AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

ROAD TEST [FW6A-EL, FW6AX-EL]

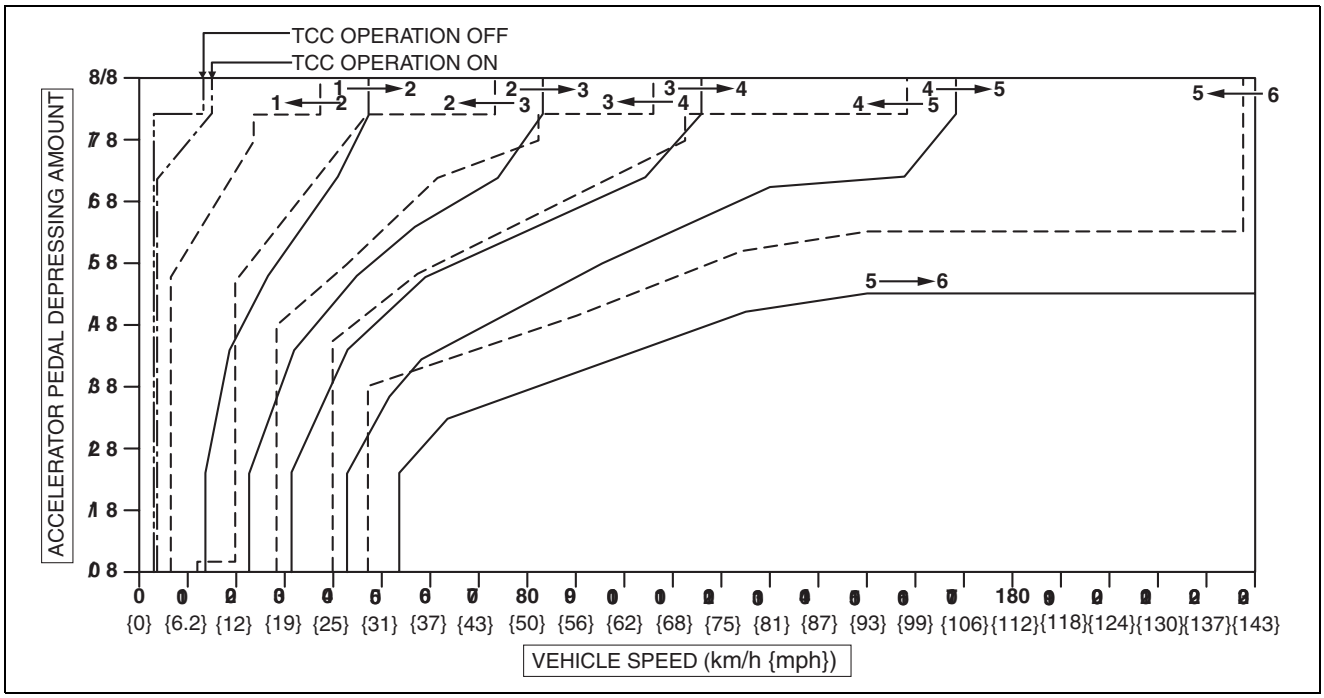
id0517h2118400

Warning
- **When performing a road test, always verify the safety of the surrounding area before performing the test.**

Note
- When performing a road test requiring speeds which exceed the legal speed limit, use a dynamometer.

Road test preparation
1. Inspect the engine coolant level. (See 01-12A-3 ENGINE COOLANT LEVEL INSPECTION [SKYACTIV-G 2.0].)
2. Inspect the engine oil level. (See 01-11A-3 ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0].)
3. Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].)
4. Inspect the ignition timing. (See 01-10A-4 ENGINE TUNE-UP [SKYACTIV-G 2.0].)
5. Inspect the idle speed. (See 01-10A-4 ENGINE TUNE-UP [SKYACTIV-G 2.0].)
6. Verify that no DTCs are stored.

Shift diagram (D position, normal mode)



ac5wzw0000091

D position test
1. Perform road test preparations. (See 05-17A-9 Road test preparation.)
2. Warm up the transaxle.
3. Select D position.
4. Inspect the shift point for the D position in normal mode.
   - If there is any malfunction, refer to symptom troubleshooting and verify the malfunction symptom.
   (1) Depress the accelerator pedal and start the vehicle, and verify that the gears shift from 1st to 2nd, 2nd to 3rd, 3rd to 4th, 4th to 5th, and 5th to 6th. In addition, verify that the vehicle speed corresponds to the shift point when shifting.
   (2) Release the accelerator pedal while driving in 6th gear, and verify that the gears shift from 6th to 5th, 5th to 4th, 4th to 3rd, 3rd to 2nd, and 2nd to 1st. In addition, verify that the vehicle speed corresponds to the shift point when shifting.

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

Note
- When the accelerator pedal is fully released quickly, shifting is not performed according to the shift pattern because the gear being used may be maintained.
- When decelerating by strongly depressing the brake pedal, shifting is not performed according to the shift pattern because the shift-down point may be at high vehicle speed.

(3) Kick down while driving in 6th, 5th, 4th, 3rd, and 2nd gears, and verify that the gears shift from 6th to 5th, 5th to 4th, 4th to 3rd, 3rd to 2nd, and 2nd to 1st. In addition, verify that the vehicle speed limit for kicking down corresponds to the shift point.
(4) Verify that the shift shock is minimal, shifting is smooth and timely, and there is no abnormal noise or slip.

Shift point

Position/mode		Accelerator pedal depression amount	Shift	Vehicle speed (km/h {mph})	Turbine rotation speed (rpm)
D	NORMAL	8/8	$D_1 \rightarrow D_2$	47—52 {30—32}	5,850—6,600
			$D_2 \rightarrow D_3$	82—89 {51—55}	5,850—6,400
			$D_3 \rightarrow D_4$	113—122 {71—75}	5,850—6,300
			$D_4 \rightarrow D_5$	166—175 {103—108}	5,900—6,200
		4/8	$D_1 \rightarrow D_2$	19—26 {12—16}	2,300—3,400
			$D_2 \rightarrow D_3$	31—46 {20—28}	2,200—3,350
			$D_3 \rightarrow D_4$	40—63 {25—39}	2,100—3,250
			$D_4 \rightarrow D_5$	61—88 {38—54}	2,150—3,150
		0/8	$D_6 \rightarrow D_5$	44—50 {28—31}	950—1,050
			$D_5 \rightarrow D_4$	37—42 {23—26}	950—1,050
			$D_4 \rightarrow D_3$	26—31 {17—19}	900—1,100
			$D_3 \rightarrow D_2$	9—14 {6—8}	500—750
			$D_2 \rightarrow D_1$	4—9 {3—5}	250—650
		Kickdown (8/8)	$D_5 \rightarrow D_4$	154—163 {96—101}	3,900—4,100
			$D_4 \rightarrow D_3$	101—110 {63—68}	3,600—3,900
			$D_3 \rightarrow D_2$	69—77 {43—47}	3,600—3,950
			$D_2 \rightarrow D_1$	35—40 {22—24}	2,500—2,850

M position test

1. Perform road test preparations. (See 05-17A-9 Road test preparation.)
2. Warm up the transaxle.
3. Select the M position.
4. Inspect the shift point for the M position.
   - If there is any malfunction, refer to symptom troubleshooting and verify the malfunction symptom.
   (1) Perform the shift operation while driving and verify that the gears can be shifted.
   (2) Release the accelerator pedal while driving in 6th gear, and verify that the gears shift from 6th to 5th, 5th to 4th, 4th to 3rd, 3rd to 2nd, and 2nd to 1st. In addition, verify that the vehicle speed corresponds to the shift point when shifting.
   (3) Release the accelerator pedal while driving and verify that the engine braking operates in all gears.
   (4) Verify that the shift shock is minimal, shifting is smooth and timely, and there is no abnormal noise or slip.

Shift point

Position/mode	Accelerator pedal depression amount	Shift	Vehicle speed (km/h {mph})	Turbine rotation speed (rpm)
M	0/8	$M_6 \rightarrow M_5$	44—50 {28—31}	950—1,050
		$M_5 \rightarrow M_4$	37—42 {23—26}	950—1,050
		$M_4 \rightarrow M_3$	26—31 {17—19}	900—1,100
		$M_3 \rightarrow M_2$	9—14 {6—8}	500—750
		$M_2 \rightarrow M_1$	4—9 {3—5}	250—650

5. Inspect 2nd gear fixed mode.
   (1) While the vehicle is stopped or the vehicle speed is **10 km/h {6.2 mph} or less**, operate the selector lever toward + to shift to 2nd gear.
   (2) Verify that the gear is fixed in 2nd gear.
   (3) Release the accelerator pedal while driving and verify that the engine braking operates.
   (4) Perform the shift operation while driving and verify that the gears can be shifted.

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

P position test

1. Park the vehicle on a gentle slope and shift the selector lever to the P position.
2. Release the brake and verify that the vehicle does not move.
   - If there is any malfunction, inspect the parking mechanism in the transaxle.

AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL]

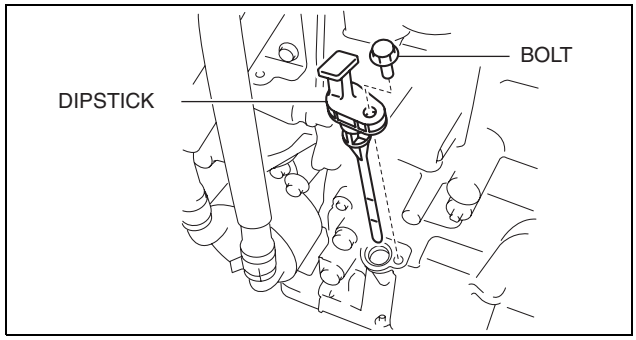
id0517h2118500

Caution

- **If the ATF level is not within the specification or ATF is not adhering to the dipstick after warming up the engine, do not drive the vehicle. Otherwise, the transaxle could be damaged.**

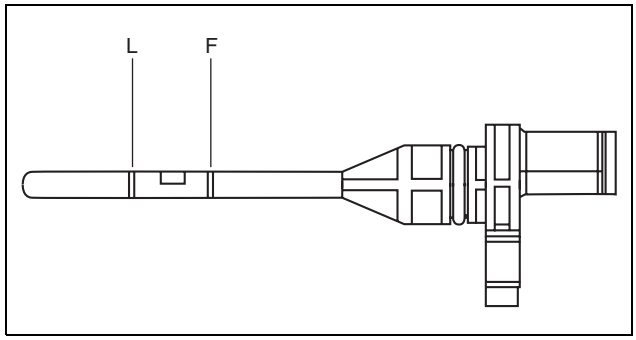
ATF level inspection

1. Remove the dipstick securing bolt.
2. Connect the M-MDS to the DLC-2 and display the PID TFT.
3. Warm up the engine until the ATF temperature is 50 °C {122 °F}.
4. Remove the dipstick and wipe ATF off using a nylon cloth while leaving the engine idling.
5. Insert the dipstick and pull it out again.
6. Verify that the ATF is adhering between L and F on the dipstick.



ac5wzw0000234

- If ATF is not adhering between L and F on the dipstick, adjust the ATF level. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) ADJUSTMENT [FW6A-EL, FW6AX-EL].)



aaxjjw00010212

Note

- The ATF color is blue.
- Only use ATF FZ for the FW6A-EL, FW6AX-EL.

ATF type
ATF FZ

7. Insert the dipstick and install the securing bolt.

Tightening torque
8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL]

id0517h2118600

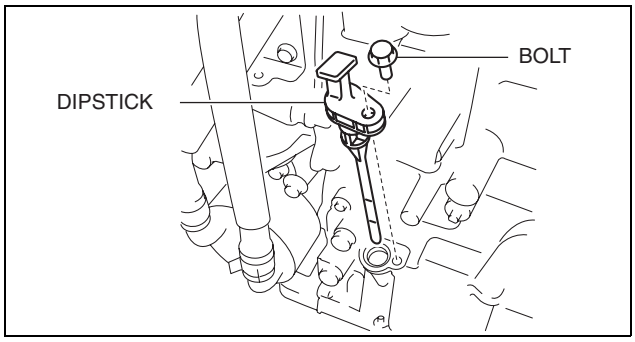
Warning
- **Do not perform the servicing while the ATF is hot. Otherwise, it could cause severe burns or serious injury.**

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Remove the dipstick securing bolt.
3. Remove the dipstick.
4. Remove the drain plug and washer, and drain the ATF.
5. Install a new washer and drain plug.

Tightening torque
30—41 N·m {3.1—4.1 kgf·m, 23—30 ft·lbf}

6. Add ATF from the dipstick installation hole.

Note
- The ATF color is blue.
- Only use ATF FZ for the FW6A-EL, FW6AX-EL.

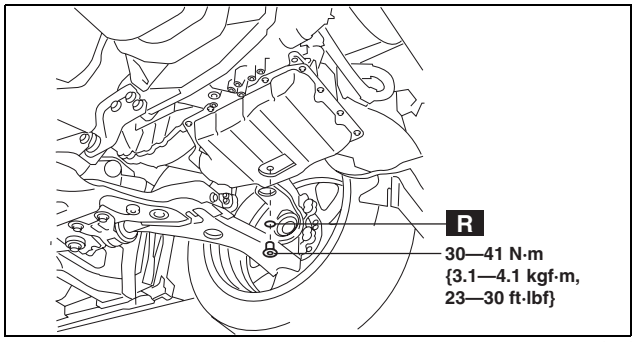


ac5wzw0000234

ATF type
ATF FZ
Resupply amount (Reference)
ATF is drained from drain plug: 3.5—4.9 L {3.7—5.1 US qt, 3.1—4.3 Imp qt}

7. Adjust the ATF level. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) ADJUSTMENT [FW6A-EL, FW6AX-EL].)
8. Insert the dipstick and install the securing bolt.

Tightening torque
8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}



am3zzw0001264

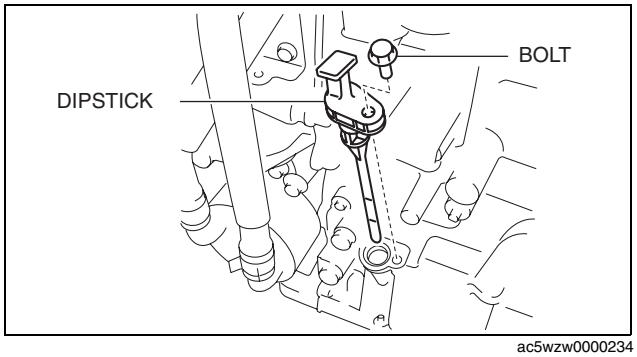
9. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)

AUTOMATIC TRANSAXLE FLUID (ATF) ADJUSTMENT [FW6A-EL, FW6AX-EL]

id0517h2119300

Caution
- **Only adjust the ATF level when the ATF temperature is 45—55 °C {113—131 °F}. If the ATF level is incorrect, it could damage the transaxle.**
- **Do not add ATF over the specification. Otherwise, the transaxle performance could be reduced and ATF could leak.**

1. Remove the dipstick securing bolt.
2. Remove the dipstick.
3. Adjust the ATF level.
   (1) Connect the M-MDS to the DLC-2 and display the PID TFT.
   (2) Warm up the engine until the ATF temperature is **50 °C {122 °F}**.
   (3) Remove the dipstick and wipe the ATF off using a rag while leaving the engine idling.
   (4) Insert the dipstick and pull it out again.
   (5) Verify that ATF is adhering to the central marker area on the dipstick.
      - If ATF is not adhering to the central marker area on the dipstick, adjust the ATF level to the central marker area.



ac5wzw0000234

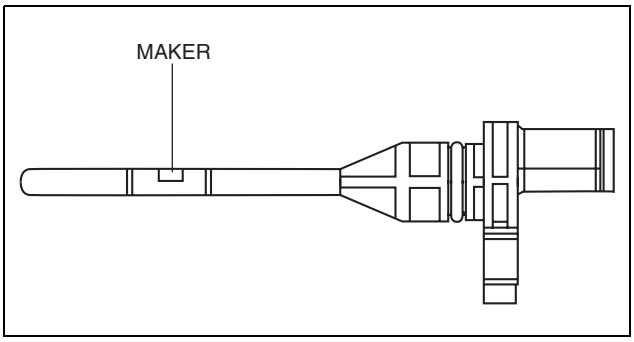
AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

Note
- The ATF color is blue.
- Only use ATF FZ for the FW6A-EL, FW6AX-EL.

ATF type
ATF FZ

4. Insert the dipstick and install the securing bolt.

Tightening torque
8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}



am3uuw0000839

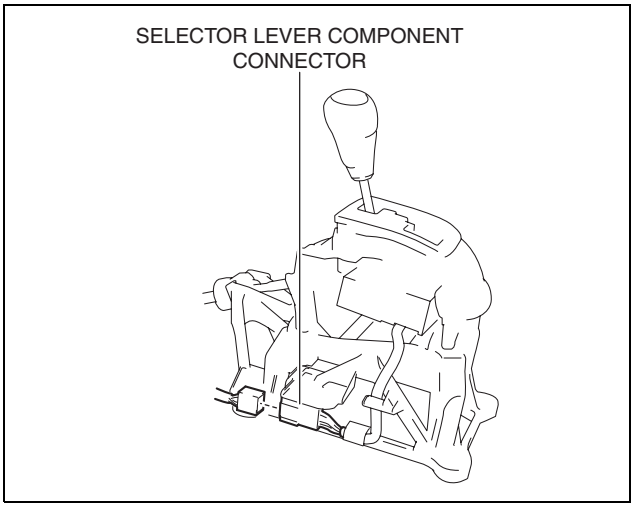
M POSITION SWITCH INSPECTION [FW6A-EL, FW6AX-EL]

id0517h2500000

Continuity Inspection

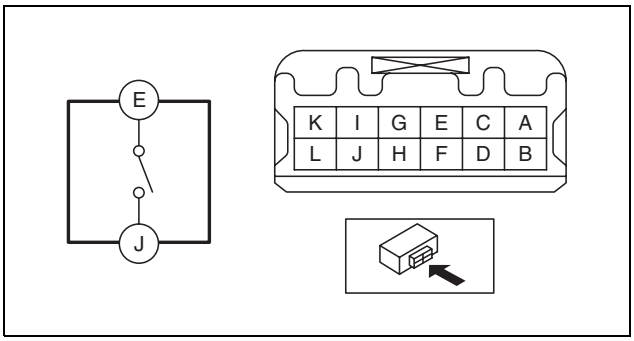
Note
- The M position switch is built into the selector lever component.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the front console. (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
3. Disconnect the selector lever component connector.



ac5wzw0000078

4. Verify that the continuity between selector lever component terminals E and J.
   - If not as verified, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)



ac5wzw0000078

M position switch specification

Test condition	Continuity
Selector lever is in the M position.	Continuity
Selector lever is not in the M position.	No continuity

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

M POSITION SWITCH REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL]

id0517h2100000

Note
- The M position switch is built into the selector lever component.

1. If the M position switch is replaced, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)

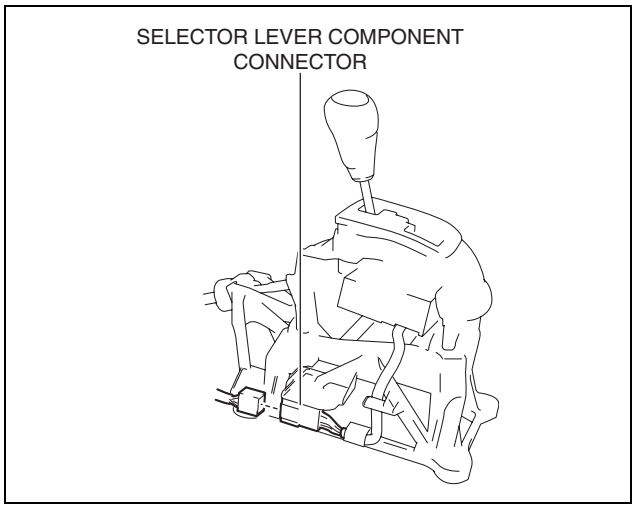
UP SWITCH INSPECTION [FW6A-EL, FW6AX-EL]

id0517h2600500

Continuity Inspection

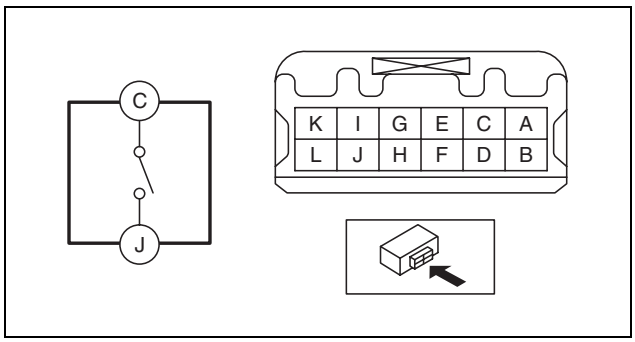
Note
- The up switch is built into the selector lever component.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the front console. (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
3. Disconnect the selector lever component connector.



ac5wzw0000078

4. Verify that the continuity between selector lever component terminals C and J.
   - If not as verified, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)



ac5wzw0000078

Up switch specification

Test condition	Continuity
Selector lever is in the M position (+) side position.	Continuity
Selector lever is not in the M position (+) side position.	No continuity

UP SWITCH REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL]

id0517h2112200

Note
- The up switch is built into the selector lever component.

1. If the up switch is replaced, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

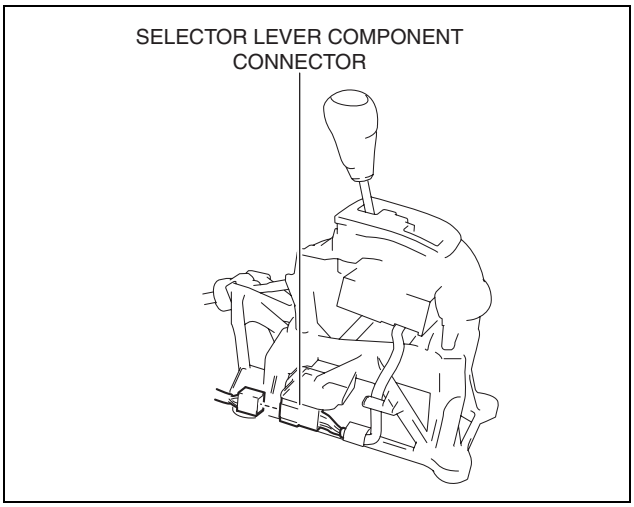
DOWN SWITCH INSPECTION [FW6A-EL, FW6AX-EL]

id0517h2600600

Continuity Inspection

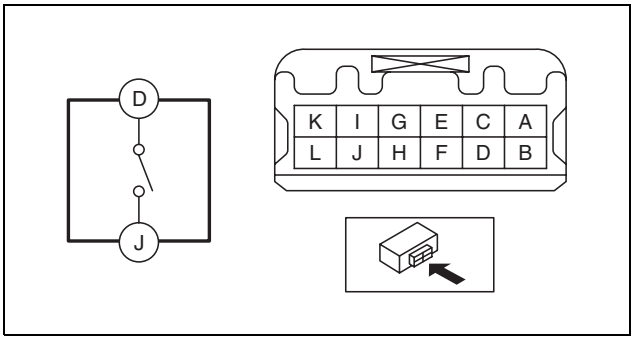
Note
- The down switch is built into the selector lever component.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the front console. (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
3. Disconnect the selector lever component connector.



ac5wzw0000078

4. Verify that the continuity between selector lever component terminals D and J.
   - If not as verified, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)



ac5wzw0000078

Down switch specification

Test condition	Continuity
Selector lever is in the M position (–) side position.	Continuity
Selector lever is not in the M position (–) side position.	No continuity

DOWN SWITCH REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL]

id0517h2112300

Note
- The down switch is built into the selector lever component.

1. If the down switch is replaced, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

COUPLER COMPONENT REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL]

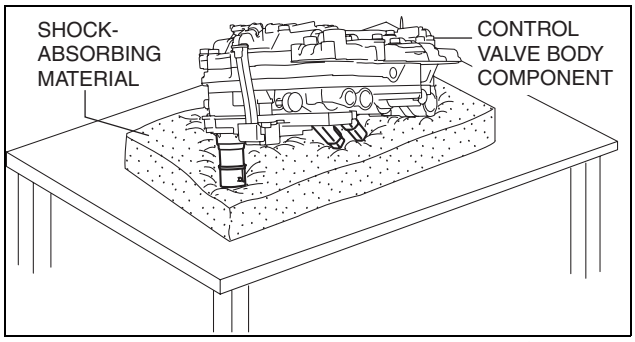
id0517h2112400

Warning

- **A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool.**
- **Always wear protective eye wear when using the air compressor. If the air compressor is used, any particles of dirt or soiling could spatter and get into the eyes.**

Caution

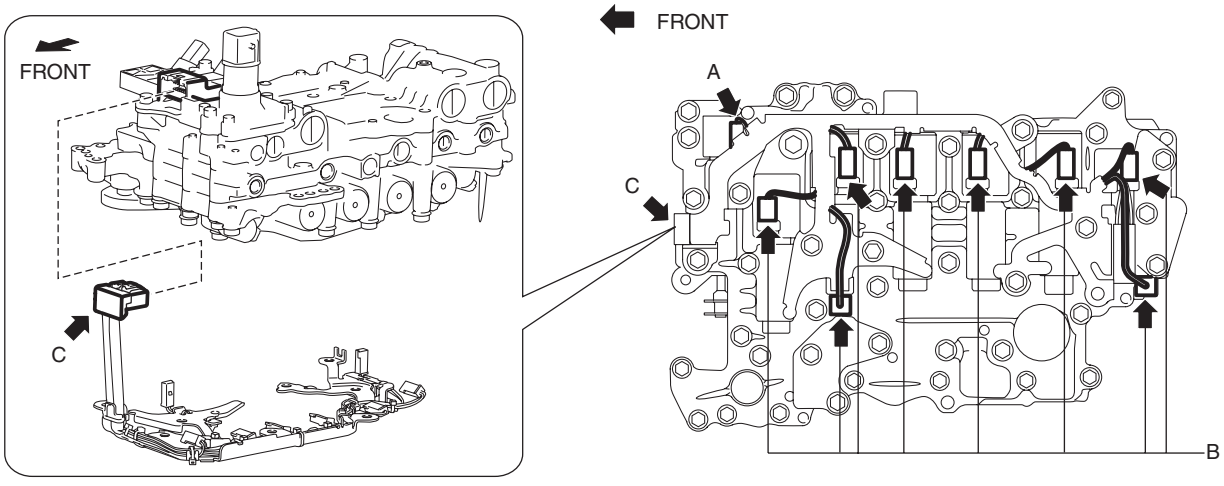
- **Placing the control valve body connector side pointed downward could damage the control valve body connector part or sensor. If the servicing can only be performed by pointing the control valve body connector side downward, spread shock-absorbing material, which does not produce dust or foreign matter, and place the control valve body connector part and sensor on the table so that they do not directly contact the table.**



1. Select the selector lever to P position.
2. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
3. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
4. Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.
5. Remove the air cleaner component. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
6. Remove the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
7. Remove the oil seal (control valve body). (See 05-17A-63 OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [FW6A-EL, FW6AX-EL].)
8. Disconnect the coupler component connectors.

Caution

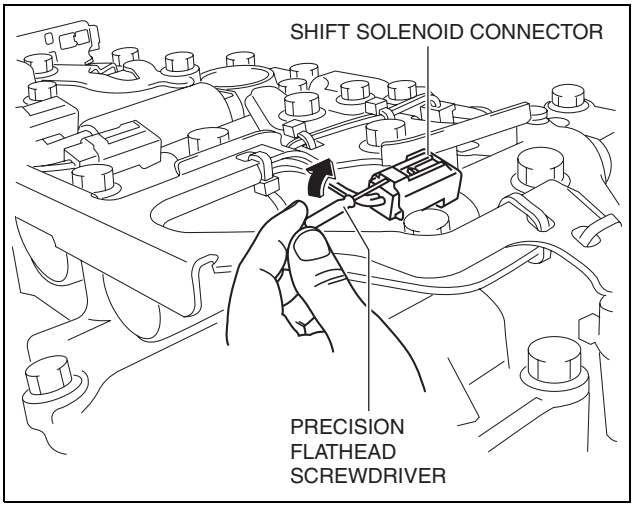
- **Do not scratch the shift solenoid, shift solenoid connector, oil pressure switch, and oil pressure switch connector with the precision flathead screwdriver.**
- **When disconnecting connectors, grasp the connectors, not the wiring harnesses. Otherwise, the wiring harnesses may be pulled out of the connector causing poor contact.**



CONNECTOR A:ON/OFF SOLENOID
CONNECTOR B:SHIFT SOLENOID /OIL PRESSURE SWITCH
CONNECTOR C:TCM

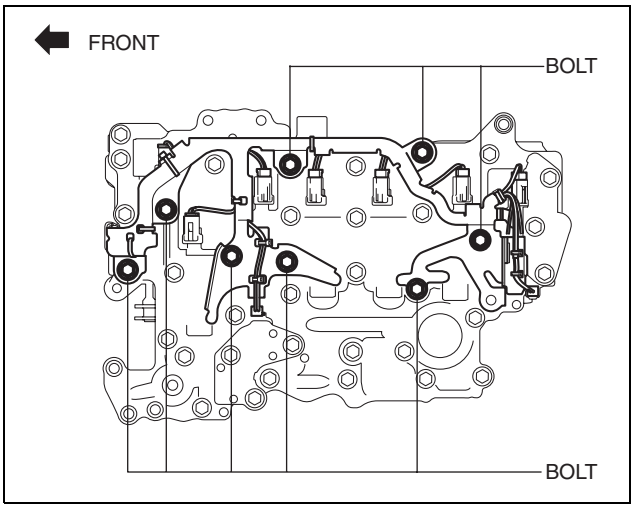
AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

(1) Disconnect connector A and connector C by pressing the connector tab with your fingers.
(2) Insert a precision flathead screwdriver and move it in the direction of the arrow to disconnect connector B as shown in the figure.



am3zzw0001264

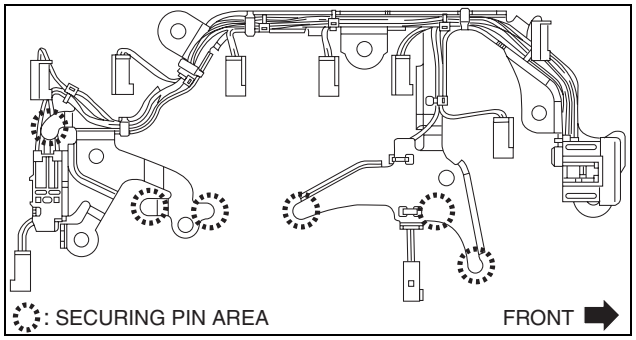
9. Remove the coupler component.



am3uuw0000916

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

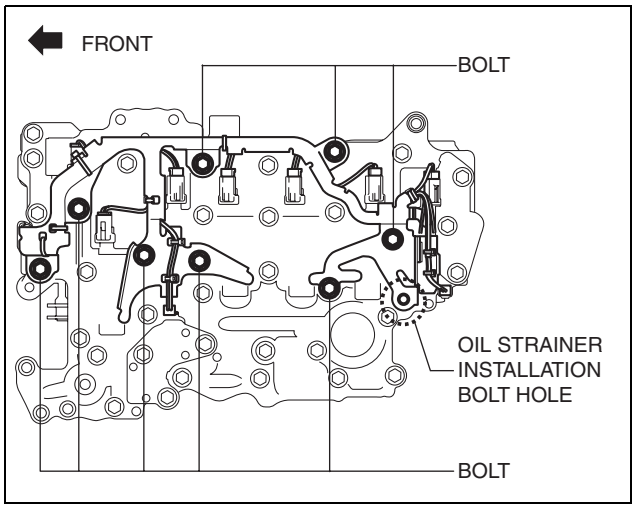
Caution
- **Because there are solenoid valve securing pins in the areas circled with a dotted line shown in the figure. Always verify that the solenoid valve securing pins are on the control valve body when installing the coupler component.**



am3zzw0001265

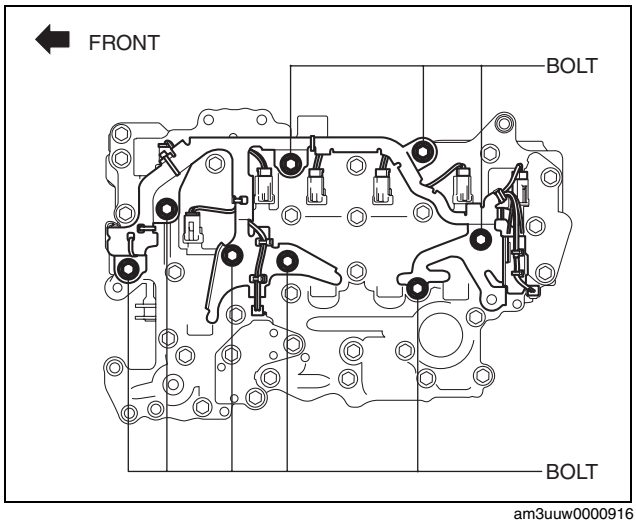
10. Temporarily install the coupler component so that the oil strainer installation bolt hole does not deviate.
11. After verifying that the oil strainer installation bolt hole is not deviated, install the coupler component.

Caution
- **After assembling the coupler component, verify that shift solenoids No.1, 2, 3, 4, the pressure control solenoid, and the TCC control solenoid cannot be pulled out from the control valve body.**



am3uuw0000916

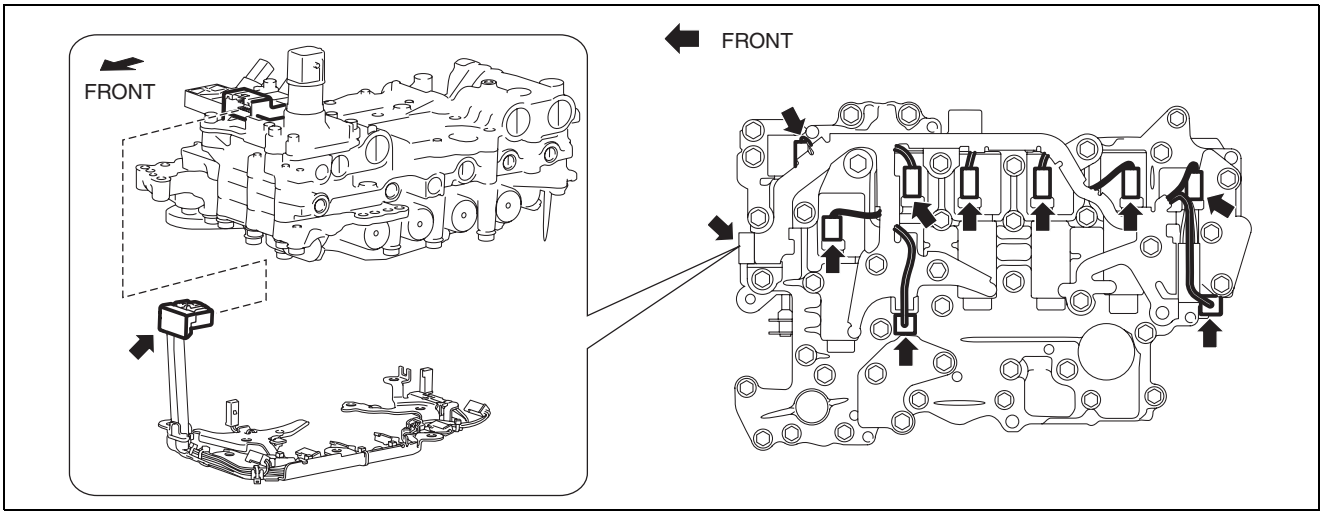
Tightening torque
9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}



am3uuw0000916

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

12. Connect the coupler component connectors.



am3uuw0000916

13. Install the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
14. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
15. Install the oil seal (control valve body). (See 05-17A-63 OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [FW6A-EL, FW6AX-EL].)
16. Install the hose clamp. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
17. Connect the control valve body connector. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)

Caution

- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Verify that there is no fluid or foreign matter adhering to the connector before connecting the connector.**
- **Insert the connector straight as the connector terminal could be damaged.**
- **Rotate the connector lever until a click is heard.**

18. Add the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
19. Install the air cleaner component. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
20. Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
21. Perform the “Mechanical System Test”. (See 05-17A-4 MECHANICAL SYSTEM TEST [FW6A-EL, FW6AX-EL].)

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL]

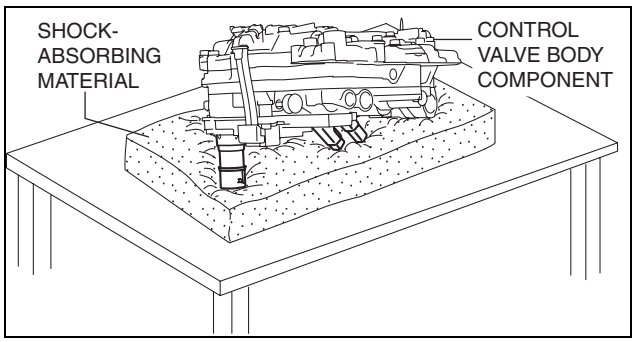
id0517h2112600

Warning

- **A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool.**
- **Always wear protective eye wear when using the air compressor. If the air compressor is used, any particles of dirt or soiling could spatter and get into the eyes.**

Caution

- **If the oil pressure switch has been replaced, perform initial learning. (See 05-17A-74 INITIAL LEARNING [FW6A-EL, FW6AX-EL].)**
- **Placing the control valve body connector side pointed downward could damage the control valve body connector part or sensor. If the servicing can only be performed by pointing the control valve body connector side downward, spread shock-absorbing material, which does not produce dust or foreign matter, and place the control valve body connector part and sensor on the table so that they do not directly contact the table.**

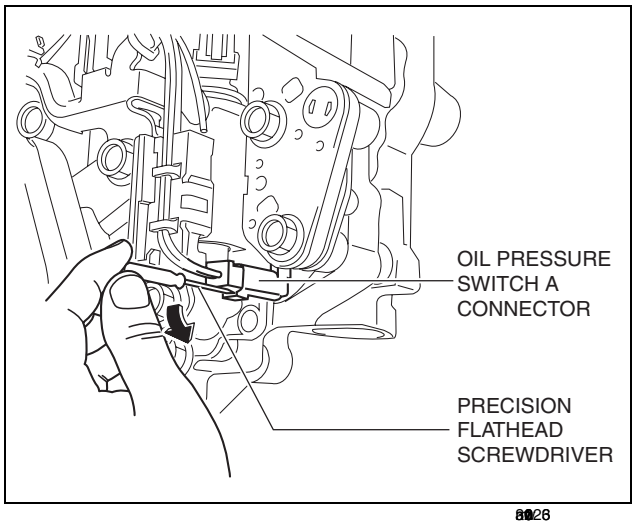


Oil Pressure Switch A

1. Select the selector lever to P position.
2. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
3. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
4. Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.
5. Remove the air cleaner component. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
6. Remove the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
7. Remove the oil seal (control valve body). (See 05-17A-63 OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [FW6A-EL, FW6AX-EL].)
8. Insert a precision flathead screwdriver and move it in the direction of the arrow to disconnect the oil pressure switch A connector as shown in the figure.

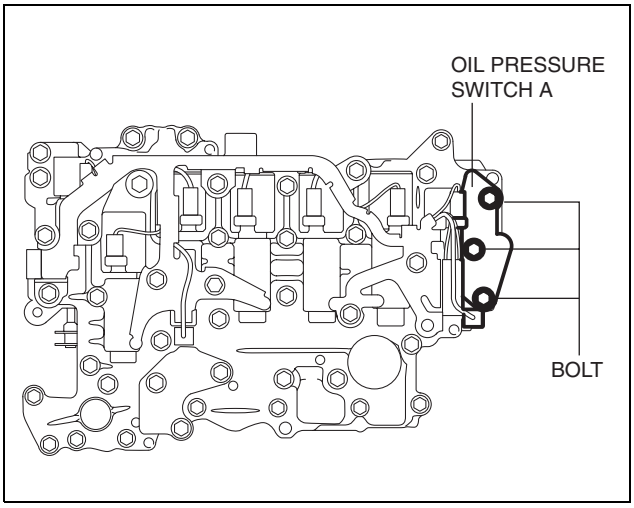
Caution

- **Do not scratch the oil pressure switch A and oil pressure switch connector A with the precision flathead screwdriver.**
- **When disconnecting connectors, grasp the connectors, not the wiring harnesses. Otherwise, the wiring harnesses may be pulled out of the connector causing poor contact.**



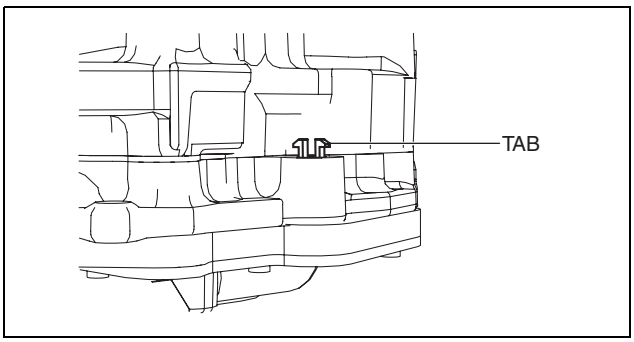
AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

9. Remove the oil pressure switch A fitting bolts.



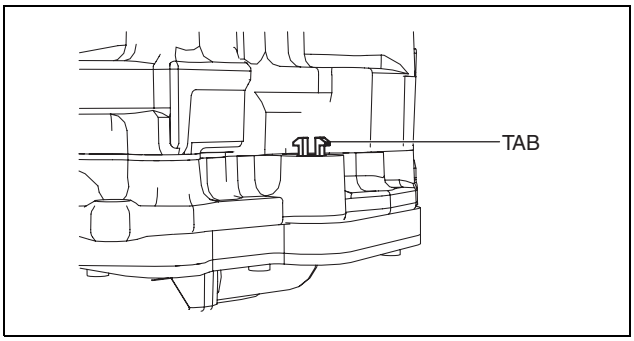
am3uuw0000872

10. Detach tab shown in the figure and remove the oil pressure switch A from the control valve body.



am3uuw0000901

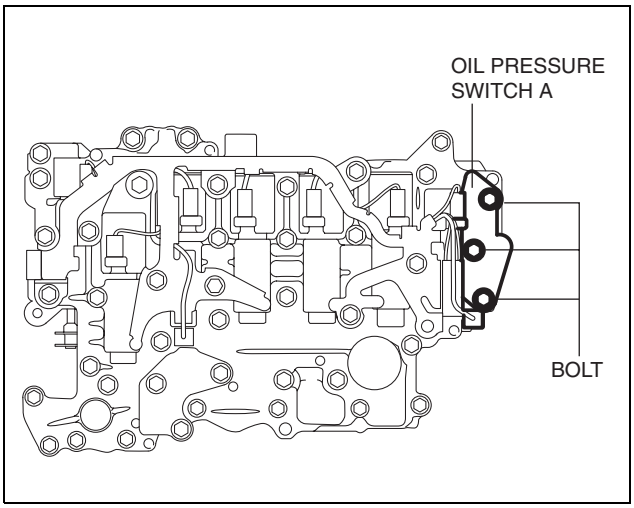
11. Install the oil pressure switch A to the control valve body.
12. Verify that the tab is attached correctly.



am3uuw0000901

13. Install the oil pressure switch A fitting bolts.

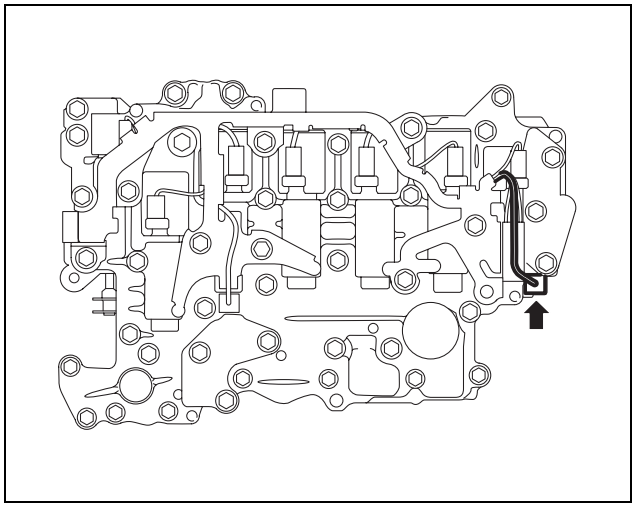
Tightening torque
9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}



am3uuw0000872

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

14. Connect the oil pressure switch A connector.
15. Install the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
16. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/ INSTALLATION.)
17. Install the oil seal (control valve body). (See 05-17A-63 OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [FW6A-EL, FW6AX-EL].)
18. Install the hose clamp. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
19. Connect the control valve body connector. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)



am3uuw0000871

Caution
- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Verify that there is no fluid or foreign matter adhering to the connector before connecting the connector.**
- **Insert the connector straight as the connector terminal could be damaged.**
- **Rotate the connector lever until a click is heard.**

20. Add the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
21. Install the air cleaner component. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
22. Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
23. Perform the “Initial Learning” (oil pressure switch A Replacement). (See 05-17A-74 INITIAL LEARNING [FW6A-EL, FW6AX-EL].)
24. Perform the “Mechanical System Test”. (See 05-17A-4 MECHANICAL SYSTEM TEST [FW6A-EL, FW6AX-EL].)

Oil Pressure Switch B

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
2. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
3. Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.
4. Drain the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
5. Remove the oil pan.

Caution
- **To avoid damaging the control valve body, if there is a large amount of foreign material at the bottom of the oil pan when the oil pan is removed, replace the oil strainer with a new one.**
- **If there is not a large amount of foreign material at the bottom of the oil pan, the oil strainer does not have to be replaced.**

Note
- Always use new oil pan installation bolts when re-installing the oil pan because the oil pan installation bolts cannot be reused.

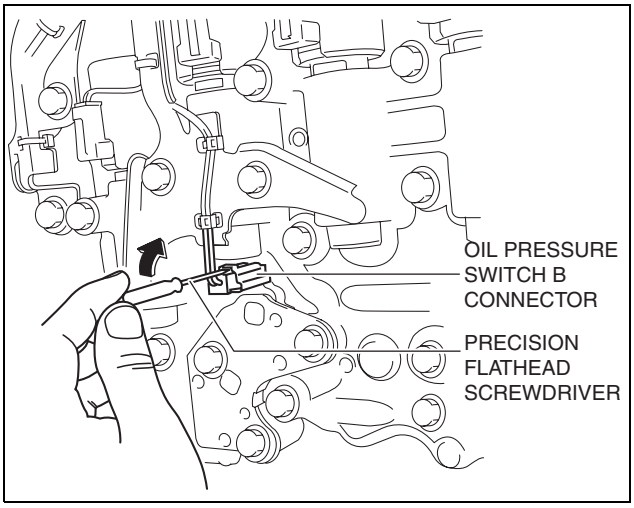
6. Remove the oil strainer. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
7. Remove the oil strainer O-ring. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

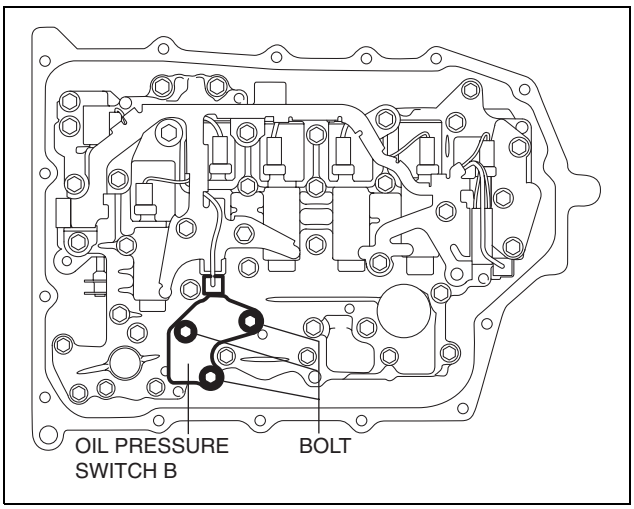
8. Insert a precision flathead screwdriver and move it in the direction of the arrow to disconnect the oil pressure switch B connector as shown in the figure.

Caution

- **Do not scratch the oil pressure switch B and oil pressure switch connector B with the precision flathead screwdriver.**
- **When disconnecting connectors, grasp the connectors, not the wiring harnesses. Otherwise, the wiring harnesses may be pulled out of the connector causing poor contact.**

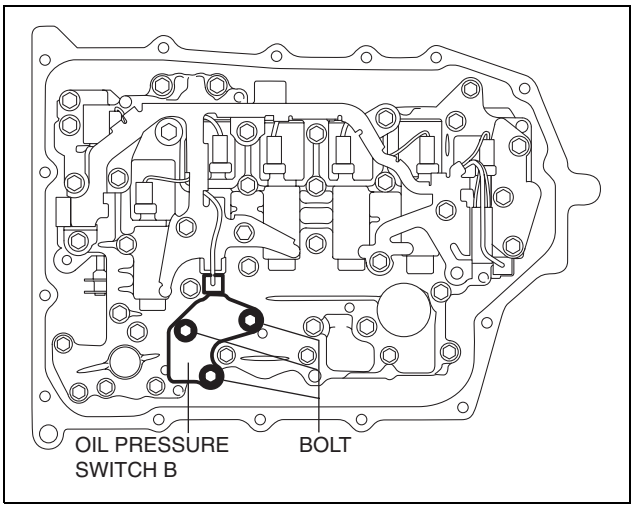


9. Remove the oil pressure switch B.



10. Install the oil pressure switch B.

Tightening torque
9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}

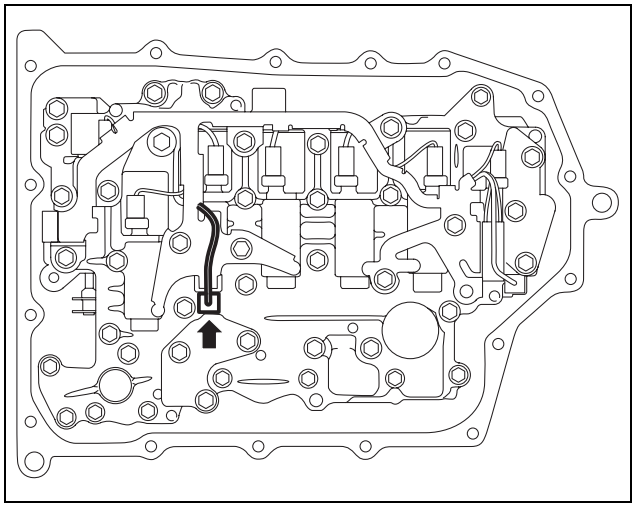


AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

11. Connect the oil pressure switch B connector.
12. Install the oil strainer O-ring. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)

Note
- If there is a large amount of foreign material at the bottom of the oil pan, replace the oil strainer with a new one.

13. Install the oil strainer. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)

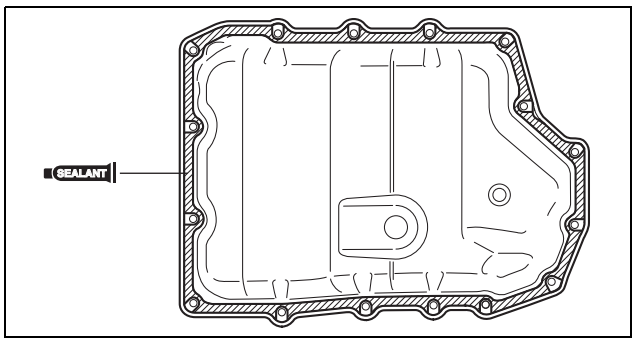


am3uuw0000872

14. Apply a light coat of silicon sealant (TB1217E) to the contact surfaces of the oil pan and transaxle case.

Caution
- **Clean any remaining silicone sealant on the contact surface of the transaxle case and oil pan, and degrease the sealant area. Otherwise, oil could leak.**

15. Install the oil pan with new bolts before the applied sealant starts to harden.



am3uuw0000828

Tightening torque
8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

16. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
17. Add the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
18. Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
19. Perform the “Initial Learning” (oil pressure switch B Replacement). (See 05-17A-74 INITIAL LEARNING [FW6A-EL, FW6AX-EL].)
20. Perform the “Mechanical System Test”. (See 05-17A-4 MECHANICAL SYSTEM TEST [FW6A-EL, FW6AX-EL].)

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

ON/OFF SOLENOID REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL]

id0517h2117100

Warning
- **A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool.**
- **Always wear protective eye wear when using the air compressor. If the air compressor is used, any particles of dirt or soiling could spatter and get into the eyes.**

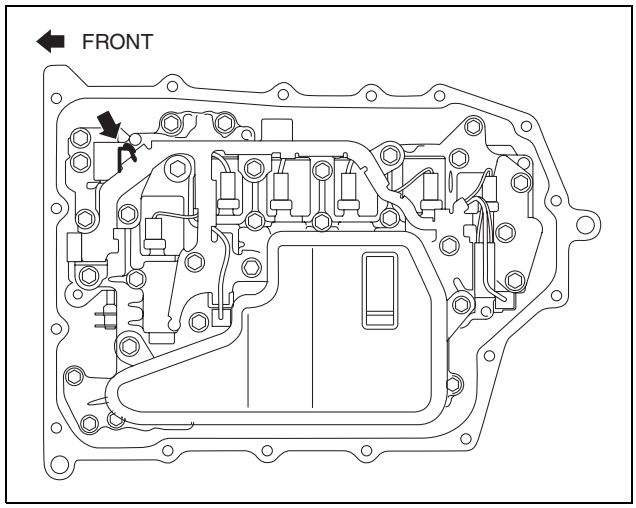
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
2. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
3. Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.
4. Drain the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
5. Remove the oil pan.

Caution
- **To avoid damaging the control valve body, if there is a large amount of foreign material at the bottom of the oil pan when the oil pan is removed, replace the oil strainer with a new one.**
- **If there is not a large amount of foreign material at the bottom of the oil pan, the oil strainer does not have to be replaced.**

Note
- Always use new oil pan installation bolts when re-installing the oil pan because the oil pan installation bolts cannot be reused.

6. Disconnect the ON/OFF solenoid connector.

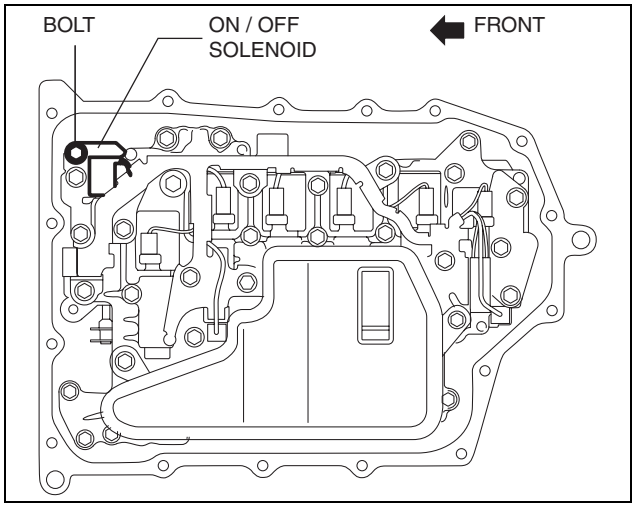
Note
- Disconnect the ON/OFF solenoid connector by pressing the connector tab with your fingers.



am3uuw0000838

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

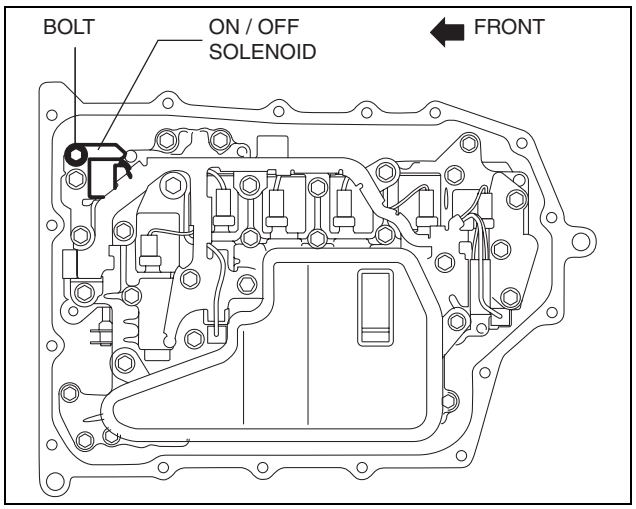
7. Remove the ON/OFF solenoid.



am3uuw0000838

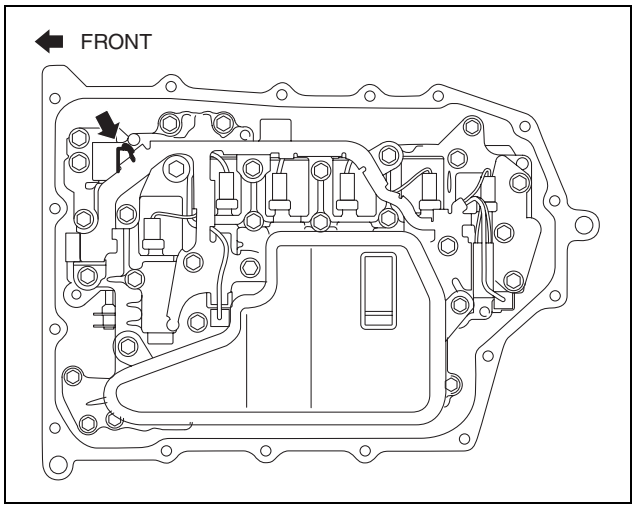
8. Install the ON/OFF solenoid.

Tightening torque
9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}



am3uuw0000838

9. Connect the ON/OFF solenoid connector.

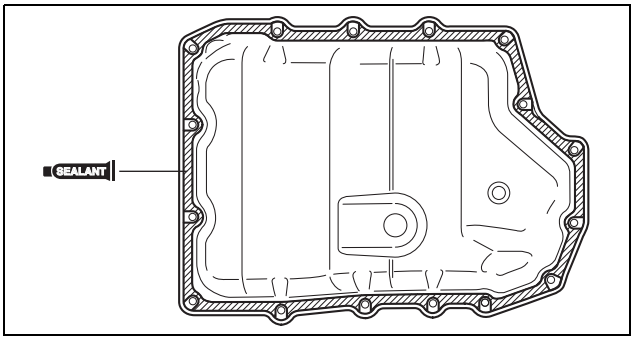


am3uuw0000838

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

10. Apply a light coat of silicon sealant (TB1217E) to the contact surfaces of the oil pan and transaxle case.

Caution
- **Clean any remaining silicone sealant on the contact surface of the transaxle case and oil pan, and degrease the sealant area. Otherwise, oil could leak.**



am3uuw0000828

11. Install the oil pan with new bolts before the applied sealant starts to harden.

Tightening torque
8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

12. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
13. Add the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
14. Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
15. Perform the “Mechanical System Test”. (See 05-17A-4 MECHANICAL SYSTEM TEST [FW6A-EL, FW6AX-EL].)

05

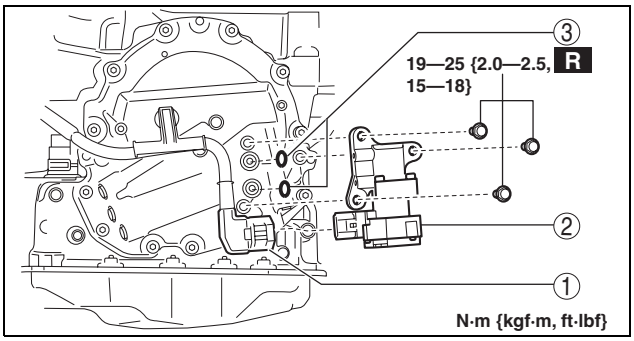
ELECTRIC AT OIL PUMP REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL]

id0517h2117600

Caution
- **Do not drop or apply a shock to the electric AT oil pump. Replace the electric AT oil pump if it has been dropped or received an impact.**
- **Do not disassemble the electric AT oil pump. Replace the electric AT oil pump if it has been disassembled.**
- **Make sure that there is no silicone sealant or other foreign matter in the electric AT oil pump and transaxle. Otherwise, it could cause a malfunction.**

1. Turn the steering wheel left until it locks.
2. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
3. Remove the splash shield (LH). (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.

1	Electric AT oil pump connector
2	Electric AT oil pump (See05-17A-28 Electric AT Oil Pump Installation Note.)
3	O-ring



am3zzw0001264

5. Install in the reverse order of removal.
6. Adjust the ATF level. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) ADJUSTMENT [FW6A-EL, FW6AX-EL].)

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

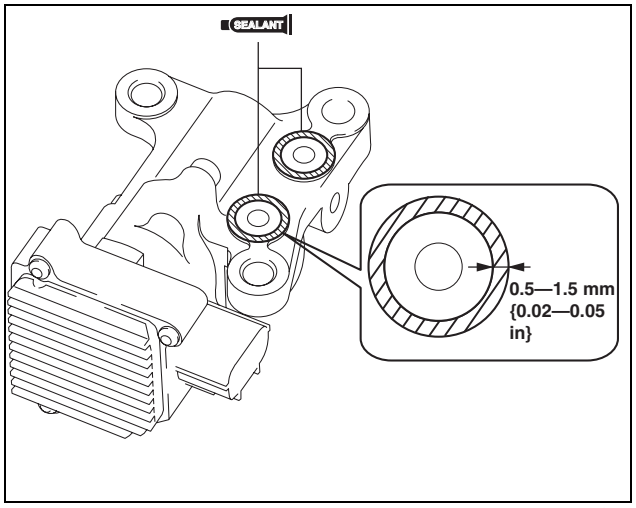
Electric AT Oil Pump Installation Note

1. Apply a light coat of silicon sealant (TB1217E) to the contact surfaces of the electric AT oil pump and end cover.

   Caution
   - **If any old sealant gets into the side cover during installation of the electric AT oil pump, trouble may occur in the end cover and electric AT oil pump, and clean with cleaning fluids.**
   - **Do not damage the O-ring installation area and the sealing surface.**
   - **To apply silicone sealant securely, clean away the oil on the sealing surface before applying silicone sealant.**

2. Install the electric AT oil pump before the applied sealant starts to harden.

   Tightening torque
   19—25 N·m {2.0—2.5 kgf·m, 15—18 ft·lbf}



am3zzw0001265

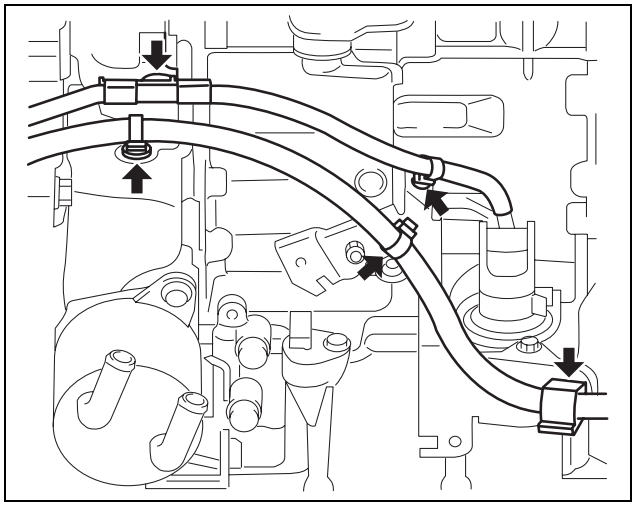
AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL]

id0517h21172h1

Caution
- **Performing the following procedures without first removing the front ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, disconnect the front ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor will not be pulled by mistake while servicing the vehicle.**
- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**

Removal

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
2. Remove the air cleaner and air hose as a single unit. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the battery tray and PCM component. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Disconnect the wiring harness clip from the transaxle.
5. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)



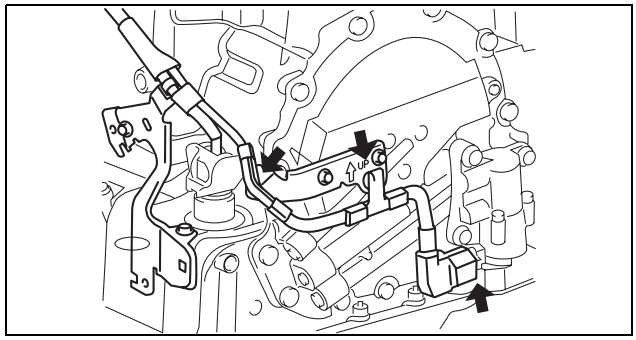
ac5uuw00000219

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

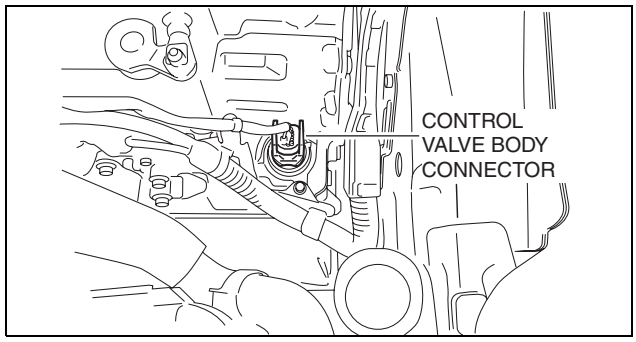
6. Disconnect the electric AT oil pump connector and electric AT oil pump harness from the transaxle. (With electric AT oil pump)
7. Disconnect the control valve body connector.

Caution

- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**

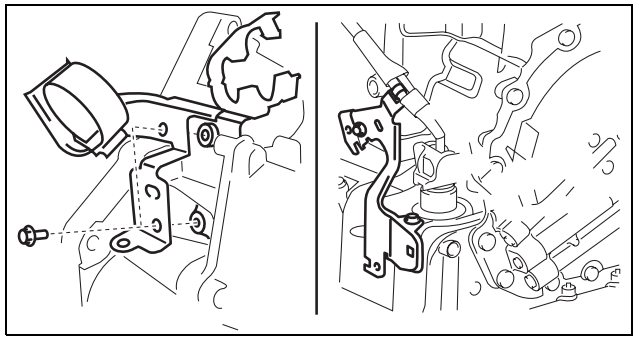


ac5wzw0000091



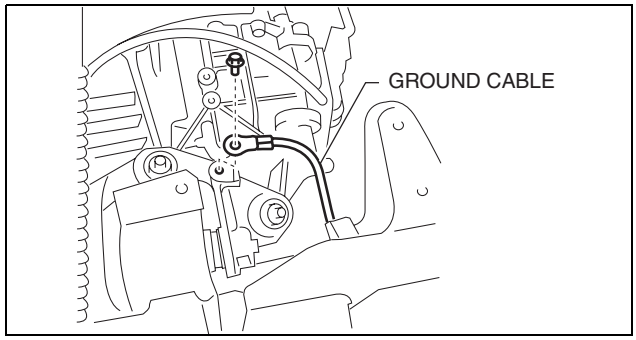
ac5uuw00000223

8. Remove the bracket from the transaxle.



ac5uuw00000224

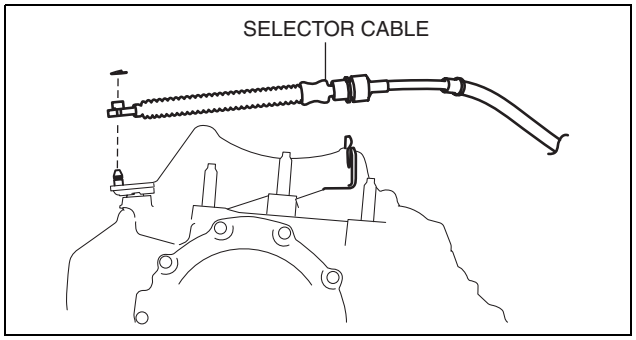
9. Disconnect the ground cable.



ac5uuw00000220

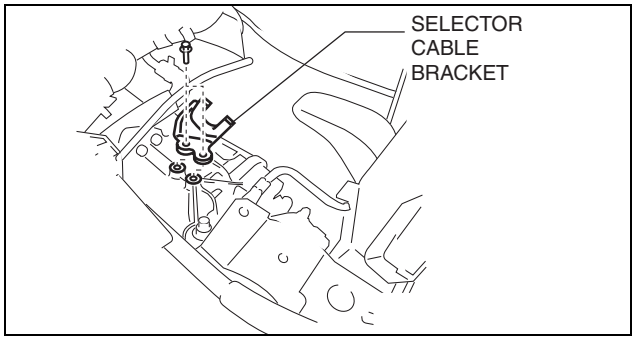
AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

10. Disconnect the selector cable from the transaxle.



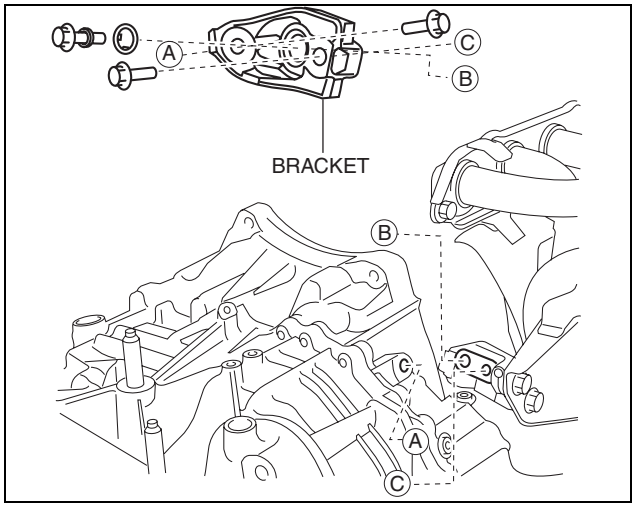
ac5uuw00000221

11. Remove the selector cable bracket.



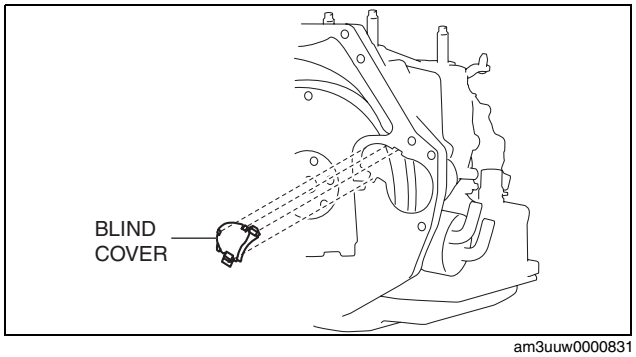
ac5uuw00000222

12. Remove the bracket.
13. Disconnect the breather hose from the transaxle.
14. Remove the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/ INSTALLATION.)
15. Disconnect the intermediate shaft from the steering gear and linkage. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/ INSTALLATION.)
16. Remove the front tires. (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
17. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/ INSTALLATION.)
18. Remove the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/ INSTALLATION.)
19. Drain the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)



ac5wzw0000246

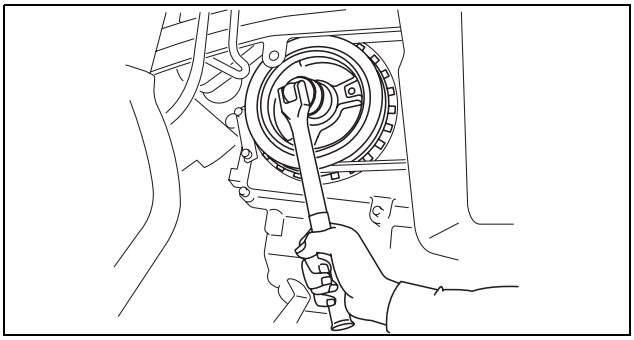
20. Disconnect the oil cooler from the transaxle with the hose connected. (Except Automatic Transaxle Replacement) (See 05-17A-66 OIL COOLER REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
21. Disconnect the water hose from the oil cooler. (Automatic Transaxle Replacement) (See 05-17A-66 OIL COOLER REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
22. Remove the starter. (See 01-19A-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
23. Remove the blind cover.



am3uuw0000831

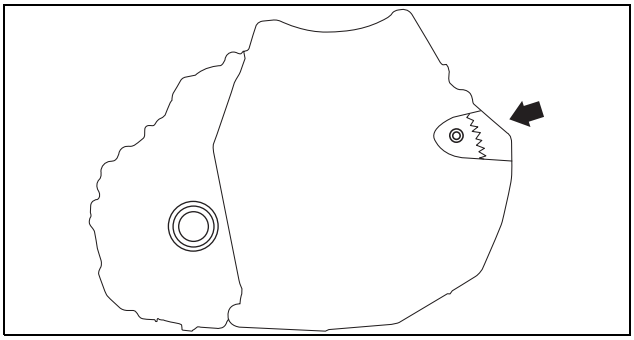
AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

24. Hold the crankshaft pulley to prevent drive plate from rotating.



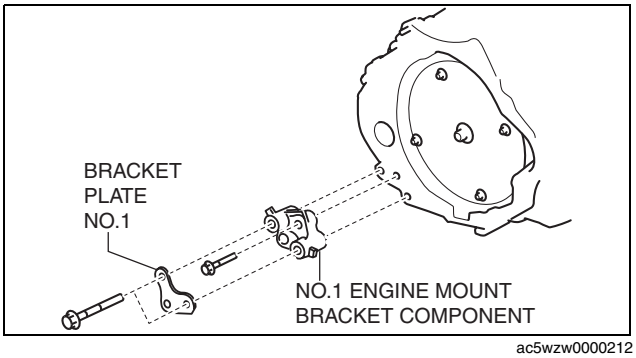
am3uuw0000258

25. Remove the torque converter nuts from the starter installation hole.
26. Disconnect the front ABS wheel-speed sensors from the steering knuckles. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
27. Disconnect the clips securing the brake hose from the front shock absorbers. (See 04-11-30 BRAKE HOSE (FRONT) REMOVAL/INSTALLATION.)
28. Disconnect the tie-rod end ball joints from the steering knuckles. (See 06-13-16 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION.)



ac5uuw00000225

29. Disconnect the front lower arms from the steering knuckles. (See 02-13-7 FRONT LOWER ARM REMOVAL/INSTALLATION.)
30. Disconnect the front stabilizer control links from the front stabilizer. (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)
31. Disconnect the front drive shaft (LH) from the transaxle. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
32. Disconnect the front drive shaft (RH) from the transaxle. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
33. Remove the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
34. Remove the bracket plate No.1 and No.1 engine mount bracket component from the transaxle.

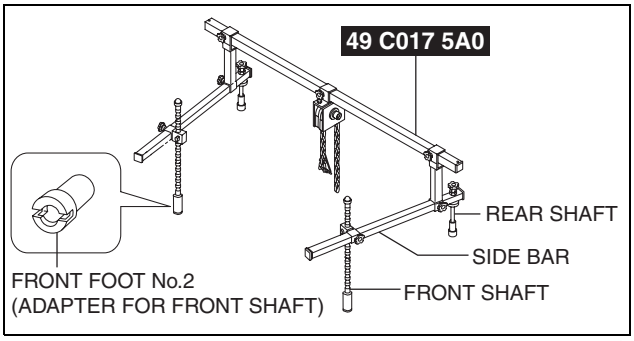


ac5wzw0000212

35. Install the **SST** using the following procedures.

Caution
- **Refer to the SST instruction manual for the basic handing procedure.**

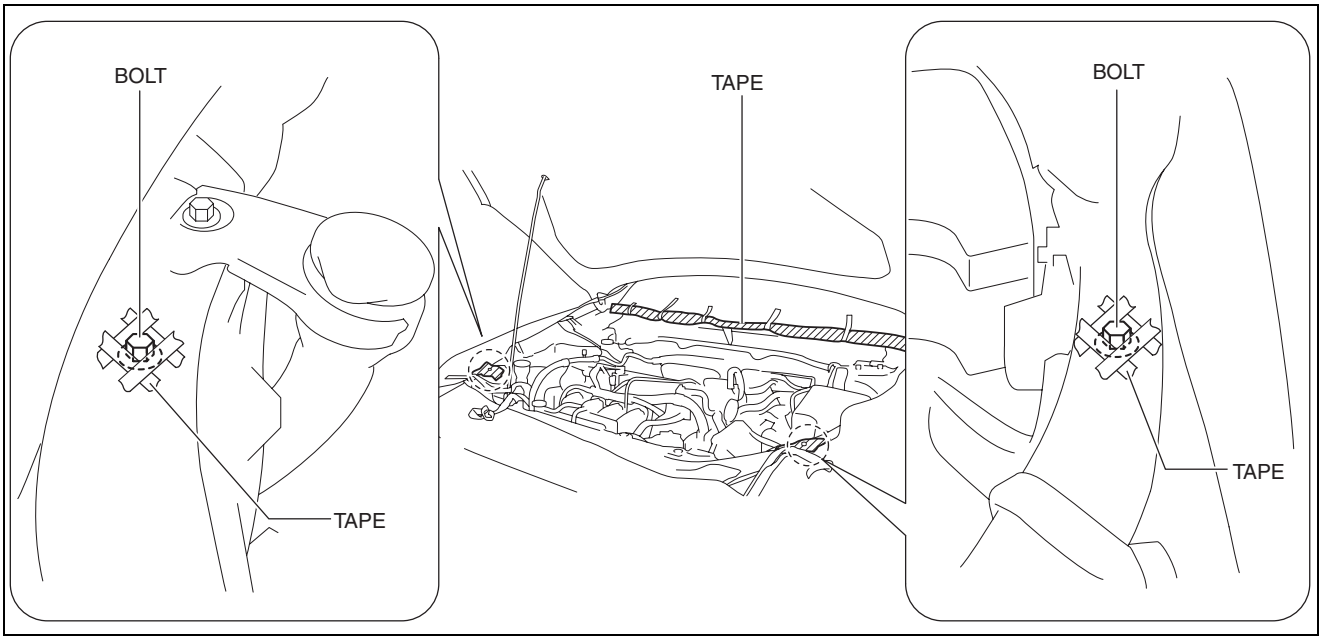
(1) Install one front foot No.2 to each of the left and right front shafts of the **SST**.
(2) Remove the windshield wiper arm and blade. (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
(3) Remove the cowl grille. (See 09-16-3 COWL GRILLE REMOVAL/INSTALLATION.)
(4) Remove the cowl panel. (See 09-10-41 COWL PANEL REMOVAL/INSTALLATION.)



ac5wzw0000212

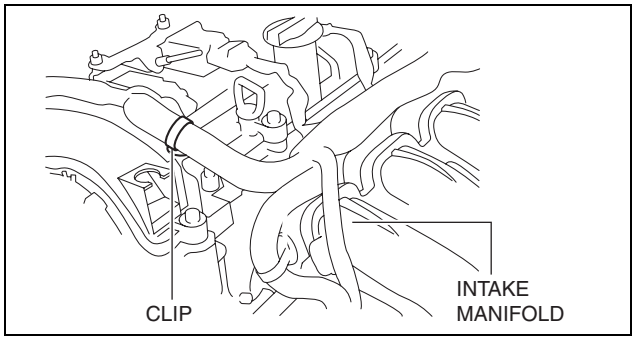
AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

(5) Protect the positions shown in the area using tape.

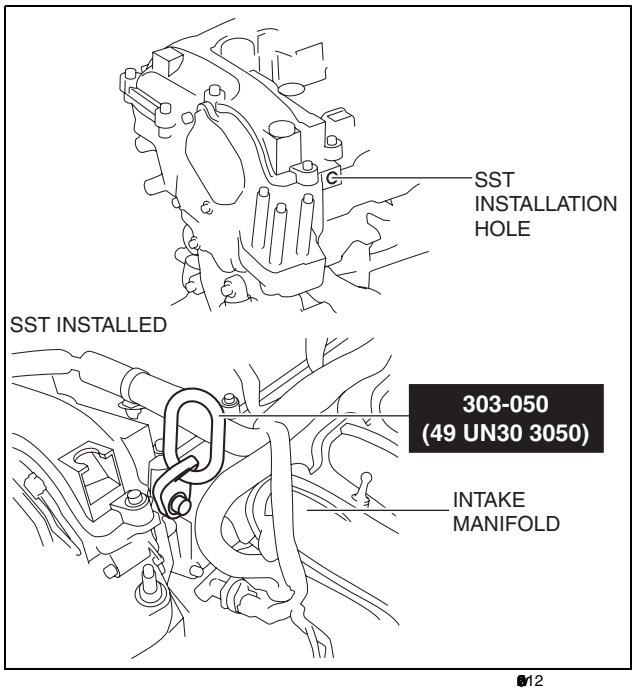


(6) To enable to install the **SST**, disconnect the clip shown in the figure and set the wiring harness aside.
(7) Install the **SST** using **part number 99794 1025** or an **M10—1.25**, length **25 mm {0.98 in}** bolt as shown in the figure.

Engine front side



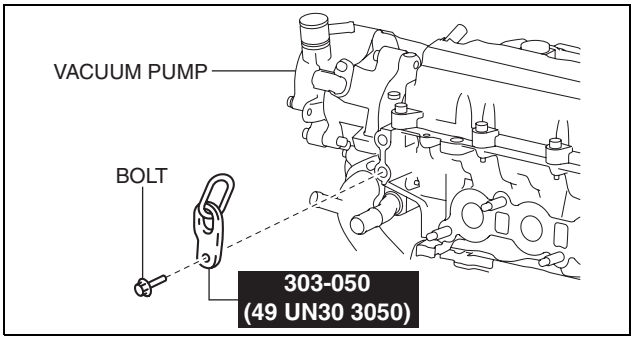
Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}



AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

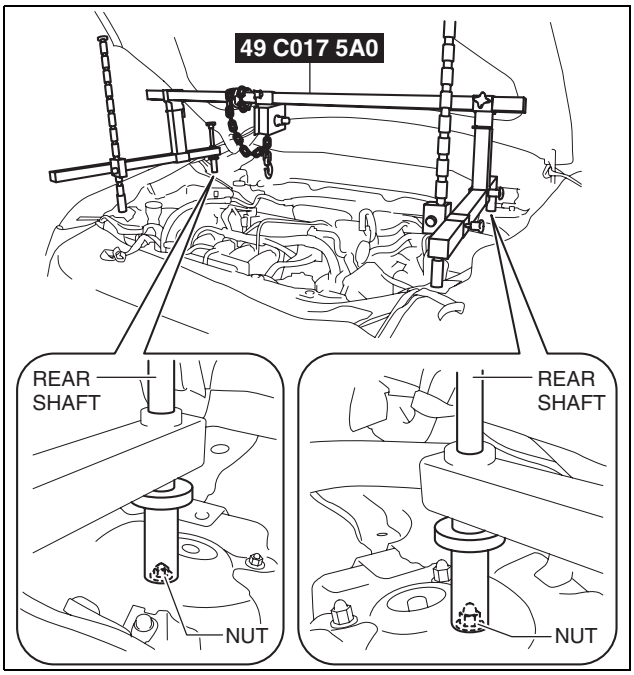
Engine rear side

Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}



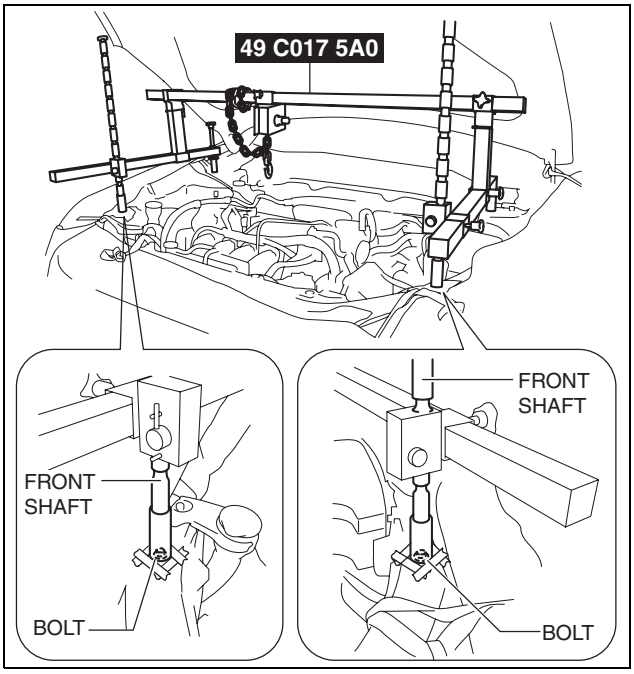
am3uuw0000830

(8) As shown in the figure, set the rear shafts of the **SST** to the left and right shock absorber nuts.



ac5uuw00000230

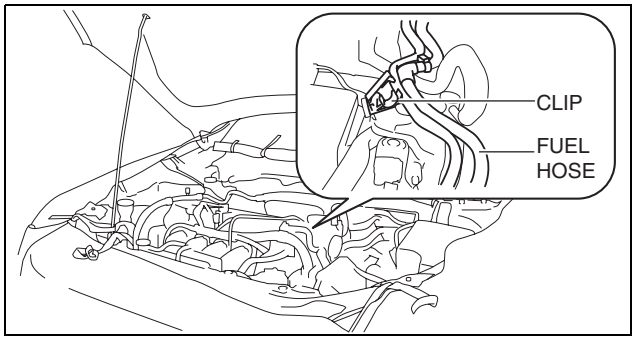
(9) As shown in the figure, set the front shafts of the **SST** to the left and right bolts.



ac5uuw00000238

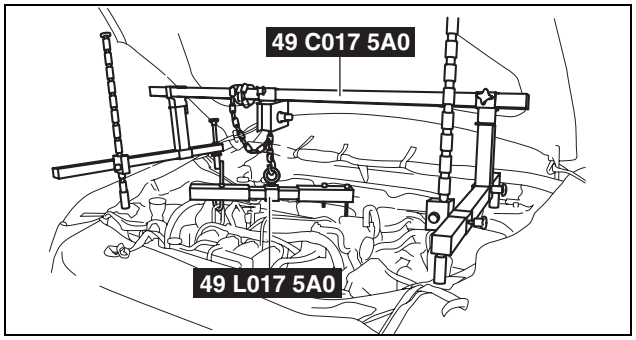
AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

(10)When assembling the **SST** (49 L017 5A0), disconnect the fuel hose from the clip shown in the figure to prevent interference between the fuel hose and **SST**.



ac5uuw00000232

(11)Install the **SST** (49 L017 5A0) to the **SST** (49 C017 5A0) as shown in the figure.



ac5uuw00000234

(12)Install the **SST** (49 L017 5A0) to the **SST** (49 UN30 3050) with the hook of the **SST** (49 L017 5A0) facing outward.
(13)Adjust the height of the left and right side bars so that they are leveled, then tighten each part of the **SST**.
(14)Apply tension to the chain to secure the engine.

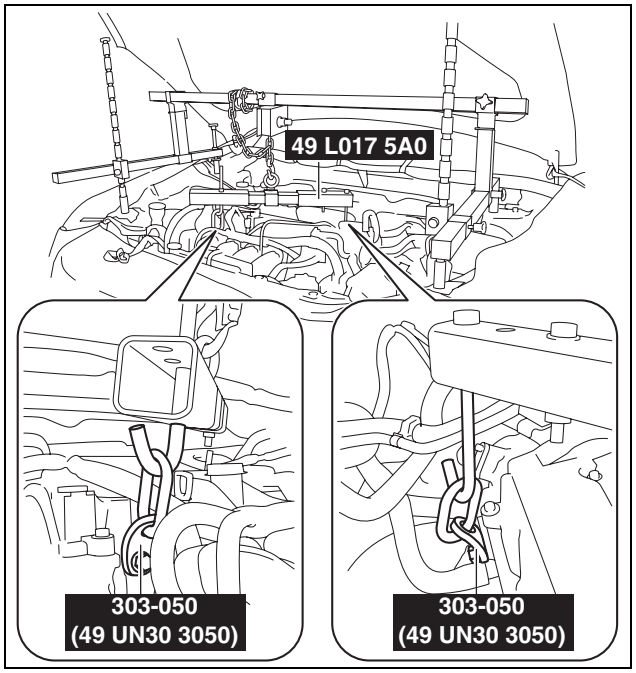
36. Remove in the order shown in the figure.

Warning

- **Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.**

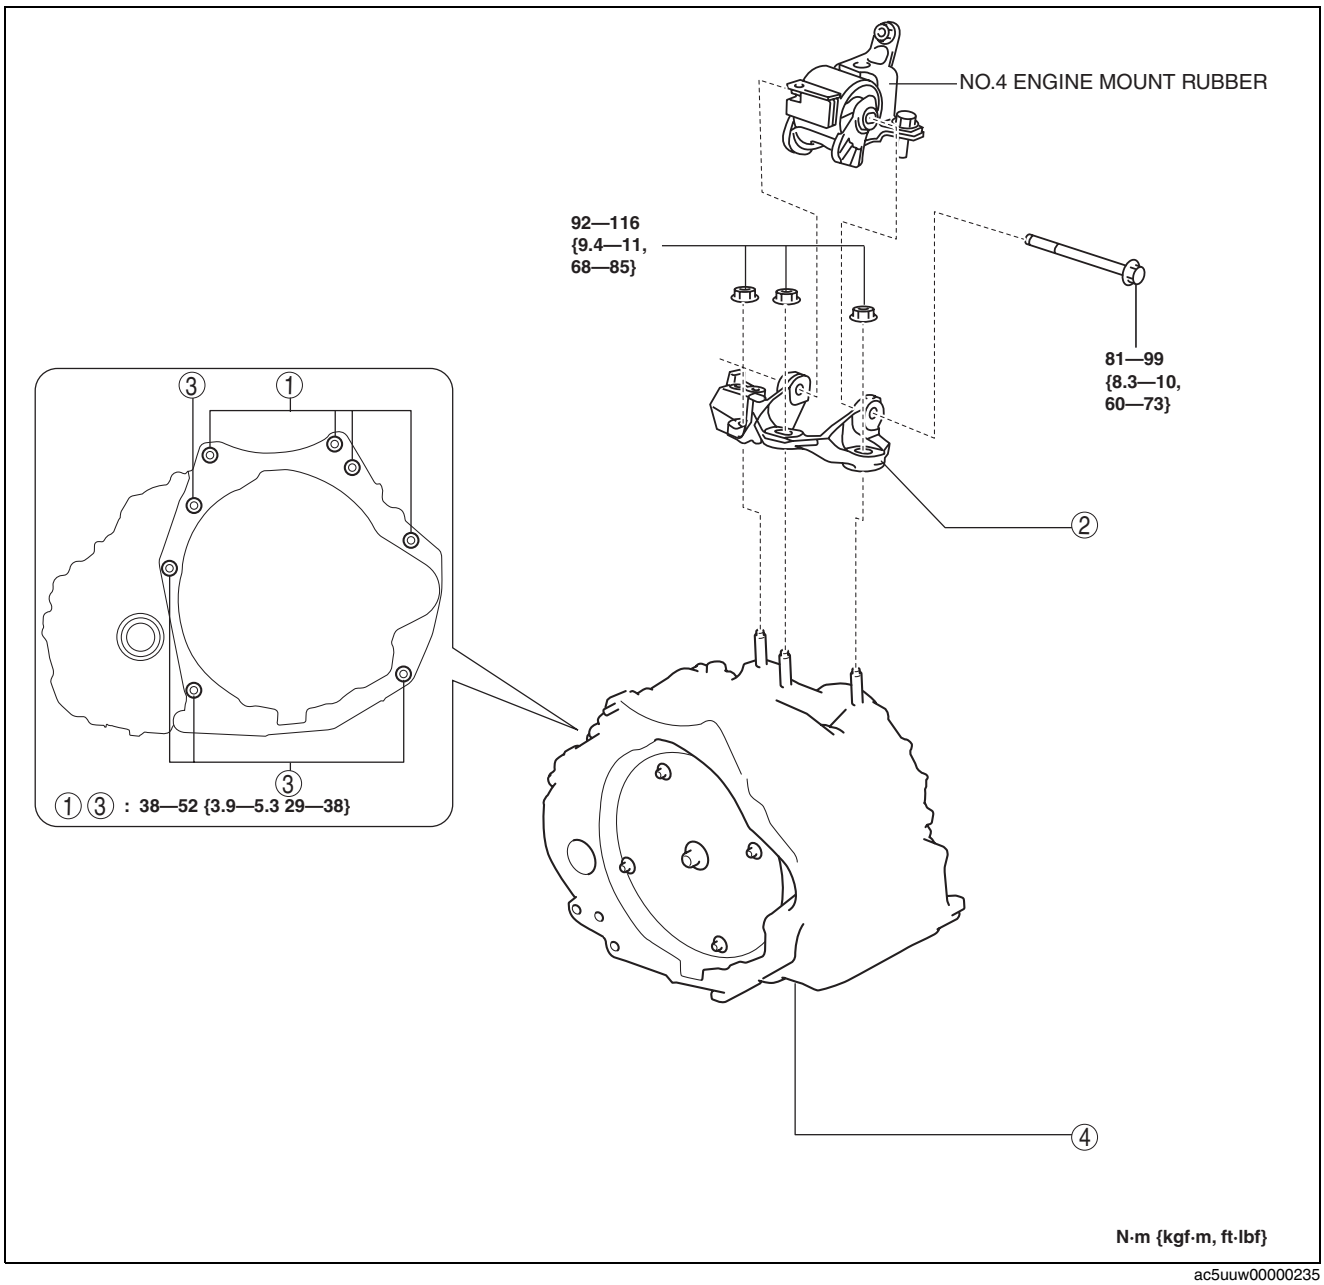
Caution

- **To prevent the torque converter and transaxle from separating, remove the transaxle without tilting it toward the torque converter.**



ac5uuw00000233

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]



ac5uuw00000235

1	Transaxle mounting bolts (upper side)
2	No.4 engine mount bracket (See 05-17A-36 No.4 engine mount bracket removal note.)
3	Transaxle mounting bolts (lower side) (See 05-17A-36 Transaxle mounting bolt removal note.)

4	Transaxle (See 05-17A-36 No.4 engine mount bracket removal note.) (See 05-17A-36 Transaxle mounting bolt removal note.)

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

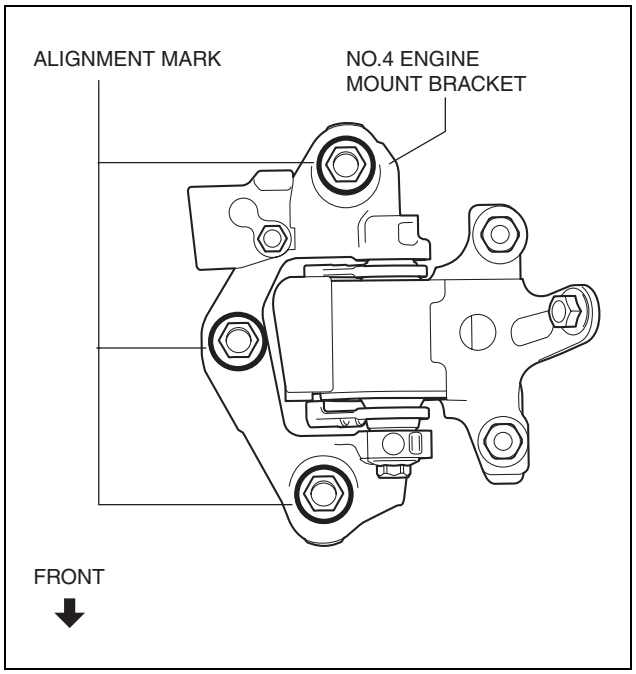
No.4 engine mount bracket removal note

Caution
- **A slot has been adopted for the No.4 engine mount bracket installation hole. If the No.4 engine mount bracket is deviated from the original position when installing the No.4 engine mount, engine noise or vibration could increase. When removing the No.4 engine mount, place alignment marks on the No.4 engine mount bracket so that they can be assembled to the same positions as before removal.**

1. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

   Note
   - Paint so that the outline of the nut is framed on the bracket side.

2. Remove the No.4 engine mount bracket.

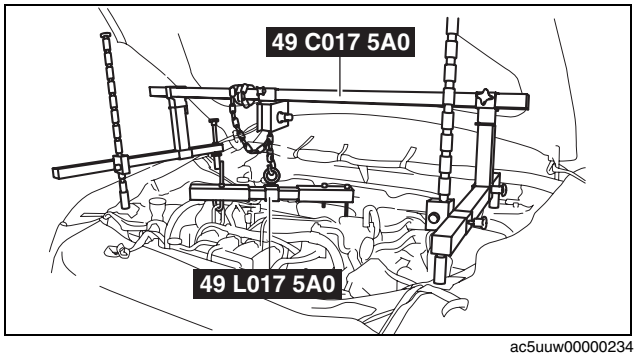


ac5wzw0000460

Transaxle mounting bolt removal note

Warning
- **Remove the transaxle carefully, holding it steady. If the transaxle falls it could be damaged or cause injury.**

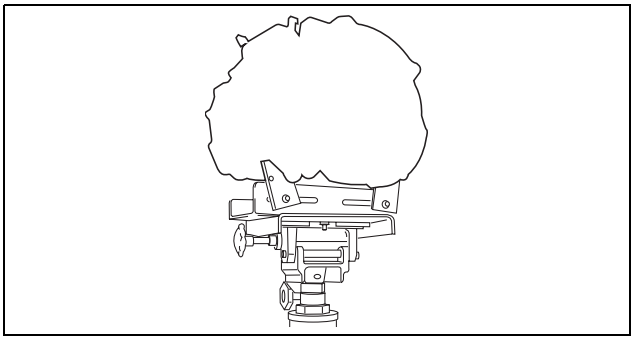
1. Adjust the **SST** and lean the engine toward the transaxle.



ac5uuw00000234

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

2. Support the transaxle on a jack.
3. Remove the transaxle mounting bolts (lower side).
4. Remove the transaxle.

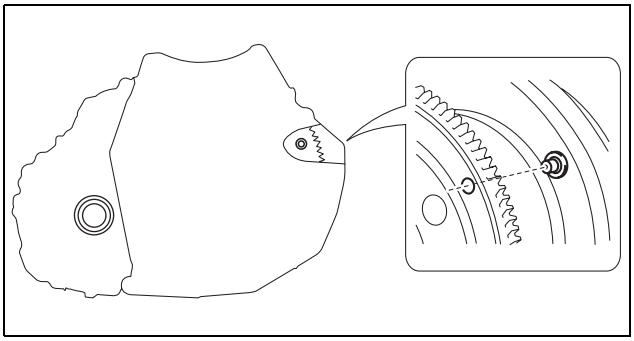


am3uuw0000258

Installation

Caution
- **Verify that the torque converter stud bolts are inserted into the drive plate bolt holes, and install the transaxle installation bolts. Otherwise, the drive plate could be damaged.**

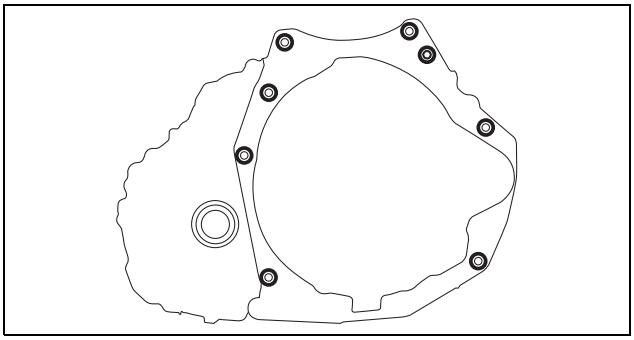
1. Verify that the torque converter stud bolts are inserted into the drive plate bolt holes from the starter installation hole.



am3uuw0000831

2. Install the transaxle mounting bolts.

Tightening torque
38—52 N·m {3.9—5.3 kgf·m, 29—38 ft·lbf}

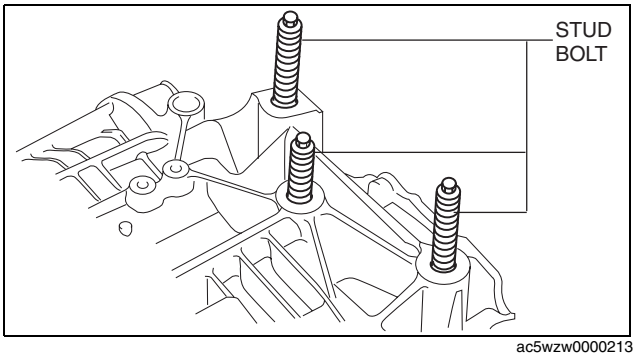


am3uuw0000918

3. Tighten the stud bolts for the transaxle.

Note
- If the No.4 engine mount bracket nut is loosened, tighten the stud bolts for the transaxle because they may be loosened.

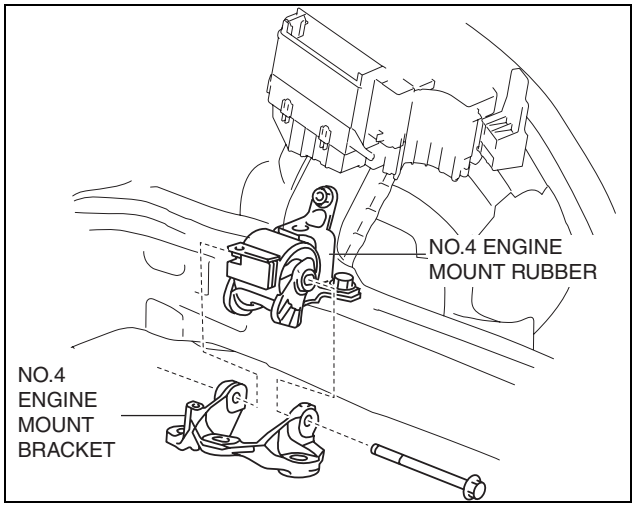
Tightening torque
15—25 N·m {1.6—2.5 kgf·m, 12—18 ft·lbf}



ac5wzw0000213

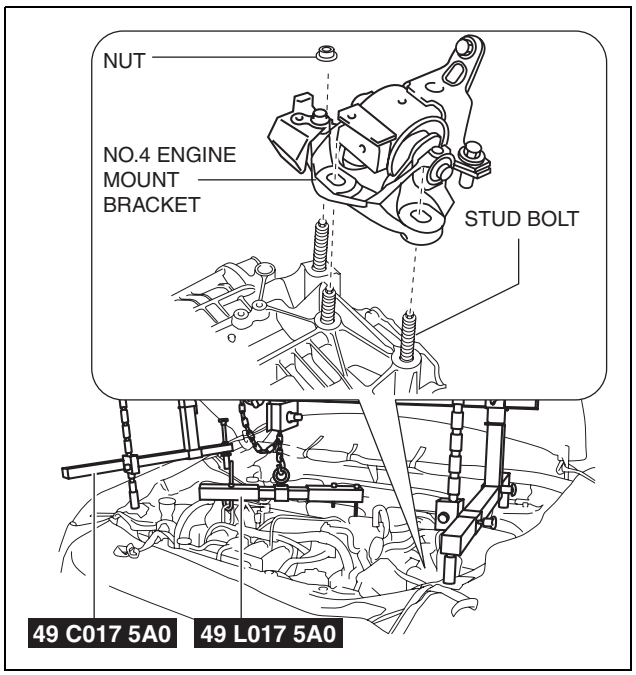
AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

4. Install the No.4 engine mount bracket to No.4 engine mount rubber, and temporarily tighten the installation bolt.



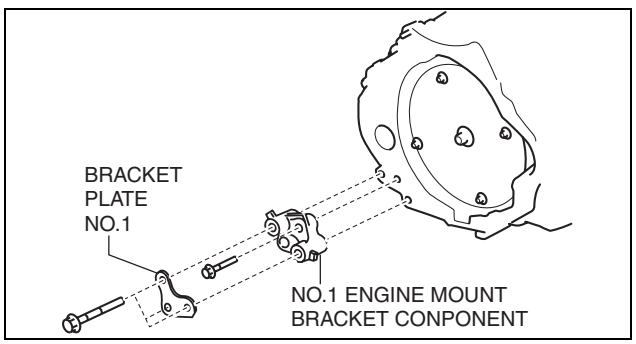
ac5uuw00000237

5. Pull up the transaxle using the **SSTs**, pass the transaxle stud bolts through the No.4 engine mount bracket, and temporarily tighten the No.4 engine mount installation nuts.



ac5uuw00000238

6. Install the No.1 engine mount bracket component and the bracket plate No.1 to the transaxle, and temporarily tighten the installation bolts.

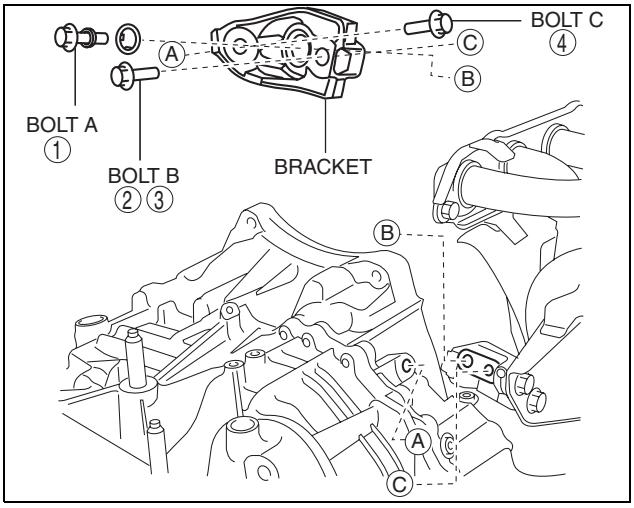


ac5uuw00000241

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

7. Install the bracket to the transaxle and the exhaust manifold and tighten the bolts in the order shown in the figure.

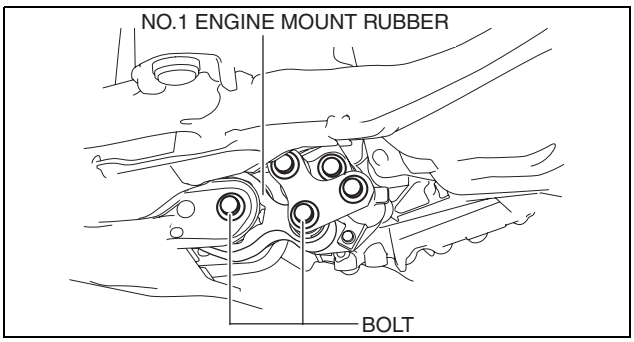
   Tightening procedure
   1. **Tighten the bolt A.**
      19—25 N·m {2.0—2.5 kgf·m, 15—18 ft·lbf}
   2. **Tighten the bolt B.**
      5—10 N·m {51—101 kgf·cm, 45—88 in·lbf}
   3. **Loosen the bolt B 90°—180°**
   4. **Tighten the bolt C.**
      38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}



ac5wzw0000246

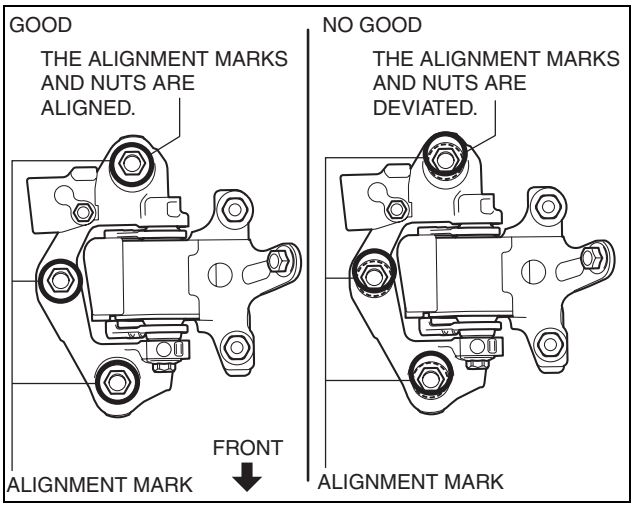
8. Install the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/ INSTALLATION.)

9. Temporarily tighten the No.1 engine mount rubber installation bolts.



ac5wzw0000213

10. Align the alignment marks on the No.4 engine mount bracket and nuts, and temporarily tighten the nuts shown in the figure.

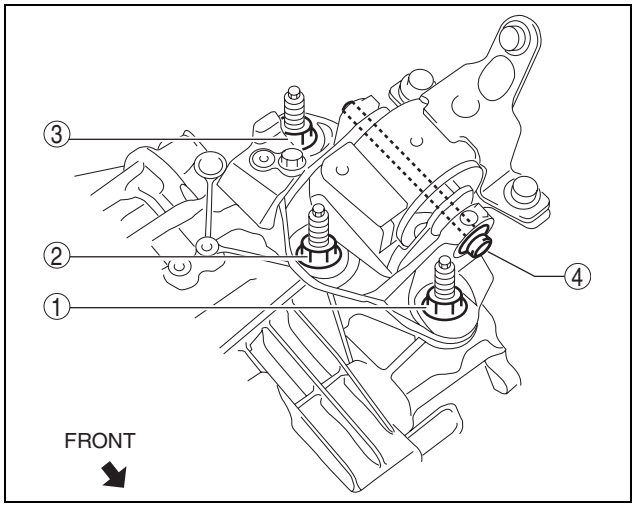


ac5wzw0000460

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

11. Tighten the No.4 engine mount bracket installation nuts and bolt in the order shown in the figure.

No.	Tightening torque
1, 2, 3	92—116 N·m {9.4—11 kgf·m, 69—85 ft·lbf}
4	81—99 N·m {8.3—10 kgf·m, 60—73 ft·lbf}

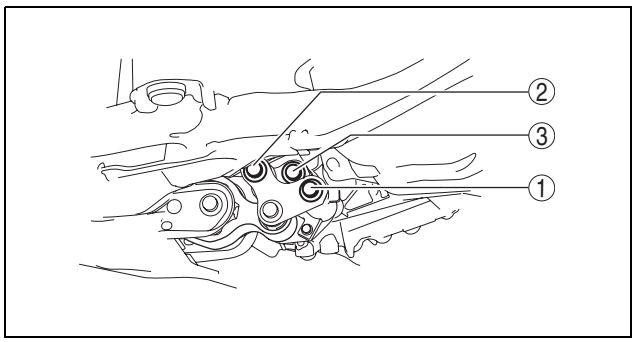


ac5uuw00000243

12. Tighten the No.1 engine mount bracket and bracket plate installation bolts in the order shown in the figure.

    Tightening torque
    84—98 N·m {8.6—9.9 kgf·m, 62—72 ft·lbf}

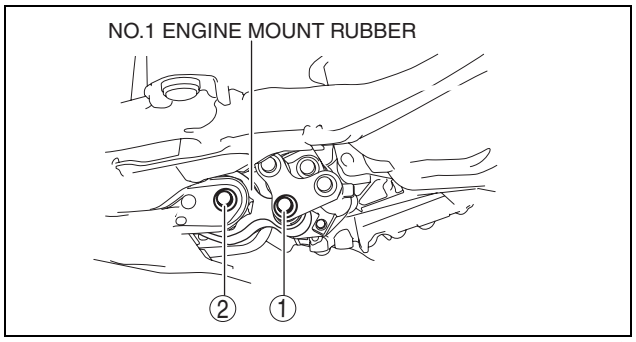
13. Remove the **SST (49 C017 5A0)** .



ac5wzw0000213

14. Tighten the No.1 engine mount rubber installation bolts in the order shown in the figure.

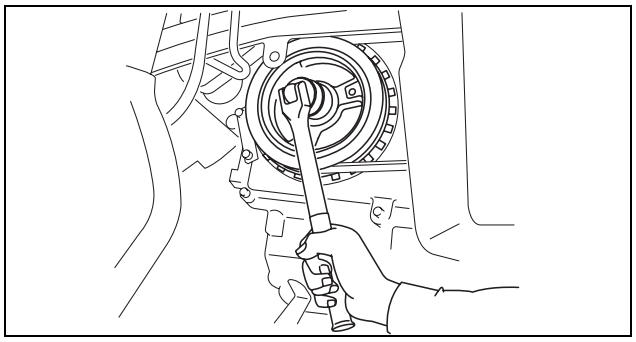
No.	Tightening torque
1	140—163 N·m {15—16 kgf·m, 104—120 ft·lbf}
2	130—164 N·m {14—16 kgf·m, 96—120 ft·lbf}



ac5wzw0000213

15. Fix the crankshaft pulley to lock the torque converter against rotation.

    Caution
    - **After temporarily tightening the torque converter installation nut uniformly, tighten it to the specified torque.**

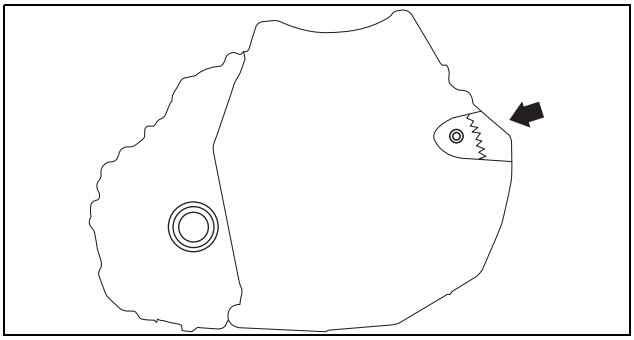


am3uuw0000258

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

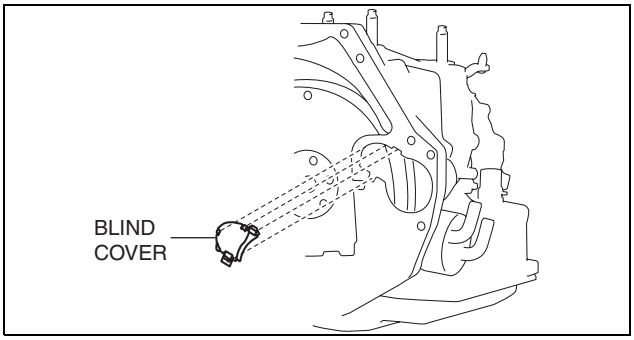
16. Tighten the torque converter installation nut.

    Tightening torque
    41—54 N·m {4.2—5.5 kgf·m, 31—39 ft·lbf}



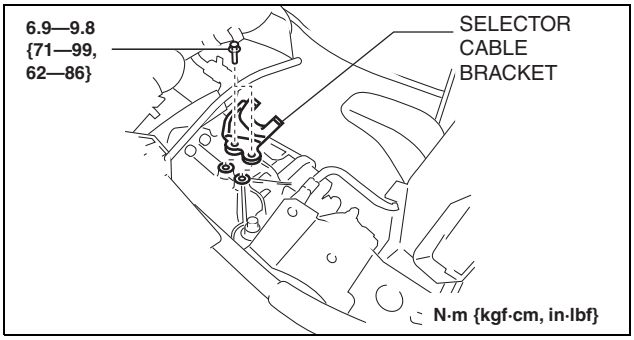
ac5uuw00000225

17. Install the blind cover.
18. Install the starter. (See 01-19A-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
19. Install the front drive shaft (RH) to the transaxle. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
20. Install the front drive shaft (LH) to the transaxle. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
21. Install the front stabilizer control links to the front stabilizer. (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)
22. Install the front lower arms to the steering knuckles. (See 02-13-7 FRONT LOWER ARM REMOVAL/INSTALLATION.)



am3uuw0000831

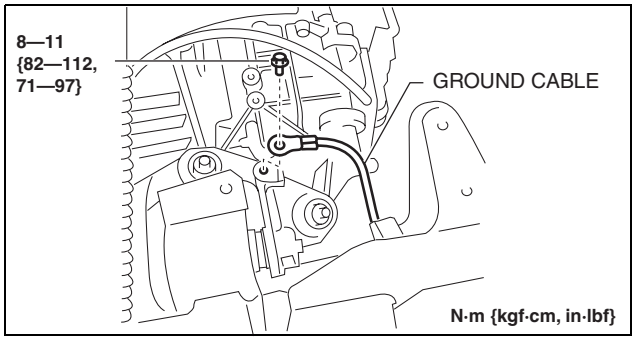
23. Install the tie-rod end ball joints to the steering knuckles. (See 06-13-16 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION.)
24. Install the clips securing the brake hose to the front shock absorbers. (See 04-11-30 BRAKE HOSE (FRONT) REMOVAL/INSTALLATION.)
25. Install the front ABS wheel-speed sensors to the steering knuckles. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
26. Connect the water hose to the oil cooler. (Automatic Transaxle Replacement) (See 05-17A-66 OIL COOLER REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
27. Install the oil cooler to the transaxle with the hose connected. (Except Automatic Transaxle Replacement) (See 05-17A-66 OIL COOLER REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
28. Install the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
29. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
30. Install the front tires. (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
31. Install the intermediate shaft to the steering gear and linkage. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
32. Install the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
33. Connect the breather hose to the transaxle.
34. Install the selector cable bracket.
35. Connect the selector cable to the transaxle.



ac5wzw0000213

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

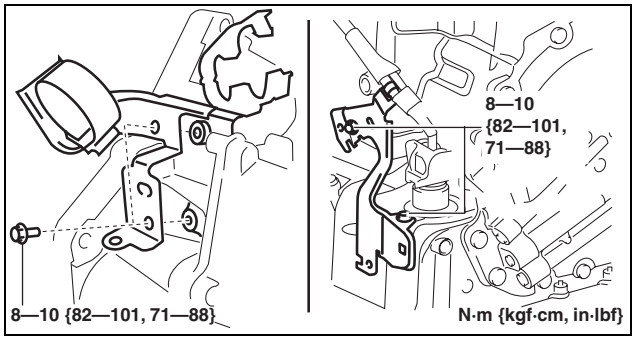
36. Install the ground cable.



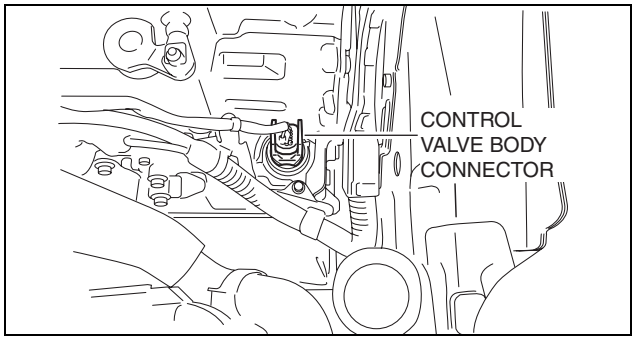
ac5uuw00000247

37. Install the bracket to the transaxle.
38. Connect the control valve body connector.

Caution
- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Verify that there is no fluid or foreign matter adhering to the connector before connecting the connector.**
- **Insert the connector straight as the connector terminal could be damaged.**
- **Rotate the connector lever until a click is heard.**

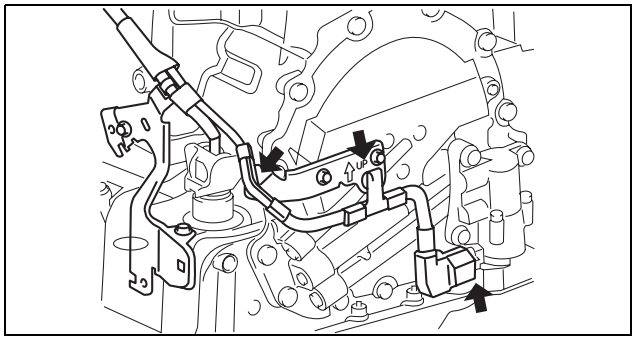


ac5wzw0000213



ac5uuw00000223

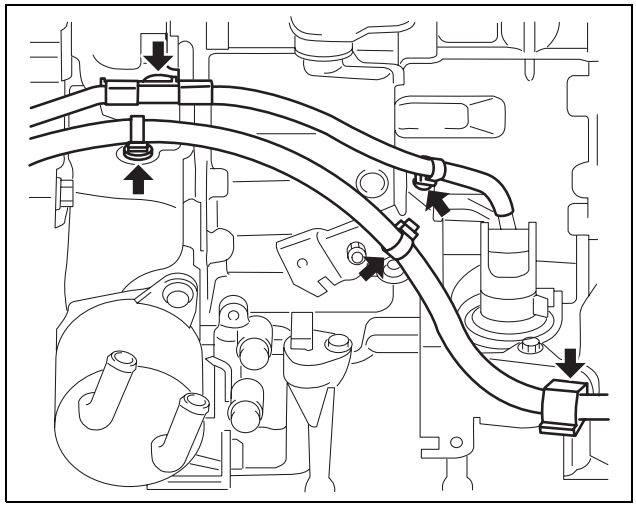
39. Connect the electric AT oil pump connector and electric AT oil pump harness from the transaxle. (With electric AT oil pump)
40. Install the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)



ac5wzw0000091

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

41. Connect the wiring harness from the transaxle.
42. Install the battery tray and PCM component. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
43. Install the air cleaner and air hose as a single unit. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
44. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
45. Add the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
46. Perform the “Mechanical System Test”. (See 05-17A-4 MECHANICAL SYSTEM TEST [FW6A-EL, FW6AX-EL].)



ac5uuw00000219

AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL]

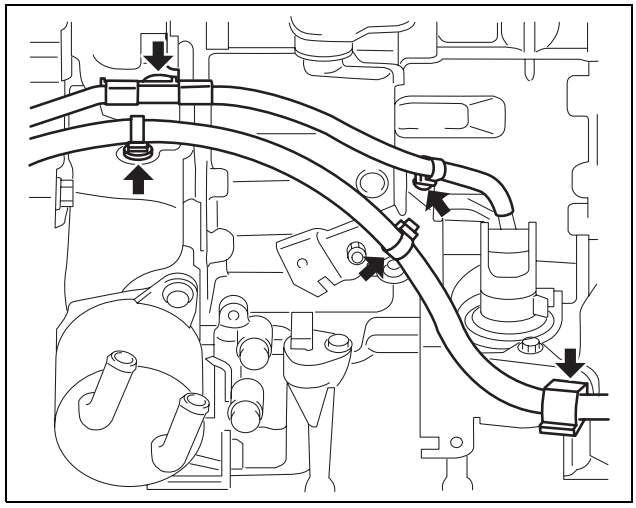
id0517h21172h4

Caution

- **Performing the following procedures without first removing the front ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, disconnect the front ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor will not be pulled by mistake while servicing the vehicle.**
- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**

Removal

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
2. Remove the air cleaner and air hose as a single unit. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the battery tray and PCM component. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Disconnect the wiring harness clip from the transaxle.
5. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)



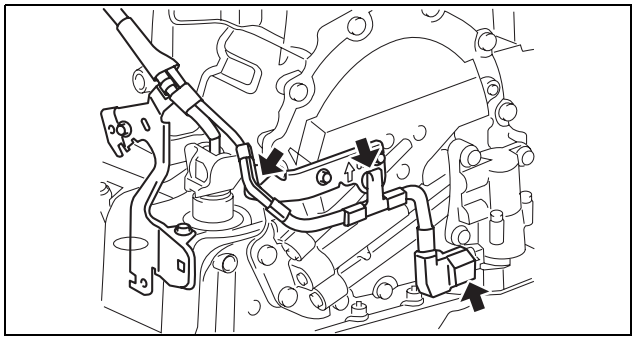
ac5uuw00000323

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

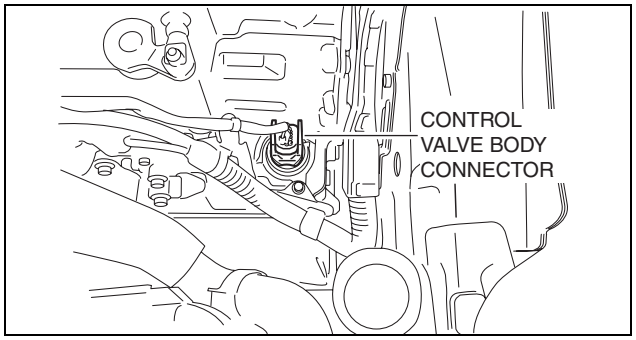
6. Disconnect the electric AT oil pump connector and electric AT oil pump harness from the transaxle. (With electric AT oil pump)
7. Disconnect the control valve body connector.

Caution

- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**

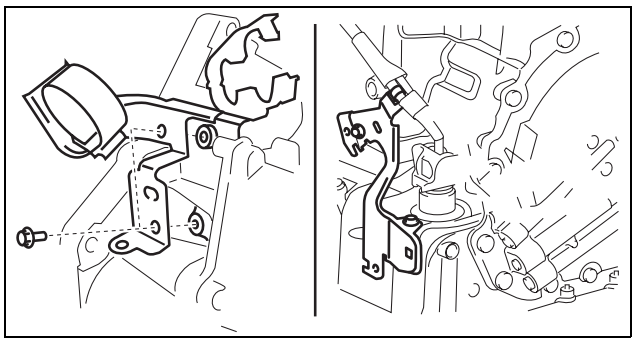


ac5wzw0000091



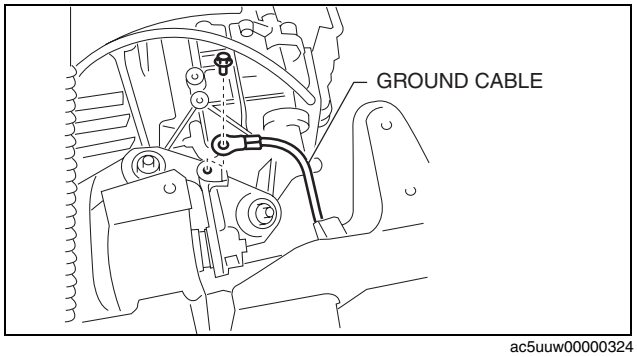
ac5uuw00000327

8. Remove the bracket from the transaxle.



ac5uuw00000328

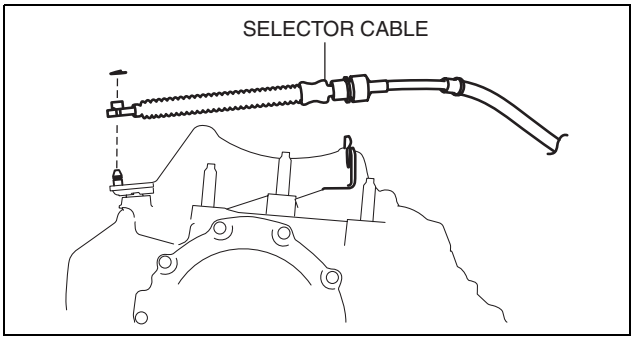
9. Disconnect the ground cable.



ac5uuw00000324

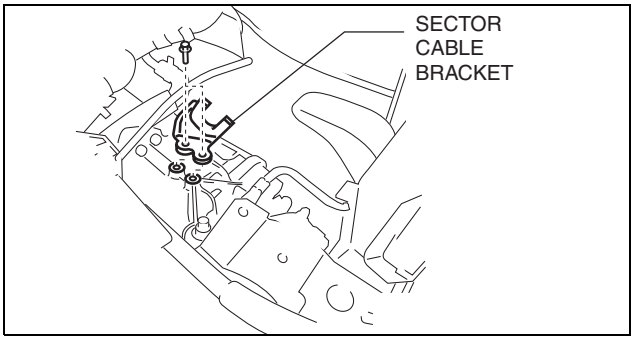
AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

10. Disconnect the selector cable from the transaxle.



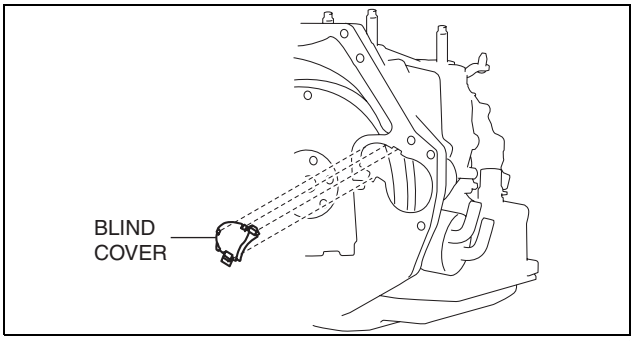
ac5uuw00000325

11. Remove the selector cable bracket.
12. Disconnect the breather hose from the transaxle.
13. Remove the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/ INSTALLATION.)
14. Disconnect the intermediate shaft from the steering gear and linkage. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/ INSTALLATION.)
15. Remove the front tires. (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
16. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/ INSTALLATION.)



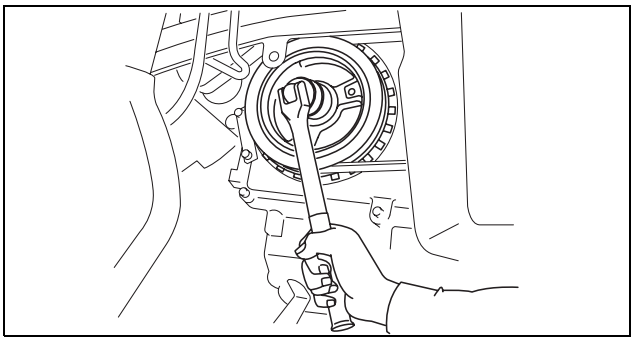
ac5uuw00000788

17. Remove the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
18. Drain the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
19. Disconnect the oil cooler from the transaxle with the hose connected. (Except Automatic Transaxle Replacement) (See 05-17A-66 OIL COOLER REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
20. Disconnect the water hose from the oil cooler. (Automatic Transaxle Replacement) (See 05-17A-66 OIL COOLER REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
21. Remove the starter. (See 01-19A-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
22. Remove the blind cover.



am3uuw0000831

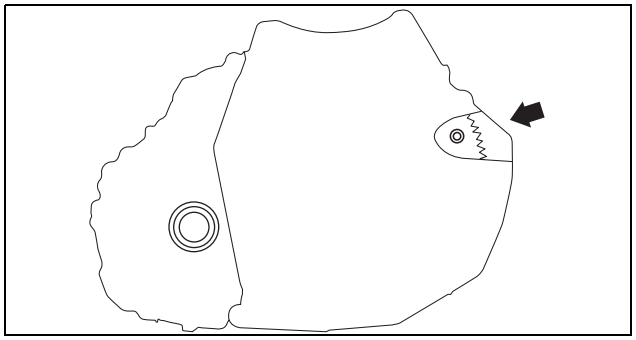
23. Hold the crankshaft pulley to prevent drive plate from rotating.



am3uuw0000258

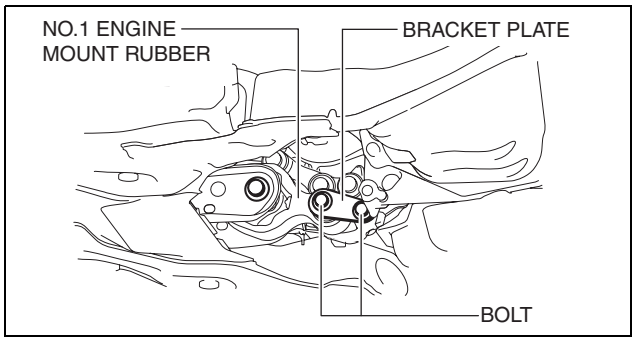
AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

24. Remove the torque converter nuts from the starter installation hole.
25. Disconnect the front ABS wheel-speed sensors from the steering knuckles. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
26. Disconnect the clips securing the brake hose from the front shock absorbers. (See 04-11-27 FRONT BRAKE (DISC) REMOVAL/INSTALLATION.)
27. Disconnect the tie-rod end ball joints from the steering knuckles. (See 06-13-16 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION.)



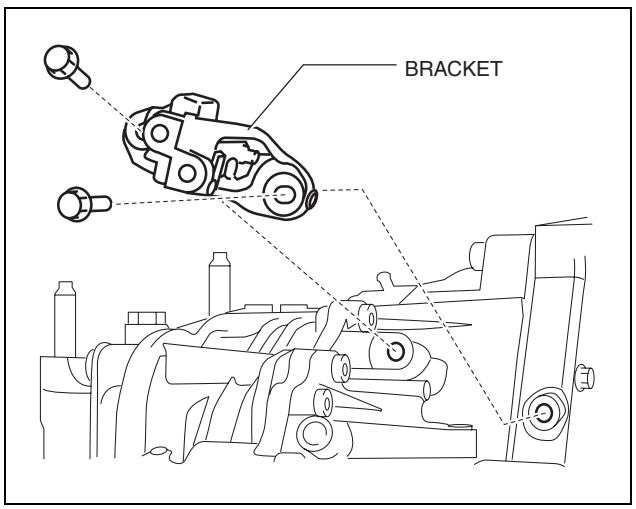
ac5uuw00000329

28. Disconnect the front lower arms from the steering knuckles. (See 02-13-7 FRONT LOWER ARM REMOVAL/INSTALLATION.)
29. Disconnect the front stabilizer control links from the front stabilizer. (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)
30. Disconnect the front drive shaft (LH) from the transaxle. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
31. Remove the front drive shaft (RH) from the transfer. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
32. Remove the propeller shaft. (See 03-15-2 PROPELLER SHAFT REMOVAL/INSTALLATION.)
33. Remove the bracket plate. (See 01-10A-91 ENGINE MOUNT DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0].)
34. Remove the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
35. Remove the exhaust manifold (WU-TWC). (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
36. Remove the transfer. (See 03-16B-4 TRANSFER REMOVAL/INSTALLATION [FW6AX-EL].)



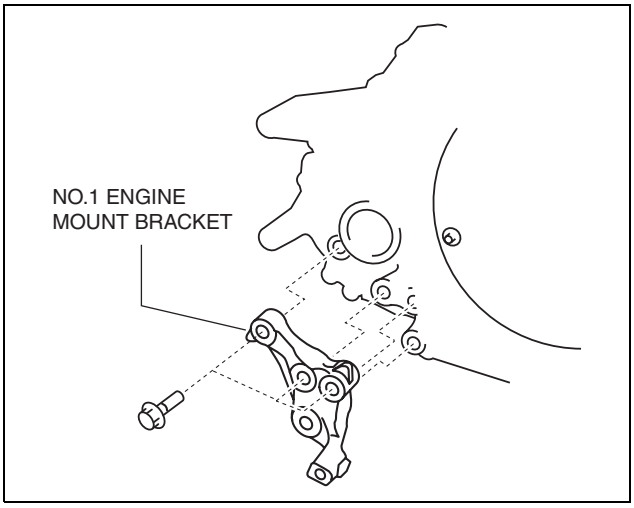
ac5uuw00000330

37. Remove the bracket.



ac5uuw00000331

38. Remove the No.1 engine mounting bracket.

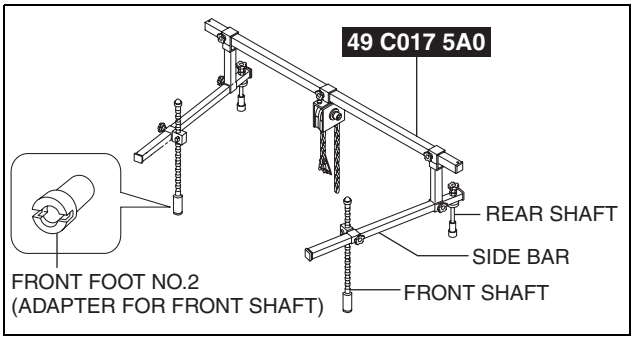


ac5uuw00000346

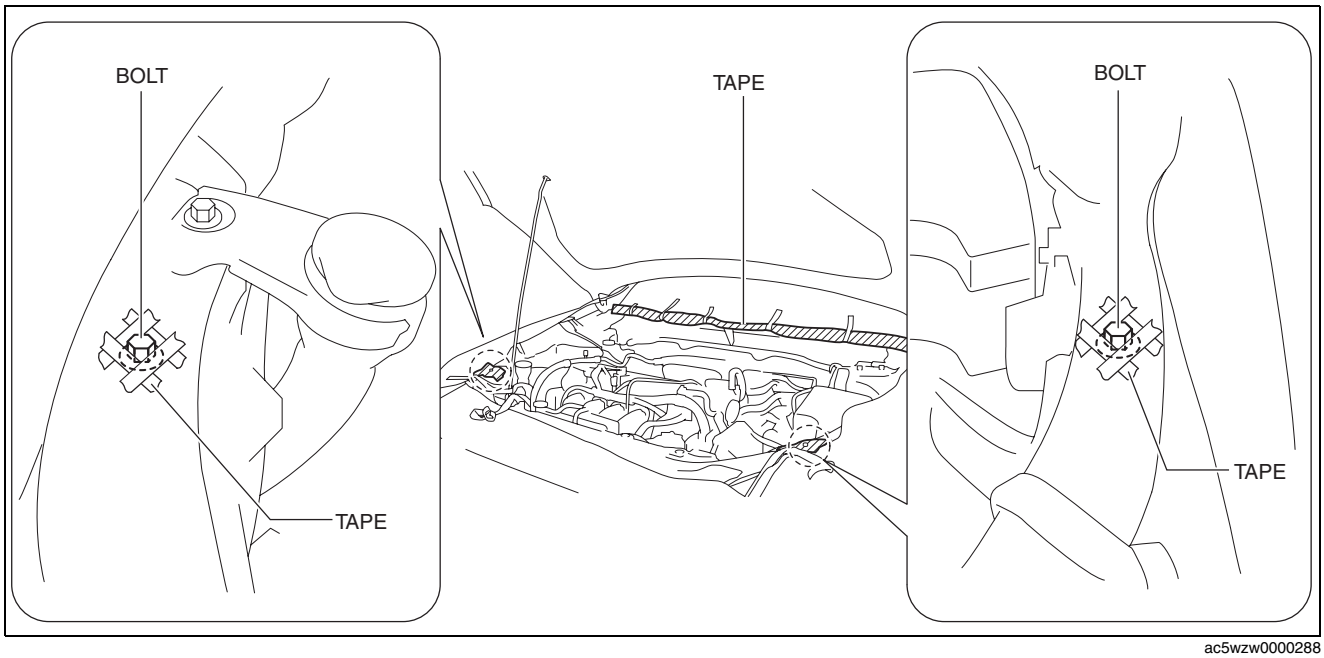
39. Install the **SST** using the following procedures.

Caution
- **Refer to the SST instruction manual for the basic handing procedure.**

(1) Install one front foot No.2 to each of the left and right front shafts of the **SST**.
(2) Remove the windshield wiper arm and blade. (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
(3) Remove the cowl grille. (See 09-16-3 COWL GRILLE REMOVAL/INSTALLATION.)
(4) Remove the cowl panel. (See 09-10-41 COWL PANEL REMOVAL/INSTALLATION.)
(5) Protect the positions shown in the area using tape.



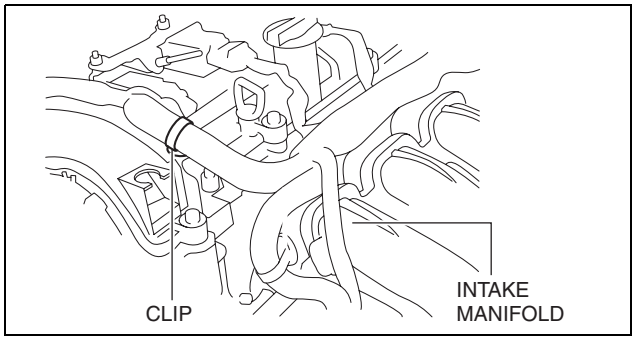
ac5wzw0000459



ac5wzw0000288

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

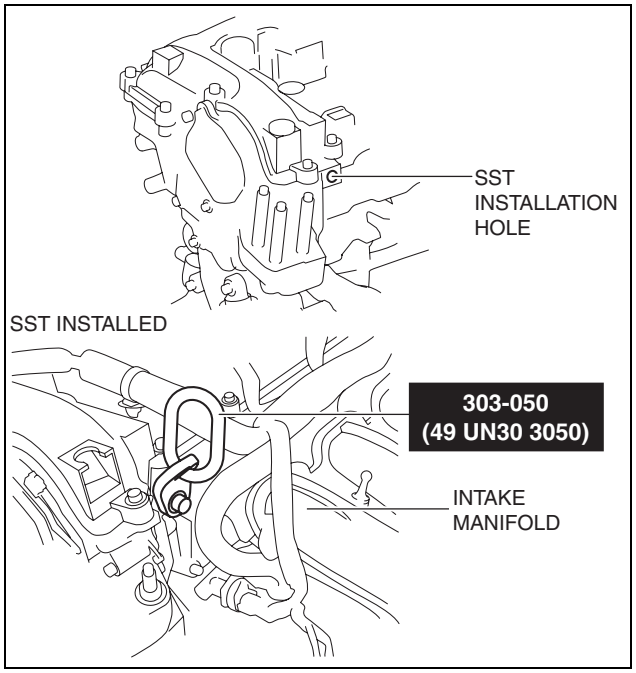
(6) To enable to install the **SST**, disconnect the clip shown in the figure and set the wiring harness aside.



ac5uuw00000333

(7) Install the **SST** using **part number 99794 1025** or an **M10—1.25**, length **25 mm {0.98 in}** bolt as shown in the figure.

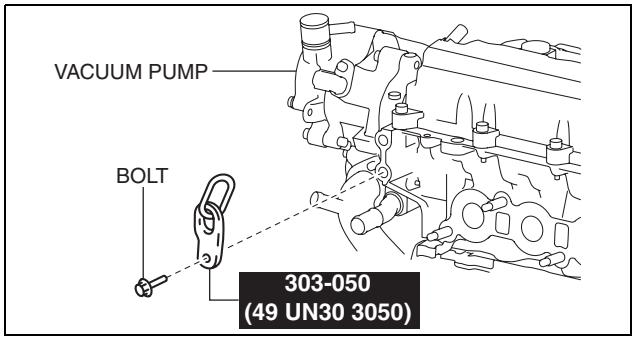
Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}



am3uuw0000813

Engine rear side

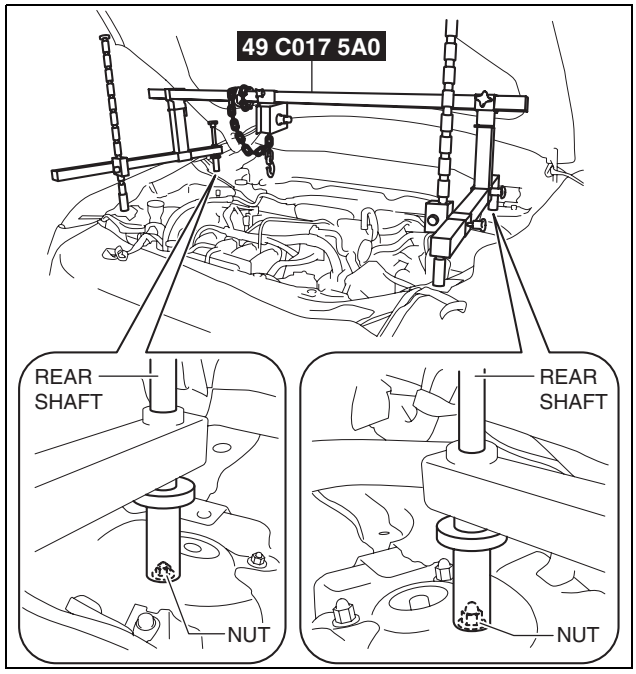
Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}



am3uuw0000830

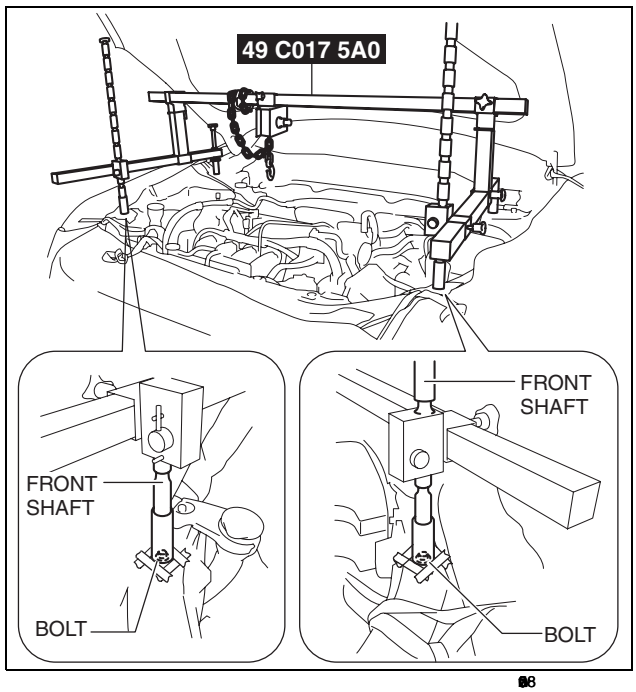
AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

(8) As shown in the figure, set the rear shafts of the **SST** to the left and right shock absorber nuts

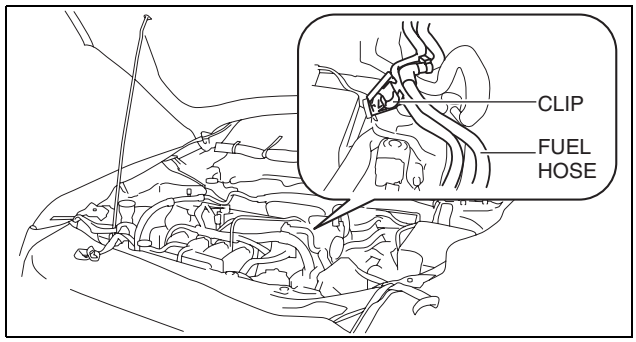


ac5uuw00000334

(9) As shown in the figure, set the front shafts of the **SST** to the left and right bolts.



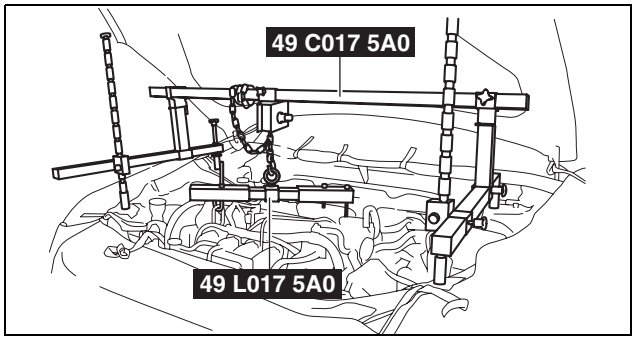
(10) When assembling the **SST** (49 L017 5A0), disconnect the fuel hose from the clip shown in the figure to prevent interference between the fuel hose and **SST**.



05

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

(11)Install the **SST (49 L017 5A0)** to the **SST (49 C017 5A0)** as shown in the figure.



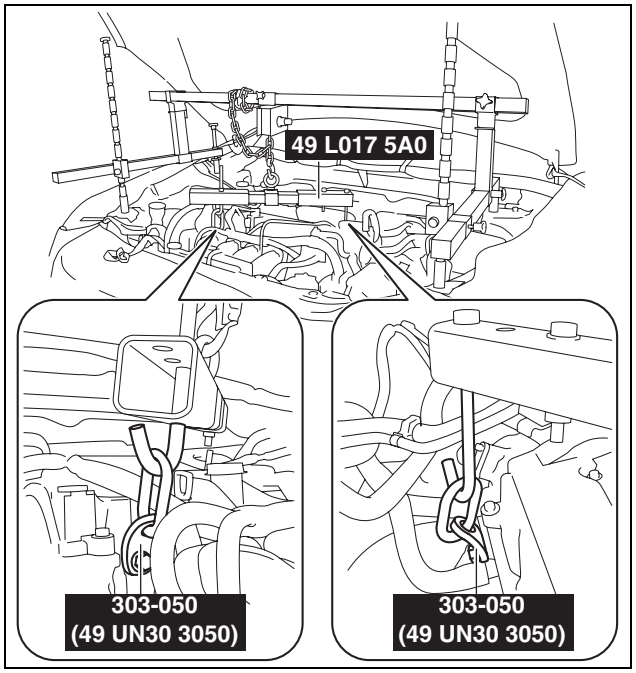
ac5uuw00000338

(12)Install the **SST** (49 L017 5A0) to the **SST** (49 UN30 3050) with the hook of the **SST** (49 L017 5A0) facing outward.
(13)Adjust the height of the left and right side bars so that they are leveled, then tighten each part of the **SST**.
(14)Apply tension to the chain to secure the engine.

40. Remove in the order shown in the figure.

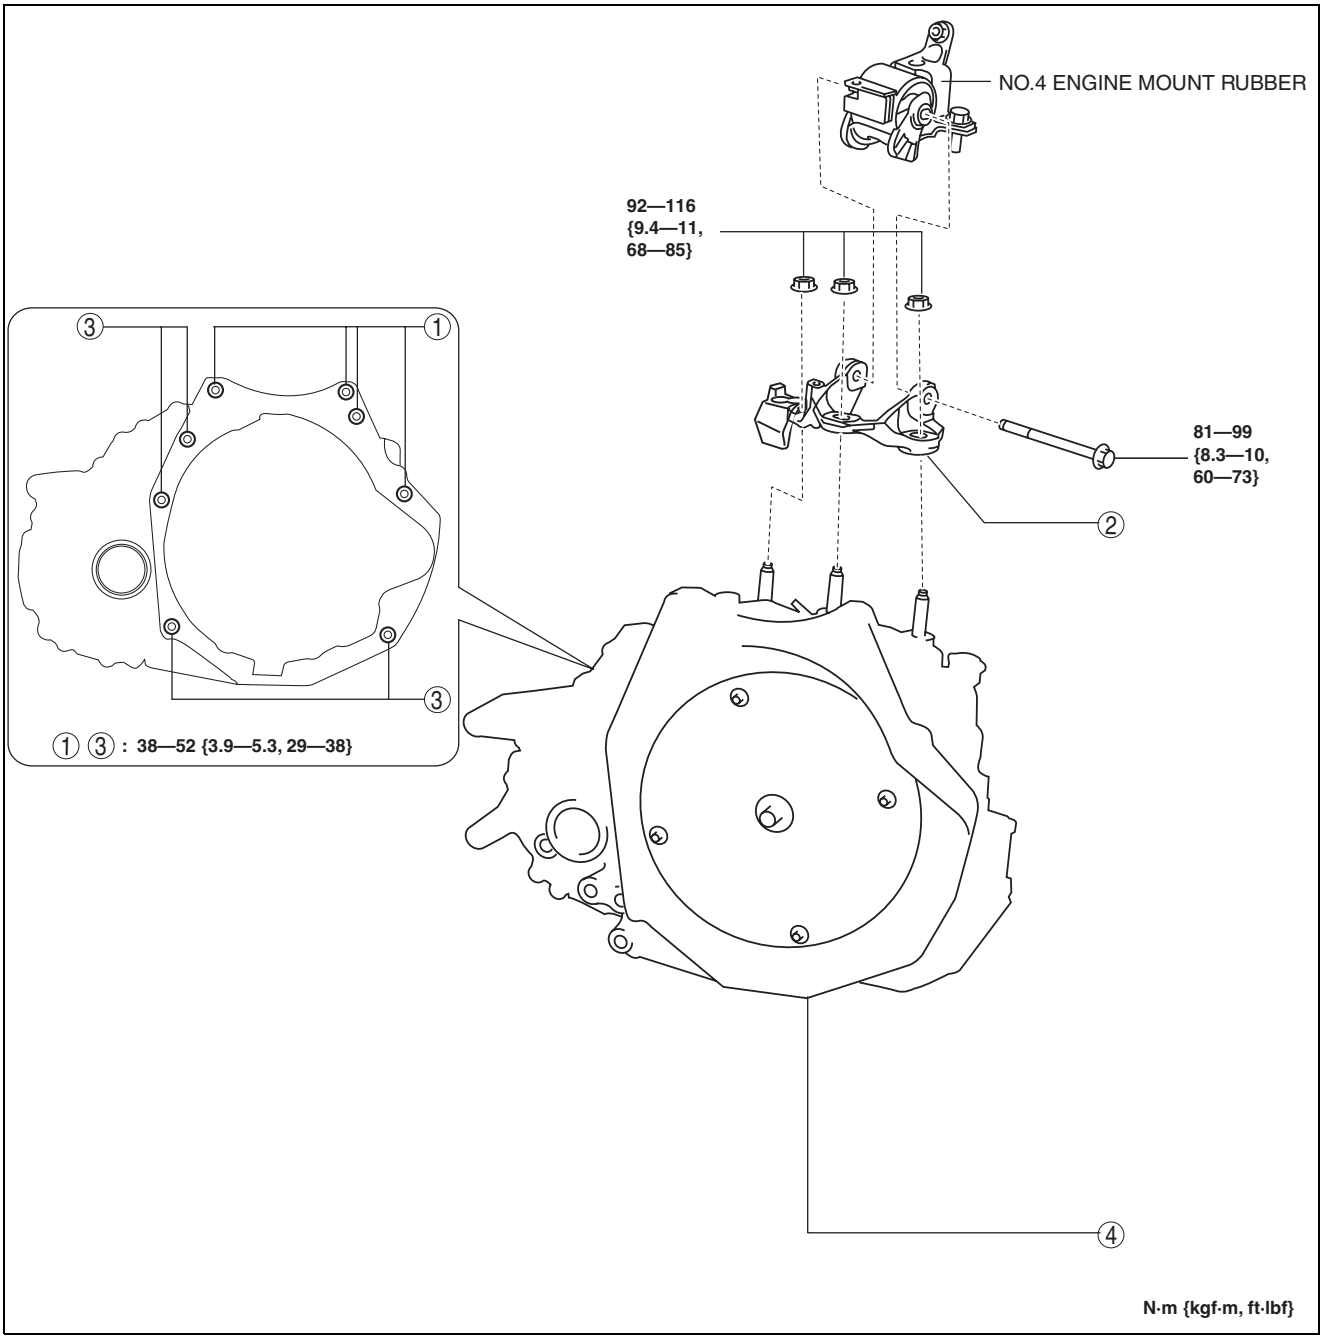
Warning
- **Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.**

Caution
- **To prevent the torque converter and transaxle from separating, remove the transaxle without tilting it toward the torque converter.**



ac5uuw00000337

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]



1	Transaxle mounting bolts (upper side)
2	No.4 engine mount bracket (See 05-17A-52 No.4 engine mount bracket removal note.)
3	Transaxle mounting bolts (lower side) (See 05-17A-52 No.4 engine mount bracket removal note.)

4	Transaxle (See 05-17A-52 No.4 engine mount bracket removal note.) (See 05-17A-52 Transaxle mounting bolt removal note.)

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

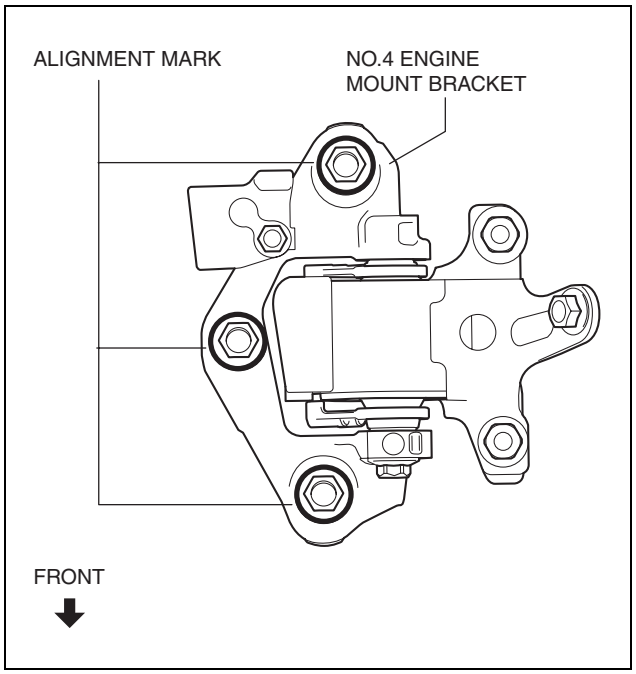
No.4 engine mount bracket removal note

Caution
- **A slot has been adopted for the No.4 engine mount bracket installation hole. If the No.4 engine mount bracket is deviated from the original position when installing the No.4 engine mount, engine noise or vibration could increase. When removing the No.4 engine mount, place alignment marks on the No.4 engine mount bracket so that they can be assembled to the same positions as before removal.**

1. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

Note
- Paint so that the outline of the nut is framed on the bracket side.

2. Remove the No.4 engine mount bracket.

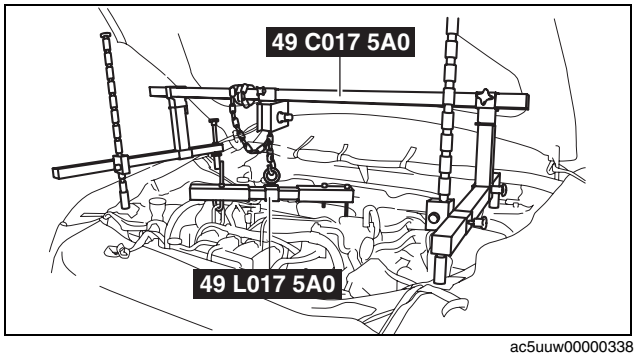


ac5wzw0000460

Transaxle mounting bolt removal note

Warning
- **Remove the transaxle carefully, holding it steady. If the transaxle falls it could be damaged or cause injury.**

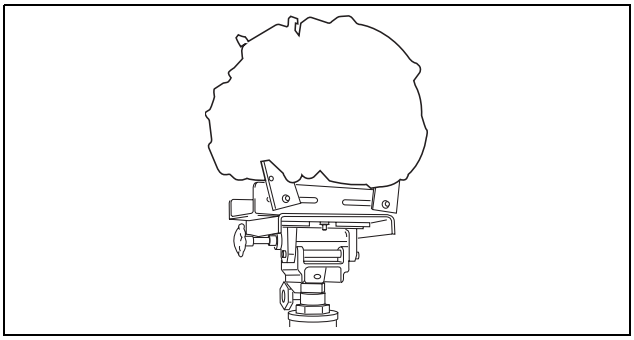
1. Adjust the **SST** and lean the engine toward the transaxle.



ac5uuw00000338

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

2. Support the transaxle on a jack.
3. Remove the transaxle mounting bolts (lower side).
4. Remove the transaxle.

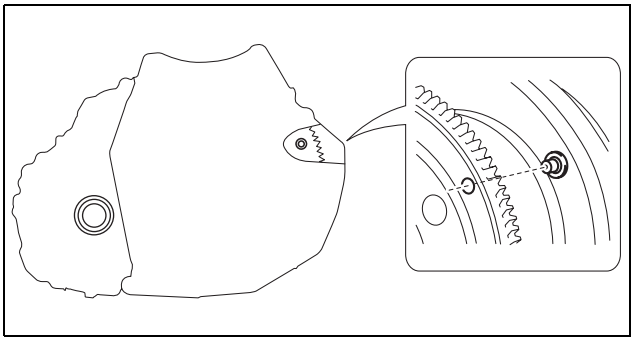


am3uuw0000258

Installation

Caution
- **Verify that the torque converter stud bolts are inserted into the drive plate bolt holes, and install the transaxle installation bolts. Otherwise, the drive plate could be damaged.**

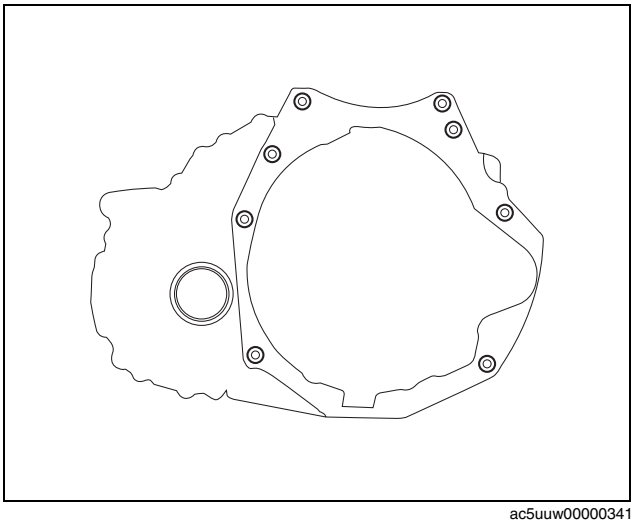
1. Verify that the torque converter stud bolts are inserted into the drive plate bolt holes from the starter installation hole.



am3uuw0000831

2. Install the transaxle mounting bolts.

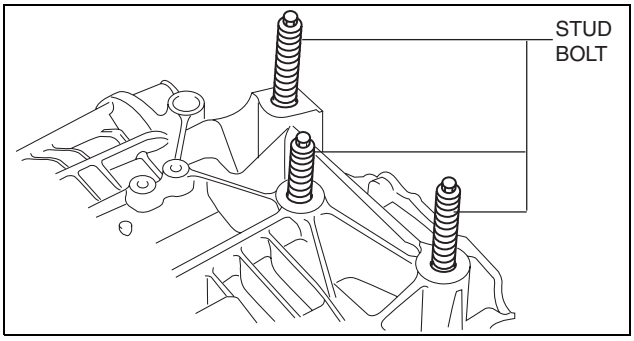
Tightening torque
38—52 N·m {3.9—5.3 kgf·m, 29—38 ft·lbf}



ac5uuw00000341

3. Tighten the stud bolts for the transaxle.

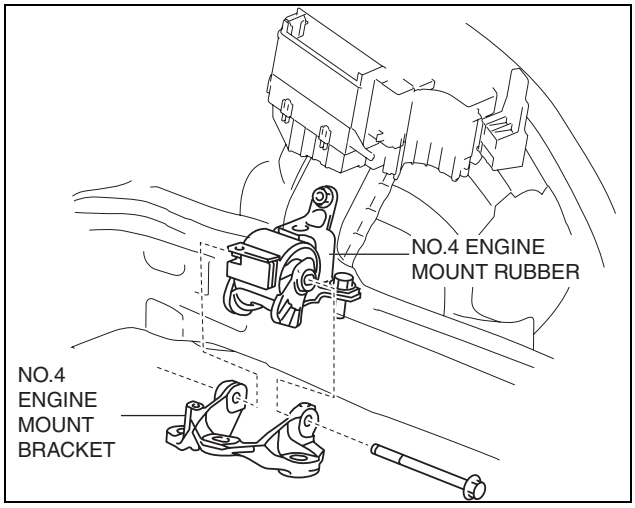
Tightening torque
15—25 N·m {1.6—2.5 kgf·m, 12—18 ft·lbf}



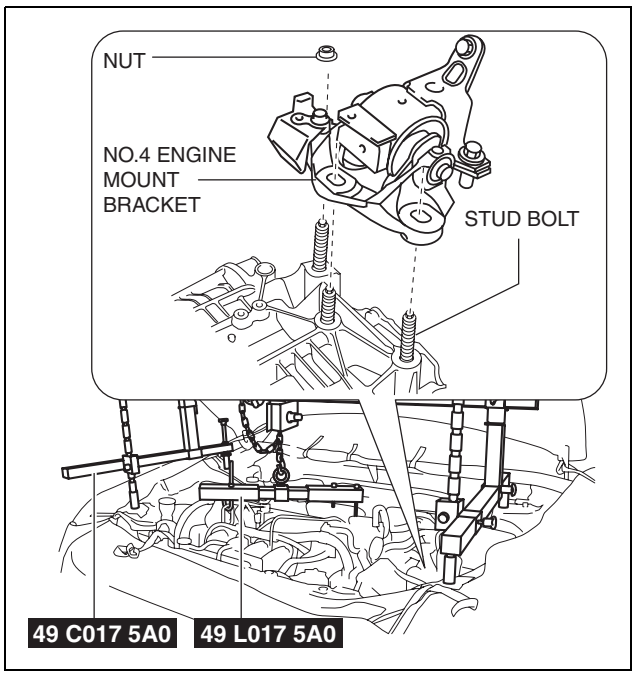
ac5wzw0000213

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

4. Install the No.4 engine mount bracket to No.4 engine mount rubber, and temporarily tighten the installation bolt.



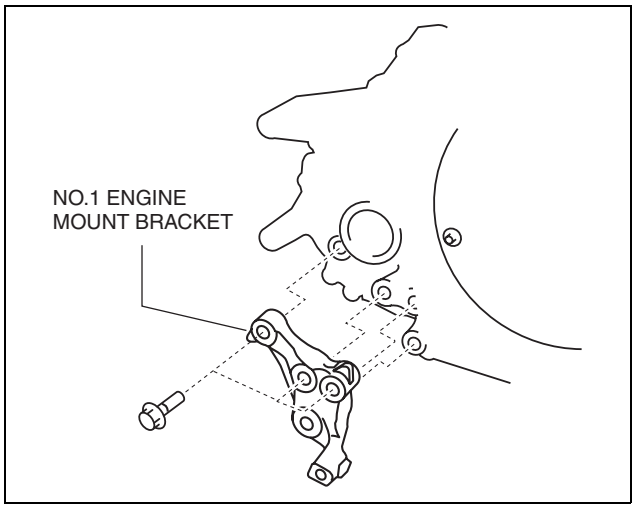
5. Pull up the transaxle using the **SSTs**, pass the transaxle stud bolts through the No.4 engine mount bracket, and temporarily tighten the No.4 engine mount installation nuts.



ac5uuw00000343

6. Install the No.1 engine mounting bracket.

Tightening torque
131—153 N·m {14—15 kgf·m, 97—112 ft·lbf}



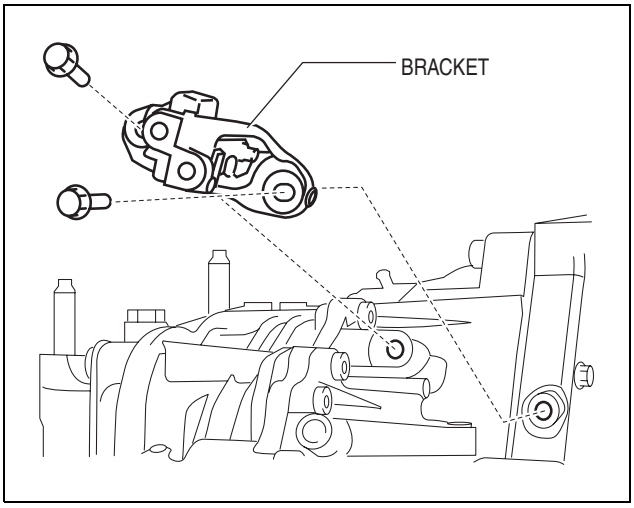
ac5uuw00000346

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

7. Install the bracket.

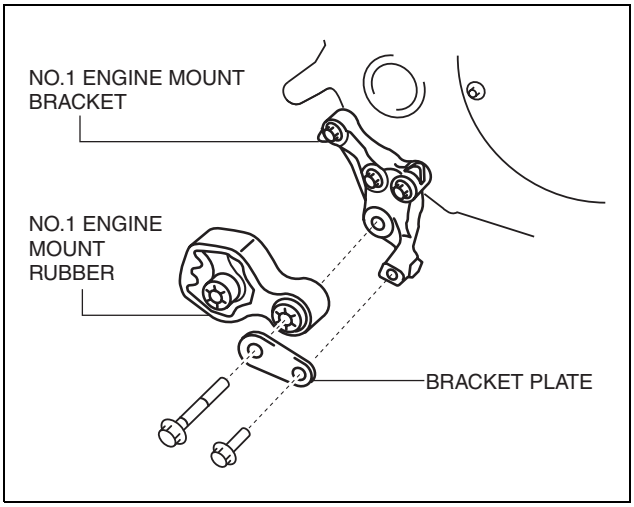
   Tightening torque
   38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

8. Install the the transfer. (See 03-16B-4 TRANSFER REMOVAL/INSTALLATION [FW6AX-EL].)
9. Install the exhaust manifold (WU-TWC). (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
10. Install the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)



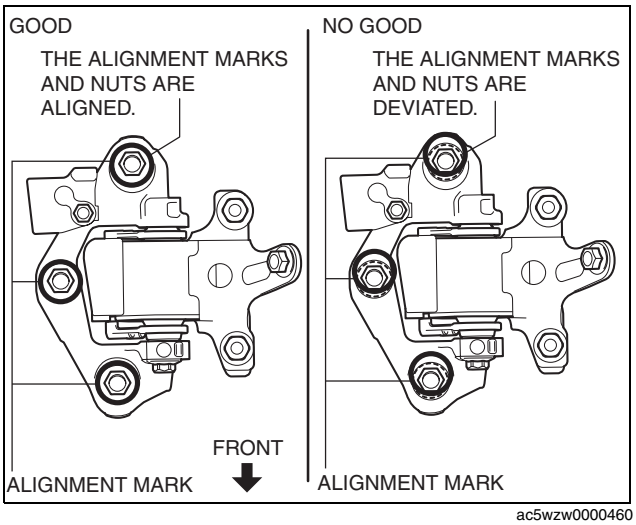
ac5uuw00000345

11. Temporarily install the No.1 engine mount rubber and bracket plate.



ac5uuw00000347

12. Align the alignment marks on the No.4 engine mount bracket and nuts, and temporarily tighten the nuts shown in the figure.

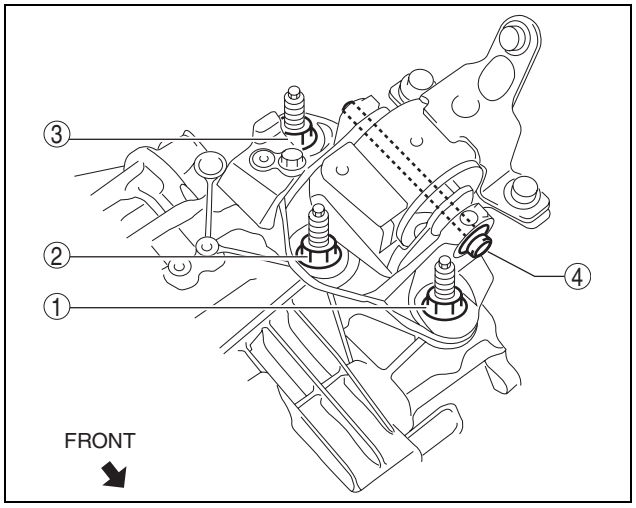


ac5wzw0000460

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

13. Tighten the No.4 engine mount bracket installation nuts and bolt in the order shown in the figure.

No.	Tightening torque
1, 2, 3	92—116 N·m {9.4—11 kgf·m, 69—85 ft·lbf}
4	81—99 N·m {8.3—10 kgf·m, 60—73 ft·lbf}

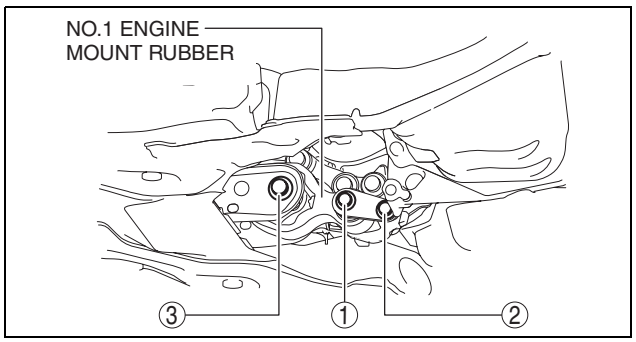


ac5uuw00000349

14. Install the propeller shaft. (See 03-15-2 PROPELLER SHAFT REMOVAL/ INSTALLATION.)
15. Remove the **SST (49 C017 5A0)**.

16. Tighten the No.1 engine mount rubber and bracket plate installation bolts.

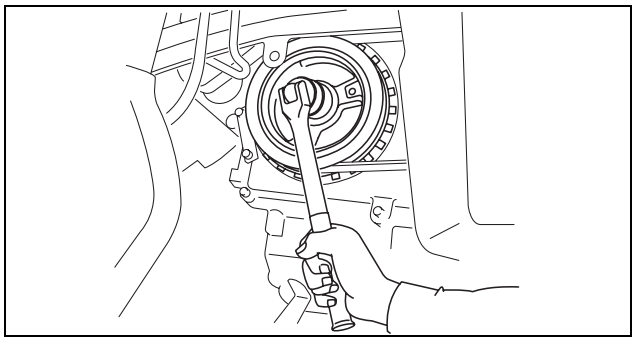
No.	Tightening torque
1	140—163 N·m {15—16 kgf·m, 104—120 ft·lbf}
2	55—69 N·m {5.7—7.0 kgf·m, 41—50 ft·lbf}
3	130—164 N·m {14—16 kgf·m, 96—120 ft·lbf}



ac5uuw00000350

17. Fix the crankshaft pulley to lock the torque converter against rotation.

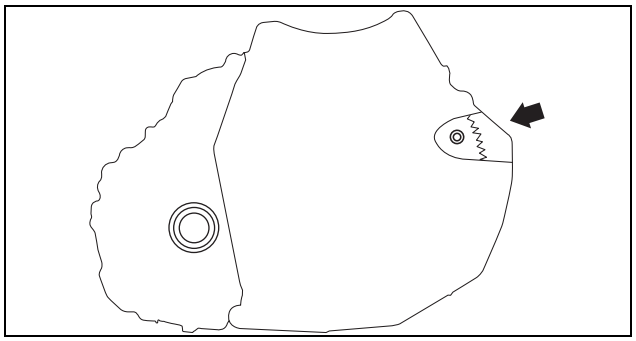
Caution
- **After temporarily tightening the torque converter installation nut uniformly, tighten it to the specified torque.**



am3uuw0000258

18. Tighten the torque converter installation nut.

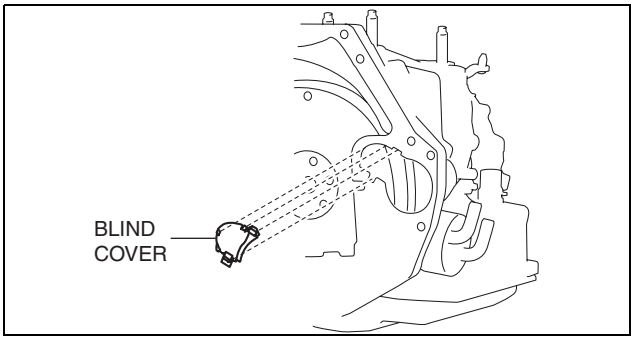
Tightening torque
41—54 N·m {4.2—5.5 kgf·m, 31—39 ft·lbf}



ac5uuw00000329

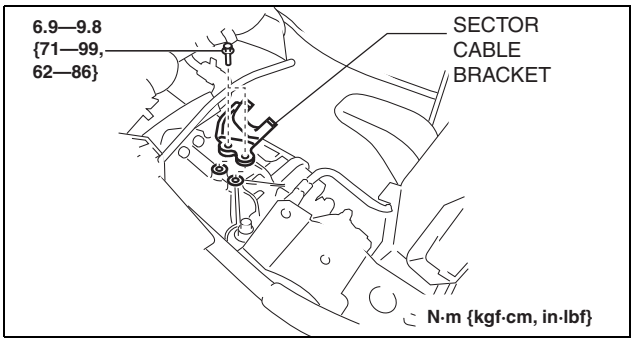
AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

19. Install the blind cover.
20. Install the starter. (See 01-19A-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
21. Install the drive shaft (RH) to the transfer. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
22. Install the drive shaft (LH) to the transaxle. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
23. Install the front stabilizer control links to the front stabilizer. (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)
24. Install the front lower arms to the steering knuckles. (See 02-13-7 FRONT LOWER ARM REMOVAL/INSTALLATION.)



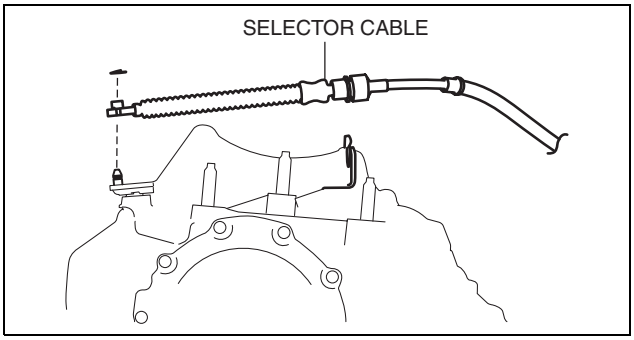
am3uuw0000831

25. Install the tie-rod end ball joints to the steering knuckles. (See 06-13-16 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION.)
26. Install the clips securing the brake hose to the front shock absorbers. (See 04-11-27 FRONT BRAKE (DISC) REMOVAL/INSTALLATION.)
27. Install the front ABS wheel-speed sensors to the steering knuckles. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
28. Connect the water hose to the oil cooler. (Automatic Transaxle Replacement) (See 05-17A-66 OIL COOLER REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
29. Install the oil cooler to the transaxle with the hose connected. (Except Automatic Transaxle Replacement) (See 05-17A-66 OIL COOLER REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
30. Install the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
31. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
32. Install the front tires. (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
33. Connect the intermediate shaft to the steering gear and linkage. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
34. Install the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
35. Connect the breather hose to the transaxle.
36. Install the selector cable bracket.



ac5wzw0000459

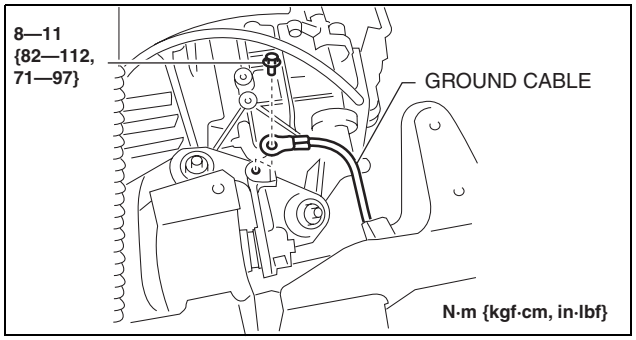
37. Connect the selector cable to the transaxle.



ac5uuw00000325

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

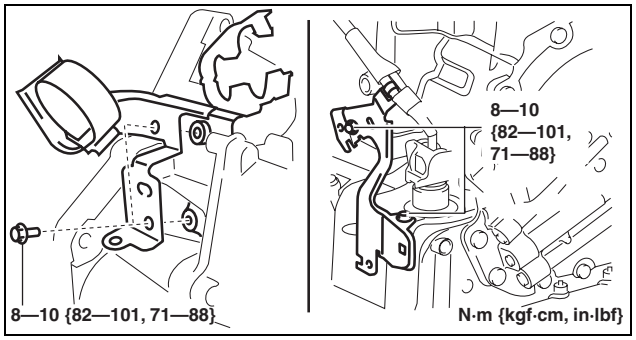
38. Install the ground cable.



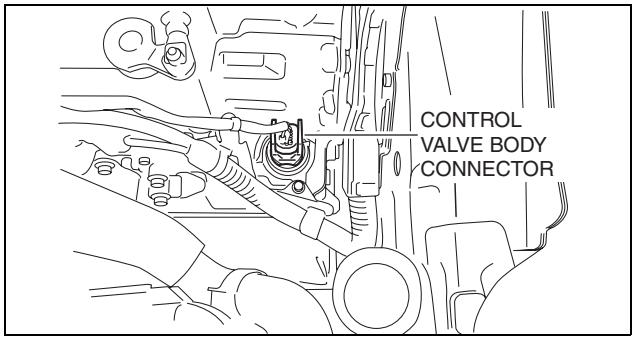
ac5uuw00000353

39. Install the bracket to the transaxle.
40. Connect the control valve body connector.

Caution
- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Verify that there is no fluid or foreign matter adhering to the connector before connecting the connector.**
- **Insert the connector straight as the connector terminal could be damaged.**
- **Rotate the connector lever until a click is heard.**

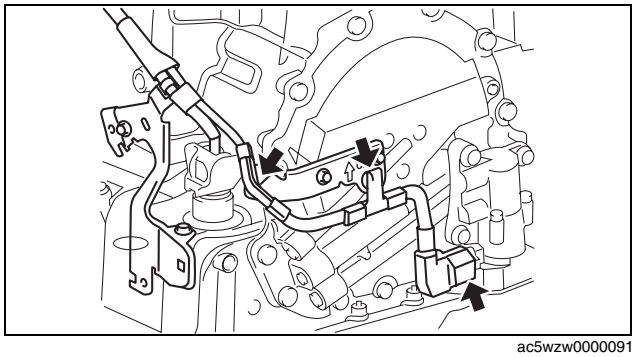


ac5uuw00000351



ac5uuw00000327

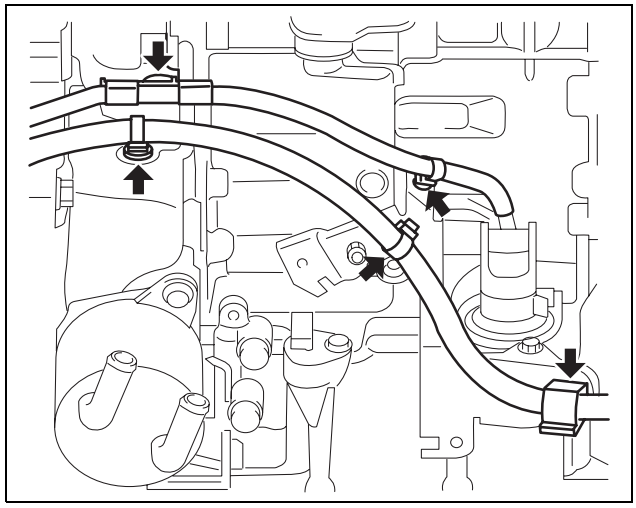
41. Connect the electric AT oil pump connector and electric AT oil pump harness from the transaxle. (With electric AT oil pump)
42. Install the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)



ac5wzw0000091

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

43. Connect the wiring harness to the transaxle.
44. Install the battery tray and PCM component. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
45. Install the air cleaner and air hose as a single unit. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
46. Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
47. Add the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
48. Perform the “Mechanical System Test”. (See 05-17A-4 MECHANICAL SYSTEM TEST [FW6A-EL, FW6AX-EL].)



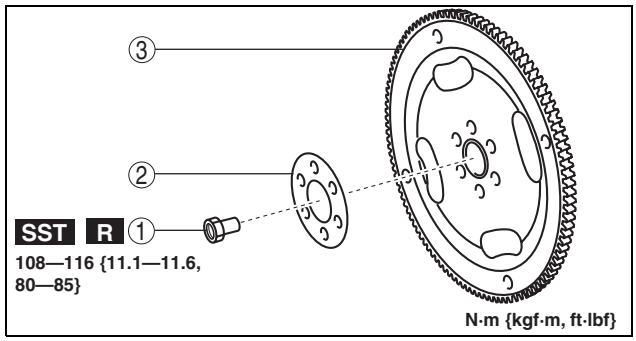
ac5uuw00000354

DRIVE PLATE REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL]

id0517h2117300

1. Remove the transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].)
2. Remove in the order indicated in the table.

1	Drive plate installation bolts (See 05-17A-59 Drive Plate Installation Bolts Removal Note.) (See 05-17A-60 Drive Plate Installation Bolts Installation Note.)
2	Backing plate
3	Drive plate

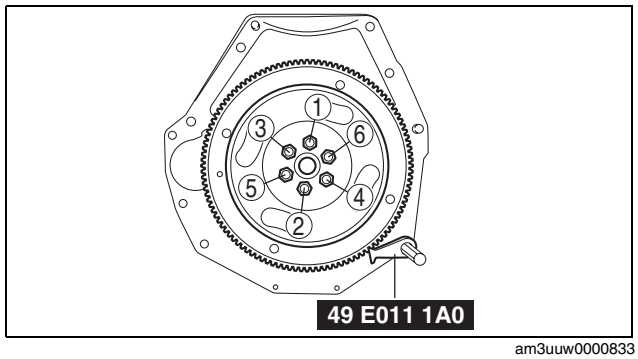


am3uuw0000918

3. Install in the reverse order of removal.

Drive Plate Installation Bolts Removal Note

1. Set the **SST** against the drive plate.
2. Loosen the drive plate installation bolts uniformly in two or three steps in the order shown in the figure, then remove the bolts and the drive plate.



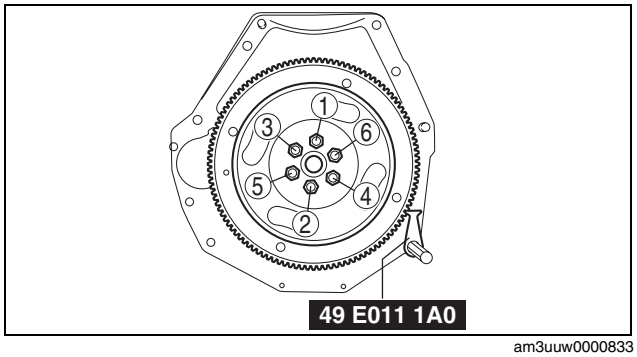
am3uuw0000833

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

Drive Plate Installation Bolts Installation Note

1. Set the **SST** against the drive plate.
2. Tighten the new drive plate installation bolts uniformly in two or three steps in the order shown in the figure.

   Tightening torque
   108—116 N·m {11.1—11.8 kgf·m, 80—85 ft·lbf}



am3uuw0000833

OIL SEAL (DIFFERENTIAL) REPLACEMENT [FW6A-EL, FW6AX-EL]

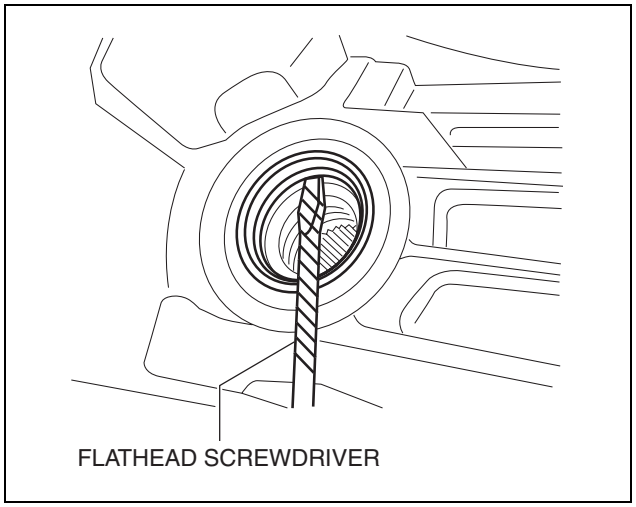
id0517h2118800

Transaxle Case Side

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Drain the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
3. Disconnect the front drive shaft (LH) from the transaxle. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)

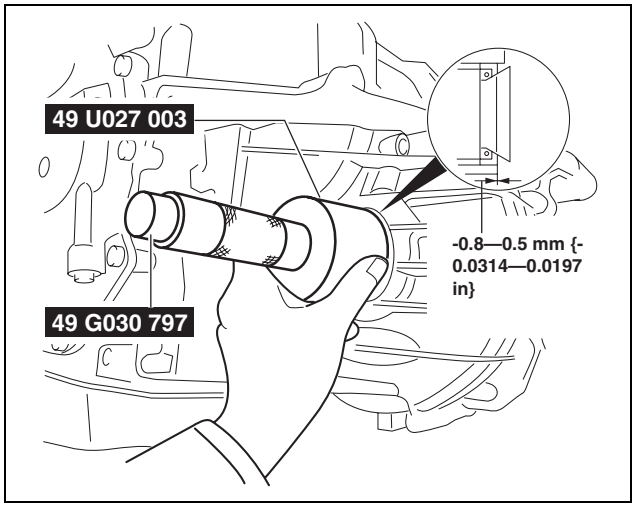
   Caution
   - **The oil seal is easily damaged by the sharp edges of the drive shaft splines. Do not let the splines contact the oil seal.**

4. Remove the oil seal using a flathead screwdriver.



ac5uuw00000215

5. Using the **SSTs** and a hammer, tap a new oil seal in evenly until the **SST** (**49 U027 003**) contacts the transaxle case.
6. Coat the lip of the oil seal with ATF.
7. Install the front drive shaft (LH) to the transaxle. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
8. Add the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
9. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
10. Perform the “Mechanical System Test”. (See 05-17A-4 MECHANICAL SYSTEM TEST [FW6A-EL, FW6AX-EL].)



ac5uuw00000216

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

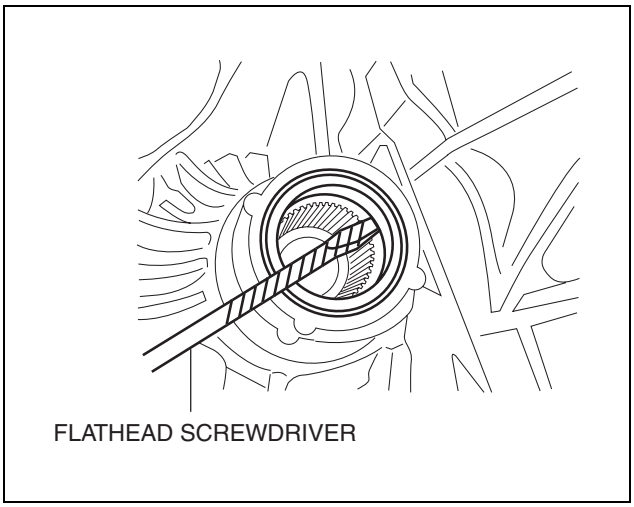
Converter housing Side (FW6A-EL)

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Drain the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
3. Disconnect the front drive shaft (RH). (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)

Caution

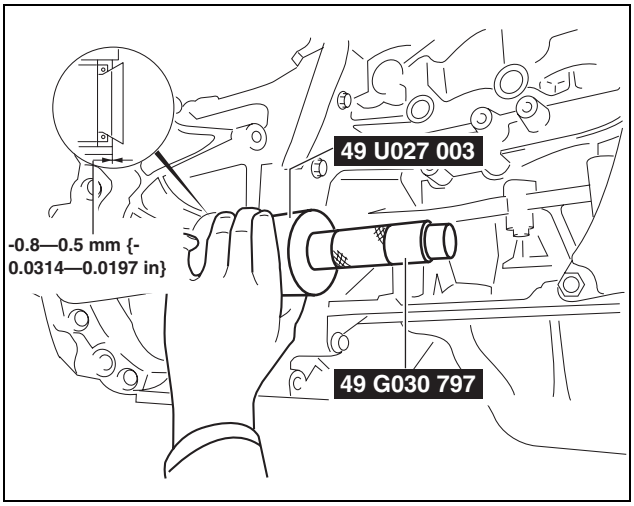
- **The oil seal is easily damaged by the sharp edges of the drive shaft splines. Do not let the splines contact the oil seal.**

4. Remove the oil seal using a flathead screwdriver.



ac5uuw00000217

5. Using the **SSTs** and a hammer, tap a new oil seal in evenly until the **SST** (**49 U027 003**) contacts the transaxle case.
6. Coat the lip of the oil seal with ATF.
7. Install the front drive shaft (RH). (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
8. Add the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
9. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
10. Perform the “Mechanical System Test”. (See 05-17A-4 MECHANICAL SYSTEM TEST [FW6A-EL, FW6AX-EL].)



ac5uuw00000218

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

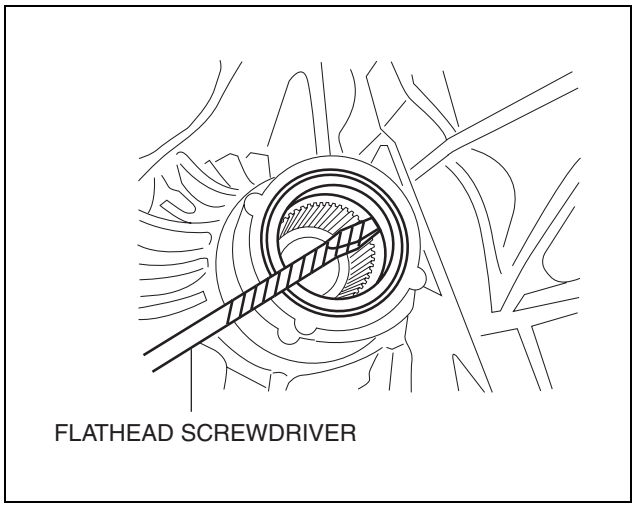
Converter housing Side (FW6AX-EL)

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Drain the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
3. Remove the transfer. (See 03-16B-4 TRANSFER REMOVAL/INSTALLATION [FW6AX-EL].)

Caution

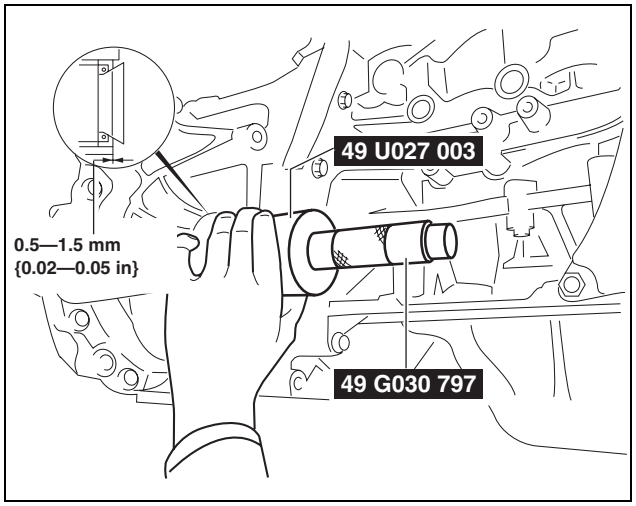
- **The oil seal is easily damaged by the sharp edges of the drive shaft splines. Do not let the splines contact the oil seal.**

4. Remove the oil seal using a flathead screwdriver.



ac5uuw00000217

5. Using the **SSTs** and a hammer, tap a new oil seal in evenly until the **SST** (**49 U027 003**) contacts the transaxle case.
6. Coat the lip of the oil seal with ATF.
7. Install the transfer. (See 03-16B-4 TRANSFER REMOVAL/INSTALLATION [FW6AX-EL].)
8. Add the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
9. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
10. Perform the “Mechanical System Test”. (See 05-17A-4 MECHANICAL SYSTEM TEST [FW6A-EL, FW6AX-EL].)



ac5wzw0000091

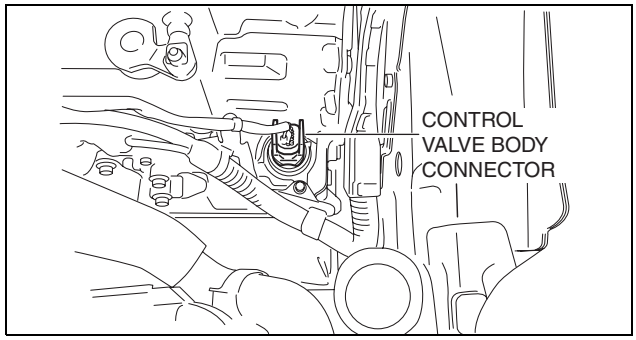
AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [FW6A-EL, FW6AX-EL]

id0517h2118700

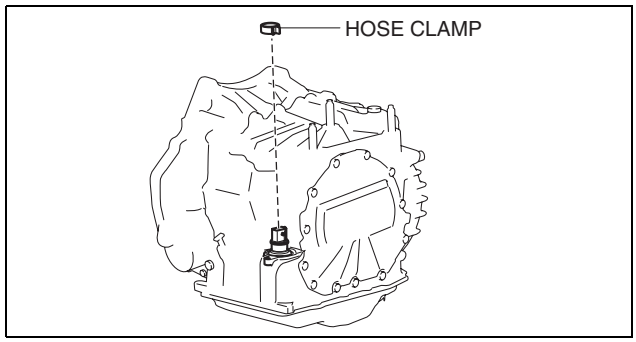
1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
2. Remove the air cleaner component. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Disconnect the control valve body connector.

Caution
- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**



am3uuw0000832

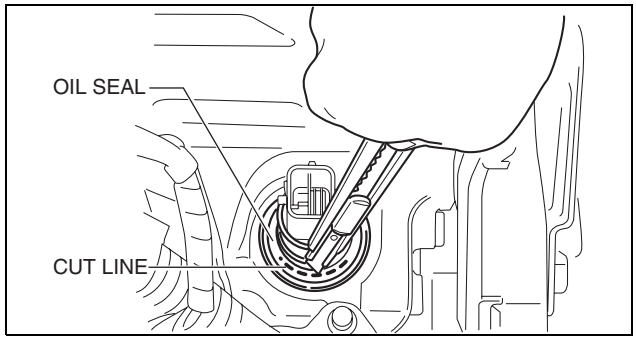
4. Remove the hose clamp.



am3uuw0000832

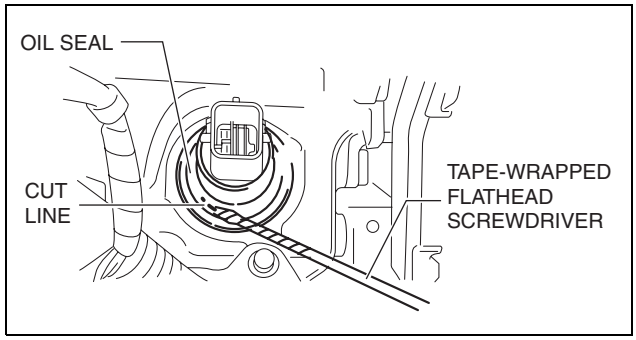
5. Cut the oil seal using a utility knife as shown in the following illustration.

Caution
- **Do not damage the transaxle case.**
- **Do not damage the control valve body coupler connector.**
- **To prevent foreign matter penetration, clean the oil seal area thoroughly and cut the oil seal so as not to leave cutting fragments.**



am3uuw0000832

6. Using a tape-wrapped flathead screwdriver, remove the oil seal from the transaxle case.

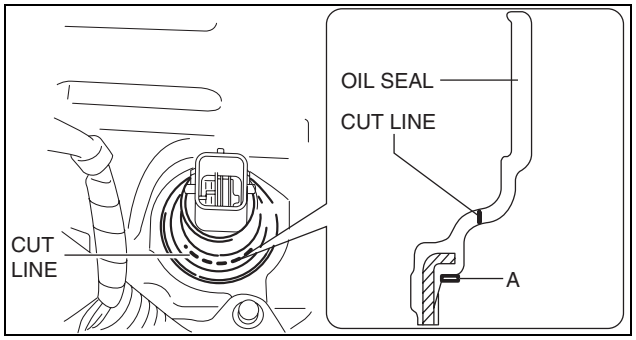


am3uuw0000919

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

Note
- Remove the oil seal by tapping the tip of a tape-wrapped flathead screwdriver on the inner circumference surface A area of the oil seal.

7. Temporarily install the oil seal (control valve body) by hand.



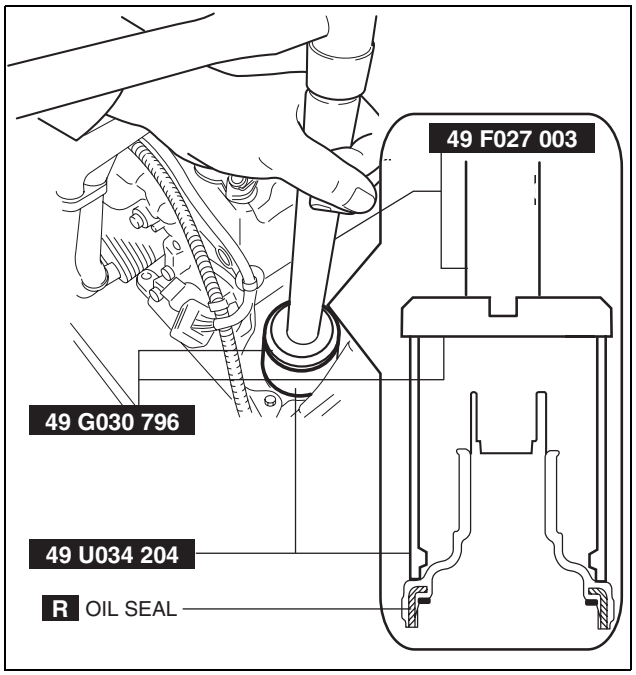
am3uuw0000919

8. Using the **SSTs** and a hammer, install the oil seal (control valve body) so that it is not tilted and there is no height difference between the transaxle case surface and the end surface of the oil seal.

Caution
- **When installing the oil seal (control valve body), do not mistakenly hit the control valve body connector with the hammer. Otherwise the control valve body connector could be damaged making it no longer waterproof.**

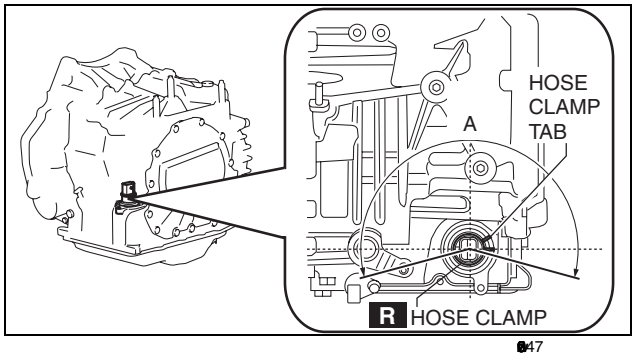
9. Install a new hose clamp to the position shown in the figure.

Caution
- **If the hose clamp is reused it could cause ATF leakage, therefore use a new hose clamp.**



ac5wzw0000234

- **Install the hose clamp tab to within the range shown in the figure.**
  A: 210°



ac5wzw0000247

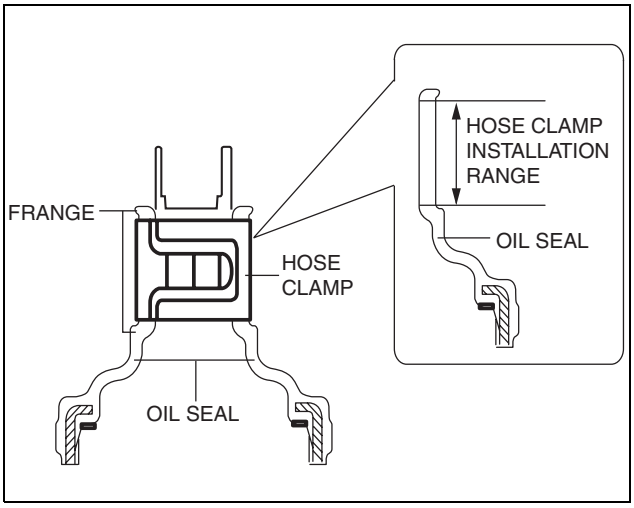
AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

- **Install the hose clamp so that it does not interfere with the top and bottom flanges of the oil seal to maintain the waterproofing integrity.**

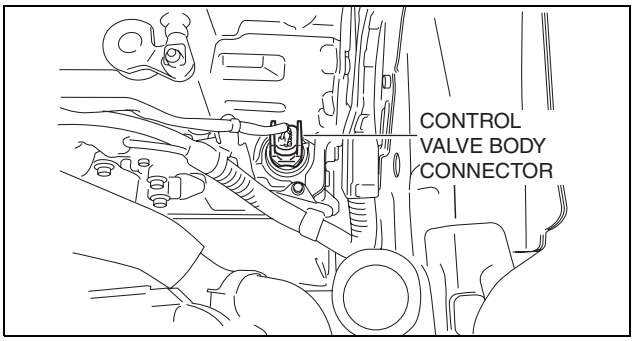
10. Connect the control valve body connector.

Caution
- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Verify that there is no fluid or foreign matter adhering to the connector before connecting the connector.**
- **Insert the connector straight as the connector terminal could be damaged.**
- **Rotate the connector lever until a click is heard.**

11. Install the air cleaner component. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
12. Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)



ac5wzw0000291



am3uuw0000832

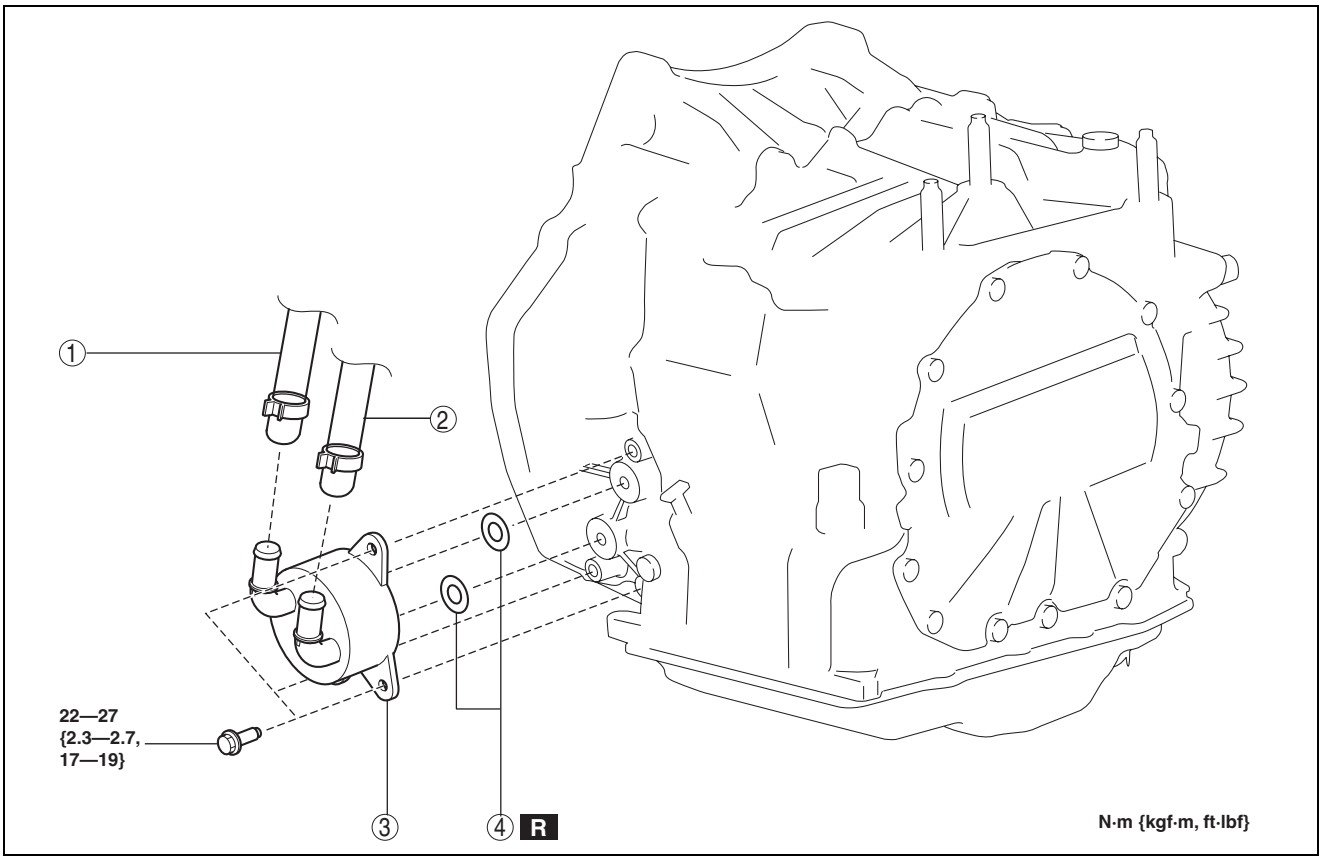
05

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

OIL COOLER REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL]

id0517h2117500

1. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
2. Remove the front under cover NO.2. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
3. Drain the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
4. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)
5. Remove in the order indicated in the table.



1	W[illegible]	3	W[illegible]
2	W[illegible]	4	O-[illegible]

6. Install in the reverse order of removal.
7. Add the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)
8. Add the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
9. Perform the “Mechanical System Test”. (See 05-17A-4 MECHANICAL SYSTEM TEST [FW6A-EL, FW6AX-EL].)

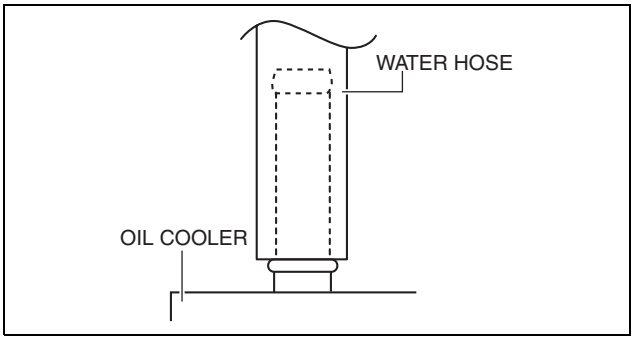
AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

Water Hose Installation Note

1. Install the water hose to the oil cooler as shown in the figure with the hose clamp expanded.

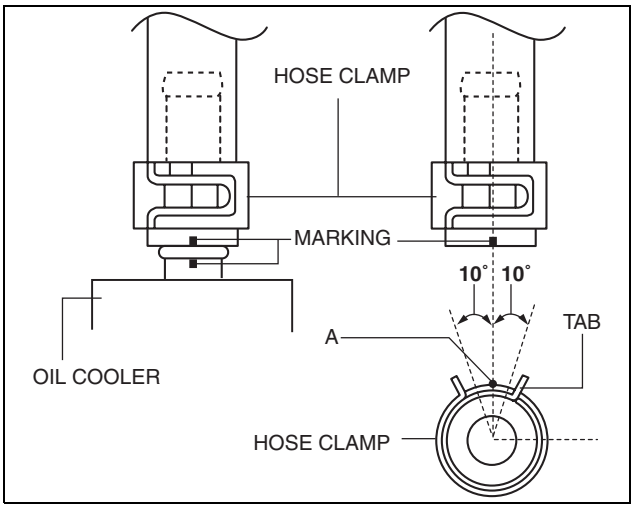
Note

- A new water hose and hose clamp are attached.



am3uuw0000832

2. Install the hose clamp so that center A of the hose clamp tab is within the range shown in the figure.
   - Verify that the installation angle of the hose clamp is within the range shown in the figure.
3. Verify that the hose clamp does not interfere with any other components.



id0517h2118000

CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL]

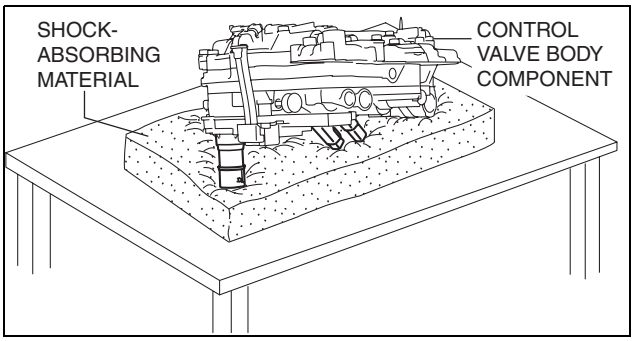
On-Vehicle Removal

Warning

- **A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool.**
- **Using compressed air can cause dirt and other particles to fly out, causing injury to the eyes. Wear protective eyeglasses whenever using compressed air.**

Caution

- **If the control valve body has been replaced, perform initial learning. (See 05-17A-74 INITIAL LEARNING [FW6A-EL, FW6AX-EL].)**
- **Placing the control valve body connector side pointed downward could damage the control valve body connector part or sensor. If the servicing can only be performed by pointing the control valve body connector side downward, spread shock-absorbing material, which does not produce dust or foreign matter, and place the control valve body connector part and sensor on the table so that they do not directly contact the table.**

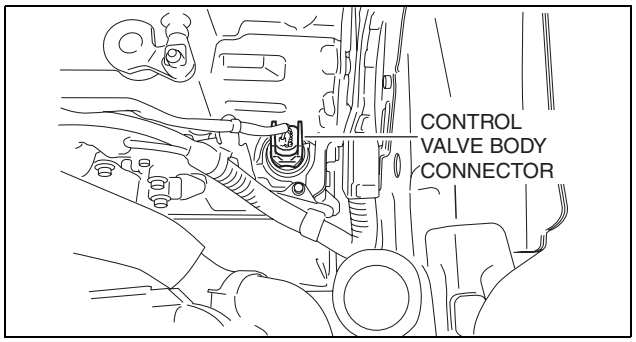


1. Select the selector lever to P position.

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

2. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
3. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
4. Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.
5. Remove the air cleaner component. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
6. Disconnect the control valve body connector.

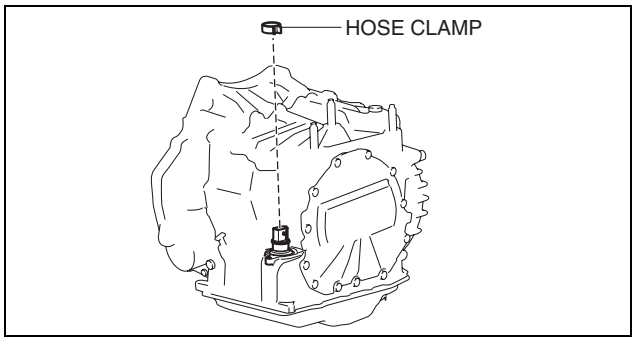
Caution
- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**



am3uuw0000828

7. Remove the hose clamp.
8. Drain the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
9. Remove the oil pan.

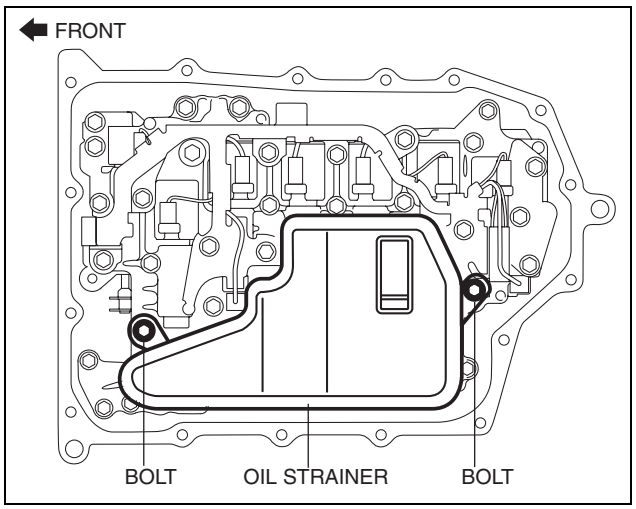
Caution
- **To avoid damaging the control valve body, if there is a large amount of foreign material at the bottom of the oil pan when the oil pan is removed, replace the oil strainer with a new one.**
- **If there is not a large amount of foreign material at the bottom of the oil pan, the oil strainer does not have to be replaced.**



am3uuw0000828

Note
- Always use new oil pan installation bolts when re-installing the oil pan because the oil pan installation bolts cannot be reused.

10. Remove the oil strainer.

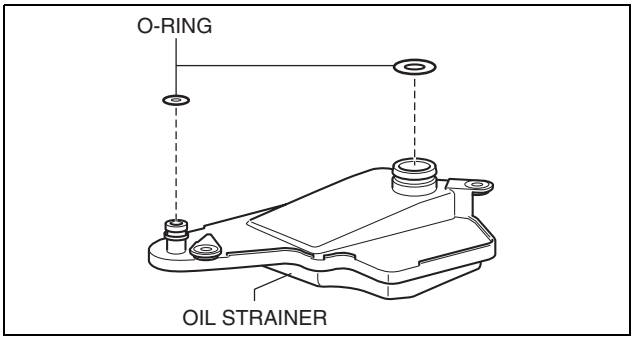


am3uuw0000828

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

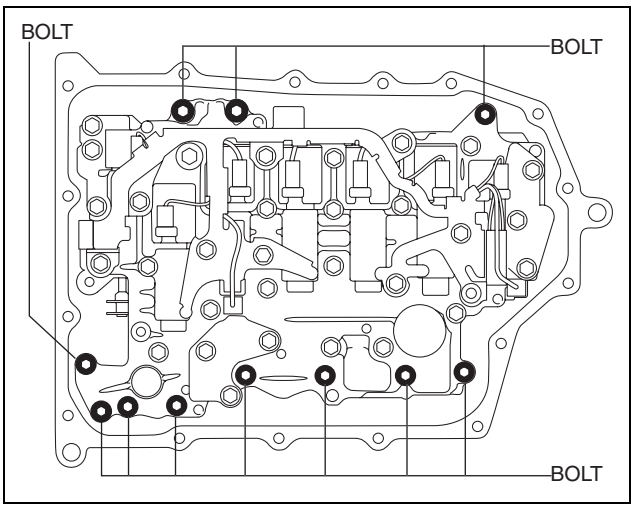
11. Remove the oil strainer O-ring.
12. Remove the control valve body.

Caution
- **Remove the control valve body directly from underneath so that force is not applied to the control valve body connector in the lateral direction.**



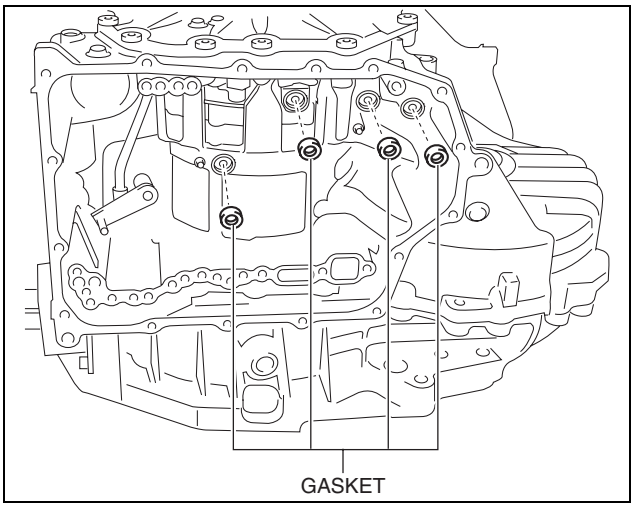
am3uuw0000828

13. Remove the oil seal (control valve body). (See 05-17A-63 OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [FW6A-EL, FW6AX-EL].)



am3uuw0000828

14. Remove the gasket from the transaxle case.



am3uuw0000921

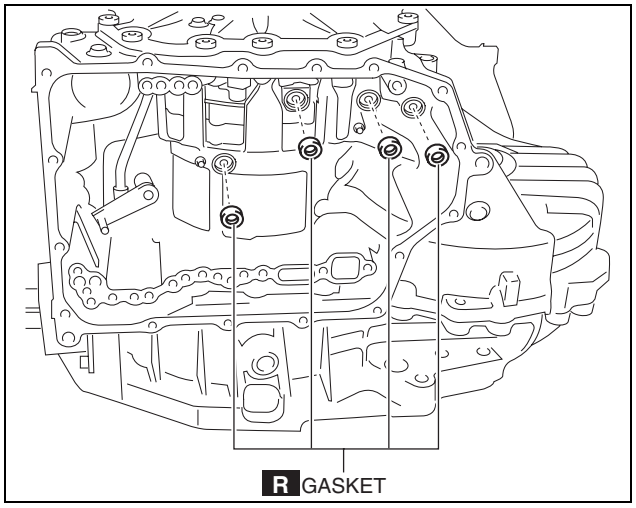
AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

On-Vehicle Installation

1. Install the gasket to the transaxle case.
2. Install the dowel pin to the control valve body.

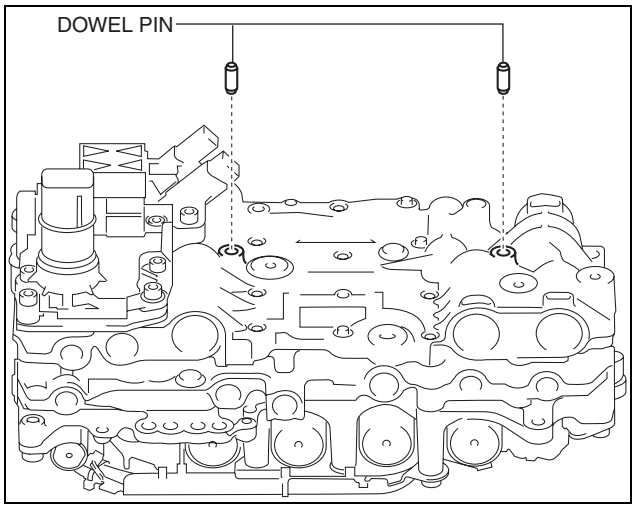
Note

- If the dowel pin remains in the transaxle case, remove the dowel pin from the transaxle case and install the dowel pin to the control valve body.



am3uuw0000918

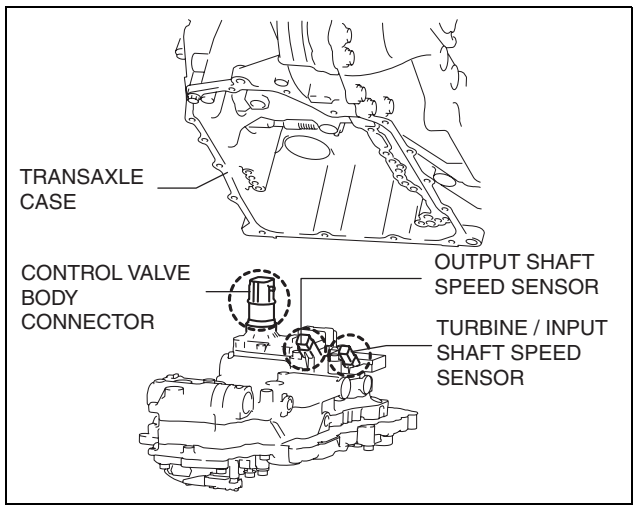
3. Install the control valve body so that the parking assist lever component is engaged in the gap between the two surfaces of the spool part of the manual valve.



am3uuw0000918

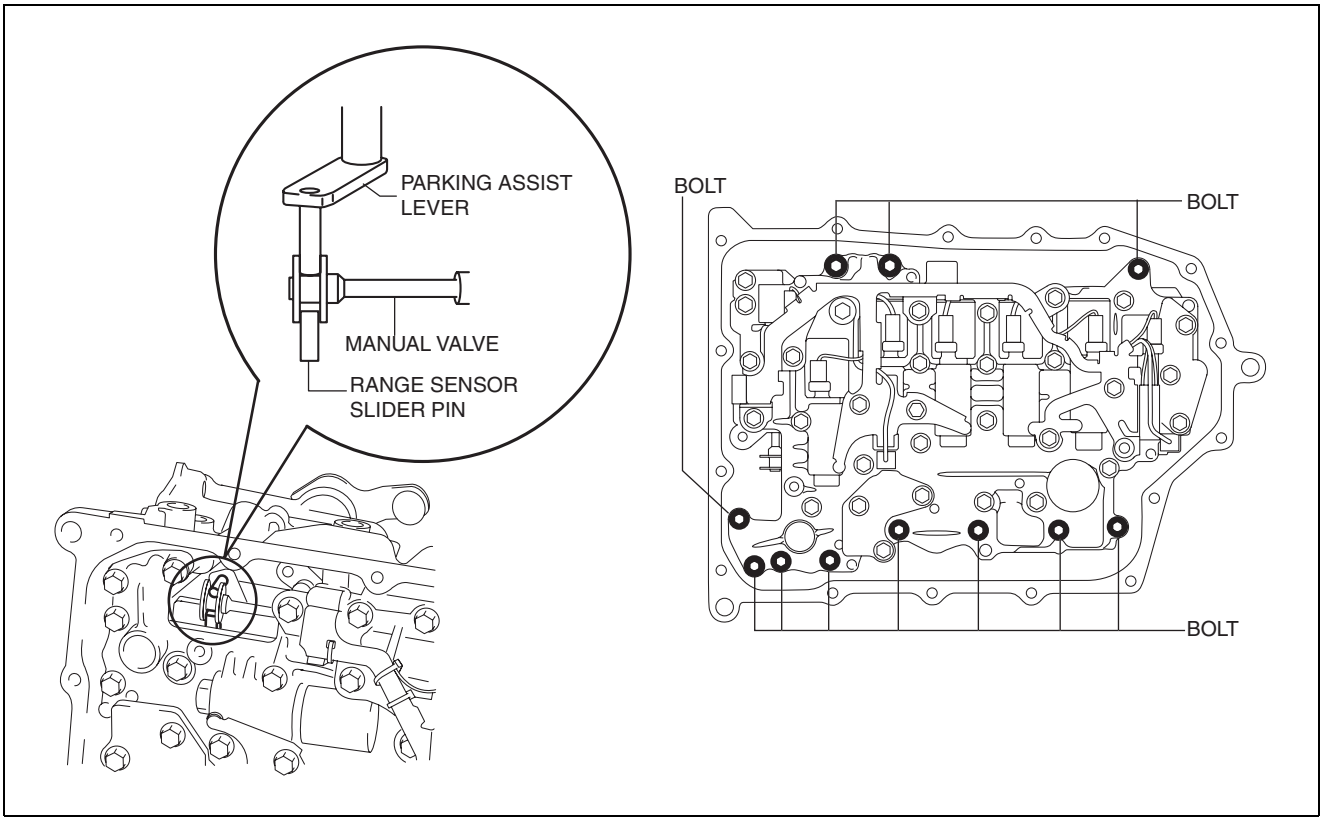
Caution

- **Install the control valve body so that the turbine/input shaft speed sensor, output shaft speed sensor, and control valve body connector do not contact the transaxle case.**



ac5wzw0000461

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

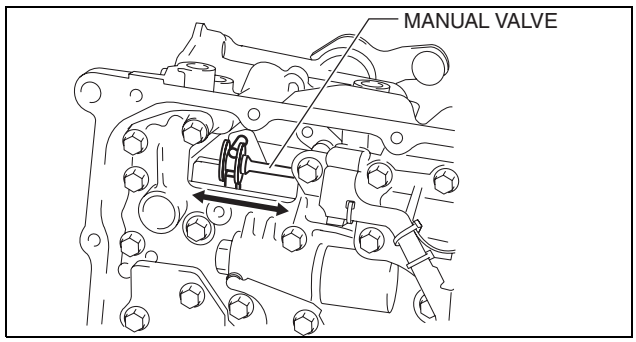


ac5wzw0000233

Tightening torque
9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}

4. Move the manual valve in both directions of the arrow and verify that the manual valve is correctly connected to the parking assist lever component and the slider pin for the range sensor.

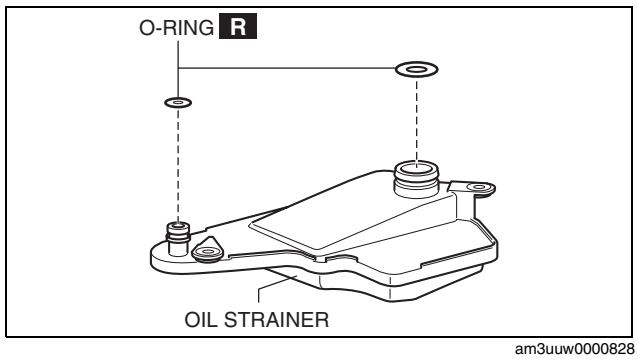
Note
- If the manual valve only moves in the gap between the parking assist lever component surface and the manual valve surface, the manual valve and the parking assist lever component are correctly engaged.



am3zzw0001265

5. Install the oil strainer O-ring.

Note
- If there is a large amount of foreign material at the bottom of the oil pan, replace the oil strainer with a new one.

