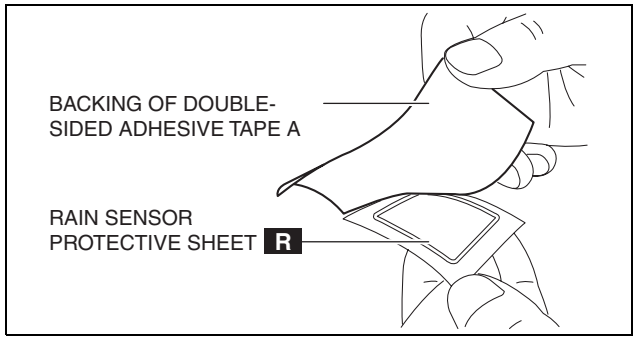
WIPER/WASHER SYSTEM

1. Wipe off any oil or dirt from the rain sensor lens and the windshield using a clean rag.



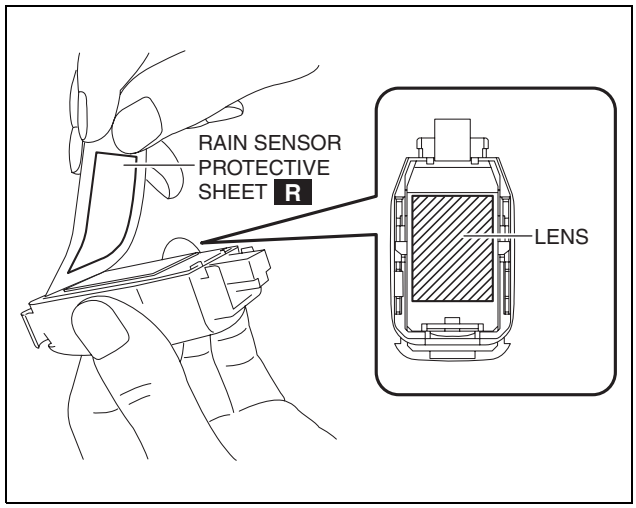
ac5wzw0000160

2. Peel off backing of double-sided adhesive tape A from the rain sensor protective sheet.



ac5wzw0000160

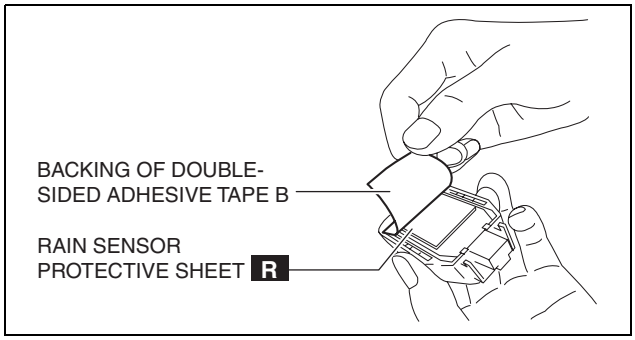
3. Adhere the rain sensor protective sheet to the rain sensor lens.



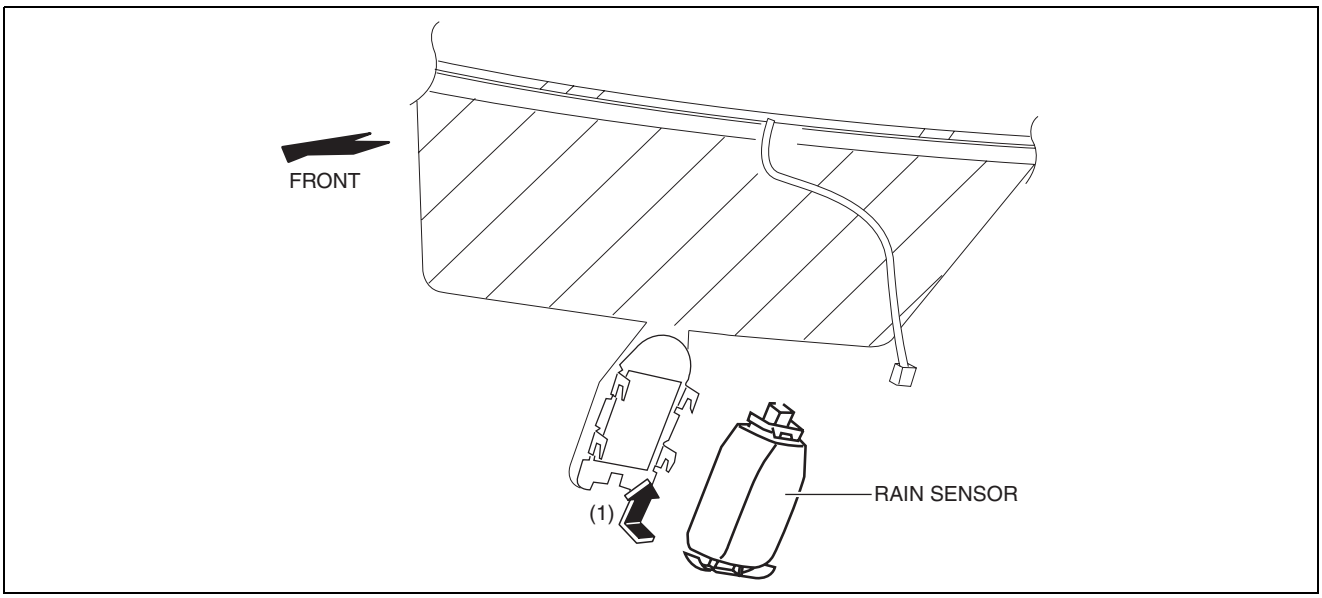
ac5wzw0000160

WIPER/WASHER SYSTEM

4. Peel off backing of double-sided adhesive tape B from the rain sensor protective sheet.
5. Install the rain sensor in the direction of the arrow (1).

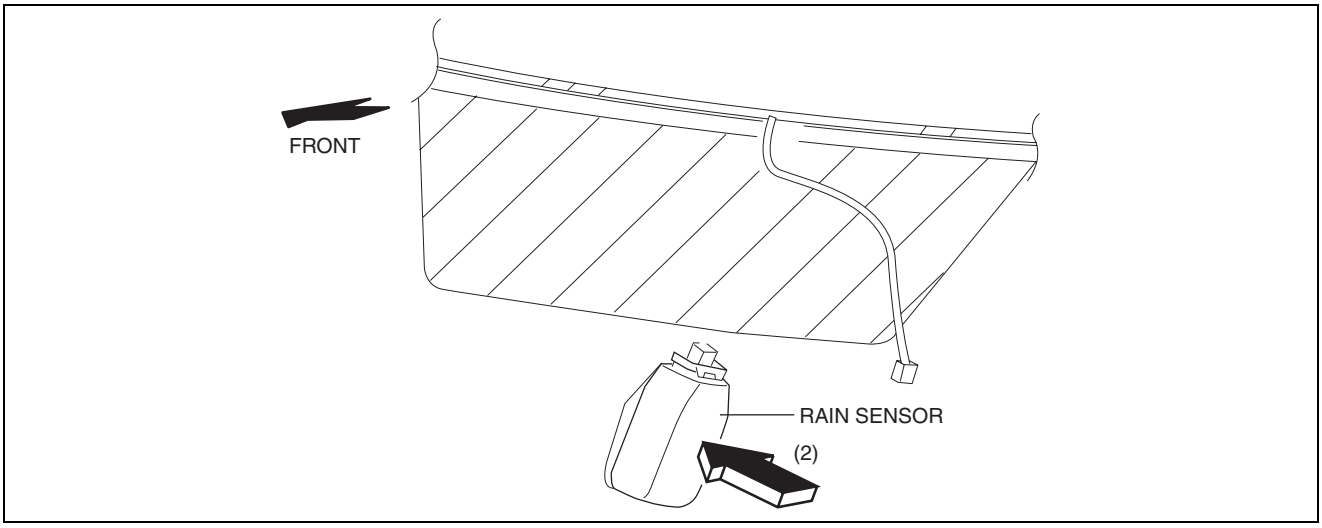


ac5wzw0000160



ac5wzw0000160

6. Press the rain sensor in the direction (direction of arrow (2)) of the windshield and press out any air bubbles.



ac5wzw0000160

7. Verify that there is no air bubble between the rain sensor and the windshield.

RAIN SENSOR INITIALIZATION SETTING

id091900810100

Note

- When the ignition is switched ON (engine off or on), the rain sensor detects the condition of the windshield surface, and performs initialization automatically.

WIPER/WASHER SYSTEM

WIPER/WASHER SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE

id091900804100

Using M-MDS

- The auto wiper function can be enabled or disabled using the M-MDS. Refer to the control system personalization features setting. (See 09-40-16 CONTROL SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE.)

Using audio unit (with color LCD)

- The user can enable or disable the auto wiper function by operating the audio unit display. Refer to the entertainment system personalization features setting. (See 09-20-9 AUDIO UNIT PERSONALIZATION FEATURES SETTING PROCEDURE.)

AUDIO UNIT REMOVAL/INSTALLATION

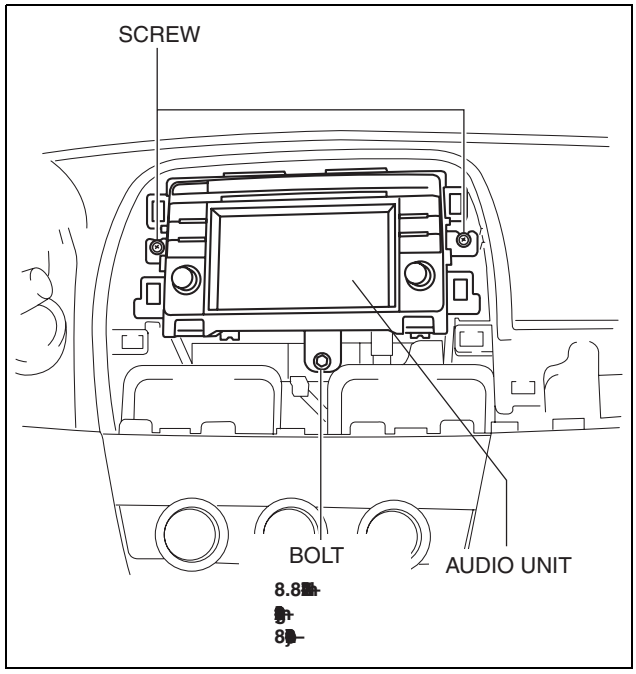
id092000805500

Removal

1. Disconnect the negative battery cable.
2. Remove the decoration panel. (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)

ENTERTAINMENT

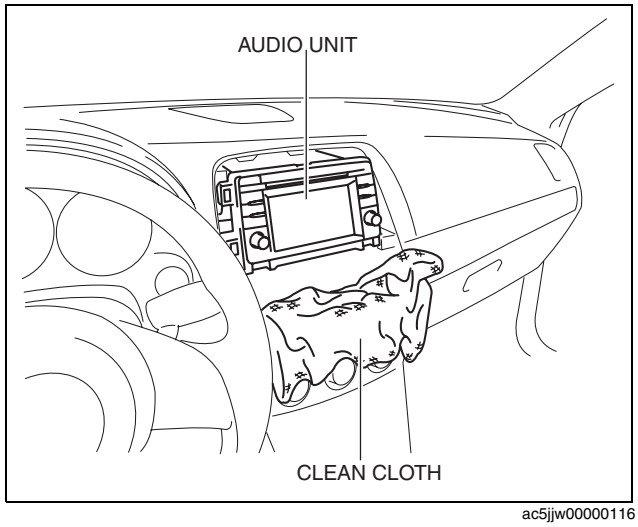
3. Remove the bolt.
4. Remove the screws.



ac5uuw00002265

Note

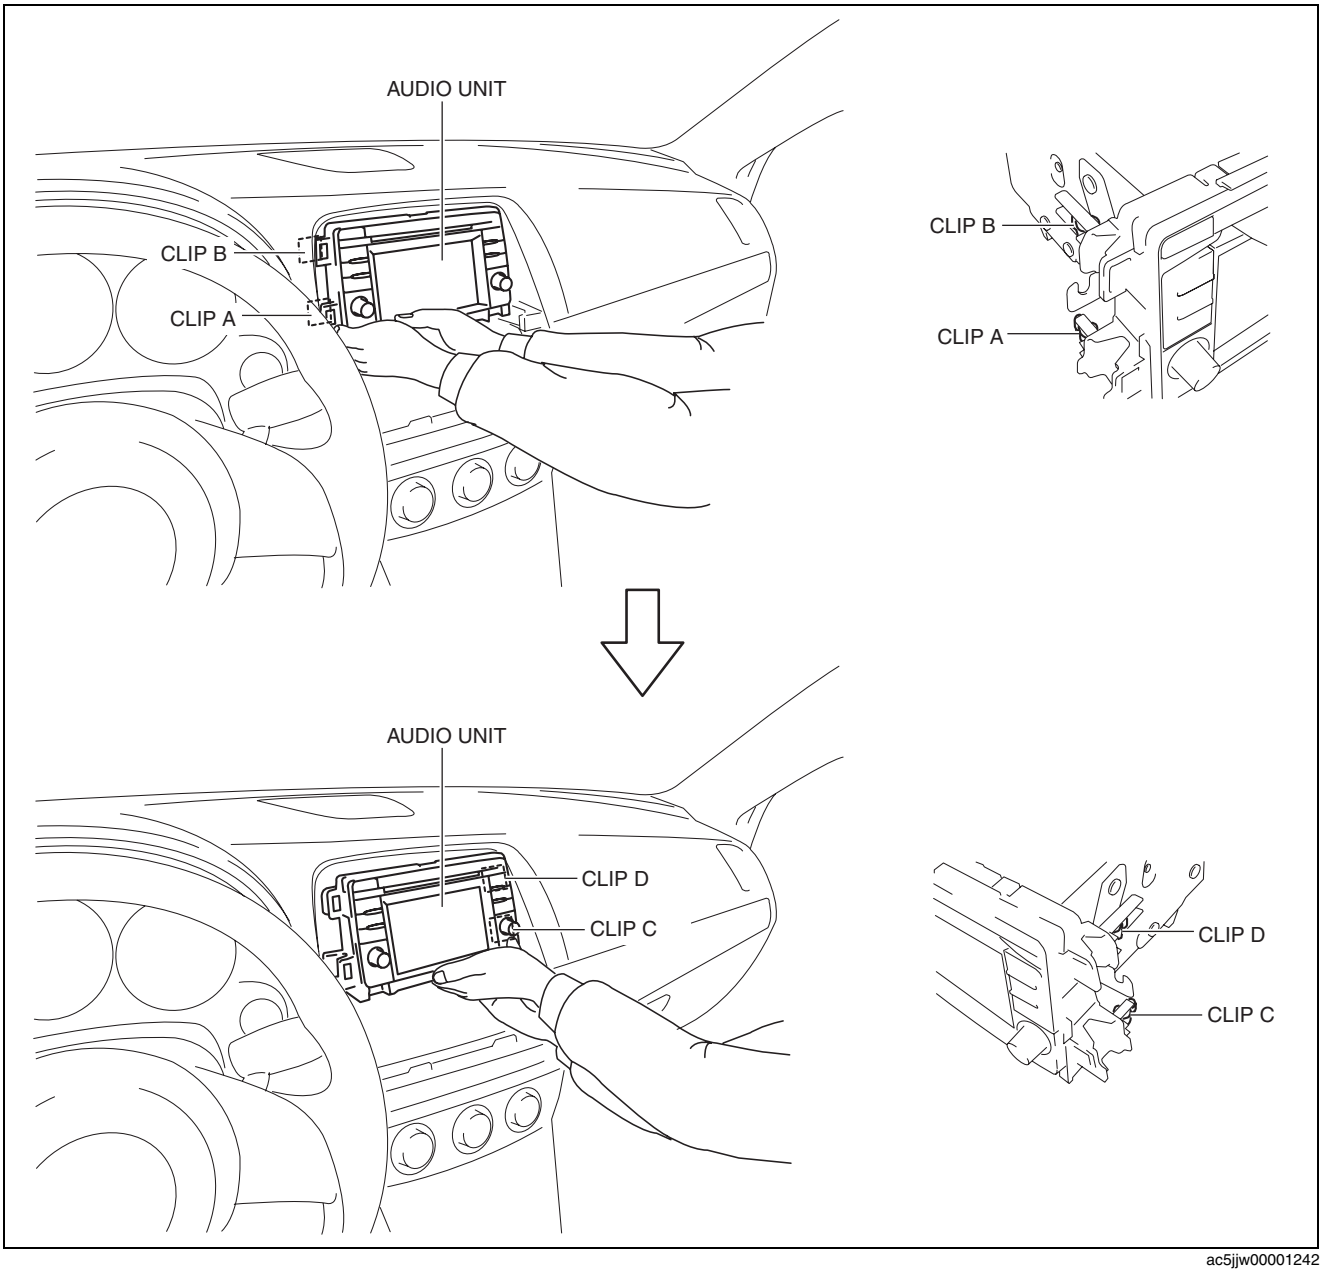
- When removing the audio unit, the audio unit could interfere with the climate control unit and scratch the climate control unit. Perform the servicing by spreading a cloth in the position indicated in the figure.



ac5jjw00000116

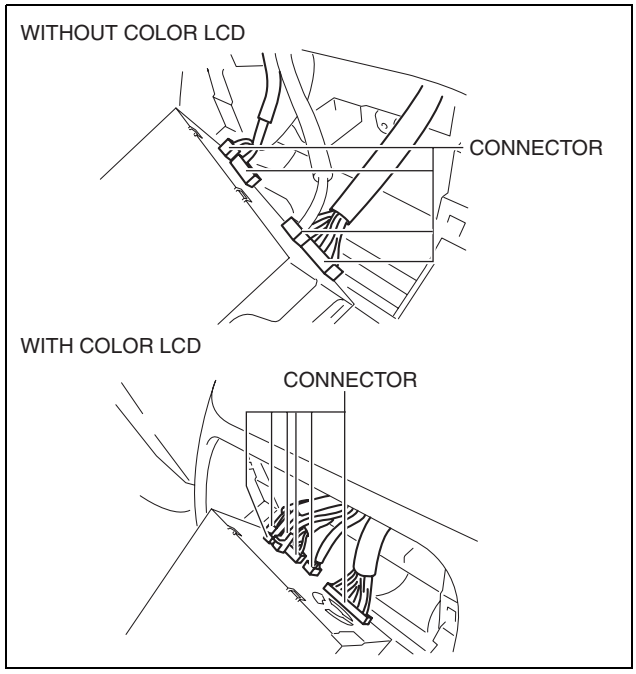
ENTERTAINMENT

5. Hold the audio unit in the position shown in the figure and pull it outward to disengage clips A, B, C, and D from the instrument panel.



ac5jjw00001242

6. Disconnect the connectors.
7. Remove the audio unit.

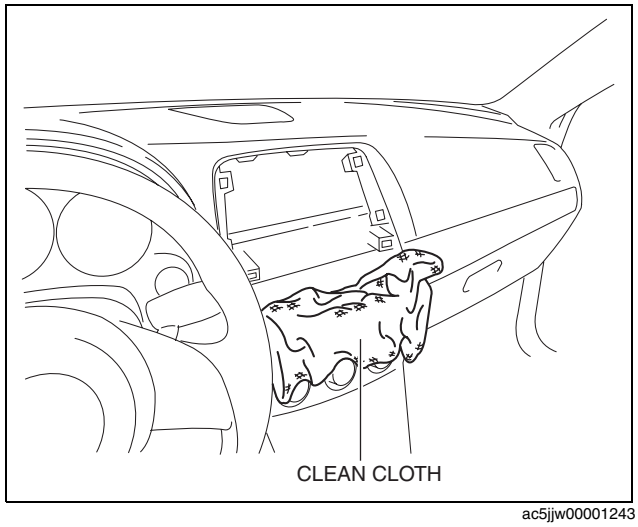


ac5jjw00001241

Installation

Note

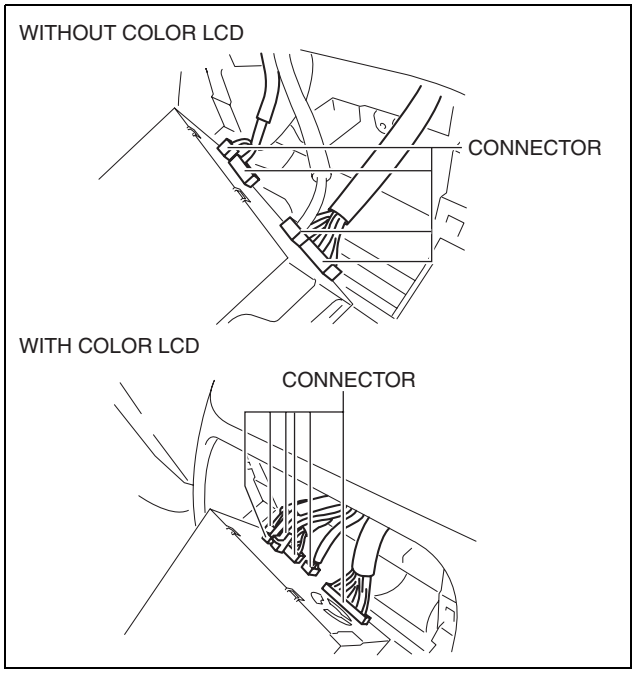
- When installing the audio unit, the audio unit could interfere with the climate control unit and scratch the climate control unit. Perform the servicing by spreading a cloth in the position indicated in the figure.



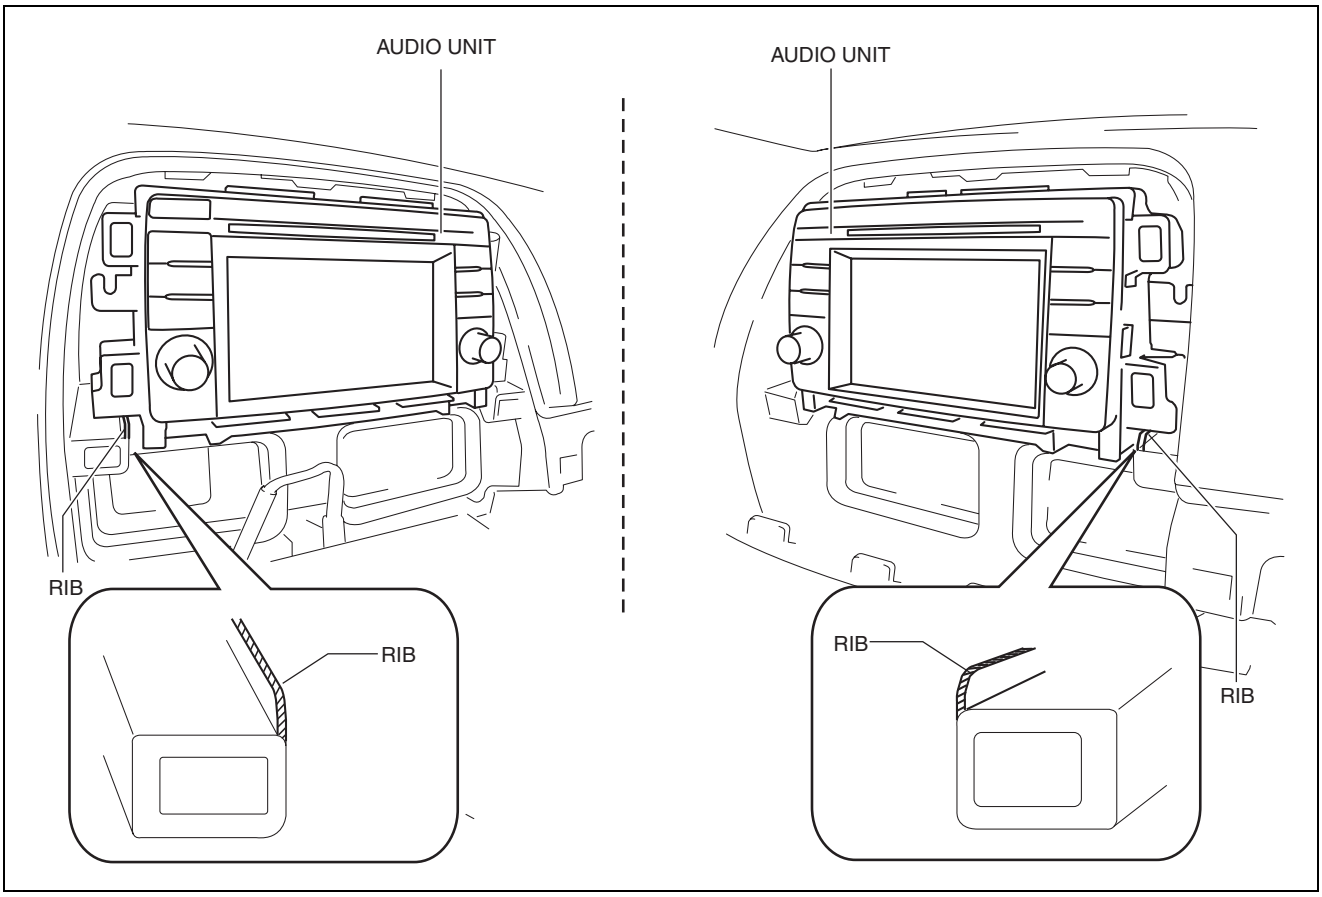
ac5jjw00001243

ENTERTAINMENT

1. Connect all the connectors.
2. Temporarily position the audio unit on the ribs and align the hole positions of the instrument panel with clips.



ac5jjw00001241

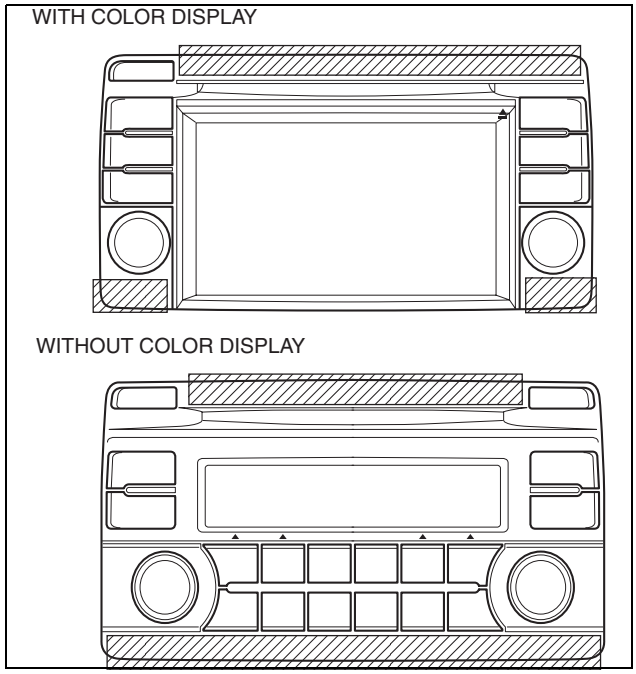


ac5wzw0000236

ENTERTAINMENT

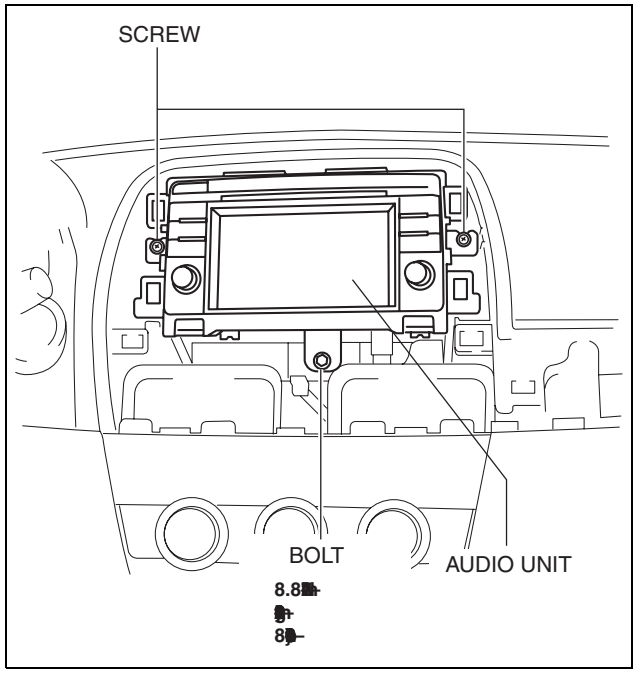
3. Press the audio unit in the position shown in the figure and engage clips to the instrument panel.

Caution
- **If the audio unit switch area and screen are pressed it could cause a malfunction.**



ac5jjw00001096

4. Install the screws.
5. Install the bolt.
6. Install the Decoration panel. (See 09-17-33 DECORATION PANEL REMOVAL/ INSTALLATION.)
7. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)



ac5uuw00002265

AUDIO UNIT PERSONALIZATION FEATURES SETTING PROCEDURE

id092000000200

Door Locks Systems

1. Switch the ignition ON (engine off or on).
2. Turn the audio unit power on.
3. Select the following from the audio unit screen.
   (1) “Setup”
   (2) “Vehicle”
   (3) “Door Locks“
4. Select the following items and change the setting.

Advanced keyless entry system

Audio unit display	Function	Initial setting	Settings	Control module
Auto Re-lock Time	The operation start time of the auto re-lock function can be changed.	30 seconds	30 seconds / 60 seconds / 90 seconds	Start stop unit

ENTERTAINMENT

Audio unit display	Function	Initial setting	Settings	Control module
Lock Beep Volume	The keyless beeper volume can be adjusted.	Medium	Off / Low / Medium / High	Start stop unit
Walk Away Lock	The out-of-area (reception area) type auto lock function can be set.	OFF	OFF / ON	Start stop unit

Keyless entry system

Audio unit display	Function	Initial setting	Settings	Control module
Auto Re-lock Time	The operation start time of the auto re-lock function can be changed.	30 seconds	30 seconds / 60 seconds / 90 seconds	Start stop unit

Lighting Systems

1. Switch the ignition ON (engine off or on).
2. Turn the audio unit power on.
3. Select the following from the audio unit screen.
   (1) “Setup”
   (2) “Vehicle”
   (3) “Lighting“
4. Select the following items and change the setting.

High beam control (HBC) system

Audio unit display	Function	Initial setting	Settings	Control module
High Beam Control	The high beam control (HBC) system can be switched between operable and inoperable.	On	On / Off	FSC

Turn light system

Audio unit display	Function	Initial setting	Settings	Control module
3-Flash Turn Signal	The turn light system can be switched between operable and inoperable.	On	On / Off	Rear body control module (RBCM)

Auto light system

Audio unit display	Function	Initial setting	Settings	Control module
Auto-headlight On	Auto light sensor sensitivity can be changed.	Medium	Light / Medium Light / Medium / Medium Dark / Dark	Rear body control module (RBCM)

Note

- If the mode is set to “Light” and “Medium Light”, the illumination level for illuminating the TNS and headlight increases. Therefore, the TNS and headlights illuminate when the ambient light is brighter than when the level is set to “Medium”. In addition, if the mode is set to “Medium Dark” and “Dark”, the illumination level for illuminating the TNS and headlights decreases. Therefore, the TNS and headlights illuminate when the ambient light is lower than when the level is set to “Medium”.

Room light control system

Audio unit display	Function	Initial setting	Settings	Control module
Interior Light Timeout - Door Open	The front/rear map light illumination time after any door is open can be changed.	30 minutes	60 minutes / 30 minutes / 10 minutes	Rear body control module (RBCM)
Interior Light Timeout - Door Closed	The front/rear map light illumination time after any door is closed can be changed.	15 seconds	60 seconds / 30 seconds / 15 seconds / 7.5 seconds	Rear body control module (RBCM)

Wiper Systems

1. Switch the ignition ON (engine off or on).
2. Turn the audio unit power on.
3. Select the following from the audio unit screen.
   (1) “Setup”
   (2) “Vehicle”
4. Select the following items and change the setting.

ENTERTAINMENT

Auto wiper system

Audio unit display	Function	Initial setting	Settings	Control module
Wipers	Auto wiper system can be set to operable or inoperable.	On (Rain Sensing)	On (Rain Sensing) / Off (Intermittent)	Rear body control module (RBCM)

CAR-NAVIGATION UNIT REMOVAL/INSTALLATION

id092000801000

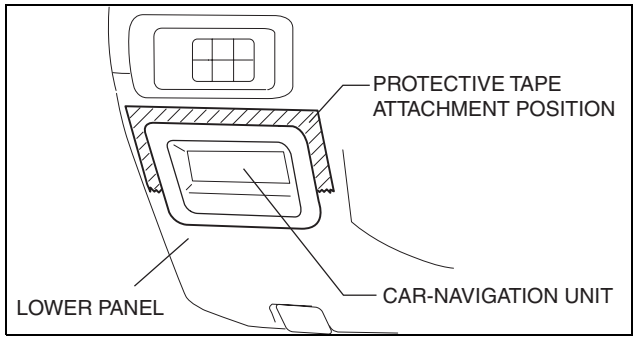
Caution

- **The audio unit communicates with the car-navigation unit and records the presence/non-presence of the car-navigation unit when the ignition is switched to ACC or ON (engine off or on) after connecting the negative battery cable.**
- **If the commander switch is installed with the negative battery cable connected when the audio unit records that there is no car-navigation unit, the car-navigation unit does not operate.**
- **For the car-navigation unit installation/removal, disconnect the negative battery cable, switch the ignition to ACC or ON (engine off or on) after the servicing is completed, and the audio unit records the presence/non-presence of the car-navigation unit.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Affix protective tape to the gaps between the car-navigation and lower panel as shown in the figure.

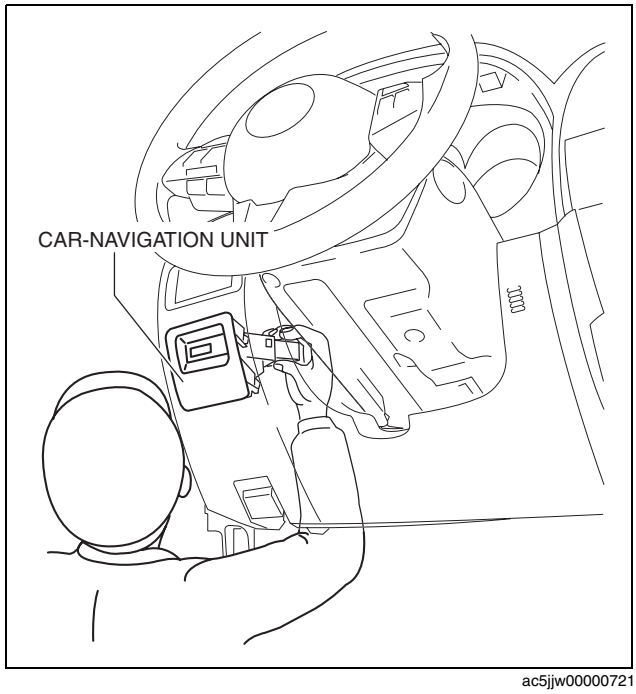
Caution

- **Before inserting a flathead screwdriver into the gap between the car-navigation and lower panel, affix protective tape to prevent damage. Otherwise, the lower panel could be damaged by the flathead screwdriver.**



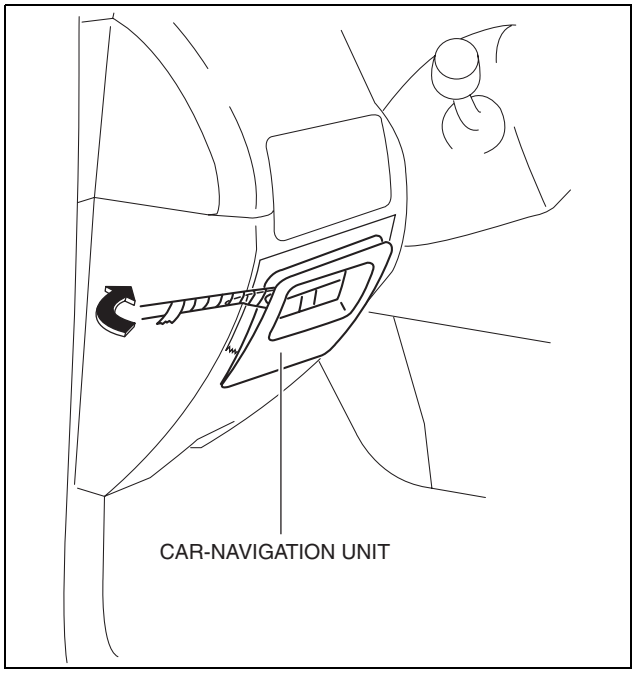
ac5wzw0000341

3. Insert your hand from the lower side of the lower panel and press the car-navigation unit so that there is a gap on the upper side of the car-navigation unit.



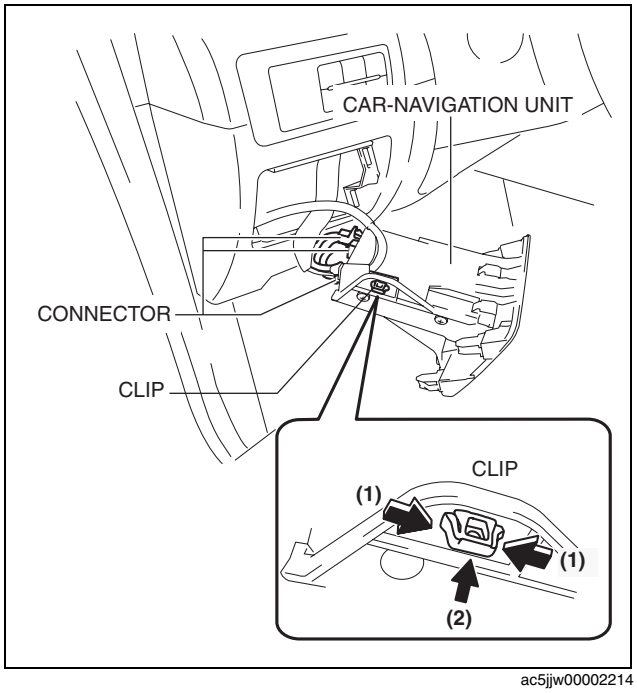
ac5jjw00000721

4. Insert a tape-wrapped fastener remover into the gap between the lower panel and car-navigation unit.
5. Move the fastener remover to the position of the arrow shown in the figure and detach the car-navigation unit clip from the lower panel.



ac5jjw00000119

6. Pull out the car-navigation unit and disconnect the connectors.
7. While pressing the tabs of the clip in the direction of arrows (1) shown in the figure, press the clip in the direction of arrow (2) to detach it from the car-navigation unit.
8. Remove the clip.
9. Remove the car-navigation unit.
10. Install in the reverse order of removal. (See 09-20-12 Installation Note.)



ac5jjw00002214

Installation Note

- Pressing the car-navigation unit when installing it could result in a malfunction. Therefore, press the panel area to install the car-navigation unit.

AUDIO AMPLIFIER REMOVAL/INSTALLATION

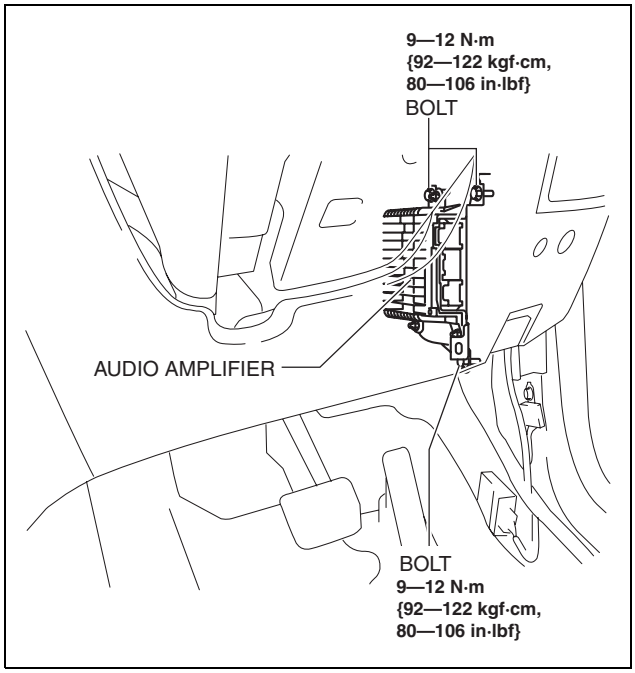
id092000801100

R.H.D.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front scuff plate (RH). (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)

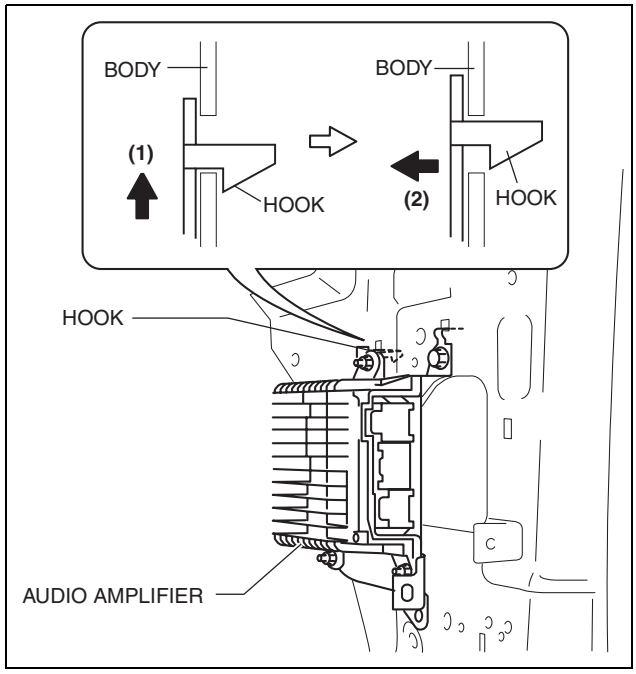
ENTERTAINMENT

3. Remove the bolts.



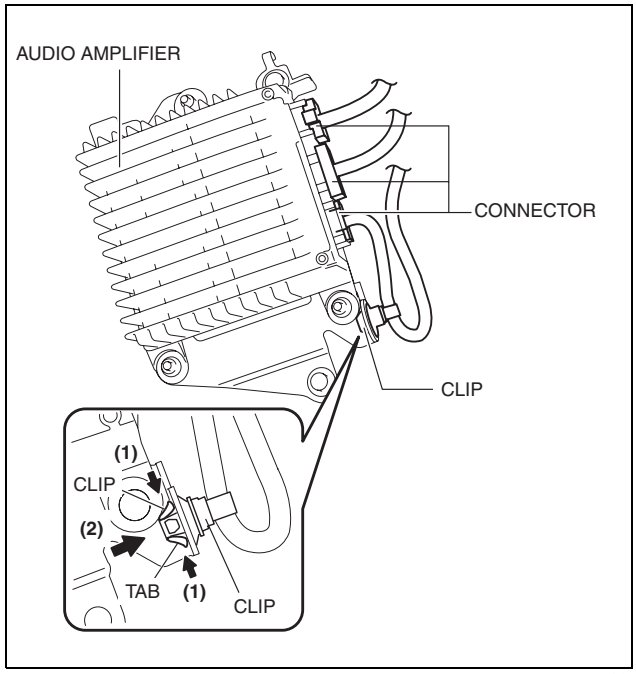
ac5jjw00000887

4. Lift up the audio amplifier in the direction of the arrow (1) shown in the figure, pull it in the direction of the arrow (2) shown in the figure, and pull out the audio amplifier hook from the body.



ac5wzw0000147

5. Disconnect the connectors.
6. While pressing the clip tabs in the direction of the arrows (1) shown in the figure, press the clip in the direction of the arrow (2) to detach the clip tabs from the audio amplifier.
7. Detach the clip.
8. Remove the audio amplifier.



ac5wzw0000147

FRONT DOOR SPEAKER REMOVAL/INSTALLATION

id092000802200

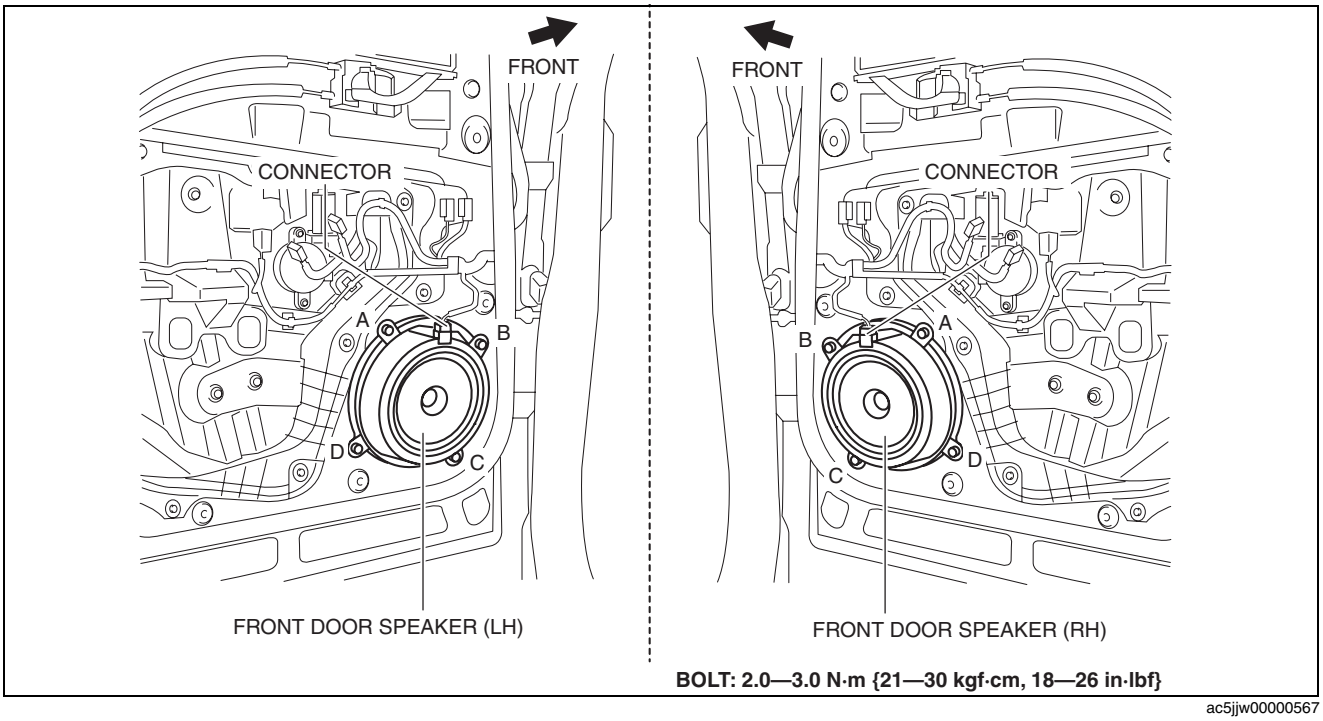
Without Bose®

Note
- If the procedure is performed while holding the front door speaker cone, it could deform the cone causing a malfunction. Therefore, perform the procedure while holding any part other than the cone.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Inner garnish (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)
   (2) Front door trim (See 09-17-65 FRONT DOOR TRIM REMOVAL/INSTALLATION.)

ENTERTAINMENT

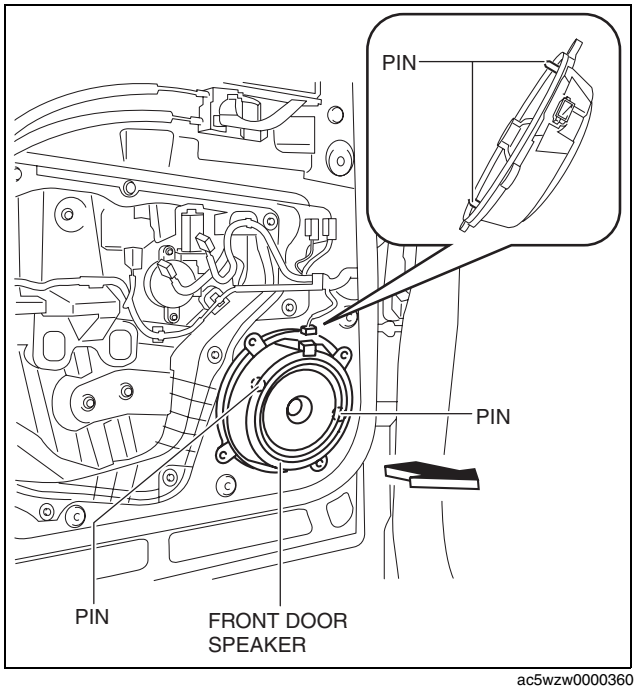
3. Disconnect the connector.



BOLT: 2.0—3.0 N·m {21—30 kgf·cm, 18—26 in·lbf}

ac5jjw00000567

4. Remove the bolts in alphabetical order.
5. Pull the front door speaker in the direction of the arrow shown in the figure and remove it while detaching the pins.
6. Install in the reverse order of removal.



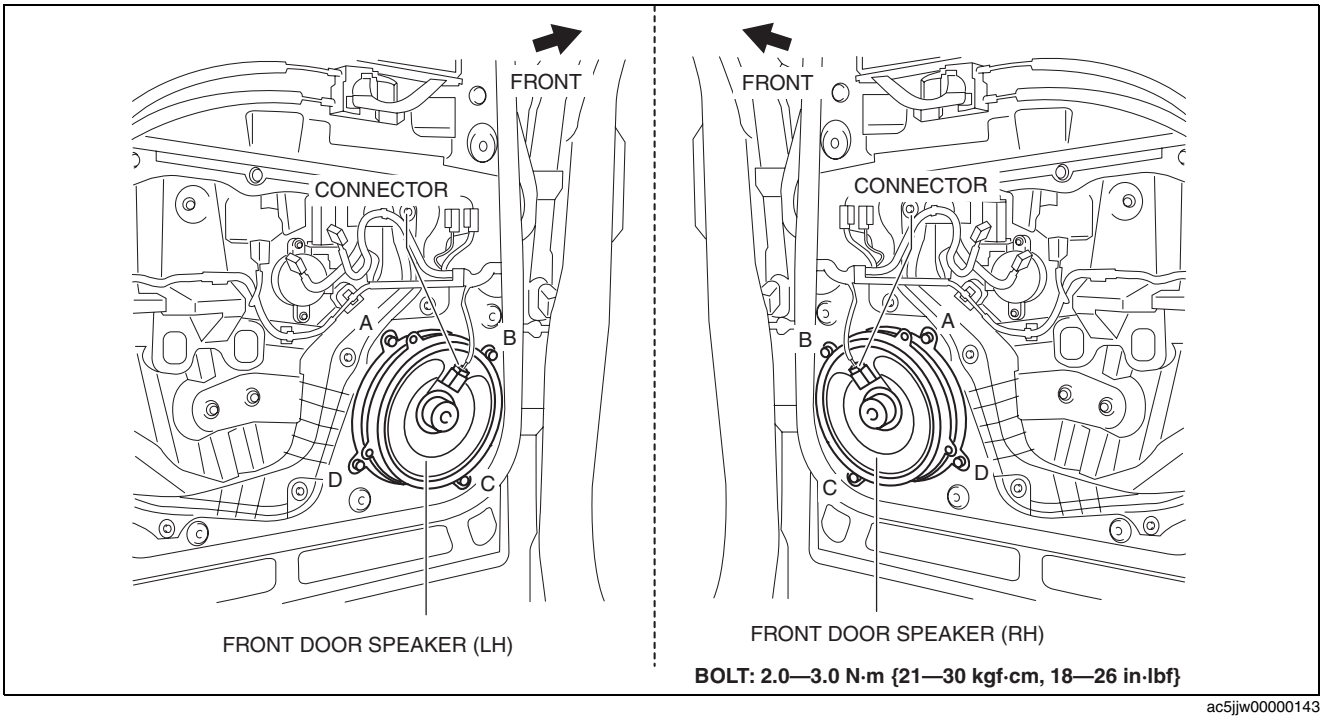
ac5wzw0000360

With Bose®

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Inner garnish (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)
   (2) Front door trim (See 09-17-65 FRONT DOOR TRIM REMOVAL/INSTALLATION.)

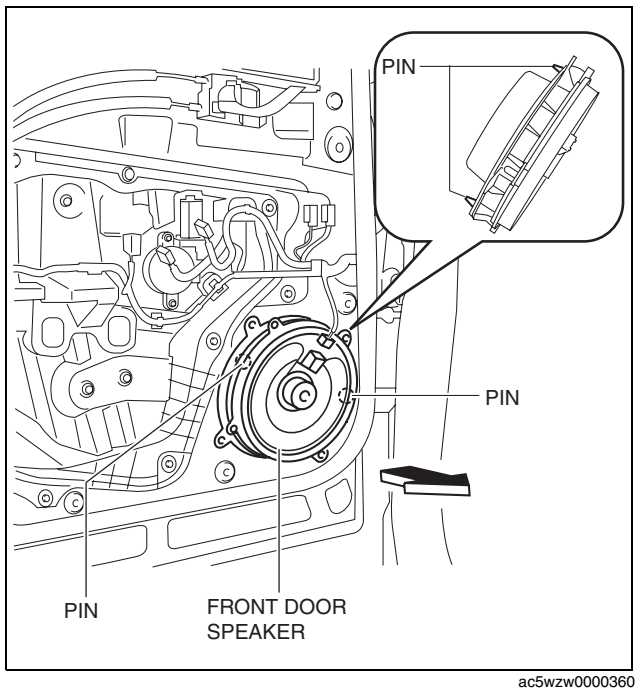
ENTERTAINMENT

3. Disconnect the connector.



ac5jjw00000143

4. Remove the bolts in alphabetical order.
5. Pull the front door speaker in the direction of the arrow shown in the figure and remove it while detaching the pins.



ac5wzw0000360

ENTERTAINMENT

CENTER ROOF ANTENNA INSPECTION

id092000801700

Note
- The center roof antenna is integrated with the antenna amplifier.

Antenna amplifier inspection

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) B-pillar lower trim (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)

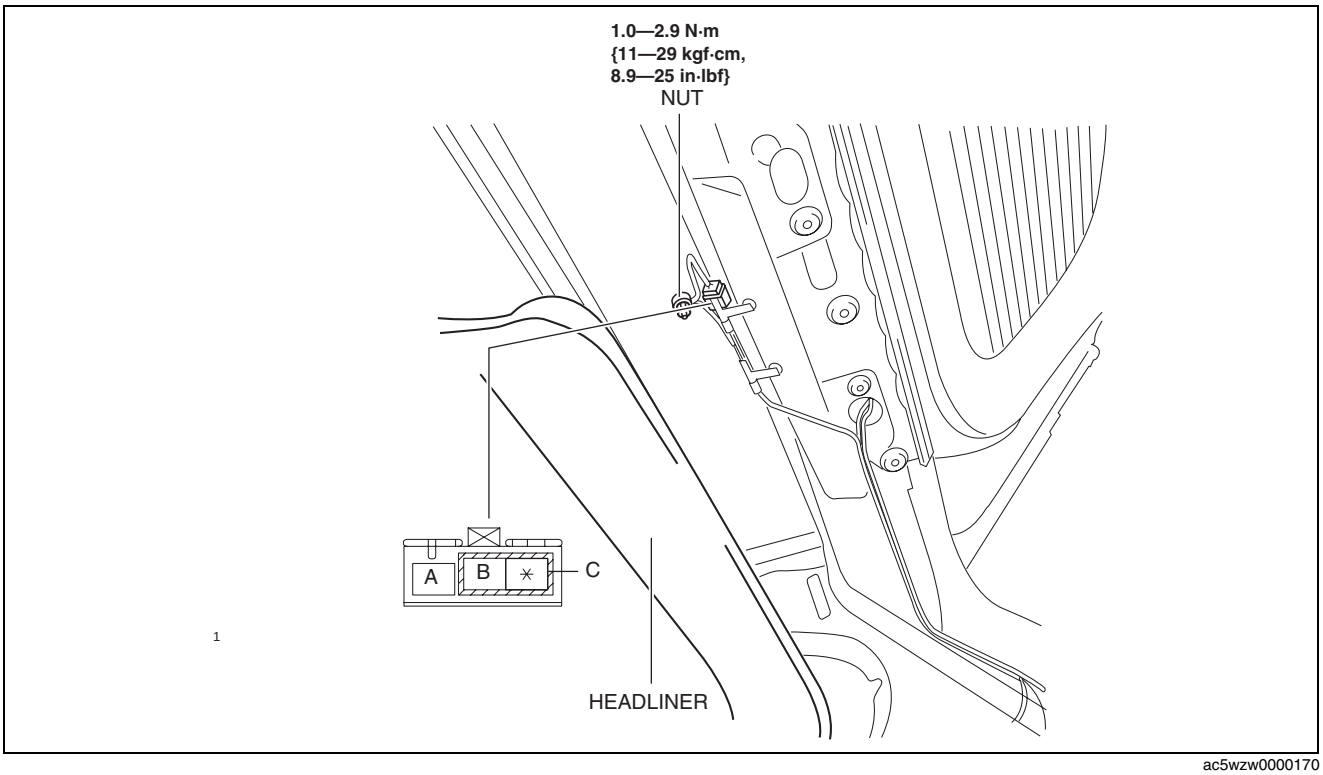
ENTERTAINMENT

(4) Front seat belt adjusting cover (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
(5) Front seat belt upper anchor installation bolt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
(6) B-pillar upper trim (See 09-17-58 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
(7) Trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
(8) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
(9) Trunk side trim (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
(10) D-pillar trim (See 09-17-60 D-PILLAR TRIM REMOVAL/INSTALLATION.)
(11) C-pillar trim (See 09-17-59 C-PILLAR TRIM REMOVAL/INSTALLATION.)

3. Remove the rear passenger's assist handle. (See 09-17-91 ASSIST HANDLE REMOVAL/INSTALLATION.)
4. Partially peel back the headliner.

Note
- Be careful not to peel back the headliner excessively. Otherwise it could create a fold-seam in the headliner.

5. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
6. Switch the ignition ON (engine off).
7. Turn the audio unit power on.
8. Tune in the radio.
9. Verify that the battery voltage is supplied to antenna amplifier terminal A.



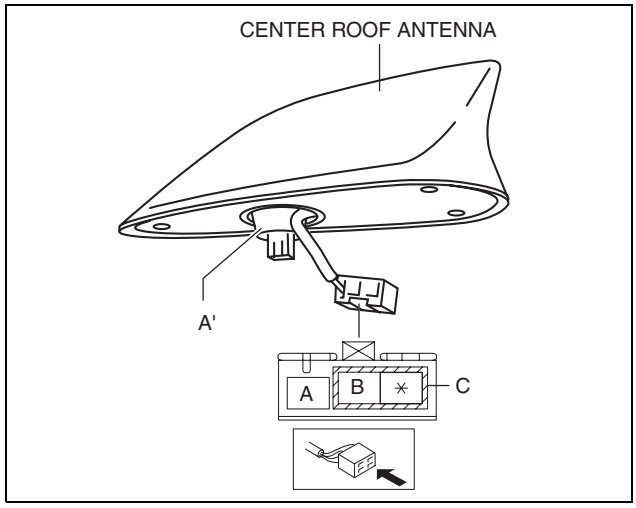
ac5wzw0000170

- If the battery voltage cannot be verified, inspect the audio unit (optional)/car-navigation unit (optional) and antenna feeder.
- If the battery voltage can be verified, go to the feeder line inspection.

Feeder line inspection

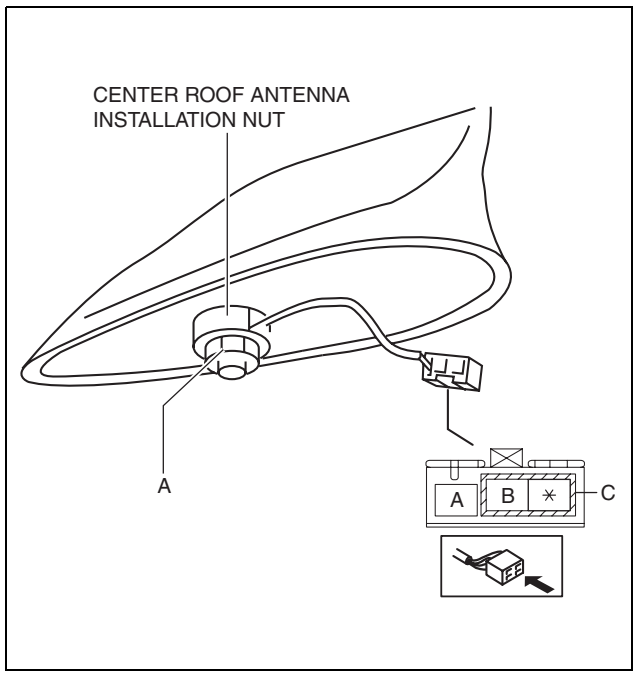
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0]) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the center roof antenna.

3. Verify that there is no continuity between center roof antenna sections A' and B.
   - If there is continuity, replace the center roof antenna.
4. Install the center roof antenna.



ac5wzw0000170

5. Verify that the continuity between the center roof antenna terminals is as indicated in the table.



ac5wzw0000293

- If the continuity is not as indicated in the table, verify the installation condition of the center roof antenna installation nut.
- If the installation condition of the center roof antenna installation nut is normal, replace the center roof antenna.

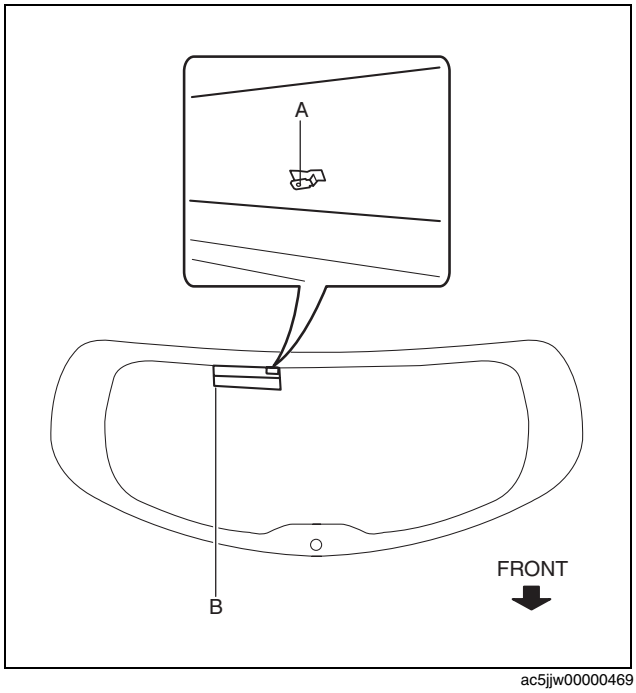
GLASS ANTENNA INSPECTION

id092000806200

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Partially peel back the seaming welt.
3. Remove the liftgate upper trim. (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
4. Disconnect antenna feeder connector. (See 09-20-47 ANTENNA FEEDER NO.3 REMOVAL/INSTALLATION.)

5. Visually inspect the glass antenna for damage.
6. Verify that the continuity between the glass antenna terminals is as indicated in the table.



ac5jjw00000469

- If not as indicated in the table, repair the glass antenna. (See 09-12-38 FILAMENT INSPECTION.)

3. Remove the rear passenger's assist handle. (See 09-17-91 ASSIST HANDLE REMOVAL/INSTALLATION.)
4. Partially peel back the headliner.

Note
- If the headliner is peeled back excessively, the headliner could become creased. Be careful not to peel back the headliner excessively.

5. Disconnect antenna feeder No.2.
6. Disconnect the roof antenna connector.
7. Disconnect the glass antenna. (With RDS (radio data system))
8. Verify that the continuity between antenna feeder No.3 terminals is as indicated in the table.

ENTERTAINMENT

Without RDS (radio data system)

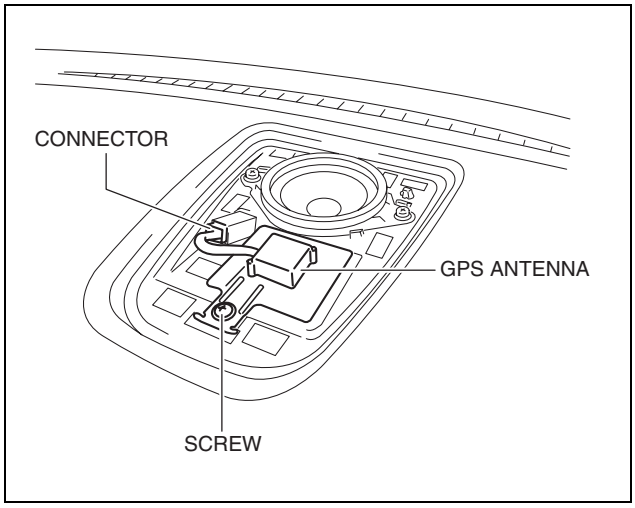
GLOBAL POSITIONING SYSTEM (GPS) ANTENNA REMOVAL/INSTALLATION

id092000801500

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the center speaker grille. (see 09-17-15 SPEAKER GRILLE REMOVAL/INSTALLATION.)
3. Disconnect the connector.
4. Remove the screw.
5. Remove the GPS antenna.
6. Install in the reverse order of removal.



ac5wzw0000071

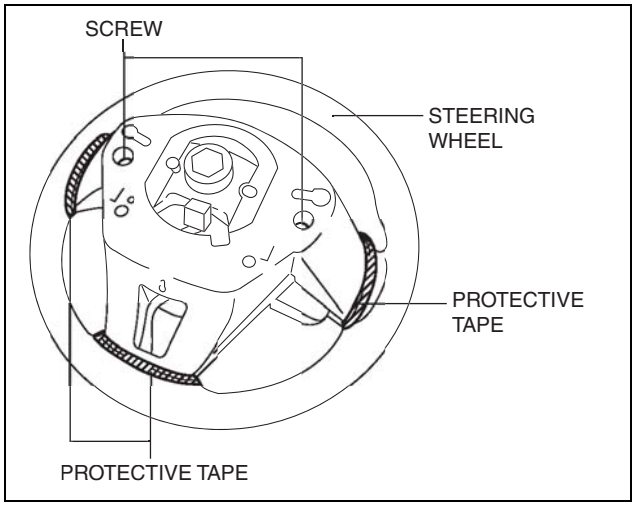
STEERING SWITCH REMOVAL/INSTALLATION

id092000822500

Warning

- **Handling the driver-side air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

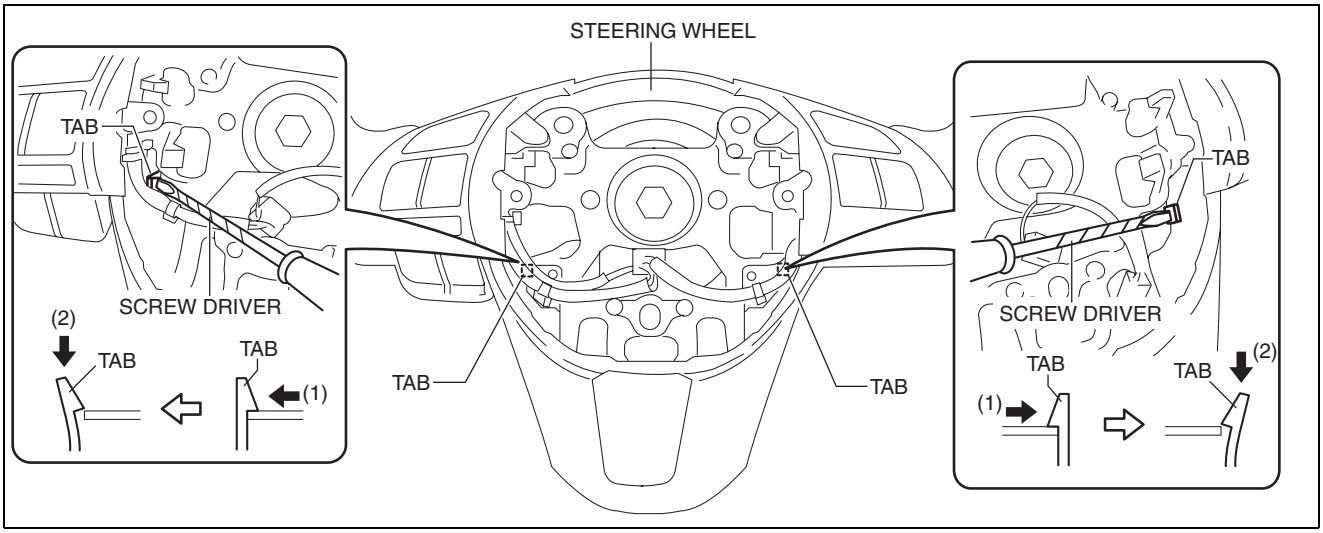
1. Switch the ignition OFF (LOCK).
2. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the driver-side air bag module. (See 08-10-6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
4. Remove the steering wheel. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
5. Affix protective tape to the gaps between the steering wheel and cover as shown in the figure.
6. Remove the screws.



ac5jjw00000932

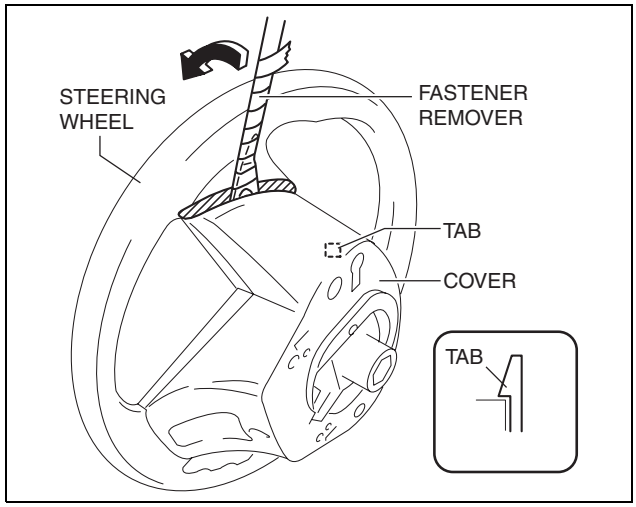
ENTERTAINMENT

7. Using a tape-wrapped flathead screwdriver, press the cover tabs in the direction of the arrows shown in the figure to detach the cover tabs from the steering wheel.



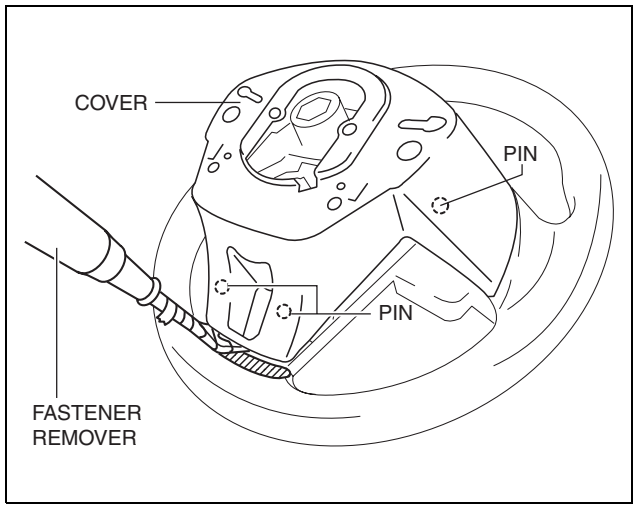
ac5jjw00000933

8. Insert the fastener remover into the clearance between the steering wheel and cover as shown in the figure.
9. Move the fastener remover in the direction of the arrow shown in the figure and detach cover tab from the steering wheel.



ac5jjw00000934

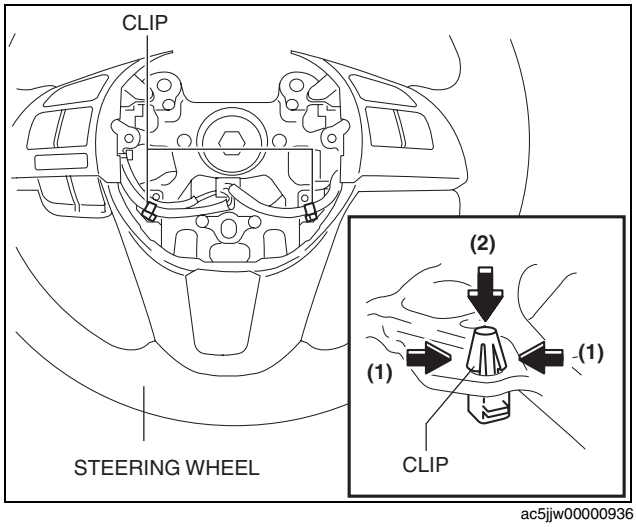
10. Remove the cover while detaching the pins from the steering wheel.



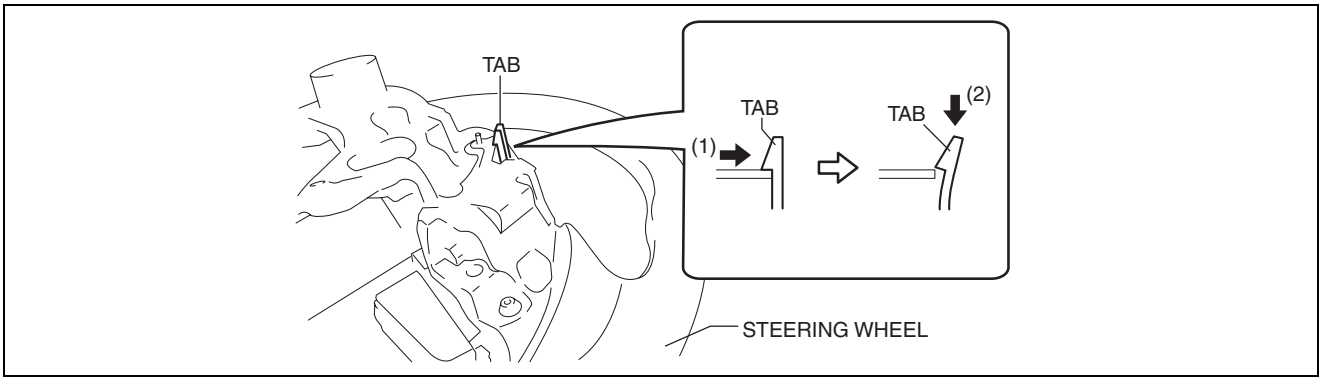
ac5jjw00000943

ENTERTAINMENT

11. While pressing the clip tabs in the direction of the arrows (1) shown in the figure, press the clip in the direction of the arrow (2) to detach the clip tabs from the steering wheel.
12. Detach the clip.
13. While pressing the tabs of the steering switch in the direction of the arrows (1) shown in the figure, press the steering switch in the direction of the arrow (2) to detach the tabs of the steering switch from the steering wheel.

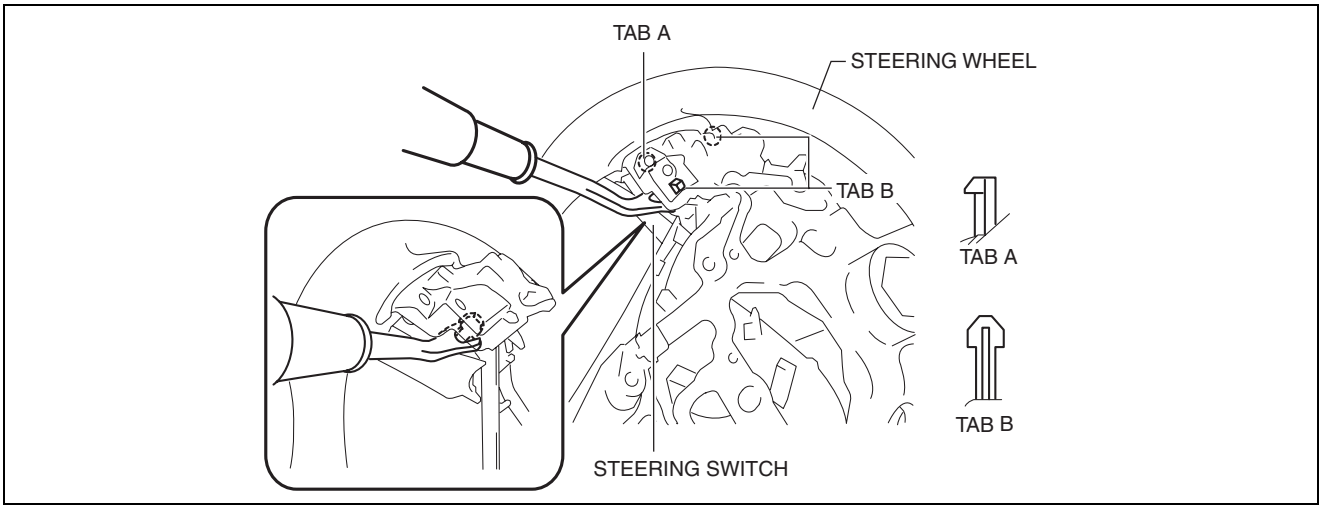


ac5jjw00000936



ac5uuw00002651

14. Insert a fastener remover into the position shown in the figure.



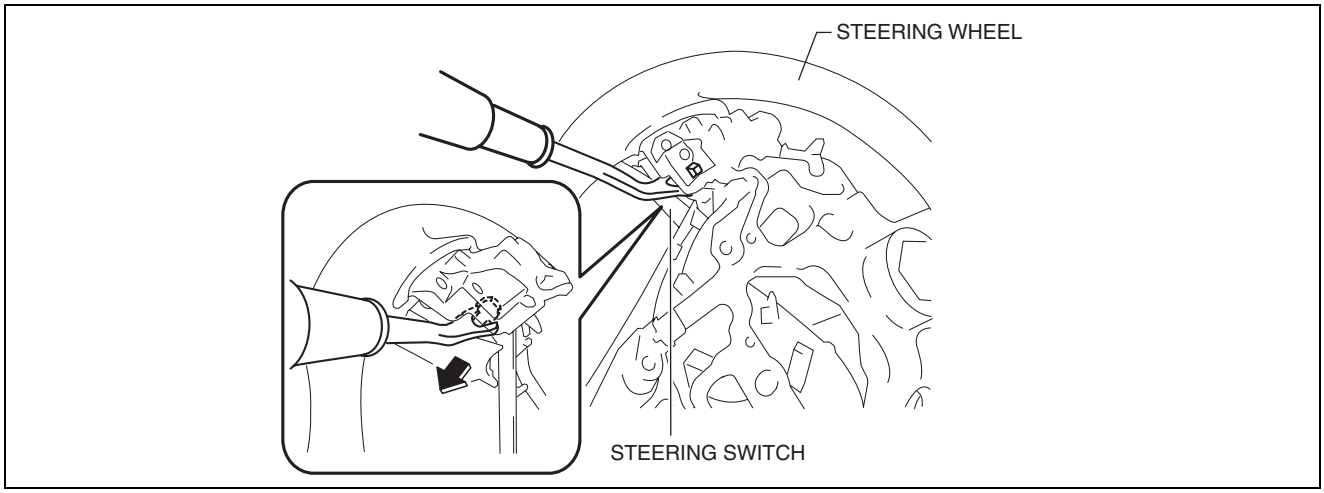
ac5uuw00002652

15. Move the fastener remover straight in the direction shown in the figure and remove the tabs of the steering switch from the steering wheel.

Caution
- **When removing the pins of the steering switch, pull them out straight. If the fastener remover is moved at an angle, the pins could be damaged.**

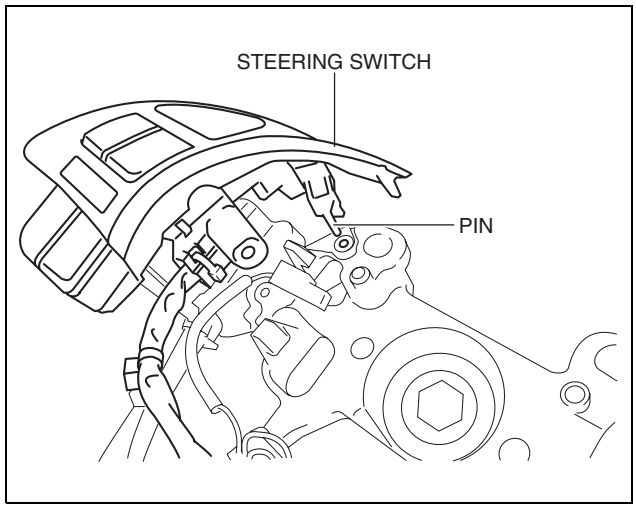
Note
- Because the pins of the steering switch are installed to the hard plastic area of the steering wheel, the engagement is strong.

ENTERTAINMENT



ac5uuw00002653

16. Remove the steering switch while detaching the pin and tabs of the steering wheel.
17. Install in the reverse order of removal.



ac5jjw00000944

STEERING SWITCH INSPECTION

id092000822600

Without Bluetooth system

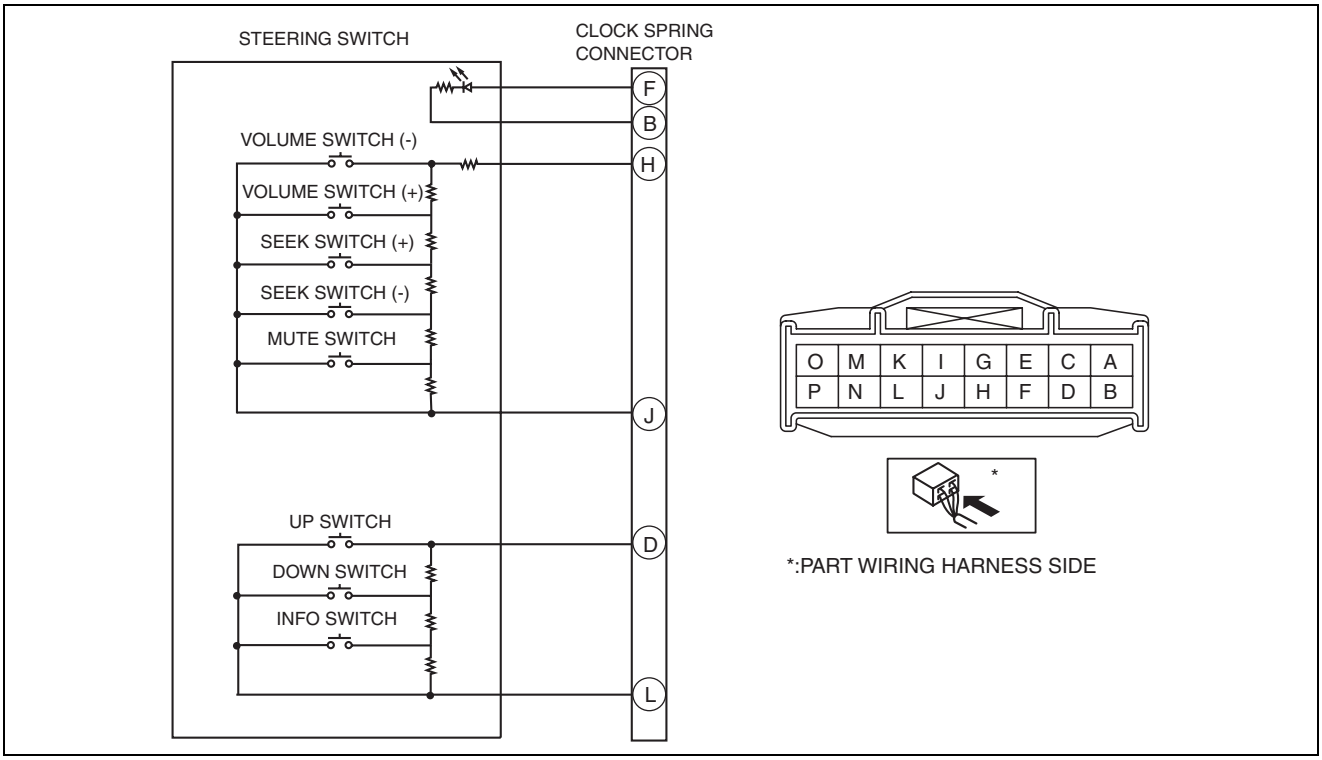
Warning

- **Handling the driver-side air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

1. Switch the ignition OFF (LOCK).
2. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the driver-side air bag module. (See 08-10-6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
4. Remove the steering wheel. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)

ENTERTAINMENT

5. Verify that the resistance and continuity between the steering switch terminals is as indicated in the table.



ac5uuw00002646

- If not as indicated in the table, replace the steering switch. (See 09-20-54 STEERING SWITCH REMOVAL/INSTALLATION.)

ac5uuw00002648

COMMANDER SWITCH REMOVAL/INSTALLATION

id092000811300

Caution

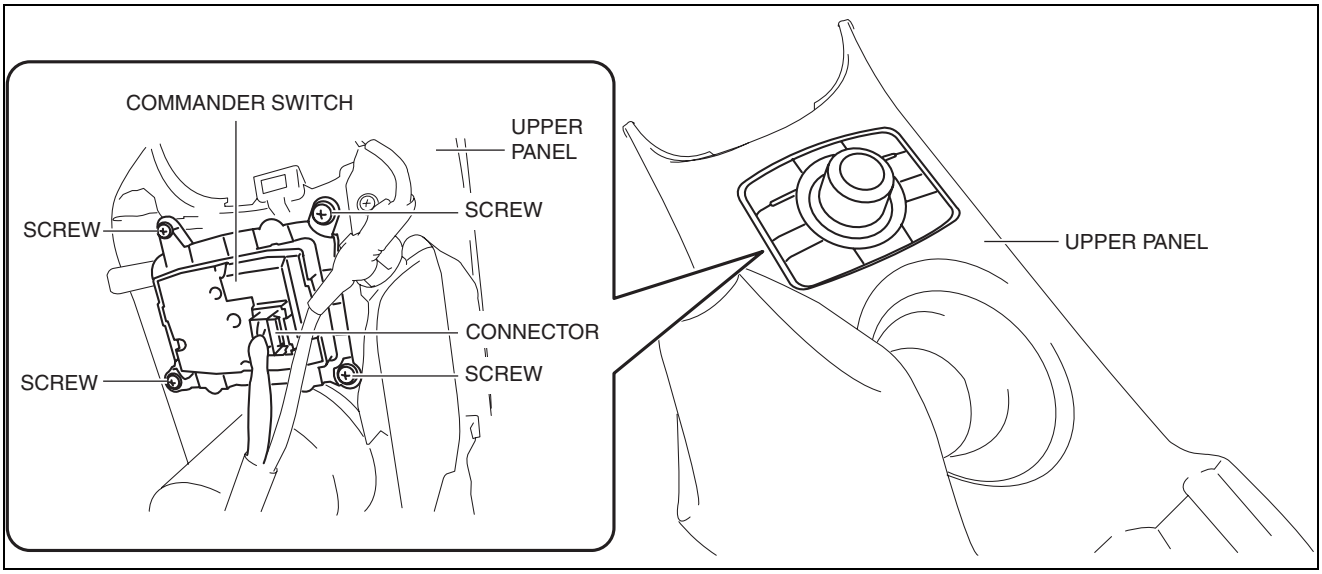
- **The audio unit communicates with the commander switch and records the presence/non-presence of the commander switch when the ignition is switched to ACC or ON (engine off or on) after connecting the negative battery cable.**
- **If the commander switch is installed with the negative battery cable connected when the audio unit records that there is no commander switch, the commander switch does not operate.**
- **For the commander switch installation/removal, disconnect the negative battery cable, switch the ignition to ACC or ON (engine off or on) after the servicing is completed, and the audio unit records the presence/non-presence of the commander switch.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Front console box (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)

ENTERTAINMENT

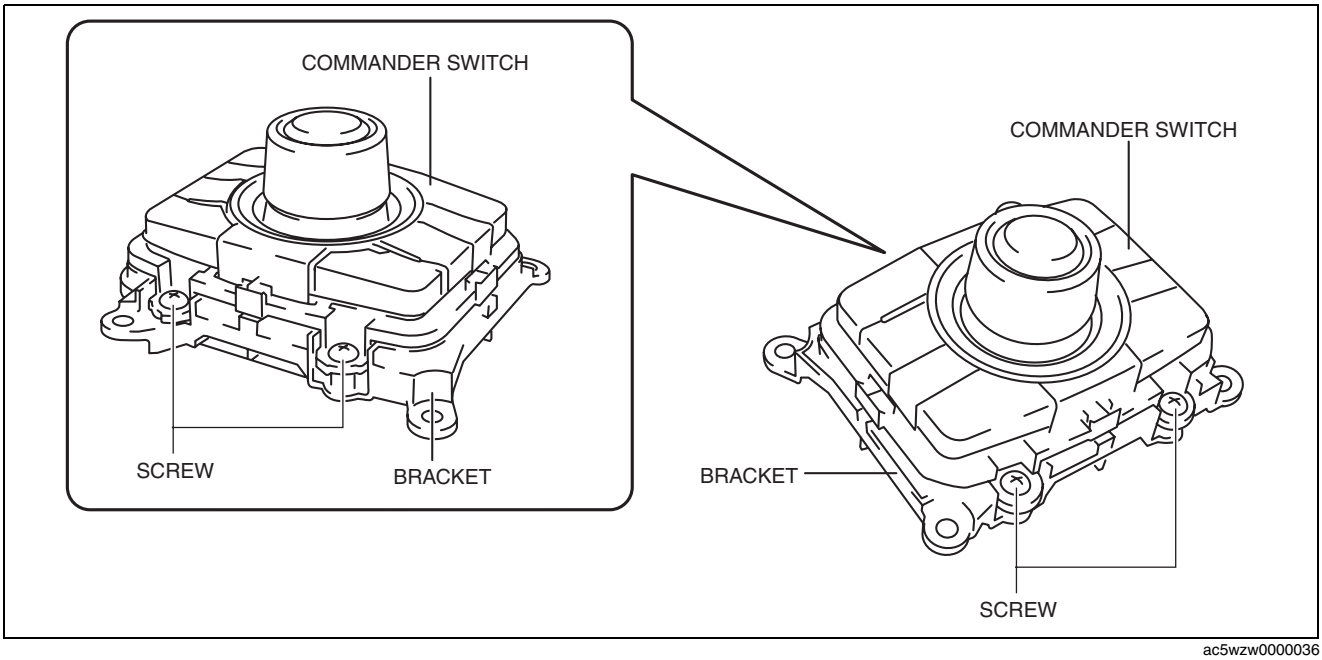
(2) Shift lever knob (MTX) (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].)(See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
(3) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
(4) Upper panel (See 09-17-44 UPPER PANEL REMOVAL/INSTALLATION.)

3. Disconnect the connector.



ac5wzw0000036

4. Remove the screws.
5. Remove the commander switch component from the upper panel.
6. Remove the commander switch screws.



ac5wzw0000036

7. Remove the commander switch from the bracket.
8. Install in the reverse order of removal.

COMMANDER SWITCH INSPECTION

id092000811400

Switch panel

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

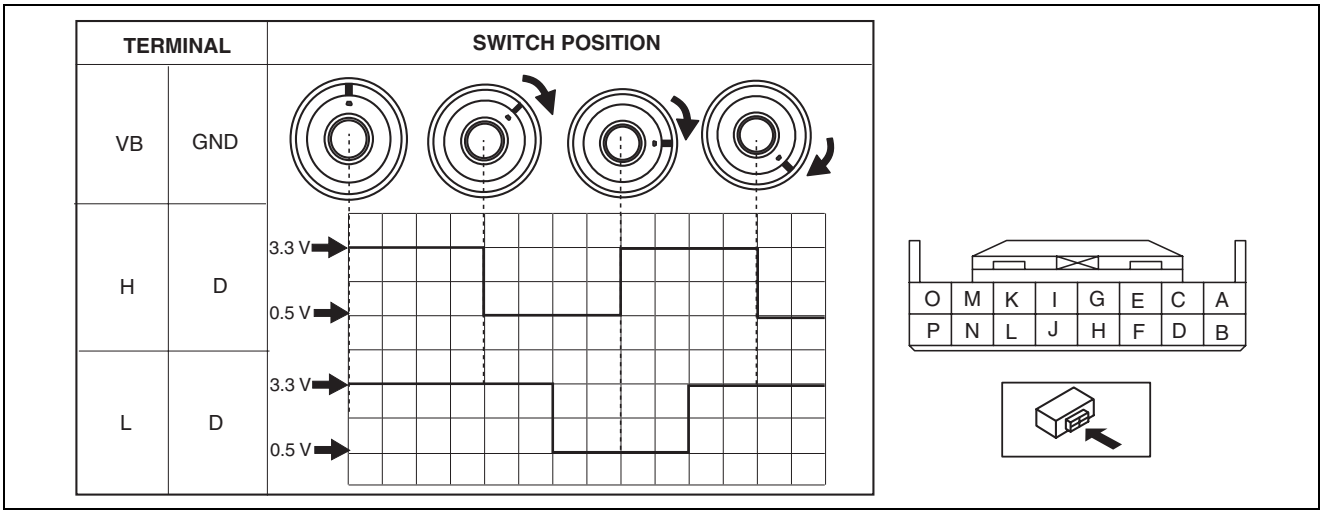
OFF	○-WW-○		4,996.333—5,099.167

ac5wzw0000331

Commander knob (rotation)

1. Connect the commander switch connector.
2. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. The ignition is switched to ACC or ON (engine off).
4. When the commander knob is rotated once step at a time, verify that the voltage between terminals and the waveforms are as indicated in the table.

ENTERTAINMENT



ac5wzw0000331

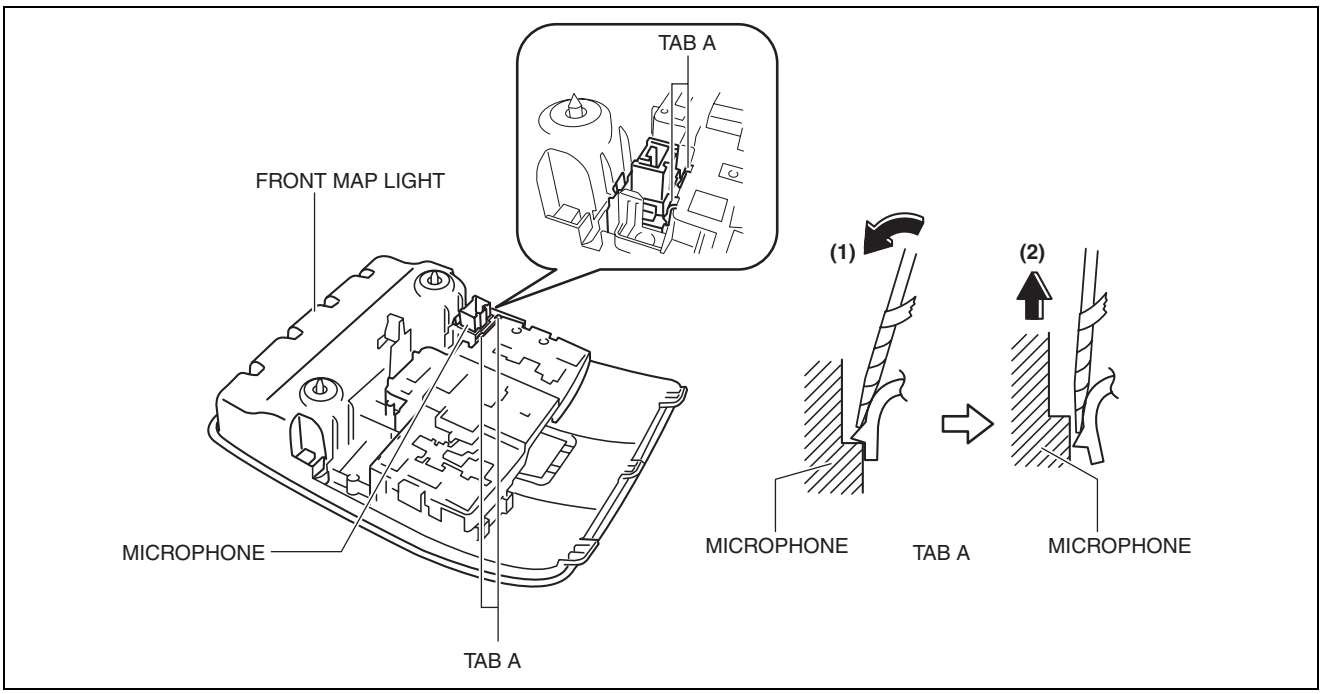
- If the voltage is not as indicated in the table, verify the related wiring harness.
- If the related wiring harness is normal, replace the commander switch.

MICROPHONE REMOVAL/INSTALLATION

id092000801400

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front map light. (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)
3. While pressing tabs A of the voice recognition microphone in the direction of the arrows (1) shown in the figure using a tape-wrapped flathead screwdriver, pull the voice recognition microphone in the direction of the arrow (2) shown in the figure to detach tabs A of the voice recognition microphone from the front map light.

R.H.D.

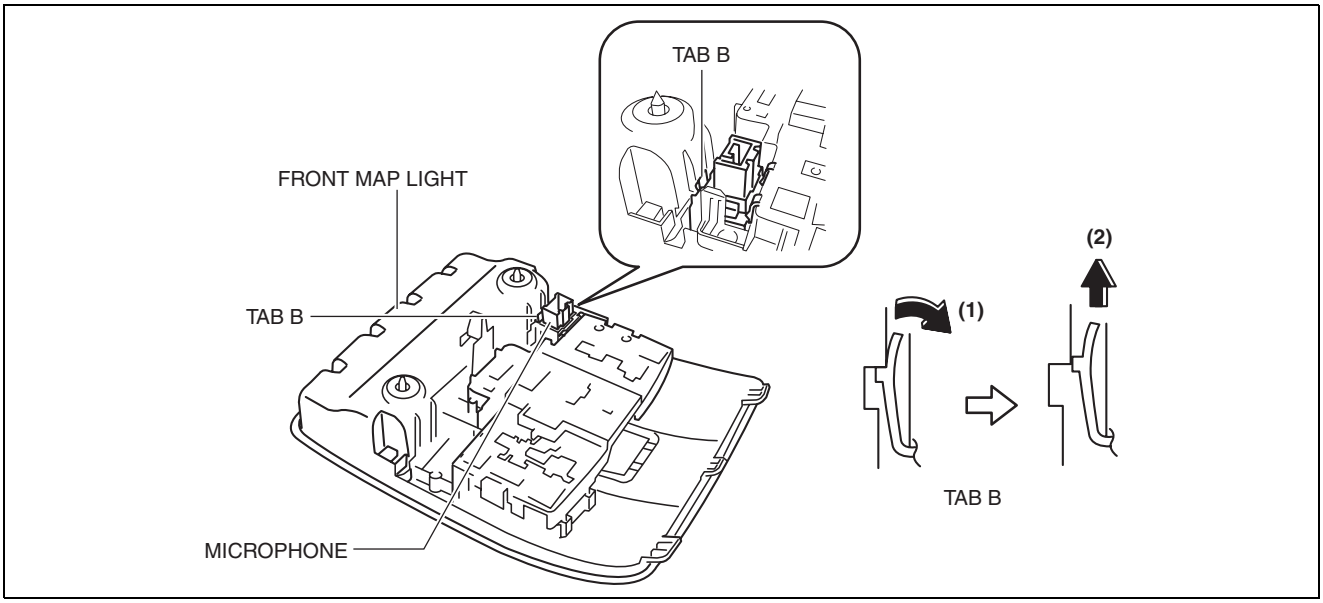


ac5wzw0000377

4. While pulling tab B of the voice recognition microphone in the direction of the arrow (1) shown in the figure, pull the voice recognition microphone in the direction of the arrow (2) shown in the figure to detach tab B of the voice recognition microphone from the front map light.

ENTERTAINMENT

R.H.D.



ac5wzw0000377

5. Remove the voice recognition microphone.
6. Install in the reverse order of removal.

Bluetooth UNIT REMOVAL/INSTALLATION

id092000833300

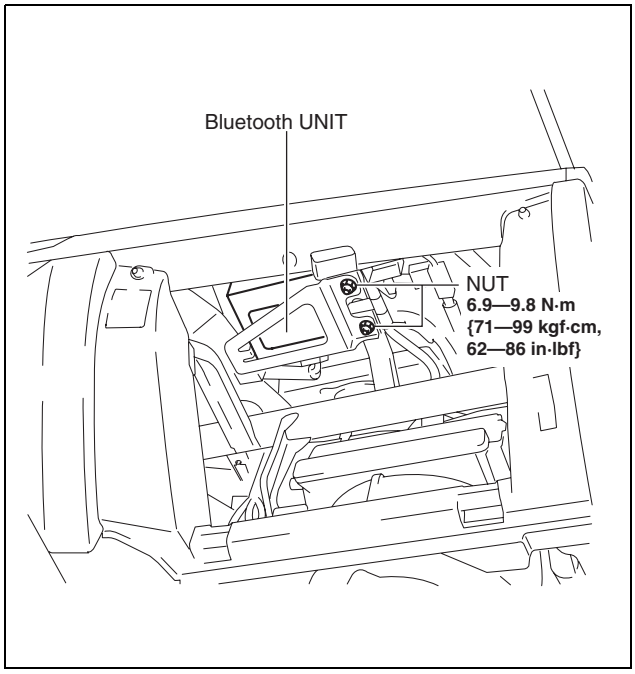
Caution

- **The audio unit communicates with the Bluetooth unit and records the presence/non-presence of the Bluetooth unit when the ignition is switched to ACC or ON (engine off or on) after connecting the negative battery cable.**
- **If the commander switch is installed with the negative battery cable connected when the audio unit records that there is no Bluetooth unit, the Bluetooth unit does not operate.**
- **For the Bluetooth unit installation/removal, disconnect the negative battery cable, switch the ignition to ACC or ON (engine off or on) after the servicing is completed, and the audio unit records the presence/non-presence of the Bluetooth unit.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)

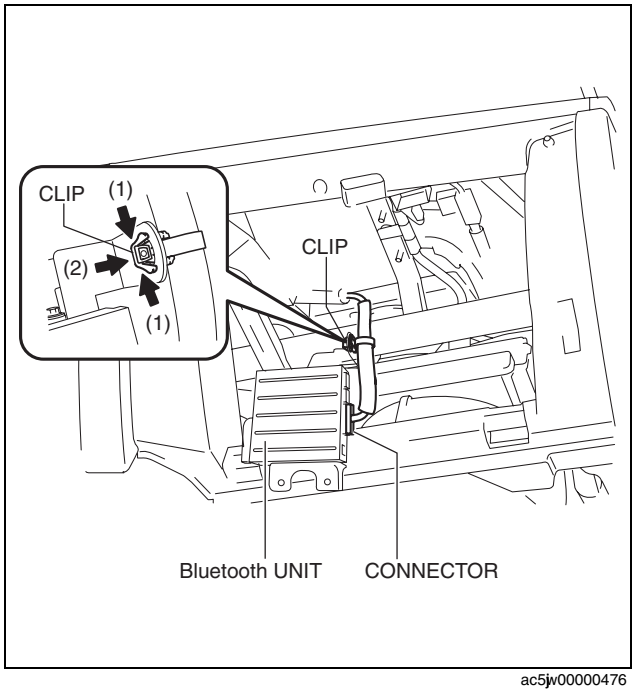
ENTERTAINMENT

3. Remove the nuts.



ac5jw00000475

4. While pressing the tabs of the clip in the direction of the arrows (1) shown in the figure, press the clip in the direction of the arrow (2) to detach it from the Bluetooth unit.
5. Detach the clip.
6. Disconnect the connector.
7. Remove the Bluetooth unit.
8. Install in the reverse order of removal.



ac5jw00000476

REAR MOUNT CAMERA REMOVAL/INSTALLATION

id092000814900

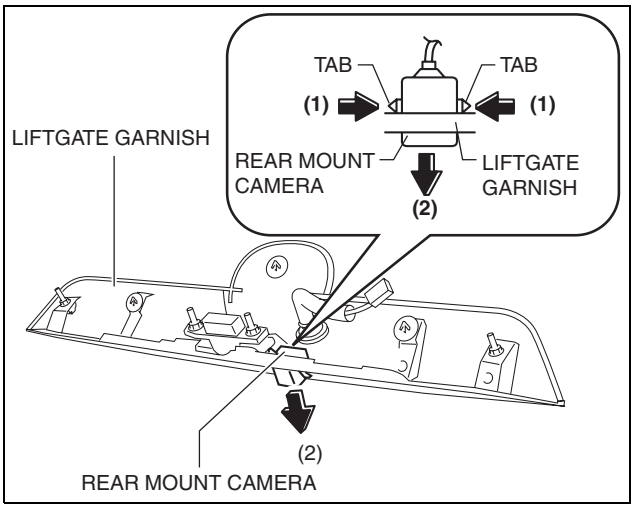
Caution

- **The audio unit communicates with the rear mount camera and records the presence/non-presence of the rear mount camera when the ignition is switched to ACC or ON (engine off or on) after connecting the negative battery cable.**
- **If the commander switch is installed with the negative battery cable connected when the audio unit records that there is no rear mount camera, the rear mount camera does not operate.**
- **For the rear mount camera installation/removal, disconnect the negative battery cable, switch the ignition to ACC or ON (engine off or on) after the servicing is completed, and the audio unit records the presence/non-presence of the rear mount camera.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

ENTERTAINMENT

2. Remove the following parts:
   (1) Liftgate upper trim (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
   (2) Liftgate side trim (See 09-17-87 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Liftgate lower trim (See 09-17-89 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
   (4) Liftgate garnish (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)
3. Press the rear mount camera tabs in the direction of the arrows (1) shown in the figure, pull the rear mount camera in the direction of the arrow (2) shown in the figure, and disengage the rear mount camera tabs from the liftgate garnish.
4. Remove the rear mount camera.
5. Install in the reverse order of removal.



ac5jw00001090

REAR MOUNT CAMERA INSPECTION

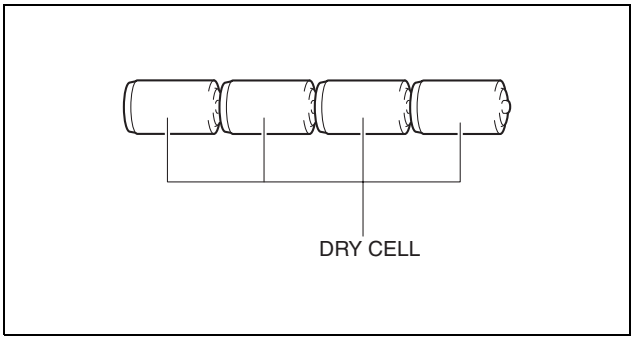
id092000815000

European (L.H.D. U.K.) specs.

Note
- The rear mount camera cannot be inspected as an individual unit. If the rear mount camera does not display images normally, refer to the symptom troubleshooting. (See 09-03F-32 DISPLAY DOES NOT CHANGE TO THE REAR MOUNT CAMERA IMAGE. [ENTIRE AUDIO SYSTEM].)

Except European (L.H.D. U.K.) specs.

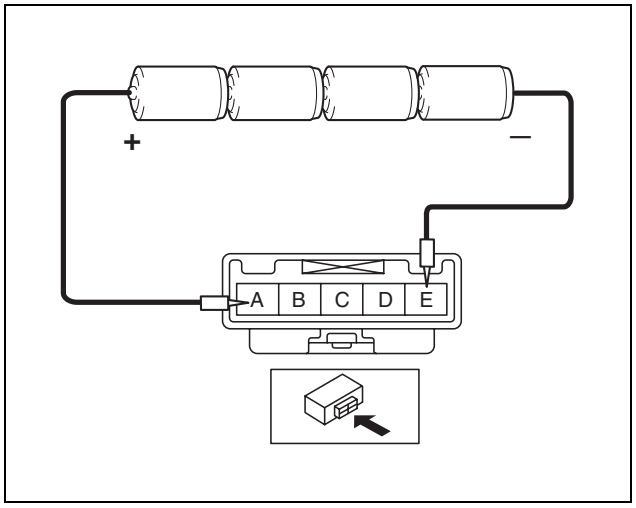
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Liftgate upper trim (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
   (2) Liftgate side trim (See 09-17-87 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Liftgate lower trim (See 09-17-89 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
   (4) Liftgate garnish (See 09-17-65 INNER GARNISH REMOVAL/INSTALLATION.)
   (5) Rear mount camera (See 09-20-68 REAR MOUNT CAMERA REMOVAL/INSTALLATION.)
3. Prepare four dry cell batteries (1.5 V)
4. Connect the four dry cell batteries in a series.



ac5wzw0000510

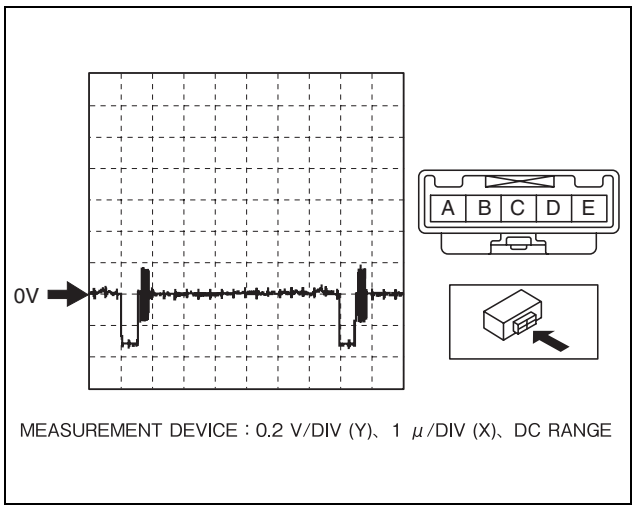
ENTERTAINMENT

5. Connect the positive pole of the dry cell battery to rear mount camera terminal A, and the negative pole to terminal E.
6. With the cell batteries being connected, measure the waveform between rear mount camera terminal C and terminal B.



ac5wzw0000464

7. Verify that the waveform is displayed as shown in the figure.
8. If the voltage is not as shown in the figure, replace the rear mount camera.



ac5wzw0000464

PARKING ASSIST SYSTEM INITIALIZATION SETTING (CALIBRATION)

id092000841000

Note

- The guide line settings can be changed as follows.
  - — Line display contiguous to steering angle (SET1)
  - — Fixed line display (SET2)
  - — No guide line display (SET3)

- The parking assist unit initialization (calibration) has the following items.

Item	Content/function
Factory adjustment	Performs back camera optical axis adjustment
Back camera optical axis adjustment	
Steering angle adjustment*	Acquires steering angle sensor information.
Signal connection verification	Performs verification of connection condition for parking assist system-related parts

* : Performs steering angle adjustment only if the guide line display setting is SET2. (If other than SET2, cannot select.))

- If for the following, perform 09-20-71 Initialization setting (calibration) launching procedure.
  - — If back camera, liftgate replaced
  - — Part replacement having large effect on vehicle height such as tires, suspension, and wheels
  - — “Not Initialized” is displayed
- If the communication status of the parking assist status input signal is to be verified, perform signal connection verification.

ENTERTAINMENT

Initialization setting (calibration) mode launching procedure
Cursor operation method

- The operation method of the screen cursor, operates the light switch as follows.

Switch position	Operation content
Right turn	Move cursor clockwise.
Left turn	Move cursor counterclockwise.
Passing	Selects (decides).

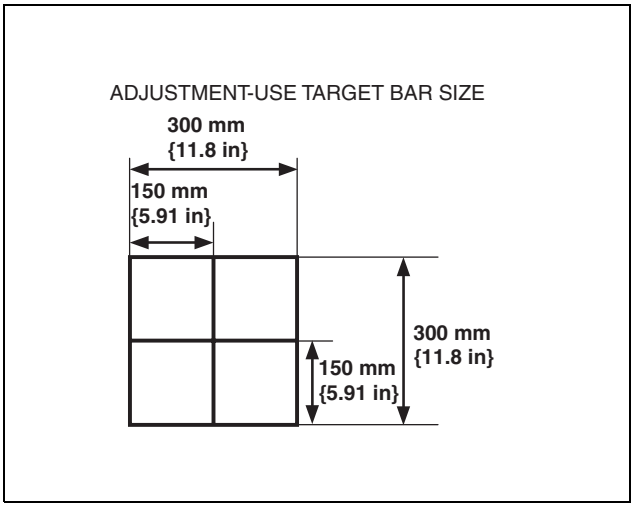
Preparation

1. Adjust the wheel alignment, tire pressure. (See 02-12-1 WHEEL AND TIRE SPECIFICATION.)
2. Prepare two target bars for adjustment as shown in the figure.

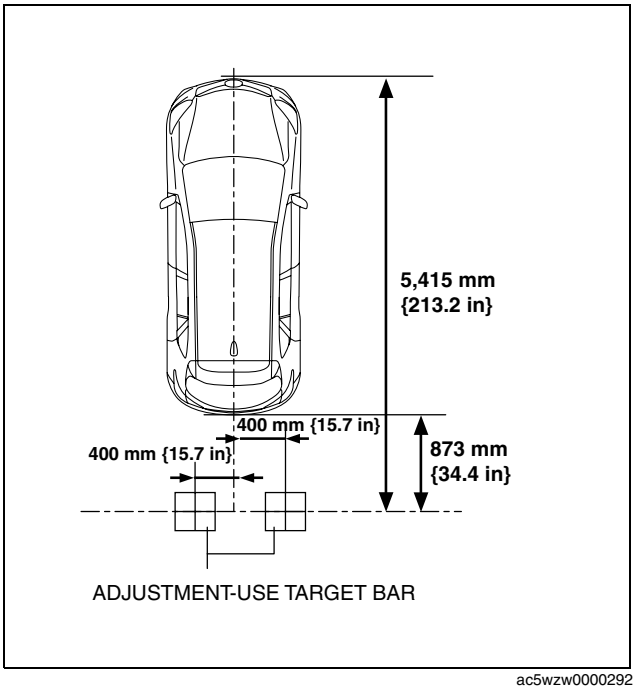
   Note
   - Prepare target bars for adjustment which are easily recognized.

3. Attach the target bars for adjustment to the position (floor surface) shown in the figure.

   Caution
   - **The margin of error in the installation position of the adjustment target bar is within +/- 5 mm {0.2 in}.**



ac5wzw0000292

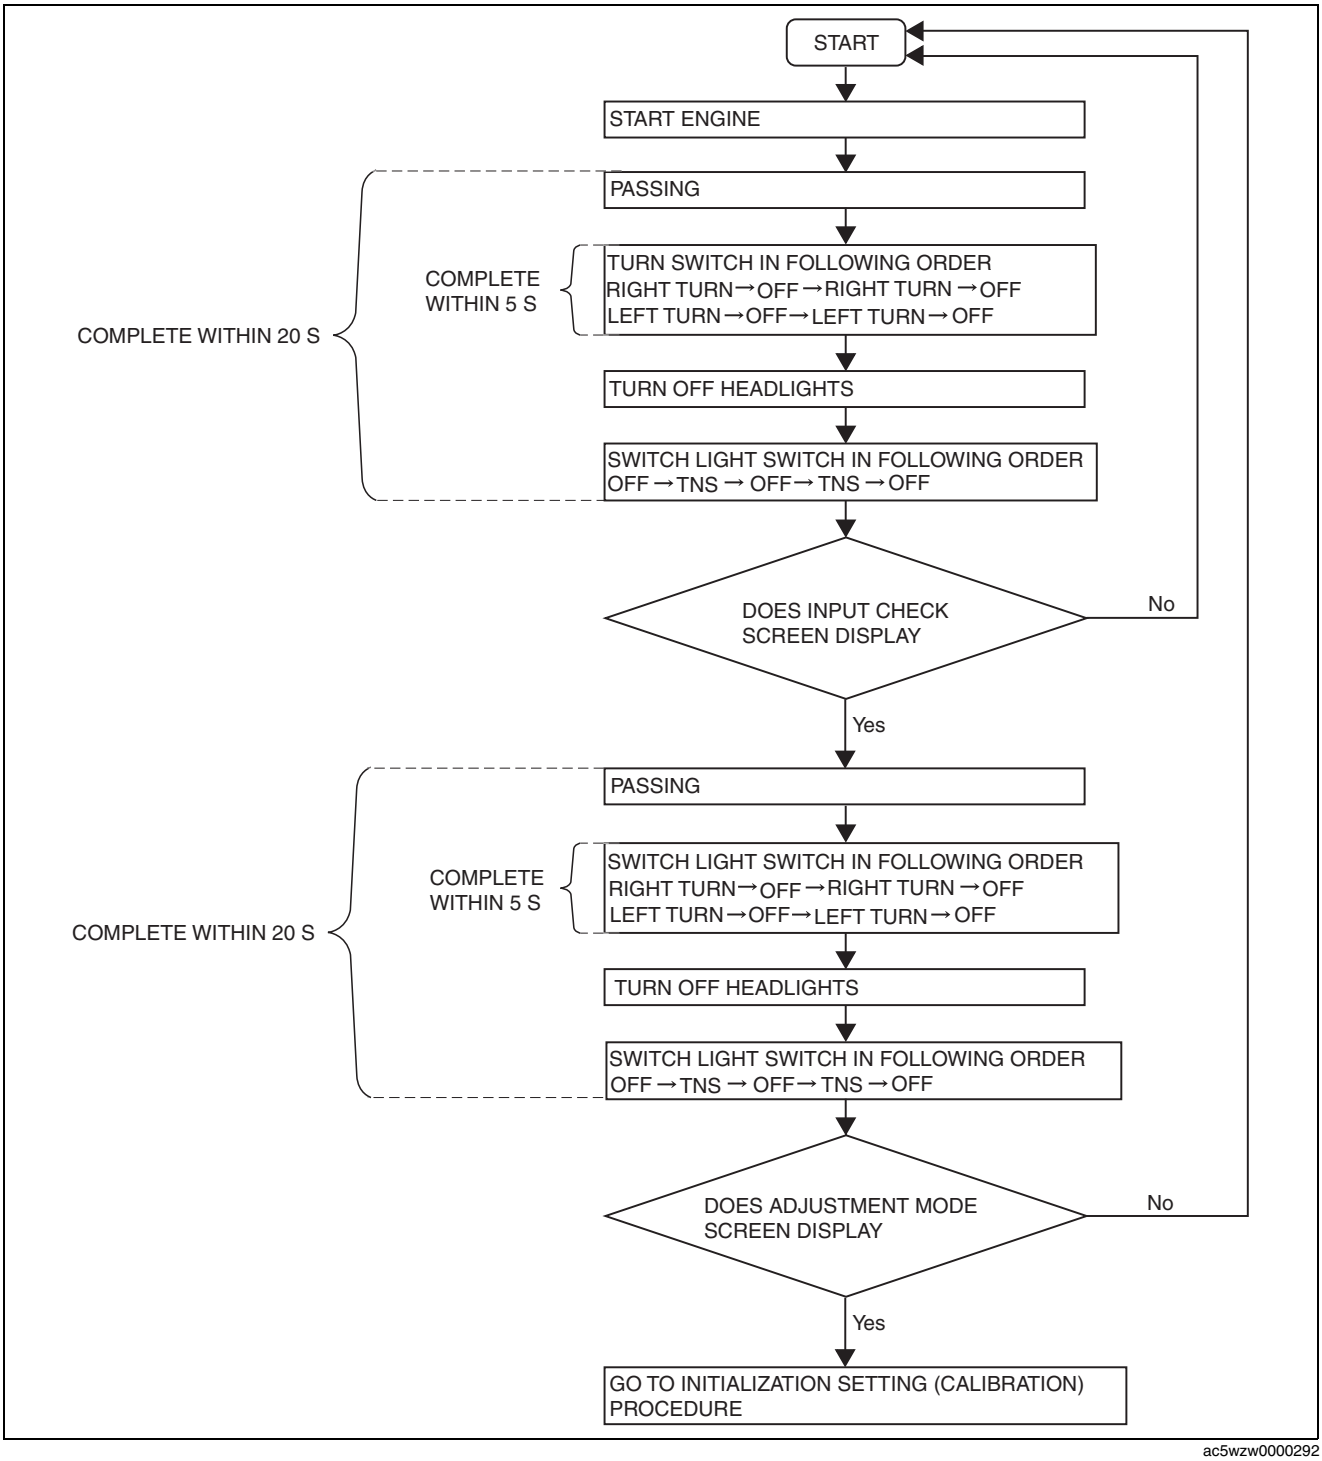


ac5wzw0000292

Initialization setting (calibration) launching procedure

1. Launch the initialization setting (calibration) mode using the following procedure.

   Note
   - If the parking assist system initialization is not implemented (such as after back camera is replaced), the initialization setting adjustment mode is force-launched when the ignition is switched ON, and the No.1 screen is displayed, therefore, the procedure shown in the figure is not required.



ac5wzw0000292

2. Start the engine. (Only if initialization setting is not implemented)

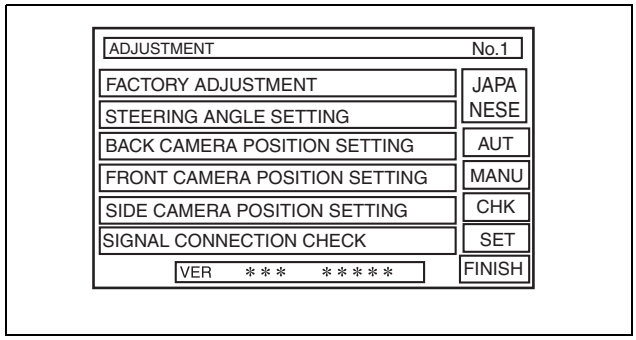
Initialization setting (calibration) procedure
Procedure

Caution
- **If the initialization setting is performed on a sloping surface or if there is cargo loaded which largely changes the vehicle posture, the camera optical axis may not set to the correct position. When performing the initialization setting, park the vehicle on a flat surface and remove any cargo.**

1. Launch the initialization setting (calibration) mode. (See 09-20-71 Initialization setting (calibration) mode launching procedure.)

ENTERTAINMENT

2. Select the adjustment mode No.1 screen MANU.



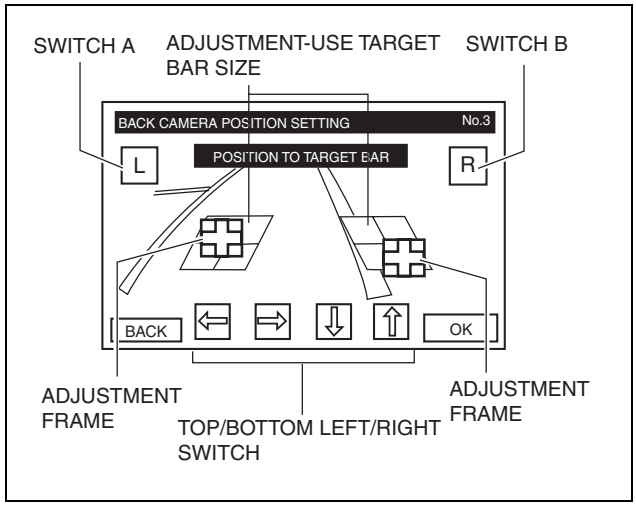
ac5wzw0000325

Note
- If it does not change to the adjustment mode No.1 screen and the the screen turns black, a malfunction in the back camera can be considered. Verify the connection status of the back camera.

3. Select the adjustment mode No.1 screen FACTORY ADJUSTMENT.

Note
- If the guide line display mode is SET1 or SET3, either FACTORY ADJUSTMENT or BACK CAMERA can be selected because the content for the factory adjustment and the back camera adjustment is the same.

4. Operate switch A, B and the up/down switch of the back camera optical axis adjustment screen and center the target bar for adjustment in the adjustment frame.



ac5wzw0000292

Note
- If it does not move in back camera optical axis adjustment screen, a back camera malfunction can be considered. Verify the connection status of the back camera.

5. Select the back camera optical axis adjustment No.3 screen OK.

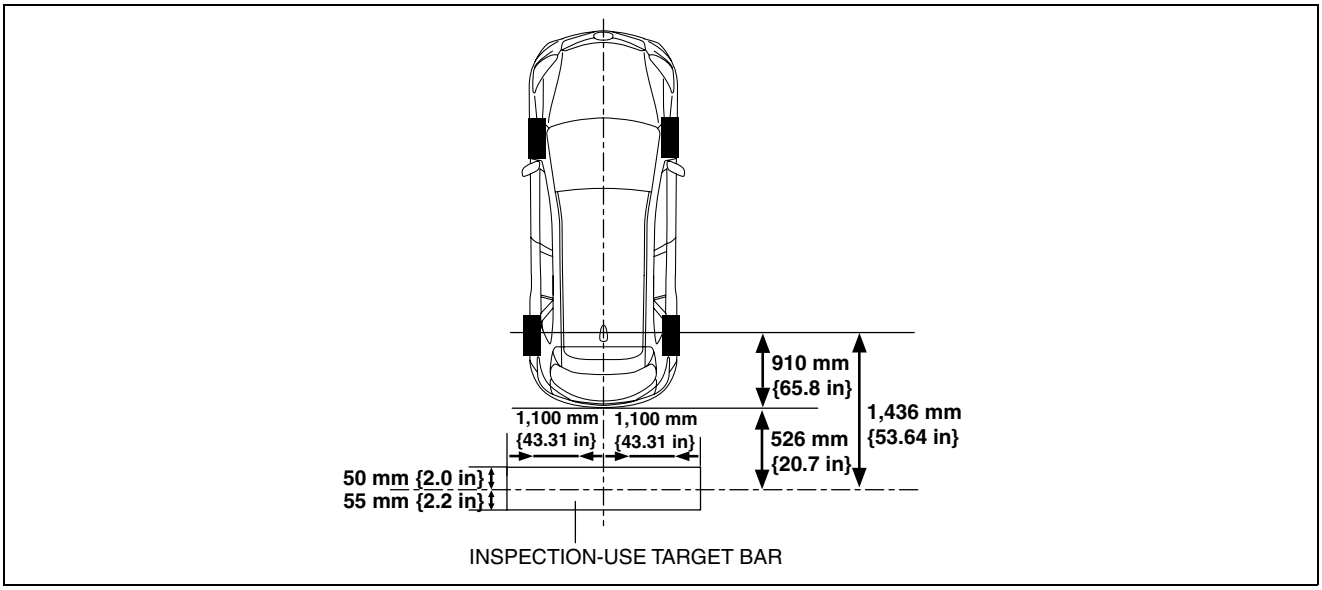
Note
- The camera image (image at vehicle rear) is displayed while the adjustment value is stored.

6. Verify that the adjustment mode No.1 screen is displayed.
   - If it does not display, repeat procedure from Step 1.
   - If the adjustment mode No.1 screen is not displayed even if the procedure is repeated from Step 1, a back camera malfunction can be considered. Replace the back camera and perform the initialization setting again (calibration).
7. Prepare target bar for inspection as shown in the figure.
8. Attach the target bars for inspection to the position (floor surface) shown in the figure.

ac5wzw0000376

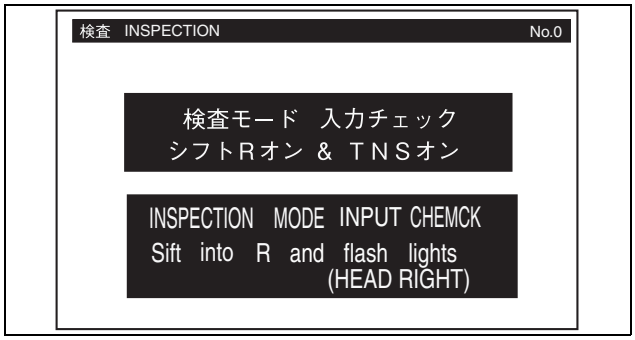
Caution
- **The margin of error in the installation position of the adjustment target bar is within +/- 5 mm.**

ENTERTAINMENT



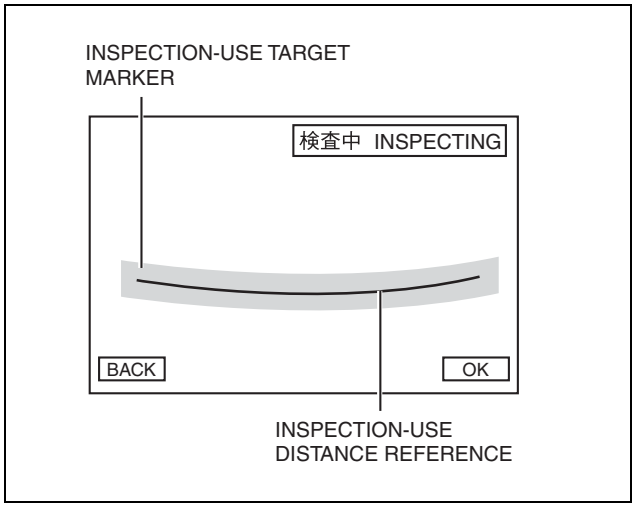
ac5wzw0000380

9. Select the adjustment mode No.1 screen CHK.
10. Input the inspection password.
    - Switch the light switch in the following order while the selector lever is shifted to the R position (ATX)/put in reverse (MTX).



ac5wzw0000331

11. Verify that the distance reference line for the inspection is above the inspection-use target marker, and select OK.
    - If it is not above the inspection-use target marker, select NG and perform the initialization again.
12. Switch the ignition OFF (LOCK).
13. Launch the initialization setting (calibration) mode. (See 09-20-71 Initialization setting (calibration) mode launching procedure.)

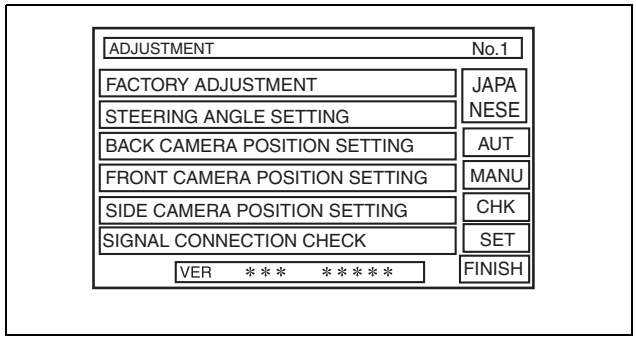


ac5wzw0000292

ENTERTAINMENT

14. Verify that the adjustment No.1 screen FACTORY ADJUSTMENT item is not displayed in black.

Note
- Adjustment items that have been completed are displayed in black on the screen. If the steering angle adjustment item is not displayed in green, perform the procedure from Step 1 again because the adjustment has not been completed.



ac5wzw0000325

15. Verify the operation of the predicted vehicle path lines. (See 09-20-76 Predicted vehicle path line operation verification procedure.)

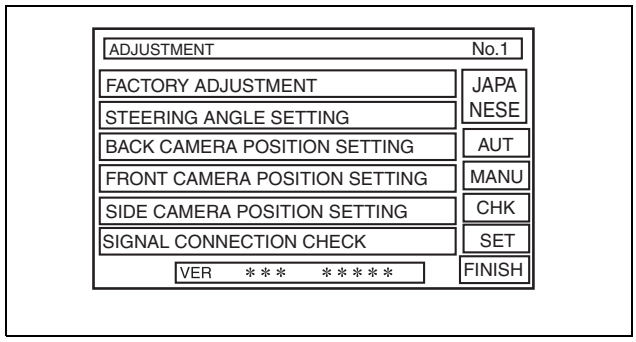
Guide line setting change procedure

Note
- The guide line setting can only be changed if the initialization (calibration) has been completed.

Changing to fixed line display

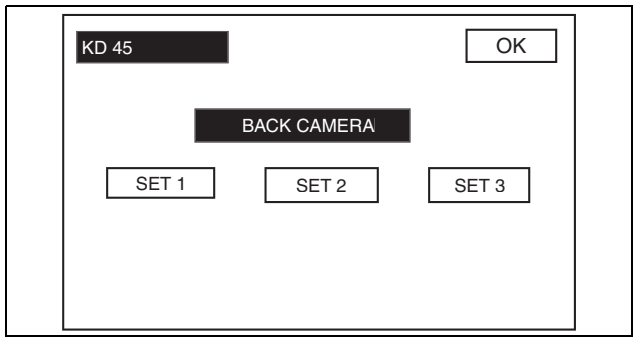
1. Launch the initialization setting (calibration) mode. (See 09-20-71 Initialization setting (calibration) mode launching procedure.)
2. Select the adjustment mode No.1 screen SET.

Note
- If it does not change to the adjustment mode No.1 screen and the the screen turns black, a malfunction in the back camera can be considered. Verify the connection status of the back camera.



ac5wzw0000325

3. Select setting screen SET2.
4. Select setting screen OK.

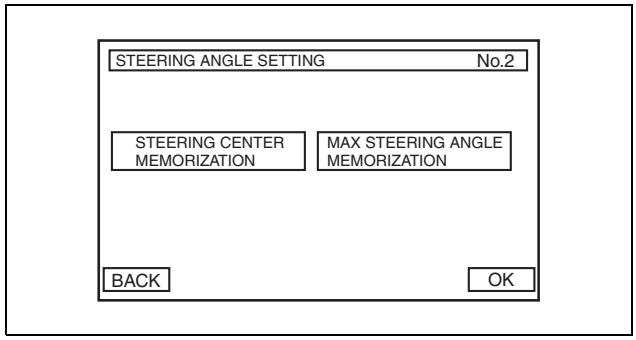


ac5jjw00002679

5. Turn the steering wheel left/right until it locks.

Note
- The steering wheel can be turned first to the left or right.
- If the steering wheel is turned in the opposite direction before it locks, the correct steering angle will not be stored in memory.

6. Select steering angle adjustment screen MAX STEERING ANGLE MEMORIZATION.
7. Select the adjustment mode No.1 screen FINISH.



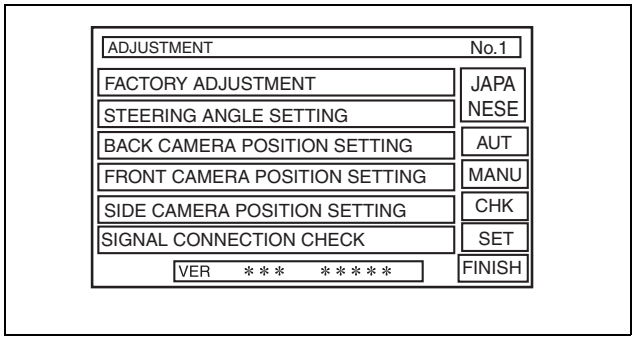
ac5wzw0000325

ENTERTAINMENT

Guide lines not displayed

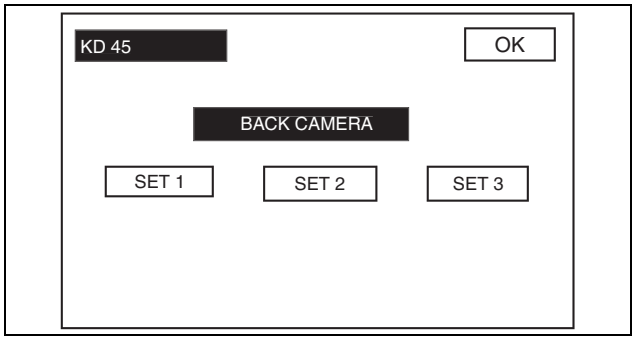
1. Launch the initialization setting (calibration) mode. (See 09-20-71 Initialization setting (calibration) mode launching procedure.)
2. Select the adjustment mode No.1 screen SET.

Note
- If it does not change to the adjustment mode No.1 screen and the the screen turns black, a malfunction in the back camera can be considered. Verify the connection status of the back camera.



ac5wzw0000325

3. Select setting screen SET3.
4. Select setting screen OK.
5. Select the adjustment mode No.1 screen FINISH.



ac5jjw00002679

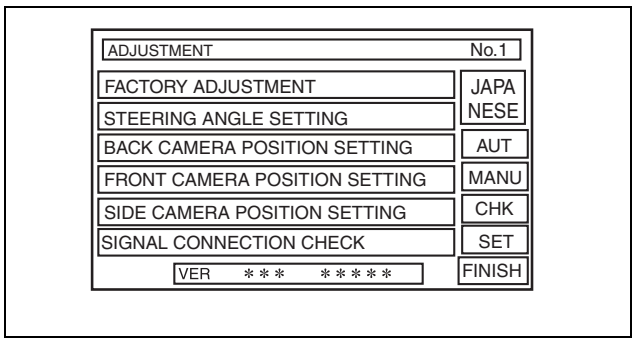
Predicted vehicle path line operation verification procedure

Caution
- **When performing this procedure, keep the brake pedal depressed so that the vehicle does not unexpectedly move and cause an accident.**

1. Verify that the parking brake is applied correctly.
2. Start the engine.
3. Shift the selector lever to the R position (ATX)/put in reverse (MTX).
4. Turn the steering wheel left and right until it locks, and verify that the predicted vehicle path line movement is synchronized to the operation..
   - If the predicted vehicle path lines do not link, or they do not move prior to locking the steering wheel, the steering angle signal will not be received correctly, therefore, perform signal connection verification.

Signal connection verification

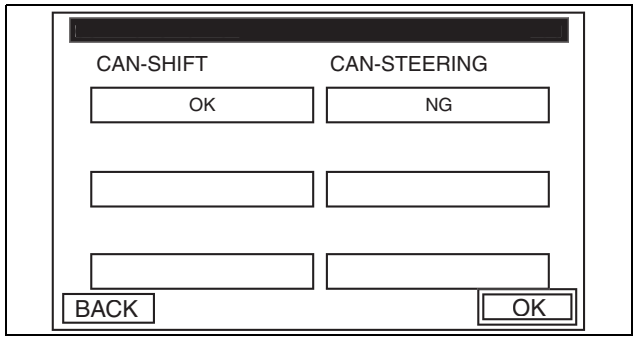
1. Launch the initialization setting (calibration) mode. (See 09-20-71 Initialization setting (calibration) mode launching procedure.)
2. Select the adjustment mode No.1 screen SIGNAL CONNECTION CHECK.



ac5wzw0000325

ENTERTAINMENT

3. Verify the input signal status displayed on the screen.



ac5jjw00001710

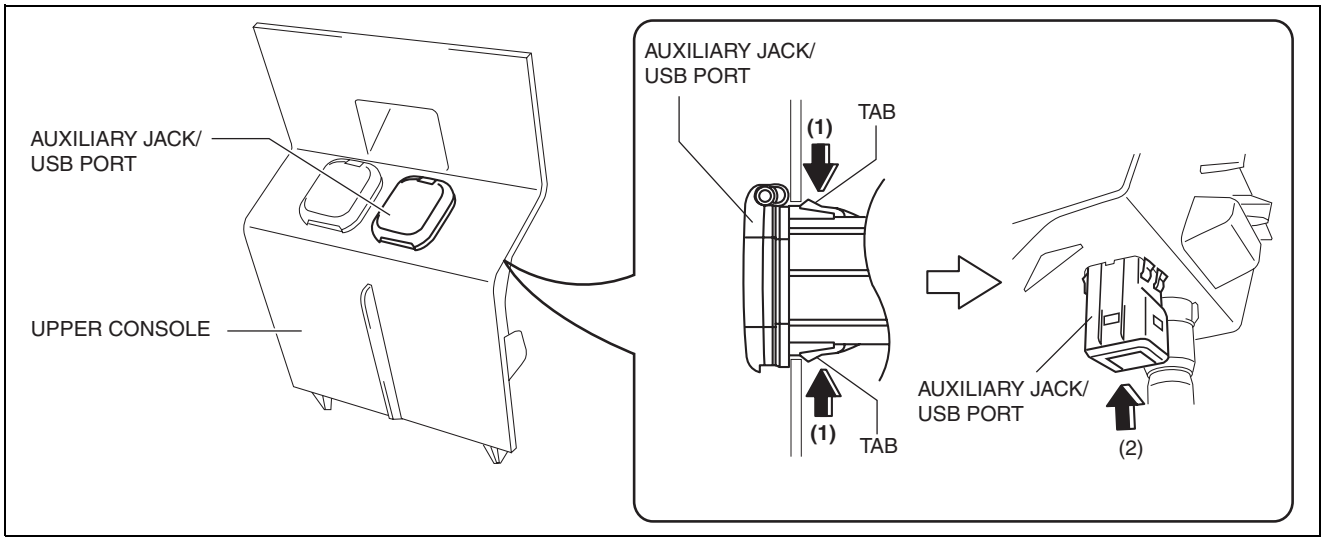
Item	OPERATION
CAN shift signal	The signal connection verification is performed automatically.
CAN Steering angle	The signal connection verification is performed automatically.

- Items displaying OK: Signal input normal
- Items not displaying OK: Verify connection status of vehicle wiring harnesses, parts and the CAN signal communication status.

AUXILIARY JACK/USB PORT REMOVAL/INSTALLATION

id092000811500

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the upper console. (See 09-17-47 REAR CONSOLE DISASSEMBLY/ASSEMBLY.)
3. While pressing the auxiliary jack/USB port tabs in the direction of the arrows (1) shown in the figure, press the auxiliary jack/USB port in the direction of the arrow (2) to detach the auxiliary jack/USB port tabs from the upper console.



ac5wzw0000229

4. Remove the auxiliary jack/USB port.
5. Install in the reverse order of removal.

AUXILIARY JACK/USB PORT INSPECTION

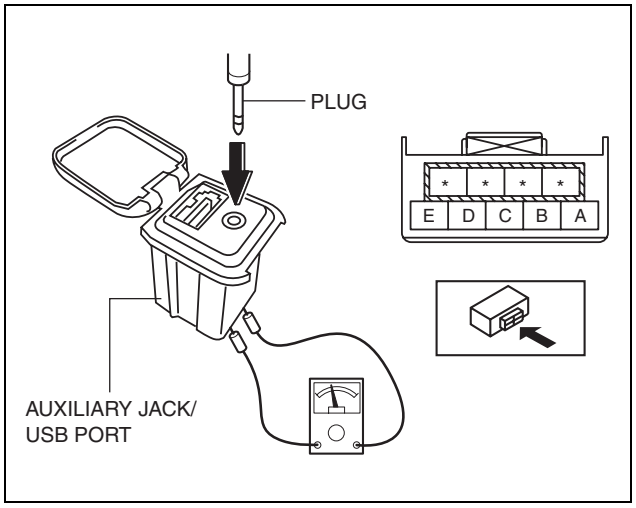
id092000811600

Auxiliary jack inspection

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Upper console (See 09-17-47 REAR CONSOLE DISASSEMBLY/ASSEMBLY.)
   (2) Auxiliary jack/USB port (See 09-20-77 AUXILIARY JACK/USB PORT REMOVAL/INSTALLATION.)

ENTERTAINMENT

3. Connect a commercially-available plug to the external input unit.



ac5uuw00002842

4. Verify that the continuity between the external input unit terminals is as indicated in the table.
   - If not as indicated in the table, replace the external input unit.

○—○ : Continuity

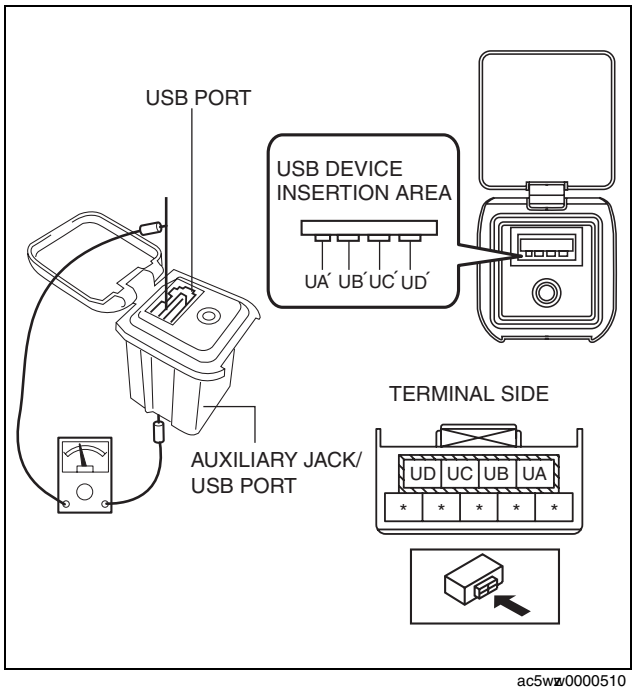
Test condition	Terminal				
	A	B	C	D	E
Plug is connected	○				○
Plug is not connected					

ac5wxw0000148

USB port inspection

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Upper console (See 09-17-47 REAR CONSOLE DISASSEMBLY/ASSEMBLY.)
   (2) Auxiliary jack/USB port (See 09-20-77 AUXILIARY JACK/USB PORT REMOVAL/INSTALLATION.)
3. Insert the pins to positions UA', UB', UC', and UD' shown in the figure from the side of the USB device insertion area for the external input unit, and verify the continuity at the insertion side and terminal side of the USB device.
4. Verify that the continuity at the insertion side and terminal side of the USB device is as indicated in the table.

Note
- When inspecting the USB device insertion side, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals.



ac5wxw0000510

ENTERTAINMENT

- If not as indicated in the table, replace the external input unit.

○—○: Continuity

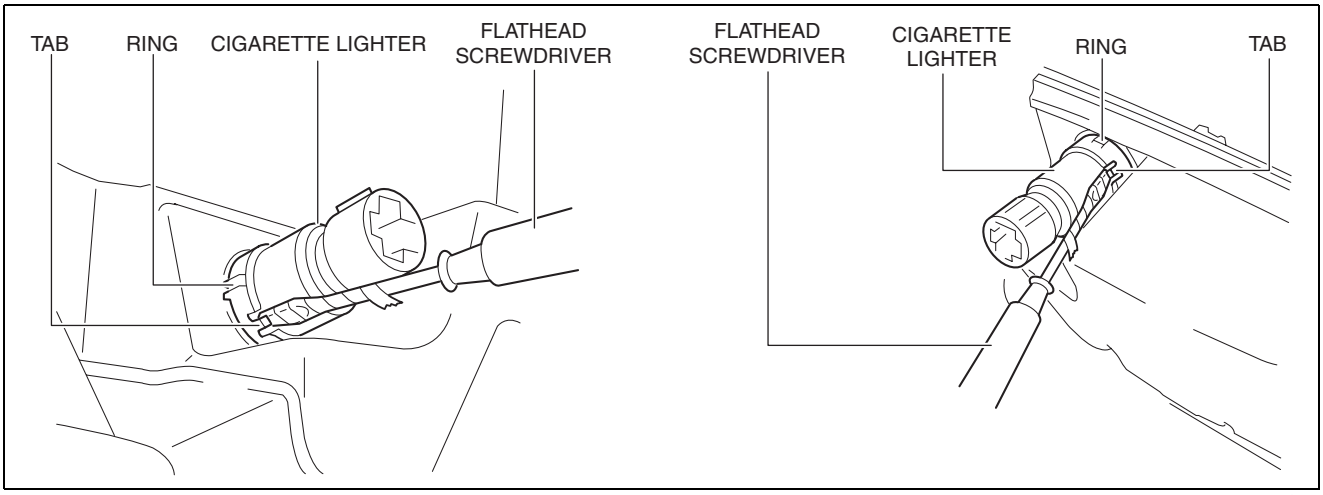
Test condition	Terminal							
	Terminal side				USB devise insertion area			
	UA	UB	UC	UD	UA'	UB'	UC'	UD'
Under any condition	○				○			
		○				○		
			○				○	
				○				○

ac5wxw0000510

CIGARETTE LIGHTER REMOVAL/INSTALLATION

id092000803100

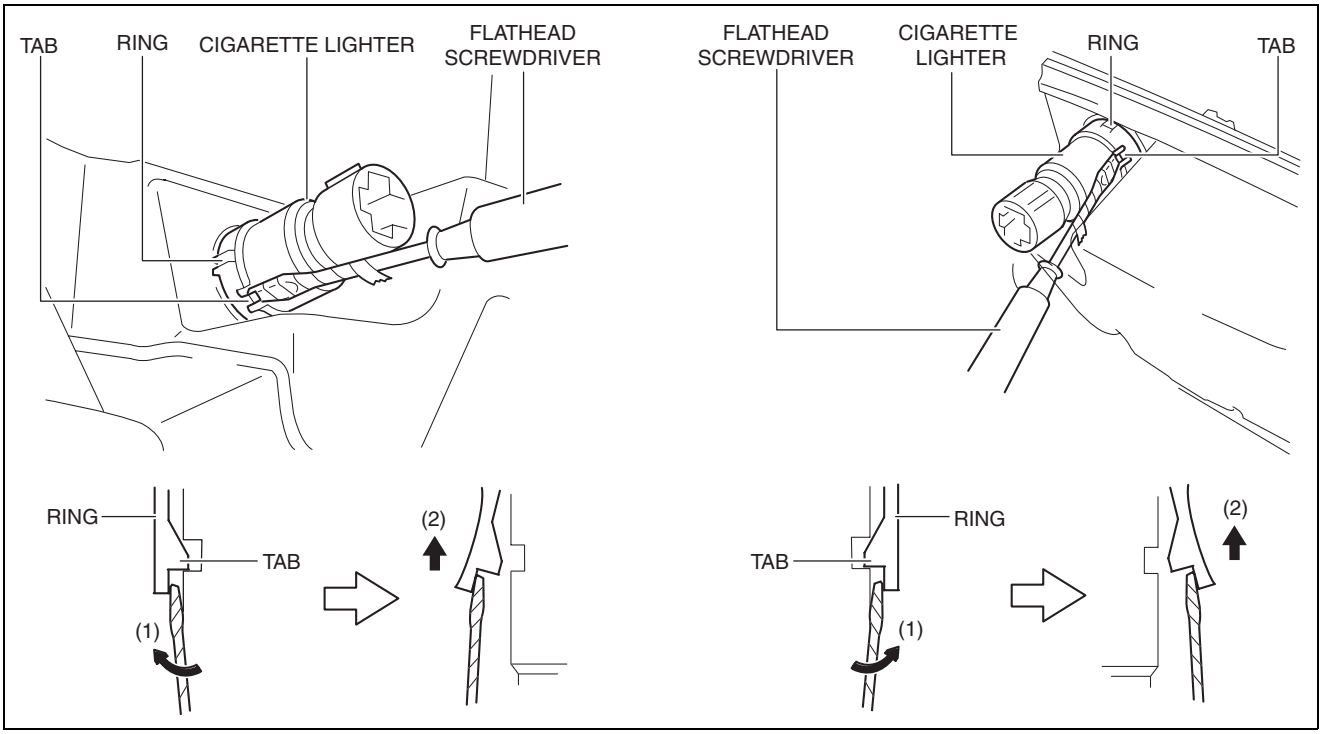
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (2) Front console box (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)
   (3) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
   (4) Upper panel (See 09-17-44 UPPER PANEL REMOVAL/INSTALLATION.)
   (5) Rear console (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.)
   (6) Side wall (See 09-17-49 SIDE WALL REMOVAL/INSTALLATION.)
   (7) Front console (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
3. Insert a tape-wrapped flathead screwdriver into the gap between the ring tab and socket.



ac5wxw0000460

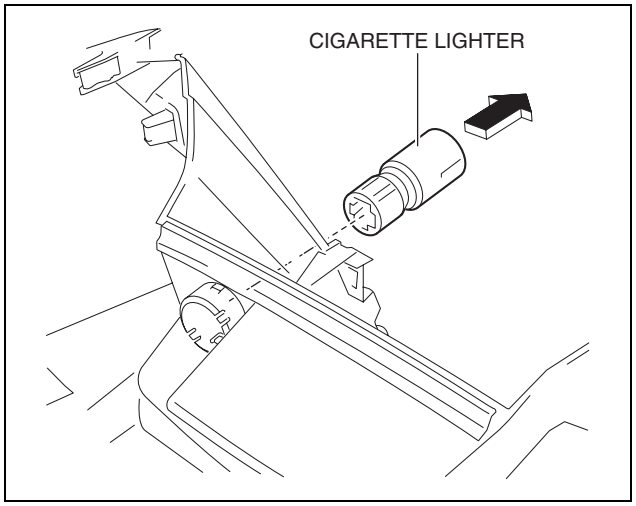
ENTERTAINMENT

4. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, press the cigarette lighter in the direction of the arrow (2) shown in the figure, and detach the ring tab from the socket.



ac5wzw0000460

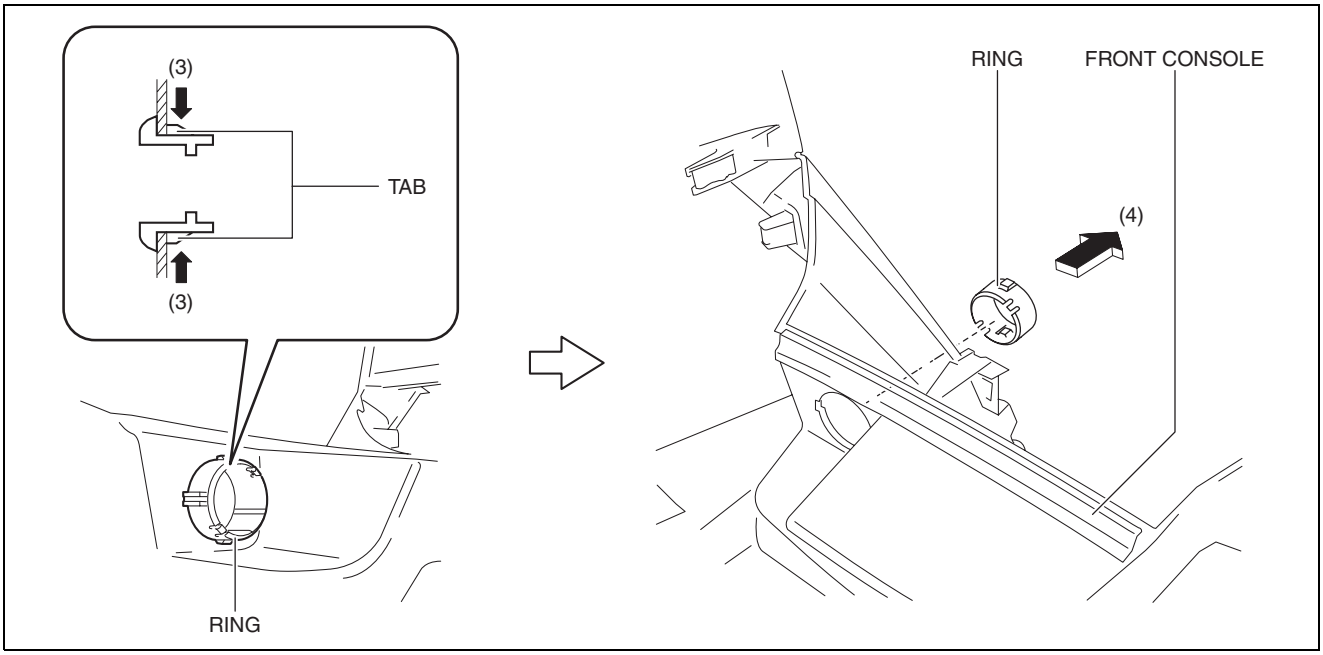
5. Pull the cigarette lighter in the direction of the arrow shown in the figure and remove it.



ac5wzw0000461

ENTERTAINMENT

6. While pressing the ring tabs in the direction of arrows (3) shown in the figure, press the ring in the direction of arrow (4) to detach the ring tabs from the front console.



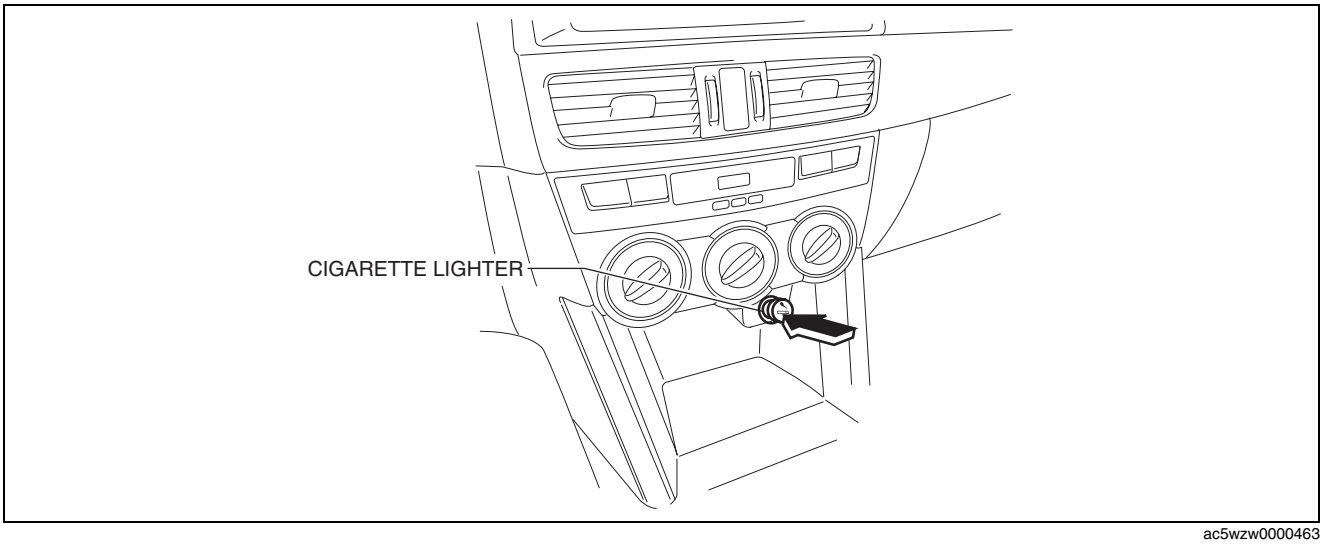
ac5wzw0000461

7. Remove the ring.
8. Install in the reverse order of removal.

CIGARETTE LIGHTER INSPECTION

id092000803200

1. Switch the ignition to ACC.
2. Press the cigarette lighter into the socket and verify that it returns to its original position in **10—20 s**.



ac5wzw0000463

- If the cigarette lighter does not operate normally, replace the cigarette lighter and the socket.

POWER SYSTEMS

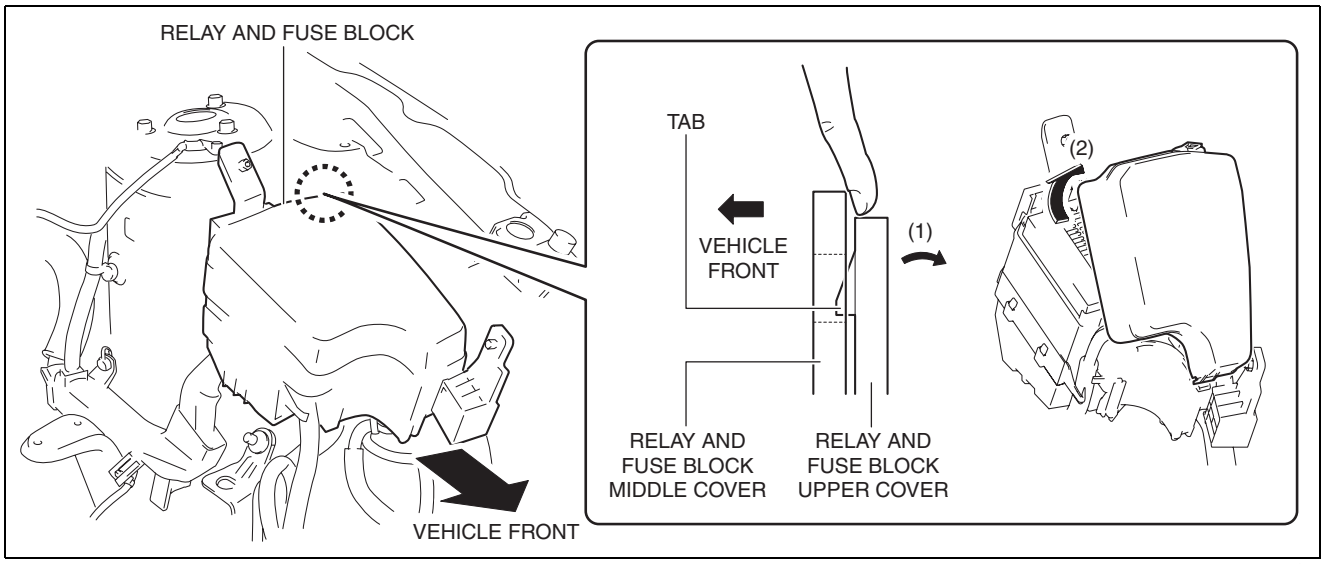
RELAY AND FUSE BLOCK REMOVAL/INSTALLATION

id092100498600

1. Remove the battery tray. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Remove the air cleaner case. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. While pressing the relay and fuse block upper cover tab in the direction of the arrow (1) shown in the figure, lift up the relay and fuse block upper cover in the direction of the arrow (2) to detach the relay and fuse block upper cover tab from the relay and fuse block middle cover.



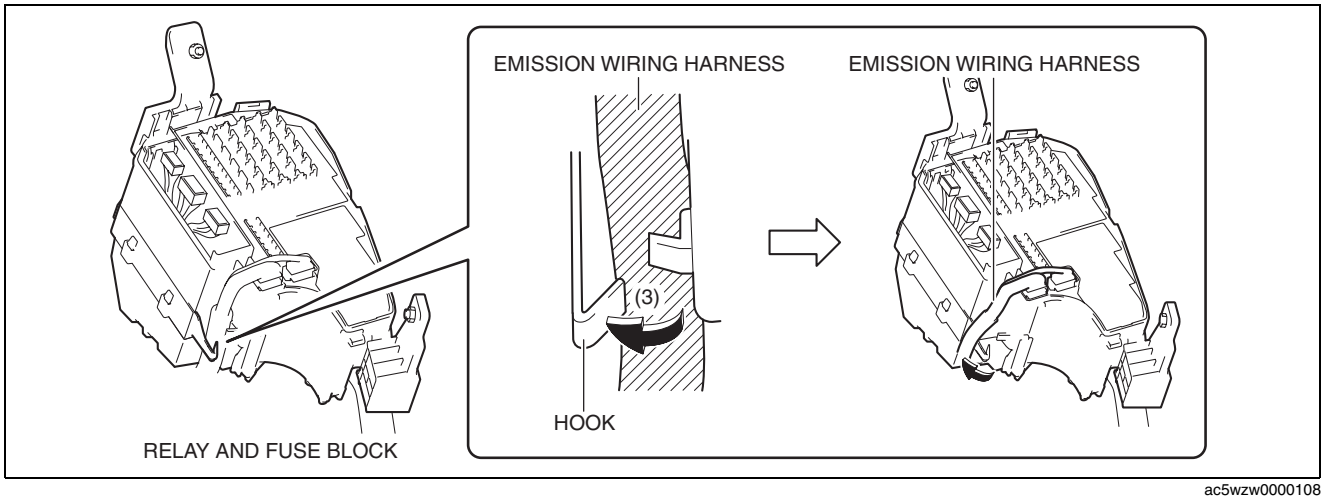
ac5wzw0000108

4. Remove the relay and fuse block upper cover.
5. Remove all the relays and fuses.

Caution

- **If the relay and fuse block is removed with the relays and fuses installed, the area around the relay and fuse block may contact the relays or fuses and damage the them. Before removing the relay and fuse block, remove all the relays and fuses.**

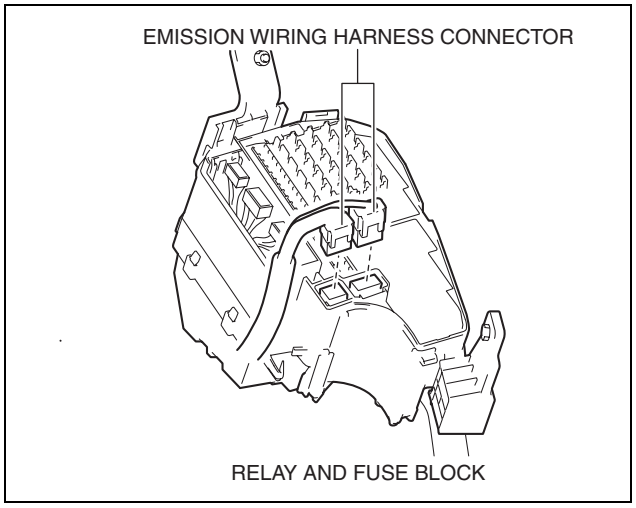
6. Remove the front body control module (FBCM). (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
7. Disconnect the front body control module (FBCM) connector. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
8. While pressing the relay and fuse block hook in the direction of the arrow (3) shown in the figure, set the emission wiring harness away from the relay and fuse block hook.



ac5wzw0000108

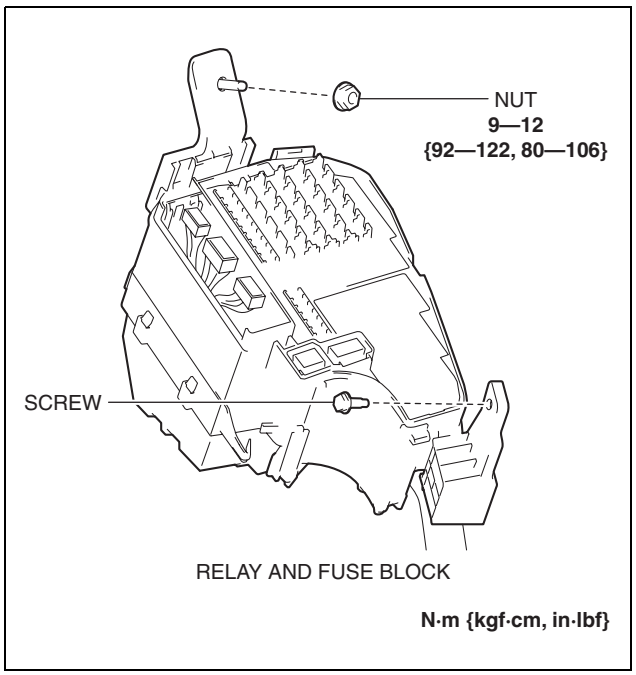
POWER SYSTEMS

9. Disconnect the emission wiring harness connectors.



ac5wzw0000013

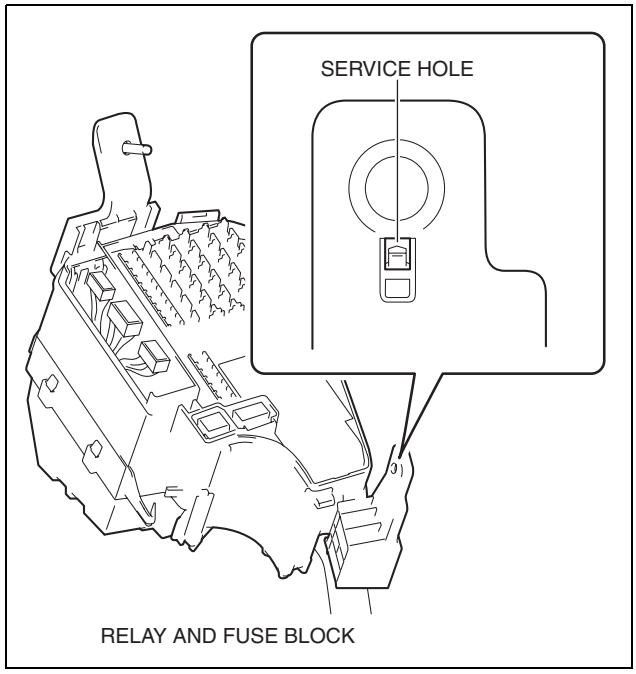
10. Remove the nut and screw.



ac5wzw0000110

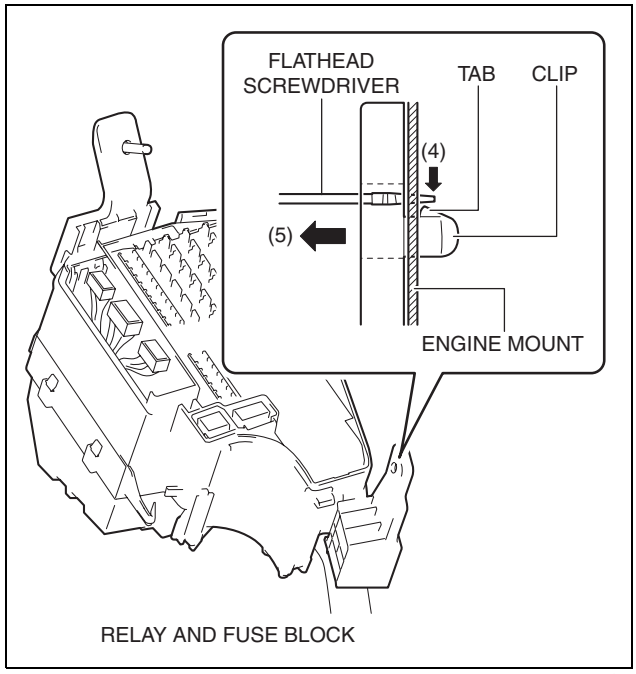
POWER SYSTEMS

11. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.



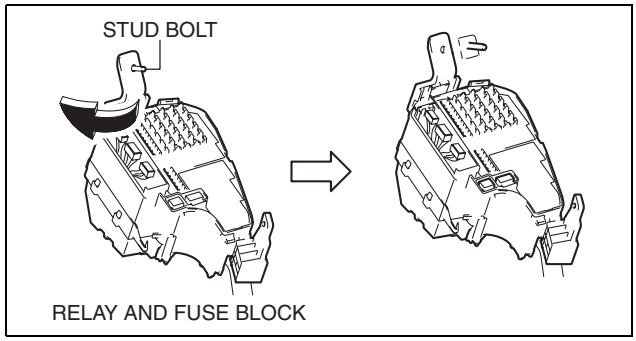
ac5wzw0000013

12. While pressing the clip tab of the relay and fuse block in the direction of the arrow (4) shown in the figure, pull the clip in the direction of the arrow (5) to detach the clip tab from the engine mount.



ac5wzw0000108

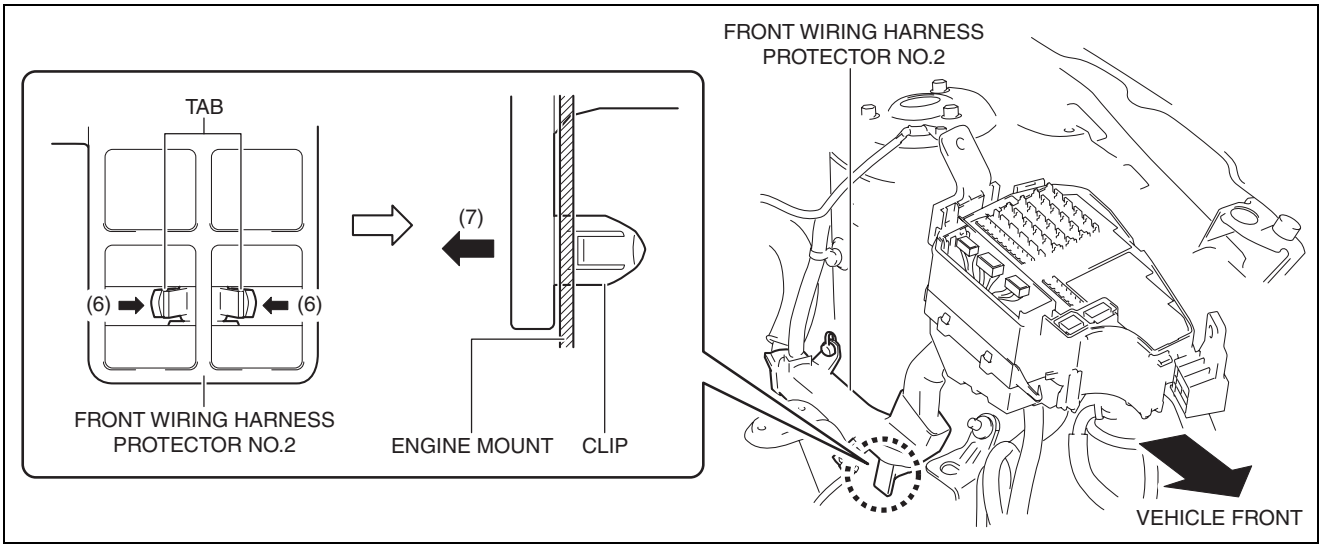
13. Pull out the relay and fuse block from the stud bolt and set it aside as shown in the figure.



ac5wzw0000051

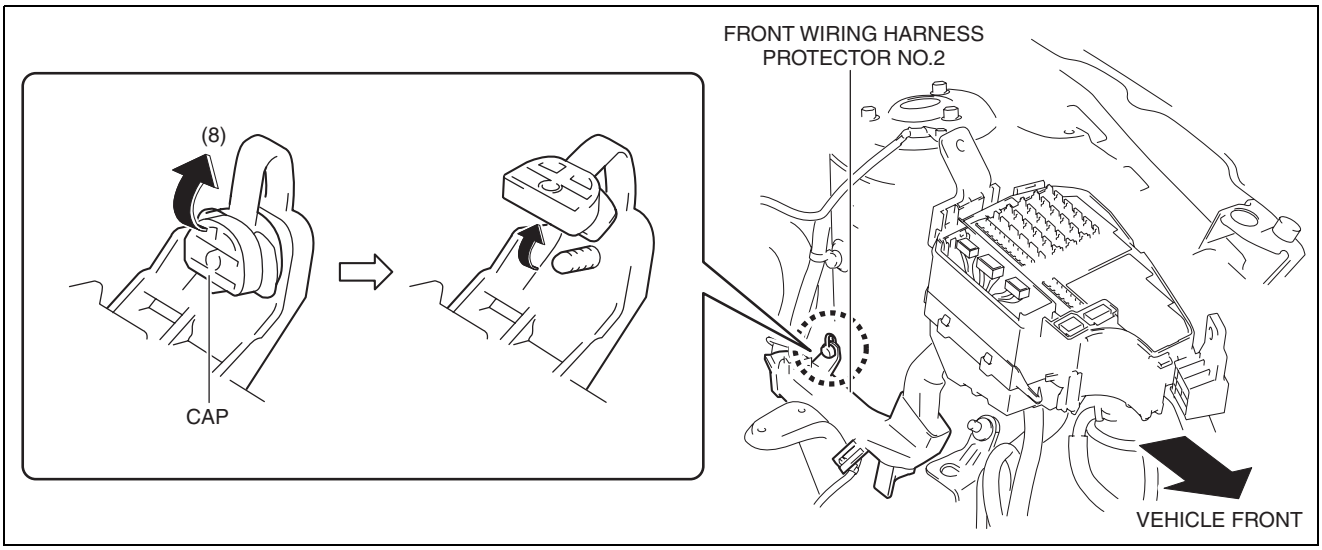
POWER SYSTEMS

14. While pressing the clip tabs of front wiring harness protector No.2 in the direction of the arrows (6) shown in the figure, pull the clip in the direction of the arrow (7) shown in the figure to detach the clip tabs from the engine mount.



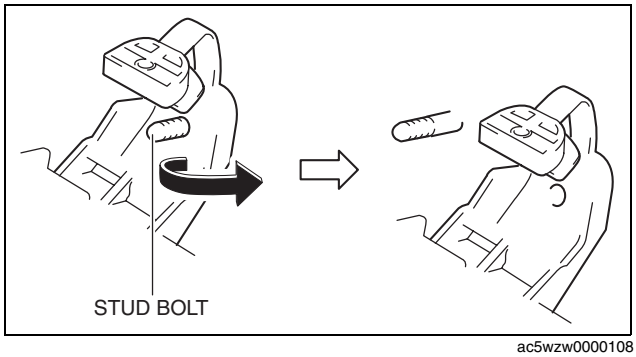
ac5wzw0000108

15. Remove the front wiring harness protector No.2 clip.
16. Lift up the front wiring harness protector No.2 cap in the direction of the arrow (8) shown in the figure.



ac5wzw0000108

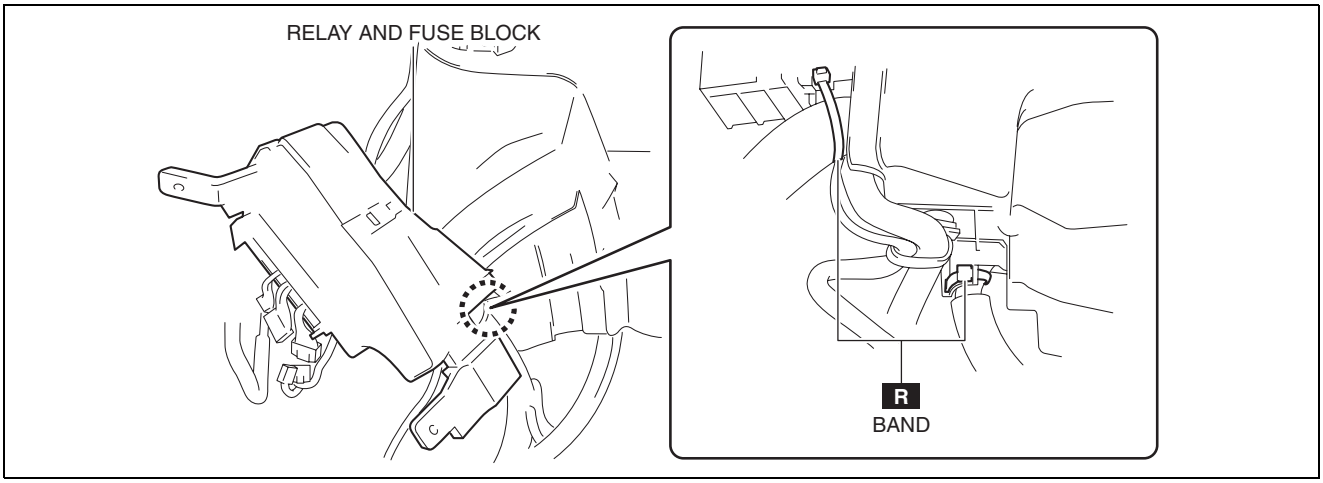
17. Pull out front wiring harness protector No.2 from the stud bolt and set it aside as shown in the figure.



ac5wzw0000108

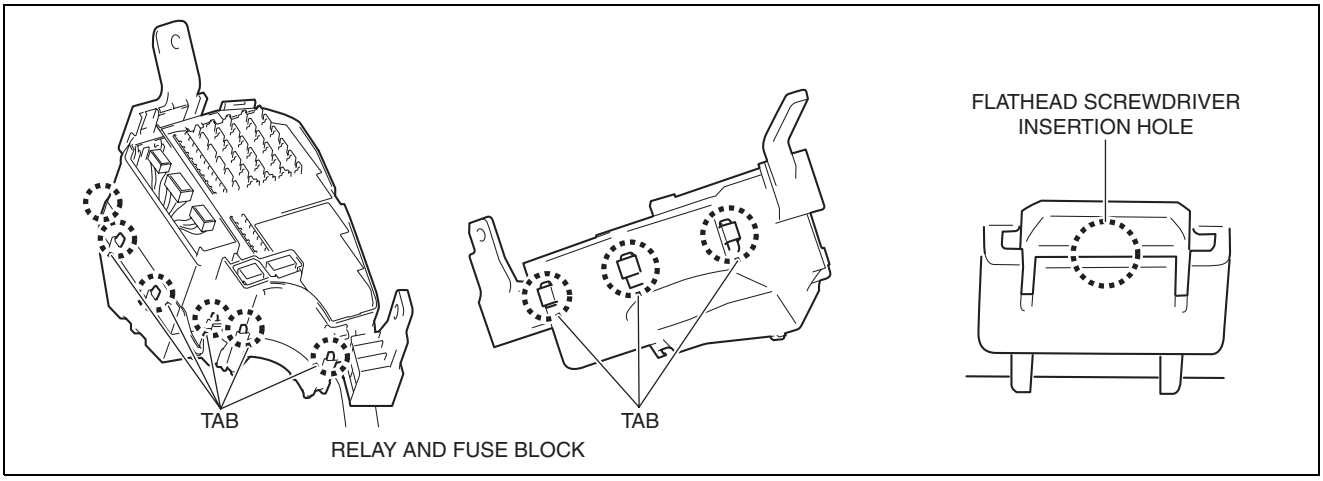
POWER SYSTEMS

18. Cut the band shown in the figure.



ac5wzw0000014

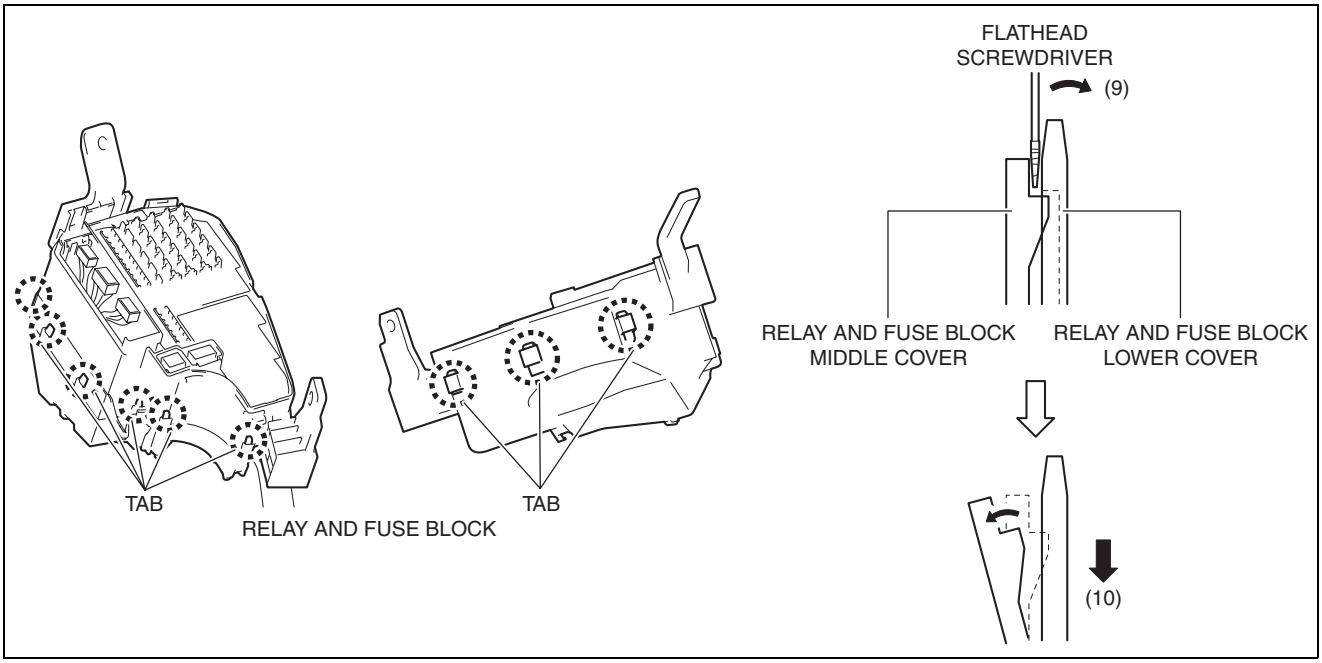
19. Insert a flathead screwdriver into the gap between the relay and fuse block middle cover tabs and the relay and fuse block lower cover as shown in the figure.



ac5wzw0000108

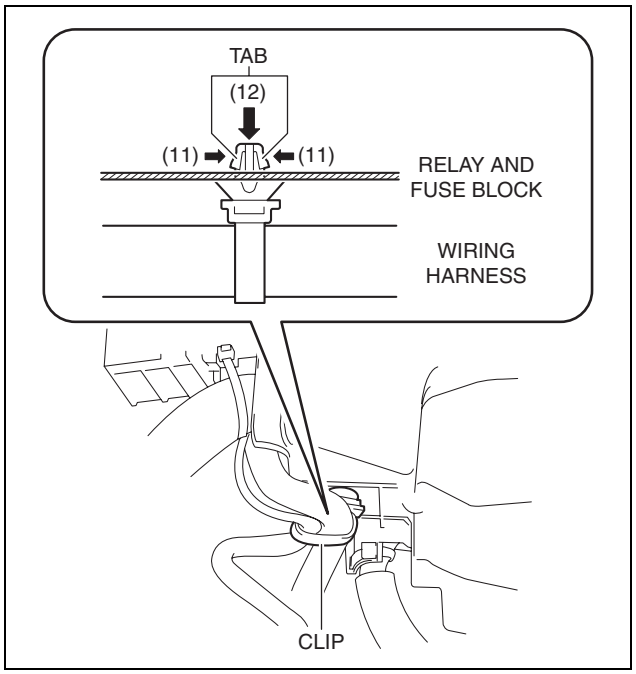
POWER SYSTEMS

20. Move the flathead screwdriver in the direction of the arrow (9) shown in the figure, pull down the relay and fuse block lower cover in the direction of the arrow (10) shown in the figure, and detach the relay and fuse block middle cover tabs from the relay and fuse block lower cover.



ac5wzw0000109

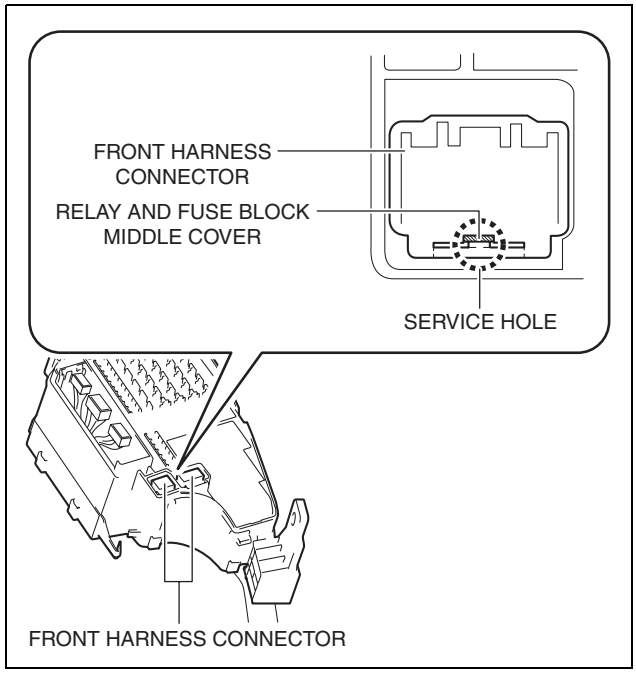
21. Detach all the relay and fuse block middle cover tabs from the relay and fuse block lower cover, and remove the relay and fuse block lower cover from the relay and fuse block middle cover. (See 09-21-12 Relay and Fuse Block Lower Cover Installation Note.)
22. While pressing the wiring harness clip tabs in the direction of the arrows (11) shown in the figure, push out the clip in the direction of the arrow (12) shown in the figure to detach the clip tabs from the relay and fuse block.



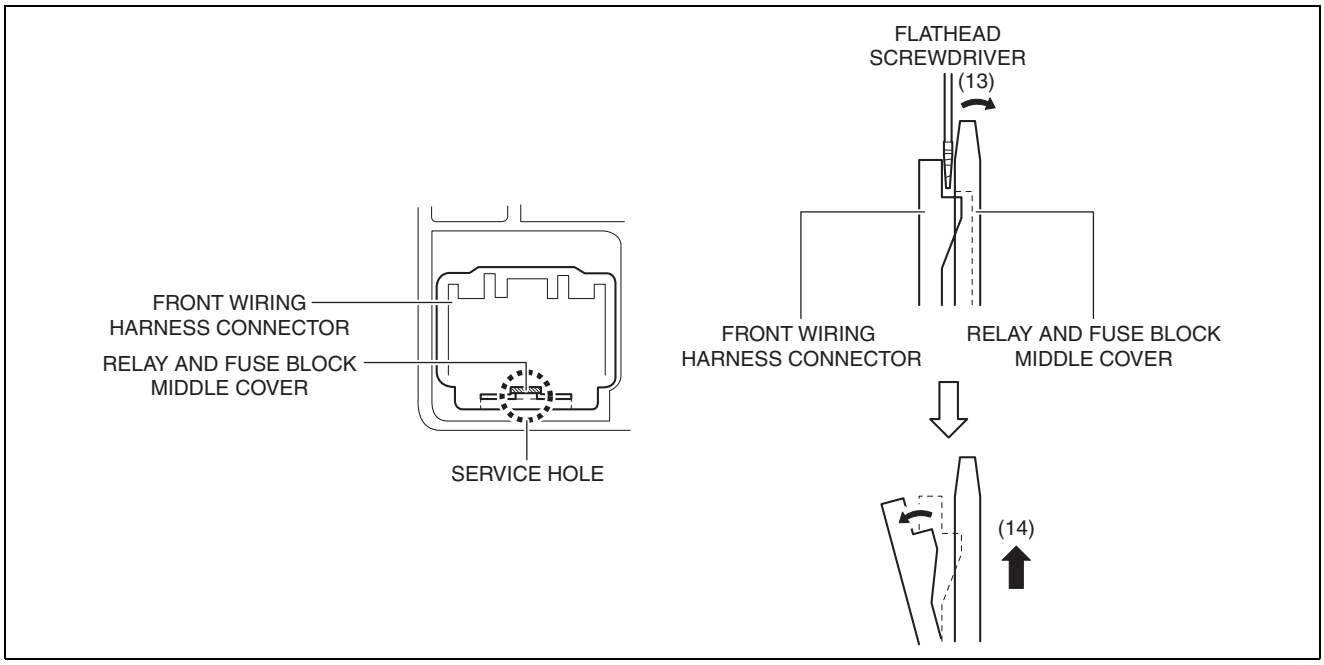
ac5wzw0000109

POWER SYSTEMS

23. Insert a flathead screwdriver into the service hole in the position shown in the figure.
24. Move the flathead screwdriver in the direction of the arrow (13) shown in the figure, lift up the front wiring harness connectors in the direction of the arrow (14) shown in the figure, and detach the connector tabs from the relay and fuse block middle cover.

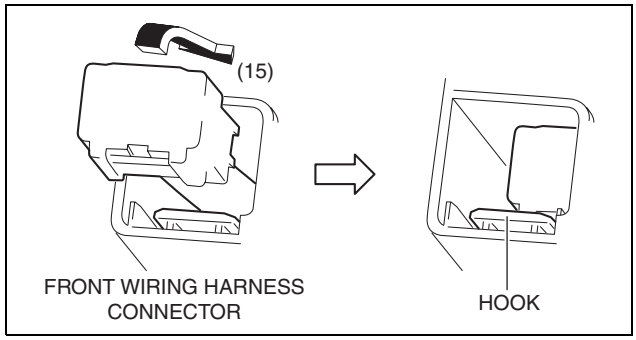


ac5wzw0000052



ac5wzw0000109

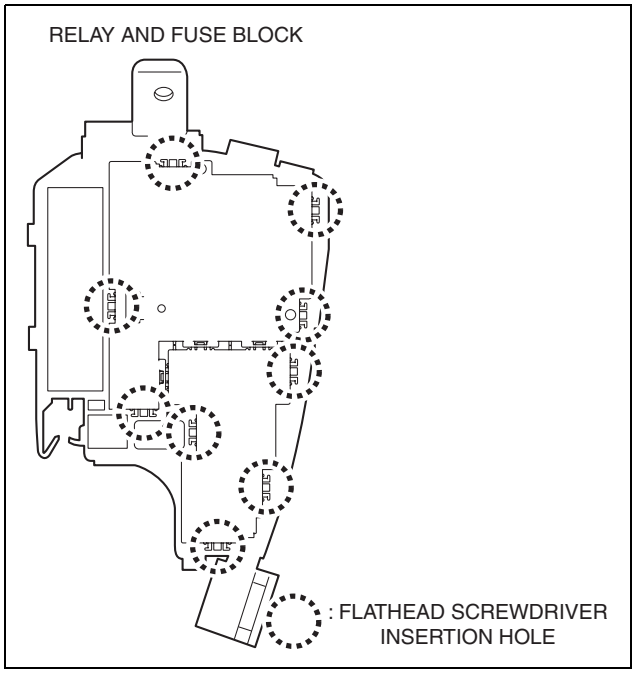
25. Move the front wiring harness connector in the direction of the arrow (15) shown in the figure, release the hook, and pull it out from the relay and fuse block middle cover.



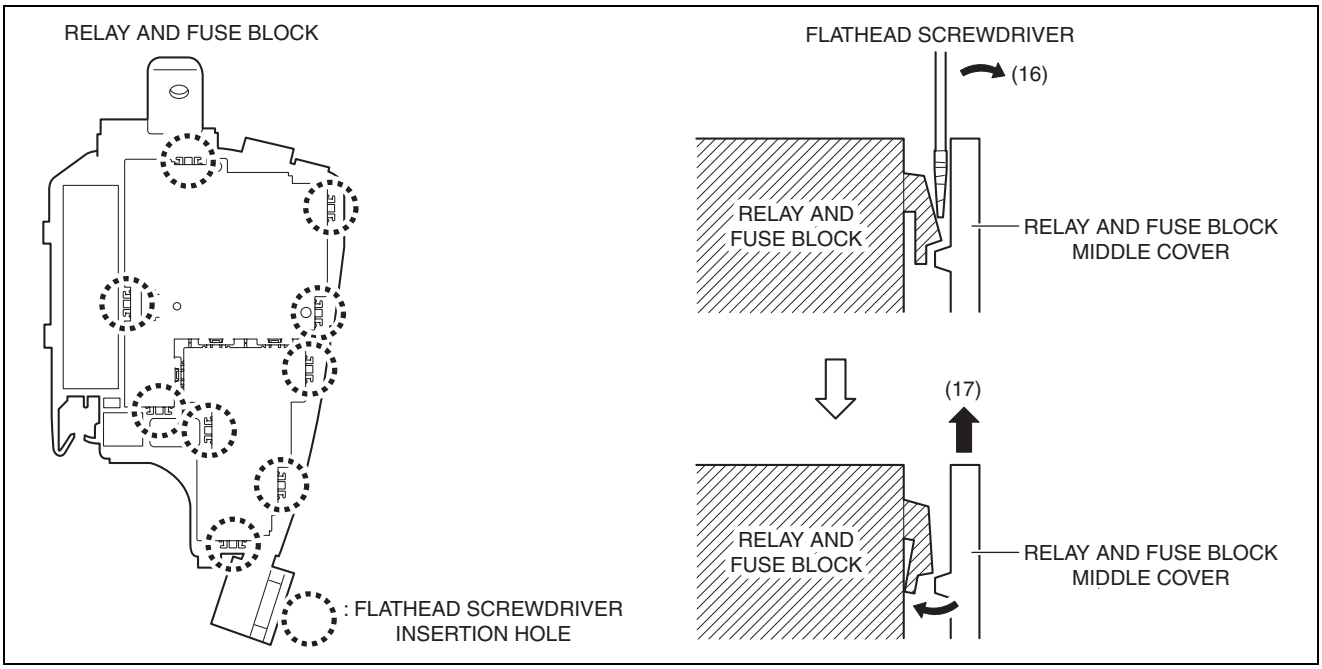
ac5wzw0000109

POWER SYSTEMS

26. Insert the flathead screwdriver into the gap between the relay and fuse block middle cover and the relay and fuse block shown in the figure.
27. Move the flathead screwdriver in the direction of the arrow (16) shown in the figure, pull up the relay and fuse block middle cover in the direction of the arrow (17) shown in the figure, and detach the relay and fuse block tabs from the relay and fuse block middle cover.



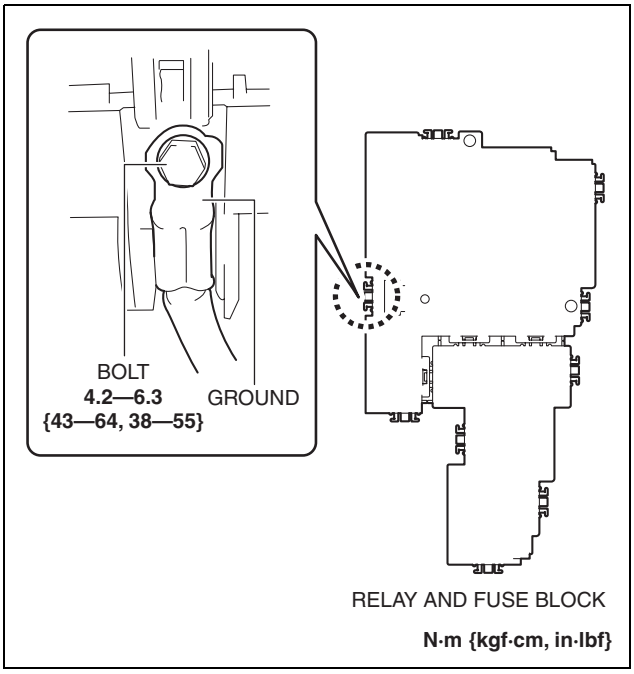
ac5wzw0000109



ac5wzw0000109

POWER SYSTEMS

28. Remove the bolt.
29. Remove the ground.

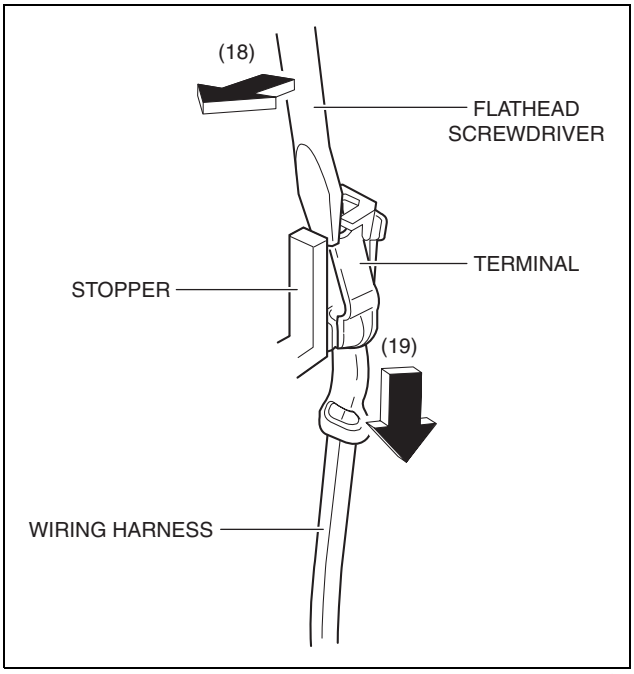


ac5wzw0000109

30. Move the flathead screwdriver in the direction of the arrow (18) shown in the figure, pull the wiring harness in the direction of the arrow (19) while pressing the stopper, and detach the relay or fuse terminal from the stopper.
31. Remove the relay or fuse terminal.

Caution

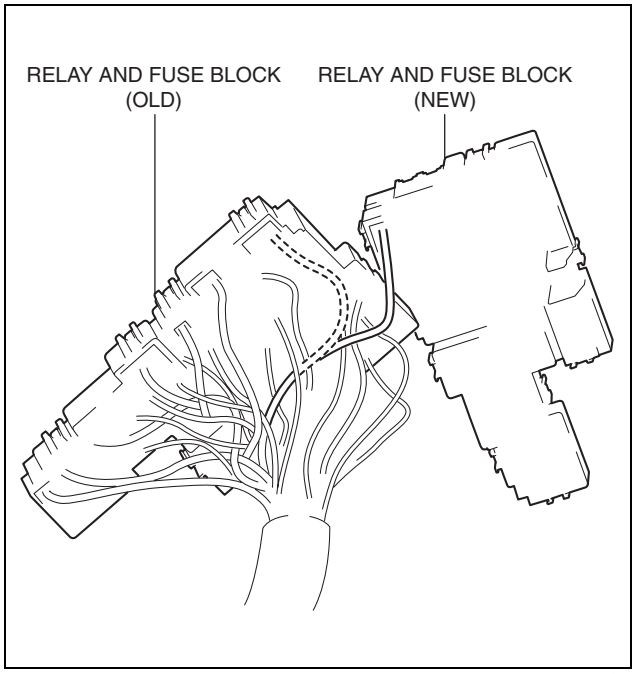
- **A terminal disconnection could cause electronic components and the system to not operate normally due to poor contact. After terminal relocation, lightly pull the wiring harnesses to verify that they cannot be pulled out.**



ac5wzw0000109

Note
- For terminal relocation, line up the relays and fuse blocks of the old and news parts and always verify each of the wiring harnesses in the wiring diagram.

32. Install in the reverse order of removal.
33. Perform verify relay and fuse block replacement. (See 09-21-13 Verify Relay and Fuse Block Replacement.)

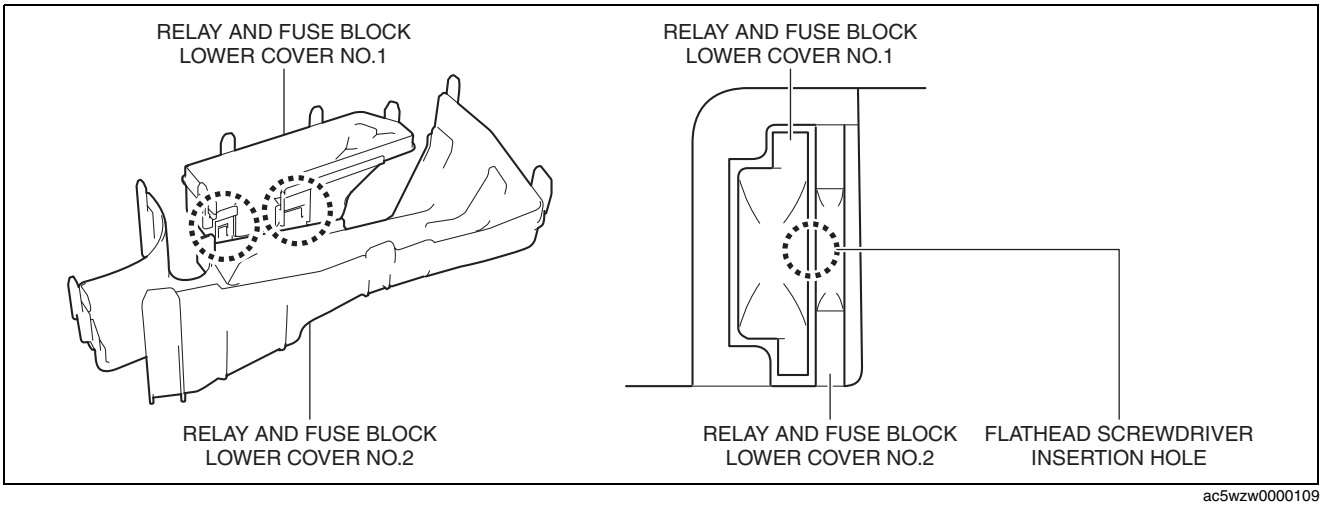


ac5wzw0000109

Relay and Fuse Block Lower Cover Installation Note

Note
- When installing the relay and fuse block lower cover to the relay and fuse block middle cover, the wiring harness could get caught between the relay and fuse block middle cover and the relay and fuse block lower cover resulting in open or short circuit in the wiring harness. When installing the relay and fuse block lower cover, disassemble the relay and fuse block lower cover and install one at a time.

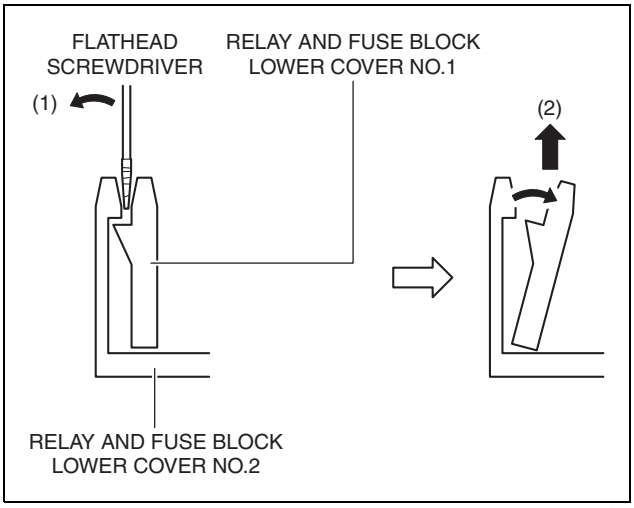
1. Insert a flathead screwdriver into the gap between relay and fuse block lower covers No.1 and 2 shown in the figure.



ac5wzw0000109

POWER SYSTEMS

2. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, pull up relay and fuse block lower cover No.1 in the direction of the arrow (2) shown in the figure, and detach the relay and fuse block lower cover No.1 tab from relay and fuse block lower cover No.2.
3. Detach all the relay and fuse block lower cover No.1 tabs from relay and fuse block lower cover No.2, and remove relay and fuse block lower cover No.1 from relay and fuse block lower cover No.2.
4. Install relay and fuse block lower covers No.1 and 2.



ac5wzw0000110

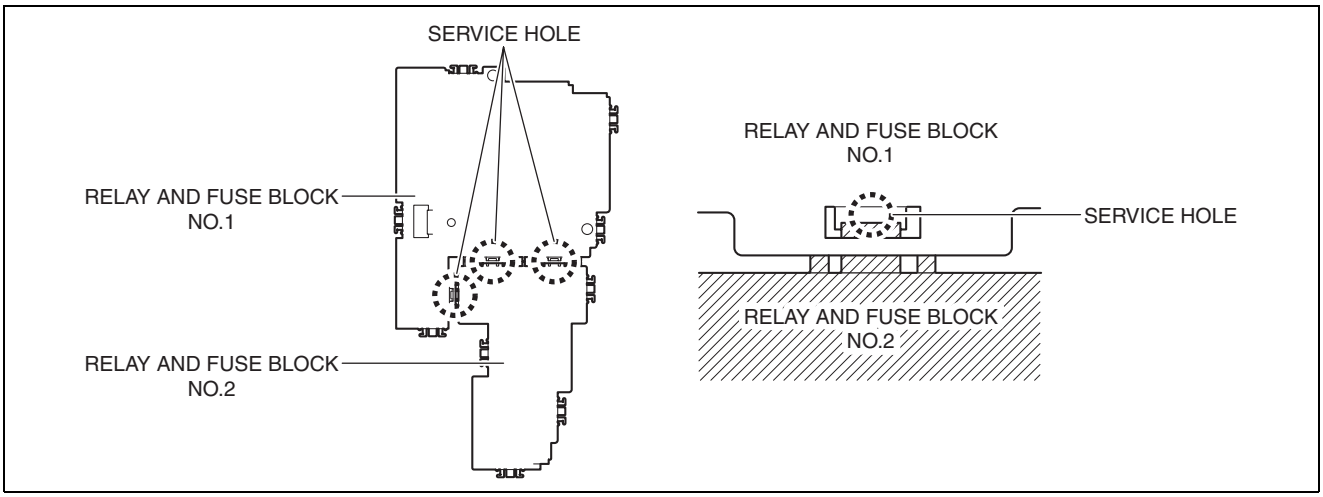
Verify Relay and Fuse Block Replacement

1. Temporarily connect the negative battery cable to verify that the related wiring harness is not heated.
2. Switch the ignition ON (engine off).
3. Verify that the fuse is not burnt out and the related wiring harness is not heated.
4. Perform the initial settings for the following systems:
   - — Power window system (See 09-12-66 POWER WINDOW SYSTEM INITIALIZATION PROCEDURE.)
   - — Clock and audio
   - — i-stop system
   - — Tire pressure monitoring system (TPMS) (See 02-12-4 TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE.)
5. Verify DTCs using the M-MDS.
   - If a DTC is displayed, repair the malfunctioning part according to the corresponding DTC inspection.
     - — After completion of repairs, clear all DTCs stored in the module.
6. If there is no malfunction in Step 1, 3, and 5, start the engine and maintain the idle status.
7. Operate all the switches of the interior/exterior lights of the vehicle and verify that all the light bulbs illuminate and flash.
8. Operate the audio, climate control, wiper switch, and selector lever and verify that they operate correctly.
9. Shift the selector lever to the P position, race the engine at **approx. 3,000 rpm** from engine idling, and verify that there is no malfunction.
10. Perform a road test and verify that low speed, acceleration, shift-up, and shift-down conditions are normal.

RELAY AND FUSE BLOCK DISASSEMBLY/ASSEMBLY

id092100900000

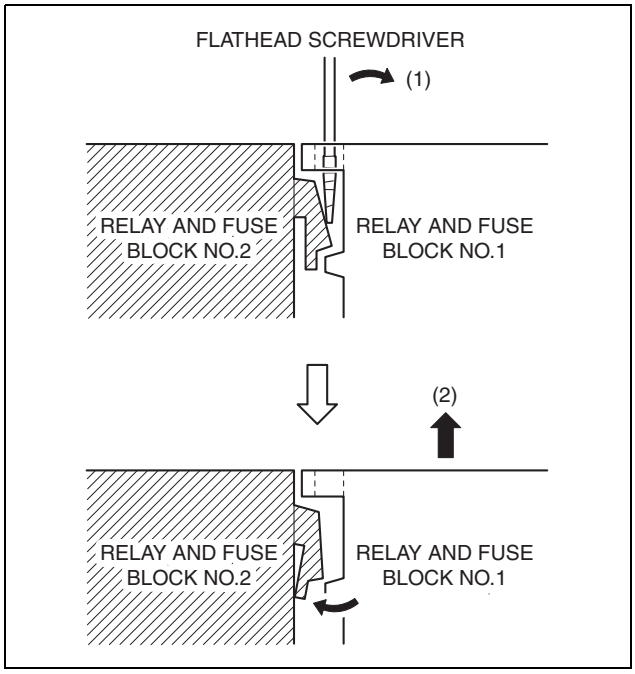
1. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.



ac5wzw0000053

POWER SYSTEMS

2. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, pull up relay and fuse block No.1 in the direction of the arrow (2) shown in the figure, and detach the relay and fuse block No.2 tab from relay and fuse block No.1.
3. Detach all the relay and fuse block No.2 tabs from relay and fuse block No.1, and remove relay and fuse block No.1 from relay and fuse block No.2.
4. Assemble in the reverse order of disassembly.

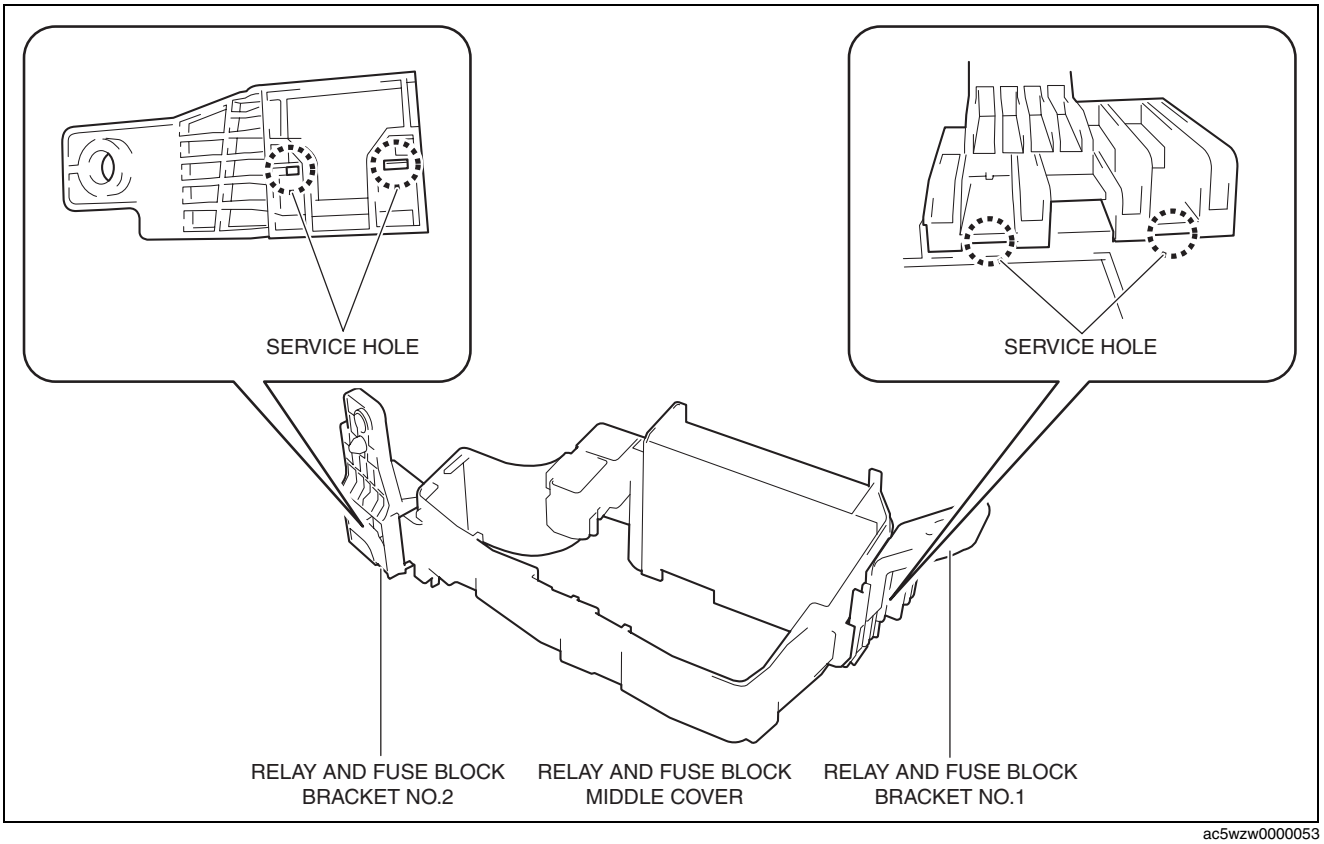


ac5wzw0000053

RELAY AND FUSE BLOCK MIDDLE COVER DISASSEMBLY/ASSEMBLY

id092100900100

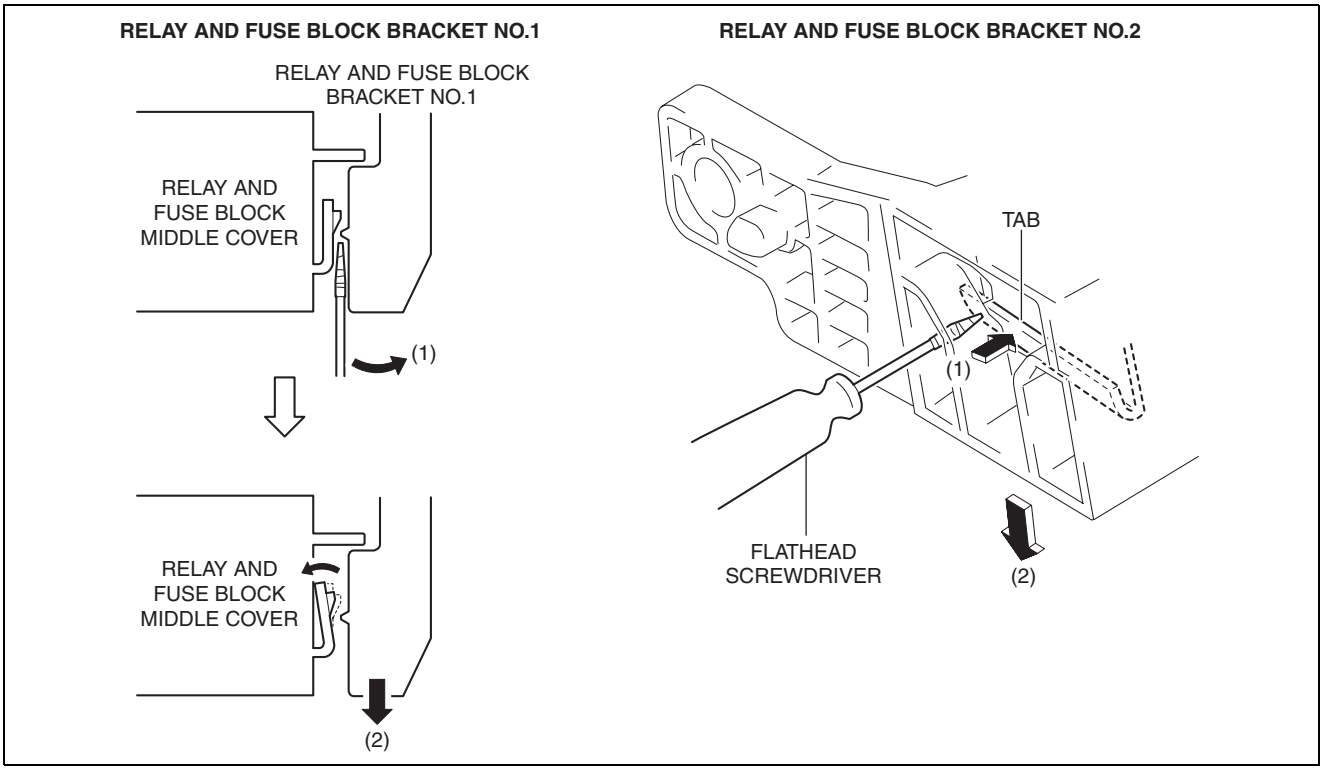
1. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.



ac5wzw0000053

POWER SYSTEMS

2. While pressing the relay and fuse block middle cover tab in the direction of arrow (1) shown in the figure, pull out the bracket in the direction of arrow (2) to detach the relay and fuse block middle cover tab from the bracket.



ac5wzw0000287

3. Detach all the relay and fuse block middle cover tabs from the bracket and remove the bracket from the relay and fuse block middle cover.
4. Assemble in the reverse order of disassembly.

FRONT WIRING HARNESS PROTECTOR REMOVAL/INSTALLATION

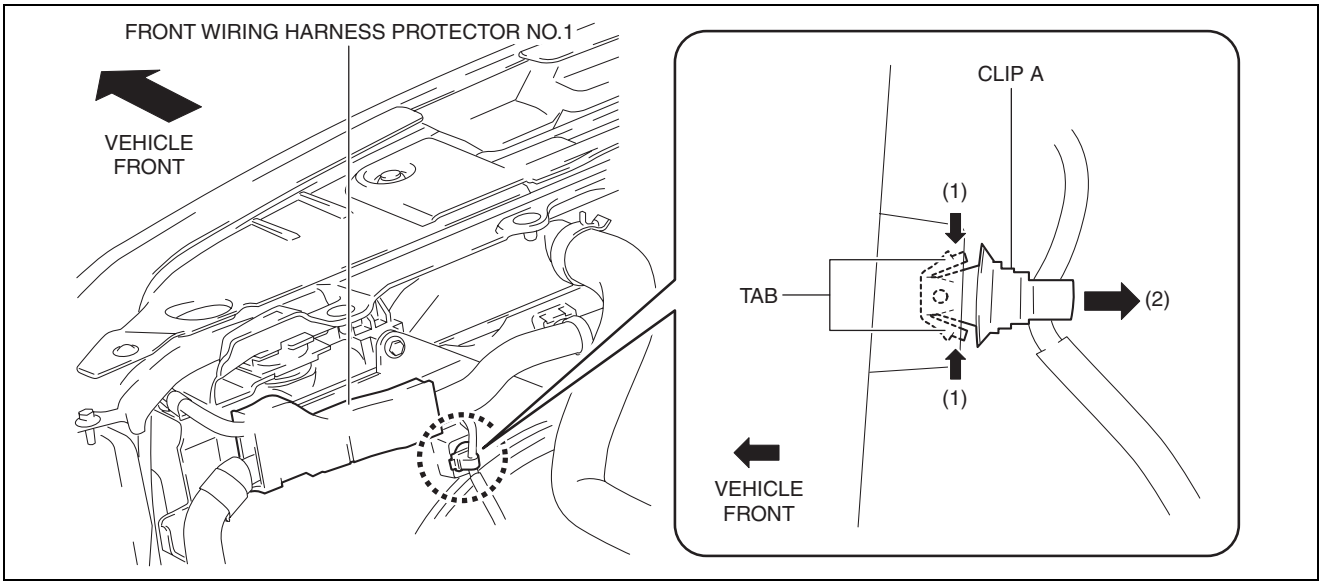
id092100000300

Front Wiring Harness Protector No.1

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the air cleaner case. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

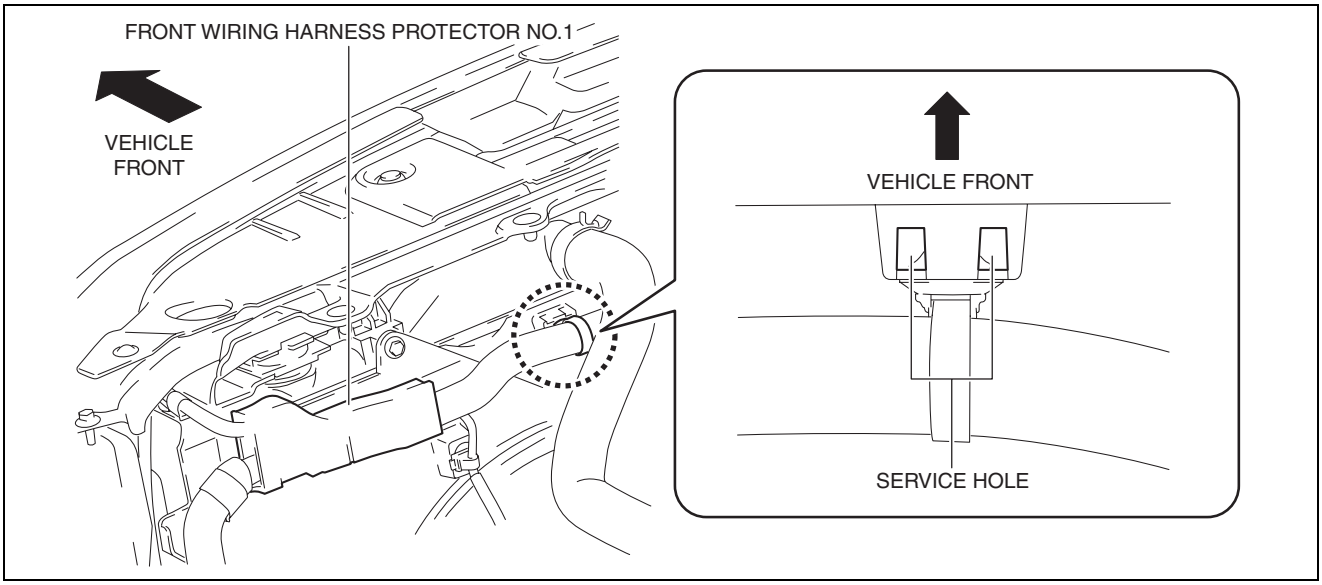
POWER SYSTEMS

3. While pressing the tabs of clip A in the direction of the arrows (1) shown in the figure, pull clip A in the direction of the arrow (2) shown in the figure to detach the tab of clip A from the radiator.



ac5wzw0000107

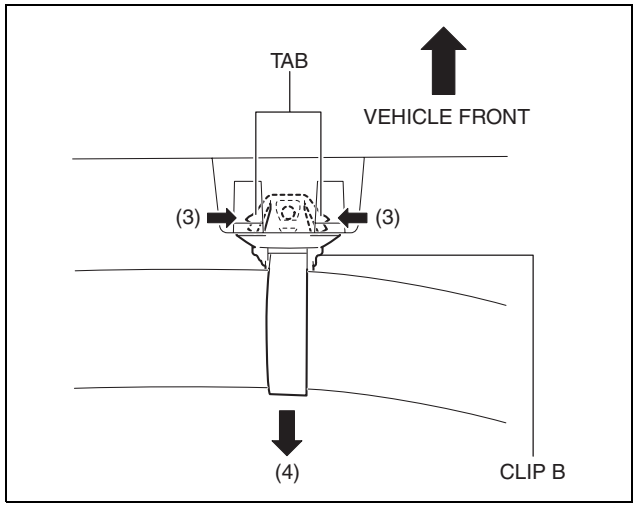
4. Detach clips A.
5. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.



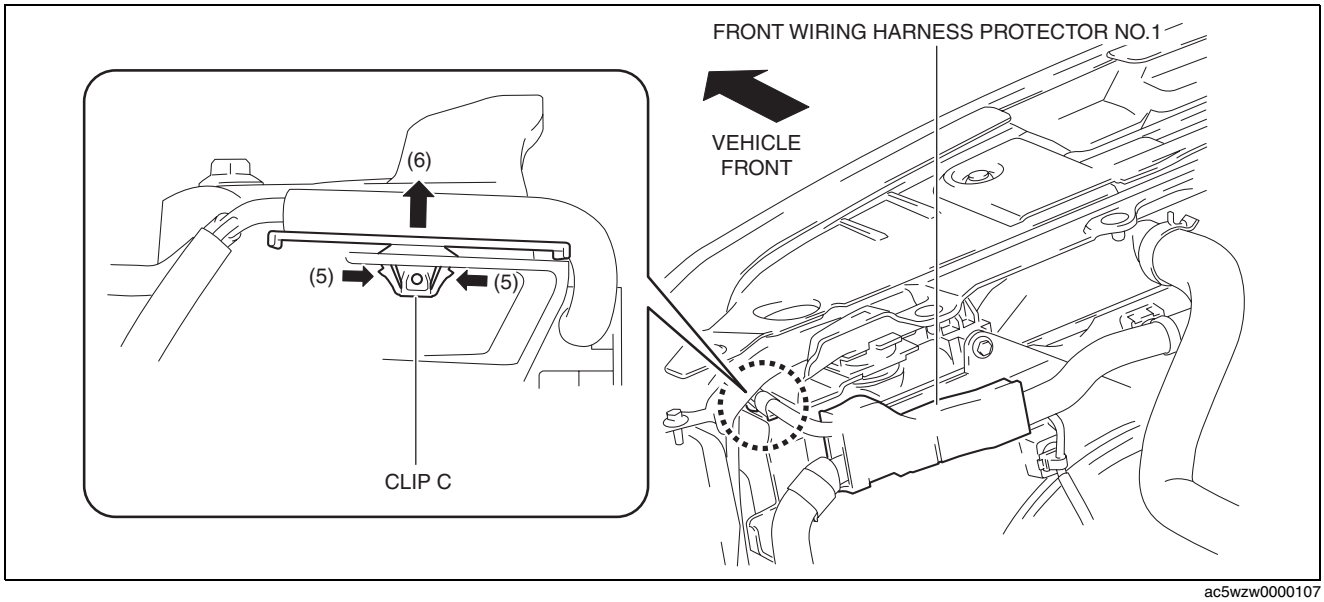
ac5wzw0000107

POWER SYSTEMS

6. While pressing the tabs of clip B in the direction of the arrows (3) shown in the figure, pull clip B in the direction of the arrow (4) shown in the figure to detach the tab of clip B from the radiator.
7. Detach clip B.
8. While pressing the tabs of clip C in the direction of the arrows (5) shown in the figure, pull clip C in the direction of the arrow (6) shown in the figure to detach the tab of clip C from the front bumper.

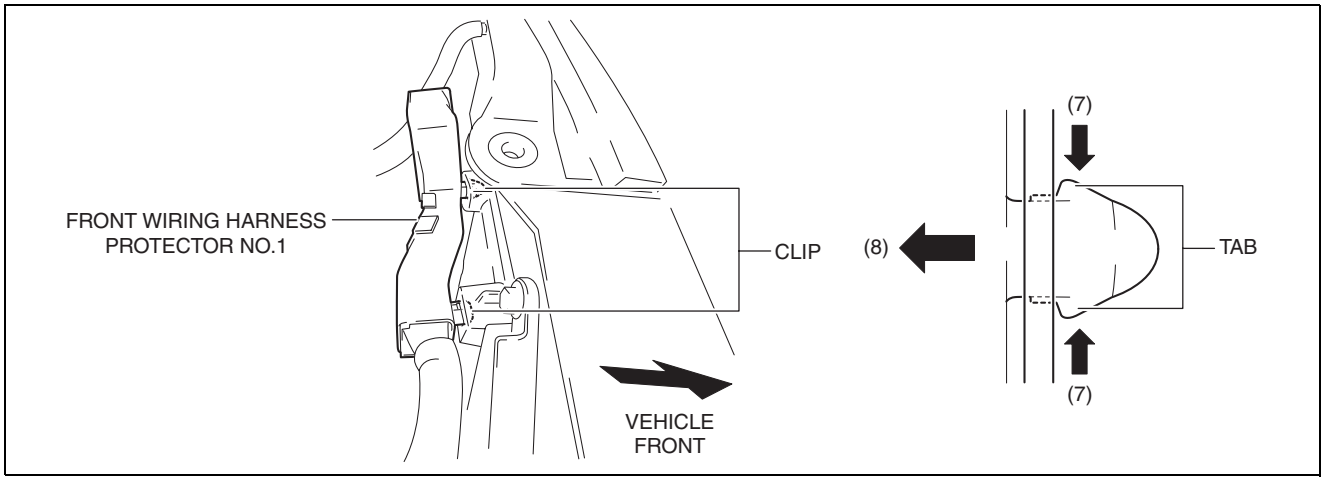


ac5wzw0000107



ac5wzw0000107

9. Remove clip C.
10. While pressing the clip tabs in the direction of the arrows (7) shown in the figure, pull the clip in the direction of the arrow (8) to detach the clip tabs from the radiator.

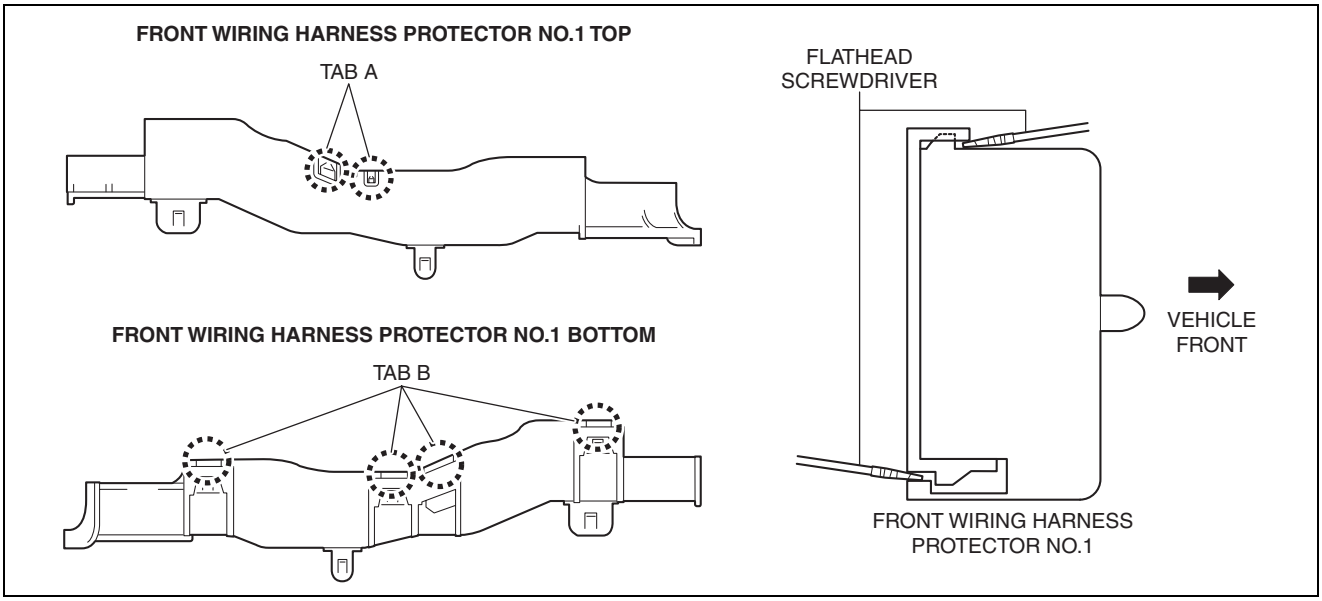


ac5wzw0000107

11. Detach all the clip tabs and remove the clip.

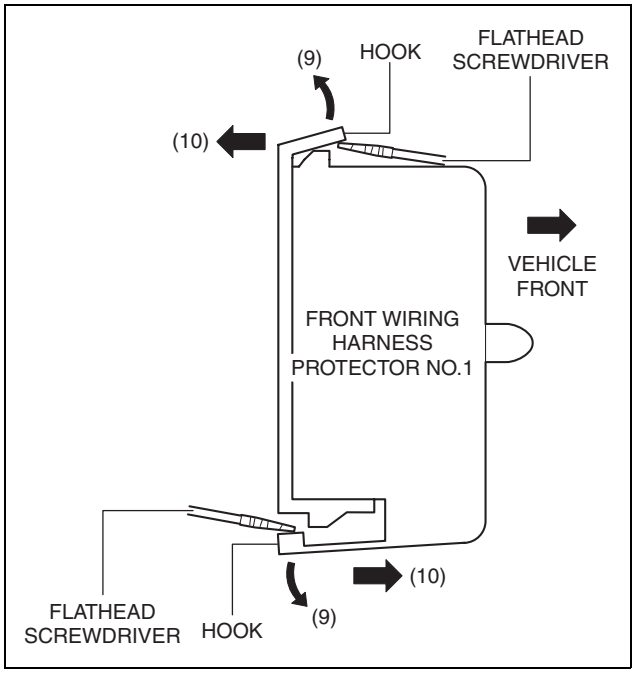
POWER SYSTEMS

12. Insert a flathead screwdriver into the position shown in the figure.



ac5wzw0000107

13. While lifting up the hooks in the direction of the arrows (9) shown in the figure using a flathead screwdriver, pull the hooks in the direction of the arrows (10) shown in the figure to detach the tabs from the hooks.
14. Detach all the tabs and hooks and remove front wiring harness protector No.1.
15. Install in the reverse order of removal.



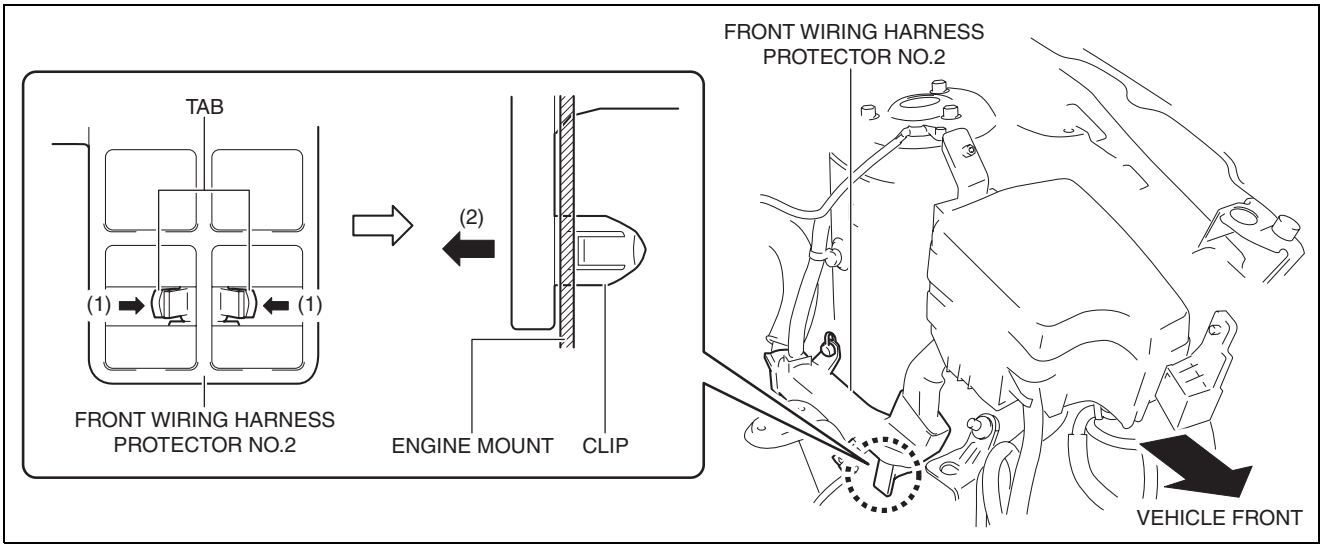
ac5wzw0000107

Front Wiring Harness Protector No.2

1. Remove the battery tray. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

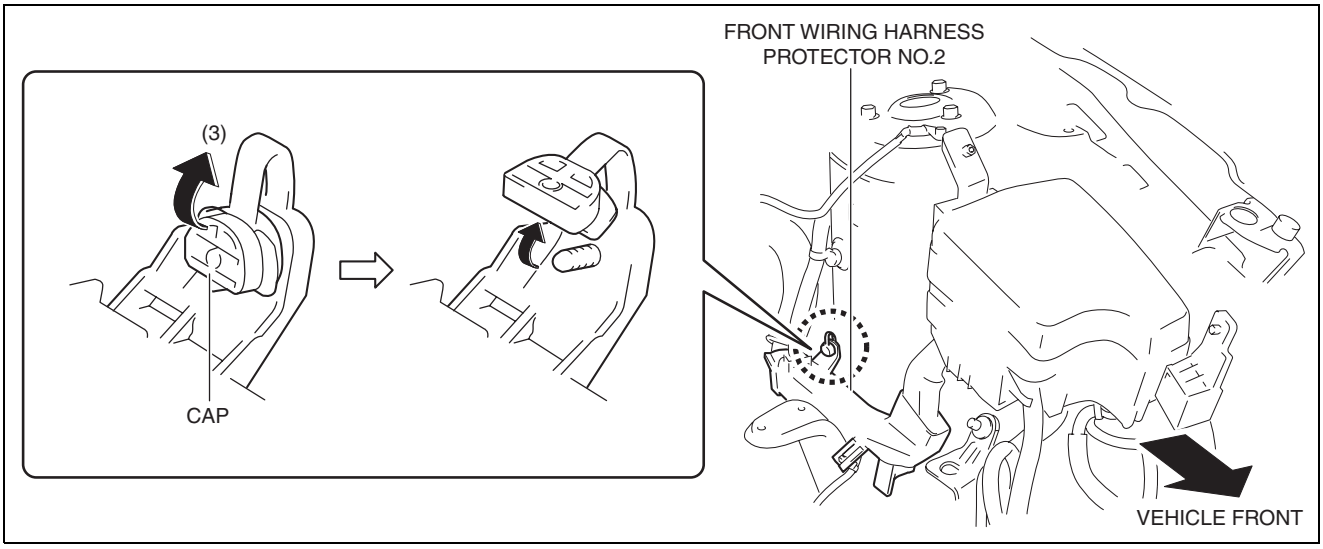
POWER SYSTEMS

2. While pressing the clip tabs in the direction of arrows (1) shown in the figure, pull the clip in the direction of arrow (2) to detach it from the engine mount.



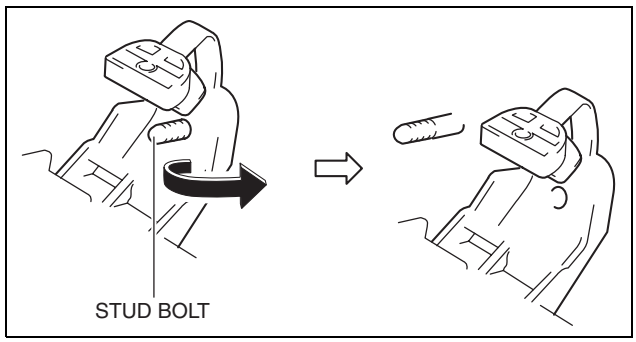
ac5wzw0000107

3. Remove the clip.
4. Remove the cap in the direction of the arrow (3) shown in the figure.



ac5wzw0000011

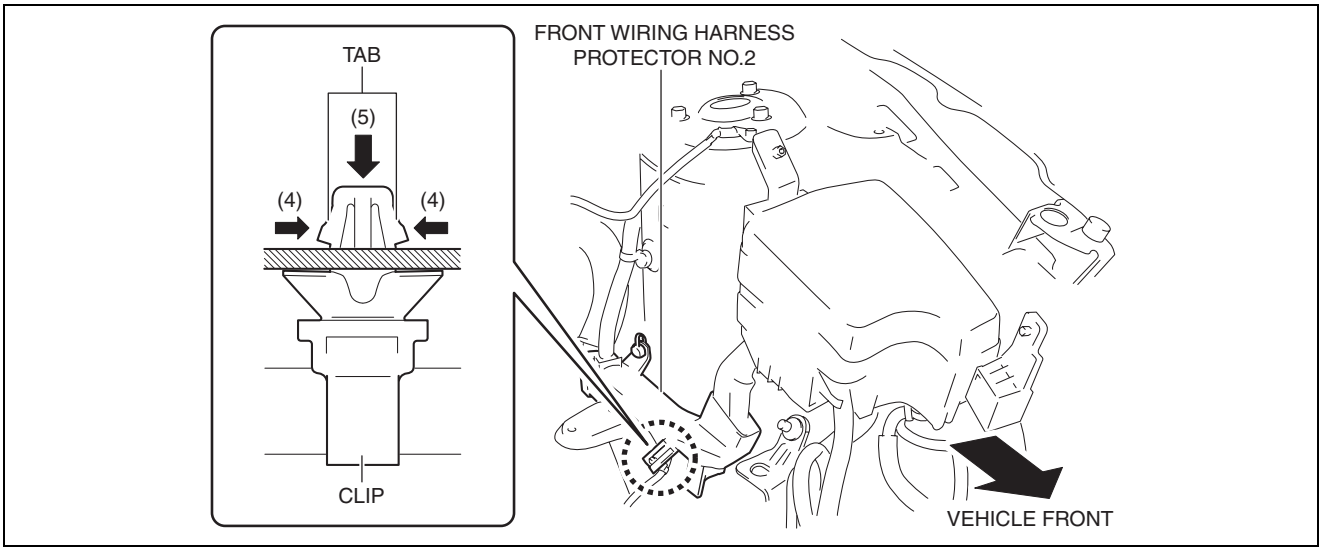
5. Pull out front wiring harness protector No.2 from the stud bolt and set it aside as shown in the figure.



ac5wzw0000288

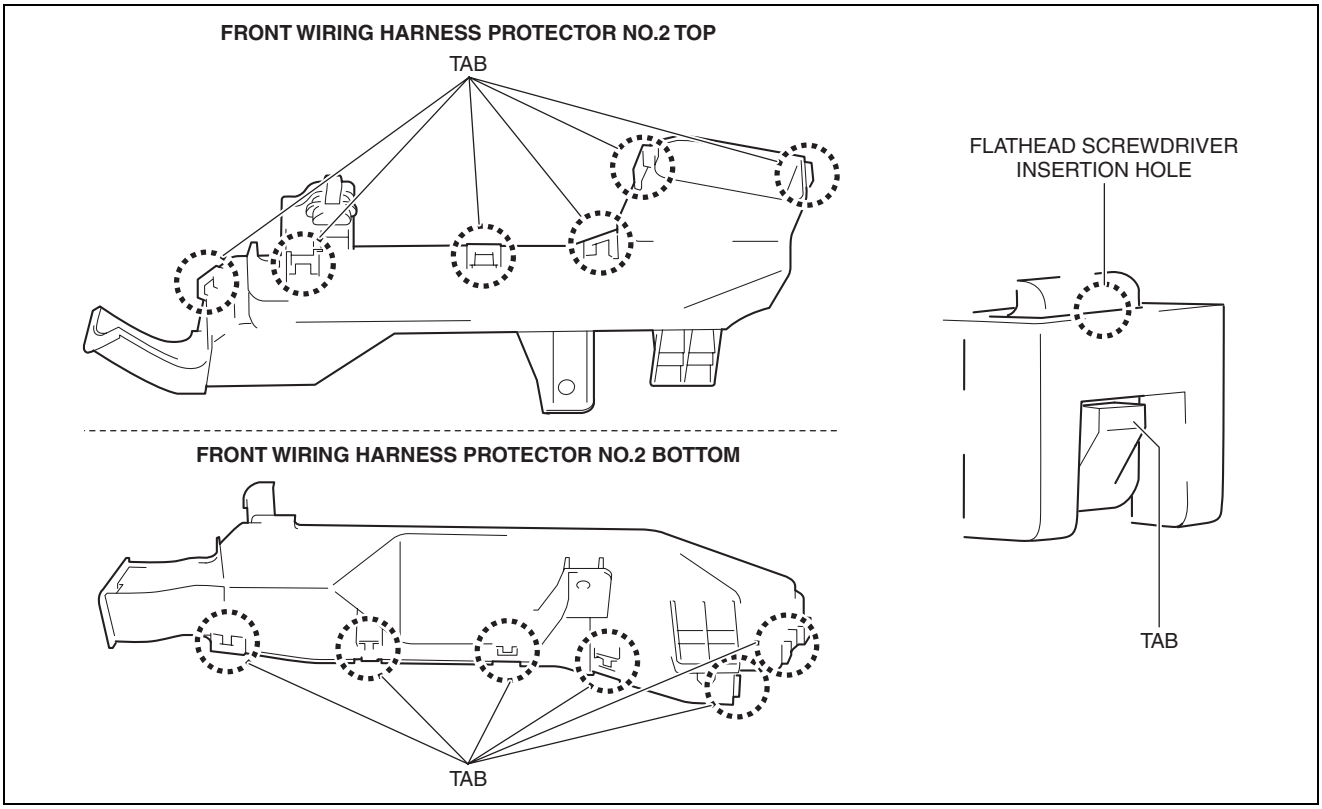
POWER SYSTEMS

6. While pressing the clip tabs in the direction of the arrows (4) shown in the figure, push out the clip in the direction of the arrow (5) shown in the figure to detach the clip tabs from front wiring harness protector No.2.



ac5wzw0000108

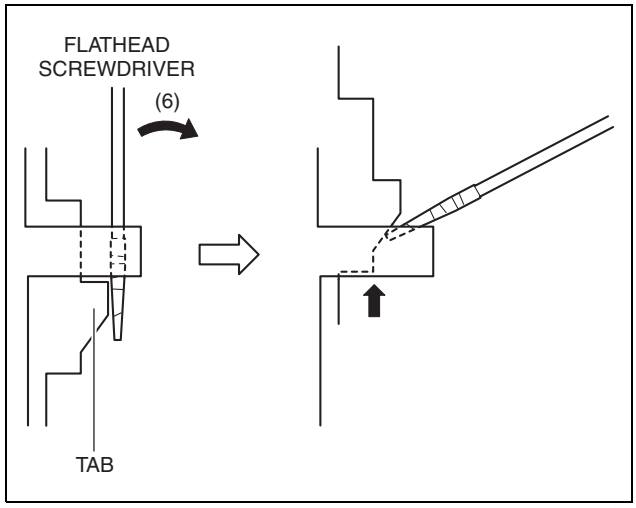
7. Remove the clip.
8. Insert a tape-wrapped flathead screwdriver into the gap between front wiring harness protector No.2 and the tabs shown in the figure.



ac5wzw0000108

POWER SYSTEMS

9. Move the flathead screwdriver in the direction of the arrow (6) shown in the figure, lift up the front wiring harness protector No.2 tab to detach the tab from front wiring harness protector No.2.
10. Detach all the tabs and front wiring harness protector No.2 and remove front wiring harness protector No.2.
11. Install in the reverse order of removal.



ac5wzw0000108

FUSE SERVICE CAUTIONS

id092100800400

Caution

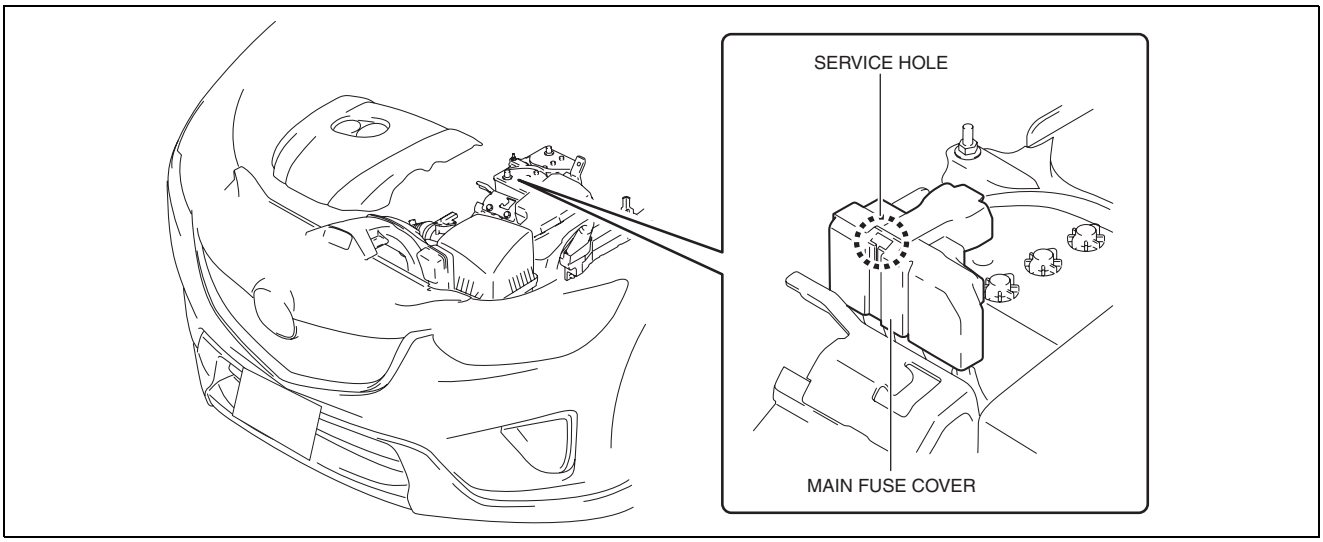
- **If a fuse is burnt out, inspect the cause and repair the malfunctioning part, and always replace a fuse with one of the specified value. If the fuse is replaced before repairing a malfunction, it may burn out again.**

MAIN FUSE REMOVAL/INSTALLATION

id092100801500

SKYACTIV-G 2.0

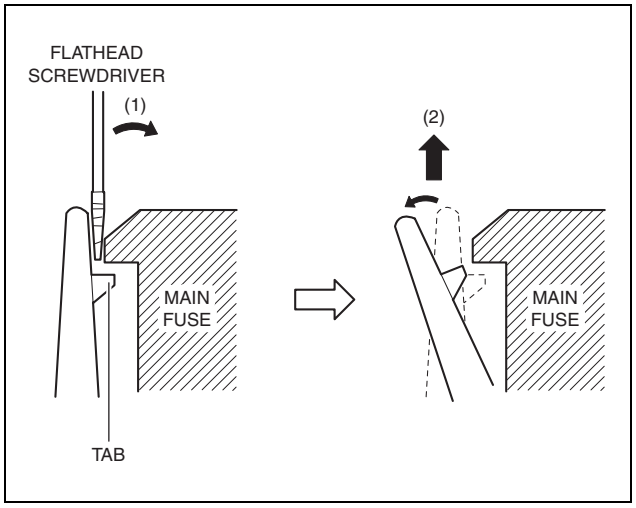
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
2. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.



ac5wzw0000379

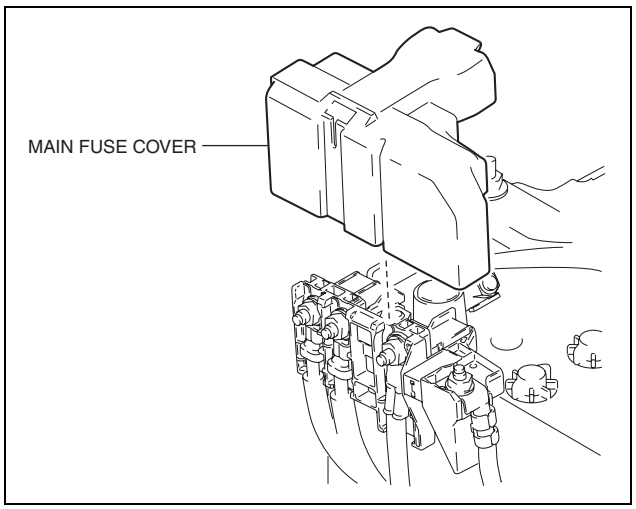
POWER SYSTEMS

3. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, pull up the main fuse cover in the direction of the arrow (2) shown in the figure, and detach the main fuse cover tab from the main fuse.

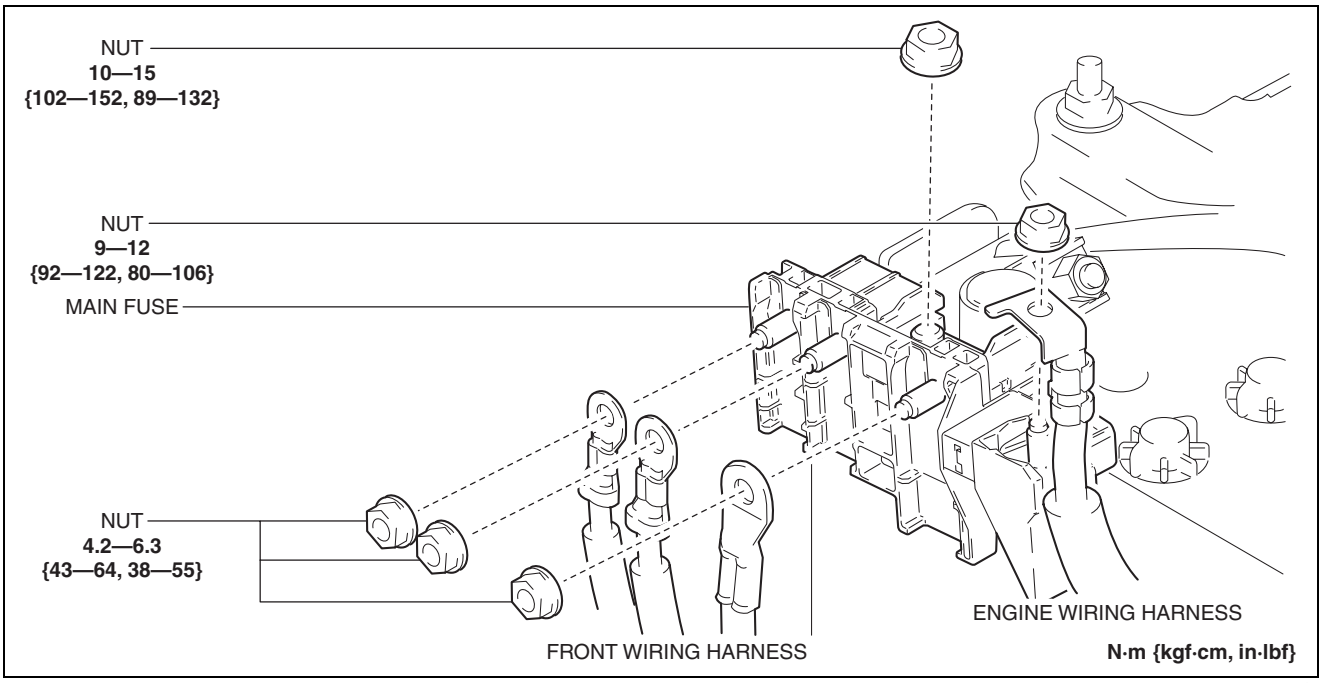


ac5wzw0000376

4. Remove the main fuse cover.
5. Remove the nuts.



ac5wzw0000052



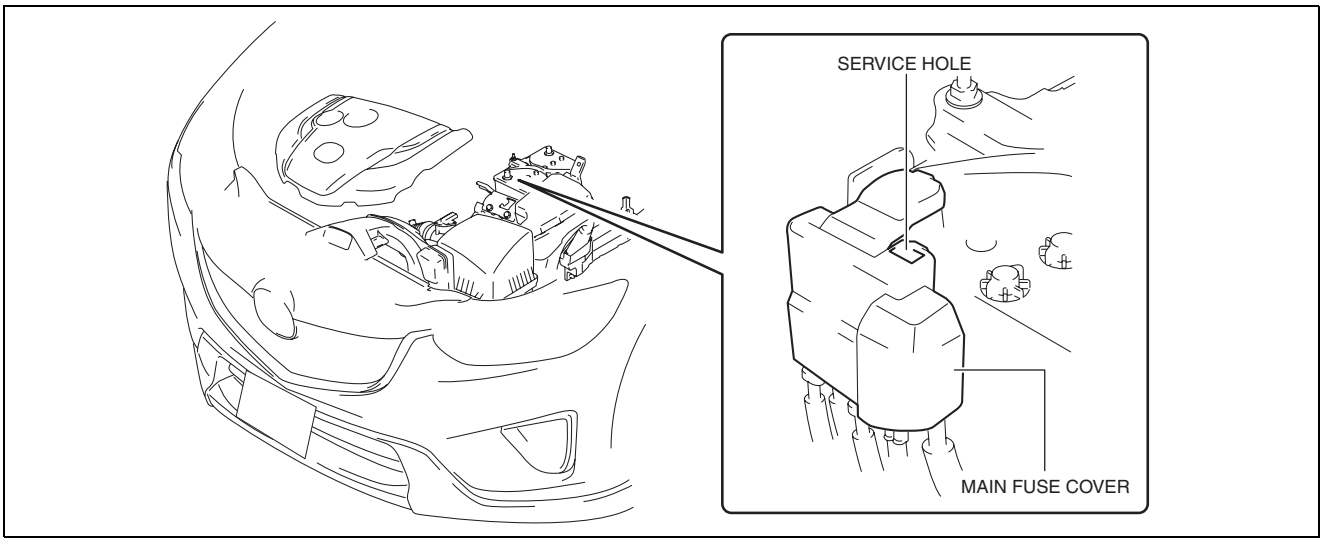
ac5wzw0000015

6. Remove the main fuse.
7. Install in the reverse order of removal.

POWER SYSTEMS

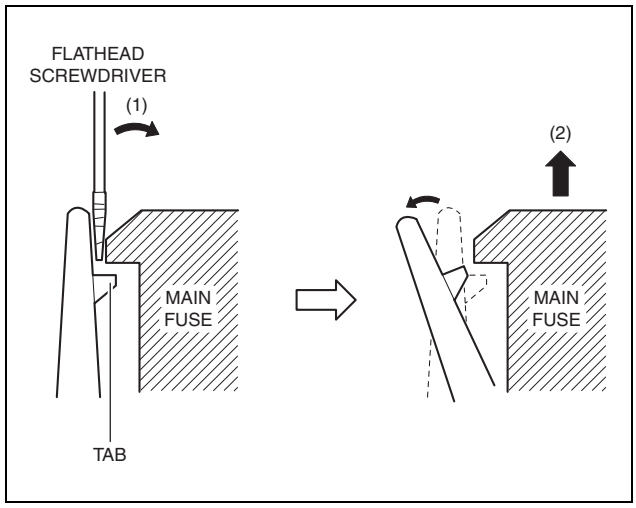
SKYACTIV-D 2.2

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.



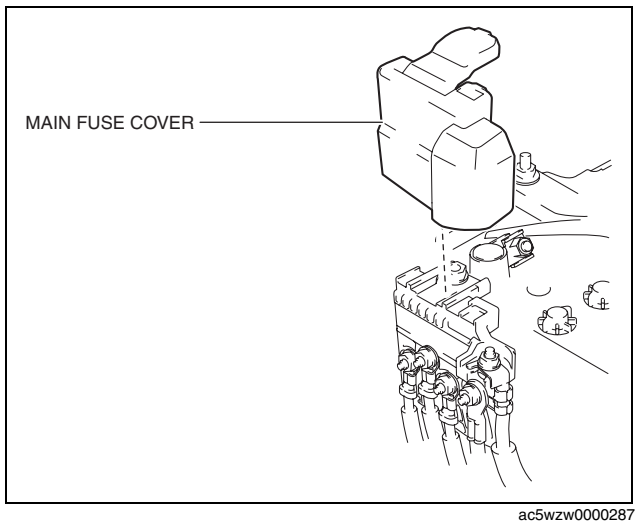
ac5wzw0000287

3. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, pull up the main fuse cover in the direction of the arrow (2) shown in the figure, and detach the main fuse cover tab from the main fuse.



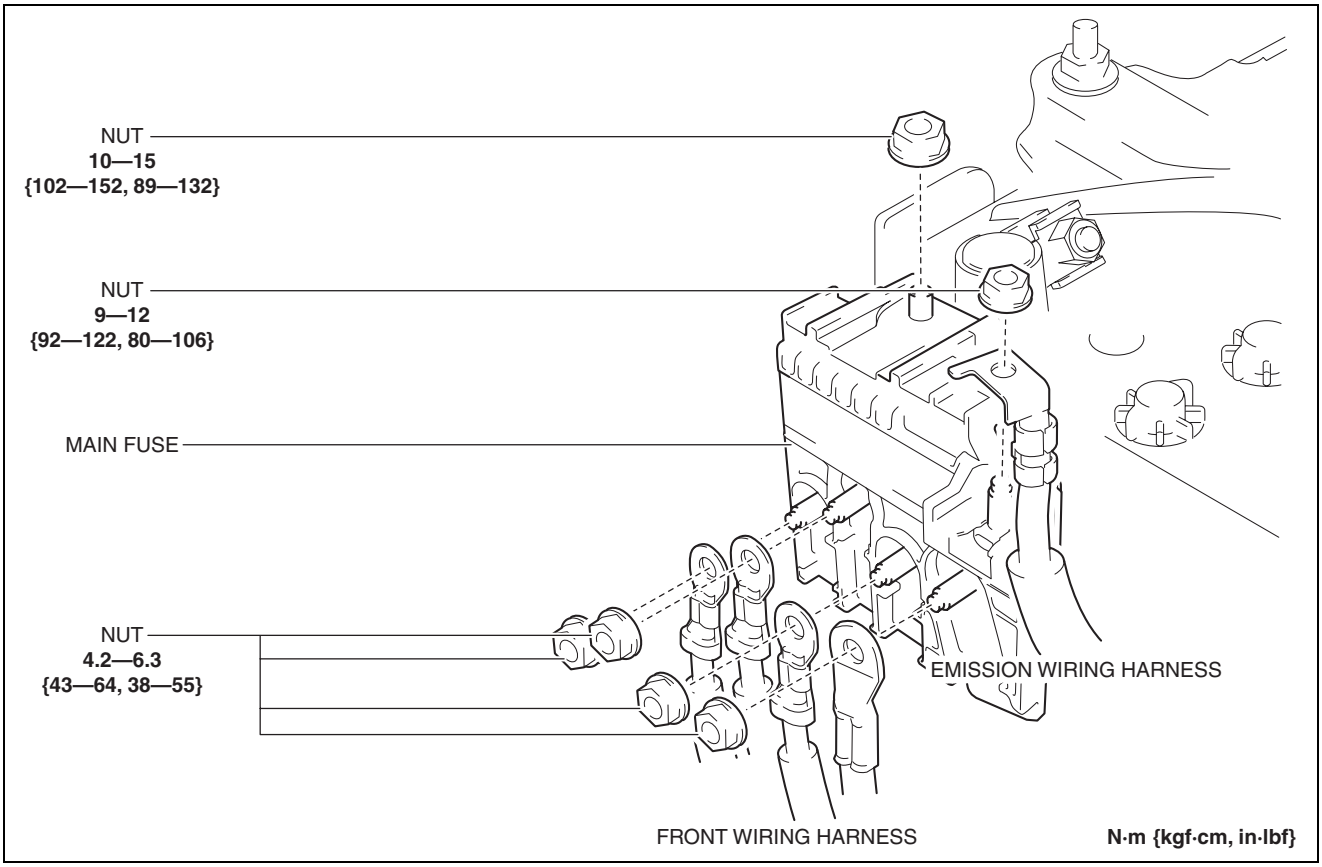
ac5wzw0000287

4. Remove the main fuse cover.



ac5wzw0000287

5. Remove the nuts.



ac5wzw0000287

6. Remove the main fuse.
7. Install in the reverse order of removal.

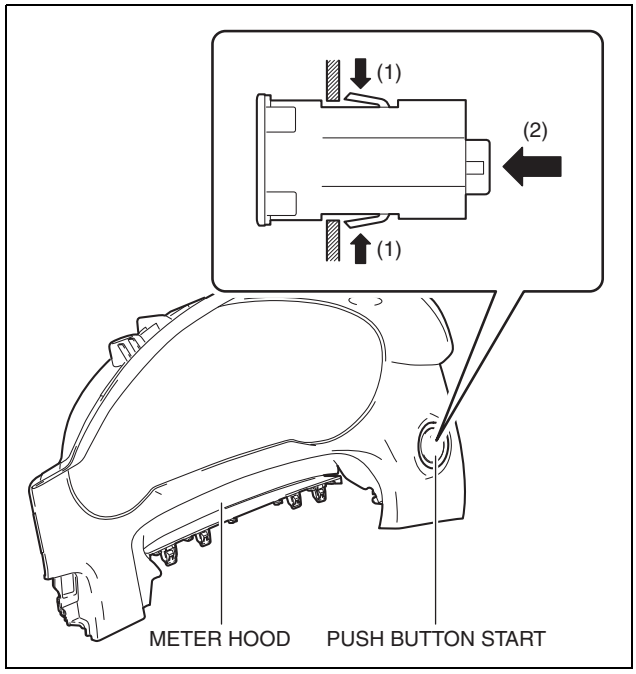
PUSH BUTTON START REMOVAL/INSTALLATION

id092100802200

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the meter hood. (See 09-17-20 METER HOOD REMOVAL/INSTALLATION.)

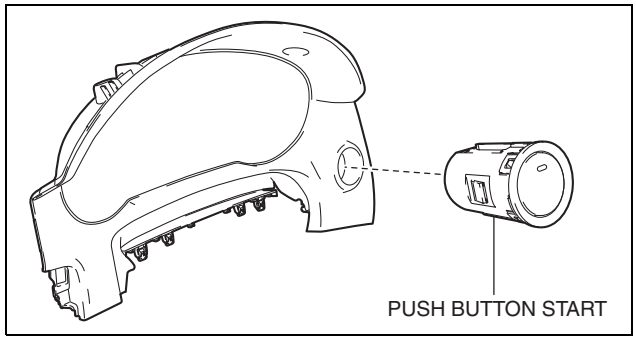
POWER SYSTEMS

3. While pressing the push button start tab in the direction of the arrow (1) shown in the figure, push out the push button start in the direction of the arrow (2) shown in the figure to detach the push button start tab from the meter hood.



ac5wzw0000008

4. Remove the push button start.
5. Install in the reverse order of removal.

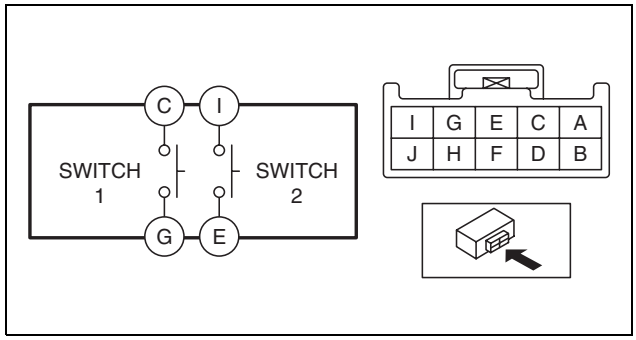


ac5wzw0000052

PUSH BUTTON START INSPECTION

id092100802300

1. Remove the push button start. (See 09-21-24 PUSH BUTTON START REMOVAL/INSTALLATION.)
2. Verify that the continuity between the push button start terminals is as indicated in the table.



ac5wzw0000009

POWER SYSTEMS

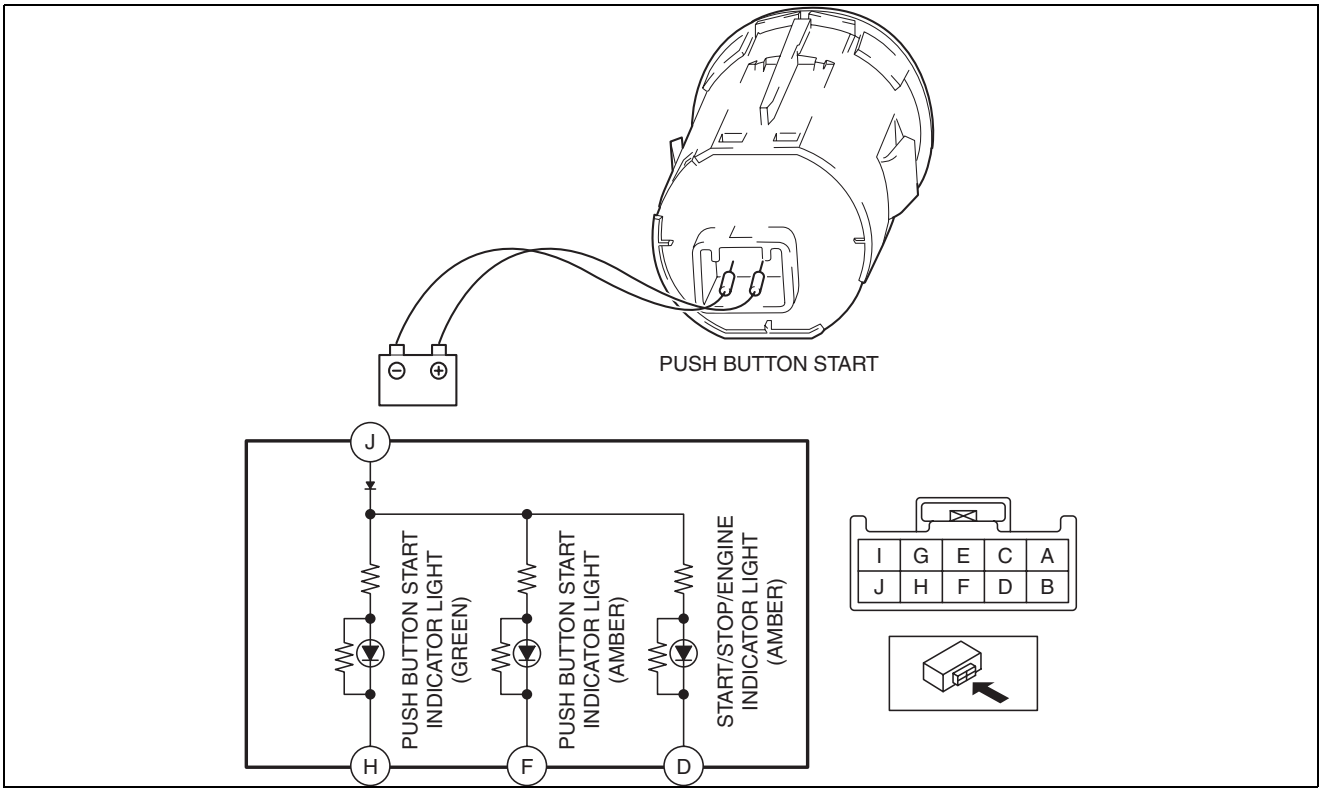
- If the continuity can be verified as indicated in the table, go to the next step.
- If not as indicated in the table, replace the push button start. (See 09-21-24 PUSH BUTTON START REMOVAL/INSTALLATION.)

3. Apply battery positive voltage and connect the ground to the push button start terminals and verify that the LED illuminates as indicated in the table.

○—○ : Continuity

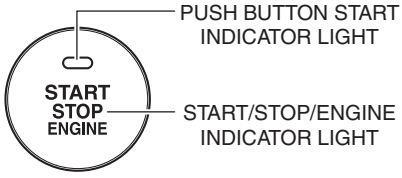
Test condition	Terminal			
	C	E	G	I
Button pressed	○		○	
		○		○
Button released				

ac5wzw0000052



ac5wzw0000463

- If the LED does not illuminate as indicated in the table, replace the push button start. (See 09-21-24 PUSH BUTTON START REMOVAL/INSTALLATION.)



Terminal		Illumination positions (Color)
B+	Ground	
J	D	START/STOP/ENGINE indicator light (Amber)
	F	Push button start indicator light (Amber)
	H	Push button start indicator light (Green)

POWER SYSTEMS

FORCED IGNITION ON

id092100802500

Note

- In order to perform a forced ignition ON, the M-MDS is necessary. If the servicing is being done outside of an Authorized Mazda dealership, contact an Authorized Mazda dealership for instructions.
- The forced ignition ON procedure forces a power supply to each part when no power is available even after the ignition switch has been operated. However, the engine cannot be started and the steering cannot be unlocked.
- When performing a forced ignition ON procedure, remove all remote transmitters from the vehicle. If a remote transmitter is left in the vehicle, the forced ignition ON procedure cannot be done.

1. Verify that there are no remote transmitters in the vehicle.
2. Get PCM part number from As-built site.
3. Connect the M-MDS to the DLC-2.
4. Manual vehicle identification.
    1. Select “Manual Vehicle Entry”.
5. Select the “All other” from Vehicle list.
6. Input the PCM part number on the following screen.
7. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    1. Select “Body”.
    2. Select “Special Ignition ON”.
8. Perform the procedure according to the directions on the screen.
9. Delete the session, but keep the ignition ON.
10. Normal vehicle identification.

RELAY INSPECTION

id092100800300

Relay Type

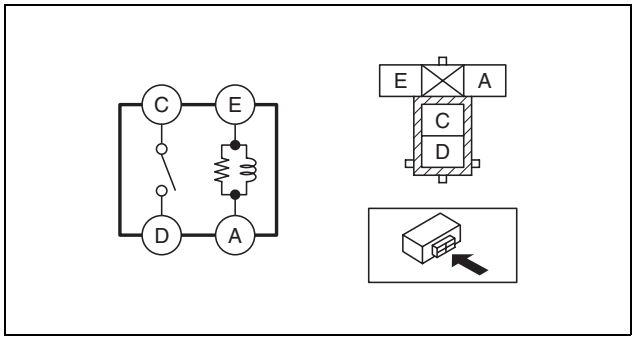
Connector type	Part name
Type A	• TNS relay • Electric AT oil pump relay • A/C relay • Headlight HI relay • Headlight LO relay • Headlight LO relay (LH) • Outlet relay • Horn relay • ACC relay • Cooling fan relay No.1 (SKYACTIV-G 2.0) • Cooling fan relay No.2 (SKYACTIV-G 2.0) • Headlight LO relay (RH) • Rear window defroster relay • Front fog light relay • Ignition relay (ACC_STAB) • Ignition relay (IG1_STAB)
Type B	• Brake light relay • Cooling fan relay No.3 (SKYACTIV-G 2.0)
Type C	• Blower relay • Cooling fan relay No.2 (SKYACTIV-D 2.2) • Cooling fan relay No.1 (SKYACTIV-D 2.2)

POWER SYSTEMS

Connector type	Part name
Type D	• Fuel injector relay • Fuel pump relay • IG1 relay • Electric variable valve timing relay • Blow-by heater relay • Main relay
Type E	Starter relay

Type A

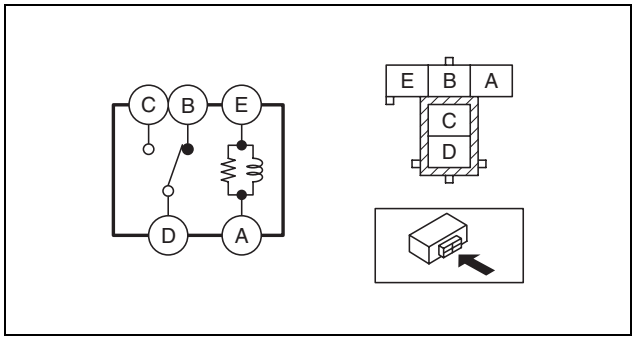
1. Remove the relay. (See 09-21-28 RELAY LOCATION.)
2. Verify the continuity between relay terminals E and A.
   - If it can be verified, go to the next step.
   - If it cannot be verified, replace the relay. (See 09-21-28 RELAY LOCATION.)
3. Apply battery voltage to relay terminal E, and connect terminal A to ground.
4. Verify the continuity between relay terminals C and D.
   - If it cannot be verified, replace the relay. (See 09-21-28 RELAY LOCATION.)



ac5wzw0000008

Type B

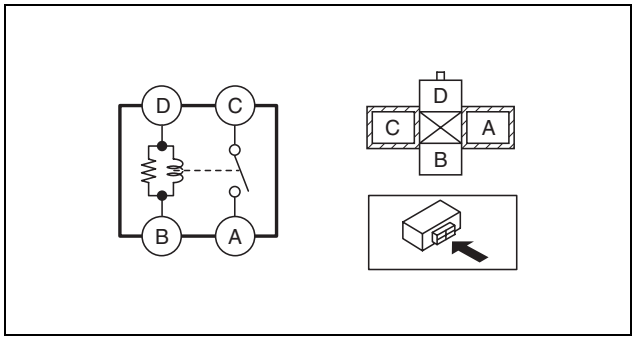
1. Remove the relay. (See 09-21-28 RELAY LOCATION.)
2. Verify the continuity between relay terminals E and A.
   - If it can be verified, go to the next step.
   - If it cannot be verified, replace the relay. (See 09-21-28 RELAY LOCATION.)
3. Verify the continuity between the relay terminals B and D.
   - If it can be verified, go to the next step.
   - If it cannot be verified, replace the relay. (See 09-21-28 RELAY LOCATION.)
4. Apply battery voltage to relay terminal E, and connect terminal A to ground.
5. Verify the continuity between relay terminals C and D.
   - If it cannot be verified, replace the relay. (See 09-21-28 RELAY LOCATION.)



ac5wzw0000008

Type C

1. Remove the relay. (See 09-21-28 RELAY LOCATION.)
2. Verify the continuity between the relay terminals D and B.
   - If it can be verified, go to the next step.
   - If it cannot be verified, replace the relay. (See 09-21-28 RELAY LOCATION.)
3. Apply battery voltage to relay terminal D, and connect terminal B to ground.
4. Verify the continuity between relay terminals C and A.
   - If it cannot be verified, replace the relay. (See 09-21-28 RELAY LOCATION.)



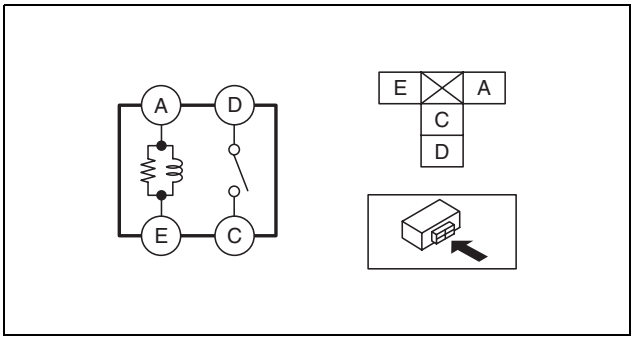
ac5wzw0000008

Type D

1. Remove the relay. (See 09-21-28 RELAY LOCATION.)

POWER SYSTEMS

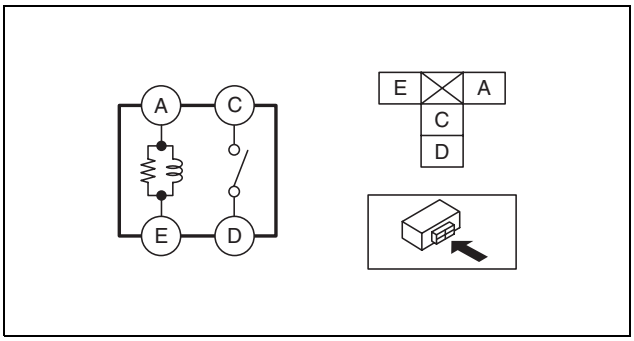
2. Verify the continuity between relay terminals A and E.
   - If it can be verified, go to the next step.
   - If it cannot be verified, replace the relay. (See 09-21-28 RELAY LOCATION.)
3. Apply battery voltage to relay terminal A, and connect terminal E to ground.
4. Verify the continuity between relay terminals D and C.
   - If it cannot be verified, replace the relay. (See 09-21-28 RELAY LOCATION.)



ac5wzw0000008

Type E

1. Remove the relay. (See 09-21-28 RELAY LOCATION.)
2. Verify the continuity between relay terminals A and E.
   - If it can be verified, go to the next step.
   - If it cannot be verified, replace the relay. (See 09-21-28 RELAY LOCATION.)
3. Apply battery voltage to relay terminal A, and connect terminal E to ground.
4. Verify the continuity between relay terminals C and D.
   - If it cannot be verified, replace the relay. (See 09-21-28 RELAY LOCATION.)

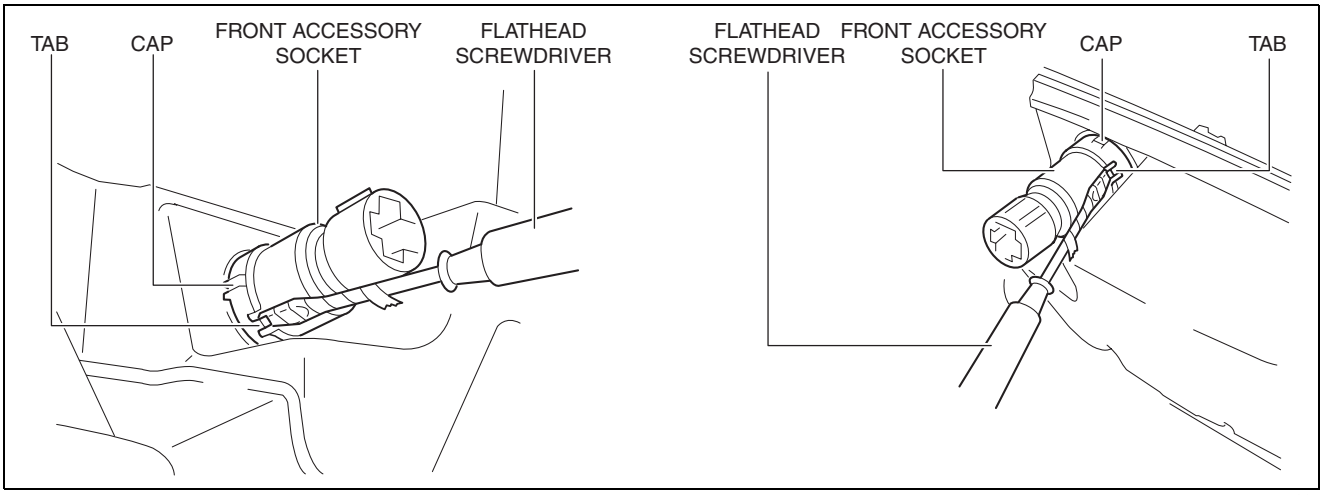


ac5wzw0000008

FRONT ACCESSORY SOCKET REMOVAL/INSTALLATION

id092100900500

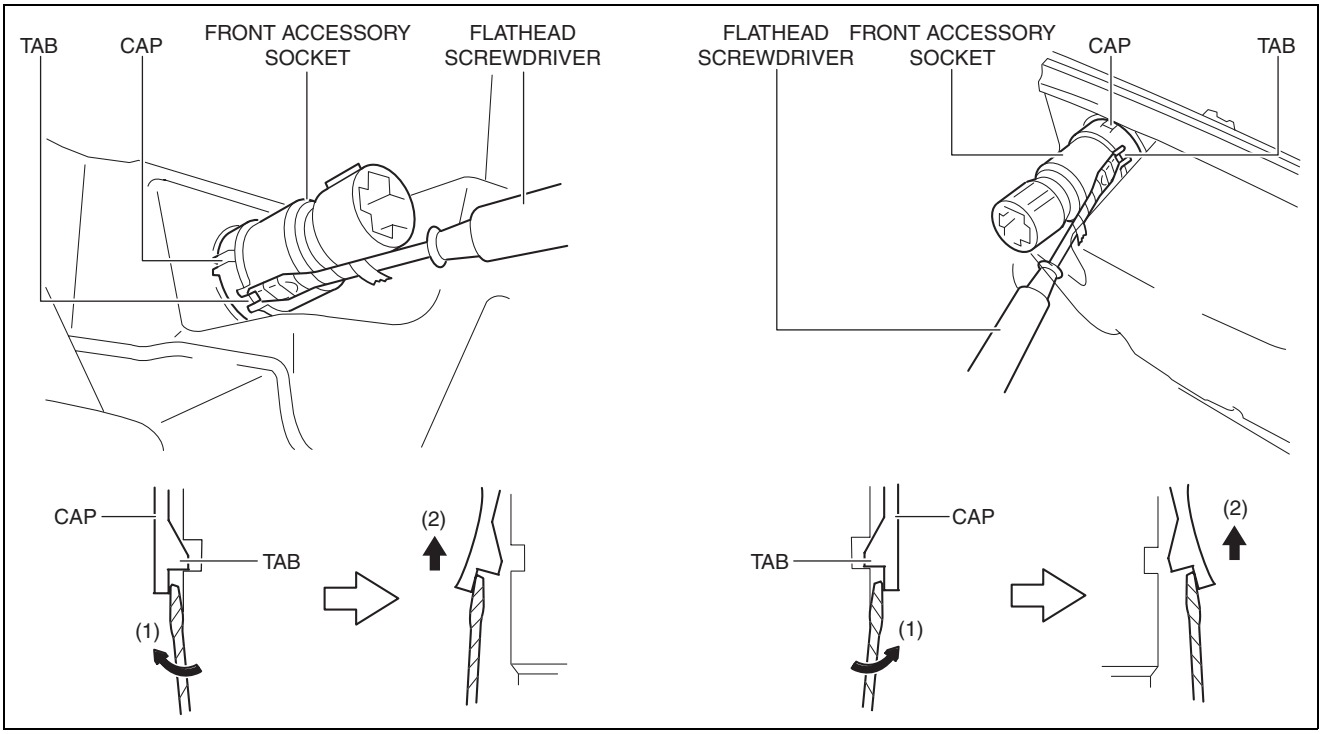
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (2) Front console box (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)
   (3) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
   (4) Upper panel (See 09-17-44 UPPER PANEL REMOVAL/INSTALLATION.)
   (5) Rear console (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.)
   (6) Side wall (See 09-17-49 SIDE WALL REMOVAL/INSTALLATION.)
   (7) Front console (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
3. Insert a tape-wrapped flathead screwdriver into the gap between the cap tab and socket.



ac5wzw0000110

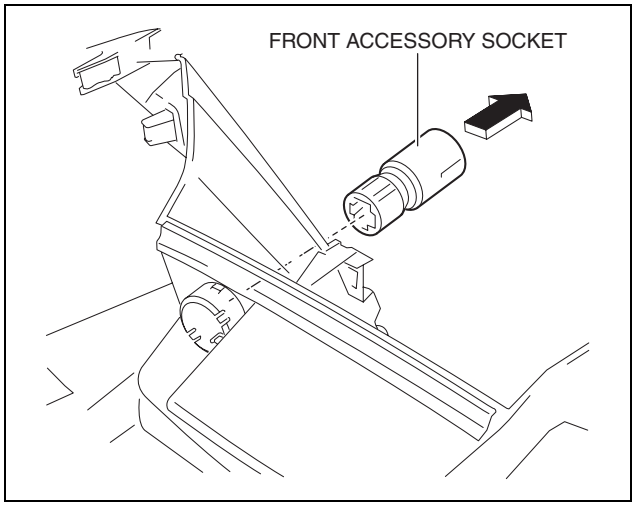
POWER SYSTEMS

4. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, press the front accessory socket in the direction of the arrow (2) shown in the figure, and detach the cap tab from the socket.



ac5wzw0000110

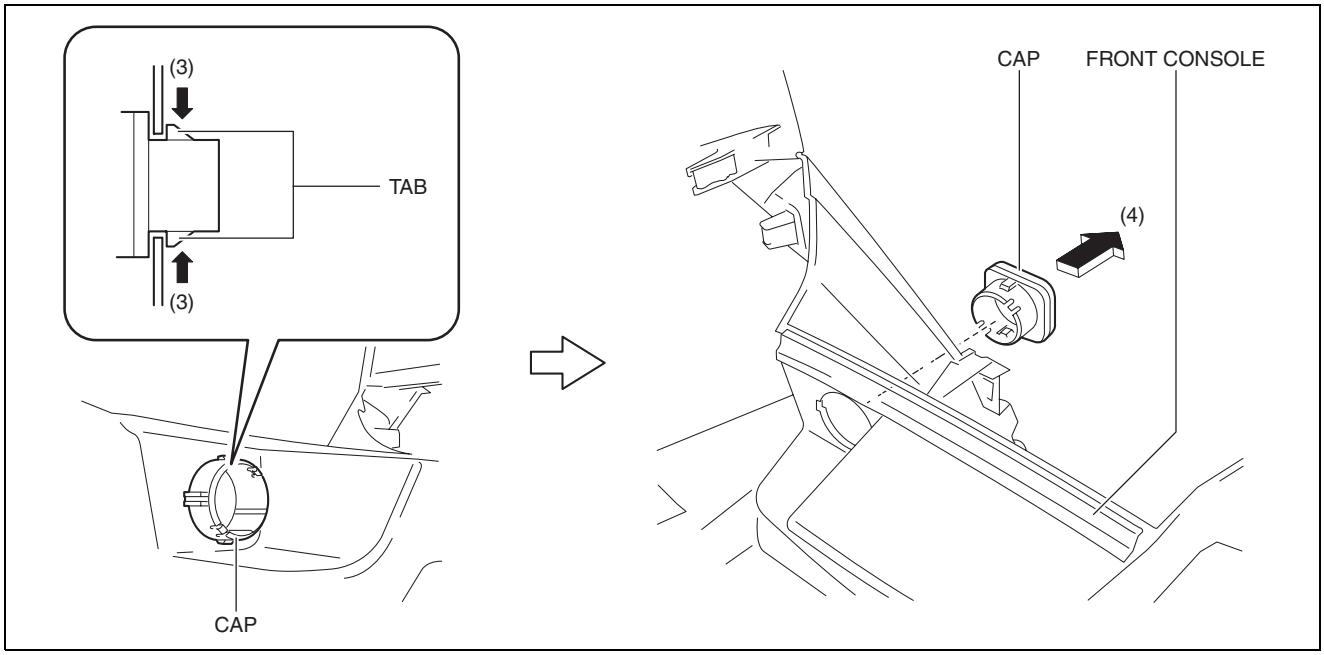
5. Pull the front accessory socket in the direction of the arrow shown in the figure and remove it.



ac5wzw0000110

POWER SYSTEMS

6. While pressing the cap tabs in the direction of arrows (3) shown in the figure, press the cap in the direction of arrow (4) to detach the cap tabs from the front console.



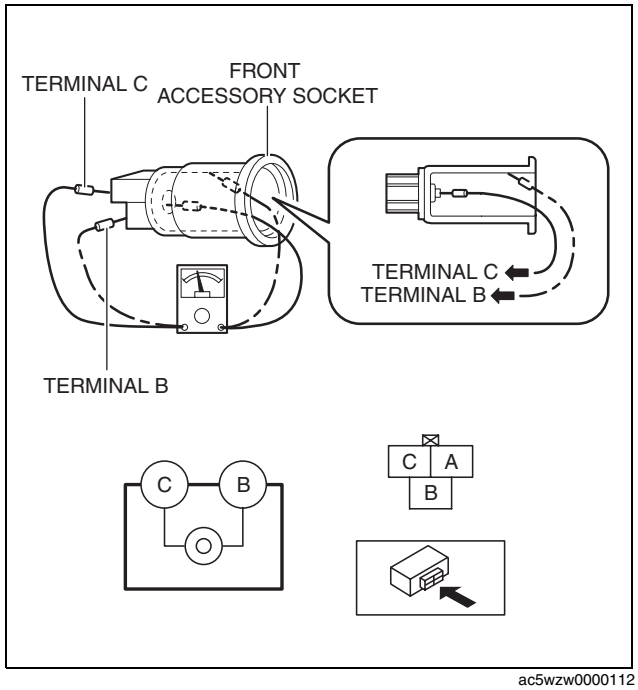
ac5wzw0000110

7. Remove the cap.
8. Install in the reverse order of removal.

FRONT ACCESSORY SOCKET INSPECTION

id092100900800

1. Remove the front accessory socket. (See 09-21-31 FRONT ACCESSORY SOCKET REMOVAL/INSTALLATION.)
2. Connect the tester probe to the position shown in the figure and verify that there is continuity.
   - If it cannot be verified, replace the front accessory socket. (See 09-21-31 FRONT ACCESSORY SOCKET REMOVAL/INSTALLATION.)



ac5wzw0000112

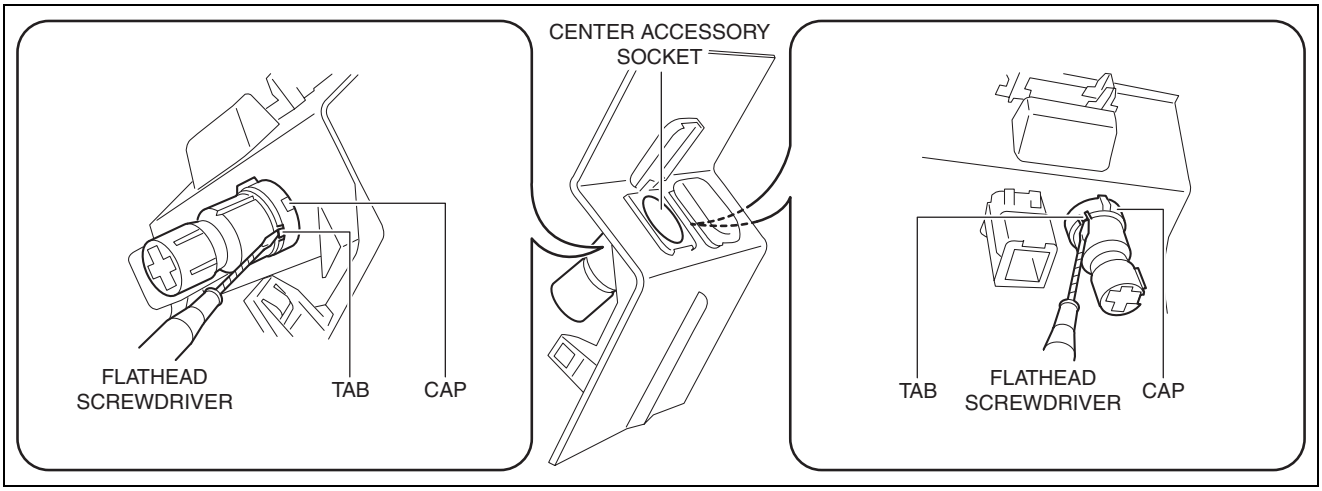
CENTER ACCESSORY SOCKET REMOVAL/INSTALLATION

id092100900600

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the upper console. (See 09-17-47 REAR CONSOLE DISASSEMBLY/ASSEMBLY.)

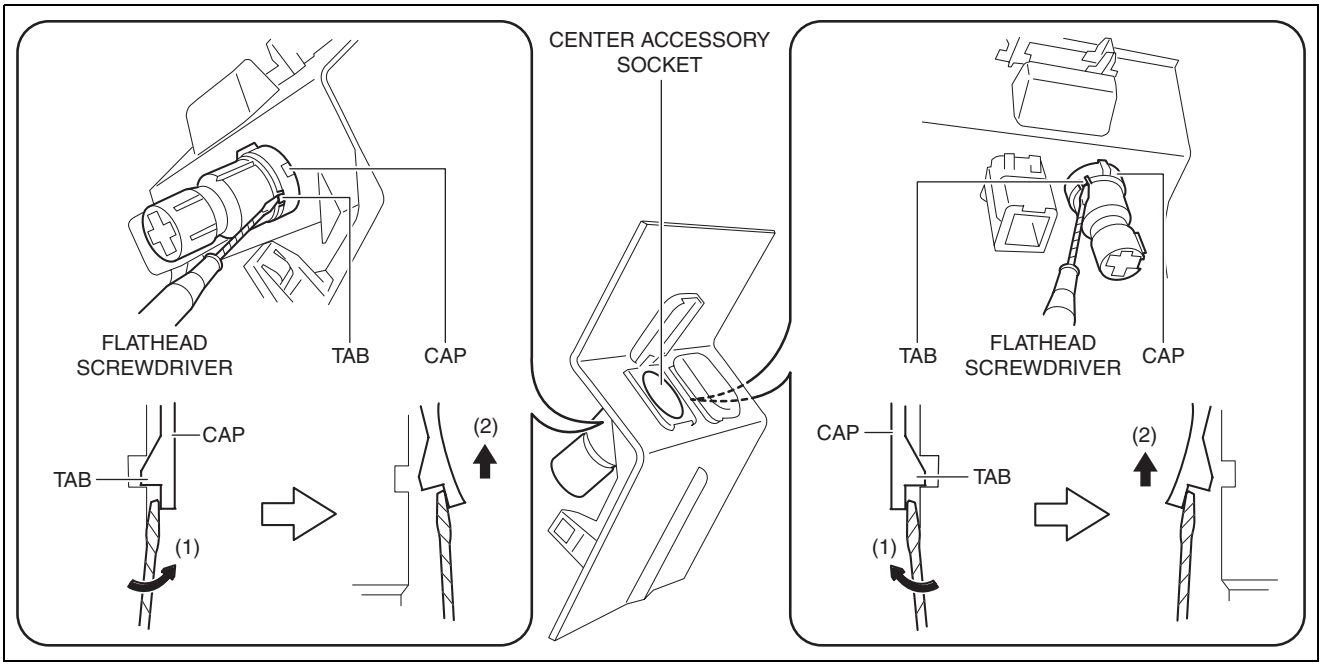
POWER SYSTEMS

3. Insert a tape-wrapped flathead screwdriver into the gap between the cap tab and socket.



ac5wzw0000111

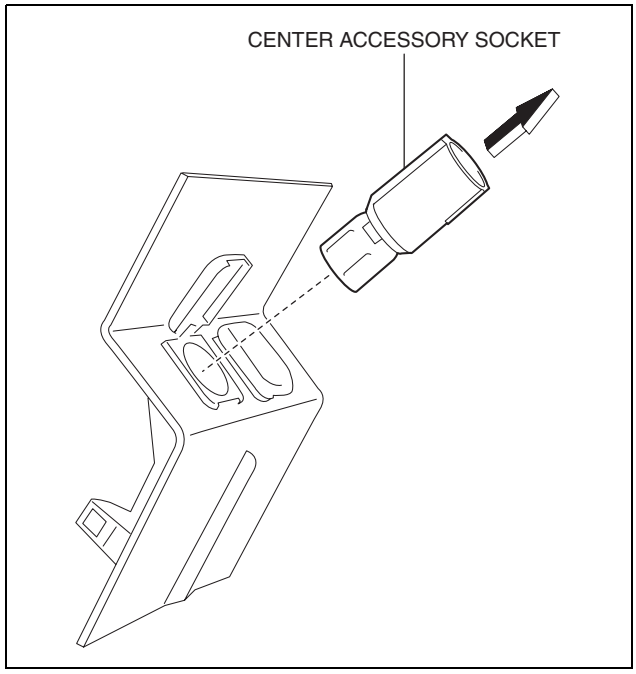
4. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, press the center accessory socket in the direction of the arrow (2) shown in the figure, and detach the cap tab from the socket.



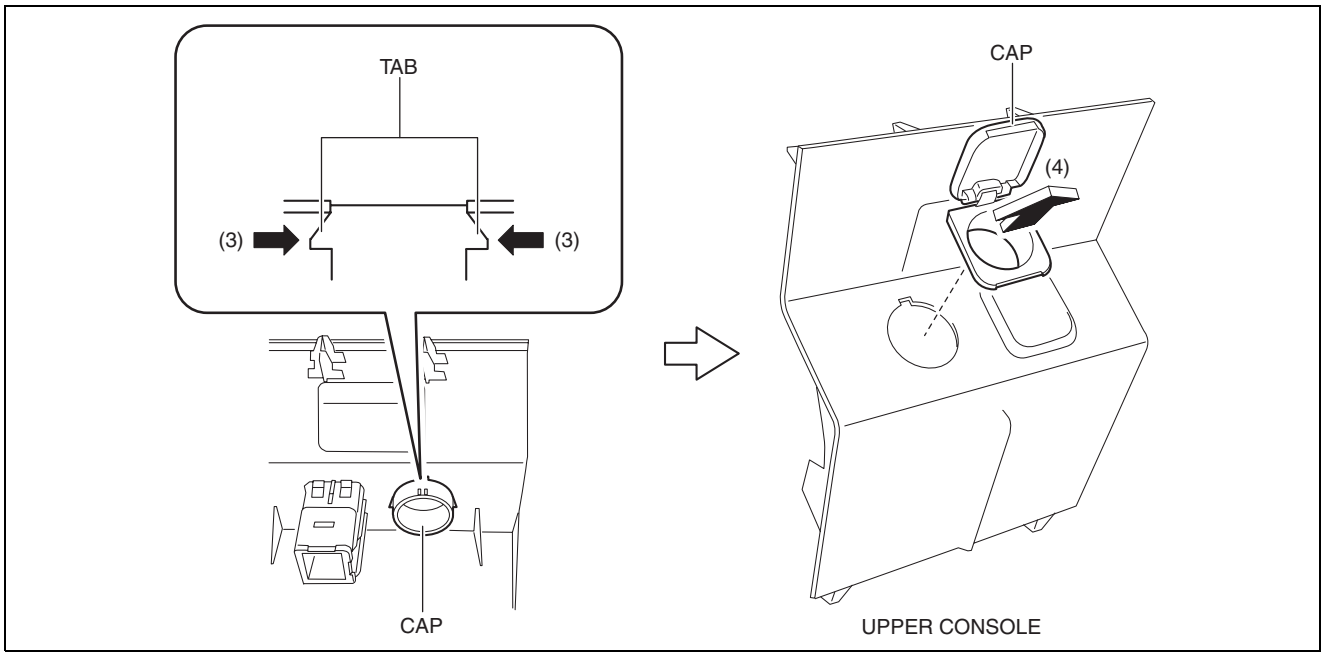
ac5wzw0000111

POWER SYSTEMS

5. Pull the center accessory socket in the direction of the arrow shown in the figure and remove it.
6. While pressing the clip tabs in the direction of arrows (3) shown in the figure, press the cap in the direction of arrow (4) to detach the cap tabs from the upper console.



ac5wzw0000111



ac5wzw0000111

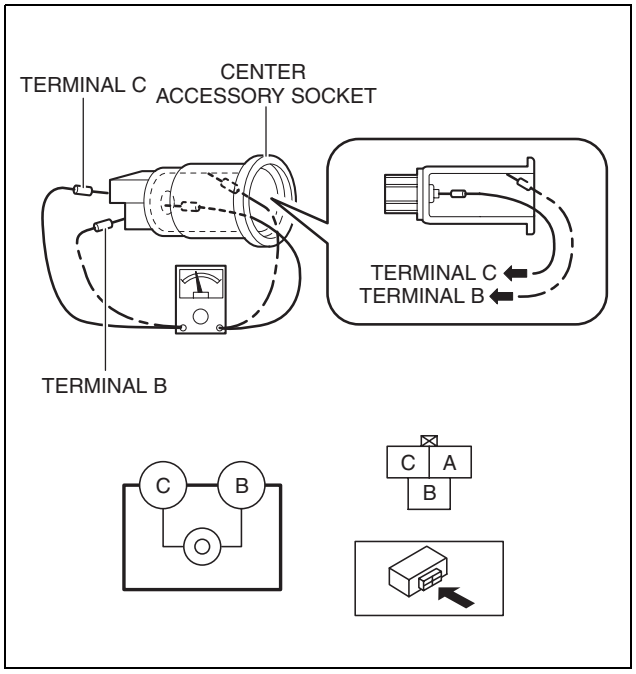
7. Remove the cap.
8. Install in the reverse order of removal.

CENTER ACCESSORY SOCKET INSPECTION

id092100900900

1. Remove the center accessory socket. (See 09-21-33 CENTER ACCESSORY SOCKET REMOVAL/INSTALLATION.)

2. Connect the tester probe to the position shown in the figure and verify that there is continuity.
   - If it cannot be verified, replace the center accessory socket. (See 09-21-33 CENTER ACCESSORY SOCKET REMOVAL/INSTALLATION.)

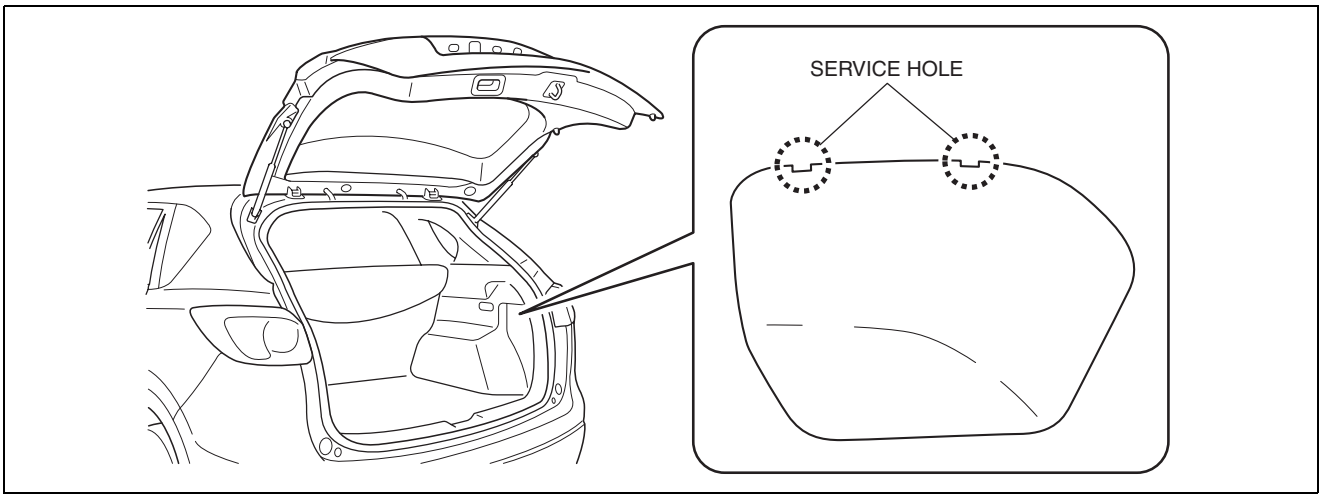


ac5wzw0000112

REAR ACCESSORY SOCKET REMOVAL/INSTALLATION

id092100900700

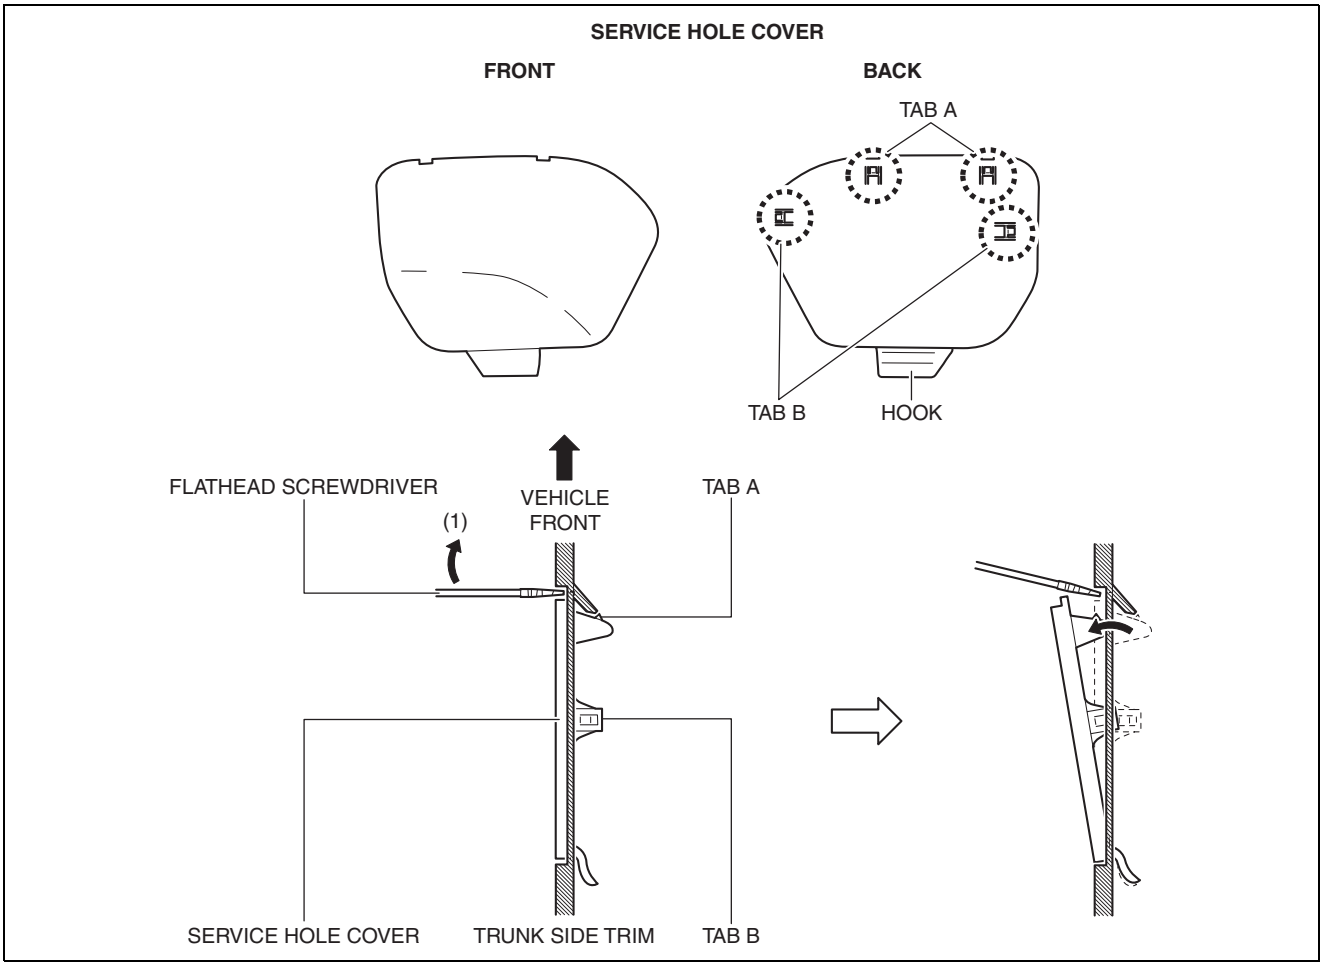
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.



ac5wzw0000111

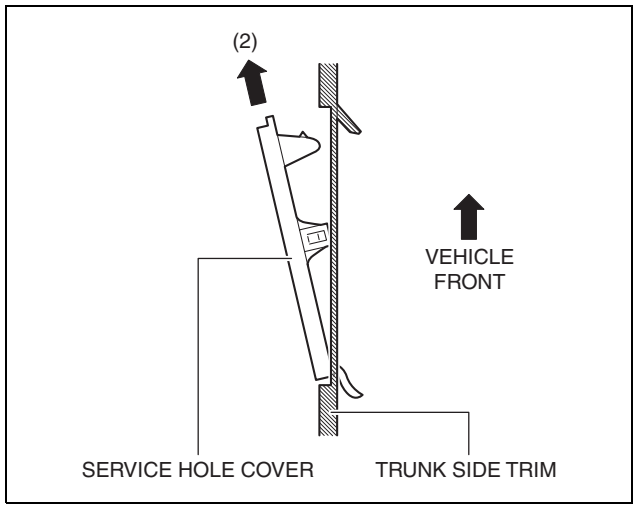
POWER SYSTEMS

3. Move the flathead screwdriver in the direction of the arrow (1) shown in the figure, pull out the service hole cover, and detach the service hole cover tab and trunk side trim.



ac5wzw0000287

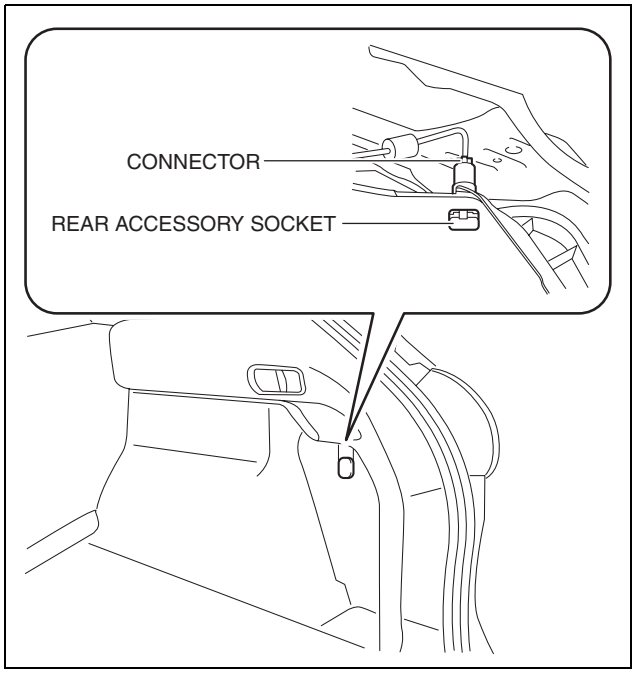
4. Pull out the service hole cover in the direction of the arrow (2) shown in the figure and pull out the service hole cover hook from the trunk side trim.
5. Remove the service hole cover.



ac5wzw0000287

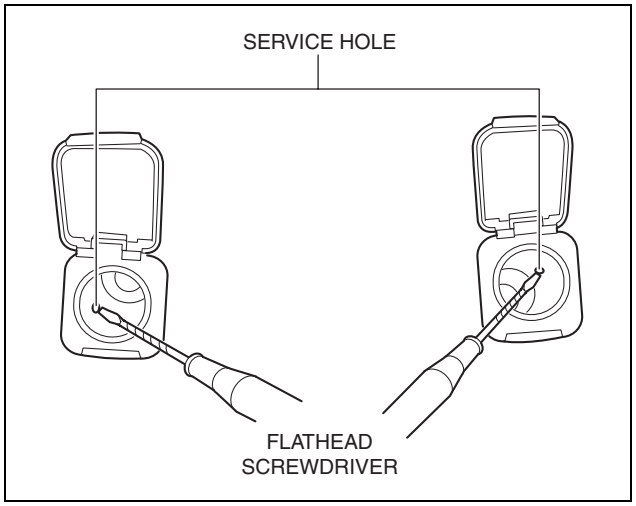
POWER SYSTEMS

6. Disconnect the connector.



ac5wzw0000111

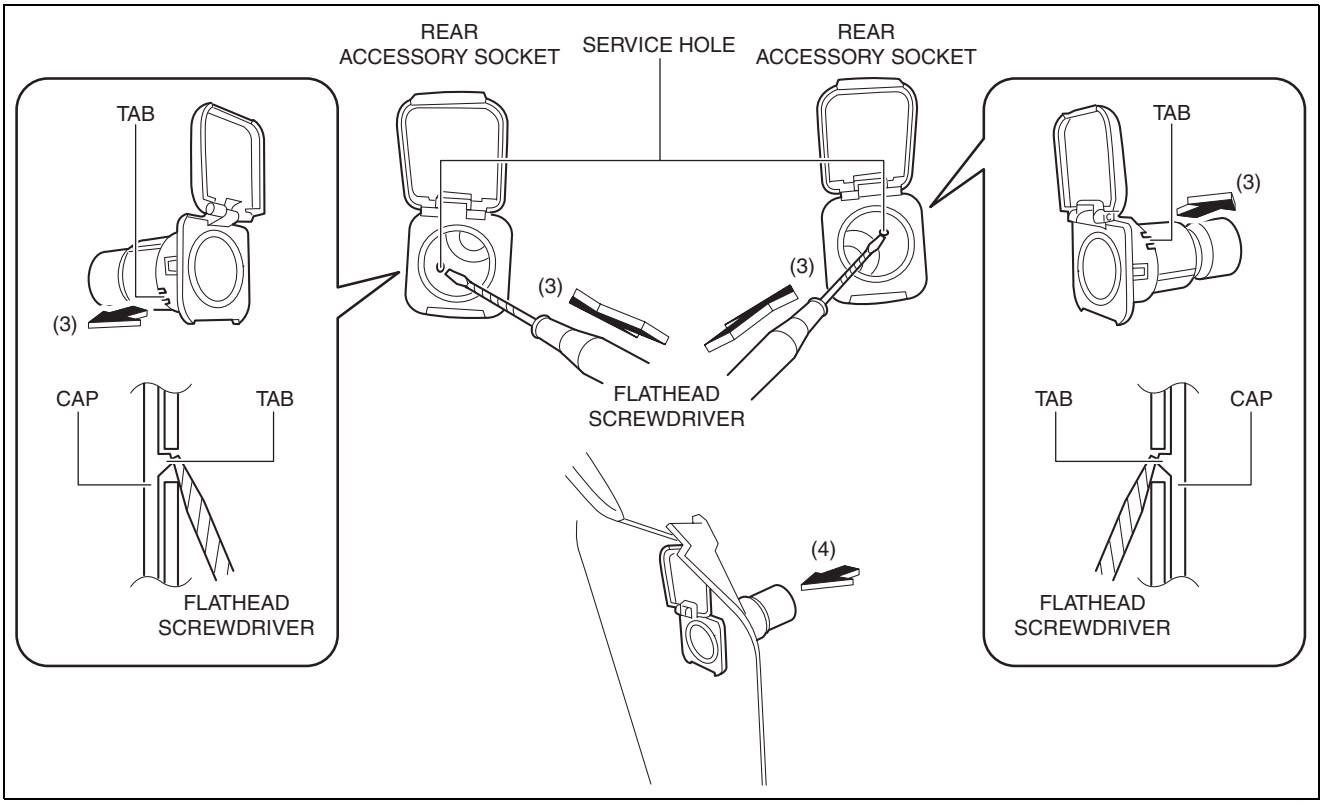
7. Insert a tape-wrapped flathead screwdriver into the service hole in the position shown in the figure.



ac5wzw0000111

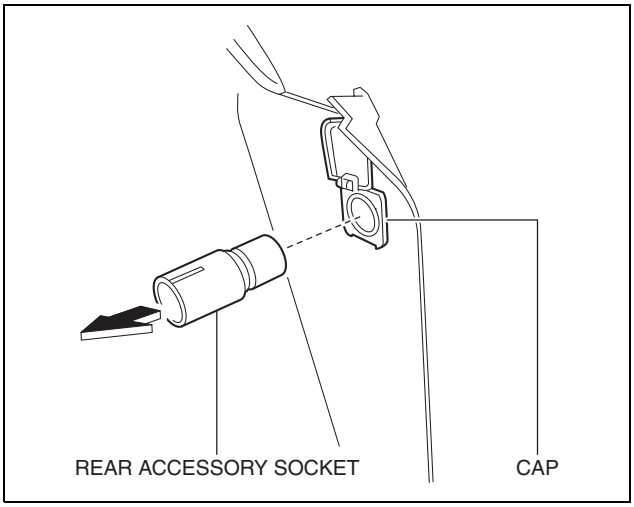
POWER SYSTEMS

8. While pressing the cap tab in the direction of arrow (3) shown in the figure, push out the rear accessory socket in the direction of arrow (4) to detach the cap tab from the socket.



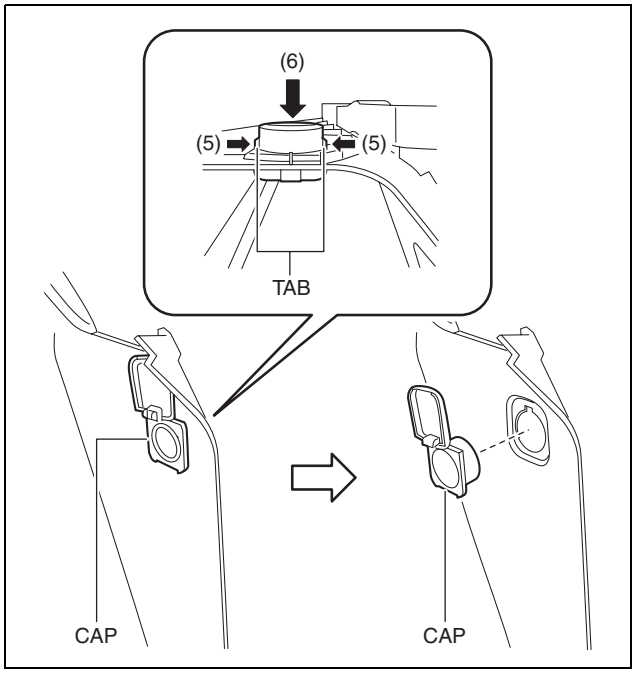
ac5wzw0000111

9. Pull the rear accessory socket in the direction of the arrow shown in the figure and remove it.



ac5wzw0000112

10. While pressing the cap tab in the direction of the arrow (5) shown in the figure, push out the cap in the direction of the arrow (6) shown in the figure to detach the cap tab from the trunk side trim.
11. Remove the cap.
12. Install in the reverse order of removal.

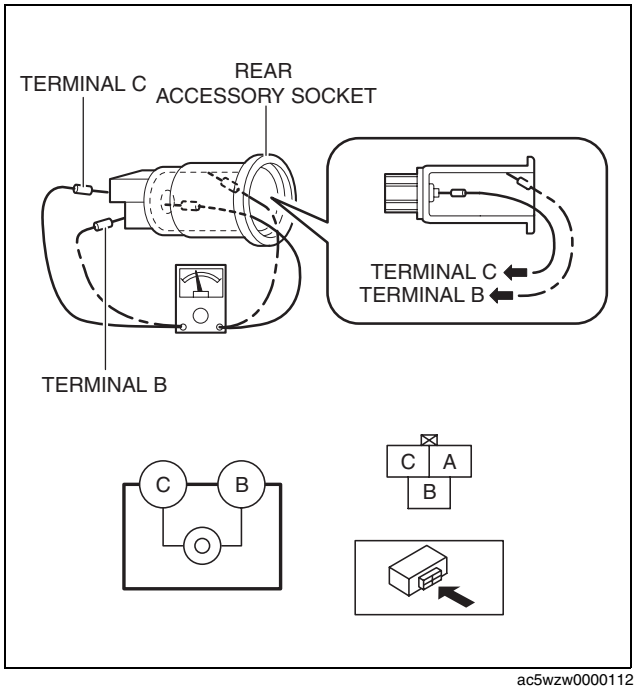


ac5wzw0000112

REAR ACCESSORY SOCKET INSPECTION

id092100901000

1. Remove the rear accessory socket. (See 09-21-36 REAR ACCESSORY SOCKET REMOVAL/INSTALLATION.)
2. Connect the tester probe to the position shown in the figure and verify that there is continuity.
   - If it cannot be verified, replace the rear accessory socket. (See 09-21-36 REAR ACCESSORY SOCKET REMOVAL/INSTALLATION.)



ac5wzw0000112

INSTRUMENT CLUSTER REMOVAL/INSTALLATION

id092200010300

Caution

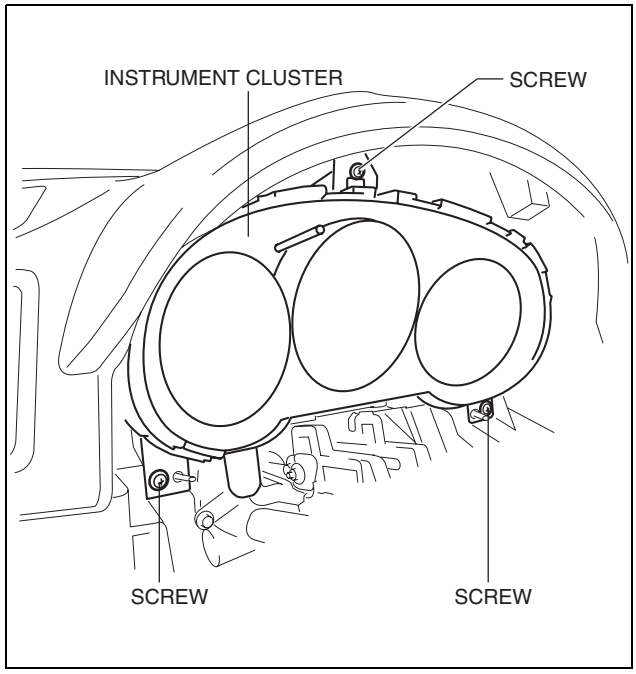
- **If configuration is not performed when the instrument cluster is replaced with a new one, the vehicle specification information is not stored in the instrument cluster and the system will not operate normally.**
- **When performing configuration, it is necessary to read the vehicle specification information from the instrument cluster before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the instrument cluster. The vehicle specification information is temporarily stored in the M-MDS.**

Note

- The instrument cluster prior to replacement stores the vehicle specification information.
- A new instrument cluster does not store any vehicle specification information.
- If the vehicle specification information from the instrument cluster prior to replacement cannot be read, perform the configuration using As-Built data.

1. When replacing the instrument cluster, perform the configuration. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING READ/WRITE FUNCTION).)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the upper column cover. (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.)
4. Remove the meter hood. (See 09-17-20 METER HOOD REMOVAL/INSTALLATION.)

5. Remove the screws.

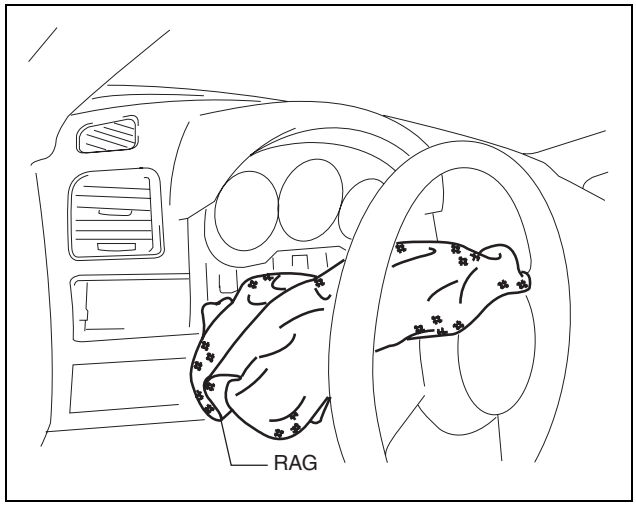


ac5wzw0000274

6. Cover the light switch, wiper switch, and start stop unit using a rag to prevent scratches.

Caution

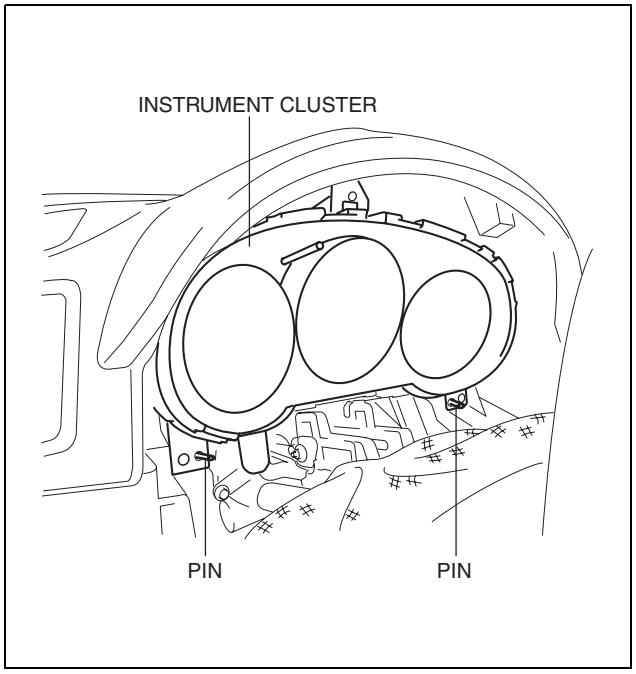
- **When removing the instrument cluster, the instrument cluster may contact the light switch, wiper switch, or the start stop unit and the instrument cluster may be scratched. When removing the instrument cluster, cover the light switch, wiper switch, and start stop unit using a rag.**



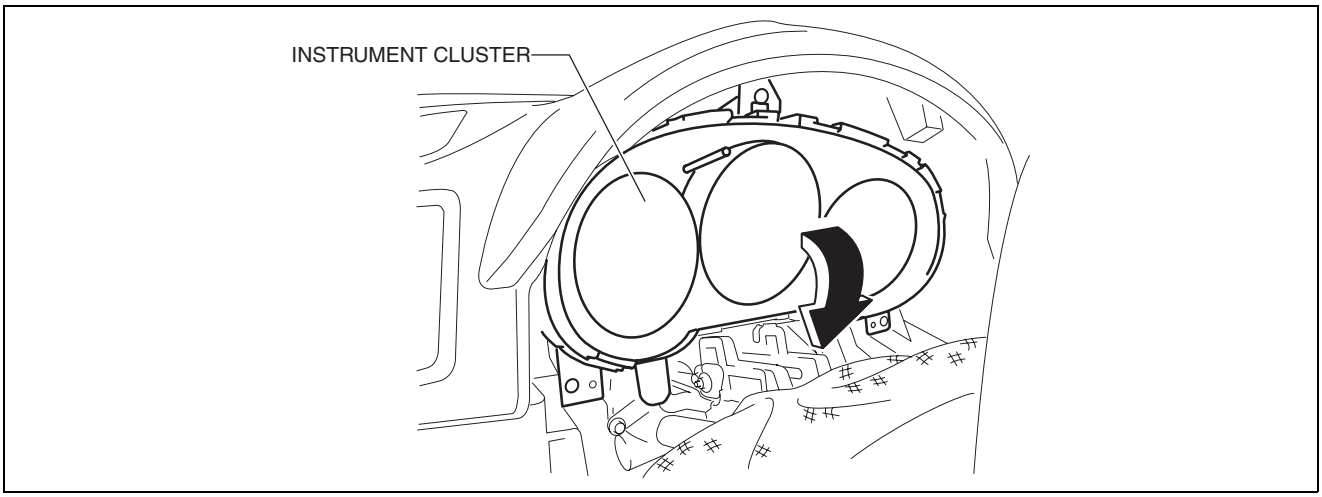
ac5wzw0000274

INSTRUMENTATION/DRIVER INFO.

7. Pull the instrument cluster outward to detach it from the instrument panel pins.
8. Rotate the instrument cluster in the direction of the arrow shown in the figure.



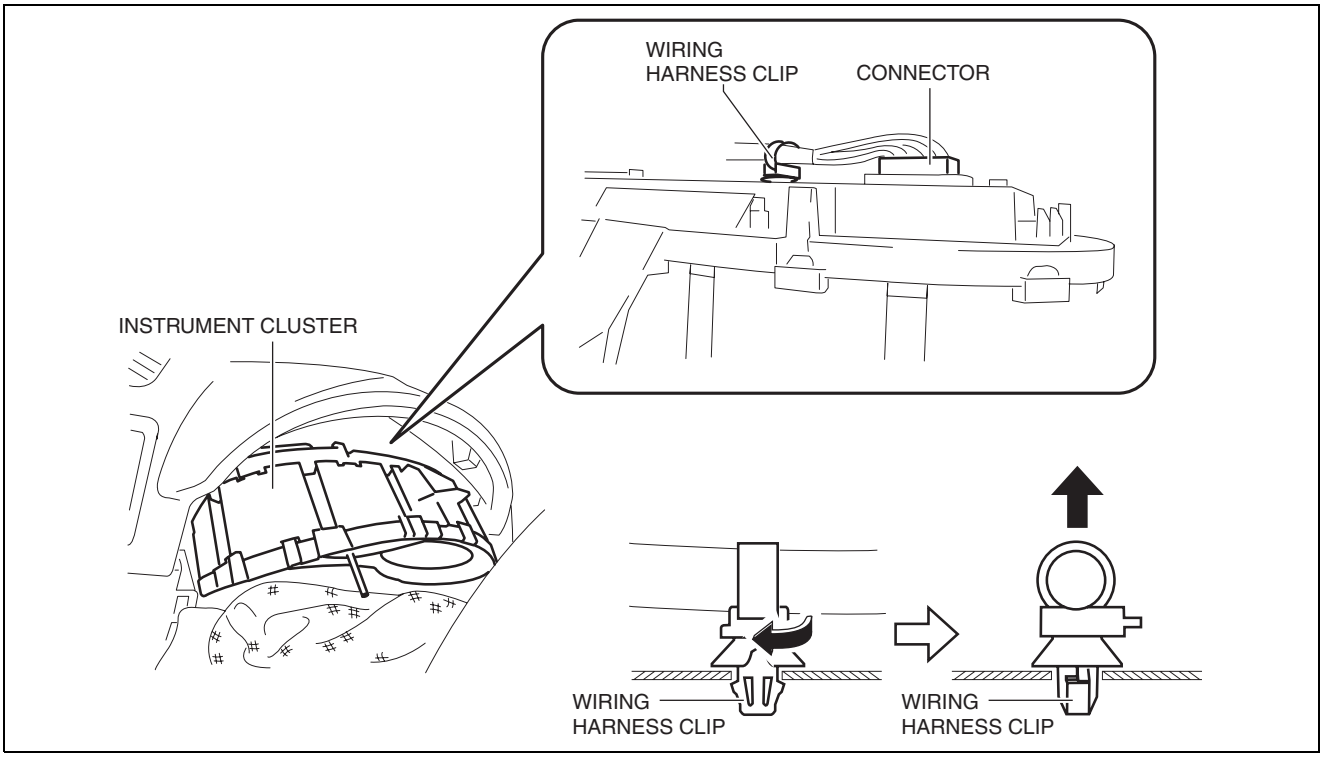
ac5wzw0000274



ac5wzw0000274

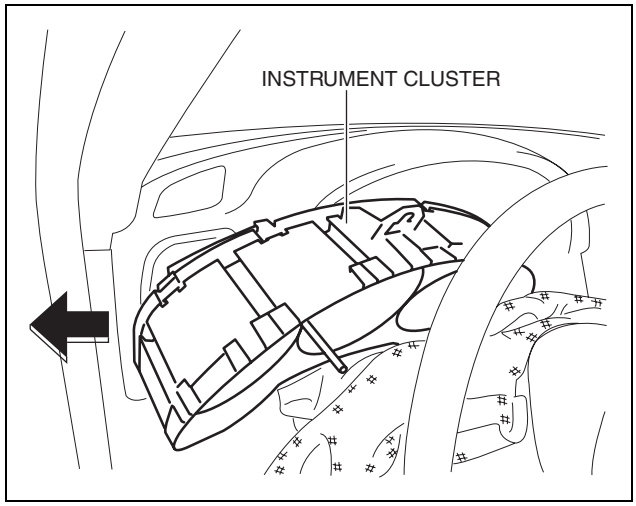
INSTRUMENTATION/DRIVER INFO.

9. Disconnect the connector.



ac5wzw0000263

10. Rotate the wiring harness clip approx. 90 degrees, pull it in the direction shown by the arrow in the figure, and disengage the wiring harness clip tab from the instrument cluster.
11. Remove the instrument cluster by sliding it between the instrument panel and the steering.
12. Install in the reverse order of removal.



ac5wzw0000274

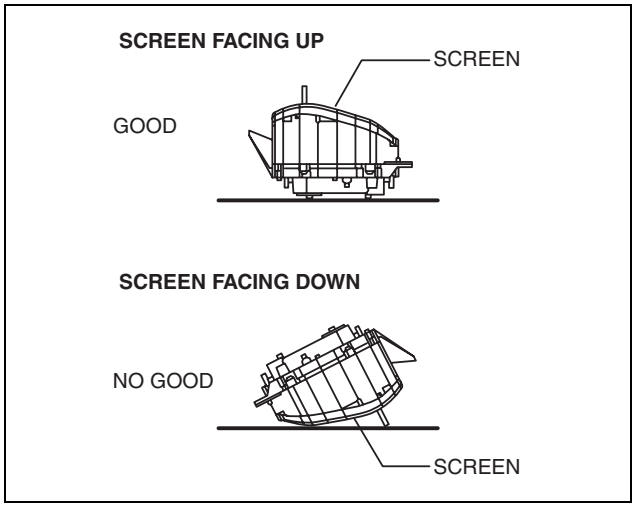
INSTRUMENTATION/DRIVER INFO.

Caution

- **If the instrument cluster is left for a long time with its screen facing down, grease applied to the needles may spill and the needles may not operate smoothly. When storing the instrument cluster, store it with its screen facing upward.**

Note

- If configuration cannot be performed by reading/writing of the vehicle specification information, perform the configuration using As-Built information after replacing the instrument cluster. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).)



ac5wzw0000294

INSTRUMENT CLUSTER DISASSEMBLY/ASSEMBLY

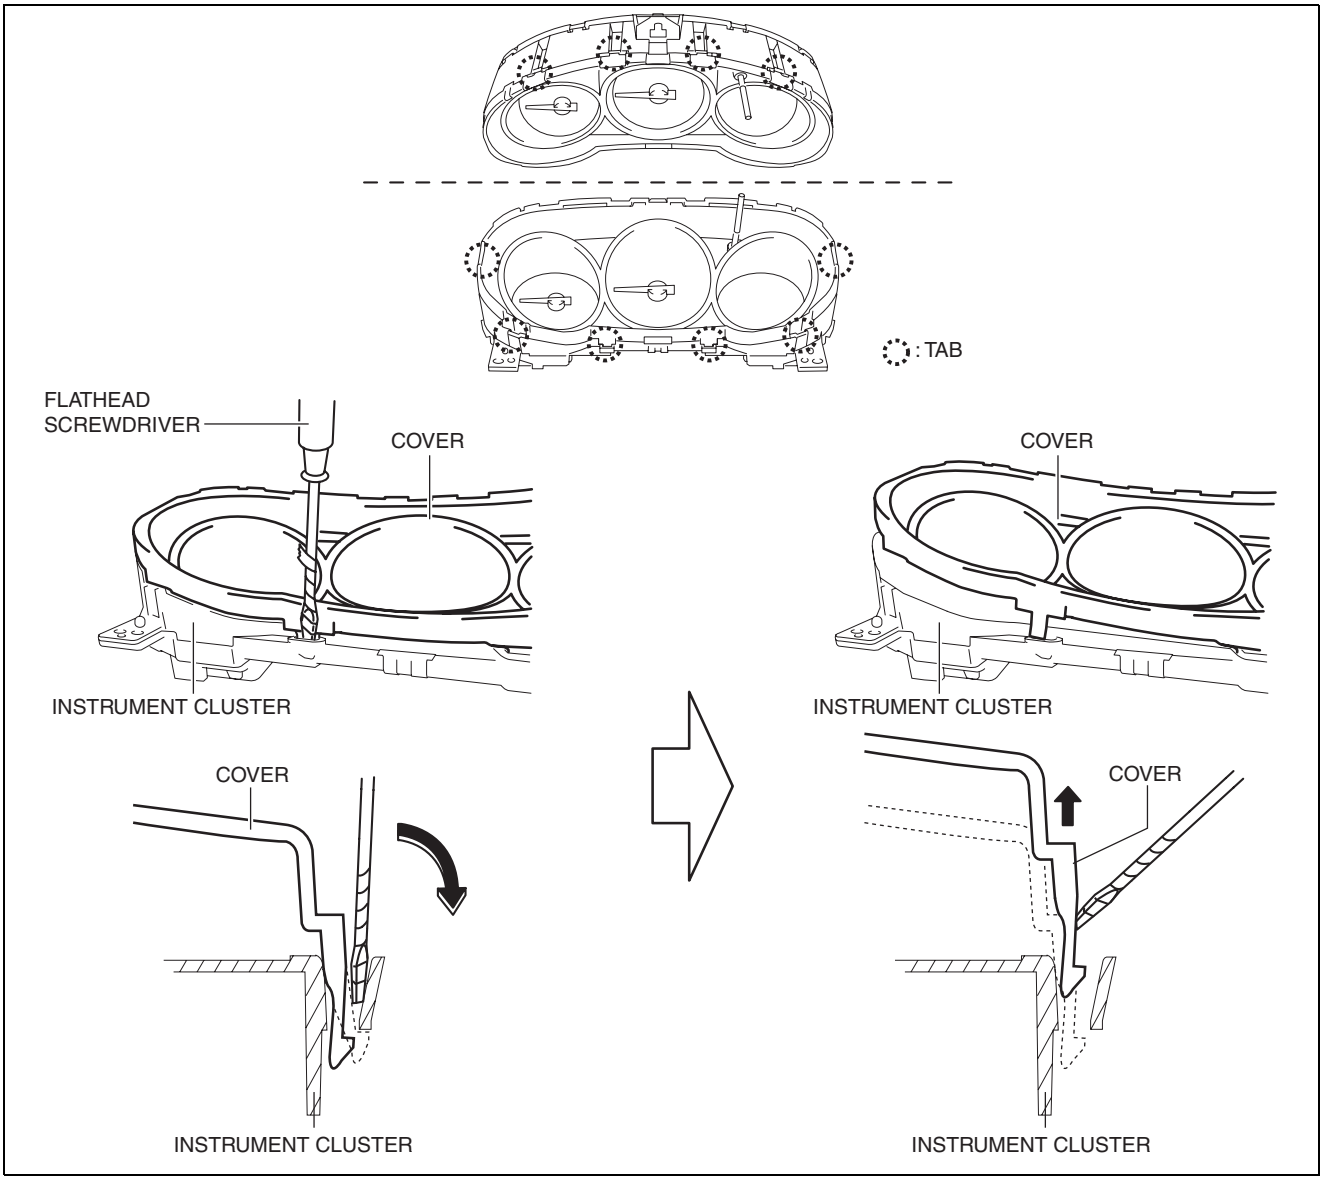
id092200010500

Caution

- **If the instrument cluster is hit forcefully during disassembly such as by being dropped, it could get damaged and the system may not operate normally. When disassembling the instrument cluster, perform the procedure on a workbench on clean clothes being careful not to drop it.**

INSTRUMENTATION/DRIVER INFO.

1. Move a tape-wrapped flathead screwdriver in the direction of the arrow shown in the figure, lift up the cover while pressing the cover tab, and disengage the cover tab from the instrument cluster.



ac5wzw0000010

2. Disengage all the cover tabs from the instrument cluster and remove the cover.
3. Assemble in the reverse order of disassembly.

INSTRUMENT CLUSTER INSPECTION

id092200010600

Speedometer inspection
Using a speedometer tester

1. Adjust the tire pressure to the specification.
2. Using a speedometer tester, verify that the tester reading is as indicated in the following table.

INSTRUMENTATION/DRIVER INFO.

European (L.H.D. U.K.), General (L.H.D. R.H.D.) specs., Australian specs.

Speedometer tester indication (km/h)	Allowable range (km/h)
20	20—25
40	40—45
60	61—66
80	81—86
100	102—107
120	122—129
140	142—150
160	163—170
180	183—181
200	204—211
220	224—232
240	244—253

U.K. specs.

Speedometer tester indication (mph)	Allowable range (mph)
10	10—13
20	20—23
30	30—33
40	40—43
50	51—54
60	61—64
70	71—75
80	81—86
90	91—96
100	102—106
110	112—116
120	122—127
130	132—137
140	142—148
150	153—158

General (L.H.D. R.H.D.) specs.,

Speedometer tester indication (km/h)	Allowable range (km/h)
20	18—22
40	38—42
60	58—62
80	78—82
100	98—102
120	117—123
140	137—143
160	157—163
180	177—183
200	197—203
220	216—224
240	236—244

3. Verify that the speedometer reading is within the range indicated in the table.
   - If the speedometer does not operate or the indication is not within the allowable range, inspect the DTC inspection for the following control module and the related wiring harnesses.
     — PCM
     — TCM (ATX)
     — DSC HU/CM
   - If the PCM, TCM (ATX), DSC HU/CM, and related wiring harnesses are normal, replace the instrument cluster.

INSTRUMENTATION/DRIVER INFO.

Using the M-MDS

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
   (1) “Data logger”
   (2) “Module”
   (3) “IC”
3. Using “SPDMTR”, verify that the displayed information is as indicated in the table.

European (L.H.D. U.K.), General (L.H.D. R.H.D.) specs., Australian specs.

M-MDS display	Instrument cluster display
60 km/h	Speedometer needle moves to approx. 61—66 km/h {38—41 mph}.
120 km/h	Speedometer needle moves to approx. 122—129 km/h {75.9—80.1 mph}.
Off	Speedometer needle moves to the bottommost position.

General (L.H.D. R.H.D.) specs.,

M-MDS display	Instrument cluster display
60 km/h	Speedometer needle moves to approx. 58—62 km/h {36—39 mph}.
120 km/h	Speedometer needle moves to approx. 117—123 km/h {72.8—76.4 mph}.
Off	Speedometer needle moves to the bottommost position.

- If the speedometer does not operate or the indication is not within the allowable range, inspect the DTC inspection for the following control module and the related wiring harnesses.
  — PCM
  — TCM (ATX)
  — DSC HU/CM
- If the PCM, TCM (ATX), DSC HU/CM, and related wiring harnesses are normal, replace the instrument cluster.

Tachometer inspection

Caution

- **If the engine speed exceeds the allowable range, the engine could be damaged. Therefore, when inspecting the tachometer, do not allow the engine speed to exceed the allowable range indicated on the tachometer.**

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
   (1) “Data logger”
   (2) “Module”
   (3) “IC”
3. Using “TACHOMTR”, verify that the displayed information is as indicated in the table.

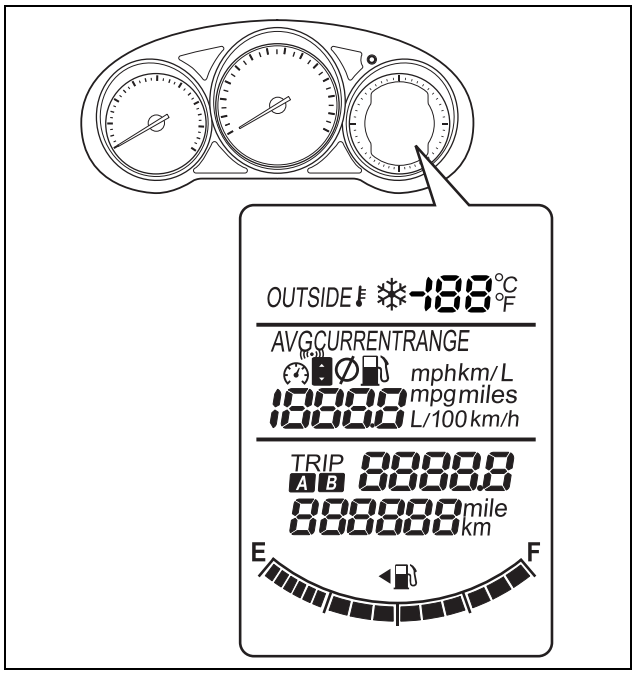
M-MDS display	Instrument cluster display
3000 RPM	Tachometer needle moves to approx. 3,050 rpm.
6000 RPM	Tachometer needle moves to approx. 6,100 rpm.
Off	Tachometer needle moves to bottommost position.

- If the tachometer does not operate or the indication is not within the allowable range, inspect the DTC inspection for the following control module and the related wiring harnesses.
  — PCM
- If the PCM and related wiring harnesses are normal, replace the instrument cluster.

INSTRUMENTATION/DRIVER INFO.

Fuel Gauge/LCD Inspection
Without TFT LCD display

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
   (1) “Data logger”
   (2) “Module”
   (3) “IC”
3. Using “LCD_SEG”, verify that the LCD is illuminated.
   - If there are any non-illuminated area, replace the instrument cluster.

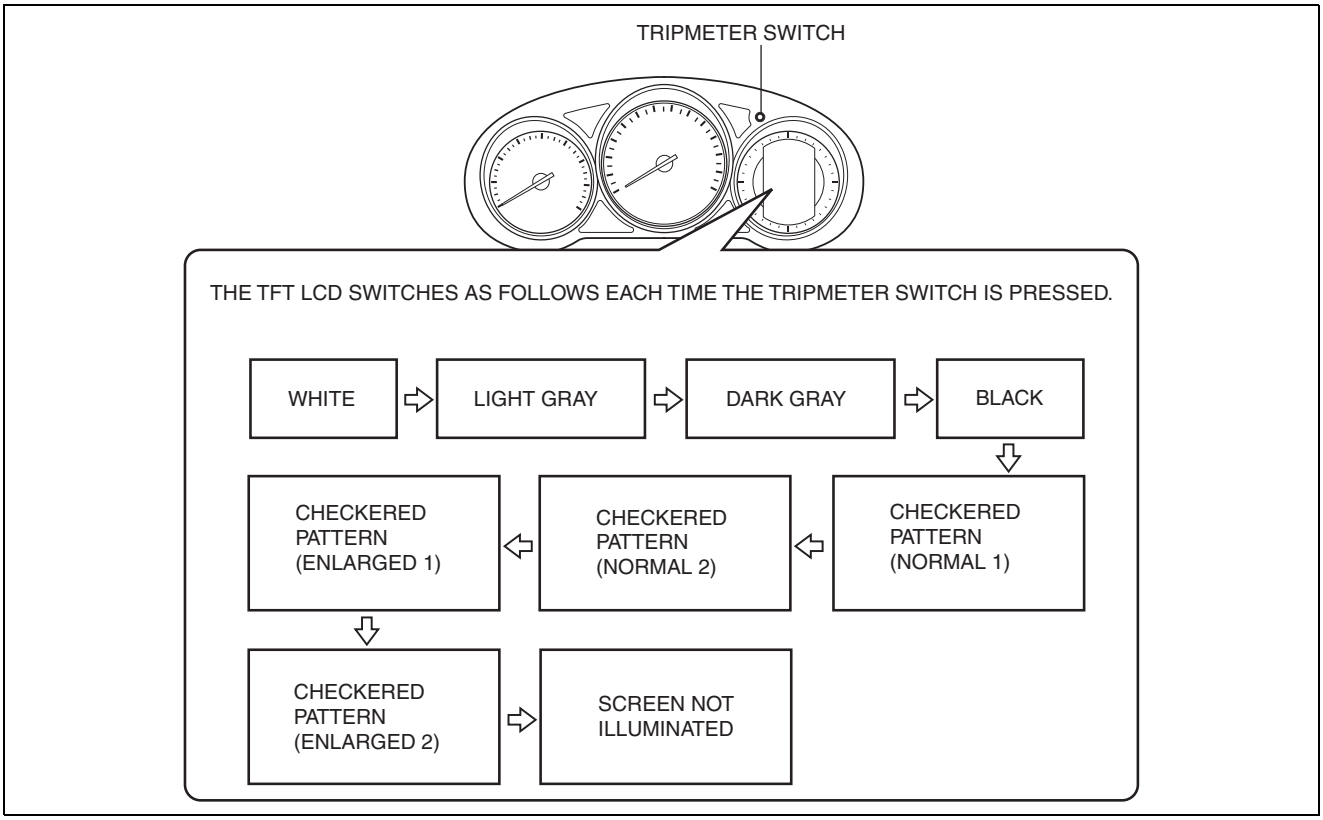


ac5wzw0000378

With TFT LCD display

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
   (1) “Data logger”
   (2) “Module”
   (3) “IC”

3. Using “LCD_SEG”, verify that the LCD is illuminated.



ac5wzw0000291

- If there are any non-illuminated area, replace the instrument cluster.

Warning/Indicator Light Illumination Inspection

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
   (1) “Data logger”
   (2) “Module”
   (3) “IC”
3. Using “WL+IL”, verify that the warning/indicator lights in the following table are illuminated.
   - If any of the warning/indicator lights are not displayed, replace the instrument cluster.

INSTRUMENTATION/DRIVER INFO.

Alarm Inspection

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
   (1) “Data logger”
   (2) “Module”
   (3) “IC”
3. Using “ALARM”, verify that the buzzer sounds.
   - If the buzzer does not sound, replace the instrument cluster.

INSTRUMENT CLUSTER CONFIGURATION (USING READ/WRITE FUNCTION)

id092200033300

Note

- When performing configuration, it is necessary to read the vehicle specification information from the instrument cluster before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the instrument cluster. The vehicle specification information is temporarily stored in the M-MDS.

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
   1. “Module programming”
3. Then, select the following from the screen menu.
   1. “Programmable Module Installation”
   2. “IC”
4. Perform the configuration following the instructions on the screen.

Caution

- **When the configuration is performed, CAN communication between the instrument cluster and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.**

5. Verify the DTCs for all of the control modules connected to the CAN line.
   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)

id092200032100

Note

- If the configuration is performed using As-Built data, the set value of the personalization function is reset to the initial value (condition when shipped from factory). Verify the set value with the customer and perform the personalization function setting after performing the configuration using As-Built data.

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
   1. “Module programming”
3. Then, select the following from the screen menu.
   1. “As-Built”

INSTRUMENTATION/DRIVER INFO.

2. “IC”

4. Perform As-Built following the instructions on the screen.

Caution

- **When the configuration is performed, CAN communication between the instrument cluster and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.**

5. Verify the DTCs for all of the control modules connected to the CAN line.
   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

INSTRUMENT CLUSTER OPERATION RECORD

id092200033200

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initial screen.
   1. “Operational Record”
3. Then, select the following from the screen menu.
   1. “Meter Warning System”
4. Display the instrument cluster operation history according to the screen instructions.

INSTRUMENT CLUSTER PERSONALIZATION FEATURES SETTING PROCEDURE

id092200033600

Using M-MDS

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
   (1) “Module programming”
   (2) “Programmable Parameters”
3. Select menu in the “IC”.
4. Select an item name, and than select option.

Instrument cluster

Mazda Modular Diagnostic System (M-MDS) display	Function	Initial setting	Setting contents	Control unit
Lights-on Reminder Volume.	The volume for the lights-on reminder warning alarm can be changed.	High	Not Adopted. / OFF / Low / High	Instrument cluster
Turn Signal Volume.	The volume of the turn and hazard indicator alarm can be changed.	High	Not Adopted. / Low / High	Instrument cluster

Rear vehicle monitoring (RVM) system

LDWS Timing.	The warning operation timing of the lane departure warning system (LDWS) can be changed.	Adaptive	Not Adopted / Adaptive / Early / Medium / Late	FSC
LDWS Warning.	The warning operation sensitivity of the lane departure warning system (LDWS) can be changed.	Medium	Not Adopted. / Often / Medium / Rare	FSC

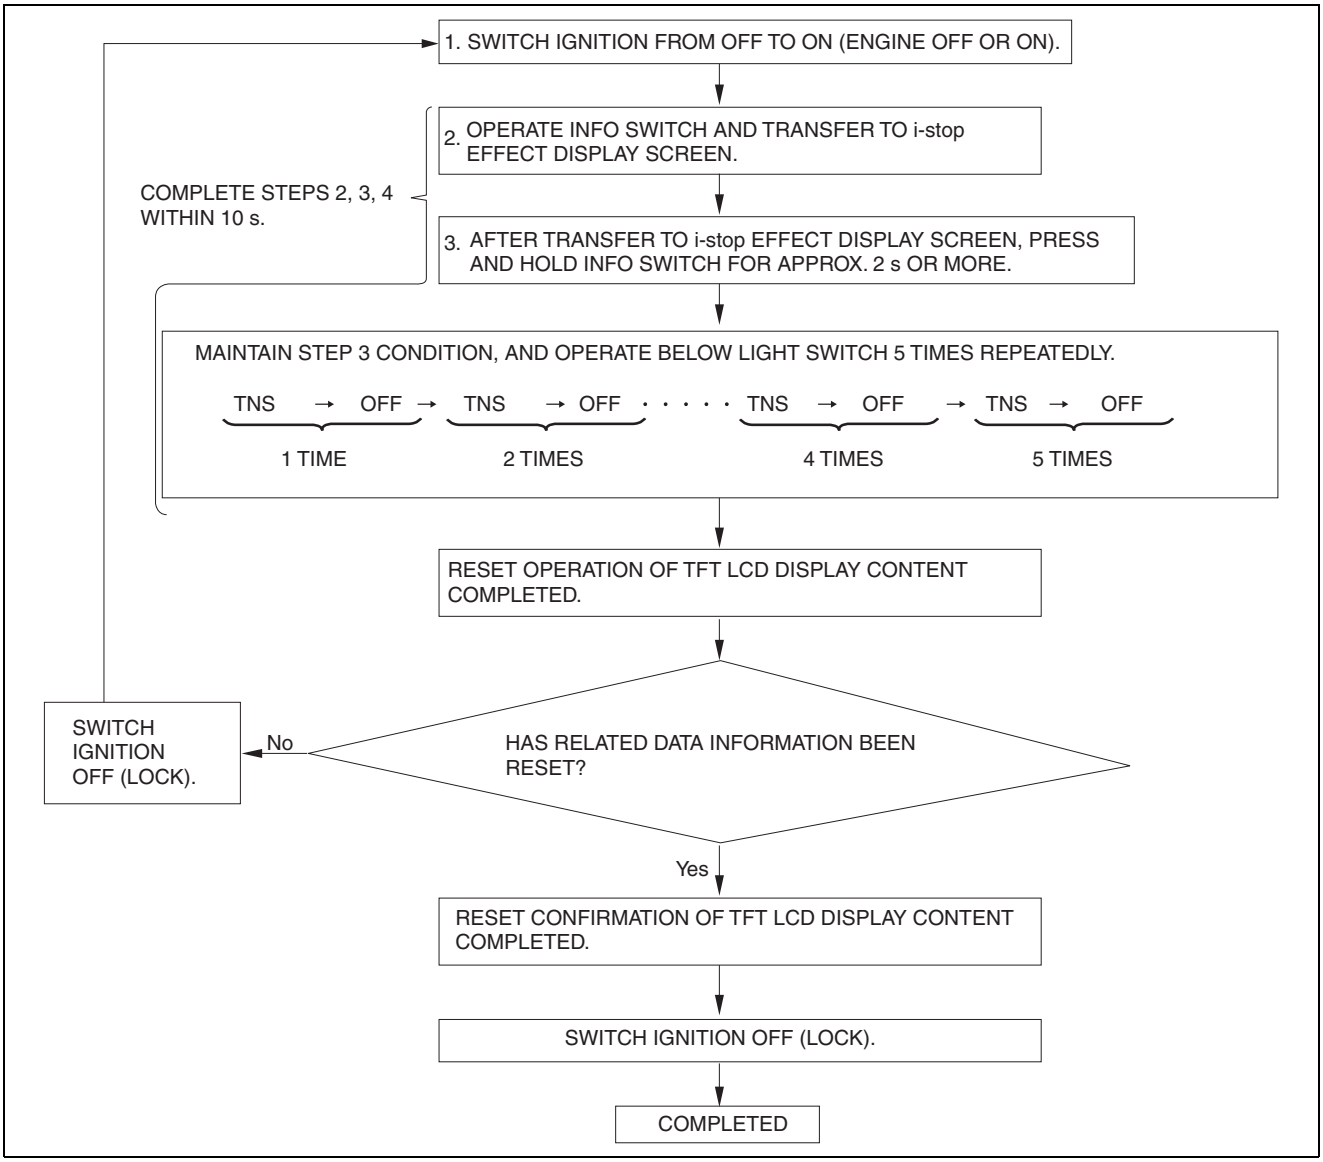
INSTRUMENT CLUSTER DATA RESET PROCEDURE

id092200034400

Caution
- **Explain the reset items to the customer for their understanding, and then perform the data reset.**

- Related information can be reset collectively using the following procedure:
  i-stop-related information
  — i-stop total time
  — i-stop time
  Trip computer-related information
  — Average fuel economy
  — Average vehicle speed
  — TRIP value

INSTRUMENTATION/DRIVER INFO.



ac5wzw0000383

FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION [2WD]

id092200012001

Warning

- **Always keep sparks and flames away from fuel when servicing the fuel system. Fuel can be easily ignited which could cause serious injury or death, and damage to equipment.**
- **Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the Fuel Line Safety Procedure, while referring to the BEFORE SERVICE PRECAUTION.**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching a vehicle.**

Caution

- **If the fuel gauge level indicates 3/4 or more, the fuel surface is higher than the fuel pump unit and fuel gauge sender unit installation surface. If servicing is performed under this condition, fuel leakage could result. Always drain the fuel before performing the operation and keep the fuel in the fuel tank at less than half.**

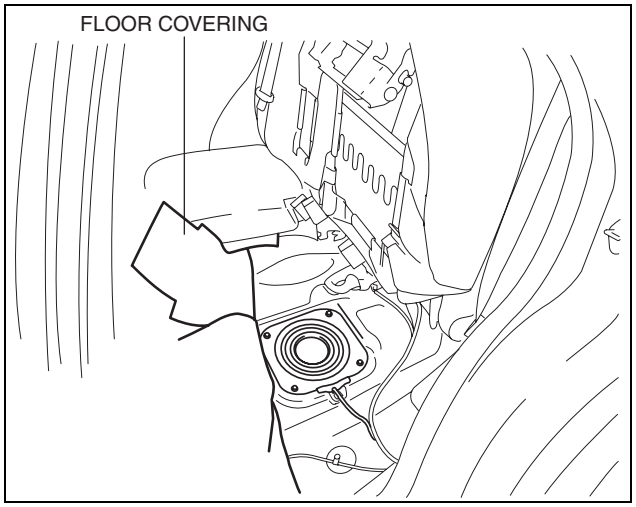
INSTRUMENTATION/DRIVER INFO.

SKYACTIV-G 2.0

Note
- For the fuel gauge sender unit removal/installation, refer to the fuel pump removal/installation because the fuel gauge sender unit is integrated with the fuel pump. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

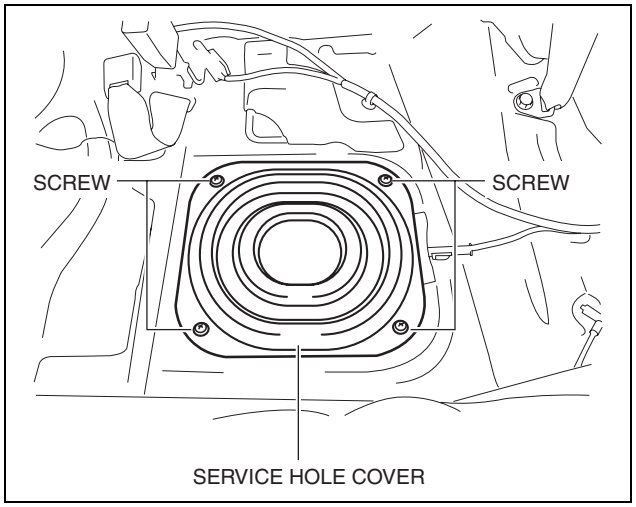
SKYACTIV-D 2.2

1. Perform the "Fuel Line Safety Procedure" referring to the "BEFORE REPAIR PROCEDURE". (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
2. If the fuel gauge level indicates 3/4 or more, refer to the "FUEL DRAINING PROCEDURE" and drain the fuel. (See 01-14B-9 FUEL DRAINING PROCEDURE [SKYACTIV-D 2.2].)
3. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
4. Remove the following parts:
   (1) Rear seat cushion (6:4 split-type seat) (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
   (2) Rear seat under installation bolt (4:2:4 split-type seat) (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
5. Partially peel back the floor covering.