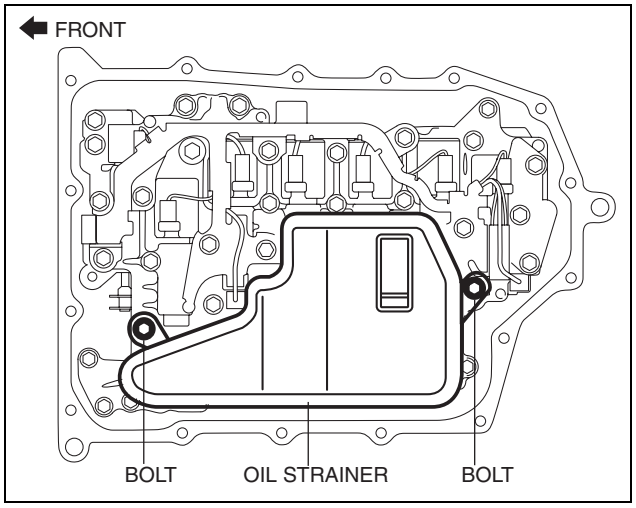


am3uuw0000828

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

6. Install the oil strainer.

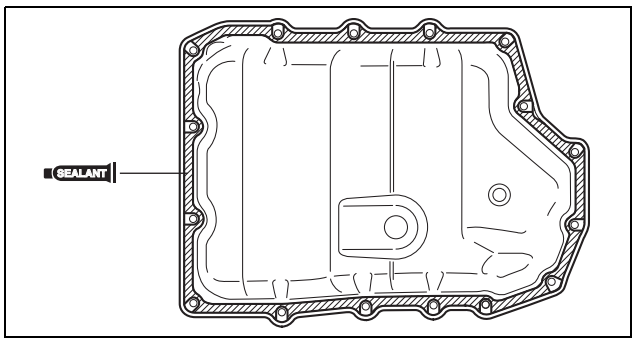
Tightening torque
9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}



am3uuw0000828

7. Apply a light coat of silicon sealant (TB1217E) to the contact surfaces of the oil pan and transaxle case.

Caution
- **Clean any remaining silicone sealant on the contact surface of the transaxle case and oil pan, and degrease the sealant area. Otherwise, oil could leak.**



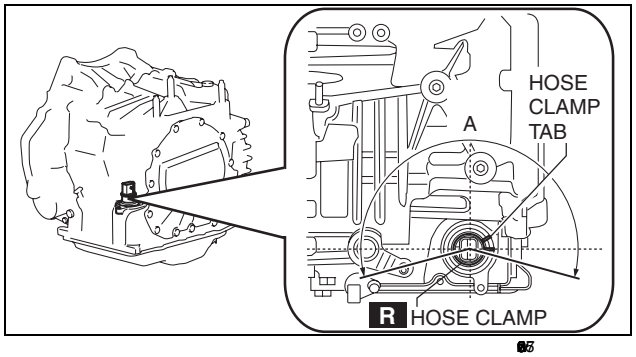
am3uuw0000828

8. Install the oil pan with new bolts before the applied sealant starts to harden.

Tightening torque
8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

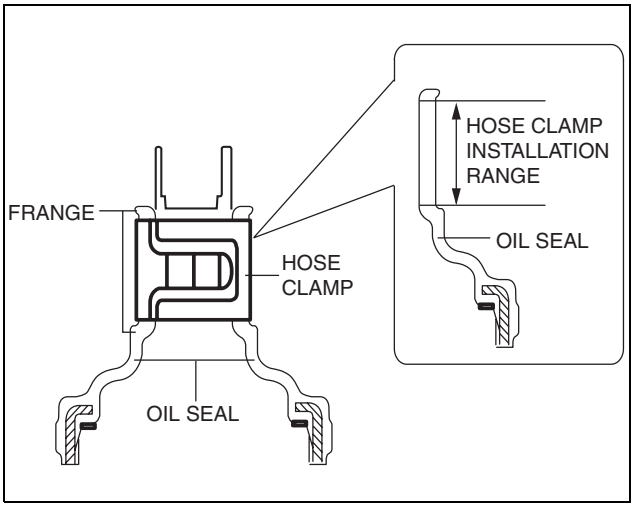
9. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
10. Install the oil seal (control valve body). (See 05-17A-63 OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [FW6A-EL, FW6AX-EL].)
11. Install a new hose clamp to the position shown in the figure.

Caution
- **If the hose clamp is reused it could cause ATF leakage, therefore use a new hose clamp.**
- **Install the hose clamp tab to within the range shown in the figure.**
  A: 210°



AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

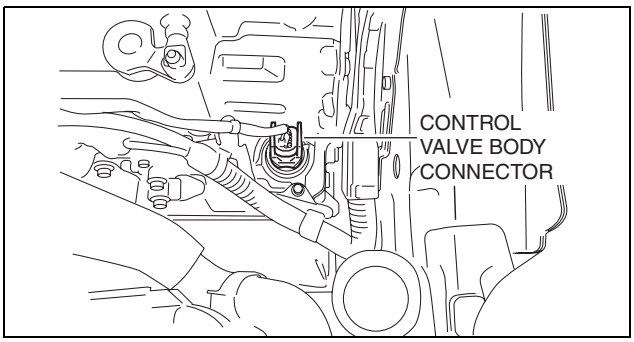
- **Install the hose clamp so that it does not interfere with the top and bottom flanges of the oil seal to maintain the waterproofing integrity.**



ac5wzw0000290

12. Connect the control valve body connector.

Caution
- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Verify that there is no fluid or foreign matter adhering to the connector before connecting the connector.**
- **Insert the connector straight as the connector terminal could be damaged.**
- **Rotate the connector lever until a click is heard.**



am3uuw0000828

13. Add the ATF. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
14. Install the air cleaner component. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
15. Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
16. Perform the “TCM configuration” (Control valve body Replacement). (See 05-17A-79 TCM CONFIGURATION [FW6A-EL, FW6AX-EL].)
17. Perform the “Initial Learning” (Control valve body Replacement). (See 05-17A-74 INITIAL LEARNING [FW6A-EL, FW6AX-EL].)
18. Perform the “Mechanical System Test”. (See 05-17A-4 MECHANICAL SYSTEM TEST [FW6A-EL, FW6AX-EL].)
19. Perform the “Road Test”. (See 05-17A-9 ROAD TEST [FW6A-EL, FW6AX-EL].)

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

INITIAL LEARNING [FW6A-EL, FW6AX-EL]

id0517h2119100

Introduction

- If the control valve body and oil pressure switch are replaced, always perform the initial learning. If the initial learning is not completed, engine rev-up may occur or shift shock may increase. DTC P06B8:00 is displayed while the initial learning has not been implemented.
- The procedure for the initial learning has a procedure which uses the M-MDS and one which does not. The initial learning can be activated easily using the M-MDS.

Warning

- **The initial learning forcibly changes gears within the driving shift range while the engine is running. Before implementing the initial learning, securely apply the parking brake and set the wheel blocks for both the front and rear wheels. Otherwise, the vehicle will move which could cause injury or property damage.**

Using M-MDS

Preparation before servicing

1. Verify initial learning implementation necessity for replacement parts.

Replacement part	Initial learning necessity
Control valve body replacement	Necessary
Oil pressure switch replacement	Necessary
Automatic transaxle replacement	Unnecessary
ON/OFF solenoid replacement	Unnecessary
Coupler component replacement	Unnecessary

2. Apply the parking brake firmly, and set the wheel blocks for both the front and rear wheels.
3. Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].)
4. Bring the M-MDS inside the vehicle and connect it to the DLC-2.
5. Perform vehicle identification using the M-MDS.
6. Start the engine.
7. After the vehicle is identified, select the following items from initialization of the M-MDS.
   (1) Select “Data logger”.
   (2) Select “Module”.
   (3) Select “TCM”.
8. While checking the PID TFT (ATF temperature), warm-up the engine and allow the ATF temperature to reach **40—110 °C {72—198 °F}**.

Starting procedure for initial learning

1. After the vehicle is identified, select the following items from initialization of the M-MDS.
   (1) Select “Self-test”
   (2) Select “Module”
   (3) Select “TCM”

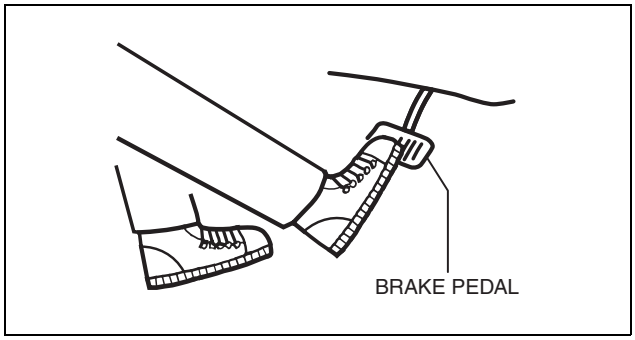
Note

- DTC P06B8:00 is displayed while the initial learning has not been implemented.

2. Start the engine and wait for **30 s or more**.
3. Perform the following steps (1) to (4) with the brake pedal depressed.

Caution

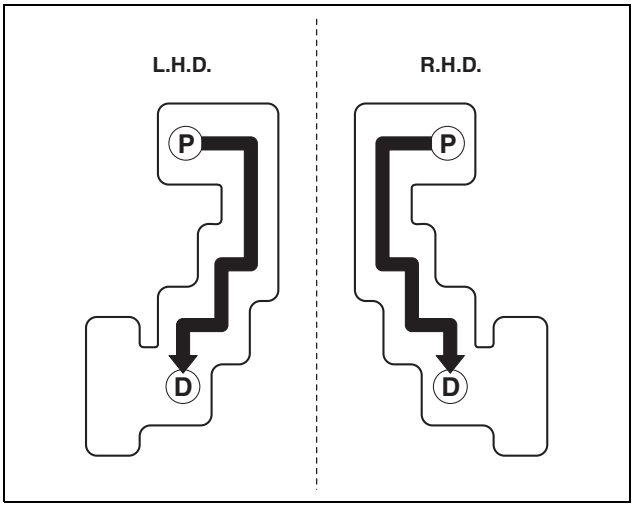
- **When the brake fluid pressure sensor value is the specification or less, shut down the initial learning to assure safety. Accordingly, be careful of the following when performing the initial learning:**
  - **— Strongly depress the brake pedal while performing the initial learning.**
  - **— Do not depress the brake pedal again. Otherwise, the brake booster pressure will decrease and the brake force will weaken.**



ac5wzw0000404

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

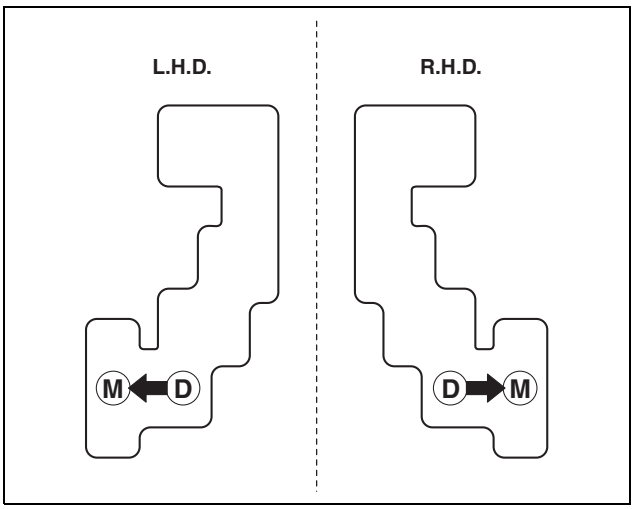
(1) Shift the selector lever from P position to D position and click the DTC clear button for the M-MDS.



ac5wzw0000077

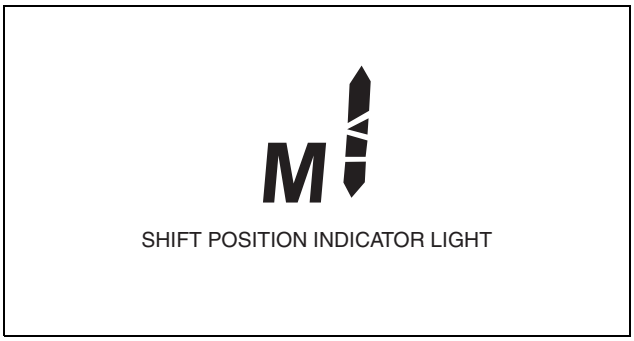
(2) When the M-MDS screen returns to the DTC display screen, shift the selector lever from D position to M position within **10 s** and verify that the engine speed increases from idling.

Note
- The initial learning implements after idle speed starts increasing. If idle speed does not start increasing, repeat the procedure from Step 2.
- If the initial learning is shut down for any reason while performing the learning, shift position indicator light does not flash. If shift position indicator light does not flash, repeat the procedure from Step 2.



ac5wzw0000077

(3) Verify that the engine speed returns to idle and shift position indicator light flashes **two times**.



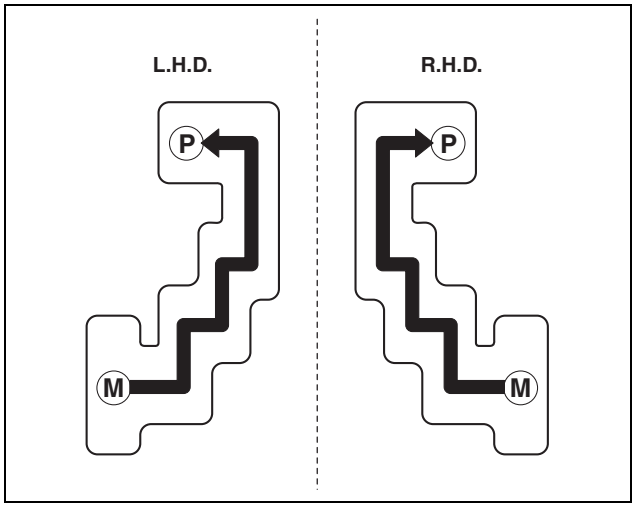
ac5wzw0000077

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

(4) After shift position indicator light flashes twice, shift the selector lever from M position to P position and stop the engine.

Note
- Be careful not to miss looking at shift position indicator light because the light flashes only **one time**.

4. Release the brake pedal.
5. Switch the ignition to KOEO and verify the DTC.
   - If DTC P06B8:00 is displayed, repeat the procedure from Step 2. If any other DTCs are displayed, perform the applicable DTC troubleshooting. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)



ac5wzw0000077

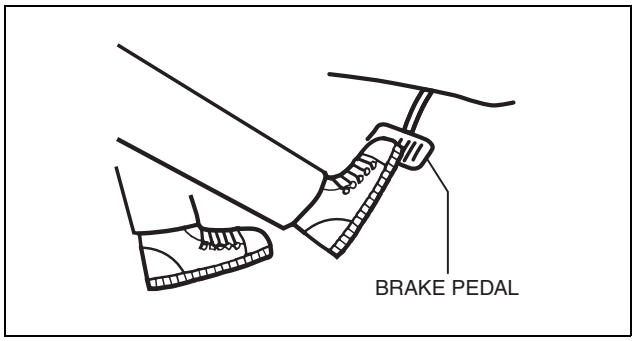
Not Using of M-MDS
Preparation before servicing
1. Verify initial learning implementation necessity for replacement parts.

Replacement part	Initial learning necessity
Control valve body replacement	Necessary
Oil pressure switch replacement	Necessary
Automatic transaxle replacement	Unnecessary
ON/OFF solenoid replacement	Unnecessary
Coupler component replacement	Unnecessary

2. Apply the parking brake firmly, and set the wheel blocks for both the front and rear wheels.
3. Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].)
4. Start the engine.
5. Warm-up the engine and allow the ATF temperature to reach **40—110 °C {72—198 °F}**.

Starting procedure for initial learning
1. Start the engine and wait for **30 s or more**.
2. Perform the following steps (1) to (7) with the brake pedal depressed.

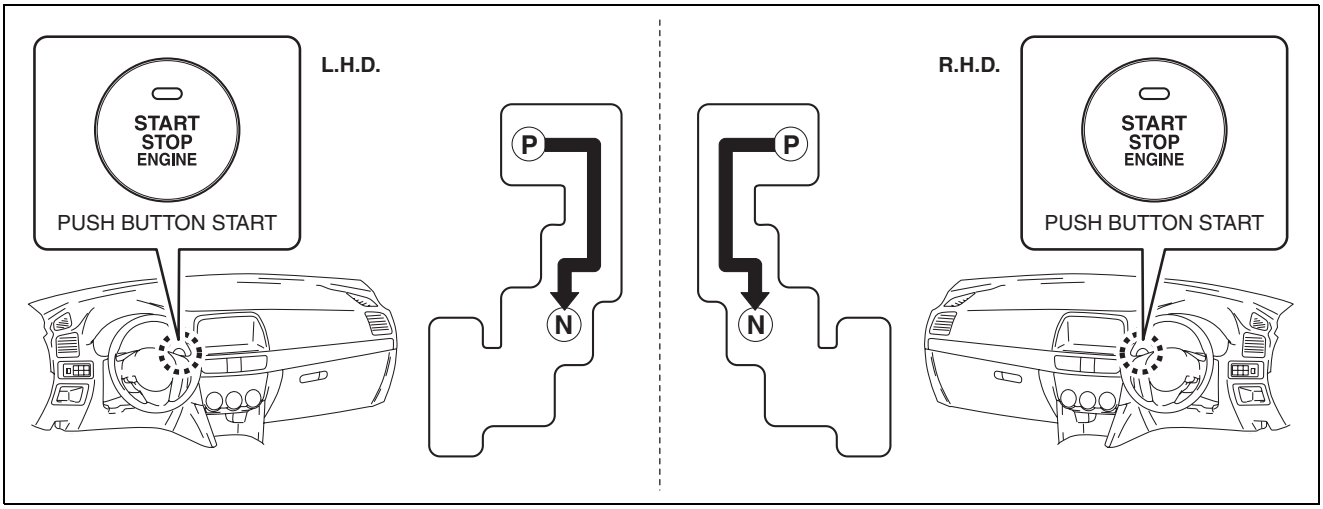
Caution
- **When the brake fluid pressure sensor value is the specification or less, shut down the initial learning to assure safety. Accordingly, be careful of the following when performing the initial learning:**
  - **— Strongly depress the brake pedal while performing the initial learning.**
  - **— Do not depress the brake pedal again. Otherwise, the brake booster pressure will decrease and the brake force will weaken.**



ac5wzw0000404

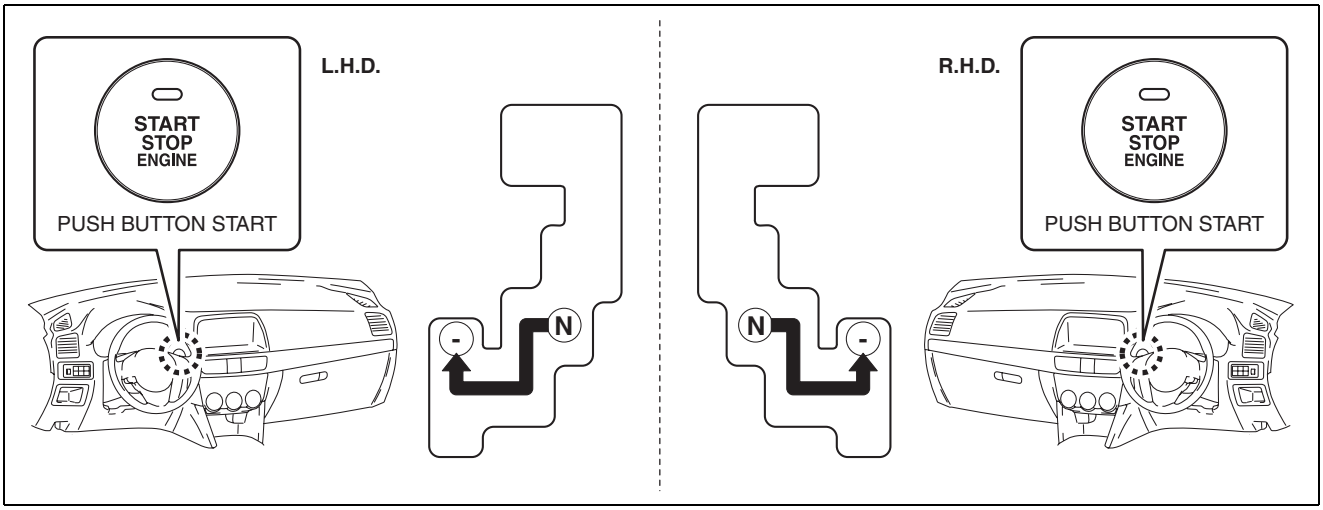
AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

(1) Shift the selector lever from P position to N position, press the push button start **one time**, and stop the engine.



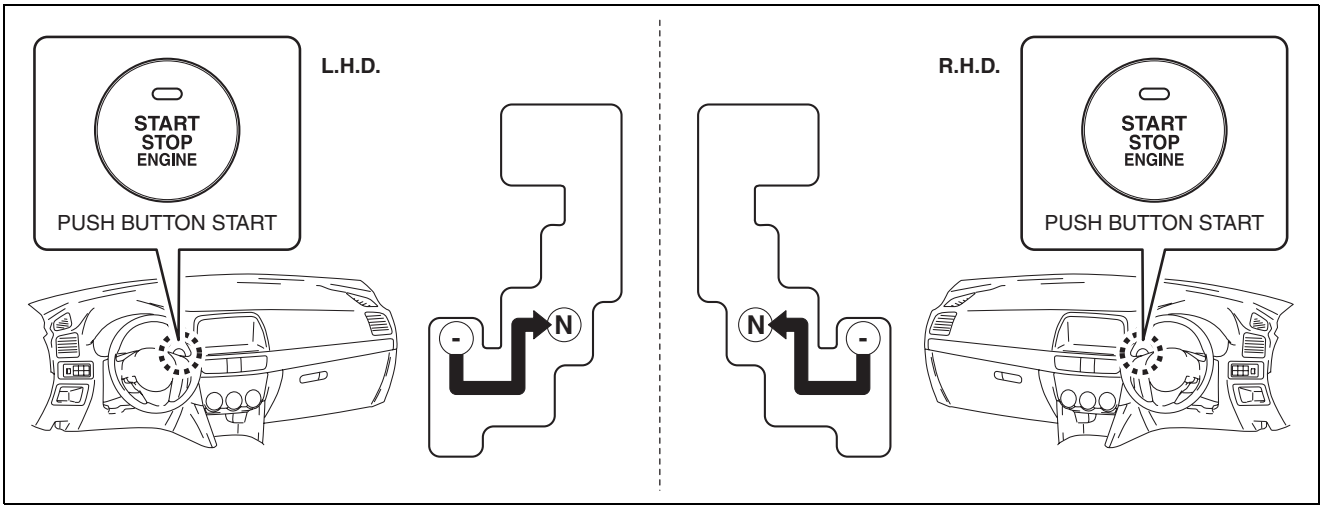
ac5wzw0000077

(2) Shift the selector lever from N position to M- position, press the push button start **one time** while holding the lever in the M- position, and wait for **5 s or more** (ignition switch ON (engine on)).



ac5wzw0000077

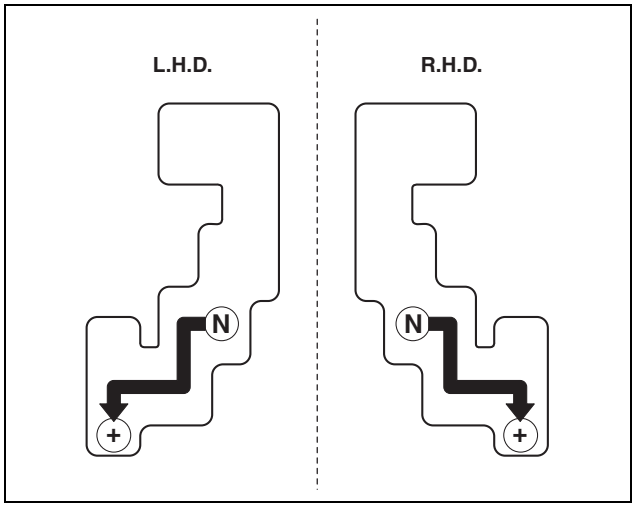
(3) Shift the selector lever from M- position to N position, press the push button start **one time**, and start the engine.



ac5wzw0000078

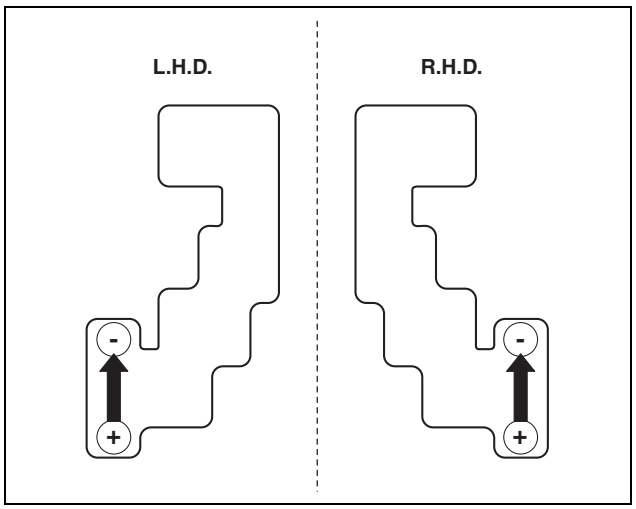
AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

(4) Shift the selector lever from N position to M+ position and wait for **5 s or more** while holding the lever in the M+ position.

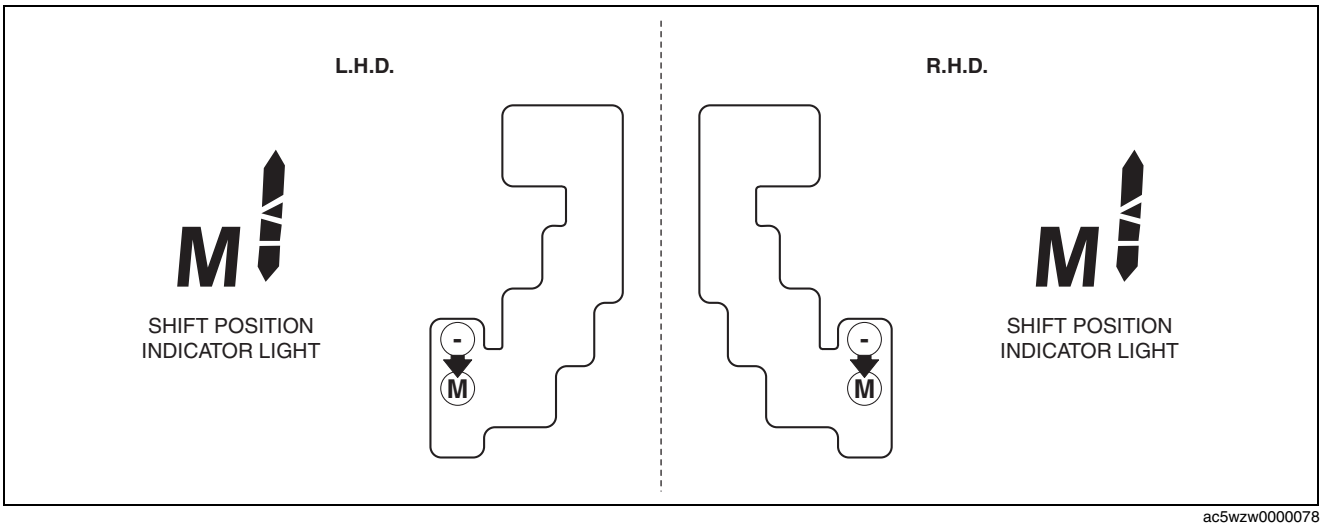


ac5wzw0000078

(5) Select the selector lever from M+ position to M- position and wait for **5 s or more** while holding the lever in the M- position.
(6) When starting idle up, shift the selector lever from the M- position to M position and verify that the shift position indicator light flashes **two times**.



ac5wzw0000078



ac5wzw0000078

Note

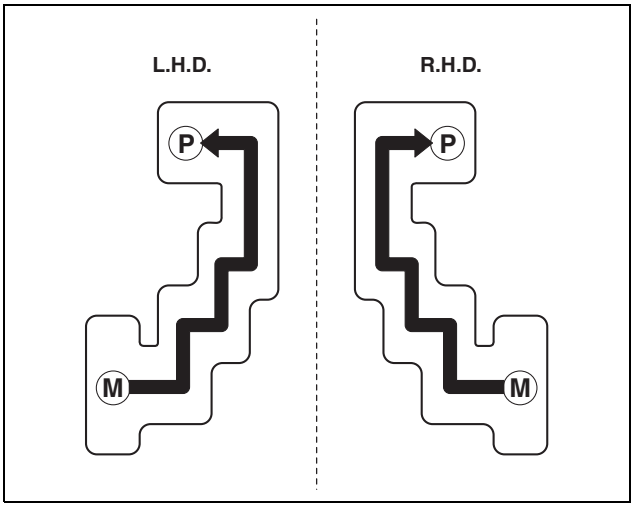
- The initial learning implements after idle speed starts increasing. If idle speed does not start increasing, repeat the procedure from Step 1 "Start the engine and wait for **30 s or more**.".

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

(7) After shift position indicator light flashes twice, shift the selector lever from M position to P position and stop the engine.

Note
- Be careful not to miss looking at shift position indicator light because the light flashes only **one time**.

3. Release the brake pedal.
4. Clear the DTC using the M-MDS and switch the ignition to off. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].)
5. Switch the ignition ON (engine off or on) and verify that DTC P06B8:00 is not recorded using the M-MDS. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
   - If the DTC P06B8:00 is displayed, repeat the procedure from Step 1.



ac5wzw0000077

TCM CONFIGURATION [FW6A-EL, FW6AX-EL]

id0517h2119200

Note
- The TCM is built into the control valve body.

1. Verify TCM configuration implementation necessity for replacement parts.

Replacement part	Configuration necessity
Control valve body replacement	Necessary
Oil pressure switch replacement	Unnecessary
Automatic transaxle replacement	Unnecessary
ON/OFF solenoid replacement	Unnecessary
Coupler component replacement	Unnecessary

2. Connect the M-MDS to the DLC-2.
3. After vehicle identification, the following can be selected from the M-MDS initialization screen.
   1. Select “Module Programming”
4. Then, select the following from the screen menu.
   1. Select “Programmable Module Installation”
   2. Select “TCM”
5. Perform the configuration following the instructions on the screen.
6. Verify that no DTCs are stored. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].)

Note
- If any DTC (U code) is output, the system is normal.

7. Delete the U code and verify that no DTC is output. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].)
   - If any DTC other than U code is output, repair the malfunctioning location according to the applicable DTC troubleshooting. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

MECHANICAL SYSTEM TEST [GW6A-EL, GW6AX-EL]

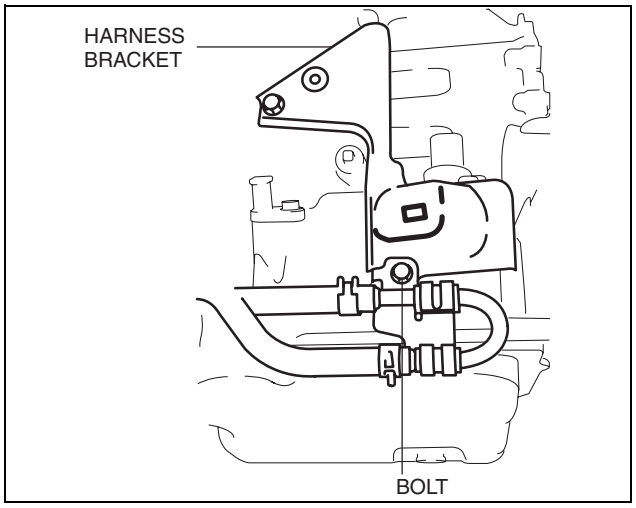
id0517i2118300

Mechanical system test preparation

1. Apply the parking brake firmly, and set the wheel blocks for both the front and rear wheels.
2. Inspect the engine coolant level. (See 01-12B-3 ENGINE COOLANT LEVEL INSPECTION [SKYACTIV-D 2.2].)
3. Inspect the engine oil level. (See 01-11B-3 ENGINE OIL LEVEL INSPECTION [SKYACTIV-D 2.2].)
4. Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].)
5. Inspect the ignition timing. (See 01-10B-3 ENGINE TUNE-UP [SKYACTIV-D 2.2].)
6. Inspect the idle speed. (See 01-10B-3 ENGINE TUNE-UP [SKYACTIV-D 2.2].)
7. Verify that no DTCs are stored.

Line pressure test

1. Perform the mechanical system test preparation. (See 05-17B-4 Mechanical system test preparation.)
2. Remove the air cleaner component. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Disconnect the oil pipe No.1 from the harness bracket with the oil hose connected. (With Oil cooler No.2)

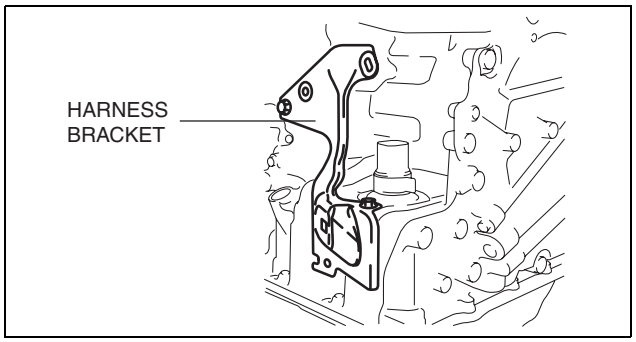


ac5wzw0000374

4. Remove the harness bracket.
5. Remove the pressure detection square head plug.

Warning

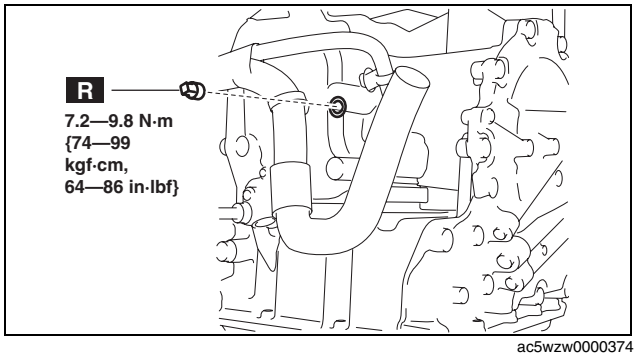
- **Do not remove the square head plug when the ATF temperature is high. Otherwise, ATF could overflow and cause severe burns or serious injury. Remove the square head plug when the transaxle and ATF temperatures are low.**



ac5wzw0000374

Note

- Use a suitable oil pressure gauge that corresponds to the line pressure because the maximum scale value differs depending on the oil pressure gauge.

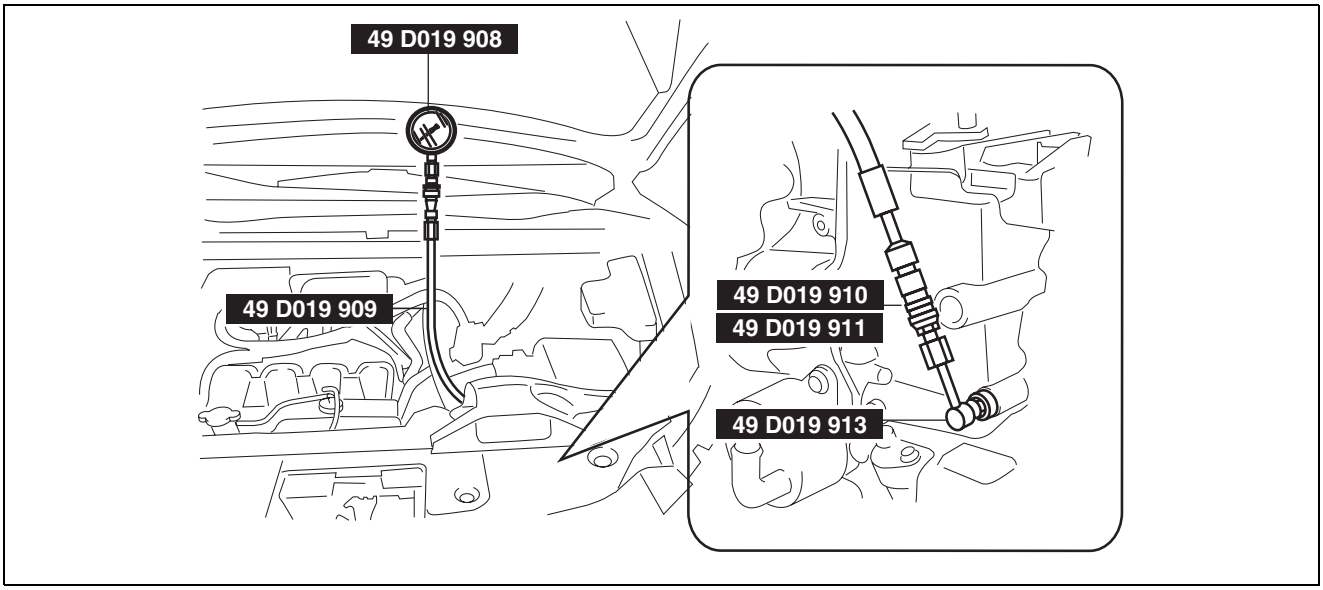


ac5wzw0000374

6. Install the air cleaner component. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

7. Install **SSTs (49 D019 908, 49 D019 909, 49 D019 910,** 49 D019 911, 49 D019 913) to the line pressure detection port as shown in the figure.



ac5uuw00000212

8. Start the engine.
9. Warm up the engine until the ATF temperature is **60—70 °C {140—158 °F}**.
10. Shift the selector lever to the D position.
11. Measure the line pressure while idling in D position.
12. Measure the line pressures while idling in the M (1st gear) and R positions using the same procedure.
13. Stop the engine.
14. Change the low-pressure gauge (49 D019 908) to the high-pressure gauge (49 D019 907).
15. Start the engine.
16. Measure the line pressure while stalling in D position.
    (1) Strongly depress the brake pedal with the left foot.
    (2) Shift the selector lever to the D position.

    Caution
    - **To prevent damage to the transaxle, measure the line pressure while stalling (Step (3)—(4)) within 5 s.**

    (3) Slowly depress the accelerator pedal fully with the right foot all the way down.
    (4) Read the line pressure quickly while stalling, and remove the right foot from the accelerator pedal.
    (5) Shift the selector lever to the N position and idle for **1 min or more**.
17. Measure the line pressure while stalling for positions other than D in the same procedure.
    - If there is any malfunction, one of the following causes may have occurred:

Condition		Possible cause
Lower than specification	Lower in R, D, and M (1GR) position	• Oil pump wear • ATF leakage from oil pump, control valve body, and transaxle case • Pressure regulator valve sticking • Pressure control solenoid malfunction • Solenoid reducing valve sticking
	Lower in D and M (1GR) position	• ATF leakage from low clutch hydraulic circuit
	Lower in R and M (1GR) position	• ATF leakage from low and reverse brake hydraulic circuit
	Lower in R position	• ATF leakage from R-3-5 brake hydraulic circuit
Higher than specification	Higher in R, D, and M (1GR) position	• Pressure regulator valve sticking • Pressure control solenoid malfunction

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

Line pressure

Measurement conditions		Specification (kPa {kgf/cm^2, psi})
Idling	R position	500—700 {5.10—7.13, 72.6—101.0}
	D and M (1GR) position	330—470 {3.37—4.79, 47.9—68.1}
Stalling	R position	1,790—2,100 {18.26—21.41, 259.7—304.5}
	D and M (1GR) position	970—1,170 {9.90—11.93, 141.0—169.6}

18. Stop the engine.
19. Remove the air cleaner component. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
20. Remove the **SSTs**.

Warning
- **If the SST is removed when the ATF temperature is high, ATF could overflow and cause severe burns or serious injury. Remove the SST when the transaxle and ATF temperatures are low.**

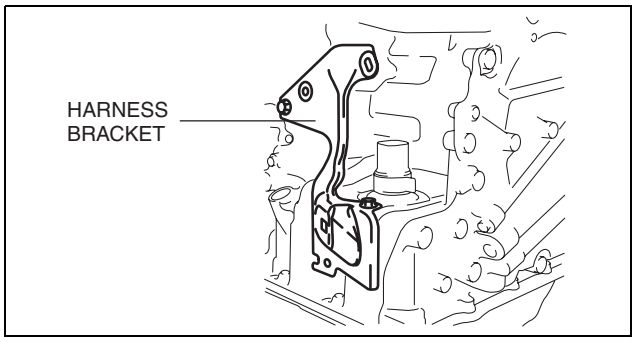
21. Install a new square head plug.

Note
- Do not reuse the square head plug because a sealant coating has been applied.

Tightening torque
7.2—9.8 N·m {74—99 kgf·cm, 64—86 in·lbf}

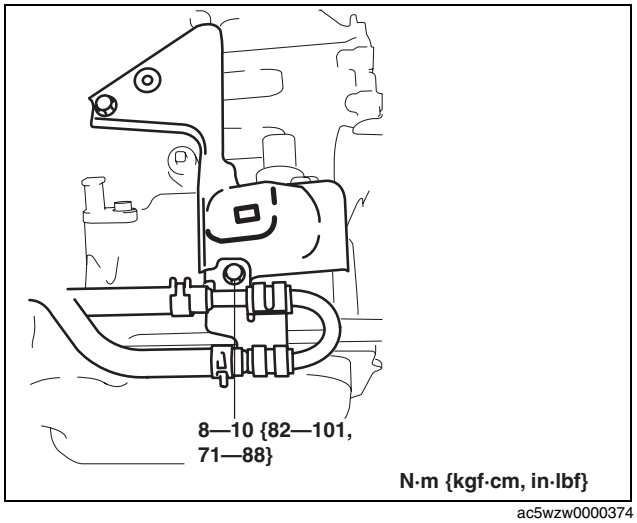
22. Install the harness bracket.

Tightening torque
8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}



ac5wzw0000374

23. Install the oil pipe No.1 to the harness bracket. (With Oil cooler No.2)
24. Install the air cleaner component. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000374

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

Stall test

1. Perform the mechanical system test preparation. (See 05-17B-4 Mechanical system test preparation.)
2. Apply the parking brake firmly, and set the wheel blocks for both the front and rear wheels.
3. Start the engine.
4. Measure the stall speed in the D position.
   (1) Strongly depress the brake pedal with the left foot.
   (2) Shift the selector lever to the D position.

   Caution
   - **Stall speed: Maximum stall speed during stall test**
   - **If the stall condition is determined in the D or M position, the control for limiting the engine speed is operated to protect the transaxle. Engine speed increases momentarily and decreases gradually during the stall test, however, this does not indicate a malfunction.**
   - **To prevent damage to the transaxle, measure the stall speed (Step (3)—(4)) within 5 s.**

   (3) Slowly depress the accelerator pedal fully with the right foot all the way down.
   (4) Read the engine speed quickly when the speed is stabilized, and remove the right foot from the accelerator pedal.
   (5) Shift the selector lever to the N position and idle for **1 min or more**.
5. Measure the stall speed in the M (1st gear) and R positions using the same procedure.
   - If there is any malfunction, one of the following causes may have occurred:

Condition		Possible cause	
Higher than specification	Higher in R, D, and M (1GR) position	Line pressure is low	• Oil pump wear • ATF leakage from oil pump, control valve body, and transaxle case • Pressure regulator valve sticking • TR control valve sticking • Pressure control solenoid operation malfunction
		• Low and reverse brake slippage, and damage of one-way clutch	
	Higher in D and M (1GR) position	• Low clutch slippage • One-way clutch damage	
	Higher in R position	Perform road test to determine whether problem is in R-3-5 brake or low and reverse brake • Engine brake operates in M (1GR) position — R-3-5 brake slippage • Engine braking does not operate in M (1GR) position — Low and reverse brake slippage	
Lower than specification	Lower in R, D, and M (1GR) position	• Engine malfunction • One-way clutch slippage in torque converter	

Stall speed

Measurement conditions	Standard value (rpm)
R position	1,800—2,400
D position	2,100—3,100
M position	

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

Time lag test

1. Perform the mechanical system test preparation. (See 05-17B-4 Mechanical system test preparation.)
2. Apply the parking brake firmly, and set the wheel blocks for both the front and rear wheels.
3. Start the engine.
4. Measure the time lag from the N position to the D position.
   (1) Shift the selector lever from the N position to the D position with the brake pedal depressed.
   (2) Measure the time until the shift shock is felt firmly after shifting.
5. Measure the time lag from the N position to the R position using the same procedure.
   - If there is any malfunction, one of the following causes may have occurred:

Condition		Possible cause
N to D selected	Longer than specification	• Line pressure is low • Low clutch slippage • ATF leakage from low clutch hydraulic circuit • ATF leakage from low and reverse brake hydraulic circuit • Shift solenoid No.1 operation malfunction • Shift solenoid No.4 operation malfunction
	Shorter than specification	• Line pressure is high • N-D accumulator operation malfunction • Shift solenoid No.1 operation malfunction • Shift solenoid No.4 operation malfunction
N to R selected	Longer than specification	• Line pressure is low • Low and Reverse brake slippage • R-3-5 brake slippage • ATF leakage from R-3-5 brake hydraulic circuit • ATF leakage from low and reverse brake hydraulic circuit • Shift solenoid No.3 operation malfunction • Shift solenoid No.4 operation malfunction
	Shorter than specification	• Line pressure is high • N-R accumulator operation malfunction • Shift solenoid No.3 operation malfunction • Shift solenoid No.4 operation malfunction

Time lag

Measurement conditions	Specification (s)
N to D selected	0.4—0.7
N to R selected	

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

ROAD TEST [GW6A-EL, GW6AX-EL]

id0517i2118400

Warning

- **When performing a road test, always verify the safety of the surrounding area before performing the test.**

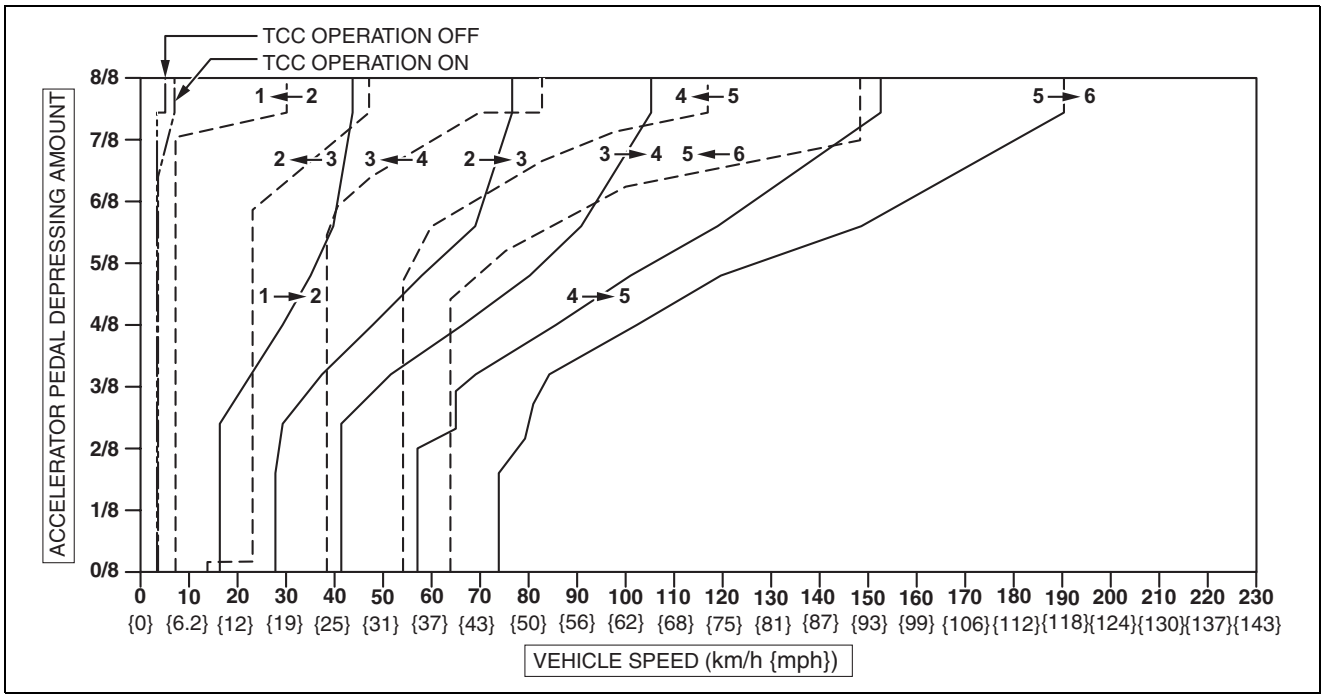
Note

- When performing a road test requiring speeds which exceed the legal speed limit, use a dynamometer.

Road test preparation

1. Inspect the engine coolant level. (See 01-12B-3 ENGINE COOLANT LEVEL INSPECTION [SKYACTIV-D 2.2].)
2. Inspect the engine oil level. (See 01-11B-3 ENGINE OIL LEVEL INSPECTION [SKYACTIV-D 2.2].)
3. Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].)
4. Inspect the ignition timing. (See 01-10B-3 ENGINE TUNE-UP [SKYACTIV-D 2.2].)
5. Inspect the idle speed. (See 01-10B-3 ENGINE TUNE-UP [SKYACTIV-D 2.2].)
6. Verify that no DTCs are stored.

Shift diagram (D position, normal mode)



ac5wzw0000360

05

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

D position test

1. Perform road test preparations. (See 05-17B-9 Road test preparation.)
2. Warm up the transaxle.
3. Select D position.
4. Inspect the shift point for the D position in normal mode.
   - If there is any malfunction, refer to symptom troubleshooting and verify the malfunction symptom.

   (1) Depress the accelerator pedal and start the vehicle, and verify that the gears shift from 1st to 2nd, 2nd to 3rd, 3rd to 4th, 4th to 5th, and 5th to 6th. In addition, verify that the vehicle speed corresponds to the shift point when shifting.

   (2) Release the accelerator pedal while driving in 6th gear, and verify that the gears shift from 6th to 5th, 5th to 4th, 4th to 3rd, 3rd to 2nd, and 2nd to 1st. In addition, verify that the vehicle speed corresponds to the shift point when shifting.

Note

- When the accelerator pedal is fully released quickly, shifting is not performed according to the shift pattern because the gear being used may be maintained.
- When decelerating by strongly depressing the brake pedal, shifting is not performed according to the shift pattern because the shift-down point may be at high vehicle speed.

   (3) Kick down while driving in 6th, 5th, 4th, 3rd, and 2nd gears, and verify that the gears shift from 6th to 5th, 5th to 4th, 4th to 3rd, 3rd to 2nd, and 2nd to 1st. In addition, verify that the vehicle speed limit for kicking down corresponds to the shift point.

   (4) Verify that the shift shock is minimal, shifting is smooth and timely, and there is no abnormal noise or slip.

Shift point

Position/mode		Accelerator pedal depression amount	Shift	Vehicle speed (km/h {mph})	Turbine rotation speed (rpm)
D	NORMAL	8/8	$D_1 \rightarrow D_2$	43—48 {27—29}	4,700—5,300
			$D_2 \rightarrow D_3$	75—82 {47—50}	4,700—5,150
			$D_3 \rightarrow D_4$	103—112 {64—69}	4,700—5,100
			$D_4 \rightarrow D_5$	150—159 {93—98}	4,750—5,000
		4/8	$D_1 \rightarrow D_2$	24—33 {15—20}	2,600—3,650
			$D_2 \rightarrow D_3$	39—57 {25—35}	2,450—3,550
			$D_3 \rightarrow D_4$	53—79 {33—48}	2,450—3,600
			$D_4 \rightarrow D_5$	72—99 {45—61}	2,300—3,100
		0/8	$D_6 \rightarrow D_5$	61—66 {38—40}	1,150—1,250
			$D_5 \rightarrow D_4$	51—57 {32—35}	1,150—1,250
			$D_4 \rightarrow D_3$	36—41 {23—25}	1,150—1,300
			$D_3 \rightarrow D_2$	11—16 {7—9}	500—750
			$D_2 \rightarrow D_1$	5—10 {4—6}	300—600
		Kickdown (8/8)	$D_5 \rightarrow D_4$	112—121 {70—75}	2,500—2,700
			$D_4 \rightarrow D_3$	78—87 {49—53}	2,450—2,750
			$D_3 \rightarrow D_2$	43—51 {27—31}	2,000—2,300
			$D_2 \rightarrow D_1$	27—33 {17—20}	1,700—2,050

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

M position test

1. Perform road test preparations. (See 05-17B-9 Road test preparation.)
2. Warm up the transaxle.
3. Select the M position.
4. Inspect the shift point for the M position.
   - If there is any malfunction, refer to symptom troubleshooting and verify the malfunction symptom.
   (1) Perform the shift operation while driving and verify that the gears can be shifted.
   (2) Release the accelerator pedal while driving in 6th gear, and verify that the gears shift from 6th to 5th, 5th to 4th, 4th to 3rd, 3rd to 2nd, and 2nd to 1st. In addition, verify that the vehicle speed corresponds to the shift point when shifting.
   (3) Release the accelerator pedal while driving and verify that the engine braking operates in all gears.
   (4) Verify that the shift shock is minimal, shifting is smooth and timely, and there is no abnormal noise or slip.

Shift point

Position/mode	Accelerator pedal depression amount	Shift	Vehicle speed (km/h {mph})	Turbine rotation speed (rpm)
M	0/8	$M_6 \rightarrow M_5$	61—66 {38—40}	1,150—1,250
		$M_5 \rightarrow M_4$	51—57 {32—35}	1,150—1,250
		$M_4 \rightarrow M_3$	36—41 {23—25}	1,150—1,300
		$M_3 \rightarrow M_2$	11—16 {7—9}	500—750
		$M_2 \rightarrow M_1$	5—10 {4—6}	300—600

5. Inspect 2nd gear fixed mode.
   (1) While the vehicle is stopped or the vehicle speed is **10 km/h {6.2 mph} or less**, operate the selector lever toward + to shift to 2nd gear.
   (2) Verify that the gear is fixed in 2nd gear.
   (3) Release the accelerator pedal while driving and verify that the engine braking operates.
   (4) Perform the shift operation while driving and verify that the gears can be shifted.

P position test

1. Park the vehicle on a gentle slope and shift the selector lever to the P position.
2. Release the brake and verify that the vehicle does not move.
   - If there is any malfunction, inspect the parking mechanism in the transaxle.

AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL]

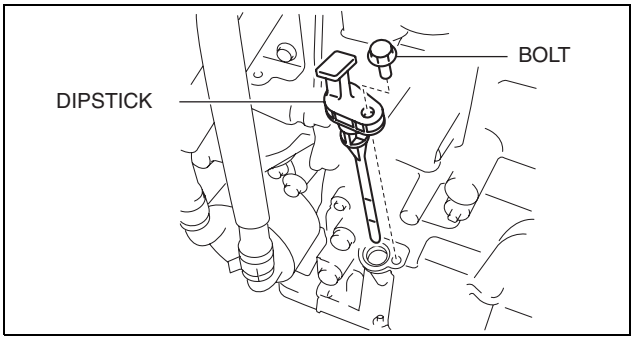
id0517i2118500

Caution

- **If the ATF level is not within the specification or ATF is not adhering to the dipstick after warming up the engine, do not drive the vehicle. Otherwise, the transaxle could be damaged.**

ATF level inspection

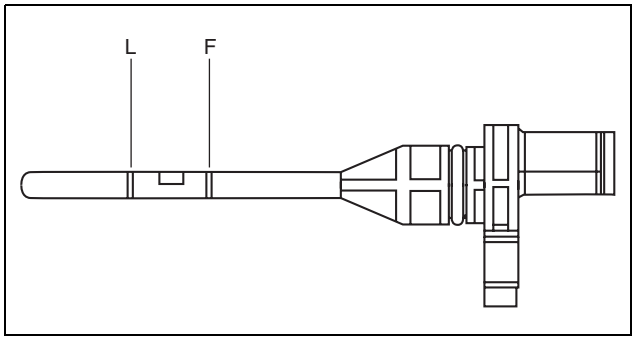
1. Remove the dipstick securing bolt.
2. Connect the M-MDS to the DLC-2 and display the PID TFT.
3. Warm up the engine until the ATF temperature is 50 °C {122 °F}.
4. Remove the dipstick and wipe ATF off using a nylon cloth while leaving the engine idling.
5. Insert the dipstick and pull it out again.
6. Verify that the ATF is adhering between L and F on the dipstick.



ac5wzw0000374

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

- If ATF is not adhering between L and F on the dipstick, adjust the ATF level. (See 05-17B-13 AUTOMATIC TRANSAXLE FLUID (ATF) ADJUSTMENT [GW6A-EL, GW6AX-EL].)



aaxjjw00010212

Note
- The ATF color is blue.
- Only use ATF FZ for the GW6A-EL, GW6AX-EL.

ATF type
ATF FZ

7. Insert the dipstick and install the securing bolt.

Tightening torque
8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL]

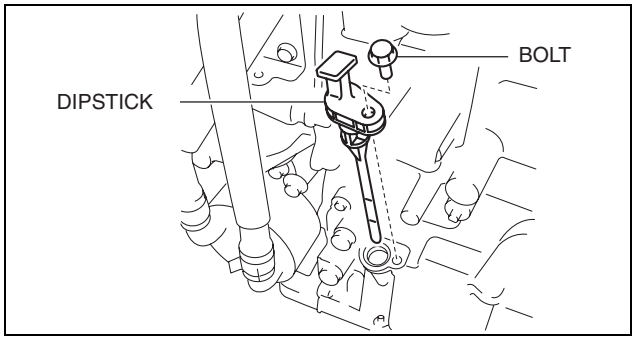
id0517i2118600

Warning
- **Do not perform the servicing while the ATF is hot. Otherwise, it could cause severe burns or serious injury.**

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Remove the dipstick securing bolt.
3. Remove the dipstick.
4. Remove the drain plug and washer, and drain the ATF.
5. Install a new washer and drain plug.

Tightening torque
30—41 N·m {3.1—4.1 kgf·m, 23—30 ft·lbf}

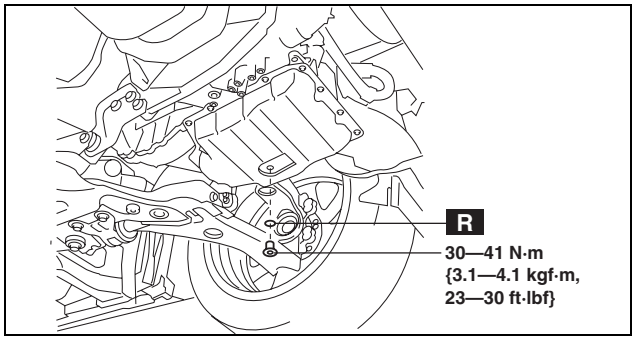
6. Add ATF from the dipstick installation hole.



ac5wzw0000360

Note
- The ATF color is blue.
- Only use ATF FZ for the GW6A-EL, GW6AX-EL.

ATF type
ATF FZ
Resupply amount (Reference)
ATF is drained from drain plug: 3.5—4.9 L {3.7—5.1 US qt, 3.1—4.3 Imp qt}



am3zzw0001264

7. Adjust the ATF level. (See 05-17B-13 AUTOMATIC TRANSAXLE FLUID (ATF) ADJUSTMENT [GW6A-EL, GW6AX-EL].)
8. Insert the dipstick and install the securing bolt.

Tightening torque
8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

9. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)

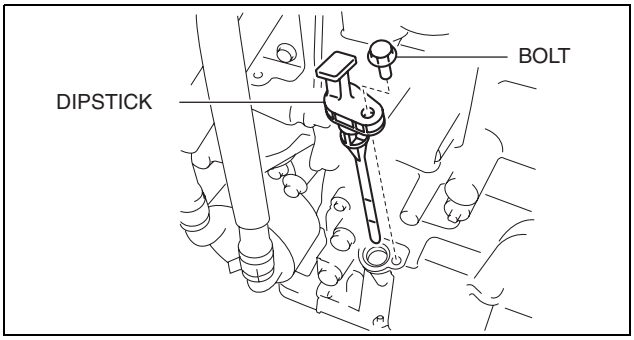
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

AUTOMATIC TRANSAXLE FLUID (ATF) ADJUSTMENT [GW6A-EL, GW6AX-EL]

id0517i2119300

Caution
- **Only adjust the ATF level when the ATF temperature is 45—55 °C {113—131 °F}. If the ATF level is incorrect, it could damage the transaxle.**
- **Do not add ATF over the specification. Otherwise, the transaxle performance could be reduced and ATF could leak.**

1. Remove the dipstick securing bolt.
2. Remove the dipstick.
3. Adjust the ATF level.
   (1) Connect the M-MDS to the DLC-2 and display the PID TFT.
   (2) Warm up the engine until the ATF temperature is **50 °C {122 °F}**.
   (3) Remove the dipstick and wipe the ATF off using a rag while leaving the engine idling.
   (4) Insert the dipstick and pull it out again.
   (5) Verify that ATF is adhering to the central marker area on the dipstick.
      - If ATF is not adhering to the central marker area on the dipstick, adjust the ATF level to the central marker area.



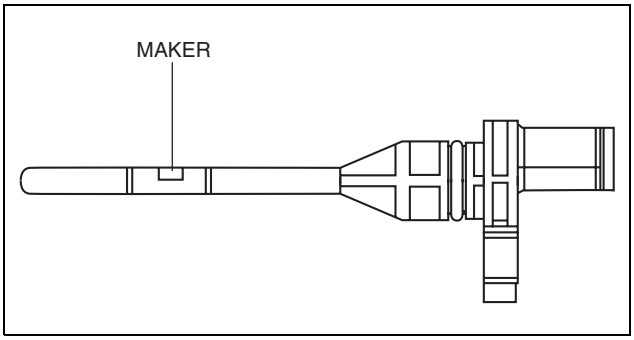
ac5wzw0000360

Note
- The ATF color is blue.
- Only use ATF FZ for the GW6A-EL, GW6AX-EL.

ATF type
ATF FZ

4. Insert the dipstick and install the securing bolt.

Tightening torque
8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}



am3uuw0000839

05

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

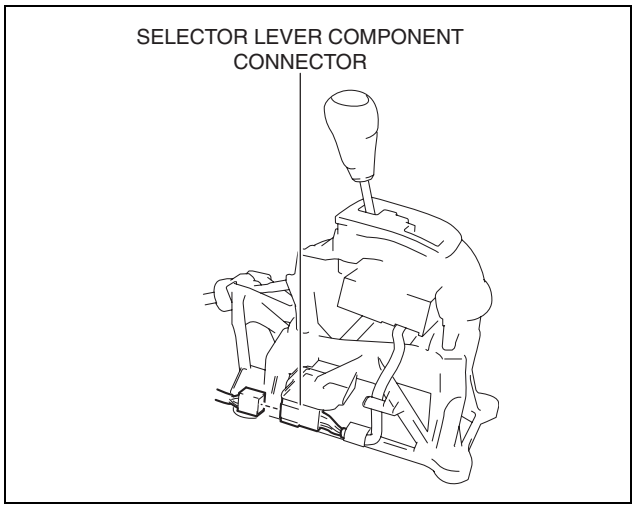
M POSITION SWITCH INSPECTION [GW6A-EL, GW6AX-EL]

id0517i2500000

Continuity Inspection

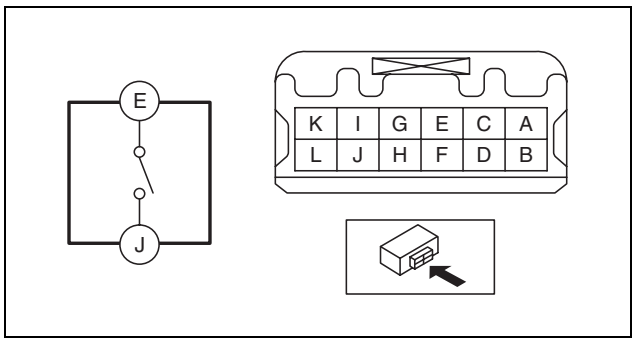
Note
- The M position switch is built into the selector lever component.

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front console. (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
3. Disconnect the selector lever component connector.



ac5wzw0000078

4. Verify that the continuity between selector lever component terminals E and J.
   - If not as verified, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)



ac5wzw0000078

M position switch specification

Test condition	Continuity
Selector lever is in the M position.	Continuity
Selector lever is not in the M position.	No continuity

M POSITION SWITCH REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL]

id0517i2100000

Note
- The M position switch is built into the selector lever component.

1. If the M position switch is replaced, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

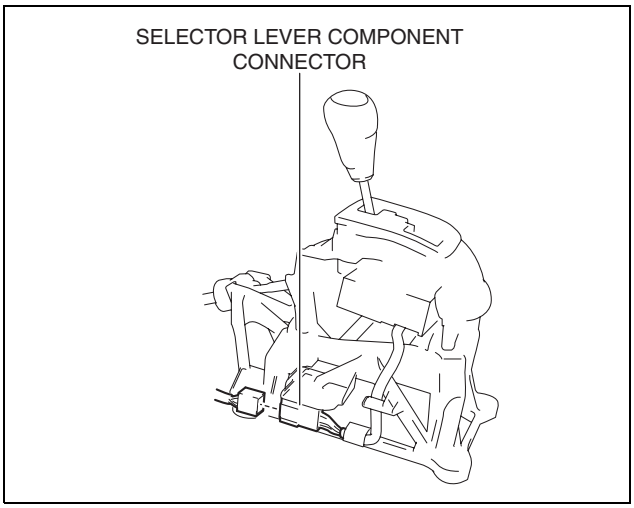
UP SWITCH INSPECTION [GW6A-EL, GW6AX-EL]

id0517i2600500

Continuity Inspection

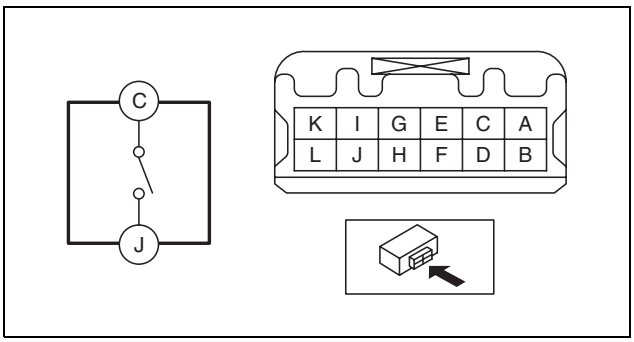
Note
- The up switch is built into the selector lever component.

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front console. (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
3. Disconnect the selector lever component connector.



ac5wzw0000078

4. Verify that the continuity between selector lever component terminals C and J.
   - If not as verified, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)



ac5wzw0000078

Up switch specification

Test condition	Continuity
Selector lever is in the M position (+) side position.	Continuity
Selector lever is not in the M position (+) side position.	No continuity

UP SWITCH REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL]

id0517i2112200

Note
- The up switch is built into the selector lever component.

1. If the up switch is replaced, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

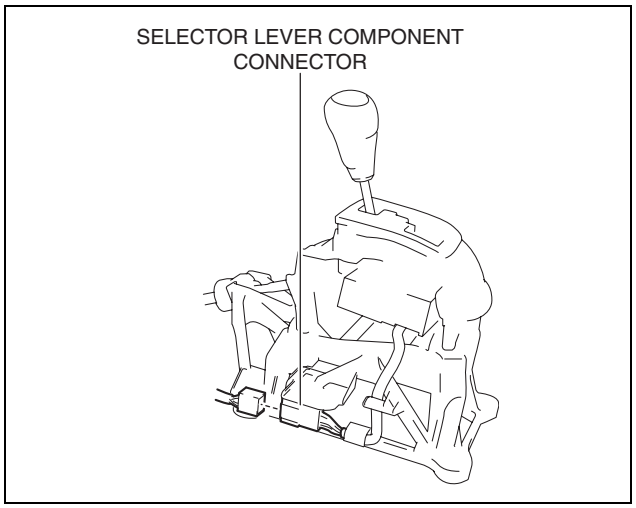
DOWN SWITCH INSPECTION [GW6A-EL, GW6AX-EL]

id0517i2600600

Continuity Inspection

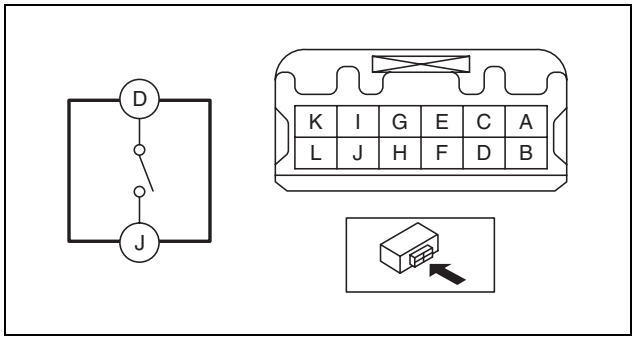
Note
- The down switch is built into the selector lever component.

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front console. (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
3. Disconnect the selector lever component connector.



ac5wzw0000078

4. Verify that the continuity between selector lever component terminals D and J.
   - If not as verified, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)



ac5wzw0000078

Down switch specification

Test condition	Continuity
Selector lever is in the M position (–) side position.	Continuity
Selector lever is not in the M position (–) side position.	No continuity

DOWN SWITCH REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL]

id0517i2112300

Note
- The down switch is built into the selector lever component.

1. If the down switch is replaced, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

COUPLER COMPONENT REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL]

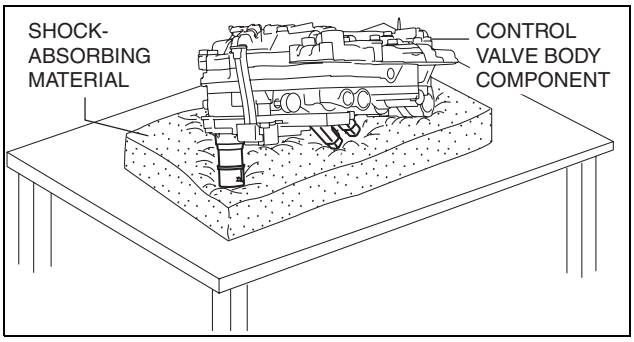
id0517i2112400

Warning

- **A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool.**
- **Always wear protective eye wear when using the air compressor. If the air compressor is used, any particles of dirt or soiling could spatter and get into the eyes.**

Caution

- **Placing the control valve body connector side pointed downward could damage the control valve body connector part or sensor. If the servicing can only be performed by pointing the control valve body connector side downward, spread shock-absorbing material, which does not produce dust or foreign matter, and place the control valve body connector part and sensor on the table so that they do not directly contact the table.**

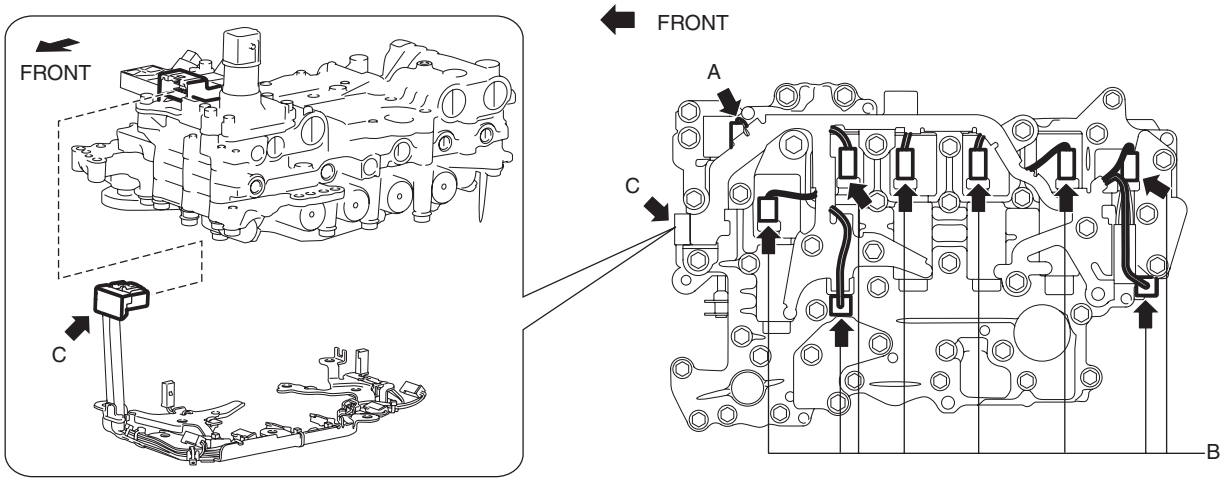


ac5wzw0000360

1. Select the selector lever to P position.
2. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
4. Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.
5. Remove the air cleaner component. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Remove the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
7. Remove the oil seal (control valve body). (See 05-17B-68 OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [GW6A-EL, GW6AX-EL].)
8. Disconnect the coupler component connectors.

Caution

- **Do not scratch the shift solenoid, shift solenoid connector, oil pressure switch, and oil pressure switch connector with the precision flathead screwdriver.**
- **When disconnecting connectors, grasp the connectors, not the wiring harnesses. Otherwise, the wiring harnesses may be pulled out of the connector causing poor contact.**



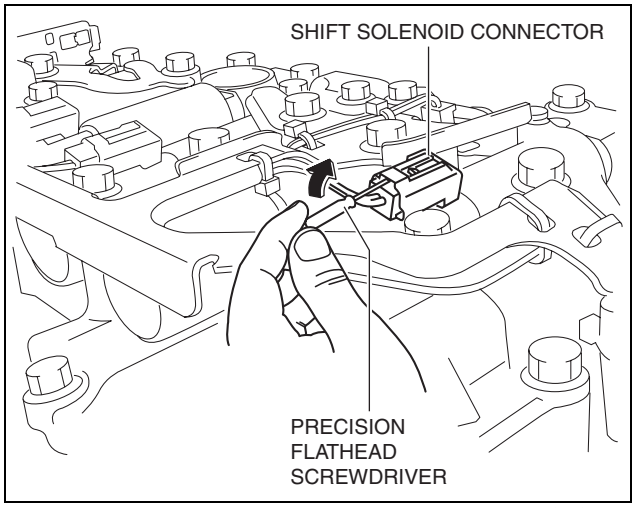
CONNECTOR A: ON/OFF SOLENOID
CONNECTOR B: SHIFT SOLENOID / OIL PRESSURE SWITCH
CONNECTOR C: TCM

ac5wzw0000396

(1) Disconnect connector A and connector C by pressing the connector tab with your fingers.

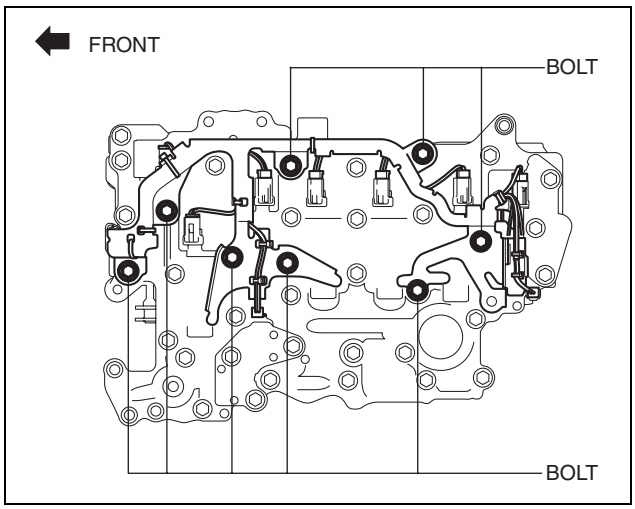
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

(2) Insert a precision flathead screwdriver and move it in the direction of the arrow to disconnect connector B as shown in the figure.



80001264

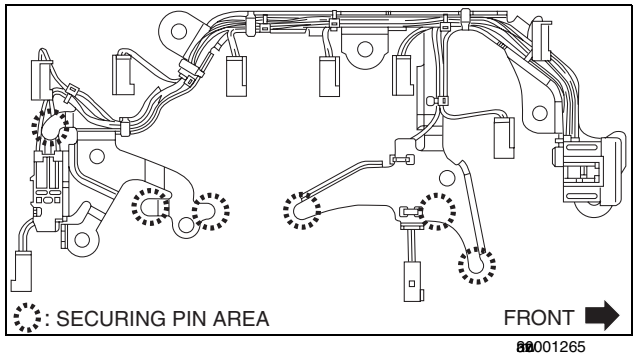
9. Remove the coupler component.



80000916

Caution

- **Because there are solenoid valve securing pins in the areas circled with a dotted line shown in the figure. Always verify that the solenoid valve securing pins are on the control valve body when installing the coupler component.**

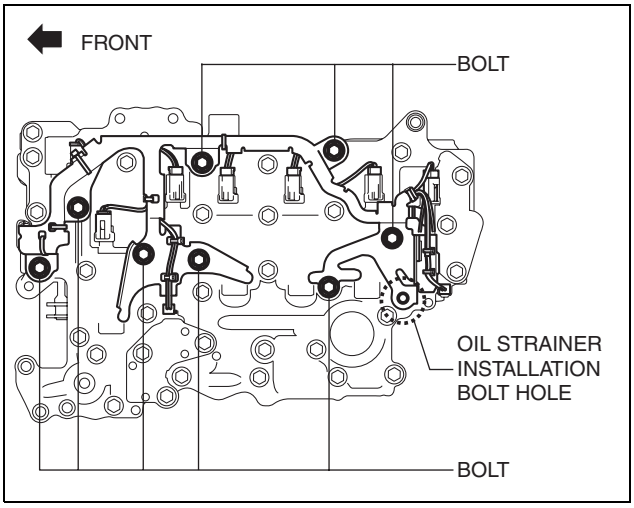


80001265

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

10. Temporarily install the coupler component so that the oil strainer installation bolt hole does not deviate.
11. After verifying that the oil strainer installation bolt hole is not deviated, install the coupler component.

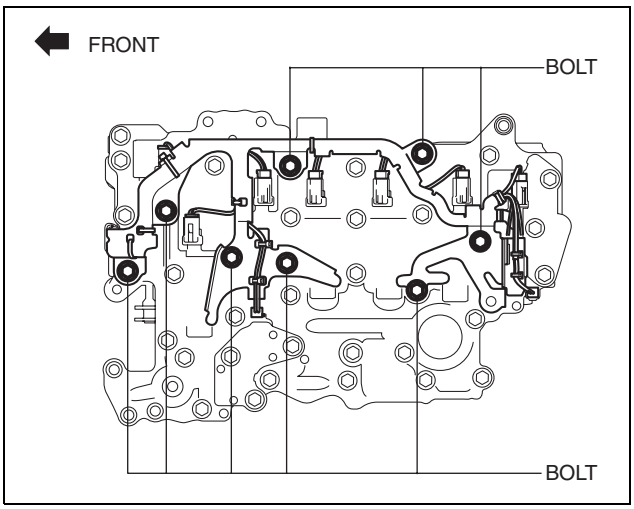
Caution
- **After assembling the coupler component, verify that shift solenoids No.1, 2, 3, 4, the pressure control solenoid, and the TCC control solenoid cannot be pulled out from the control valve body.**



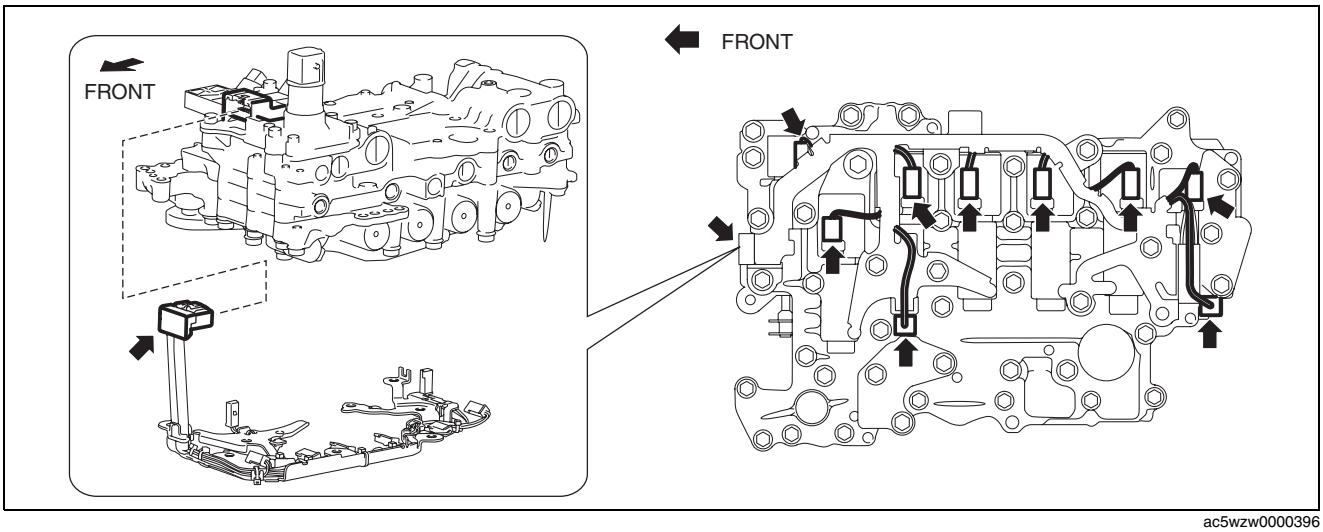
am3uuw0000916

Tightening torque
9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}

12. Connect the coupler component connectors.



am3uuw0000916



ac5wzw0000396

13. Install the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
14. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
15. Install the oil seal (control valve body). (See 05-17B-68 OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [GW6A-EL, GW6AX-EL].)
16. Install the hose clamp. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

17. Connect the control valve body connector. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)

Caution
- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Verify that there is no fluid or foreign matter adhering to the connector before connecting the connector.**
- **Insert the connector straight as the connector terminal could be damaged.**
- **Rotate the connector lever until a click is heard.**

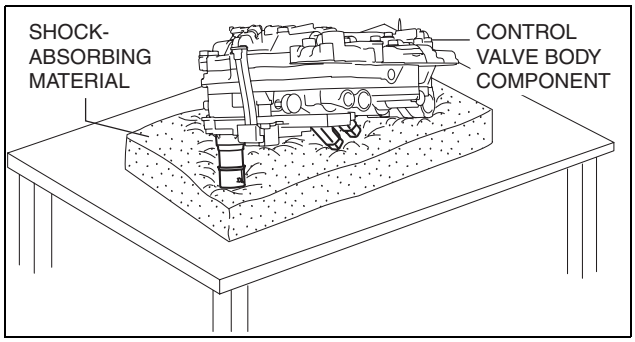
18. Add the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
19. Install the air cleaner component. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
20. Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
21. Perform the “Mechanical System Test”. (See 05-17B-4 MECHANICAL SYSTEM TEST [GW6A-EL, GW6AX-EL].)

OIL PRESSURE SWITCH REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL]

id0517i2112600

Warning
- **A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool.**
- **Always wear protective eye wear when using the air compressor. If the air compressor is used, any particles of dirt or soiling could spatter and get into the eyes.**

Caution
- **If the oil pressure switch has been replaced, perform initial learning. (See 05-17B-93 INITIAL LEARNING [GW6A-EL, GW6AX-EL].)**
- **Placing the control valve body connector side pointed downward could damage the control valve body connector part or sensor. If the servicing can only be performed by pointing the control valve body connector side downward, spread shock-absorbing material, which does not produce dust or foreign matter, and place the control valve body connector part and sensor on the table so that they do not directly contact the table.**



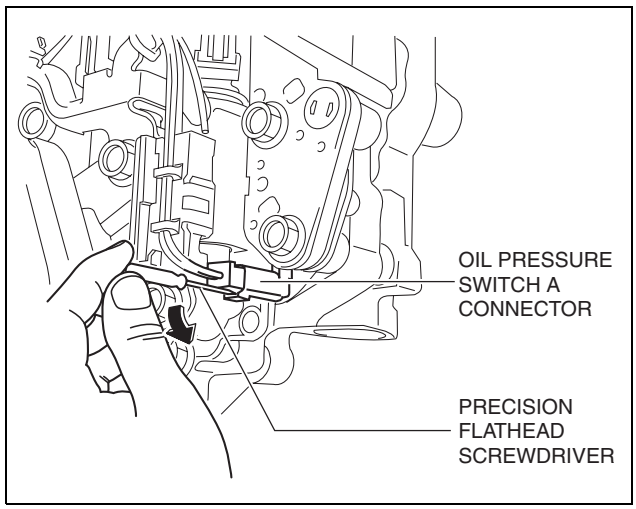
E5000360

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

Oil Pressure Switch A

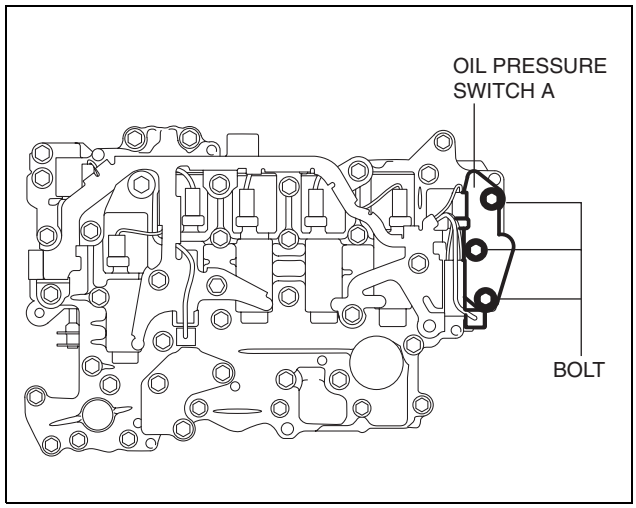
1. Select the selector lever to P position.
2. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
4. Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.
5. Remove the air cleaner component. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Remove the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
7. Remove the oil seal (control valve body). (See 05-17B-68 OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [GW6A-EL, GW6AX-EL].)
8. Insert a precision flathead screwdriver and move it in the direction of the arrow to disconnect the oil pressure switch A connector as shown in the figure.

   Caution
   - **Do not scratch the oil pressure switch A and oil pressure switch connector A with the precision flathead screwdriver.**
   - **When disconnecting connectors, grasp the connectors, not the wiring harnesses. Otherwise, the wiring harnesses may be pulled out of the connector causing poor contact.**



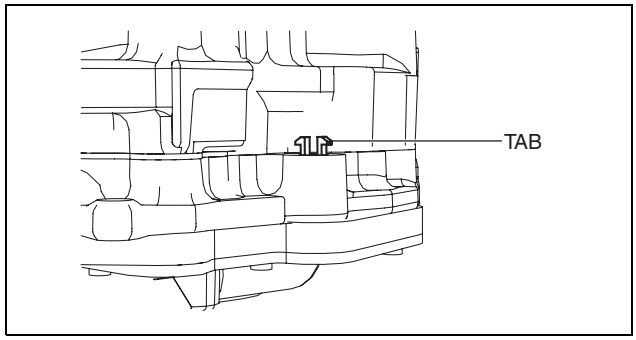
am3zzw0001263

9. Remove the oil pressure switch A fitting bolts.



am3uuw0000872

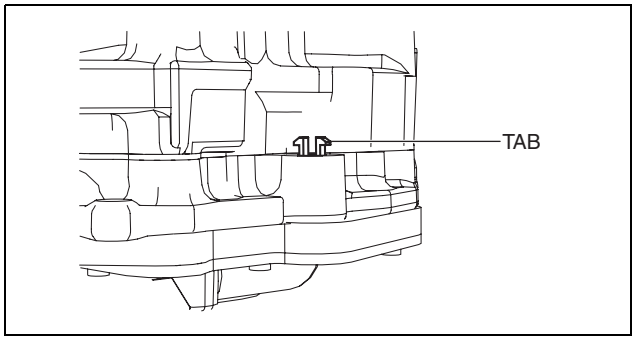
10. Detach tab shown in the figure and remove the oil pressure switch A from the control valve body.



am3uuw0000901

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

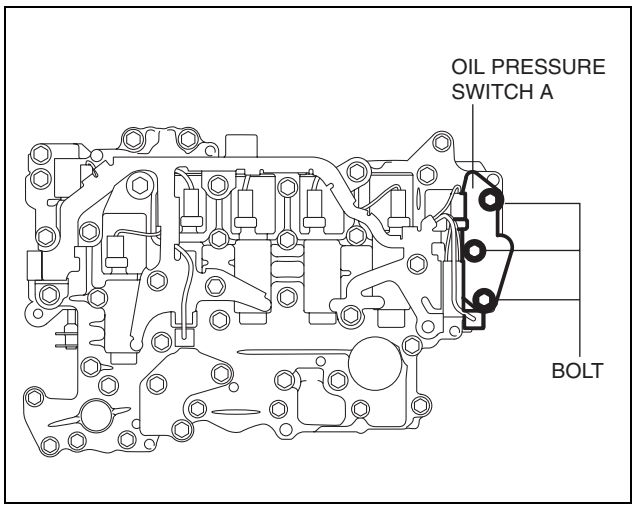
11. Install the oil pressure switch A to the control valve body.
12. Verify that the tab is attached correctly.



am3uuw0000901

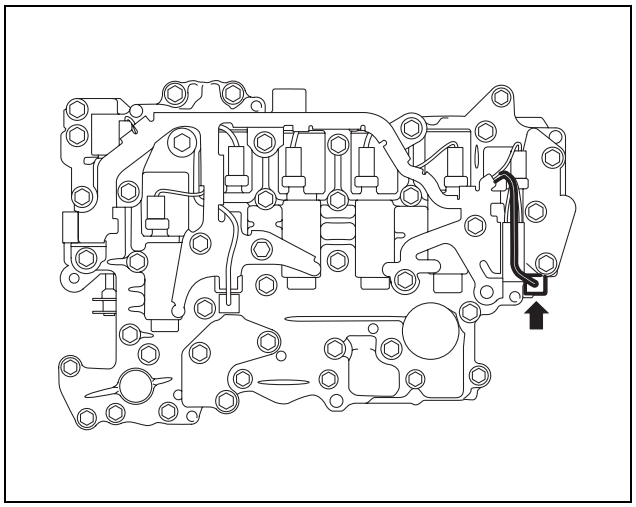
13. Install the oil pressure switch A fitting bolts.

Tightening torque
9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}



am3uuw0000872

14. Connect the oil pressure switch A connector.
15. Install the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
16. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
17. Install the oil seal (control valve body). (See 05-17B-68 OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [GW6A-EL, GW6AX-EL].)
18. Install the hose clamp. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
19. Connect the control valve body connector. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)



am3uuw0000871

Caution
- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Verify that there is no fluid or foreign matter adhering to the connector before connecting the connector.**
- **Insert the connector straight as the connector terminal could be damaged.**
- **Rotate the connector lever until a click is heard.**

20. Add the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
21. Install the air cleaner component. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
22. Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

23. Perform the “Initial Learning” (oil pressure switch A Replacement). (See 05-17B-93 INITIAL LEARNING [GW6A-EL, GW6AX-EL].)
24. Perform the “Mechanical System Test”. (See 05-17B-4 MECHANICAL SYSTEM TEST [GW6A-EL, GW6AX-EL].)

Oil Pressure Switch B

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
3. Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.
4. Drain the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
5. Remove the oil pan.

Caution

- **To avoid damaging the control valve body, if there is a large amount of foreign material at the bottom of the oil pan when the oil pan is removed, replace the oil strainer with a new one.**
- **If there is not a large amount of foreign material at the bottom of the oil pan, the oil strainer does not have to be replaced.**

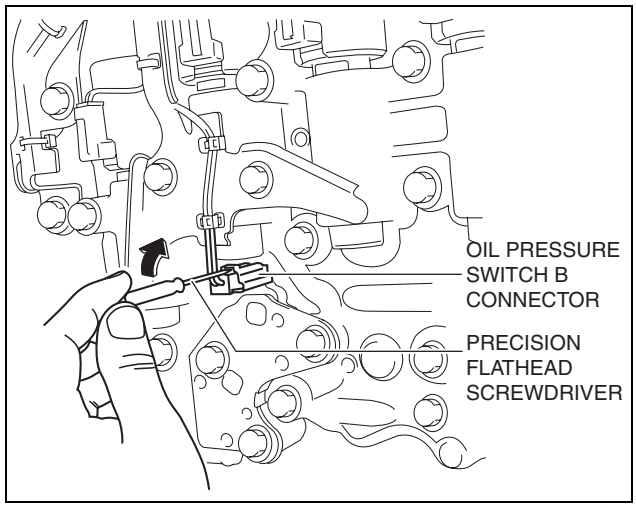
Note

- Always use new oil pan installation bolts when re-installing the oil pan because the oil pan installation bolts cannot be reused.

6. Remove the oil strainer. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
7. Remove the oil strainer O-ring. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
8. Insert a precision flathead screwdriver and move it in the direction of the arrow to disconnect the oil pressure switch B connector as shown in the figure.

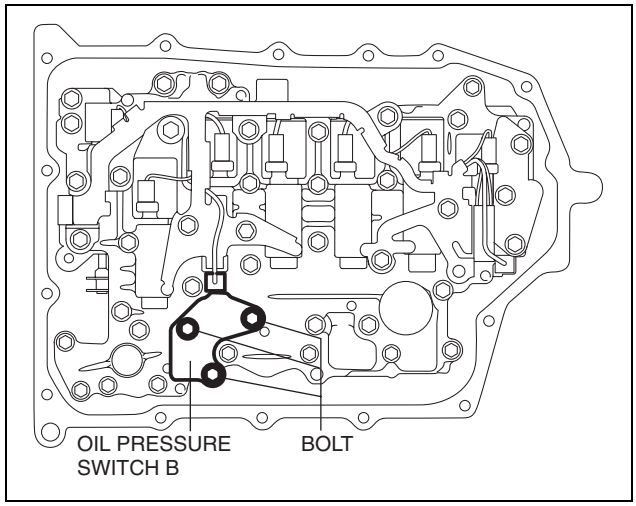
Caution

- **Do not scratch the oil pressure switch B and oil pressure switch connector B with the precision flathead screwdriver.**
- **When disconnecting connectors, grasp the connectors, not the wiring harnesses. Otherwise, the wiring harnesses may be pulled out of the connector causing poor contact.**



am3zzw0001263

9. Remove the oil pressure switch B.

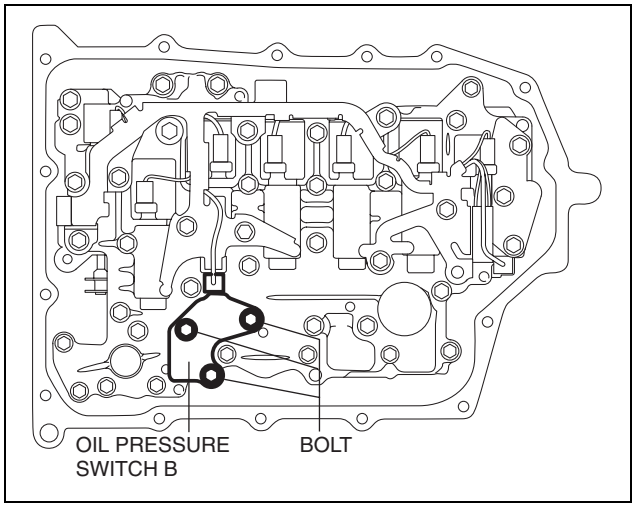


am3uuw0000872

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

10. Install the oil pressure switch B.

    Tightening torque
    9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}

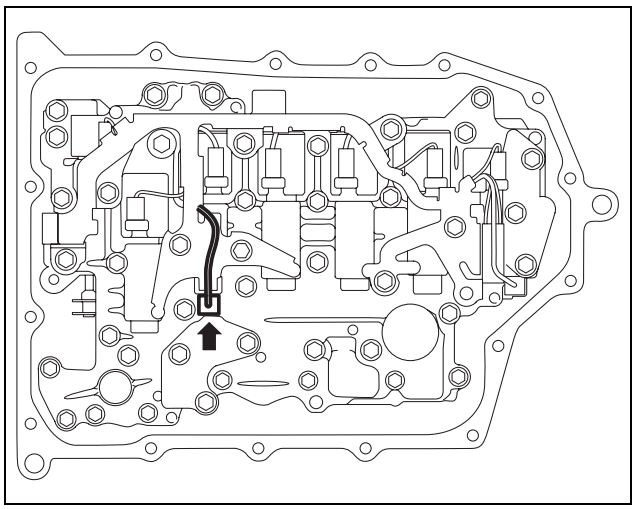


am3uuw0000872

11. Connect the oil pressure switch B connector.
12. Install the oil strainer O-ring. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)

    Note
    - If there is a large amount of foreign material at the bottom of the oil pan, replace the oil strainer with a new one.

13. Install the oil strainer. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)



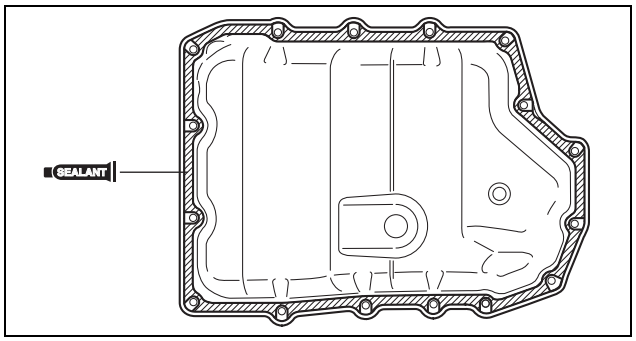
am3uuw0000872

14. Apply a light coat of silicon sealant (TB1217E) to the contact surfaces of the oil pan and transaxle case.

    Caution
    - **Clean any remaining silicone sealant on the contact surface of the transaxle case and oil pan, and degrease the sealant area. Otherwise, oil could leak.**

15. Install the oil pan with new bolts before the applied sealant starts to harden.

    Tightening torque
    8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}



am3uuw0000828

16. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
17. Add the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
18. Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
19. Perform the “Initial Learning” (oil pressure switch B Replacement). (See 05-17B-93 INITIAL LEARNING [GW6A-EL, GW6AX-EL].)
20. Perform the “Mechanical System Test”. (See 05-17B-4 MECHANICAL SYSTEM TEST [GW6A-EL, GW6AX-EL].)

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

ON/OFF SOLENOID REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL]

id0517i2117100

Warning
- **A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool.**
- **Always wear protective eye wear when using the air compressor. If the air compressor is used, any particles of dirt or soiling could spatter and get into the eyes.**

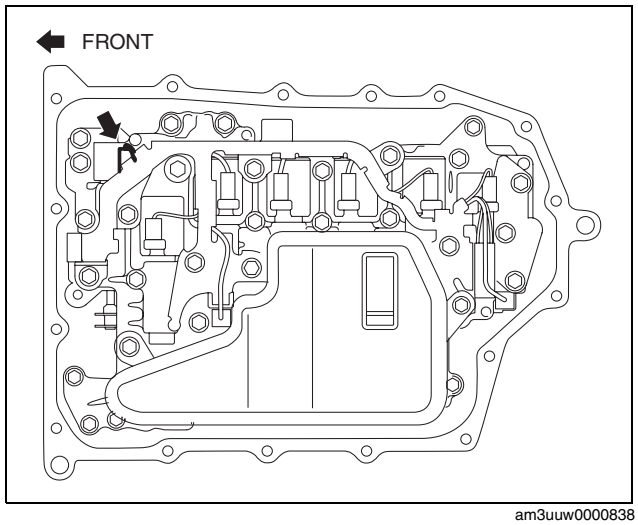
1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
3. Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.
4. Drain the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
5. Remove the oil pan.

Caution
- **To avoid damaging the control valve body, if there is a large amount of foreign material at the bottom of the oil pan when the oil pan is removed, replace the oil strainer with a new one.**
- **If there is not a large amount of foreign material at the bottom of the oil pan, the oil strainer does not have to be replaced.**

Note
- Always use new oil pan installation bolts when re-installing the oil pan because the oil pan installation bolts cannot be reused.

6. Disconnect the ON/OFF solenoid connector.

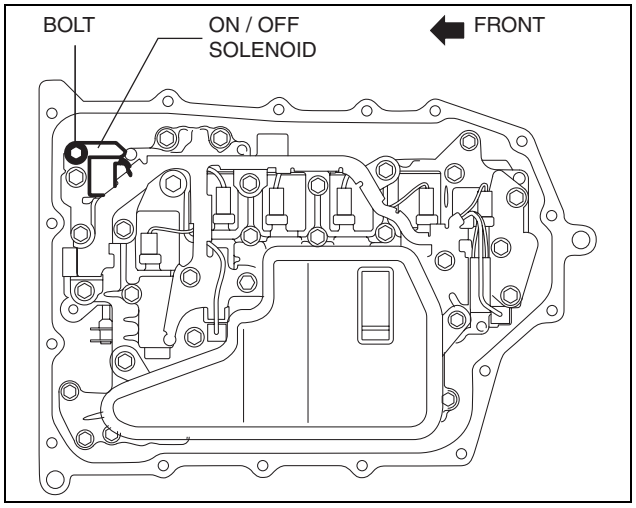
Note
- Disconnect the ON/OFF solenoid connector by pressing the connector tab with your fingers.



am3uuw0000838

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

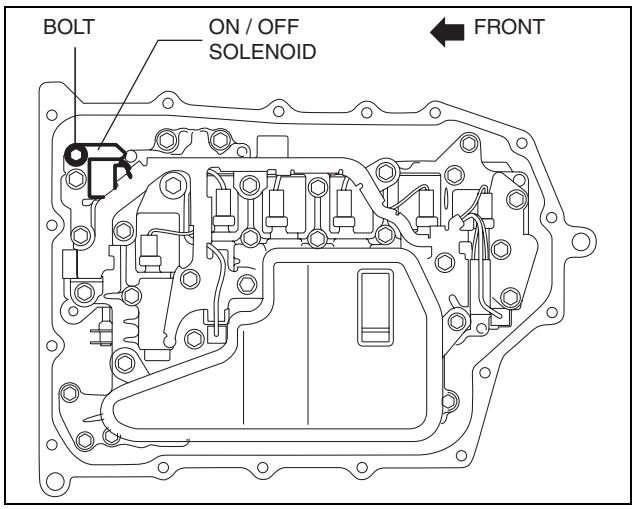
7. Remove the ON/OFF solenoid.



am3uuw0000838

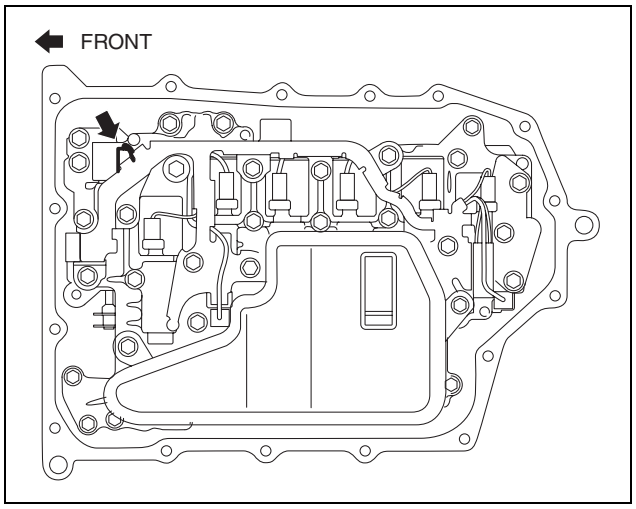
8. Install the ON/OFF solenoid.

Tightening torque
9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}



am3uuw0000838

9. Connect the ON/OFF solenoid connector.

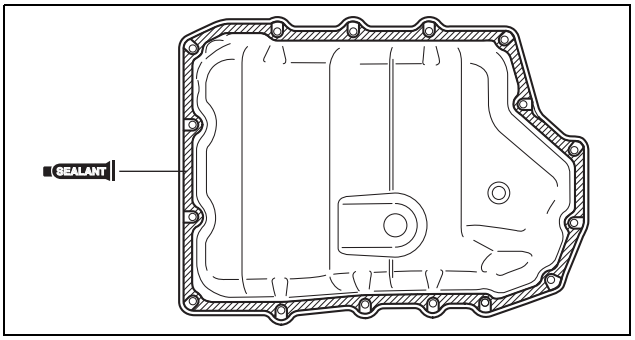


am3uuw0000838

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

10. Apply a light coat of silicon sealant (TB1217E) to the contact surfaces of the oil pan and transaxle case.

    Caution
    - **Clean any remaining silicone sealant on the contact surface of the transaxle case and oil pan, and degrease the sealant area. Otherwise, oil could leak.**



am3uuw0000828

11. Install the oil pan with new bolts before the applied sealant starts to harden.

    Tightening torque
    8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

12. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
13. Add the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
14. Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
15. Perform the “Mechanical System Test”. (See 05-17B-4 MECHANICAL SYSTEM TEST [GW6A-EL, GW6AX-EL].)

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

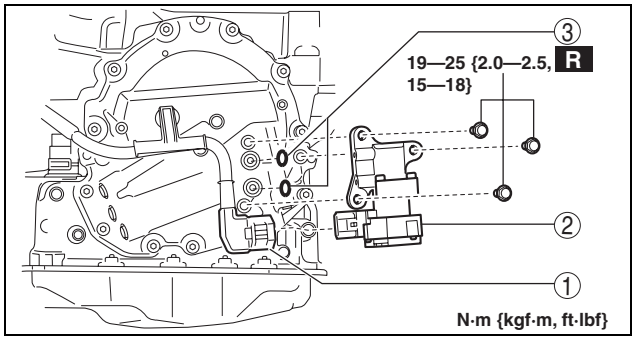
ELECTRIC AT OIL PUMP REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL]

id0517i2117600

Caution
- **Do not drop or apply a shock to the electric AT oil pump. Replace the electric AT oil pump if it has been dropped or received an impact.**
- **Do not disassemble the electric AT oil pump. Replace the electric AT oil pump if it has been disassembled.**
- **Make sure that there is no silicone sealant or other foreign matter in the electric AT oil pump and transaxle. Otherwise, it could cause a malfunction.**

1. Turn the steering wheel left until it locks.
2. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
3. Remove the splash shield (LH). (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.

1	Electric AT oil pump connector
2	Electric AT oil pump (See05-17B-28 Electric AT Oil Pump Installation Note.)
3	O-ring



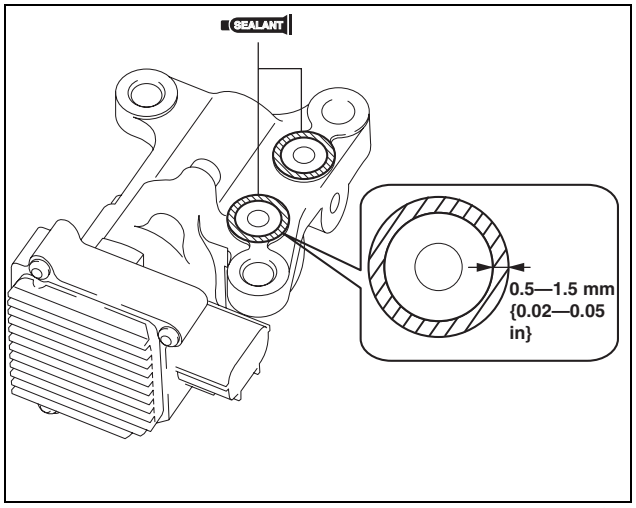
am3zzw0001264

5. Install in the reverse order of removal.
6. Adjust the ATF level. (See 05-17B-13 AUTOMATIC TRANSAXLE FLUID (ATF) ADJUSTMENT [GW6A-EL, GW6AX-EL].)

Electric AT Oil Pump Installation Note

1. Apply a light coat of silicon sealant (TB1217E) to the contact surfaces of the electric AT oil pump and end cover.

Caution
- **If any old sealant gets into the side cover during installation of the electric AT oil pump, trouble may occur in the end cover and electric AT oil pump, and clean with cleaning fluids.**
- **Do not damage the O-ring installation area and the sealing surface.**
- **To apply silicone sealant securely, clean away the oil on the sealing surface before applying silicone sealant.**



am3zzw0001265

2. Install the electric AT oil pump before the applied sealant starts to harden.

Tightening torque
19—25 N·m {2.0—2.5 kgf·m, 15—18 ft·lbf}

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL]

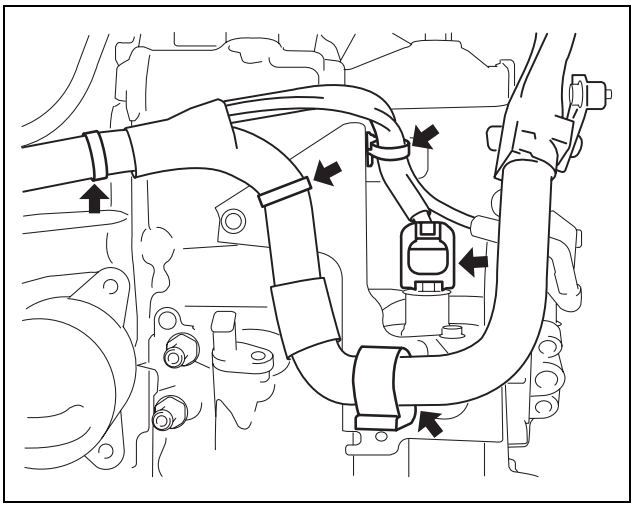
id0517i21172i1

Caution

- **Performing the following procedures without first removing the front ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, disconnect the front ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor will not be pulled by mistake while servicing the vehicle.**
- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**

Removal

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the air cleaner and air hose as a single unit. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the battery tray. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Disconnect the wiring harness clip from the transaxle.
5. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)

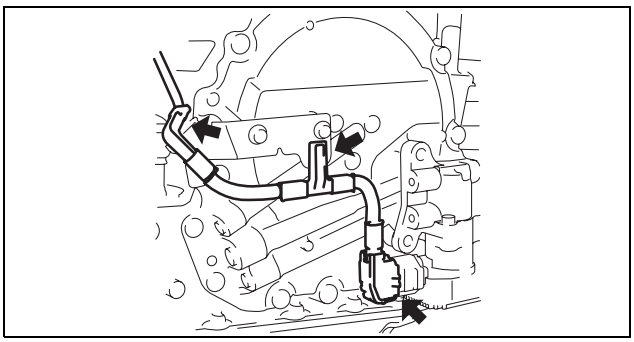


ac5wzw0000428

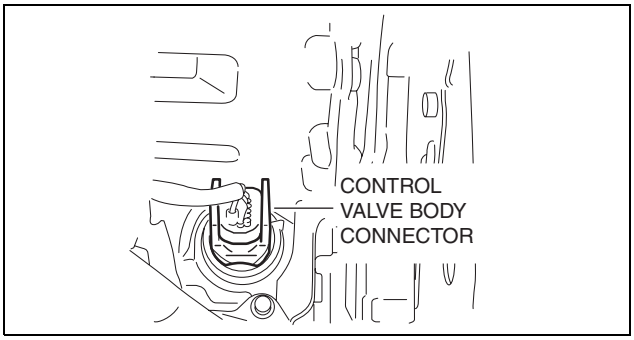
6. Disconnect the electric AT oil pump connector and electric AT oil pump harness from the transaxle.
7. Disconnect the control valve body connector.

Caution

- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**



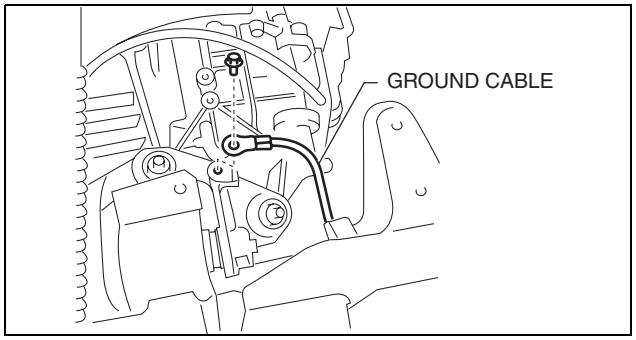
ac5wzw0000428



ac5wzw0000428

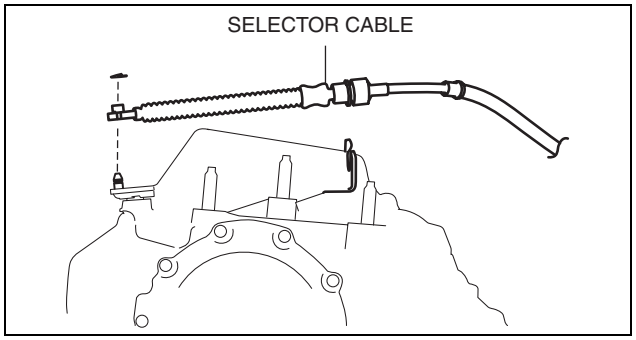
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

8. Disconnect the ground cable.



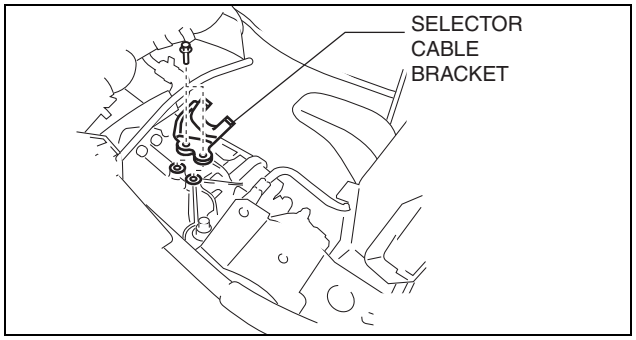
ac5wzw0000428

9. Disconnect the selector cable from the transaxle.



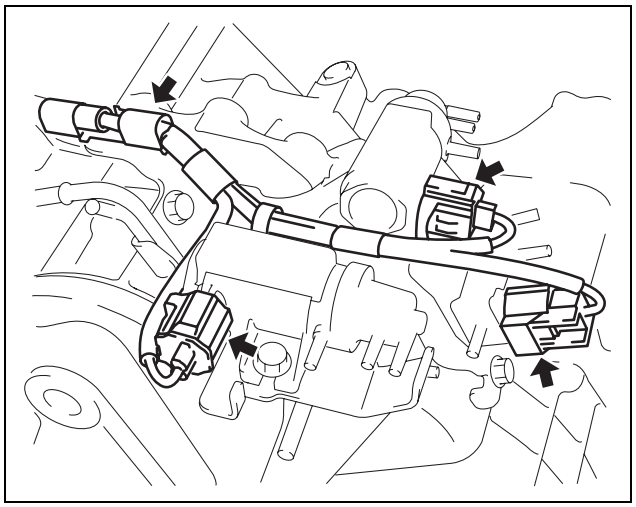
ac5wzw0000429

10. Remove the selector cable bracket.
11. Remove the EGR cooler. (See 01-16B-12 EGR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000429

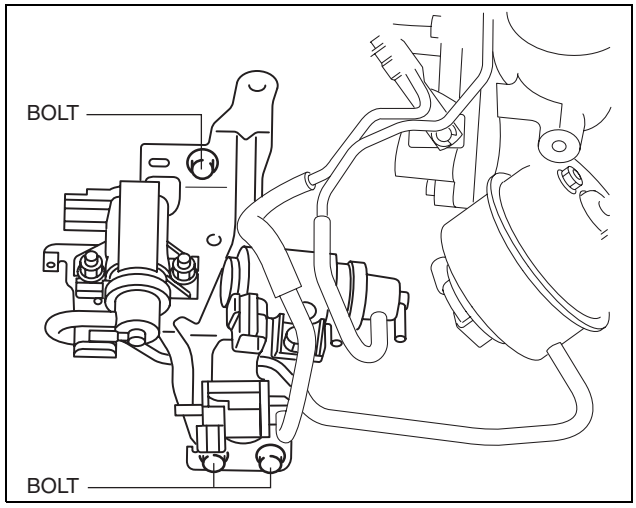
12. Disconnect the solenoid valve connectors and the wiring harness from the solenoid valve component. (See 01-13B-38 COMPRESSOR BYPASS SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]) (See 01-13B-50 REGULATING SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]) (See 01-13B-61 WASTEGATE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2])



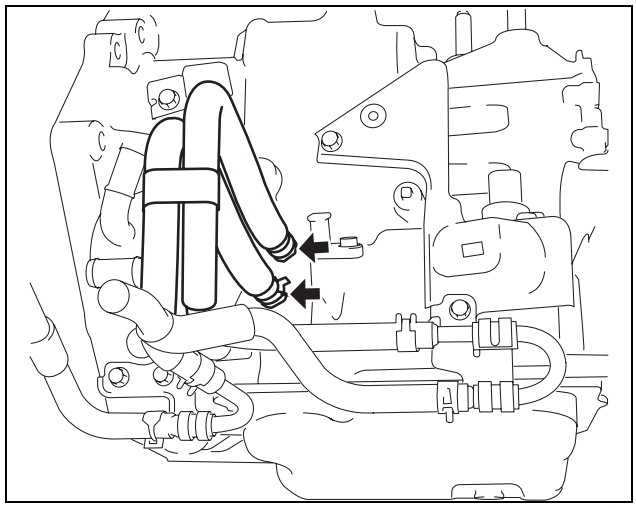
ac5wzw0000429

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

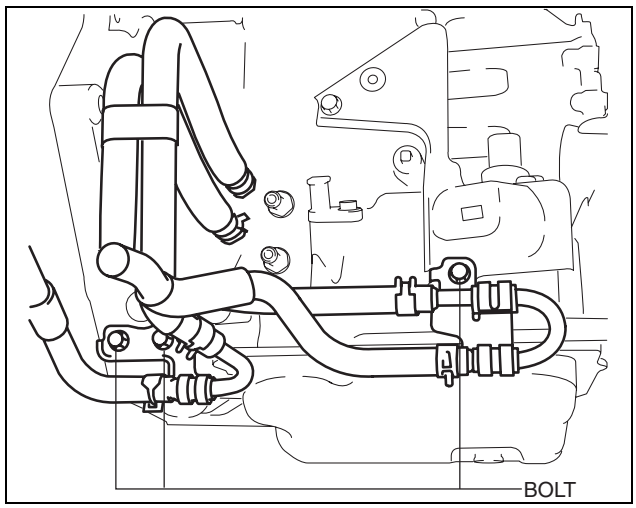
13. Disconnect the solenoid valve component from the ATX with the hose still connected, and set it out of the way. (See 01-13B-38 COMPRESSOR BYPASS SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]) (See 01-13B-50 REGULATING SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]) (See 01-13B-61 WASTEGATE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2])
14. Disconnect the breather hose from the transaxle.
15. Remove the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
16. Disconnect the intermediate shaft from the steering gear and linkage. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
17. Remove the front tires. (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
18. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
19. Remove the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
20. Drain the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
21. Disconnect the oil hose from the transaxle. (With oil cooler No.2) (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
22. Set the oil pipe component in a place which does not interfere with the servicing. (With oil cooler No.2) (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)



ac5wzw0000429



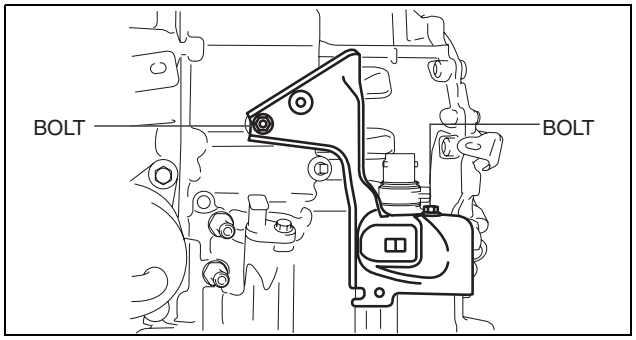
ac5wzw0000429



ac5wzw0000429

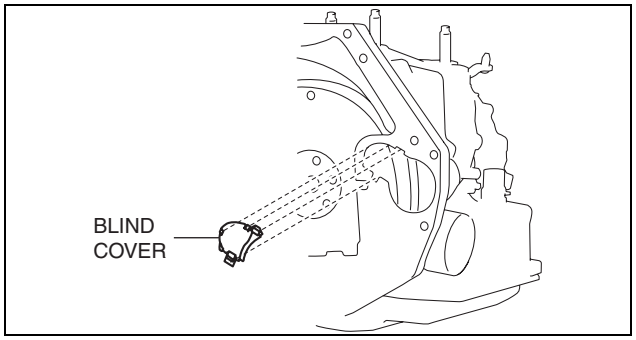
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

23. Remove the bracket from the transaxle.
24. Disconnect the oil cooler from the transaxle with the hose connected. (Except Automatic Transaxle Replacement) (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
25. Disconnect the water hose from the oil cooler. (Automatic Transaxle Replacement) (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
26. Remove the starter. (See 01-19B-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000429

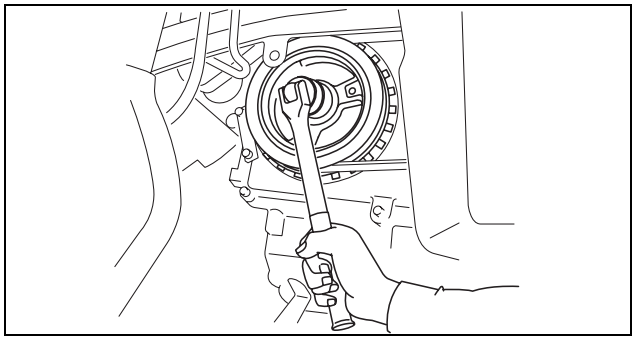
27. Remove the blind cover.



ac5wzw0000429

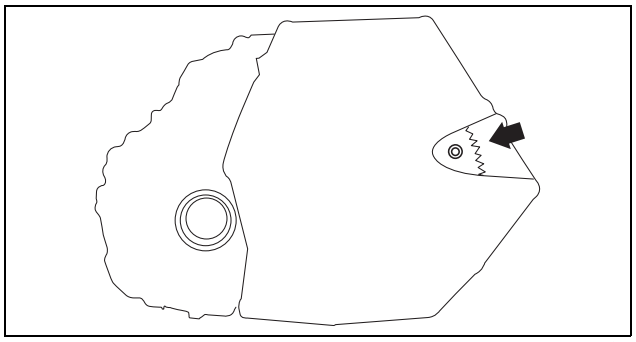
28. Hold the crankshaft pulley to prevent drive plate from rotating.
29. Remove the torque converter nuts from the starter installation hole.

Note
- There are six installation nuts.



ac5wzw0000429

30. Disconnect the front ABS wheel-speed sensors from the steering knuckles. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
31. Disconnect the clips securing the brake hose from the front shock absorbers. (See 04-11-30 BRAKE HOSE (FRONT) REMOVAL/INSTALLATION.)
32. Disconnect the tie-rod end ball joints from the steering knuckles. (See 06-13-16 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION.)
33. Disconnect the front lower arms from the steering knuckles. (See 02-13-7 FRONT LOWER ARM REMOVAL/INSTALLATION.)

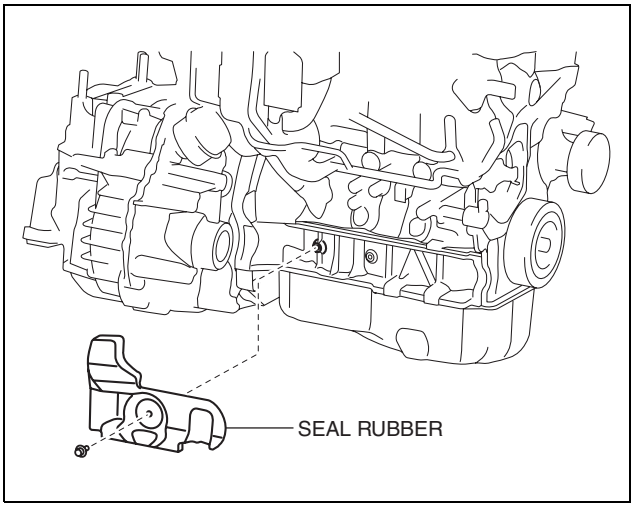


ac5wzw0000429

34. Disconnect the front stabilizer control links from the front stabilizer. (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)
35. Disconnect the front drive shaft (LH) from the transaxle. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
36. Disconnect the front drive shaft (RH) from the transaxle. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)

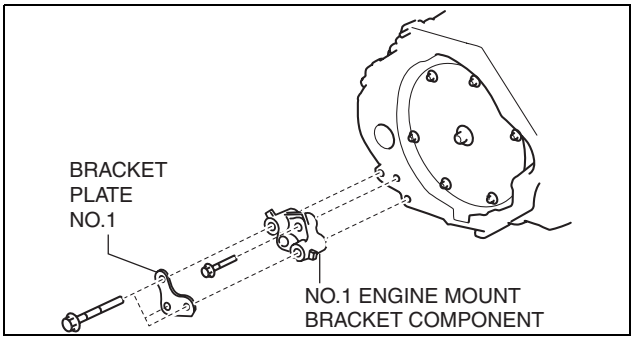
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

37. Remove the seal rubber.
38. Remove the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)



ac5wzw0000430

39. Remove the bracket plate No.1 and No.1 engine mount bracket component from the transaxle.

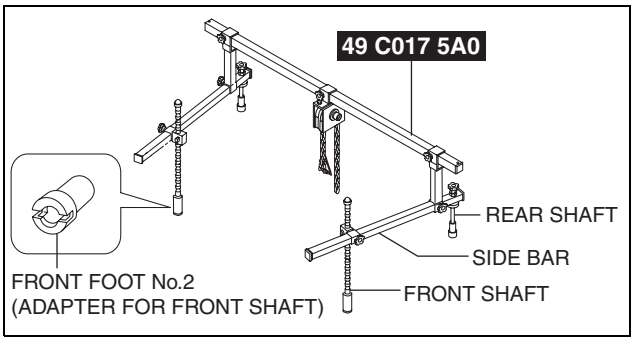


ac5wzw0000430

40. Install the **SST** using the following procedures.

Caution
- **Refer to the SST instruction manual for the basic handing procedure.**

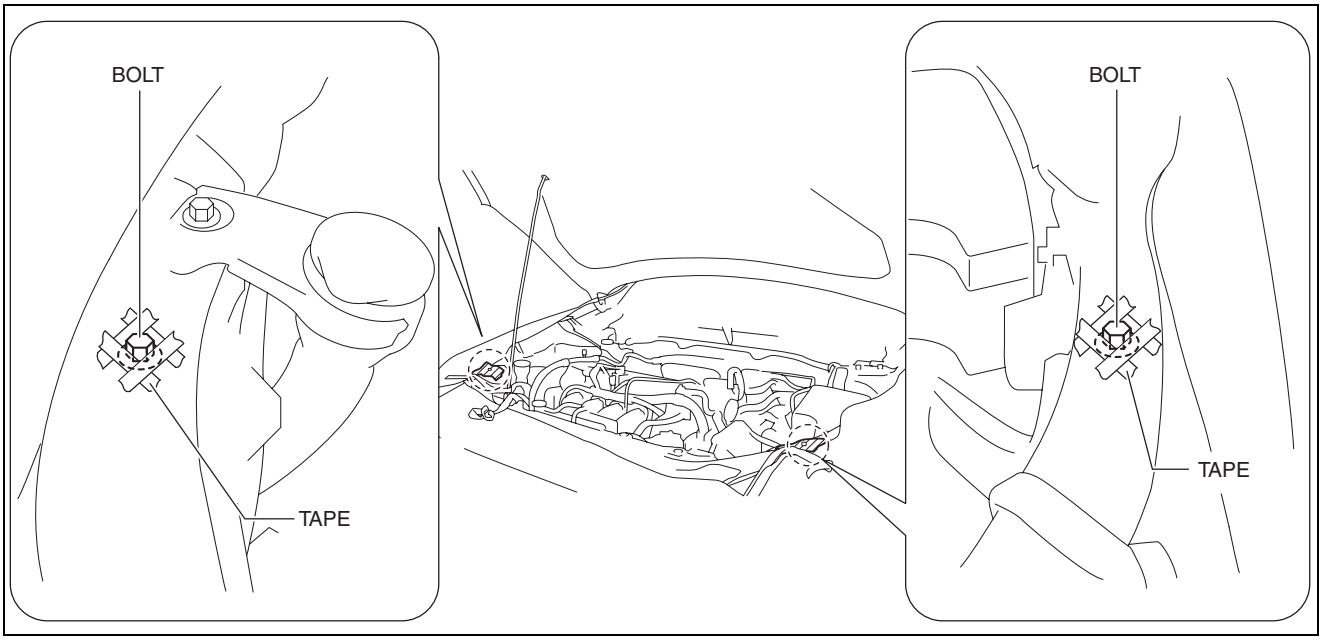
(1) Install one front foot No.2 to each of the left and right front shafts of the **SST**.



ac5wzw0000430

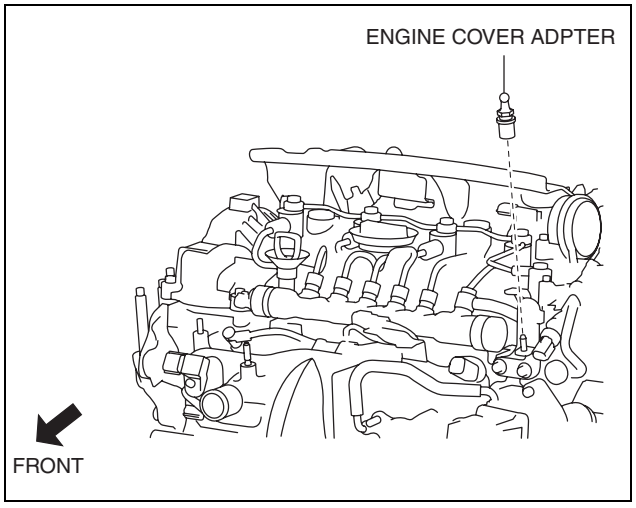
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

(2) Protect the positions shown in the figure using tape.



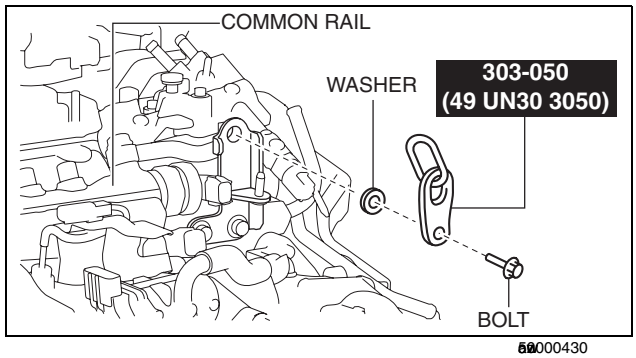
E5000430

(3) Remove the engine cover adapter.
(4) Install the SST to the position shown in the figure using the following bolt and washer.



E5000430

Engine front side



E5000430

Bolt: part number 99794 1025 or an M10—1.25, length 25 mm {0.98 in}
Washer: approx. 3 mm {0.1 in} thickness

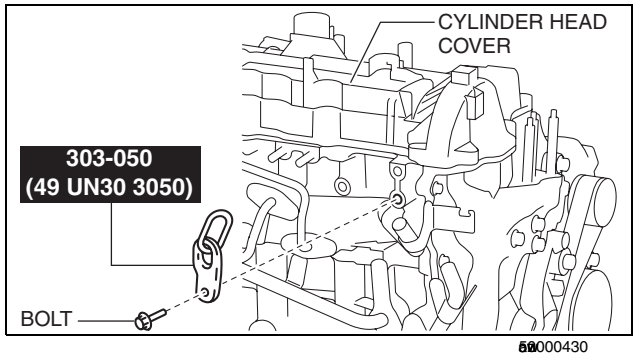
Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

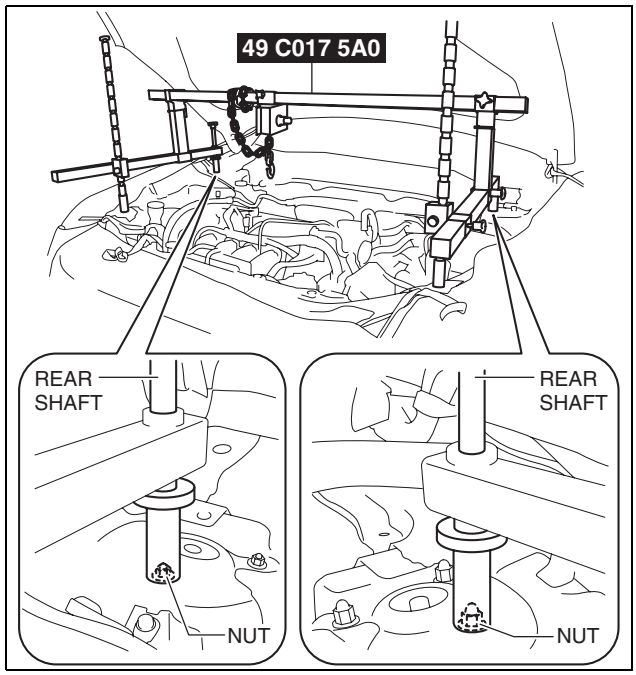
Engine rear side

Bolt: part number 99794 1025 or an M10—1.25, length 25 mm {0.98 in}

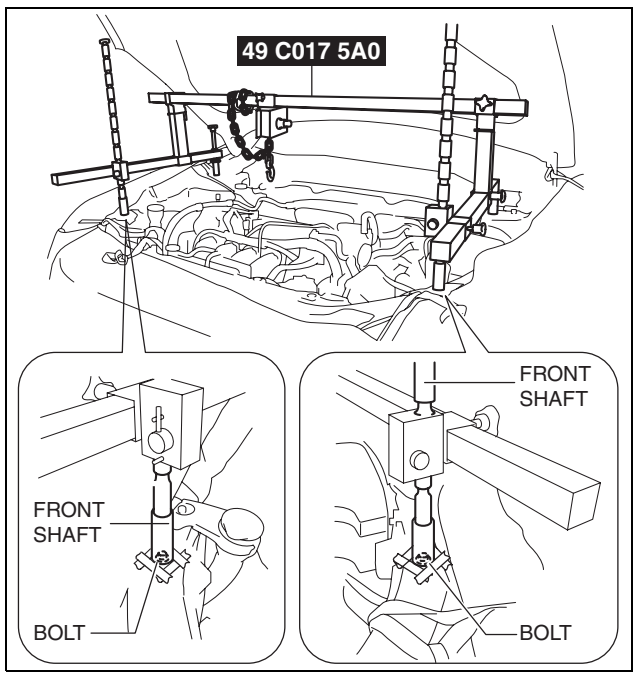
Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}



(5) As shown in the figure, set the rear shafts of the **SST** to the left and right shock absorber nuts.

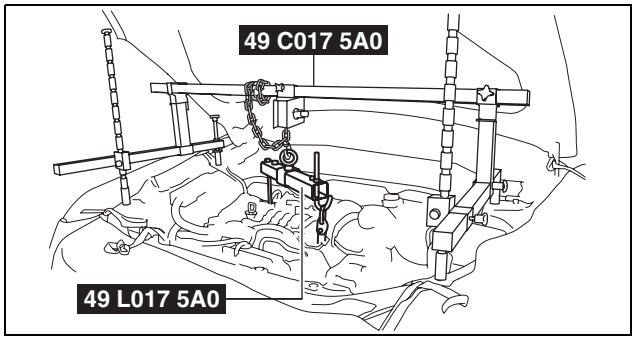


(6) As shown in the figure, set the front shafts of the **SST** to the left and right bolts.



AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

(7) Install the **SST** (49 L017 5A0) to the **SST** (49 C017 5A0) as shown in the figure.



ac5wzw0000430

(8) Install the **SST** (49 L017 5A0) to the **SST** (49 UN30 3050) with the hook of the **SST** (49 L017 5A0) facing outward.
(9) Adjust the height of the left and right side bars so that they are leveled, then tighten each part of the **SST**.
(10) Apply tension to the chain to secure the engine.

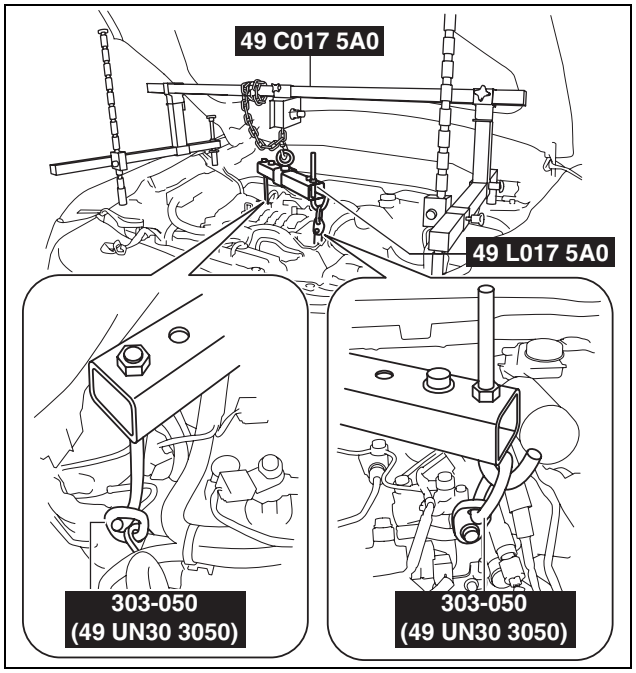
41. Remove in the order shown in the figure.

Warning

- **Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.**

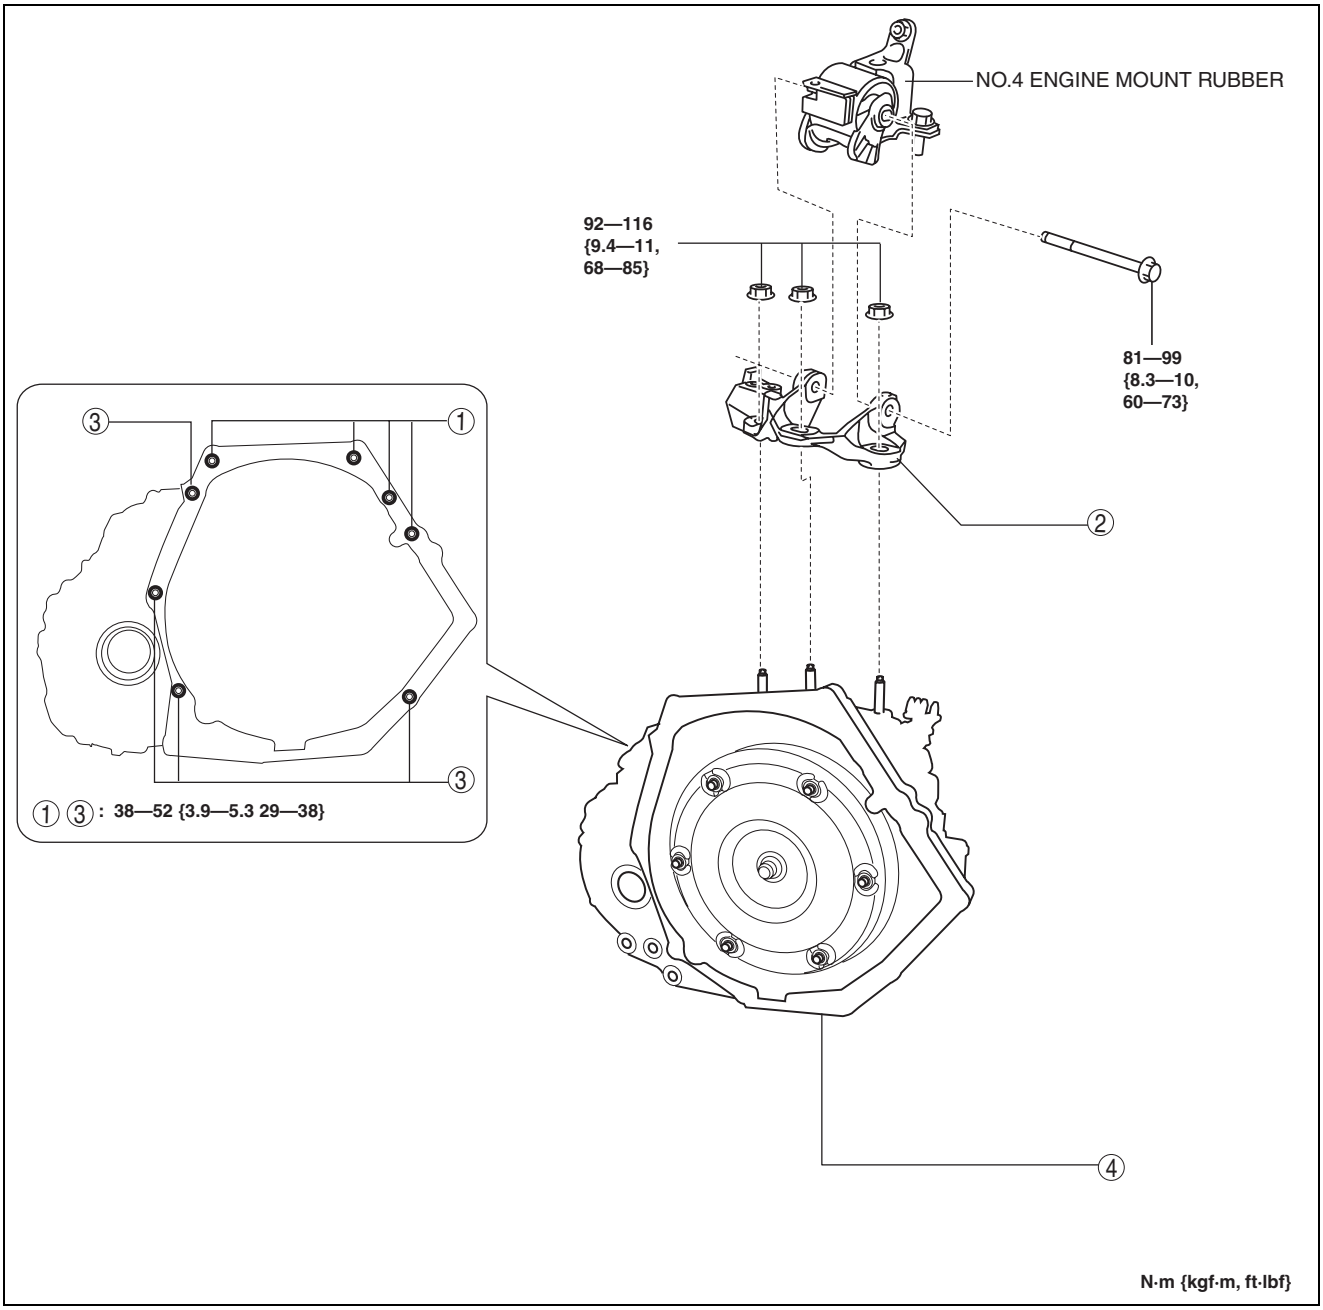
Caution

- **To prevent the torque converter and transaxle from separating, remove the transaxle without tilting it toward the torque converter.**



ac5wzw0000431

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]



ac5wzw0000431

1	Transaxle mounting bolts (upper side)
2	No.4 engine mount bracket (See 05-17B-38 No.4 engine mount bracket removal note.)
3	Transaxle mounting bolts (lower side) (See 05-17B-38 Transaxle mounting bolt removal note.)

4	Transaxle (See 05-17B-38 No.4 engine mount bracket removal note.) (See 05-17B-38 Transaxle mounting bolt removal note.)

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

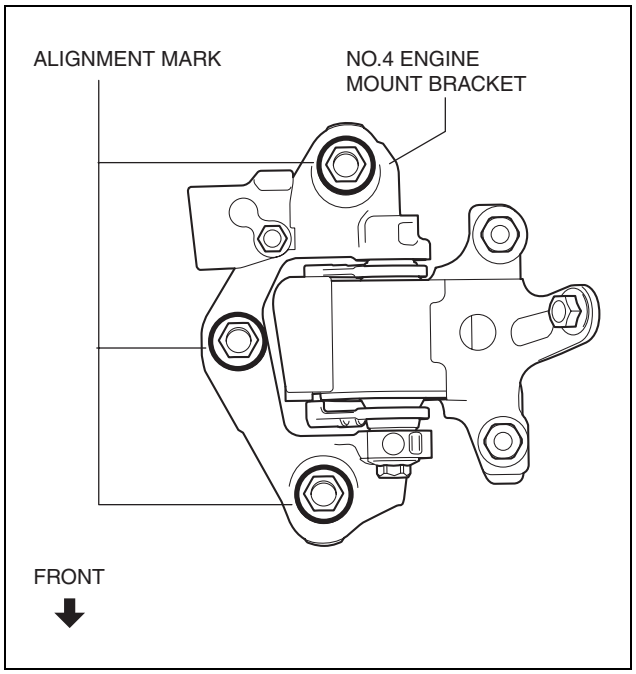
No.4 engine mount bracket removal note

Caution
- **A slot has been adopted for the No.4 engine mount bracket installation hole. If the No.4 engine mount bracket is deviated from the original position when installing the No.4 engine mount, engine noise or vibration could increase. When removing the No.4 engine mount, place alignment marks on the No.4 engine mount bracket so that they can be assembled to the same positions as before removal.**

1. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

   Note
   - Paint so that the outline of the nut is framed on the bracket side.

2. Remove the No.4 engine mount bracket.

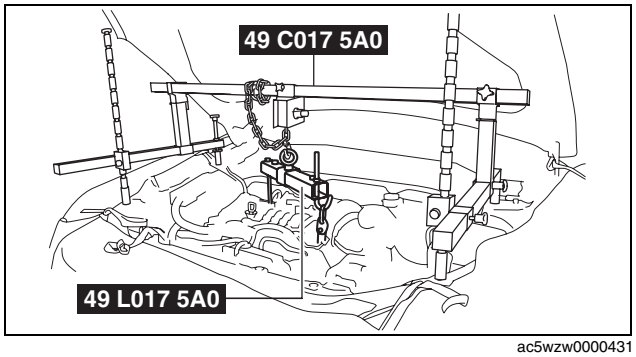


ac5wzw0000431

Transaxle mounting bolt removal note

Warning
- **Remove the transaxle carefully, holding it steady. If the transaxle falls it could be damaged or cause injury.**

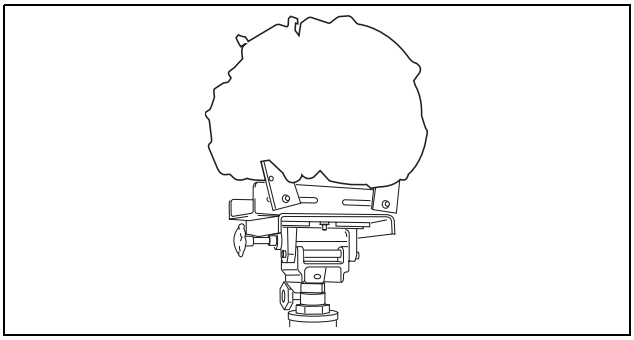
1. Adjust the **SST** and lean the engine toward the transaxle.



ac5wzw0000431

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

2. Support the transaxle on a jack.
3. Remove the transaxle mounting bolts (lower side).
4. Remove the transaxle.

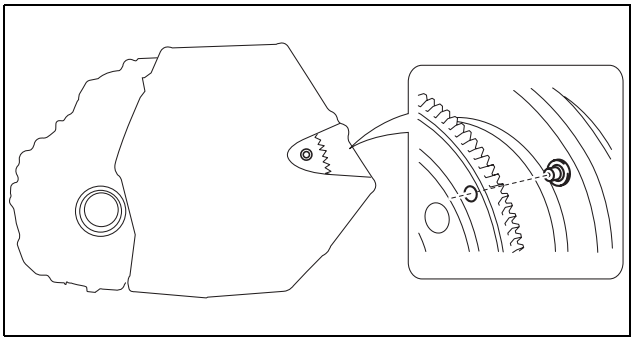


ac5wzw0000431

Installation

Caution
- **Verify that the torque converter stud bolts are inserted into the drive plate bolt holes, and install the transaxle installation bolts. Otherwise, the drive plate could be damaged.**

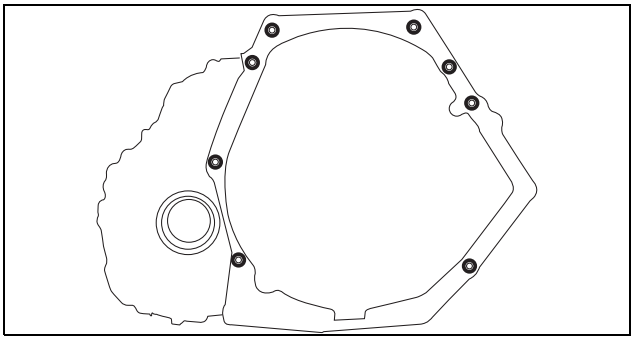
1. Verify that the torque converter stud bolts are inserted into the drive plate bolt holes from the starter installation hole.



ac5wzw0000431

2. Install the transaxle mounting bolts.

Tightening torque
38—52 N·m {3.9—5.3 kgf·m, 29—38 ft·lbf}

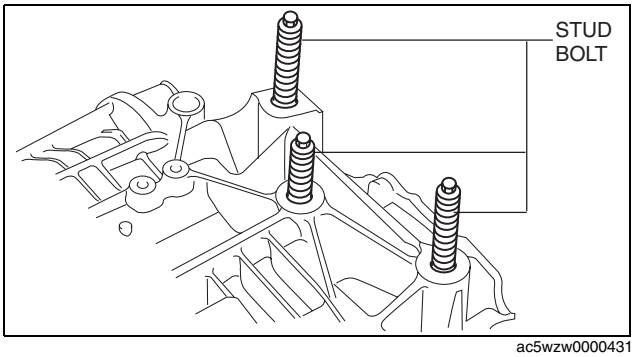


ac5wzw0000431

3. Tighten the stud bolts for the transaxle.

Note
- If the No.4 engine mount bracket nut is loosened, tighten the stud bolts for the transaxle because they may be loosened.

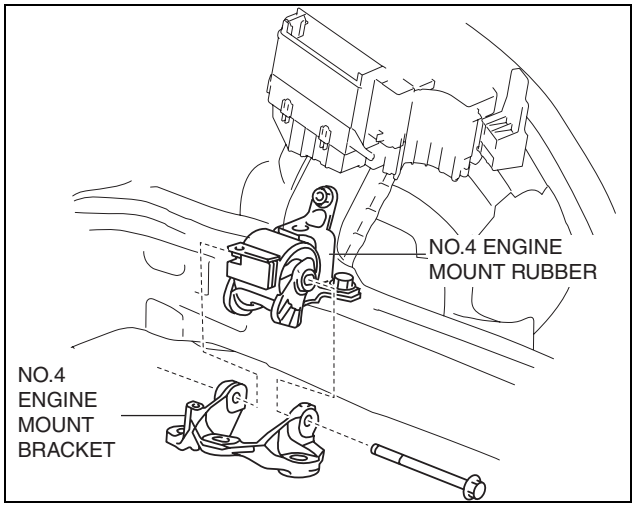
Tightening torque
15—25 N·m {1.6—2.5 kgf·m, 12—18 ft·lbf}



ac5wzw0000431

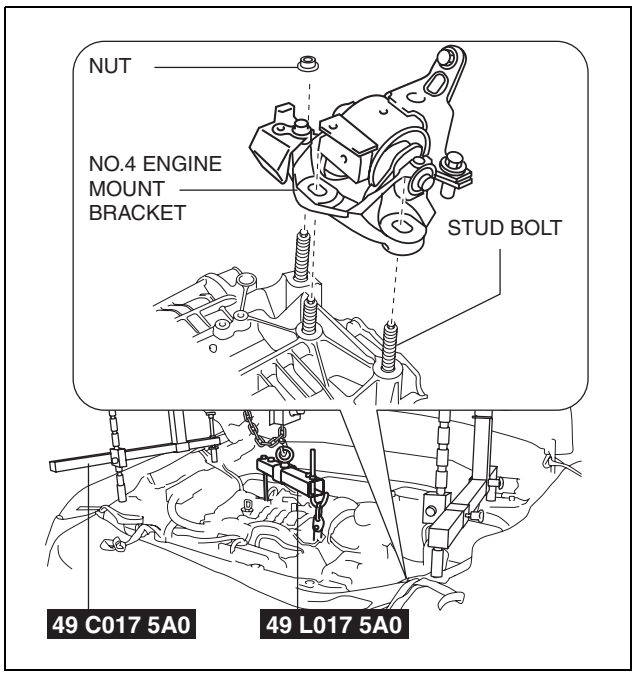
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

4. Install the No.4 engine mount bracket to No.4 engine mount rubber, and temporarily tighten the installation bolt.



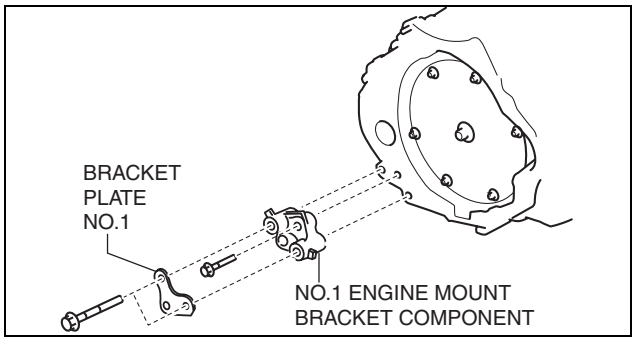
ac5wzw0000431

5. Pull up the transaxle using the **SSTs**, pass the transaxle stud bolts through the No.4 engine mount bracket, and temporarily tighten the No.4 engine mount installation nuts.



ac5wzw0000431

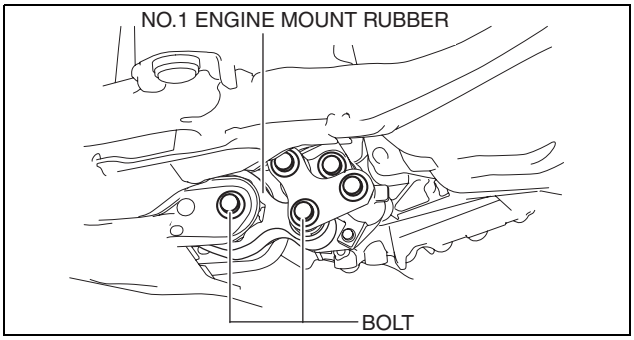
6. Install the No.1 engine mount bracket component and the bracket plate No.1 to the transaxle, and temporarily tighten the installation bolts.
7. Install the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/ INSTALLATION.)



ac5wzw0000432

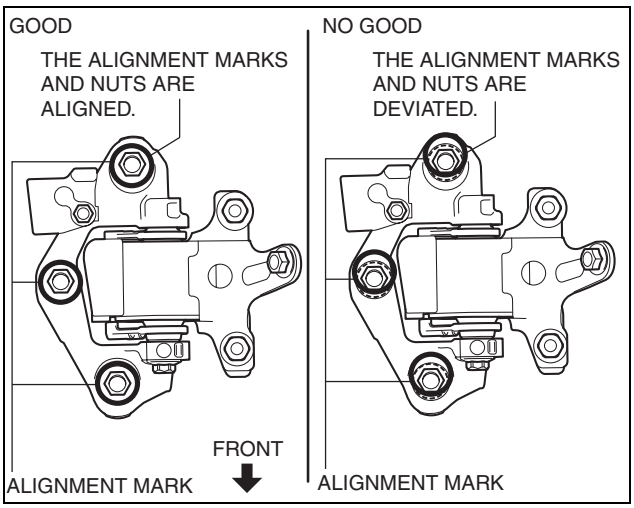
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

8. Temporarily tighten the No.1 engine mount rubber installation bolts.



ac5wzw0000432

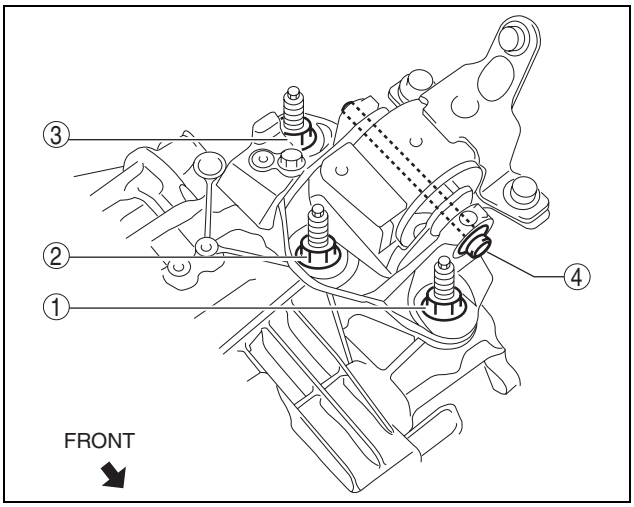
9. Align the alignment marks on the No.4 engine mount bracket and nuts, and temporarily tighten the nuts shown in the figure.



ac5wzw0000432

10. Tighten the No.4 engine mount bracket installation nuts and bolt in the order shown in the figure.

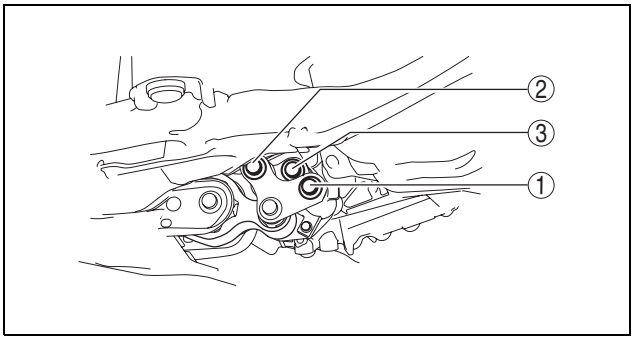
No.	Tightening torque
1, 2, 3	92—116 N·m {9.4—11 kgf·m, 69—85 ft·lbf}
4	81—99 N·m {8.3—10 kgf·m, 60—73 ft·lbf}



ac5wzw0000432

11. Tighten the No.1 engine mount bracket and bracket plate installation bolts in the order shown in the figure.

Tightening torque
84—98 N·m {8.6—9.9 kgf·m, 62—72 ft·lbf}

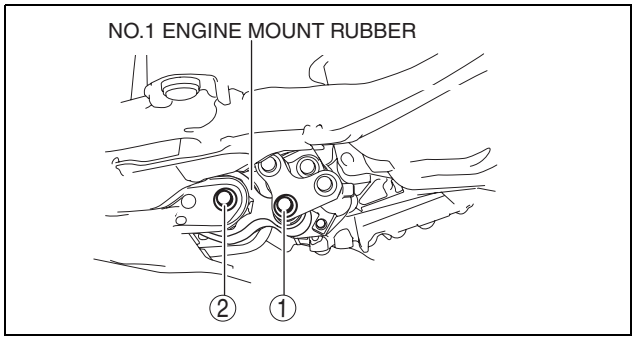


ac5wzw0000432

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

12. Tighten the No.1 engine mount rubber installation bolts in the order shown in the figure.

No.	Tightening torque
1	130—151 N·m {14—15 kgf·m, 96—111 ft·lbf}
2	130—164 N·m {14—16 kgf·m, 96—120 ft·lbf}

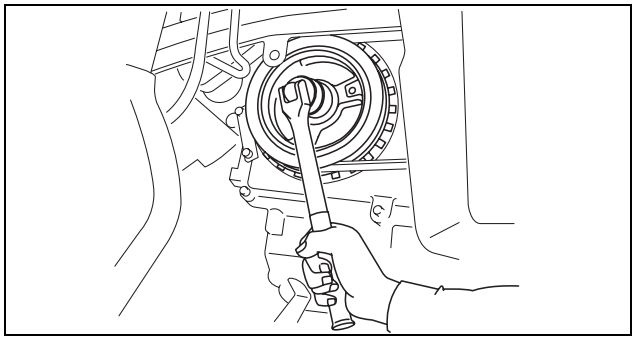


ac5wzw0000432

13. Remove the **SST (49 C017 5A0)**.

14. Fix the crankshaft pulley to lock the torque converter against rotation.

Caution
- **After temporarily tightening the torque converter installation nut uniformly, tighten it to the specified torque.**

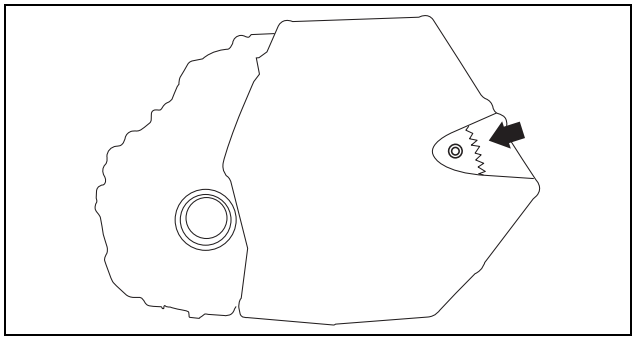


ac5wzw0000432

15. Tighten the torque converter installation nut.

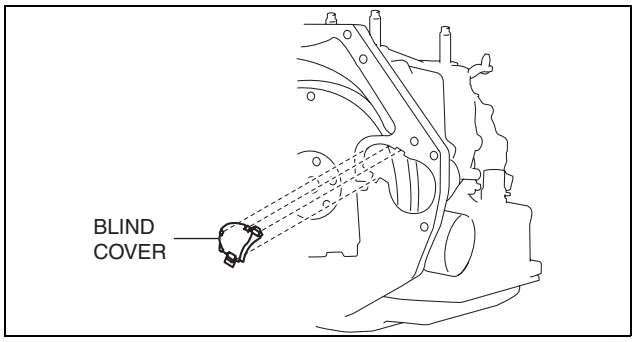
Note
- There are six installation nuts.

Tightening torque
41—54 N·m {4.2—5.5 kgf·m, 31—39 ft·lbf}



ac5wzw0000432

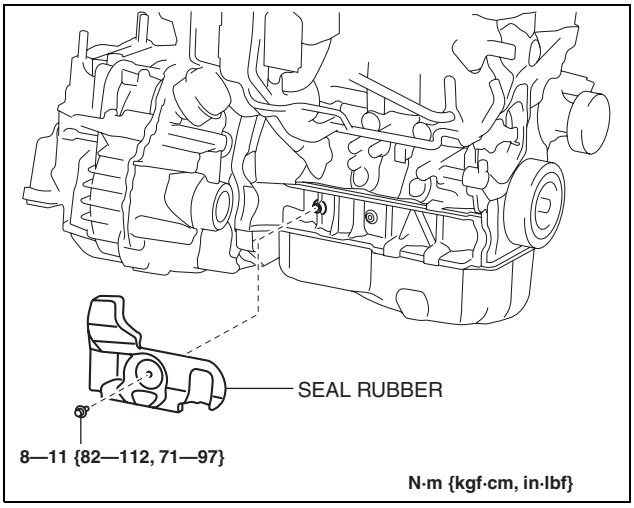
16. Install the blind cover.
17. Install the starter. (See 01-19B-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



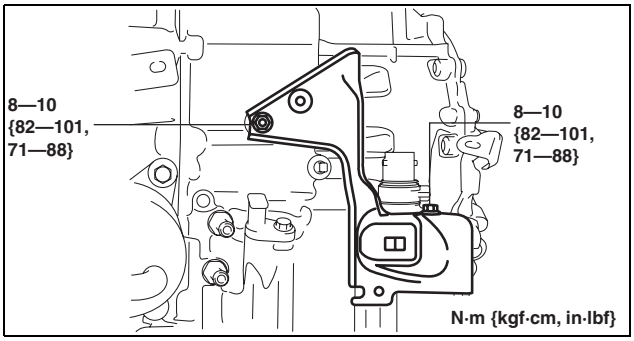
ac5wzw0000432

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

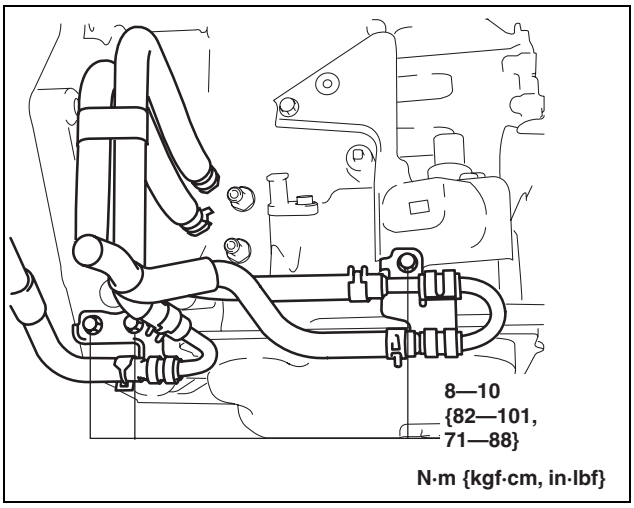
18. Install the seal rubber.
19. Install the front drive shaft (RH) to the transaxle. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
20. Install the front drive shaft (LH) to the transaxle. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
21. Install the front stabilizer control links to the front stabilizer. (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)
22. Install the front lower arms to the steering knuckles. (See 02-13-7 FRONT LOWER ARM REMOVAL/INSTALLATION.)
23. Install the tie-rod end ball joints to the steering knuckles. (See 06-13-16 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION.)
24. Install the clips securing the brake hose to the front shock absorbers. (See 04-11-30 BRAKE HOSE (FRONT) REMOVAL/INSTALLATION.)
25. Install the front ABS wheel-speed sensors to the steering knuckles. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
26. Connect the water hose to the oil cooler. (Automatic Transaxle Replacement) (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
27. Install the oil cooler to the transaxle with the hose connected. (Except Automatic Transaxle Replacement) (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
28. Install the bracket to the transaxle.
29. Install the oil pipe conponent. (With oil cooler No.2) (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)



ac5wzw0000432



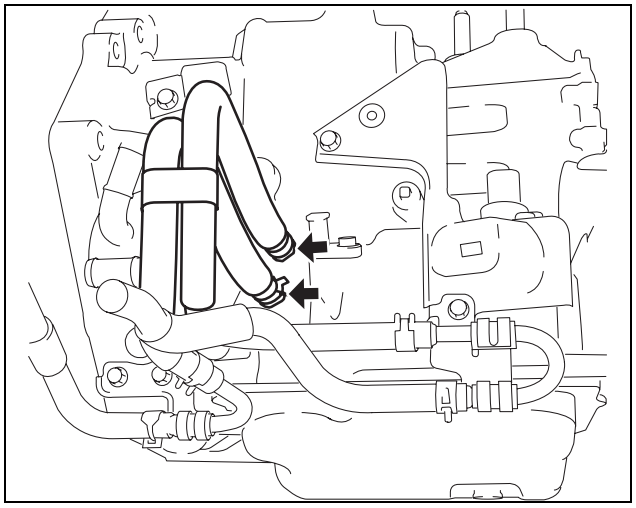
ac5wzw0000433



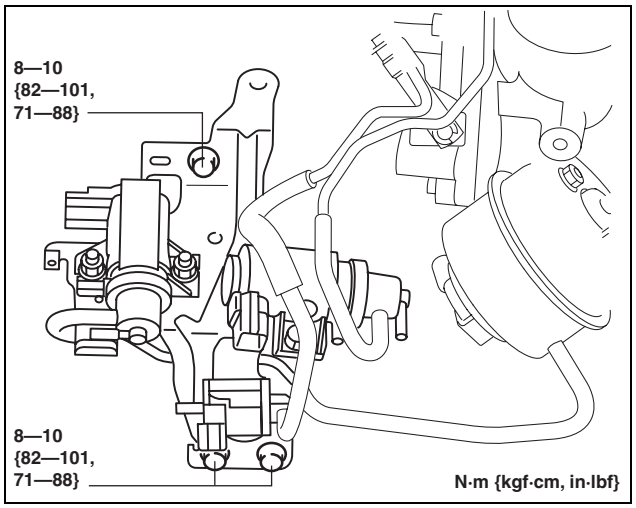
ac5wzw0000433

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

30. Connect the oil hose to the transaxle. (With oil cooler No.2) (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
31. Install the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
32. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
33. Install the front tires. (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
34. Install the intermediate shaft to the steering gear and linkage. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
35. Install the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
36. Connect the breather hose to the transaxle.
37. Install the solenoid valve component. (See 01-13B-38 COMPRESSOR BYPASS SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]) (See 01-13B-50 REGULATING SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]) (See 01-13B-61 WASTEGATE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2])

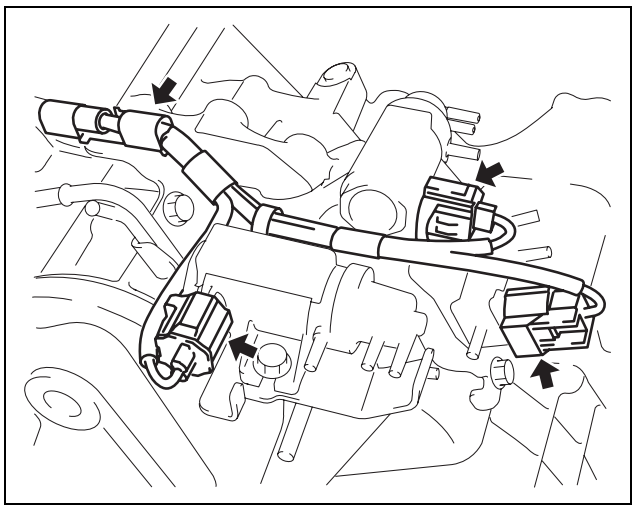


ac5wzw0000433



ac5wzw0000433

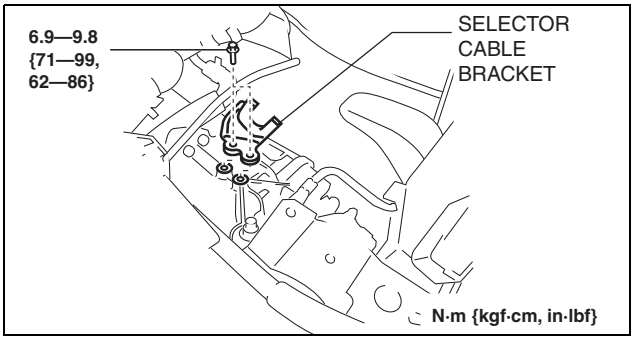
38. Connect the solenoid valve connectors and the wiring harness to the solenoid valve component. (See 01-13B-38 COMPRESSOR BYPASS SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]) (See 01-13B-50 REGULATING SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]) (See 01-13B-61 WASTEGATE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2])
39. Install the EGR cooler. (See 01-16B-12 EGR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000433

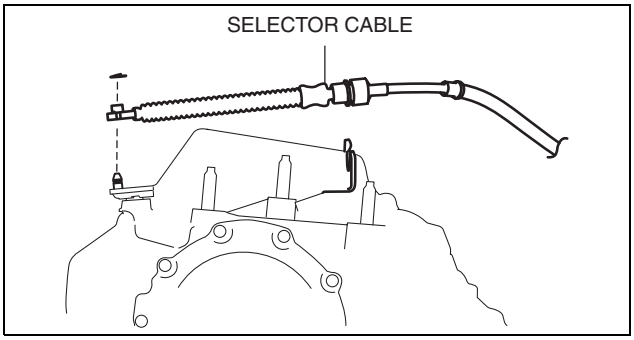
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

40. Install the selector cable bracket.



ac5wzw0000433

41. Connect the selector cable to the transaxle.

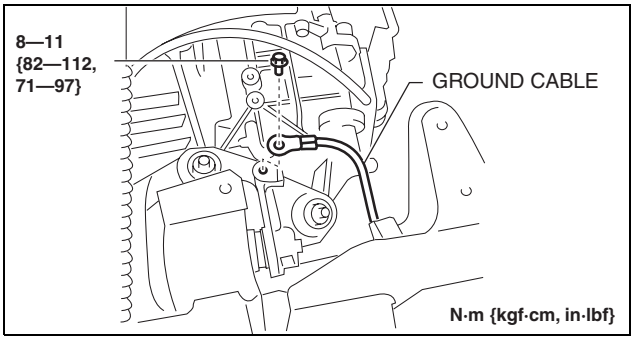


ac5wzw0000433

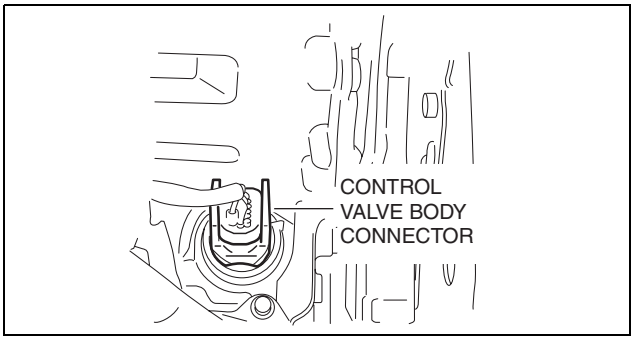
42. Install the ground cable.
43. Connect the control valve body connector.

Caution

- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Verify that there is no fluid or foreign matter adhering to the connector before connecting the connector.**
- **Insert the connector straight as the connector terminal could be damaged.**
- **Rotate the connector lever until a click is heard.**



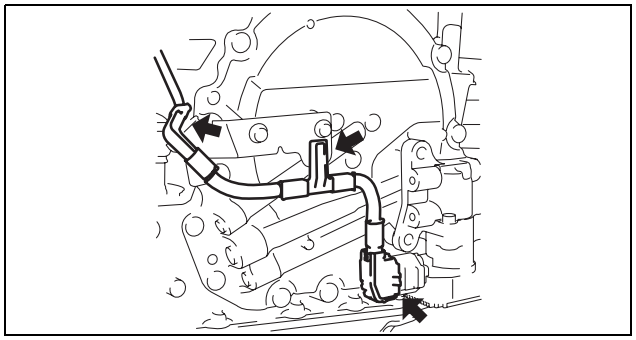
ac5wzw0000433



ac5wzw0000433

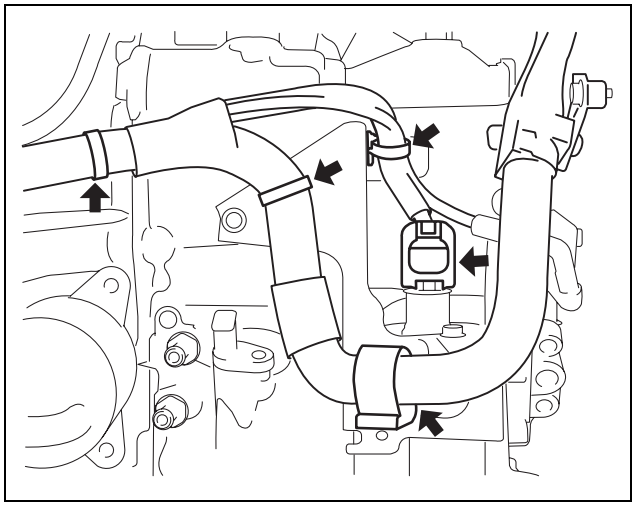
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

44. Connect the electric AT oil pump connector and electric AT oil pump harness from the transaxle.
45. Install the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)



ac5wzw0000433

46. Connect the wiring harness from the transaxle.
47. Install the battery tray. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
48. Install the air cleaner and air hose as a single unit. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
49. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
50. Add the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
51. Perform the “Mechanical System Test”. (See 05-17B-4 MECHANICAL SYSTEM TEST [GW6A-EL, GW6AX-EL].)



ac5wzw0000434

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL]

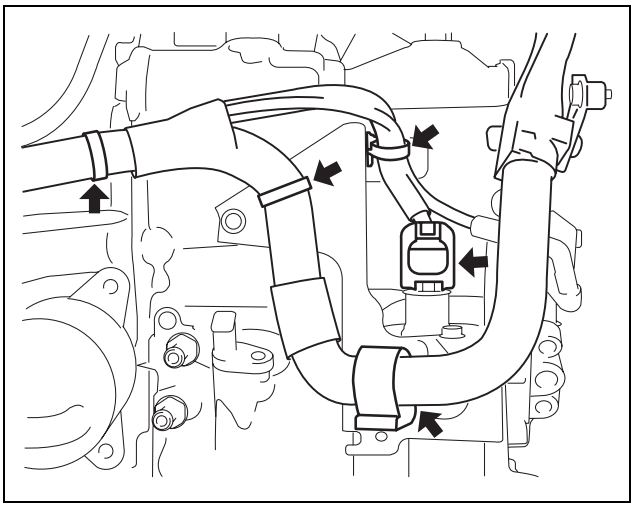
id0517i21172i4

Caution

- **Performing the following procedures without first removing the front ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, disconnect the front ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor will not be pulled by mistake while servicing the vehicle.**
- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**

Removal

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the air cleaner and air hose as a single unit. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the battery tray. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Disconnect the wiring harness clip from the transaxle.
5. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)

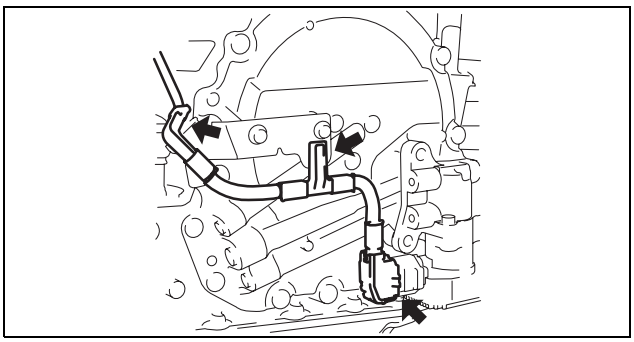


ac5wzw0000434

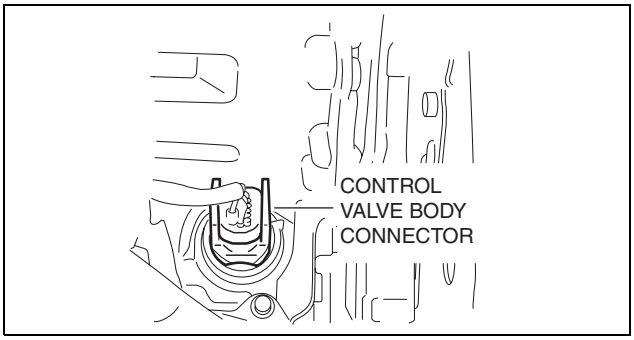
6. Disconnect the electric AT oil pump connector and electric AT oil pump harness from the transaxle.
7. Disconnect the control valve body connector.

Caution

- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**



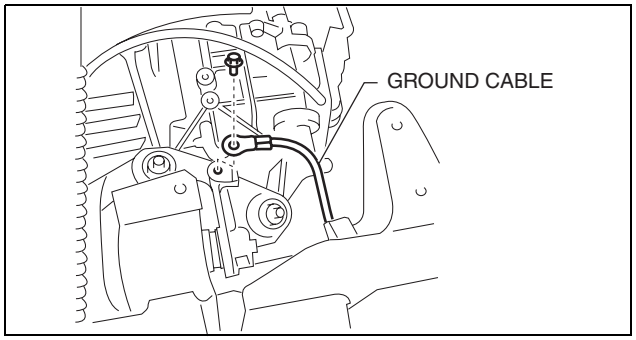
ac5wzw0000434



ac5wzw0000434

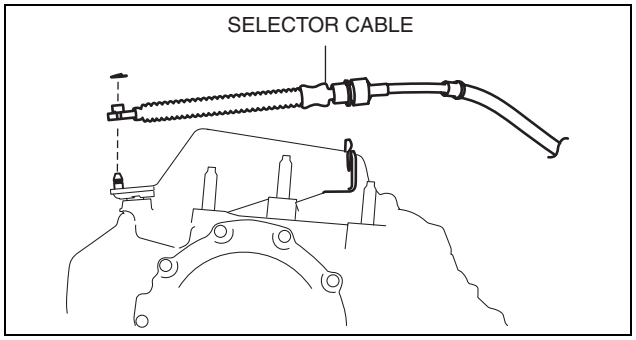
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

8. Disconnect the ground cable.



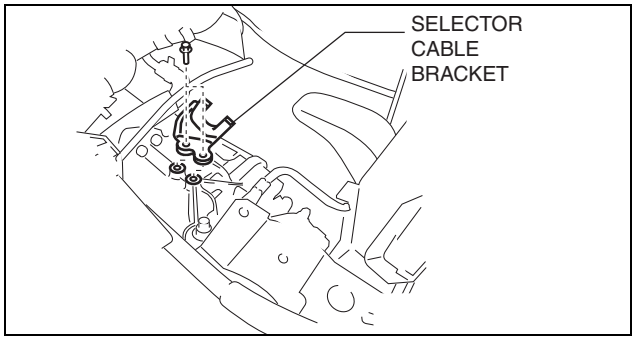
ac5wzw0000434

9. Disconnect the selector cable from the transaxle.



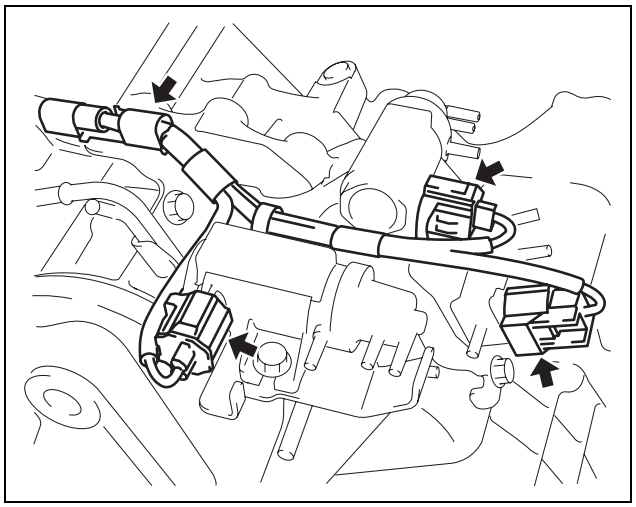
ac5wzw0000434

10. Remove the selector cable bracket.
11. Remove the EGR cooler. (See 01-16B-12 EGR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000434

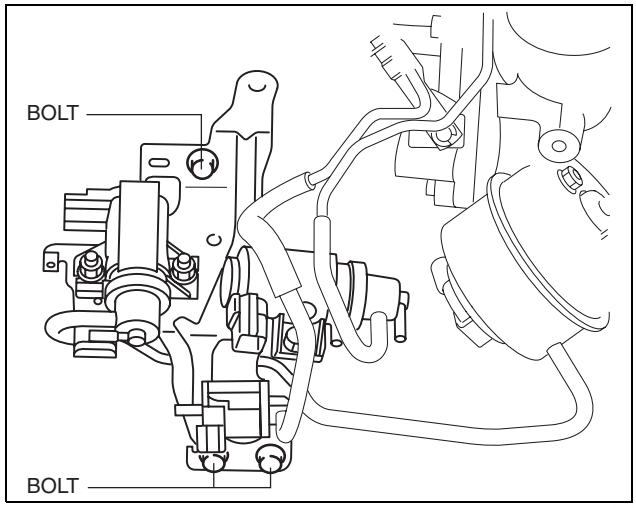
12. Disconnect the solenoid valve connectors and the wiring harness from the solenoid valve component. (See 01-13B-38 COMPRESSOR BYPASS SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]) (See 01-13B-50 REGULATING SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]) (See 01-13B-61 WASTEGATE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2])



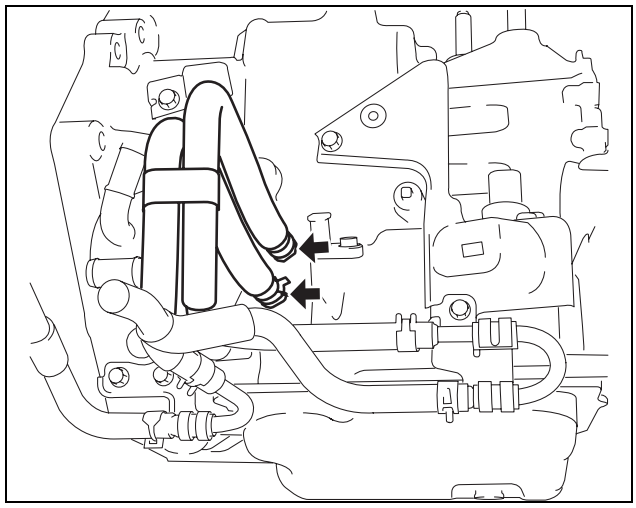
ac5wzw0000434

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

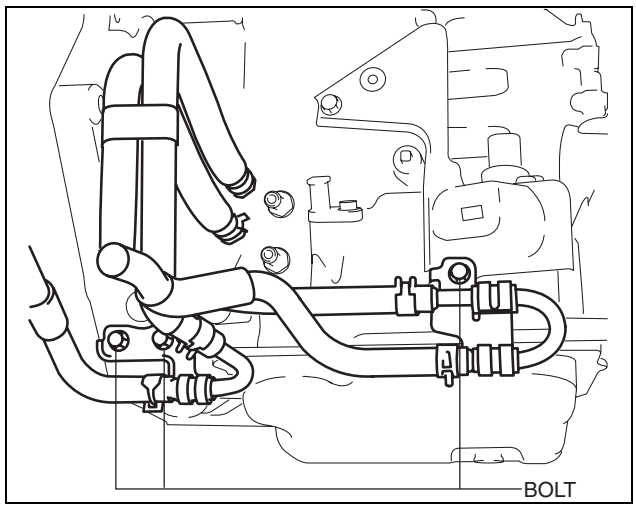
13. Disconnect the solenoid valve component from the ATX with the hose still connected, and set it out of the way. (See 01-13B-38 COMPRESSOR BYPASS SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]) (See 01-13B-50 REGULATING SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]) (See 01-13B-61 WASTEGATE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2])
14. Disconnect the breather hose from the transaxle.
15. Remove the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
16. Disconnect the intermediate shaft from the steering gear and linkage. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
17. Remove the front tires. (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
18. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
19. Remove the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
20. Drain the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
21. Disconnect the oil hose from the transaxle. (With oil cooler No.2) (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
22. Set the oil pipe component in a place which does not interfere with the servicing. (With oil cooler No.2) (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)



ac5wzw0000434



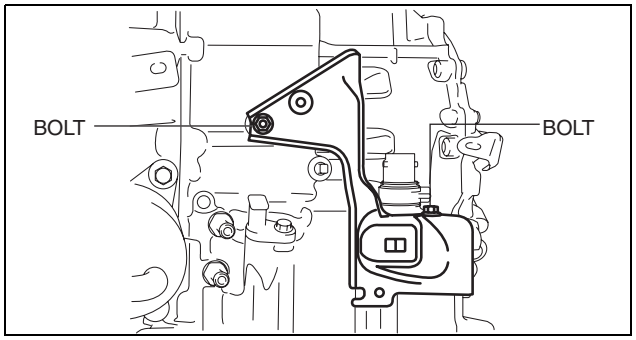
ac5wzw0000434



ac5wzw0000435

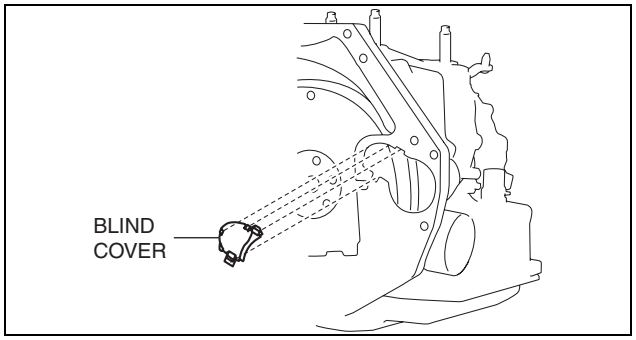
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

23. Remove the bracket from the transaxle.
24. Disconnect the oil cooler from the transaxle with the hose connected. (Except Automatic Transaxle Replacement) (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
25. Disconnect the water hose from the oil cooler. (Automatic Transaxle Replacement) (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
26. Remove the starter. (See 01-19B-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000435

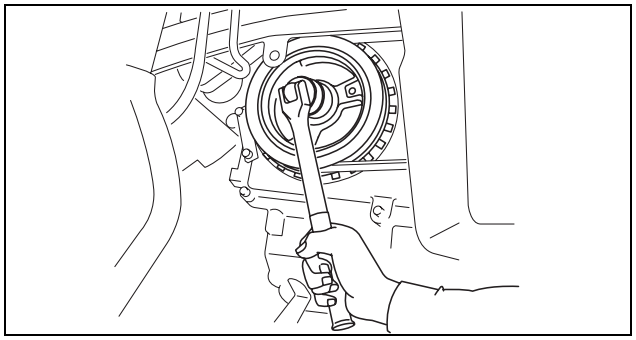
27. Remove the blind cover.



ac5wzw0000435

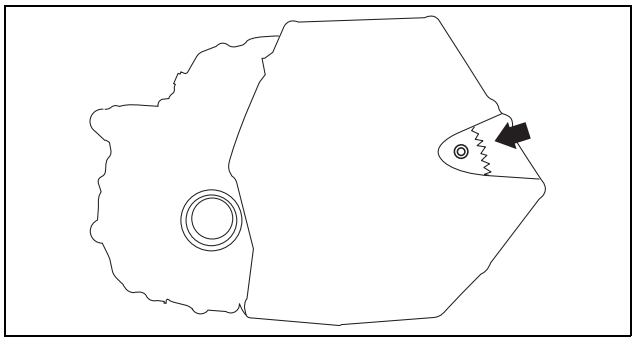
28. Hold the crankshaft pulley to prevent drive plate from rotating.
29. Remove the torque converter nuts from the starter installation hole.

Note
- There are six installation nuts.



ac5wzw0000435

30. Disconnect the front ABS wheel-speed sensors from the steering knuckles. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
31. Disconnect the clips securing the brake hose from the front shock absorbers. (See 04-11-27 FRONT BRAKE (DISC) REMOVAL/INSTALLATION.)
32. Disconnect the tie-rod end ball joints from the steering knuckles. (See 06-13-16 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION.)
33. Disconnect the front lower arms from the steering knuckles. (See 02-13-7 FRONT LOWER ARM REMOVAL/INSTALLATION.)

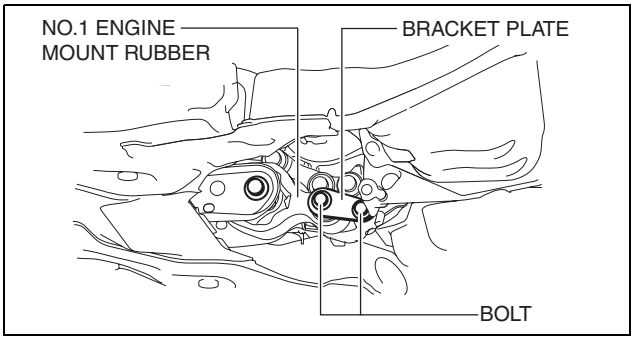


ac5wzw0000435

34. Disconnect the front stabilizer control links from the front stabilizer. (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)
35. Disconnect the front drive shaft (LH) from the transaxle. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
36. Remove the front drive shaft (RH) from the transfer. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
37. Remove the propeller shaft. (See 03-15-2 PROPELLER SHAFT REMOVAL/INSTALLATION.)

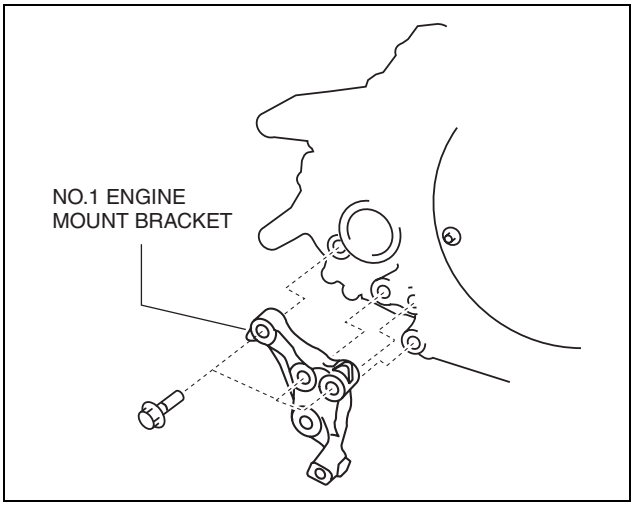
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

38. Remove the bracket plate. (See 01-10B-110 ENGINE DISASSEMBLY/ASSEMBLY [SKYACTIV-D 2.2].)
39. Remove the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
40. Remove the transfer. (See 03-16B-6 TRANSFER REMOVAL/INSTALLATION [GW6AX-EL].)



ac5wzw0000435

41. Remove the No.1 engine mounting bracket.

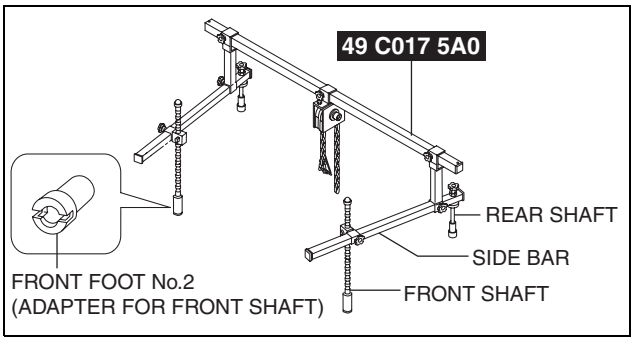


ac5wzw0000435

42. Install the **SST** using the following procedures.

Caution
- **Refer to the SST instruction manual for the basic handing procedure.**

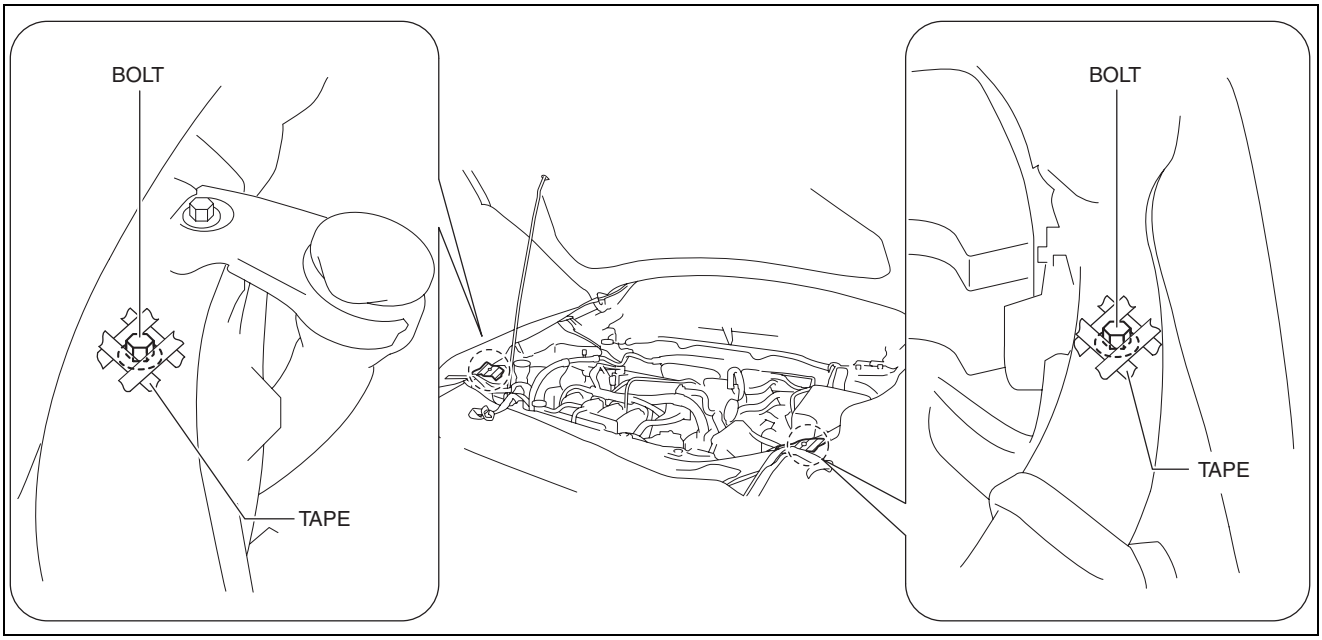
(1) Install one front foot No.2 to each of the left and right front shafts of the **SST**.



ac5wzw0000435

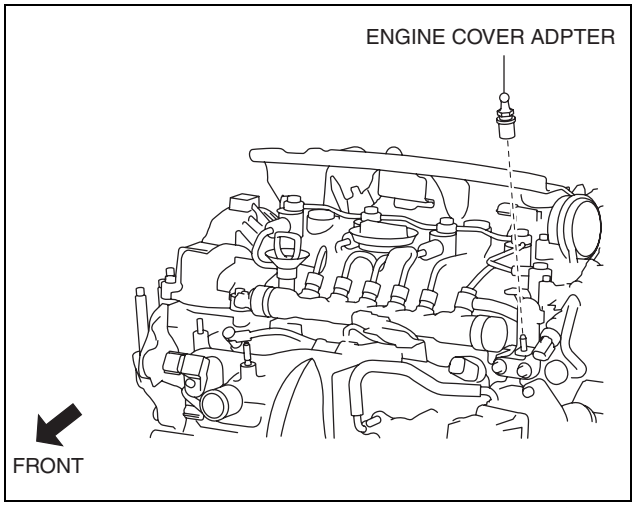
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

(2) Protect the positions shown in the figure using tape.



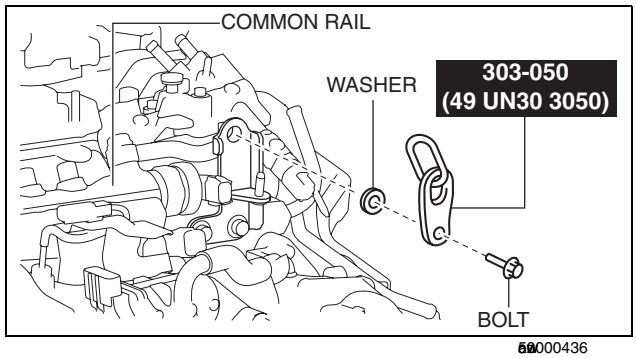
E5000435

(3) Remove the engine cover adapter.
(4) Install the SST to the position shown in the figure using the following bolt and washer.



E5000435

Engine front side



E5000436

Bolt: part number 99794 1025 or an M10—1.25, length 25 mm {0.98 in}
Washer: approx. 3 mm {0.1 in} thickness

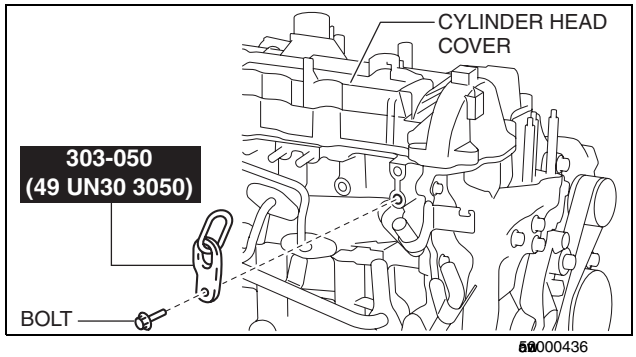
Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

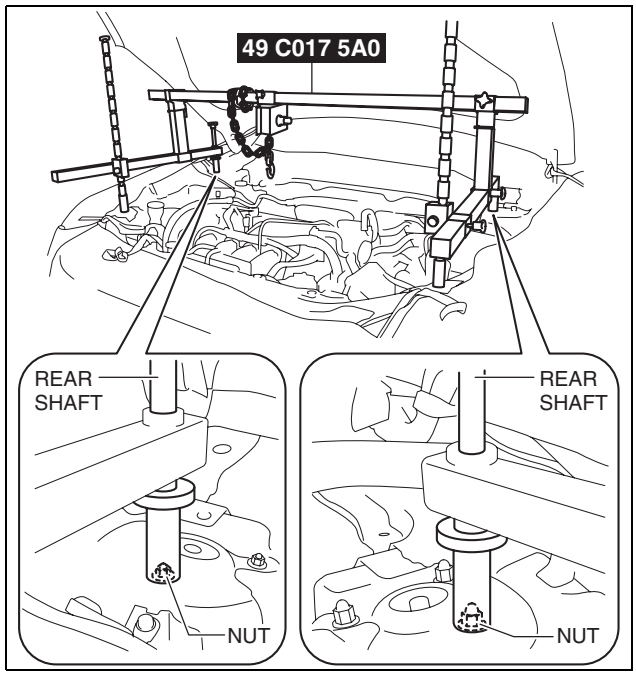
Engine rear side

Bolt: part number 99794 1025 or an M10—1.25, length 25 mm {0.98 in}

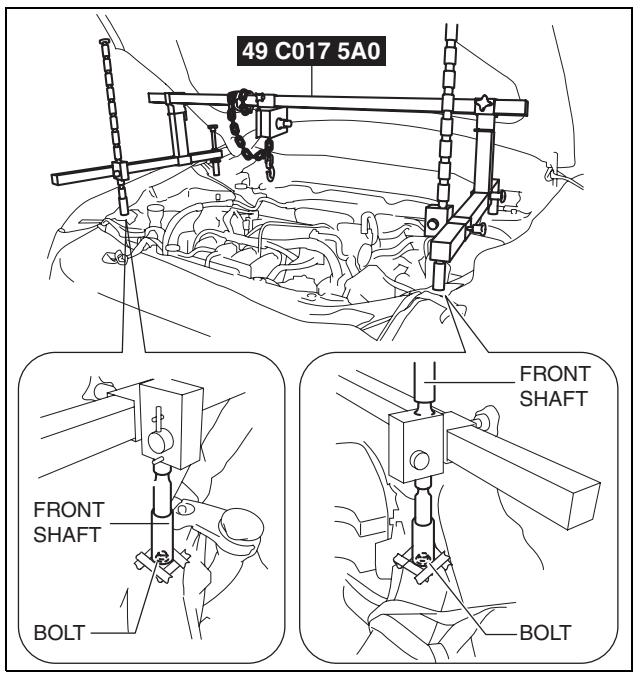
Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}



(5) As shown in the figure, set the rear shafts of the **SST** to the left and right shock absorber nuts

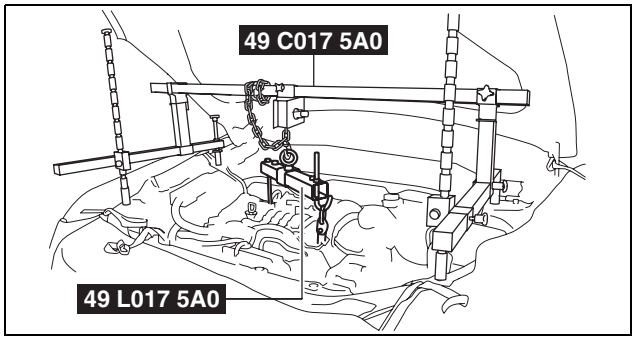


(6) As shown in the figure, set the front shafts of the **SST** to the left and right bolts.



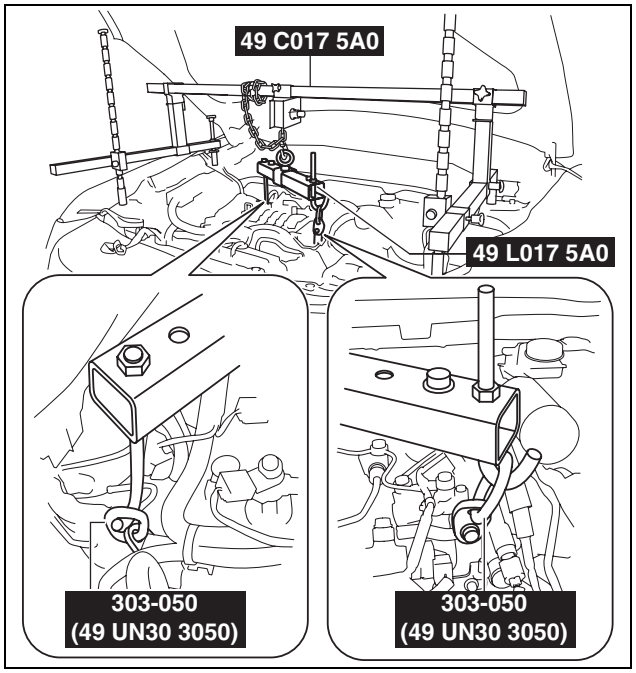
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

(7) Install the **SST (49 L017 5A0)** to the **SST (49 C017 5A0)** as shown in the figure.



ac5wzw0000436

(8) Install the **SST** (49 L017 5A0) to the **SST** (49 UN30 3050) with the hook of the **SST** (49 L017 5A0) facing outward.
(9) Adjust the height of the left and right side bars so that they are leveled, then tighten each part of the **SST**.
(10) Apply tension to the chain to secure the engine.



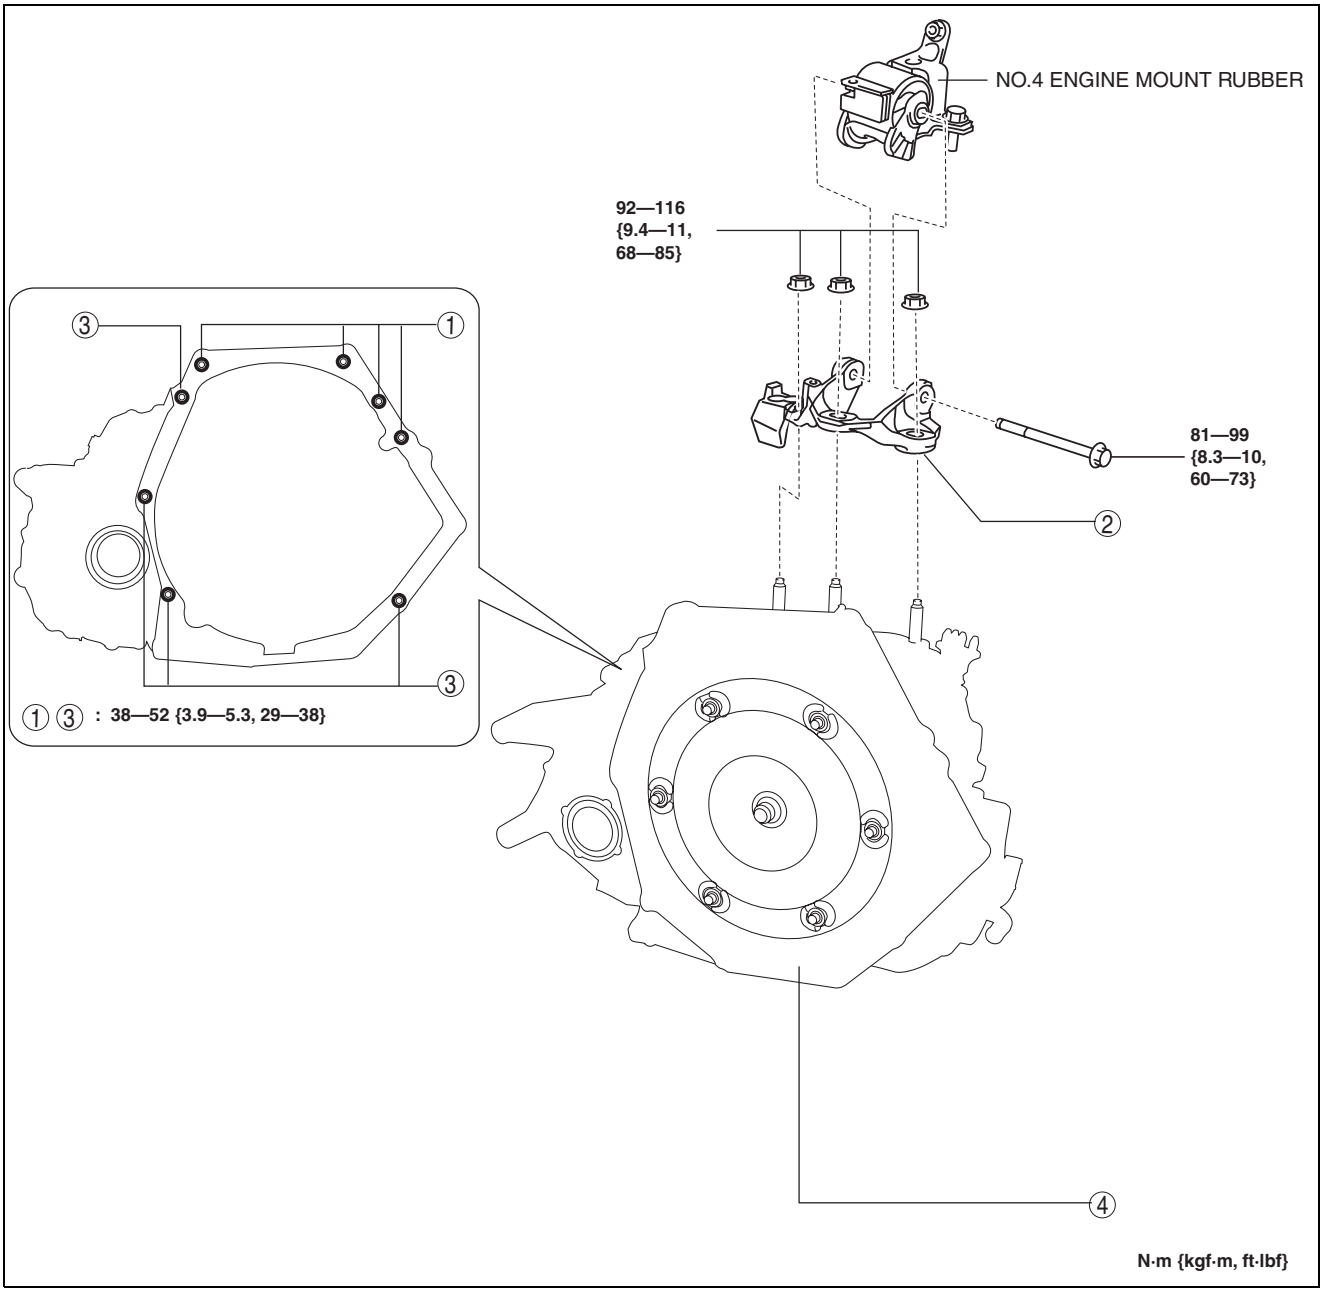
ac5wzw0000436

43. Remove in the order shown in the figure.

Warning
- **Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.**

Caution
- **To prevent the torque converter and transaxle from separating, remove the transaxle without tilting it toward the torque converter.**

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]



1	Transaxle assembly (See 05-17B-56 Transaxle assembly removal/installation)
2	No.4 engine mount (See 05-17B-56 No.4 engine mount removal/installation)
3	Transaxle assembly (See 05-17B-56 No.4 engine mount removal/installation)
4	Transaxle assembly (See 05-17B-56 No.4 engine mount removal/installation) (See 05-17B-56 Transaxle assembly removal/installation)

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

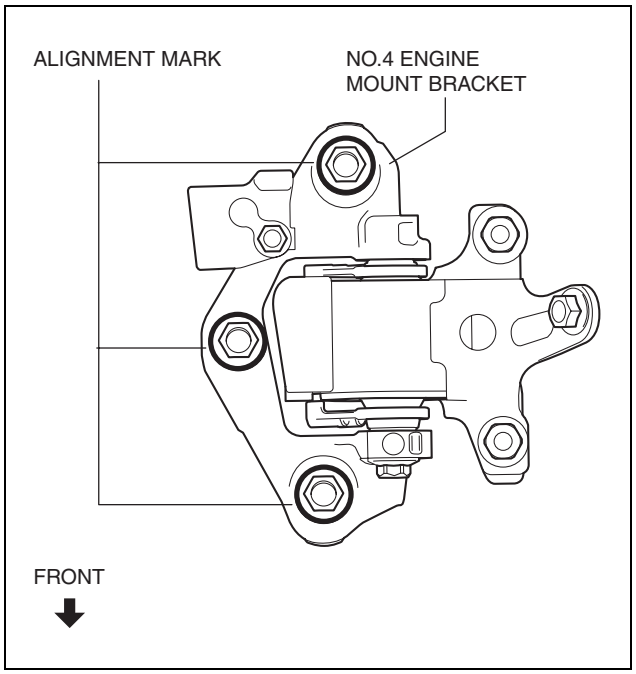
No.4 engine mount bracket removal note

Caution
- **A slot has been adopted for the No.4 engine mount bracket installation hole. If the No.4 engine mount bracket is deviated from the original position when installing the No.4 engine mount, engine noise or vibration could increase. When removing the No.4 engine mount, place alignment marks on the No.4 engine mount bracket so that they can be assembled to the same positions as before removal.**

1. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

   Note
   - Paint so that the outline of the nut is framed on the bracket side.

2. Remove the No.4 engine mount bracket.

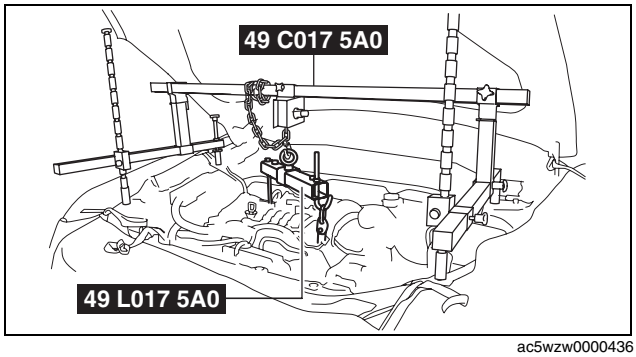


ac5wzw0000436

Transaxle mounting bolt removal note

Warning
- **Remove the transaxle carefully, holding it steady. If the transaxle falls it could be damaged or cause injury.**

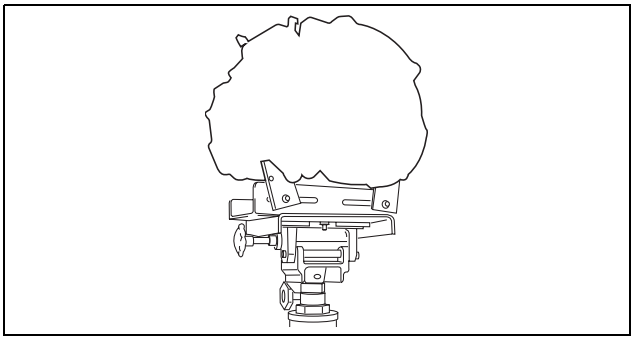
1. Adjust the **SST** and lean the engine toward the transaxle.



ac5wzw0000436

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

2. Support the transaxle on a jack.
3. Remove the transaxle mounting bolts (lower side).
4. Remove the transaxle.

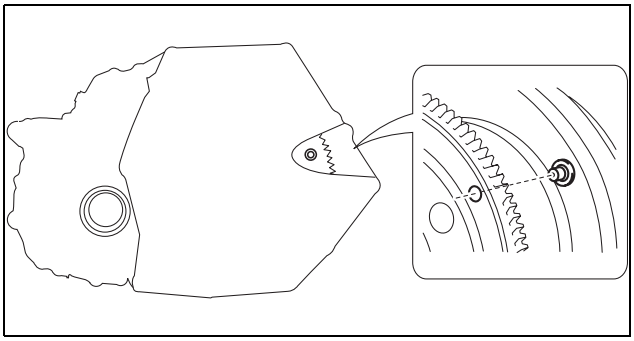


ac5wzw0000436

Installation

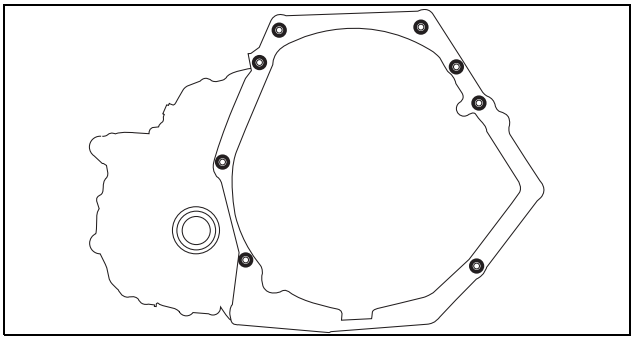
Caution
- **Verify that the torque converter stud bolts are inserted into the drive plate bolt holes, and install the transaxle installation bolts. Otherwise, the drive plate could be damaged.**

1. Verify that the torque converter stud bolts are inserted into the drive plate bolt holes from the starter installation hole.



ac5wzw0000437

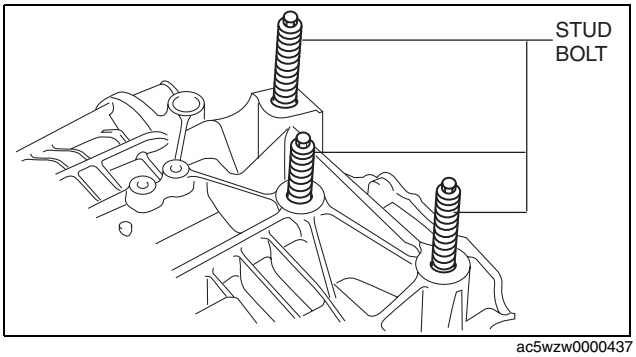
2. Install the transaxle mounting bolts.



ac5wzw0000437

3. Tighten the stud bolts for the transaxle.

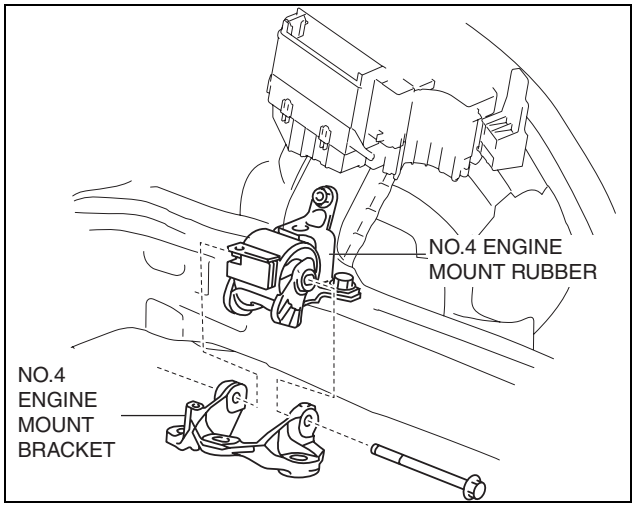
Tightening torque
15—25 N·m {1.6—2.5 kgf·m, 12—18 ft·lbf}



ac5wzw0000437

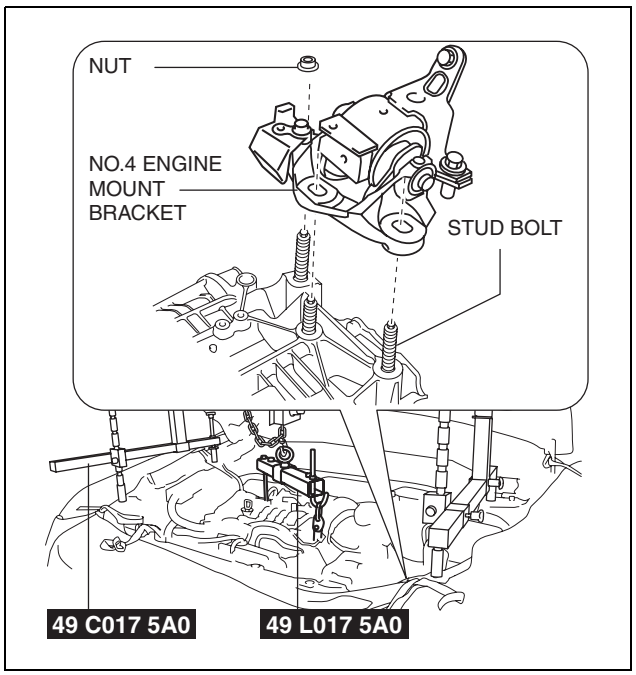
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

4. Install the No.4 engine mount bracket to No.4 engine mount rubber, and temporarily tighten the installation bolt.



ac5wzw0000437

5. Pull up the transaxle using the **SSTs**, pass the transaxle stud bolts through the No.4 engine mount bracket, and temporarily tighten the No.4 engine mount installation nuts.

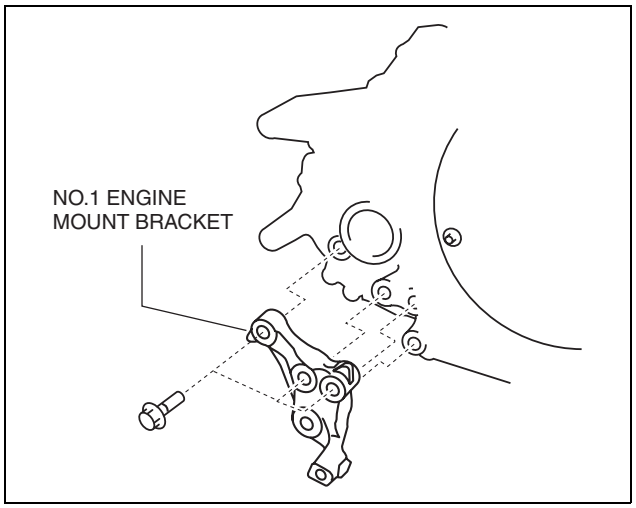


ac5wzw0000437

6. Install the No.1 engine mounting bracket.

   Tightening torque
   131—153 N·m {14—15 kgf·m, 97—112 ft·lbf}

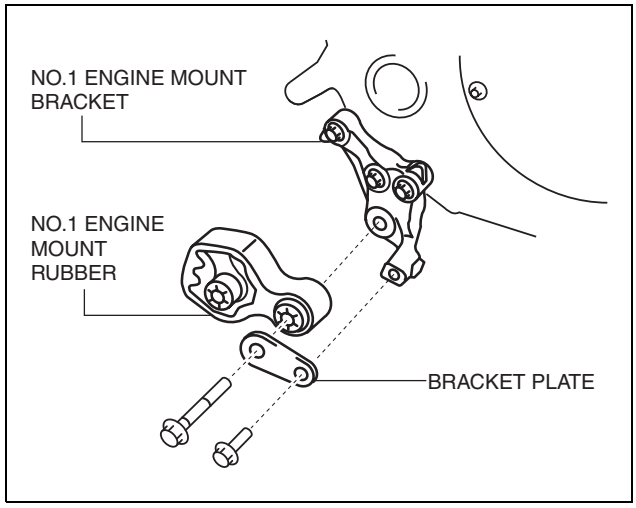
7. Install the the transfer. (See 03-16B-6 TRANSFER REMOVAL/INSTALLATION [GW6AX-EL].)
8. Install the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)



ac5wzw0000437

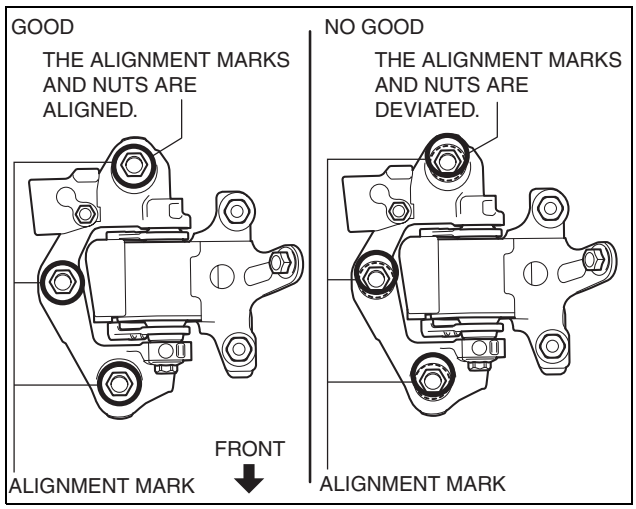
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

9. Temporarily install the No.1 engine mount rubber and bracket plate.



ac5wzw0000437

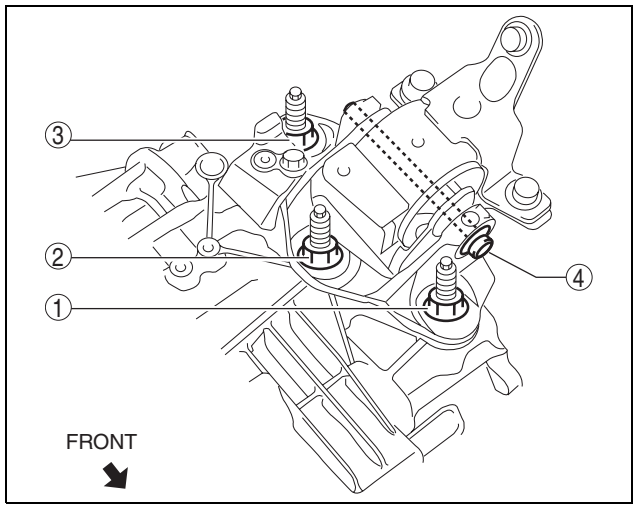
10. Align the alignment marks on the No.4 engine mount bracket and nuts, and temporarily tighten the nuts shown in the figure.



ac5wzw0000437

11. Tighten the No.4 engine mount bracket installation nuts and bolt in the order shown in the figure.

No.	Tightening torque
1, 2, 3	92—116 N·m {9.4—11 kgf·m, 69—85 ft·lbf}
4	81—99 N·m {8.3—10 kgf·m, 60—73 ft·lbf}

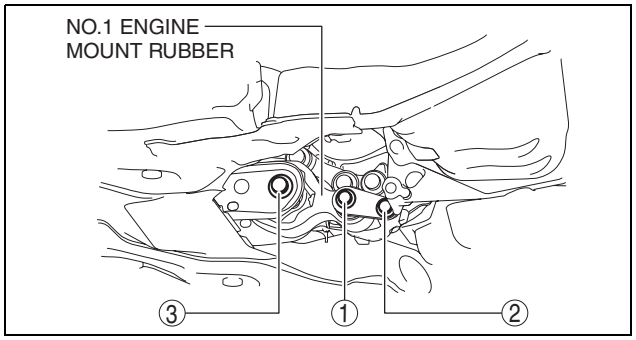


ac5wzw0000437

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

12. Tighten the No.1 engine mount rubber and bracket plate installation bolts.

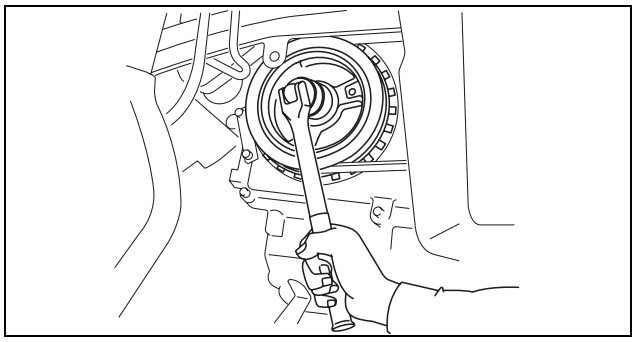
No.	Tightening torque
1	140—163 N·m {15—16 kgf·m, 104—120 ft·lbf}
2	55—69 N·m {5.7—7.0 kgf·m, 41—50 ft·lbf}
3	130—164 N·m {14—16 kgf·m, 96—120 ft·lbf}



ac5wzw0000437

13. Install the propeller shaft. (See 03-15-2 PROPELLER SHAFT REMOVAL/INSTALLATION.)
14. Remove the **SST (49 C017 5A0)**.
15. Fix the crankshaft pulley to lock the torque converter against rotation.