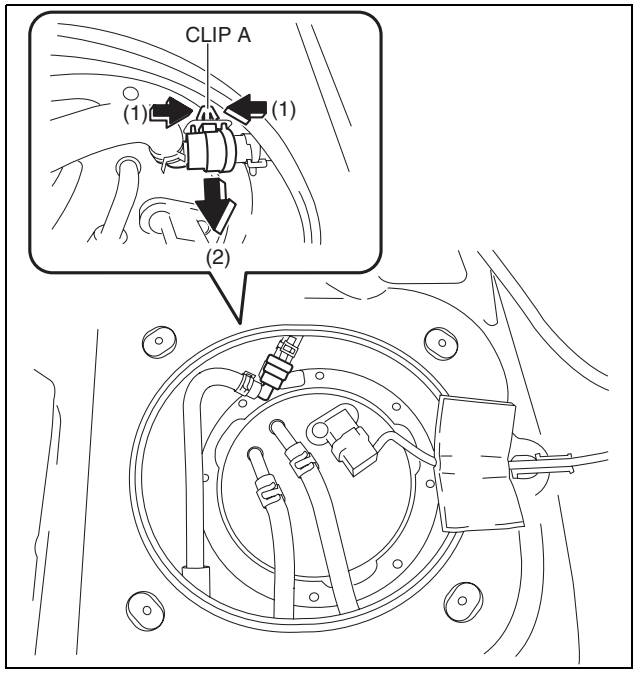
ac5wzw0000230

6. Remove the screws.
7. Remove the service hole cover.



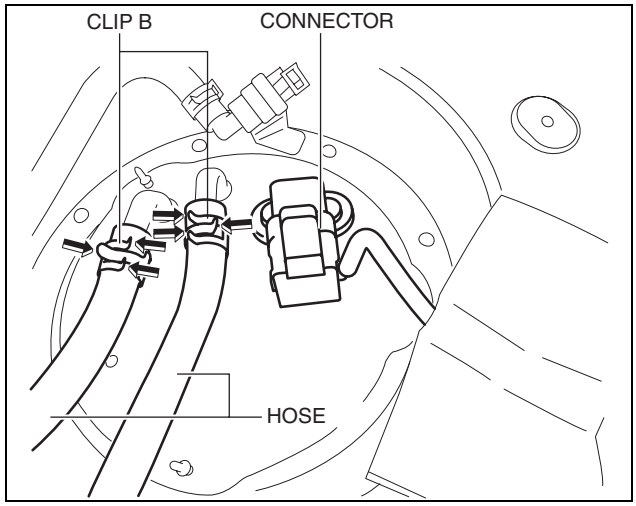
ac5wzw0000230

8. While pressing the tabs of clip A in the direction of arrows (1) shown in the figure, pull clip A in the direction of arrow (2) to detach the tabs of clip A from the fuel gauge sender unit (main).
9. Detach clip A.



ac5wzw0000230

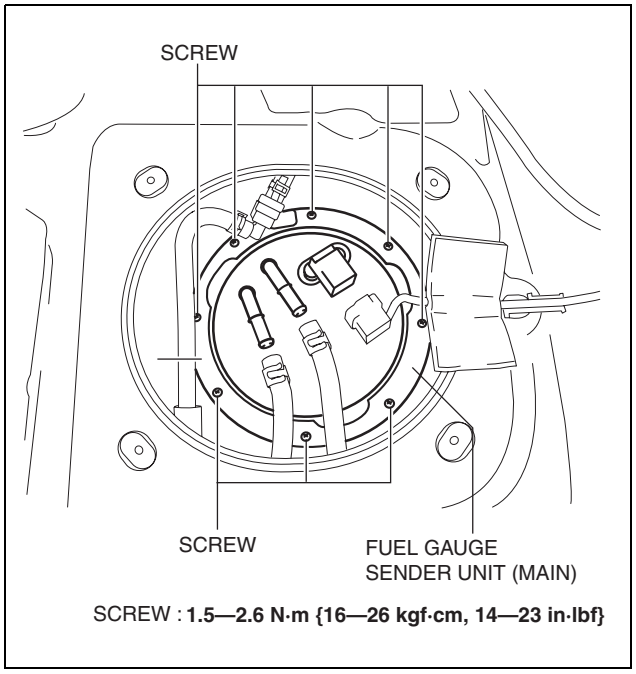
10. Disconnect the connector.
11. Disconnect the hose from the fuel gauge sender unit (main) while pressing the tabs of clips B in the direction of the arrows shown in the figure.



ac5wzw0000231

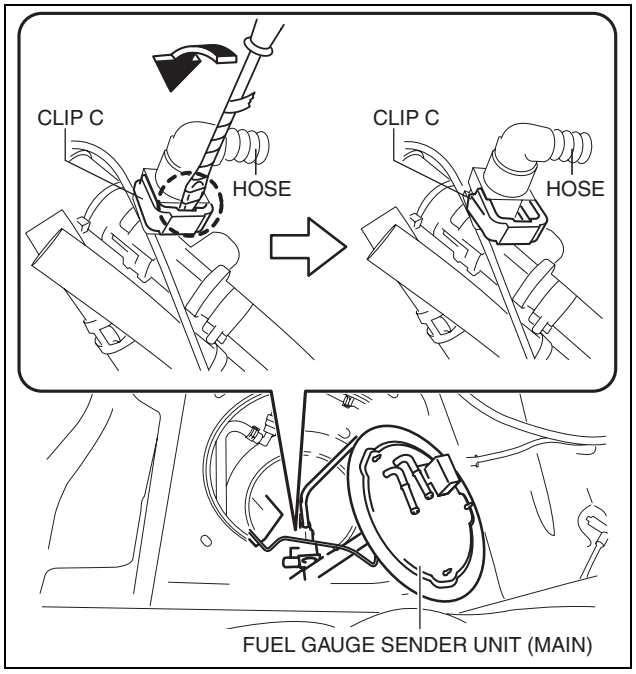
INSTRUMENTATION/DRIVER INFO.

12. Remove the screws.



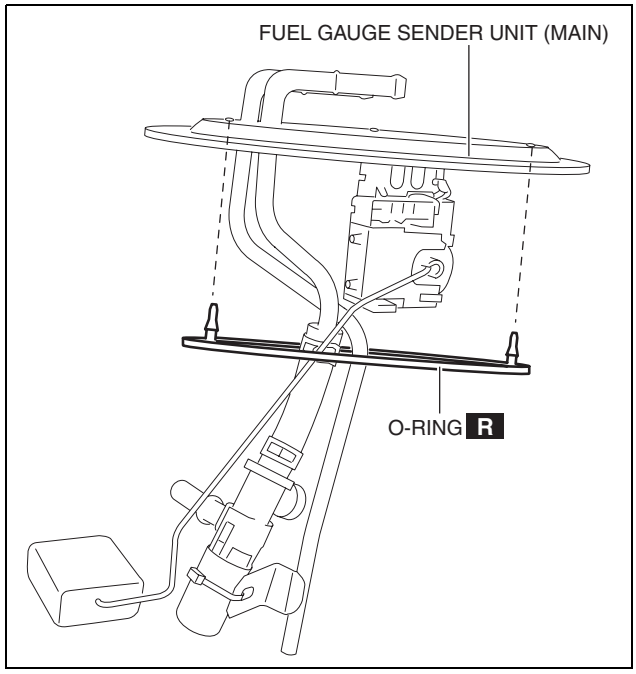
ac5wzw0000326

13. Insert a tape-wrapped flathead screwdriver into the gap between clip C and the hose shown in the figure.
14. Move the flathead screwdriver in the direction of the arrow shown in the figure to detach clip C from the hose.
15. Disconnect the hose.
16. Remove the fuel gauge sender unit (main).



ac5wzw0000231

17. Remove the O-ring.
18. Install in the reverse order of removal.
19. Perform the fuel leakage inspection referring to “AFTER SERVICE PRECAUTION”. (See 01-14B-7 AFTER SERVICE PRECAUTION [SKYACTIV-D 2.2].)



ac5wzw0000231

FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION [4WD]

id092200012002

Warning

- **Always keep sparks and flames away from fuel when servicing the fuel system. Fuel can be easily ignited which could cause serious injury or death, and damage to equipment.**
- **Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the Fuel Line Safety Procedure, while referring to the BEFORE SERVICE PRECAUTION.**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching a vehicle.**

Caution

- **If the fuel gauge level indicates 3/4 or more, the fuel surface is higher than the fuel pump unit and fuel gauge sender unit installation surface. If servicing is performed under this condition, fuel leakage could result. Always drain the fuel before performing the operation and keep the fuel in the fuel tank at less than half.**

SKYACTIV-G 2.0
Fuel gauge sender unit (main)

Note

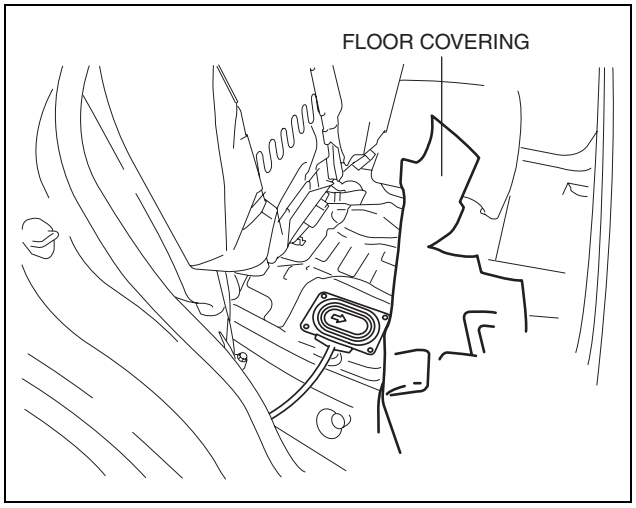
- For the fuel gauge sender unit removal/installation, refer to the fuel pump removal/installation because the fuel gauge sender unit is integrated with the fuel pump. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

Fuel gauge sender unit (sub)

1. Perform the "Fuel Line Safety Procedure" referring to the "BEFORE REPAIR PROCEDURE". (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)
2. If the fuel gauge level indicates 3/4 or more, refer to the "FUEL DRAINING PROCEDURE" and drain the fuel. (See 01-14A-11 FUEL DRAINING PROCEDURE [SKYACTIV-G 2.0].)
3. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
4. Remove the following parts:
   (1) Rear seat cushion (6:4 split type) (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
   (2) Rear seat under installation bolt (4:2:4 split type) (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)

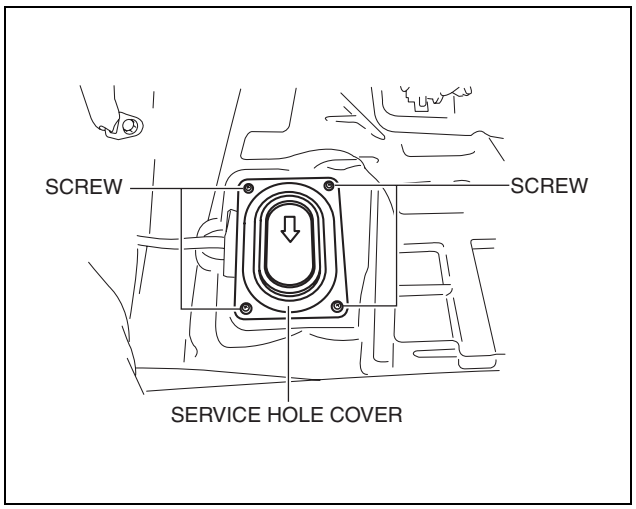
INSTRUMENTATION/DRIVER INFO.

5. Partially peel back the floor covering.



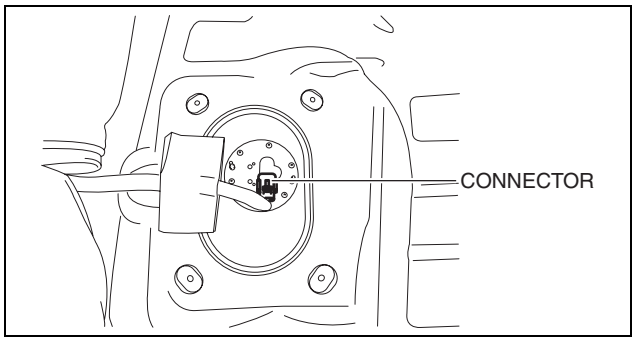
ac5wzw0000230

6. Remove the screws.
7. Remove the service hole cover.



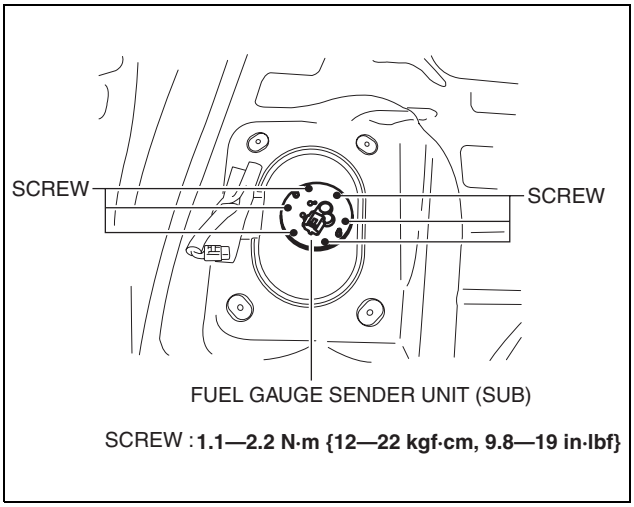
ac5wzw0000230

8. Disconnect the connector.



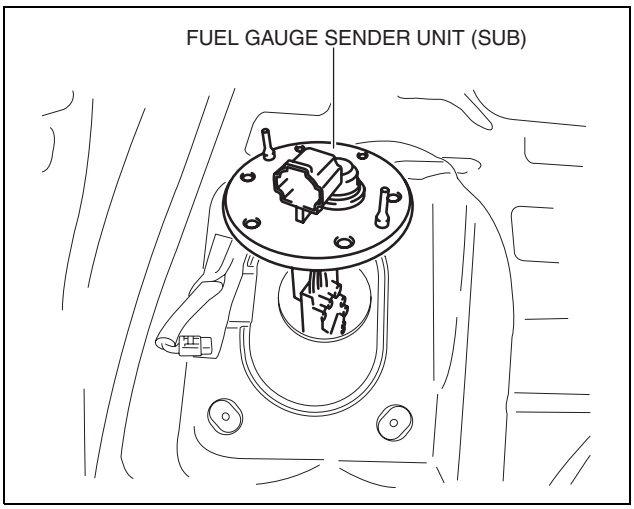
ac5wzw0000230

9. Remove the screws.



ac5wzw0000230

10. Remove the fuel gauge sender unit (sub).
11. Install in the reverse order of removal.
12. Perform the fuel leakage inspection referring to “AFTER SERVICE PRECAUTION”. (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)



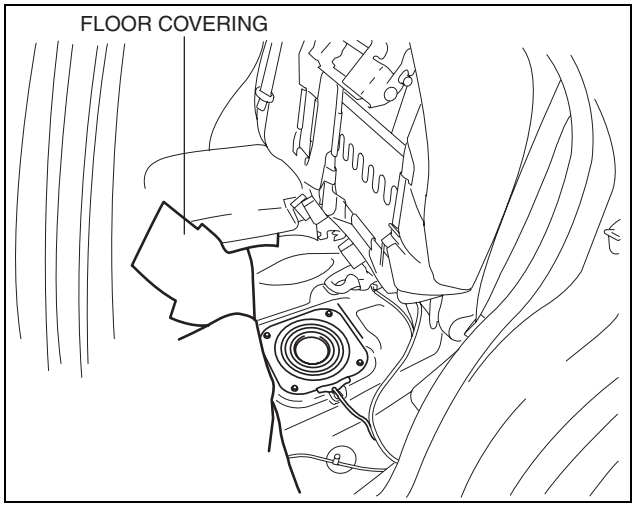
ac5wzw0000230

SKYACTIV-D 2.2
Fuel gauge sender unit (main)

1. Perform the "Fuel Line Safety Procedure" referring to the "BEFORE REPAIR PROCEDURE". (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
2. If the fuel gauge level indicates 3/4 or more, refer to the "FUEL DRAINING PROCEDURE" and drain the fuel. (See 01-14B-9 FUEL DRAINING PROCEDURE [SKYACTIV-D 2.2].)
3. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
4. Remove the following parts:
   (1) Rear seat cushion (6:4 split-type seat) (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
   (2) Rear seat under installation bolt (4:2:4 split-type seat) (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)

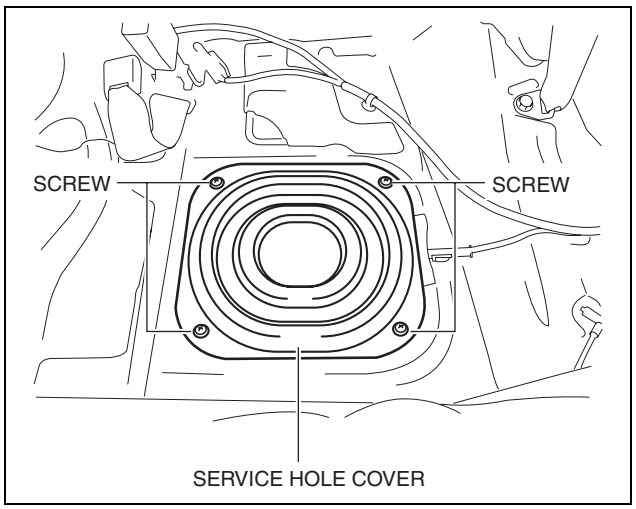
INSTRUMENTATION/DRIVER INFO.

5. Partially peel back the floor covering.



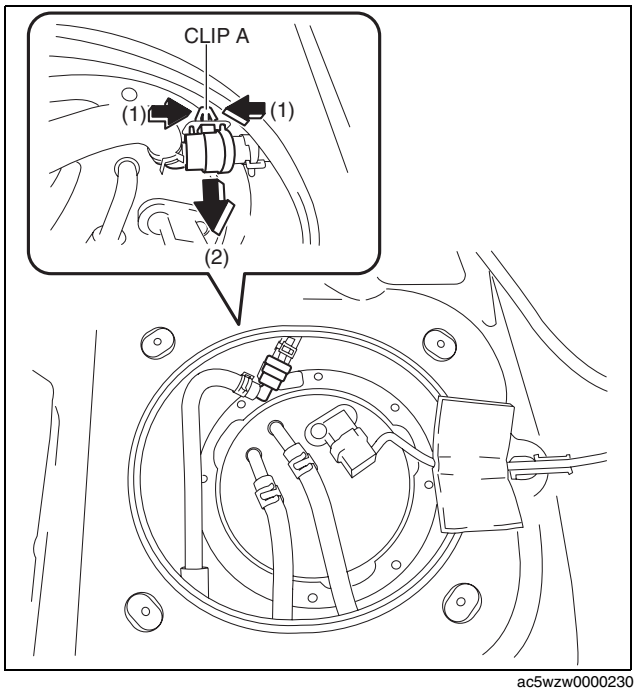
ac5wzw0000230

6. Remove the screws.
7. Remove the service hole cover.



ac5wzw0000230

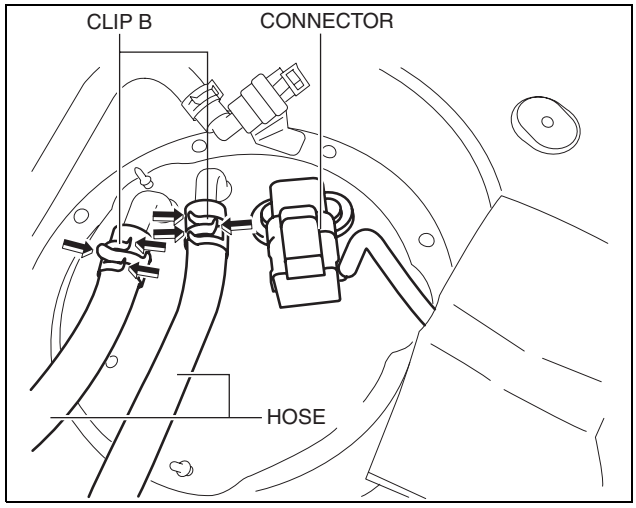
8. While pressing the tabs of clip A in the direction of arrows (1) shown in the figure, pull clip A in the direction of arrow (2) to detach the tabs of clip A from the fuel gauge sender unit (main).
9. Detach clip A.



ac5wzw0000230

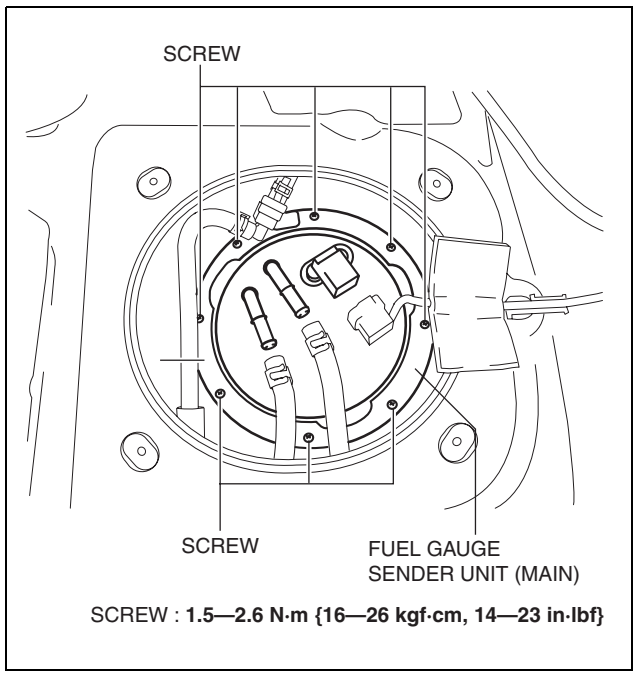
INSTRUMENTATION/DRIVER INFO.

10. Disconnect the connector.
11. Disconnect the hose from the fuel gauge sender unit (main) while pressing the tabs of clips B in the direction of the arrows shown in the figure.



ac5wzw0000231

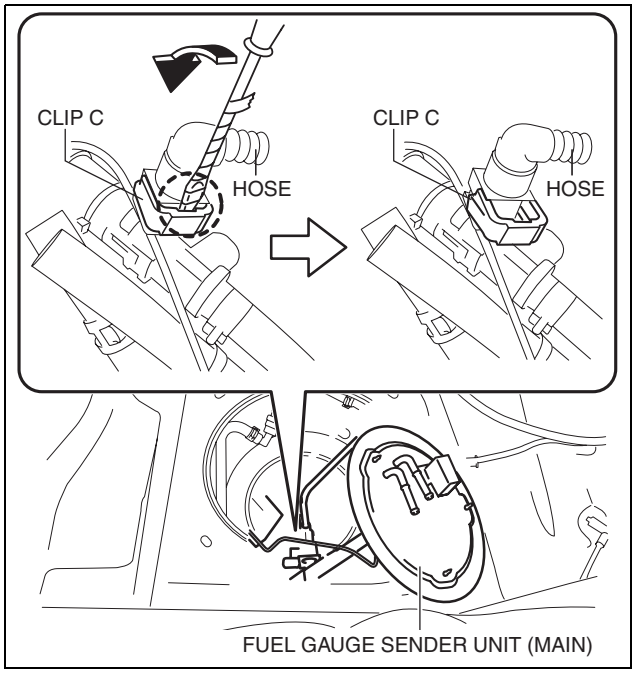
12. Remove the screws.



ac5wzw0000326

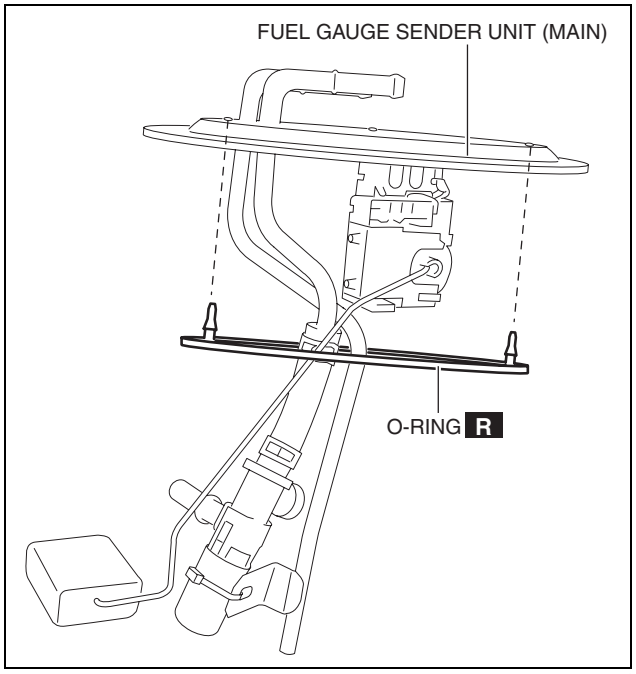
INSTRUMENTATION/DRIVER INFO.

13. Insert a tape-wrapped flathead screwdriver into the gap between clip C and the hose shown in the figure.
14. Move the flathead screwdriver in the direction of the arrow shown in the figure to detach clip C from the hose.
15. Disconnect the hose.
16. Remove the fuel gauge sender unit (main).



ac5wzw0000231

17. Remove the O-ring.
18. Install in the reverse order of removal.
19. Perform the fuel leakage inspection referring to “AFTER SERVICE PRECAUTION”. (See 01-14B-7 AFTER SERVICE PRECAUTION [SKYACTIV-D 2.2].)



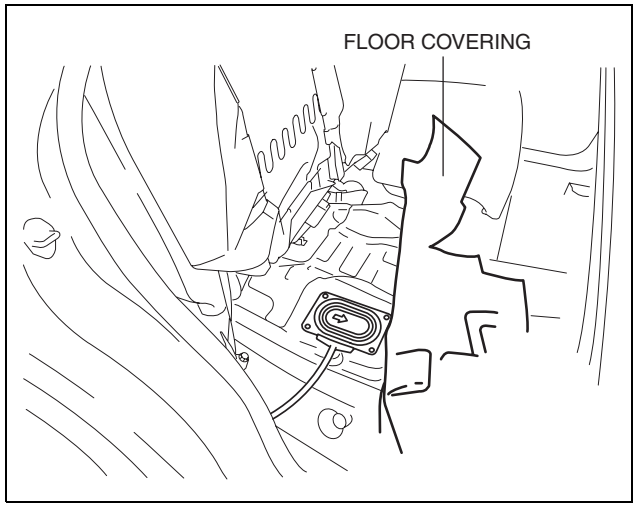
ac5wzw0000231

Fuel gauge sender unit (sub)

1. Perform the "Fuel Line Safety Procedure" referring to the "BEFORE REPAIR PROCEDURE". (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
2. If the fuel gauge level indicates 3/4 or more, refer to the "FUEL DRAINING PROCEDURE" and drain the fuel. (See 01-14B-9 FUEL DRAINING PROCEDURE [SKYACTIV-D 2.2].)
3. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
4. Remove the following parts:
   (1) Rear seat cushion (6:4 split-type seat) (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
   (2) Rear seat under installation bolt (4:2:4 split-type seat) (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)

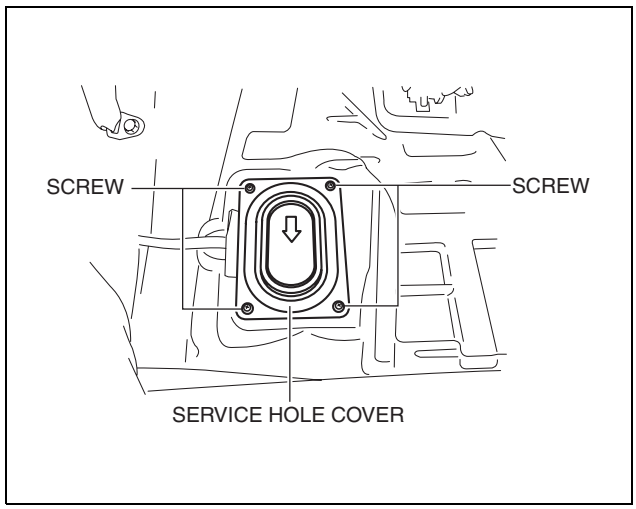
INSTRUMENTATION/DRIVER INFO.

5. Partially peel back the floor covering.



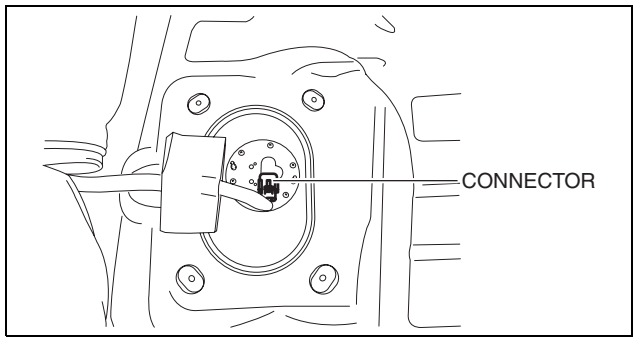
ac5wzw0000230

6. Remove the screws.
7. Remove the service hole cover.



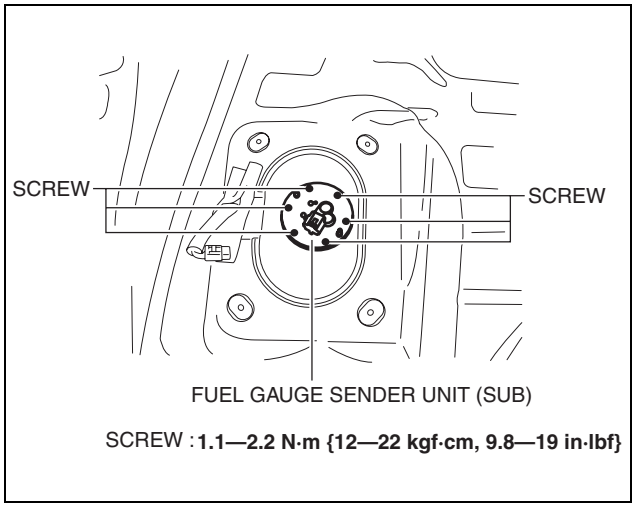
ac5wzw0000230

8. Disconnect the connector.



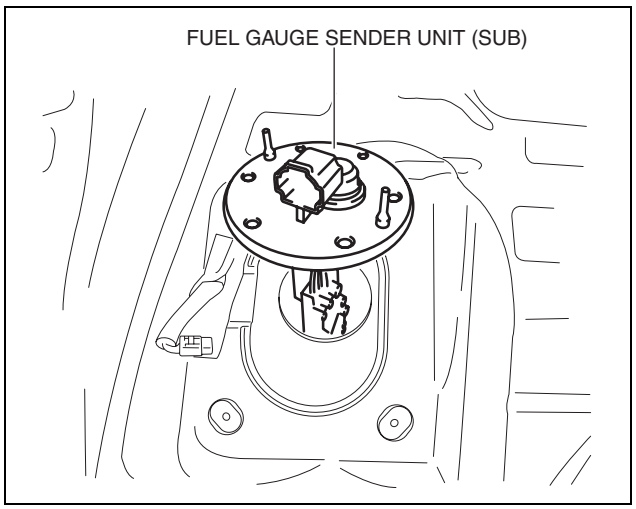
ac5wzw0000230

9. Remove the screws.



ac5wzw0000230

10. Remove the fuel gauge sender unit (sub).
11. Install in the reverse order of removal.
12. Perform the fuel leakage inspection referring to “AFTER SERVICE PRECAUTION”. (See 01-14B-7 AFTER SERVICE PRECAUTION [SKYACTIV-D 2.2].)



ac5wzw0000230

FUEL GAUGE SENDER UNIT INSPECTION [2WD]

id092200012101

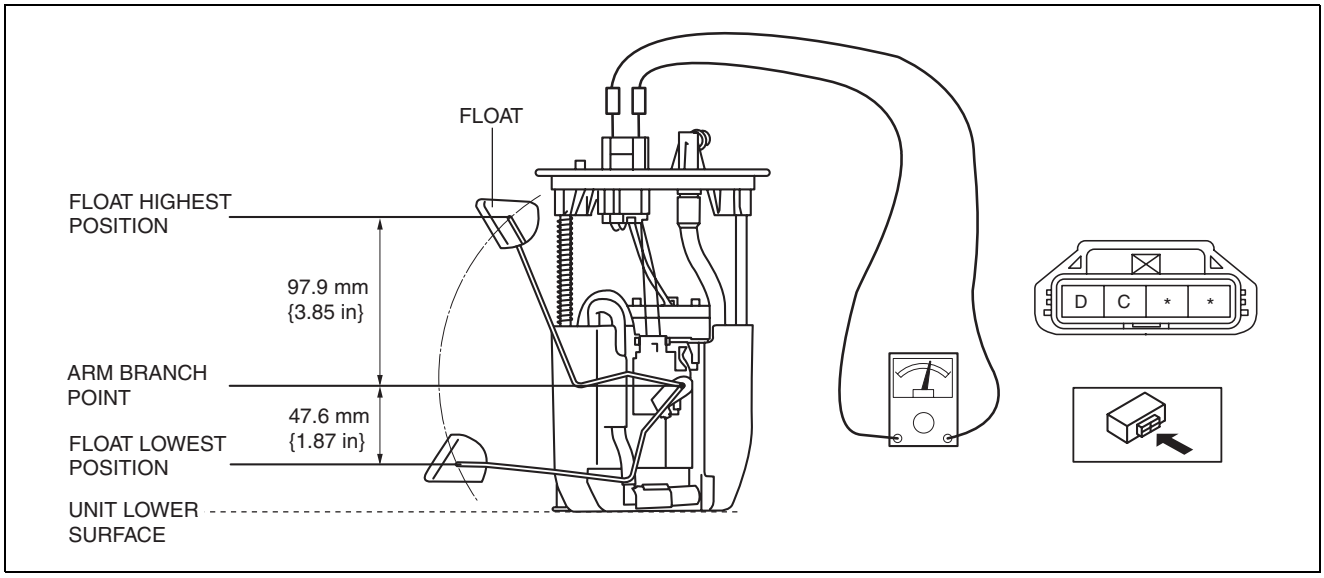
SKYACTIV-G 2.0

Note

- For the fuel gauge sender unit removal/installation, refer to the fuel pump removal/installation because the fuel gauge sender unit is integrated with the fuel pump. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

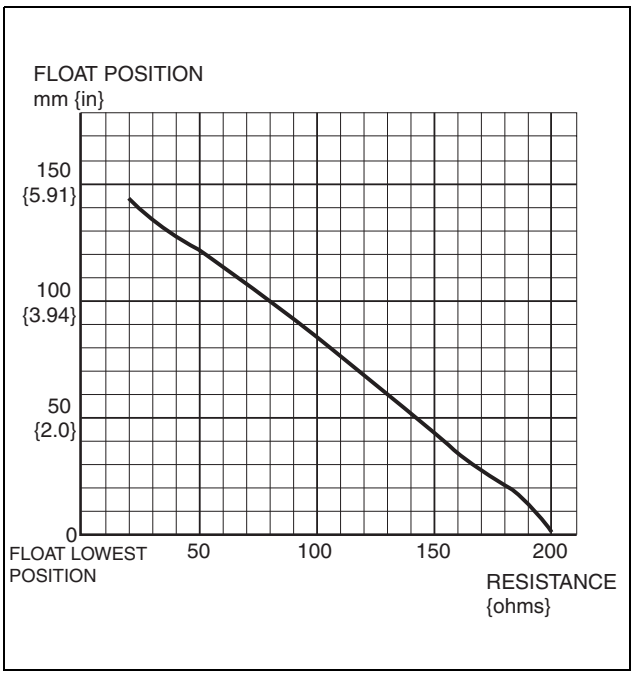
INSTRUMENTATION/DRIVER INFO.

1. Verify that the resistance at fuel gauge sender unit terminals D and C is as indicated in the table according to the height of the float.



ac5wzw0000377

- If not as indicated in the table, replace the fuel gauge sender unit.



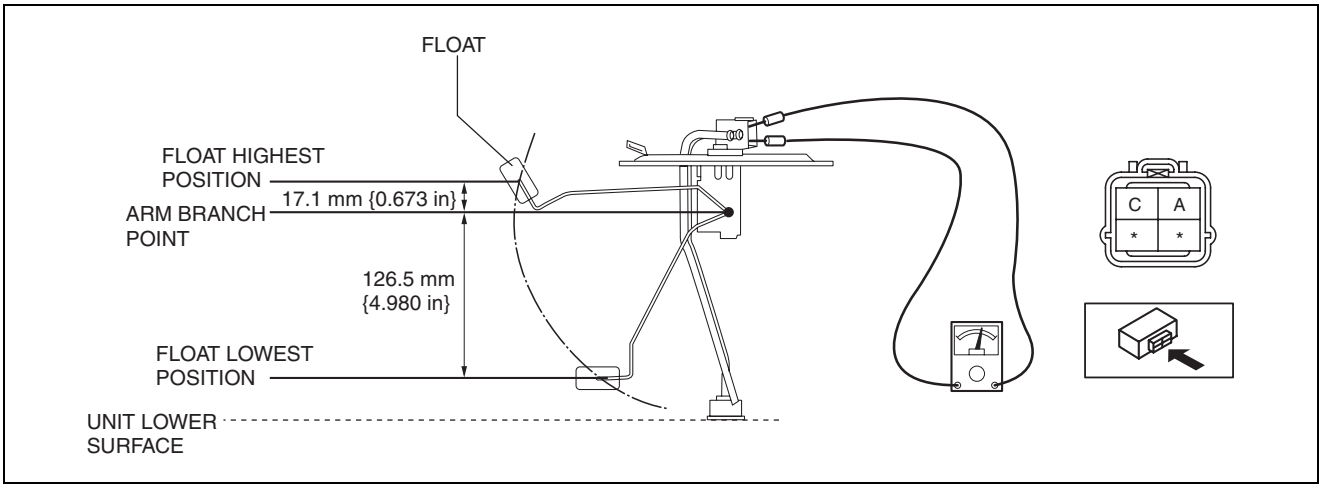
ac5wzw0000377

SKYACTIV-D 2.2

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Rear seat cushion (6:4 split-type seat) (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
   (2) Rear seat under installation bolt (4:2:4 split-type seat) (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) Fuel gauge sender unit (See 09-22-23 FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION [2WD].)

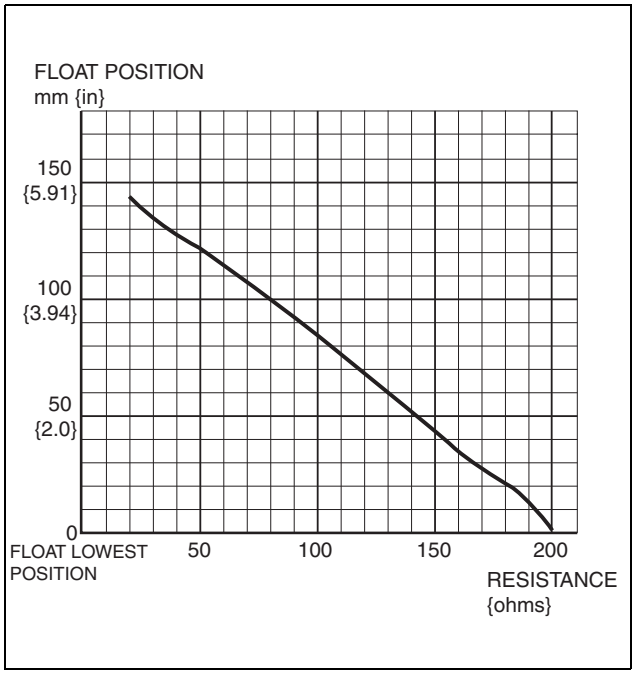
INSTRUMENTATION/DRIVER INFO.

3. Verify that the resistance at fuel gauge sender unit terminals A and C is as indicated in the table according to the height of the float.



ac5wzw0000326

- If not as indicated in the table, replace the fuel gauge sender unit.



ac5wzw0000377

FUEL GAUGE SENDER UNIT INSPECTION [4WD]

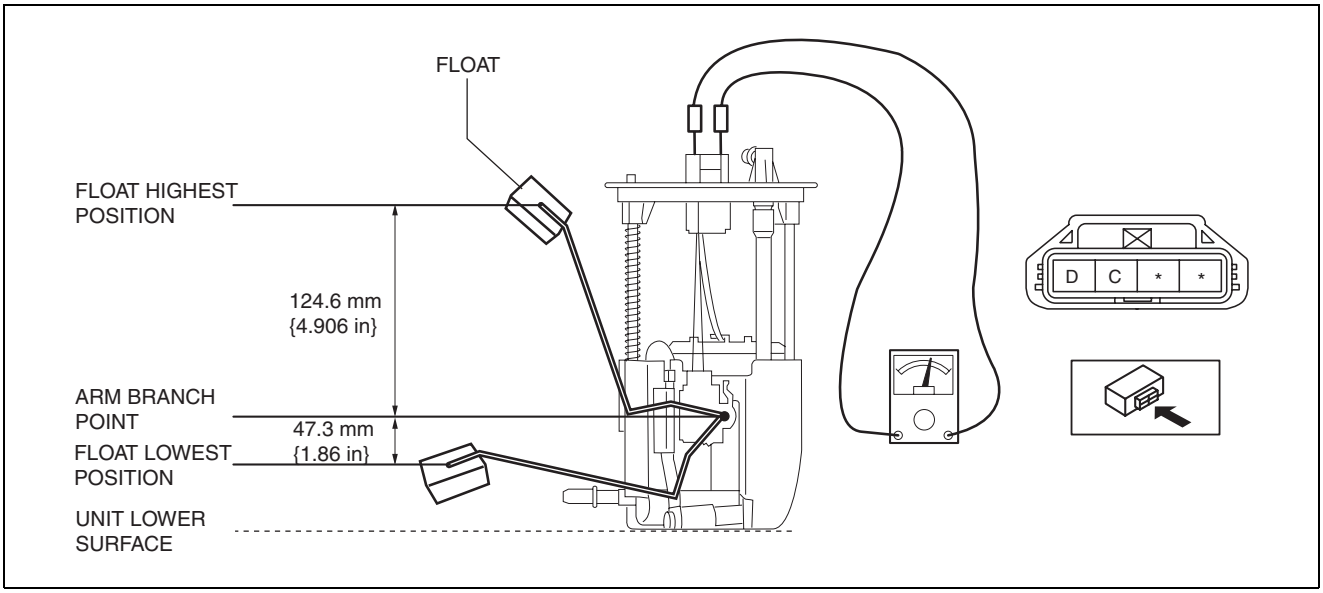
id092200012102

SKYACTIV-G 2.0
Fuel gauge sender unit (main)

Note
- For the fuel gauge sender unit removal/installation, refer to the fuel pump removal/installation because the fuel gauge sender unit is integrated with the fuel pump. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

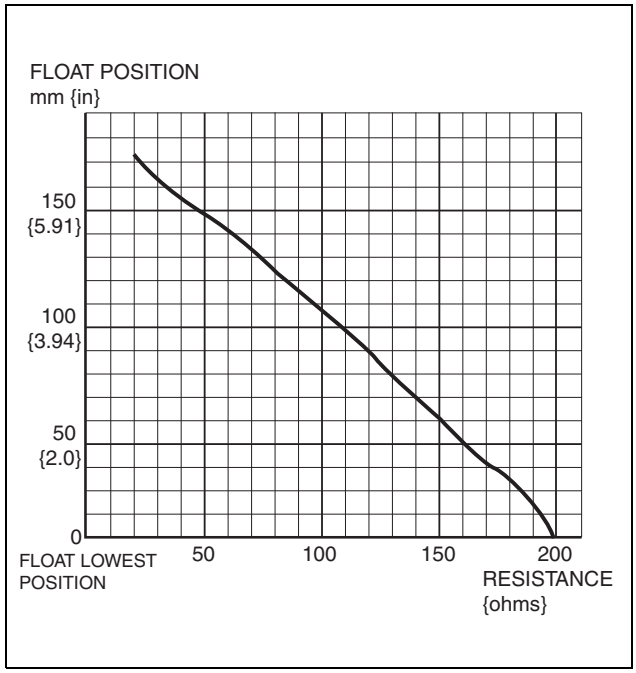
INSTRUMENTATION/DRIVER INFO.

1. Verify that the resistance at fuel gauge sender unit (main) terminals D and C is as indicated in the table according to the height of the float.



ac5wzw0000377

- If not as indicated in the table, replace the fuel gauge sender unit (main).



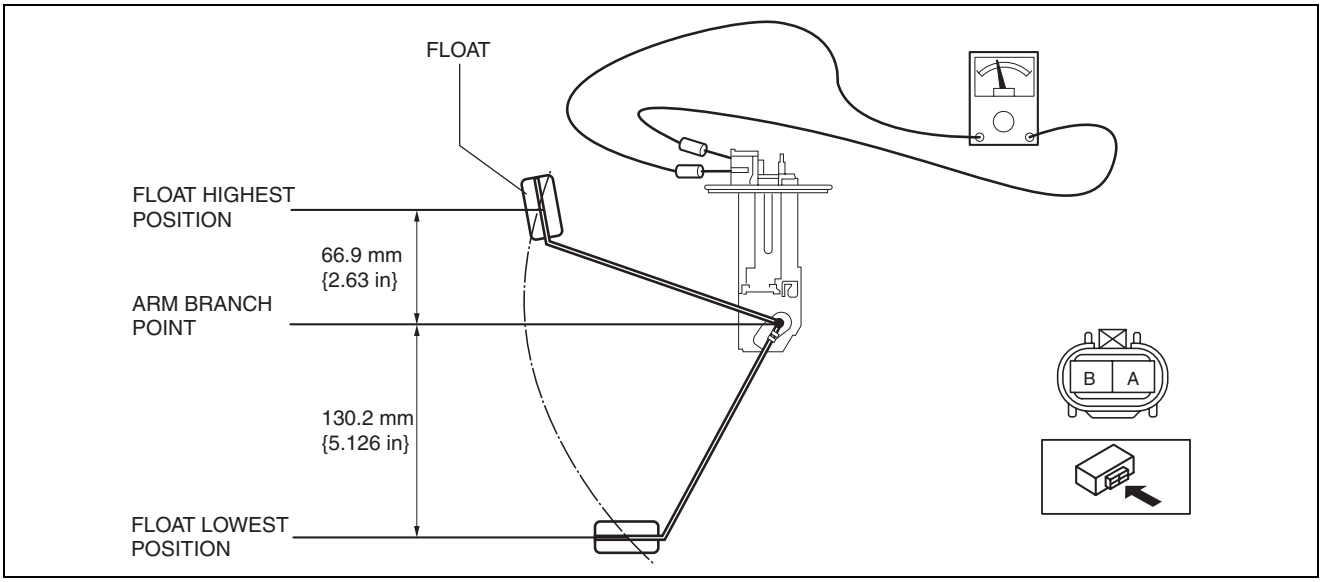
ac5wzw0000377

Fuel gauge sender unit (sub)

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Rear seat cushion (6:4 split-type seat) (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
   (2) Rear seat under installation bolt (4:2:4 split-type seat) (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) Fuel gauge sender unit (sub). (See 09-22-27 FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION [4WD].)

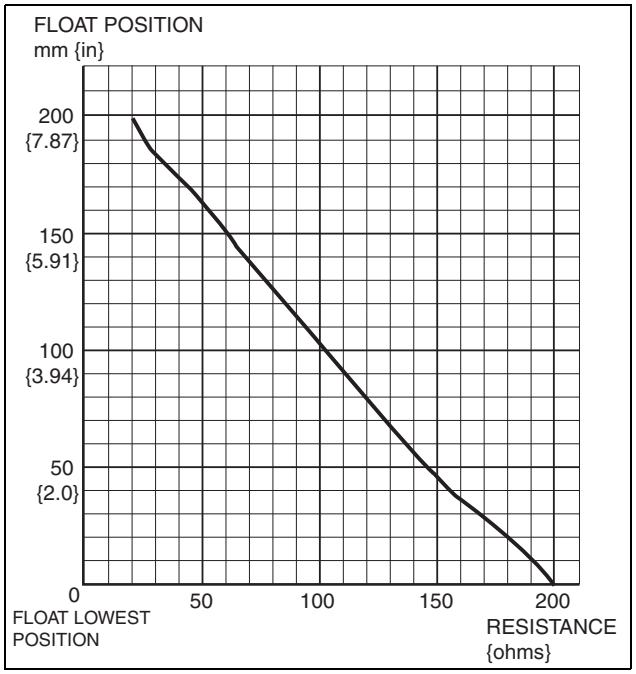
INSTRUMENTATION/DRIVER INFO.

3. Verify that the resistance at fuel gauge sender unit (sub) terminals B and A is as indicated in the table according to the height of the float.



ac5wzw0000377

- If not as indicated in the table, replace the fuel gauge sender unit (sub).



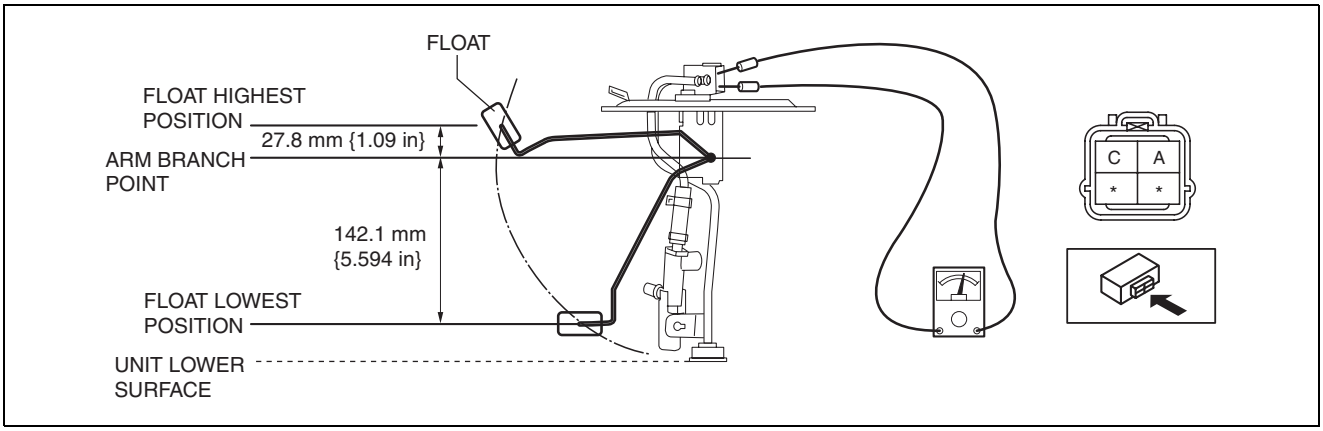
ac5wzw0000378

SKYACTIV-D 2.2
Fuel gauge sender unit (main)

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Rear seat cushion (6:4 split-type seat) (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
   (2) Rear seat under installation bolt (4:2:4 split-type seat) (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) Fuel gauge sender unit (main). (See 09-22-27 FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION [4WD].)

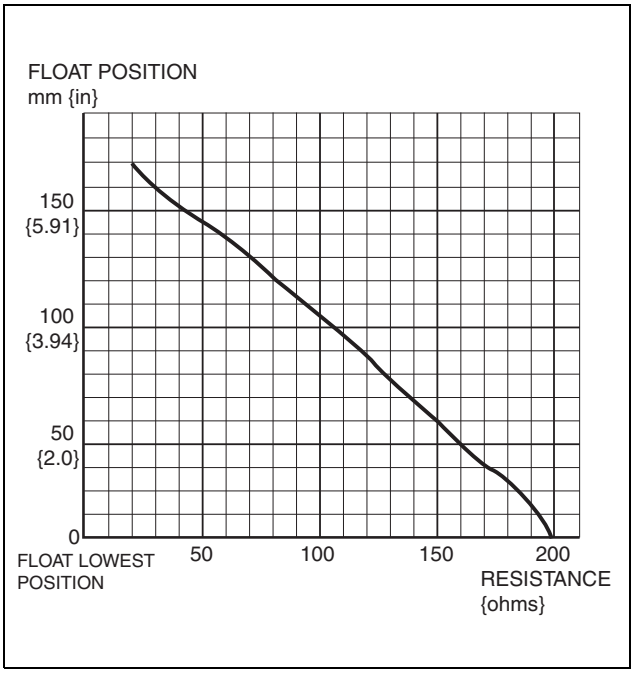
INSTRUMENTATION/DRIVER INFO.

3. Verify that the resistance at fuel gauge sender unit (main) terminals A and C is as indicated in the table according to the height of the float.



ac5wzw0000326

- If not as indicated in the table, replace the fuel gauge sender unit (main).



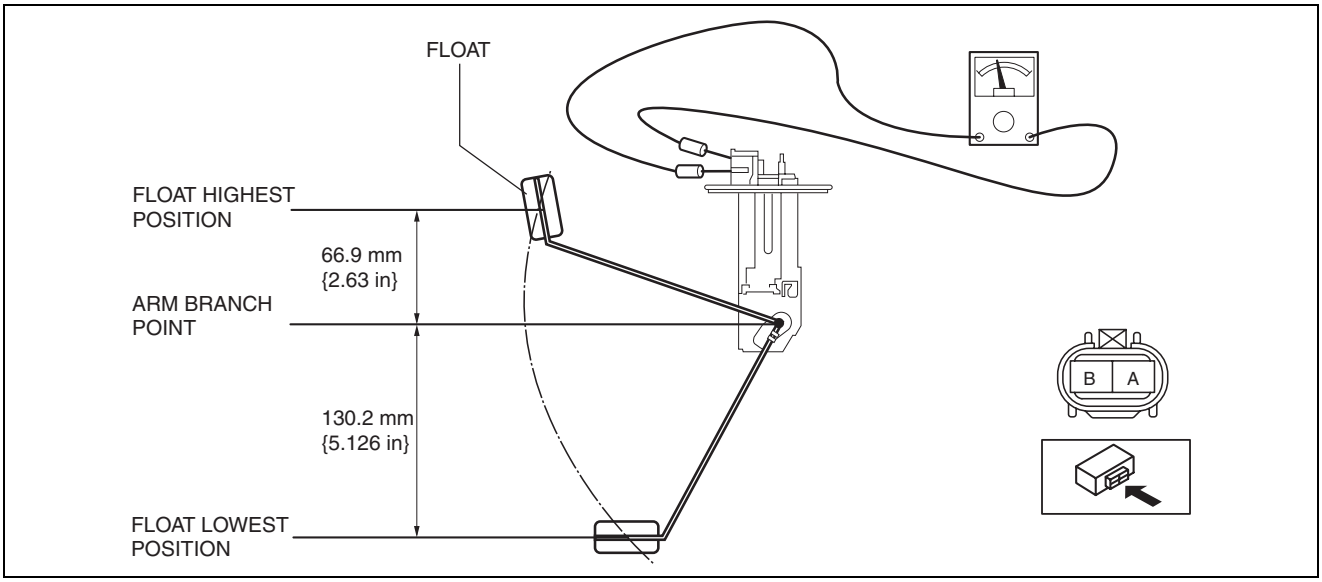
ac5wzw0000378

Fuel gauge sender unit (sub)

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Rear seat cushion (6:4 split-type seat) (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
   (2) Rear seat under installation bolt (4:2:4 split-type seat) (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) Fuel gauge sender unit (sub). (See 09-22-27 FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION [4WD].)

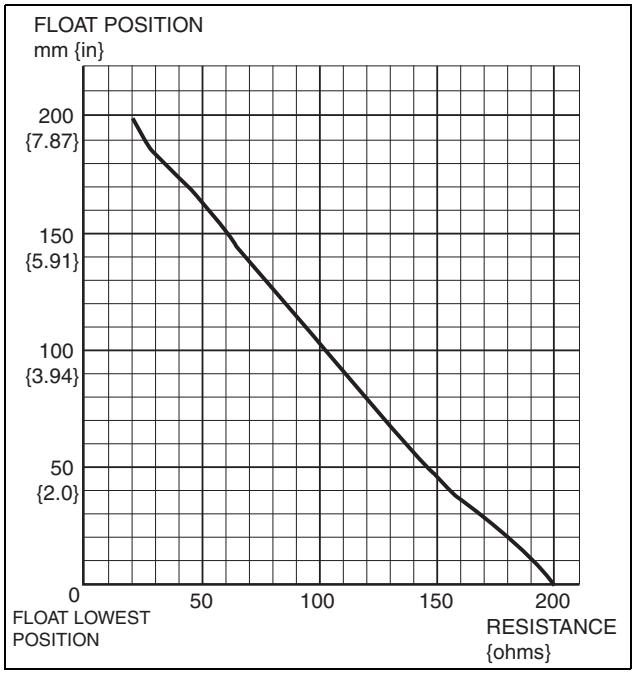
INSTRUMENTATION/DRIVER INFO.

3. Verify that the resistance at fuel gauge sender unit (sub) terminals B and A is as indicated in the table according to the height of the float.



ac5wzw0000377

- If not as indicated in the table, replace the fuel gauge sender unit (sub).



ac5wzw0000378

OIL PRESSURE SWITCH REMOVAL/INSTALLATION

id092200029100

Note

- For the oil pressure switch removal/installation, refer to the engine oil solenoid valve removal installation because the oil pressure switch is installed to the engine oil solenoid valve. (See 01-11A-10 ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

OIL PRESSURE SWITCH INSPECTION

id092200012500

1. Switch the ignition ON (engine off) and verify that the oil pressure warning light is illuminated.
2. Start the engine and verify that the oil pressure warning light turns off.
   - If the oil pressure warning light is not illuminated or remains illuminated, inspect the wiring harness between the oil pressure switch and the PCM and CAN line between the PCM and the instrument cluster.
     — If the related wiring harnesses are not malfunctioning, inspect the oil pressure. (See 01-11A-10 ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
       - If the oil pressure is normal, replace the oil pressure switch.

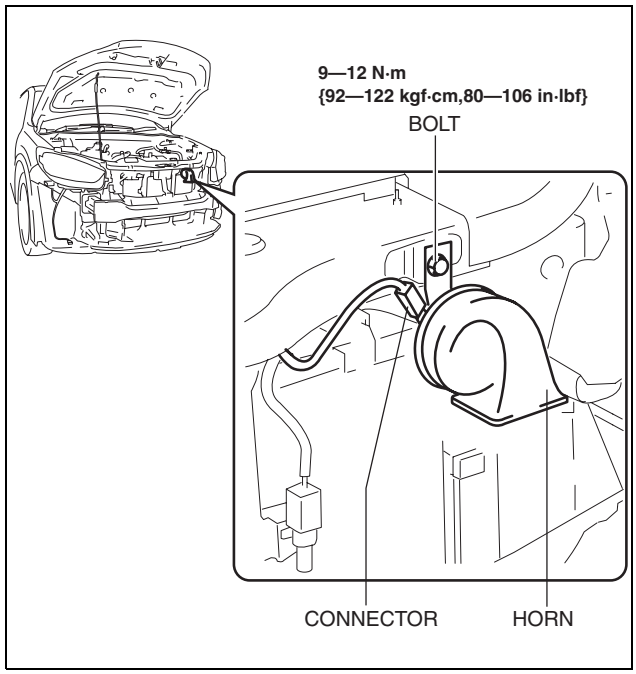
INSTRUMENTATION/DRIVER INFO.

HORN REMOVAL/INSTALLATION

id092200012600

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].
2. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Disconnect the connector.

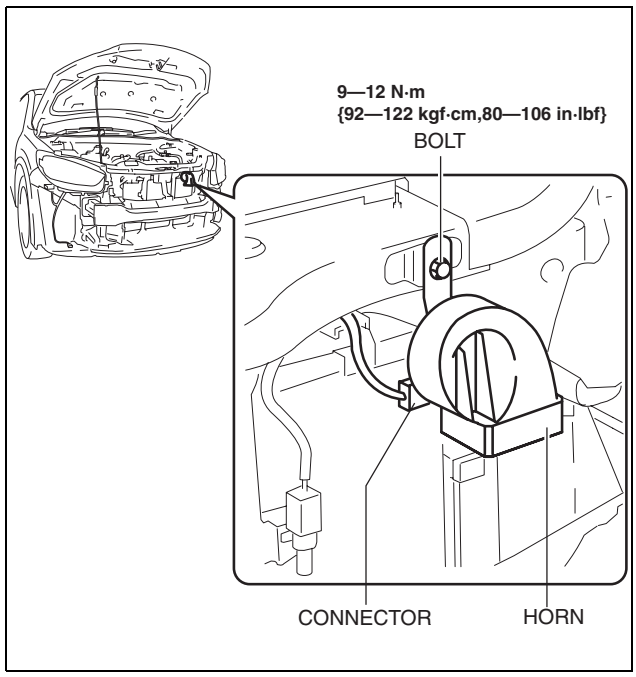
TYPE A



ac5wzw0000010

TYPE B

4. Remove the bolt.
5. Remove the horn.
6. Install in the reverse order of removal.



ac5wzw0000010

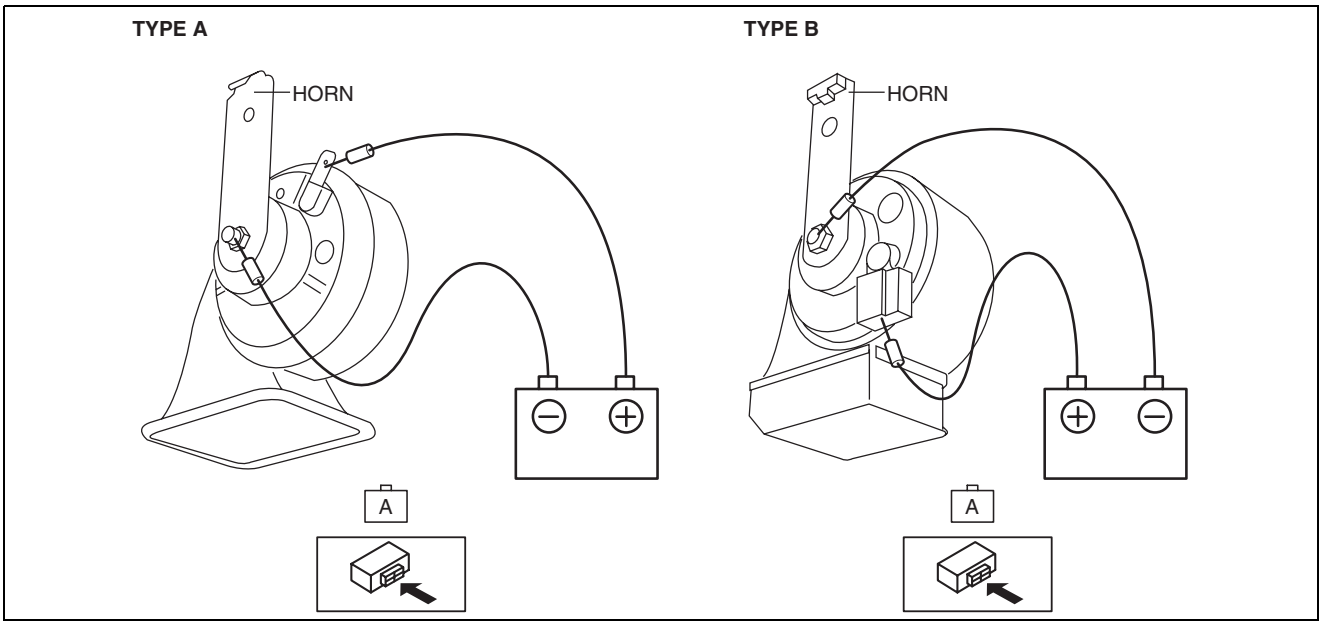
HORN INSPECTION

id092200012700

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

INSTRUMENTATION/DRIVER INFO.

2. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove the horn. (See 09-22-41 HORN INSPECTION.)
4. Apply battery positive voltage to horn terminal A, and connect the horn retaining bolt to ground as shown in the figure, and then verify that the horn sounds.



ac5jjw00000655

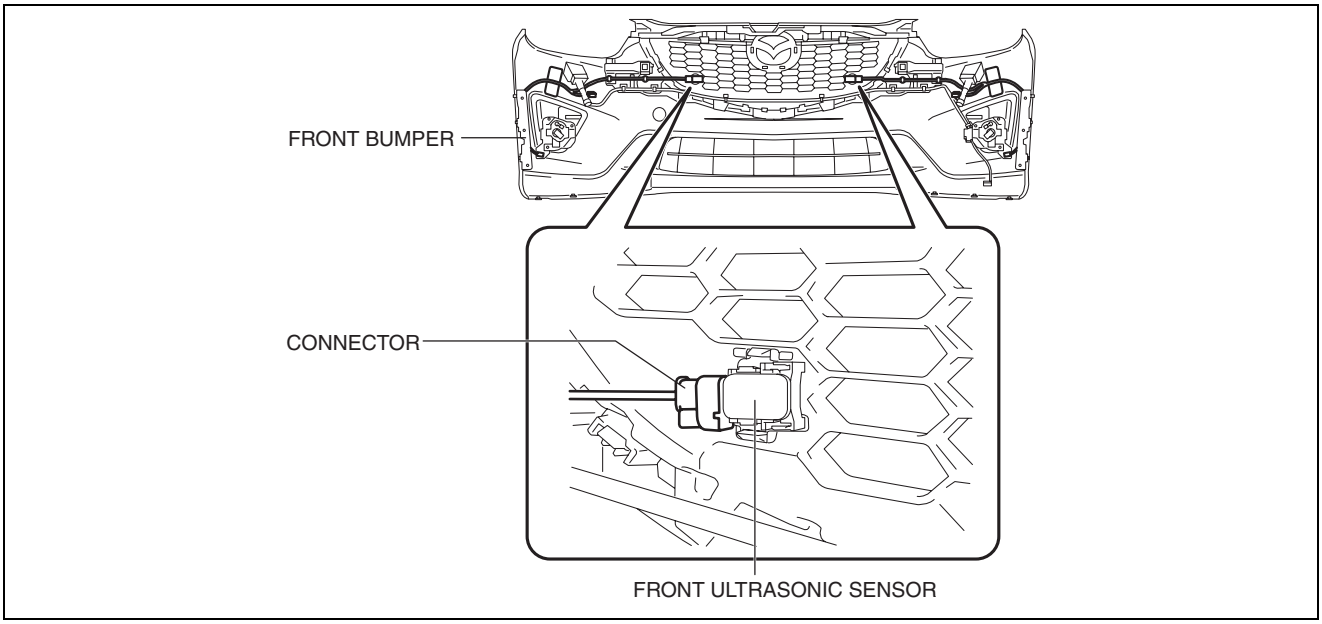
- If the horn does not sound, replace the horn.

FRONT ULTRASONIC SENSOR REMOVAL/INSTALLATION

id092200030800

Front Ultrasonic Sensor

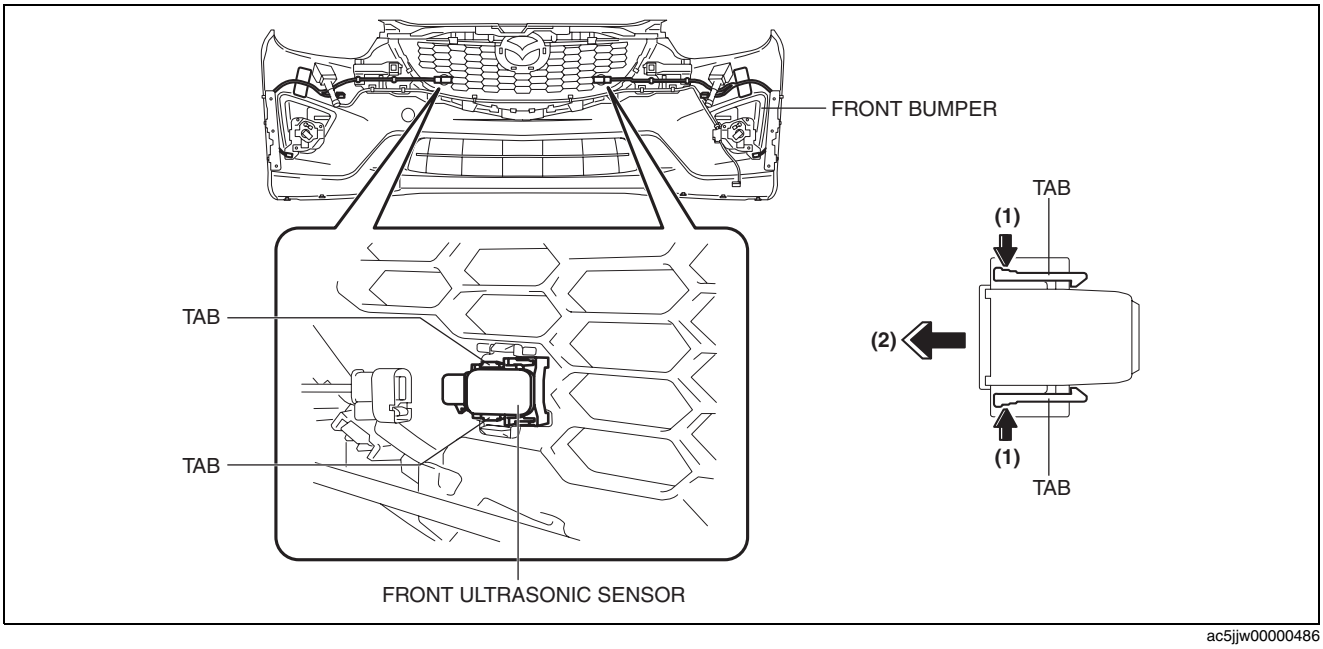
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Disconnect the connector.



ac5jjw00000485

INSTRUMENTATION/DRIVER INFO.

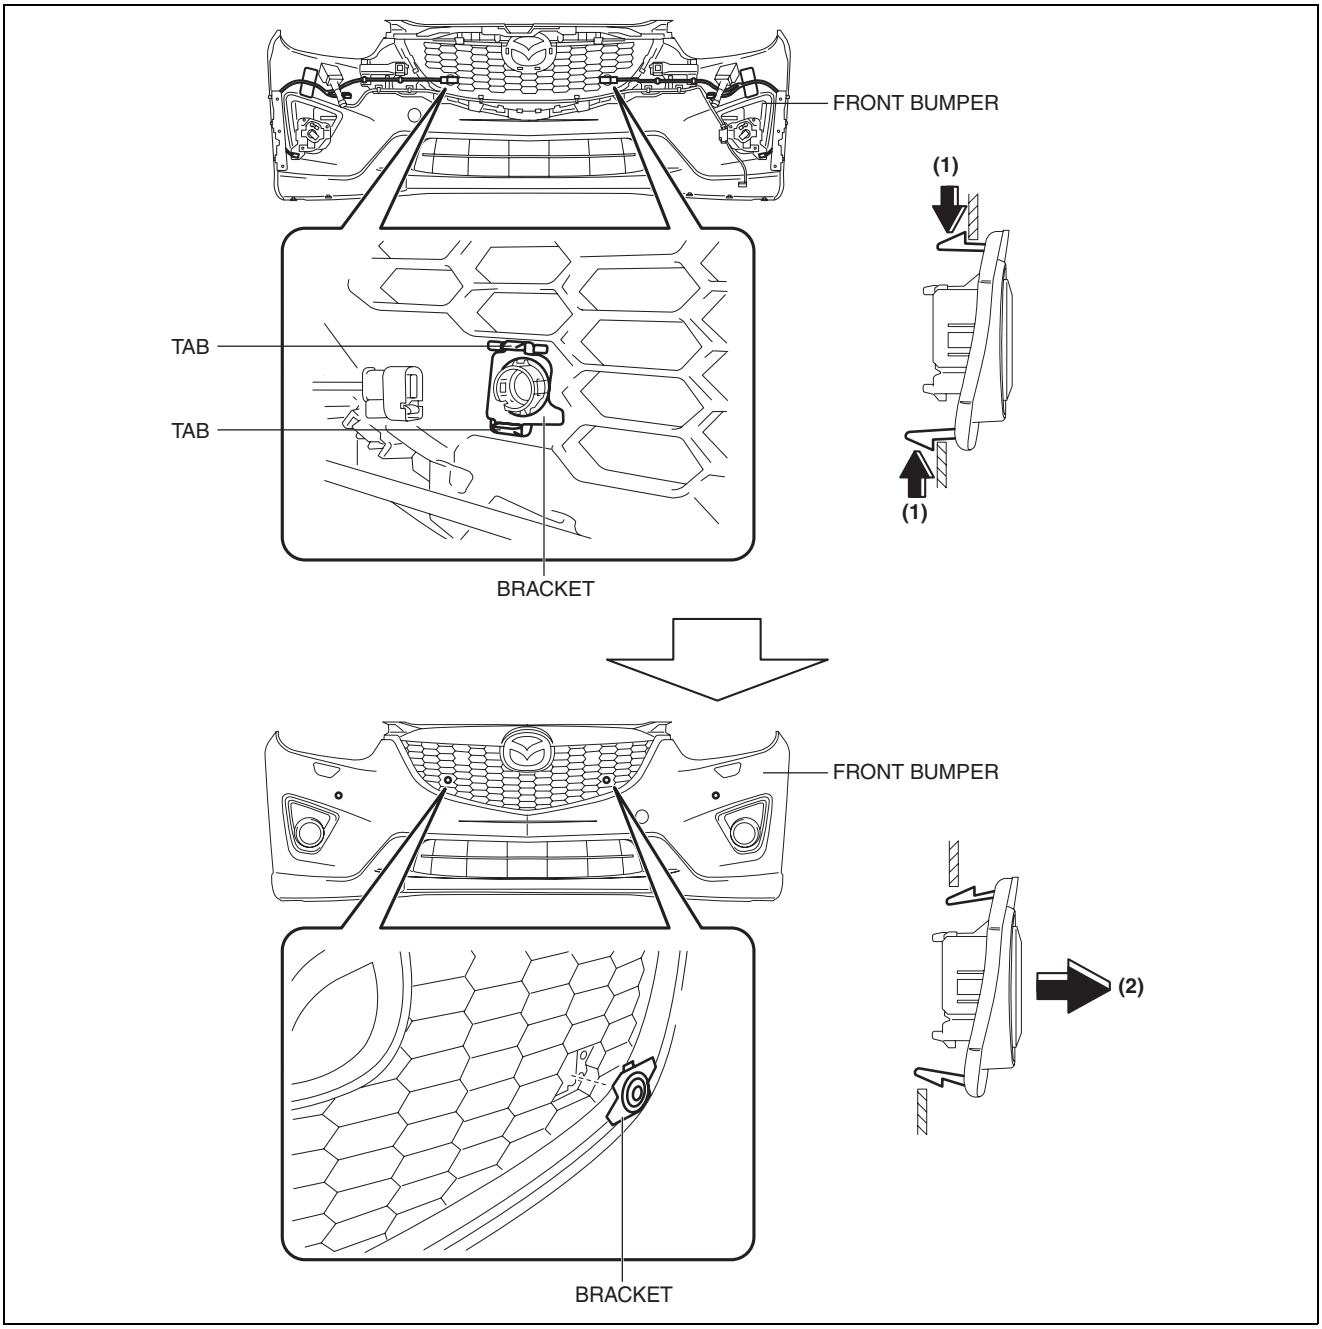
4. Pull the front ultrasonic sensor in the direction of the arrow (2) shown in the figure while pressing the front ultrasonic sensor tab in the direction of the arrow (1) shown in the figure, detach the front ultrasonic sensor tab and bracket, and remove the front ultrasonic sensor from the front bumper.



ac5jjw00000486

INSTRUMENTATION/DRIVER INFO.

5. Pull the bracket in the direction of the arrow (2) shown in the figure while pressing the bracket tab in the direction of the arrow (1) shown in the figure, detach the bracket tab and front bumper, and remove the bracket from the front bumper.



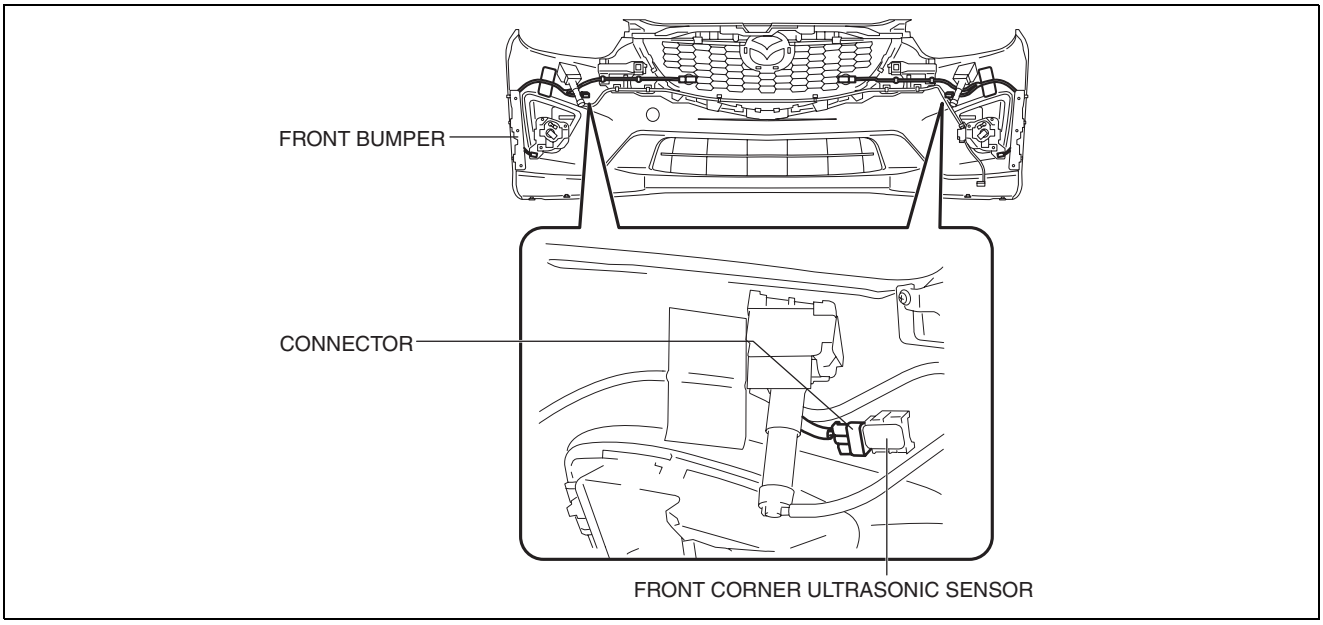
ac5jjw00000487

6. Install in the reverse order of removal.

Front Corner Ultrasonic Sensor

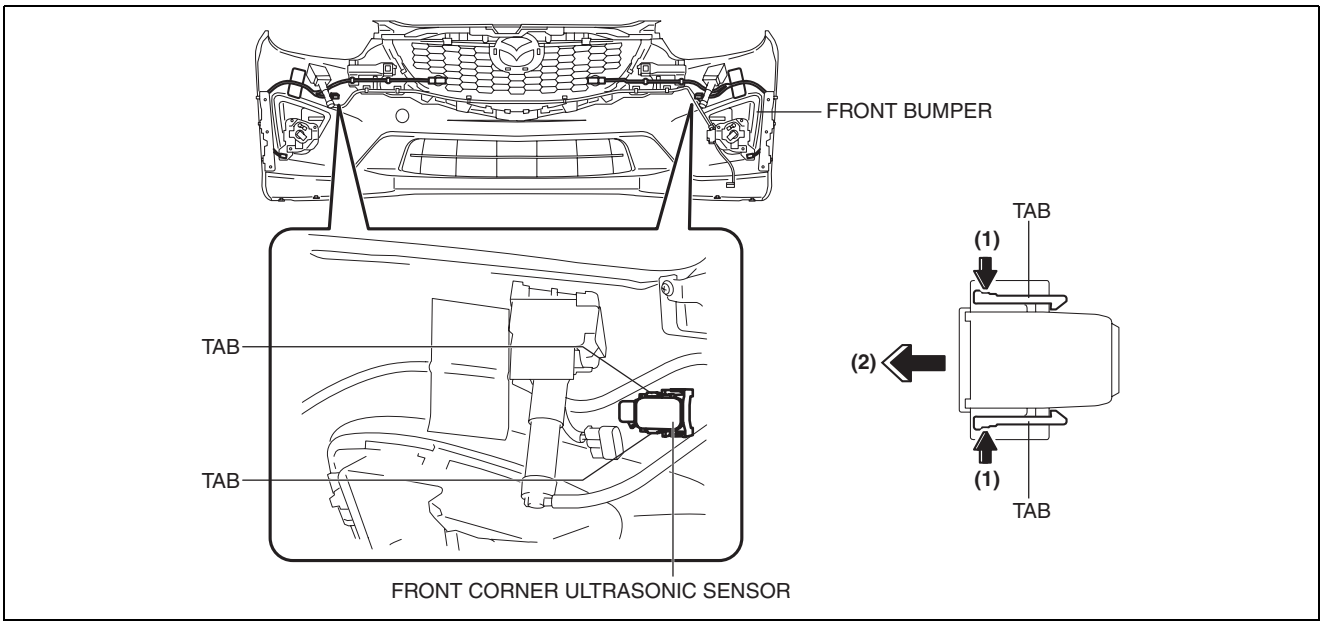
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)

3. Disconnect the connector.



ac5wzw0000326

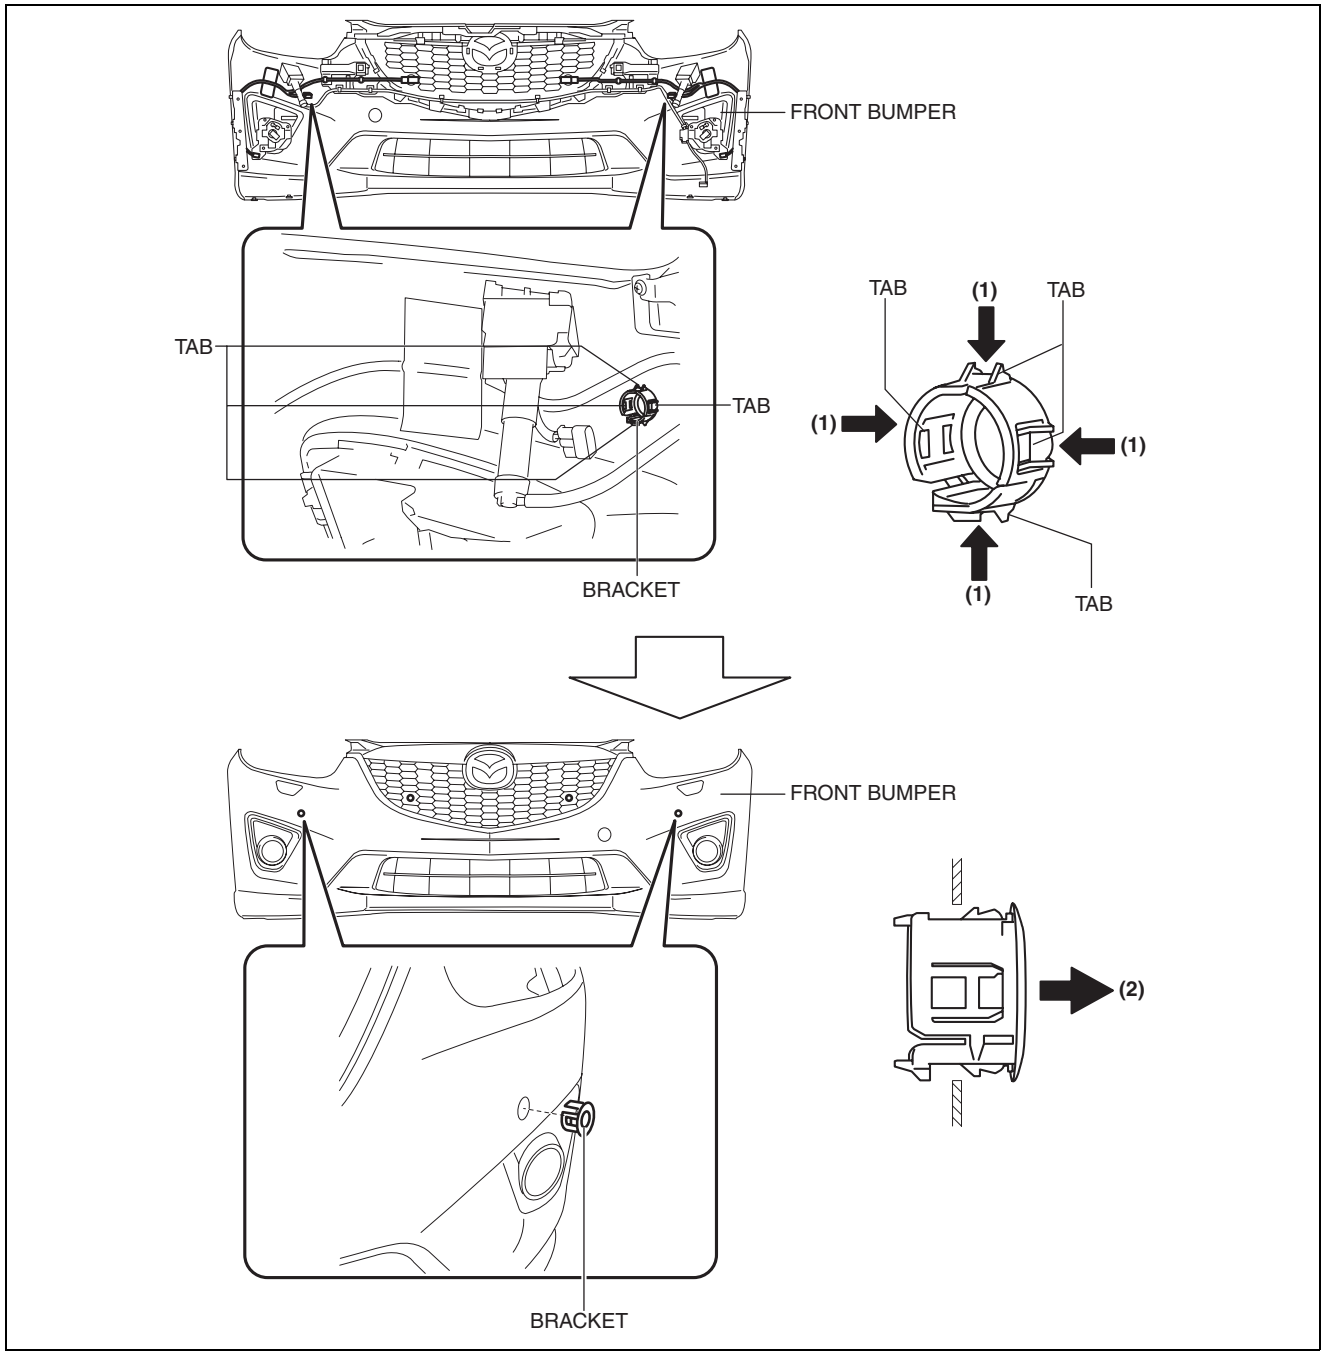
4. Pull the front corner ultrasonic sensor in the direction of the arrow (2) shown in the figure while pressing the front corner ultrasonic sensor tab in the direction of the arrow (1) shown in the figure, detach the front corner ultrasonic sensor tab and bracket, and remove the front corner ultrasonic sensor from the front bumper.



ac5wzw0000326

INSTRUMENTATION/DRIVER INFO.

5. Pull the bracket in the direction of the arrow (2) shown in the figure while pressing the bracket tab in the direction of the arrow (1) shown in the figure, detach the bracket tab and front bumper, and remove the bracket from the front bumper.



ac5jjw00000644

6. Install in the reverse order of removal.

REAR ULTRASONIC SENSOR REMOVAL/INSTALLATION

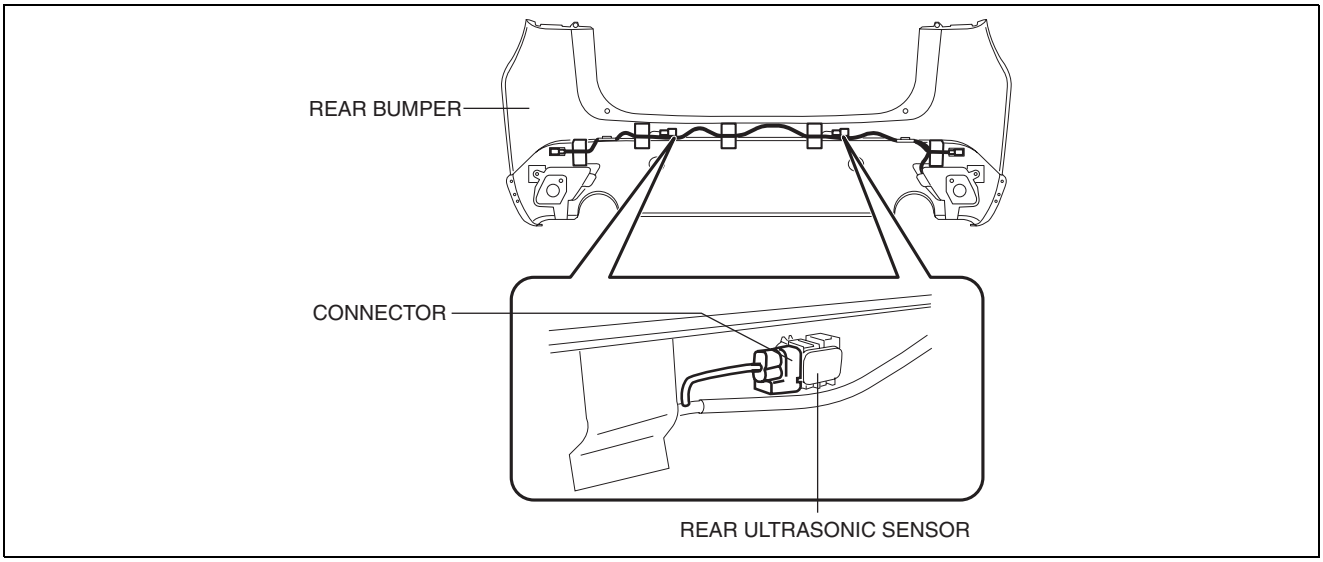
id092200030900

Rear Ultrasonic Sensor

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the rear combination light. (See 09-18-54 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
3. Remove the rear bumper. (See 09-10-24 REAR BUMPER REMOVAL/INSTALLATION.)

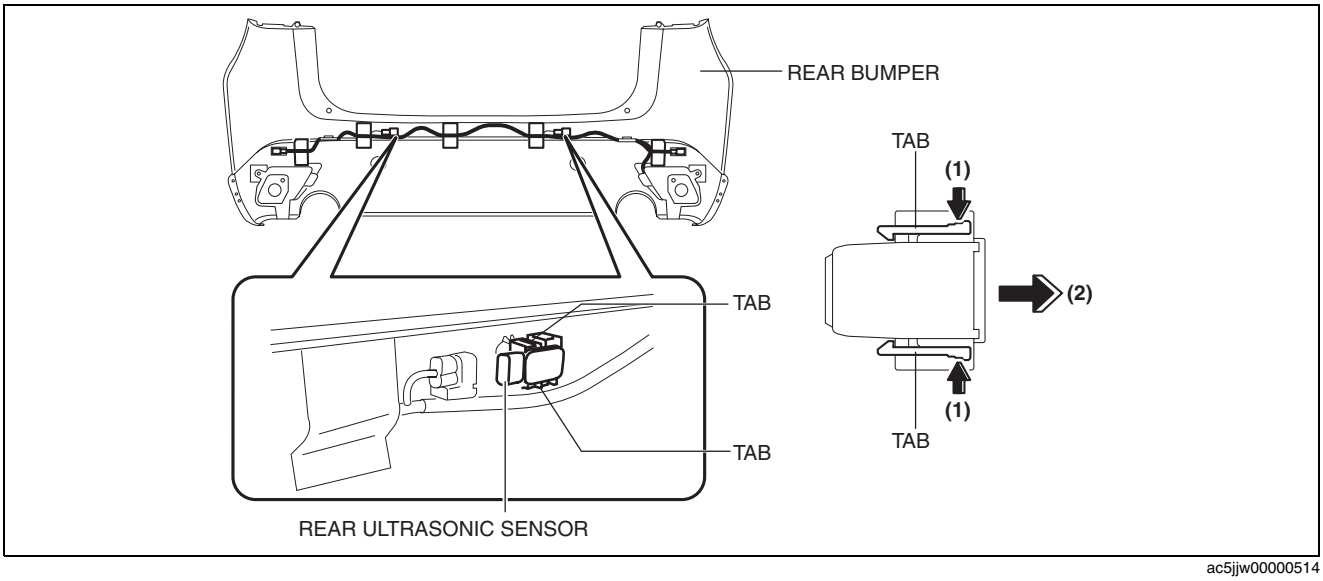
INSTRUMENTATION/DRIVER INFO.

4. Disconnect the connector.



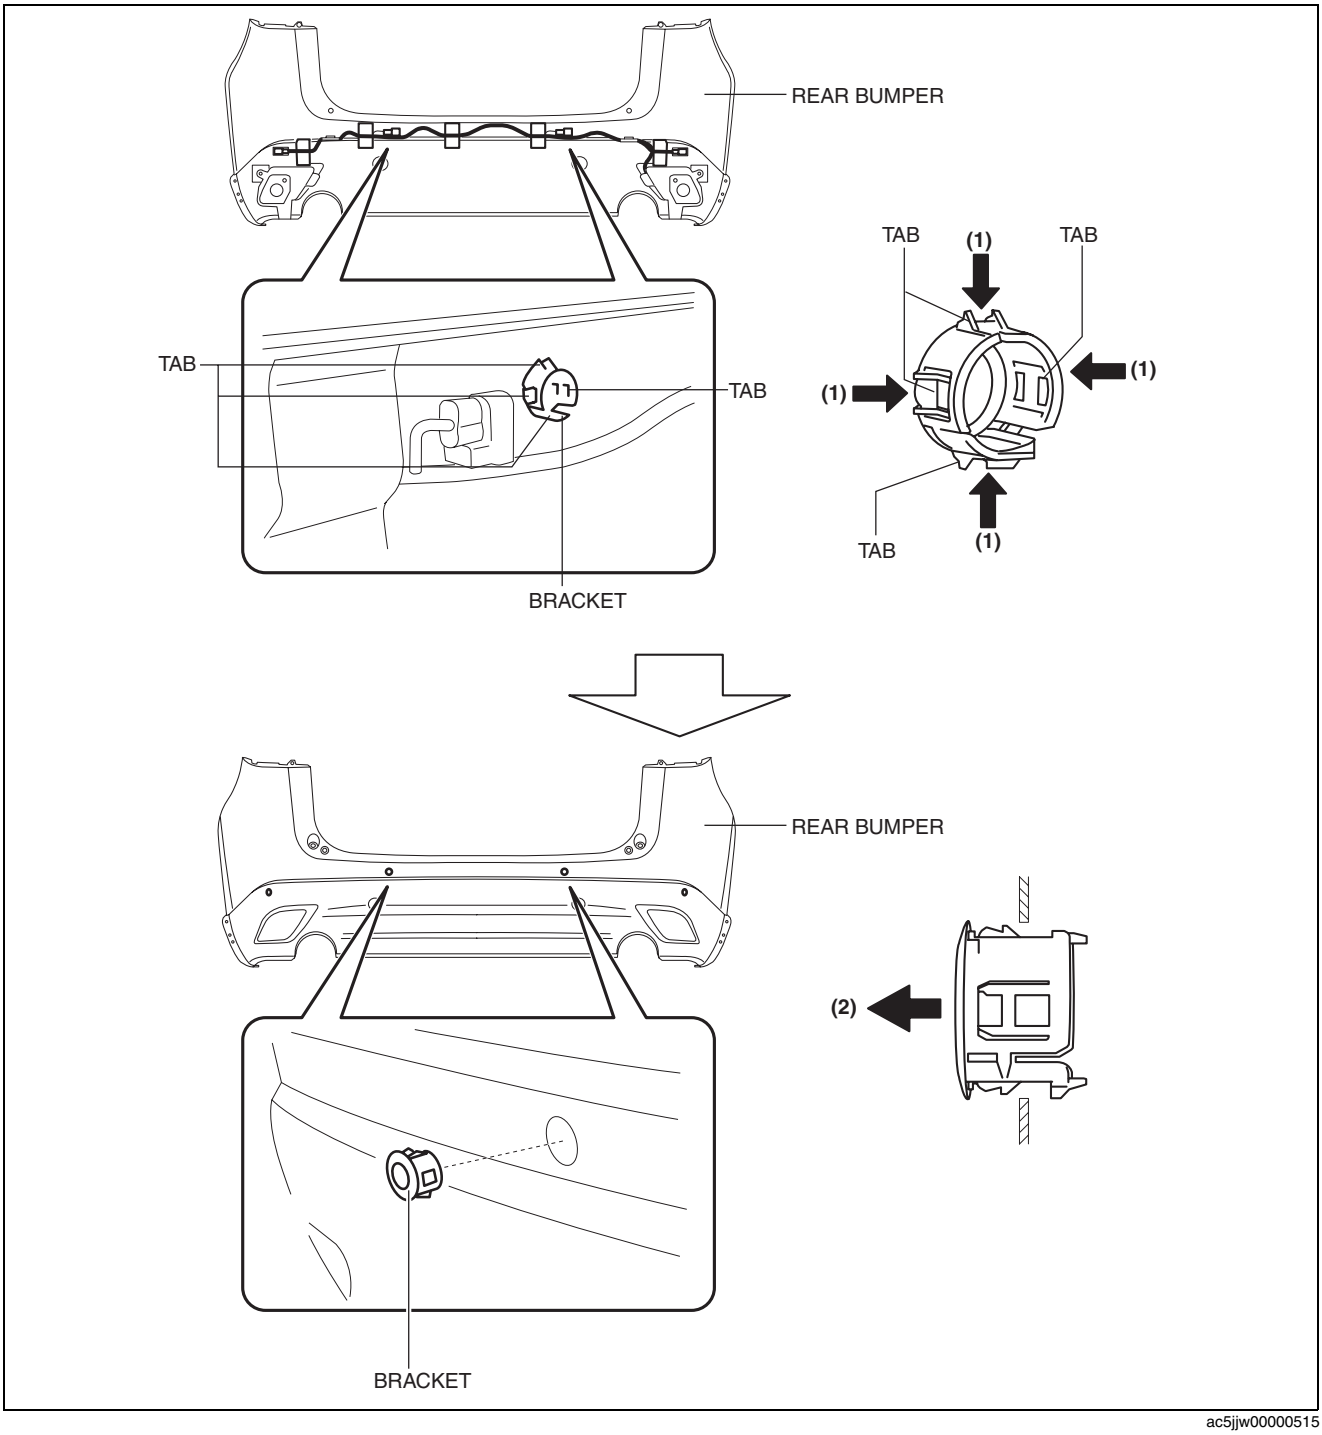
ac5jjw00000513

5. Pull the rear ultrasonic sensor in the direction of the arrow (2) shown in the figure while pressing the rear ultrasonic sensor tab in the direction of the arrow (1) shown in the figure, detach the rear ultrasonic sensor tab and bracket, and then remove the rear ultrasonic sensor from the rear bumper.



ac5jjw00000514

6. Pull the bracket in the direction of the arrow (2) shown in the figure while pressing the bracket tab in the direction of the arrow (1) shown in the figure, detach the bracket tab and rear bumper, and then remove the bracket from the rear bumper.



ac5jjw00000515

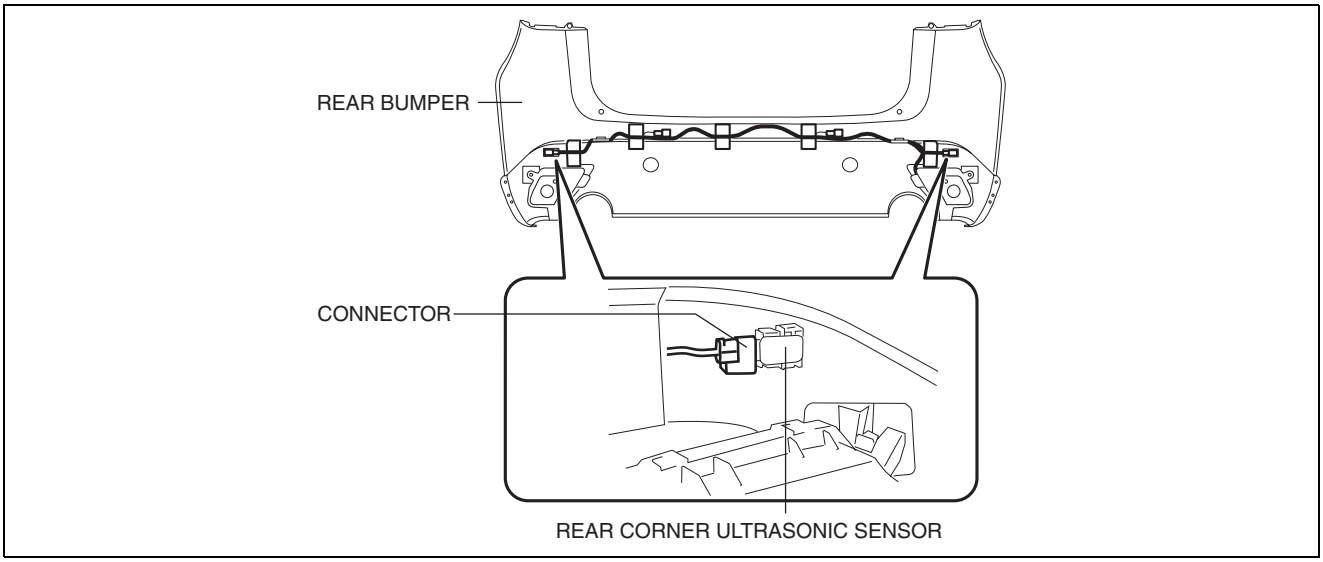
7. Install in the reverse order of removal.

Rear Corner Ultrasonic Sensor

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the rear combination light. (See 09-18-54 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
3. Remove the rear bumper. (See 09-10-24 REAR BUMPER REMOVAL/INSTALLATION.)

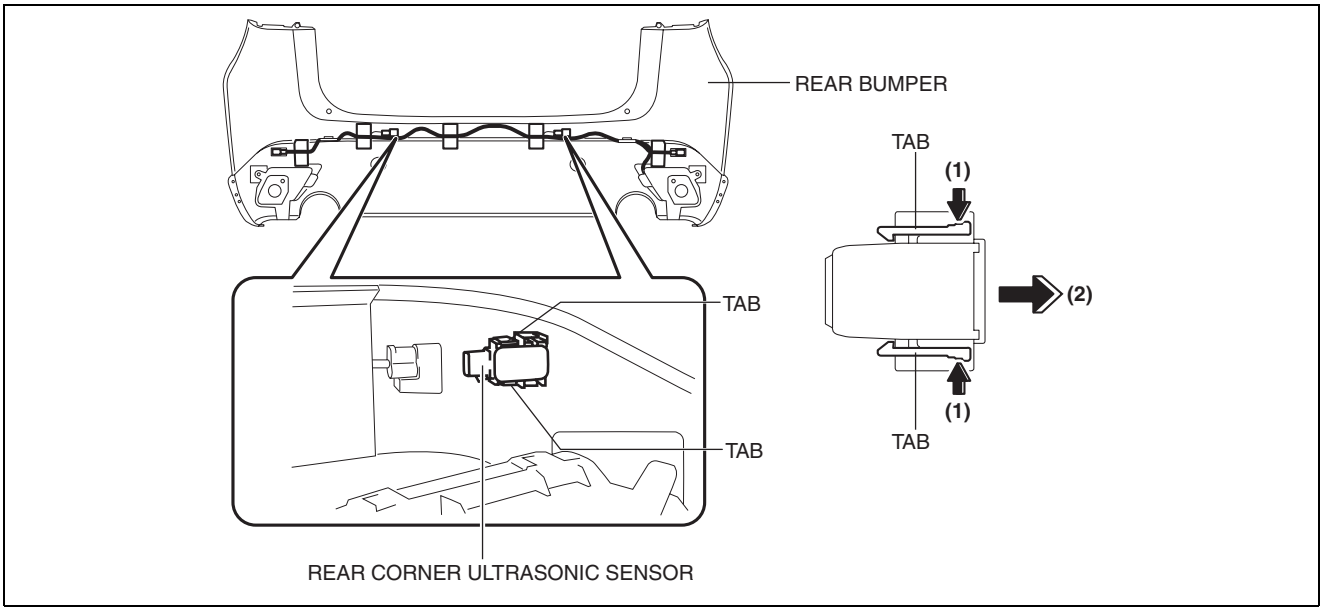
INSTRUMENTATION/DRIVER INFO.

4. Disconnect the connector.



ac5jjw00000516

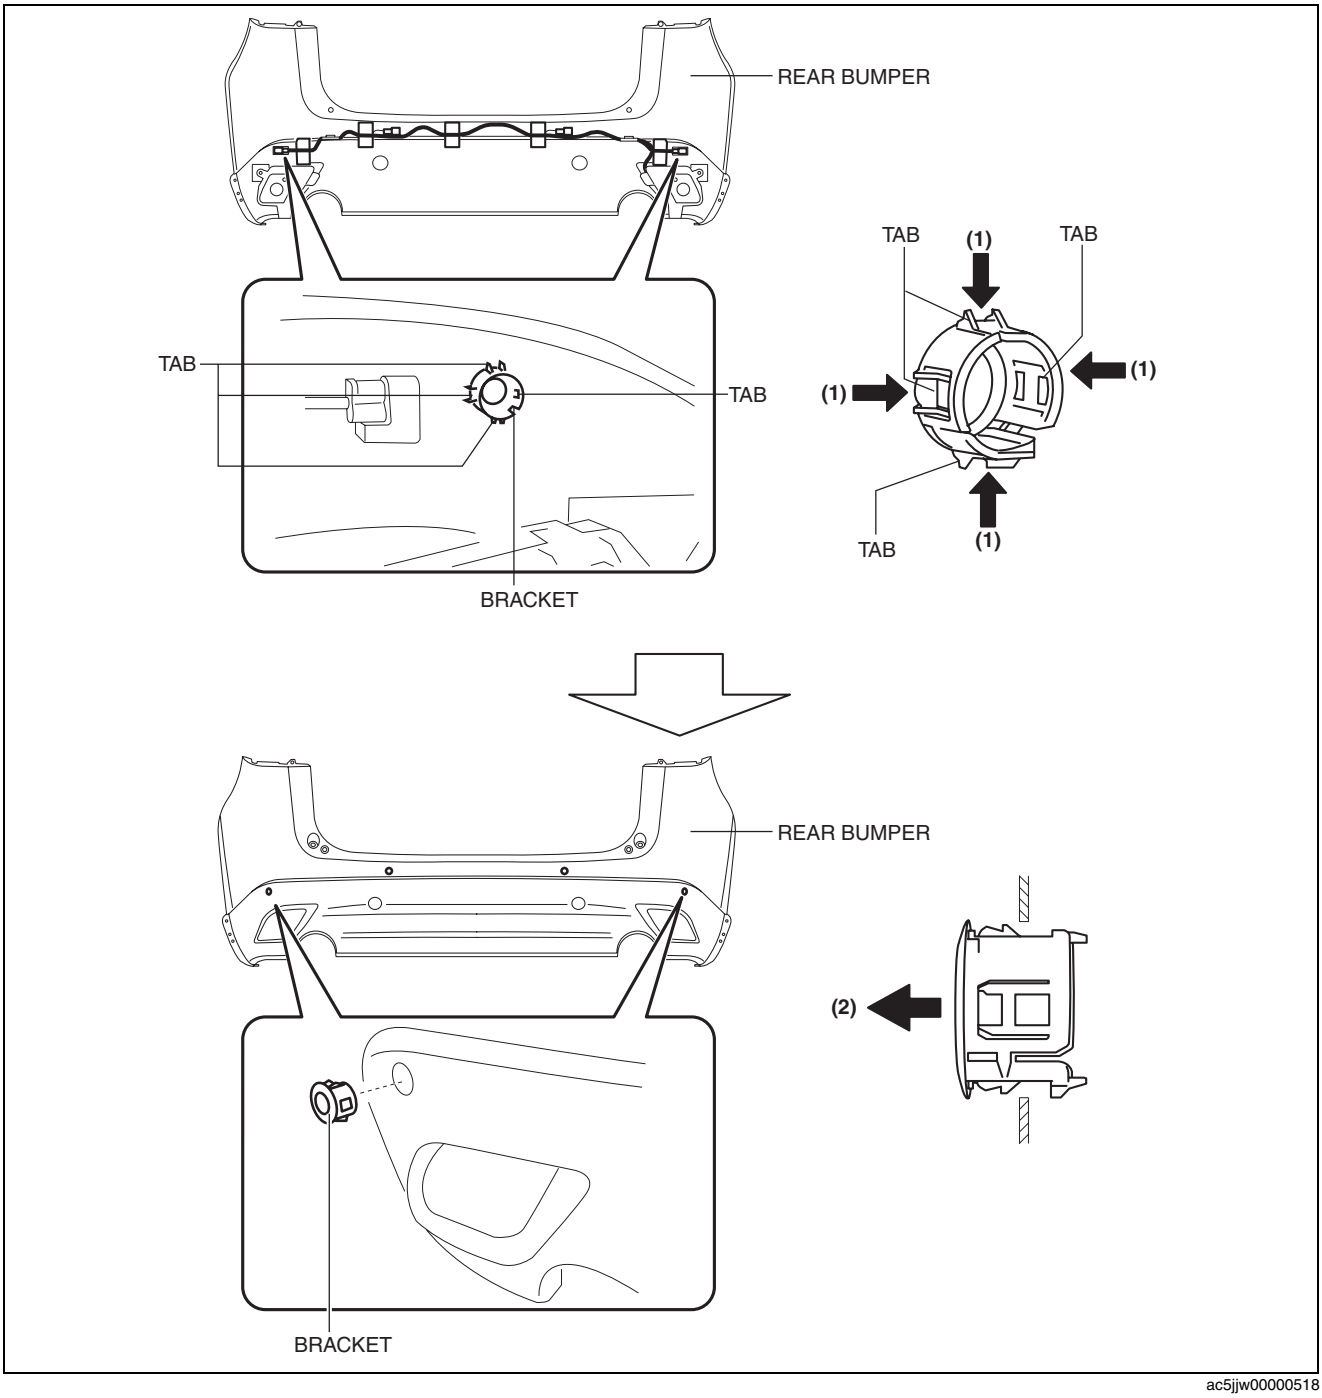
5. Pull the rear corner ultrasonic sensor in the direction of the arrow (2) shown in the figure while pressing the rear corner ultrasonic sensor tab in the direction of the arrow (1) shown in the figure, detach the rear corner ultrasonic sensor tab and bracket, and then remove the rear corner ultrasonic sensor from the rear bumper.



ac5jjw00000517

INSTRUMENTATION/DRIVER INFO.

6. Pull the bracket in the direction of the arrow (2) shown in the figure while pressing the bracket tab in the direction of the arrow (1) shown in the figure, detach the bracket tab and rear bumper, and then remove the bracket from the rear bumper.



ac5jjw00000518

7. Install in the reverse order of removal.

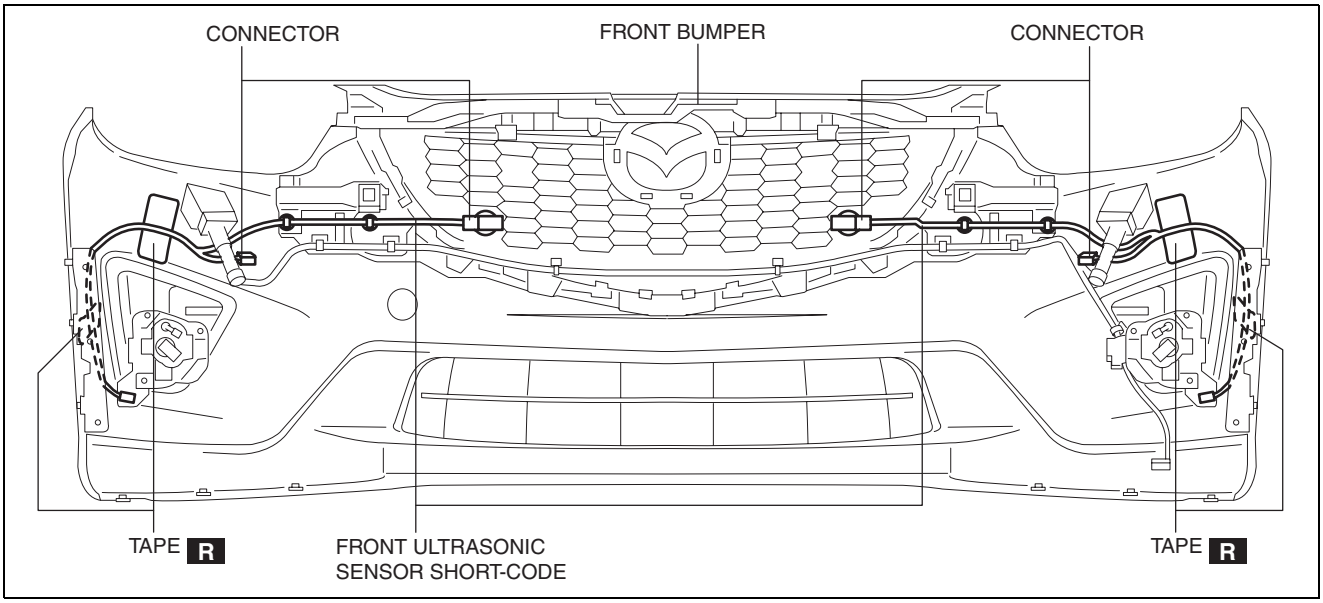
FRONT ULTRASONIC SENSOR SHORT-CORD REMOVAL/INSTALLATION

id092200031000

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)

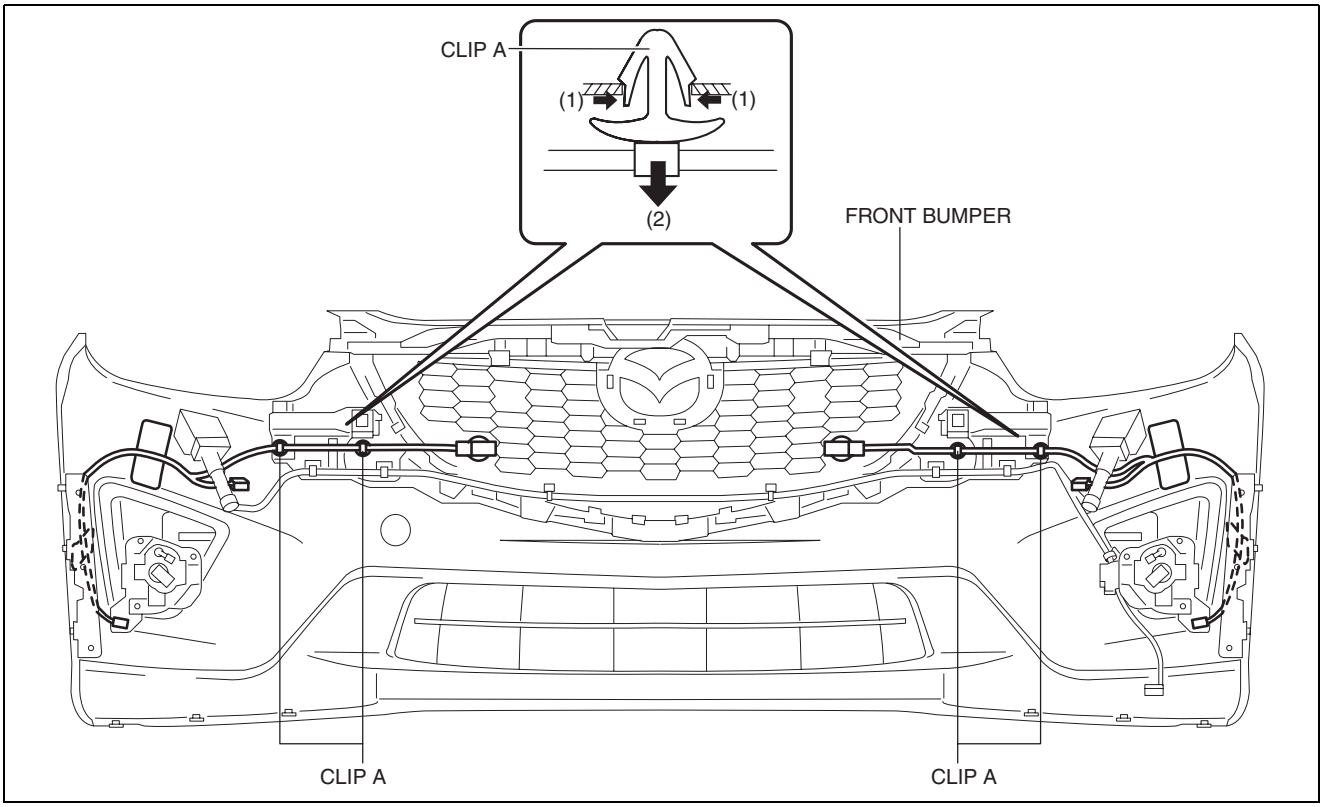
INSTRUMENTATION/DRIVER INFO.

3. Peel off the tape securing the front ultrasonic sensor short-cord from the front bumper.



ac5jjw00000519

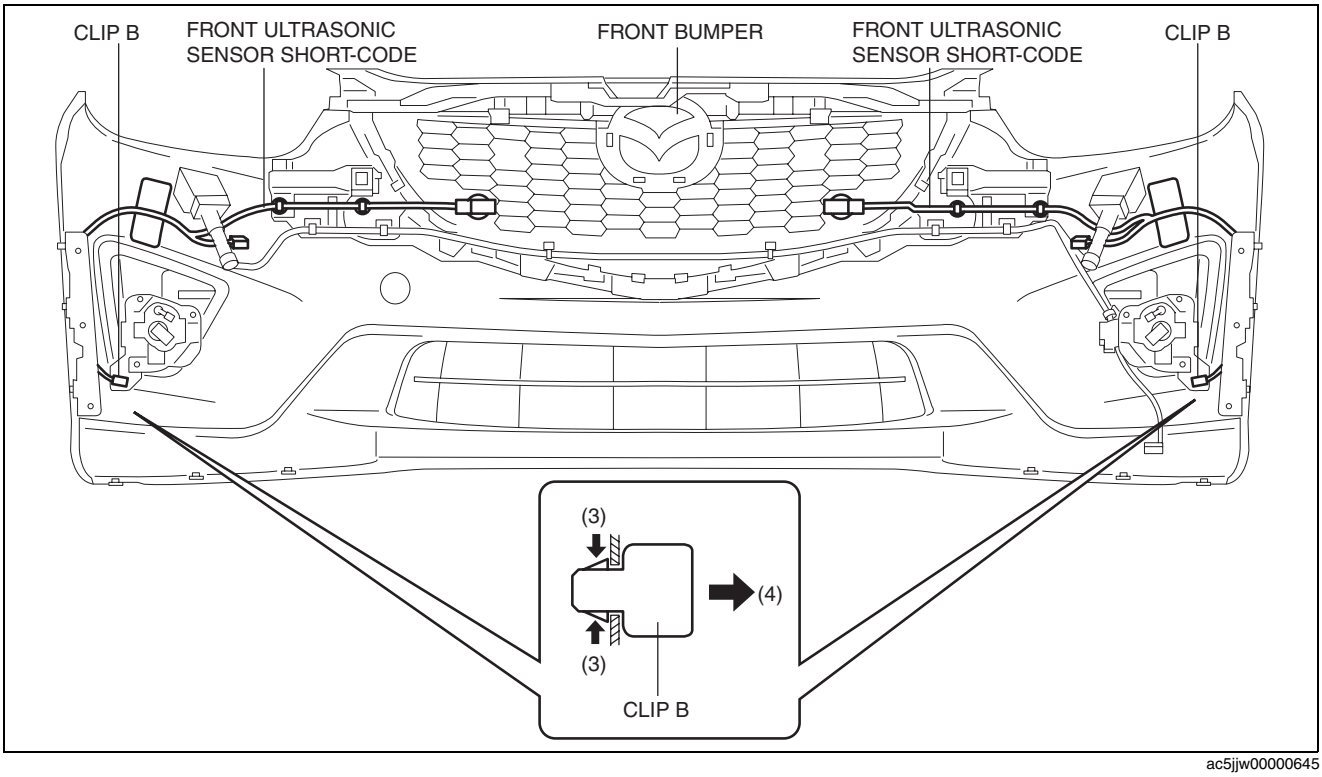
4. Disconnect the connector from the front ultrasonic sensor.
5. Pull clip A in the direction of the arrow (2) shown in the figure while pressing the tab of clip A in the direction of the arrow (1) shown in the figure, and detach the tab of clip A and front bumper.



ac5jjw00000660

INSTRUMENTATION/DRIVER INFO.

6. Pull clip B in the direction of the arrow (4) shown in the figure while pressing the tab of clip B in the direction of the arrow (3) shown in the figure, detach the tab of clip B and front bumper, and remove the front ultrasonic sensor short-cord.



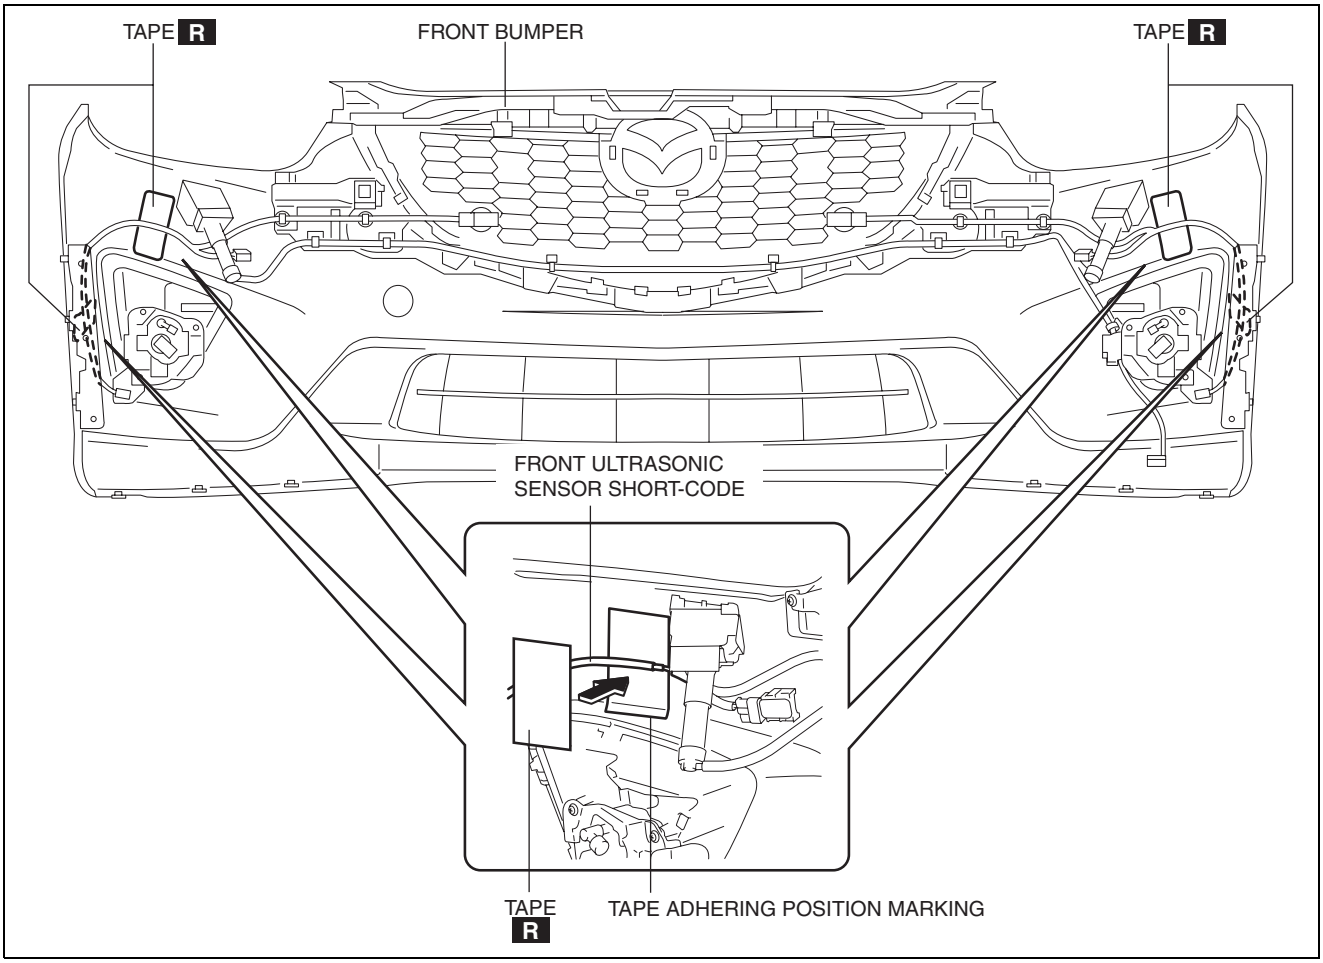
ac5jjw00000645

7. Install in the reverse order of removal. (See 09-22-53 Front Ultrasonic Sensor Short Cord Installation Note.)

INSTRUMENTATION/DRIVER INFO.

Front Ultrasonic Sensor Short Cord Installation Note

1. Align the height of the front ultrasonic sensor short-cord with the center of the tape adhering position marking on the front bumper.



ac5wzw0000088

2. Align the tape with the tape adhering position marking and adhere the front ultrasonic sensor short-cord and front bumper.

FRONT ULTRASONIC SENSOR SHORT-CORD INSPECTION

id092200031800

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove the front ultrasonic sensor short-cord. (See 09-22-50 FRONT ULTRASONIC SENSOR SHORT-CORD REMOVAL/INSTALLATION.)
4. Verify that the continuity between the front ultrasonic sensor short-cord terminals is as indicated in the table.

○—○ : Continuity

Test condition	Terminal							
	Vehicle wiring harness (C06 (LH)/C07 (RH)) side connector				Front ultrasonic sensor side connector		Front corner ultrasonic sensor side connector	
	A	B	D	E	A	B	A	B
Under any condition	○							○

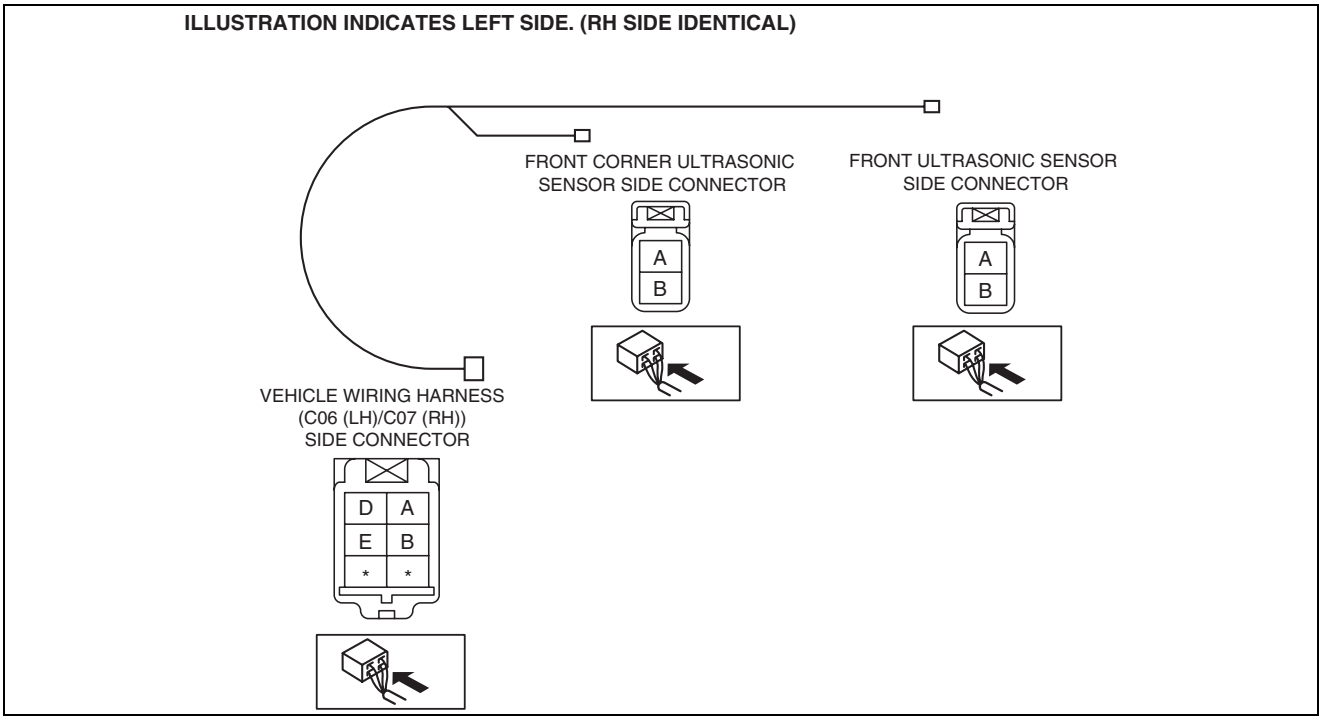
			○		○			
				○		○		

ac5wzw0000326

INSTRUMENTATION/DRIVER INFO.



ac5jjw00001273

- If not as indicated in the table, replace the front ultrasonic sensor short-cord.

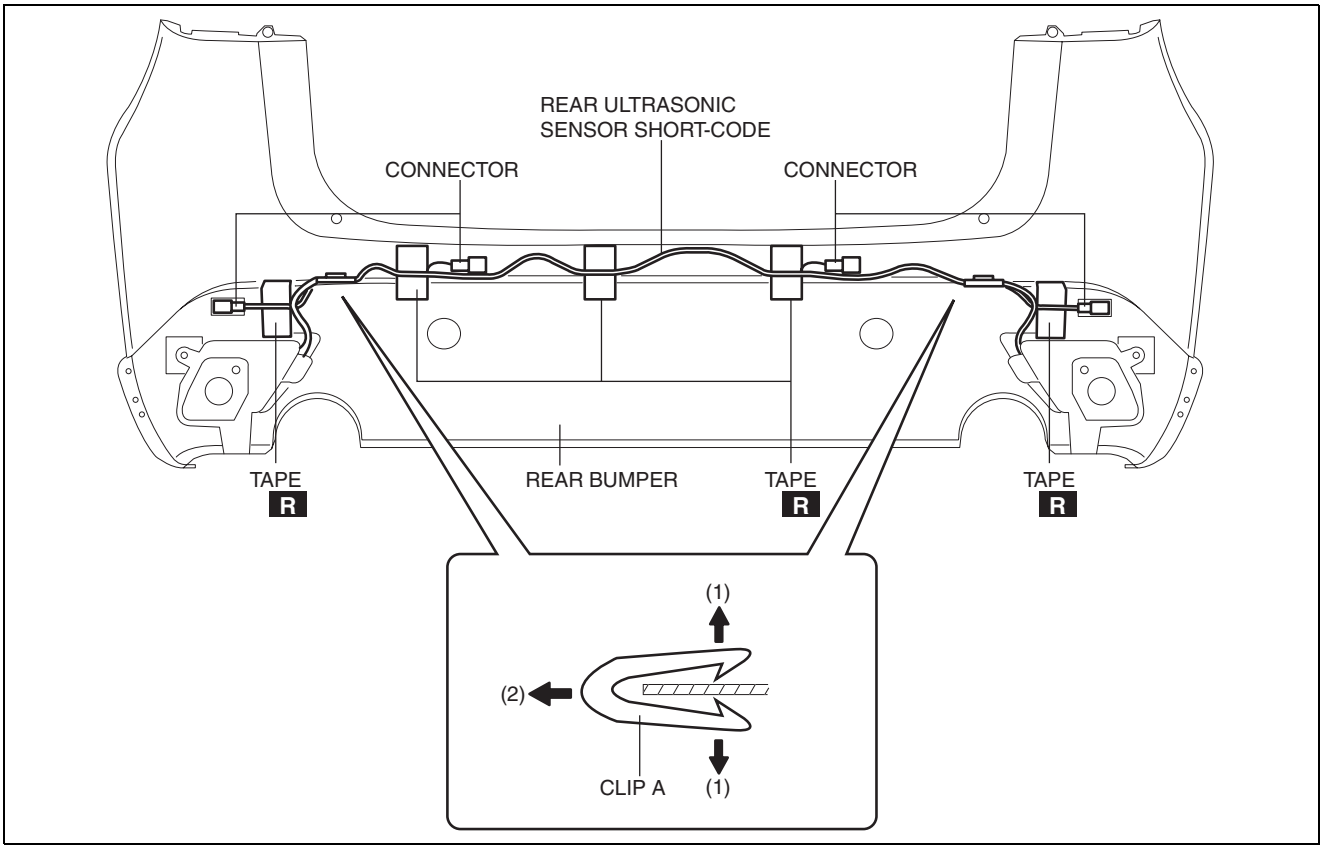
REAR ULTRASONIC SENSOR SHORT-CORD REMOVAL/INSTALLATION

id092200031100

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the rear combination light. (See 09-18-54 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
3. Remove the rear bumper. (See 09-10-24 REAR BUMPER REMOVAL/INSTALLATION.)

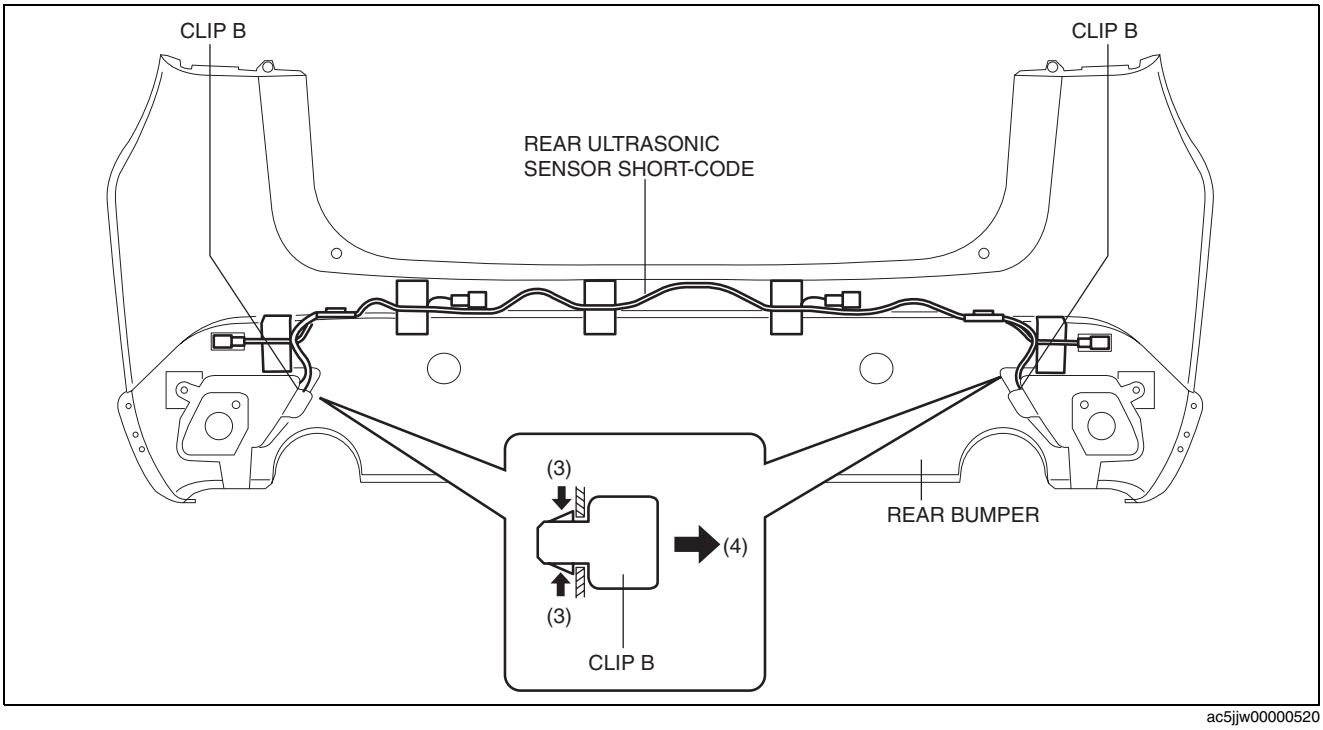
INSTRUMENTATION/DRIVER INFO.

4. Peel off the tape securing the rear ultrasonic sensor short-cord from the rear bumper.



ac5jjw00000649

5. Disconnect the connector from the rear ultrasonic sensor.
6. Pull clip A in the direction of the arrow (2) shown in the figure while pressing the tab of clip A in the direction of the arrow (1) shown in the figure, and detach the tab of clip A and rear bumper.
7. Pull clip B in the direction of the arrow (4) shown in the figure while pressing the tab of clip B in the direction of the arrow (3) shown in the figure, detach the tab of clip B and front bumper, and remove the rear ultrasonic sensor short-cord.



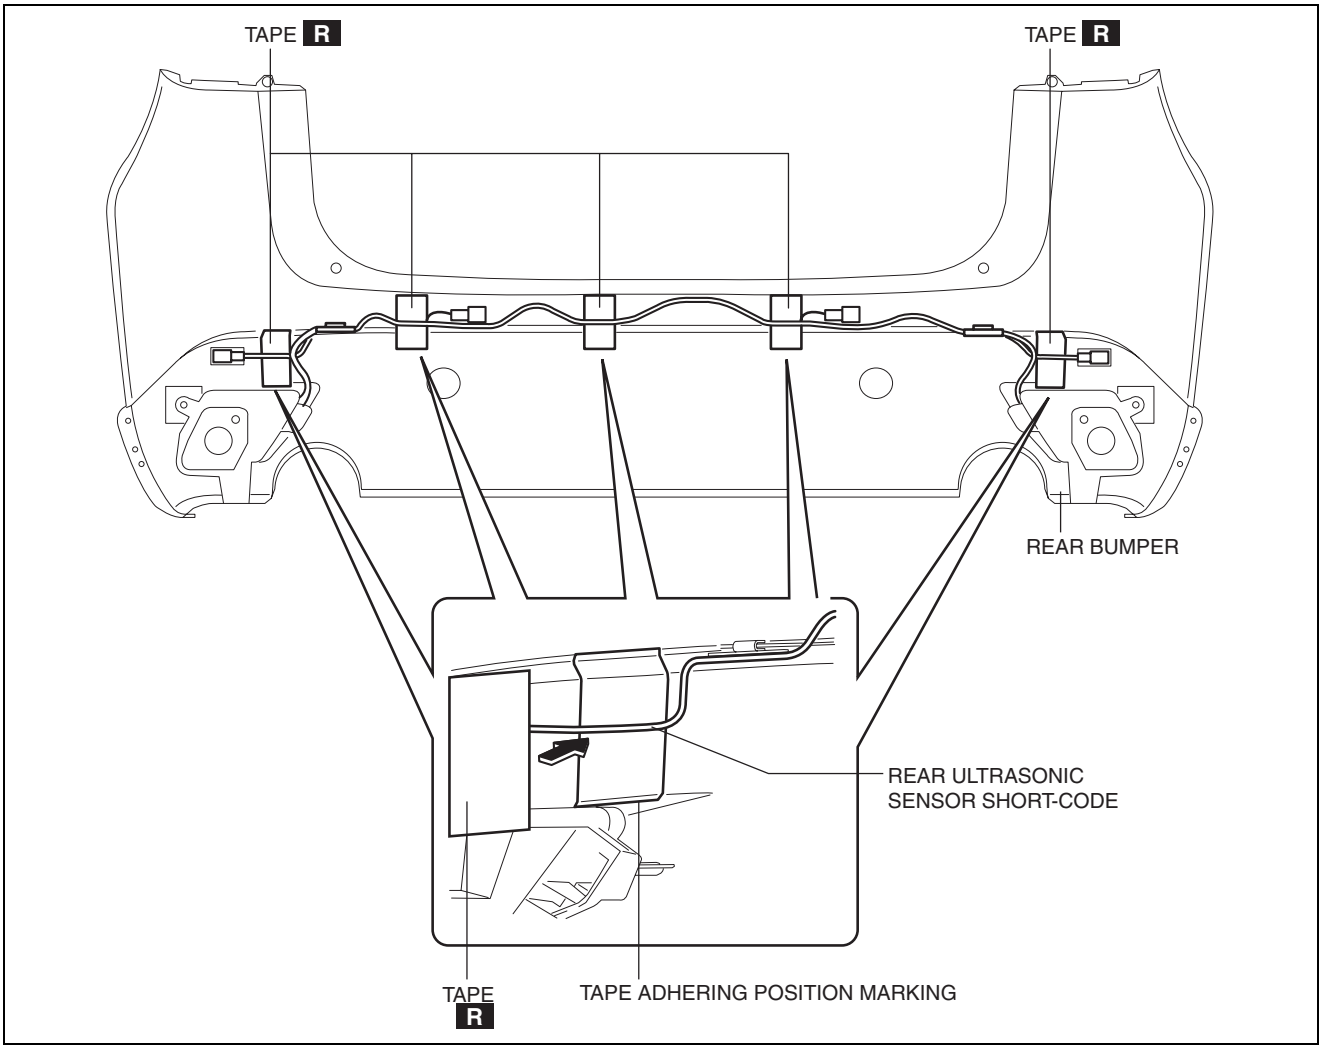
ac5jjw00000520

8. Install in the reverse order of removal. (See 09-22-56 Rear Ultrasonic Sensor Short-cord Installation Note.)

INSTRUMENTATION/DRIVER INFO.

Rear Ultrasonic Sensor Short-cord Installation Note

1. Align the height of the rear ultrasonic sensor short-cord with the center of the tape adhering position marking on the rear bumper.



ac5wzw0000089

2. Align the tape with the mark of the tape adhering position marking and adhere the rear ultrasonic sensor short-cord and rear bumper.

REAR ULTRASONIC SENSOR SHORT-CORD INSPECTION

id092200031900

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Rear combination light (See 09-18-54 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (2) Rear bumper (See 09-10-24 REAR BUMPER REMOVAL/INSTALLATION.)
   (3) Rear ultrasonic sensor short-cord (See 09-22-54 REAR ULTRASONIC SENSOR SHORT-CORD REMOVAL/INSTALLATION.)

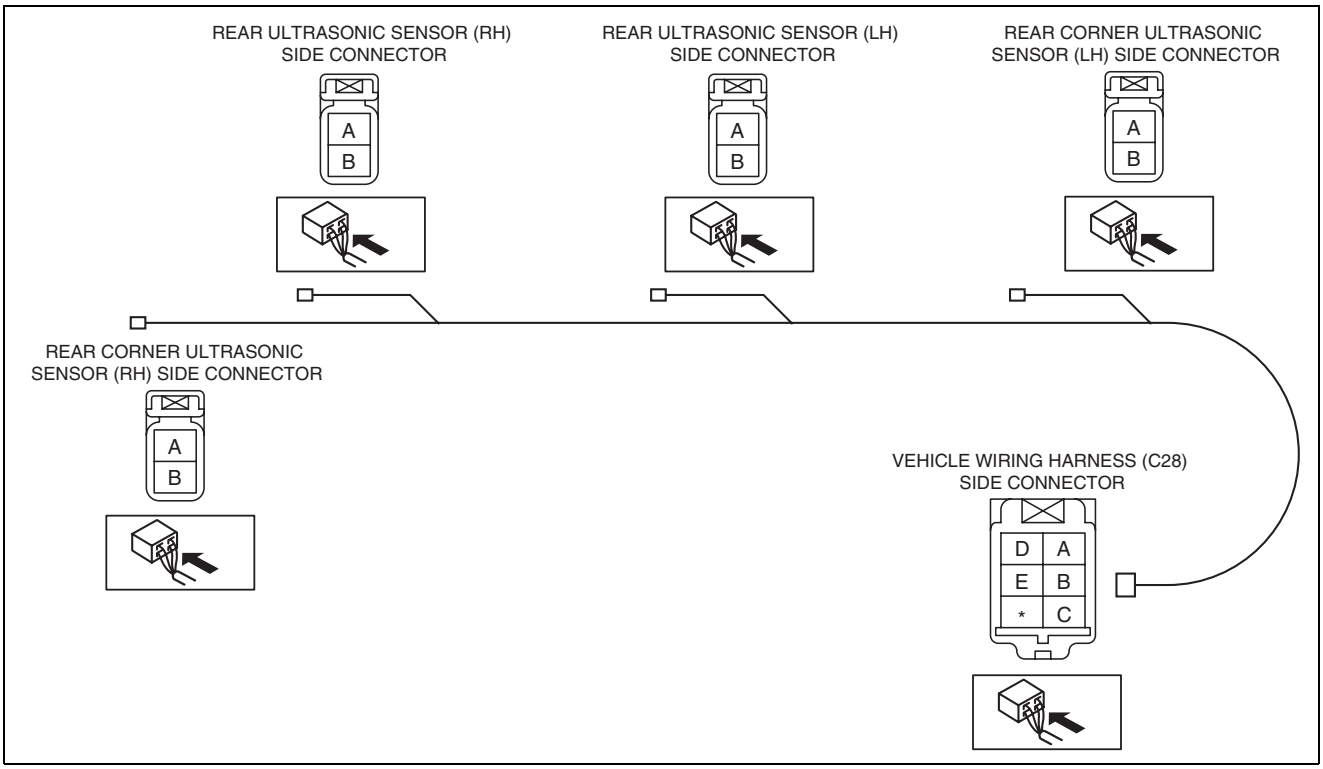
INSTRUMENTATION/DRIVER INFO.

3. Verify that the continuity between the rear ultrasonic sensor short-cord terminals is as indicated in the table.

○—○ : Continuity

Test condition	Terminal												
	Vehicle wiring harness (C28) side connector					Rear corner ultrasonic sensor (LH) side connector		Rear ultrasonic sensor (LH) side connector		Rear ultrasonic sensor (RH) side connector		Rear corner ultrasonic sensor (LH) side connector	
	A	B	C	D	E	A	B	A	B	A	B	A	B
Under any condition	○												○
		○									○		
			○						○				
				○			○						
					○	○		○		○		○	

ac5jjw00001277



ac5jjw00001278

- If not as indicated in the table, replace the rear ultrasonic sensor short-cord.

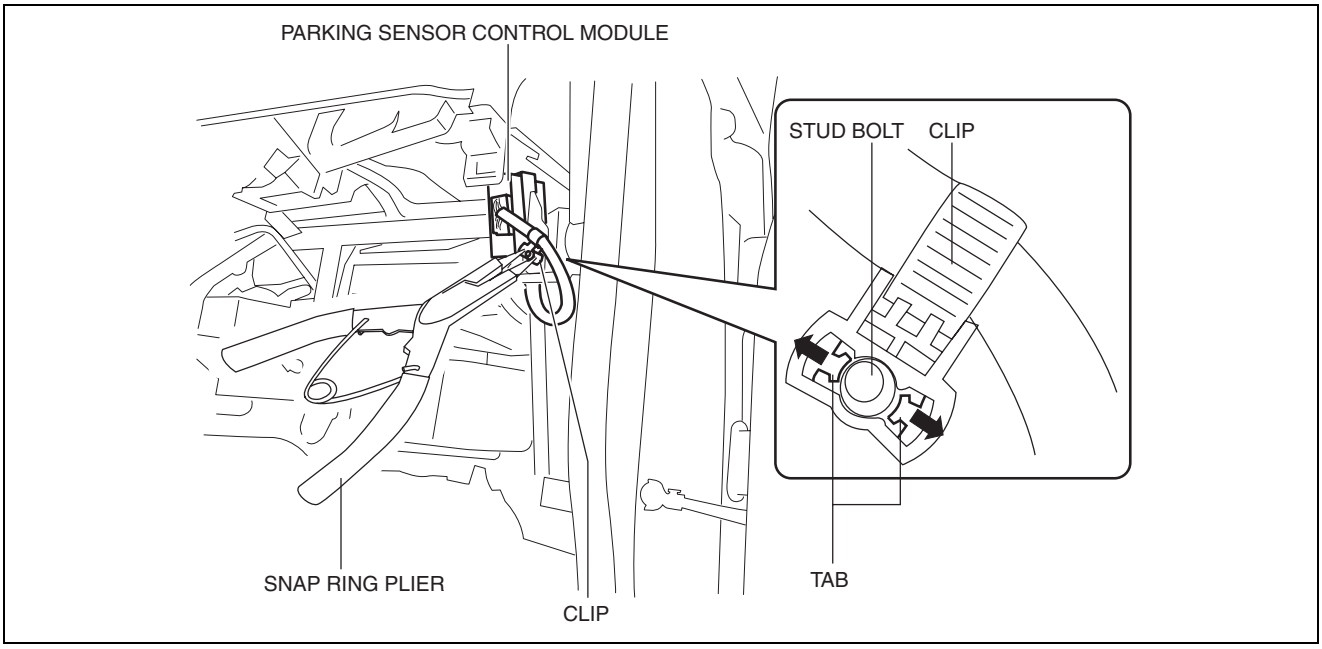
PARKING SENSOR CONTROL MODULE REMOVAL/INSTALLATION

id092200023500

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Passenger-side front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Passenger-side front side trim (See 09-17-62 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Glove compartment (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (4) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (5) Passenger-side lower panel (See 09-17-35 LOWER PANEL REMOVAL/INSTALLATION.)

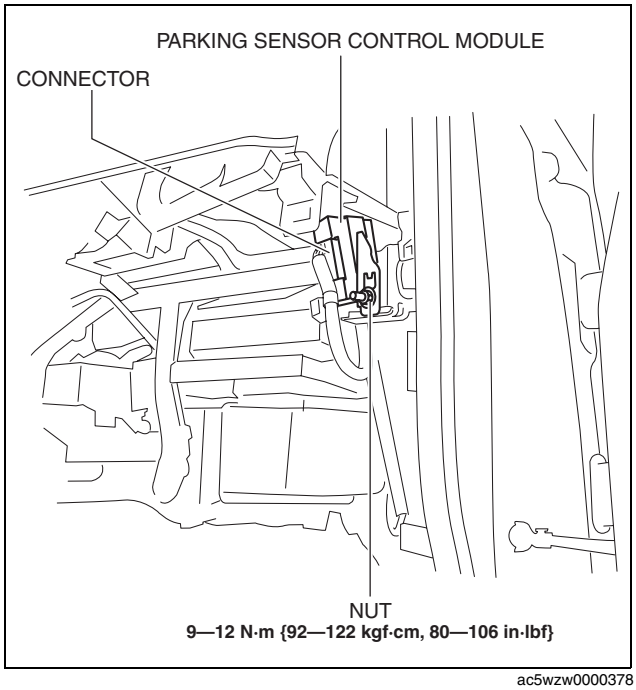
INSTRUMENTATION/DRIVER INFO.

3. Spread the clip tabs using snap ring pliers and pull out the clip from the stud bolt.



ac5wzw0000106

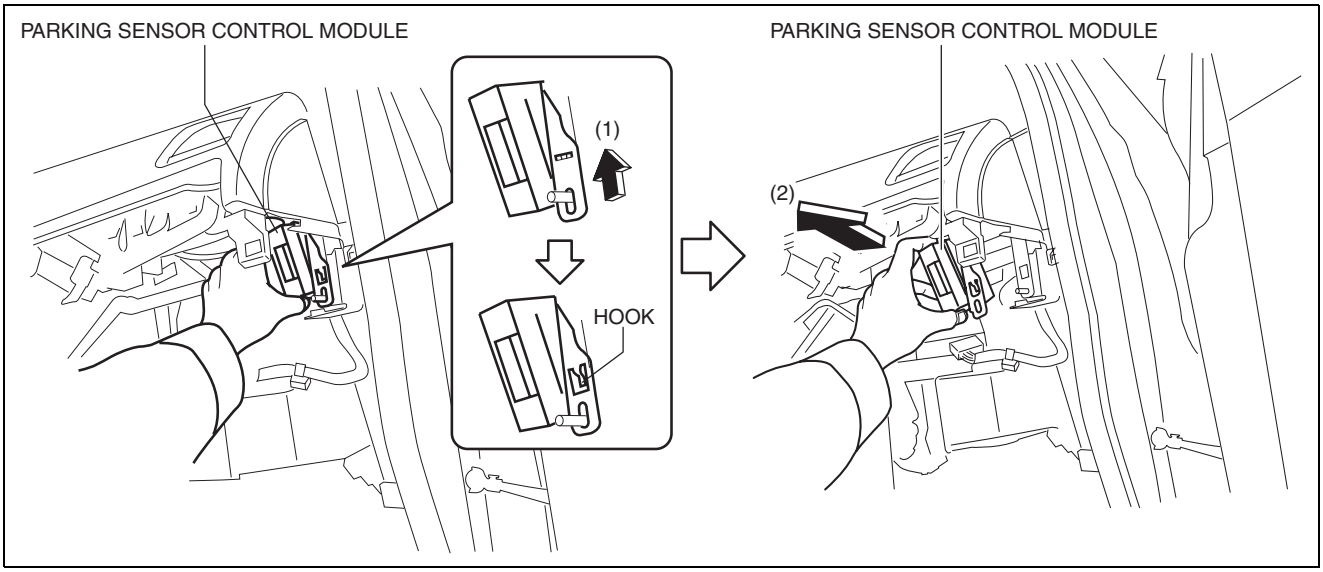
4. Disconnect the connector.
5. Remove the nut.



ac5wzw0000378

INSTRUMENTATION/DRIVER INFO.

6. Lift up the parking sensor control module in the direction of the arrow (1) shown in the figure to detach the hook from the dashboard.



ac5jjw00000261

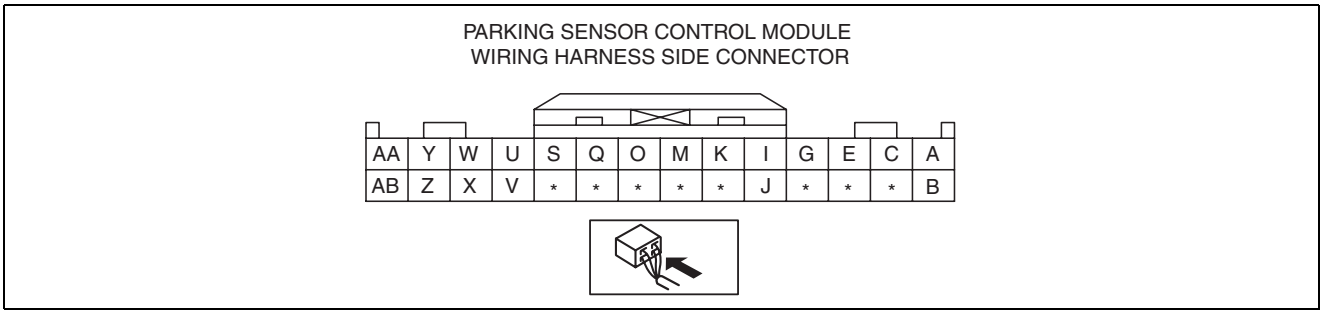
7. Remove the parking sensor control module in the direction of the arrow (2) shown in the figure.
8. Install in the reverse order of removal.

PARKING SENSOR CONTROL MODULE INSPECTION

id092200023600

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Passenger-side front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Passenger-side front side trim (See 09-17-62 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Glove compartment (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (4) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (5) Passenger-side lower panel (See 09-17-35 LOWER PANEL REMOVAL/INSTALLATION.)
3. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
4. Verify that the voltages of each of the terminals are as indicated in the terminal voltage table (reference).
   - If the voltage is not as specified in the terminal voltage table (reference), inspect the parts under Inspection item(s).
     — If the system does not operate normally even though the inspection items are normal, replace the parking sensor control module.

Terminal Voltage Table (Reference)



ac5wzw0000243

INSTRUMENTATION/DRIVER INFO.

Terminal	Signal name	Connected to	Measured item	Test condition	Voltage (V)	Inspection item

PARKING SENSOR SWITCH/INDICATOR REMOVAL/INSTALLATION

id092200023700

Note

- The parking sensor switch/indicator is integrated with the climate control unit.
- For the parking sensor switch/indicator removal/installation, refer to the climate control unit removal/installation. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)

PARKING SENSOR SWITCH/INDICATOR INSPECTION

id092200023800

Note

- The parking sensor switch/indicator is integrated with the climate control unit.
- For the parking sensor switch/indicator inspection, refer to the climate control unit inspection. (See 07-40A-33 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].)

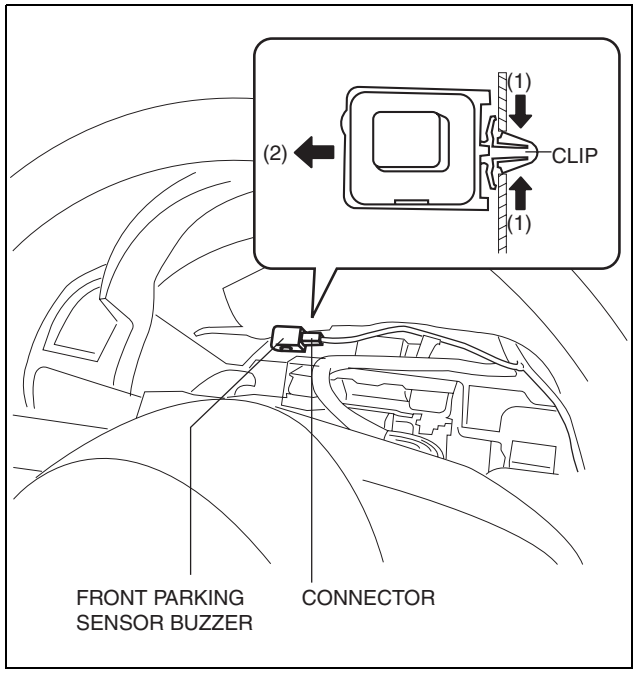
FRONT PARKING SENSOR BUZZER REMOVAL/INSTALLATION

id092200030400

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Upper column cover (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.)
   (2) Meter hood (See 09-17-20 METER HOOD REMOVAL/INSTALLATION.)
   (3) Instrument cluster (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

INSTRUMENTATION/DRIVER INFO.

3. Disconnect the connector.
4. Pull out the front parking sensor buzzer in the direction of arrow (2) shown in the figure while pressing the clip in the direction of arrow (1) shown in the figure, detach the clip and dashboard, and remove the front parking sensor buzzer.
5. Install in the reverse order of removal.

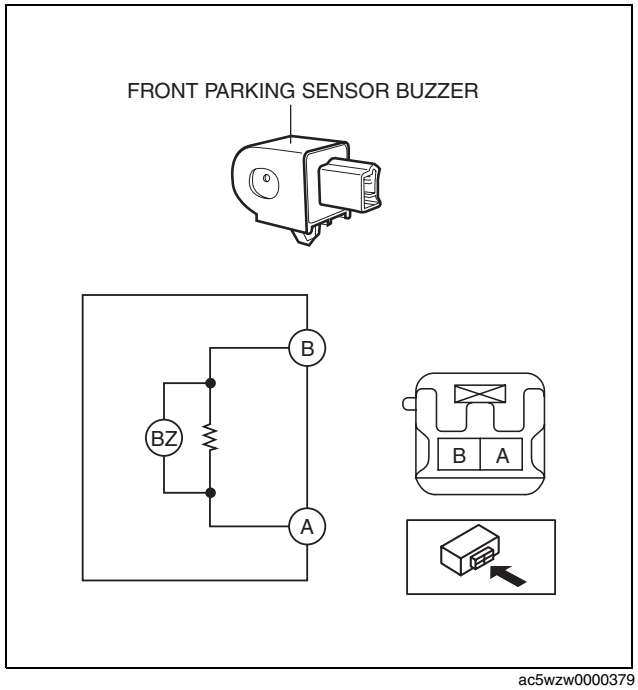


ac5jjw00000402

FRONT PARKING SENSOR BUZZER INSPECTION

id092200030600

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Upper column cover (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.)
   (2) Meter hood (See 09-17-20 METER HOOD REMOVAL/INSTALLATION.)
   (3) Instrument cluster (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
   (4) Front parking sensor buzzer (See 09-22-62 FRONT PARKING SENSOR BUZZER REMOVAL/INSTALLATION.)
3. Verify the continuity between front parking sensor buzzer terminals A and B.
   - If not as indicated in the table, replace the front parking sensor buzzer.



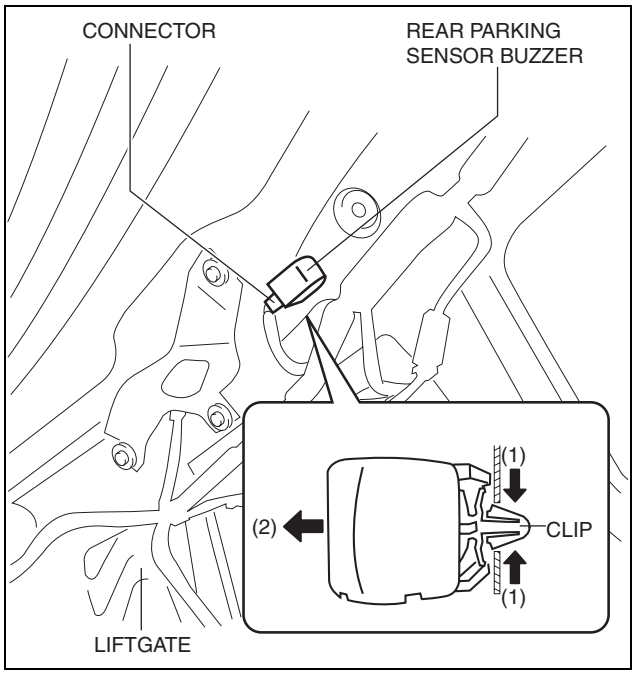
ac5wzw0000379

INSTRUMENTATION/DRIVER INFO.

REAR PARKING SENSOR BUZZER REMOVAL/INSTALLATION

id092200030500

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Liftgate upper trim (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
   (2) Liftgate side trim (See 09-17-87 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Liftgate recess (See 09-17-89 LIFTGATE RECESS REMOVAL/INSTALLATION.)
   (4) Liftgate lower trim (See 09-17-89 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
3. Disconnect the connector.
4. Pull out the rear parking sensor buzzer in the direction of arrow (2) shown in the figure while pressing the clip in the direction of arrow (1) shown in the figure and remove the rear parking sensor buzzer.
5. Install in the reverse order of removal.



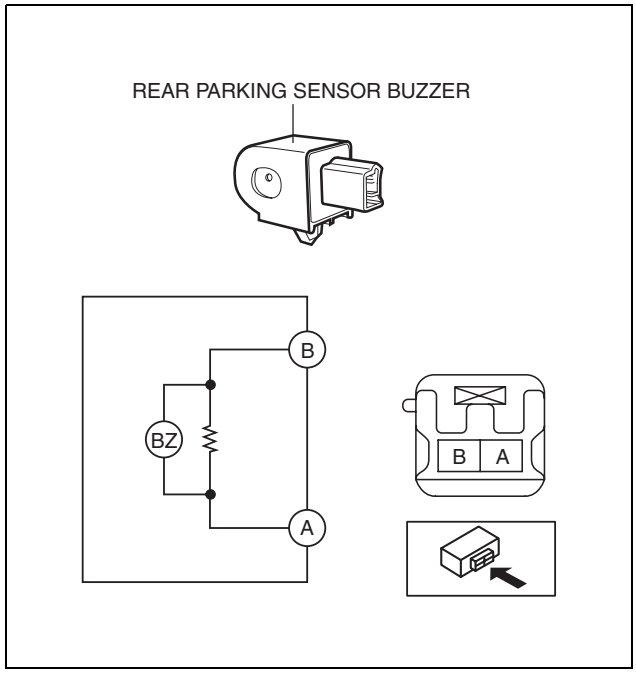
ac5jjw00000403

REAR PARKING SENSOR BUZZER INSPECTION

id092200030700

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Liftgate upper trim (See 09-17-87 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION.)
   (2) Liftgate side trim (See 09-17-87 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Liftgate recess (See 09-17-89 LIFTGATE RECESS REMOVAL/INSTALLATION.)
   (4) Liftgate lower trim (See 09-17-89 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION.)
   (5) Rear parking sensor buzzer (See 09-22-64 REAR PARKING SENSOR BUZZER REMOVAL/INSTALLATION.)

3. Verify the continuity between rear parking sensor buzzer terminals A and B.
   - If not as indicated in the table, replace the rear parking sensor buzzer.



ac5wzw0000379

BEEP SOUND ADJUSTMENT

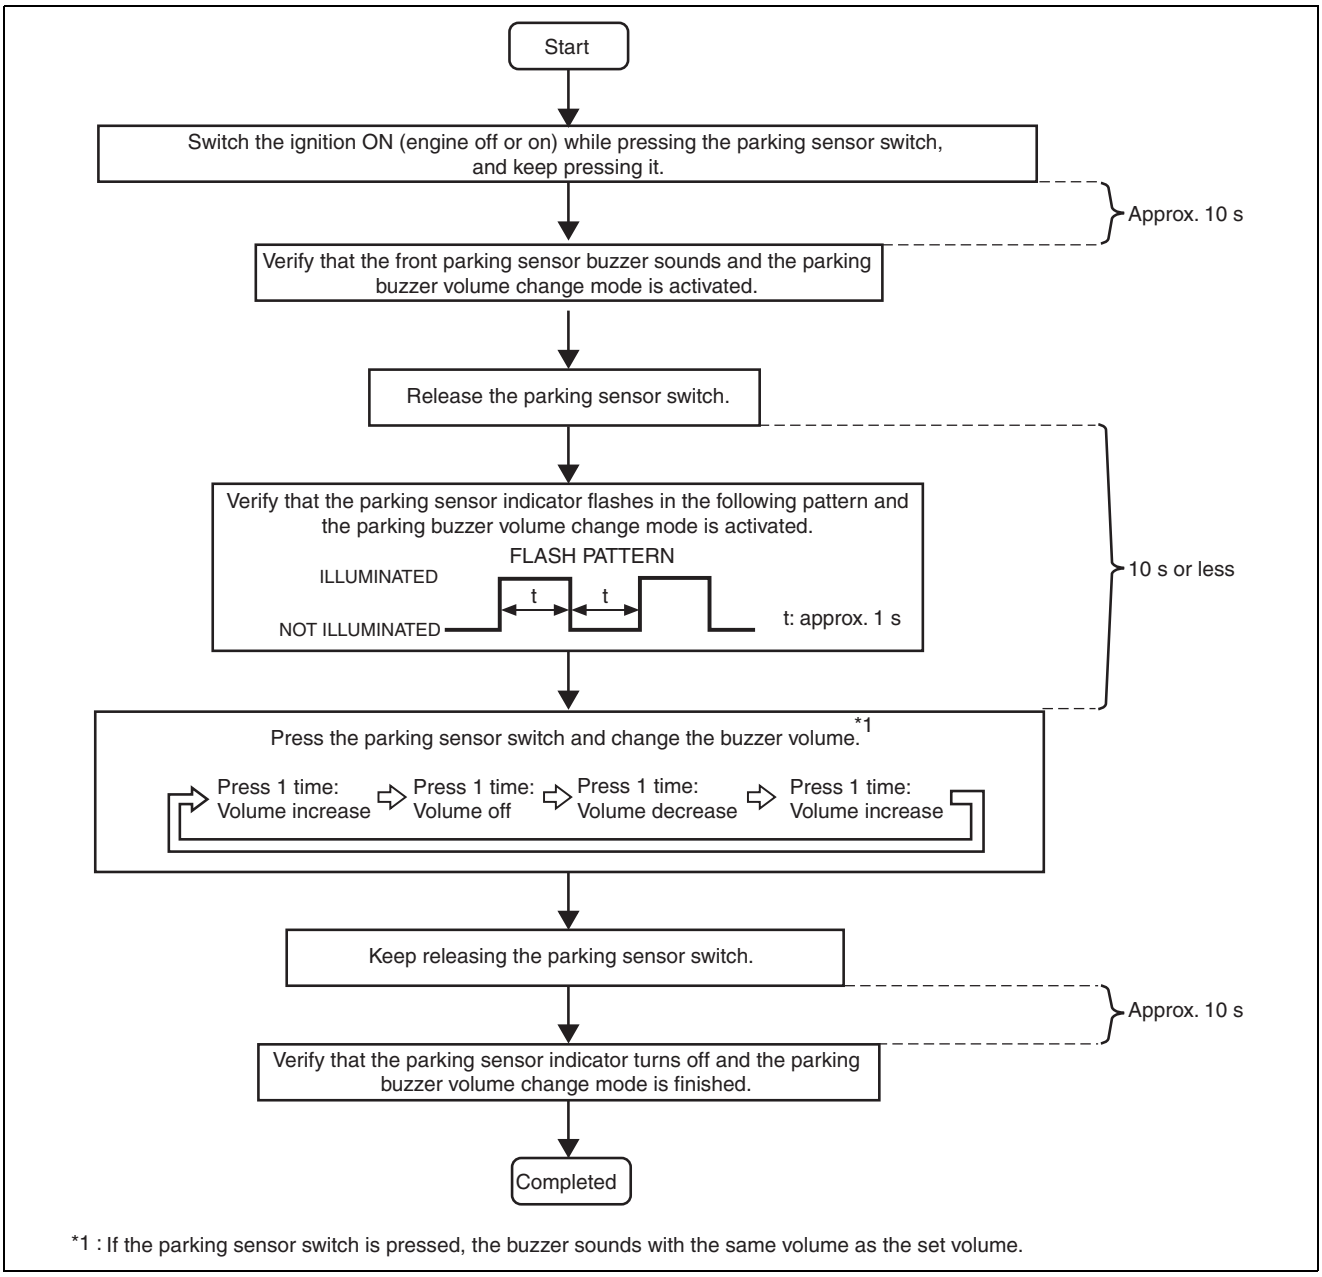
id092200024100

Note

- The parking buzzer volume change mode is activated by operating the parking sensor switch and ignition using the specified procedure.
- While in the parking buzzer volume change mode, the parking buzzer sounds for approx. 1 s when activating the mode and the parking sensor indicator flashes while activating the mode. If the parking buzzer does not sound or the parking sensor indicator does not flash, the procedure for activating the parking buzzer volume change mode may have been performed incorrectly. Switch the ignition off and repeat the procedure from Step 1.

INSTRUMENTATION/DRIVER INFO.

Front Parking Sensor Buzzer

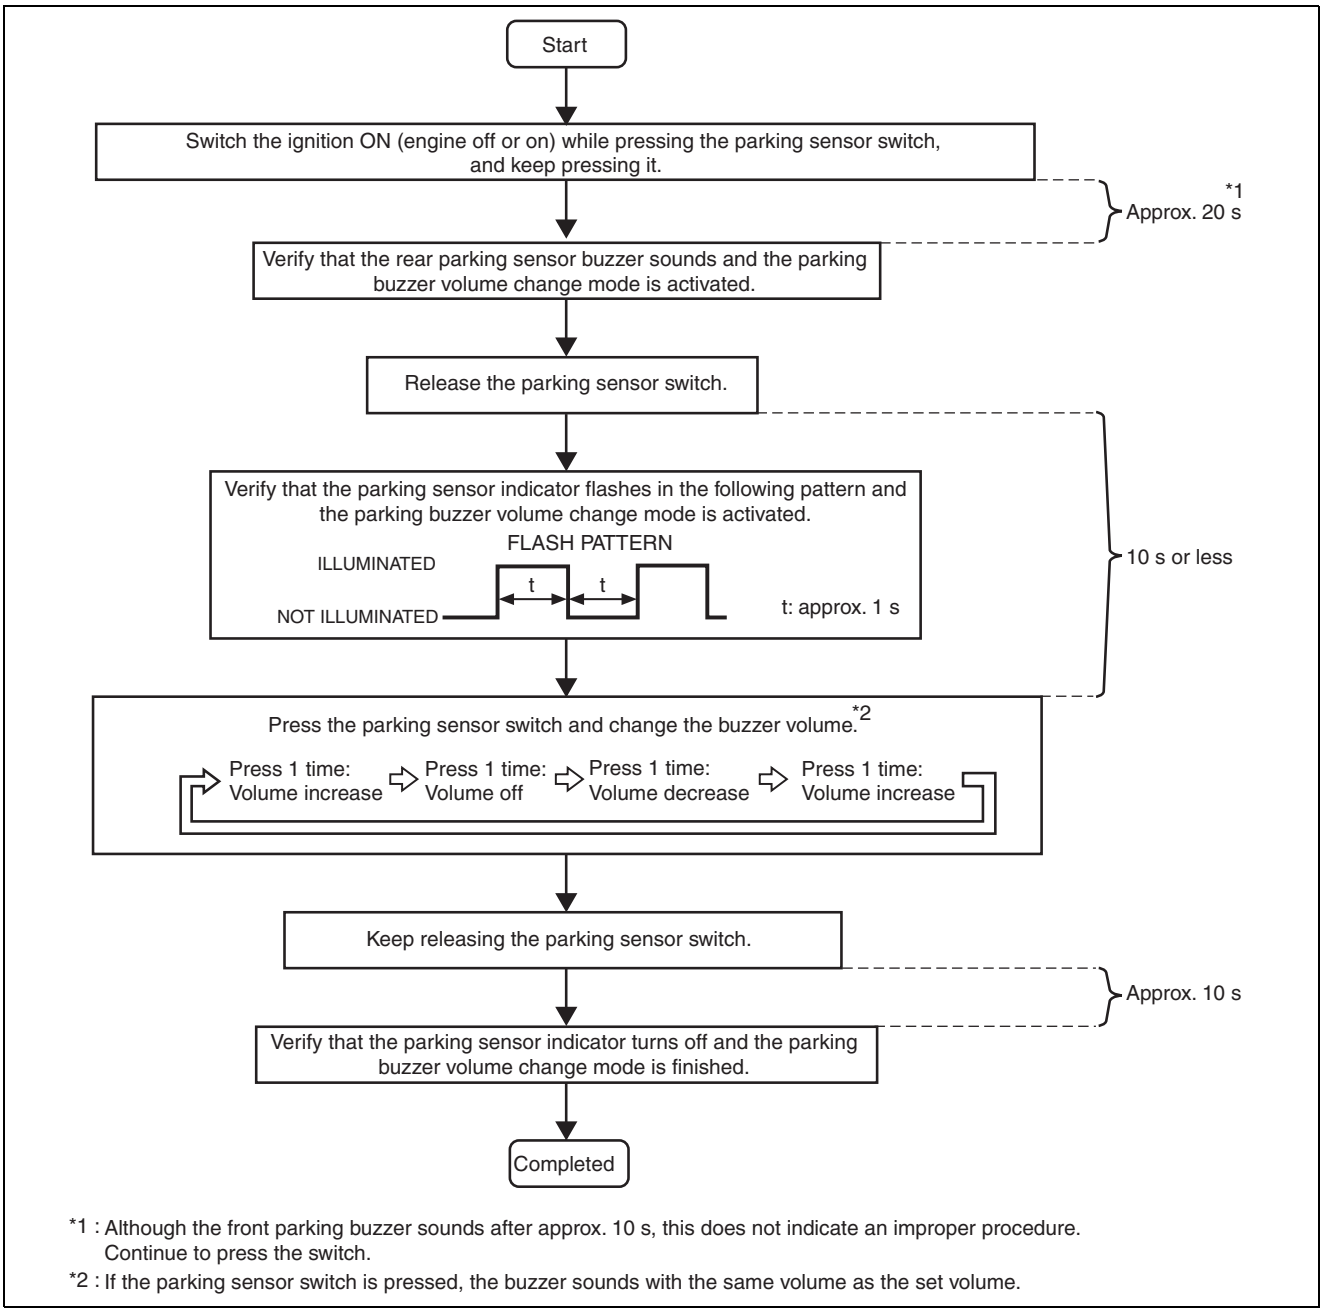


*1 : If the parking sensor switch is pressed, the buzzer sounds with the same volume as the set volume.

ac5wzw0000378

INSTRUMENTATION/DRIVER INFO.

Rear Parking Sensor Buzzer



*1 : Although the front parking buzzer sounds after approx. 10 s, this does not indicate an improper procedure. Continue to press the switch.

*2 : If the parking sensor switch is pressed, the buzzer sounds with the same volume as the set volume.

ac5wzw0000378

BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION

id092200013600

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the rear combination light. (See 09-18-54 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
3. Remove the rear bumper. (See 09-10-24 REAR BUMPER REMOVAL/INSTALLATION.)

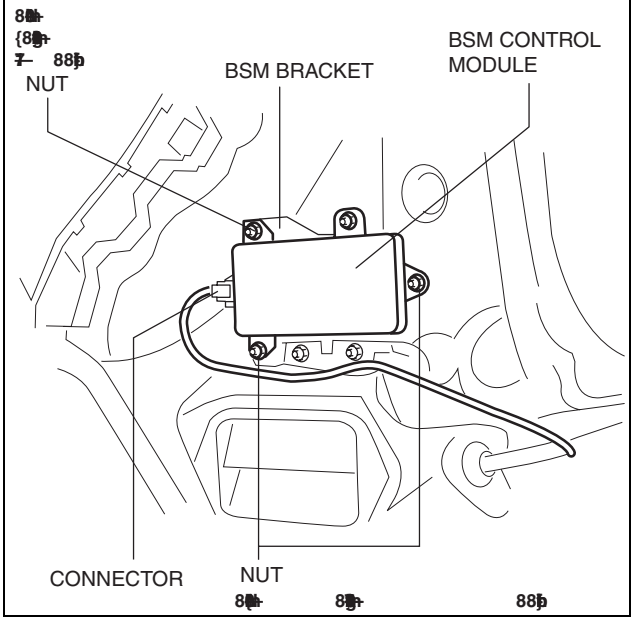
INSTRUMENTATION/DRIVER INFO.

4. Disconnect the connector.
5. Remove the nuts.
6. Remove the BSM control module.
7. Install in the reverse order of removal.
8. Perform the BSM radar test. (See 09-22-71 BLIND SPOT MONITORING (BSM) RADAR TEST.)

Caution

- **If the BSM control module is replaced, not performing the BSM radar test will cause a deviation in the radar emission angle which could result in the system not detecting a vehicle approaching from the rear correctly. If the BSM control module is replaced, perform the BSM radar test.**

ILLUSTRATION INDICATES LEFT SIDE. (RH SIDE IDENTICAL)



ac5wzw0000085

BLIND SPOT MONITORING (BSM) CONTROL MODULE INSPECTION

id092200013700

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the rear combination light. (See 09-18-54 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
3. Remove the rear bumper. (See 09-10-24 REAR BUMPER REMOVAL/INSTALLATION.)
4. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
5. Verify that the voltages of each of the terminals are as indicated in the terminal voltage table (reference).
   - If the voltage is not as specified in the terminal voltage table (reference), inspect the parts under Inspection item(s).
     — If the system does not operate normally even though the inspection items are normal, replace the BSM control module (RH) or BSM control module (LH).

BLIND SPOT MONITORING (BSM) BRACKET REMOVAL/INSTALLATION

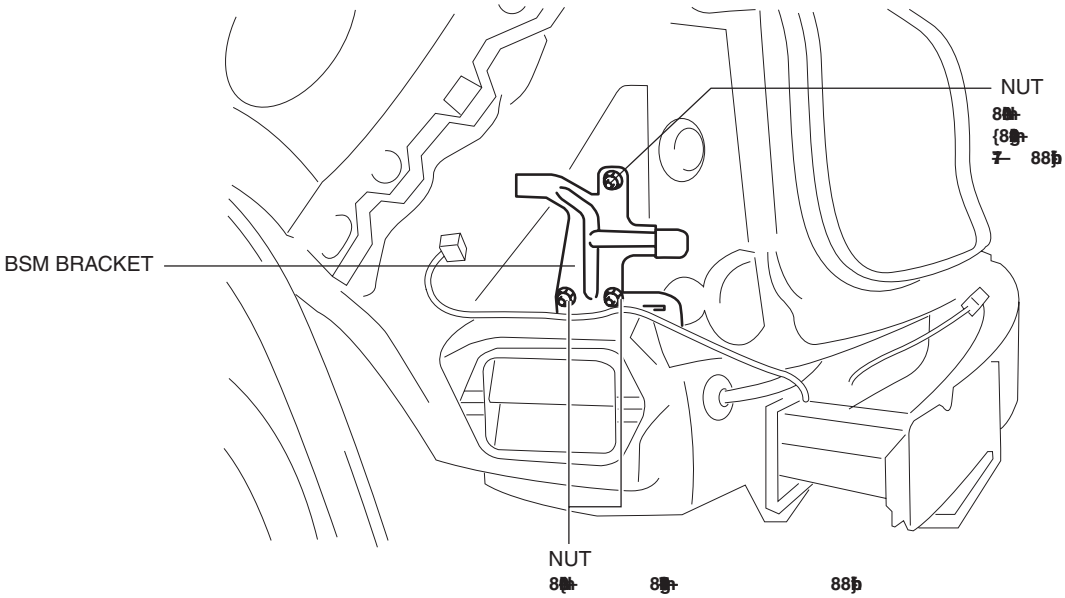
id092200013900

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Rear combination lights (See 09-18-54 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (2) Rear bumper (See 09-10-24 REAR BUMPER REMOVAL/INSTALLATION.)
   (3) BSM control module (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)

INSTRUMENTATION/DRIVER INFO.

3. Remove the nuts.

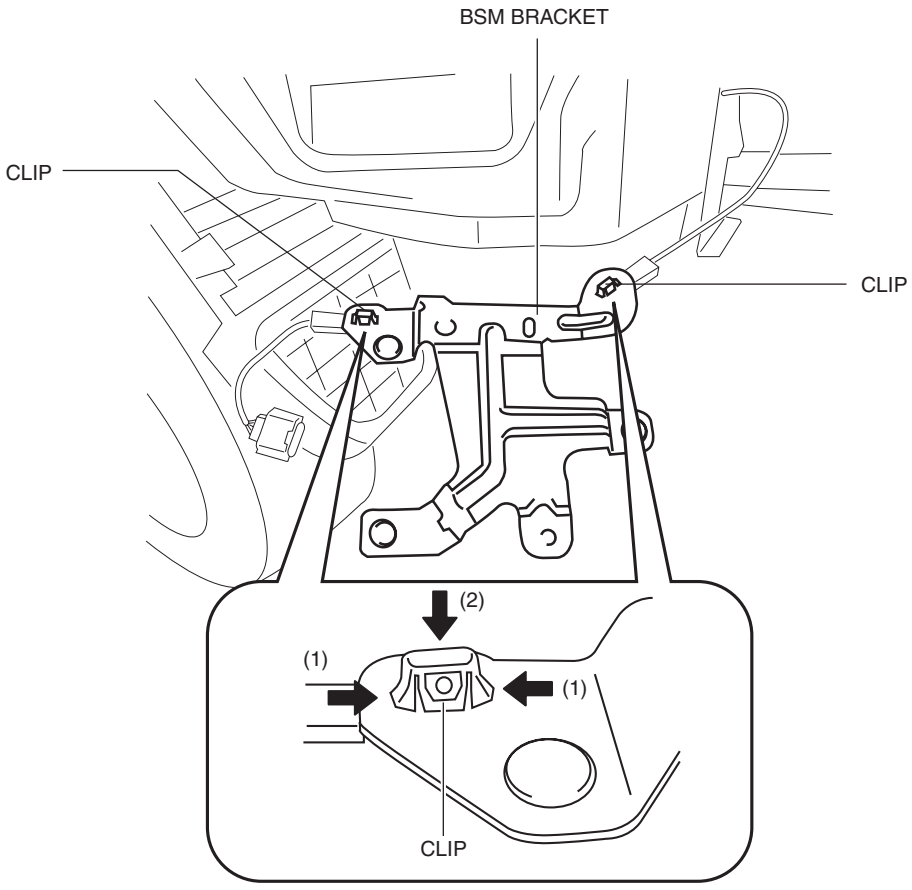
ILLUSTRATION INDICATES LEFT SIDE. (RH SIDE IDENTICAL)



ac5wzw0000085

4. While pressing the clip tabs in the direction of the arrows (1) shown in the figure, press the clip in the direction of the arrow (2) to detach the clip tabs from the bracket.

ILLUSTRATION INDICATES LEFT SIDE. (RH SIDE IDENTICAL)



ac5wzw0000085

5. Detach the clip.
6. Remove the BSM bracket.

INSTRUMENTATION/DRIVER INFO.

7. Install in the reverse order of removal.
8. Perform the BSM radar test. (See 09-22-71 BLIND SPOT MONITORING (BSM) RADAR TEST.)

Caution
- **If the BSM bracket is replaced, not performing the BSM radar test will cause a deviation in the radar emission angle which could result in the system not detecting a vehicle approaching from the rear correctly. If the BSM bracket is replaced, perform the BSM radar test.**

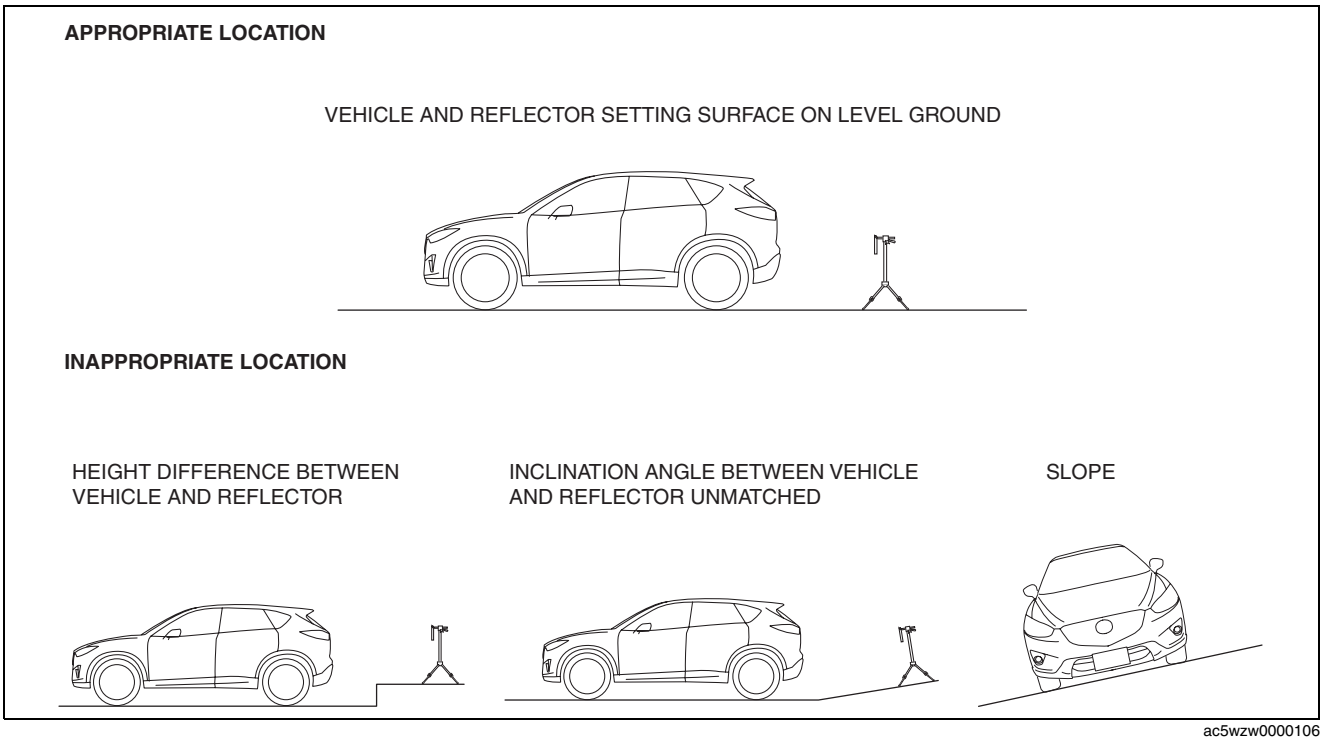
BLIND SPOT MONITORING (BSM) RADAR TEST

id092200014000

Note
- The BSM radar test stores the radar angles in the BSM control module based on the forced emission of radar at a SST (reflector) and performing aiming based on the induced tolerance with the radar as it is currently installed and reflected from the SST (reflector).
- Perform the BSM radar test when replacing the BSM control module, BSM bracket, or the rear bumper.
- As there are two BSM control modules, one each on the left and right, radar aiming is performed for each side.
- The BSM radar test cannot be performed correctly if obstructions which interfere with radar emission are stuck on the BSM control modules or the rear bumper. Perform the following procedure before performing the radar test.
  - — Verify that there is no water, mud, soiling, sticker adhesion, or repairs done using putty application on the surface of the rear bumper, and that there is no mud, soiling or scratches on the BSM control modules.

Radar test procedure
1. Empty the vehicle by having all occupants leave the vehicle and remove all the cargo except for the spare tire, jack and tools equipped on the vehicle.
2. Adjust the air pressure of each tire to the specified value. (See 02-12-1 WHEEL AND TIRE SPECIFICATION.)
3. Move the vehicle to level ground.

Caution
- **If the setting surface height and angle between the vehicle and the SST (reflector) differs, a correct radar test cannot be done. Perform the radar test with the vehicle and SST (reflector) set on level ground.**



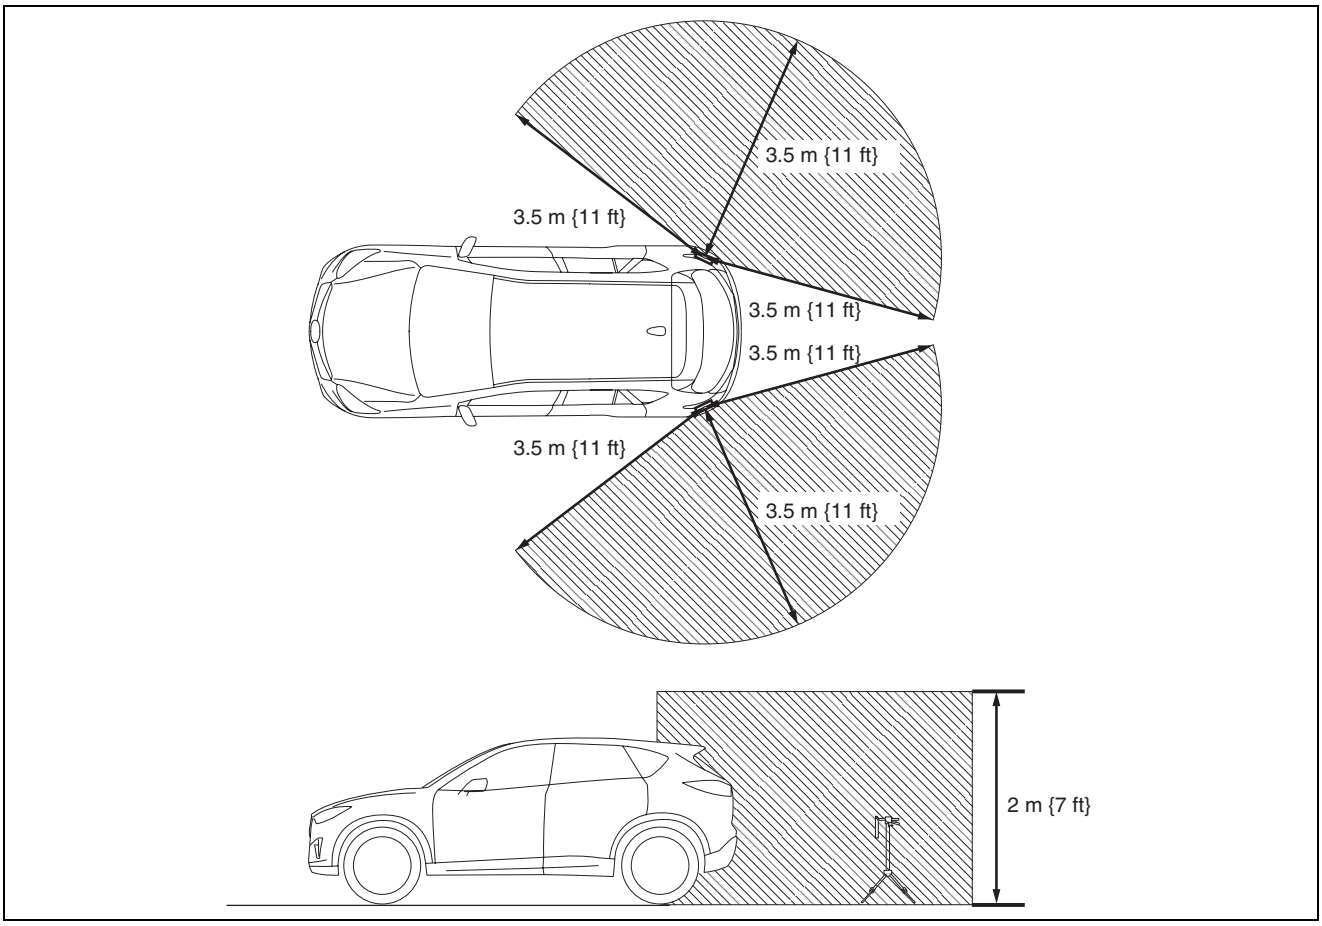
ac5wzw0000106

4. Verify that there are no obstructions which interfere with radar emissions such as metal objects in the radar emission area shown in the figure.

INSTRUMENTATION/DRIVER INFO.

Caution

- **If the radar test is performed in the shaded area shown in the figure with obstructions such as covered drain gutters in the floor or other metal reflective objects, it could result in the radar test not being performed correctly. Move all obstructions out of the area, and when performing the radar test, do not have personnel standing in the area.**



ac5wzw0000244

5. Using the M-MDS, perform a DTC inspection of the BSM control modules and verify that no DTCs are displayed. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].)

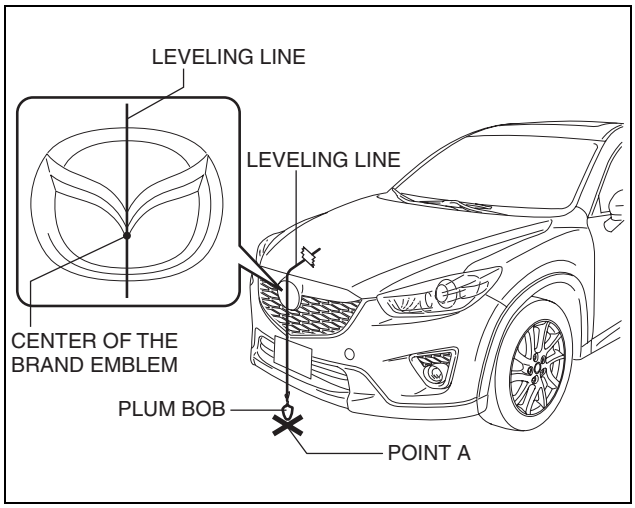
Note

- If any DTCs are displayed, perform malfunction repair referring to the applicable DTC troubleshooting. (See 09-02H-6 DTC TABLE [BLIND SPOT MONITORING (BSM)].)

6. Adjust the SST (plum-bob) so that it is aligned with the center of the brand emblem, determine the center position at the front of the vehicle, and mark the center position (point A) on the floor surface.

Note

- The center of the brand emblem indicates the center position of the vehicle.



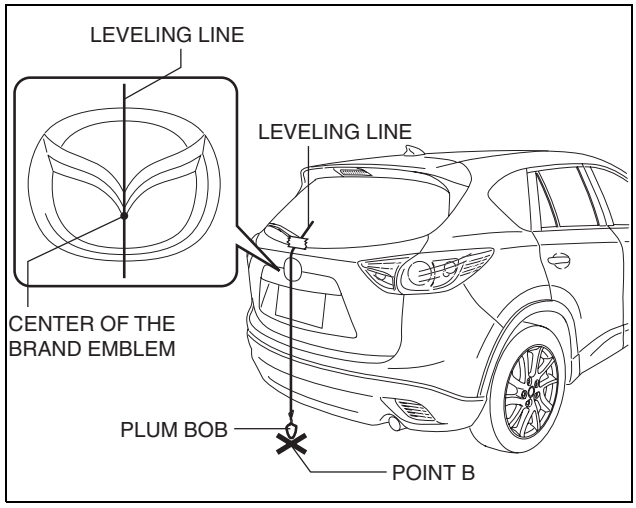
ac5wzw0000106

7. Adjust the SST (plum-bob) so that it is aligned with the center of the brand emblem, determine the center position at the rear of the vehicle, and mark the center position (point B) on the floor surface.

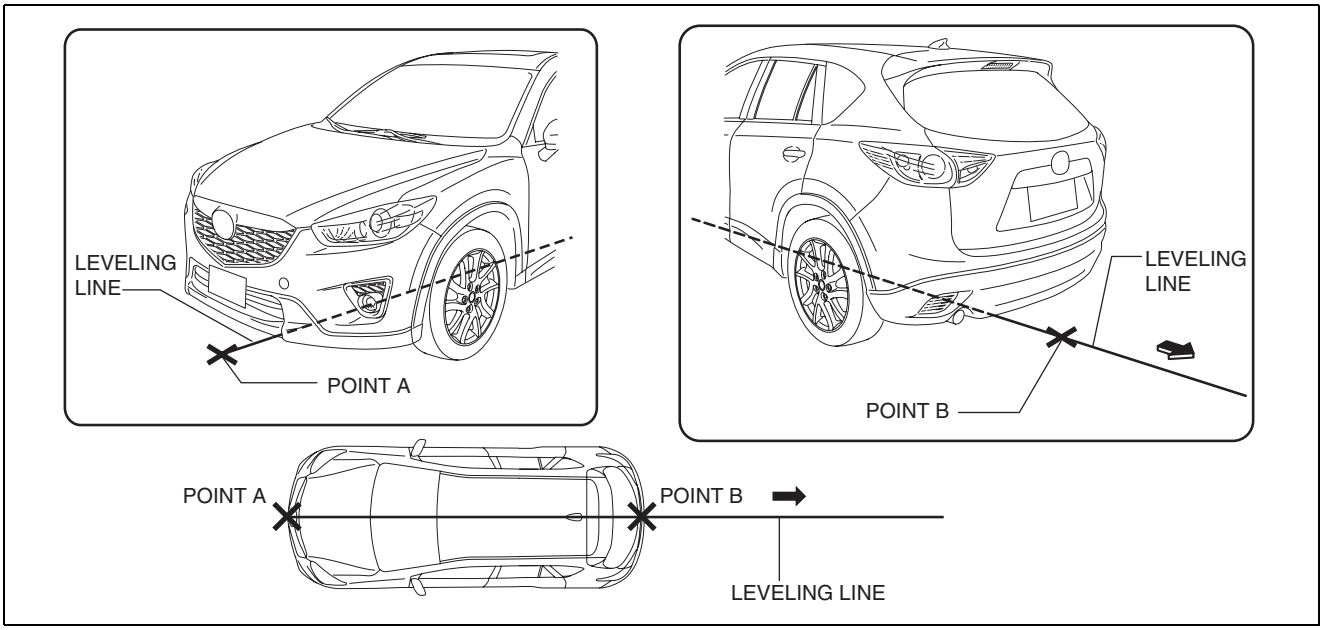
Note
- The center of the brand emblem indicates the center position of the vehicle.

8. Secure the end of the leveling line over point A.

Note
- Use a commercially-available leveling line.

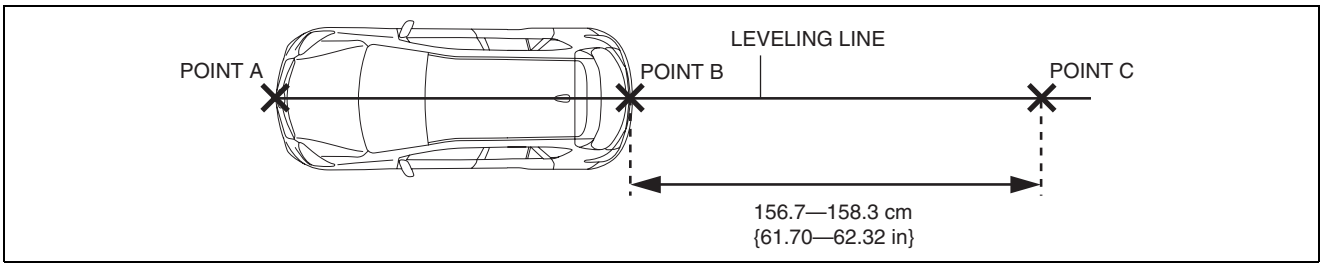


ac5wzw0000106



ac5wzw0000106

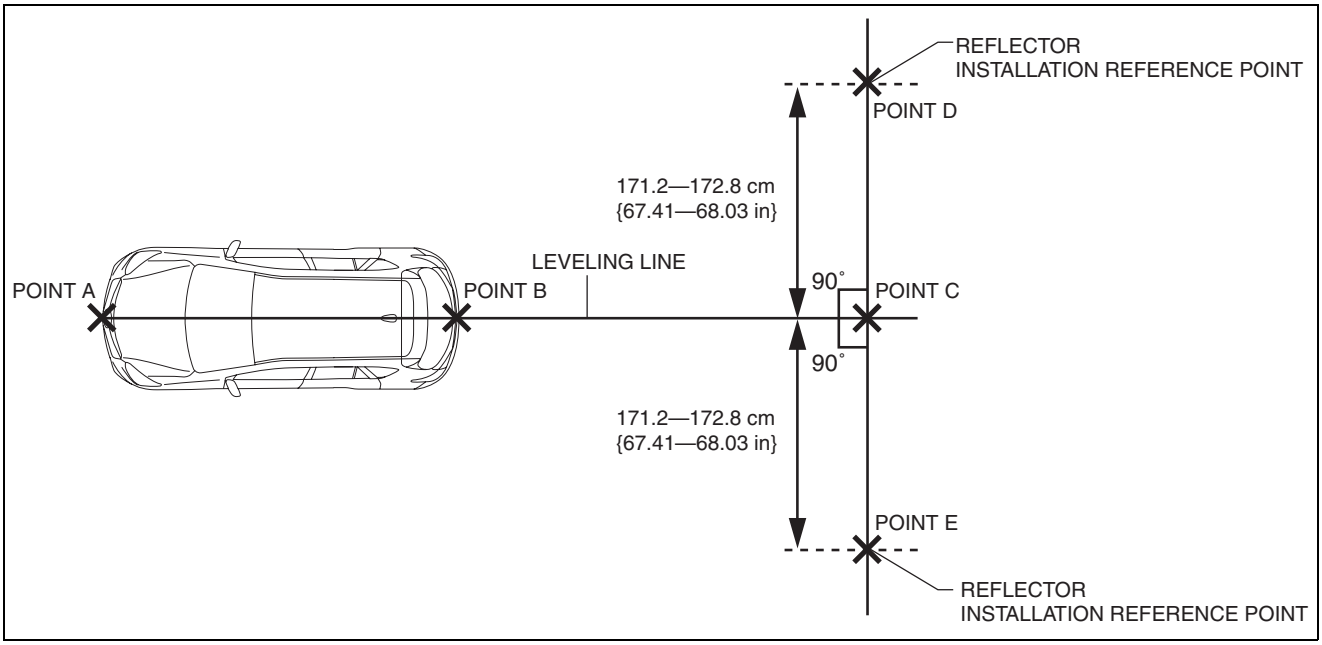
9. Pull the unsecured end of the leveling line over the vehicle and to the rear and adjust it so that passes over point B.
10. Mark the line (position C) within the range of **156.7—158.3 cm {61.70—62.32 in}** from point B and in the direction rearward of the vehicle.



ac5wzw0000244

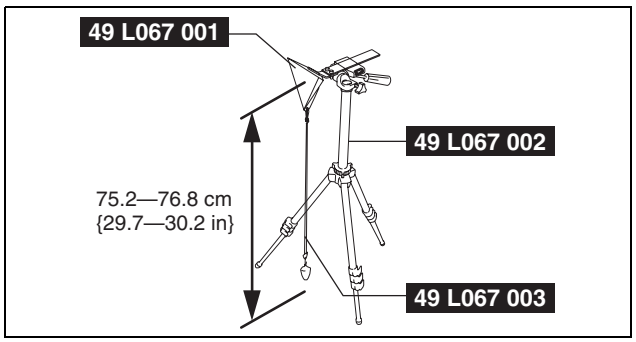
INSTRUMENTATION/DRIVER INFO.

11. Mark the points (points D and E) (SST (reflector) installation reference points) **171.2—172.8 cm {67.41—68.03 in}** from point C on the line which runs perpendicular to the vehicle center line (SST (reflector) installation reference point).



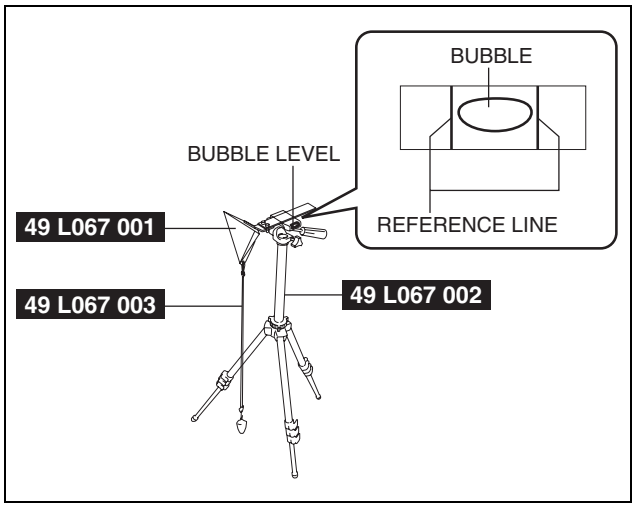
ac5wzw0000245

12. Pull the connected points D, C and E lines (SST (reflector) installation line).
13. Install the SST (reflector and plum bob) to the SST (tripod).
14. Adjust so that the height of the SST (reflector) from the floor surface is **75.2—76.8 cm {29.7—30.2 in}**.



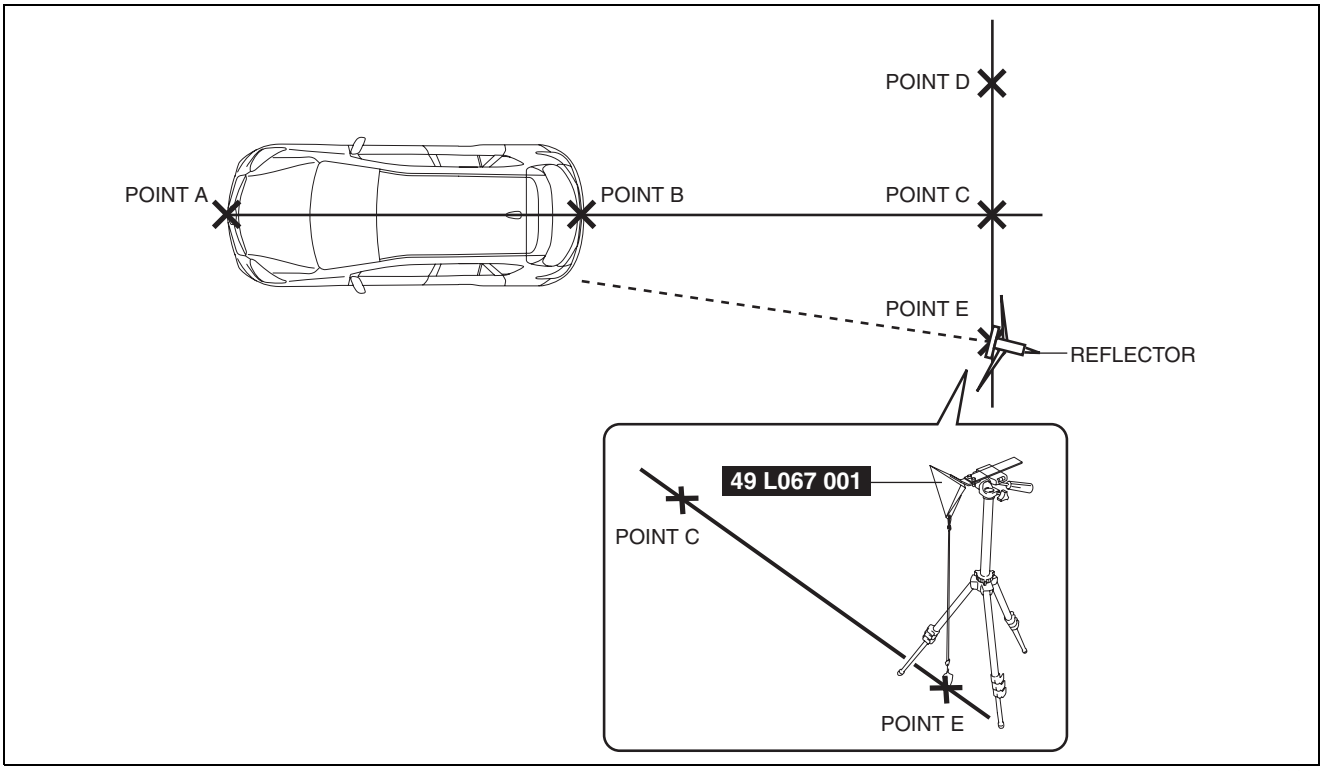
ac5wzw0000245

15. Level the SST (reflector) by adjusting the leveling bubble on the SST (tripod) so that it is centered on the bubble reference line.



ac5wzw0000106

16. Align point D or point E with the end of the SST (plum bomb).



ac5wzw0000106

17. Adjust the reflecting surface of the SST (reflector) so that it faces the radar emission surface (near a rear bumper corner) of BSM control module.
18. Perform the radar test using the M-MDS.
19. Connect the M-MDS to the DLC-2.
20. After vehicle identification, the following can be selected from the M-MDS initialization screen.
    1. "Electrical"
    2. "BSM Radar Test"
21. Select either the left or right rear BSM control module and perform the radar test according to the instructions on the M-MDS screen.
22. Verify the M-MDS display.
    - If "TEST PASSED" is displayed
      — Radar test is completed
    - If "TEST FAILED" is displayed
      — Perform an inspection according to the following table.

Step	Inspection	Action	
1	**VERIFY REFLECTOR POSITION** • Verify if the reflector installation position is correct. • Is the reflector set in the correct position?	Yes	Go to the next step.
		No	Set the reflector in the correct position and perform the BSM radar test.
2	**INSPECT REAR BUMPER** • Remove the rear bumper. (See 09-10-24 REAR BUMPER REMOVAL/ INSTALLATION.) • Perform the BSM radar test. • Is "Procedure completed correctly." displayed?	Yes	Replace the rear bumper and perform the BSM radar test. (See 09-10-24 REAR BUMPER REMOVAL/ INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF BSM CONTROL MODULE OR BSM BRACKET IS MIS-INSTALLED AND IF THERE IS DISTORTION TO VEHICLE INSTALLATION SURFACE** • Verify whether a BSM control module or BSM bracket has been mis-installed, and if there is distortion to the vehicle installation surface. • Is there poor installation or distortion?	Yes	Repair or replace the malfunctioning part and perform the BSM radar test.
		No	Go to the next step.

INSTRUMENTATION/DRIVER INFO.

Step	Inspection	Action	
4	**RE-PERFORM THE BSM RADAR TEST** • Perform the BSM radar test. • Repeat the M-MDS operation for the BSM radar test 2 or 3 times (Steps 22 to 23). • Is "Procedure completed correctly." displayed?	Yes	BSM radar test is completed.
		No	Replace the BSM control module.

BLIND SPOT MONITORING (BSM) OFF SWITCH REMOVAL/INSTALLATION

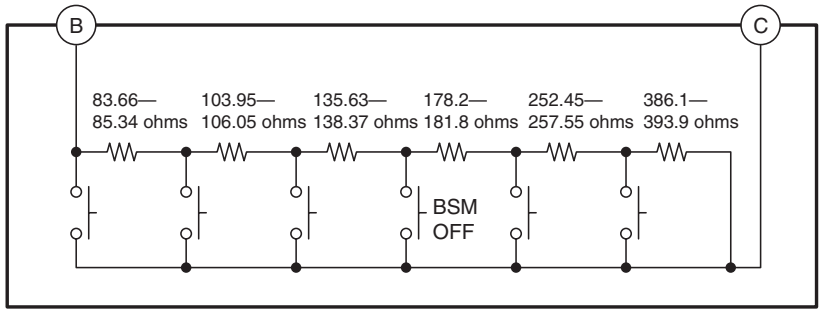
id092200014100

Note
- The BSM OFF switch is integrated with the cluster switch.
- For the cluster switch removal/installation, refer to the switch panel removal/installation because the cluster switch is installed to the switch panel. (See 09-17-18 SWITCH PANEL REMOVAL/INSTALLATION.)

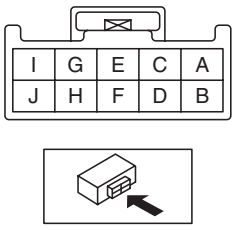
BLIND SPOT MONITORING (BSM) OFF SWITCH INSPECTION

id092200014200

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the BSM OFF switch. (See 09-22-76 BLIND SPOT MONITORING (BSM) OFF SWITCH REMOVAL/INSTALLATION.)
3. Verify that the resistance between BSM OFF switches B and C is as indicated in the table.



TEST CONDITION	RESISTANCE (ohms)
BSM OFF SWITCH PRESSED	323.24—329.76
ALL SWITCHES RELEASED	1,139.99—1,163.01

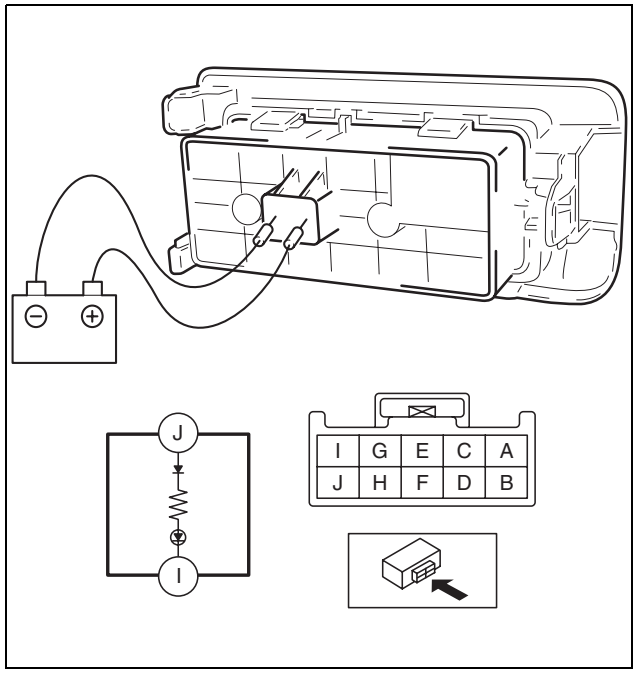


ac5wzw0000294

- If the resistance cannot be verified as indicated in the table, replace the cluster switch.

INSTRUMENTATION/DRIVER INFO.

4. Apply battery positive voltage to BSM OFF switch terminal J, and connect terminal I to ground.
5. Verify that the LED illuminates.
   - If there is any malfunction, replace the cluster switch.



ac5jjw00000654

BLIND SPOT MONITORING (BSM) INDICATOR LIGHT REMOVAL/INSTALLATION

id092200014300

Note
- The BSM indicator lights are integrated into the outer mirror glass.
- For the BSM indicator light removal/installation, refer to the outer mirror glass removal/installation. (See 09-12-73 OUTER MIRROR GLASS REMOVAL.) (See 09-12-78 OUTER MIRROR GLASS INSTALLATION.)

BLIND SPOT MONITORING (BSM) INDICATOR LIGHT INSPECTION

id092200014400

Note
- The BSM indicator lights are integrated into the outer mirror glass.
- For the BSM indicator light inspection, refer to the outer mirror glass inspection. (See 09-12-81 OUTER MIRROR GLASS INSPECTION.)

REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION

id092200014600

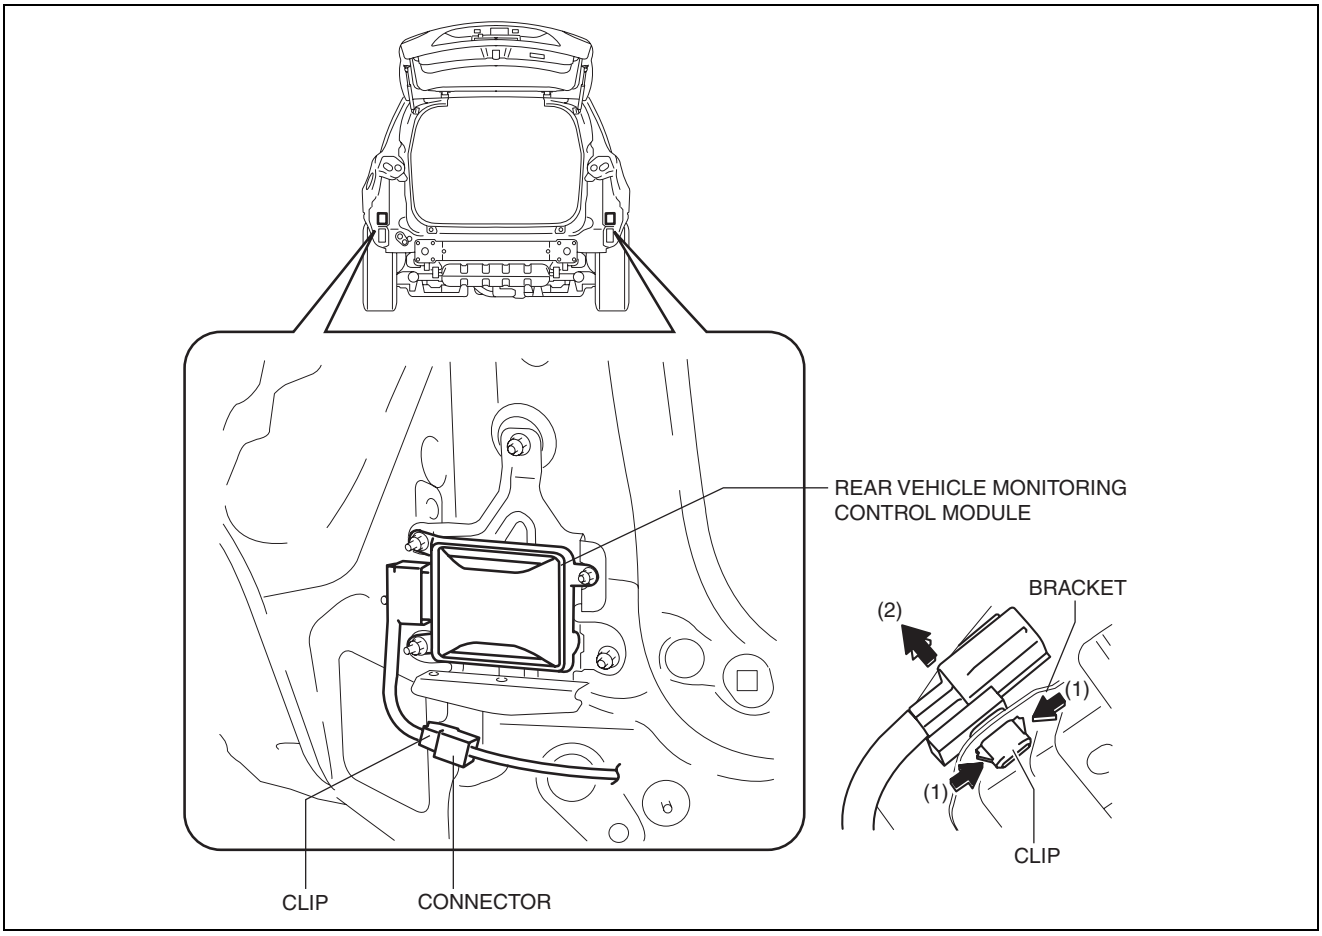
Caution
- **If configuration is not performed when the rear vehicle monitoring control module (RH) is replaced with a new one, the vehicle specification information is not stored in the rear vehicle monitoring control module (RH) and the system will not operate normally.**
- **When performing configuration, it is necessary to read the vehicle specification information from the rear vehicle monitoring control module (RH) before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the rear vehicle monitoring control module (RH). The vehicle specification information is temporarily stored in the M-MDS.**

Note
- The rear vehicle monitoring control module (RH) prior to replacement stores the vehicle specification information.
- A new rear vehicle monitoring control module (RH) does not store any vehicle specification information.
- If the vehicle specification information from the rear vehicle monitoring control module (RH) prior to replacement cannot be read, perform the configuration using As-Built data.

1. When replacing a rear vehicle monitoring control module (RH), perform the rear vehicle monitoring control module configuration. (See 09-22-82 REAR VEHICLE MONITORING CONTROL MODULE CONFIGURATION (USING READ/WRITE FUNCTION).)

INSTRUMENTATION/DRIVER INFO.

2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the rear combination light. (See 09-18-54 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
4. Remove the rear bumper. (See 09-10-24 REAR BUMPER REMOVAL/INSTALLATION.)
5. Disconnect the connector.



ac5wzw0000291

6. While pressing the tabs of the clip in the direction of the arrows (1) shown in the figure, pull the clip in the direction of the arrow (2) to detach it from the bracket.
7. Remove the clip from the bracket.

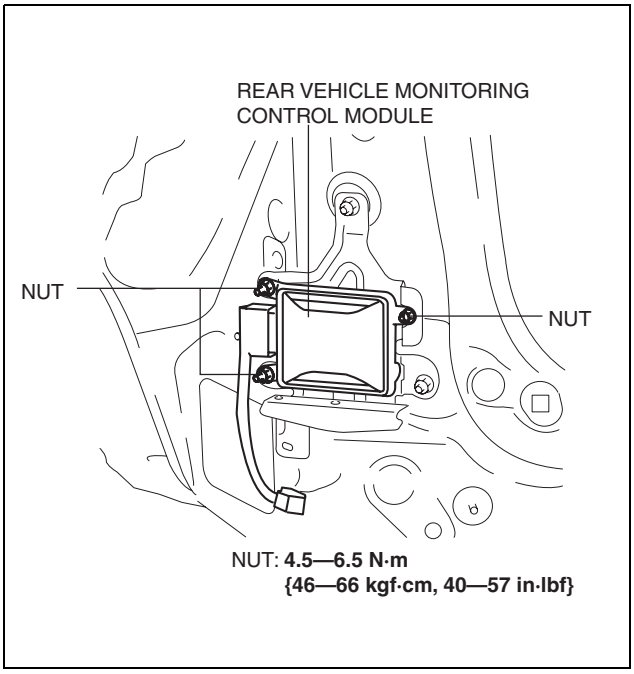
INSTRUMENTATION/DRIVER INFO.

8. Remove the nuts from the bracket.
9. Remove the rear vehicle monitoring control module from the bracket.
10. Install in the reverse order of removal.

Note

- If configuration cannot be performed by reading/writing of the vehicle specification information, perform the configuration using As-Built information after replacing the rear vehicle monitoring control module (RH). (See 09-22-83 REAR VEHICLE MONITORING CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA).)

11. Perform the rear vehicle monitoring radar aiming procedure. (See 09-22-83 REAR VEHICLE MONITORING RADAR AIMING.)



ac5wzw0000291

Caution

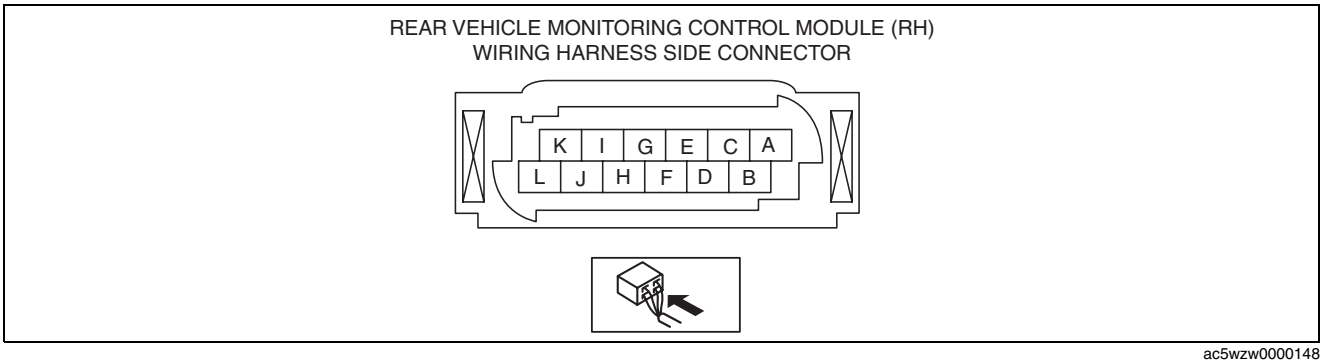
- **If a rear vehicle monitoring control module is replaced, not performing the rear vehicle monitoring radar aiming procedure will cause a deviation in the the radar emission angle which could result in the system not detecting a vehicle approaching from the rear correctly. If a rear vehicle monitoring control module is replaced, perform the rear vehicle monitoring radar aiming procedure.**

REAR VEHICLE MONITORING CONTROL MODULE INSPECTION

id092200014700

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the rear combination light. (See 09-18-54 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
3. Remove the rear bumper. (See 09-10-24 REAR BUMPER REMOVAL/INSTALLATION.)
4. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
5. Verify that the voltages of each of the terminals are as indicated in the terminal voltage table (reference).
   - If the voltage is not as specified in the terminal voltage table (reference), inspect the parts under Inspection item(s).
     — If the system does not operate normally even though the inspection items are normal, replace the rear vehicle monitoring control module (RH) or the rear vehicle monitoring control module (LH).

Terminal Voltage Table (Reference)
Rear vehicle monitoring control module (RH)



ac5wzw0000148

INSTRUMENTATION/DRIVER INFO.

Terminal	Signal name	Connected to	Measurement conditions	Voltage (V)	Inspection item(s)
A	CAN2_L	Rear vehicle monitoring CM (LH)	Because this terminal is for communication, determination using terminal voltage inspection is not possible.		
B	—	—	—	—	—
C	CAN2_H	Rear vehicle monitoring CM (LH)	Because this terminal is for communication, determination using terminal voltage inspection is not possible.		
D	—	—	—	—	—
E	—	—	—	—	—
F	Power position (1G1)	IG relay	Ignition switched ON (engine off or on)	B+	• C/U IG1 fuse • IG relay • Related wiring harness
			Ignition switched off (LOCK) or ACC	1.0 or less	
G	—	—	—	—	—
H	Ground	Body ground	Under any condition	1.0 or less	• Related wiring harness
I	MS-CAN_L	CAN communication related module	Because this terminal is for communication, determination using terminal voltage inspection is not possible.		
J	—	—	—	—	—
K	—	—	—	—	—
L	MS-CAN_H	CAN communication related module	Because this terminal is for communication, determination using terminal voltage inspection is not possible.		

Rear vehicle monitoring control module (LH)

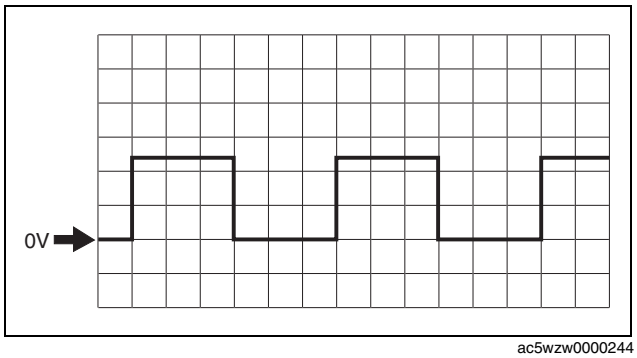
			Turn on the RVM warning indicator light using the rear vehicle monitoring system simulation WRN_IND_L	Wave pattern (See 09-22-81 Inspection Using an Oscilloscope (Reference).)	
L	CAN2_H	Rear vehicle monitoring CM (RH)	Because this terminal is for communication, determination using terminal voltage inspection is not possible.		

Inspection Using an Oscilloscope (Reference)
Pattern 1



ac5wzw0000244

- Terminal:
  - — RVM warning indicator light signal (RH): D (+) ⇔ body ground (-)
  - — RVM warning indicator light signal (LH): K (+) ⇔ body earth (-)
- Oscilloscope setting: 2 V/DIV (Y), 2 ms/DIV (X), DC range

REAR VEHICLE MONITORING BRACKET REMOVAL/INSTALLATION

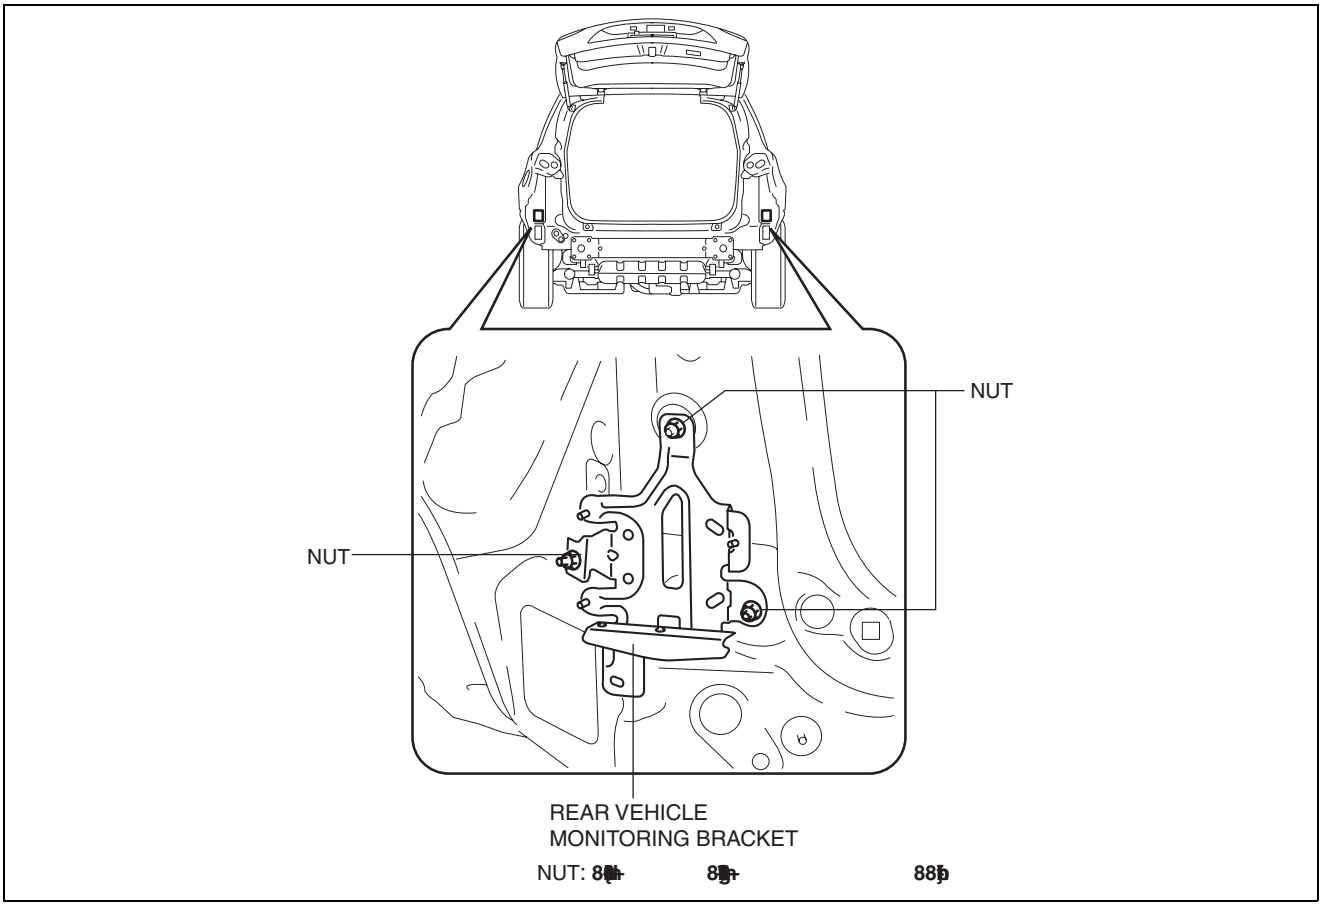
id092200014900

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Rear combination lights (See 09-18-54 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (2) Rear bumper (See 09-10-24 REAR BUMPER REMOVAL/INSTALLATION.)

INSTRUMENTATION/DRIVER INFO.

(3) Rear vehicle monitoring control module (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.)

3. Remove the nuts from the rear vehicle monitoring bracket.



ac5wzw0000292

4. Remove the rear vehicle monitoring bracket.
5. Install in the reverse order of removal.
6. Perform the rear vehicle monitoring radar aiming procedure. (See 09-22-83 REAR VEHICLE MONITORING RADAR AIMING.)

Caution

- **If a rear vehicle monitoring bracket is replaced, not performing the rear vehicle monitoring radar aiming procedure will cause a deviation in the the radar emission angle which could result in the system not detecting a vehicle approaching from the rear correctly. If a rear vehicle monitoring bracket is replaced, perform the rear vehicle monitoring radar aiming.**

REAR VEHICLE MONITORING CONTROL MODULE CONFIGURATION (USING READ/WRITE FUNCTION)

id092200033400

Note

- When performing configuration, it is necessary to read the vehicle specification information from the rear vehicle monitoring control module (RH) before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the rear vehicle monitoring control module (RH). The vehicle specification information is temporarily stored in the M-MDS.

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
   1. “Module programming”
3. Then, select the following from the screen menu.
   1. “Programmable Module Installation”
   2. “RVM”
4. Perform the configuration following the instructions on the screen.

Caution

- **When the configuration is performed, CAN communication between the rear vehicle monitoring control module (RH) and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.**

5. Verify the DTCs for all of the control modules connected to the CAN line.
   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

REAR VEHICLE MONITORING CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA)

id092200032200

Note

- If the configuration is performed using As-Built data, the set value of the personalization function is reset to the initial value (condition when shipped from factory). Verify the set value with the customer and perform the personalization function setting after performing the configuration using As-Built data.

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
   1. “Module programming”
3. Then, select the following from the screen menu.
   1. “As-Built”
   2. “RVM”
4. Perform As-Built following the instructions on the screen.

Caution

- **When the configuration is performed, CAN communication between the rear vehicle monitoring control module (RH) and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.**

5. Verify the DTCs for all of the control modules connected to the CAN line.
   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

REAR VEHICLE MONITORING RADAR AIMING

id092200015000

Note

- The rear vehicle monitoring radar aiming procedure stores the radar angles in the rear vehicle monitoring control module based on the forced emission of radar at a SST (Doppler simulator) and performing aiming based on the induced tolerance with the radar as it is currently installed and reflected from the SST (Doppler simulator).
- The rear vehicle monitoring radar aiming is performed when the rear vehicle monitoring control module, rear vehicle monitoring bracket or the rear bumper is replaced.
- As there are two rear vehicle monitoring control modules, one each on the left and right, radar aiming is performed for each side.
- Radar aiming cannot be performed correctly if obstructions which interfere with radar emission are stuck on the rear vehicle monitoring control modules or the rear bumper. Perform the following procedure before performing the radar aiming.
  - — Verify that there is no water, mud, soiling, sticker adhesion, or repairs done using putty application on the surface of the rear bumper, and that there is no mud, soiling or scratches on the rear vehicle monitoring control modules.

Radar aiming procedure

1. Empty the vehicle by having all occupants leave the vehicle and remove all the cargo except for the spare tire, jack and tools.
2. Adjust the air pressure of each tire to the specified value. (See 02-12-1 WHEEL AND TIRE SPECIFICATION.)
3. Move the vehicle to level ground.

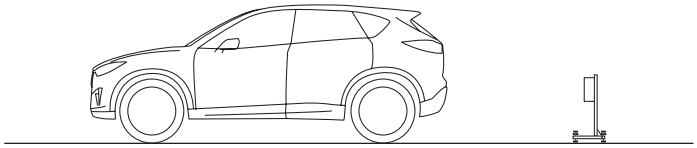
INSTRUMENTATION/DRIVER INFO.

Caution

- **If the setting surface height and angle between the vehicle and the SST (Doppler simulator) differs, correct radar aiming cannot be done. Perform the radar aiming with the vehicle and SST (Doppler simulator) set on level ground.**

APPROPRIATE LOCATION

VEHICLE AND DOPPLER SIMULATOR SETTING SURFACE ON LEVEL GROUND

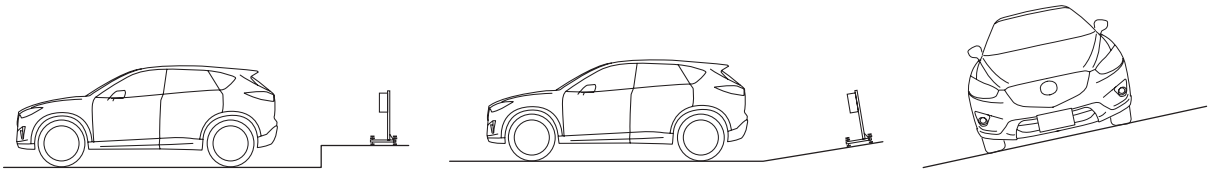


INAPPROPRIATE LOCATION

HEIGHT DIFFERENCE BETWEEN VEHICLE AND DOPPLER SIMULATOR

INCLINATION ANGLE BETWEEN VEHICLE AND DOPPLER SIMULATOR UNMATCHED

SLOPE



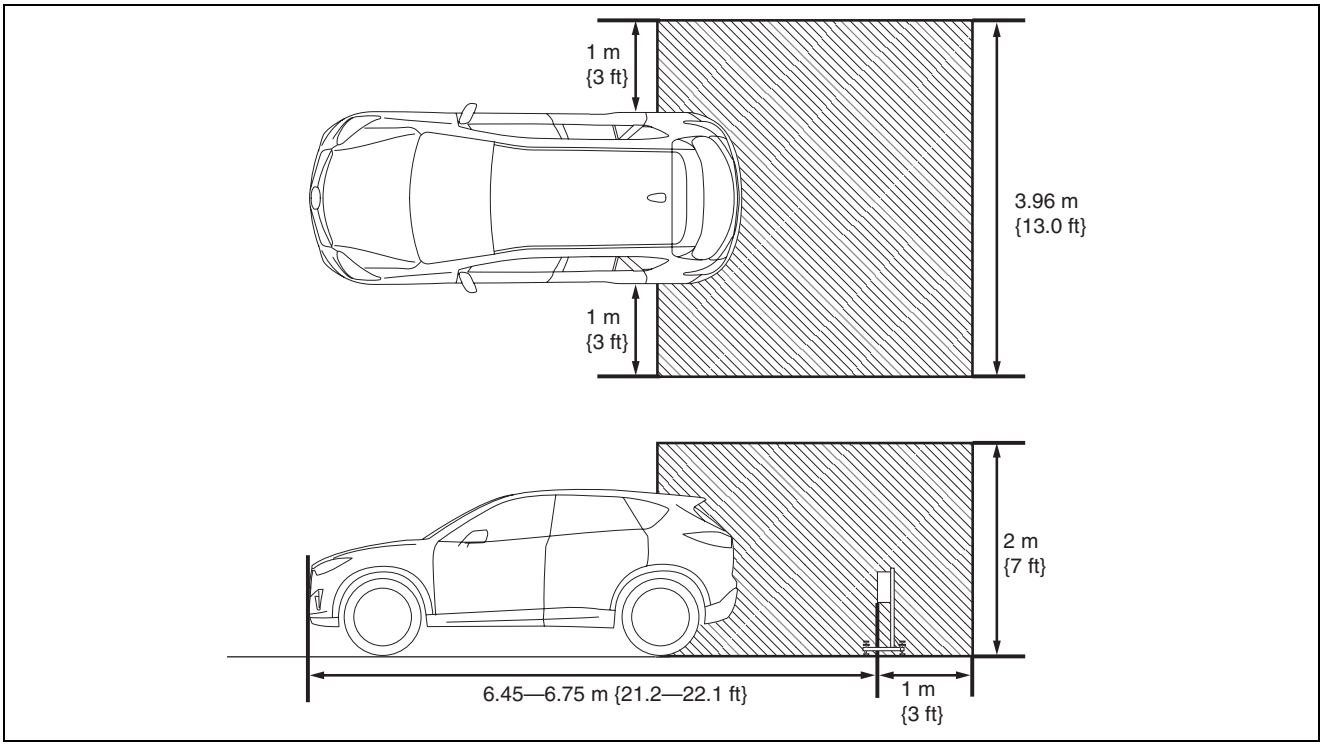
ac5wzw0000086

4. Verify that there are no obstructions which interfere with radar emissions such as metal objects in the radar emission area shown in the figure.

Caution

- **If the radar aiming is performed in the shaded area show in the figure with obstructions such as covered drain gutters in the floor or other metal reflective objects, it could result in the radar aiming not being performed correctly. Move all obstructions out of the area, and when performing the radar aiming, do not have personnel standing in the area.**

INSTRUMENTATION/DRIVER INFO.



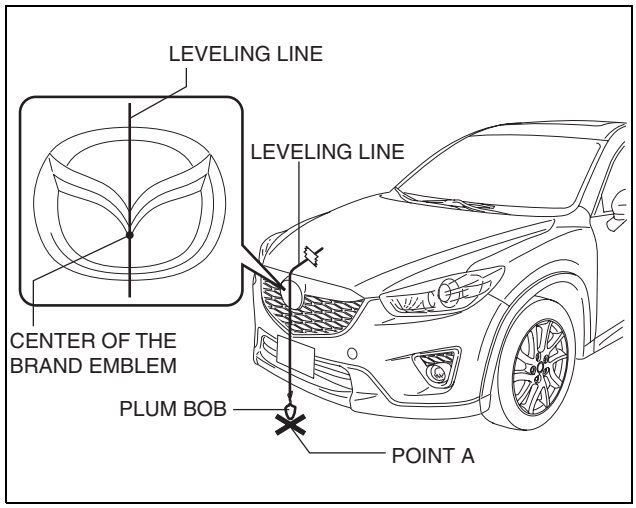
ac5wzw0000086

5. Perform the DTC inspection for the rear vehicle monitoring control module using the M-MDS and verify that no DTCs are displayed. (See 09-02I-4 DTC INSPECTION [REAR VEHICLE MONITORING SYSTEM].)

Note
- If any DTCs are displayed, perform malfunction repair referring to the applicable DTC troubleshooting. (See 09-02I-5 DTC TABLE [REAR VEHICLE MONITORING SYSTEM].)

6. Adjust the SST (plum-bob) so that it is aligned with the center of the brand emblem, determine the center position at the front of the vehicle, and mark the center position (point A) on the floor surface.

Note
- The center of the brand emblem indicates the center position of the vehicle.



ac5wzw0000086

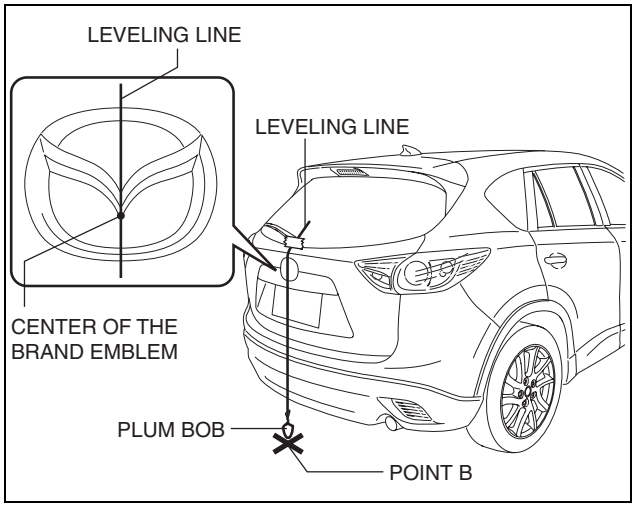
INSTRUMENTATION/DRIVER INFO.

7. Adjust the SST (plum-bob) so that it is aligned with the center of the brand emblem, determine the center position at the rear of the vehicle, and mark the center position (point B) on the floor surface.

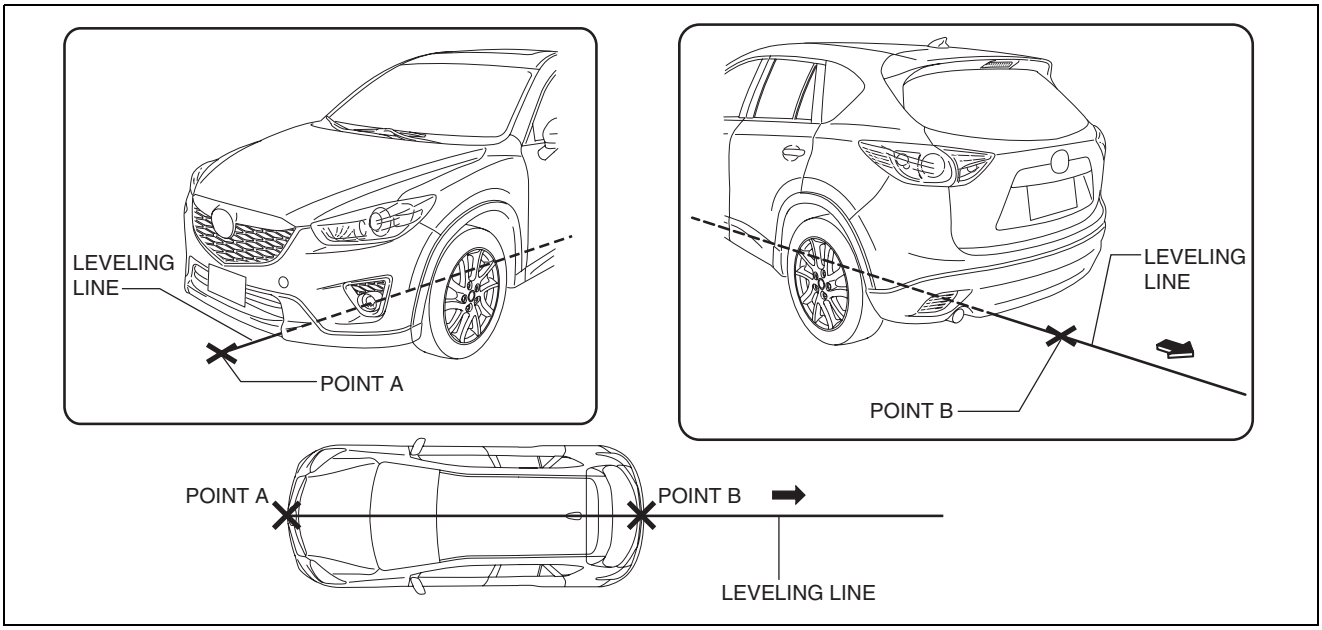
   Note
   - The center of the brand emblem indicates the center position of the vehicle.

8. Secure the end of the leveling line over point A.

   Note
   - Use a commercially-available leveling line.

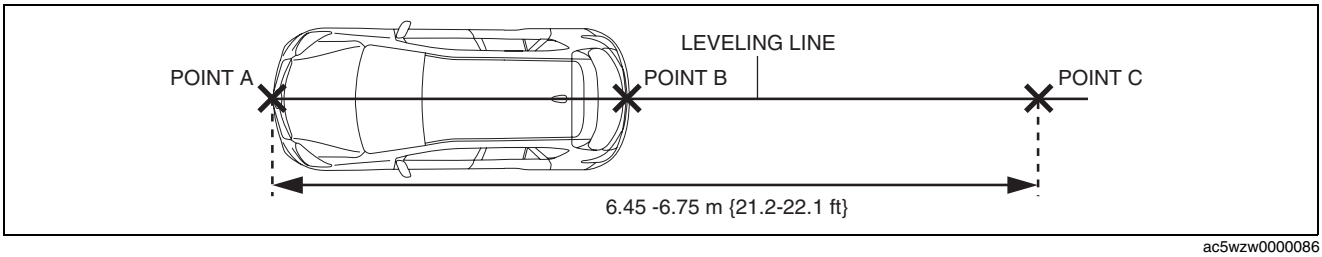


ac5wzw0000086



ac5wzw0000086

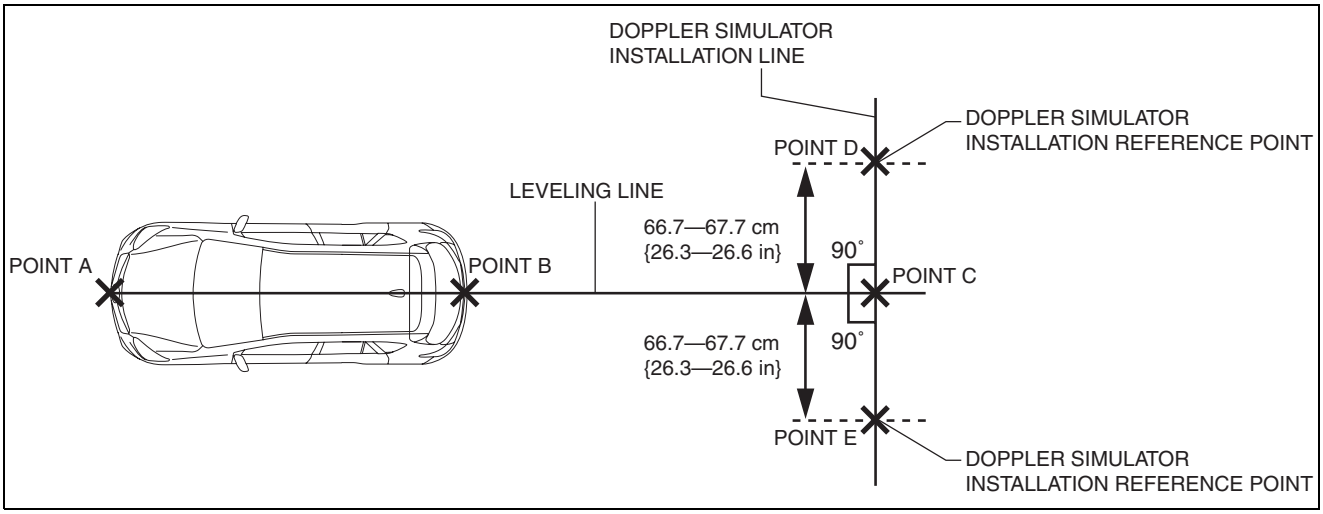
9. Pull the unsecured end of the leveling line over the vehicle and to the rear and adjust it so that passes over point B.
10. Mark the line (position C) within the range of **6.45 —6.75 m {21.2—22.1 ft}** from point A and in the direction rearward of the vehicle.



ac5wzw0000086

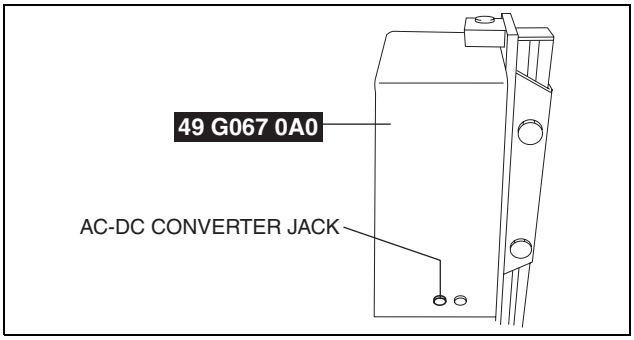
INSTRUMENTATION/DRIVER INFO.

11. Mark the points (points D and E) (SST (Doppler simulator) installation reference points) **66.7—67.7 cm {26.3—26.6 in}** from point C on the line which runs perpendicular to the vehicle center line (SST (Doppler simulator) installation reference point).



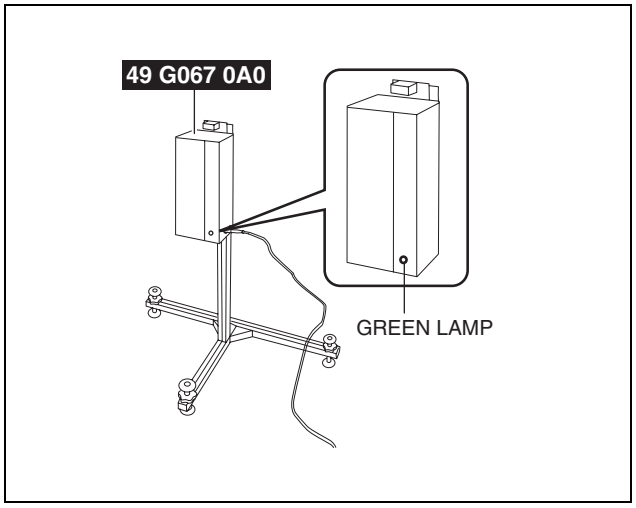
ac5wzw0000086

12. Pull the connected points D, C and E lines (SST (Doppler simulator) installation line).
13. Insert the SST (AC-DC converter) into the side of the SST (Doppler simulator) and turn on the power.



ac5wzw0000086

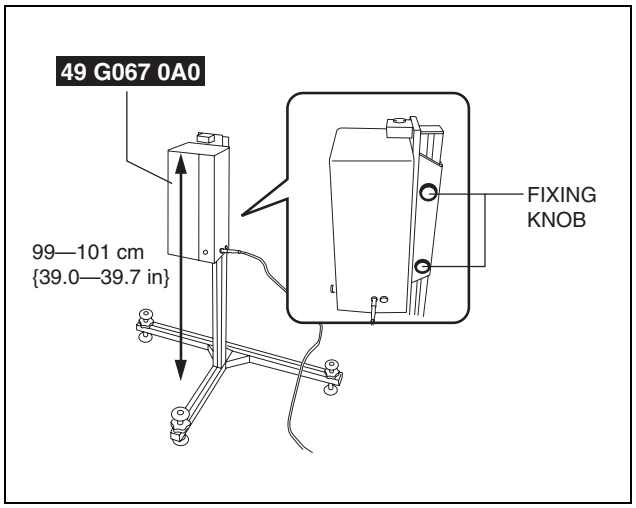
Note
- Verify that the green lamp on the SST (Doppler simulator) unit illuminates.



ac5wzw0000086

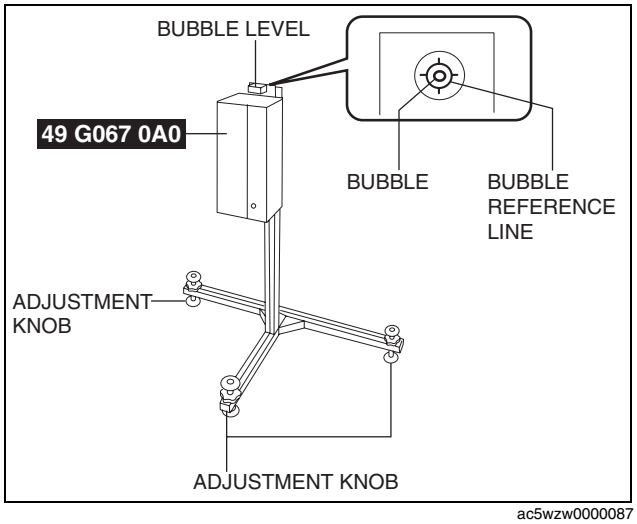
14. Loosen the fixing knobs on the side of the SST (Doppler simulator) and adjust the height of the SST (Doppler simulator) so that the height is between **99—101 cm {39.0—39.7 in}** from the floor.

Caution
- **If the knobs are loosened excessively, the SST (Doppler simulator) could fall and become damaged. Support the SST (Doppler simulator) with one hand while loosening the fixing knobs.**



ac5wzw0000086

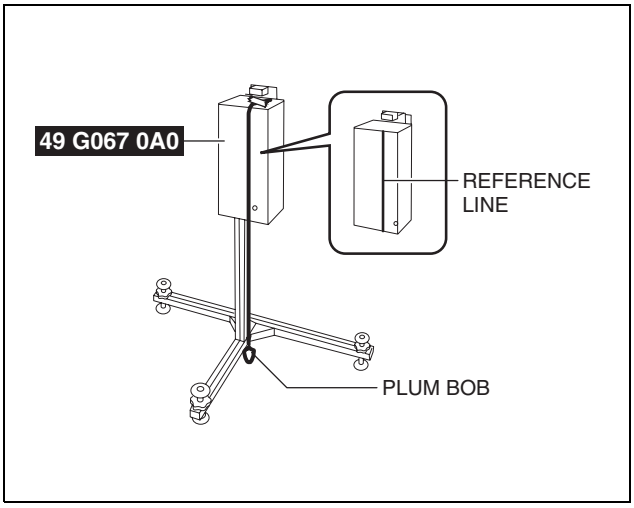
15. Level the SST (Doppler simulator) by turning the SST (Doppler simulator) adjustment knobs and adjust so that the leveling bubble is centered on the reference line.



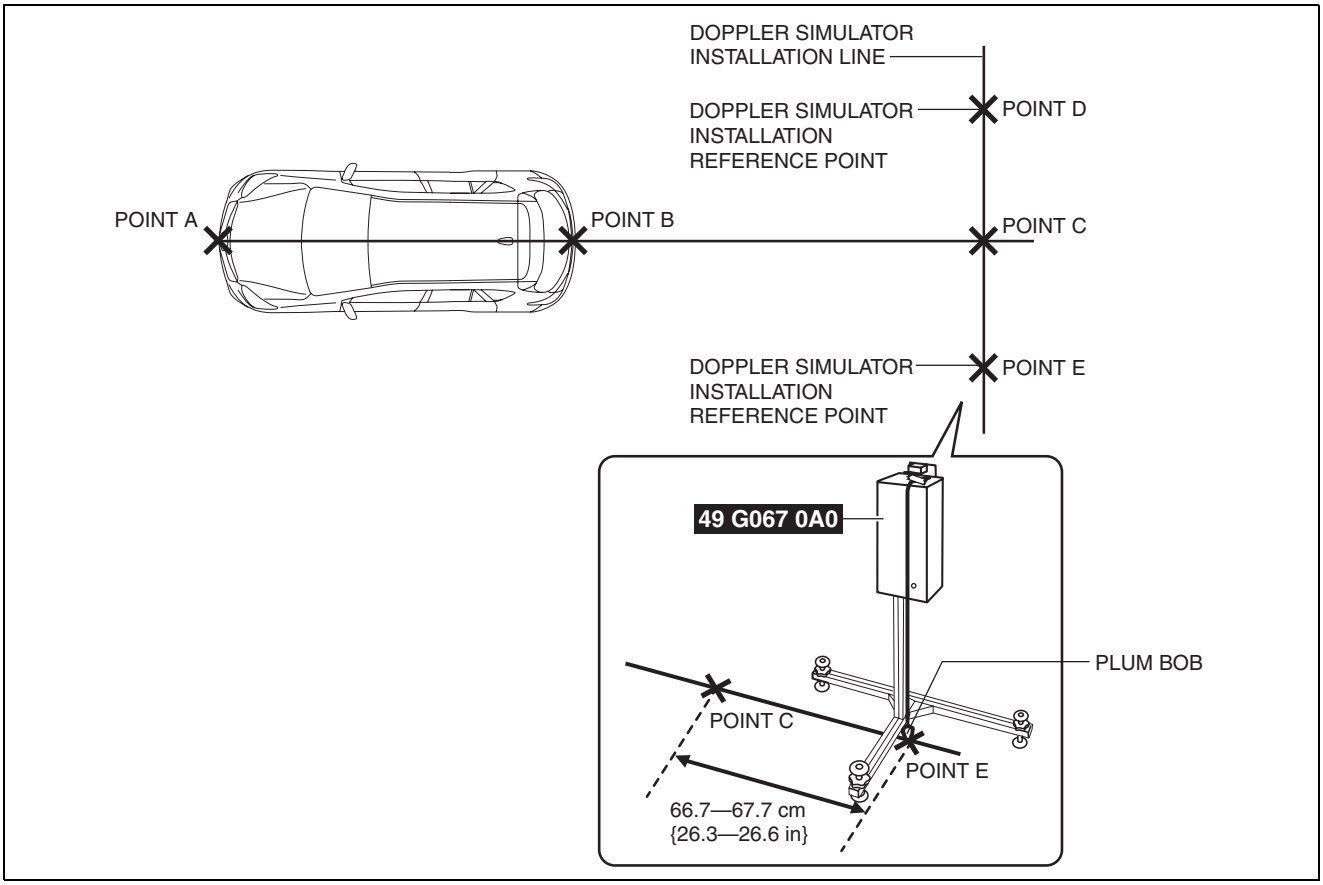
ac5wzw0000087

INSTRUMENTATION/DRIVER INFO.

16. Drop the SST (plum bob) to the floor along the reference line printed on the SST (Doppler simulator).
17. Align point D or point E with the end of the SST (plum bomb).



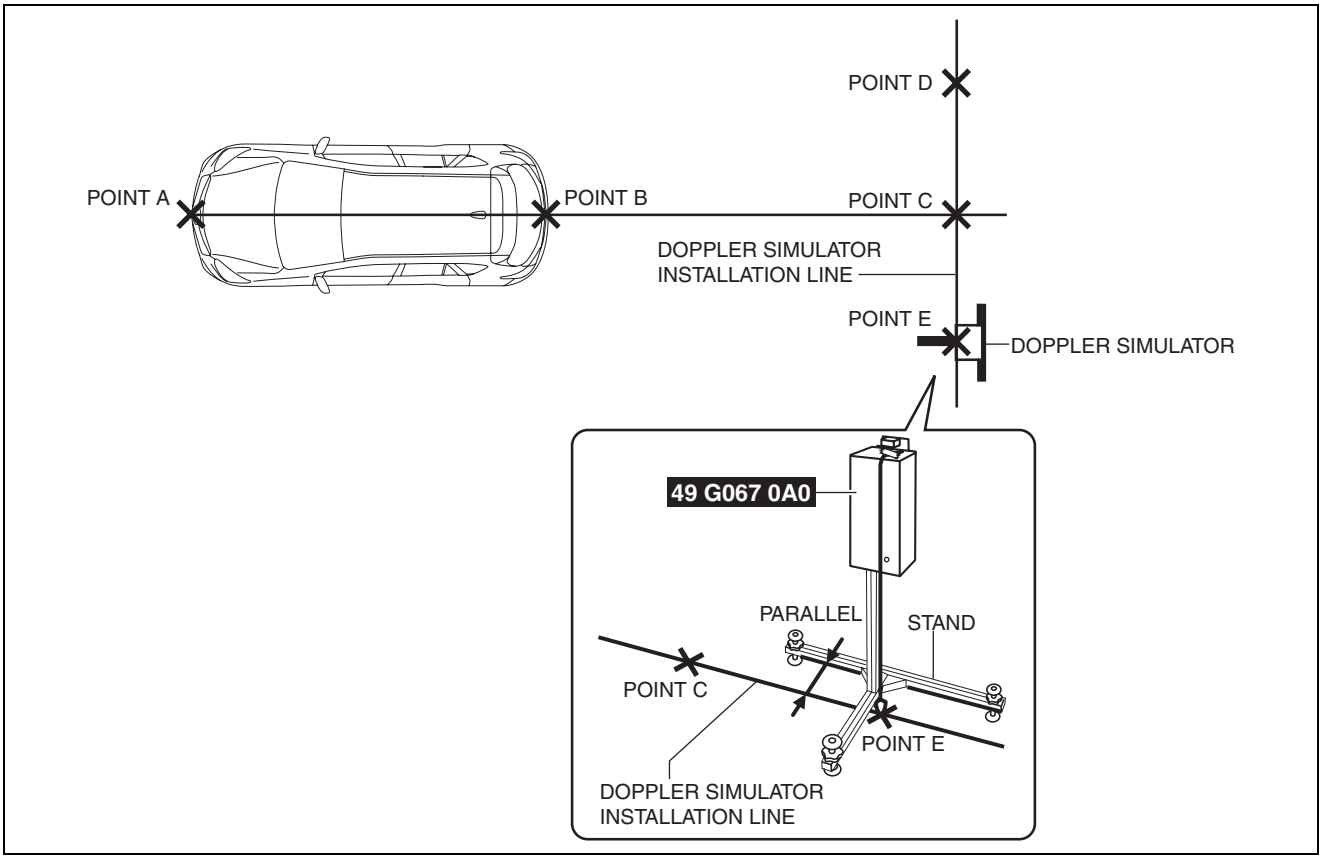
ac5wzw0000087



ac5wzw0000087

INSTRUMENTATION/DRIVER INFO.

18. Align so that the SST (Doppler simulator) installation line and the SST stand (Doppler simulator) are level at the center of point D or point E.



ac5wzw0000087

19. Remove the SST (plum bob).
20. Perform the radar aiming using the M-MDS.
21. Connect the M-MDS to the DLC-2.
22. After vehicle identification, the following can be selected from the M-MDS initialization screen.
    1. “Electrical components”
    2. "RVM aiming"
23. Select either the left or right rear vehicle monitoring control module and perform the radar aiming according to the instructions on the M-MDS screen.
24. Verify the M-MDS display.
    - If "Procedure completed successfully" is displayed
      — The radar aiming procedure is complete
    - If “This test found error.” Or, "Procedure not completed successfully" is displayed.
      — Perform an inspection according to the following table.

Step	Inspection	Action	
1	**DOPPLER SIMULATOR POSITION SET VERIFICATION** • Verify if the Doppler simulator installation position is correct. • Is the Doppler simulator set in the correct position?	Yes	Go to the next step.
		No	Set the Doppler simulator in the correct position and perform the rear vehicle monitoring radar aiming.
2	**INSPECT REAR BUMPER** • Remove the rear bumper. (See 09-10-24 REAR BUMPER REMOVAL/ INSTALLATION.) • Perform the rear vehicle monitoring radar aiming procedure. • Is "Procedure completed successfully." displayed?	Yes	Replace the rear bumper and perform the RVM radar aiming procedure. (See 09-10-24 REAR BUMPER REMOVAL/ INSTALLATION.)
		No	Go to the next step.

INSTRUMENTATION/DRIVER INFO.

Step	Inspection	Action	
3	**VERIFY IF RVM CONTROL MODULE OR RVM BRACKET IS MIS-INSTALLED AND IF THERE IS DISTORTION TO VEHICLE INSTALLATION SURFACE** • Verify whether a RVM control module or RVM bracket has been mis-installed, and if there is distortion to the vehicle installation surface. • Is there poor installation or distortion?	Yes	Repair or replace the malfunctioning part and perform the RVM radar aiming procedure.
		No	Go to the next step.
4	**REPEAT REAR MONITORING RADAR AIMING** • Perform the rear vehicle monitoring radar aiming procedure. • Repeat the M-MDS operation for the rear vehicle monitoring radar aiming 2 or 3 times (Steps 22 to 23). • Is "Procedure completed correctly." displayed?	Yes	The rear vehicle monitoring radar aiming is completed.
		No	Replace the applicable rear vehicle monitoring control module.

RVM SWITCH REMOVAL/INSTALLATION

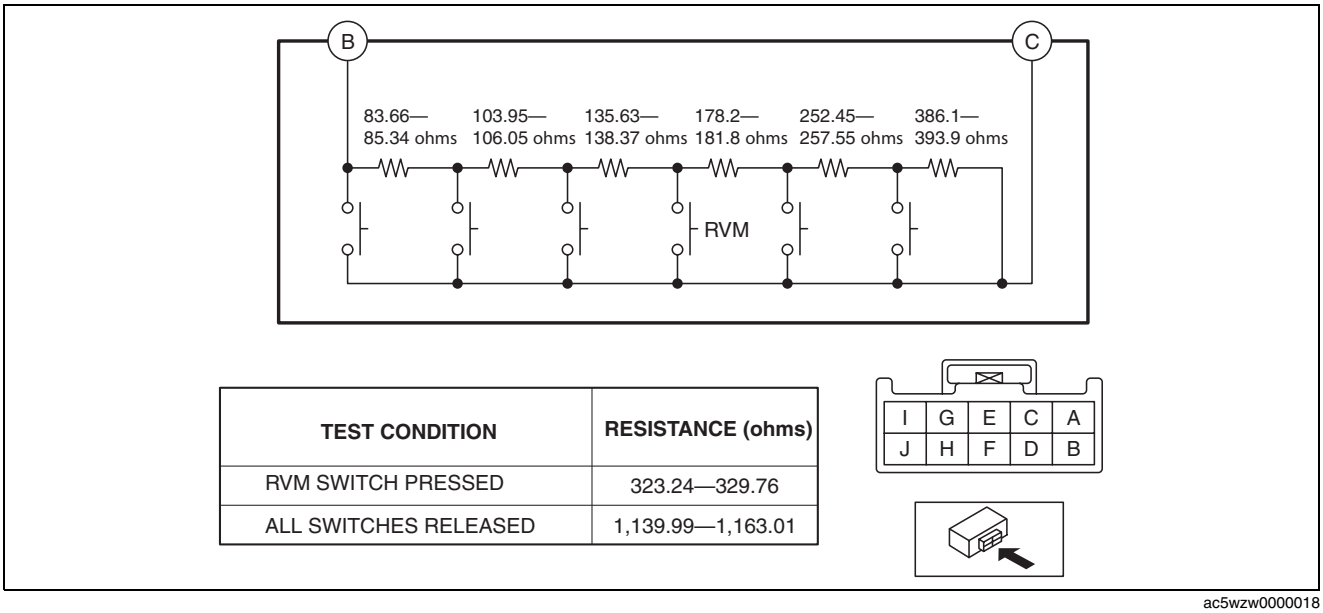
id092200015100

Note
- The RVM switch is integrated with the cluster switch.
- For the cluster switch removal/installation, refer to the switch panel removal/installation because the cluster switch is installed to the switch panel. (See 09-17-18 SWITCH PANEL REMOVAL/INSTALLATION.)

RVM SWITCH INSPECTION

id092200015200

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the RVM switch. (See 09-22-91 RVM SWITCH REMOVAL/INSTALLATION.)
3. Verify that the resistance between RVM switches B and C is as indicated in the table.

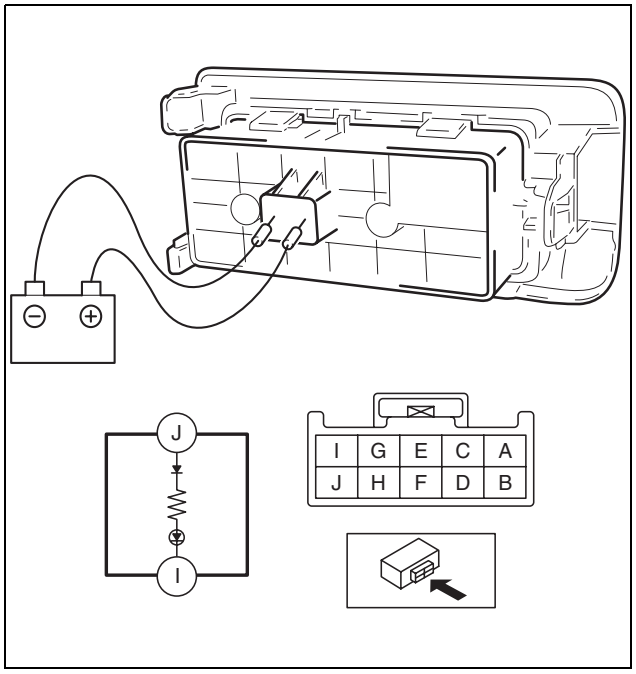


TEST CONDITION	RESISTANCE (ohms)
RVM SWITCH PRESSED	323.24—329.76
ALL SWITCHES RELEASED	1,139.99—1,163.01

ac5wzw0000018

- If the resistance cannot be verified as indicated in the table, replace the cluster switch.

4. Apply battery positive voltage to RVM switch terminal J, and connect terminal I to ground.
5. Verify that the LED illuminates.
   - If there is any malfunction, replace the cluster switch.



ac5jjw00000654

RVM WARNING INDICATOR LIGHT REMOVAL/INSTALLATION

id092200015300

Note
- The RVM warning indicator lights are integrated into the outer mirror glass.
- For the RVM warning indicator light removal/installation, refer to the outer mirror glass removal/installation. (See 09-12-73 OUTER MIRROR GLASS REMOVAL.) (See 09-12-78 OUTER MIRROR GLASS INSTALLATION.)

RVM WARNING INDICATOR LIGHT INSPECTION

id092200015400

Note
- The RVM warning indicator lights are integrated into the outer mirror glass.
- For the RVM warning indicator light inspection, refer to the outer mirror glass inspection. (See 09-12-81 OUTER MIRROR GLASS INSPECTION.)

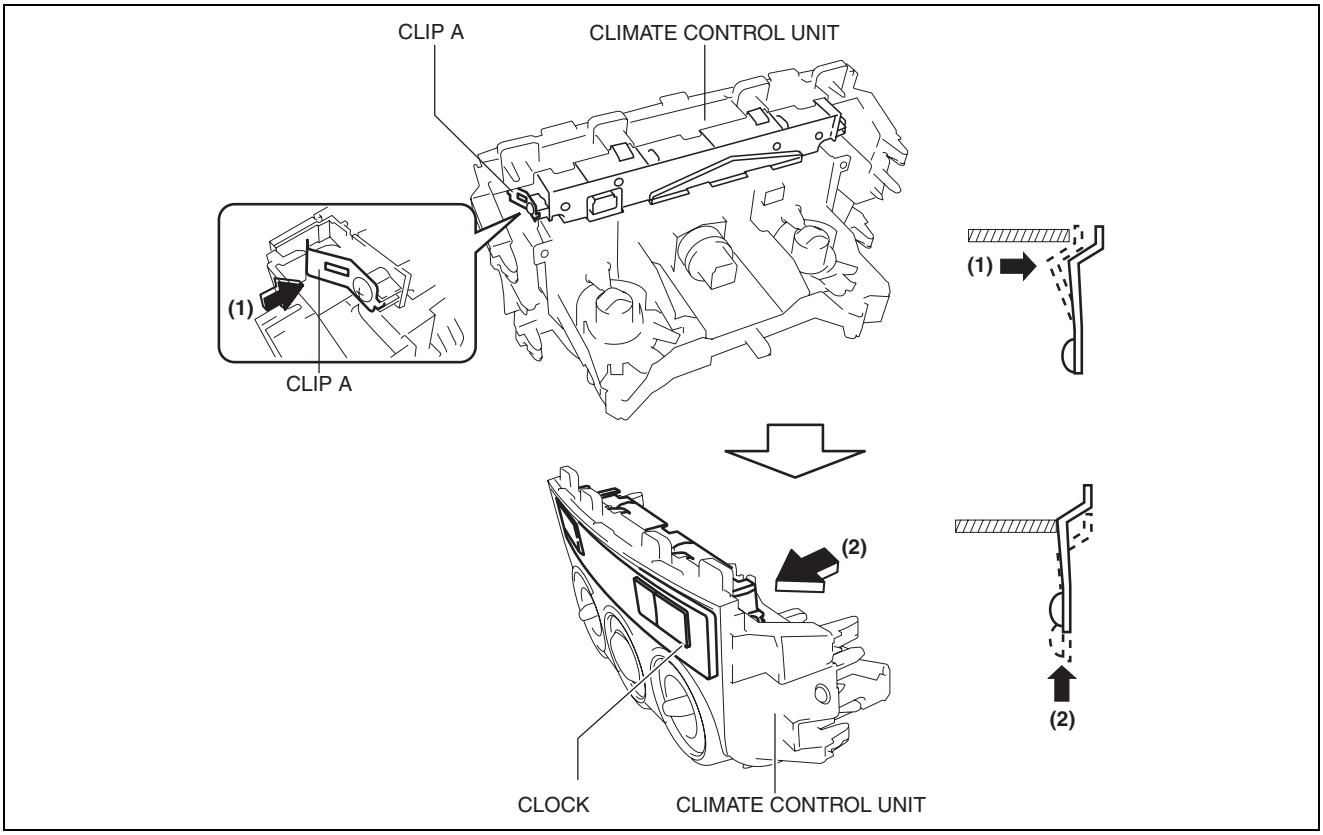
CLOCK REMOVAL/INSTALLATION

id092200028900

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Shift lever knob (MTX) (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].)(See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
   (2) Front console box (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)
   (3) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
   (4) Upper panel (See 09-17-44 UPPER PANEL REMOVAL/INSTALLATION.)
   (5) Rear console (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.)
   (6) Side wall (See 09-17-49 SIDE WALL REMOVAL/INSTALLATION.)
   (7) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (8) Front console (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
   (9) Glove compartment (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (10) Climate control unit (See 07-40B-16 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].)

INSTRUMENTATION/DRIVER INFO.

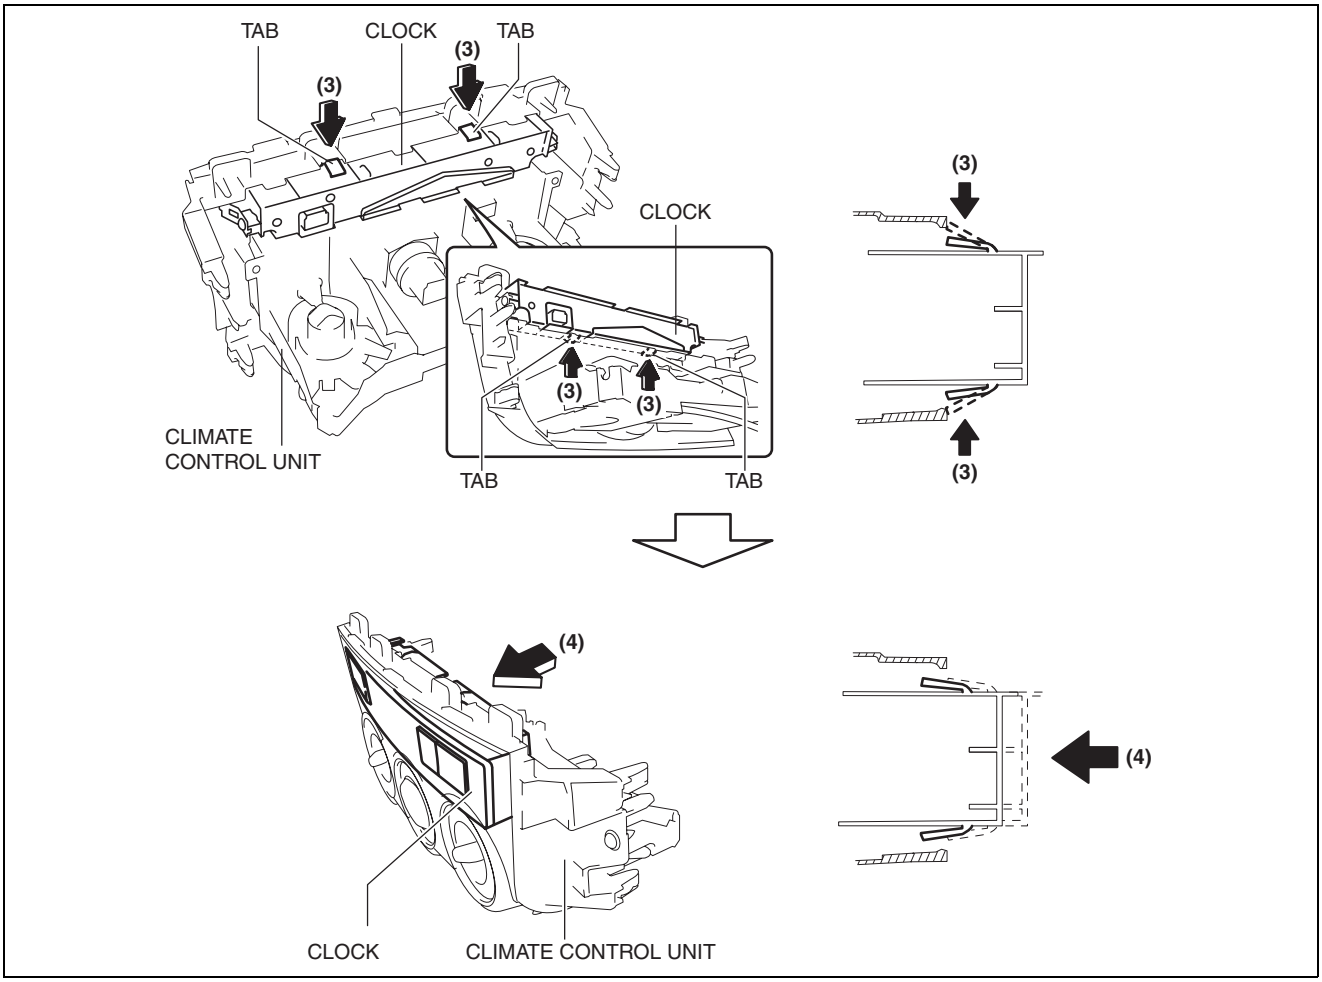
3. Push out the clock in the direction of the arrow (2) shown in the figure while pressing clip A in the direction of the arrow (1) shown in the figure, and detach clip A and the climate control unit.



ac5jjw00000242

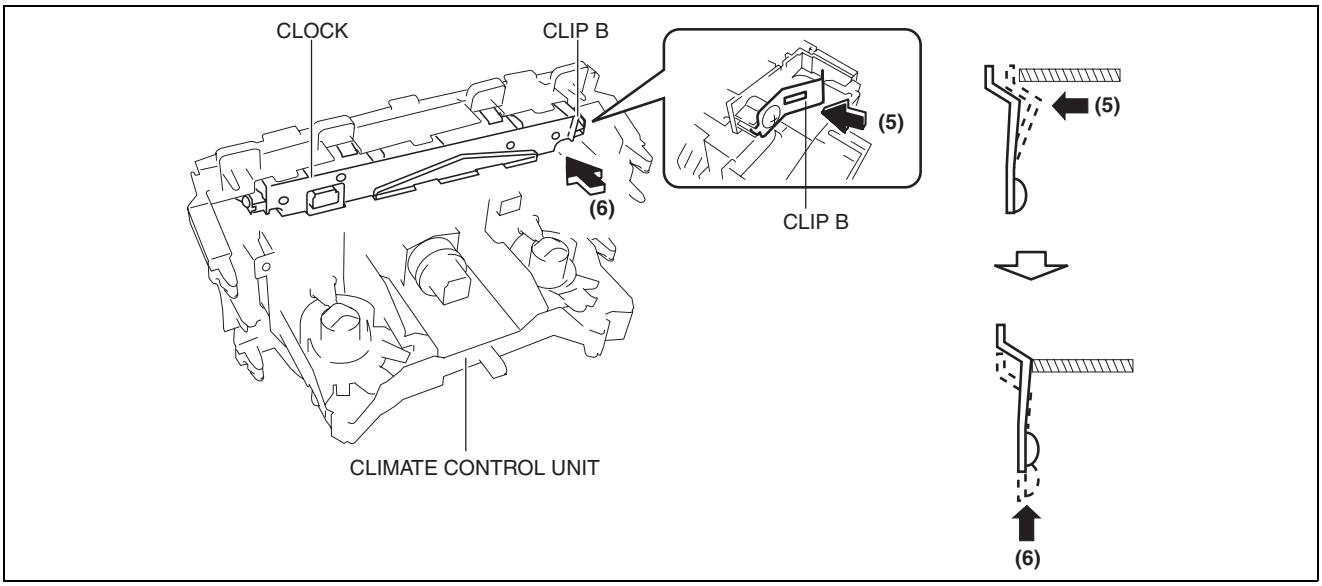
INSTRUMENTATION/DRIVER INFO.

4. Push out the clock in the direction of the arrow (4) shown in the figure while pressing the clock tab in the direction of the arrow (3) shown in the figure and remove the clock tab and climate control unit.



ac5jjw00000220

5. Push out the clock in the direction of the arrow (6) shown in the figure while pressing clip B in the direction of the arrow (5) shown in the figure, detach the clock tab and climate control unit, and remove the clock from the climate control unit.



ac5jjw00000221

6. Install in the reverse order of removal.

INSTRUMENTATION/DRIVER INFO.

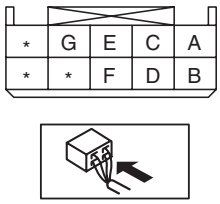
CLOCK INSPECTION

id092200029000

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Shift lever knob (MTX) (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].)(See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
   (2) Front console box (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)
   (3) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
   (4) Upper panel (See 09-17-44 UPPER PANEL REMOVAL/INSTALLATION.)
   (5) Rear console (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.)
   (6) Side wall (See 09-17-49 SIDE WALL REMOVAL/INSTALLATION.)
   (7) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (8) Front console (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
   (9) Glove compartment (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (10)Climate control unit (See 07-40B-16 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].)
3. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
4. Verify that the voltages of each of the terminals are as indicated in the terminal voltage table (reference).
   - If the voltage is not as specified in the terminal voltage table (reference), inspect the parts under Inspection item(s).
     — If the system does not operate normally even though the inspection items are normal, replace the clock.

Terminal Voltage Table (Reference)

CLOCK
WIRING HARNESS SIDE CONNECTOR



ac5wzw0000291

Terminal	Signal name	Connected to	Measurement conditions	Voltage (V)	Inspection item(s)
A	Power position (1G1)	IG relay	Ignition switch ON (engine off or on)	B+	• METER1 10 A fuse • IG relay • Related wiring harness
			Ignition switch OFF (LOCK) or ACC	1.0 or less	
B	Power supply	ROOM 15 A fuse	Under any condition	B+	• ROOM 15 A fuse • Related wiring harness
C	Power supply (ACC)	Ignition relay (ACC_STAB) {DCDC ACC}*1 ACC relay *2	Ignition switch ACC	B+	• Ignition relay*1 • ACC relay*2 • AUDIO2 7.5 A fuse*2 • Related wiring harness
			Ignition switch OFF (LOCK) or ON (engine off or on)	1.0 or less	
D	Seat warmer switch signal	Seat warmer unit	Because this terminal is for communication, good/no good judgment by terminal voltage is not possible.		• Related wiring harness
E	MS-CAN_H	CAN communication related module	Because this terminal is for communication, determination using terminal voltage inspection is not possible.		
F	Ground	Body ground	Under any condition	1.0 or less	• Related wiring harness

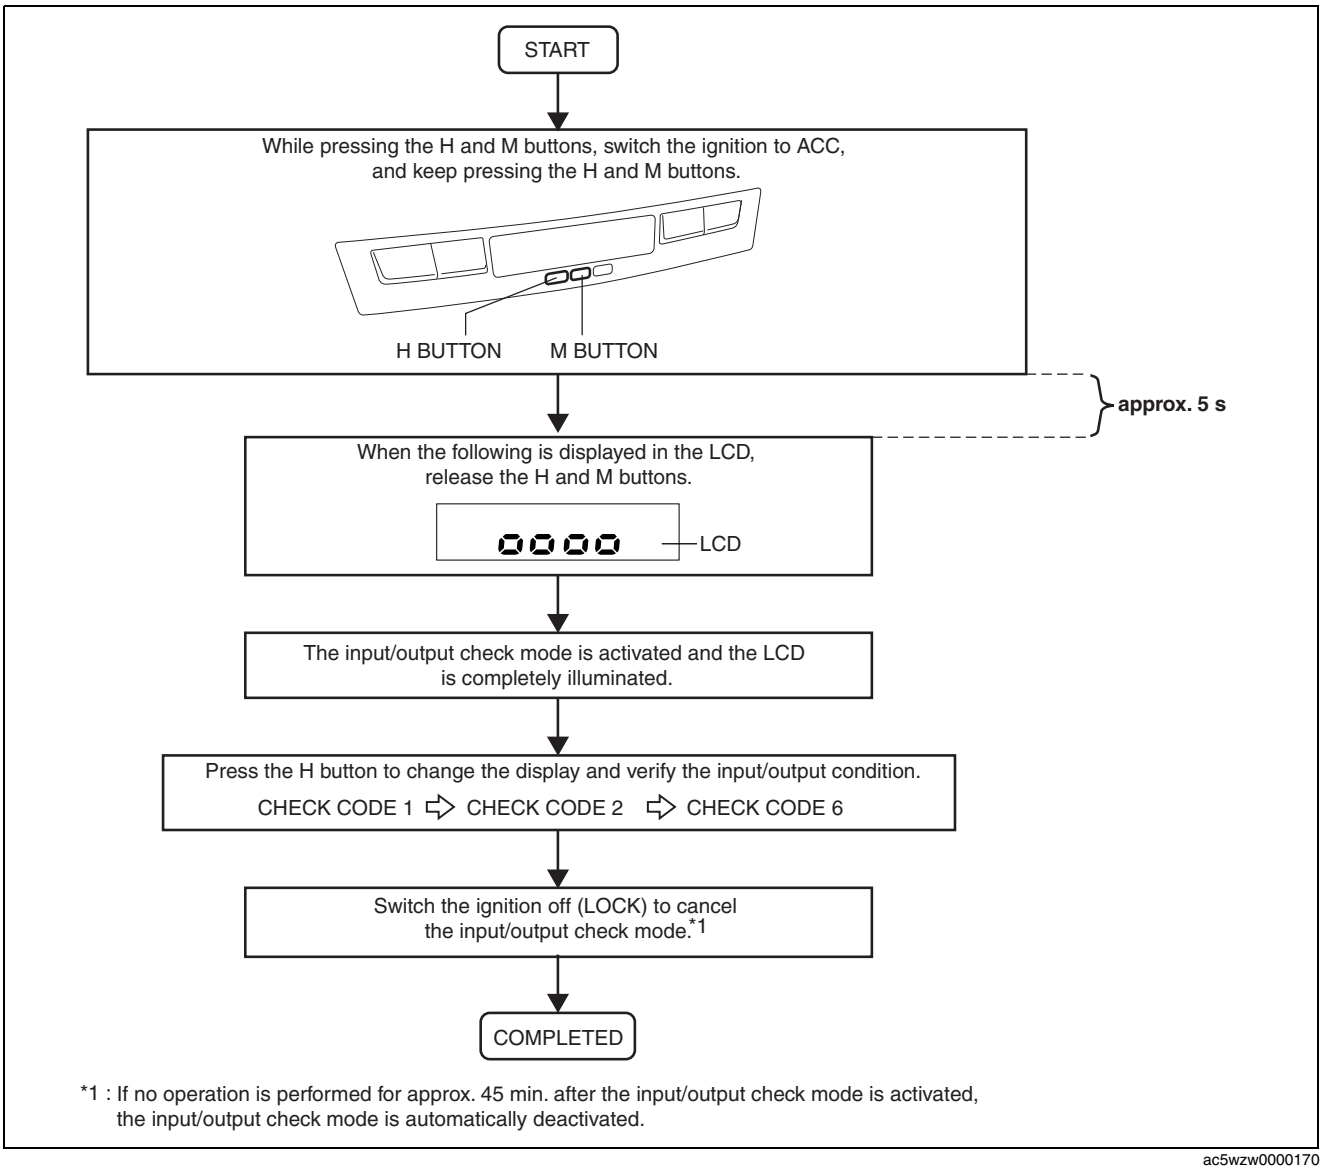
CLOCK INPUT/OUTPUT CHECK MODE

id092200031700

Activation procedure



*1 : If no operation is performed for approx. 45 min. after the input/output check mode is activated, the input/output check mode is automatically deactivated.

ac5wzw0000170

Inspection

Note

- The clock input/output check mode is displayed in the following order and returning to the previous screen is impossible.
- If you want to check All LCD illuminated or Check code 1 or 2 after Check code 6 is displayed, activate the input/output check mode again.

INSTRUMENTATION/DRIVER INFO.

Item	Check content
All LCD illuminated	LCD indication
Check code 1	MS-CAN BUS OFF occurrence
Check code 2	Communication between instrument cluster
Check code 6	Ignition switch ON/OFF signal

All LCD illuminated

Inspection	Display	Action	
• Activate the clock input/output check mode. • Are all segments and dots on the LCD illuminated?	 : WITH PASSENGER AIR BAG DEACTIVATION (PAD) SWITCH	Yes	LCD display is normal.
		No	Replace the clock. (See 09-22-95 CLOCK INSPECTION.)

Check code 1

Inspection procedure	Display	Action
1. Press the H button to display check code 1. 2. Verify the screen display.		There is no MS-CAN BUS OFF error (normal)
		There is an MS-CAN BUS OFF error (malfunction) Perform the malfunction diagnosis for the MS-CAN referring to the following: (See 10-02A-1 FOREWORD [SKYACTIV-G 2.0 (L.H.D.)].) (See 10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)].) (See 10-02C-1 FOREWORD [SKYACTIV-D 2.2 (L.H.D.)].) (See 10-02D-1 FOREWORD [SKYACTIV-D 2.2 (R.H.D.)].)

Check code 2

Inspection procedure	Display	Action
1. Press the H button to display check code 2. 2. Verify the screen display.		There is no communication error between the instrument cluster.
		There is a communication error between the instrument cluster. Perform the malfunction diagnosis for the MS-CAN referring to the following: (See 10-02A-1 FOREWORD [SKYACTIV-G 2.0 (L.H.D.)].) (See 10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)].) (See 10-02C-1 FOREWORD [SKYACTIV-D 2.2 (L.H.D.)].) (See 10-02D-1 FOREWORD [SKYACTIV-D 2.2 (R.H.D.)].)

Check code 6

Inspection procedure		Display	Action
Step 1	1. Press the H button to display check code 6. 2. Switch the ignition ON (engine off or on). 3. Verify the screen display.		Go to the next step.
			Refer to the clock inspection and verify the terminal voltage at clock terminal A. (See 09-22-95 CLOCK INSPECTION.) • Replace the clock if the voltage is B+. (See 09-22-92 CLOCK REMOVAL/INSTALLATION.) • Inspect the following parts if the voltage is 1.0 V or less. — METER1 10 A fuse — IG relay — Related wiring harness

INSTRUMENTATION/DRIVER INFO.

Inspection procedure		Display	Action
Step 2	1. Switch the ignition off (LOCK). 2. Verify the screen display.		Ignition switch ON/OFF signal is normal.
			Refer to the clock inspection and verify the terminal voltage at clock terminal A. (See 09-22-95 CLOCK INSPECTION.) • Replace the clock if the voltage is 1.0 V or more. (See 09-22-92 CLOCK REMOVAL/INSTALLATION.) • Inspect the following parts if the voltage is B+. — METER1 10 A fuse — IG relay — Related wiring harness

FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION

id092200028600

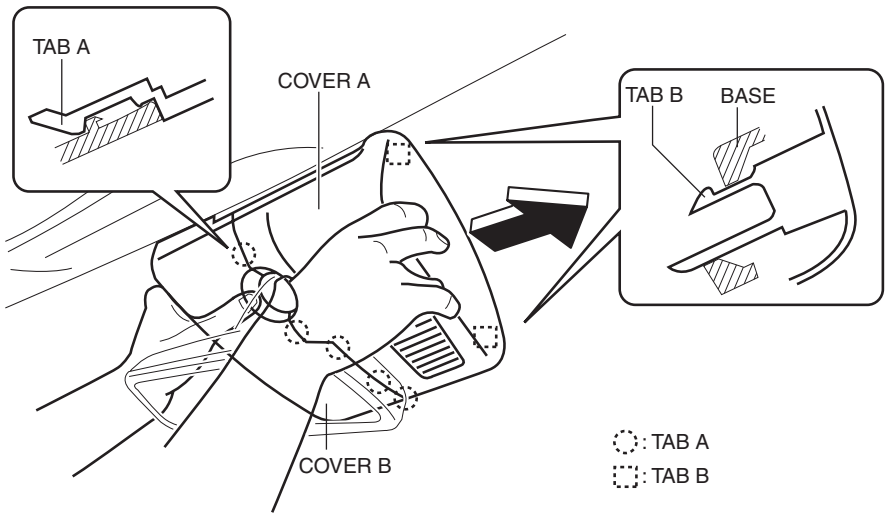
Caution

- **If configuration is not performed when the FSC is replaced with a new one, the vehicle specification information is not stored in the FSC and the system will not operate normally.**
- **When performing configuration, it is necessary to read the vehicle specification information from the FSC before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the FSC. The vehicle specification information is temporarily stored in the M-MDS.**

Note

- The FSC prior to replacement stores the vehicle specification information.
- A new FSC does not store any vehicle specification information.
- If the vehicle specification information from the FSC prior to replacement cannot be read, perform the configuration using As-Built data.

1. When replacing the FSC, perform the configuration. (See 09-22-117 FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING READ/WRITE FUNCTION).)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Pull cover A in the direction of the arrow shown in the figure and detach tab A of cover A and cover B.

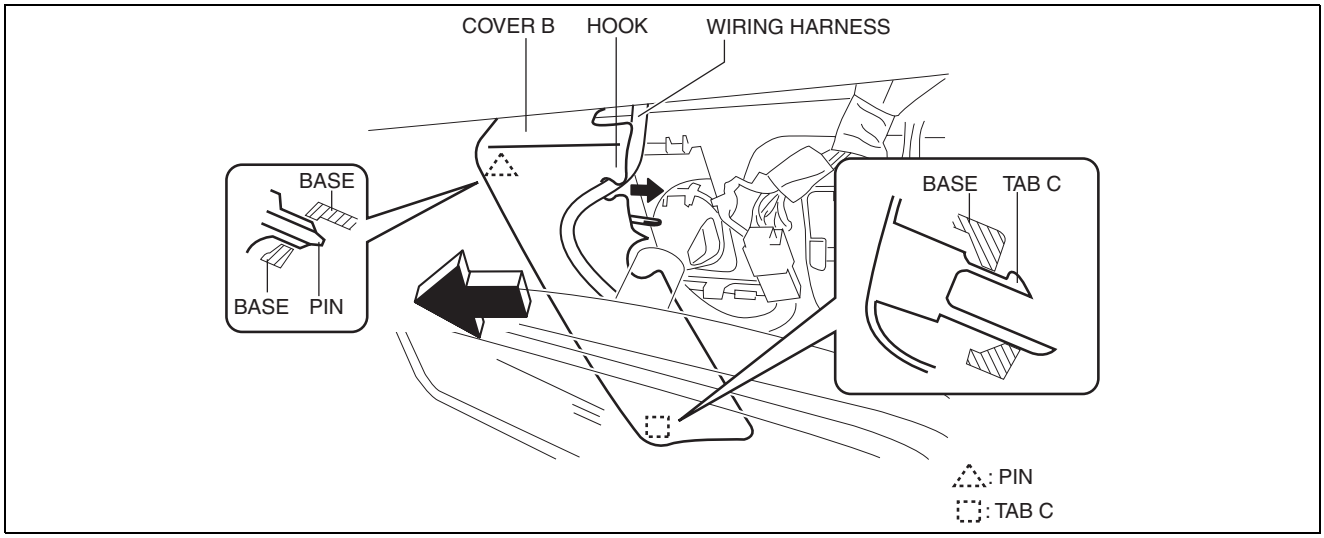


ac5jjw00000243

4. Pull cover A in the direction of the arrow shown in the figure, detach tab B of cover A and the base, and remove cover A from the base.

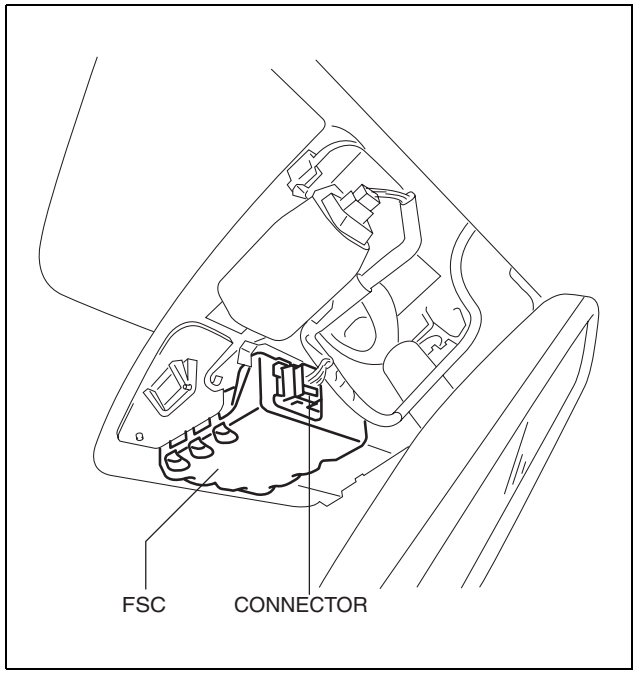
INSTRUMENTATION/DRIVER INFO.

5. Remove the wiring harness from the hook.



ac5jjw00000244

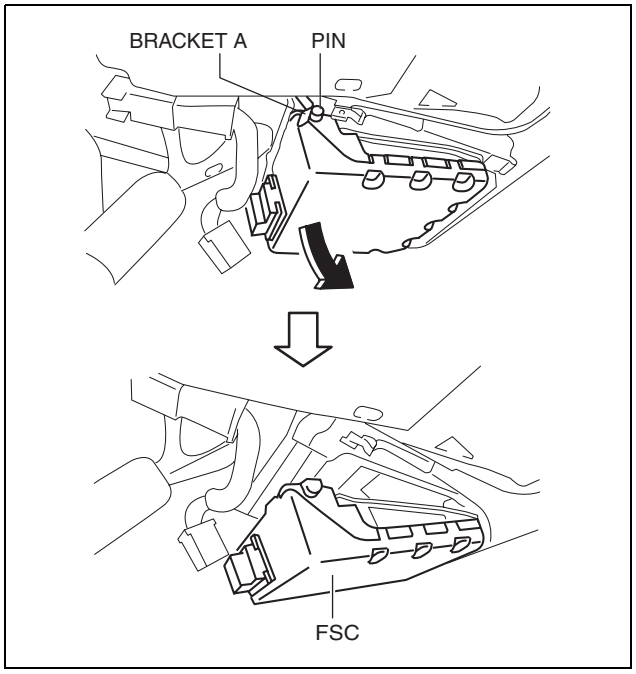
6. Pull cover B in the direction of the arrow shown in the figure, detach the pin and tab C for cover B and the base, and remove cover B from the base.
7. Disconnect the connector.



ac5jjw00000245

INSTRUMENTATION/DRIVER INFO.

8. Pull the FSC in the direction of the arrow shown in the figure and remove the FSC pin from bracket A.



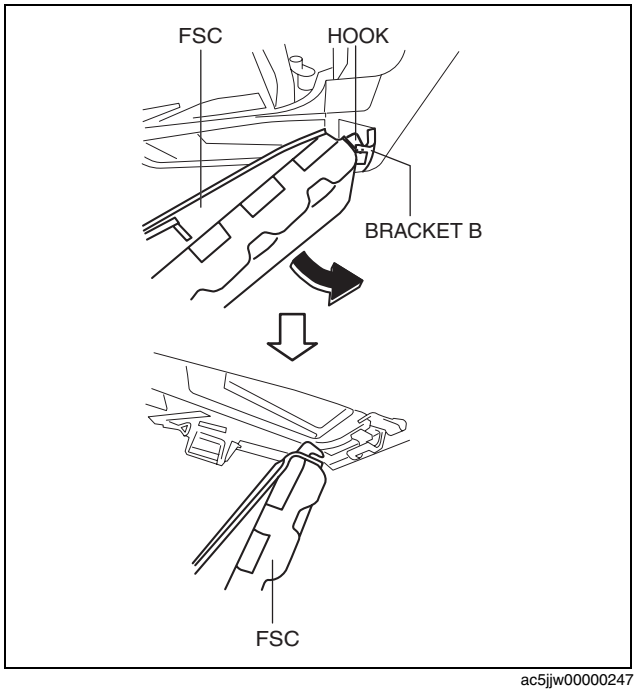
ac5jjw00000246

9. Rotate the FSC in the direction of the arrow shown in the figure, remove the FSC hook from bracket B, and remove the FSC.
10. Install in the reverse order of removal.

Note
- If configuration cannot be performed by reading/writing of the vehicle specification information, perform the configuration using As-Built information after replacing the FSC. (See 09-22-118 FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING AS-BUILT DATA).)

11. If the FSC is replaced, perform the FSC aiming (See 09-22-106 FORWARD SENSING CAMERA (FSC) AIMING.).

Caution
- **If FSC aiming is not performed after replacing the FSC, the high beam control (HBC) system and the lane departure warning system (LDWS) will not operate because the FSC cannot store the camera shot angle. If the FSC is replaced, perform the FSC aiming.**



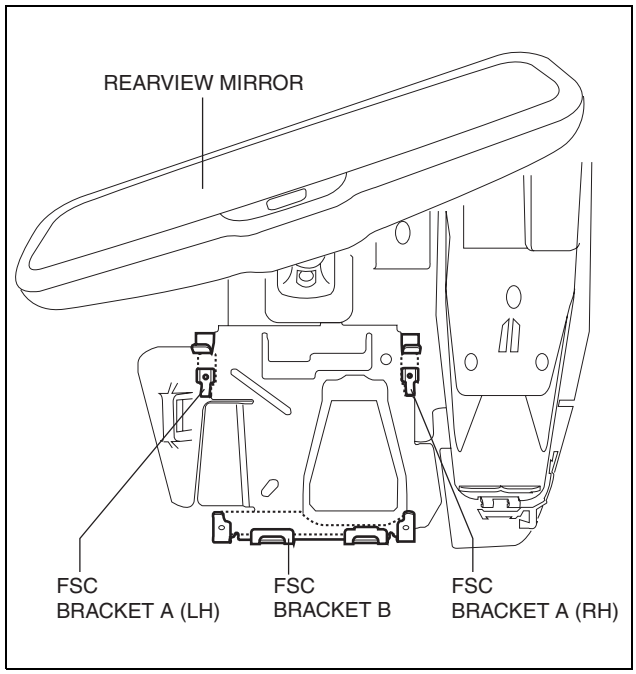
ac5jjw00000247

INSTRUMENTATION/DRIVER INFO.

FORWARD SENSING CAMERA (FSC) BRACKET REMOVAL/INSTALLATION

id092200028700

Note
- The forward sensing camera (FSC) brackets include brackets A and B.



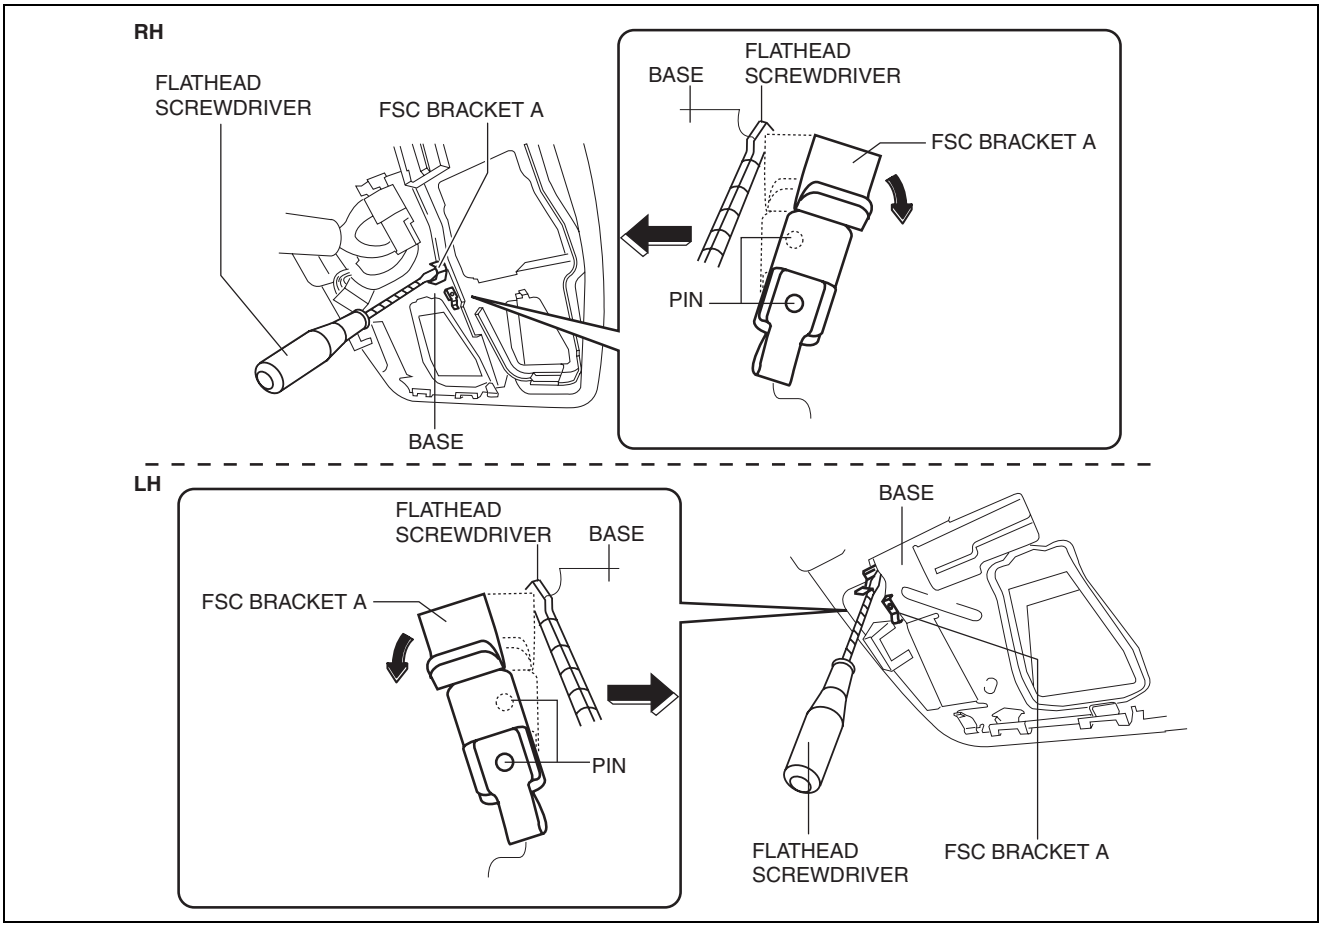
ac5wzw0000294

FSC bracket A

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Cover (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
   (2) Forward sensing camera (FSC) (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
   (3) Laser sensor (See 04-15-17 LASER SENSOR REMOVAL/INSTALLATION.)

INSTRUMENTATION/DRIVER INFO.

3. Insert a tape-wrapped flathead screwdriver into the gap between the base and FSC bracket A.

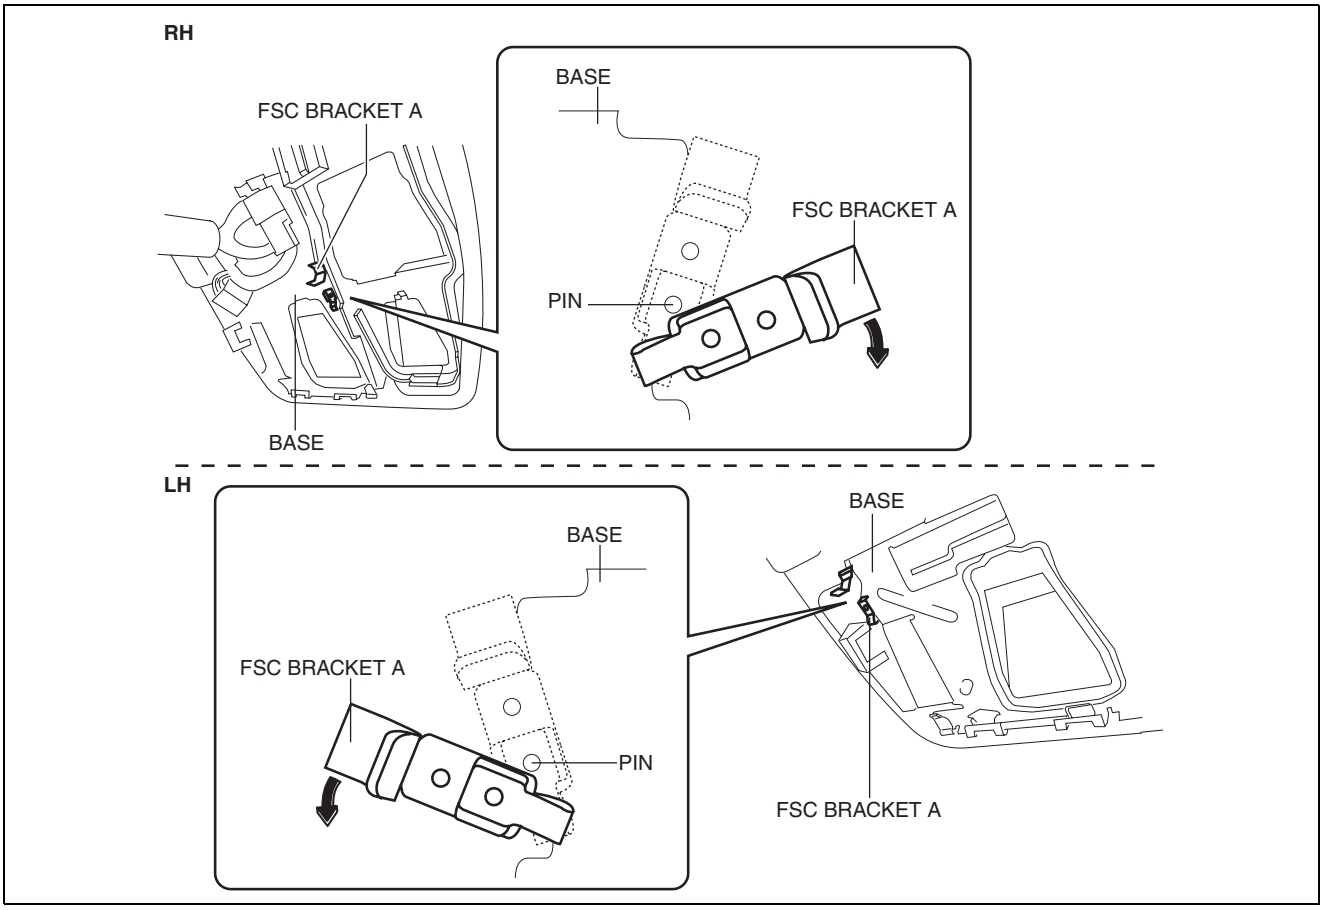


ac5wzw0000294

4. Move the flathead screwdriver in the direction of the arrow shown in the figure and rotate FSC bracket A.

INSTRUMENTATION/DRIVER INFO.

5. In addition, rotate FSC bracket A, detach the base pin and FSC bracket A, and then remove FSC bracket A.



ac5wzw0000294

6. Install in the reverse order of removal.
7. If the FSC bracket is replaced, perform the FSC aiming (See 09-22-106 FORWARD SENSING CAMERA (FSC) AIMING.).

Caution

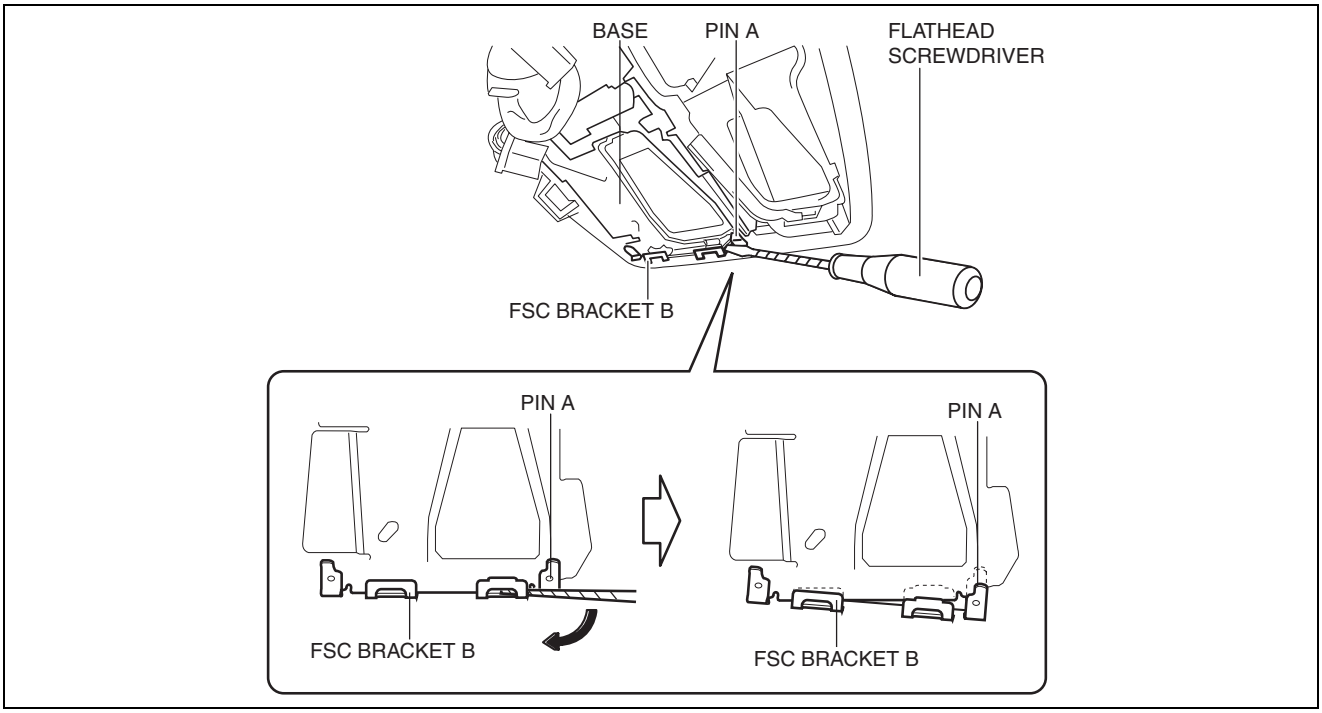
- **If FSC aiming is not performed after replacing the FSC, the high beam control (HBC) system and the lane departure warning system (LDWS) will not operate because the FSC cannot store the camera shot angle. If the FSC bracket is replaced, perform the FSC aiming.**

FSC bracket B

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Cover (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
   (2) Forward sensing camera (FSC) (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
   (3) Laser sensor (See 04-15-17 LASER SENSOR REMOVAL/INSTALLATION.)

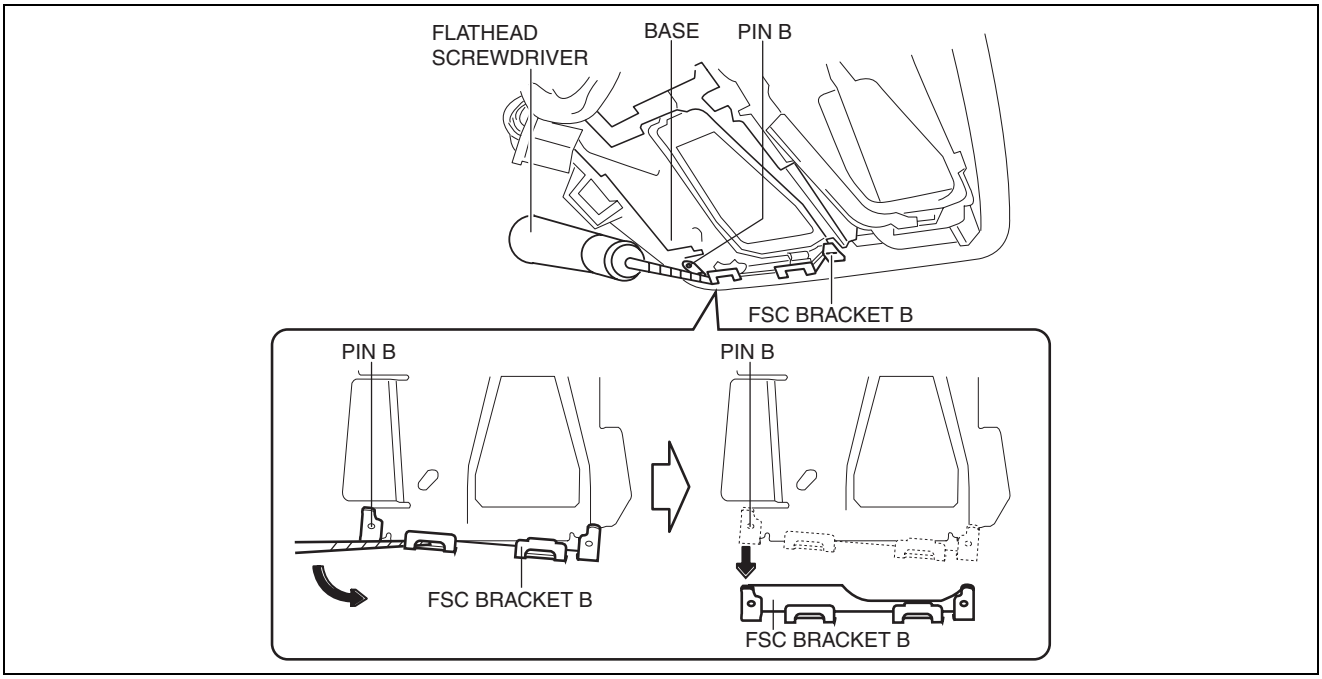
INSTRUMENTATION/DRIVER INFO.

3. Insert a tape-wrapped flathead screwdriver into the gap between the base and FSC bracket B.



ac5jjw00000252

4. Move the flathead screwdriver in the direction of the arrow shown in the figure, rotate FSC bracket B, and detach base pin A and FSC bracket B.
5. Insert a tape-wrapped flathead screwdriver into the gap between the base and FSC bracket B.



ac5jjw00000253

6. Move the flathead screwdriver in the direction of the arrow shown in the figure, pull down FSC bracket B, detach base pin B and FSC bracket B, and remove FSC bracket B.
7. Install in the reverse order of removal.
8. If the FSC is replaced, perform the FSC aiming (See 09-22-106 FORWARD SENSING CAMERA (FSC) AIMING.).

Caution

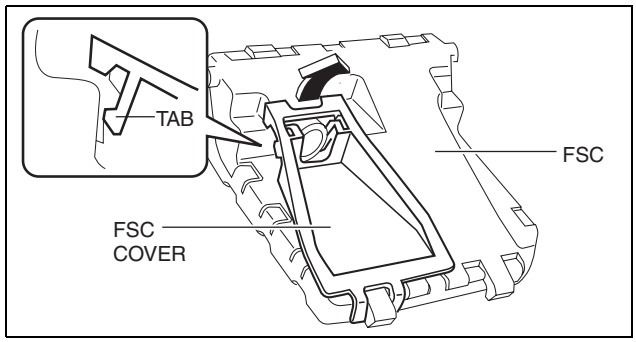
- **If FSC aiming is not performed after replacing the FSC, the high beam control (HBC) system and the lane departure warning system (LDWS) will not operate because the FSC cannot store the camera shot angle. If the FSC bracket is replaced, perform the FSC aiming.**

INSTRUMENTATION/DRIVER INFO.

FORWARD SENSING CAMERA (FSC) COVER REMOVAL/INSTALLATION

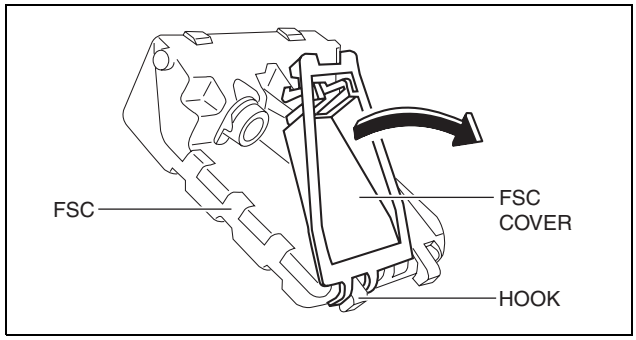
id092200033800

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the cover. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
3. Remove the forward sensing camera (FSC). (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
4. Pull the FSC cover in the direction of the arrow shown in the figure and detach tab of FSC cover.



ac5wzw0000249

5. Rotate the FSC cover in the direction of the arrow shown in the figure, remove the FSC cover from FSC hook, and remove the FSC cover.
6. Install in the reverse order of removal.

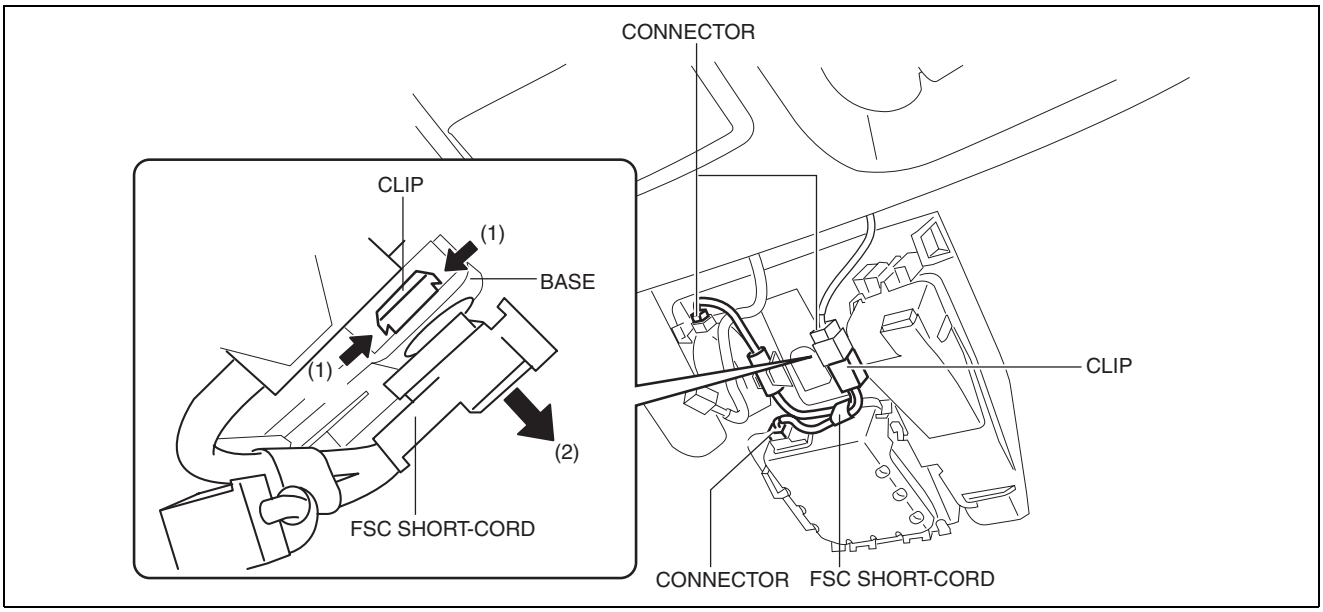


ac5wzw0000249

FORWARD SENSING CAMERA (FSC) SHORT-CORD REMOVAL/INSTALLATION

id092200030300

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the cover. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
3. Remove the auto-dimming mirror. (See 09-12-94 AUTO-DIMMING MIRROR REMOVAL/INSTALLATION.)
4. Disconnect the connector.



ac5wzw0000010

INSTRUMENTATION/DRIVER INFO.

5. Pull out the FSC short-cord in the direction of arrow (2) shown in the figure while pressing the clip in the direction of arrow (1) shown in the figure, detach the clip and base, and remove the FSC short-cord.
6. Install in the reverse order of removal.

FORWARD SENSING CAMERA (FSC) SHORT-CORD INSPECTION

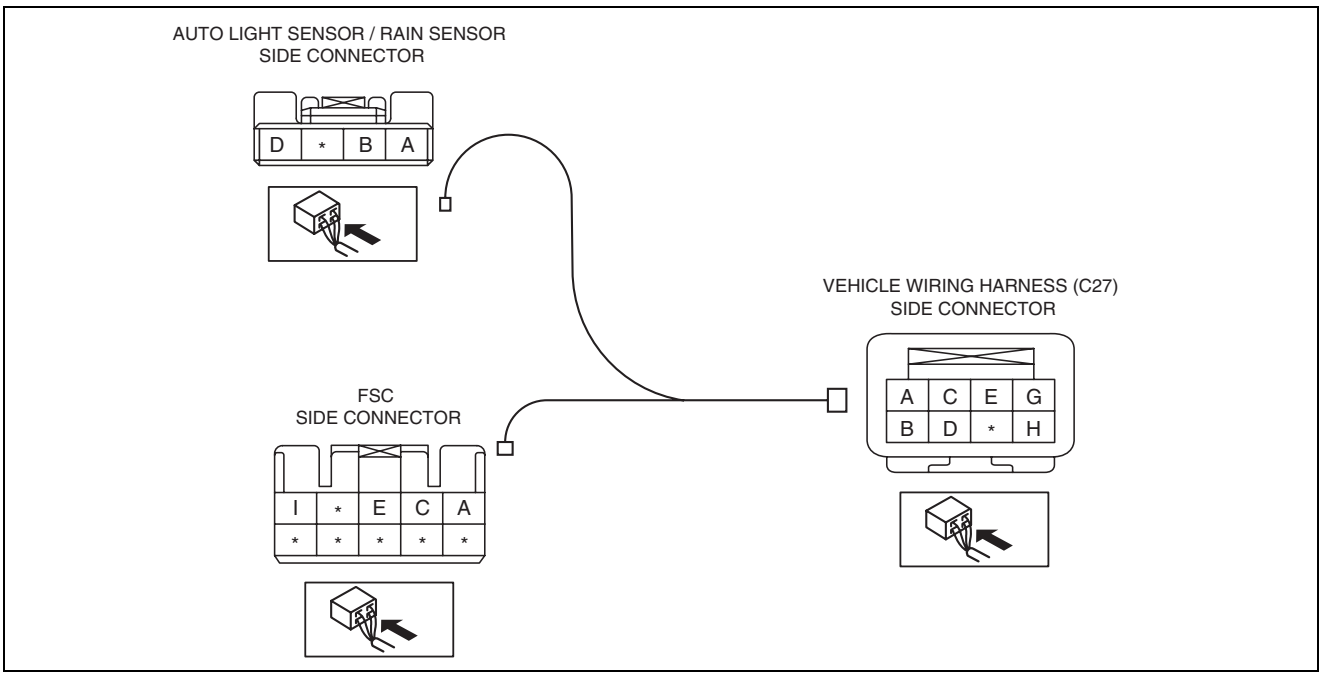
id092200032000

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Cover (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
   (2) Auto-dimming mirror (See 09-12-94 AUTO-DIMMING MIRROR REMOVAL/INSTALLATION.)
   (3) FSC short-cord (See 09-22-105 FORWARD SENSING CAMERA (FSC) SHORT-CORD REMOVAL/INSTALLATION.)
3. Verify that the continuity between the FSC short-cord terminals is as indicated in the table.

○—○ : Continuity

Test condition	Terminal													
	Vehicle wiring harness (C27) side connector							Auto light sensor / rain sensor side connector			FSC side connector			
	A	B	C	D	E	G	H	A	B	D	A	C	E	I
Under any condition	○													○
		○								○				
			○									○		
				○				○						
					○								○	
						○					○			
							○		○					

ac5jjw00001285



ac5jjw00001286

- If not as indicated in the table, replace the FSC short-cord.

FORWARD SENSING CAMERA (FSC) AIMING

id092200028800

Note

- The forward sensing camera (FSC) aiming procedure stores the camera shot angle in the FSC by reading a target used for aiming into the FSC.
- The FSC aiming procedure is performed when the FSC or the FSC bracket is replaced.

INSTRUMENTATION/DRIVER INFO.

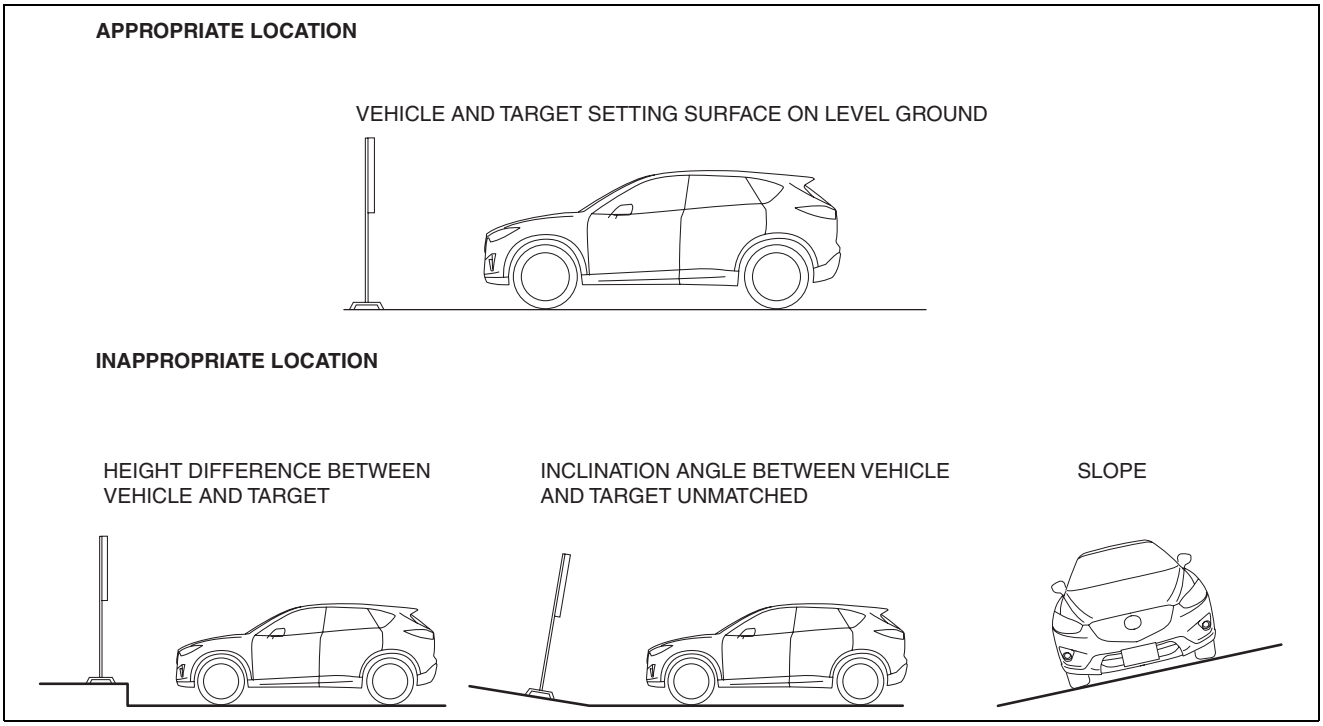
- If an obstruction on the windshield or camera lens is blocking the scene in front of the vehicle, the target used for aiming cannot be read-in and aiming will not be performed correctly. Perform the following procedure before performing the aiming.
  — Verify that there is no water, mud, soiling or sticker adhesion on the windshield, and that there is nothing on the camera lens such as dust or soiling.

Aiming procedure

1. Empty the vehicle by having all occupants leave the vehicle and remove all the cargo except for the spare tire, jack and tools.
2. Adjust the air pressure of each tire to the specified value. (See 02-12-1 WHEEL AND TIRE SPECIFICATION.)
3. Move the vehicle to level ground.

Caution

- **If the setting surface height and angle between the vehicle and the target differs, correct FSC aiming cannot be done. Perform the FSC aiming with the vehicle and target setting surface on level ground.**



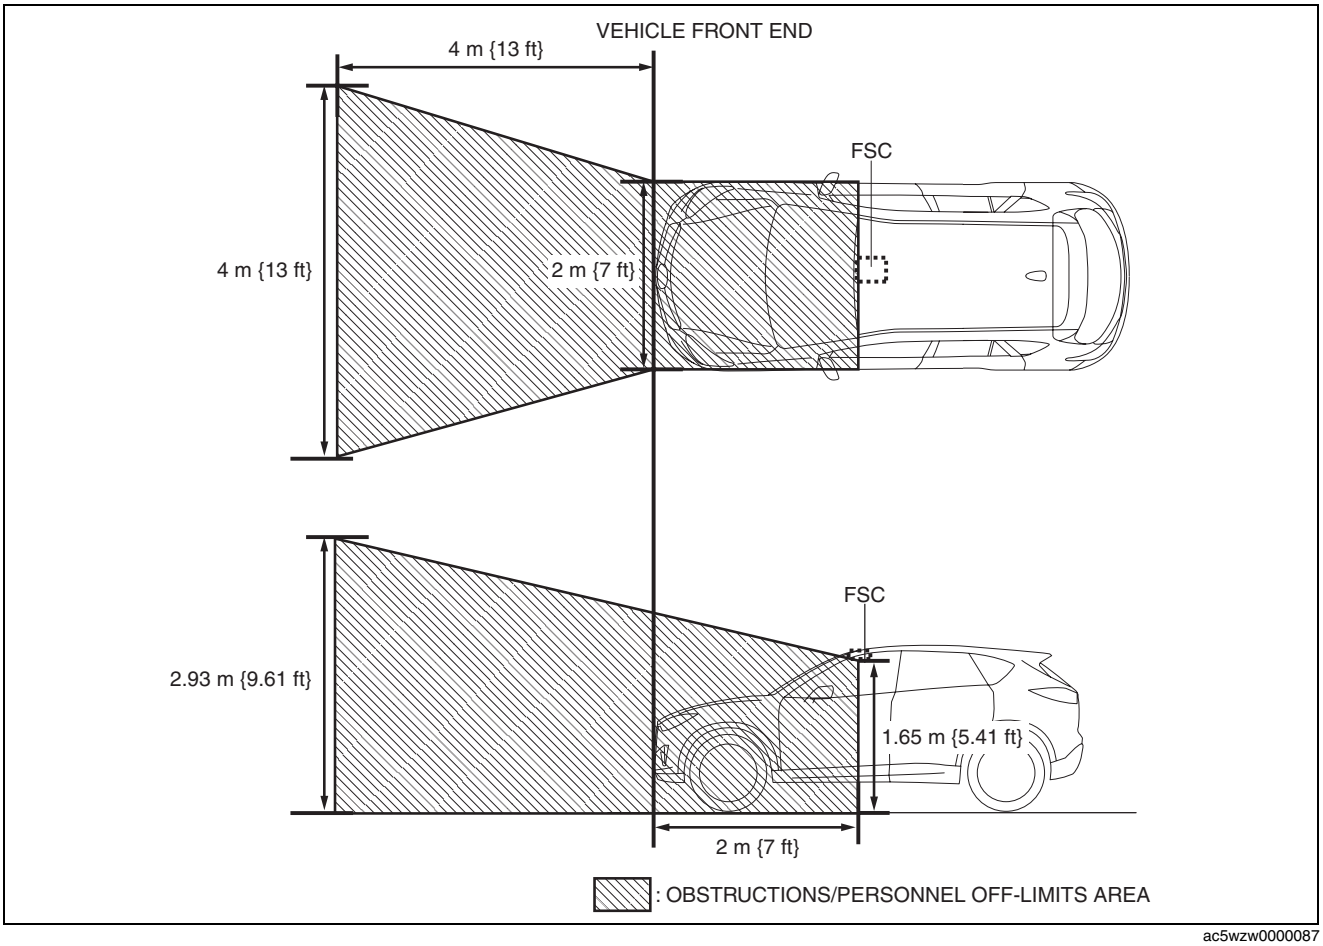
ac5wzw0000087

4. Verify that there are no obstructions such as metal objects in the shaded areas shown in the figure.

Caution

- **If the FSC aiming is performed with obstructions such as white and black patterned objects or reflective metal in the shaded areas, the FSC will determine such obstructions as targets and the FSC aiming procedure will not be performed correctly. Move all obstructions away from the shaded areas, and when performing the aiming, do not have personnel standing in the shaded areas.**

INSTRUMENTATION/DRIVER INFO.



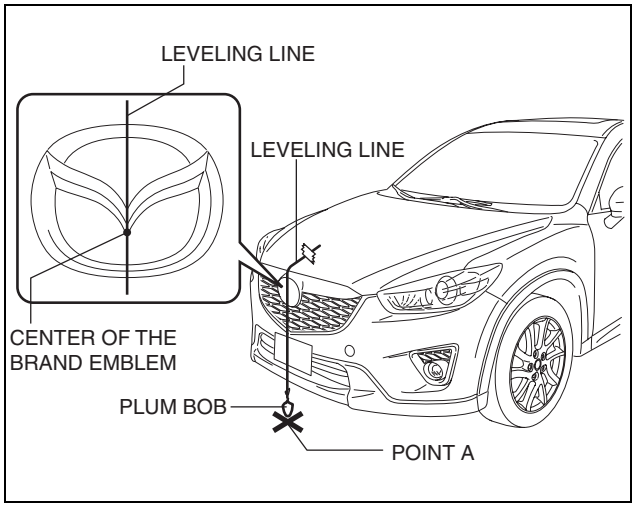
ac5wzw0000087

5. Perform the DTC inspection for the FSC using the M-MDS and verify that no DTCs other than B115E:54 are displayed. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].)

Note
- Because DTC B115E:54 is output if aiming is not performed, continue to perform the FSC aiming only if DTC B115E:54 is output. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].)

6. Adjust the SST (plum-bob) so that it is aligned with the center of the brand emblem, determine the center position at the front of the vehicle, and mark the center position (point A) on the floor surface.

Note
- The center of the brand emblem indicates the center position of the vehicle.



ac5wzw0000087

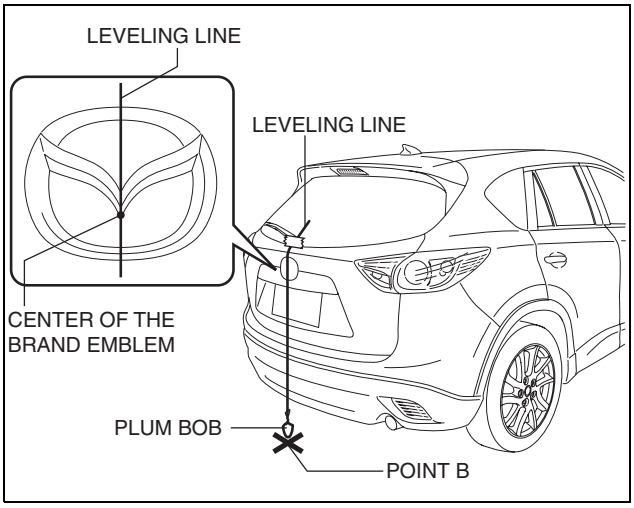
INSTRUMENTATION/DRIVER INFO.

7. Adjust the SST (plum-bob) so that it is aligned with the center of the brand emblem, determine the center position at the rear of the vehicle, and mark the center position (point B) on the floor surface.

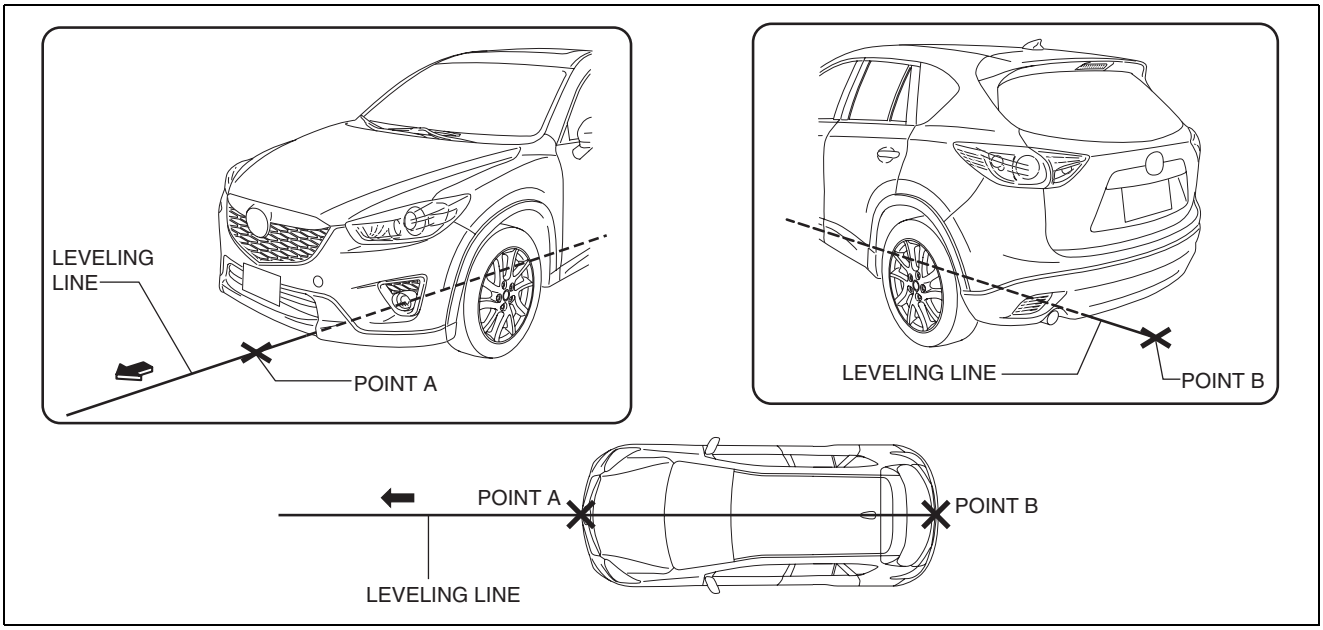
   Note
   - The center of the brand emblem indicates the center position of the vehicle.

8. Secure the end of the leveling line over point B.

   Note
   - Use a commercially-available leveling line.

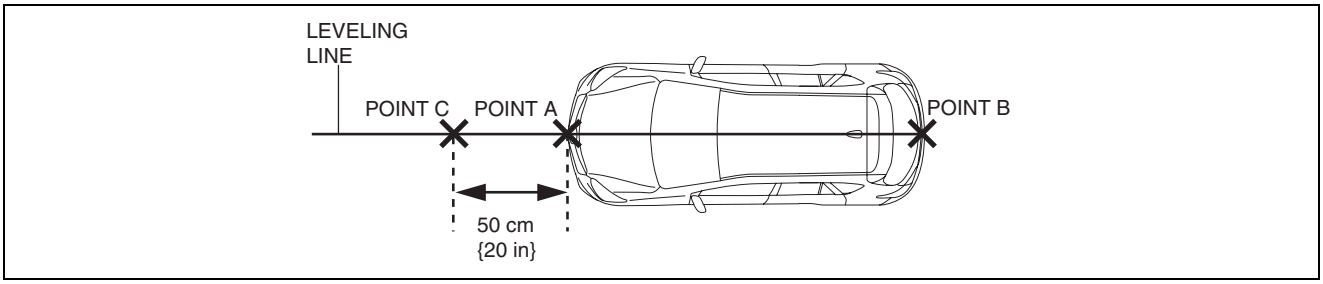


ac5wzw0000087



ac5wzw0000087

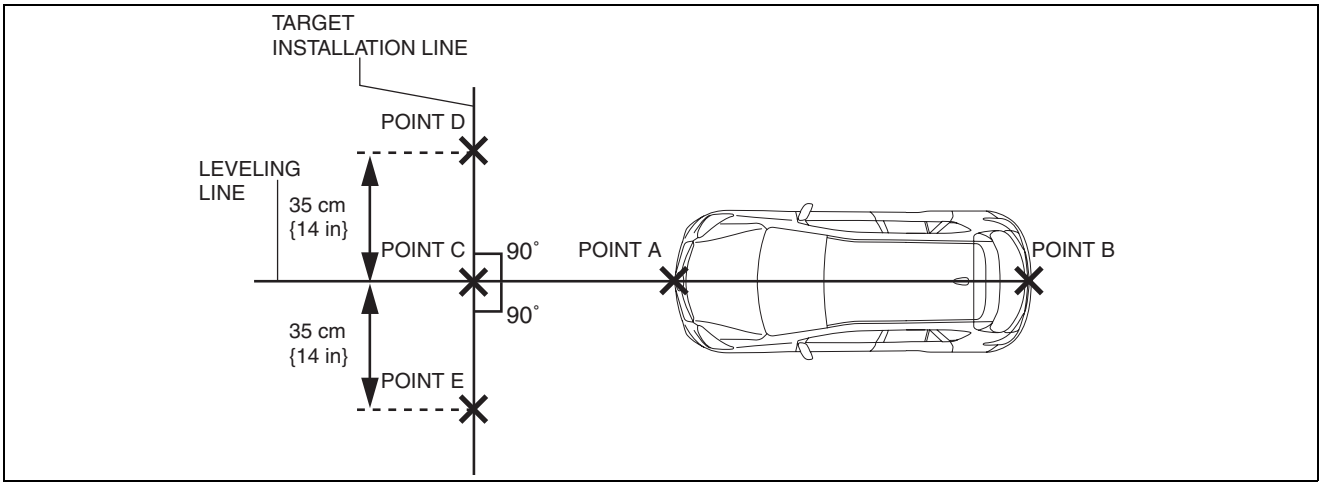
9. Pull the unsecured end of the leveling line over the vehicle and to the front and adjust it so that it passes over point A.
10. Mark the line (position A) at the point **50 cm {20 in}** from point A and in the direction forward of the vehicle.



ac5wzw0000087

INSTRUMENTATION/DRIVER INFO.

11. Mark the points (points D and E) **35 cm {14 in}** from point C on the line which runs perpendicular to the vehicle center line.

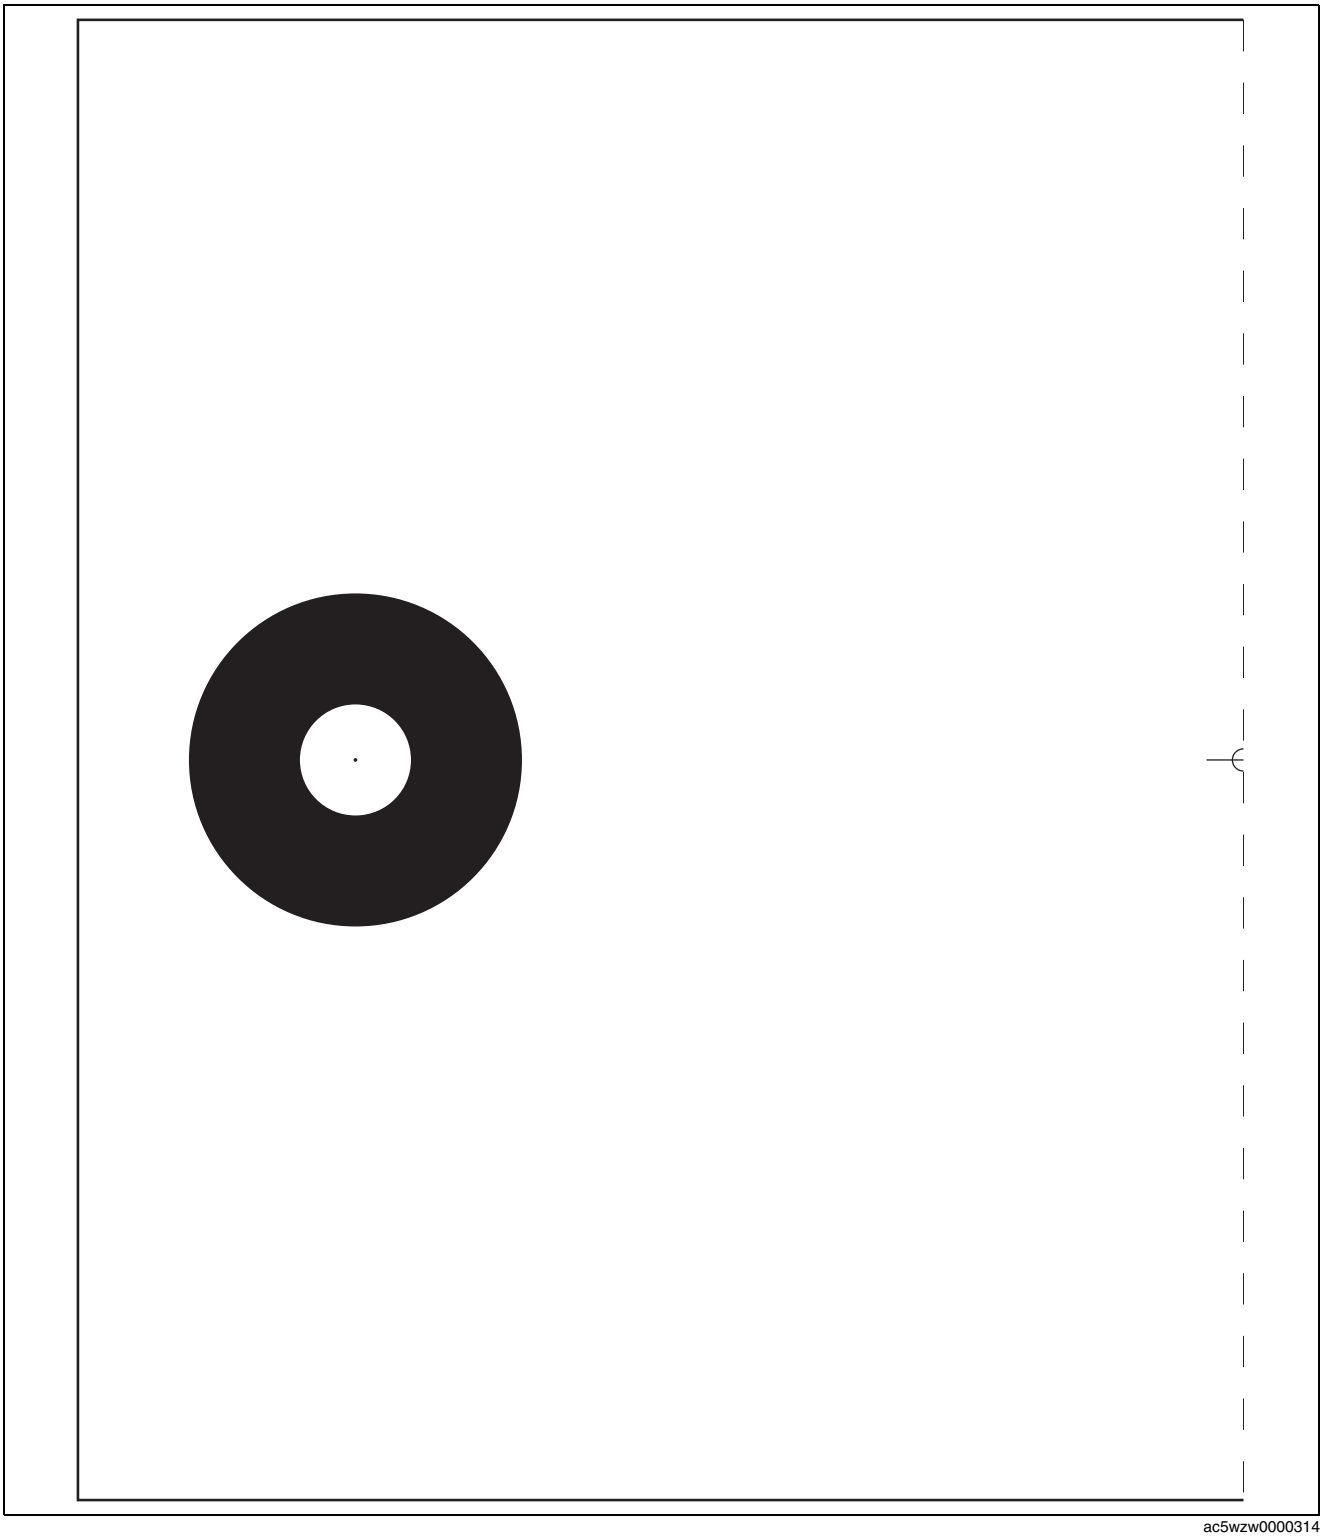


ac5wzw0000088

12. Pull the connected points D, C and E lines (target setting line).

INSTRUMENTATION/DRIVER INFO.

13. Print out two A4-sized copies of the following target pattern.



ac5wzw0000314

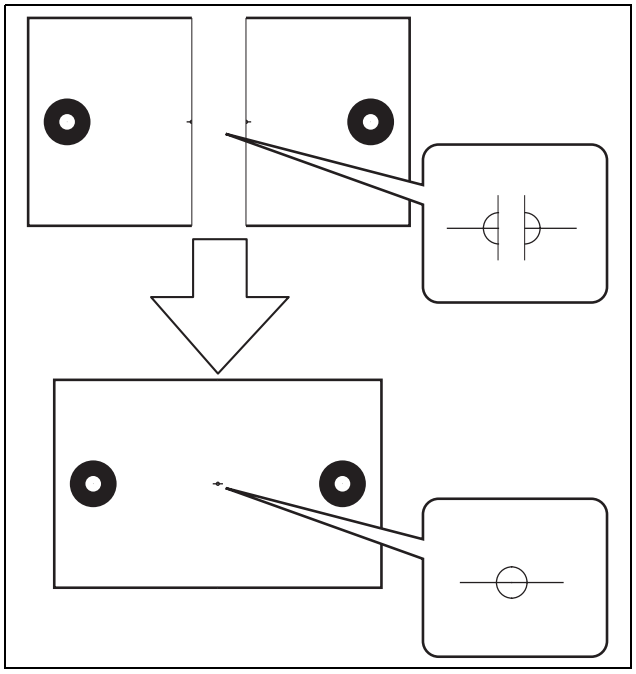
14. Cut the printed target sheets along the dotted line and line up the two sheets at their respective center marks as shown in the figure, and then affix cellophane tape to the back of the target.

Caution

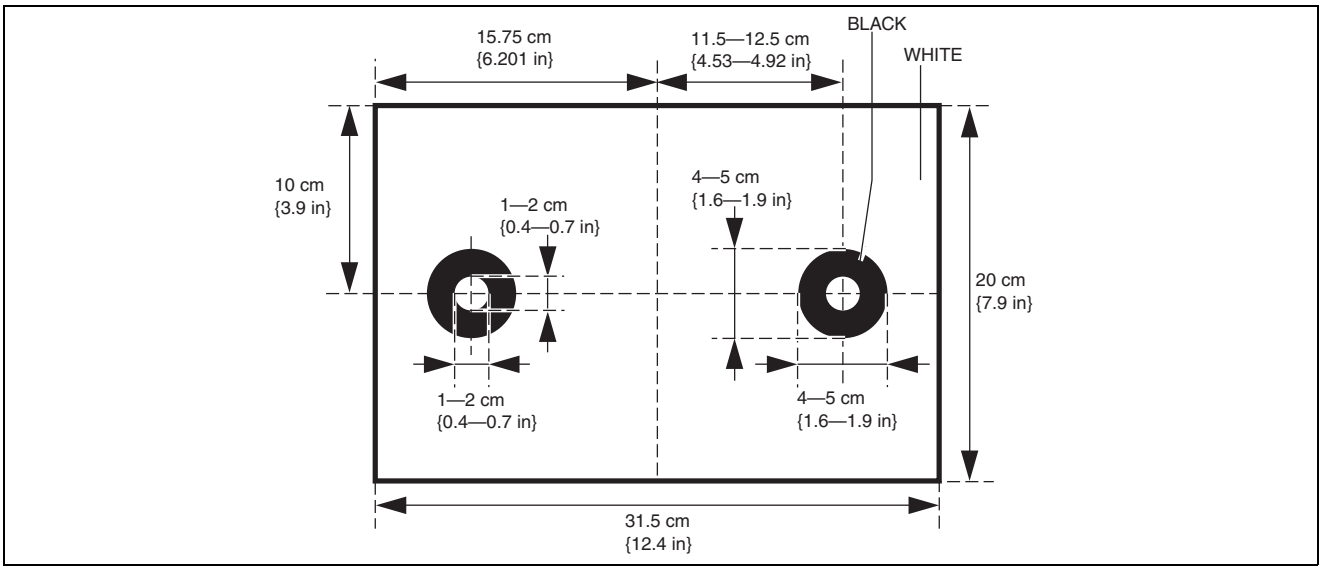
- **When taping the two target sheets together, if cellophane tape is affixed to the front of the target sheets it could reflect light and adversely affect the aiming accuracy. When taping the two target sheets together, affix the cellophane tape to the back of the target pattern.**

INSTRUMENTATION/DRIVER INFO.

15. Verify that the taped-together target is of the dimensions shown in the figure.



ac5jjw00000715



ac5wzw0000326

16. Affix double-sided adhesive tape to the back of the target.

Caution

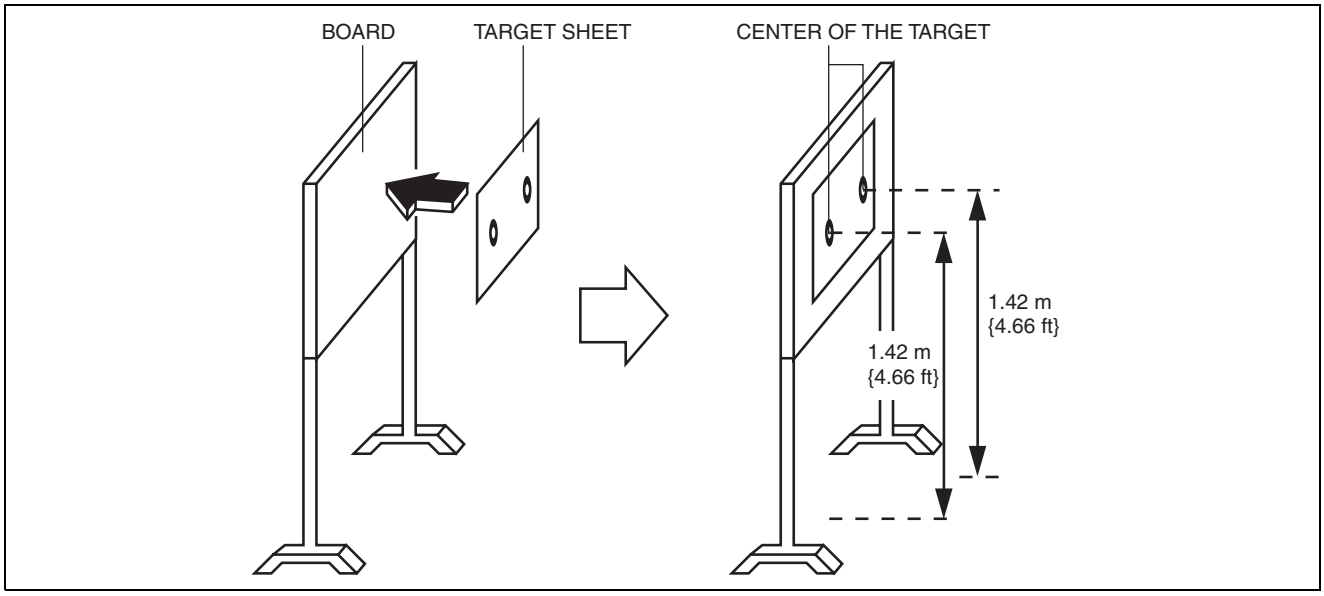
- **When affixing the target, if tape is affixed to the front of the target it could reflect light and adversely affect the aiming accuracy. When affixing the target, affix the double-sided adhesive tape to the back of the target, and then affix it to the board.**

17. Align the target to the height shown in the figure, and affix it to a board.

Note

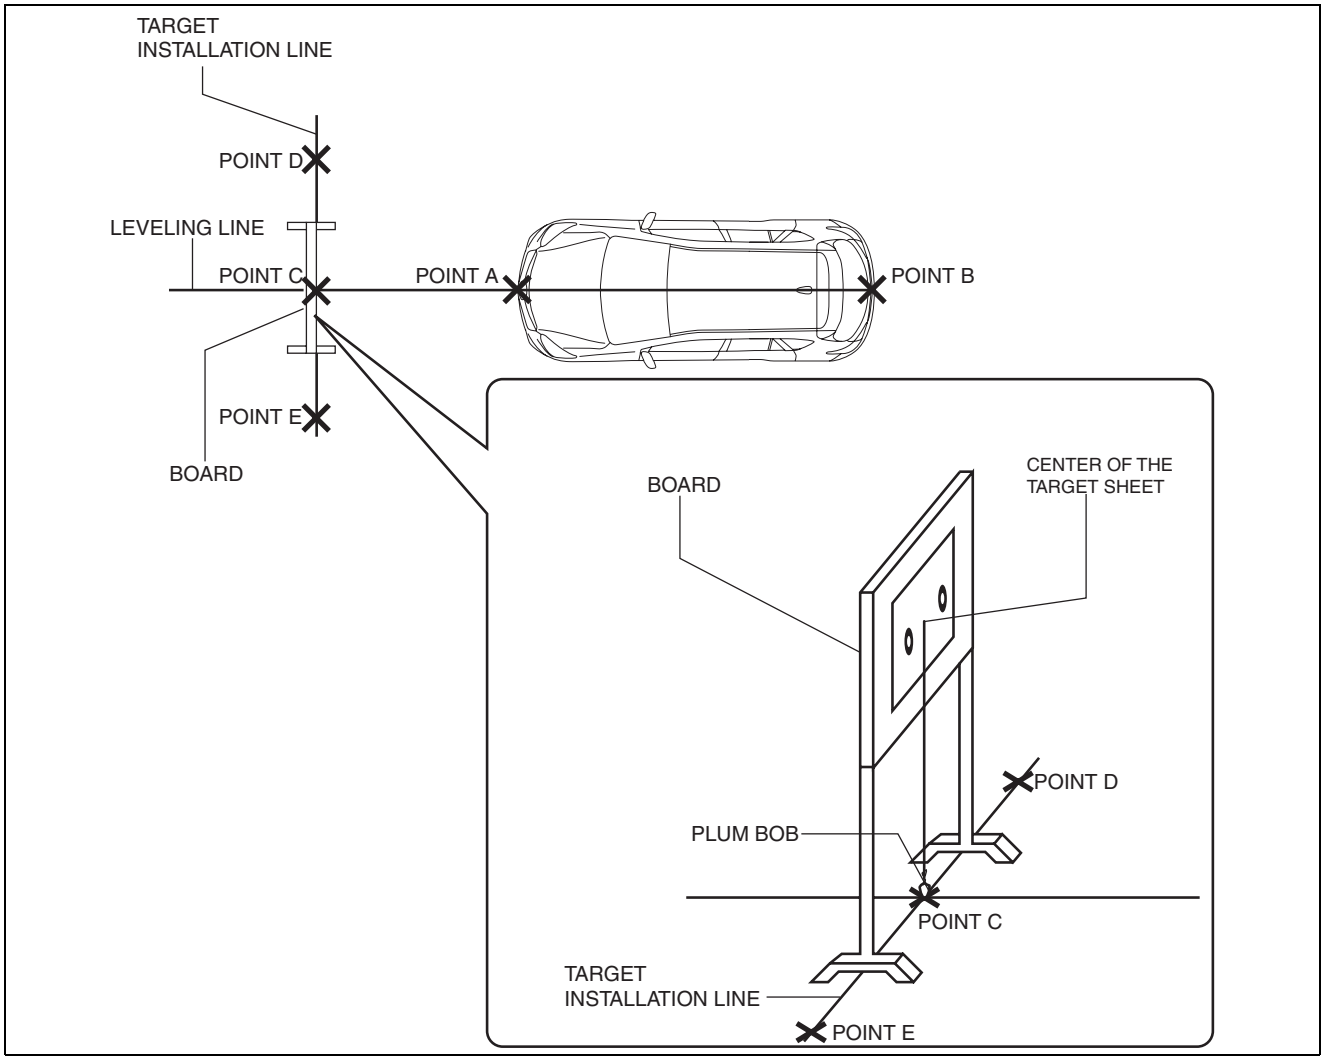
- Use a wooden board which does not reflect light to affix the target.