Caution
- **After temporarily tightening the torque converter installation nut uniformly, tighten it to the specified torque.**

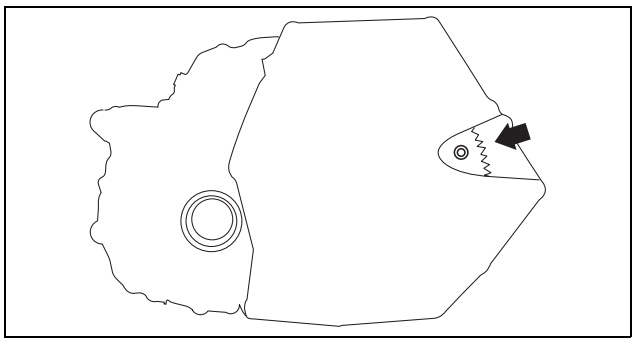


ac5wzw0000438

16. Tighten the torque converter installation nut.

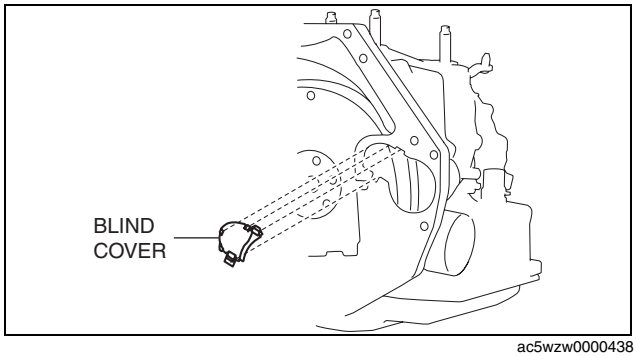
Note
- There are six installation nuts.

Tightening torque
41—54 N·m {4.2—5.5 kgf·m, 31—39 ft·lbf}



ac5wzw0000438

17. Install the blind cover.
18. Install the starter. (See 01-19B-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
19. Install the front drive shaft (RH) to the transfer. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
20. Install the front drive shaft (LH) to the transaxle. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
21. Install the front stabilizer control links to the front stabilizer. (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)
22. Install the front lower arms to the steering knuckles. (See .02-13-7 FRONT LOWER ARM REMOVAL/INSTALLATION)

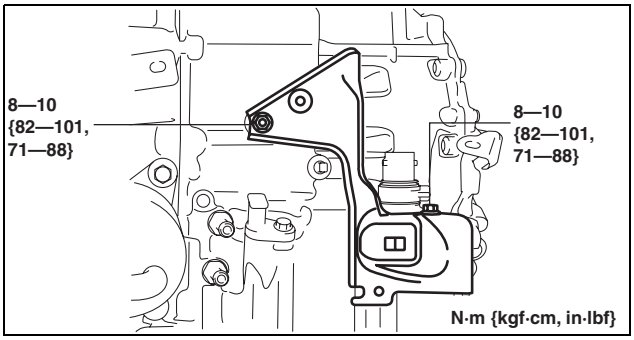


ac5wzw0000438

23. Install the tie-rod end ball joints to the steering knuckles. (See 06-13-16 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION.)
24. Install the clips securing the brake hose to the front shock absorbers. (See 04-11-27 FRONT BRAKE (DISC) REMOVAL/INSTALLATION.)
25. Install the front ABS wheel-speed sensors to the steering knuckles. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
26. Connect the water hose to the oil cooler. (Automatic Transaxle Replacement) (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
27. Install the oil cooler to the transaxle with the hose connected. (Except Automatic Transaxle Replacement) (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)

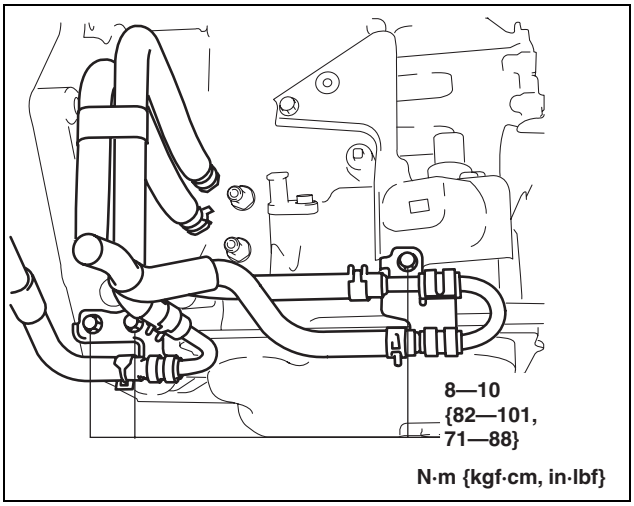
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

28. Install the bracket to the transaxle.



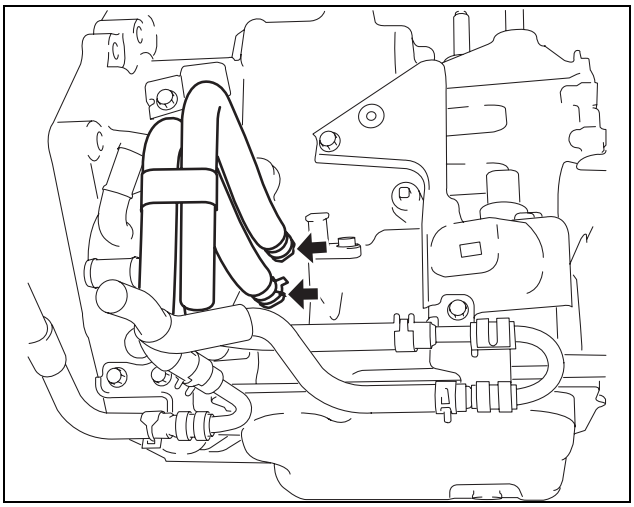
ac5wzw0000438

29. Install the oil pipe conponent. (With oil cooler No.2) (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)



ac5wzw0000438

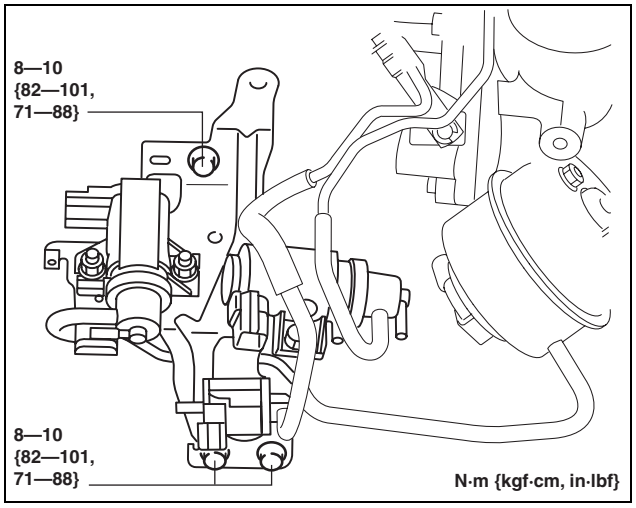
30. Connect the oil hose to the transaxle. (With oil cooler No.2) (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
31. Install the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
32. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
33. Install the front tires. (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
34. Connect the intermediate shaft to the steering gear and linkage. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
35. Install the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
36. Connect the breather hose to the transaxle.



ac5wzw0000438

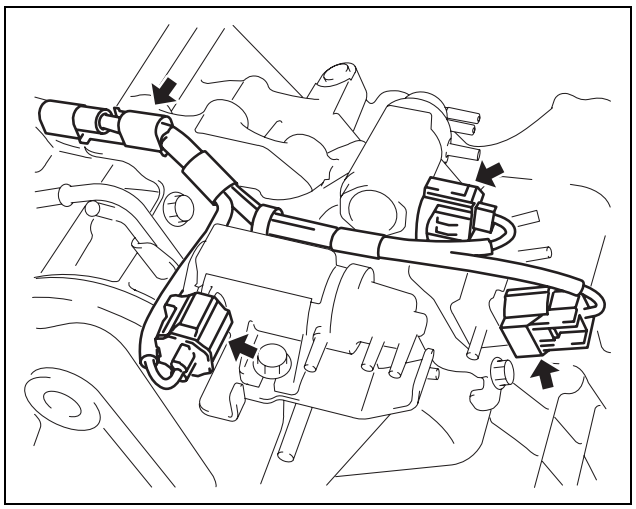
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

37. Install the solenoid valve component. (See 01-13B-38 COMPRESSOR BYPASS SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]) (See 01-13B-50 REGULATING SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]) (See 01-13B-61 WASTEGATE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2])



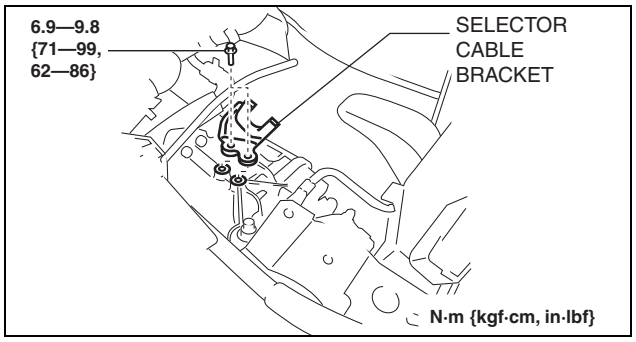
ac5wzw0000438

38. Connect the solenoid valve connectors and the wiring harness to the solenoid valve component. (See 01-13B-38 COMPRESSOR BYPASS SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]) (See 01-13B-50 REGULATING SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]) (See 01-13B-61 WASTEGATE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2])
39. Install the EGR cooler. (See 01-16B-12 EGR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



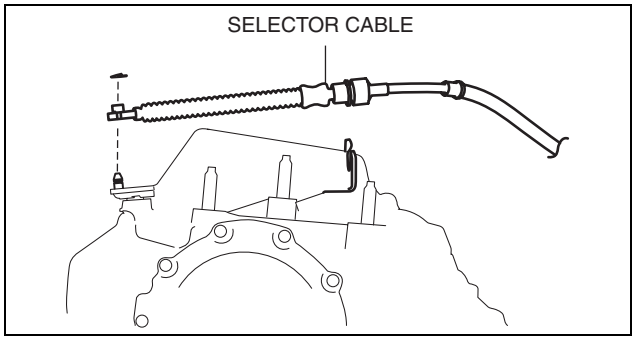
ac5wzw0000438

40. Install the selector cable bracket.



ac5wzw0000438

41. Connect the selector cable to the transaxle.



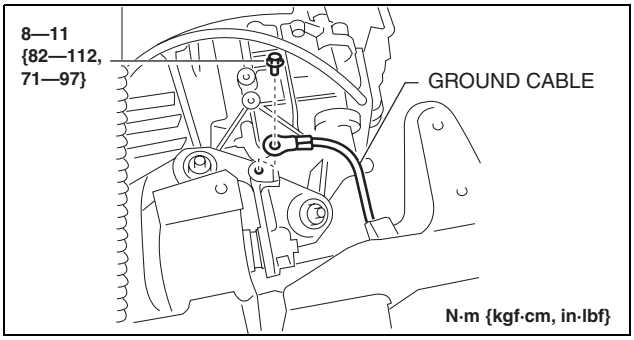
ac5wzw0000438

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

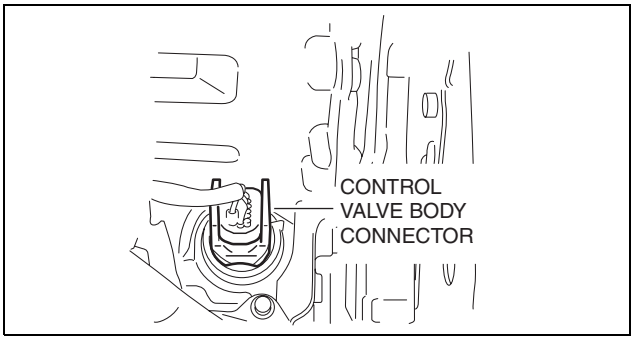
42. Install the ground cable.
43. Connect the control valve body connector.

Caution

- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Verify that there is no fluid or foreign matter adhering to the connector before connecting the connector.**
- **Insert the connector straight as the connector terminal could be damaged.**
- **Rotate the connector lever until a click is heard.**

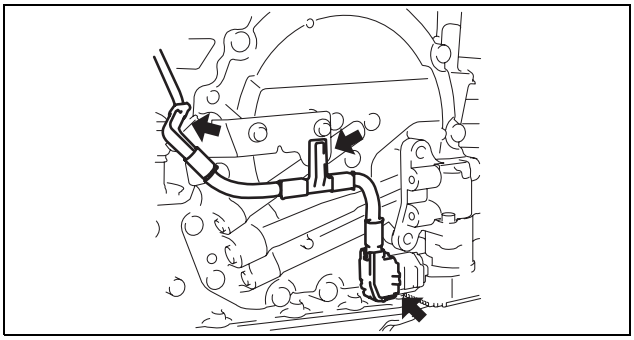


ac5wzw0000439



ac5wzw0000439

44. Connect the electric AT oil pump connector and electric AT oil pump harness from the transaxle.
45. Install the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)



ac5wzw0000439

46. Connect the wiring harness to the transaxle.
47. Install the battery tray. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
48. Install the air cleaner and air hose as a single unit. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
49. Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
50. Add the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
51. Perform the “Mechanical System Test”. (See 05-17B-4 MECHANICAL SYSTEM TEST [GW6A-EL, GW6AX-EL].)

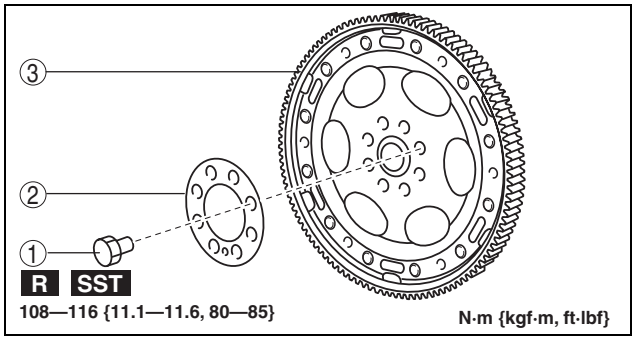
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

DRIVE PLATE REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL]

id0517i2117300

1. Remove the transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].)
2. Remove in the order indicated in the table.

1	Drive plate installation bolts (See 05-17B-64 Drive Plate Installation Bolts Removal Note.) (See 05-17B-64 Drive Plate Installation Bolts Installation Note.)
2	Backing plate
3	Drive plate

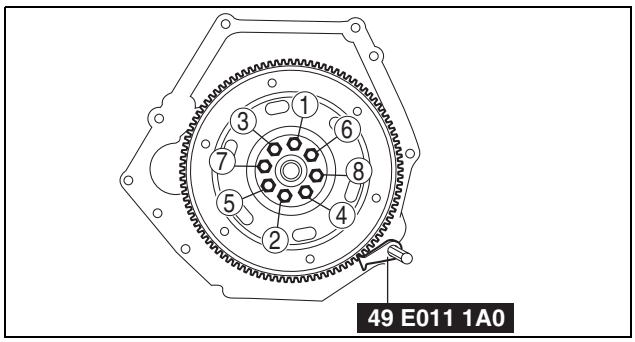


ac5wzw0000371

3. Install in the reverse order of removal.

Drive Plate Installation Bolts Removal Note

1. Set the **SST** against the drive plate.
2. Loosen the drive plate installation bolts uniformly in two or three steps in the order shown in the figure, then remove the bolts and the drive plate.

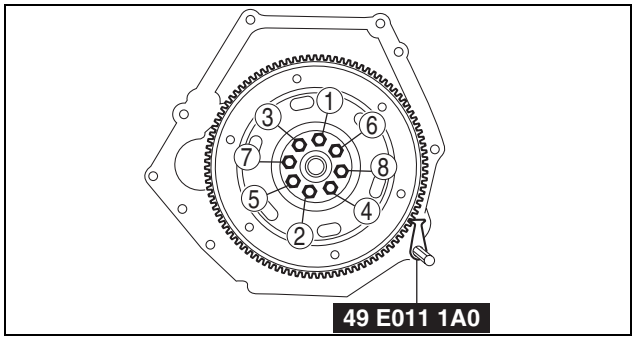


ac5wzw0000455

Drive Plate Installation Bolts Installation Note

1. Set the **SST** against the drive plate.
2. Tighten the new drive plate installation bolts uniformly in two or three steps in the order shown in the figure.

Tightening torque
108—116 N·m {11.1—11.8 kgf·m, 80—85 ft·lbf}



ac5wzw0000455

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

OIL SEAL (DIFFERENTIAL) REPLACEMENT [GW6A-EL, GW6AX-EL]

id0517i2118800

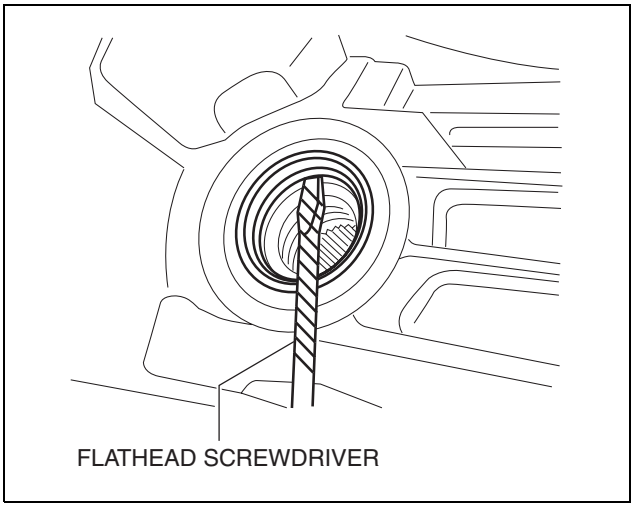
Transaxle Case Side

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Drain the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
3. Disconnect the drive shaft (LH) from the transaxle. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)

Caution

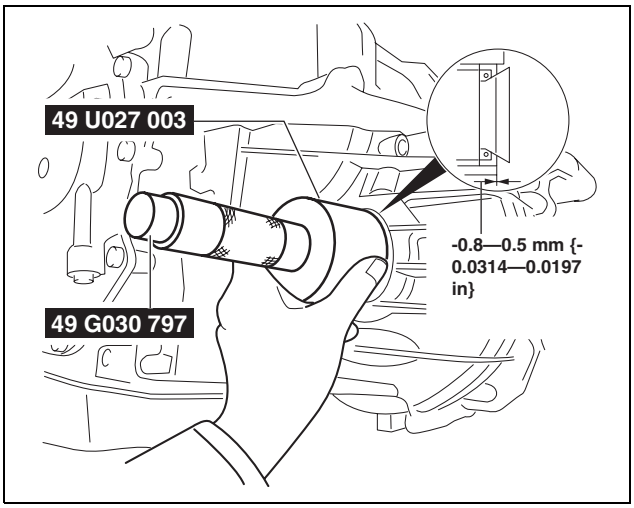
- **The oil seal is easily damaged by the sharp edges of the drive shaft splines. Do not let the splines contact the oil seal.**

4. Remove the oil seal using a flathead screwdriver.



ac5uuw00000215

5. Using the **SSTs** and a hammer, tap a new oil seal in evenly until the **SST** (**49 U027 003**) contacts the transaxle case.
6. Coat the lip of the oil seal with ATF.
7. Install the drive shaft (LH) to the transaxle. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
8. Add the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
9. Install the under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
10. Perform the “Mechanical System Test”. (See 05-17B-4 MECHANICAL SYSTEM TEST [GW6A-EL, GW6AX-EL].)



ac5uuw00000216

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

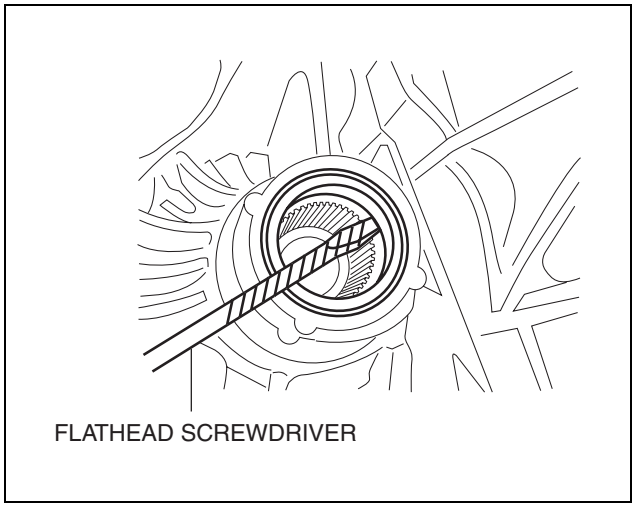
Converter housing Side (GW6A-EL)

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Drain the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
3. Disconnect the drive shaft (RH) from the transaxle. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)

Caution

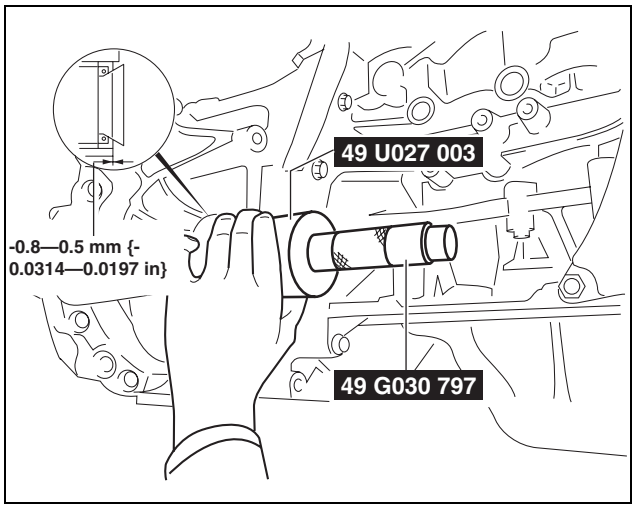
- **The oil seal is easily damaged by the sharp edges of the drive shaft splines. Do not let the splines contact the oil seal.**

4. Remove the oil seal using a flathead screwdriver.



ac5uuw00000217

5. Using the **SSTs** and a hammer, tap a new oil seal in evenly until the **SST** (**49 U027 003**) contacts the transaxle case.
6. Coat the lip of the oil seal with ATF.
7. Install the drive shaft (RH) to the transaxle. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
8. Add the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
9. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
10. Perform the “Mechanical System Test”. (See 05-17B-4 MECHANICAL SYSTEM TEST [GW6A-EL, GW6AX-EL].)



ac5uuw00000218

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

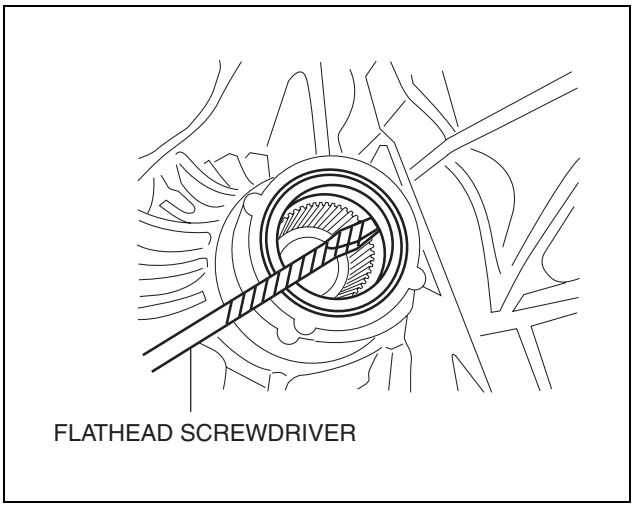
Converter housing Side (GW6AX-EL)

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Drain the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
3. Remove the transfer. (See 03-16B-6 TRANSFER REMOVAL/INSTALLATION [GW6AX-EL].)

Caution

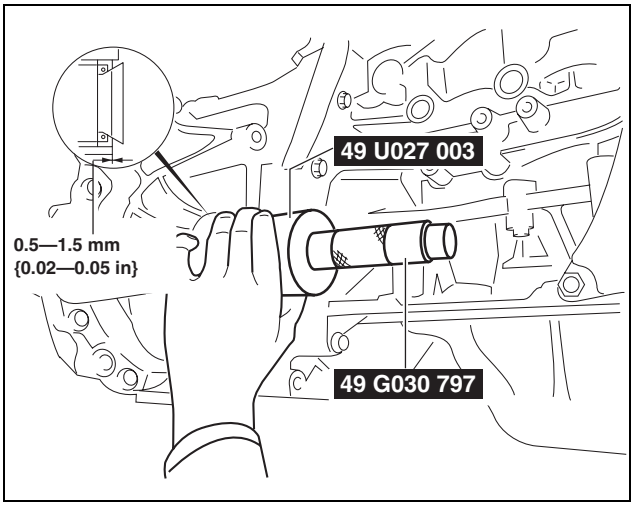
- **The oil seal is easily damaged by the sharp edges of the drive shaft splines. Do not let the splines contact the oil seal.**

4. Remove the oil seal using a flathead screwdriver.



ac5uuw00000217

5. Using the **SSTs** and a hammer, tap a new oil seal in evenly until the **SST** (**49 U027 003**) contacts the transaxle case.
6. Coat the lip of the oil seal with ATF.
7. Install the transfer. (See 03-16B-6 TRANSFER REMOVAL/INSTALLATION [GW6AX-EL].)
8. Add the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
9. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
10. Perform the “Mechanical System Test”. (See 05-17B-4 MECHANICAL SYSTEM TEST [GW6A-EL, GW6AX-EL].)



ac5wzw0000091

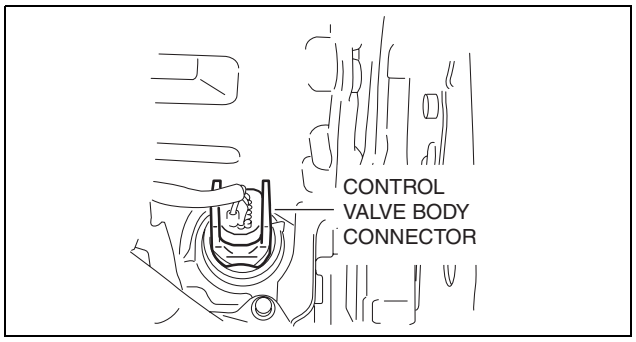
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [GW6A-EL, GW6AX-EL]

id0517i2118700

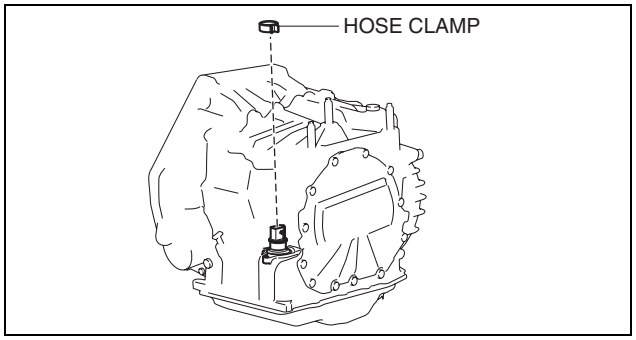
1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the air cleaner component. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Disconnect the control valve body connector.

Caution
- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**



ac5wzw0000396

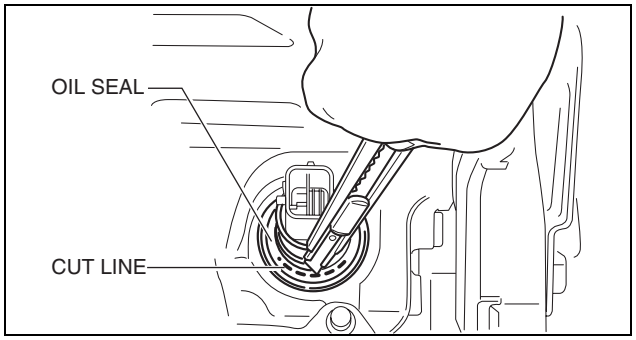
4. Remove the hose clamp.



ac5wzw0000396

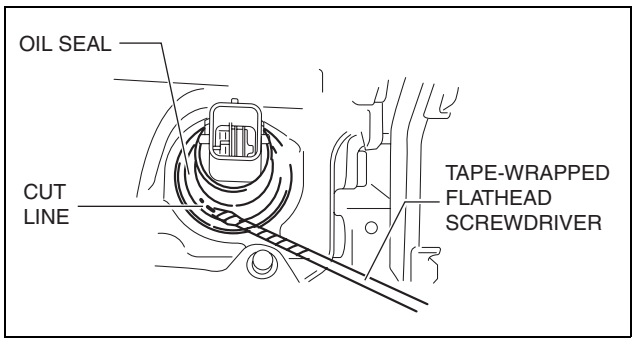
5. Cut the oil seal using a utility knife as shown in the following illustration.

Caution
- **Do not damage the transaxle case.**
- **Do not damage the control valve body coupler connector.**
- **To prevent foreign matter penetration, clean the oil seal area thoroughly and cut the oil seal so as not to leave cutting fragments.**



ac5wzw0000456

6. Using a tape-wrapped flathead screwdriver, remove the oil seal from the transaxle case.

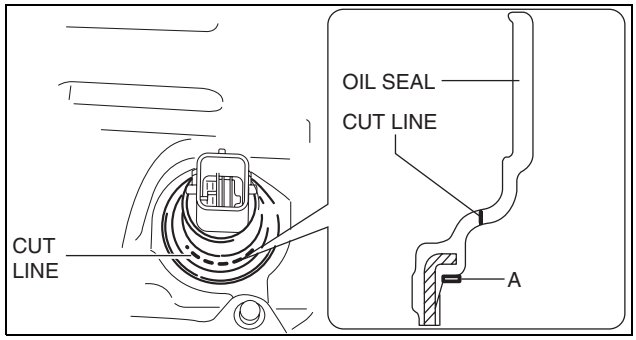


ac5wzw0000456

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

Note
- Remove the oil seal by tapping the tip of a tape-wrapped flathead screwdriver on the inner circumference surface A area of the oil seal.

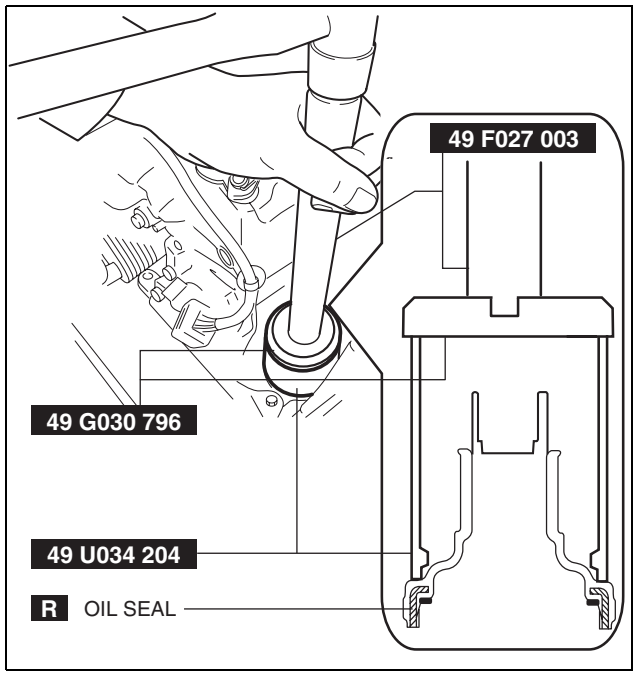
7. Temporarily install the oil seal (control valve body) by hand.



ac5wzw0000456

8. Using the **SSTs** and a hammer, install the oil seal (control valve body) so that it is not tilted and there is no height difference between the transaxle case surface and the end surface of the oil seal.

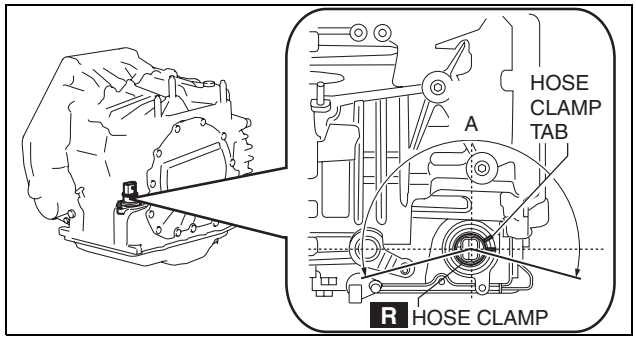
Caution
- **When installing the oil seal (control valve body), do not mistakenly hit the control valve body connector with the hammer. Otherwise the control valve body connector could be damaged making it no longer waterproof.**



ac5wzw0000374

9. Install a new hose clamp to the position shown in the figure.

Caution
- **If the hose clamp is reused it could cause ATF leakage, therefore use a new hose clamp.**
- **Install the hose clamp tab to within the range shown in the figure.**
  A: 210°



ac5wzw0000397

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

- **Install the hose clamp so that it does not interfere with the top and bottom flanges of the oil seal to maintain the waterproofing integrity.**

10. Connect the control valve body connector.

Caution
- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Verify that there is no fluid or foreign matter adhering to the connector before connecting the connector.**
- **Insert the connector straight as the connector terminal could be damaged.**
- **Rotate the connector lever until a click is heard.**

11. Install the air cleaner component. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)
12. Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

E5000371

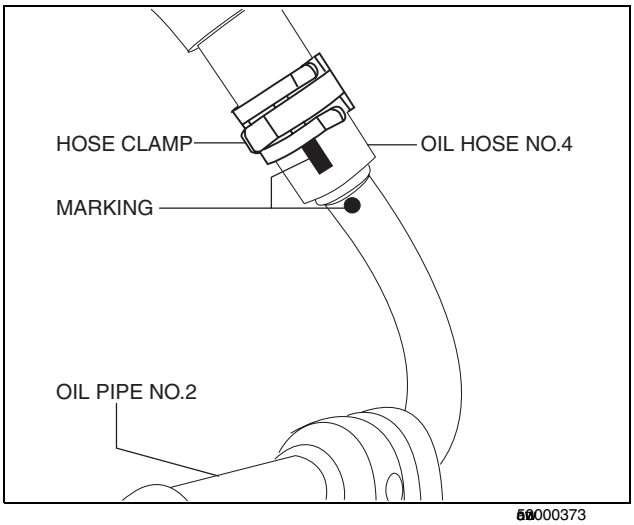
Oil Hose No.4 (oil pipe No.2 side) Installation Note

1. Install the oil hose No.4 to the oil pipe No.2 as shown in the figure with the hose clamp expanded.

Note

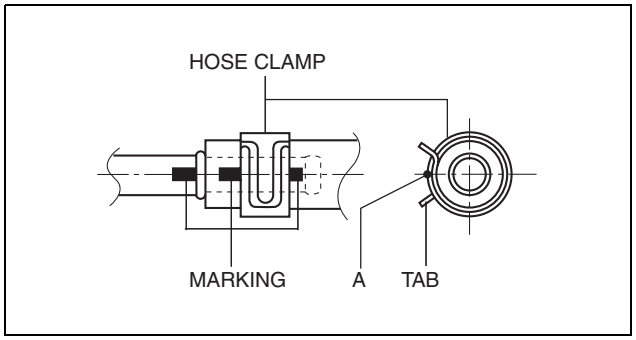
- A new oil hose No.4 and hose clamp are attached.



E5000373

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

2. Install the hose clamp so that center A of the hose clamp tab is aligned with the marking as shown in the figure.
   - Verify that the installation angle of the hose clamp is within the range shown in the figure.
3. Verify that the hose clamp does not interfere with any other components.

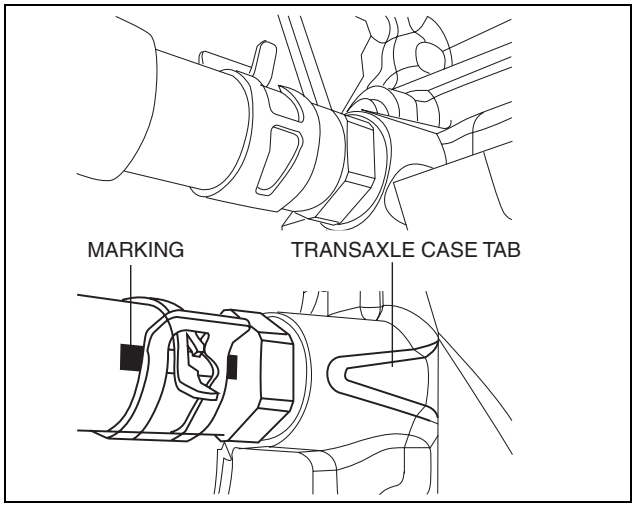


ac5wzw0000373

Oil Hose No.4 (transaxle side) Installation Note

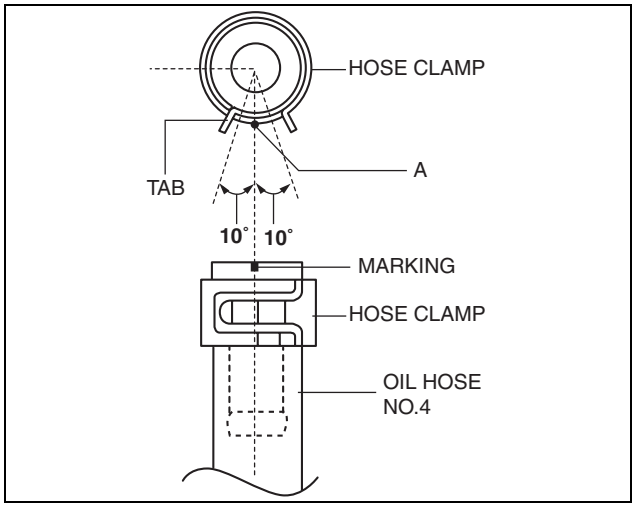
1. Install the oil hose No.4 to the connector bolt as shown in the figure with the hose clamp expanded.

Note
- A new oil hose No.4 and hose clamp are attached.



ac5wzw0000372

2. Install the hose clamp so that center A of the hose clamp tab is within the range shown in the figure.
   - Verify that the installation angle of the hose clamp is within the range shown in the figure.
3. Verify that the hose clamp does not interfere with any other components.



ac5wzw0000372

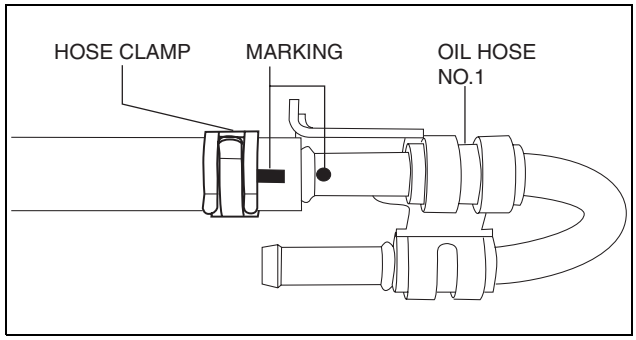
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

Oil Hose No.3 (oil pipe No.1 side) Installation Note

1. Install the oil hose No.3 to the oil pipe No.1 as shown in the figure with the hose clamp expanded.

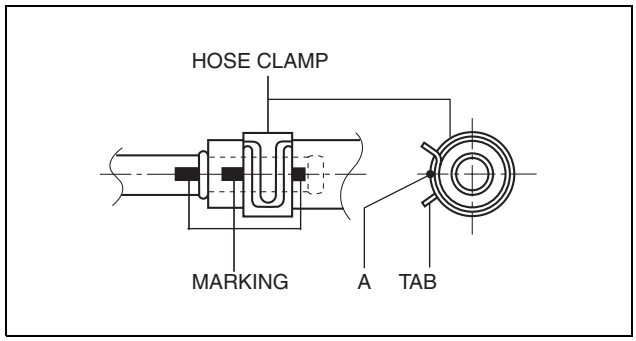
Note

- A new oil hose No.3 and hose clamp are attached.



ac5wzw0000373

2. Install the hose clamp so that center A of the hose clamp tab is aligned with the marking as shown in the figure.
   - Verify that the installation angle of the hose clamp is within the range shown in the figure.
3. Verify that the hose clamp does not interfere with any other components.



ac5wzw0000373

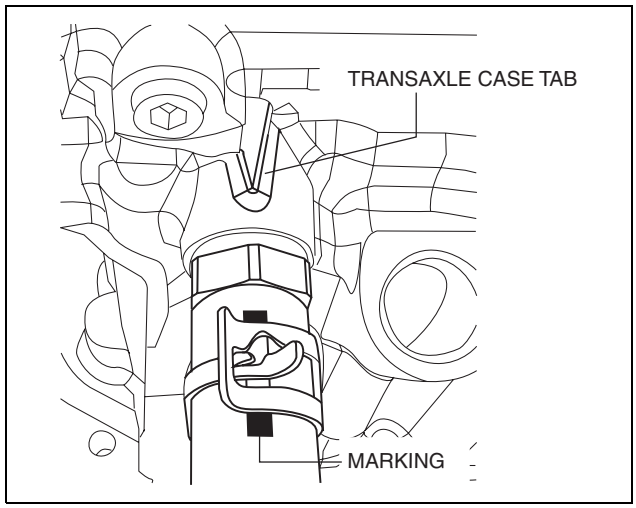
Oil Hose No.3 (transaxle side) Installation Note

1. Install the oil hose No.3 to the connector bolt as shown in the figure with the hose clamp expanded.

Note

- A new oil hose No.3 and hose clamp are attached.

2. Install the hose clamp so that center A of the hose clamp tab is within the range shown in the figure.

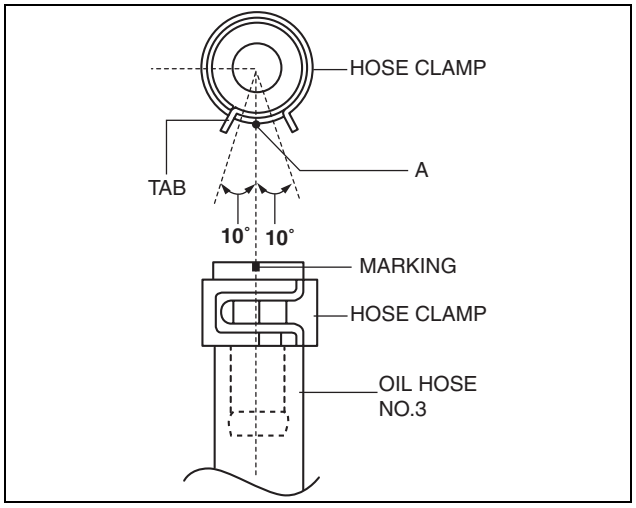


ac5wzw0000372

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

- Verify that the installation angle of the hose clamp is within the range shown in the figure.

3. Verify that the hose clamp does not interfere with any other components.



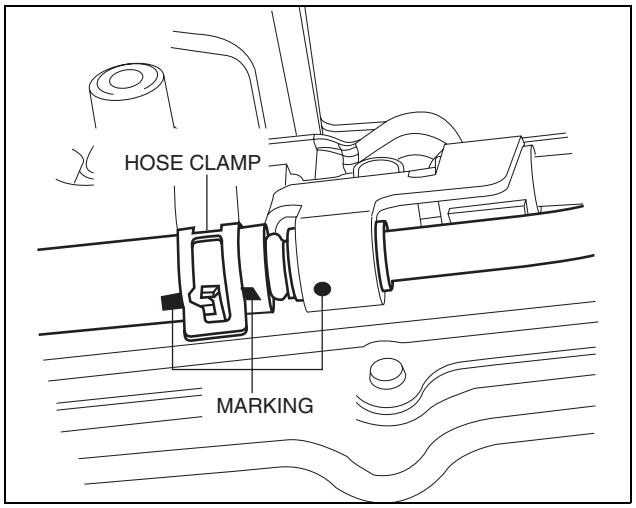
ac5wzw0000372

Oil Hose No.2 (oil pipe No.1 side) Installation Note

1. Install the oil hose No.2 to the oil pipe No.1 as shown in the figure with the hose clamp expanded.

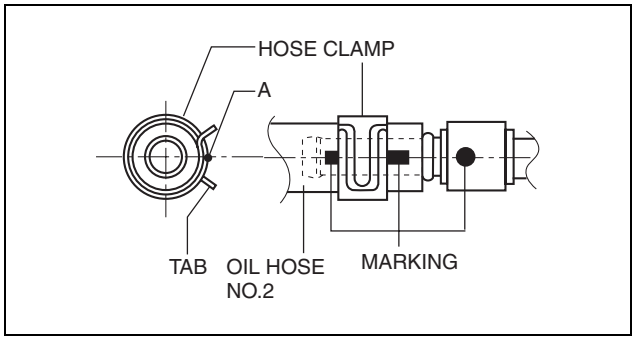
Note

- A new oil hose No.2 and hose clamp are attached.



ac5wzw0000372

2. Install the hose clamp so that center A of the hose clamp tab is aligned with the marking as shown in the figure.
   - Verify that the installation angle of the hose clamp is within the range shown in the figure.
3. Verify that the hose clamp does not interfere with any other components.



ac5wzw0000373

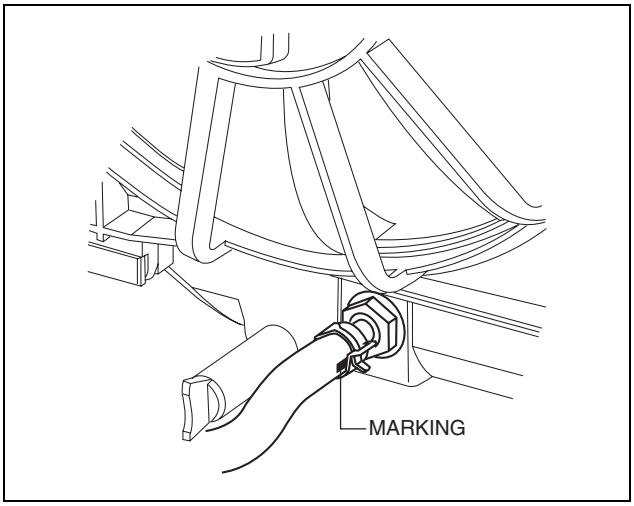
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

Oil Hose No.2 (radiator in side) Installation Note

1. Install the oil hose No.2 to the radiator as shown in the figure with the hose clamp expanded.

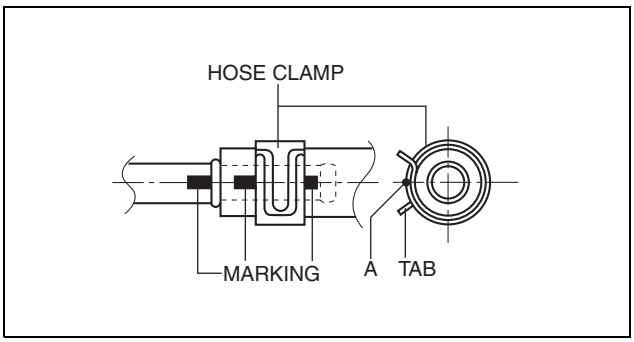
Note

- A new oil hose No.2 and hose clamp are attached.



ac5wzw0000372

2. Install the hose clamp so that center A of the hose clamp tab is aligned with the marking as shown in the figure.
   - Verify that the installation angle of the hose clamp is within the range shown in the figure.
3. Verify that the hose clamp does not interfere with any other components.



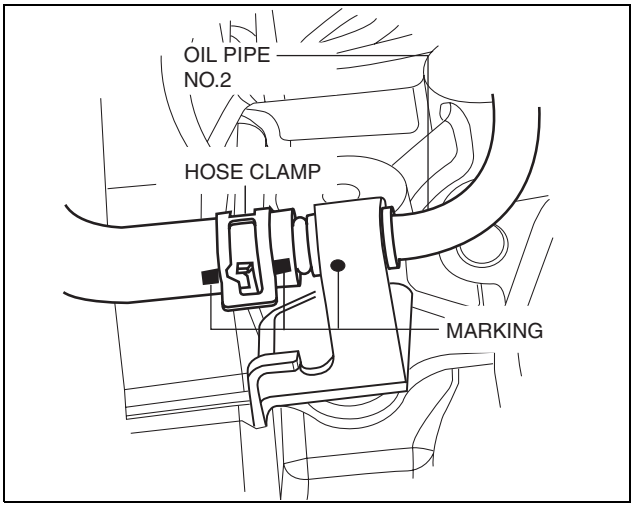
ac5wzw0000372

Oil Hose No.1 (oil pipe No.2 side) Installation Note

1. Install the oil hose No.1 to the oil pipe No.2 as shown in the figure with the hose clamp expanded.

Note

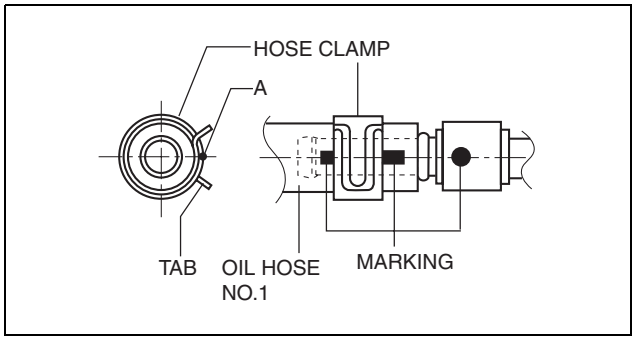
- A new oil hose No.1 and hose clamp are attached.



ac5wzw0000373

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

2. Install the hose clamp so that center A of the hose clamp tab is aligned with the marking as shown in the figure.
   - Verify that the installation angle of the hose clamp is within the range shown in the figure.
3. Verify that the hose clamp does not interfere with any other components.



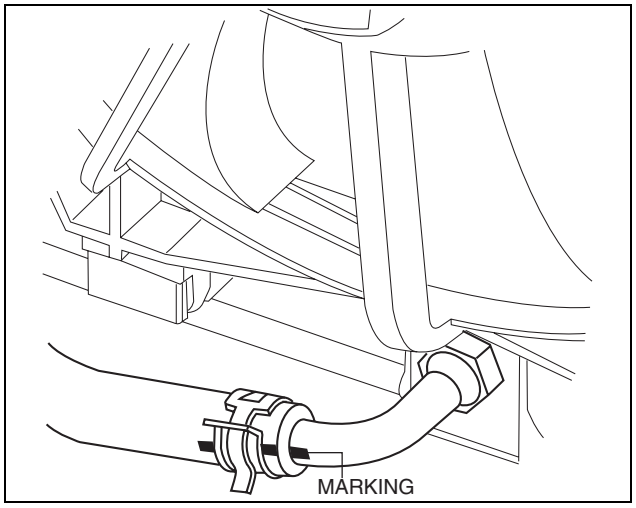
ac5wzw0000373

Oil Hose No.1 (radiator out side) Installation Note

1. Install the oil hose No.1 to the radiator as shown in the figure with the hose clamp expanded.

Note

- A new oil hose No.1 and hose clamp are attached.



ac5wzw0000372

2. Install the hose clamp so that center A of the hose clamp tab is aligned with the marking as shown in the figure.
   - Verify that the installation angle of the hose clamp is within the range shown in the figure.
3. Verify that the hose clamp does not interfere with any other components.

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

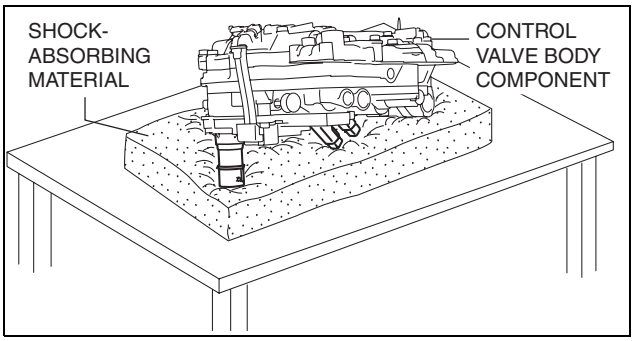
CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL]

id0517i2118000

On-Vehicle Removal

Warning
- **A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool.**
- **Using compressed air can cause dirt and other particles to fly out, causing injury to the eyes. Wear protective eyeglasses whenever using compressed air.**

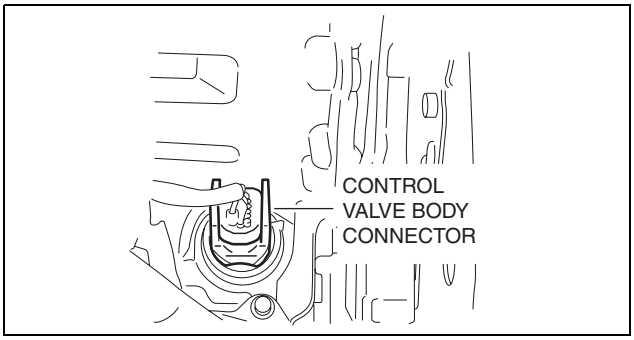
Caution
- **If the control valve body has been replaced, perform initial learning. (See 05-17B-93 INITIAL LEARNING [GW6A-EL, GW6AX-EL].)**
- **Placing the control valve body connector side pointed downward could damage the control valve body connector part or sensor. If the servicing can only be performed by pointing the control valve body connector side downward, spread shock-absorbing material, which does not produce dust or foreign matter, and place the control valve body connector part and sensor on the table so that they do not directly contact the table.**



ac5wzw0000373

1. Select the selector lever to P position.
2. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
4. Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents.
5. Remove the air cleaner component. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Disconnect the control valve body connector.

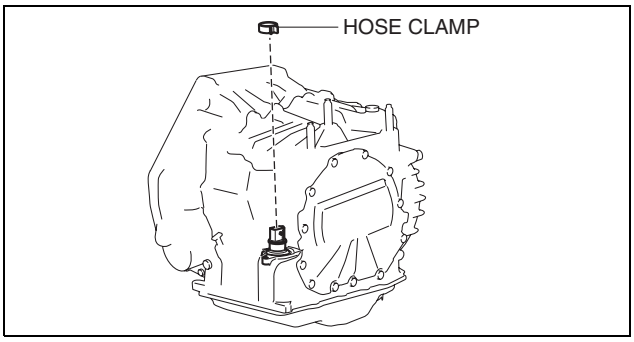
Caution
- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**



ac5wzw0000396

7. Remove the hose clamp.
8. Drain the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
9. Remove the oil pan.

Caution
- **To avoid damaging the control valve body, if there is a large amount of foreign material at the bottom of the oil pan when the oil pan is removed, replace the oil strainer with a new one.**
- **If there is not a large amount of foreign material at the bottom of the oil pan, the oil strainer does not have to be replaced.**

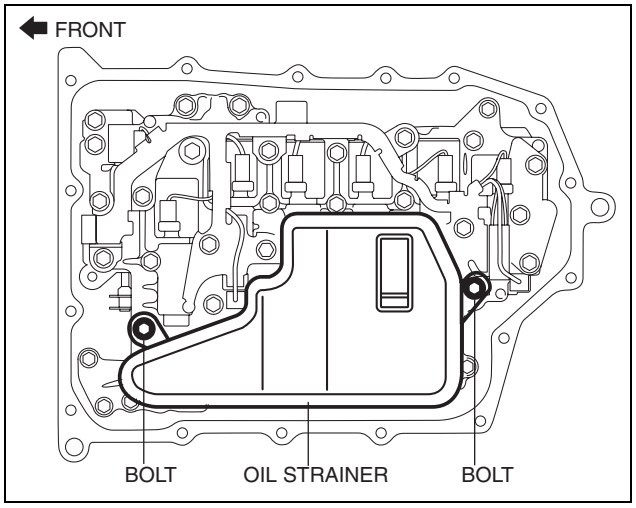


ac5wzw0000396

Note
- Always use new oil pan installation bolts when re-installing the oil pan because the oil pan installation bolts cannot be reused.

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

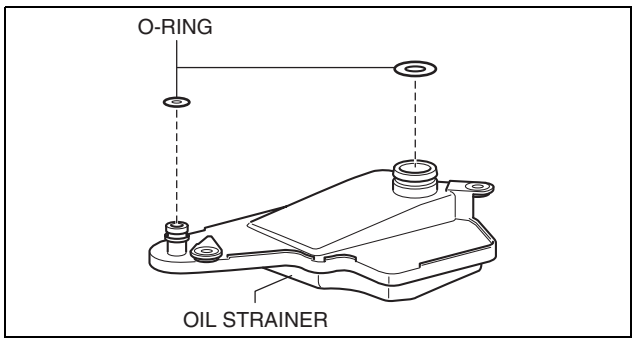
10. Remove the oil strainer.



am3uuw0000828

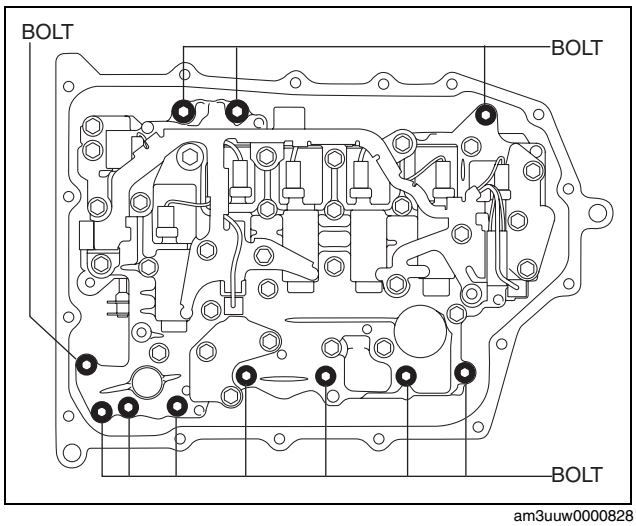
11. Remove the oil strainer O-ring.
12. Remove the control valve body.

Caution
- **Remove the control valve body directly from underneath so that force is not applied to the control valve body connector in the lateral direction.**
- **When removing the control valve body component for vehicles with oil cooler No.2, be careful not to loose the spool valve and the spool valve spring because they may fall off.**



am3uuw0000828

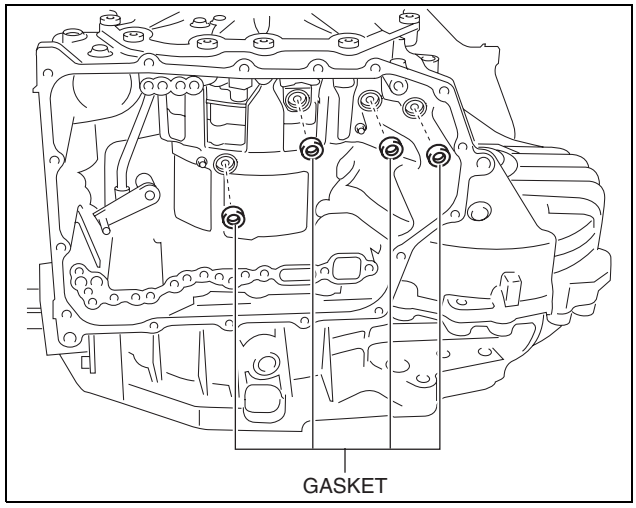
13. Remove the oil seal (control valve body). (See 05-17B-68 OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [GW6A-EL, GW6AX-EL].)



am3uuw0000828

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

14. Remove the gasket from the transaxle case.



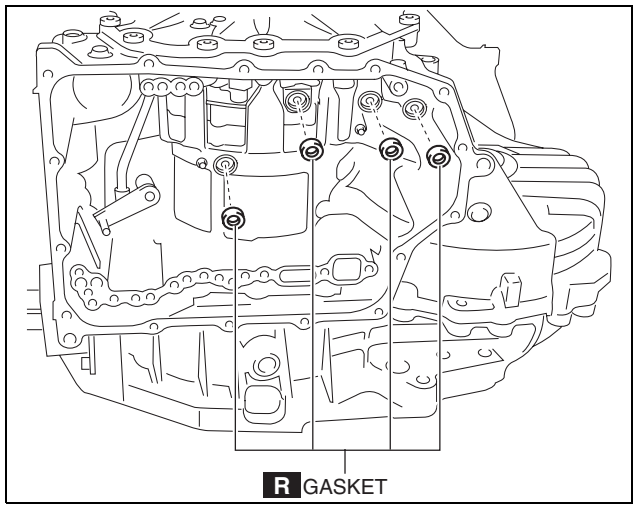
am3uuw0000921

On-Vehicle Installation (With oil cooler No.2)

1. Install the gasket to the transaxle case.
2. Install the dowel pin to the control valve body.

Note

- If the dowel pin remains in the transaxle case, remove the dowel pin from the transaxle case and install the dowel pin to the control valve body.

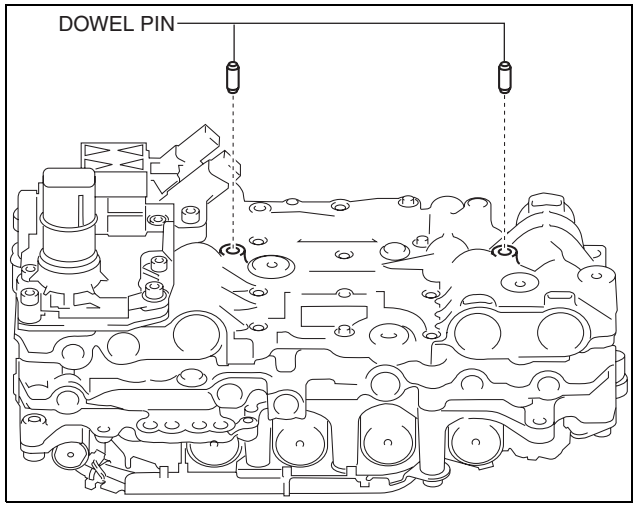


am3uuw0000918

3. Prepare a plastic plate of the size indicated in the figure.

Note

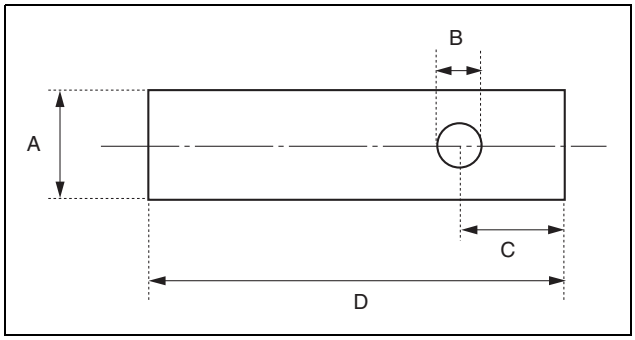
- Use a plastic plate made of material that is not too hard.



am3uuw0000918

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

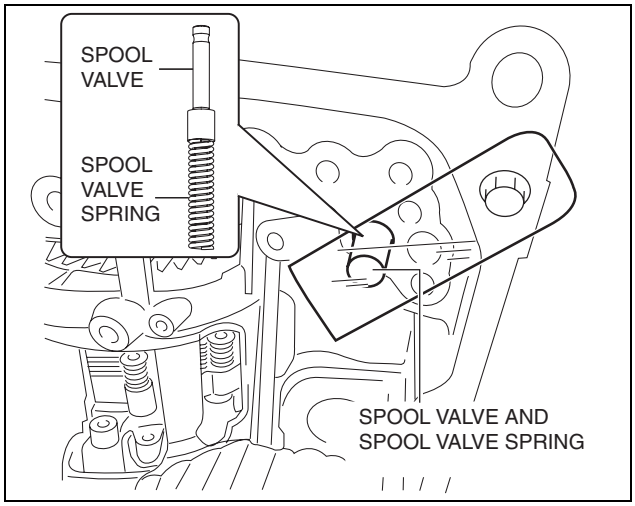
A: 20 mm {0.79 in}
B: ϕ8
C: 15 mm {0.59 in}
D: 65 mm {2.6 in}



59000373

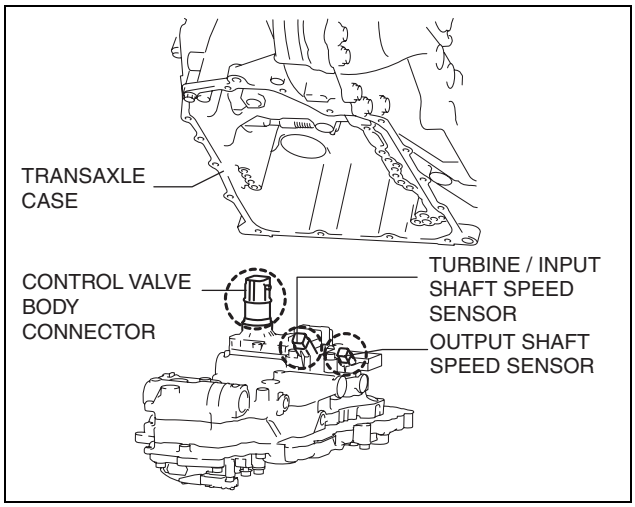
4. Insert the spool valve and the spool valve spring into the transaxle case, and hold the relief valve and the spring using the plastic plate prepared in Step 3 as shown in the figure so that they do not fall off.
5. Install the control valve body using the following procedure.

Caution



59000373

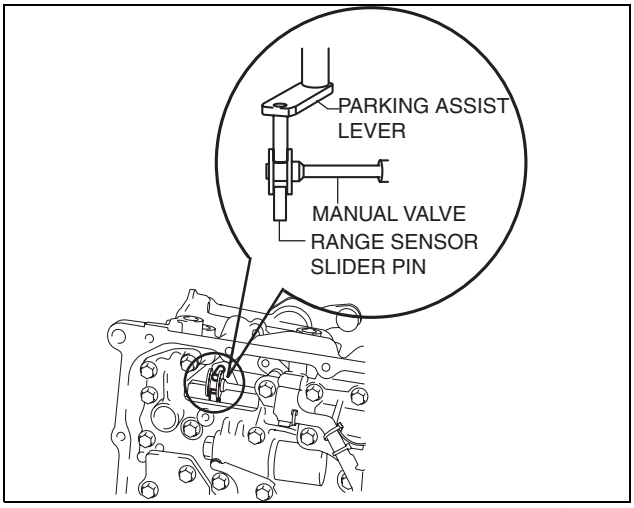
- **Install the control valve body so that the turbine/input shaft speed sensor, output shaft speed sensor, and control valve body connector do not contact the transaxle case.**



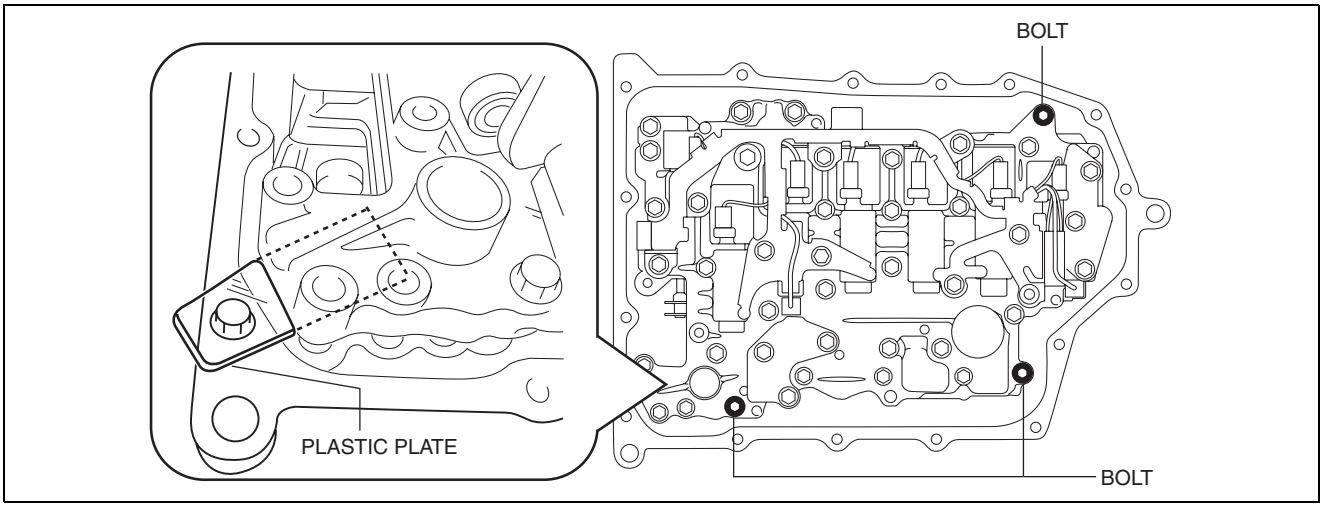
59000374

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

(1) Engage the parking assist lever component on both surfaces of the manual valve.
(2) Temporarily install the control valve body installation bolts at three locations so that the plastic plate installed in Step 4 can be removed.



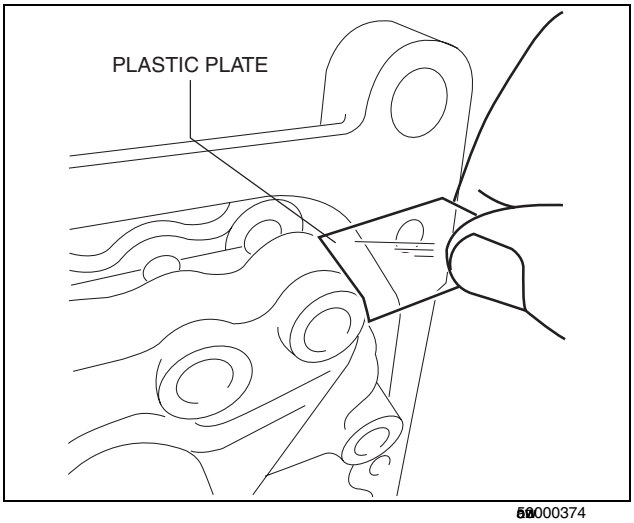
E5000455



E5000374

(3) Remove the plastic plate.

Caution
- **Because the control valve body may be damaged if foreign material penetrates it, carefully remove the plastic plate preventing foreign material from penetrating the control valve body.**

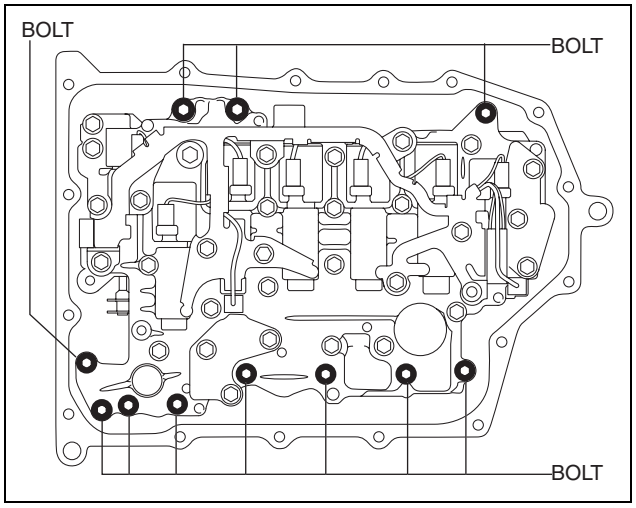


E5000374

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

(4) Install the control valve body.

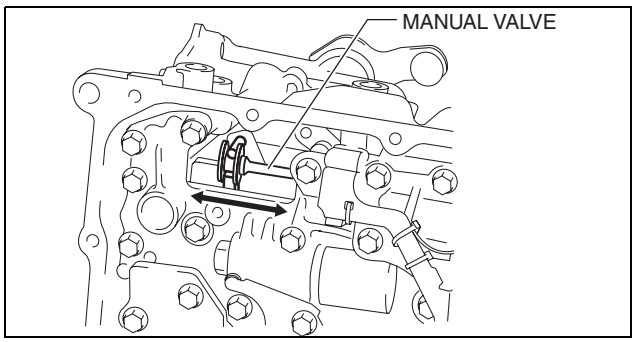
Tightening torque
9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}



ac5wzw0000456

6. Move the manual valve in both directions of the arrow and verify that the manual valve is correctly connected to the parking assist lever component and the slider pin for the range sensor.

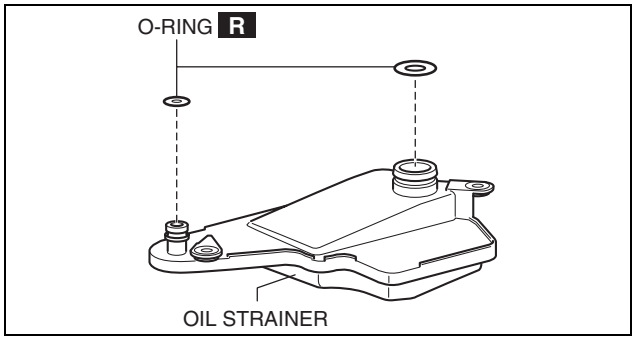
Note
- If the manual valve only moves in the gap between the parking assist lever component surface and the manual valve surface, the manual valve and the parking assist lever component are correctly engaged.



ac5wzw0000456

7. Install the oil strainer O-ring.

Note
- If there is a large amount of foreign material at the bottom of the oil pan, replace the oil strainer with a new one.

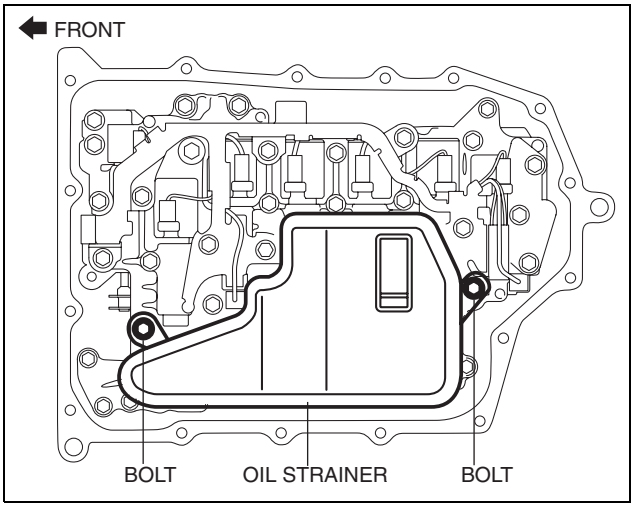


am3uuw0000828

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

8. Install the oil strainer.

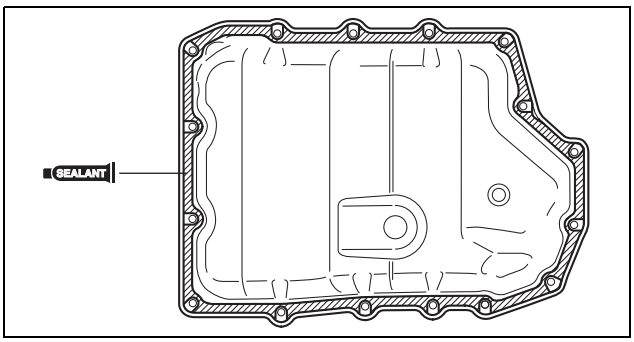
Tightening torque
9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}



am3uuw0000828

9. Apply a light coat of silicon sealant (TB1217E) to the contact surfaces of the oil pan and transaxle case.

Caution
- **Clean any remaining silicone sealant on the contact surface of the transaxle case and oil pan, and degrease the sealant area. Otherwise, oil could leak.**



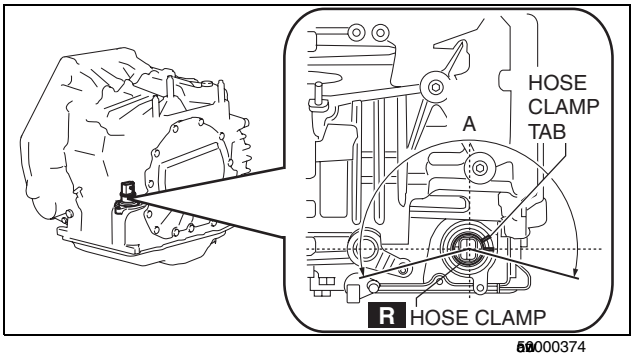
am3uuw0000828

10. Install the oil pan with new bolts before the applied sealant starts to harden.

Tightening torque
8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

11. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
12. Install the oil seal (control valve body). (See 05-17B-68 OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [GW6A-EL, GW6AX-EL].)
13. Install a new hose clamp to the position shown in the figure.

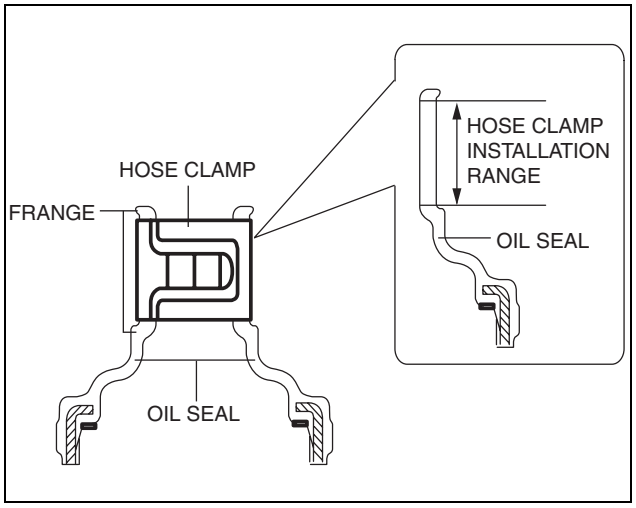
Caution
- **If the hose clamp is reused it could cause ATF leakage, therefore use a new hose clamp.**
- **Install the hose clamp tab to within the range shown in the figure.**
  A: 210°



am3uuw0000374

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

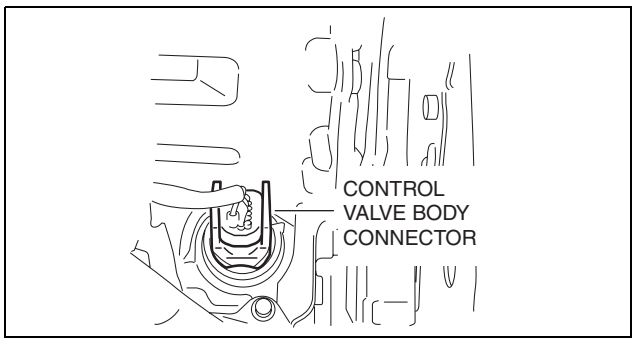
- **Install the hose clamp so that it does not interfere with the top and bottom flanges of the oil seal to maintain the waterproofing integrity.**



ac5wzw0000456

14. Connect the control valve body connector.

Caution
- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Verify that there is no fluid or foreign matter adhering to the connector before connecting the connector.**
- **Insert the connector straight as the connector terminal could be damaged.**
- **Rotate the connector lever until a click is heard.**



ac5wzw0000396

15. Add the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
16. Install the air cleaner component. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
17. Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
18. Perform the “TCM configuration” (Control valve body Replacement). (See 05-17B-98 TCM CONFIGURATION [GW6A-EL, GW6AX-EL].)
19. Perform the “Initial Learning” (Control valve body Replacement). (See 05-17B-93 INITIAL LEARNING [GW6A-EL, GW6AX-EL].)
20. Perform the “Mechanical System Test”. (See 05-17B-4 MECHANICAL SYSTEM TEST [GW6A-EL, GW6AX-EL].)
21. Perform the “Road Test”. (See 05-17B-9 ROAD TEST [GW6A-EL, GW6AX-EL].)

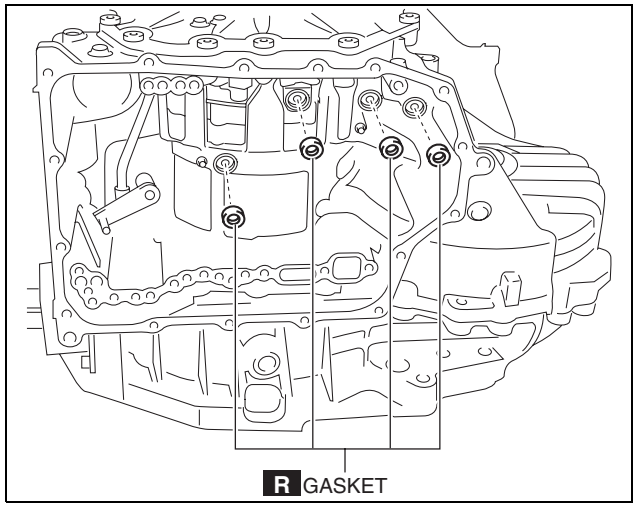
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

On-Vehicle Installation (Without oil cooler No.2)

1. Install the gasket to the transaxle case.
2. Install the dowel pin to the control valve body.

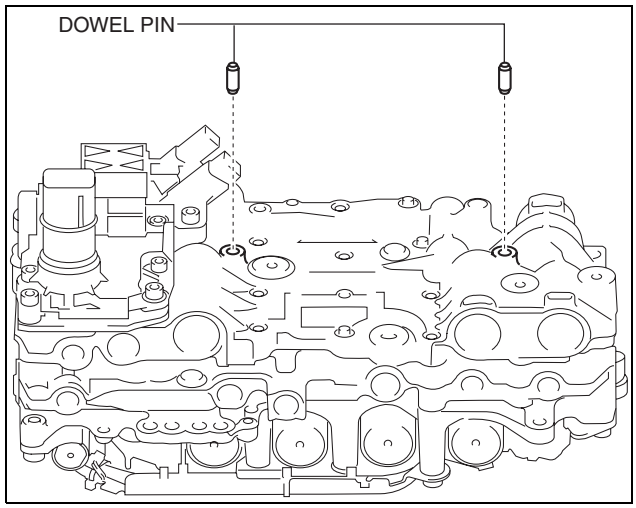
Note

- If the dowel pin remains in the transaxle case, remove the dowel pin from the transaxle case and install the dowel pin to the control valve body.



am3uuw0000918

3. Install the control valve body so that the parking assist lever component is engaged in the gap between the two surfaces of the spool part of the manual valve.



am3uuw0000918

Caution

- **Install the control valve body so that the turbine/input shaft speed sensor, output shaft speed sensor, and control valve body connector do not contact the transaxle case.**

am3uuw0000828

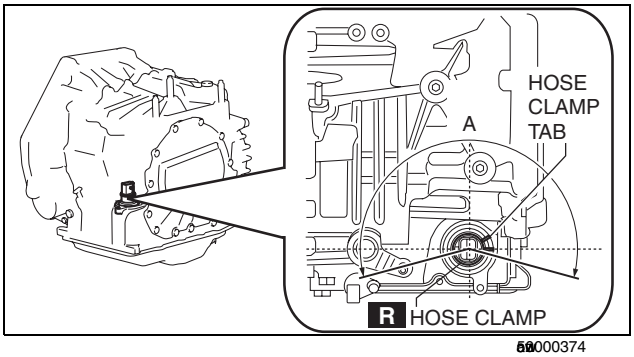
8. Install the oil pan with new bolts before the applied sealant starts to harden.

Tightening torque
8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

9. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
10. Install the oil seal (control valve body). (See 05-17B-68 OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [GW6A-EL, GW6AX-EL].)
11. Install a new hose clamp to the position shown in the figure.

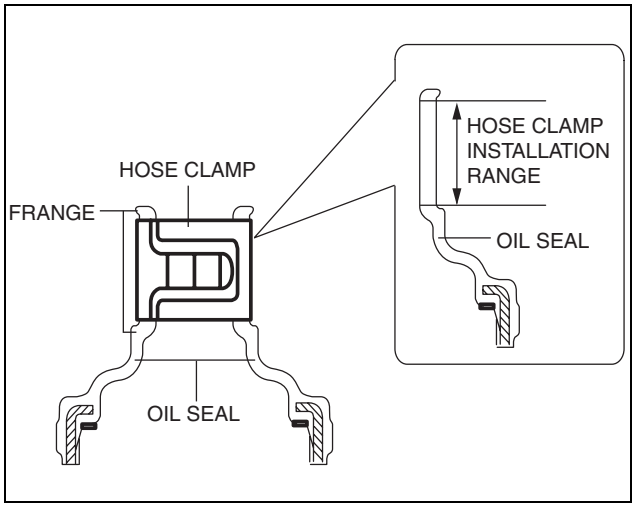
Caution
- **If the hose clamp is reused it could cause ATF leakage, therefore use a new hose clamp.**
- **Install the hose clamp tab to within the range shown in the figure.**
  A: 210°



am3uuw0000374

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

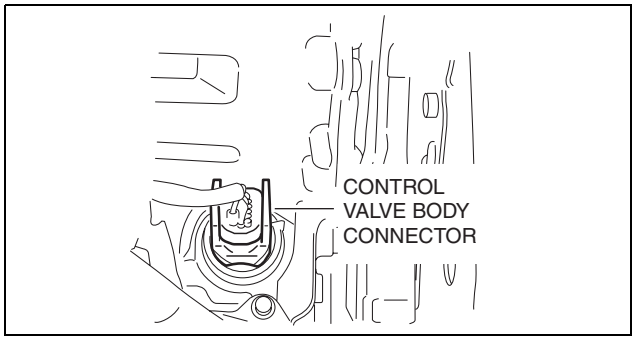
- **Install the hose clamp so that it does not interfere with the top and bottom flanges of the oil seal to maintain the waterproofing integrity.**



ac5wzw0000456

12. Connect the control valve body connector.

Caution
- **Make sure that your hand does not touch the terminal as the connector terminal could be damaged.**
- **Verify that there is no fluid or foreign matter adhering to the connector before connecting the connector.**
- **Insert the connector straight as the connector terminal could be damaged.**
- **Rotate the connector lever until a click is heard.**



ac5wzw0000396

13. Add the ATF. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
14. Install the air cleaner component. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
15. Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
16. Perform the “TCM configuration” (Control valve body Replacement). (See 05-17B-98 TCM CONFIGURATION [GW6A-EL, GW6AX-EL].)
17. Perform the “Initial Learning” (Control valve body Replacement). (See 05-17B-93 INITIAL LEARNING [GW6A-EL, GW6AX-EL].)
18. Perform the “Mechanical System Test”. (See 05-17B-4 MECHANICAL SYSTEM TEST [GW6A-EL, GW6AX-EL].)
19. Perform the “Road Test”. (See 05-17B-9 ROAD TEST [GW6A-EL, GW6AX-EL].)

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

INITIAL LEARNING [GW6A-EL, GW6AX-EL]

id0517i2119100

Introduction

- If the control valve body and oil pressure switch are replaced, always perform the initial learning. If the initial learning is not completed, engine rev-up may occur or shift shock may increase. DTC P06B8:00 is displayed while the initial learning has not been implemented.
- The procedure for the initial learning has a procedure which uses the M-MDS and one which does not. The initial learning can be activated easily using the M-MDS.

Warning

- **The initial learning forcibly changes gears within the driving shift range while the engine is running. Before implementing the initial learning, securely apply the parking brake and set the wheel blocks for both the front and rear wheels. Otherwise, the vehicle will move which could cause injury or property damage.**

Using M-MDS

Preparation before servicing

1. Verify initial learning implementation necessity for replacement parts.

Replacement part	Initial learning necessity
Control valve body replacement	Necessary
Oil pressure switch replacement	Necessary
Automatic transaxle replacement	Unnecessary
ON/OFF solenoid replacement	Unnecessary
Coupler component replacement	Unnecessary

2. Apply the parking brake firmly, and set the wheel blocks for both the front and rear wheels.
3. Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].)
4. Bring the M-MDS inside the vehicle and connect it to the DLC-2.
5. Perform vehicle identification using the M-MDS.
6. Start the engine.
7. After the vehicle is identified, select the following items from initialization of the M-MDS.
   (1) Select “Data logger”.
   (2) Select “Module”.
   (3) Select “TCM”.
8. While checking the PID TFT (ATF temperature), warm-up the engine and allow the ATF temperature to reach **40—110 °C {72—198 °F}**.

Starting procedure for initial learning

1. After the vehicle is identified, select the following items from initialization of the M-MDS.
   (1) Select “Self-test”
   (2) Select “Module”
   (3) Select “TCM”

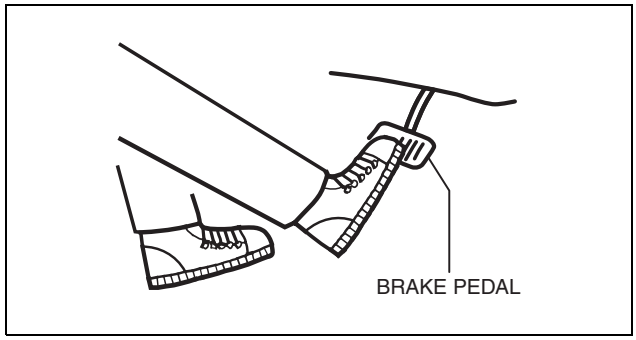
Note

- DTC P06B8:00 is displayed while the initial learning has not been implemented.

2. Start the engine and wait for **30 s or more**.
3. Perform the following steps (1) to (4) with the brake pedal depressed.

Caution

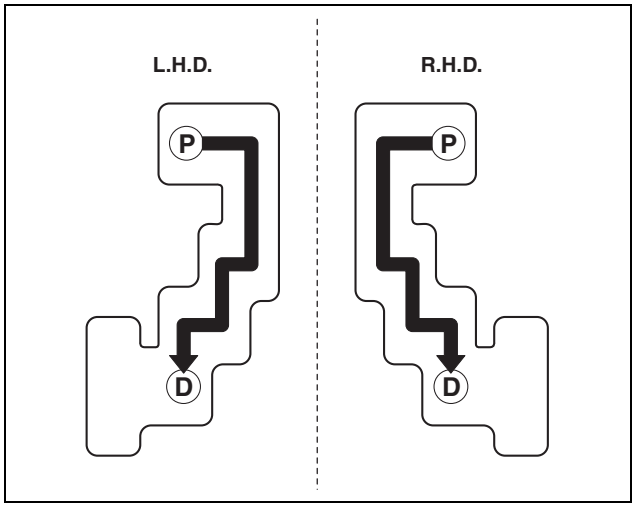
- **When the brake fluid pressure sensor value is the specification or less, shut down the initial learning to assure safety. Accordingly, be careful of the following when performing the initial learning:**
  - **— Strongly depress the brake pedal while performing the initial learning.**
  - **— Do not depress the brake pedal again. Otherwise, the brake booster pressure will decrease and the brake force will weaken.**



ac5wzw0000404

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

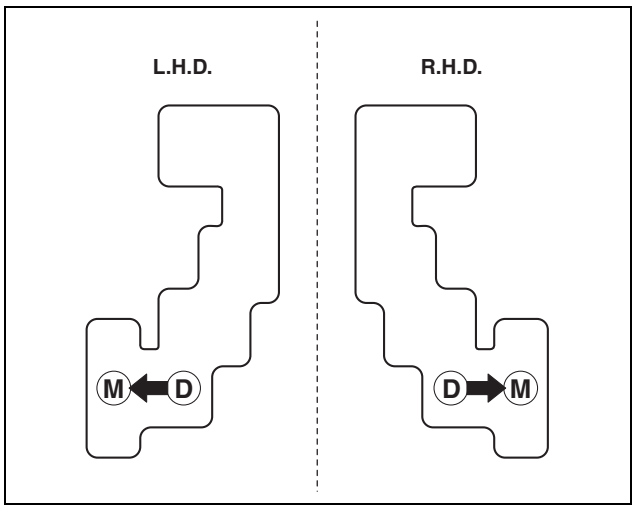
(1) Shift the selector lever from P position to D position and click the DTC clear button for the M-MDS.



ac5wzw0000077

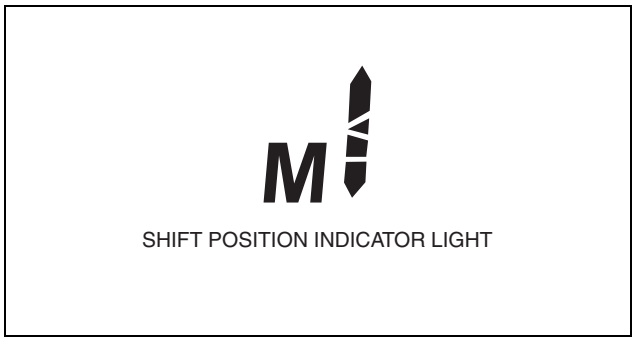
(2) When the M-MDS screen returns to the DTC display screen, shift the selector lever from D position to M position within **10 s** and verify that the engine speed increases from idling.

Note
- The initial learning implements after idle speed starts increasing. If idle speed does not start increasing, repeat the procedure from Step 2.
- If the initial learning is shut down for any reason while performing the learning, shift position indicator light does not flash. If shift position indicator light does not flash, repeat the procedure from Step 2.



ac5wzw0000077

(3) Verify that the engine speed returns to idle and shift position indicator light flashes **two times**.



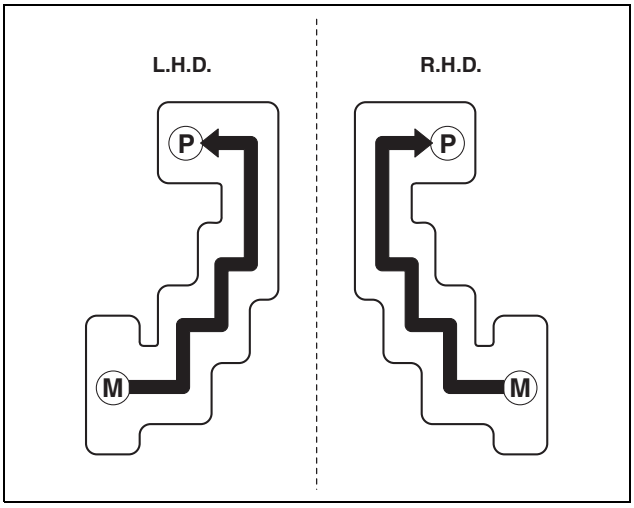
ac5wzw0000077

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

(4) After shift position indicator light flashes twice, shift the selector lever from M position to P position and stop the engine.

Note
- Be careful not to miss looking at shift position indicator light because the light flashes only **one time**.

4. Release the brake pedal.
5. Switch the ignition to KOEO and verify the DTC.
   - If DTC P06B8:00 is displayed, repeat the procedure from Step 2. If any other DTCs are displayed, perform the applicable DTC troubleshooting. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)



ac5wzw0000077

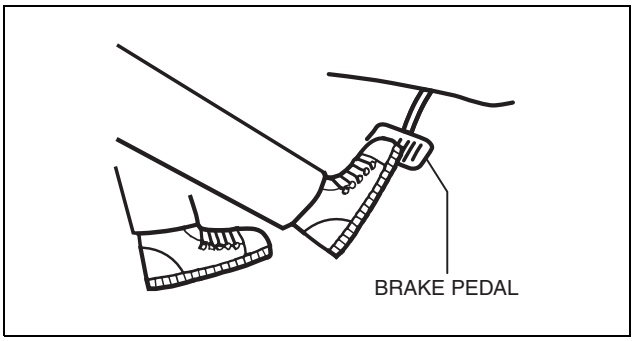
Not Using of M-MDS
Preparation before servicing
1. Verify initial learning implementation necessity for replacement parts.

Replacement part	Initial learning necessity
Control valve body replacement	Necessary
Oil pressure switch replacement	Necessary
Automatic transaxle replacement	Unnecessary
ON/OFF solenoid replacement	Unnecessary
Coupler component replacement	Unnecessary

2. Apply the parking brake firmly, and set the wheel blocks for both the front and rear wheels.
3. Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].)
4. Start the engine.
5. Warm-up the engine and allow the ATF temperature to reach **40—110 °C {72—198 °F}**.

Starting procedure for initial learning
1. Start the engine and wait for **30 s or more**.
2. Perform the following steps (1) to (7) with the brake pedal depressed.

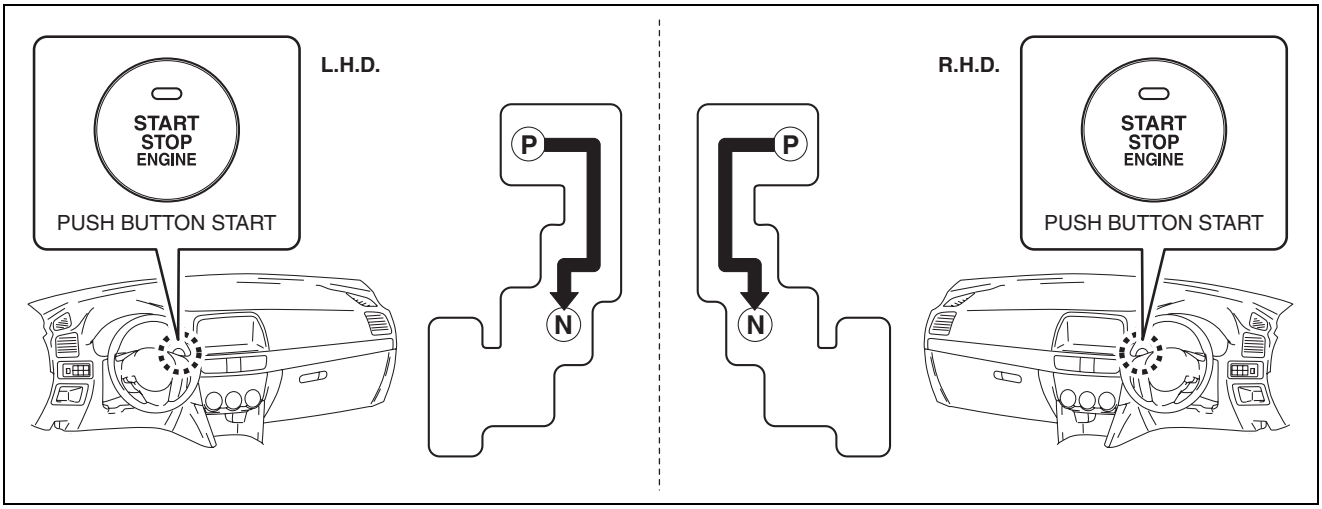
Caution
- **When the brake fluid pressure sensor value is the specification or less, shut down the initial learning to assure safety. Accordingly, be careful of the following when performing the initial learning:**
  - **— Strongly depress the brake pedal while performing the initial learning.**
  - **— Do not depress the brake pedal again. Otherwise, the brake booster pressure will decrease and the brake force will weaken.**



ac5wzw0000404

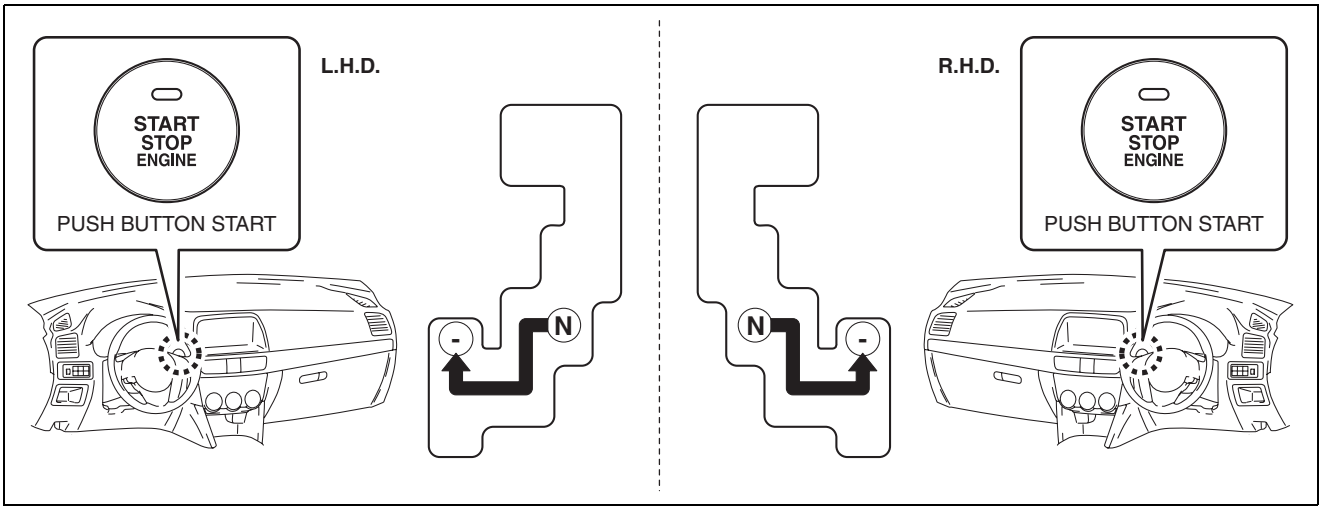
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

(1) Shift the selector lever from P position to N position, press the push button start **one time**, and stop the engine.



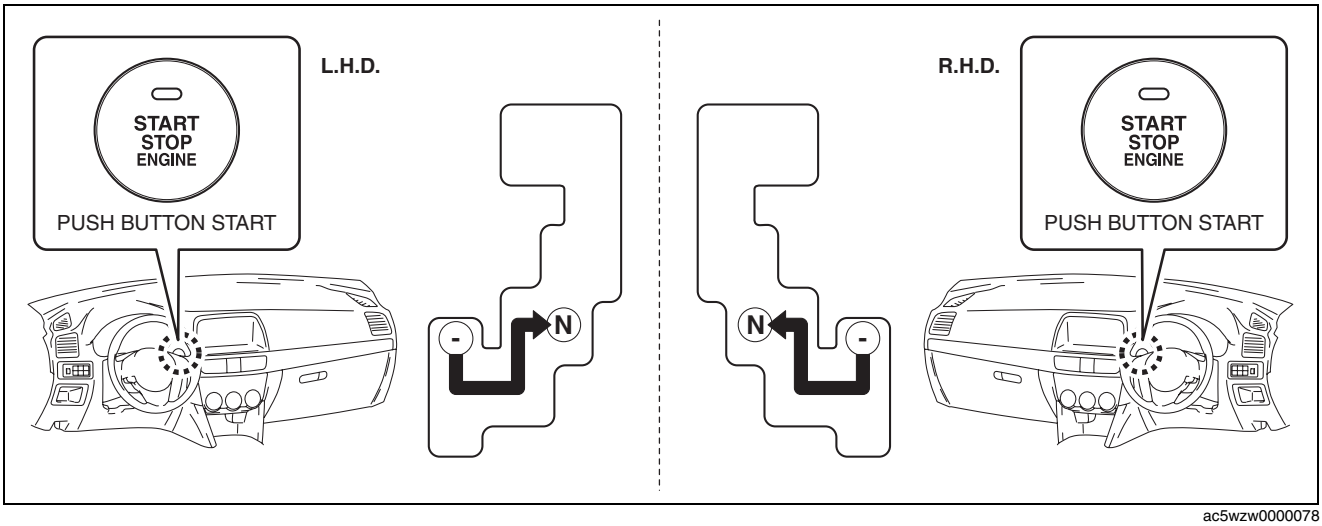
ac5wzw0000077

(2) Shift the selector lever from N position to M- position, press the push button start **one time** while holding the lever in the M- position, and wait for **5 s or more** (ignition switch ON (engine on)).



ac5wzw0000077

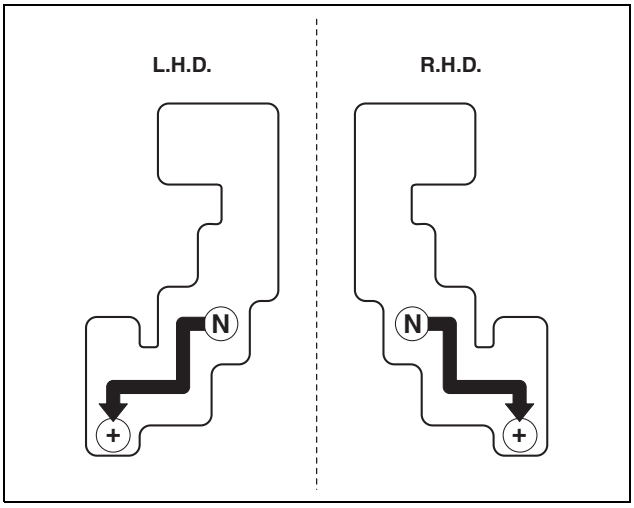
(3) Shift the selector lever from M- position to N position, press the push button start **one time**, and start the engine.



ac5wzw0000078

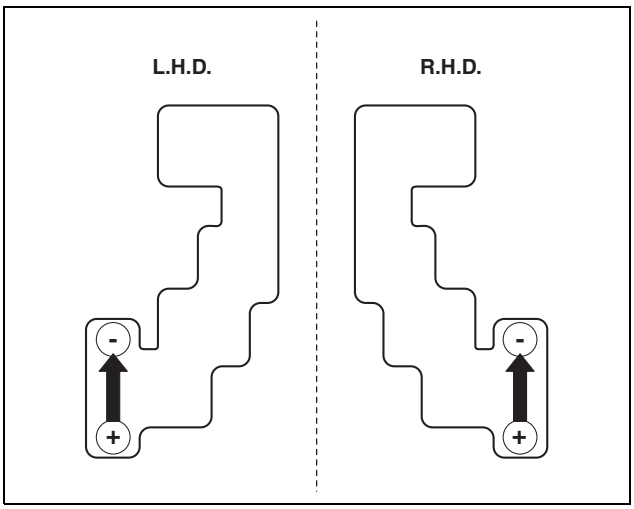
AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

(4) Shift the selector lever from N position to M+ position and wait for **5 s or more** while holding the lever in the M+ position.

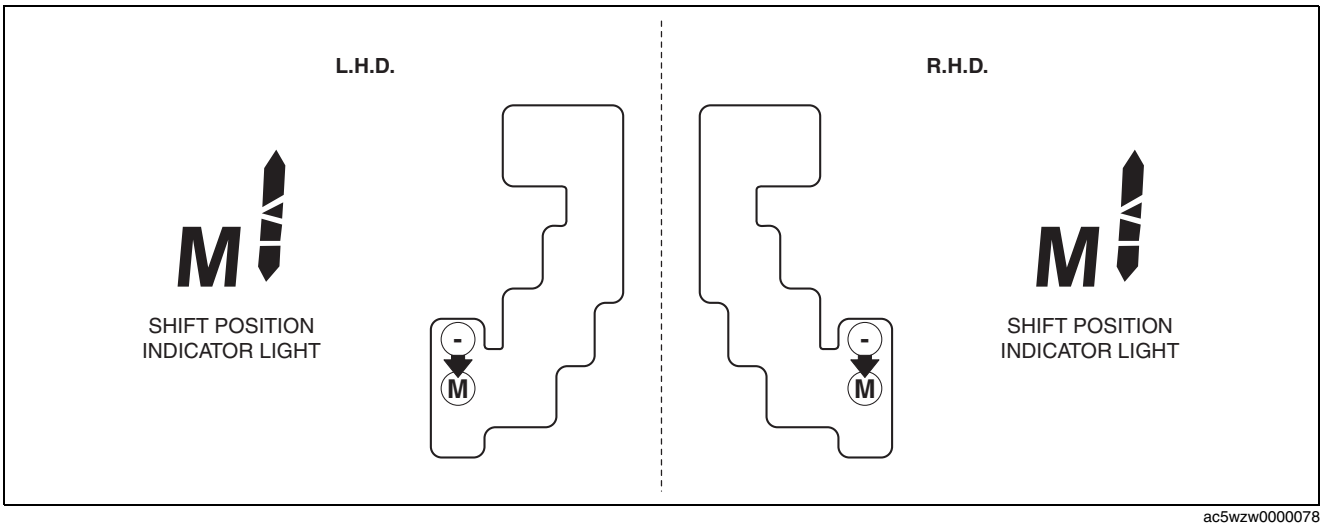


ac5wzw0000078

(5) Select the selector lever from M+ position to M- position and wait for **5 s or more** while holding the lever in the M- position.
(6) When starting idle up, shift the selector lever from the M- position to M position and verify that the shift position indicator light flashes **two times**.



ac5wzw0000078



ac5wzw0000078

Note

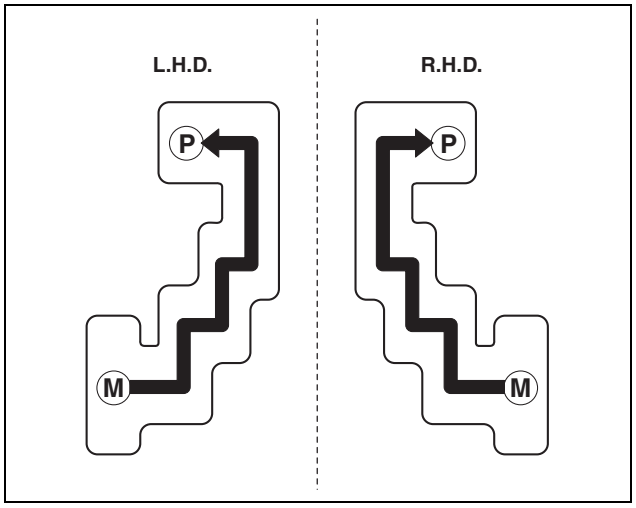
- The initial learning implements after idle speed starts increasing. If idle speed does not start increasing, repeat the procedure from Step 1 "Start the engine and wait for **30 s or more**.".

AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

(7) After shift position indicator light flashes twice, shift the selector lever from M position to P position and stop the engine.

Note
- Be careful not to miss looking at shift position indicator light because the light flashes only **one time**.

3. Release the brake pedal.
4. Clear the DTC using the M-MDS and switch the ignition to off. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].)
5. Switch the ignition ON (engine off or on) and verify that DTC P06B8:00 is not recorded using the M-MDS. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
   - If the DTC P06B8:00 is displayed, repeat the procedure from Step 1.



ac5wzw0000077

TCM CONFIGURATION [GW6A-EL, GW6AX-EL]

id0517i2119200

Note
- The TCM is built into the control valve body.

1. Verify TCM configuration implementation necessity for replacement parts.

Replacement part	Configuration necessity
Control valve body replacement	Necessary
Oil pressure switch replacement	Unnecessary
Automatic transaxle replacement	Unnecessary
ON/OFF solenoid replacement	Unnecessary
Coupler component replacement	Unnecessary

2. Connect the M-MDS to the DLC-2.
3. After vehicle identification, the following can be selected from the M-MDS initialization screen.
   1. Select “Module Programming”
4. Then, select the following from the screen menu.
   1. Select “Programmable Module Installation”
   2. Select “TCM”
5. Perform the configuration following the instructions on the screen.
6. Verify that no DTCs are stored. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].)

Note
- If any DTC (U code) is output, the system is normal.

7. Delete the U code and verify that no DTC is output. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].)
   - If any DTC other than U code is output, repair the malfunctioning location according to the applicable DTC troubleshooting. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)

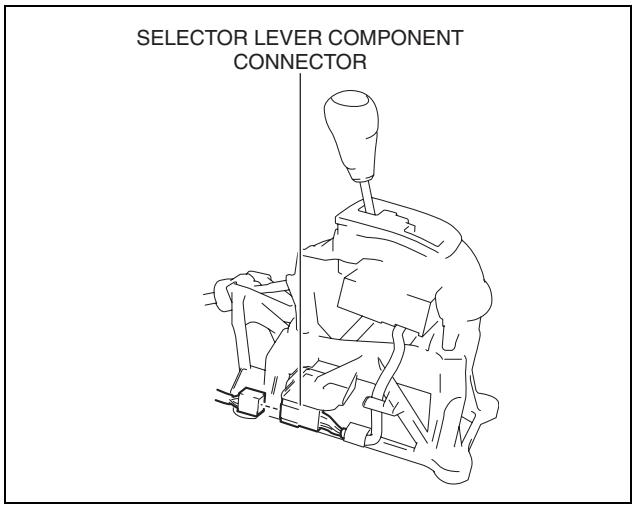
AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION

id051800296900

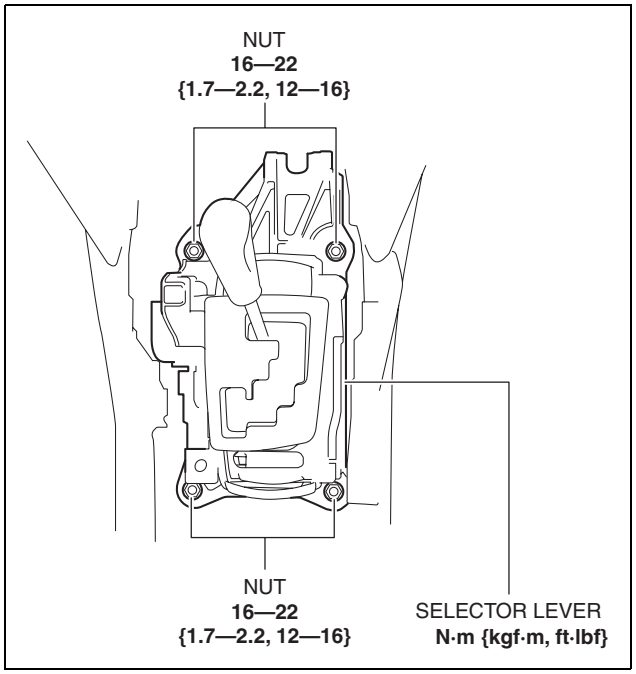
Selector Lever Removal/Installation

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front console. (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
3. Disconnect the selector lever component connector.
4. Remove the selector cable (selector lever side). (See 05-18-3 Selector Cable Removal/Installation.)



ac5wzw0000079

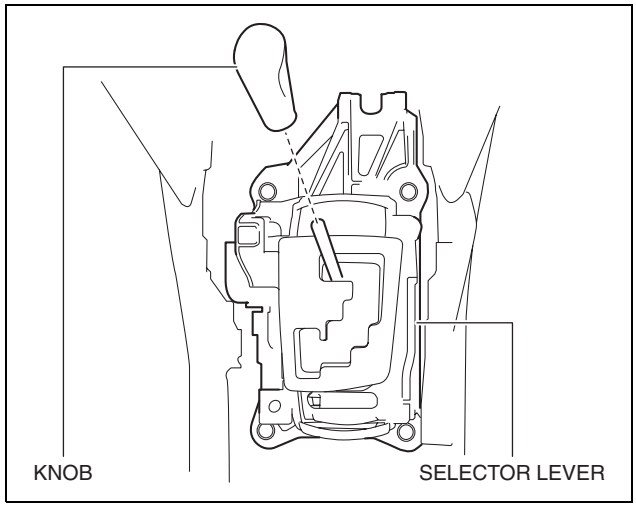
5. Remove the nuts from the selector lever.



ac5wzw0000092

AUTOMATIC TRANSAXLE SHIFT MECHANISM

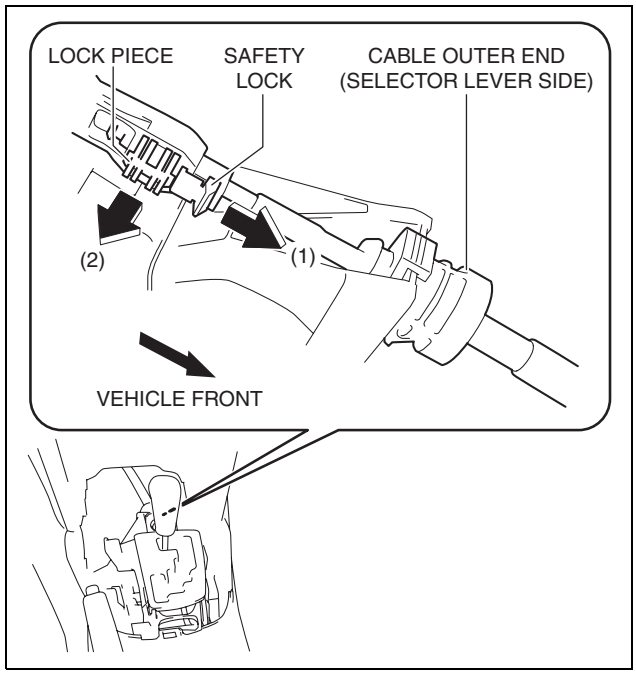
6. Remove the knob.
7. Remove the selector lever.
8. Install in the reverse order of removal.



ac5wzw0000092

Selector Cable Removal/Installation

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Perform the following procedure to remove the selector cable (selector lever side).
   (1) Remove the front console. (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
   (2) Pull out the safety lock in the direction of the arrow (1) shown in the figure, pull out the lock piece in the direction of the arrow (2) shown in the figure, and release the lock. (See 05-18-10 Selector Cable (Selector Lever Side) Installation Note.)

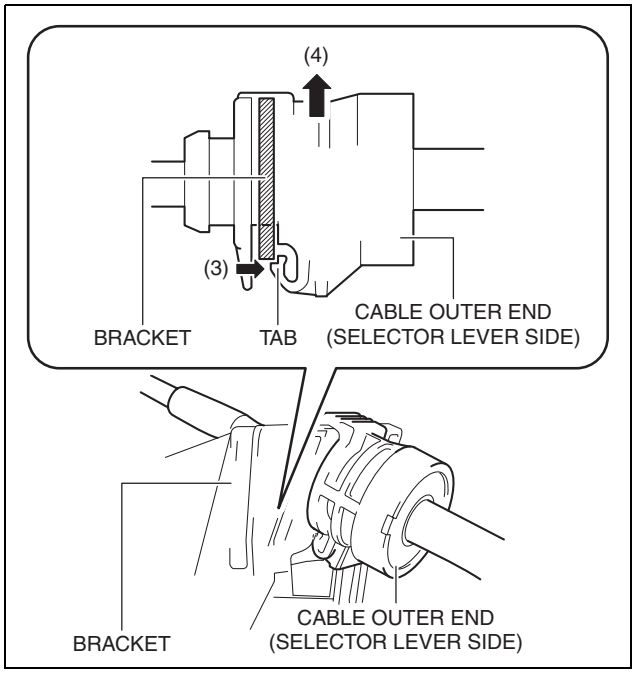


ac5wzw0000093

05

AUTOMATIC TRANSAXLE SHIFT MECHANISM

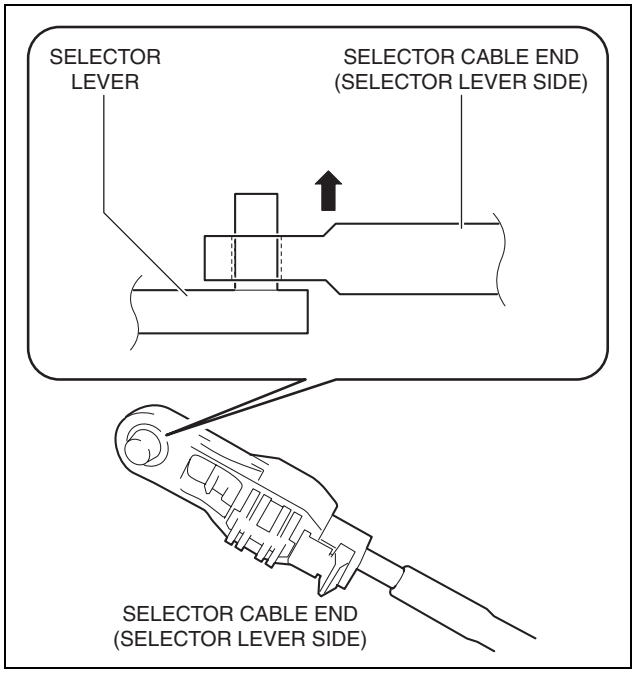
(3) While pressing the cable outer end tab (selector lever side) in the direction of the arrow (3) shown in the figure, lift up cable outer end (selector lever side) in the direction of the arrow (4) shown in the figure to detach the cable outer end tab (selector lever side) from the bracket.
(4) Remove the cable outer end (selector lever side) from the bracket.



ac5wzw0000093

(5) Remove the selector cable end (selector lever side) from the selector lever.

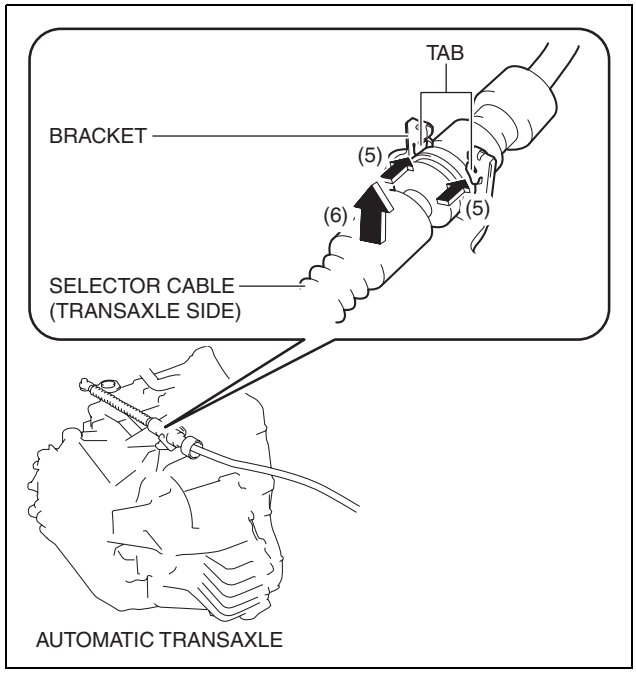
3. Perform the following procedure to remove the selector cable (transaxle side).
(1) Remove the air cleaner case. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
(2) Remove the battery tray. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000305

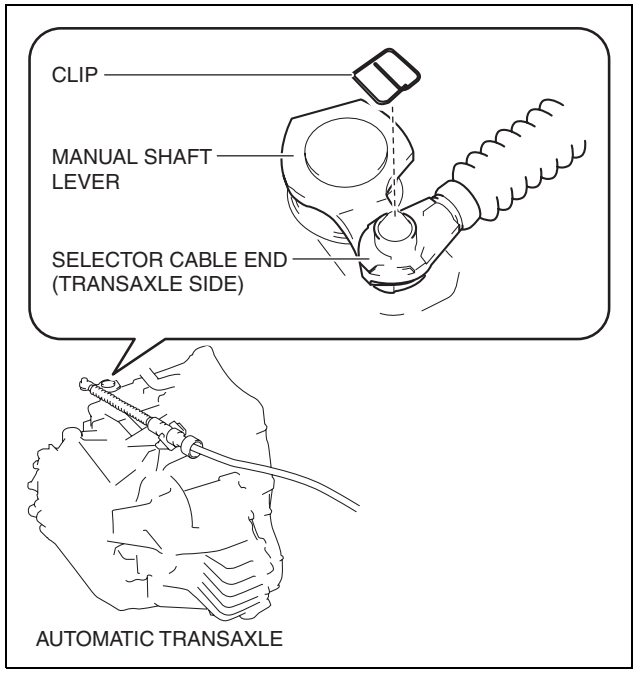
AUTOMATIC TRANSAXLE SHIFT MECHANISM

(3) While pressing the bracket tab in the direction of the arrow (5) shown in the figure, lift up the cable outer end (transaxle side) in the direction of the arrow (6) shown in the figure to detach the bracket tab from the cable outer end (transaxle side).
(4) Remove the cable outer end (transaxle side) from the bracket. (See 05-18-11 Cable Outer End (Transaxle Side) Installation Note.)



ac5wzw0000305

(5) Remove the clip from the selector cable end (transaxle side).



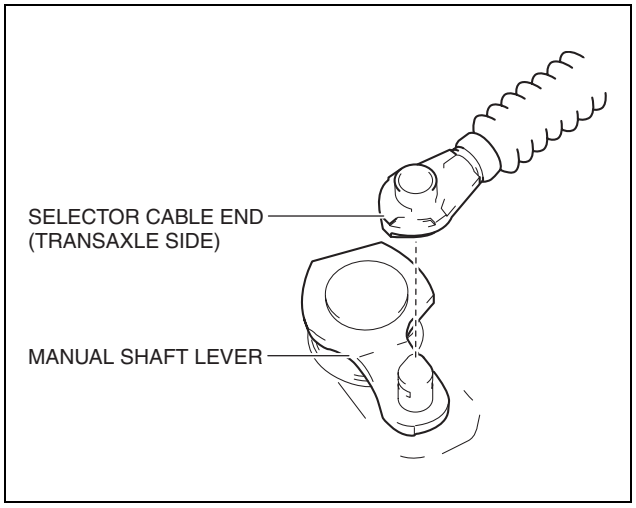
ac5wzw0000093

05

AUTOMATIC TRANSAXLE SHIFT MECHANISM

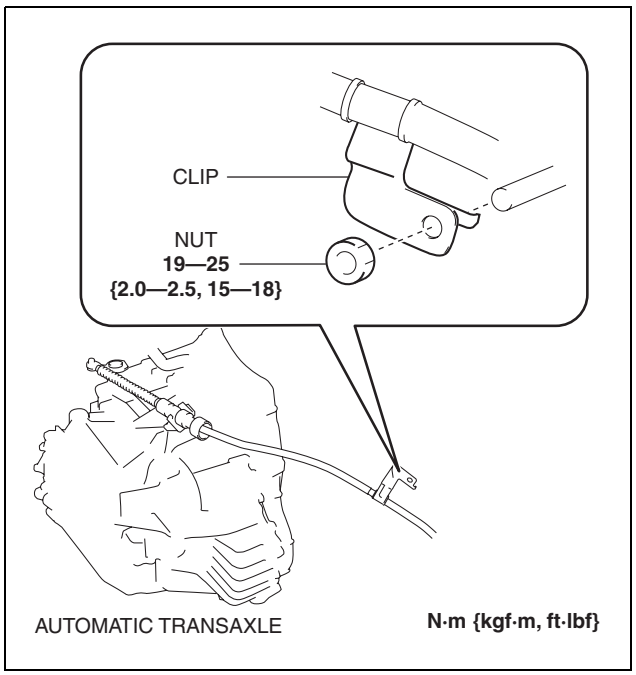
(6) Remove the selector cable end (transaxle side) from the manual shaft lever.

4. Remove the side wall. (See 09-17-49 SIDE WALL REMOVAL/INSTALLATION.)



ac5wzw0000093

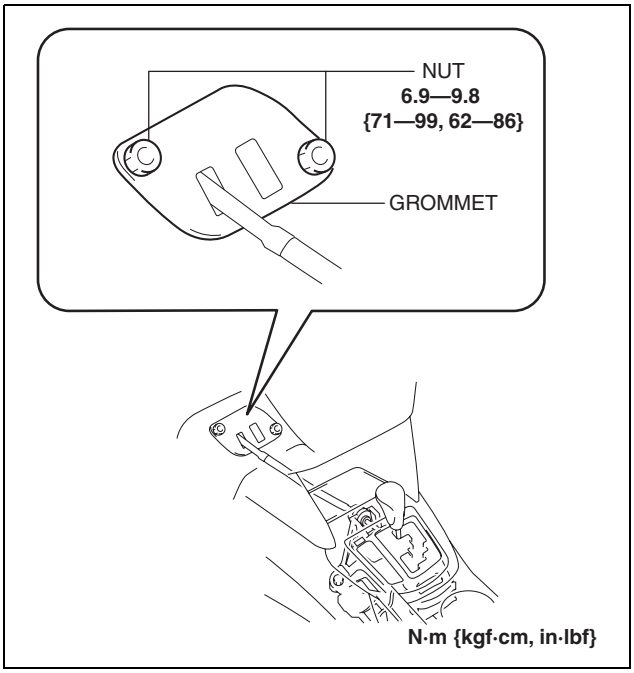
5. Remove the clip as shown in the figure and remove the nut.



ac5wzw0000289

AUTOMATIC TRANSAXLE SHIFT MECHANISM

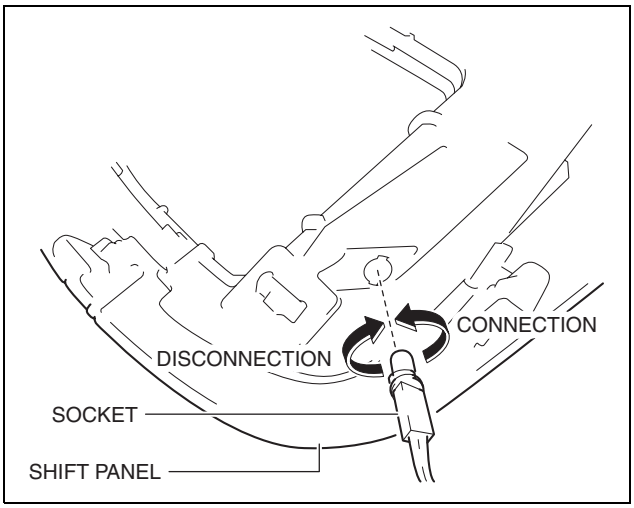
6. Remove the grommet as shown in the figure and remove the nuts.
7. Install in the reverse order of removal.



ac5wzw0000290

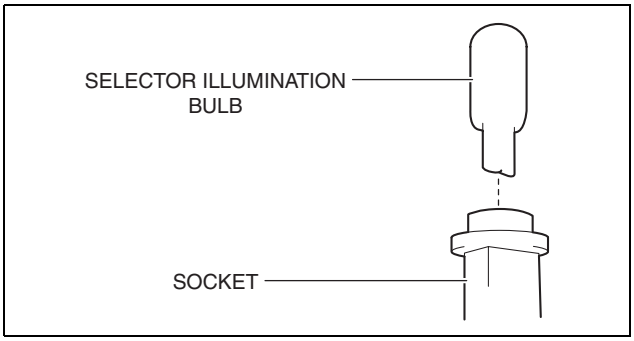
Selector Illumination Bulb Removal/Installation

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the shift panel. (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
3. Remove the socket from the shift panel.



ac5wzw0000093

4. Remove the selector illumination bulb from the socket.
5. Install in the reverse order of removal.

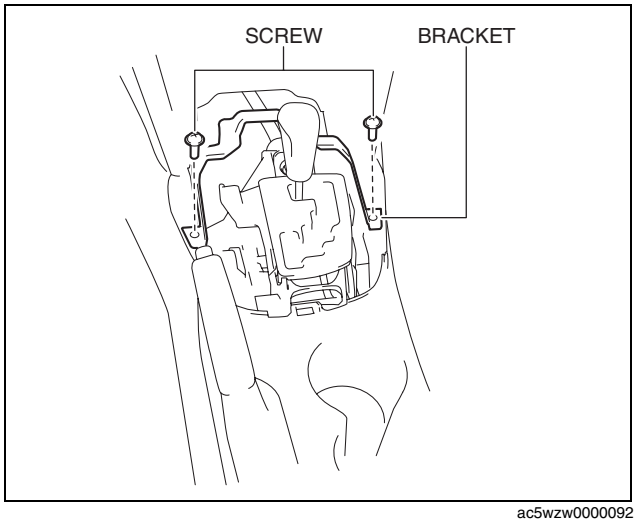


ac5wzw0000093

AUTOMATIC TRANSAXLE SHIFT MECHANISM

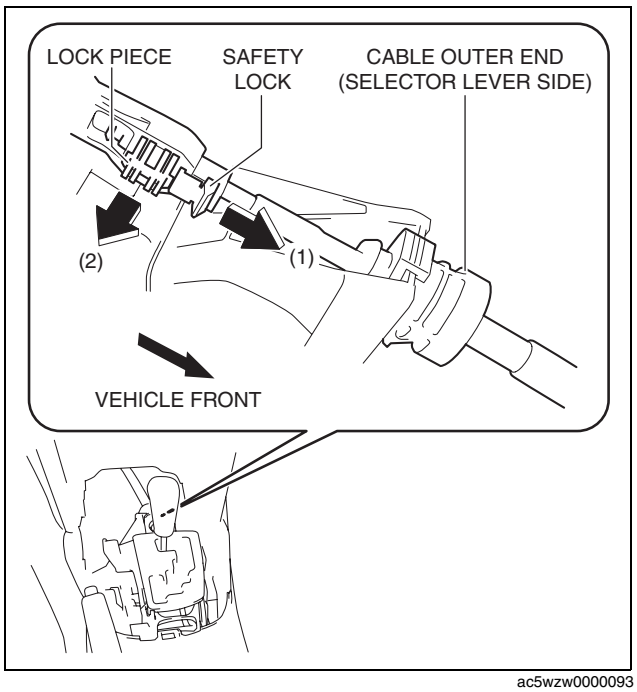
Selector Cable Adjustment

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the shift panel. (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
3. Remove the screws from the bracket.
4. Remove the bracket from the rear console.
5. Shift the selector lever to the P position.



ac5wzw0000092

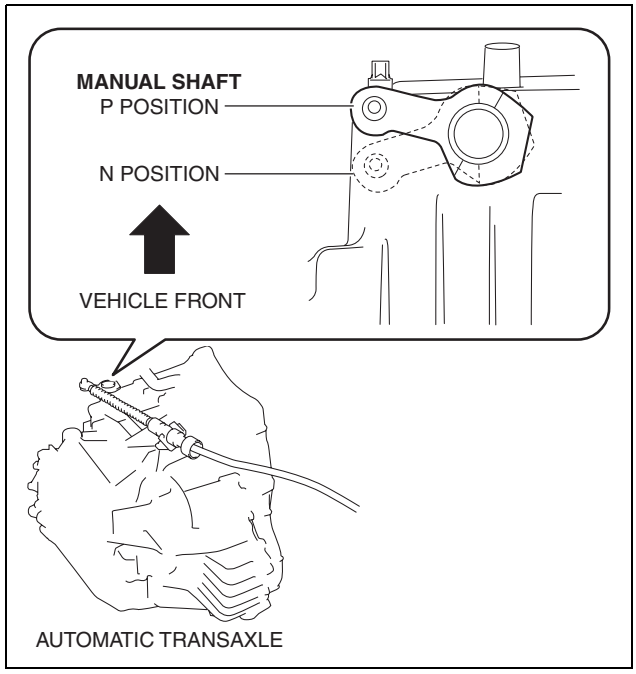
6. Pull out the safety lock in the direction of the arrow (1) shown in the figure, pull out the lock piece in the direction of the arrow (2) shown in the figure, and release the lock. (See 05-18-10 Selector Cable (Selector Lever Side) Installation Note.)



ac5wzw0000093

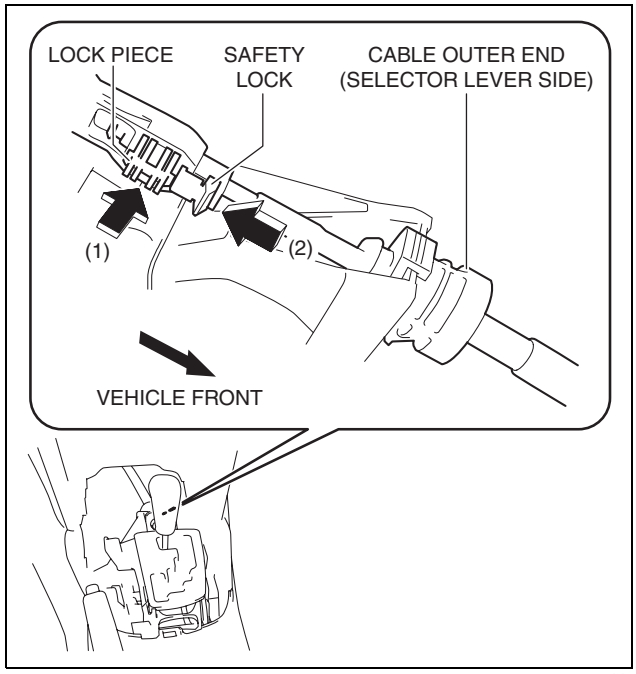
AUTOMATIC TRANSAXLE SHIFT MECHANISM

7. Set the manual shaft to the P position.



ac5wzw0000305

8. Press in the lock piece in the direction of the arrow (1) shown in the figure, press in the safety lock in the direction of the arrow (2) shown in the figure, and lock it.
9. Perform the procedure in the reverse order of Step 1 to 4 to install the removed part.
10. Perform the selector lever inspection. (See 05-18-11 SELECTOR LEVER INSPECTION.)

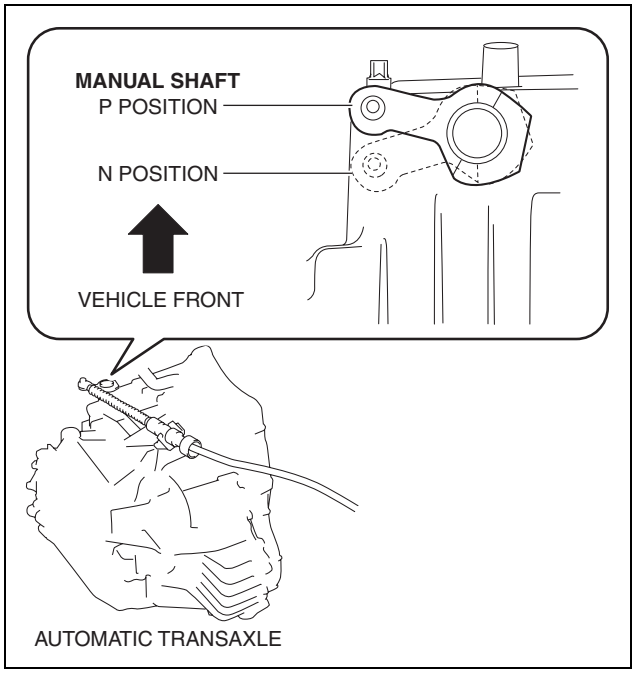


ac5wzw0000112

AUTOMATIC TRANSAXLE SHIFT MECHANISM

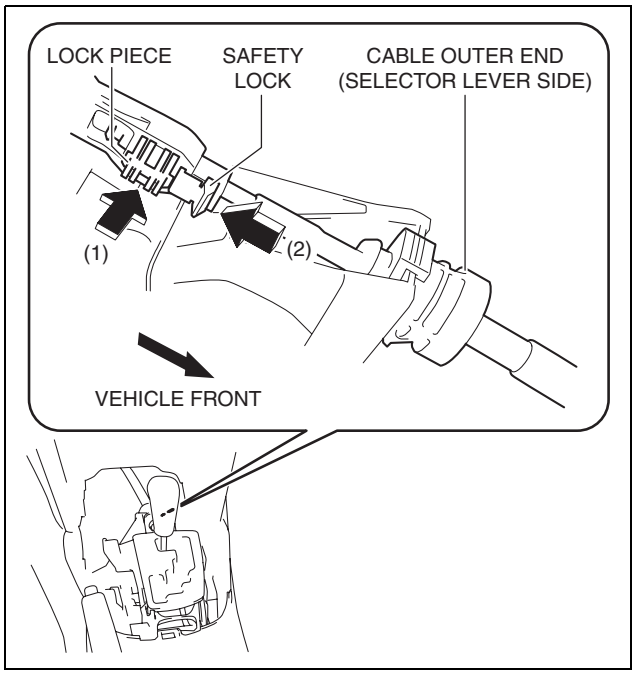
Selector Cable (Selector Lever Side) Installation Note

1. Verify that the selector lever is in the P position.
2. Verify that the manual shaft is in the P position.



ac5wzw0000305

3. Press in the lock piece in the direction of the arrow (1) shown in the figure, press in the safety lock in the direction of the arrow (2) shown in the figure, and lock it.

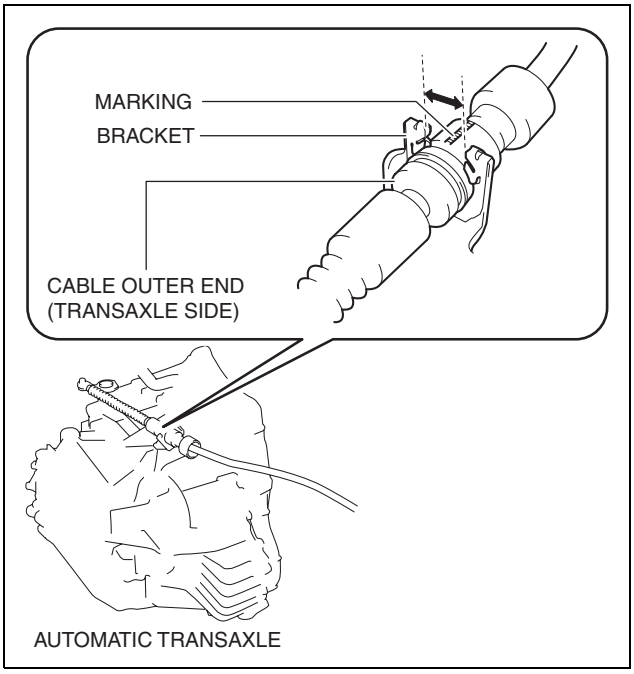


ac5wzw0000112

AUTOMATIC TRANSAXLE SHIFT MECHANISM

Cable Outer End (Transaxle Side) Installation Note

1. Assemble the cable outer end (transaxle side) to the bracket so that the marking is in the area of the arrow shown in the figure.



ac5wzw0000112

05

SELECTOR LEVER INSPECTION

id051800297000

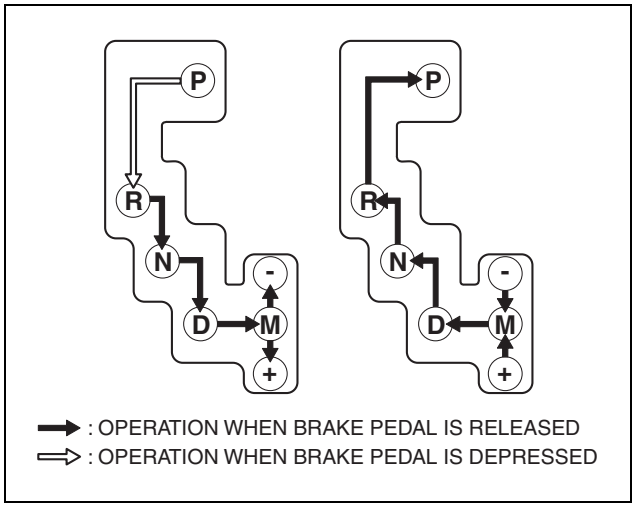
1. Switch the ignition ON (engine off or on).
2. Perform the following procedures to inspect the selector lever.
   - If there is any malfunction, adjust the selector cable. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)

   (1) Verify that the selector lever can be operated as shown in the figure.

AUTOMATIC TRANSAXLE SHIFT MECHANISM

R.H.D.

(2) Verify that the selector lever can be operated smoothly and moderately.



ac5wzw0000079

SHIFT-LOCK SYSTEM INSPECTION

id051800297100

Shift-Lock System Inspection

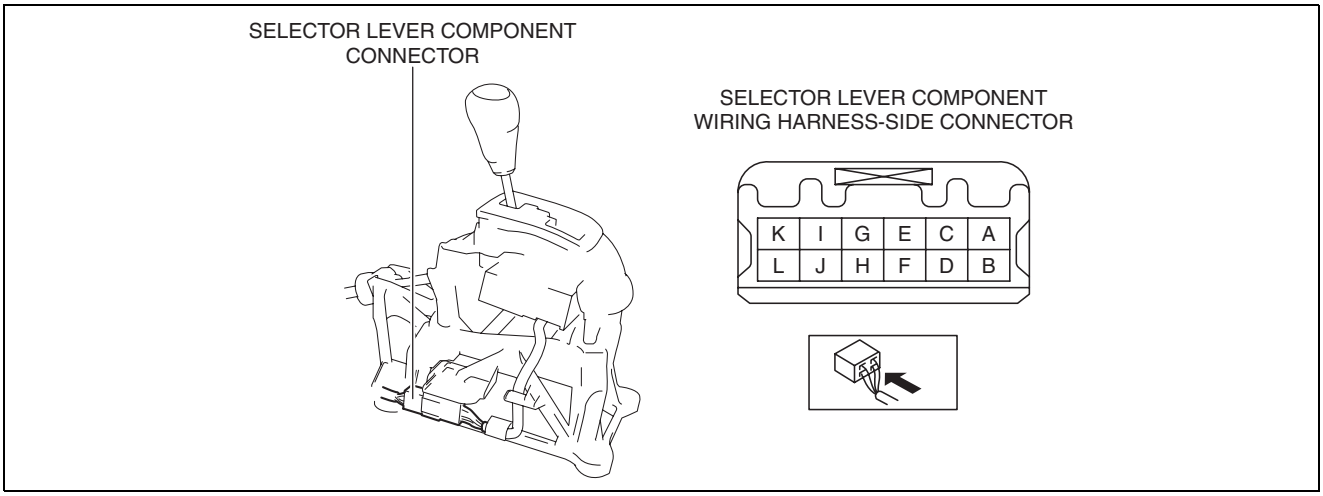
1. Switch the ignition ON (engine off).
2. Shift the selector lever to the P position.
3. Verify that the selector lever cannot be shifted from P to R position when the brake pedal is released.
   - If it can be verified, go to the next step.
   - If not as verified, inspect the following parts:
     - — Shift-lock solenoid (See 05-18-12 Shift-Lock System Inspection.)
     - — Not P position switch (See 05-18-14 NOT P POSITION SWITCH INSPECTION.)
     - — Brake switch (See 04-11-11 BRAKE SWITCH INSPECTION.)
     - — Start stop unit (See 09-14-56 START STOP UNIT INSPECTION.)
     - — PCM (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)
4. Verify that the selector lever can be shifted from P to R position when the brake pedal is depressed.
   - If it can be verified, go to the next step.
   - If not as verified, inspect the following parts:
     - — Shift-lock solenoid (See 05-18-12 Shift-Lock System Inspection.)
     - — Not P position switch (See 05-18-14 NOT P POSITION SWITCH INSPECTION.)
     - — Brake switch (See 04-11-11 BRAKE SWITCH INSPECTION.)
     - — Start stop unit (See 09-14-56 START STOP UNIT INSPECTION.)
     - — PCM (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)

AUTOMATIC TRANSAXLE SHIFT MECHANISM

Shift-Lock Solenoid Inspection

Note
- The shift-lock solenoid is built into the selector lever component.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front console. (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
3. Reconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
4. Verify that the voltages of each of the selector lever component terminals are as indicated in the table.



ac5wzw0000290

Shift-lock solenoid specification

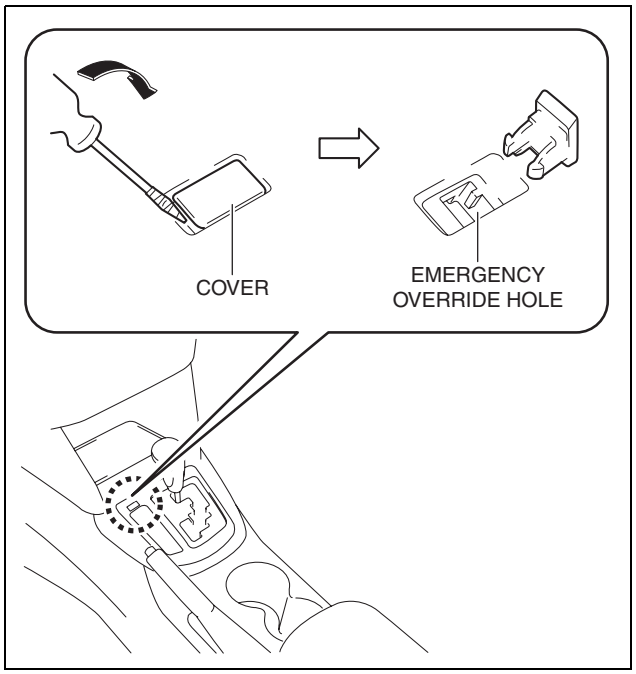
Terminal	Connected to	Test condition	Voltage (V)
A	IG1 relay	Ignition switched ON (engine on)	B+
		Except above	Below 1.0
H	Start stop unit	Under any condition	Below 1.0

- If the voltage is not as indicated in the table, repair or replace the related wiring harness.
- If the voltage can be verified as indicated in the table, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)

AUTOMATIC TRANSAXLE SHIFT MECHANISM

Shift-lock Override Button Inspection

1. Switch the ignition to off.
2. Verify that the selector lever is in the P position.
3. Without the brake pedal depressed, verify that the selector lever cannot be shifted from the P position.
4. Remove the emergency override hole cover using a tape-wrapped flathead screwdriver.
5. Insert the flathead screwdriver into the emergency override hole and push it down.
6. Verify that the selector lever can be shifted from the P position.
   - If not as verified, replace the selector lever. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)



ac5wzw0000083

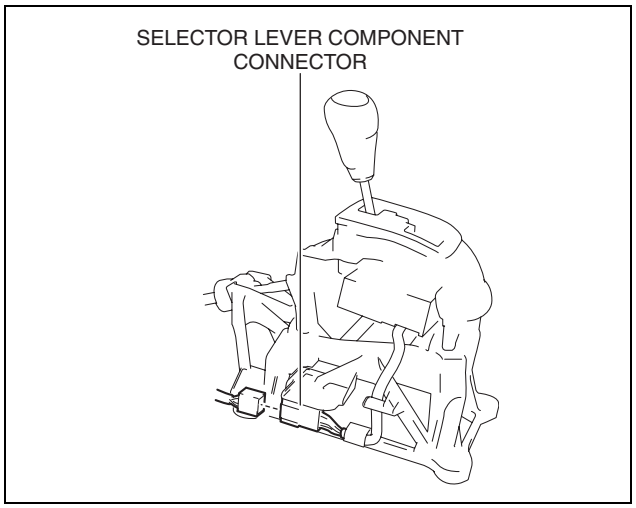
NOT P POSITION SWITCH INSPECTION

id051800300000

Note

- The not P position switch is built into the selector lever component.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front console. (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
3. Disconnect the selector lever component connector.



ac5wzw0000079

AUTOMATIC TRANSAXLE SHIFT MECHANISM

4. Verify that the continuity between selector lever component terminals B and I.
   - If not as verified, replace the selector lever component. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)

Not P position switch specification

Test condition	Continuity
Selector lever is in the P position.	No continuity
Selector lever is not in the P position.	Continuity

ON-BOARD DIAGNOSTIC

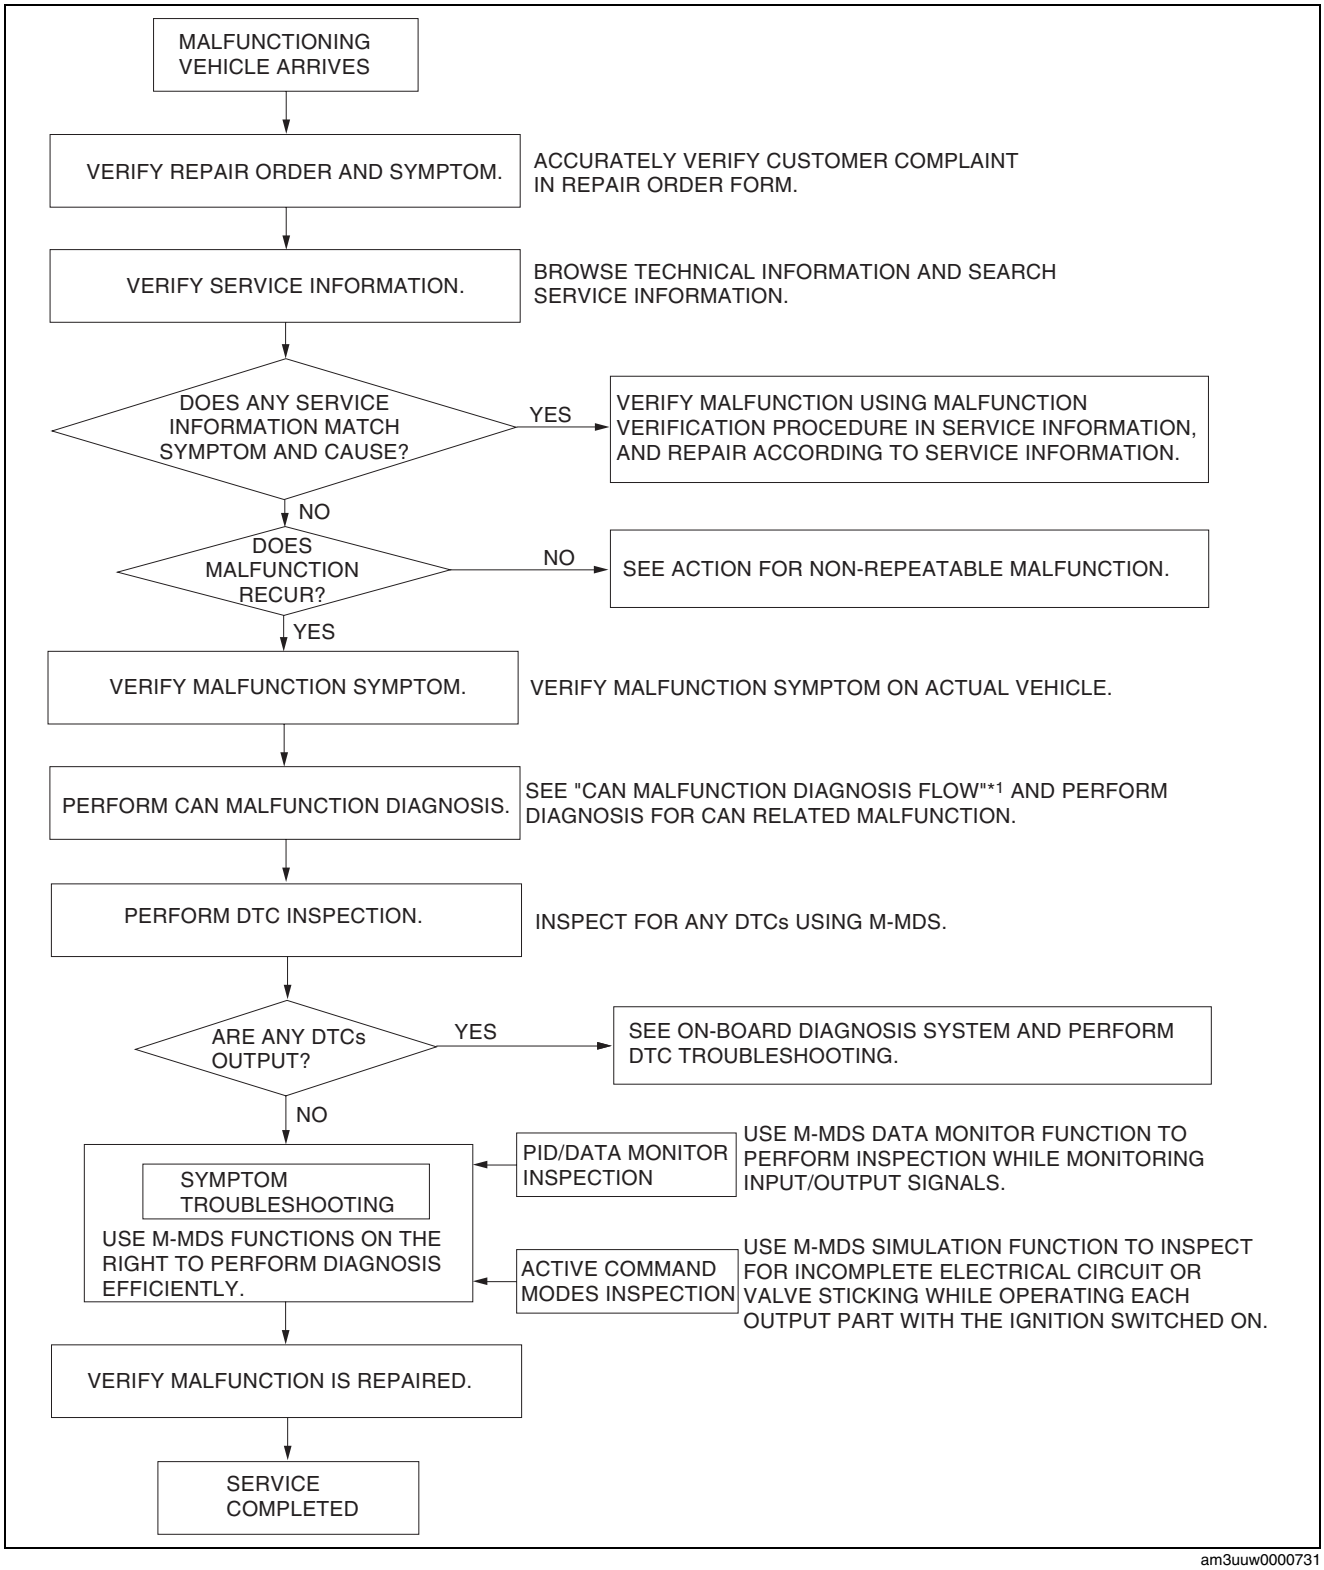
FOREWORD

id060200813800

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



am3uuw0000731

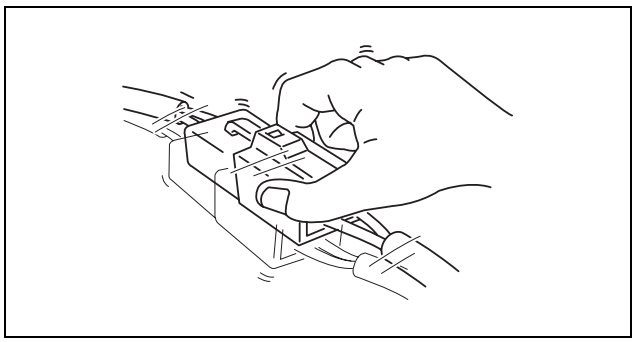
ON-BOARD DIAGNOSTIC

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)], 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)], 10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)], 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

Action for non-repeatable malfunction

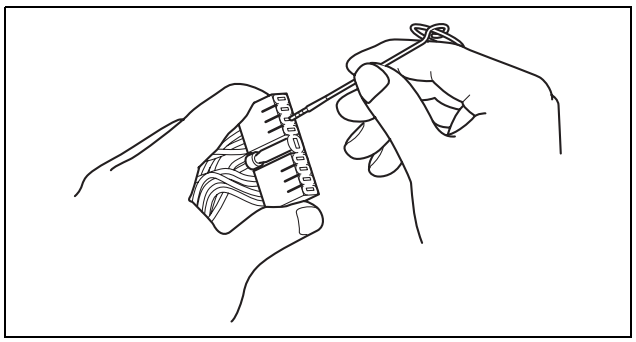
- If the malfunction does not recur, verify the malfunction cause by performing the following actions:

1. Verify that a DTC has been recorded in the memory using the M-MDS. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
2. Perform a simulation test in the simulation mode based on the repair order form, record the data at that time, and detect the malfunction cause.
3. Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for the occurrence of any malfunction or DTCs.



am3uuw0000812

4. Inspect the female terminals for poor connection.



am3uuw0000812

ON-BOARD DIAGNOSTIC

ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS

id060200813500

On-Board Diagnostic (OBD) Test Description

- The OBD test inspects the integrity and function of the EPS and outputs the results when requested by the specific tests.
- On-board diagnostic test also:
  - — Provides a quick inspection of the EPS usually performed at the start of each diagnostic procedure.
  - — Provides verification after repairs to ensure that no other faults occurred during service.
- The OBD test is divided into 2 tests:
  - — Read/clear diagnostic results, PID monitor and record.

Read/clear diagnostic results

- This function allows reading or clearing of DTCs in the EPS CM memory.

PID/Data monitor and record

- This function allows access of certain data values, input signals, calculated values, and system status information.

Reading DTCs Procedure

CMDTC self test

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the EPS. (See 06-02-5 Clearing DTCs Procedure.)

ODDTC self test

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “EPS”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the EPS. (See 06-02-5 Clearing DTCs Procedure.)

Snapshot Data Access Procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “EPS”.
3. Then, select the “Retrieve CMDTCs” and perform procedures according to directions on the IDS screen.
4. Retrieve the freeze frame PID data according to the directions on the IDS screen.

Note

- Snapshot data appears at the top of the help screen when the displayed DTC is selected.
- Snapshot data stores the currently detected DTC data.

Clearing DTCs Procedure

CMDTC clearing procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition OFF.
6. Switch the ignition ON (engine off) and wait for **5 s or more**.
7. Perform DTC inspection. (See 06-02-5 Reading DTCs Procedure.)
8. Verify that no DTCs are displayed.

ON-BOARD DIAGNOSTIC

ODDTC clearing procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “EPS”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition OFF.
6. Switch the ignition ON (engine off) and wait for **5 s or more**.
7. Perform DTC inspection. (See 06-02-5 Reading DTCs Procedure.)
8. Verify that no DTCs are displayed.

PID/Data Monitor and Record Procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “EPS”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module.Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

RPM_STATUS	Engine Stop/ Under 1500rpm/ Over 1500rpm/ FAIL	Engine RPM status	—
SHIFT_STATUS	P/N D/ R/ FAIL	Shift position status	—
STR_ANG	°	Steering wheel angle	STR_ANG
STR_ROT_SPD	°/s	Steering wheel rotation speed	STR_ROT_SPD

ON-BOARD DIAGNOSTIC

Snapshot data item	Unit	Definition	Corresponding data monitor items
STR_TRQ_S_M	Nm	Steering shaft torque (Main)	STR_TRQ_S_M
STR_TRQ_S_S	Nm	Steering shaft torque (Sub)	STR_TRQ_S_S
TOTAL_DIST	km, ft, mi	Total distance	—
TOTAL_TIME	hh:mm:ss	Total time	—
VPWR	V	Power supply	VPWR
VSPD	KPH, MPH	Vehicle speed	VSPD
VSPD_STATUS	Stop/ 0 - 10km/h/ Over 10km/h/ FAIL	Vehicle speed status	—

PID/DATA Monitor Table

Note

- If the PID/data monitor value “STR_ANG” is inspected, perform the following procedure before inspecting.
  1. Switch the ignition to OFF, and maintain this condition for **approx. 3 s**.
  2. Set the vehicle wheels in the straight-ahead position.
  3. Switch the ignition ON (engine off or on).

PID name (definition) M-MDS display	Unit/Operation	Operation Status (Reference)	Inspection item(s)	EPS control module terminal
CEN_TRQ_S	Nm	• Torque sensor neutral position: Near 0 Nm	• Steering column replacement (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)	—
ECU_IN_TMP	°C, °F	• Displays temperature of board in EPS control module: -40°C—+215°C {-40°F—419°F}	• EPS CM replacement (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)	—
ENG_RPM	RPM	• Engine stopped: 0 RPM • Engine rotating at **3,000 RPM**: 3,000 RPM	• PCM inspection (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	—
MT_CURRENT	A	• When not steered: Near 0 A • Steered: Changes to positive or negative	• EPS CM replacement (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)	—
OH_CR_C	Yes/No	• Is the overheating prevention control (Complete) operating?	—	—
OH_CR_M	Yes/No	• Is the overheating prevention control (Middle) operating?	—	—
OH_HIST_C	Yes/No	• Has the overheating prevention control (Complete) operated before?	—	—
OH_HIST_M	Yes/No	• Has the overheating prevention control (Middle) operated before?	—	—
OH_IG_CNT_C	—	• History of overheating prevention control (Complete) • Number of times vehicle is driven (ignition switched ON (engine off or on)) after overheating prevention control operates	—	—

ON-BOARD DIAGNOSTIC

PID name (definition) M-MDS display	Unit/Operation	Operation Status (Reference)	Inspection item(s)	EPS control module terminal
OH_IG_CNT_M	—	• History of overheating prevention control (Middle) • Number of times vehicle is driven (ignition switched ON (engine off or on)) after overheating prevention control operates	—	—
STR_ANG	°	• Steering in neutral position • Steered left: Changes to 0°—Positive • Steered right: Changes to 0°—Negative	• EPS CM replacement (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/ INSTALLATION.)	—
STR_ROT_SPD	°/s	• Not steered: Near 0 °/s • Steered: Changes according to steering speed	• EPS CM replacement (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/ INSTALLATION.)	—
STR_TRQ_S_M	Nm	• Not steered: Near 0 Nm • Steered left: Changes to 0 Nm—Positive • Steered right: Changes to 0 Nm—Negative	• EPS CM replacement (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/ INSTALLATION.)	—
STR_TRQ_S_S	Nm	• Not steered: Near 0 Nm • Steered left: Changes to 0 Nm—Positive • Steered right: Changes to 0 Nm—Negative	• EPS CM replacement (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/ INSTALLATION.)	—
VPWR	V	• Engine stopped: Approx. **12 V** • Idling: Approx. **14 V**	• Battery inspection (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Power supply circuit inspection (ignition switch, fuses)	1B
VSPD	KPH, MPH	• Vehicle stopped: 0 KPH, 0 MPH • Vehicle speed **20 km/h {12 mph}**: 20 KPH, 12 MPH	• PCM inspection (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	—

ON-BOARD DIAGNOSTIC

DTC C200B:02/C200B:16/C200B:62/C200B:85

id060200814900

DTC C200B:02, C200B:16, C200B:62, C200B:85	Torque sensor
DETECTION CONDITION	• C200B:02 — Signal error detected in torque sensor signal • C200B:16 — Open or short circuit is detected in torque sensor circuit • C200B:62 — Difference occurs between signals 1 and 2 from torque sensor • C200B:85 — Signal error detected in torque sensor signal
FAIL-SAFE FUNCTION	• Control disabled • Power steering malfunction indicator light: Illuminated
POSSIBLE CAUSE	• Torque sensor malfunction • EPS CM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT TORQUE SENSOR USING M-MDS** • Connect the M-MDS to the DLC-2. • Switch the ignition ON (engine off). • Access “STR_TRQ_S_M” and ”STR_TRQ_S_S” PIDs. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Verify that the data monitor value changes when the steering wheel is turned. — Left: 0—positive — Right: 0— negative • Do the torque sensor signal values change in the same way?	Yes	Go to the next step.
		No	Replace the steering column (torque sensor), then go to the next step. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
2	**VERIFY THAT SAME DTC IS NOT PRESENT** • Clear the DTC from the memory. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the same DTC present? (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the EPS CM, then go to the next step. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output? (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)	Yes	Go to the applicable DTC inspection. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC C200B:1C/C200C:1C

id060200814800

DTC C200B:1C, C200C:1C	Torque sensor
DETECTION CONDITION	• Open or short circuit is detected in torque sensor circuit
FAIL-SAFE FUNCTION	• Control disabled • Power steering malfunction indicator light: Illuminated
POSSIBLE CAUSE	• Open or short circuit in wiring harness between the EPS CM terminals and torque sensor. • Poor connection at connectors • Torque sensor malfunction • EPS CM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT TORQUE SENSOR USING M-MDS** • Connect the M-MDS to the DLC-2. • Switch the ignition ON (engine off). • Access “STR_TRQ_S_M” and ”STR_TRQ_S_S” PIDs. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Verify that the data monitor value changes when the steering wheel is turned. — Left: 0—positive — Right: 0— negative • Do the torque sensor signal values change in the same way?	Yes	Malfunction may be temporary. Go to step 3.
		No	Go to the next step.
2	**INSPECT TORQUE SENSOR CONNECTOR AND TORQUE SENSOR WIRING HARNESS** • Switch the ignition OFF. • Disconnect the torque sensor connector. • Are the connector connection, connector pins, and wiring harness normal?	Yes	Replace the steering column (torque sensor), then go to the next step. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Repair or replace the connector or wiring harness, then go to the next step.
3	**VERIFY THAT SAME DTC IS NOT PRESENT** • Clear the DTC from the memory. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the same DTC present? (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the EPS CM, then go to the next step. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output? (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)	Yes	Go to the applicable DTC inspection. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC C200D:1C/C200D:64/U2011:19/U2011:1C/U2011:62/U2011:72/U2011:92

id060200814700

DTC C200D:1C, C200D:64, U2011:1C, U2011:19, U2011:62, U2011:72, U2011:92	EPS motor
DETECTION CONDITION	• C200D:1C — Malfunction detected in resolver sensor internal circuit • C200D:64 — Signal error detected in resolver sensor signal • U2011:1C, U2011:19, U2011:62, U2011:72 — Malfunction detected in EPS motor internal circuit • U2011:92 — Malfunction detected in EPS motor internal circuit in the backup control
FAIL-SAFE FUNCTION	• C200D:1C, C200D:64, U2011:1C, U2011:19, U2011:62 — Control disabled — Power steering malfunction indicator light: Illuminated • U2011:72 — Phase 1 open circuit malfunction is detected in the EPS motor • Control is maintained in the backup control — Other malfunction detected in EPS motor internal circuit • Control disabled — Power steering malfunction indicator light: Illuminated • U2011:92 — Control disabled — Power steering malfunction indicator light: Illuminated
POSSIBLE CAUSE	• Malfunction in internal steering column, EPS motor
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY DTC** • Clear the DTC from the memory. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Verify if any DTCs are displayed. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the same DTC present?	Yes	Replace the EPS CM (EPS motor). (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output? (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)	Yes	Go to the applicable DTC inspection. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC U0001:88/U0100:00/U0121:00/U0155:00

id060200814600

DTC	U0001:88	CAN system Communication error
	U0100:00	Communication error to PCM
	U0121:00	Communication error to DSC HU/CM
	U0155:00	Communication error to instrument cluster
DETECTION CONDITION		• U0001:88 — Error detected in line between CAN connection module and CAN bus communication line • U0100:00 — Communication error to PCM is detected in CAN communication • U0121:00 — Communication error to DSC CM is detected in CAN communication • U0155:00 — Communication error to instrument cluster is detected in CAN communication
FAIL-SAFE FUNCTION		• U0001:88 — Control enabled — Power steering malfunction indicator light: Illuminated • U0100:00 — Control is maintained by gradually changing the controlled vehicle speed and setting it to **120 km/h {74.6 mph}** — Power steering malfunction indicator light: Illuminated • U0121:00, U0155:00 — Control enabled — Power steering malfunction indicator light: Not illuminated
POSSIBLE CAUSE		• CAN system wiring harness open or short circuit with PCM • CAN system wiring harness open or short circuit with DSC HU/CM • CAN system wiring harness open or short circuit with instrument cluster • Poor connection at connectors
SYSTEM WIRING DIAGRAM		—

Diagnostic procedure

- Perform inspection according to the diagnostic procedure in MULTIPLEX COMMUNICATION SYSTEM. (See 10-02A-1 FOREWORD [SKYACTIV-G 2.0 (L.H.D.)].) (See 10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)].) (See 10-02C-1 FOREWORD [SKYACTIV-D 2.2 (L.H.D.)].) (See 10-02D-1 FOREWORD [SKYACTIV-D 2.2 (R.H.D.)].)

DTC U0338:00/U0515:00

id060200814500

DTC U0338:00, U0515:00	CAN system communication error
DETECTION CONDITION	• Error detected in signal from the start stop unit via CAN communication
FAIL-SAFE FUNCTION	• Control enabled • Power steering malfunction indicator light: Not illuminated
POSSIBLE CAUSE	• Start stop unit malfunction • Mis-assembly of the steering angle sensor
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FOR THE START STOP UNIT MALFUNCTION** • Using the M-MDS, perform the DTC inspection for the start stop unit. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 09-02C-8 DTC TABLE [START STOP UNIT].) DTC troubleshooting completed, then go to the next step.
		No	Go to the next step.
2	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the memory. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the same DTC present? (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)	Yes	Replace the start stop unit. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC U0401:00

id060200812200

DTC U0401:00	CAN system communication error
DETECTION CONDITION	• Error detected in signal from PCM via CAN communication
FAIL-SAFE FUNCTION	• Vehicle speed signal malfunction — Control is maintained by gradually changing the controlled vehicle speed and setting it to **120 km/h {74.6 mph}** — Power steering malfunction indicator light: Illuminated • Engine speed signal malfunction — Control enabled — Power steering malfunction indicator light: Not illuminated • i-stop status signal malfunction — EPS i-stop control is not operated, and normal control is maintained — Power steering malfunction indicator light: Not illuminated
POSSIBLE CAUSE	• PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FOR PCM MALFUNCTION** • Using the M-MDS, perform the DTC inspection for the PCM. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].) DTC troubleshooting completed, then go to the next step.
		No	Go to the next step.
2	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the memory. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the same DTC present? (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)	Yes	Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC U0415:00

id060200814400

DTC U0415:00	CAN system communication error
DETECTION CONDITION	• Error detected in signal from DSC HU/CM via CAN communication
FAIL-SAFE FUNCTION	• Control enabled • Power steering malfunction indicator light: Not illuminated
POSSIBLE CAUSE	• DSC HU/CM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FOR DSC HU/CM MALFUNCTION** • Using the M-MDS, perform the DTC inspection for the DSC HU/CM. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) DTC troubleshooting completed, then go to the next step.
		No	Go to the next step.
2	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the memory. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the same DTC present? (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)	Yes	Replace the DSC HU/CM. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC U2300:54/U2300:55/U2300:56

id060200813700

DTC U2300:54, U2300:55, U2300:56	EPS configuration
DETECTION CONDITION	• EPS CM detects configuration data not read or data error
FAIL-SAFE FUNCTION	• U2300:54 — Control enabled — Power steering malfunction indicator light: Not illuminated • U2300:55 — Control enabled — Power steering malfunction indicator light: Illuminated • U2300:56 — Control enabled — Power steering malfunction indicator light: Not illuminated
POSSIBLE CAUSE	• Module configuration procedure is not done properly • Correct data cannot be received from instrument cluster
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection		Action
1	**RECORD THE CAR CONFIGURATION DATA** • Switch the ignition OFF. • Switch the ignition ON (engine off or on), and maintain this condition for **approx. 1 min**. • Switch the ignition OFF, and maintain this condition for **approx. 3 s**. • Switch the ignition ON (engine off or on).		Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTC from the memory. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, go to the next step.
		No	Go to Step 5.
3	**INSPECT FOR INSTRUMENT CLUSTER MALFUNCTION** • Switch the ignition OFF. • Using the M-MDS, perform the DTC inspection for the instrument cluster. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].) After repairing the instrument cluster, perform the “INSTRUMENT CLUSTER CONFIGURATION”, then go to the next step. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING READ/WRITE FUNCTION).) (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to the next step.
4	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTC from the memory. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the EPS CM, then go to the next step. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output? (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)	Yes	Go to the applicable DTC inspection. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC U3000:16/U3000:1C/U3000:28/U3000:41/U3000:46/U3000:47/U3000:49/U3000:61/U3000:73/U3000:96

id060200813600

DTC U3000:16, U3000:1C, U3000:28, U3000:41, U3000:46, U3000:47, U3000:49, U3000:61, U3000:73, U3000:96	EPS CM
DETECTION CONDITION	• The on-board diagnostic function detects control module malfunction

FAIL-SAFE FUNCTION	• U3000:16, U3000:1C, U3000:28, C3000:41, U3000:47, U3000:49, U3000:61, U3000:73, U3000:96
	  • Control disabled
	  • Power steering malfunction indicator light: Illuminated
	• U3000:46
	  • Control is maintained in fail mode
	  • Power steering malfunction indicator light: Not illuminated

POSSIBLE CAUSE	• Internal malfunction of EPS CM
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY DTC** • Clear the DTC from the memory. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Verify if any DTCs are displayed. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the same DTC present?	Yes	Replace the EPS CM. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output? (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)	Yes	Go to the applicable DTC inspection. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

DTC U3000:4B

id060200816400

Warning

- **The EPS CM temperature could become high and may cause a burn. Before performing the work, verify that the steering column is cold.**

DTC U3000:4B	EPS CM
DETECTION CONDITION	• Abnormal temperature in EPS CM is detected
FAIL-SAFE FUNCTION	• Control is maintained in fail mode • Power steering malfunction indicator light: Not illuminated
POSSIBLE CAUSE	• Due to the continuously static steering, being turned to the lock end, or other causes, the internal temperature of the EPS CM is more than the specified value. • EPS CM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

Step	Inspection		Action
1	**SWITCH THE IGNITION TO OFF AND ALLOW EPS CONTROL MODULE TO COOL DOWN.**		
2	**VERIFY THAT SAME DTC IS NOT PRESENT** • Clear the DTC from the memory. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the same DTC present? (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the EPS CM. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Are any other DTCs output? (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)	Yes	Go to the applicable DTC inspection. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC U3003:16

id060200812800

DTC U3003:16	Battery power supply
DETECTION CONDITION	• Voltage of 8 V or less detected by EPS CM internal ignition voltage observation.
FAIL-SAFE FUNCTION	• Control is maintained by gradually decreasing the motor control current — However, control is inhibited if the power supply voltage is the specified value of less. • Power steering malfunction indicator light: Illuminated
POSSIBLE CAUSE	• Battery and/or generator malfunction • EPS 60A fuse malfunction • Malfunction in the wiring harness between EPS CM terminal 1B and battery • Open circuit in the wiring harness between EPS CM terminal 1A and body ground
SYSTEM WIRING DIAGRAM	
Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT BATTERY VOLTAGE** • Is the battery terminal voltage normal?	Yes	Make sure that battery terminal connection is okay. Go to the next step.
		No	Charge or replace the battery, then go to Step 6. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17A-10 BATTERY RECHARGING [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2	**INSPECT BATTERY GRAVITY** • Is the battery specific gravity as specified?	Yes	Go to the next step.
		No	Replace the battery, then go to Step 6. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3	**INSPECT CHARGING SYSTEM** • Are the generator and drive belt tension normal?	Yes	Go to the next step.
		No	Replace the generator and/or drive belt if necessary. Go to step 6. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].) (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-10B-8 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
4	**INSPECT FUSE CONDITION** • Is the fuse (EPS 60A) normal?	Yes	Go to the next step.
		No	Replace the fuse, then go to Step 7.
5	**INSPECT EPS CM POWER SUPPLY CIRCUIT FOR OPEN OR SHORT CIRCUIT** • Start the engine. • Measure the voltage between following EPS CM terminal (wiring harness-side) and ground. — EPS CM: 1B—ground • Is the voltage **8 V or more**?	Yes	Go to the next Step.
		No	Repair or replace the wiring harness (including fuse) between the EPS CM and ground, then go to Step 6.
6	**INSPECT EPS CM GROUND CIRCUIT FOR POOR GROUND OR OPEN CIRCUIT** • Switch the ignition OFF. • Inspect for continuity between EPS control module terminal 1A and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between terminal 1A and body ground, then go to the next step.
7	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the memory. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the same DTC present?	Yes	Replace the steering column, then go to the next step. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC U3003:17

id060200810100

DTC U3003:17	Battery power supply
DETECTION CONDITION	• Voltage of 17.5 V or more detected by EPS CM internal battery voltage observation.
FAIL-SAFE FUNCTION	• Control disabled • Power steering malfunction indicator light: Illuminated
POSSIBLE CAUSE	• Generator malfunction • Poor connection at connectors
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT CHARGING SYSTEM** • Are the generator and drive belt tension normal?	Yes	Go to the next step.
		No	Replace the generator and/or drive belt if necessary. Go to step 3. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].) (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-10B-8 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2	**INSPECT WHETHER MALFUNCTION IS CAUSED BY POOR CONNECTION OF EPS CM OR PIN DEFORMATION** • Switch the ignition OFF. • Inspect connection of the EPS CM and wiring harness. • Disconnect the EPS CM connector. • Inspect whether malfunction is caused by bent or poorly connected EPS CM connector pin. • Are the connector connection, connector pins, and wiring harness normal?	Yes	Go to the next step.
		No	Repair or replace the faulty connector wiring harness, then go to the next step.
3	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the memory. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the same DTC present?	Yes	Replace the EPS CM, then go to the next step. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

SYMPTOM TROUBLESHOOTING

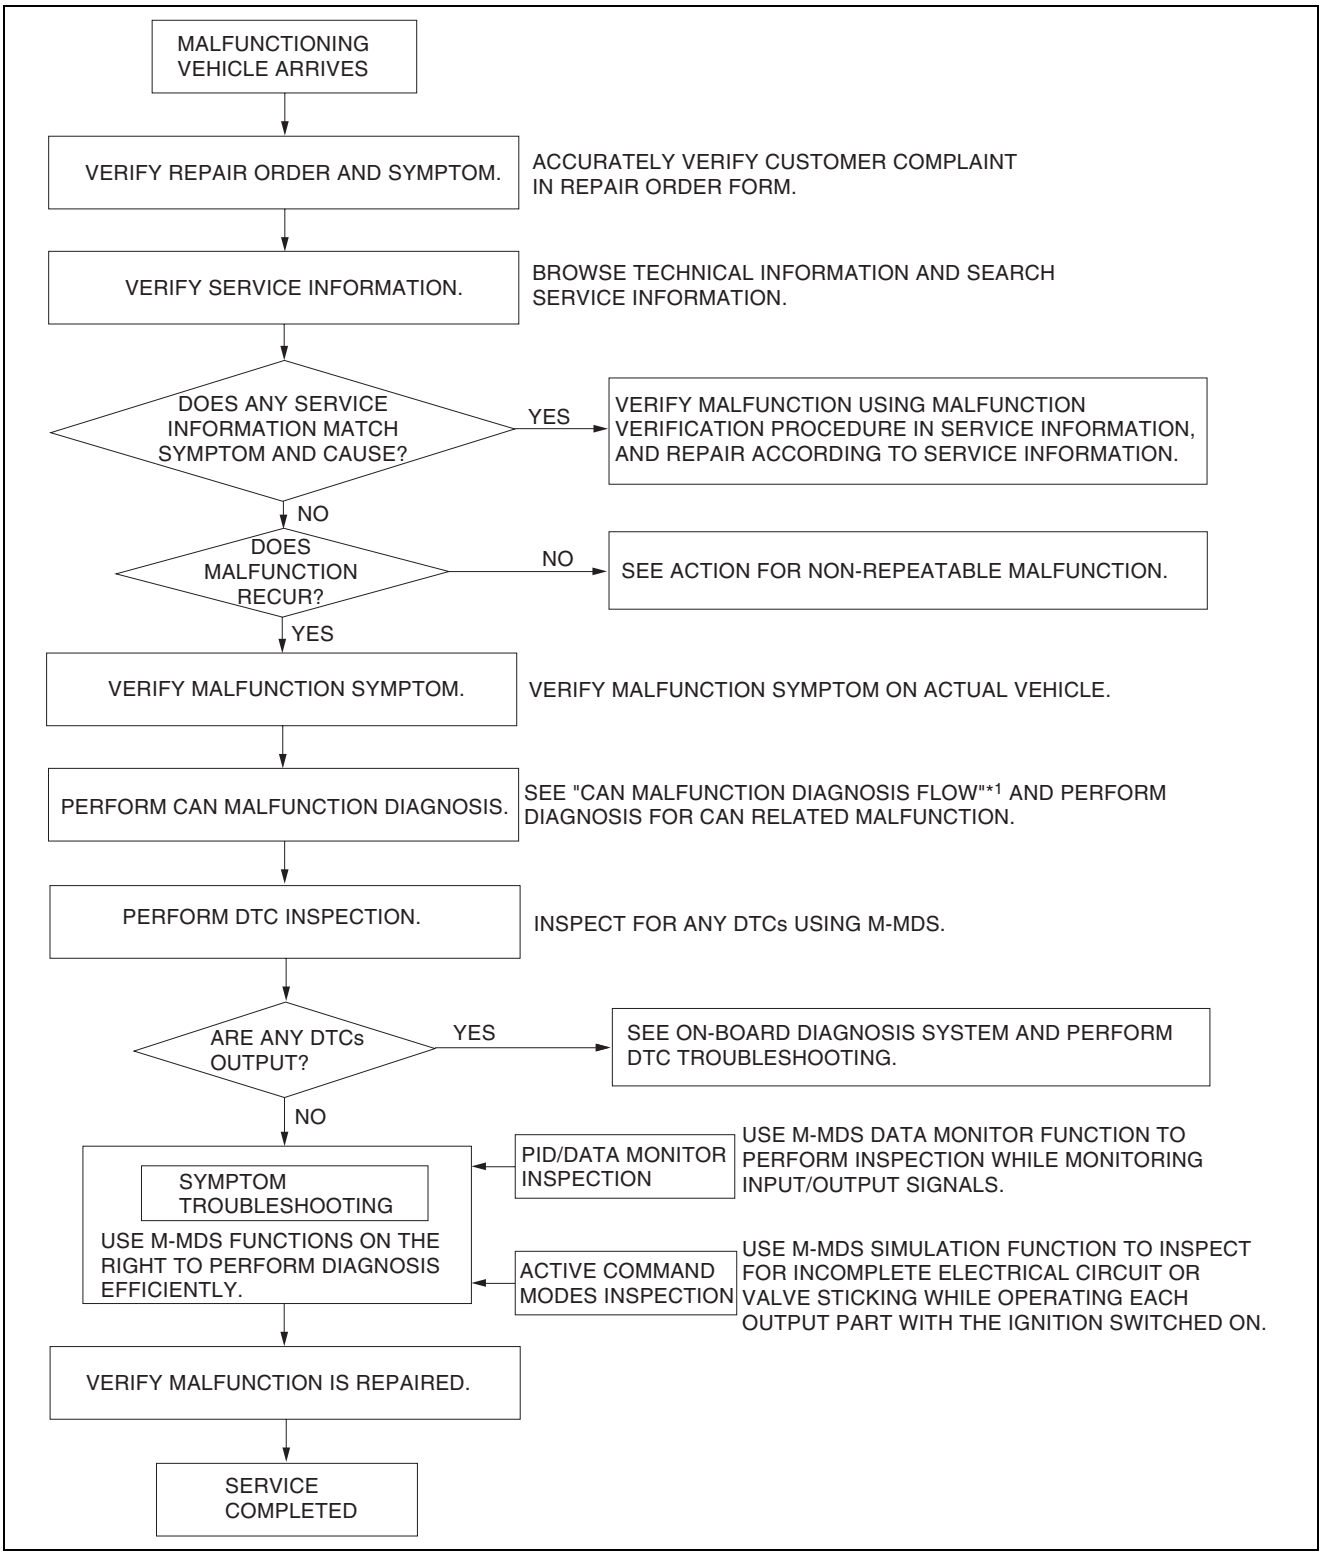
FOREWORD

id060300800100

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



am3uuw0000731

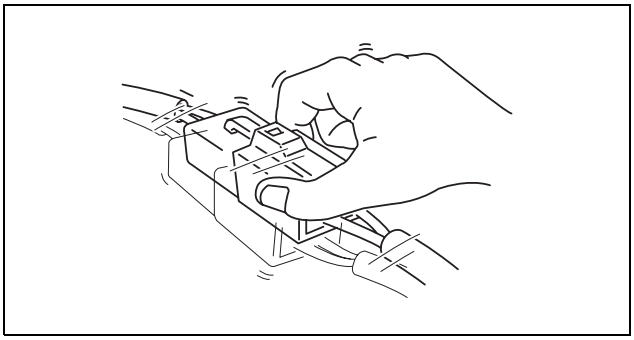
SYMPTOM TROUBLESHOOTING

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)], 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)], 10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)], 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

Action for non-repeatable malfunction

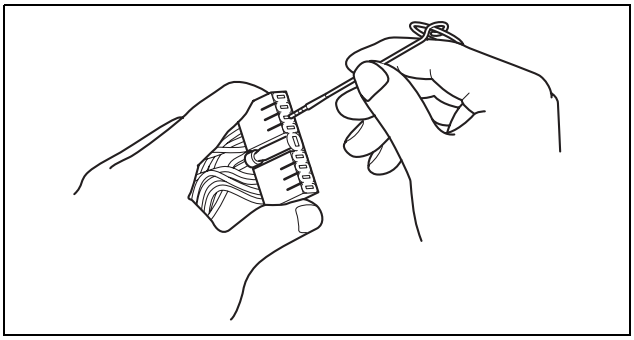
- If the malfunction does not recur, verify the malfunction cause by performing the following actions:

1. Verify that a DTC has been recorded in the memory using the M-MDS. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
2. Perform a simulation test in the simulation mode based on the repair order form, record the data at that time, and detect the malfunction cause.
3. Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for the occurrence of any malfunction or DTCs.



am3uuw0000812

4. Inspect the female terminals for poor connection.



am3uuw0000812

SYMPTOM TROUBLESHOOTING

PRECAUTION

id060300800300

Intermittent Concern Troubleshooting

Vibration method

- If a malfunction occurs or becomes worse while driving on a rough road or when the engine is vibrating, perform the following steps.

Note

- There are several reasons why vehicle or engine vibration could cause an electrical malfunction. Inspect the following:
  - — Connectors not fully seated.
  - — Wiring harnesses not having full play.
  - — Wires laying across brackets or moving parts.
  - — Wires routed too close to hot parts.
- An improperly routed, improperly clamped, or loose wiring harness can cause wiring to become pinched between parts.
- The connector joints, points of vibration, and places where wiring harness pass through the firewall, body panels and other panels are the major areas to be inspected.

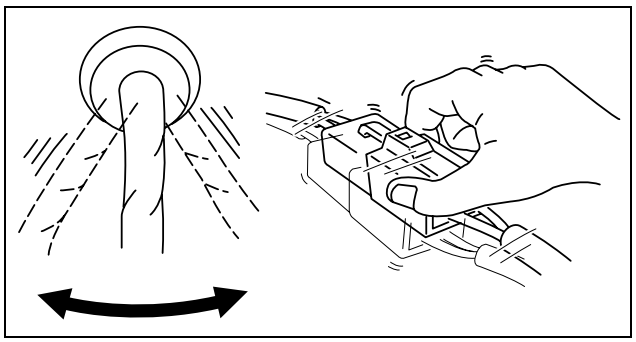
Inspection method for switch and/or sensor connectors or wires

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (engine off).

Note

- If the engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Turn the switch on manually.
5. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
   - If the PID value is unstable, inspect for poor connection.



am2zzw0000021

Inspection method for sensors

1. Connect the M-MDS to the DLC-2.
2. Turn the ignition switch to the ON position (engine off).

Note

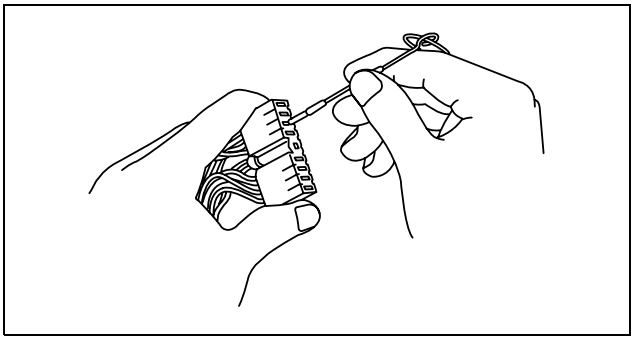
- If the engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Vibrate the sensor slightly with your finger.
   - If the PID value is unstable or a malfunction occurs, inspect for poor connection and/or poorly mounted sensor.

SYMPTOM TROUBLESHOOTING

Connector terminal inspection method

1. Inspect the connection of each female terminal.
2. Insert the male terminal to the female terminal and inspect the female terminal for looseness.



am2zzw0000021

SYMPTOM TROUBLESHOOTING

id060300800400

- Verify the symptom, and perform troubleshooting according to the appropriate number.

No.	Symptom
1	Electric power steering (EPS) warning light does not illuminate with ignition switched ON.
2	Electric power steering (EPS) warning light/Master warning light does not go out even though engine has started.
3	Power assist differs between right and left turns.

NO.1 ELECTRIC POWER STEERING (EPS) WARNING LIGHT DOES NOT ILLUMINATE WITH IGNITION SWITCHED ON

id060300950600

1	**Electric power steering (EPS) warning light does not illuminate with ignition switched ON.***

TROUBLESHOOTING HINTS

- EPS warning light circuit malfunction in the instrument cluster.
- An error originates from the EPS CM, and the off signal is generated.
  — EPS CM malfunction

* : Instrument cluster without TFT LCD display.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn on the EPS warning light at instrument cluster using the “WL+IL” of the M-MDS active command modes function. • Does the EPS warning light turn on?	Yes	EPS CM malfunction. Replace the EPS CM. (See 06-13-16 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION.)
		No	Perform the instrument cluster configuration, then repeat the inspection from Step 1. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).) If the malfunction recurs, replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING

NO.2 ELECTRIC POWER STEERING (EPS) WARNING LIGHT/MASTER WARNING LIGHT DOES NOT GO OUT EVEN THOUGH ENGINE HAS STARTED

id060300950400

2	**Electric power steering (EPS) warning light*1/master warning light*2 does not go out even though engine has started.**

TROUBLESHOOTING HINTS

- EPS system malfunction.
  - — Wiring harness malfunction
  - — Connector condition malfunction
  - — Torque sensor malfunction
  - — EPS motor malfunction
  - — Fuse malfunction
  - — EPS CM malfunction
- EPS CM detects an EPS system malfunction even though the EPS system is normal.
- CAN communication line and/or CAN signal malfunction.
  - — Vehicle speed signal malfunction
  - — Engine speed signal malfunction
  - — CAN wiring harness malfunction
- EPS warning light*1/Master warning light*2 circuit malfunction in the instrument cluster.
- CAN wiring harness malfunction.
  - — Malfunction in wiring harness between EPS CM and instrument cluster
- Instrument cluster configuration procedure was not completed properly.

*1 : Without TFT LCD display.
*2 : With TFT LCD display.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Switch the ignition to off and maintain this condition **approx. 1 minute**. • Switch the ignition ON (engine on). • Perform the DTC inspection. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	Go to the next step.
2	• Turn off the EPS warning light at instrument cluster using the “WL+IL” of the M-MDS active command modes function. • Does the EPS warning light*1/master warning light*2 turn off?	Yes	EPS CM malfunction. Replace the EPS CM. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Perform the instrument cluster configuration, then repeat the inspection from Step 1. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).) If the malfunction recurs, replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING

NO.3 POWER ASSIST DIFFERS BETWEEN RIGHT AND LEFT TURNS

id060300801000

3	Power assist differs between right and left turns.

TROUBLESHOOTING HINTS

- Steering gear and linkage malfunction.
- EPS CM malfunction.
- Poor connection of EPS CM connector, terminal damage.
- The steering wheel angle neutral position automatic learning function has not been operated.

Note

- If the right and left wheels are rotated freely at the same speed with the vehicle jacked up, the EPS CM may learn the steering angle incorrectly.
- The steering angle learned by the EPS CM is cleared when **1 min. or more** has elapsed after the ignition was switched off.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Have DTCs been recorded in the memory?	Yes	Perform inspection using the appropriate DTC.
		No	Go to the next step.
2	• Switch the ignition to off and maintain this condition **1 min. or more**. • Switch the ignition ON (engine on). • Drive **10 m {33 ft} or above** in a straight line at **more than 10 km/h {6.2 mph}**. • Is there recurrence of malfunction?	Yes	Go to the next step.
		No	Temporary error occurred while learning steering wheel angle neutral position. There is not malfunction in the EPS system.
3	• Inspect the connection of the EPS CM connector. • Disconnect the EPS CM connector. • Inspect both the EPS CM and wiring harness-side connector for poor connection (such as damage/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Replace the steering gear and linkage. (See 06-13-16 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION.)
		No	**If poor connection of EPS CM connector:** • Securely connect the EPS CM connector. **If the EPS CM side connector is wrong:** • Replace the EPS CM. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector. • Recheck malfunction symptoms, then replace the steering gear and linkage. (See 06-13-16 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION.)

Wheel And Tire Installation **06-10–2**
Connectors disconnection **06-10–2**
Suspension Links
Removal/Installation **06-10–2**
EPS Related Parts **06-10–2**

GENERAL PROCEDURES

GENERAL PROCEDURES (STEERING)

id061000279700

Warning

- **Always inspect the steering component carefully for any shock or impact which may have occurred during a collision or servicing operation. If a damaged part or a part suspected of being damaged is used, it could result in an unexpected accident due to the steering mechanism being inoperative. Always replace the damaged part or part suspected of being damaged.**
- **If the steering mechanism is turned from lock to lock continuously or the steering rack terminal limit is reached repeatedly, such high-load steering action increases the temperature of the steering column (to approx. 85 °C {185°F}), causing severe burns. Be careful when handling the steering column.**
- **If the steering column is dropped, the EPS CM could be damaged internally causing the steering mechanism to become inoperative, which could result in an unexpected accident. Always replace the steering column if it has been subjected to an impact.**

Caution

- **If the steering column is stored in a humid place, the EPS system may not operate properly when installed to the vehicle. Store the steering column in a suitable place.**
- **Be careful when handling the steering column because it weighs approximately 10 kg {22 lb} and it could fall off and be damaged while servicing.**
- **If the intermediate shaft is connected to the steering gear (pinion) before installing the steering column to the dashboard member, the weight of the steering column could cause damage to the intermediate shaft slider/bush/yoke. Always follow the procedure in the Workshop Manual.**
- **The universal joint could be damaged if subjected to an impact when the intermediate shaft (pinion) is disconnected. Perform the servicing carefully avoiding impact when disconnecting the intermediate shaft from the steering gear (pinion).**
- **Do not release the lock of the adjusting lever when handling the steering column unless it is securely installed to the dashboard member. If the adjusting lever is unlocked with the steering column not securely installed, the steering column and other parts could be damaged.**
- **A new steering column is shipped in a pre-set condition. Maintain this condition until the steering column is completely installed to the dashboard member so as to avoid damage during transportation and installation.**
- **When removing/installing the steering column, keep the wiring harness away from the steering column installation area so as to prevent the steering column from being caught in the wiring harness and damaged.**

Note

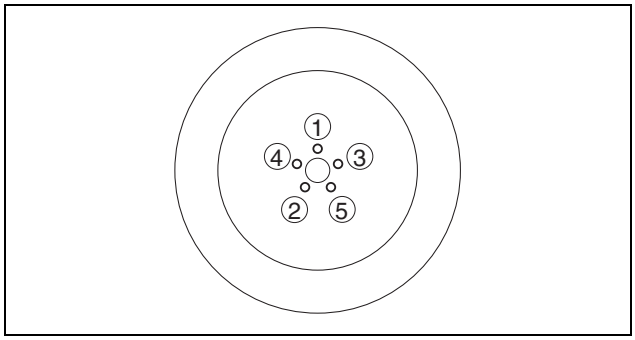
- When installing a replacement part, be careful not to rotate the steering shaft until the installation has been completed.
- In order to completely interrupt the EPS system power supply, do not disconnect the battery for **20 s** or more after the ignition switch is turned off.
- Do not replace the steering column (EPS system) with that of another vehicle even if they are the same model.

GENERAL PROCEDURES

Wheel And Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts in a criss-cross pattern to the following tightening torque.

   Tightening Torque
   108—147 N·m {12—14 kgf·m, 80—108 ft·lbf}



am5uuw0000341

Connectors disconnection

1. Disconnect the negative battery terminal before performing any work that requires handling of connectors. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].), (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].), (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

Suspension Links Removal/Installation

Note
- To prevent the bushings from being twisted or pinched, perform the procedures with no passengers or luggage aboard the vehicle.

1. For the joint sections with rubber bushings, raise the vehicle using a lift and temporarily tighten the installation nuts and bolts. Afterwards, tighten to the specified torque with the wheels on the ground.

EPS Related Parts

Caution
- **If the EPS CM configuration is not completed, the EPS will not operate properly.If the steering column component or EPS CM is replaced, always carry out the automatic configuration so that the EPS operates properly.**

1. Make sure that there are no DTCs in the EPS memory after working on EPS related parts.If there are any DTCs in the memory, go to the applicable DTC diagnostic procedure. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)

ELECTRIC POWER STEERING (EPS)

STEERING WHEEL AND COLUMN INSPECTION

id061300801300

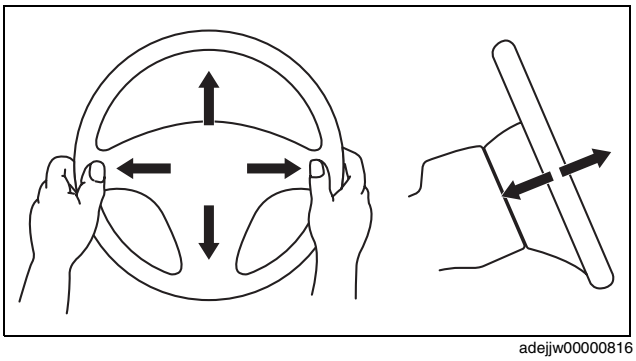
Play inspection

1. With the wheels in the straight-ahead position, start the engine.
2. Turn the steering wheel to the left and right gently, then verify that the steering wheel play is within the specification.

Steering wheel play
0—30 mm {0—1.1 in}

Looseness, Excessive Play Inspection

1. Inspect the steering wheel for looseness or excessive play in the axial direction of the shaft and four locations around the steering wheel.
   - If there is any malfunction, inspect the following, and repair or replace the applicable part.
     — Column bearing wear
     — Looseness of the steering wheel installation part
     — Looseness of the column installation area
     — Excessive play in the intermediate shaft joint
     — Excessive play in the steering gear



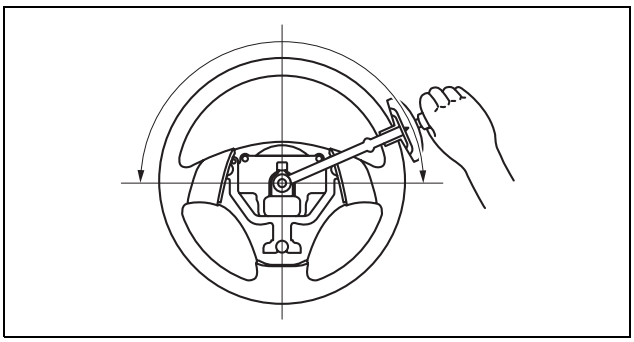
adejjw00000816

Steering Force Inspection

1. Verify that the equipped tire size and tire air pressure is as specified.
2. With the vehicle on a hard, level surface, put the wheels in the straight-ahead position.
3. Remove the driver-side air bag module. (See 08-10-6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)

Warning
- **Handling the air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you.Read the service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

4. Start the engine and idle it.
5. Verify that the power steering malfunction indicator light is not illuminated or flashing.
6. Inspect the steering torque using a torque wrench.
   - If it exceeds the reference value, inspect the steering gear and linkage. (See 06-13-19 STEERING GEAR AND LINKAGE INSPECTION.)



adejjw00000817

Steering wheel steering force (reference)
7.8 N·m {80 kgf·cm, 69 in·lbf} or less

Note
- Comparing another vehicle of the same model under the same conditions is an acceptable inspection method.
- The steering torque varies with the conditions indicated below.
  — Road conditions: Such as dry, wet, asphalt, or concrete
  — Tire condition: Such as brand, wear, and tire pressure

ELECTRIC POWER STEERING (EPS)

STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION

id061300801400

Warning

- **Handling the air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**
- **The steering column (EPS motor) temperature increases directly after continuous turning of the steering mechanism which could cause burns if it is touched. Before performing any servicing, verify that the steering column has cooled off.**

Caution

- **If the EPS CM configuration is not completed, the EPS will not operate properly. If the EPS CM is replaced, always use the automatic configuration function so that the EPS operation conditions are correct.**
- **If the EPS column is dropped it could result in internal damage to the EPS CM, therefore be careful not to drop it. Replace the EPS CM if it is subjected to an impact.**

Note

- When the ignition is switched to ON or the engine is started after the EPS CM have been replaced, the EPS CM reads data from the instrument cluster via CAN communication to perform automatic configuration.
- The EPS CM prior to replacement stores the vehicle specification information.
- A new EPS CM does not store any vehicle specification information.

1. Remove the driver-side front scuff plate. (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the driver-side front side trim. (See 09-17-62 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
3. Remove the car-navigation unit (with car navigation system). (See 09-20-11 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
4. Remove the switch panel. (See 09-17-18 SWITCH PANEL REMOVAL/INSTALLATION.)
5. Remove the decoration panel. (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
6. Remove the shift lever knob (MTX vehicles). (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
7. Remove the selector lever knob (ATX vehicles). (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
8. Remove the front console box. (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)
9. Remove the shift panel. (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
10. Remove the upper panel. (See 09-17-44 UPPER PANEL REMOVAL/INSTALLATION.)
11. Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.)
12. Remove the side wall. (See 09-17-49 SIDE WALL REMOVAL/INSTALLATION.)
13. Remove the front console. (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
14. Disconnect the bonnet release lever from the lower panel. (See 09-14-17 BONNET LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
15. Remove the lower panel. (See 09-17-35 LOWER PANEL REMOVAL/INSTALLATION.)
16. Remove the driver-side front heat duct. (See 07-11-22 FRONT HEAT DUCT REMOVAL/INSTALLATION.)
17. Detach the harness clips shown in the figure.
18. Remove in the order indicated in the table.
19. Install in the reverse order of removal.
20. If the EPS CM is replaced, perform the following procedure.
    (1) After installation, switch the ignition to ON or start the engine, and maintain this condition for **approx. 1 min.** to allow the EPS CM automatic configuration to be performed.
    (2) Switch the ignition to OFF, and maintain this condition for **approx. 3 s**
    (3) Switch the ignition to ON (engine on or off) to allow the EPS CM automatic configuration to be performed.
    (4) Clear the DTC from the memory. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)

7	Steering column

Steering Wheel Removal Note

Caution

- **Do not try to remove the steering wheel by hitting the shaft with a hammer. The steering column will be damaged.**

1. Set the vehicle wheels in the straight-ahead position.
2. Remove the steering wheel using any commercially available puller.

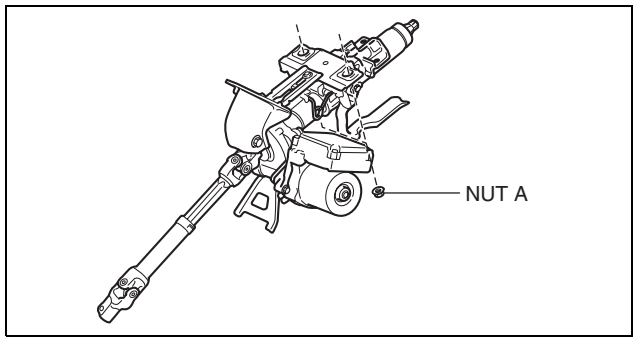
ELECTRIC POWER STEERING (EPS)

Steering Column Component Removal Note

Caution

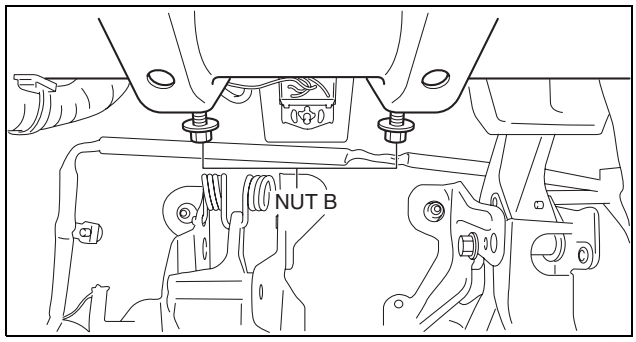
- **Always lock the adjusting lever to prevent damage to the steering column.In addition, do not unlock the adjusting lever until after the steering column installation is completed.**
- **If the steering column is removed, remove it according to the procedure to prevent damage to intermediate shaft that could result if the steering column is removed in the incorrect order.**

1. Lock the adjusting lever.
2. Remove the bolt, disconnect the intermediate shaft from the steering gear (pinion shaft).
3. Remove nut A.



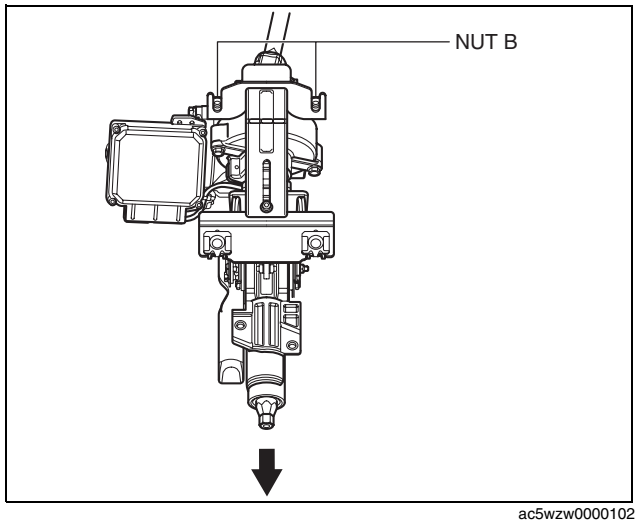
ac5wzw0000157

4. Loosen nut B.



ac5wzw0000102

5. Remove the steering column component by tilting it towards the loosened nut B and sliding it outward.

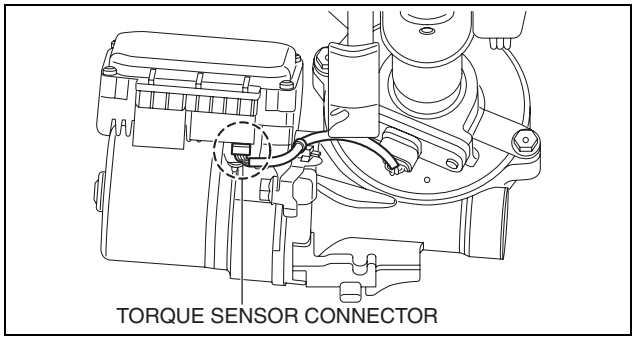


ac5wzw0000102

ELECTRIC POWER STEERING (EPS)

EPS CM Removal Note

1. Disconnect the torque sensor connector (EPS CM side).
2. Remove the EPS CM.



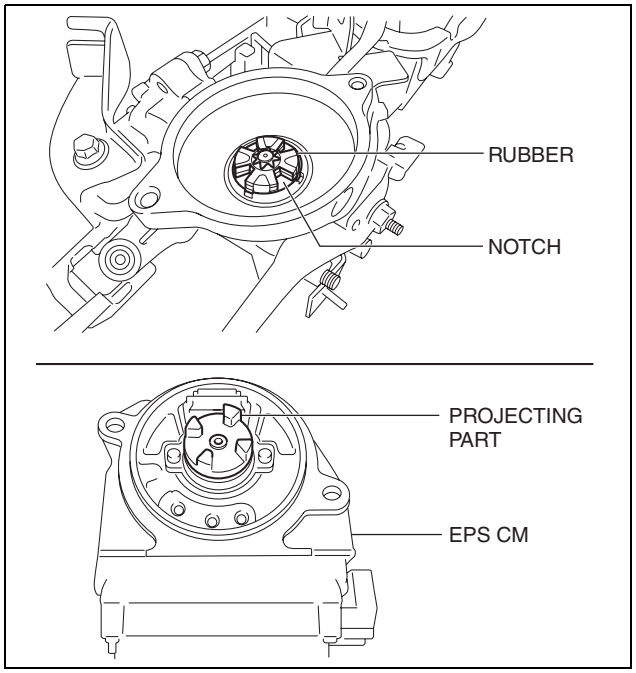
ac5wzw0000102

Spacer, Rubber and EPS CM Installation Note

1. Install the spacer and rubber to the steering column.
2. Install the EPS CM so that the projecting part of the EPS CM (rotor) is engaged with the notch in the rubber.

Note

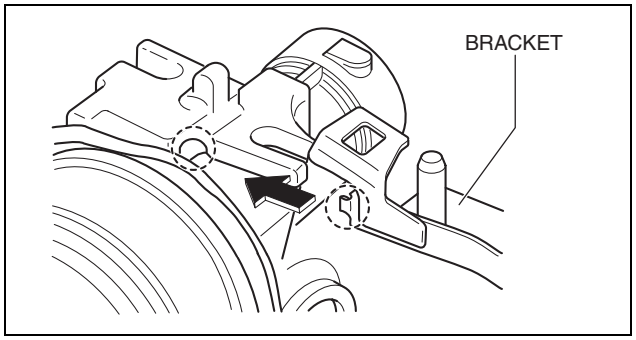
- If the projecting part of the EPS CM (rotor) is not engaged with the notch in the rubber, adjust the position of the EPS CM projection (rotor).



ac5wzw0000102

Bracket Installation Note

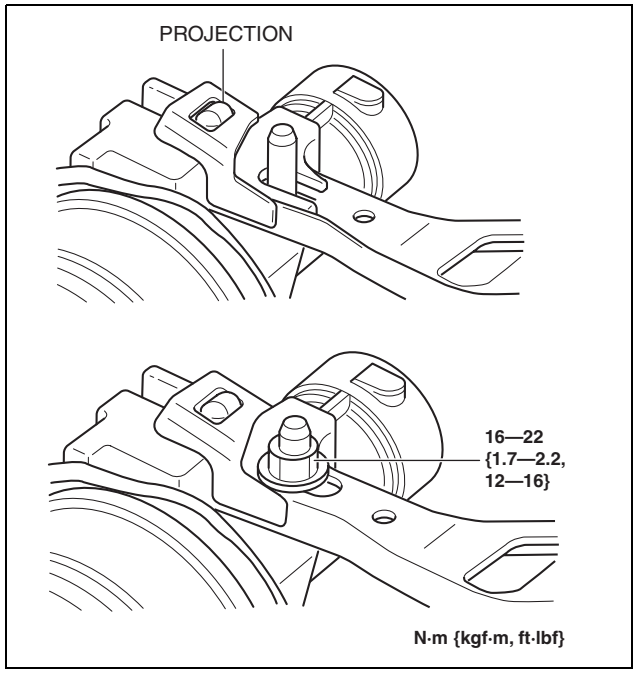
1. Insert the bracket bolt into the steering column and install the projecting part of the bracket to the installation area of the steering column.



ac5wzw0000033

ELECTRIC POWER STEERING (EPS)

2. Verify that the projection on the steering column is inserted into the hole in the bracket as shown in the figure and tighten the nut to the specified torque.



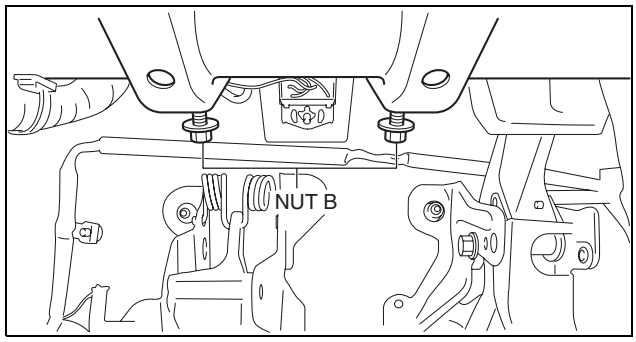
ac5wzw0000102

Steering Column Component Installation Note

Caution

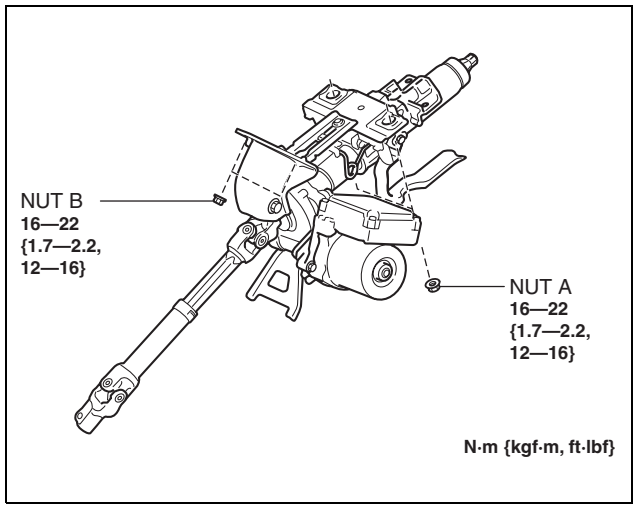
- **If the steering column is installed, install it according to the procedure to prevent damage to intermediate shaft that could result if the steering column is installed in the incorrect order.**
- **Do not unlock the adjusting lever until after the steering column installation is completed to prevent damage to the steering column.**

1. Temporarily install nut B to the dashboard member.
2. Tilt the steering column component towards the temporarily installed nut B and temporarily install the steering column component to the instrument panel member using nut A



ac5wzw0000102

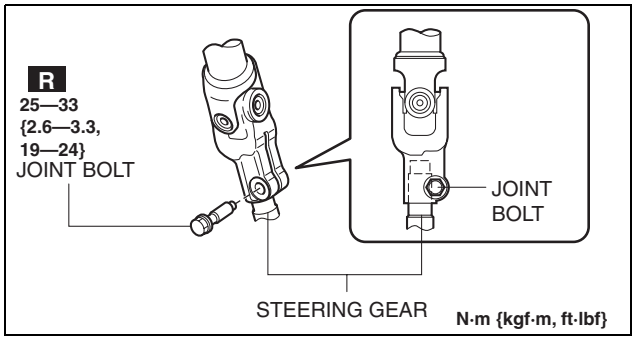
3. Tighten the nuts in the order of nut A and nut B.



ac5wzw0000157

ELECTRIC POWER STEERING (EPS)

4. Insert the intermediate shaft into the steering gear (pinion shaft) to the position shown in the figure, and tighten it using a new bolt.



ac5wzw0000033

Steering Wheel Installation Note

1. Set the vehicle wheels in the straight-ahead position, and install the steering wheel using a new lockbolt.

INTERMEDIATE SHAFT REMOVAL/INSTALLATION

id061300803100

Warning

- **The steering column (EPS motor) temperature increases directly after continuous turning of the steering mechanism which could cause burns if it is touched. Before performing any servicing, verify that the steering column has cooled off.**

1. Rotate the steering wheel until the joint bolt is in a position in which it can be removed.

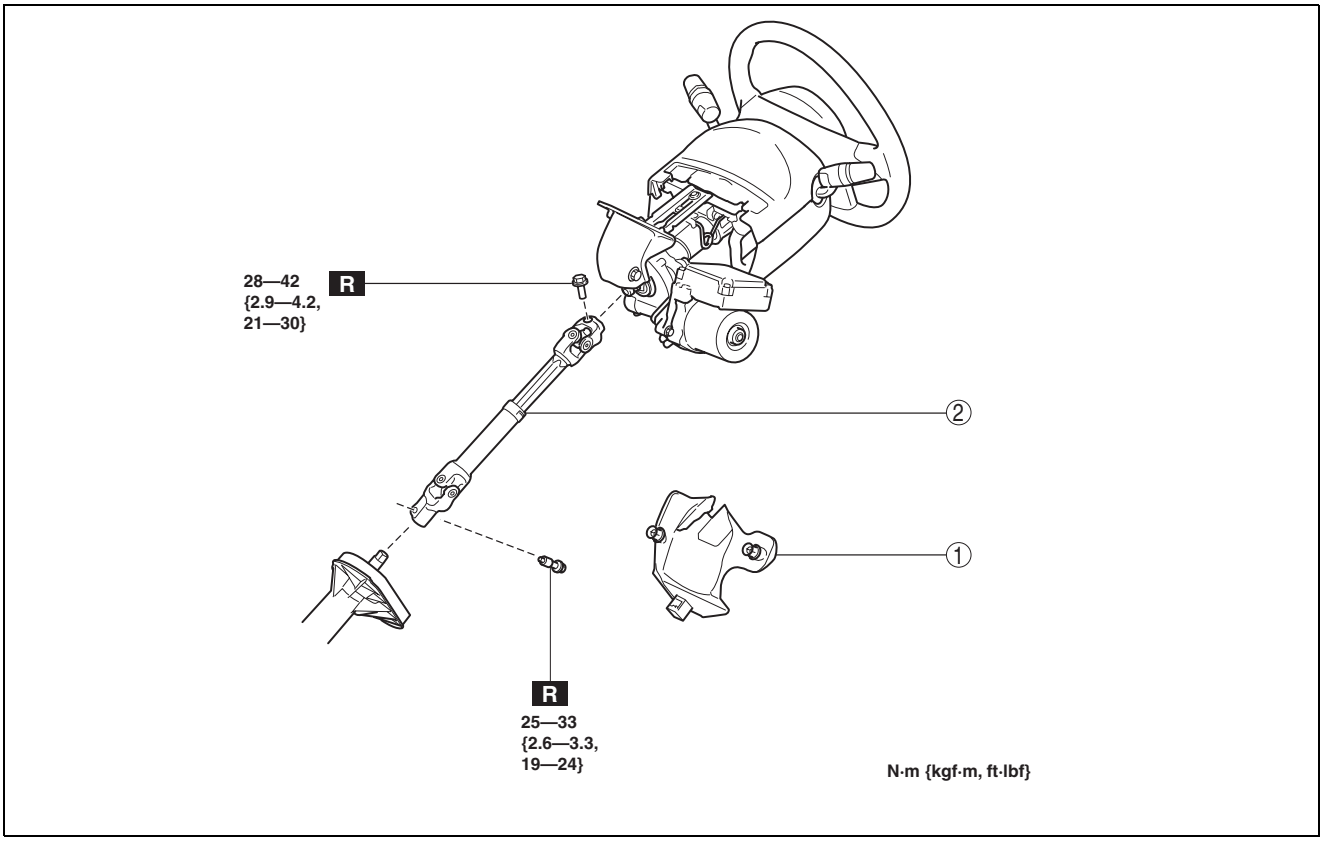
Caution

- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the intermediate shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**

2. Lock the adjusting lever.
3. Remove in the order indicated in the table.

ELECTRIC POWER STEERING (EPS)

4. Install in the reverse order of removal.



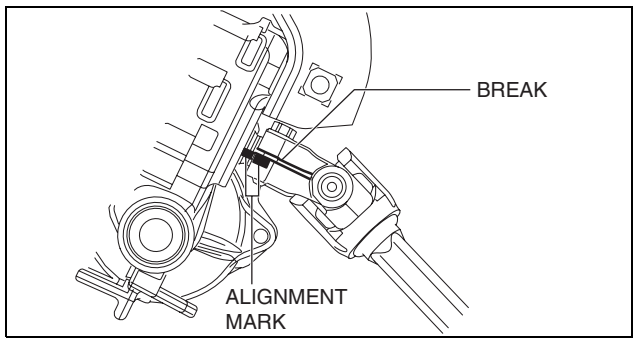
ac5wzw0000105

1	Joint cover

2	Intermediate shaft (See 06-13-11 Intermediate Shaft Removal Note.) (See 06-13-12 Intermediate Shaft Installation Note.)

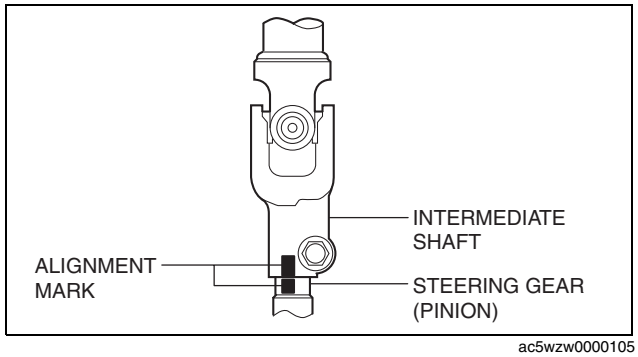
Intermediate Shaft Removal Note

1. Place an alignment mark across the break between the steering column and the yoke for the intermediate shaft as shown in the figure.



ac5wzw0000105

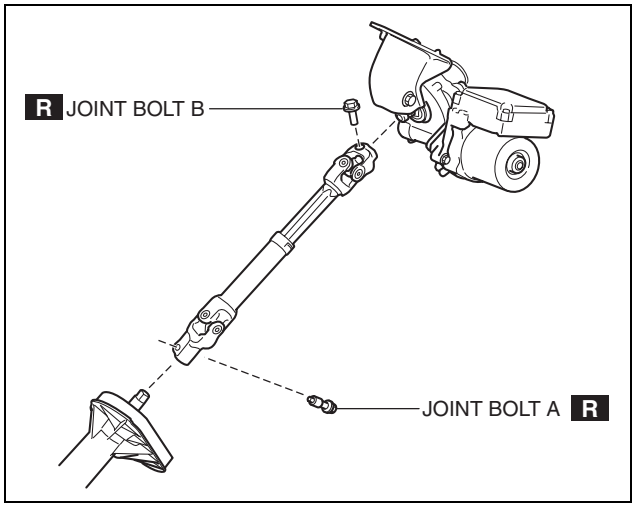
2. Place alignment marks on the steering gear (pinion) and the intermediate shaft as shown in the figure.



ac5wzw0000105

ELECTRIC POWER STEERING (EPS)

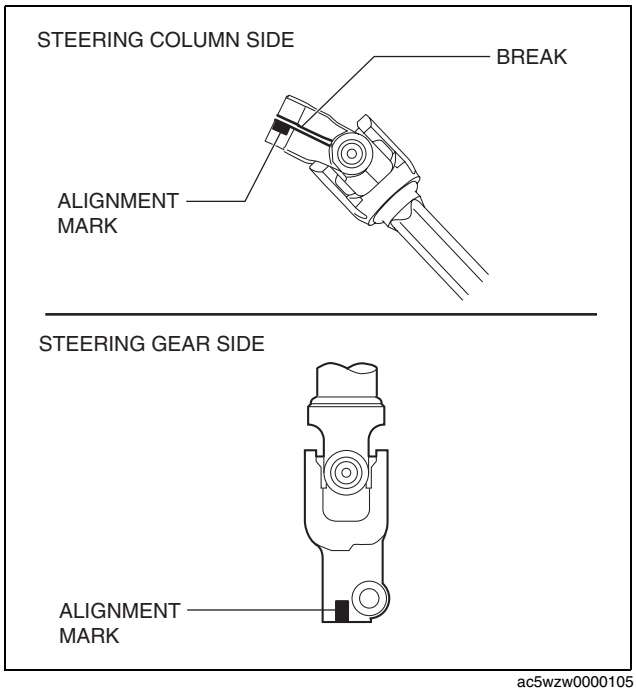
3. Remove joint bolt A, then joint bolt B.
4. Remove the intermediate shaft.



ac5wzw0000105

Intermediate Shaft Installation Note

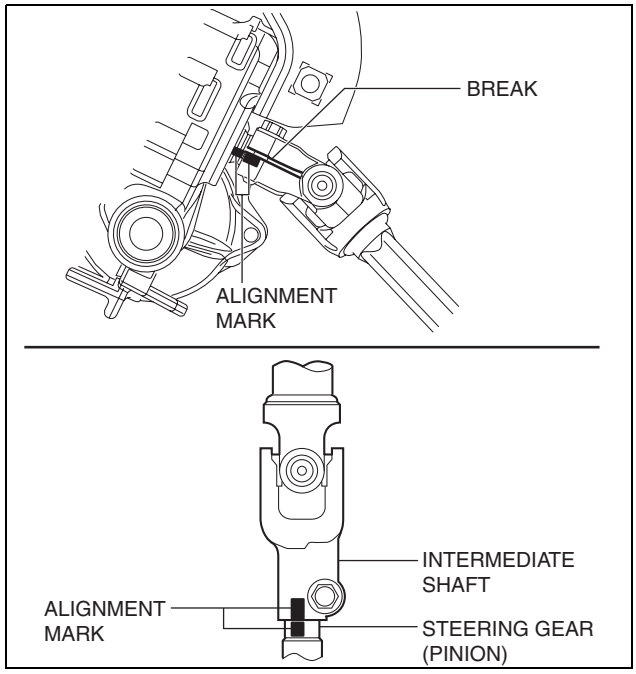
1. Place alignment marks on the new intermediate shaft in the same positions as the removed intermediate shaft.



ac5wzw0000105

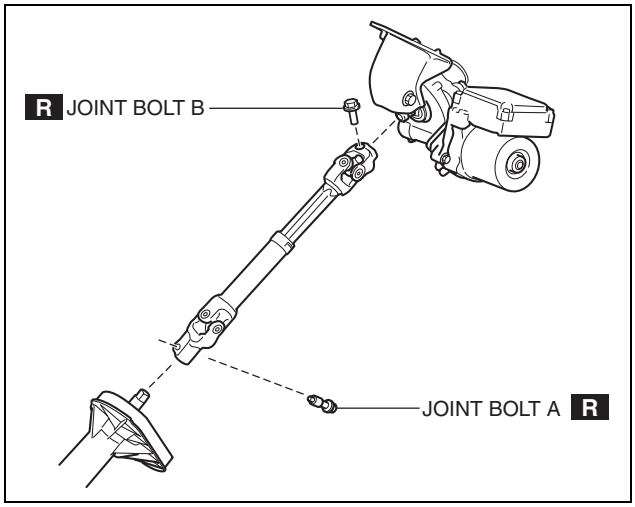
ELECTRIC POWER STEERING (EPS)

2. Align the alignment marks on the steering column and the steering gear (pinion), which were placed before removing the intermediate shaft, and install the intermediate shaft.