INSTRUMENTATION/DRIVER INFO.



ac5wzw0000294

18. Align the center of the target with point C using the SST (plum bob).



ac5wzw0000088

19. Align so that the board and the target setting line are level with the center of point C.
20. Connect the M-MDS (IDS) to the DLC-2.
21. After vehicle identification, the following can be selected from the M-MDS initialization screen.
    1. "Electrical"

2. "FSC Aiming"

22. Input the following values according to the instructions on the M-MDS screen.

Item		Value	
		mm	in
Input height from the ground to the wheel house.	Front Left	803	$31\frac{5}{8}$
	Front Right	803	$31\frac{5}{8}$
	Rear Left	806	$31\frac{6}{8}$
	Rear Right	806	$31\frac{6}{8}$
Input the distance from the target to the front wheel center.		-1,432	$-56\frac{3}{8}$
Input the distance from the lens center to the vehicle center.		-22	$-\frac{7}{8}$
Input the distance from the ground to the target center.		1,420	56

23. Perform the FSC aiming procedure according to the directions on the M-MDS.
24. Verify the M-MDS display.
- If "Procedure successful" is displayed
  — FSC aiming completed
- If "Procedure unsuccessful" is displayed
  — Perform an inspection according to the following table for the error code procedure.
  — If an error code other than the error codes in the following table is displayed, verify the following and re-perform the FSC aiming if there is no malfunction, as there could be a communication error between the FSC and the diagnostic tester.
    1. Is the battery positive voltage for the vehicle 8 V or more?
    2. Is the ignition switched ON (engine off or on)?

Error code	Detection condition
01	Target set position or input value is incorrect
02	Visibility where aiming is performed is bright or dark, target soiled
03	Target is not detected
04	Target moves during aiming
05	Input vehicle value exceeds specification
06	Aiming result is required during aiming
08	Aiming result is required for FSC with aiming not completed
FF	Aiming cannot be performed due to communication error

INSTRUMENTATION/DRIVER INFO.

Error code 01/05

Step	Inspection	Action	
1	**VERIFY VEHICLE HEIGHT INPUT VALUE** • Verify the vehicle height indicated in Step 22 for aiming with the input value. • Is the value input correctly?	Yes	Go to the next step.
		No	Input the vehicle height indicated in Step 22 for aiming, then go to the next step.
2	**VERIFY TARGET POSITION** • Verify the following: — Are the vehicle and target set on level ground? — Is the target set to the position indicated in the procedure? — Are the board and the target set line parallel and is the height at the center of the target correct? — Is the target produced as indicated in the procedure? — Is there any dirt, cracks, damage, or wrinkling on the target and board? • Is there any malfunction?	Yes	Repair the target for malfunction and go to the next step.
		No	Go to the next step.
3	**PERFORM FSC AIMING** • Perform the FSC aiming. • Is the FSC aiming completed normally?	Yes	FSC aiming is completed.
		No	**Error code 01 or 05 is displayed** • Go to the next step. **Code other than error cord 01 or 05 is displayed** • Go to the procedure for the displayed error code.
4	**PERFORM FSC AIMING AT ACTUAL MEASURED VALUE OF VEHICLE HEIGHT** • Measure the vehicle height according to the actual measurement procedure for the wheel house height. (See 09-22-117 Wheel house height measurement procedure.) • Input the actual measured value and perform the FSC aiming. • Is the FSC aiming completed normally?	Yes	The FSC aiming is completed.
		No	Go to the next step.
5	**VERIFY DTC** • Perform the DTC inspection for the FSC. • Is the DTC displayed?	Yes	• Go to the applicable DTC inspection. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].) • After the diagnostic procedure is completed, perform the FSC aiming.
		No	Re-perform the FSC aiming, and replace the FSC if the FSC aiming is not completed normally. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)

Error code 02/03/04

Step	Inspection	Action	
1	**VERIFY TARGET AND TARGET SETTING ENVIRONMENT** • Verify the following: — Is there any dirt or damage on the windshield, FSC lens, and FSC cover? — Does direct sunlight penetrate the camera or target surroundings? — Is the camera or target surroundings shadowed? — Is there any dirt, cracks, damage, or wrinkling on the target and board? — Is the target produced in white and black? — Is there any obstruction or moving object within the shaded area indicated in Step 4 for aiming? — Is the target produced as indicated in the procedure? — Does the target move during aiming? • Is there any malfunction?	Yes	Repair the malfunctioning part and go to the next step.
		No	Go to the next step.

INSTRUMENTATION/DRIVER INFO.

Step	Inspection	Action	
2	**PERFORM FSC AIMING** • Perform the FSC aiming. • Is the FSC aiming completed normally?	Yes	The FSC aiming is completed.
		No	**Error code 02 or 03 or 04 is displayed** • Go to the next step. **Code other than error code 02 or 03 or 04 is displayed** • Go to the procedure for the displayed error code.
3	**PERFORM FSC AIMING WITH ACTUAL MEASURED VALUE OF VEHICLE HEIGHT** • Measure the vehicle height according to the actual measurement procedure for the wheel house height. (See 09-22-117 Wheel house height measurement procedure.) • Input the actually measured value and perform the FSC aiming. • Is the FSC aiming completed normally?	Yes	The FSC aiming is completed.
		No	Go to the next step.
4	**VERIFY DTC** • Perform the DTC inspection for the FSC. • Is the DTC displayed?	Yes	• Go to the applicable DTC inspection. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].) • After the diagnostic procedure is completed, perform the FSC aiming.
		No	Re-perform the FSC aiming, and replace the FSC if the FSC aiming is not completed normally. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)

INSTRUMENTATION/DRIVER INFO.

Error code 06/08

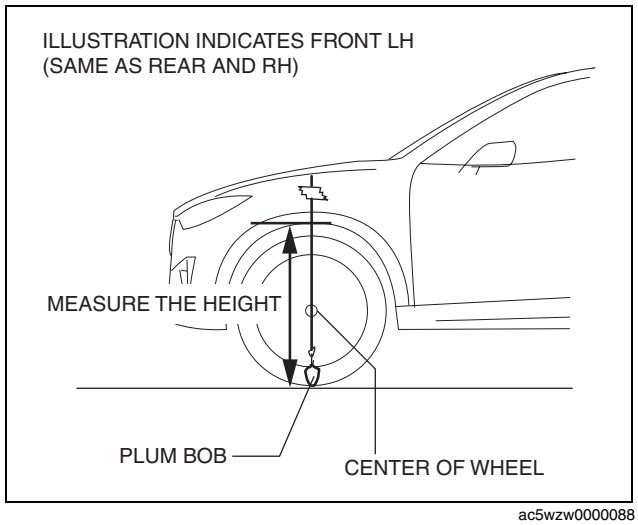
Step	Inspection	Action	
1	**PERFORM FSC AIMING** • Re-perform the FSC aiming. • Is the FSC aiming completed normally?	Yes	The FSC aiming is completed.
		No	**Error code 06 or 08 is displayed** • Go to the next step. **Code other than error code 06 or 08 is displayed** • Go to the procedure for the displayed error code.
2	**VERIFY DTC** • Perform the DTC inspection for the FSC. • Is the DTC displayed?	Yes	• Go to the applicable DTC inspection. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].) • After the diagnostic procedure is completed, perform the FSC aiming.
		No	Re-perform the FSC aiming, and replace the FSC if the FSC aiming is not completed normally. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)

Error code FF

Step	Inspection	Action	
1	**VERIFY DTC** • Perform the DTC inspection for the FSC. • Is the DTC displayed?	Yes	• Go to the applicable DTC inspection. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].) • After the diagnostic procedure is completed, perform the FSC aiming.
		No	Re-perform the FSC aiming, and replace the FSC if the FSC aiming is not completed normally. (See 09-22-98 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)

Wheel house height measurement procedure

1. Adjust the SST (plum bob) so that it crosses the center of the wheel and identify the center position of the wheel house.
2. Measure the height from the uppermost part of the wheel house to the floor.



ac5wzw0000088

FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING READ/WRITE FUNCTION)

id092200030200

Note

- When performing configuration, it is necessary to read the vehicle specification information from the FSC before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the FSC. The vehicle specification information is temporarily stored in the M-MDS.

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
   1. “Module programming”
3. Then, select the following from the screen menu.
   1. “Programmable Module Installation”

2. “FSC”

4. Perform the configuration following the instructions on the screen.

Caution
- **When the configuration is performed, CAN communication between the FSC and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.**

5. Verify the DTCs for all of the control modules connected to the CAN line.
   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

FORWARD SENSING CAMERA (FSC) CONFIGURATION (USING AS-BUILT DATA)

id092200032300

Note
- If the configuration is performed using As-Built data, the set value of the personalization function is reset to the initial value (condition when shipped from factory). Verify the set value with the customer and perform the personalization function setting after performing the configuration using As-Built data.

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
   1. “Module programming”
3. Then, select the following from the screen menu.
   1. “As-Built”
   2. “FSC”
4. Perform As-Built following the instructions on the screen.

Caution
- **When the configuration is performed, CAN communication between the FSC and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.**

5. Verify the DTCs for all of the control modules connected to the CAN line.
   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

LDWS SWITCH REMOVAL/INSTALLATION

id092200031500

Note
- The LDWS switch is integrated with the cluster switch.
- For the cluster switch removal/installation, refer to the switch panel removal/installation because the cluster switch is installed to the switch panel. (See 09-17-18 SWITCH PANEL REMOVAL/INSTALLATION.)

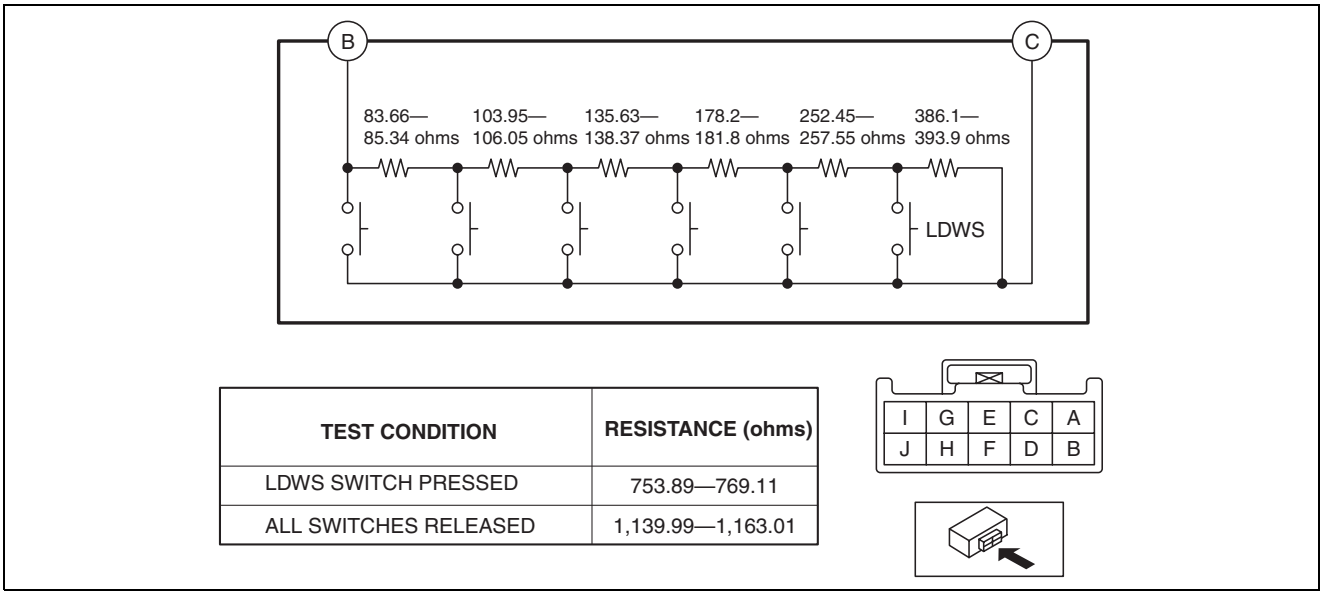
LDWS SWITCH INSPECTION

id092200031600

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the LDWS switch. (See 09-22-118 LDWS SWITCH REMOVAL/INSTALLATION.)

INSTRUMENTATION/DRIVER INFO.

3. Verify that the resistance between LDWS switches B and C is as indicated in the table.

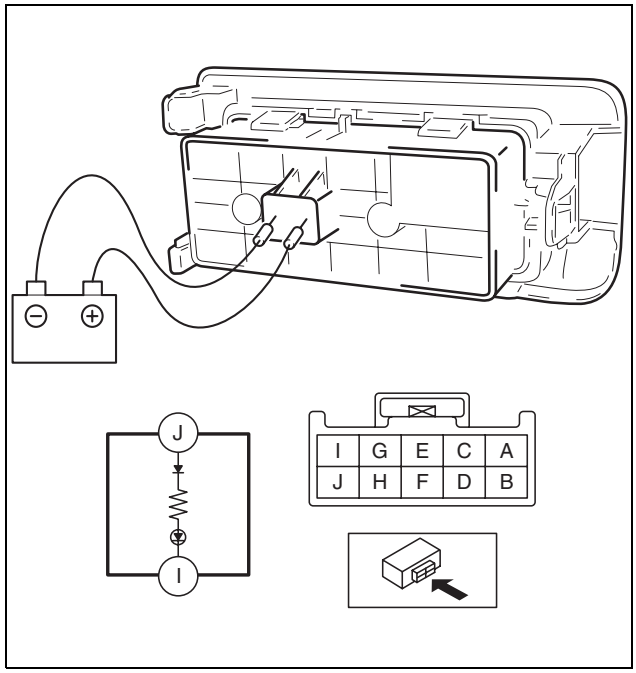


TEST CONDITION	RESISTANCE (ohms)
LDWS SWITCH PRESSED	753.89—769.11
ALL SWITCHES RELEASED	1,139.99—1,163.01

ac5wzw0000121

- If the resistance cannot be verified as indicated in the table, replace the cluster switch.

4. Apply battery positive voltage to LDWS switch terminal J, and connect terminal I to ground.
5. Verify that the LED illuminates.
   - If there is any malfunction, replace the cluster switch.



ac5jjw00000654

CONTROL SYSTEM

FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION

id094000001900

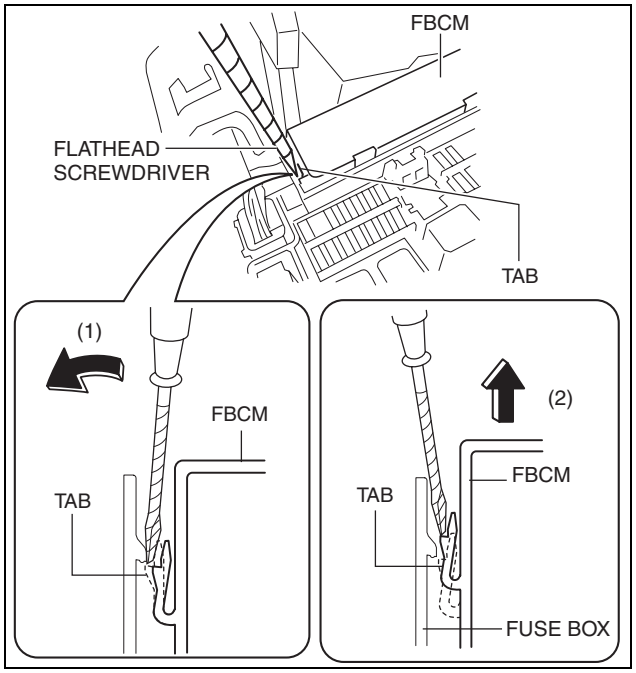
Caution

- **If configuration is not performed when the front body control module (FBCM) is replaced with a new one, the vehicle specification information is not stored in the front body control module (FBCM) and the system will not operate normally.**
- **When performing configuration, it is necessary to read the vehicle specification information from the front body control module (FBCM) before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the front body control module (FBCM). The vehicle specification information is temporarily stored in the M-MDS.**

Note

- The front body control module (FBCM) prior to replacement stores the vehicle specification information.
- A new front body control module (FBCM) does not store any vehicle specification information.
- If the vehicle specification information from the front body control module (FBCM) prior to replacement cannot be read, perform the configuration using As-Built data.

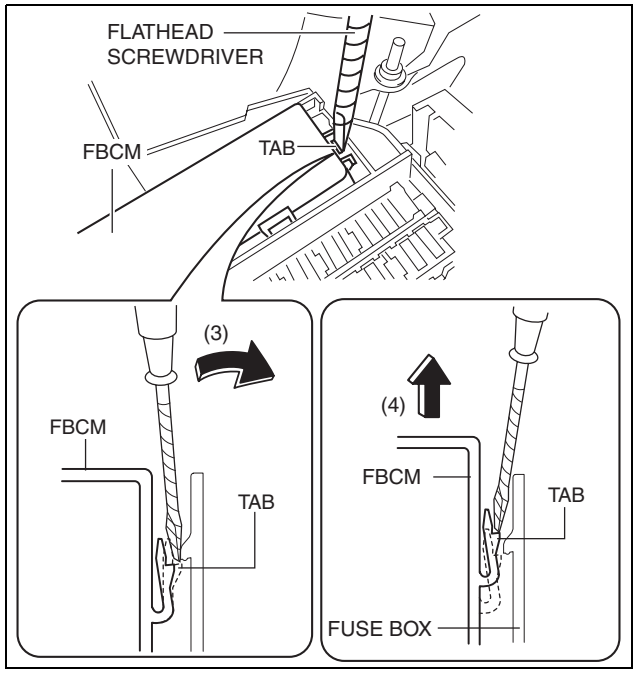
1. When replacing the front body control module (FBCM), perform the configuration. (See 09-40-8 FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING READ/WRITE FUNCTION).)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the fuse box cover. (See 09-21-3 RELAY AND FUSE BLOCK REMOVAL/INSTALLATION.)
4. Insert a tape-wrapped flathead screwdriver into the position shown in the figure.
5. Move the screwdriver in the direction of arrow (1) shown in the figure and lift the front body control module (FBCM) in the direction of arrow (2) to detach its tab from the fuse box.



ac5uuw00000006

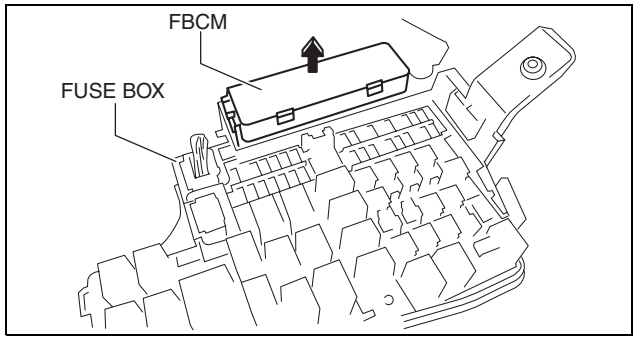
CONTROL SYSTEM

6. Insert a tape-wrapped flathead screwdriver into the position shown in the figure.
7. Move the screwdriver in the direction of arrow (3) shown in the figure and lift the front body control module (FBCM) in the direction of arrow (4) to detach its tab from the fuse box.



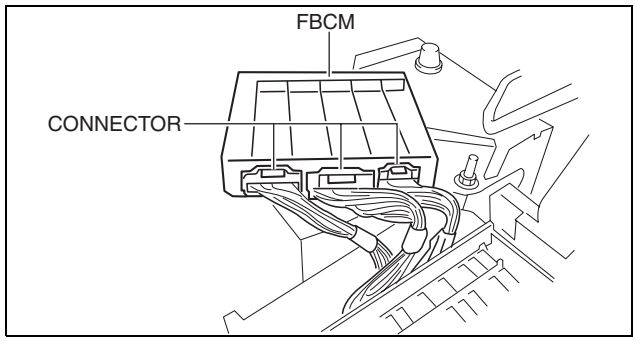
ac5uuw00000007

8. Pull the front body control module (FBCM) in the direction of the arrow shown in the figure to remove it from the fuse box.



ac5uuw00000008

9. Disconnect the connectors shown in the figure.
10. Install in the reverse order of removal.



ac5uuw00000009

Note

- If configuration cannot be performed by reading/writing of the vehicle specification information, perform the configuration using As-Built information after replacing the front body control module (FBCM). (See 09-40-9 FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING AS-BUILT DATA).)

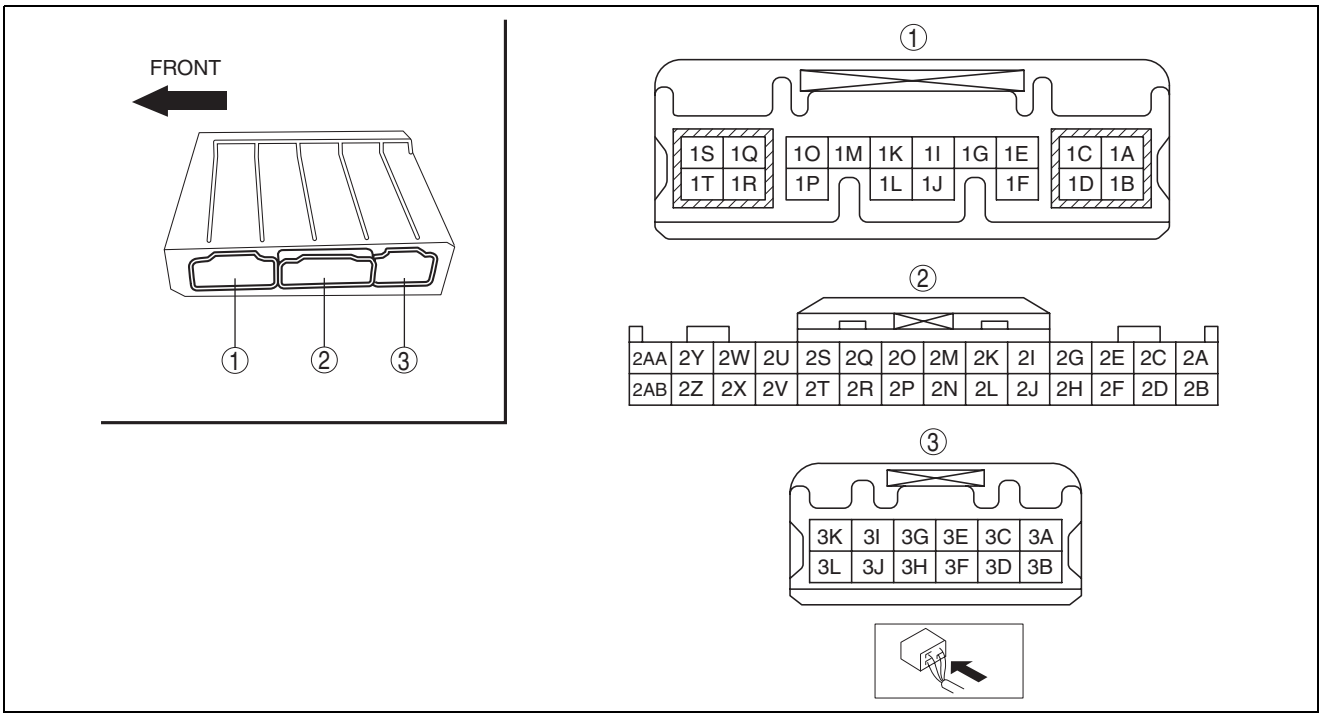
FRONT BODY CONTROL MODULE (FBCM) INSPECTION

id094000002100

1. Remove the fuse box cover. (See 09-21-3 RELAY AND FUSE BLOCK REMOVAL/INSTALLATION.)
2. Remove the front body control module (FBCM) from the fuse box. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
3. Verify that the voltages of each of the terminals are as indicated in the 09-40-4 Terminal Voltage Table (Reference).
   - If the voltage is not as indicated in the table, inspect the parts under Inspection item(s).
     - — If the system does not launch normally even though inspection items are normal, specify the location of the malfunction based on the instructions from the on-board diagnostic system and the symptom troubleshooting, and perform repairs.

CONTROL SYSTEM

Terminal Voltage Table (Reference)



ac5wzw0000088

Terminal	Signal	Connected to	Measurement conditions	Voltage (V)	Inspection item(s)
1A	Power supply	HAZARD 25 A fuse	Under any condition	B+	• HAZARD 25 A fuse • Related wiring harness
1B	Power supply	HAZARD 25 A fuse	Under any condition	B+	• HAZARD 25 A fuse • Related wiring harness
1C	Ignition power supply	• Climate control unit • Seat warmer control unit • A/C relay • PTC heater*6	Ignition switched ON (engine off)	B+	• Climate control unit • Seat warmer control unit • A/C relay • PTC heater*6 • Related wiring harness
			Ignition switched OFF (LOCK)	1.0 or less	
1D	Signal ground	Body ground	Under any condition	1.0 or less	• Related wiring harness
1E	Rear turn light (RH) control	Rear turn light (RH)	Turn switch at right turn light position	1.0 or less ⇔ B+	• Rear turn light (RH) • Related wiring harness
			Turn switch is in position other than above	1.0 or less	
1F	Side turn light (RH) control	Side turn light (RH)	Turn switch at right turn light position	1.0 or less ⇔ B+	• Side turn light (RH) • Related wiring harness
			Turn switch is in position other than above	1.0 or less	
1G	Front turn light (RH) control	Front turn light (RH)	Turn switch at right turn light position	1.0 or less ⇔ B+	• Front turn light (RH) • Related wiring harness
			Turn switch is in position other than above	1.0 or less	
1H	—	—	—	—	—
1I	License light control	TNS relay	Light switch at TNS position	B+	• TNS relay • Related wiring harness
			Light switch at OFF position	1.0 or less	
1J	Parking light control	Parking light (LH, RH)	Light switch at TNS position	B+	• Parking light (LH, RH) • Related wiring harness
			Light switch at OFF position	1.0 or less	
1K	—	—	—	—	—
1L	Horn relay control	Horn relay	Horn switch not pressed	B+	• Horn relay • Related wiring harness
			Horn switch pressed	1.0 or less	

CONTROL SYSTEM

Terminal	Signal	Connected to	Measurement conditions		Voltage (V)	Inspection item(s)
1M	Headlight relay (LO) control	• Headlight LO relay (halogen type) • Headlight LO relay (LH) (discharge type)	Light switch at HEAD position		1.0 or less	• Headlight LO relay (halogen type) • Headlight LO relay (LH) (discharge type) • Related wiring harness
			Light switch is in position other than above		B+	
1N	—	—	—		—	—
1O*7	Theft-deterrent horn input signal	Rear body control module (RBCM)	M-MDS is connected and theft-deterrent is sounded using data monitor function		1.0 or less	• Rear body control module (RBCM) • Related wiring harness
			M-MDS is connected and theft-deterrent is not sounded using data monitor function		B+	
1P	Rear window defroster relay control	Rear window defroster relay	Ignition switched ON (engine off)	Rear window defroster switch OFF	B+	• Rear window defroster relay • Related wiring harness
				Rear window defroster switch ON	1.0 or less	
1Q*1	Headlight cleaner motor control	Headlight cleaner motor	Ignition switched ON (engine off)	Turn front washer switch ON 2 times within 2 s	B+→ 1.0 or less	• Headlight cleaner motor • Related wiring harness
				No operation	1.0 or less	
1R*7	Theft-deterrent horn power supply	R.WIPER 15 A fuse	Under any condition		B+	• R.WIPER 15 A fuse • Related wiring harness
1S*1	Headlight washer power supply	H/CLEAN 20 A fuse	Under any condition		B+	• H/CLEAN 20 A fuse • Related wiring harness
1T*7	Theft-deterrent horn output signal	Theft-deterrent horn	M-MDS is connected and theft-deterrent is sounded using data monitor function		B+	• Theft-deterrent horn • Related wiring harness
			M-MDS is connected and theft-deterrent is not sounded using data monitor function		1.0 or less	
2A	Interior light power supply	ROOM 15 A fuse	Under any condition		B+	• ROOM 15 A fuse • Related wiring harness
2B	Front turn light (LH) control	Front turn light (LH)	Turn switch at left turn light position		1.0 or less ⇔ B+	• Front turn light (LH) • Related wiring harness
			Turn switch is in position other than above		1.0 or less	
2C*2	Running light control	Running light (LH, RH)	Ignition switched ON (engine off) and light switch OFF	Running light illuminates	B+	• Running light (LH, RH) • Related wiring harness
				Running light turns off	1.0 or less	
2D	Rear turn light (LH) control	Rear turn light (LH)	Turn switch at left turn light position		1.0 or less ⇔ B+	• Rear turn light (LH) • Related wiring harness
			Turn switch is in position other than above		1.0 or less	
2E	LIN communication	Current sensor	Terminal used for communication therefore determination based on terminal voltage is not possible.			
2F	Side turn light (LH) control	Side turn light (LH)	Turn switch at left turn light position		1.0 or less ⇔ B+	• Side turn light (LH) • Related wiring harness
			Turn switch is in position other than above		1.0 or less	
2G*3	LIN communication	Auto-light sensor/rain sensor	Terminal used for communication therefore determination based on terminal voltage is not possible.			
2H	LIN communication	DC-DC converter	Terminal used for communication therefore determination based on terminal voltage is not possible.			

CONTROL SYSTEM

Terminal	Signal	Connected to	Measurement conditions		Voltage (V)	Inspection item(s)
2I	CAN_L	CAN system related module	Terminal used for communication therefore determination based on terminal voltage is not possible.			
2J*5	LIN communication	Climate control unit	Terminal used for communication therefore determination based on terminal voltage is not possible.			
2K	CAN_H	CAN system related module	Terminal used for communication therefore determination based on terminal voltage is not possible.			
2L	CAN_L	CAN system related module	Terminal used for communication therefore determination based on terminal voltage is not possible.			
2M	Ignition power supply	C/U IG1 15 A fuse	Ignition switched ON (engine off)		B+	• C/U IG1 15 A fuse • Related wiring harness
			Ignition switched OFF (LOCK)		1.0 or less	
2N	CAN_L	CAN system related module	Terminal used for communication therefore determination based on terminal voltage is not possible.			
2O	—	—	—		—	—
2P	CAN_H	CAN system related module	Terminal used for communication therefore determination based on terminal voltage is not possible.			
2Q	Brake fluid level switch signal	Brake fluid level sensor	Ignition switched ON (engine off)	Brake fluid level is less than MIN (brake fluid level sensor ON)	1.0 or less	• Brake fluid level sensor • Related wiring harness
				Brake fluid level is MIN or more (brake fluid level sensor OFF)	Wave pattern (See 09-40-8 Pattern 1.)	
2R	CAN_H	CAN system related module	Terminal used for communication therefore determination based on terminal voltage is not possible.			
2S*8	Washer level switch signal	Washer fluid-level sensor	Ignition switched ON (engine off)	Washer level is less than MIN (washer fluid-level sensor ON)	1.0 or less	• Washer fluid-level sensor • Related wiring harness
				Washer level is MIN or more (washer fluid-level sensor OFF)	Wave pattern (See 09-40-8 Pattern 1.)	
2T*6	PTC heater signal	PTC heater	Terminal used for communication therefore determination based on terminal voltage is not possible.			
2U	Ignition power supply	Start stop unit	Ignition switched ON (engine off)		B+	• Start stop unit • Related wiring harness
			Ignition switched OFF (LOCK)		1.0 or less	
2V	Headlight relay (LO) control (discharge type)	Headlight LO relay (RH)	Light switch at HEAD position		1.0 or less	• Headlight LO relay (RH) • Related wiring harness
			Light switch is in position other than above		B+	
2W	Headlight (LO) switch signal	Start stop unit	Light switch at HEAD position		1.0 or less	• Start stop unit • Related wiring harness
			Light switch at OFF position		B+	
2X	Headlight relay (HI) control	Headlight HI relay	Headlight at HEAD position and dimmer switch at LO position		B+	• Headlight HI relay • Related wiring harness
			Headlight at HEAD position and dimmer switch at HIGH or passing position		1.0 or less	
2Y	Windshield wiper (LO) switch signal	Start stop unit	Windshield wiper switch at ON position		1.0 or less	• Start stop unit • Related wiring harness
			Windshield wiper switch at OFF position		B+	
2Z	Blower motor relay control	Blower relay	Ignition switched ON (engine off)	Operate blower motor using fan switch	1.0 or less	• Blower relay • Related wiring harness
				Press climate control unit OFF button to stop blower motor	B+	

CONTROL SYSTEM

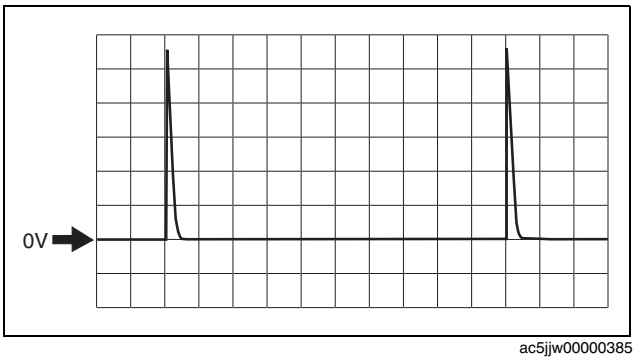
Terminal	Signal	Connected to	Measurement conditions		Voltage (V)	Inspection item(s)
2AA	Autostop switch signal	Windshield wiper motor	Ignition switched ON (engine off)	Turn windshield wiper switch ON and wiper is operated	B+	• Windshield wiper motor • Related wiring harness
				Windshield wiper switch OFF	1.0 or less	
2AB*4	Front fog light relay control	Front fog light relay	Light switch at HEAD position	Front fog light switch OFF	B+	• Front fog light relay • Related wiring harness
				Front fog light switch ON	1.0 or less	
3A	Wiper power supply	WIPER 20 A fuse	Under any condition		B+	• WIPER 20 A fuse • Related wiring harness
3B	Wiper power supply	WIPER 20 A fuse	Under any condition		B+	• WIPER 20 A fuse • Related wiring harness
3C	Windshield wiper motor (HI) control	Windshield wiper motor	Ignition switched ON (engine off)	Windshield wiper switch at HI position	B+	• Windshield wiper motor • Related wiring harness
				Windshield wiper switch at OFF position	1.0 or less	
3D	Power ground	Body ground	Under any condition		1.0 or less	• Related wiring harness
3E	Windshield wiper motor (HI) control	Windshield wiper motor	Ignition switched ON (engine off)	Windshield wiper switch at HI position	B+	• Windshield wiper motor • Related wiring harness
				Windshield wiper switch at OFF position	1.0 or less	
3F	Windshield washer motor control	Washer motor	Ignition switched ON (engine off)	Windshield washer switch ON	B+	• Washer motor • Related wiring harness
				Windshield washer switch OFF	1.0 or less	
3G	Windshield wiper motor (LOW) control	Windshield wiper motor	Ignition switched ON (engine off)	Windshield wiper switch at LOW position	B+	• Windshield wiper motor • Related wiring harness
				Windshield wiper switch at OFF position	1.0 or less	
3H	Rear window washer motor control	Washer motor	Ignition switched ON (engine off)	Rear window washer switch ON	B+	• Washer motor • Related wiring harness
				Rear washer switch OFF	1.0 or less	
3I	Windshield wiper motor (LOW) control	Windshield wiper motor	Ignition switched ON (engine off)	Windshield wiper switch at LOW position	B+	• Windshield wiper motor • Related wiring harness
				Windshield wiper switch at OFF position	1.0 or less	
3J	Interior illumination power supply	• Glove compartment light • Selector illumination • Hazard warning switch • Climate control unit*5 • Audio unit • Clock spring	Light switch at TNS position		B+	• Glove compartment light • Selector illumination • Hazard warning switch • Climate control unit*5 • Audio unit • Clock spring • Related wiring harness
			Light switch at OFF position		1.0 or less	

CONTROL SYSTEM

Terminal	Signal	Connected to	Measurement conditions	Voltage (V)	Inspection item(s)
3K	Power supply	HAZARD 25 A fuse	Under any condition	B+	• HAZARD 25 A fuse • Related wiring harness
3L	Power supply	HAZARD 25 A fuse	Under any condition	B+	• HAZARD 25 A fuse • Related wiring harness

*1 : Vehicles with headlight cleaner system
*2 : Vehicles with running light system
*3 : Vehicles with auto wiper/ auto light system
*4 : Vehicles with front fog light system
*5 : Vehicles with manual air conditioner
*6 : SKYACTIV-D 2.2
*7 : Vehicles with theft-deterrent system
*8 : Vehicles with washer fluid-level sensor

Inspection Using an Oscilloscope (Reference)
Pattern 1



ac5jjw00000385

- Terminal:
  - — Brake fluid level signal: 2Q (+) ⇔ ground (-)
  - — Washer level signal: 2S (+) ⇔ ground (-)
- Oscilloscope setting: 2 V/DIV (Y), 1 ms/DIV (X), DC range

FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING READ/WRITE FUNCTION)
id094000002300

Note
- When performing configuration, it is necessary to read the vehicle specification information from the front body control module (FBCM) before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the front body control module (FBCM). The vehicle specification information is temporarily stored in the M-MDS.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   1. Select “Module Programming”.
3. Then, select items from the screen menu in the following order.
   1. Select “Programmable Module Installation”.
   2. Select “F_BCM”.
4. Perform the configuration according to the directions on the screen.

Caution
- **When the configuration is performed, CAN communication between the front body control module (FBCM) and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.**

5. Verify the DTCs for all of the control modules connected to the CAN line.
   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

CONTROL SYSTEM

FRONT BODY CONTROL MODULE (FBCM) CONFIGURATION (USING AS-BUILT DATA)

id094000005700

Note
- If the configuration is performed using As-Built data, the set value of the personalization function is reset to the initial value (condition when shipped from factory). Verify the set value with the customer and perform the personalization function setting after performing the configuration using As-Built data.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    1. Select “Module Programming”.
3. Then, select items from the screen menu in the following order.
    1. Select “As-Built”.
    2. Select “F_BCM”.
4. Perform the configuration according to the directions on the screen.

Caution
- **When the configuration is performed, CAN communication between the front body control module (FBCM) and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.**

5. Verify the DTCs for all of the control modules connected to the CAN line.
    - If any DTC is stored, clear it.
    - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
    - If the DTC remains, perform troubleshooting according to the DTC.

REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION

id094000002000

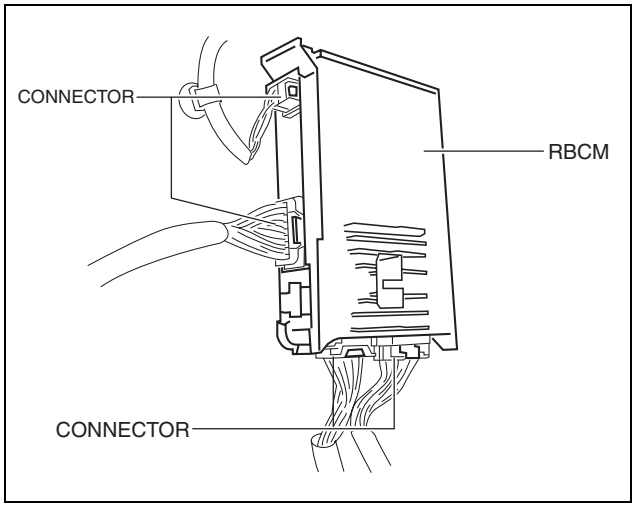
Caution
- **If configuration is not performed when the rear body control module (RBCM) is replaced with a new one, the vehicle specification information is not stored in the rear body control module (RBCM) and the system will not operate normally.**
- **When performing configuration, it is necessary to read the vehicle specification information from the rear body control module (RBCM) before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the rear body control module (RBCM). The vehicle specification information is temporarily stored in the M-MDS.**

Note
- The rear body control module (RBCM) prior to replacement stores the vehicle specification information.
- A new rear body control module (RBCM) does not store any vehicle specification information.
- If the vehicle specification information from the rear body control module (RBCM) prior to replacement cannot be read, perform the configuration using As-Built data.

1. When replacing the rear body control module (RBCM), perform the configuration. (See 09-40-15 REAR BODY CONTROL MODULE (RBCM) CONFIGURATION (USING READ/WRITE FUNCTION).)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the following parts:
    1. Trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
    2. Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
    3. Rear scuff plate (LH) (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
    4. Trunk side trim (LH) (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)

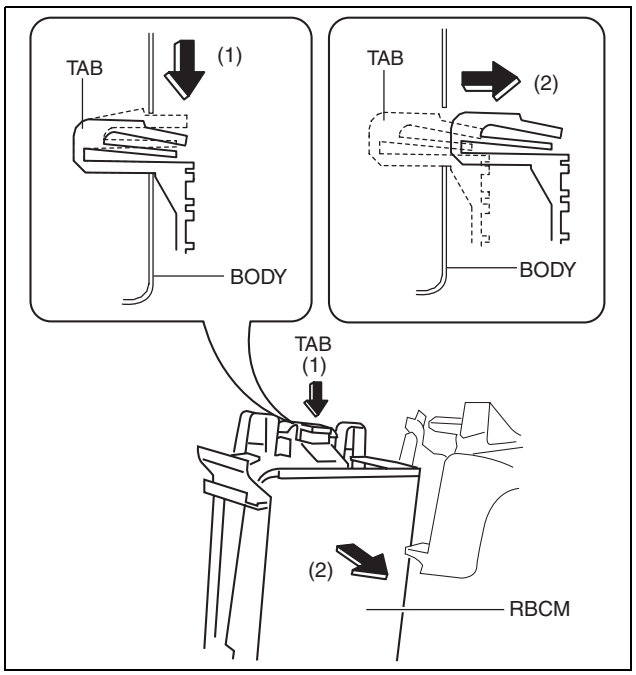
CONTROL SYSTEM

4. Disconnect the connectors shown in the figure.



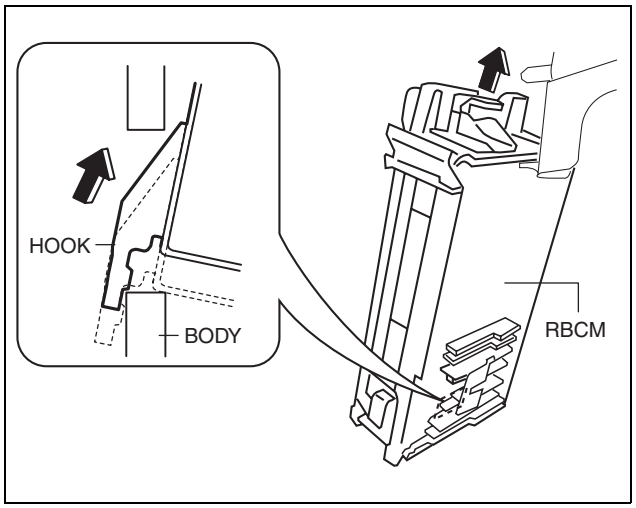
ac5uuw00000010

5. While pressing the rear body control module (RBCM) tab in the direction of arrow (1) shown in the figure, pull it in the direction of arrow (2) to detach the tab from the body.



ac5wzw0000112

6. Pull the rear body control module (RBCM) up in the direction of the arrow to detach the hook from the body.
7. Remove the rear body control module (RBCM).



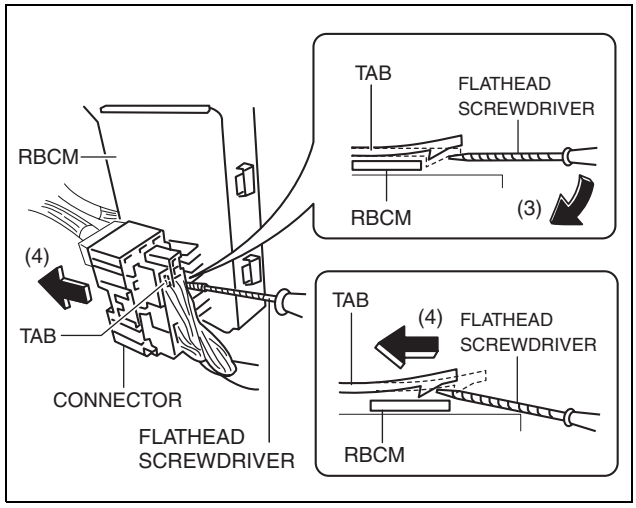
ac5wzw0000113

CONTROL SYSTEM

8. Insert a tape-wrapped flathead screwdriver into the position shown in the figure.
9. Move the screwdriver in the direction of arrow (3) shown in the figure and pull the connector in the direction of arrow (4) to detach its tab from the rear body control module (RBCM).
10. Pull the connector in the direction of arrow (4) shown in the figure and remove it.
11. Install in the reverse order of removal.

Note

- If configuration cannot be performed by reading/writing of the vehicle specification information, perform the configuration using As-Built information after replacing the rear body control module (RBCM). (See 09-40-16 REAR BODY CONTROL MODULE (RBCM) CONFIGURATION (USING AS-BUILT DATA).)



ac5wzw0000113

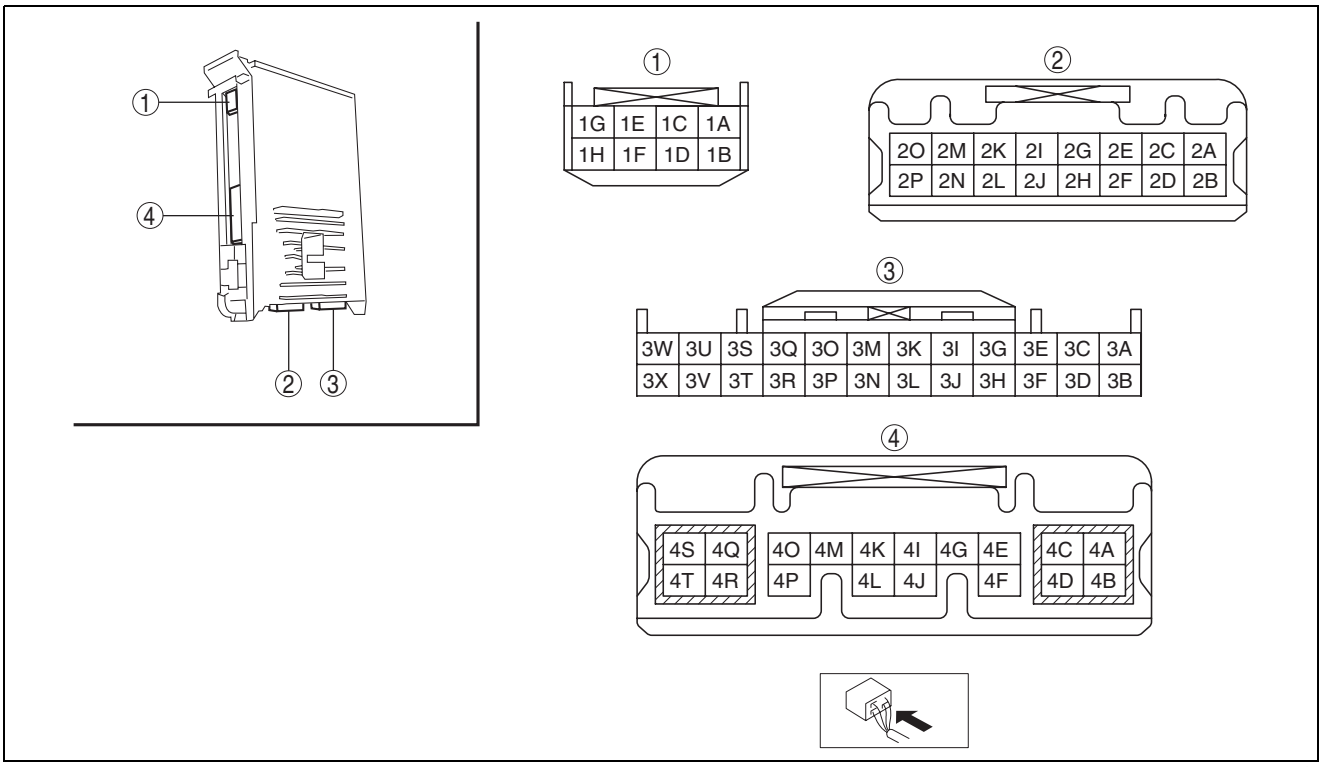
REAR BODY CONTROL MODULE (RBCM) INSPECTION

id094000002200

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
   (2) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (LH) (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) Trunk side trim (LH) (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
3. Remove the rear body control module (RBCM) from the body with the connector connected. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
4. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
5. Verify that the voltages of each of the terminals are as indicated in the 09-40-12 Terminal Voltage Table (Reference).
   - If the voltage is not as indicated in the table, inspect the parts under Inspection item(s).
     — If the system does not launch normally even though inspection items are normal, specify the location of the malfunction based on the instructions from the on-board diagnostic system and the symptom troubleshooting, and perform repairs.

CONTROL SYSTEM

Terminal Voltage Table (Reference)



ac5wzw0000218

Terminal	Signal	Connected to	Measurement conditions	Voltage (V)	Inspection item(s)
1A*1	LIN communication ground	Intruder sensor	Under any condition	1.0 or less	• Intruder sensor • Related wiring harness
1B	Interior light ground	• Front map light • Rear map light • Vanity mirror illumination	Under any condition	1.0 or less	• Front map light • Rear map light • Vanity mirror illumination • Related wiring harness
1C	—	—	—	—	—
1D	—	—	—	—	—
1E	Interior light control	Front map light	Under any condition	1.0 or less	• Front map light • Related wiring harness
1F	—	—	—	—	—
1G*1	LIN communication	Intruder sensor	Terminal used for communication therefore determination based on terminal voltage is not possible.		
1H	Interior light power supply	• Front map light • Rear map light • Vanity mirror illumination (LH, RH) • Intruder sensor*1	Under any condition	B+	• Front map light • Rear map light • Vanity mirror illumination (LH, RH) • Intruder sensor • Related wiring harness
2A	—	—	—	—	—
2B	Power supply	D.LOCK 25 A fuse	Under any condition	B+	• D.LOCK 25 A fuse • Related wiring harness
2C	Door lock control	Door lock actuator	Lock driver-side door lock switch from unlock	1.0 or less → B+ → 1.0 or less	• Door lock actuator • Related wiring harness
			Unlock driver-side door lock switch from lock	1.0 or less	
2D	—	—	—	—	—

CONTROL SYSTEM

Terminal	Signal	Connected to	Measurement conditions	Voltage (V)	Inspection item(s)
2E	Door unlock control	Door lock actuator	Unlock driver-side door lock switch from lock	1.0 or less → B+ → 1.0 or less	• Door lock actuator • Related wiring harness
			Lock driver-side door lock switch from unlock	1.0 or less	
2F*1	Theft-deterrent horn relay control	Front body control module (FBCM)	Connected to M-MDS and using data monitor function, theft-deterrent sound activates	1.0 or less	• Front body control module (FBCM) • Related wiring harness
			Connected to M-MDS and using data monitor function, theft-deterrent sound does not activate	B+	
2G*2	Double locking system control	Door lock actuator	Press transmitter lock button two times (double locking system operation condition)	B+ → 1.0 or less	• Door lock actuator • Related wiring harness
			Except above	1.0 or less	
2H*5	Brake light control	Brake light relay	Connect the M-MDS and turn on the "STOP_LMP_CS" using the rear body control module (RBCM) simulation function	1.0 or less	• Brake light relay • Related wiring harness
			Connect the M-MDS and turn off the "STOP_LMP_CS" using the rear body control module (RBCM) simulation function	B+	
2I	Ignition power supply	METER1 10 A fuse	Ignition switched ON (engine off)	B+	• METER1 10 A fuse • Related wiring harness
			Ignition switched OFF (LOCK)	1.0 or less	
2J*5	Brake switch signal	• Brake switch • Start stop unit	Brake pedal depressed	B+	• Brake switch • Start stop unit • Related wiring harness
			Brake pedal not depressed	1.0 or less	
2K*3	Rear fog light power supply	STOP 10 A fuse	Under any condition	B+	• STOP 10 A fuse • Related wiring harness
2L	—	—	—	—	—
2M	Power supply	R.WIPER 15 A fuse	Under any condition	B+	• R.WIPER 15 A fuse • Related wiring harness
2N	—	—	—	—	—
2O	—	—	—	—	—
2P	Power supply	ROOM 15 A fuse	Under any condition	B+	• ROOM 15 A fuse • Related wiring harness
3A*1	LIN communication	Theft-deterrent siren	Terminal used for communication therefore determination based on terminal voltage is not possible.		
3B	Serial communication	Start stop unit	Terminal used for communication therefore determination based on terminal voltage is not possible.		
3C	Fuel sensor ground	• Fuel gauge sensor unit • Fuel gauge sensor unit (sub)	Under any condition	1.0 or less	• Fuel gauge sensor unit • Fuel gauge sensor unit (sub) • Related wiring harness
3D	Serial communication	Power window main switch	Terminal used for communication therefore determination based on terminal voltage is not possible.		
3E	—	—	—	—	—
3F	Door lock switch signal	Door lock switch	Door lock switch unlocked	1.0 or less	• Door lock switch • Related wiring harness
			Other	4.5

REAR BODY CONTROL MODULE (RBCM) CONFIGURATION (USING READ/WRITE FUNCTION)

id094000002400

Note
- When performing configuration, it is necessary to read the vehicle specification information from the rear body control module (RBCM) before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the rear body control module (RBCM). The vehicle specification information is temporarily stored in the M-MDS.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
    1. Select “Module Programming”.
3. Then, select items from the screen menu in the following order.
    1. Select “Programmable Module Installation”.
    2. Select “R_BCM”.
4. Perform the configuration according to the directions on the screen.

CONTROL SYSTEM

Caution
- **When the configuration is performed, CAN communication between the rear body control module (RBCM) and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.**

5. Verify the DTCs for all of the control modules connected to the CAN line.
   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

REAR BODY CONTROL MODULE (RBCM) CONFIGURATION (USING AS-BUILT DATA)

id094000005800

Note
- If the configuration is performed using As-Built data, the set value of the personalization function is reset to the initial value (condition when shipped from factory). Verify the set value with the customer and perform the personalization function setting after performing the configuration using As-Built data.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   1. Select “Module Programming”.
3. Then, select items from the screen menu in the following order.
   1. Select “As-Built”.
   2. Select “R_BCM”.
4. Perform the configuration according to the directions on the screen.

Caution
- **When the configuration is performed, CAN communication between the rear body control module (RBCM) and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.**

5. Verify the DTCs for all of the control modules connected to the CAN line.
   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

CONTROL SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE

id094000439800

1. Connect the M-MDS to DLC-2.
2. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   - Select the “Module Programming”.
   - Select “Programmable Parameters”.
   - Select menu in the R_BCM.
3. Select an item name, and then select option.

Security And Locks
Power door lock system

M-MDS display	Function	Initial setting	Setting contents	Control unit
Auto Door Lock Mode.	Auto door lock function can be changed.	Lock: Driving, Unlock: IGN Off.	Not Adopted./OFF/ Lock When Driving./ Lock: Driving, Unlock: IGN Off./Lock When Shifting Out Of P./ Lock: Shift From P, Unlock: In P.	Rear body control module (RBCM)

Lighting Systems
Turn light system

M-MDS display	Function	Initial setting	Setting content	Control unit
3-Flash Turn Signal.	The turn light system can be switched between operable and inoperable.	OFF	Not Adopted./OFF/ON	Rear body control module (RBCM)

CONTROL SYSTEM

Auto light system

M-MDS display	Function	Initial setting	Setting content	Control unit
Auto-headlight On.	Auto light sensor sensitivity can be changed.	Medium	Not Adopted./Dark/ Medium Dark/Medium/ Medium Light/Light	Rear body control module (RBCM)

Note

- If the mode is set to “Light” and “Medium Light”, the illumination level for illuminating the TNS and headlight increases. Therefore, the TNS and headlights illuminate when the ambient light is brighter than when the level is set to “Medium”. In addition, if the mode is set to “Medium Dark” and “Dark”, the illumination level for illuminating the TNS and headlights decreases. Therefore, the TNS and headlights illuminate when the ambient light is lower than when the level is set to “Medium”.

Room Light Control System

M-MDS display	Function	Initial setting	Setting content	Control unit
Interior Light Timeout-Door Open.	The front/rear map light illumination time after any door is open can be changed.	30 minutes.	Not Adopted./30 minutes./60 minutes./ 10 minutes.	Rear body control module (RBCM)
Interior Light Timeout-Door Closed.	The front/rear map light illumination time after any door is closed can be changed.	15 seconds.	Not Adopted./15 seconds./7.5 seconds./30 seconds./ 60 seconds.	Rear body control module (RBCM)

Wiper/washer System
Auto wiper system

M-MDS display	Function	Initial setting	Setting content	Control unit
Rain Sensing Wipers.	Auto wiper system can be set to operable or inoperable.	Lock: Driving, Unlock: IGN Off.	Not Adopted./Off (Intermittent)/On (Rein Sensing)	Rear body control module (RBCM)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

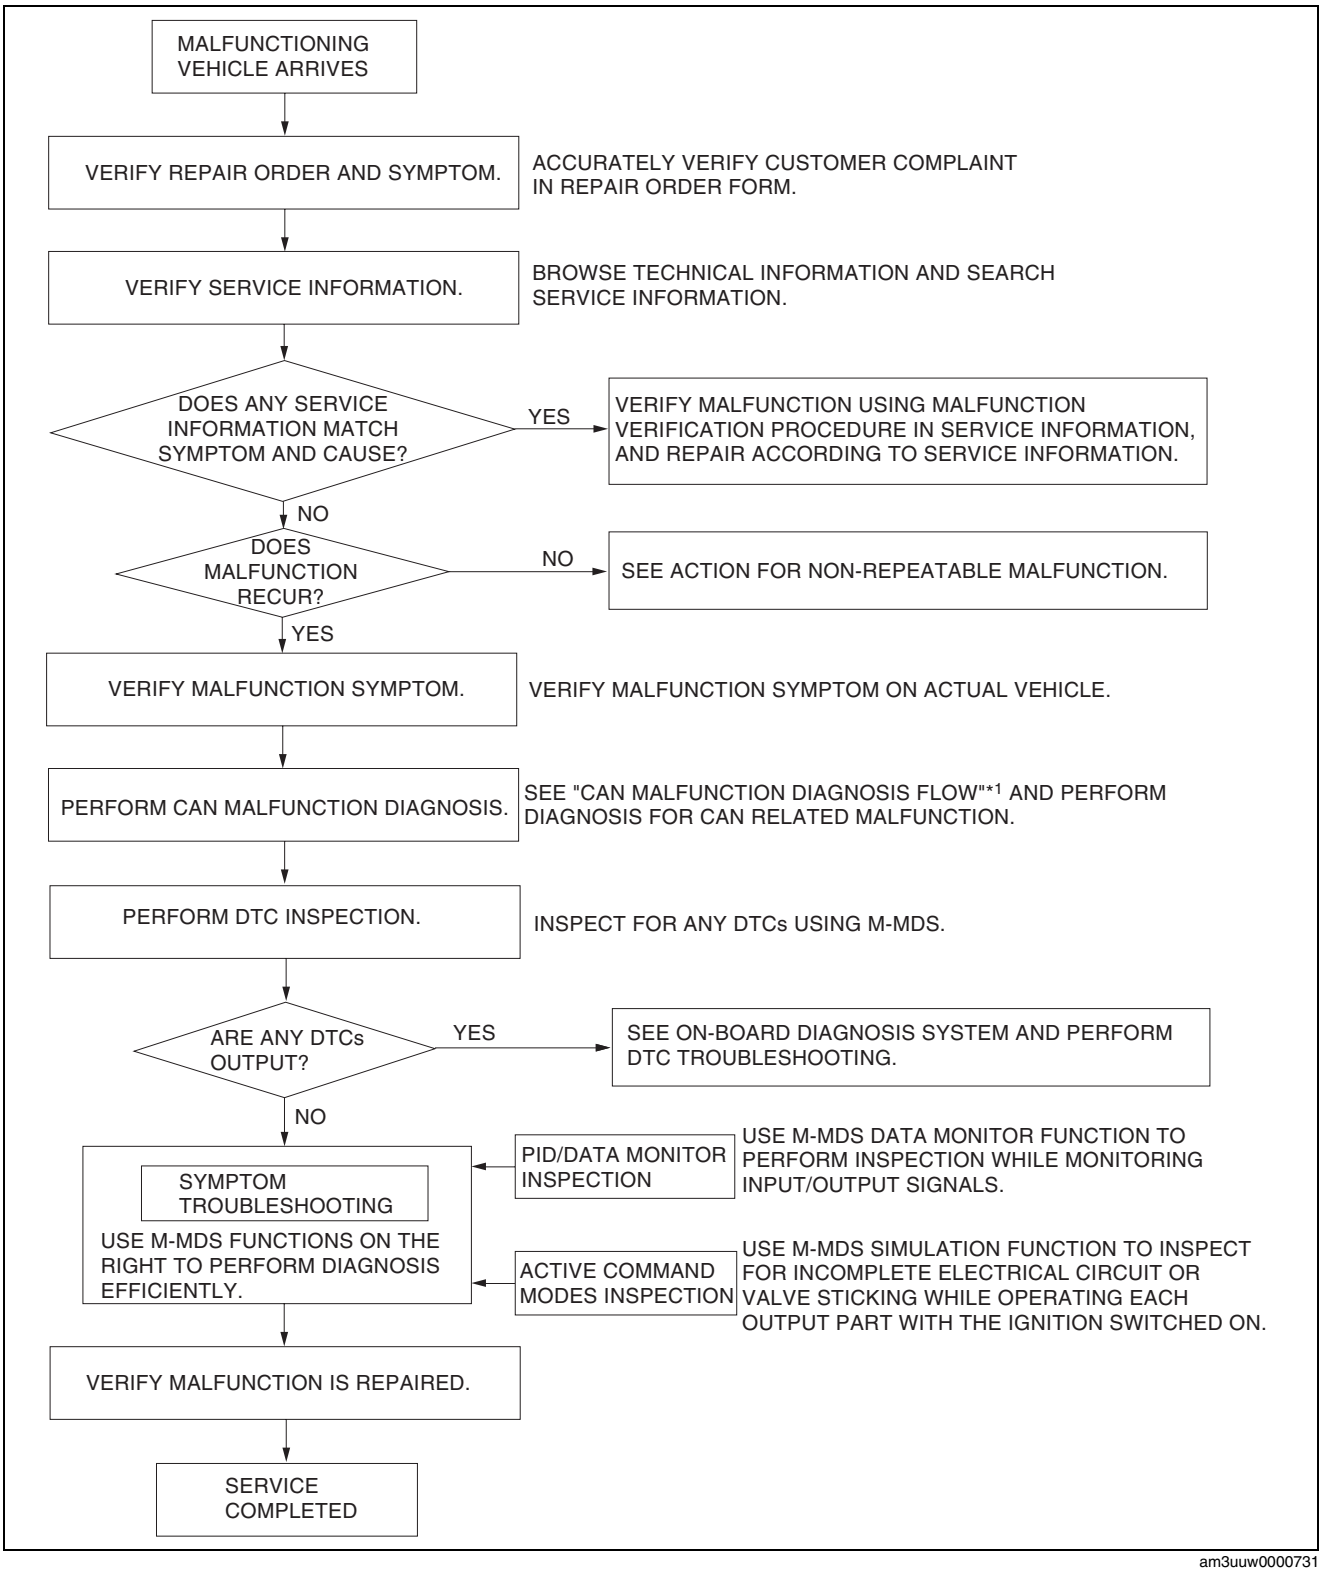
FOREWORD [SKYACTIV-G 2.0 (R.H.D.)]

id100202000000

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the 10-02B-2 Troubleshooting Procedure.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Troubleshooting Procedure



am3uuw0000731

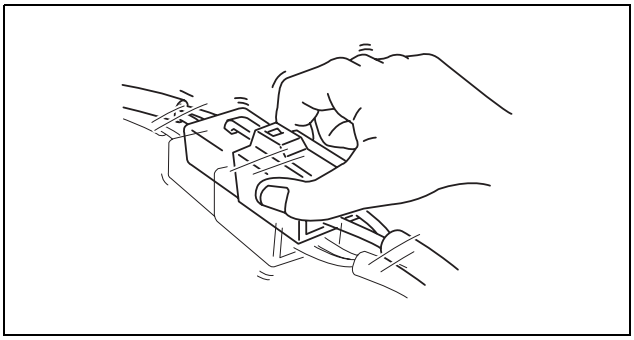
*1 : 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)]

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as CAN circuit voltage) at that time, and detect the malfunction cause.

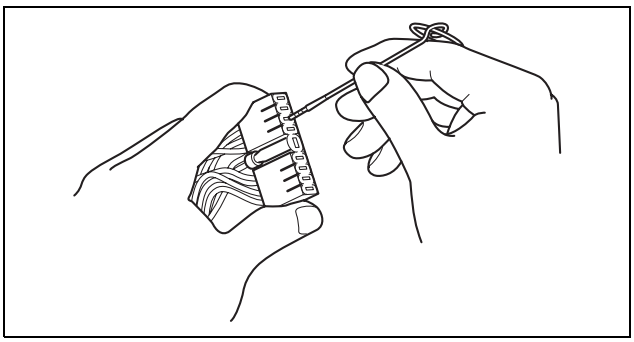
ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

— Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.



aaxjjw00007274

— Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)]

id100202000100

- If there is any vehicle malfunction complaint lodged by a customer, refer to "10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)]" and perform CAN malfunction diagnosis following the steps in the troubleshooting procedure.

CAN malfunction diagnosis flow

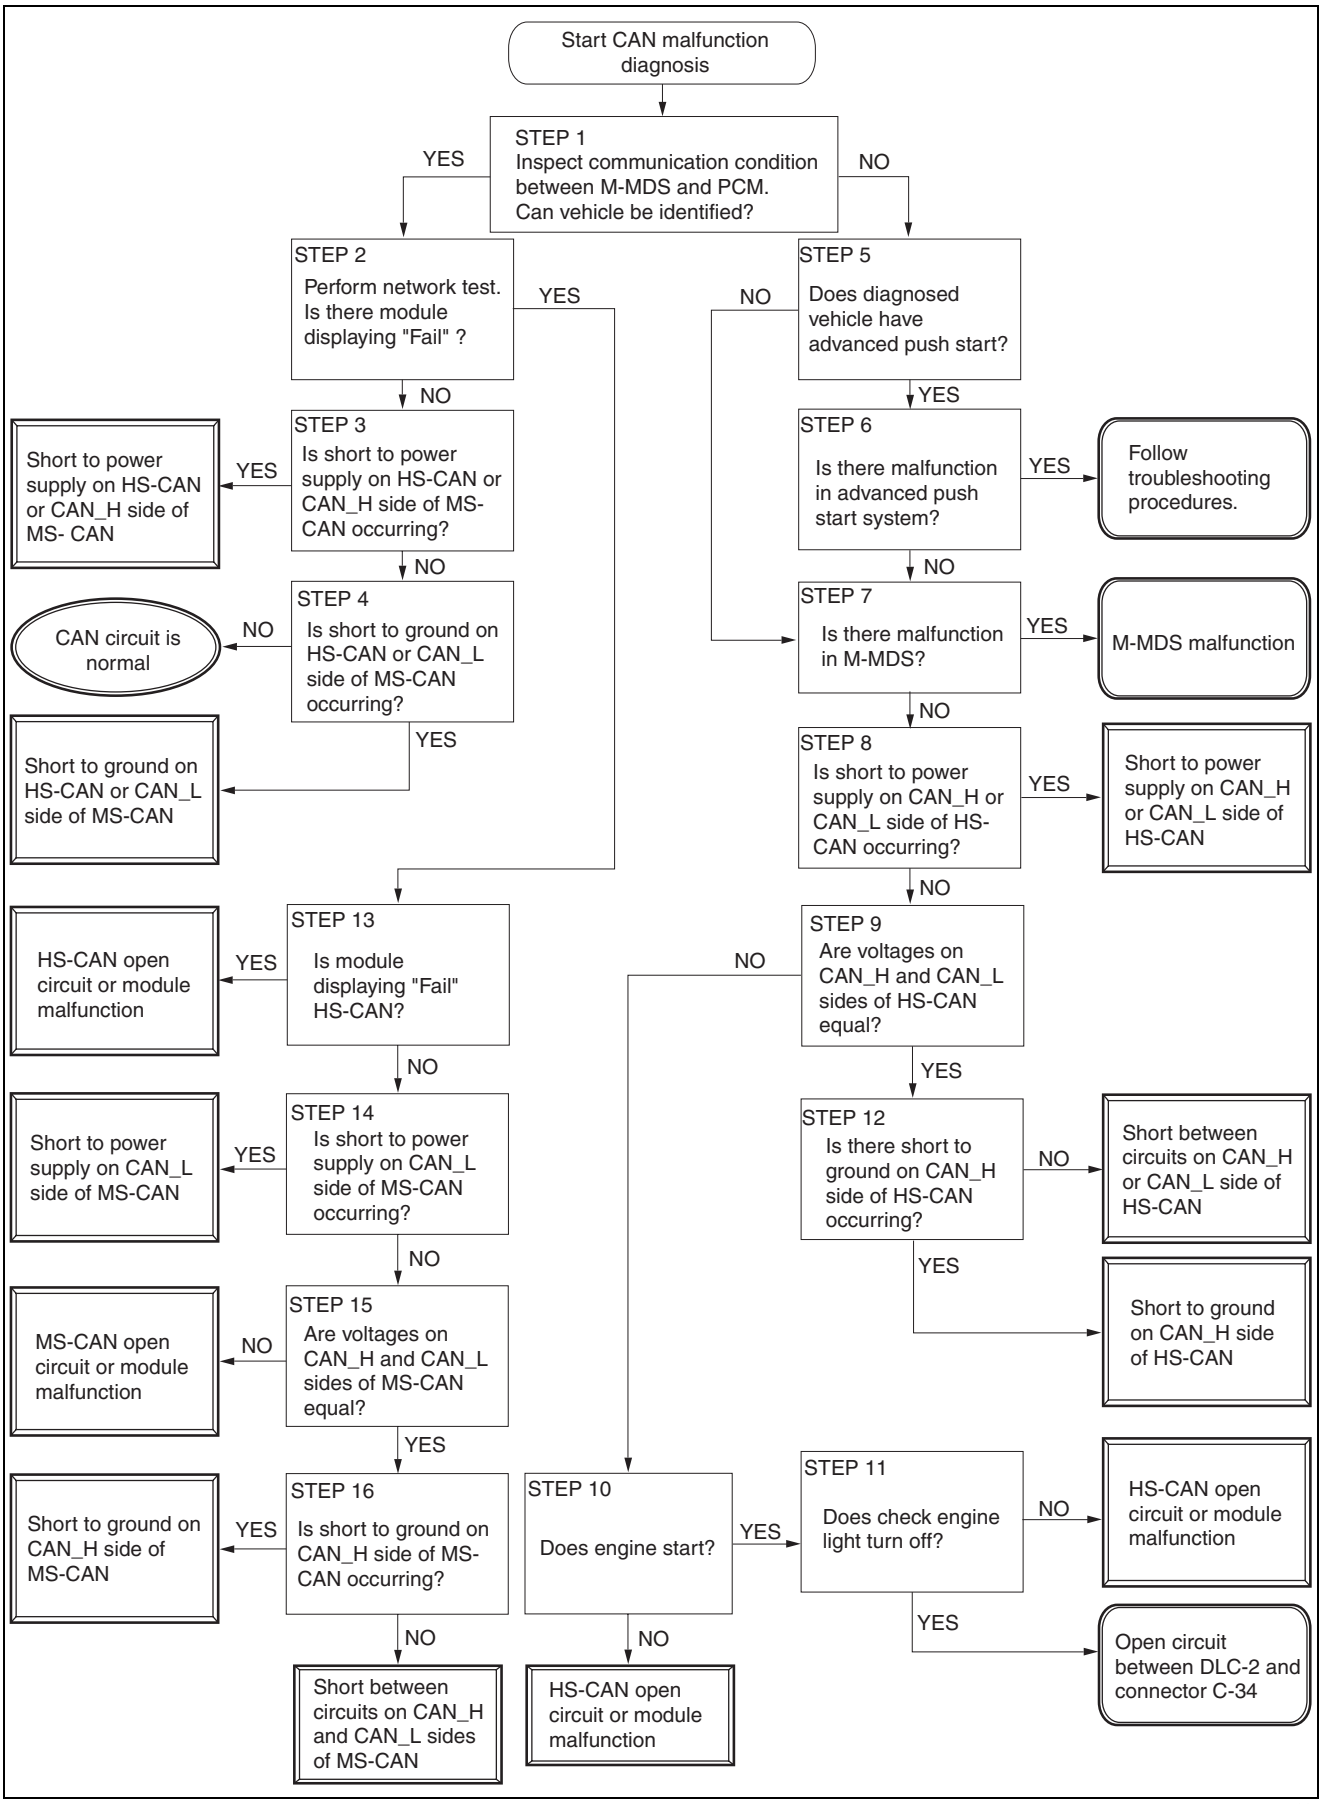
Note

- The flowchart and the diagnosis flow of the diagnosis procedure are the same thing, and the detailed procedure of the flowchart is the diagnosis procedure.
- The step numbers in the flowchart indicate the step numbers of the diagnosis procedure.

10

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Flowchart



ac5wzw0000442

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Diagnostic procedure

Step	Inspection		Action
1	**INSPECT IF COMMUNICATION BETWEEN M-MDS AND PCM IS POSSIBLE** • Connect the M-MDS to the DLC-2. • Switch the ignition ON (engine off). • Perform vehicle identification. • Can the vehicle be identified?	Yes	Go to the next step.
		No	Go to Step 5 as a malfunction in the HS-CAN circuit has occurred.
2	**INSPECT MODULE FOR INABILITY TO COMMUNICATE DUE TO CAN MALFUNCTION** • Implement the network test using the M-MDS. (See 10-02B-8 NETWORK TEST [SKYACTIV-G 2.0 (R.H.D.)].) • Is there a module indicating a malfunction?	Yes	Go to Step 14 as a malfunction in the CAN circuit has occurred.
		No	Go to the next step.
3	**INSPECT FOR SHORT TO POWER SUPPLY IN CAN_H SIDE OF MS-CAN OR HS-CAN** • Measure the voltage between the following terminals: — Between DLC-2 terminal F (CAN_H side of HS CAN) and body ground — Between DLC-2 terminal L (CAN_H side of MS CAN) and body ground • Is B+ voltage measured between any of the terminals? **Note** • If a short to power supply other than the B+ power supply has occurred, a constant voltage other than B+ can be measured.	Yes	A short to power supply in the CAN_H side of MS-CAN or HS-CAN. Determine the location of the short to power supply according to the diagnosis procedure for determining the location of a short to power supply. (See 10-02B-62 DETERMINING SHORT TO POWER SUPPLY LOCATION (HS-CAN) [SKYACTIV-G 2.0 (R.H.D.)].) (See 10-02B-103 DETERMINING SHORT TO POWER SUPPLY LOCATION (MS-CAN) [SKYACTIV-G 2.0 (R.H.D.)].)
		No	Go to the next step.
4	**INSPECT FOR SHORT TO GROUND IN CAN_L SIDE OF HS-CAN OR MS-CAN** • Measure the voltage between the following terminals: — Between DLC-2 terminal E (CAN_L side of HS-CAN) and ground — Between DLC-2 terminal K (CAN_L side of MS-CAN) and ground • Is the voltage measured as 0 V?	Yes	A short to ground on the CAN_L side of the HS-CAN or MS-CAN has occurred. Determine the location of the short to ground according to the diagnosis procedure for determining the location of a short to ground. (See 10-02B-55 DETERMINING SHORT TO GROUND LOCATION (HS-CAN) [SKYACTIV-G 2.0 (R.H.D.)].) (See 10-02B-97 DETERMINING SHORT TO GROUND LOCATION (MS-CAN) [SKYACTIV-G 2.0 (R.H.D.)].)
		No	The current CAN circuit is normal, return to FOREWARD, and go to the next step of the CAN malfunction diagnosis in the troubleshooting procedure. (See 10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)].)
5	**VERIFY IF VEHICLE UNDER DIAGNOSIS IS EQUIPPED WITH ADVANCED PUSH START SYSTEM.** • Is the vehicle equipped with the advanced push start system?	Yes	Go to the next step.
		No	Go to Step 7.
6	**VERIFY IF ADVANCED PUSH START SYSTEM HAS MALFUNCTION** • Switch the ignition ON (engine off). • Can the ignition be switched ON?	Yes	Go to the next step.
		No	A malfunction in the advanced push start system has occurred. Perform diagnosis according to the symptom troubleshooting.
7	**INSPECT FOR MALFUNCTION IN M-MDS** • Connect the M-MDS to a normal vehicle and implement vehicle identification. • Can the vehicle be identified?	Yes	Go to the next step.
		No	A malfunction in the M-MDS can be considered. Repair the M-MDS.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
8	**INSPECT HS-CAN FOR SHORT TO POWER SUPPLY** • Measure the voltage between the following terminals: — Between DLC-2 terminal F (CAN_H side) and body ground — Between DLC-2 terminal E (CAN_L side) and body ground • Is B+ voltage measured between any of the terminals? **Note** • If a short to power supply other than the B+ power supply has occurred, a constant voltage other than B+ can be measured.	Yes	A short to power supply in the CAN_H side or CAN_L of HS-CAN has occurred. Determine the location of the short to power supply according to the diagnosis procedure for determining the location of a short to power supply. (See 10-02B-62 DETERMINING SHORT TO POWER SUPPLY LOCATION (HS-CAN) [SKYACTIV-G 2.0 (R.H.D.)].)
		No	Go to the next step.
9	**INSPECT HS-CAN FOR OPEN CIRCUIT** • Measure the voltage between the following terminals: — Between DLC-2 terminal F (CAN_H side) and body ground — Between DLC-2 terminal E (CAN_L side) and body ground • Is the voltage between both terminals (CAN_H side and CAN_L side) equal?	Yes	Go to Step 13 as a short to ground or a short between circuits has occurred in the HS-CAN.
		No	Go to the next step.
10	**DETERMINE IF OPEN CIRCUIT LOCATION IN HS-CAN CIRCUIT IS BETWEEN DLC AND CONNECTOR C-35 OR ELSEWHERE** • Start the engine to verify that the immobilizer system operates normally. • Can the engine be started? **Note** • If there is an open circuit in the wiring harness between the PCM and the start stop unit, the engine cannot be started because the key ID number verification for the immobilizer system is performed by CAN communication.	Yes	Go to the next step.
		No	An open circuit has occurred between the PCM and connector C-34 in the HS-CAN. Determine the location of the open circuit according to the diagnosis procedure for determining the location of an open circuit. (See 10-02B-11 DETERMINING OPEN CIRCUIT LOCATION (HS-CAN) [SKYACTIV-G 2.0 (R.H.D.)].)
11	**DETERMINE IF OPEN CIRCUIT LOCATION IN HS-CAN CIRCUIT IS BETWEEN DLC AND CONNECTOR C-34 OR ELSEWHERE** • Switch the ignition ON (engine off). • Verify if the check engine light in the instrument cluster illuminates. • Start the engine. • Verify if the check engine light turns off. • Does the check engine light turn off?	Yes	An open circuit between DLC-2 and connector C-34 has occurred. Repair or replace the wiring harness for an open circuit, then return to Step 1.
		No	An open circuit has occurred between the PCM and connector C-34 in the HS-CAN. Determine the location of the open circuit according to the diagnosis procedure for determining the location of an open circuit. (See 10-02B-11 DETERMINING OPEN CIRCUIT LOCATION (HS-CAN) [SKYACTIV-G 2.0 (R.H.D.)].)
12	**VERIFY MALFUNCTION OCCURRED IN HS-CAN CIRCUIT** • Measure the voltage between the following terminals: — Between DLC-2 terminal F (CAN_H side) and body ground — Between DLC-2 terminal E (CAN_L side) and body ground • Is the voltage between both terminals (CAN_H side and CAN_L side) 0 V?	Yes	A short to ground in CAN_H side of HS-CAN has occurred. Determine the location of the short to ground according to the diagnosis procedure for determining the location of a short to ground. (See 10-02B-55 DETERMINING SHORT TO GROUND LOCATION (HS-CAN) [SKYACTIV-G 2.0 (R.H.D.)].)
		No	A short between circuits in the CAN_H side and the CAN_L side of HS-CAN has occurred. Determine the location of the short between circuits according to the diagnosis procedure for determining the location of a short between circuits. (See 10-02B-74 DETERMINING SHORT BETWEEN CIRCUITS LOCATION (HS-CAN) [SKYACTIV-G 2.0 (R.H.D.)].)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
13	**DETERMINE CAN COMMUNICATION SPECIFICATION IN WHICH MALFUNCTION OCCURS** • Refer to the CAN communication specification quick reference table and verify the CAN communication specification (HS-CAN or MS-CAN) that is connected to the module which is indicating a malfunction. (See 10-02B-7 CAN communication specification quick reference table.) • Is the module that is indicating a malfunction HS-CAN?	Yes	An open circuit in the HS-CAN has occurred. Determine the location of the open circuit according to the diagnosis procedure for determining the location of an open circuit. (See 10-02B-11 DETERMINING OPEN CIRCUIT LOCATION (HS-CAN) [SKYACTIV-G 2.0 (R.H.D.)].)
		No	Go to the next step.
14	**INSPECT CAN_L SIDE OF MS-CAN FOR SHORT TO POWER SUPPLY** • Measure voltage between DLC-2 terminal K (CAN_L side) and body ground. • Can B+ voltage be measured? **Note** • If a short to power supply other than the B+ power supply has occurred, a constant voltage other than B+ can be measured.	Yes	A short to power supply in the CAN_L side of the MS-CAN has occurred. Determine the location of the short to power supply according to the diagnosis procedure for determining the location of a short to power supply. (See 10-02B-103 DETERMINING SHORT TO POWER SUPPLY LOCATION (MS-CAN) [SKYACTIV-G 2.0 (R.H.D.)].)
		No	Go to the next step.
15	**INSPECT MS-CAN FOR OPEN CIRCUIT** • Measure the voltage between the following terminals: — Between DLC-2 terminal L (CAN_H side) and body ground — Between DLC-2 terminal K (CAN_L side) and body ground • Is the voltage between both terminals (CAN_H side and CAN_L side) equal?	Yes	Go to the next step.
		No	Open circuit in MS-CAN has occurred. Determine the location of the open circuit according to the diagnosis procedure for determining the location of an open circuit. (See 10-02B-11 DETERMINING OPEN CIRCUIT LOCATION (HS-CAN) [SKYACTIV-G 2.0 (R.H.D.)].)
16	**VERIFY MALFUNCTION OCCURRED IN MS-CAN** • Measure the voltage between the following terminals: — Between DLC-2 terminal L (CAN_H side) and body ground — Between DLC-2 terminal K (CAN_L side) and body ground • Is the voltage between both terminals (CAN_H side and CAN_L side) equal?	Yes	A short to ground in the CAN_H side of the MS-CAN has occurred. Determine the location of the short to ground according to the diagnosis procedure for determining the location of a short to ground. (See 10-02B-97 DETERMINING SHORT TO GROUND LOCATION (MS-CAN) [SKYACTIV-G 2.0 (R.H.D.)].)
		No	A short between circuits on the CAN_H side and CAN_L side of MS-CAN has occurred. Determine the location of the short between circuits according to the diagnosis procedure for determining the location of a short between circuits. (See 10-02B-111 DETERMINING SHORT BETWEEN CIRCUITS LOCATION (MS-CAN) [SKYACTIV-G 2.0 (R.H.D.)].)

HS-CAN signal waveform

CAN circuit condition	Signal waveform (reference)
Normal		• CAN_H — Connection terminal: DLC-2: terminal F (+) ⇔ body ground (—) — Oscilloscope setting: 0.5 V/DIV (Y), 200 μs/DIV (X), DC range • CAN_L — Connection terminal: DLC-2: terminal E (+) ⇔ Body ground (—) — Oscilloscope setting: 0.5 V/DIV (Y), 200 μs/DIV (X), DC range

MS-CAN signal waveform

CAN circuit condition	Signal waveform (reference)
Normal		• CAN_H — Connection terminal: DLC-2: terminal L (+) ⇔ Body ground (—) — Oscilloscope setting: 0.5 V/DIV (Y), 1 ms/DIV (X), DC range • CAN_L — Connection terminal: DLC-2: terminal K (+) ⇔ Body ground (—) — Oscilloscope setting: 0.5 V/DIV (Y), 1 ms/DIV (X), DC range

NETWORK TEST [SKYACTIV-G 2.0 (R.H.D.)]

id100202000200

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the "NETWORK TEST" from the initialization screen of the M-MDS.
3. Verify the unit with a communication error according to the directions on the screen.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

DTC TABLE [SKYACTIV-G 2.0 (R.H.D.)]

id100202000300

Caution

- **If there is any vehicle malfunction complaint lodged by a customer, refer to "FOREWORD" and perform CAN malfunction diagnosis following the steps in the troubleshooting procedure. (See 10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)].)**

DETERMINING OPEN CIRCUIT LOCATION (HS-CAN) [SKYACTIV-G 2.0 (R.H.D.)]

id100202000400

Caution

- **Perform the following malfunction diagnosis only when it is diagnosed with a open circuit by 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)].**
- **If the malfunctioning part is detected in the communication line, before disconnecting the related connector for inspection, press the connector in the connection direction to verify that there is no looseness or disconnection.**
- **When disconnecting the connector, verify that there is no damage, deformation, or corrosion of the connector terminals.**

1. Verify the CAN system-related module DTCs and the failed module on the M-MDS screen.
2. Apply the communication error DTC and the failed module to 10-02B-12 DTC output pattern and malfunctioning location, and select the possible cause for the diagnostic result and the reference for the inspection item.

Note

- The open circuit location can be determined by the DTC indicated in the 10-02B-12 DTC output pattern and malfunctioning location chart. DTCs not listed in the chart are not used for the determination of the open circuit location.

3. Inspect the possible cause and inspection item of the applicable malfunctioning part.
4. After repairs, return to 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)], and verify that the repairs have been completed.

Inspection item

- Front body control module (FBCM) connector
- Connector C-04
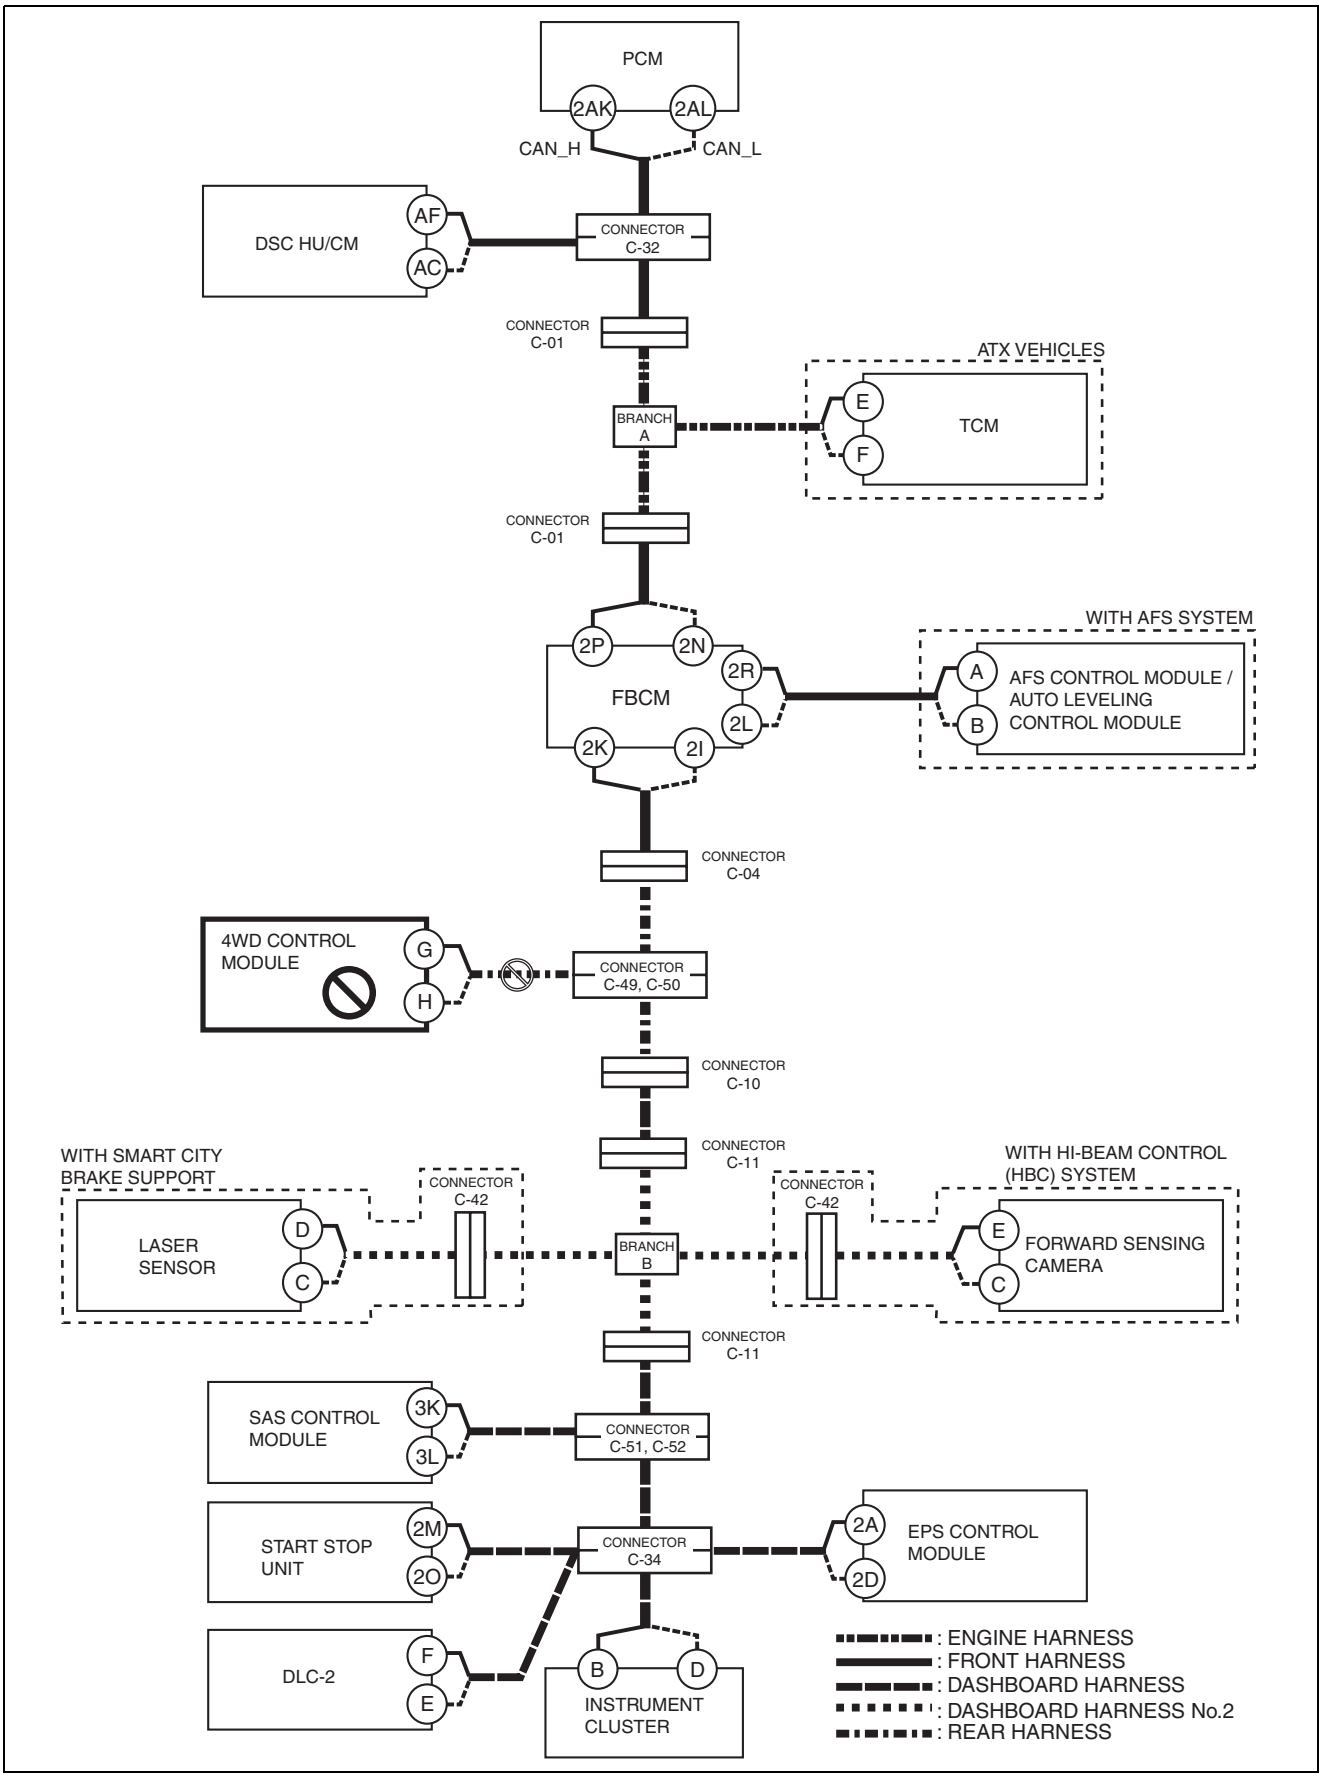
- Connector C-10

- Connector C-11
- Wiring harness between front body control module (FBCM) terminal 2K and connector C-04
- Wiring harness between front body control module (FBCM) terminal 2I and connector C-04
- Wiring harness between connectors C-04 and C-10
- Wiring harness between connectors C-10 and C-11
- Front body control module (FBCM)
  - — Between front body control module (FBCM) terminal 2P and front body control module (FBCM) terminal 2K
  - — Between front body control module (FBCM) terminal 2N and front body control module (FBCM) terminal 2I

I
Possible cause
- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between 4WD control module and connectors C-49, C-50
- Connector C-49, C-50 malfunction
- 4WD control module malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000359

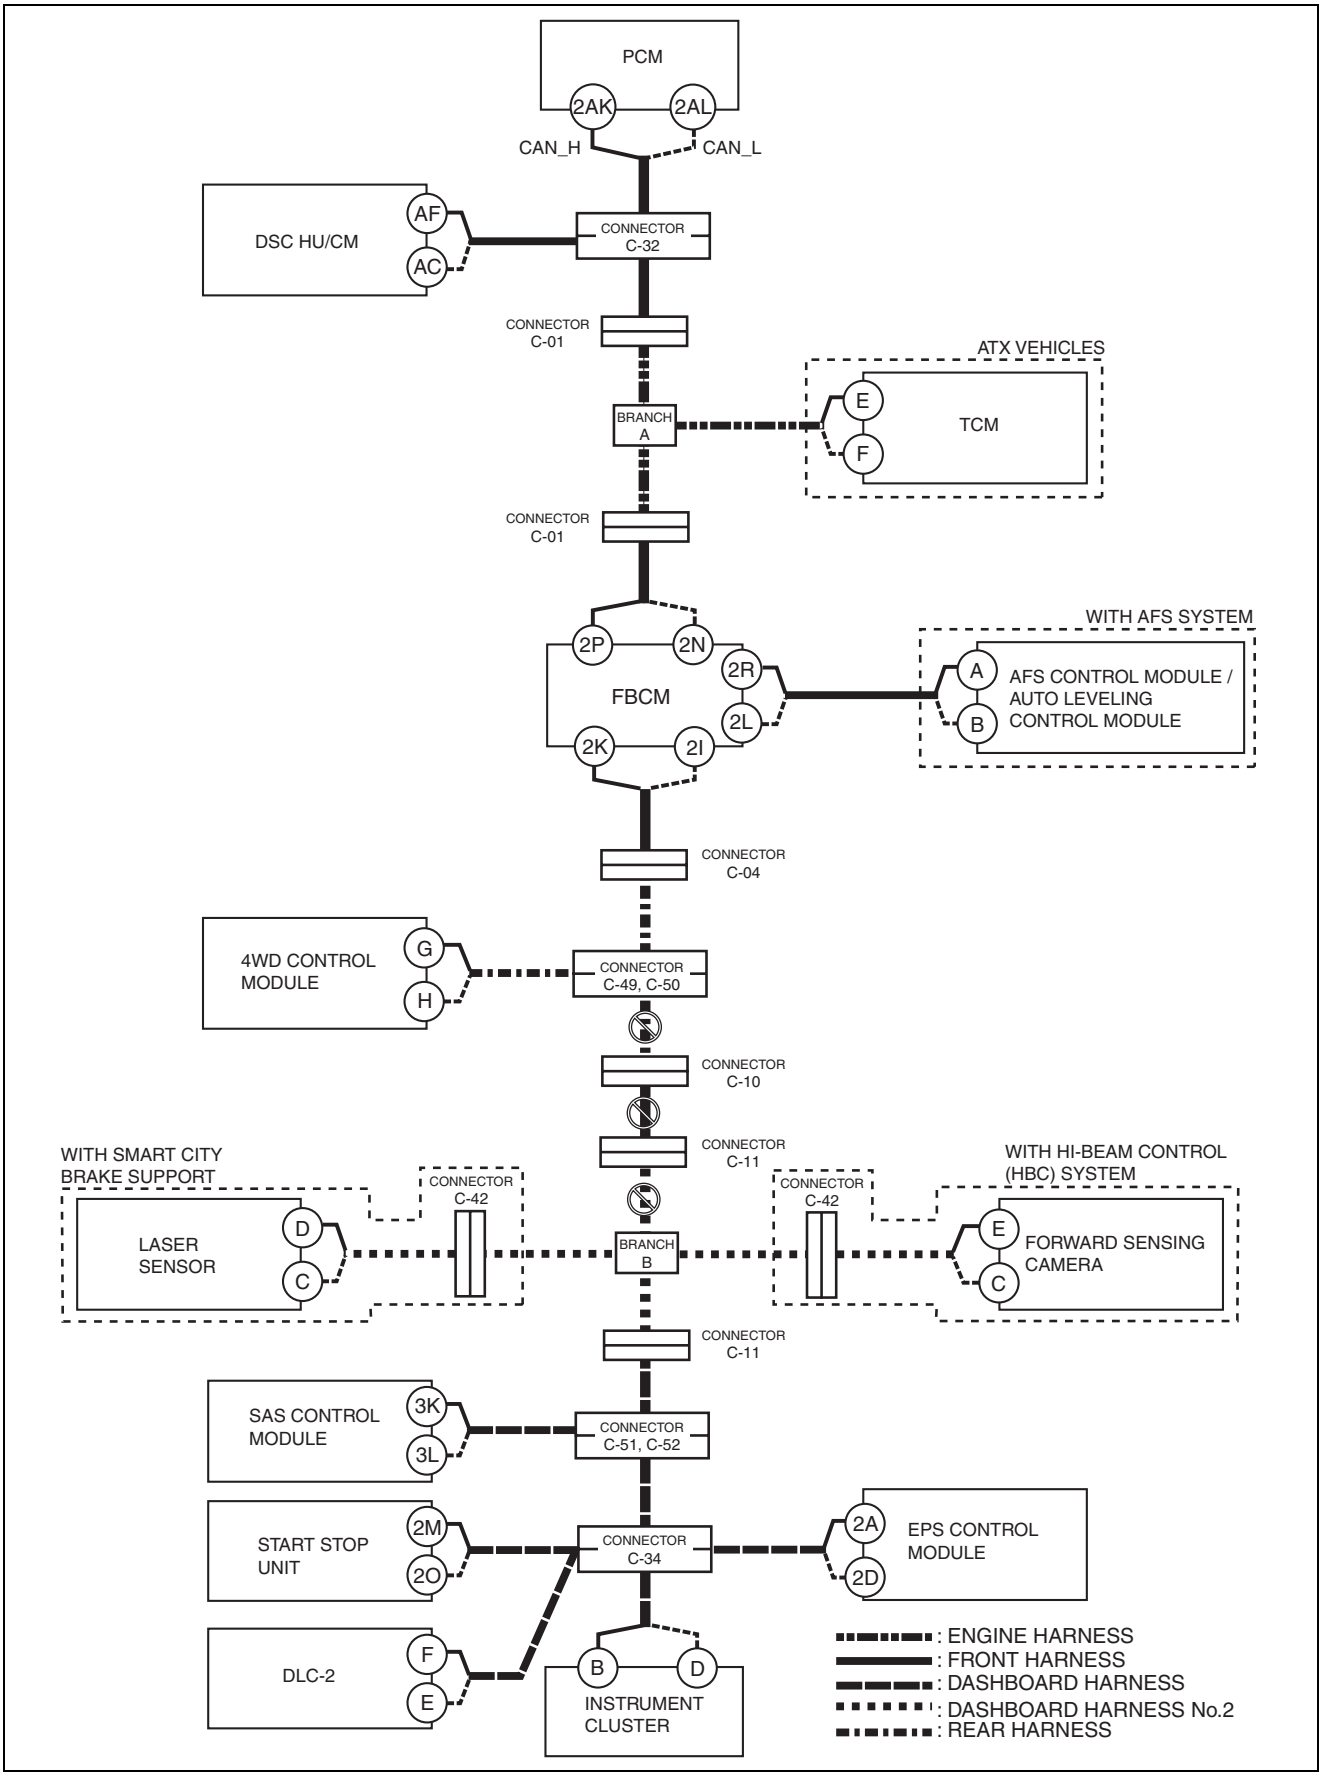
ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Inspection item
- 4WD control module connector
- Connectors C-49, C-50
- Wiring harness between 4WD control module terminal G and connector C-49
- Wiring harness between 4WD control module terminal H and connector C-50
- 4WD control module

J
With smart city brake support or hi-beam control (HBC) system
Possible cause
- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between connector C-49, C-50 and connector C-10
- Open circuit in wiring harness between connector C-10 and connector C-11
- Open circuit in wiring harness between connector C-11 and branch B
- Connector C-49, C-50 malfunction
- Connector C-10 malfunction
- Connector C-11 malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



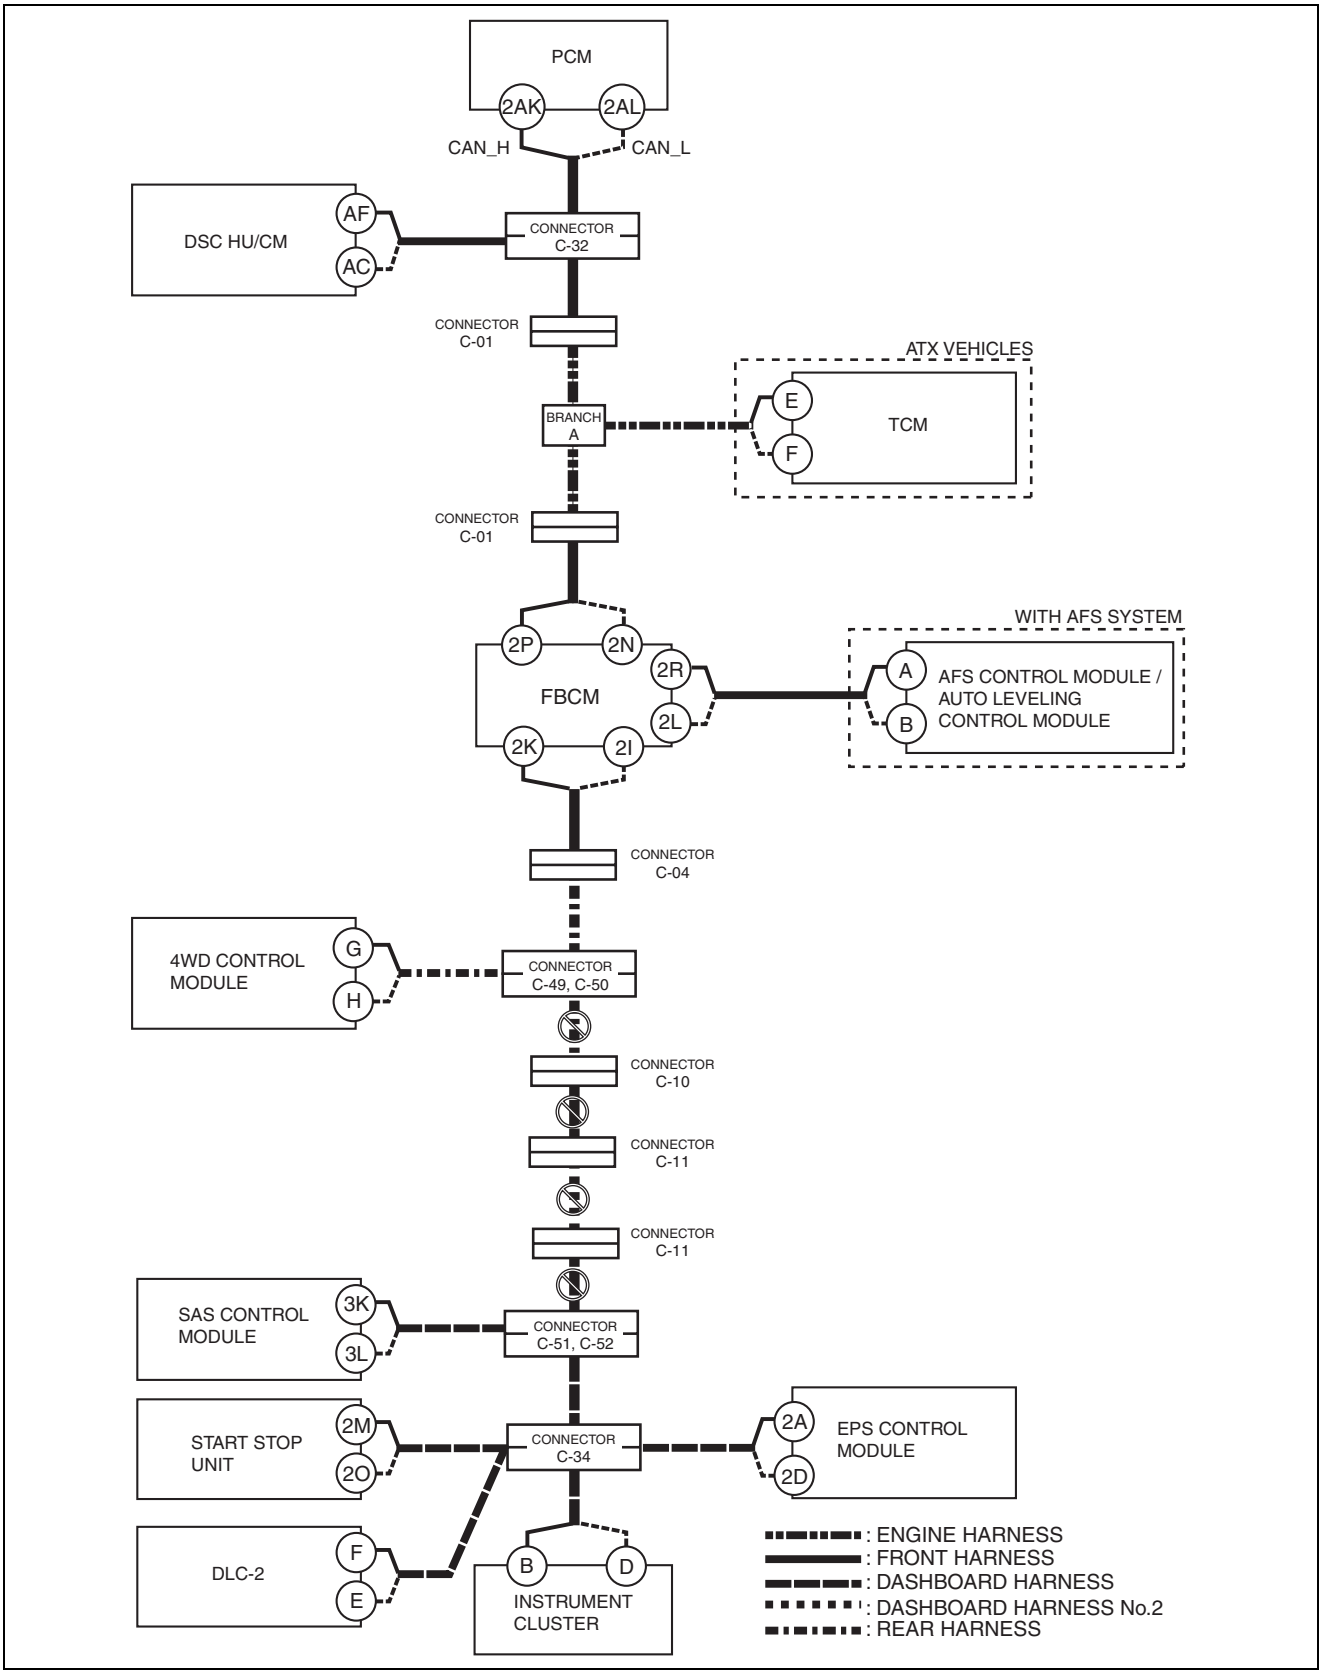
ac5wzw0000359

Inspection item
- Connector C-49, C-50
- Connector C-10
- Connector C-11
- Wiring harness between connector C-49, C-50 and connector C-10
- Wiring harness between connector C-10 and connector C-11
- Wiring harness between connector C-11 and branch B

Without smart city brake support or hi-beam control (HBC) system
Possible cause
- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between connector C-49, C-50 and connector C-10
- Open circuit in wiring harness between connector C-10 and connector C-11
- Open circuit in wiring harness between connector C-11 and connector C-11
- Open circuit in wiring harness between connector C-11 and connector C-51, C-52
- Connector C-49, C-50 malfunction
- Connector C-10 malfunction
- Connector C-11 malfunction
- Connector C-51, C-52 malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000359

Inspection item

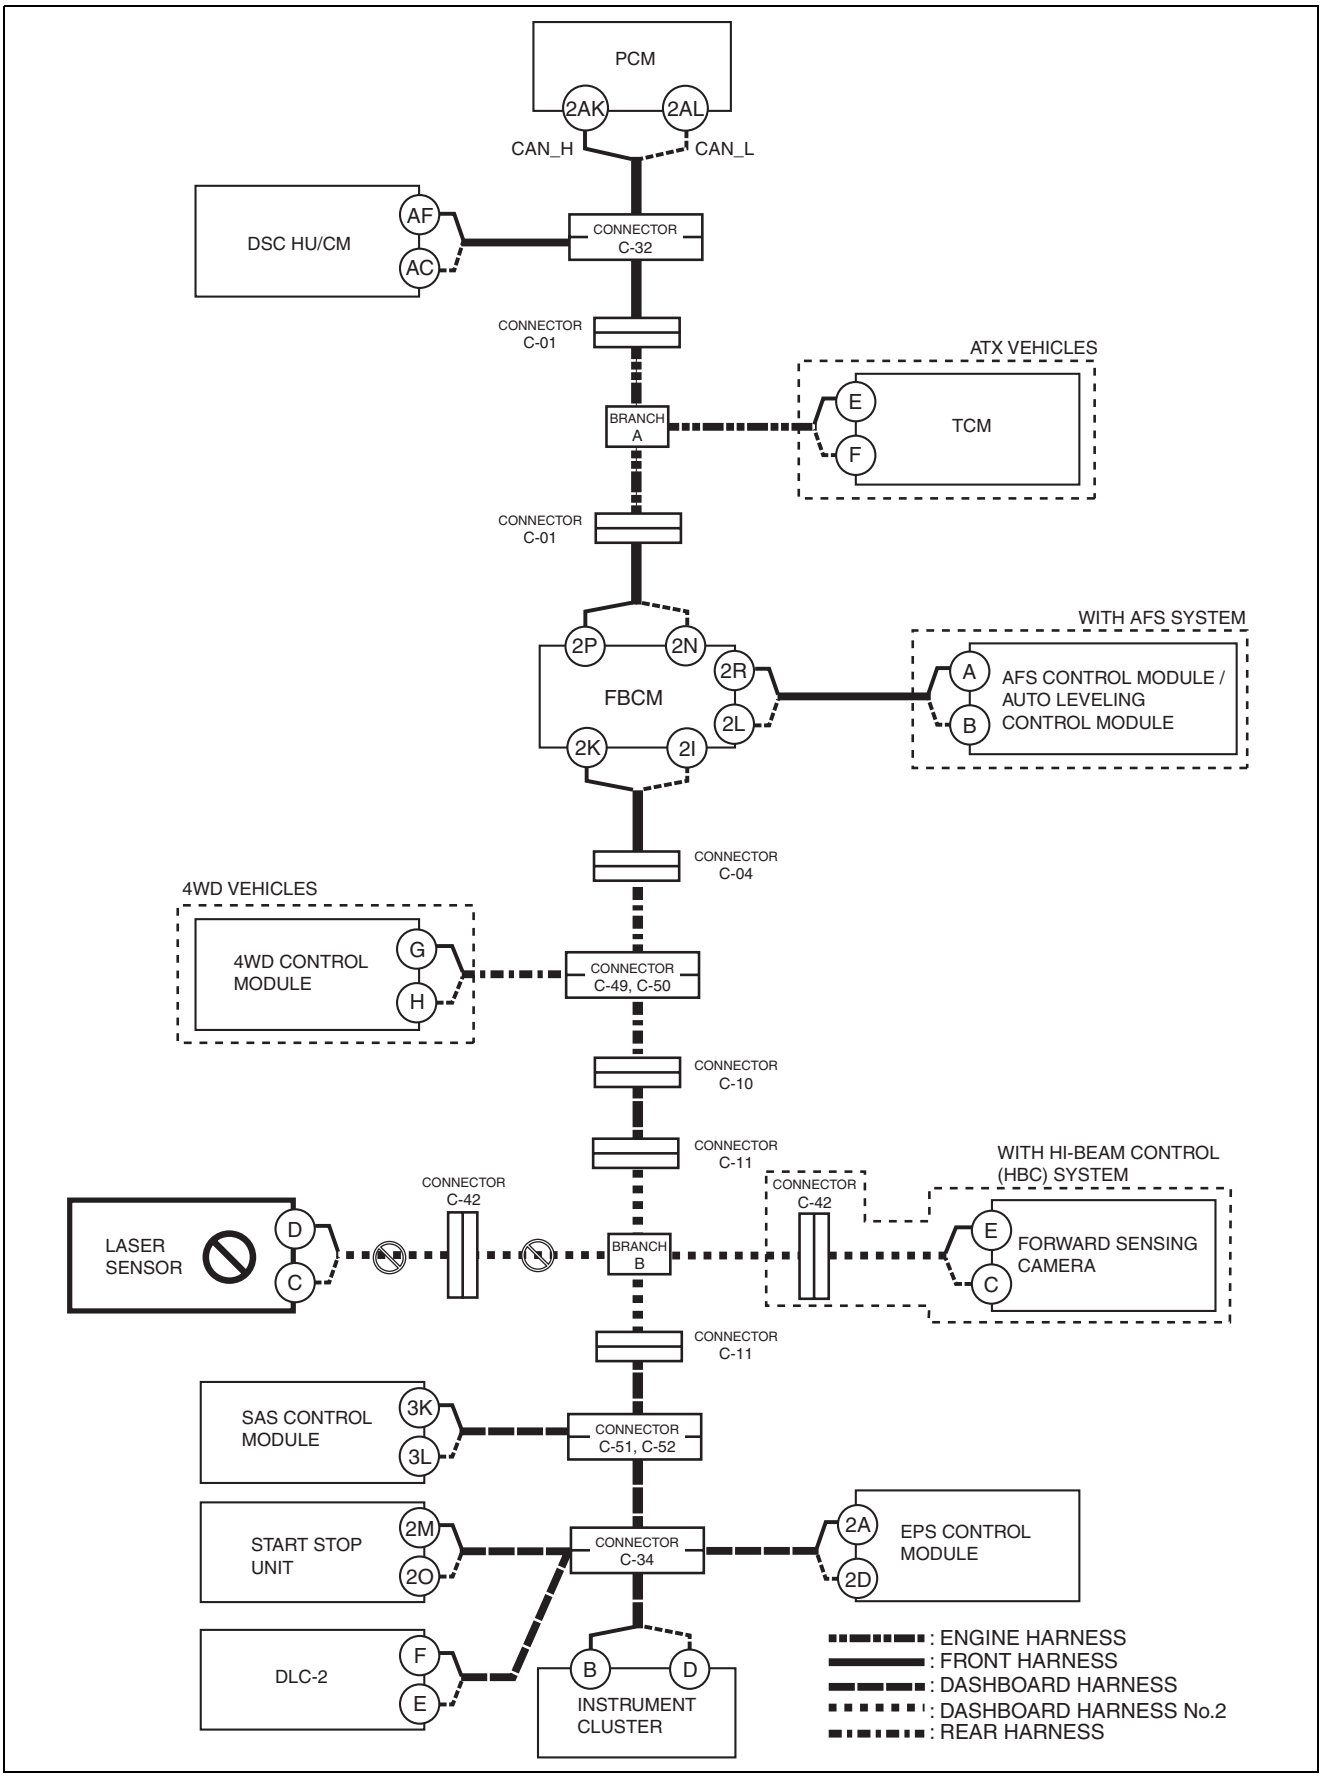
- Connector C-49, C-50
- Connector C-10
- Connector C-11
- Connector C-51, C-52

- Wiring harness between connector C-49, C-50 and connector C-10
- Wiring harness between connector C-10 and connector C-11
- Wiring harness between connector C-11 and connector C-11
- Wiring harness between connector C-11 and connector C-51, C-52

K
Possible cause
- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between laser sensor and connector C-42
- Open circuit in wiring harness between connector C-42 and branch B
- Connector C-42 malfunction
- Laser sensor malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000359

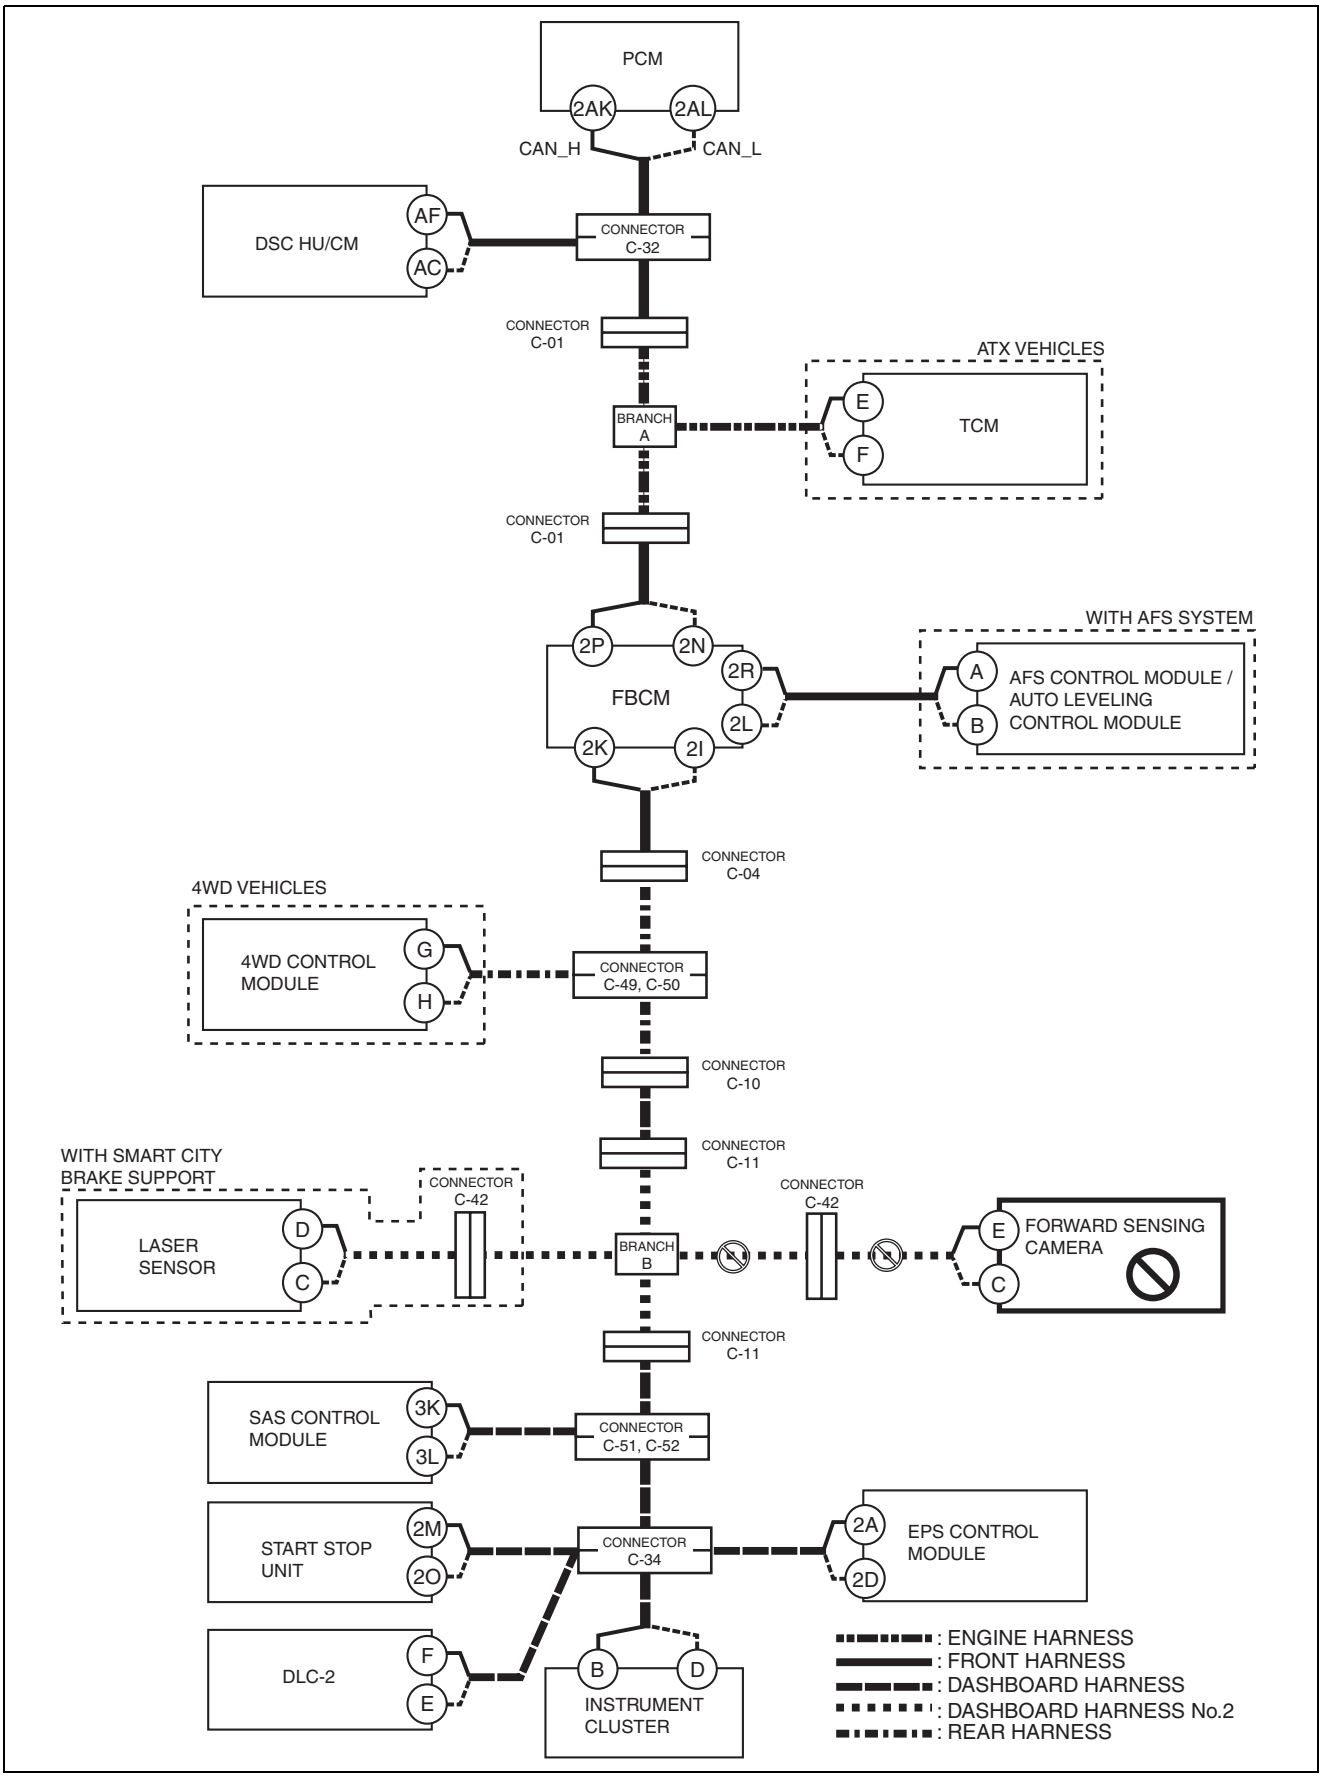
ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Inspection item
- laser sensor connector
- Connector C-42
- Wiring harness between laser sensor terminal D and connector C-42
- Wiring harness between laser sensor terminal C and connector C-42
- Wiring harness between connector C-42 and branch B
- Laser sensor

L
Possible cause
- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between forward sensing camera and connector C-42
- Open circuit in wiring harness between connector C-42 and branch B
- Connector C-42 malfunction
- Forward sensing camera malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000359

Inspection item

- Forward sensing camera connector
- Connector C-42
- Wiring harness between forward sensing camera terminal E and connector C-42
- Wiring harness between forward sensing camera terminal C and connector C-42
- Wiring harness between connector C-42 and branch B
- Forward sensing camera

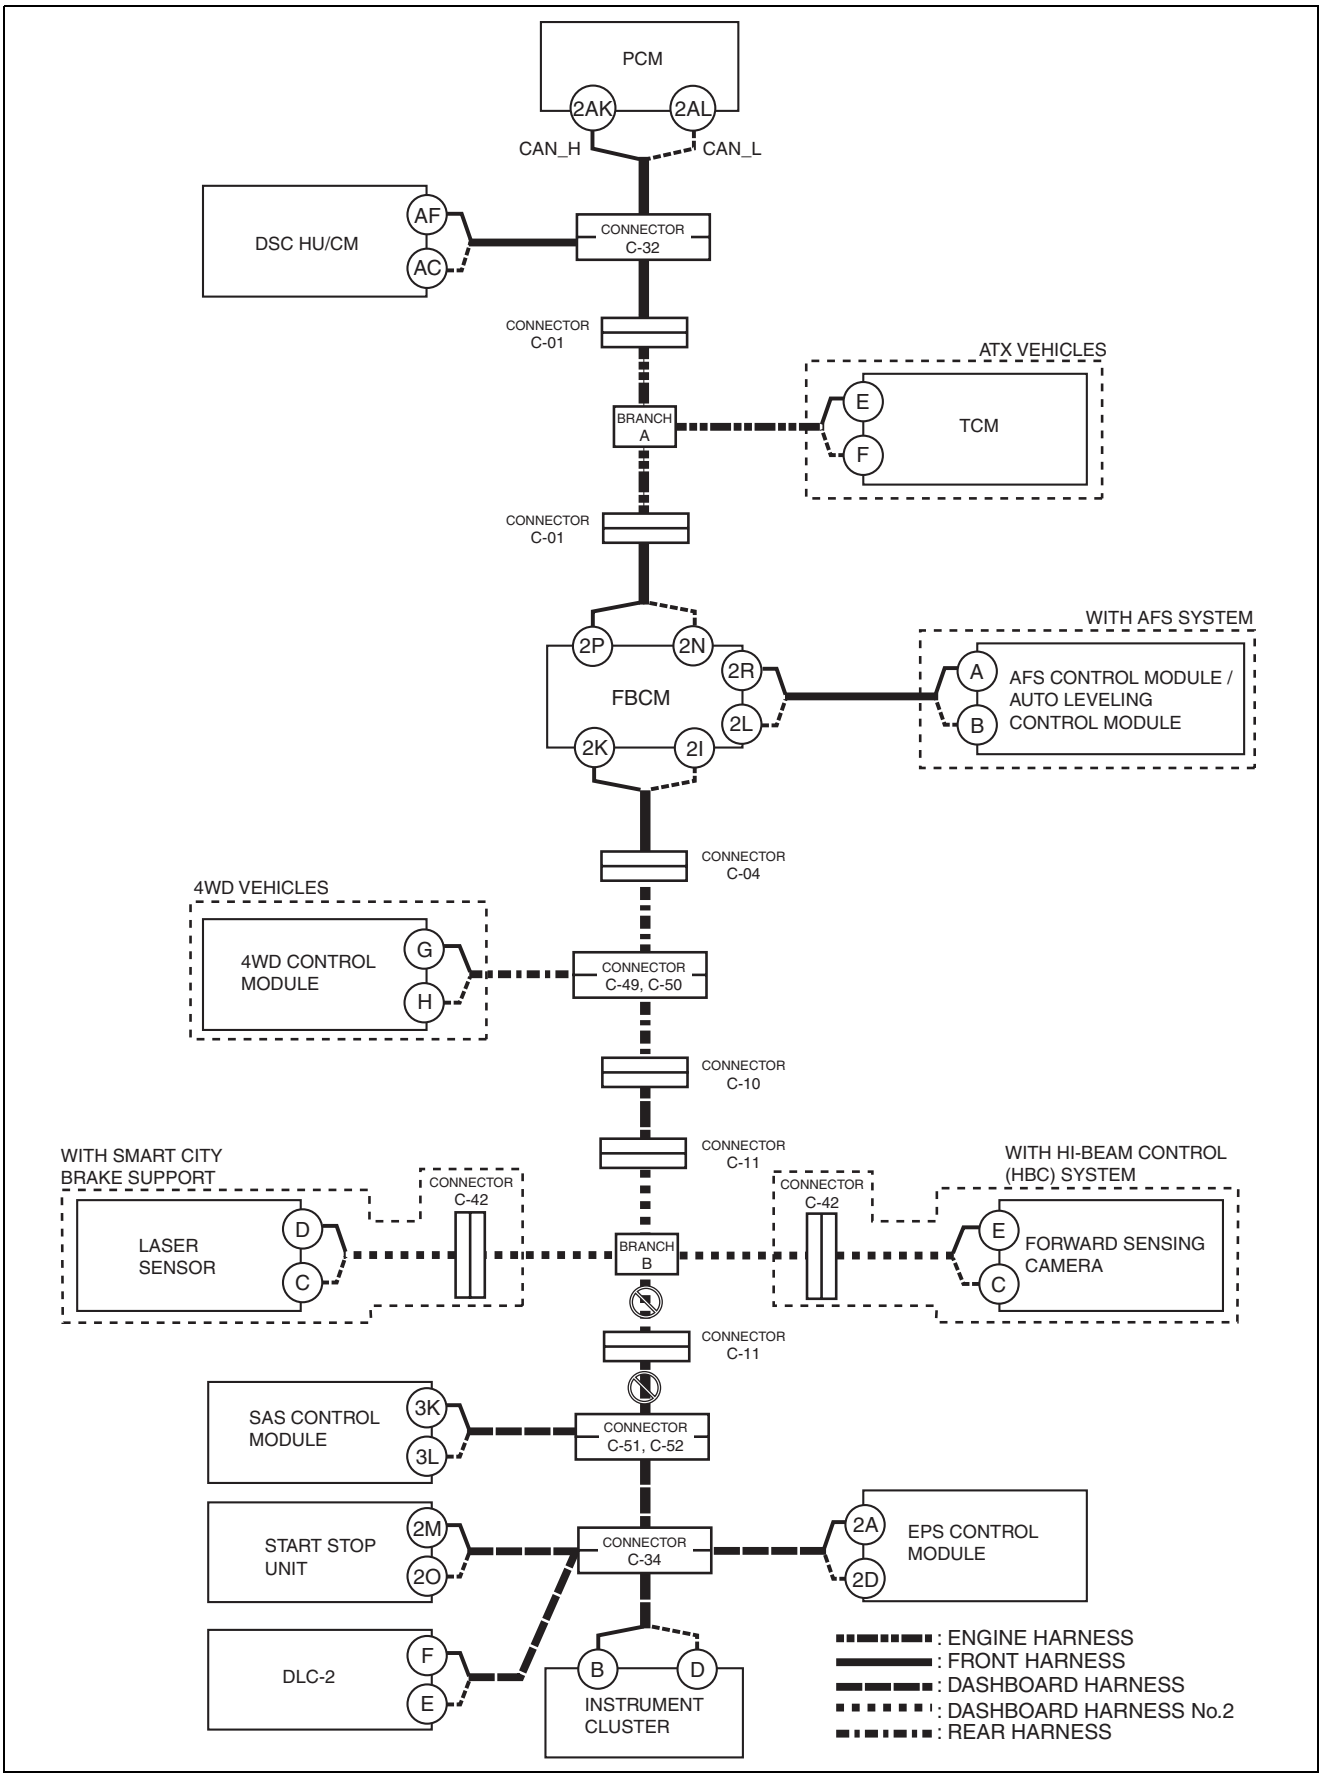
M

Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between branch B and connector C-11
- Open circuit in wiring harness between connectors C-11 and C-51, C-52
- Connector C-11 malfunction
- Connector C-51, C-52 malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000359

Inspection item
- Connectors C-11
- Connector C-51, C-52
- Wiring harness between branch B and connector C-11
- Wiring harness between connectors C-11 and C-51, C-52

N
Possible cause
- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between SAS control module and connector C-51, C-52
- Connector C-51, C-52 malfunction
- SAS control module malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Inspection item

- Instrument cluster connector
- Connector C-34
- Wiring harness between instrument cluster terminal B and connector C-34
- Wiring harness between instrument cluster terminal D and connector C-34
- Instrument cluster

DETERMINING SHORT TO GROUND LOCATION (HS-CAN) [SKYACTIV-G 2.0 (R.H.D.)]

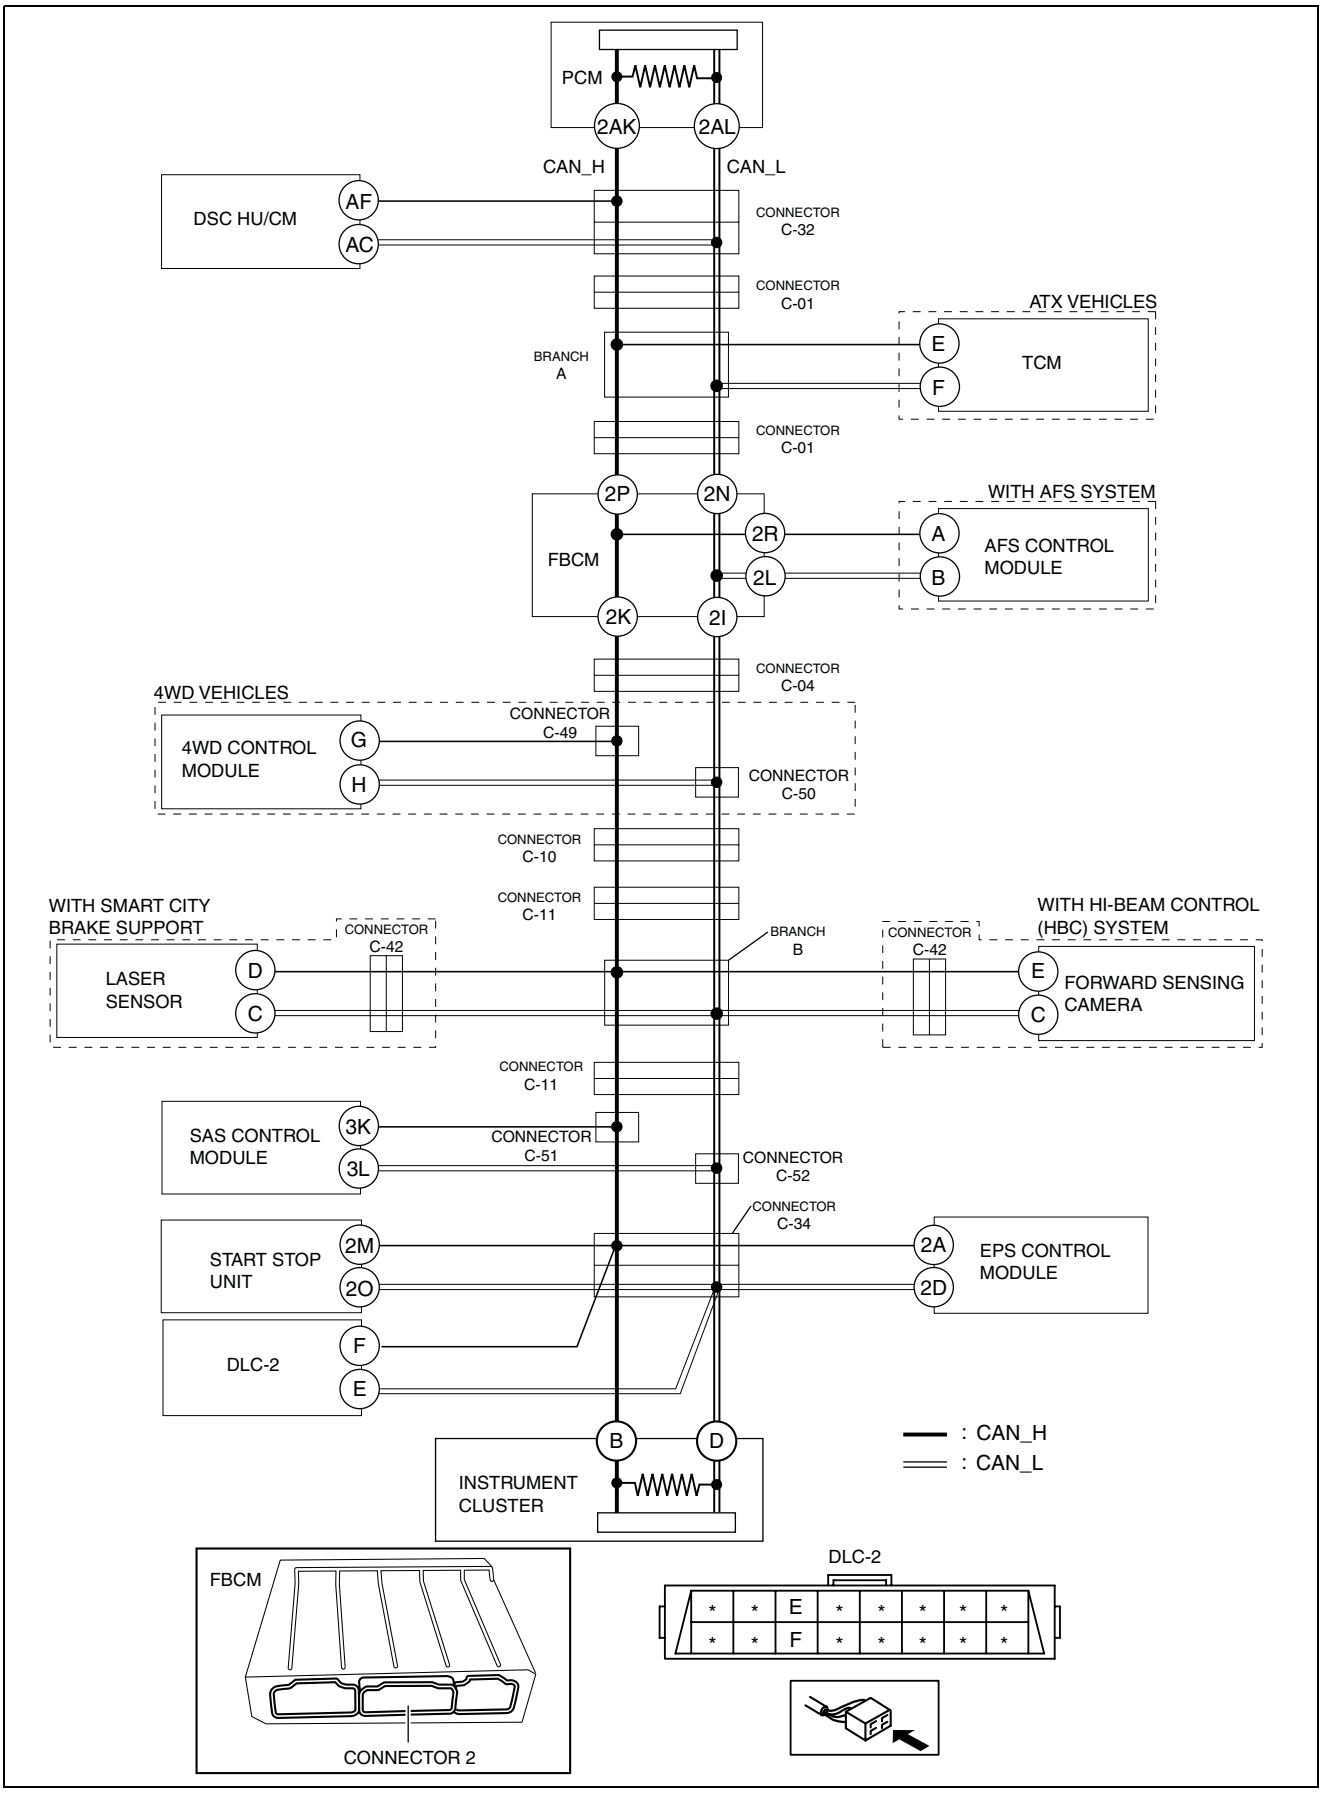
id100202000600

Caution

- **Perform the following malfunction diagnosis only when it is diagnosed with a short to ground by 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)].**

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000457

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Determination procedure

Caution
- **When disconnecting the connector, verify that there is no looseness, damage, deformation, corrosion, or poor connection of the connector terminals.**
- **When inspecting the DLC-2, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals.**

Step	Inspection		Action
1	**INSPECT FOR SHORT TO GROUND BETWEEN FRONT BODY CONTROL MODULE (FBCM) AND INSTRUMENT CLUSTER** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector 2 which has front body control module (FBCM) terminals 2P and 2N. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Go to Step 5.
		No	Go to the next step.
2	**INSPECT CAN LINE INSIDE FRONT BODY CONTROL MODULE (FBCM) FOR SHORT TO GROUND** • Inspect for continuity at the following terminals: — Between front body control module (FBCM) terminal 2P and body ground — Between front body control module (FBCM) terminal 2N and body ground • Is there continuity?	Yes	Replace the front body control module (FBCM) because there is a short to ground in the front body control module (FBCM). (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**INSPECT FOR SHORT TO GROUND BETWEEN AFS CONTROL MODULE AND FRONT BODY CONTROL MODULE (FBCM)** • Inspect for continuity at the following terminals: — Between AFS control module terminal A and body ground — Between AFS control module terminal B and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 26.
4	**INSPECT CAN LINE IN AFS CONTROL MODULE FOR SHORT TO GROUND** • Disconnect the AFS control module connector. • Inspect for continuity at the following terminals: — Between AFS control module terminal A (wiring harness side) and body ground — Between AFS control module terminal B (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the AFS control module and front body control module (FBCM) because the wiring harness is shorted to ground.
		No	Replace the AFS control module because there is a short to ground in the AFS control module. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
5	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-04 AND INSTRUMENT CLUSTER** • Disconnect connector C-04. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between the front body control module (FBCM) and connector C-04 because the wiring harness is shorted to ground.
6	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTORS C-49 AND C-50 AND INSTRUMENT CLUSTER** • Disconnect connectors C-49 and C-50. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Go to Step 9.
		No	Go to the next step.
7	**INSPECT FOR SHORT TO GROUND BETWEEN 4WD CONTROL MODULE AND CONNECTORS C-49 AND C-50** • Inspect for continuity at the following terminals: — Between 4WD control module terminal G and body ground — Between 4WD control module terminal H and body ground • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-04 and connectors C-49 and C-50 because the wiring harness is shorted to ground.
8	**INSPECT CAN LINE IN 4WD CONTROL MODULE FOR SHORT TO GROUND** • Disconnect the 4WD control module connector. • Inspect for continuity at the following terminals: — Between 4WD control module terminal G (wiring harness side) and body ground — Between 4WD control module terminal H (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the 4WD control module and connectors C-49 and C-50 because the wiring harness is shorted to ground.
		No	Replace the 4WD control module because there is a short to ground in the 4WD control module. (See 03-18-4 4WD CONTROL MODULE REMOVAL/ INSTALLATION.)
9	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-10 AND INSTRUMENT CLUSTER** • Disconnect connector C-10. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connectors C-49 and C-50 and connector C-10 because the wiring harness is shorted to ground.
10	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-11 AND INSTRUMENT CLUSTER** • Disconnect connector C-11. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Go to Step 16.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
11	**INSPECT FOR SHORT TO GROUND BETWEEN LASER SENSOR AND CONNECTOR C-42** • Disconnect connector C-42. • Inspect for continuity at the following terminals: — Between laser sensor terminal D and body ground — Between laser sensor terminal C and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT CAN LINE INSIDE LASER SENSOR FOR SHORT TO GROUND** • Disconnect the laser sensor connector. • Inspect for continuity at the following terminals: — Between laser sensor terminal D (wiring harness side) and body ground — Between laser sensor terminal C (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the laser sensor and connector C-42 because the wiring harness is shorted to ground.
		No	Replace the laser sensor because there is a short to ground in the laser sensor. (See 04-15-17 LASER SENSOR REMOVAL/INSTALLATION.)
13	**INSPECT FOR SHORT TO GROUND BETWEEN FORWARD SENSING CAMERA AND CONNECTOR C-42** • Inspect for continuity at the following terminals: — Between forward sensing camera terminal E and body ground — Between forward sensing camera terminal C and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 15.
14	**INSPECT CAN LINE IN FORWARD SENSING CAMERA FOR SHORT TO GROUND** • Disconnect the forward sensing camera connector. • Inspect for continuity at the following terminals: — Between forward sensing camera terminal E (wiring harness side) and body ground — Between forward sensing camera terminal C (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the forward sensing camera and connector C-42 because the wiring harness is shorted to ground.
		No	Replace the forward sensing camera because there is a short to ground in the forward sensing camera. (See 09-18-94 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
15	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTORS C-11 AND C-42** • Connect connector C-42. • Inspect for continuity at the following terminals: — Between forward sensing camera terminal E and body ground (with high beam control (HBC) system) — Between forward sensing camera terminal C and body ground (with high beam control (HBC) system) — Between laser sensor terminal D and body ground (with smart city brake support) — Between laser sensor terminal C and body ground (with smart city brake support) • Is there continuity?	Yes	Repair or replace the wiring harness between connector C-11 and connector C-42 because the wiring harness is shorted to ground.
		No	Repair or replace the wiring harness between connector C-10 and connector C-11 because the wiring harness is shorted to ground.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
16	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-51, C-52 AND INSTRUMENT CLUSTER** • Disconnect connector C-51, C-52. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Go to Step 19.
		No	Go to the next step.
17	**INSPECT FOR SHORT TO GROUND BETWEEN SAS CONTROL MODULE AND CONNECTOR C-51, C-52** • Inspect for continuity at the following terminals: — Between SAS control module terminal 3K and body ground — Between SAS control module terminal 3L and body ground • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-11 and connector C-51, C-52 because the wiring harness is shorted to ground.
18	**INSPECT CAN LINE IN SAS CONTROL MODULE FOR SHORT TO GROUND** • Disconnect the SAS control module connector. • Inspect for continuity at the following terminals: — Between SAS control module terminal 3K (wiring harness side) and body ground — Between SAS control module terminal 3L (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the SAS control module and connector C-51, C-52 because the wiring harness is shorted to ground.
		No	Replace the SAS control module because there is a short to ground in the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
19	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTORS C-34 AND DLC-2** • Disconnect connector C-34. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between connector C-34 and DLC-2 because the wiring harness is shorted to ground.
		No	Go to the next step.
20	**INSPECT FOR SHORT TO GROUND BETWEEN START STOP UNIT AND CONNECTOR C-34** • Inspect for continuity at the following terminals: — Between start stop unit terminal 2M and body ground — Between start stop unit terminal 2O and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 22.
21	**INSPECT CAN LINE IN START STOP UNIT FOR SHORT TO GROUND** • Disconnect the start stop unit connector. • Inspect for continuity at the following terminals: — Between start stop unit terminal 2M (wiring harness side) and body ground — Between start stop unit terminal 2O (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the start stop unit and connector C-34 because the wiring harness is shorted to ground.
		No	Replace the start stop unit because there is a short to ground in the start stop unit. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
22	**INSPECT FOR SHORT TO GROUND BETWEEN EPS CONTROL MODULE AND CONNECTOR C-34** • Inspect for continuity at the following terminals: — Between EPS control module terminal 2A and body ground — Between EPS control module terminal 2D and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 24.
23	**INSPECT CAN LINE IN EPS CONTROL MODULE FOR SHORT TO GROUND** • Disconnect the EPS control module connector. • Inspect for continuity at the following terminals: — Between EPS control module terminal 2A (wiring harness side) and body ground — Between EPS control module terminal 2D (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the EPS control module and connector C-34 because the wiring harness is shorted to ground.
		No	Replace the EPS control module because there is a short to ground in the EPS control module. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
24	**INSPECT FOR SHORT TO GROUND BETWEEN INSTRUMENT CLUSTER AND CONNECTOR C-34** • Inspect for continuity at the following terminals: — Between instrument cluster terminal B and body ground — Between instrument cluster terminal D and body ground • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-51, C-52 and connector C-34 because the wiring harness is shorted to ground.
25	**INSPECT CAN LINE IN INSTRUMENT CLUSTER FOR SHORT TO GROUND** • Disconnect the instrument cluster connector. • Inspect for continuity at the following terminals: — Between instrument cluster terminal B (wiring harness side) and body ground — Between instrument cluster terminal D (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the instrument cluster and connector C-34 because the wiring harness is shorted to ground.
		No	Replace the instrument cluster because there is a short to ground in the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
26	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-01 AND FRONT BODY CONTROL MODULE (FBCM)** • Disconnect connector C-01. • Connect connector 2 which has front body control module (FBCM) terminals 2P and 2N. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between connector C-01 and the front body control module (FBCM) because the wiring harness is shorted to ground.
		No	Go to the next step.
27	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-01 AND TCM** • Inspect for continuity at the following terminals: — Between TCM terminal E and body ground — Between TCM terminal F and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 29.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
28	**INSPECT CAN LINE IN TCM FOR SHORT TO GROUND** • Disconnect the TCM connector. • Inspect for continuity at the following terminals: — Between TCM terminal E (wiring harness side) and body ground — Between TCM terminal F (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the TCM and connector C-01 because the wiring harness is shorted to ground.
		No	Replace the TCM because there is a short to ground in the TCM. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
29	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTORS C-32 AND C-01** • Disconnect connector C-32. • Connect connector C-01. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between connector C-32 and connector C-01 because the wiring harness is shorted to ground.
		No	Go to the next step.
30	**INSPECT FOR SHORT TO GROUND BETWEEN DSC HU/CM AND CONNECTOR C-32** • Inspect for continuity at the following terminals: — Between DSC HU/CM terminal AF and body ground — Between DSC HU/CM terminal AC and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 31.
31	**INSPECT CAN LINE IN DSC HU/CM FOR SHORT TO GROUND** • Disconnect the DSC HU/CM connector. • Inspect for continuity at the following terminals: — Between DSC HU/CM terminal AF (wiring harness side) and body ground — Between DSC HU/CM terminal AC (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the DSC HU/CM and connector C-32 because the wiring harness is shorted to ground.
		No	Replace the DSC HU/CM because there is a short to ground in the DSC HU/CM. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
32	**INSPECT CAN LINE IN PCM FOR SHORT TO GROUND** • Disconnect the PCM connector. • Inspect for continuity at the following terminals: — Between PCM terminal 2AK (wiring harness side) and body ground — Between PCM terminal 2AL (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the PCM and connector C-32 because the wiring harness is shorted to ground .
		No	Replace the PCM because there is a short to ground in the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

DETERMINING SHORT TO POWER SUPPLY LOCATION (HS-CAN) [SKYACTIV-G 2.0 (R.H.D.)]

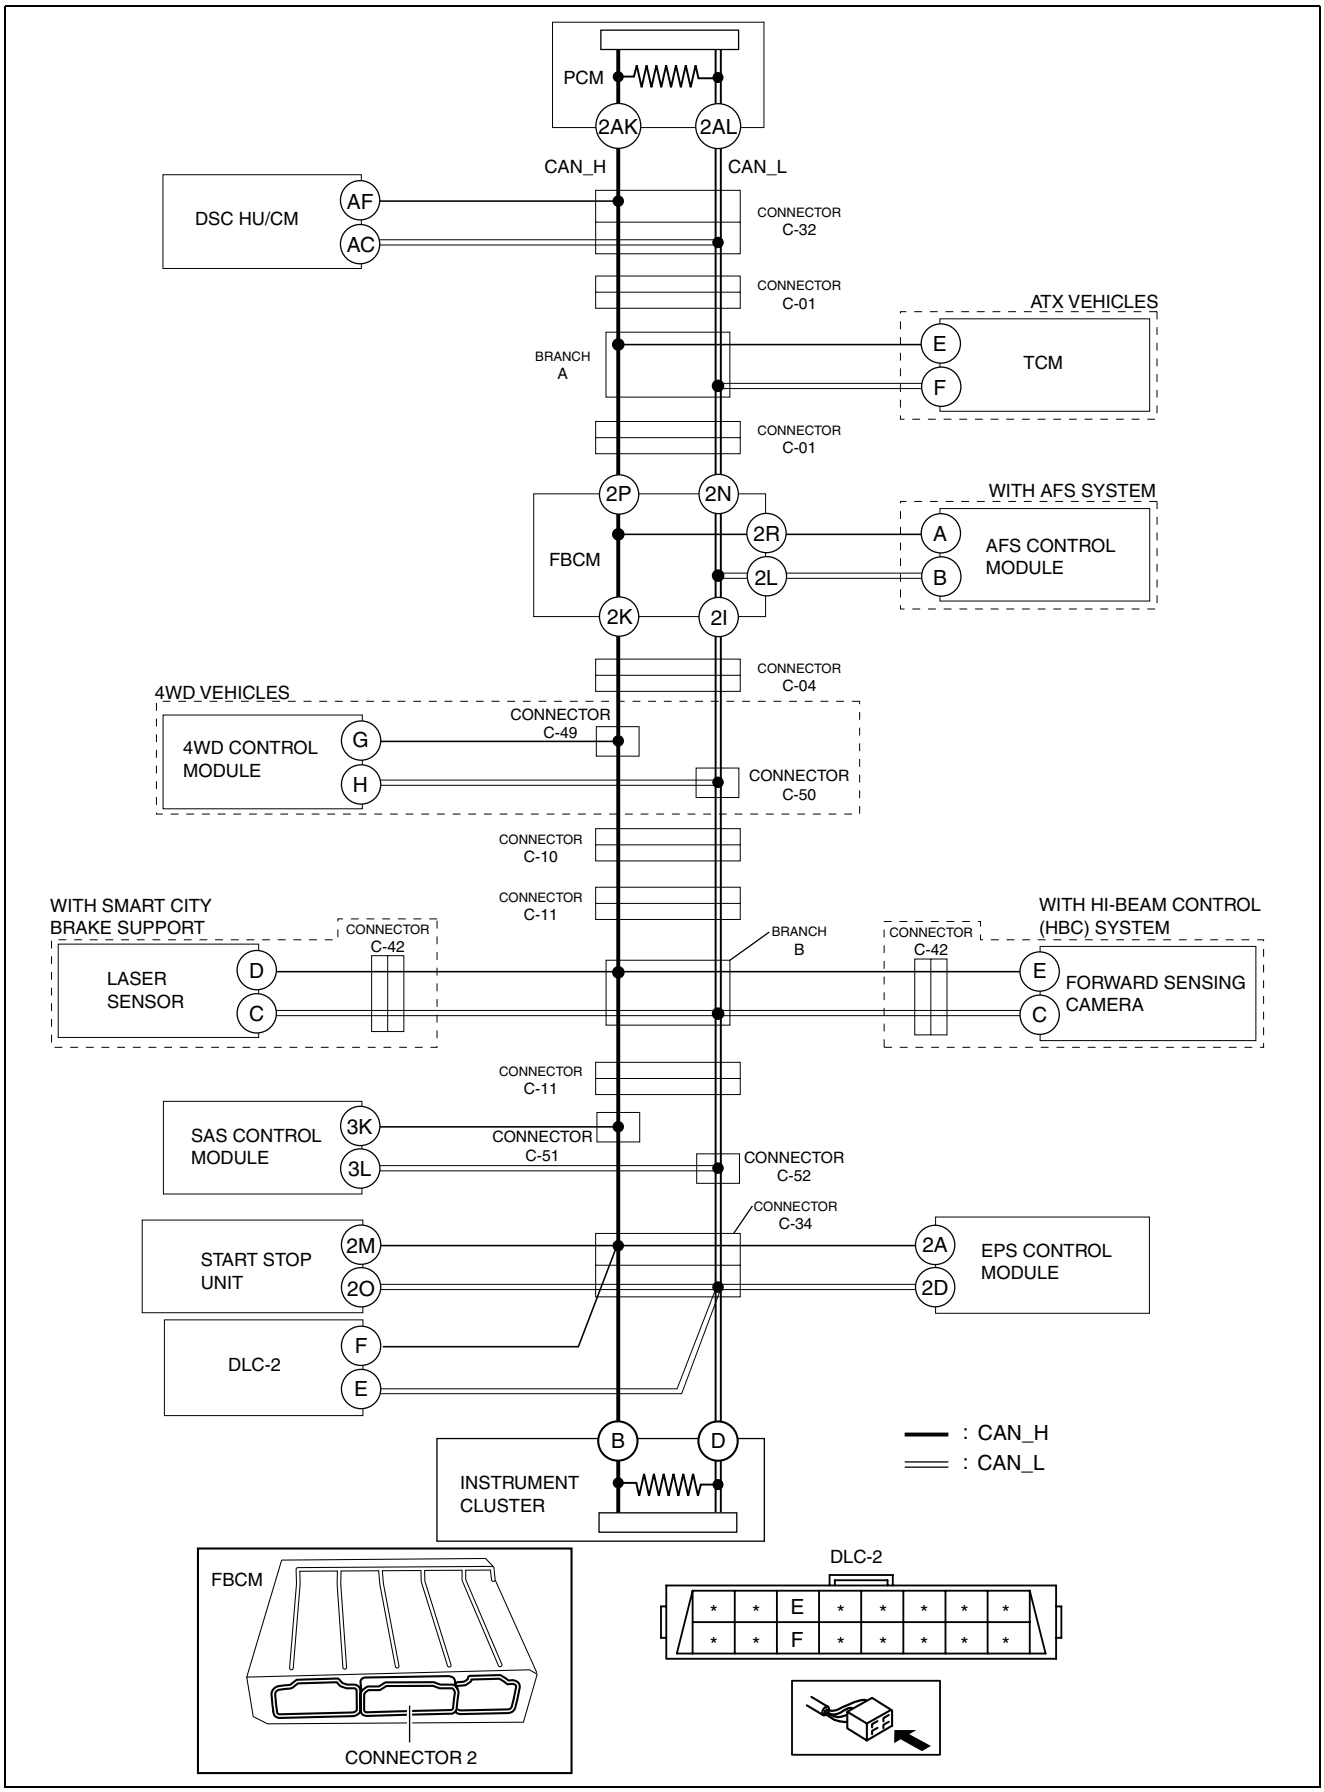
id100202000700

Caution

- **Perform the following malfunction diagnosis only when it is diagnosed with a short to the power supply by 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)].**

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000457

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Determination procedure

Caution
- **When disconnecting the connector, verify that there is no looseness, damage, deformation, corrosion, or poor connection of the connector terminals.**
- **When inspecting the DLC-2, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals.**
- **Disconnect the negative battery cable before performing any work that requires handling of connectors.**

Step	Inspection		Action
1	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN FRONT BODY CONTROL MODULE (FBCM) AND INSTRUMENT CLUSTER** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector 2 which has front body control module (FBCM) terminals 2K and 2I • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to the next step.
		No	Go to Step 4.
2	**INSPECT CAN LINE BETWEEN AFS CONTROL MODULE AND FRONT BODY CONTROL MODULE (FBCM) FOR SHORT TO POWER SUPPLY** • Measure the voltage at AFS control module terminals A and B. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 25.
		No	Go to the next step.
3	**INSPECT AFS CONTROL MODULE FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect the AFS control module connector. • Connect connector 2 which has front body control module (FBCM) terminals 2K and 2I. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the AFS control module because there is a short to the power supply in the AFS control module. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between AFS control module and the front body control module (FBCM) because the wiring harness is shorted to the power supply.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
4	**INSPECT CAN LINE BETWEEN CONNECTOR C-04 AND INSTRUMENT CLUSTER FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-04. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Repair or replace the wiring harness between the front body control module (FBCM) and connector C-04 because the wiring harness is shorted to the power supply.
		No	Go to the next step.
5	**INSPECT CAN LINE BETWEEN CONNECTORS C-49 AND C-50 AND INSTRUMENT CLUSTER FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connectors C-49 and C-50. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to the next step.
		No	Go to Step 8.
6	**INSPECT CAN LINE BETWEEN 4WD CONTROL MODULE AND CONNECTORS C-49 AND C-50 FOR SHORT TO POWER SUPPLY** • Measure the voltage at 4WD control module terminals G and H. • Is the voltage between 1.5 — 3.5 V?	Yes	Repair or replace the wiring harness between connector C-04 and connectors C-49 and C-50 because the wiring harness is shorted to the power supply.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
7	**INSPECT 4WD CONTROL MODULE FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Connect connectors C-49 and C-50 • Disconnect the 4WD control module connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the 4WD control module because there is a short to the power supply in the 4WD control module. (See 03-18-4 4WD CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	Repair or replace the wiring harness between the 4WD control module and connectors C-49 and C-50 because the wiring harness is shorted to the power supply.
8	**INSPECT CAN LINE BETWEEN CONNECTOR C-10 AND INSTRUMENT CLUSTER FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-10. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Repair or replace the wiring harness between connectors C-49 and C-50 and connector C-10 because the wiring harness is shorted to the power supply.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
9	**INSPECT CAN LINE BETWEEN CONNECTOR C-11 AND INSTRUMENT CLUSTER FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-11. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to the next step.
		No	Go to Step 15.
10	**INSPECT CAN LINE BETWEEN CONNECTOR C-11 AND FORWARD SENSING CAMERA/ LASER SENSOR FOR SHORT TO POWER SUPPLY** • Measure the voltage at forward sensing camera terminals E and C. (with high beam control (HBC) system) • Measure the voltage at laser sensor terminals D and C. (with smart city brake support) • Is the voltage between 1.5 — 3.5 V?	Yes	Repair or replace the wiring harness between connector C-10 and connector C-11 because the wiring harness is shorted to the power supply.
		No	Go to the next step.
11	**INSPECT CAN LINE BETWEEN LASER SENSOR AND CONNECTOR C-42 FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-42. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at laser sensor terminals D and C. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 13.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
12	**INSPECT LASER SENSOR FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect the laser sensor connector. • Connect connector C-42. • Connect connector C-11. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the laser sensor because there is a short to the power supply in the laser sensor. (See 04-15-17 LASER SENSOR REMOVAL/ INSTALLATION.)
		No	Repair or replace the wiring harness between the laser sensor and connector C-42 because the wiring harness is shorted to the power supply.
13	**INSPECT CAN LINE BETWEEN FORWARD SENSING CAMERA AND CONNECTOR C-42 FOR SHORT TO POWER SUPPLY** • Measure the voltage at forward sensing camera terminals E and C. • Is the voltage between 1.5 — 3.5 V?	Yes	Repair or replace the wiring harness between connector C-11 and connector C-42 because the wiring harness is shorted to the power supply.
		No	Go to the next step.
14	**INSPECT FORWARD SENSING CAMERA FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect the forward sensing camera connector. • Connect connector C-42. • Connect connector C-11. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the forward sensing camera because there is a short to the power supply in the forward sensing camera. (See 09-18-94 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the forward sensing camera and connector C-42 because the wiring harness is shorted to the power supply.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
15	**INSPECT CAN LINE BETWEEN CONNECTOR C-51, C-52 AND INSTRUMENT CLUSTER FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. • Disconnect connector C-51, C-52. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 23.
		No	Go to the next step.
16	**INSPECT CAN LINE BETWEEN CONNECTOR C-34 AND DLC-2 FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-34. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage 0 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-34 and DLC-2 because the wiring harness is shorted to the power supply.
17	**INSPECT CAN LINE BETWEEN START STOP UNIT AND CONNECTOR C-34 FOR SHORT TO POWER SUPPLY** • Measure the voltage at start stop unit terminals 2M and 2O. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 19.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
18	**INSPECT START STOP UNIT FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Connect connector C-34. • Disconnect the start stop unit connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the start stop unit because there is a short to the power supply in the start stop unit. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Repair or replace the wiring harness between the start stop unit and connector C-34 because the wiring harness is shorted to the power supply.
19	**INSPECT CAN LINE BETWEEN EPS CONTROL MODULE AND CONNECTOR C-34 FOR SHORT TO POWER SUPPLY** • Measure the voltage at EPS control module terminals 2A and 2D. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 21.
		No	Go to the next step.
20	**INSPECT EPS CONTROL MODULE FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Connect connector C-34. • Disconnect the EPS control module connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the EPS control module because there is a short to the power supply in the EPS control module. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the EPS control module and connector C-34 because the wiring harness is shorted to the power supply.
21	**INSPECT CAN LINE BETWEEN INSTRUMENT CLUSTER AND CONNECTOR C-34 FOR SHORT TO POWER SUPPLY** • Measure the voltage at instrument cluster terminals B and D. • Is the voltage between 1.5 — 3.5 V?	Yes	Repair or replace the wiring harness between connector C-51, C-52 and connector C-34 because the wiring harness is shorted to the power supply.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
22	**INSPECT INSTRUMENT CLUSTER FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Connect connector C-34. • Disconnect the instrument cluster connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the instrument cluster because the instrument cluster is shorted to the power supply. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the instrument cluster and connector C-34 because the wiring harness is shorted to the power supply.
23	**INSPECT CAN LINE BETWEEN SAS CONTROL MODULE AND CONNECTOR C-51, C-52 FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect the SAS control module connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at SAS control module terminals 3K and 3L (wiring harness side). • Is the voltage 0 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between the SAS control module and connector C-51, C-52 because the wiring harness is shorted to the power supply.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
24	**INSPECT CAN LINE BETWEEN CONNECTOR C-11 AND CONNECTOR C-51, C-52 FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Connect connector C-51, C-52. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the SAS control module because there is a short to the power supply in the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between connector C-11 and connector C-51, C-52 because the wiring harness is shorted to the power supply.
25	**INSPECT CAN LINE BETWEEN PCM AND FRONT BODY CONTROL MODULE (FBCM) FOR SHORT TO POWER SUPPLY** • Measure voltage at PCM terminals 2AK and 2AL. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the front body control module (FBCM) because there is a short to the power supply in the front body control module (FBCM). (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
26	**INSPECT CAN LINE BETWEEN CONNECTOR C-01 AND FRONT BODY CONTROL MODULE (FBCM) FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-01. • Connect connector 2 which has front body control module (FBCM) terminals 2K and 2I. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-01 and the front body control module (FBCM) because the wiring harness is shorted to the power supply.
27	**INSPECT CAN LINE BETWEEN TCM AND CONNECTOR C-01 FOR SHORT TO POWER SUPPLY** • Measure the voltage at TCM terminals E and F. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 29.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
28	**INSPECT TCM FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Connect connector C-01. • Disconnect the TCM connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the TCM because there is a short to the power supply in the TCM. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	Repair or replace the wiring harness between the TCM and connector C-01 because the wiring harness is shorted to the power supply.
29	**INSPECT CAN LINE BETWEEN CONNECTOR C-32 AND CONNECTOR C-01 FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Connect connector C-01. • Disconnect connector C-32. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-32 and connector C-01 because the wiring harness is shorted to the power supply.
30	**INSPECT CAN LINE BETWEEN DSC HU/CM AND CONNECTOR C-32 FOR SHORT TO POWER SUPPLY** • Measure voltage at DSC HU/CM terminals AF and AC. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 32.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
31	**INSPECT DSC HU/CM FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Connect connector C-32. • Disconnect the DSC HU/CM connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the DSC HU/CM because the DSC HU/CM is shorted to the power supply. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the DSC HU/CM and connector C-32 because the wiring harness is shorted to the power supply.
32	**INSPECT PCM FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Connect connector C-32. • Disconnect the PCM connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the PCM because there is a short to the power supply in the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Repair or replace the wiring harness between the PCM and connector C-32 because the wiring harness is shorted to the power supply.

DETERMINING SHORT BETWEEN CIRCUITS LOCATION (HS-CAN) [SKYACTIV-G 2.0 (R.H.D.)]

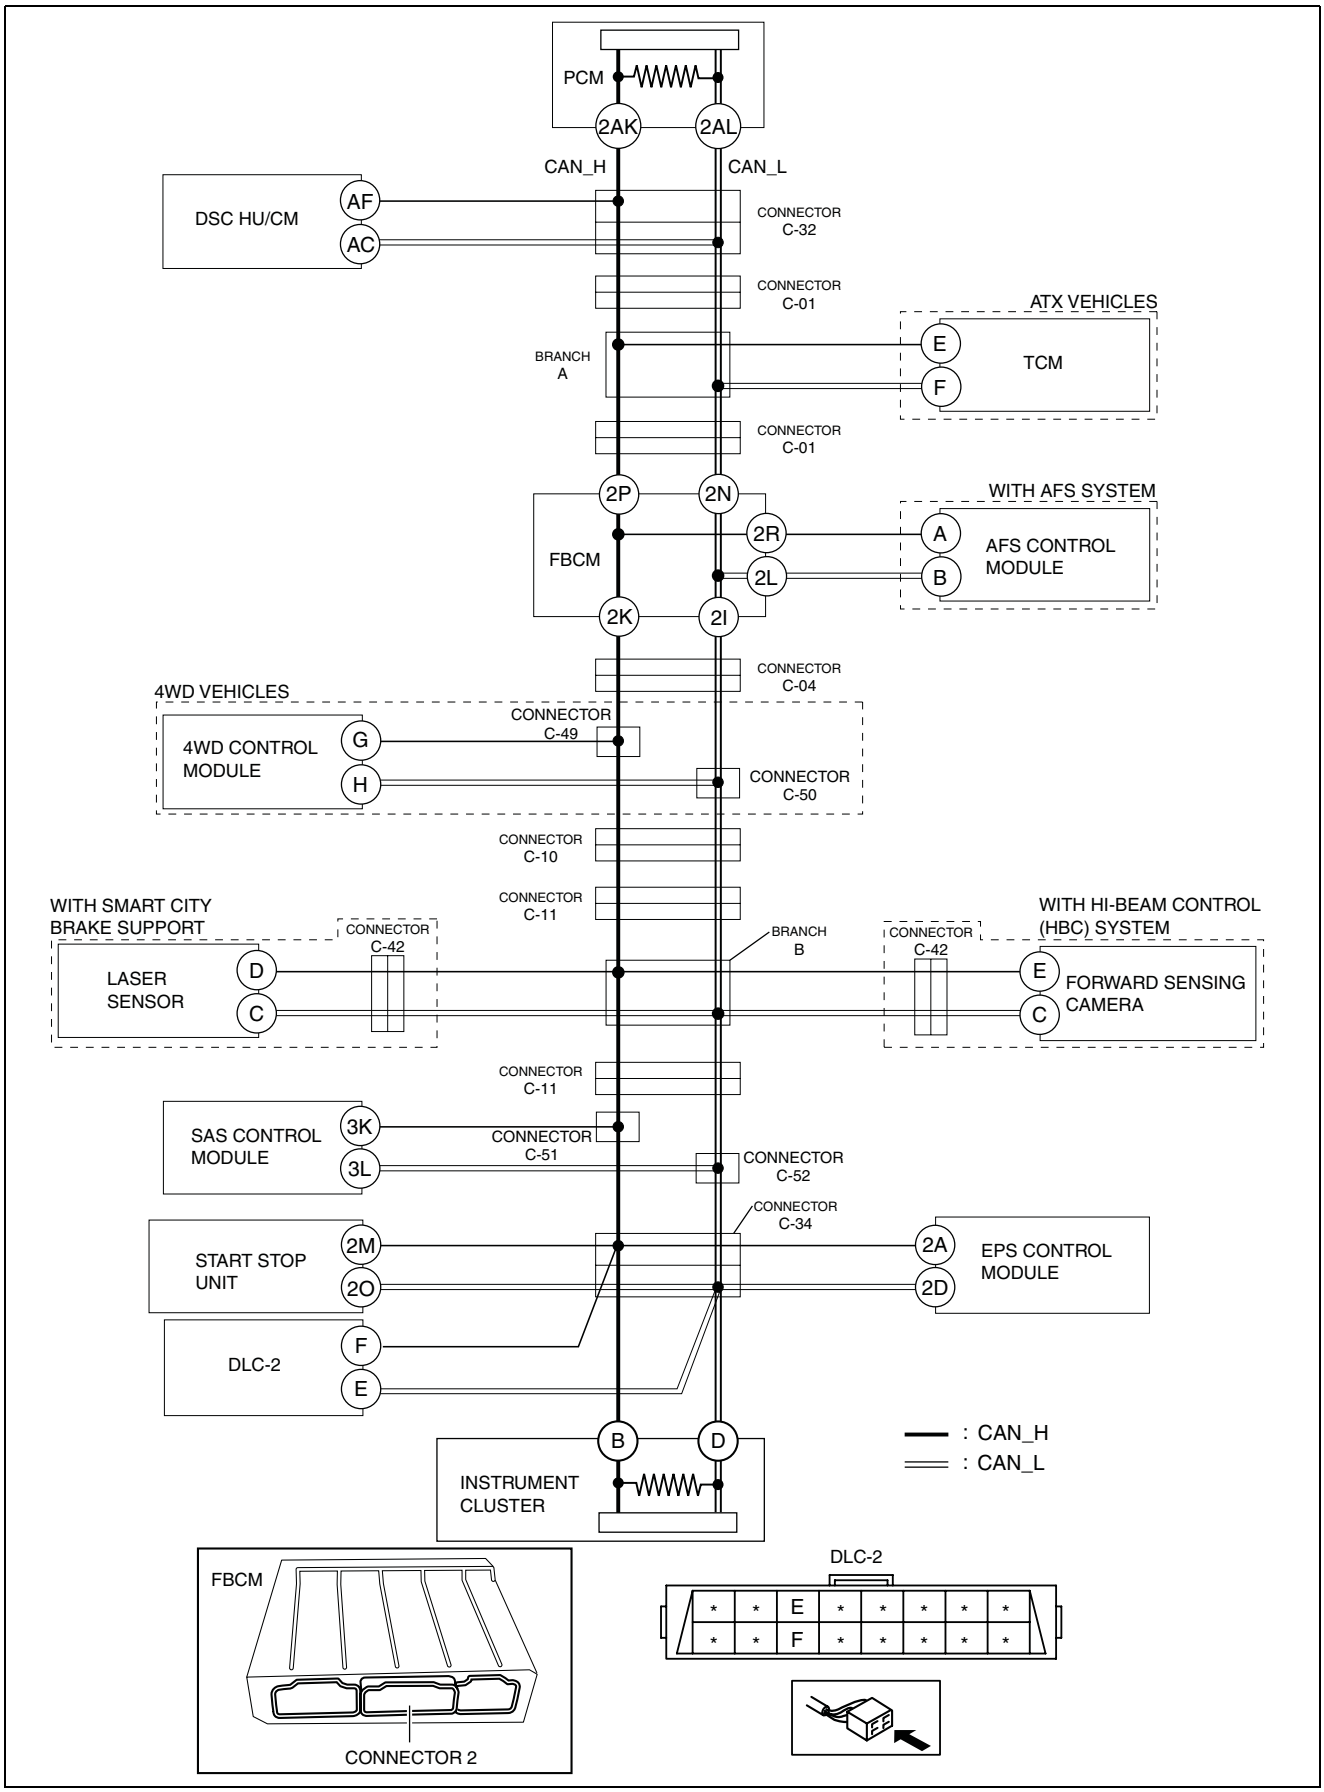
id100202000800

Caution

- **Perform the following malfunction diagnosis only when it is diagnosed with a short between circuits by 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)].**

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000457

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Determination procedure

Caution
- **When disconnecting the connector, verify that there is no looseness, damage, deformation, corrosion, or poor connection of the connector terminals.**
- **When inspecting the DLC-2, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals.**

Step	Inspection		Action
1	**INSPECT BETWEEN FRONT BODY CONTROL MODULE (FBCM) AND INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector 2 which has front body control module (FBCM) terminals 2K and 2I • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage at DLC-2 terminals F and E the same?	Yes	Go to Step 5.
		No	Go to the next step.
2	**INSPECT FRONT BODY CONTROL MODULE (FBCM) FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Inspect for continuity between front body control module (FBCM) terminals 2K and 2I. • Is there continuity?	Yes	Replace the front body control module (FBCM) because there is a short between circuits in the front body control module (FBCM). (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**INSPECT BETWEEN AFS CONTROL MODULE AND FRONT BODY CONTROL MODULE (FBCM) FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity between AFS control module terminals A and B. • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 26.
4	**INSPECT AFS CONTROL MODULE FOR SHORT BETWEEN CIRCUITS** • Disconnect the AFS control module connector. • Inspect for continuity between AFS control module terminals A and B (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the AFS control module and front body control module (FBCM) because the wiring harness is shorted between circuits.
		No	Replace the AFS control module because there is a short between circuits in the AFS control module. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
5	**INSPECT BETWEEN CONNECTOR C-04 AND INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-04. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage at DLC-2 terminals F and E the same?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between the front body control module (FBCM) and connector C-04 because the wiring harness is shorted between circuits.
6	**INSPECT BETWEEN CONNECTORS C-49 AND C-50 AND INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connectors C-49 and C-50. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage at DLC-2 terminals F and E the same?	Yes	Go to Step 9.
		No	Go to the next step.
7	**INSPECT BETWEEN 4WD CONTROL MODULE AND CONNECTORS C-49 AND C-50 FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Inspect for continuity between 4WD control module terminals G and H. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-04 and connectors C-49 and C-50 because the wiring harness is shorted between circuits.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
8	**INSPECT 4WD CONTROL MODULE FOR SHORT BETWEEN CIRCUITS** • Disconnect the 4WD control module connector. • Inspect for continuity between 4WD control module terminals G and H (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the 4WD control module and connectors C-49 and C-50 because the wiring harness is shorted between circuits.
		No	Replace the 4WD control module because there is a short between circuits in the 4WD control module. (See 03-18-4 4WD CONTROL MODULE REMOVAL/ INSTALLATION.)
9	**INSPECT BETWEEN CONNECTOR C-10 AND INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-10. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage at DLC-2 terminals F and E the same?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connectors C-49 and C-50 and connector C-10 because the wiring harness is shorted between circuits.
10	**INSPECT BETWEEN CONNECTOR C-11 AND INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-11. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage at DLC-2 terminals F and E the same?	Yes	Go to Step 16.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
11	**INSPECT BETWEEN CONNECTOR C-11 AND FORWARD SENSING CAMERA/LASER SENSOR FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Inspect for continuity between forward sensing camera terminals E and C. (With high beam control (HBC) system) • Inspect for continuity between laser sensor terminals D and C. (With smart city brake support) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-11 and connector C-10 because the wiring harness is shorted between circuits.
12	**INSPECT BETWEEN LASER SENSOR AND CONNECTOR C-42 FOR SHORT BETWEEN CIRCUITS** • Disconnect connector C-42. • Inspect for continuity between laser sensor terminals D and C. • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 14.
13	**INSPECT LASER SENSOR FOR SHORT BETWEEN CIRCUITS** • Disconnect the laser sensor connector. • Inspect for continuity between laser sensor terminals D and C (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the laser sensor and connector C-42 because the wiring harness is shorted between circuits.
		No	Replace the laser sensor because there is a short between circuits in the laser sensor. (See 04-15-17 LASER SENSOR REMOVAL/INSTALLATION.)
14	**INSPECT BETWEEN FORWARD SENSING CAMERA AND CONNECTOR C-42 FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity between forward sensing camera terminals E and C. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-11 and connector C-42 because the wiring harness is shorted between circuits.
15	**INSPECT FORWARD SENSING CAMERA FOR SHORT BETWEEN CIRCUITS** • Disconnect the forward sensing camera connector. • Inspect for continuity between forward sensing camera terminals E and C (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the forward sensing camera and connector C-42 because the wiring harness is shorted between circuits.
		No	Replace the forward sensing camera because there is a short between circuits in the forward sensing camera. (See 09-18-94 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
16	**INSPECT BETWEEN CONNECTOR C-51, C-52 AND INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-51, C-52. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage at DLC-2 terminals F and E the same?	Yes	Go to Step 19.
		No	Go to the next step.
17	**INSPECT BETWEEN SAS CONTROL MODULE AND CONNECTOR C-51, C-52 FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Inspect for continuity between SAS control module terminals 3K and 3L. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-11 and connector C-51, C-52 because the wiring harness is shorted between circuits.
18	**INSPECT SAS CONTROL MODULE FOR SHORT BETWEEN CIRCUITS** • Disconnect the SAS control module connector. • Is there continuity between SAS control module terminals 3K and 3L (wiring harness side)? • Is there continuity?	Yes	Repair or replace the wiring harness between the SAS control module and connector C-51, C-52 because the wiring harness is shorted between circuits.
		No	Replace the SAS control module because there is a short between circuits in the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
19	**INSPECT BETWEEN DLC-2 AND CONNECTOR C-34 FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-34. • Inspect for continuity between DLC-2 terminals F and E. • Is there continuity?	Yes	Repair or replace the wiring harness between DLC-2 and connector C-34 because the wiring harness is shorted between circuits.
		No	Go to the next step.
20	**INSPECT BETWEEN START STOP UNIT AND CONNECTOR C-34 FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity between start stop unit terminals 2M and 2O. • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 22.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
21	**INSPECT START STOP UNIT FOR SHORT BETWEEN CIRCUITS** • Disconnect the start stop unit connector. • Is there continuity between start stop unit terminals 2M and 2O (wiring harness side)? • Is there continuity?	Yes	Repair or replace the wiring harness between the start stop unit and connector C-34 because the wiring harness is shorted between circuits.
		No	Replace the start stop unit because there is a short between circuits in the start stop unit. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
22	**INSPECT BETWEEN EPS CONTROL MODULE AND CONNECTOR C-34 FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity between EPS control module terminals 2A and 2D. • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 24.
23	**INSPECT EPS CONTROL MODULE FOR SHORT BETWEEN CIRCUITS** • Disconnect the EPS control module connector. • Is there continuity between EPS control module terminals 2A and 2D (wiring harness side)? • Is there continuity?	Yes	Repair or replace the wiring harness between the EPS control module and connector C-34 because the wiring harness is shorted between circuits.
		No	Replace the EPS control module because there is a short between circuits in the EPS control module. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
24	**INSPECT BETWEEN INSTRUMENT CLUSTER AND CONNECTOR C-34 FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity between instrument cluster terminals B and D. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-51, C-52 and connector C-34 because the wiring harness is shorted between circuits.
25	**INSPECT INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Disconnect the instrument cluster connector. • Is there continuity between instrument cluster terminals B and D (wiring harness side)? • Is there continuity?	Yes	Repair or replace the wiring harness between the instrument cluster and connector C-34 because the wiring harness is shorted between circuits.
		No	Replace the instrument cluster because there is a short between circuits in the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
26	**INSPECT BETWEEN CONNECTOR C-01 AND front body control module (FBCM) FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Connect connector 2 which has front body control module (FBCM) terminals 2K and 2I. • Disconnect connector C-01. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage at DLC-2 terminals F and E the same?	Yes	Repair or replace the wiring harness between connector C-01 and the front body control module (FBCM) because the wiring harness is shorted between circuits.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
27	**INSPECT BETWEEN TCM AND CONNECTOR C-01 FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Inspect for continuity between TCM terminals E and F. • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 29.
28	**INSPECT TCM FOR SHORT BETWEEN CIRCUITS** • Disconnect the TCM connector. • Inspect for continuity between TCM terminals E and F (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the TCM and connector C-01 because the wiring harness is shorted between circuits.
		No	Replace the TCM because there is a short between circuits in the TCM. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
29	**INSPECT BETWEEN CONNECTORS C-32 AND C-01 FOR SHORT BETWEEN CIRCUITS** • Connect connector C-01. • Disconnect connector C-32. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage at DLC-2 terminals F and E the same?	Yes	Repair or replace the wiring harness between connector C-32 and connector C-01 because the wiring harness is shorted between circuits.
		No	Go to the next step.
30	**INSPECT BETWEEN DSC HU/CM AND CONNECTOR C-32 FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Inspect for continuity between DSC HU/CM terminals AF and AC. • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 32.
31	**INSPECT DSC HU/CM FOR SHORT BETWEEN CIRCUITS** • Disconnect the DSC HU/CM connector. • Inspect for continuity between DSC HU/CM terminals AF and AC (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the DSC HU/CM and connector C-32 because the wiring harness is shorted between circuits.
		No	Replace the DSC HU/CM because there is a short between circuits in the DSC HU/CM. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
32	**INSPECT PCM FOR SHORT BETWEEN CIRCUITS** • Disconnect the PCM connector. • Inspect for continuity between PCM terminals 2AK and 2AL (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the PCM and connector C-32 because the wiring harness is shorted between circuits.
		No	Replace the PCM because there is a short between circuits in the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

DETERMINING OPEN CIRCUIT LOCATION (MS-CAN) [SKYACTIV-G 2.0 (R.H.D.)]

id100202000500

Caution

- **Perform the following malfunction diagnosis only when it is diagnosed with a open circuit by 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)].**
- **If the malfunctioning part is detected in the communication line, before disconnecting the related connector for inspection, press the connector in the connection direction to verify that there is no looseness or disconnection.**
- **When disconnecting the connector, verify that there is no damage, deformation, or corrosion of the connector terminals.**

1. Verify DTCs of the modules related to the CAN system.
2. Apply the communication error DTC and the failed module to 10-02B-83 DTC output pattern and malfunctioning location, and select the possible cause for the diagnostic result and the reference for the inspection item.

Note

- The open circuit location can be determined by the DTC indicated in the 10-02B-83 DTC output pattern and malfunctioning location chart. DTCs not listed in the chart are not used for the determination of the open circuit location.

3. Inspect the possible cause and inspection item of the applicable malfunctioning part.
4. After repairs, return to 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)], and verify that the repairs have been completed.

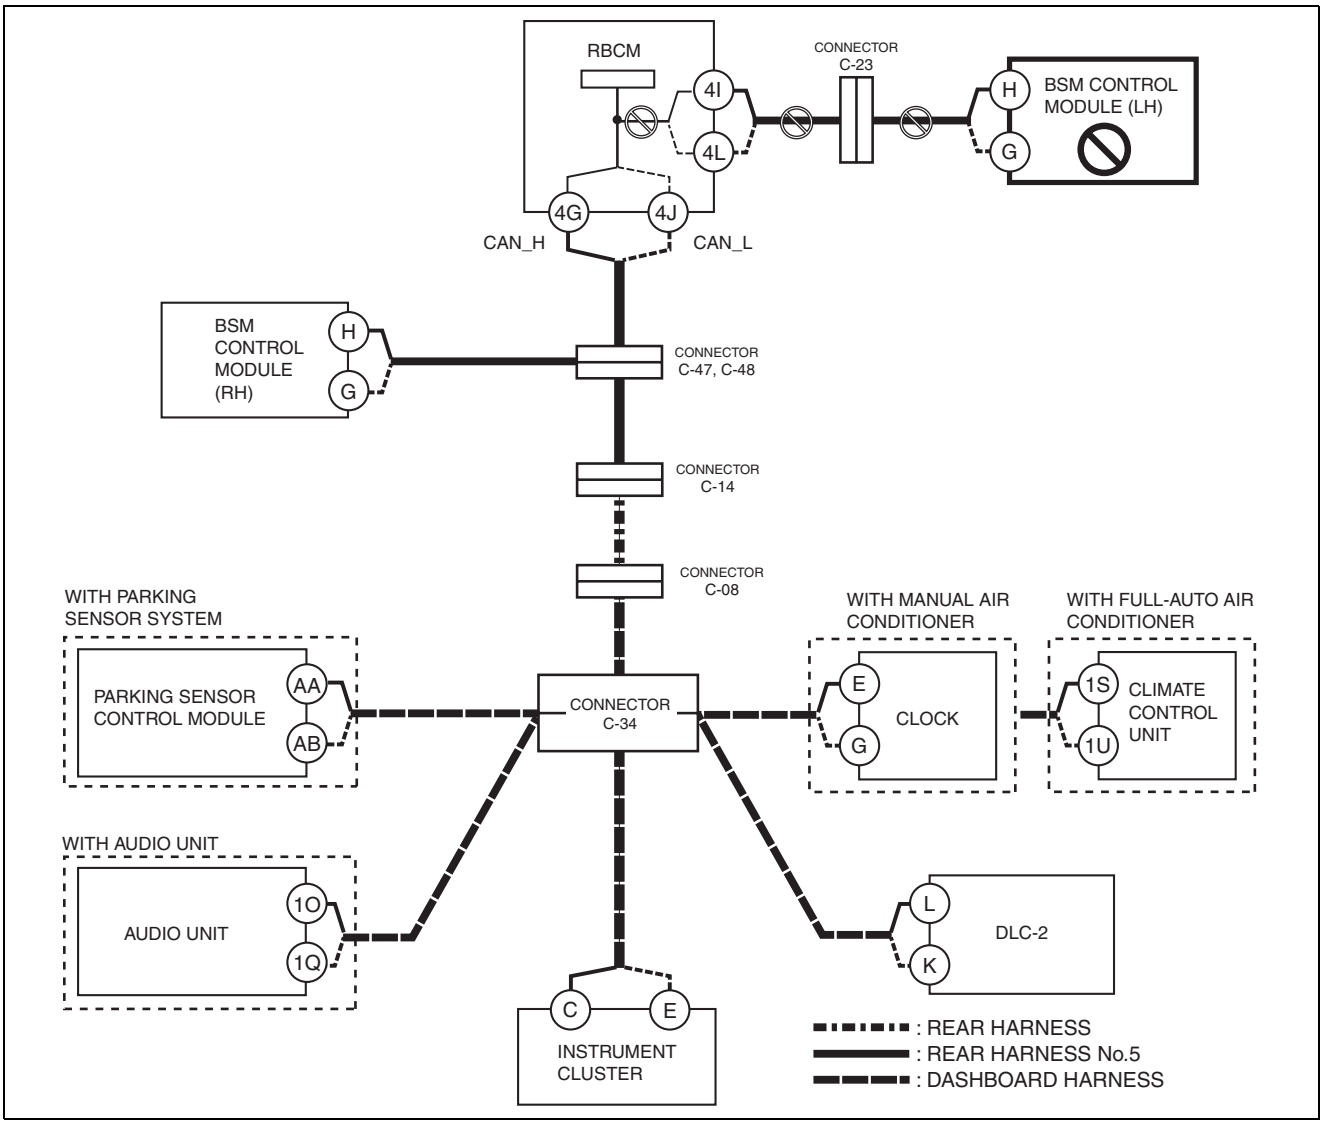
*1 : With BSM
*2 : With rear vehicle monitoring system
*3 : With full-auto air conditioner
*4 : With audio unit

A
Possible cause
- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between BSM control module (LH) and connector C-23
- Open circuit in wiring harness between connector C-23 and RCBM
- Connector C-23 malfunction
- BSM control module (LH) malfunction
- CAN circuit in rear body control module (RBCM) malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000356

Inspection item

- BSM control module (LH) connector
- Rear body control module (RBCM) connector
- Connector C-23
- Wiring harness between BSM control module (LH) terminal H and connector C-23.
- Wiring harness between BSM control module (LH) terminal G and connector C-23
- Wiring harness between rear body control module (RBCM) terminal 4I and connector C-23
- Wiring harness between rear body control module (RBCM) terminal 4L and connector C-23
- BSM control module (LH)
- Rear body control module (RBCM)
  - — Between rear body control module (RBCM) terminal 4G and rear body control module (RBCM) terminal 4I
  - — Between rear body control module (RBCM) terminal 4J and rear body control module (RBCM) terminal 4L

B

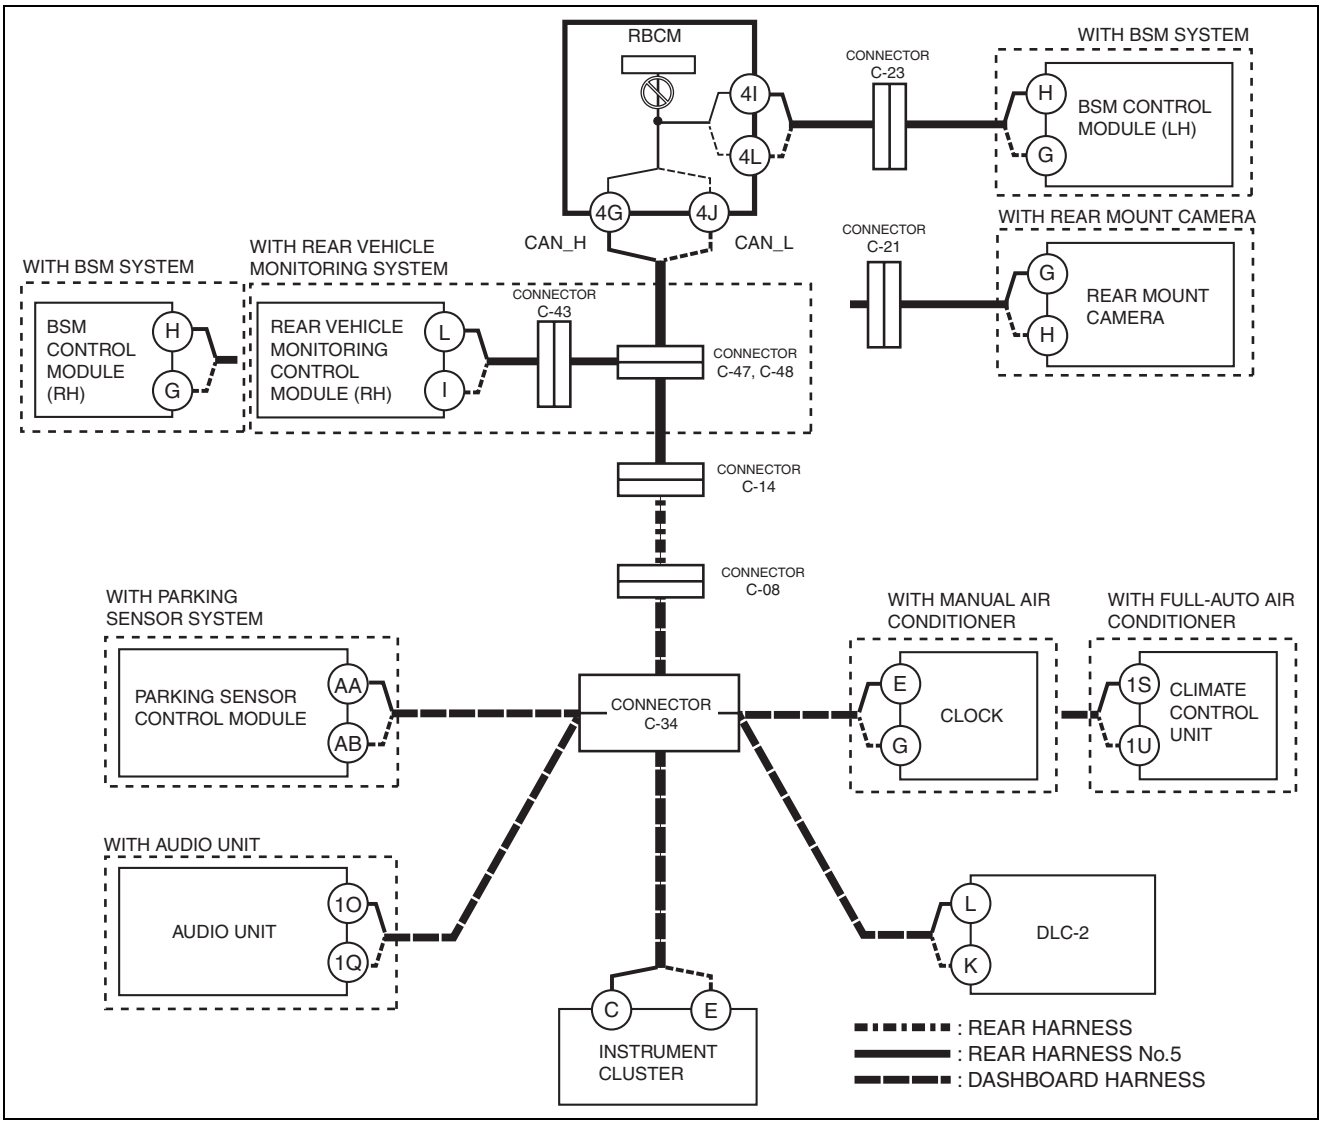
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Rear body control module (RBCM) malfunction

10

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000356

Inspection item

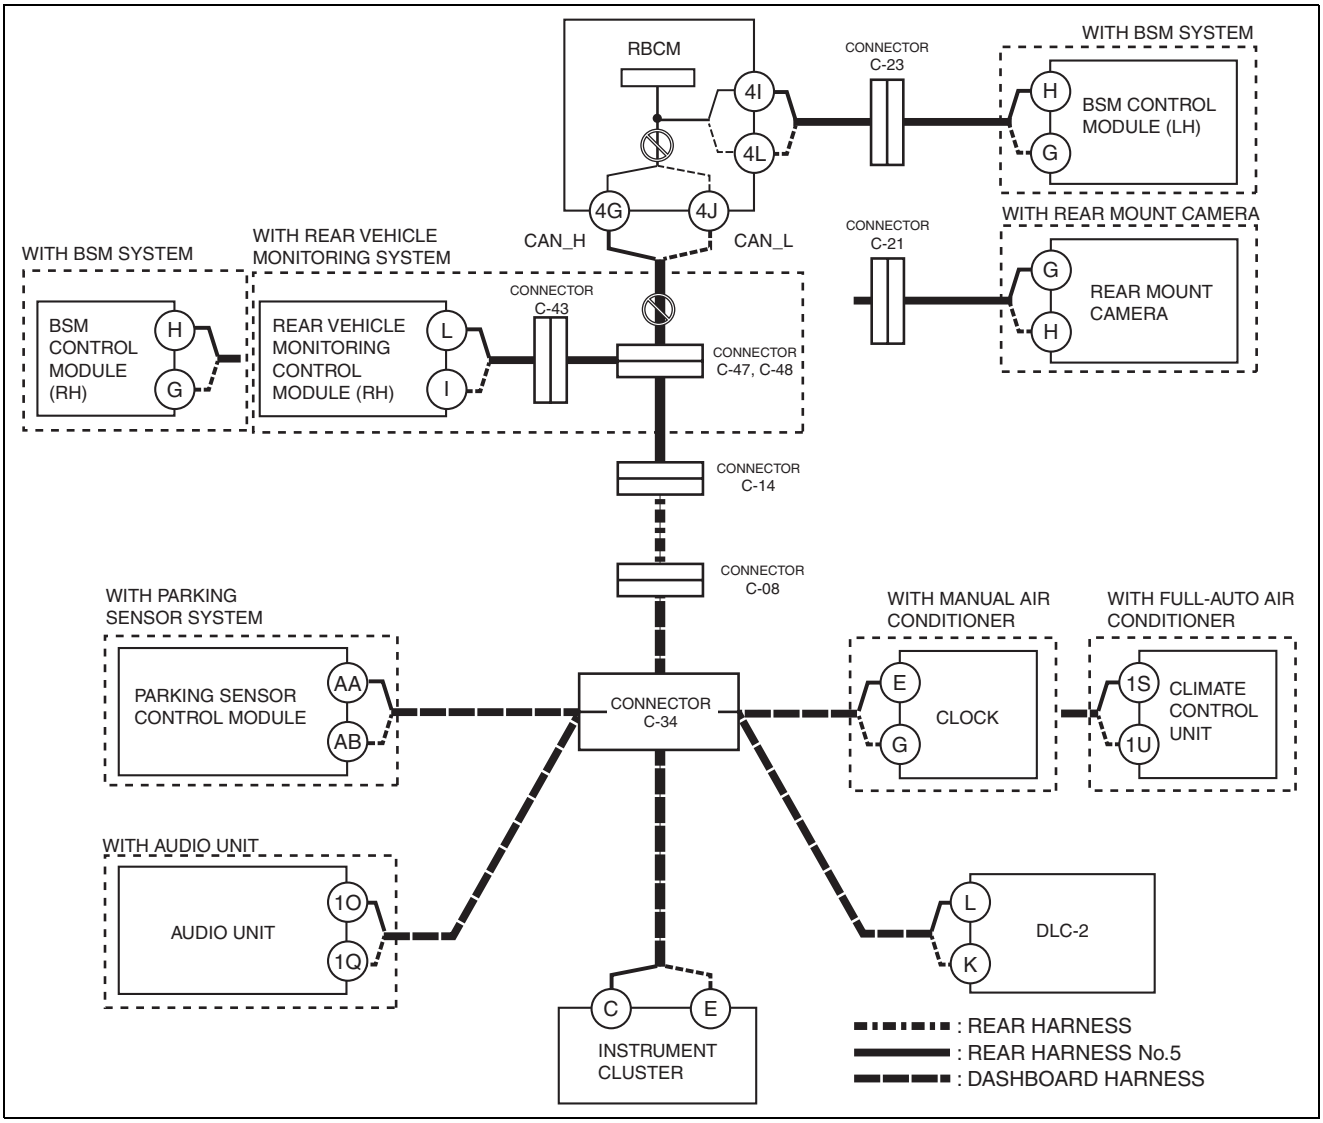
- Rear body control module (RBCM)

C
With rear vehicle monitoring system or BSM system
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between rear body control module (RBCM) and connectors C-47, C-48
- Connector C-47, C-48 malfunction
- CAN circuit in rear body control module (RBCM) malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000356

Inspection item

- Rear body control module (RBCM) connector
- Connectors C-47, C-48
- Wiring harness between rear body control module (RBCM) terminal 4G and connectors C-47
- Wiring harness between rear body control module (RBCM) terminal 4J and connectors C-48
- Rear body control module (RBCM)
  - — Between rear body control module (RBCM) terminal 4G and rear body control module (RBCM) terminal 4I
  - — Between rear body control module (RBCM) terminal 4J and rear body control module (RBCM) terminal 4L

Without rear vehicle monitoring system or BSM system

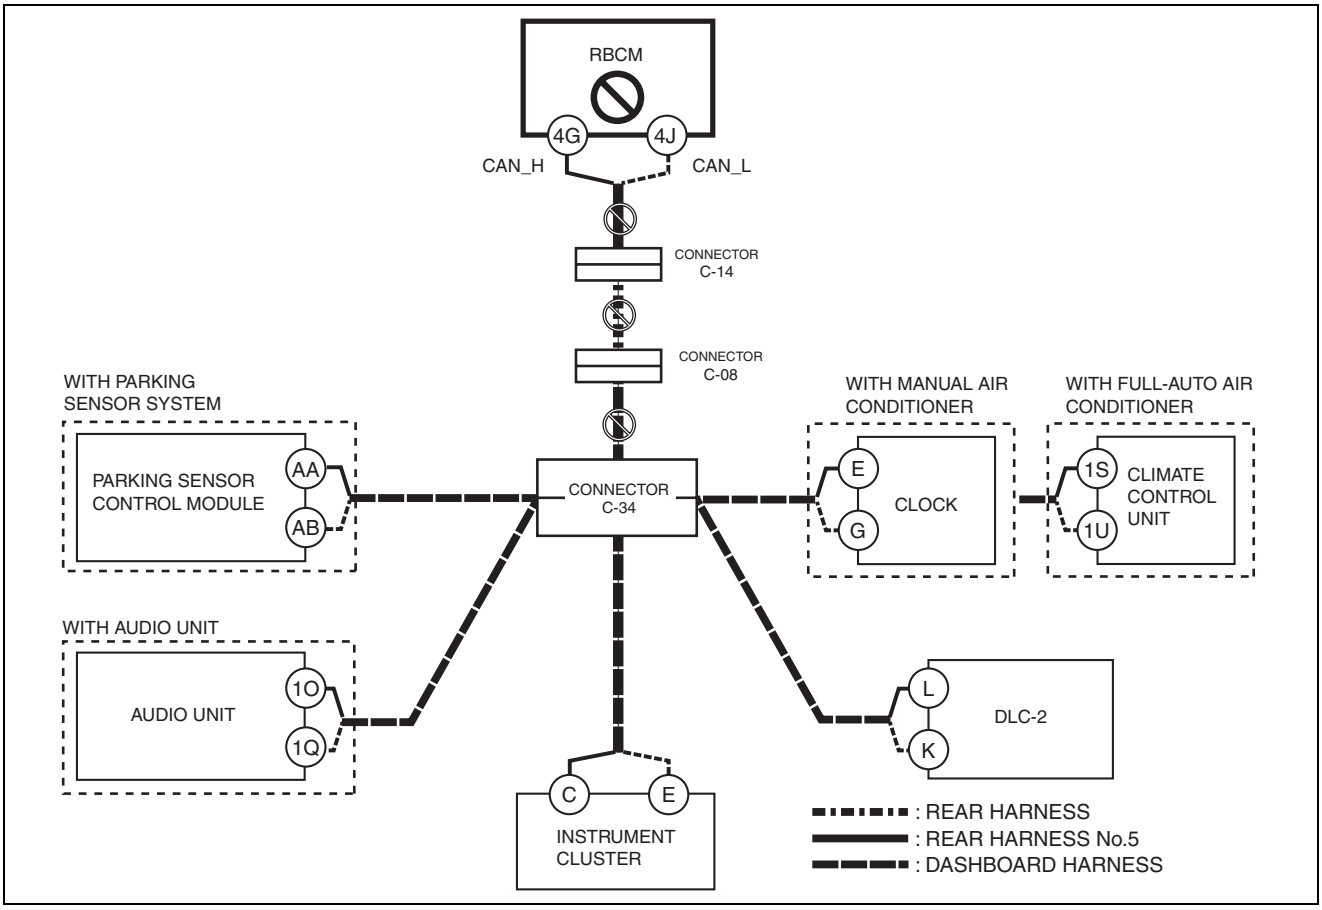
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between rear body control module (RBCM) and connector C-14
- Open circuit in wiring harness between connector C-14 and connector C-08
- Open circuit in wiring harness between connector C-08 and connector C-34
- Connector C-14 malfunction
- Connector C-08 malfunction
- Connector C-34 malfunction
- Rear body control module (RBCM) malfunction

10

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000357

Inspection item

- Rear body control module (RBCM) connector
- Connector C-14
- Connector C-08
- Connector C-34
- Wiring harness between rear body control module (RBCM) terminal 4G and connector C-14
- Wiring harness between rear body control module (RBCM) terminal 4J and connector C-14
- Wiring harness between connector C-14 and connector C-08
- Wiring harness between connector C-08 and connector C-34
- Rear body control module (RBCM)

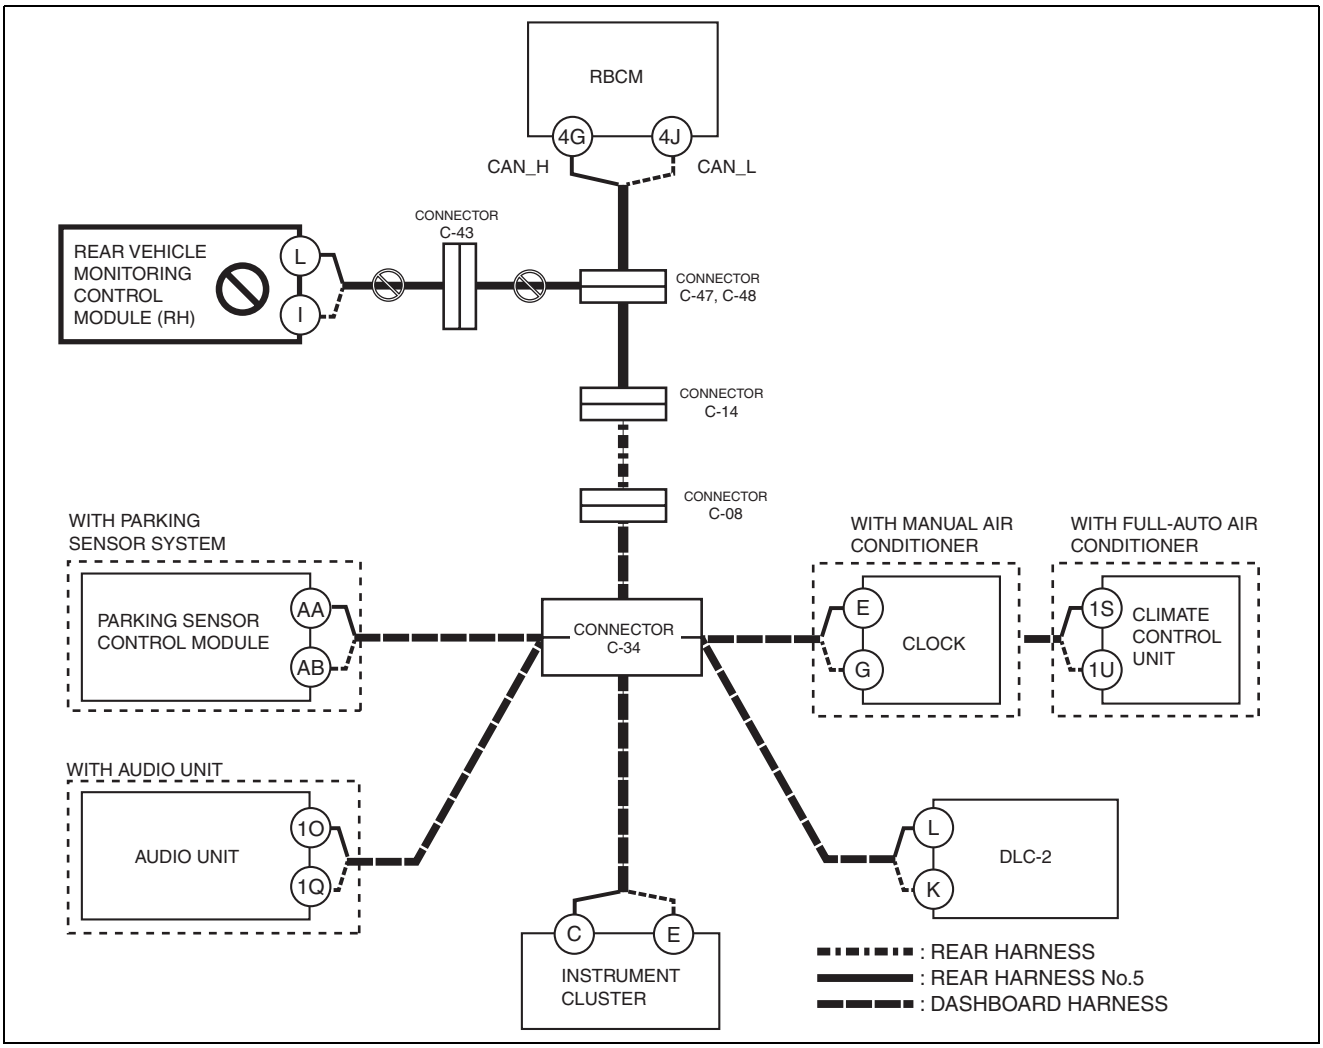
D

Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between rear vehicle monitoring (RH) and connectors C-43
- Open circuit in wiring harness between connectors C-43 and connectors C-47, C-48
- Connector C-43 malfunction
- Connector C-47, C-48 malfunction
- Rear vehicle monitoring control module (RH) malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000357

Inspection item

- Rear vehicle monitoring control module (RH) connector
- Connectors C-43
- Connectors C-47, C-48
- Wiring harness between Rear vehicle monitoring control module (RH) terminal L and connector C-43
- Wiring harness between Rear vehicle monitoring control module (RH) terminal I and connector C-43
- Wiring harness between connector C-43 and connector C-47, C-48
- Rear vehicle monitoring control module (RH)

E

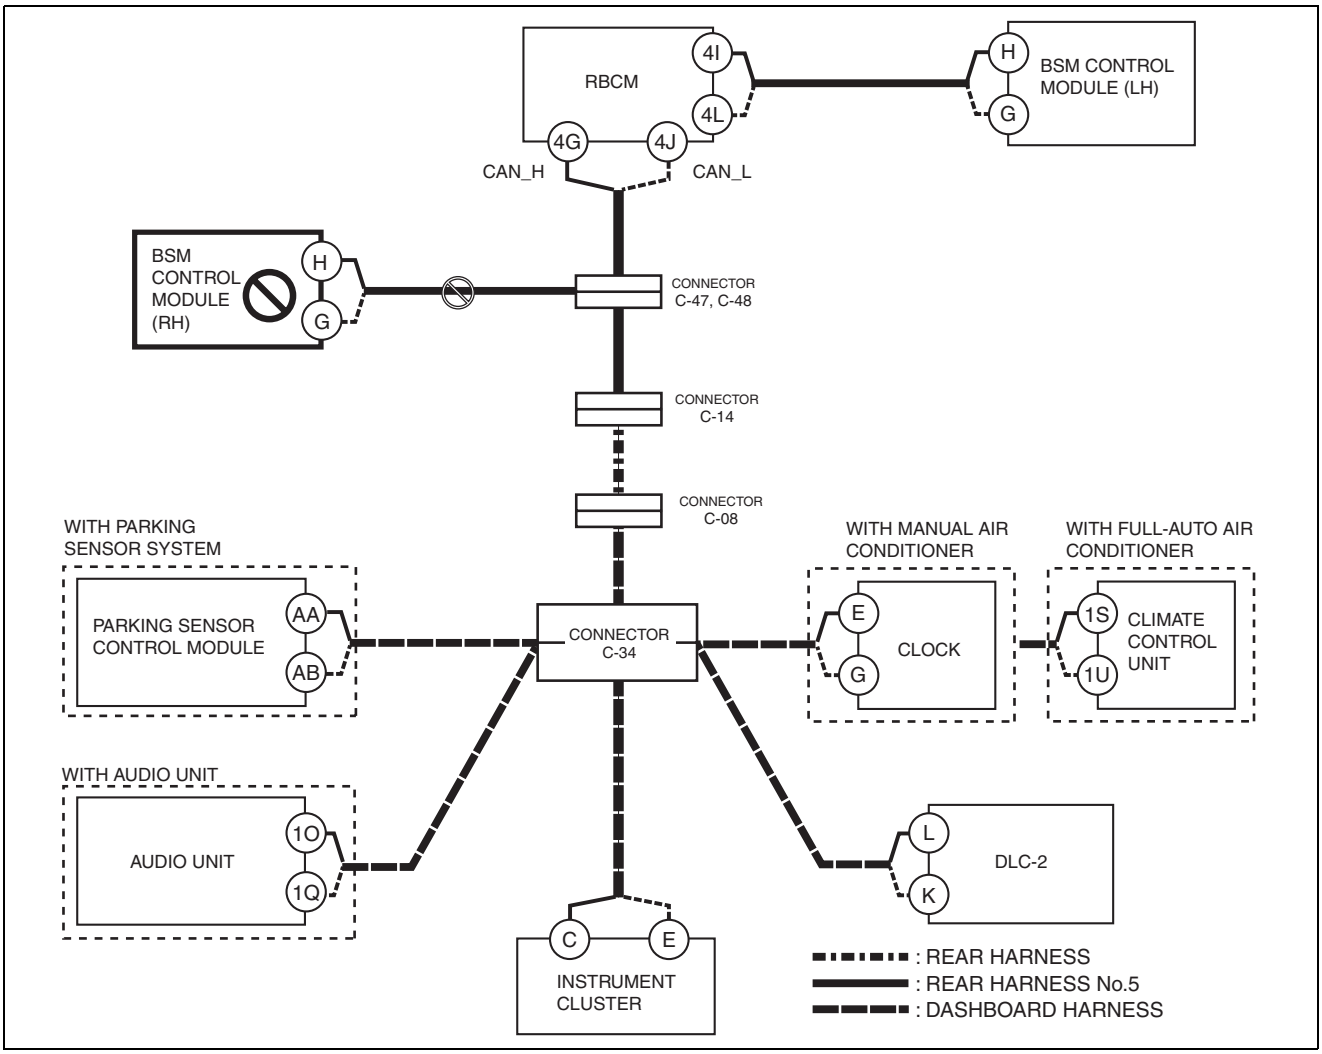
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between BSM control module (RH) and connectors C-47, C-48
- Connector C-47, C-48 malfunction
- BSM control module (RH) malfunction

10

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000357

Inspection item

- BSM control module (RH) connector
- Connectors C-47, C-48
- Wiring harness between BSM control module (RH) terminal H and connector C-47
- Wiring harness between BSM control module (RH) terminal G and connector C-48
- BSM control module (RH)

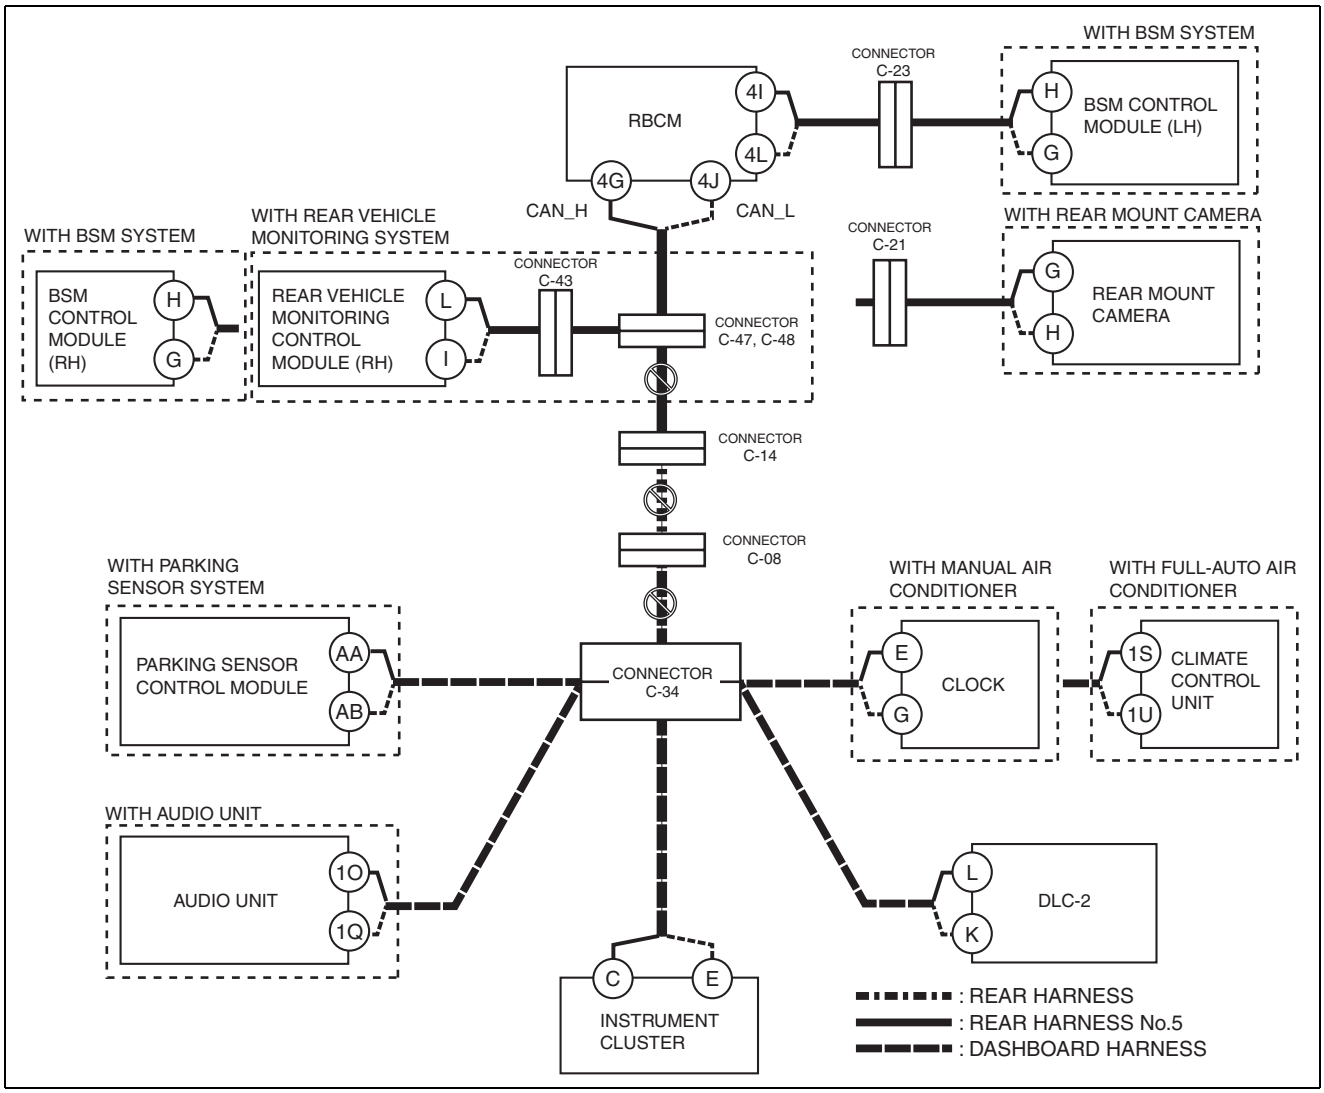
F

Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between connectors C-47, C-48 and connector C-14
- Open circuit in wiring harness between connector C-14 and C-08
- Open circuit in wiring harness between connectors C-08 and C-34
- Connectors C-47, C-48 malfunction
- Connector C-14 malfunction
- Connector C-08 malfunction
- Connector C-34 malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000357

Inspection item

- Connectors C-47, C-48
- Connector C-14
- Connector C-08
- Connector C-34
- Wiring harness between connectors C-47, C-48 and connector C-14
- Wiring harness between connector C-14 and connector C-08
- Wiring harness between connector C-08 and connector C-34

G

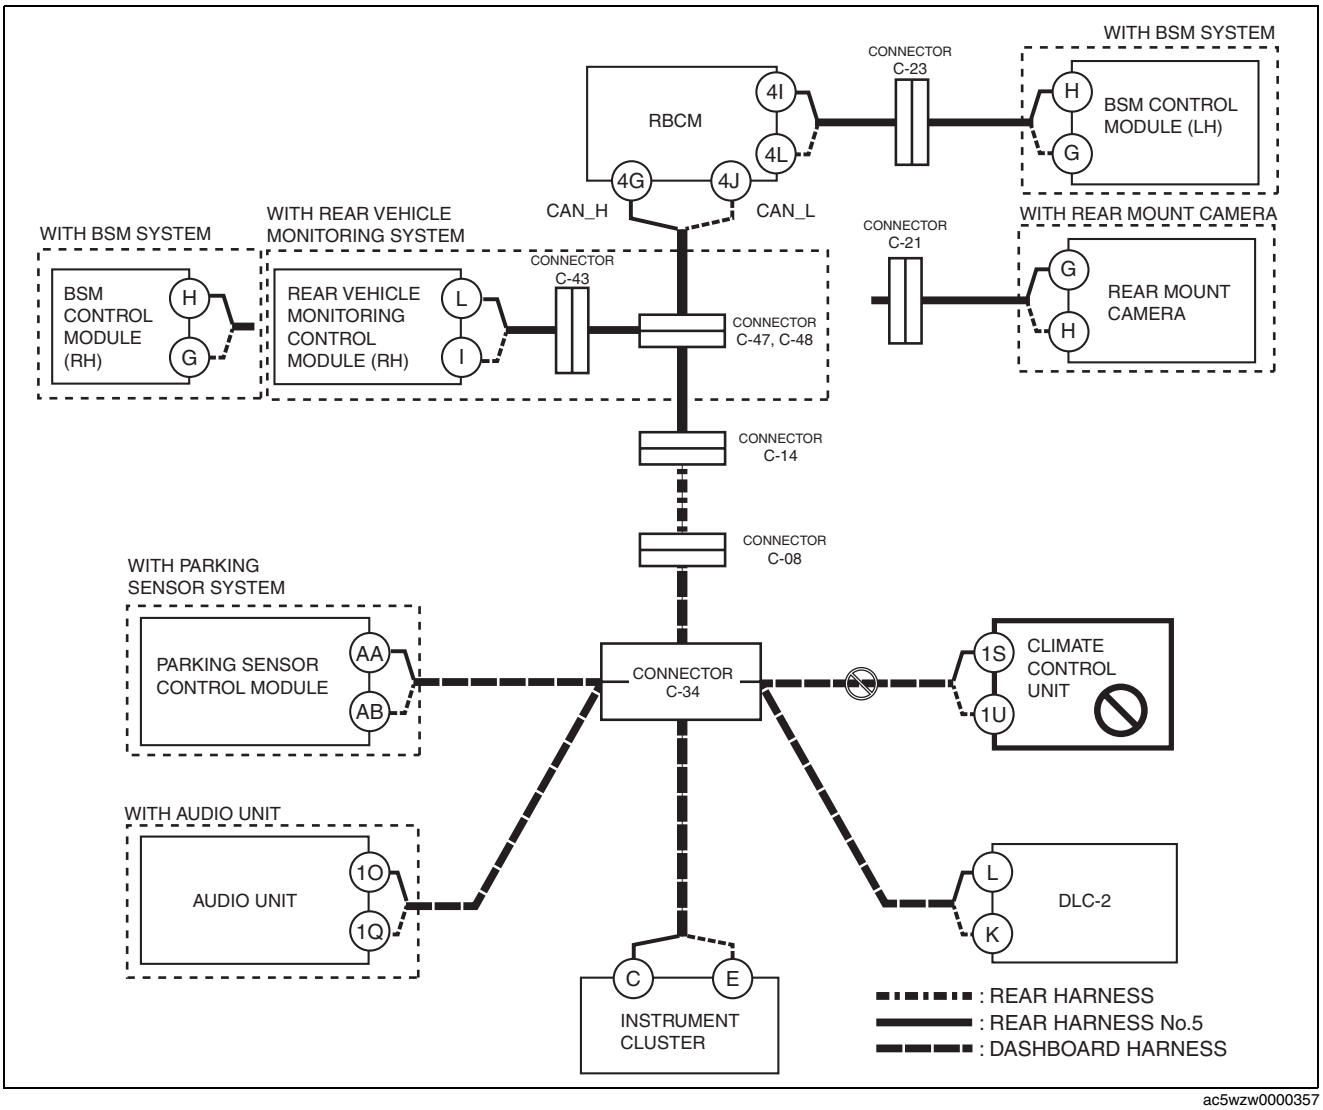
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between climate control unit and connector C-34
- Connector C-34 malfunction
- Climate control unit malfunction

10

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000357

Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between climate control unit and connector C-34
- Connector C-34 malfunction
- Climate control unit malfunction

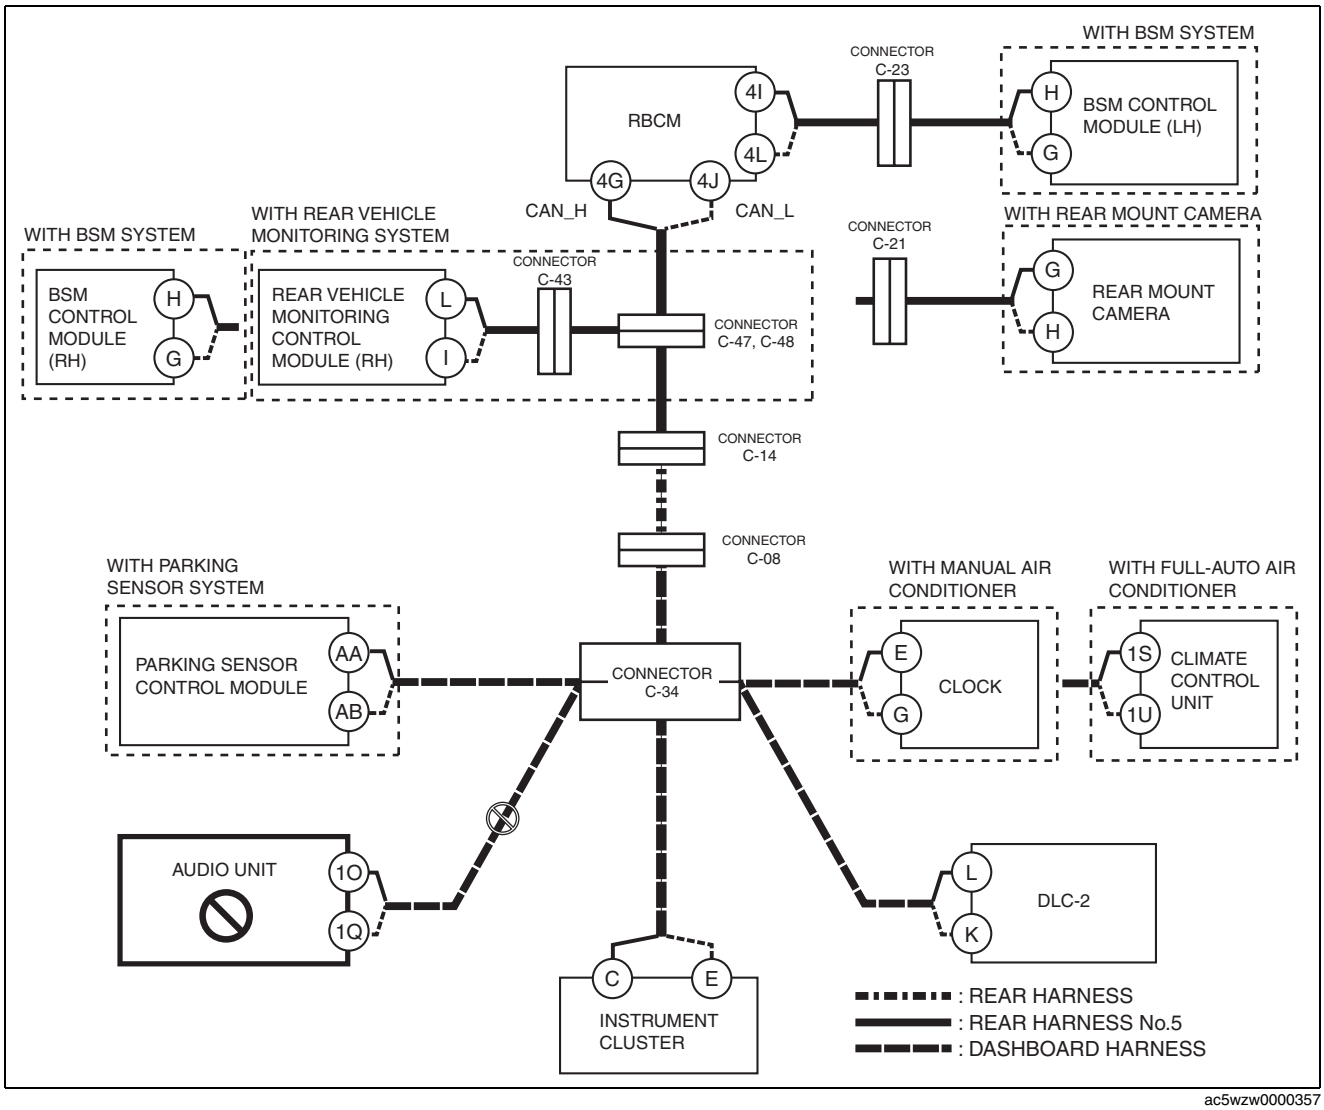
H

Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between vehicle with audio unit and connector C-34
- Connector C-34 malfunction
- Audio unit malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000357

Inspection item

- Audio unit connector
- Connector C-34
- Wiring harness between audio unit terminal 1O and connector C-34
- Wiring harness between audio unit terminal 1Q and connector C-34
- Audio unit

I

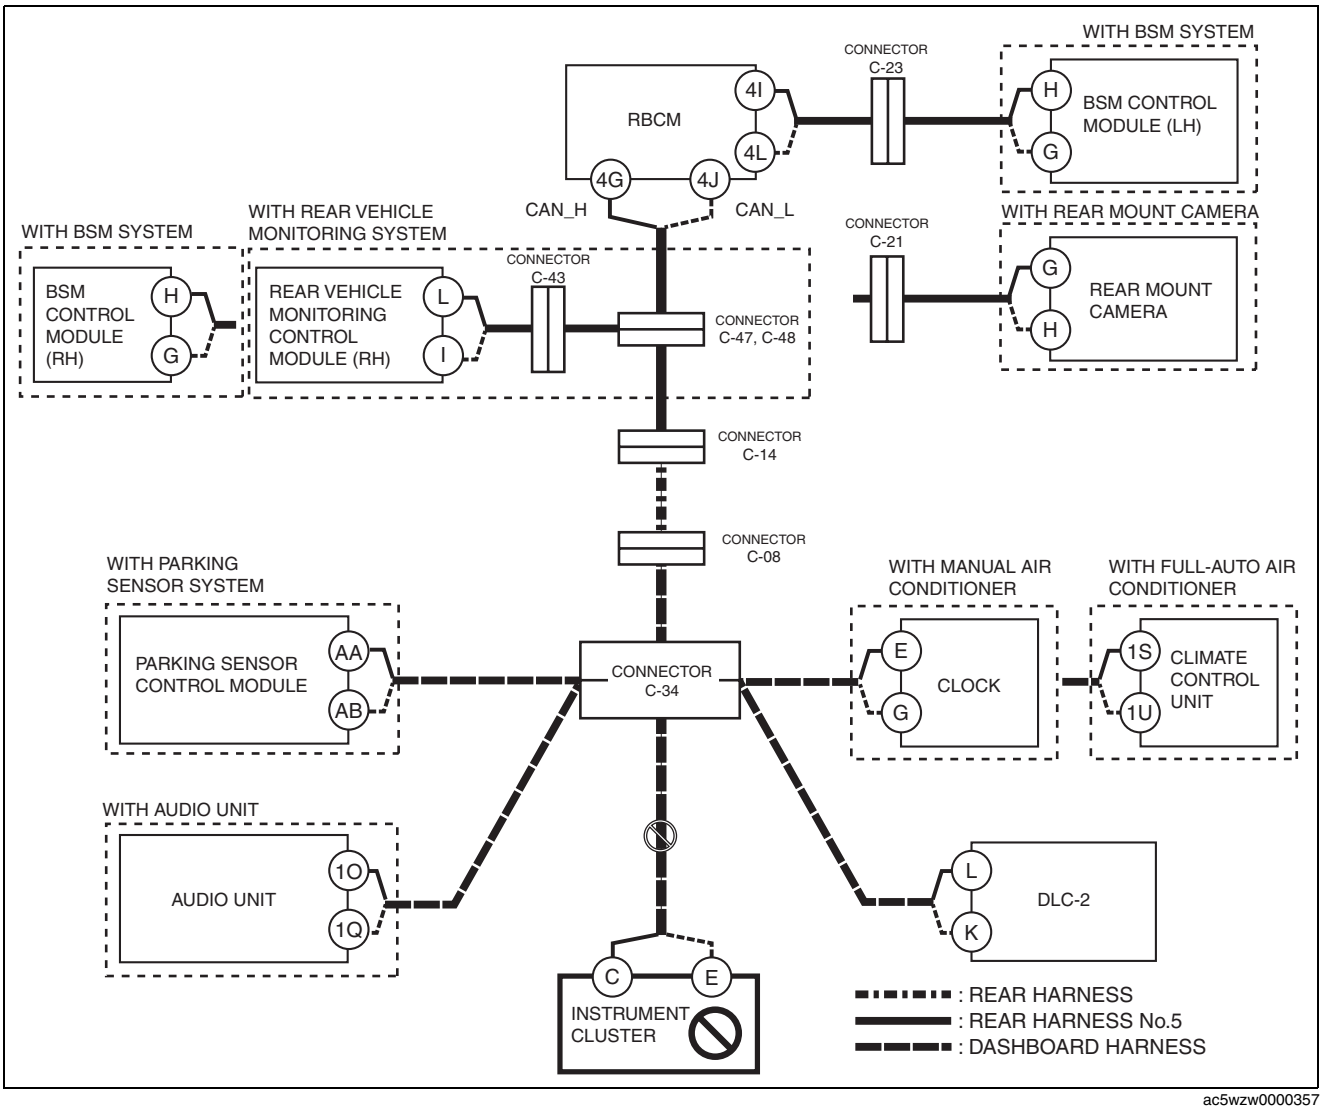
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between instrument cluster and connector C-34
- Connector C-34 malfunction
- Instrument cluster malfunction

10

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000357

Inspection item

- Instrument cluster connector
- Connector C-34
- Wiring harness between instrument cluster terminal C and connector C-34
- Wiring harness between instrument cluster terminal E and connector C-34
- Instrument cluster

J

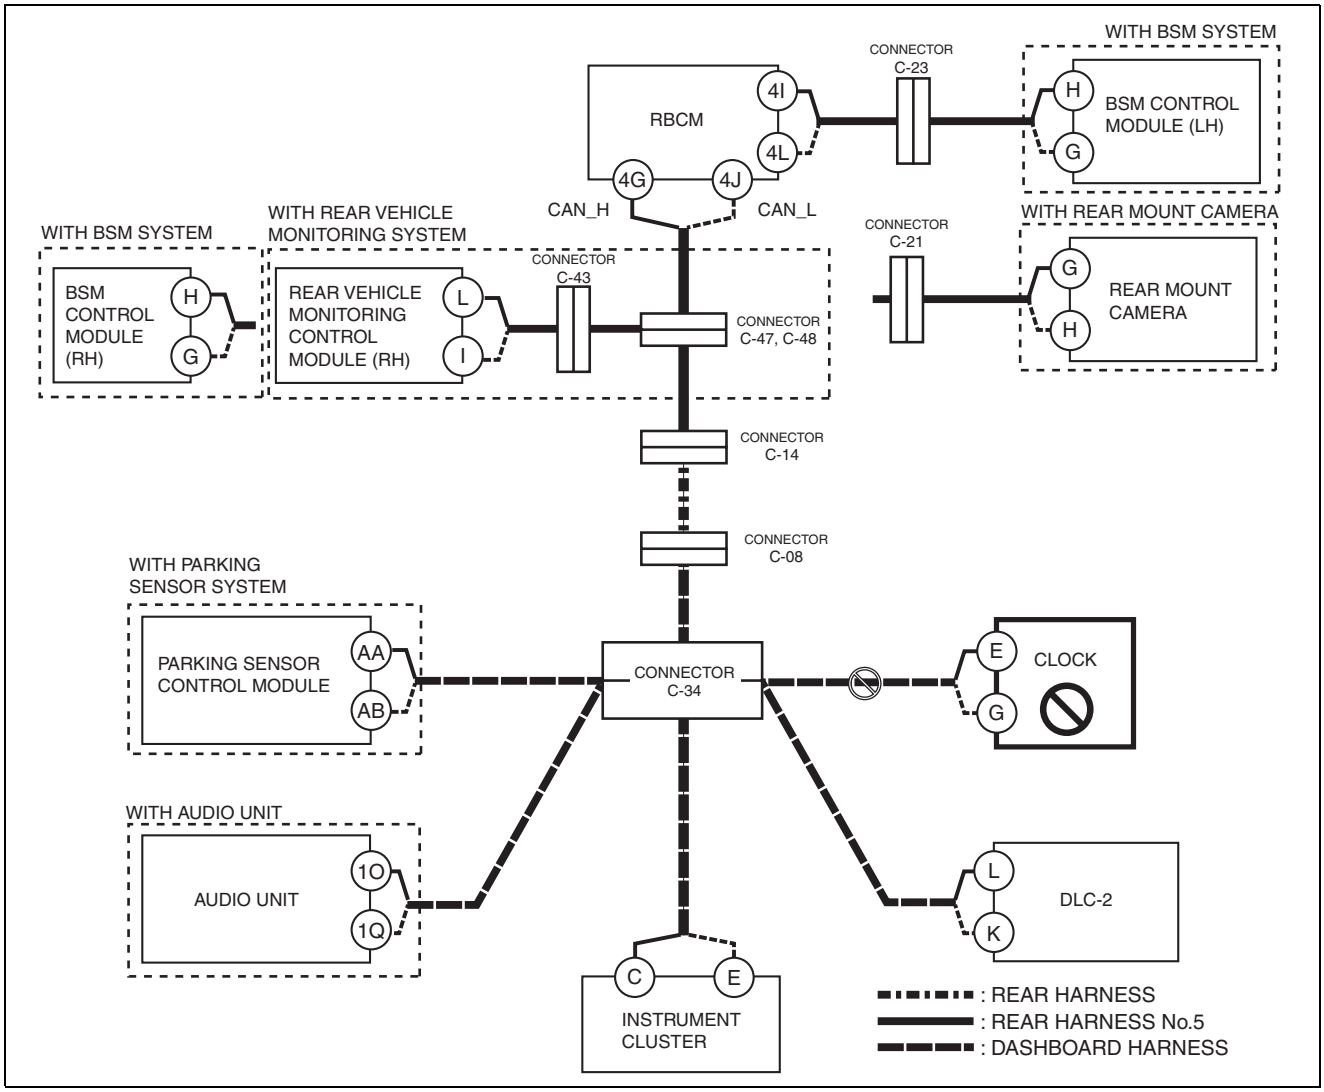
1. Perform the clock input/output check mode. (See 09-22-96 CLOCK INPUT/OUTPUT CHECK MODE.)
   - If "2:00" is displayed, go to the next step.
   - If "2:Er is displayed, inspect the inspection items in the possible causes for 10-02B-94 Clock Circuit Malfunction.
2. Shift the selector lever (ATX) or shift lever (MTX) to the R position.
   - If images from the rear mount camera appear in the audio unit, inspect the inspection items in the possible causes for the 10-02B-95 Parking Sensor Control Module Circuit Malfunction.
   - If images from the rear mount camera do not appear in the audio unit, inspect the inspection items in the possible causes for 10-02B-96 Rear Mount Camera Circuit Malfunction.

Clock Circuit Malfunction
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between clock component and connector C-34
- Connector C-34 malfunction
- Clock component malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000357

Inspection item

- Clock component connector
- Connector C-34
- Wiring harness between clock component terminal E and connector C-34
- Wiring harness between clock component terminal G and connector C-34
- Clock component

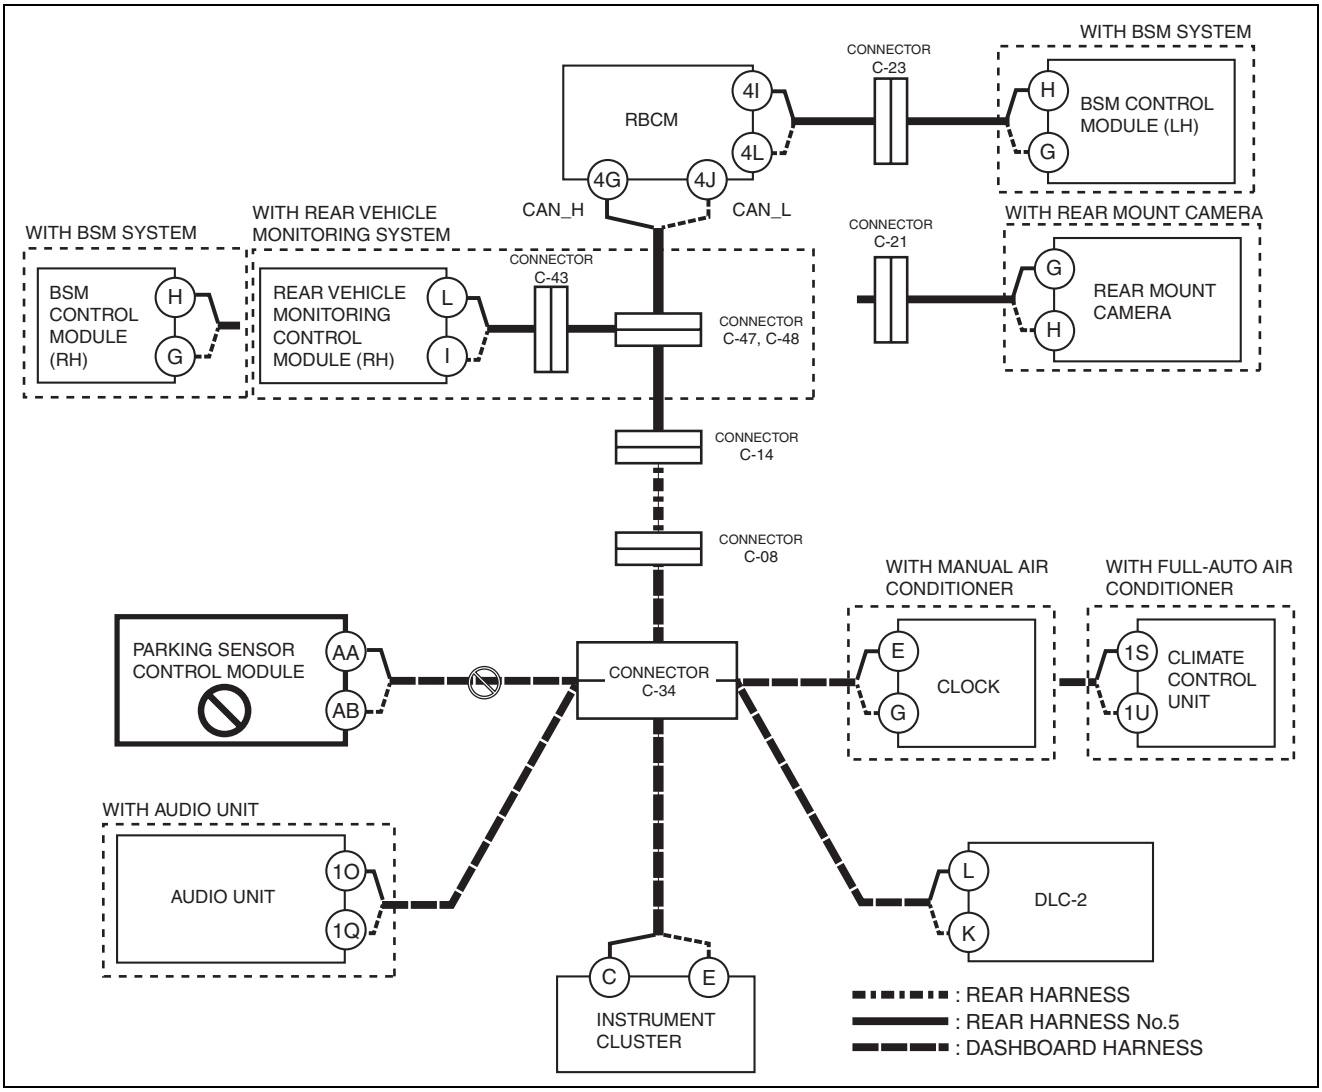
Parking Sensor Control Module Circuit Malfunction
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between parking sensor control module and connector C-34
- Connector C-34 malfunction
- Parking sensor control module malfunction

10

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000357

Inspection item

- Parking sensor control module connector
- Connector C-34
- Wiring harness between parking sensor control module terminal AA and connector C-34
- Wiring harness between parking sensor control module terminal AB and connector C-34
- Parking sensor control module

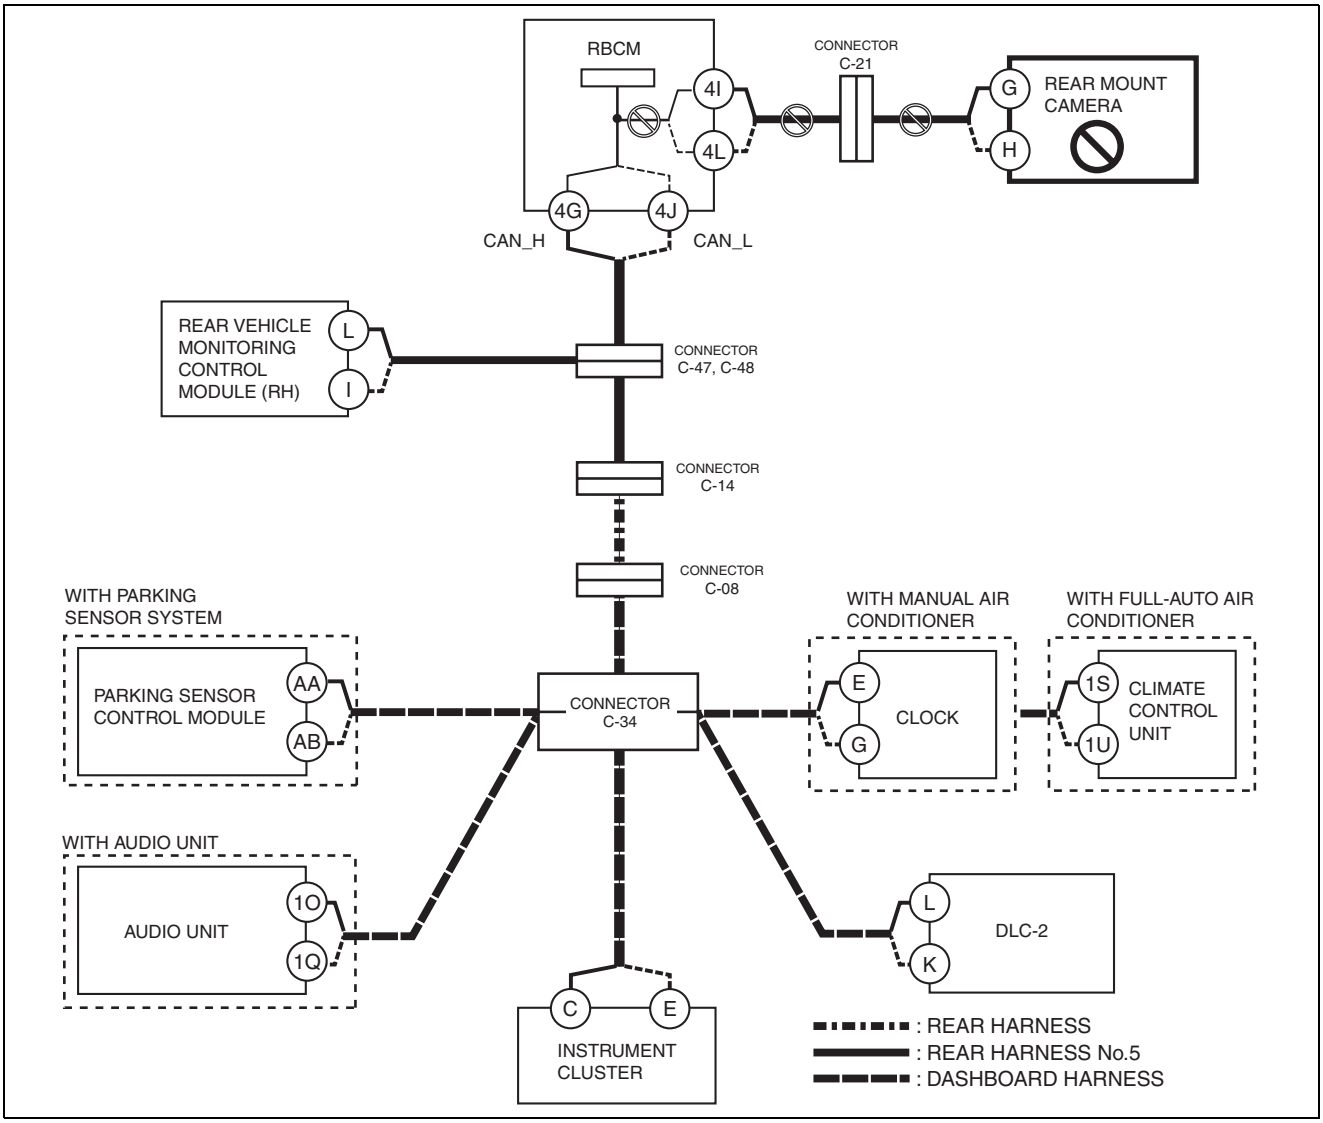
Rear Mount Camera Circuit Malfunction

Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between rear mount camera and connector C-21
- Open circuit in wiring harness between connector C-21 and RCBM
- Connector C-21 malfunction
- Rear mount camera malfunction
- CAN circuit in rear body control module (RBCM) malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000357

Inspection item

- Rear mount camera connector
- Rear body control module (RBCM) connector
- Connector C-21
- Wiring harness between rear mount camera terminal G and connector C-21.
- Wiring harness between rear mount camera terminal H and connector C-21.
- Wiring harness between rear body control module (RBCM) terminal 4I and connector C-21
- Wiring harness between rear body control module (RBCM) terminal 4L and connector C-21
- Rear mount camera
- Rear body control module (RBCM)
  - — Between rear body control module (RBCM) terminal 4G and rear body control module (RBCM) terminal 4I
  - — Between rear body control module (RBCM) terminal 4J and rear body control module (RBCM) terminal 4L

DETERMINING SHORT TO GROUND LOCATION (MS-CAN) [SKYACTIV-G 2.0 (R.H.D.)]

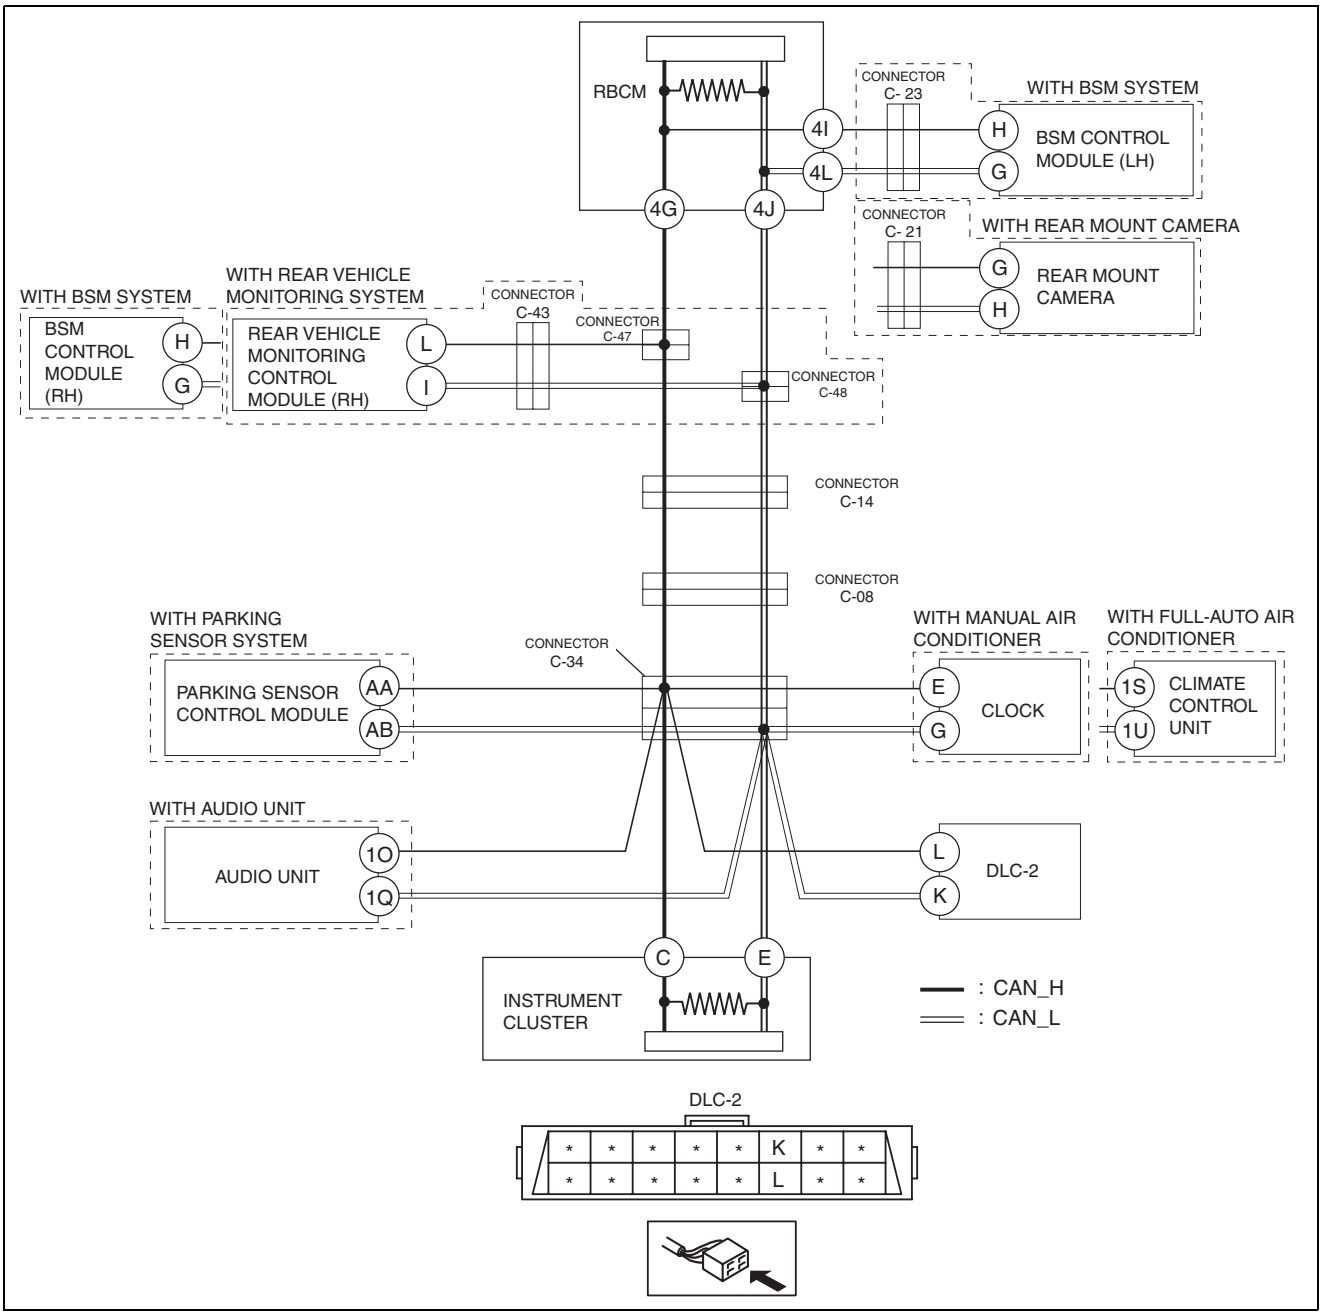
id100202000900

Caution

- **Perform the following malfunction diagnosis only when it is diagnosed with a short to ground by 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)].**

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000068

Determination procedure

Caution

- **When disconnecting the connector, verify that there is no looseness, damage, deformation, corrosion, or poor connection of the connector terminals.**
- **When inspecting the DLC-2, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals.**

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
1	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-08 AND INSTRUMENT CLUSTER** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-08. • Inspect for continuity at the following terminals: — Between DLC-2 terminal L and body ground — Between DLC-2 terminal K and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 11.
2	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTORS C-34 AND DLC-2** • Disconnect connector C-34. • Inspect for continuity at the following terminals: — Between DLC-2 terminal L and body ground — Between DLC-2 terminal K and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between connector C-34 and DLC-2 because the wiring harness is shorted to ground.
		No	Go to the next step.
3	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-34 AND PARKING SENSOR CONTROL MODULE** • Inspect for continuity at the following terminals: — Between parking sensor control module terminal AA and body ground — Between parking sensor control module terminal AB and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 5.
4	**INSPECT CAN LINE IN PARKING SENSOR CONTROL MODULE FOR SHORT TO GROUND** • Disconnect the parking sensor connector. • Inspect for continuity at the following terminals: — Between parking sensor control module terminal AA (wiring harness side) and body ground — Between parking sensor control module terminal AB (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the parking sensor control module and connector C-34 because the wiring harness is shorted to ground.
		No	Replace the parking sensor control module because there is a short to ground in the parking sensor control module. (See 09-22-57 PARKING SENSOR CONTROL MODULE REMOVAL/INSTALLATION.)
5	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-34 AND CLIMATE CONTROL UNIT** • Inspect for continuity at the following terminals: — Between climate control unit terminal 1S and body ground (with full-auto air conditioner) — Between climate control unit terminal 1U and body ground (with full-auto air conditioner) — Between clock terminal E and body ground (with manual air conditioner) — Between clock terminal G and body ground (with manual air conditioner) • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 7.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
6	**INSPECT CAN LINE IN CLIMATE CONTROL UNIT OR CLOCK FOR SHORT TO GROUND** • Disconnect the climate control unit connector or clock connector. • Inspect for continuity at the following terminals: — Between climate control unit terminal 1S (wiring harness side) and body ground (with full-auto air conditioner) — Between climate control unit terminal 1U (wiring harness side) and body ground (with full-auto air conditioner) — Between clock terminal E (wiring harness side) and body ground (with manual air conditioner) — Between clock terminal G (wiring harness side) and body ground (with manual air conditioner) • Is there continuity?	Yes	Repair or replace the wiring harness between the climate control unit or clock and connector C-34 because the wiring harness is shorted to ground.
		No	Replace the climate control unit or the clock because there is a short to ground inside the climate control unit or the clock. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) (See 09-22-92 CLOCK REMOVAL/INSTALLATION.)
7	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-34 AND AUDIO UNIT** • Inspect for continuity at the following terminals: — Between audio unit terminal 1O and body ground — Between audio unit terminal 1Q and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 9.
8	**INSPECT CAN LINE IN AUDIO UNIT FOR SHORT TO GROUND** • Disconnect the audio unit connector. • Inspect for continuity at the following terminals: — Between audio unit terminal 1O (wiring harness side) and body ground — Between audio unit terminal 1Q (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the audio unit and connector C-34 because the wiring harness is shorted to ground.
		No	Replace the audio unit because there is a short to ground in the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
9	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-34 AND INSTRUMENT CLUSTER** • Inspect for continuity at the following terminals: — Between instrument cluster terminal C and body ground — Between instrument cluster terminal E and body ground • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connectors C-08 and C-34 because the wiring harness is shorted to ground.
10	**INSPECT CAN LINE IN INSTRUMENT CLUSTER FOR SHORT TO GROUND** • Disconnect the instrument cluster connector. • Inspect for continuity at the following terminals: — Between instrument cluster terminal C (wiring harness side) and body ground — Between instrument cluster terminal E (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the instrument cluster and connector C-34 because the wiring harness is shorted to ground.
		No	Replace the instrument cluster because there is a short to ground in the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
11	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTORS C-14 AND C-08** • Disconnect connector C-14. • Connect connector C-08. • Inspect for continuity at the following terminals: — Between DLC-2 terminal L and body ground — Between DLC-2 terminal K and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between connectors C-14 and C-08 because the wiring harness is shorted to ground.
		No	Go to the next step.
12	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-14 AND CONNECTORS C-47 AND C-48** • Disconnect connectors C-47 and C-48. • Connect connector C-14. • Inspect for continuity at the following terminals: — Between DLC-2 terminal L and body ground — Between DLC-2 terminal K and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between connectors C-47 and C-48 and connector C-14 because the wiring harness is shorted to ground.
		No	Go to the next step.
13	**INSPECT FOR SHORT TO GROUND BETWEEN REAR VEHICLE MONITORING CONTROL MODULE (RH) OR BSM CONTROL MODULE (RH) AND CONNECTORS C-47 AND C-48** • Inspect for continuity at the following terminals: — Between rear vehicle monitoring control module (RH) terminal L and body ground (with rear vehicle monitoring system) — Between rear vehicle monitoring control module (RH) terminal I and body ground (with rear vehicle monitoring system) — Between BSM control module (RH) terminal H and body ground (with BSM system) — Between BSM control module (RH) terminal G and body ground (with BSM system) • Is there continuity?	Yes	• Go to the next step. (With rear vehicle monitoring system) • Go to Step 15. (With BSM system)
		No	Go to Step 16.
14	**INSPECT FOR SHORT TO GROUND BETWEEN REAR VEHICLE MONITORING CONTROL MODULE (RH) AND CONNECTOR C-43** • Disconnect connector C-43. • Inspect for continuity at the following terminals: — Between rear vehicle monitoring control module (RH) terminal L and body ground — Between rear vehicle monitoring control module (RH) terminal I and body ground • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-43 and connectors C-47 and C-48 because the wiring harness is shorted to ground.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
15	**INSPECT CAN LINE IN REAR VEHICLE MONITORING CONTROL MODULE (RH) OR BSM CONTROL MODULE (RH) FOR SHORT TO GROUND** • Disconnect the rear vehicle monitoring control module (RH) connector or BSM control module (RH) connector. • Inspect for continuity at the following terminals: — Between rear vehicle monitoring control module (RH) terminal L (wiring harness side) and body ground (with rear vehicle monitoring system) — Between rear vehicle monitoring control module (RH) terminal I (wiring harness side) and body ground (with rear vehicle monitoring system) — Between BSM control module (RH) terminal H (wiring harness side) and body ground (with BSM system) — Between rear vehicle monitoring control module (RH) terminal G (wiring harness side) and body ground (with rear vehicle monitoring system) • Is there continuity?	Yes	• Repair or replace the wiring harness between the rear vehicle monitoring control module (RH) and connector C-43 because the wiring harness is shorted to ground. (With rear vehicle monitoring system) • Repair or replace the wiring harness between the BSM control module (RH) and connectors C-47 and C-48 because the wiring harness is shorted to ground. (With BSM system)
		No	Replace the rear vehicle monitoring control module (RH) or the BSM control module (RH) because there is a short to ground in the rear vehicle monitoring control module (RH) or the BSM control module (RH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.) (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
16	**INSPECT FOR SHORT TO GROUND BETWEEN REAR BODY CONTROL MODULE (RBCM) AND BSM CONTROL MODULE (LH) OR REAR MOUNT CAMERA** • Disconnect the rear body control module (RBCM) connector. • Inspect for continuity at the following terminals: — Between BSM control module (LH) terminal H and body ground (with BSM system) — Between BSM control module (LH) terminal G and body ground (with BSM system) — Between rear mount camera terminal G and body ground (with rear mount camera) — Between rear mount camera terminal H and body ground (with rear mount camera) • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 19.
17	**INSPECT FOR SHORT TO GROUND BETWEEN REAR BODY CONTROL MODULE (RBCM) AND CONNECTOR C-23 OR C-21** • Disconnect connector C-23 or C-21. • Inspect for continuity at the following terminals: — Between rear body control module (RBCM) terminal 4I (wiring harness side) and body ground — Between rear body control module (RBCM) terminal 4L (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the rear body control module (RBCM) and connector C-23 or C-21 because the wiring harness is shorted to ground.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
18	**INSPECT CAN LINE IN BSM CONTROL MODULE (LH) OR REAR MOUNT CAMERA FOR SHORT TO GROUND** • Disconnect the BSM control module (LH) connector or the rear mount camera connector. • Inspect for continuity at the following terminals: — Between BSM control module (LH) terminal H (wiring harness side) and body ground (with BSM system) — Between BSM control module (LH) terminal G (wiring harness side) and body ground (with BSM system) — Between rear mount camera terminal G (wiring harness side) and body ground (with rear mount camera) — Between rear mount camera terminal H (wiring harness side) and body ground (with rear mount camera) • Is there continuity?	Yes	• Repair or replace the wiring harness between BSM control module (LH) and connector C-23 because the wiring harness is shorted to ground. (With BSM system) • Repair or replace the wiring harness between the rear mount camera and connector C-21 because the wiring harness is shorted to ground. (With rear mount camera)
		No	Replace the BSM control module (LH) or the rear mount camera because there is a short to ground in the BSM control module (LH) or the rear mount camera. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
19	**INSPECT CAN LINE INSIDE REAR BODY CONTROL MODULE (RBCM) FOR SHORT TO GROUND** • Disconnect the rear body control module (RBCM) connector. • Inspect for continuity at the following terminals: — Between rear body control module (RBCM) terminal 4G (wiring harness side) and body ground — Between rear body control module (RBCM) terminal 4J (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the rear body control module (RBCM) and connectors C-47 and C-48 because the wiring harness is shorted to ground.
		No	Replace the rear body control module (RBCM) because there is a short to ground in the rear body control module (RBCM). (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)

DETERMINING SHORT TO POWER SUPPLY LOCATION (MS-CAN) [SKYACTIV-G 2.0 (R.H.D.)]

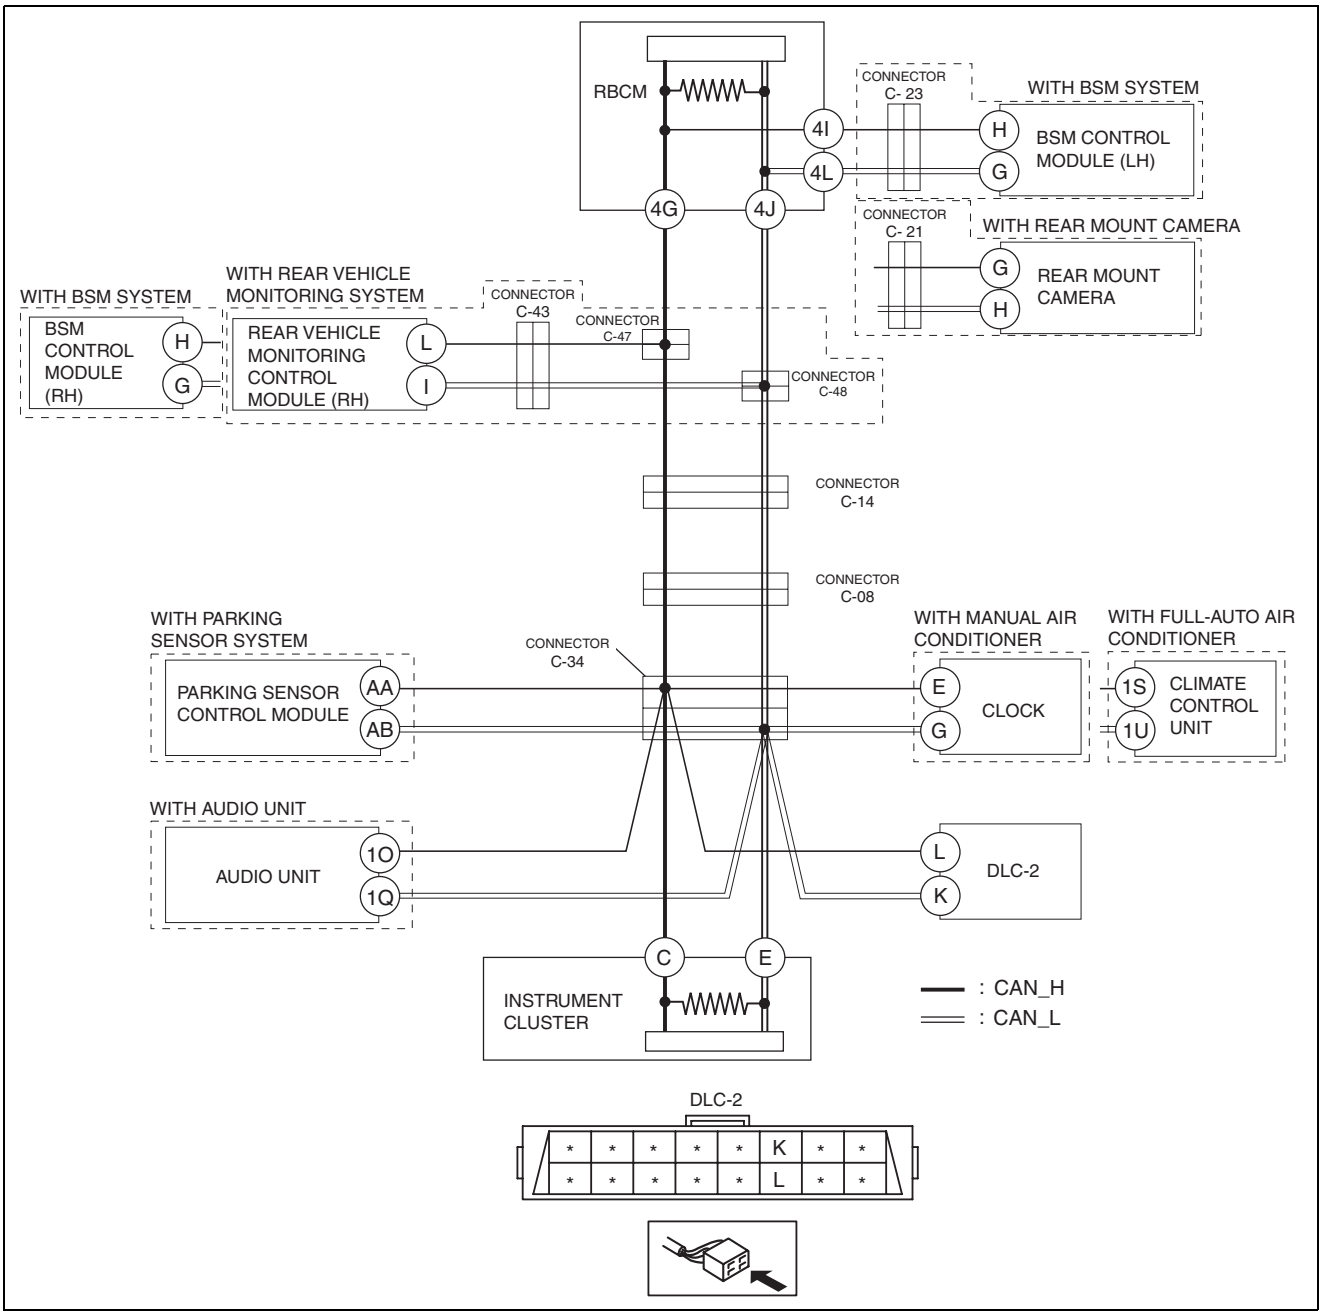
id100202001000

Caution

- **Perform the following malfunction diagnosis only when it is diagnosed with a short to the power supply by 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)].**

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000068

Determination procedure

Caution

- **When disconnecting the connector, verify that there is no looseness, damage, deformation, corrosion, or poor connection of the connector terminals.**
- **When inspecting the DLC-2, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals.**
- **Disconnect the negative battery cable before performing any work that requires handling of connectors.**

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
1	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN CONNECTOR C-08 AND INSTRUMENT CLUSTER** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-08. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 11.
		No	Go to the next step.
2	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN CONNECTORS C-34 AND DLC-2** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-34. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage 0 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between DLC-2 and connector C-34 because the wiring harness is shorted to the power supply.
3	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN CONNECTOR C-34 AND PARKING SENSOR CONTROL MODULE** • Measure the voltage at parking sensor control module terminals AA and AB. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 5.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
4	**INSPECT PARKING SENSOR CONTROL MODULE FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect the parking sensor control module connector. • Connect connector C-34. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the parking sensor control module because there is a short to power supply in the parking sensor control module. (See 09-22-57 PARKING SENSOR CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the parking sensor control module and connector C-34 because the wiring harness is shorted to the power supply.
5	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN CONNECTOR C-34 AND CLIMATE CONTROL UNIT OR CLOCK** • Measure the voltage at climate control unit terminals 1S and 1U. (with full-auto air conditioner) • Measure the voltage at clock terminals E and G. (with manual air conditioner) • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 7.
		No	Go to the next step.
6	**INSPECT CLIMATE CONTROL UNIT OR CLOCK FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect the climate control unit connector or the clock connector. • Connect connector C-34. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the climate control unit or the clock because there is a short to power supply inside the climate control unit or the clock. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) (See 09-22-92 CLOCK REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the climate control unit or the clock and connector C-34 because the wiring harness is shorted to the power supply.
7	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN CONNECTOR C-34 AND AUDIO** • Measure the voltage at audio unit terminals 1O and 1Q. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 9.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
8	**INSPECT AUDIO UNIT FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect the audio unit connector. • Connect connector C34. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at audio unit terminals 1O and 1Q (wiring harness side). • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the audio unit because there is a short to the power supply in the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the audio unit and connector C-34 because the wiring harness is shorted to the power supply.
9	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN CONNECTOR C-34 AND INSTRUMENT CLUSTER** • Measure the voltage at instrument cluster terminals C and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Repair or replace the wiring harness between connector C-08 and connector C-34 because the wiring harness is shorted to the power supply.
		No	Go to the next step.
10	**INSPECT INSTRUMENT CLUSTER FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect the instrument cluster connector. • Connect connector C-34. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the instrument cluster because there is a short to the power supply in the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the instrument cluster and connector C-34 because the wiring harness is shorted to the power supply.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
11	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN CONNECTORS C-14 AND C-08** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-14. • Connect connector C-08. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-14 and connector C-08 because the wiring harness is shorted to the power supply.
12	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN CONNECTORS C-47 AND C-48 AND CONNECTOR C-14** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connectors C-47 and C-48. • Connect connector C-14. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connectors C-47 and C-48 and connector C-14 because the wiring harness is shorted to the power supply.
13	**INSPECT BETWEEN REAR VEHICLE MONITORING CONTROL MODULE (RH) OR BSM CONTROL MODULE (RH) AND CONNECTORS C-47 AND C-48 FOR SHORT TO POWER SUPPLY** • Measure the voltage at rear vehicle monitoring control module (RH) terminals L and I. (With rear vehicle monitoring system) • Measure the voltage at BSM control module (RH) terminals H and G. (With BSM system) • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 16.
		No	• Go to the next step. (With rear vehicle monitoring system) • Go to Step 15.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
14	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN REAR VEHICLE MONITORING CONTROL MODULE (RH) AND CONNECTOR C-43** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connectors C-43. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at rear vehicle monitoring (RH) terminals L and I. • Is the voltage between 1.5 — 3.5 V?	Yes	Repair or replace the wiring harness between connector C-43 and connectors C-47 and C-48 because the wiring harness is shorted to the power supply.
		No	Go to the next step.
15	**INSPECT BETWEEN REAR VEHICLE MONITORING CONTROL MODULE (RH) OR BSM CONTROL MODULE (RH) FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect the rear vehicle monitoring control modules (RH) connector or the BSM control module (RH) connector. • Connect connectors C-47 and C-48. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the rear vehicle monitoring control module (RH) or the BSM control module (RH) because there is a short to the power supply in the rear vehicle monitoring control module (RH) or the BSM control module (RH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.) (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	• Repair or replace the wiring harness between the rear vehicle monitoring control module (RH) and connector C-43 because the wiring harness is shorted to the power supply. (With rear vehicle monitoring system) • Repair or replace the wiring harness between the BSM control module (RH) and connectors C-47 and C-48 because the wiring harness is shorted to the power supply. (With BSM system)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
16	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN REAR BODY CONTROL MODULE (RBCM) AND BSM CONTROL MODULE (LH) OR REAR MOUNT CAMERA** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect the rear body control module (RBCM) connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at BSM control module (LH) terminals H and G. (With BSM system) • Measure the voltage at BSM control module (LH) terminals H and G. (With rear mount camera) • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 19.
		No	Go to the next step.
17	**INSPECT BETWEEN REAR BODY CONTROL MODULE (RBCM) AND CONNECTOR C-23 OR C-21 FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-23 or C-21. • Connect the rear body control module (RBCM) connector. • Connect connectors C-47 and C-48. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between the rear body control module (RBCM) and connector C-23 or C-21 because the wiring harness is shorted to the power supply.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
18	**INSPECT BSM CONTROL MODULE (LH) OR REAR MOUNT CAMERA FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect the BSM control module (LH) connector or the rear mount camera connector. • Connect connector C-23 or C-21. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the BSM control module (LH) or the rear mount camera because there is a short to the power supply in the BSM control module (LH) or the rear mount camera. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.) (See 09-20-68 REAR MOUNT CAMERA REMOVAL/INSTALLATION.)
		No	• Repair or replace the wiring harness between BSM control module (LH) and connector C-23 because the wiring harness is shorted to the power supply. (With BSM system) • Repair or replace the wiring harness between the rear mount camera and connector C-21 because the wiring harness is shorted to the power supply. (With rear mount camera)
19	**INSPECT REAR BODY CONTROL MODULE (RBCM) FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Connect connectors C-47 and C-48. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the rear body control module (RBCM) because there is a short to the power supply in the rear body control module (RBCM). (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the rear body control module (RBCM) and connectors C-47 and C-48 because the wiring harness is shorted to the power supply.

DETERMINING SHORT BETWEEN CIRCUITS LOCATION (MS-CAN) [SKYACTIV-G 2.0 (R.H.D.)]

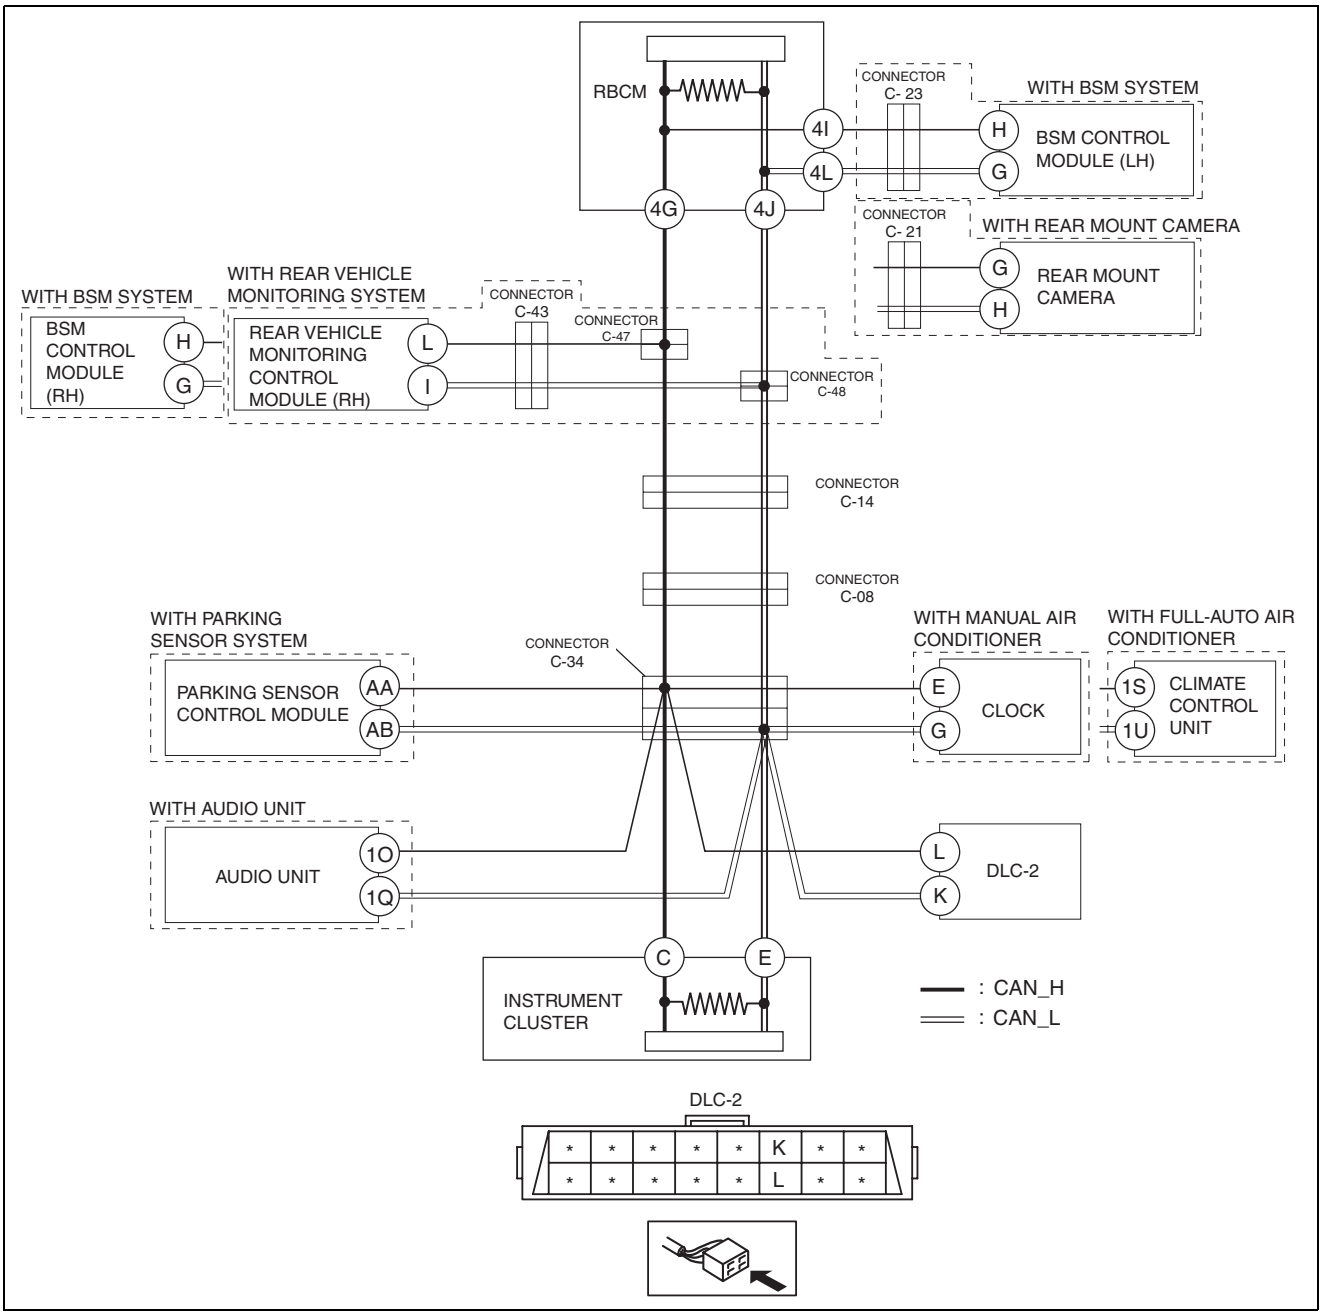
id100202001100

Caution

- **Perform the following malfunction diagnosis only when it is diagnosed with a short between circuits by 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)].**

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

System wiring diagram



ac5wzw0000068

Determination procedure

Caution

- **When disconnecting the connector, verify that there is no looseness, damage, deformation, corrosion, or poor connection of the connector terminals.**
- **When inspecting the DLC-2, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals.**

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
1	**INSPECT BETWEEN CONNECTOR C-08 AND INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-08. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage at DLC-2 terminals L and K the same?	Yes	Go to the next step.
		No	Go to Step 11.
2	**INSPECT BETWEEN CONNECTOR C-34 AND DLC-2 FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-34. • Inspect for continuity between DLC-2 terminals L and K. • Is there continuity?	Yes	Repair or replace the wiring harness between connector C-34 and DLC-2 because the wiring harness is shorted between circuits.
		No	Go to the next step.
3	**INSPECT BETWEEN CONNECTOR C-34 AND PARKING SENSOR CONTROL MODULE FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity between parking sensor control module terminals AA and AB. • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 5.
4	**INSPECT PARKING SENSOR CONTROL MODULE FOR SHORT BETWEEN CIRCUITS** • Disconnect the parking sensor control module connector. • Inspect for continuity between parking sensor control module terminals AA and AB (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the parking sensor control module and connector C-34 because the wiring harness is shorted between circuits.
		No	Replace the parking sensor control module because there is a short between circuits in the parking sensor control module. (See 09-22-57 PARKING SENSOR CONTROL MODULE REMOVAL/INSTALLATION.)
5	**INSPECT BETWEEN CONNECTOR C-34 AND CLIMATE CONTROL UNIT OR CLOCK FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity between climate control unit terminals 1S and 1U. (with full-auto air conditioner) • Inspect for continuity between clock terminals E and G. (with manual air conditioner) • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 7.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
6	**INSPECT CLIMATE CONTROL UNIT OR CLOCK FOR SHORT BETWEEN CIRCUITS** • Disconnect the climate control unit connector or the clock connector. • Inspect for continuity between climate control unit terminals 1S and 1U (wiring harness side). (with full-auto air conditioner) • Inspect for continuity between clock terminals E and G (wiring harness side). (with manual air conditioner) • Is there continuity?	Yes	Repair or replace the wiring harness between the climate control unit or clock and connector C-34 because the wiring harness is shorted between circuits.
		No	Replace the climate control unit or the clock because there is a short between circuits inside the climate control unit or the clock. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) (See 09-22-92 CLOCK REMOVAL/INSTALLATION.)
7	**INSPECT BETWEEN CONNECTOR C-34 AND AUDIO UNIT FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity between audio unit terminals 1O and 1Q. • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 9.
8	**INSPECT AUDIO UNIT FOR SHORT BETWEEN CIRCUITS** • Disconnect the audio unit connector. • Inspect for continuity between audio unit terminals 1O and 1Q (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the audio unit and connector C-34 because the wiring harness is shorted between circuits.
		No	Replace the audio unit because there is a short between circuits in the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
9	**INSPECT BETWEEN CONNECTOR C-34 AND INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity between instrument cluster terminals C and E. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connectors C-34 and C-08 because the wiring harness is shorted between circuits.
10	**INSPECT INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Disconnect the instrument cluster connector. • Inspect for continuity between instrument cluster terminals C and E (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the instrument cluster and connector C-34 because the wiring harness is shorted between circuits.
		No	Replace the instrument cluster because there is a short between circuits in the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
11	**INSPECT BETWEEN CONNECTORS C-14 AND C-08 FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connector C-14. • Connect connector C-08. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage at DLC-2 terminals L and K the same?	Yes	Repair or replace the wiring harness between connectors C-14 and C-08 because the wiring harness is shorted between circuits.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
12	**INSPECT BETWEEN CONNECTORS C-47 AND C-48 AND CONNECTOR C-14 FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect connectors C-47 and C-48. • Connect connector C-14. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage at DLC-2 terminals L and K the same?	Yes	Repair or replace the wiring harness between connectors C-47 and C-48 and connector C-14 because the wiring harness is shorted between circuits.
		No	Go to the next step.
13	**INSPECT BETWEEN REAR VEHICLE MONITORING CONTROL MODULE (RH) OR BSM CONTROL MODULE (RH) AND CONNECTORS C-47 AND C-48 FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Inspect for continuity between rear vehicle control module (RH) terminals L and I. (With rear vehicle monitoring system) • Inspect for continuity between BSM control module (RH) terminals H and G. (With BSM system) • Is there continuity?	Yes	• Go to the next step. (With rear vehicle monitoring system) • Go to Step 15. (With BSM system)
		No	Go to Step 16.
14	**INSPECT BETWEEN REAR VEHICLE MONITORING CONTROL MODULE (RH) AND CONNECTOR C-43 FOR SHORT BETWEEN CIRCUITS** • Disconnect connector C-43. • Inspect for continuity between rear vehicle control module (RH) terminals L and I. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-43 and connectors C-47 and C-48 because the wiring harness is shorted between circuits.
15	**INSPECT BETWEEN REAR VEHICLE MONITORING CONTROL MODULE (RH) OR BSM CONTROL MODULE (RH) FOR SHORT BETWEEN CIRCUITS** • Disconnect the rear vehicle monitoring control modules (RH) connector or the BSM control module (RH) connector. • Inspect for continuity between rear vehicle control module (RH) terminals L and I (wiring harness side). (With rear vehicle monitoring system) • Inspect for continuity between BSM control module (RH) terminals H and G (wiring harness side). (With BSM system) • Is there continuity?	Yes	• Repair or replace the wiring harness between the rear vehicle monitoring control module (RH) and connector C-43 because the wiring harness is shorted between circuits. (With rear vehicle monitoring system) • Repair or replace the wiring harness between the BSM control module (RH) and connectors C-47 and C-48 because the wiring harness is shorted between circuits. (With BSM system)
		No	Replace the rear vehicle monitoring control module (RH) or the BSM control module (RH) because there is a short between circuits in the rear vehicle monitoring control module (RH) or the BSM control module (RH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.) (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
16	**INSPECT BETWEEN BSM CONTROL MODULE (LH) OR REAR MOUNT CAMERA AND REAR BODY CONTROL MODULE (RBCM) FOR SHORT BETWEEN CIRCUITS** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect the rear body control module (RBCM) connector. • Inspect for continuity between BSM control module (LH) terminals H and G (wiring harness side). (With BSM system) • Inspect the continuity between rear mount camera terminals G and H (wiring harness side). (With rear mount camera) • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 19.
17	**INSPECT BETWEEN REAR BODY CONTROL MODULE (RBCM) AND CONNECTOR C-23 OR C-21 FOR SHORT BETWEEN CIRCUITS** • Disconnect connector C-23 or C-21. • Inspect for continuity between BSM control module (LH) terminals H and G (wiring harness side). (With BSM system) • Inspect the continuity between rear mount camera terminals G and H (wiring harness side). (With rear mount camera) • Is there continuity?	Yes	Repair or replace the wiring harness between the rear body control module (RBCM) and connector C-23 or C-21 because the wiring harness is shorted between circuits.
		No	Go to the next step.
18	**INSPECT BSM CONTROL MODULE (LH) OR REAR MOUNT CAMERA FOR SHORT BETWEEN CIRCUITS** • Disconnect the BSM control module (LH) connector or the rear mount camera connector. • Connect the rear body control module (RBCM) connector. • Connect connectors C-47 and C-48 • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage at DLC-2 terminals L and K the same?	Yes	• Repair or replace the wiring harness between BSM control module (LH) and rear body control module (RBCM) because the wiring harness is shorted between circuits. (With BSM system) • Repair or replace the wiring harness between the rear mount camera and rear body control module (RBCM) because the wiring harness is shorted between circuits. (With rear mount camera)
		No	Replace the BSM control module (LH) or the rear mount camera because there is a short between circuits in the BSM control module (LH) or the rear mount camera. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.) (See 09-20-68 REAR MOUNT CAMERA REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0 (R.H.D.)]

Step	Inspection		Action
19	**INSPECT REAR BODY CONTROL MODULE (RBCM) FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Connect connectors C-47 and C-48 • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage at DLC-2 terminals L and K the same?	Yes	Repair or replace the wiring harness between the rear body control module (RBCM) and connectors C-47 and C-48 because the wiring harness is shorted between circuits.
		No	Replace the rear body control module (RBCM) because there is a short between circuits in the rear body control module (RBCM). (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

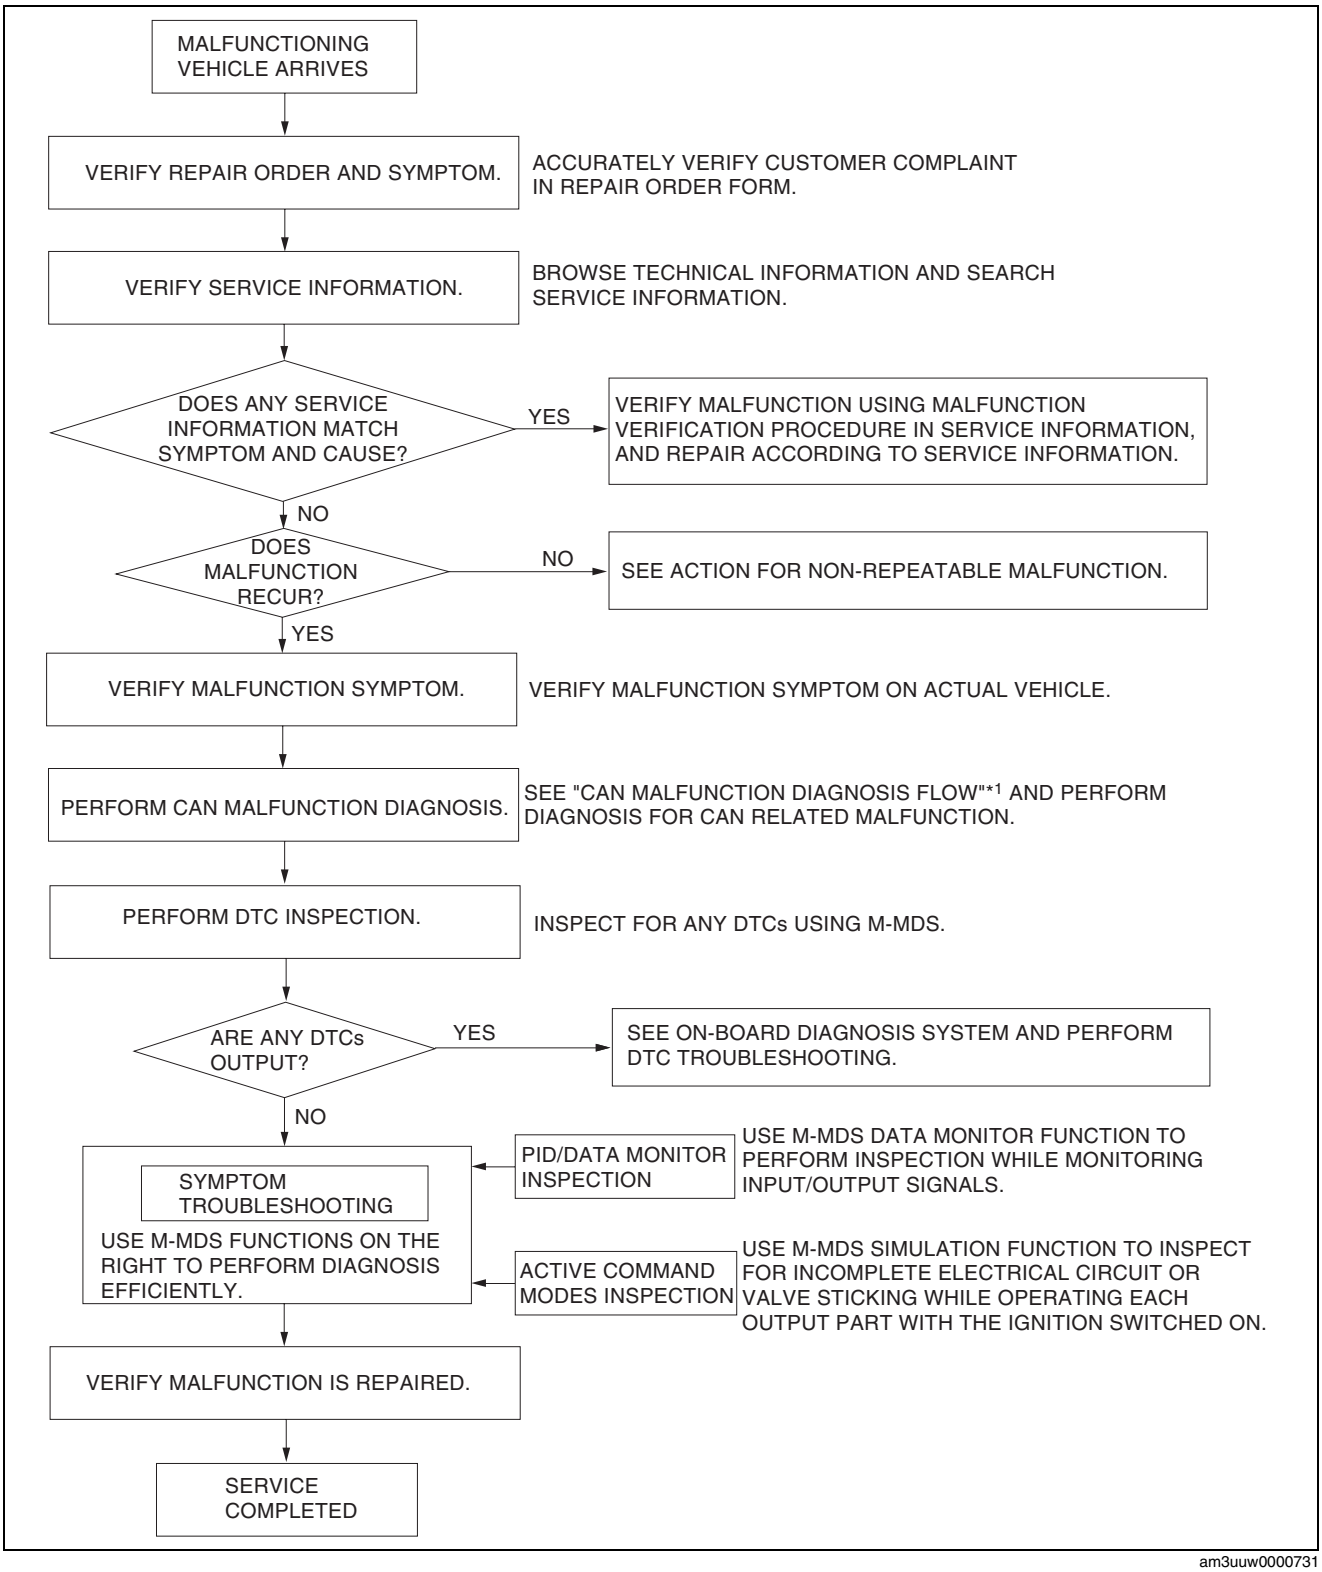
FOREWORD [SKYACTIV-D 2.2 (R.H.D.)]

id100206000000

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the 10-02D-2 Troubleshooting Procedure.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Troubleshooting Procedure



am3uuw0000731

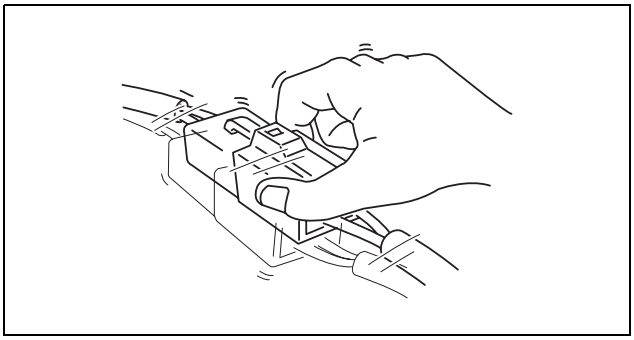
*1 : 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as CAN circuit voltage) at that time, and detect the malfunction cause.

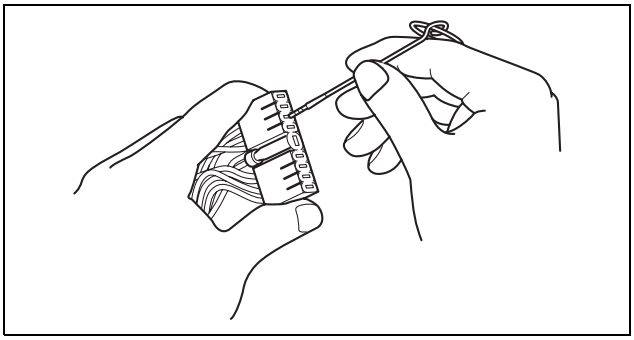
ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

— Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.



aaxjjw00007274

— Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

id100206000100

- If there is any vehicle malfunction complaint lodged by a customer, refer to "10-02D-1 FOREWORD [SKYACTIV-D 2.2 (R.H.D.)]" and perform CAN malfunction diagnosis following the steps in the troubleshooting procedure.

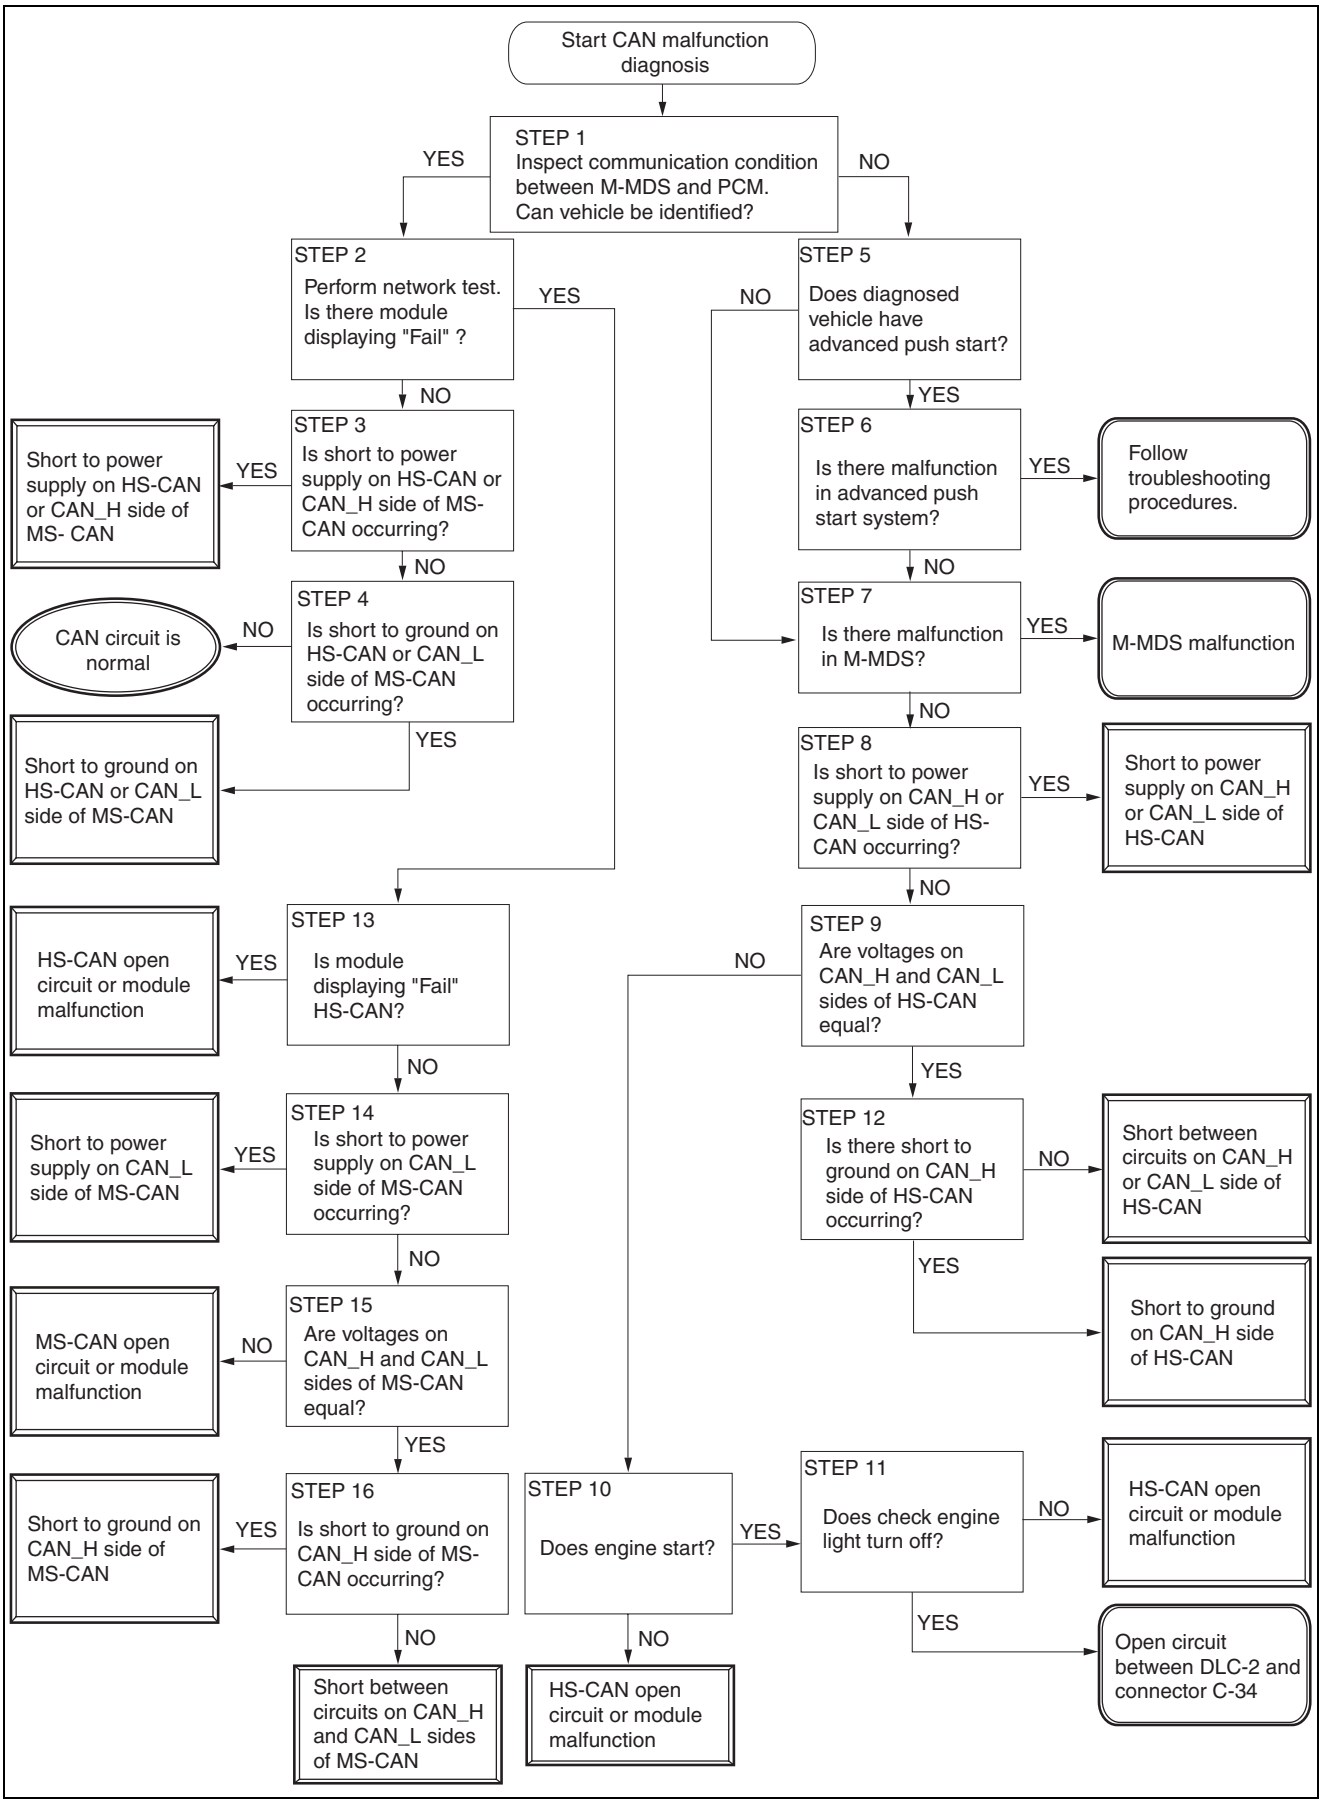
CAN malfunction diagnosis flow

Note

- The flowchart and the diagnosis flow of the diagnosis procedure are the same thing, and the detailed procedure of the flowchart is the diagnosis procedure.
- The step numbers in the flowchart indicate the step numbers of the diagnosis procedure.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Flowchart



ac5wzw0000244

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Diagnostic procedure

Step	Inspection		Action
1	**INSPECT IF COMMUNICATION BETWEEN M-MDS AND PCM IS POSSIBLE** • Connect the M-MDS to the DLC-2. • Switch the ignition ON (engine off). • Perform vehicle identification. • Can the vehicle be identified?	Yes	Go to the next step.
		No	Go to Step 5 as a malfunction in the HS-CAN circuit has occurred.
2	**INSPECT MODULE FOR INABILITY TO COMMUNICATE DUE TO CAN MALFUNCTION** • Implement the network test using the M-MDS. (See 10-02D-8 NETWORK TEST [SKYACTIV-D 2.2 (R.H.D.)].) • Is there a module indicating a malfunction?	Yes	Go to Step 14 as a malfunction in the CAN circuit has occurred.
		No	Go to the next step.
3	**INSPECT FOR SHORT TO POWER SUPPLY IN CAN_H SIDE OF MS-CAN OR HS-CAN** • Measure the voltage between the following terminals: — Between DLC-2 terminal F (CAN_H side of HS CAN) and body ground — Between DLC-2 terminal L (CAN_H side of MS CAN) and body ground • Is B+ voltage measured between any of the terminals? **Note** • If a short to power supply other than the B+ power supply has occurred, a constant voltage other than B+ can be measured.	Yes	A short to power supply in the CAN_H side of MS-CAN or HS-CAN. Determine the location of the short to power supply according to the diagnosis procedure for determining the location of a short to power supply. (See 10-02D-65 DETERMINING SHORT TO POWER SUPPLY LOCATION (HS-CAN) [SKYACTIV-D 2.2 (R.H.D.)].) (See 10-02D-103 DETERMINING SHORT TO POWER SUPPLY LOCATION (MS-CAN) [SKYACTIV-D 2.2 (R.H.D.)].)
		No	Go to the next step.
4	**INSPECT FOR SHORT TO GROUND IN CAN_L SIDE OF HS-CAN OR MS-CAN** • Measure the voltage between the following terminals: — Between DLC-2 terminal E (CAN_L side of HS-CAN) and ground — Between DLC-2 terminal K (CAN_L side of MS-CAN) and ground • Is the voltage measured as 0 V?	Yes	A short to ground on the CAN_L side of the HS-CAN or MS-CAN has occurred. Determine the location of the short to ground according to the diagnosis procedure for determining the location of a short to ground. (See 10-02D-57 DETERMINING SHORT TO GROUND LOCATION (HS-CAN) [SKYACTIV-D 2.2 (R.H.D.)].) (See 10-02D-97 DETERMINING SHORT TO GROUND LOCATION (MS-CAN) [SKYACTIV-D 2.2 (R.H.D.)].)
		No	The current CAN circuit is normal, return to FOREWARD, and go to the next step of the CAN malfunction diagnosis in the troubleshooting procedure. (See 10-02D-1 FOREWORD [SKYACTIV-D 2.2 (R.H.D.)].)
5	**VERIFY IF VEHICLE UNDER DIAGNOSIS IS EQUIPPED WITH ADVANCED PUSH START SYSTEM.** • Is the vehicle equipped with the advanced push start system?	Yes	Go to the next step.
		No	Go to Step 7.
6	**VERIFY IF ADVANCED PUSH START SYSTEM HAS MALFUNCTION** • Switch the ignition ON (engine off). • Can the ignition be switched ON?	Yes	Go to the next step.
		No	A malfunction in the advanced push start system has occurred. Perform diagnosis according to the symptom troubleshooting.
7	**INSPECT FOR MALFUNCTION IN M-MDS** • Connect the M-MDS to a normal vehicle and implement vehicle identification. • Can the vehicle be identified?	Yes	Go to the next step.
		No	A malfunction in the M-MDS can be considered. Repair the M-MDS.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
8	**INSPECT HS-CAN FOR SHORT TO POWER SUPPLY** • Measure the voltage between the following terminals: — Between DLC-2 terminal F (CAN_H side) and body ground — Between DLC-2 terminal E (CAN_L side) and body ground • Is B+ voltage measured between any of the terminals? **Note** • If a short to power supply other than the B+ power supply has occurred, a constant voltage other than B+ can be measured.	Yes	A short to power supply in the CAN_H side or CAN_L of HS-CAN has occurred. Determine the location of the short to power supply according to the diagnosis procedure for determining the location of a short to power supply. (See 10-02D-65 DETERMINING SHORT TO POWER SUPPLY LOCATION (HS-CAN) [SKYACTIV-D 2.2 (R.H.D.)].)
		No	Go to the next step.
9	**INSPECT HS-CAN FOR OPEN CIRCUIT** • Measure the voltage between the following terminals: — Between DLC-2 terminal F (CAN_H side) and body ground — Between DLC-2 terminal E (CAN_L side) and body ground • Is the voltage between both terminals (CAN_H side and CAN_L side) equal?	Yes	Go to Step 13 as a short to ground or a short between circuits has occurred in the HS-CAN.
		No	Go to the next step.
10	**DETERMINE IF OPEN CIRCUIT LOCATION IN HS-CAN CIRCUIT IS BETWEEN DLC AND CONNECTOR C-35 OR ELSEWHERE** • Start the engine to verify that the immobilizer system operates normally. • Can the engine be started? **Note** • If there is an open circuit in the wiring harness between the PCM and the start stop unit, the engine cannot be started because the key ID number verification for the immobilizer system is performed by CAN communication.	Yes	Go to the next step.
		No	An open circuit has occurred between the PCM and connector C-34 in the HS-CAN. Determine the location of the open circuit according to the diagnosis procedure for determining the location of an open circuit. (See 10-02D-11 DETERMINING OPEN CIRCUIT LOCATION (HS-CAN) [SKYACTIV-D 2.2 (R.H.D.)].)
11	**DETERMINE IF OPEN CIRCUIT LOCATION IN HS-CAN CIRCUIT IS BETWEEN DLC AND CONNECTOR C-34 OR ELSEWHERE** • Switch the ignition ON (engine off). • Verify if the check engine light in the instrument cluster illuminates. • Start the engine. • Verify if the check engine light turns off. • Does the check engine light turn off?	Yes	An open circuit between DLC-2 and connector C-34 has occurred. Repair or replace the wiring harness for an open circuit, then return to Step 1.
		No	An open circuit has occurred between the PCM and connector C-34 in the HS-CAN. Determine the location of the open circuit according to the diagnosis procedure for determining the location of an open circuit. (See 10-02D-11 DETERMINING OPEN CIRCUIT LOCATION (HS-CAN) [SKYACTIV-D 2.2 (R.H.D.)].)
12	**VERIFY MALFUNCTION OCCURRED IN HS-CAN CIRCUIT** • Measure the voltage between the following terminals: — Between DLC-2 terminal F (CAN_H side) and body ground — Between DLC-2 terminal E (CAN_L side) and body ground • Is the voltage between both terminals (CAN_H side and CAN_L side) 0 V?	Yes	A short to ground in CAN_H side of HS-CAN has occurred. Determine the location of the short to ground according to the diagnosis procedure for determining the location of a short to ground. (See 10-02D-57 DETERMINING SHORT TO GROUND LOCATION (HS-CAN) [SKYACTIV-D 2.2 (R.H.D.)].)
		No	A short between circuits in the CAN_H side and the CAN_L side of HS-CAN has occurred. Determine the location of the short between circuits according to the diagnosis procedure for determining the location of a short between circuits. (See 10-02D-75 DETERMINING SHORT BETWEEN CIRCUITS LOCATION (HS-CAN) [SKYACTIV-D 2.2 (R.H.D.)].)

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
13	**DETERMINE CAN COMMUNICATION SPECIFICATION IN WHICH MALFUNCTION OCCURS** • Refer to the CAN communication specification quick reference table and verify the CAN communication specification (HS-CAN or MS-CAN) that is connected to the module which is indicating a malfunction. (See 10-02D-7 CAN communication specification quick reference table.) • Is the module that is indicating a malfunction HS-CAN?	Yes	An open circuit in the HS-CAN has occurred. Determine the location of the open circuit according to the diagnosis procedure for determining the location of an open circuit. (See 10-02D-11 DETERMINING OPEN CIRCUIT LOCATION (HS-CAN) [SKYACTIV-D 2.2 (R.H.D.)].)
		No	Go to the next step.
14	**INSPECT CAN_L SIDE OF MS-CAN FOR SHORT TO POWER SUPPLY** • Measure voltage between DLC-2 terminal K (CAN_L side) and body ground. • Can B+ voltage be measured? **Note** • If a short to power supply other than the B+ power supply has occurred, a constant voltage other than B+ can be measured.	Yes	A short to power supply in the CAN_L side of the MS-CAN has occurred. Determine the location of the short to power supply according to the diagnosis procedure for determining the location of a short to power supply. (See 10-02D-103 DETERMINING SHORT TO POWER SUPPLY LOCATION (MS-CAN) [SKYACTIV-D 2.2 (R.H.D.)].)
		No	Go to the next step.
15	**INSPECT MS-CAN FOR OPEN CIRCUIT** • Measure the voltage between the following terminals: — Between DLC-2 terminal L (CAN_H side) and body ground — Between DLC-2 terminal K (CAN_L side) and body ground • Is the voltage between both terminals (CAN_H side and CAN_L side) equal?	Yes	Go to the next step.
		No	Open circuit in MS-CAN has occurred. Determine the location of the open circuit according to the diagnosis procedure for determining the location of an open circuit. (See 10-02D-83 DETERMINING OPEN CIRCUIT LOCATION (MS-CAN) [SKYACTIV-D 2.2 (R.H.D.)].)
16	**VERIFY MALFUNCTION OCCURRED IN MS-CAN** • Measure the voltage between the following terminals: — Between DLC-2 terminal L (CAN_H side) and body ground — Between DLC-2 terminal K (CAN_L side) and body ground • Is the voltage between both terminals (CAN_H side and CAN_L side) equal?	Yes	A short to ground in the CAN_H side of the MS-CAN has occurred. Determine the location of the short to ground according to the diagnosis procedure for determining the location of a short to ground. (See 10-02D-97 DETERMINING SHORT TO GROUND LOCATION (MS-CAN) [SKYACTIV-D 2.2 (R.H.D.)].)
		No	A short between circuits on the CAN_H side and CAN_L side of MS-CAN has occurred. Determine the location of the short between circuits according to the diagnosis procedure for determining the location of a short between circuits. (See 10-02D-109 DETERMINING SHORT BETWEEN CIRCUITS LOCATION (MS-CAN) [SKYACTIV-D 2.2 (R.H.D.)].)

HS-CAN signal waveform

CAN circuit condition	Signal waveform (reference)
Normal		• CAN_H — Connection terminal: DLC-2: terminal F (+) ⇔ body ground (—) — Oscilloscope setting: 0.5 V/DIV (Y), 200 μs/DIV (X), DC range • CAN_L — Connection terminal: DLC-2: terminal E (+) ⇔ Body ground (—) — Oscilloscope setting: 0.5 V/DIV (Y), 200 μs/DIV (X), DC range

MS-CAN signal waveform

CAN circuit condition	Signal waveform (reference)
Normal		• CAN_H — Connection terminal: DLC-2: terminal L (+) ⇔ Body ground (—) — Oscilloscope setting: 0.5 V/DIV (Y), 1 ms/DIV (X), DC range • CAN_L — Connection terminal: DLC-2: terminal K (+) ⇔ Body ground (—) — Oscilloscope setting: 0.5 V/DIV (Y), 1 ms/DIV (X), DC range

NETWORK TEST [SKYACTIV-D 2.2 (R.H.D.)]

id100206000200

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the "NETWORK TEST" from the initialization screen of the M-MDS.
3. Verify the unit with a communication error according to the directions on the screen.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

DTC TABLE [SKYACTIV-D 2.2 (R.H.D.)]

id100206000300

Caution

- **If there is any vehicle malfunction complaint lodged by a customer, refer to "FOREWORD" and perform CAN malfunction diagnosis following the steps in the troubleshooting procedure. (See 10-02D-1 FOREWORD [SKYACTIV-D 2.2 (R.H.D.)].)**

DETERMINING OPEN CIRCUIT LOCATION (HS-CAN) [SKYACTIV-D 2.2 (R.H.D.)]

id100206000400

Caution

- **Perform the following malfunction diagnosis only when it is diagnosed with a open circuit by 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)].**
- **If the malfunctioning part is detected in the communication line, before disconnecting the related connector for inspection, press the connector in the connection direction to verify that there is no looseness or disconnection.**
- **When disconnecting the connector, verify that there is no damage, deformation, or corrosion of the connector terminals.**

1. Verify the CAN system-related module DTCs and the failed module on the M-MDS screen.
2. Apply the communication error DTC and the failed module to 10-02D-12 DTC output pattern and malfunctioning location, and select the possible cause for the diagnostic result and the reference for the inspection item.

Note

- The open circuit location can be determined by the DTC indicated in the 10-02D-12 DTC output pattern and malfunctioning location chart. DTCs not listed in the chart are not used for the determination of the open circuit location.

3. Inspect the possible cause and inspection item of the applicable malfunctioning part.
4. After repairs, return to 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)], and verify that the repairs have been completed.

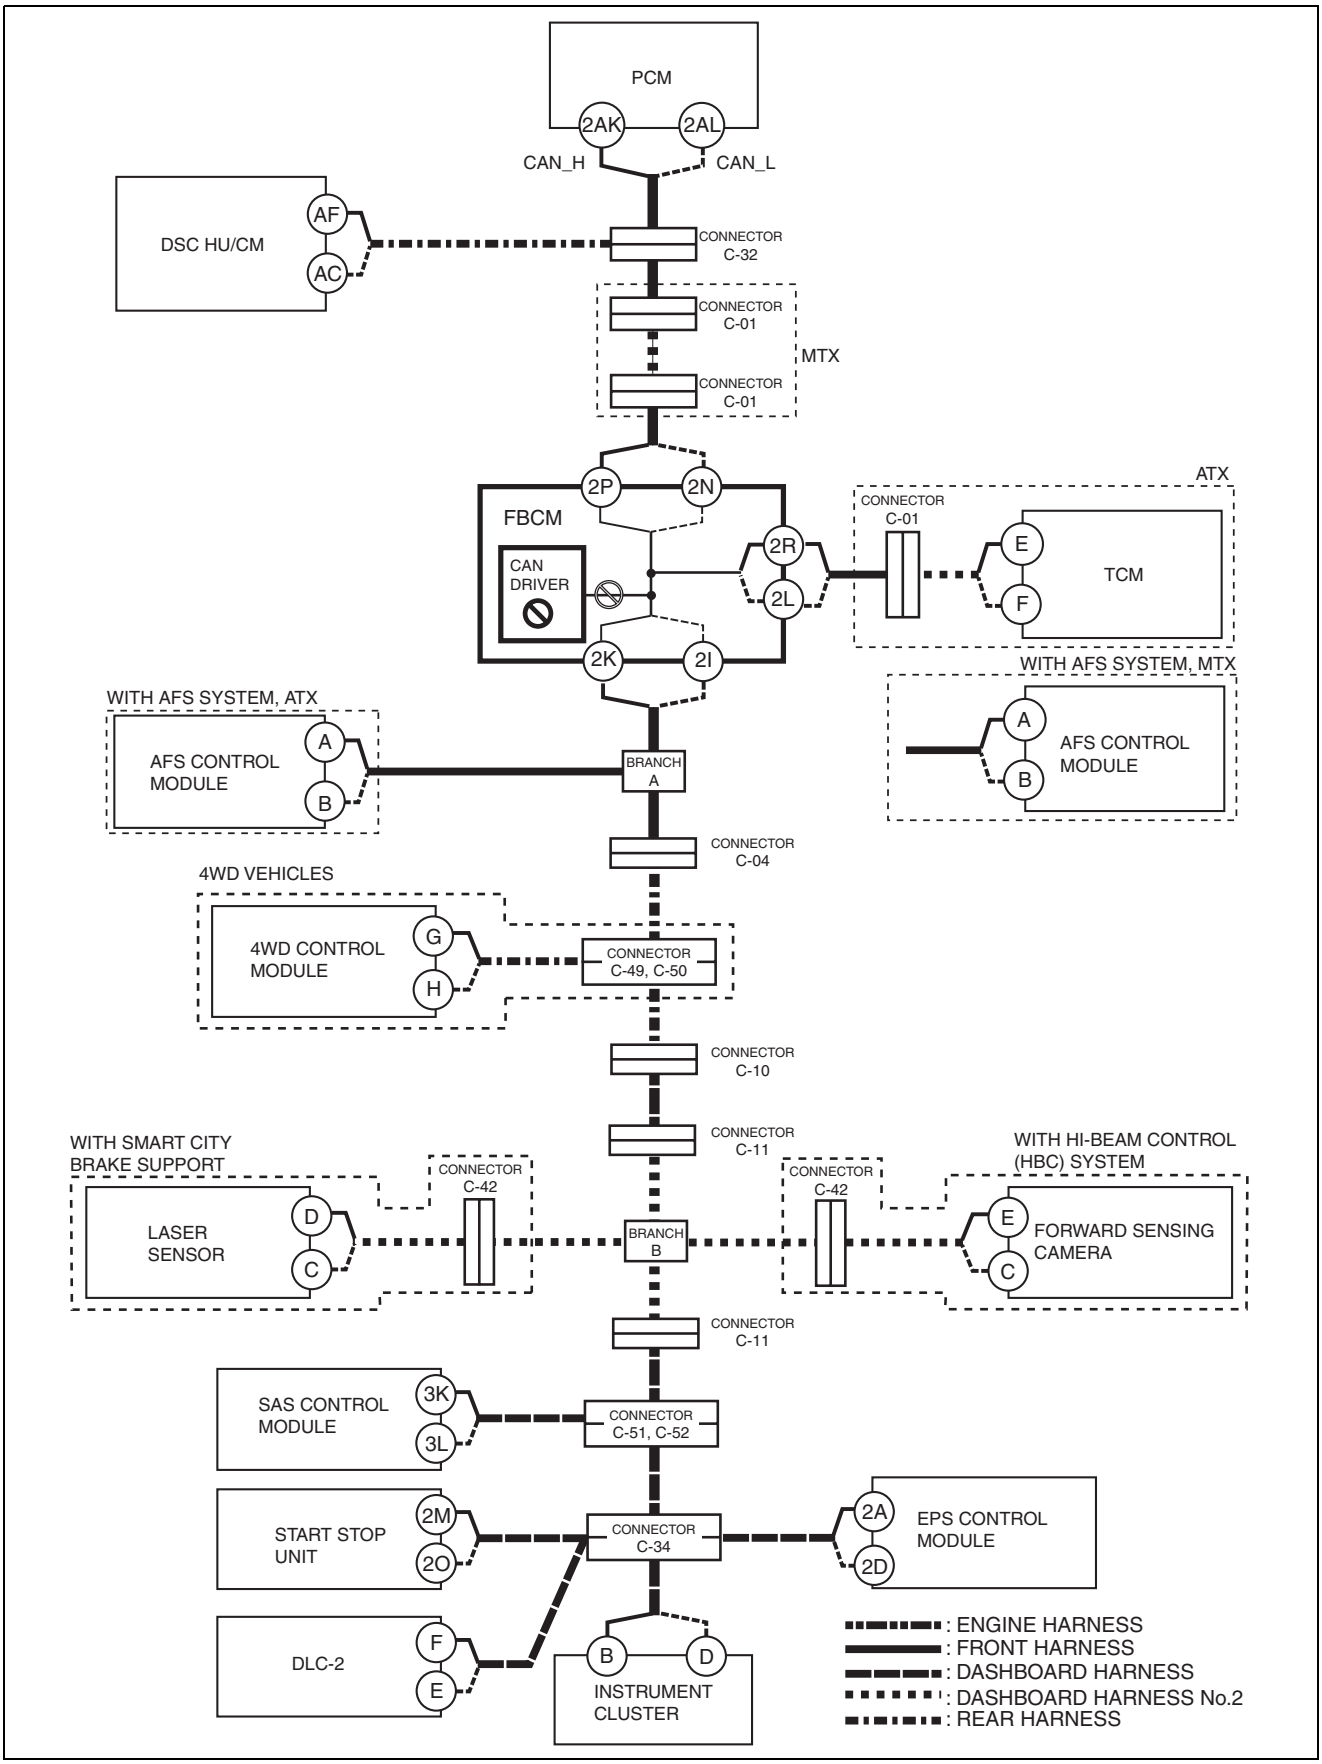
- Wiring harness between TCM terminal F and connector C-01
- Wiring harness between connector C-01 and front body control module (FBCM) terminal 2R
- Wiring harness between connector C-01 and front body control module (FBCM) terminal 2L
- TCM
- Front body control module (FBCM)
  - — Between front body control module (FBCM) terminal 2R and front body control module (FBCM) terminal 2K
  - — Between front body control module (FBCM) terminal 2L and front body control module (FBCM) terminal 2I

E
Possible cause
- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Front body control module (FBCM) malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



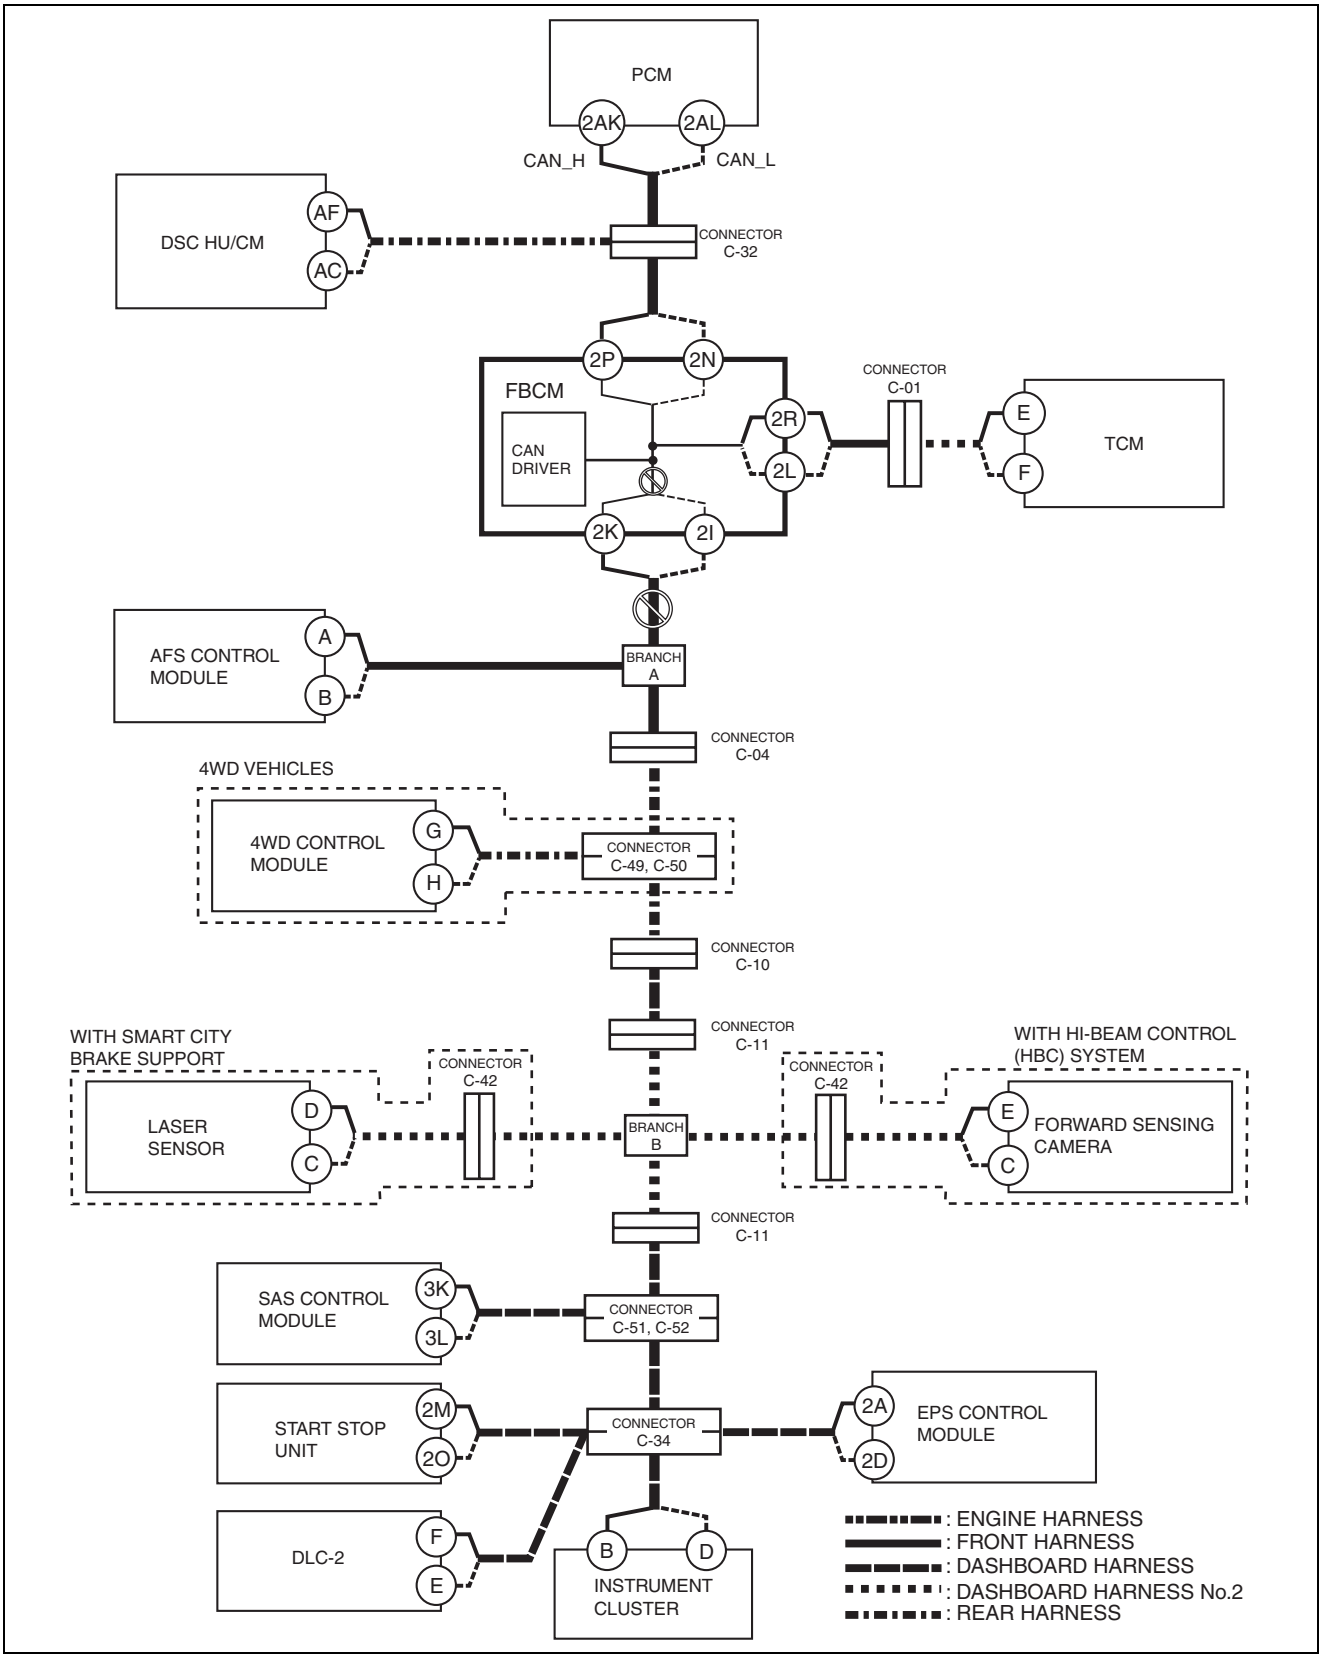
ac5wzw0000453

Inspection item
- Front body control module (FBCM)

F
ATX vehicles
Possible cause
- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between front body control module (FBCM) and branch A
- CAN circuit in front body control module (FBCM) malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000453

Inspection item

- Front body control module (FBCM) connector
- Wiring harness between front body control module (FBCM) terminal 2K and branch A
- Wiring harness between front body control module (FBCM) terminal 2I and branch A
- Front body control module (FBCM)

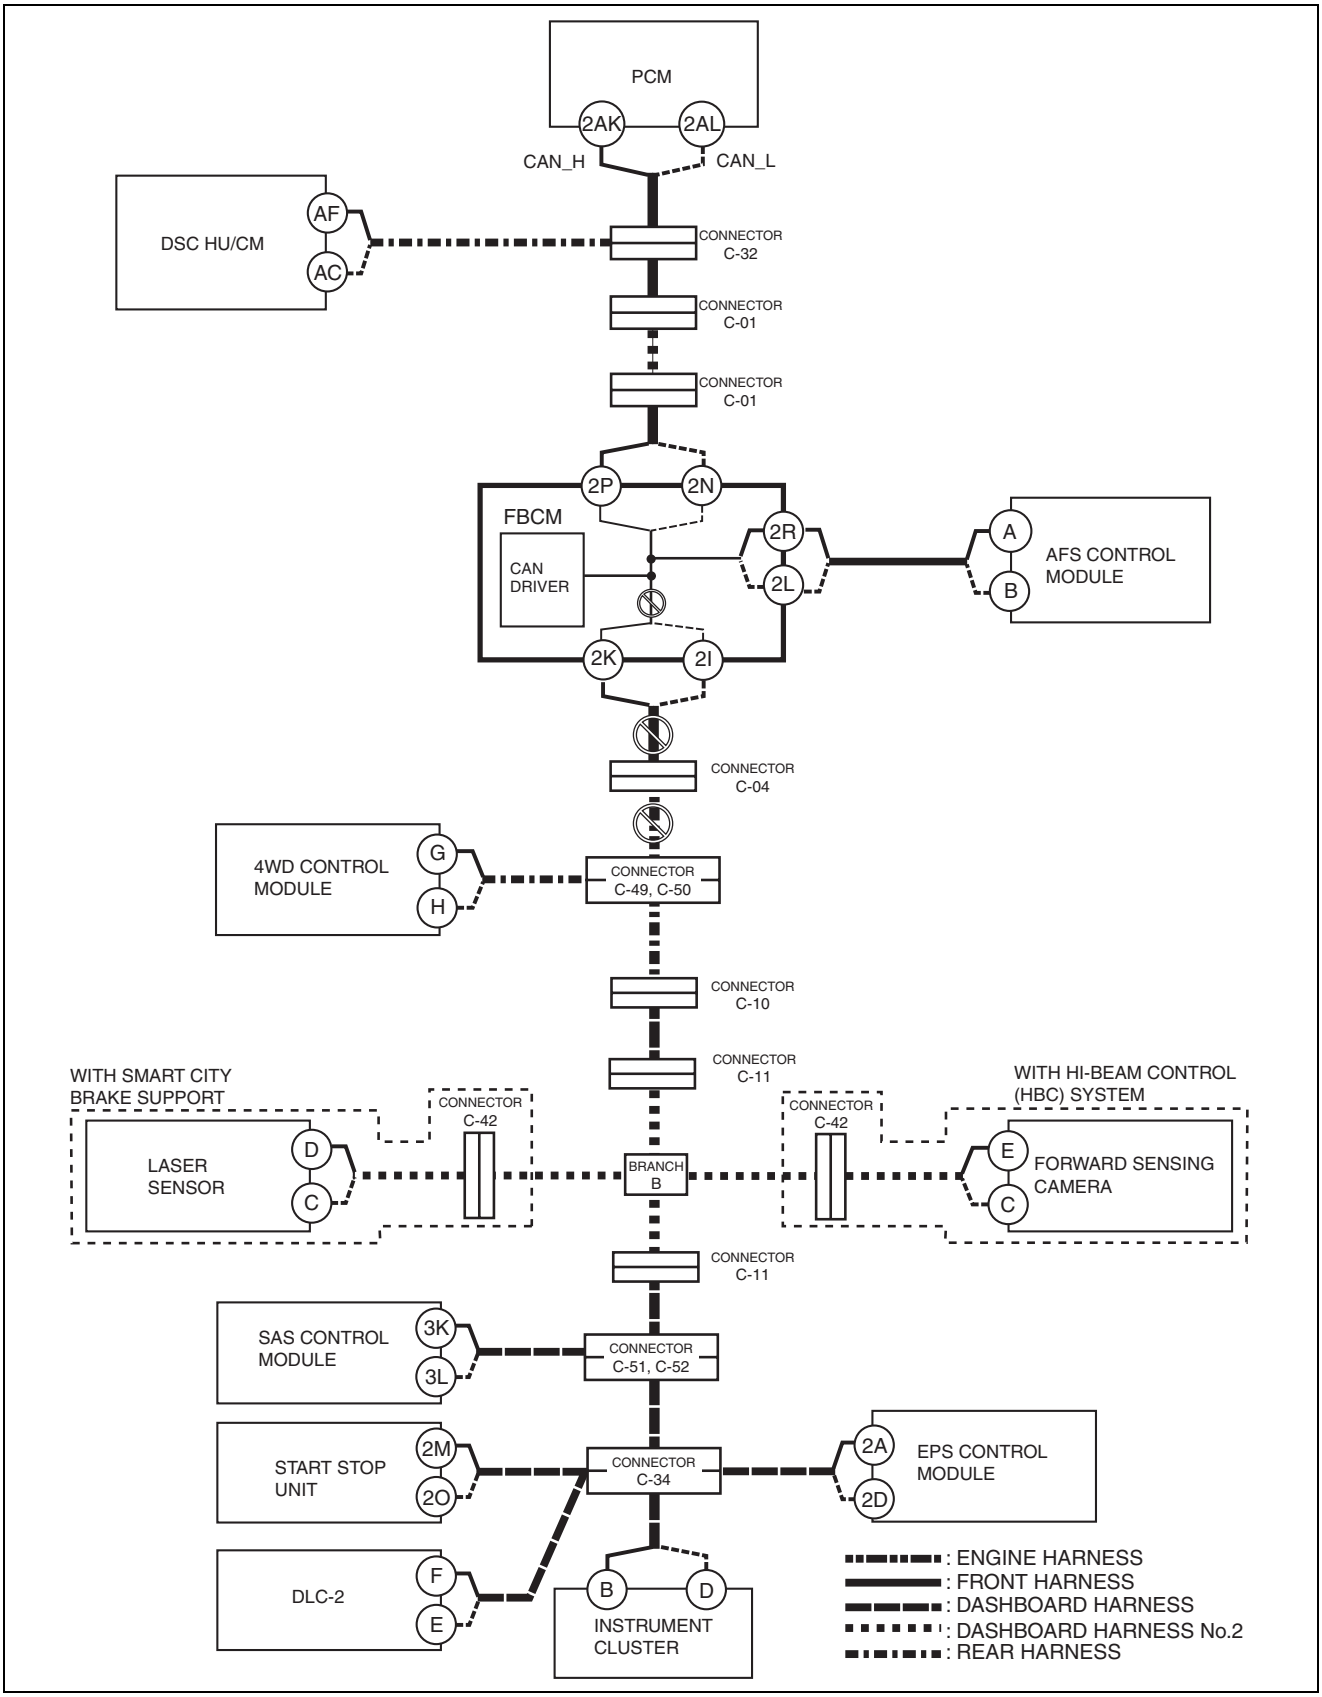
— Between front body control module (FBCM) terminal 2P and front body control module (FBCM) terminal 2K
— Between front body control module (FBCM) terminal 2N and front body control module (FBCM) terminal 2I

MTX vehicles
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between front body control module (FBCM) and connector C-04
- Open circuit in wiring harness between connector C-04 and connectors C-49, C-50
- Connector C-04 malfunction
- Connectors C-49, C-50 malfunction
- CAN circuit in front body control module (FBCM) malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000453

Inspection item

- Front body control module (FBCM) connector
- Connector C-04
- Connectors C-49, C-50

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

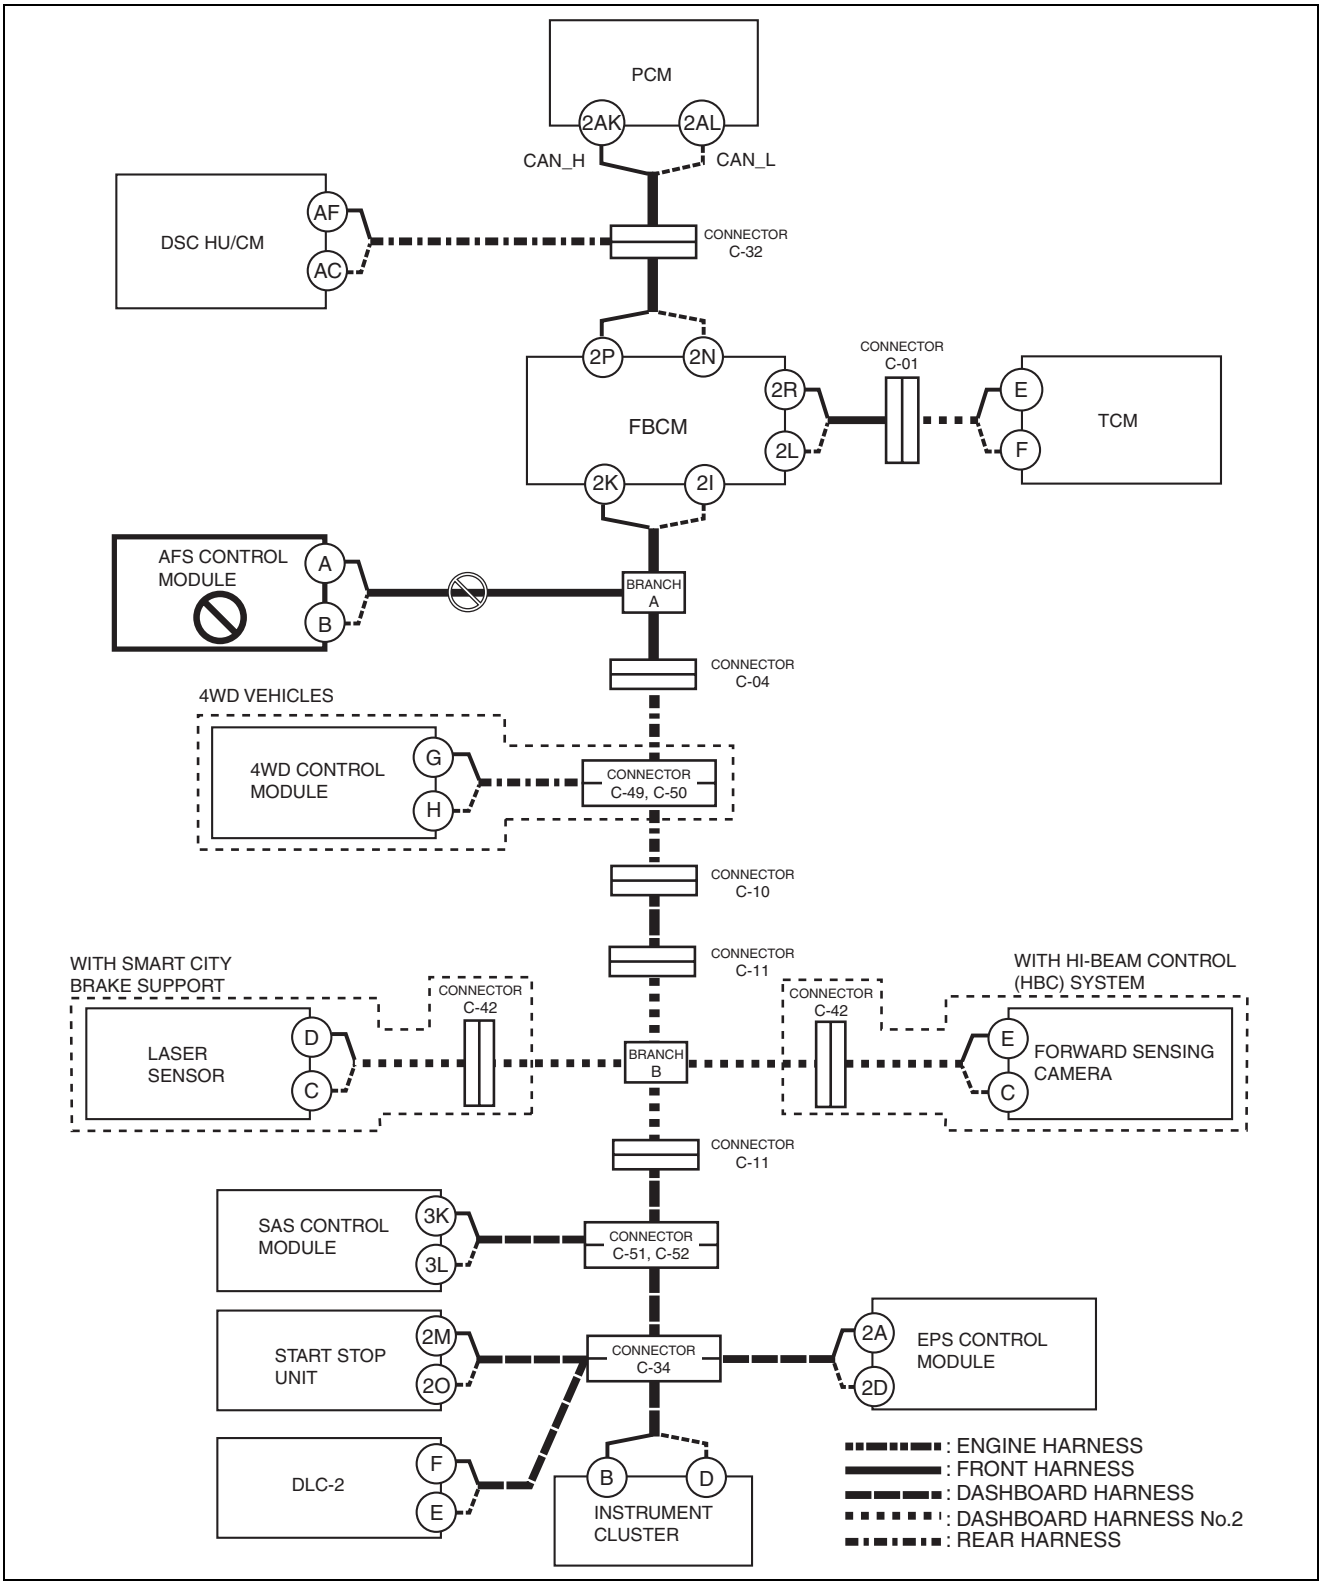
- Wiring harness between front body control module (FBCM) terminal 2K and connector C-04
- Wiring harness between front body control module (FBCM) terminal 2I and connector C-04
- Wiring harness between connector C-04 and connectors C-49, C-50
- Front body control module (FBCM)
  - — Between front body control module (FBCM) terminal 2P and front body control module (FBCM) terminal 2K
  - — Between front body control module (FBCM) terminal 2N and front body control module (FBCM) terminal 2I

G
ATX vehicles
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between AFS control module and branch A
- AFS control module malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000453

Inspection item

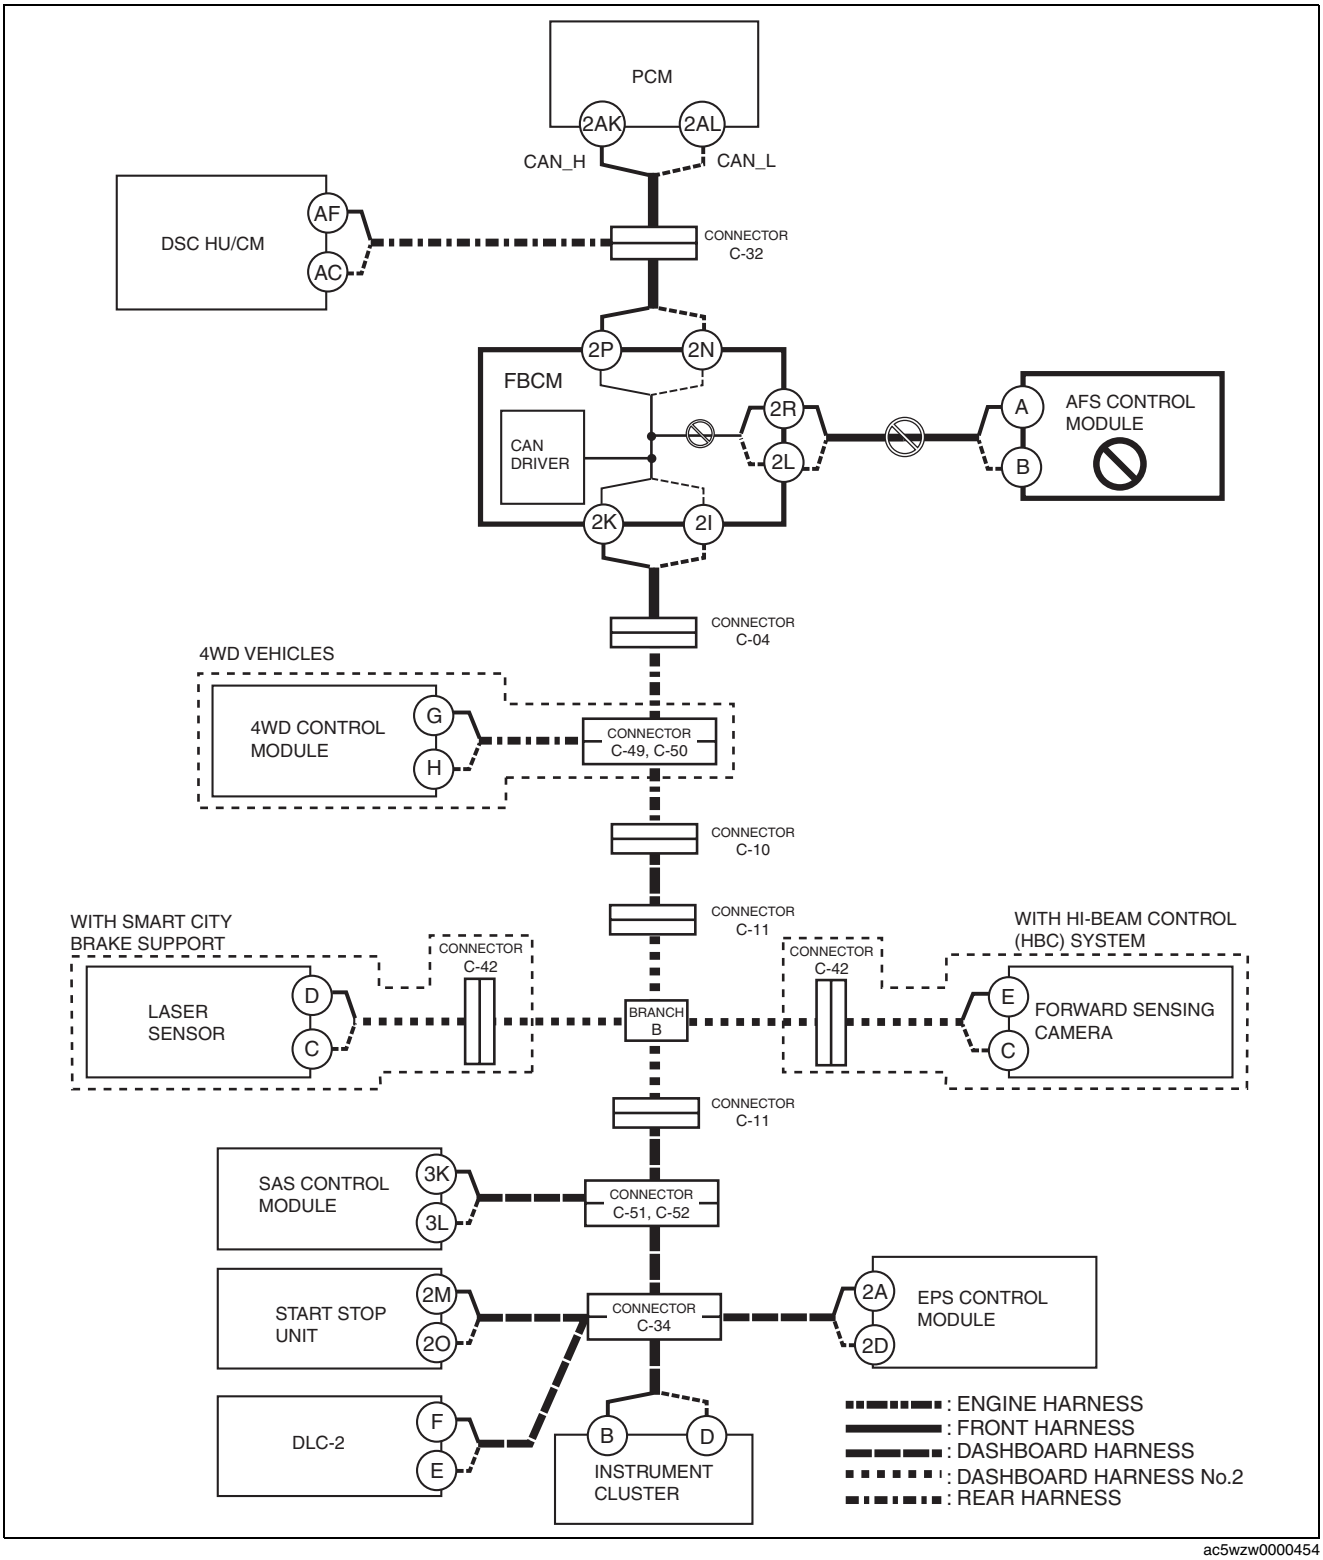
- AFS control module connector
- Wiring harness between AFS control module terminal A and branch A
- Wiring harness between AFS control module terminal B and branch A
- AFS control module