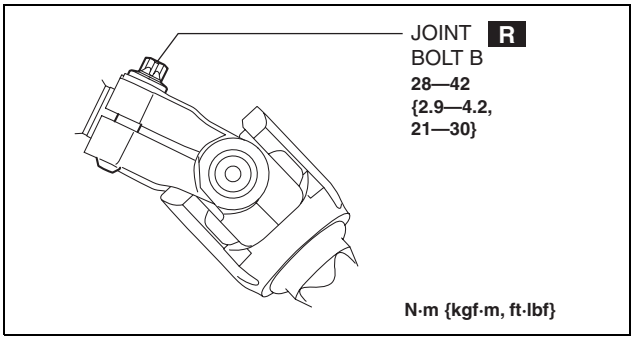
ac5wzw0000105

Note
- Install joint bolt B, then joint bolt A.



ac5wzw0000105

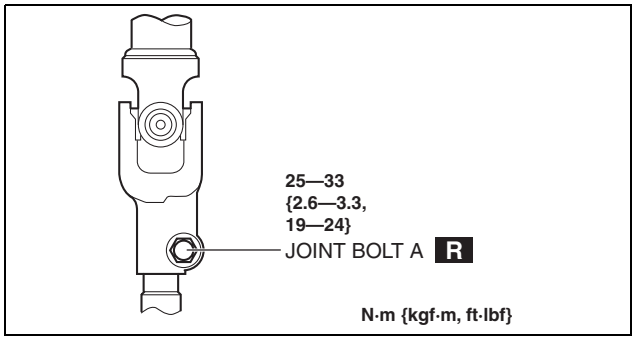
3. Verify that the joint bolt B flange is seated in the specified position.



ac5wzw0000105

ELECTRIC POWER STEERING (EPS)

4. Verify that joint bolt A is installed to the groove of the steering gear (pinion).



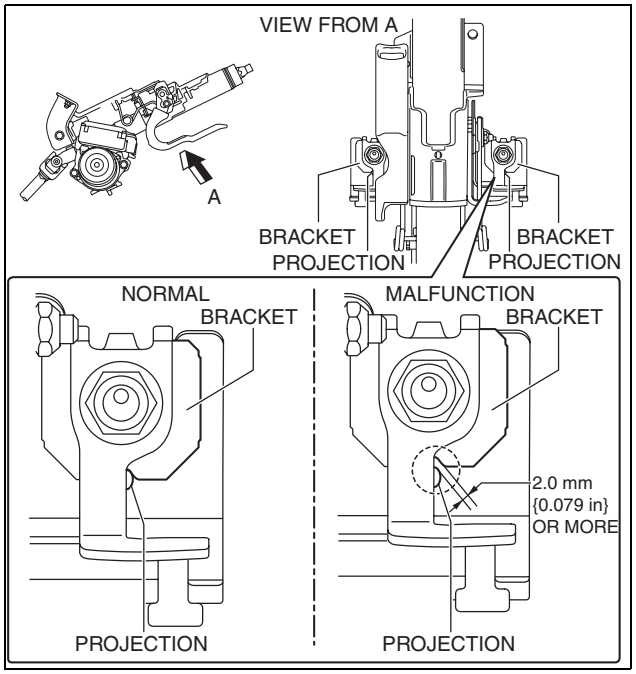
ac5wzw0000105

STEERING SHAFT INSPECTION

id061300801600

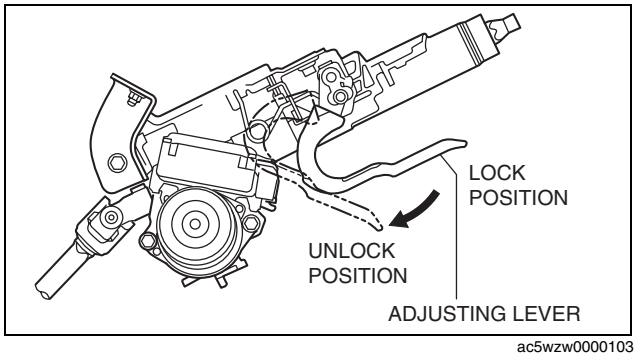
1. Inspect the steering column for excessive play and damage.
2. Verify that the clearance between the projection on the steering column shown in the figure and the bracket is **less than 2.0 mm {0.079 in}**.
   - If the clearance between the projection and bracket is **2.0 mm {0.079 in} or more**, replace the steering column component.

Note
- If the clearance between the projection and bracket is **2.0 mm {0.079 in} or more**, the impact absorbing mechanism of the steering column will operate, therefore it is necessary to replace the steering column component.



ac5uuw00002726

3. Inspect the tilt/telescope mechanism operation for the following:
   (1) The adjusting lever moves smoothly from the lock to the unlock position.
   (2) The steering shaft is fixed firmly when the adjusting lever is locked.
      - If there is any malfunction, replace the steering column.



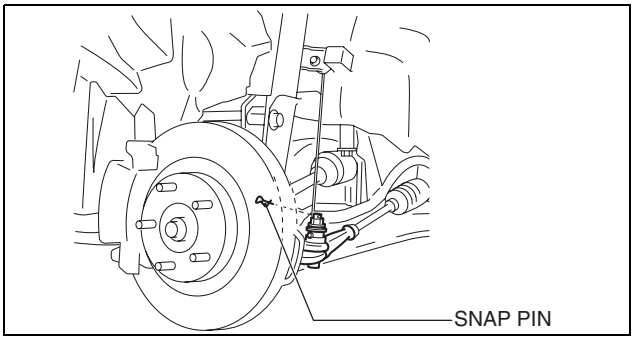
ac5wzw0000103

ELECTRIC POWER STEERING (EPS)

TIE-ROD END REPLACEMENT

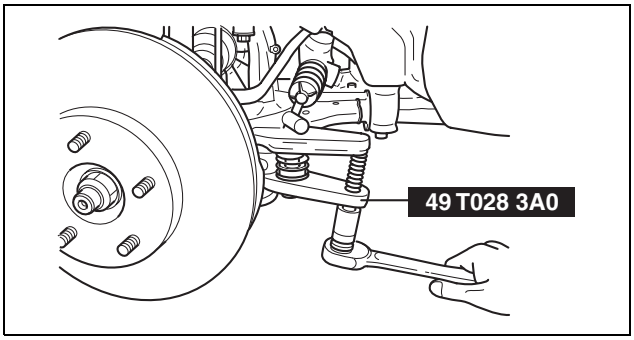
id061300801200

1. Remove the snap pin.
2. Loosen the tie-rod end locknut.



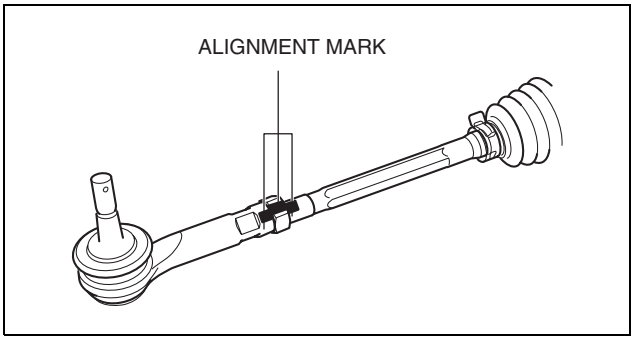
ac5wzw0000101

3. Detach the tie-rod end from the steering knuckle using the **SST**.
4. Remove the tie-rod end locknut.



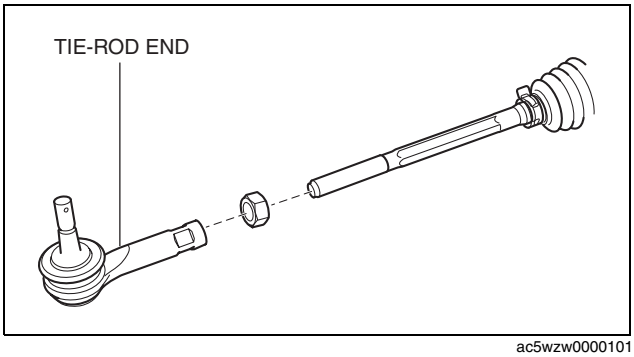
ac5wzw0000101

5. Place alignment marks as shown in the figure for proper installation.



ac5wzw0000101

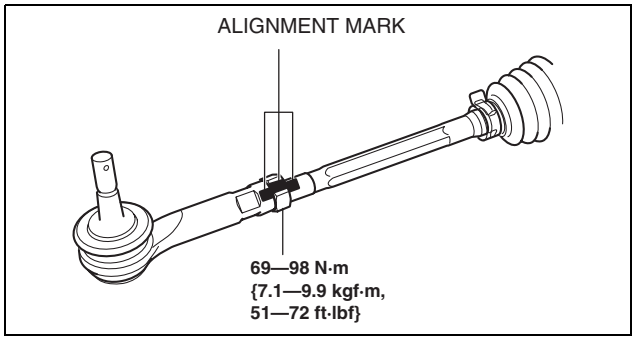
6. Remove the tie-rod end.



ac5wzw0000101

ELECTRIC POWER STEERING (EPS)

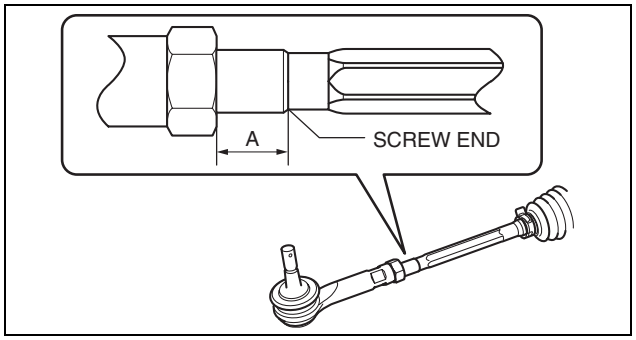
7. Align the alignment marks made before removing the tie-rod end, and then install a new tie-rod end to the tie rod.
   - If there are no alignment marks, go to the following procedure.



ac5wzw0000101

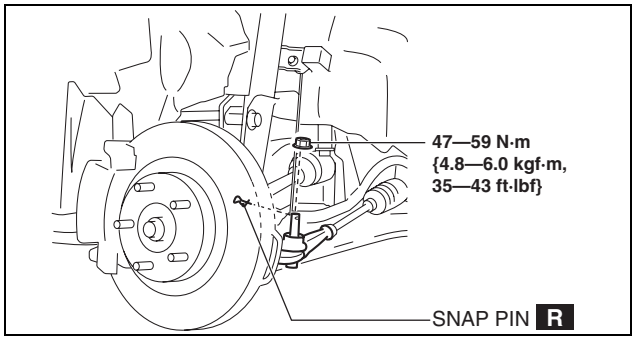
8. Adjust dimension A shown in the figure to the standard, and assemble.

   Standard Dimension A
   10.1—23.1 mm {0.398—0.909 in}



ac5wzw0000249

9. Install the tie-rod end to the steering knuckle.
10. Install a new snap pin.
11. After installation, inspect the front wheel alignment and adjust it if necessary. (See 02-11-1 FRONT WHEEL ALIGNMENT.)



ac5wzw0000101

STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION

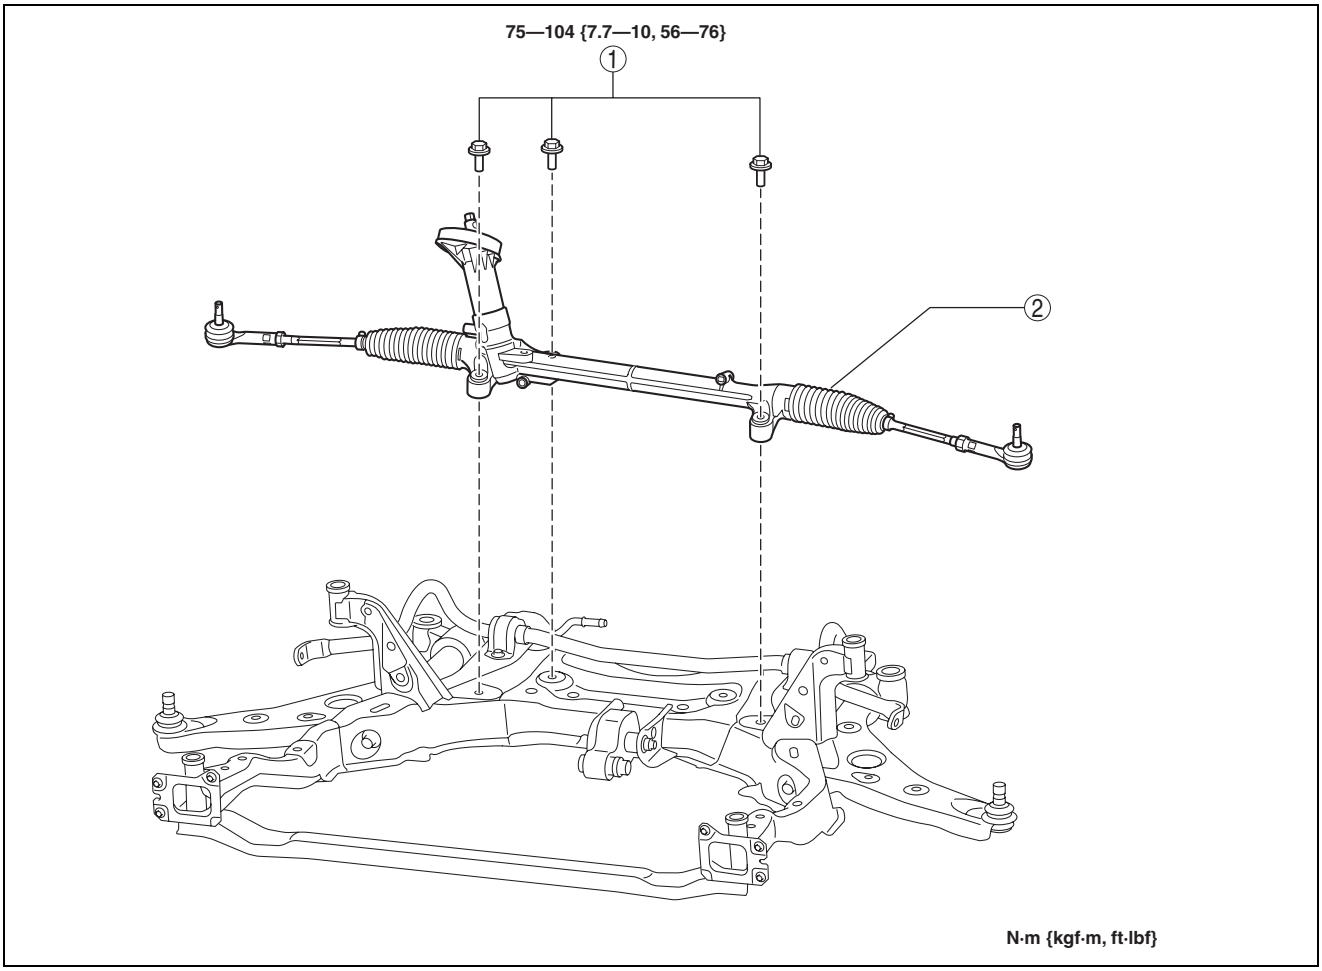
id061300801700

Caution
- **Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor connector (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.**
- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**

1. Remove the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
2. Disconnect the intermediate shaft from the steering gear and linkage. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
3. Disconnect the front ABS wheel-speed sensor wiring harness installed to the steering knuckle and set it aside. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
4. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
5. Remove the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
6. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
7. Remove the front crossmember component. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
8. Remove in the order indicated in the table.
9. Install in the reverse order of removal.
10. After installation, inspect the front wheel alignment. (See 02-11-1 FRONT WHEEL ALIGNMENT.)

ELECTRIC POWER STEERING (EPS)

R.H.D.



ac5wzw0000034

1	Steering gear and linkage installation bolt

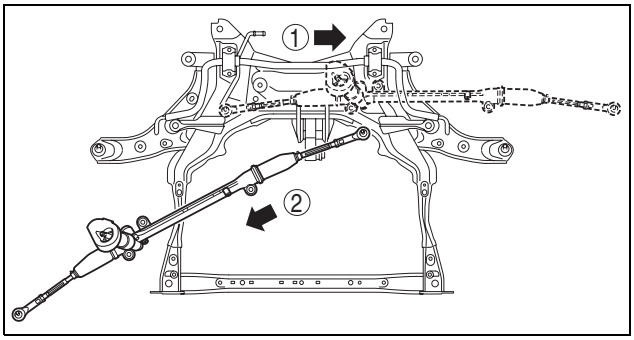
2	Steering gear and linkage (See 06-13-18 Steering Gear and Linkage Removal Note.)

Steering Gear and Linkage Removal Note

1. Remove the steering gear and linkage installation bolts, move the steering gear and linkage in the direction and order of the arrows shown in the figure, and then remove it.

ELECTRIC POWER STEERING (EPS)

R.H.D.

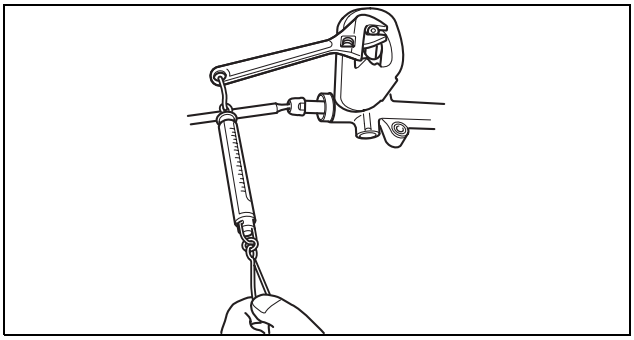


ac5wzw0000034

STEERING GEAR AND LINKAGE INSPECTION

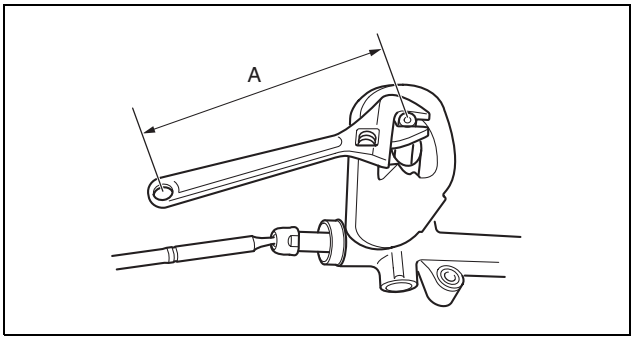
id061300802000

1. Remove the steering gear and linkage. (See 06-13-16 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION.)
2. Remove the tie-rod end and boot. (See 06-13-20 STEERING GEAR AND LINKAGE DISASSEMBLY.)
3. Measure the rotation torque of the pinion shaft using a crescent wrench and pull scale. (speed measurement reference **5 °/s**)
   (1) Install the crescent wrench to the steering gear.



ac5wzw0000103

   (2) Measure the length from the pinion shaft center to the crescent wrench end (application point of pull scale) as shown in the figure. This is dimension A.
   (3) The rotation torque of the pinion shaft can be calculated using the following formula Measured value using pull scale (N {kgf, lbf}) = rotation torque of the pinion shaft (N·m {kgf·cm, in·lbf})/length A (m {cm, in})



ac5wzw0000103

Pinion shaft rotation torque (center of rack ± 180°)
1.0—1.6 N·m {11—16 kgf·cm, 8.9—14 in·lbf} [Pull scale reading: 1.0—1.6 N·m {11—16 kgf·cm, 8.9—14 in·lbf}/A (m {cm, in})]

- If not within the specification, replace the steering gear. (See 06-13-16 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION.)

ELECTRIC POWER STEERING (EPS)

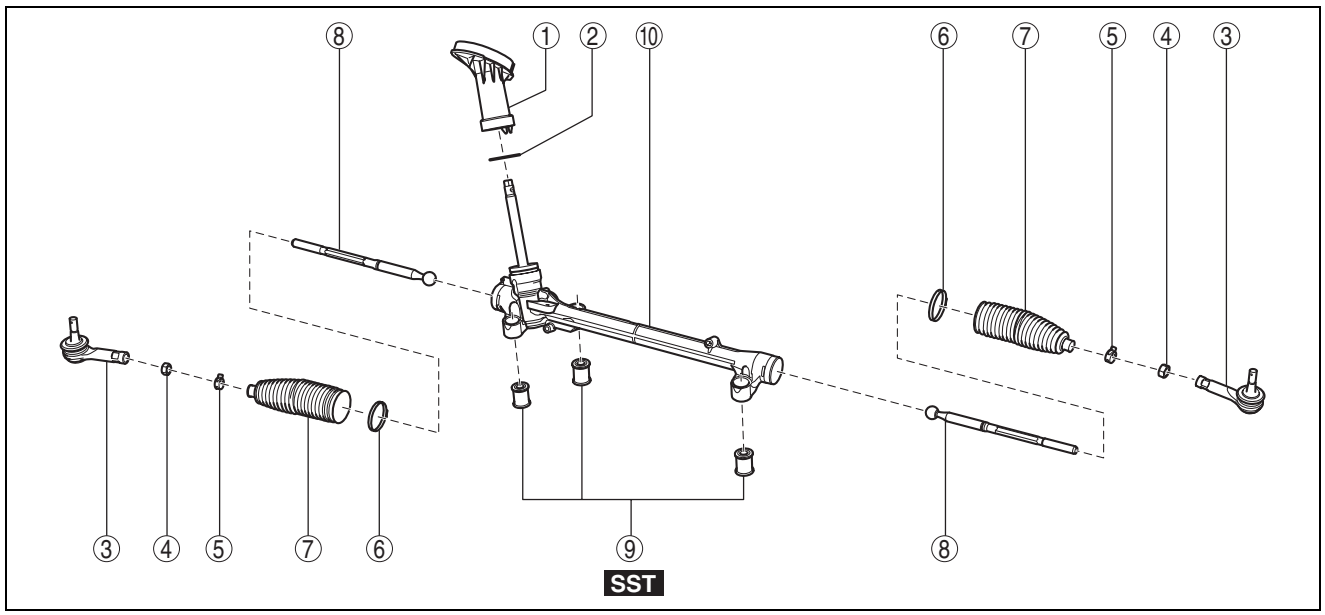
STEERING GEAR AND LINKAGE DISASSEMBLY

id061300801800

Caution
- **To prevent damage to the steering gear, secure it to the vise using a copper plate or clean cloth.**

1. Disassemble in the order indicated in the figure.

R.H.D.



ac5wzw0000103

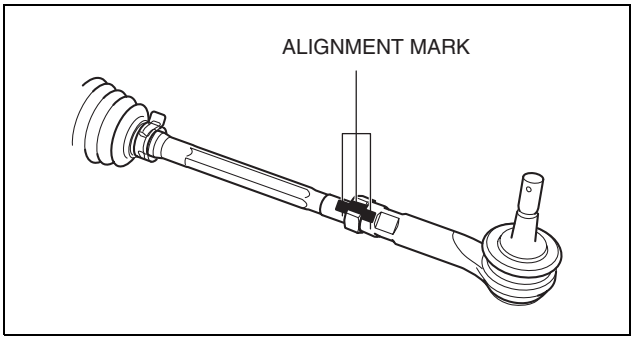
1	Dust cover
2	O-ring
3	Tie-rod end (See 06-13-21 Tie-rod End Disassembly Note.)
4	Locknut
5	Boot clamp
6	Boot band (See 06-13-21 Boot Band Disassembly Note.)

7	Boot
8	Tie rod (See 06-13-21 Tie Rod Disassembly Note.)
9	Mounting rubber (See 06-13-22 Mounting Rubber Disassembly Note.)
10	Steering gear

ELECTRIC POWER STEERING (EPS)

Tie-rod End Disassembly Note

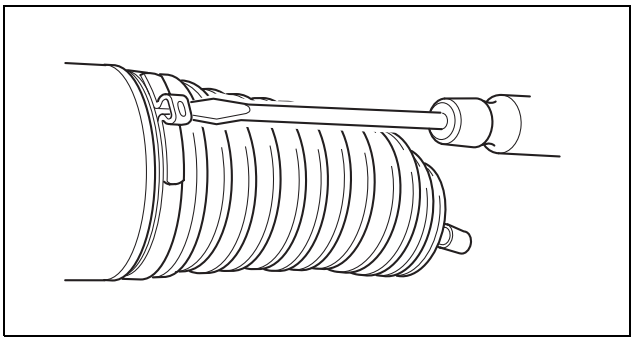
1. Place alignment marks as shown in the figure for proper installation.
2. Remove the tie-rod end.



ac5wzw0000103

Boot Band Disassembly Note

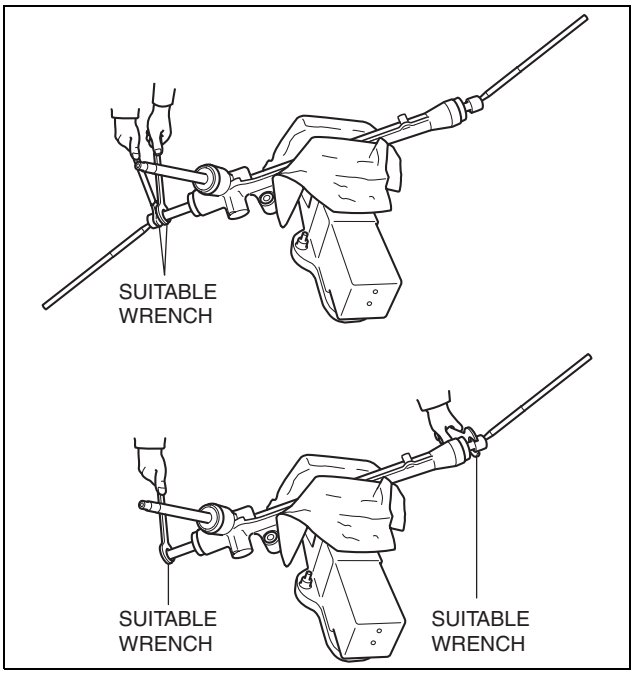
1. Insert a flathead screwdriver into the boot band as shown in the figure, then press the caulked area outward to remove the boot band.



ac5wzw0000103

Tie Rod Disassembly Note

1. Lock the steering rack end (pinion gear side) against rotation with a wrench and remove the tie rod using the suitable wrench.

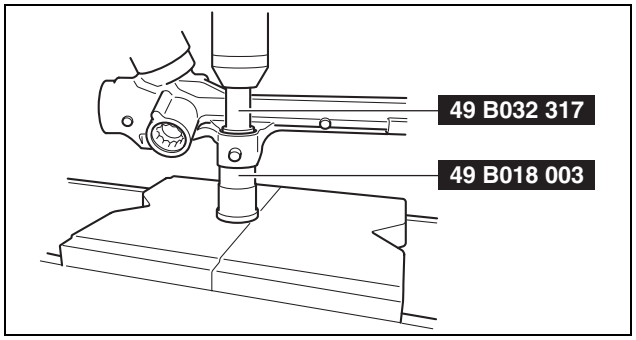


ac5wzw0000103

ELECTRIC POWER STEERING (EPS)

Mounting Rubber Disassembly Note

1. Remove the mounting rubber from the gear housing using the **SSTs** and a press.



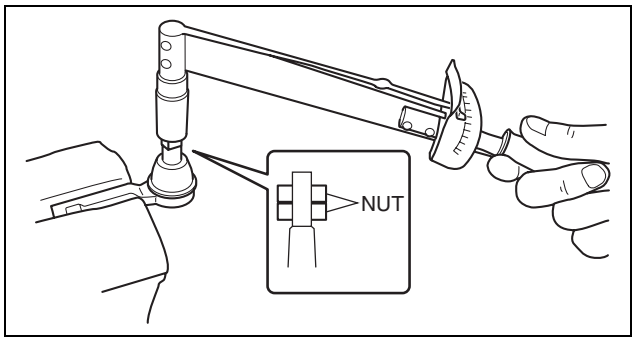
ac5wzw0000103

TIE-ROD END INSPECTION

id061300802700

1. Inspect the tie-rod end for damage and the boot for cracks.
   - If there is any malfunction, replace the tie-rod end.
2. Inspect for excessive play.
   - If there is any malfunction, replace the tie-rod end.
3. Rotate the tie-rod end five times.
4. Install two nuts to the ball joint and measure the tie-rod end rotational torque using a torque wrench.
   - If not within the specification, replace the tie-rod end.

   Tie-rod end rotational torque
   0.5—2.1 N·m {5.1—21 kgf·cm, 4.5—18 in·lbf}



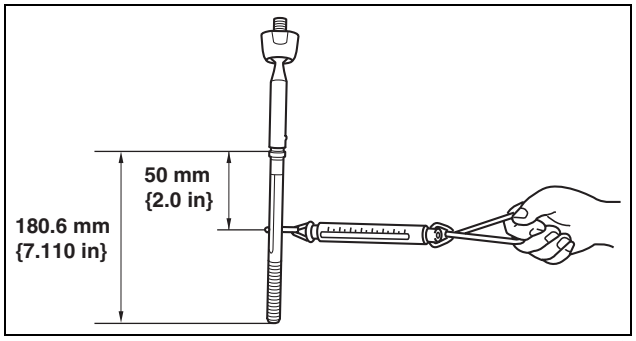
ac5wzw0000104

TIE ROD INSPECTION

id061300802900

1. Inspect for bending and damage.
   - If there is any malfunction, replace the tie rod.
2. Inspect for excessive play.
   - If there is any malfunction, replace the tie rod.
3. Swing the tie rod five times.
4. Measure the swing torque of the tie rod using a pull scale.
   - If not within the specification, replace the tie rod.

   Tie rod swing torque
   0.4—4.0 N·m {4.1—40 kgf·cm, 3.6—35 in·lbf}
   [Pull scale reading: 8—80 N {0.9—8.1 kgf, 2—17 lbf}]



ac5wzw0000249

ELECTRIC POWER STEERING (EPS)

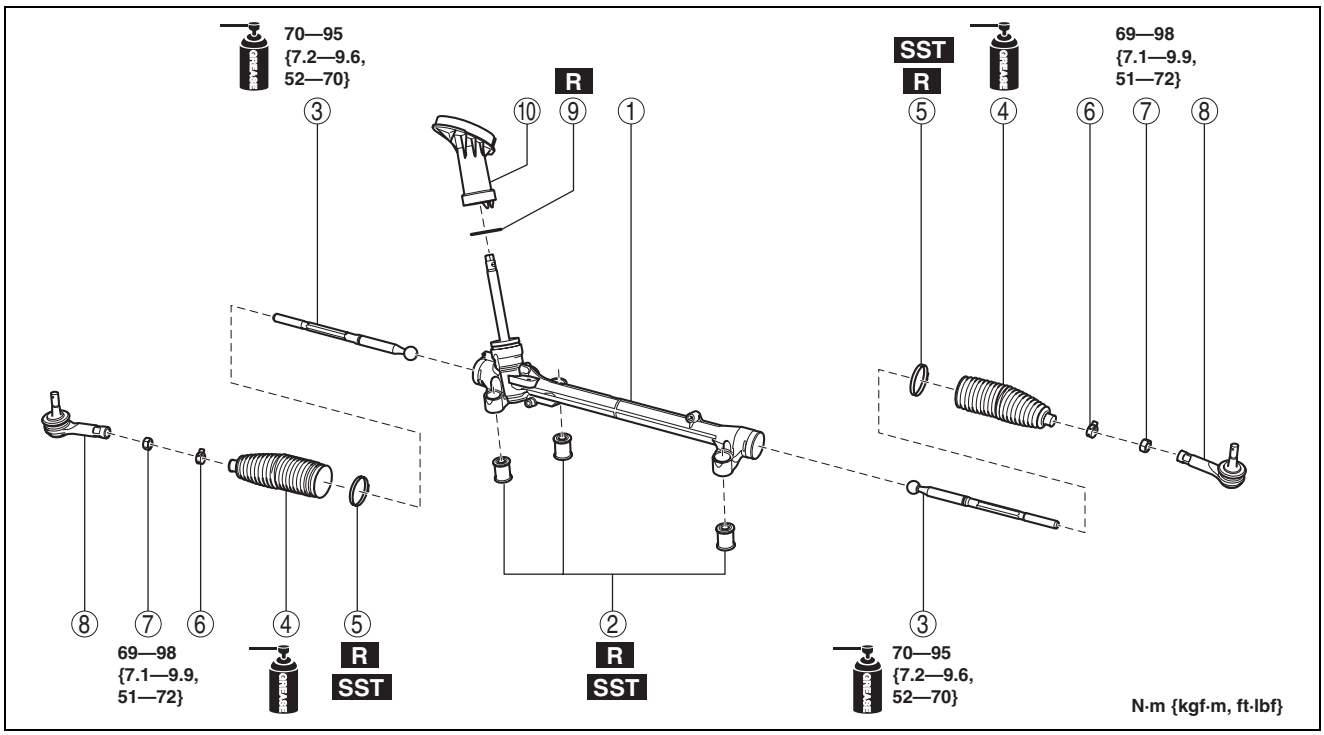
STEERING GEAR AND LINKAGE ASSEMBLY

id061300802100

Caution
- **To prevent damage to the steering gear, secure it to the vise using a copper plate or clean cloth.**

1. Assemble in the order shown in the figure.

R.H.D.



ac5wzw0000104

1	Steering gear
2	Mounting rubber (See 06-13-24 Mounting Rubber Assembly Note.)

3	Tie rod (See 06-13-25 Tie Rod Assembly Note.)
4	Boot

ELECTRIC POWER STEERING (EPS)

5	Boot band (See 06-13-25 Boot Band Assembly Note.)
6	Boot clamp
7	Locknut

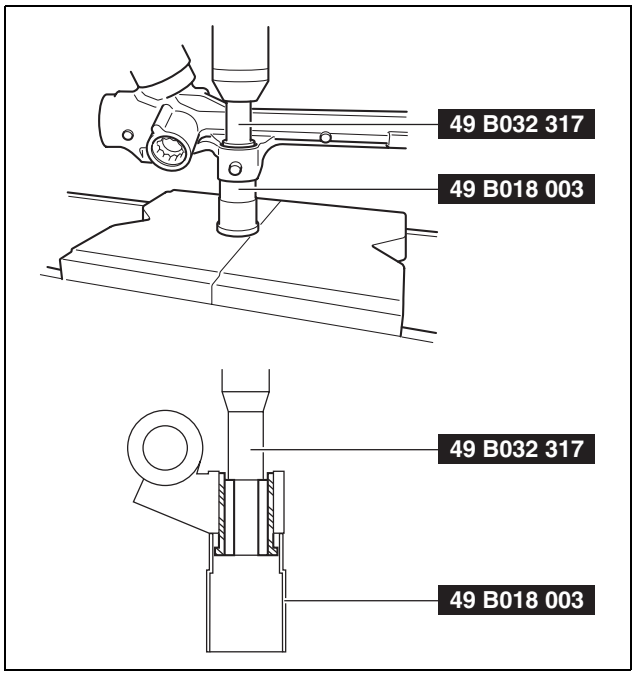
8	Tie-rod end (See 06-13-26 Tie-rod End Assembly Note.)
9	O-ring
10	Dust cover

Mounting Rubber Assembly Note

1. Apply soapy water to the rubber part of the mounting rubber.
2. Press fit the ear portion of the mounting rubber (lower side) using the SSTs until it projects from the gear housing as shown in the figure.

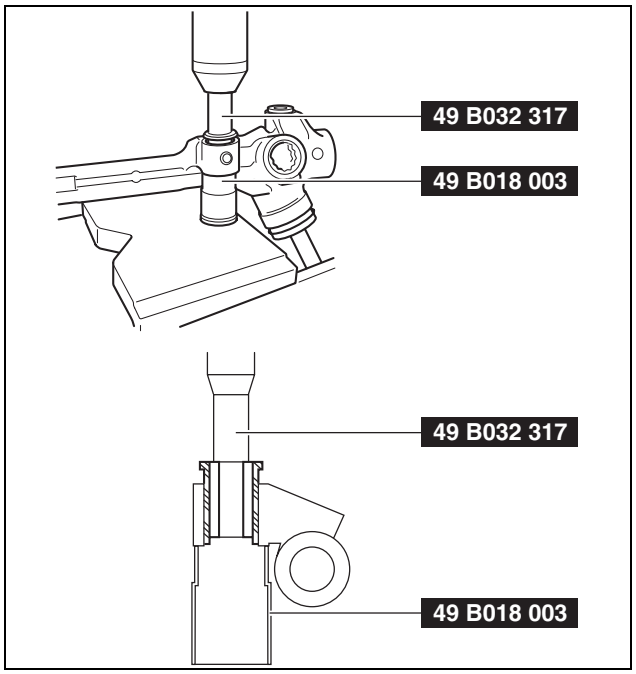
Note

- Press fit the ear portion of the mounting rubber (upper side) until it partially enters the gear housing.



ac5wzw0000104

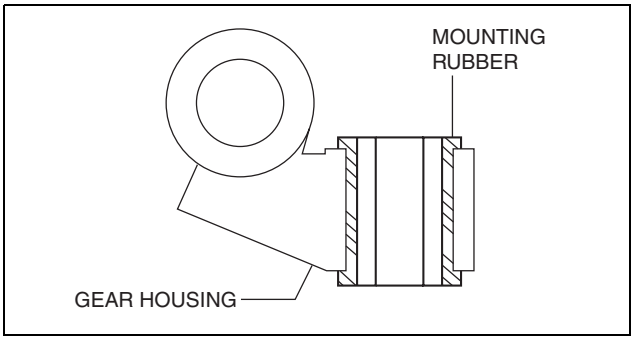
3. Reverse the gear housing, then press fit the mounting rubber using the SSTs and the press until the mounting rubber ear portion (upper side) contacts the gear housing.



ac5wzw0000104

ELECTRIC POWER STEERING (EPS)

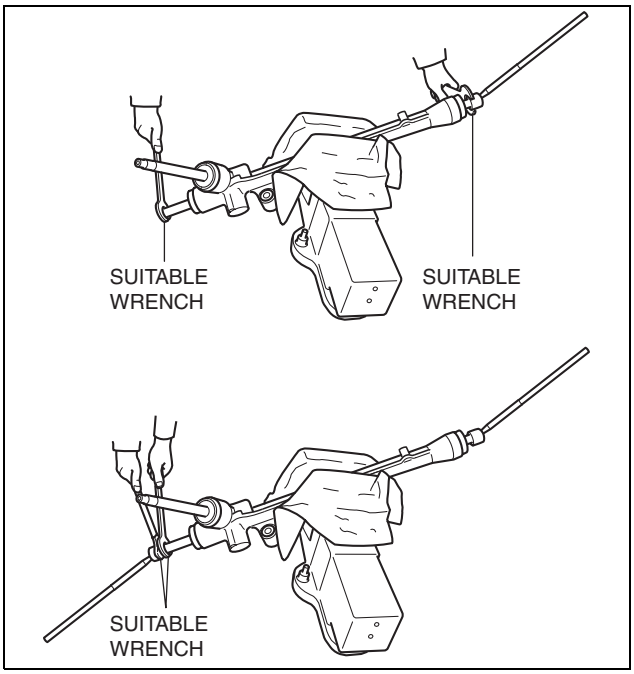
4. Verify that both mounting rubber ears are correctly assembled with no gaps between them and the gear housing as shown in the figure.
   - If there are gaps, readjust their positions using the **SSTs** and the press.



ac5wzw0000104

Tie Rod Assembly Note

1. Lock the steering rack end (pinion gear side) against rotation with a wrench and install the tie rod using the suitable wrench.



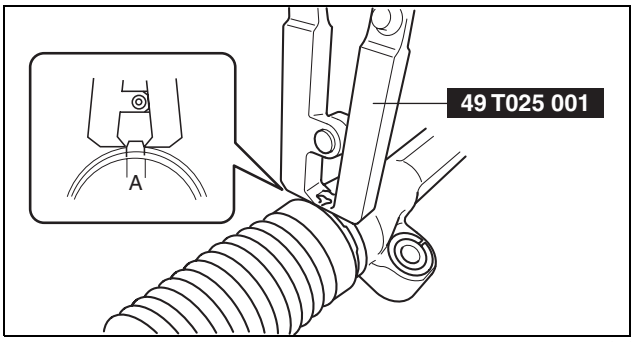
ac5wzw0000104

Boot Band Assembly Note

1. Assemble the boot band to the boot.
2. Crimp the boot band using the **SST**.
3. Verify that the crimping clearance A is within the specification.
   - If crimping clearance A exceeds the specification, reduce **SST** clearance, and crimp the boot band again.
   - If crimping clearance A is less than the specification, increase **SST** clearance, and crimp a new boot band.

   Standard clearance A
   2.5—3.0 mm {0.10—0.11 in}

4. Rotate the by hand and verify that it is securely installed to the boot band.

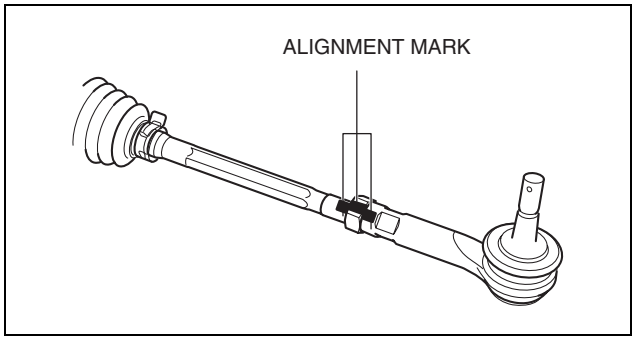


ac5wzw0000104

ELECTRIC POWER STEERING (EPS)

Tie-rod End Assembly Note

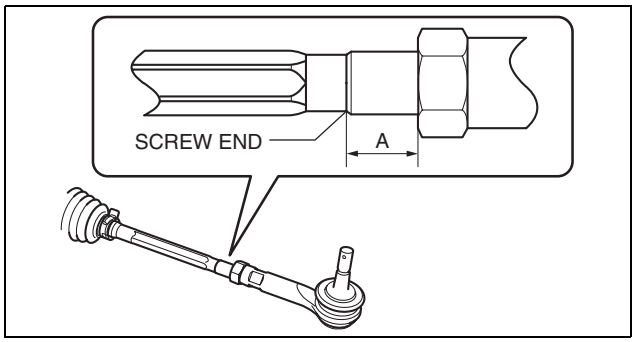
1. Align the alignment marks made before removal and assemble the tie-rod end to the tie rod.
   - If there are no alignment marks, go to the next step.



ac5wzw0000104

2. Adjust dimension A shown in the figure to the standard, then assemble the tie-rod end.

   Standard Dimension A
   - **10.1—23.1 mm {0.398—0.909 in}**



ac5wzw0000249

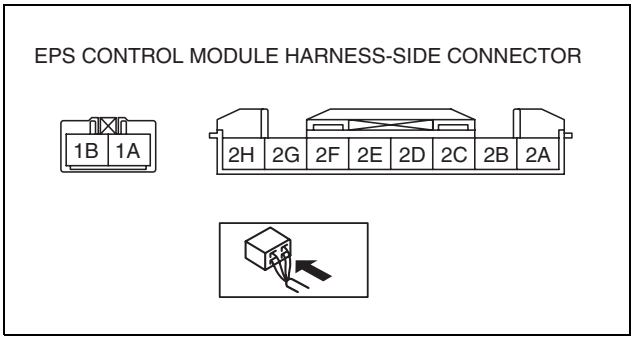
EPS CONTROL MODULE INSPECTION

id061300802400

1. Remove the driver-side front scuff plate. (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the driver-side front side trim. (See 09-17-62 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
3. Remove the car-navigation unit (with car-navigation system). (See 09-20-11 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
4. Remove the switch panel. (See 09-17-18 SWITCH PANEL REMOVAL/INSTALLATION.)
5. Remove the decoration panel. (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
6. Remove the shift lever knob (MTX vehicles). (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R]
7. Remove the selector lever knob (ATX vehicles). (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
8. Remove the front console box. (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)
9. Remove the shift panel. (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
10. Remove the upper panel. (See 09-17-44 UPPER PANEL REMOVAL/INSTALLATION.)
11. Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.)
12. Remove the side wall. (See 09-17-49 SIDE WALL REMOVAL/INSTALLATION.)
13. Remove the front console. (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
14. Disconnect the bonnet release lever from the lower panel. (See 09-14-17 BONNET LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)
15. Remove the lower panel. (See 09-17-35 LOWER PANEL REMOVAL/INSTALLATION.)
16. Remove the driver-side front heat duct. (See 07-11-22 FRONT HEAT DUCT REMOVAL/INSTALLATION.)
17. Attach the tester lead to the underside of the EPS CM connector and inspect the voltage according to the terminal voltage table (reference).

ELECTRIC POWER STEERING (EPS)

Terminal Voltage Table (Reference)



ac5wzw0000034

Terminal	Signal name	Connected to	Measured item	Measured terminal (measurement condition)	Voltage (V)	Inspection item(s)
1A	Ground	Ground point	Voltage	Under any condition	1 or less	• Wiring harness (1A—ground point)
1B	Battery power supply	Battery	Voltage	Under any condition	B+	• Wiring harness (1B—battery) • Fuse (EPS 60A)
2A	CAN_H	—	Perform DTC inspection			—
2B	—	—	—	—	—	—
2C	—	—	—	—	—	—
2D	CAN_L	—	Perform DTC inspection			—
2E	—	—	—	—	—	—
2F	—	—	—	—	—	—
2G	—	—	—	—	—	—
2H	Ignition power supply	IG1 relay	Voltage	Ignition ON (engine off or on)	B+	• Wiring harness (2H—IG1 relay—battery) • Fuse (SRS1 7.5A)
				Ignition OFF (LOCK)	1 or less	

06-50 TECHNICAL DATA

STEERING TECHNICAL DATA. 06-50–1

STEERING TECHNICAL DATA

id065000800200

Item	Specification
Steering wheel play	0—30 mm {0—1.1 in}
Steering wheel steering force (reference)	7.8 N·m {80 kgf·cm, 69 in·lbf} or less
Steering shaft length	463.7—467.7 mm {18.26—18.41 in}
Pinion shaft rotation torque (center of rack ± 180°)	1.0—1.6 N·m {11—16 kgf·cm, 8.9—14 in·lbf} [Pull scale reading: 1.0—1.6 N·m {11—16 kgf·cm, 8.9—14 in·lbf}/A (m {cm, in})] A: Length from the pinion shaft center to application point of pull scale
Tie-rod end rotational torque	0.5—2.1 N·m {5.1—21 kgf·cm, 4.5—18 in·lbf}
Tie rod swing torque	0.4—4.0 N·m {4.1—40 kgf·cm, 3.6—35 in·lbf} [Pull scale reading: 8—80 N {0.9—8.1 kgf, 2—17.0 lbf}]

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

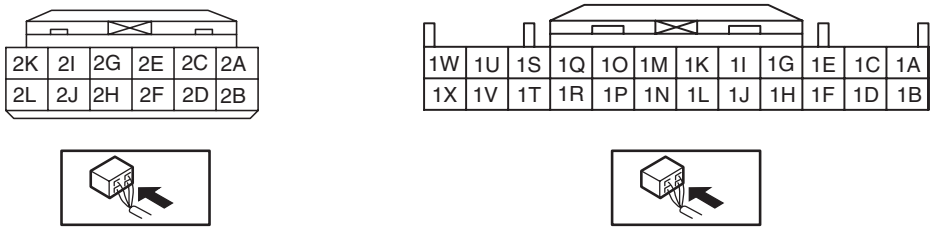
CLIMATE CONTROL UNIT WIRING HARNESS SIDE CONNECTOR



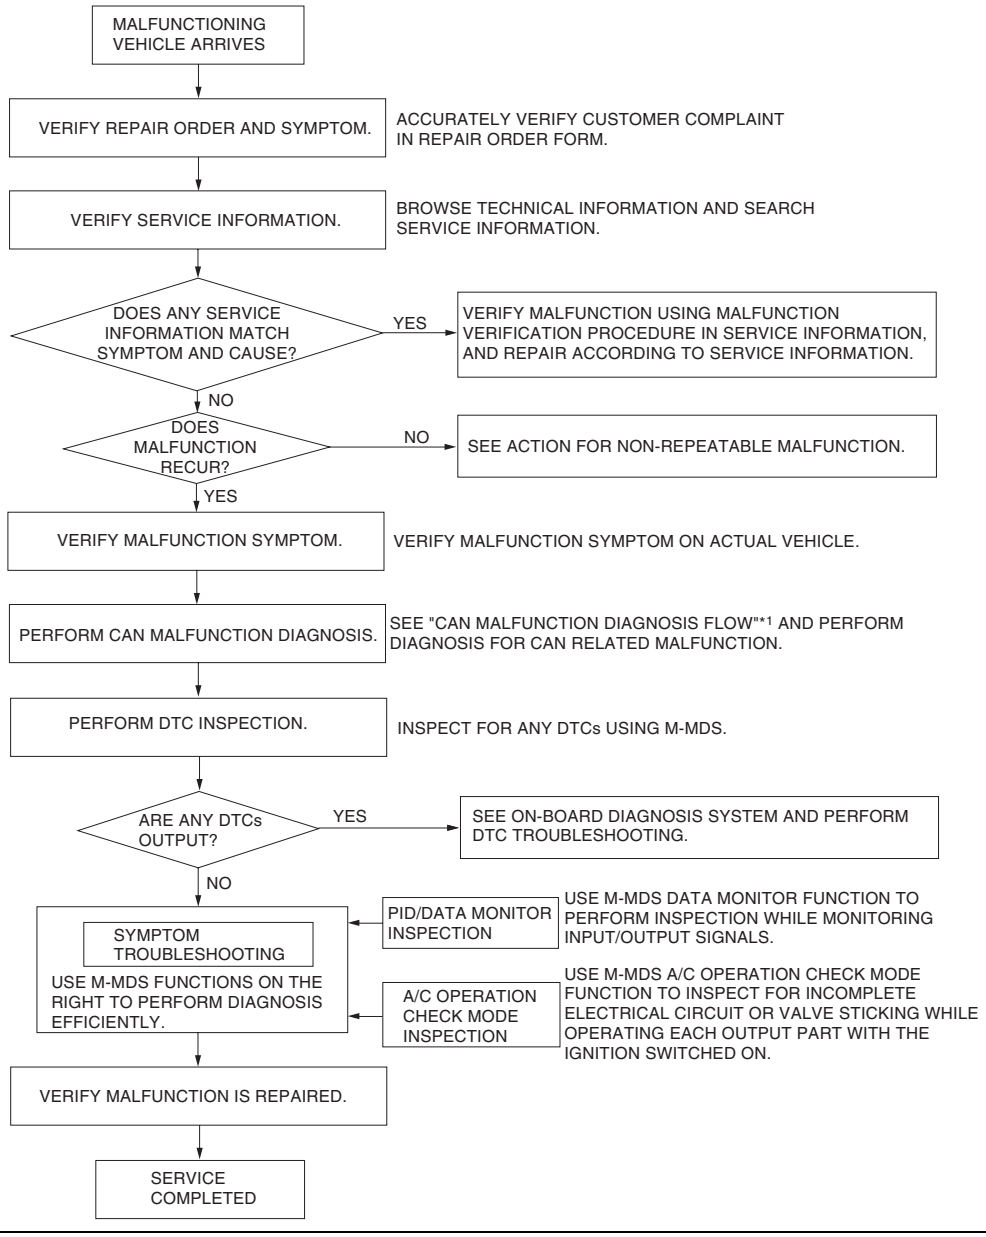
ac5wzw0000276

FOREWORD [FULL-AUTO AIR CONDITIONER]

id0702c1820100

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



ac5wzw0000276

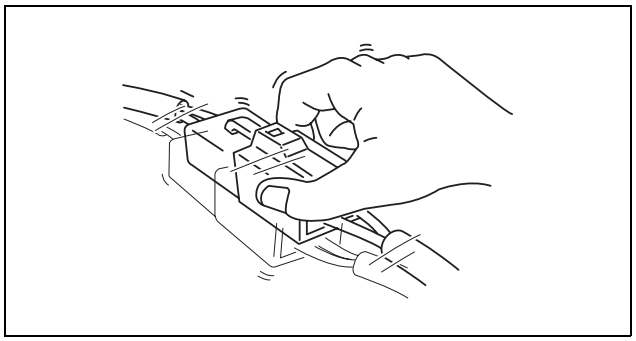
07

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)], 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)], 10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)], 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

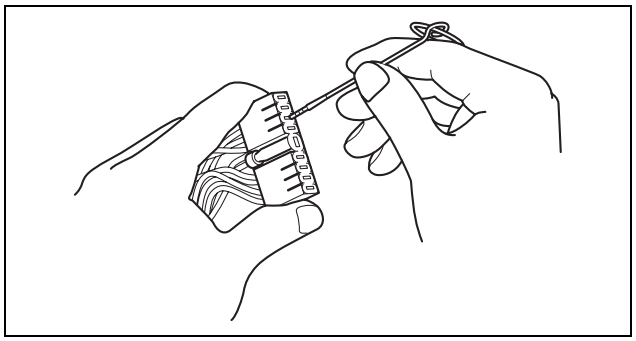
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as CAN circuit voltage) at that time, and detect the malfunction cause.
  - — Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3zzw0001143

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

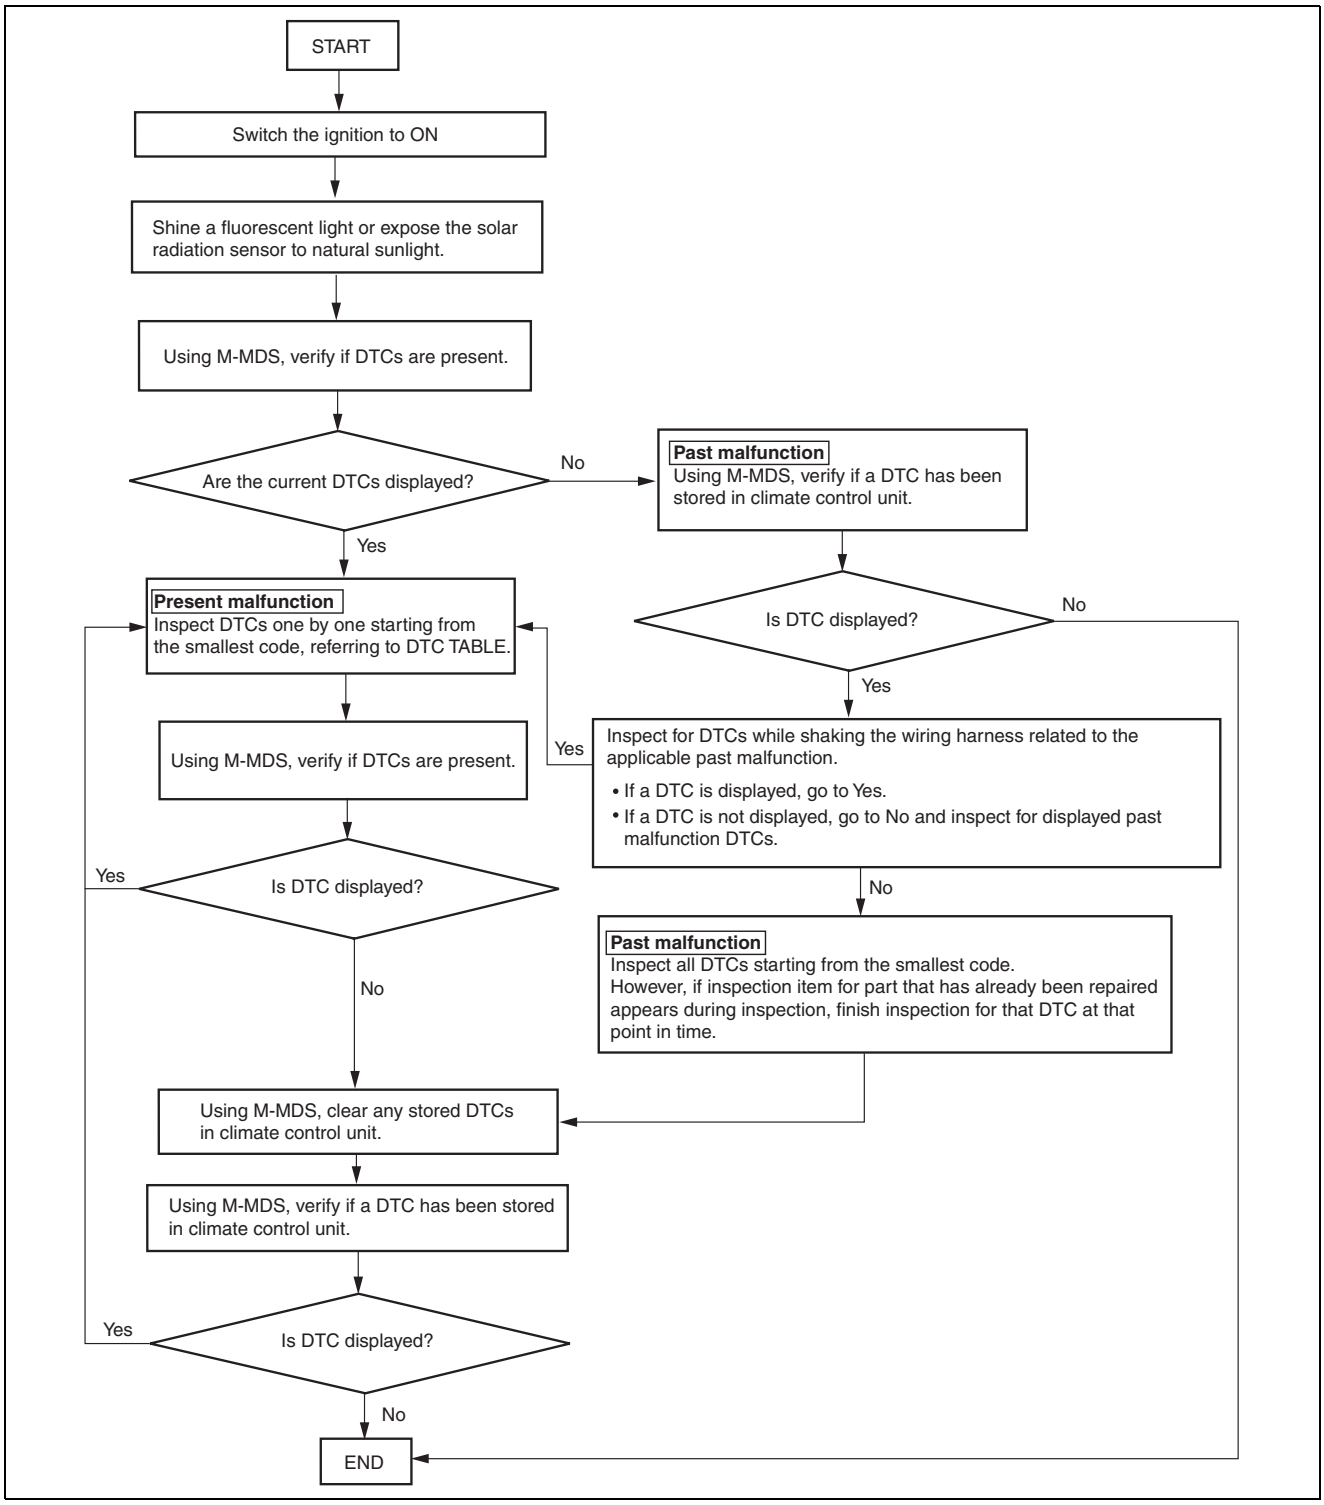
FLOWCHART [FULL-AUTO AIR CONDITIONER]

id0702c1820200

- Use the following flowchart to verify the cause of the problem.

Note

- When inspecting past malfunction codes, inspect only the DTCs that were indicated before beginning the inspection. A mis-diagnosis could occur as a result of new DTCs being added while performing an inspection by disconnecting related parts or connectors.
- When DTCs of the present malfunction are no longer output after present or past malfunctions or both have been repaired, be sure to clear the past malfunction from memory to prevent repair of malfunctions that have already been repaired.



am3zzw0001093

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

DTC DISPLAY [FULL-AUTO AIR CONDITIONER]

id0702c1801500

Note
- If power from the battery is interrupted, the heater control unit will go into a non-configured state because the memory for the configuration information is erased. If the ignition is switched ON (engine off) at this time, DTC U2300:55 is detected.
- Normally, the configuration is re-performed within 6 s after the ignition is switched ON (engine off).
- After performing the configuration, DTC U2300:55 will be cleared if the ignition is switched ON (engine off) after the ignition is switched off.

CMDTC Self Test
1. Switch the ignition to off.
2. Switch the ignition to ON (engine off) and wait for **6 s or more**.
3. Switch the ignition to off.
4. Connect the M-MDS to the DLC-2.
5. Expose the solar radiation sensor to natural sunlight.

Note
- If natural sunlight is not shone on the solar radiation sensor, the climate control unit determines a malfunction and indicates DTC “B1A63:12, B1A63:13, B1A64:12, B1A64:13”.

6. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
7. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
8. After completion of repairs, clear all DTCs stored in the climate control unit. (See 07-02-7 CLEARING DTC [FULL-AUTO AIR CONDITIONER].)

ODDTC Self Test
1. Switch the ignition to off.
2. Switch the ignition to ON (engine off) and wait for **6 s or more**.
3. Switch the ignition to off.
4. Connect the M-MDS to the DLC-2.
5. Expose the solar radiation sensor to natural sunlight.

Note
- If natural sunlight is not shone on the solar radiation sensor, the climate control unit determines a malfunction and indicates DTC “B1A63:12, B1A63:13, B1A64:12, B1A64:13”.

6. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “EATC”.
7. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
8. After completion of repairs, clear all DTCs stored in the climate control unit. (See 07-02-7 CLEARING DTC [FULL-AUTO AIR CONDITIONER].)

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

CLEARING DTC [FULL-AUTO AIR CONDITIONER]

id0702c1801600

CMDTC Clearing DTC Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s more.**
7. Perform DTC inspection. (See 07-02-6 DTC DISPLAY [FULL-AUTO AIR CONDITIONER].)
8. Verify that no DTCs are displayed.

ODDTC Clearing DTC Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “EATC”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s more.**
7. Perform DTC inspection. (See 07-02-6 DTC DISPLAY [FULL-AUTO AIR CONDITIONER].)
8. Verify that no DTCs are displayed.

DTC TABLE [FULL-AUTO AIR CONDITIONER]

id0702c1801700

X: Applicable
–: Not applicable

DTC	Warning lamp	Malfunction location	Detected condition	Fail safe	Drive cycle	Self test type*1	Memory function	Page
B1081:71	—	• Driver-side air mix actuator (L.H.D.) • Passenger-side air mix actuator (R.H.D.)	Motor lock	X	—	C	X	(See 07-02-9 DTC B1081:71, B1082:71 [FULL-AUTO AIR CONDITIONER].)

DTC B1081:71, B1082:71 [FULL-AUTO AIR CONDITIONER]

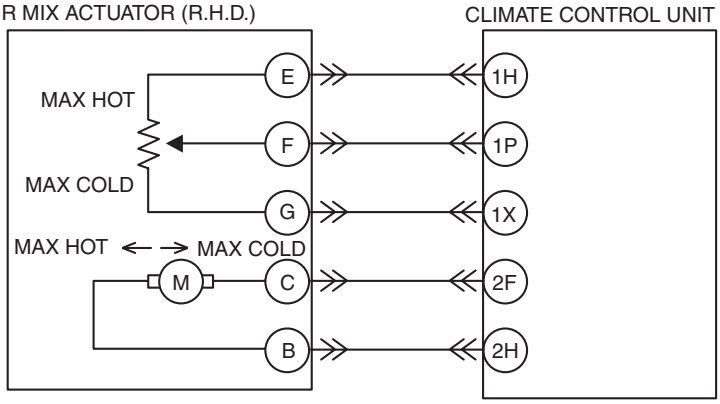
id0702c1816500

System malfunction location (L.H.D)	• **B1081:71: Driver-side air mix actuator motor lock** • **B1082:71: Passenger-side air mix actuator motor lock**
System malfunction location (R.H.D)	• **B1081:71: Passenger-side air mix actuator motor lock** • **B1082:71: Driver-side air mix actuator motor lock**
Detection condition	• Air mix actuator motor lock
Fail-safe	**Malfunction determined when IG SW at ON** • Air mix actuator drive signal is stopped right when the malfunction is determined. **Malfunction already exists when IG SW turned to ON** • Twenty seconds after ignition is switched ON, the air mix actuator drive signal is output normally again. Afterwards, motor output is stopped during malfunction determination.
Possible cause	• Connector or terminal malfunction • Air mix actuator malfunction • A/C unit (air mix link and air mix crank) malfunction • Open circuit in wiring harness between climate control unit and air mix actuator • Short to ground in wiring harness between climate control unit and air mix actuator • Climate control unit malfunction

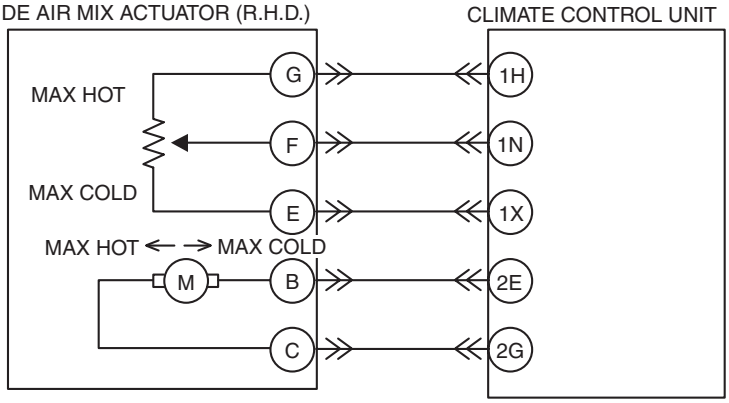
ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

System malfunction location (L.H.D)	• **B1081:71: Driver-side air mix actuator motor lock** • **B1082:71: Passenger-side air mix actuator motor lock**
System malfunction location (R.H.D)	• **B1081:71: Passenger-side air mix actuator motor lock** • **B1082:71: Driver-side air mix actuator motor lock**

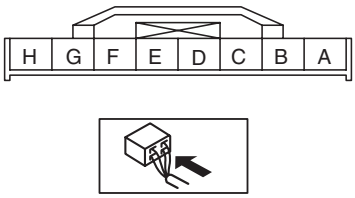
• PASSENGER-SIDE AIR MIX ACTUATOR (L.H.D.)
• DRIVER-SIDE AIR MIX ACTUATOR (R.H.D.)



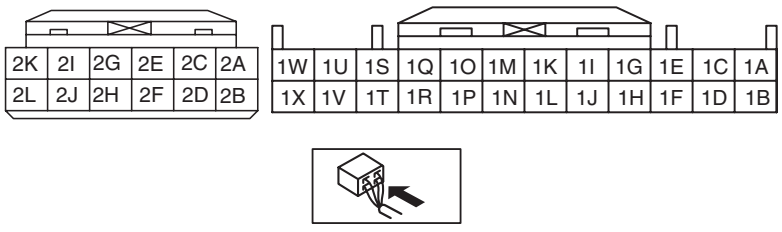
• DRIVER-SIDE AIR MIX ACTUATOR (L.H.D.)
• PASSENGER-SIDE AIR MIX ACTUATOR (R.H.D.)



AIR MIX ACTUATOR WIRING HARNESS SIDE CONNECTOR



CLIMATE CONTROL UNIT WIRING HARNESS SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIR MIX ACTUATOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the air mix actuator connector. (See 07-40A-7 AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
2	**INSPECT AIR MIX ACTUATOR OPERATION** • Disconnect the air mix actuator connector. • Apply battery positive voltage and connect the ground to the air mix actuator terminals B and C, and then inspect the air mix actuator. • Does the air mix actuator operate?	Yes	Connect the connector, then go to Step 4.
		No	Go to the next step.
3	**INSPECT AIR MIX LINK OPERATION** • Remove the air mix actuator. • Operate the air mix link manually. • Does the air mix link operate smoothly?	Yes	Replace the air mix actuator. (See 07-40A-7 AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
		No	Replace the air mix link and the air mix crank. Go to the next step.
4	**INSPECT AIR MIX ACTUATOR CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Disconnect the climate control unit connector. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) • Apply battery positive voltage and connect the ground to the climate control unit terminal 2E and 2G, and then inspect the air mix actuator. (Driver-side) • Apply battery positive voltage and connect the ground to the climate control unit terminal 2F and 2H, and then inspect the air mix actuator. (Passenger-side) • Does the air mix actuator operate?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness. After repair procedure, go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the past malfunction from memory. • Verify DTCs. • Is DTC B1081:71 or B1082:71 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
		No	Go to the next step.

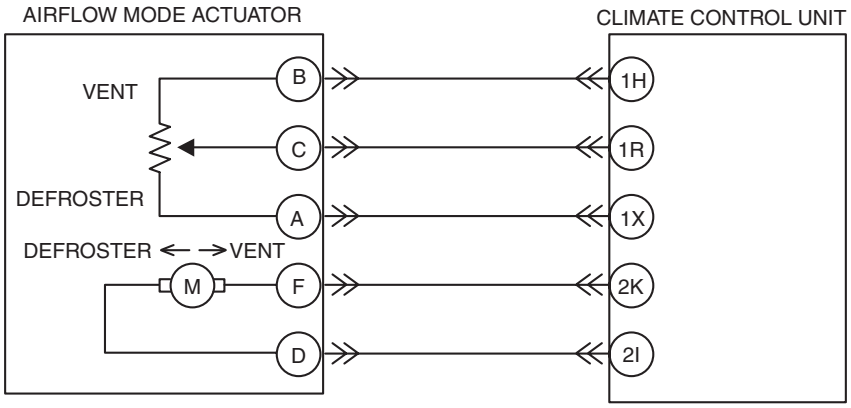
ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
7	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection.
		No	DTC troubleshooting completed.

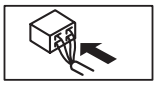
DTC B1086:71 [FULL-AUTO AIR CONDITIONER]

id0702c1816700

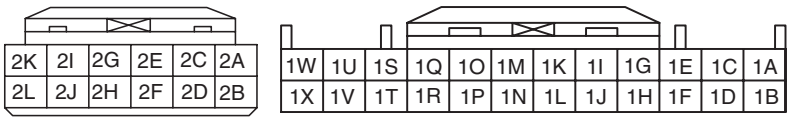
System malfunction location	• **Airflow mode actuator motor lock**
Detection condition	• Airflow mode actuator motor lock
Fail-safe	**Malfunction determined when IG SW at ON** • Airflow mode actuator drive signal is stopped right when the malfunction is determined. **Malfunction already exists when IG SW turned to ON** • Nine seconds after ignition is switched ON, the airflow mode actuator drive signal is output normally again. Afterwards, motor output is stopped during malfunction determination.
Possible cause	• Connector or terminal malfunction • Airflow mode actuator malfunction • A/C unit (airflow mode link and airflow mode crank) malfunction • Open circuit in wiring harness between climate control unit and airflow mode actuator • Short to ground in wiring harness between climate control unit and airflow mode actuator • Climate control unit malfunction

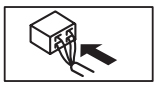


AIRFLOW MODE ACTUATOR WIRING HARNESS SIDE CONNECTOR



CLIMATE CONTROL UNIT WIRING HARNESS SIDE CONNECTOR





ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIRFLOW MODE ACTUATOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the airflow mode actuator connector. (See 07-40A-13 AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
2	**INSPECT AIRFLOW MODE ACTUATOR OPERATION** • Disconnect the airflow mode actuator connector. • Apply battery positive voltage and connect the ground to the airflow mode actuator terminals F and D, and then inspect the airflow mode actuator. • Does the airflow mode actuator operate?	Yes	Connect the connector, then go to Step 4.
		No	Go to the next step.
3	**INSPECT AIRFLOW MODE MAIN LINK OPERATION** • Remove the airflow mode actuator. • Operate the airflow mode main link manually. • Does the airflow mode main link operate smoothly?	Yes	Replace the airflow mode actuator. (See 07-40A-13 AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
		No	Replace the airflow mode main link, airflow mode sub link, and the airflow mode crank. Go to the next step.
4	**INSPECT AIRFLOW MODE ACTUATOR CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Disconnect the climate control unit connector. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) • Apply battery positive voltage and connect the ground to the climate control unit connector terminals 2K and 2I, and then inspect the airflow mode actuator. • Does the airflow mode actuator operate?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness. After repair procedure, go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the past malfunction from memory. • Verify DTCs. • Is DTC B1086:71 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
		No	Go to the next step.

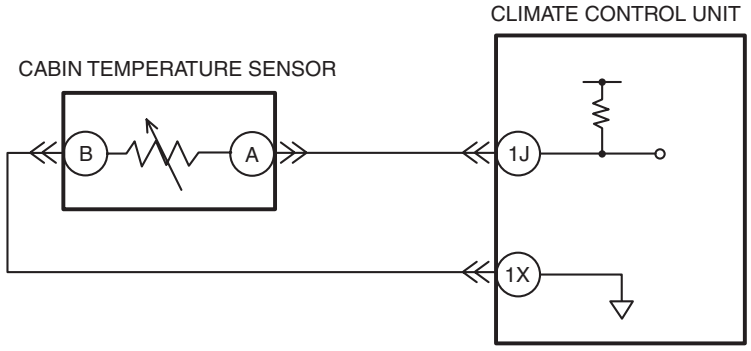
ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

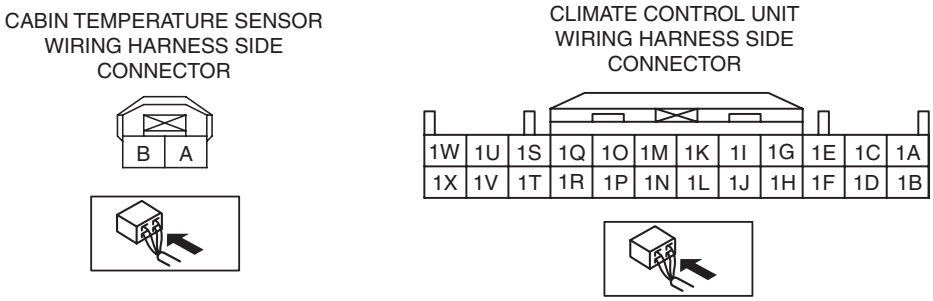
STEP	INSPECTION		ACTION
7	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection.
		No	DTC troubleshooting completed.

DTC B1A61:11, B1A61:13 [FULL-AUTO AIR CONDITIONER]

id0702c1816800

System malfunction location	• **B1A61:11: Cabin temperature sensor circuit short to ground** • **B1A61:13: Cabin temperature sensor circuit open**
Detection condition	• Malfunction in wiring harness between cabin temperature sensor and climate control unit
Fail-safe	**Malfunction determined when IG SW at ON** • Cabin temperature sensor input value is fixed at the value right before the malfunction. **Malfunction already exists when IG SW turned to ON** • Cabin temperature sensor input value is fixed at **25 °C {77 °F}**.
Possible cause	• Connector or terminal malfunction • Cabin temperature sensor malfunction • Open circuit in wiring harness between climate control unit and cabin temperature sensor • Short to ground in wiring harness between climate control unit and cabin temperature sensor • Climate control unit malfunction





ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT CABIN TEMPERATURE SENSOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the cabin temperature sensor connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
2	**INSPECT CABIN TEMPERATURE SENSOR** • Inspect the cabin temperature sensor. (See 07-40A-26 CABIN TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is it normal?	Yes	Go to the next step.
		No	Replace the cabin temperature sensor. (See 07-40A-23 CABIN TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
3	**INSPECT CABIN TEMPERATURE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Disconnect the climate control unit connector and the cabin temperature sensor connector. • Inspect for continuity between the following terminals (wiring harness-side): — Climate control unit terminal 1J—cabin temperature sensor terminal A — Climate control unit terminal 1X—cabin temperature sensor terminal B • Is there continuity?	Yes	Go to the next step.
		No	Repair the wiring harness. Go to the next step.
4	**INSPECT CABIN TEMPERATURE SENSOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Climate control unit 1J • Is there continuity?	Yes	Repair the wiring harness. Go to the next step.
		No	Connect the climate control unit connector, then go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**INSPECT CABIN TEMPERATURE SENSOR CIRCUIT** • Connect the climate control unit connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Inspect the voltage at the following climate control unit terminal (wiring harness-side). — Terminal 1J (cabin temperature sensor input signal) • Is the voltage normal? (**Approx. 5 V**)	Yes	The system is normal at present. Go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

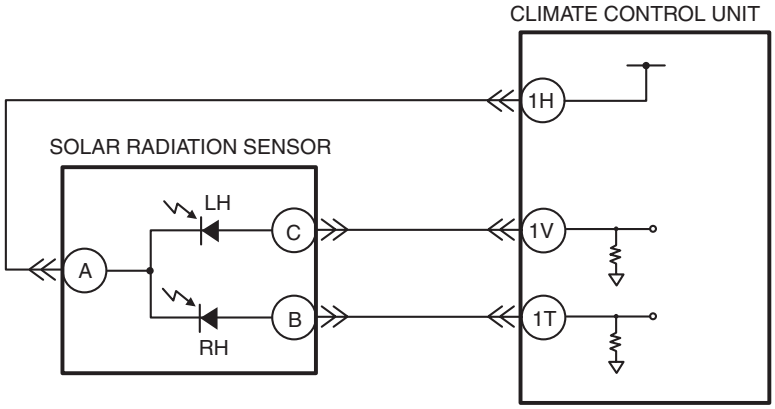
STEP	INSPECTION		ACTION
7	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Switch the ignition off. • Disconnect the negative battery cable. • Reconnect the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the past malfunction from memory. • Verify DTCs. • Is DTC B1A61:11 or B1A61:13 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
		No	Go to the next step.
8	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection.
		No	DTC troubleshooting completed.

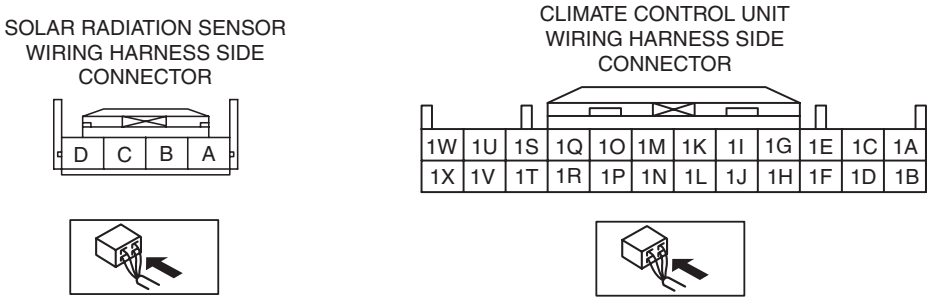
ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

DTC B1A63:12, B1A63:13, B1A64:12, B1A64:13 [FULL-AUTO AIR CONDITIONER]

id0702c1730000

System malfunction location	• **B1A63:12: Solar radiation sensor (RH) circuit short to power supply** • **B1A63:13: Solar radiation sensor (RH) circuit open** • **B1A64:12: Solar radiation sensor (LH) circuit short to power supply** • **B1A64:13: Solar radiation sensor (LH) circuit open**
Detection condition	• Malfunction in wiring harness between solar radiation sensor and climate control unit
Fail-safe	**Malfunction determined when IG SW at ON** • The solar radiation sensor input value is fixed at the value directly before the malfunction only when the valve is **1,450 W/m^2 or more**. **Malfunction already exists when IG SW turned to ON** • Solar radiation sensor value is fixed at **0 W/m^2**.
Possible cause	• Connector or terminal malfunction • Light amount shone on the solar radiation sensor is insufficient (Circuit is normal) • Solar radiation sensor malfunction • Open circuit in wiring harness between climate control unit and solar radiation sensor • Short to power supply in wiring harness between climate control unit and solar radiation sensor • Climate control unit malfunction





ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT SOLAR RADIATION SENSOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the solar radiation sensor connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
2	**INSPECT SOLAR RADIATION SENSOR** • Inspect the solar radiation sensor. (See 07-40A-22 SOLAR RADIATION SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is it normal?	Yes	Go to the next step.
		No	Replace the solar radiation sensor. (See 07-40A-21 SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
3	**INSPECT SOLAR RADIATION SENSOR CIRCUIT FOR OPEN CIRCUIT** • Disconnect the climate control unit connector and the solar radiation sensor connector. • Inspect for continuity between the following terminals (wiring harness-side): — Climate control unit terminal 1H—solar radiation sensor terminal A — Climate control unit terminal 1V—solar radiation sensor terminal C — Climate control unit terminal 1T—solar radiation sensor terminal B • Is there continuity?	Yes	Go to the next step.
		No	Repair the wiring harness. Go to the next step.
4	**INSPECT SOLAR RADIATION SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — Climate control unit terminal 1H — Climate control unit terminal 1V — Climate control unit terminal 1T • Is the voltage **0V**?	Yes	Go to the next step.
		No	Repair the wiring harness. Go to the next step.

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

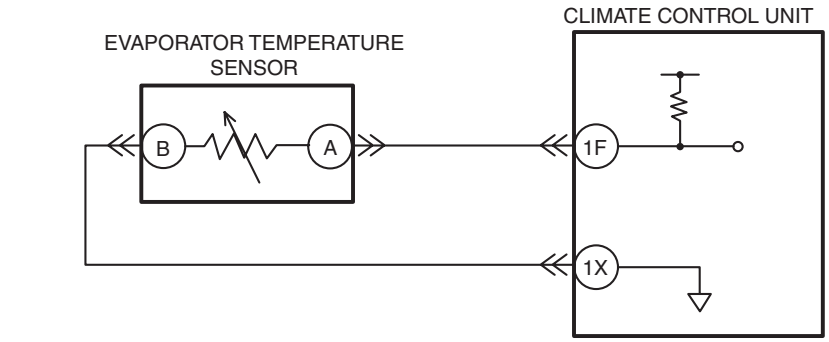
STEP	INSPECTION		ACTION
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the past malfunction from memory. • Verify DTCs. • Is DTC B1A63:12, B1A63:13, B1A64:12 or B1A64:13 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection.
		No	DTC troubleshooting completed.

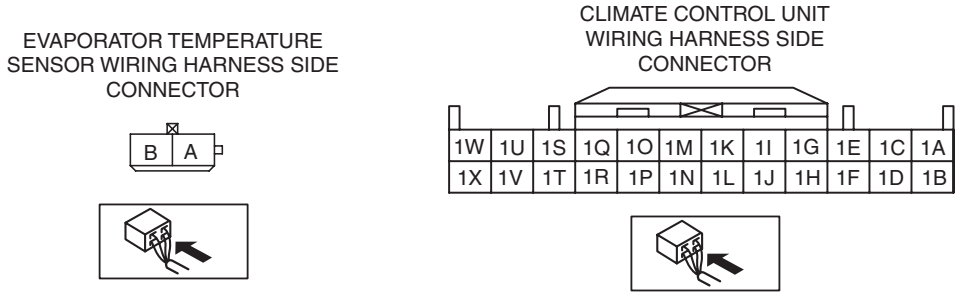
ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

DTC B1B71:11, B1B71:13 [FULL-AUTO AIR CONDITIONER]

id0702c1817100

System malfunction location	• **B1B71:11: Evaporator temperature sensor circuit short to ground** • **B1B71:13: Evaporator temperature sensor circuit open**
Detection condition	• Malfunction in wiring harness between evaporator temperature sensor and climate control unit
Fail-safe	• A/C output OFF is controlled when the evaporator temperature sensor input value is at **0 °C {32 °F}**.
Possible cause	• Connector or terminal malfunction • Evaporator temperature sensor malfunction • Open circuit in wiring harness between climate control unit and evaporator temperature sensor • Short to ground in wiring harness between climate control unit and evaporator temperature sensor • Climate control unit malfunction





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT EVAPORATOR TEMPERATURE SENSOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the evaporator temperature sensor connector. (See 07-11-14 A/C UNIT DISASSEMBLY/ASSEMBLY.) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
2	**INSPECT EVAPORATOR TEMPERATURE SENSOR** • Inspect the evaporator temperature sensor. (See 07-40A-27 EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is it normal?	Yes	Go to the next step.
		No	Replace the evaporator temperature sensor. (See 07-11-14 A/C UNIT DISASSEMBLY/ASSEMBLY.) Go to the next step.

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
3	**INSPECT EVAPORATOR TEMPERATURE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Disconnect the climate control unit connector and the evaporator temperature sensor connector. • Inspect for continuity between the following terminals (wiring harness-side): — Climate control unit terminal1F—evaporator temperature sensor terminal A — Climate control unit terminal 1X—evaporator temperature sensor terminal B • Is there continuity?	Yes	Go to the next step.
		No	Repair the wiring harness. Go to the next step.
4	**INSPECT EVAPORATOR TEMPERATURE SENSOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Climate control unit 1F • Is there continuity?	Yes	Repair the wiring harness. Go to the next step.
		No	Connect the climate control unit connector, then go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**INSPECT EVAPORATOR TEMPERATURE SENSOR CIRCUIT** • Connect the climate control unit connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Inspect the voltage at the following climate control unit terminal (wiring harness-side). — Terminal 1F (evaporator temperature sensor input signal) • Is the voltage normal? (**Approx. 5 V**)	Yes	The system is normal at present. Go to the next step.
		No	Go to the next step.
7	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Switch the ignition off. • Disconnect the negative battery cable. • Reconnect the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the past malfunction from memory. • Verify DTCs. • Is DTC B1B71:11 or B1B71:13 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
		No	Go to the next step.
8	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection.
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

DTC B1C1A:12, B1C1A:13, B1C1B:12, B1C1B:13 [FULL-AUTO AIR CONDITIONER]

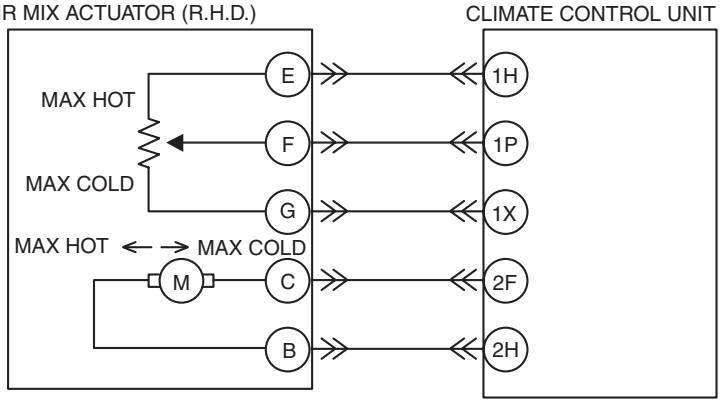
id0702c1818100

System malfunction location (L.H.D)	• **B1C1A:12: Driver-side air mix actuator (potentiometer) circuit short to power supply** • **B1C1A:13: Driver-side air mix actuator (potentiometer) circuit open** • **B1C1B:12: Passenger-side air mix actuator (potentiometer) circuit short to power supply** • **B1C1B:13: Passenger-side air mix actuator (potentiometer) circuit open**
System malfunction location (R.H.D)	• **B1C1A:12: Passenger-side air mix actuator (potentiometer) circuit short to power supply** • **B1C1A:13: Passenger-side air mix actuator (potentiometer) circuit open** • **B1C1B:12: Driver-side air mix actuator (potentiometer) circuit short to power supply** • **B1C1B:13: Driver-side air mix actuator (potentiometer) circuit open**
Detection condition	• Malfunction in wiring harness between air mix actuator and climate control unit
Fail-safe	**Malfunction determined when IG SW at ON** • Air mix actuator drive signal is stopped right when the malfunction is determined. **Malfunction already exists when IG SW turned to ON** • Control based on ambient temperature.
Possible cause	• Connector or terminal malfunction • Air mix actuator malfunction • Open circuit in wiring harness between climate control unit and air mix actuator • Short to power supply in wiring harness between climate control unit and air mix actuator • Climate control unit malfunction

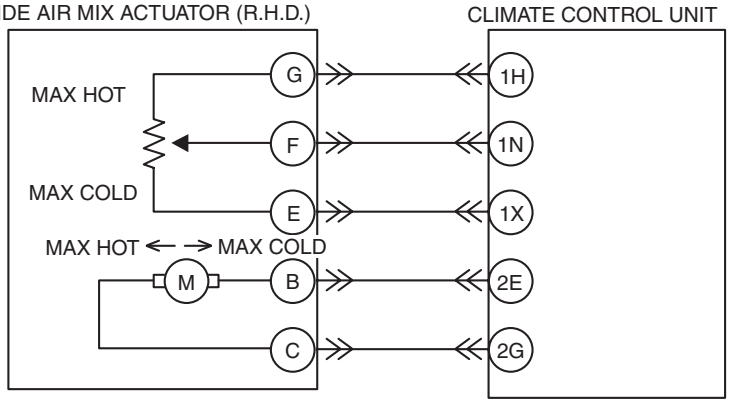
ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

System malfunction location (L.H.D)	• **B1C1A:12: Driver-side air mix actuator (potentiometer) circuit short to power supply** • **B1C1A:13: Driver-side air mix actuator (potentiometer) circuit open** • **B1C1B:12: Passenger-side air mix actuator (potentiometer) circuit short to power supply** • **B1C1B:13: Passenger-side air mix actuator (potentiometer) circuit open**
System malfunction location (R.H.D)	• **B1C1A:12: Passenger-side air mix actuator (potentiometer) circuit short to power supply** • **B1C1A:13: Passenger-side air mix actuator (potentiometer) circuit open** • **B1C1B:12: Driver-side air mix actuator (potentiometer) circuit short to power supply** • **B1C1B:13: Driver-side air mix actuator (potentiometer) circuit open**

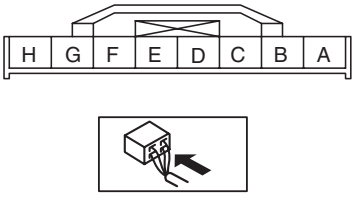
• PASSENGER-SIDE AIR MIX ACTUATOR (L.H.D.)
• DRIVER-SIDE AIR MIX ACTUATOR (R.H.D.)



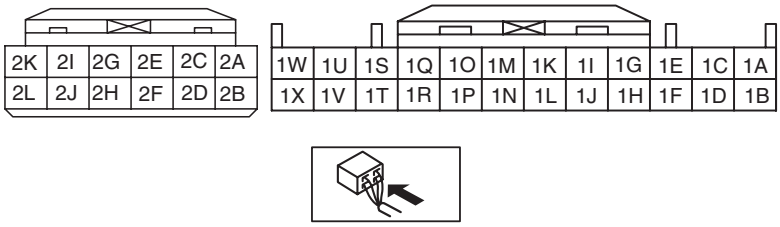
• DRIVER-SIDE AIR MIX ACTUATOR (L.H.D.)
• PASSENGER-SIDE AIR MIX ACTUATOR (R.H.D.)



AIR MIX ACTUATOR WIRING HARNESS SIDE CONNECTOR



CLIMATE CONTROL UNIT WIRING HARNESS SIDE CONNECTOR



07

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIR MIX ACTUATOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the air mix actuator connector. (See 07-40A-7 AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
2	**INSPECT AIR MIX ACTUATOR** • Inspect the air mix actuator. (See 07-40A-9 AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is it normal?	Yes	Go to the next step.
		No	Replace the air mix actuator. (See 07-40A-7 AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
3	**INSPECT AIR MIX ACTUATOR (POTENTIOMETER) CIRCUIT FOR OPEN** • Disconnect the climate control unit connector and the air mix actuator connector. • Inspect for continuity between the following terminals (wiring harness-side): **Driver-side (L.H.D.), Passenger-side (R.H.D.)** — Climate control unit terminal 1H—air mix actuator terminal G — Climate control unit terminal 1N—air mix actuator terminal F — Climate control unit terminal 1X—air mix actuator terminal E **Passenger-side (L.H.D.), Driver-side (R.H.D.)** — Climate control unit terminal 1H—air mix actuator terminal E — Climate control unit terminal 1P—air mix actuator terminal F — Climate control unit terminal 1X—air mix actuator terminal G • Is there continuity?	Yes	Go to the next step.
		No	Repair the wiring harness. Go to the next step.

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

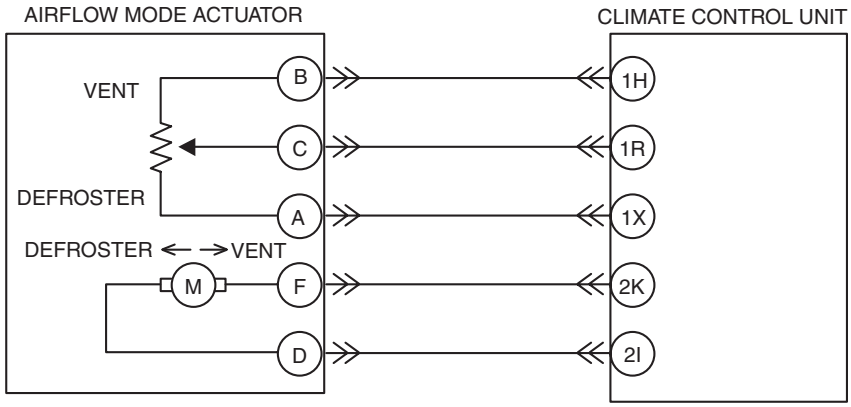
STEP	INSPECTION		ACTION
4	**INSPECT AIR MIX ACTUATOR (POTENTIOMETER) SHORT TO POWER SUPPLY** • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): **Driver-side (L.H.D.), Passenger-side (R.H.D.)** — Climate control unit 1N **Passenger-side (L.H.D.), Driver-side (R.H.D.)** — Climate control unit 1P • Is the voltage **0V**?	Yes	The system is normal at present. Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness. After repair procedure, go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the past malfunction from memory. • Verify DTCs. • Is DTC B1C1A:12, B1C1A:13, B1C1B:12, B1C1B:13 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection.
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

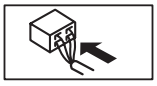
DTC B1C1C:12, B1C1C:13 [FULL-AUTO AIR CONDITIONER]

id0702c1200100

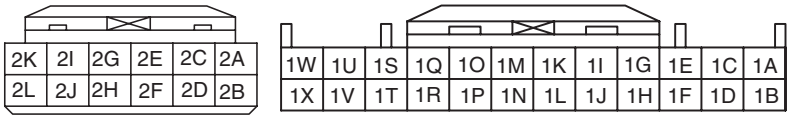
System malfunction location	• **B1C1C:12: Airflow mode actuator (potentiometer) circuit short to power supply** • **B1C1C:13: Airflow mode actuator (potentiometer) circuit open**
Detection condition	• Malfunction in wiring harness between airflow mode actuator and climate control unit
Fail-safe	**Malfunction determined when IG SW at ON** • Airflow mode actuator drive signal is stopped right when the malfunction is determined. **Malfunction already exists when IG SW turned to ON** • Control based on ambient temperature.
Possible cause	• Connector or terminal malfunction • Airflow mode actuator malfunction • Open circuit in wiring harness between climate control unit and airflow mode actuator • Short to power supply in wiring harness between climate control unit and airflow mode actuator • Climate control unit malfunction



AIRFLOW MODE ACTUATOR WIRING HARNESS SIDE CONNECTOR



CLIMATE CONTROL UNIT WIRING HARNESS SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIRFLOW MODE ACTUATOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the airflow mode actuator connector. (See 07-40A-13 AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
2	**INSPECT AIRFLOW MODE ACTUATOR** • Inspect the airflow mode actuator. (See 07-40A-15 AIRFLOW MODE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is it normal?	Yes	Go to the next step.
		No	Replace the airflow mode actuator. (See 07-40A-13 AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
3	**INSPECT AIRFLOW MODE ACTUATOR (POTENTIOMETER) CIRCUIT FOR OPEN CIRCUIT** • Disconnect the climate control unit connector and the airflow mode actuator connector. • Inspect for continuity between the following terminals (wiring harness-side): — Climate control unit terminal 1H—airflow mode actuator terminal B — Climate control unit terminal 1R—airflow mode actuator terminal C — Climate control unit terminal 1X—airflow mode actuator terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair the wiring harness. Go to the next step.
4	**INSPECT AIRFLOW MODE ACTUATOR (POTENTIOMETER) SHORT TO POWER SUPPLY** • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — Climate control unit terminal 1R • Is the voltage **0V**?	Yes	The system is normal at present. Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness. After repair procedure, go to the next step.

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

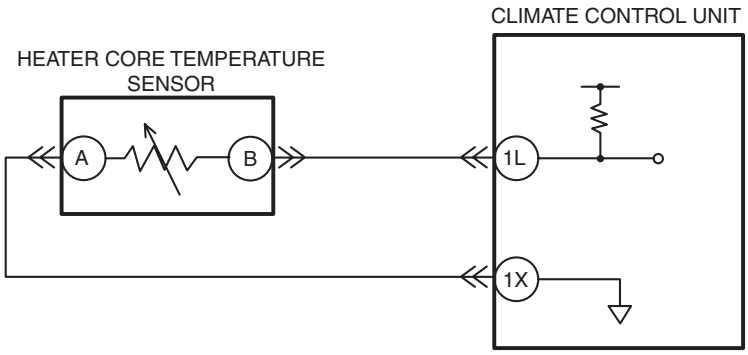
STEP	INSPECTION		ACTION
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the past malfunction from memory. • Verify DTCs. • Is DTC B1C1C:12, B1C1C:13 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection.
		No	DTC troubleshooting completed.

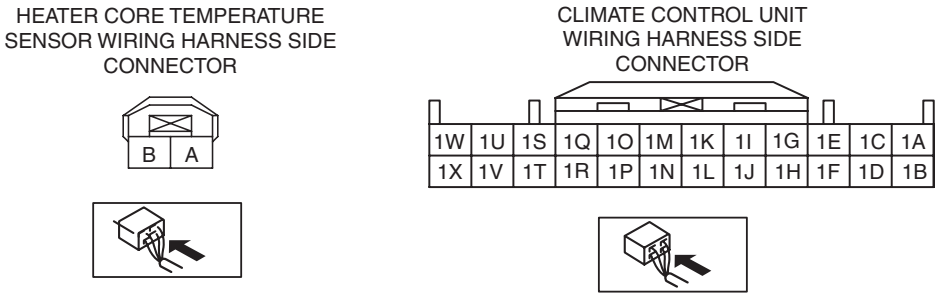
ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

DTC B1D22:11, B1D22:13 [FULL-AUTO AIR CONDITIONER]

id0702c1731600

System malfunction location	• **B1D22:11: Heater core temperature sensor circuit short to ground** • **B1D22:13: Heater core temperature sensor circuit open**
Detection condition	• Malfunction in wiring harness between heater core temperature sensor and climate control unit
Fail-safe	• Heater core temperature sensor input value is fixed at **50 °C {122 °F}**.
Possible cause	• Connector or terminal malfunction • Heater core temperature sensor malfunction • Open circuit in wiring harness between climate control unit and heater core temperature sensor • Short to ground in wiring harness between climate control unit and heater core temperature sensor • Climate control unit malfunction





Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT HEATER CORE TEMPERATURE SENSOR CONNECTOR** • Switch the ignition off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the heater core temperature sensor connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
2	**INSPECT HEATER CORE TEMPERATURE SENSOR** • Inspect the heater core temperature sensor. (See 07-40A-29 HEATER CORE TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is it normal?	Yes	Go to the next step.
		No	Replace the heater core temperature sensor. (See 07-40A-27 HEATER CORE TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
3	**INSPECT HEATER CORE TEMPERATURE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Disconnect the climate control unit connector and the heater core temperature sensor connector. • Inspect for continuity between the following terminals (wiring harness-side): — Climate control unit terminal 1L—heater core temperature sensor terminal B — Climate control unit terminal 1X—heater core temperature sensor terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair the wiring harness. Go to the next step.
4	**INSPECT HEATER CORE TEMPERATURE SENSOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Climate control unit 1L • Is there continuity?	Yes	Repair the wiring harness. Go to the next step.
		No	Connect the climate control unit connector, then go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
6	**INSPECT HEATER CORE TEMPERATURE SENSOR CIRCUIT** • Connect the climate control unit connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Inspect the voltage at the following climate control unit terminal (wiring harness-side). — Terminal 1L (heater core temperature sensor input signal) • Is the voltage normal? (**Approx. 5 V**)	Yes	The system is normal at present. Go to the next step.
		No	Go to the next step.
7	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Switch the ignition off. • Disconnect the negative battery cable. • Reconnect the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the past malfunction from memory. • Verify DTCs. • Is DTC B1D22:11 or B1D22:13 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
		No	Go to the next step.
8	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection.
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

DTC U0423:68 [FULL-AUTO AIR CONDITIONER]

id0702c1730600

System malfunction location	• **Invalid data received from instrument cluster**
Detection condition	• Communication error between Instrument cluster and climate control unit
Fail-safe	—
Possible cause	• Instrument cluster malfunction • Climate control unit malfunction
System wiring diagram	—

Diagnostic Procedure

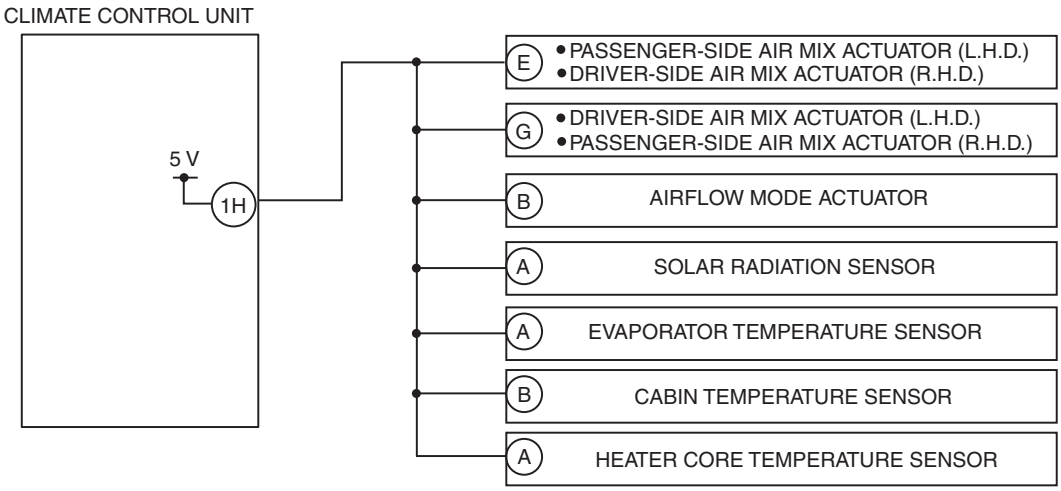
Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER DTC INSPECTION** • Perform the instrument cluster DTC inspection using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**PERFORM CLIMATE CONTROL UNIT DTC INSPECTION** • Clear the DTC from the climate control unit memory using the M-MDS. (See 07-02-7 CLEARING DTC [FULL-AUTO AIR CONDITIONER].) • Perform the climate control unit DTC inspection using the M-MDS. (See 07-02-6 DTC DISPLAY [FULL-AUTO AIR CONDITIONER].) • Is the same DTC present?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING COMPLETED** • Clear the DTC from the climate control unit memory using the M-MDS. (See 07-02-7 CLEARING DTC [FULL-AUTO AIR CONDITIONER].) • Perform the climate control unit DTC inspection using the M-MDS. (See 07-02-6 DTC DISPLAY [FULL-AUTO AIR CONDITIONER].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
		No	Go to the next step.
4	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection.
		No	DTC troubleshooting completed.

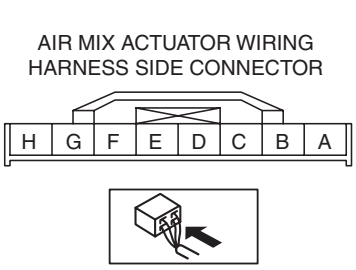
ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

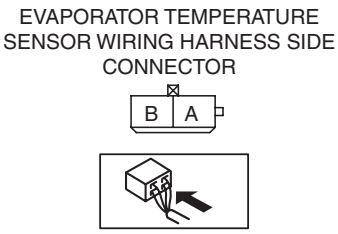
DTC U200D:11 [FULL-AUTO AIR CONDITIONER]

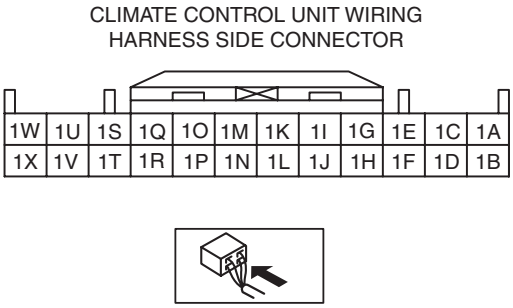
id0702c1736600

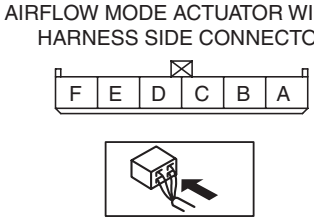
System malfunction location	• **Climate control unit circuit voltage (+5V) circuit short to ground**
Detection condition	• Malfunction in wiring harness between climate control unit circuit voltage (+5V) and each sensor/ actuator
Fail-safe	—
Possible cause	• Connector or terminal malfunction • Each sensor/actuator malfunction • Short to ground in wiring harness between climate control unit and air mix actuator • Short to ground in wiring harness between climate control unit and airflow mode actuator • Short to ground in wiring harness between climate control unit and solar radiation sensor • Short to ground in wiring harness between climate control unit and evaporator temperature sensor • Short to ground in wiring harness between climate control unit and cabin temperature sensor • Short to ground in wiring harness between climate control unit and heater core temperature sensor • Climate control unit malfunction

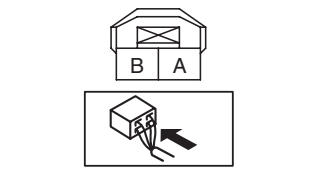


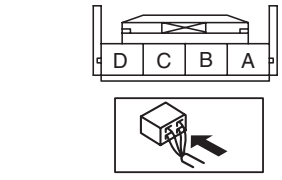


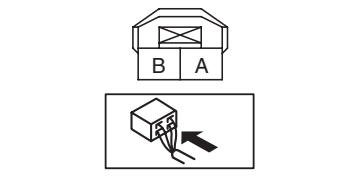












ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the climate control unit connectors. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the malfunctioning vehicle wiring harness, connector, or terminal. After repair procedure, go to the next step.
2	**VERIFY CONNECTOR CONDITION** • Disconnect the following each sensor/actuator connectors. — Air mix actuator (See 07-40A-7 AIR MIX ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) — Airflow mode actuator (See 07-40A-13 AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) — Solar radiation sensor (See 07-40A-21 SOLAR RADIATION SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) — Evaporator temperature sensor (See 07-40A-26 EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) — Cabin temperature sensor (See 07-40A-23 CABIN TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) — Heater core temperature sensor (See 07-40A-27 HEATER CORE TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Replace the malfunctioning part. After replace procedure, go to the next step.

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
3	**INSPECT EACH SENSOR/ACTUATOR** • Inspect the following each sensor/actuator connectors. — Air mix actuator (See 07-40A-9 AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER].) — Airflow mode actuator (See 07-40A-15 AIRFLOW MODE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER].) — Solar radiation sensor (See 07-40A-22 SOLAR RADIATION SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) — Evaporator temperature sensor (See 07-40A-27 EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) — Cabin temperature sensor (See 07-40A-26 CABIN TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) — Heater core temperature sensor (See 07-40A-29 HEATER CORE TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is it normal?	Yes	Go to the next step.
		No	Replace the malfunctioning sensor/actuator. After repair procedure, go to the next step.
4	**INSPECT EACH SENSOR/ACTUATOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Climate control unit 1H • Is there continuity?	Yes	Repair the wiring harness. Go to the next step.
		No	Go to the next step.
5	**VERIFY THAT SAME DTC IS NOT OUTPUT AGAIN** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the past malfunction from memory. • Verify DTCs. • Is DTC U200D:11 output?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
		No	Go to the next step.
6	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection.
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

DTC U2300:54, U2300:55, U2300:56, U2300:64 [FULL-AUTO AIR CONDITIONER]

id0702c1745500

System malfunction location	• **U2300:54: Configuration error (data not received)** • **U2300:55: Configuration error (not configured)** • **U2300:56: Configuration error (ineffective/non-interchangeable data read)** • **U2300:64: Configuration error (error value read)**
Detection condition	• Climate control unit detects configuration data not record or data error
Fail-safe	—
Possible cause	**Note** • If power from the battery is interrupted, the heater control unit will go into a non-configured state because the memory for the configuration information is erased. If the ignition is switched ON (engine off) at this time, DTC U2300:55 is detected. • Normally, the configuration is re-performed within 6 s after the ignition is switched ON (engine off). • After performing the configuration, DTC U2300:55 will be cleared if the ignition is switched ON (engine off) after the ignition is switched off. • Module configuration procedure was not completed properly • Correct data cannot be received from instrument cluster • Climate control unit malfunction
System wiring diagram	—

Diagnostic Procedure

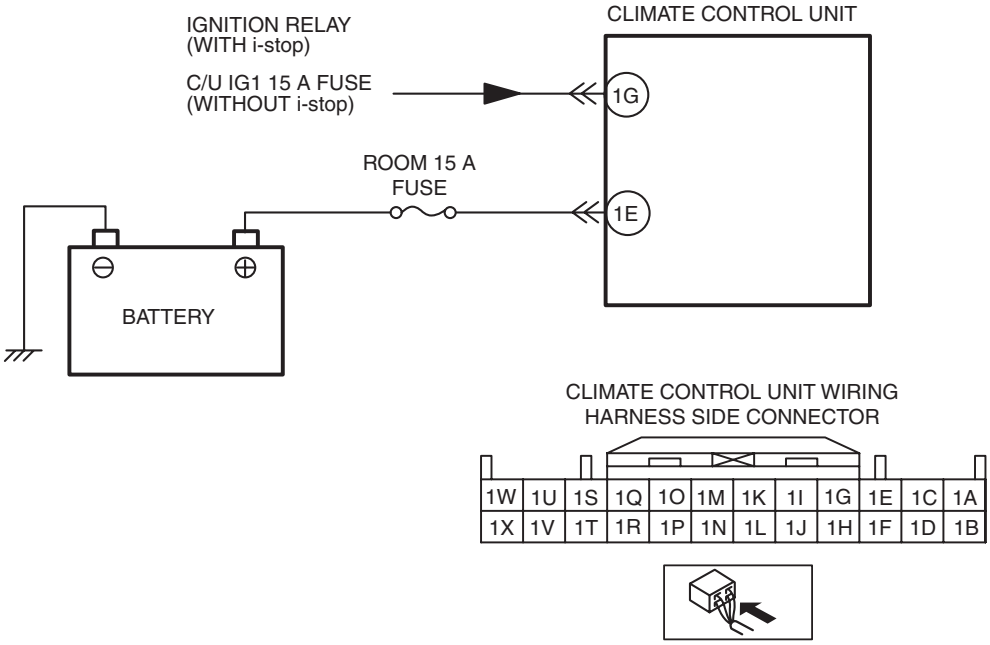
Step	Inspection		Action
1	**RECORD THE CAR CONFIGURATION DATA** • Switch the ignition ON (engine off) and wait for 6 s or more. • Switch the ignition off. • Switch the ignition ON (engine off).		Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 07-02-7 CLEARING DTC [FULL-AUTO AIR CONDITIONER].) • Perform the climate control unit DTC inspection using the M-MDS. (See 07-02-6 DTC DISPLAY [FULL-AUTO AIR CONDITIONER].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, go to the next step.
		No	Go to Step 5.
3	**INSPECT FOR INSTRUMENT CLUSTER MALFUNCTION** • Switch the ignition off. • Perform the instrument cluster DTC inspection using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs present?	Yes	Go to applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].) After repairing the instrument cluster, perform the instrument cluster configuration. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).) Then go to the next step.
		No	Go to the next step.
4	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 07-02-7 CLEARING DTC [FULL-AUTO AIR CONDITIONER].) • Perform the climate control unit DTC inspection using the M-MDS. (See 07-02-6 DTC DISPLAY [FULL-AUTO AIR CONDITIONER].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection.
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

DTC U3003:16, U3003:17 [FULL-AUTO AIR CONDITIONER]

id0702c1731000

System malfunction location	• **U3003:16: Climate control unit power supply circuit voltage below threshold (B+, IG1) (10 V or less)** • **U3003:17: Climate control unit power supply circuit voltage above threshold (B+, IG1) (17.3 V or more)**
Detection condition	• Climate control unit power supply voltage is other than **10.1—17.2 V**
Fail-safe	—
Possible cause	• Generator system malfunction • ROOM 15 A fuse malfunction • Battery malfunction • Climate control unit connector malfunction • Open or short circuit to ground in wiring harness between battery positive terminal and climate control unit • Climate control unit malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT PCM DTC (INSPECT GENERATOR CIRCUIT)** • Switch the ignition off. • Connect the M-MDS to the DLC-2. • Perform the PCM DTC inspection using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT FUSE** • Switch the ignition off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the ROOM 15 A fuse. • Is the fuse normal?	Yes	Install the ROOM 15 A fuse, then go to the next step.
		No	Replace the ROOM 15 A fuse, then go to Step 8.

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
3	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Replace/charge the battery, then go to Step 8.
4	**INSPECT CLIMATE CONTROL UNIT** • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Inspect the climate control unit terminal 1E. • Is voltage normal?	Yes	The system is normal at present. Go to the step 8.
		No	Go to the next step.
5	**VERIFY CLIMATE CONTROL UNIT CONNECTOR CONDITION** • Switch the ignition off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the climate control unit connector. • Inspect the connector and terminals (corrosion, damage, pin disconnection). • Are the connector and terminals normal?	Yes	Go to the next step.
		No	Repair/replace the connector or terminal. After repair procedure, go to the next step.
6	**INSPECT CLIMATE CONTROL UNIT POWER SUPPLY CIRCUIT FOR SHORT CIRCUIT TO GROUND** • Disconnect the climate control unit connector. • Inspect for continuity between climate control unit terminal 1E and body ground. • Is there continuity?	Yes	Repair the wiring harness, then go to Step 8.
		No	Go to the next step.
7	**INSPECT CLIMATE CONTROL UNIT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between climate control unit terminal 1E and battery positive terminal. • Is there continuity?	Yes	Go to the next step.
		No	Repair the wiring harness, then go to the next step.
8	**INSPECT CLIMATE CONTROL UNIT** • Reconnect the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTCs using the M-MDS. • Perform the climate control unit DTC inspection using the M-MDS. (See 07-02-6 DTC DISPLAY [FULL-AUTO AIR CONDITIONER].) • Are DTCs U3003:16 or U3003:17 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction does not recur, go to the next step. • If the malfunction recurs, replace the climate control unit. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
9	**VERIFY THAT NO OTHER DTCs ARE PRESENT** • Verify other DTCs displayed. • Are any other DTCs output?	Yes	Perform the corresponding DTC inspection.
		No	DTC troubleshooting completed.

PID/DATA MONITOR DISPLAY [FULL-AUTO AIR CONDITIONER]

id0702c1801800

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “EATC”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

PID/DATA MONITOR TABLE [FULL-AUTO AIR CONDITIONER]

id0702c1801900

PID name (definition)	Unit/Condition	Operation Status (Reference)	Input part
A/C_SW	Off/On	• A/C switch OFF: Off • A/C switch ON: On	Climate control unit
AUTO_SW	Off/On	• AUTO switch OFF: Off • AUTO switch ON: On	Climate control unit
B_MT_RLY_CS	Off/On	• Blower relay off: Off • Blower relay on: On	Climate control unit
DEF_SW	Off/On	• DEFROSTER switch OFF: Off • DEFROSTER switch ON: On	Climate control unit
DUAL_SW	Off/On	• DUAL switch OFF: Off • DUAL switch ON: On	Climate control unit
ELE_W/P	Off/On	• Water pump off: Off • Water pump on: On	Water pump
ENG_C_TMP	°C, °F	Engine coolant temperature is displayed	Engine coolant temperature sensor
EVA_TMP_SEN	°C, °F	Evaporator temperature is displayed	Evaporator temperature sensor
F_REC_CS	Off/On	• Forced recirculate control off: Off • Forced recirculate control on: On	Climate control unit
FRE_SW	Off/On	• FRESH switch OFF: Off • FRESH switch ON: On	Climate control unit
HC_TMP_SEN	°C, °F	Heater core temperature is displayed	Heater core temperature sensor
INC_TMP_SEN	°C, °F	Cabin temperature is displayed	Cabin temperature sensor
M_DOWN_SW	Off/On	• MODE switch (DOWN) OFF: Off • MODE switch (DOWN) ON: On	Climate control unit
M_UP_SW	Off/On	• MODE switch (UP) OFF: Off • MODE switch (UP) ON: On	Climate control unit
OFF_SW	Off/On	• OFF switch OFF: Off • OFF switch ON: On	Climate control unit
OUT_CAR_TMP	°C, °F	Ambient temperature is displayed	Ambient temperature sensor
R/DEF_CS	Off/On	• Rear defroster off: Off • Rear defroster on: On	Climate control unit
R/DEF_SW	Off/On	• Rear window defroster switch OFF: Off • Rear window defroster switch ON: On	Climate control unit
REC_SW	Off/On	• RECIRCULATE switch OFF: Off • RECIRCULATE switch ON: On	Climate control unit

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

PID name (definition)	Unit/Condition	Operation Status (Reference)	Input part
S_HT_CUT_CS	No_Request/Cut	• Seat warmer signal cut control off: No_Request • Seat warmer signal cut control on: Cut	Climate control unit
SLR_R_SEN_L SLR_R_SEN_R	W	Solar radiation amount is displayed	Solar radiation sensor
STOP_ST	Available/ Not Available/ Error	• i-stop permit condition: Available • i-stop inhibit condition: Not Available • i-stop signal failure: Error	• Climate control unit • PCM
UNIT_TMP	deg_C/deg_F	• Centigrade: deg_C • Fahrenheit: deg_F	Climate control unit

A/C OPERATION CHECK MODE [FULL-AUTO AIR CONDITIONER]

id0702c1881500

- The A/C operation check mode forcibly operates the output devices as shown in the operation check table regardless of the signals input to the climate control unit.
- During an A/C operation check mode operation, indication in the display panel and the illumination of the indicator light on the switches are automatically controlled.
- Determine the malfunctioning part by visual inspection, listening to the operation sound, placing a hand on the air vents, or checking that each transition is as indicated in the operation check table.

M-MDS display	Target part	Reference
Air Mix Actuator	• Air mix actuator • Air mix door	(See 07-02-39 Air Mix Actuator)
Air conditioning compressor	• A/C compressor	(See 07-02-40 A/C Compressor)
Air Intake Actuator	• Air intake actuator • Air intake door	(See 07-02-40 Air Intake Actuator)
Blower Motor Speed	• Blower motor	(See 07-02-41 Blower Motor)
Air Flow Mode Actuator	• Airflow mode actuator • Airflow mode door	(See 07-02-42 Airflow Mode Actuator)
Illumination of All Indicator Lights	• Climate control unit	(See 07-02-42 Indicator Light)
Electrical Water Pump	• Water pump*	(See 07-02-43 Water Pump)

* : With water pump

Air Mix Actuator

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Start the engine.
4. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   (1) Select the “Body”.
   (2) Select the “EATC Operation Check”.
5. Select the “Air Mix Actuator” from the screen menu.
6. Verify the A/C operation check mode according to the directions on the screen.
7. Select "Stop" to stop the A/C operation check. (See 07-02-43 A/C Operation Check Stop.)

Operation

Step	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
1	0 %	VENT	5th	ON	FRESH
2	100 %				

Display

Step	Temperature (°C {°F})	Airflow mode	Blower volume	A/C	Recirculate switch indicator light	Fresh switch indicator light
1	20.0 {68}			Displayed	Not illuminated	Illuminated
2	21.0 {70}					

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

Note
- After approx. 22 s have elapsed the operation step moves to the next step.
- When the last step is finished, the operation is repeated from Step 1.
- To prevent super-cooling, the magnetic clutch turns off despite the A/C forced override.

A/C Compressor
1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Start the engine.
4. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   (1) Select the “Body”.
   (2) Select the “EATC Operation Check”.
5. Select the “Air conditioning compressor” from the screen menu.
6. Verify the A/C operation check mode according to the directions on the screen.
7. Select "Stop" to stop the A/C operation check. (See 07-02-43 A/C Operation Check Stop.)

Operation

Step	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
1	0 %	VENT	5th	ON	FRESH
2				OFF	

Display

Step	Temperature (°C {°F})	Airflow mode	Blower volume	A/C	Recirculate switch indicator light	Fresh switch indicator light
1	4 {39}			Displayed	Not illuminated	Illuminated
2				Not displayed		

Note
- After the following times have elapsed, the operation step moves to the next step.
  — Step 1: Approx. 5 s
  — Step 2: Approx. 25 s
- When the last step is finished, the operation is repeated from Step 1.

Air Intake Actuator
1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Start the engine.
4. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   (1) Select the “Body”.
   (2) Select the “EATC Operation Check”.
5. Select the “Air Intake Actuator” from the screen menu.
6. Verify the A/C operation check mode according to the directions on the screen.
7. Select "Stop" to stop the A/C operation check. (See 07-02-43 A/C Operation Check Stop.)

Operation

Step	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
1	0 %	VENT	5th	ON	FRESH
2					RECIRCULATE
3				OFF	FRESH
4					RECIRCULATE

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

Display

Step	Temperature (°C {°F})	Airflow mode	Blower volume	A/C	Recirculate switch indicator light	Fresh switch indicator light
1	4 {39}			Displayed	Not illuminated	Illuminated
2					Illuminated	Not illuminated
3				Not displayed	Not illuminated	Illuminated
4					Illuminated	Not illuminated

Note

- After approx. 11 s have elapsed the operation step moves to the next step.
- When the last step is finished, the operation is repeated from Step 1.
- To prevent super-cooling, the magnetic clutch turns off despite the A/C forced override.

Blower Motor

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Start the engine.
4. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   (1) Select the “Body”.
   (2) Select the “EATC Operation Check”.
5. Select the “Blower Motor Speed” from the screen menu.
6. Verify the A/C operation check mode according to the directions on the screen.
7. Select "Stop" to stop the A/C operation check. (See 07-02-43 A/C Operation Check Stop.)

Operation

Step	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
1	50 %	VENT	OFF	OFF	FRESH
2			1st	ON	
3			3rd		
4			5th		
5			7th		

Display

Step	Temperature (°C {°F})	Airflow mode	Blower volume	A/C	Recirculate switch indicator light	Fresh switch indicator light
1	1 {34}		Not displayed	Not displayed	Not illuminated	Illuminated
2				Displayed		
3						
4						
5						

Note

- After approx. 4 s have elapsed the operation step moves to the next step.
- When the last step is finished, the operation is repeated from Step 1.
- To prevent super-cooling, the magnetic clutch turns off despite the A/C forced override.

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

Airflow Mode Actuator

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Start the engine.
4. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   (1) Select the “Body”.
   (2) Select the “EATC Operation Check”.
5. Select the “Airflow Mode Actuator” from the screen menu.
6. Verify the A/C operation check mode according to the directions on the screen.
7. Select "Stop" to stop the A/C operation check. (See 07-02-43 A/C Operation Check Stop.)

Operation

Step	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
1	50 %	VENT	5th	ON	FRESH
2		BI-LEVEL			
3		HEAT			
4		DEF/HEAT			
5		DEFROSTER			

Display

Step	Temperature (°C {°F})	Airflow mode	Blower volume	A/C	Recirculate switch indicator light	Fresh switch indicator light
1	3 {37}			Displayed	Not illuminated	Illuminated
2						
3						
4						
5						

Note

- After approx. 11 s have elapsed the operation step moves to the next step.
- When the last step is finished, the operation is repeated from Step 1.
- To prevent super-cooling, the magnetic clutch turns off despite the A/C forced override.

Indicator Light

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).
3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   (1) Select the “Body”.
   (2) Select the “EATC Operation Check”.
4. Select the “Illumination Of All Indicator Lights” from the screen menu.
5. Verify the A/C operation check mode according to the directions on the screen.
6. Select "Stop" to stop the A/C operation check. (See 07-02-43 A/C Operation Check Stop.)

Operation

Step	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
—	50 %	VENT	OFF	OFF	FRESH

Display

Step	Temperature (°C {°F})	Airflow mode	Blower volume	A/C	Recirculate switch indicator light	Fresh switch indicator light
—	All indicator displayed				Illuminated	Illuminated

ON-BOARD DIAGNOSTIC [FULL-AUTO AIR CONDITIONER]

Water Pump

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).
3. After the vehicle is identified, select the following items from the initial screen of the M-MDS.
   (1) Select the “Body”.
   (2) Select the “EATC Operation Check”.
4. Select the “Electrical Water Pump” from the screen menu.
5. Verify the A/C operation check mode according to the directions on the screen.
6. Select "Stop" to stop the A/C operation check. (See 07-02-43 A/C Operation Check Stop.)

Operation

Step	Water pump	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
—	ON	50 %	VENT	OFF	OFF	FRESH

Display

Step	Temperature (°C {°F})	Airflow mode	Blower volume	A/C	Recirculate switch indicator light	Fresh switch indicator light
—	10 {50}		Not displayed	Not displayed	Not illuminated	Illuminated

A/C Operation Check Stop

1. If "Stop" is selected while the A/C operation check is operating, the A/C stops at the conditions shown in the table.

Operation

Step	Water pump (with water pump)	Air mix actuator	Airflow mode actuator	Blower speed	Magnet clutch	Air intake actuator
—	OFF	50 %	VENT	OFF	OFF	FRESH

Display

Step	Temperature (°C {°F})	Airflow mode	Blower volume	A/C	Recirculate switch indicator light	Fresh switch indicator light
—	0 {32}		Not displayed	Not displayed	Not illuminated	Illuminated

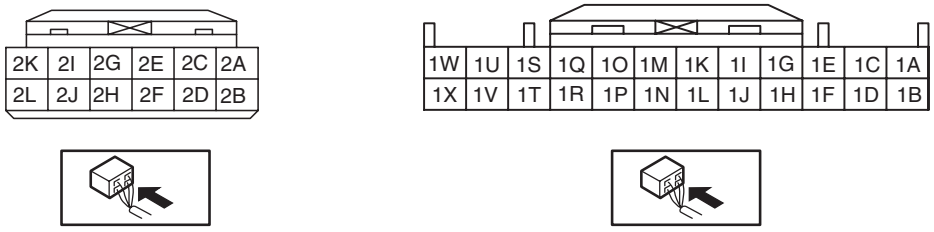
CLIMATE CONTROL UNIT WIRING HARNESS SIDE CONNECTOR



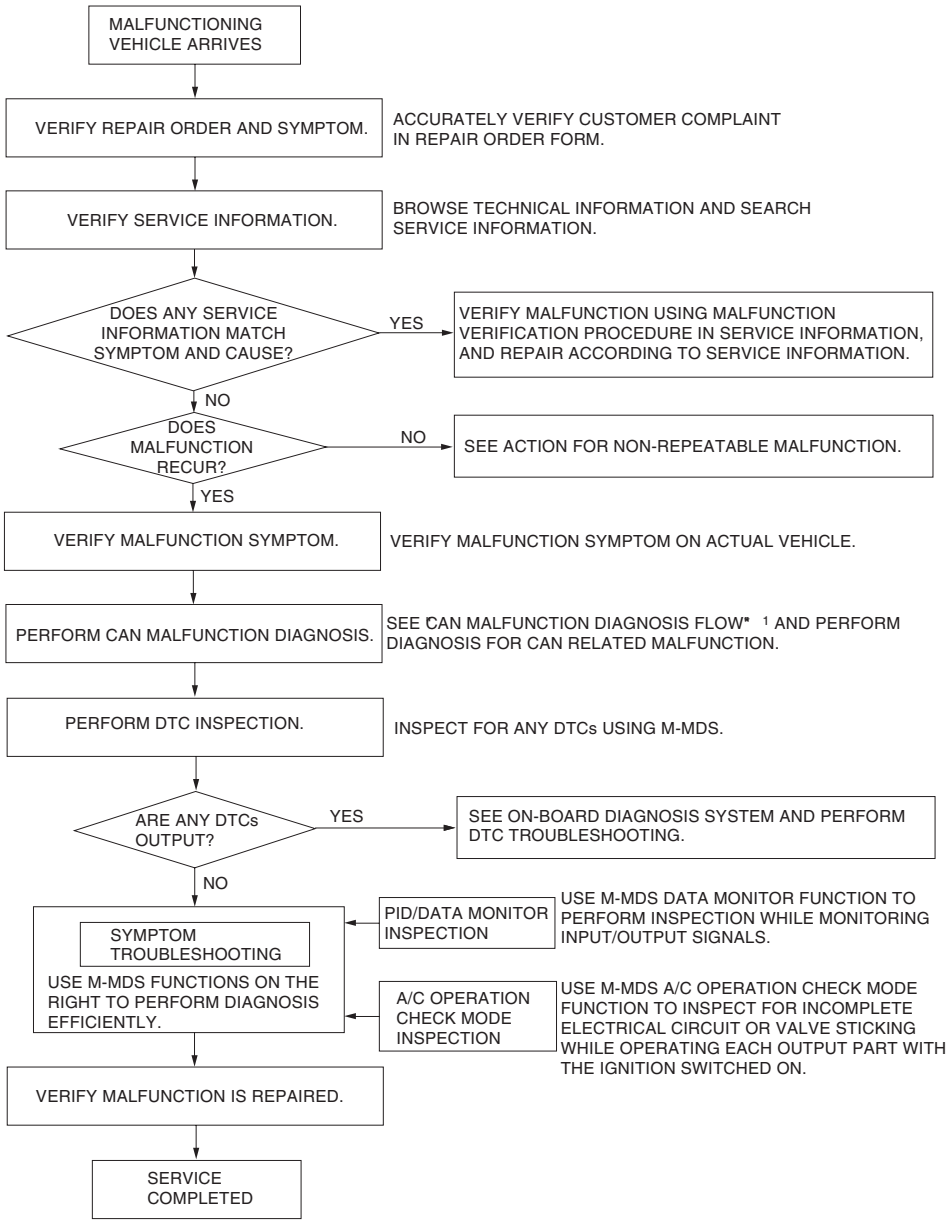
ac5wzw0000276

FOREWORD [FULL-AUTO AIR CONDITIONER]

id0703c1800200

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



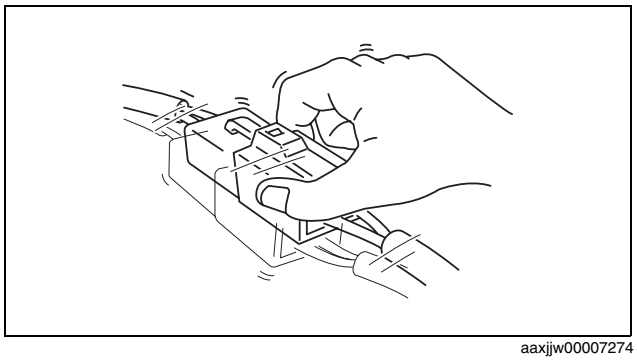
ac5wzw0000290

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)], 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)], 10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)], 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

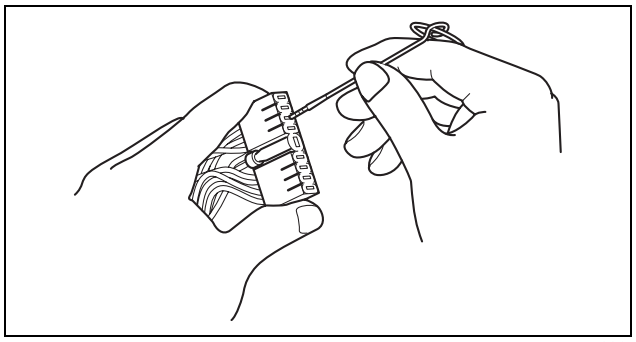
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as CAN circuit voltage) at that time, and detect the malfunction cause.
  - — Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3zzw0001143

TROUBLESHOOTING INDEX [FULL-AUTO AIR CONDITIONER]

id0703c1800300

No.	TROUBLESHOOTING ITEM	DESCRIPTION
1	Insufficient air (or no air) blown from vents	• Problem with each vent and/or duct • Airflow mode does not change
2	Amount of air blown from vents does not change	• Malfunction in blower system
3	Air intake mode from front vent does not change	• Air intake mode does not change when switching REC/FRESH mode
4	No temperature control with climate control unit	• Temperature does not change when operating temperature dial • Malfunction in A/C unit and/or climate control unit air mix system • Malfunction in driver and/or passenger side air mix actuator or related wiring harness
5	Windshield fogged	• A/C compressor does not operate while airflow mode is in DEFROSTER or DEF/HEAT modes • Air intake mode does not change to FRESH while airflow mode is in DEFROSTER or DEF/HEAT modes
6	Air from vents not cold enough	• Magnetic clutch operates but A/C system malfunctions
7	No cool air	• Magnetic clutch does not operate
8	Noise while operating A/C system	• Noise from magnetic clutch, A/C compressor, hose or refrigerant line
9	Dual A/C control function does not operate	• Driver or passenger side temperature control dial does not operate individually • Temperature control operates normally expect for dual A/C control function

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

NO.1 INSUFFICIENT AIR (OR NO AIR) BLOWN FROM VENTS [FULL-AUTO AIR CONDITIONER]

id0703c1800400

1	Insufficient air (or no air) blown from vents
DESCRIPTION	• Problem with each vent and/or duct • Airflow mode does not change
POSSIBLE CAUSE	• Malfunction in airflow mode actuator • Malfunction in VENT mode system • Malfunction in HEAT mode system • Malfunction in DEFROSTER mode system

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions.
  If there is a problem, check to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1*	**INSPECT CLIMATE CONTROL UNIT POWER SUPPLY FUSE FOR B+ SIGNAL** • Is the climate control unit power supply fuse for B+ signal normal?	Yes	Go to the next step.
		No	Inspect for short to GND in blown fuse circuit Repair or replace as necessary. Install appropriate amperage fuse.
2*	**INSPECT TO SEE WHETHER MALFUNCTION (OPEN CIRCUIT) IS IN B+ SIGNAL WIRING HARNESS (BETWEEN FUSE BLOCK AND CLIMATE CONTROL UNIT) OR ELSEWHERE** • Disconnect the climate control unit connector (24-pin). • Switch the ignition ON (engine off or on). • Measure the voltage at climate control unit harness-side connector (24-pin) terminal 1E (B+ signal). • Is the voltage **approx. 12V**?	Yes	Go to the next step.
		No	Repair wiring harness between fuse block and climate control unit, then go to Step 20.
3*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND GND) OR ELSEWHERE** • Climate control unit connector (24-pin) disconnected. • Verify that continuity between climate control unit harness-side connector (24-pin) terminal 1W and GND. • Is there continuity?	Yes	Go to the next step.
		No	Repair wiring harness between climate control unit and GND. Inspect GND point condition. Then go to Step 20.
4*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C UNIT OR AIRFLOW MODE ACTUATOR** • Switch the ignition ON (engine off or on). • Measure voltage at climate control unit terminal 1R (24-pin) when airflow mode at VENT and DEFROSTER. (See 07-40A-33 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is voltage normal?	Yes	Go to Step 16.
		No	Go to the next step.
5*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN POSITION SENSOR OR ELSEWHERE** • Switch the ignition ON (engine off or on). • Measure voltage at climate control unit terminal 1P and 1N (24-pin) when temperature setting to MAX HOT and MAX COLD. (See 07-40A-33 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].) • Are voltages normal?	Yes	Go to Step 8.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
6*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY OR SHORT TO BATTERY POWER OR GND) IS IN POSITION SENSOR POWER SUPPLY (CLIMATE CONTROL UNIT TERMINAL 1H) OR ELSEWHERE** • Switch the ignition ON (engine off or on). • Measure voltage at climate control unit terminal 1H (24-pin). • Is voltage **approx. 5V**?	Yes	Go to the next step.
		No	Repair wiring harness between climate control unit terminal 1H and follows: • Airflow mode actuator terminal B • Driver side air mix actuator terminal G (L.H.D.) / E (R.H.D.) • Passenger side air mix actuator terminal E (L.H.D.) / G (R.H.D.) Then go to Step 20.
7*	**INSPECT TO SE WHETHER MALFUNCTION (LACK OF CONTINUITY OR OPEN) IS IN POSITION SENSOR GND (CLIMATE CONTROL UNIT TERMINAL 1X) OR ELSEWHERE** • Measure voltage at climate control unit terminal 1X (24-pin). • Is voltage **below 1.0V**?	Yes	Go to Step 11.
		No	Repair wiring harness for lack of continuity or open between climate control unit terminal 1X and follows: • Airflow mode actuator terminal A • Driver side air mix actuator terminal E (L.H.D.) / G (R.H.D.) • Passenger side air mix actuator terminal G (L.H.D.) / E (R.H.D.) Then go to Step 20.
8*	**INSPECT TO SEE WHETHER MALFUNCTION (SHORT TO POWER) IS IN WIRING HARNESS (AIRFLOW MODE POSITION SIGNAL) OR ELSEWHERE** • Is climate control unit terminal 1R voltage **approx. 12V**, at Step 4?	Yes	Repair wiring harness between climate control unit terminal 1R and airflow mode actuator terminal C. Then go to Step 20.
		No	Go to the next step.
9*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN WIRING HARNESS (AIRFLOW MODE POSITION SIGNAL) OR ELSEWHERE** • Switch the ignition off. • Disconnect climate control unit and airflow mode actuator connectors • Verify continuity between climate control unit terminal 1R (24-pin) and airflow mode actuator terminal C at harness-side connector. • Is there continuity?	Yes	Go to next step.
		No	Repair wiring harness between climate control unit terminal 1R and airflow mode actuator terminal C. Then go to Step 20.
10*	**INSPECT TO SEE WHETHER MALFUNCTION (SHORT TO GND) IS IN WIRING HARNESS (AIRFLOW MODE POSITION SIGNAL) OR POSITION SENSOR COMMON (POWER SUPPLY OR GND) HARNESS** • Verify continuity between climate control unit harness-side connector terminal 1R (24-pin) and GND. • Is there continuity?	Yes	Repair wiring harness between climate control unit terminal 1R and airflow mode actuator terminal C. Then go to Step 20.
		No	Inspection and repair for open circuit following: • Between airflow mode actuator terminal B and junction point to each air mix actuator (position sensor power supply). • Between airflow mode actuator terminal A and junction point to each air mix actuator (position sensor GND). Then go to Step 20.
11*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN AIRFLOW MODE ACTUATOR WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND AIR FLOW MODE ACTUATOR) OR ELSEWHERE** • Switch the ignition ON (engine off or on). • Measure voltage at the following terminals of climate control unit. (See 07-40A-33 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].) — Terminal 2K (12-pin, DEFROSTER mode motor drive signal) — Terminal 2I (12-pin, VENT mode motor drive signal) • Are voltages okay?	Yes	Go to the next step.
		No	Go to Step 13.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
12*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN AIR FLOW MODE ACTUATOR OR WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND AIR FLOW MODE ACTUATOR)** • Verify continuity at following terminals between airflow mode actuator and climate control unit. — Climate control unit terminal 2K — airflow mode actuator terminal F (12-pin, DEFROSTER mode motor drive signal) — Climate control unit terminal 2I — airflow mode actuator terminal D (12-pin, VENT mode motor drive signal) • Is there continuity?	Yes	Go to Step 17.
		No	Repair wiring harness between climate control unit and airflow mode actuator. Then go to Step 20.
13*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN AIR FLOW MODE ACTUATOR OR ELSEWHERE** • Airflow mode actuator and climate control unit connectors disconnected. • Measure voltage at the following terminals of climate control unit. (See 07-40A-33 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].) — Terminal 2K (12-pin, DEFROSTER mode motor drive signal) — Terminal 2I (12-pin, VENT mode motor drive signal) • Are voltage okay?	Yes	Go to Step 16.
		No	Go to the next step.
14*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO B+ BETWEEN CLIMATE CONTROL UNIT AND FLOW MODE ACTUATOR) OR ELSEWHERE** • Measure voltage at the following terminal of the climate control unit harness-side connector. — Terminal 2K (12-pin, DEFROSTER mode motor drive signal) — Terminal 2I (12-pin, VENT mode motor drive signal) • Are voltages **approx. 0V**?	Yes	Go to the next step.
		No	Repair wiring between climate control unit and airflow mode actuator. Then go to the Step 20.
15*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO GND BETWEEN CLIMATE CONTROL UNIT AND AIRFLOW MODE ACTUATOR) OR ELSEWHERE** • Switch the ignition off. • Verify that continuity at the following harness-side connector terminals between climate control unit and GND. — Terminal 2K (12-pin, DEFROSTER mode motor drive signal) — Terminal 2I (12-pin, VENT mode motor drive signal) • Is there continuity?	Yes	Repair wiring harness between climate control unit and airflow mode actuator. Then go to the Step 20.
		No	Go to the next step.
16	**INSPECT AIRFLOW MODE ACTUATOR** • Inspect airflow mode actuator. (See 07-40A-15 AIRFLOW MODE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is airflow mode actuator normal?	Yes	Go to the next step.
		No	Replace the airflow mode actuator. (See 07-40A-13 AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Then go to the Step 20.
17	**INSPECT AIRFLOW MODE LINK** • Inspect airflow mode links. — Is grease on link? — Are links securely and properly installed? — Are links free of obstructions and hindrances? • Are above items okay?	Yes	Go to the next step.
		No	Apply grease to links. If any links are damaged, replace malfunctioning part. Then go to the Step 20.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
18	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR AIRFLOW MODE DOOR** • Inspect A/C unit airflow mode door. — Is door free of obstructions, cracks and damage? — Are door securely and properly installed? • Are above items okay?	Yes	Go to the next step.
		No	Remove the obstruction, or install door in proper position. If any doors are cracked or damaged, replace them. Then go to the Step 20.
19	**VERIFY THAT DUCTS INSTALLATION CONDITION** • Are following ducts installed properly? — Dashboard ducts — Defroster ducts	Yes	Inspect ducts for clogging, deformity, and air leakage, then go to the next step.
		No	Install the suspected ducts properly, then go to the next step.
20	**CONFIRM THAT MALFUNCTION SYMPTOM DOES NOT RECUR AFTER REPAIR** • Does air blow out?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

NO.2 AMOUNT OF AIR BLOWN FROM VENTS DOES NOT CHANGE [FULL-AUTO AIR CONDITIONER]

id0703c1800500

2	**Amount of air blown from vents does not change.**
DESCRIPTION	• Malfunction in blower system
POSSIBLE CAUSE	• Blower unit malfunction • Blower motor malfunction • Malfunction in power MOS FET system • Climate control unit malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT HEATER 40 A FUSE** • Inspect the HEATER 40 A fuse. • Is it normal?	Yes	Go to the next step.
		No	**If the fuse is melted:** Repair or replace wiring harness for short to GND and replace the fuse. **If the fuse is deterioration:** Replace the fuse. Then go to Step 15.
2	**INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER UNIT OR ELSEWHERE** • Switch the ignition ON (engine off or on). • Turn the fan dial clockwise. • Recirculate air inside the vehicle. • Does the blower motor rotate smoothly?	Yes	Go to the next step.
		No	Go to Step 4.
3	**INSPECT BLOWER UNIT INTAKE VENT** • Is blower unit intake vent clogged?	Yes	Remove obstruction, then go to Step 15.
		No	Inspect if there are any obstruction in the A/C unit passage, then go to Step 15.
4*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER RELAY SYSTEM OR POWER MOS FET SYSTEM** • Switch the ignition ON (engine off or on). • Turn the fan dial clockwise. • Measure the voltage at the following blower motor terminal. — Terminal A (blower motor operation signal) • Is voltage **approx. 12 V**?	Yes	Go to Step 8.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
5*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN FUSE BLOCK AND BLOWER RELAY) OR ELSEWHERE** • Measure the voltage at the following blower relay terminals. — Terminal A (B+ signal) — Terminal B (B+ signal) • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Repair the wiring harness for lack of continuity between the blower relay and HEATER 40 A fuse, then go to Step 15.
6*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER RELAY AND GROUND) OR ELSEWHERE** • Measure the voltage at the following blower relay terminal. — Terminal D (GND signal) • Is the voltage **approx. 0 V**?	Yes	Go to the next step.
		No	Repair the wiring harness for lack of continuity between the blower relay and front body control module (FBCM), then go to Step 15.
7*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER RELAY AND BLOWER MOTOR) OR BLOWER RELAY** • Measure the voltage at the following blower relay terminal. — Terminal C (blower motor operation signal) • Is the voltage **approx. 12 V**?	Yes	Repair the wiring harness for lack of continuity between the blower relay and blower motor, then go to Step 15.
		No	Replace the blower relay, then go to Step 15.
8*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER MOTOR OR ELSEWHERE** • Measure the voltage at the following blower motor terminal. — Terminal B (blower motor operation signal) • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Inspect the blower motor, then go to Step 15. (See 07-40A-16 BLOWER MOTOR INSPECTION [FULL-AUTO AIR CONDITIONER].)
9*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER MOTOR AND POWER MOS FET) OR ELSEWHERE** • Measure the voltage at the following terminal of power MOS FET. — Terminal B (blower motor operation signal) • Is voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Repair the wiring harness for lack of continuity between the blower motor and power MOS FET, then go to Step 15.
10*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN POWER MOS FET AND GROUND) OR ELSEWHERE** • Measure the voltage at the following power MOS FET terminal. — Terminal A (GND) • Is the voltage **approx. 0 V**?	Yes	Go to the next step.
		No	Repair the wiring harness for lack of continuity between the power MOS FET and ground, then go to Step 15.
11	**INSPECT BLOWER UNIT** • Inspect the fan in blower unit. — Is the fan free of interference with the blower unit case? — Is the fan free of foreign material and obstruction? • Is the fan normal?	Yes	Go to the next step.
		No	Remove obstruction, repair or replace the fan and A/C unit case, then go to Step 15.
12*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN POWER MOS FET OR ELSEWHERE** • Disconnect power MOS FET connector. • Turn the fun switch to 1st position from off. • Measure the voltage at the following power MOS FET terminal. — Terminal E (blower motor speed control signal) • Is voltage **approx. 10 V**?	Yes	Replace the power MOS FET, then go to Step 15. (See 07-40A-19 POWER METAL OXIDE SEMICONDUCTOR FIELD EFFECT TRANSISTOR (POWER MOS FET) REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
13*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN POWER MOS FET AND CLIMATE CONTROL UNIT) OR ELSEWHERE** • Switch the ignition off. • Disconnect climate control unit connector. • Inspect for continuity at the following terminals between the power MOS FET and climate control unit. — Terminal E—2D blower motor speed control signal) — Terminal B—2A (blower motor speed feedback signal) • Is there continuity?	Yes	Go to the next step.
		No	Repair the wiring harness for lack of continuity between the power MOS FET and climate control unit, then go to Step 15.
14*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR WIRING HARNESS (SHORT TO GROUND IN WIRING HARNESS BETWEEN POWER MOS FET AND CLIMATE CONTROL UNIT)** • Inspect for continuity at the following terminal between the power MOS FET and ground. — Terminal E (blower motor control signal)—ground — Terminal B (blower motor feedback signal)—ground • Is there continuity?	Yes	Repair the wiring harness for short to GND between the power MOS FET and ground, then go to the next step.
		No	Replace the climate control unit, then go to the next step. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/ INSTALLATION [FULL-AUTO AIR CONDITIONER].)
15	**CONFIRM THAT MALFUNCTION SYMPTOM DOES NOT RECUR AFTER REPAIR** • Is air discharged from vent?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

NO.3 AIR INTAKE MODE FROM VENT DOES NOT CHANGE [FULL-AUTO AIR CONDITIONER]

id0703c1803000

3	**Air intake mode from vent does not change.**
DESCRIPTION	• Air intake mode does not change when switching REC/FRESH mode.
POSSIBLE CAUSE	• Air intake actuator malfunction • Air intake door malfunction • Clogged in blower unit

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIR INTAKE ACTUATOR** • Inspect the following item using the M-MDS A/C operation check mode function. (See 07-02-39 A/C OPERATION CHECK MODE [FULL-AUTO AIR CONDITIONER].) — Air Intake Actuator • Does the air intake actuator operate?	Yes	Go to Step 7.
		No	Go to the next step.
2	**INSPECT TO SEE WHETHER MALFUNCTION IS IN AIR INTAKE ACTUATOR OR ELSEWHERE** • Disconnect the air intake actuator connector. • Switch the ignition ON (engine off or on). • Measure the voltages at the following climate control unit terminals. — Terminal 2J (FRESH motor drive signal) — Terminal 2L (RECIRCULATE motor drive signal) (See 07-40A-33 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].) • Are voltages normal?	Yes	Go to the next step.
		No	Go to Step 4.
3	**INSPECT AIR INTAKE ACTUATOR** • Inspect the air intake actuator. (See 07-40A-6 AIR INTAKE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is the air intake actuator normal?	Yes	Go to Step 7.
		No	Replace the air intake actuator. (See 07-40A-5 AIR INTAKE ACTUATOR REMOVAL/ INSTALLATION [FULL-AUTO AIR CONDITIONER].) Then go to Step 9.
4	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO B+ BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Air intake actuator connector disconnected. • Disconnect the climate control unit connector. • Measure the voltages at the following air intake actuator terminals. — Terminal C (L.H.D.) / B (R.H.D.) (FRESH motor drive signal) — Terminal B (L.H.D.) / C (R.H.D.) (RECIRCULATE motor drive signal) • Are voltages **approx. 0 V**?	Yes	Go to the next step.
		No	Repair the wiring harness for short to B+ between the climate control unit and air intake actuator, then go to Step 9.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
5	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO GROUND BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Climate control unit and air intake actuator connectors disconnected. • Switch the ignition off. • Inspect for continuity at the following terminals between the air intake actuator and ground. — Terminal C (L.H.D.) / B (R.H.D.) (FRESH motor drive signal) — Terminal B (L.H.D.) / C (R.H.D.) (RECIRCULATE motor drive signal) • Is there continuity?	Yes	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 9.
		No	Go to the next step.
6	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY OR OPEN BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Climate control unit and air intake actuator connectors disconnected. • Inspect for continuity at the following terminals between the air intake actuator and climate control unit. **L.H.D.** — Terminal C—2J (FRESH motor drive signal) — Terminal B—2L (RECIRCULATE motor drive signal) **R.H.D.** — Terminal B—2J (FRESH motor drive signal) — Terminal C—2L (RECIRCULATE motor drive signal) • Is there continuity?	Yes	Replace the climate control unit, then go to Step 9. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/ INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Repair the wiring harness for lack of continuity or open between climate control unit and air intake actuator, then go to Step 9.
7	**INSPECT AIR INTAKE LINK** • Inspect the air intake links. — Is there grease on link? — Are the links securely and properly installed? — Are the links free of obstructions and hindrances? • Are the above items normal?	Yes	Go to the next step.
		No	Apply grease to the links. If any the links are damaged, replace the air intake actuator, then go to Step 9.
8	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR AIR INTAKE DOOR** • Inspect the blower unit air intake door. — Is the door free of obstructions, cracks, and damage? — Are the doors securely and properly installed? • Are the above items normal?	Yes	Replace the climate control unit, then go to the next step. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/ INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Remove obstruction, or install the doors in the proper position. If any doors are cracked or damaged, replace them, then go to the next step.
9	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Does the air intake mode change smoothly?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

NO.4 NO TEMPERATURE CONTROL WITH CLIMATE CONTROL UNIT [FULL-AUTO AIR CONDITIONER]

id0702c1812400

4	No temperature control with climate control unit
DESCRIPTION	• Temperature does not change when operating temperature dial • Malfunction in A/C unit and/or climate control unit air mix system • Malfunction in driver and/or passenger side air mix actuator or related wiring harness
POSSIBLE CAUSE	• A/C unit air mix link, air mix crank, air mix rod, malfunction • Climate control unit rack-and-pinion, malfunction • A/C unit air mix door malfunction • Heater piping malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT COOLANT TEMPERATURE** • Is the coolant sufficiently warmed up?	Yes	Go to the next step.
		No	Warm up the engine, then go to Step 20.
2*	**INSPECT CLIMATE CONTROL UNIT POWER SUPPLY FUSE FOR B+ SIGNAL** • Is the climate control unit power supply fuse for B+ signal normal?.	Yes	Go to the next step.
		No	Inspect for short to GND in blown fuse circuit. Repair or replace as necessary. Install appropriate amperage fuse, then go to Step 20.
3*	**INSPECT TO SEE WHETHER MALFUNCTION (OPEN CIRCUIT) IS IN B+ SIGNAL WIRING HARNESS (BETWEEN FUSE BLOCK AND CLIMATE CONTROL UNIT) OR ELSEWHERE.** • Disconnect the climate control unit connector (24-pin). • Switch the ignition ON (engine off or on). • Measure voltage at climate control unit harness-side connector (24-pin) terminal 1E (B+ signal). • Is the voltage **approx. 12V?**	Yes	Go to the next step.
		No	Repair wiring harness for open between fuse block and climate control unit, then go to Step 20.
4*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND GND) OR ELSEWHERE** • Climate control unit connector (24-pin) disconnected. • Verify that continuity between climate control unit harness-side connector (24-pin) terminal 1W and GND. • Is the continuity?	Yes	Go to the next step.
		No	Repair wiring harness for lack of continuity between climate control unit and GND. Inspect GND point condition. Then go to Step 20.
5*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER UNIT OR AIR MIX ACTUATOR** • Reconnect the disconnected climate control unit connector. • Switch the ignition ON (engine off or on). • Measure the voltage at climate control unit terminal 1N and 1P (24-pin) when temperature control dial at MAX HOT and MAX COLD. (See 07-40A-33 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is voltage normal?	Yes	Go to Step 16.
		No	Go to the next step.
6*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN POSITION SENSOR OR ELSEWHERE** • Switch the ignition ON (engine off or on). • Measure voltage at climate control unit terminal 1R (24-pin) when airflow mode change to DEF and VENT (See 07-40A-33 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is voltage normal?	Yes	Go to Step 9.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
7*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY OR SHORT TO BATTERY POWER OR GND) IS IN POSITION SENSOR POWER SUPPLY (CLIMATE CONTROL UNIT TERMINAL 1H) OR ELSEWHERE** • Switch the ignition ON (engine off or on). • Measure voltage at climate control unit terminal 1H (24-pin). • Is voltage **approx. 5V?**	Yes	Go to the next step.
		No	Repair wiring harness for lack of continuity or short circuit between climate control unit terminal 1H and follows: • Driver side air mix actuator terminal G (L.H.D.) / E (R.H.D.) • Passenger side air mix actuator terminal E (L.H.D.) / G (R.H.D.) • Airflow mode actuator terminal B Then go to Step 20.
8*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY OR OPEN) IS IN POSITION SENSOR GND (CLIMATE CONTROL UNIT TERMINAL 1X) OR ELSEWHERE** • Measure voltage at climate control unit terminal 1X (24-pin). • Is the voltage **below. 1.0V?**	Yes	Go to Step 12.
		No	Repair wiring harness for lack of continuity or open between climate control unit terminal 1X and follows: • Driver side air mix actuator terminal E (L.H.D.) / G (R.H.D.) • Passenger side air mix actuator terminal G (L.H.D.) / E (R.H.D.) • Airflow mode actuator terminal A Then go to Step 20.
9	**INSPECT TO SEE WHETHER MALFUNCTION (SHORT TO POWER) IS IN WIRING HARNESS (AIR MIX POSITION SIGNAL) OR ELSEWHERE** • Is climate control unit terminal 1N and 1P voltage **approx. 12V,** at Step 5?	Yes	Repair wiring harness for short to power supply between climate control unit terminal 1N and 1P and each side air mix actuator terminal F. Then go to Step 20.
		No	Go to the next step.
10*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN WIRING HARNESS (AIR MIX POSITION SIGNAL) OR ELSEWHERE** • Switch the ignition off. • Disconnect the climate control unit and air mix actuator connectors. • Verify continuity between climate control unit terminal 1N and 1P (24-pin) and each side air mix actuator terminal F at harness-side connector. • Is there continuity?	Yes	Go to the next step.
		No	Repair wiring harness for lack of continuity between climate control unit terminal 1N and 1P and each side air mix actuator terminal F. Then go to Step 20.
11*	**INSPECT TO SEE WHETHER MALFUNCTION (SHORT TO GND) IS IN WIRING HARNESS (AIR MIX POSITION SIGNAL) OR POSITION SENSOR COMMON (POWER SUPPLY OR GND) HARNESS** • Climate control unit and air mix actuators connectors disconnected. • Verify continuity between climate control unit harness-side connector terminal 1N and 1P (24-pin) and GND. • Is there continuity?	Yes	Repair wiring harness for short to GND between climate control unit terminal 1N and 1P and each side air mix actuator terminal F. Then go to Step 20.
		No	Inspect and repair for open circuit following: • Between driver side air mix actuator terminal G (L.H.D.) / E (R.H.D.) and junction point to airflow mode actuator (position sensor power supply). • Between passenger side air mix actuator terminal E (L.H.D.) / G (R.H.D.) and junction point to airflow mode actuator (position sensor power supply). • Between driver side air mix actuator terminal E (L.H.D.) / G (R.H.D.) and junction point to airflow mode actuator (position sensor GND). • Between passenger side air mix actuator terminal G (L.H.D.) / E (R.H.D.) and junction point to airflow mode actuator (position sensor GND). Then go to Step 20.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
12*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN AIR MIX ACTUATOR OR WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND AIR MIX ACTUATOR)** • Disconnect the air mix actuators connectors. • Measure voltage at the following terminals of air mix actuator. **L.H.D.** — Terminal C (driver-side)/B (passenger-side) (COLD motor drive signal) — Terminal B (driver-side)/C (passenger-side) (HOT motor drive signal) **R.H.D.** — Terminal B (driver-side)/C (passenger-side) (COLD motor drive signal) — Terminal C (driver-side)/B (passenger-side) (HOT motor drive signal) • Are voltage s as shown below? — COLD motor drive signal: **approx. 10V** during COLD and **approx. 0.5V** during HOT — HOT motor drive signal: **approx. 0.5V** during COLD and **approx. 10V** during HOT	Yes	Go to Step 16.
		No	Go to the next step.
13*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO B+ BETWEEN CLIMATE CONTROL UNIT AND AIR MIX ACTUATOR) OR ELSEWHERE** • Air mix actuators connectors disconnected. • Disconnect the climate control unit connector. • Measure voltage at the following terminals of the climate control unit harness-side connector. **Driver-side: (L.H.D.)** — Terminal 2G (12-pin, COLD motor drive signal) — Terminal 2E (12-pin, HOT motor drive signal) **Passenger-side: (L.H.D.)** — Terminal 2H (12-pin, COLD motor drive signal) — Terminal 2F (12-pin, HOT motor drive signal) **Driver-side: (R.H.D.)** — Terminal 2H (12-pin, COLD motor drive signal) — Terminal 2F (12-pin, HOT motor drive signal) **Passenger-side: (R.H.D.)** — Terminal 2G (12-pin, COLD motor drive signal) — Terminal 2E (12-pin, HOT motor drive signal) • Are voltages **approx. 0V?**	Yes	Go to the next step.
		No	Repair wiring harness for short to B+ between climate control unit and air mix actuator. Then go to Step 20.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
14*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO GND BETWEEN CLIMATE CONTROL UNIT AND AIR MIX ACTUATOR) OR ELSEWHERE** • Air mix actuators connectors disconnected. • Switch the ignition off. • Verify that continuity at the following harness-side connector terminals between climate control unit and GND. **Driver-side: (L.H.D.)** — Terminal 2G (12-pin, COLD motor drive signal) — Terminal 2E (12-pin, HOT motor drive signal) **Passenger-side: (L.H.D.)** — Terminal 2H (12-pin, COLD motor drive signal) — Terminal 2F (12-pin, HOT motor drive signal) **Driver-side: (R.H.D.)** — Terminal 2H (12-pin, COLD motor drive signal) — Terminal 2F (12-pin, HOT motor drive signal) **Passenger-side: (R.H.D.)** — Terminal 2G (12-pin, COLD motor drive signal) — Terminal 2E (12-pin, HOT motor drive signal) • Is there continuity?	Yes	Repair wiring harness for short to GND between climate control unit and air mix actuator. Then go to Step 20.
		No	Go to the next step.
15	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY OR OPEN BETWEEN CLIMATE CONTROL UNIT AND AIR MIX ACTUATOR) OR ELSEWHERE** • Air mix actuators connectors disconnected. • Switch the ignition off. • Verify that continuity at the following harness-side connector terminals between climate control unit and each air mix actuator. **L.H.D.** Driver-side air mix actuator: — Terminal C—climate control unit terminal 2G (12-pin, COLD motor drive signal) — Terminal B—climate control unit terminal 2E (12-pin, HOT motor drive signal) Passenger-side air mix actuator: — Terminal B—climate control unit terminal 2H (12-pin, COLD motor drive signal) — Terminal C—climate control unit terminal 2F (12-pin, HOT motor drive signal) **R.H.D.** Driver-side air mix actuator: — Terminal B—climate control unit terminal 2H (12-pin, COLD motor drive signal) — Terminal C—climate control unit terminal 2F (12-pin, HOT motor drive signal) Passenger-side air mix actuator: — Terminal C—climate control unit terminal 2G (12-pin, COLD motor drive signal) — Terminal B—climate control unit terminal 2E (12-pin, HOT motor drive signal) • Is there continuity?	Yes	Repair wiring harness for lack of continuity or open between climate control unit and air mix actuator. Then go to Step 20.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
16	**INSPECT AIR MIX ACTUATOR** • Inspect the air mix actuator. (See 07-40A-9 AIR MIX ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is air mix actuator normal?	Yes	Go to the next step.
		No	Replace the suspected side air mix actuator. Then go to 20. (See 07-40A-7 AIR MIX ACTUATOR REMOVAL/ INSTALLATION [FULL-AUTO AIR CONDITIONER].)
17	**INSPECT AIR MIX LINK** • Inspect air mix links for each-side. — Is grease on link? — Are links securely and properly installed? — Are links free of obstructions and hindrances? • Are above items okay?	Yes	Go to the next step.
		No	Apply grease to links. If any links are damaged. Replace malfunctioning part. Then go to Step 20.
18	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR AIR MIX DOOR ELSEWHERE** • Inspect A/C unit and each-side air mix door. — Is door free of unit and obstruction, and damage? — Are doors securely and properly installed? • Are above items okay?	Yes	Go to the next step.
		No	Remove the obstruction, or install door in proper position. If any door are cracked, replace them. Then go to the next step.
19	**INSPECT HEATER LINES** • Inspect heater lines for followings: — Is heater piping free if damage and cracks? — Are heater piping connections free of engine coolant leakage? — Are heater piping installation points on A/C unit free of engine coolant leakage? • Are above items okay?	Yes	Replace the climate control unit. Then go to the next step. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/ INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	If heater piping connections is loosed, tighten connections with specified torque. Repair or replace heater piping. Then go to the next step.
20	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Does the unit operate in every temperature setting?	Yes	Trouble shooting completed. Explain repairs customer.
		No	Recheck malfunction symptoms, then repeat from Step1 if the malfunction recurs.

07

NO.5 WINDSHIELD FOGGED [FULL-AUTO AIR CONDITIONER]

id0703c1801900

5	Windshield fogged
DESCRIPTION	• A/C compressor does not operate while airflow mode is in DEFROSTER or DEF/HEAT modes • Air intake mode does not change to FRESH while airflow mode is in DEFROSTER or DEF/HEAT modes
POSSIBLE CAUSE	• Climate control unit (B+ signal) system malfunction • Air intake actuator malfunction • Climate control unit (RECIRCULATE, FRESH signal) system malfunction • Blower unit air intake door malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**COOL AIR BLOW OUT INSPECTION** • When both the A/C switch and airflow volume control dial in the climate control unit are on, does cool air blow out from the front vent?	Yes	Go to the next step.
		No	Go to Step 1 of troubleshooting index No.7.
2	**INSPECT CLIMATE CONTROL UNIT POWER SUPPLY FUSE FOR B+ SIGNAL** • Is the climate control unit power supply fuse for B+ signal normal?	Yes	Go to the next step.
		No	**If the fuse is melted:** Repair or replace wiring harness for short to GND and replace the fuse. **If the fuse is deterioration:** Replace the fuse. Then go to Step 14.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
3	**INSPECT AIR INTAKE ACTUATOR** • Inspect the air intake actuator. — Is there grease on the link? — Is the link securely and properly positioned? — Is the link free of obstructions? • Are the above items normal?	Yes	Go to the next step.
		No	Apply grease or install the link properly and securely, remove obstruction, then go to Step 14.
4*	**INSPECT WIRING HARNESS BETWEEN FUSE BLOCK AND CLIMATE CONTROL UNIT FOR CONTINUITY** • Disconnect the climate control unit connector (24-pin). • Switch the ignition ON (engine off or on). • Measure the voltage at climate control unit terminal 1E (B+ signal). • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Repair the wiring harness between the fuse block and climate control unit, then go to Step 14.
5*	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND GROUND FOR VOLTAGE** • Measure the voltage at climate control unit terminal 1W (Ground). • Is the voltage **approx. 0V**?	Yes	Go to the next step.
		No	Repair the wiring harness between the climate control unit and ground, then go to Step 14.
6	**VERIFY WHETHER MALFUNCTION IS IN A/C UNIT AIR INTAKE DOOR OR ELSEWHERE** • Switch the ignition off. • Connect the climate control unit connector (24-pin and 12-pin). • Remove the air intake actuator. • Switch the ignition ON (engine off or on). • Set the airflow volume control dial to MAX position. • Does the air intake mode (RECIRCULATE, FRESH) change smoothly when the air intake link is operated by hand?	Yes	Go to the next step.
		No	Go to Step 12.
7	**INSPECT AIR INTAKE ACTUATOR** • Inspect the air intake actuator. (See 07-40A-6 AIR INTAKE ACTUATOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is it normal?	Yes	Go to the next step.
		No	Replace the air intake actuator, go to Step 14.
8	**INSPECT AIR INTAKE SELECTOR SWITCH AND DEFROSTER SWITCH IN CLIMATE CONTROL UNIT** • Measure the voltage at climate control unit connector (12-pin) terminals 2J and 2L. • Is it normal?	Yes	Go to the next step.
		No	Replace the climate control unit, then go to Step 14. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/ INSTALLATION [FULL-AUTO AIR CONDITIONER].)
9*	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR CONTINUITY** • Switch the ignition off. • Is there continuity between the following climate control unit terminals and air intake actuator terminals? **L.H.D.** — Terminal 2J —Terminal C (FRESH signal) — Terminal 2L —Terminal B (RECIRCULATE signal) **R.H.D.** — Terminal 2J —Terminal B (FRESH signal) — Terminal 2L —Terminal C (RECIRCULATE signal)	Yes	Go to the next step.
		No	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 14.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
10*	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR SHORT TO GROUND** • Is there continuity between the following climate control unit terminals and ground? — Terminal 2J (FRESH signal) — Terminal 2L (RECIRCULATE signal)	Yes	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 14.
		No	Go to the next step.
11*	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR SHORT TO B+** • Switch the ignition ON (engine off or on). • Measure the voltage at the following climate control unit terminals. — Terminal 2J (FRESH signal) — Terminal 2L (RECIRCULATE signal) • Is the voltage **approx. 12 V**?	Yes	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 14.
		No	Replace the climate control unit, then go to Step 14. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/ INSTALLATION [FULL-AUTO AIR CONDITIONER].)
12	**INSPECT BLOWER UNIT AIR INTAKE DOOR** • Is there any foreign material or obstruction in the blower unit air intake door?	Yes	Remove obstruction, then go to Step 14.
		No	Go to the next step.
13	**VERIFY THAT BLOWER UNIT AIR INTAKE DOOR IS POSITIONED SECURELY AND PROPERLY** • Is the blower unit air intake door securely and properly positioned?	Yes	Inspect the air intake door for cracks or damage, then go to the next step.
		No	Install the air intake door securely in the proper position, then go to the next step.
14	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Does the malfunction disappear?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

NO.6 AIR FROM VENTS NOT COLD ENOUGH [FULL-AUTO AIR CONDITIONER]

id0702c1812500

07

6	**Air from vents not cold enough**
DESCRIPTION	• Magnetic clutch operates but A/C system malfunctions
POSSIBLE CAUSE	**Note** • If the engine coolant temperature increases due to a cooling system malfunction, the fail-safe function disables the A/C operation. • Drive belt malfunction • Refrigerant pressure sensor malfunction • Malfunction in blower unit or condenser • Cooling fan system malfunction • Condenser or related part malfunction • A/C unit or condenser malfunction • Receiver/drier or expansion valve malfunction (valve closes too much) • Malfunction in refrigerant lines • A/C compressor system malfunction, insufficient compressor oil • Over filling of compressor oil, malfunction in expansion valve or A/C unit air mix link system • Evaporative temperature sensor malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CHECK MALFUNCTION SYMPTOMS** **Note** • Without i-stop, go to the next step. • Is malfunctions occur in only when operating the i-stop?	Yes	Perform the i-stop troubleshooting. (See 01-02-4 FOREWORD [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT REFRIGERANT SYSTEM PERFORMANCE** • Perform refrigerant system performance test. (See 07-10-9 REFRIGERANT SYSTEM PERFORMANCE TEST.) • Is the operation normal?	Yes	Operation is normal. (Recheck malfunction symptoms.)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
3	**INSPECT DRIVE BELT** • Inspect the drive belt. (See 01-10A-9 DRIVE BELT INSPECTION [SKYACTIV-G 2.0].) (See 01-10B-7 DRIVE BELT INSPECTION [SKYACTIV-D 2.2].) • Is it normal?	Yes	Go to the next step.
		No	Adjust or replace the drive belt, then the next step. (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-10B-8 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4	**INSPECT REFRIGERANT PRESSURE SENSOR** • Inspect the refrigerant pressure sensor. (See 07-40A-30 REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is it normal?	Yes	Replace the refrigerant pressure sensor. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].) Then go to the next step.
		No	Go to the next step.
5	**DETERMINE IF MALFUNCTION CAUSE IS A/C PRESSURE SENSOR SIGNAL OR ELSEWHERE** • Access PCM PID AC_PRES. • Monitor the AC_PRES PID while turning on and off the air conditioner by switching the control panel. (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].) • Is the PID normal?	Yes	Go to appropriate inspection procedure.
		No	Go to the next step.
6	**INSPECT REFRIGERANT PRESSURE** • Perform refrigerant pressure check. (See 07-10-7 REFRIGERANT PRESSURE CHECK.) • Are the refrigerant high-pressure and low-pressure values both high?	Yes	Go to the next step.
		No	After recording the inspection results, go to Step 11.
7	**INSPECT COOLING FAN OPERATION** • Verify the cooling fan operation. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is the cooling fan operation normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning location according to the inspection results. Then go to Step 23.
8	**VISUALLY INSPECT CONDENSER** • Is the condenser fin clogged or obstructed by foreign material?	Yes	Remove the foreign material. Repair the condenser fin. Then go to Step 23.
		No	Go to the next step.
9	**CHECK TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE OR ELSEWHERE** • Verify the condition of the low pressure hose while the A/C is operating. • Is there frost or condensation adhering?	Yes	Replace the expansion valve. After performing the following servicing, go to Step 23. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No	Go to the next step.
10	**INSPECT AIR MIX DOOR RELATED PART INSTALLATION** • Remove the A/C unit. (See 07-11-11 A/C UNIT REMOVAL/INSTALLATION.) • Are the air mix link, and air mix crank of the A/C unit correctly and securely installed to their positions?	Yes	Adjust the compressor oil to the specified amount. (See 07-11-25 A/C COMPRESSOR REMOVAL/INSTALLATION.) Then go to Step 23.
		No	Repair or install the links, and cranks securely in the proper position, then go to Step 23.
11	**CHECK TO SEE WHETHER MALFUNCTION IS IN BLOWER UNIT AND REFRIGERANT PRESSURE LINE OR ELSEWHERE** • Are the refrigerant high-pressure and low-pressure values low?	Yes	Go to the next step.
		No	Go to Step 17.
12	**INSPECT BLOWER UNIT FOR BLOCKAGE** • Is the blower unit intake and air filter clogged?	Yes	Remove the cause of the clogging. Replace the air filter if it is clogged. (See 07-11-11 AIR FILTER REMOVAL/INSTALLATION.) Then go to Step 23.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
13	**CHECK TO SEE WHETHER MALFUNCTION IS REFRIGERANT LINE LEAKAGE OR ELSEWHERE** • Verify if there is gas leakage from the system hoses using the gas leak tester. • Is there gas leakage?	Yes	• If there is leakage from a system hose connection area, go to Step 15. • If there is leakage other than from a system hose connection area, go to the next step.
		No	Go to the next step.
14	**VISUALLY INSPECT REFRIGERANT LINE** • Is a system hose crushed?	Yes	Replace the crushed system hose. (See 07-11-36 REFRIGERANT LINE REMOVAL/INSTALLATION.) After performing the following servicing, go to the next step. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No	Go to the next step.
15	**CHECK TO SEE WHETHER MALFUNCTION IS IN REFRIGERANT LINE JOINT LOOSE OR O-RING** • Tighten the system hose connection area to the specified torque. (See 07-11-36 REFRIGERANT LINE REMOVAL/INSTALLATION.) • Has the leakage stopped?	Yes	Go to Step 23.
		No	Go to the next step.
16	**VISUALLY INSPECT REFRIGERANT LINE** • Is a system hose crushed?	Yes	Replace the O-ring of the leaking area. Replace the crushed system hose. (See 07-11-36 REFRIGERANT LINE REMOVAL/INSTALLATION.) After performing the following servicing, go to Step 23. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No	Replace the O-ring of the leaking area. After performing the following servicing, go to Step 23. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
17	**CHECK TO SEE WHETHER MALFUNCTION IS IN CONDENSER AND EXPANSION VALVE OR ELSEWHERE** • Do the results of the refrigerant pressure inspection in Step 6 indicate vacuum on the low pressure side and extremely low pressure on the high pressure side?	Yes	Go to the next step.
		No	Go to Step 21.
18	**CHECK TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE AND RECEIVER/DRIER OR ELSEWHERE** • Is there no refrigerant pressure on the low pressure side, or is it normal?	Yes	Replace the condenser. (See 07-11-28 CONDENSER REMOVAL/INSTALLATION.) After performing the following servicing, go to Step 23. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No	Go to the next step.
19	**CHECK TO SEE WHETHER MALFUNCTION IS IN CONDENSER OR EXPANSION VALVE** • Verify the condition of the outlet hose on the condenser high pressure side. • Is there condensation in the hose?	Yes	Replace the condenser. (See 07-11-28 CONDENSER REMOVAL/INSTALLATION.) After performing the following servicing, go to Step 23. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No	Go to the next step.
20	**INSPECT EXPANSION VALVE** • Remove the expansion valve and verify its condition. • Is there refrigerant leakage or valve clogging?	Yes	If there is foreign matter clogging the valve • Remove the foreign matter. If there is refrigerant leakage or clogging • Replace the expansion valve. Perform discharge, charge with new refrigerant, and then go to Step 23.
		No	Install the expansion valve, then go to Step 23.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
21	**CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE** • Do the results of the refrigerant pressure inspection in Step 6 indicate low pressure on the high pressure side and high pressure on the low pressure side?	Yes	Replace the A/C compressor. (See 07-11-25 A/C COMPRESSOR REMOVAL/INSTALLATION.) Then go to Step 23.
		No	Go to the next step.
22	**INSPECT EVAPORATIVE TEMPERATURE SENSOR** • Inspect the evaporator temperature sensor. (See 07-40A-27 EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is it normal?	Yes	Verify the evaporator temperature sensor position. (See 07-11-14 A/C UNIT DISASSEMBLY/ASSEMBLY.) Then go to the next step.
		No	Replace the evaporator temperature sensor. (See 07-11-14 A/C UNIT DISASSEMBLY/ASSEMBLY.) Then go to the next step.
23	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • If the refrigerant discharged during inspection has not been recharged, discharge and charge with new refrigerant to the specified level. • Does cool air blow out? (Are results of refrigerant system performance test normal?)	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.7 NO COOL AIR [FULL-AUTO AIR CONDITIONER]

id0702c1812600

7	**No cool air**
DESCRIPTION	• Magnetic clutch does not operate.
POSSIBLE CAUSE	• Malfunction in PCM A/C cut control system • Malfunction in climate control unit • Malfunction in refrigerant pressure sensor • Malfunction in PCM (A/C signal) • Malfunction in PCM (IG1 signal) • Malfunction in A/C compressor • Malfunction in A/C relay • Malfunction in evaporator temperature sensor • Malfunction in front body control module (FBCM) • Malfunction in instrument cluster • Malfunction in CAN communication • Improper refrigerant charging amount

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CHECK MALFUNCTION SYMPTOMS** **Note** • Without i-stop, go to the next step. • Is malfunctions occur in only when operating the i-stop?	Yes	Perform the i-stop troubleshooting. (See 01-02-4 FOREWORD [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT AIR BLOW OUT** • Does air blow out?	Yes	Go to the next step.
		No	Go to Step 1 of troubleshooting indexes No.1 and 2.
3	**INSPECT A/C COMPRESSOR OPERATION** • Start engine. • Turn A/C switch and fan switch on. • Does A/C compressor operate?	Yes	Go to Step 1 of troubleshooting index No.6.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
4	**INSPECT FOR DTC IN PCM, CLIMATE CONTROL UNIT, AND INSTRUMENT CLUSTER** • Inspect for DTCs related to the PCM, climate control unit, and instrument cluster on-board diagnostic system. • Are any DTCs displayed?	Yes	Go to appropriate inspection procedure.
		No	Go to the next step.
5	**DETERMINE IF MALFUNCTION CAUSE IS A/C REQUEST SIGNAL OR A/C RELAY OPERATIONAL MALFUNCTION** • Access PCM PID ACCS using the M-MDS. • Start the engine and idle it. • Turn the PID ACCS to ON from OFF using the M-MDS simulation function. • Is the A/C magnetic clutch engaged?	Yes	Go to the next step.
		No	Go to Step 11.
6	**DETERMINE IF MALFUNCTION CAUSE IS A/C PRESSURE SENSOR SIGNAL OR ELSEWHERE** • Access climate control unit PID AC_PRES. • Monitor the AC_PRES PID while turning on and off the air conditioner by switching the control panel. • Is the PID normal? (See 07-02-38 PID/DATA MONITOR DISPLAY [FULL-AUTO AIR CONDITIONER].)	Yes	Go to Step 8.
		No	Go to the next step.
7	**INSPECT TO SEE MALFUNCTION IS IN REFRIGERANT PRESSURE SENSOR OR A/C SYSTEM** • Inspect the refrigerant pressure sensor. (See 07-40A-30 REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is the refrigerant pressure sensor normal?	Yes	Inspect for following and repair or replace if necessary. • Refrigerant charging amount • A/C compressor for seizure Then go to Step 17.
		No	Repair or replace malfunctioning part according to inspection result, then go to Step 17.
8	**DETERMINE IF MALFUNCTION CAUSE IS EVAPORATOR TEMPERATURE SENSOR OPERATIONAL SIGNAL OR ELSEWHERE** • Access climate control unit PID EVA_TMP_SEN. • Monitor the EVA_TMP_SEN PID while turning on and off the air conditioner by switching the control panel. • Is the PID normal? (See 07-02-38 PID/DATA MONITOR DISPLAY [FULL-AUTO AIR CONDITIONER].)	Yes	Go to Step 10.
		No	Go to the next step.
9	**INSPECT EVAPORATOR TEMPERATURE SENSOR** • Inspect the evaporator temperature sensor. (See 07-40A-27 EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is the evaporator temperature sensor normal?	Yes	Inspect and repair for open or short circuit between evaporator temperature sensor and climate control unit. Then go to Step 17.
		No	Replace the evaporator temperature sensor, then go to Step 17. (See 07-11-14 A/C UNIT DISASSEMBLY/ASSEMBLY.)
10	**DETERMINE IF MALFUNCTION CAUSE IS INSTRUMENT CLUSTER OR CAN COMMUNICATION SIGNAL** • Verify the information panel indication of A/C system while turning on and off the air conditioner by switching the control panel. • Does the information panel indicate properly?	Yes	Replace the instrument cluster.(Instrument cluster does not receive A/C request signal from climate control unit or transmit it to PCM.) (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) Then go to Step 17.
		No	Repair or replace malfunctioning part according to inspection result, then go to Step 17.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
11	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN A/C CONTROL SIGNAL CIRCUIT (BETWEEN A/C RELAY AND PCM) OR ELSEWHERE** • Does cool air blow out when terminal E of A/C relay connector (A/C control signal) is grounded?	Yes	Release short, then go to the next step.
		No	Go to Step 13.
12*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN PCM OR WIRING HARNESS (BETWEEN A/C RELAY AND PCM)** • Test voltage at the A/C relay control signal terminal of PCM. • Is voltage **approx. 12 V**?	Yes	Inspect the PCM, then go to Step 17.
		No	Repair wiring harness between A/C relay and PCM, then go to Step 17.
13*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN MAGNETIC CLUTCH OR ELSEWHERE** • Test voltage at the following terminal of magnetic clutch thermal protector. — Terminal A (magnetic clutch operation signal) • Is voltage **approx. 12 V**?	Yes	Inspect magnetic clutch, then go to Step 17.
		No	Go to the next step.
14	**INSPECT FUSE** • Are A/C relay power supply fuses okay?	Yes	Go to the next step.
		No	Replace fuse, then go to Step 17. If fuse burns out immediately, go to the next step.
15	**INSPECT WIRING HARNESS BETWEEN FUSE BLOCK AND A/C RELAY FOR LACK OF CONTINUITY** • Test voltages at following terminals of A/C relay. — Terminal A (A/C relay control signal) — Terminal C (A/C control signal) • Are voltages **approx. 12 V**?	Yes	Go to the next step.
		No	Repair the wiring harness between fuse block and A/C relay, then go to Step 17.
16	**INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C RELAY OR WIRING HARNESS (BETWEEN A/C RELAY AND MAGNETIC CLUTCH)** • Test voltage at the following terminal of A/C relay. — Terminal D (magnetic clutch operation signal) • Is voltage **approx. 12 V**?	Yes	Inspect wiring harness between A/C relay and magnetic clutch. • If above wiring harness is OK, go to the next step. • If above wiring harness malfunctions, repair wiring harness, then go to the next step.
		No	Replace the A/C relay, then go to the next step.
17	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Does cool air blow out? (Are the results of refrigerant system performance test okay?)	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

NO.8 NOISE WHILE OPERATING A/C SYSTEM [FULL-AUTO AIR CONDITIONER]

id0702c1812700

8	Noise while operating A/C system.
DESCRIPTION	• Noise from magnetic clutch, A/C compressor, hose or refrigerant line.
POSSIBLE CAUSE	• Magnetic clutch operation noise • A/C compressor vane noise • A/C compressor slippage noise • Hose or refrigerant line interference noise

* : If there is gas leakage, air enters into the A/C system. The desiccant within the receiver/drier absorbs the moisture from the air and becomes saturated. If the A/C system is used in this condition, the inside of the A/C compressor will begin to rust due to this moisture, which may cause lock up or noise to occur. Therefore, replacement of the receiver/drier is necessary.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CHECK A/C COMPRESSOR VANE NOISE** • Is there a jingling, popping, beeping, or buzzing sound (A/C compressor vane noise)?	Yes	Go to Step 5.
		No	Go to the next step.
2	**INSPECT A/C COMPRESSOR SLIPPAGE NOISE** • Is there a squeaking or whirling sound (A/C compressor slippage noise)?	Yes	Go to Step 14.
		No	Go to the next step.
3	**INSPECT A/C COMPRESSOR INTERFERENCE NOISE** • Is there a rattling or vibrating sound (interference noise)?	Yes	Go to Step 18.
		No	Go to the next step.
4	**INSPECT MAGNETIC CLUTCH OPERATION NOISE** • Is there a clicking sound (magnetic clutch operation noise)?	Yes	Adjust clearance between pressure plate of magnetic clutch and A/C compressor pulley, then go to Step 19. (See 07-40A-18 MAGNETIC CLUTCH ADJUSTMENT [FULL-AUTO AIR CONDITIONER].)
		No	Condition is normal. (Recheck malfunction symptoms.)
5	**INSPECT A/C COMPRESSOR NOISE TIME** • Is noise heard continuously for **more than 3 s** after A/C compressor comes on?	Yes	Go to the next step.
		No	Condition is normal. (Noise occurs for **2—3 s** immediately after A/C compressor turns on.)
6	**INSPECT IDLE SPEED** • Inspect idle speed. (See 01-10A-4 ENGINE TUNE-UP [SKYACTIV-G 2.0].) (See 01-10B-3 ENGINE TUNE-UP [SKYACTIV-D 2.2].) • Is it okay?	Yes	Go to the next step.
		No	Follow the repair instruction described in “ENGINE” section, then go to Step 19.
7	**INSPECT REFRIGERANT AMOUNT** • Inspect refrigerant amount. • Is it okay?	Yes	Go to Step 10.
		No	Go to the next step.
8	**INSPECT REFRIGERANT LINES** • Inspect refrigerant lines. — Is piping free of damage and cracks? — Are piping connections free of oil grime? (Visual inspection) — Are piping connections free of gas leakage? — Are piping installation points on condenser free of gas leakage? — Are piping installation points on receiver/drier free of gas leakage? — Are piping installation points on A/C compressor free of gas leakage? — Are piping installation points on A/C unit free of gas leakage? — Perform gas leak inspection using gas leak tester. • Are above items okay?	Yes	Go to the next step.
		No	If piping or A/C component(s) is damaged or cracked, replace then go to Step 19. If there is gas leakage, repair or replace connection and replace condenser*, then go to Step 19.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
9	**INSPECT EVAPORATOR PIPING CONNECTIONS IN A/C UNIT FOR GAS LEAKAGE** • Are piping connections for evaporator in A/C unit free of gas leakage?	Yes	Adjust refrigerant amount to specified level, then go to Step 19.
		No	If piping is damaged or cracked, replace then go to Step 19. If there is gas leakage, repair or replace connection and replace condenser*, then go to Step 19.
10	**CHECK TO SEE WHETHER MALFUNCTION IS IN COMPRESSOR OIL OR ELSEWHERE** • Add **20 ml {20 cc, 0.68 fl oz}** of compressor oil. • Is noise heard when racing engine?	Yes	Go to the next step.
		No	Troubleshooting completed. Explain repair to customer.
11	**CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE** • Drain compressor oil. • Is it contaminated with metal particles?	Yes	Go to the next step.
		No	Replace A/C compressor, then go to Step 19.
12	**CHECK TO SEE WHETHER MALFUNCTION IS SOMEWHERE IN A/C SYSTEM OR ELSEWHERE** • Is compressor oil whitish and mixed with water?	Yes	Replace entire A/C system (excluding heater), then go to Step 19.
		No	Go to the next step.
13	**INSPECT A/C COMPRESSOR OIL** • Is compressor oil darker than normal and contaminated with aluminum chips?	Yes	Replace A/C compressor and condenser, then go to Step 19. (Since A/C compressor may be worn and receiver/drier may be clogged, replacement of receiver/drier is necessary.)
		No	Condition is normal. Recheck malfunction symptoms.
14	**CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE** • Is noise heard immediately after A/C compressor is stopped?	Yes	Replace A/C compressor, then go to Step 19. (A/C compressor discharge valve left open)
		No	Go to the next step.
15	**INSPECT DRIVE BELT** • Inspect the drive belt. (See 01-10A-9 DRIVE BELT INSPECTION [SKYACTIV-G 2.0].) (See 01-10B-7 DRIVE BELT INSPECTION [SKYACTIV-D 2.2].) • Is it okay?	Yes	Go to the next step.
		No	Replace the drive belt, then go to Step 19. (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-10B-8 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
16	**INSPECT DRIVE BELT CONDITION** • Is drive belt worn? • Does it have foreign material imbedded in it, or have oil on it?	Yes	Remove obstruction, remove oil, or replace drive belt, then go to Step 19.
		No	Go to the next step.
17	**INSPECT MAGNETIC CLUTCH** • Inspect the magnetic clutch. (See 07-40A-19 MAGNETIC CLUTCH INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is it okay?	Yes	Replace A/C compressor (excluding pressure plate, A/C compressor pulley, and stator), then go to Step 19.
		No	Replace magnetic clutch, then go to Step 19.
18	**CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR REFRIGERANT LINES** • Is noise emitted from A/C compressor?	Yes	Visually inspect A/C compressor, replace appropriate parts if necessary, then go to the next step.
		No	If noise is due to refrigerant lines, repair detached or missing clips, tighten loose bolts, then go to the next step.
19	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Has A/C compressor noise stopped?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

NO.9 DUAL A/C CONTROL DOES NOT OPERATE [FULL-AUTO AIR CONDITIONER]

id0703c1812300

9	Dual A/C control function does not operate
DESCRIPTION	• Driver or passenger side temperature control dial does not operate individually • Temperature control operates normally except for dual A/C control function
POSSIBLE CAUSE	• Driver-side air mix door malfunction (stuck) • Passenger-side air mix door malfunction (stuck) • Driver-side air mix actuator malfunction • Passenger-side air mix actuator malfunction • Driver-side air mix actuator position sensor malfunction • Passenger-side air mix actuator position sensor malfunction • Open, short circuit in wiring or poor connection between climate control unit and driver-side air mix actuator • Open, short circuit in wiring or poor connection between climate control unit and passenger-side air mix actuator • Open, short circuit in wiring or poor connection between climate control unit and driver-side air mix actuator position sensor • Open, short circuit in wiring or poor connection between climate control unit and passenger-side air mix actuator position sensor • Climate control unit malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CHECK SYMPTOM** • Turn on the A/C. • Perform the dual A/C control function for driver and passenger side individually. • Is it either of cannot the temperature control on driver side or passenger side?	Yes	Go to the next step.
		No	Go to Step 12.
2	**INSPECT TO SEE WHETHER MALFUNCTION IS IN AIR MIX DOOR OR ELSEWHERE** • Turn on the A/C. • Change temperature control for suspect side seat at the dual mode. • Does the suspect side air mix door move smoothly?	Yes	Go to Step 8.
		No	Go to the next step.
3	**INSPECT AIR MIX ACTUATOR** • Inspect the suspect side air mix actuator. • Is the air mix actuator normal?	Yes	Go to the next step.
		No	Replace the suspect air mix actuator, then go to Step 15.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
4*	**INSPECT AIR MIX ACTUATOR (MOTOR) CIRCUIT FOR SHORT TO GROUND** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the climate control unit connector. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: **L.H.D.** — Climate control unit terminal 2E (driver-side motor) — Climate control unit terminal 2G (driver-side motor) — Climate control unit terminal 2F (passenger-side motor) — Climate control unit terminal 2H (passenger-side motor) **R.H.D.** — Climate control unit terminal 2F (driver-side motor) — Climate control unit terminal 2H (driver-side motor) — Climate control unit terminal 2E (passenger-side motor) — Climate control unit terminal 2G (passenger-side motor) • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to the Step 15.
		No	Go to the next step.
5*	**INSPECT AIR MIX ACTUATOR (MOTOR) CIRCUIT FOR OPEN CIRCUIT** • Air mix actuator and climate control unit connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): **L.H.D.** — Climate control unit terminal 2E— driver-side air mix actuator terminal B — Climate control unit terminal 2G — driver-side air mix actuator terminal C — Climate control unit terminal 2F— passenger-side air mix actuator terminal C — Climate control unit terminal 2H — passenger-side air mix actuator terminal B **R.H.D.** — Climate control unit terminal 2F — driver-side air mix actuator terminal C — Climate control unit terminal 2H — driver-side air mix actuator terminal B — Climate control unit terminal 2E — passenger-side air mix actuator terminal B — Climate control unit terminal 2G— passenger-side air mix actuator terminal C • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 15.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
6*	**INSPECT AIR MIX ACTUATOR (MOTOR) CIRCUIT FOR SHORT TO POWER SUPPLY** • Air mix actuator and climate control unit connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): **L.H.D.** — Climate control unit terminal 2E (driver-side motor) — Climate control unit terminal 2G (driver-side motor) — Climate control unit terminal 2F (passenger-side motor) — Climate control unit terminal 2H (passenger-side motor) **R.H.D.** — Climate control unit terminal 2F (driver-side motor) — Climate control unit terminal 2H (driver-side motor) — Climate control unit terminal 2E (passenger-side motor) — Climate control unit terminal 2G (passenger-side motor) • Is the voltage 0 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 15.
7	**INSPECT AIR MIX DOOR** • Inspect the suspect side air mix door. — Is the fan free of interfere with the suspect side A/C unit case? — Is the fan free of foreign material and obstruction? • Is the air mix door normal?	Yes	Replace the climate control unit, then go to Step 15. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Remove the obstruction or replace the suspect side A/C unit case, then go to Step 15.
8*	**INSPECT AIR MIX ACTUATOR POSITION SENSOR** • Inspect the suspect side air mix actuator position sensor. • Is the air mix actuator position sensor normal?	Yes	Go to the next step.
		No	Replace the suspect air mix actuator, then go to Step 15.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
9*	**INSPECT AIR MIX ACTUATOR (POSITION SENSOR) CIRCUIT FOR SHORT TO GROUND** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the climate control unit connector. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: **L.H.D.** — Climate control unit terminal 1N (driver-side position sensor) — Climate control unit terminal 1P (passenger-side position sensor) — Climate control unit terminal 1H (position sensor power supply) — Climate control unit terminal 1X (position sensor ground) **R.H.D.** — Climate control unit terminal 1P (driver-side position sensor) — Climate control unit terminal 1N (passenger-side position sensor) — Climate control unit terminal 1H (position sensor power supply) — Climate control unit terminal 1X (position sensor ground) • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to the Step 15.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
10*	**INSPECT AIR MIX ACTUATOR (POSITION SENSOR) CIRCUIT FOR OPEN CIRCUIT** • Air mix actuator and climate control unit connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): **L.H.D.** — Climate control unit terminal 1N — driver-side air mix actuator terminal F — Climate control unit terminal 1P — passenger-side air mix actuator terminal F — Climate control unit terminal 1H — driver-side air mix actuator terminal G — Climate control unit terminal 1H — passenger-side air mix actuator terminal E — Climate control unit terminal 1X — driver-side air mix actuator terminal E — Climate control unit terminal 1X — passenger-side air mix actuator terminal G **R.H.D.** — Climate control unit terminal 1P — driver-side air mix actuator terminal F — Climate control unit terminal 1N — passenger-side air mix actuator terminal F — Climate control unit terminal 1H — driver-side air mix actuator terminal E — Climate control unit terminal 1H — passenger-side air mix actuator terminal G — Climate control unit terminal 1X — driver-side air mix actuator terminal G — Climate control unit terminal 1X — passenger-side air mix actuator terminal E • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 15.

07

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
11*	**INSPECT AIR MIX ACTUATOR (POSITION SENSOR) CIRCUIT FOR SHORT TO POWER SUPPLY** • Air mix actuator and climate control unit connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): **L.H.D.** — Climate control unit terminal 1N (driver-side position sensor) — Climate control unit terminal 1P (passenger-side position sensor) — Climate control unit terminal 1H (position sensor power supply) — Climate control unit terminal 1X (position sensor ground) **R.H.D.** — Climate control unit terminal 1P (driver-side position sensor) — Climate control unit terminal 1N (passenger-side position sensor) — Climate control unit terminal 1H (position sensor power supply) — Climate control unit terminal 1X (position sensor ground) • Is the voltage 0 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 15.
12*	**INSPECT AIR MIX ACTUATOR (POSITION SENSOR) CIRCUIT FOR SHORT TO GROUND** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the climate control unit connector. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Climate control unit terminal 1H (position sensor power supply) — Climate control unit terminal 1X (position sensor ground) • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to the Step 15.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [FULL-AUTO AIR CONDITIONER]

STEP	INSPECTION		ACTION
13*	**INSPECT AIR MIX ACTUATOR (POSITION SENSOR) CIRCUIT FOR OPEN CIRCUIT** • Air mix actuator and climate control unit connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): **L.H.D.** — Climate control unit terminal 1H — driver-side air mix actuator terminal G — Climate control unit terminal 1H — passenger-side air mix actuator terminal E — Climate control unit terminal 1X — driver-side air mix actuator terminal E — Climate control unit terminal 1X — passenger-side air mix actuator terminal G **R.H.D.** — Climate control unit terminal 1H — driver-side air mix actuator terminal E — Climate control unit terminal 1H — passenger-side air mix actuator terminal G — Climate control unit terminal 1X — driver-side air mix actuator terminal G — Climate control unit terminal 1X — passenger-side air mix actuator terminal E • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 15.
14*	**INSPECT AIR MIX ACTUATOR (POSITION SENSOR) CIRCUIT FOR SHORT TO POWER SUPPLY** • Air mix actuator and climate control unit connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — Climate control unit terminal 1H (position sensor power supply) — Climate control unit terminal 1X (position sensor ground) • Is the voltage 0 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to the next step.
15	**CONFIRM THAT MALFUNCTION SYMPTOMS DOES NOT RECUR AFTER REPAIR** • Does the temperature adjust individually for driver seat and passenger seat?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

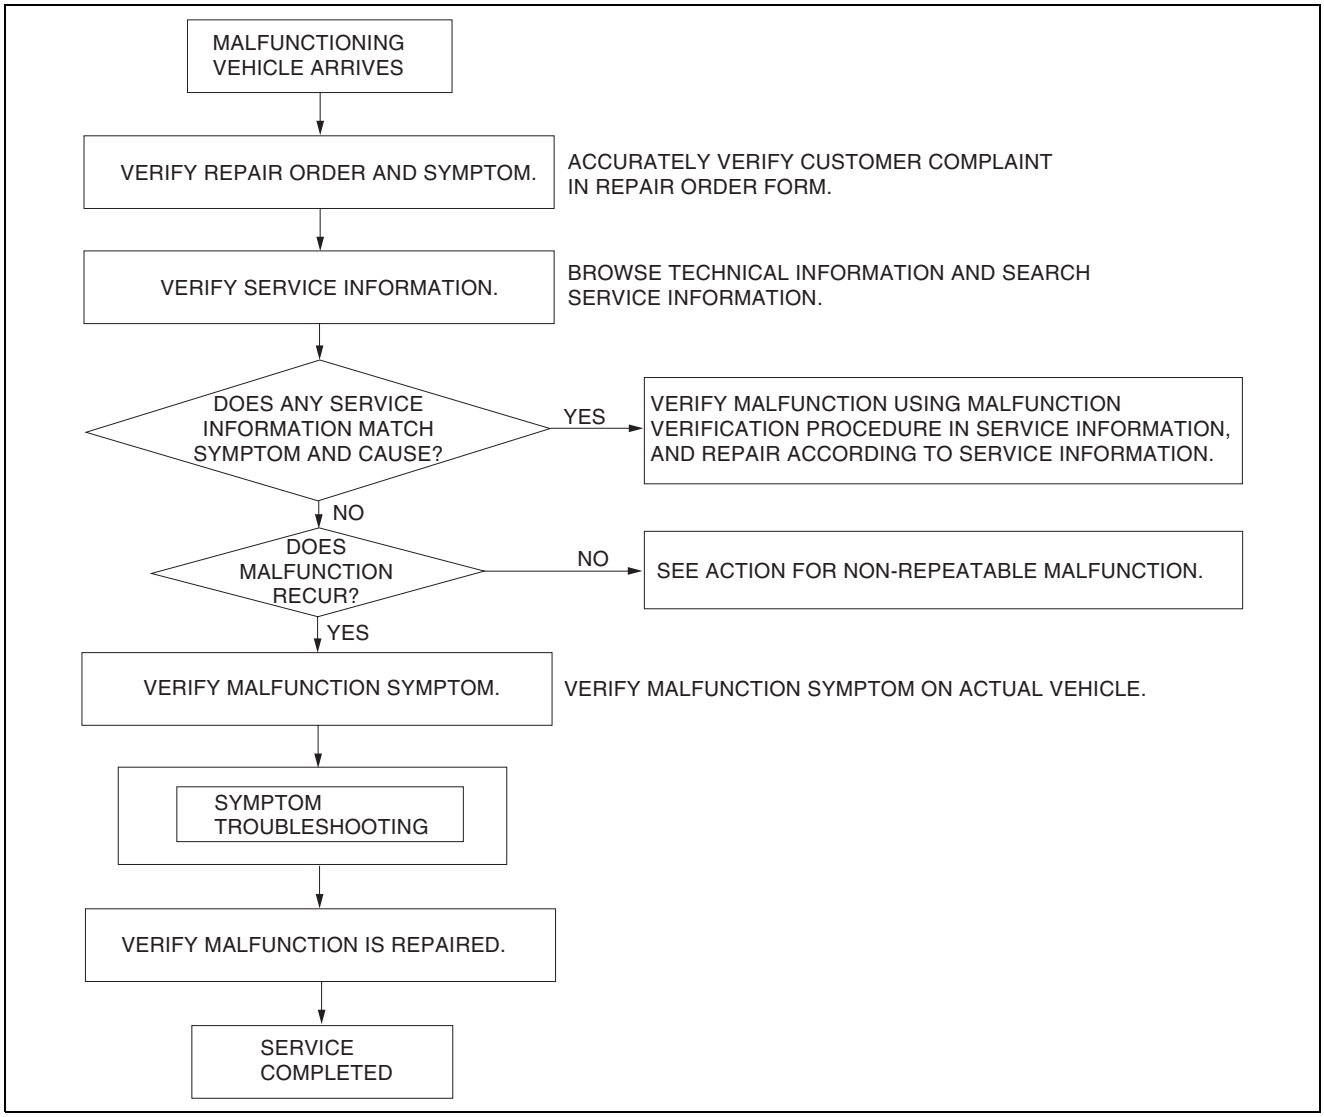
FOREWORD [MANUAL AIR CONDITIONER]

id0703c2800200

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

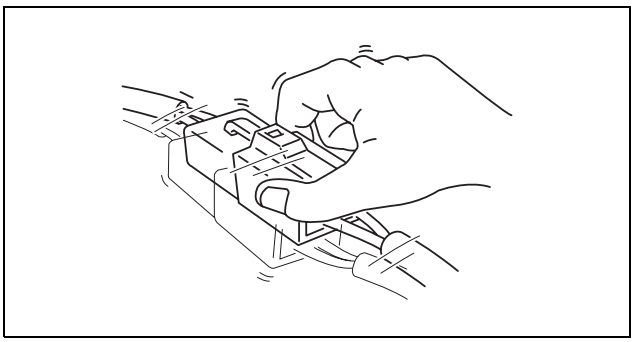
Troubleshooting Procedure



am3zzw0001143

Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction.

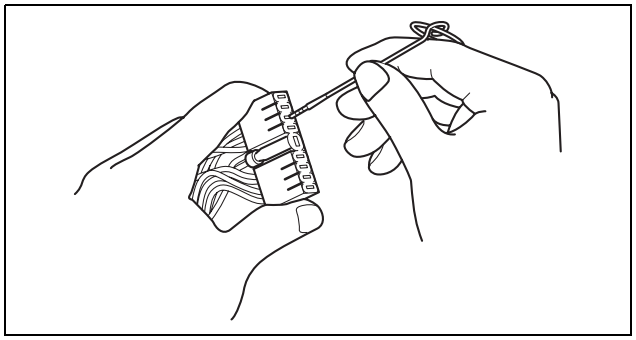


aaxjjw00007274

07

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

— Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3zzw0001144

TROUBLESHOOTING INDEX [MANUAL AIR CONDITIONER]

id0703c2800300

No.	TROUBLESHOOTING ITEM	DESCRIPTION
1	Insufficient air (or no air) blown from vents	• Problem with each vent and/or duct • Airflow mode does not change
2	Amount of air blown from vents does not change	• Malfunction in blower system
3	Air intake mode does not change	• Air intake mode does not change when switching REC/FRESH mode
4	No temperature control with climate control unit	• Temperature does not change when operating temperature dial • Malfunction in A/C unit and/or climate control unit air mix system
5	Windshield fogged	• A/C compressor does not operate while airflow mode is in DEFROSTER or DEF/HEAT mode • Air intake mode does not change to FRESH while airflow mode is in DEFROSTER or DEF/HEAT mode
6	Air from vents not cold enough	• Magnetic clutch operates but A/C system malfunctions
7	No cool air	• Magnetic clutch does not operate
8	Noise while operating A/C system	• Noise from magnetic clutch, A/C compressor, hose or refrigerant line

NO.1 INSUFFICIENT AIR (OR NO AIR) BLOWN FROM VENTS [MANUAL AIR CONDITIONER]

id0703c2800400

1	Insufficient air (or no air) blown from vents
DESCRIPTION	• Problem with each vent and/or duct. • Airflow mode does not change.
POSSIBLE CAUSE	• Malfunction in airflow mode wire • Malfunction in VENT mode system • Malfunction in HEAT mode system • Malfunction in DEFROSTER mode system • Malfunction in next vent or duct (clogging, deformation, air leakage, improper operation)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT A/C UNIT AIRFLOW MODE SYSTEM** • Inspect the A/C unit and/or climate control unit airflow mode links, air airflow mode cranks, air airflow mode rods, and wire clamp. — Is there grease on links and cranks? — Are links, cranks, and rods securely installed in their proper positions? — Is wire clamp free of deformation? • Are the above items normal?	Yes	Go to the next step.
		No	Apply grease or airflow mode the links, cranks, and rods securely in their proper positions, repair or replace the airflow mode wire clamp, then go to Step 9.
2	**INSPECT TO SEE WHETHER MALFUNCTION IS IN VENT MODE OR OTHER MODES** • Does air blow out when in the VENT mode?	Yes	Go to Step 5.
		No	Go to the next step.
3	**INSPECT VENT** • Is the vent clogged?	Yes	Remove obstruction, then go to Step 9.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION		ACTION
4	**VERIFY THAT DUCT IN DASHBOARD IS INSTALLED** • Is the duct in the dashboard properly installed?	Yes	Inspect the duct for clogging, deformation and air leakage, then go to Step 9.
		No	Install the duct securely in the proper position, then go to Step 9.
5	**INSPECT TO SEE WHETHER MALFUNCTION IS IN HEAT MODE OR DEFROSTER MODE** • Does air blow out when in the HEAT mode?	Yes	Go to the next step.
		No	Inspect the vent for clogging, then go to Step 9.
6	**INSPECT DEFROSTER MODE** • Does air blow out when in the DEFROSTER mode?	Yes	Operation is normal. Recheck malfunction symptoms.
		No	Go to the next step.
7	**INSPECT VENT** • Is the vent clogged?	Yes	Remove obstruction, then go to Step 9.
		No	Go to the next step.
8	**VERIFY THAT DEFROSTER DUCT IS INSTALLED** • Is the defroster duct properly installed?	Yes	Inspect the duct for clogging, deformation, and air leakage, then go to the next step.
		No	Install the duct securely in proper position, then go to the next step.
9	**CONFIRM THAT MALFUNCTION SYMPTOM DOES NOT RECUR AFTER REPAIR** • Does air blow out?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

NO.2 AMOUNT OF AIR BLOWN FROM VENTS DOES NOT CHANGE [MANUAL AIR CONDITIONER]

id0703c2800500

2	**Amount of air blown from vents does not change.**
DESCRIPTION	• Malfunction in blower system
POSSIBLE CAUSE	• Blower unit malfunction • Blower motor malfunction • Clogged in A/C unit passage

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BLOWER SYSTEM** • Inspect the following systems and electrical parts. — Blower relay — Blower motor — Resistor — Fan switch — Related wiring harnesses • Are they normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part, then go to Step 5.
2	**INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C UNIT OR ELSEWHERE** • Switch the ignition ON (engine off or on). • Turn the fan switch to ON position. • Recirculate air inside the vehicle. • Does the blower motor rotate smoothly?	Yes	Go to Step 4.
		No	Go to the next step.
3	**INSPECT BLOWER UNIT INTAKE VENT** • Inspect blower motor. — Is the fan free of interference from the A/C unit case? — Is the fan free of foreign material and obstructions? • Is the fan normal?	Yes	Go to the next step.
		No	Remove obstruction, repair or replace the fan and A/C unit case, then go to Step 5.
4	**INSPECT BLOWER UNIT INTAKE VENT** • Is the blower unit intake vent clogged?	Yes	Remove obstruction, then go to the next step.
		No	Inspect it there are not any obstructions in the blower unit passage, then go to the next step.
5	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Does air blow out?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

NO.3 AIR INTAKE MODE DOES NOT CHANGE [MANUAL AIR CONDITIONER]

id0703c2802900

3	**Air intake mode does not change.**
DESCRIPTION	• Air intake mode does not change when switching REC/FRESH mode.
POSSIBLE CAUSE	• Air intake actuator malfunction • Air intake door malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Note

- The climate control unit controls the air intake mode when the airflow mode is in DEFROSTER so that it is fixed at FRESH mode. At this time, the airflow mode cannot be changed from FRESH to RECIRCULATE even if the REC switch is pressed, but this does not indicate a malfunction.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT TO SEE WHETHER MALFUNCTION IS IN AIR INTAKE ACTUATOR OR ELSEWHERE** • Disconnect the air intake actuator connector. • Measure the voltages at the following air intake actuator terminals. **L.H.D.** — Terminal C (FRESH motor drive signal) — Terminal B (RECIRCULATE motor drive signal) **R.H.D.** — Terminal B (FRESH motor drive signal) — Terminal C (RECIRCULATE motor drive signal) • Are voltages normal?	Yes	Go to the next step.
		No	Go to Step 3.
2	**INSPECT AIR INTAKE ACTUATOR** • Inspect air intake actuator. (See 07-40B-5 AIR INTAKE ACTUATOR INSPECTION [MANUAL AIR CONDITIONER].) • Is it normal?	Yes	Go to the Step 6.
		No	Replace the air intake actuator, then go to Step 8. (See 07-40B-4 AIR INTAKE ACTUATOR REMOVAL/ INSTALLATION [MANUAL AIR CONDITIONER].)
3	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO B+ BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Air intake actuator and climate control unit disconnected. • Switch the ignition ON (engine off or on). • Measure the voltages at the following air intake actuator terminals. **L.H.D.** — Terminal C (FRESH motor drive signal) — Terminal B (RECIRCULATE motor drive signal) **R.H.D.** — Terminal B (FRESH motor drive signal) — Terminal C (RECIRCULATE motor drive signal) • Are voltages **approx. 0 V**?	Yes	Go to the next step.
		No	Repair the wiring harness for short to B+ between the climate control unit and air intake actuator, then go to Step 8.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION		ACTION
4	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO GROUND BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Air intake actuator and climate control unit connectors disconnected. • Switch the ignition off. • Inspect for continuity at the following terminals between the air intake actuator and ground. **L.H.D.** — Terminal C (FRESH motor drive signal) — Terminal B (RECIRCULATE motor drive signal) **R.H.D.** — Terminal B (FRESH motor drive signal) — Terminal C (RECIRCULATE motor drive signal) • Is there continuity?	Yes	Repair the wiring harness for short to ground between the climate control unit and air intake actuator, then go to Step 8.
		No	Go to the next step.
5	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (OPEN CIRCUIT BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Air intake actuator and climate control unit connectors disconnected. • Switch the ignition off. • Inspect for continuity at the following terminals between the climate control unit and air intake actuator. — Air intake actuator terminal C (L.H.D.) /B (R.H.D.) and climate control unit terminal E (FRESH motor drive signal) — Air intake actuator terminal B (L.H.D.) / C (R.H.D.) and climate control unit terminal C (RECIRCULATE motor drive signal) • Is there continuity?	Yes	Go to the next step.
		No	Repair the wiring harness for open circuit between the climate control unit and air intake actuator, then go to Step 8.
6	**INSPECT AIR INTAKE LINK** • Inspect the air intake links. — Is there grease on link? — Are the links securely and properly installed? — Are the links free of obstructions and hindrances? • Are the above items normal?	Yes	Go to the next step.
		No	Apply grease to the links. if any the links are damaged, replace the air intake actuator, then go to Step 8.
7	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR AIR INTAKE DOOR** • Inspect the blower unit air intake door. — Is the door free of obstructions, cracks, and damage? — Are the doors securely and properly installed? • Are the above items normal?	Yes	Replace the climate control unit, then go to the next step.
		No	Remove obstruction, or install the doors in the proper position. If any doors are cracked or damaged, replace them, then go to the next step.
8	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Does the air intake mode change smoothly?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

NO.4 NO TEMPERATURE CONTROL WITH CLIMATE CONTROL UNIT [MANUAL AIR CONDITIONER]

id0702c2812400

4	No temperature control with climate control unit
DESCRIPTION	• Temperature does not change when operating temperature dial • Malfunction in A/C unit and/or climate control unit air mix system
POSSIBLE CAUSE	• A/C unit air mix link, air mix crank, air mix rod, air mix wire, or wire clamp malfunction • Climate control unit rack-and-pinion, or air mix wire malfunction • A/C unit air mix door malfunction • Heater piping malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT COOLANT TEMPERATURE** • Is the coolant sufficiently warmed up?	Yes	Go to the next step.
		No	Warm up the engine, then go to Step 8.
2	**INSPECT A/C UNIT AIR MIX SYSTEM** • Inspect the A/C unit air mix links, air mix cranks, air mix rods, and wire clamp. — Is there grease on links and cranks? — Are links, cranks, and rods securely installed in their proper positions? — Is wire clamp free of deformation? • Are the above items normal?	Yes	Go to the next step.
		No	Apply grease or install the links, cranks, and rods securely in their proper positions, repair or replace the wire clamp, then go to Step 8.
3	**VERIFY THAT AIR MIX WIRE FROM A/C UNIT IS POSITIONED SECURELY AND CORRECTLY** • Is the air mix wire securely installed in the correct position in relation to the A/C unit air mix links?	Yes	Go to the next step.
		No	Adjust the air mix wire or install securely in the correct position, then go to Step 8.
4	**INSPECT CLIMATE CONTROL UNIT** • Inspect the climate control unit. • Is the climate control unit normal?	Yes	Go to the next step.
		No	Repair or replace the climate control unit, then go to Step 8.
5	**INSPECT A/C UNIT** • Is there any foreign material or obstruction in the A/C unit air mix doors?	Yes	Remove obstruction, then go to Step 8.
		No	Go to the next step.
6	**INSPECT A/C UNIT AIR MIX DOOR** • Is the A/C unit air mix door securely and properly installed?	Yes	Inspect the air mix door for cracks or damage, then go to the next step.
		No	Install the air mix door securely in the proper position, then go to the next step.
7	**INSPECT HEATER LINE** • Inspect the heater lines. — Is the heater piping free of damage and cracks? — Are the heater piping connections free of engine coolant leakage? — Are the heater piping connections securely tightened? — Are the heater piping installation points on A/C unit free of engine coolant leakage? • Are the above items normal?	Yes	Operation is normal. Recheck malfunction symptoms.
		No	If heater piping connections are loose, tighten the connections to the specified torque. Repair or replace the heater piping, then go to the next step.
8	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Does the unit operate in every temperature setting?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

NO.5 WINDSHIELD FOGGED [MANUAL AIR CONDITIONER]

id0703c2801900

5	Windshield fogged
DESCRIPTION	• A/C compressor does not operate while airflow mode is in DEFROSTER or DEF/HEAT modes • Air intake mode does not change to FRESH while airflow mode is in DEFROSTER or DEF/HEAT modes
POSSIBLE CAUSE	• Climate control unit (B+ signal) system malfunction • Air intake actuator malfunction • Climate control unit (RECIRCULATE, FRESH signal) system malfunction • Blower unit air intake door malfunction

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, inspect to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**COOL AIR BLOW OUT INSPECTION** • When both the A/C and fan switch in the climate control unit are on, does cool air blow out from the front vent?	Yes	Go to the next step.
		No	Go to Step 1 of troubleshooting index No.8.
2	**INSPECT CLIMATE CONTROL UNIT POWER SUPPLY FUSE FOR B+ SIGNAL** • Is the climate control unit power supply fuse for B+ signal normal?	Yes	Go to the next step.
		No	Inspect for a short to ground on blown fuse circuit. • Repair or replace if necessary. Install appropriate amperage fuse.
3	**INSPECT AIR INTAKE ACTUATOR** • Inspect the air intake actuator. — Is there grease on the link? — Is the link securely and properly positioned? — Is the link free of obstructions? • Are the above items normal?	Yes	Go to the next step.
		No	Apply grease or install the link properly and securely, remove obstruction, then go to Step 14.
*4	**INSPECT WIRING HARNESS BETWEEN FUSE BLOCK AND CLIMATE CONTROL UNIT FOR CONTINUITY** • Disconnect the climate control unit connector. • Switch the ignition ON (engine off or on). • Measure the voltage at climate control unit terminal J (B+ signal). • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Repair the wiring harness between the fuse block and climate control unit, then go to Step 14.
*5	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND GROUND FOR VOLTAGE** • Measure the voltage at climate control unit terminal D (Ground). • Is the voltage **approx. 0V**?	Yes	Go to the next step.
		No	Repair the wiring harness between the climate control unit and ground, then go to Step 14.
6	**VERIFY WHETHER MALFUNCTION IS IN BLOWER UNIT AIR INTAKE DOOR OR ELSEWHERE** • Switch the ignition off. • Connect the climate control unit connector. • Remove the air intake actuator. • Switch the ignition ON (engine off or on). • Set the fan switch to 4th position. • Does the air intake mode (RECIRCULATE, FRESH) change smoothly when the air intake link is operated by hand?	Yes	Go to the next step.
		No	Go to Step 12.
7	**INSPECT AIR INTAKE ACTUATOR** • Inspect the air intake actuator. (See 07-40B-5 AIR INTAKE ACTUATOR INSPECTION [MANUAL AIR CONDITIONER].) • Is it normal?	Yes	Go to the next step.
		No	Replace the air intake actuator, go to Step 14.

07

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION		ACTION
8	**INSPECT AIR INTAKE SELECTOR SWITCH AND DEFROSTER SWITCH IN CLIMATE CONTROL UNIT** • Measure the voltage at climate control unit connector (12-pin) terminals E and C. • Is it normal?	Yes	Go to the next step.
		No	Replace the climate control unit, then go to Step 14.
*9	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR CONTINUITY** • Switch the ignition off. • Is there continuity between the following climate control unit terminals and air intake actuator terminals? **L.H.D.** — Terminal C —Terminal E (FRESH signal) — Terminal B —Terminal C (RECIRCULATE signal) **R.H.D.** — Terminal B —Terminal E (FRESH signal) — Terminal C —Terminal C (RECIRCULATE signal)	Yes	Go to the next step.
		No	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 14.
*10	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR SHORT TO GROUND** • Is there continuity between the following climate control unit terminals and ground? — Terminal E (FRESH signal) — Terminal C (RECIRCULATE signal)	Yes	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 14.
		No	Go to the next step.
*11	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR SHORT TO B+** • Switch the ignition ON (engine off or on). • Measure the voltage at the following climate control unit terminals. — Terminal E (FRESH signal) — Terminal C (RECIRCULATE signal) • Is the voltage **approx. 12 V**?	Yes	Repair the wiring harness between the climate control unit and air intake actuator, then go to Step 14.
		No	Replace the climate control unit, then go to Step 14.
12	**INSPECT BLOWER UNIT AIR INTAKE DOOR** • Is there any foreign material or obstruction in the blower unit air intake door?	Yes	Remove obstruction, then go to Step 14.
		No	Go to the next step.
13	**VERIFY THAT BLOWER UNIT AIR INTAKE DOOR IS POSITIONED SECURELY AND PROPERLY** • Is the blower unit air intake door securely and properly positioned?	Yes	Inspect the air intake door for cracks or damage, then go to the next step.
		No	Install the air intake door securely in the proper position, then go to the next step.
14	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Does the malfunction disappear?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

NO.6 AIR FROM VENTS NOT COLD ENOUGH [MANUAL AIR CONDITIONER]

id0702c2812500

6	Air from vents not cold enough
DESCRIPTION	• Magnetic clutch operates but A/C system malfunctions
POSSIBLE CAUSE	**Note** • If the engine coolant temperature increases due to a cooling system malfunction, the fail-safe function disables the A/C operation. • Drive belt malfunction • Refrigerant pressure sensor malfunction • Malfunction in blower unit or condenser • Cooling fan system malfunction • Condenser or related part malfunction • A/C unit or condenser malfunction • Receiver/drier or expansion valve malfunction (valve closes too much) • A/C compressor system malfunction, insufficient compressor oil • Over filling of compressor oil, malfunction in expansion valve or A/C unit air mix link system • Evaporative temperature sensor malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CHECK MALFUNCTION SYMPTOMS** **Note** • Without i-stop, go to the next step. • Is malfunctions occur in only when operating the i-stop?	Yes	Perform the i-stop troubleshooting. (See 01-02-4 FOREWORD [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT REFRIGERANT PRESSURE TO LOCATE MALFUNCTION** • Perform refrigerant pressure check. (See 07-10-7 REFRIGERANT PRESSURE CHECK.) • Is the refrigerant pressure normal?	Yes	Go to the next step.
		No	Record the inspection result. • If the refrigerant high-pressure and low-pressure values are both high, go to Step 6. • If the refrigerant high-pressure and low-pressure values are approximately the same, go to Step 9. • If the refrigerant high-pressure and low-pressure values are both low, go to Step 11. • If there is a vacuum on the low pressure side and extremely low pressure on the high pressure side, go to Step 17. • If there is low pressure on the high pressure side and high pressure on the low pressure side, replace the A/C compressor, then go to Step 21. (See 07-11-25 A/C COMPRESSOR REMOVAL/INSTALLATION.) • If the refrigerant pressure is other than above condition, go to Step 19.
3	**INSPECT REFRIGERANT SYSTEM PERFORMANCE** • Perform refrigerant system performance test. (See 07-10-9 REFRIGERANT SYSTEM PERFORMANCE TEST.) • Is the operation normal?	Yes	Operation is normal. (Recheck malfunction symptoms.)
		No	Go to the next step.
4	**INSPECT DRIVE BELT** • Inspect the drive belt. (See 01-10A-9 DRIVE BELT INSPECTION [SKYACTIV-G 2.0].) (See 01-10B-7 DRIVE BELT INSPECTION [SKYACTIV-D 2.2].) • Is it normal?	Yes	Go to the next step.
		No	Adjust or replace the drive belt, then the next step. (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-10B-8 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5	**INSPECT REFRIGERANT PRESSURE SENSOR** • Inspect the refrigerant pressure sensor. (See 07-40B-14 REFRIGERANT PRESSURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) • Is it normal?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to inspection result, then go to Step 21.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION		ACTION
6	**INSPECT COOLING FAN OPERATION** • Verify the cooling fan operation. (See 01-12A-21 COOLING FAN MOTOR INSPECTION [SKYACTIV-G 2.0].) (See 01-12B-19 COOLING FAN MOTOR INSPECTION [SKYACTIV-D 2.2].) • Is the cooling fan operation normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning location according to the inspection results. Then go to Step 21.
7	**VISUALLY INSPECT CONDENSER** • Is the condenser fin clogged or obstructed by foreign material?	Yes	Remove the foreign material. Repair the condenser fin. Then go to Step 21.
		No	Go to the next step.
8	**CHECK REFRIGERATION SYSTEM FOR OVERCHARGE OR AIR CONTAMINATION** • Is the low side line hot to the touch?	Yes	Recover refrigerant. Evacuate system for one hour. Refill with correct amount of refrigerant, and go to step 21.
		No	Recover refrigerant, evacuate for 15 minutes, refill with correct amount and go to step 21.
9	**CHECK TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE OR ELSEWHERE** • Compare the refrigerant pressure of the low pressure side with the high pressure side at Step 3. • Is there little difference between the high pressure side and low pressure side readings (refer to graph in REFRIGERANT PRESSURE CHECK procedure)? (See 07-10-7 REFRIGERANT PRESSURE CHECK.)	Yes	Replace the expansion valve. After performing the following servicing, go to Step 21. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No	Go to the next step.
10	**INSPECT AIR MIX DOOR RELATED PART INSTALLATION** • Remove the A/C unit. (See 07-11-11 A/C UNIT REMOVAL/INSTALLATION.) • Are the air mix link, air mix crank, air mix wire and air mix rod of the A/C unit correctly and securely installed to their positions?	Yes	Adjust the compressor oil to the specified amount, then go to Step 21. (See 07-11-25 A/C COMPRESSOR REMOVAL/INSTALLATION.)
		No	Inspect the air mix link, air mix crank, and air mix rod of the A/C unit correctly and securely installed to their positions. (See 07-11-11 A/C UNIT REMOVAL/INSTALLATION.) • Repair or install correctly for suspect part according to inspection result, then go to Step 21.
11	**INSPECT BLOWER UNIT FOR BLOCKAGE** • Is the blower unit intake and air filter clogged?	Yes	Remove the cause of the clogging.Replace the air filter if it is clogged. (See 07-11-11 AIR FILTER REMOVAL/INSTALLATION.) Then go to Step 21.
		No	Go to the next step.
12	**CHECK TO SEE WHETHER MALFUNCTION IS REFRIGERANT LINE LEAKAGE OR ELSEWHERE** • Verify if there is gas leakage from the system hoses using the gas leak tester. • Is there gas leakage?	Yes	If there is leakage from a system hose connection area, go to Step 14. If there is leakage other than from a system hose connection area, go to Step 16.
		No	Go to the next step.
13	**VISUALLY INSPECT REFRIGERANT LINE** • Is a system hose crushed?	Yes	Replace the crushed system hose. (See 07-11-36 REFRIGERANT LINE REMOVAL/INSTALLATION.) After performing the following servicing, go to Step 21. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No	Go to Step 21.
14	**CHECK TO SEE WHETHER MALFUNCTION IS IN REFRIGERANT LINE JOINT LOOSE OR O-RING** • Tighten the system hose connection area to the specified torque. (See 07-11-36 REFRIGERANT LINE REMOVAL/INSTALLATION.) • Has the leakage stopped?	Yes	Go to the next step.
		No	Go to Step 16.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION		ACTION
15	**VISUALLY INSPECT REFRIGERANT LINE** • Is a system hose crushed?	Yes	Replace the crushed system hose. (See 07-11-36 REFRIGERANT LINE REMOVAL/INSTALLATION.) After performing the following servicing, go to Step 21. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No	Adjust the compressor oil to the specified amount, then go to Step 21. (See 07-11-25 A/C COMPRESSOR REMOVAL/INSTALLATION.)
16	**VISUALLY INSPECT REFRIGERANT LINE** • Is a system hose crushed?	Yes	Replace the O-ring of the leaking area. Replace the crushed system hose. (See 07-11-36 REFRIGERANT LINE REMOVAL/INSTALLATION.) After performing the following servicing, go to Step 21. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
		No	Replace the O-ring of the leaking area. After performing the following servicing, go to Step 21. • Adjust the compressor oil to the specified level. • After discharging, charge with new refrigerant to the specified level.
17	**CHECK TO SEE WHETHER MALFUNCTION IS WATER IN REFRIGERANT SYSTEM OR ELSEWHERE** • Does the refrigerant pressure on the low pressure side vary between the vacuum and normal range?	Yes	Replace the condenser. (Water in refrigerant system) (See 07-11-28 CONDENSER REMOVAL/INSTALLATION.) Then go to Step 21.
		No	Go to the next step.
18	**CHECK TO SEE WHETHER MALFUNCTION IS IN RECEIVER DRYER FILTER OR EXPANSION VALVE** • Remove the expansion valve and verify its condition. • Is there refrigerant leakage or valve clogging?	Yes	If there is foreign matter clogging the valve, remove the foreign matter. If there is refrigerant leakage or clogging, replace the expansion valve. Perform discharge, charge with new refrigerant, and then go to Step 21.
		No	Install the expansion valve. Replace the condenser. (Receiver/Dryer filter is clogged.) (See 07-11-28 CONDENSER REMOVAL/INSTALLATION.) Then go to Step 21.
19	**INSPECT EVAPORATIVE TEMPERATURE SENSOR** • Inspect the evaporator temperature sensor. (See 07-40A-27 EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is it normal?	Yes	Verify the evaporator temperature sensor position. (See 07-11-14 A/C UNIT DISASSEMBLY/ASSEMBLY.) Then go to Step 21.
		No	Replace the evaporator temperature sensor, then go to Step 21. (See 07-11-14 A/C UNIT DISASSEMBLY/ASSEMBLY.)
20	**INSPECT AIR MIX DOOR RELATED PART INSTALLATION** • Remove the A/C unit. (See 07-11-11 A/C UNIT REMOVAL/INSTALLATION.) • Are the air mix link, air mix crank, and air mix wire of the A/C unit correctly and securely installed to their positions?	Yes	Go to the next step.
		No	• Inspect the air mix link, and air mix crank of the A/C unit correctly and securely installed to their positions. (See 07-11-14 A/C UNIT DISASSEMBLY/ASSEMBLY.) • Repair or install correctly for suspect part according to inspection result. Then go to next step.
21	**VERIFY THAT MALFUNCTION SYMPTOM DOES OCCURS AFTER REPAIR** • If the refrigerant discharged during inspection has not been recharged, discharge and charge with new refrigerant to the specified level. • Does cool air blow out? (Are results of refrigerant system performance test normal?)	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

NO.7 NO COOL AIR [MANUAL AIR CONDITIONER]

id0702c2812600

7	No cool air
DESCRIPTION	• Magnetic clutch does not operate
POSSIBLE CAUSE	• Malfunction in PCM A/C cut control system • Open or short circuit in wiring harness between evaporator temperature sensor and climate control unit • Malfunction in evaporator temperature sensor (internal circuit malfunction) • Malfunction in climate control unit • Malfunction in refrigerant pressure sensor • Malfunction in PCM (A/C signal) • Malfunction in PCM (IG1 signal) • Malfunction in A/C compressor • Malfunction in A/C relay • Malfunction in evaporator temperature sensor • Malfunction in front body control module (FBCM) • Improper refrigerant charging amount • Open circuit in wiring harness between front body control module (FBCM) and climate control unit • Malfunction in CAN communication

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CHECK MALFUNCTION SYMPTOMS** **Note** • Without i-stop, go to the next step. • Is malfunctions occur in only when operating the i-stop?	Yes	Perform the i-stop troubleshooting. (See 01-02-4 FOREWORD [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT FUSE** • Are A/C relay power supply fuses okay?	Yes	Go to the next step.
		No	Replace fuse, then go to Step 16. If fuse burns out immediately, go to the next step.
3	**INSPECT AIR BLOW OUT** • Does air blow out?	Yes	Go to the next step.
		No	Go to Step 1 of troubleshooting indexes No.1 and 2.
4	**INSPECT A/C COMPRESSOR OPERATION** • Start engine. • Turn A/C switch and fan switch on. • Does A/C compressor operate?	Yes	Go to Step 1 of troubleshooting index No.6.
		No	Go to the next step.
5	**INSPECT FOR DTC IN PCM AND FRONT BODY CONTROL MODULE (FBCM)** • Inspect for DTCs related to the PCM and front body control module (FBCM) on-board diagnostic system. • Are any DTCs displayed?	Yes	Go to appropriate inspection procedure.
		No	Go to the next step.
6	**DETERMINE IF MALFUNCTION CAUSE IS A/C REQUEST SIGNAL OR A/C RELAY OPERATIONAL MALFUNCTION** • Access PCM PID ACCS using the M-MDS. • Start the engine and idle it. • Turn the PID ACCS to ON from OFF using the M-MDS simulation function. • Is the A/C magnetic clutch engaged?	Yes	Go to the next step.
		No	Go to Step 11.
7*	**SIGNAL INSPECTION FROM EVAPORATOR TEMPERATURE SENSOR TO CLIMATE CONTROL UNIT** • Remove the climate control unit. • Reconnect the climate control unit connector. • Measure the climate control unit terminal H voltage. (See 07-40B-25 CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER].) • Is the voltage within the specified?	Yes	Go to Step 9.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION		ACTION
8	**INSPECT EVAPORATOR TEMPERATURE SENSOR** • Inspect the evaporator temperature sensor. (See 07-40B-12 EVAPORATOR TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) • Is the evaporator temperature sensor normal?	Yes	Inspect and repair for open or short circuit between evaporator temperature sensor and climate control unit.
		No	Replace the evaporator temperature sensor. (See 07-11-14 A/C UNIT DISASSEMBLY/ASSEMBLY.)
9	**INSPECT REFRIGERANT PRESSURE SENSOR** • Inspect refrigerant pressure sensor. (See 07-40B-14 REFRIGERANT PRESSURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) • Is the refrigerant pressure sensor normal?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to inspection result, then go to Step 17.
10	**CONTINUITY INSPECTION BETWEEN CLIMATE CONTROL UNIT AND INSTRUMENT CLUSTER** • Inspect for open or short circuit between climate control unit terminal K and front body control module (FBCM) terminal 2J. Is there any open or short circuit detected?	Yes	Repair for open or short circuit.
		No	Replace the climate control unit.(A/C switch malfunction or climate control unit does not determine A/C request or transmit the A/C request signal.) (See 07-40B-16 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].)
11	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN A/C CONTROL SIGNAL CIRCUIT (BETWEEN A/C RELAY AND PCM) OR ELSEWHERE** • Does cool air blow out when terminal E of A/C relay connector (A/C control signal) is grounded?	Yes	Release short, then go to the next step.
		No	Go to Step 13.
12*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN PCM OR WIRING HARNESS (BETWEEN A/C RELAY AND PCM)** • Test voltage at the A/C relay control signal terminal of PCM. • Is voltage **approx. 12 V**?	Yes	Inspect PCM, then go to Step 17.
		No	Repair wiring harness between A/C relay and PCM, then go to Step 17.
13*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN MAGNETIC CLUTCH OR ELSEWHERE** • Test voltage at the following terminal of magnetic clutch. — Terminal A (magnetic clutch operation signal) • Is voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Go to Step 15.
14	**INSPECT MAGNETIC CLUTCH CLEARANCE** • Inspect the magnetic clutch clearance. (See 07-40B-9 MAGNETIC CLUTCH ADJUSTMENT [MANUAL AIR CONDITIONER].) • Is the magnetic clutch clearance normal?	Yes	Inspect and repair the magnetic clutch, then go to Step 17. (See 07-40B-9 MAGNETIC CLUTCH INSPECTION [MANUAL AIR CONDITIONER].)
		No	Adjust the magnetic clutch clearance, then go to Step 17. (See 07-40B-9 MAGNETIC CLUTCH ADJUSTMENT [MANUAL AIR CONDITIONER].)
15	**INSPECT WIRING HARNESS BETWEEN FUSE BLOCK AND A/C RELAY FOR LACK OF CONTINUITY** • Test voltages at following terminals of A/C relay. — Terminal A (A/C relay control signal) — Terminal C (A/C control signal) • Are voltages **approx. 12 V**?	Yes	Go to the next step.
		No	Repair wiring harness between fuse block and A/C relay, then go to Step 17.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION		ACTION
16	**INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C RELAY OR WIRING HARNESS (BETWEEN A/C RELAY AND MAGNETIC CLUTCH)** • Test voltage at the following terminal of A/C relay. — Terminal D (magnetic clutch operation signal) • Is voltage **approx. 12 V**?	Yes	Inspect wiring harness between A/C relay and magnetic clutch. • If above wiring harness is OK, go to the next step. • If above wiring harness malfunctions, repair wiring harness, then go to the next step.
		No	Replace A/C relay, then go to the next step.
17	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Does cool air blow out? (Are the results of refrigerant system performance test okay?)	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.8 NOISE WHILE OPERATING A/C SYSTEM [MANUAL AIR CONDITIONER]

id0702c2812700

8	**Noise while operating A/C system**
DESCRIPTION	• Noise from magnetic clutch, A/C compressor, hose or refrigerant line
POSSIBLE CAUSE	• Magnetic clutch operation noise • A/C compressor vane noise • A/C compressor slippage noise • Hose or refrigerant line interference noise

* : If there is gas leakage, air enters into the A/C system. The desiccant within the receiver/drier absorbs the moisture from the air and becomes saturated. If the A/C system is used in this condition, the inside of the A/C compressor will begin to rust due to this moisture, which may cause lock up or noise to occur. Therefore, replacement of the receiver/drier is necessary.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CHECK A/C COMPRESSOR VANE NOISE** • Is there a jingling, popping, beeping, or buzzing sound (A/C compressor vane noise)?	Yes	Go to Step 5.
		No	Go to the next step.
2	**INSPECT A/C COMPRESSOR SLIPPAGE NOISE** • Is there a squeaking or whirling sound (A/C compressor slippage noise)?	Yes	Go to Step 14.
		No	Go to the next step.
3	**INSPECT A/C COMPRESSOR INTERFERENCE NOISE** • Is there a rattling or vibrating sound (interference noise)?	Yes	Go to Step 18.
		No	Go to the next step.
4	**INSPECT MAGNETIC CLUTCH OPERATION NOISE** • Is there a clicking sound (magnetic clutch operation noise)?	Yes	Adjust clearance between pressure plate of magnetic clutch and A/C compressor pulley, then go to Step 19. (See 07-40B-9 MAGNETIC CLUTCH ADJUSTMENT [MANUAL AIR CONDITIONER].)
		No	Condition is normal. (Recheck malfunction symptoms.)
5	**INSPECT A/C COMPRESSOR NOISE TIME** • Is noise heard continuously for **more than 3 s** after A/C compressor comes on?	Yes	Go to the next step.
		No	Condition is normal. (Noise occurs for **2—3 s** immediately after A/C compressor turns on.)
6	**INSPECT IDLE SPEED** • Inspect idle speed. (See 01-10A-4 ENGINE TUNE-UP [SKYACTIV-G 2.0].) (See 01-10B-3 ENGINE TUNE-UP [SKYACTIV-D 2.2].) • Is it okay?	Yes	Go to the next step.
		No	Follow the repair instruction described in section 01, then go to Step 19.
7	**INSPECT REFRIGERANT AMOUNT** • Inspect refrigerant amount. • Is it okay?	Yes	Go to Step 10.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION		ACTION
8	**INSPECT REFRIGERANT LINES** • Inspect refrigerant lines. — Is piping free of damage and cracks? — Are piping connections free of oil grime? (Visual inspection) — Are piping connections free of gas leakage? — Are piping installation points on condenser free of gas leakage? — Are piping installation points on receiver/drier free of gas leakage? — Are piping installation points on A/C compressor free of gas leakage? — Are piping installation points on A/C unit free of gas leakage? — Perform gas leak inspection using gas leak tester. • Are above items okay?	Yes	Go to the next step.
		No	If piping or A/C component(s) is damaged or cracked, replace then go to Step 19. If there is gas leakage, repair or replace connection and replace condenser*, then go to Step 19.
9	**INSPECT EVAPORATOR PIPING CONNECTIONS IN A/C UNIT FOR GAS LEAKAGE** • Are piping connections for evaporator in A/C unit free of gas leakage?	Yes	Adjust refrigerant amount to specified level, then go to Step 19.
		No	If piping is damaged or cracked, replace then go to Step 19. If there is gas leakage, repair or replace connection and replace condenser*, then go to Step 19.
10	**CHECK TO SEE WHETHER MALFUNCTION IS IN COMPRESSOR OIL OR ELSEWHERE** • Add **20 ml {20 cc, 0.8 fl oz}** of compressor oil. • Is noise heard when racing engine?	Yes	Go to the next step.
		No	Troubleshooting completed. Explain repair to customer.
11	**CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE** • Drain compressor oil. • Is it contaminated with metal particles?	Yes	Go to the next step.
		No	Replace A/C compressor, then go to Step 19.
12	**CHECK TO SEE WHETHER MALFUNCTION IS SOMEWHERE IN A/C SYSTEM OR ELSEWHERE** • Is compressor oil whitish and mixed with water?	Yes	Replace entire A/C system (excluding heater), then go to Step 19.
		No	Go to the next step.
13	**INSPECT A/C COMPRESSOR OIL** • Is compressor oil darker than normal and contaminated with aluminum chips?	Yes	Replace A/C compressor and condenser, then go to Step 19. (Since A/C compressor may be worn and receiver/drier may be clogged, replacement of receiver/drier is necessary.)
		No	Condition is normal. Recheck malfunction symptoms.
14	**CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE** • Is noise heard immediately after A/C compressor is stopped?	Yes	Replace A/C compressor, then go to Step 19. (A/C compressor discharge valve left open)
		No	Go to the next step.
15	**INSPECT DRIVE BELT** • Inspect drive belt. (See 01-10A-9 DRIVE BELT INSPECTION [SKYACTIV-G 2.0].) (See 01-10B-7 DRIVE BELT INSPECTION [SKYACTIV-D 2.2].) • Is it okay?	Yes	Go to the next step.
		No	Replace drive belt, then go to Step 19. (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-10B-8 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
16	**INSPECT DRIVE BELT CONDITION** • Is drive belt worn? • Does it have foreign material imbedded in it, or have oil on it?	Yes	Remove obstruction, remove oil, or replace drive belt, then go to Step 19.
		No	Go to the next step.
17	**INSPECT MAGNETIC CLUTCH** • Inspect magnetic clutch. (See 07-40B-9 MAGNETIC CLUTCH INSPECTION [MANUAL AIR CONDITIONER].) • Is it okay?	Yes	Replace A/C compressor (excluding pressure plate, A/C compressor pulley, and stator), then go to Step 19.
		No	Replace magnetic clutch, then go to Step 19.
18	**CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR REFRIGERANT LINES** • Is noise emitted from A/C compressor?	Yes	Visually inspect A/C compressor, replace appropriate parts if necessary, then go to the next step.
		No	If noise is due to refrigerant lines, repair detached or missing clips, tighten loose bolts, then go to the next step.

SYMPTOM TROUBLESHOOTING [MANUAL AIR CONDITIONER]

STEP	INSPECTION		ACTION
19	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Has A/C compressor noise stopped?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

07-10 REFRIGERANT SYSTEM

REFRIGERANT SYSTEM

REFRIGERANT SYSTEM SERVICE WARNINGS

id071000800100

Handling Refrigerant

- **Avoid breathing air conditioning refrigerant or lubricant vapor. Exposure may irritate eyes, nose and throat. Also, due to environmental concerns, we urge use of recovery/recycling/recharging equipment when draining refrigerant from the air conditioning system. If accidental system discharge occurs, ventilate work area before resuming service.**
- **Do not perform pressure test or leak test for refrigerant service equipment and/or vehicle air conditioning system using compressed air. Some mixtures of air and refrigerant have been shown to be combustible at elevated pressures. These mixtures, if ignited, may cause injury or property damage. Additional health and safety information may be obtained from refrigerant manufacturers.**
- **Do not allow the refrigerant to leak near fire or any kind of heat. A poisonous gas may be generated if the refrigerant gas contacts fire or heat such as from cigarettes and heaters. When carrying out any operation that can cause refrigerant leakage, extinguish or remove the above-mentioned heat sources and maintain adequate ventilation.**
- **Handling liquid refrigerant is dangerous. A drop of it on the skin can result in localized frostbite. When handling the refrigerant, wear gloves and safety goggles. If refrigerant splashes into the eyes, immediately wash them with clean water and consult a doctor.**

Storing Refrigerant

- **The refrigerant container is highly pressurized. If it is subjected to high heat, it could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Store the refrigerant at temperatures below 40 °C {104 °F}.**

REFRIGERANT SYSTEM

REFRIGERANT SYSTEM SERVICE CAUTIONS

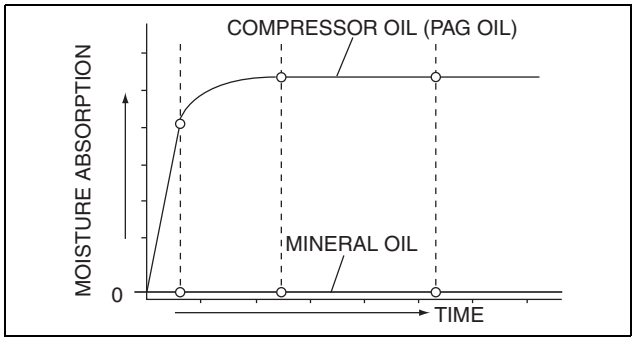
id071000800200

Handling Insufficient Refrigerant Level

- **If an insufficient refrigerant level is detected at troubleshooting, do not charge (add) the refrigerant. Because an accurate amount of refrigerant cannot be determined from the pressure indicated on the manifold gauge, never charge the refrigerant. If there is too much or too little refrigerant from the refilling, there may be secondary problems such as damage to the refrigerant cycle parts, or a decrease of cooling performance. Therefore, if it is determined that the refrigerant level is insufficient, completely remove refrigerant from the refrigerant cycle and refill with refrigerant to the specified amount.**

Handling Compressor Oil

- **Use only the following specified compressor oil for this vehicle. Using compressor oil (PAG oil) other than specified compressor oil can damage the A/C compressor.**
  - **FD46XG**
- **Do not spill compressor oil on the vehicle. A drop of compressor oil on the vehicle surface can eat away at the paint. If oil gets on the vehicle, wipe it off immediately.**
- **Compressor oil (PAG oil) has a higher moisture absorption efficiency than the previously used mineral oil. If moisture mixes with the compressor oil, the refrigerant system could be damaged. Therefore, install caps immediately after using the compressor oil or removing refrigerant system parts to prevent moisture absorption.**
- **If the refrigerant gas is completely discharged from the system for reasons such as a malfunction during A/C operation, repair or replace the malfunctioning part, charge the refrigerant to the specified amount and always add 60 ml {60 cc, 2.0 fl oz} of compressor. If the compressor oil is not adequately replenished, the A/C compressor may quickly deteriorate, abnormal noise may develop, cooling performance may be affected or, in the worst case, the A/C compressor may seize.**

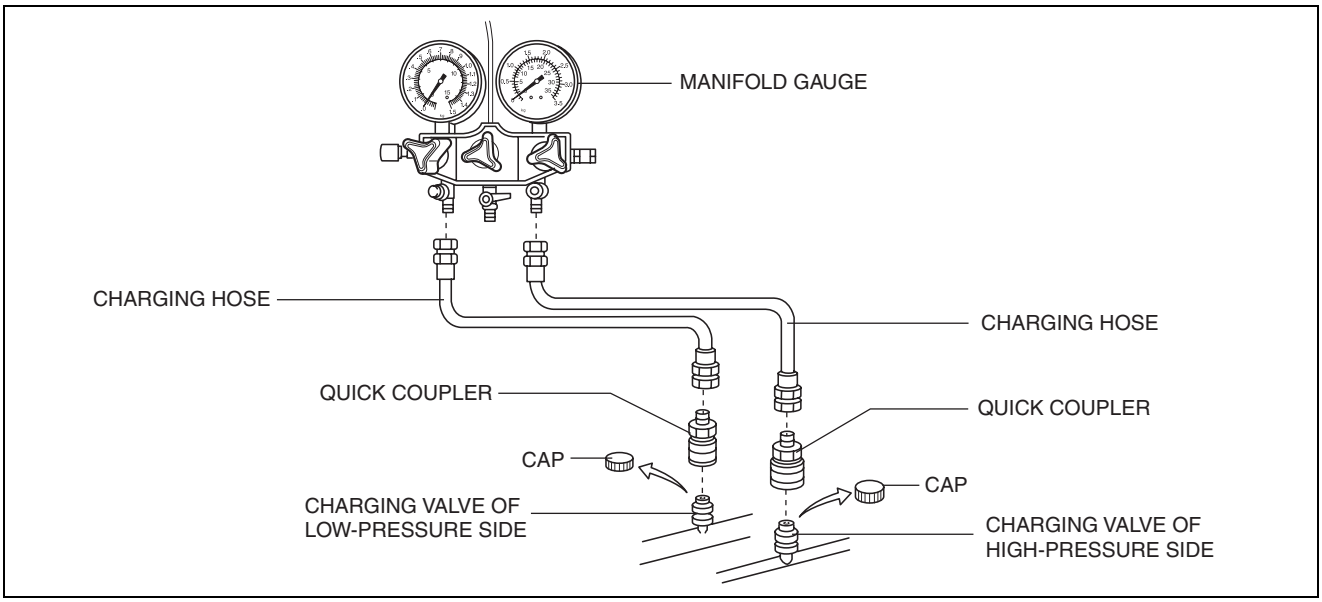


am3zzw0001093

REFRIGERANT SYSTEM GENERAL PROCEDURES

id071000800300

1. Fully close the valves of the manifold gauge.
2. Connect the charging hoses to the high- and low-pressure side joints of the manifold gauge.



ac5wzw0000175

3. Connect the quick couplers to the ends of the charging hoses.
4. Connect the quick couplers to the charging valves.

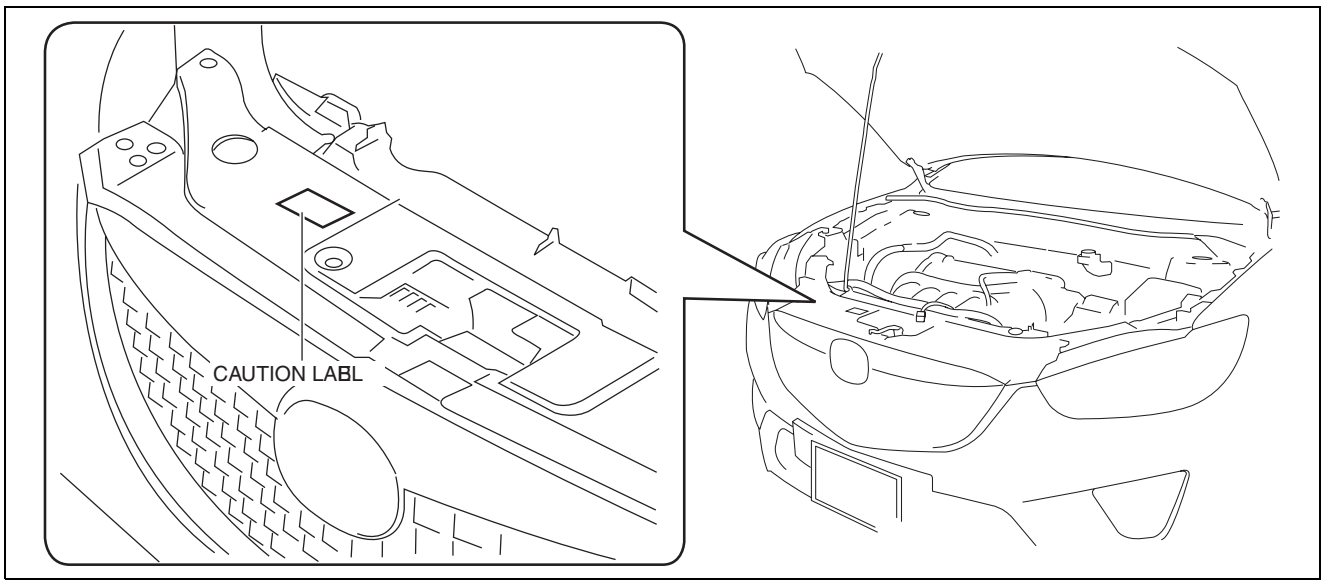
REFRIGERANT SYSTEM

REFRIGERANT CHARGING

id071000800400

Caution
- **Do not use a different type of refrigerant or charge beyond the specified level. Otherwise, cooling ability will be lowered and the A/C compressor could be damaged.**

Note
- The refrigerant used for the refrigerant system differs depending on the country. When draining or adding the refrigerant, verify the appropriate refrigerant type and specified amount of refrigerant from the caution label.



ac5wzw0000276

Refrigerant type
- HFO-1234yf
- HFC-134a

Regular amount of refrigerant (approx. quantity)
- **475—525** g {**16.8—18.5** oz} (SKYACTIV-G 2.0 (HFO-1234yf))
- **445—495** g {**15.7—17.4** oz} (SKYACTIV-D 2.2 (HFO-1234yf))
- **465—515** g {**16.5—18.1** oz} (HFC-134a)

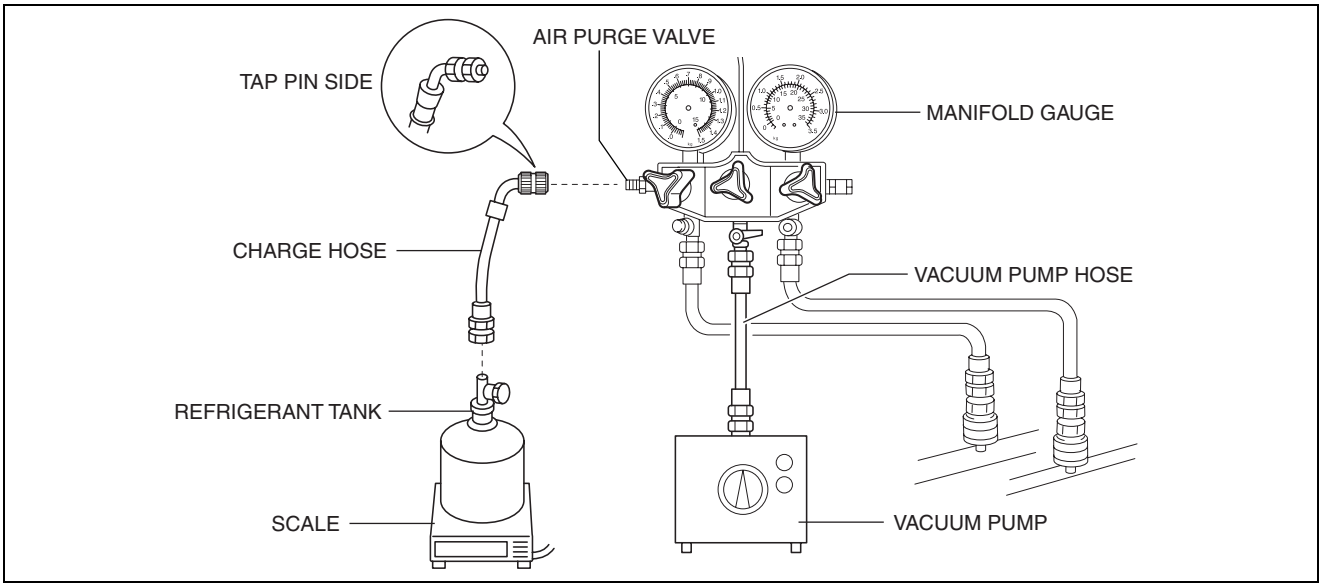
Charging Recycled R-134a Refrigerant
1. Connect an R-134a recovery/recycling/recharging device to the vehicle and follow the device manufacturer's instructions.

Charging Recycled R-1234yf Refrigerant
1. Connect an R-1234yf recovery/recycling/recharging device to the vehicle and follow the device manufacturer's instructions.

REFRIGERANT SYSTEM

Charging Preparation

1. Install the manifold gauge set.
2. Connect the tap pin side of the charging hose to the air purge valve of the manifold gauge.



ac5wzw0000175

3. Connect the vacuum pump hose to the center joint of the manifold gauge.
4. Connect the vacuum pump hose to the vacuum pump.
5. Connect the charging hose to the refrigerant tank.
6. Place the refrigerant tank on the scale.

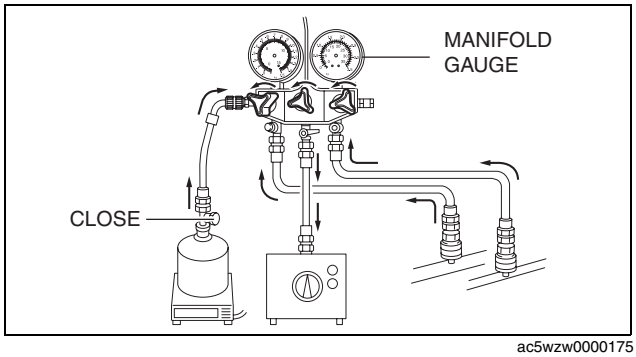
Evacuation

1. Open all the valves of the manifold gauge.

Caution

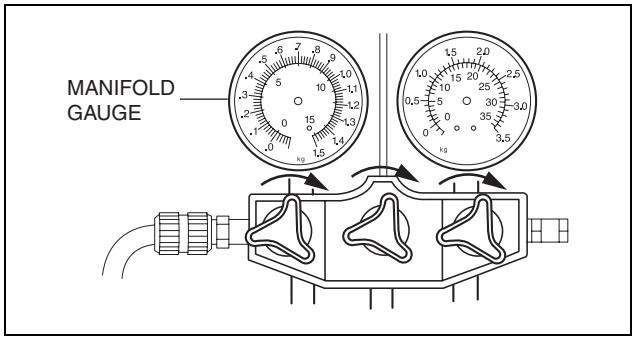
- **Close the manifold gauge valve immediately after stopping the vacuum pump. If the valve is left open, the vacuum pump oil will flow back into the refrigeration cycle and cause a decrease in the efficiency of the air conditioner.**

2. Start the vacuum pump and let it operate for **15 min**.



ac5wzw0000175

3. Verify that high- and low-pressure side readings of the manifold gauge are at **–101 kPa {–1.03 kgf/cm^2, –14.6 psi}**. Close each valve of the manifold gauge.



ac5wzw0000176

REFRIGERANT SYSTEM

Airtightness Check

1. Stop the vacuum pump and wait for **5 min**.
2. Check the high- and low-pressure side readings of the manifold gauge.
   - If the reading has changed, inspect for leakage and go to Evacuation. (See 07-10-4 Evacuation.)
   - If the reading has not changed, go to Charging New Refrigerant. (See 07-10-5 Charging New Refrigerant.)

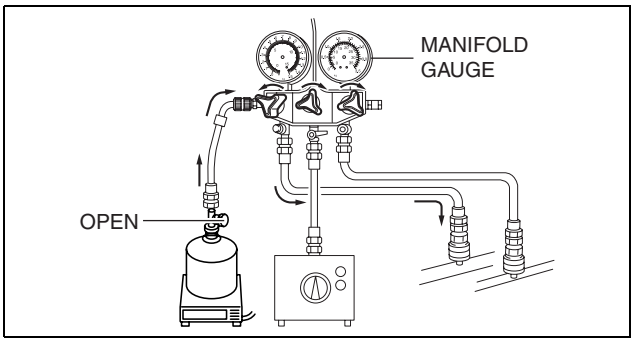
Charging New Refrigerant

1. Open the valve of the refrigerant tank.
2. Weigh the refrigerant tank to charge the suitable amount of refrigerant.

Warning

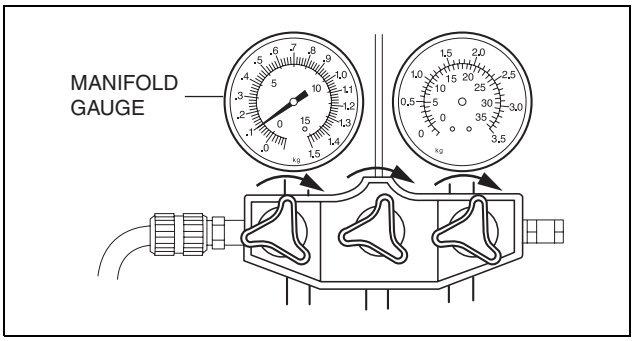
- **If the refrigerant system is charged with a large amount of refrigerant when inspecting for gas leakage, and if any leakage should occur, the refrigerant will be released into the atmosphere. In order to prevent the accidental release of refrigerant which can destroy the ozone layer in the stratosphere, follow the proper procedures and charge with only a small amount of refrigerant when inspecting for gas leakage.**
- **If charging the system with refrigerant using service cans, running the engine with the high-pressure side valve open is dangerous. Pressure within the service cans will increase and the cans could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Therefore, do not open the high-pressure side valve while the engine is running.**

3. Open the low-pressure side valve of the manifold gauge.



ac5wzw0000176

4. When the low-pressure side reading increases to **0.098 MPa {1.0 kgf/cm^2, 14 psi}**, close the low-pressure side valve of the manifold gauge.
5. Inspect for leakage from the cooler pipe/hose connections using the manifold gauge.
   - If there is no leakage, go to Step 7.
   - If leakage is found at a loose joint, tighten the joint, then go to the next step.
6. Inspect for leakage again.
   - If there is no leakage after tightening the joint, go to the next step.
   - If there is still a leakage at the same joint, discharge the refrigerant and then repair the joint. Repeat the charging procedure from evacuation.



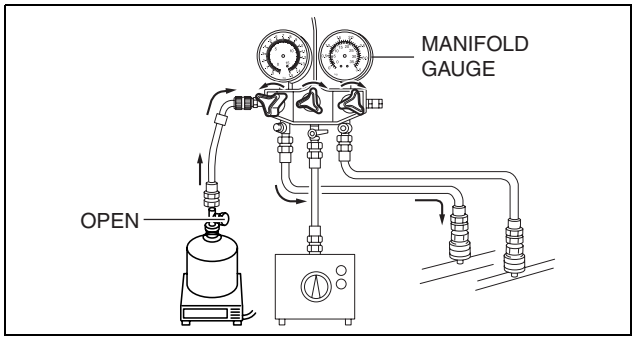
ac5wzw0000176

Warning

- **If charging the system with refrigerant using service cans, running the engine with the high-pressure side valve open is dangerous. Pressure within the service cans will increase and the cans could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Therefore, do not open the high-pressure side valve while the engine is running.**

REFRIGERANT SYSTEM

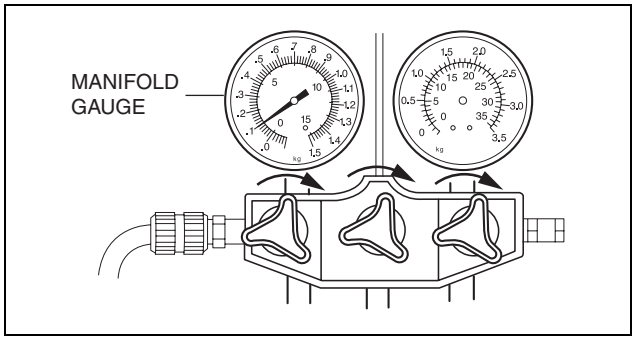
7. Open the low-pressure side valve of the manifold gauge and charge with refrigerant until the weight of refrigerant tank has decreased **250 g {8.82 oz}** from the amount in Step 2.



ac5wzw0000176

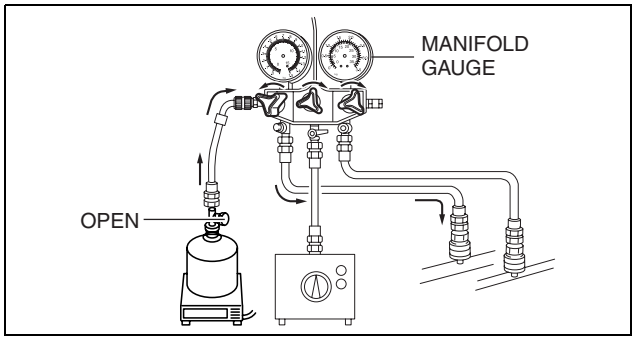
8. Close the low-pressure side valve of the manifold gauge.

Warning
- **If charging the system with refrigerant using service cans, running the engine with the high-pressure side valve open is dangerous. Pressure within the service cans will increase and the cans could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Therefore, do not open the high-pressure side valve while the engine is running.**



ac5wzw0000176

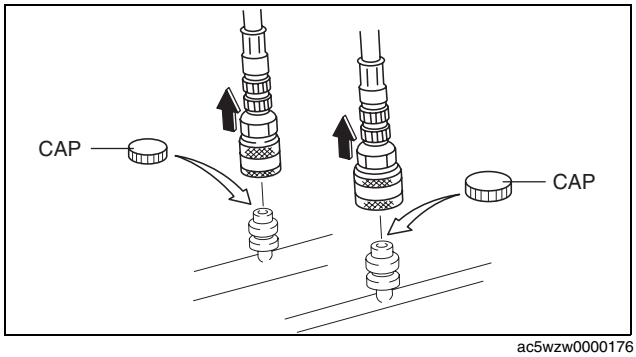
9. Start the engine and actuate the A/C compressor.
10. Open the low-pressure side valve of the manifold gauge and charge with refrigerant until the weight of the refrigerant tank has decreased regular amount from the amount in Step 2.
11. Close the low-pressure side valve of the manifold gauge and the valve of the refrigerant tank.
12. Stop the engine and A/C compressor.



ac5wzw0000176

Leak Test

1. Inspect for leakage using the gas leak tester.
   - If there is no leakage, go to Step 3.
   - If leakage is found at a loose joint, tighten the joint, then go to the next step.
2. Inspect for leakage again.
   - If there is no leakage after tightening the joint, go to the next step.
   - If there is still leakage at the same joint, discharge the refrigerant and then repair the joint. Repeat the charging procedure from evacuation.
3. Disconnect the quick couplers from the charging valves.
4. Install the caps to the charging valves.



ac5wzw0000176

REFRIGERANT SYSTEM

REFRIGERANT RECOVERY

id071000800500

HFC-134a

- Connect a HFC-134a recovery/recycling/recharging device to the vehicle and follow the device manufacturer's instructions.

HFO-1234yf

- Connect a HFO-1234yf recovery/recycling/recharging device to the vehicle and follow the device manufacturer's instructions.

REFRIGERANT PRESSURE CHECK

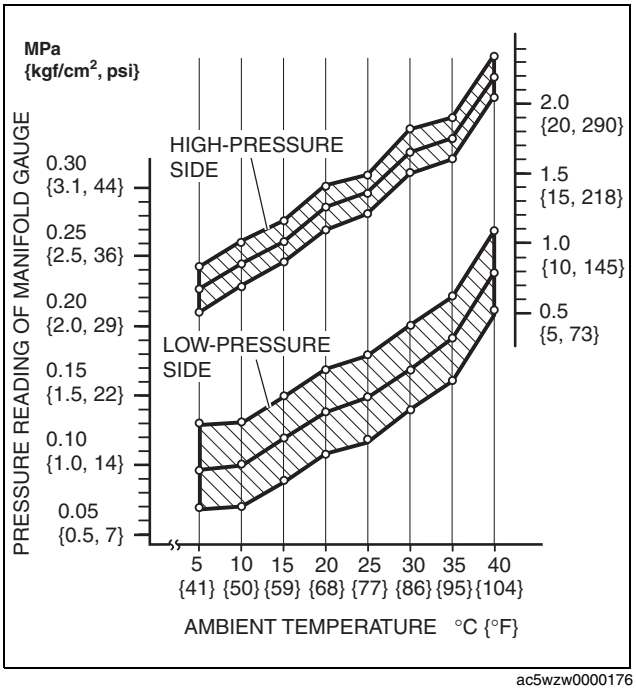
id071000800600

Note

- Measure the refrigerant pressure after approx. **10 min** have elapsed from engine start.

1. Install the manifold gauge. (See 07-10-2 REFRIGERANT SYSTEM GENERAL PROCEDURES.)
2. Start the engine and warm it up.
3. Set the fan speed MAX HI.
4. Turn the A/C switch on.
5. Set to RECIRCULATE mode.
6. Set the temperature control to MAX COLD.
7. Set to VENT mode.
8. Close all the doors and all the windows.
9. Maintain the engine speed at **1,500 rpm**.
10. Measure the ambient temperature and high- and low- pressure side reading of the manifold gauge.
11. Verify that the intersection of the pressure reading of the manifold gauge and ambient temperature is in the shaded zone.

SKYACTIV-G 2.0 (HFC-134a)



ac5wzw0000176

REFRIGERANT SYSTEM

SKYACTIV-D 2.2 (HFC-134a)

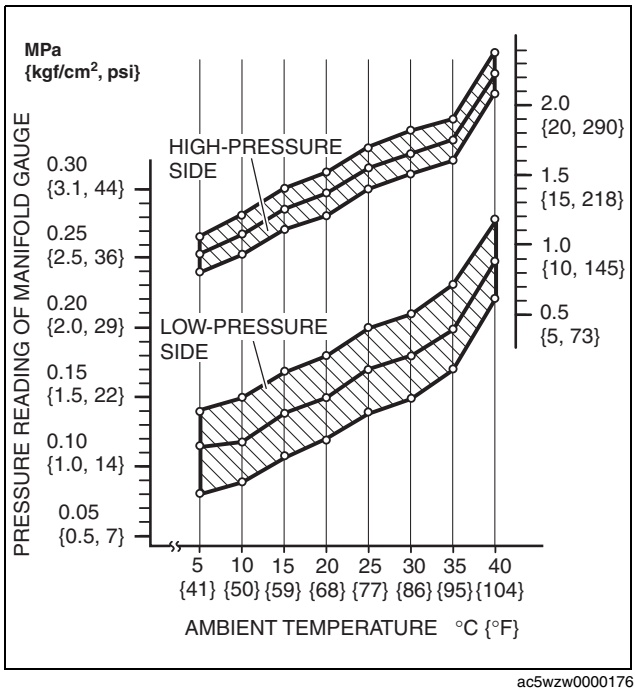
SKYACTIV-G 2.0 (HFO-1234yf)

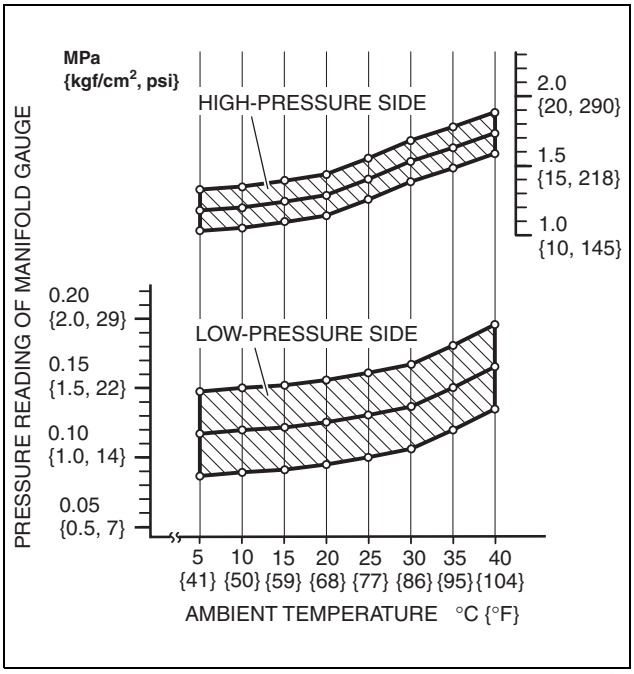


ac5wzw0000176

REFRIGERANT SYSTEM

SKYACTIV-D 2.2 (HFO-1234yf)

- If there is any malfunction, inspect the refrigerant system according to the troubleshooting chart.



ac5wzw0000176

REFRIGERANT SYSTEM PERFORMANCE TEST

id071000800700

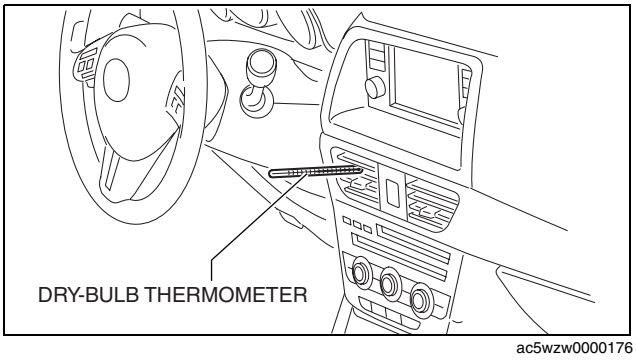
Note

- Measure the air conditioner output temperature after approx. **10 min** have elapsed from engine start.

1. Inspect the refrigerant pressure. (See 07-10-7 REFRIGERANT PRESSURE CHECK.)
2. Place a dry-bulb thermometer in the driver-side center ventilator outlet.
3. Start the engine and warm it up.
4. Set the fan speed to MAX HI.
5. Turn the A/C switch on.
6. Set to RECIRCULATE mode.
7. Set the temperature control to MAX COLD.
8. Set to VENT mode.
9. Close all the doors and windows.
10. Maintain the engine speed at **1,500 rpm**.
11. Wait until the air conditioner output temperature stabilizes.

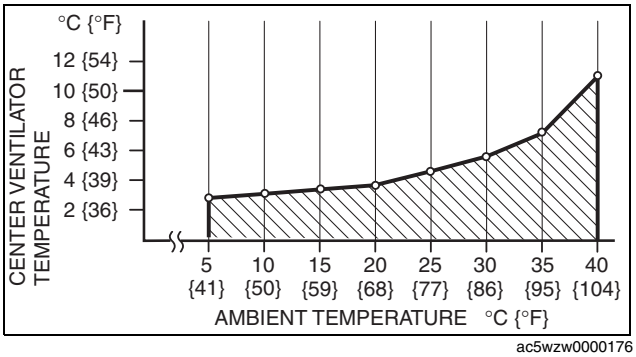
    Stabilized condition

    - The A/C compressor repeatedly turns on and off at regular intervals.
12. After the blower air is stabilized, read the dry-bulb thermometer.
13. Verify the ambient temperature.
14. Verify that the temperature reading is in the shaded zone.



ac5wzw0000176

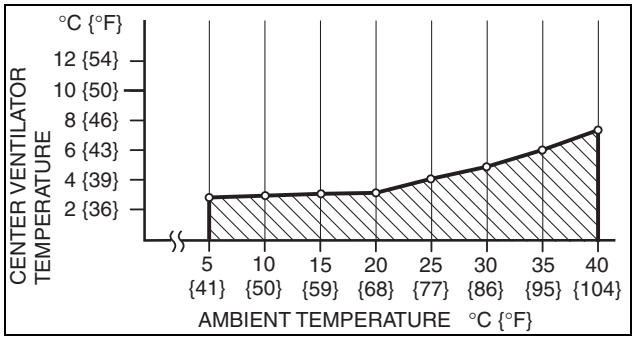
SKYACTIV-G 2.0 (HFC-134a)



ac5wzw0000176

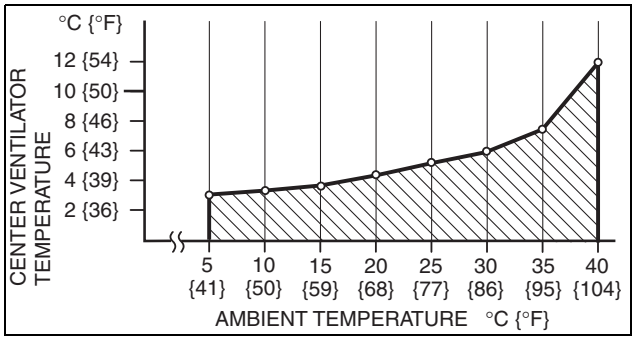
REFRIGERANT SYSTEM

SKYACTIV-D 2.2 (HFC-134a)



ac5wzw0000177

SKYACTIV-G 2.0 (HFO-1234yf)



ac5wzw0000177

SKYACTIV-D 2.2 (HFO-1234yf)

- If the there is any malfunction, inspect the refrigerant system according to the troubleshooting chart.

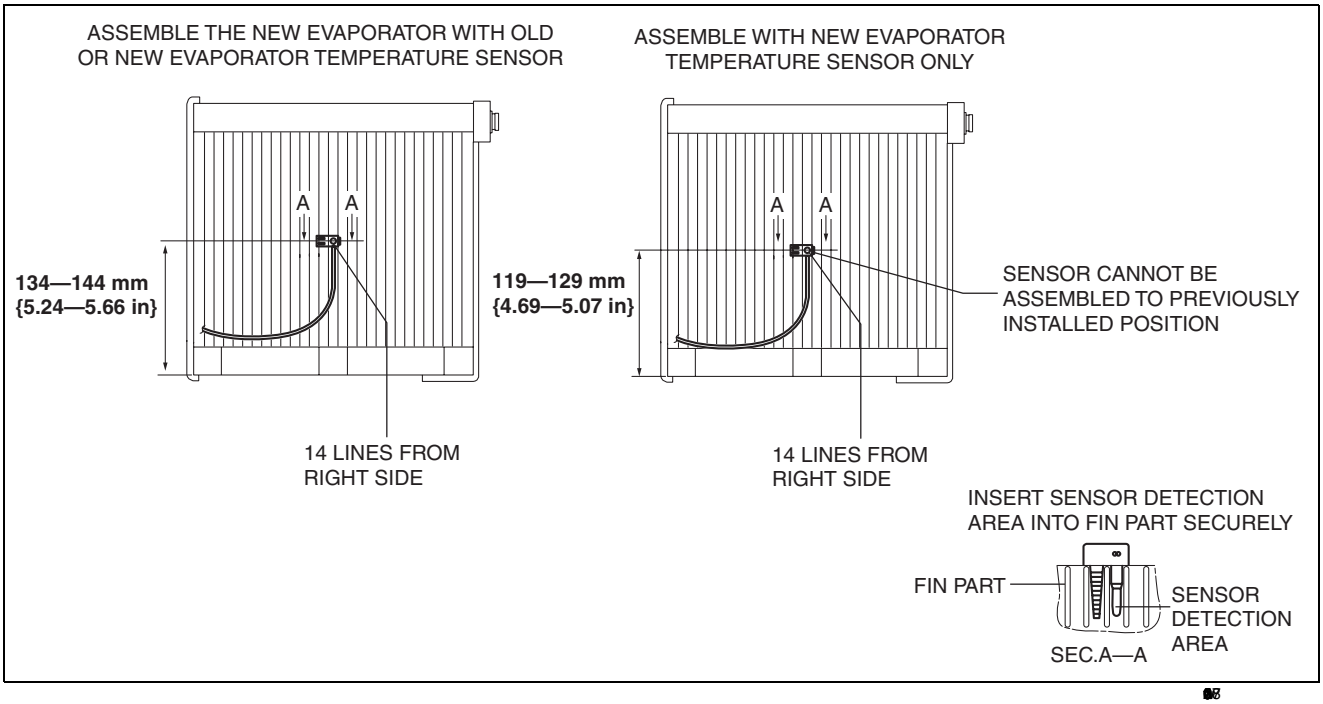
Evaporator Temperature Sensor Assembly Note

1. Assemble the evaporator temperature sensor as shown in the figure.

BASIC SYSTEM

R.H.D.



Caution

- **When installing the evaporator temperature sensor without replacing the evaporator, assemble the evaporator temperature sensor with the installation position slid to the left of the previous position by 1 line. If the evaporator temperature sensor is assembled to the previously installed position, it may not function due to poor contact of the fin surface with the sensor detection area caused by fin deformation.**

Note

- If an evaporator temperature sensor cannot be correctly positioned on the evaporator, replace the evaporator.

07

BASIC SYSTEM

EXPANSION VALVE REMOVAL/INSTALLATION

id071100800400

R.H.D.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Discharge the refrigerant from the system. (See 07-10-3 REFRIGERANT CHARGING.)

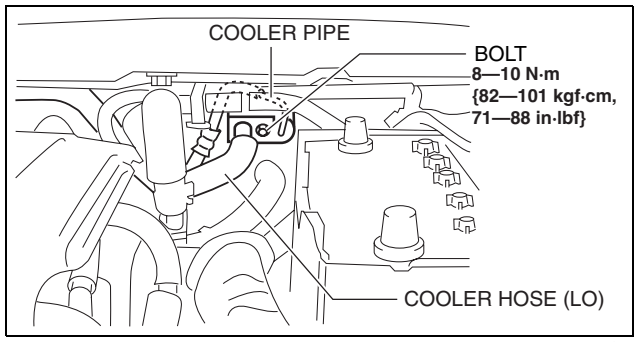
Caution

- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.**

3. Remove the bolt.
4. Disconnect the cooler hose (LO) and cooler pipe. Do not allow compressor oil to spill. (See 07-11-36 REFRIGERANT LINE REMOVAL/INSTALLATION.)

Caution

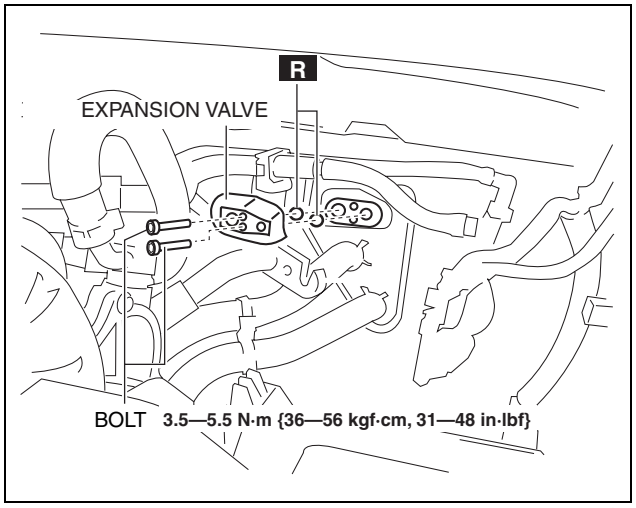
- **When setting the cooler hose (LO) and cooler pipe aside, only bend the flexible hose part. If force is applied to areas other than the flexible hose, the pipe will bend and could be damaged.**



ac5wzw0000178

BASIC SYSTEM

5. Remove the bolt.
6. Remove the expansion valve. Do not allow compressor oil to spill.
7. Install in the reverse order of removal.
8. Perform the refrigerant system performance test. (See 07-10-9 REFRIGERANT SYSTEM PERFORMANCE TEST.)



ac5wzw0000178

EVAPORATOR INSPECTION

id071100801500

1. Inspect the evaporator for damage, cracks, and oil leakage.
   - If there is any malfunction, replace the evaporator.
2. Visually inspect the fins for bending.
   - If there is any bending, use the end of a flathead screwdriver to straighten the fins.

HEATER CORE INSPECTION

id071100801600

1. Inspect the heater core for damage, cracks, and water leakage.
   - If there is any malfunction, replace the heater core.
2. Visually inspect the fins for bending.
   - If there is any bending, use the end of a flathead screwdriver to straighten the fins.
3. Visually inspect the heater hose for deformation.
   - Repair with pliers if there is deformation. If there is any malfunction, replace the heater core.

AIRFLOW MODE MAIN LINK REMOVAL/INSTALLATION

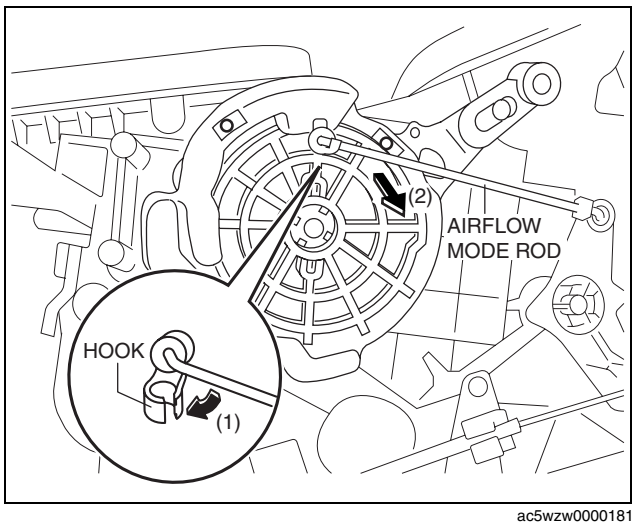
id071100801800

Full-auto Air Conditioner

1. The airflow mode main link is installed to the airflow mode actuator. When removing the airflow mode main link, refer to the airflow mode actuator removal/installation. (See 07-40A-13 AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)

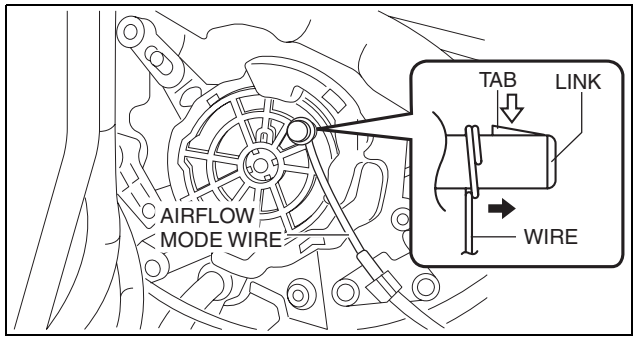
Manual Air Conditioner

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
3. Detach the hook (1), then remove the airflow mode rod (2). (L.H.D.)



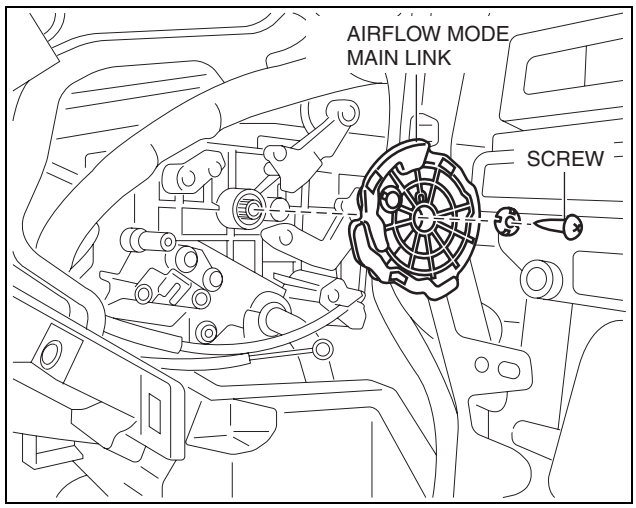
ac5wzw0000181

4. Remove the airflow mode wire. (R.H.D.)



ac5wzw0000181

5. Remove the screw, then airflow mode main link.
6. Install in the reverse order of removal. (See 07-11-21 Airflow Mode Main Link Installation Note.)



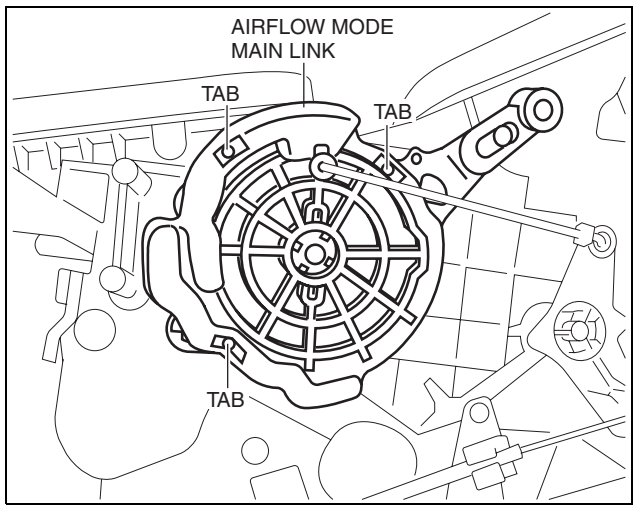
ac5wzw0000181

Airflow Mode Main Link Installation Note

Caution

- **Apply only the specified grease to links. Otherwise abnormal noise or improper operation may result.**

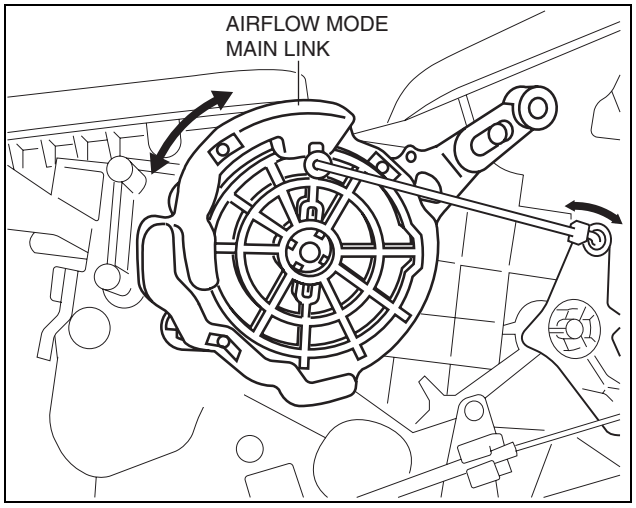
1. Align the airflow mode main link hole with the airflow mode sub link projection as shown in the figure.



ac5wzw0000181

BASIC SYSTEM

2. Press the airflow mode main link lightly to the A/C unit, then set the projections of each airflow mode sub link into the grooves of the airflow mode main link.
3. Rotate airflow mode main link and verify that each mode is accessed properly.



ac5wzw0000181

FRONT HEAT DUCT REMOVAL/INSTALLATION

id071100307100

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the dashboard under cover. (See 09-17-35 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
3. Detach the tab and remove the front heat duct.

BASIC SYSTEM

SKYACTIV-D 2.2

Procedure from top side of vehicle

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Discharge the refrigerant. (See 07-10-3 REFRIGERANT CHARGING.)
3. Remove bolts A.

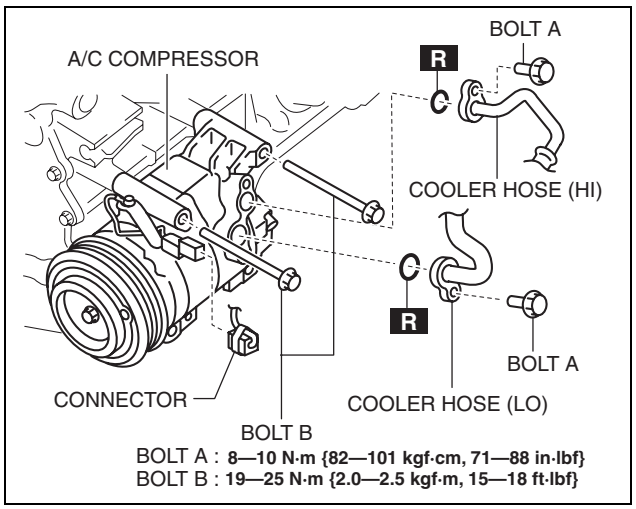
Caution

- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise or other malfunction could occur. Always plug open fittings immediately after removing any refrigeration cycle parts.**

4. Disconnect the cooler hose (LO). (See 07-11-36 REFRIGERANT LINE REMOVAL/ INSTALLATION.)
5. Disconnect the cooler hose (HI). (See 07-11-36 REFRIGERANT LINE REMOVAL/ INSTALLATION.)
6. Disconnect the connector.
7. Remove bolts B.

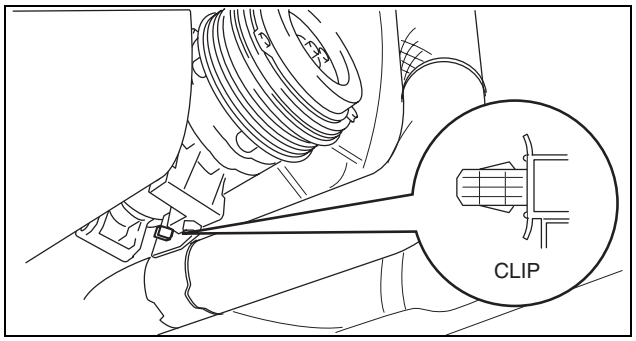
Procedure from underside of vehicle

8. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/ INSTALLATION.)
9. Remove the splash shield (RH). (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
10. Remove the drive belt. (See 01-10B-8 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



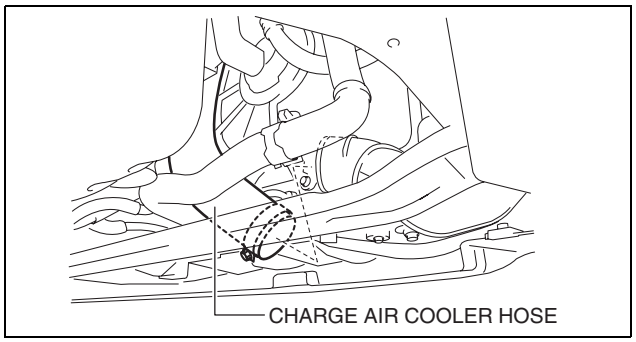
ac5wzw0000180

11. Detach the clip.



ac5wzw0000180

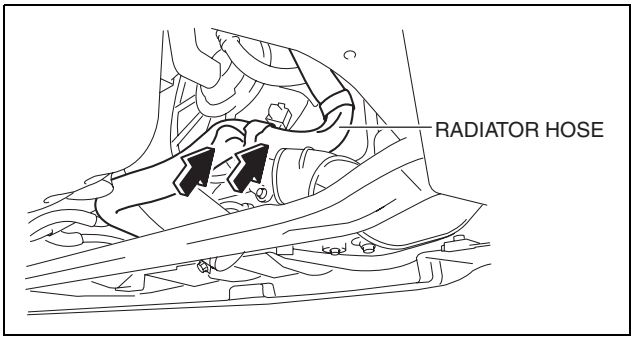
12. Disconnect the charge air cooler hose.



ac5wzw0000180

BASIC SYSTEM

13. Set the radiator hose out of the way.

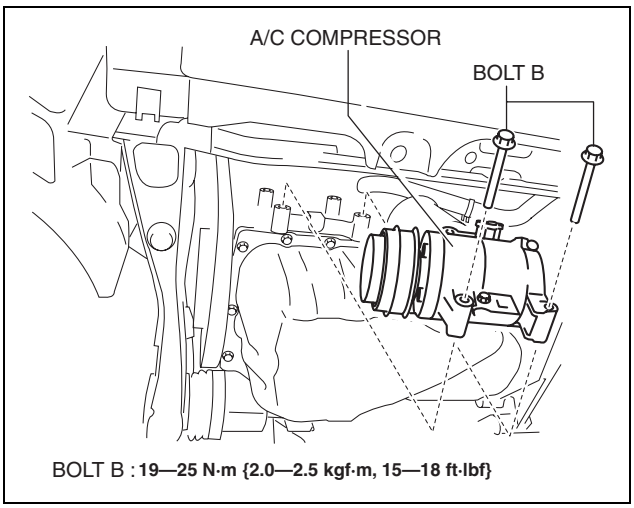


ac5wzw0000180

14. Remove bolts B.

Caution
- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise or other malfunction could occur. Always plug open fittings immediately after removing any refrigeration cycle parts.**

15. Remove the A/C compressor. Do not allow compressor oil to spill. (See 07-11-27 A/C Compressor Installation Note.)
16. Install in the reverse order of removal.
17. Perform the refrigerant system performance test. (See 07-10-9 REFRIGERANT SYSTEM PERFORMANCE TEST.)



ac5wzw0000180

A/C Compressor Installation Note

Caution
- **Due to the high moisture-absorption characteristics of the compressor oil, it may absorb moisture if left over a long period of time thereby negatively affecting A/C operation. Drain the compressor oil and refill within 10 min. of each other.**

1. Rotate the new A/C compressor shaft six to eight revolutions while pouring refrigerant oil in a clean measuring container. Use this refrigerant oil to refill new compressor. Do not allow refrigerant oil to become contaminated.
2. Rotate old A/C compressor shaft six to eight revolutions while pouring refrigerant oil in a separate, clean measuring container.
3. Compare those oil amounts. The amount of the oil drained from the new A/C compressor should be greater than the old one.
4. Pour the same amount oil of drained from the old A/C compressor back into the new A/C compressor.

A/C compressor oil type
FD46XG

A/C compressor oil sealed volume (approx. quantity)
100 ml {100 cc, 3.38 fl oz}

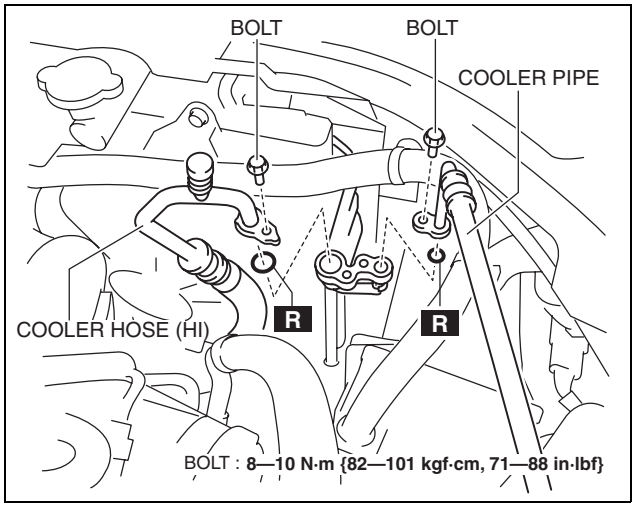
2. Discharge the refrigerant. (See 07-10-3 REFRIGERANT CHARGING.)
3. Remove the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
4. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].) (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
5. Remove the following parts: (SKYACTIV-G 2.0)
   (1) Plug hole plate (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (2) Air cleaner, air hose and fresh air duct component (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (3) Coolant reserve tank (See 01-12A-8 COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (4) Cooling fan component (See 01-12A-19 COOLING FAN MOTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
6. Remove the following parts: (SKYACTIV-D 2.2)
   (1) Engine cover (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (2) Air cleaner and fresh air duct component (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (3) Coolant reserve tank (See 01-12B-8 COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (4) Cooling fan component (See 01-12B-18 COOLING FAN MOTOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (5) Charge air cooler inlet hose and charge air cooler outlet hose (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
7. Disconnect the ATF oil cooler hose from the radiator. (if equipped) (SKYACTIV-D 2.2) (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
8. Remove the radiator. (See 01-12A-9 RADIATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-12B-9 RADIATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
9. Remove the bolts.
10. Disconnect the cooler hose (HI) and cooler pipe. Do not allow remaining compressor oil in the refrigerant line to spill. (See 07-11-36 REFRIGERANT LINE REMOVAL/INSTALLATION.)

Caution

- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise or other malfunction could occur. Always plug open fittings immediately after removing any refrigeration cycle parts.**

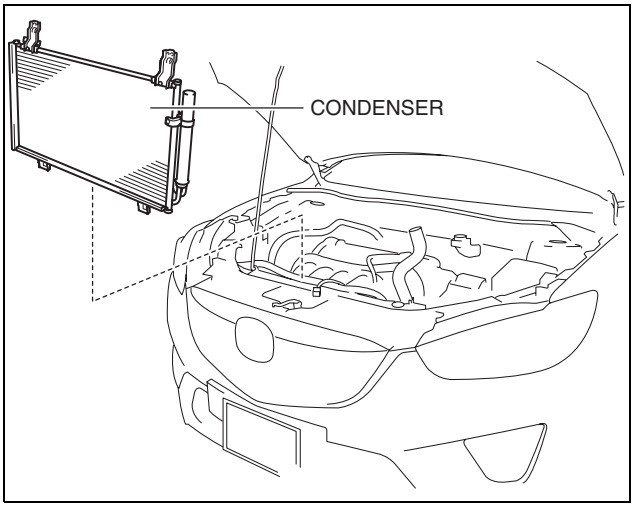


ac5wzw0000180

BASIC SYSTEM

11. Remove the condenser, being careful not to allow remaining compressor oil in the condenser to spill. (See 07-11-29 Condenser Installation Note.)

    Caution
    - **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise or other malfunction could occur. Always plug open fittings immediately after removing any refrigeration cycle parts.**



ac5wzw0000180

12. Install in the reverse order of removal.
13. Inspect for engine coolant leakage. (See 01-12A-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0].) (See 01-12B-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-D 2.2].)
14. Inspect the ATF level. (if equipped) (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].)
15. Perform the refrigerant system performance test. (See 07-10-9 REFRIGERANT SYSTEM PERFORMANCE TEST.)

Condenser Installation Note

1. After replacing the condenser, add compressor oil to the refrigeration cycle.

   Supplemental oil amount (approx. quantity)
   13 ml {13 cc, 0.44 fl oz}

CONDENSER INSPECTION

id071100801300

1. Inspect the condenser for cracks, damage, and oil leakage.
   - If there is any malfunction, replace the condenser.
2. Visually inspect for bent fins for clogging of foreign material.
   - If any fins are clogged, remove the foreign material.
3. Visually inspect for bent fins.
   - If any fins are bent, use the end of a flathead screwdriver to straighten fins.

RECEIVER/DRIER REMOVAL/INSTALLATION

id071100801400

1. Disconnect the negative battery cable.(See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Discharge the refrigerant. (See 07-10-3 REFRIGERANT CHARGING.)
3. Remove the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
4. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].) (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
5. Remove the following parts: (SKYACTIV-G 2.0)
   (1) Plug hole plate (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (2) Air cleaner, air hose and fresh air duct component (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (3) Coolant reserve tank (See 01-12A-8 COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (4) Cooling fan component (See 01-12A-19 COOLING FAN MOTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

6. Remove the following parts: (SKYACTIV-D 2.2)
   (1) Engine cover (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (2) Air cleaner and fresh air duct component (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (3) Coolant reserve tank (See 01-12B-8 COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

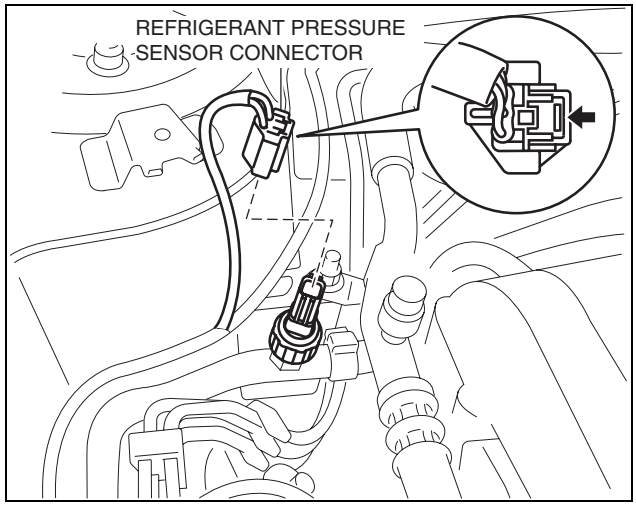
16. Remove in the order indicated in the table. Do not allow compressor oil to spill.

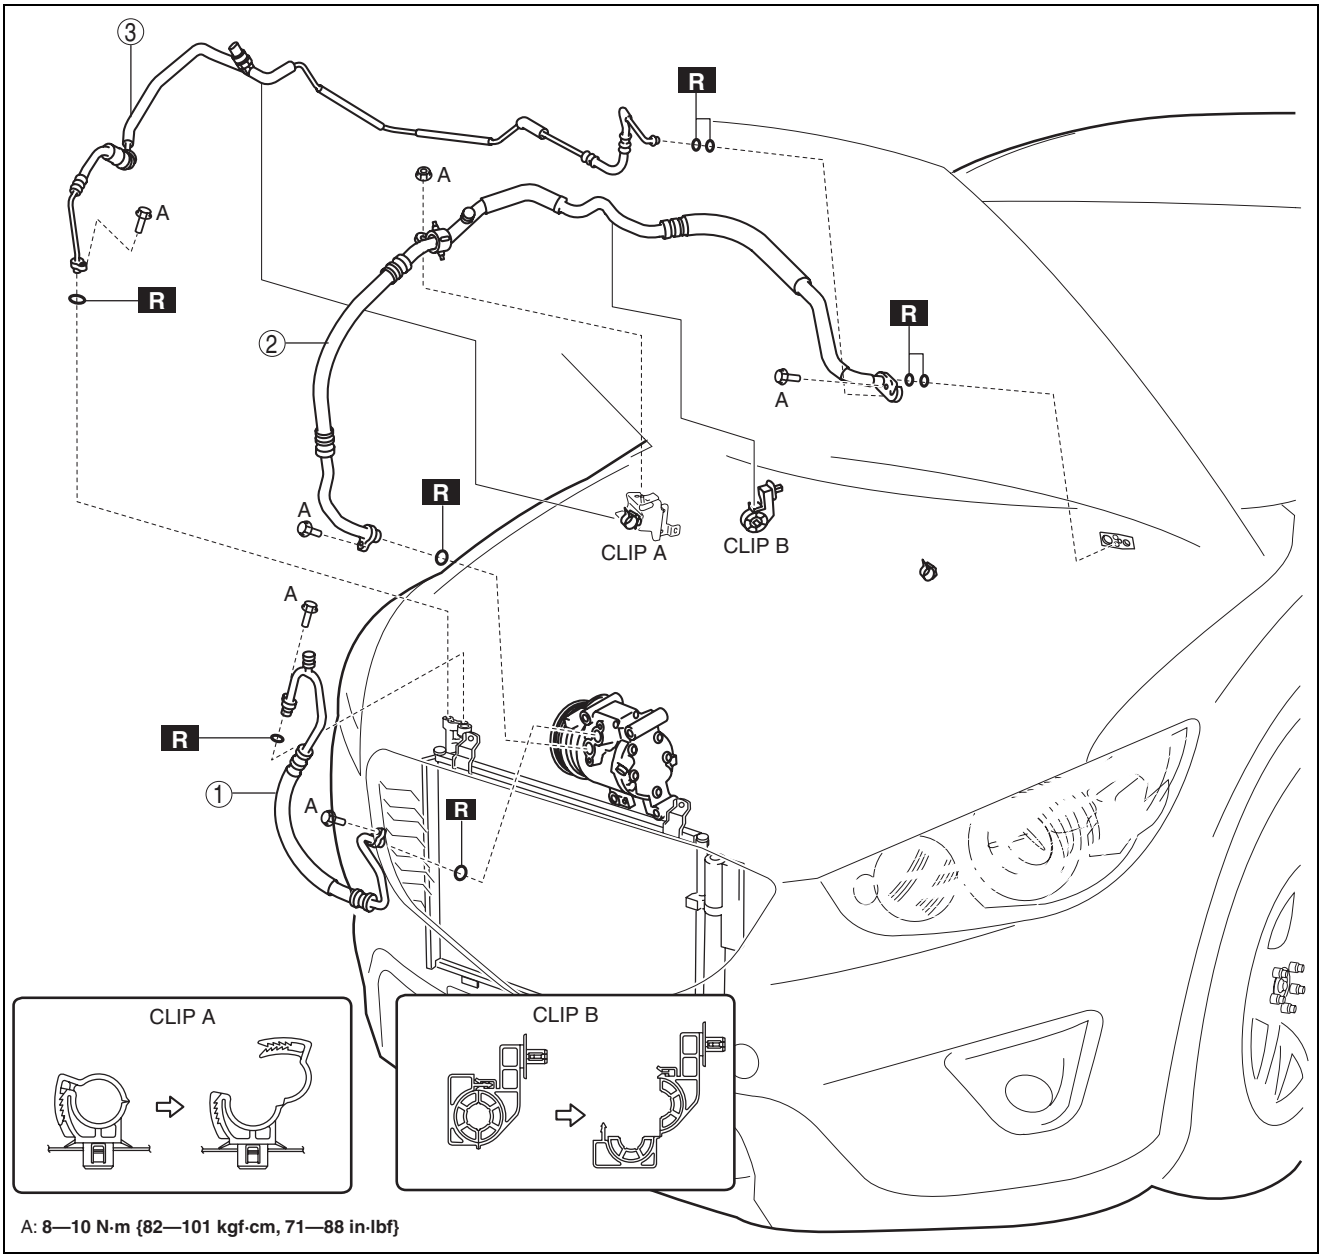
Caution

- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.**



ac5wzw0000182

BASIC SYSTEM



ac5wzw0000183

1	Cooler hose (HI) (See 07-11-47 Refrigerant Line Installation Note (1).) (See 07-11-47 Refrigerant Line Installation Note (2).)
2	Cooler hose (LO) (See 07-11-47 Refrigerant Line Installation Note (1).) (See 07-11-47 Refrigerant Line Installation Note (2).)

3	Cooler pipe (See 07-11-47 Refrigerant Line Installation Note (1).) (See 07-11-47 Refrigerant Line Installation Note (2).)

17. Install in the reverse order of removal.
18. Perform the refrigerant system performance test. (See 07-10-9 REFRIGERANT SYSTEM PERFORMANCE TEST.)

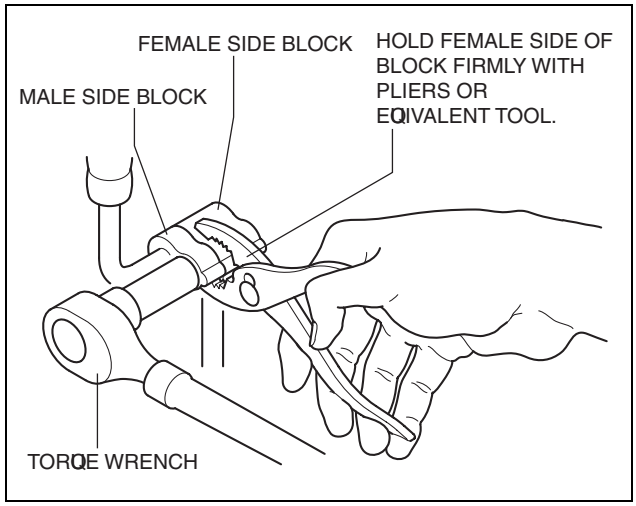
BASIC SYSTEM

Refrigerant Line Installation Note (1)

1. Apply compressor oil to the O-rings and connect the joints.
2. Tighten the joints.

Block joint type

1. Tighten the joint bolt by hand.
2. Connect the block joint type pipes by grasping the female side of the block with pliers or similar tool and holding firmly, then tighten the connection bolt or nut with a torque wrench.



ac5wzw0000281

Refrigerant Line Installation Note (2)

1. After replacing the refrigerant line, add compressor oil to the refrigeration cycle.
   - After replacing the cooler hose (HI)
     Supplemental oil amount (approx. quantity)
     — 1 ml {1 cc, 0.03 fl oz}
   - After replacing the cooler hose (LO)
     Supplemental oil amount (approx. quantity)
     — 3 ml {3 cc, 0.1 fl oz}
   - After replacing the cooler pipe
     Supplemental oil amount (approx. quantity)
     — 1 ml {1 cc, 0.03 fl oz}

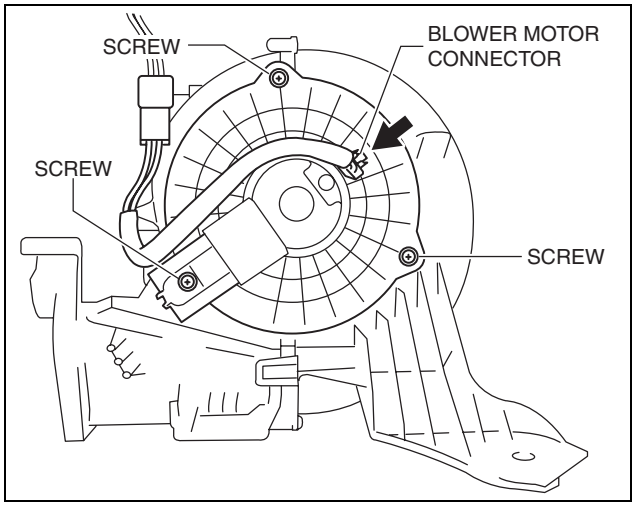
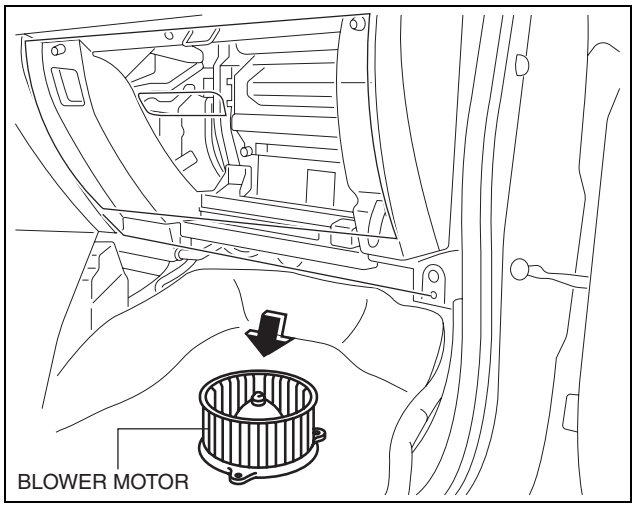
2. Remove the dashboard under cover. (See 09-17-35 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
3. Disconnect the connector.
4. Remove the screws.



ac5wzw0000184

5. Remove the blower motor.
6. Install in the reverse order of removal.

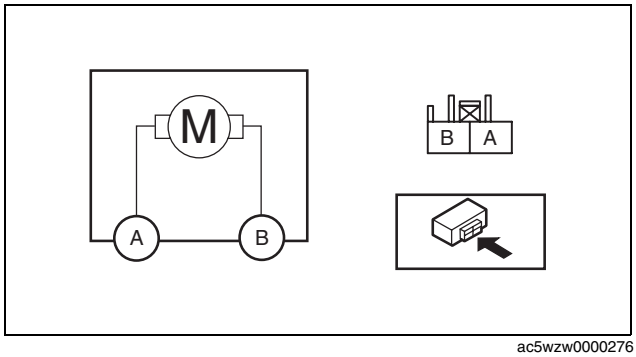


ac5wzw0000184

BLOWER MOTOR INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1801000

1. Connect battery positive voltage to blower motor terminal B, connect terminal A to ground, and then verify its operation.
   - If there is any malfunction, replace the blower motor.



ac5wzw0000276

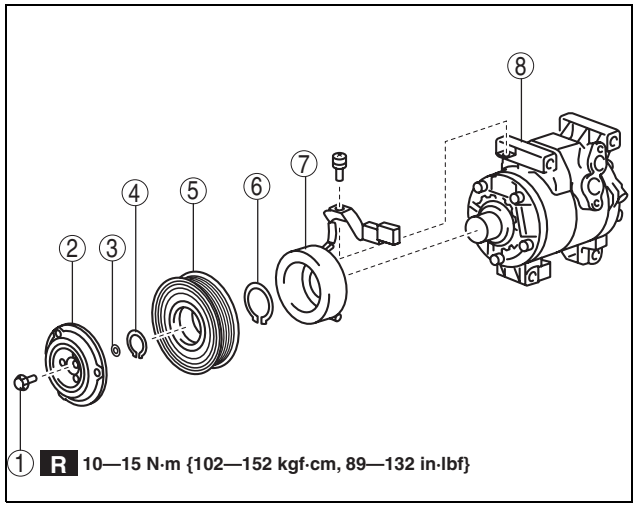
CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY [FULL-AUTO AIR CONDITIONER]

id0740a1800400

1. Disassemble in the order indicated in the table.

1	Bolt (See 07-40A-17 Bolt Removal/Installation Note.)
2	Pressure plate
3	Shim (See 07-40A-18 Shim Installation Note.)
4	Snap ring (See 07-40A-18 Snap Ring Removal/Installation Note.)
5	A/C compressor pulley
6	Snap ring (See 07-40A-18 Snap Ring Removal/Installation Note.)
7	Stator
8	A/C compressor body



ac5wzw0000276

2. Assemble in the reverse order of disassembly.
3. Adjust the magnetic clutch clearance. (See 07-40A-18 MAGNETIC CLUTCH ADJUSTMENT [FULL-AUTO AIR CONDITIONER].)

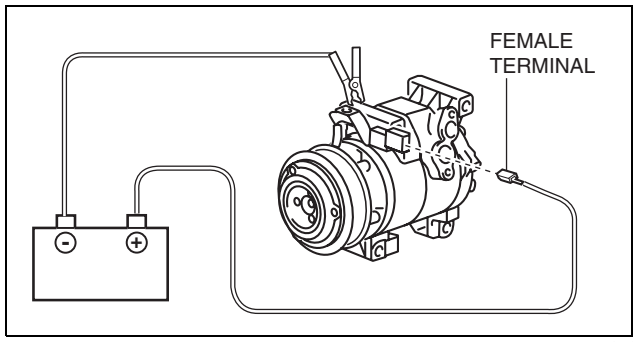
Bolt Removal/Installation Note

1. When removing or installing the bolt, lock the A/C compressor pulley against rotation using the following procedure.

Caution

- **When connecting the positive battery cable to the magnetic clutch connector, use a cable with a female terminal of the correct size. Otherwise, load will be applied to the terminal, resulting in deformation or damage, and poor contact. In addition, the positive battery cable could disconnect from the connector resulting in a short circuit.**

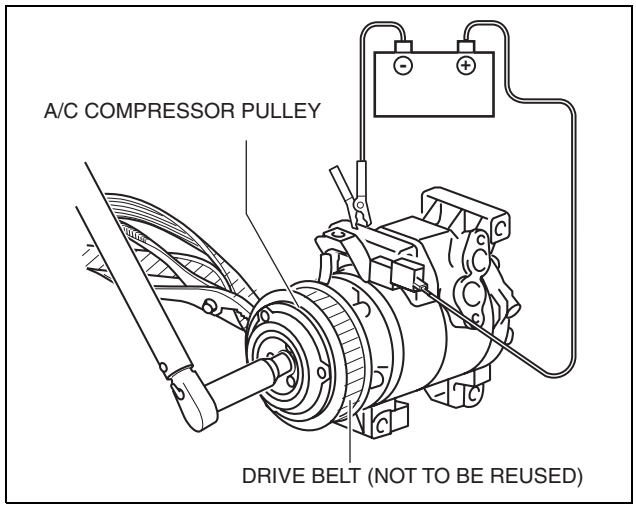
(1) Apply battery positive voltage to the magnetic clutch terminal and connect the A/C compressor body to the ground.



ac5wzw0000184

(2) Wrap the drive belt, which is no longer of use, tightly around the A/C compressor pulley.
(3) Hold the drive belt in place with pliers.
(4) Remove/installation the bolt.

Tightening torque
10—15 N·m {102 —152 kgf·cm, 89 — 132 in·lbf}



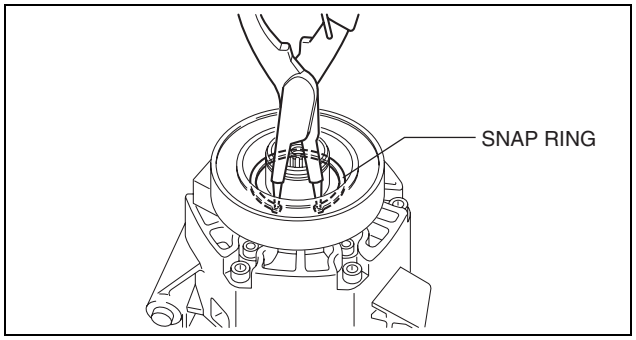
ac5wzw0000184

2. When installing a new A/C compressor body, replace the recommended bolt.

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

Snap Ring Removal/Installation Note

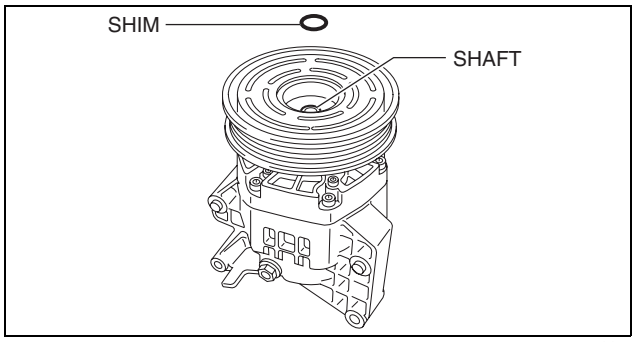
1. Remove/install the snap ring using a snap ring pliers.



am3zzw0001099

Shim Installation Note

1. First, insert the **1mm (0.039 in)** thick shim into the shaft.



am3zzw0001100

MAGNETIC CLUTCH ADJUSTMENT [FULL-AUTO AIR CONDITIONER]

id0740a1800500

1. Measure the clearance around the entire circumference between the pressure plate and A/C compressor pulley using a thickness gauge.
2. Verify the clearance.
   - If not within the specification, remove the pressure plate and adjust the clearance by changing the shim (**0.2 mm {0.008 in}, 0.5 mm {0.02 in}**) or the number of shims.

   Magnetic clutch clearance
   0.35—0.65 mm {0.014—0.025 in}

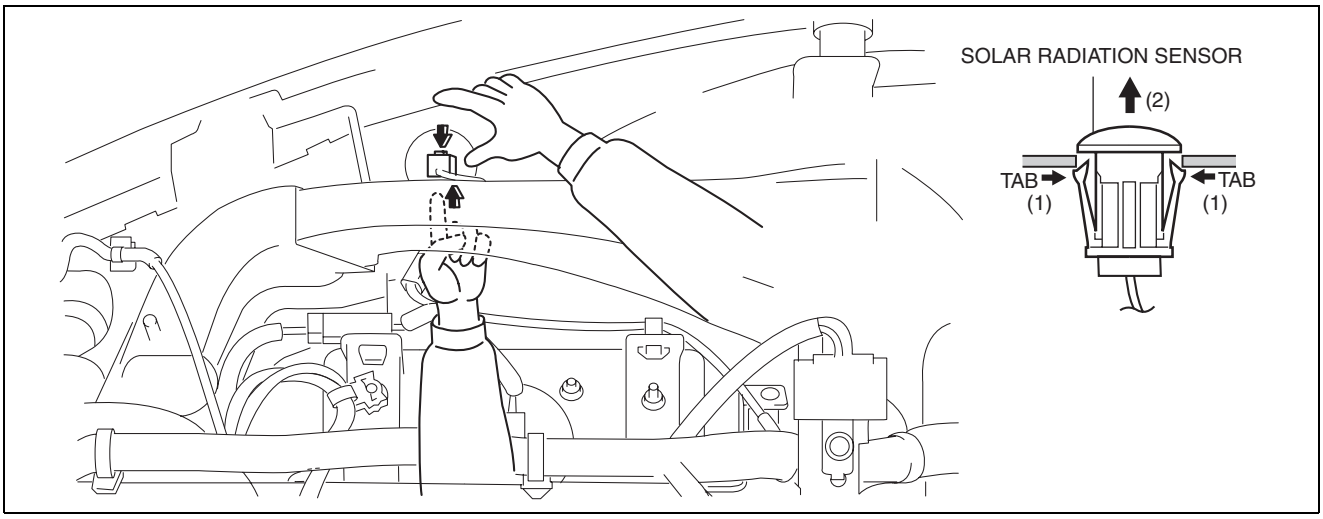
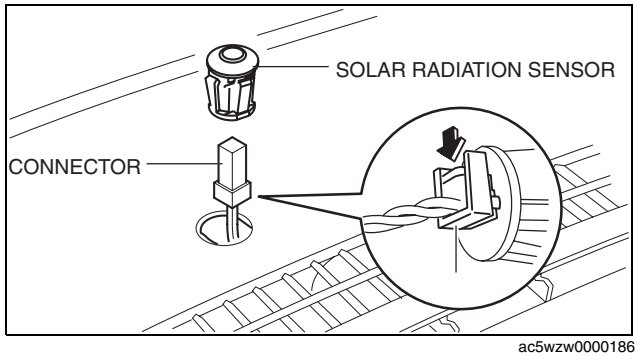
   (6) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (7) Lower panel (passenger-side) (See 09-17-35 LOWER PANEL REMOVAL/INSTALLATION.)
   (8) Blower unit (See 07-11-5 BLOWER UNIT REMOVAL/INSTALLATION.)
3. Press the tab from the inside of the dashboard and press out the solar radiation sensor as shown in the figure.



ac5wzw0000186

4. Disconnect the solar radiation sensor connector.
5. Remove the solar radiation sensor.
6. Install in the reverse order of removal.



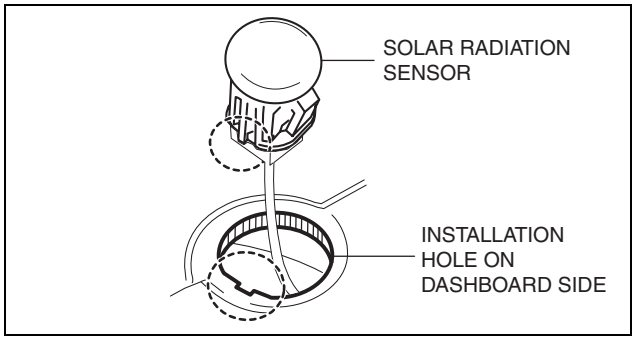
ac5wzw0000186

07

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

Solar Radiation Sensor Installation Note

1. Align the shape of the solar radiation sensor with the shape of the installation hole on the dashboard side, and install as shown in the figure.

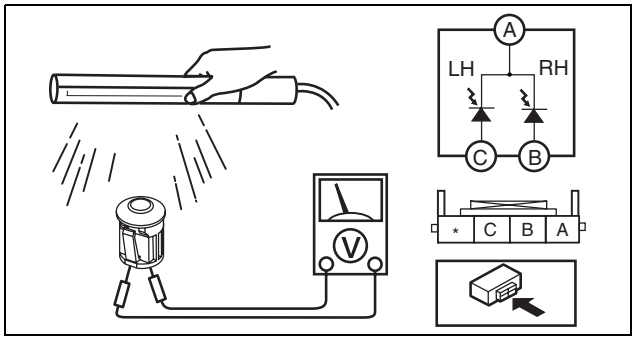


ac5wzw0000186

SOLAR RADIATION SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1802900

1. Shine a fluorescent light or expose the solar radiation sensor to natural sunlight.
2. Connect the positive (+) lead to terminal B, C and negative (-) lead to terminal A of the solar radiation sensor, and verify that the voltage value is output.
   - If the voltage is **0 V**, replace the solar radiation sensor.

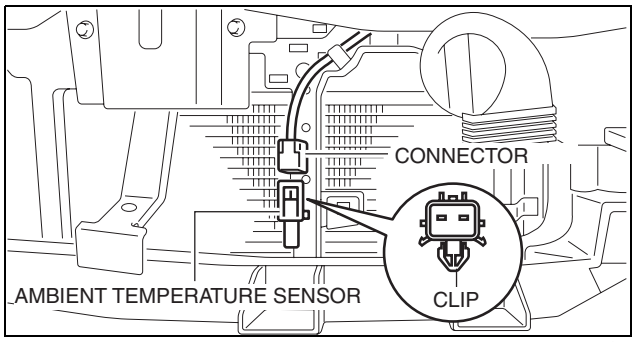


am3zzw0001102

AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

id0740a1803200

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Disconnect the connector.
4. Remove the ambient temperature sensor.
5. Install in the reverse order of removal.



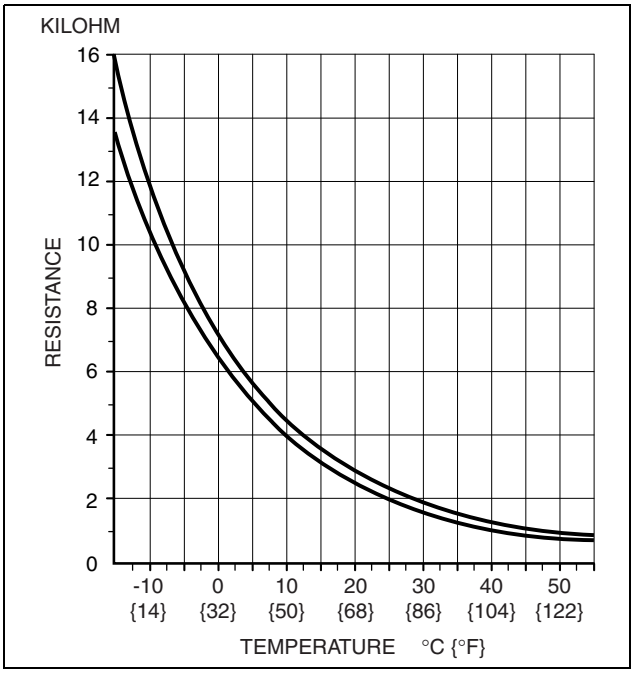
ac5wzw0000186

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

AMBIENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1803300

1. Measure the temperature around the ambient temperature sensor and measure the resistance between the ambient temperature sensor terminal.
   - If the characteristics of the ambient temperature sensor are not as shown in the graph, replace the ambient temperature sensor.



am3zzw0000076

CABIN TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

id0740a1807800

R.H.D.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Front scuff plate (driver-side) (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Front side trim (driver-side) (See 09-17-62 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Switch panel (See 09-17-18 SWITCH PANEL REMOVAL/INSTALLATION.)
   (4) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (5) Shift lever knob (MTX) (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
   (6) Front console box (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)
   (7) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
   (8) Upper panel (See 09-17-44 UPPER PANEL REMOVAL/INSTALLATION.)
   (9) Rear console (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.)
   (10) Side wall (See 09-17-49 SIDE WALL REMOVAL/INSTALLATION.)
   (11) Front console (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
   (12) Bonnet release lever (See 09-14-17 BONNET LATCH AND RELEASE LEVER REMOVAL/INSTALLATION.)

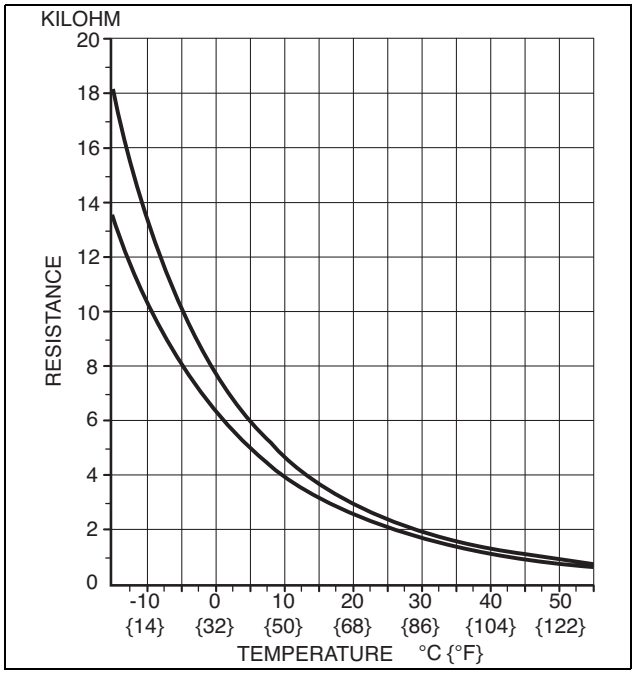
CABIN TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1807700

1. Measure the temperature around the cabin temperature sensor and measure the resistance between cabin temperature sensor terminals A and B.
   - If the characteristics of the cabin temperature sensor are not as shown in the graph, replace the cabin temperature sensor.



am3uuw0000405

EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

id0740a1801100

1. Remove the evaporator temperature sensor from the A/C unit. (See 07-11-14 A/C UNIT DISASSEMBLY/ ASSEMBLY.)

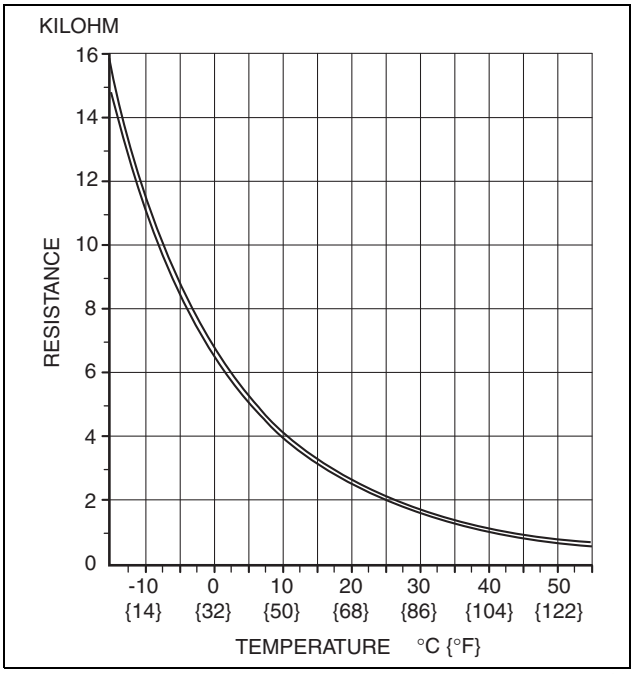
CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1801200

Note
- Inspect the evaporator temperature sensor when it is installed to the A/C unit.

1. Set the fan speed at MAX HI.
2. Set the temperature control at MAX COLD.
3. Set the RECIRCULATE mode.
4. Turn the A/C switch off.
5. Close all doors and windows.
6. Wait for **5 min**.
7. Disconnect the evaporator temperature sensor connector.
8. Measure the temperature at the blower inlet.
9. Measure the resistance between the evaporator temperature sensor terminals.
   - If the resistance is not as shown in the graph, replace the evaporator temperature sensor.



am3uuw0000403

HEATER CORE TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

id0740a1808100

Note
- The heater core temperature sensor is installed to the A/C unit by engaging the tab.

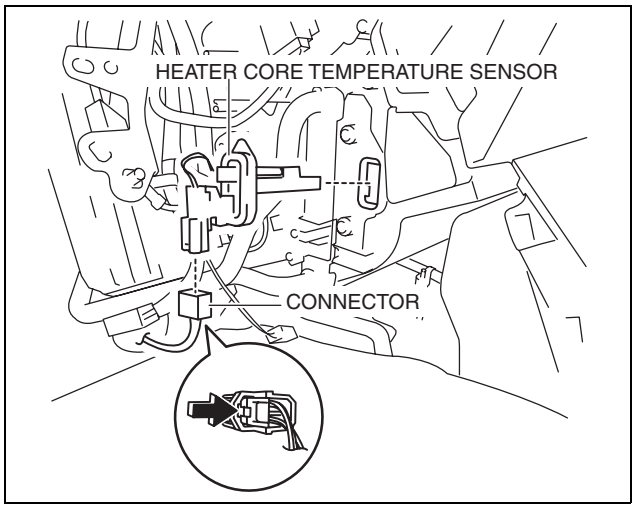
CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

R.H.D.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Side wall (See 09-17-49 SIDE WALL REMOVAL/INSTALLATION.)
   (2) Dashboard under cover (See 09-17-35 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
   (3) Front heat duct (passenger-side) (See 07-11-22 FRONT HEAT DUCT REMOVAL/INSTALLATION.)
3. Disconnect the connector.
4. Remove the heater core temperature sensor.
5. Install in the reverse order of the removal.



ac5wzw0000188

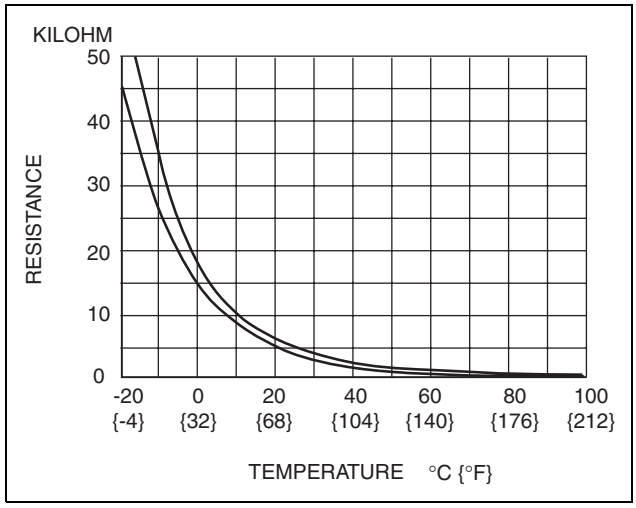
CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

HEATER CORE TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1808200

Note
- Inspect the heater core temperature sensor when it is installed to the heater case.

1. Set the fan speed MAX HI.
2. Set the temperature control at MAX HOT.
3. Set the RECIRCULATE mode.
4. Turn the A/C switch off.
5. Close all doors and windows.
6. Wait for **5 min**.
7. Disconnect the heater core temperature sensor connector.
8. Measure the temperature at the blower inlet.
9. Measure the resistance between the heater core temperature sensor terminals.
   - If the resistance is not as shown in the graph, replace the heater core temperature sensor.



ac5wzw0000277

REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

id0740a1817300

07

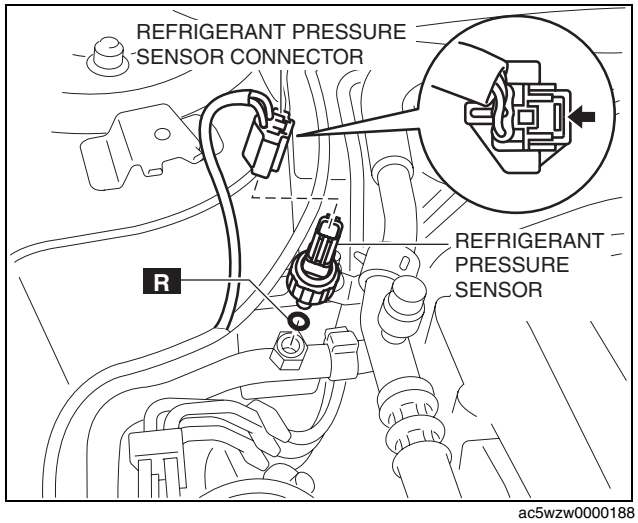
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Discharge the refrigerant. (See 07-10-3 REFRIGERANT CHARGING.)
3. Disconnect the refrigerant pressure sensor connector.

Caution
- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.**

4. Loosen the refrigerant pressure sensor using two spanners.
5. Remove the refrigerant pressure sensor.

Tightening torque
10—11 N·m {102—112 kgf·cm, 89—97 in·lbf}

6. Install in the reverse order of removal. (See 07-40A-30 Refrigerant Pressure Sensor Installation Note.)
7. Perform the refrigerant system performance test. (See 07-10-9 REFRIGERANT SYSTEM PERFORMANCE TEST.)



ac5wzw0000188

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

Refrigerant Pressure Sensor Installation Note

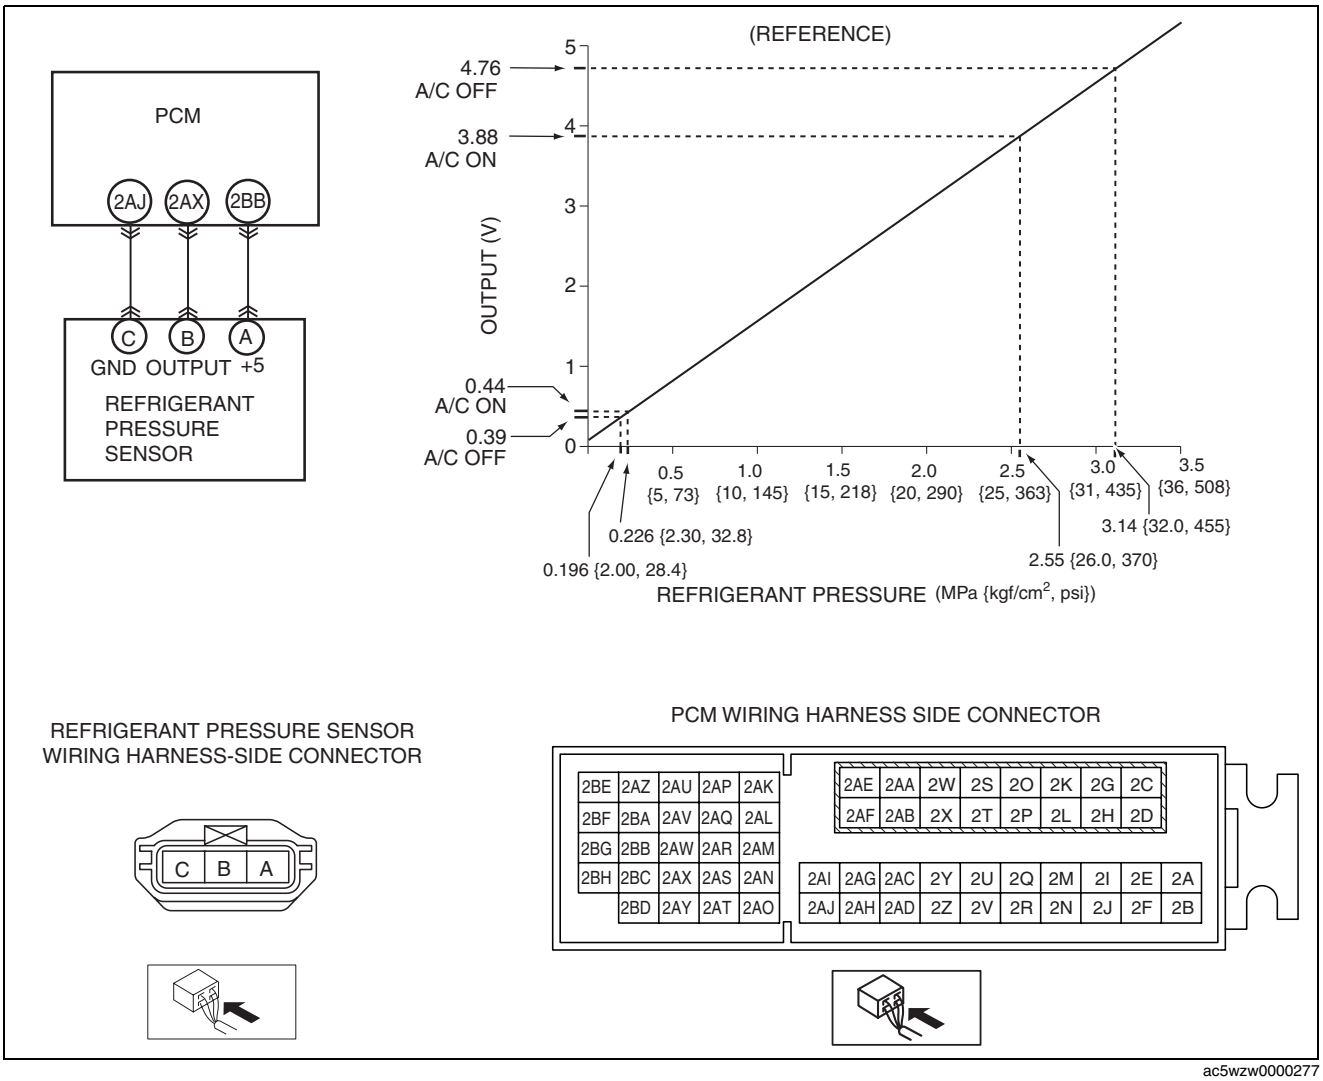
1. Apply compressor oil to the O-rings and connect the joints.

REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1817400

SKYACTIV-G 2.0

1. Install the manifold gauge.
2. Verify the high-pressure side reading of the manifold gauge.
3. Measure the terminal voltage at PCM terminal 2BB, 2AX and 2AJ.
4. Using the graph below, measure and verify the terminal voltage at 2AX.
5. Follow the PCM inspection when measuring the other terminal voltages. (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)
   - Terminal 2BB: Approx. 5 V (Ignition switch on)
   - Terminal 2AJ: 1.0 V or less
     - — If the each voltage is not normal, inspect the related wiring harness.
       - If there is any malfunction, replace the related wiring harness.
       - If wiring harness is normal, replace the refrigerant pressure sensor.



ac5wzw0000277

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

SKYACTIV-D 2.2

1. Install the manifold gauge.
2. Verify the high-pressure side reading of the manifold gauge.
3. Measure the terminal voltage at PCM terminal 2BB, 2BH and 2BD.
4. Using the graph below, measure and verify the terminal voltage at 2BH.
5. Follow the PCM inspection when measuring the other terminal voltages.
   - Terminal 2BB: Approx. 5 V (Ignition switch on)
   - Terminal 2BD: 1.0 V or less
     - — If the each voltage is not normal, inspect the related wiring harness.
       - If there is any malfunction, replace the related wiring harness.
       - If wiring harness is normal, replace the refrigerant pressure sensor.

07

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

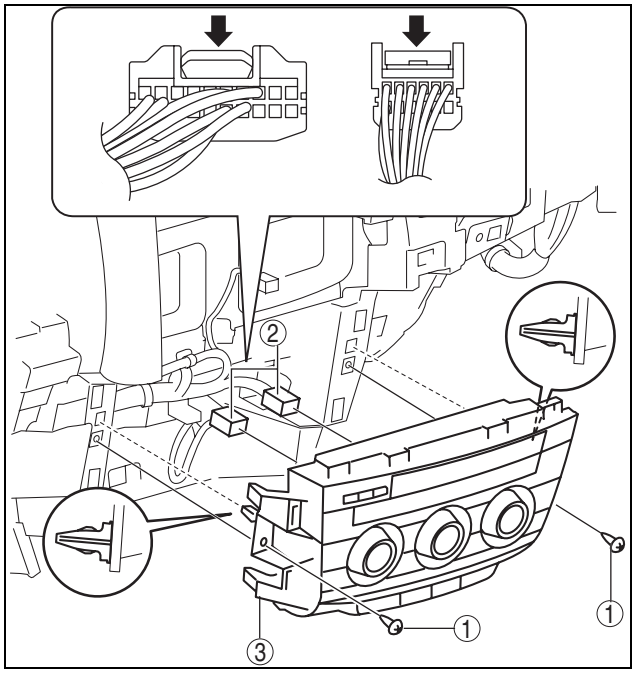
id0740a1807400

Note

- The climate control unit prior to replacement stores the vehicle specification information.
- The new climate control unit does not store any vehicle specification information.
- When the ignition is switched ON after the climate control unit is replaced, the climate control unit reads the vehicle specification information sent via CAN transmission from the instrument cluster, and stores the vehicle specification information.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Shift lever knob (MTX) (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
   (2) Front console box (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)
   (3) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
   (4) Upper panel (See 09-17-44 UPPER PANEL REMOVAL/INSTALLATION.)
   (5) Rear console (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.)
   (6) Side wall (See 09-17-49 SIDE WALL REMOVAL/INSTALLATION.)
   (7) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (8) Front console (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Screw
2	Connector
3	Climate control unit



ac5wzw0000187

4. Install in the reverse order of removal.
5. Switch the ignition ON and perform the climate control unit automatic configuration.
6. Clear the DTCs. (See 07-02-7 CLEARING DTC [FULL-AUTO AIR CONDITIONER].)

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

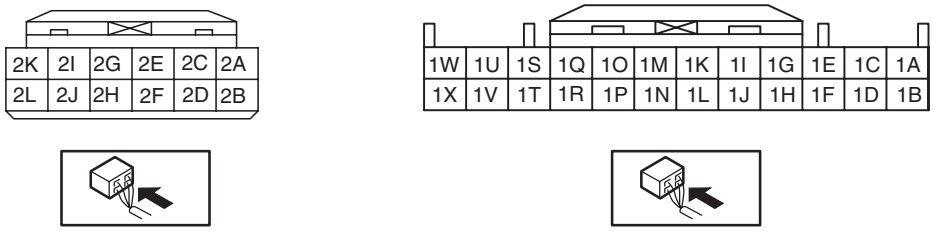
CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1802200

1. Remove the climate control unit with the connector connected. (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
2. Switch the ignition ON (engine off or on).
3. Connect the negative (-) lead of the tester to body ground.
4. By inserting the positive (+) lead of the tester into each climate control unit terminal, measure the voltage according to the terminal voltage table.
   - If there is any malfunction, inspect the parts under “Inspection item (s)”.
     - — If the parts under “Inspection item (s)” are found to be normal (except for terminal 2D), replace the climate control unit.
     - — For terminal 2D, first try replacing the power MOS FET. If there is still any malfunction, replace the climate control unit.

Terminal Voltage Table (Reference)

CLIMATE CONTROL UNIT WIRING HARNESS SIDE CONNECTOR



ac5wzw0000185

Terminal	Signal name	Connected to	Measurement condition	Voltage (V)	Inspection item (s)
1A*1	Parking sensor OFF indicator	Parking sensor control module	Parking sensor OFF indicator on	0.6 or less	• Related wiring harness • Parking sensor control unit
			Parking sensor OFF indicator off	B+	
1B*1	Parking sensor OFF switch	Parking sensor control module	Keep parking sensor OFF switch push	2.0 or less	• Related wiring harness • Parking sensor control unit
			Release parking sensor OFF switch	5	
1C*2	Seat warmer switch signal	Seat warmer control unit	Because this terminal is for communication, good/no good judgment by terminal voltage is not possible.		• Related wiring harness
1D	—	—	—	—	—
1E	B+	ROOM 15 A fuse	Under any condition	B+	• Related wiring harness • ROOM 15 A fuse

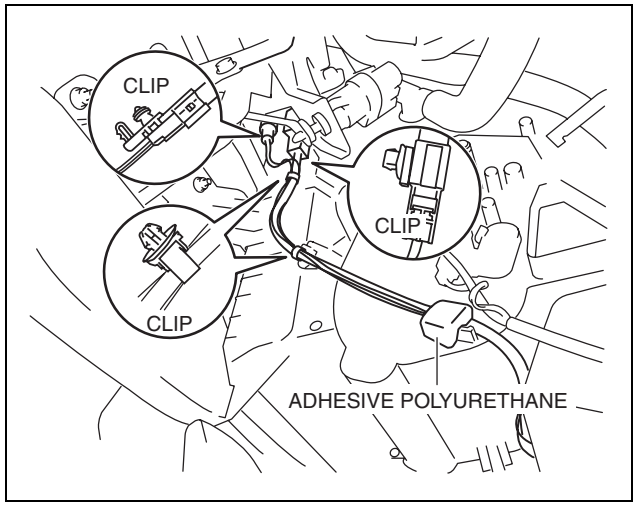
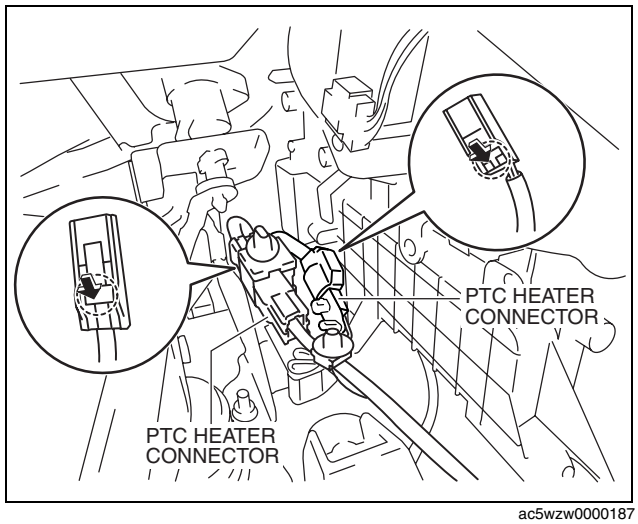
3. Detach the clips.
4. Remove the adhesive polyurethane.



ac5wzw0000187

5. Disconnect the PTC heater connectors.

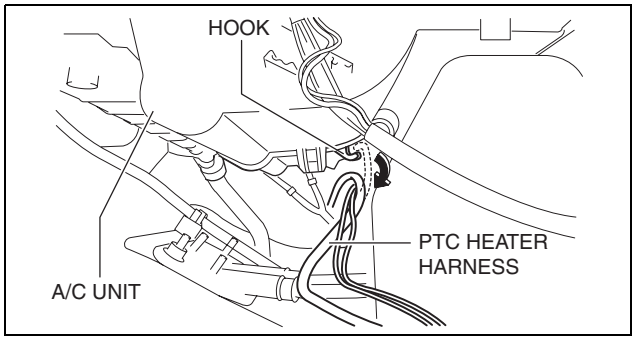


ac5wzw0000187

07

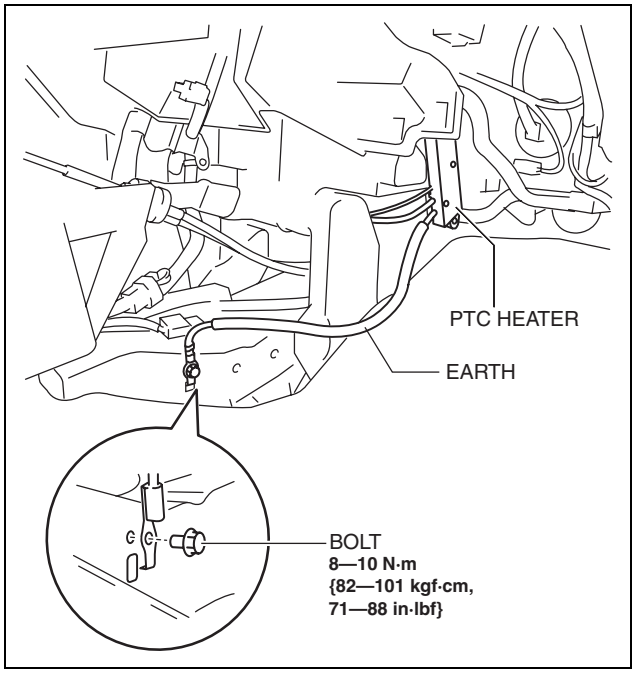
CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

6. Remove the PTC heater wiring harness from the hook as shown in the figure.



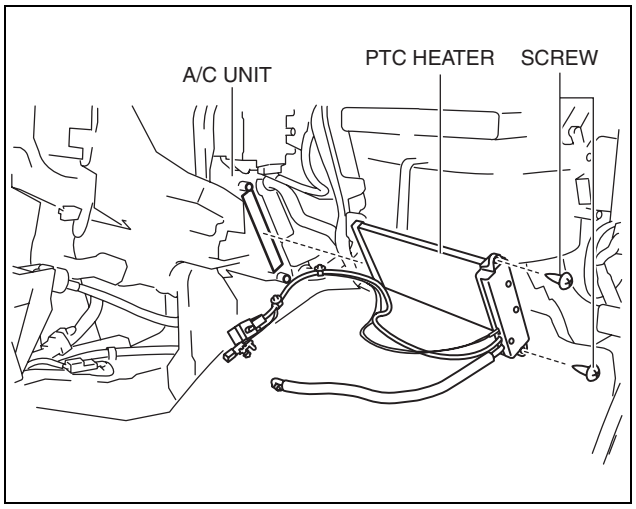
ac5wzw0000187

7. Remove the bolt and disconnect the earth.



ac5wzw0000187

8. Remove the screws and remove the PTC heater.
9. Install in the reverse order of the removal.



ac5wzw0000187

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

PTC (POSITIVE TEMPERATURE COEFFICIENT) HEATER INSPECTION [FULL-AUTO AIR CONDITIONER]

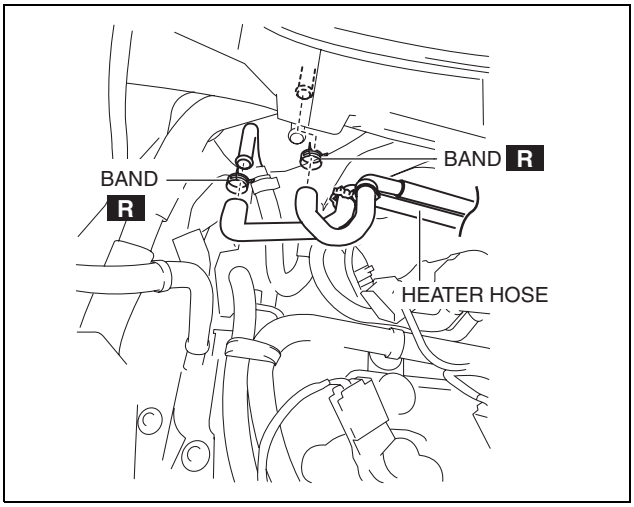
id0740a1806800

1. Allow the engine to cool down completely.
2. Remove the ambient temperature sensor and apply a resistance of **approx.12 kilohms (equivalent to -10 °C {14.0 °F})**.
3. Connect the PTC heater power supply wiring harness (red) or ground wiring harness (black) to a tester.
4. Set the fan switch at MAX HI and the temperature setting dial at MAX HOT, start the engine, and then measure the current.
   - If not within specification, remove the PTC heater.
     Current value (approx. quantity)
     67.5—82.5 A

WATER PUMP REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER]

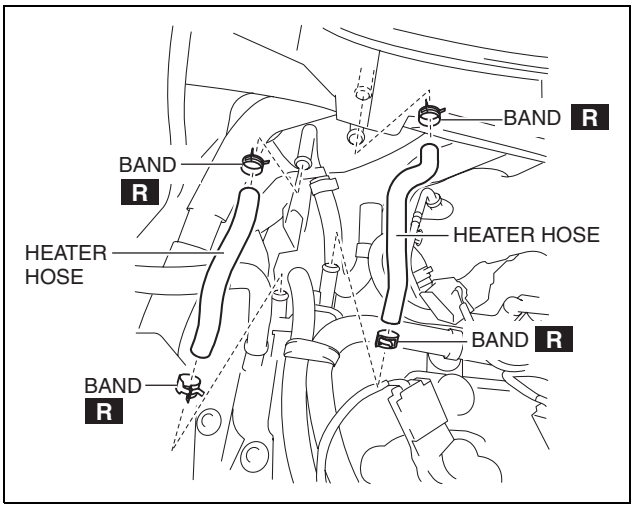
id0740a1911000

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].) (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
3. Disconnect the heater hose. (SKYACTIV-G 2.0)



ac5wzw0000189

4. Remove the heater hose. (SKYACTIV-D 2.2)

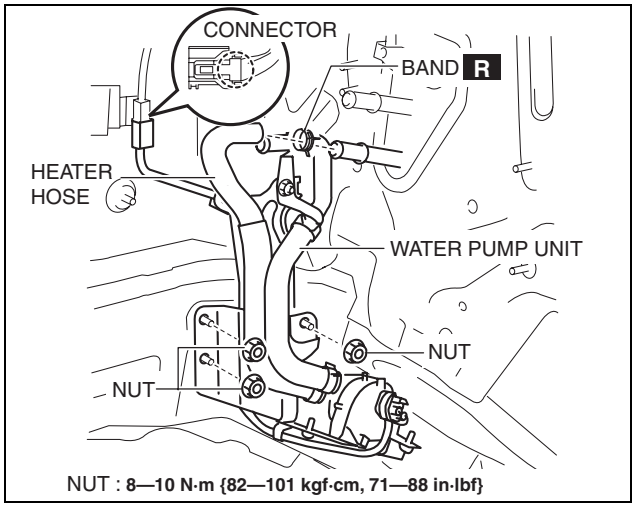


ac5wzw0000189

07

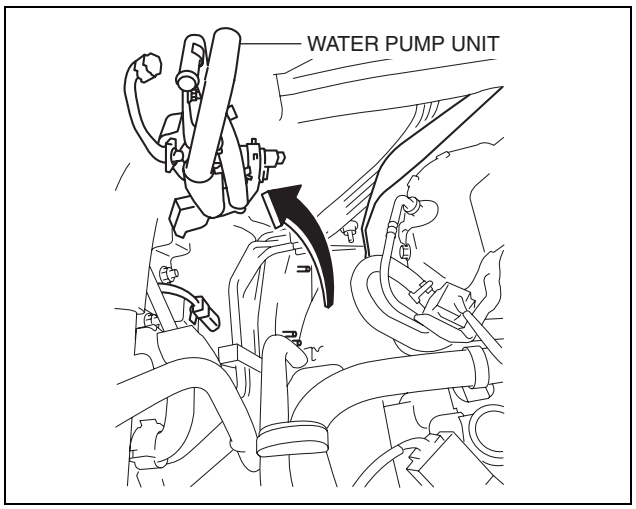
CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

5. Disconnect the heater hose.
6. Disconnect the connector.
7. Remove the nut.



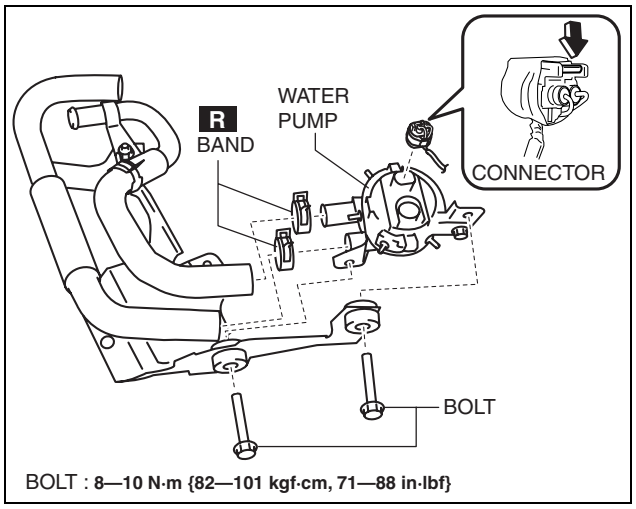
ac5wzw0000189

8. Remove the water pump unit.(See 07-40A-41 Water Pump Unit Removal Note (SKYACTIV-D 2.2).)



ac5wzw0000189

9. Disconnect the connector.
10. Remove the bolt, then remove the water pump. (See 07-40A-41 Water Pump Unit Disassemble Note.)
11. Install in the reverse order of the removal.

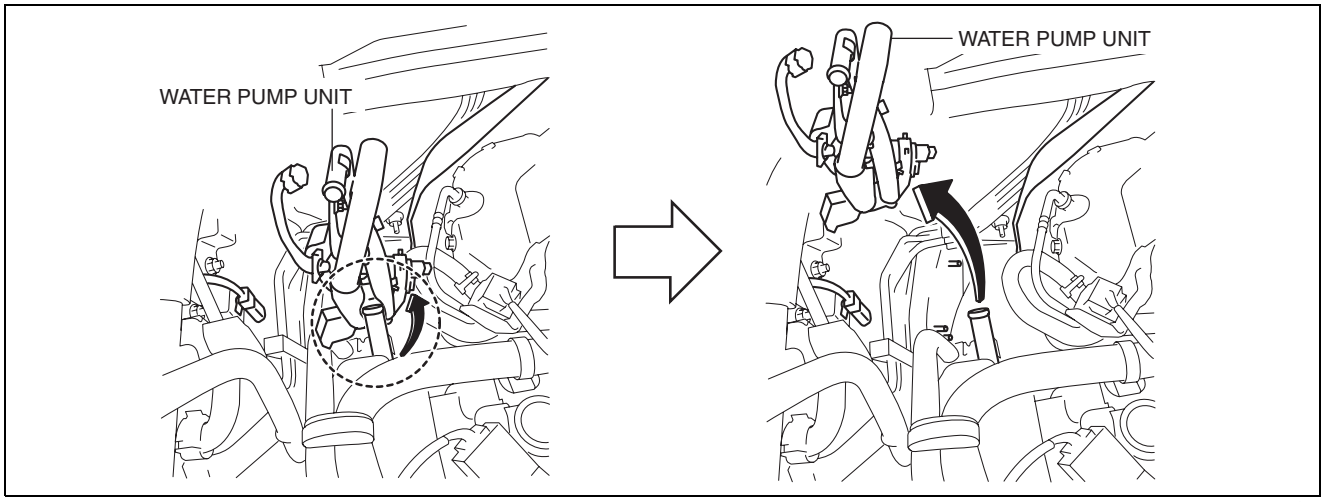


ac5wzw0000189

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

Water Pump Unit Removal Note (SKYACTIV-D 2.2)

1. Pull out the water pump unit in the upward direction so that the heater hose plug on the engine side passes between the heater hoses installed to the water pump as indicated by the circled areas in the figure.



ac5wzw0000189

Water Pump Unit Disassemble Note

1. Disassemble the water pump unit as shown in the figure.

CONTROL SYSTEM [FULL-AUTO AIR CONDITIONER]

WATER PUMP INSPECTION [FULL-AUTO AIR CONDITIONER]

id0740a1910200

Caution

- **The water pump operates by the passage of engine coolant in the water pump. If the water pump is left operating empty for a long period of time, load will be applied to the engine which could cause a malfunction.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Disconnect the water pump connector. (See 07-40A-39 WATER PUMP REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
3. Connect battery positive voltage to water pump terminal B, connect terminal A to ground, and then verify its operation.
   - If there is any malfunction, replace the water pump.

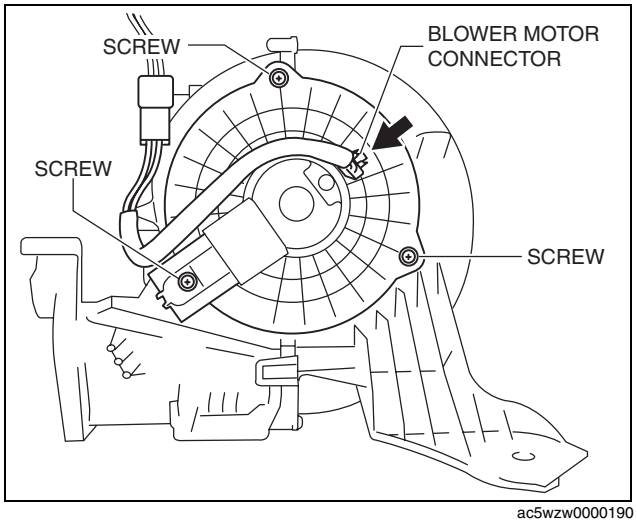
BLOWER MOTOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]

id0740a2800900

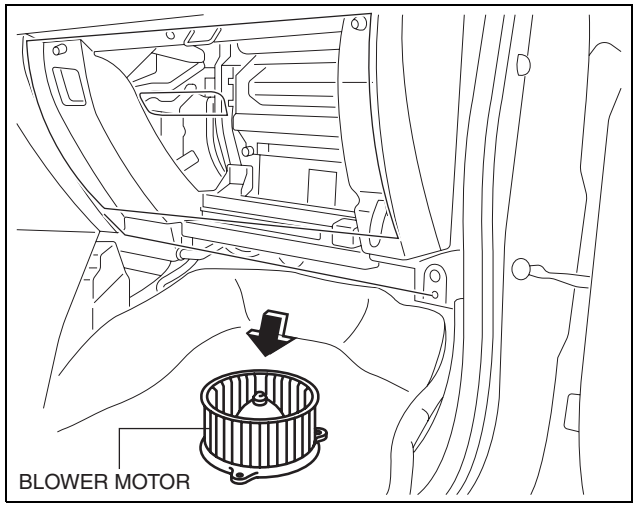
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the dashboard under cover. (See 09-17-35 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
3. Disconnect the connector.
4. Remove the screws.



ac5wzw0000190

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

5. Remove the blower motor.
6. Install in the reverse order of removal.

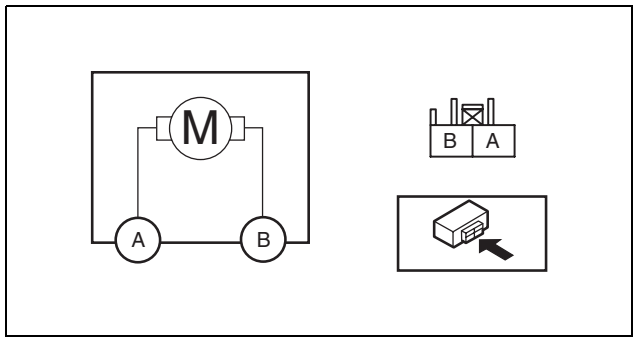


ac5wzw0000190

BLOWER MOTOR INSPECTION [MANUAL AIR CONDITIONER]

id0740a2801000

1. Connect battery positive voltage to blower motor terminal B, connect terminal A to ground, and then verify its operation.
   - If there is any malfunction, replace the blower motor.



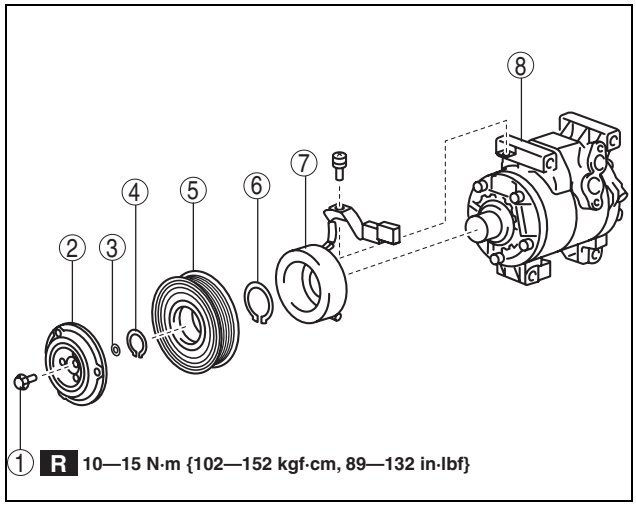
ac5wzw0000277

MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY [MANUAL AIR CONDITIONER]

id0740a2800400

1. Disassemble in the order indicated in the table.

1	Bolt (See 07-40B-8 Bolt Removal/Installation Note.)
2	Pressure plate
3	Shim (See 07-40B-9 Shim Installation Note.)
4	Snap ring (See 07-40B-8 Snap Ring Removal/Installation Note.)
5	A/C compressor pulley
6	Snap ring (See 07-40B-8 Snap Ring Removal/Installation Note.)
7	Stator
8	A/C compressor body



ac5wzw0000277

2. Assemble in the reverse order of disassembly.
3. Adjust the magnetic clutch clearance. (See 07-40B-9 MAGNETIC CLUTCH ADJUSTMENT [MANUAL AIR CONDITIONER].)

07

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

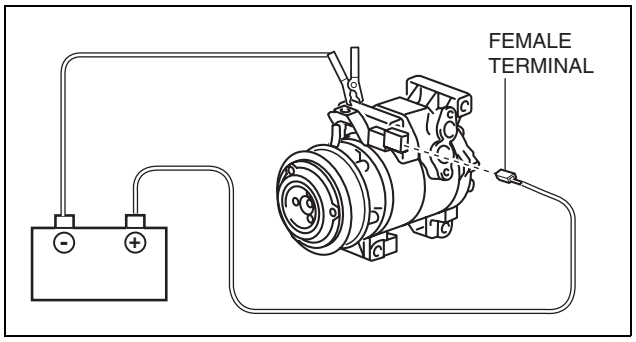
Bolt Removal/Installation Note

1. When removing or installing the bolt, lock the A/C compressor pulley against rotation using the following procedure.

Caution

- **When connecting the positive battery cable to the magnetic clutch connector, use a cable with a female terminal of the correct size. Otherwise, load will be applied to the terminal, resulting in deformation or damage, and poor contact. In addition, the positive battery cable could disconnect from the connector resulting in a short circuit.**

(1) Apply battery positive voltage to the magnetic clutch terminal and connect the A/C compressor body to the ground.

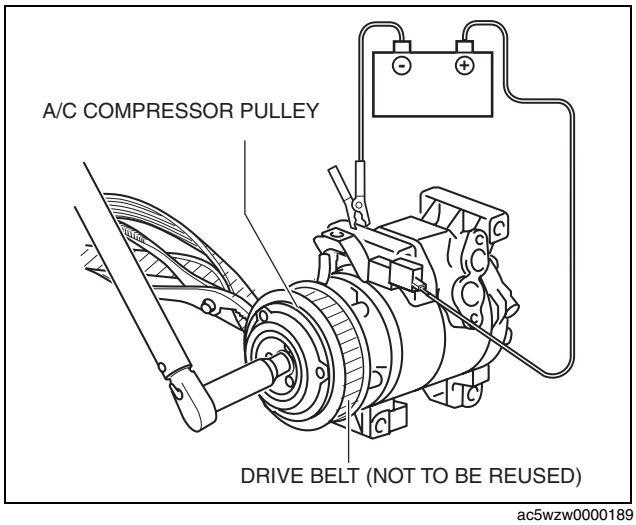


ac5wzw0000189

(2) Wrap the drive belt, which is no longer of use, tightly around the A/C compressor pulley.
(3) Hold the drive belt in place with pliers.
(4) Remove/installation the bolt.

Tightening torque
10—15 N·m {102 —152 kgf·cm, 89 — 132 in·lbf}

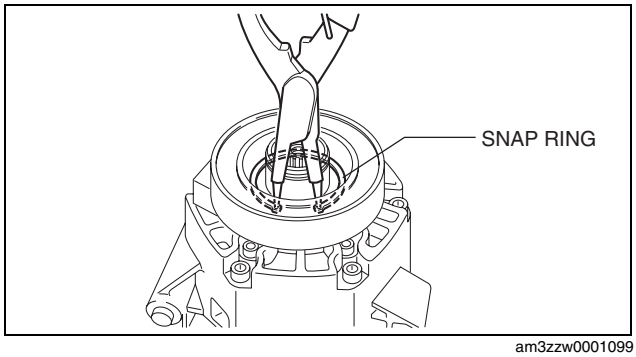
2. When installing a new A/C compressor body, replace the recommended bolt.



ac5wzw0000189

Snap Ring Removal/Installation Note

1. Remove/install the snap ring using a snap ring pliers.

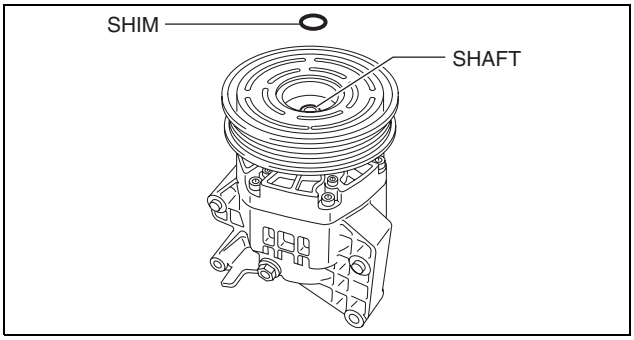


am3zzw0001099

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

Shim Installation Note

1. First, insert the **1mm (0.039 in)** thick shim into the shaft.



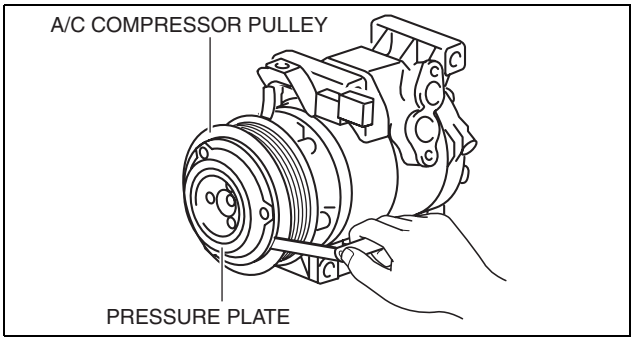
am3zzw0001100

MAGNETIC CLUTCH ADJUSTMENT [MANUAL AIR CONDITIONER]

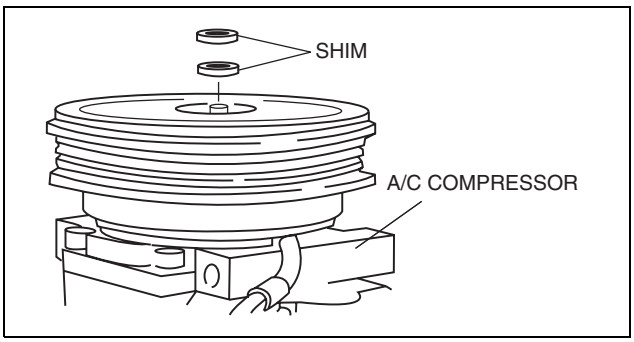
id0740a2800500

1. Measure the clearance around the entire circumference between the pressure plate and A/C compressor pulley using a thickness gauge.
2. Verify the clearance.
   - If not within the specification, remove the pressure plate and adjust the clearance by changing the shim (**0.2 mm {0.008 in}, 0.5 mm {0.02 in}**) or the number of shims.

   Magnetic clutch clearance
   0.35—0.65 mm {0.014—0.025 in}



am3zzw0001100

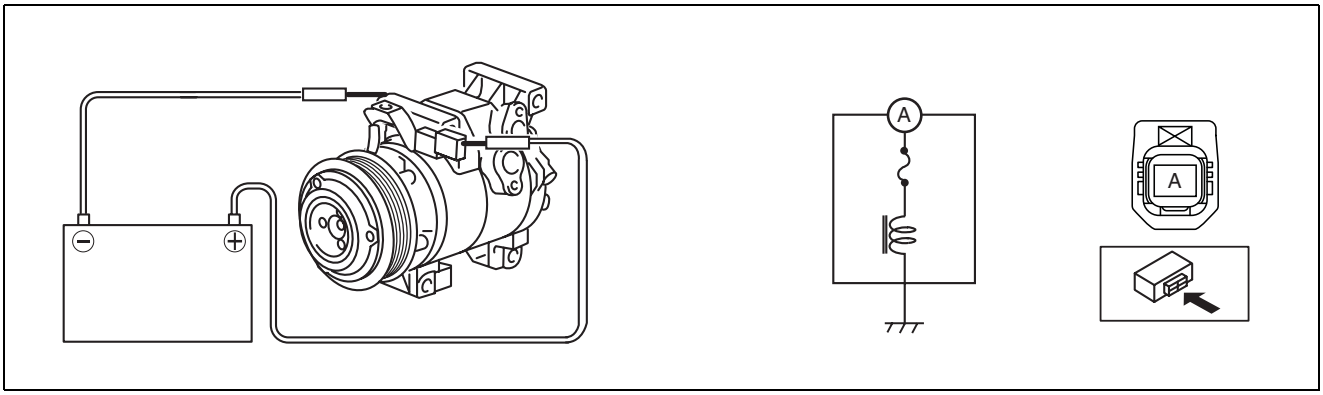


am3zzw0001194

MAGNETIC CLUTCH INSPECTION [MANUAL AIR CONDITIONER]

id0740a2800600

1. Connect battery to terminal A of magnetic clutch and ground to A/C compressor body.



am3zzw0001100

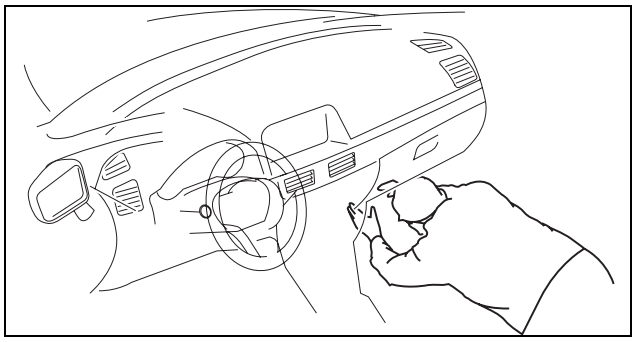
2. Verify that the magnetic clutch operates.
   - If there is any malfunction, replace the magnetic clutch.

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

RESISTOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]

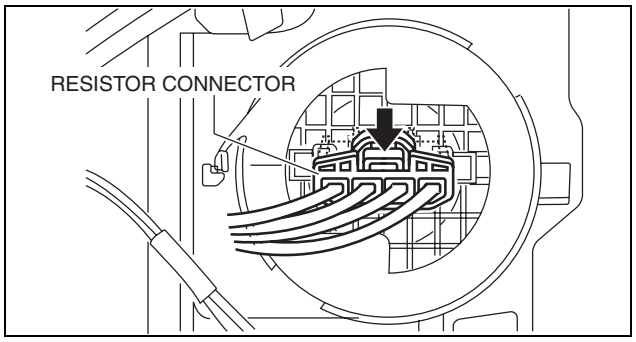
id0740a2800700

Note
- When removing the resistor, perform the procedure in the posture shown in the figure.

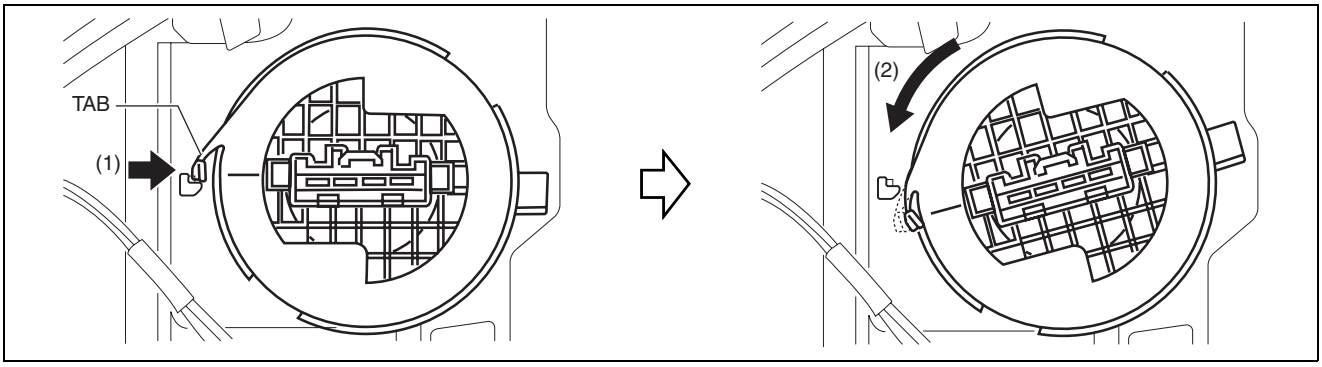


ac5wzw0000189

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the dashboard under cover. (See 09-17-35 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
3. Disconnect the connector.
4. Rotate the resistor (2) while pressing the tab (1).

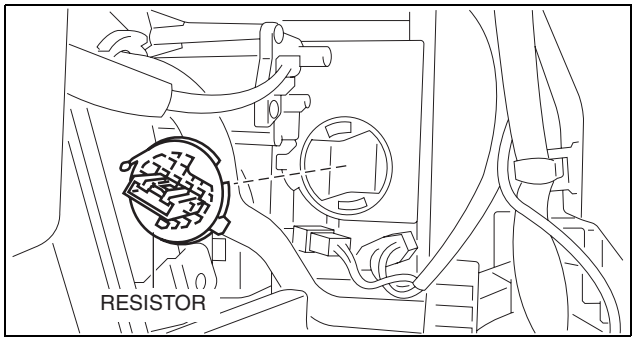


ac5wzw0000190



ac5wzw0000190

5. Remove the resistor.
6. Install in the reverse order of removal.



ac5wzw0000190

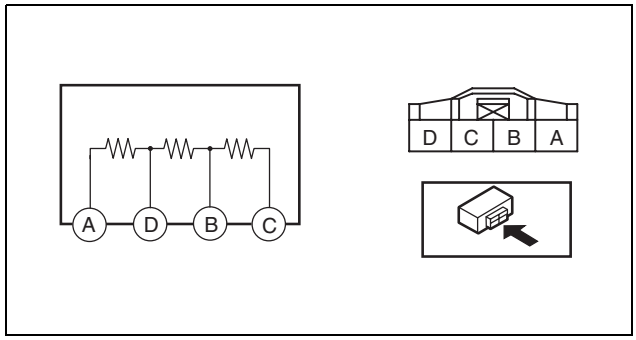
CONTROL SYSTEM [MANUAL AIR CONDITIONER]

RESISTOR INSPECTION [MANUAL AIR CONDITIONER]

id0740a2800800

1. Verify that the resistance between the resistor terminals is as shown in the table.
   - If there is any malfunction, replace the resistor.

Terminal	Resistance (ohm)
A—D	0.35—0.41
A—B	0.95—1.09
A—C	2.68—3.08

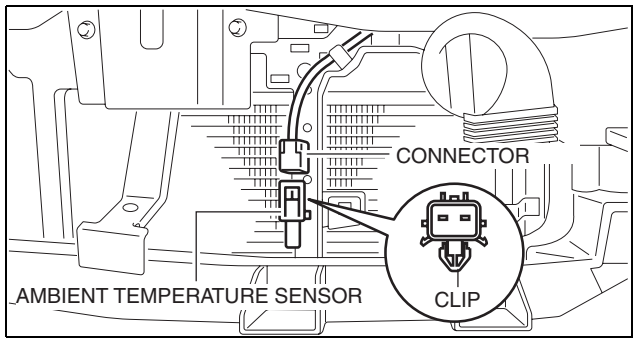


am3zzw0001104

AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]

id0740a2803200

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Disconnect the connector.
4. Remove the ambient temperature sensor.
5. Install in the reverse order of removal.

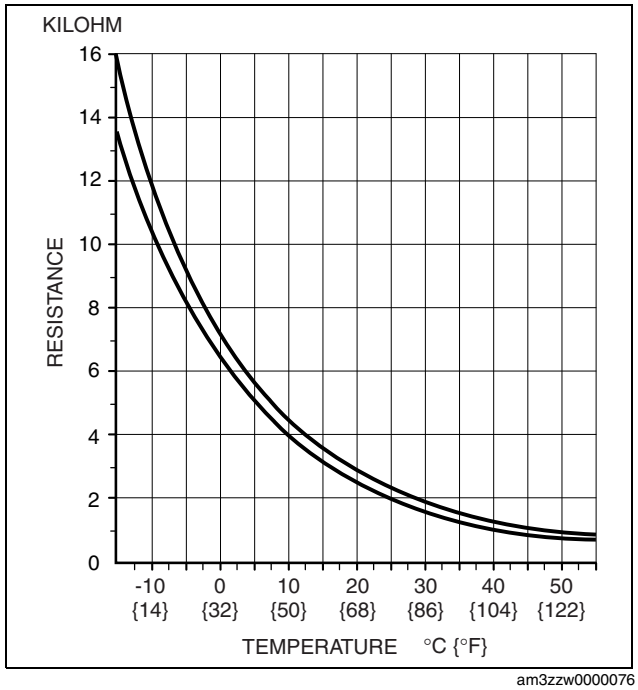


ac5wzw0000192

AMBIENT TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]

id0740a2803300

1. Measure the temperature around the ambient temperature sensor and measure the resistance between the ambient temperature sensor terminal.
   - If the characteristics of the ambient temperature sensor are not as shown in the graph, replace the ambient temperature sensor.



am3zzw0000076

EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]

id0740a2801100

1. Remove the evaporator temperature sensor from the A/C unit. (See 07-11-14 A/C UNIT DISASSEMBLY/ASSEMBLY.)

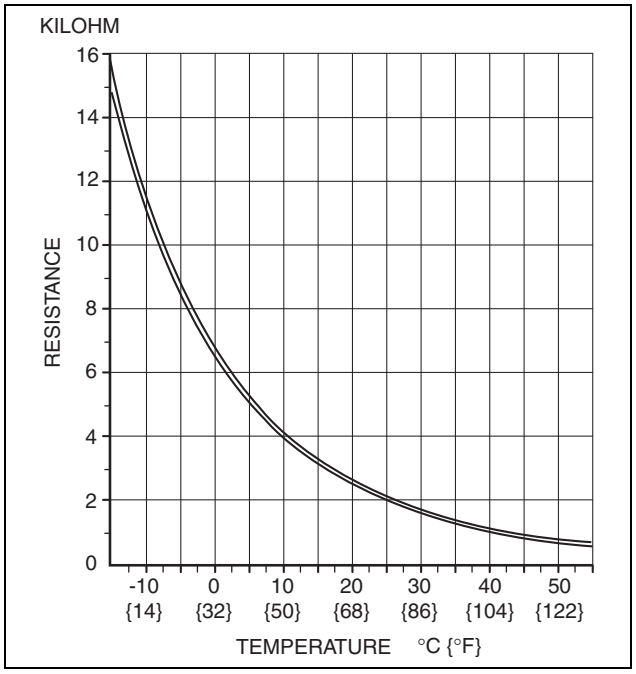
CONTROL SYSTEM [MANUAL AIR CONDITIONER]

EVAPORATOR TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]

id0740a2801200

Note
- Inspect the evaporator temperature sensor when it is installed to the A/C unit.

1. Set the fan speed at MAX HI.
2. Set the temperature control at MAX COLD.
3. Set the RECIRCULATE mode.
4. Turn the A/C switch off.
5. Close all doors and windows.
6. Wait for **5 min**.
7. Disconnect the evaporator temperature sensor connector.
8. Measure the temperature at the blower inlet.
9. Measure the resistance between the evaporator temperature sensor terminals.
   - If the resistance is not as shown in the graph, replace the evaporator temperature sensor.



am3uuw0000408

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]

id0740a2817300

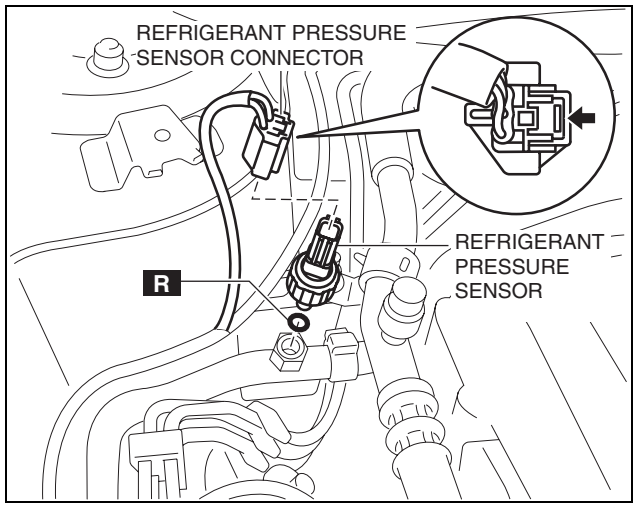
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Discharge the refrigerant. (See 07-10-3 REFRIGERANT CHARGING.)
3. Disconnect the refrigerant pressure sensor connector.

Caution
- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.**

4. Loosen the refrigerant pressure sensor using two spanners.
5. Remove the refrigerant pressure sensor. (See 07-40B-13 Refrigerant Pressure Sensor Installation Note.)

Tightening torque
10—11 N·m {102—112 kgf·cm, 89—97 in·lbf}

6. Install in the reverse order of removal.
7. Perform the refrigerant system performance test. (See 07-10-9 REFRIGERANT SYSTEM PERFORMANCE TEST.)



ac5wzw0000193

Refrigerant Pressure Sensor Installation Note

1. Apply compressor oil to the O-rings and connect the joints.

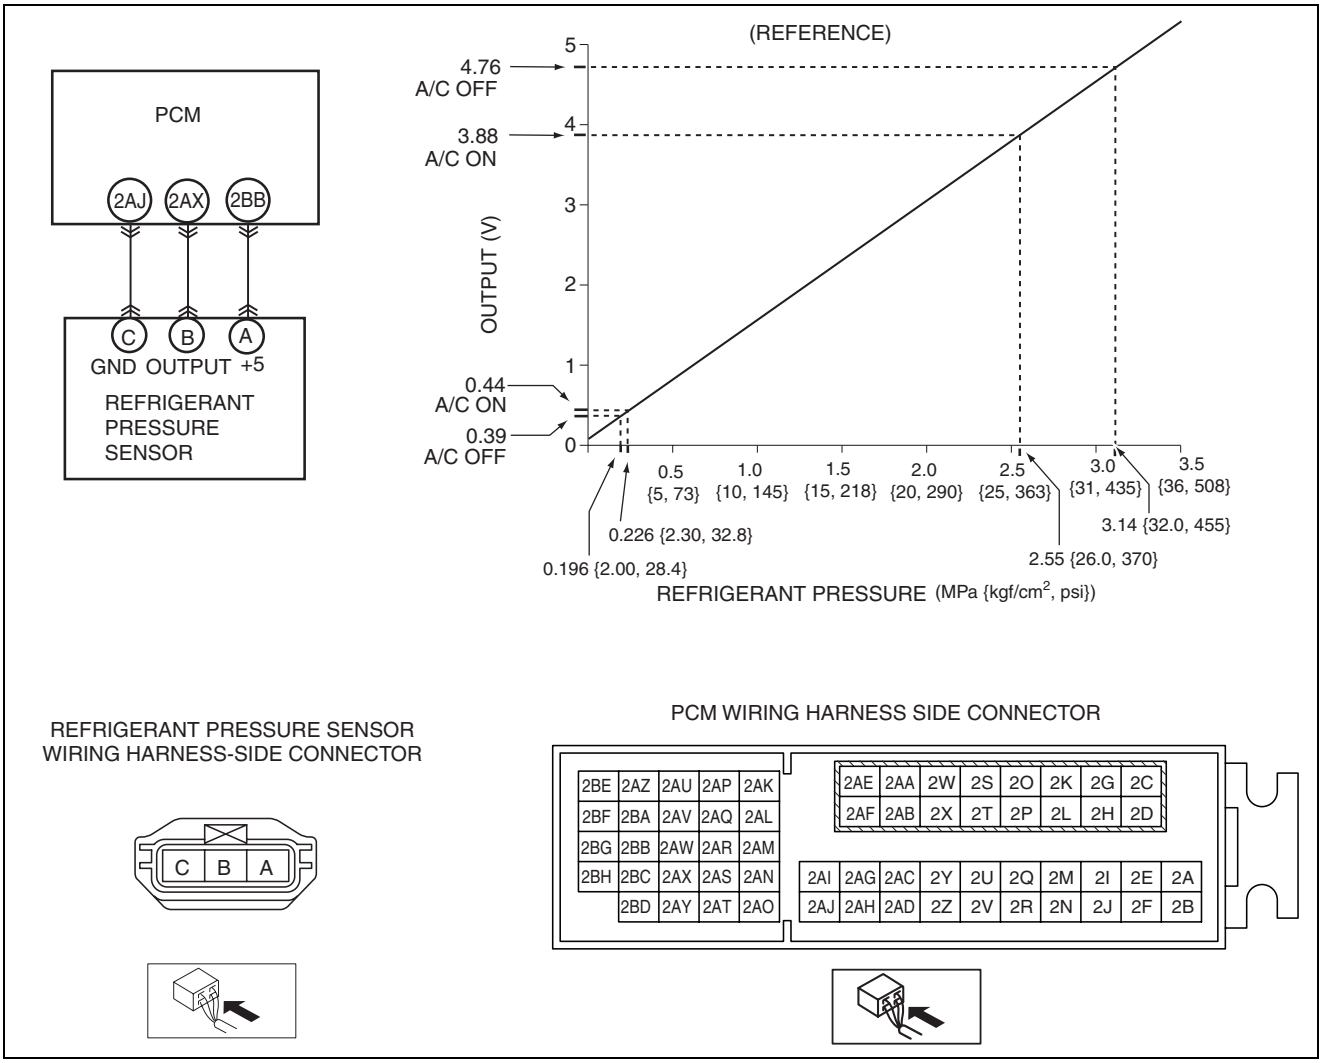
CONTROL SYSTEM [MANUAL AIR CONDITIONER]

REFRIGERANT PRESSURE SENSOR INSPECTION [MANUAL AIR CONDITIONER]

id0740a2817400

SKYACTIV-G 2.0

1. Install the manifold gauge.
2. Verify the high-pressure side reading of the manifold gauge.
3. Measure the terminal voltage at PCM terminal 2BB, 2AX and 2AJ.
4. Using the graph below, measure and verify the terminal voltage at 2AX.
5. Follow the PCM inspection when measuring the other terminal voltages. (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)
   - Terminal 2BB: Approx. 5 V (Ignition switch on)
   - Terminal 2AJ: 1.0 V or less
     - — If the each voltage is not normal, inspect the related wiring harness.
       - If there is any malfunction, replace the related wiring harness.
       - If wiring harness is normal, replace the refrigerant pressure sensor.



ac5wzw0000277

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

SKYACTIV-D 2.2

1. Install the manifold gauge.
2. Verify the high-pressure side reading of the manifold gauge.
3. Measure the terminal voltage at PCM terminal 2BB, 2BH and 2BD.
4. Using the graph below, measure and verify the terminal voltage at 2BH.
5. Follow the PCM inspection when measuring the other terminal voltages.
   - Terminal 2BB: Approx. 5 V (Ignition switch on)
   - Terminal 2BD: 1.0 V or less
     - — If the each voltage is not normal, inspect the related wiring harness.
       - If there is any malfunction, replace the related wiring harness.
       - If wiring harness is normal, replace the refrigerant pressure sensor.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Shift lever knob (MTX) (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
   (2) Glove compartment (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (3) Front console box (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)
   (4) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
   (5) Upper panel (See 09-17-44 UPPER PANEL REMOVAL/INSTALLATION.)
   (6) Rear console (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.)
   (7) Side wall (See 09-17-49 SIDE WALL REMOVAL/INSTALLATION.)
   (8) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (9) Front console (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
3. Remove the climate control unit. (See 07-40B-16 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].)
4. Verify that the continuity between the fan switch terminals as indicated in the table.
   - If there is any malfunction, replace the fan switch.

○—○: Continuity

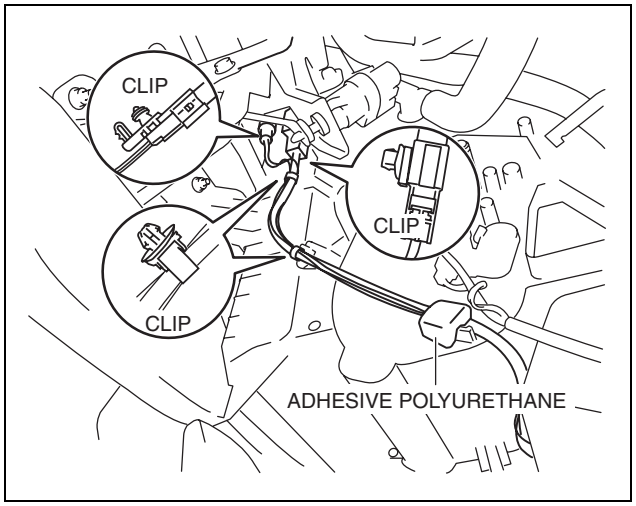
CONTROL SYSTEM [MANUAL AIR CONDITIONER]

PTC (POSITIVE TEMPERATURE COEFFICIENT) HEATER REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER]

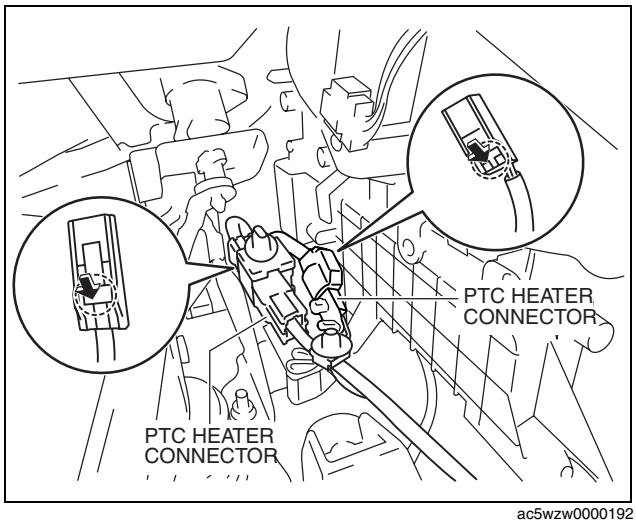
id0740a2806900

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the following parts:
   (1) Shift lever knob (MTX) (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/ INSTALLATION [C66M-R, C66MX-R].) (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
   (2) Glove compartment (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (3) Front console box (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)
   (4) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
   (5) Upper panel (See 09-17-44 UPPER PANEL REMOVAL/INSTALLATION.)
   (6) Rear console (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.)
   (7) Side wall (See 09-17-49 SIDE WALL REMOVAL/INSTALLATION.)
   (8) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (9) Front console (See 09-17-50 FRONT CONSOLE REMOVAL/INSTALLATION.)
   (10)Front scuff plate (passenger-side) (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (11)Front side trim (passenger-side) (See 09-17-62 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (12)Dashboard under cover (See 09-17-35 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
   (13)Front heat duct (passenger-side) (See 07-11-22 FRONT HEAT DUCT REMOVAL/INSTALLATION.)
   (14)Lower panel (passenger-side) (See 09-17-35 LOWER PANEL REMOVAL/INSTALLATION.)
3. Detach the clips.
4. Remove the adhesive polyurethane.



ac5wzw0000192

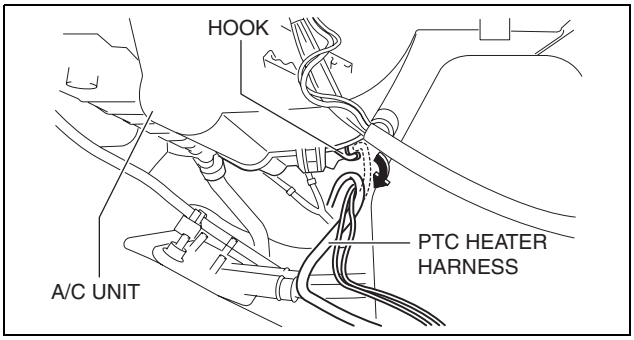
5. Disconnect the PTC heater connectors.



ac5wzw0000192

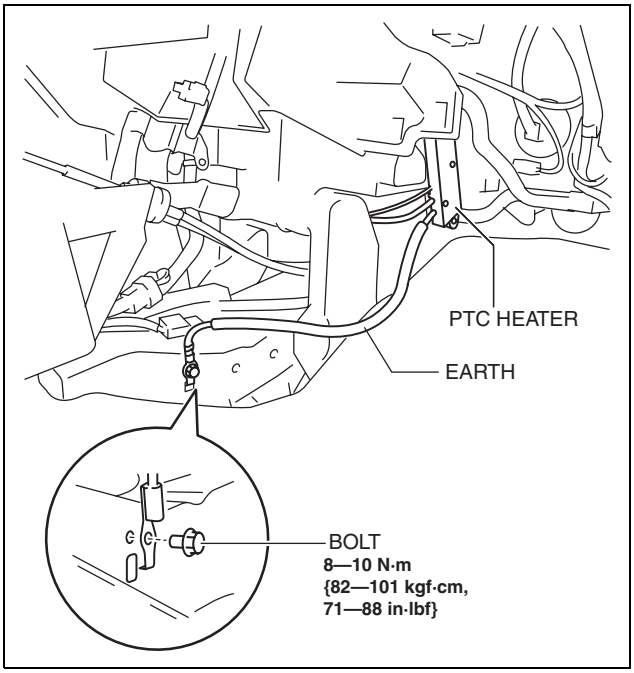
CONTROL SYSTEM [MANUAL AIR CONDITIONER]

6. Remove the PTC heater wiring harness from the hook as shown in the figure.



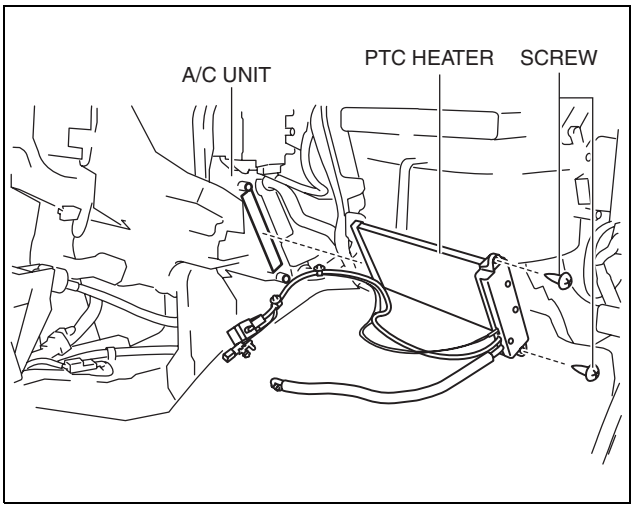
ac5wzw0000192

7. Remove the bolt and disconnect the earth.



ac5wzw0000192

8. Remove the screws and remove the PTC heater.
9. Install in the reverse order of the removal.



ac5wzw0000192

CONTROL SYSTEM [MANUAL AIR CONDITIONER]

PTC (POSITIVE TEMPERATURE COEFFICIENT) HEATER INSPECTION [MANUAL AIR CONDITIONER]

id0740a2806800

1. Allow the engine to cool down completely.
2. Remove the ambient temperature sensor and apply a resistance of **approx.12 kilohms (equivalent to -10 °C {14.0 °F})**.
3. Connect the PTC heater power supply wiring harness (red) or ground wiring harness (black) to a tester.
4. Set the fan switch at MAX HI and the temperature setting dial at MAX HOT, start the engine, and then measure the current.
   - If not within specification, remove the PTC heater.
     Current value (approx. quantity)
     67.5—82.5 A

ON-BOARD DIAGNOSTIC

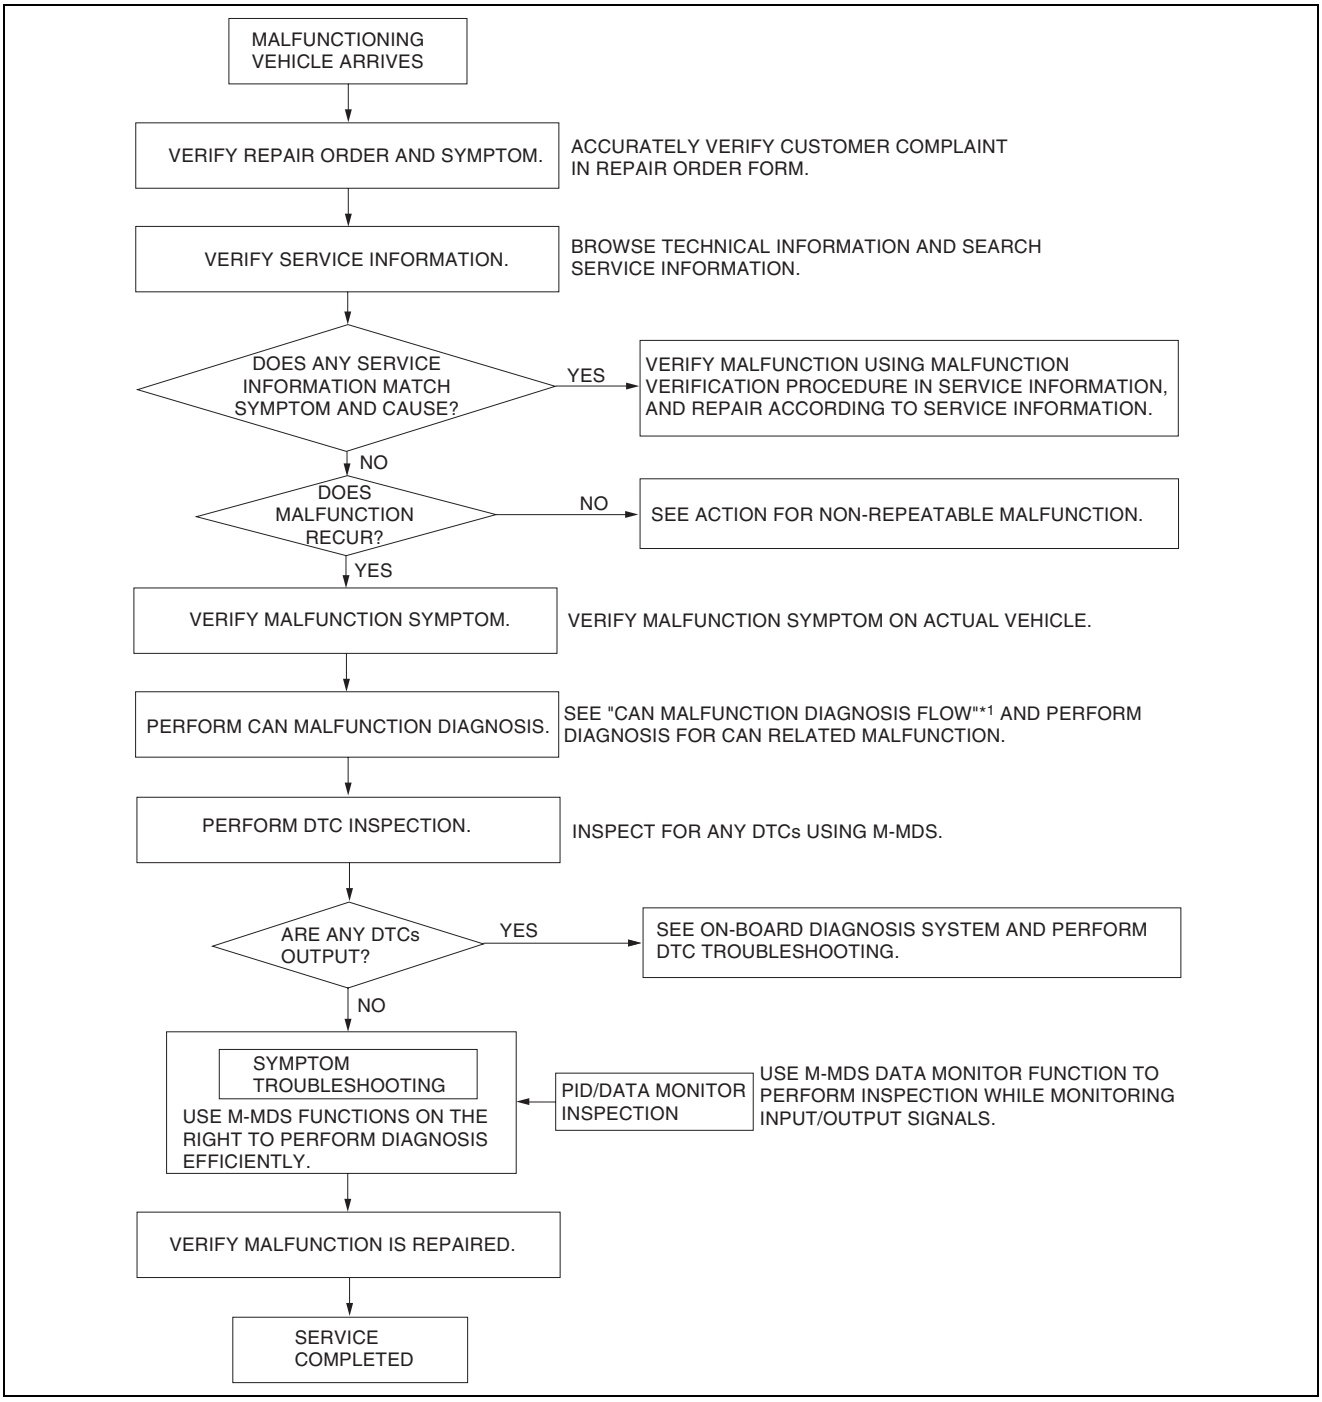
FOREWORD

id080200080300

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



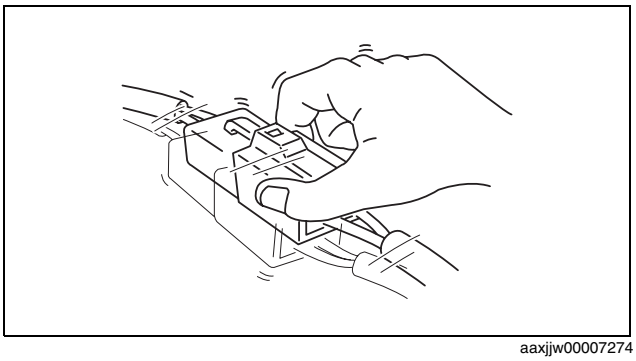
am3zzw0001144

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)], 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)], 10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)], 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

ON-BOARD DIAGNOSTIC

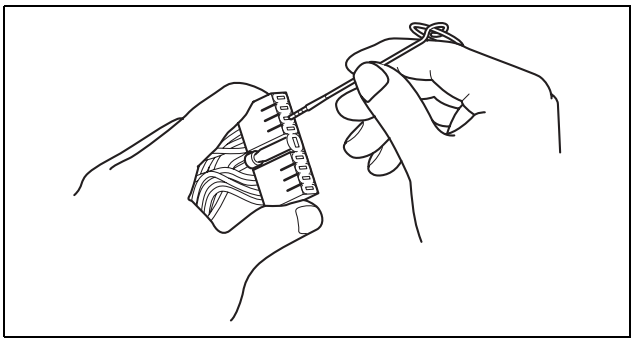
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Verify that a DTC has been recorded in the memory.
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as CAN circuit voltage) at that time, and detect the malfunction cause.
  - — Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3zzw0001144

Outline

- The OBD (on-board diagnostic) system has the following functions:
  - — Malfunction detection function: Detects malfunctions in the air bag system and outputs DTCs (Diagnostic Trouble Codes).
  - — PID/data monitor function: Reads out specific input/output signals and the system status.
- DTCs can be read/cleared using the M-MDS.

Note

- Use the M-MDS to verify DTCs because the DTCs displayed by the air bag system warning light are reference information only.

FLOWCHART

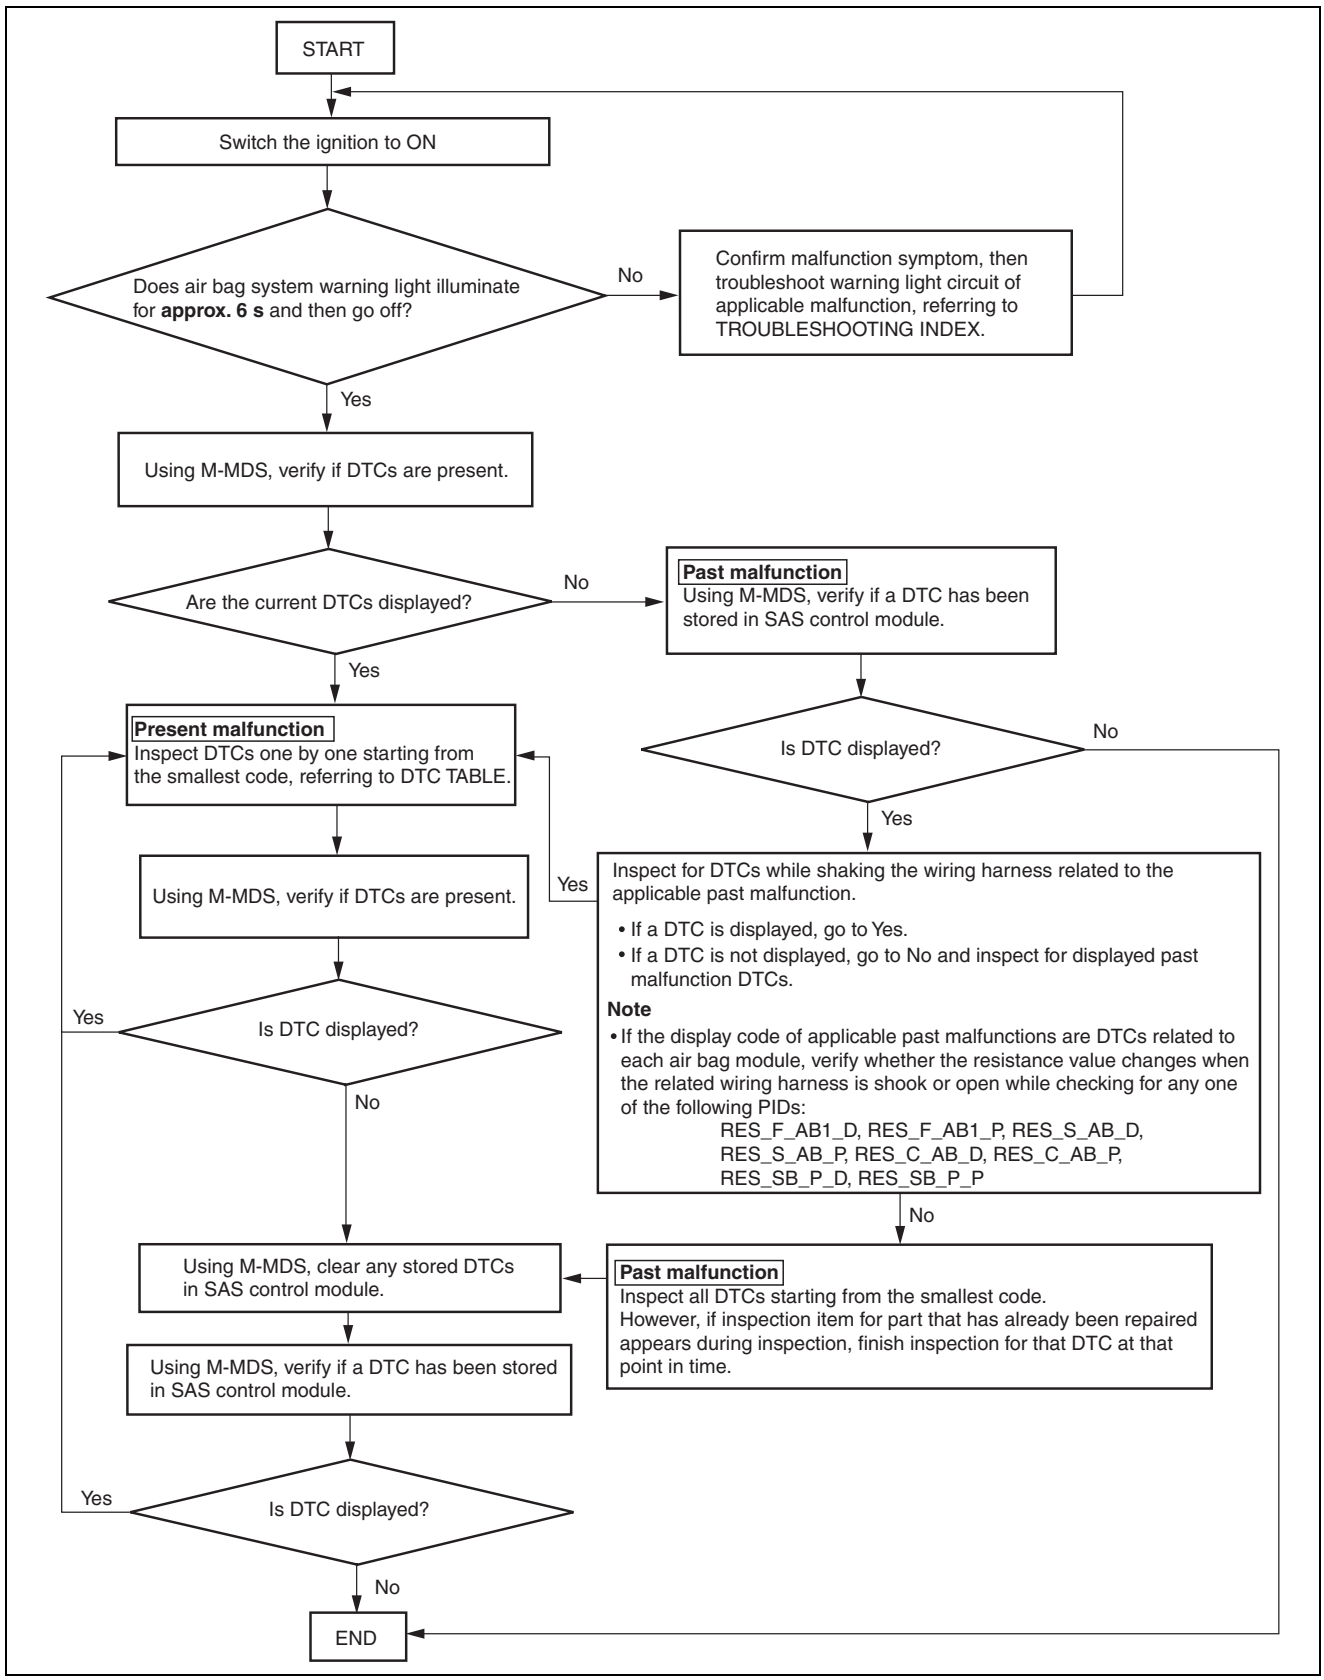
id080200080400

- Use the following flowchart to verify the cause of the trouble.

Note

- When inspecting past malfunction codes, inspect only the DTCs that were indicated before beginning the inspection. A mis-diagnosis could occur as a result of new DTCs being added while performing an inspection by disconnecting related parts or connectors.
- When DTCs of the present malfunction are no longer output after present or past malfunctions or both have been repaired, be sure to clear the past malfunction from memory to prevent repair of malfunctions that have already been repaired.

ON-BOARD DIAGNOSTIC



ac5wzw0000195

ON-BOARD DIAGNOSTIC

DTC INSPECTION

id080200080500

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select "Self Test".
   (2) Select "All CMDTCs".
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the SAS control module. (See 08-02-10 CLEARING DTC.)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select "Self Test".
   (2) Select "Modules".
   (3) Select "RCM".
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the SAS control module. (See 08-02-10 CLEARING DTC.)

Snapshot Data Table

Note

- Snapshot data items are not displayed, according to detected DTC.

Snapshot data item	Unit		Definition	Corresponding PID data monitor item
AAT	°C	°F	Ambient temperature	—
APP_STATUS	Accelerator Pedal Off/ Under20%/ Over20%/FAIL		Accelerator pedal position status	—
CFG_STATUS	Config Complete/ Not Configured/ Config Error		Configuration status	—
ECT_STATUS	Under 0 degrees C/ 0-Under 80 degrees C/ Over 80 degrees C/ FAIL		Engine coolant temperature status	—
FAULT_CNT	—		Number of malfunction detections	—
FIRST_DET_IG	hh:mm:ss		Time when initial malfunction occurs (IG-ON counter) • Elapsed time from when ignition is switched ON (engine off or on) until SAS control module detects first malfunction (See 08-02-9 Snapshot counter pattern.)	—
IC_VPWR	V		Instrument cluster power supply voltage	—
IG-ON_TIMER	hh:mm:ss		Elapsed time since ignition switched ON (engine off or on)	—
LAST_CLR	hh:mm:ss		Repair time for last malfunction (B+ counter) • Elapsed time from when battery is connected until SAS control module detects that last malfunction is repaired (See 08-02-9 Snapshot counter pattern.)	—

ON-BOARD DIAGNOSTIC

Snapshot data item	Unit		Definition	Corresponding PID data monitor item

ON-BOARD DIAGNOSTIC

CLEARING DTC

id080200080600

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Module programming”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 08-02-7 DTC INSPECTION.)
8. Verify that no DTCs are displayed.

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Module programming”.
   (2) Select “Programmable Module Installation”.
   (3) Select “RCM”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 08-02-7 DTC INSPECTION.)
8. Verify that no DTCs are displayed.

ON-BOARD DIAGNOSTIC

DTC TABLE

id080200080700

Caution
- **When DTCs not shown in the DTC table are displayed, perform the inspection for DTCs not shown in the DTC table. (See 08-02-21 Inspection for DTCs not shown in DTC table.)**

ON-BOARD DIAGNOSTIC

Diagnostic procedure

Step	Inspection		Action
1	**BATTERY INSPECTION** • Refer to the battery inspection and inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Replace or charge the battery. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17A-10 BATTERY RECHARGING [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].) (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].) Then go to Step 5.
2	**FUSE INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the SRS1 7.5 A fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Replace the SRS1 7.5 A fuse. Then go to Step 5.

Step	Inspection		Action
3	**INSPECT WIRING HARNESS BETWEEN SAS CONTROL MODULE AND IG1 RELAY** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connector. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connector. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.) • Disconnect all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage of SAS control module connector terminal 3C (wiring harness-side). **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and IG1 relay.	Yes	Go to the next step.
		No	Replace the wiring harness between the SAS control module and IG1 relay. Then go to Step 5.

ON-BOARD DIAGNOSTIC

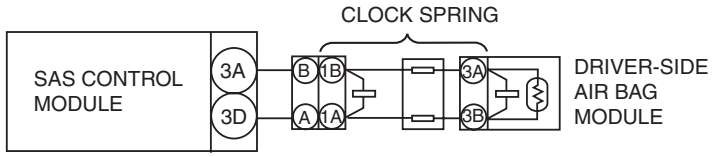
Step	Inspection		Action
3	• Is the voltage **8–17.9 V**?	Yes	Go to the next step.
		No	Replace the wiring harness between the SAS control module and IG1 relay. Then go to Step 5.
4	**INSPECT SAS CONTROL MODULE CIRCUIT FOR OPEN CIRCUIT** • SAS control module connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable and wait **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the wiring harness between SAS control module connector terminal 2C, 2F (wiring harness-side) and body ground. **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go the next step.
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

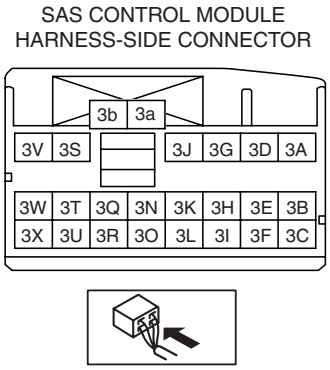
ON-BOARD DIAGNOSTIC

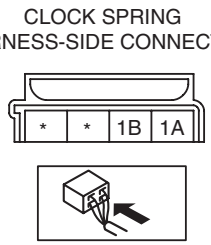
DTC B0001:11/B0001:12/B0001:13/B0001:19/B0001:1A

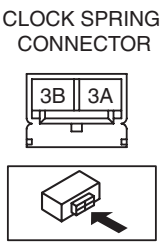
id080200820100

System malfunction location	• **B0001:11: Driver-side air bag module circuit short to body ground** • **B0001:12: Driver-side air bag module circuit short to power supply** • **B0001:13: Driver-side air bag module circuit open circuit or resistance high** • **B0001:19: Short circuit to driver-side air bag module and other air bag module circuits** • **B0001:1A: Driver-side air bag module circuit resistance low**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Resistance **other than 0.99–6.42 ohms** detected in driver-side air bag module circuit • Wiring harness between driver-side air bag module and SAS control module has malfunction
Fail-safe	—
Possible cause	• Clock spring connector malfunction • Clock spring malfunction • Short circuit to power supply or body ground in the wiring harness between the clock spring and SAS control module • Open circuit in the wiring harness between the clock spring and SAS control module • Driver-side air bag module malfunction • SAS control module malfunction









08

ON-BOARD DIAGNOSTIC

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE AIR BAG MODULE CONNECTOR** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the driver-side air bag module connector. (See 08-10-6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Inspect the clock spring connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the clock spring connector?	Yes	Replace clock spring. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.) Then go to Step 7.
		No	Go to the next step.
2	**INSPECT CLOCK SPRING** • Remove the steering wheel. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.) • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.) • Remove the clock spring. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.) • Inspect for continuity between clock spring connector terminals 1B—3A and 1A—3B. **Note** • Inspect the clock spring wiring harness for continuity while shaking it. • Is there continuity?	Yes	Go to the next step.
		No	Replace clock spring. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.) Then go to Step 7.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
3	**INSPECT DRIVER-SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO GROUND** • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.) • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — SAS control module terminal 3A — SAS control module terminal 3D **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and clock spring. • Is there continuity?	Yes	Replace the wiring harness for a possible short to ground, then go to Step 7.
		No	Go to the next step.
4	**INSPECT DRIVER-SIDE AIR BAG MODULE CIRCUIT FOR OPEN CIRCUIT** • SAS control module and clock spring connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Clock spring terminal B—SAS control module terminal 3A — Clock spring terminal A—SAS control module terminal 3D **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and clock spring. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go to Step 7.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
5	**INSPECT DRIVER-SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • SAS control module and clock spring connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — SAS control module terminal 3A — SAS control module terminal 3D **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and clock spring. • Is the voltage **0V**?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible short to power supply, then go to Step 7.
6	**INSPECT DRIVER-SIDE AIR BAG MODULE** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect the SAS control module connectors. • Except for the driver-side air bag module connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the clock spring connector terminals 3A and 3B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Go to the next step.
		No	Replace the driver-side air bag module. (See 08-10-6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) Then go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
7	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the driver-side air bag module connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B0001:55/B0010:55

id080200822500

System malfunction location	• **B0001:55: Configuration setting error (driver-side air bag module structural malfunction)** • **B0010:55: Configuration setting error (passenger-side air bag module structural malfunction)**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe	—
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side air bag module assembly incorrect • SAS control module malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See 08-10-22 SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA).) • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**INSPECT AIR BAG MODULE** • Verify that the driver or passenger-side air bag module is correctly installed. • Is the driver or passenger-side air bag module correctly installed?	Yes	Go to the next step.
		No	Correctly Install the driver or passenger-side air bag module.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B0003:53

id080200821000

System malfunction location	• **Operation (deployment) inhibited due to configuration setting**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • The SAS control module configuration has not been set
Fail-safe	—
Possible cause	• SAS control module configuration error • SAS control module malfunction
System wiring diagram	—

Diagnostic Procedure

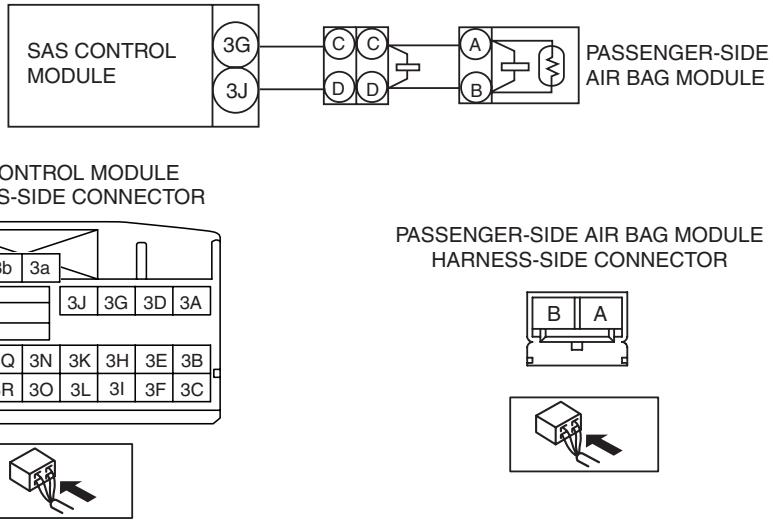
Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See 08-10-22 SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA).) • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) Go to the next step.
		No	DTC troubleshooting completed.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are any other DTCs output?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B0010:11/B0010:12/B0010:13/B0010:19/B0010:1A

id080200821200

System malfunction location	• **B0010:11: Passenger-side air bag module circuit short to body ground** • **B0010:12: Passenger-side air bag module circuit short to power supply** • **B0010:13: Passenger-side air bag module circuit open circuit or resistance high** • **B0010:19: Short circuit to passenger-side air bag module and other air bag module circuits** • **B0010:1A: Passenger-side air bag module circuit resistance low**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Resistance **other than 0.81–6.42 ohms** detected in passenger-side air bag module circuit • Wiring harness between passenger-side air bag module and SAS control module has malfunction
Fail-safe	—
Possible cause	• Passenger-side air bag module connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side air bag module and the SAS control module • Open circuit in the wiring harness between the passenger-side air bag module and the SAS control module • Passenger-side air bag module malfunction • SAS control module malfunction



ON-BOARD DIAGNOSTIC

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE AIR BAG MODULE CONNECTOR** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Inspect the passenger-side air bag module connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side air bag module connector?	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
2	**INSPECT PASSENGER-SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/ INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/ INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/ INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (See 08-11-2 FRONT SEAT BELT REMOVAL/ INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/ INSTALLATION.) • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — SAS control module terminal 3G — SAS control module terminal 3J **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side air bag module. • Is there continuity?	Yes	Replace the wiring harness for a possible short to ground, then go to Step 6.
		No	Go to the next step.
3	**INSPECT PASSENGER-SIDE AIR BAG MODULE CIRCUIT FOR OPEN CIRCUIT** • Passenger-side air bag module and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Passenger-side air bag module terminal A—SAS control module terminal 3G — Passenger-side air bag module terminal B—SAS control module terminal 3J **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side air bag module. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go to Step 6.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
4	**INSPECT PASSENGER-SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side air bag module and SAS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — SAS control module terminal 3G — SAS control module terminal 3J **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side air bag module. • Is the voltage **0V**?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible short to power supply, then go to Step 6.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
5	**INSPECT PASSENGER-SIDE AIR BAG MODULE** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect the SAS control module connectors. • Except for the passenger-side air bag module connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the passenger-side air bag module connector terminals A and B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Go to the next step.
		No	Replace the passenger-side air bag module. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) Then go to the next step.

ON-BOARD DIAGNOSTIC

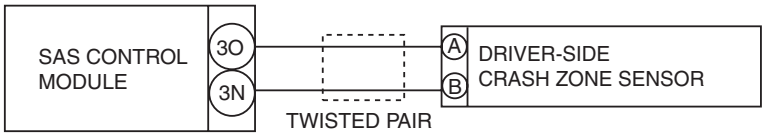
Step	Inspection		Action
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the passenger-side air bag module connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

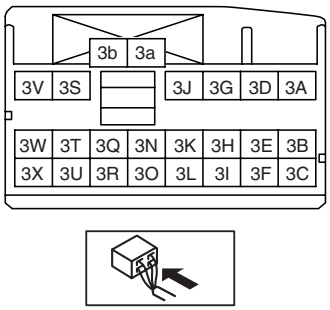
DTC B0094:11/B0094:13/B0094:87/B0094:96

id080200000400

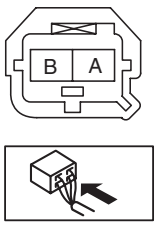
System malfunction location	• **B0094:11: Driver-side crash zone sensor circuit short to body ground** • **B0094:13: Driver-side crash zone sensor circuit open circuit or short to power supply** • **B0094:87: Signal reception error from driver-side crash zone sensor** • **B0094:96: Driver-side crash zone sensor internal malfunction**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Wiring harness between the driver-side crash zone sensor and SAS control module has a malfunction • Driver-side crash zone sensor has a malfunction
Fail-safe	—
Possible cause	• Driver-side crash zone sensor connector malfunction • Open or short circuit or short to ground or short to power supply in the wiring harness between the driver-side crash zone sensor and SAS control module • Driver-side crash zone sensor malfunction • SAS control module malfunction



SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



DRIVER-SIDE CRASH ZONE SENSOR WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE CRASH ZONE SENSOR CONNECTOR** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.) • Disconnect the driver-side crash zone sensor connector. (See 08-10-19 CRASH ZONE SENSOR REMOVAL/INSTALLATION.) • Inspect the driver-side crash zone sensor connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the driver-side crash zone sensor connector?	Yes	Replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
2	**INSPECT DRIVER-SIDE CRASH ZONE SENSOR CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/ INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/ INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/ INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connector. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/ INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connector. (See 08-11-2 FRONT SEAT BELT REMOVAL/ INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/ INSTALLATION.) • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — SAS control module terminal 3O — SAS control module terminal 3N **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side crash zone sensor. • Is there continuity?	Yes	Replace the wiring harness for a possible short to ground, then go to Step 5.
		No	Go to the next step.
3	**INSPECT DRIVER-SIDE CRASH ZONE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Driver-side crash zone sensor and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Driver-side crash zone sensor terminal A—SAS control module terminal 3O — Driver-side crash zone sensor terminal B—SAS control module terminal 3N **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side crash zone sensor. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go to Step 5.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
4	**INSPECT DRIVER-SIDE CRASH ZONE SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Driver-side crash zone sensor and SAS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — SAS control module terminal 3O — SAS control module terminal 3N **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and driver-side crash zone sensor. • Is the voltage **0V**?	Yes	Replace the driver-side crash zone sensor, then go to the next step. (See 08-10-19 CRASH ZONE SENSOR REMOVAL/INSTALLATION.)
		No	Replace the wiring harness for a possible short to power supply, then go to the next step.
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B0094:55/B1417:55

id080200880100

System malfunction location	• **B0094:55: Configuration setting error (driver-side crash zone sensor structural malfunction)** • **B1417:55: Configuration setting error (passenger-side crash zone sensor structural malfunction)**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe	—
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side crash zone sensor assembly incorrect • SAS control module malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See 08-10-22 SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA).) • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**INSPECT CRASH ZONE SENSOR** • Verify that the driver or passenger-side crash zone sensor is correctly installed. • Is the driver or passenger-side crash zone sensor correctly installed?	Yes	Go to the next step.
		No	Correctly Install the driver or passenger-side crash zone sensor. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B00D2:01

id080200824000

System malfunction location	• **Air bag system warning light malfunction**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Air bag system warning light malfunction detected
Fail-safe	—
Possible cause	• Air bag system warning light malfunction
System wiring diagram	—

Diagnostic Procedure

Action
Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC

DTC B00D2:29

id080200826700

System malfunction location	• **Invalid signal to air bag system warning light**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Air bag system warning light illumination request sent from SAS control module does not correspond to air bag system warning light illumination status in instrument cluster
Fail-safe	—
Possible cause	• Instrument cluster assembly incorrect • Instrument cluster malfunction • SAS control module malfunction
System wiring diagram	—

Diagnostic Procedure

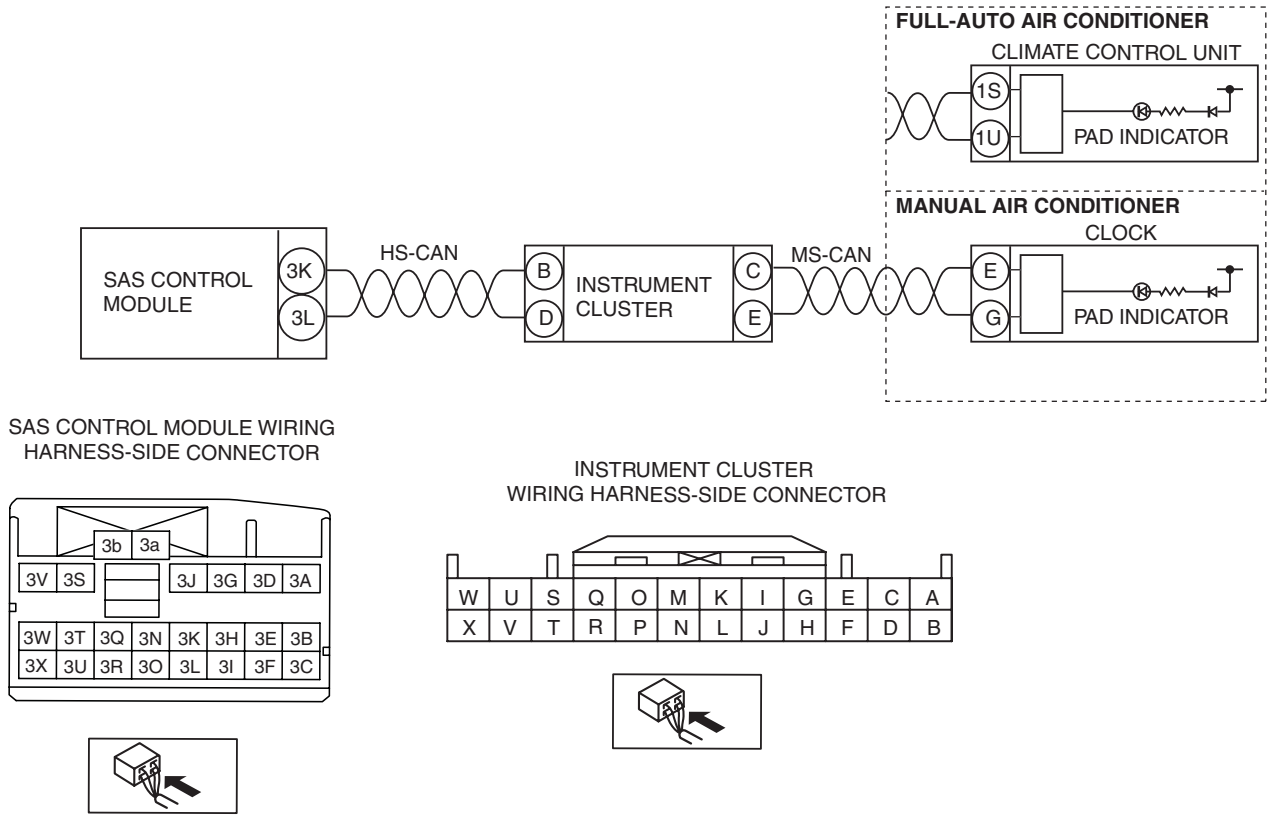
Step	Inspection		Action
1	**INSPECT DTCs IN SAS CONTROL MODULE** • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Inspect the DTC from the SAS control module memory using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Is DTC U0001:88 or U0155:00 displayed?	Yes	Perform the applicable DTC inspection.
		No	Go to the next step.
2	**INSPECT INSTRUMENT CLUSTER** • Verify that the instrument cluster is correctly installed. • Is the instrument cluster correctly installed?	Yes	Go to the next step.
		No	Correctly install the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) Then go to the next step.
3	**INSPECT INSTRUMENT CLUSTER** • Perform the active command mode inspection for the instrument cluster using the M-MDS. (See 09-02G-38 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) — WL+IL (See 09-02G-38 ACTIVE COMMAND MODES TABLE [INSTRUMENT CLUSTER].) • Does the air bag system warning light illuminate?	Yes	Go to the next step.
		No	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) Then go to the next step.
4	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Is DTC B00D2:29 displayed?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B00D5:01/B00D5:29/B1202:01

id080200890500

System malfunction location	• **B00D5:01: PAD OFF indicator circuit open circuit or short to power supply** • **B00D5:29: PAD OFF indicator communication error** • **B1202:01: PAD ON indicator circuit open circuit or short to power supply**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Malfunction in PAD indicator circuit
Fail-safe	—
Possible cause	• Instrument cluster malfunction • SAS control module connector malfunction • Instrument cluster connector malfunction • Short circuit to power supply or body ground in wiring harness between Instrument cluster and SAS control module • Open circuit in wiring harness between Instrument cluster and SAS control module • SAS control module malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**PERFORM INSTRUMENT CLUSTER DTC INSPECTION** • Perform the instrument cluster DTC inspection using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs present?	Yes	Perform the applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

STEP	INSPECTION		ACTION
2	**INSPECT SAS CONTROL MODULE CONNECTOR** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.) • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Inspect the SAS control module connector terminal for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Replace the malfunctioning part, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

STEP	INSPECTION		ACTION
3	**INSPECT INSTRUMENT CLUSTER CONNECTOR** • Disconnect the instrument cluster connectors. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) • Inspect the instrument cluster terminal for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.
4	**INSPECT SAS CONTROL MODULE CIRCUIT FOR SHORT TO GROUND** • Instrument cluster and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — SAS control module terminal 3K — SAS control module terminal 3L **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and instrument cluster. • Is there continuity?	Yes	Replace the wiring harness for a possible short to ground, then go to Step 7.
		No	Go to the next step.
5	**INSPECT SAS CONTROL MODULE CIRCUIT FOR OPEN CIRCUIT** • Instrument cluster and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Instrument cluster terminal B—SAS control module terminal 3K — Instrument cluster terminal D—SAS control module terminal 3L **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and instrument cluster. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go to Step 7.
6	**INSPECT SAS CONTROL MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • Instrument cluster and SAS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — SAS control module terminal 3K — SAS control module terminal 3L **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and instrument cluster. • Is the voltage **0V**?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible short to power supply, then go to the next step.

ON-BOARD DIAGNOSTIC

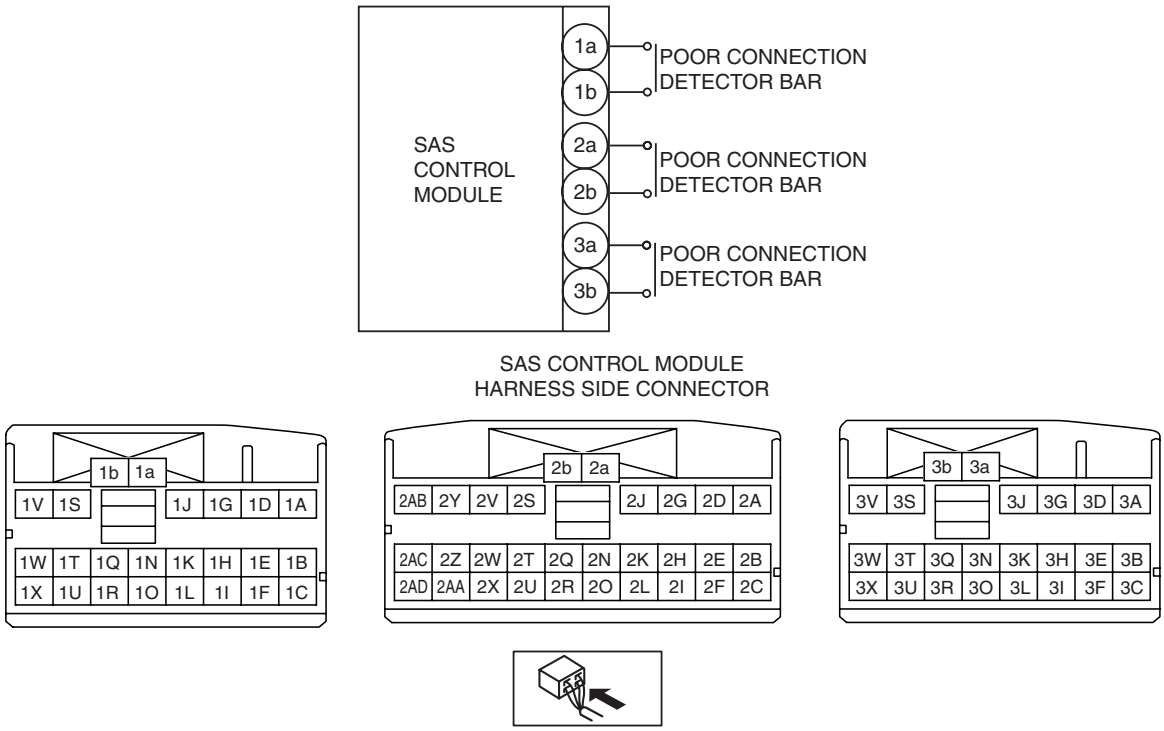
STEP	INSPECTION		ACTION
7	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B1011:95

id080200823100

System malfunction location	• **SAS control module connectors are poorly connected**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • No continuity between poorly connected detector bar terminals of the SAS control module
Fail-safe	—
Possible cause	• SAS control module connectors are poorly connected • SAS control module connector malfunction • SAS control module malfunction



08

ON-BOARD DIAGNOSTIC

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT CONTACTS OF SAS CONTROL MODULE CONNECTORS** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.) • Are all SAS control module connectors securely connected?	Yes	Go to the next step.
		No	Reconnect the SAS control module connectors properly. Then go to Step 3.