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

MTX vehicles
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between AFS control module and front body control module (FBCM)
- CAN circuit in front body control module (FBCM) malfunction
- AFS control module malfunction
- CAN circuit in front body control module (FBCM) malfunction

System wiring diagram



ac5wzw0000454

Inspection item

- Front body control module (FBCM) connector

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

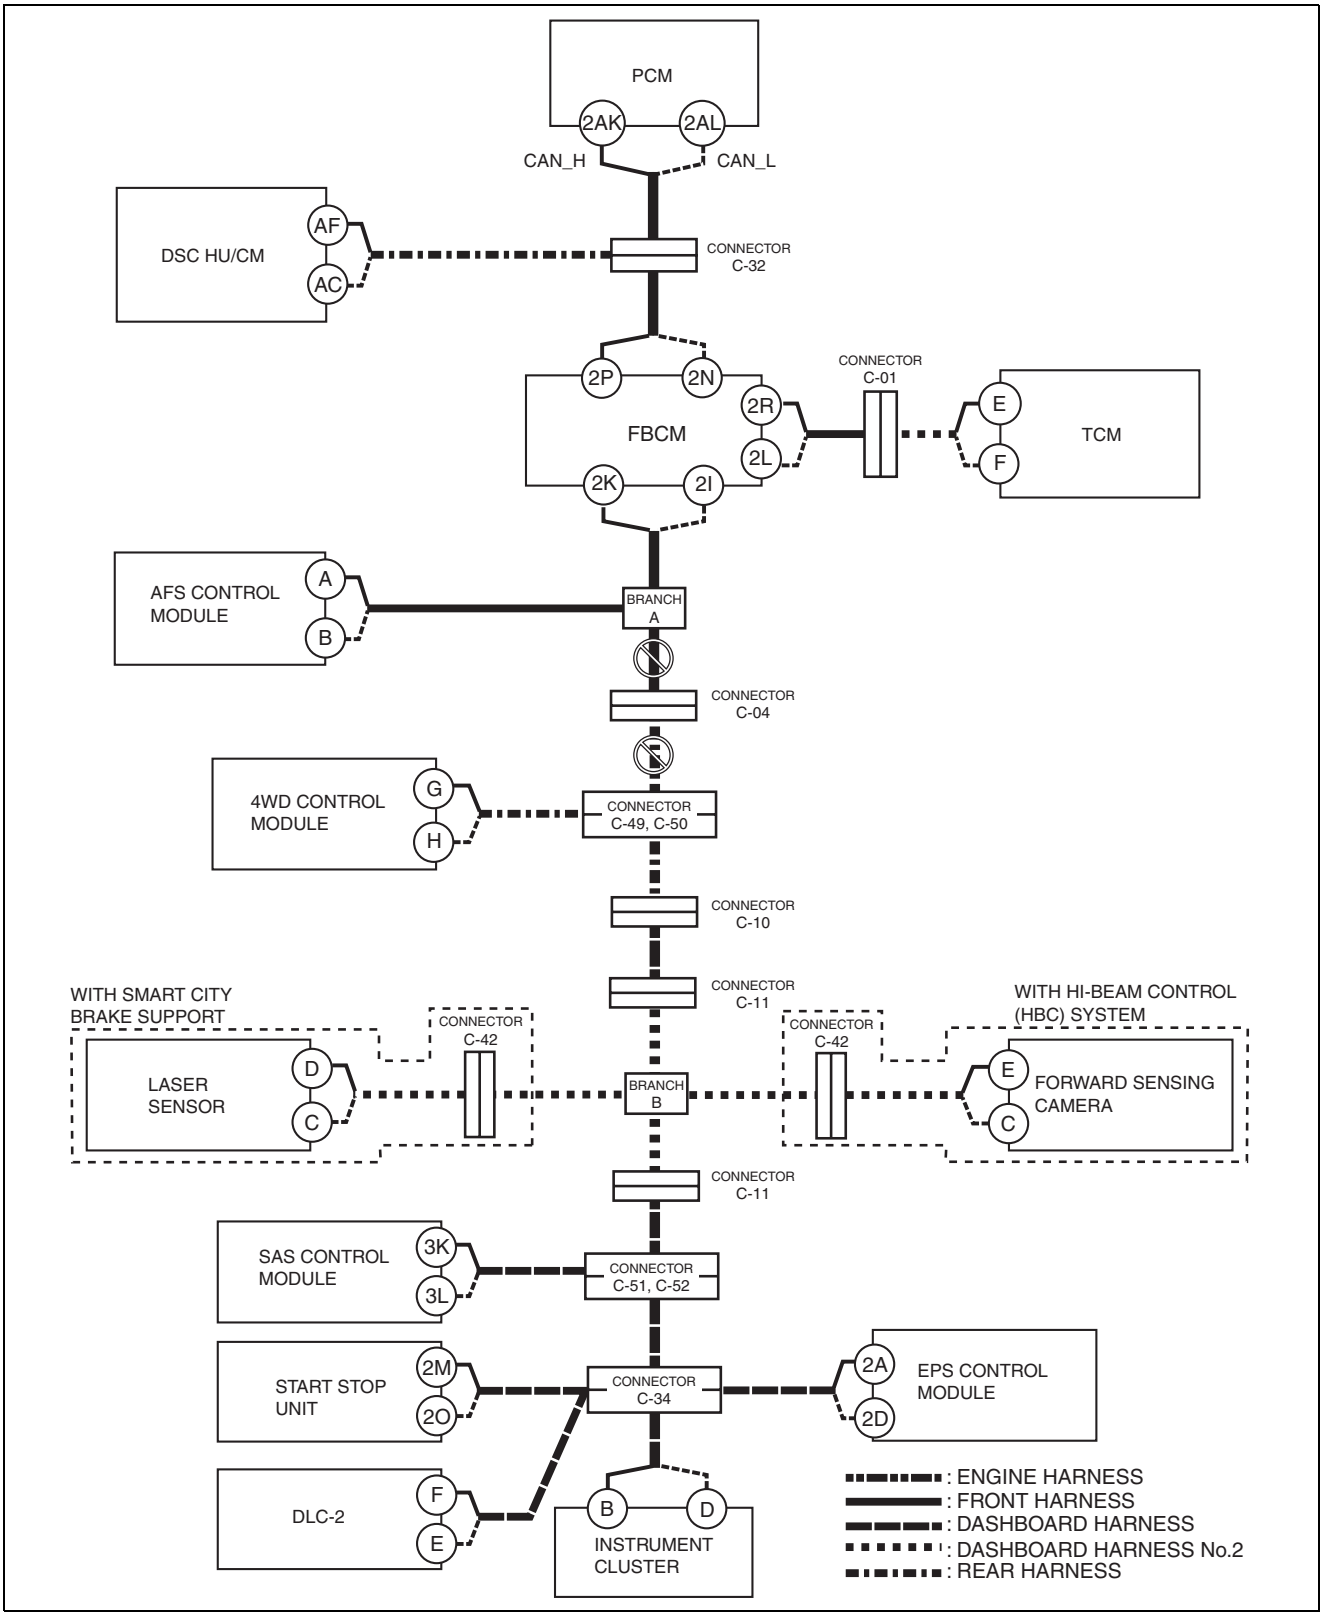
- AFS control module connector
- Wiring harness between AFS control module terminal A and front body control module (FBCM) terminal 2R
- Wiring harness between AFS control module terminal B and front body control module (FBCM) terminal 2L
- AFS control module
- Front body control module (FBCM)
  - — Between front body control module (FBCM) terminal 2R and front body control module (FBCM) terminal 2K
  - — Between front body control module (FBCM) terminal 2L and front body control module (FBCM) terminal 2I

H
4WD vehicles (ATX)
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between branch A and connector C-04
- Open circuit in wiring harness between connector C-04 and connectors C-49, C-50
- Connector C-04 malfunction
- Connectors C-49, C-50 malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000454

Inspection item

- Connector C-04
- Connectors C-49, C-50
- Wiring harness between branch A and connector C-04
- Wiring harness between connector C-04 and connectors C-49, C-50

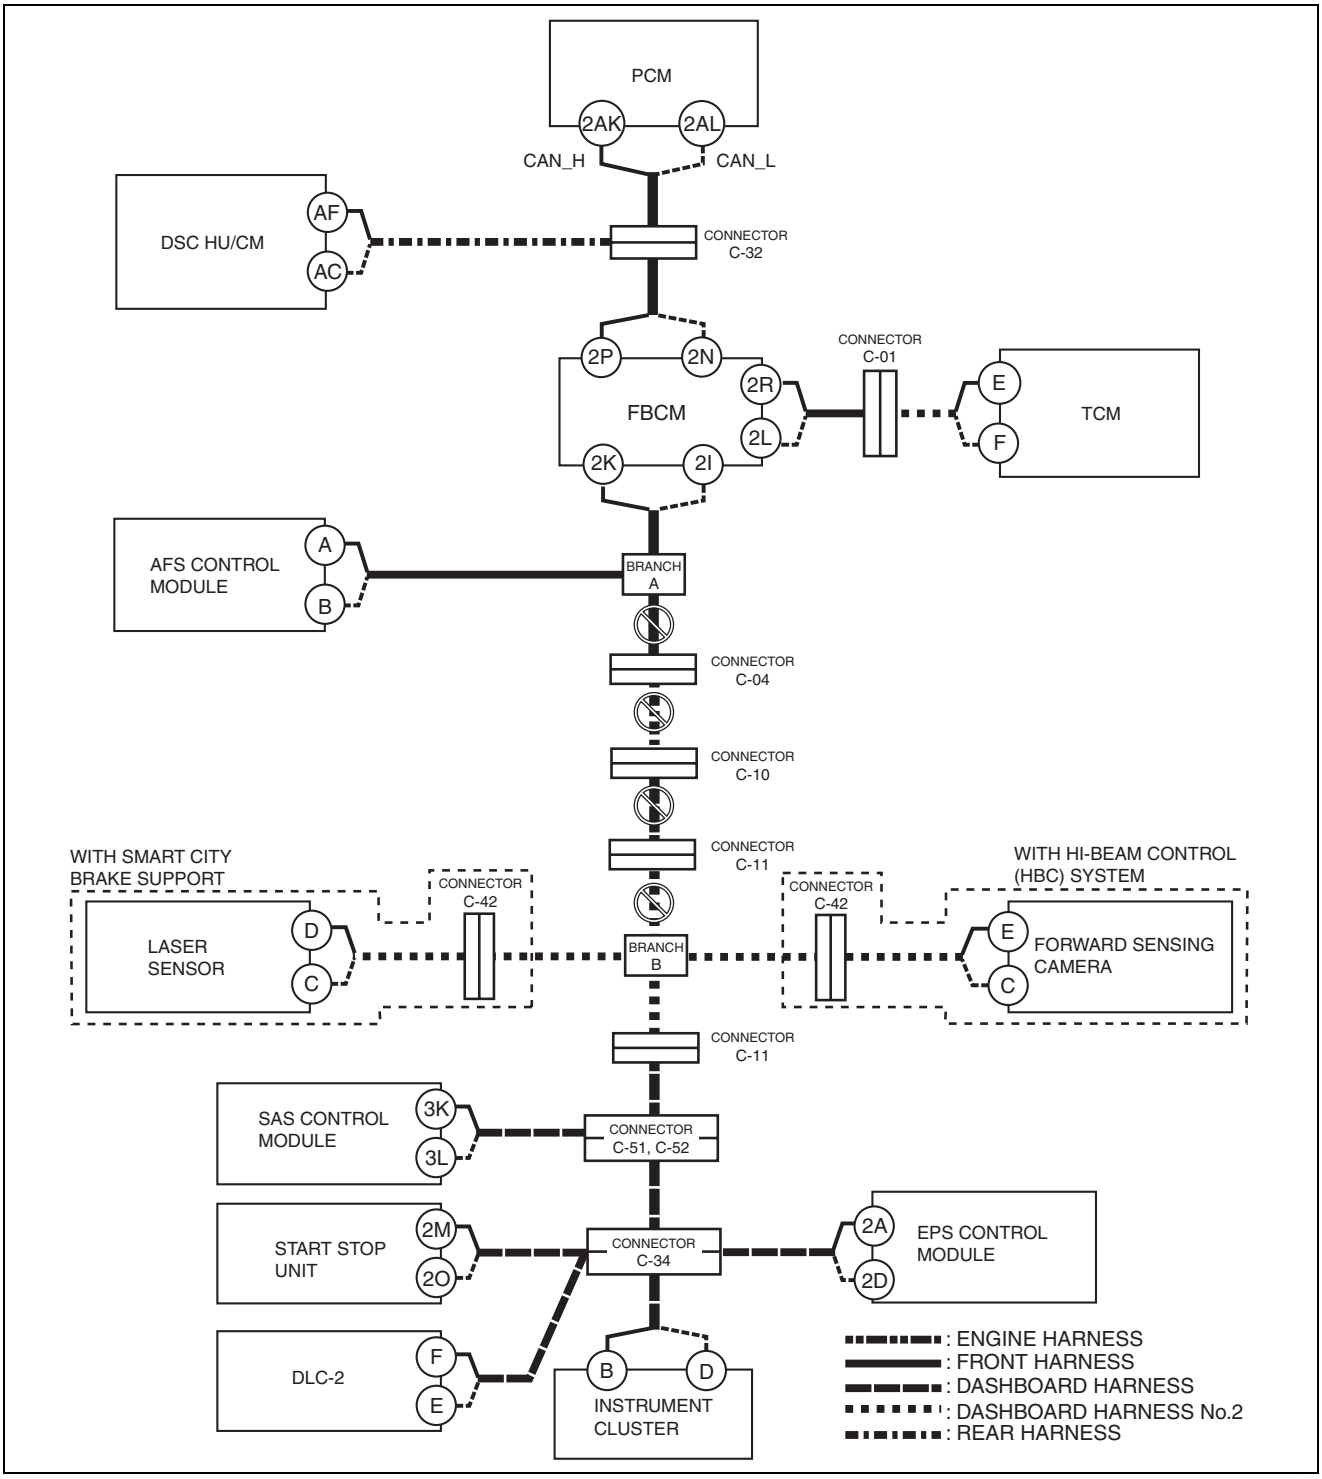
10

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

2WD vehicles (ATX)
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between branch A and connector C-04
- Open circuit in wiring harness between connector C-04 and connector C-10
- Open circuit in wiring harness between connector C-10 and connector C-11
- Open circuit in wiring harness between connector C-11 and branch B
- Connector C-04 malfunction
- Connector C-10 malfunction
- Connector C-11 malfunction

System wiring diagram



ac5wzw0000454

Inspection item

- Connector C-04

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

- Connector C-10
- Connector C-11
- Wiring harness between branch A and connector C-04
- Wiring harness between connector C-04 and connector C-10
- Wiring harness between connector C-10 and connector C-11
- Wiring harness between connector C-11 and branch B

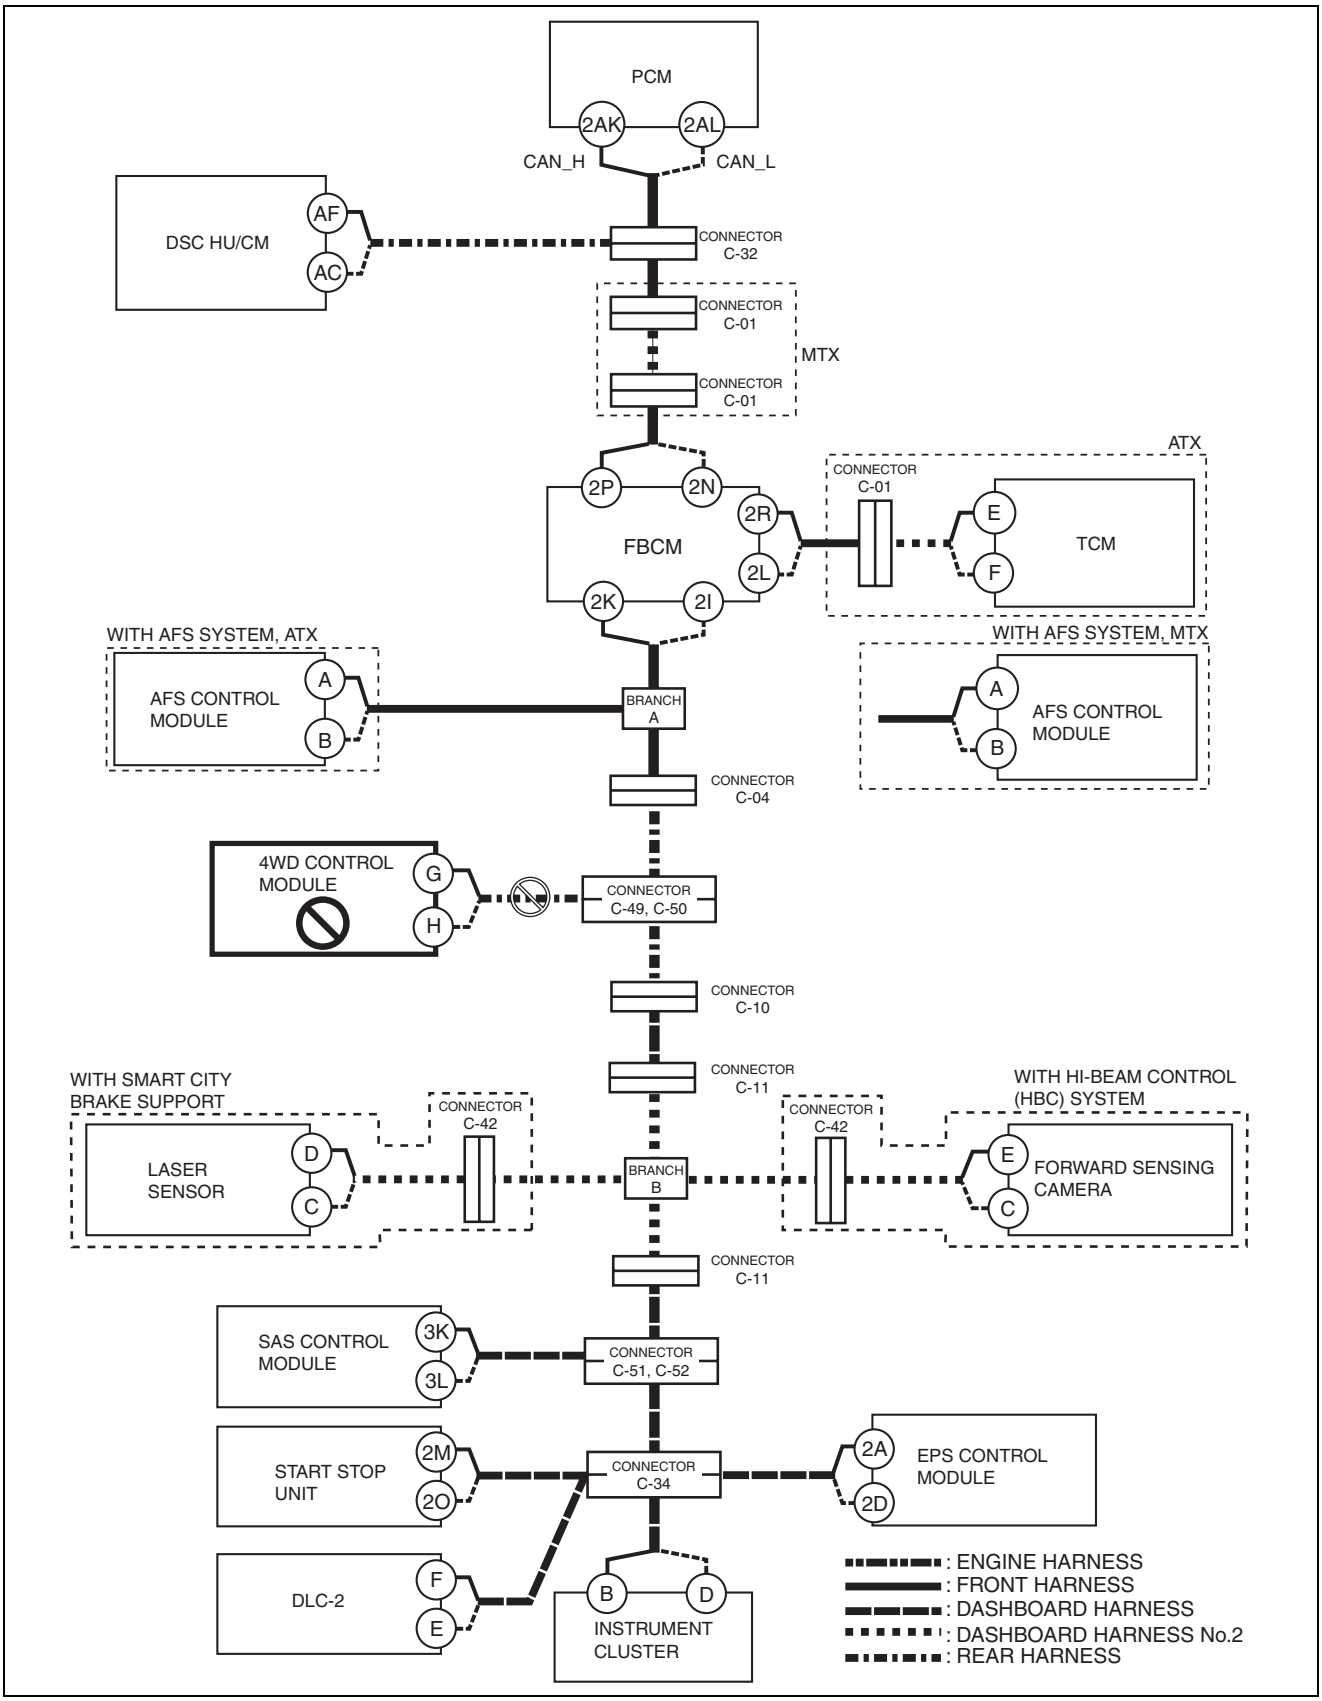
I

Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between 4WD control module and connectors C-49, C-50
- Connectors C-49, C-50 malfunction
- 4WD control module malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000454

Inspection item

- 4WD control module connector
- Connectors C-49, C-50

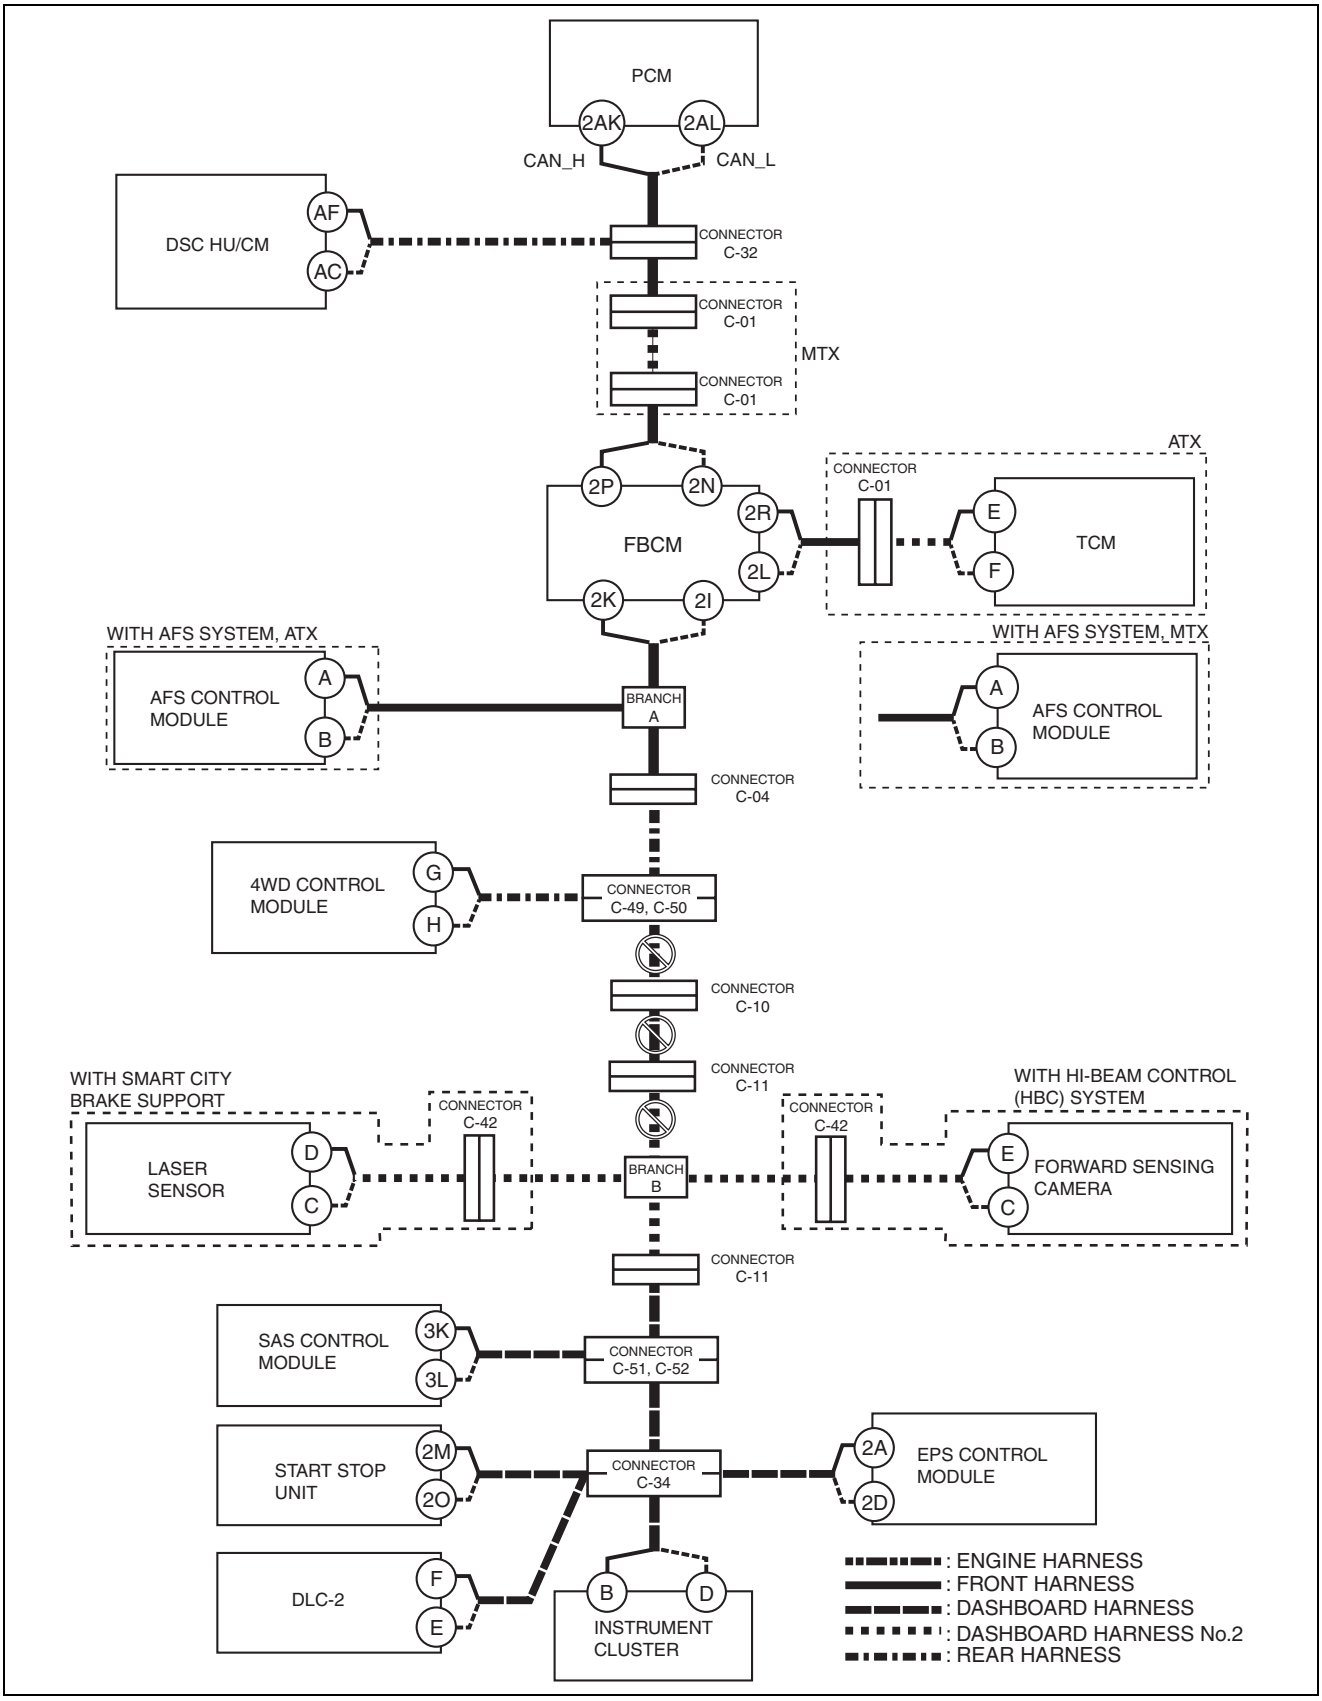
- Wiring harness between 4WD control module terminal G and connector C-49
- Wiring harness between 4WD control module terminal H and connector C-50
- 4WD control module

J
With smart city brake support or hi-beam control (HBC) system
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between connectors C-49, C-50 and connector C-10
- Open circuit in wiring harness between connector C-10 and connector C-11
- Open circuit in wiring harness between connector C-11 and branch B
- Connectors C-49, C-50 malfunction
- Connector C-10 malfunction
- Connector C-11 malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000454

Inspection item

- Connectors C-49, C-50
- Connector C-10
- Connector C-11

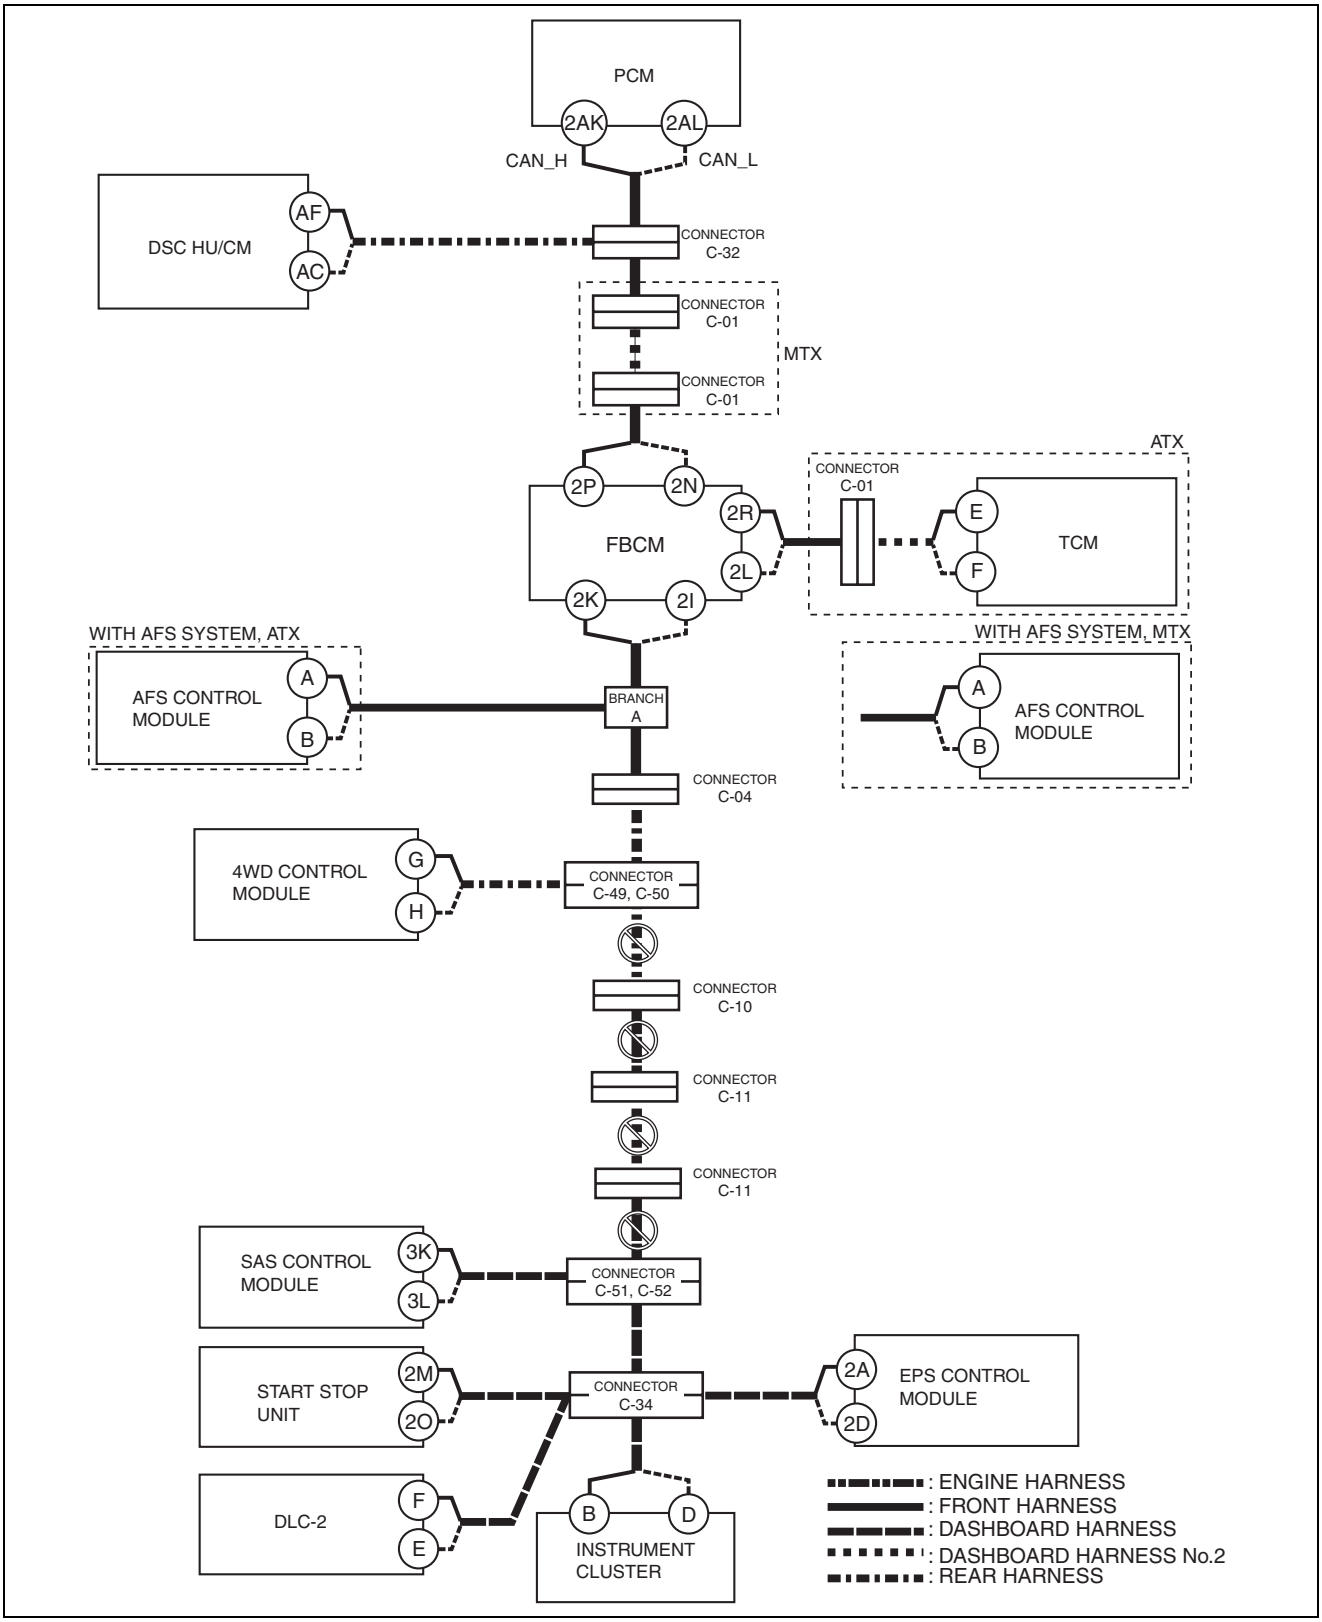
- Wiring harness between connectors C-49, C-50 and connector C-10
- Wiring harness between connector C-10 and connector C-11
- Wiring harness between connector C-11 and branch B

Without smart city brake support or hi-beam control (HBC) system
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between connectors C-49, C-50 and connector C-10
- Open circuit in wiring harness between connector C-10 and connector C-11
- Open circuit in wiring harness between connector C-11 and connector C-11
- Open circuit in wiring harness between connector C-11 and connectors C-51, C-52
- Connectors C-49, C-50 malfunction
- Connector C-10 malfunction
- Connector C-11 malfunction
- Connectors C-51, C-52 malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000454

Inspection item

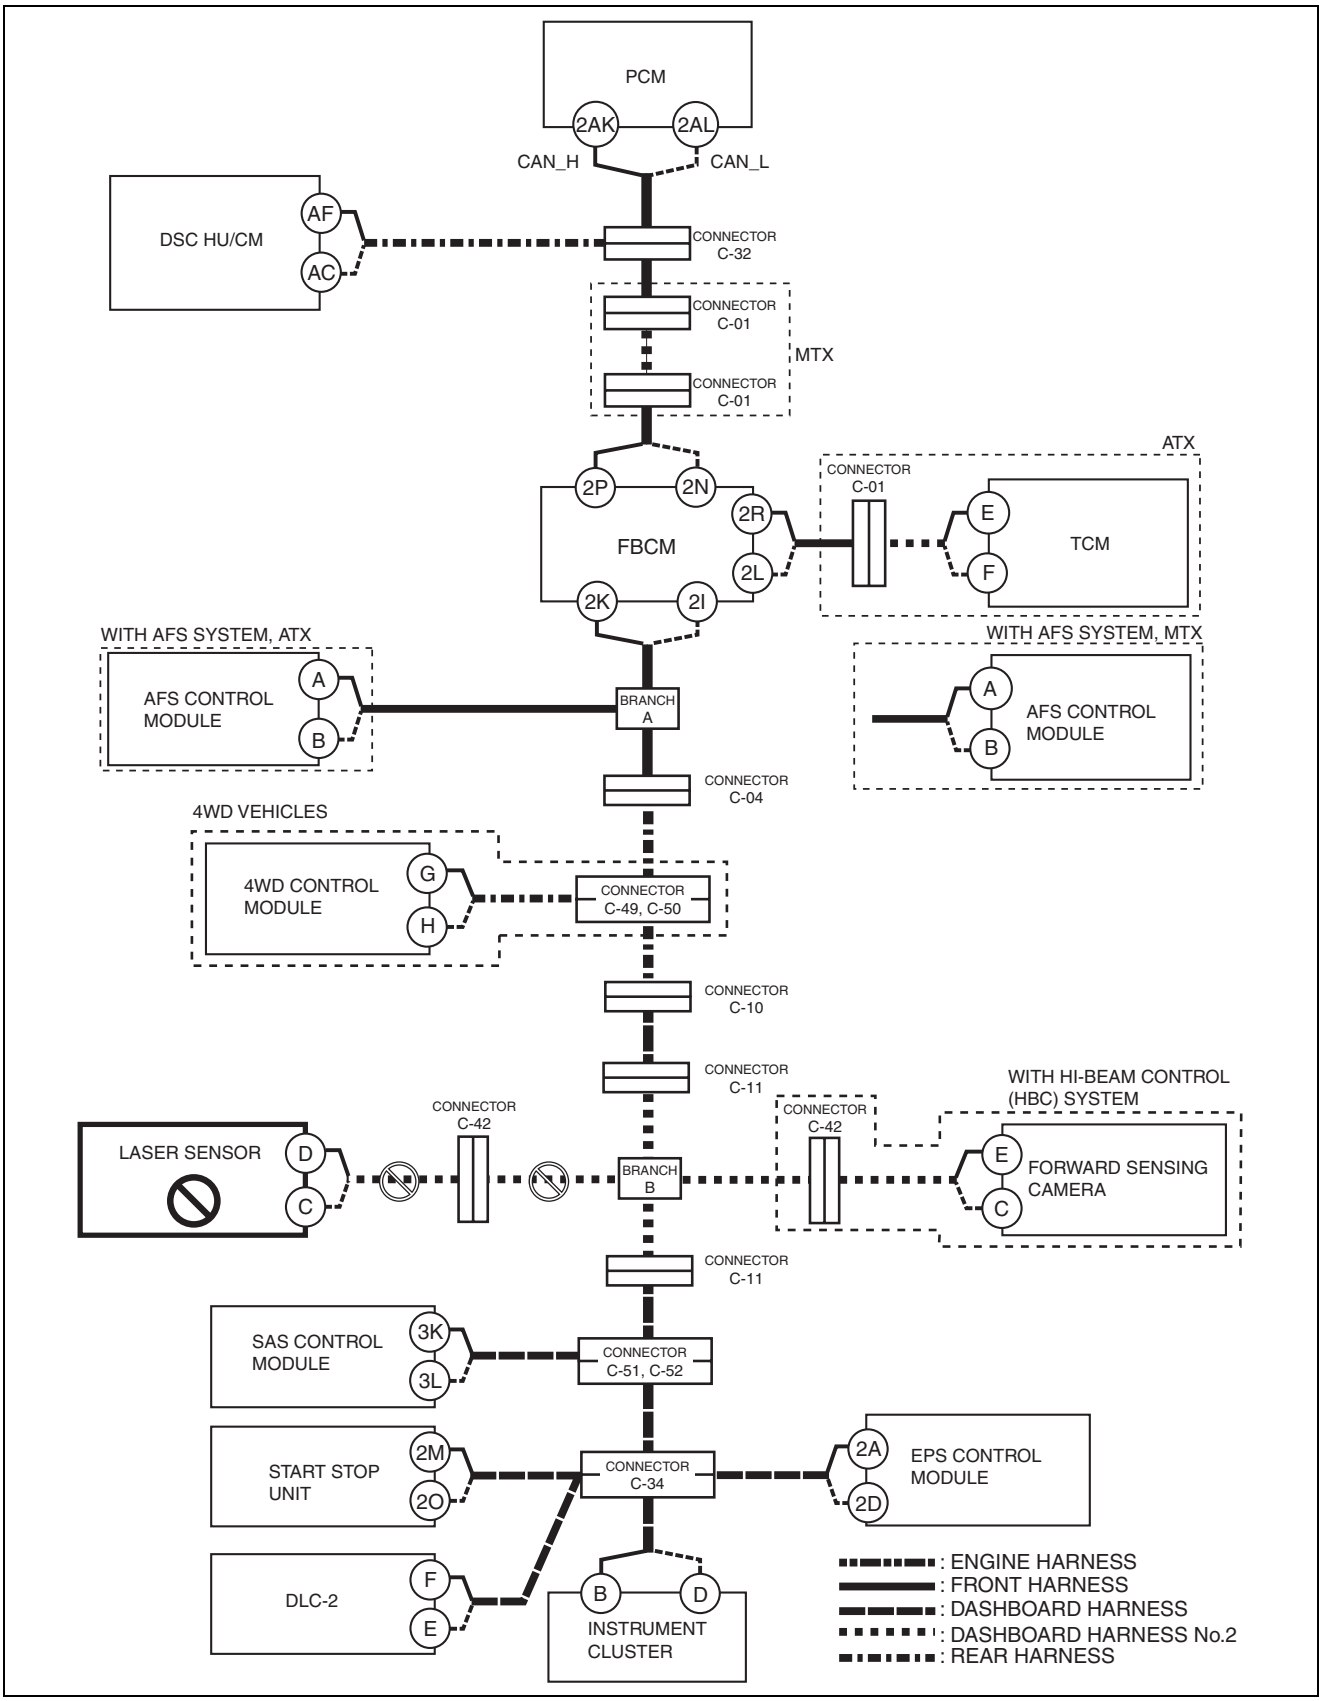
- Connectors C-49, C-50
- Connector C-10
- Connector C-11
- Connectors C-51, C-52
- Wiring harness between connectors C-49, C-50 and connector C-10
- Wiring harness between connector C-10 and connector C-11

- Wiring harness between connector C-11 and connector C-11
- Wiring harness between connector C-11 and connectors C-51, C-52

K
Possible cause
- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between laser sensor and connector C-42
- Open circuit in wiring harness between connector C-42 and branch B
- Connector C-42 malfunction
- Laser sensor malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000454

Inspection item

- laser sensor connector
- Connector C-42

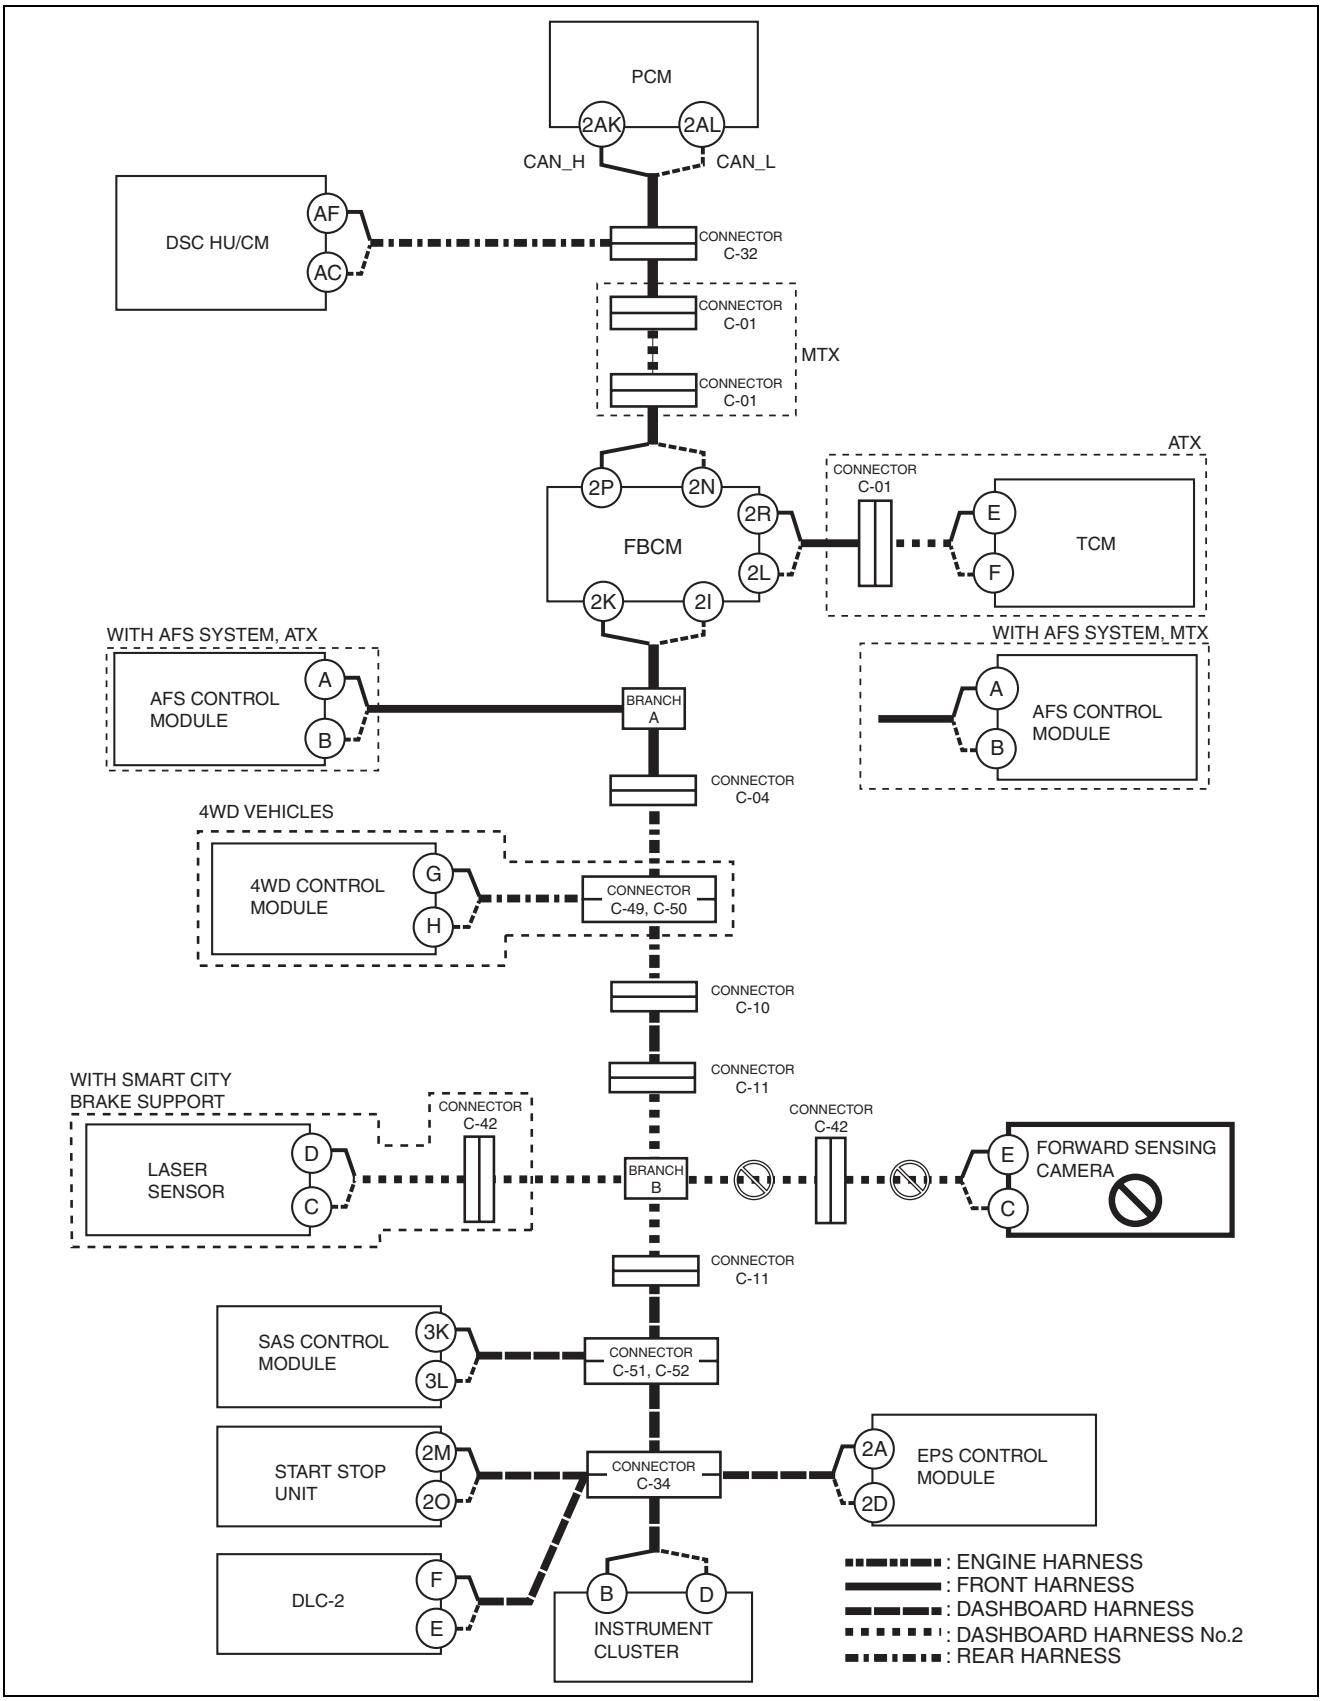
ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

- Wiring harness between laser sensor terminal D and connector C-42
- Wiring harness between laser sensor terminal C and connector C-42
- Wiring harness between connector C-42 and branch B
- Laser sensor

L
Possible cause
- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between forward sensing camera and connector C-42
- Open circuit in wiring harness between connector C-42 and branch B
- Connector C-42 malfunction
- Forward sensing camera malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000454

Inspection item

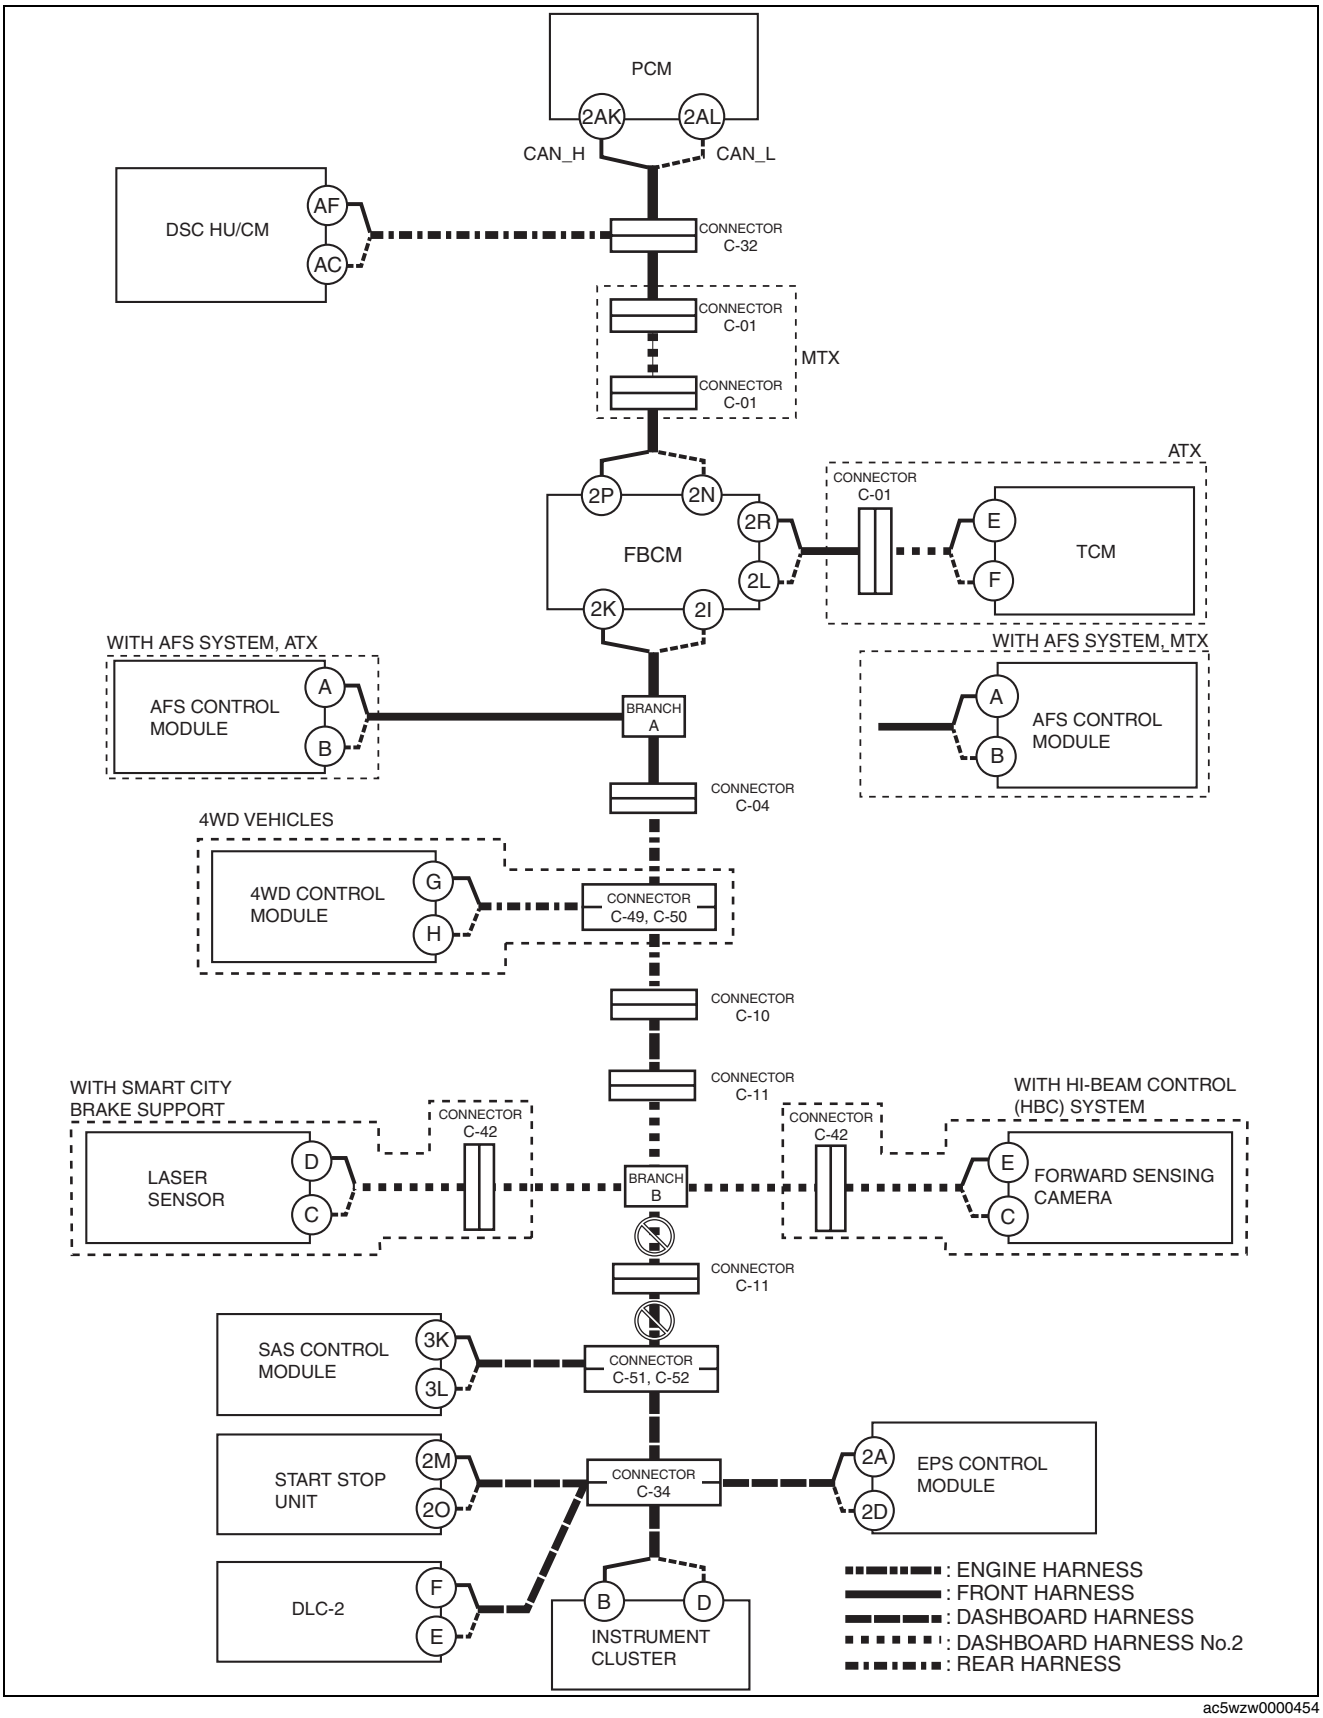
- Forward sensing camera connector
- Connector C-42

- Wiring harness between forward sensing camera terminal E and connector C-42
- Wiring harness between forward sensing camera terminal C and connector C-42
- Wiring harness between connector C-42 and branch B
- Forward sensing camera

M
Possible cause
- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between branch B and connector C-11
- Open circuit in wiring harness between connector C-11 and connector C-51, C-52
- Connector C-11 malfunction
- Connectors C-51, C-52 malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000454

Inspection item

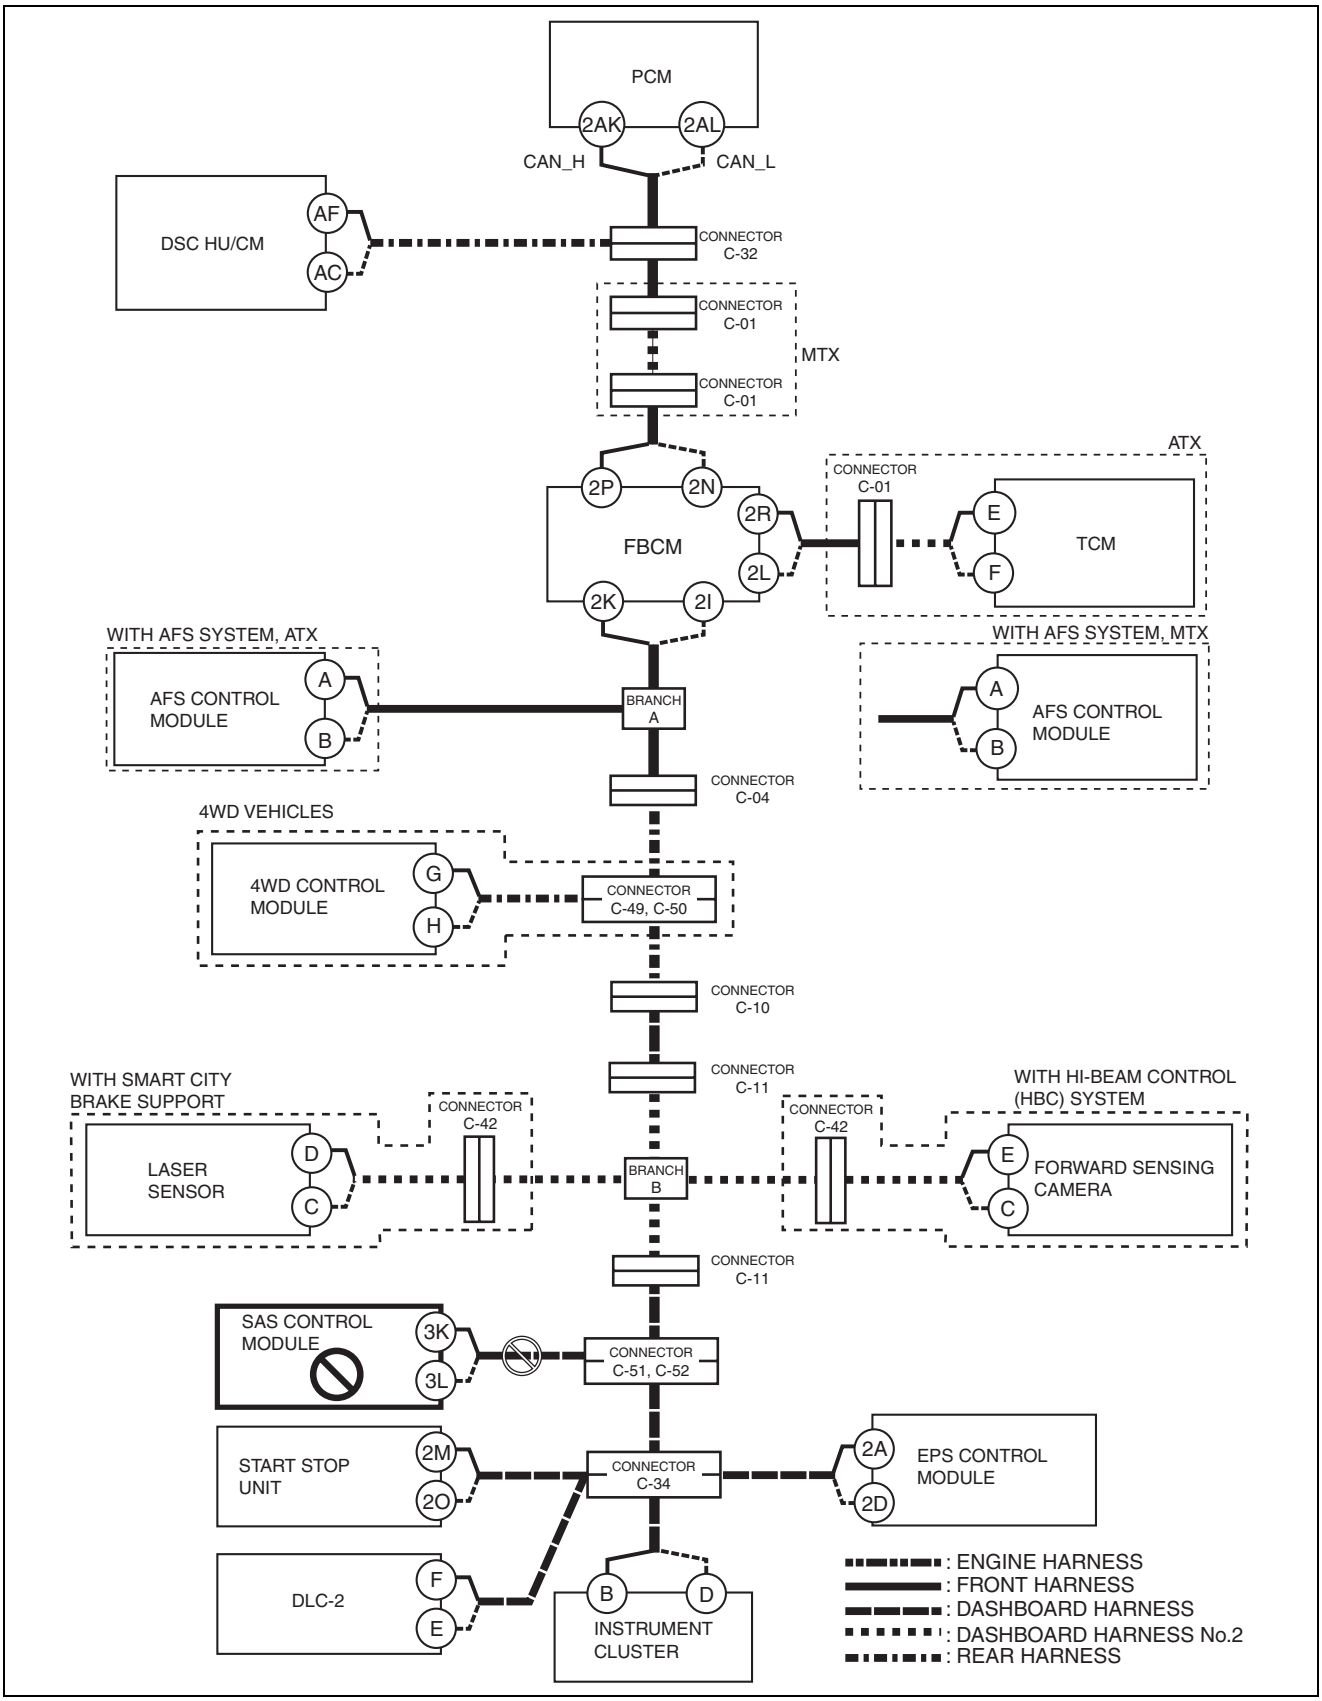
- Connector C-11
- Connectors C-51, C-52

- Wiring harness between branch B and connector C-11
- Wiring harness between connector C-11 and connectors C-51, C-52

N
Possible cause
- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between SAS control module and connectors C-51, C-52
- Connectors C-51, C-52 malfunction
- SAS control module malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000454

Inspection item

Warning

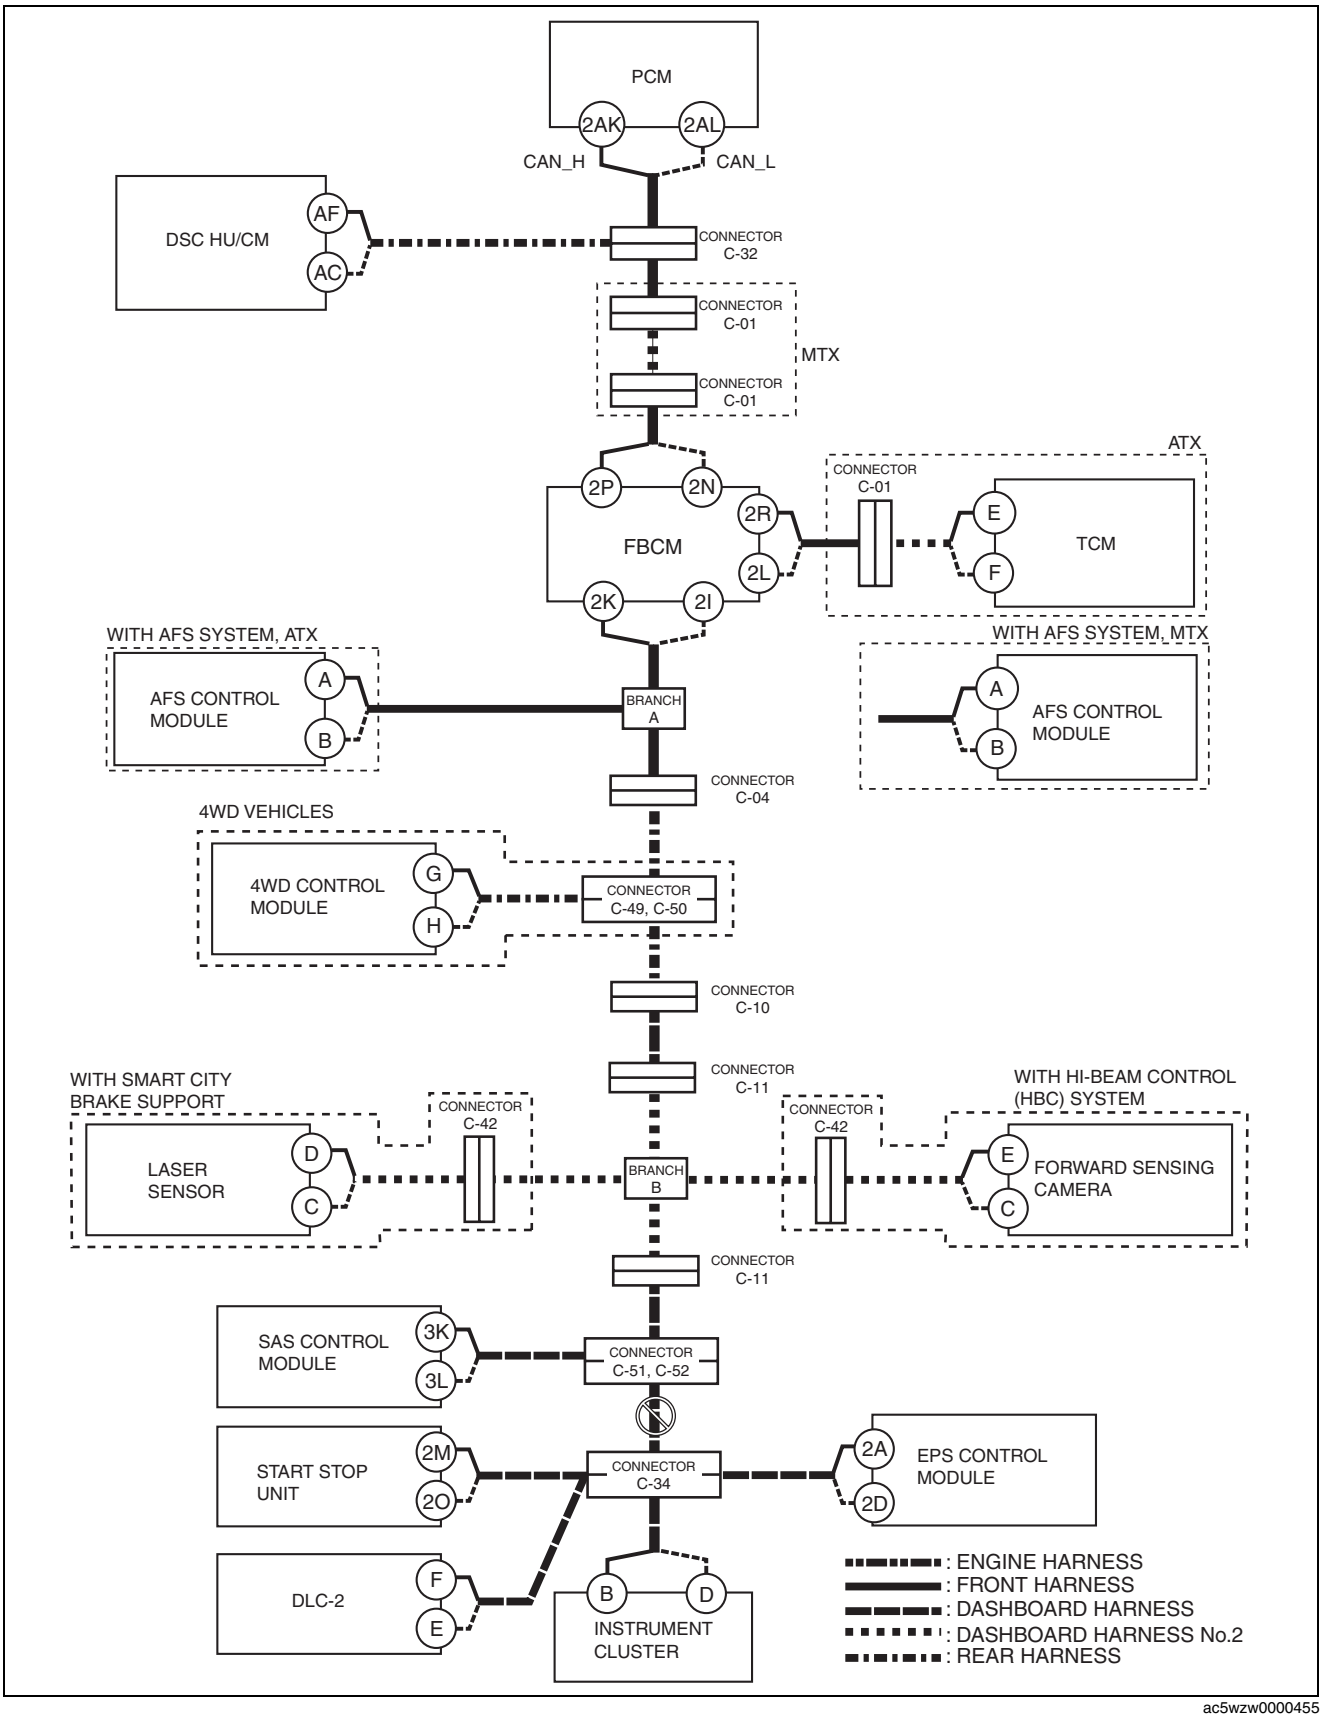
- **Handling the component parts of the SRS air bag system improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components of the SRS air bag system.**
  (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)
  (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)

- SAS control module connector
- Connectors C-51, C-52
- Wiring harness between SAS control module terminal 3K and connector C-51
- Wiring harness between SAS control module terminal 3L and connector C-52
- SAS control module

O
Possible cause
- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between connectors C-51, C-52 and connector C-34
- Connectors C-51, C-52 malfunction
- Connector C-34 malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000455

Inspection item

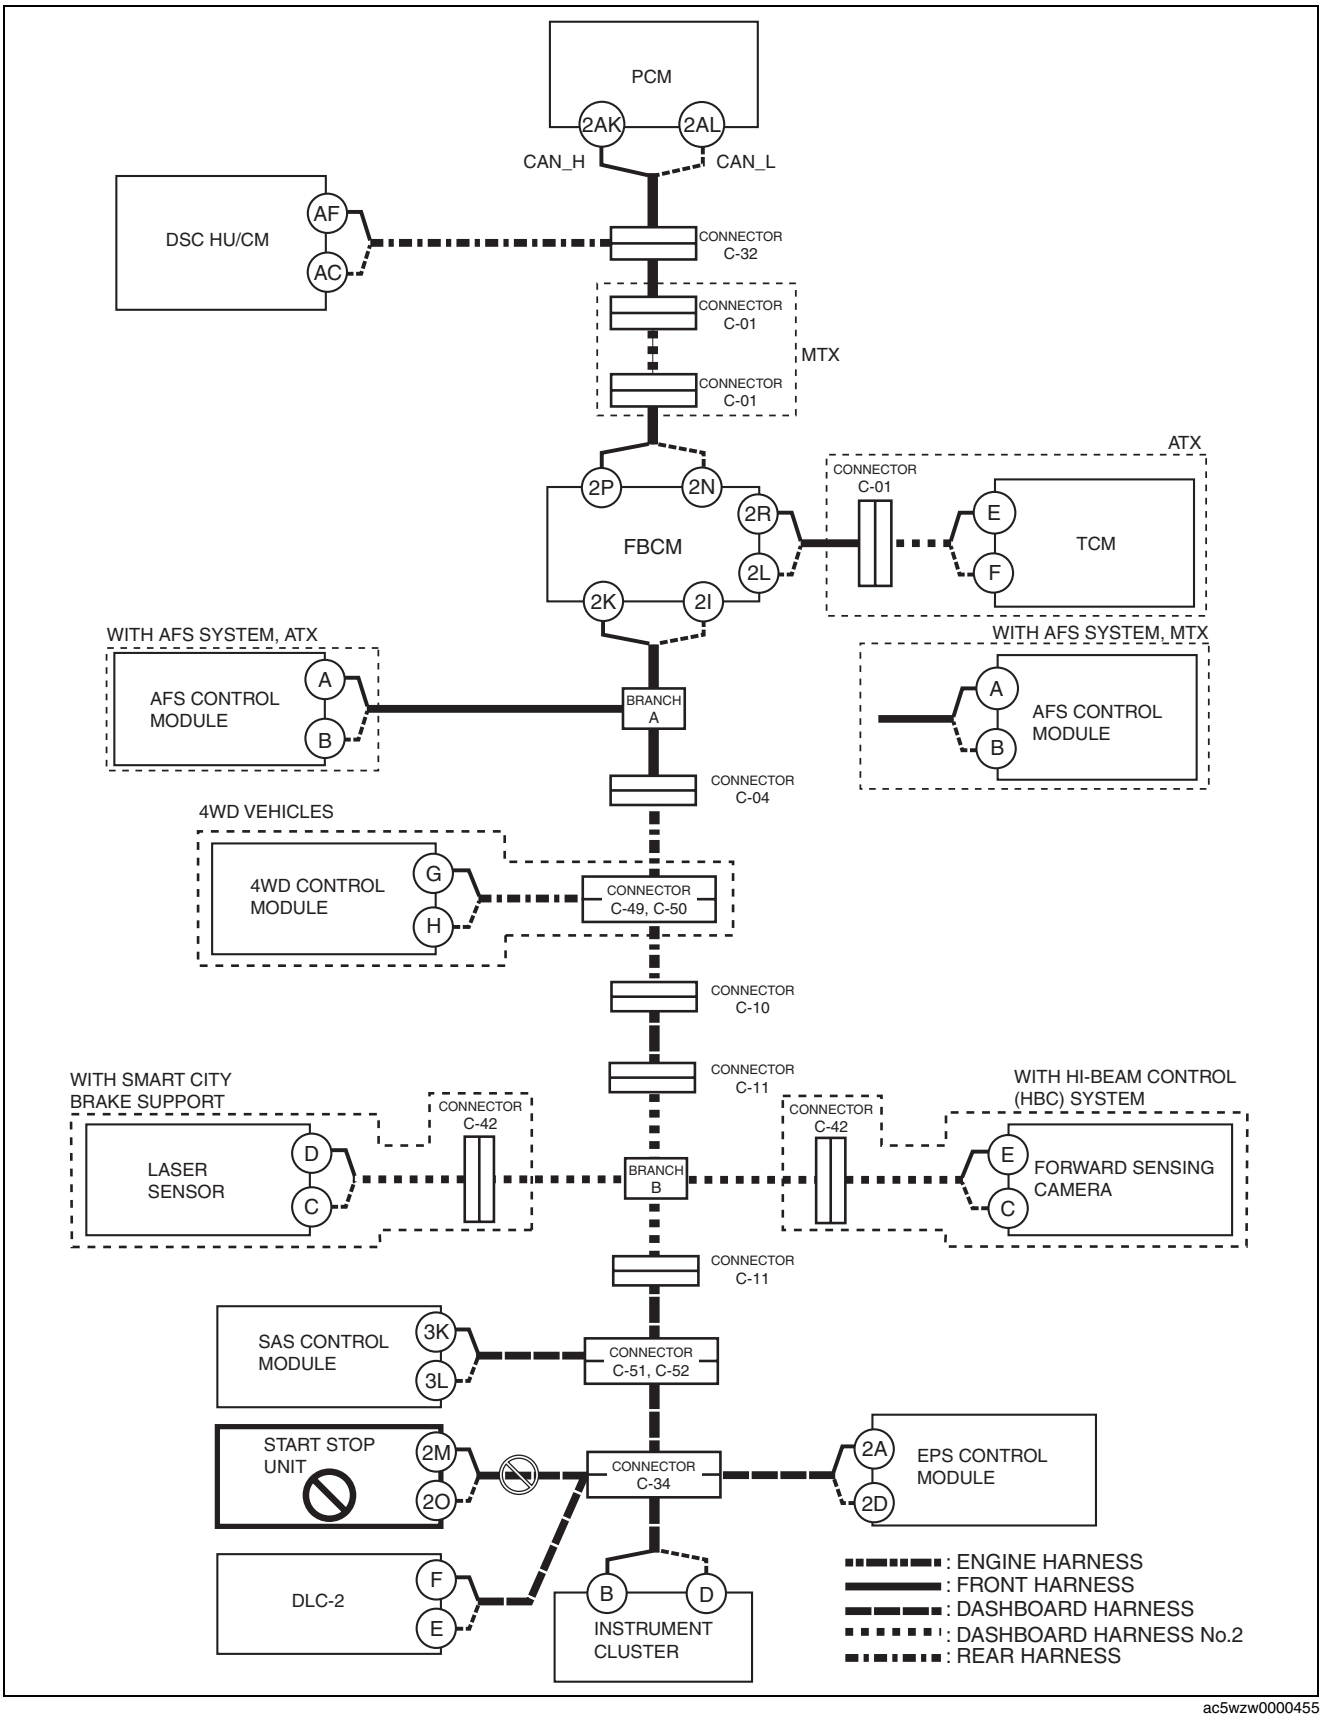
- Connectors C-51, C-52
- Connector C-34

- Wiring harness between connectors C-51, C-52 and connector C-34

P
Possible cause
- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between start stop unit and connector C-34
- Connector C-34 malfunction
- Start stop unit malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000455

Inspection item

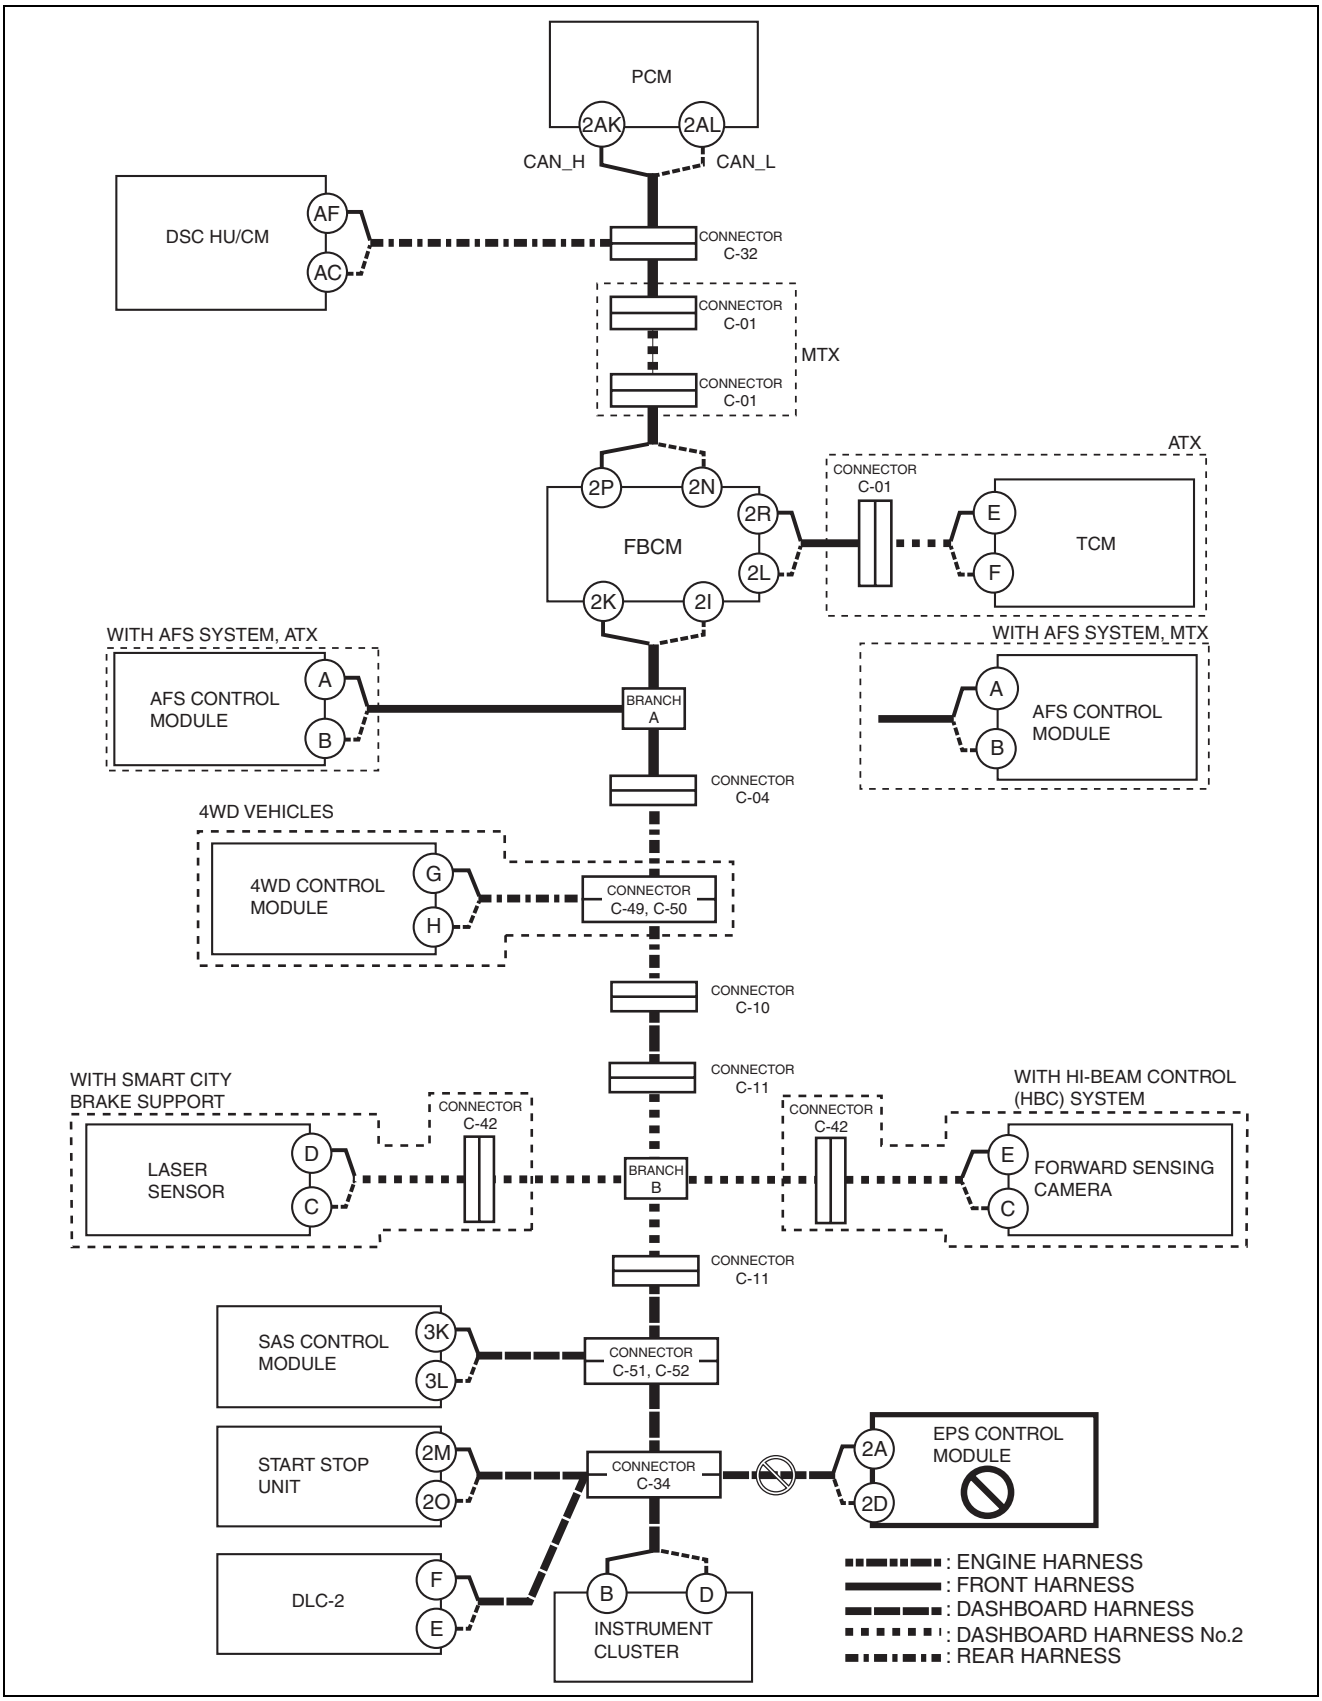
- Start stop unit connector
- Connector C-34

- Wiring harness between start stop unit terminal 2M and connector C-34
- Wiring harness between start stop unit terminal 2O and connector C-34
- Start stop unit

Q
Possible cause
- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between EPS control module and connector C-34
- Connector C-34 malfunction
- EPS control module malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000455

Inspection item

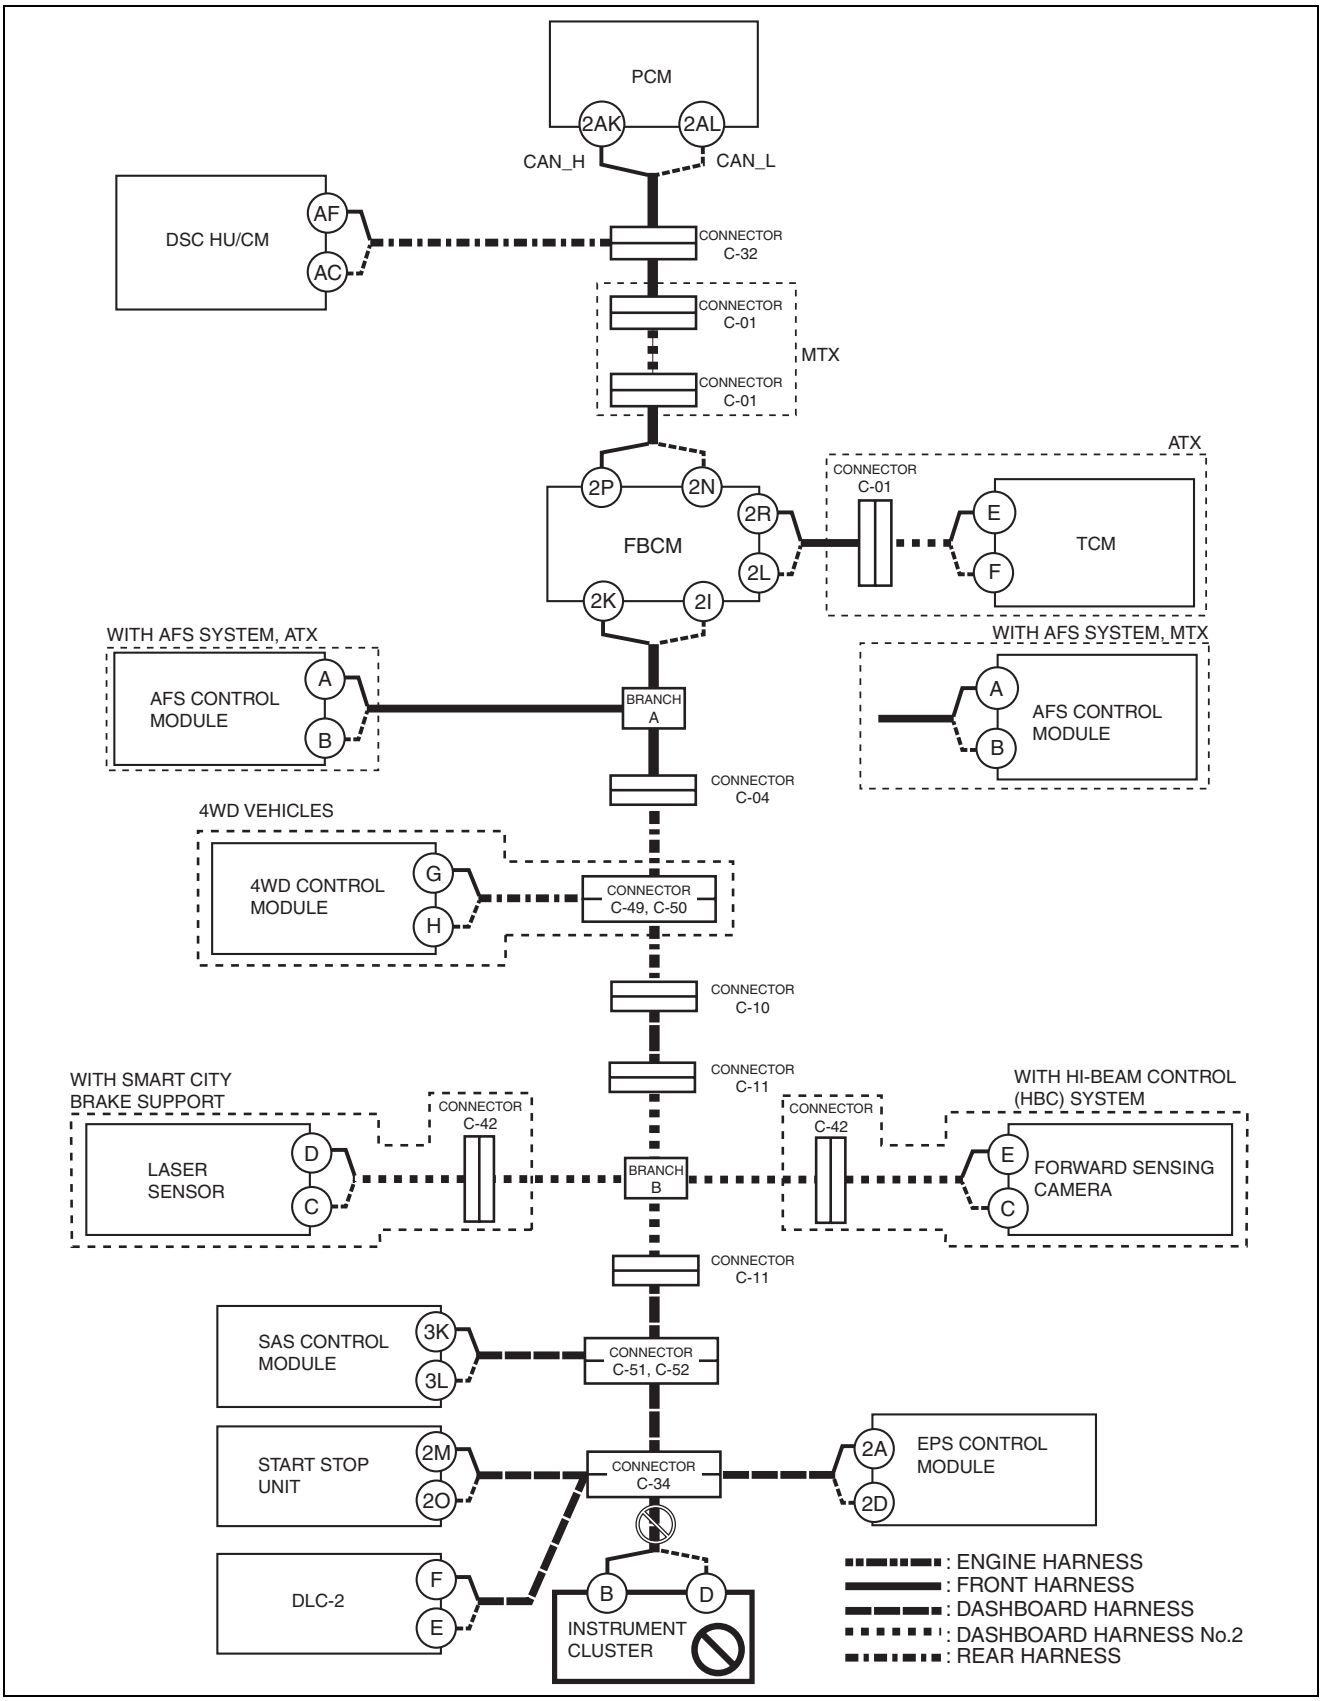
- EPS control module connector
- Connector C-34

- Wiring harness between EPS control module terminal 2A and connector C-34
- Wiring harness between EPS control module terminal 2D and connector C-34
- EPS control module

R
Possible cause
- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between instrument cluster and connector C-34
- Connector C-34 malfunction
- Instrument cluster malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000455

Inspection item

- Instrument cluster connector
- Connector C-34

- Wiring harness between instrument cluster terminal B and connector C-34
- Wiring harness between instrument cluster terminal D and connector C-34
- Instrument cluster

DETERMINING SHORT TO GROUND LOCATION (HS-CAN) [SKYACTIV-D 2.2 (R.H.D.)]

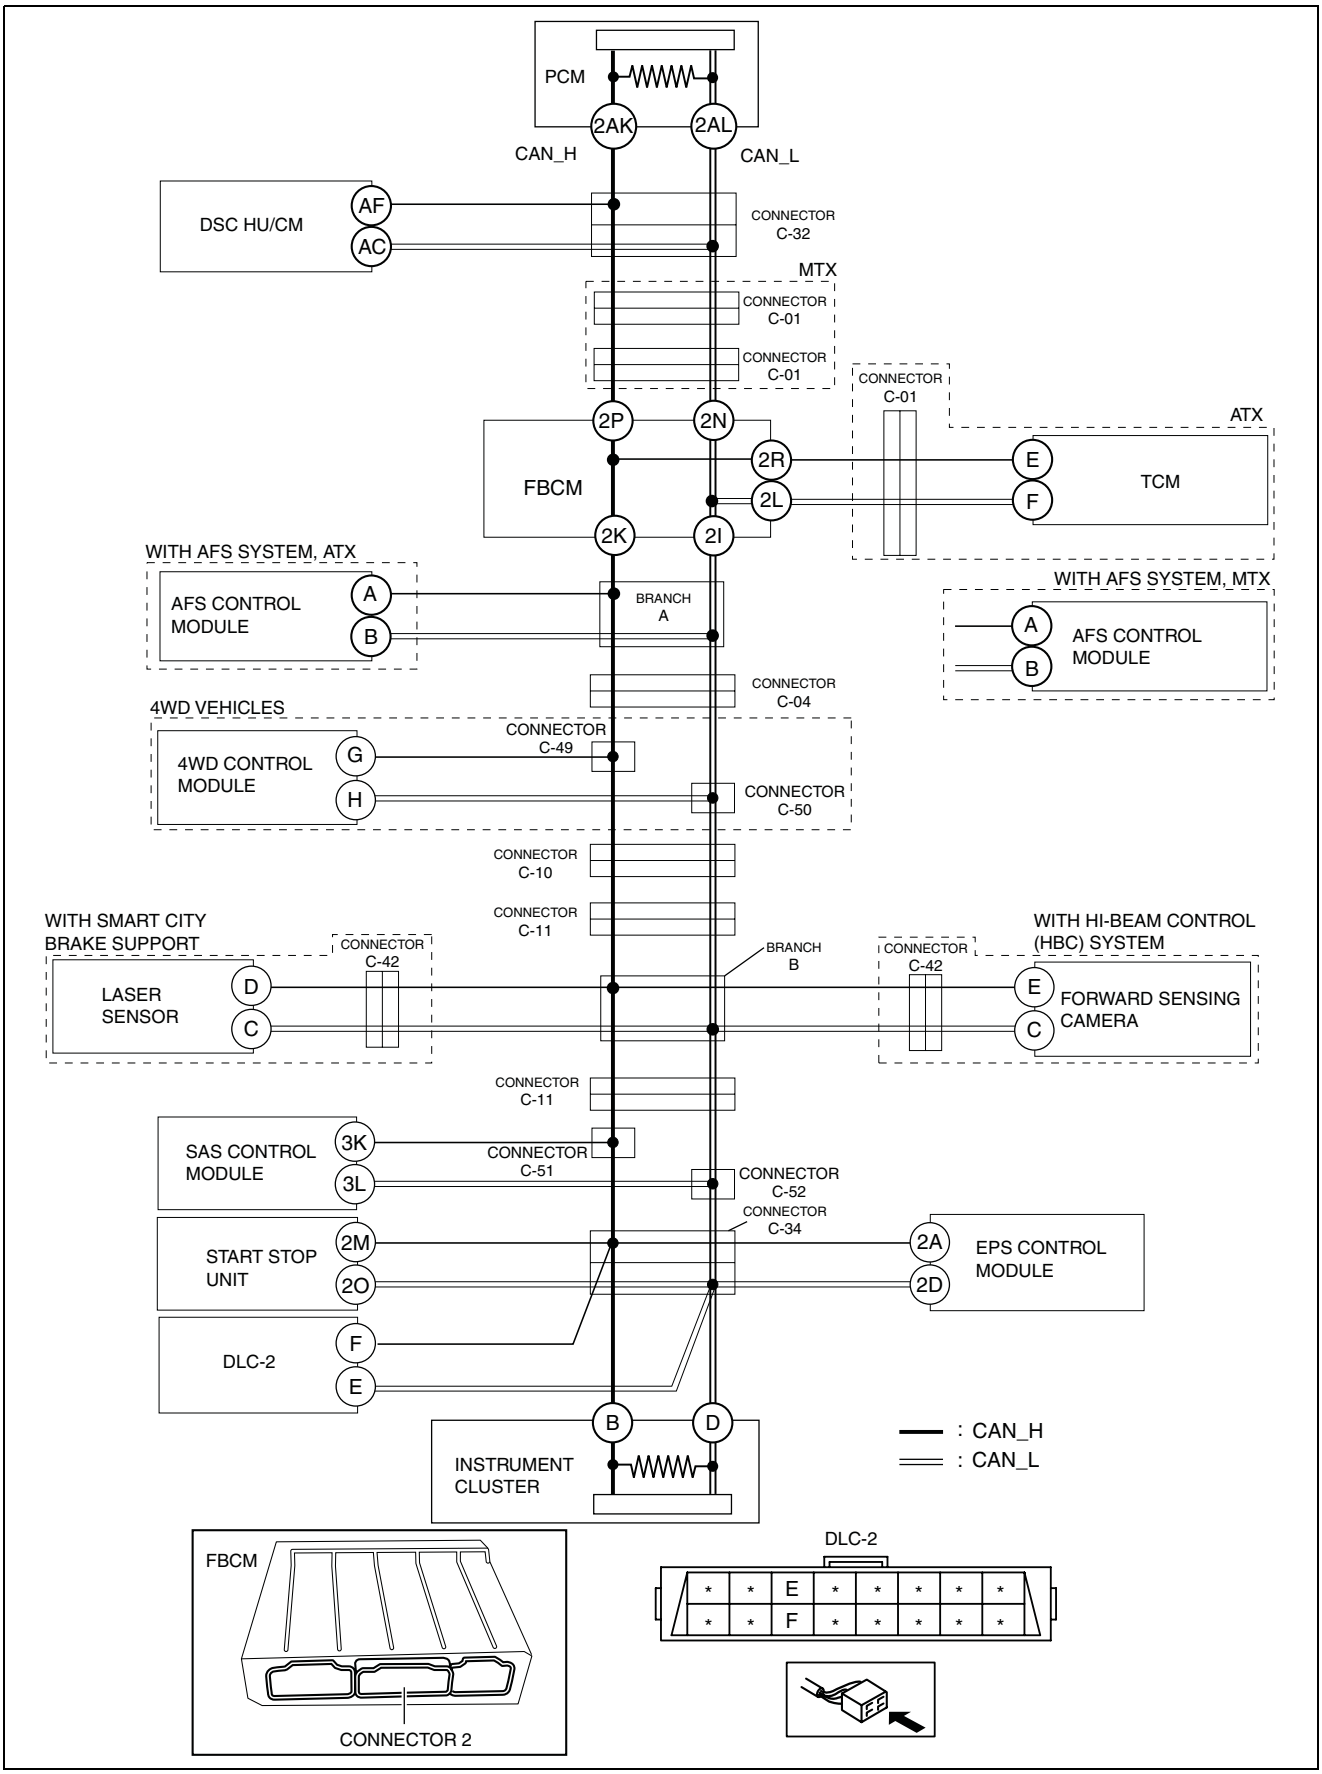
id100206000600

Caution

- **Perform the following malfunction diagnosis only when it is diagnosed with a short to ground by 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)].**

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000068

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Determination procedure

Caution
- **When disconnecting the connector, verify that there is no looseness, damage, deformation, corrosion, or poor connection of the connector terminals.**
- **When inspecting the DLC-2, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals.**

Step	Inspection		Action
1	**INSPECT FOR SHORT TO GROUND BETWEEN FRONT BODY CONTROL MODULE (FBCM) AND INSTRUMENT CLUSTER** • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector 2 which has front body control module (FBCM) terminals 2P and 2N. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Go to Step 6.
		No	Go to the next step.
2	**INSPECT CAN LINE INSIDE FRONT BODY CONTROL MODULE (FBCM) FOR SHORT TO GROUND** • Inspect for continuity at the following terminals: — Between front body control module (FBCM) terminal 2P and body ground — Between front body control module (FBCM) terminal 2N and body ground • Is there continuity?	Yes	Replace the front body control module (FBCM) because there is a short to ground in the front body control module (FBCM). (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**INSPECT FOR SHORT TO GROUND BETWEEN TCM OR AFS CONTROL MODULE AND FRONT BODY CONTROL MODULE (FBCM)** • Inspect for continuity at the following terminals: — Between TCM control module terminal E and body ground (ATX) — Between TCM control module terminal F and body ground (ATX) — Between AFS control module terminal A and body ground (MTX) — Between AFS control module terminal B and body ground (MTX) • Is there continuity?	Yes	• Go to the next step. (ATX) • Go to Step 5. (MTX)
		No	• Go to Step 30. (ATX) • Go to Step 28. (MTX)
4	**INSPECT FOR SHORT TO GROUND BETWEEN TCM AND CONNECTOR C-01** • Disconnect connector C-01. • Inspect for continuity at the following terminals: — Between TCM control module terminal E and body ground — Between TCM control module terminal F and body ground • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between the front body control module (FBCM) and connector C-01 because the wiring harness is shorted to ground.

10

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
5	**INSPECT CAN LINE IN TCM OR AFS CONTROL MODULE FOR SHORT TO GROUND** • Disconnect the TCM connector. (ATX) • Disconnect the AFS control module connector. (MTX) • Inspect for continuity at the following terminals: — Between TCM terminal E (wiring harness side) and body ground (ATX) — Between TCM terminal F (wiring harness side) and body ground (ATX) — Between AFS control module terminal A (wiring harness side) and body ground (MTX) — Between AFS control module terminal B (wiring harness side) and body ground (MTX) • Is there continuity?	Yes	• Repair or replace the wiring harness between the TCM and connector C-01because the wiring harness is shorted to ground. (ATX) • Repair or replace the wiring harness between the AFS control module and front body control module (FBCM) because the wiring harness is shorted to ground. (MTX)
		No	• Replace the TCM because there is a short to ground in the TCM. (ATX) (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].) (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].) • Replace the AFS control module because there is a short to ground in the AFS control module. (MTX) (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
6	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-04 AND INSTRUMENT CLUSTER** • Disconnect connector C-04. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Go to Step 8.
		No	• Go to the next step. (ATX) • Repair or replace the wiring harness between the front body control module (FBCM) and connector C-04 because the wiring harness is shorted to ground. (MTX)
7	**INSPECT CAN LINE IN AFS CONTROL MODULE FOR SHORT TO GROUND** • Disconnect the AFS control module connector. • Inspect for continuity at the following terminals: — Between AFS control module terminal A (wiring harness side) and body ground — Between AFS control module terminal B (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the AFS control module and front body control module (FBCM) / connector C-04 because the wiring harness is shorted to ground.
		No	Replace the AFS control module because there is a short to ground in the AFS control module. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
8	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTORS C-49 AND C-50 AND INSTRUMENT CLUSTER** • Disconnect connectors C-49 and C-50. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Go to Step 11.
		No	Go to the next step.
9	**INSPECT FOR SHORT TO GROUND BETWEEN 4WD CONTROL MODULE AND CONNECTORS C-49 AND C-50** • Inspect for continuity at the following terminals: — Between 4WD control module terminal G and body ground — Between 4WD control module terminal H and body ground • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-04 and connectors C-49 and C-50 because the wiring harness is shorted to ground.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
10	**INSPECT CAN LINE IN 4WD CONTROL MODULE FOR SHORT TO GROUND** • Disconnect the 4WD control module connector. • Inspect for continuity at the following terminals: — Between 4WD control module terminal G (wiring harness side) and body ground — Between 4WD control module terminal H (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the 4WD control module and connectors C-49 and C-50 because the wiring harness is shorted to ground.
		No	Replace the 4WD control module because there is a short to ground in the 4WD control module. (See 03-18-4 4WD CONTROL MODULE REMOVAL/ INSTALLATION.)
11	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-10 AND INSTRUMENT CLUSTER** • Disconnect connector C-10. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connectors C-49 and C-50 and connector C-10 because the wiring harness is shorted to ground.
12	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-11 AND INSTRUMENT CLUSTER** • Disconnect connector C-11. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Go to Step 18.
		No	Go to the next step.
13	**INSPECT FOR SHORT TO GROUND BETWEEN LASER SENSOR AND CONNECTOR C-42** • Disconnect connector C-42. • Inspect for continuity at the following terminals: — Between laser sensor terminal D and body ground — Between laser sensor terminal C and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 15.
14	**INSPECT CAN LINE INSIDE LASER SENSOR FOR SHORT TO GROUND** • Disconnect the laser sensor connector. • Inspect for continuity at the following terminals: — Between laser sensor terminal D (wiring harness side) and body ground — Between laser sensor terminal C (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the laser sensor and connector C-42 because the wiring harness is shorted to ground.
		No	Replace the laser sensor because there is a short to ground in the laser sensor. (See 04-15-17 LASER SENSOR REMOVAL/ INSTALLATION.)
15	**INSPECT FOR SHORT TO GROUND BETWEEN FORWARD SENSING CAMERA AND CONNECTOR C-42** • Inspect for continuity at the following terminals: — Between forward sensing camera terminal E and body ground — Between forward sensing camera terminal C and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 17.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
16	**INSPECT CAN LINE IN FORWARD SENSING CAMERA FOR SHORT TO GROUND** • Disconnect the forward sensing camera connector. • Inspect for continuity at the following terminals: — Between forward sensing camera terminal E (wiring harness side) and body ground — Between forward sensing camera terminal C (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the forward sensing camera and connector C-42 because the wiring harness is shorted to ground.
		No	Replace the forward sensing camera because there is a short to ground in the forward sensing camera. (See 09-18-94 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
17	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTORS C-11 AND C-42** • Connect connector C-42. • Inspect for continuity at the following terminals: — Between forward sensing camera terminal E and body ground (with high beam control (HBC) system) — Between forward sensing camera terminal C and body ground (with high beam control (HBC) system) — Between laser sensor terminal D and body ground (with smart city brake support) — Between laser sensor terminal C and body ground (with smart city brake support) • Is there continuity?	Yes	Repair or replace the wiring harness between connector C-11 and connector C-42 because the wiring harness is shorted to ground.
		No	Repair or replace the wiring harness between connector C-10 and connector C-11 because the wiring harness is shorted to ground.
18	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-51, C-52 AND INSTRUMENT CLUSTER** • Disconnect connector C-51, C-52. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Go to Step 21.
		No	Go to the next step.
19	**INSPECT FOR SHORT TO GROUND BETWEEN SAS CONTROL MODULE AND CONNECTOR C-51, C-52** • Inspect for continuity at the following terminals: — Between SAS control module terminal 3K and body ground — Between SAS control module terminal 3L and body ground • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-11 and connector C-51, C-52 because the wiring harness is shorted to ground.
20	**INSPECT CAN LINE IN SAS CONTROL MODULE FOR SHORT TO GROUND** • Disconnect the SAS control module connector. • Inspect for continuity at the following terminals: — Between SAS control module terminal 3K (wiring harness side) and body ground — Between SAS control module terminal 3L (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the SAS control module and connector C-51, C-52 because the wiring harness is shorted to ground.
		No	Replace the SAS control module because there is a short to ground in the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
21	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTORS C-34 AND DLC-2** • Disconnect connector C-34. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between connector C-34 and DLC-2 because the wiring harness is shorted to ground.
		No	Go to the next step.
22	**INSPECT FOR SHORT TO GROUND BETWEEN START STOP UNIT AND CONNECTOR C-34** • Inspect for continuity at the following terminals: — Between start stop unit terminal 2M and body ground — Between start stop unit terminal 2O and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 24.
23	**INSPECT CAN LINE IN START STOP UNIT FOR SHORT TO GROUND** • Disconnect the start stop unit connector. • Inspect for continuity at the following terminals: — Between start stop unit terminal 2M (wiring harness side) and body ground — Between start stop unit terminal 2O (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the start stop unit and connector C-34 because the wiring harness is shorted to ground.
		No	Replace the start stop unit because there is a short to ground in the start stop unit. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
24	**INSPECT FOR SHORT TO GROUND BETWEEN EPS CONTROL MODULE AND CONNECTOR C-34** • Inspect for continuity at the following terminals: — Between EPS control module terminal 2A and body ground — Between EPS control module terminal 2D and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 26.
25	**INSPECT CAN LINE IN EPS CONTROL MODULE FOR SHORT TO GROUND** • Disconnect the EPS control module connector. • Inspect for continuity at the following terminals: — Between EPS control module terminal 2A (wiring harness side) and body ground — Between EPS control module terminal 2D (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the EPS control module and connector C-34 because the wiring harness is shorted to ground.
		No	Replace the EPS control module because there is a short to ground in the EPS control module. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
26	**INSPECT FOR SHORT TO GROUND BETWEEN INSTRUMENT CLUSTER AND CONNECTOR C-34** • Inspect for continuity at the following terminals: — Between instrument cluster terminal B and body ground — Between instrument cluster terminal D and body ground • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-51, C-52 and connector C-34 because the wiring harness is shorted to ground.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
27	**INSPECT CAN LINE IN INSTRUMENT CLUSTER FOR SHORT TO GROUND** • Disconnect the instrument cluster connector. • Inspect for continuity at the following terminals: — Between instrument cluster terminal B (wiring harness side) and body ground — Between instrument cluster terminal D (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the instrument cluster and connector C-34 because the wiring harness is shorted to ground.
		No	Replace the instrument cluster because there is a short to ground in the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
28	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-01 AND FRONT BODY CONTROL MODULE (FBCM)** • Disconnect connector C-01. • Connect connector 2 which has front body control module (FBCM) terminals 2P and 2N. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between connector C-01 and the front body control module (FBCM) because the wiring harness is shorted to ground.
		No	Go to the next step.
29	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-32 AND CONNECTOR C-01** • Disconnect connector C-32. • Connect connector C-01. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between connector C-32 and connector C-01 because the wiring harness is shorted to ground.
		No	Go to Step 31.
30	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTORS C-32 AND FRONT BODY CONTROL MODULE (FBCM)** • Disconnect connector C-32. • Connect connector 2 which has front body control module (FBCM) terminals 2P and 2N. • Inspect for continuity at the following terminals: — Between DLC-2 terminal F and body ground — Between DLC-2 terminal E and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between connector C-32 and the front body control module (FBCM) because the wiring harness is shorted to ground.
		No	Go to the next step.
31	**INSPECT FOR SHORT TO GROUND BETWEEN DSC HU/CM AND CONNECTOR C-32** • Inspect for continuity at the following terminals: — Between DSC HU/CM terminal AF and body ground — Between DSC HU/CM terminal AC and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 33.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
32	**INSPECT CAN LINE IN DSC HU/CM FOR SHORT TO GROUND** • Disconnect the DSC HU/CM connector. • Inspect for continuity at the following terminals: — Between DSC HU/CM terminal AF (wiring harness side) and body ground — Between DSC HU/CM terminal AC (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the DSC HU/CM and connector C-32 because the wiring harness is shorted to ground.
		No	Replace the DSC HU/CM because there is a short to ground in the DSC HU/CM. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
33	**INSPECT CAN LINE IN PCM FOR SHORT TO GROUND** • Disconnect the PCM connector. • Inspect for continuity at the following terminals: — Between PCM terminal 2AK (wiring harness side) and body ground — Between PCM terminal 2AL (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the PCM and connector C-32 because the wiring harness is shorted to ground .
		No	Replace the PCM because there is a short to ground in the PCM.

DETERMINING SHORT TO POWER SUPPLY LOCATION (HS-CAN) [SKYACTIV-D 2.2 (R.H.D.)]

id100206000700

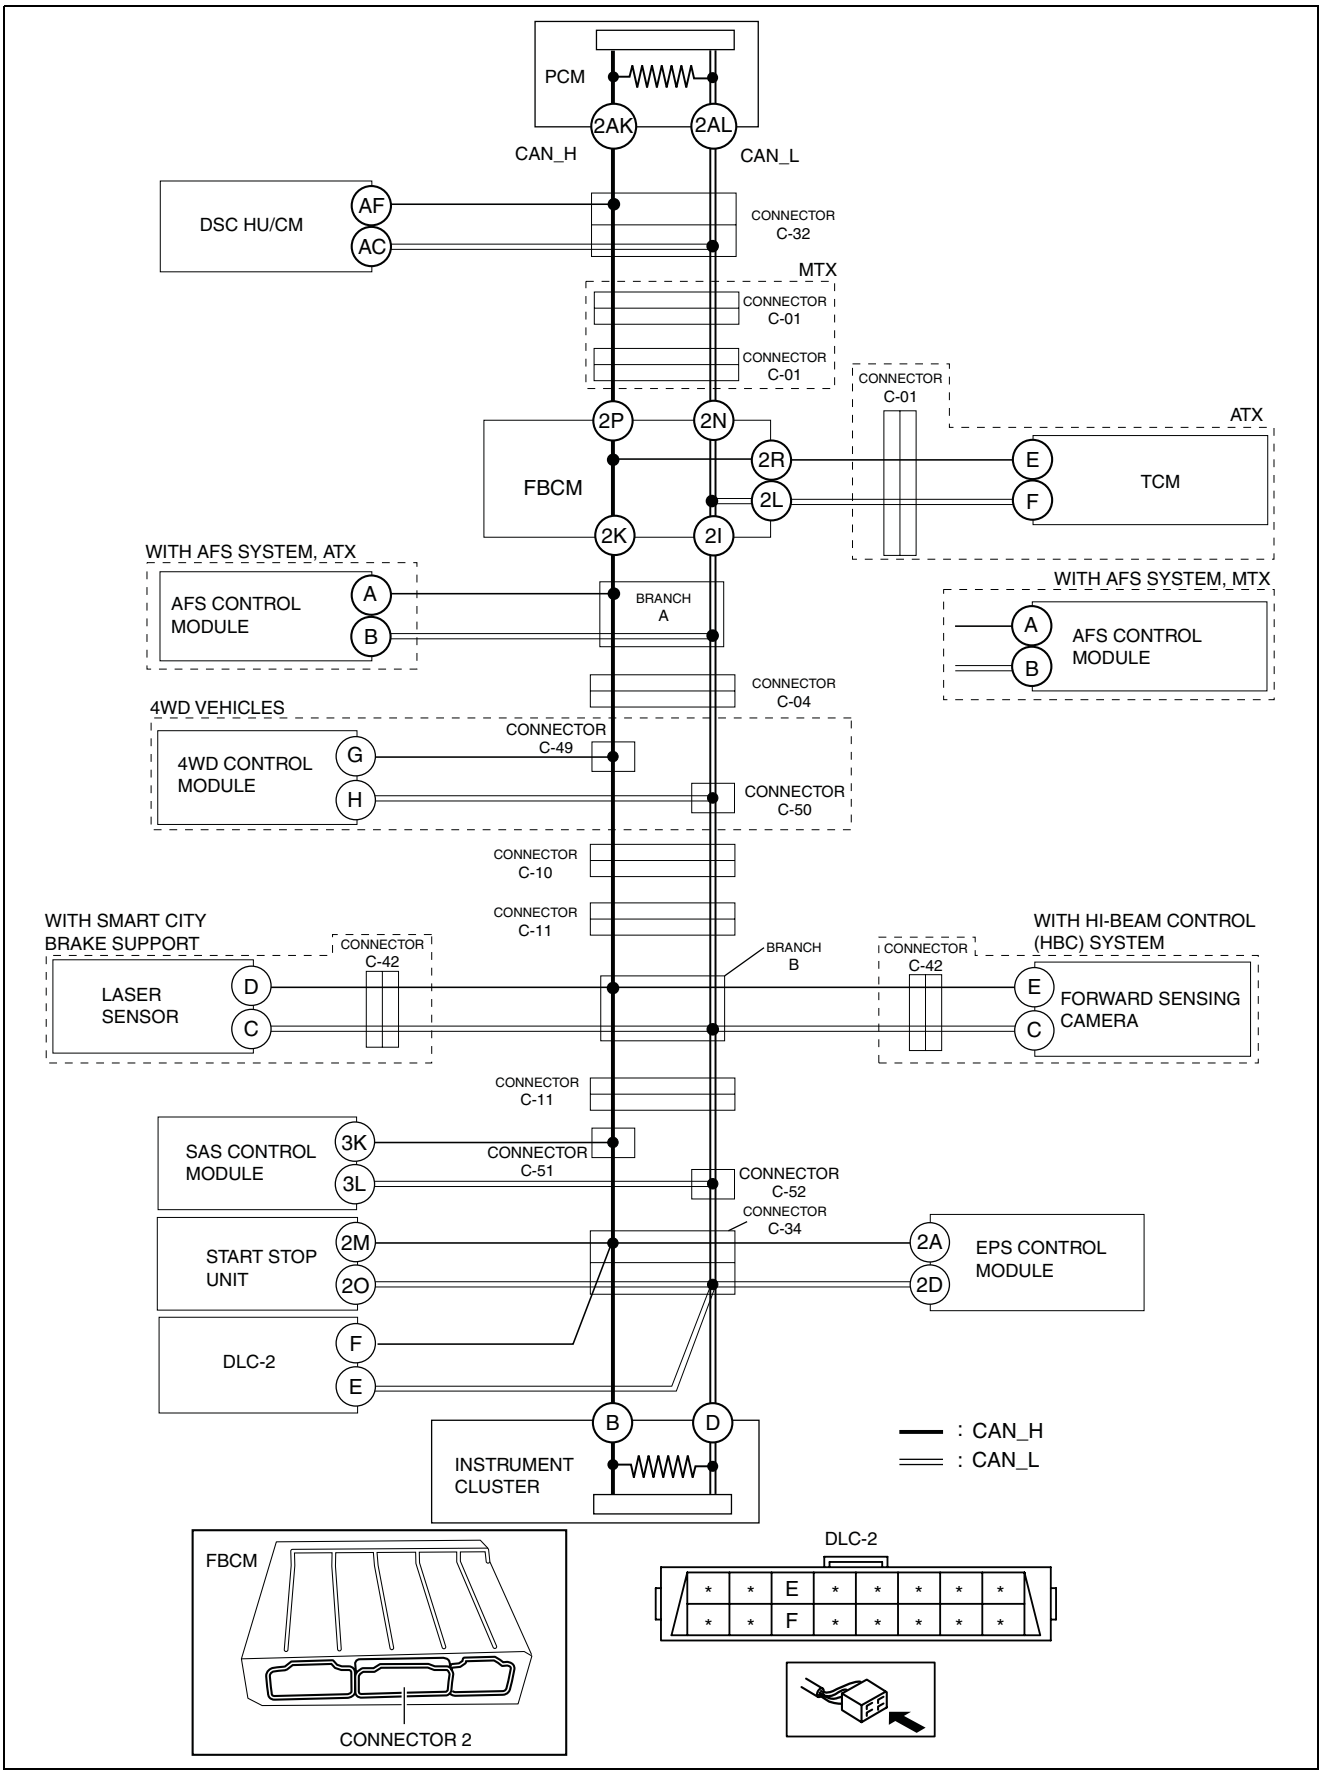
Caution

- **Perform the following malfunction diagnosis only when it is diagnosed with a short to the power supply by 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)].**

10

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000068

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Determination procedure

Caution
- **When disconnecting the connector, verify that there is no looseness, damage, deformation, corrosion, or poor connection of the connector terminals.**
- **When inspecting the DLC-2, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals.**
- **Disconnect the negative battery cable before performing any work that requires handling of connectors.**

Step	Inspection		Action
1	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN FRONT BODY CONTROL MODULE (FBCM) AND INSTRUMENT CLUSTER** • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector 2 which has front body control module (FBCM) terminals 2K and 2I • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to the next step.
		No	Go to Step 5.
2	**INSPECT CAN LINE BETWEEN TCM OR AFS CONTROL MODULE AND FRONT BODY CONTROL MODULE (FBCM) FOR SHORT TO POWER SUPPLY** • Measure the voltage at TCM terminals E and F. (ATX) • Measure the voltage at AFS control module terminals A and B. (MTX) • Is the voltage between 1.5 - 3.5 V?	Yes	Go to Step 27.
		No	• Go to the next step. (ATX) • Go to Step 4. (MTX)
3	**INSPECT CAN LINE BETWEEN TCM AND CONNECTOR C-01 FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-01. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at TCM terminals E and F. • Is the voltage between 1.5 - 3.5 V?	Yes	Repair or replace the wiring harness between connector C-01 and the front body control module (FBCM) because the wiring harness is shorted to the power supply.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
4	**INSPECT TCM OR AFS CONTROL MODULE FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the TCM connector. (ATX) • Connect connector C-01. (ATX) • Disconnect the AFS control module connector. (MTX) • Connect connector 2 which has front body control module (FBCM) terminals 2K and 2I • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 - 3.5 V?	Yes	• Replace the TCM because there is a short to the power supply in the TCM. (ATX) (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].) (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].) • Replace the AFS control module because there is a short to the power supply in the AFS control module. (MTX) (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	• Repair or replace the wiring harness between TCM and connector C-01 because the wiring harness is shorted to the power supply. (ATX) • Repair or replace the wiring harness between AFS control module and the front body control module (FBCM) because the wiring harness is shorted to the power supply. (MTX)
5	**INSPECT CAN LINE BETWEEN CONNECTOR C-04 AND INSTRUMENT CLUSTER FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-04. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 - 3.5 V?	Yes	• Go to the next step. (ATX) • Repair or replace the wiring harness between the front body control module (FBCM) and connector C-04 because the wiring harness is shorted to the power supply. (MTX)
		No	Go to Step 7.
6	**INSPECT AFS CONTROL MODULE FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the AFS control module connector. • Connect connector 2 which has front body control module (FBCM) terminals 2K and 2I • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 - 3.5 V?	Yes	Replace the AFS control module because there is a short to the power supply in the AFS control module. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between AFS control module and the front body control module (FBCM) / connector C-04 because the wiring harness is shorted to the power supply.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
7	**INSPECT CAN LINE BETWEEN CONNECTORS C-49 AND C-50 AND INSTRUMENT CLUSTER FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connectors C-49 and C-50. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to the next step.
		No	Go to Step 10.
8	**INSPECT CAN LINE BETWEEN 4WD CONTROL MODULE AND CONNECTORS C-49 AND C-50 FOR SHORT TO POWER SUPPLY** • Measure the voltage at 4WD control module terminals G and H. • Is the voltage between 1.5 — 3.5 V?	Yes	Repair or replace the wiring harness between connector C-04 and connectors C-49 and C-50 because the wiring harness is shorted to the power supply.
		No	Go to the next step.
9	**INSPECT 4WD CONTROL MODULE FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect connectors C-49 and C-50 • Disconnect the 4WD control module connector. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the 4WD control module because there is a short to the power supply in the 4WD control module. (See 03-18-4 4WD CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the 4WD control module and connectors C-49 and C-50 because the wiring harness is shorted to the power supply.
10	**INSPECT CAN LINE BETWEEN CONNECTOR C-10 AND INSTRUMENT CLUSTER FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-10. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Repair or replace the wiring harness between connectors C-49 and C-50 and connector C-10 because the wiring harness is shorted to the power supply.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
11	**INSPECT CAN LINE BETWEEN CONNECTOR C-11 AND INSTRUMENT CLUSTER FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-11. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to the next step.
		No	Go to Step 17.
12	**INSPECT CAN LINE BETWEEN CONNECTOR C-11 AND FORWARD SENSING CAMERA/ LASER SENSOR FOR SHORT TO POWER SUPPLY** • Measure the voltage at forward sensing camera terminals E and C. (with high beam control (HBC) system) • Measure the voltage at laser sensor terminals D and C. (with smart city brake support) • Is the voltage between 1.5 — 3.5 V?	Yes	Repair or replace the wiring harness between connector C-10 and connector C-11 because the wiring harness is shorted to the power supply.
		No	Go to the next step.
13	**INSPECT CAN LINE BETWEEN LASER SENSOR AND CONNECTOR C-42 FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-42. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at laser sensor terminals D and C. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 15.
		No	Go to the next step.
14	**INSPECT LASER SENSOR FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the laser sensor connector. • Connect connector C-42. • Connect connector C-11. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the laser sensor because there is a short to the power supply in the laser sensor. (See 04-15-17 LASER SENSOR REMOVAL/ INSTALLATION.)
		No	Repair or replace the wiring harness between the laser sensor and connector C-42 because the wiring harness is shorted to the power supply.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
15	**INSPECT CAN LINE BETWEEN FORWARD SENSING CAMERA AND CONNECTOR C-42 FOR SHORT TO POWER SUPPLY** • Measure the voltage at forward sensing camera terminals E and C. • Is the voltage between 1.5 — 3.5 V?	Yes	Repair or replace the wiring harness between connector C-11 and connector C-42 because the wiring harness is shorted to the power supply.
		No	Go to the next step.
16	**INSPECT FORWARD SENSING CAMERA FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the forward sensing camera connector. • Connect connector C-42. • Connect connector C-11. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the forward sensing camera because there is a short to the power supply in the forward sensing camera. (See 09-18-94 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the forward sensing camera and connector C-42 because the wiring harness is shorted to the power supply.
17	**INSPECT CAN LINE BETWEEN CONNECTOR C-51, C-52 AND INSTRUMENT CLUSTER FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-51, C-52. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 25.
		No	Go to the next step.
18	**INSPECT CAN LINE BETWEEN CONNECTOR C-34 AND DLC-2 FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-34. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage 0 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-34 and DLC-2 because the wiring harness is shorted to the power supply.
19	**INSPECT CAN LINE BETWEEN START STOP UNIT AND CONNECTOR C-34 FOR SHORT TO POWER SUPPLY** • Measure the voltage at start stop unit terminals 2M and 2O. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 21.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
20	**INSPECT START STOP UNIT FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect connector C-34. • Disconnect the start stop unit connector. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the start stop unit because there is a short to the power supply in the start stop unit. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Repair or replace the wiring harness between the start stop unit and connector C-34 because the wiring harness is shorted to the power supply.
21	**INSPECT CAN LINE BETWEEN EPS CONTROL MODULE AND CONNECTOR C-34 FOR SHORT TO POWER SUPPLY** • Measure the voltage at EPS control module terminals 2A and 2D. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 23.
		No	Go to the next step.
22	**INSPECT EPS CONTROL MODULE FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect connector C-34. • Disconnect the EPS control module connector. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the EPS control module because there is a short to the power supply in the EPS control module. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the EPS control module and connector C-34 because the wiring harness is shorted to the power supply.
23	**INSPECT CAN LINE BETWEEN INSTRUMENT CLUSTER AND CONNECTOR C-34 FOR SHORT TO POWER SUPPLY** • Measure the voltage at instrument cluster terminals B and D. • Is the voltage between 1.5 — 3.5 V?	Yes	Repair or replace the wiring harness between connector C-51, C-52 and connector C-34 because the wiring harness is shorted to the power supply.
		No	Go to the next step.
24	**INSPECT INSTRUMENT CLUSTER FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect connector C-34. • Disconnect the instrument cluster connector. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the instrument cluster because the instrument cluster is shorted to the power supply. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Repair or replace the wiring harness between the instrument cluster and connector C-34 because the wiring harness is shorted to the power supply.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
25	**INSPECT CAN LINE BETWEEN SAS CONTROL MODULE AND CONNECTOR C-51, C-52 FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the SAS control module connector. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at SAS control module terminals 3K and 3L (wiring harness side). • Is the voltage 0 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between the SAS control module and connector C-51, C-52 because the wiring harness is shorted to the power supply.
26	**INSPECT CAN LINE BETWEEN CONNECTOR C-11 AND CONNECTOR C-51, C-52 FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect connector C-51, C-52. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the SAS control module because there is a short to the power supply in the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between connector C-11 and connector C-51, C-52 because the wiring harness is shorted to the power supply.
27	**INSPECT CAN LINE BETWEEN PCM AND FRONT BODY CONTROL MODULE (FBCM) FOR SHORT TO POWER SUPPLY** • Measure voltage at PCM terminals 2AK and 2AL. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the front body control module (FBCM) because there is a short to the power supply in the front body control module (FBCM). (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	• Go to Step 30. (ATX) • Go to the next step. (MTX)
28	**INSPECT CAN LINE BETWEEN CONNECTOR C-01 AND FRONT BODY CONTROL MODULE (FBCM) FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-01. • Connect connector 2 which has front body control module (FBCM) terminals 2K and 2I. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-01 and the front body control module (FBCM) because the wiring harness is shorted to the power supply.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
29	**INSPECT CAN LINE BETWEEN CONNECTOR C-01 AND CONNECTOR C-32 FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-32. • Connect connector C-01. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 31.
		No	Repair or replace the wiring harness between connector C-01 and connector C-32 because the wiring harness is shorted to the power supply.
30	**INSPECT CAN LINE BETWEEN CONNECTOR C-32 AND FRONT BODY CONTROL MODULE (FBCM) FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect connector 2 which has front body control module (FBCM) terminals 2K and 2I. • Disconnect connector C-32. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-32 and front body control module (FBCM) because the wiring harness is shorted to the power supply.
31	**INSPECT CAN LINE BETWEEN DSC HU/CM AND CONNECTOR C-32 FOR SHORT TO POWER SUPPLY** • Measure voltage at DSC HU/CM terminals AF and AC. • Is the voltage between 1.5 — 3.5 V?	Yes	Go to Step 33.
		No	Go to the next step.
32	**INSPECT DSC HU/CM FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect connector C-32. • Disconnect the DSC HU/CM connector. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the DSC HU/CM because the DSC HU/CM is shorted to the power supply. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the DSC HU/CM and connector C-32 because the wiring harness is shorted to the power supply.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
33	**INSPECT PCM FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect connector C-32. • Disconnect the PCM connector. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage between 1.5 — 3.5 V?	Yes	Replace the PCM because there is a short to the power supply in the PCM.
		No	Repair or replace the wiring harness between the PCM and connector C-32 because the wiring harness is shorted to the power supply.

DETERMINING SHORT BETWEEN CIRCUITS LOCATION (HS-CAN) [SKYACTIV-D 2.2 (R.H.D.)]

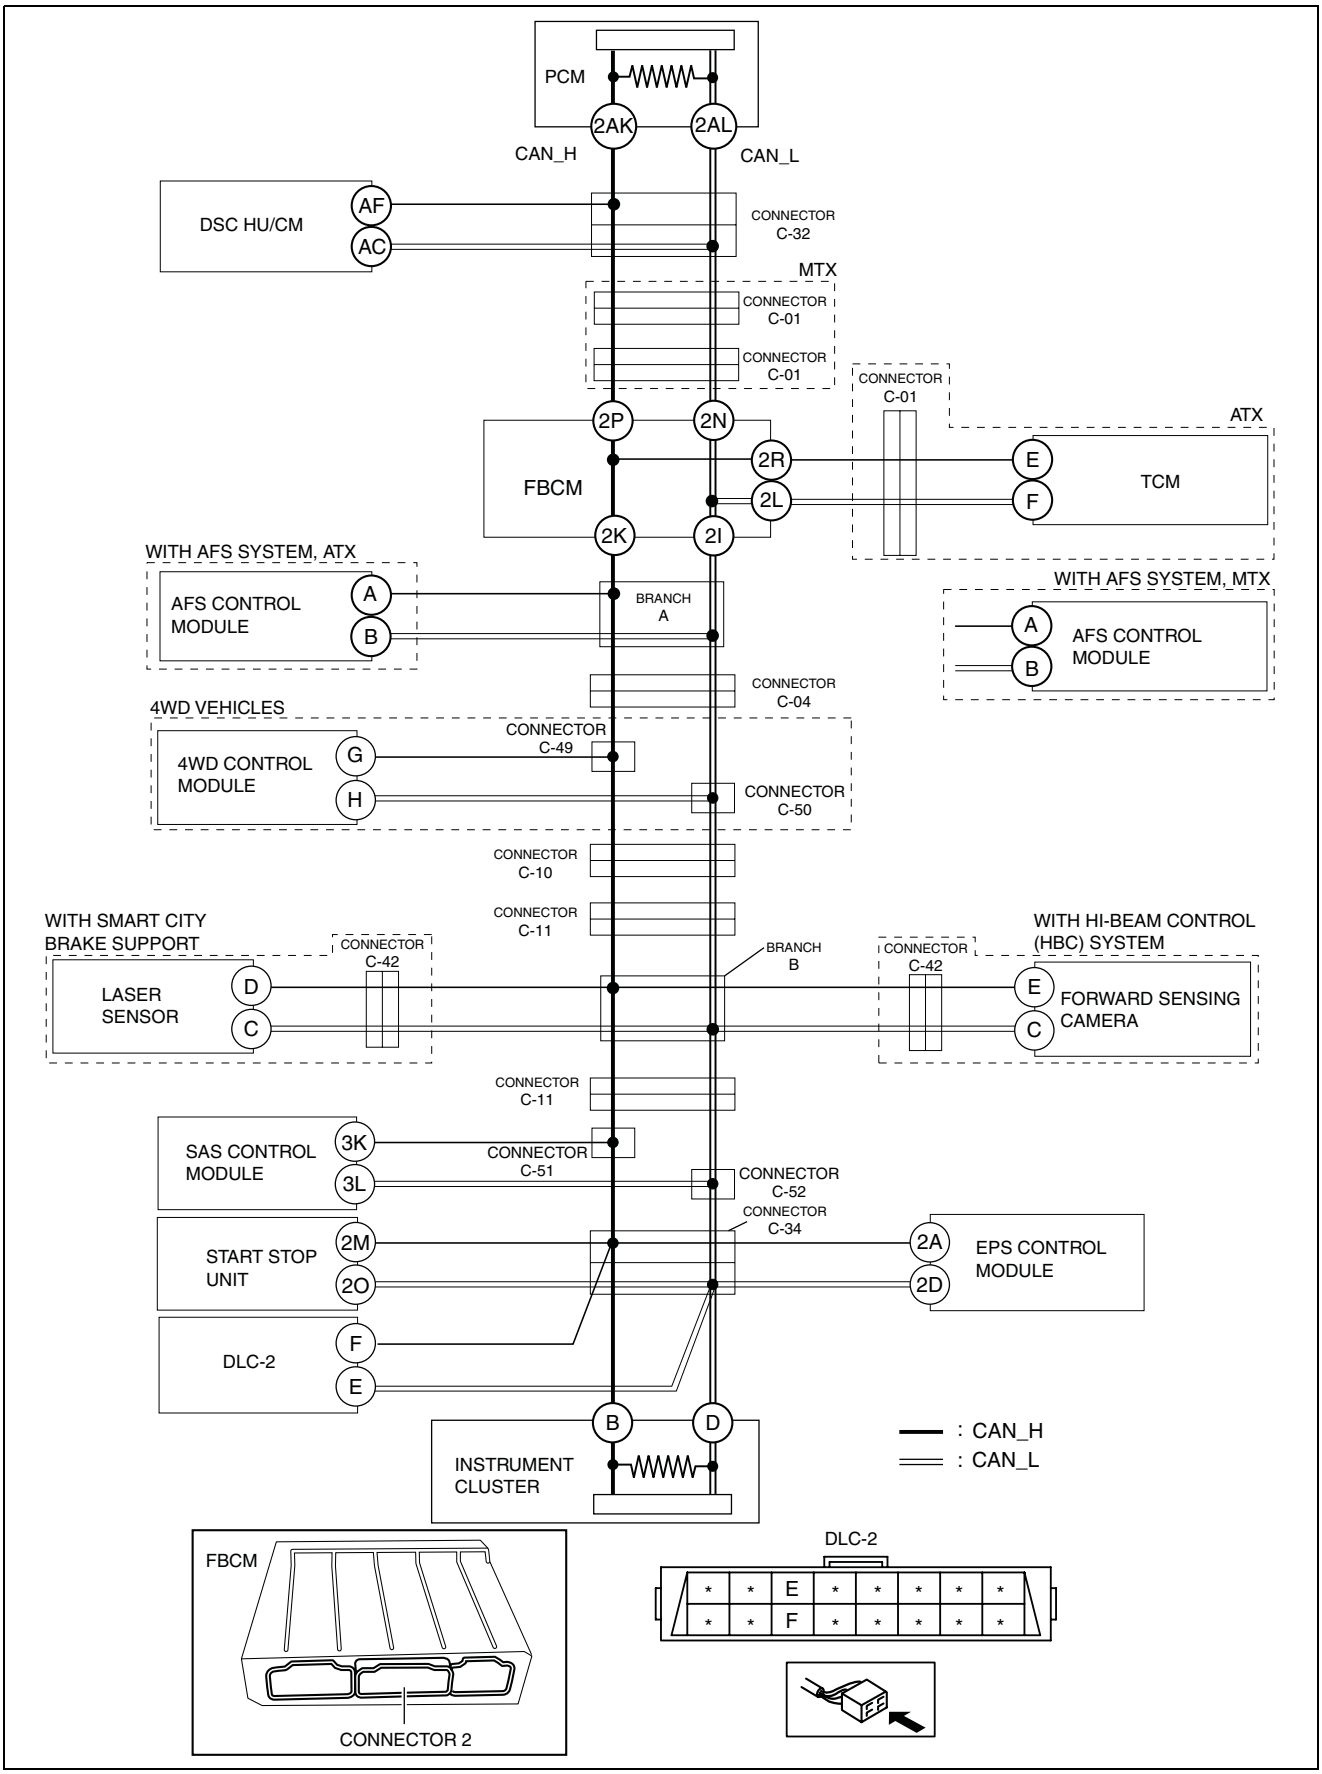
id100206000800

Caution

- **Perform the following malfunction diagnosis only when it is diagnosed with a short between circuits by 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)].**

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000068

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Determination procedure

Caution
- **When disconnecting the connector, verify that there is no looseness, damage, deformation, corrosion, or poor connection of the connector terminals.**
- **When inspecting the DLC-2, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals.**

Step	Inspection		Action
1	**INSPECT BETWEEN FRONT BODY CONTROL MODULE (FBCM) AND INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector 2 which has front body control module (FBCM) terminals 2K and 2I • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage at DLC-2 terminals F and E the same?	Yes	Go to Step 6.
		No	Go to the next step.
2	**INSPECT FRONT BODY CONTROL MODULE (FBCM) FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect for continuity between front body control module (FBCM) terminals 2K and 2I. • Is there continuity?	Yes	Replace the front body control module (FBCM) because there is a short between circuits in the front body control module (FBCM). (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**INSPECT BETWEEN TCM OR AFS CONTROL MODULE AND FRONT BODY CONTROL MODULE (FBCM) FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity between TCM terminals E and F. (ATX) • Inspect for continuity between AFS control module terminals A and B. (MTX) • Is there continuity?	Yes	• Go to the next step. (ATX) • Go to Step 5. (MTX)
		No	• Go to Step 30. (ATX) • Go to Step 28. (MTX)
4	**INSPECT BETWEEN TCM AND CONNECTOR C-01 FOR SHORT BETWEEN CIRCUITS** • Disconnect connector C-01. • Inspect for continuity between TCM terminals E and F. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between the front body control module (FBCM) and connector C-01 because the wiring harness is shorted between circuits.

10

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
5	**INSPECT TCM OR AFS CONTROL MODULE FOR SHORT BETWEEN CIRCUITS** • Disconnect the TCM connector. (ATX) • Disconnect the AFS control module connector. (MTX) • Inspect for continuity between TCM terminals E and F (wiring harness side) (ATX). • Inspect for continuity between AFS control module terminals A and B (wiring harness side). (MTX) • Is there continuity?	Yes	• Repair or replace the wiring harness between the TCM and connector C-01 because the wiring harness is shorted between circuits. (ATX) • Repair or replace the wiring harness between the AFS control module and front body control module (FBCM) because the wiring harness is shorted between circuits. (MTX)
		No	• Replace the TCM because there is a short between circuits in the TCM. (ATX) (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].) (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].) • Replace the AFS control module because there is a short between circuits in the AFS control module. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
6	**INSPECT BETWEEN CONNECTOR C-04 AND INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-04. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage at DLC-2 terminals F and E the same?	Yes	Go to Step 8.
		No	• Go to the next step. (ATX) • Repair or replace the wiring harness between the front body control module (FBCM) and connector C-04 because the wiring harness is shorted between circuits. (MTX)
7	**INSPECT AFS CONTROL MODULE FOR SHORT BETWEEN CIRCUITS** • Disconnect the AFS control module connector. • Inspect for continuity between AFS control module terminals A and B (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the AFS control module and front body control module (FBCM) / connector C-04 because the wiring harness is shorted between circuits.
		No	Replace the AFS control module because there is a short between circuits in the AFS control module. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
8	**INSPECT BETWEEN CONNECTORS C-49 AND C-50 AND INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connectors C-49 and C-50. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage at DLC-2 terminals F and E the same?	Yes	Go to Step 9.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
9	**INSPECT BETWEEN 4WD CONTROL MODULE AND CONNECTORS C-49 AND C-50 FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect for continuity between 4WD control module terminals G and H. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-04 and connectors C-49 and C-50 because the wiring harness is shorted between circuits.
10	**INSPECT 4WD CONTROL MODULE FOR SHORT BETWEEN CIRCUITS** • Disconnect the 4WD control module connector. • Inspect for continuity between 4WD control module terminals G and H (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the 4WD control module and connectors C-49 and C-50 because the wiring harness is shorted between circuits.
		No	Replace the 4WD control module because there is a short between circuits in the 4WD control module. (See 03-18-4 4WD CONTROL MODULE REMOVAL/INSTALLATION.)
11	**INSPECT BETWEEN CONNECTOR C-10 AND INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-10. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage at DLC-2 terminals F and E the same?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connectors C-49 and C-50 and connector C-10 because the wiring harness is shorted between circuits.
12	**INSPECT BETWEEN CONNECTOR C-11 AND INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-11. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage at DLC-2 terminals F and E the same?	Yes	Go to Step 18.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
13	**INSPECT BETWEEN CONNECTOR C-11 AND FORWARD SENSING CAMERA/LASER SENSOR FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect for continuity between forward sensing camera terminals E and C. (With high beam control (HBC) system) • Inspect for continuity between laser sensor terminals D and C. (With smart city brake support) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-11 and connector C-10 because the wiring harness is shorted between circuits.
14	**INSPECT BETWEEN LASER SENSOR AND CONNECTOR C-42 FOR SHORT BETWEEN CIRCUITS** • Disconnect connector C-42. • Inspect for continuity between laser sensor terminals D and C. • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 16.
15	**INSPECT LASER SENSOR FOR SHORT BETWEEN CIRCUITS** • Disconnect the laser sensor connector. • Inspect for continuity between laser sensor terminals D and C (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the laser sensor and connector C-42 because the wiring harness is shorted between circuits.
		No	Replace the laser sensor because there is a short between circuits in the laser sensor. (See 04-15-17 LASER SENSOR REMOVAL/INSTALLATION.)
16	**INSPECT BETWEEN FORWARD SENSING CAMERA AND CONNECTOR C-42 FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity between forward sensing camera terminals E and C. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-11 and connector C-42 because the wiring harness is shorted between circuits.
17	**INSPECT FORWARD SENSING CAMERA FOR SHORT BETWEEN CIRCUITS** • Disconnect the forward sensing camera connector. • Inspect for continuity between forward sensing camera terminals E and C (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the forward sensing camera and connector C-42 because the wiring harness is shorted between circuits.
		No	Replace the forward sensing camera because there is a short between circuits in the forward sensing camera. (See 09-18-94 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
18	**INSPECT BETWEEN CONNECTOR C-51, C-52 AND INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-51, C-52. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage at DLC-2 terminals F and E the same?	Yes	Go to Step 21.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
19	**INSPECT BETWEEN SAS CONTROL MODULE AND CONNECTOR C-51, C-52 FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect for continuity between SAS control module terminals 3K and 3L. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-11 and connector C-51, C-52 because the wiring harness is shorted between circuits.
20	**INSPECT SAS CONTROL MODULE FOR SHORT BETWEEN CIRCUITS** • Disconnect the SAS control module connector. • Is there continuity between SAS control module terminals 3K and 3L (wiring harness side)? • Is there continuity?	Yes	Repair or replace the wiring harness between the SAS control module and connector C-51, C-52 because the wiring harness is shorted between circuits.
		No	Replace the SAS control module because there is a short between circuits in the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
21	**INSPECT BETWEEN DLC-2 AND CONNECTOR C-34 FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-34. • Inspect for continuity between DLC-2 terminals F and E. • Is there continuity?	Yes	Repair or replace the wiring harness between DLC-2 and connector C-34 because the wiring harness is shorted between circuits.
		No	Go to the next step.
22	**INSPECT BETWEEN START STOP UNIT AND CONNECTOR C-34 FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity between start stop unit terminals 2M and 2O. • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 24.
23	**INSPECT START STOP UNIT FOR SHORT BETWEEN CIRCUITS** • Disconnect the start stop unit connector. • Is there continuity between start stop unit terminals 2M and 2O (wiring harness side)? • Is there continuity?	Yes	Repair or replace the wiring harness between the start stop unit and connector C-34 because the wiring harness is shorted between circuits.
		No	Replace the start stop unit because there is a short between circuits in the start stop unit. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
24	**INSPECT BETWEEN EPS CONTROL MODULE AND CONNECTOR C-34 FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity between EPS control module terminals 2A and 2D. • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 26.
25	**INSPECT EPS CONTROL MODULE FOR SHORT BETWEEN CIRCUITS** • Disconnect the EPS control module connector. • Is there continuity between EPS control module terminals 2A and 2D (wiring harness side)? • Is there continuity?	Yes	Repair or replace the wiring harness between the EPS control module and connector C-34 because the wiring harness is shorted between circuits.
		No	Replace the EPS control module because there is a short between circuits in the EPS control module. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
26	**INSPECT BETWEEN INSTRUMENT CLUSTER AND CONNECTOR C-34 FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity between instrument cluster terminals B and D. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-51, C-52 and connector C-34 because the wiring harness is shorted between circuits.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
27	**INSPECT INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Disconnect the instrument cluster connector. • Is there continuity between instrument cluster terminals B and D (wiring harness side)? • Is there continuity?	Yes	Repair or replace the wiring harness between the instrument cluster and connector C-34 because the wiring harness is shorted between circuits.
		No	Replace the instrument cluster because there is a short between circuits in the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
28	**INSPECT BETWEEN CONNECTOR C-01 AND FRONT BODY CONTROL MODULE (FBCM) FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect connector 2 which has front body control module (FBCM) terminals 2K and 2I. • Disconnect connector C-01. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage at DLC-2 terminals F and E the same?	Yes	Repair or replace the wiring harness between connector C-01 and the front body control module (FBCM) because the wiring harness is shorted between circuits.
		No	Go to the next step.
29	**INSPECT BETWEEN CONNECTOR C-01 AND CONNECTOR C-32 FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect connector C-01. • Disconnect connector C-32. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage at DLC-2 terminals F and E the same?	Yes	Repair or replace the wiring harness between connector C-01 and connector C-32 because the wiring harness is shorted between circuits.
		No	Go to Step 31.
30	**INSPECT BETWEEN CONNECTORS C-32 AND FRONT BODY CONTROL MODULE (FBCM) FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect connector 2 which has front body control module (FBCM) terminals 2K and 2I. • Disconnect connector C-32. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals F and E. • Is the voltage at DLC-2 terminals F and E the same?	Yes	Repair or replace the wiring harness between connector C-32 and the front body control module (FBCM) because the wiring harness is shorted between circuits.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
31	**INSPECT BETWEEN DSC HU/CM AND CONNECTOR C-32 FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect for continuity between DSC HU/CM terminals AF and AC. • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 33.
32	**INSPECT DSC HU/CM FOR SHORT BETWEEN CIRCUITS** • Disconnect the DSC HU/CM connector. • Inspect for continuity between DSC HU/CM terminals AF and AC (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the DSC HU/CM and connector C-32 because the wiring harness is shorted between circuits.
		No	Replace the DSC HU/CM because there is a short between circuits in the DSC HU/CM. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
33	**INSPECT PCM FOR SHORT BETWEEN CIRCUITS** • Disconnect the PCM connector. • Inspect for continuity between PCM terminals 2AK and 2AL (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the PCM and connector C-32 because the wiring harness is shorted between circuits.
		No	Replace the PCM because there is a short between circuits in the PCM.

DETERMINING OPEN CIRCUIT LOCATION (MS-CAN) [SKYACTIV-D 2.2 (R.H.D.)]

id100206000500

Caution

- **Perform the following malfunction diagnosis only when it is diagnosed with a open circuit by 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)].**
- **If the malfunctioning part is detected in the communication line, before disconnecting the related connector for inspection, press the connector in the connection direction to verify that there is no looseness or disconnection.**
- **When disconnecting the connector, verify that there is no damage, deformation, or corrosion of the connector terminals.**

1. Verify DTCs of the modules related to the CAN system.
2. Apply the communication error DTC and the failed module to 10-02D-83 DTC output pattern and malfunctioning location, and select the possible cause for the diagnostic result and the reference for the inspection item.

Note

- The open circuit location can be determined by the DTC indicated in the 10-02D-83 DTC output pattern and malfunctioning location chart. DTCs not listed in the chart are not used for the determination of the open circuit location.

3. Inspect the possible cause and inspection item of the applicable malfunctioning part.
4. After repairs, return to 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)], and verify that the repairs have been completed.