ON-BOARD DIAGNOSTIC

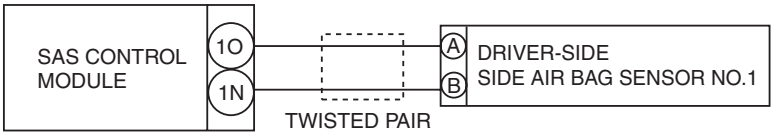
Step	Inspection		Action
2	**VERIFY POORLY CONNECTED DETECTOR BARS OF SAS CONTROL MODULE CONNECTORS** • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Verify the condition of the poorly connected detector bars of the SAS control module connectors. (Corrosion, damage, and disconnected pins) • Are the poorly connected detector bars of the SAS control module connectors normal?	Yes	Go to the next step.
		No	Replace the air bag wiring harness. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

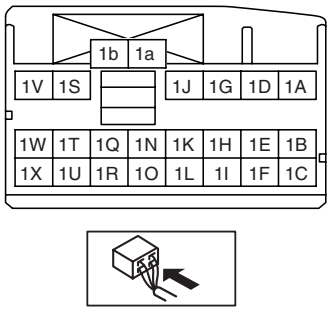
DTC B10FD:11/B10FD:13/B10FD:87/B10FD:96

id080200847100

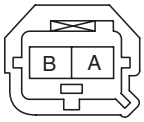
System malfunction location	• **B10FD:11: Driver-side side air bag sensor No.1 circuit short to body ground or power supply** • **B10FD:13: Driver-side side air bag sensor No.1 circuit open circuit or resistance high** • **B10FD:87: Signal reception error from driver-side side air bag sensor No.1** • **B10FD:96: Driver-side side air bag sensor No.1 internal malfunction**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Wiring harness between the driver-side side air bag sensor No.1 and SAS control module has a malfunction • Driver-side side air bag sensor No.1 has a malfunction
Fail-safe	—
Possible cause	• Driver-side side air bag sensor No.1 connector malfunction • Short circuit to power supply or body ground in the wiring harness between the driver-side side air bag sensor No.1 and SAS control module • Open circuit in the wiring harness between the driver-side side air bag sensor No.1 and SAS control module • Driver-side side air bag sensor No.1 malfunction • SAS control module malfunction

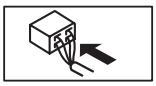


SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



DRIVER-SIDE SIDE AIR BAG SENSOR NO.1 WIRING HARNESS-SIDE CONNECTOR





ON-BOARD DIAGNOSTIC

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE SIDE AIR BAG SENSOR NO.1 CONNECTOR** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the driver-side B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.) • Disconnect the driver-side side air bag sensor No.1 connector. (See 08-10-22 SIDE AIR BAG SENSOR NO. 1 REMOVAL/INSTALLATION.) • Inspect the driver-side side air bag sensor No.1 connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the driver-side side air bag sensor No.1 connector?	Yes	Replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
2	**INSPECT DRIVER-SIDE SIDE AIR BAG SENSOR NO.1 CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/ INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/ INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/ INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connector. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/ INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connector. (See 08-11-2 FRONT SEAT BELT REMOVAL/ INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/ INSTALLATION.) • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — SAS control module terminal 1O — SAS control module terminal 1N **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side side air bag sensor No.1. • Is there continuity?	Yes	Replace the wiring harness for a possible short to ground, then go to Step 5.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
3	**INSPECT DRIVER-SIDE SIDE AIR BAG SENSOR NO.1 CIRCUIT FOR OPEN CIRCUIT** • Driver-side side air bag sensor No.1 and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Driver-side side air bag sensor No.1 terminal A—SAS control module terminal 1O — Driver-side side air bag sensor No.1terminal B—SAS control module terminal 1N **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side side air bag sensor No.1. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT DRIVER-SIDE SIDE AIR BAG SENSOR NO.1 CIRCUIT FOR SHORT TO POWER SUPPLY** • Driver-side side air bag sensor No.1 and SAS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — SAS control module terminal 1O — SAS control module terminal 1N **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and driver-side side air bag sensor No.1. • Is the voltage **0V**?	Yes	Replace the driver-side side air bag sensor No.1, then go to the next step. (See 08-10-22 SIDE AIR BAG SENSOR NO. 1 REMOVAL/INSTALLATION.)
		No	Replace the wiring harness for a possible short to power supply, then go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B10FD:55/B10FE:55

id080200822700

System malfunction location	• **B10FD:55: Configuration setting error (driver-side side air bag sensor No.1 structural malfunction)** • **B10FE:55: Configuration setting error (passenger-side side air bag sensor No.1 structural malfunction)**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe	—
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side side air bag sensor No.1 assembly incorrect • SAS control module malfunction
System wiring diagram	—

Diagnostic Procedure

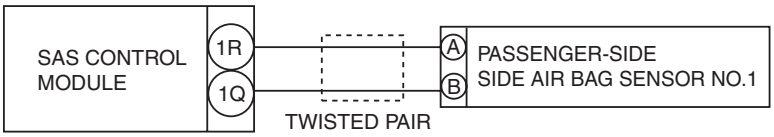
Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See 08-10-22 SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA).) • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**INSPECT SIDE AIR BAG SENSOR NO.1** • Verify that the driver or passenger-side side air bag sensor No.1 is correctly installed. • Is the driver or passenger-side side air bag sensor No.1 correctly installed?	Yes	Go to the next step.
		No	Correctly Install the driver or passenger-side side air bag sensor No.1. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

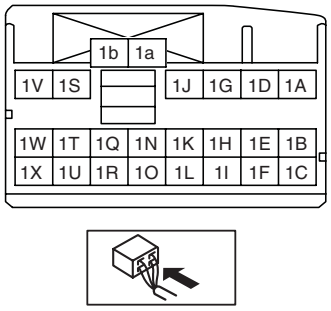
DTC B10FE:11/B10FE:13/B10FE:87/B10FE:96

id080200847200

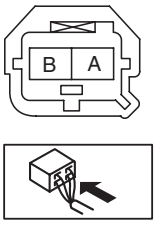
System malfunction location	• **B10FE:11: Passenger-side side air bag sensor No.1 circuit short to body ground or power supply** • **B10FE:13: Passenger-side side air bag sensor No.1 circuit open circuit or resistance high** • **B10FE:87: Signal reception error from passenger-side side air bag sensor No.1** • **B10FE:96: Passenger-side side air bag sensor No.1 internal malfunction**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Wiring harness between the passenger-side side air bag sensor No.1 and SAS control module has a malfunction • Passenger-side side air bag sensor No.1 has a malfunction
Fail-safe	—
Possible cause	• Passenger-side side air bag sensor No.1 connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side side air bag sensor No.1 and SAS control module • Open circuit in the wiring harness between the passenger-side side air bag sensor No.1 and SAS control module • Passenger-side side air bag sensor No.1 malfunction • SAS control module malfunction



SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



PASSENGER-SIDE SIDE AIR BAG SENSOR NO.1 WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE SIDE AIR BAG SENSOR NO.1 CONNECTOR** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the passenger-side B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.) • Disconnect the passenger-side side air bag sensor No.1 connector. (See 08-10-22 SIDE AIR BAG SENSOR NO. 1 REMOVAL/INSTALLATION.) • Inspect the passenger-side side air bag sensor No.1 connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side side air bag sensor No.1 connector?	Yes	Replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
2	**INSPECT PASSENGER-SIDE SIDE AIR BAG SENSOR NO.1 CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connector. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connector. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.) • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — SAS control module terminal 1R — SAS control module terminal 1Q **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side side air bag sensor No.1. • Is there continuity?	Yes	Replace the wiring harness for a possible short to ground, then go to Step 5.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
3	**INSPECT PASSENGER-SIDE SIDE AIR BAG SENSOR NO.1 CIRCUIT FOR OPEN CIRCUIT** • Passenger-side side air bag sensor No.1 and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Passenger-side side air bag sensor No.1 terminal A—SAS control module terminal 1R — Passenger-side side air bag sensor No.1 terminal B—SAS control module terminal 1Q **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side side air bag sensor No.1. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT PASSENGER-SIDE SIDE AIR BAG SENSOR NO.1 CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side side air bag sensor No.1 and SAS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — SAS control module terminal 1R — SAS control module terminal 1Q **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side side air bag sensor No.1. • Is the voltage **0V**?	Yes	Replace the passenger-side side air bag sensor No.1, then go to the next step. (See 08-10-22 SIDE AIR BAG SENSOR NO. 1 REMOVAL/INSTALLATION.)
		No	Replace the wiring harness for a possible short to power supply, then go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B1126:11/B1126:12/B1126:13/B1126:19/B1126:1A

id080200821400

System malfunction location	• **B1126:11: Driver-side side air bag module circuit short to body ground** • **B1126:12: Driver-side side air bag module circuit short to power supply** • **B1126:13: Driver-side side air bag module circuit open circuit or resistance high** • **B1126:19: Short circuit to driver-side side air bag module and other air bag module circuits** • **B1126:1A: Driver-side side air bag module circuit resistance low**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Resistance **other than 0.81–9.85 ohms** is detected in driver-side side air bag module circuit • Wiring harness between the driver-side side air bag module and SAS control module has a malfunction
Fail-safe	—
Possible cause	• Driver-side side air bag module connector malfunction • Short circuit to power supply or body ground in the wiring harness between the driver-side side air bag module and SAS control module • Open circuit in the wiring harness between the driver-side side air bag module and SAS control module • Driver-side side air bag module malfunction • SAS control module malfunction

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE CONNECTOR** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the driver-side side air bag module connector installed to the lower side of the seat cushion of the front seat. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Inspect the driver-side side air bag module connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the driver-side side air bag module connector?	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
2	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/ INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/ INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/ INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/ INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (See 08-11-2 FRONT SEAT BELT REMOVAL/ INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/ INSTALLATION.) • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — SAS control module terminal 1A — SAS control module terminal 1D **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and the driver-side side air bag module. • Is there continuity?	Yes	Replace the wiring harness for a possible short to ground, then go to Step 6.
		No	Go to the next step.
3	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE CIRCUIT FOR OPEN CIRCUIT** • Driver-side side air bag module and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Driver-side side air bag module terminal A—SAS control module terminal 1A — Driver-side side air bag module terminal B—SAS control module terminal 1D **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side side air bag module. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go to Step 6.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
4	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • Driver-side side air bag module and SAS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — SAS control module terminal 1A — SAS control module terminal 1D **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and driver-side side air bag module. • Is the voltage **0V**?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible short to power supply, then go to Step 6.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
5	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect the SAS control module connectors. • Except for the driver-side side air bag module connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the driver-side side air bag module connector terminals A and B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Go to the next step.
		No	Replace the driver-side side air bag module. (See 08-10-14 SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) Then go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the driver-side side air bag module connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B1126:55/B1127:55

id080200822800

System malfunction location	• **B1126:55: Configuration setting error (driver-side side air bag module structural malfunction)** • **B1127:55: Configuration setting error (passenger-side side air bag module structural malfunction)**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe	—
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side side air bag module assembly incorrect • SAS control module malfunction
System wiring diagram	—

Diagnostic Procedure

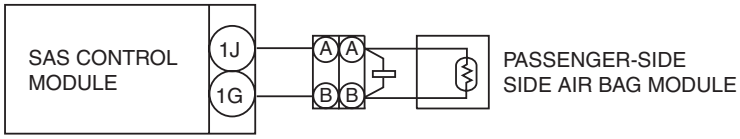
Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See 08-10-22 SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA).) • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**INSPECT SIDE AIR BAG MODULE** • Verify that the driver or passenger-side side air bag module is correctly installed. • Is the driver or passenger-side side air bag module correctly installed?	Yes	Go to the next step.
		No	Correctly Install the driver or passenger-side side air bag module. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

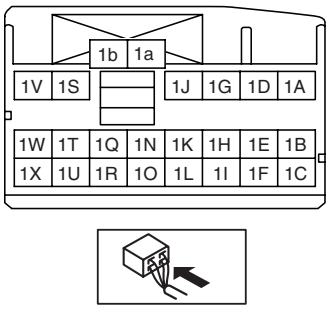
DTC B1127:11/B1127:12/B1127:13/B1127:19/B1127:1A

id080200821500

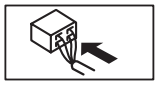
System malfunction location	• **B1127:11: Passenger-side side air bag module circuit short to body ground** • **B1127:12: Passenger-side side air bag module circuit short to power supply** • **B1127:13: Passenger-side side air bag module circuit open circuit or resistance high** • **B1127:19: Short circuit to passenger-side side air bag module and other air bag module circuits** • **B1127:1A: Passenger-side side air bag module circuit resistance low**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Resistance **other than 0.81–9.85 ohms** detected in passenger-side side air bag module circuit • Wiring harness between the passenger-side side air bag module and SAS control module has a malfunction
Fail-safe	—
Possible cause	• Passenger-side side air bag module connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side side air bag module and SAS control module • Open circuit in the wiring harness between the passenger-side side air bag module and SAS control module • Passenger-side side air bag module malfunction • SAS control module malfunction



SAS CONTROL MODULE HARNESS-SIDE CONNECTOR



PASSENGER-SIDE SIDE AIR BAG MODULE HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE CONNECTOR** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the passenger-side side air bag module connector installed to the lower side of the seat cushion of the front seat. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Inspect the passenger-side side air bag module connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side side air bag module connector?	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
2	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/ INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/ INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/ INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/ INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (See 08-11-2 FRONT SEAT BELT REMOVAL/ INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/ INSTALLATION.) • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — SAS control module terminal 1G — SAS control module terminal 1J **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and the passenger-side side air bag module. • Is there continuity?	Yes	Replace the wiring harness for a possible short to ground, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
3	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE CIRCUIT FOR OPEN CIRCUIT** • Passenger-side side air bag module and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Passenger-side side air bag module terminal A—SAS control module terminal 1J — Passenger-side side air bag module terminal B—SAS control module terminal 1G **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side side air bag module. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go to Step 6.
4	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side side air bag module and SAS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — SAS control module terminal 1G — SAS control module terminal 1J **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side side air bag module. • Is the voltage **0V**?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible short to power supply, then go to Step 6.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
5	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect the SAS control module connectors. • Except for the passenger-side side air bag module connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the passenger-side side air bag module connector terminals A and B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Go to the next step.
		No	Replace the passenger-side side air bag module. (See 08-10-14 SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) Then go to the next step.

ON-BOARD DIAGNOSTIC

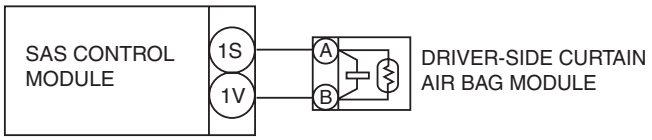
Step	Inspection		Action
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the passenger-side side air bag module connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

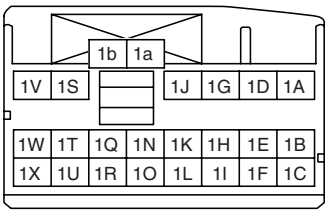
DTC B1128:11/B1128:12/B1128:13/B1128:19/B1128:1A

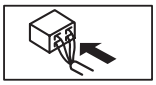
id080200821600

System malfunction location	• **B1128:11: Driver-side curtain air bag module circuit short to body ground** • **B1128:12: Driver-side curtain air bag module circuit short to power supply** • **B1128:13: Driver-side curtain air bag module circuit open circuit or resistance high** • **B1128:19: Short circuit to driver-side curtain air bag module and other air bag module circuits** • **B1128:1A: Driver-side curtain air bag module circuit resistance low**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Resistance **other than 0.81–6.42 ohms** detected in driver-side curtain air bag module circuit • Wiring harness between the driver-side curtain air bag module and SAS control module has a malfunction
Fail-safe	—
Possible cause	• Driver-side curtain air bag module connector malfunction • Short circuit to power supply or body ground in the wiring harness between the driver-side curtain air bag module and SAS control module • Open circuit in the wiring harness between the driver-side curtain air bag module and SAS control module • Driver-side curtain air bag module malfunction • SAS control module malfunction

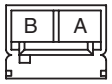


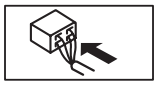
SAS CONTROL MODULE HARNESS-SIDE CONNECTOR





DRIVER-SIDE CURTAIN AIR BAG MODULE HARNESS-SIDE CONNECTOR





ON-BOARD DIAGNOSTIC

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE CONNECTOR** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver-side curtain air bag module connector. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Inspect the driver-side curtain air bag module connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the driver-side curtain air bag module connector?	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
2	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/ INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/ INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/ INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Disconnect the passenger-side curtain air bag module connector. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/ INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/ INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (See 08-11-2 FRONT SEAT BELT REMOVAL/ INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/ INSTALLATION.) • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — SAS control module terminal 1S — SAS control module terminal 1V **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and the driver-side curtain air bag module. • Is there continuity?	Yes	Replace the wiring harness for a possible short to ground, then go to Step 6.
		No	Go to the next step.
3	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE CIRCUIT FOR OPEN CIRCUIT** • Driver-side curtain air bag module and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Driver-side curtain air bag module terminal A—SAS control module terminal 1S — Driver-side curtain air bag module terminal B—SAS control module terminal 1V **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side curtain air bag module. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go to Step 6.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
4	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • Driver-side curtain air bag module and SAS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — SAS control module terminal 1S — SAS control module terminal 1V **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and driver-side curtain air bag module. • Is the voltage **0V**?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible short to power supply, then go to Step 6.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
5	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect the SAS control module connectors. • Except for the driver-side curtain air bag module connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the driver-side curtain air bag module connector terminals A and B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Go to the next step.
		No	Replace the driver-side curtain air bag module. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) Then go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the driver-side curtain air bag module connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B1128:55/B1129:55

id080200822900

System malfunction location	• **B1128:55: Configuration setting error (driver-side curtain air bag module structural malfunction)** • **B1129:55: Configuration setting error (passenger-side curtain air bag module structural malfunction)**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe	—
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side curtain air bag module assembly incorrect • SAS control module malfunction
System wiring diagram	—

Diagnostic Procedure

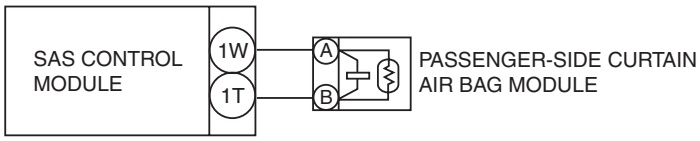
Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See 08-10-22 SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA).) • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**INSPECT CURTAIN AIR BAG MODULE** • Verify that the driver or passenger-side curtain air bag module is correctly installed. • Is the driver or passenger-side curtain air bag module correctly installed?	Yes	Go to the next step.
		No	Correctly install the driver or passenger-side curtain air bag module. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

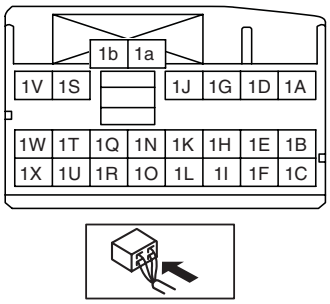
DTC B1129:11/B1129:12/B1129:13/B1129:19/B1129:1A

id080200821700

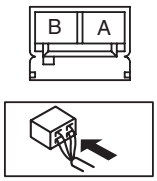
System malfunction location	• **B1129:11: Passenger-side curtain air bag module circuit short to body ground** • **B1129:12: Passenger-side curtain air bag module circuit short to power supply** • **B1129:13: Passenger-side curtain air bag module circuit open circuit or resistance high** • **B1129:19: Short circuit to passenger-side curtain air bag module and other air bag module circuits** • **B1129:1A: Passenger-side curtain air bag module circuit resistance low**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Resistance **other than 0.81–6.42 ohms** detected in passenger-side curtain air bag module circuit • Wiring harness between the passenger-side curtain air bag module and SAS control module has a malfunction
Fail-safe	—
Possible cause	• Passenger-side curtain air bag module connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side curtain air bag module and SAS control module • Open circuit in the wiring harness between the passenger-side curtain air bag module and SAS control module • Passenger-side curtain air bag module malfunction • SAS control module malfunction



SAS CONTROL MODULE HARNESS-SIDE CONNECTOR



PASSENGER-SIDE CURTAIN AIR BAG MODULE HARNESS-SIDE CONNECTOR



08

ON-BOARD DIAGNOSTIC

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE CONNECTOR** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the passenger-side curtain air bag module connector. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Inspect the passenger-side curtain air bag module connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side curtain air bag module connector?	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
2	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/ INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/ INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/ INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Disconnect the driver-side curtain air bag module connector. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/ INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/ INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (See 08-11-2 FRONT SEAT BELT REMOVAL/ INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/ INSTALLATION.) • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — SAS control module terminal 1W — SAS control module terminal 1T **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and the passenger-side curtain air bag module. • Is there continuity?	Yes	Replace the wiring harness for a possible short to ground, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
3	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE CIRCUIT FOR OPEN CIRCUIT** • Passenger-side curtain air bag module and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Passenger-side curtain air bag module terminal A—SAS control module terminal 1W — Passenger-side curtain air bag module terminal B—SAS control module terminal 1T **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side curtain air bag module. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go to Step 6.
4	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side curtain air bag module and SAS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — SAS control module terminal 1W — SAS control module terminal 1T **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side curtain air bag module. • Is the voltage **0V**?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible short to power supply, then go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
5	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect the SAS control module connectors. • Except for the passenger-side curtain air bag module connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the passenger-side curtain air bag module connector terminals A and B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Go to the next step.
		No	Replace the passenger-side curtain air bag module. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) Then go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the passenger-side curtain air bag module connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B1193:00

id080200822000

System malfunction location	• **SAS control module operation (deployment)**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • SAS control module operates (deploys) (air bag module or pre-tensioner seat belt)
Fail-safe	—
Possible cause	• SAS control module operation (deployment) • SAS control module malfunction
System wiring diagram	—

Diagnostic Procedure

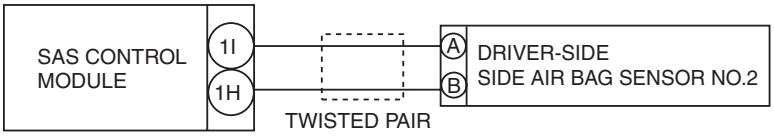
ACTION
• Replace the SAS control module. (See SAS CONTROL MODULE REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC

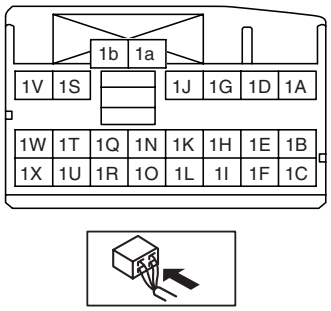
DTC B1196:11/B1196:13/B1196:87/B1196:96

id080200847300

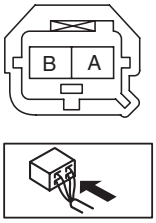
System malfunction location	• **B1196:11: Driver-side side air bag sensor No.2 circuit short to body ground** • **B1196:13: Driver-side side air bag sensor No.2 circuit open circuit or short to power supply** • **B1196:87: Signal reception error from driver-side side air bag sensor No.2** • **B1196:96: Driver-side side air bag sensor No.2 internal malfunction**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Wiring harness between the driver-side side air bag sensor No.2 and SAS control module has a malfunction • Driver-side side air bag sensor No.2 has a malfunction
Fail-safe	—
Possible cause	• Driver-side side air bag sensor No.2 connector malfunction • Short circuit to power supply or body ground in the wiring harness between the driver-side side air bag sensor No.2 and SAS control module • Open circuit in the wiring harness between the driver-side side air bag sensor No.2 and SAS control module • Driver-side side air bag sensor No.2 malfunction • SAS control module malfunction



SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



DRIVER-SIDE SIDE AIR BAG SENSOR NO.2 WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE SIDE AIR BAG SENSOR NO.2 CONNECTOR** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the driver-side trunk side trim. (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.) • Disconnect the driver-side side air bag sensor No.2 connector. (See 08-10-23 SIDE AIR BAG SENSOR NO. 2 REMOVAL/INSTALLATION.) • Inspect the driver-side side air bag sensor No.2 connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the driver-side side air bag sensor No.2 connector?	Yes	Replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
2	**INSPECT DRIVER-SIDE SIDE AIR BAG SENSOR NO.2 CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connector. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connector. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.) • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — SAS control module terminal 1I — SAS control module terminal 1H **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side side air bag sensor No.2. • Is there continuity?	Yes	Replace the wiring harness for a possible short to ground, then go to Step 5.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
3	**INSPECT DRIVER-SIDE SIDE AIR BAG SENSOR NO.2 CIRCUIT FOR OPEN CIRCUIT** • Driver-side side air bag sensor No.2 and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Driver-side side air bag sensor No.2 terminal A—SAS control module terminal 1I — Driver-side side air bag sensor No.2 terminal B—SAS control module terminal 1H **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side side air bag sensor No.2. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT DRIVER-SIDE SIDE AIR BAG SENSOR NO.2 CIRCUIT FOR SHORT TO POWER SUPPLY** • Driver-side side air bag sensor No.2 and SAS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — SAS control module terminal 1I — SAS control module terminal 1H **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and driver-side side air bag sensor No.2. • Is the voltage **0V**?	Yes	Replace the driver-side side air bag sensor No.2, then go to the next step. (See 08-10-23 SIDE AIR BAG SENSOR NO. 2 REMOVAL/INSTALLATION.)
		No	Replace the wiring harness for a possible short to power supply, then go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B1196:55/B1197:55

id080200827700

System malfunction location	• **B1196:55: Configuration setting error (driver-side side air bag sensor No.2 structural malfunction)** • **B1197:55: Configuration setting error (passenger-side side air bag sensor No.2 structural malfunction)**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe	—
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side side air bag sensor No.2 assembly incorrect • SAS control module malfunction
System wiring diagram	—

Diagnostic Procedure

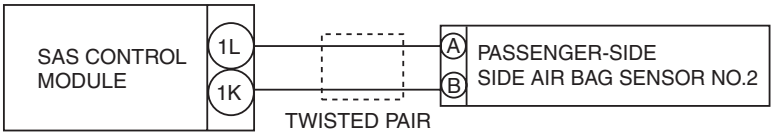
Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See 08-10-22 SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA).) • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**INSPECT SIDE AIR BAG SENSOR NO.2** • Verify that the driver or passenger-side side air bag sensor No.2 is correctly installed. • Is the driver or passenger-side side air bag sensor No.2 correctly installed?	Yes	Go to the next step.
		No	Correctly install the driver or passenger-side side air bag sensor No.2. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

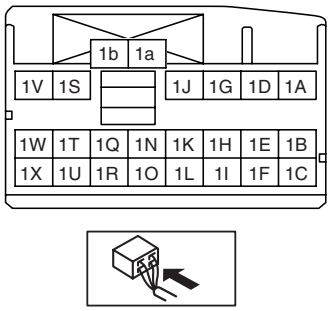
DTC B1197:11/B1197:13/B1197:87/B1197:96

id080200847400

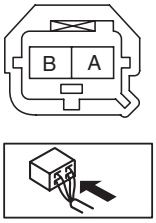
System malfunction location	• **B1197:11: Passenger-side side air bag sensor No.2 circuit short to body ground** • **B1197:13: Passenger-side side air bag sensor No.2 circuit open circuit or short to power supply** • **B1197:87: Signal reception error from passenger-side side air bag sensor No.2** • **B1197:96: Passenger-side side air bag sensor No.2 internal malfunction**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Wiring harness between the passenger-side side air bag sensor No.2 and SAS control module has a malfunction • Passenger-side side air bag sensor No.2 has a malfunction
Fail-safe	—
Possible cause	• Passenger-side side air bag sensor No.2 connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side side air bag sensor No.2 and SAS control module • Open circuit in the wiring harness between the passenger-side side air bag sensor No.2 and SAS control module • Passenger-side side air bag sensor No.2 malfunction • SAS control module malfunction



SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



PASSENGER-SIDE SIDE AIR BAG SENSOR NO.2 WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE SIDE AIR BAG SENSOR NO.2 CONNECTOR** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the passenger-side trunk side trim. (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.) • Disconnect the passenger-side side air bag sensor No.2 connector. (See 08-10-23 SIDE AIR BAG SENSOR NO. 2 REMOVAL/INSTALLATION.) • Inspect the passenger-side side air bag sensor No.2 connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side side air bag sensor No.2 connector?	Yes	Replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
2	**INSPECT PASSENGER-SIDE SIDE AIR BAG SENSOR NO.2 CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/ INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/ INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/ INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connector. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/ INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connector. (See 08-11-2 FRONT SEAT BELT REMOVAL/ INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/ INSTALLATION.) • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — SAS control module terminal 1L — SAS control module terminal 1K **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side side air bag sensor No.2. • Is there continuity?	Yes	Replace the wiring harness for a possible short to ground, then go to Step 5.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
3	**INSPECT PASSENGER-SIDE SIDE AIR BAG SENSOR NO.2 CIRCUIT FOR OPEN CIRCUIT** • Passenger-side side air bag sensor No.2 and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Passenger-side side air bag sensor No.2 terminal A—SAS control module terminal 1L — Passenger-side side air bag sensor No.2 terminal B—SAS control module terminal 1K **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side side air bag sensor No.2. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT PASSENGER-SIDE SIDE AIR BAG SENSOR NO.2 CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side side air bag sensor No.2 and SAS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — SAS control module terminal 1L — SAS control module terminal 1K **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side side air bag sensor No.2. • Is the voltage **0V**?	Yes	Replace the passenger-side side air bag sensor No.2, then go to the next step. (See 08-10-23 SIDE AIR BAG SENSOR NO. 2 REMOVAL/INSTALLATION.)
		No	Replace the wiring harness for a possible short to power supply, then go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B1D75:55

id080200828000

System malfunction location	• **Configuration setting error (PAD switch structural malfunction)**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe	—
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • PAD switch assembly incorrect • SAS control module malfunction
System wiring diagram	—

Diagnostic Procedure

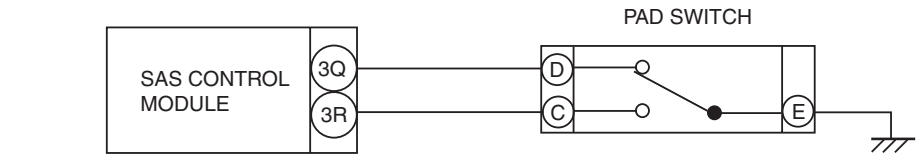
Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See 08-10-22 SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA).) • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**INSPECT PAD SWITCH** • Verify that the PAD switch is correctly installed. • Is the PAD switch correctly installed?	Yes	Go to the next step.
		No	Correctly install the PAD switch. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

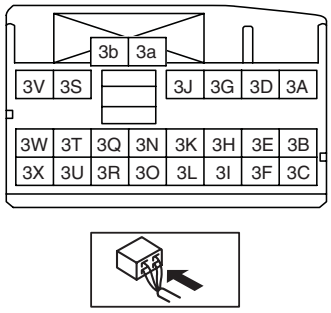
DTC B1D75:62

id080200827900

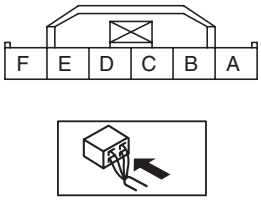
System malfunction location	• **PAD switch circuit open circuit or short to body ground**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Wiring harness between the PAD switch and SAS control module has a malfunction • PAD switch has a malfunction
Fail-safe	—
Possible cause	• PAD switch connector malfunction • Open or short circuit or short to ground or short to power supply in the wiring harness between the PAD switch and SAS control module • PAD switch malfunction • SAS control module malfunction



SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



PAD SWITCH WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PAD SWITCH CONNECTOR** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the passenger-side lower panel. (See 09-17-35 LOWER PANEL REMOVAL/INSTALLATION.) • Disconnect the PAD switch connector. (See 08-10-30 PASSENGER AIR BAG DEACTIVATION (PAD) SWITCH REMOVAL/INSTALLATION.) • Inspect the PAD switch connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the PAD switch connector?	Yes	Replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
2	**INSPECT PAD SWITCH CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/ INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/ INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/ INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connector. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/ INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connector. (See 08-11-2 FRONT SEAT BELT REMOVAL/ INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/ INSTALLATION.) • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — SAS control module terminal 3Q — SAS control module terminal 3R **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and PAD switch. • Is there continuity?	Yes	Replace the wiring harness for a possible short to ground, then go to Step 5.
		No	Go to the next step.
3	**INSPECT PAD SWITCH CIRCUIT FOR OPEN CIRCUIT** • PAD switch and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — PAD switch terminal D—SAS control module terminal 3Q — PAD switch terminal C—SAS control module terminal 3R **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and PAD switch. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go to Step 5.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
4	**INSPECT PAD SWITCH CIRCUIT FOR SHORT TO POWER SUPPLY** • PAD switch and SAS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — SAS control module terminal 3Q — SAS control module terminal 3R **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and PAD switch. • Is the voltage **0V**?	Yes	Replace the PAD switch, then go to the next step. (See 08-10-30 PASSENGER AIR BAG DEACTIVATION (PAD) SWITCH REMOVAL/INSTALLATION.)
		No	Replace the wiring harness for a possible short to power supply, then go to the next step.
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B1206:00/U2107:00

id080200890100

System malfunction location	• **B1206:00: SAS control module operation (deployment) (fuel cut signal output)** • **U2107:00: SAS control module operation (deployment) signal output**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • SAS control module operates (deploys) (air bag module or pre-tensioner seat belt)
Fail-safe	—
Possible cause	• SAS control module operation (deployment) • SAS control module malfunction
System wiring diagram	—

Diagnostic Procedure

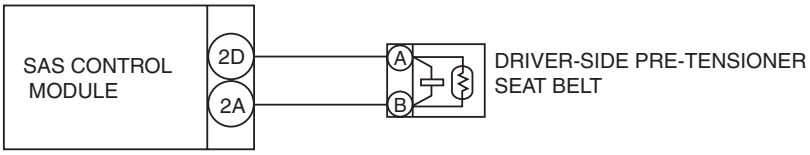
ACTION
• Replace the SAS control module. (See SAS CONTROL MODULE REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC

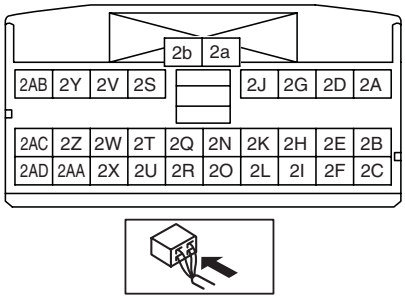
DTC B1211:11/B1211:12/B1211:13/B1211:19/B1211:1A

id080200880200

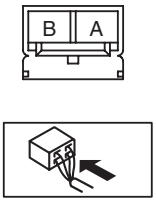
System malfunction location	• **B1211:11: Driver-side pre-tensioner seat belt circuit short to body ground** • **B1211:12: Driver-side pre-tensioner seat belt circuit short to power supply** • **B1211:13: Driver-side pre-tensioner seat belt circuit open circuit or resistance high** • **B1211:19: Short circuit to driver-side pre-tensioner seat belt and other air bag module circuits** • **B1211:1A: Driver-side pre-tensioner seat belt circuit resistance low**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Resistance other than **0.81—6.42 ohms** detected in driver-side pre-tensioner seat belt circuit • Wiring harness between the driver-side pre-tensioner seat belt and SAS control module has a malfunction
Fail-safe	—
Possible cause	• Driver-side pre-tensioner seat belt connector malfunction • Short circuit to power supply or body ground in the wiring harness between the driver-side pre-tensioner seat belt and SAS control module • Open circuit in the wiring harness between the driver-side pre-tensioner seat belt and SAS control module • Driver-side pre-tensioner seat belt malfunction • SAS control module malfunction



SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



DRIVER-SIDE PRE-TENSIONER SEAT BELT WIRING HARNESS-SIDE CONNECTOR



08

ON-BOARD DIAGNOSTIC

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT CONNECTOR** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the driver-side B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.) • Disconnect the driver-side pre-tensioner seat belt connector. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.) • Inspect the driver-side pre-tensioner seat belt connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the driver-side pre-tensioner seat belt connector?	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
2	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connector. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the passenger-side B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.) • Disconnect the passenger-side pre-tensioner seat belt connector. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.) • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — SAS control module terminal 2D — SAS control module terminal 2A **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side pre-tensioner seat belt. • Is there continuity?	Yes	Replace the wiring harness for a possible short to ground, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
3	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT CIRCUIT FOR OPEN CIRCUIT** • Driver-side pre-tensioner seat belt and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Driver-side pre-tensioner seat belt terminal A—SAS control module terminal 2D — Driver-side pre-tensioner seat belt terminal B—SAS control module terminal 2A **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and driver-side pre-tensioner seat belt. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go to Step 6.
4	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT CIRCUIT FOR SHORT TO POWER SUPPLY** • Driver-side pre-tensioner seat belt and SAS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — SAS control module terminal 2D — SAS control module terminal 2A **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and driver-side pre-tensioner seat belt. • Is the voltage **0V**?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible short to power supply, then go to Step 6.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
5	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect the SAS control module connectors. • Except for the driver-side pre-tensioner seat belt connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the driver-side pre-tensioner seat belt connector terminals A–B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Go to the next step.
		No	Replace the driver-side pre-tensioner seat belt. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.) Then go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the driver-side pre-tensioner seat belt connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC B1211:55, B1214:55

id080200880300

System malfunction location	• **B1211:55: Configuration setting error (driver-side pre-tensioner seat belt structural malfunction)** • **B1214:55: Configuration setting error (passenger-side pre-tensioner seat belt structural malfunction)**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • SAS control module configuration setting has not been done correctly • Parts which have not been set to SAS control module are assembled
Fail-safe	—
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • Driver or passenger-side pre-tensioner seat belt assembly incorrect • SAS control module malfunction
System wiring diagram	—

Diagnostic Procedure

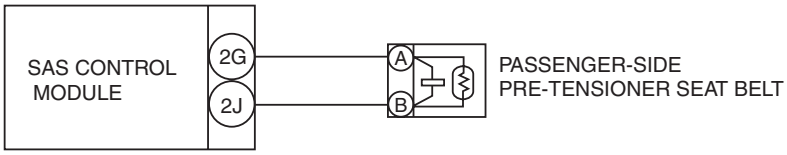
Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See 08-10-22 SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA).) • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**INSPECT PRE-TENSIONER SEAT BELT** • Verify that the driver or passenger-side pre-tensioner seat belt is correctly installed. • Is the driver or passenger-side pre-tensioner seat belt correctly installed?	Yes	Go to the next step.
		No	Correctly install the driver or passenger-side pre-tensioner seat belt. Then go to the next step.
3	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

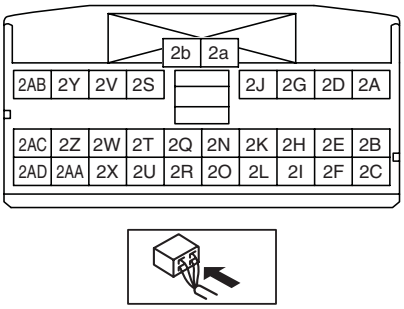
DTC B1214:11/B1214:12/B1214:13/B1214:19/B1214:1A

id080200880400

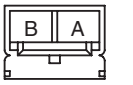
System malfunction location	• **B1214:11: Passenger-side pre-tensioner seat belt circuit short to body ground** • **B1214:12: Passenger-side pre-tensioner seat belt circuit short to power supply** • **B1214:13: Passenger-side pre-tensioner seat belt circuit open circuit or resistance high** • **B1214:19: Short circuit to passenger-side pre-tensioner seat belt and other air bag module circuits** • **B1214:1A: Passenger-side pre-tensioner seat belt circuit resistance low**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Resistance other than **0.81—6.42 ohms** detected in passenger-side pre-tensioner seat belt circuit • Wiring harness between the passenger-side pre-tensioner seat belt and SAS control module has a malfunction
Fail-safe	—
Possible cause	• Passenger-side pre-tensioner seat belt connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side pre-tensioner seat belt and SAS control module • Open circuit in the wiring harness between the passenger-side pre-tensioner seat belt and SAS control module • Passenger-side pre-tensioner seat belt malfunction • SAS control module malfunction

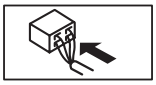


SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



PASSENGER-SIDE PRE-TENSIONER SEAT BELT WIRING HARNESS-SIDE CONNECTOR





ON-BOARD DIAGNOSTIC

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT CONNECTOR** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the passenger-side B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.) • Disconnect the passenger-side pre-tensioner seat belt connector. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.) • Inspect the passenger-side pre-tensioner seat belt connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side pre-tensioner seat belt connector?	Yes	Replace the malfunctioning part, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
2	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connector. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the driver-side B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.) • Disconnect the driver-side pre-tensioner seat belt connector. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.) • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — SAS control module terminal 2G — SAS control module terminal 2J **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side pre-tensioner seat belt. • Is there continuity?	Yes	Replace the wiring harness for a possible short to ground, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
3	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT CIRCUIT FOR OPEN CIRCUIT** • Passenger-side pre-tensioner seat belt and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Passenger-side pre-tensioner seat belt terminal A—SAS control module terminal 2G — Passenger-side pre-tensioner seat belt terminal B—SAS control module terminal 2J **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side pre-tensioner seat belt. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go to Step 6.
4	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side pre-tensioner seat belt and SAS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — SAS control module terminal 2G — SAS control module terminal 2J **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side pre-tensioner seat belt. • Is the voltage **0V**?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible short to power supply, then go to Step 6.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
5	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect the SAS control module connectors. • Except for the passenger-side pre-tensioner seat belt connector, reconnect all disconnected connectors. • Connect the **SST (Fuel and thermometer checker)** or apply **2 ohms** resistance to the passenger-side pre-tensioner seat belt connector terminals A–B. • Set the **SST (Fuel and thermometer checker)** to **2 ohms**. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Go to the next step.
		No	Replace the passenger-side pre-tensioner seat belt. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.) Then go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the **SST (Fuel and thermometer checker)** or the **2 ohms** resistance. • Connect the passenger-side pre-tensioner seat belt connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

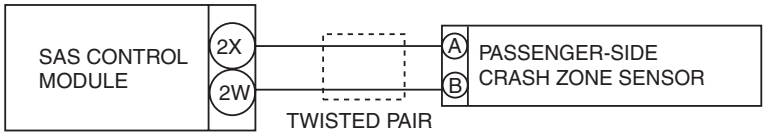
08

ON-BOARD DIAGNOSTIC

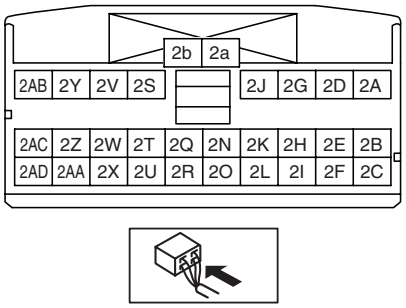
DTC B1417:11/B1417:13/B1417:87/B1417:96

id080200880700

System malfunction location	• **B1417:11: Passenger-side crash zone sensor circuit short to body ground** • **B1417:13: Passenger-side crash zone sensor circuit open circuit or short to power supply** • **B1417:87: Signal reception error from passenger-side crash zone sensor** • **B1417:96: Passenger-side crash zone sensor internal malfunction**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Wiring harness between the passenger-side crash zone sensor and SAS control module has a malfunction • Passenger-side crash zone sensor has a malfunction
Fail-safe	—
Possible cause	• Passenger-side crash zone sensor connector malfunction • Short circuit to power supply or body ground in the wiring harness between the passenger-side crash zone sensor and SAS control module • Open circuit in the wiring harness between the passenger-side crash zone sensor and SAS control module • Passenger-side crash zone sensor malfunction • SAS control module malfunction



SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



PASSENGER-SIDE CRASH ZONE SENSOR WIRING HARNESS-SIDE CONNECTOR

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PASSENGER-SIDE CRASH ZONE SENSOR CONNECTOR** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.) • Disconnect the passenger-side crash zone sensor connector. (See 08-10-19 CRASH ZONE SENSOR REMOVAL/INSTALLATION.) • Inspect the passenger-side crash zone sensor connector. (Corrosion, damage, and disconnected pins) • Is there any malfunction of the passenger-side crash zone sensor connector?	Yes	Replace the malfunctioning part, then go to Step 5.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
2	**INSPECT PASSENGER-SIDE CRASH ZONE SENSOR CIRCUIT FOR SHORT TO GROUND** • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/ INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/ INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/ INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connector. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/ INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connector. (See 08-11-2 FRONT SEAT BELT REMOVAL/ INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/ INSTALLATION.) • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — SAS control module terminal 2X — SAS control module terminal 2W **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side crash zone sensor. • Is there continuity?	Yes	Replace the wiring harness for a possible short to ground, then go to Step 5.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
3	**INSPECT PASSENGER-SIDE CRASH ZONE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Passenger-side crash zone sensor and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Passenger-side crash zone sensor terminal A—SAS control module terminal 2X — Passenger-side crash zone sensor terminal B—SAS control module terminal 2W **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and passenger-side crash zone sensor. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT PASSENGER-SIDE CRASH ZONE SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Passenger-side crash zone sensor and SAS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — SAS control module terminal 2X — SAS control module terminal 2W **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and passenger-side crash zone sensor. • Is the voltage **0V**?	Yes	Replace the passenger-side crash zone sensor, then go to the next step. (See 08-10-19 CRASH ZONE SENSOR REMOVAL/INSTALLATION.)
		No	Replace the wiring harness for a possible short to power supply, then go to the next step.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC C0061:29/C0062:29/C0063:29/P0666:29

id080200890200

System malfunction location	• **C0061:29: Low-G sensor (lateral-G) in SAS control module (internal circuit disabled)** • **C0062:29: Low-G sensor (forward-G) in SAS control module (internal circuit disabled)** • **C0063:29: Yaw rate sensor in SAS control module (internal circuit disabled)** • **P0666:29: Temperature sensor in SAS control module (internal circuit disabled)**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • SAS control module internal sensor has a malfunction
Fail-safe	—
Possible cause	• SAS control module malfunction
System wiring diagram	—

Diagnostic Procedure

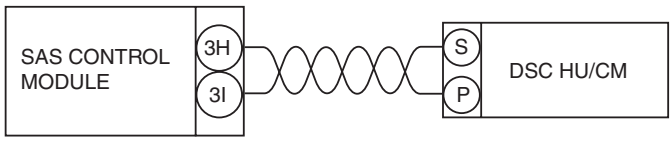
STEP	INSPECTION		ACTION
1	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

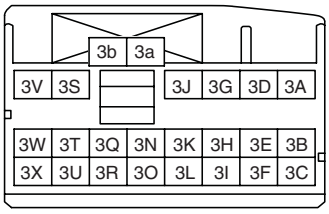
DTC U0028:88

id080200847600

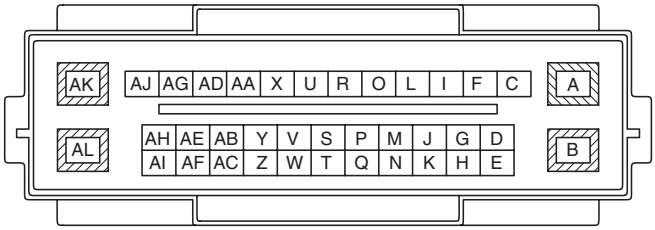
System malfunction location	• **DSC HU/CM communication fault**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Communication error between SAS control module and DSC HU/CM
Fail-safe	—
Possible cause	• DSC HU/CM connector malfunction • SAS control module connector malfunction • Short circuit to power supply or body ground in wiring harness between SAS control module and DSC HU/CM • Open circuit in wiring harness between SAS control module and DSC HU/CM • DSC HU/CM connector malfunction • SAS control module malfunction

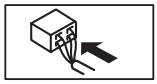


SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



DSC HU/CM WIRING HARNESS-SIDE CONNECTOR





Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT DSC HU/CM CONNECTOR** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the DSC HU/CM connector. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.) • Inspect the DSC HU/CM connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Replace the terminal, then go to next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

STEP	INSPECTION		ACTION
2	**INSPECT SAS CONTROL MODULE CONNECTOR** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.) • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Inspect the SAS control module connector terminal for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Replace the terminal, then go to next step.
		No	Go to the next step.
3	**INSPECT DSC HU/CM CIRCUIT FOR SHORT TO GROUND** • DSC HU/CM and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — SAS control module terminal 3H — SAS control module terminal 3I **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and DSC HU/CM. • Is there continuity?	Yes	Replace the wiring harness for a possible short to ground, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC

STEP	INSPECTION		ACTION
4	**INSPECT DSC HU/CM CIRCUIT FOR OPEN CIRCUIT** • DSC HU/CM and SAS control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — DSC HU/CM terminal S—SAS control module terminal 3H — DSC HU/CM terminal P—SAS control module terminal 3I **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and DSC HU/CM. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go to Step 6.
5	**INSPECT DSC HU/CM CIRCUIT FOR SHORT TO POWER SUPPLY** • DSC HU/CM and SAS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — SAS control module terminal 3H — SAS control module terminal 3I **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and DSC HU/CM. • Is the voltage **0V**?	Yes	Replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Replace the wiring harness for a possible short to power supply, then go to the next step.

ON-BOARD DIAGNOSTIC

STEP	INSPECTION		ACTION
6	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC U0300:00/U2100:00

id080200823000

System malfunction location	• **U0300:00: Configuration setting invalid** • **U2100:00: Configuration not set**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • SAS control module configuration setting has not been done correctly
Fail-safe	—
Possible cause	• SAS control module configuration setting not implemented • SAS control module configuration setting invalid • SAS control module malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM SAS CONTROL MODULE CONFIGURATION (AS-BUILT DATA USE)** • Perform the SAS control module configuration using the M-MDS. (See 08-10-22 SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA).) • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
2	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC U2005:68

id080200881500

System malfunction location	**PCM communication error (vehicle speed signal)**
Detection condition	• The SAS control module receives vehicle speed signal error from the PCM for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• PCM malfunction • SAS control module malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY SAS CONTROL MODULE DTCs AGAIN** • Clear SAS control module DTCs using the M-MDS. (See 08-02-10 CLEARING DTC.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the SAS control module DTC inspection using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Is the DTC U2005:68 displayed?	Yes	Go to the next step.
		No	Go to Step 5.
2	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS PCM** • Clear SAS control module DTCs using the M-MDS. (See 08-02-10 CLEARING DTC.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the SAS control module DTC inspection using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Is the DTC U2005:68 displayed?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 5.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear SAS control module DTCs using the M-MDS. (See 08-02-10 CLEARING DTC.) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the SAS control module DTC inspection using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Is the DTC U2005:68 displayed?	Yes	Replace the SAS control module, then go to the next step. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting.
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC U3000:49

id080200824800

System malfunction location	• **SAS control module internal malfunction**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • SAS control module internal circuit has a malfunction
Fail-safe	—
Possible cause	• SAS control module malfunction
System wiring diagram	—

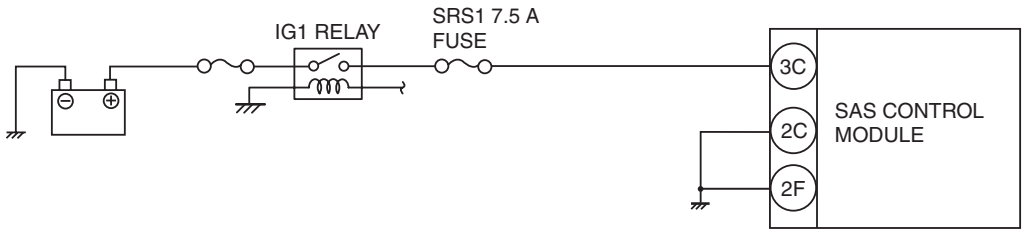
Diagnostic Procedure

ACTION
• Replace the SAS control module. (See SAS CONTROL MODULE REMOVAL/INSTALLATION.)

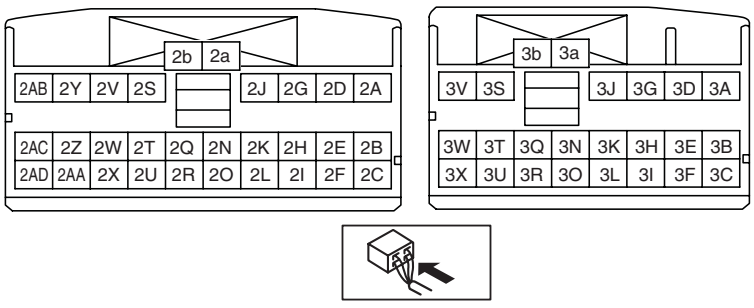
DTC U3003:16/U3003:17

id080200823200

System malfunction location	• **U3003:16: SAS control module power supply voltage decreases (less than 8 V)** • **U3003:17: SAS control module power supply voltage increases (18 V or more)**
Detection condition	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • SAS control module power supply voltage is other than **8–17.9 V**
Fail-safe	—
Possible cause	• Battery malfunction • SRS1 7.5 A fuse malfunction • Open circuit or short to body ground in wiring harness between ignition switch and SAS control module • Open circuit in the wiring harness between the SAS control module and body ground • SAS control module malfunction



SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC

Diagnostic Procedure

Step	Inspection		Action
1	**BATTERY INSPECTION** • Refer to the battery inspection and inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Replace or charge the battery. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17A-10 BATTERY RECHARGING [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].) (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].) Then go to Step 5.
2	**FUSE INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable and wait **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the SRS1 7.5 A fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Replace the SRS1 7.5 A fuse. Then go to Step 5.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
3	**INSPECT WIRING HARNESS BETWEEN SAS CONTROL MODULE AND IG1 RELAY** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Install the SRS1 7.5 A fuse. • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.) • Disconnect the all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage of SAS control module terminal 3C (wiring harness-side). **Note** • Measure the voltage while shaking the wiring harness between the SAS control module and IG1 relay. • Is the voltage between **8–17.9 V**?	Yes	Go to the next step.
		No	Replace the wiring harness between the SAS control module and IG1 relay. Then go to Step 5.

ON-BOARD DIAGNOSTIC

Step	Inspection		Action
4	**INSPECT SAS CONTROL MODULE CIRCUIT FOR OPEN CIRCUIT** • SAS control module connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable and wait **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the wiring harness between SAS control module connector terminal 2C, 2F (wiring harness-side) and body ground. **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Replace the wiring harness for a possible open circuit, then go the next step.
5	**PERFORM SAS CONTROL MODULE DTC INSPECTION** • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Clear the DTC for the SAS control module using the M-MDS. (See 08-02-10 CLEARING DTC.) • Perform the DTC inspection for the SAS control module using the M-MDS. (See 08-02-7 DTC INSPECTION.) • Are the same DTCs present?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

PID/DATA MONITOR INSPECTION

id080200080800

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “RCM”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

PID/DATA MONITOR TABLE

id080200081000

PID name (definition)	Unit/ Operation	Operation Status (Reference)
AB_WL (Air bag system warning light status)	Lamp_Off/ Lamp_On/ Plant_Mode/ Unknown	• Air bag system warning light off: Lamp_Off • Air bag system warning light on: Lamp_On • Air bag system warning light status: Plant_Mode • Air bag system warning light status: Unknown
P_SEAT_M_S (Occupancy sensor)	Off/On	• Not occupant seated in passenger-side front seat: Off • Occupant seated in passenger-side front seat: On
PAD_SW_FLT (PAD switch malfunction status)	O.K./FAULT	• PAD switch is normal: O.K. • PAD switch is abnormal: FAULT
RES_C_AB_D (Driver-side curtain air bag module resistance nominal)	ohm	Continuous: 0.81–6.42 ohms
RES_C_AB_P (Passenger-side curtain air bag module resistance nominal)	ohm	Continuous: 0.81–6.42 ohms
RES_F_AB1_D (Driver-side air bag module resistance nominal)	ohm	Continuous: 0.99–6.42 ohms
RES_F_AB1_P (Passenger-side air bag module resistance nominal)	ohm	Continuous: 0.81–6.42 ohms
RES_PCD_BAR (Poorly connected detector bar terminals resistance nominal (all of SAS control module connectors))	ohm	• Normal connected: 100 ohms or less • Poor connected: 20 kilohms or more
RES_S_AB_D (Driver-side side air bag module resistance nominal)	ohm	Continuous: 0.81–9.85 ohms
RES_S_AB_P (Passenger-side side air bag module resistance nominal)	ohm	Continuous: 0.81–9.85 ohms
RES_SB_P_D (Driver-side pre-tensioner seat belt resistance nominal)	ohm	Continuous: 0.81–6.42 ohms
RES_SB_P_P (Passenger-side pre-tensioner seat belt resistance nominal)	ohm	Continuous: 0.81–6.42 ohms
SEAT_B_D (Driver-side buckle switch status)	Unbuckled/ Buckled	• Driver-side front seat belt fastened (Driver-side buckle switch off): Buckled • Driver-side front seat belt not fastened (Driver-side buckle switch on): Unbuckled

ON-BOARD DIAGNOSTIC

PID name (definition)	Unit/ Operation	Operation Status (Reference)	
SEAT_B_P (Passenger-side buckle switch status)	Unbuckled/ Buckled	Occupant seated in passenger-side front seat: On	• Passenger-side front seat belt fastened (Passenger-side buckle switch off): Buckled • Passenger-side front seat belt not fastened (Passenger-side buckle switch on): Unbuckled
VPWR_IGA (SAS control module power voltage)	V	Ignition switch is at ON: approx. 12 V

SYMPTOM TROUBLESHOOTING

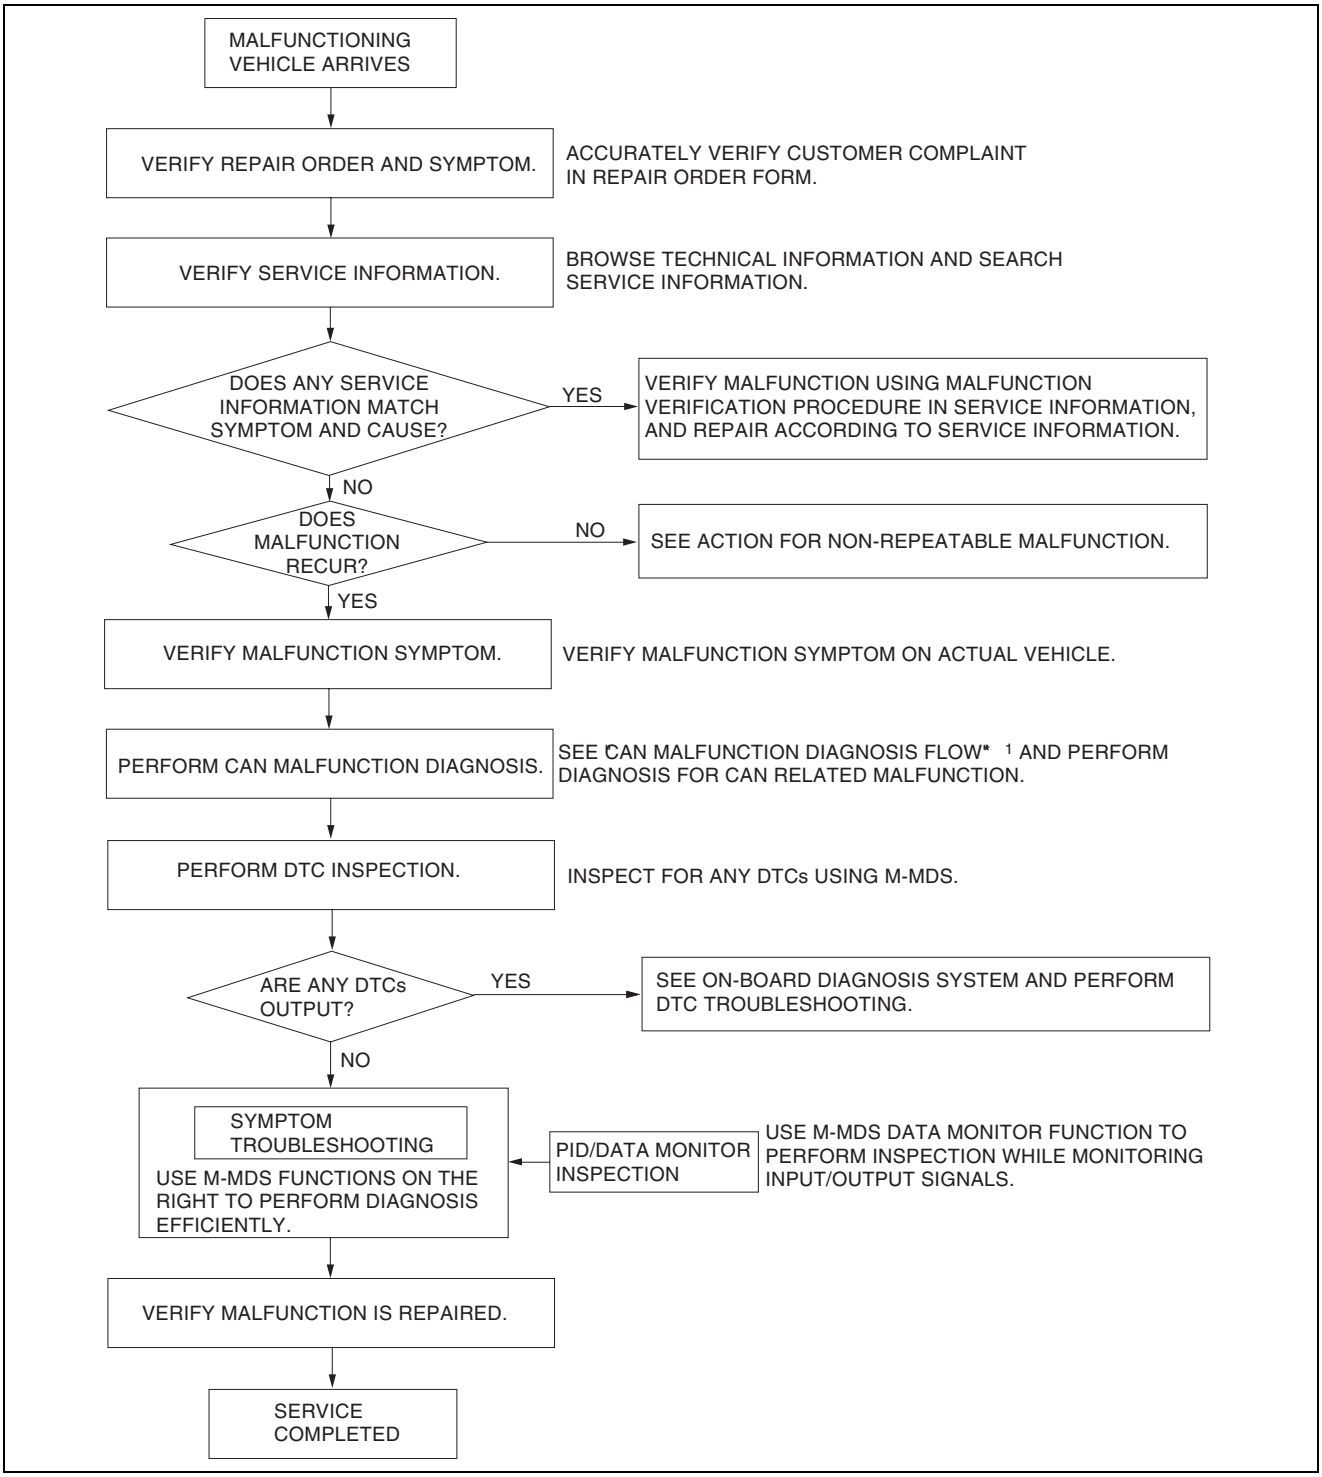
FOREWORD

id080300803000

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



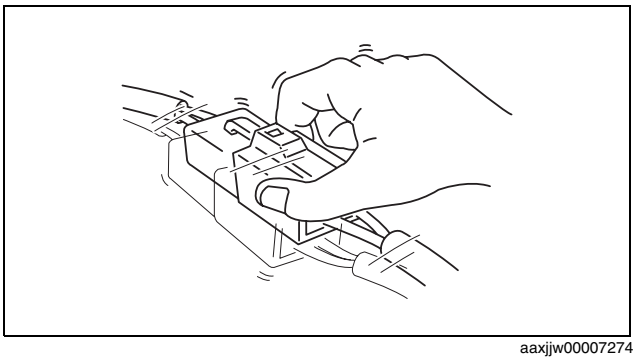
am3zzw0001144

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)], 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)], 10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)], 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

SYMPTOM TROUBLESHOOTING

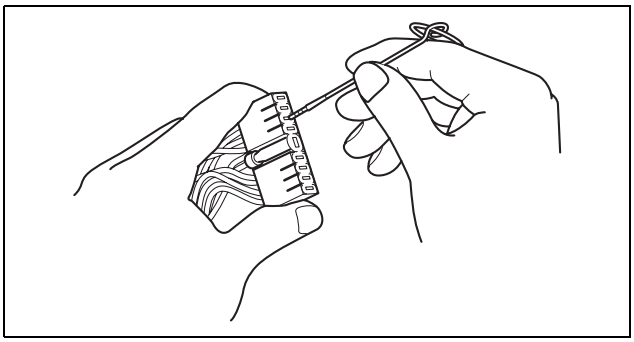
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Verify that a DTC has been recorded in the memory.
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as CAN circuit voltage) at that time, and detect the malfunction cause.
  - — Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3zzw0001144

TROUBLESHOOTING INDEX

id080300802000

- Use the chart below verify the symptoms of the trouble in order to diagnose the appropriate area.

No.	Troubleshooting item	Description	Page
1	Air bag system warning light does not illuminate.	Air bag system warning light does not illuminate while the air bag system is performing initialization.	(See 08-03-6 NO.1 AIR BAG SYSTEM WARNING LIGHT DOES NOT ILLUMINATE)
2	Air bag system warning light illuminates constantly.	Air bag system warning light is illuminated constantly and remains illuminated after 6 s have elapsed.	(See 08-03-7 NO.2 AIR BAG SYSTEM WARNING LIGHT ILLUMINATES CONSTANTLY)

SYMPTOM TROUBLESHOOTING

NO.1 AIR BAG SYSTEM WARNING LIGHT DOES NOT ILLUMINATE

id080300800200

1	**Air bag system warning light does not illuminate.**
DETECTION CONDITION	Air bag system warning light does not illuminate while the air bag system is performing initialization.
POSSIBLE CAUSE	• Air bag system warning light circuit malfunction • Air bag system warning light (LED) malfunction • Instrument cluster malfunction • Communication error between SAS control module and instrument cluster • SAS control module malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT OTHER WARNING AND INDICATOR LIGHTS CIRCUIT IN INSTRUMENT CLUSTER** • Switch the ignition ON (engine off or on). • Do other warning and indicator lights illuminate?	Yes	Go to the next step.
		No	Inspect the instrument cluster power supply system and ground system, then go to Step 3.
2	**INSPECT DTCS IN SAS CONTROL MODULE** • Inspect the DTC for the SAS control module on-board diagnostic system. • Have DTCs been recorded in memory?	Yes	Perform the applicable DTC inspection. (See 08-02-11 DTC TABLE.) Go to the next step.
		No	Go to the next step.
3	**VERIFY WHERE MALFUNCTION IS IN WARNING LIGHTS INDICATION CIRCUIT OR ELSEWHERE** • Turn on all warning lights and indicator lights using the instrument cluster PID WL+IL of simulation function using the M-MDS. (See 09-02G-38 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Do other waning and indicator lights illuminate?	Yes	Go to the next step.
		No	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) Then go to Step 5.
4	**INSPECT DTCS IN INSTRUMENT CLUSTER** • Inspect the DTC for the instrument cluster on-board diagnostic system. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Have DTCs been recorded in memory?	Yes	Perform the applicable DTC inspection, then go to Step 8. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
5	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Switch the ignition ON (engine off or on). • Does the air bag system warning light operate properly?	Yes	Verify that there are no DTCs in the memory. If there are no DTCs, the troubleshooting is completed.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

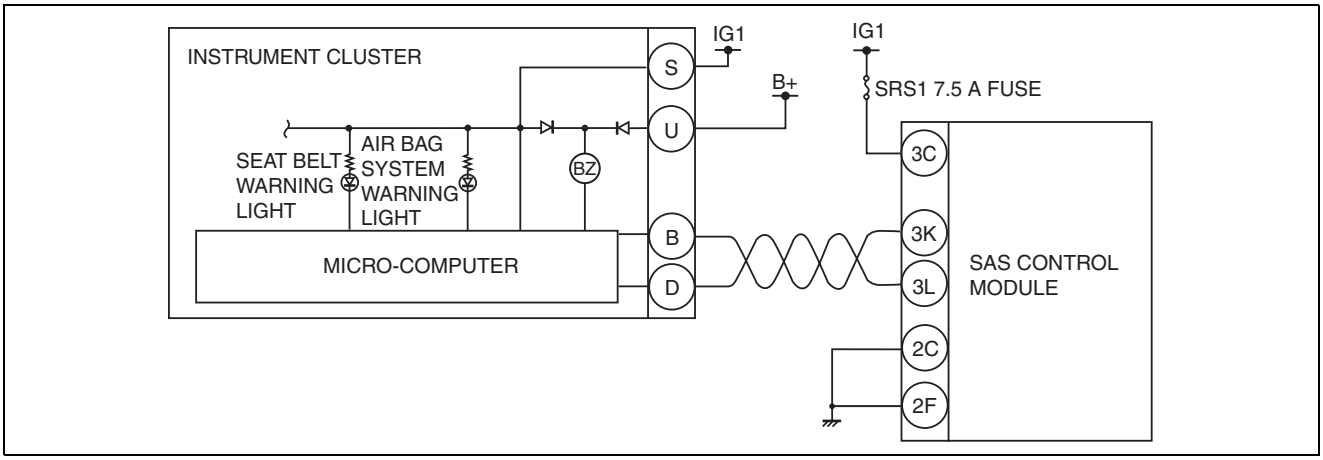
SYMPTOM TROUBLESHOOTING

NO.2 AIR BAG SYSTEM WARNING LIGHT ILLUMINATES CONSTANTLY

id080300800300

2	Air bag system warning light illuminates constantly
DETECTION CONDITION	Air bag system warning light is illuminated constantly and remains illuminated after 6 s have elapsed.
POSSIBLE CAUSE	• Weak battery • SAS control module malfunction • SAS control module connectors are poorly connected • Instrument cluster malfunction • Instrument cluster connector is poorly connected • Open circuit in wiring harness between instrument cluster and SAS control module

System Wiring Diagram



ac5wzw0000156

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**INSPECT BATTERY** • Measure the voltage of battery. • Is the voltage **8 V or more**?	Yes	Go to the next step.
		No	Battery is weak. Inspect charge/discharge system, then go to Step 8. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].)

08

SYMPTOM TROUBLESHOOTING

STEP	INSPECTION		ACTION
2	**VERIFY THAT SAS CONTROL MODULE CONNECTOR IS CONNECTED** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the rear console. (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.) • Are all SAS control module connectors securely connected?	Yes	Go to the next step.
		No	Reconnect the connector properly, then go to Step 8.
3	**INSPECT DTCS IN SAS CONTROL MODULE** • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the DTC for the SAS control module on-board diagnostic system. (See 08-02-7 DTC INSPECTION.) • Have DTCs been recorded in memory?	Yes	Perform the applicable DTC inspection, then go to Step 8. (See 08-02-11 DTC TABLE.)
		No	Go to the next step.
4	**INSPECT DTCS IN INSTRUMENT CLUSTER** • Inspect the DTC for the instrument cluster on-board diagnostic system. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Have DTCs been recorded in memory?	Yes	Perform the applicable DTC inspection, then go to Step 8. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
5	**VERIFY WHERE MALFUNCTION IS IN WARNING LIGHTS INDICATION CIRCUIT OR ELSEWHERE** • Turn on all warning lights and indicator lights using the instrument cluster PID WL+IL of simulation function using the M-MDS. (See 09-02G-38 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Do other warning and indicator lights illuminate?	Yes	Go to the next step.
		No	Repair the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) Then go to Step 8.

SYMPTOM TROUBLESHOOTING

STEP	INSPECTION		ACTION
6	**INSPECT POWER SUPPLY CIRCUIT OF SAS CONTROL MODULE (TERMINAL 3C)** **Warning** • **Handling the component parts improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the service warnings/cautions and the workshop manual before handling the air bag system components. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)** • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.) • Disconnect the clock spring connector. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.) • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.) • Disconnect the passenger-side air bag module connector. (See 08-10-10 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side front seat connector. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.) • Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side curtain air bag module connectors. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.) • Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.) • Disconnect all SAS control module connectors. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at SAS control module at wiring harness-side connector terminal 3C. • Is the voltage **8 V—16 V**?	Yes	Go to the next step.
		No	Repair the wiring harnesses, then go to Step 8.

SYMPTOM TROUBLESHOOTING

STEP	INSPECTION		ACTION
7	**VERIFY THAT SAS CONTROL MODULE CONNECTOR TERMINAL 2C, 2F IS GROUND** • SAS control module connector disconnected. • Switch the ignition to off. • Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect for continuity between the following terminals (wiring harness-side): — SAS control module terminal 2C—body ground — SAS control module terminal 2F—body ground **Note** • Inspect for continuity while shaking the wiring harness between the SAS control module and body ground. • Is there continuity?	Yes	Replace the SAS control module, then go to the next step. (See 08-10-20 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	Replace the wiring harnesses, then go to the next step.
8	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Connect the SAS control module connectors. • Reconnect all disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Does the air bag system warning light illuminate for **approx. 6 s** and turn off?	Yes	Complete troubleshooting, then explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

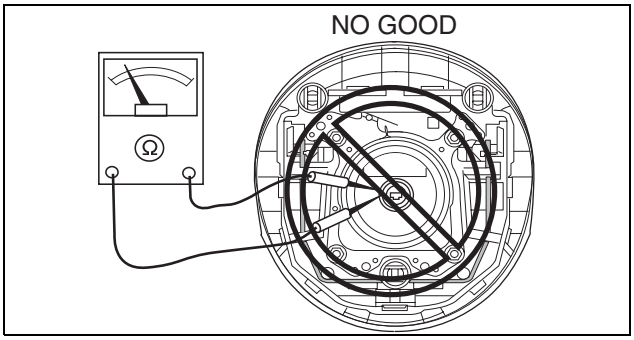
AIR BAG SYSTEM SERVICE WARNINGS

id081000802400

Air Bag Module Inspection

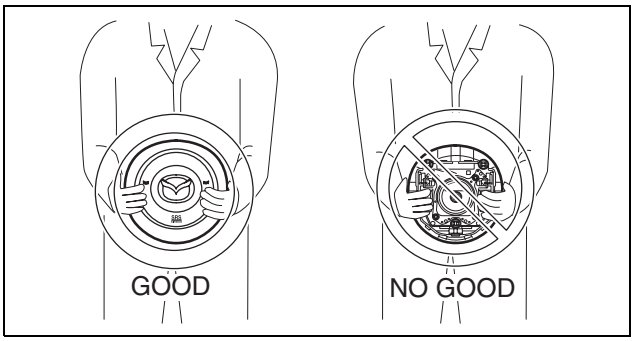
- **Inspecting an air bag module using a tester can operate (deploy) the air bag module, which may cause serious injury. Do not use a tester to inspect an air bag module. Always use the on-board diagnostic function to diagnose the air bag module for malfunctions.**



ac5wzw0000205

Air Bag Module Handling

- **Before removing the air bag module or disconnecting the air bag module connector, always switch the ignition to off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.**
- **Handling a live (undeployed) air bag module that is pointed toward your body could result in serious injury if the air bag module were to accidentally operate (deploy). When carrying a live (undeployed) air bag module, point the deployment surface away from your body to lessen the chance of injury in case it operates (deploys).**

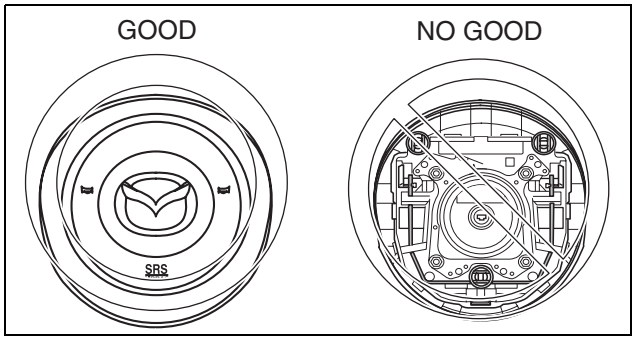


ac5wzw0000205

08

AIR BAG SYSTEM

- **A live (undeployed) air bag module placed with its deployment surface to ground is dangerous. If the air bag module were to accidentally operate (deploy), it could cause serious injury. Always place a live (undeployed) air bag module with its deployment surface up.**



ac5wzw0000205

Side Air Bag Module Handling

- **When a side air bag module operates (deploys) due to a collision, the interior of the seat back (pad, frame, trim) may become damaged. If a side air bag does not operate (deploy) normally from a seat back that has been reused, a serious accident may result. After a side air bag has operated (deployed), always replace both the side air bag module and the seat back (pad, frame, trim) with new parts. After servicing, verify that the seat operates normally and that the wiring harness is not caught.**

SAS Control Module Handling

- **When connecting or disconnecting the SAS control module connector, a person charged with static electricity could accidentally operate (deploy) each air bag module. Before connecting or disconnecting the SAS control module connector, discharge any charged static electricity from your body.**
- **Removing the SAS control module or disconnecting the SAS control module connector with the ignition ON can activate the sensor in the SAS control module and operate (deploy) the air bags and pre-tensioner seat belts, which may cause serious injury. Before removing the SAS control module or disconnecting the SAS control module connector, always switch the ignition to off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.**
- **Connecting the SAS control module connector with the SAS control module not securely fixed to the vehicle is dangerous. The sensor in the SAS control module could send an electrical signal to the air bag modules and pre-tensioner seat belts. This will operate (deploy) the air bags and pre-tensioner seat belts, which may result in serious injury. Therefore, before connecting the connector, securely fix the SAS control module to the vehicle.**
- **Because a sensor is built into the SAS control module, once the air bags and pre-tensioner seat belts have operated (deployed) due to a collision or other causes, the SAS control module must be replaced with a new one even if the used one does not have any visible external damage or deformation. The used SAS control module may have been damaged internally, which may cause improper operation. If the SAS control module is reused, the air bags and pre-tensioner seat belts may not operate (deploy) normally, which could result in a serious accident. Always replace the SAS control module with a new one. The SAS control module cannot be bench-checked or self-checked.**

Crash Zone Sensor Handling

- **Removing the crash zone sensor or disconnecting the crash zone sensor connector with the ignition ON can activate the crash zone sensor and operate (deploy) the air bags and pre-tensioner seat belts, which may cause serious injury. Before removing the crash zone sensor or disconnecting the crash zone sensor connector, always switch the ignition to off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.**
- **If the crash zone sensor is subjected to shock or the sensor is disassembled, the air bags and pre-tensioner seat belts may accidentally operate (deploy) and cause injury, or the system may fail to operate normally and cause a serious accident. Do not subject the crash zone sensor to shock or disassemble the sensor.**
- **Because a sensor is built into the crash zone sensor, once the air bags and pre-tensioner seat belts have operated (deployed) due to a collision or other causes, the crash zone sensor must be replaced with a new one even if the used one does not have any visible external damage or deformation. If the crash zone sensor is reused, the air bags and pre-tensioner seat belts may not operate (deploy) normally, which could result in a serious accident. Always replace the crash zone sensor with a new one. The crash zone sensor cannot be bench-checked or self-checked.**

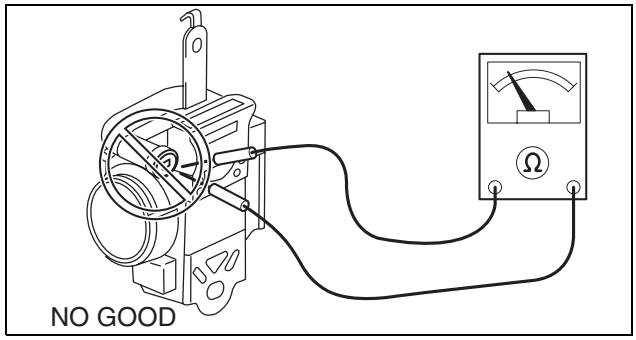
AIR BAG SYSTEM

Side Air Bag Sensor Handling

- **Removing the side air bag sensor or disconnecting the side air bag sensor connector with the ignition ON can activate the side air bag sensor and operate (deploy) the side air bag, which may cause serious injury. Before removing the side air bag sensor or disconnecting the side air bag sensor connector, always switch the ignition to off, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.**
- **If the side air bag sensor is subjected to shock or the sensor is disassembled, the side air bag may accidentally operate (deploy) and cause injury, or the system may fail to operate normally and cause a serious accident. Do not subject the side air bag sensor to shock or disassemble the sensor.**
- **Because a sensor is built into the side air bag sensor, once the air bag has operated (deployed) due to a collision or other causes, the side air bag sensor must be replaced with a new one even if the used one does not have any visible external damage or deformation. If the side air bag sensor is reused, the side air bag may not operate (deploy) normally, which could result in a serious accident. Always replace the side air bag sensor with a new one. The side air bag sensor cannot be bench-checked or self-checked.**

Pre-tensioner Seat Belt Inspection

- **Inspecting a pre-tensioner seat belt using a tester can operate (deploy) the pre-tensioner seat belt, which may cause serious injury. Do not use a tester to inspect a pre-tensioner seat belt. Always use the on-board diagnostic function to diagnose the pre-tensioner seat belt for malfunctions.**



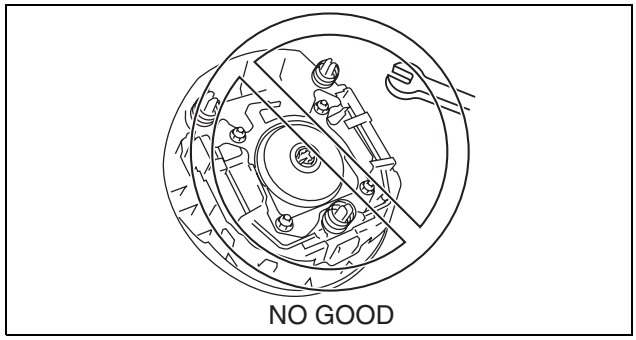
ac5wzw0000205

AIR BAG SYSTEM SERVICE CAUTIONS

id081000802300

Air Bag System Component Disassembly

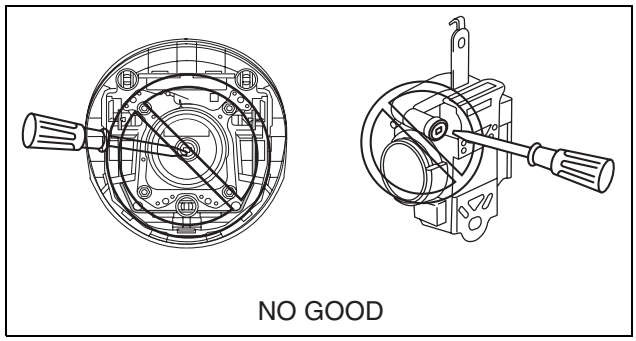
- **Disassembling the air bag system components could cause it to not operate (deploy) normally. Never disassemble any air bag system components.**



ac5wzw0000205

Air Bag Module, Pre-tensioner Seat Belt Handling

- **Oil, grease, or water on the air bag modules may cause the air bags to fail to operate (deploy) in an accident. Never allow oil, grease, or water to get on the air bag modules.**
- **Inserting a screwdriver or similar object into the connector of an air bag module or pre-tensioner seat belt may damage the connector and cause the air bag module or pre-tensioner seat belt to operate (deploy) improperly, which may cause serious injury. Never insert any foreign objects into the air bag module or pre-tensioner seat belts.**



ac5wzw0000205

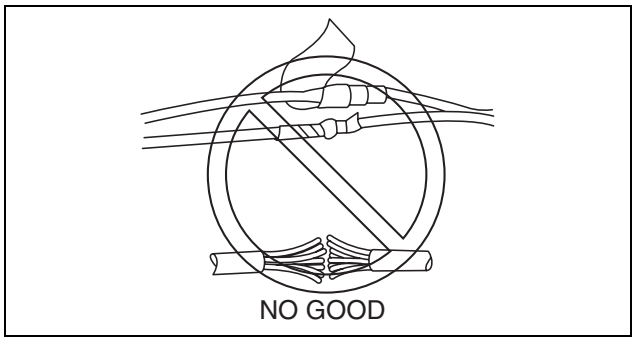
AIR BAG SYSTEM

Air Bag Module, Pre-tensioner Seat Belt Reuse

- **Even if an air bag module or a pre-tensioner seat belt does not operate (deploy) in a collision and does not have any external signs of damage, it may have been damaged internally, which may cause improper operation. Before reusing a live (undeployed) air bag module and the pre-tensioner seat belts, always use the on-board diagnostic to diagnose the air bag module and the pre-tensioner seat belts to verify that they have no malfunction.**

Air Bag Wiring Harness Repair

- **Incorrectly repairing an air bag wiring harness can accidentally operate (deploy) the air bag module and pre-tensioner seat belts. If a problem is found in the air bag wiring harness, always replace the wiring harness with a new one.**



am6zzw0000094

DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION

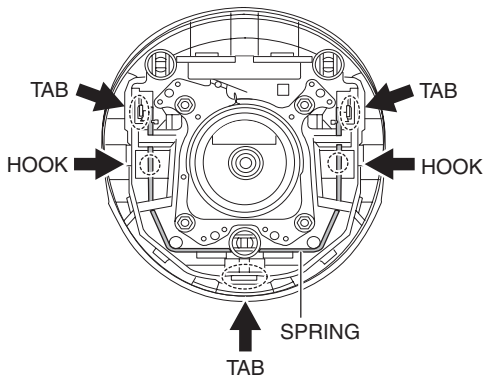
id081000801300

Warning

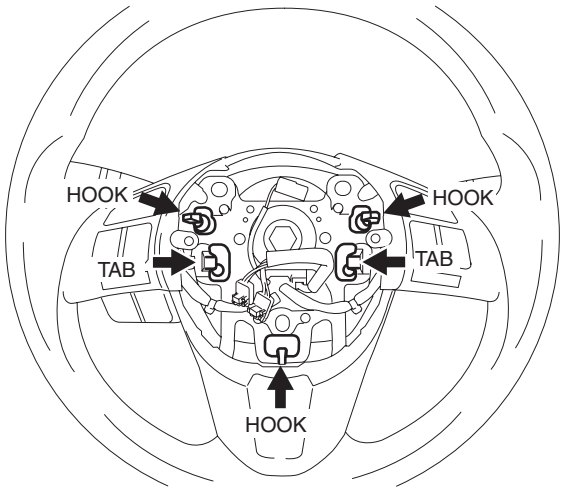
- **Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

Note

- The driver-side air bag module is installed to the steering wheel by engaging the tab.



DRIVER-SIDE AIR BAG MODULE SIDE



STEERING WHEEL SIDE

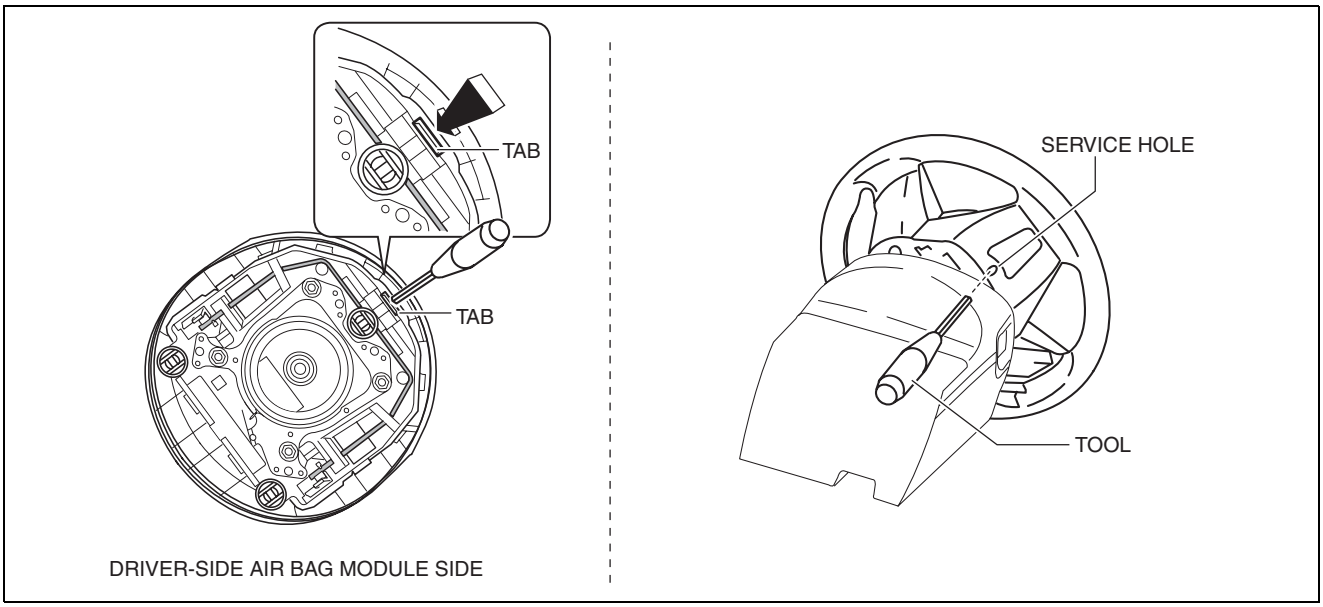
ac5wzw0000202

AIR BAG SYSTEM

Removal

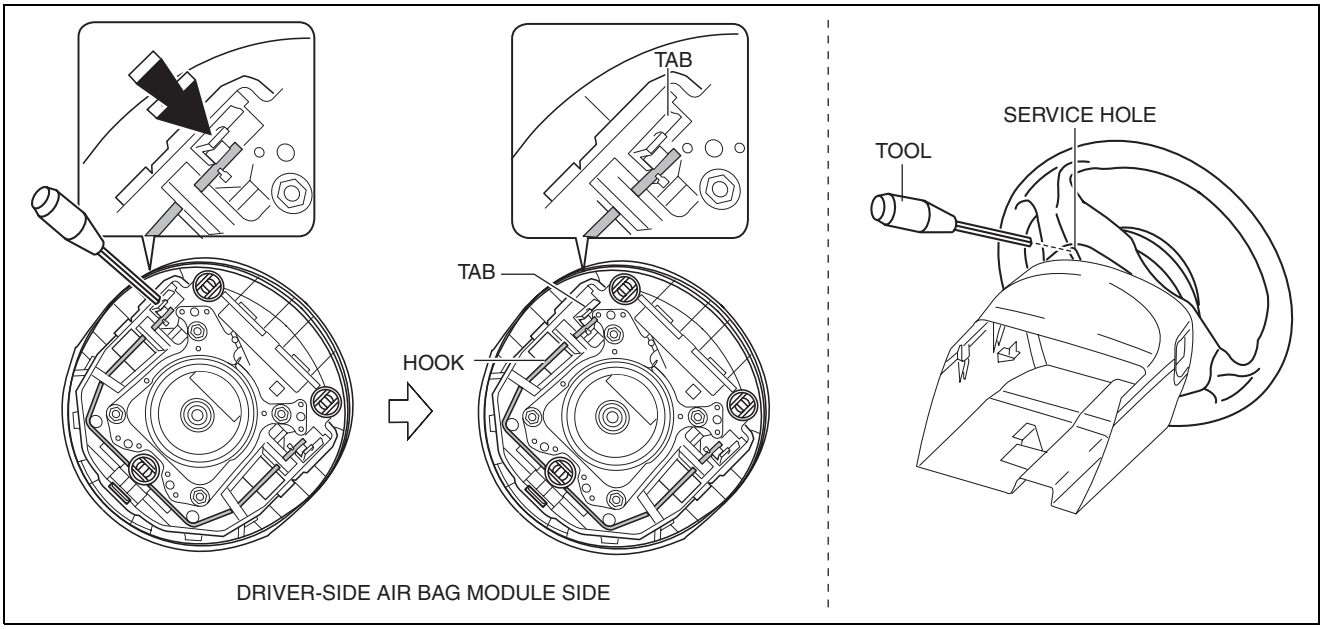
Note
- If the ignition is switched off from ON (engine off or on) with the driver's door open, the steering lock operation can be temporarily released.

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Rotate the steering wheel to the position shown in the figure, insert the tool from the service hole, and press the tab to release it.
   Recommended tool
   - TORX driver (T30 (diam. 6))



ac5wzw0000202

4. Rotate the steering wheel to the position shown in the figure, insert the tool from the service hole, press the area of the tab indicated by the arrow to release the tab and hook.



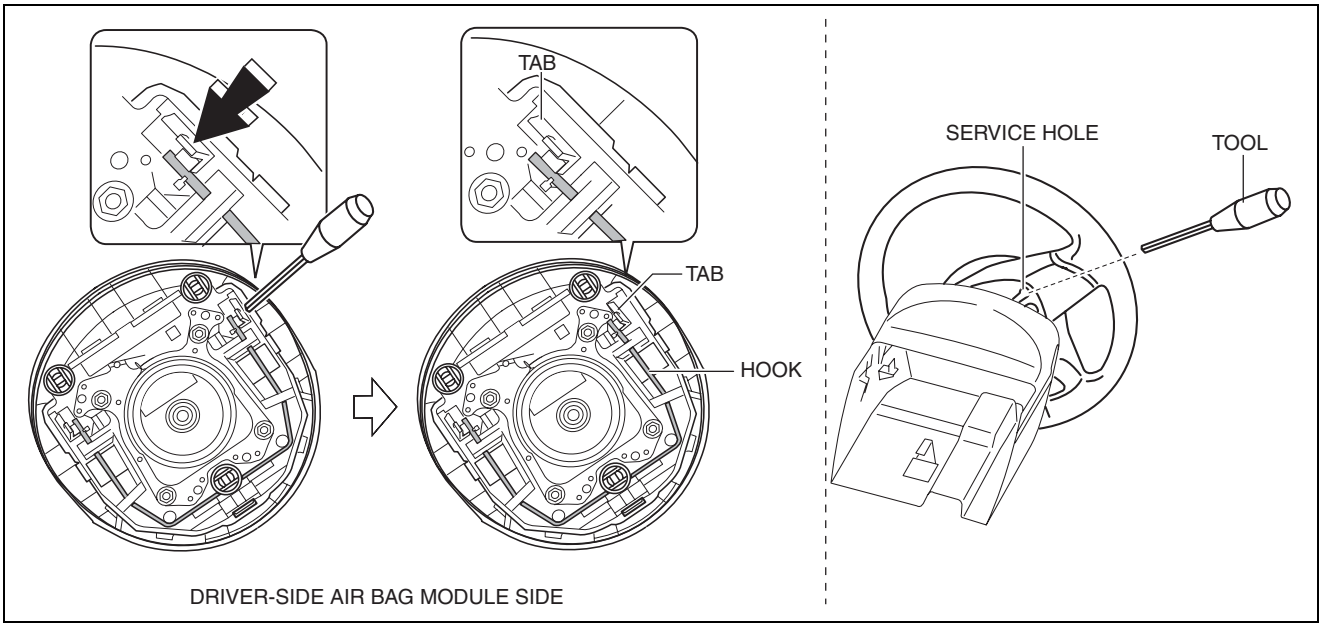
ac5wzw0000202

AIR BAG SYSTEM

5. Rotate the steering wheel to the position shown in the figure, insert the tool from the service hole, press the area of the tab indicated by the arrow to release the tab and hook. (Engagement of driver-side air bag module and steering wheel is released.)

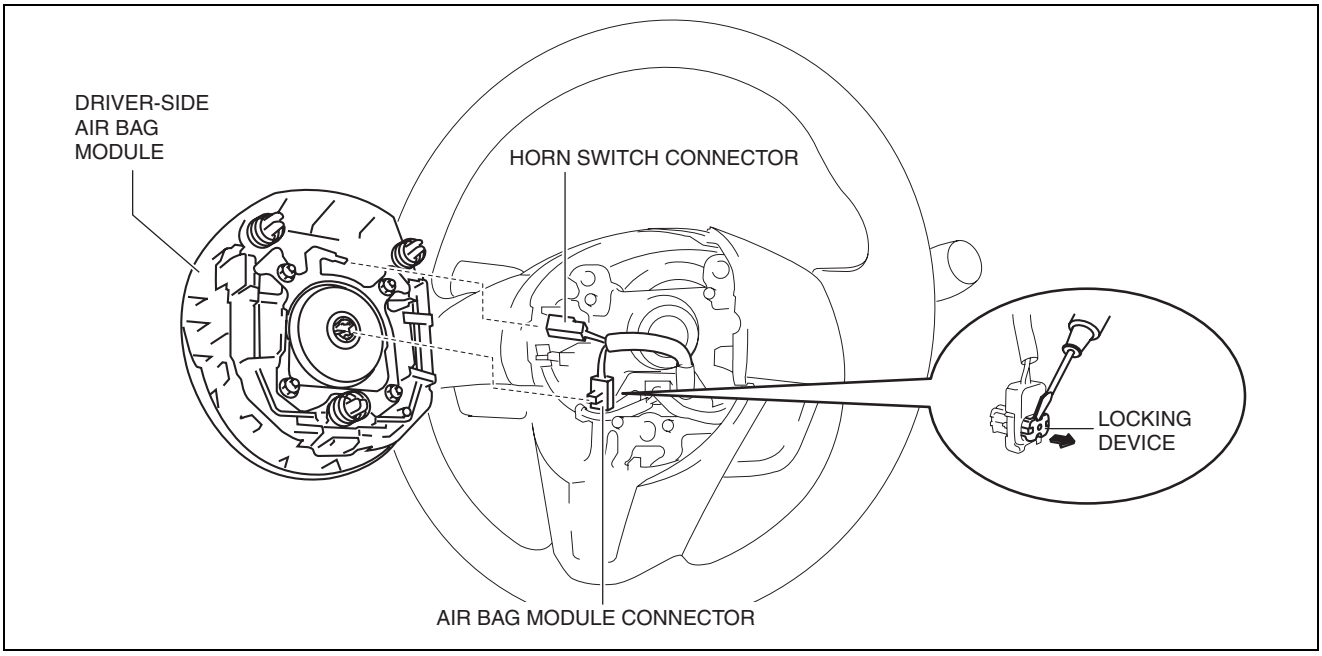
Caution

- **Hold the driver-side air bag module when releasing its securement. Otherwise, it may fall off and be damaged.**



ac5wzw0000202

6. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.



ac5wzw0000203

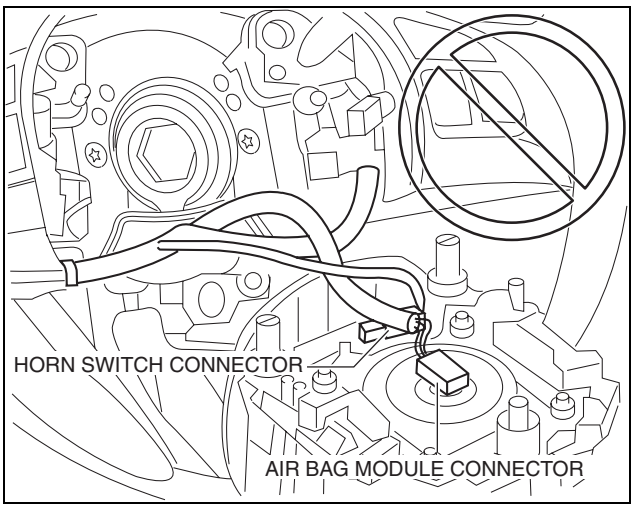
7. Disconnect the air bag module connector.
8. Disconnect the horn switch connector.
9. Remove the driver-side air bag module.

AIR BAG SYSTEM

Installation

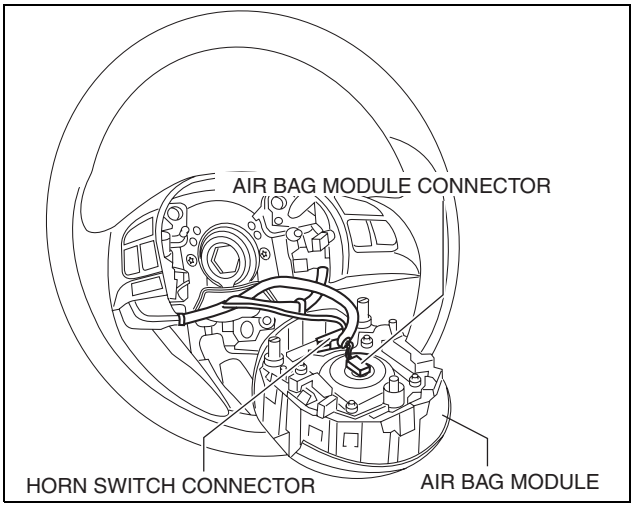
Caution

- **If the driver-side air bag module is connected with the air bag module wiring harness and the horn switch wiring harness crossing over each other, the wiring harnesses could become tangled and damaged. When connecting the connectors, be careful that the wiring harnesses are not crossed over each other.**

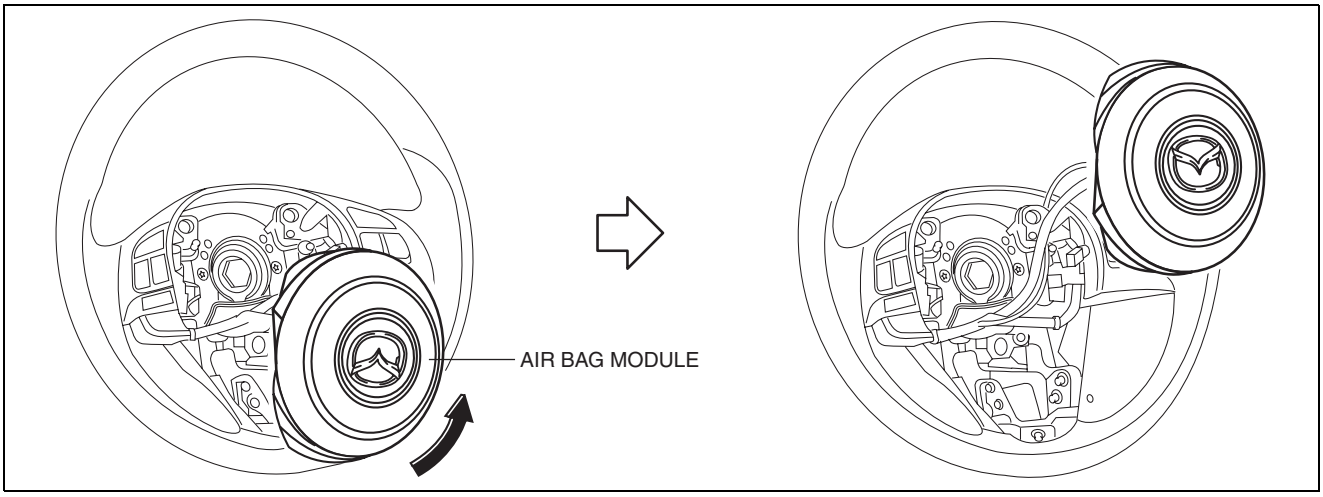


ac5wzw0000278

1. Point the upper side of the driver-side air bag module towards the steering wheel and connect the following connectors as shown in the figure.
2. Connect the air bag module connector.
3. Rotate the driver-side air bag module counterclockwise 180 degrees.



ac5wzw0000279

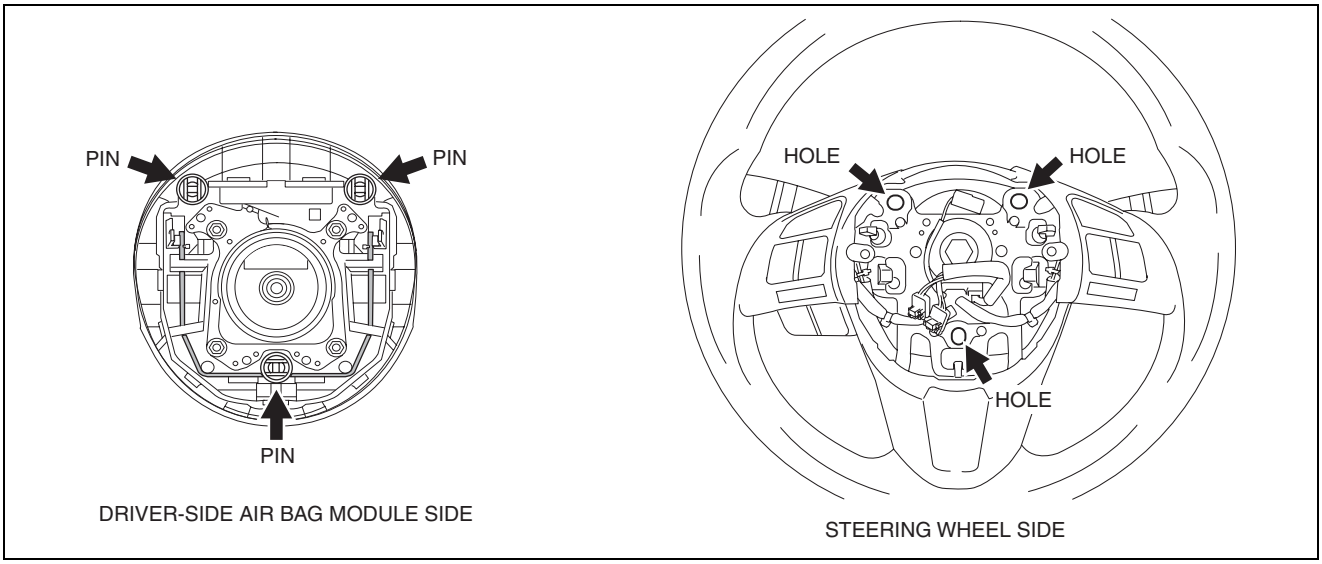


ac5wzw0000279

08

AIR BAG SYSTEM

4. Align the driver-side air bag module pin with the steering wheel hole.



ac5wzw0000203

5. Press the pin of the driver-side air bag module until a click sound is heard.
6. Verify that the quick release connector is securely attached by lightly pulling the driver-side air bag module.
7. Switch the ignition ON (engine off or on).
8. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-5 FLOWCHART.)

PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION

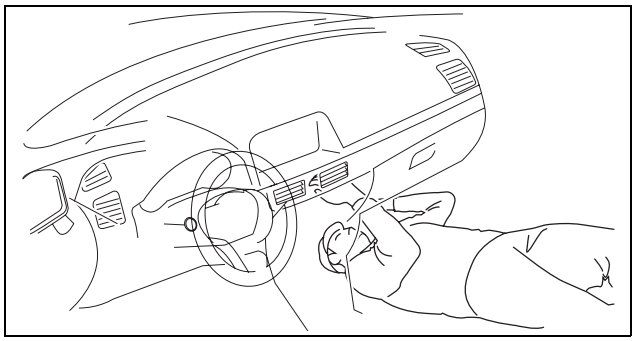
id081000801900

Warning

- **Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

Note

- When replacing the passenger-side air bag module after the deployment, replace it together with the mid-wiring harness.
- When removing the passenger-side air bag module, perform the procedure in the posture shown in the figure.

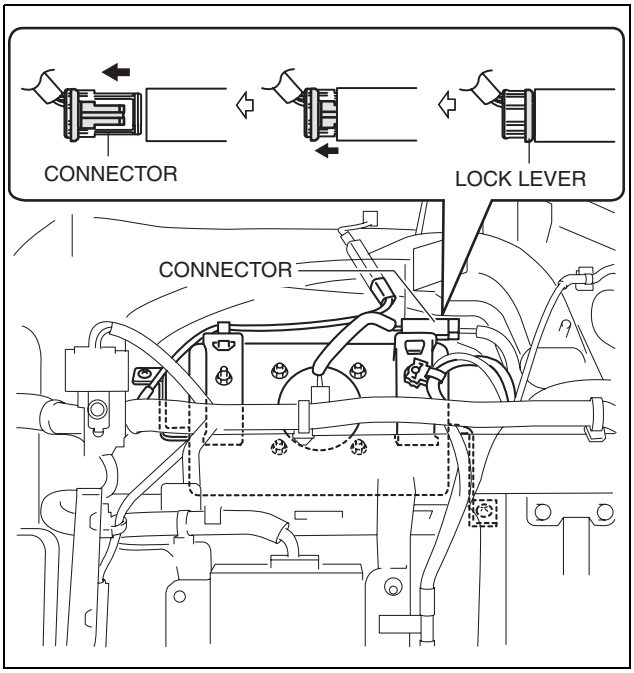


ac5wzw0000203

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the following parts:
   (1) Front scuff plate (passenger-side) (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Front side trim (passenger-side) (See 09-17-62 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Glove compartment (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (4) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (5) Dashboard under cover (See 09-17-35 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
   (6) Lower panel (passenger-side) (See 09-17-35 LOWER PANEL REMOVAL/INSTALLATION.)
   (7) Front heat duct (passenger-side) (See 07-11-22 FRONT HEAT DUCT REMOVAL/INSTALLATION.)
   (8) Blower unit (See 07-11-5 BLOWER UNIT REMOVAL/INSTALLATION.)

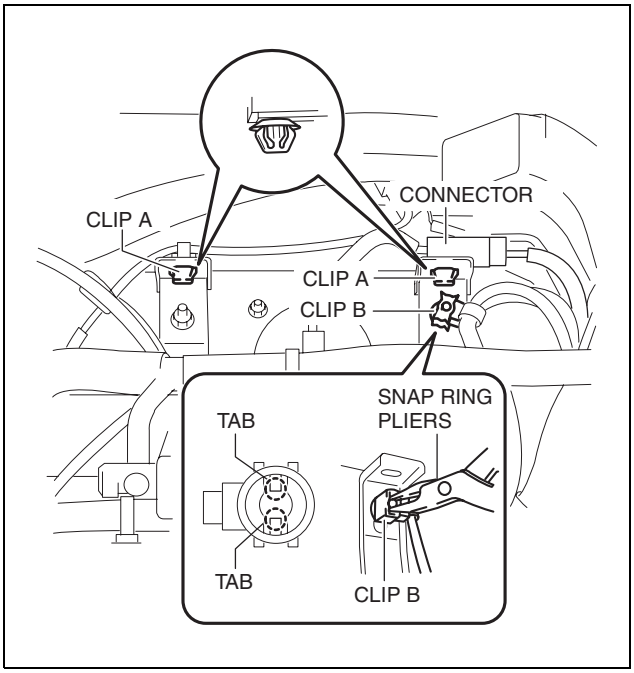
AIR BAG SYSTEM

4. Disconnect the connector.



ac5wzw0000203

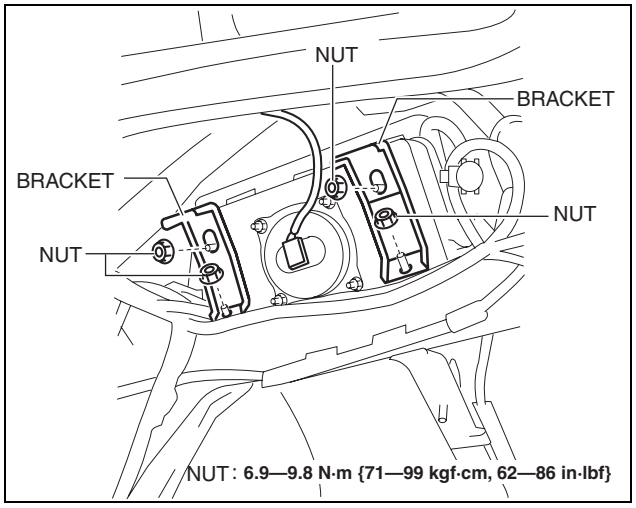
5. Remove clips A.
6. Remove clip B while opening the tabs outward using snap ring pliers.



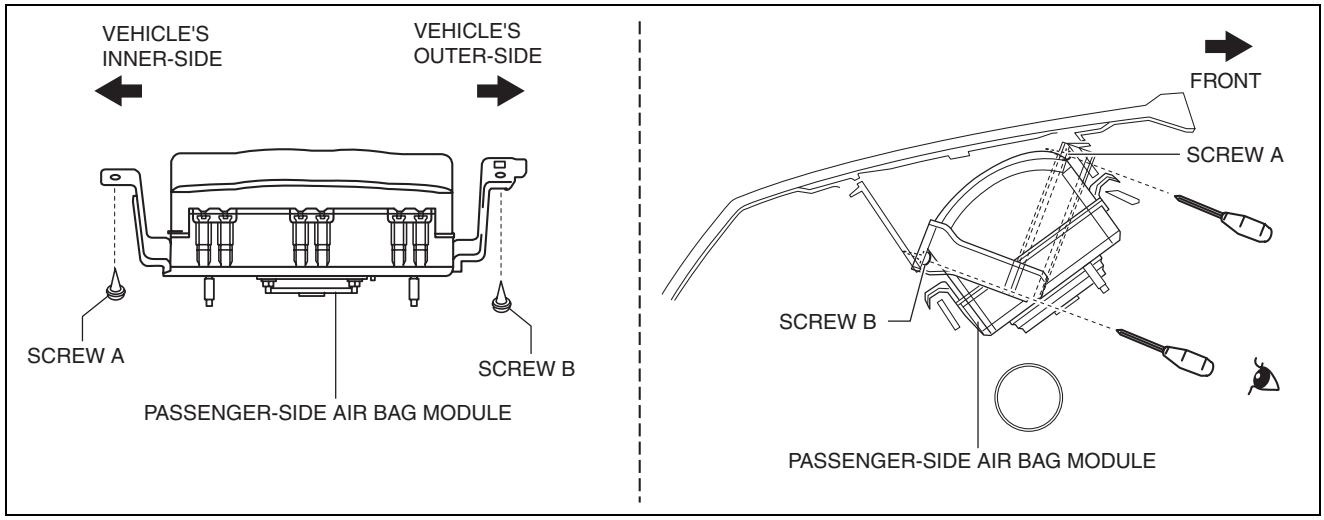
ac5wzw0000203

AIR BAG SYSTEM

7. Remove the nuts.
8. Remove the bracket.
9. Remove screws A and B while visually verifying the screw positions. (See 08-10-13 Screw Installation Note.)

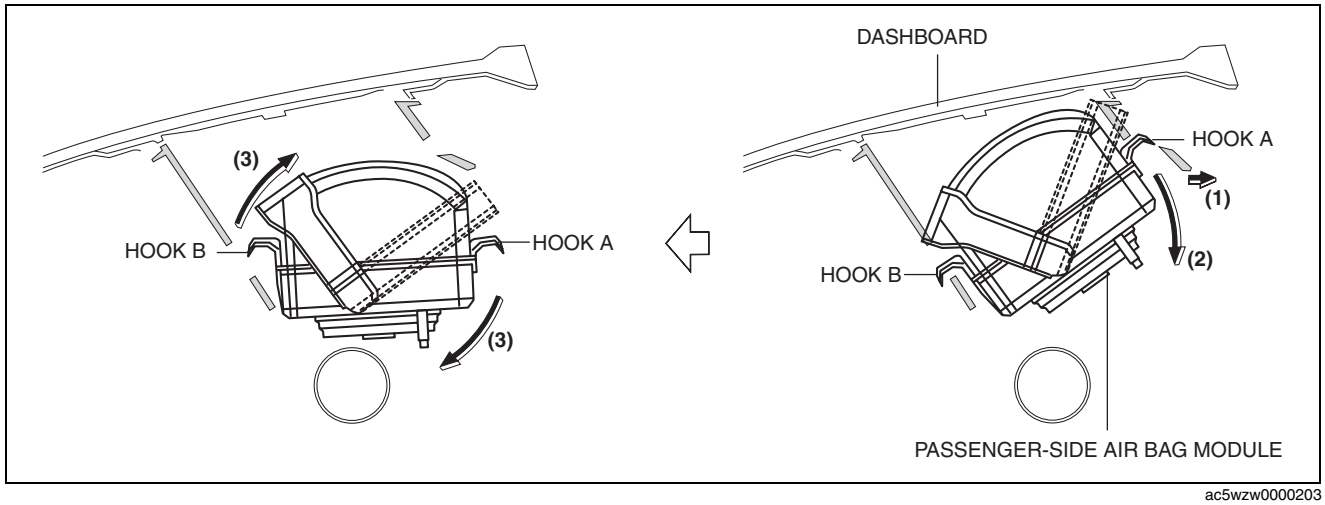


ac5wzw0000203



ac5wzw0000203

10. Pull the passenger-side air bag module in the direction of the arrow (2) and remove hooks A from the dashboard while spreading the dashboard in the direction of the arrow (1).

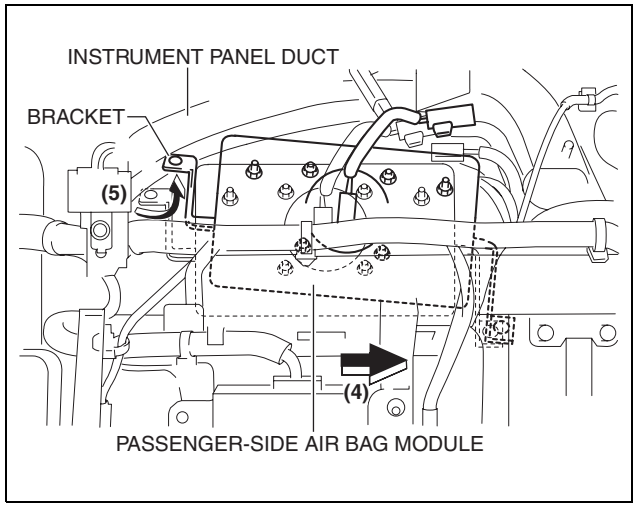


ac5wzw0000203

11. Move the passenger-side air bag module in the direction of the arrow (3) and detach hooks B from the dashboard.

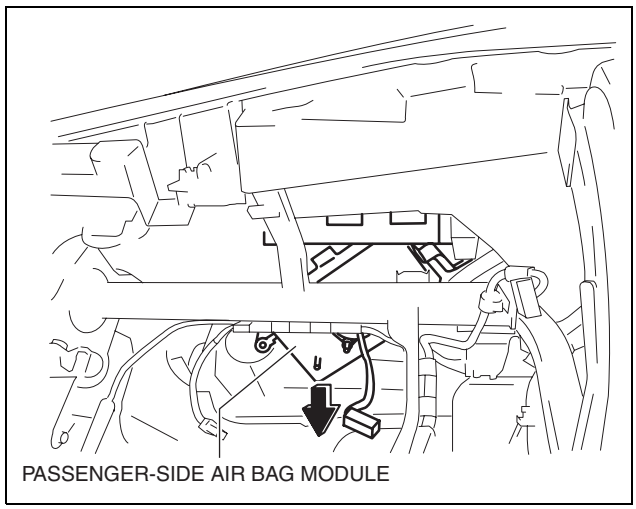
AIR BAG SYSTEM

12. Set the passenger-side air bag module bracket aside from the dashboard duct (5) while sliding the passenger-side air bag module in the direction of the arrow (4).



ac5wzw0000203

13. Remove the passenger-side air bag module.
14. Install in the reverse order of removal.
15. Switch the ignition ON (engine off or on).
16. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
    - If the air bag system warning light does not operate, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-5 FLOWCHART.)



ac5wzw0000204

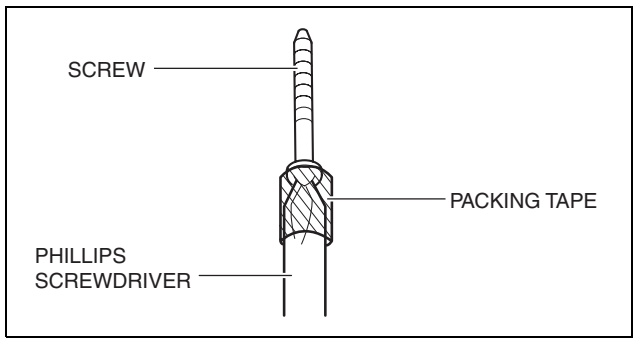
08

Screw Installation Note

Note
- The passenger-side air bag module fixing screws are set in the back side of the dashboard. Affix packing tape to phillips screwdriver so that the screws do not fall off while performing the work.

1. Insert a Phillips screwdriver into the screw groove and fix it with packing tape.
2. Tighten the screw halfway.
3. Remove the packing tape.

Caution
- **If the packing tape is left in the vehicle when tightening the screw, it may become a source of noise. When tightening the screw, remove the packing tape so that it does not remain in the vehicle.**



ac5wzw0000204

4. Tighten the screw completely.

AIR BAG SYSTEM

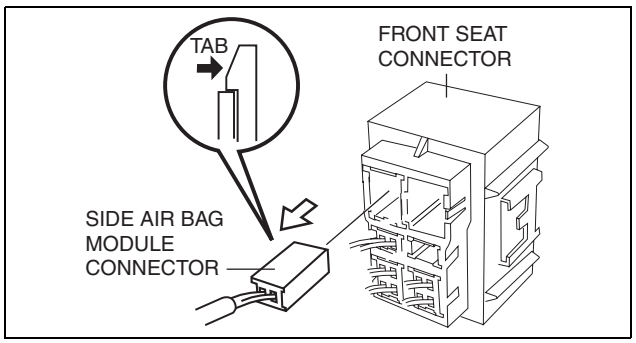
SIDE AIR BAG MODULE REMOVAL/INSTALLATION

id081000800800

Warning

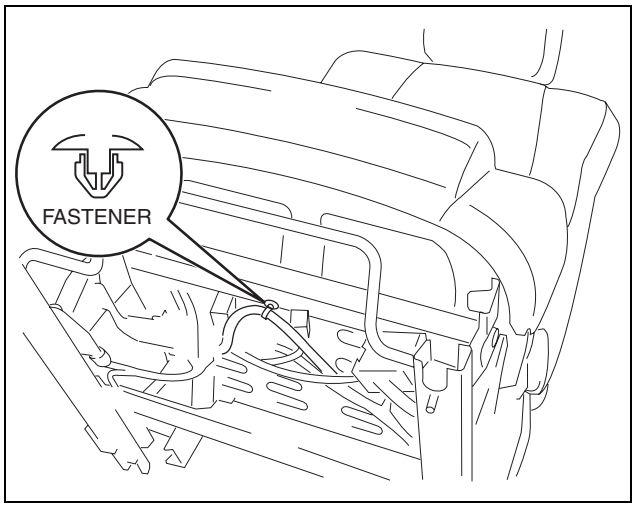
- **Handling the air bag module improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**
- **If the side air bag module is installed with debris in the seat back, the foreign material may be scattered when the side air bag module operates (deploys), causing injury. Verify that there is no foreign material in the seat back before installing the side air bag module.**

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the front seat. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.)
4. Remove the seat back trim and the seat back pad. (See 09-13-11 FRONT SEAT BACK TRIM REMOVAL/INSTALLATION.)
5. Disconnect the side air bag module connector.



ac5wzw0000200

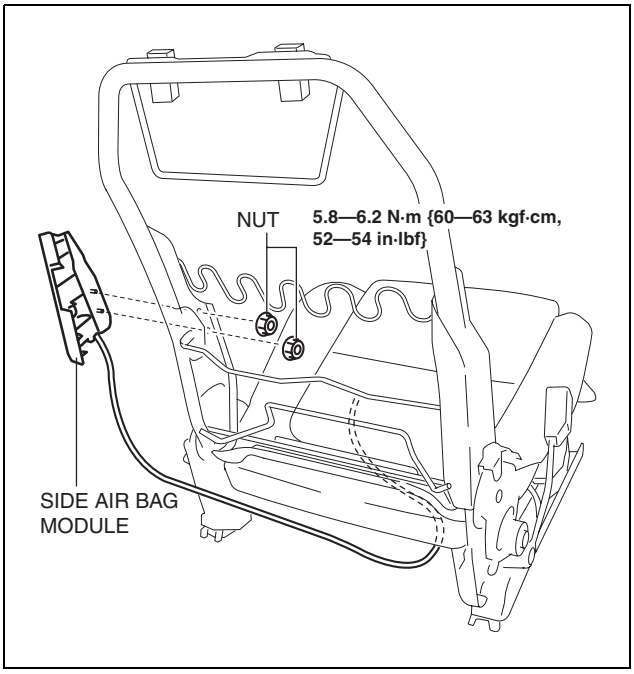
6. Remove the fastener.



ac5wzw0000200

AIR BAG SYSTEM

7. Remove the nuts.
8. Remove the side air bag module.
9. Install in the reverse order of removal.
10. Switch the ignition ON (engine off or on).
11. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
    - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-5 FLOWCHART.)



ac5wzw0000200

CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION

id081000800900

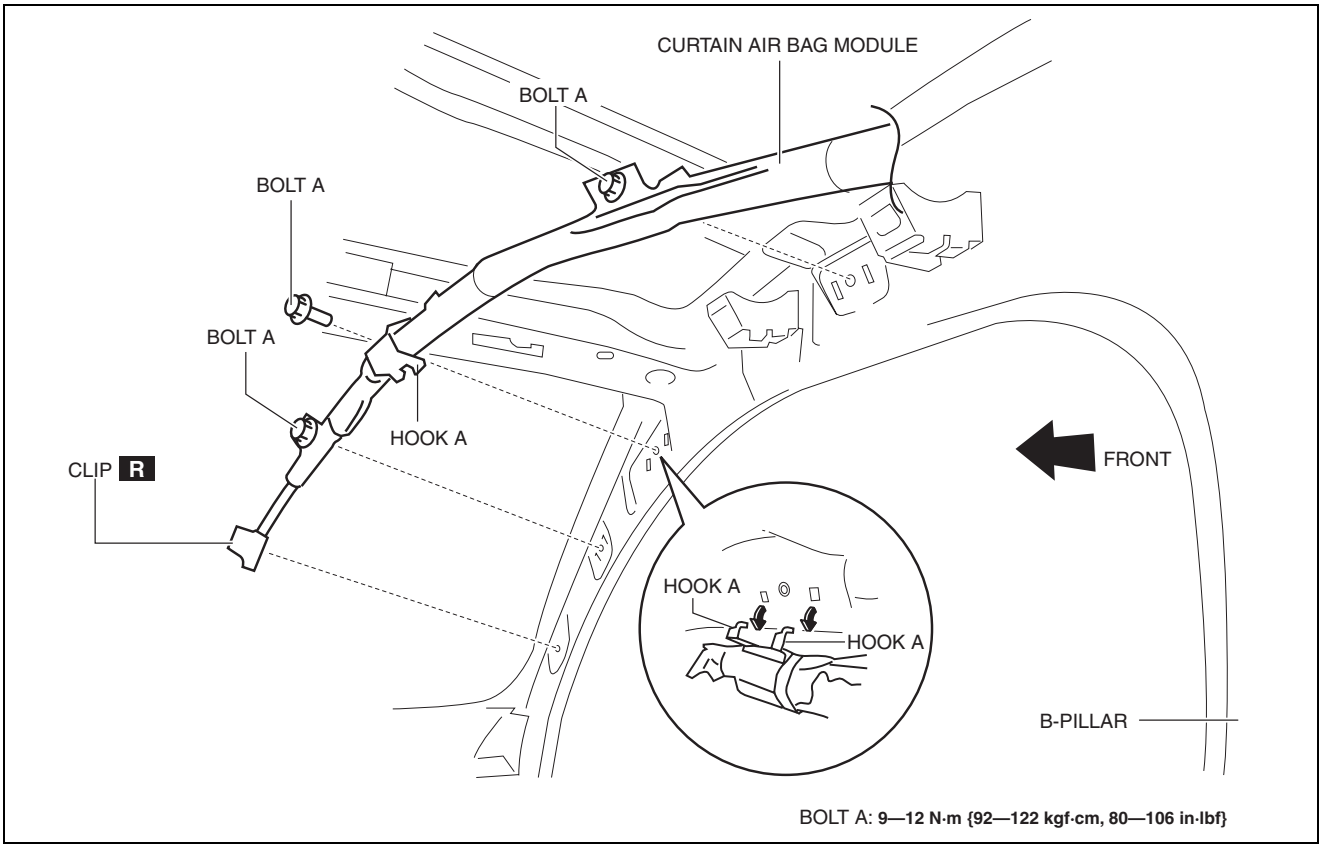
Warning

- **Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

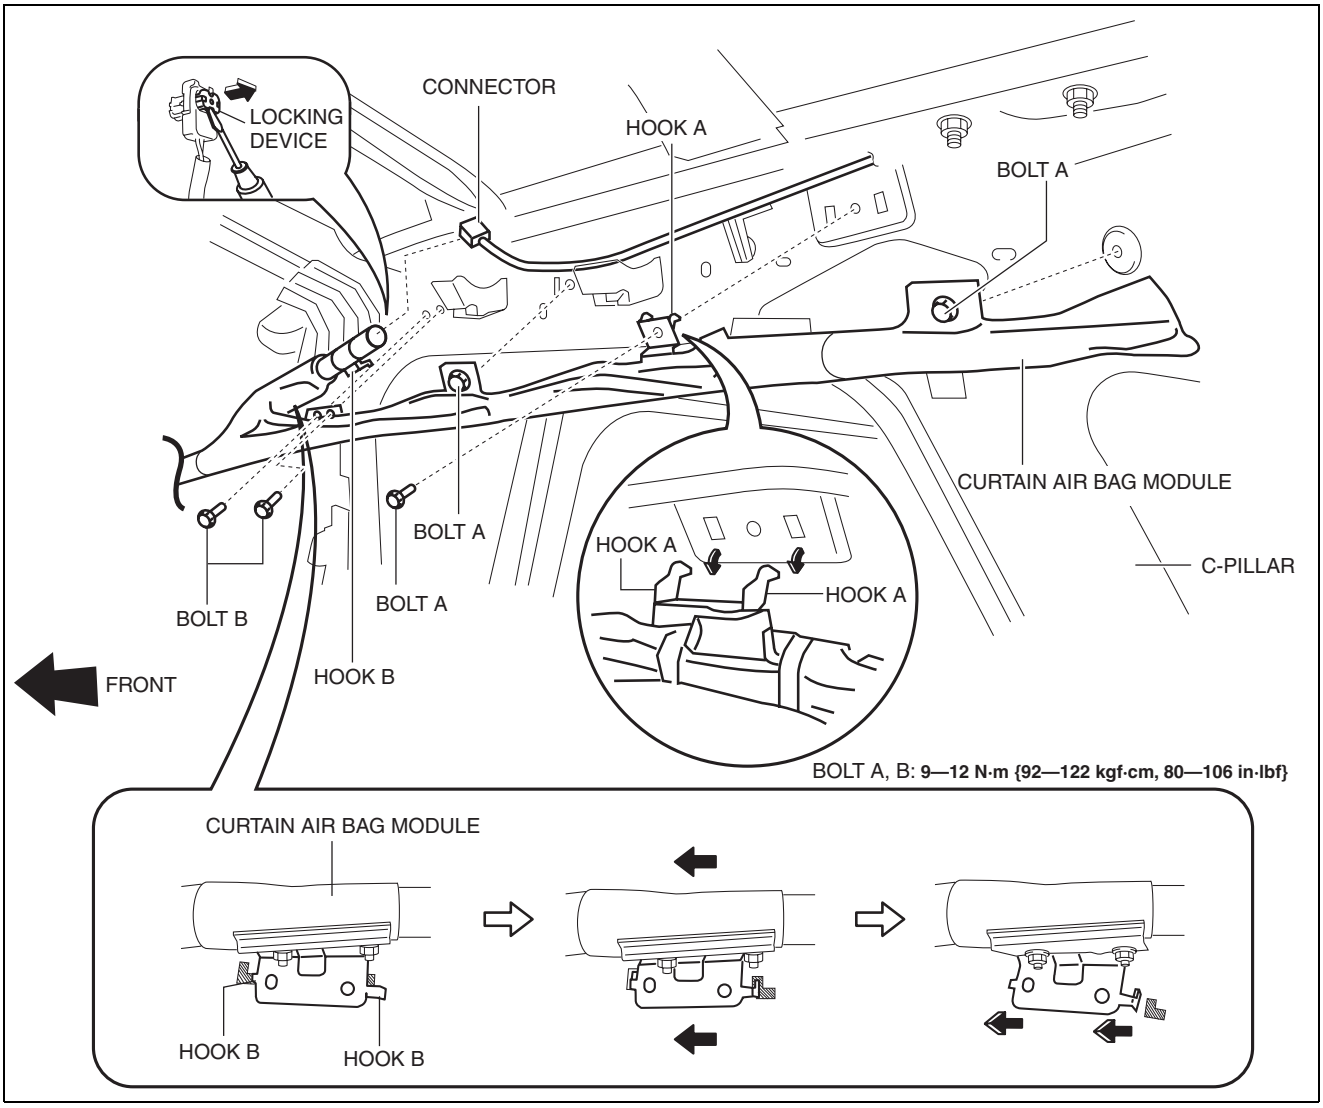
1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Partially peel back the seaming welts.
4. Remove the following parts:
   (1) Sunroof seaming welt (with sunroof) (See 09-15-6 SUNROOF UNIT REMOVAL/INSTALLATION.)
   (2) A-pillar trim (See 09-17-53 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (3) Front map light (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)
   (4) Sunvisor (See 09-17-93 SUNVISOR REMOVAL/INSTALLATION.)
   (5) Front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (7) B-pillar lower trim (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (8) Front seat belt adjuster cover (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (9) Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (10) B-pillar upper trim (See 09-17-58 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (11) Assist handle (See 09-17-91 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (12) Trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
   (13) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (14) Trunk side trim (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (15) D-pillar trim (See 09-17-60 D-PILLAR TRIM REMOVAL/INSTALLATION.)
   (16) C-pillar trim (See 09-17-59 C-PILLAR TRIM REMOVAL/INSTALLATION.)
5. Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.)

AIR BAG SYSTEM

6. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.



AIR BAG SYSTEM



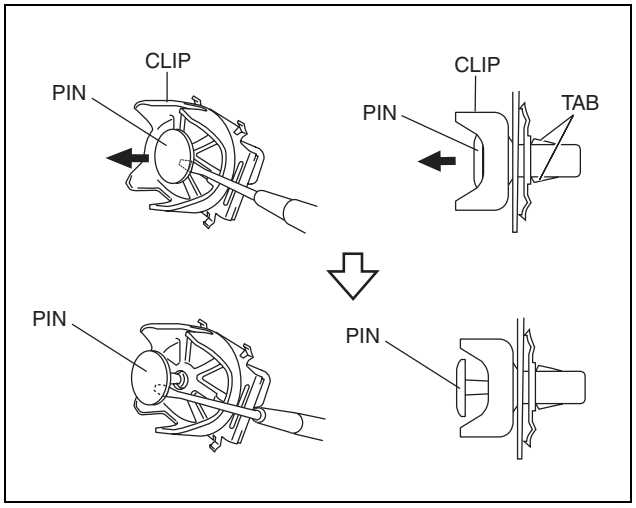
ac5wzw0000200

7. Disconnect the connector.
8. Remove the clip. (See 08-10-18 Clip Removal Note.)
9. Remove bolts A.
10. Remove bolts B.
11. Pull hook A in the direction shown in the figure and remove it from the body.
12. Pull hook B in the direction shown in the figure and remove it from the body.
13. Remove the curtain air bag module.
14. Install in the reverse order of removal.
15. When the Switch the ignition ON (engine off or on).
16. Verify that the air bag system warning light illuminates for **approx. 6 s and goes out.**
    - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-5 FLOWCHART.)

AIR BAG SYSTEM

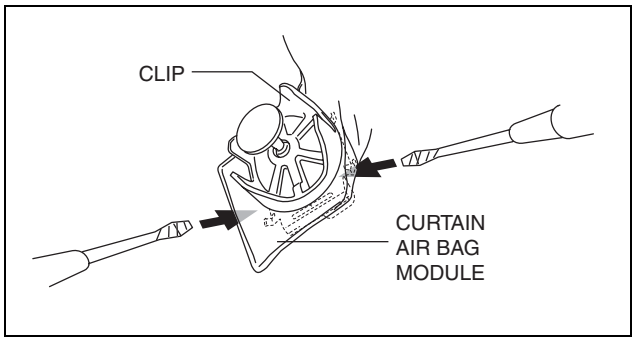
Clip Removal Note

1. Pull out the pin with flathead screwdriver as shown in the figure.



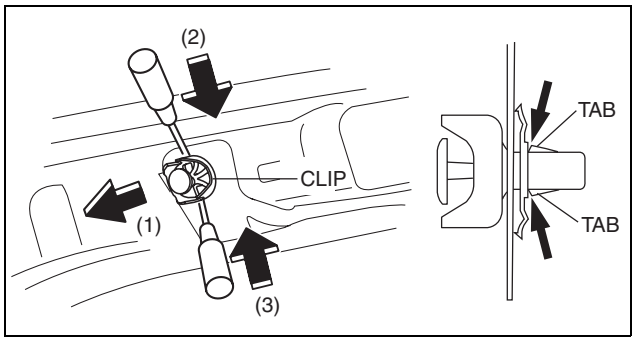
ac5wzw0000318

2. Insert a flathead screwdriver into shown in the figure.



ac5wzw0000200

3. While pulling the curtain air bag in the direction of the arrow shown in the figure (1), detach tabs by prying with a flathead screwdriver in the direction of the arrow (2) (3).
4. Remove the clip from the body.



am3uuw0000422

AIR BAG SYSTEM

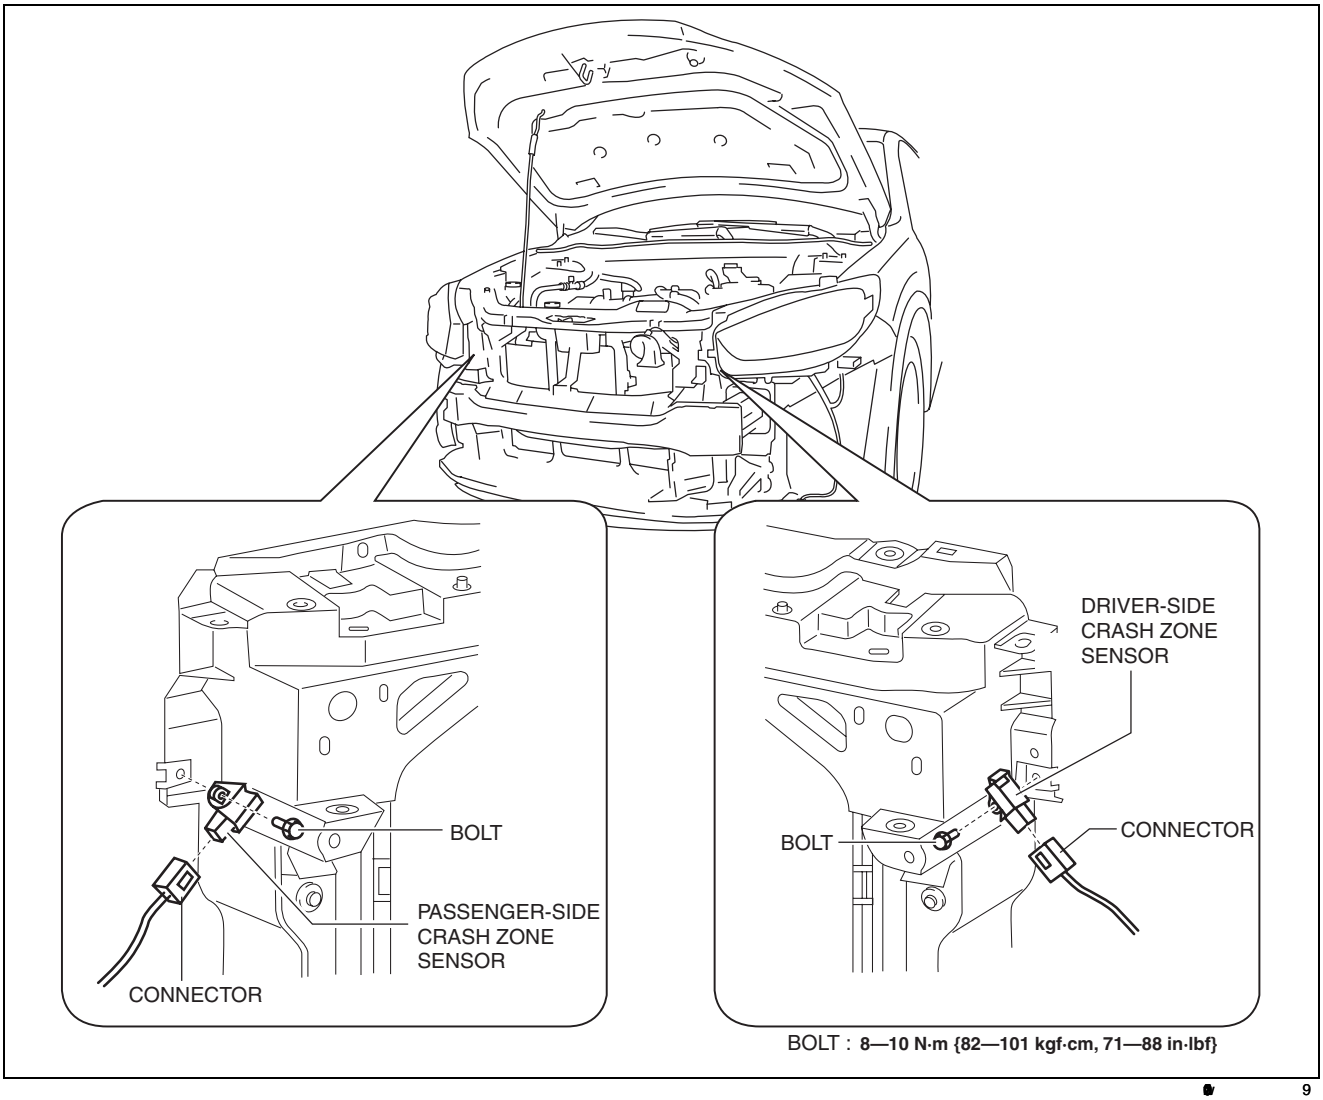
CRASH ZONE SENSOR REMOVAL/INSTALLATION

id081000800500

Warning

- **Handling the crash zone sensor improperly can accidentally deploy the air bags and pre-tensioner seat belts, which may seriously injure you. Read the air bag system service warnings and cautions before handling the crash zone sensor. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
4. Remove the bolt.

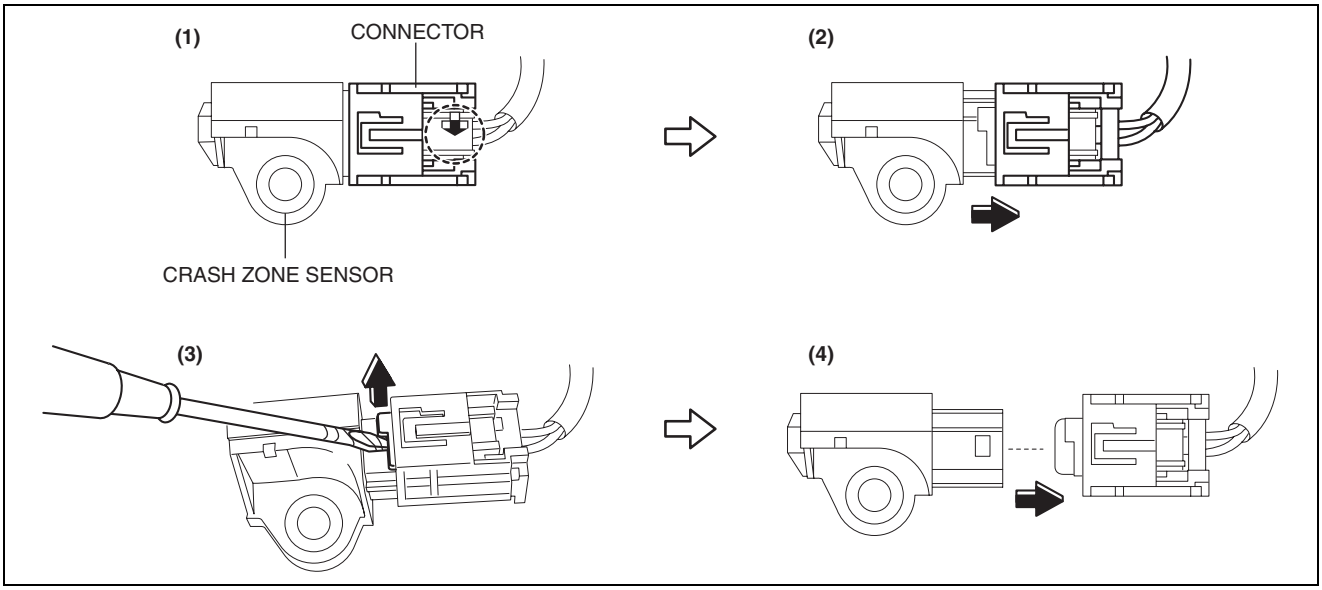


5. Disconnect the connector. (See 08-10-20 Connector Disconnect Note.)
6. Remove the crash zone sensor.
7. Install in the reverse order of removal.
8. Switch the ignition ON (engine off or on).
9. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-5 FLOWCHART.)

AIR BAG SYSTEM

Connector Disconnect Note

1. Press the area (1) indicated by the arrow and slide it as shown in the figure (2).



ac5wzw0000199

2. Lift up the location shown in the figure using a tape-wrapped flathead screwdriver (3) and disconnect the connector (4).

SAS CONTROL MODULE REMOVAL/INSTALLATION

id081000801400

Warning

- **Handling the SAS control module or air bag module improperly can accidentally deploy the air bag modules and pre-tensioner seat belt, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**
- **If the connector is connected and the ignition switch is turned to the ON position with the SAS control module not secured completely using the installation nuts, the SAS control module may detect a degree of impact even when something contacts it lightly, deploying the air bag module and pre-tensioner seat belt accidentally.**
- **If the DSC sensor initialization procedure is not completed, it could result in an unexpected accident due to the DSC being inoperative. Therefore, after the SAS control module is replaced, always perform the DSC sensor initialization procedure to ensure proper DSC operation.**
- **If configuration is not performed when the SAS control module is replaced with a new one, the vehicle specification information is not stored in the SAS control module and the system will not operate normally.**

Caution

- **When replacing the SAS control module, always perform the configuration procedure before removing the SAS control module. If the configuration is not performed and the SAS control module is removed, DTC B0003:53 will be displayed.**
- **When performing configuration, it is necessary to read the vehicle specification information from the SAS control module before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the SAS control module. The vehicle specification information is temporarily stored in the M-MDS.**

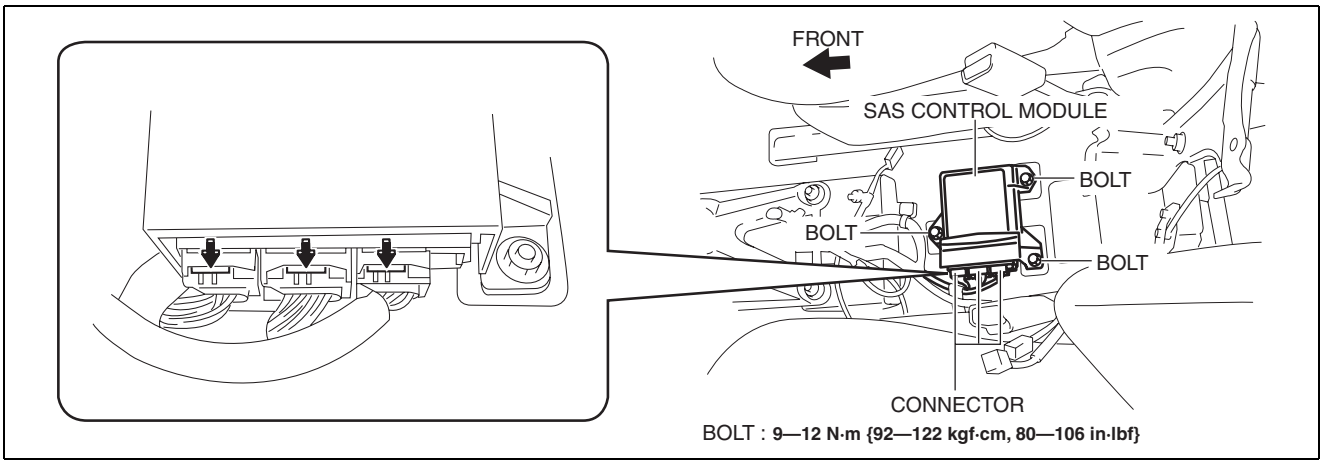
Note

- The SAS control module prior to replacement stores the vehicle specification information.
- A new SAS control module does not store any vehicle specification information.
- If the vehicle specification information from the SAS control module prior to replacement cannot be read, perform the configuration using As-Built data.

1. Perform SAS control module configuration when replacing it. (See 08-10-21 SAS CONTROL MODULE CONFIGURATION (USING READ/WRITE FUNCTION).)
2. Switch the ignition to off.

AIR BAG SYSTEM

3. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
4. Remove the following parts:
   (1) Front console box (See 09-17-40 FRONT CONSOLE BOX REMOVAL/INSTALLATION.)
   (2) Shift lever knob (MTX) (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
   (3) Shift panel (See 09-17-42 SHIFT PANEL REMOVAL/INSTALLATION.)
   (4) Upper panel (See 09-17-44 UPPER PANEL REMOVAL/INSTALLATION.)
   (5) Rear console (See 09-17-45 REAR CONSOLE REMOVAL/INSTALLATION.)
5. Set the parking brake lever out of the way. (See 04-12-3 PARKING BRAKE LEVER REMOVAL/INSTALLATION.)
6. Disconnect the connectors.



ac5wzw0000203

7. Remove the bolts.
8. Remove the SAS control module.
9. Install in the reverse order of removal.
10. Switch the ignition ON (engine off or on).
11. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
    - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-5 FLOWCHART.)
12. Perform the DSC sensor initialization procedures. (See 04-15-7 DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE.)

Note
- If configuration cannot be performed by reading/writing of the vehicle specification information, perform the configuration using As-Built information after replacing the SAS control module. (See 08-10-22 SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA).)

SAS CONTROL MODULE CONFIGURATION (USING READ/WRITE FUNCTION)

id081000891500

Note
- When performing configuration, it is necessary to read the vehicle specification information from the SAS control module before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the SAS control module. The vehicle specification information is temporarily stored in the M-MDS.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Module Programming”.
3. Then, select items from the screen menu in the following order.
   (1) Select “Programmable Module Installation”.
   (2) Select “RCM”.
4. Perform the configuration according to the directions on the screen.

AIR BAG SYSTEM

Caution
- **When the configuration is performed, CAN communication between the SAS control module and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.**

5. Verify the DTCs for all of the control modules connected to the CAN line.
   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

SAS CONTROL MODULE CONFIGURATION (USING AS-BUILT DATA)

id081000890300

Note
- If the configuration is performed using As-Built data, the set value of the personalization function is reset to the initial value (condition when shipped from factory). Verify the set value with the customer and perform the personalization function setting after performing the configuration using As-Built data.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Module Programming”.
3. Then, select items from the screen menu in the following order.
   (1) Select “As-Built”.
   (2) Select “RCM”.
4. Perform the as-built according to the directions on the screen.

Caution
- **When the configuration is performed, CAN communication between the SAS control module and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.**

5. Verify the DTCs for all of the control modules connected to the CAN line.
   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

SIDE AIR BAG SENSOR NO. 1 REMOVAL/INSTALLATION

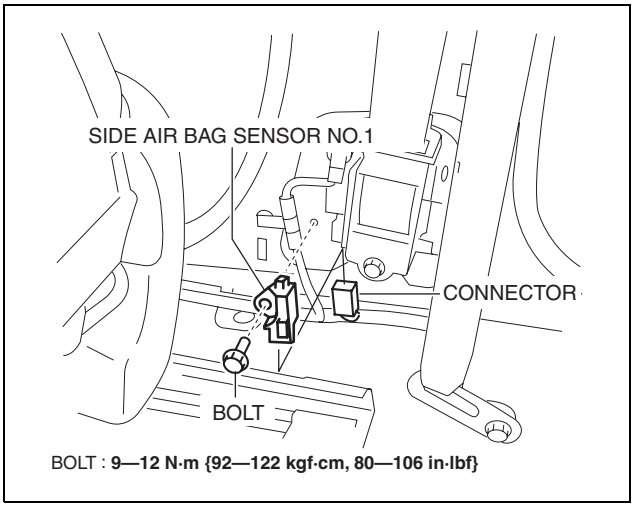
id081000800600

Warning
- **Handling the side air bag sensor improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the side air bag sensor. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the front scuff plate. (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
4. Remove the rear scuff plate. (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
5. Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)

AIR BAG SYSTEM

6. Remove the bolt.
7. Disconnect the connector. (See 08-10-23 Connector Disconnect Note.)
8. Remove the side air bag sensor No.1.
9. Install in the reverse order of removal.
10. Switch the ignition ON (engine off or on).
11. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
    - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-5 FLOWCHART.)

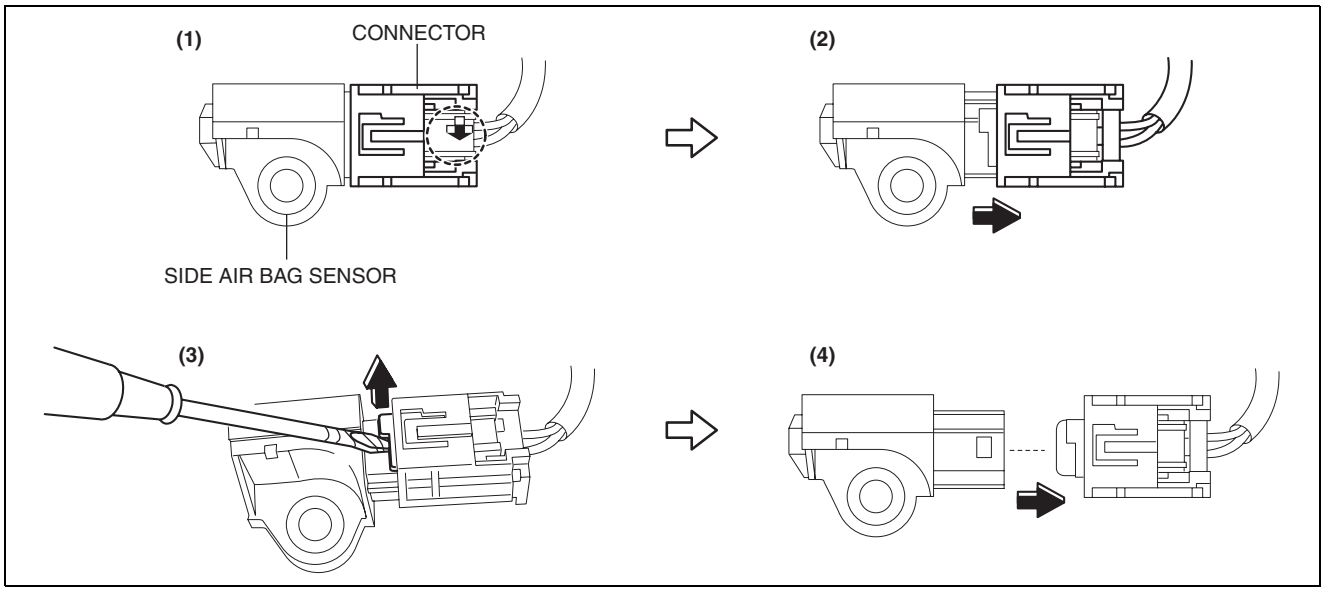


BOLT : **9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}**

9

Connector Disconnect Note

1. Press the area (1) indicated by the arrow and slide it as shown in the figure (2).



ac5wzw0000200

2. Lift up the location shown in the figure using a tape-wrapped flathead screwdriver (3) and disconnect the connector (4).

SIDE AIR BAG SENSOR NO. 2 REMOVAL/INSTALLATION

id081000800700

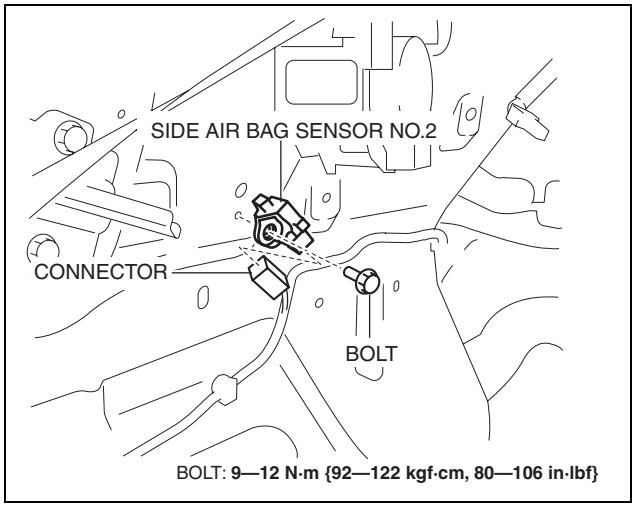
Warning

- **Handling the side air bag sensor improperly can accidentally operate (deploy) the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the side air bag sensor. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the following parts:
   (1) Remove the trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
   (2) Remove the trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (3) Remove the rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) Remove the trunk side trim (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)

AIR BAG SYSTEM

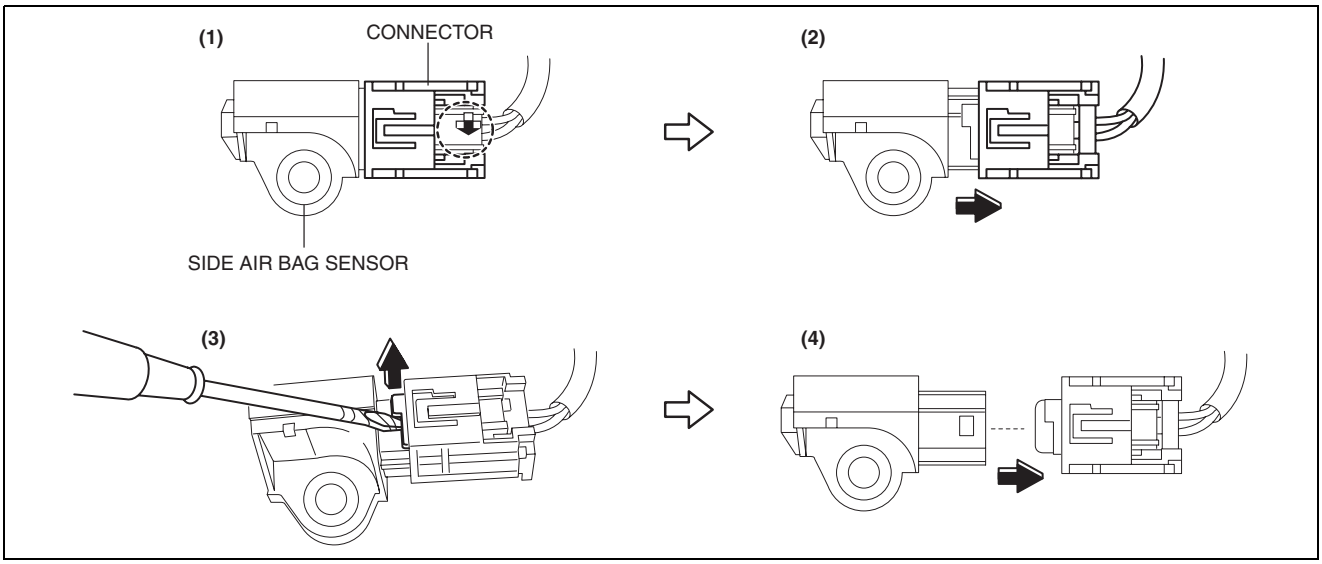
4. Remove the bolt.
5. Disconnect the connector. (See 08-10-24 Connector Disconnect Note.)
6. Remove the side air bag sensor No.2.
7. Install in the reverse order of removal.
8. Switch the ignition ON (engine off or on).
9. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-5 FLOWCHART.)



ac5wzw0000100

Connector Disconnect Note

1. Press the area (1) indicated by the arrow and slide it as shown in the figure (2).



ac5wzw0000200

2. Lift up the location shown in the figure using a tape-wrapped flathead screwdriver (3) and disconnect the connector (4).

CLOCK SPRING REMOVAL/INSTALLATION

id081000802000

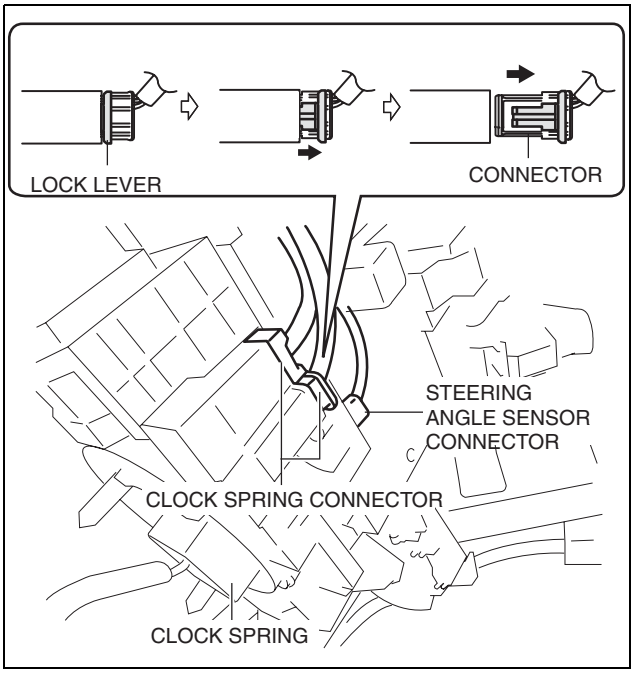
Caution

- **If the disc on the combination switch is deformed or has foreign material adhering to it, performance of the steering angle sensor may be reduced, causing abnormal operation. When handling the clock spring, be careful not to deform the disc and make sure there is no foreign material on it.**

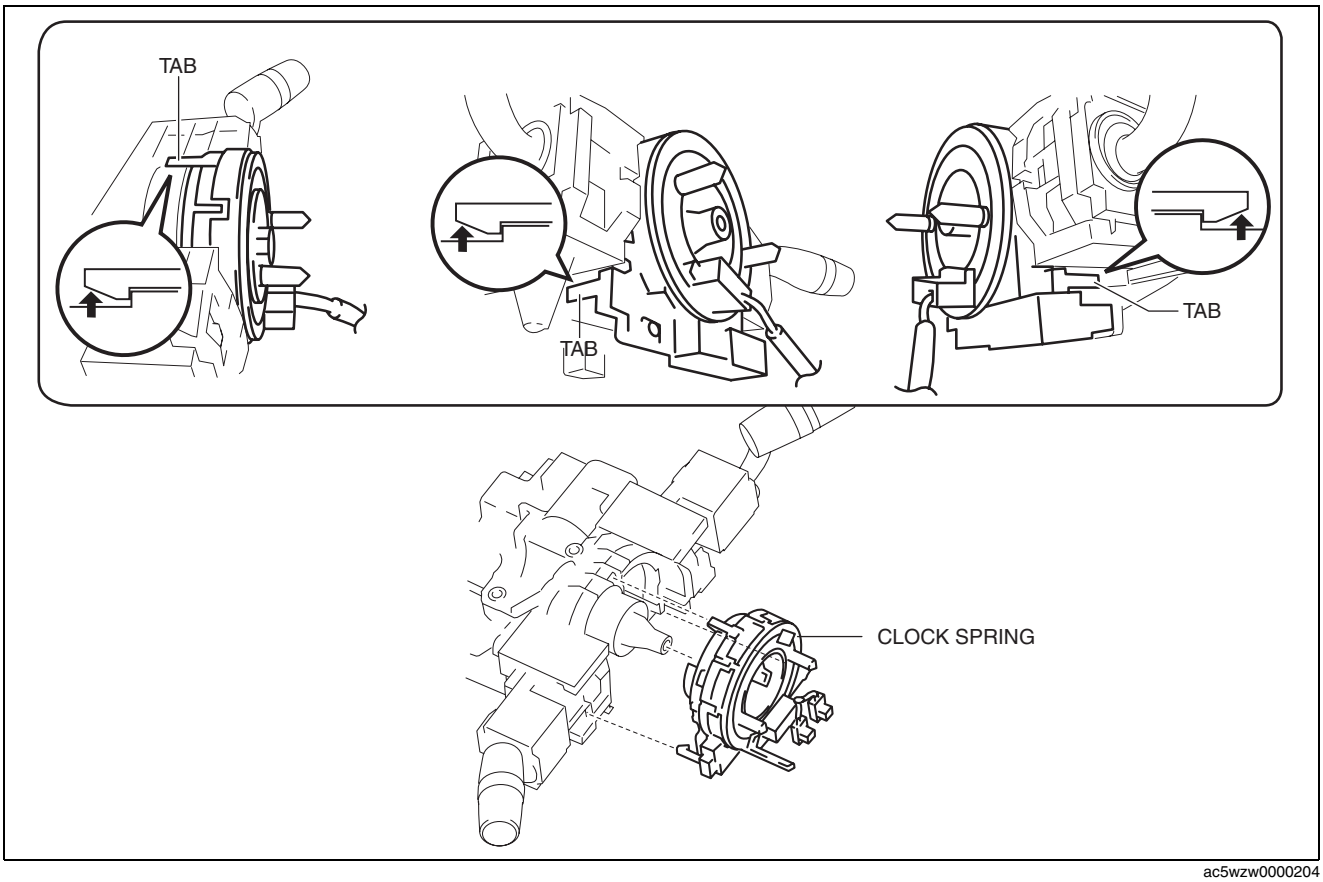
1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the driver-side air bag module. (See 08-10-6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
4. Remove the steering wheel. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
5. Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.)

AIR BAG SYSTEM

6. Disconnect the clock spring connector.
7. Disconnect the steering angle sensor connector. (vehicles with steering angle sensor)
8. Remove the tab direction of the arrow shown in the figure and remove the clock spring.



ac5wzw0000204



ac5wzw0000204

9. Install in the reverse order of removal. (See 08-10-26 Clock Spring Installation Note.)
10. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
    - If the air bag system warning light does not operate in the manner described above, there are malfunctions in the system. Inspect the system using the on-board diagnostic. (See 08-02-5 FLOWCHART.)

AIR BAG SYSTEM

Clock Spring Installation Note

Caution
- **If the clock spring is not adjusted, the spring wire in the clock spring will break due to overtension when the steering wheel is turned. Always adjust the clock spring after installing it.**

- Adjust the clock spring after installing it. (See 08-10-26 CLOCK SPRING ADJUSTMENT.)

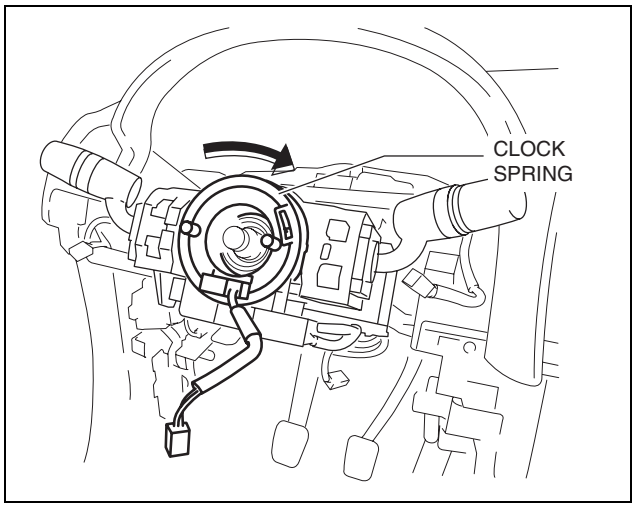
CLOCK SPRING ADJUSTMENT

id081000802100

1. Set the front wheels straight ahead.

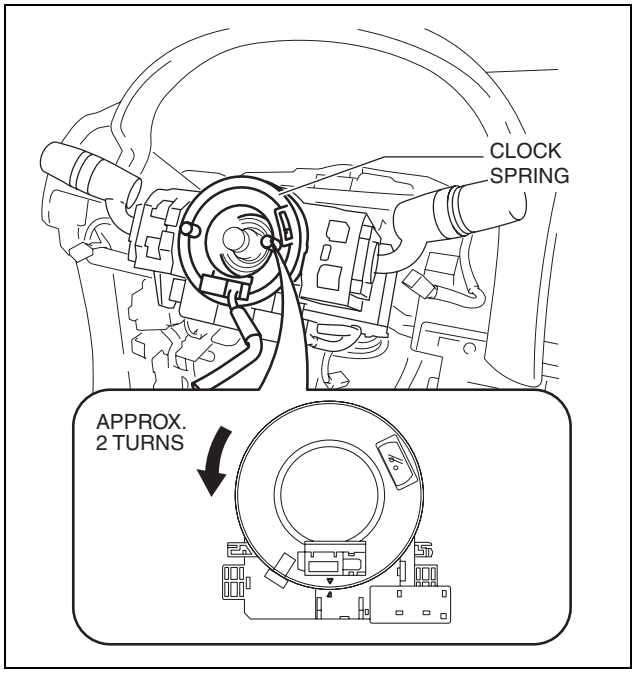
Caution
- **The clock spring will break if over-wound. Do not forcibly turn the clock spring.**

2. Turn the clock spring clockwise until it stops.



ac5wzw0000204

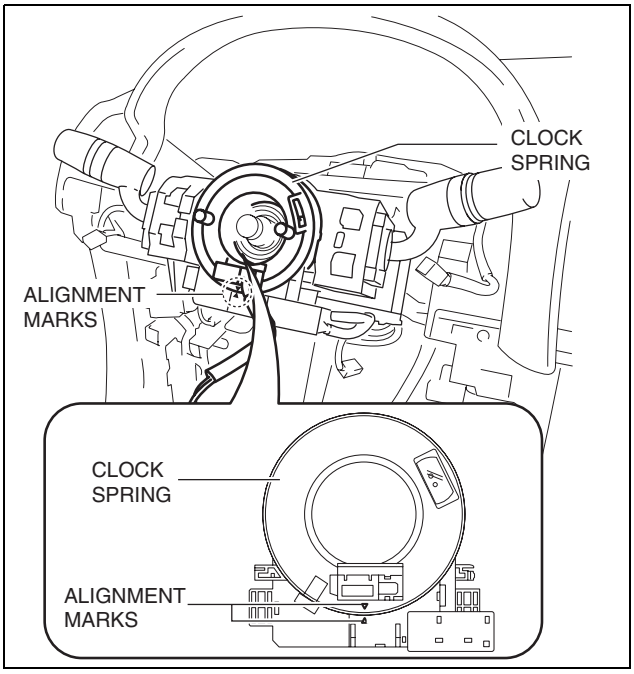
3. Turn the clock spring counterclockwise **approx. 2 turns**.



ac5wzw0000204

AIR BAG SYSTEM

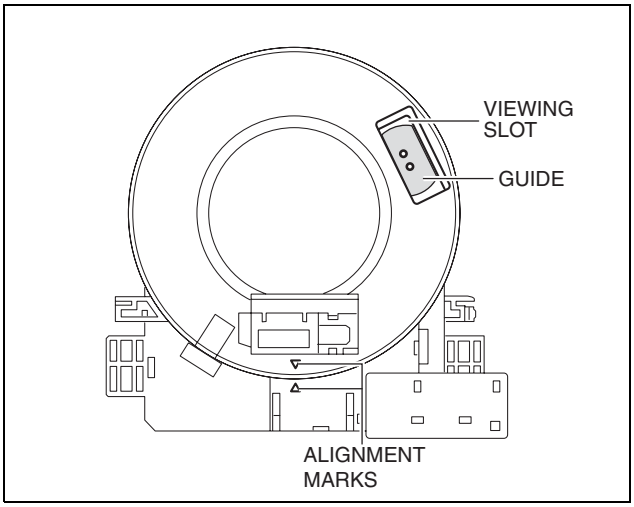
4. Align the mark on the clock spring with the mark on the outer housing.



ac5wzw0000204

Note

- After adjusting the alignment marks, the guides can be verified in the viewing slots shown in the figure.



ac5wzw0000204

AIR BAG SYSTEM

CLOCK SPRING INSPECTION

id081000802200

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the driver-side air bag module. (See 08-10-6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
4. Remove the steering wheel. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
5. Remove the column cover. (See 09-17-25 COLUMN COVER REMOVAL/INSTALLATION.)
6. Remove the clock spring. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.)
7. Verify that the continuity is as indicated in the table.
   - If not as indicated in the table, replace the clock spring.

Note

- When the vehicle-side connector for the clock spring is disconnected, terminals 1A, 1B are shorted to prevent unexpected operation (deployment) of the air bag module.

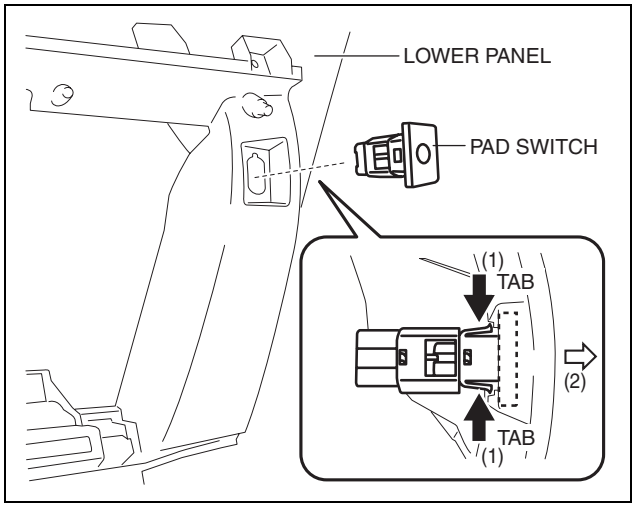
PASSENGER AIR BAG DEACTIVATION (PAD) SWITCH REMOVAL/INSTALLATION

id081000804100

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the following parts:
   (1) Front scuff plate (passenger-side) (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Front side trim (passenger-side) (See 09-17-62 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Glove compartment (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (4) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (5) Lower panel (passenger-side) (See 09-17-35 LOWER PANEL REMOVAL/INSTALLATION.)
4. Remove the PAD switch in the direction of the arrow (2) shown in the figure while pressing the tabs in the direction of the arrow (1).
5. Install in the reverse order of removal.
6. Switch the ignition ON (engine off or on).
7. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate normally, refer to the on-board diagnostic system (air bag system) and perform inspection of the system.

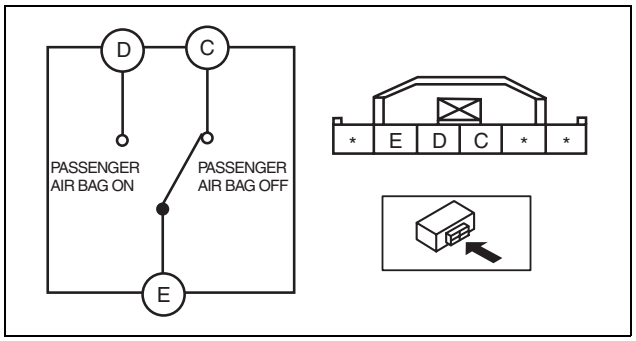


ac5wzw0000205

PASSENGER AIR BAG DEACTIVATION (PAD) SWITCH INSPECTION

id081000804000

1. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the PAD switch. (See 08-10-30 PASSENGER AIR BAG DEACTIVATION (PAD) SWITCH REMOVAL/INSTALLATION.)
3. Verify that the continuity between the PAD switch terminals is as indicated in the table.
   - If not as indicated in the table, replace the PAD switch.



ac5wzw0000205

AIR BAG SYSTEM

AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES

id081000801100

Warning

- **A live (undeployed) air bag module or pre-tensioner seat belt may accidentally operate (deploy) when it is disposed of and cause serious injury. Do not dispose of a live (undeployed) air bag module and pre-tensioner seat belt. If the SSTs (Deployment tool and Adapter harness) are not available, consult the nearest Mazda representative for assistance.**

Caution

- **Deploying the air bag modules and pre-tensioner seat belts inside the vehicle may cause damage to the vehicle interior. When the vehicle is not to be scrapped, always deploy the air bag modules and pre-tensioner seat belts outside the vehicle.**

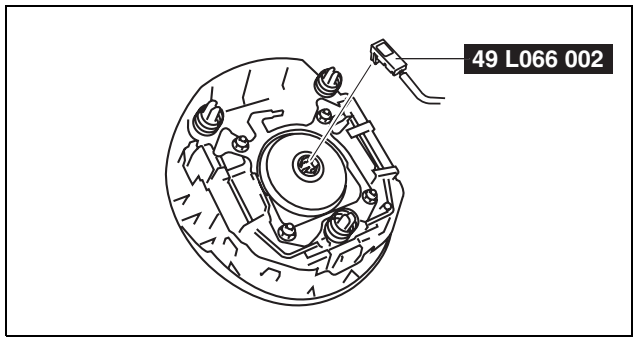
- If the vehicle is to be scrapped, or when disposing of any air bag modules or pre-tensioner seat belts, operate (deploy) them inside the vehicle by following the deployment procedure below and using the **SST (Deployment tool)**.
- When disposing of an operated (deployed) air bag module and pre-tensioner seat belt, refer to “AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DISPOSAL PROCEDURES”.

Deployment Procedure for Inside of Vehicle

1. Inspect the **SST (Deployment tool)**. (See 08-10-45 INSPECTION OF SST (DEPLOYMENT TOOL).)
2. Move the vehicle to an open space, away from strong winds, and close all of the vehicle doors and windows.
3. Switch the ignition to off.
4. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
5. Follow the procedure below for operating (deploying) the applicable air bag module or pre-tensioner seat belt.

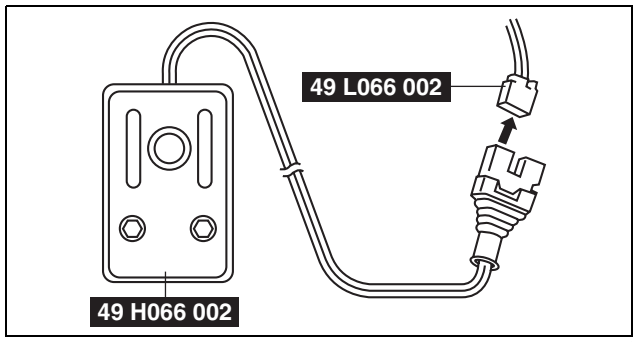
Driver-side Air Bag Module

1. Remove the driver-side air bag module. (See 08-10-6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
2. Connect the **SST (Adapter harness)** to the driver-side air bag module as shown in the figure.
3. Install the driver-side air bag module. (See 08-10-6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)



ac5wzw0000200

4. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.
5. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
6. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
7. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.



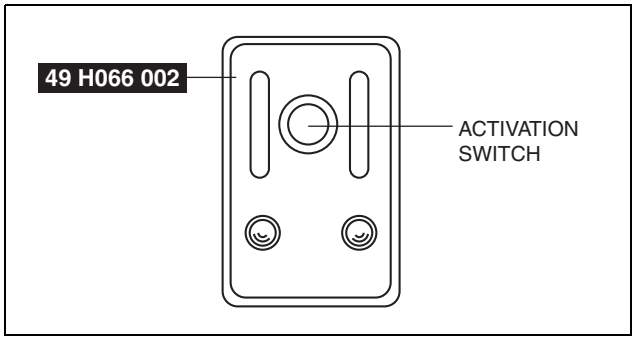
am3zzw0000581

AIR BAG SYSTEM

8. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the air bag module.

   Warning
   - **The air bag module is very hot immediately after it is operated (deployed). You can get burned. Do not touch the air bag module for at least 15 min after deployment.**

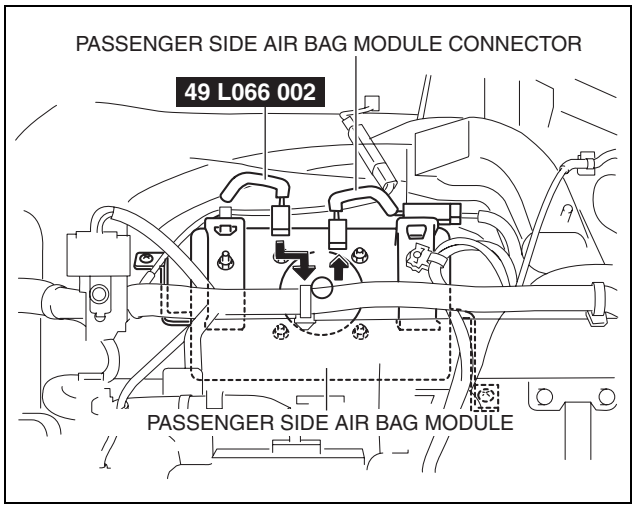
9. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.



am3zzw0000970

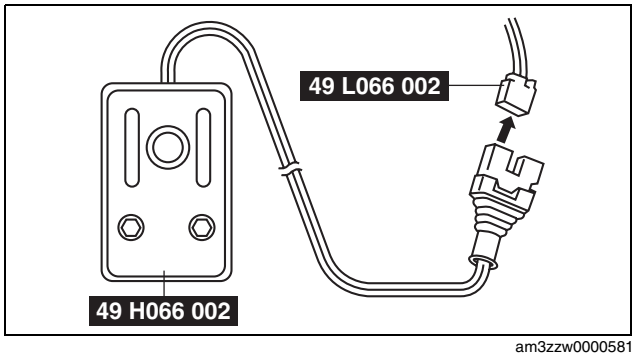
Passenger-side Air Bag Module

1. Remove the following parts:
   (1) Front scuff plate (passenger-side) (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Front side trim (passenger-side) (See 09-17-62 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Dashboard under cover (See 09-17-35 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
   (4) Front heat duct (passenger-side) (See 07-11-22 FRONT HEAT DUCT REMOVAL/INSTALLATION.)
   (5) Glove compartment (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (6) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (7) Lower panel (passenger-side) (See 09-17-35 LOWER PANEL REMOVAL/INSTALLATION.)
   (8) Blower unit (See 07-11-5 BLOWER UNIT REMOVAL/INSTALLATION.)
2. Disconnect the passenger-side air bag module connector.
3. Connect the **SST (Adapter harness)** to the passenger-side air bag module as shown in the figure.



ac5wzw0000201

4. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.
5. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
6. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
7. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.



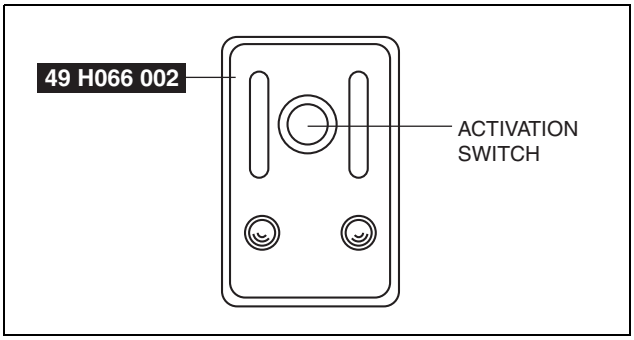
am3zzw0000581

AIR BAG SYSTEM

8. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the air bag module.

   Warning
   - **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

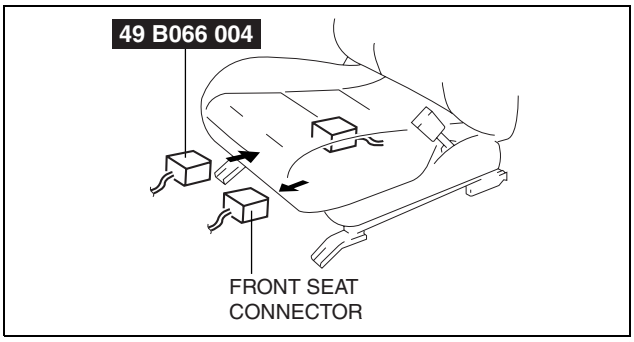
9. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.



am3zzw0000970

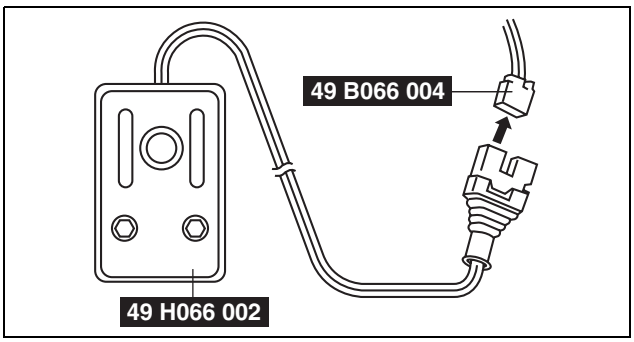
Side Air Bag Module

1. Disconnect the front seat connector.
2. Connect the **SST (Adapter harness)** to the front seat connector as shown in the figure.



ac5wzw0000201

3. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.
4. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
5. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
6. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

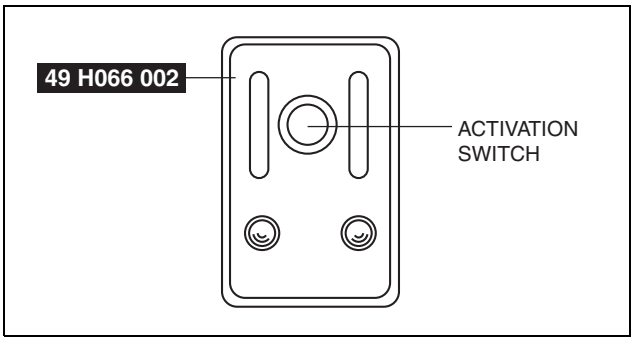


ac5wzw0000201

7. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the side air bag module.

   Warning
   - **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

8. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

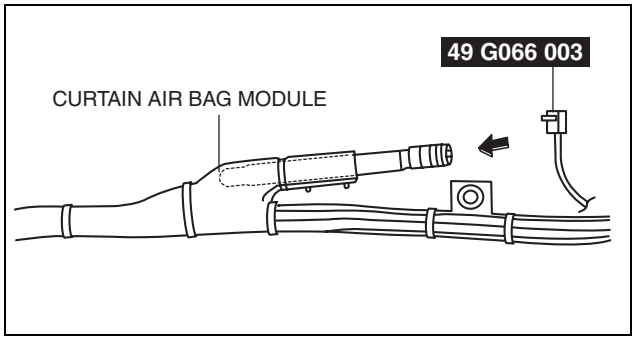


am3zzw0000970

AIR BAG SYSTEM

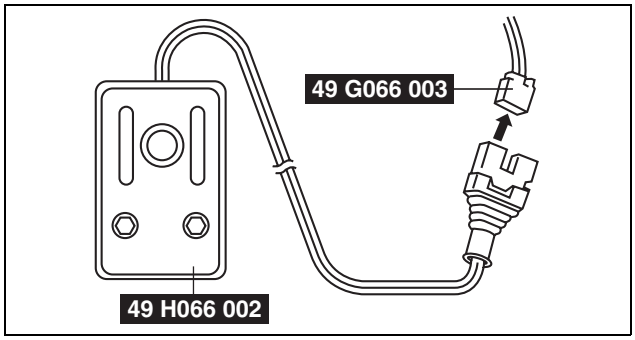
Curtain Air Bag Module

1. Remove the following parts:
   (1) Front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) B-pillar lower trim (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (4) Front seat belt adjuster cover (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (5) Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (6) B-pillar upper trim (See 09-17-58 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (7) Assist handle (See 09-17-91 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (8) Trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
   (9) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (10)Trunk side trim (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (11)D-pillar trim (See 09-17-60 D-PILLAR TRIM REMOVAL/INSTALLATION.)
   (12)C-pillar trim (See 09-17-59 C-PILLAR TRIM REMOVAL/INSTALLATION.)
2. Peel back the headliner.
3. Disconnect the curtain air bag module connector.
4. Connect the **SST (Adapter harness)** to the curtain air bag module as shown in the figure.



ac5wzw0000201

5. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.
6. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
7. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
8. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

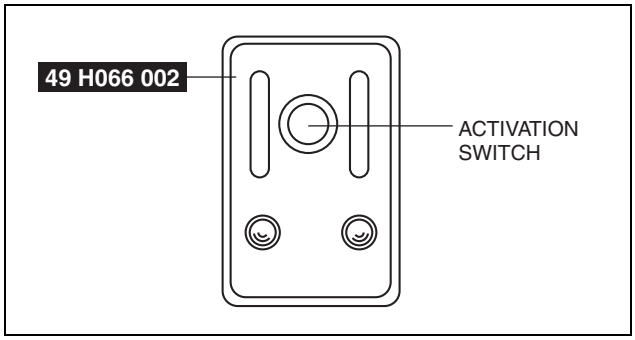


ac5wzw0000201

9. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the curtain air bag module.

   Warning
   - **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

10. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

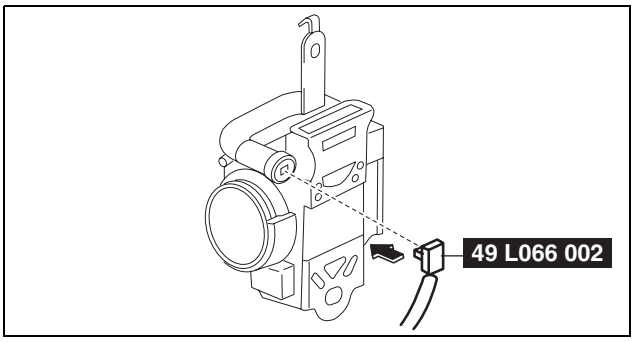


am3zzw0000970

AIR BAG SYSTEM

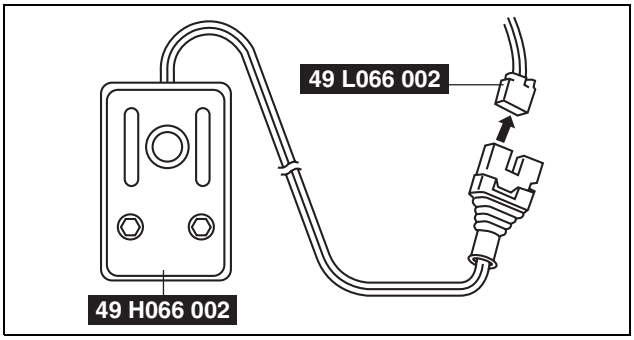
Pre-tensioner Seat Belt

1. Remove the front scuff plate. (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the rear scuff plate. (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
3. Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
4. Remove the pre-tensioner seat belt and connect the **SST (Adapter harness)** as shown in the figure. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
5. Install the pre-tensioner seat belt.



ac5wzw0000201

6. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.
7. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
8. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
9. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

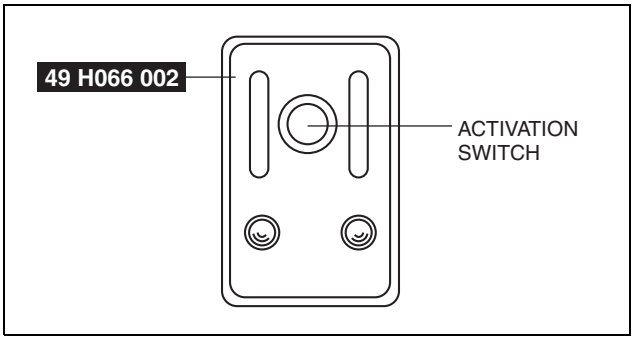


am6xuw0000203

10. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the pre-tensioner seat belt.

    Warning
    - **The pre-tensioner seat belt is very hot immediately after it is operated (deployed). You can be burned. Do not touch the pre-tensioner seat belt for at least 15 min after deployment.**

11. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.



am3zzw0000970

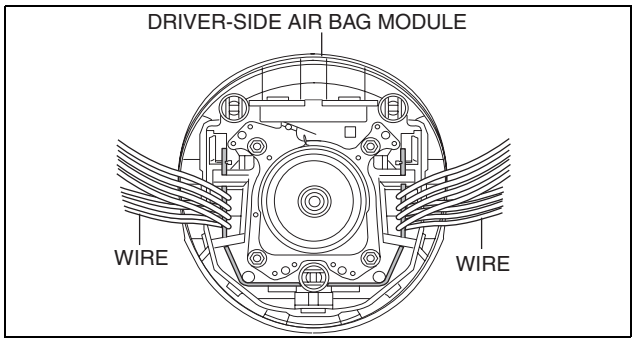
AIR BAG SYSTEM

Deployment Procedure for Outside of Vehicle

1. Inspect the **SST (Deployment tool)**. (See 08-10-45 INSPECTION OF SST (DEPLOYMENT TOOL).)
2. Switch the ignition to off.

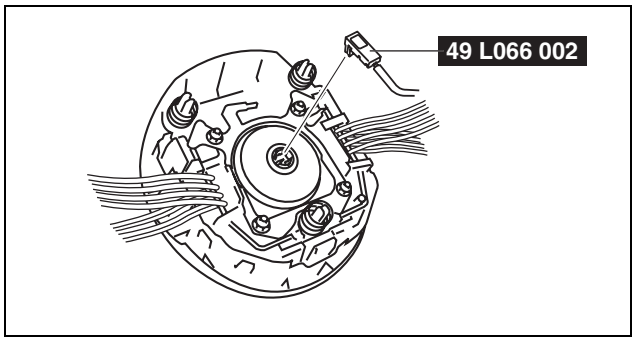
Driver-side Air Bag Module

1. Remove the driver-side air bag module. (See 08-10-6 DRIVER-SIDE AIR BAG MODULE REMOVAL/ INSTALLATION.)
2. Wrap the wiring harness (cross section **1.25 mm^2 {0.002 in^2} or more**) at least four times around the position shown in the figure for the driver-side air bag module.



ac5wzw0000201

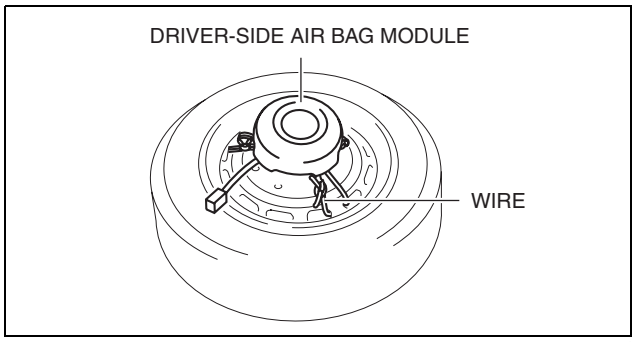
3. Connect the **SST (Adapter harness)** to the driver-side air bag module.



ac5wzw0000201

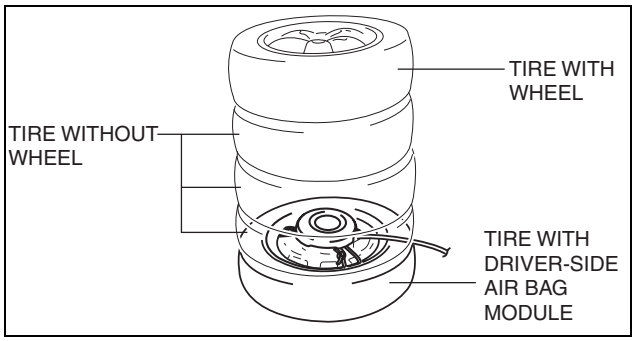
4. Place the driver-side air bag module on the center of the tire wheel with the padded surface facing up. To secure the air bag module to the tire wheel, wrap a wire (cross section **1.25 mm^2 {0.002 in^2} or more**) through the wheel and the bolt installation holes of the air bag module **at least 4 times**.

   Warning
   - **If the air bag module is not properly installed to the tire wheel, serious injury may occur when the module is operated (deployed). When installing the air bag module to the tire wheel, make sure the padded surface is facing up.**



ac5wzw0000201

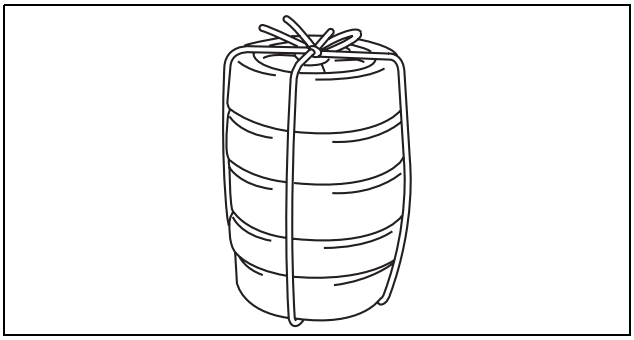
5. Stack three tires without wheels on top of the tire with the driver-side air bag module, and then stack another tire with a wheel on the very top.



ac5wzw0000201

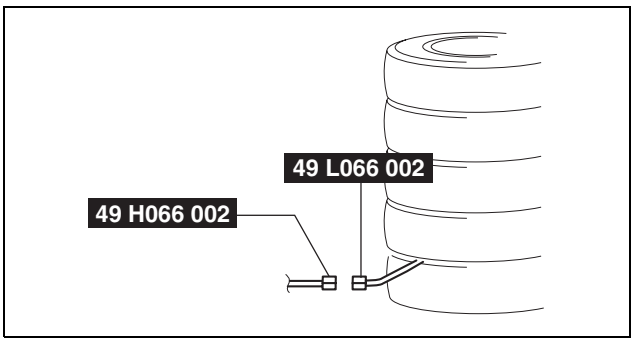
AIR BAG SYSTEM

6. Secure the tires with wire.



am6zzw0000096

7. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.
8. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
9. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
10. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

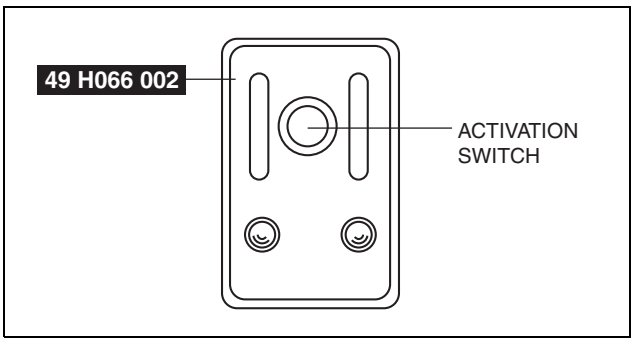


am3zzw0000581

11. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the air bag module.

    Warning
    - **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

12. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.



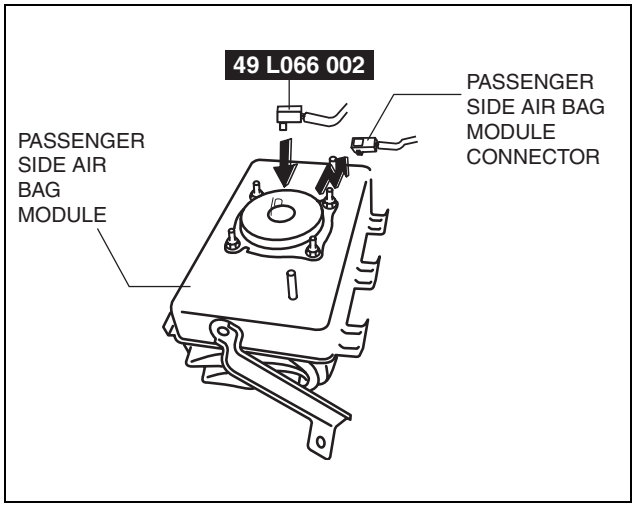
am3zzw0000970

Passenger-side Air Bag Module

1. Remove the following parts:
   (1) Front scuff plate (passenger-side) (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Front side trim (passenger-side) (See 09-17-62 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (3) Dashboard under cover (See 09-17-35 DASHBOARD UNDER COVER REMOVAL/INSTALLATION.)
   (4) Front heat duct (passenger-side) (See 07-11-22 FRONT HEAT DUCT REMOVAL/INSTALLATION.)
   (5) Glove compartment (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (6) Decoration panel (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
   (7) Lower panel (passenger-side) (See 09-17-35 LOWER PANEL REMOVAL/INSTALLATION.)
   (8) Blower unit (See 07-11-5 BLOWER UNIT REMOVAL/INSTALLATION.)

AIR BAG SYSTEM

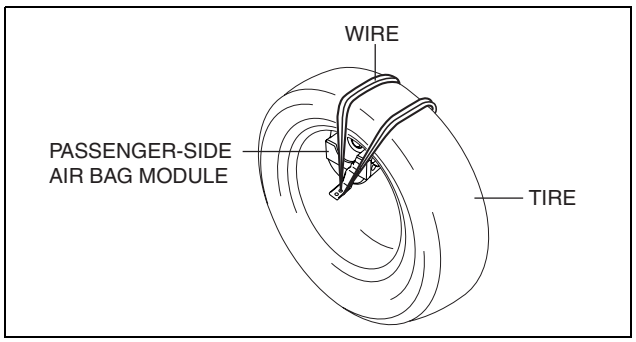
2. Disconnect the passenger-side air bag module connector.
3. Connect the **SST (Adapter harness)** to the passenger-side air bag module as shown in the figure.



ac5wzw0000202

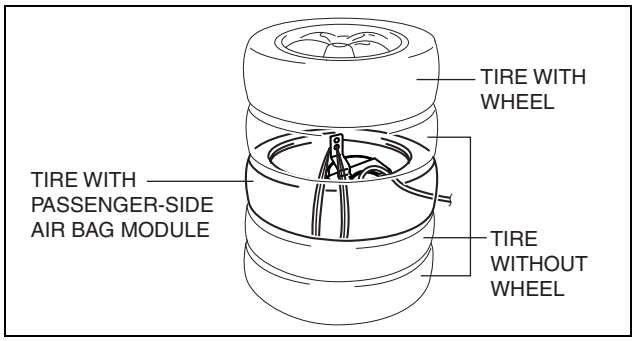
4. Place the padded surface of the passenger-side air bag module facing the center of the tire as shown in the figure. To secure the air bag module to the tire wheel, wrap a wire (cross section **1.25 mm^2 {0.002 in^2} or more**) through the tire and the bolt installation holes **at least 4 times** as shown in the figure.

Warning
- **If the air bag module is not properly secured to the tire, the tires may fall over by the impact of operation (deployment) and cause serious injury. To prevent this, secure the air bag module properly with the padded surface facing the center of the tire.**



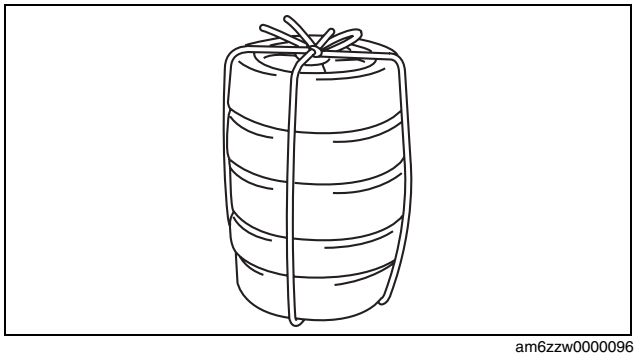
am6zzw0000096

5. Stack the tire with the passenger-side air bag module on top of two tires without wheels. Stack a tire without a wheel on top of the tire with the passenger-side air bag module, and then stack another tire with a wheel on the very top.



am6xuw0000182

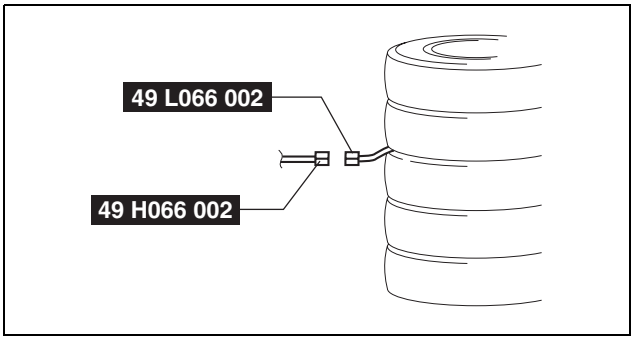
6. Secure the tires with wire.



am6zzw0000096

AIR BAG SYSTEM

7. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.
8. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
9. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
10. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

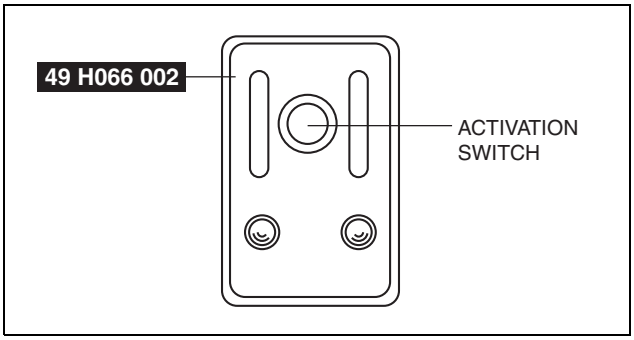


am3zzw0000581

11. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the air bag module.

Warning
- **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

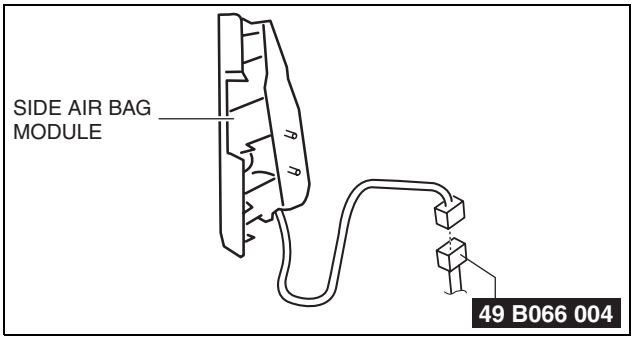
12. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.



am3zzw0000970

Side Air Bag Module

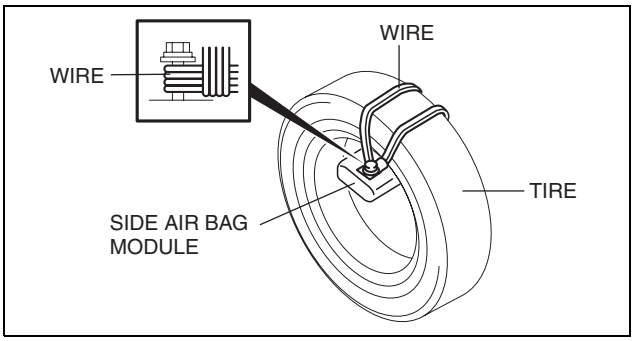
1. Remove the front seat. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.)
2. Remove the front seat back trim and pad. (See 09-13-11 FRONT SEAT BACK TRIM REMOVAL/INSTALLATION.)
3. Remove the side air bag module. (See 08-10-14 SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
4. Connect the **SST (Adapter harness)** to the side air bag module as shown in the figure.



ac5wzw0000202

5. Put the side air bag module inside the tire and secure it to the tire by wrapping a wire (cross section **1.25 mm^2 {0.002 in^2} or more**) through the tire and the bolt **at least 4 times**.

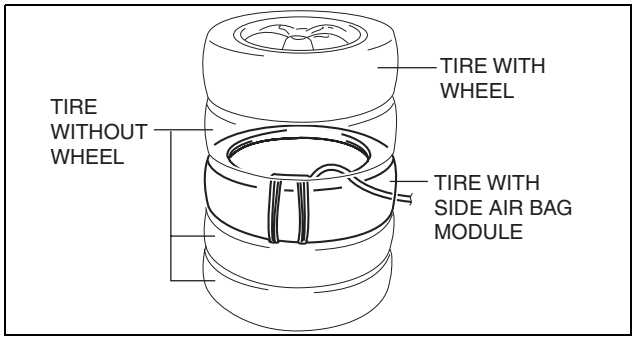
Warning
- **If the air bag module is not properly secured to the tire, the tires may fall over by the impact of operation (deployment) and cause serious injury. To prevent this, secure the air bag module properly with the padded surface facing the center of the tire.**



am3uuw0000424

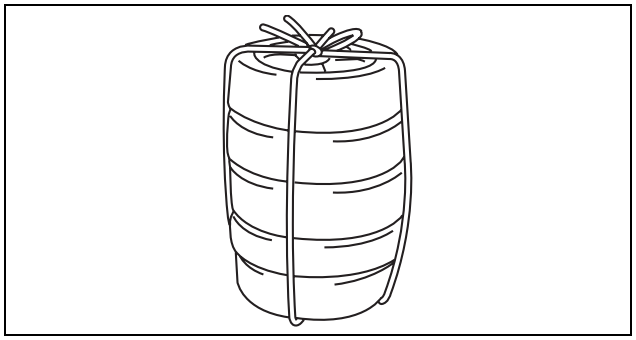
AIR BAG SYSTEM

6. Stack the tire with the side air bag module on top of two tires without wheels. Stack a tire without a wheel on top of the tire with the side air bag module, and then stack another tire with a wheel on the very top.



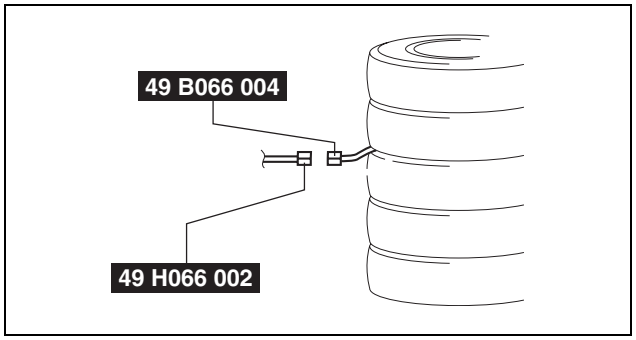
am2zzw0000037

7. Secure the tires with wire.



am6zzw0000096

8. Connect the **SST (Deployment tool)** to the **SST (Adapter harness).**
9. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
10. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
11. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

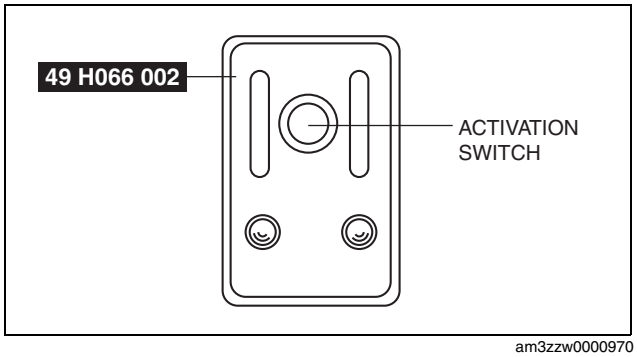


ac5wzw0000202

12. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the side air bag module.

Warning
- **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

13. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.



am3zzw0000970

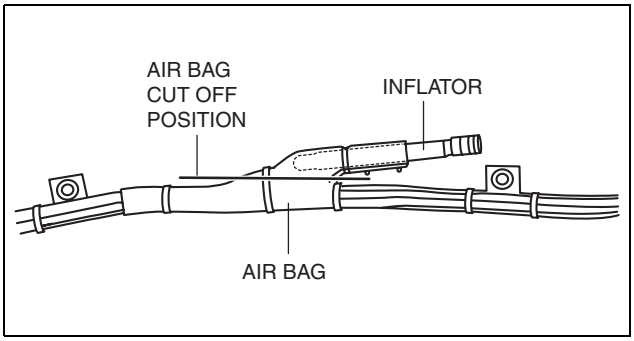
AIR BAG SYSTEM

Curtain Air Bag Module

1. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Partially peel back the seaming welts.
3. Remove the following parts:
   (1) Sunroof seaming welt (vehicles with sunroof) (See 09-15-6 SUNROOF UNIT REMOVAL/INSTALLATION.)
   (2) A-pillar trim (See 09-17-53 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (3) Front map light (See 09-18-95 MAP LIGHT REMOVAL/INSTALLATION.)
   (4) Sunvisor (See 09-17-93 SUNVISOR REMOVAL/INSTALLATION.)
   (5) Front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (7) B-pillar lower trim (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (8) Front seat belt adjuster cover (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (9) Upper anchor of the front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (10)B-pillar upper trim (See 09-17-58 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (11)Assist handle (See 09-17-91 ASSIST HANDLE REMOVAL/INSTALLATION.)
   (12)Trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
   (13)Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (14)Trunk side trim (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (15)D-pillar trim (See 09-17-60 D-PILLAR TRIM REMOVAL/INSTALLATION.)
   (16)C-pillar trim (See 09-17-59 C-PILLAR TRIM REMOVAL/INSTALLATION.)
4. Remove the headliner. (See 09-17-94 HEADLINER REMOVAL/INSTALLATION.)
5. Remove the curtain air bag module. (See 08-10-15 CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION.)
6. Cut off the air bag part of the curtain air bag module at the position shown in the figure.

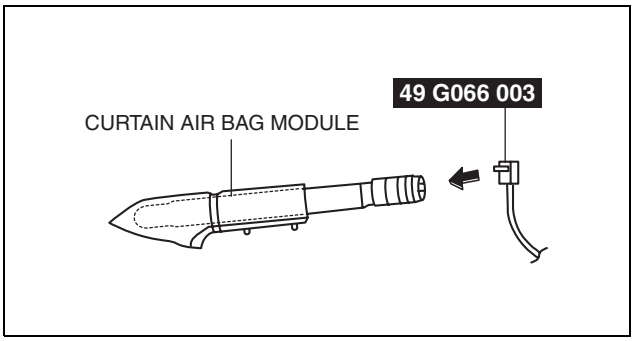
Warning

- **Be sure not to crush the pipe on the side where it is cut. If it is crushed completely, the interior pressure of the pipe will build up and can cause it to explode during air bag module operation (deployment).**



ac5wzw0000202

7. Disconnect the curtain air bag module connector.
8. Connect the **SST (Adapter harness)** to the curtain air bag module as shown in the figure.

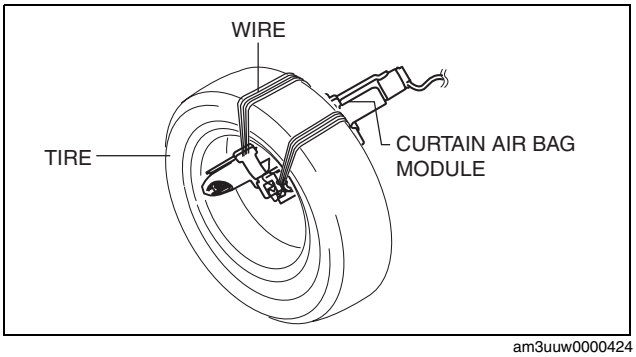


ac5wzw0000202

9. Secure the curtain air bag module to the tire, by wrapping a wire (cross section **1.25 mm^2 {0.002 in^2} or more**) through the tire and the bolt installation holes **at least 4 times** as shown in the figure.

Warning

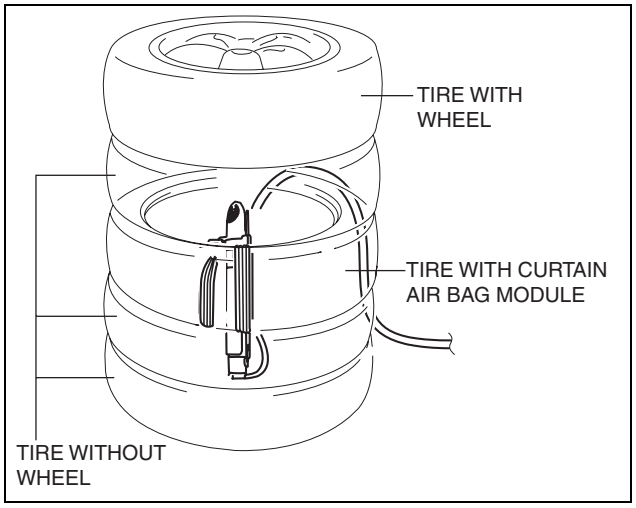
- **If the air bag module is not properly installed to the tire, serious injury may occur when the module is operated (deployed). Make sure to install the air bag module securely.**



am3uuw0000424

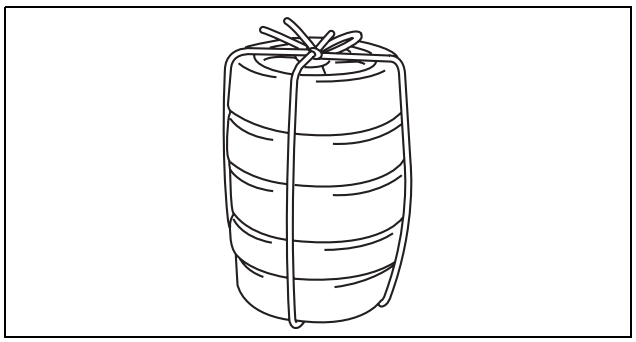
AIR BAG SYSTEM

10. Stack the tire with the curtain air bag module on top of two tires without wheels. Stack a tire without a wheel on top of the tire with the curtain air bag module, and then stack another tire with a wheel on the very top.



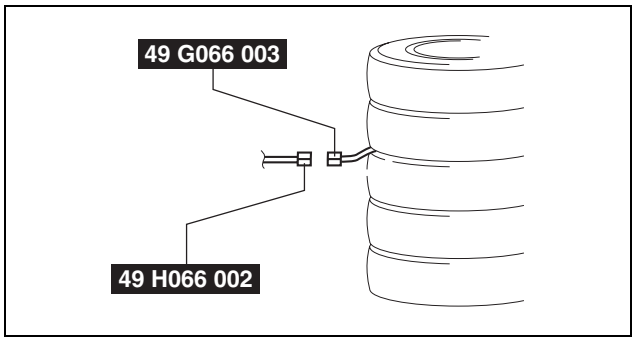
am3uuw0000424

11. Secure the tires with wire.



am6zzw0000096

12. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.
13. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
14. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
15. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.



ac5wzw0000202

16. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the curtain air bag module.

Warning
- **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

17. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.

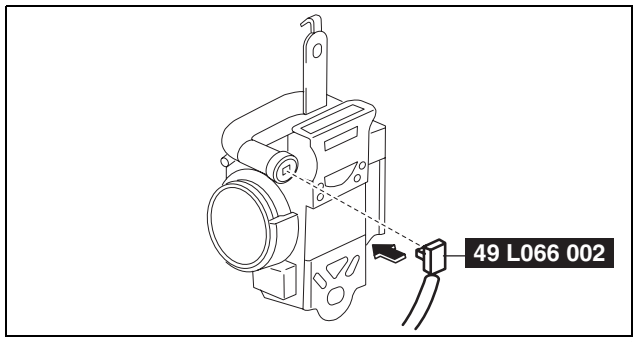
AIR BAG SYSTEM

Pre-tensioner Seat Belt

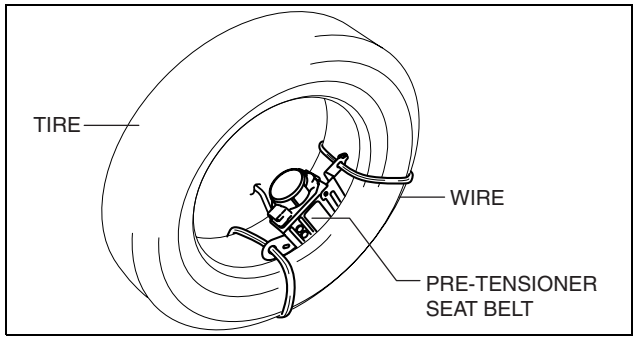
1. Remove the front scuff plate. (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the rear scuff plate. (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
3. Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
4. Remove the pre-tensioner seat belt and connect the **SST (Adapter harness)** as shown in the figure. (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)



ac5wzw0000201

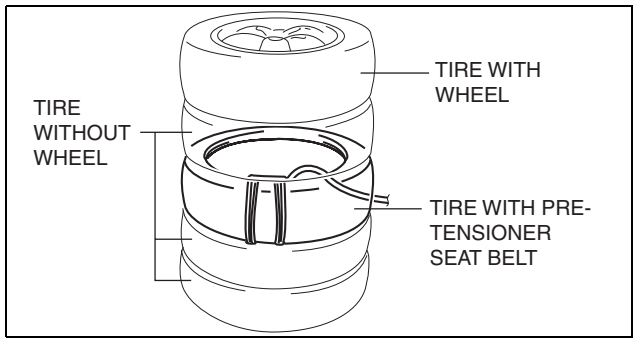
5. Put the pre-tensioner seat belt inside the tire and secure it to the tire by wrapping a wire (cross section **1.25 mm^2 {0.002 in^2} or more**) through the tire and the bolt installation holes **at least 4 times**.

   Warning
   - **If the pre-tensioner seat belt is not properly installed to the tire, serious injury may occur when the pre-tensioner part is operated (deployed). When installing the pre-tensioner seat belt to the tire, make sure the pre-tensioner part is inside the tire.**



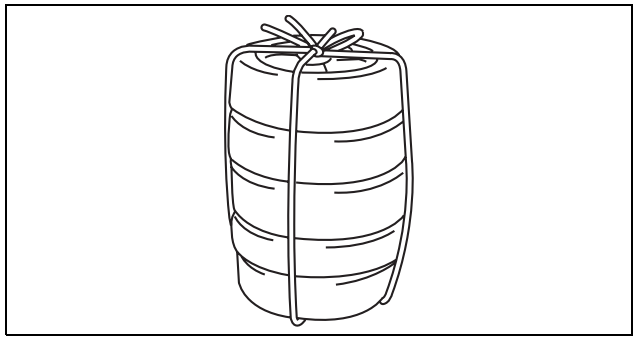
am6zzw0000097

6. Stack the tire with the pre-tensioner seat belt on to of two tires without wheels. Stack a tire without a wheel on top of the tire with the pre-tensioner seat belt, and then stack another tire with a wheel on the very top.



am2zzw0000037

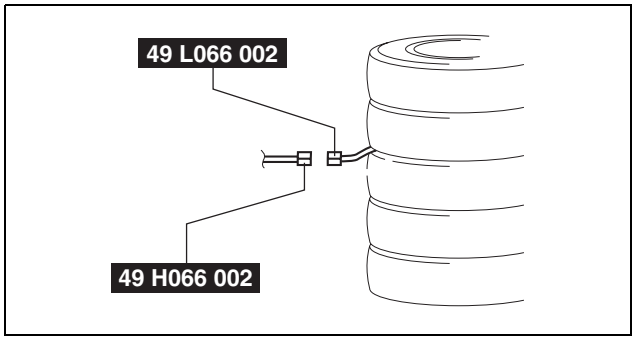
7. Secure the tires with wire.



am6zzw0000096

AIR BAG SYSTEM

8. Connect the **SST (Deployment tool)** to the **SST (Adapter harness)**.
9. Connect the **SST (Deployment tool)** to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
10. Verify that the red lamp on the **SST (Deployment tool)** is illuminated.
11. Verify that all persons are standing **at least 6 m {20 ft}** away from the vehicle.

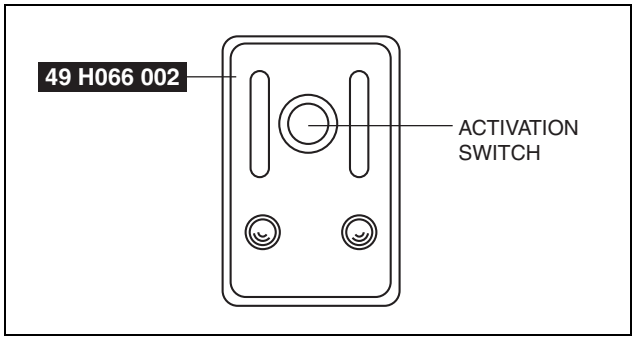


am6xuw0000203

12. Press the activation switch on the **SST (Deployment tool)** to operate (deploy) the pre-tensioner seat belt.

Warning
- **The pre-tensioner seat belt is very hot immediately after it is operated (deployed). You can be burned. Do not touch the pre-tensioner seat belt for at least 15 min after deployment.**

13. Disconnect the **SST (Deployment tool)** from the **SST (Adapter harness)**.



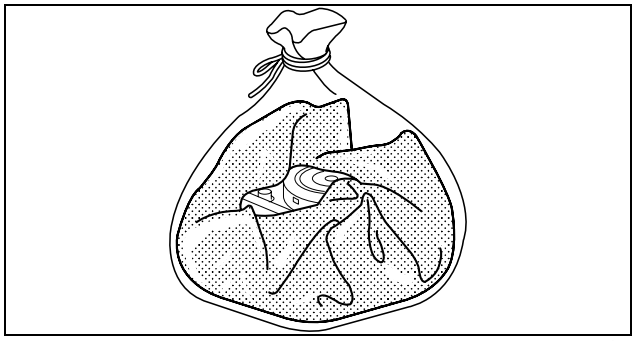
am3zzw0000970

AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DISPOSAL PROCEDURES

id081000801200

Warning
- **A live (undeployed) air bag module or pre-tensioner seat belt may accidentally operate (deploy) when it is disposed of and cause serious injury. Always refer to the "AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES" and dispose of air bag modules and pre-tensioner seat belts in a deployed condition.**
- **The air bag modules and the pre-tensioner seat belts are very hot immediately after they are deployed. You can be burned. Do not touch an air bag module and pre-tensioner seat belt for at least 15 min after deployment.**
- **Pouring water on the deployed air bag module and pre-tensioner seat belt is dangerous. The water will mix with the residual gases to form a gas that can make breathing difficult. Do not pour water on the deployed air bag module and pre-tensioner seat belt.**
- **The deployed air bag module or pre-tensioner seat belt may contain deposits of sodium hydroxide, a caustic byproduct of the gas-generated combustion. If this substance gets into your eyes or on your hands, it can cause irritation and itching. When handling the deployed air bag module and pre-tensioner seat belt, wear gloves and safety glasses.**

1. Remove the deployed air bag module or pre-tensioner seat belt.
2. Put the air bag module or pre-tensioner seat belt in a plastic bag, seal the bag, and then dispose of it.



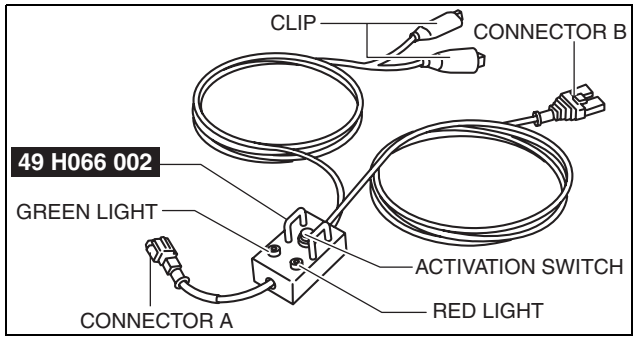
am3zzw0000107

AIR BAG SYSTEM

INSPECTION OF SST (DEPLOYMENT TOOL)

1. Before using the **SST** (49 H066 002), inspect its operation.

id081000801000



am3zzw0001108

Inspection Procedure

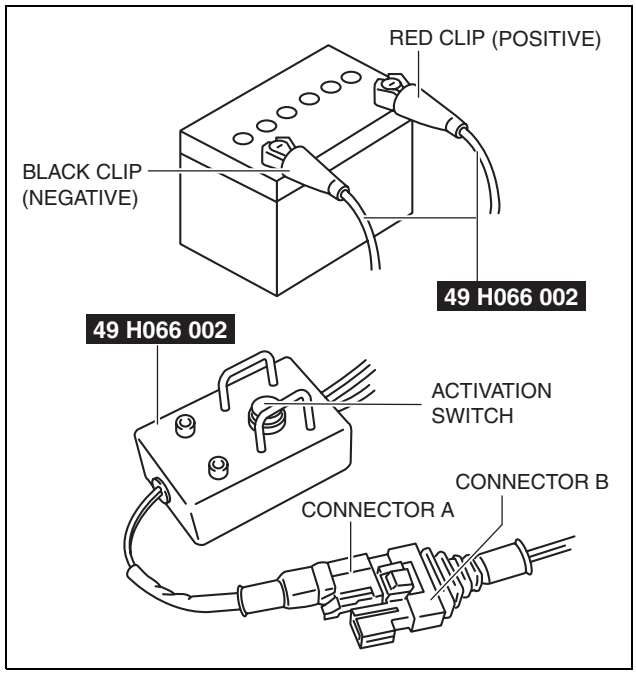
1. Follow the steps below to inspect the **SST** (49 H066 002).
   - If not as indicated in the table, replace the **SST** (49 H066 002) because it has a malfunction.

Warning

- **Do not use a malfunctioning SST (49 H066 002), otherwise it could cause the air bag module or pre-tensioner front buckle to accidentally operate (deploy).**

Caution

- **Because the permissible voltage for the SST (49 H066 002) is 12 V, do not connect a 24 V power source because it will damage the SST. Always connect only a 12 V power source.**



Step	Inspection procedure	Light condition	
		Green	Red
1	Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.	On	Off
2	Connect connectors A and B.	Off	On
3	Press the activation switch.	On	Off

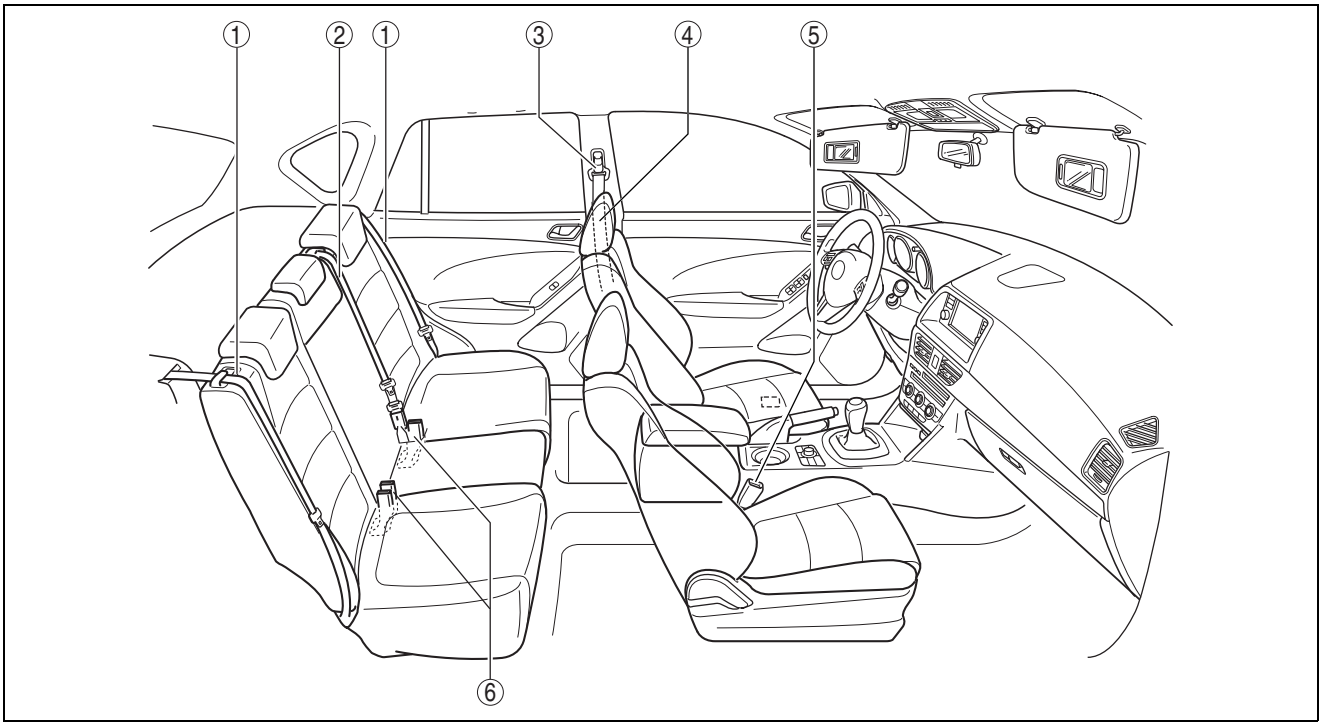
SEAT BELT

SEAT BELT LOCATION INDEX

id081100804200



ac5wzw0000207

1	Rear seat belt (See 08-11-5 REAR SEAT BELT REMOVAL/INSTALLATION.) (See 08-11-7 SEAT BELT INSPECTION.)
2	Rear center seat belt (See 08-11-6 REAR CENTER SEAT BELT REMOVAL/INSTALLATION.)
3	Adjuster anchor (See 08-11-4 ADJUSTER ANCHOR REMOVAL/INSTALLATION.)
4	Front seat belt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.) (See 08-11-7 SEAT BELT INSPECTION.)
5	Front buckle (See 08-11-9 FRONT BUCKLE REMOVAL/INSTALLATION.) (See 08-11-11 BUCKLE SWITCH INSPECTION.)
6	Rear buckle (See 08-11-10 REAR BUCKLE REMOVAL/INSTALLATION.) (See 08-11-11 BUCKLE SWITCH INSPECTION.)

FRONT SEAT BELT REMOVAL/INSTALLATION

id081100800600

Warning

- **Handling the front seat belt (pre-tensioner seat belt) improperly can accidentally deploy the pre-tensioner seat belt, which may seriously injure you. Read the air bag system service warnings and cautions before handling the front seat belt. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.) (See 08-10-5 AIR BAG SYSTEM SERVICE CAUTIONS.)**

Warning

- **The side air bag sensor is attached to the lower part of the B-pillar. When working around the B-pillar, disconnect the negative battery cable avoiding excessive impact to the lower part of the B-pillar.**

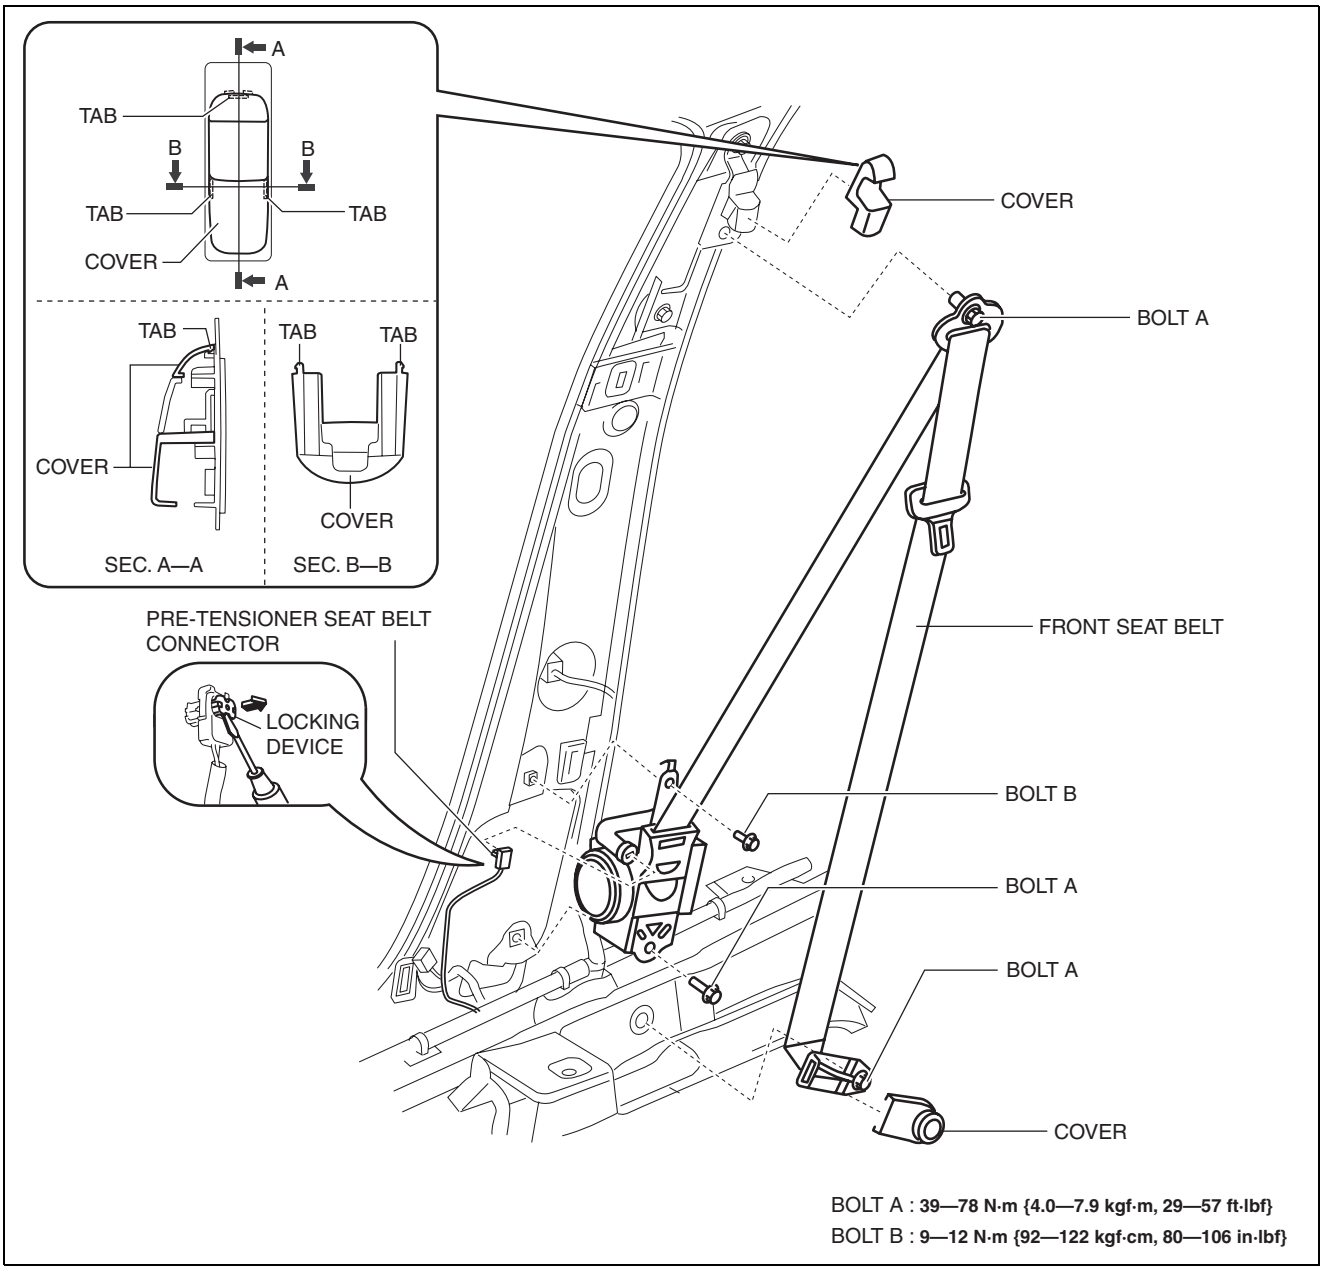
Caution

- **If the retractor is disassembled, it will not operate correctly due to looseness and excessive play of the internal parts, therefore, do not disassemble the retractor.**

1. Switch the ignition to off.

SEAT BELT

2. Disconnect the negative battery cable and wait for **1min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the front scuff plate. (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
4. Remove the rear scuff plate. (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
5. Remove the B-pillar lower trim. (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
6. Using a flathead screwdriver, lift the locking device carefully, however do not remove it.



ac5wzw0000206

7. Disconnect the pre-tensioner seat belt connector.
8. Remove the cover.
9. Remove bolt A.
10. Remove bolt B.
11. Remove the front seat belt.
12. Install in the reverse order of removal.
13. Switch the ignition ON (engine off or on).
14. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
    - If the air bag system warning light does not operate, refer to the on-board diagnostic system (air bag system) and perform inspection of the system. (See 08-02-5 FLOWCHART.)

SEAT BELT

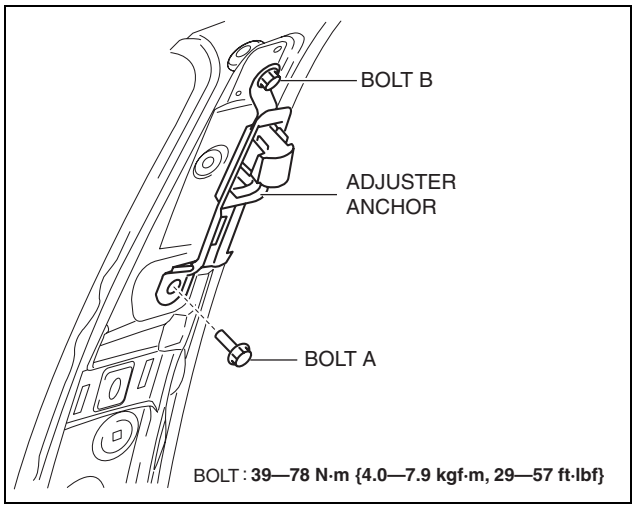
ADJUSTER ANCHOR REMOVAL/INSTALLATION

id081100802000

Warning

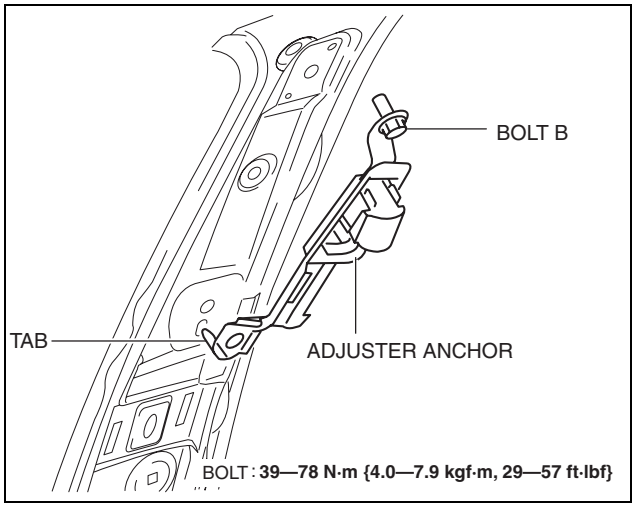
- **The side air bag sensor is attached to the lower part of the B-pillar. When working around the B-pillar, disconnect the negative battery cable or work carefully, avoiding excessive impact to the lower part of the B-pillar.**

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Set the adjuster to the lowest position.
4. Remove the following parts:
   (1) Front scuff plate (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) B-pillar lower trim (See 09-17-57 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (4) Front seat belt upper anchor installation bolt (See 08-11-2 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (5) B-pillar upper trim (See 09-17-58 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
5. Remove bolt A.



ac5wzw0000207

6. Remove bolt B.
7. Remove the tab.
8. Remove the adjuster anchor.
9. Install in the reverse order of removal.



ac5wzw0000207

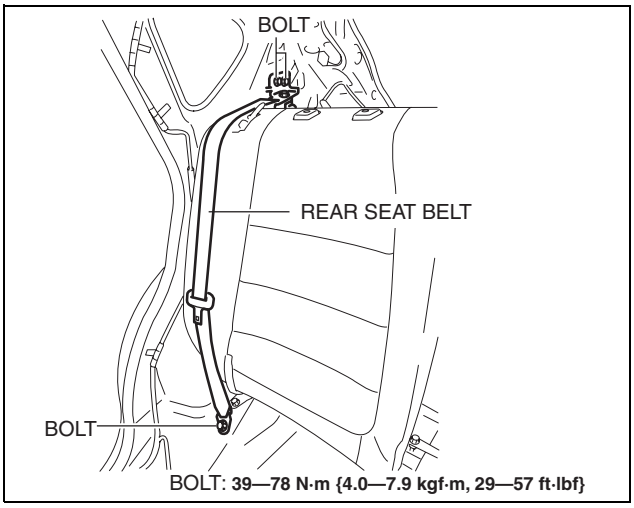
SEAT BELT

REAR SEAT BELT REMOVAL/INSTALLATION

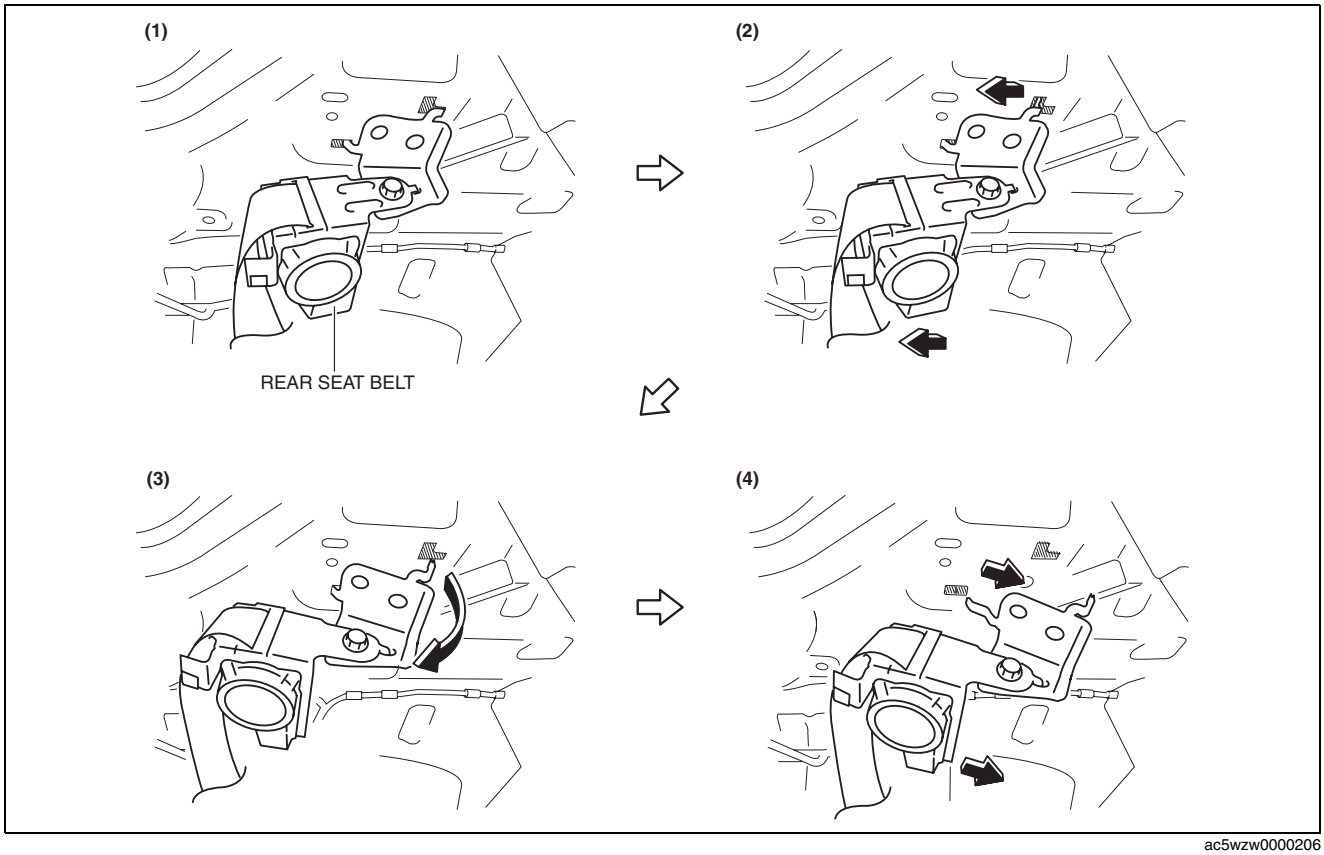
id081100800800

Caution
- **If the retractor is disassembled, it will not operate correctly due to looseness and excessive play of the internal parts, therefore, do not disassemble the retractor.**

1. Remove the following parts:
   (1) Trunk board (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
   (2) Trunk end trim (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) Trunk side trim (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
   (5) D-pillar trim (See 09-17-60 D-PILLAR TRIM REMOVAL/INSTALLATION.)
2. Remove the bolts.
3. Remove the tab as shown in the figure.



ac5wzw0000206



ac5wzw0000206

4. Remove the rear seat belt.
5. Install in the reverse order of removal.

SEAT BELT

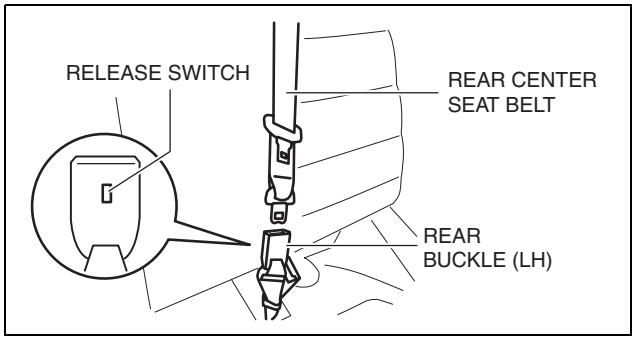
REAR CENTER SEAT BELT REMOVAL/INSTALLATION

id081100800900

Caution
- **If the retractor is disassembled, it will not operate correctly due to looseness and excessive play of the internal parts, therefore, do not disassemble the retractor.**

Note
- The rear center seat belt is building into the rear seat back.

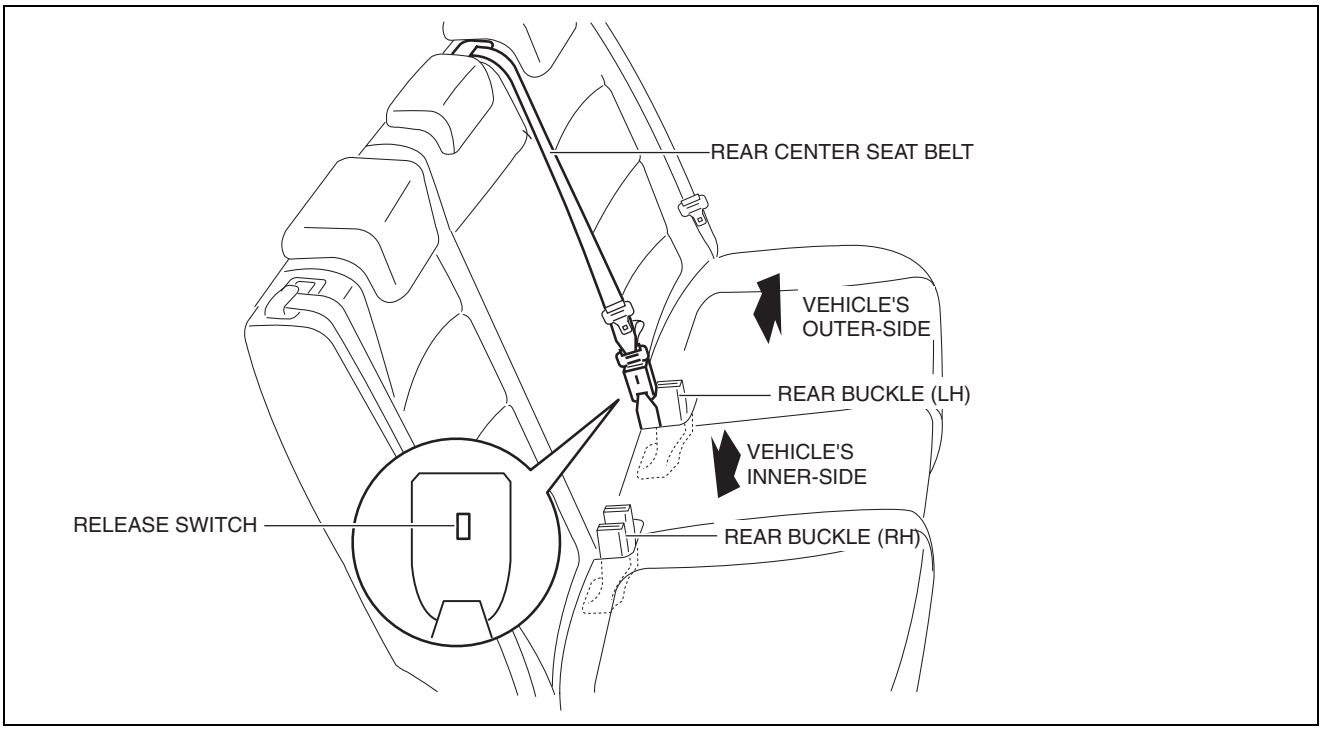
1. Press the release switch, then disconnect the rear center seat belt and rear buckle.
2. Remove the rear center seat belt with the rear seat back. (See 09-13-61 REAR SEAT BACK REMOVAL/INSTALLATION.)
3. Install in the reverse order of removal. (See 08-11-6 Rear Center Seat Belt Installation Note.)



ac5wzw0000207

Rear Center Seat Belt Installation Note

1. After installing the rear center seat belt, place the release switch of the rear buckle so that it faces the vehicle's inner-side as shown in the figure.



ac5wzw0000278

SEAT BELT

SEAT BELT INSPECTION

id081100800300

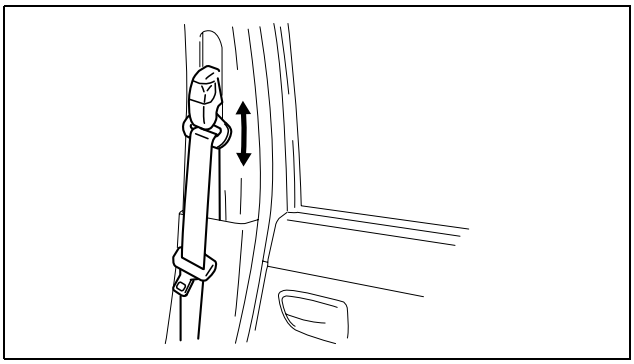
Belt

1. Verify that the belt is installed properly with no twists or kinks.
2. Verify that there is no damage to the seat belt and no deformation of the metal fittings.
   - If there is any malfunction, replace the seat belt.

ELR (Emergency Locking Retractor)

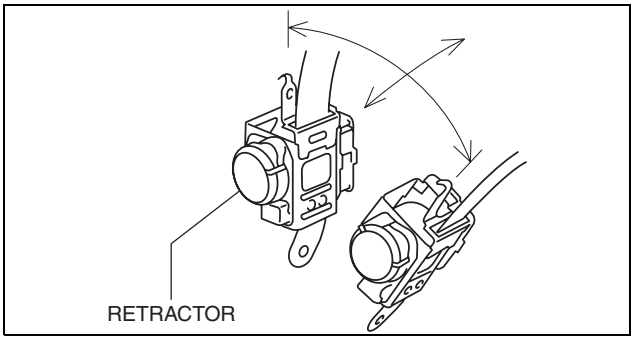
Except rear center seat belt

1. Verify that the belt can be pulled out smoothly, and that it retracts smoothly.
   - If there is any malfunction, replace the seat belt.
2. Verify that the retractor locks when the belt is pulled quickly.
   - If there is any malfunction, replace the seat belt.
3. Remove the retractor.



acxuuw00002083

4. While pulling the seat belt out, make sure that the seat belt does not lock when the retractor is tilted slowly up to **15**° from the mounted position and locks when the retractor is tilted **40**° **or more.**
   - If there is any malfunction, replace the seat belt.



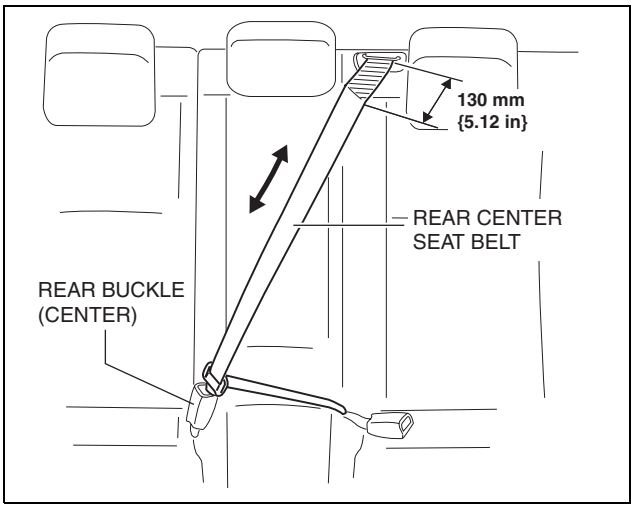
am3zzw0001109

Rear center seat belt

Caution

- **The rear center seat belt ELR only becomes operable after a certain amount of belt webbing is pulled out. For the ELR inspection, fasten the rear center seat belt to the rear buckle (center) and perform the inspection after pulling out the rear center seat belt 130 mm {5.12 in} (ELR operable condition). If the inspection is performed while the ELR is not in an operable condition, the integrity of the system cannot be determined.**

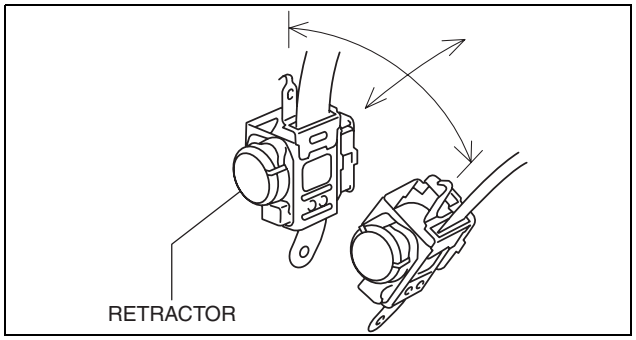
1. Fasten the rear center seat belt to the rear buckle (center) and pull out the rear center seat belt **130 mm {5.12 in}**.
2. Verify that the belt can be pulled out smoothly, and that it retracts smoothly.
   - If there is any malfunction, replace the seat belt.
3. Verify that the retractor locks when the belt is pulled quickly.
   - If there is any malfunction, replace the seat belt.
4. Remove the retractor.



am3zzw0001110

SEAT BELT

5. While pulling the seat belt out, make sure that the seat belt does not lock when the retractor is tilted slowly up to **15**° from the mounted position and locks when the retractor is tilted **40**° **or more.**
   - If there is any malfunction, replace the seat belt.



am3zzw0001109

ALR (Automatic Locking Retractor)

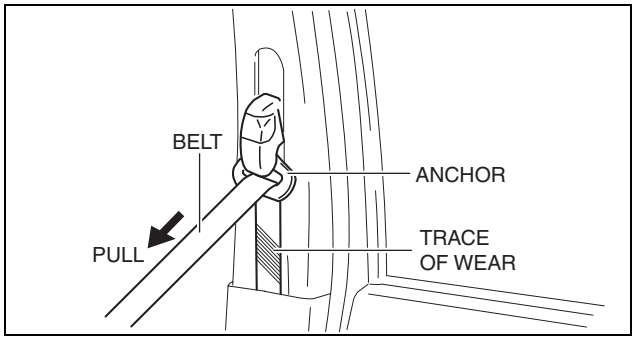
1. Pull the belt out fully to change the lock mode from ELR to ALR.
2. Verify that retractor makes a clicking sound as the belt slowly retracts. If no sound is heard, the lock mode has not changed to ALR. If necessary, repeat Step 1.
   - If there is any malfunction, replace the rear seat belt.
3. Verify that the retractor locks when pulled.
   - If there is any malfunction, replace the rear seat belt.
4. Verify that the lock mode changes to ELR when the belt is fully pulled out.
   - If there is any malfunction, replace the rear seat belt.

Load Limiter Retractor

Warning

- **When the load limiter operates, the belt and anchor rub against each other strongly leaving wear tracks. If the seat belt is used in this state, the seat belt will not function at its full capability and there is the possibility of serious injury to passengers. Be sure to replace the seat belt once the load limiter operates.**

1. If the vehicle has been subjected to a shock in an accident, pull the belt from the retractor and confirm that there are no wear tracks (the load limiter has not operated) by visually inspecting and feeling the belt.
   - If there is any malfunction, replace the seat belt.



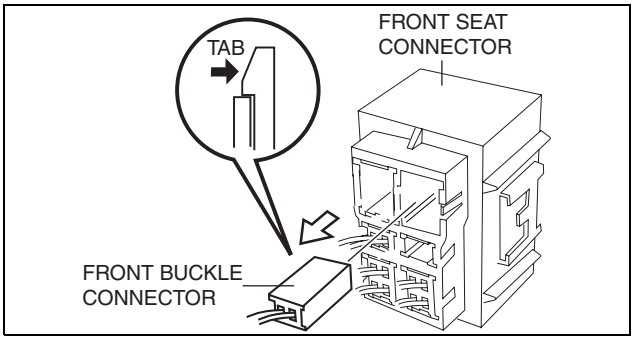
am3zzw0001110

SEAT BELT

FRONT BUCKLE REMOVAL/INSTALLATION

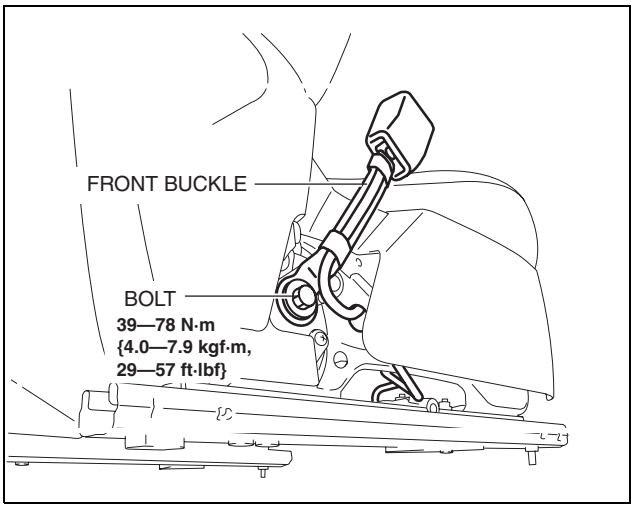
id081100800400

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the front seat. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.)
4. Disconnect the front buckle connector. (with buckle switch)



ac5wzw0000206

5. Remove the bolt.
6. Remove the front buckle.
7. Install in the reverse order of removal.



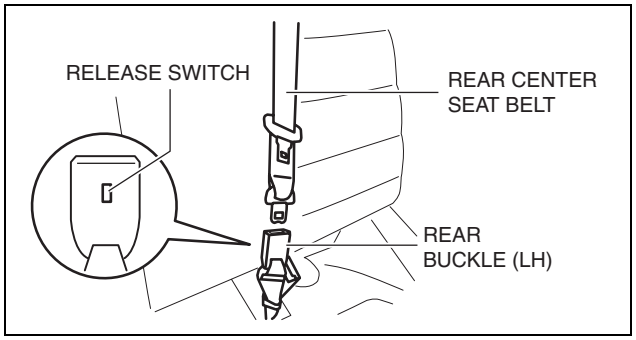
ac5wzw0000206

SEAT BELT

REAR BUCKLE REMOVAL/INSTALLATION

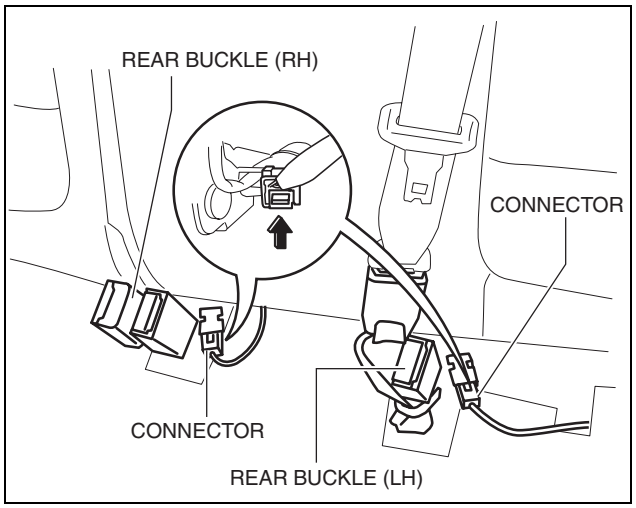
id081100800700

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Press the release switch, then disconnect the rear center seat belt and rear buckle.
4. Fold down the rear seat back.
5. Remove the trunk board. (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)



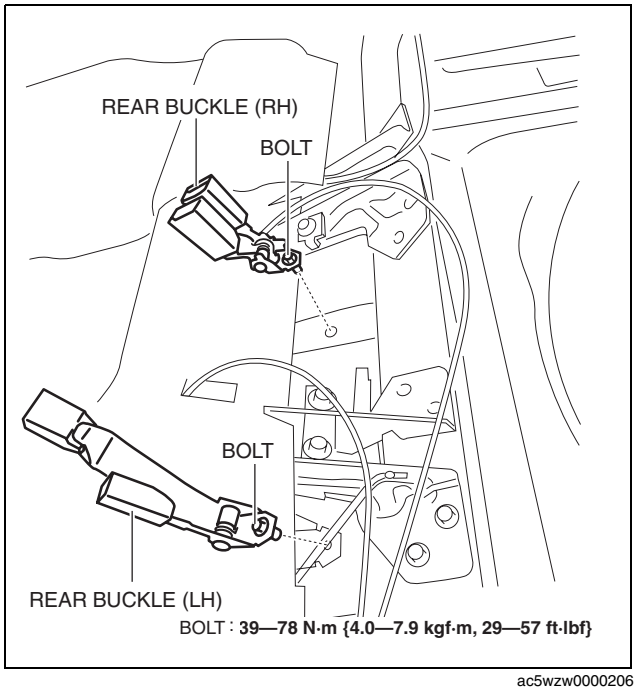
ac5wzw0000206

6. Disconnect the connector. (vehicles with rear seat belt reminder)



ac5wzw0000206

7. Remove the bolt.
8. Remove the rear buckle (RH) and rear buckle (LH).
9. Install in the reverse order of removal. (See 08-11-11 Rear Buckle Installation Note.)

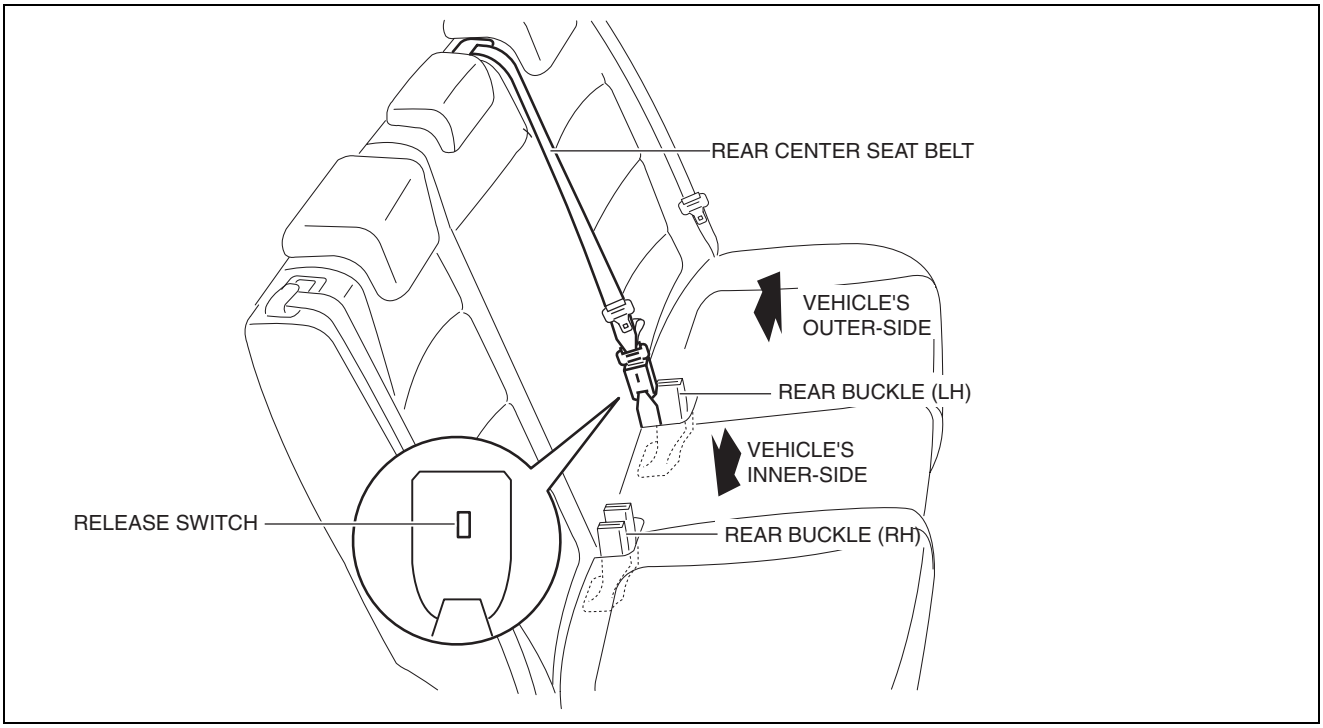


ac5wzw0000206

SEAT BELT

Rear Buckle Installation Note

1. After installing the rear center seat belt, place the release switch of the rear buckle so that it faces the vehicle's inner-side as shown in the figure.



ac5wzw0000278

BUCKLE SWITCH INSPECTION

id081100803000

Front

1. Switch the ignition to off.
2. Disconnect the negative battery cable and wait for **1 min or more**. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)(See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)(See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the front seat. (See 09-13-4 FRONT SEAT REMOVAL/INSTALLATION.)
4. Remove the front buckle. (See 08-11-9 FRONT BUCKLE REMOVAL/INSTALLATION.)
5. Inspect for continuity between the buckle switch terminals using a tester.
   - If not as indicated in the table, replace the front buckle.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

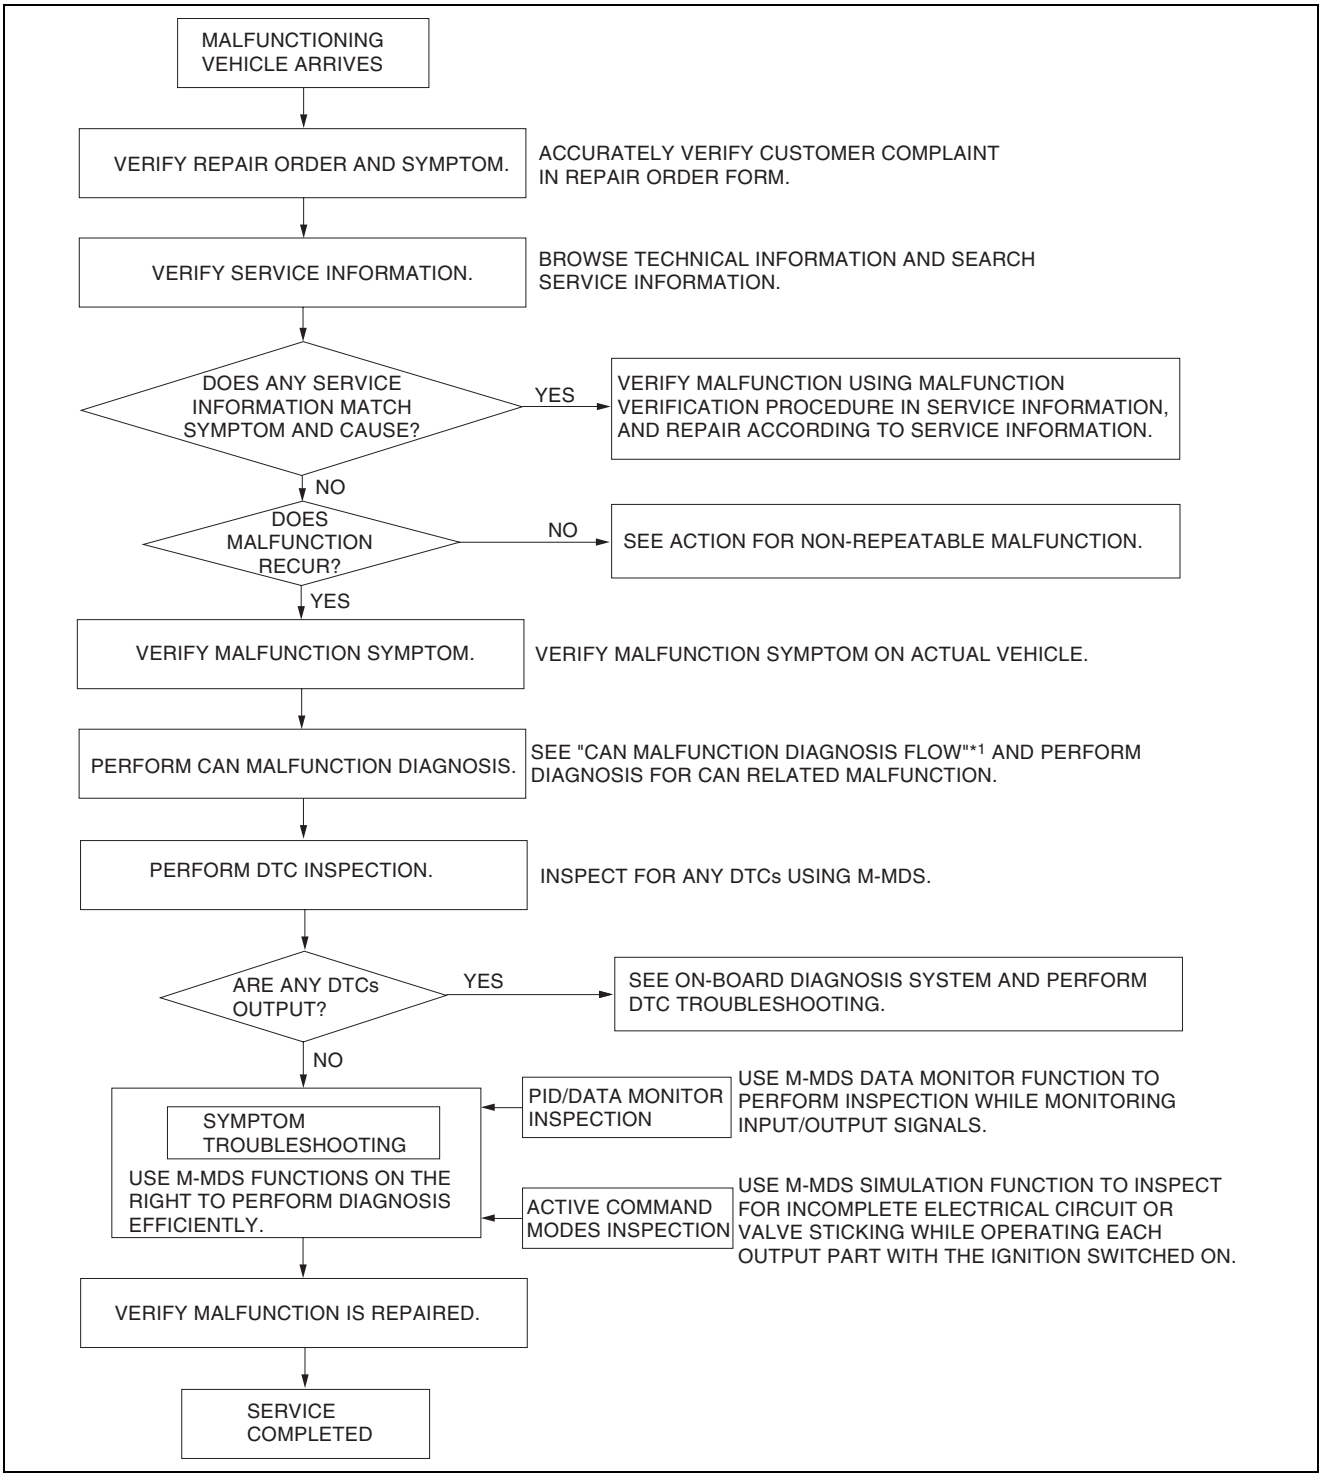
FOREWORD [ADVANCED KEYLESS ENTRY SYSTEM]

id0902p8025700

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



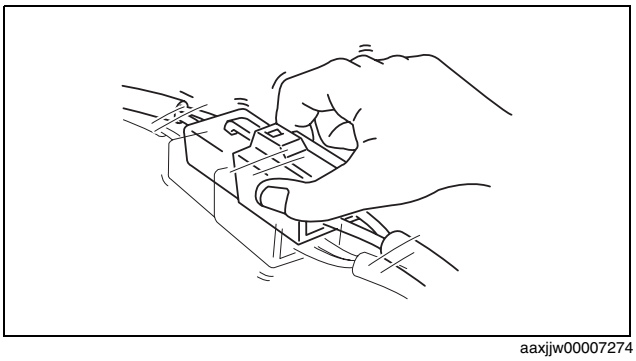
am3uuw0000731

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)] /10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)]/10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)]/10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

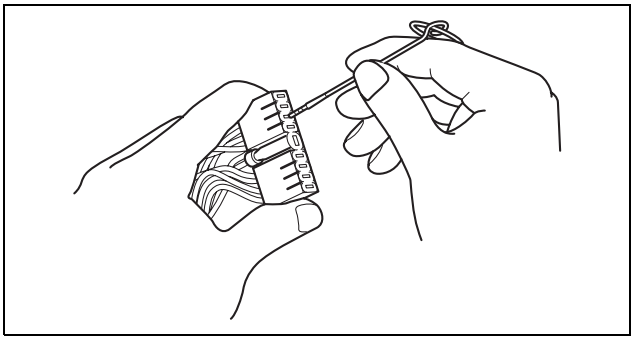
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]

id0902p8025800

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the start stop unit. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “SSU”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the start stop unit. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].)

CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM]

id0902p8025900

CMDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].)
8. Verify that no DTCs are displayed.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

ODDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “SSU”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].)
8. Verify that no DTCs are displayed.

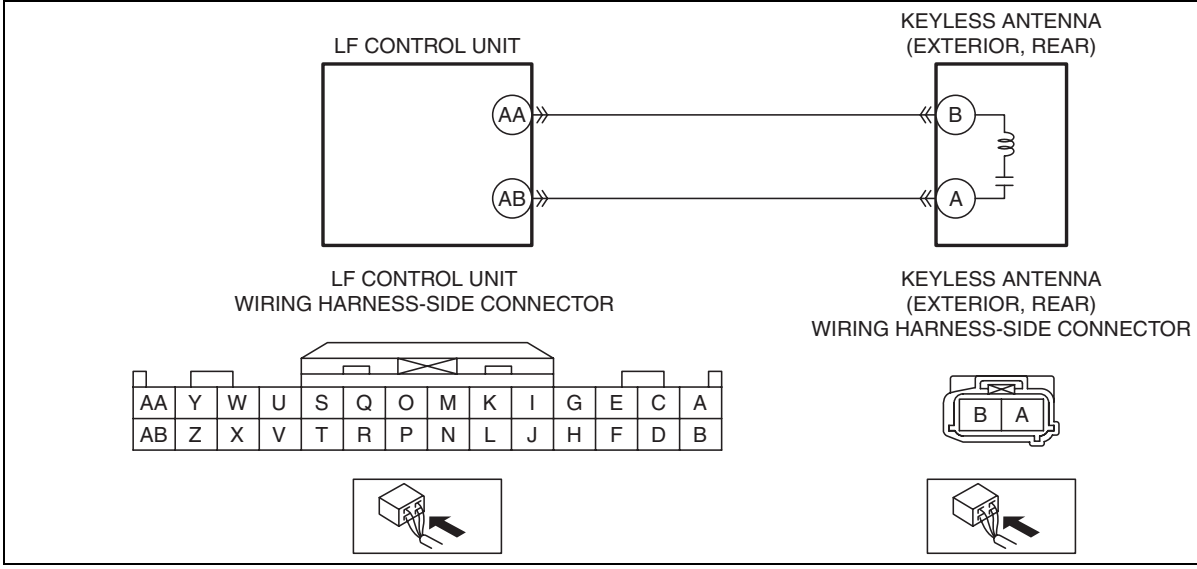
DTC B10C6:1F [ADVANCED KEYLESS ENTRY SYSTEM]

id0902p8026100

System malfunction location	Keyless antenna (exterior, rear) circuit malfunction
Detection condition	• The start stop unit detects an open circuit in the keyless antenna (exterior, rear) or a short to ground with the ignition switched off.
Fail-safe	• Inhibits the door lock/unlock control using the advanced keyless entry system.
Possible cause	• Keyless antenna (exterior, rear) connector or terminal malfunction • LF control unit connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — Between LF control unit terminal AA and keyless antenna (exterior, rear) terminal B — Between LF control unit terminal AB and keyless antenna (exterior, rear) terminal A • Open circuit in wiring harness between the following terminals: — Between LF control unit terminal AA and keyless antenna (exterior, rear) terminal B — Between LF control unit terminal AB and keyless antenna (exterior, rear) terminal A • LF control unit malfunction • Keyless antenna (exterior, rear) malfunction • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT KEYLESS ANTENNA (EXTERIOR, REAR) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the keyless antenna (exterior, rear) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION** • Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT KEYLESS ANTENNA (EXTERIOR, REAR) CIRCUIT FOR SHORT TO GROUND** • Verify that the LF control unit and keyless antenna (exterior, rear) connectors are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — Keyless antenna (exterior, rear) terminal B — Keyless antenna (exterior, rear) terminal A • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 7.
		No	Go to the next step.
4	**INSPECT KEYLESS ANTENNA (EXTERIOR, REAR) CIRCUIT FOR OPEN CIRCUIT** • Verify that the LF control unit and keyless antenna (exterior, rear) connectors are disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — Between LF control unit terminal AA and keyless antenna (exterior, rear) terminal B — Between LF control unit terminal AB and keyless antenna (exterior, rear) terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 7.
5	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See 09-14-60 LF CONTROL UNIT INSPECTION.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to Step 7. (See 09-14-59 LF CONTROL UNIT REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

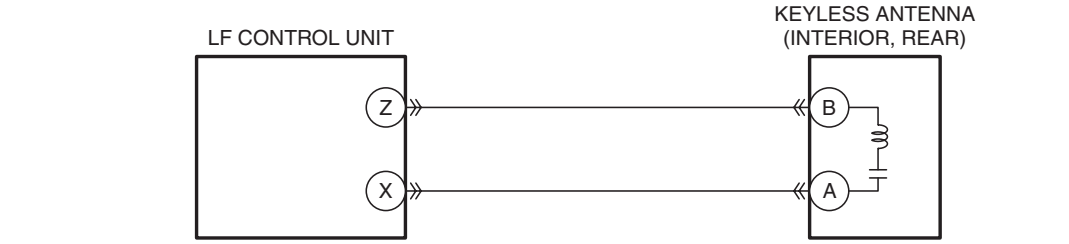
Step	Inspection		Action
6	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS KEYLESS ANTENNA (EXTERIOR, REAR)** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTCs for the advanced keyless entry system using the M-MDS. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].) • Perform the advanced keyless entry system DTC inspection using the M-MDS. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].) • Is DTC B10C6:1F displayed?	Yes	Replace the keyless antenna (exterior, rear), then go to the next step. (See 09-14-66 KEYLESS ANTENNA REMOVAL/ INSTALLATION.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTCs for the advanced keyless entry system using the M-MDS. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].) • Perform the advanced keyless entry system DTC inspection using the M-MDS. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].) • Is DTC B10C6:1F displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-53 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02A-6 DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

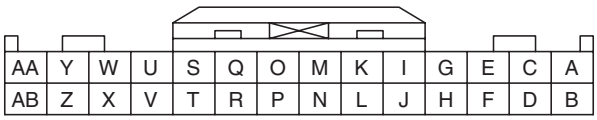
DTC B10C7:1F [ADVANCED KEYLESS ENTRY SYSTEM]

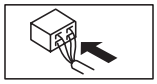
id0902p8026200

System malfunction location	**Keyless antenna (interior, rear) circuit malfunction**
Detection condition	• The start stop unit detects an open circuit in the keyless antenna (interior, rear) or a short to ground with the ignition switched off.
Fail-safe	• Inhibits the door lock/unlock control using the advanced keyless entry system.
Possible cause	• Keyless antenna (interior, rear) connector or terminal malfunction • LF control unit connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — Between LF control unit terminal Z and keyless antenna (interior, rear) terminal B — Between LF control unit terminal X and keyless antenna (interior, rear) terminal A • Open circuit in wiring harness between the following terminals: — Between LF control unit terminal Z and keyless antenna (interior, rear) terminal B — Between LF control unit terminal X and keyless antenna (interior, rear) terminal A • LF control unit malfunction • Keyless antenna (interior, rear) malfunction • Start stop unit malfunction

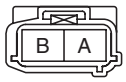


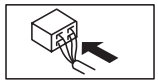
LF CONTROL UNIT
WIRING HARNESS-SIDE CONNECTOR





KEYLESS ANTENNA
(INTERIOR, REAR)
WIRING HARNESS-SIDE CONNECTOR





ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT KEYLESS ANTENNA (INTERIOR, REAR) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the keyless antenna (interior, rear) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION** • Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT KEYLESS ANTENNA (INTERIOR, REAR) CIRCUIT FOR SHORT TO GROUND** • Verify that the LF control unit and keyless antenna (interior, rear) connectors are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — Keyless antenna (interior, rear) terminal B — Keyless antenna (interior, rear) terminal A • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 7.
		No	Go to the next step.
4	**INSPECT KEYLESS ANTENNA (INTERIOR, REAR) CIRCUIT FOR OPEN CIRCUIT** • Verify that the LF control unit and keyless antenna (interior, rear) connectors are disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — Between LF control unit terminal Z and keyless antenna (interior, rear) terminal B — Between LF control unit terminal X and keyless antenna (interior, rear) terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 7.
5	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See 09-14-60 LF CONTROL UNIT INSPECTION.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to Step 7. (See 09-14-59 LF CONTROL UNIT REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

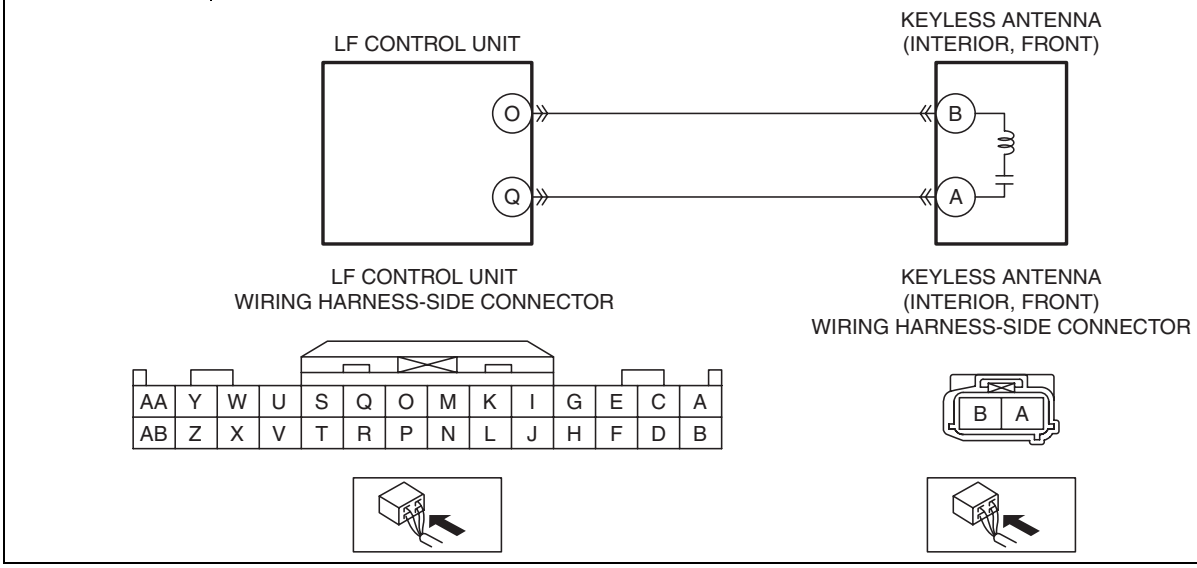
Step	Inspection		Action
6	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS KEYLESS ANTENNA (INTERIOR, REAR)** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTCs for the advanced keyless entry system using the M-MDS. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].) • Perform the advanced keyless entry system DTC inspection using the M-MDS. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].) • Is DTC B10C7:1F displayed?	Yes	Replace the keyless antenna (interior, rear), then go to the next step. (See 09-14-66 KEYLESS ANTENNA REMOVAL/ INSTALLATION.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTCs for the advanced keyless entry system using the M-MDS. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].) • Perform the advanced keyless entry system DTC inspection using the M-MDS. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].) • Is DTC B10C7:1F displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-53 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02A-6 DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

DTC B10C9:1F [ADVANCED KEYLESS ENTRY SYSTEM]

id0902p8026300

System malfunction location	**Keyless antenna (interior, front) circuit malfunction**
Detection condition	• The start stop unit detects an open circuit in the keyless antenna (interior, front) or a short to ground with the ignition switched off.
Fail-safe	• Inhibits the door lock/unlock control using the advanced keyless entry system.
Possible cause	• Keyless antenna (interior, front) connector or terminal malfunction • LF control unit connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — Between LF control unit terminal O and keyless antenna (interior, front) terminal B — Between LF control unit terminal Q and keyless antenna (interior, front) terminal A • Open circuit in wiring harness between the following terminals: — Between LF control unit terminal O and keyless antenna (interior, front) terminal B — Between LF control unit terminal Q and keyless antenna (interior, front) terminal A • LF control unit malfunction • Keyless antenna (interior, front) malfunction • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT KEYLESS ANTENNA (INTERIOR, FRONT) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the keyless antenna (interior, front) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION** • Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT KEYLESS ANTENNA (INTERIOR, FRONT) CIRCUIT FOR SHORT TO GROUND** • Verify that the LF control unit and keyless antenna (interior, front) connectors are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — Keyless antenna (interior, front) terminal B — Keyless antenna (interior, front) terminal A • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 7.
		No	Go to the next step.
4	**INSPECT KEYLESS ANTENNA (INTERIOR, FRONT) CIRCUIT FOR OPEN CIRCUIT** • Verify that the LF control unit and keyless antenna (interior, front) connectors are disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — Between LF control unit terminal O and keyless antenna (interior, front) terminal B — Between LF control unit terminal Q and keyless antenna (interior, front) terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 7.
5	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See 09-14-60 LF CONTROL UNIT INSPECTION.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to Step 7. (See 09-14-59 LF CONTROL UNIT REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

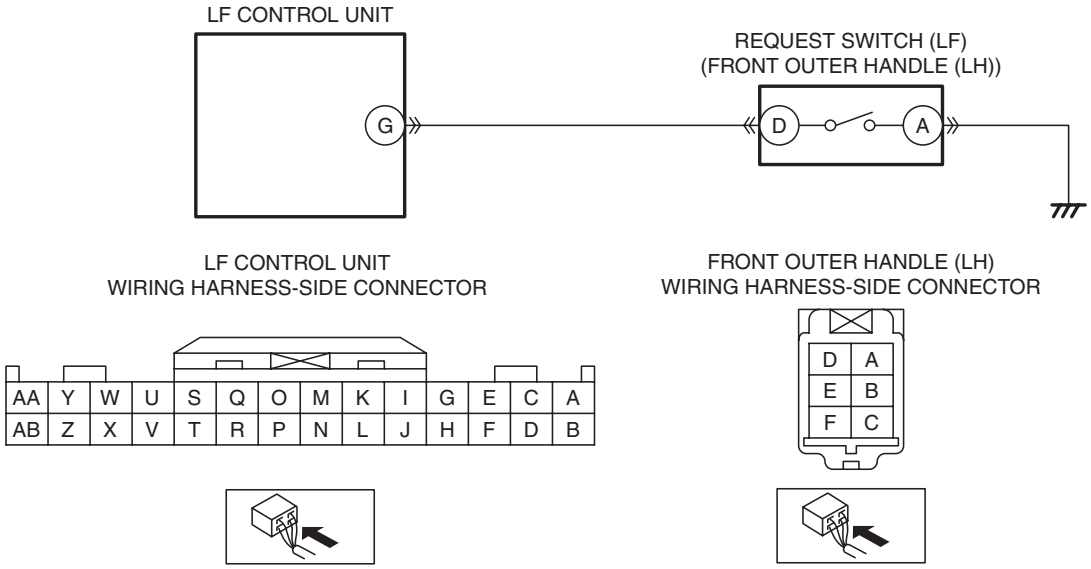
Step	Inspection		Action
6	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS KEYLESS ANTENNA (INTERIOR, FRONT)** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTCs for the advanced keyless entry system using the M-MDS. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].) • Perform the advanced keyless entry system DTC inspection using the M-MDS. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].) • Is DTC B10C9:1F displayed?	Yes	Replace the keyless antenna (interior, front), then go to the next step. (See 09-14-66 KEYLESS ANTENNA REMOVAL/ INSTALLATION.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTCs for the advanced keyless entry system using the M-MDS. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].) • Perform the advanced keyless entry system DTC inspection using the M-MDS. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].) • Is DTC B10C9:1F displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-53 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02A-6 DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

DTC B10D1:23 [ADVANCED KEYLESS ENTRY SYSTEM]

id0902p8026400

System malfunction location	**Request switch (LF) circuit malfunction**
Detection condition	• With the ignition switched ON (engine on), the start stop unit detects that the vehicle speed is **5 km/h {3 mph} or more** for a continuous **2 min or more** and the request switch (LF) is on **7 times or more** until the vehicle speed is **less than 5 km/h {3 mph}**.
Fail-safe	—
Possible cause	• Front outer handle (LH) connector or terminal malfunction • LF control unit connector or terminal malfunction • Short to ground in wiring harness between LF control unit terminal G and front outer handle (LH) terminal D • Request switch (LF) malfunction • LF control unit malfunction • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FRONT OUTER HANDLE (LH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front outer handle (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION** • Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT REQUEST SWITCH (LF) CIRCUIT FOR SHORT TO GROUND** • Verify that the LF control unit and front outer handle (LH) connectors are disconnected. • Inspect for continuity between front outer handle (LH) terminal D (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 6.
		No	Go to the next step.
4	**INSPECT REQUEST SWITCH (LF)** • Inspect the request switch (LF). (See 09-14-65 REQUEST SWITCH INSPECTION.) • Is the request switch (LF) normal?	Yes	Go to the next step.
		No	Replace the front outer handle (LH), then go to Step 6. (See 09-14-8 FRONT OUTER HANDLE REMOVAL/INSTALLATION.)
5	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See 09-14-60 LF CONTROL UNIT INSPECTION.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to the next step. (See 09-14-59 LF CONTROL UNIT REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

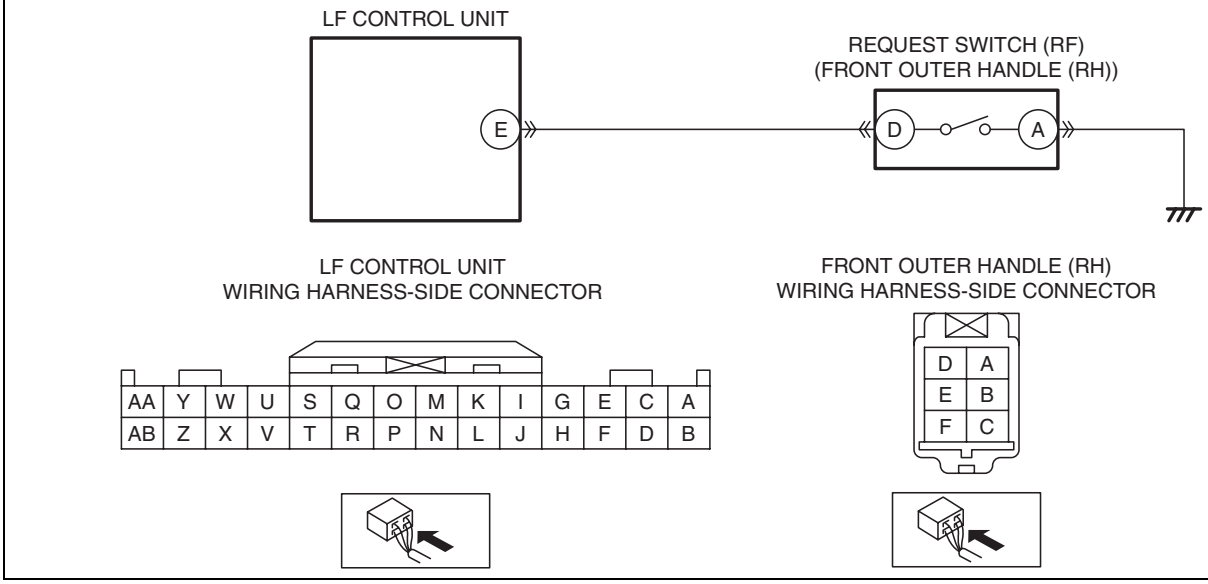
Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTCs for the advanced keyless entry system using the M-MDS. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].) • Drive the vehicle at **5 km/h {3 mph} or more** for **2 min or more**. • Perform the advanced keyless entry system DTC inspection using the M-MDS. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].) • Is DTC B10D1:23 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-53 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02A-6 DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

DTC B10D3:23 [ADVANCED KEYLESS ENTRY SYSTEM]

id0902p8026500

System malfunction location	**Request switch (RF) circuit malfunction**
Detection condition	• With the ignition switched ON (engine on), the start stop unit detects that the vehicle speed is **5 km/h {3 mph} or more** for a continuous **2 min or more** and the request switch (RF) is on **7 times or more** until the vehicle speed is **less than 5 km/h {3 mph}**.
Fail-safe	—
Possible cause	• Front outer handle (RH) connector or terminal malfunction • LF control unit connector or terminal malfunction • Short to ground in wiring harness between LF control unit terminal E and front outer handle (RH) terminal D • Request switch (RF) malfunction • LF control unit malfunction • Start stop unit malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FRONT OUTER HANDLE (RH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front outer handle (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION** • Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

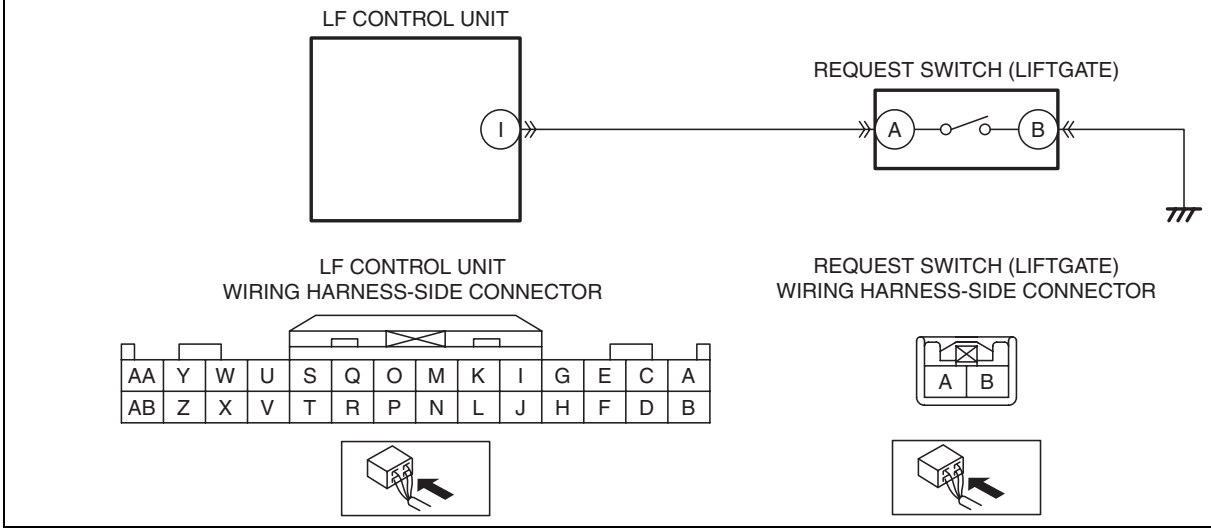
Step	Inspection		Action
3	**INSPECT REQUEST SWITCH (RF) CIRCUIT FOR SHORT TO GROUND** • Verify that the LF control unit and front outer handle (RH) connectors are disconnected. • Inspect for continuity between front outer handle (RH) terminal D (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 6.
		No	Go to the next step.
4	**INSPECT REQUEST SWITCH (RF)** • Inspect the request switch (RF). (See 09-14-65 REQUEST SWITCH INSPECTION.) • Is the request switch (RH) normal?	Yes	Go to the next step.
		No	Replace the front outer handle (RH), then go to Step 6. (See 09-14-8 FRONT OUTER HANDLE REMOVAL/INSTALLATION.)
5	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See 09-14-60 LF CONTROL UNIT INSPECTION.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to the next step. (See 09-14-59 LF CONTROL UNIT REMOVAL/INSTALLATION.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTCs for the advanced keyless entry system using the M-MDS. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].) • Drive the vehicle at **5 km/h {3 mph} or more** for **2 min or more**. • Perform the advanced keyless entry system DTC inspection using the M-MDS. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].) • Is DTC B10D3:23 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-53 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02A-6 DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

DTC B11C4:23 [ADVANCED KEYLESS ENTRY SYSTEM]

id0902p8026600

System malfunction location	**Request switch (liftgate) circuit malfunction**
Detection condition	• With the ignition switched ON (engine on), the start stop unit detects that the vehicle speed is **5 km/h {3 mph} or more** for a continuous **2 min or more** and the request switch (liftgate) is on **7 times or more** until the vehicle speed is **less than 5 km/h {3 mph}**.
Fail-safe	—
Possible cause	• Request switch (liftgate) connector or terminal malfunction • LF control unit connector or terminal malfunction • Short to ground in wiring harness between LF control unit terminal I and request switch (liftgate) terminal A • Request switch (liftgate) malfunction • LF control unit malfunction • Start stop unit malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT REQUEST SWITCH (LIFTGATE) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the request switch (liftgate) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION** • Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

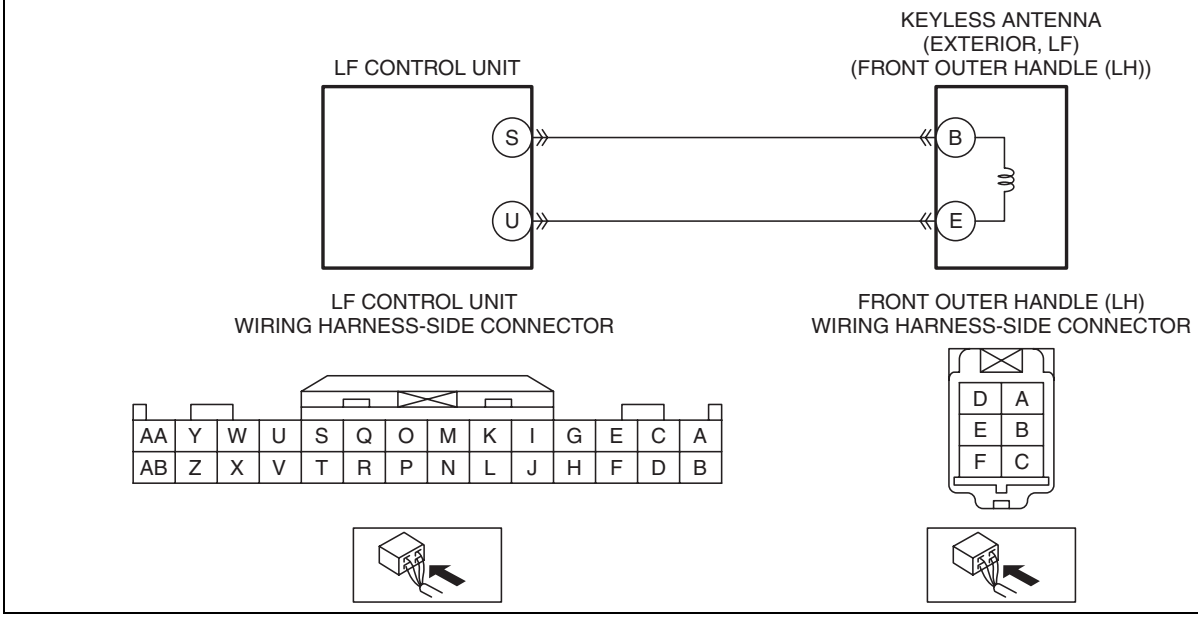
Step	Inspection		Action
3	**INSPECT REQUEST SWITCH (LIFTGATE) CIRCUIT FOR SHORT TO GROUND** • Verify that the LF control unit and request switch (liftgate) connectors are disconnected. • Inspect for continuity between request switch (liftgate) terminal A (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 6.
		No	Go to the next step.
4	**INSPECT REQUEST SWITCH (LIFTGATE)** • Inspect the request switch (liftgate). (See 09-14-65 REQUEST SWITCH INSPECTION.) • Is the request switch (liftgate) normal?	Yes	Go to the next step.
		No	Replace the request switch (liftgate), then go to Step 6. (See 09-14-64 REQUEST SWITCH REMOVAL/INSTALLATION.)
5	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See 09-14-60 LF CONTROL UNIT INSPECTION.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to the next step. (See 09-14-59 LF CONTROL UNIT REMOVAL/INSTALLATION.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTCs for the advanced keyless entry system using the M-MDS. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].) • Drive the vehicle at **5 km/h {3 mph} or more** for **2 min or more**. • Perform the advanced keyless entry system DTC inspection using the M-MDS. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].) • Is DTC B11C4:23 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-53 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02A-6 DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

DTC B11FD:1F [ADVANCED KEYLESS ENTRY SYSTEM]

id0902p8026700

System malfunction location	**Keyless antenna (exterior, LF) circuit malfunction**
Detection condition	• The start stop unit detects an open circuit in the keyless antenna (exterior, LF) or a short to ground with the ignition switched off.
Fail-safe	• Inhibits the door lock/unlock using the advanced keyless entry system.
Possible cause	• Front outer handle (LH) connector or terminal malfunction • LF control unit connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — Between LF control unit terminal S and front outer handle (LH) terminal B — Between LF control unit terminal U and front outer handle (LH) terminal E • Open circuit in wiring harness between the following terminals: — Between LF control unit terminal S and front outer handle (LH) terminal B — Between LF control unit terminal U and front outer handle (LH) terminal E • LF control unit malfunction • Keyless antenna (exterior, LF) malfunction • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FRONT OUTER HANDLE (LH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front outer handle (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION** • Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT KEYLESS ANTENNA (EXTERIOR, LF) CIRCUIT FOR SHORT TO GROUND** • Verify that the LF control unit and front outer handle (LH) connectors are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — Front outer handle (LH) terminal B — Front outer handle (LH) terminal E • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 7.
		No	Go to the next step.
4	**INSPECT FRONT OUTER HANDLE (LH) CIRCUIT FOR OPEN CIRCUIT** • Verify that the LF control unit and front outer handle (LH) connectors are disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — Between LF control unit terminal S and front outer handle (LH) terminal B — Between LF control unit terminal U and front outer handle (LH) terminal E • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 7.
5	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See 09-14-60 LF CONTROL UNIT INSPECTION.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to Step 7. (See 09-14-59 LF CONTROL UNIT REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

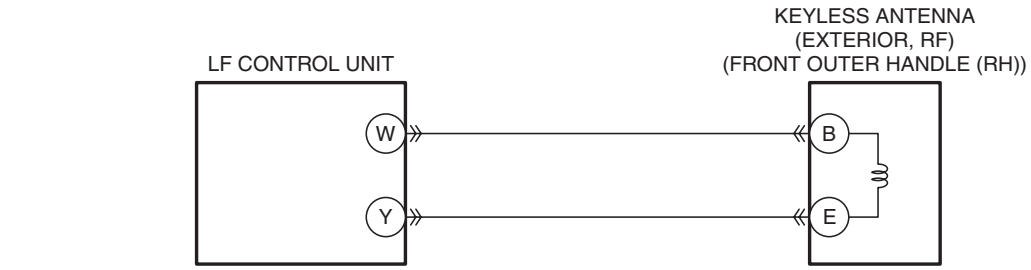
Step	Inspection		Action
6	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS KEYLESS ANTENNA (EXTERIOR, LF)** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTCs for the advanced keyless entry system using the M-MDS. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].) • Perform the advanced keyless entry system DTC inspection using the M-MDS. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].) • Is DTC B11FD:1F displayed?	Yes	Replace the front outer handle (LH), then go to the next step. (See 09-14-8 FRONT OUTER HANDLE REMOVAL/ INSTALLATION.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTCs for the advanced keyless entry system using the M-MDS. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].) • Perform the advanced keyless entry system DTC inspection using the M-MDS. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].) • Is DTC B11FD:1F displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-53 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02A-6 DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

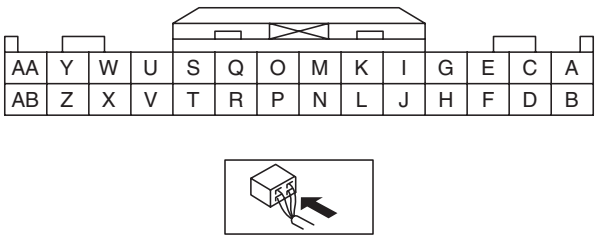
DTC B1210:1F [ADVANCED KEYLESS ENTRY SYSTEM]

id0902p8026800

System malfunction location	**Keyless antenna (exterior, RF) circuit malfunction**
Detection condition	• The start stop unit detects an open circuit in the keyless antenna (exterior, RF) or a short to ground with the ignition switched off.
Fail-safe	• Inhibits the door lock/unlock control using the advanced keyless entry system.
Possible cause	• Front outer handle (RH) connector or terminal malfunction • LF control unit connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — Between LF control unit terminal W and front outer handle (RH) terminal B — Between LF control unit terminal Y and front outer handle (RH) terminal E • Open circuit in wiring harness between the following terminals: — Between LF control unit terminal W and front outer handle (RH) terminal B — Between LF control unit terminal Y and front outer handle (RH) terminal E • LF control unit malfunction • Keyless antenna (exterior, RF) malfunction • Start stop unit malfunction



LF CONTROL UNIT
WIRING HARNESS-SIDE CONNECTOR



FRONT OUTER HANDLE (RH)
WIRING HARNESS-SIDE CONNECTOR

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FRONT OUTER HANDLE (RH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front outer handle (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION** • Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT KEYLESS ANTENNA (EXTERIOR, RF) CIRCUIT FOR SHORT TO GROUND** • Verify that the LF control unit and front outer handle (RH) connectors are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — Front outer handle (RH) terminal B — Front outer handle (RH) terminal E • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 7.
		No	Go to the next step.
4	**INSPECT FRONT OUTER HANDLE (RH) CIRCUIT FOR OPEN CIRCUIT** • Verify that the LF control unit and front outer handle (RH) connectors are disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — Between LF control unit terminal W and front outer handle (RH) terminal B — Between LF control unit terminal Y and front outer handle (RH) terminal E • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 7.
5	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See 09-14-60 LF CONTROL UNIT INSPECTION.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to Step 7. (See 09-14-59 LF CONTROL UNIT REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

Step	Inspection		Action
6	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS KEYLESS ANTENNA (EXTERIOR, RF)** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTCs for the advanced keyless entry system using the M-MDS. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].) • Perform the advanced keyless entry system DTC inspection using the M-MDS. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].) • Is DTC B1210:1F displayed?	Yes	Replace the front outer handle (RH), then go to the next step. (See 09-14-8 FRONT OUTER HANDLE REMOVAL/ INSTALLATION.)
		No	Go to Step 8.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTCs for the advanced keyless entry system using the M-MDS. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].) • Perform the advanced keyless entry system DTC inspection using the M-MDS. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].) • Is DTC B1210:1F displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-53 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02A-6 DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

DTC B13C3:04 [ADVANCED KEYLESS ENTRY SYSTEM]

id0902p8026900

System malfunction location	**LF control unit internal malfunction**
Detection condition	• LF control unit internal malfunction detected
Fail-safe	• Inhibits the door lock/unlock control using the advanced keyless entry system.
Possible cause	• LF control unit internal malfunction • Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

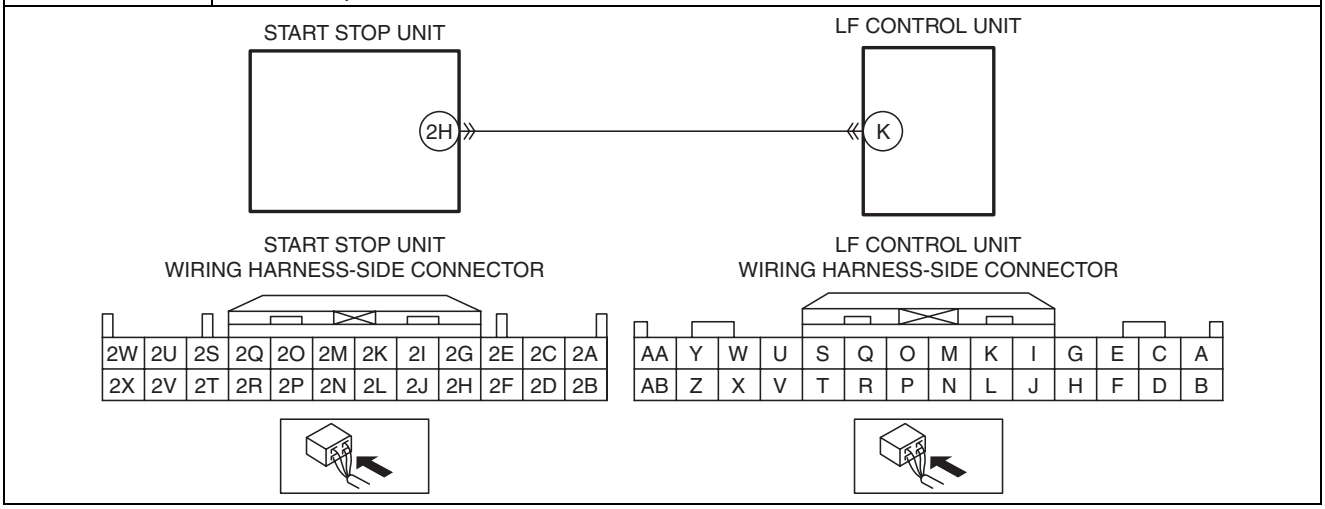
Step	Inspection		Action
1	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See 09-14-60 LF CONTROL UNIT INSPECTION.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to the next step. (See 09-14-59 LF CONTROL UNIT REMOVAL/INSTALLATION.)
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS START STOP UNIT** • Clear DTCs for the advanced keyless entry system using the M-MDS. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].) • Perform the advanced keyless entry system DTC inspection using the M-MDS. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].) • Is DTC B13C3:04 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-53 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02A-6 DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

DTC B13C3:09 [ADVANCED KEYLESS ENTRY SYSTEM]

id0902p8027000

System malfunction location	**LF control unit malfunction**
Detection condition	• The start stop unit detects that the LF State signal of the LF control unit is low for **5 s or more**. • With the communication between the start stop unit and LF control unit being performed normally, there is no response from the LF control unit even though there is a signal transmission request from the start stop unit to the LF control unit, and the LF state signal becomes low.
Fail-safe	• Inhibits the door lock/unlock control using the advanced keyless entry system.
Possible cause	• LF control unit connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 2H and LF control unit terminal K • Open circuit in wiring harness between start stop unit terminal 2H and LF control unit terminal K • LF control unit malfunction • Start stop unit malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

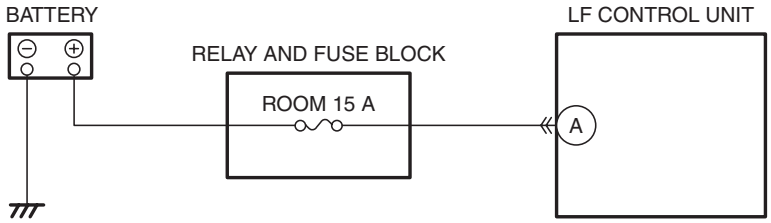
Step	Inspection		Action
3	**INSPECT LF CONTROL UNIT CIRCUIT FOR SHORT TO GROUND** • Verify that the start stop unit and LF control unit connectors are disconnected. • Inspect for continuity between LF control unit terminal K (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 6.
		No	Go to the next step.
4	**INSPECT LF CONTROL UNIT CIRCUIT FOR OPEN CIRCUIT** • Verify that the start stop unit and LF control unit connectors are disconnected. • Inspect the wiring harness for continuity between start stop unit terminal 2H (vehicle wiring harness side) and LF control unit terminal K (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 6.
5	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See 09-14-60 LF CONTROL UNIT INSPECTION.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to the next step. (See 09-14-59 LF CONTROL UNIT REMOVAL/INSTALLATION.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTCs for the advanced keyless entry system using the M-MDS. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the advanced keyless entry system DTC inspection using the M-MDS. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].) • Is DTC B13C3:09 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-53 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02A-6 DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

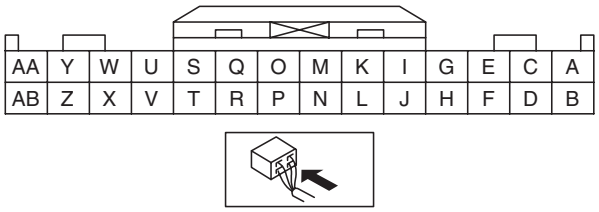
DTC B13C3:16 [ADVANCED KEYLESS ENTRY SYSTEM]

id0902p8027100

System malfunction location	**LF control unit power supply voltage decrease input**
Detection condition	• With the ignition switched ON (engine off), start stop unit power supply circuit (+B1) voltage of **8.5 V or more or less than 16.5 V** and LF control unit power supply circuit voltage of **5 V or more or less than 8.5 V** are detected for **5 s or more**.
Fail-safe	• Inhibits the door lock/unlock control using the advanced keyless entry system.
Possible cause	• LF control unit connector or terminal malfunction • LF control unit power supply circuit malfunction — Short to ground in the wiring harness between ROOM 15 A fuse and LF control unit terminal A — ROOM 15 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and LF control unit terminal A • LF control unit malfunction • Start stop unit malfunction



LF CONTROL UNIT
WIRING HARNESS-SIDE CONNECTOR



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

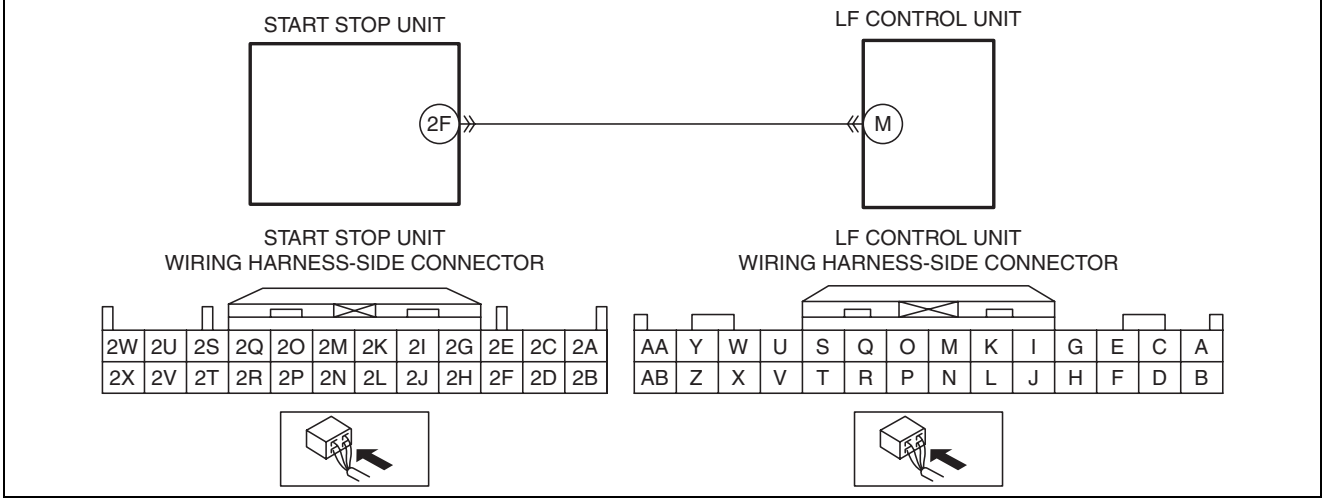
Step	Inspection		Action
2	**INSPECT LF CONTROL UNIT POWER SUPPLY CIRCUIT** • Verify that the LF control unit connector is disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Measure the voltage at LF control unit terminal A (vehicle wiring harness side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ROOM 15 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the fuse. • If a fuse is damaged: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness which has an open circuit. Go to Step 4.
3	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See 09-14-60 LF CONTROL UNIT INSPECTION.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to the next step. (See 09-14-59 LF CONTROL UNIT REMOVAL/INSTALLATION.)
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTCs for the advanced keyless entry system using the M-MDS. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].) • Switch the ignition ON (engine off) and wait for **5 s or more**. • Perform the advanced keyless entry system DTC inspection using the M-MDS. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].) • Is DTC B13C3:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-53 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02A-6 DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

DTC B13C3:29 [ADVANCED KEYLESS ENTRY SYSTEM]

id0902p8027200

System malfunction location	**Communication error with LF control unit**
Detection condition	• The start stop unit detects communication error with LF control unit **10 times** in a series.
Fail-safe	• Inhibits the door lock/unlock control using the advanced keyless entry system.
Possible cause	• LF control unit connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 2F and LF control unit terminal M • Open circuit in wiring harness between start stop unit terminal 2F and LF control unit terminal M • LF control unit malfunction • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT LF CONTROL UNIT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the LF control unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT LF CONTROL UNIT CIRCUIT FOR SHORT TO GROUND** • Verify that the start stop unit and LF control unit connectors are disconnected. • Inspect for continuity between LF control unit terminal M (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 6.
		No	Go to the next step.
4	**INSPECT LF CONTROL UNIT CIRCUIT FOR OPEN CIRCUIT** • Verify that the start stop unit and LF control unit connectors are disconnected. • Inspect the wiring harness for continuity between start stop unit terminal 2F (vehicle wiring harness side) and LF control unit terminal M (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 6.
5	**INSPECT LF CONTROL UNIT** • Inspect the LF control unit. (See 09-14-60 LF CONTROL UNIT INSPECTION.) • Is the LF control unit normal?	Yes	Go to the next step.
		No	Replace the LF control unit, then go to the next step. (See 09-14-59 LF CONTROL UNIT REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTCs for the advanced keyless entry system using the M-MDS. (See 09-02A-5 CLEARING DTC [ADVANCED KEYLESS ENTRY SYSTEM].) • Perform the advanced keyless entry system DTC inspection using the M-MDS. (See 09-02A-5 DTC INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM].) • Is DTC B13C3:29 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-53 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02A-6 DTC TABLE [ADVANCED KEYLESS ENTRY SYSTEM].)
		No	DTC troubleshooting completed.

PID/DATA MONITOR INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]

id0902p8027300

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   1. Select “DataLogger”.
   2. Select “Modules”.
   3. Select “SSU”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

PID/DATA MONITOR TABLE [ADVANCED KEYLESS ENTRY SYSTEM]

id0902p8027400

PID	Unit/ Operation	Data contents	Inspection item(s)
LG/ T_LK_SW	Off/On	• Off: Request switch (liftgate) is off. • On: Request switch (liftgate) is on.	Request switch (liftgate)
RQ_SW_LF	Off/On	• Off: Request switch (LF) is off. • On: Request switch (LF) is on.	Request switch (LF)
RQ_SW_RF	Off/On	• Off: Request switch (RF) is off. • On: Request switch (RF) is on.	Request switch (RF)

ON-BOARD DIAGNOSTIC [ADVANCED KEYLESS ENTRY SYSTEM]

ACTIVE COMMAND MODES INSPECTION [ADVANCED KEYLESS ENTRY SYSTEM]

id0902p8027500

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “SSU”.
3. Select the simulation items from the PID table.
4. Perform the active command modes function, inspect the operations for each parts.
   - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

ACTIVE COMMAND MODES TABLE [ADVANCED KEYLESS ENTRY SYSTEM]

id0902p8027600

Simulation item	Unit/ Operation	Data contents	Output part name
BZR_OUT	Off/On	• Off: Keyless beeper does not sound. • On: Keyless beeper sounds.	Keyless beeper

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

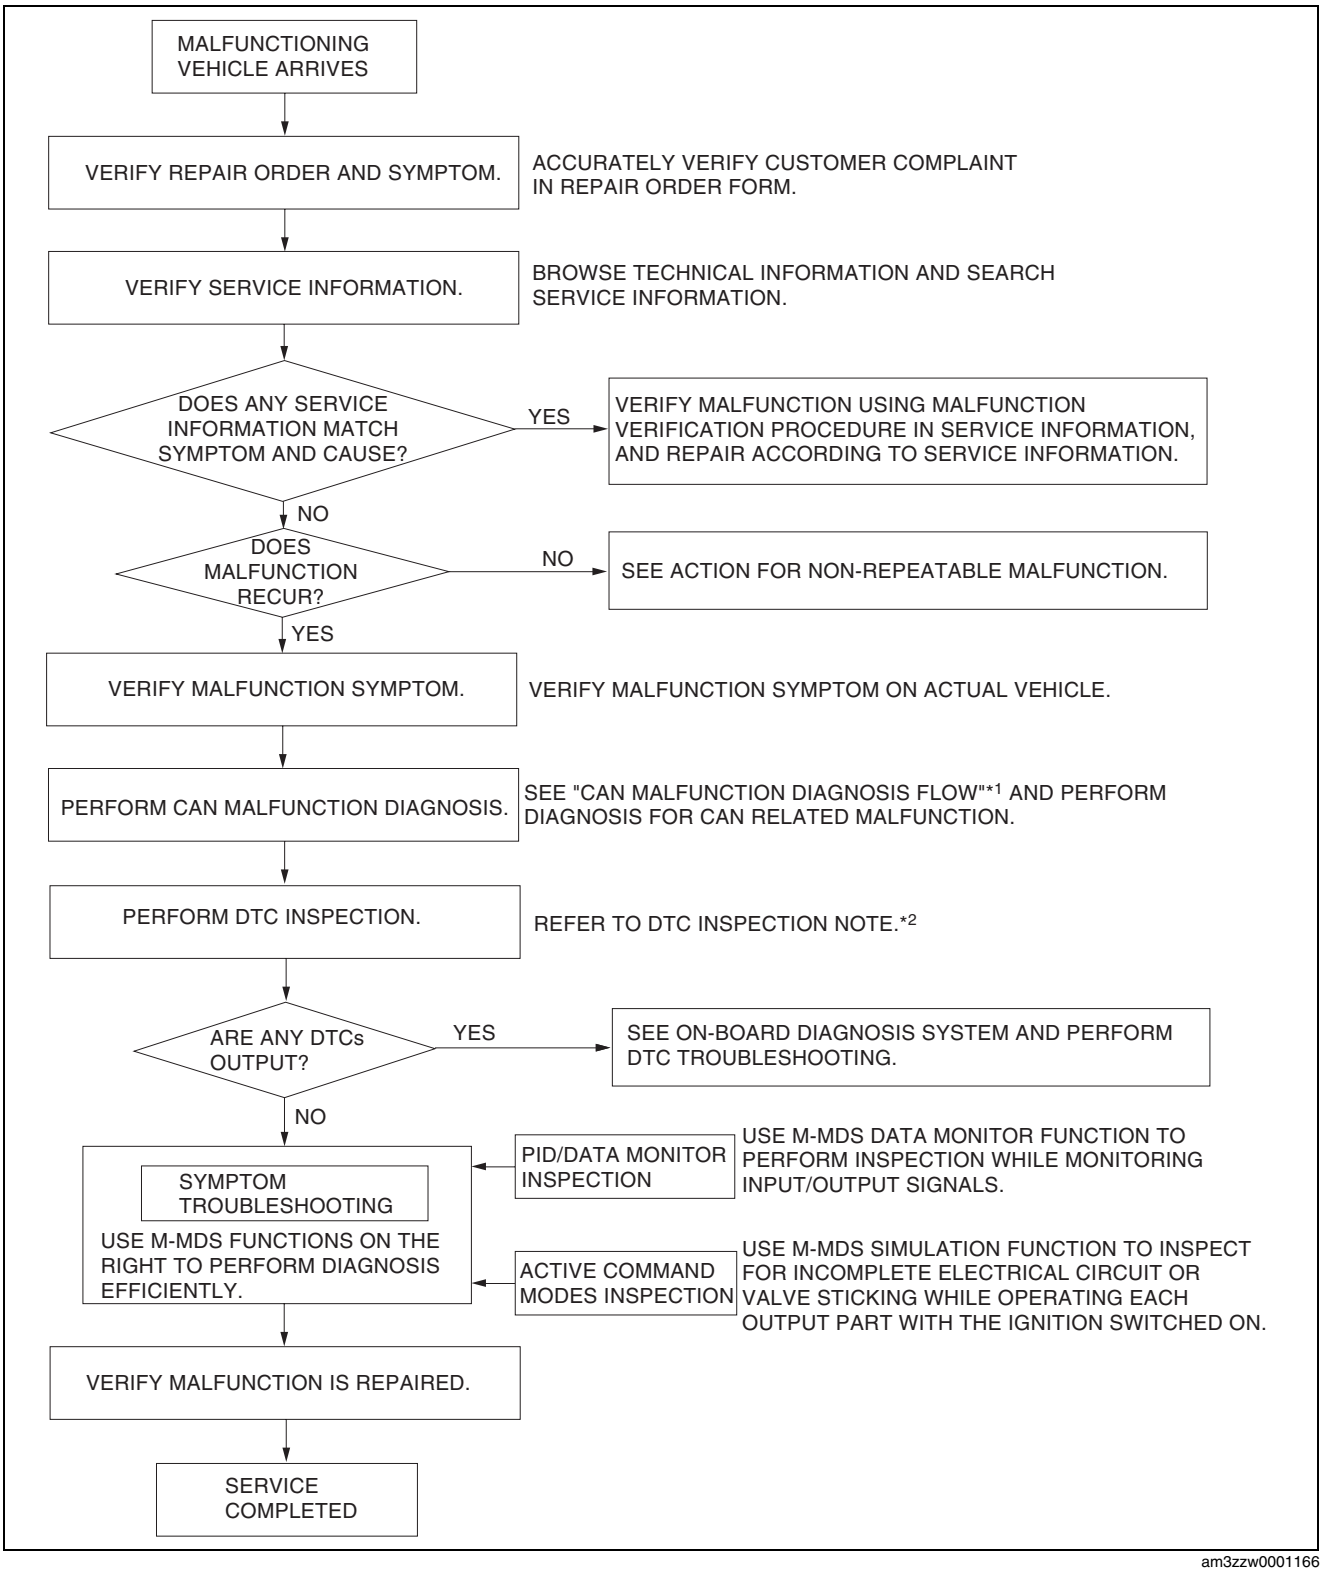
FOREWORD [IMMOBILIZER SYSTEM]

id0902e4028400

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.
- Due to the possibility that the engine cannot be started because signal transmission between the remote transmitter and the vehicle is obstructed, do not allow the following items to contact the remote transmitter.
  - — Any metallic object
  - — Spare keys or other keys for immobilizer system
  - — Device such as a mobile phone which generates radio waves.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

Troubleshooting Procedure



am3zzw0001166

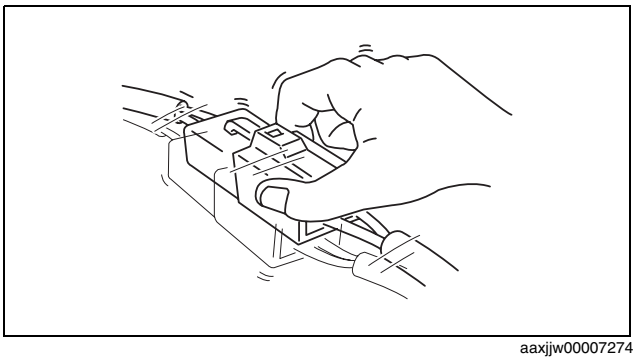
*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)]/10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)]/10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)]/10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

*2 : 09-02B-3 DTC Inspection Note

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

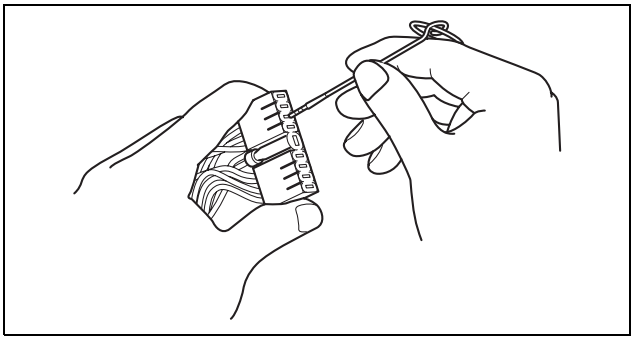
Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

DTC Inspection Note

- When there is a malfunction in the immobilizer system, DTCs are recorded in the start stop unit and PCM.
- The DTCs stored in the start stop unit can be verified using the flashing pattern of the security indicator light and M-MDS.
- If immobilizer system DTCs are not recorded even if the engine cannot be started, perform symptom troubleshooting. (See 01-03-19 NO.3 WILL NOT CRANK [SKYACTIV-G 2.0].)

DTC INSPECTION [IMMOBILIZER SYSTEM]

id0902e4028500

Verifying DTCs using security indicator light

Note

- If multiple DTCs are detected, only those having the lowest numbers of those detected will be indicated by the security light.
- A DTC is displayed ten times by switching the ignition ON (engine off or on) once.

1. Switch the ignition ON (engine off or on).
2. Wait for approx. 1 min until the security indicator light displays a DTC.

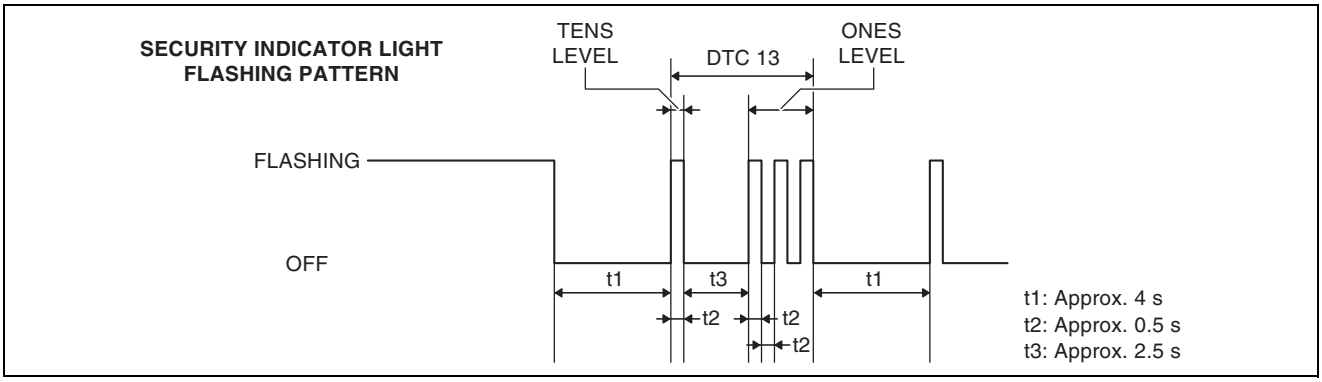
Note

- If the following DTCs are detected when the ignition is switched ON (engine off or on), the DTC is displayed after the security indicator light is flashed or illuminated for **approx. 1 min**.
  - — If DTCs in the nines and tens are detected, the security indicator light flashes for **approx. 1 min**.
  - — If a DTC 22 or 23 is detected, the security indicator light illuminates for **approx. 1 min**.
- DTC 21 is displayed when the ignition is switched ON (engine off or on) and the security indicator light illumination turns off after **approx. 1 min**.

3. Read DTCs by the number of times the security indicator light flashes as shown in the figure.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

Example: DTC 13



ac5wzw0000351

4. Repair the malfunctioning part according to the applicable DTC troubleshooting based on the DTC which was verified by the number of times the security indicator light flashed. (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM].)

Detecting DTC using the M-MDS

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the start stop unit. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].)

CLEARING DTC [IMMOBILIZER SYSTEM]

id0902e4028600

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].)
8. Verify that no DTCs are displayed.

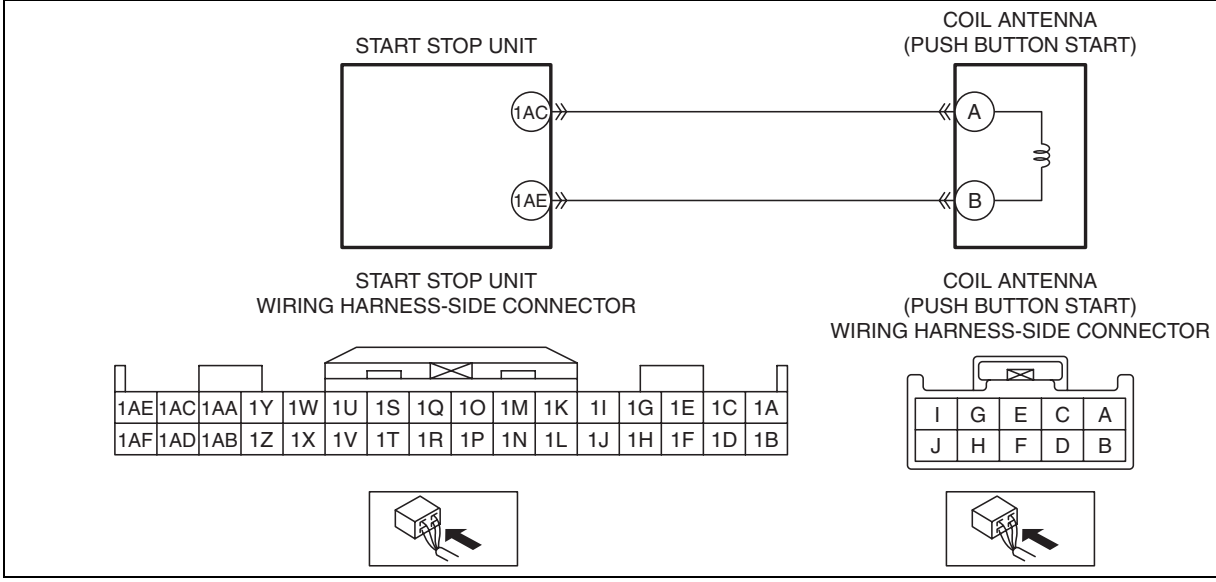
*2 : C: CMDTC self test, D: ODDTC self test

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

SECURITY INDICATOR LIGHT: 11, DTC: B10D9:87/P1260:00 [IMMOBILIZER SYSTEM]

id0902e4908000

System malfunction location	**Coil antenna (built into push button start) error**
Detection condition	• The starter stop unit detected a malfunction in the coil antenna, and remote transmitter communication is not possible.
Fail-safe	—
Possible cause	• Push button start connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — Start stop unit terminal 1AC and push button start terminal A — Start stop unit terminal 1AE and push button start terminal B • Open circuit in wiring harness between the following terminals: — Start stop unit terminal 1AC and push button start terminal A — Start stop unit terminal 1AE and push button start terminal B • Coil antenna malfunction • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PUSH BUTTON START CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the push button start connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT COIL ANTENNA CIRCUIT FOR SHORT TO GROUND** • Verify that the push button start and start stop unit connectors are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — Push button start terminal A — Push button start terminal B • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 6.
		No	Go to the next step.
4	**INSPECT COIL ANTENNA CIRCUIT FOR OPEN CIRCUIT** • Verify that the push button start and start stop unit connectors are disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — Start stop unit terminal 1AC and push button start terminal A — Start stop unit terminal 1AE and push button start terminal B • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 6.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

Step	Inspection		Action
5	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS COIL ANTENNA** • Reconnect all the disconnected connectors. • Remove the ROOM 15 A fuse. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the immobilizer system using the M-MDS. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].) • Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Security indicator light: 11, DTC B10D9:87/ P1260:00 displayed?	Yes	Replace the push button start, then go to the next step. (See 09-21-24 PUSH BUTTON START REMOVAL/ INSTALLATION.)
		No	Go to Step 7.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Remove the ROOM 15 A fuse. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the immobilizer system using the M-MDS. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].) • Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Security indicator light: 11, DTC B10D9:87/ P1260:00 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

SECURITY INDICATOR LIGHT: 13, DTC: B13D3:94/P1260:00 [IMMOBILIZER SYSTEM]

id0902e4027800

System malfunction location	**Communication error with remote transmitter**
Detection condition	• The starter stop unit could not detect remote transmitter communication or communication error was detected.
Fail-safe	—
Possible cause	• When the ignition is switched ON (engine off or on), it is detected that the remote transmitter is outside of the vehicle. • Push button start connector or terminal malfunction • Start stop unit connector or terminal malfunction • Remote transmitter malfunction • Start stop unit malfunction **Note** • If any of the following items are touching or near the remote transmitter, signal communication between the remote transmitter and the vehicle is negatively affected, resulting in the engine not starting. — Spare keys — Keys for other vehicles equipped with an immobilizer system — Any metallic object — Any electronic device, or any credit or other card with magnetic strips — Radio wave outputting device nearby
System wiring diagram	—

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PUSH BUTTON START CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the push button start connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**VERIFY IF MALFUNCTION CAUSE IS REMOTE TRANSMITTER** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Re-program key ID number of the remote transmitter. (See 09-14-78 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING.) • Clear DTC for the immobilizer system using the M-MDS. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].) • Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Security indicator light: 13, DTC B13D3:94/ P1260:00 displayed?	Yes	Replace the remote transmitter, then go to the next step. (See 09-14-78 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING.)
		No	Go to Step 5.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

Step	Inspection		Action
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the immobilizer system using the M-MDS. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].) • Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Security indicator light: 13, DTC B13D3:94/P1260:00 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

SECURITY INDICATOR LIGHT: 13, DTC: B13D3:05/P1260:00 [IMMOBILIZER SYSTEM]

id0902e4027900

System malfunction location	**Remote transmitter program error**
Detection condition	• The start stop unit detects a remote transmitter program error.
Fail-safe	—
Possible cause	• Push button start connector or terminal malfunction • Start stop unit connector or terminal malfunction • Remote transmitter program error • Start stop unit malfunction **Note** • If any of the following items are touching or near the remote transmitter, signal communication between the remote transmitter and the vehicle is negatively affected, resulting in the engine not starting. — Spare keys — Keys for other vehicles equipped with an immobilizer system — Any metallic object — Any electronic device, or any credit or other card with magnetic strips — Radio wave outputting device nearby

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PUSH BUTTON START CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the push button start connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**VERIFY IF MALFUNCTION CAUSE IS REMOTE TRANSMITTER** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Re-program key ID number of the remote transmitter. (See 09-14-78 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING.) • Clear DTC for the immobilizer system using the M-MDS. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].) • Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Security indicator light: 13, DTC B13D3:05/ P1260:00 displayed?	Yes	Replace the remote transmitter, then go to the next step. (See 09-14-78 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING.)
		No	Go to Step 5.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

Step	Inspection		Action
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the immobilizer system using the M-MDS. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].) • Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Security indicator light: 13, DTC B13D3:05/ P1260:00 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

SECURITY INDICATOR LIGHT: 15, DTC: B13D3:51/P1260:00 [IMMOBILIZER SYSTEM]

id0902e4028000

System malfunction location	**Unregistered remote transmitter is detected**
Detection condition	• The start stop unit detects that the remote transmitter has not been programmed.
Fail-safe	—
Possible cause	• Remote transmitter malfunction — The remote transmitter is not programmed after replacing the start stop unit. — Unprogrammed remote transmitter was used. • Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY IF THE REMOTE TRANSMITTER BROUGHT INTO THE VEHICLE IS FOR THAT VEHICLE** • Does the remote transmitter belong to another vehicle?	Yes	Have the correct transmitter for the vehicle ready inside the vehicle and go to Step 3.
		No	Go to the next step.
2	**REGISTER REMOTE TRANSMITTER** • Perform the following work for each of the programmed remote transmitters. — Clear DTC for the immobilizer system using the M-MDS. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].) — Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Security indicator light: 15, DTC B13D3:51/P1260:00 displayed?	Yes	Replace the malfunctioning remote transmitter, then go to the next step. (See 09-14-78 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the immobilizer system using the M-MDS. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].) • Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Security indicator light: 15, DTC B13D3:51/P1260:00 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

SECURITY INDICATOR LIGHT: 16, DTC: U0100:87/P1260:00 [IMMOBILIZER SYSTEM]

id0902e4908600

System malfunction location	**Communication error with PCM (no response or data mis-match)**
Detection condition	• The starter stop unit detects a communication error (no response or immobilizer system cancel not possible) with the PCM.
Fail-safe	—
Possible cause	• The immobilizer system-related parts have not been programmed when replacing the PCM or start stop unit. • Start stop unit malfunction • PCM malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**Perform immobilizer system-related part programming.** • Perform start stop unit replacement and programming due to simultaneous replacement of start stop unit/PCM. (See 09-14-78 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING.) • Clear DTC for the immobilizer system using the M-MDS. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].) • Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Security indicator light: 16, DTC U0100:87/P1260:00 displayed?	Yes	Go to the next step.
		No	Go to Step 4.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS START STOP UNIT** • Clear DTC for the immobilizer system using the M-MDS. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].) • Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Security indicator: 16, DTC U0100:87/P1260:00 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to Step 4.
3	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS PCM** • Clear DTC for the immobilizer system using the M-MDS. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].) • Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Security indicator: 16, DTC U0100:87/P1260:00 displayed?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

SECURITY INDICATOR LIGHT: 21, DTC: B13D4:00/P1260:00 [IMMOBILIZER SYSTEM]

id0902e4028100

System malfunction location	**Insufficient remote transmitter programming number**
Detection condition	• The start stop unit detects that the number of programmed remote transmitters is less than 2.
Fail-safe	—
Possible cause	• Insufficient number of remote transmitters programmed • Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY NUMBER OF PROGRAMMED REMOTE TRANSMITTER** • Display PID NUM_TRNSMIT using the M-MDS. (See 09-02B-21 PID/DATA MONITOR INSPECTION [IMMOBILIZER SYSTEM].) • Is the number of programmed remote transmitters less than 2?	Yes	Perform additional remote transmitter programming, then go to the next step. (See 09-14-78 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING.)
		No	Go to the next step.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the immobilizer system using the M-MDS. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].) • Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Security indicator light: 21, DTC B13D4:00/P1260:00 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

SECURITY INDICATOR LIGHT: 22, DTC: B10DA:51/P1260:00 [IMMOBILIZER SYSTEM]

id0902e4908800

System malfunction location	**Communication error with PCM (data received failure)**
Detection condition	• The start stop unit detects a communication error (data received failure) with PCM.
Fail-safe	—
Possible cause	• The immobilizer system-related part programming has not been performed when replacing the PCM or start stop unit. • Start stop unit malfunction • PCM malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**Perform immobilizer system-related part programming.** • Perform start stop unit replacement and programming due to simultaneous replacement of start stop unit/PCM. (See 09-14-78 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING.) • Clear DTC for the immobilizer system using the M-MDS. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].) • Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Security indicator light: 22, DTC B10DA:51/P1260:00 displayed?	Yes	Go to the next step.
		No	Go to Step 4.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS START STOP UNIT** • Clear DTC for the immobilizer system using the M-MDS. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].) • Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Security indicator light: 22, DTC B10DA:51/P1260:00 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to Step 4.
3	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS PCM** • Clear DTC for the immobilizer system using the M-MDS. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].) • Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Security indicator light: 22, DTC B10DA:51/P1260:00 displayed?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

SECURITY INDICATOR LIGHT: 23, DTC: B10DA:62/P1260:00 [IMMOBILIZER SYSTEM]

id0902e4909000

System malfunction location	**Communication error with PCM (code mis-matched)**
Detection condition	• The start stop unit detects a communication error (code mis-matched) with PCM.
Fail-safe	—
Possible cause	• The immobilizer system-related part programming has not been performed when replacing the PCM or start stop unit. • PCM malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**Perform immobilizer system-related part programming.** • Perform start stop unit replacement and programming due to simultaneous replacement of start stop unit/PCM. (See 09-14-78 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING.) • Clear DTC for the immobilizer system using the M-MDS. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].) • Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Security indicator light: 23, DTC B10DA:62/P1260:00 displayed?	Yes	Go to the next step.
		No	Go to Step 3.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS PCM** • Clear DTC for the immobilizer system using the M-MDS. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].) • Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Security indicator light: 23, DTC B10DA:62/P1260:00 displayed?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [IMMOBILIZER SYSTEM]

SECURITY INDICATOR LIGHT: 09, DTC: U3000:96/P1260:00 [IMMOBILIZER SYSTEM]

id0902e4028200

System malfunction location	**Start stop unit malfunction**
Detection condition	• Start stop unit malfunction detected.
Fail-safe	—
Possible cause	• Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS START STOP UNIT** • Clear DTC for the immobilizer system using the M-MDS. (See 09-02B-4 CLEARING DTC [IMMOBILIZER SYSTEM].) • Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Security indicator light: 09, DTC U3000:96/P1260:00 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM].)
		No	DTC troubleshooting completed.

PID/DATA MONITOR INSPECTION [IMMOBILIZER SYSTEM]

id0902e4028800

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Data Logger”.
   (2) Select “Modules”.
   (3) Select “SSU”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

PID/DATA MONITOR TABLE [IMMOBILIZER SYSTEM]

id0902e4028900

—: Not applicable

PID	Unit/ Operation	Data contents	Inspection item(s)
NUM_TRNSMIT	—	Displays the number of the remote transmitters programmed to the start stop unit.	Start stop unit

ON-BOARD DIAGNOSTIC [START STOP UNIT]

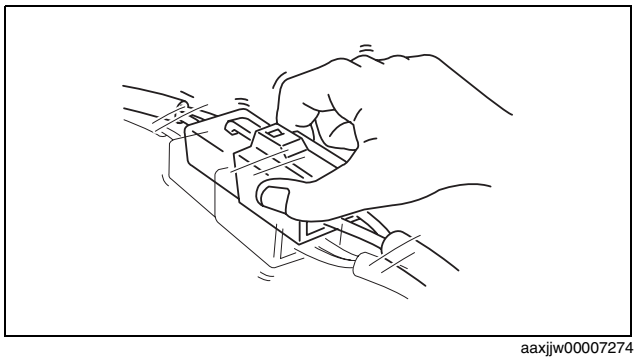
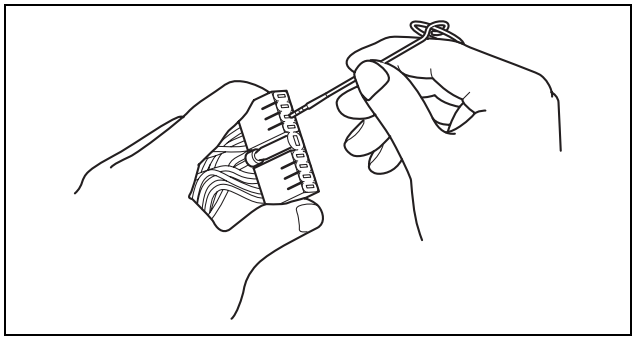
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

DTC INSPECTION [START STOP UNIT]

id0902p6018800

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the start stop unit. (See 09-02C-7 CLEARING DTC [START STOP UNIT].)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “SSU”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the start stop unit. (See 09-02C-7 CLEARING DTC [START STOP UNIT].)

Snap shot data

- The data for all DTCs currently detected is stored.

Snap shot data table

Snap shot data item	Unit		Data contents	Corresponding data monitor items
AAT	°C	°F	Ambient temperature	—
APP_STATUS	Accelerator Pedal Off/Under20%/ Over20%/FAIL		Accelerator pedal position status	—
CFG_STATUS	Config Complete/Not Configured/ Config Error		Configuration status	—

ON-BOARD DIAGNOSTIC [START STOP UNIT]

Snap shot data item	Unit		Data contents	Corresponding data monitor items
ECT_STATUS	Under 0 degrees C/0-Under 80 degrees C/Over 80 degrees C/FAIL		Engine coolant temperature status	—
IC_VPWR	V		Instrument cluster power supply voltage	—
IG-ON_TIMER	hh:mm:ss		Elapsed time since ignition switched ON (engine off or on)	—
PWR_MODE_KEY	Key Out/Key Recently Out/ Key Approved (Position 0)/ Post Accessory (Position 0)/ Accessory (Position 1)/ Post Ignition (Position 1)/ ignition On (Position 2)/ Running - Starting In Progress (Position 2)/Crank (Position 3)		Push button start power position switching status	—
RPM_STATUS	Engine Stop/Under1500rpm/ Over1500rpm/FAIL		Engine speed status	—
SHIFT_STATUS	P/N/ D/ R/ FAIL		Selector lever position status	—
TOTAL_DIST	Km	miles	Accumulated total traveled distance since vehicle completion	—
TOTAL_TIME	hh:mm:ss		Accumulated total elapsed time since vehicle completion **Note** • When the ROOM fuse is removed, or the ignition is switched off (LOCK), the time is not included in the elapsed time.	—
TRNS_NUM_L	Initial/No.1/No.2/No.3/No.4/No.5/No.6		Order of remote transmitters Programmed to vehicle	—
VPWR	V		Start stop unit power supply malfunction	—
VPWR_B1	V		Start stop unit power supply malfunction	—
VSPD_STATUS	Stop/ 0-10km/h/ Over10km/h/ FAIL		Vehicle speed status	—

CLEARING DTC [START STOP UNIT]

id0902p6018900

CMDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].)
8. Verify that no DTCs are displayed.

ODDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “SSU”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].)
8. Verify that no DTCs are displayed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC B1026:49 [START STOP UNIT]

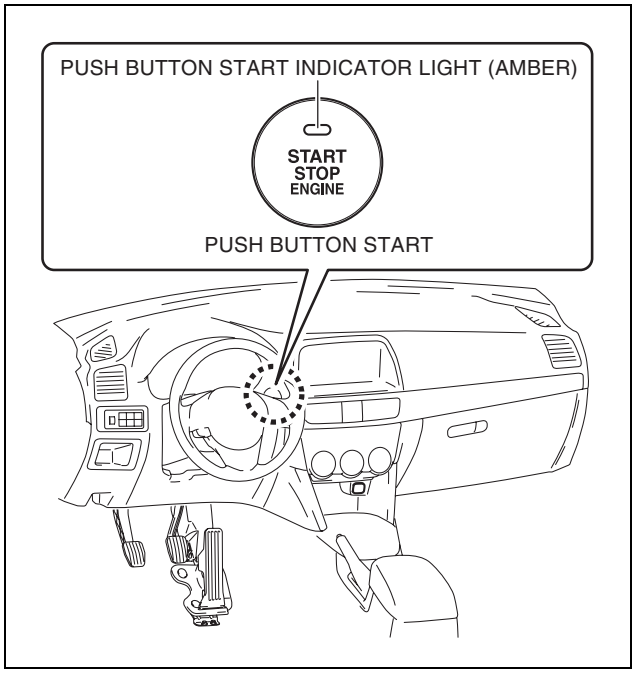
id0902p6019100

Warning

- **If this DTC is detected, the system will enter the fail-safe function to ensure safety. If a specified period of time has elapsed or the vehicle has been driven for a specified period of time or more while in fail-safe mode, the ignition will remain stuck in off and the engine cannot be started. Therefore, perform the malfunction diagnosis while the engine can be started. In addition, after having performed the malfunction diagnosis, verify that this DTC is not detected with the steering wheel locked. If the DTC is not detected, the system returns to normal from the fail-safe function.**

Note

- When changing to the fail-safe mode, the push button start indicator light (amber) flashes.
- In addition to the normal engine starting operation while cranking the engine in fail-safe mode, it is necessary to press the push button start.



ac5wzw0000239

System malfunction location	**Steering lock malfunction**
Detection condition	• Start stop unit detects a serious malfunction in the steering lock of the internal start stop unit.
Fail-safe	• The system will enter the fail-safe function to ensure safety. If a specified period of time has elapsed or the vehicle has been driven for a specified period of time or more while in fail-safe mode, the ignition will remain stuck in off and the engine cannot be started.
Possible cause	• Start stop unit malfunction
System wiring diagram	—

ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS START STOP UNIT** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B1026:49 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

DTC B1026:96 [START STOP UNIT]

id0902p6019200

System malfunction location	**Steering lock malfunction**
Detection condition	• Start stop unit detects malfunction in the steering lock of the internal start stop unit.
Fail-safe	—
Possible cause	• Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

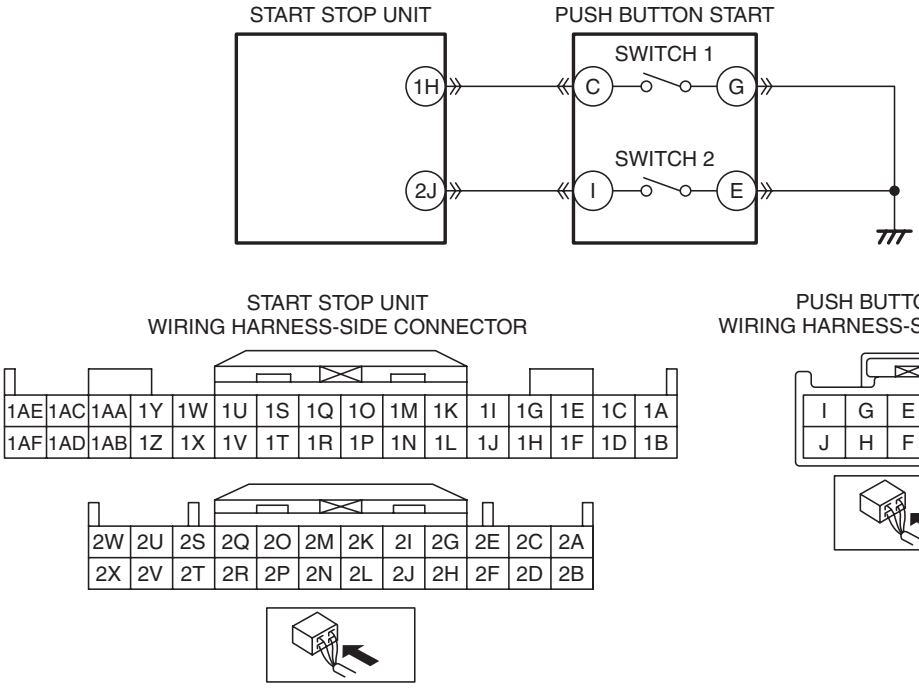
Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS START STOP UNIT** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B1026:96 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC B108B:23 [START STOP UNIT]

id0902p6019300

System malfunction location	**Push button start switch 1 circuit malfunction**
Detection condition	• Start stop unit detects push button start switch 1 ON stuck for **120 s or more**.
Fail-safe	• Perform the control with push button start switch 1 turned off.
Possible cause	• Push button start connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 1H and push button start terminal C • Push button start switch 1 malfunction • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PUSH BUTTON START CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the push button start connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**INSPECT PUSH BUTTON START SWITCH 1 CIRCUIT FOR SHORT TO GROUND** • Verify that the push button start and start stop unit connectors are disconnected. • Inspect for continuity between push button start terminal C (vehicle wiring harness) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 5.
		No	Go to the next step.
4	**INSPECT PUSH BUTTON START SWITCH 1** • Inspect push button start switch 1. (See 09-21-25 PUSH BUTTON START INSPECTION.) • Is push button start switch 1 normal?	Yes	Go to the next step.
		No	Replace the push button start, then go to the next step. (See 09-21-24 PUSH BUTTON START REMOVAL/INSTALLATION.)
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **120 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B108B:23 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

Step	Inspection		Action
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

DTC B108B:24 [START STOP UNIT]

id0902p6019400

System malfunction location	**Push button start switch 1 circuit malfunction**
Detection condition	• The start stop unit detects that push button start switch 1 is kept in an off condition **5 times or more** even though push button start switch 2 is on.
Fail-safe	—
Possible cause	• Push button start connector or terminal malfunction • Open circuit in wiring harness between push button start terminal G and body ground • Start stop unit connector or terminal malfunction • Open circuit in wiring harness between start stop unit terminal 1H and push button start terminal C • Push button start switch 1 malfunction • Start stop unit malfunction

ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PUSH BUTTON START CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the push button start connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT PUSH BUTTON START SWITCH 1 CIRCUIT FOR OPEN CIRCUIT** • Verify that the push button start connector is disconnected. • Inspect for continuity between push button start terminal G (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 6.
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT PUSH BUTTON START SWITCH 1 CIRCUIT FOR OPEN CIRCUIT** • Verify that the push button start and start stop unit connectors are disconnected. • Inspect the wiring harness for continuity between start stop unit terminal 1H (vehicle wiring harness side) and push button start terminal C (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 6.
5	**INSPECT PUSH BUTTON START SWITCH 1** • Inspect push button start switch 1. (See 09-21-25 PUSH BUTTON START INSPECTION.) • Is push button start switch 1 normal?	Yes	Go to the next step.
		No	Replace the push button start, then go to the next step. (See 09-21-24 PUSH BUTTON START REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [START STOP UNIT]

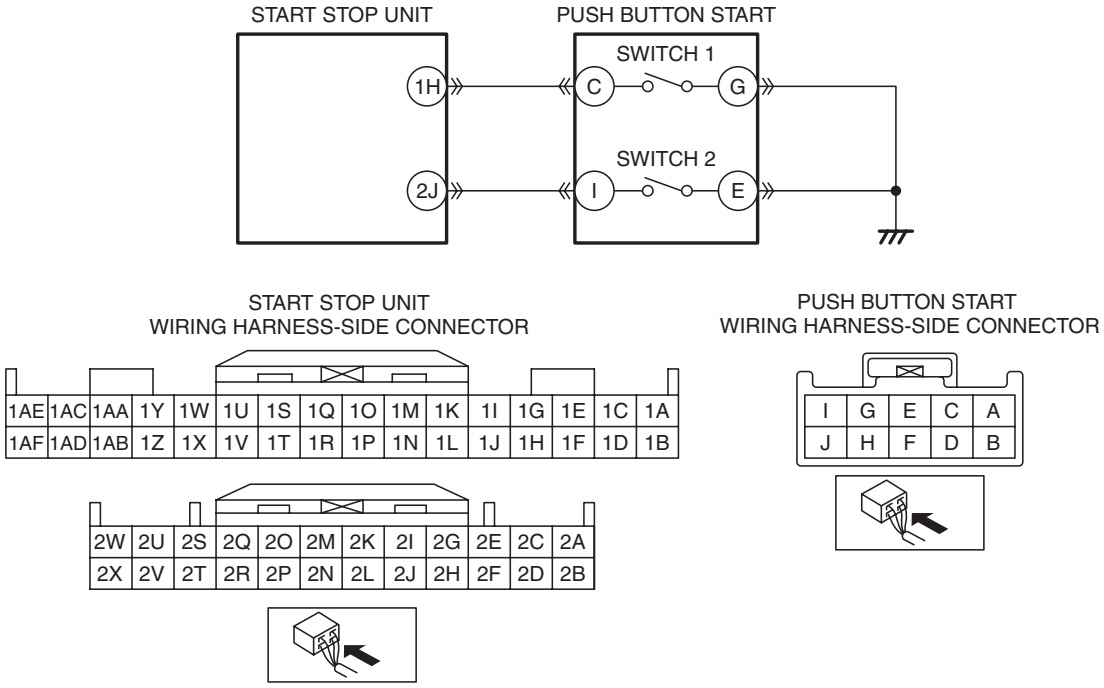
Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and press the push button start **5 times or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B108B:24 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC B108C:23 [START STOP UNIT]

id0902p6019500

System malfunction location	**Push button start switch 2 circuit malfunction**
Detection condition	• Start stop unit detects push button start switch 2 ON stuck for **120 s or more**.
Fail-safe	• Perform the control with push button start switch 2 turned off.
Possible cause	• Push button start connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 2J and push button start terminal I • Push button start switch 2 malfunction • Start stop unit malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PUSH BUTTON START CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the push button start connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

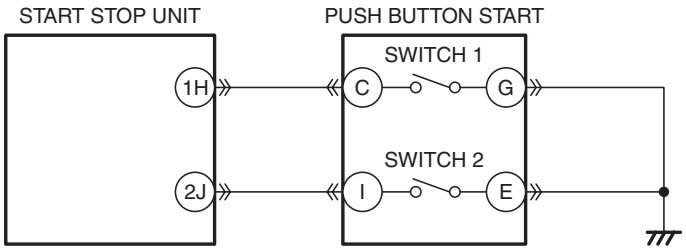
Step	Inspection		Action
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**INSPECT PUSH BUTTON START SWITCH 2 CIRCUIT FOR SHORT TO GROUND** • Verify that the push button start and start stop unit connectors are disconnected. • Inspect for continuity between push button start terminal I (vehicle wiring harness) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 5.
		No	Go to the next step.
4	**INSPECT PUSH BUTTON START SWITCH 2** • Inspect push button start switch 2. (See 09-21-25 PUSH BUTTON START INSPECTION.) • Is push button start switch 2 normal?	Yes	Go to the next step.
		No	Replace the push button start, then go to the next step. (See 09-21-24 PUSH BUTTON START REMOVAL/INSTALLATION.)
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **120 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B108C:23 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

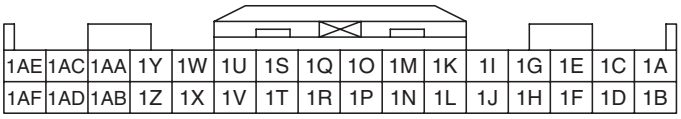
DTC B108C:24 [START STOP UNIT]

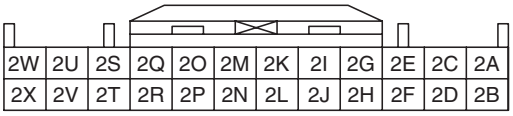
id0902p6019600

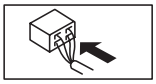
System malfunction location	**Push button start switch 2 circuit malfunction**
Detection condition	• The start stop unit detects that push button start switch 2 is kept in an off condition **5 times or more** even though push button start switch 1 is on.
Fail-safe	—
Possible cause	• Push button start connector or terminal malfunction • Open circuit in wiring harness between push button start terminal E and body ground • Start stop unit connector or terminal malfunction • Open circuit in wiring harness between start stop unit terminal 2J and push button start terminal I • Push button start switch 2 malfunction • Start stop unit malfunction



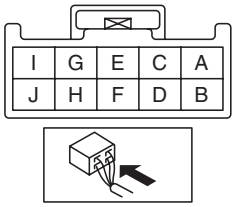
START STOP UNIT
WIRING HARNESS-SIDE CONNECTOR







PUSH BUTTON START
WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT PUSH BUTTON START CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the push button start connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT PUSH BUTTON START SWITCH 2 CIRCUIT FOR OPEN CIRCUIT** • Verify that the push button start connector is disconnected. • Inspect for continuity between push button start terminal E (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 6.
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT PUSH BUTTON START SWITCH 2 CIRCUIT FOR OPEN CIRCUIT** • Verify that the push button start and start stop unit connectors are disconnected. • Inspect the wiring harness for continuity between start stop unit terminal 2J (vehicle wiring harness side) and push button start terminal I (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 6.
5	**INSPECT PUSH BUTTON START SWITCH 2** • Inspect push button start switch 2. (See 09-21-25 PUSH BUTTON START INSPECTION.) • Is push button start switch 2 normal?	Yes	Go to the next step.
		No	Replace the push button start, then go to the next step. (See 09-21-24 PUSH BUTTON START REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [START STOP UNIT]

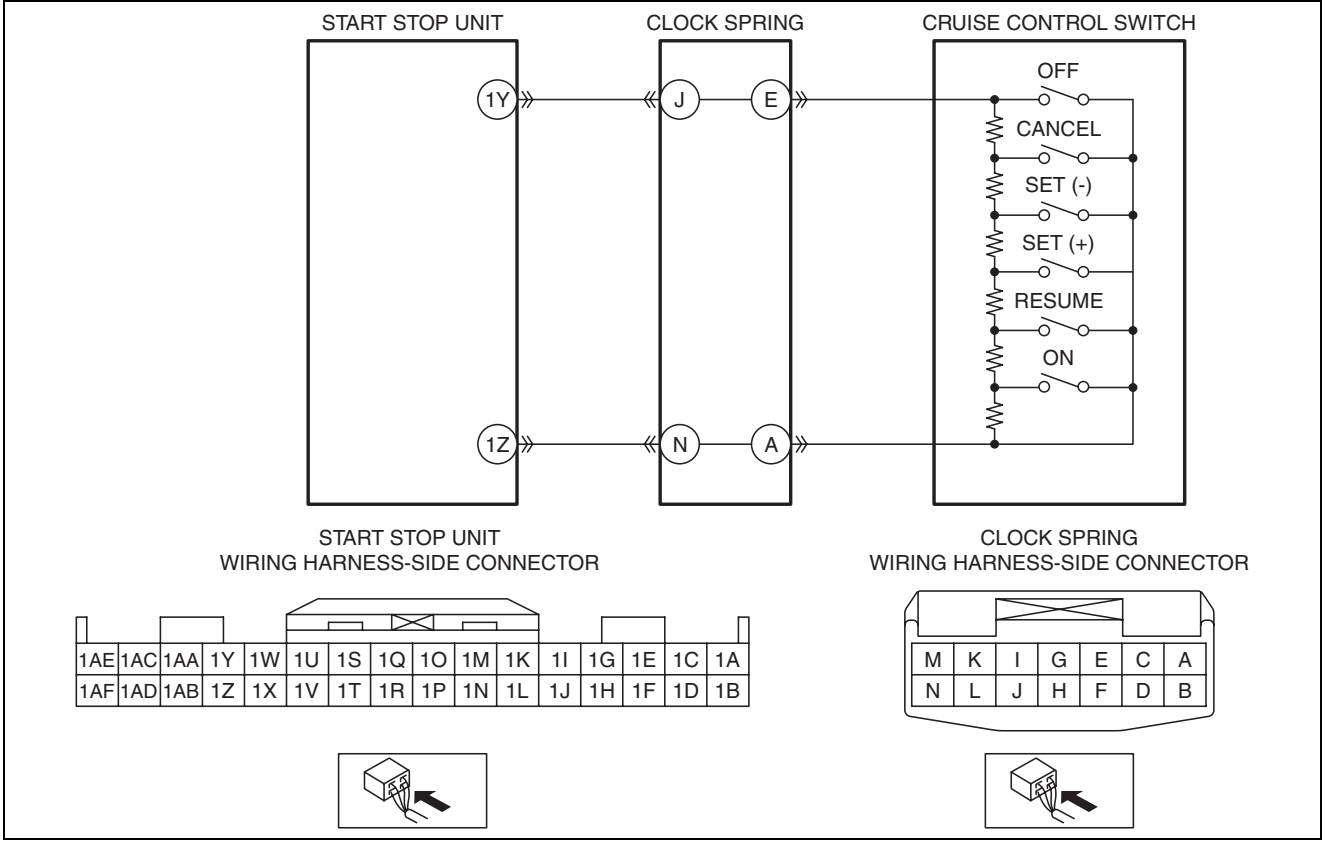
Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and press the push button start **5 times or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B108C:24 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC B10AC:13 [START STOP UNIT]

id0902p6019700

System malfunction location	**Cruise control switch circuit malfunction**
Detection condition	• The start stop unit detected an open circuit in the cruise control switch circuit for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Instrument cluster configuration error • Clock spring connector or terminal malfunction • Clock spring malfunction • Start stop unit connector or terminal malfunction • Open circuit in wiring harness between the following terminals: — Start stop unit terminal 1Y and clock spring (start stop unit side) terminal J — Start stop unit terminal 1Z and clock spring (start stop unit side) terminal N • Cruise control switch malfunction • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration with the As-Built data. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B10AC:13 displayed?	Yes	Using the M-MDS, re-perform the instrument cluster configuration using the As-Built data, then go to the next step. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 8.
2	**INSPECT CLOCK SPRING CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the clock spring connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT CLOCK SPRING** • Inspect the clock spring. (See 08-10-28 CLOCK SPRING INSPECTION.) • Is the clock spring normal?	Yes	Go to the next step.
		No	Replace the clock spring, then go to Step 7. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.)
4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
5	**INSPECT CRUISE CONTROL SWITCH CIRCUIT FOR OPEN CIRCUIT** • Verify that the start stop unit and clock spring connectors are disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — Start stop unit terminal 1Y and clock spring (start stop unit side) terminal J — Start stop unit terminal 1Z and clock spring (start stop unit side) terminal N • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 7.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

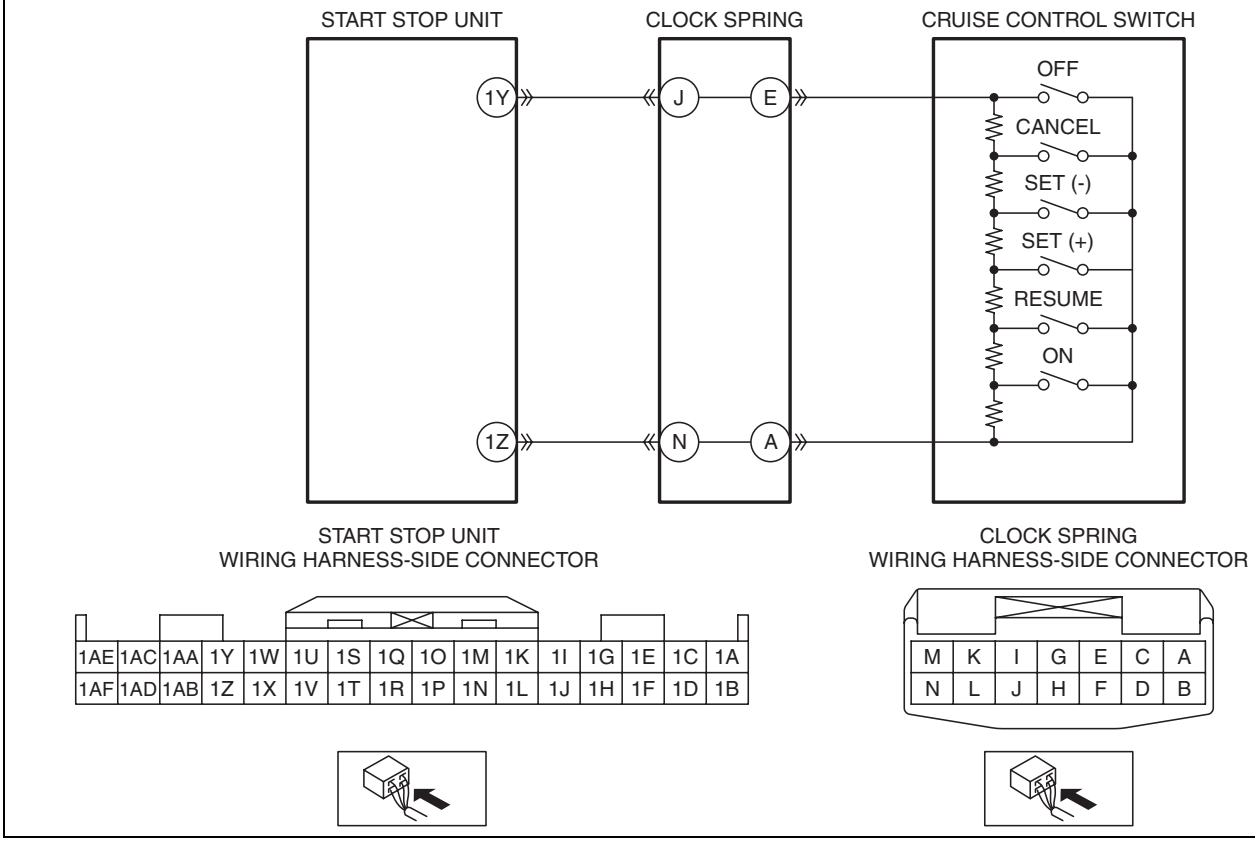
Step	Inspection		Action
6	**INSPECT CRUISE CONTROL SWITCH** • Inspect the cruise control switch. (See 01-20A-1 CRUISE CONTROL SWITCH INSPECTION [SKYACTIV-G 2.0].) (See 01-20B-1 CRUISE CONTROL SWITCH INSPECTION [SKYACTIV-D 2.2].) • Is the cruise control switch normal?	Yes	Go to the next step.
		No	Replace the cruise control switch, then go to the next step. (See 09-20-54 STEERING SWITCH REMOVAL/INSTALLATION.)
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B10AC:13 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC B10AC:23 [START STOP UNIT]

id0902p6019800

System malfunction location	**Cruise control switch circuit malfunction**
Detection condition	• The start stop unit detects any cruise control switch stuck on for **2 min or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Instrument cluster configuration error • Clock spring connector or terminal malfunction • Clock spring malfunction • Start stop unit connector or terminal malfunction • Short to power supply in wiring harness between start stop unit terminal 1Z and clock spring terminal N (start stop unit side) • Cruise control switch malfunction • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration with the As-Built data. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **2 min or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B10AC:23 displayed?	Yes	Using the M-MDS, re-perform the instrument cluster configuration using the As-Built data, then go to the next step. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 8.
2	**INSPECT CLOCK SPRING CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the clock spring connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT CLOCK SPRING** • Inspect the clock spring. (See 08-10-28 CLOCK SPRING INSPECTION.) • Is the clock spring normal?	Yes	Go to the next step.
		No	Replace the clock spring, then go to Step 7. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.)
4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

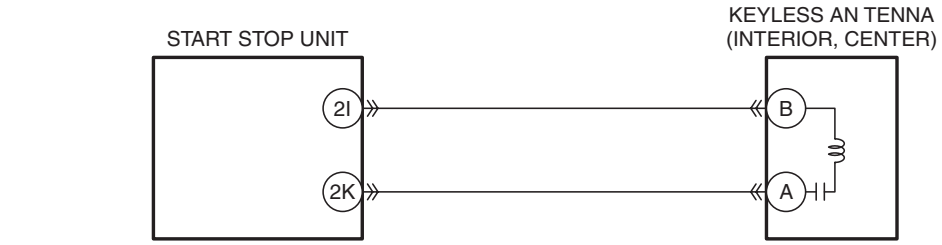
Step	Inspection		Action
5	**INSPECT CRUISE CONTROL SWITCH CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the start stop unit and clock spring connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at clock spring (start stop unit side) (vehicle wiring harness side) terminal N. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which is shorted to power supply, then go to Step 7.
6	**INSPECT CRUISE CONTROL SWITCH** • Inspect the cruise control switch. (See 01-20A-1 CRUISE CONTROL SWITCH INSPECTION [SKYACTIV-G 2.0].) (See 01-20B-1 CRUISE CONTROL SWITCH INSPECTION [SKYACTIV-D 2.2].) • Is the cruise control switch normal?	Yes	Go to the next step.
		No	Replace the cruise control switch, then go to the next step. (See 09-20-54 STEERING SWITCH REMOVAL/INSTALLATION.)
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **2 min or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B10AC:23 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

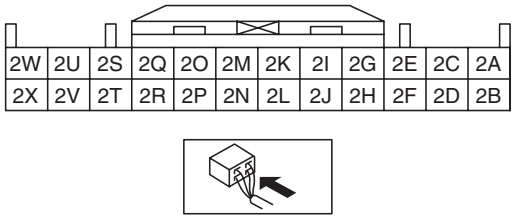
DTC B10C9:1F [START STOP UNIT]

id0902p6019900

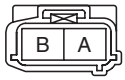
System malfunction location	**Keyless antenna (interior, center) circuit malfunction**
Detection condition	• The start stop unit detects an open circuit in the keyless antenna (interior, center) or a short to ground with the ignition switched off.
Fail-safe	—
Possible cause	• Keyless antenna (interior, center) connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — Start stop unit terminal 2I and keyless antenna (interior, center) terminal B — Start stop unit terminal 2K and keyless antenna (interior, center) terminal A • Open circuit in wiring harness between the following terminals: — Start stop unit terminal 2I and keyless antenna (interior, center) terminal B — Start stop unit terminal 2K and keyless antenna (interior, center) terminal A • Keyless antenna (interior, center) malfunction • Start stop unit malfunction



START STOP UNIT
WIRING HARNESS-SIDE CONNECTOR



KEYLESS AN TENNA
(INTERIOR, CENTER)
WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT KEYLESS ANTENNA (INTERIOR, CENTER) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the keyless antenna (interior, center) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT KEYLESS ANTENNA (INTERIOR, CENTER) CIRCUIT FOR SHORT TO GROUND** • Verify that the start stop unit and keyless antenna (interior, center) connectors are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — Keyless antenna (interior, center) terminal B — Keyless antenna (interior, center) terminal A • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 6.
		No	Go to the next step.
4	**INSPECT KEYLESS ANTENNA (INTERIOR, CENTER) CIRCUIT FOR OPEN CIRCUIT** • Verify that the start stop unit and keyless antenna (interior, center) connectors are disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — Start stop unit terminal 2I and keyless antenna (interior, center) terminal B — Start stop unit terminal 2K and keyless antenna (interior, center) terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 6.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

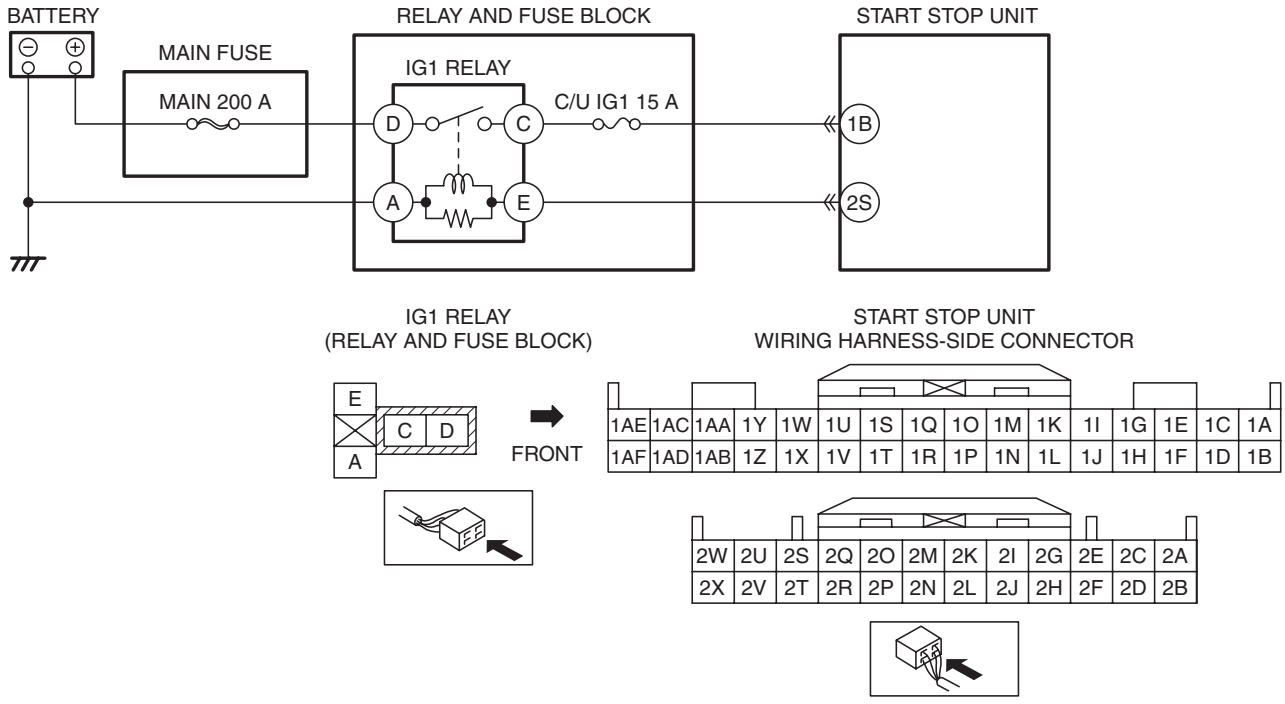
Step	Inspection		Action
5	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS KEYLESS ANTENNA (INTERIOR, CENTER)** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B10C9:1F displayed?	Yes	Replace the keyless antenna (interior, center), then go to the next step. (See 09-14-67 KEYLESS ANTENNA REMOVAL/ INSTALLATION.)
		No	Go to Step 7.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B10C9:1F displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC B10E7:11 [START STOP UNIT]

id0902p6020000

System malfunction location	**IG1 relay circuit malfunction**
Detection condition	• The ignition is switched ON (engine off or on) and the starter stop unit detects voltage from IG1 relay output monitor as **less than 2.5 V** for **0.5 s or more** while the engine is not being cranked.
Fail-safe	—
Possible cause	• IG1 relay malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between IG1 relay terminal E and start stop unit terminal 2S • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

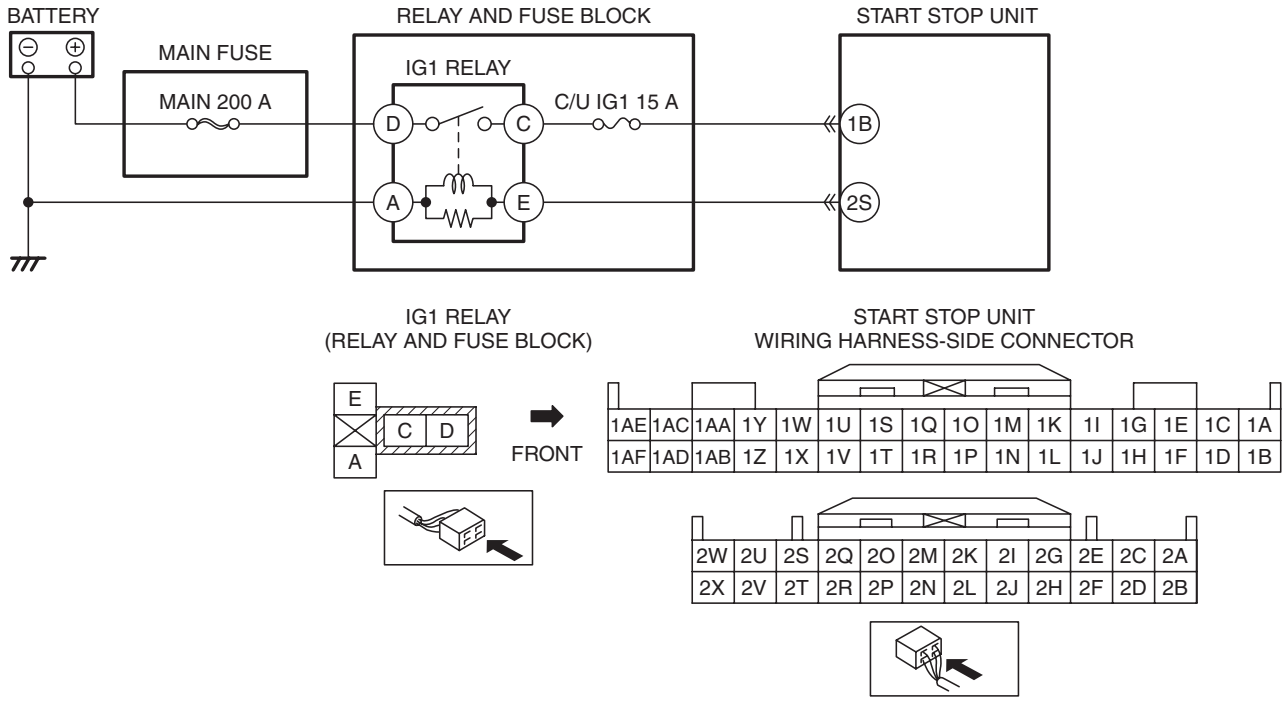
Step	Inspection		Action
1	**INSPECT IG1 RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the IG1 relay. (See 09-21-28 RELAY LOCATION.) • Inspect the IG1 relay. (See 09-21-29 RELAY INSPECTION.) • Is the IG1 relay normal?	Yes	Go to the next step.
		No	Replace the IG1 relay, then go to Step 4. (See 09-21-28 RELAY LOCATION.)
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT IG1 RELAY CIRCUIT FOR SHORT TO GROUND** • Verify that the IG1 relay is removed. • Verify that the start stop unit connector is disconnected. • Inspect for continuity between IG1 relay terminal E (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **0.5 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is the DTC B10E7:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC B10E7:12 [START STOP UNIT]

id0902p6020100

System malfunction location	**IG1 relay circuit malfunction**
Detection condition	• The start stop unit detects IG1 relay output monitor voltage of **2.5 V or more** for **0.5 s or more** with the ignition switched off or ACC.
Fail-safe	—
Possible cause	• IG1 relay malfunction • Start stop unit connector or terminal malfunction • Short to power supply in wiring harness between IG1 relay terminal E and start stop unit terminal 2S • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT IG1 RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the IG1 relay. (See 09-21-28 RELAY LOCATION.) • Inspect the IG1 relay. (See 09-21-29 RELAY INSPECTION.) • Is the IG1 relay normal?	Yes	Go to the next step.
		No	Replace the IG1 relay, then go to Step 4. (See 09-21-28 RELAY LOCATION.)
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT IG1 RELAY CIRCUIT FOR SHORT TO POWER SUPPLY** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Measure the voltage at start stop unit terminal 2S (vehicle wiring harness side). • Is the voltage **2.5 V or more**?	Yes	Repair or replace the wiring harness which has a short to the power supply, then go to the next step.
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition to off and wait for **0.5 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is the DTC B10E7:12 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.

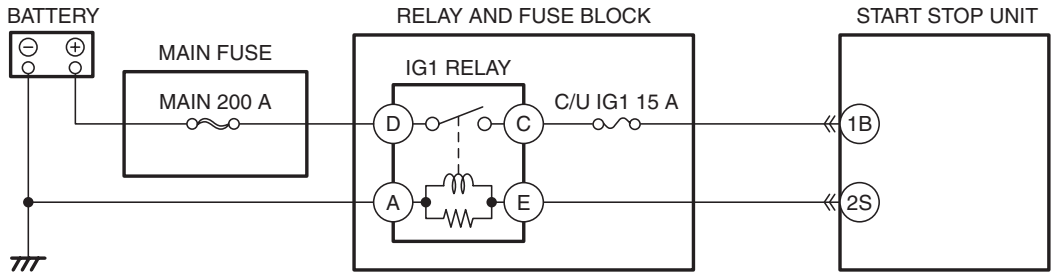
ON-BOARD DIAGNOSTIC [START STOP UNIT]

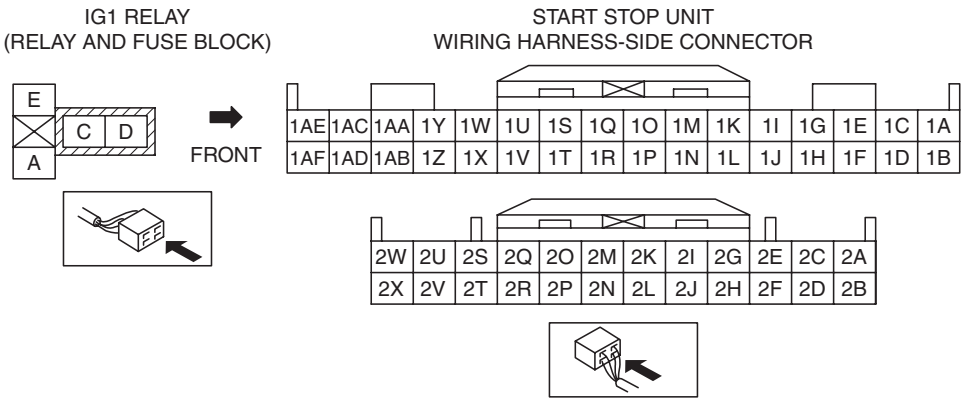
Step	Inspection		Action
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

DTC B10E7:16 [START STOP UNIT]

id0902p6020200

System malfunction location	**IG1 relay circuit malfunction**
Detection condition	• With the ignition switched ON (engine off or on), the start stop unit detects IG1 monitor voltage of **less than 2.5 V** for **1 s or more**.
Fail-safe	—
Possible cause	• IG1 relay malfunction • IG1 relay power supply circuit malfunction — Short to ground in wiring harness between MAIN 200 A fuse and IG1 relay terminal D — MAIN 200 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and IG1 relay terminal D • Start stop unit connector or terminal malfunction • Start stop unit power supply circuit (IG1) malfunction — Short to ground in wiring harness between IG1 relay terminal C and start stop unit terminal 1B — C/U IG1 15 A fuse malfunction — Open circuit in wiring harness between IG1 relay terminal C and start stop unit terminal 1B • Start stop unit malfunction





ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT IG1 RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the IG1 relay. (See 09-21-28 RELAY LOCATION.) • Inspect the IG1 relay. (See 09-21-29 RELAY INSPECTION.) • Is the IG1 relay normal?	Yes	Go to the next step.
		No	Replace the IG1 relay, then go to Step 5. (See 09-21-28 RELAY LOCATION.)
2	**INSPECT IG1 RELAY POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Verify that the IG1 relay is removed. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at IG1 relay terminal D (vehicle wiring harness side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the fuse. • If a fuse is damaged: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness which has an open circuit. Go to Step 5.
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

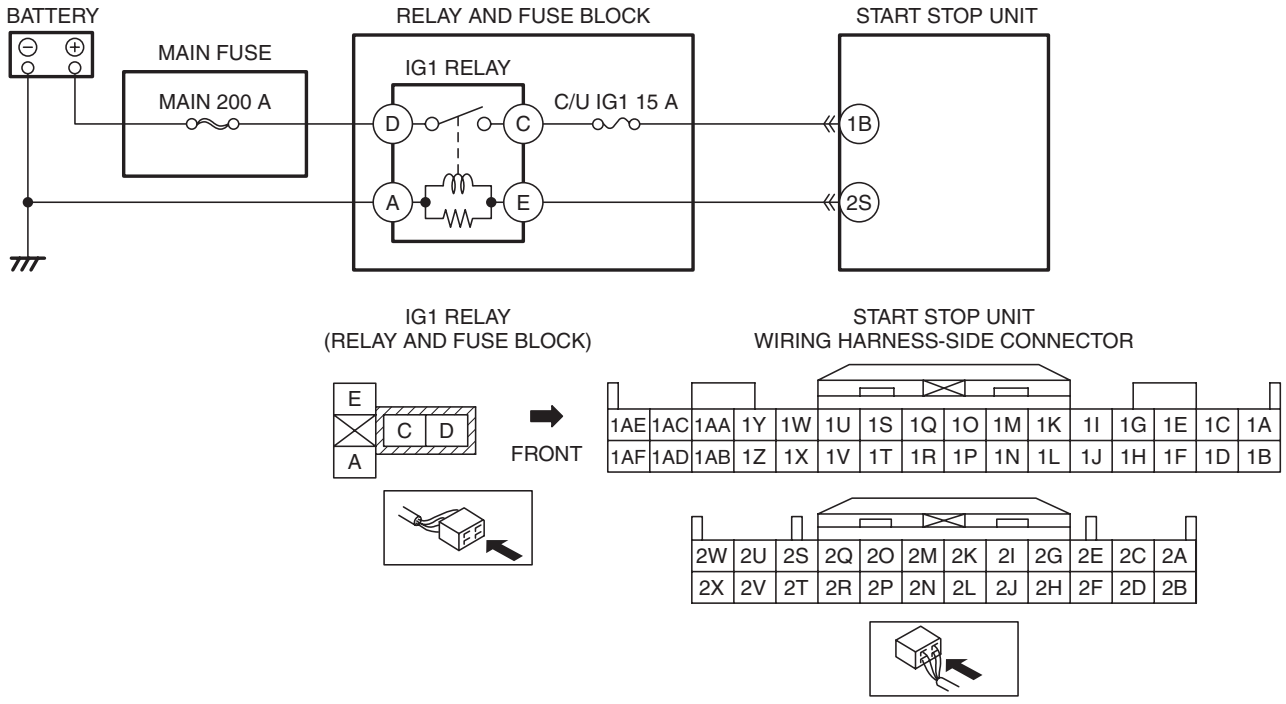
Step	Inspection		Action
4	**INSPECT START STOP UNIT POWER SUPPLY CIRCUIT (IG1) FOR OPEN CIRCUIT OR SHORT TO GROUND** • Verify that the start stop unit connector is disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at IG1 relay terminal C (vehicle wiring harness side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the C/U IG1 15 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the fuse. • If a fuse is damaged: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness which has an open circuit. Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is the DTC B10E7:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC B10E7:17 [START STOP UNIT]

id0902p6020300

System malfunction location	**IG1 relay circuit malfunction**
Detection condition	• The start stop unit detects IG1 monitor voltage of **2.5 V or more** for **1 s or more** with the ignition switched off or ACC.
Fail-safe	• Door locking operation inhibited while under i-stop control.
Possible cause	• IG1 relay malfunction • Start stop unit connector or terminal malfunction • Short to power supply in wiring harness between IG1 relay terminal C and start stop unit terminal 1B • Start stop unit malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT IG1 RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the IG1 relay. (See 09-21-28 RELAY LOCATION.) • Inspect the IG1 relay. (See 09-21-29 RELAY INSPECTION.) • Is the IG1 relay normal?	Yes	Go to the next step.
		No	Replace the IG1 relay, then go to Step 4. (See 09-21-28 RELAY LOCATION.)
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

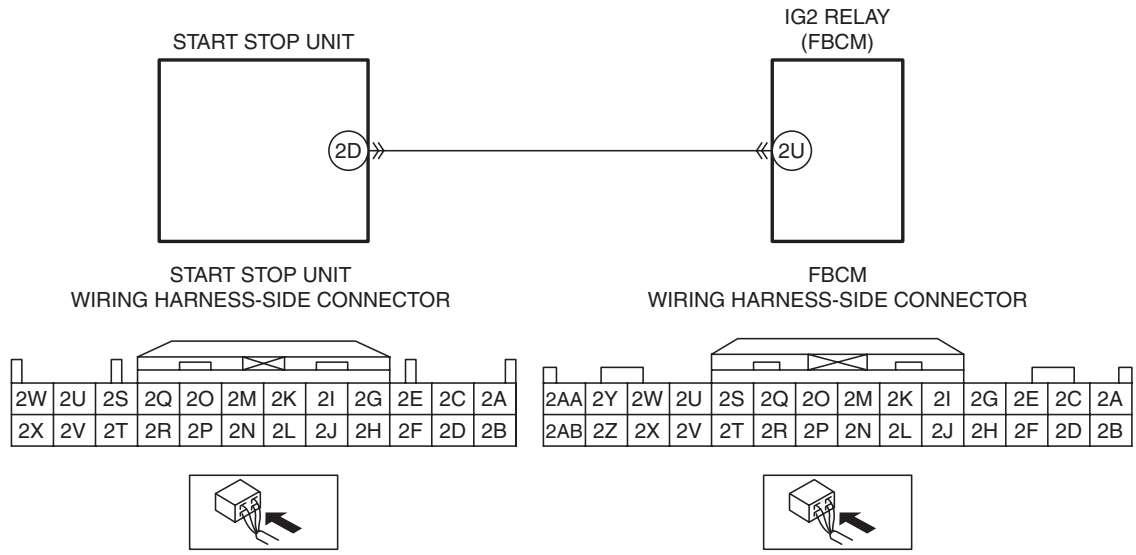
Step	Inspection		Action
3	**INSPECT START STOP UNIT POWER SUPPLY CIRCUIT (IG1) FOR SHORT TO POWER SUPPLY** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Measure the voltage at start stop unit terminal 1B (vehicle wiring harness side). • Is the voltage **2.5 V or more**?	Yes	Repair or replace the wiring harness which has a short to the power supply, then go to the next step.
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition to off and wait for **1 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is the DTC B10E7:17 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC B112A:11 [START STOP UNIT]

id0902p6020400

System malfunction location	**IG2 relay circuit malfunction**
Detection condition	• With the ignition switched ON (engine off or on), the start stop unit detects IG2 relay circuit voltage of **2.5 V or less** for **0.5 s or more**.
Fail-safe	—
Possible cause	• Front body control module (FBCM) connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 2D and front body control module (FBCM) terminal 2U • Front body control module (FBCM) malfunction • Start stop unit malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

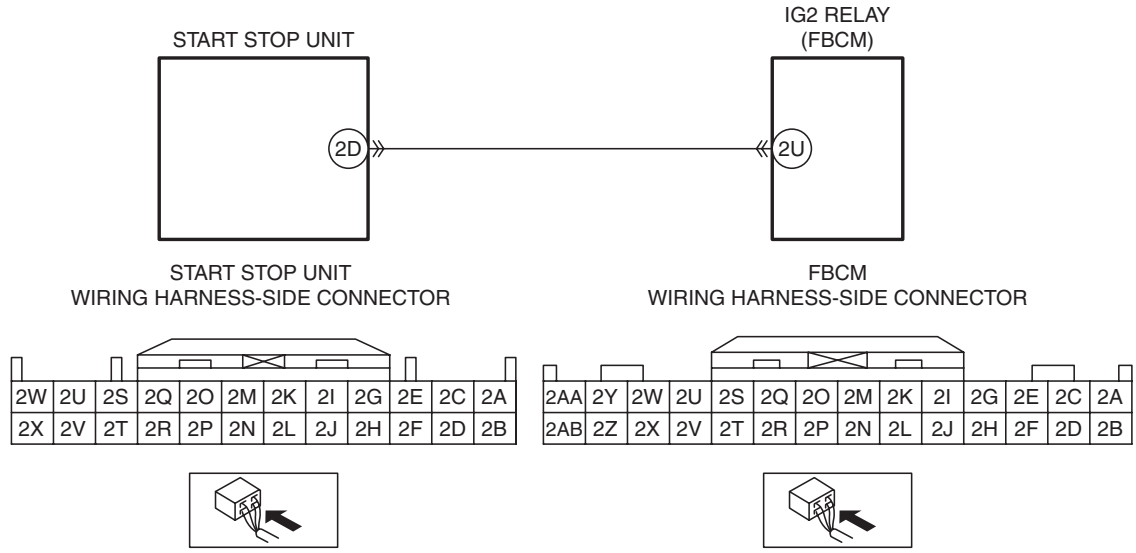
Step	Inspection		Action
3	**INSPECT IG2 RELAY CIRCUIT FOR SHORT TO GROUND** • Verify that the start stop unit and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between front body control module (FBCM) terminal 2U (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 5.
		No	Go to the next step.
4	**PERFORM DTC INSPECTION AND VERIFY IF IG2 RELAY IS MALFUNCTIONING PART** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **0.5 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B112A:11 displayed?	Yes	Replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **0.5 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B112A:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC B112A:12 [START STOP UNIT]

id0902p6020500

System malfunction location	**IG2 relay circuit malfunction**
Detection condition	• With the ignition switched off or to ACC, the start stop unit detects IG2 relay circuit voltage of **2.5 V or more** for **0.5 s or more**.
Fail-safe	—
Possible cause	• Front body control module (FBCM) connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to power supply in wiring harness between start stop unit terminal 2D and front body control module (FBCM) terminal 2U • Front body control module (FBCM) malfunction • Start stop unit malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front body control module (FBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

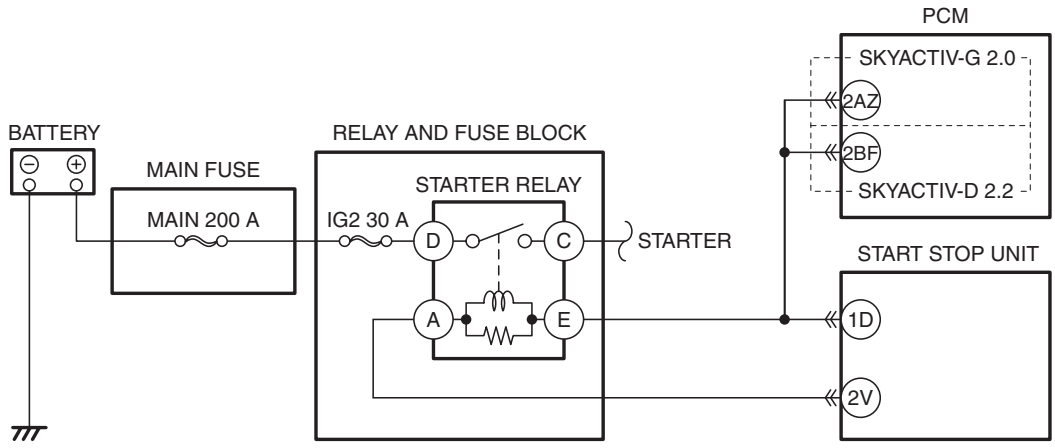
Step	Inspection		Action
3	**INSPECT IG2 RELAY CIRCUIT FOR SHORT TO POWER SUPPLY** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Measure the voltage at front body control module (FBCM) terminal 2U (vehicle wiring harness side). • Is the voltage **2.5 V or more**?	Yes	Repair or replace the wiring harness which is shorted to power supply, then go to Step 5.
		No	Go to the next step.
4	**PERFORM DTC INSPECTION AND VERIFY IF IG2 RELAY IS MALFUNCTIONING PART** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition to off or to ACC, and wait for **0.5 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B112A:12 displayed?	Yes	Replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition to off or to ACC, and wait for **0.5 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B112A:12 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

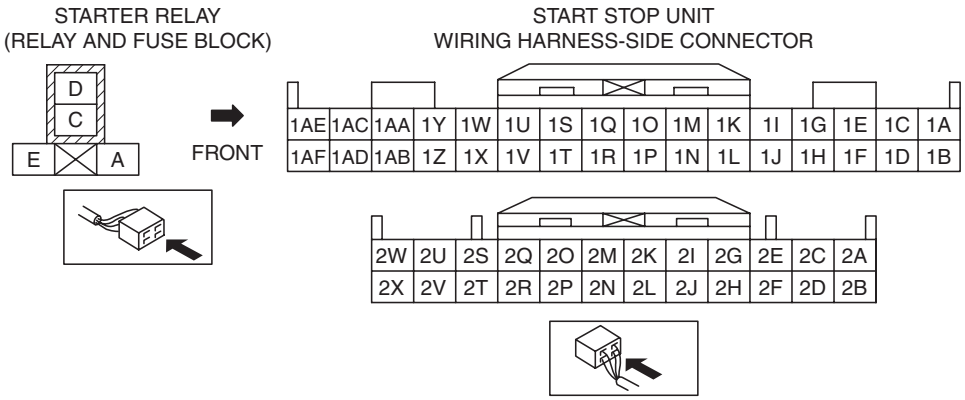
ON-BOARD DIAGNOSTIC [START STOP UNIT]

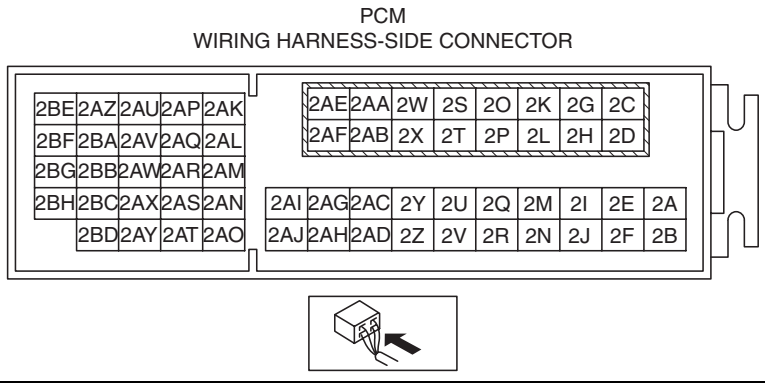
DTC B1140:29 [START STOP UNIT]

id0902p6020600

System malfunction location	**i-stop control error signal received**
Detection condition	• The starter ground circuit does not turn on even though the PCM detects an engine restart request while the engine is stopped under i-stop control, or the condition whereby an open circuit is detected for a continuous **12 s or more** for a total of five times or more.
Fail-safe	—
Possible cause	• Starter relay malfunction • PCM connector or terminal malfunction • Start stop unit connector or terminal malfunction • Open circuit in wiring harness between the following terminals: — Starter relay terminal E—PCM terminal 2AZ (SKYACTIV-G 2.0) — Starter relay terminal E—PCM terminal 2BF (SKYACTIV-D 2.2) — Start stop unit terminal 1D—PCM terminal 2AZ (SKYACTIV-G 2.0) — Start stop unit terminal 1D—PCM terminal 2BF (SKYACTIV-D 2.2) — Starter relay terminal A—Start stop unit terminal 2V • Start stop unit malfunction







ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT STARTER RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the starter relay. (See 09-21-28 RELAY LOCATION.) • Inspect the starter relay. (See 09-21-29 RELAY INSPECTION.) • Is the starter relay normal?	Yes	Go to the next step.
		No	Replace the starter relay, then go to Step 5. (See 09-21-28 RELAY LOCATION.)
2	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT STARTER RELAY CIRCUIT FOR OPEN CIRCUIT** • Verify that the starter relay is removed. • Verify that the PCM and start stop unit connectors are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side). — Starter relay terminal E—PCM terminal 2AZ (SKYACTIV-G 2.0) — Starter relay terminal E—PCM terminal 2BF (SKYACTIV-D 2.2) — Start stop unit terminal 1D—PCM terminal 2AZ (SKYACTIV-G 2.0) — Start stop unit terminal 1D—PCM terminal 2BF (SKYACTIV-D 2.2) — Starter relay terminal A—Start stop unit terminal 2V • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

Step	Inspection		Action
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the work of stopping the engine by i-stop control and then restarting the engine for five or more times. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B1140:29 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC B124C:56 [START STOP UNIT]

id0902p6020700

System malfunction location	**Turn switch circuit malfunction**
Detection condition	• The start stop unit detects that turn switches LH and RH are turned on simultaneously for **5 s or more**.
Fail-safe	—
Possible cause	• Start stop unit configuration error • The installations of the light switch and the wiper and washer switch are reversed. • Turn switch malfunction • Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM START STOP UNIT CONFIGURATION (AS-BUILT DATA USE)** • Perform the start stop unit configuration using the M-MDS. (See 09-14-60 START STOP UNIT CONFIGURATION (USING AS-BUILT DATA).) • Clear start stop unit DTCs using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Operate the turn switch to RH position and wait for **5 s or more**. • Operate the turn switch to LH position and wait for **5 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B124C:56 displayed?	Yes	Using the M-MDS, re-perform the start stop unit configuration using the As-Built data, then go to the next step. (See 09-14-60 START STOP UNIT CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 5.
2	**VERIFY IF INSTALLATIONS OF LIGHT SWITCH AND WIPER AND WASHER SWITCH ARE REVERSED** • Verify the installation condition of the light switch and the wiper and washer switch. • Are the light switch and the wiper and washer switch installed correctly?	Yes	Go to the next step.
		No	Install the light switch and the wiper and washer switch properly, then go to Step 4.
3	**INSPECT TURN SWITCH** • Inspect the turn switch. (See 09-18-86 LIGHT SWITCH INSPECTION.) • Is the turn switch normal?	Yes	Go to the next step.
		No	Replace the turn switch, then go to the next step. (See 09-18-84 LIGHT SWITCH REMOVAL/INSTALLATION.)
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear start stop unit DTCs using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Operate the turn switch to RH position and wait for **5 s or more**. • Operate the turn switch to LH position and wait for **5 s or more**. • Perform the start stop unit DTC inspection using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B124C:56 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC B13D3:16 [START STOP UNIT]

id0902p6050100

System malfunction location	Low remote transmitter battery voltage
Detection condition	• Start stop unit detects low remote transmitter battery voltage in any of the programmed transmitters **3 times** continuously.
Fail-safe	—
Possible cause	• Soiling around remote transmitter battery, or foreign matter adhering • Remote transmitter battery is dead • Specific remote transmitter is malfunctioning • Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT AREA AROUND REMOTE TRANSMITTER BATTERY** • Inspect the area around the remote transmitter. • Is the area around the transmitter battery soiled or is there foreign mattering adhering?	Yes	Remove dirt or foreign matter, then go to Step 4.
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS DEAD REMOTE TRANSMITTER BATTERY** • Replace the remote transmitter battery. (See 09-14-76 REMOTE TRANSMITTER DISASSEMBLY/ASSEMBLY.) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B13D3:16 displayed?	Yes	Go to the next step.
		No	Go to Step 5.
3	**VERIFY IF MALFUNCTION CAUSE IS SPECIFIC REMOTE TRANSMITTER** **Note** • Perform the following procedure for all of the programmed remote transmitters. • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Can a remote transmitter which indicates DTC B13D3:16 be specified?	Yes	Replace the remote transmitter which indicates the DTC, then go to the next step. (See 09-14-78 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING.)
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B13D3:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

DTC B13D3:4A [START STOP UNIT]

id0902p6020800

System malfunction location	**Remote transmitter assembly malfunction**
Detection condition	• The start stop unit detects a remote transmitter different from the one equipped to the vehicle.
Fail-safe	—
Possible cause	• Mistaken remote transmitter registration • Start stop unit configuration error • Remote transmitter malfunction • Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY THAT THE VEHICLE AND REMOTE TRANSMITTER COMBINATION IS CORRECT** • Verify that the vehicle and remote transmitter combination is correct • Is the combination of remote transmitters correct?	Yes	Go to the next step.
		No	Re-register using correct remote transmitters, then go to the Step 3. (See 09-14-78 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING.)
2	**PERFORM START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the start stop unit configuration with the As-Built data. (See 09-14-60 START STOP UNIT CONFIGURATION (USING AS-BUILT DATA).) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B13D3:4A displayed?	Yes	Using the M-MDS, re-perform the start stop unit configuration using the As-Built data, then go to the next step. (See 09-14-60 START STOP UNIT CONFIGURATION (USING AS-BUILT DATA).) • If the malfunction recurs, replace the remote transmitter, then go to the next step. (See 09-14-78 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B13D3:4A displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC B13D3:97 [START STOP UNIT]

id0902p6020900

System malfunction location	**Remote transmitter registration work not completed**
Detection condition	• The start stop unit detects that the registration of a remote transmitter has not been completed.
Fail-safe	—
Possible cause	• DTCs are stored in the immobilizer system. • Start stop unit configuration error • Remote transmitter registration not completed correctly. • Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY IMMOBILIZER SYSTEM DTCs** • Perform the DTC inspection for the immobilizer system using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].)
		No	Go to the next step.
2	**PERFORM START STOP UNIT CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the start stop unit configuration with the As-Built data. (See 09-14-60 START STOP UNIT CONFIGURATION (USING AS-BUILT DATA).) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B13D3:97 displayed?	Yes	Using the M-MDS, re-perform the start stop unit configuration using the As-Built data, then go to the next step. (See 09-14-60 START STOP UNIT CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 5.
3	**REGISTER REMOTE TRANSMITTER** • Register the remote transmitter. (See 09-14-78 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING.) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B13D3:97 displayed?	Yes	Go to the next step.
		No	Go to Step 5.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B13D3:97 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC B1C53:13 [START STOP UNIT]

id0902p6021000

System malfunction location	**Windshield wiper switch circuit malfunction**
Detection condition	• The start stop unit detects an open circuit, short to ground, or short to power supply in the windshield wiper switch circuit for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Start stop unit configuration error • The installations of the light switch and the wiper and washer switch are reversed. • Windshield wiper switch malfunction • Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

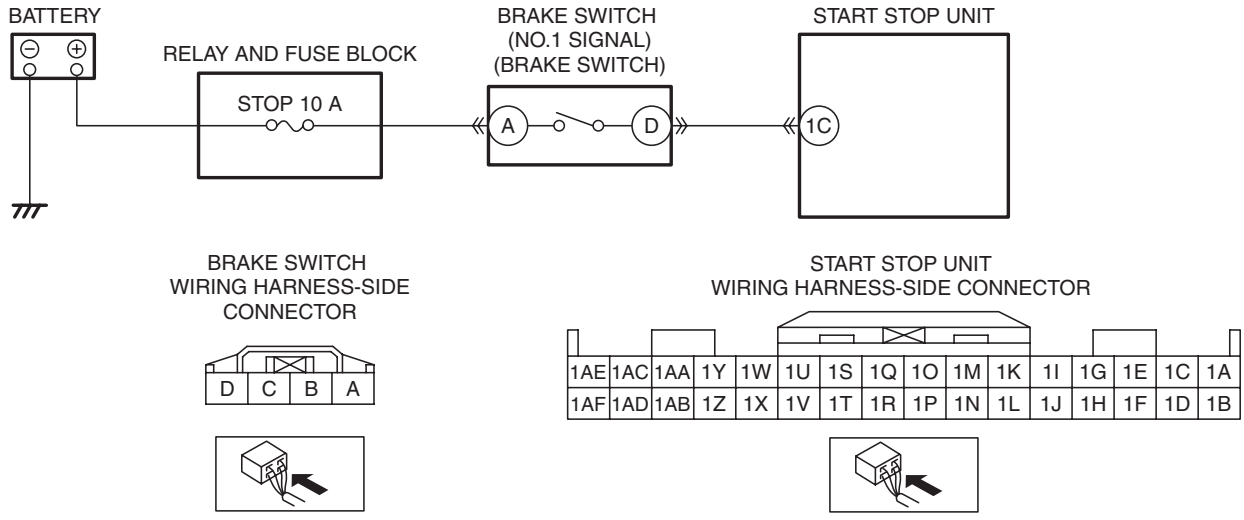
Step	Inspection		Action
1	**PERFORM START STOP UNIT CONFIGURATION (AS-BUILT DATA USE)** • Perform the start stop unit configuration using the M-MDS. (See 09-14-60 START STOP UNIT CONFIGURATION (USING AS-BUILT DATA).) • Clear start stop unit DTCs using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the INT volume switch to each step at **5 s** intervals. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B1C53:13 displayed?	Yes	Using the M-MDS, re-perform the start stop unit configuration using the As-Built data, then go to the next step. (See 09-14-60 START STOP UNIT CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 5.
2	**VERIFY IF INSTALLATIONS OF LIGHT SWITCH AND WIPER AND WASHER SWITCH ARE REVERSED** • Verify the installation condition of the light switch and the wiper and washer switch. • Are the light switch and the wiper and washer switch installed correctly?	Yes	Go to the next step.
		No	Install the light switch and the wiper and washer switch properly, then go to Step 4.
3	**INSPECT WINDHIELD WIPER SWITCH** • Inspect the windshield wiper switch. (See 09-19-47 WINDSHIELD WIPER AND WASHER SWITCH INSPECTION.) • Is the windshield wiper switch normal?	Yes	Go to the next step.
		No	Replace the windshield wiper switch, then go to the next step. (See 09-19-45 WIPER AND WASHER SWITCH REMOVAL/INSTALLATION.)
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear start stop unit DTCs using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the INT volume switch to each step at **5 s** intervals. • Perform the start stop unit DTC inspection using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC B1C53:13 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC C0040:23 [START STOP UNIT]

id0902p6021100

System malfunction location	**Brake switch (No.1 signal) circuit malfunction**
Detection condition	• With the ignition switched ON (engine off or on), the start stop unit detects that the brake switch No.1 signal is in the off condition for **3 s or more** continuously for a continuous **5 times** even though brake switch No.2 signal changes.
Fail-safe	• Determined by brake switch No.2 with the brake pedal depressed.
Possible cause	• Brake switch connector or terminal malfunction • Brake switch (No.1 signal) malfunction • Brake switch (No.1 signal) power supply circuit malfunction — Short to ground in wiring harness between STOP 10 A fuse and brake switch terminal A — STOP 10 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and brake switch terminal A • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between brake switch terminal D and start stop unit terminal 1C • Open circuit in wiring harness between brake switch terminal D and start stop unit terminal 1C • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT BRAKE SWITCH CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the brake switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT BRAKE SWITCH (NO.1 SIGNAL)** • Inspect the brake switch (No.1 signal). (See 04-11-11 BRAKE SWITCH INSPECTION.) • Is the brake switch (No.1 signal) normal?	Yes	Go to the next step.
		No	Replace the brake switch, then go to Step 7. (See 04-11-8 BRAKE PEDAL REMOVAL/INSTALLATION [L.H.D.].) (See 04-11-9 BRAKE PEDAL REMOVAL/INSTALLATION [R.H.D.].)
3	**INSPECT BRAKE SWITCH (NO.1 SIGNAL) POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Verify that the brake switch connector is disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at brake switch terminal A (vehicle wiring harness side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the STOP 10 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the burnt out fuse. • If a fuse is damaged: — Replace the damaged fuse. • If the fuse is normal: — Repair or replace the wiring harness which has an open circuit. Go to Step 7.
4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

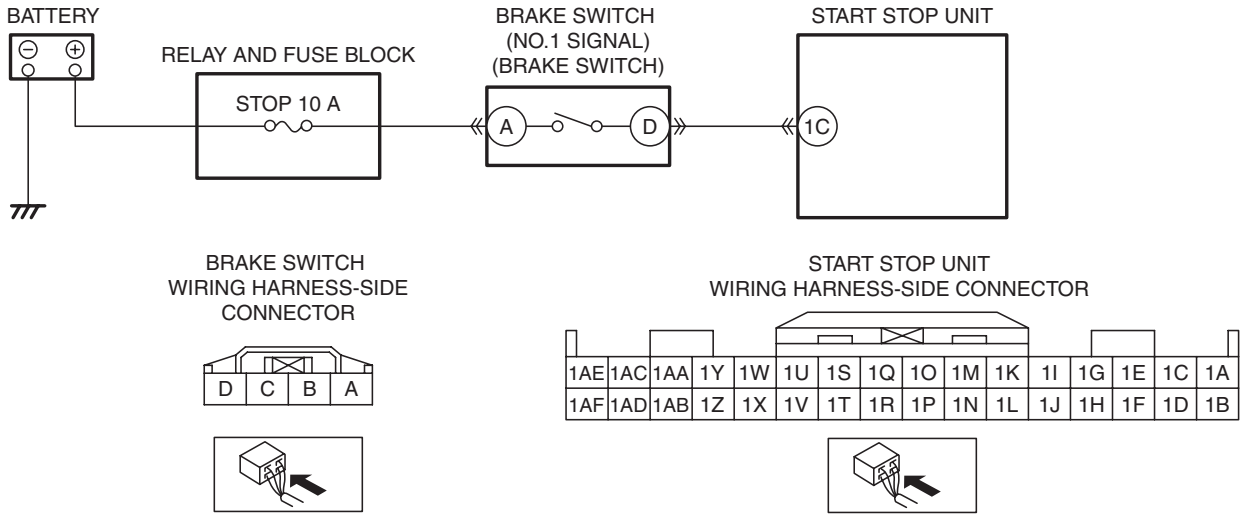
Step	Inspection		Action
5	**INSPECT BRAKE SWITCH (NO.1 SIGNAL) CIRCUIT FOR SHORT TO GROUND** • Verify that the brake switch and start stop unit connectors are disconnected. • Inspect for continuity between brake switch terminal D (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 7.
		No	Go to the next step.
6	**INSPECT BRAKE SWITCH (NO.1 SIGNAL) CIRCUIT FOR OPEN CIRCUIT** • Verify that the brake switch and start stop unit connectors are disconnected. • Inspect the wiring harness for an open circuit between brake switch terminal D (vehicle wiring harness side) and start stop unit terminal 1C (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • With the ignition switched ON (engine off or on), perform the work of depressing the brake pedal for **3 s or more** and then releasing it for **5 or more times**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC C0040:23 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC C0040:24 [START STOP UNIT]

id0902p6021200

System malfunction location	**Brake switch (No.1 signal) circuit malfunction**
Detection condition	• With the ignition switched ON (engine off or on), the start stop unit detects that the brake switch No.1 signal is in the on condition for **3 s or more** continuously for a continuous **5 times** even though brake switch No.2 signal changes.
Fail-safe	• Perform the brake switch (No.1 signal) control based on the CAN signal.
Possible cause	• Brake switch connector or terminal malfunction • Brake switch (No.1 signal) malfunction • Start stop unit connector or terminal malfunction • Short to power supply in wiring harness between brake switch terminal D and start stop unit terminal 1C • Start stop unit malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT BRAKE SWITCH CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the brake switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT BRAKE SWITCH (NO.1 SIGNAL)** • Inspect the brake switch (No.1 signal). (See 04-11-11 BRAKE SWITCH INSPECTION.) • Is the brake switch (No.1 signal) normal?	Yes	Go to the next step.
		No	Replace the brake switch, then go to Step 5. (See 04-11-8 BRAKE PEDAL REMOVAL/INSTALLATION [L.H.D.].) (See 04-11-9 BRAKE PEDAL REMOVAL/INSTALLATION [R.H.D.].)

ON-BOARD DIAGNOSTIC [START STOP UNIT]

Step	Inspection		Action
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT BRAKE SWITCH (NO.1 SIGNAL) CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the brake switch and start stop unit connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltages at brake switch terminal D (vehicle wiring harness side) when the ignition is switched OFF (LOCK) and ON (engine off or on). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has a short to the power supply, then go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • With the ignition switched ON (engine off or on), perform the work of depressing the brake pedal for **3 s or more** and then releasing it for **5 or more times**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC C0040:24 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC C0051:95 [START STOP UNIT]

id0902p6027700

System malfunction location	**Steering angle sensor assembly malfunction**
Detection condition	• The start stop unit receives the following signals with the ignition switched ON (engine off or on). — Steering angle sensor assembly malfunction from EPS control module for **1 s or more** — Improper assembly of steering angle sensor at 360° — Steering wheel angle of **720° or more** for **0.048 s or more**
Fail-safe	—
Possible cause	• DTCs are stored in the EPS control module. • Improper assembly of steering angle sensor • Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY EPS CONTROL MODULE DTCs** • Perform the DTC inspection for the EPS control module using the M-MDS. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	Go to the next step.
2	**VERIFY STEERING ANGLE SENSOR INSTALLATION CONDITION** • Verify the steering angle sensor installation condition. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.) • Is the steering angle sensor installed correctly?	Yes	Go to the next step.
		No	Install the steering angle sensor correctly, then go to the next step. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.)
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC C0051:95 displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC C0051:2F [START STOP UNIT]

id0902p6021300

System malfunction location	**Steering angle sensor signal error**
Detection condition	• The start stop unit detects steering angle sensor signal error for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

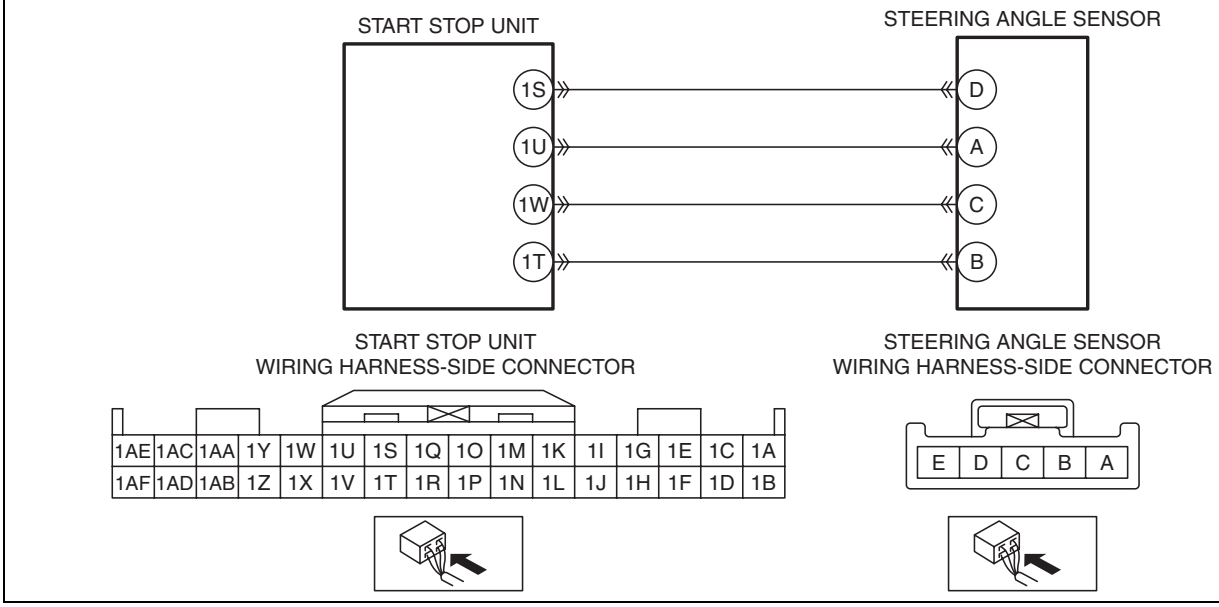
Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS START STOP UNIT** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC C0051:2F displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC C0052:14 [START STOP UNIT]

id0902p6021400

System malfunction location	**Steering angle sensor A signal circuit malfunction**
Detection condition	• The start stop unit detects an open circuit or a short to ground in steering angle sensor A signal circuit for.
Fail-safe	—
Possible cause	• Steering angle sensor connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 1U and steering angle sensor terminal A • Open circuit in wiring harness between start stop unit terminal 1U and steering angle sensor terminal A • Steering angle sensor malfunction • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT STEERING ANGLE SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the steering angle sensor connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT STEERING ANGLE SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the steering angle sensor and start stop unit connectors are disconnected. • Inspect for continuity between steering angle sensor terminal A (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 6.
		No	Go to the next step.
4	**INSPECT STEERING ANGLE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the steering angle sensor and start stop unit connectors are disconnected. • Inspect the wiring harness for an open circuit between start stop unit terminal 1U (vehicle wiring harness side) and steering angle sensor terminal A (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 6.
5	**INSPECT STEERING ANGLE SENSOR** • Inspect the steering angle sensor. (See 09-18-33 STEERING ANGLE SENSOR INSPECTION.) • Is the steering angle sensor normal?	Yes	Go to the next step.
		No	Replace the steering angle sensor, then go to the next step. (See 08-10-24 CLOCK SPRING REMOVAL/ INSTALLATION.)