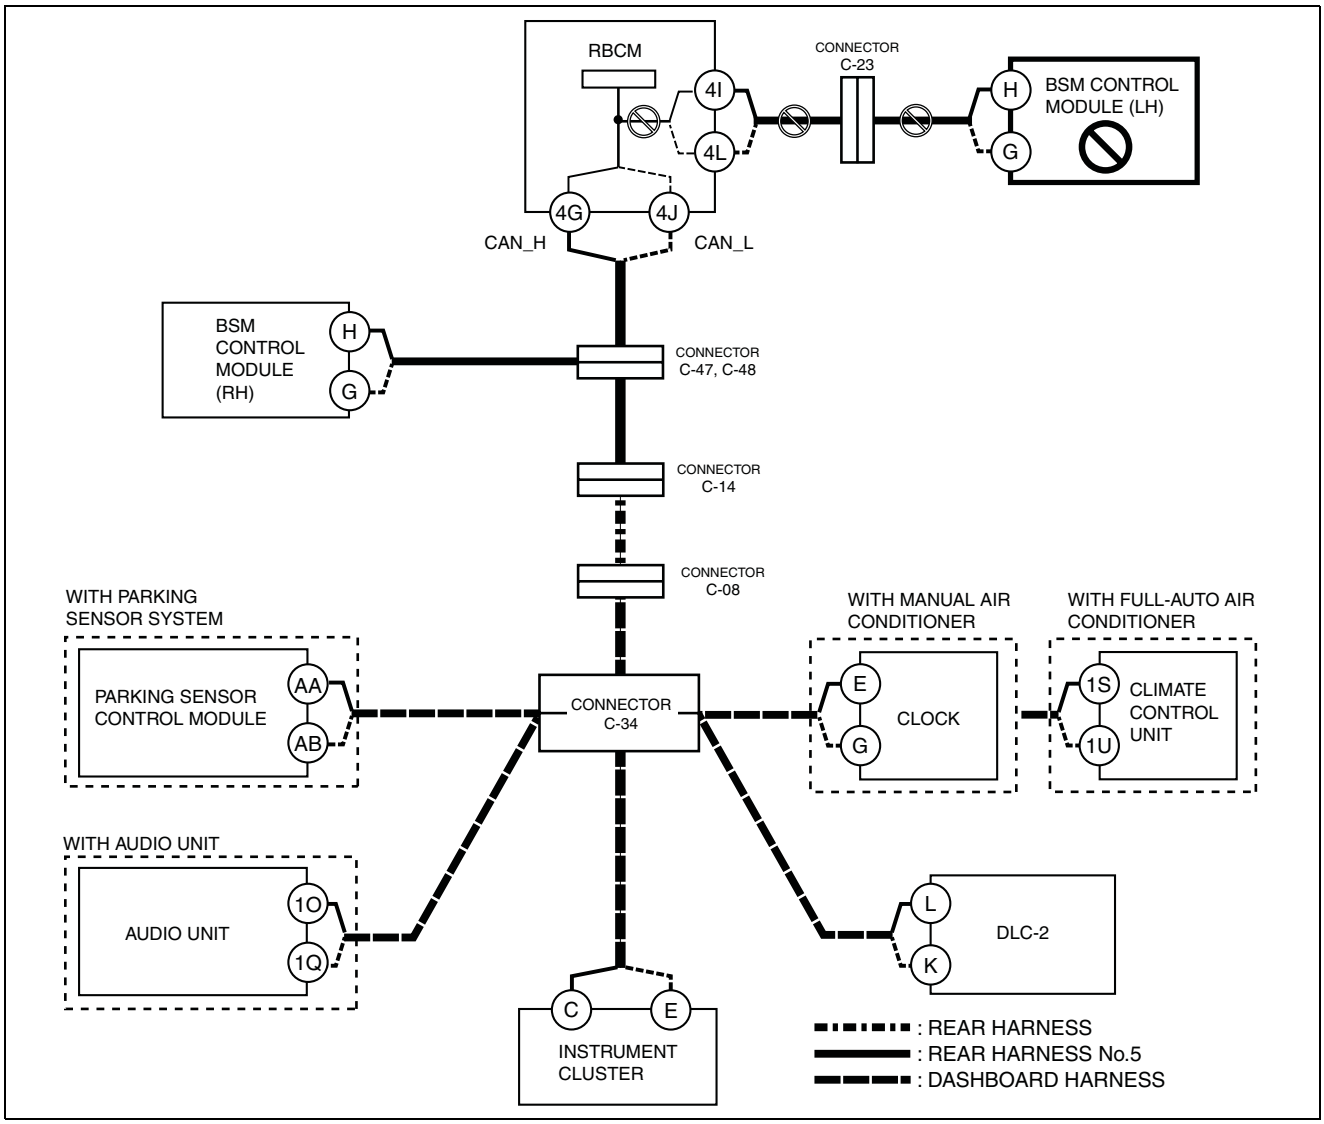
*1 : With BSM
*2 : With rear vehicle monitoring system
*3 : With full-auto air conditioner
*4 : With audio unit

A
Possible cause
- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between BSM control module (LH) and connector C-23
- Open circuit in wiring harness between connector C-23 and RCBM
- Connector C-23 malfunction
- BSM control module (LH) malfunction
- CAN circuit in rear body control module (RBCM) malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000067

Inspection item

- BSM control module (LH) connector
- Rear body control module (RBCM) connector
- Connector C-23
- Wiring harness between BSM control module (LH) terminal H and connector C-23.
- Wiring harness between BSM control module (LH) terminal G and connector C-23
- Wiring harness between rear body control module (RBCM) terminal 4I and connector C-23
- Wiring harness between rear body control module (RBCM) terminal 4L and connector C-23
- BSM control module (LH)
- Rear body control module (RBCM)
  - — Between rear body control module (RBCM) terminal 4G and rear body control module (RBCM) terminal 4I
  - — Between rear body control module (RBCM) terminal 4J and rear body control module (RBCM) terminal 4L

B

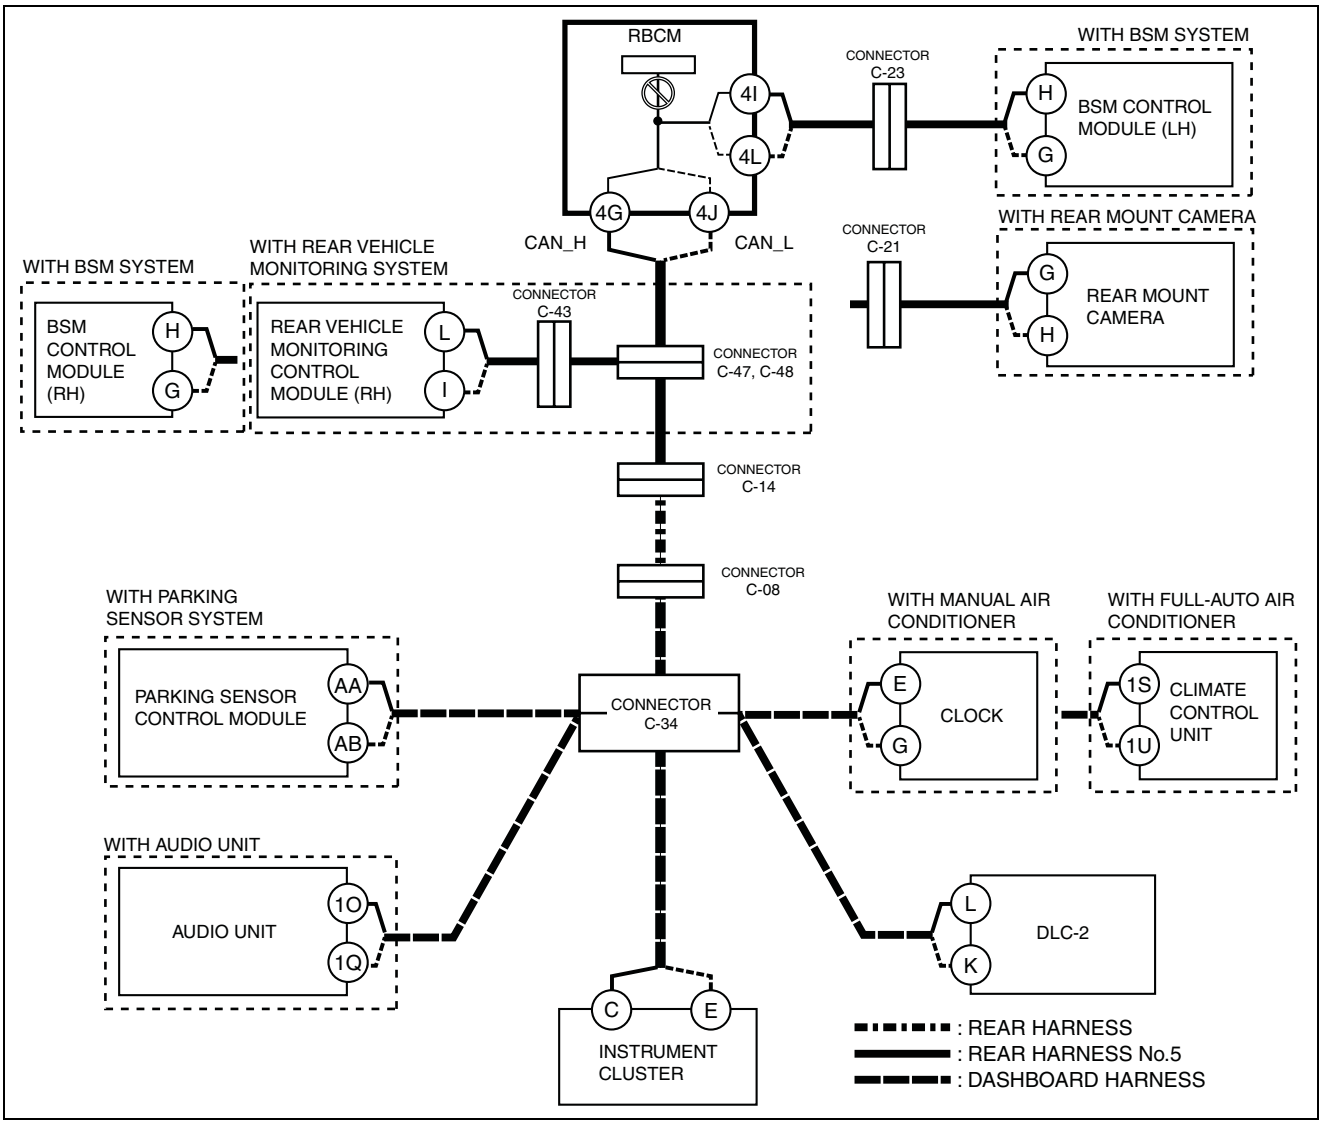
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Rear body control module (RBCM) malfunction

10

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000253

Inspection item

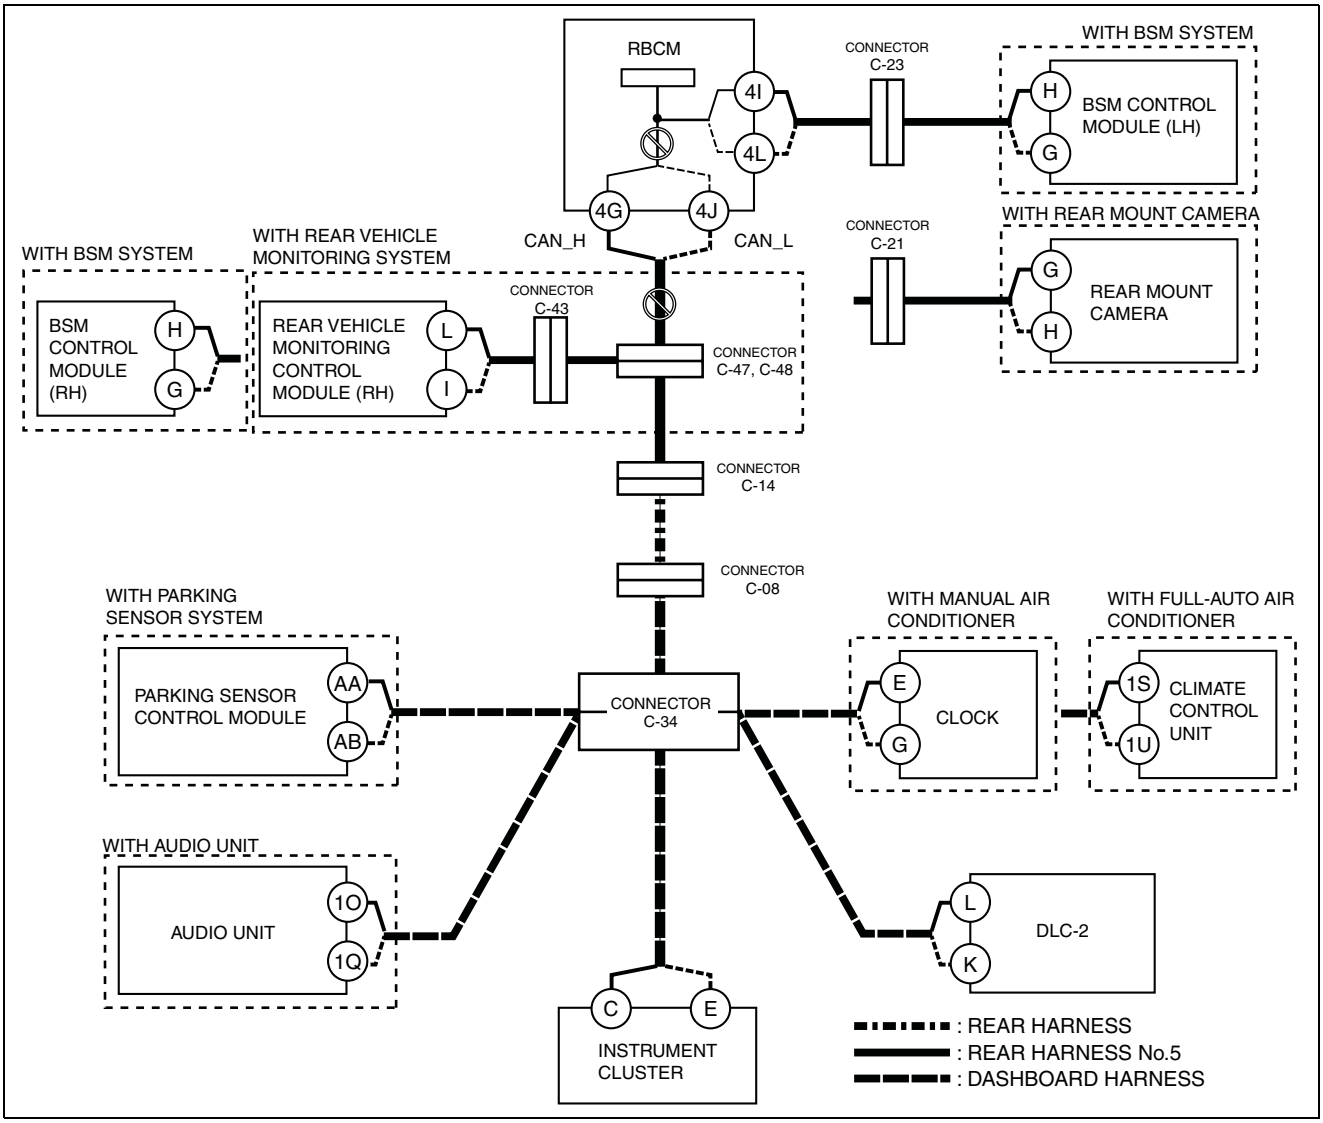
- Rear body control module (RBCM)

C
With rear vehicle monitoring system or BSM system
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between rear body control module (RBCM) and connectors C-47, C-48
- Connector C-47, C-48 malfunction
- CAN circuit in rear body control module (RBCM) malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000067

Inspection item

- Rear body control module (RBCM) connector
- Connectors C-47, C-48
- Wiring harness between rear body control module (RBCM) terminal 4G and connectors C-47
- Wiring harness between rear body control module (RBCM) terminal 4J and connectors C-48
- Rear body control module (RBCM)
  - — Between rear body control module (RBCM) terminal 4G and rear body control module (RBCM) terminal 4I
  - — Between rear body control module (RBCM) terminal 4J and rear body control module (RBCM) terminal 4L

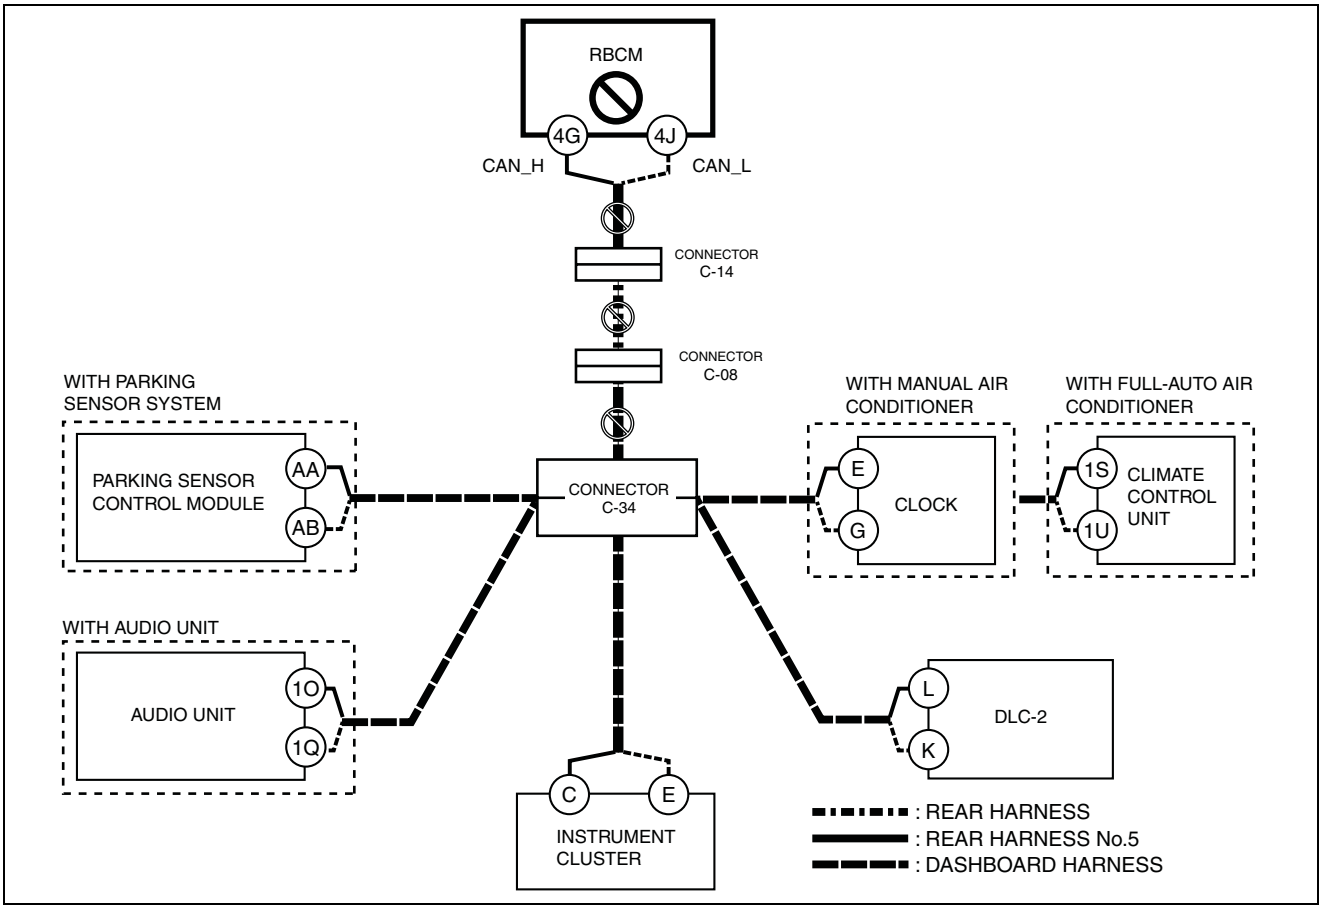
Without rear vehicle monitoring system or BSM system
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between rear body control module (RBCM) and connector C-14
- Open circuit in wiring harness between connector C-14 and connector C-08
- Open circuit in wiring harness between connector C-08 and connector C-34
- Connector C-14 malfunction
- Connector C-08 malfunction
- Connector C-34 malfunction
- Rear body control module (RBCM) malfunction

10

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000067

Inspection item

- Rear body control module (RBCM) connector
- Connector C-14
- Connector C-08
- Connector C-34
- Wiring harness between rear body control module (RBCM) terminal 4G and connector C-14
- Wiring harness between rear body control module (RBCM) terminal 4J and connector C-14
- Wiring harness between connector C-14 and connector C-08
- Wiring harness between connector C-08 and connector C-34
- Rear body control module (RBCM)

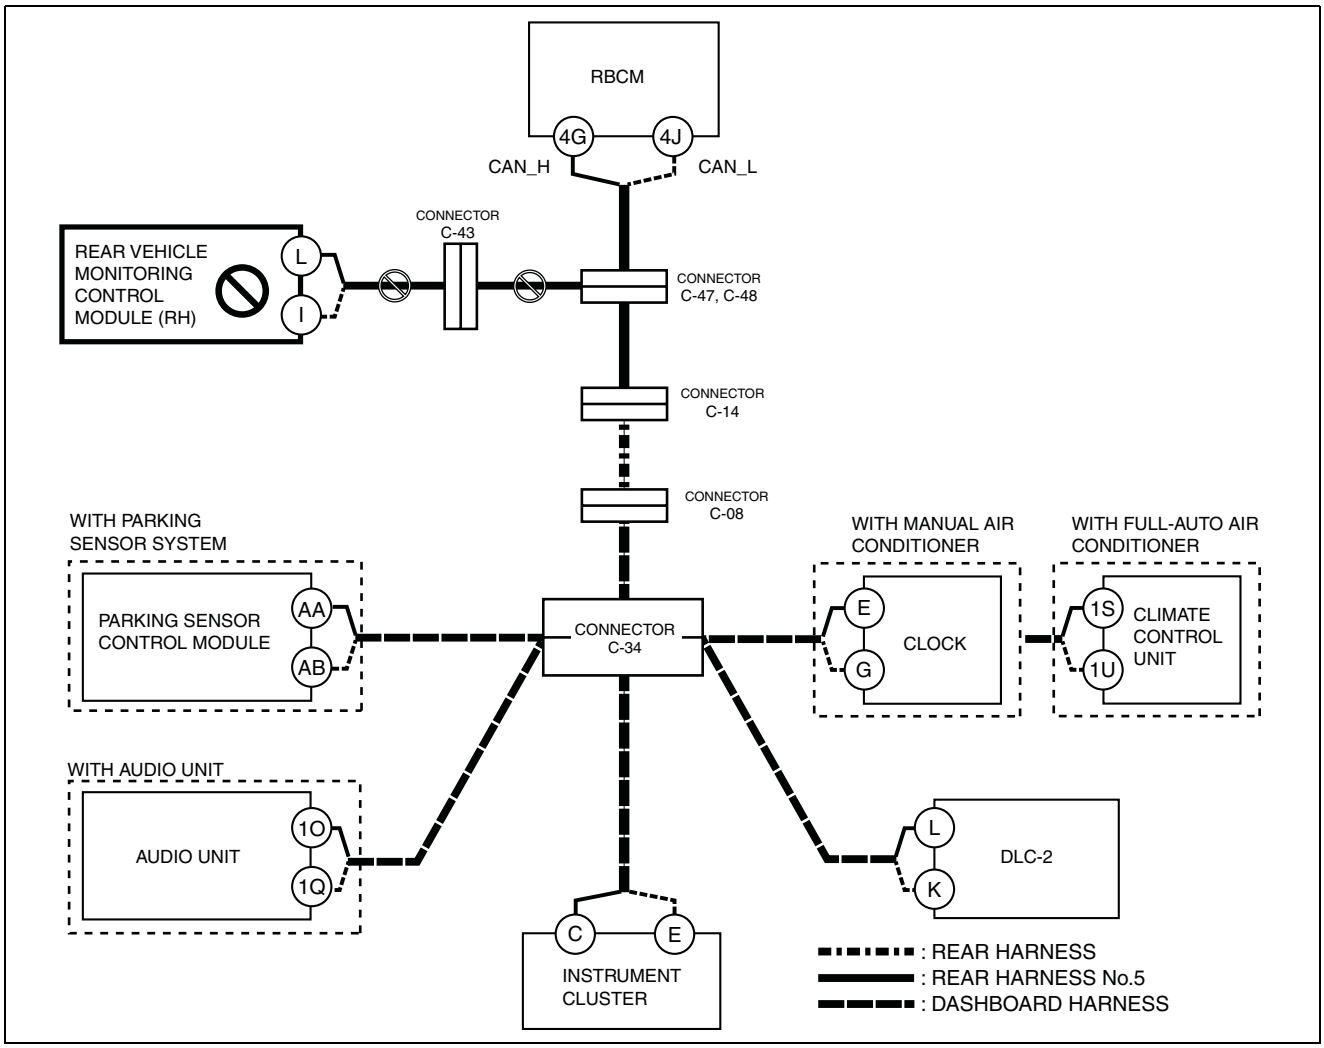
D

Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between rear vehicle monitoring (RH) and connectors C-43
- Open circuit in wiring harness between connectors C-43 and connectors C-47, C-48
- Connector C-43 malfunction
- Connector C-47, C-48 malfunction
- Rear vehicle monitoring control module (RH) malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000067

Inspection item

- Rear vehicle monitoring control module (RH) connector
- Connectors C-43
- Connectors C-47, C-48
- Wiring harness between Rear vehicle monitoring control module (RH) terminal L and connector C-43
- Wiring harness between Rear vehicle monitoring control module (RH) terminal I and connector C-43
- Wiring harness between connector C-43 and connector C-47, C-48
- Rear vehicle monitoring control module (RH)

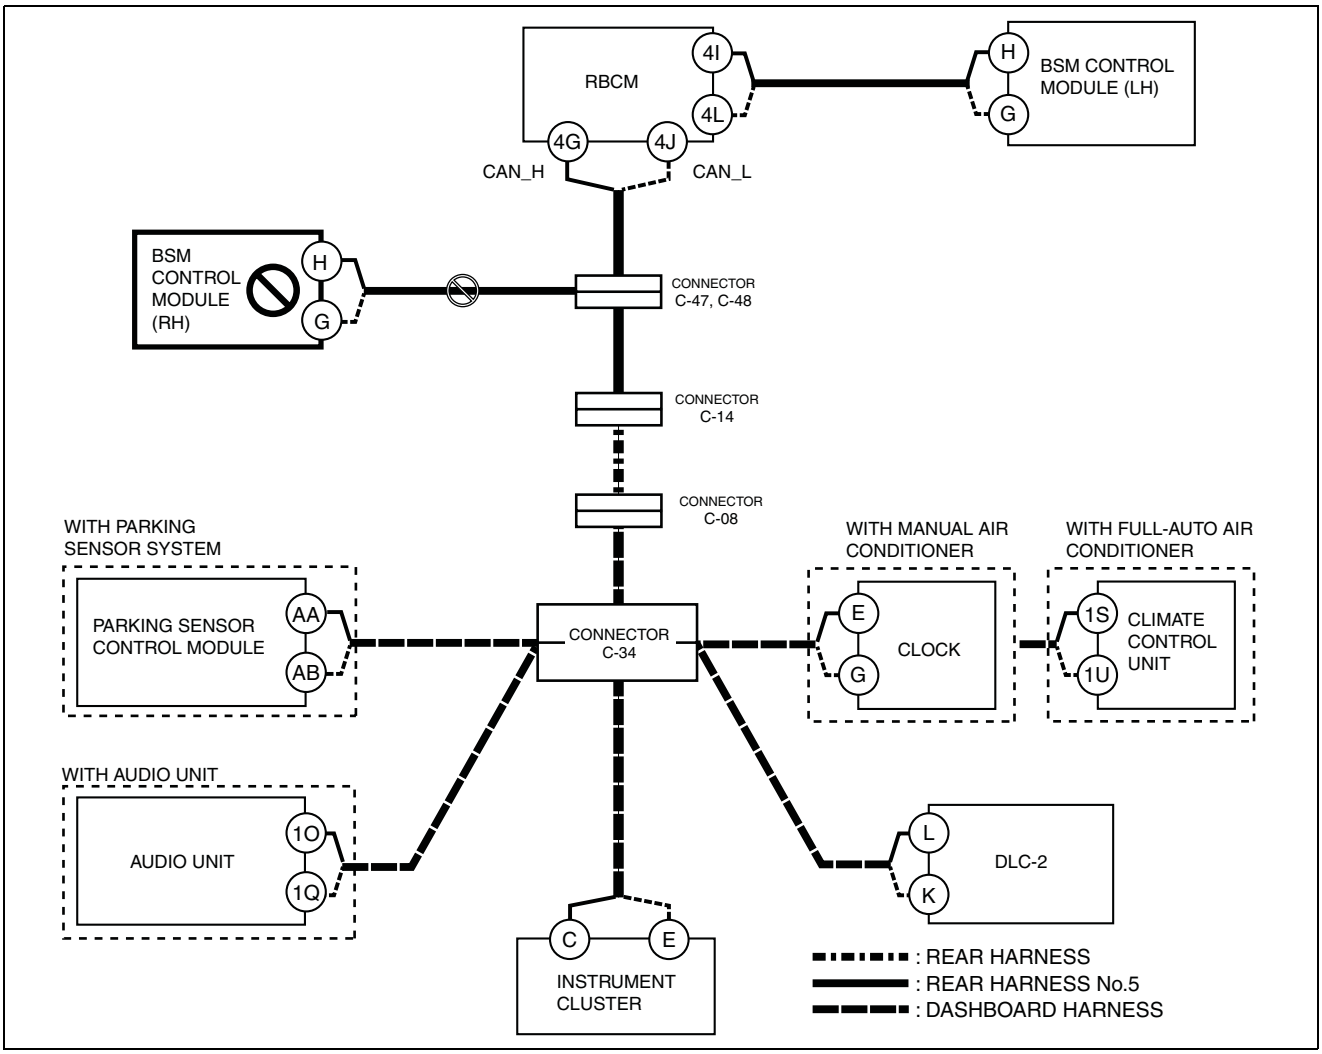
E

Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between BSM control module (RH) and connectors C-47, C-48
- Connector C-47, C-48 malfunction
- BSM control module (RH) malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000067

Inspection item

- BSM control module (RH) connector
- Connectors C-47, C-48
- Wiring harness between BSM control module (RH) terminal H and connector C-47
- Wiring harness between BSM control module (RH) terminal G and connector C-48
- BSM control module (RH)

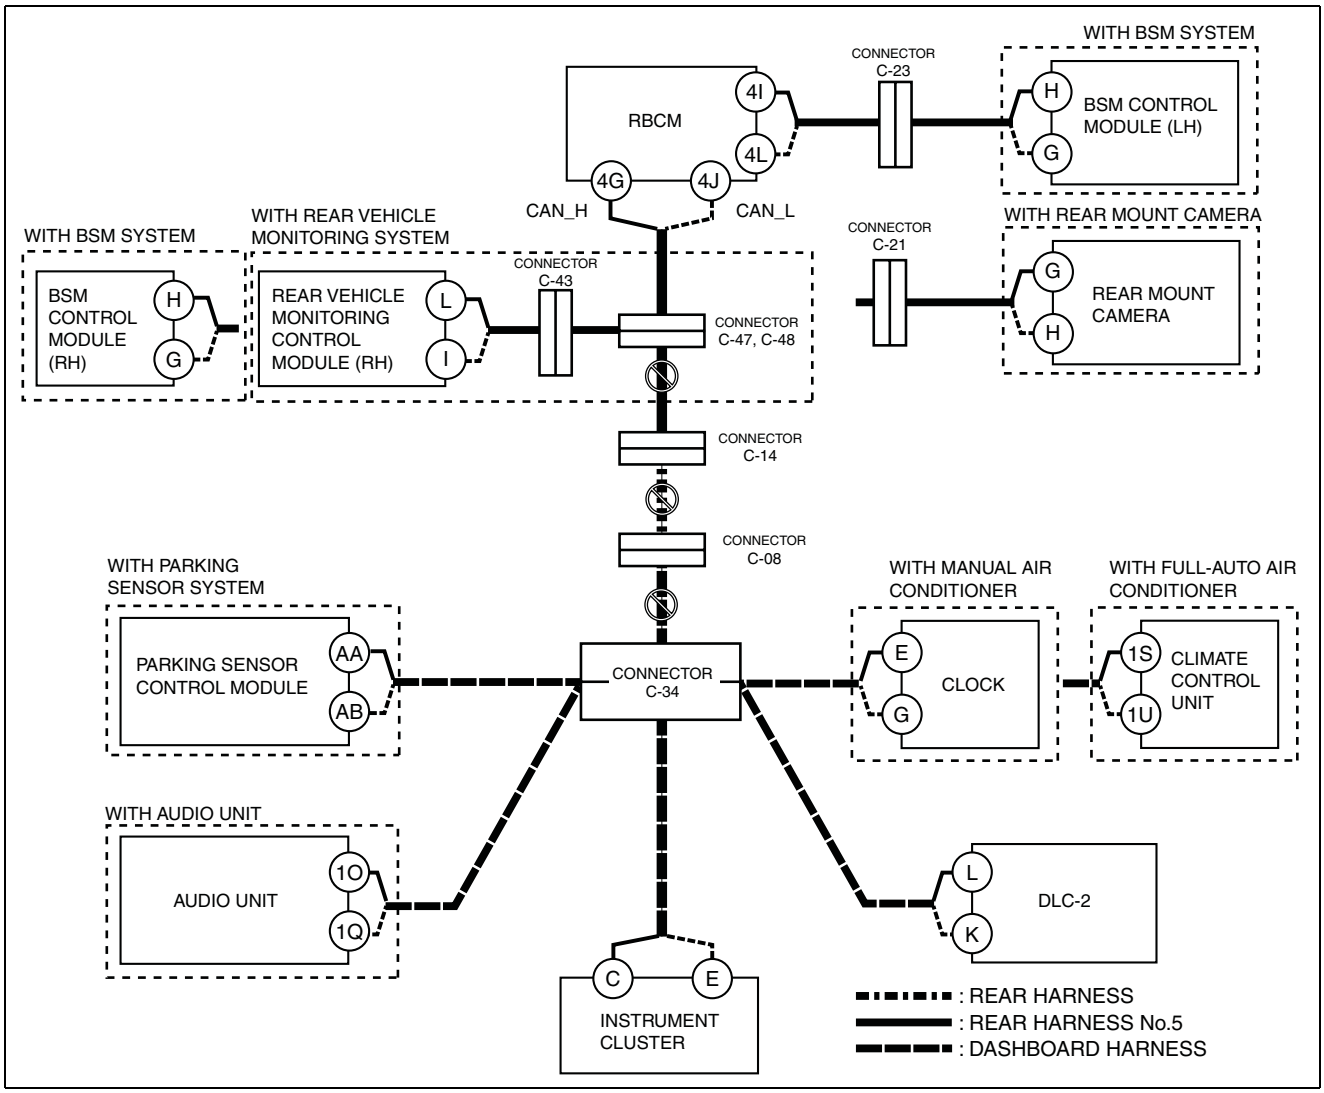
F

Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between connectors C-47, C-48 and connector C-14
- Open circuit in wiring harness between connector C-14 and C-08
- Open circuit in wiring harness between connectors C-08 and C-34
- Connectors C-47, C-48 malfunction
- Connector C-14 malfunction
- Connector C-08 malfunction
- Connector C-34 malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000067

Inspection item

- Connectors C-47, C-48
- Connector C-14
- Connector C-08
- Connector C-34
- Wiring harness between connectors C-47, C-48 and connector C-14
- Wiring harness between connector C-14 and connector C-08
- Wiring harness between connector C-08 and connector C-34

G

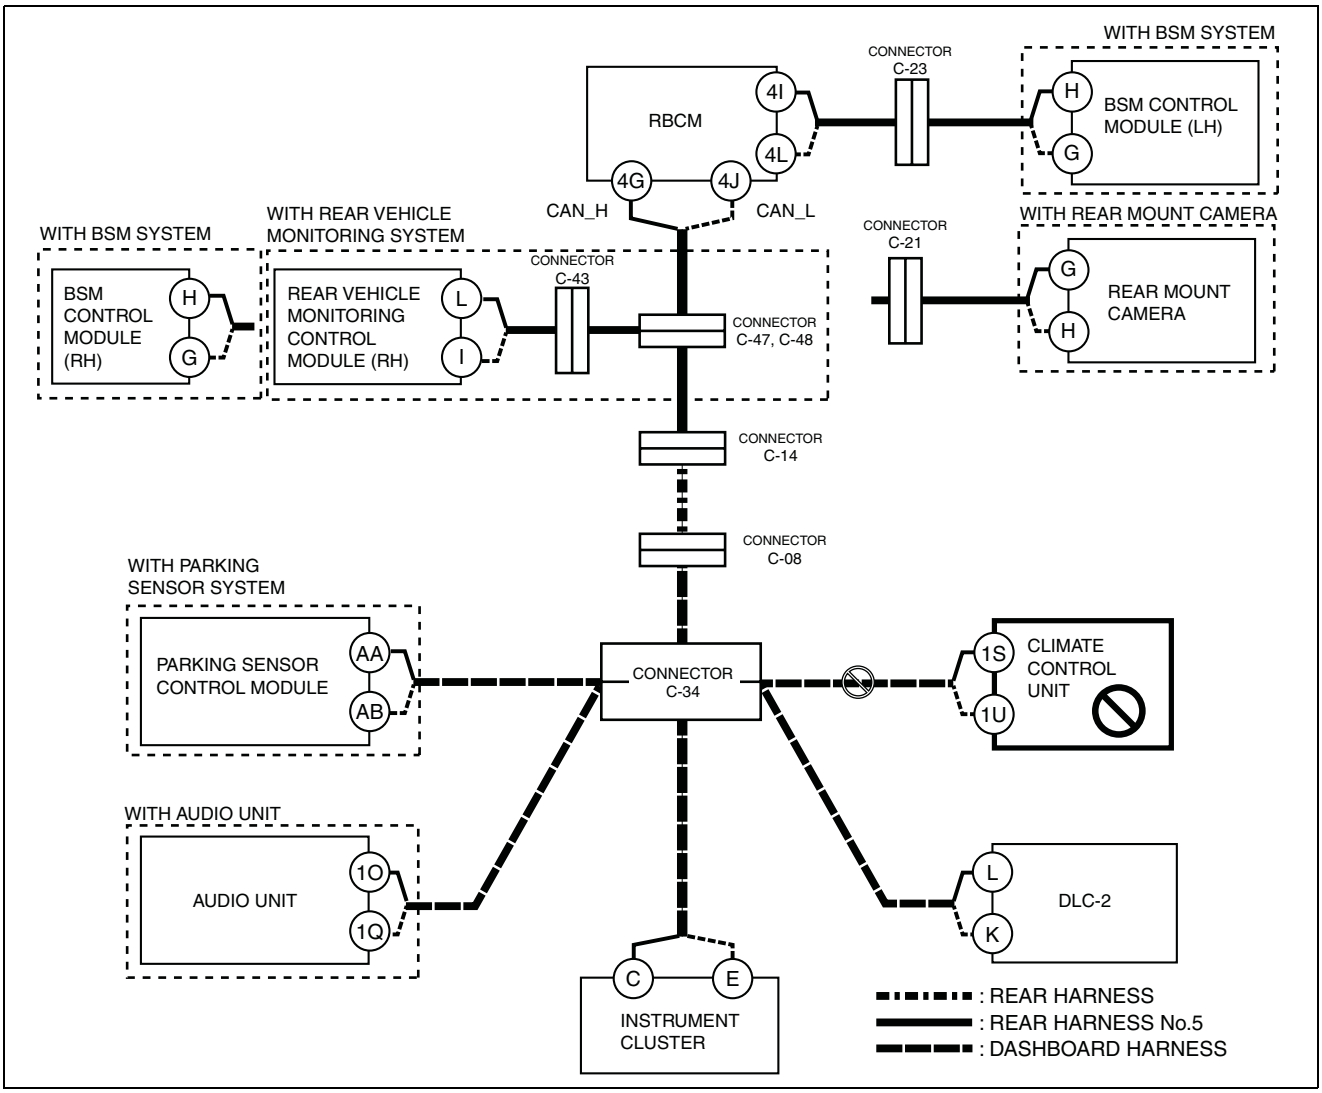
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between climate control unit and connector C-34
- Connector C-34 malfunction
- Climate control unit malfunction

10

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000067

Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between climate control unit and connector C-34
- Connector C-34 malfunction
- Climate control unit malfunction

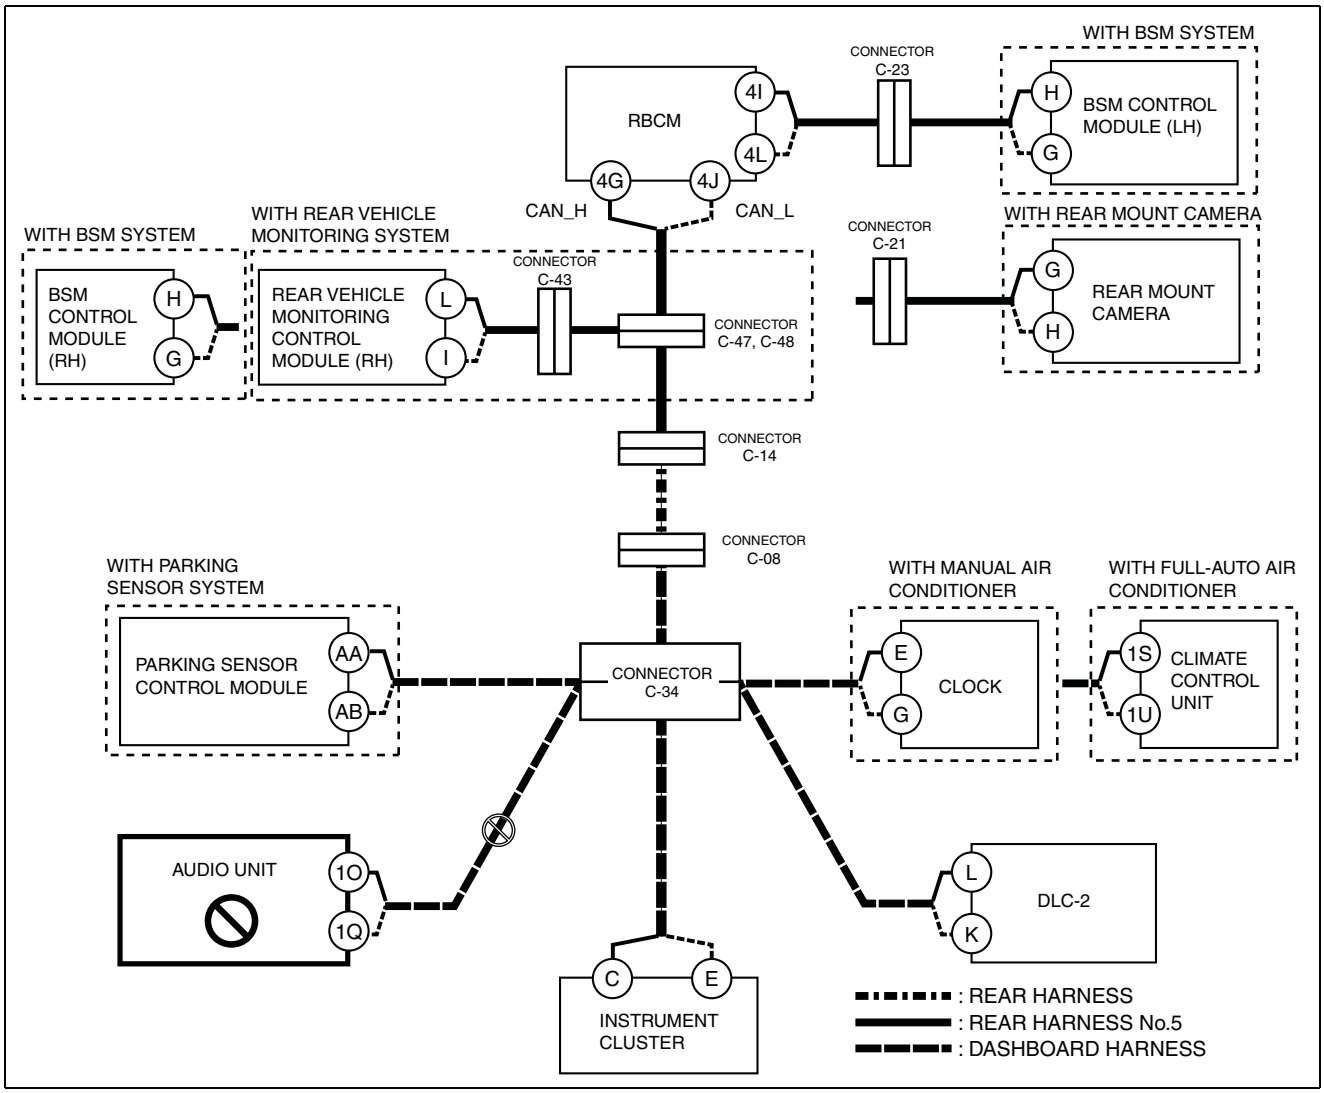
H

Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between vehicle with audio unit and connector C-34
- Connector C-34 malfunction
- Audio unit malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000067

Inspection item

- Audio unit connector
- Connector C-34
- Wiring harness between audio unit terminal 1O and connector C-34
- Wiring harness between audio unit terminal 1Q and connector C-34
- Audio unit

I

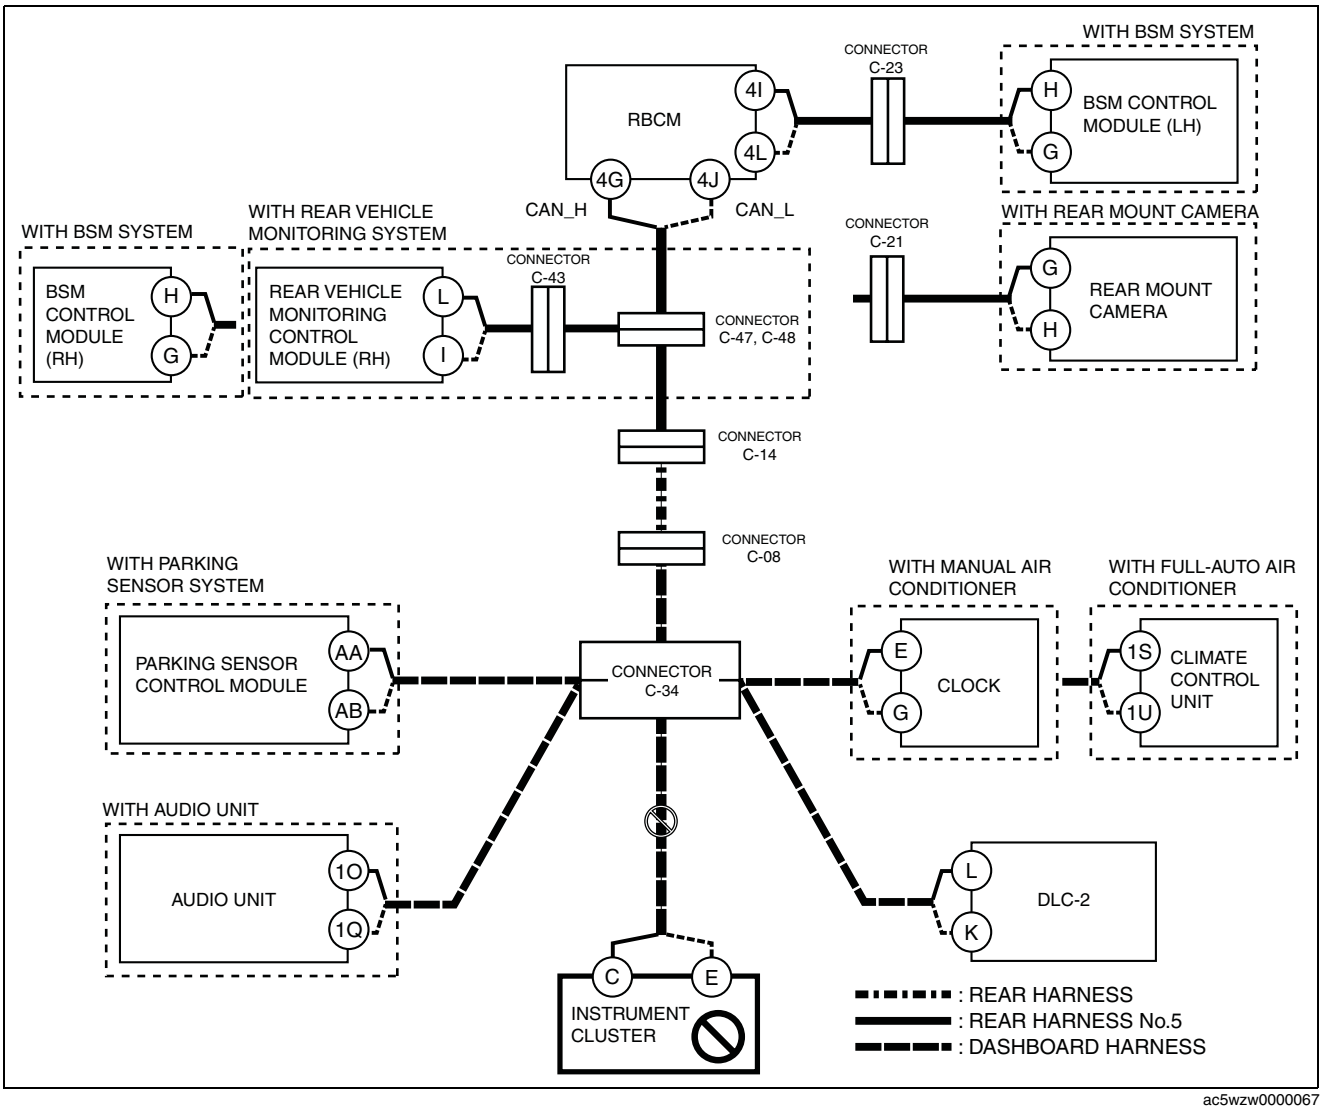
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between instrument cluster and connector C-34
- Connector C-34 malfunction
- Instrument cluster malfunction

10

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000067

Inspection item

- Instrument cluster connector
- Connector C-34
- Wiring harness between instrument cluster terminal C and connector C-34
- Wiring harness between instrument cluster terminal E and connector C-34
- Instrument cluster

J

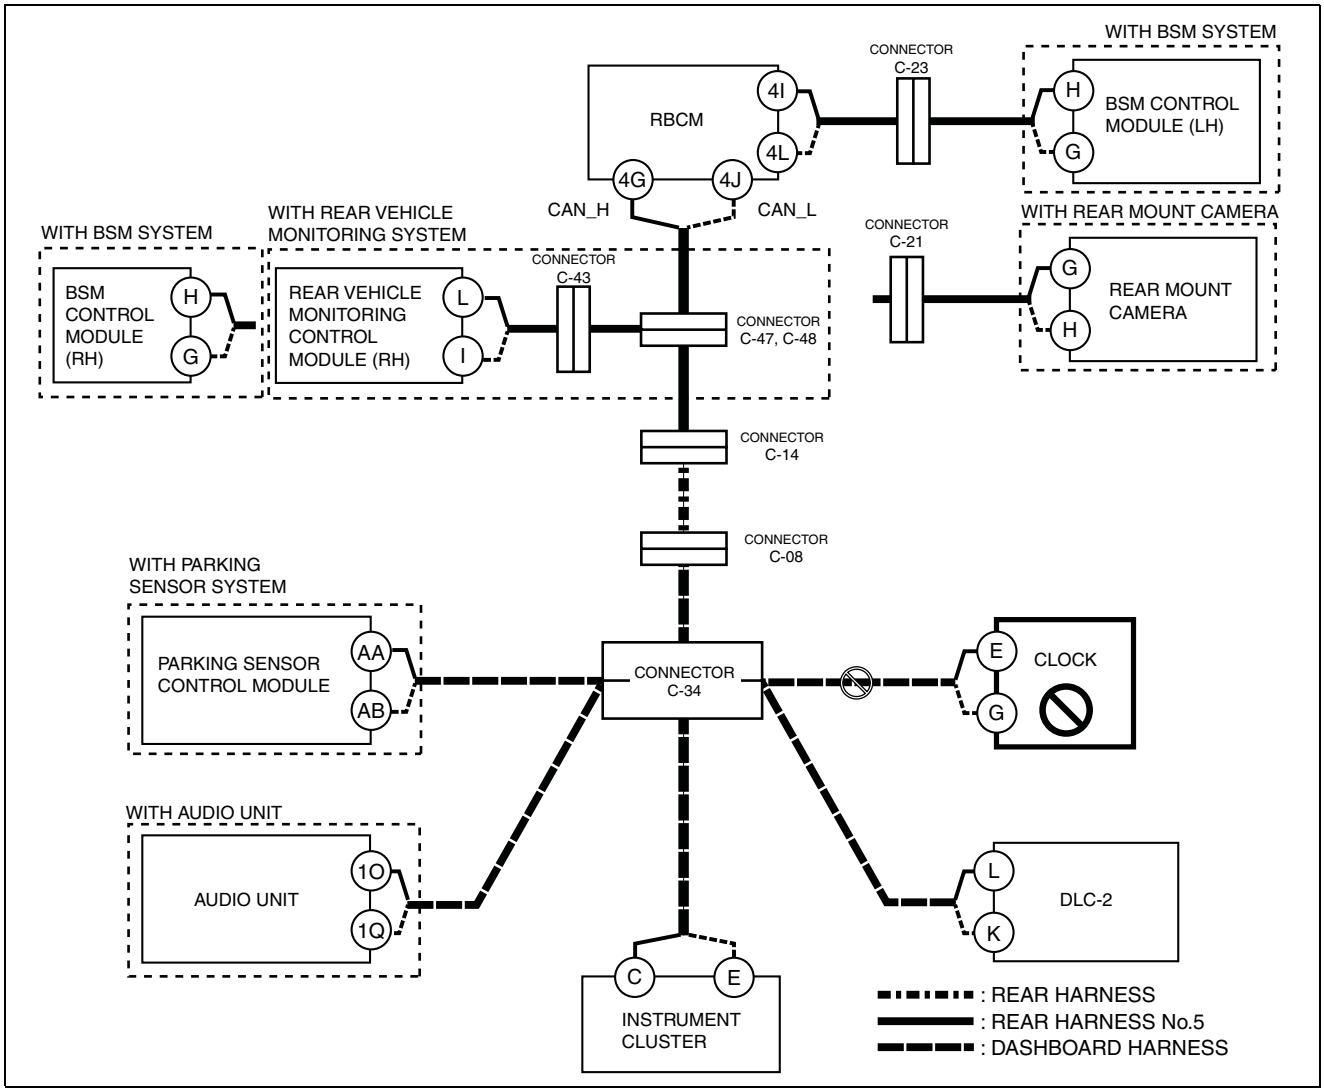
1. Perform the clock input/output check mode. (See 09-22-96 CLOCK INPUT/OUTPUT CHECK MODE.)
   - If "2:00" is displayed, go to the next step.
   - If "2:Er is displayed, inspect the inspection items in the possible causes for 10-02D-94 Clock Circuit Malfunction.
2. Shift the selector lever (ATX) or shift lever (MTX) to the R position.
   - If images from the rear mount camera appear in the audio unit, inspect the inspection items in the possible causes for the 10-02D-95 Parking Sensor Control Module Circuit Malfunction.
   - If images from the rear mount camera do not appear in the audio unit, inspect the inspection items in the possible causes for 10-02D-96 Rear Mount Camera Circuit Malfunction.

Clock Circuit Malfunction
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between clock component and connector C-34
- Connector C-34 malfunction
- Clock component malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000244

Inspection item

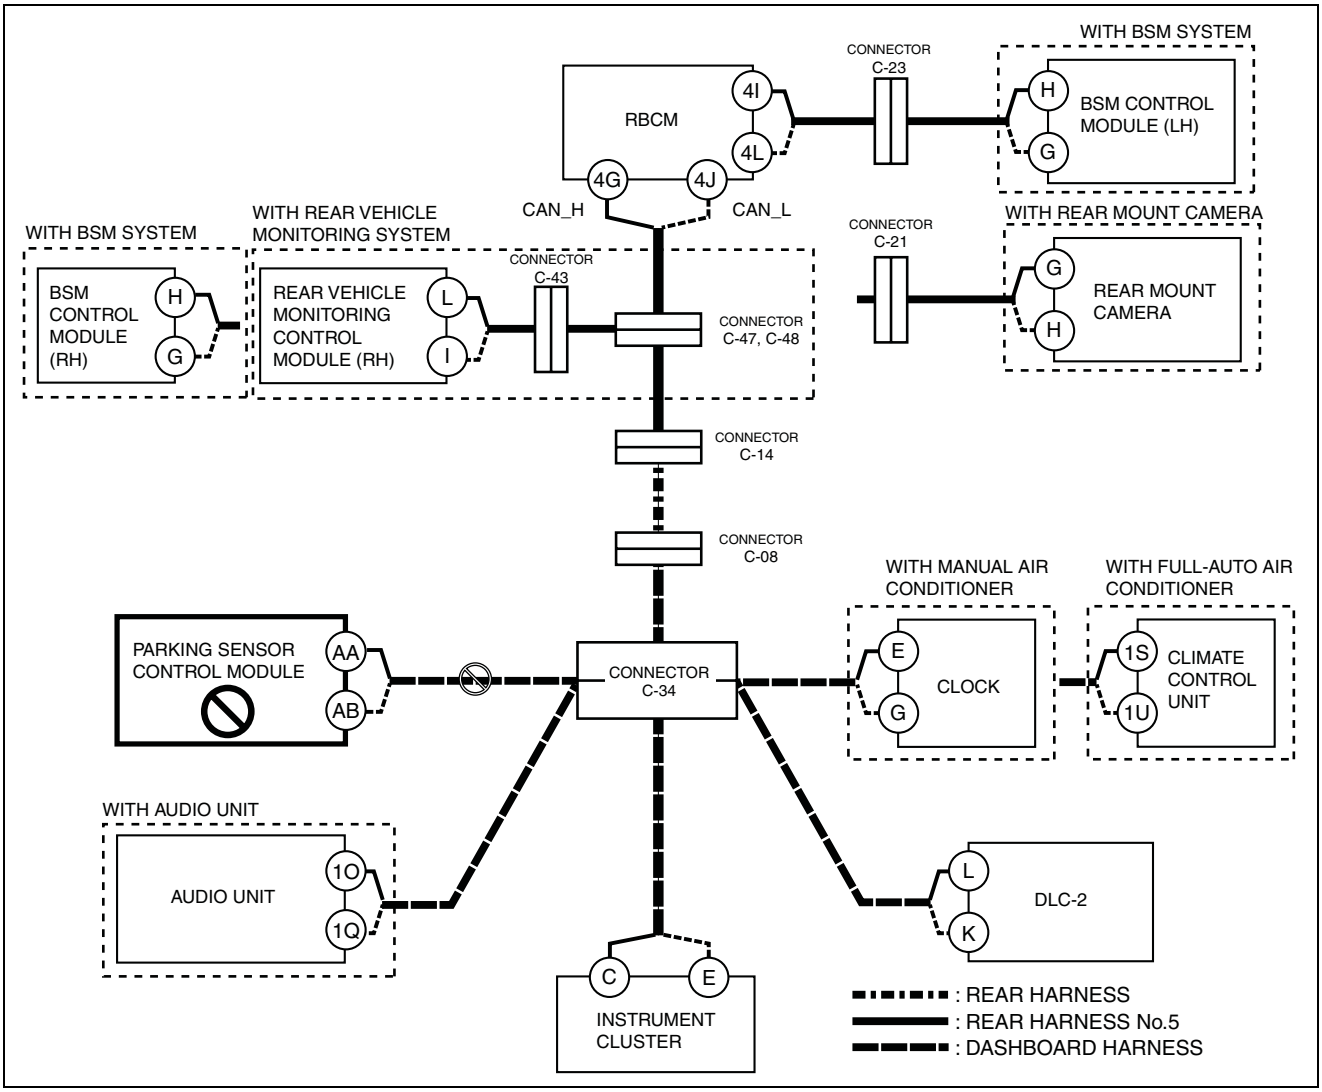
- Clock component connector
- Connector C-34
- Wiring harness between clock component terminal E and connector C-34
- Wiring harness between clock component terminal G and connector C-34
- Clock component

Parking Sensor Control Module Circuit Malfunction
Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between parking sensor control module and connector C-34
- Connector C-34 malfunction
- Parking sensor control module malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000067

Inspection item

- Parking sensor control module connector
- Connector C-34
- Wiring harness between parking sensor control module terminal AA and connector C-34
- Wiring harness between parking sensor control module terminal AB and connector C-34
- Parking sensor control module

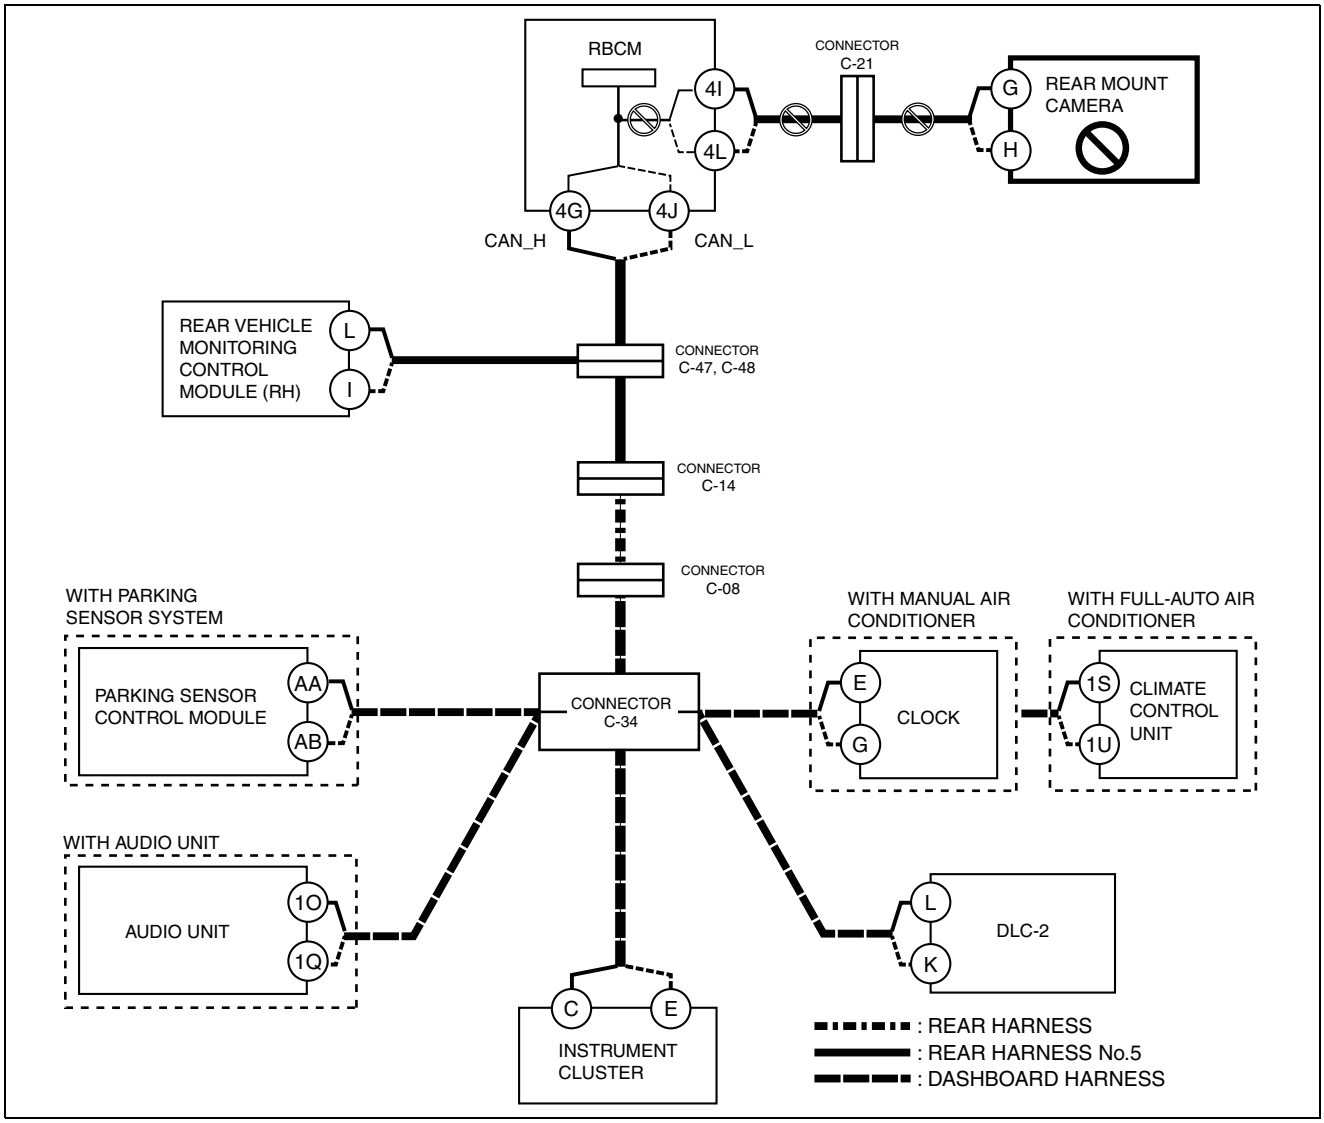
Rear Mount Camera Circuit Malfunction

Possible cause

- Connector terminal disconnection, poor contact, damage, deformation, corrosion
- Open circuit in wiring harness between rear mount camera and connector C-21
- Open circuit in wiring harness between connector C-21 and RCBM
- Connector C-21 malfunction
- Rear mount camera malfunction
- CAN circuit in rear body control module (RBCM) malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000244

Inspection item

- Rear mount camera connector
- Rear body control module (RBCM) connector
- Connector C-21
- Wiring harness between rear mount camera terminal G and connector C-21.
- Wiring harness between rear mount camera terminal H and connector C-21.
- Wiring harness between rear body control module (RBCM) terminal 4I and connector C-21
- Wiring harness between rear body control module (RBCM) terminal 4L and connector C-21
- Rear mount camera
- Rear body control module (RBCM)
  - — Between rear body control module (RBCM) terminal 4G and rear body control module (RBCM) terminal 4I
  - — Between rear body control module (RBCM) terminal 4J and rear body control module (RBCM) terminal 4L

DETERMINING SHORT TO GROUND LOCATION (MS-CAN) [SKYACTIV-D 2.2 (R.H.D.)]

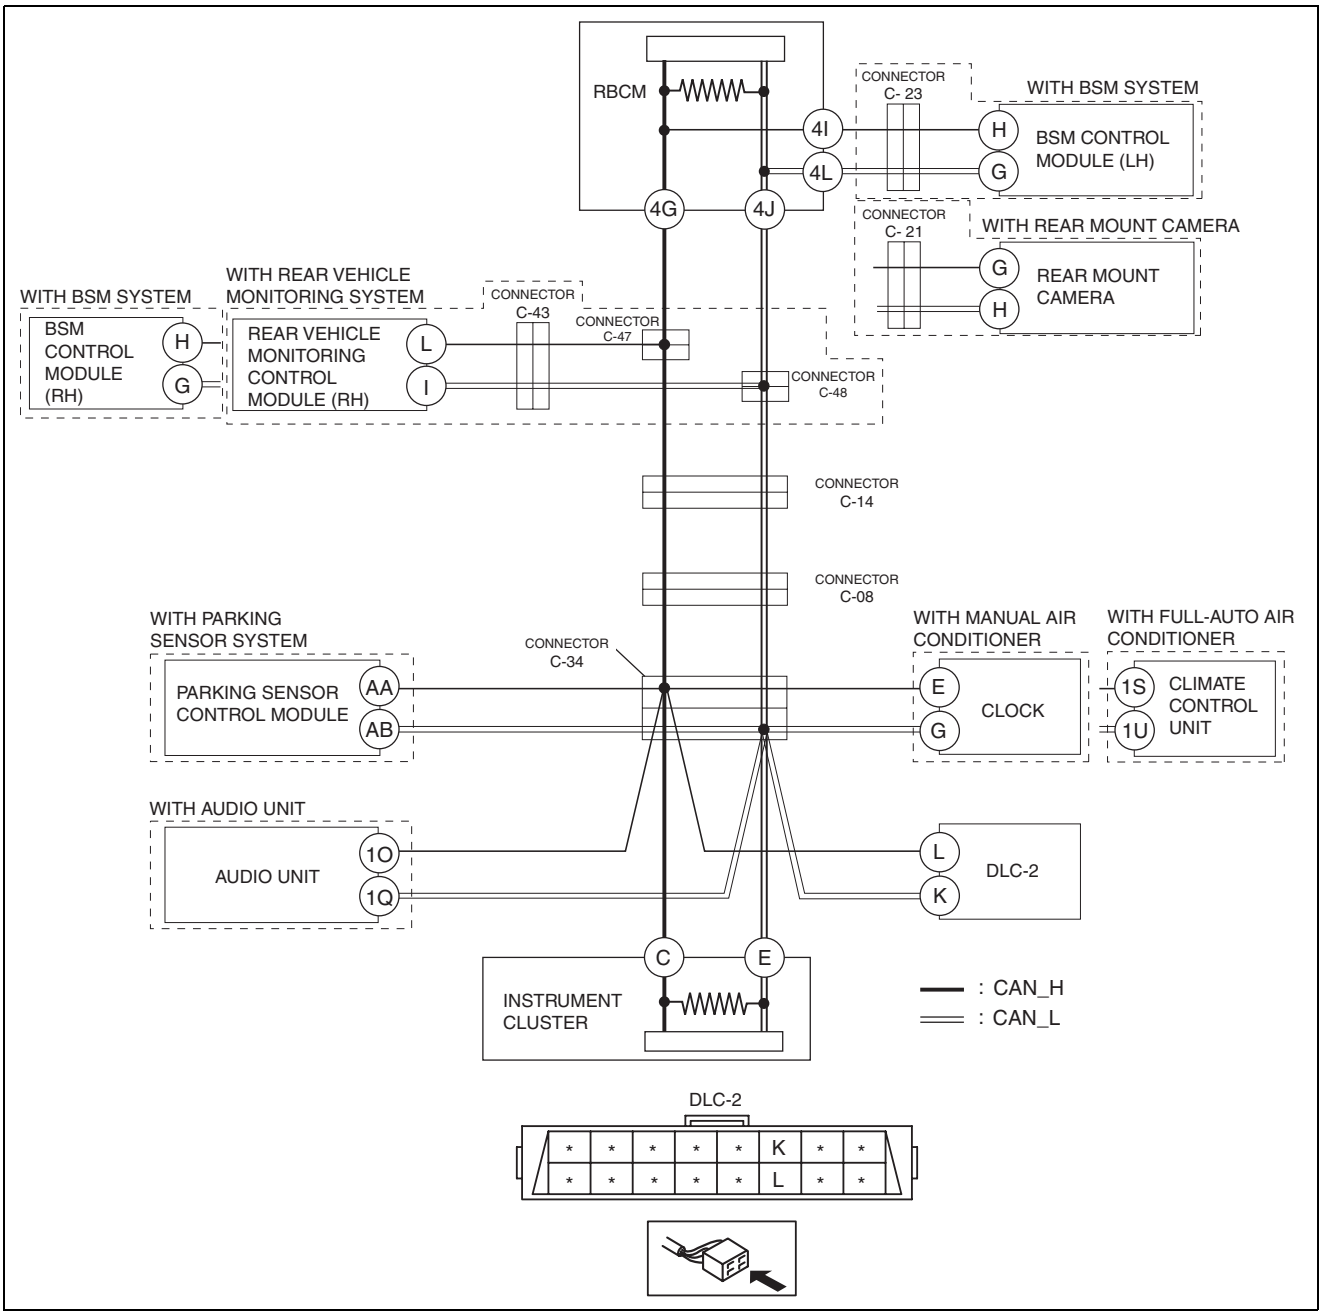
id100206000900

Caution

- **Perform the following malfunction diagnosis only when it is diagnosed with a short to ground by 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)].**

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000068

Determination procedure

Caution

- **When disconnecting the connector, verify that there is no looseness, damage, deformation, corrosion, or poor connection of the connector terminals.**
- **When inspecting the DLC-2, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals.**

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
1	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-08 AND INSTRUMENT CLUSTER** • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-08. • Inspect for continuity at the following terminals: — Between DLC-2 terminal L and body ground — Between DLC-2 terminal K and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 11.
2	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTORS C-34 AND DLC-2** • Disconnect connector C-34. • Inspect for continuity at the following terminals: — Between DLC-2 terminal L and body ground — Between DLC-2 terminal K and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between connector C-34 and DLC-2 because the wiring harness is shorted to ground.
		No	Go to the next step.
3	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-34 AND PARKING SENSOR CONTROL MODULE** • Inspect for continuity at the following terminals: — Between parking sensor control module terminal AA and body ground — Between parking sensor control module terminal AB and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 5.
4	**INSPECT CAN LINE IN PARKING SENSOR CONTROL MODULE FOR SHORT TO GROUND** • Disconnect the parking sensor connector. • Inspect for continuity at the following terminals: — Between parking sensor control module terminal AA (wiring harness side) and body ground — Between parking sensor control module terminal AB (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the parking sensor control module and connector C-34 because the wiring harness is shorted to ground.
		No	Replace the parking sensor control module because there is a short to ground in the parking sensor control module. (See 09-22-57 PARKING SENSOR CONTROL MODULE REMOVAL/INSTALLATION.)
5	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-34 AND CLIMATE CONTROL UNIT** • Inspect for continuity at the following terminals: — Between climate control unit terminal 1S and body ground (with full-auto air conditioner) — Between climate control unit terminal 1U and body ground (with full-auto air conditioner) — Between clock terminal E and body ground (with manual air conditioner) — Between clock terminal G and body ground (with manual air conditioner) • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 7.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
6	**INSPECT CAN LINE IN CLIMATE CONTROL UNIT OR CLOCK FOR SHORT TO GROUND** • Disconnect the climate control unit connector or clock connector. • Inspect for continuity at the following terminals: — Between climate control unit terminal 1S (wiring harness side) and body ground (with full-auto air conditioner) — Between climate control unit terminal 1U (wiring harness side) and body ground (with full-auto air conditioner) — Between clock terminal E (wiring harness side) and body ground (with manual air conditioner) — Between clock terminal G (wiring harness side) and body ground (with manual air conditioner) • Is there continuity?	Yes	Repair or replace the wiring harness between the climate control unit or clock and connector C-34 because the wiring harness is shorted to ground.
		No	Replace the climate control unit or the clock because there is a short to ground inside the climate control unit or the clock. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) (See 09-22-92 CLOCK REMOVAL/INSTALLATION.)
7	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-34 AND AUDIO UNIT** • Inspect for continuity at the following terminals: — Between audio unit terminal 1O and body ground — Between audio unit terminal 1Q and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 9.
8	**INSPECT CAN LINE IN AUDIO UNIT FOR SHORT TO GROUND** • Disconnect the audio unit connector. • Inspect for continuity at the following terminals: — Between audio unit terminal 1O (wiring harness side) and body ground — Between audio unit terminal 1Q (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the audio unit and connector C-34 because the wiring harness is shorted to ground.
		No	Replace the audio unit because there is a short to ground in the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
9	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-34 AND INSTRUMENT CLUSTER** • Inspect for continuity at the following terminals: — Between instrument cluster terminal C and body ground — Between instrument cluster terminal E and body ground • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connectors C-08 and C-34 because the wiring harness is shorted to ground.
10	**INSPECT CAN LINE IN INSTRUMENT CLUSTER FOR SHORT TO GROUND** • Disconnect the instrument cluster connector. • Inspect for continuity at the following terminals: — Between instrument cluster terminal C (wiring harness side) and body ground — Between instrument cluster terminal E (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the instrument cluster and connector C-34 because the wiring harness is shorted to ground.
		No	Replace the instrument cluster because there is a short to ground in the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
11	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTORS C-14 AND C-08** • Disconnect connector C-14. • Connect connector C-08. • Inspect for continuity at the following terminals: — Between DLC-2 terminal L and body ground — Between DLC-2 terminal K and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between connectors C-14 and C-08 because the wiring harness is shorted to ground.
		No	Go to the next step.
12	**INSPECT FOR SHORT TO GROUND BETWEEN CONNECTOR C-14 AND CONNECTORS C-47 AND C-48** • Disconnect connectors C-47 and C-48. • Connect connector C-14. • Inspect for continuity at the following terminals: — Between DLC-2 terminal L and body ground — Between DLC-2 terminal K and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between connectors C-47 and C-48 and connector C-14 because the wiring harness is shorted to ground.
		No	Go to the next step.
13	**INSPECT FOR SHORT TO GROUND BETWEEN REAR VEHICLE MONITORING CONTROL MODULE (RH) OR BSM CONTROL MODULE (RH) AND CONNECTORS C-47 AND C-48** • Inspect for continuity at the following terminals: — Between rear vehicle monitoring control module (RH) terminal L and body ground (with rear vehicle monitoring system) — Between rear vehicle monitoring control module (RH) terminal I and body ground (with rear vehicle monitoring system) — Between BSM control module (RH) terminal H and body ground (with BSM system) — Between BSM control module (RH) terminal G and body ground (with BSM system) • Is there continuity?	Yes	• Go to the next step. (With rear vehicle monitoring system) • Go to Step 15. (With BSM system)
		No	Go to Step 16.
14	**INSPECT FOR SHORT TO GROUND BETWEEN REAR VEHICLE MONITORING CONTROL MODULE (RH) AND CONNECTOR C-43** • Disconnect connector C-43. • Inspect for continuity at the following terminals: — Between rear vehicle monitoring control module (RH) terminal L and body ground — Between rear vehicle monitoring control module (RH) terminal I and body ground • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-43 and connectors C-47 and C-48 because the wiring harness is shorted to ground.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
15	**INSPECT CAN LINE IN REAR VEHICLE MONITORING CONTROL MODULE (RH) OR BSM CONTROL MODULE (RH) FOR SHORT TO GROUND** • Disconnect the rear vehicle monitoring control module (RH) connector or BSM control module (RH) connector. • Inspect for continuity at the following terminals: — Between rear vehicle monitoring control module (RH) terminal L (wiring harness side) and body ground (with rear vehicle monitoring system) — Between rear vehicle monitoring control module (RH) terminal I (wiring harness side) and body ground (with rear vehicle monitoring system) — Between BSM control module (RH) terminal H (wiring harness side) and body ground (with BSM system) — Between rear vehicle monitoring control module (RH) terminal G (wiring harness side) and body ground (with rear vehicle monitoring system) • Is there continuity?	Yes	• Repair or replace the wiring harness between the rear vehicle monitoring control module (RH) and connector C-43 because the wiring harness is shorted to ground. (With rear vehicle monitoring system) • Repair or replace the wiring harness between the BSM control module (RH) and connectors C-47 and C-48 because the wiring harness is shorted to ground. (With BSM system)
		No	Replace the rear vehicle monitoring control module (RH) or the BSM control module (RH) because there is a short to ground in the rear vehicle monitoring control module (RH) or the BSM control module (RH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.) (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
16	**INSPECT FOR SHORT TO GROUND BETWEEN REAR BODY CONTROL MODULE (RBCM) AND BSM CONTROL MODULE (LH) OR REAR MOUNT CAMERA** • Disconnect the rear body control module (RBCM) connector. • Inspect for continuity at the following terminals: — Between BSM control module (LH) terminal H and body ground (with BSM system) — Between BSM control module (LH) terminal G and body ground (with BSM system) — Between rear mount camera terminal G and body ground (with rear mount camera) — Between rear mount camera terminal H and body ground (with rear mount camera) • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 19.
17	**INSPECT FOR SHORT TO GROUND BETWEEN REAR BODY CONTROL MODULE (RBCM) AND CONNECTOR C-23 OR C-21** • Disconnect connector C-23 or C-21. • Inspect for continuity at the following terminals: — Between rear body control module (RBCM) terminal 4I (wiring harness side) and body ground — Between rear body control module (RBCM) terminal 4L (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the rear body control module (RBCM) and connector C-23 or C-21 because the wiring harness is shorted to ground.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
18	**INSPECT CAN LINE IN BSM CONTROL MODULE (LH) OR REAR MOUNT CAMERA FOR SHORT TO GROUND** • Disconnect the BSM control module (LH) connector or the rear mount camera connector. • Inspect for continuity at the following terminals: — Between BSM control module (LH) terminal H (wiring harness side) and body ground (with BSM system) — Between BSM control module (LH) terminal G (wiring harness side) and body ground (with BSM system) — Between rear mount camera terminal G (wiring harness side) and body ground (with rear mount camera) — Between rear mount camera terminal H (wiring harness side) and body ground (with rear mount camera) • Is there continuity?	Yes	• Repair or replace the wiring harness between BSM control module (LH) and connector C-23 because the wiring harness is shorted to ground. (With BSM system) • Repair or replace the wiring harness between the rear mount camera and connector C-21 because the wiring harness is shorted to ground. (With rear mount camera)
		No	Replace the BSM control module (LH) or the rear mount camera because there is a short to ground in the BSM control module (LH) or the rear mount camera. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
19	**INSPECT CAN LINE INSIDE REAR BODY CONTROL MODULE (RBCM) FOR SHORT TO GROUND** • Disconnect the rear body control module (RBCM) connector. • Inspect for continuity at the following terminals: — Between rear body control module (RBCM) terminal 4G (wiring harness side) and body ground — Between rear body control module (RBCM) terminal 4J (wiring harness side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the rear body control module (RBCM) and connectors C-47 and C-48 because the wiring harness is shorted to ground.
		No	Replace the rear body control module (RBCM) because there is a short to ground in the rear body control module (RBCM). (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)

DETERMINING SHORT TO POWER SUPPLY LOCATION (MS-CAN) [SKYACTIV-D 2.2 (R.H.D.)]

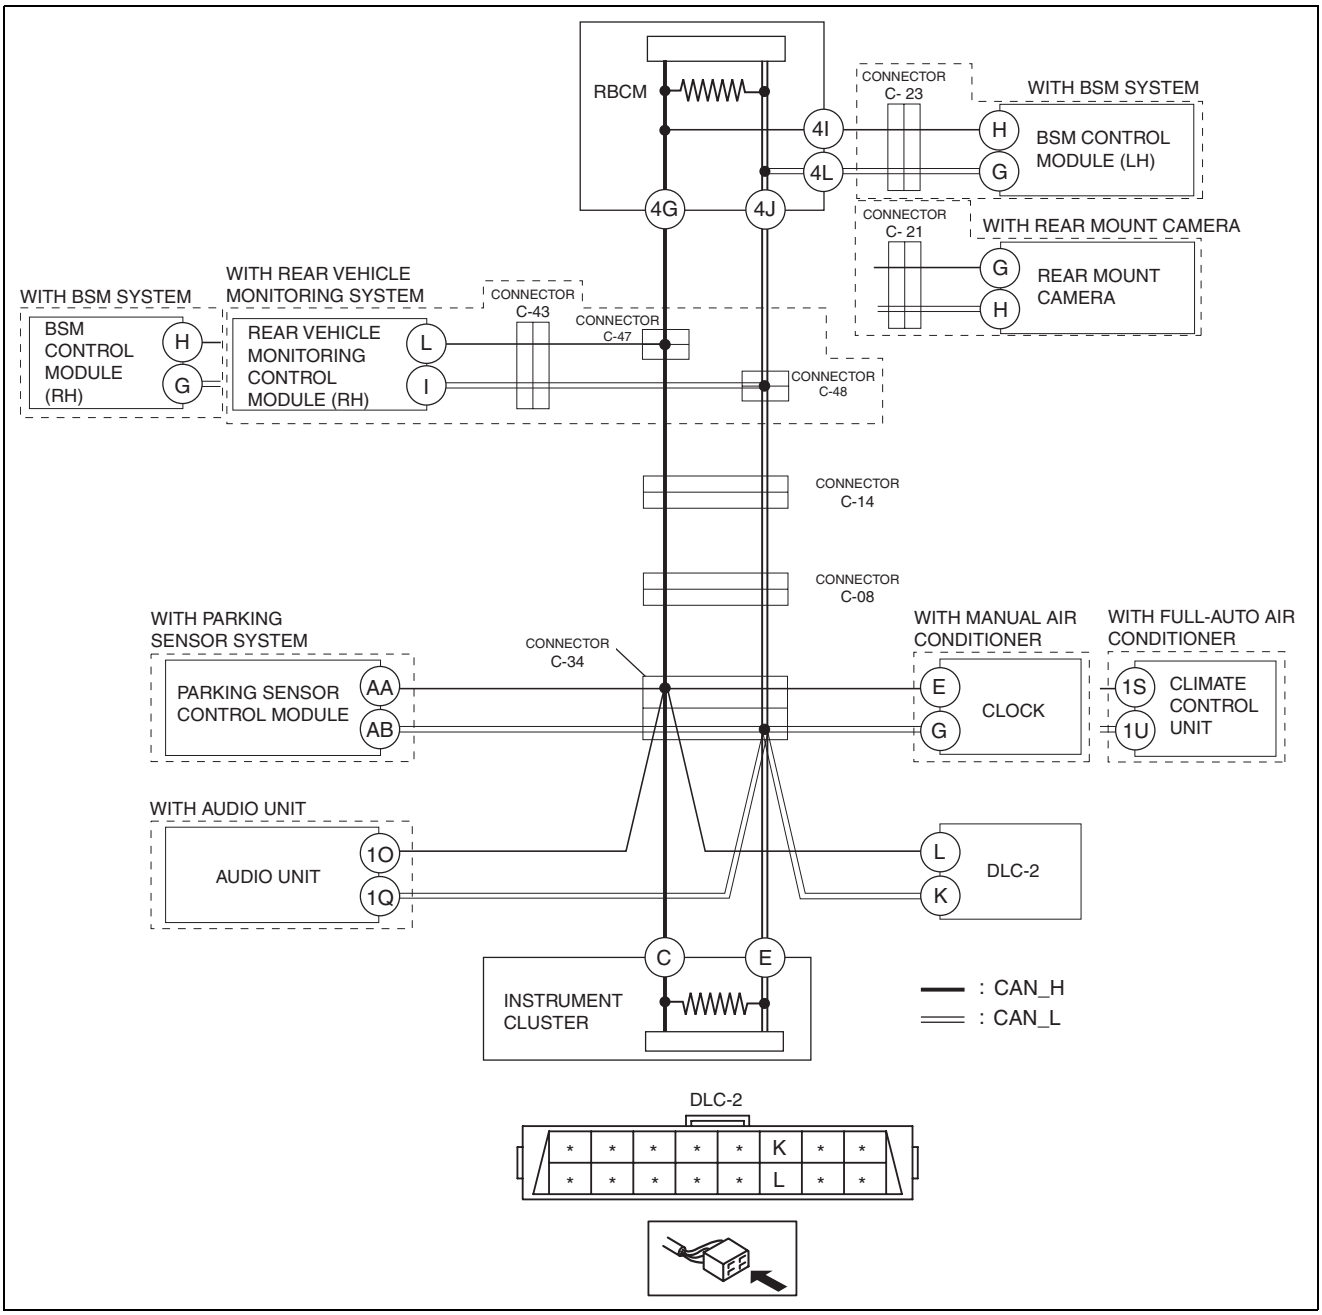
id100206001000

Caution

- **Perform the following malfunction diagnosis only when it is diagnosed with a short to the power supply by 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)].**

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000068

Determination procedure

Caution

- **When disconnecting the connector, verify that there is no looseness, damage, deformation, corrosion, or poor connection of the connector terminals.**
- **When inspecting the DLC-2, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals.**
- **Disconnect the negative battery cable before performing any work that requires handling of connectors.**

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
1	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN CONNECTOR C-08 AND INSTRUMENT CLUSTER** • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-08. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 - 3.5 V?	Yes	Go to Step 11.
		No	Go to the next step.
2	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN CONNECTORS C-34 AND DLC-2** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-34. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage 0 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between DLC-2 and connector C-34 because the wiring harness is shorted to the power supply.
3	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN CONNECTOR C-34 AND PARKING SENSOR CONTROL MODULE** • Measure the voltage at parking sensor control module terminals AA and AB. • Is the voltage between 1.5 - 3.5 V?	Yes	Go to Step 5.
		No	Go to the next step.
4	**INSPECT PARKING SENSOR CONTROL MODULE FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the parking sensor control module connector. • Connect connector C-34. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 - 3.5 V?	Yes	Replace the parking sensor control module because there is a short to power supply in the parking sensor control module. (See 09-22-57 PARKING SENSOR CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the parking sensor control module and connector C-34 because the wiring harness is shorted to the power supply.
5	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN CONNECTOR C-34 AND CLIMATE CONTROL UNIT OR CLOCK** • Measure the voltage at climate control unit terminals 1S and 1U. (with full-auto air conditioner) • Measure the voltage at clock terminals E and G. (with manual air conditioner) • Is the voltage between 1.5 - 3.5 V?	Yes	Go to Step 7.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
6	**INSPECT CLIMATE CONTROL UNIT OR CLOCK FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the climate control unit connector or the clock connector. • Connect connector C-34. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 - 3.5 V?	Yes	Replace the climate control unit or the clock because there is a short to power supply inside the climate control unit or the clock. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) (See 09-22-92 CLOCK REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the climate control unit or the clock and connector C-34 because the wiring harness is shorted to the power supply.
7	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN CONNECTOR C-34 AND AUDIO** • Measure the voltage at audio unit terminals 1O and 1Q. • Is the voltage between 1.5 - 3.5 V?	Yes	Go to Step 9.
		No	Go to the next step.
8	**INSPECT AUDIO UNIT FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the audio unit connector. • Connect connector C34. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at audio unit terminals 1O and 1Q (wiring harness side). • Is the voltage between 1.5 - 3.5 V?	Yes	Replace the audio unit because there is a short to the power supply in the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the audio unit and connector C-34 because the wiring harness is shorted to the power supply.
9	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN CONNECTOR C-34 AND INSTRUMENT CLUSTER** • Measure the voltage at instrument cluster terminals C and E. • Is the voltage between 1.5 - 3.5 V?	Yes	Repair or replace the wiring harness between connector C-08 and connector C-34 because the wiring harness is shorted to the power supply.
		No	Go to the next step.
10	**INSPECT INSTRUMENT CLUSTER FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the instrument cluster connector. • Connect connector C-34. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 - 3.5 V?	Yes	Replace the instrument cluster because there is a short to the power supply in the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the instrument cluster and connector C-34 because the wiring harness is shorted to the power supply.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
11	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN CONNECTORS C-14 AND C-08** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-14. • Connect connector C-08. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 - 3.5 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-14 and connector C-08 because the wiring harness is shorted to the power supply.
12	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN CONNECTORS C-47 AND C-48 AND CONNECTOR C-14** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connectors C-47 and C-48. • Connect connector C-14. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 - 3.5 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connectors C-47 and C-48 and connector C-14 because the wiring harness is shorted to the power supply.
13	**INSPECT BETWEEN REAR VEHICLE MONITORING CONTROL MODULE (RH) OR BSM CONTROL MODULE (RH) AND CONNECTORS C-47 AND C-48 FOR SHORT TO POWER SUPPLY** • Measure the voltage at rear vehicle monitoring control module (RH) terminals L and I. (With rear vehicle monitoring system) • Measure the voltage at BSM control module (RH) terminals H and G. (With BSM system) • Is the voltage between 1.5 - 3.5 V?	Yes	Go to Step 16.
		No	• Go to the next step. (With rear vehicle monitoring system) • Go to Step 15.
14	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN REAR VEHICLE MONITORING CONTROL MODULE (RH) AND CONNECTOR C-43** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connectors C-43. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at rear vehicle monitoring (RH) terminals L and I. • Is the voltage between 1.5 - 3.5 V?	Yes	Repair or replace the wiring harness between connector C-43 and connectors C-47 and C-48 because the wiring harness is shorted to the power supply.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
15	**INSPECT BETWEEN REAR VEHICLE MONITORING CONTROL MODULE (RH) OR BSM CONTROL MODULE (RH) FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the rear vehicle monitoring control modules (RH) connector or the BSM control module (RH) connector. • Connect connectors C-47 and C-48. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 - 3.5 V?	Yes	Replace the rear vehicle monitoring control module (RH) or the BSM control module (RH) because there is a short to the power supply in the rear vehicle monitoring control module (RH) or the BSM control module (RH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.) (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	• Repair or replace the wiring harness between the rear vehicle monitoring control module (RH) and connector C-43 because the wiring harness is shorted to the power supply. (With rear vehicle monitoring system) • Repair or replace the wiring harness between the BSM control module (RH) and connectors C-47 and C-48 because the wiring harness is shorted to the power supply. (With BSM system)
16	**INSPECT FOR SHORT TO POWER SUPPLY BETWEEN REAR BODY CONTROL MODULE (RBCM) AND BSM CONTROL MODULE (LH) OR REAR MOUNT CAMERA** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the rear body control module (RBCM) connector. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at BSM control module (LH) terminals H and G. (With BSM system) • Measure the voltage at BSM control module (LH) terminals H and G. (With rear mount camera) • Is the voltage between 1.5 - 3.5 V?	Yes	Go to Step 19.
		No	Go to the next step.
17	**INSPECT BETWEEN REAR BODY CONTROL MODULE (RBCM) AND CONNECTOR C-23 OR C-21 FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-23 or C-21. • Connect the rear body control module (RBCM) connector. • Connect connectors C-47 and C-48. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 - 3.5 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between the rear body control module (RBCM) and connector C-23 or C-21 because the wiring harness is shorted to the power supply.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
18	**INSPECT BSM CONTROL MODULE (LH) OR REAR MOUNT CAMERA FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the BSM control module (LH) connector or the rear mount camera connector. • Connect connector C-23 or C-21. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 - 3.5 V?	Yes	Replace the BSM control module (LH) or the rear mount camera because there is a short to the power supply in the BSM control module (LH) or the rear mount camera. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.) (See 09-20-68 REAR MOUNT CAMERA REMOVAL/INSTALLATION.)
		No	• Repair or replace the wiring harness between BSM control module (LH) and connector C-23 because the wiring harness is shorted to the power supply. (With BSM system) • Repair or replace the wiring harness between the rear mount camera and connector C-21 because the wiring harness is shorted to the power supply. (With rear mount camera)
19	**INSPECT REAR BODY CONTROL MODULE (RBCM) FOR SHORT TO POWER SUPPLY** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect connectors C-47 and C-48. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage between 1.5 - 3.5 V?	Yes	Replace the rear body control module (RBCM) because there is a short to the power supply in the rear body control module (RBCM). (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the rear body control module (RBCM) and connectors C-47 and C-48 because the wiring harness is shorted to the power supply.

DETERMINING SHORT BETWEEN CIRCUITS LOCATION (MS-CAN) [SKYACTIV-D 2.2 (R.H.D.)]

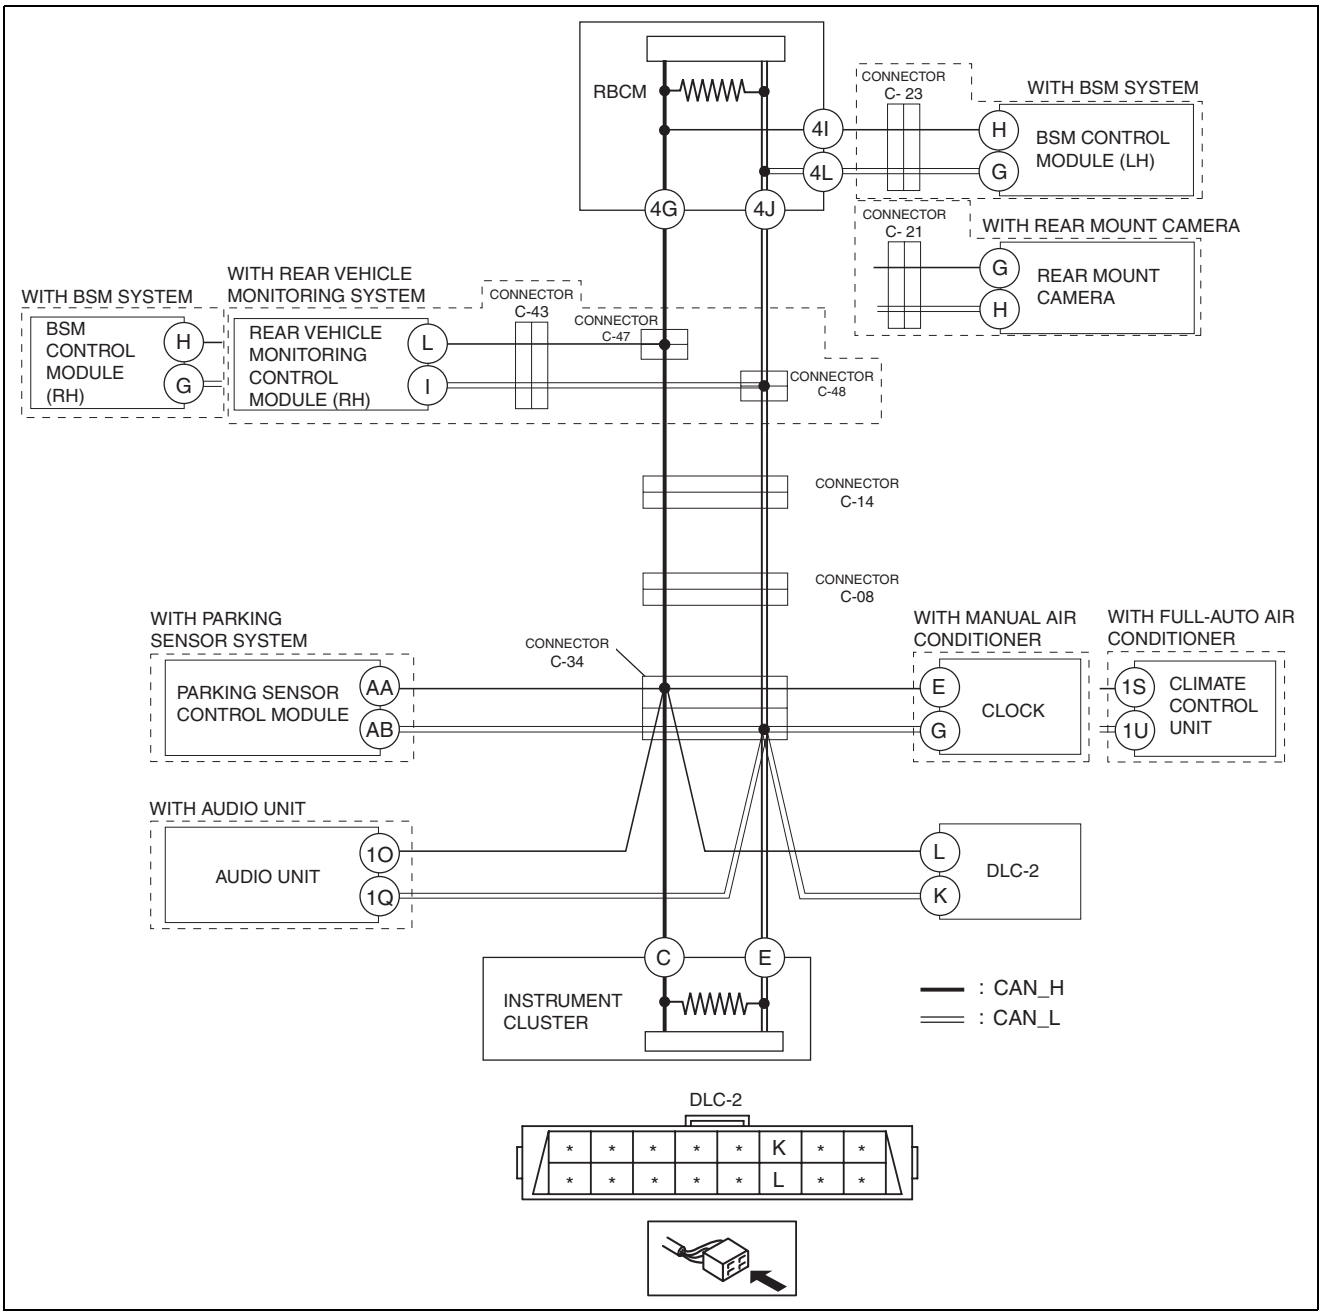
id100206001100

Caution

- **Perform the following malfunction diagnosis only when it is diagnosed with a short between circuits by 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)].**

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

System wiring diagram



ac5wzw0000068

Determination procedure

Caution

- **When disconnecting the connector, verify that there is no looseness, damage, deformation, corrosion, or poor connection of the connector terminals.**
- **When inspecting the DLC-2, touch it with a paper clip or similar thin pin without directly inserting a tester into the terminals.**

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
1	**INSPECT BETWEEN CONNECTOR C-08 AND INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-08. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage at DLC-2 terminals L and K the same?	Yes	Go to the next step.
		No	Go to Step 11.
2	**INSPECT BETWEEN CONNECTOR C-34 AND DLC-2 FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-34. • Inspect for continuity between DLC-2 terminals L and K. • Is there continuity?	Yes	Repair or replace the wiring harness between connector C-34 and DLC-2 because the wiring harness is shorted between circuits.
		No	Go to the next step.
3	**INSPECT BETWEEN CONNECTOR C-34 AND PARKING SENSOR CONTROL MODULE FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity between parking sensor control module terminals AA and AB. • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 5.
4	**INSPECT PARKING SENSOR CONTROL MODULE FOR SHORT BETWEEN CIRCUITS** • Disconnect the parking sensor control module connector. • Inspect for continuity between parking sensor control module terminals AA and AB (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the parking sensor control module and connector C-34 because the wiring harness is shorted between circuits.
		No	Replace the parking sensor control module because there is a short between circuits in the parking sensor control module. (See 09-22-57 PARKING SENSOR CONTROL MODULE REMOVAL/INSTALLATION.)
5	**INSPECT BETWEEN CONNECTOR C-34 AND CLIMATE CONTROL UNIT OR CLOCK FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity between climate control unit terminals 1S and 1U. (with full-auto air conditioner) • Inspect for continuity between clock terminals E and G. (with manual air conditioner) • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT CLIMATE CONTROL UNIT OR CLOCK FOR SHORT BETWEEN CIRCUITS** • Disconnect the climate control unit connector or the clock connector. • Inspect for continuity between climate control unit terminals 1S and 1U (wiring harness side). (with full-auto air conditioner) • Inspect for continuity between clock terminals E and G (wiring harness side). (with manual air conditioner) • Is there continuity?	Yes	Repair or replace the wiring harness between the climate control unit or clock and connector C-34 because the wiring harness is shorted between circuits.
		No	Replace the climate control unit or the clock because there is a short between circuits inside the climate control unit or the clock. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) (See 09-22-92 CLOCK REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
7	**INSPECT BETWEEN CONNECTOR C-34 AND AUDIO UNIT FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity between audio unit terminals 1O and 1Q. • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 9.
8	**INSPECT AUDIO UNIT FOR SHORT BETWEEN CIRCUITS** • Disconnect the audio unit connector. • Inspect for continuity between audio unit terminals 1O and 1Q (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the audio unit and connector C-34 because the wiring harness is shorted between circuits.
		No	Replace the audio unit because there is a short between circuits in the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
9	**INSPECT BETWEEN CONNECTOR C-34 AND INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Inspect for continuity between instrument cluster terminals C and E. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connectors C-34 and C-08 because the wiring harness is shorted between circuits.
10	**INSPECT INSTRUMENT CLUSTER FOR SHORT BETWEEN CIRCUITS** • Disconnect the instrument cluster connector. • Inspect for continuity between instrument cluster terminals C and E (wiring harness side). • Is there continuity?	Yes	Repair or replace the wiring harness between the instrument cluster and connector C-34 because the wiring harness is shorted between circuits.
		No	Replace the instrument cluster because there is a short between circuits in the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
11	**INSPECT BETWEEN CONNECTORS C-14 AND C-08 FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connector C-14. • Connect connector C-08. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage at DLC-2 terminals L and K the same?	Yes	Repair or replace the wiring harness between connectors C-14 and C-08 because the wiring harness is shorted between circuits.
		No	Go to the next step.
12	**INSPECT BETWEEN CONNECTORS C-47 AND C-48 AND CONNECTOR C-14 FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect connectors C-47 and C-48. • Connect connector C-14. • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage at DLC-2 terminals L and K the same?	Yes	Repair or replace the wiring harness between connectors C-47 and C-48 and connector C-14 because the wiring harness is shorted between circuits.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
13	**INSPECT BETWEEN REAR VEHICLE MONITORING CONTROL MODULE (RH) OR BSM CONTROL MODULE (RH) AND CONNECTORS C-47 AND C-48 FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Inspect for continuity between rear vehicle control module (RH) terminals L and I. (With rear vehicle monitoring system) • Inspect for continuity between BSM control module (RH) terminals H and G. (With BSM system) • Is there continuity?	Yes	• Go to the next step. (With rear vehicle monitoring system) • Go to Step 15. (With BSM system)
		No	Go to Step 16.
14	**INSPECT BETWEEN REAR VEHICLE MONITORING CONTROL MODULE (RH) AND CONNECTOR C-43 FOR SHORT BETWEEN CIRCUITS** • Disconnect connector C-43. • Inspect for continuity between rear vehicle control module (RH) terminals L and I. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between connector C-43 and connectors C-47 and C-48 because the wiring harness is shorted between circuits.
15	**INSPECT BETWEEN REAR VEHICLE MONITORING CONTROL MODULE (RH) OR BSM CONTROL MODULE (RH) FOR SHORT BETWEEN CIRCUITS** • Disconnect the rear vehicle monitoring control modules (RH) connector or the BSM control module (RH) connector. • Inspect for continuity between rear vehicle control module (RH) terminals L and I (wiring harness side). (With rear vehicle monitoring system) • Inspect for continuity between BSM control module (RH) terminals H and G (wiring harness side). (With BSM system) • Is there continuity?	Yes	• Repair or replace the wiring harness between the rear vehicle monitoring control module (RH) and connector C-43 because the wiring harness is shorted between circuits. (With rear vehicle monitoring system) • Repair or replace the wiring harness between the BSM control module (RH) and connectors C-47 and C-48 because the wiring harness is shorted between circuits. (With BSM system)
		No	Replace the rear vehicle monitoring control module (RH) or the BSM control module (RH) because there is a short between circuits in the rear vehicle monitoring control module (RH) or the BSM control module (RH). (See 09-22-77 REAR VEHICLE MONITORING CONTROL MODULE REMOVAL/INSTALLATION.) (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
16	**INSPECT BETWEEN BSM CONTROL MODULE (LH) OR REAR MOUNT CAMERA AND REAR BODY CONTROL MODULE (RBCM) FOR SHORT BETWEEN CIRCUITS** • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the rear body control module (RBCM) connector. • Inspect for continuity between BSM control module (LH) terminals H and G (wiring harness side). (With BSM system) • Inspect the continuity between rear mount camera terminals G and H (wiring harness side). (With rear mount camera) • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 19.
17	**INSPECT BETWEEN REAR BODY CONTROL MODULE (RBCM) AND CONNECTOR C-23 OR C-21 FOR SHORT BETWEEN CIRCUITS** • Disconnect connector C-23 or C-21. • Inspect for continuity between BSM control module (LH) terminals H and G (wiring harness side). (With BSM system) • Inspect the continuity between rear mount camera terminals G and H (wiring harness side). (With rear mount camera) • Is there continuity?	Yes	Repair or replace the wiring harness between the rear body control module (RBCM) and connector C-23 or C-21 because the wiring harness is shorted between circuits.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-D 2.2 (R.H.D.)]

Step	Inspection		Action
18	**INSPECT BSM CONTROL MODULE (LH) OR REAR MOUNT CAMERA FOR SHORT BETWEEN CIRCUITS** • Disconnect the BSM control module (LH) connector or the rear mount camera connector. • Connect the rear body control module (RBCM) connector. • Connect connectors C-47 and C-48 • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage at DLC-2 terminals L and K the same?	Yes	• Repair or replace the wiring harness between BSM control module (LH) and rear body control module (RBCM) because the wiring harness is shorted between circuits. (With BSM system) • Repair or replace the wiring harness between the rear mount camera and rear body control module (RBCM) because the wiring harness is shorted between circuits. (With rear mount camera)
		No	Replace the BSM control module (LH) or the rear mount camera because there is a short between circuits in the BSM control module (LH) or the rear mount camera. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.) (See 09-20-68 REAR MOUNT CAMERA REMOVAL/INSTALLATION.)
19	**INSPECT REAR BODY CONTROL MODULE (RBCM) FOR SHORT BETWEEN CIRCUITS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect connectors C-47 and C-48 • Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage at DLC-2 terminals L and K. • Is the voltage at DLC-2 terminals L and K the same?	Yes	Repair or replace the wiring harness between the rear body control module (RBCM) and connectors C-47 and C-48 because the wiring harness is shorted between circuits.
		No	Replace the rear body control module (RBCM) because there is a short between circuits in the rear body control module (RBCM). (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Repair order form (i-stop)

i-stop inoperable diagnostic sheet (i-stop indicator light (green) non-illumination while driving)

Dealer name: VIN:

1. Vehicle inspection

Inspection date Date customer verified malfunction:

No	Item	Inspection result					
1	Inoperable i-stop replicated?	During replication		Not replicated			
2	DTCs (including pending code) Yes/No	DTC:					
3	Extension FFD acquired (zip file) (Can/cannot acquire)	—					
4	Verification of BATT_SOC "i-stop operation conditions 68.4% or more."	%	* Due to the possibility of recurrence when BATT_SOC is 70% or less, after inspection completion, perform normal battery charging (10 A/3 hrs) and after battery learning, deliver vehicle.				
		Measurement timing: Vehicle-in, after charging, after inspection completed					
5	Battery specific gravity measurement	+ side (1)	-2	-3	-4	-5	(6) - side
6	BATT_CUR (current) measurement during idling	A					
7	BATT_V (voltage) measurement during idling If constant 14.5 V, in refresh mode.	M-MDS V		Circuit tester V			

2. Repair order form

1) Customer's usual vehicle pattern of use

Frequency of use	Electrical load		Usual driving environment		Usual use purpose		Meters & MID display
Once/day or more Once every 2-3 days Once/week Once/2-3 weeks Once/month Other	Headlights	Used often Sometimes Does not use	City traffic jam	%	Work use	%	When i-stop does not operate, does the A/C operation priority display appear? Yes, No, Unknown,
	A/C	・AUTO ℃ ・Manual Blower step	City streets	%	Shopping	%	
			Suburbs	%	Travel	%	
			Highway	%	Other	%	
	Period of time used		Other		From ENG start to stop: Distance, time Approx. km Approx. Hrs.		
	Morning	%			Occupant number Load condition kg		
	Noon (during day)	%					
	Nighttime	%					

2) Has customer discharged the battery accidently at some time Yes/No Yes, No

3) Has initialization learning (i-stop learning) been performed on the battery in the past? Yes, No

4) If learning has been performed, record the charging method, charging time, and BATT_SOC value after battery initialization learning (i-stop learning) was completed.

Quick charging (Hrs.) Normal charging (Hrs.) BATT_SOC value (%)

5) Number of times vehicle is stopped per one drive and i-stop frequency
(Ex: One drive, vehicle stopped times, i-stop times)

No. of times vehicle stopped in one driver ( ) No. of times i-stop functions ( )

6) Are there any variations prior to the stated malfunction
Ex.) Happens when driving to work. When going to pick up the kids at kindergarten.

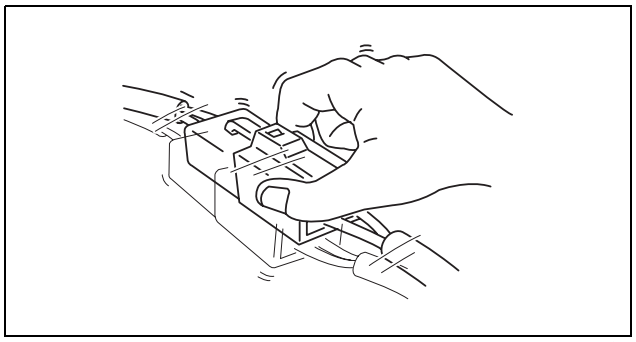
7) Verify the use conditions which consume battery power when the vehicle is mainly used.
Ex.) Kindergarten, pick-up from after-school events, how long vehicle is stopped, and the electric load at those times (AC, audio use conditions).

ac5wzw0000417

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

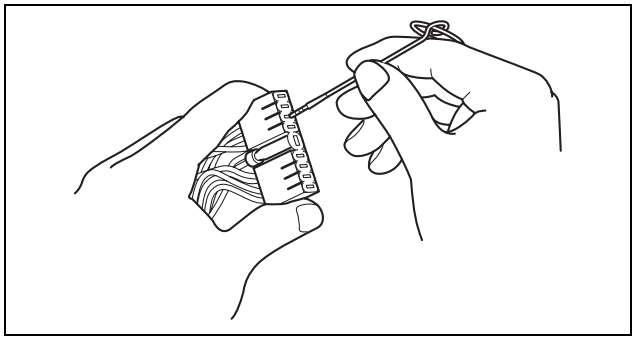
Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as PCM circuit voltage) at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



ac5wzw0000405

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

i-stop control

- The i-stop system is programmed to not function (stop or restart engine) while the bonnet is open, however, when performing servicing in the engine compartment be careful so as to prevent getting caught in a rotating part if the engine were too restart accidentally.
- When performing an asterisks (*) troubleshooting inspection, shake the applicable part, wiring harness, and connector by hand to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, inspect to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged, and repair or replace if necessary.
- Depending on the vehicle operation status and the conditions indicated in the table below, the engine may not stop or it may restart for a condition unrelated to driving operations (system is normal).

i-stop (engine-stop control) permit condition

- The conditions to stop the engine by the i-stop control are as follows:

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Purpose	Condition item	ATX	MTX
Driveability	Vehicle speed	0 km/h {0 mph}	3 km/h {2 mph} or less
	Brake pedal	Brake pedal depressed in D position or M position (except 2nd gear fixed mode) (If ABS operates during deceleration, i-stop operation is inhibited.)	Not applicable
	Brake fluid pressure	Brake fluid pressure is 1.25 MPa {12.7 kgf/cm^2, 181 psi} or more in D position or M position (except 2nd gear fixed mode) (pedal force sufficient to suppress vehicle lurch when engine is restarted)	Not applicable
	Accelerator pedal	Released (foot removed from accelerator pedal)	←
	Clutch pedal	Not applicable	30% or less (clutch pedal opening angle)
	Gear position	Not applicable	Neutral
	Vehicle conditions	Vehicle stopped in D position (After vehicle is stopped and shifted into N position, engine stops 0.6 s after operation. In addition, after vehicle is stopped in D position and if shifted into P position, engine stop condition continues by i-stop control	Not applicable
Marketability	Cabin temperature	Difference between target temperature in cabin and temperature in cabin is within a certain value (A/C cabin temperature control is performed)	←
	A/C temperature	Setting other than MAX/MIN	←
	Ambient temperature	-10—50 °C {14—122 °F}	←
	Steering speed	15 deg/sec or less	←
	Steering angle	-65—65 ° (Center) (After EPS control module learned center value)	Not applicable
	Steering torque	1.4 N·m {14 kgf·cm, 12 in·lbf} or less	←
	i-stop OFF switch	OFF	←
	Vehicle speed history	3 km/h {2 mph} or more	4 km/h {2.5 mph} or more

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Purpose	Condition item	ATX	MTX
Safety	Battery charge condition	68.4% or more (determined from current sensor signal))	←
	Battery fluid temperature	0—70 °C {32—158 °F}	←
	Battery voltage	11.2 V or more	←
	Estimated battery voltage during engine restart	7.45 or more*1	←
	Defroster switch	OFF	←
	Power brake unit vacuum	-45 kPa {-0.46 kgf/cm^2, -6.5 psi} or less 	
	Door (front, rear)	Closed	←
	Bonnet	Closed*2	←
	Liftgate	Closed	←
	Vehicle inclination angle	When level, less than ± 7%	Not applicable
	Seat belt (driver)	Fastened	←
	Push button start system	Normal	←
	System condition	i-stop related module normal	←
System restriction	Number of starter operations	Within 180,000 times	←
	Number of starter relay operations	Within 180,000 times	←
	Number of i-stop operations	Within 300,000 times	←
	ISC learning	Completed	←
	Battery condition learning setting	Completed	←
	Steering angle sensor initialization setting	Completed	Not applicable
	DSC sensor initialization	Completed	Not applicable
	Elapsed time after engine restart	Maximum 6.4 s or more (Engine stop time fluctuation by i-stop control)	Not applicable
	PCM DTC	DTC except P11A:00 and P117A:00 and P2299:00 not detected	←
Engine condition	Engine coolant temperature	55—110 °C {131—230 °F}	←
	Intake air temperature	100°C {212 °F} or less	←
	ATF temperature	20—120 °C {68—248 °F}	Not applicable
Environment condition	Altitude	**European (L.H.D. U.K.) specs.** • 1,800 m or less **Except for European (L.H.D. U.K.) specs.** • 1,500 m or less	←

*1 : If the i-stop is operated repeatedly with a high-capacity audio system or added electronic device connected to the DC-DC converter, engine stop by the i-stop control is inhibited at a faster timing than normal.
*2 : If the engine is started while the hood is open, i-stop is inhibited until the engine is stopped.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

i-stop (engine restart control) conditions

- Conditions for restarting the engine during i-stop control (engine stopped) are as follows:

Purpose	Condition item	
	ATX	MTX
Driver operation	Not applicable	Clutch pedal depression rate: 86% or more (If the clutch pedal depressed and then it is released while the engine is cranking to restart by the i-stop control, engine stop by the i-stop control continues. If the same operation is repeated several times, the engine will stall.)
	Brake pedal released → depressed while in P or N position	Not applicable
	Brake fluid pressure is 0.35 MPa {3.6 kgf/cm2, 51 psi} or less in D position or M position	Not applicable
	Accelerator pedal depressed while in D or M position	Not applicable
	Steering torque is 2.8 N·m {29 kgf·cm, 25 in·lbf} or more in D position or M position	Not applicable
	Steering angle (D or M position (except 2nd gear fixed mode)): -70° or less or 70° or more (after EPS control module learned center value)	Not applicable
	Engine start by key operation	←
	Shift operation • When changed to the M position (except 2nd gear fixed mode) • P or N position →D or M or R position	Not applicable
Marketability	A/C request	←
	A/C temperature MAX setting, MIN setting	←
	Battery charge 67.9% or less	←
	Battery charge rate is specified value or more	←
	Estimated battery voltage when engine is restarted is 7.25 V or less	←
	i-stop OFF switch on	←
	• The following conditions are met. — Seat belt (driver): Not fastened — Door or liftgate: Open	←
Safety	**Except for European (L.H.D. U.K.) specs.** • The following conditions are met while in P or N position (determined that driver is not in vehicle). — Seat belt (driver): Not fastened — Door (driver): Open	**Except for European (L.H.D. U.K.) specs.** • The following conditions are met while in neutral position (determined that driver is not in vehicle). — Seat belt (driver): Not fastened — Door (driver): Open
	Defroster switch on	←
	Power brake unit vacuum: -43 kPa {-0.44 kgf/cm^2, -6.2 psi} or more POWER BRAKE UNIT VACUUM  	←
	Vehicle speed: 1 km/h {0.6 mph} or more	Vehicle speed: 4 km/h {2.5 mph} or more
	Engine stop time by the i-stop control: 120 s or more	←

SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0]

id1103a1000300

- Verify malfunction symptoms using the following diagnostic index, then go to the appropriate troubleshooting chart.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Diagnostic Index

No.	TROUBLESHOOTING ITEM	DESCRIPTION
1	i-stop warning light (amber) illuminates	• i-stop warning light (amber) remains illuminated while engine is running.
2	i-stop warning light (amber) flashes	• i-stop function is inhibited because an i-stop control system error is detected.
3	i-stop indicator light (green) flashes	• i-stop indicator light (green) remains flashing during idling.
4	i-stop function does not operate	• i-stop function does not operate when vehicle is stopped.
5	i-stop function operates under no engine-stop conditions	• i-stop function operates even though system is turned off by pressing i-stop OFF switch. • i-stop function operates even though vehicle conditions are for non-operation. • i-stop function operates frequently while parking vehicle.
6	Engine does not restart	• The i-stop warning light (amber) illuminates and engine does not restart while the i-stop function is operating. • Engine does not restart when attempting to resume driving vehicle after stopping, and i-stop warning light (amber) is illuminated. • Engine does not restart even though restart conditions are met.
7	Limited i-stop function operation time	• Frequency of which i-stop function operates is low. • Frequent occurrence of engine restarting other than for driving vehicle from stop.
8	Ineffective operation of A/C during engine stop (i-stop system)	• A/C airflow temperature gradually increases or decreases while i-stop function is operating.
9	Acceleration malfunction	• Acceleration from i-stop is not smooth. • Suppresses (shock) when accelerating vehicle from i-stop. • Engine vibration increases when engine is restarted.
10	Vehicle moves when accelerating from standstill on slope	• Vehicle slips backwards on inclined road surface when accelerating after i-stop operates.

QUICK DIAGNOSTIC CHART [SKYACTIV-G 2.0]

id1103a1000400

X: Applied

Troubleshooting item		Starter motor malfunction (mechanical or electrical)	Starter circuit including ignition switch is open	Improper engine oil level	Low or dead battery	Charging system malfunction	Improper engine compression	Improper dipstick	Base engine malfunction	Drive plate (ATX) or flywheel (MTX) is seized	Improper tension or damaged drive belts	Improper engine coolant level	Water and anti-freeze mixture is improper	Cooling system malfunction (radiator, hoses,overflow system, thermostat, etc.)	Cooling fan system malfunction
1	i-stop warning light (amber) illuminates					X									
2	i-stop warning light (amber) flashes	X	X												
3	i-stop indicator light (green) flashes														
4	i-stop function does not operate	X	X			X									
5	i-stop function operates under no engine-stop conditions														
6	Engine does not restart	X	X			X									
7	Limited i-stop function operation time														
8	Ineffective operation of A/C during engine stop (i-stop system)														
9	Acceleration malfunction														
10	Vehicle moves when accelerating from standstill on slope														

ac5wzw0000405

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

X: Applied

Troubleshooting item		Possible factor: Engine or transaxle mounts are improperly installed	Cooling fan or condenser fan seats improper	Fuel quality	Improper engine oil viscosity	Improper valve timing	Oil leakage (internal, turbocharger, external)	Improper oil or fluid level	Coolant leakage (internal, turbocharger, external)	Electric variable valve timing system malfunction	Hydraulic variable valve timing system malfunction	Engine overheating	Air cleaner element clogged or restricted	Air leakage from intake-air system (loose tubes, cracks, gaskets breakage)	Air suction in intake-air system	Intake-air system restriction
1	i-stop warning light (amber) illuminates					X				X	X				X	
2	i-stop warning light (amber) flashes															
3	i-stop indicator light (green) flashes															
4	i-stop function does not operate															
5	i-stop function operates under no engine-stop conditions															
6	Engine does not restart														X	
7	Limited i-stop function operation time															
8	Ineffective operation of A/C during engine stop (i-stop system)															
9	Acceleration malfunction															
10	Vehicle moves when accelerating from standstill on slope															

ac5wzw0000405

X: Applied

Troubleshooting item		Possible factor: Drive-by-wire control system improper operation	Drive-by-wire control system operates with brake override system	Throttle body malfunction	Vacuum leakage (vacuum hose damage, misrouting)	Ignition coil malfunction (e.g. open, short or cracks)	Initial ignition timing misadjustment (CKP and pulse wheel misadjustment)	Spark plug malfunction	Fuel pump (low-pressure side) malfunction (mechanically or electrically)	Pressure regulator (built-into fuel pump unit at fuel tank)	Inadequate fuel pressure (high-pressure side)	Inadequate fuel pressure (low-pressure side)	Fuel line restricted or clogged
1	i-stop warning light (amber) illuminates	X											
2	i-stop warning light (amber) flashes												
3	i-stop indicator light (green) flashes												
4	i-stop function does not operate												
5	i-stop function operates under no engine-stop conditions												
6	Engine does not restart	X											
7	Limited i-stop function operation time												
8	Ineffective operation of A/C during engine stop (i-stop system)												
9	Acceleration malfunction												
10	Vehicle moves when accelerating from standstill on slope												

ac5wzw0000405

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

X: Applied

Troubleshooting item		Constant voltage supply circuit malfunction	Main relay malfunction (mechanically or electrically)	No battery power supply to PCM	Poor PCM ground or vehicle ground (open)	Electrical connector disconnection	ECT sensor or related circuit malfunction	Transaxle range sensor malfunction (ATX)	Brake switch or related circuit malfunction	A/F sensor or HO2S or related circuit malfunction	IAT sensor No.1 (integrated in MAF sensor/ IAT sensor No.1) or related circuit malfunction	Fuel pressure sensor or related circuit malfunction	MAP sensor or related circuit malfunction
	Possible factor												
1	i-stop warning light (amber) illuminates												
2	i-stop warning light (amber) flashes												
3	i-stop indicator light (green) flashes												
4	i-stop function does not operate						X				X		
5	i-stop function operates under no engine-stop conditions							X					
6	Engine does not restart							X					
7	Limited i-stop function operation time							X					
8	Ineffective operation of A/C during engine stop (i-stop system)												
9	Acceleration malfunction												
10	Vehicle moves when accelerating from standstill on slope

NO.1 i-stop WARNING LIGHT (AMBER) ILLUMINATES [SKYACTIV-G 2.0]

id1103a1000600

1	i-stop WARNING LIGHT (AMBER) ILLUMINATES
DESCRIPTION	• i-stop warning light (amber) remains illuminated while engine is running.
POSSIBLE CAUSE	**System off recognized due to false detection of i-stop OFF switch** • i-stop OFF switch malfunction — i-stop OFF switch malfunction **Instrument cluster malfunction** • i-stop warming light (amber) illumination circuit in instrument cluster disabled • CAN communication line between instrument cluster and PCM malfunction

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY DTC** • Retrieve the PCM and instrument cluster DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].) (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**DETERMINE FALSE ILLUMINATION OF i-stop WARNING LIGHT (AMBER)** • Does the i-stop operate while the i-stop warning light (amber) is illuminated?	Yes	False illumination of i-stop warning light (amber) can be considered the cause. Go to the next step.
		No	Go to Step 4.
3	**DETERMINE IF MALFUNCTION CAUSE IS INSTRUMENT CLUSTER WARNING LIGHT ILLUMINATION CIRCUIT OR ERROR SIGNAL FROM PCM** • Switch the ignition ON (engine off or on). • Access the instrument cluster PID WL+IL and illuminate and turn off the warning light in the instrument cluster using the M-MDS. (See 09-02G-38 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Does the i-stop warning light (amber) illuminate or turn off according to the M-MDS operation? (See 09-02G-38 ACTIVE COMMAND MODES TABLE [INSTRUMENT CLUSTER].)	Yes	Repeat the inspection from Step 1. • If the malfunction is not resolved, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 6.
		No	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
4	**INSPECT i-stop OFF SWITCH** • Inspect the i-stop OFF switch. (See 01-40-66 i-stop OFF SWITCH INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the cluster switch. (See 09-17-18 SWITCH PANEL REMOVAL/INSTALLATION.)
		No	Go to the next step.
5*	**DETERMINE IF MALFUNCTION CAUSE IS i-stop OFF SWITCH SIGNAL OR OTHER** • Switch the ignition to off. • Disconnect the cluster switch and instrument cluster connectors. • Inspect for continuity between cluster switch terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to the next step.
		No	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
6	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

NO.2 i-stop WARNING LIGHT (AMBER) FLASHES [SKYACTIV-G 2.0]

id1103a1000700

2	i-stop WARNING LIGHT (AMBER) FLASHES
DESCRIPTION	• i-stop function is inhibited because an i-stop control system error is detected.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

2	i-stop WARNING LIGHT (AMBER) FLASHES
POSSIBLE CAUSE	**i-stop component parts malfunction** • Detects malfunction in i-stop component part (i-stop related module detects DTC) — PCM — DC-DC converter — Current sensor — Battery malfunction (deterioration) — Generator malfunction (part, system, control malfunction) — DSC HU/CM — SAS control module — TCM (ATX) **Number of times i-stop function operates exceeds assured operation amount of components** • Number of times engine restart exceed limit • Any of following parts exceeds assured operation amount: — Starter relay — Starter

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY DTC** • Retrieve the PCM, DSC HU/CM, SAS control module and TCM DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) (See 08-02-7 DTC INSPECTION.) (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].) (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) (See 08-02-11 DTC TABLE.) (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**DETERMINE IF MALFUNCTION CAUSE IS BATTERY VOLTAGE DECREASE OR OTHER** • Start the engine and warm it up completely. • Idle the engine. • Access the BATT_SOC PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the BATT_SOC PID value **above 68 %**?	Yes	Go to Step 4.
		No	Go to the next step.
3	**INSPECT BATTERY** • Recharge the battery. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the battery. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

NO.3 i-stop INDICATOR LIGHT (GREEN) FLASHES [SKYACTIV-G 2.0]

id1103a1000800

3	i-stop INDICATOR LIGHT (GREEN) FLASHES
DESCRIPTION	• i-stop indicator light (green) remains flashing during idling.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

3	i-stop INDICATOR LIGHT (GREEN) FLASHES
POSSIBLE CAUSE	**Note** • If the brake pedal depression is insufficient, the i-stop indicator light (green) illuminates and the i-stop function operates by increasing brake pedal depression. (ATX, Except for European (L.H.D. U.K.) specs.) • If in gear while i-stop is operating, the i-stop indicator light (green) flashes continuously. (MTX) • If the driver's door is open while i-stop is operating, the i-stop warning light (green) flashes continuously. (European (L.H.D. U.K.) specs.) **i-stop function operation conditions are not set** • False detection of insufficient brake depression (fluid pressure). — Brake fluid pressure sensor (built-into DSC HU/CM) malfunction

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY DTC** • Retrieve the PCM and DSC HU/CM DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].) (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	**INSPECT BRAKE FLUID PRESSURE SENSOR** • Inspect the brake fluid pressure sensor. (See 04-11-14 BRAKE FLUID LEVEL SENSOR INSPECTION.) • Is there any malfunction?	Yes	Replace the DSC HU/CM. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Repeat the inspection from Step 1. • If the malfunction is not resolved, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
3	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

NO.4 i-stop FUNCTION DOES NOT OPERATE [SKYACTIV-G 2.0]

id1103a1000900

4	i-stop FUNCTION DOES NOT OPERATE
DESCRIPTION	• i-stop function does not operate when vehicle is stopped.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

4	i-stop FUNCTION DOES NOT OPERATE
POSSIBLE CAUSE	**False detection of conditions other than i-stop function operation.** • Falsely detects that driver does not intend to stop. — False detection of brake pedal not depressed • Brake switch No.1 malfunction • Open circuit in wiring harness between brake switch terminal D and PCM terminal 2G • Brake fluid pressure sensor (built-into DSC HU/CM) malfunction (i-stop indicator light (green) flashes) • Falsely detection of external vehicle temperature out of operation range **(–10 to 50 °C {14 to 122 °F})** — Ambient temperature sensor malfunction (sensor specific malfunction) — Short or open circuit in wiring harness between ambient temperature sensor terminal A and PCM terminal 2I — Open circuit in wiring harness between ambient temperature sensor terminal B and PCM terminal 2AJ • Climate control unit falsely detects that internal vehicle temperature is high. (vehicles with full-auto air conditioner) — Cabin temperature sensor malfunction (sensor specific or motor malfunction) — Short or open circuit in wiring harness between cabin temperature sensor terminal A and climate control unit terminal 1J — Open circuit in wiring harness between cabin temperature sensor terminal B and climate control unit terminal 1X • Falsely detects that climate control unit detects driver-side air mix door position at MAX HOT or MAX COLD (vehicles with full-auto air conditioner) — Driver-side air mix actuator malfunction — Driver-side air mix actuator position sensor malfunction — Driver-side air mix door or linkage stuck • Climate control unit falsely detects that i-stop function is operating in manual defroster mode. — Climate control unit (panel switch) malfunction • False detection of vehicle not being parked — False detection of steering wheel rotation and rotation speed • Steering angle sensor initialization malfunction • Steering angle sensor malfunction • Short or open circuit in wiring harness between steering angle sensor and start stop unit terminals 1U, 1T, 1W or 1S

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

4	i-stop FUNCTION DOES NOT OPERATE
POSSIBLE CAUSE	• False detection of vehicle in unsafe condition — False detection of open bonnet • Bonnet latch switch malfunction (stuck open) • Open circuit in wiring harness between bonnet latch switch terminal A and rear body control module (RBCM) terminal 3L — False detection of open door and liftgate • Door latch switch malfunction • Liftgate latch switch malfunction • Open circuit in wiring harness between door latch switch and rear body control module (RBCM) • Short to ground in wiring harness between liftgate latch switch and rear body control module (RBCM) — False detection of unfastened driver seat belt • Driver-side buckle switch malfunction • Short to ground in wiring harness between driver-side buckle switch terminal 4A and SAS control module terminal 2U — False detection of inclination angle (false detection of **12 % or more**) • Low-G (XY) sensor (built-into SAS control module) malfunction (In this case, the SAS control module records DTCs C0061:29 and C0062:29.) • Low-G (XY) sensor (built-into SAS control module) initialization malfunction — DC-DC converter system error (exceeds capacity of DC-DC converter output due to open or short circuit in wiring harness and after-market electrical part) — False detection of low power brake unit load • Power brake unit vacuum sensor malfunction • Short or open circuit in wiring harness between power brake unit vacuum sensor terminal C and PCM terminal 2BG • Short or open circuit in wiring harness between power brake unit vacuum sensor terminal B and PCM terminal 2Q • Short or open circuit in wiring harness between power brake unit vacuum sensor terminal A and PCM terminal 2AH • Power brake unit malfunction (air tightness malfunction) • Malfunction in vacuum hose to power brake unit (damage, bad check valve) **Falsely detects possible inability of engine to restart** • False detection of low (**55 °C {131 °F} or less**) or high (**110 °C {230 °F} or more**) engine coolant temperature — ECT sensor malfunction (sensor specific malfunction) • False detection of high intake air temperature (**100 °C {212 °F} or more**) — IAT sensor No.1 malfunction (sensor specific malfunction) • False detection of low (**less than 0 °C {32 °F}**) or high (**70 °C {158 °F} or more**) battery fluid temperature • False detection of low (**20 °C {68 °F} or less**) or high (**120 °C {248 °F} or more**) ATF temperature (ATX) **Determines possible inability of engine to restart** • Battery voltage decrease — Battery malfunction — Generator malfunction — Generator malfunction (part, system, control malfunction) — Large amount of vehicle power consumption/Large amount of back-up current • Determination of jump-start possibility — Engine start using key with bonnet opened

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY i-stop INDICATOR LIGHT (GREEN) CONDITION WHEN MALFUNCTION OCCURS** • Is the i-stop indicator light (green) flashing?	Yes	Perform the symptom troubleshooting “NO.3 i-stop INDICATOR LIGHT (GREEN) FLASHES”. (See 11-03-16 NO.3 i-stop INDICATOR LIGHT (GREEN) FLASHES [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**DETERMINE IF MALFUNCTION CAUSE IS BATTERY VOLTAGE DECREASE OR OTHER** • Start the engine and warm it up completely. • Idle the engine. • Access the BATT_SOC PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the BATT_SOC PID value **above 75 %**?	Yes	Go to the next step.
		No	Recharge the battery (6-hour normal recharge at **10 A** recharge current). (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].)
3	**INSPECT INSUFFICIENT ADVANCED KEY BATTERY POWER FOR MALFUNCTION** **Note** • The following test should be performed on the advanced keyless entry system. If not equipped, go to Step 3. • Verify the condition of the KEY indicator light (green) in the instrument cluster while the advanced key is in the cabin. • Is the KEY indicator light (green) flashing?	Yes	Replace the advanced key battery.
		No	Go to the next step.
4	**INSPECT EFFECT OF NON-GENUINE ELECTRICAL ACCESSORY FOR CAUSE OF MALFUNCTION** • Remove any non-genuine electrical accessory. • Verify the malfunction symptom. • Does the i-stop function operate when the vehicle is stopped?	Yes	The system is normal. • Explain to the customer that the i-stop function does not operate due to the effect of the non-genuine electrical accessory installed.
		No	Go to the next step.
5	**VERIFY DTC** • Retrieve the PCM, TCM, front body control module (FBCM), rear body control module (RBCM), DSC HU/CM, SAS control module, instrument cluster and climate control unit DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) (See 08-02-7 DTC INSPECTION.) (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) (See 07-02-6 DTC DISPLAY [FULL-AUTO AIR CONDITIONER].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].) (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].) (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].) (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].) (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) (See 08-02-11 DTC TABLE.) (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].) (See 07-02-7 DTC TABLE [FULL-AUTO AIR CONDITIONER].)
		No	Go to the next step.
6	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the battery. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
7	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
8	**DETERMINE IF MALFUNCTION CAUSE IS APP SENSOR SIGNAL OR OTHER** • Start the engine and drive the vehicle for **5 min**. • Idle the engine. • Access the following PCM and TCM PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 05-02A-94 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FW6A-EL, FW6AX-EL].) **PCM PIDs:** — BATT_TEMP (**0—70 °C {32—158 °F}**) — ECT (**55—110 °C {131—230 °F}**) — IAT (**less than 100 °C {212 °F}**) **TCM PID: (ATX)** — TFT **(20—120 °C {68—248 °F})** • Are the PID values within the i-stop operation range?	Yes	Inspect the related-PID sensor which is out of range and the wiring harness. • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
9	**DETERMINE IF MALFUNCTION CAUSE IS AMBIENT TEMPERATURE SENSOR SIGNAL OR OTHER** • Switch the ignition ON (engine off or on). • Compare the ambient temperature sensor on the LCD with the actual ambient temperature. • Does the ambient temperature on the LCD correspond to the actual ambient temperature?	Yes	ATX: • Go to Step 12. MTX: • Go to Step 13.
		No	Go to the next step.
10	**INSPECT AMBIENT TEMPERATURE SENSOR** • Inspect the ambient temperature sensor. (See 07-40A-23 AMBIENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the ambient temperature sensor. (See 07-40A-22 AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Go to the next step.
11	**INSPECT AMBIENT TEMPERATURE SENSOR CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Inspect for open or short circuit between the following terminals (wiring harness-side): — Ambient temperature sensor terminal A—PCM terminal 2I — Ambient temperature sensor terminal B—PCM terminal 2AJ • Is there any malfunction?	Yes	Repair or replace the suspected wiring harness.
		No	Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
12	**VERIFY IF MALFUNCTION CAUSE IS STEERING ANGLE SENSOR INITIALIZATION NOT PERFORMED** • Drive the vehicle and verify the steering learning. • Can learning be completed?	Yes	Malfunction caused by the steering angle sensor initialization malfunction. • Investigate when there is a malfunction in steering angle learning.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
13*	**DETERMINE IF MALFUNCTION CAUSE IS DOOR LATCH SWITCH AND LIFTGATE LATCH SWITCH SIGNAL OR OTHER** • Switch the ignition ON (engine off or on). • Access the following rear body control module (RBCM) PIDs using the M-MDS: (See 09-02L-93 PID/DATA MONITOR INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) — TRUNK — DOOR_D — DOOR_ALL • Are the PID values congruent with the opening and closing of the doors and liftgate? (See 09-02L-94 PID/DATA MONITOR TABLE [REAR BODY CONTROL MODULE (RBCM)].)	Yes	Go to Step 15.
		No	Go to the next step.
14	**INSPECT DOOR LATCH SWITCH AND LIFTGATE LATCH SWITCH** • Inspect the PID-related switch in which the malfunction occurred in Step 13. (See 09-14-50 LIFTGATE LATCH SWITCH INSPECTION.) (See 09-14-40 FRONT DOOR LATCH SWITCH INSPECTION.) (See 09-14-46 REAR DOOR LATCH SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the applicable switch. (See 09-14-48 LIFTGATE LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.) (See 09-14-35 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.) (See 09-14-42 REAR DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
		No	Inspect the following wiring harness in which the malfunction occurred in Step 13: • Open circuit in wiring harness between door latch switch and rear body control module (RBCM) • Short to ground in wiring harness between liftgate latch switch and rear body control module (RBCM) — If there is any malfunction: • Repair or replace the suspected wiring harness.
15	**DETERMINE IF MALFUNCTION CAUSE IS DRIVER-SIDE BUCKLE SWITCH SIGNAL OR OTHER** • Switch the ignition ON (engine off or on). • Access the SAS control module PID SEAT_B_D using the M-MDS. (See 08-02-136 PID/DATA MONITOR INSPECTION.) • Is the SEAT_B_D PID value congruent with the seat belt condition? (See 08-02-136 PID/DATA MONITOR TABLE.)	Yes	Vehicles with manual air conditioner: • Go to Step 19. Vehicles with full-auto air conditioner: • Go to Step 17.
		No	Go to the next step.
16	**INSPECT DRIVER-SIDE BUCKLE SWITCH** • Inspect the driver-side buckle switch. (See 08-11-11 BUCKLE SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the driver-side buckle switch. (See 08-11-9 FRONT BUCKLE REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between driver-side buckle switch terminal 4A and SAS control module terminal 2U for a possible short to ground.
17	**DETERMINE IF MALFUNCTION CAUSE IS CABIN TEMPERATURE SENSOR SIGNAL OR OTHER** • Access the climate control unit PID INC_TMP_SEN using the M-MDS. (See 07-02-38 PID/DATA MONITOR DISPLAY [FULL-AUTO AIR CONDITIONER].) • Does the INC_TMP_SEN PID value indicate the actual cabin temperature of the vehicle?	Yes	Go to Step 19.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
18	**INSPECT CABIN TEMPERATURE SENSOR** • Inspect the cabin temperature sensor. (See 07-40A-26 CABIN TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the cabin temperature sensor. (See 07-40A-23 CABIN TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Inspect the wiring harness between the following terminals for a short or open circuit: • Cabin temperature sensor terminal A—Climate control unit terminal 1J • Cabin temperature sensor terminal B—Climate control unit terminal 1X — If there is any malfunction: • Repair or replace the suspected wiring harness.
19*	**DETERMINE IF MALFUNCTION CAUSE IS BONNET LATCH SWITCH SIGNAL OR OTHER** • Switch the ignition ON (engine off or on). • Access the rear body control module (RBCM) PID HOOD_SW using the M-MDS. (See 09-02L-93 PID/DATA MONITOR INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is the HOOD_SW PID value normal? (See 09-02L-94 PID/DATA MONITOR TABLE [REAR BODY CONTROL MODULE (RBCM)].)	Yes	Go to Step 21.
		No	Go to the next step.
20	**INSPECT BONNET LATCH SWITCH** • Inspect the bonnet latch switch. (See 09-14-20 BONNET LATCH SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the bonnet latch switch. (See 09-14-16 BONNET LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between bonnet latch switch terminal A and rear body control module (RBCM) terminal 3L for a possible open circuit.
21	**DETERMINE IF MALFUNCTION CAUSE IS STEERING ANGLE SENSOR SIGNAL OR OTHER** • Start the engine and it at idle. • Access the EPS control module PID STR_ANG using the M-MDS. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the PID value normal?	Yes	Go to Step 23.
		No	Go to the next step.
22	**INSPECT STEERING ANGLE SENSOR** • Inspect the steering angle sensor. (See 09-18-33 STEERING ANGLE SENSOR INSPECTION.) • Is there any malfunction?	Yes	Replace the steering angle sensor. (See 09-18-33 STEERING ANGLE SENSOR REMOVAL/INSTALLATION.)
		No	Inspect the wiring harness between the following terminals for a short or open circuit: • Steering angle sensor terminal A—Start stop unit terminal 1U • Steering angle sensor terminal B—Start stop unit terminal 1T • Steering angle sensor terminal C—Start stop unit terminal 1W • Steering angle sensor terminal D—Start stop unit terminal 1S — If there is any malfunction: • Repair or replace the suspected wiring harness.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
23	**DETERMINE IF MALFUNCTION CAUSED BY BRAKE OPERATION SIGNAL ERROR** • Switch the ignition ON (engine off or on). • Access the PCM PID BOO using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Does the BOO PID value change according to the brake pedal operation? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to Step 25.
		No	Go to the next step.
24	**INSPECT BRAKE SWITCH** • Inspect the brake switch. (See 04-11-11 BRAKE SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the brake switch. (See 04-11-8 BRAKE PEDAL REMOVAL/INSTALLATION [L.H.D.].) (See 04-11-9 BRAKE PEDAL REMOVAL/INSTALLATION [R.H.D.].)
		No	Open circuit in wiring harness between brake switch terminal D and PCM terminal 2G. • If there is any malfunction: — Repair or replace the suspected wiring harness.
25	**DETERMINE IF MALFUNCTION CAUSE IS POWER BRAKE UNIT VACUUM SENSOR SIGNAL OR OTHER** • Start the engine and run it is idling. • Access the PCM PID BBP using the M-MDS with the brake pedal held depressed while the i-stop function is operating. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Does the BBP PID value remain **less than –43 kPa {–0.44 kgf/cm^2, –6.2 psi}**?	Yes	Vehicles with manual air conditioner: • Go to Step 31. Vehicles with full-auto air conditioner: • Go to Step 29.
		No	Go to the next step.
26	**INSPECT POWER BRAKE UNIT VACUUM SENSOR FOR AIR TIGHTNESS MALFUNCTION** • Perform the vacuum function inspection for the power brake unit and the vacuum loss inspection. (See 04-11-14 POWER BRAKE UNIT INSPECTION.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
27	**INSPECT POWER BRAKE UNIT VACUUM SENSOR** • Inspect the power brake unit vacuum sensor. (See 04-11-14 POWER BRAKE UNIT INSPECTION.) • Is there any malfunction?	Yes	Replace the power brake unit vacuum sensor. (See 01-40-68 POWER BRAKE UNIT VACUUM SENSOR INSPECTION [SKYACTIV-G 2.0].)
		No	Go to the next step.
28	**INSPECT POWER BRAKE UNIT VACUUM SENSOR CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Inspect for open or short circuit between the following terminals (wiring harness-side): — Power brake unit vacuum sensor terminal C—PCM terminal 2BG — Power brake unit vacuum sensor terminal B—PCM terminal 2Q — Power brake unit vacuum sensor terminal A—PCM terminal 2AH • Is there any malfunction?	Yes	Repair or replace the suspected wiring harness.
		No	Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
29	**DETERMINE IF MALFUNCTION CAUSE IS DRIVER-SIDE AIR MIX ACTUATOR SIGNAL OR OTHER** • Measure the voltage at the climate control unit terminal 1N (wiring harness-side) when the driver-side temperature setting is MAX HOT and MAX COLD. • Is the voltage normal? (See 07-40A-33 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].)	Yes	Repeat the inspection from Step 1. • If the malfunction is not resolved, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 31.
		No	Go to the next step.
30	**INSPECT DRIVER-SIDE AIR MIX ACTUATOR** • Inspect the driver-side air mix actuator. (See 07-40A-9 AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the driver-side air mix actuator. (See 07-40A-7 AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Inspect the air mix actuator and linkage for sticking. (See 07-11-14 A/C UNIT DISASSEMBLY/ASSEMBLY.) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results.
31	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

NO.5 i-stop FUNCTION OPERATES UNDER NO ENGINE-STOP CONDITIONS [SKYACTIV-G 2.0]

id1103a1001000

5	i-stop FUNCTION OPERATES UNDER NO ENGINE-STOP CONDITIONS
DESCRIPTION	• i-stop function operates even though system is turned off by pressing i-stop OFF switch. • i-stop function operates even though vehicle conditions are for non-operation. • i-stop function operates frequently while parking vehicle.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

5	i-stop FUNCTION OPERATES UNDER NO ENGINE-STOP CONDITIONS
POSSIBLE CAUSE	**i-stop warning light (amber) false illumination** • i-stop warning light (amber) illumination circuit malfunction in instrument cluster • CAN communication line between instrument cluster and PCM malfunction **False detection of i-stop function operation conditions** • False detection of external vehicle temperature within operable range (**–10 to 50 °C {14 to 122 °F}**) — Ambient temperature sensor malfunction (sensor specific malfunction) — Short or open circuit in wiring harness between ambient temperature sensor terminal A and PCM terminal 2I — Open circuit in wiring harness between ambient temperature sensor terminal B and PCM terminal 2AJ • Climate control unit falsely detects that internal vehicle temperature is within operation range. (vehicles with full-auto air conditioner) — Cabin temperature sensor malfunction (sensor specific or motor malfunction) — Short or open circuit in wiring harness between cabin temperature sensor terminal A and climate control unit terminal 1J — Open circuit in wiring harness between cabin temperature sensor terminal B and climate control unit terminal 1X • Falsely detects that climate control unit detects that driver-side air mix door is not in MAX HOT or MAX COLD position even though driver-side air mix door is in MAX HOT or MAX COLD position (vehicles with full-auto air conditioner) — Driver-side air mix actuator malfunction — Driver-side air mix actuator position sensor malfunction — Driver-side air mix door or linkage stuck • False detection of vehicle not being parked — False detection of steering wheel rotation speed • Steering angle sensor initialization malfunction • Steering angle sensor malfunction • Short or open circuit in wiring harness between steering angle sensor and start stop unit terminals 1U, 1T, 1W or 1S • Falsely detects that vehicle is under safety condition — False detection of closed bonnet • Bonnet latch switch malfunction (stuck closed) • Short to ground in wiring harness between bonnet latch switch terminal A and rear body control module (RBCM) terminal 3L — False detection of closed door, liftgate • Door latch switch malfunction • Liftgate latch switch malfunction • Short to ground in wiring harness between door latch switch and rear body control module (RBCM) • Open circuit in wiring harness between liftgate latch switch and rear body control module (RBCM) — False detection of fastened driver seat belt • Driver-side buckle switch malfunction • Open circuit in wiring harness between driver-side buckle switch terminal 4A and SAS control module terminal 2U — False detection of inclination angle (false detection of **12 % or less**) • Low-G (XY) sensor (built-into SAS control module) malfunction (In this case, the SAS control module records DTCs C0061:29 and C0062:29.) • Low-G (XY) sensor (built-into SAS control module) initialization malfunction — False detection of low power brake unit load • Power brake unit vacuum sensor malfunction • Short or open circuit in wiring harness between power brake unit vacuum sensor terminal C and PCM terminal 2BG • Short or open circuit in wiring harness between power brake unit vacuum sensor terminal B and PCM terminal 2Q • Short or open circuit in wiring harness between power brake unit vacuum sensor terminal A and PCM terminal 2AH

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY DTC** • Retrieve the PCM, TCM, front body control module (FBCM), rear body control module (RBCM), DSC HU/CM, SAS control module, instrument cluster and climate control unit DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) (See 08-02-7 DTC INSPECTION.) (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) (See 07-02-6 DTC DISPLAY [FULL-AUTO AIR CONDITIONER].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].) (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].) (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].) (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].) (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) (See 08-02-11 DTC TABLE.) (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].) (See 07-02-7 DTC TABLE [FULL-AUTO AIR CONDITIONER].)
		No	Go to the next step.
2*	**DETERMINE IF MALFUNCTION CAUSE IS AMBIENT TEMPERATURE SENSOR SIGNAL OR OTHER** • Switch the ignition ON (engine off or on). • Compare the ambient temperature sensor on the LCD with the actual ambient temperature. • Does the ambient temperature on the LCD correspond to the actual ambient temperature?	Yes	Go to Step 4.
		No	Go to the next step.
3	**INSPECT AMBIENT TEMPERATURE SENSOR** • Inspect the ambient temperature sensor. (See 07-40A-23 AMBIENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the ambient temperature sensor. (See 07-40A-22 AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Inspect the following: • Short or open circuit in wiring harness between ambient temperature sensor terminal A and PCM terminal 2I • Open circuit in wiring harness between ambient temperature sensor terminal B and PCM terminal 2AJ — If there is any malfunction: • Repair or replace the suspected wiring harness.
4*	**DETERMINE IF MALFUNCTION CAUSE IS DOOR LATCH SWITCH AND LIFTGATE LATCH SWITCH SIGNAL OR OTHER** • Switch the ignition ON (engine off or on). • Access the following rear body control module (RBCM) PIDs using the M-MDS: (See 09-02L-93 PID/DATA MONITOR INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) — TRUNK — DOOR_D — DOOR_ALL • Are the PID values congruent with the opening and closing of the doors and liftgate? (See 09-02L-94 PID/DATA MONITOR TABLE [REAR BODY CONTROL MODULE (RBCM)].)	Yes	Go to Step 6.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
5	**INSPECT DOOR LATCH SWITCH AND LIFTGATE LATCH SWITCH** • Inspect the PID-related switch in which the malfunction occurred in Step 4. (See 09-14-50 LIFTGATE LATCH SWITCH INSPECTION.) (See 09-14-40 FRONT DOOR LATCH SWITCH INSPECTION.) (See 09-14-46 REAR DOOR LATCH SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the applicable switch. (See 09-14-48 LIFTGATE LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.) (See 09-14-35 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.) (See 09-14-42 REAR DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
		No	Inspect the following in which the malfunction occurred in Step 4: • Short to ground in wiring harness between door latch switch and rear body control module (RBCM) • Open circuit in wiring harness between liftgate latch switch and rear body control module (RBCM) — If there is any malfunction: • Repair or replace the suspected wiring harness.
6*	**DETERMINE IF MALFUNCTION CAUSE IS DRIVER-SIDE BUCKLE SWITCH SIGNAL OR OTHER** • Switch the ignition ON (engine off or on). • Access the SAS control module PID SEAT_B_D using the M-MDS. (See 08-02-136 PID/DATA MONITOR INSPECTION.) • Is the SEAT_B_D PID value congruent with the seat belt condition? (See 08-02-136 PID/DATA MONITOR TABLE.)	Yes	Vehicles with manual air conditioner: • Go to Step 10. Vehicles with full-auto air conditioner: • Go to Step 8.
		No	Go to the next step.
7	**INSPECT DRIVER-SIDE BUCKLE SWITCH** • Inspect the driver-side buckle switch. (See 08-11-11 BUCKLE SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the driver-side buckle switch. (See 08-11-9 FRONT BUCKLE REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between driver-side buckle switch terminal 4A and SAS control module terminal 2U for a possible open circuit.
8	**DETERMINE IF MALFUNCTION CAUSE IS CABIN TEMPERATURE SENSOR SIGNAL OR OTHER** • Access the climate control unit PID INC_TMP_SEN using the M-MDS. (See 07-02-38 PID/DATA MONITOR DISPLAY [FULL-AUTO AIR CONDITIONER].) • Does the INC_TMP_SEN PID value indicate the actual cabin temperature of the vehicle?	Yes	Go to Step 10.
		No	Go to the next step.
9	**INSPECT CABIN TEMPERATURE SENSOR** • Inspect the cabin temperature sensor. (See 07-40A-26 CABIN TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the cabin temperature sensor. (See 07-40A-23 CABIN TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Inspect the wiring harness between the following terminals for a short or open circuit: • Cabin temperature sensor terminal A—Climate control unit terminal 1J • Cabin temperature sensor terminal B—Climate control unit terminal 1X — If there is any malfunction: • Repair or replace the suspected wiring harness.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
10*	**DETERMINE IF MALFUNCTION CAUSE IS BONNET LATCH SWITCH SIGNAL OR OTHER** • Switch the ignition ON (engine off or on). • Access the rear body control module (RBCM) PID HOOD_SW using the M-MDS. (See 09-02L-93 PID/DATA MONITOR INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is the HOOD_SW PID value normal? (See 09-02L-94 PID/DATA MONITOR TABLE [REAR BODY CONTROL MODULE (RBCM)].)	Yes	Go to Step 12.
		No	Go to the next step.
11	**INSPECT BONNET LATCH SWITCH** • Inspect the bonnet latch switch. (See 09-14-20 BONNET LATCH SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the bonnet latch switch. (See 09-14-16 BONNET LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between bonnet latch switch terminal A and rear body control module (RBCM) terminal 3L for a possible short to ground.
12	**DETERMINE IF MALFUNCTION CAUSE IS STEERING ANGLE SENSOR SIGNAL OR OTHER** • Switch the ignition ON (engine off or on). • Access the EPS control module PID STR_ANG using the M-MDS. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the PID value normal?	Yes	Go to Step 14.
		No	Go to the next step.
13*	**INSPECT STEERING ANGLE SENSOR** • Inspect the steering angle sensor. (See 09-18-33 STEERING ANGLE SENSOR INSPECTION.) • Is there any malfunction?	Yes	Replace the steering angle sensor. (See 09-18-33 STEERING ANGLE SENSOR REMOVAL/INSTALLATION.)
		No	Inspect the wiring harness between the following terminals for a short or open circuit: • Steering angle sensor terminal A—Start stop unit terminal 1U • Steering angle sensor terminal B—Start stop unit terminal 1T • Steering angle sensor terminal C—Start stop unit terminal 1W • Steering angle sensor terminal D—Start stop unit terminal 1S — If there is any malfunction: • Repair or replace the suspected wiring harness.
14	**DETERMINE IF MALFUNCTION CAUSE IS POWER BRAKE UNIT VACUUM SENSOR SIGNAL OR OTHER** • Turn off the i-stop system with i-stop OFF switch. • Start the engine and run it is idling. • Switch the ignition to off. • Switch the ignition ON (engine off). • Access the PCM PID BBP using the M-MDS while the brake pedal has been depressed several times. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Does the monitor value decrease every time the brake pedal is depressed?	Yes	Vehicles with manual air conditioner: • Go to Step 18. Vehicles with full-auto air conditioner: • Go to Step 16.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
15	**INSPECT POWER BRAKE UNIT VACUUM SENSOR** • Inspect the power brake unit vacuum sensor. (See 04-11-14 POWER BRAKE UNIT INSPECTION.) • Is there any malfunction?	Yes	Replace the power brake unit vacuum sensor. (See 01-40-68 POWER BRAKE UNIT VACUUM SENSOR INSPECTION [SKYACTIV-G 2.0].)
		No	Inspect the wiring harness between the following terminals for a short or open circuit: • Power brake unit vacuum sensor terminal C—PCM terminal 2BG • Power brake unit vacuum sensor terminal B—PCM terminal 2Q • Power brake unit vacuum sensor terminal A—PCM terminal 2AH — If there is any malfunction: • Repair or replace the suspected wiring harness. — If there is no malfunction: • Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
16	**DETERMINE IF MALFUNCTION CAUSE IS DRIVER-SIDE AIR MIX ACTUATOR SIGNAL OR OTHER** • Measure the voltage at the climate control unit terminal 1N (wiring harness-side) when the driver-side temperature setting is MAX HOT and MAX COLD. • Is the voltage normal? (See 07-40A-33 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].)	Yes	Repeat the inspection from Step 1. • If the malfunction is not resolved, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 18.
		No	Go to the next step.
17	**INSPECT DRIVER-SIDE AIR MIX ACTUATOR** • Inspect the driver-side air mix actuator. (See 07-40A-9 AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the driver-side air mix actuator. (See 07-40A-7 AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Inspect the air mix actuator and linkage for sticking. (See 07-11-14 A/C UNIT DISASSEMBLY/ASSEMBLY.) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results.
18	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

NO.6 ENGINE DOES NOT RESTART [SKYACTIV-G 2.0]

id1103a1001100

6	ENGINE DOES NOT RESTART
DESCRIPTION	• The i-stop warning light (amber) illuminates and engine does not restart while the i-stop function is operating. • Engine does not restart when attempting to resume driving vehicle after stopping, and i-stop warning light (amber) is illuminated. • Engine does not restart even though restart conditions are met.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

6	ENGINE DOES NOT RESTART
POSSIBLE CAUSE	**False detection of engine restart restriction conditions during engine stop** • False detection of vehicle in unsafe condition while i-stop function is operating — False detection of open bonnet (engine stalls and i-stop warning light (amber) illuminates) • Bonnet latch switch malfunction • Open circuit in wiring harness between bonnet latch switch terminal A and rear body control module (RBCM) terminal 3L — False detection of open driver's door (when driver's seat belt is unfastened, engine stalls and i-stop warning light (amber) illuminates) • Front door latch switch (driver's side) malfunction • Open circuit in wiring harness between front door latch switch (driver's side) and rear body control module (RBCM) — False detection of unfastened driver seat belt (when driver's door is opened, engine stalls and i-stop warning light (amber) illuminates) • Driver-side buckle switch malfunction • Short to ground in wiring harness between driver-side buckle switch terminal 4A and SAS control module terminal 2U **Engine does not crank when engine is restarted (i-stop warning light (amber) illuminates)** • Engine starting system malfunction **Cannot recognize signal for conditions permitting engine restart** • False detection of i-stop operation not switched OFF even though switched OFF — i-stop OFF switch malfunction • False detection of brake pedal non-operation even though operated — Brake fluid pressure sensor (built-into DSC HU/CM) malfunction • Falsely detects that climate control unit detects driver-side air mix door position at MAX HOT or MAX COLD (vehicles with full-auto air conditioner) — Driver-side air mix actuator malfunction — Driver-side air mix actuator position sensor malfunction — Driver-side air mix door link stuck • False detection of assured power brake unit vacuum (assist force) even though vacuum decreases — Power brake unit vacuum sensor malfunction — Short or open circuit in wiring harness between the following terminals: • Power brake unit vacuum sensor terminal C—PCM terminal 2BG • Power brake unit vacuum sensor terminal B—PCM terminal 2Q • Power brake unit vacuum sensor terminal A—PCM terminal 2AH • Cannot recognize steering wheel angle and speed even though steering wheel is turned. (ATX, D or M position) — Steering angle sensor malfunction — Short or open circuit in wiring harness between steering angle sensor and start stop unit terminals 1U, 1T, 1W or 1S **Engine system malfunction (engine does not start even though cranking for 3 s or more when engine is restarted) (i-stop warning light (amber) illuminates)** • Piston-stop position malfunction while i-stop function is operating — CKP sensor malfunction — Throttle value operation malfunction (drive-by-wire control malfunction) — Intake-air system related malfunction (air suction, vacuum hose breakage) — Purge control malfunction • Mechanical (engine) malfunction — Valve timing malfunction — Improper operation of electric variable valve timing control system (PCM DTC is stored.) — Improper operation of hydraulic variable valve timing control system

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY DTC** • Retrieve the PCM, TCM, front body control module (FBCM), rear body control module (RBCM) and climate control unit DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) (See 07-02-6 DTC DISPLAY [FULL-AUTO AIR CONDITIONER].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].) (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].) (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].) (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].) (See 07-02-7 DTC TABLE [FULL-AUTO AIR CONDITIONER].)
		No	Go to the next step.
2	**VERIFY i-stop WARNING LIGHT (AMBER) CONDITION** • Does the i-stop warning light (amber) illuminate?	Yes	Go to Step 12.
		No	Go to the next step.
3	**DETERMINE IF MALFUNCTION CAUSE IS i-stop OFF SWITCH SIGNAL OR OTHER** • Switch the ignition to off. • Disconnect the instrument cluster connector. • Inspect for continuity between instrument cluster terminal V and body ground when the i-stop OFF switch is pressed. • Is there continuity?	Yes	Go to Step 5.
		No	Go to the next step.
4	**INSPECT i-stop OFF SWITCH** • Inspect the i-stop OFF switch. (See 01-40-66 i-stop OFF SWITCH INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the cluster switch. (See 09-17-18 SWITCH PANEL REMOVAL/ INSTALLATION.)
		No	Inspect the wiring harness between the following terminals for open circuit: • Cluster switch terminal B—Instrument cluster terminal V • Cluster switch terminal C—Instrument cluster terminal T — If there is any malfunction: • Repair or replace the suspected wiring harness.
5	**DETERMINE IF MALFUNCTION CAUSE IS STEERING ANGLE SENSOR SIGNAL OR OTHER** • Start the engine and it at idle. • Access the EPS control module PID STR_ANG using the M-MDS. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the PID value normal?	Yes	Go to Step 7.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
6	**INSPECT STEERING ANGLE SENSOR** • Inspect the steering angle sensor. (See 09-18-33 STEERING ANGLE SENSOR INSPECTION.) • Is there any malfunction?	Yes	Replace the steering angle sensor. (See 09-18-33 STEERING ANGLE SENSOR REMOVAL/INSTALLATION.)
		No	Inspect the wiring harness between the following terminals for a short or open circuit: • Steering angle sensor terminal A—Start stop unit terminal 1U • Steering angle sensor terminal B—Start stop unit terminal 1T • Steering angle sensor terminal C—Start stop unit terminal 1W • Steering angle sensor terminal D—Start stop unit terminal 1S — If there is any malfunction: • Repair or replace the suspected wiring harness.
7	**INSPECT BRAKE FLUID PRESSURE SENSOR** • Inspect the brake fluid pressure sensor. (See 04-15-14 BRAKE FLUID PRESSURE SENSOR INSPECTION.) • Is there any malfunction?	Yes	Replace the DSC HU/CM. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**DETERMINE IF MALFUNCTION CAUSE IS DRIVER-SIDE AIR MIX ACTUATOR SIGNAL OR OTHER** • Measure the voltage at the climate control unit terminal 1N (wiring harness-side) when the driver-side temperature setting is MAX HOT and MAX COLD. • Is the voltage normal? (See 07-40A-33 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].)	Yes	Go to Step 10.
		No	Go to the next step.
9	**INSPECT DRIVER-SIDE AIR MIX ACTUATOR** • Inspect the driver-side air mix actuator. (See 07-40A-9 AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the driver-side air mix actuator. (See 07-40A-7 AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Inspect the air mix actuator and linkage for sticking. (See 07-11-14 A/C UNIT DISASSEMBLY/ASSEMBLY.) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results.
10	**DETERMINE IF MALFUNCTION CAUSE IS POWER BRAKE UNIT VACUUM SENSOR SIGNAL OR OTHER** • Turn off the i-stop system with i-stop OFF switch. • Start the engine and run it is idling. • Stop the engine. • Switch the ignition ON (engine off). • Access the PCM PID BBP using the M-MDS while the brake pedal has been depressed several times. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Does the monitor value decrease every time the brake pedal is depressed?	Yes	Repeat the inspection from Step 1. • If the malfunction is not resolved, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 23.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
11	**INSPECT POWER BRAKE UNIT VACUUM SENSOR** • Inspect the power brake unit vacuum sensor. (See 04-11-14 POWER BRAKE UNIT INSPECTION.) • Is there any malfunction?	Yes	Replace the power brake unit vacuum sensor. (See 01-40-68 POWER BRAKE UNIT VACUUM SENSOR INSPECTION [SKYACTIV-G 2.0].)
		No	Inspect the wiring harness between the following terminals for a short or open circuit: • Power brake unit vacuum sensor terminal C—PCM terminal 2BG • Power brake unit vacuum sensor terminal B—PCM terminal 2Q • Power brake unit vacuum sensor terminal A—PCM terminal 2AH — If there is any malfunction: • Repair or replace the suspected wiring harness. — If there is no malfunction: • Replace the PCM. (See 01-40-10 PCM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
12	**VERIFY IF ENGINE STALLS AFTER CRANKING DURING ENGINE RESTART** • Does the engine restart by i-stop engine start?	Yes	Go to Step 19.
		No	Go to the next step.
13	**DETERMINE IF MALFUNCTION CAUSE IS FRONT DOOR LATCH SWITCH (DRIVER'S SIDE) SIGNAL OR OTHER** • Switch the ignition ON (engine off or on). • Access the rear body control module (RBCM) PID DOOR_D using the M-MDS. (See 09-02L-93 PID/DATA MONITOR INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Are the DOOR_D PID values congruent with the opening and closing of the driver's door? (See 09-02L-94 PID/DATA MONITOR TABLE [REAR BODY CONTROL MODULE (RBCM)].)	Yes	Go to Step 15.
		No	Go to the next step.
14	**INSPECT FRONT DOOR LATCH SWITCH (DRIVER'S SIDE)** • Inspect the front door latch switch (driver's side). (See 09-14-40 FRONT DOOR LATCH SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the front door latch and lock actuator (driver's side). (See 09-14-35 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between front door latch switch (driver's side) and rear body control module (RBCM) for a possible open circuit.
15	**DETERMINE IF MALFUNCTION CAUSE IS DRIVER-SIDE BUCKLE SWITCH SIGNAL OR OTHER** • Switch the ignition ON (engine off or on). • Access the SAS control module PID SEAT_B_D using the M-MDS. (See 08-02-136 PID/DATA MONITOR INSPECTION.) • Is the SEAT_B_D PID value congruent with the seat belt condition? (See 08-02-136 PID/DATA MONITOR TABLE.)	Yes	Go to Step 17.
		No	Go to the next step.
16	**INSPECT DRIVER-SIDE BUCKLE SWITCH** • Inspect the driver-side buckle switch. (See 08-11-11 BUCKLE SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the driver-side buckle switch. (See 08-11-9 FRONT BUCKLE REMOVAL/ INSTALLATION.)
		No	Repair or replace the wiring harness between driver-side buckle switch terminal 4A and SAS control module terminal 2U for a possible short to ground.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
17	**DETERMINE IF MALFUNCTION CAUSE IS BONNET LATCH SWITCH SIGNAL OR OTHER** • Switch the ignition ON (engine off). • Access the rear body control module (RBCM) PID HOOD_SW using the M-MDS. (See 09-02L-93 PID/DATA MONITOR INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Is the HOOD_SW PID value normal? (See 09-02L-94 PID/DATA MONITOR TABLE [REAR BODY CONTROL MODULE (RBCM)].)	Yes	Repeat the inspection from Step 1. • If the malfunction is not resolved, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 23.
		No	Go to the next step.
18	**INSPECT BONNET LATCH SWITCH** • Inspect the bonnet latch switch. (See 09-14-20 BONNET LATCH SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the bonnet latch switch. (See 09-14-16 BONNET LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between bonnet latch switch terminal A and rear body control module (RBCM) terminal 3L for a possible open circuit.
19	**DETERMINE IF MALFUNCTION IS CAUSED BY ROUGH IDLING OR A PISTON-STOP POSITION CONTROL MALFUNCTION** • Start the engine and warm it up completely. • Verify the idling condition. • Is the engine idling rough?	Yes	Inspect the following: • Air suction into intake-air system • Vacuum hose leakage • Purge system • Electric variable valve timing system • Hydraulic variable valve timing system — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
20	**INSPECT CKP SENSOR SIGNAL WAVE** • Start the engine and idle it. • Verify the PCM terminal 1AD output signal wave pattern using an oscilloscope. (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].) • Is the output wave pattern normal?	Yes	Go to Step 22.
		No	Go to the next step.
21	**INSPECT CKP SENSOR PULSE WHEEL** • Visually inspect the CKP sensor pulse wheel. • Are there any cracks or bending in the pulse wheel?	Yes	Replace the crankshaft pulley. (See 01-40-59 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Inspect the wiring harness between the following terminals: • CKP sensor terminal A—PCM terminal 1BN • CKP sensor terminal C—PCM terminal 1AD • CKP sensor terminal B—PCM terminal 1AH — If there is any malfunction: • Repair or replace the suspected wiring harness. — If there is no malfunction: • Replace the CKP sensor. (See 01-40-59 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
22	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the Drive-by-wire Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is the drive-by-wire control system normal?	Yes	Repeat the inspection from Step 1. • If the malfunction is not resolved, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
23	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

NO.7 LIMITED i-stop FUNCTION OPERATION TIME [SKYACTIV-G 2.0]

id1103a1001200

7	LIMITED i-stop FUNCTION OPERATION TIME
DESCRIPTION	• Frequency of which i-stop function operates is low. • Frequent occurrence of engine restarting other than for driving vehicle from stop.
POSSIBLE CAUSE	**Note** • To ensure electric vehicle system reliability, restart the engine regardless of the vehicle condition after **120 s** have elapsed since the i-stop function operated. **Battery voltage low during i-stop function operation** • Battery deterioration • Insufficient battery recharge while engine is running — Low recharge effect • Generator malfunction (part, system, control malfunction) • Large amount of vehicle power consumption • High electrical load from aftermarket electrical accessories **False detection of engine starting conditions** • False detection of battery voltage • False detection of low power brake unit load — Power brake unit vacuum sensor malfunction — Short or open circuit in wiring harness between the following terminals: • Power brake unit vacuum sensor terminal C—PCM terminal 2BG • Power brake unit vacuum sensor terminal B—PCM terminal 2Q • Power brake unit vacuum sensor terminal A—PCM terminal 2AH — Power brake unit malfunction (air tightness malfunction) — Malfunction in vacuum hose to power brake unit (damage, bad check valve) **False recognition of driver performing engine start operation** • False detection of depressed clutch pedal (MTX) — Clutch stroke sensor malfunction — Short to power supply in wiring harness between clutch stroke sensor terminal B and PCM terminal 2M • False detection of released brake pedal (ATX) — Brake fluid pressure sensor (built-into DSC HU/CM) malfunction • False detection of steering wheel operation — Steering angle sensor initialization malfunction — Steering angle sensor malfunction — Short or open circuit in wiring harness between steering angle sensor and start stop unit terminals 1U, 1T, 1W or 1S

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**INSPECT EFFECT OF NON-GENUINE ELECTRICAL ACCESSORY FOR CAUSE OF MALFUNCTION** • Remove any non-genuine electrical accessory. • Verify the malfunction symptom. • Is the frequency of the engine restarting from the i-stop off condition the same as that of another vehicle of the same model?	Yes	The system is normal. • Explain to the customer that the frequency of the engine restarting increases due to the effect of the non-genuine electrical accessory installed.
		No	Go to the next step.
2	**VERIFY DTC** • Retrieve the PCM, TCM, rear body control module (RBCM), DSC HU/CM, instrument cluster and climate control unit DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) (See 07-02-6 DTC DISPLAY [FULL-AUTO AIR CONDITIONER].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].) (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].) (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].) (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].) (See 07-02-7 DTC TABLE [FULL-AUTO AIR CONDITIONER].)
		No	Go to the next step.
3	**VERIFY BATTERY CONDITION** • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 5.
4	**DETERMINE IF MALFUNCTION CAUSE IS BATTERY OR GENERATOR** • Recharge the battery. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) • Inspect the battery again. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the battery. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	ATX: • Go to the next step. MTX: • Go to Step 9.
6	**DETERMINE IF MALFUNCTION CAUSE IS STEERING ANGLE SENSOR SIGNAL OR OTHER** • Start the engine and let it idle. • Access the EPS control module PID STR_ANG using the M-MDS. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the PID value normal?	Yes	Go to Step 9.
		No	Go to the next step.
7	**INSPECT STEERING ANGLE SENSOR** • Inspect the steering angle sensor. (See 09-18-33 STEERING ANGLE SENSOR INSPECTION.) • Is there any malfunction?	Yes	Replace the steering angle sensor. (See 09-18-33 STEERING ANGLE SENSOR REMOVAL/INSTALLATION.)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
8	**INSPECT STEERING ANGLE SENSOR CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Inspect for open or short circuit between the following terminals (wiring harness-side): — Steering angle sensor terminal A—Start stop unit terminal 1U — Steering angle sensor terminal B—Start stop unit terminal 1T — Steering angle sensor terminal C—Start stop unit terminal 1W — Steering angle sensor terminal D—Start stop unit terminal 1S • Is there any malfunction?	Yes	Repair or replace the suspected wiring harness.
		No	Replace the EPS control module.
9	**DETERMINE IF MALFUNCTION CAUSE IS POWER BRAKE UNIT VACUUM SENSOR SIGNAL OR OTHER** • Put the vehicle in an i-stop condition (engine stopped). • Access the PCM PID BBP using the M-MDS with the brake pedal depressed and the engine stopped. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Does the BBP PID value remain **less than** –**43 kPa {–0.44 kgf/cm^2, –6.2 psi}**?	Yes	ATX: • Go to Step 13. MTX: • Go to Step 14.
		No	Go to the next step.
10	**INSPECT POWER BRAKE UNIT VACUUM SENSOR FOR AIR TIGHTNESS MALFUNCTION** • Perform the vacuum function inspection for the power brake unit and the vacuum loss inspection. (See 04-11-14 POWER BRAKE UNIT INSPECTION.) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
11	**INSPECT POWER BRAKE UNIT VACUUM SENSOR** • Inspect the power brake unit vacuum sensor. (See 04-11-14 POWER BRAKE UNIT INSPECTION.) • Is there any malfunction?	Yes	Replace the power brake unit vacuum sensor. (See 01-40-68 POWER BRAKE UNIT VACUUM SENSOR INSPECTION [SKYACTIV-G 2.0].)
		No	Go to the next step.
12	**INSPECT POWER BRAKE UNIT VACUUM SENSOR CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Inspect for open or short circuit between the following terminals (wiring harness-side): — Power brake unit vacuum sensor terminal C—PCM terminal 2BG — Power brake unit vacuum sensor terminal B—PCM terminal 2Q — Power brake unit vacuum sensor terminal A—PCM terminal 2AH • Is there any malfunction?	Yes	Repair or replace the suspected wiring harness.
		No	Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
13	**DETERMINE IF MALFUNCTION CAUSE IS BRAKE FLUID PRESSURE SENSOR SIGNAL OR OTHER** • Put the vehicle in an i-stop condition (engine stopped). • Monitor the PCM PID BFP using the M-MDS while the brake is depressed and held with the i-stop function operating. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Does the monitoring value change?	Yes	Repeat the inspection from Step 1. • If the malfunction is not resolved, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 16.
		No	Brake fluid pressure sensor malfunction. • Replace the DSC HU/CM. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
14*	**DETERMINE IF MALFUNCTION CAUSE IS CLUTCH STROKE SENSOR SIGNAL OR OTHER** • Switch the ignition ON (engine off or on). • Access the PCM PID CPP using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Does the CPP PID value change according to the amount the clutch pedal is depressed?	Yes	Repeat the inspection from Step 1. • If the malfunction is not resolved, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 16.
		No	Go to the next step.
15	**INSPECT CLUTCH STROKE SENSOR** • Inspect the clutch stroke sensor. (See 01-40-67 CLUTCH STROKE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the clutch master cylinder. (See 05-10A-17 CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
		No	Inspect for short to power supply between clutch stroke sensor terminal B and PCM terminal 2M. • If there is any malfunction: — Repair or replace the wiring harness for a possible short to power supply. • If there is no malfunction: — Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
16	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

NO.8 INEFFECTIVE OPERATION OF A/C DURING ENGINE STOP (i-stop system) [SKYACTIV-G 2.0]

id1103a1001300

8	INEFFECTIVE OPERATION OF A/C DURING ENGINE STOP (i-stop SYSTEM)
DESCRIPTION	• A/C airflow temperature gradually increases or decreases while i-stop function is operating.
POSSIBLE CAUSE	**A/C system malfunction** • Climate control unit falsely recognizes MAX HOT or MAX COLD of air mix door on driver-side — Driver-side air mix actuator malfunction — Driver-side air mix actuator position sensor malfunction — Driver-side air mix door link stuck • Airflow temperature cannot be determined correctly. — Heater core temperature sensor (heater airflow temperature sensor) malfunction • Cabin temperature of target vehicle cannot be calculated. — Cabin temperature sensor malfunction — Solar radiation sensor malfunction — Ambient temperature sensor malfunction

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**DETERMINE IF MALFUNCTION CAUSE IS i-stop SYSTEM OR A/C SYSTEM** • Verify the malfunction symptom. • Does the malfunction occur only while the i-stop function is operating (engine stopped)?	Yes	Go to the next step.
		No	Go to the applicable A/C malfunction diagnostic procedure. (See 07-03A-4 TROUBLESHOOTING INDEX [FULL-AUTO AIR CONDITIONER].)
2	**VERIFY DTC** • Retrieve the PCM, instrument cluster and climate control unit DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) (See 07-02-6 DTC DISPLAY [FULL-AUTO AIR CONDITIONER].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].) (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].) (See 07-02-7 DTC TABLE [FULL-AUTO AIR CONDITIONER].)
		No	Go to the next step.
3	**DETERMINE IF MALFUNCTION CAUSE IS AMBIENT TEMPERATURE SENSOR SIGNAL OR OTHER** • Switch the ignition ON (engine off or on). • Compare the ambient temperature sensor on the LCD with the actual ambient temperature. • Does the ambient temperature on the LCD correspond to the actual ambient temperature?	Yes	Vehicles with manual air conditioner: • Go to Step 13. Vehicles with full-auto air conditioner: • Go to Step 5.
		No	Go to the next step.
4	**INSPECT AMBIENT TEMPERATURE SENSOR** • Inspect the ambient temperature sensor. (See 07-40A-23 AMBIENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the ambient temperature sensor. (See 07-40A-22 AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Inspect the wiring harness between the following terminals: • Ambient temperature sensor terminal A—PCM terminal 2I • Ambient temperature sensor terminal B—PCM terminal 2AJ — If there is any malfunction: • Repair or replace the suspected wiring harness.
5	**DETERMINE IF MALFUNCTION CAUSE IS CABIN TEMPERATURE SENSOR SIGNAL OR OTHER** • Access the climate control unit PID INC_TMP_SEN using the M-MDS. (See 07-02-38 PID/DATA MONITOR DISPLAY [FULL-AUTO AIR CONDITIONER].) • Does the INC_TMP_SEN PID value indicate the actual cabin temperature of the vehicle?	Yes	Go to Step 7.
		No	Go to the next step.
6	**INSPECT CABIN TEMPERATURE SENSOR** • Inspect the cabin temperature sensor. (See 07-40A-26 CABIN TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the cabin temperature sensor. (See 07-40A-23 CABIN TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Inspect the wiring harness between the following terminals for a short or open circuit: • Cabin temperature sensor terminal A—Climate control unit terminal 1J • Cabin temperature sensor terminal B—Climate control unit terminal 1X — If there is any malfunction: • Repair or replace the suspected wiring harness.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
7	**DETERMINE IF MALFUNCTION CAUSE IS SOLAR RADIATION SENSOR SIGNAL OR OTHER** • Access the climate control unit PID SLR_R_SEN_L and SLR_R_SEN_R using the M-MDS. (See 07-02-38 PID/DATA MONITOR DISPLAY [FULL-AUTO AIR CONDITIONER].) • Does the SLR_R_SEN_L and SLR_R_SEN_R PID value display according to the solar radiation condition?	Yes	Go to Step 9.
		No	Go to the next step.
8	**INSPECT SOLAR RADIATION SENSOR** • Inspect the solar radiation sensor. (See 07-40A-22 SOLAR RADIATION SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the solar radiation sensor. (See 07-40A-21 SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Inspect the wiring harness between the following terminals: • Solar radiation sensor terminal B—Climate control unit terminal 1T • Solar radiation sensor terminal C—Climate control unit terminal 1V — If there is any malfunction: • Repair or replace the suspected wiring harness.
9	**DETERMINE IF MALFUNCTION CAUSE IS DRIVER-SIDE AIR MIX ACTUATOR SIGNAL OR OTHER** • Measure the voltage at the climate control unit terminal 1N (wiring harness-side) when the driver-side temperature setting is MAX HOT and MAX COLD. • Is the voltage normal? (See 07-40A-33 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].)	Yes	Go to Step 11.
		No	Go to the next step.
10	**INSPECT DRIVER-SIDE AIR MIX ACTUATOR** • Inspect the driver-side air mix actuator. (See 07-40A-9 AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the driver-side air mix actuator. (See 07-40A-7 AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Inspect the air mix actuator and linkage for sticking. (See 07-11-14 A/C UNIT DISASSEMBLY/ASSEMBLY.) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results.
11	**DETERMINE IF MALFUNCTION CAUSE IS HEATER CORE TEMPERATURE SENSOR SIGNAL OR OTHER** • Measure the voltage at the climate control unit terminal 1L (wiring harness-side) while the engine is stopped via i-stop control. • Do the elapsed time and voltage values change?	Yes	The system is normal. • Effect is due to a possible change in the vehicle environment while the engine is stopped (change in solar radiation).
		No	Go to the next step.
12	**INSPECT HEATER CORE TEMPERATURE SENSOR** • Inspect the heater core temperature sensor. (See 07-40A-29 HEATER CORE TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the heater core temperature sensor. (See 07-40A-27 HEATER CORE TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Repair or replace the wiring harness between heater core temperature sensor terminal B and climate control unit terminal 1L.
13	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

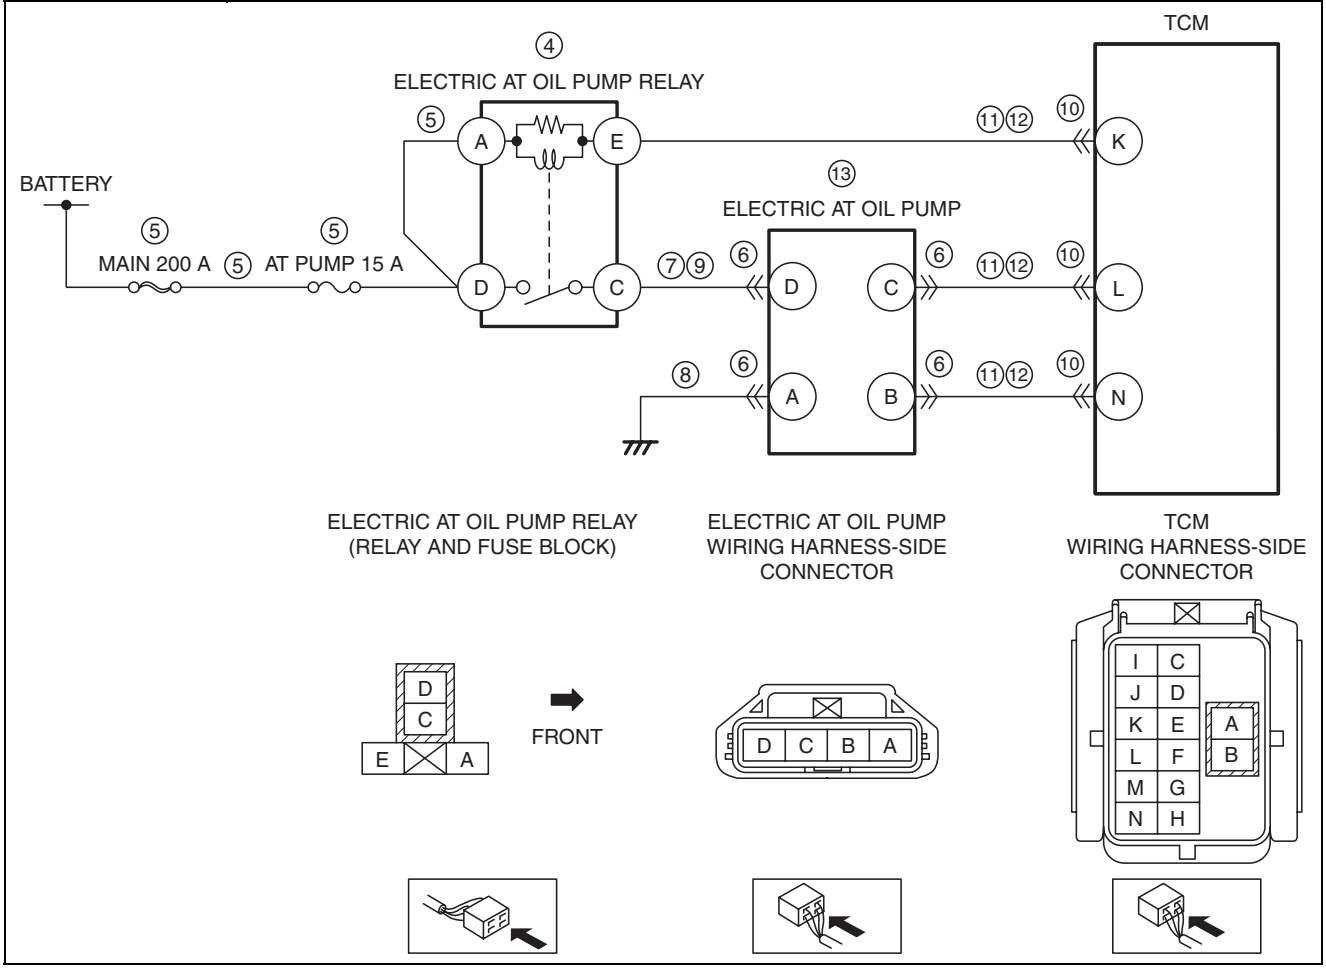
NO.9 ACCELERATION MALFUNCTION [SKYACTIV-G 2.0]

id1103a1001400

9	ACCELERATION MALFUNCTION
DESCRIPTION	• Acceleration from i-stop is not smooth. • Suppresses (shock) when accelerating vehicle from i-stop. • Engine vibration increases when engine is restarted.
POSSIBLE CAUSE	**ATX system malfunction** • Electric AT oil pump malfunction (operation malfunction, insufficient pressure) — Electric AT oil pump relay malfunction (stuck open) — Short to ground or open circuit in electric AT oil pump relay power supply circuit • Short to ground in wiring harness between MAIN 200 A fuse and electric AT oil pump relay terminal A • Short to ground in wiring harness between MAIN 200 A fuse and electric AT oil pump relay terminal D • MAIN 200 A fuse and/or AT PUMP 15 A fuse malfunction • Open circuit in wiring harness between battery positive terminal and electric AT oil pump relay terminal A • Open circuit in wiring harness between battery positive terminal and electric AT oil pump relay terminal D — Electric AT oil pump connector or terminals malfunction — Short to ground in wiring harness between electric AT oil pump relay terminal C and electric AT oil pump terminal D — Open circuit in wiring harness between electric AT oil pump terminal A and body ground — Open circuit in wiring harness between electric AT oil pump relay terminal C and electric AT oil pump terminal D — TCM connector or terminals malfunction — Short to ground in wiring harness between the following terminals: • Electric AT oil pump relay terminal E—TCM terminal K • Electric AT oil pump terminal C—TCM terminal L • Electric AT oil pump terminal B—TCM terminal N — Open circuit in wiring harness between the following terminals: • Electric AT oil pump relay terminal E—TCM terminal K • Electric AT oil pump terminal C—TCM terminal L • Electric AT oil pump terminal B—TCM terminal N — Electric AT oil pump malfunction — TCM malfunction • ATX malfunction **Hill launch assist function system (DSC) malfunction** • False detection of inclination angle (cannot calculate correct road slope) — Low-G (XY) sensor (built-into SAS control module) malfunction (In this case, the SAS control module records DTCs C0061:29 and C0062:29.) — Low-G (XY) sensor (built-into SAS control module) initialization malfunction • False detection of brake fluid pressure — Brake fluid pressure sensor (built-into DSC HU/CM) malfunction • Cannot maintain brake fluid pressure — DSC HU/CM malfunction

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

9	ACCELERATION MALFUNCTION



11

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**DETERMINE IF MALFUNCTION CAUSED BY ATX BODY** • Compare the malfunction symptom with the i-stop system stop condition. • Is there any shock or slippage during acceleration with the i-stop system disabled?	Yes	Perform the applicable symptom troubleshooting procedure. (See 05-03A-6 SYMPTOM TROUBLESHOOTING ITEM TABLE [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY DTC** • Retrieve the PCM, TCM, DSC HU/CM, SAS control module DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) (See 08-02-7 DTC INSPECTION.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].) (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].) (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) (See 08-02-11 DTC TABLE.)
		No	Go to the next step.
3	**DETERMINE IF MALFUNCTION CAUSE IS BRAKE FLUID PRESSURE SENSOR SIGNAL OR OTHER** • Put the vehicle in an i-stop condition (engine stopped). • Monitor the PCM PID BFP using the M-MDS while the brake is depressed and held with the i-stop function operating. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Does the monitoring value change?	Yes	Brake fluid pressure sensor (built-into DSC HU/CM) or DSC HU/CM brake pressure hold function malfunction. • Replace the DSC HU/CM. (See 04-15-4 DSC HU/CM REMOVAL/ INSTALLATION.)
		No	Go to the next step.
4	**INSPECT ELECTRIC AT OIL PUMP RELAY** • Switch the ignition to off. • Remove the electric AT oil pump relay. • Inspect the electric AT oil pump relay. (See 09-21-29 RELAY INSPECTION.) • Is there any malfunction?	Yes	Replace the electric AT oil pump relay.
		No	Go to the next step.
5	**INSPECT ELECTRIC AT OIL PUMP RELAY POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Electric AT oil pump relay is removed. • Measure the voltage at the following terminals (wiring harness-side): — Electric AT oil pump relay terminal A — Electric AT oil pump relay terminal D • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A fuse and AT PUMP 15 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the malfunctioning fuse. • If the fuse is deteriorated: — Replace the malfunctioning fuse. • If all fuses are normal: — Repair or replace the wiring harness for a possible open circuit.
6	**INSPECT ELECTRIC AT OIL PUMP CONNECTOR CONDITION** • Disconnect the electric AT oil pump connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals.
		No	Go to the next step.
7	**INSPECT ELECTRIC AT OIL PUMP POWER SUPPLY CIRCUIT FOR SHORT TO GROUND** • Electric AT oil pump relay is removed. • Verify that the electric AT oil pump connector is disconnected. • Inspect for continuity between electric AT oil pump relay terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
8	**INSPECT ELECTRIC AT OIL PUMP GROUND CIRCUIT FOR OPEN CIRCUIT** • Electric AT oil pump relay is removed. • Verify that the electric AT oil pump connector is disconnected. • Inspect for continuity between electric AT oil pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit.
9	**INSPECT ELECTRIC AT OIL PUMP POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Electric AT oil pump relay is removed. • Verify that the electric AT oil pump connector is disconnected. • Inspect for continuity between electric AT oil pump relay terminal C (wiring harness-side) and electric AT oil pump terminal D (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit.
10	**INSPECT TCM CONNECTOR CONDITION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals.
		No	Go to the next step.
11	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Electric AT oil pump relay is removed. • Verify that the electric AT oil pump and TCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Electric AT oil pump relay terminal E — Electric AT oil pump terminal C — Electric AT oil pump terminal B • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground.
		No	Go to the next step.
12	**INSPECT TCM CIRCUIT FOR OPEN CIRCUIT** • Electric AT oil pump relay is removed. • Verify that the electric AT oil pump and TCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Electric AT oil pump relay terminal E—TCM terminal K — Electric AT oil pump terminal C—TCM terminal L — Electric AT oil pump terminal B—TCM terminal N • Is there continuity?	Yes	Replace the electric AT oil pump. (See 05-17A-27 ELECTRIC AT OIL PUMP REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	Repair or replace the wiring harness for a possible open circuit.
13	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

NO.10 VEHICLE MOVES WHEN ACCELERATING FROM STANDSTILL ON SLOPE [SKYACTIV-G 2.0]

id1103a1001700

10	VEHICLE MOVES WHEN ACCELERATING FROM STANDSTILL ON SLOPE
DESCRIPTION	• Vehicle slips backwards on inclined road surface when accelerating after i-stop operates.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

10	VEHICLE MOVES WHEN ACCELERATING FROM STANDSTILL ON SLOPE
POSSIBLE CAUSE	**Note** • i-stop (engine-stop control) continues operating when shifting the selector lever from D position to N or P position while i-stop (engine-stop control) is operating, however, if the slope of the road surface is **within ±4 %**, the Hill Launch Assist (HLA) function is canceled. **Hill launch assist function system (DSC) malfunction** • False detection of inclination angle (cannot calculate correct road slope) — Low-G (XY) sensor (built-into SAS control module) malfunction (In this case, the SAS control module records DTCs C0061:29 and C0062:29.) — Low-G (XY) sensor (built-into SAS control module) initialization malfunction • False detection of brake fluid pressure — Brake fluid pressure sensor (built-into DSC HU/CM) malfunction • Cannot maintain brake fluid pressure — DSC HU/CM malfunction • DC-DC converter system error (exceeds capacity of DC-DC converter output due to open or short circuit in wiring harness and after-market electrical part) **ATX system malfunction** • Electric AT oil pump malfunction (operation malfunction, insufficient pressure) • ATX malfunction

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**INSPECT EFFECT OF NON-GENUINE ELECTRICAL ACCESSORY FOR CAUSE OF MALFUNCTION** • Remove any non-genuine electrical accessory. • Verify the malfunction symptom. • Does vehicle slip backwards on inclined road surface when accelerating after i-stop operates?	Yes	The system is normal. • Explain to the customer that the vehicle slips backwards on an inclined road surface when accelerating after i-stop operates due to the effect of the non-genuine electrical accessory installed.
		No	Go to the next step.
2	**VERIFY DTC** • Retrieve the PCM, TCM, DSC HU/CM, SAS control module DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) (See 08-02-7 DTC INSPECTION.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].) (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].) (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) (See 08-02-11 DTC TABLE.)
		No	Go to the next step.
3	**DETERMINE IF MALFUNCTION CAUSE IS HILL LAUNCH ASSIST FUNCTION OR ATX SYSTEM** • Verify the malfunction symptom on a flat road surface. • Does the acceleration lag when accelerating?	Yes	Perform the symptom troubleshooting “NO.9 ACCELERATION MALFUNCTION”. (See 11-03-42 NO.9 ACCELERATION MALFUNCTION [SKYACTIV-G 2.0].)
		No	Brake fluid pressure sensor (built-into DSC HU/CM) or DSC HU/CM brake pressure hold function malfunction. • Replace the DSC HU/CM. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
4	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

- The following systems can be customized.
- When performing a customized setting, refer to the referenced section for the detailed setting procedure.

Security And Locks

Note
- There are two types of customization procedures; one using the M-MDS and the other using the audio unit screen.

Advanced keyless entry system

Personalization features	Setting contents	Setting procedure
The advanced keyless entry system and push button start system functions can be disabled.	Enabled./Disabled.	M-MDS is used. (See 09-14-63 SECURITY AND LOCKS PERSONALIZATION FEATURES SETTING PROCEDURE.)
The out-of-area (reception area) type auto lock function can be set.	Not Adopted./OFF/ON	M-MDS is used. (See 09-14-63 SECURITY AND LOCKS PERSONALIZATION FEATURES SETTING PROCEDURE.)
	OFF/ON	Audio unit screen is used for the setting. (See 09-20-9 AUDIO UNIT PERSONALIZATION FEATURES SETTING PROCEDURE.)
The operation start time of the auto re-lock function can be changed.	Not Adopted./30 seconds/60 seconds/90 seconds	M-MDS is used. (See 09-14-63 SECURITY AND LOCKS PERSONALIZATION FEATURES SETTING PROCEDURE.)
	30 seconds/60 seconds/ 90 seconds	Audio unit screen is used for the setting. (See 09-20-9 AUDIO UNIT PERSONALIZATION FEATURES SETTING PROCEDURE.)
The keyless beeper volume can be adjusted.	Not Adopted./Off/Low/ Medium/High	M-MDS is used. (See 09-14-63 SECURITY AND LOCKS PERSONALIZATION FEATURES SETTING PROCEDURE.)
	Off/Low/Medium/High	Audio unit screen is used for the setting. (See 09-20-9 AUDIO UNIT PERSONALIZATION FEATURES SETTING PROCEDURE.)

Keyless entry system

Personalization features	Setting contents	Setting procedure
The keyless entry system and push button start system functions can be disabled.	Enabled./Disabled.	M-MDS is used. (See 09-14-63 SECURITY AND LOCKS PERSONALIZATION FEATURES SETTING PROCEDURE.)

PERSONALIZATION FEATURES

Personalization features	Setting contents	Setting procedure
The operation start time of the auto re-lock function can be changed.	Not Adopted./30 seconds/60 seconds/90 seconds	M-MDS is used. (See 09-14-63 SECURITY AND LOCKS PERSONALIZATION FEATURES SETTING PROCEDURE.)
	30 seconds/60 seconds/ 90 seconds	Audio unit screen is used for the setting. (See 09-20-9 AUDIO UNIT PERSONALIZATION FEATURES SETTING PROCEDURE.)

Power door lock system

Personalization features	Setting contents	Setting procedure
Auto door lock function can be changed.	Not Adopted. / OFF / Lock When Driving. / Lock: Driving, Unlock: IGN Off. / Lock When Shifting Out Of P. / Lock: Shift From P, Unlock: In P.	M-MDS is used. (See 09-14-63 SECURITY AND LOCKS PERSONALIZATION FEATURES SETTING PROCEDURE.)

Lighting Systems

Note

- There are two types of customization procedures; one using the M-MDS and the other using the audio unit screen.

Auto light system

Personalization features	Setting contents	Setting procedure
Auto light sensor sensitivity can be changed.	Not Adopted./Dark/ Medium Dark/Medium/ Medium Light/Light	M-MDS is used. (See 09-40-16 CONTROL SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE.)
	Light/Medium Light/ Medium/Medium Dark/ Dark	Audio unit screen is used for the setting. (See 09-20-9 AUDIO UNIT PERSONALIZATION FEATURES SETTING PROCEDURE.)

Turn light system

Personalization features	Setting contents	Setting procedure
The turn light system can be switched between operable and inoperable.	Not Adopted./OFF/ON	M-MDS is used. (See 09-40-16 CONTROL SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE.)
	On/Off	Audio unit screen is used for the setting. (See 09-20-9 AUDIO UNIT PERSONALIZATION FEATURES SETTING PROCEDURE.)

Room light control system

Personalization features	Setting contents	Setting procedure
The front/rear map light illumination time after any door is open can be changed.	Not Adopted./30 minutes./60 minutes./10 minutes.	M-MDS is used. (See 09-40-16 CONTROL SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE.)
	60 minutes/30 minutes/ 10 minutes	Audio unit screen is used for the setting. (See 09-20-9 AUDIO UNIT PERSONALIZATION FEATURES SETTING PROCEDURE.)
The front/rear map light illumination time after any door is closed can be changed.	Not Adopted./15 seconds./7.5 seconds./ 30 seconds./60 seconds.	M-MDS is used. (See 09-40-16 CONTROL SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE.)
	60 seconds/30 seconds/ 15 seconds/7.5 seconds	Audio unit screen is used for the setting. (See 09-20-9 AUDIO UNIT PERSONALIZATION FEATURES SETTING PROCEDURE.)

PERSONALIZATION FEATURES

High Beam Control (HBC) System

Note
- There are two types of customization procedures; one using the M-MDS and the other using the audio unit screen.

Personalization features	Setting contents	Setting procedure
The high beam control (HBC) system can be switched between operable and inoperable.	Not Adopted./OFF/ON	M-MDS is used. (See 09-22-21 FORWARD SENSING CAMERA (FSC) PERSONALIZATION FEATURES SETTING PROCEDURE.)
	On/Off	Audio unit screen is used for the setting. (See 09-20-9 AUDIO UNIT PERSONALIZATION FEATURES SETTING PROCEDURE.)

Wiper/Washer System

Note
- There are two types of customization procedures; one using the M-MDS and the other using the audio unit screen.

Auto wiper system

Personalization features	Setting contents	Setting procedure
Auto wiper system can be set to operable or inoperable.	Not Adopted./Off (Intermittent)/On (Rain Sensing)	M-MDS is used. (See 09-40-16 CONTROL SYSTEM PERSONALIZATION FEATURES SETTING PROCEDURE.)
	On (Rain Sensing)/ Off (Intermittent)	Audio unit screen is used for the setting. (See 09-20-9 AUDIO UNIT PERSONALIZATION FEATURES SETTING PROCEDURE.)

Instrumentation/Driver Info.

Note
- There are two types of customization procedures; one using the M-MDS and the other using the instrument cluster.

Instrument cluster

Personalization features	Setting contents	Setting procedure
The volume for the lights-on reminder warning alarm can be changed.	Not Adopted./OFF/Low/ High	M-MDS is used. (See 09-22-20 INSTRUMENT CLUSTER PERSONALIZATION FEATURES SETTING PROCEDURE.)
	High/Low/OFF	Instrument cluster (with TFT LCD display) is used. (See 09-22-20 INSTRUMENT CLUSTER PERSONALIZATION FEATURES SETTING PROCEDURE.)
The volume of the turn and hazard indicator alarm can be changed.	Not Adopted./Low/High	M-MDS is used. (See 09-22-20 INSTRUMENT CLUSTER PERSONALIZATION FEATURES SETTING PROCEDURE.)
	High/Low	Instrument cluster (with TFT LCD display) is used. (See 09-22-20 INSTRUMENT CLUSTER PERSONALIZATION FEATURES SETTING PROCEDURE.)
The volume of the operation sound which the instrument cluster outputs can be changed.	High/Low/OFF	Instrument cluster (with TFT LCD display) is used. (See 09-22-20 INSTRUMENT CLUSTER PERSONALIZATION FEATURES SETTING PROCEDURE.)

Rear Vehicle Monitoring (RVM) System

Note
- There are two types of customization procedures; one using the M-MDS and the other using the instrument cluster.

PERSONALIZATION FEATURES

Personalization features	Setting contents	Setting procedure
The volume of the rear vehicle monitoring (RVM) warning alarm can be changed.	Not Adopted./OFF/Low/ High	M-MDS is used. (See 09-22-20 INSTRUMENT CLUSTER PERSONALIZATION FEATURES SETTING PROCEDURE.)
	High/Low/OFF	Instrument cluster (with TFT LCD display) is used. (See 09-22-20 INSTRUMENT CLUSTER PERSONALIZATION FEATURES SETTING PROCEDURE.)

Blind Spot Monitoring (BSM) System

Personalization features	Setting contents	Setting procedure
The volume of the blind spot monitoring (BSM) warning alarm can be changed.	Not Adopted./OFF/Low/ High	M-MDS is used. (See 09-22-20 INSTRUMENT CLUSTER PERSONALIZATION FEATURES SETTING PROCEDURE.)

Lane Departure Warning System (LDWS)

Note

- There are two types of customization procedures; one using the M-MDS and the other using the instrument cluster.

Personalization features	Setting contents	Setting procedure
The volume of the LDWS warning alarm can be changed.	Not Adopted./Volume 1/ Volume 2/Volume 3	M-MDS is used. (See 09-22-20 INSTRUMENT CLUSTER PERSONALIZATION FEATURES SETTING PROCEDURE.)
	High/Medium/Low	Instrument cluster (with TFT LCD display) is used. (See 09-22-20 INSTRUMENT CLUSTER PERSONALIZATION FEATURES SETTING PROCEDURE.)
The type of the LDWS warning alarm can be changed.	Beep/Rumble	M-MDS is used. (See 09-22-20 INSTRUMENT CLUSTER PERSONALIZATION FEATURES SETTING PROCEDURE.)
	Rumble/Beep	Instrument cluster (with TFT LCD display) is used. (See 09-22-20 INSTRUMENT CLUSTER PERSONALIZATION FEATURES SETTING PROCEDURE.)
The warning operation timing of the lane departure warning system (LDWS) can be changed.	Not Adopted/Adaptive/ Early/Medium/Late	M-MDS is used. (See 09-22-21 FORWARD SENSING CAMERA (FSC) PERSONALIZATION FEATURES SETTING PROCEDURE.)
	Early/Medium/Late/ Adaptive	Instrument cluster (with TFT LCD display) is used. (See 09-22-20 INSTRUMENT CLUSTER PERSONALIZATION FEATURES SETTING PROCEDURE.)
The warning operation sensitivity of the lane departure warning system (LDWS) can be changed.	Not Adopted./Often/ Medium/Rare	M-MDS is used. (See 09-22-21 FORWARD SENSING CAMERA (FSC) PERSONALIZATION FEATURES SETTING PROCEDURE.)
	Often/Medium/Rare	Instrument cluster (with TFT LCD display) is used. (See 09-22-20 INSTRUMENT CLUSTER PERSONALIZATION FEATURES SETTING PROCEDURE.)
The high and low range of the LDWS warning alarm can be changed.	High/Low	Instrument cluster (with TFT LCD display) is used. (See 09-22-20 INSTRUMENT CLUSTER PERSONALIZATION FEATURES SETTING PROCEDURE.)