ON-BOARD DIAGNOSTIC [START STOP UNIT]

Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC C0052:14 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

DTC C0052:2F [START STOP UNIT]

id0902p6021500

System malfunction location	**Steering angle sensor A signal malfunction**
Detection condition	• The start stop unit detected sudden change in steering angle sensor A signal. • The start stop unit detected that steering angle sensor A signal is stuck with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Steering angle sensor malfunction • Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

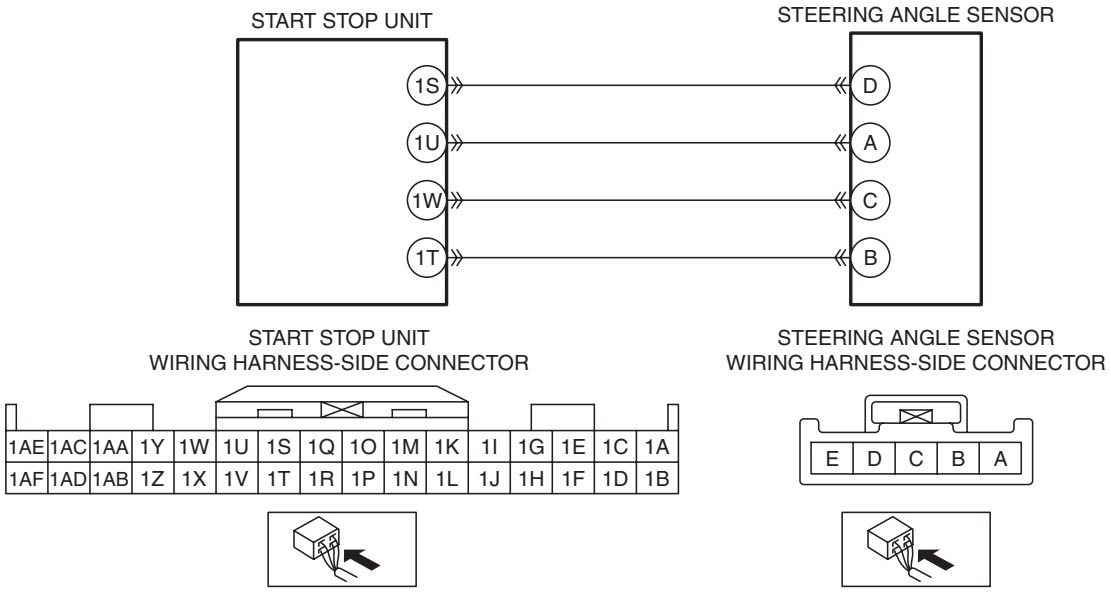
Step	Inspection		Action
1	**INSPECT STEERING ANGLE SENSOR** • Inspect the steering angle sensor. (See 09-18-33 STEERING ANGLE SENSOR INSPECTION.) • Is the steering angle sensor normal?	Yes	Go to the next step.
		No	Replace the steering angle sensor, then go to the next step. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.)
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC C0052:2F displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC C0053:14 [START STOP UNIT]

id0902p6021600

System malfunction location	**Steering angle sensor B signal circuit malfunction**
Detection condition	• The start stop unit detects an open circuit or a short to ground in steering angle sensor B signal circuit.
Fail-safe	—
Possible cause	• Steering angle sensor connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 1W and steering angle sensor terminal C • Open circuit in wiring harness between start stop unit terminal 1W and steering angle sensor terminal C • Steering angle sensor malfunction • Start stop unit malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT STEERING ANGLE SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the steering angle sensor connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

Step	Inspection		Action
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT STEERING ANGLE SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the steering angle sensor and start stop unit connectors are disconnected. • Inspect for continuity between steering angle sensor terminal C (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 6.
		No	Go to the next step.
4	**INSPECT STEERING ANGLE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the steering angle sensor and start stop unit connectors are disconnected. • Inspect the wiring harness for an open circuit between start stop unit terminal 1W (vehicle wiring harness side) and steering angle sensor terminal C (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 6.
5	**INSPECT STEERING ANGLE SENSOR** • Inspect the steering angle sensor. (See 09-18-33 STEERING ANGLE SENSOR INSPECTION.) • Is the steering angle sensor normal?	Yes	Go to the next step.
		No	Replace the steering angle sensor, then go to the next step. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC C0053:14 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC C0053:2F [START STOP UNIT]

id0902p6021700

System malfunction location	**Steering angle sensor B signal malfunction**
Detection condition	• The start stop unit detects sudden change in steering angle sensor B signal. • The start stop unit detects that steering angle sensor B signal is stuck with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Steering angle sensor malfunction • Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

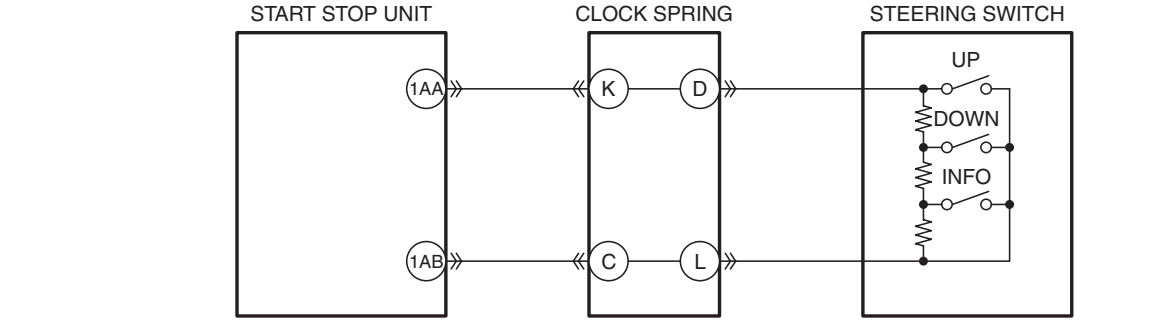
Step	Inspection		Action
1	**INSPECT STEERING ANGLE SENSOR** • Inspect the steering angle sensor. (See 09-18-33 STEERING ANGLE SENSOR INSPECTION.) • Is the steering angle sensor normal?	Yes	Go to the next step.
		No	Replace the steering angle sensor, then go to the next step. (See 08-10-24 CLOCK SPRING REMOVAL/ INSTALLATION.)
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC C0053:2F displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

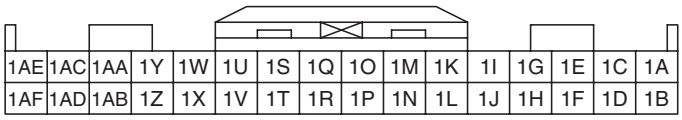
DTC C2003:13 [START STOP UNIT]

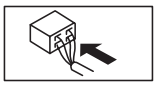
id0902p6021800

System malfunction location	**Open circuit in steering switch**
Detection condition	• The start stop unit detects an open circuit in the steering switch circuit for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Clock spring connector or terminal malfunction • Clock spring malfunction • Start stop unit connector or terminal malfunction • Open circuit in wiring harness between the following terminals: — Start stop unit terminal 1AA and clock spring (start stop unit side) terminal K — Start stop unit terminal 1AB and clock spring (start stop unit side) terminal C • Steering switch malfunction • Start stop unit malfunction

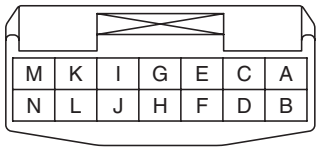


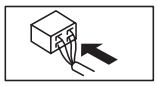
START STOP UNIT
WIRING HARNESS-SIDE CONNECTOR





CLOCK SPRING
WIRING HARNESS-SIDE CONNECTOR





ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT CLOCK SPRING CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the clock spring connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT CLOCK SPRING** • Inspect the clock spring. (See 08-10-28 CLOCK SPRING INSPECTION.) • Is the clock spring normal?	Yes	Go to the next step.
		No	Replace the clock spring, then go to Step 6. (See 08-10-24 CLOCK SPRING REMOVAL/INSTALLATION.)
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT STEERING SWITCH CIRCUIT FOR OPEN CIRCUIT** • Verify that the clock spring and start stop unit connectors are disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — Start stop unit terminal 1AA and clock spring (start stop unit side) terminal K — Start stop unit terminal 1AB and clock spring (start stop unit side) terminal C • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 6.
5	**INSPECT STEERING SWITCH** • Inspect the steering switch. (See 09-20-57 STEERING SWITCH INSPECTION.) • Is the steering switch normal?	Yes	Go to the next step.
		No	Replace the steering switch, then go to the next step. (See 09-20-54 STEERING SWITCH REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [START STOP UNIT]

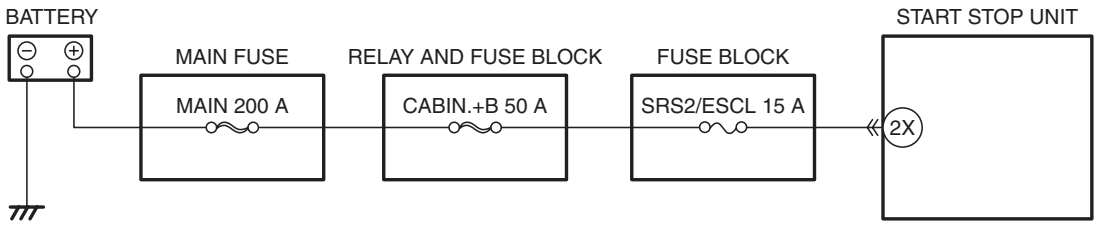
Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC C2003:13 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

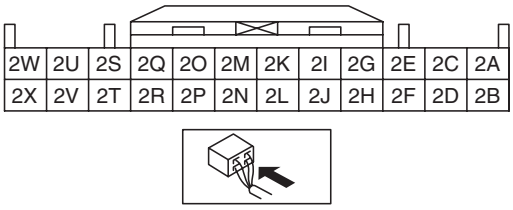
DTC P0560:16 [START STOP UNIT]

id0902p6021900

System malfunction location	**Start stop unit power supply voltage (+B3) low input**
Detection condition	• Start stop unit power supply circuit (+B3) voltage of **less than 8.5 V** is detected for **5 s or more**.
Fail-safe	—
Possible cause	• Battery malfunction • Start stop unit connector or terminal malfunction • Start stop unit power supply circuit (+B3) malfunction — Short to ground in wiring harness between MAIN 200 A fuse and start stop unit terminal 2X — MAIN 200 A fuse malfunction — CABIN.+B 50 A fuse malfunction — SRS2/ESCL 15 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and start stop unit terminal 2X • Start stop unit malfunction



START STOP UNIT
WIRING HARNESS-SIDE CONNECTOR



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 4. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17A-10 BATTERY RECHARGING [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

ON-BOARD DIAGNOSTIC [START STOP UNIT]

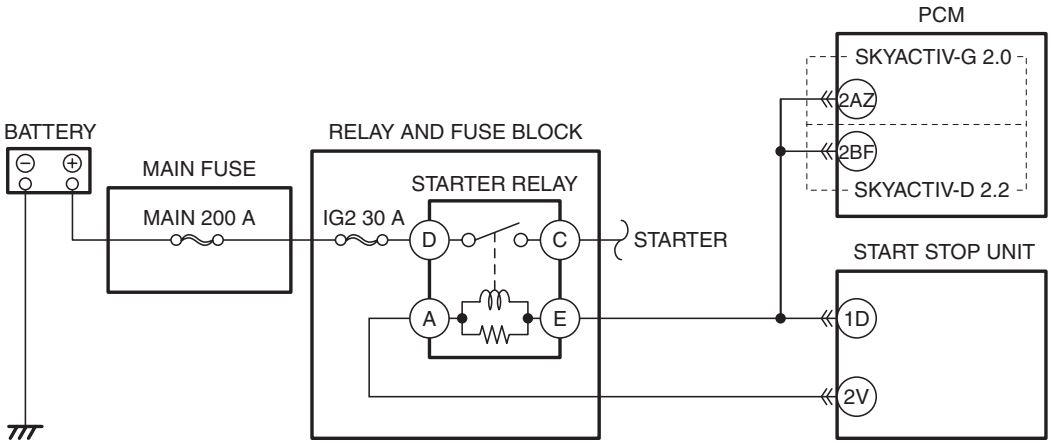
Step	Inspection		Action
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT START STOP UNIT POWER SUPPLY CIRCUIT (+B3)** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Display PID VPWR_B3 using the M-MDS. (See 09-02C-151 PID/DATA MONITOR INSPECTION [START STOP UNIT].) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A, CABIN.+B 50 A and SRS2/ESCL 15 A fuses. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the burnt out fuse. • If a fuse is damaged: — Replace the damaged fuse. • If the fuse is normal: — Repair or replace the wiring harness which has an open circuit. Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P0560:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

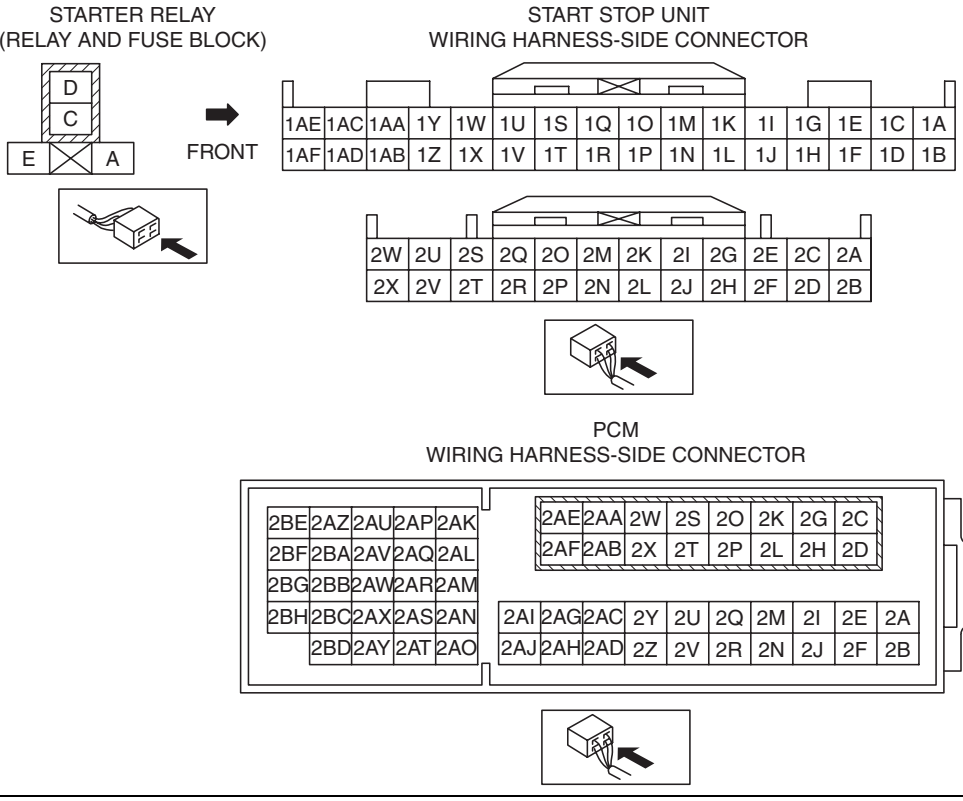
ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC P0615:11 [START STOP UNIT]

id0902p6022000

System malfunction location	**Starter relay circuit malfunction**
Detection condition	• The start stop unit detects starter relay monitor circuit voltage of **less than 2.2 V** for **1 s or more** with the ignition switched off.
Fail-safe	—
Possible cause	• DTCs are stored in the PCM • Starter relay malfunction • Start stop unit connector or terminal malfunction • PCM connector malfunction • Short to ground in wiring harness between the following terminals: — Starter relay terminal E—Start stop unit terminal 1D — Start stop unit terminal 1D—PCM terminal 2AZ (SKYACTIV-G 2.0) — Start stop unit terminal 1D—PCM terminal 2BF (SKYACTIV-D 2.2) — Starter relay terminal A—Start stop unit terminal 2V • Start stop unit malfunction





ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT STARTER RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the starter relay. (See 09-21-28 RELAY LOCATION.) • Inspect the starter relay. (See 09-21-29 RELAY INSPECTION.) • Is the starter relay normal?	Yes	Go to the next step.
		No	Replace the starter relay, then go to Step 6. (See 09-21-28 RELAY LOCATION.)
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT STARTER RELAY CIRCUIT FOR SHORT TO GROUND** • Verify that the starter relay is removed. • Verify that the start stop unit and PCM connectors are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — Starter relay terminal E — Starter relay terminal A • Is there continuity?	Yes	Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

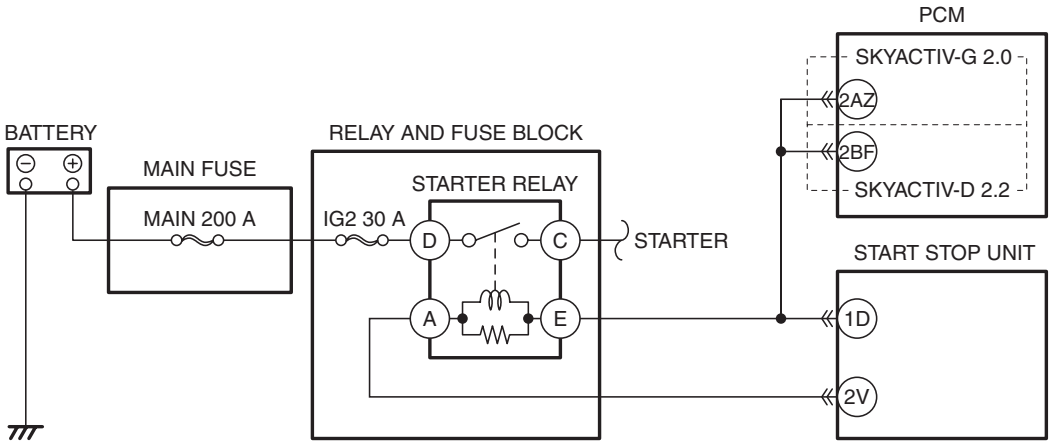
Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition to off and wait for **1 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P0615:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

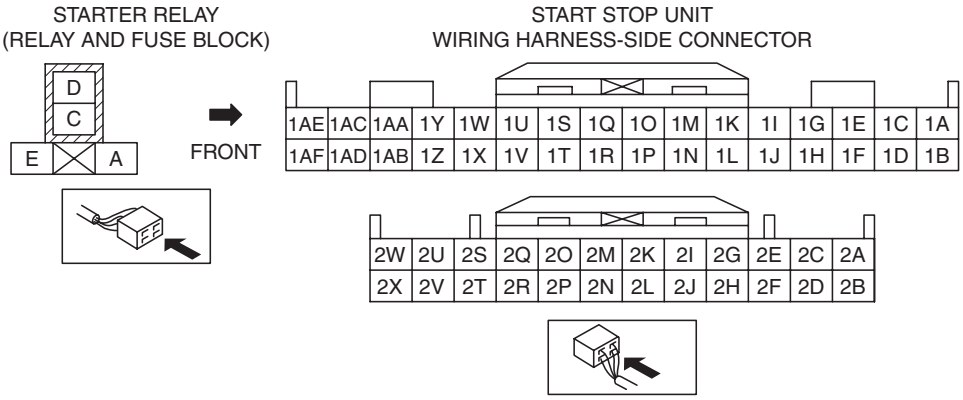
ON-BOARD DIAGNOSTIC [START STOP UNIT]

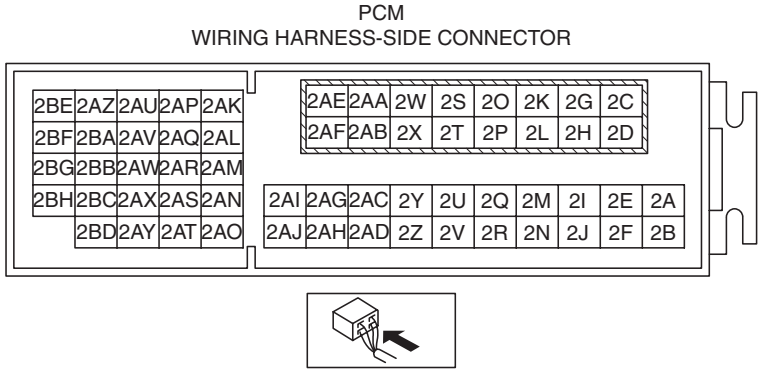
DTC P0615:12 [START STOP UNIT]

id0902p6022100

System malfunction location	**Starter relay circuit malfunction**
Detection condition	• The start stop unit detects starter relay circuit voltage of specification or more for **1 s or more** with the ignition switched off.
Fail-safe	• Inhibits switching the ignition ON. • Inhibits the engine start.
Possible cause	• DTCs are stored in the PCM • Starter relay malfunction • Start stop unit connector or terminal malfunction • Short to power supply in wiring harness between the following terminals: — Starter relay terminal A—Start stop unit terminal 2V — Starter relay terminal E—Start stop unit terminal 1D • PCM connector malfunction • Short to ground in wiring harness between the following terminals: — Start stop unit terminal 1D—PCM terminal 2AZ (SKYACTIV-G 2.0) — Start stop unit terminal 1D—PCM terminal 2BF (SKYACTIV-G 2.2) • Start stop unit malfunction







ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT STARTER RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the starter relay. (See 09-21-28 RELAY LOCATION.) • Inspect the starter relay. (See 09-21-29 RELAY INSPECTION.) • Is the starter relay normal?	Yes	Go to the next step.
		No	Replace the starter relay, then go to Step 7. (See 09-21-28 RELAY LOCATION.)
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
4	**INSPECT STARTER RELAY CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the starter relay is removed. • Verify that the start stop unit connector is disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Measure the voltage at the following terminals (vehicle wiring harness side). — Starter relay terminal A — Starter relay terminal E • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has a short to the power supply, then go to Step 7.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

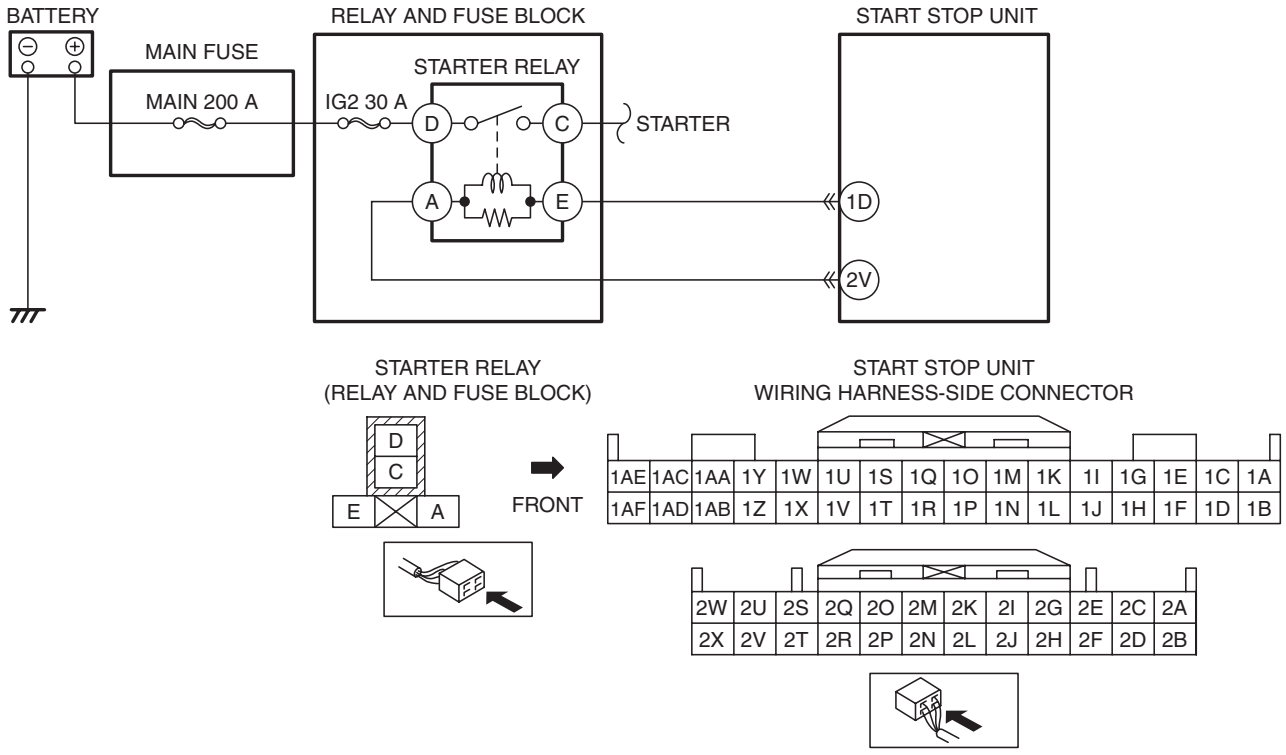
Step	Inspection		Action
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the PCM connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
6	**INSPECT STARTER RELAY CIRCUIT FOR SHORT TO GROUND** • Verify that the starter relay is removed. • Verify that the start stop unit and PCM connectors are disconnected. • Inspect for continuity the wiring harness between start stop unit terminal 1D (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition to off and wait for **1 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P0615:12 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC P0615:13 [START STOP UNIT]

id0902p6022200

System malfunction location	**Starter relay circuit malfunction**
Detection condition	• The start stop unit detects an open circuit in the starter relay circuit for **1 s or more** with the ignition switched off.
Fail-safe	—
Possible cause	• Disconnect the starter stop unit with the battery cables connected. • Starter relay malfunction • Start stop unit connector or terminal malfunction • Open circuit in wiring harness between the following terminals: — Starter relay terminal A and start stop unit terminal 2V — Starter relay terminal E and start stop unit terminal 1D • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT STARTER RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the starter relay. (See 09-21-28 RELAY LOCATION.) • Inspect the starter relay. (See 09-21-29 RELAY INSPECTION.) • Is the starter relay normal?		Go to the next step.
		No	Replace the starter relay, then go to Step 4. (See 09-21-28 RELAY LOCATION.)
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT STARTER RELAY CIRCUIT FOR OPEN CIRCUIT** • Verify that the starter relay is removed. • Verify that the start stop unit connector is disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — Starter relay terminal A and start stop unit terminal 2V — Starter relay terminal E and start stop unit terminal 1D • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition to off and wait for **1 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P0615:13 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

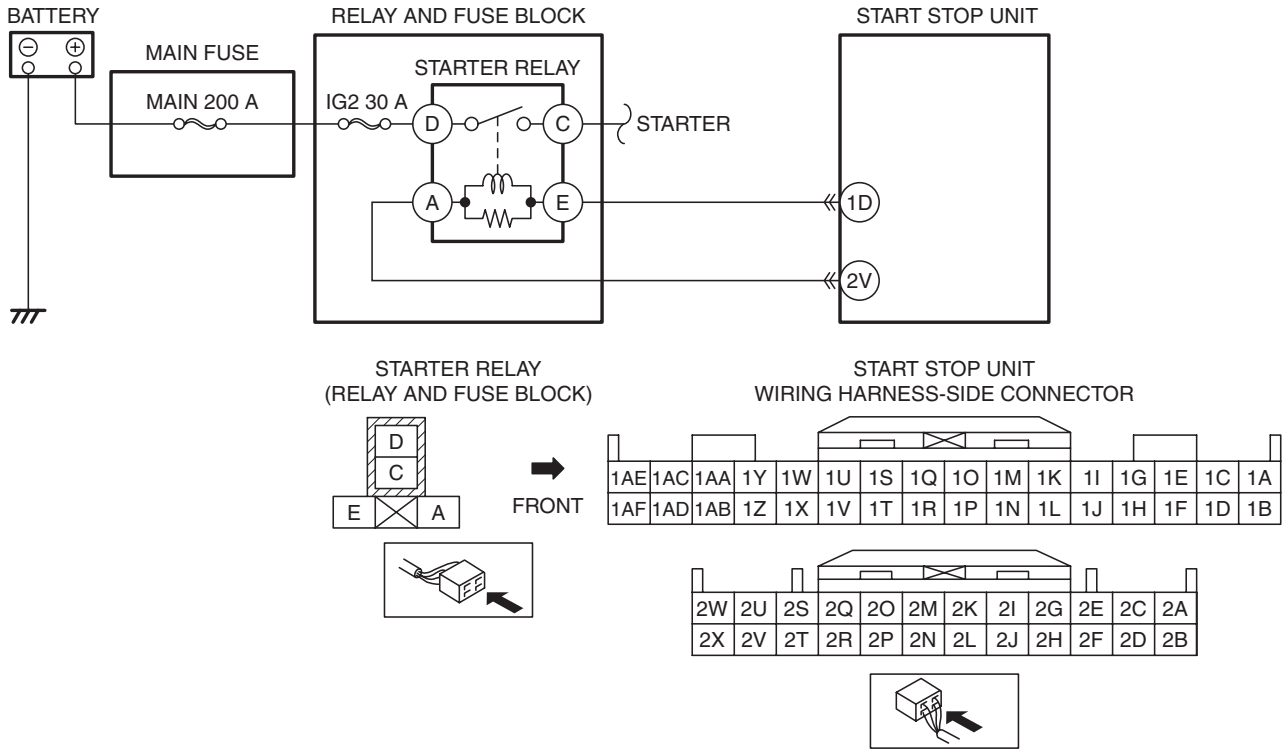
Step	Inspection		Action
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC P0615:16 [START STOP UNIT]

id0902p6022300

System malfunction location	**Starter relay circuit malfunction**
Detection condition	• The start stop unit detects starter relay circuit voltage that is less than the specification for **1 s or more** during cranking.
Fail-safe	—
Possible cause	• Starter relay malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between starter relay terminal A and start stop unit terminal 2V • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT STARTER RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the starter relay. (See 09-21-28 RELAY LOCATION.) • Inspect the starter relay. (See 09-21-29 RELAY INSPECTION.) • Is the starter relay normal?	Yes	Go to the next step.
		No	Replace the starter relay, then go to Step 4. (See 09-21-28 RELAY LOCATION.)
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT STARTER RELAY CIRCUIT FOR SHORT TO GROUND** • Verify that the starter relay is removed. • Verify that the start stop unit connector is disconnected. • Inspect for continuity between starter relay terminal A (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Wait until **1 s or more** have elapsed during cranking. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P0615:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

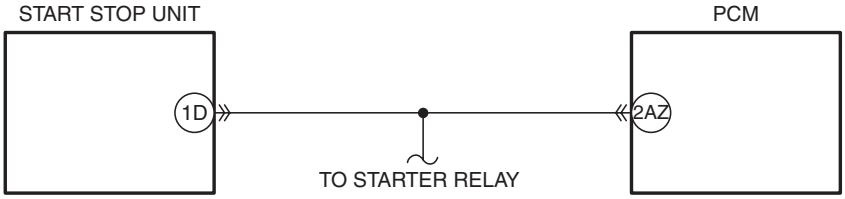
ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC P0616:23 [START STOP UNIT]

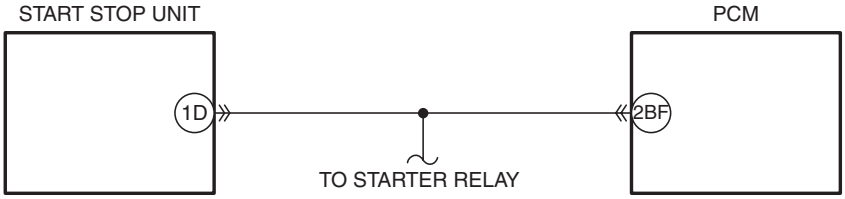
id0902p6022400

System malfunction location	**Circuit malfunction on downstream side of starter relay**
Detection condition	• The start stop unit detects a short to ground in the starter relay downstream circuit continuously for **0.5 s or more** for a continuous **5 times**.
Fail-safe	—
Possible cause	• DTCs are stored in the PCM. • PCM connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — Start stop unit terminal 1D—PCM terminal 2AZ (SKYACTIV-G 2.0) — Start stop unit terminal 1D—PCM terminal 2BF (SKYACTIV-D 2.2) • PCM malfunction • Start stop unit malfunction

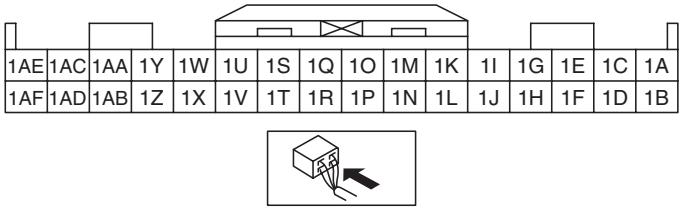
SKYACTIV-G 2.0



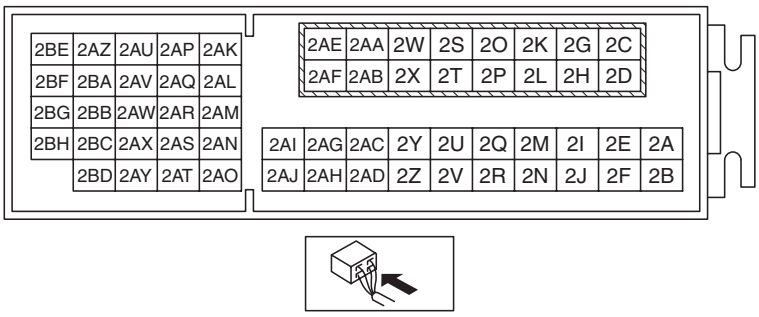
SKYACTIV-D 2.2



START STOP UNIT
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the PCM connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT DOWNSTREAM SIDE OF STARTER RELAY CIRCUIT FOR SHORT TO GROUND** • Verify that the PCM and start stop unit connectors are disconnected. • Inspect for continuity between start stop unit terminal 1D (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

Step	Inspection		Action
5	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS PCM** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • With the programmed remote transmitter in the vehicle, switch the ignition ON (engine off). • Depress the clutch pedal and release it. (MTX) • Operate the selector lever to positions from other than P or N and hold for **1 s or more**, and perform this procedure **5 or more times**. (ATX) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P0616:23 displayed?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 7.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on). • Depress the clutch pedal and release it. (MTX) • Operate the selector lever to positions from other than P or N and hold for **1 s or more**, and perform this procedure **5 or more times**. (ATX) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P0616:23 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC P0616:24 [START STOP UNIT]

id0902p6022500

System malfunction location	**Circuit malfunction on downstream side of starter relay**
Detection condition	• The start stop unit detects an open circuit in the starter relay downstream circuit continuously for **0.5 s or more** for a continuous **5 times**.
Fail-safe	—
Possible cause	• DTCs are stored in the PCM. • PCM connector or terminal malfunction • Start stop unit connector or terminal malfunction • Open circuit in wiring harness between the following terminals: — Start stop unit terminal 1D—PCM terminal 2AZ (SKYACTIV-G 2.0) — Start stop unit terminal 1D—PCM terminal 2BF (SKYACTIV-D 2.2) • PCM malfunction • Start stop unit malfunction

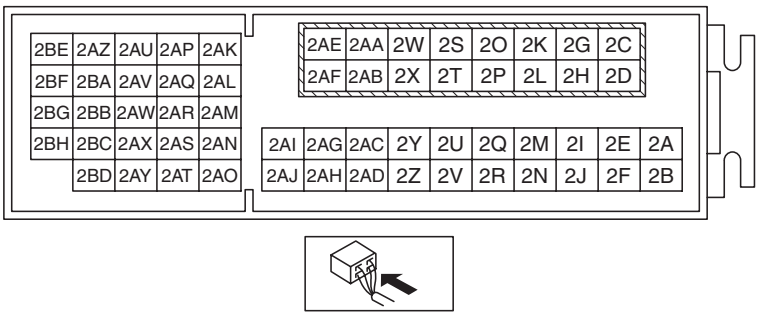
PCM
WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the PCM connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
4	**INSPECT DOWNSTREAM SIDE OF STARTER RELAY CIRCUIT FOR OPEN CIRCUIT** • Verify that the PCM and start stop unit connectors are disconnected. • Inspect the wiring harness for continuity between the following terminals (vehicle wiring harness side). — Start stop unit terminal 1D—PCM terminal 2AZ (SKYACTIV-G 2.0) — Start stop unit terminal 1D—PCM terminal 2BF (SKYACTIV-D 2.2) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 6.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

Step	Inspection		Action
5	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS PCM** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • With the programmed remote transmitter in the vehicle, switch the ignition ON (engine off). • Depress the clutch pedal and release it. (MTX) • Operate the selector lever to positions from other than P or N and hold for **1 s or more**, and perform this procedure **5 or more times**. (ATX) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P0616:24 displayed?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 7.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on). • Depress the clutch pedal and release it. (MTX) • Operate the selector lever to positions from other than P or N and hold for **1 s or more**, and perform this procedure **5 or more times**. (ATX) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P0616:24 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC P0616:29 [START STOP UNIT]

id0902p6022600

System malfunction location	**Starter relay signal malfunction**
Detection condition	• If the following CAN signals are unmatched for **0.5 s or more** continuously, and this condition is detected for a continuous **5 or more times**. — Transaxle range sensor (ATX) or starter interlock switch (MTX) condition — Starter relay downstream circuit condition — PCM control result — CAN signal condition output from PCM
Fail-safe	—
Possible cause	• PCM stores DTCs • Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

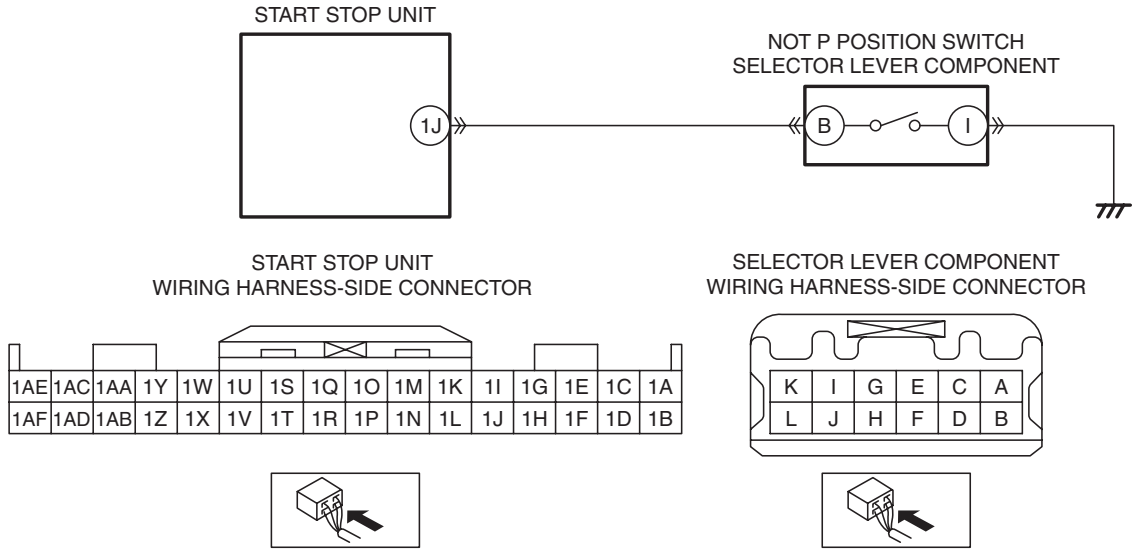
Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS START STOP UNIT** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • With the programmed remote transmitter in the vehicle, switch the ignition ON (engine off). • Depress the clutch pedal and release it. (MTX) • Operate the selector lever to positions from other than P or N and hold for **1 s or more**, and perform this procedure **5 or more times**. (ATX) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P0616:29 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC P081C:23 [START STOP UNIT]

id0902p6022700

System malfunction location	**NOT P position switch circuit malfunction**
Detection condition	• The start stop unit detects NOT P position switch is stuck on for **5 s or more** for a continuous **5 times** with the ignition switched ON (engine off or on).
Fail-safe	• Perform the NOT P position switch control in a position other than P.
Possible cause	• Selector lever component connector or terminal malfunction • NOT P position switch malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 1J and selector lever component terminal B • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT SELECTOR LEVER COMPONENT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the selector lever component connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT NOT P POSITION SWITCH** • Inspect the NOT P position switch. (See 05-18-14 NOT P POSITION SWITCH INSPECTION.) • Is the NOT P position switch normal?	Yes	Go to the next step.
		No	Replace the selector lever component, then go to Step 5. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
4	**INSPECT NOT P POSITION SWITCH CIRCUIT FOR SHORT TO GROUND** • Verify that the start stop unit and selector lever component connectors are disconnected. • Inspect for continuity between selector lever component terminal B (vehicle wiring harness) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

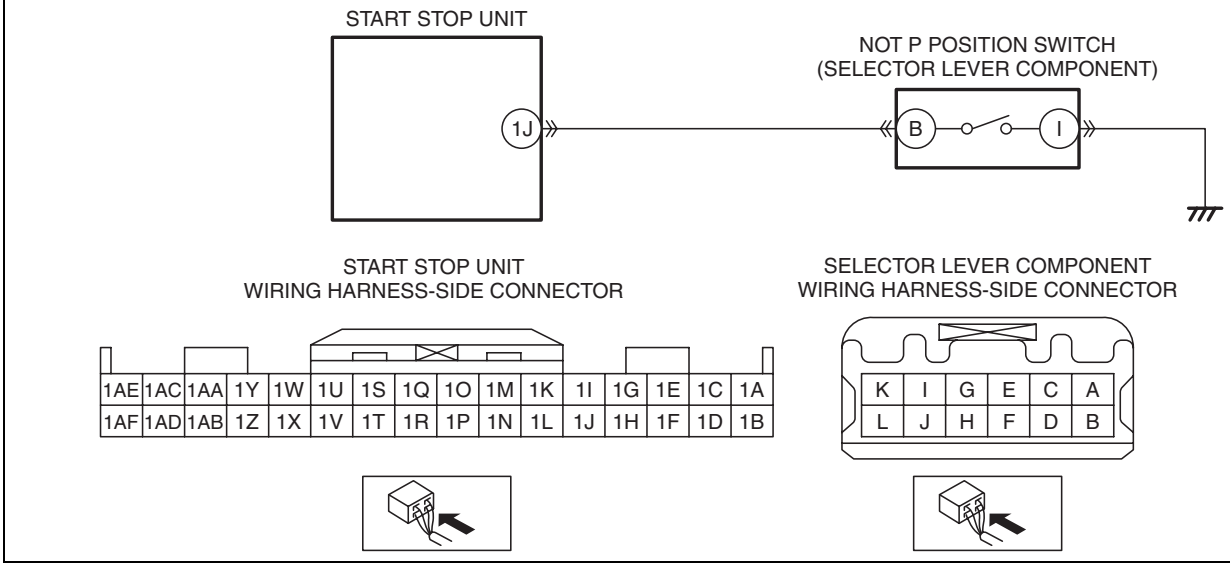
Step	Inspection		Action
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off). • Perform the following work **5 or more times**. — Operate the selector lever to positions from other than P and hold for **5 s or more**. — Operate the selector lever to position P and hold for **5 s or more**. — Operate the selector lever to positions from other than P. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P081C:23 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC P081C:24 [START STOP UNIT]

id0902p6022800

System malfunction location	**NOT P position switch circuit malfunction**
Detection condition	• The start stop unit detects NOT P position switch is stuck off for **5 s or more** for a continuous **5 times** with the ignition switched ON (engine off or on).
Fail-safe	• Perform the NOT P position switch control in a position other than P.
Possible cause	• Selector lever component connector or terminal malfunction • Open circuit in wiring harness between selector lever component terminal I and body ground • NOT P position switch malfunction • Start stop unit connector or terminal malfunction • Open circuit in wiring harness between start stop unit terminal 1J and selector lever component terminal B • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT SELECTOR LEVER COMPONENT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the selector lever component connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT NOT P POSITION SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the selector lever component connector is disconnected. • Inspect for continuity between selector lever component terminal I (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 6.
3	**INSPECT NOT P POSITION SWITCH** • Inspect the NOT P position switch. (See 05-18-14 NOT P POSITION SWITCH INSPECTION.) • Is the NOT P position switch normal?	Yes	Go to the next step.
		No	Replace the selector lever component, then go to Step 6. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT NOT P POSITION SWITCH CIRCUIT FOR OPEN CIRCUIT** • Verify that the start stop unit and selector lever component connectors are disconnected. • Inspect the wiring harness for continuity between start stop unit terminal 1J (vehicle wiring harness side) and selector lever component terminal B (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off). • Perform the following work **5 or more times**. — Operate the selector lever to positions from other than P and hold for **5 s or more**. — Operate the selector lever to position P and hold for **5 s or more**. — Operate the selector lever to positions from other than P. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P081C:24 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC P081D:29 [START STOP UNIT]

id0902p6022900

System malfunction location	**Neutral switch error signal received**
Detection condition	• The start stop unit receives neutral switch signal error signal from the PCM for **1 min or more** with the ignition switched ON (engine off or on).
Fail-safe	• Perform the control with neutral switch signal turned off.
Possible cause	• DTCs are stored in the PCM • Neutral switch malfunction • PCM malfunction • Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT NEUTRAL SWITCH** • Inspect the neutral switch. (See 01-40-40 NEUTRAL SWITCH INSPECTION [SKYACTIV-G 2.0].) • Is the neutral switch normal?	Yes	Go to the next step.
		No	Replace the neutral switch, then go to Step 4. (See 05-15A-2 NEUTRAL SWITCH REMOVAL/ INSTALLATION [C66M-R, C66MX-R].) (See 05-15B-2 NEUTRAL SWITCH REMOVAL/ INSTALLATION [D66M-R, D66MX-R].)
3	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **1 min or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P081D:29 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC P081D:2F [START STOP UNIT]

id0902p6023000

System malfunction location	**Neutral switch signal mismatch**
Detection condition	• With the ignition switched ON (engine off or on), the start unit detects that the vehicle speed changes from **0 km/h {0 mph}** to **10 km/h** {6.2 mph} for a continuous **5 or more times** even though the neutral signal from the PCM is being received.
Fail-safe	• Perform the control with neutral switch signal turned off.
Possible cause	• DTCs are stored in the PCM. • Neutral switch malfunction • PCM malfunction • Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

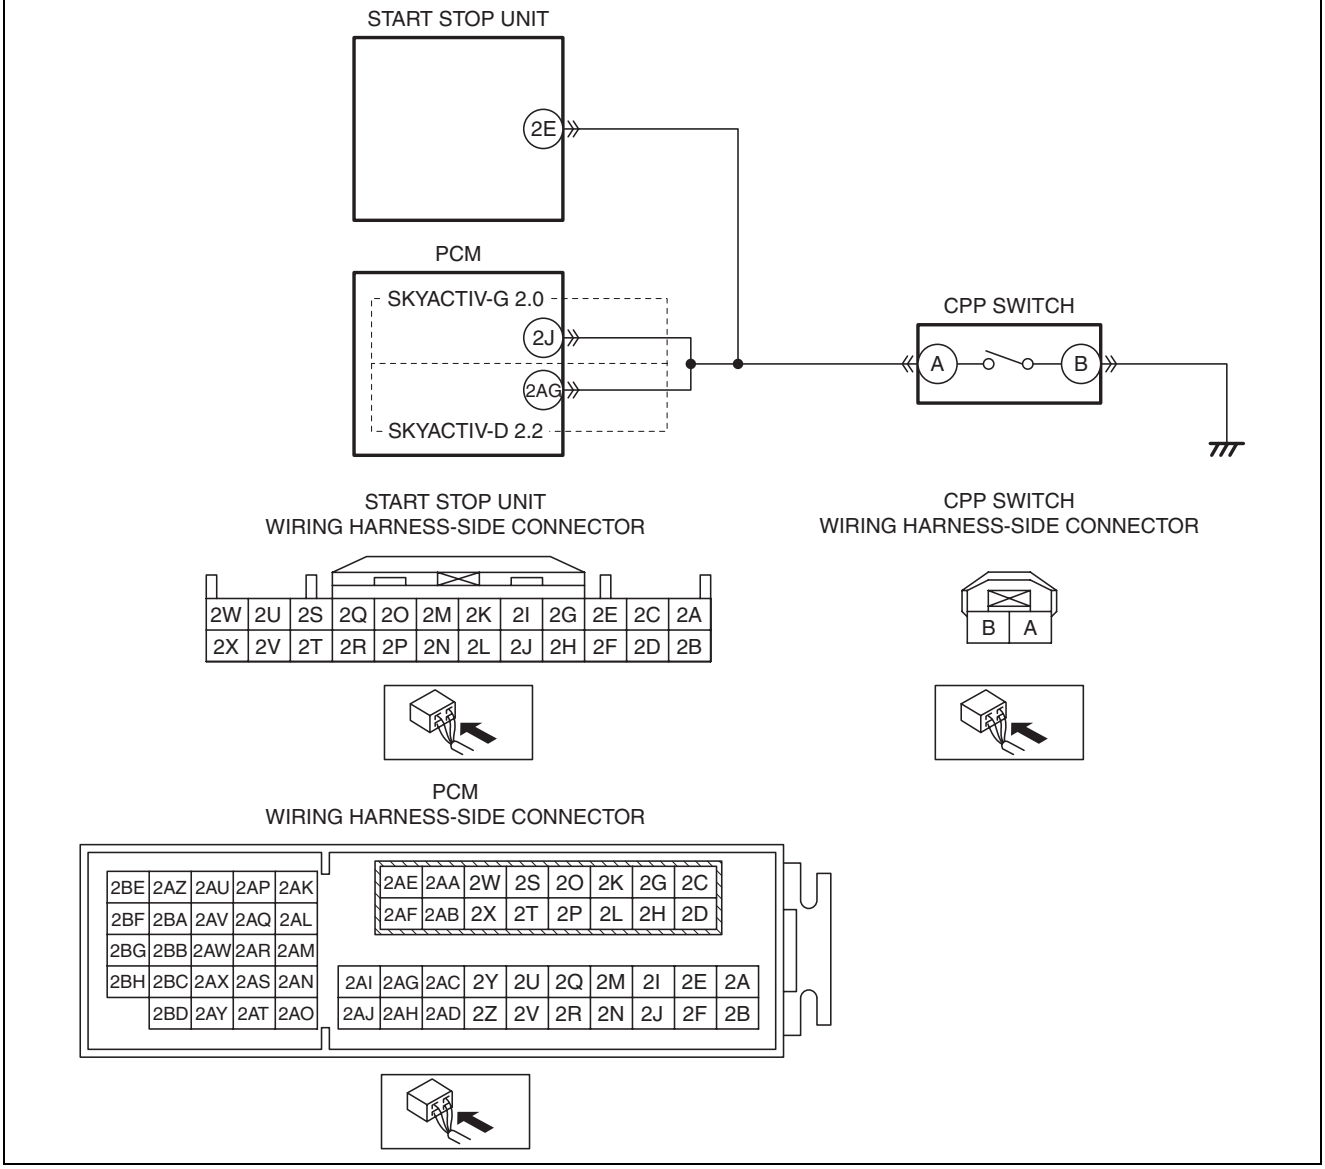
Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT NEUTRAL SWITCH** • Inspect the neutral switch. (See 01-40-40 NEUTRAL SWITCH INSPECTION [SKYACTIV-G 2.0].) • Is the neutral switch normal?	Yes	Go to the next step.
		No	Replace the neutral switch, then go to Step 4. (See 05-15A-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-15B-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
3	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the following work **5 or more times**. — Drive the vehicle. — Vehicle speed changes from **0 km/h {0 mph}** to **10 km/h {6.2 mph}**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P081D:2F displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC P0830:23 [START STOP UNIT]

id0902p6023100

System malfunction location	**CPP switch circuit malfunction**
Detection condition	• Start stop unit detects clutch switch is stuck on for **10 s or more**.
Fail-safe	• Change to the back-up mode. • Perform the control with CPP switch turned off.
Possible cause	• DTCs are stored in the PCM. • CPP switch connector or terminal malfunction • CPP switch malfunction • PCM connector or terminal malfunction • Short to ground in the wiring harness between the following terminals: — CPP switch terminal A—PCM terminal 2J (SKYACTIV-G 2.0) — CPP switch terminal A—PCM terminal 2AG (SKYACTIV-D 2.2) • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 2E and CPP switch terminal A • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT CPP SWITCH CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the CPP switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
3	**INSPECT CPP SWITCH** • Inspect the CPP switch. (See 01-40-40 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [SKYACTIV-G 2.0].) • Is the CPP switch normal?	Yes	Go to the next step.
		No	Replace the CPP switch, then go to the Step 8. (See 05-10A-13 CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-10B-13 CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
5	**INSPECT CPP SWITCH CIRCUIT FOR SHORT TO GROUND** • Verify that the PCM and CPP switch connectors are disconnected. • Inspect for continuity between CPP switch terminal A (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 8.
		No	Go to the next step.
6	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
7	**INSPECT CPP SWITCH CIRCUIT FOR SHORT TO GROUND** • Verify that the start stop unit and CPP switch connectors are disconnected. • Inspect for continuity between CPP switch terminal A (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

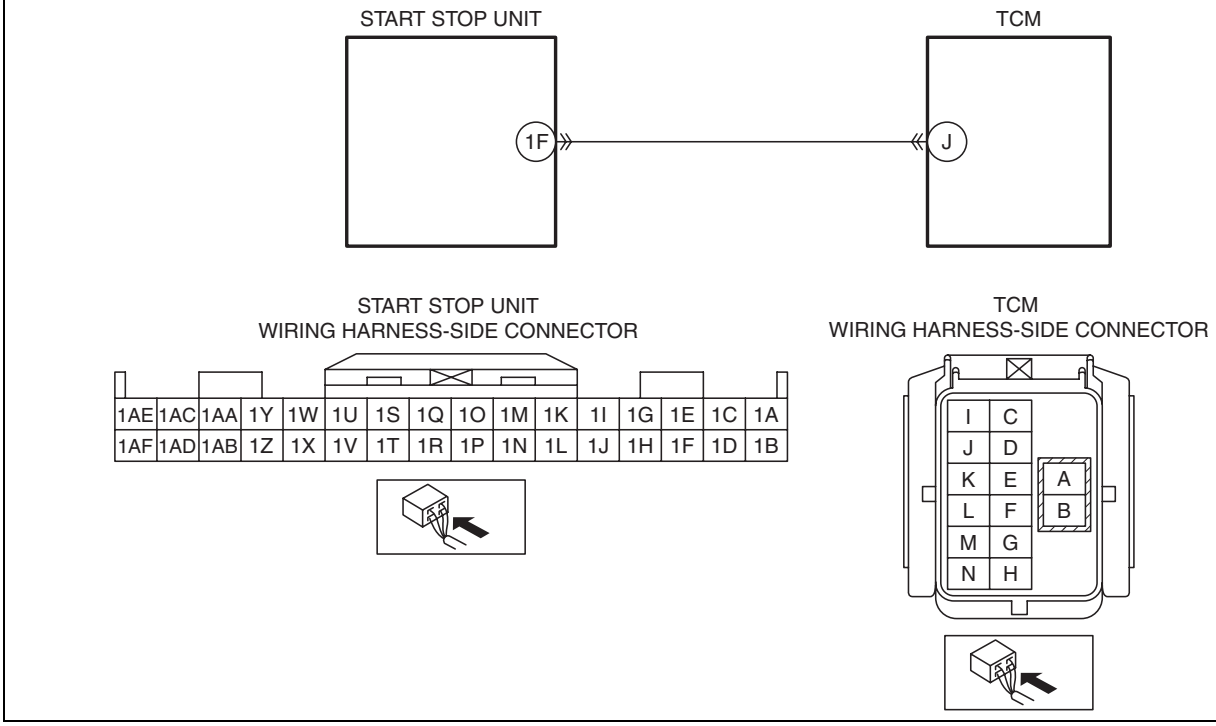
Step	Inspection		Action
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **10 min or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P0830:23 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC P0850:23 [START STOP UNIT]

id0902p6023200

System malfunction location	**TCM circuit malfunction**
Detection condition	• With the ignition switched ON (engine off or on), it is detected that the transaxle range sensor CAN signal is P or N position for **1 s or more** continuously for a continuous **5 or more times** even though the TCM CAN signal is other than P and N position.
Fail-safe	• Perform control of the internal signal for control of the transaxle range sensor as position other than P, N positions.
Possible cause	• TCM connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to power supply in wiring harness between start stop unit terminal 1F and TCM terminal J • Transaxle range sensor malfunction • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT TCM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the TCM connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**INSPECT TCM CIRCUIT FOR SHORT TO POWER SUPPLY** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Operate the selector lever to positions P or N. • Measure the voltage at start stop unit terminal 1F (vehicle wiring harness side). • Is the voltage **1.0 V or less**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which is shorted to power supply, then go to Step 5.
4	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS TRANSAXLE RANGE SENSOR** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off). • Perform the following work five or more times. — Operate the selector lever to positions P or N and wait for **1 s or more**. — Operate the selector lever to positions R or D and wait for **1 s or more**. — Operate the selector lever to positions P or N. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P0850:23 displayed?	Yes	Replace the TCM, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	Go to Step 6.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

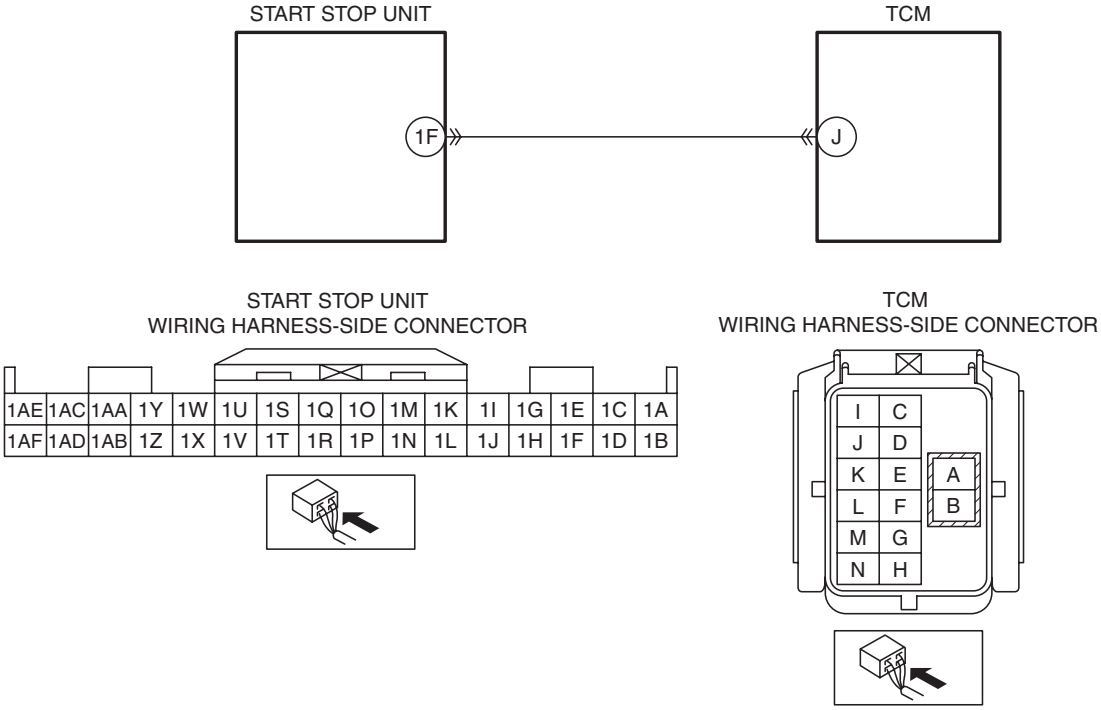
Step	Inspection		Action
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off). • Perform the following work five or more times. — Operate the selector lever to positions P or N and wait for **1 s or more**. — Operate the selector lever to positions R or D and wait for **1 s or more**. — Operate the selector lever to positions P or N. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P0850:23 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC P0850:24 [START STOP UNIT]

id0902p6023300

System malfunction location	**TCM circuit malfunction**
Detection condition	• With the ignition switched ON (engine off or on), it is detected that the transaxle range sensor CAN signal is other than P and N position for **1 s or more** continuously for a continuous **5 or more times** even though the TCM CAN signal is other than P or N position.
Fail-safe	• Perform control of the internal signal for control of the transaxle range sensor as position other than P, N positions.
Possible cause	• TCM connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 1F and TCM terminal J • Open circuit in wiring harness between start stop unit terminal 1F and TCM terminal J • Transaxle range sensor malfunction • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT TCM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the TCM connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Verify that the start stop unit and TCM connectors are disconnected. • Inspect for continuity between TCM terminal J (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 6.
		No	Go to the next step.
4	**INSPECT TCM CIRCUIT FOR OPEN CIRCUIT** • Verify that the start stop unit and TCM connectors are disconnected. • Inspect the wiring harness for continuity between start stop unit terminal 1F (vehicle wiring harness side) and TCM terminal J (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 6.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

Step	Inspection		Action
5	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS TRANSAXLE RANGE SENSOR** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off). • Perform the following work five or more times. — Operate the selector lever to positions to other than P and N and wiat for **1 s or more**. — Operate the selector lever to positions to P or N and wiat for **1 s or more**. — Operate the selector lever to positions to other than P and N. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P0850:24 displayed?	Yes	Replace the TCM, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	Go to Step 7.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off). • Perform the following work five or more times. — Operate the selector lever to positions to other than P and N and wiat for **1 s or more**. — Operate the selector lever to positions to P or N and wiat for **1 s or more**. — Operate the selector lever to positions to other than P and N. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P0850:24 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.

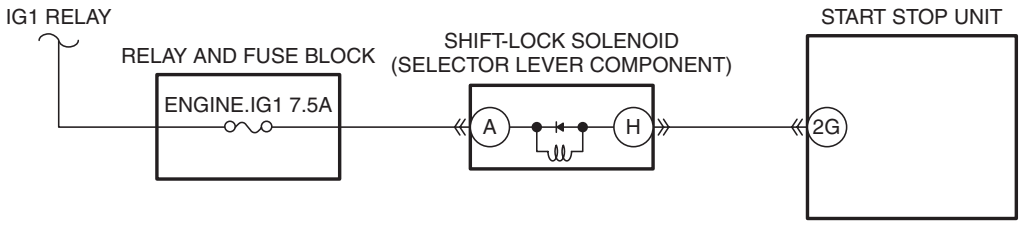
ON-BOARD DIAGNOSTIC [START STOP UNIT]

Step	Inspection		Action
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

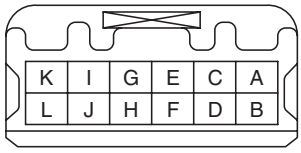
DTC P0930:71 [START STOP UNIT]

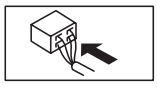
id0902p6023400

System malfunction location	**Shift-lock solenoid circuit malfunction**
Detection condition	• The start stop unit detects shift-lock solenoid is stuck on for **30 s or more** with the ignition switched ON (engine off or on).
Fail-safe	• Inhibits the shift lock control.
Possible cause	• Selector lever component connector or terminal malfunction • Shift-lock solenoid power supply circuit malfunction — Short to ground in wiring harness between ENGINE.IG1 7.5 A fuse and selector lever component terminal A — ENGINE.IG1 7.5 A fuse malfunction — Open circuit in wiring harness between IG1 relay and selector lever component terminal A • Start stop unit connector or terminal malfunction • Short to ground in the wiring harness between selector lever component terminal H and start stop unit terminal 2G • Open circuit in the wiring harness between selector lever component terminal H and start stop unit terminal 2G • Shift-lock solenoid malfunction • Start stop unit malfunction

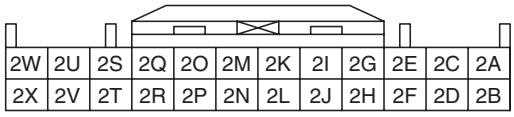


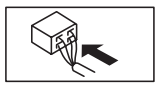
SELECTOR LEVER COMPONENT WIRING HARNESS-SIDE CONNECTOR





START STOP UNIT WIRING HARNESS-SIDE CONNECTOR





ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT SELECTOR LEVER COMPONENT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the selector lever component connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT SHIFT-LOCK SOLENOID POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Verify that the selector lever component connector is disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at selector lever component terminal A (vehicle wiring harness side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE.IG1 7.5 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the burnt out fuse. • If a fuse is damaged: — Replace the damaged fuse. • If the fuse is normal: — Repair or replace the wiring harness which has an open circuit. Go to Step 7.
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
4	**INSPECT SHIFT-LOCK SOLENOID CIRCUIT FOR SHORT TO GROUND** • Verify that the selector lever component and start stop unit connectors are disconnected. • Inspect for continuity between selector lever component terminal H (vehicle wiring harness) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 7.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

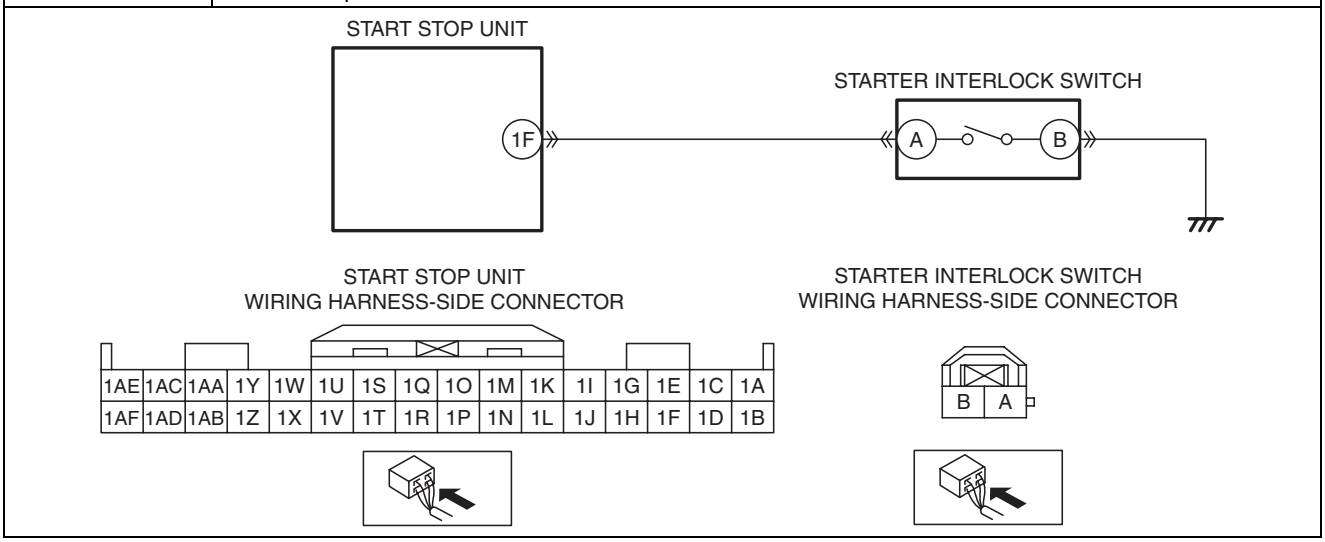
Step	Inspection		Action
5	**INSPECT SHIFT-LOCK SOLENOID CIRCUIT FOR OPEN CIRCUIT** • Verify that the selector lever component and start stop unit connectors are disconnected. • Inspect the wiring harness for continuity between selector lever component terminal H (vehicle wiring harness side) and start stop unit terminal 2G (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 7.
6	**INSPECT SHIFT-LOCK SOLENOID** • Inspect the shift-lock solenoid. (See 05-18-12 SHIFT-LOCK SYSTEM INSPECTION.) • Is the shift-lock solenoid normal?	Yes	Go to the next step.
		No	Replace the selector lever component, then go to the next step. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **30 min or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P0930:71 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC P1708:24 [START STOP UNIT]

id0902p6023500

System malfunction location	**Starter interlock switch circuit malfunction**
Detection condition	• The start stop unit detects an open circuit in the starter interlock switch circuit for **1 s or more** for a continuous **5 times** with the ignition switched ON (engine off or on).
Fail-safe	• Change to the back-up mode.
Possible cause	• Starter interlock switch connector or terminal malfunction • Open circuit in wiring harness between starter interlock switch terminal B and body ground • Starter interlock switch malfunction • Start stop unit connector or terminal malfunction • Open circuit in wiring harness between start stop unit terminal 1F and starter interlock switch terminal A • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**STARTER INTERLOCK SWITCH CONNECTOR INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the starter interlock switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT STARTER INTERLOCK SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the start stop unit and starter interlock switch connectors are disconnected. • Inspect for continuity between starter interlock switch terminal B (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 6.
3	**INSPECT STARTER INTERLOCK SWITCH** • Inspect the starter interlock switch. (See 01-19A-9 STARTER INTERLOCK SWITCH INSPECTION [SKYACTIV-G 2.0].) (See 01-19B-5 STARTER INTERLOCK SWITCH INSPECTION [SKYACTIV-D 2.2].) • Is the starter interlock switch normal?	Yes	Go to the next step.
		No	Replace the starter interlock switch, then go to Step 6. (See 05-10A-14 STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-10B-14 STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT STARTER INTERLOCK SWITCH CIRCUIT FOR OPEN CIRCUIT** • Verify that the start stop unit and starter interlock switch connectors are disconnected. • Inspect the wiring harness for continuity between start stop unit terminal 1F (vehicle wiring harness side) and starter interlock switch terminal A (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

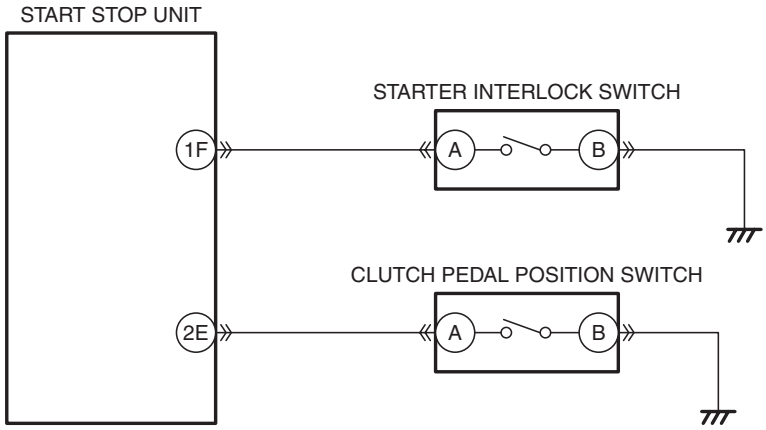
Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on). • Perform the work of depressing the clutch pedal for **1 s or more** and releasing it for **1 s or more** for **5 or more times**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P1708:24 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

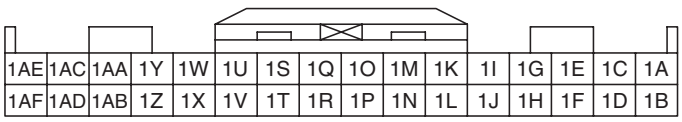
DTC P1708:29 [START STOP UNIT]

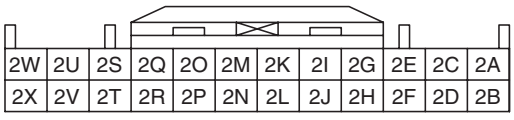
id0902p6023600

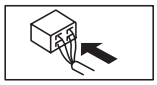
System malfunction location	**Starter interlock switch circuit or clutch pedal position switch circuit malfunction**
Detection condition	• The start stop unit detects that the start interlock switch circuit is stuck on for **0.2 s or more**, or the clutch pedal position switch circuit is stuck off for **0.25 s or more**.
Fail-safe	• Change to the back-up mode.
Possible cause	• Starter interlock switch connector or terminal malfunction • Starter interlock switch malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 1F and starter interlock switch terminal A • Clutch pedal position switch connector or terminal malfunction • Open circuit in wiring harness between clutch pedal position switch terminal B and body ground • CPP switch malfunction • Open circuit in wiring harness between start stop unit terminal 2E and clutch pedal position switch terminal A • Start stop unit malfunction



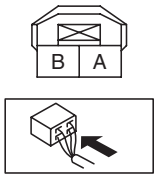
START STOP UNIT
WIRING HARNESS-SIDE CONNECTOR



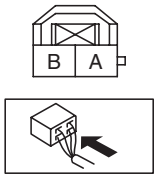




CLUTCH PEDAL POSITION SWITCH
WIRING HARNESS-SIDE CONNECTOR



STARTER INTERLOCK SWITCH
WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**STARTER INTERLOCK SWITCH CONNECTOR INSPECTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the starter interlock switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
2	**INSPECT STARTER INTERLOCK SWITCH** • Inspect the starter interlock switch. (See 01-19A-9 STARTER INTERLOCK SWITCH INSPECTION [SKYACTIV-G 2.0].) (See 01-19B-5 STARTER INTERLOCK SWITCH INSPECTION [SKYACTIV-D 2.2].) • Is the starter interlock switch normal?	Yes	Go to the next step.
		No	Replace the starter interlock switch, then go to Step 9. (See 05-10A-14 STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-10B-14 STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
4	**INSPECT STARTER INTERLOCK SWITCH CIRCUIT FOR SHORT TO GROUND** • Verify that the start stop unit and starter interlock switch connectors are disconnected. • Inspect for continuity between starter interlock switch terminal A (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 9.
		No	Go to the next step.
5	**INSPECT CPP SWITCH CONNECTOR CONDITION** • Disconnect the CPP switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 9.
6	**INSPECT CPP SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the CPP switch connector is disconnected. • Inspect for continuity between CPP switch terminal B (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 9.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

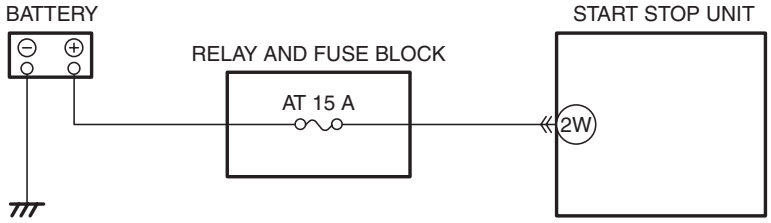
Step	Inspection		Action
7	**INSPECT CPP SWITCH** • Inspect the CPP switch. (See 01-40-40 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [SKYACTIV-G 2.0].) • Is the clutch pedal position switch normal?	Yes	Go to the next step.
		No	Replace the clutch pedal position switch, then go to the Step 9. (See 05-10A-13 CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].) (See 05-10B-13 CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
8	**INSPECT CPP SWITCH CIRCUIT FOR OPEN CIRCUIT** • Verify that the start stop unit and clutch pedal position switch connectors are disconnected. • Inspect the wiring harness for an open circuit between start stop unit terminal 2E (vehicle wiring harness side) and clutch pedal position switch terminal A (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to the next step.
9	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on). • Perform the work of depressing and releasing the clutch pedal **3 times**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P1708:29 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
10	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

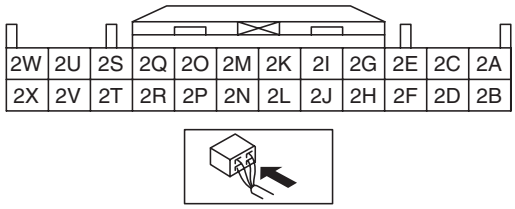
DTC P1794:16 [START STOP UNIT]

id0902p6023700

System malfunction location	**Start stop unit power supply voltage (+B2) low input**
Detection condition	• Start stop unit power supply circuit (+B2) voltage of **less than 6.5 V** is detected for **5 s or more**.
Fail-safe	—
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • Start stop unit connector or terminal malfunction • Start stop unit power supply circuit (+B2) malfunction — Short to ground in wiring harness between AT 15 A 15 A fuse and start stop unit terminal 2W — AT 15 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and start stop unit terminal 2W • Start stop unit malfunction



START STOP UNIT
WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 6. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17A-10 BATTERY RECHARGING [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 6. (See 01-17A-17 GENERATOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)
4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT START STOP UNIT POWER SUPPLY CIRCUIT (+B2)** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Display PID VPWR_B2 using the M-MDS. (See 09-02C-151 PID/DATA MONITOR INSPECTION [START STOP UNIT].) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the AT 15 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the fuse. • If a fuse is damaged: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness which has an open circuit. Go to the next step.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC P1794:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC U0001:88/U0100:00/U0101:00/U0121:00/U0121:87/U0131:00/U0140:00/U0146:00/U0151:00/U0155:00 [START STOP UNIT]

id0902p6023800

System malfunction location	**U0001:88** • **Module communication error (HS-CAN)** **U0100:00** • **Communication error with PCM** **U0101:00** • **Communication error with TCM** **U0121:00** • **Communication error with DSC HU/CM** **U0121:87** • **Communication error with DSC HU/CM** **U0131:00** • **Communication error with EPS control module** **U0140:00** • **Communication error with front body control module (FBCM)** **U0146:00** • **Communication error with instrument cluster** **U0151:00** • **SAS control module communication error** **U0155:00** • **Communication error with instrument cluster**
Detection condition	• U0001:88 — The start stop unit detects CAN bus communication line (HS-CAN) malfunction **10 times** continuously. • U0100:00 — The start stop unit could not receive CAN signal from the PCM for **1 s or more**. • U0101:00 — The start stop unit could not receive CAN signal from the TCM for **1 s or more**. • U0121:00 — The start stop unit could not receive CAN signal from the DSC HU/CM for **1 s or more**. • U0121:87 — The start stop unit could not receive CAN signal from the DSC HU/CM for **10 s or more**. • U0131:00 — The start stop unit could not receive CAN signal from the EPS control module for **1.2 s or more**. • U0140:00 — The start stop unit could not receive CAN signal from the front body control module (FBCM) for **5 s or more**. • U0146:00 — The start stop unit cannot receive CAN signals from the instrument cluster for **5 s or more** with the ignition switched ON (engine off or on). • U0151:00 — The start stop unit could not receive CAN signal from the SAS control module for **1 s or more**. • U0155:00 — The start stop unit could not receive CAN signal from the instrument cluster for **5 s or more**.
Fail-safe	• U0001:88 — Sets to default signal. — Cancel the i-stop control. (With i-stop) • U0100:00 — Sets to default signal. — Cancel the i-stop control. (With i-stop) • U0101:00 — Sets to default signal. • U0121:00 — Sets to default signal. • U0121:87 — Sets to default signal. • U0131:00 — Sets to default signal. • U0140:00 — Sets to default signal. • U0146:00 — Sets to default signal. • U0151:00 — Sets to default signal. • U0155:00 — Sets to default signal.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

System malfunction location	**U0001:88** • **Module communication error (HS-CAN)** **U0100:00** • **Communication error with PCM** **U0101:00** • **Communication error with TCM** **U0121:00** • **Communication error with DSC HU/CM** **U0121:87** • **Communication error with DSC HU/CM** **U0131:00** • **Communication error with EPS control module** **U0140:00** • **Communication error with front body control module (FBCM)** **U0146:00** • **Communication error with instrument cluster** **U0151:00** • **SAS control module communication error** **U0155:00** • **Communication error with instrument cluster**
Possible cause	• Malfunction in CAN bus communication line • Malfunction in CAN line between the PCM and start stop unit • Malfunction in CAN line between the TCM and start stop unit • Malfunction in CAN line between the DSC HU/CM and start stop unit • Malfunction in CAN line between the EPS control module and start stop unit • Malfunction in CAN line between the front body control module (FBCM) and start stop unit • Malfunction in CAN line between the SAS control module and start stop unit • Malfunction in CAN line between the instrument cluster and start stop unit
System wiring diagram	—

Diagnostic Procedure

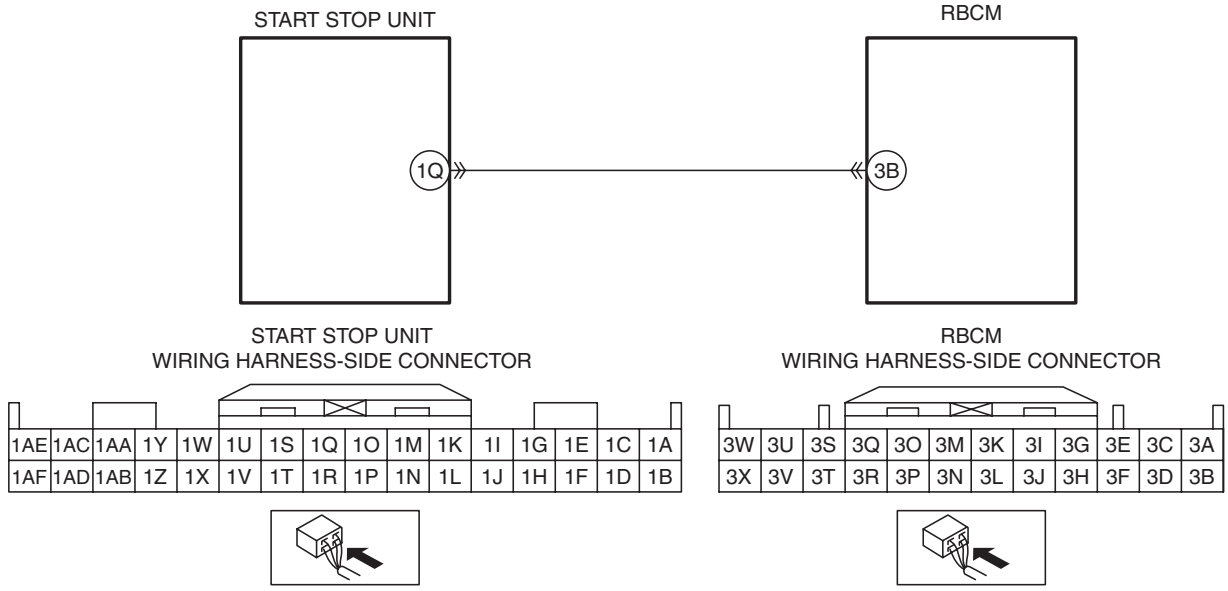
- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See 10-02A-1 FOREWORD [SKYACTIV-G 2.0 (L.H.D.)].)(See 10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)].)(See 10-02C-1 FOREWORD [SKYACTIV-D 2.2 (L.H.D.)].)(See 10-02D-1 FOREWORD [SKYACTIV-D 2.2 (R.H.D.)].)

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC U0028:87 [START STOP UNIT]

id0902p6023900

System malfunction location	**Communication error with rear body control module (RBCM)**
Detection condition	• Start stop unit detects communication error with rear body control module (RBCM) **10 times continuously**.
Fail-safe	—
Possible cause	• Rear body control module (RBCM) connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 1Q and rear body control module (RBCM) terminal 3B • Open circuit in wiring harness between start stop unit terminal 1Q and rear body control module (RBCM) terminal 3B • Rear body control module (RBCM) malfunction • Start stop unit malfunction



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the rear body control module (RBCM) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT REAR BODY CONTROL MODULE (RBCM) CIRCUIT FOR SHORT TO GROUND** • Verify that the rear body control module (RBCM) connector and start stop unit connector are disconnected. • Inspect for continuity between rear body control module (RBCM) terminal 3B (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 6.
		No	Go to the next step.
4	**INSPECT REAR BODY CONTROL MODULE (RBCM) CIRCUIT FOR OPEN CIRCUIT** • Verify that the rear body control module (RBCM) connector and start stop unit connector are disconnected. • Inspect the wiring harness for an open circuit between start stop unit terminal 1Q (vehicle wiring harness side) and rear body control module (RBCM) terminal 3B (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 6.
5	**INSPECT REAR BODY CONTROL MODULE (RBCM)** • Inspect the rear body control module (RBCM). (See 09-40-11 REAR BODY CONTROL MODULE (RBCM) INSPECTION.) • Is the rear body control module (RBCM) normal?	Yes	Go to the next step.
		No	Replace the rear body control module (RBCM), then go to the next step. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.)

ON-BOARD DIAGNOSTIC [START STOP UNIT]

Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC U0028:87 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

DTC U0447:86 [START STOP UNIT]

id0902p6024200

System malfunction location	**Error signal received from instrument cluster**
Detection condition	• The start stop unit receives error signals from the instrument cluster for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• DTCs are stored in the instrument cluster. • Instrument cluster malfunction • Start stop unit malfunction
System wiring diagram	—

ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

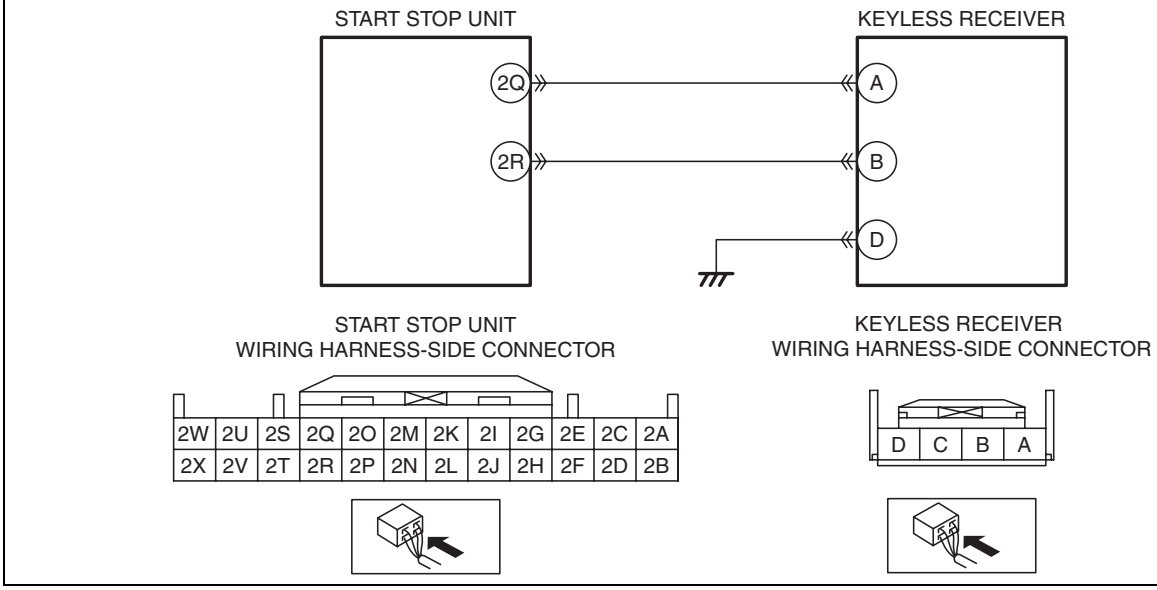
Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS INSTRUMENT CLUSTER** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-2 ON-BOARD DIAGNOSTIC WIRING DIAGRAM [INSTRUMENT CLUSTER].) • Is the DTC U0447:86 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to step 4.
3	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS START STOP UNIT** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is the DTC U0447:86 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC U201F:11 [START STOP UNIT]

id0902p6024300

System malfunction location	**Keyless receiver circuit malfunction**
Detection condition	• Start stop unit detects keyless receiver circuit voltage of **less than 3.4 V** for **0.5 s or more**.
Fail-safe	—
Possible cause	• Keyless receiver connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between start stop unit terminal 2Q and keyless receiver terminal A • Keyless receiver malfunction • Start stop unit malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT KEYLESS RECEIVER CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the keyless receiver connector • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

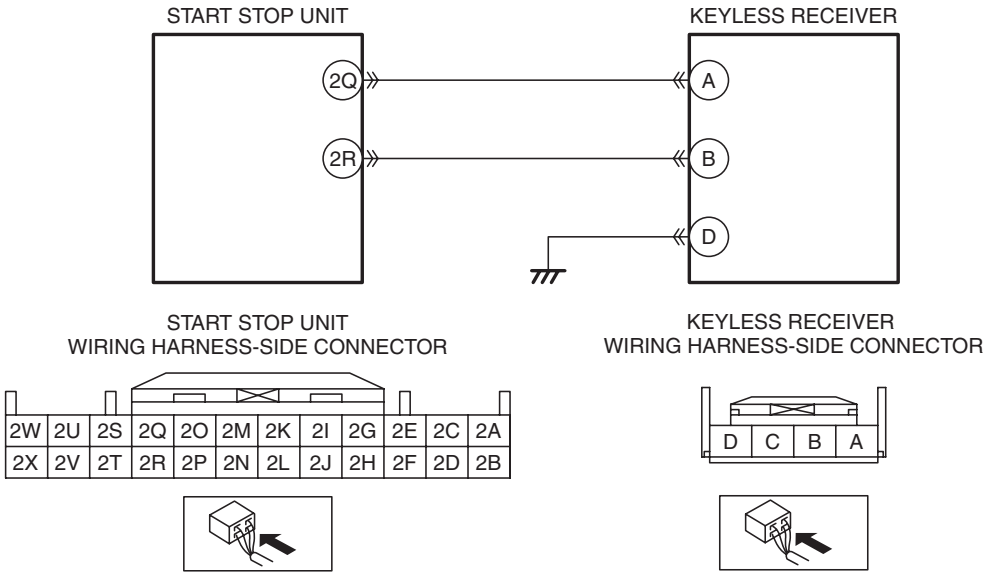
Step	Inspection		Action
3	**INSPECT KEYLESS RECEIVER CIRCUIT FOR SHORT TO GROUND** • Verify that the keyless receiver and start stop unit connectors are disconnected. • Inspect for continuity between keyless receiver terminal A (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 5.
		No	Go to the next step.
4	**INSPECT KEYLESS RECEIVER** • Inspect the keyless receiver. (See 09-14-75 KEYLESS RECEIVER INSPECTION.) • Is the keyless receiver normal?	Yes	Go to the next step.
		No	Replace the keyless receiver, then go to the next step. (See 09-14-74 KEYLESS RECEIVER REMOVAL/INSTALLATION.)
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **0.5 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC U201F:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC U201F:12 [START STOP UNIT]

id0902p6024400

System malfunction location	**Keyless receiver circuit malfunction**
Detection condition	• Start stop unit detects keyless receiver circuit voltage of **6.2 V or more** for **0.5 s or more**.
Fail-safe	—
Possible cause	• Keyless receiver connector or terminal malfunction • Start stop unit connector or terminal malfunction • Short to power supply in wiring harness between start stop unit terminal 2Q and keyless receiver terminal A • Keyless receiver malfunction • Start stop unit malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT KEYLESS RECEIVER CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the keyless receiver connector • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

Step	Inspection		Action
3	**INSPECT KEYLESS RECEIVER CIRCUIT FOR SHORT TO POWER SUPPLY** • Reconnect the start stop unit connector. • Verify that the keyless receiver connector is disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). — Keyless receiver terminal A — Start stop unit terminal 2Q • Is the voltage 0 V?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which is shorted to power supply, then go to Step 5.
4	**INSPECT KEYLESS RECEIVER** • Inspect the keyless receiver. (See 09-14-75 KEYLESS RECEIVER INSPECTION.) • Is the keyless receiver normal?	Yes	Go to the next step.
		No	Replace the keyless receiver, then go to the next step. (See 09-14-74 KEYLESS RECEIVER REMOVAL/INSTALLATION.)
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **0.5 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC U201F:12 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC U2100:00 [START STOP UNIT]

id0902p6024500

System malfunction location	**Start stop unit configuration not completed**
Detection condition	• Start stop unit configuration not completed.
Fail-safe	• Inhibits switching to cranking status directly after the ignition is switched off (LOCK) or to ACC. • Switches the engine start condition (ATX/MTX) setting automatically by receiving the CAN communication after the ignition is switched on (engine off). If it cannot be received, set as ATX and start the engine.
Possible cause	• Start stop unit configuration error • Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM START STOP UNIT CONFIGURATION** • Perform the start stop unit configuration using the M-MDS. (See 09-14-60 START STOP UNIT CONFIGURATION (USING AS-BUILT DATA).) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC U2100:00 displayed?	Yes	Perform the start stop unit configuration again, then go to the next step. (See 09-14-60 START STOP UNIT CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC U2100:00 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC U2300:00 [START STOP UNIT]

id0902p6024600

System malfunction location	**Configuration data not received from instrument cluster**
Detection condition	• The start stop unit cannot receive configuration data from the instrument cluster for **1 s or more** with the ignition switched ON (engine off or on).
Fail-safe	• Secures the correct data received right before the malfunction.
Possible cause	• DTCs are stored in the instrument cluster. • Instrument cluster malfunction • Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS INSTRUMENT CLUSTER** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-2 ON-BOARD DIAGNOSTIC WIRING DIAGRAM [INSTRUMENT CLUSTER].) • Is the DTC U2300:00 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **1 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC U2300:00 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC U3000:01 [START STOP UNIT]

id0902p6024700

System malfunction location	**Start stop unit internal malfunction**
Detection condition	• Malfunction inside start stop unit detected.
Fail-safe	—
Possible cause	• Start stop unit internal malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS START STOP UNIT** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC U3000:01 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

DTC U3000:49 [START STOP UNIT]

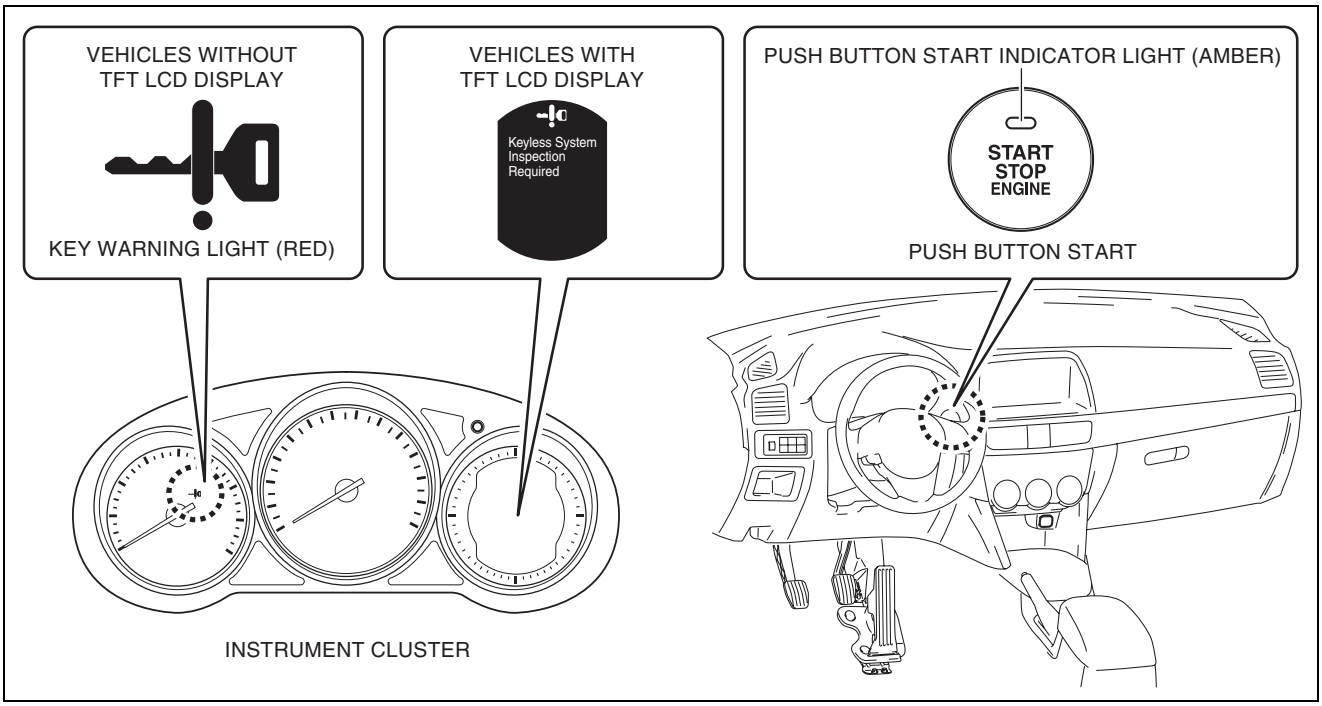
id0902p6024800

Warning

- **If this DTC is detected, the system will enter the fail-safe function to ensure safety. If a specified period of time has elapsed or the vehicle has been driven for a specified period of time or more while in fail-safe mode, the ignition will remain stuck in off and the engine cannot be started. Therefore, perform the malfunction diagnosis while the engine can be started. In addition, after having performed the malfunction diagnosis. If the DTC is not detected, the system returns to normal from the fail-safe function.**

Note

- If the vehicle is in the following condition while in fail-safe mode, the KEY warning indicator light (red) illuminates and the push button start indicator light (amber) flashes.
  - — Switch the ignition to ACC or ON (engine off or on).
  - — Depress the brake pedal (ATX) / clutch pedal (MTX).
- In addition to the normal engine starting operation while cranking the engine in fail-safe mode, it is necessary to press the push button start.



ac5wzw0000325

System malfunction location	**Start stop unit internal malfunction**
Detection condition	• Malfunction inside start stop unit detected.
Fail-safe	• The system will enter the fail-safe function to ensure safety. If a specified period of time has elapsed or the vehicle has been driven for a specified period of time or more while in fail-safe mode, the ignition will remain stuck in off and the engine cannot be started.
Possible cause	• Start stop unit internal malfunction
System wiring diagram	—

ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS START STOP UNIT** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC U3000:49 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

DTC U3000:96 [START STOP UNIT]

id0902p6050000

System malfunction location	**Start stop unit malfunction**
Detection condition	• Start stop unit malfunction detected.
Fail-safe	• Cancel the i-stop control. (With i-stop)
Possible cause	• Start stop unit malfunction
System wiring diagram	—

Diagnostic Procedure

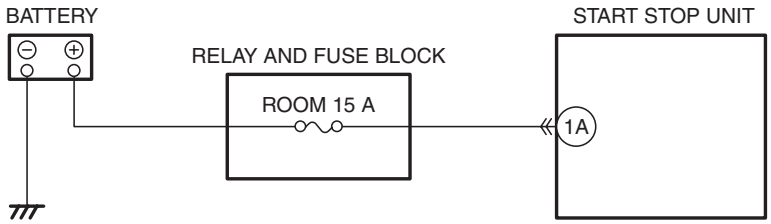
Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS START STOP UNIT** • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC U3000:96 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

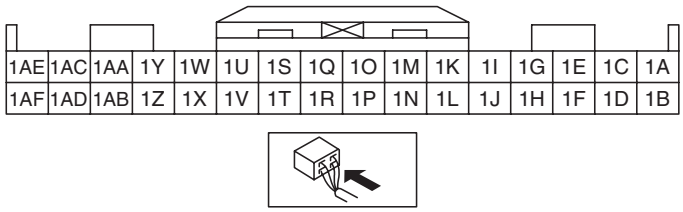
DTC U3003:16 [START STOP UNIT]

id0902p6024900

System malfunction location	**Start stop unit power supply voltage (+B1) low input**
Detection condition	• Start stop unit power supply circuit (+B1) voltage of **5V or more, less than 8.5 V** is detected for **5 s or more**.
Fail-safe	• Inhibits the door lock/unlock control using the advanced keyless entry system. (With advanced keyless entry system).
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • Start stop unit connector or terminal malfunction • Start stop unit power supply circuit (+B1) malfunction — Short to ground in the wiring harness between ROOM 15 A fuse and start stop unit terminal 1A — ROOM 15 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and start stop unit terminal 1A • Start stop unit malfunction



START STOP UNIT
WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 6. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17A-10 BATTERY RECHARGING [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 6. (See 01-17A-17 GENERATOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)
4	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT START STOP UNIT POWER SUPPLY CIRCUIT (+B1)** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Display PID VPWR_B1 using the M-MDS. (See 09-02C-151 PID/DATA MONITOR INSPECTION [START STOP UNIT].) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ROOM 15 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the fuse. • If a fuse is damaged: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness which has an open circuit. Go to the next step.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

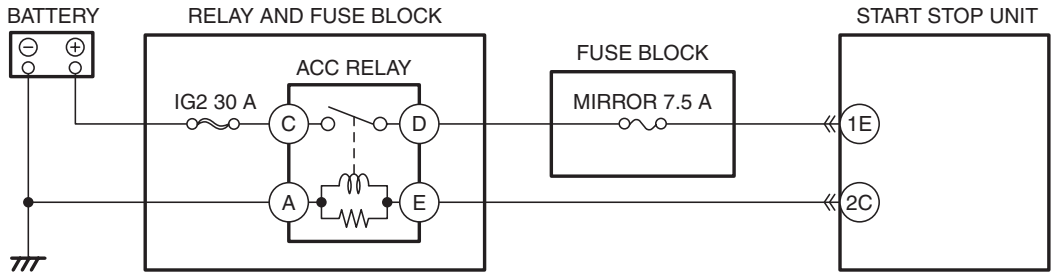
Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is DTC U3003:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

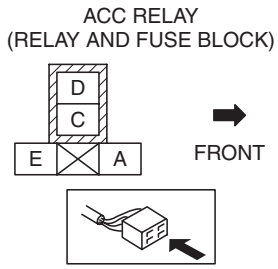
ON-BOARD DIAGNOSTIC [START STOP UNIT]

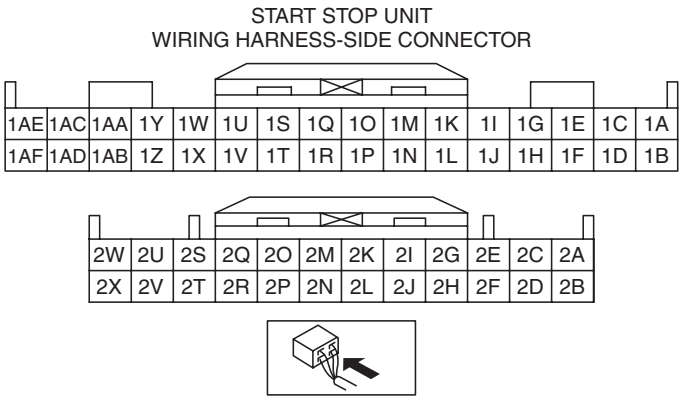
DTC U3004:11 [START STOP UNIT]

id0902p6025000

System malfunction location	**ACC relay circuit malfunction**
Detection condition	• With the ignition switched to ACC or ON (engine off or on), the start stop unit detects ACC relay output monitor voltage of **less than specification** for **0.05 s or more**.
Fail-safe	—
Possible cause	• ACC relay malfunction • Start stop unit connector or terminal malfunction • Short to ground in wiring harness between ACC relay terminal E and start stop unit terminal 2C • Start stop unit malfunction







ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

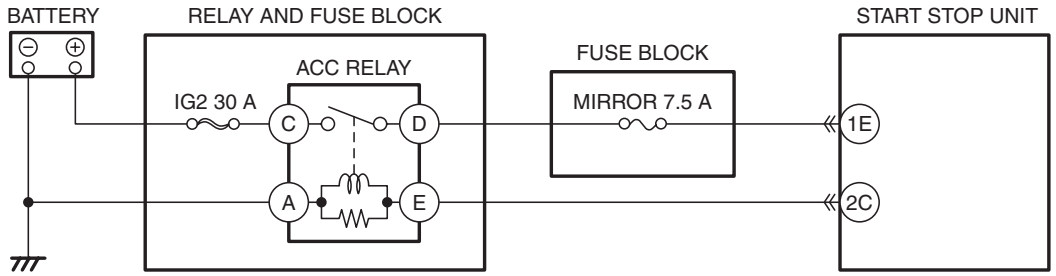
Step	Inspection		Action
1	**INSPECT ACC RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the ACC relay. (See 09-21-28 RELAY LOCATION.) • Inspect the ACC relay. (See 09-21-29 RELAY INSPECTION.) • Is the ACC relay normal?	Yes	Go to the next step.
		No	Replace the ACC relay, then go to Step 4. (See 09-21-28 RELAY LOCATION.)
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT ACC RELAY CIRCUIT FOR SHORT TO GROUND** • Verify that the ACC relay is removed. • Verify that the start stop unit connector is disconnected. • Inspect for continuity between ACC relay terminal E (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 4.
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition to ACC or ON (engine off or on) and wait for **0.05 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is the DTC U3004:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

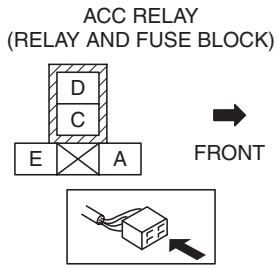
ON-BOARD DIAGNOSTIC [START STOP UNIT]

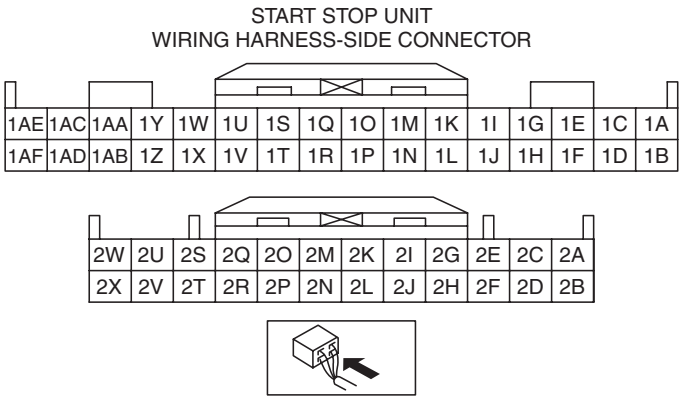
DTC U3004:12 [START STOP UNIT]

id0902p6025100

System malfunction location	**ACC relay circuit malfunction**
Detection condition	• The start stop unit detects ACC relay output monitor voltage of **2.5 V or more** for **0.5 s or more** with the ignition switched off.
Fail-safe	• Door locking operation inhibited while under i-stop control.
Possible cause	• ACC relay malfunction • Start stop unit connector or terminal malfunction • Short to power supply in wiring harness between ACC relay terminal E and start stop unit terminal 2C • Start stop unit malfunction







ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT ACC RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the ACC relay. (See 09-21-28 RELAY LOCATION.) • Inspect the ACC relay. (See 09-21-29 RELAY INSPECTION.) • Is the ACC relay normal?	Yes	Go to the next step.
		No	Replace the ACC relay, then go to Step 4. (See 09-21-28 RELAY LOCATION.)
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT ACC RELAY CIRCUIT FOR SHORT TO POWER SUPPLY** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Measure the voltage at start stop unit terminal 2C (vehicle wiring harness side). • Is the voltage **2.5 V or more**?	Yes	Repair or replace the wiring harness which has a short to the power supply, then go to the next step.
		No	Go to the next step.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition to off and wait for **0.5 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is the DTC U3004:12 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.

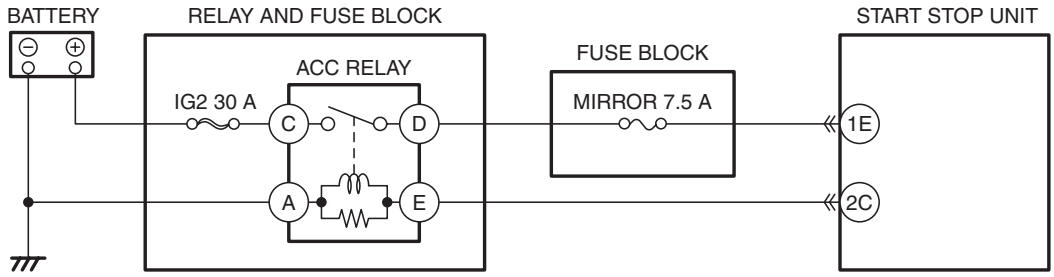
ON-BOARD DIAGNOSTIC [START STOP UNIT]

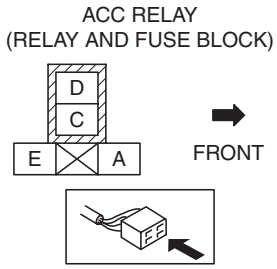
Step	Inspection		Action
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

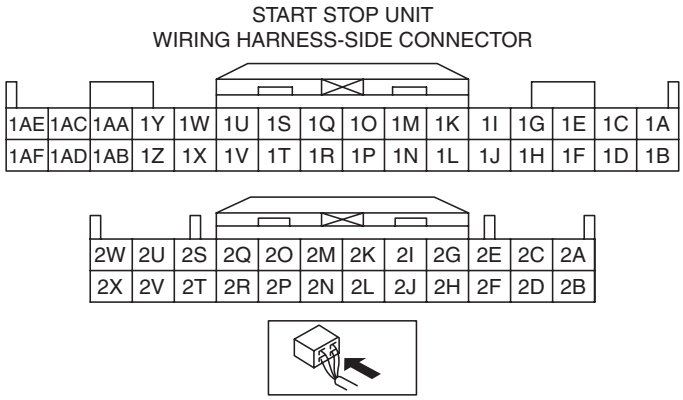
DTC U3004:16 [START STOP UNIT]

id0902p6025200

System malfunction location	**ACC relay circuit malfunction**
Detection condition	• With the ignition switched to ACC or ON (engine off or on), the start stop unit detects ACC monitor voltage of **less than 2.5 V** for **1 s or more**.
Fail-safe	—
Possible cause	• ACC relay malfunction • ACC relay power supply circuit malfunction — Short to ground in wiring harness between IG2 30 A fuse and ACC terminal C — IG2 30 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and ACC relay terminal C • Start stop unit connector or terminal malfunction • Start stop unit power supply circuit (ACC) malfunction — Short to ground in wiring harness between ACC relay terminal D and start stop unit terminal 1E — MIRROR 7.5 A fuse malfunction — Open circuit in wiring harness between ACC relay terminal D and start stop unit terminal 1E • Start stop unit malfunction







ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT ACC RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the ACC relay. (See 09-21-28 RELAY LOCATION.) • Inspect the ACC relay. (See 09-21-29 RELAY INSPECTION.) • Is the ACC relay normal?	Yes	Go to the next step.
		No	Replace the ACC relay, then go to Step 5. (See 09-21-28 RELAY LOCATION.)
2	**INSPECT ACC RELAY POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Verify that the ACC relay is removed. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition to ACC or ON (engine off or on). • Measure the voltage at ACC relay terminal C (vehicle wiring harness side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the IG2 30 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the fuse. • If a fuse is damaged: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness which has an open circuit. Go to Step 5.
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

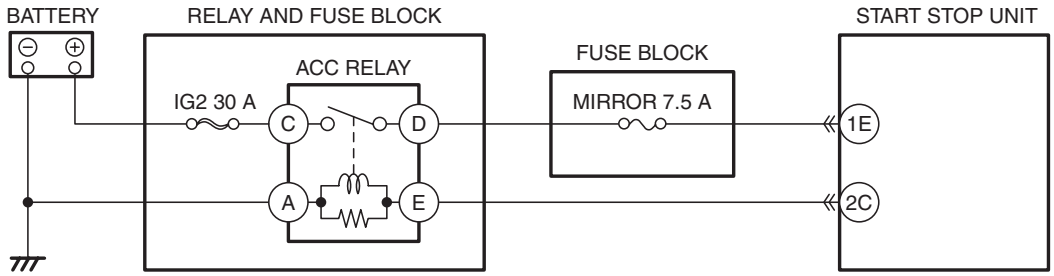
Step	Inspection		Action
4	**INSPECT START STOP UNIT POWER SUPPLY CIRCUIT (ACC) FOR OPEN CIRCUIT OR SHORT TO GROUND** • Verify that the start stop unit connector is disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition to ACC or ON (engine off or on). • Measure the voltage at ACC relay terminal E (vehicle wiring harness side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MIRROR 7.5 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the fuse. • If a fuse is damaged: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness which has an open circuit. Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition to ACC or ON (engine off or on) and wait for **1 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is the DTC U3004:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

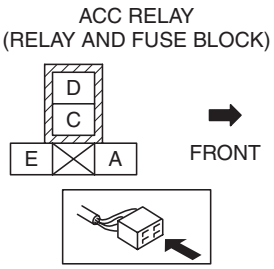
ON-BOARD DIAGNOSTIC [START STOP UNIT]

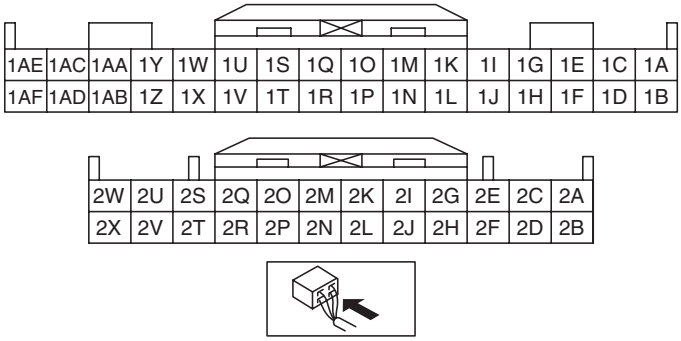
DTC U3004:17 [START STOP UNIT]

id0902p6025300

System malfunction location	**ACC relay circuit malfunction**
Detection condition	• The start stop unit detects ACC monitor voltage of **2.5 V or more** for **5 s or more** with the ignition switched off.
Fail-safe	• Door locking operation inhibited while under i-stop control.
Possible cause	• ACC relay malfunction • Start stop unit connector or terminal malfunction • Short to power supply in wiring harness between ACC relay terminal D and start stop unit terminal 1E • Start stop unit malfunction







ON-BOARD DIAGNOSTIC [START STOP UNIT]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT ACC RELAY FOR MALFUNCTION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the ACC relay. (See 09-21-28 RELAY LOCATION.) • Inspect the ACC relay. (See 09-21-29 RELAY INSPECTION.) • Is the ACC relay normal?	Yes	Go to the next step.
		No	Replace the ACC relay, then go to Step 4. (See 09-21-28 RELAY LOCATION.)
2	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Disconnect the start stop unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT START STOP UNIT POWER SUPPLY CIRCUIT (ACC) FOR SHORT TO POWER SUPPLY** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Measure the voltage at start stop unit terminal 1E (vehicle wiring harness side). • Is the voltage **2.5 V or more**?	Yes	Repair or replace the wiring harness which has a short to the power supply, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

Step	Inspection		Action
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the start stop unit using the M-MDS. (See 09-02C-7 CLEARING DTC [START STOP UNIT].) • Switch the ignition to off and wait for **5 s or more**. • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is the DTC U3004:17 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [START STOP UNIT]

PID/DATA MONITOR INSPECTION [START STOP UNIT]

id0902p6025400

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   1. Select “DataLogger”.
   2. Select “Modules”.
   3. Select “SSU”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

PID/DATA MONITOR TABLE [START STOP UNIT]

id0902p6025500

PID	Unit/ Operation	Data contents	Inspection item(s)
BRAKE_SW 1*1	Off/On	• Off: Brake switched is off. • On: Brake switch is on.	Brake switch
CLUT_CUT _SW*2	Off/On	• Off: Starter interlock switch is off. • On: Starter interlock switch is on.	Starter interlock switch
CLUTCH_S W*2	Off/On	• Off: CPP switch is off. • On: CPP switch is on.	CPP switch
COMM_ST_ TSP	Off/On	• Off: Remote transmitter is not communicated. • On: Remote transmitter is communicated.	Start stop unit
CRU_CON_ SW*3	Not_Presse d/On/Off/ Cancel/ Resume/ Fault/Set (+)/Set (-)	• Not_Pressed: Each switch of cruise control switch is not pressed. • On: Cruise ON switch is pressed. • Off: Cruise OFF switch is pressed. • Cancel: CANCEL switch is pressed. • Resume: RESUME switch is pressed. • Fault: Cruise control switch has a malfunction. • Set (+): SET (+) switch is pressed. • Set (-): SET (-) switch is pressed.	Cruise control switch
ES_UL_SW	Not_Unlock/ Unlock	• Not_Unlock: Steering lock unlock switch is off. • Unlock: Steering lock unlock switch is on.	Start stop unit
ES_UL_SW _M	Not_Unlock/ Unlock	• Not_Unlock: Memory value of steering lock unlock switch is not unlocked. • Unlock: Memory value of steering lock unlock switch is unlocked.	Start stop unit
ES_ULL_S W	Off/On	• Not_Unlock: Steering lock unlock/lock switch is off. • Unlock: Steering lock unlock/lock switch is on.	Start stop unit
ES_ULL_S W_M	Off/On	• Not_Unlock: Memory value of steering lock unlock/lock switch is not unlocked. • Unlock: Memory value of steering lock unlock/lock switch is unlocked.	Start stop unit
F_FOG_SW	Off/On	• Off: Fog light switch is not in F.FOG position. • On: Fog light switch is in F.FOG position.	Front fog light switch
H/L_SW_HI	Off/On	• Off: Light switch is not in HI position. • On: Light switch is in HI position.	Light switch
H/ L_SW_LOW	Off/On	• Off: Light switch is not in LO position. • On: Light switch is in LO position.	Light switch
H/ L_SW_OFF	Off/On	• Off: Light switch is not in OFF position. • On: Light switch is in OFF position.	Light switch
H/ L_SW_PAS S	Off/On	• Off: Light switch is not in passing position. • On: Light switch is in passing position.	Light switch

ON-BOARD DIAGNOSTIC [START STOP UNIT]

PID	Unit/ Operation	Data contents	Inspection item(s)
H/ L_SW_TNS	Off/On	• Off: Light switch is not in TNS position. • On: Light switch in TNS position.	Light switch
HAZARD_SW	Off/On	• Off: Hazard warning switch is off. • On: Hazard warning switch is on.	Hazard warning switch
IG_POSITION	OFF/ACC/ ON/CRANK	• OFF: Ignition is switched off. • ACC: Ignition is switched to ACC. • ON: Ignition is switched ON (engine off or on). • CRANK: During engine cranking	Ignition switch
INFO_SW	Off/ SW1_On/ SW2_On/ SW3_On/ Unknown/ Invalid	• Off: Steering switch UP/DOWN/INFO switch is not pressed. • SW1_On: UP switch is pressed. • SW2_On: DOWN switch is pressed. • SW3_On: INFO switch is pressed. • Unknown: Steering switch UP/DOWN/INFO switch signal is not determined. • Invalid: Steering switch malfunction is received.	Steering switch
INHIBIT_SW*1	Off/On	• Off: Selector lever is not in P and N positions. • On: Selector lever is in P or N position.	Transaxle range sensor
LG/ T_LK_SW*5	Off/On	• Off: Request switch (liftgate) is off. • On: Request switch (liftgate) is on.	Request switch (liftgate)
LG/ T_UNL_SW	Off/On	• Off: Liftgate opener switch is off. • On: Liftgate opener switch is on.	Liftgate opener switch
LL_SW_D_LK	Off/On	• Off: Front door lock-link switch (driver's side) is in unlock. • On: Front door lock-link switch (driver's side) is in lock.	Front door lock-link switch (driver's door)
NUM_TRNSMIT	—	Displays the number of the remote transmitters programmed to the start stop unit.	Start stop unit
P_RANGE_SW*1	Off/On	• Off: NOT P position switch is off. • On: NOT P position switch is on.	NOT P position switch
R_FOG_SW	Off/On	• Off: Fog light switch is not in R.FOG position. • On: Fog light switch is in R.FOG position.	Rear fog light switch
RELAY_ACC	Off/On	• Off: ACC relay drive is off. • On: ACC relay drive is on.	ACC relay
RELAY_IG1	Off/On	• Off: IG1 relay drive is off. • On: IG1 relay drive is on.	IG1 relay
RELAY_IG2	Off/On	• Off: IG2 relay drive is off. • On: IG2 relay drive is on.	Front body control module (FBCM)
RF_RECEP_ST	Initial/ Transmitter/ RF_Response	• Initial: Signal from remote transmitter is not received. • Transmitter: Signal is received using remote transmitter button. • RF_Response: Signal is received by remote transmitter radio wave.	Keyless receiver
RQ_SW_LF *4	Off/On	• Off: Request switch (LF) is off. • On: Request switch (LF) is on.	Request switch (LF)
RQ_SW_RF *4	Off/On	• Off: Request switch (RF) is off. • On: Request switch (RF) is on.	Request switch (RF)
SECURITY_I	Off/On	• Off: Security indicator light is turned off. • On: Security indicator light is illuminated.	Instrument cluster
SFT_LK_SOL*1	Off (Lock)/ On (Unlock)	• Off (Lock): Shift-lock is operated. • On (Unlock): Shift-lock is released.	Selector lever component
SSB_1	Off/On	• Off: Push button start switch 1 is off. • On: Push button start switch 1 is on.	Push button start
SSB_2	Off/On	• Off: Push button start switch 2 is off. • On: Push button start switch 2 is on.	Push button start
SSB_AMBER	Off/On	• Off: Push button start indicator light (amber) is turned off. • On: Push button start indicator light (amber) is illuminated.	Push button start
SSB_GREEN	Off/On	• Off: Push button start indicator light (green) is turned off. • On: Push button start indicator light (green) is illuminated.	Push button start
SSB_ILLMI	Off/On	• Off: START/STOP/ENGINE indicator light is turned off. • On: START/STOP/ENGINE indicator light is illuminated.	Push button start
START_RLY_1	V	Voltage at start stop unit terminal 2V is displayed.	Starter relay

ON-BOARD DIAGNOSTIC [START STOP UNIT]

PID	Unit/ Operation	Data contents	Inspection item(s)
START_RLY_2	V	Voltage at start stop unit terminal 1D is displayed.	Starter relay
STR_A_ANG_A	° (deg)	Steering angle sensor A signal aiming angle is displayed.	Steering angle sensor
STR_A_ANG_B	° (deg)	Steering angle sensor B signal aiming angle is displayed.	Steering angle sensor
STR_AB_ANG	° (deg)	Steering wheel absolute steering angle is displayed.	Steering angle sensor
STR_ANG_S	Without/ With	• Without: Steering angle sensor is not equipped. • With: Steering angle sensor is equipped.	Steering angle sensor
STR_ANG_S_A	V	Voltage at the steering angle sensor A signal is displayed.	Steering angle sensor
STR_ANG_S_B	V	Voltage at the steering angle sensor B signal is displayed.	Steering angle sensor
STR_ANG_S_V	V	Steering angle sensor power supply voltage is displayed.	Steering angle sensor
TURN_SW_L	Off/On	• Off: Turn switch is in position other tha.n LH. • On: Turn switch is in LH position	Turn Switch
TURN_SW_R	Off/On	• Off: Turn switch is in position other than RH. • On: Turn switch is in RH position.	Turn Switch
VPWR_ACC	V	Voltage at start stop unit terminal 1E (ACC power supply) is displayed.	• Start stop unit • ACC relay • Battery
VPWR_B1	V	Voltage at start stop unit terminal 1A (+B1 power supply) is displayed.	• Start stop unit • Battery
VPWR_B2	V	Voltage at start stop unit terminal 2W (+B2 power supply) is displayed.	• Start stop unit • Battery
VPWR_B3	V	Voltage at start stop unit terminal 2X (+B3 power supply) is displayed.	• Start stop unit • Battery
VPWR_IG1	V	Voltage at start stop unit terminal 1B (IG1 power supply) is displayed.	• Start stop unit • IG1 relay • Battery
WASHER_F	Off/On	• Off: Windshield washer switch is in OFF position. • On: Windshield washer switch is in ON position.	Windshield washer switch
WASHER_R	Off/On	• Off: Rear washer switch is not in ON position. • On: Rear washer switch is in ON position.	Rear washer switch
WIP_F_INT	Off/On	• Off: Windshield wiper switch is not in INT and AUTO positions. • On: Windshield wiper switch is in INT or AUTO position.	Windshield wiper switch
WIP_F_LOW	Off/On	• Off: Windshield wiper switch is not in LO position. • On: Windshield wiper switch is in LO position.	Windshield wiper switch
WIP_INT_E_A	Low/High	• Low: Windshield wiper switch INT encoder A value is low. • High: Windshield wiper switch INT encoder A value is high.	Windshield wiper and washer switch
WIP_INT_E_B	Low/High	• Low: Windshield wiper switch INT encoder B value is low. • High: Windshield wiper switch INT encoder B value is high.	Windshield wiper and washer switch
WIP_INT_E_C	Low/High	• Low: Windshield wiper switch INT encoder C value is low. • High: Windshield wiper switch INT encoder C value is high.	Windshield wiper and washer switch
WIP_R_INT	Off/On	• Off: Rear wiper switch is not in INT position. • On: Rear wiper switch is in INT position.	Rear wiper switch
WIP_R_ON	Off/On	• Off: Rear wiper switch is not in ON position. • On: Rear wiper switch is in ON position.	Rear wiper switch

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

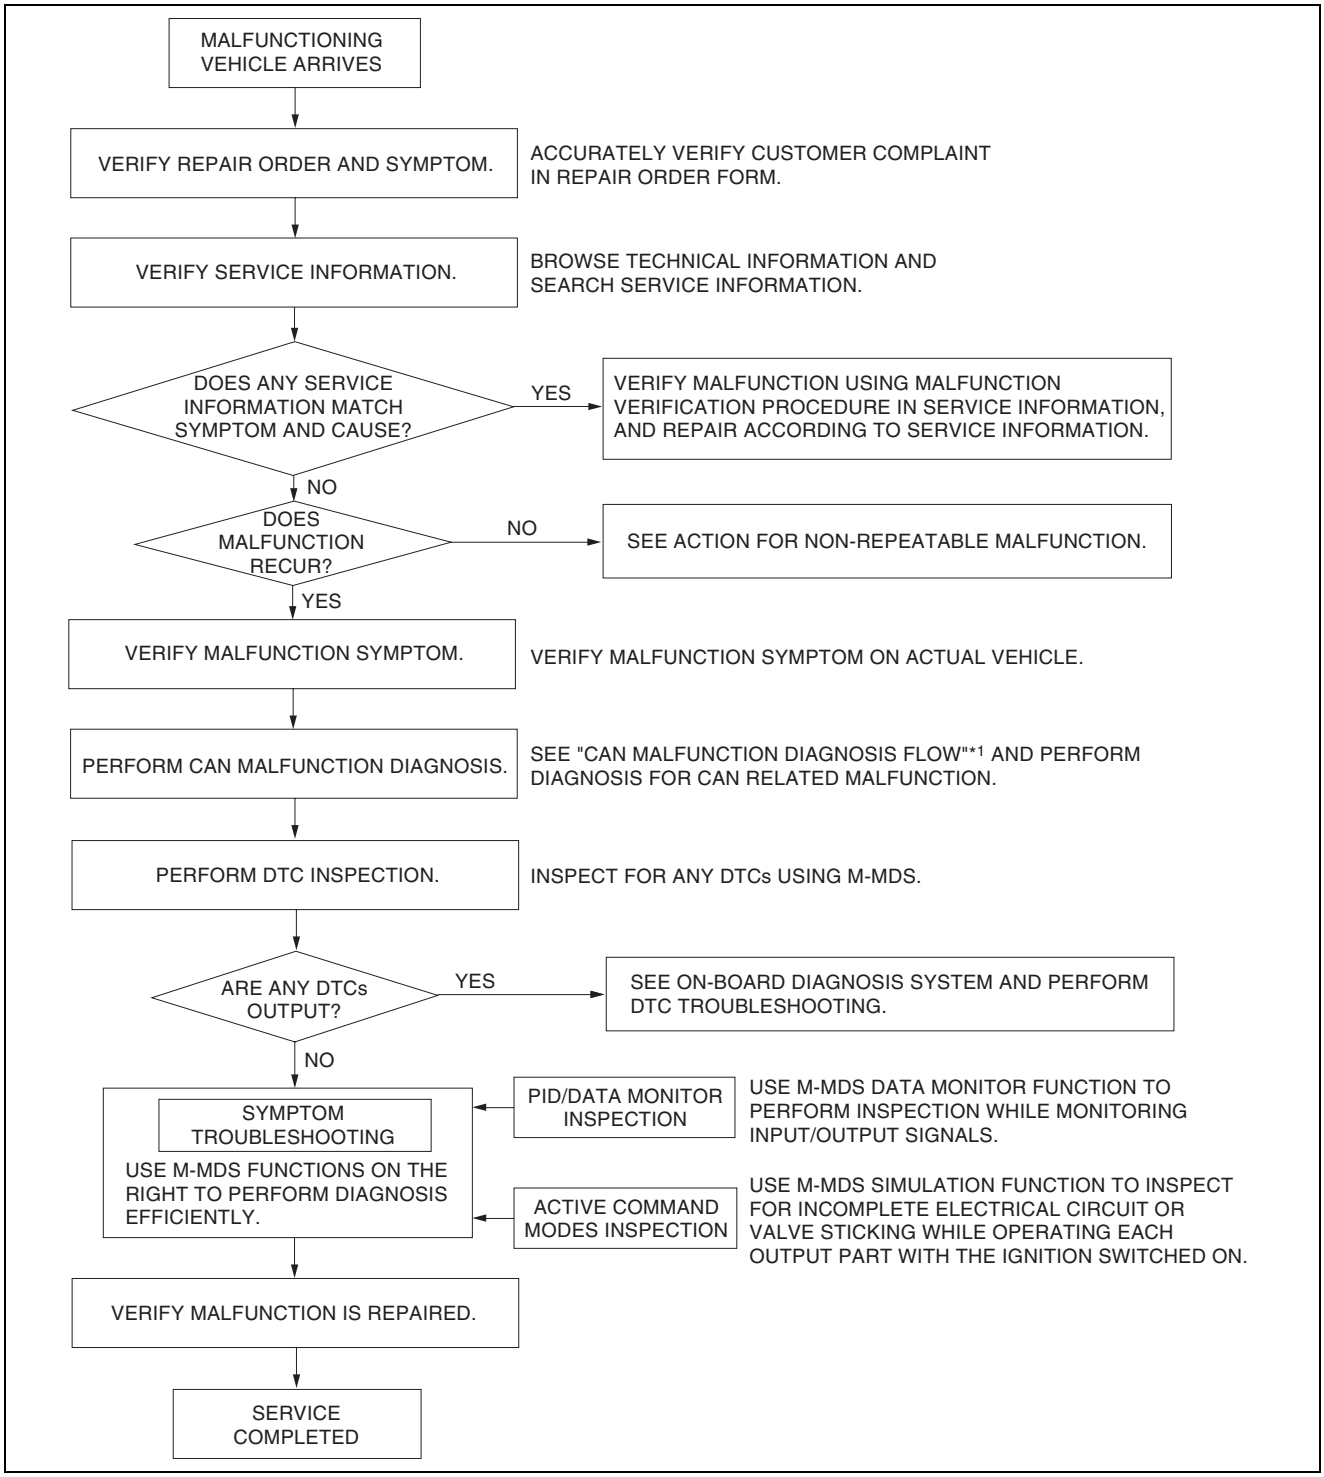
FOREWORD [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n960100

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



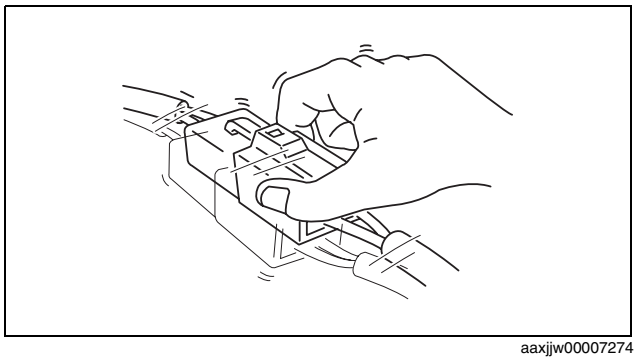
am3zzw0001242

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)]/10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)]/10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)]/10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

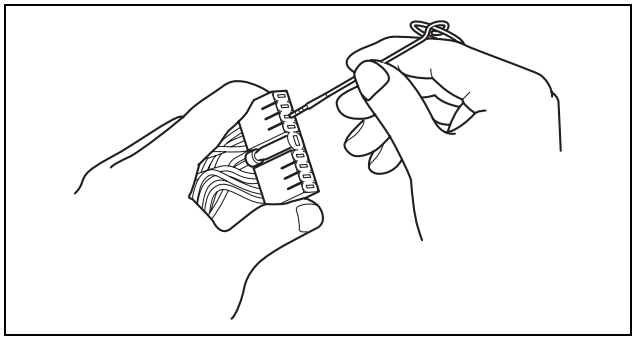
Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n960300

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the AFS control module. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “AFS”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the AFS control module. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)

Snapshot data

- The data for all DTCs currently detected is stored.

Snapshot data table

—: Not applicable

Snap shot data item	Unit	Unit	Data contents	Corresponding data monitor items
AAT	°C	°F	Ambient temperature	—
APP_STATUS	Accelerator Pedal Off/Under20%/Over20%/FAIL		Accelerator pedal position status	—
CFG_STATUS	Config Complete/Not Configured/Config Error		Configuration status	—
ECT_STATUS	Under 0 degrees C/0-Under 80 degrees C/Over 80 degrees C/FAIL		Engine coolant temperature status	—
IC_VPWR	V		Instrument cluster power supply voltage	—
IG-ON_TIMER	hh:mm:ss		Elapsed time since ignition switched ON (engine off or on)	—
PWR_MODE_KEY	Key Out/Key Recently Out/ Key Approved (Position 0)/ Post Accessory (Position 0)/ Accessory (Position 1)/ Post Ignition (Position 1)/ ignition On (Position 2)/ Running - Starting In Progress (Position 2)/Crank (Position 3)		Push button start power position switching status	—
RPM_STATUS	Engine Stop/Under1500rpm/Over1500rpm/FAIL		Engine speed status	—
SHIFT_STATUS	P/N/ D/ R/ FAIL		Selector lever position status	—
TOTAL_DIST	Km	miles	Accumulated total traveled distance since vehicle completion	—
TOTAL_TIME	hh:mm:ss		Accumulated total elapsed time since vehicle completion **Note** • When the ROOM fuse is removed, or the ignition is switched off (LOCK), the time is not included in the elapsed time.	—

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Snap shot data item	Unit	Unit	Data contents	Corresponding data monitor items
VPWR	V		AFS control module power supply malfunction	VPWR_IG
VSPD_STATUS	Stop/ 0-10km/h/ Over10km/h/ FAIL		Vehicle speed status	VSPD

CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n960400

CMDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
8. Verify that no DTCs are displayed.

ODDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “AFS”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
8. Verify that no DTCs are displayed.

DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n960500

Note

- The AFS control module flashes the AFS OFF indicator light as follows if there is a malfunction in the system.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

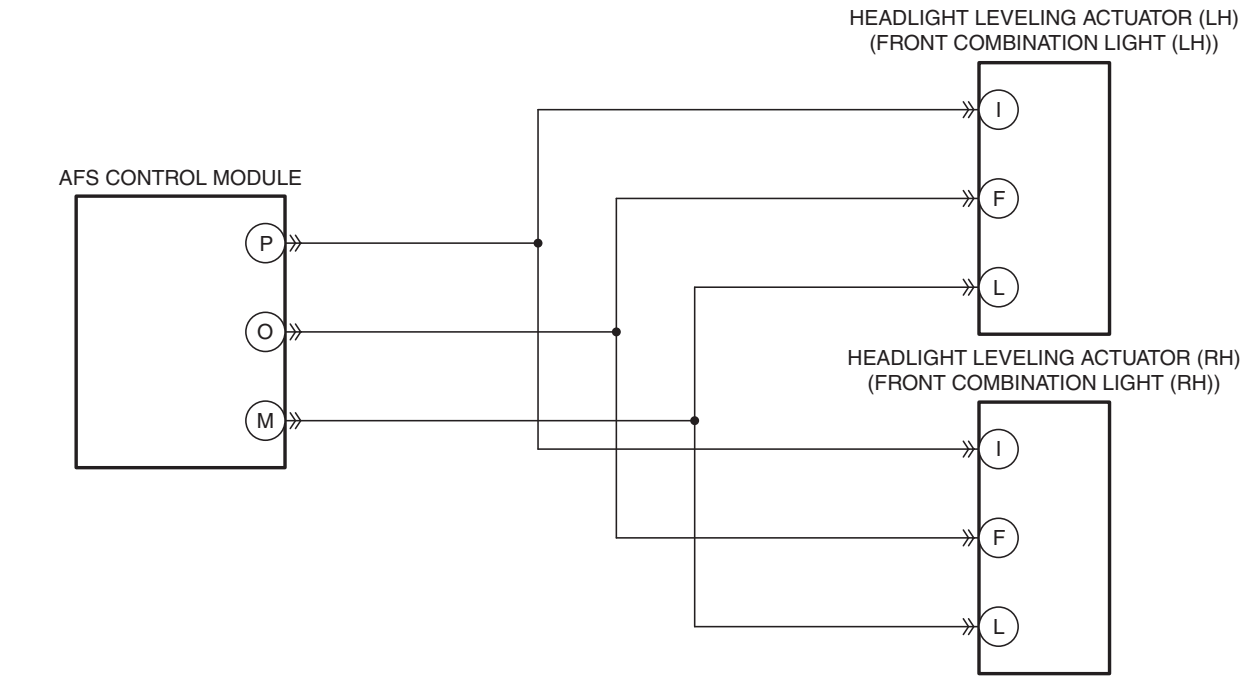
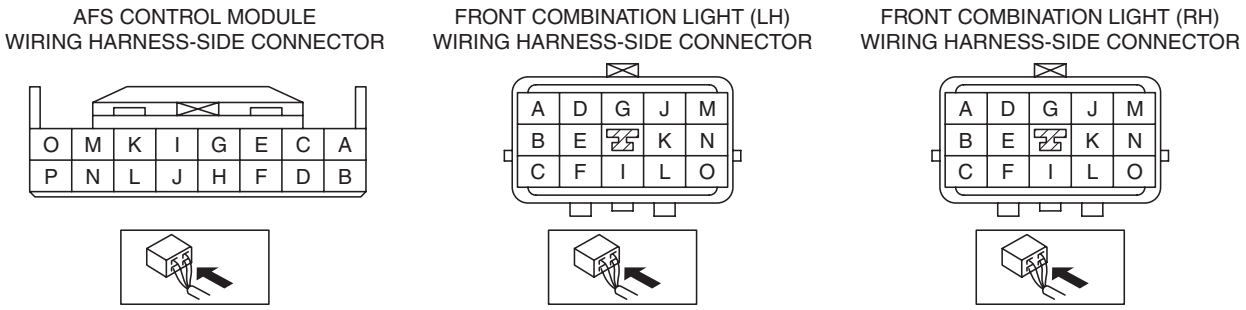
DTC B1041:14 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n017100

System malfunction location	**Headlight leveling actuator circuit malfunction**
Detection condition	• Headlight leveling actuator circuit voltage of **3.2 V or less** is detected for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	• The swivel actuator is moved to the center. • The headlight leveling actuator is stopped at the position when the malfunction is determined.
Possible cause	• Front combination light (LH) connector or terminal malfunction • Front combination light (RH) connector or terminal malfunction • AFS control module connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — AFS control module terminal P and front combination light (LH) terminal I — AFS control module terminal O and front combination light (LH) terminal F — AFS control module terminal P and front combination light (RH) terminal I — AFS control module terminal O and front combination light (RH) terminal F • Open circuit in wiring harness between the following terminals: — AFS control module terminal P and front combination light (LH) terminal I — AFS control module terminal O and front combination light (LH) terminal F — AFS control module terminal P and front combination light (RH) terminal I — AFS control module terminal O and front combination light (RH) terminal F • Headlight leveling actuator malfunction • AFS control module malfunction





ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FRONT COMBINATION LIGHT (LH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front combination light (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT FRONT COMBINATION LIGHT (RH) CONNECTOR CONDITION** • Disconnect the front combination light (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT AFS CONTROL MODULE CONNECTOR CONDITION** • Disconnect the AFS control module connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
4	**INSPECT HEADLIGHT LEVELING ACTUATOR CIRCUIT FOR SHORT TO GROUND** • Verify that the following connectors are disconnected. — Front combination light (LH) — Front combination light (RH) — AFS control module • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — Front combination light (LH) terminal I — Front combination light (LH) terminal F — Front combination light (RH) terminal I — Front combination light (RH) terminal F • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 7.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Step	Inspection		Action
5	**INSPECT HEADLIGHT LEVELING ACTUATOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the following connectors are disconnected. — Front combination light (LH) — Front combination light (RH) — AFS control module • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — AFS control module terminal P and front combination light (LH) terminal I — AFS control module terminal O and front combination light (LH) terminal F — AFS control module terminal P and front combination light (RH) terminal I — AFS control module terminal O and front combination light (RH) terminal F • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 7.
6	**INSPECT HEADLIGHT LEVELING ACTUATOR OPERATION** • Perform the headlight leveling actuator operation check mode. (See 09-02D-41 HEADLIGHT LEVELING ACTUATOR OPERATION CHECK MODE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Does the headlight leveling actuator operate normally?	Yes	Go to the next step.
		No	Replace the front combination light, then go to the next step. (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC B1041:14 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

DTC B1041:54 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n934000

System malfunction location	**Headlight auto leveling system initialization error**
Detection condition	• Ignition is switched ON (engine off or on) and headlight auto leveling system initialization is not performed.
Fail-safe	• The swivel actuator is moved to the center. • The headlight leveling actuator is stopped at the position when the malfunction is determined.
Possible cause	• Headlight auto leveling system initialization error • AFS control module malfunction
System wiring diagram	—

Diagnostic Procedure

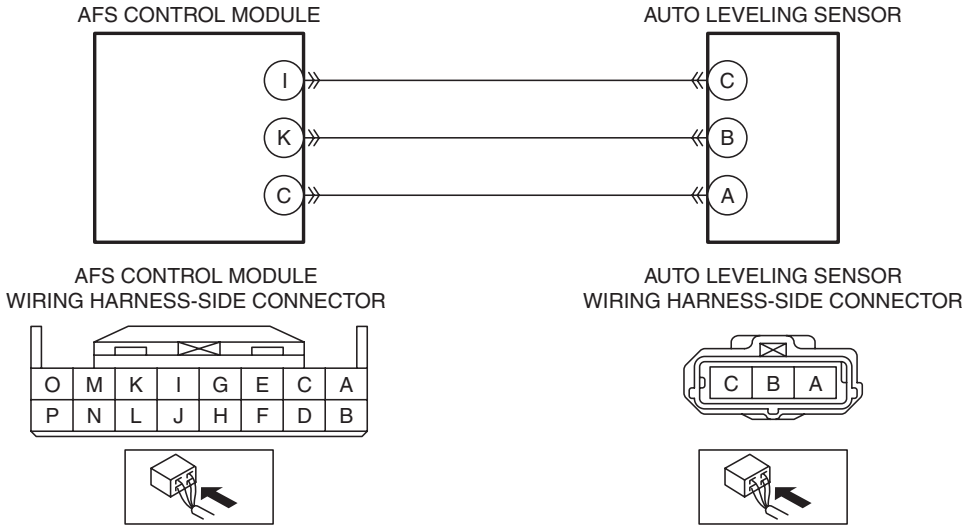
Step	Inspection		Action
1	**PERFORM HEADLIGHT AUTO LEVELING SYSTEM INITIALIZATION** • Perform headlight auto leveling system initialization. (See 09-18-82 HEADLIGHT AUTO LEVELING SYSTEM INITIALIZATION.) • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC B1041:54 displayed?	Yes	Perform the headlight auto leveling system initialization again, then go to the next step. (See 09-18-82 HEADLIGHT AUTO LEVELING SYSTEM INITIALIZATION.)
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC B1041:54 displayed?	Yes	Replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

DTC B1044:01 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n934200

System malfunction location	**Auto leveling sensor circuit malfunction**
Detection condition	• Auto leveling sensor circuit voltage of **0.25 V or less** or **4.75 V or more** is detected by AFS control module for **10 s or more** with the ignition switched ON (engine off or on).
Fail-safe	• The swivel actuator is moved to the center. • The headlight leveling actuator is stopped at the position when the malfunction is determined.
Possible cause	• Auto leveling sensor connector or terminal malfunction • AFS control module connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — AFS control module terminal I and auto leveling sensor terminal C — AFS control module terminal K and auto leveling sensor terminal B — AFS control module terminal C and auto leveling sensor terminal A • Short to power supply in wiring harness between the following terminals: — AFS control module terminal I and auto leveling sensor terminal C — AFS control module terminal K and auto leveling sensor terminal B — AFS control module terminal C and auto leveling sensor terminal A • Open circuit in wiring harness between the following terminals: — AFS control module terminal I and auto leveling sensor terminal C — AFS control module terminal K and auto leveling sensor terminal B — AFS control module terminal C and auto leveling sensor terminal A • Auto leveling sensor malfunction • AFS control module malfunction



ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT AUTO LEVELING SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the auto leveling sensor connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT AFS CONTROL MODULE CONNECTOR CONDITION** • Disconnect the AFS control module connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT AUTO LEVELING SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the auto leveling sensor and AFS control module connectors are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — Auto leveling sensor terminal C — Auto leveling sensor terminal B — Auto leveling sensor terminal A • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 7.
		No	Go to the next step.
4	**INSPECT AUTO LEVELING SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the auto leveling sensor and AFS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). — Auto leveling sensor terminal C — Auto leveling sensor terminal B — Auto leveling sensor terminal A • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which is shorted to power supply, then go to Step 7.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Step	Inspection		Action
5	**INSPECT AUTO LEVELING SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the auto leveling sensor and AFS control module connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — AFS control module terminal I and auto leveling sensor terminal C — AFS control module terminal K and auto leveling sensor terminal B — AFS control module terminal C and auto leveling sensor terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 7.
6	**INSPECT AUTO LEVELING SENSOR** • Inspect the auto leveling sensor. (See 09-18-80 AUTO LEVELING SENSOR INSPECTION.) • Is the auto leveling sensor normal?	Yes	Go to the next step.
		No	Replace the auto leveling sensor, then go to the next step. (See 09-18-79 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC B1044:01 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

DTC B10A3:86 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n934400

System malfunction location	**Communication error with swivel actuator (LH)**
Detection condition	• The AFS control module received error signals from the swivel actuator (LH) **three times** continuously with the ignition switched ON (engine off or on). • The AFS control module could not receive the signal from the swivel actuator (LH) for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	• The swivel actuator (LH) is stopped at the position when the malfunction is determined. • The swivel actuator (RH) is moved to the center. • Control of the headlight auto leveling system is continued with the headlight leveling actuator positioned −**0.6**° from where the malfunction is determined.
Possible cause	• Front combination light (LH) poor connection • Swivel actuator (LH) malfunction • AFS control module malfunction
System wiring diagram	—

Diagnostic Procedure

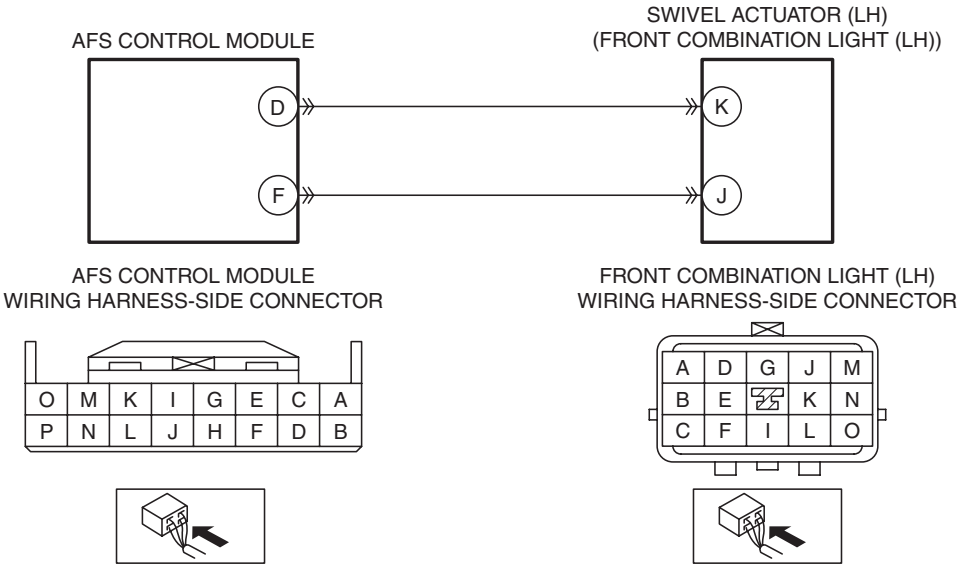
Step	Inspection		Action
1	**VERIFY IGNITER INSTALLATION CONDITION** • Verify the installation condition of the igniter. (See 09-18-26 IGNITER REMOVAL/INSTALLATION.) • Is the igniter installed correctly?	Yes	Go to the next step.
		No	Install the igniter correctly, then go to Step 3. (See 09-18-26 IGNITER REMOVAL/INSTALLATION.)
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS SWIVEL ACTUATOR (LH)** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC B10A3:86 displayed?	Yes	Replace the front combination light (LH), then go to the next step. (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC B10A3:86 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

DTC B10A3:87 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n934500

System malfunction location	**Communication error with swivel actuator (LH)**
Detection condition	• The AFS control module detected communication error with the swivel actuator (LH) for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	• The swivel actuator (LH) is stopped at the position when the malfunction is determined. • The swivel actuator (LH) is moved to the center, or the swivel actuators (LH) and (RH) are moved to the center. • Control of the headlight auto leveling system is continued with the headlight leveling actuator positioned −**0.6**° from where the malfunction is determined.
Possible cause	• Front combination light (LH) connector or terminal malfunction • AFS control module connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — AFS control module terminal D and front combination light (LH) terminal K — AFS control module terminal F and front combination light (LH) terminal J • Short to power supply in wiring harness between the following terminals: — AFS control module terminal D and front combination light (LH) terminal K — AFS control module terminal F and front combination light (LH) terminal J • Open circuit in wiring harness between the following terminals: — AFS control module terminal D and front combination light (LH) terminal K — AFS control module terminal F and front combination light (LH) terminal J • Swivel actuator (LH) malfunction • AFS control module malfunction



ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FRONT COMBINATION LIGHT (LH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front combination light (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT AFS CONTROL MODULE CONNECTOR CONDITION** • Disconnect the AFS control module connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT SWIVEL ACTUATOR (LH) CIRCUIT FOR SHORT TO GROUND** • Verify that the front combination light (LH) and AFS control module connectors are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — Front combination light (LH) terminal K — Front combination light (LH) terminal J • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 7.
		No	Go to the next step.
4	**INSPECT SWIVEL ACTUATOR (LH) CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the front combination light (LH) and AFS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). — Front combination light (LH) terminal K — Front combination light (LH) terminal J • Is the voltage **0 V**?	Yes	Repair or replace the wiring harness which is shorted to power supply, then go to Step 7.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Step	Inspection		Action
5	**INSPECT SWIVEL ACTUATOR (LH) CIRCUIT FOR OPEN CIRCUIT** • Verify that the front combination light (LH) and AFS control module connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — AFS control module terminal D and front combination light (LH) terminal K — AFS control module terminal F and front combination light (LH) terminal J • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 7.
6	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS SWIVEL ACTUATOR (LH)** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC B10A3:87 displayed?	Yes	Replace the front combination light (LH), then go to the next step. (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
		No	Go to Step 8.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Step	Inspection		Action
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC B10A3:87 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

DTC B10A4:86 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n934600

System malfunction location	**Communication error with swivel actuator (RH)**
Detection condition	• The AFS control module received error signal from the swivel actuator (RH) **three times** continuously with the ignition switched ON (engine off or on). • The AFS control module could not receive signal from the swivel actuator (RH) for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	• The swivel actuator (RH) is stopped at the position when the malfunction is determined. • The swivel actuator (LH) is moved to the center. • Control of the headlight auto leveling system is continued with the headlight leveling actuator positioned −**0.6**° from where the malfunction is determined.
Possible cause	• Front combination light (RH) poor connection • Swivel actuator (RH) malfunction • AFS control module malfunction
System wiring diagram	—

Diagnostic Procedure

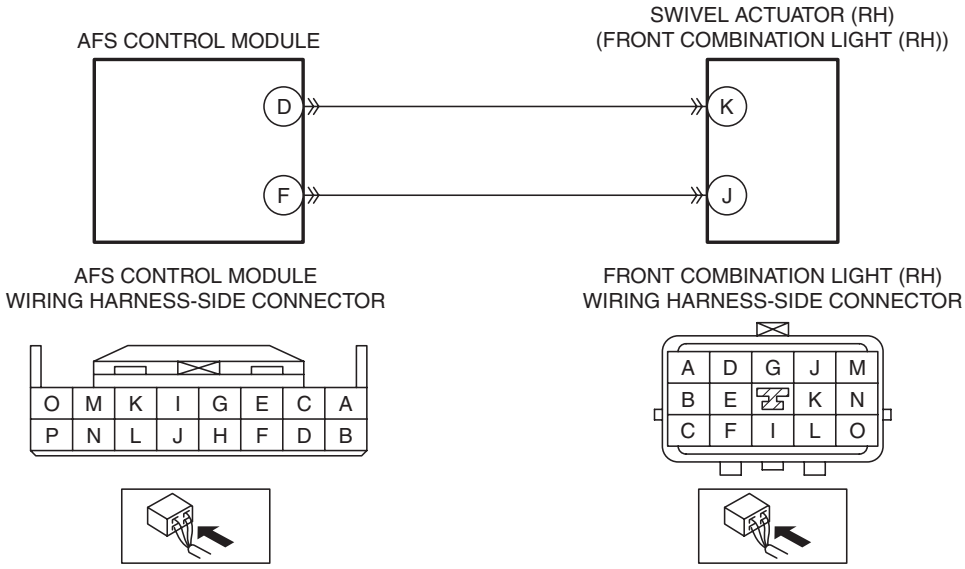
Step	Inspection		Action
1	**VERIFY IGNITER INSTALLATION CONDITION** • Verify the installation condition of the igniter. (See 09-18-26 IGNITER REMOVAL/INSTALLATION.) • Is the igniter installed correctly?	Yes	Go to the next step.
		No	Install the igniter correctly, then go to Step 3. (See 09-18-26 IGNITER REMOVAL/INSTALLATION.)
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS SWIVEL ACTUATOR (RH)** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC B10A4:86 displayed?	Yes	Replace the front combination light (RH), then go to the next step. (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC B10A4:86 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

DTC B10A4:87 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n934700

System malfunction location	**Communication error with swivel actuator (RH)**
Detection condition	• The AFS control module detected communication error with the swivel actuator (RH) for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	• The swivel actuator (RH) is stopped at the position when the malfunction is determined. • The swivel actuator (LH) is moved to the center, or the swivel actuators (LH) and (RH) are moved to the center. • Control of the headlight auto leveling system is continued with the headlight leveling actuator positioned –**0.6**° from where the malfunction is determined.
Possible cause	• Front combination light (RH) connector or terminal malfunction • AFS control module connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — AFS control module terminal D and front combination light (RH) terminal K — AFS control module terminal F and front combination light (RH) terminal J • Short to power supply in wiring harness between the following terminals: — AFS control module terminal D and front combination light (RH) terminal K — AFS control module terminal F and front combination light (RH) terminal J • Open circuit in wiring harness between the following terminals: — AFS control module terminal D and front combination light (RH) terminal K — AFS control module terminal F and front combination light (RH) terminal J • Swivel actuator (RH) malfunction • AFS control module malfunction



ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FRONT COMBINATION LIGHT (RH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the front combination light (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
2	**INSPECT AFS CONTROL MODULE CONNECTOR CONDITION** • Disconnect the AFS control module connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
3	**INSPECT SWIVEL ACTUATOR (RH) CIRCUIT FOR SHORT TO GROUND** • Verify that the front combination light (RH) and AFS control module connectors are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness side) and body ground. — Front combination light (RH) terminal K — Front combination light (RH) terminal J • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 7.
		No	Go to the next step.
4	**INSPECT SWIVEL ACTUATOR (RH) CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the front combination light (RH) and AFS control module connectors are disconnected. • Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (vehicle wiring harness side). — Front combination light (RH) terminal K — Front combination light (RH) terminal J • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which is shorted to power supply, then go to Step 7.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Step	Inspection		Action
5	**INSPECT SWIVEL ACTUATOR (RH) CIRCUIT FOR OPEN CIRCUIT** • Verify that the front combination light (RH) and AFS control module connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — AFS control module terminal D and front combination light (RH) terminal K — AFS control module terminal F and front combination light (RH) terminal J • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 7.
6	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS SWIVEL ACTUATOR (RH)** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC B10A4:87 displayed?	Yes	Replace the front combination light (RH), then go to the next step. (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
		No	Go to Step 8.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Step	Inspection		Action
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC B10A4:87 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

DTC C0051:86 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n017200

System malfunction location	**Error steering angle signal received from EPS control module**
Detection condition	• Either a condition in which the steering angle sensor has a malfunction and the EPS control module has not performed steering angle neutral position auto learning, or a condition in which the EPS control module has a malfunction is detected for **5 s or more**.
Fail-safe	• The swivel actuator is moved to the center. • Control of the headlight auto leveling system is continued.
Possible cause	• DTCs are stored in the start stop unit. • DTCs are stored in the EPS control module. • EPS control module malfunction • AFS control module malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY START STOP UNIT DTCs** • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	Go to the next step.
2	**VERIFY EPS CONTROL MODULE DTCs** • Perform the DTC inspection for the EPS control module using the M-MDS. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	Go to the next step.
3	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS EPS CONTROL MODULE** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC C0051:86 displayed?	Yes	Replace the EPS control module, then go to the next step. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Go to Step 5.
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC C0051:86 displayed?	Yes	Replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

DTC U0001:88/U0100:00/U0131:00/U0140:00/U0155:00 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n017300

System malfunction location	**U0001:88** • **Unit communication error (HS-CAN)** **U0100:00** • **Communication error with PCM** **U0131:00** • **Communication error with EPS control module** **U0140:00** • **Communication error with front body control module (FBCM)** **U0155:00** • **Communication error with instrument cluster**
Detection condition	• U0001:88 — The AFS control module detected CAN bus communication line (HS-CAN) malfunction **ten times** continuously. • U0100:00 — The AFS control module could not receive CAN signal from the PCM for **5 s or more**. • U0131:00 — The AFS control module could not receive CAN signal from the EPS control module for **5 s or more**. • U0140:00 — The AFS control module could not receive CAN signal from the front body control module (FBCM) for **5 s or more**. • U0155:00 — The AFS control module could not receive CAN signal from the instrument cluster for **5 s or more**.
Fail-safe	• U0001:88 — The swivel actuator is moved to the center. — The headlight leveling actuator is stopped at the position when the malfunction is determined. • U0100:00 — The swivel actuator is moved to the center. — The headlight leveling actuator is stopped at the position when the malfunction is determined. • U0131:00 — The swivel actuator is moved to the center. — Control of the headlight auto leveling system is continued. • U0140:00 — The swivel actuator is moved to the center. — The headlight leveling actuator is stopped at the position when the malfunction is determined. • U0155:00 — The swivel actuator is moved to the center. — Control of the headlight auto leveling system is continued.
Possible cause	• Malfunction in CAN bus communication line • Malfunction in CAN communication line between PCM and AFS control module • Malfunction in CAN communication line between EPS control module and AFS control module • Malfunction in CAN communication line between front body control module (FBCM) and AFS control module • Malfunction in CAN communication line between instrument cluster and AFS control module
System wiring diagram	—

Diagnostic Procedure

- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See 10-02A-1 FOREWORD [SKYACTIV-G 2.0 (L.H.D.)].) (See 10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)].) (See 10-02C-1 FOREWORD [SKYACTIV-D 2.2 (L.H.D.)].) (See 10-02D-1 FOREWORD [SKYACTIV-D 2.2 (R.H.D.)].)

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

DTC U0320:09 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n017400

System malfunction location	**EPS control module malfunction**
Detection condition	• The AFS control module received CAN error signal from the EPS control module for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	• The swivel actuator is moved to the center. • Control of the headlight auto leveling system is continued.
Possible cause	• DTCs are stored in the EPS control module. • EPS control module malfunction • AFS control module malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY EPS CONTROL MODULE DTCs** • Perform the DTC inspection for the EPS control module using the M-MDS. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS EPS CONTROL MODULE** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is the DTC U0320:09 displayed?	Yes	Replace the EPS control module, then go to the next step. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is the DTC U0320:09 displayed?	Yes	Replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

DTC U0420:68 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n017500

System malfunction location	**Error signal received from EPS control module**
Detection condition	• The AFS control module received error signal from the EPS control module for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	• The swivel actuator is moved to the center. • Control of the headlight auto leveling system is continued.
Possible cause	• DTCs are stored in the EPS control module. • EPS control module malfunction • AFS control module malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY EPS CONTROL MODULE DTCs** • Perform the DTC inspection for the EPS control module using the M-MDS. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS EPS CONTROL MODULE** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is the DTC U0420:68 displayed?	Yes	Replace the EPS control module, then go to the next step. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC U0420:68 displayed?	Yes	Replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

DTC U0423:68 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n017600

System malfunction location	**Error signal received from instrument cluster** • **AFS OFF switch error signal** • **Ignition switch error signal** • **Selector lever position (R position) (ATX)/Reverse (MTX) signal error** • **Selector lever position (R position) (ATX)/Reverse (MTX) signal not determined**
Detection condition	• AFS OFF switch error signal — The AFS control module received AFS OFF switch error signal for **5 s or more** with the ignition switched ON (engine off or on). • Ignition switch error signal — The AFS control module received ignition switch error signal for **5 s or more** with the ignition switched ON (engine off or on). • Selector lever position (R position) (ATX)/Reverse (MTX) signal error — The AFS control module received selector lever position (R position) (ATX)/Reverse (MTX) signal error for **5 s or more** with the ignition switched ON (engine off or on). • Selector lever position (R position) (ATX)/Reverse (MTX) signal not determined — The AFS control module detected undetermined selector lever position (R position) (ATX)/Reverse (MTX) signal.
Fail-safe	• AFS OFF switch error signal — Control of the swivel actuator is continued with the AFS OFF switch fixed in the condition when the malfunction is detected. — Control of the headlight auto leveling system is continued. • Ignition switch error signal — Control of the AFS is continued with the ignition switched ON (engine on). — Control of the headlight auto leveling system is continued. • Selector lever position (R position) (ATX)/Reverse (MTX) signal error — The swivel actuator is moved to the center. — Control of the headlight auto leveling system is continued. • Selector lever position (R position) (ATX)/Reverse (MTX) signal not determined — Control of the swivel actuator is continued with the transaxle range sensor (ATX)/back-up light switch (MTX) fixed in the condition when the malfunction is determined. — Control of the headlight auto leveling system is continued.
Possible cause	• DTCs are stored in the instrument cluster. • Instrument cluster malfunction • AFS control module malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS INSTRUMENT CLUSTER** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is the DTC U0423:68 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to Step 4.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Step	Inspection		Action
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is the DTC U0423:68 displayed?	Yes	Replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

DTC U2005:86 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n017700

System malfunction location	Error signal received from PCM
Detection condition	• The AFS control module received vehicle speed signal error from the PCM for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	• The swivel actuator is moved to the center. • The headlight leveling actuator is stopped at the position when the malfunction is determined.
Possible cause	• DTCs are stored in the PCM. • PCM malfunction • AFS control module malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS PCM** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is the DTC U2005:86 displayed?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 4.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Step	Inspection		Action
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is the DTC U2005:86 displayed?	Yes	Replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

DTC U2300:54 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n017800

System malfunction location	**Error configuration data received from instrument cluster**
Detection condition	• The AFS control module received error configuration data from the instrument cluster for **30 s or more** with the ignition switched ON (engine off or on).
Fail-safe	• Control of the AFS is continued. • Control of the headlight auto leveling system is continued.
Possible cause	• DTCs are stored in the instrument cluster. — Instrument cluster configuration not implemented — Instrument cluster internal memory malfunction • Instrument cluster configuration data error • AFS control module malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**RESET INSTRUMENT CLUSTER CONFIGURATION DATA** • Using the M-MDS, perform the instrument cluster configuration with the As-Built data. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).) • Clear the AFS control module DTCs using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition ON (engine off or on) and wait for **30 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC U2300:54 displayed?	Yes	Replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Step	Inspection		Action
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

DTC U2300:55 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n017900

System malfunction location	**Instrument cluster configuration not implemented**
Detection condition	• The AFS control module received a signal which indicates the instrument cluster configuration is not performed.
Fail-safe	• The swivel actuator is moved to the center. • The headlight leveling actuator is stopped at the position when the malfunction is determined.
Possible cause	**Note** • To correctly write the configuration data sent from the instrument cluster to the AFS control module, **30 s or more** have to be elapsed since the ignition is switched ON (engine off or on). • Instrument cluster configuration is not completed. • AFS control module malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**RESET CONFIGURATION DATA FROM INSTRUMENT CLUSTER TO AFS CONTROL MODULE** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **30 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is the DTC U2300:55 displayed?	Yes	Replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

DTC U2300:56 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n018000

System malfunction location	**Configuration data unmatched with instrument cluster**
Detection condition	• Configuration data of the AFS control module and instrument cluster are not matched.
Fail-safe	• Control of the AFS is continued. • Control of the headlight auto leveling system is continued.
Possible cause	• DTCs are stored in the instrument cluster. — Instrument cluster configuration not implemented — Instrument cluster internal memory malfunction • Instrument cluster configuration data error • AFS control module malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**RESET INSTRUMENT CLUSTER CONFIGURATION DATA** • Using the M-MDS, perform the instrument cluster configuration with the As-Built data. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).) • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is the DTC U2300:56 displayed?	Yes	Replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

DTC U3000:42 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n018100

System malfunction location	**AFS control module internal malfunction**
Detection condition	• Malfunction in the AFS control module internal EEPROM is detected.
Fail-safe	• The swivel actuator is moved to the center. • The headlight leveling actuator is stopped at the position when the malfunction is determined.
Possible cause	• AFS control module internal malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS AFS CONTROL MODULE** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC U3000:42 displayed?	Yes	Replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

DTC U3000:49 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n935100

System malfunction location	**AFS control module internal malfunction** • **RAM/ROM malfunction** • **AFS function malfunction** • **CAN hardware malfunction**
Detection condition	• RAM/ROM malfunction — The AFS control module detected a malfunction in the internal RAM/ROM. • AFS function malfunction — The AFS control module detected AFS function malfunction **three times**. • CAN hardware malfunction — The AFS control module detected CAN hardware malfunction **three times**.
Fail-safe	• RAM/ROM malfunction — The swivel actuator is moved to the center. — The headlight leveling actuator is stopped at the position when the malfunction is determined. • AFS function malfunction — — • CAN hardware malfunction — The swivel actuator is moved to the center. — The headlight leveling actuator is stopped at the position when the malfunction is determined.
Possible cause	• AFS control module internal malfunction
System wiring diagram	—

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

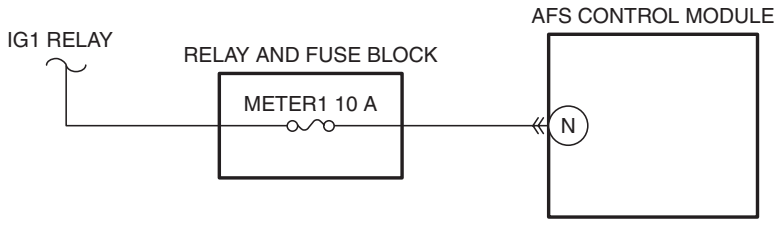
Diagnostic Procedure

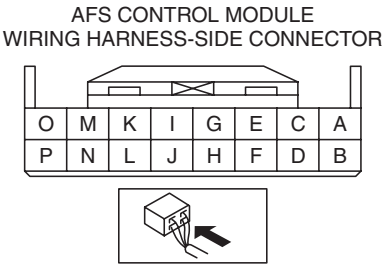
Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS AFS CONTROL MODULE** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC U3000:49 displayed?	Yes	Replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

DTC U3003:16 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n935200

System malfunction location	**AFS control module low power supply voltage input**
Detection condition	• AFS control module power supply circuit voltage of **9 V or less** is detected for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	• The swivel actuator is stopped at the position when the malfunction is determined. • The headlight leveling actuator is stopped at the position when the malfunction is determined.
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • AFS control module connector or terminal malfunction • AFS control module power supply circuit malfunction — Short to ground in wiring harness between METER1 10 A fuse and AFS control module terminal N — METER1 10 A fuse malfunction — Open circuit in wiring harness between IG1 relay and AFS control module terminal N • AFS control module malfunction





ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 6. (See 01-17A-10 BATTERY RECHARGING [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 6. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4	**INSPECT AFS CONTROL MODULE CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the AFS control module connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**VERIFY AFS CONTROL MODULE POWER SUPPLY VOLTAGE** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Display PID VPWR_IG using the M-MDS. (See 09-02D-40 PID/DATA MONITOR INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the METER1 10 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the fuse. • If a fuse is damaged: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness which has an open circuit. Go to the next step.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Step	Inspection		Action
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC U3003:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

DTC U3003:17 [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n935300

System malfunction location	**AFS control module high power supply voltage input**
Detection condition	• AFS control module power supply circuit voltage of **18.1 V or more** is detected for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	• The swivel actuator is stopped at the position when the malfunction is determined. • The headlight leveling actuator is stopped at the position when the malfunction is determined.
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • AFS control module malfunction
System wiring diagram	—

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Replace the battery, then go to Step 4. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to the next step. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the AFS control module DTCs using the M-MDS. (See 09-02D-6 CLEARING DTC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the AFS control module using the M-MDS. (See 09-02D-5 DTC INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].) • Is DTC U3003:17 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the AFS control module, then go to the next step. (See 09-18-30 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02D-6 DTC TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

PID/DATA MONITOR INSPECTION [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n960600

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “AFS”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

PID/DATA MONITOR TABLE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n960700

—: Not applicable

PID	Unit/ Operation	Data contents	Inspection item(s)
AFS_ST	Off/On	• Off: AFS is not operated. • On: AFS is operated.	• AFS OFF switch • AFS control module
H/L_CS	OFF/DRL/ TNS/H/ L_LOW/H/ L_HI	• OFF: Light switch at OFF position • DRL: Light switch at AUTO position and auto light sensor sends turn-off signal • TNS: Light switch at TNS position • H/L_LOW: Light switch at LO position • H/L_HI: Light switch at HI position	Light switch
R_HGT_S	V	Voltage at auto leveling sensor is displayed.	Auto leveling sensor
R_HGT_S_INI	V	Voltage at headlight auto leveling system initial setting is displayed.	Auto leveling sensor
R_LMP_CS	Off/On/ Unknown/ Fault	ATX: • Off: Selector lever position signal (R position) is not received. • On: Selector lever position signal (R position) is received. • Unknown: Selector lever position signal (R position) is not determined. • Fault: Selector lever position signal (R position) error is received. MTX: • Off: Reverse signal is not received. • On: Reverse signal is received. • Unknown: Reverse signal is not determined. • Fault: Reverse signal error is received.	ATX: • Transaxle range sensor (TCM) MTX: • Back-up light switch
STR_AB_ANG	° (deg)	Steering angle is displayed.	Steering angle sensor
VPWR_IG	V	AFS control module power supply voltage is displayed.	• AFS control module • IG1 relay • Battery
VSPD	KPH, MPH	Vehicle speed is displayed.	—

ON-BOARD DIAGNOSTIC [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

HEADLIGHT LEVELING ACTUATOR OPERATION CHECK MODE [ADAPTIVE FRONT LIGHTING SYSTEM (AFS)]

id09021n961000

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off or on).
3. Verify that AFS OFF indicator light is illuminated for **3 s** and then turned off.
4. Turn on the headlights.
5. After vehicle identification, select in the following order from the M-MDS initial screen.
   (1) "Electrical"
   (2) "ExteriorLighting"
   (3) "Headlamp"
   (4) "Auto Leveling Sensor"
   (5) "Auto Leveling Actuator Test"
6. Verify that the headlight optical axis lowers from the current position and returns the original position after **2 s**.
   - If the headlight leveling actuator does not operate normally, replace the front combination light. (See 09-18-7 FRONT COMBINATION LIGHT REMOVAL/ INSTALLATION.)

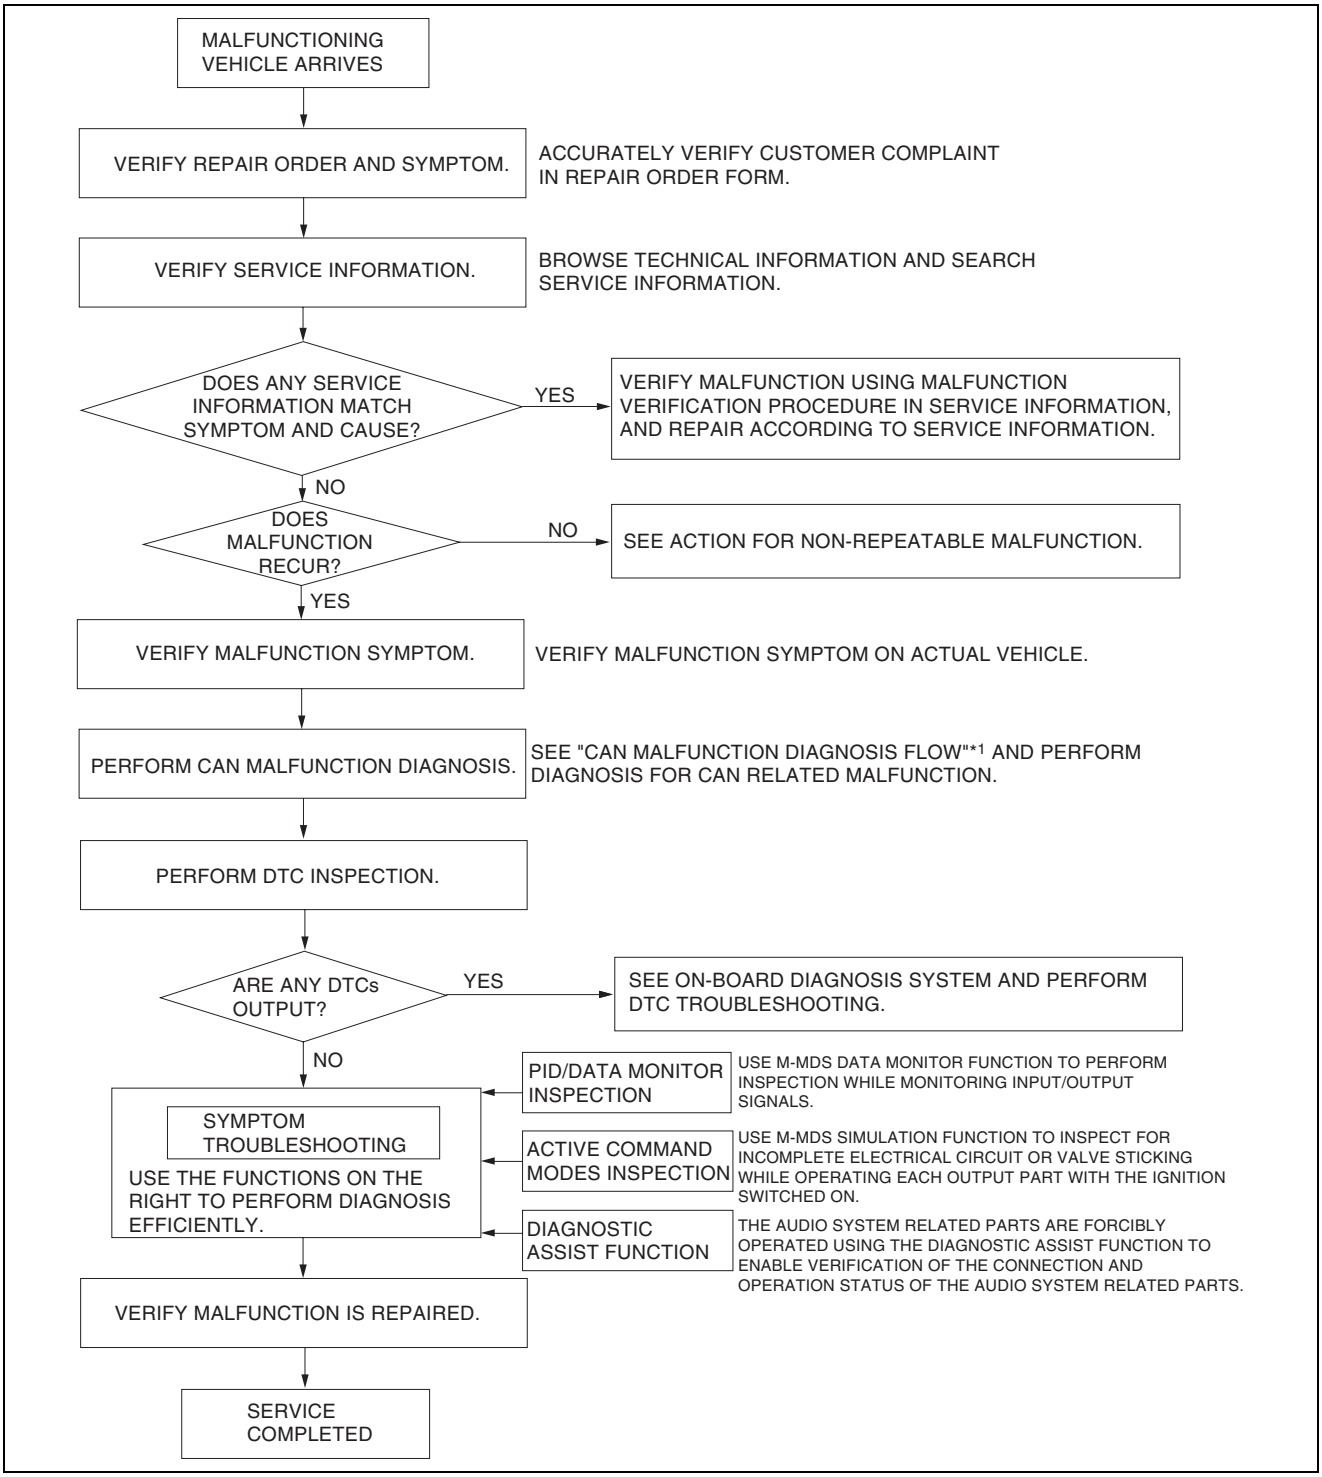
ON-BOARD DIAGNOSTIC [AUDIO]

FOREWORD [AUDIO]

id0902f6441800

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



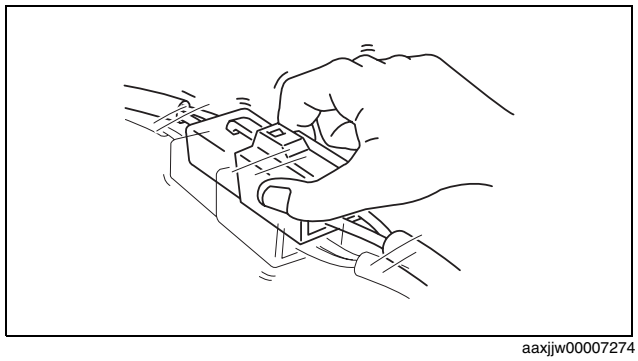
ac5wzw0000263

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)] / 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)] / 10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)] / 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

ON-BOARD DIAGNOSTIC [AUDIO]

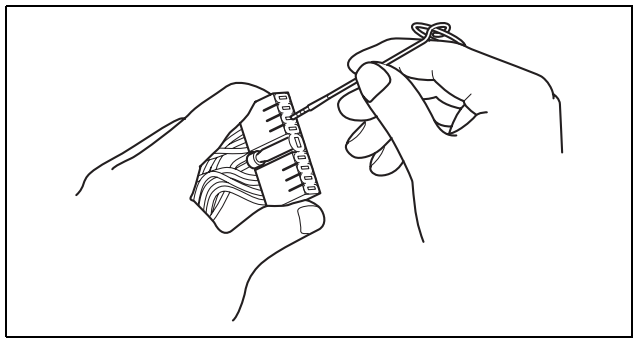
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Verify that a DTC has been recorded in the memory. (See 09-02E-3 DTC INSPECTION [AUDIO].)
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for occurrence of any malfunction or DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

DTC INSPECTION [AUDIO]

id0902f6440500

Caution

- **If the battery is disconnected or the audio unit power supply is cut, input all of the displayed DTCs to the Audio Repair Order Form because the DTCs will be cleared. (When using the M-MDS)**

Note

- For the DTC inspection of the audio unit (with color LCD), there is a method using the M-MDS and one that does not (on-board diagnostic test mode). Because the DTCs differ if using or not using the M-MDS, perform the DTC inspection using the M-MDS method and the method not using it.

Audio unit (with color LCD)
When using the M-MDS
CMDTC self test

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
   1. “Self-test”
   2. “All CMDTCs”
3. Verify the DTC according to the directions on the screen.
   - If a DTC is displayed, repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02E-10 DTC TABLE [AUDIO].)

ODDTC self test

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
   1. “Self-test”
   2. “Module”
   3. “ACU”
3. Verify the DTC according to the directions on the screen.
   - If a DTC is displayed, repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02E-10 DTC TABLE [AUDIO].)

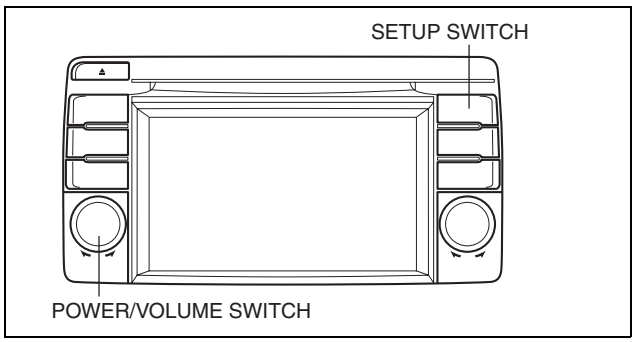
Not using M-MDS (on-board diagnostic test mode)

1. Switch the ignition to ACC or ON (engine off).
2. Verify that the audio is turned off. If the audio is turned on, press the POWER/VOLUME switch to turn it off.

ON-BOARD DIAGNOSTIC [AUDIO]

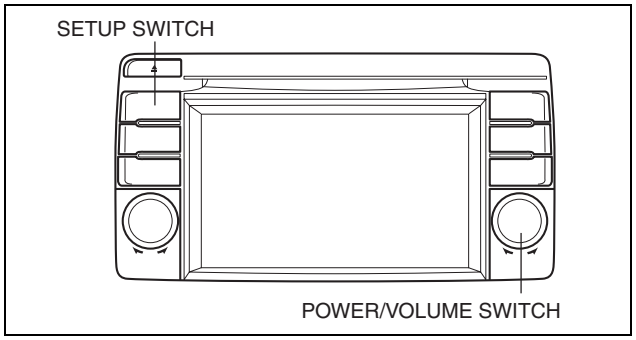
3. Press the POWER/VOLUME switch and SETUP switch simultaneously to launch the on-board diagnostic test mode.

With POWER/VOLUME switch on left side



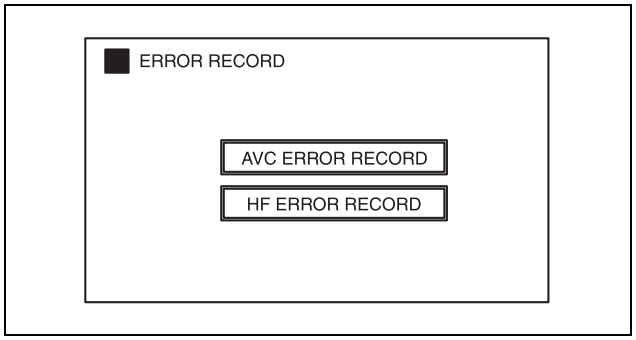
ac5wzw0000333

With POWER/VOLUME switch on right side



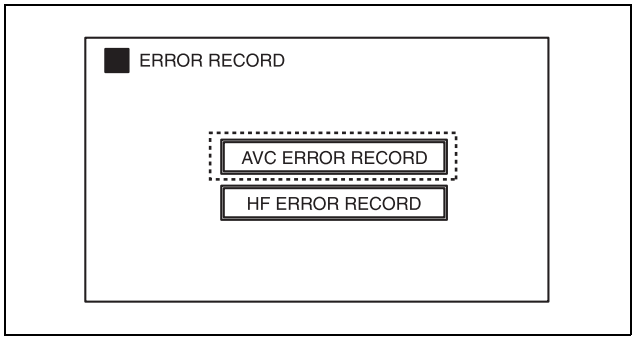
ac5wzw0000333

4. Verify that the launched on-board diagnostic test mode is displayed on the screen.



ac5jjw00001761

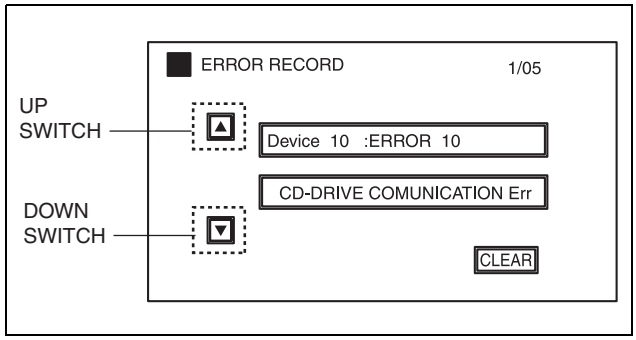
5. Select AVC ERROR RECORD.



ac5wzw0000072

ON-BOARD DIAGNOSTIC [AUDIO]

6. If several DTCs are in the memory, they can be displayed using the UP switch/DOWN switch.
7. Complete the on-board diagnostic test mode by pressing the POWER/VOLUME switch to return to the on-board diagnostic mode screen and pressing the POWER/VOLUME switch again, or by switching the ignition off (LOCK).

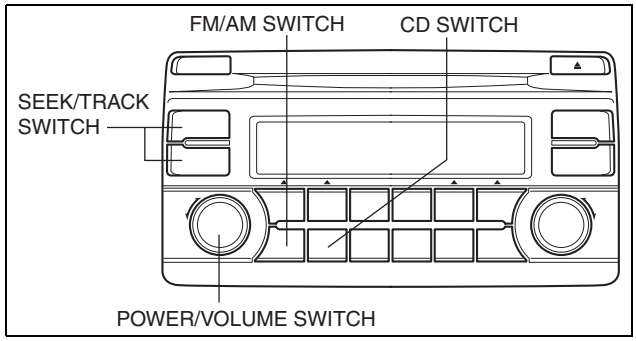


ac5wzw0000072

Audio unit (without color LCD)

1. Switch the ignition to ACC or ON (engine off).
2. Verify that the audio is turned off. If the audio is turned on, press the POWER/VOLUME switch to turn it off.
3. Press the FM/AM switch and CD switch simultaneously for 3 s or more while pressing the POWER/VOLUME switch to launch the on-board diagnostic test mode.

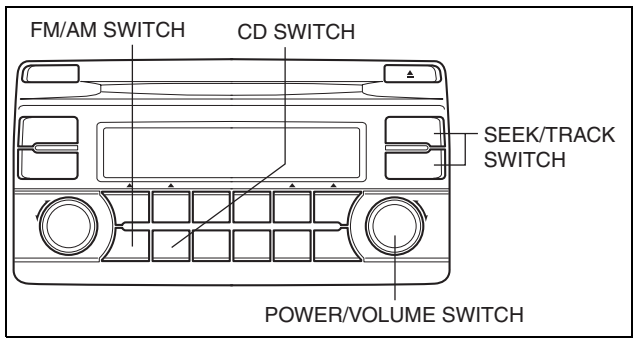
With POWER/VOLUME switch on left side



ac5wzw0000333

With POWER/VOLUME switch on right side

4. If several DTCs are in the memory, they can be displayed using the SEEK/TRACK switch.
5. Switch the ignition off (LOCK) to complete the on-board diagnostic test mode.



ac5wzw0000334

ON-BOARD DIAGNOSTIC [AUDIO]

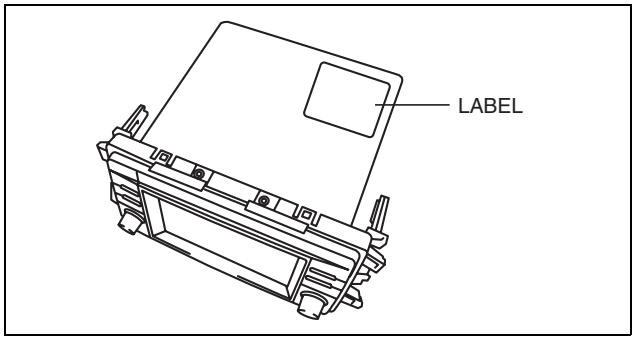
SUPPLIER IDENTIFICATION PROCEDURE [AUDIO]

id0902f6803800

Note
- The unit supplier can vary. When asking the supplier (service center) for repair or replacement, identify the supplier and fill in the Audio Repair Order Form using the following procedures.

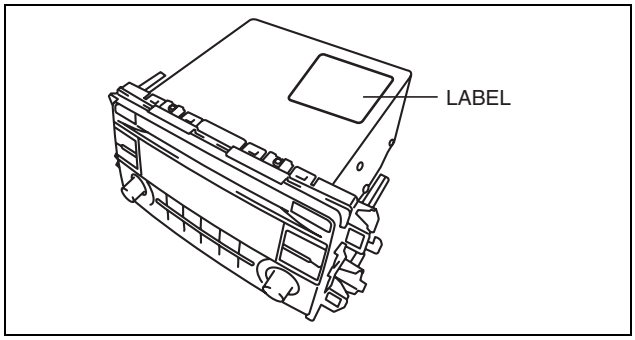
Verification procedure using label or inscribed lettering
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the decoration panel. (See 09-17-33 DECORATION PANEL REMOVAL/INSTALLATION.)
3. Remove the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
4. Verify the supplier name by referring to the label attached to the unit.

Audio unit (with color LCD)



ac5wzw0000072

Audio unit (without color LCD)



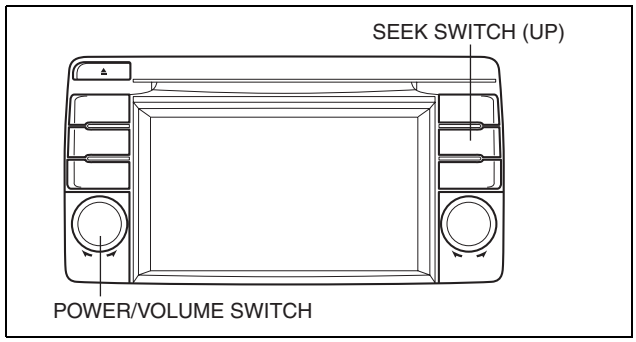
ac5wzw0000072

ON-BOARD DIAGNOSTIC [AUDIO]

Verification procedure using on-board diagnostic assist function
Audio unit (with color LCD)

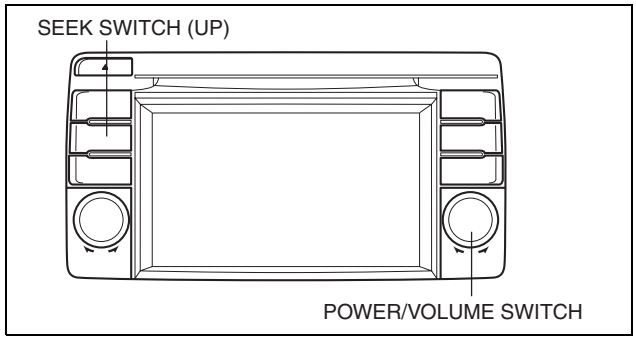
1. Switch the ignition to ACC or ON (engine off).
2. Verify that the audio is turned on. If the audio is turned off, press the POWER/VOLUME switch to turn it on.
3. Press the POWER/VOLUME switch and SEEK switch (up) simultaneously to launch the diagnostic assist function.

With POWER/VOLUME switch on left side



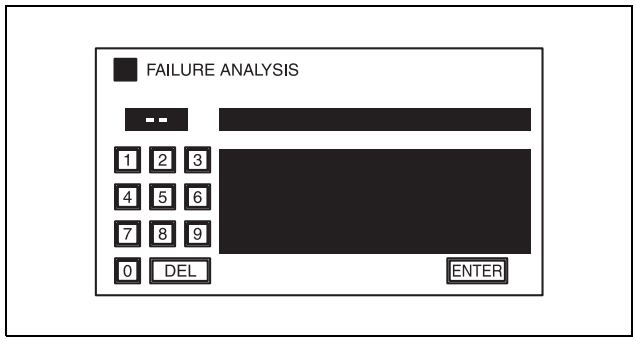
ac5wzw0000331

With POWER/VOLUME switch on right side



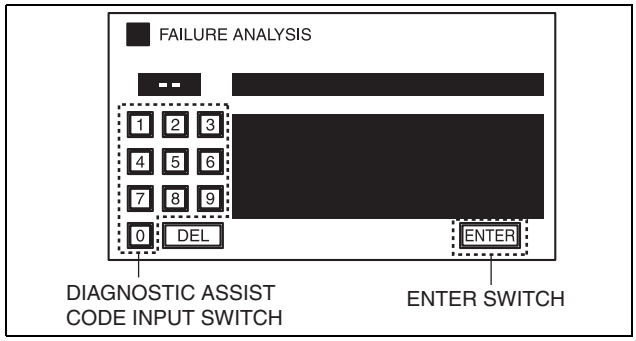
ac5jjw00001766

4. Verify that the launched diagnostic assist function is displayed on the screen.



ac5jjw00001767

5. Input diagnostic assist code "06".
6. Select "ENTER switch".

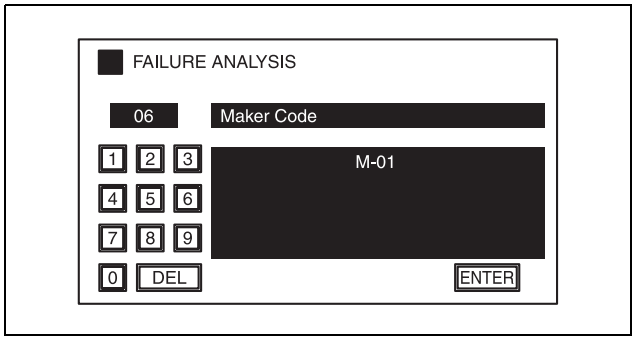


ac5jjw00001768

ON-BOARD DIAGNOSTIC [AUDIO]

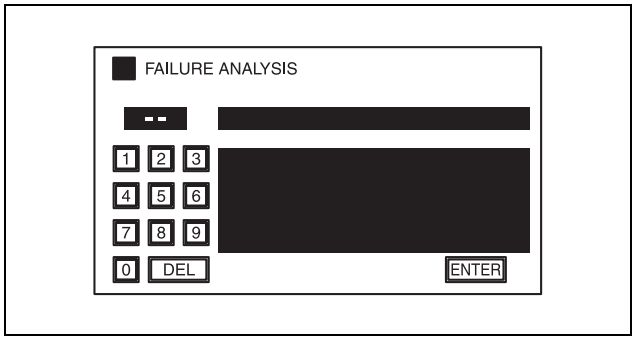
7. Identify the supplier code by referring to the display.

Supplier code	Supplier name
M-01	SANYO Automedia
M-02	Panasonic
M-03	Clarion
M-04	Pioneer
M-05	VISTEON



ac5jjw00001769

8. Press the POWER/VOLUME switch and return to the diagnostic assist screen.
9. Press the POWER/VOLUME switch and end the diagnostic assist function.

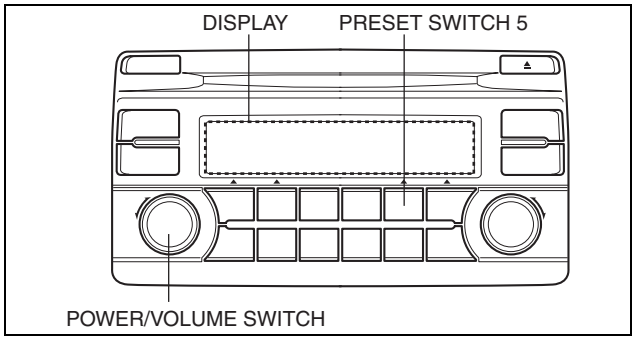


ac5jjw00001767

Audio unit (without color LCD)

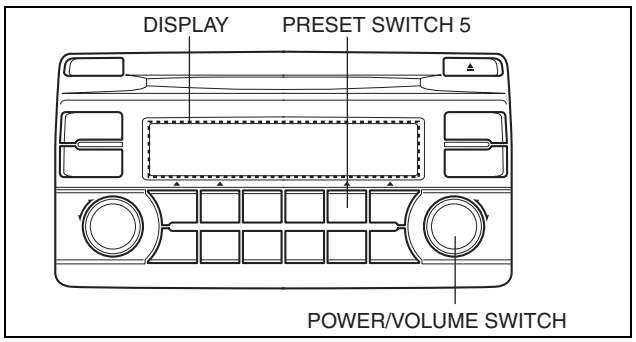
1. Switch the ignition to ACC or ON (engine off).
2. Verify that the audio is turned on. If the audio is turned off, press the POWER/VOLUME switch to turn it on.
3. Press PRESET switch 5 for 3 s or more while simultaneously pressing the POWER/VOLUME switch to launch the supplier verification mode.

With POWER/VOLUME switch on left side



ac5jjw00001770

With POWER/VOLUME switch on right side



ac5jjw00001771

ON-BOARD DIAGNOSTIC [AUDIO]

4. Identify the supplier code by referring to the audio display.

Supplier code	Supplier name
M-01	SANYO Automedia
M-02	Panasonic
M-03	Clarion
M-04	Pioneer
M-05	VISTEON

ac5jjw00001772

5. Switch the ignition off (LOCK) to complete the manufacturer code verification mode.

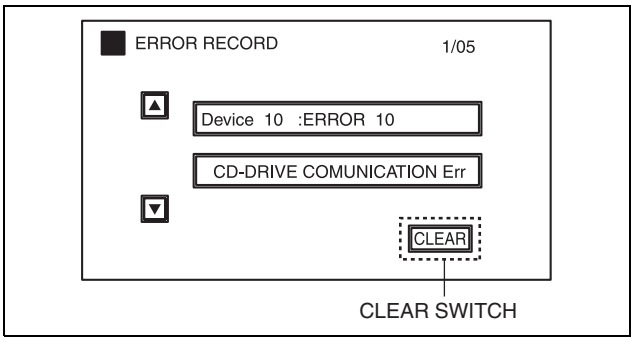
CLEARING DTC [AUDIO]

id0902f6855600

Caution
- **If the memory is cleared, past malfunctions may no longer be displayed, therefore before clearing DTCs, record all DTCs displayed in the DTC inspection on the Audio Repair Order Form.**

Audio unit (with color LCD)
When using the M-MDS
1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
   1. “Self-test”
   2. “Module”
   3. “ACU”
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off (LOCK).
6. Switch the ignition ON (engine off) and wait for 5 s or more.
7. Perform DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].)
8. Verify that no DTCs are displayed.

Not using M-MDS (on-board diagnostic test mode)
1. Switch the ignition to ACC or ON (engine off).
2. Launch the on-board diagnostic test mode. (See 09-02E-3 DTC INSPECTION [AUDIO].)
3. Select the DTC and press the CLEAR switch to clear the DTC.
4. Switch the ignition off (LOCK) to complete the on-board diagnostic test mode.



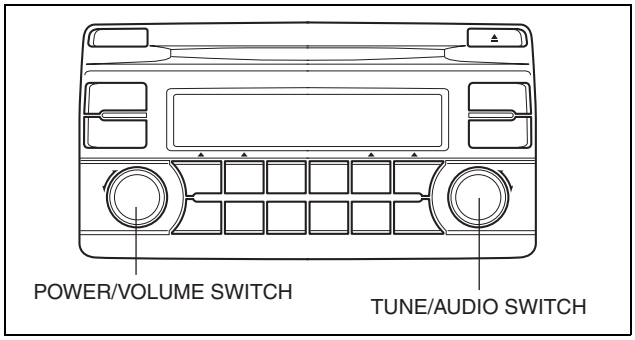
ac5jjw00001779

ON-BOARD DIAGNOSTIC [AUDIO]

Audio unit (without color LCD)

1. Switch the ignition to ACC or ON (engine off).
2. Launch the on-board diagnostic test mode and display the DTCs. (See 09-02E-3 DTC INSPECTION [AUDIO].)
3. Press the TUNE/AUDIO switch for 3 s or more while simultaneously pressing the POWER/VOLUME switch to clear the DTCs.

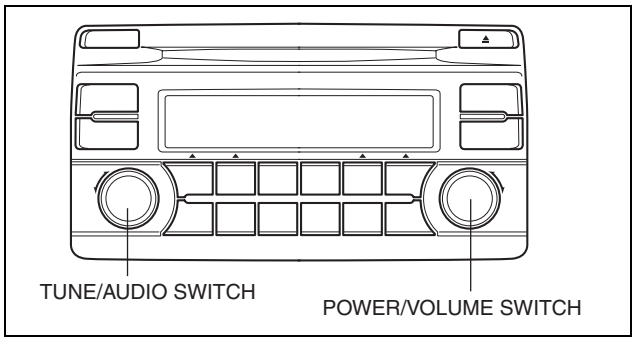
With POWER/VOLUME switch on left side



ac5wzw0000331

With POWER/VOLUME switch on right side

4. Switch the ignition off (LOCK) to complete the on-board diagnostic test mode.



ac5wzw0000332

DTC TABLE [AUDIO]

id0902f6855700

Note

- There are two types of procedures for the audio unit (with color LCD) inspection; one using the M-MDS and the other which does not (on-board diagnostic test mode). Because the DTCs differ if using or not using the M-MDS, perform the DTC inspection using the M-MDS method and the method not using it. (See 09-02E-3 DTC INSPECTION [AUDIO].)
- “iPod” is a registered trademark of Apple Inc. in the United States and other countries.

ON-BOARD DIAGNOSTIC [AUDIO]

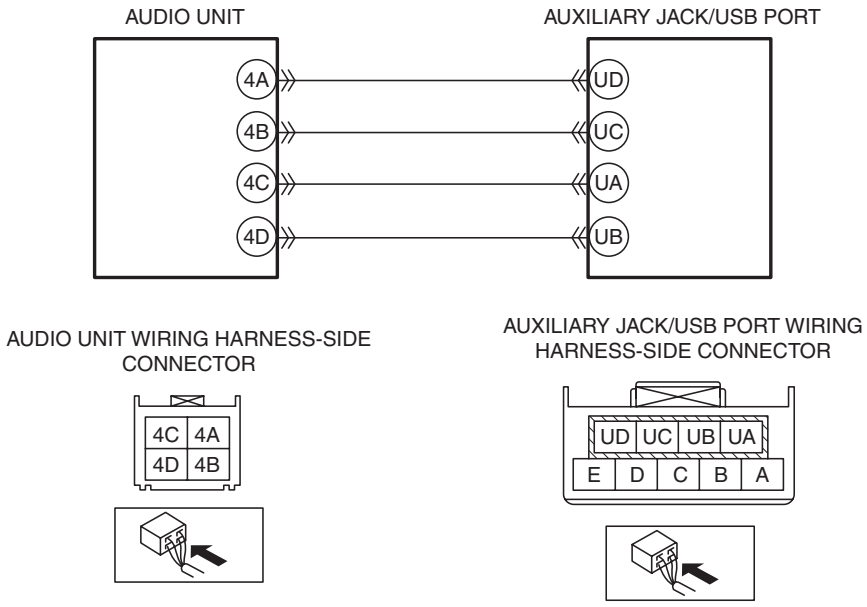
DTC: 28:Er01 [AUDIO]

id0902f6452300

Note
- "iPod" is a registered trademark of Apple Inc. in the United States and other countries.

Audio unit (with color LCD)

Description	Poor connection with auxiliary jack/USB port, or read error
Detection condition	• When USB device/iPod connected, connection error detected • When USB device/iPod connected, audio unit internal malfunction detected • When USB device connected, read error detected
Fail-safe function	—
Possible cause	• USB device/iPod malfunction • Incompatible USB device (format) used • Audio unit connector or terminal malfunction • Auxiliary jack/USB port connector or terminal malfunction • Open circuit in wiring harness between the following terminals: — Audio unit terminal 4A and auxiliary jack/USB port terminal UD — Audio unit terminal 4B and auxiliary jack/USB port terminal UC — Audio unit terminal 4C and auxiliary jack/USB port terminal UA — Audio unit terminal 4D and auxiliary jack/USB port terminal UB • Short to ground in wiring harness between the following terminals: — Audio unit terminal 4A and auxiliary jack/USB port terminal UD — Audio unit terminal 4B and auxiliary jack/USB port terminal UC — Audio unit terminal 4C and auxiliary jack/USB port terminal UA — Audio unit terminal 4D and auxiliary jack/USB port terminal UB • Auxiliary jack/USB port malfunction • Audio unit malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT USB DEVICE/iPod** • Connect the USB device/iPod to a same-model vehicle (model/unit). • Is the USB device/iPod connection detected/unit plays back.	Yes	Go to the next step.
		No	System is normal. (USB device/iPod malfunction or incompatible USB device.) Go to Step 7.

ON-BOARD DIAGNOSTIC [AUDIO]

Step	Inspection		Action
2	**INSPECT AUDIO UNIT CONNECTOR CONDITION** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the audio unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 7.
		No	Go to the next step.
3	**INSPECT AUXILIARY JACK/USB PORT CONNECTOR CONDITION** • Disconnect the auxiliary jack/USB port connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 7.
		No	Go to the next step.
4	**INSPECT WIRING HARNESS FOR OPEN CIRCUIT BETWEEN AUDIO UNIT AND AUXILIARY JACK/USB PORT** • Verify that the connectors for the audio unit and the auxiliary jack/USB port are not disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness). — Audio unit terminal 4A and auxiliary jack/USB port terminal UD — Audio unit terminal 4B and auxiliary jack/USB port terminal UC — Audio unit terminal 4C and auxiliary jack/USB port terminal UA — Audio unit terminal 4D and auxiliary jack/USB port terminal UB • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 7.
5	**INSPECT WIRING HARNESS FOR SHORT TO GROUND BETWEEN AUDIO UNIT AND AUXILIARY JACK/USB PORT** • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. — Auxiliary jack/USB port terminal UD — Auxiliary jack/USB port terminal UC — Auxiliary jack/USB port terminal UA — Auxiliary jack/USB port terminal UB • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 7.
		No	Go to the next step.
6	**INSPECT AUXILIARY JACK/USB PORT** • Inspect the auxiliary jack/USB port. (See 09-20-77 AUXILIARY JACK/USB PORT INSPECTION.) • Is there any malfunctioning part?	Yes	Replace the auxiliary jack/USB port, then go to Step 7. (See 09-20-77 AUXILIARY JACK/USB PORT REMOVAL/INSTALLATION.)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [AUDIO]

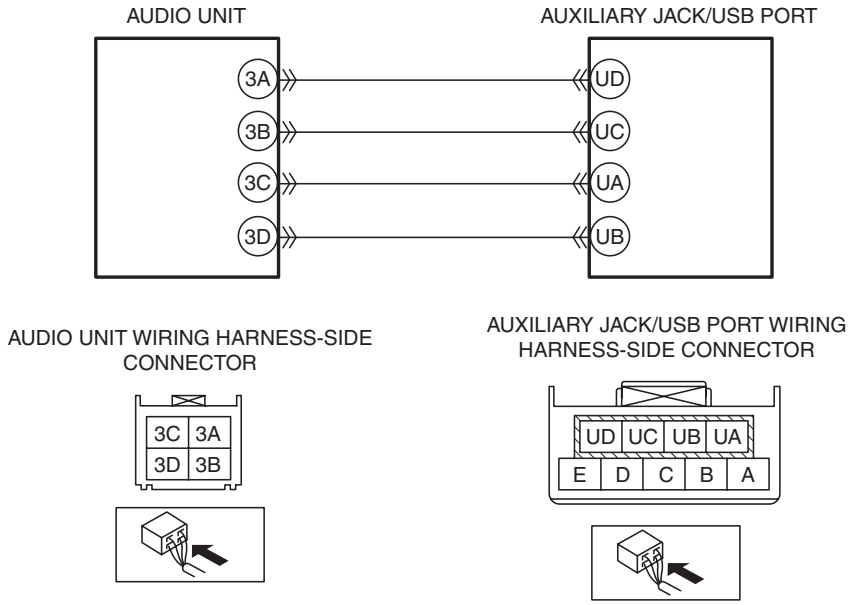
Step	Inspection		Action
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Return to Step 1 and inspect for other possible causes. If the malfunction recurs, replace the audio unit, then go to the next step. (See 09-02E-10 DTC TABLE [AUDIO].)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02E-10 DTC TABLE [AUDIO].)
		No	DTC troubleshooting completed.

Audio unit (without color LCD)

Description	Poor connection with auxiliary jack/USB port, or read error
Detection condition	• When USB device/iPod connected, connection error detected • When USB device/iPod connected, audio unit internal malfunction detected • When USB device connected, read error detected
Fail-safe function	—
Possible cause	• USB device/iPod malfunction • Incompatible USB device (format) used • Audio unit connector or terminal malfunction • Auxiliary jack/USB port connector or terminal malfunction • Open circuit in wiring harness between the following terminals: — Audio unit terminal 3A and auxiliary jack/USB port terminal UD — Audio unit terminal 3B and auxiliary jack/USB port terminal UC — Audio unit terminal 3C and auxiliary jack/USB port terminal UA — Audio unit terminal 3D and auxiliary jack/USB port terminal UB • Short to ground in wiring harness between the following terminals: — Audio unit terminal 3A and auxiliary jack/USB port terminal UD — Audio unit terminal 3B and auxiliary jack/USB port terminal UC — Audio unit terminal 3C and auxiliary jack/USB port terminal UA — Audio unit terminal 3D and auxiliary jack/USB port terminal UB • Auxiliary jack/USB port malfunction • Audio unit malfunction

ON-BOARD DIAGNOSTIC [AUDIO]

Description	Poor connection with auxiliary jack/USB port, or read error



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT USB DEVICE/iPod** • Connect the USB device/iPod to another vehicle (model/unit). • Is the USB device/iPod connection detected/ unit plays back.	Yes	Go to the next step.
		No	System is normal. (USB device/iPod malfunction or incompatible USB device.) Go to Step 7.
2	**INSPECT AUXILIARY JACK/USB PORT CONNECTOR CONDITION** • Disconnect the auxiliary jack/USB port connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 7.
		No	Go to the next step.
3	**INSPECT AUXILIARY JACK/USB PORT** • Inspect the auxiliary jack/USB port. (See 09-20-77 AUXILIARY JACK/USB PORT INSPECTION.) • Is there any malfunctioning part?	Yes	Replace the auxiliary jack/USB port, then go to Step 7. (See 09-20-77 AUXILIARY JACK/USB PORT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
4	**INSPECT AUDIO UNIT CONNECTOR CONDITION** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the audio unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 7.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [AUDIO]

Step	Inspection		Action
5	**INSPECT WIRING HARNESS FOR OPEN CIRCUIT BETWEEN AUDIO UNIT AND AUXILIARY JACK/USB PORT** • Verify that the connectors for the audio unit and the auxiliary jack/USB port are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness). — Audio unit terminal 3A and auxiliary jack/USB port terminal UD — Audio unit terminal 3B and auxiliary jack/USB port terminal UC — Audio unit terminal 3C and auxiliary jack/USB port terminal UA — Audio unit terminal 3D and auxiliary jack/USB port terminal UB • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 7.
6	**INSPECT WIRING HARNESS FOR SHORT TO GROUND BETWEEN AUDIO UNIT AND AUXILIARY JACK/USB PORT** • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. — Auxiliary jack/USB port terminal UD — Auxiliary jack/USB port terminal UC — Auxiliary jack/USB port terminal UA — Auxiliary jack/USB port terminal UB • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 7.
		No	Go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Return to Step 1 and inspect for other possible causes. If the malfunction recurs, replace the audio unit, then go to the next step. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02E-10 DTC TABLE [AUDIO].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [AUDIO]

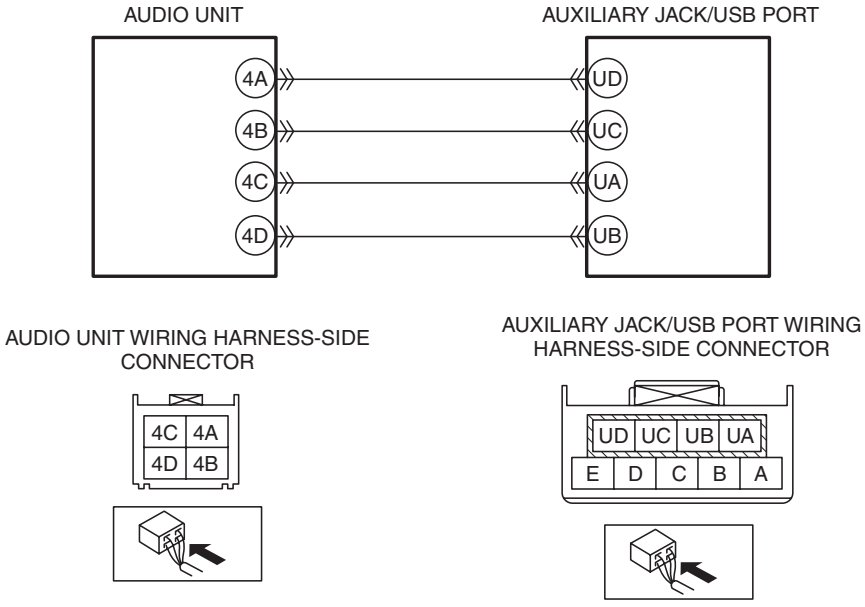
DTC: 29:Er01 [AUDIO]

id0902f6452400

Note
- “iPod” is a registered trademark of Apple Inc. in the United States and other countries.

Audio unit (with color LCD)

Description	Audio unit internal malfunction, or iPod malfunction
Detection condition	When iPod is connected, audio unit read error is detected
Fail-safe function	—
Possible cause	• USB device/iPod malfunction • Incompatible USB device (format) used • Audio unit connector or terminal malfunction • Auxiliary jack/USB port connector or terminal malfunction • Open circuit in wiring harness between the following terminals: — Audio unit terminal 4A and auxiliary jack/USB port terminal UD — Audio unit terminal 4B and auxiliary jack/USB port terminal UC — Audio unit terminal 4C and auxiliary jack/USB port terminal UA — Audio unit terminal 4D and auxiliary jack/USB port terminal UB • Short to ground in wiring harness between the following terminals: — Audio unit terminal 4A and auxiliary jack/USB port terminal UD — Audio unit terminal 4B and auxiliary jack/USB port terminal UC — Audio unit terminal 4C and auxiliary jack/USB port terminal UA — Audio unit terminal 4D and auxiliary jack/USB port terminal UB • Auxiliary jack/USB port malfunction • Audio unit malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT USB DEVICE/iPod** • Connect the USB device/iPod to a same-model vehicle (model/unit). • Is the USB device/iPod connection detected/unit plays back.	Yes	Go to the next step.
		No	System is normal. (USB device/iPod malfunction or incompatible USB device.) Go to Step 7.

ON-BOARD DIAGNOSTIC [AUDIO]

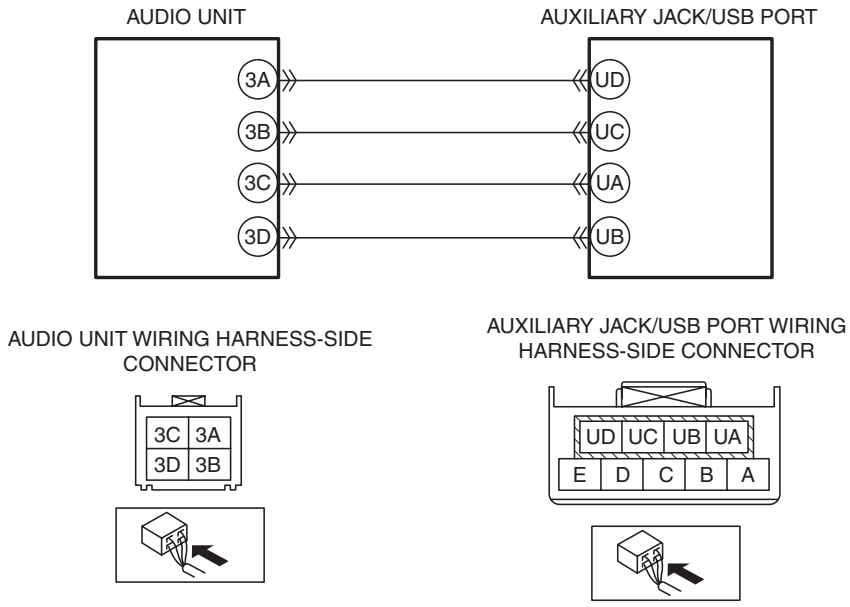
Step	Inspection		Action
2	**INSPECT AUDIO UNIT CONNECTOR CONDITION** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the audio unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 7.
		No	Go to the next step.
3	**INSPECT AUXILIARY JACK/USB PORT CONNECTOR CONDITION** • Disconnect the auxiliary jack/USB port connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 7.
		No	Go to the next step.
4	**INSPECT WIRING HARNESS FOR OPEN CIRCUIT BETWEEN AUDIO UNIT AND AUXILIARY JACK/USB PORT** • Verify that the connectors for the audio unit and the auxiliary jack/USB port are not disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness). — Audio unit terminal 4A and auxiliary jack/USB port terminal UD — Audio unit terminal 4B and auxiliary jack/USB port terminal UC — Audio unit terminal 4C and auxiliary jack/USB port terminal UA — Audio unit terminal 4D and auxiliary jack/USB port terminal UB • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 7.
5	**INSPECT WIRING HARNESS FOR SHORT TO GROUND BETWEEN AUDIO UNIT AND AUXILIARY JACK/USB PORT** • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. — Auxiliary jack/USB port terminal UD — Auxiliary jack/USB port terminal UC — Auxiliary jack/USB port terminal UA — Auxiliary jack/USB port terminal UB • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 7.
		No	Go to the next step.
6	**INSPECT AUXILIARY JACK/USB PORT** • Inspect the auxiliary jack/USB port. (See 09-20-77 AUXILIARY JACK/USB PORT INSPECTION.) • Is there any malfunctioning part?	Yes	Replace the auxiliary jack/USB port, then go to Step 7. (See 09-20-77 AUXILIARY JACK/USB PORT REMOVAL/INSTALLATION.)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [AUDIO]

Step	Inspection		Action
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Return to Step 1 and inspect for other possible causes. If the malfunction recurs, replace the audio unit, then go to the next step. (See 09-02E-10 DTC TABLE [AUDIO].)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02E-10 DTC TABLE [AUDIO].)
		No	DTC troubleshooting completed.

Audio unit (without color LCD)

Description	Audio unit internal malfunction, or iPod malfunction
Detection condition	When iPod is connected, audio unit read error is detected
Fail-safe function	—
Possible cause	• USB device/iPod malfunction • Incompatible USB device (format) used • Audio unit connector or terminal malfunction • Auxiliary jack/USB port connector or terminal malfunction • Open circuit in wiring harness between the following terminals: — Audio unit terminal 3A and auxiliary jack/USB port terminal UD — Audio unit terminal 3B and auxiliary jack/USB port terminal UC — Audio unit terminal 3C and auxiliary jack/USB port terminal UA — Audio unit terminal 3D and auxiliary jack/USB port terminal UB • Short to ground in wiring harness between the following terminals: — Audio unit terminal 3A and auxiliary jack/USB port terminal UD — Audio unit terminal 3B and auxiliary jack/USB port terminal UC — Audio unit terminal 3C and auxiliary jack/USB port terminal UA — Audio unit terminal 3D and auxiliary jack/USB port terminal UB • Auxiliary jack/USB port malfunction • Audio unit malfunction



ON-BOARD DIAGNOSTIC [AUDIO]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT USB DEVICE/iPod** • Connect the USB device/iPod to another vehicle (model/unit). • Is the USB device/iPod connection detected/ unit plays back.	Yes	Go to the next step.
		No	System is normal. (USB device/iPod malfunction or incompatible USB device.) Go to Step 7.
2	**INSPECT AUXILIARY JACK/USB PORT CONNECTOR CONDITION** • Disconnect the auxiliary jack/USB port connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 7.
		No	Go to the next step.
3	**INSPECT AUXILIARY JACK/USB PORT** • Inspect the auxiliary jack/USB port. (See 09-20-77 AUXILIARY JACK/USB PORT INSPECTION.) • Is there any malfunctioning part?	Yes	Replace the auxiliary jack/USB port, then go to Step 7. (See 09-20-77 AUXILIARY JACK/USB PORT REMOVAL/ INSTALLATION.)
		No	Go to the next step.
4	**INSPECT AUDIO UNIT CONNECTOR CONDITION** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the audio unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 7.
		No	Go to the next step.
5	**INSPECT WIRING HARNESS FOR OPEN CIRCUIT BETWEEN AUDIO UNIT AND AUXILIARY JACK/USB PORT** • Verify that the connectors for the audio unit and the auxiliary jack/USB port are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness). — Audio unit terminal 3A and auxiliary jack/ USB port terminal UD — Audio unit terminal 3B and auxiliary jack/ USB port terminal UC — Audio unit terminal 3C and auxiliary jack/ USB port terminal UA — Audio unit terminal 3D and auxiliary jack/ USB port terminal UB • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 7.

ON-BOARD DIAGNOSTIC [AUDIO]

Step	Inspection		Action
6	**INSPECT WIRING HARNESS FOR SHORT TO GROUND BETWEEN AUDIO UNIT AND AUXILIARY JACK/ USB PORT** • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. — Auxiliary jack/USB port terminal UD — Auxiliary jack/USB port terminal UC — Auxiliary jack/USB port terminal UA — Auxiliary jack/USB port terminal UB • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 7.
		No	Go to the next step.
7	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Return to Step 1 and inspect for other possible causes. If the malfunction recurs, replace the audio unit, then go to the next step. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02E-10 DTC TABLE [AUDIO].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [AUDIO]

DTC: B1188:64, 10:Er07 [AUDIO]

id0902f6442400

Description	Audio unit internal malfunction
Detection condition	Audio unit detects CD read error
Fail-safe function	—
Possible cause	• CD insertion direction mistaken • CD scratching or soiling • Incompatible CD used • Audio unit malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FOR MISTAKEN CD INSERTION DIRECTION** • Verify the CD insertion direction. • Is the CD inserted with the printed label pointed up?	Yes	Go to Step 3.
		No	Insert the CD with the printed label pointed up, then go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF CD IS MALFUNCTIONING PART** • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 6.
3	**CD INSPECTION** • Verify on another vehicle of the same model (model/unit) using the CD in which the malfunction occurred. • Does the CD play?	Yes	Go to the next step.
		No	Replace the CD then, go to the next step. **Note** • Refer to the following for a playable CD. (See 09-03J-11 REFERENCE [CD PLAYER].)
4	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS AUDIO UNIT** • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Play the CD for 12 s or more. • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Replace the audio unit, then go to the next step. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02E-10 DTC TABLE [AUDIO].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [AUDIO]

DTC: B1D19:71, 10:ER02 [AUDIO]

id0902f6442500

Description	Audio unit internal malfunction
Detection condition	Audio unit detects CD drive servo malfunction
Fail-safe function	—
Possible cause	• CD insertion direction mistaken • CD scratching or soiling • Incompatible CD used • Audio unit malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FOR MISTAKEN CD INSERTION DIRECTION** • Verify the CD insertion direction. • Is the CD inserted with the printed label pointed up?	Yes	Go to Step 3.
		No	Insert the CD with the printed label pointed up, then go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF CD IS MALFUNCTIONING PART** • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 6.
3	**CD INSPECTION** • Verify on another vehicle of the same model (model/unit) using the CD in which the malfunction occurred. • Does the CD play?	Yes	Go to the next step.
		No	Replace the CD, then go to the next step. **Note** • Refer to the following for a playable CD. (See 09-03J-11 REFERENCE [CD PLAYER].)
4	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS AUDIO UNIT** • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Play the CD for 12 s or more. • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Replace the audio unit, then go to the next step. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02E-10 DTC TABLE [AUDIO].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [AUDIO]

DTC: B1D19:79, 10:Er01 [AUDIO]

id0902f6442600

Description	Audio unit internal malfunction
Detection condition	Audio unit detects CD drive mechanism malfunction
Fail-safe function	—
Possible cause	• CD insertion direction mistaken • CD scratching or soiling • Incompatible CD used • Audio unit malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FOR MISTAKEN CD INSERTION DIRECTION** • Verify the CD insertion direction. • Is the CD inserted with the printed label pointed up?	Yes	Go to Step 3.
		No	Insert the CD with the printed label pointed up, then go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF CD IS MALFUNCTIONING PART** • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 6.
3	**CD INSPECTION** • Verify on another vehicle of the same model (model/unit) using the CD in which the malfunction occurred. • Does the CD play?	Yes	Go to the next step.
		No	Replace the CD, then go to the next step. **Note** • Refer to the following for a playable CD. (See 09-03J-11 REFERENCE [CD PLAYER].)
4	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS AUDIO UNIT** • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Play the CD for 12 s or more. • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Replace the audio unit, then go to the next step. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02E-10 DTC TABLE [AUDIO].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [AUDIO]

DTC: B1D19:96, 10:Er10 [AUDIO]

id0902f6442700

Description	Audio unit internal malfunction
Detection condition	Audio unit detects audio control circuit and CD drive communication error
Fail-safe function	—
Possible cause	• CD insertion direction mistaken • CD scratching or soiling • Incompatible CD used • Audio unit malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FOR MISTAKEN CD INSERTION DIRECTION** • Verify the CD insertion direction. • Is the CD inserted with the printed label pointed up?	Yes	Go to Step 3.
		No	Insert the CD with the printed label pointed up, then go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF CD IS MALFUNCTIONING PART** • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Go to the next step.
		No	Go to Step 6.
3	**CD INSPECTION** • Verify on another vehicle of the same model (model/unit) using the CD in which the malfunction occurred. • Does the CD play?	Yes	Go to the next step.
		No	Replace the CD, then go to the next step. **Note** • Refer to the following for a playable CD. (See 09-03J-11 REFERENCE [CD PLAYER].)
4	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS AUDIO UNIT** • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Play the CD for 12 s or more. • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Replace the audio unit, then go to the next step. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02E-10 DTC TABLE [AUDIO].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [AUDIO]

DTC: U3000:04, 09:Er22 [AUDIO]

id0902f6441500

Description	Audio unit internal malfunction
Detection condition	Audio unit internal ECU (Tuner peripheral circuit) is faulted.
Fail-safe function	—
Possible cause	Audio unit malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**CONFIRM AUDIO UNIT DTC** • Clear the DTC from the audio unit memory. (See 09-02E-9 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC present?	Yes	Replace the audio unit, then go to the next step. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02E-10 DTC TABLE [AUDIO].)
		No	DTC troubleshooting completed.

DTC: U3000:09, 09:Er21 [AUDIO]

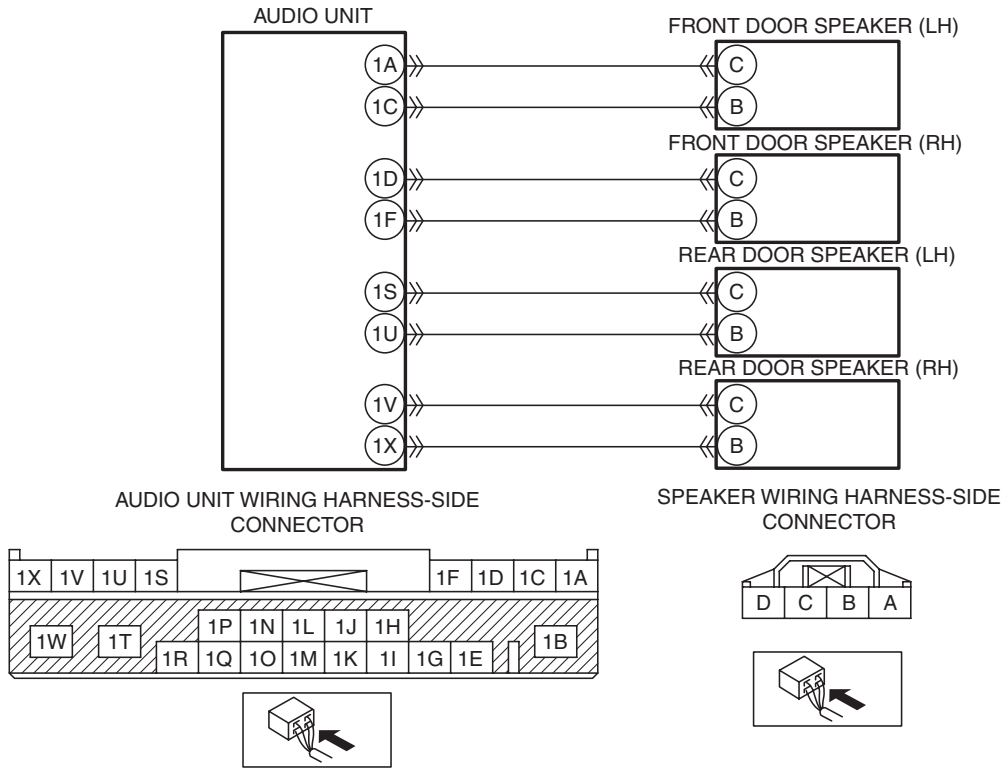
id0902f6441600

Without Bose®

Description	Audio unit internal malfunction
Detection condition	• Audio unit (circuit around power amplifier) malfunction detected • Audio unit protection function operates due to short to ground in speaker wiring harness and speaker lead wire
Fail-safe function	Output to speakers stops
Possible cause	• Audio unit connector or terminal malfunction • Speaker connector or terminal malfunction • Open circuit in wiring harness between the following terminals: — Audio unit terminal 1A and front door speaker (LH) terminal C — Audio unit terminal 1C and front door speaker (LH) terminal B — Audio unit terminal 1D and front door speaker (RH) terminal C — Audio unit terminal 1F and front door speaker (RH) terminal B — Audio unit terminal 1S and rear door speaker (LH) terminal C — Audio unit terminal 1U and front door speaker (LH) terminal B — Audio unit terminal 1V and rear door speaker (RH) terminal C — Audio unit terminal 1X and rear door speaker (RH) terminal B • Short to ground in wiring harness between the following terminals: — Audio unit terminal 1A and front door speaker (LH) terminal C — Audio unit terminal 1C and front door speaker (LH) terminal B — Audio unit terminal 1D and front door speaker (RH) terminal C — Audio unit terminal 1F and front door speaker (RH) terminal B — Audio unit terminal 1S and rear door speaker (LH) terminal C — Audio unit terminal 1U and front door speaker (LH) terminal B — Audio unit terminal 1V and rear door speaker (RH) terminal C — Audio unit terminal 1X and rear door speaker (RH) terminal B • Speaker malfunction • Audio unit malfunction

ON-BOARD DIAGNOSTIC [AUDIO]

Description	Audio unit internal malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT AUDIO UNIT CONNECTOR CONDITION** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the audio unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 6.
		No	Go to the next step.
2	**INSPECT SPEAKER CONNECTOR CONDITION** • Disconnect the speaker connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 6.
		No	Go to the next step.

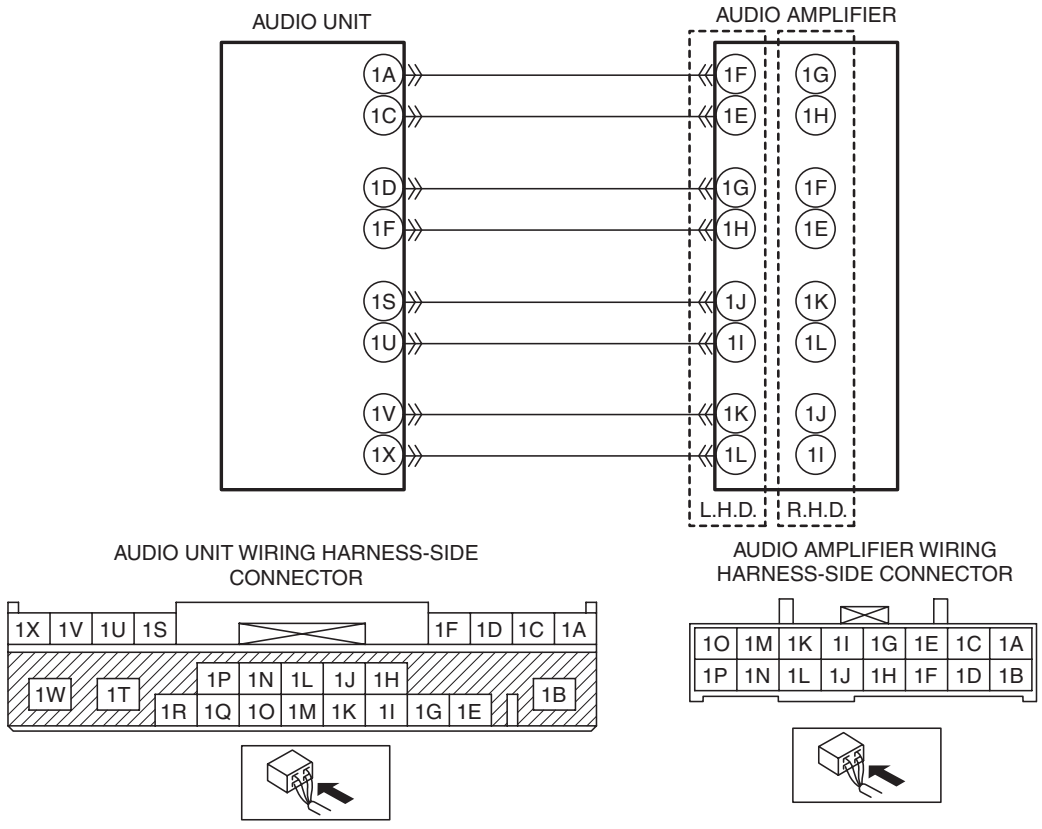
ON-BOARD DIAGNOSTIC [AUDIO]

Step	Inspection		Action
3	**INSPECT SPEAKER CIRCUIT FOR OPEN CIRCUIT** • Audio unit connector and speaker connector are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness). — Audio unit terminal 1A and front door speaker (LH) terminal C — Audio unit terminal 1C and front door speaker (LH) terminal B — Audio unit terminal 1D and front door speaker (RH) terminal C — Audio unit terminal 1F and front door speaker (RH) terminal B — Audio unit terminal 1S and rear door speaker (LH) terminal C — Audio unit terminal 1U and front door speaker (LH) terminal B — Audio unit terminal 1V and rear door speaker (RH) terminal C — Audio unit terminal 1X and rear door speaker (RH) terminal B • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 6.
4	**INSPECT SPEAKER CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. — Speaker terminal C — Speaker terminal B • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 6.
		No	Go to the next step.
5	**INSPECT SPEAKERS** • Inspect the speakers. (See 09-20-18 FRONT DOOR SPEAKER INSPECTION.) (See 09-20-21 REAR DOOR SPEAKER INSPECTION.) • Is there any malfunctioning part?	Yes	Replace the speaker, then go to Step 6. (See 09-20-15 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09-20-19 REAR DOOR SPEAKER REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Return to Step 1 and inspect for other possible causes. If the malfunction recurs, replace the audio unit, then go to the next step. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02E-10 DTC TABLE [AUDIO].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [AUDIO]

With Bose®

Description	Audio unit internal malfunction
Detection condition	• Audio unit (circuit around power amplifier) malfunction detected • Audio unit protection function operates due to short to ground in speaker wiring harness and speaker lead wire
Fail-safe function	Output to speakers stops
Possible cause	• Audio unit connector or terminal malfunction • Speaker connector or terminal malfunction • Open circuit in wiring harness between the following terminals: — Audio unit terminal 1A and audio amplifier terminal 1F (L.H.D.)/ terminal 1G (R.H.D.) — Audio unit terminal 1C and audio amplifier terminal 1E (L.H.D.)/ terminal 1H (R.H.D.) — Audio unit terminal 1D and audio amplifier terminal 1G (L.H.D.)/ terminal 1F (R.H.D.) — Audio unit terminal 1F and audio amplifier terminal 1H (L.H.D.)/ terminal 1E (R.H.D.) — Audio unit terminal 1S and audio amplifier terminal 1J (L.H.D.)/ terminal 1K (R.H.D.) — Audio unit terminal 1U and audio amplifier terminal 1I (L.H.D.)/ terminal 1L (R.H.D.) — Audio unit terminal 1V and audio amplifier terminal 1K (L.H.D.)/ terminal 1J (R.H.D.) — Audio unit terminal 1X and audio amplifier terminal 1L (L.H.D.)/ terminal 1I (R.H.D.) • Short to ground in wiring harness between the following terminals: — Audio unit terminal 1A and audio amplifier terminal 1F (L.H.D.)/ terminal 1G (R.H.D.) — Audio unit terminal 1C and audio amplifier terminal 1E (L.H.D.)/ terminal 1H (R.H.D.) — Audio unit terminal 1D and audio amplifier terminal 1G (L.H.D.)/ terminal 1F (R.H.D.) — Audio unit terminal 1F and audio amplifier terminal 1H (L.H.D.)/ terminal 1E (R.H.D.) — Audio unit terminal 1S and audio amplifier terminal 1J (L.H.D.)/ terminal 1K (R.H.D.) — Audio unit terminal 1U and audio amplifier terminal 1I (L.H.D.)/ terminal 1L (R.H.D.) — Audio unit terminal 1V and audio amplifier terminal 1K (L.H.D.)/ terminal 1J (R.H.D.) — Audio unit terminal 1X and audio amplifier terminal 1L (L.H.D.)/ terminal 1I (R.H.D.) • Speaker malfunction • Audio unit malfunction



ON-BOARD DIAGNOSTIC [AUDIO]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT AUDIO UNIT CONNECTOR CONDITION** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the audio unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 5.
		No	Go to the next step.
2	**INSPECT AUDIO AMPLIFIER CONNECTOR CONDITION** • Disconnect the audio amplifier connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 5.
		No	Go to the next step.
3	**INSPECT AUDIO AMPLIFIER CIRCUIT FOR OPEN CIRCUIT** • Audio unit connector and audio amplifier connector are disconnected. • Inspect for continuity between the following terminals (vehicle wiring harness). — Audio unit terminal 1A and audio amplifier terminal 1F (L.H.D.)/ terminal 1G (R.H.D.) — Audio unit terminal 1C and audio amplifier terminal 1E (L.H.D.)/ terminal 1H (R.H.D.) — Audio unit terminal 1D and audio amplifier terminal 1G (L.H.D.)/ terminal 1F (R.H.D.) — Audio unit terminal 1F and audio amplifier terminal 1H (L.H.D.)/ terminal 1E (R.H.D.) — Audio unit terminal 1S and audio amplifier terminal 1J (L.H.D.)/ terminal 1K (R.H.D.) — Audio unit terminal 1U and audio amplifier terminal 1I (L.H.D.)/ terminal 1L (R.H.D.) — Audio unit terminal 1V and audio amplifier terminal 1K (L.H.D.)/ terminal 1J (R.H.D.) — Audio unit terminal 1X and audio amplifier terminal 1L (L.H.D.)/ terminal 1I (R.H.D.) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 5.

ON-BOARD DIAGNOSTIC [AUDIO]

Step	Inspection		Action
4	**INSPECT AUDIO AMPLIFIER CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following wiring harness terminals (vehicle wiring harness side) and body ground. — Audio amplifier terminal 1F (L.H.D.)/ terminal 1G (R.H.D.) — Audio amplifier terminal 1E (L.H.D.)/ terminal 1H (R.H.D.) — Audio amplifier terminal 1G (L.H.D.)/ terminal 1F (R.H.D.) — Audio amplifier terminal 1H (L.H.D.)/ terminal 1E (R.H.D.) — Audio amplifier terminal 1J (L.H.D.)/ terminal 1K (R.H.D.) — Audio amplifier terminal 1I (L.H.D.)/ terminal 1L (R.H.D.) — Audio amplifier terminal 1K (L.H.D.)/ terminal 1J (R.H.D.) — Audio amplifier terminal 1L (L.H.D.)/ terminal 1I (R.H.D.) • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 5.
		No	Go to the next step.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Return to Step 1 and inspect for other possible causes. If the malfunction recurs, replace the audio unit, then go to the next step. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02E-10 DTC TABLE [AUDIO].)
		No	DTC troubleshooting completed.

DTC: U3003:16, 09:Er20 [AUDIO]

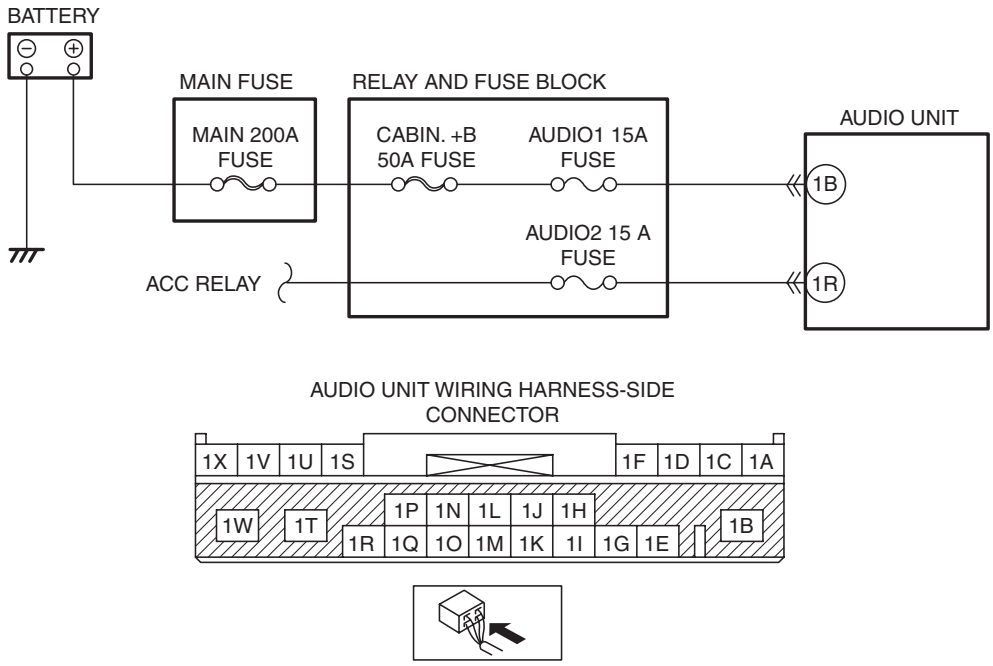
id0902f6441700

Without i-stop System

Description	Voltage decrease input from battery
Detection condition	With the ignition switched to ACC or ON, the audio unit detects voltage from the battery of 10 V or less for 30 s or more.
Fail-safe function	—
Possible cause	• Battery malfunction • Generator malfunction • Audio unit connector or terminal malfunction • Audio unit power supply circuit malfunction — Short to ground in the wiring harness between audio unit terminal 1B and battery (+) terminal. — Short to ground in wiring harness between audio unit terminal 1R and ACC RELAY — AUDIO1 15 A fuse malfunction — AUDIO2 15 A fuse malfunction — CABIN. +B 50 A fuse malfunction — MAIN 200 A fuse malfunction — Open circuit in wiring harness between audio unit terminal 1B and battery (+) terminal — Open circuit in wiring harness between audio unit and terminal 1R • Audio unit malfunction

ON-BOARD DIAGNOSTIC [AUDIO]

Description	Voltage decrease input from battery



Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 10-02A-1 FOREWORD [SKYACTIV-G 2.0 (L.H.D.)].) (See 10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Is there any malfunctioning part?	Yes	Recharge or replace the battery, then go to Step 8. (See 01-17A-10 BATTERY RECHARGING [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunctioning part?	Yes	Replace the generator, then go to Step 8. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT AUDIO UNIT CONNECTOR CONDITION** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect the audio unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 8.
		No	Go to the next step.

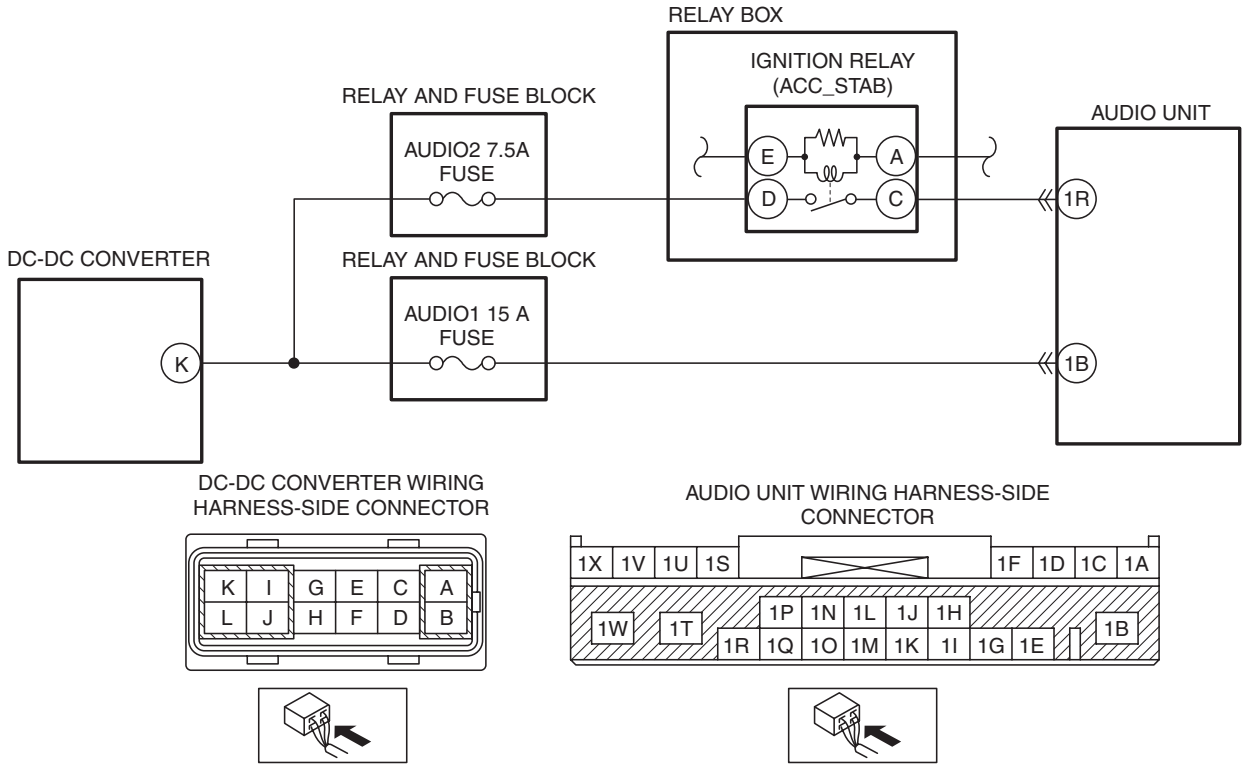
ON-BOARD DIAGNOSTIC [AUDIO]

Step	Inspection		Action
5	**INSPECT POWER SUPPLY CIRCUIT OF AUDIO UNIT FOR MALFUNCTION** • Verify that the following audio unit connectors are disconnected. • Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Switch the ignition to ACC (engine off). • Measure the voltage at the following terminals (vehicle wiring harness side). — Audio unit terminal 1B — Audio unit terminal 1R • Is the voltage B+?	Yes	Go to Step 8.
		No	• Terminal 1B voltage is not B+ — Go to Step 7. • Terminal 1R voltage is not B+ — Go to the next step.
6	**INSPECT AUDIO UNIT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Inspect the AUDIO2 15 A fuse. • Is there any malfunctioning part?	Yes	• If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the malfunctioning fuse. • If a fuse is damaged: — Replace the malfunctioning fuse.
		No	Repair or replace the wiring harness which is shorted to ground, then go to Step 8.
7	**INSPECT AUDIO UNIT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Inspect the CABIN. +B 50 A fuse, AUDIO1 15A fuse and MAIN 200 A fuse. • Is there any malfunctioning part?	Yes	• If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the malfunctioning fuse. • If a fuse is damaged: — Replace the malfunctioning fuse.
		No	Repair or replace the wiring harness which has a short to ground, then go to the next step.
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Switch the ignition off (LOCK). • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Return to Step 1 and inspect for other possible causes. If the malfunction recurs, replace the audio unit, then go to the next step. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Verify if other DTCs are displayed. • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02E-10 DTC TABLE [AUDIO].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [AUDIO]

With i-stop System

Description	Voltage decrease input from battery
Detection condition	With the ignition switched to ACC or ON, the audio unit detects voltage from the battery of 10 V or less for 30 s or more.
Fail-safe function	—
Possible cause	• Battery malfunction • Generator malfunction • Audio unit connector or terminal malfunction • Audio unit power supply circuit malfunction — Short to ground in wiring harness between AUDIO1 15A fuse and audio unit terminal 1B — AUDIO1 15 A fuse malfunction — AUDIO2 7.5 A fuse malfunction — Open circuit between audio unit terminal 1R and ignition relay (ACC_STAB) terminal C • Ignition relay (ACC_STAB) malfunction • DC-DC converter connector terminal malfunction • Open circuit in wiring harness between DC-DC converter terminal K and ignition relay terminal D • Short to ground in wiring harness between DC-DC converter terminal K and audio unit terminal 1B • Open circuit in wiring harness between DC-DC converter terminal K and audio unit terminal 1B • DC-DC converter malfunction • Audio unit malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 10-02A-1 FOREWORD [SKYACTIV-G 2.0 (L.H.D.)].) (See 10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)].) (See 10-02C-1 FOREWORD [SKYACTIV-D 2.2 (L.H.D.)].) (See 10-02D-1 FOREWORD [SKYACTIV-D 2.2 (R.H.D.)].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [AUDIO]

Step	Inspection		Action
2	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is there any malfunctioning part?	Yes	Recharge or replace the battery, then go to Step 14. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
		No	Go to the next step.
3	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is there any malfunctioning part?	Yes	Replace the generator, then go to Step 14. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
		No	Go to the next step.
4	**INSPECT AUDIO UNIT CONNECTOR CONDITION** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the audio unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 14.
		No	Go to the next step.
5	**INSPECT POWER SUPPLY CIRCUIT OF AUDIO UNIT FOR MALFUNCTION** • Verify that the following audio unit connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition to ACC (engine off). • Measure the voltage at the following terminals (vehicle wiring harness side). — Audio unit terminal 1B — Audio unit terminal 1R • Is the voltage B+?	Yes	Go to Step 14.
		No	**Terminal 1B voltage is not B+** • Go to Step 10. **Terminal 1R voltage is not B+** • Go to Step 7.
6	**INSPECT AUDIO UNIT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the AUDIO1 15 A fuse. • Is there any malfunctioning part?	Yes	• If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the malfunctioning fuse. • If a fuse is damaged: — Replace the malfunctioning fuse.
		No	Repair or replace the wiring harness which is shorted to ground, then go to Step 14.

ON-BOARD DIAGNOSTIC [AUDIO]

Step	Inspection		Action
7	**INSPECT AUDIO UNIT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect the AUDIO2 7.5 A fuse. • Is there any malfunctioning part?	Yes	• If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the malfunctioning fuse. • If a fuse is damaged: — Replace the malfunctioning fuse.
		No	Repair or replace the wiring harness which is shorted to ground, then go to Step 14.
8	**VERIFY MALFUNCTION IN POWER SUPPLY CIRCUIT OF AUDIO UNIT** • Verify that the following audio unit connectors are disconnected. • Measure the voltage at ignition relay coil (ACC_STAB) terminal D (vehicle wiring harness side). • Is the voltage B+?	Yes	Go to the next step.
		No	Go to Step 10.
9	**Inspect ignition relay (ACC_STAB).** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the ignition relay (ACC_STAB). (See 09-21-28 RELAY LOCATION.) • Inspect ignition relay (ACC_STAB). (See 09-21-29 RELAY INSPECTION.) • Is there any malfunctioning part?	Yes	Repair or replace the ignition relay (ACC_STAB), then go to Step 14.
		No	Go to the next step.
10	**INSPECT DC-DC CONVERTER CONNECTOR AND TERMINAL CONDITION** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the DC-DC converter connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 14.
		No	Go to the next step.
11	**INSPECT WIRING HARNESS FOR SHORT TO GROUND BETWEEN DC-DC CONVERTER AND IGNITION RELAY** • Verify that the DC-DC connector is disconnected. • Inspect for continuity between ignition relay (ACC_STAB) and terminal D (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 14.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [AUDIO]

Step	Inspection		Action
12	**INSPECT FOR OPEN CIRCUIT IN WIRING HARNESS BETWEEN DC-DC CONVERTER AND IGNITION RELAY** • Verify that the DC-DC connector is disconnected. • Inspect for continuity in the wiring harness between the ignition relay (ACC_STAB) terminal D (vehicle wiring harness side) and the DC-DC converter terminal K (vehicle wiring harness side). • Is there continuity?	Yes	Connect the DC-DC connector and go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 14.
13	**INSPECT DC-DC CONVERTER** • Inspect the DC-DC converter. (See 01-17A-27 DC-DC CONVERTER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunctioning part?	Yes	Repair or replace the DC-DC converter and go to the next step. (See 01-17A-26 DC-DC CONVERTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-22 DC-DC CONVERTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
		No	Go to the next step.
14	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Switch the ignition off (LOCK). • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the audio unit DTCs. (See 09-02E-9 CLEARING DTC [AUDIO].) • Perform the audio unit DTC inspection. (See 09-02E-3 DTC INSPECTION [AUDIO].) • Is the same DTC displayed?	Yes	Return to Step 1 and inspect for other possible causes. If the malfunction recurs, replace the audio unit, then go to the next step. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
15	**VERIFY IF OTHER DTCs DISPLAYED** • Verify if other DTCs are displayed. • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02E-10 DTC TABLE [AUDIO].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [AUDIO]

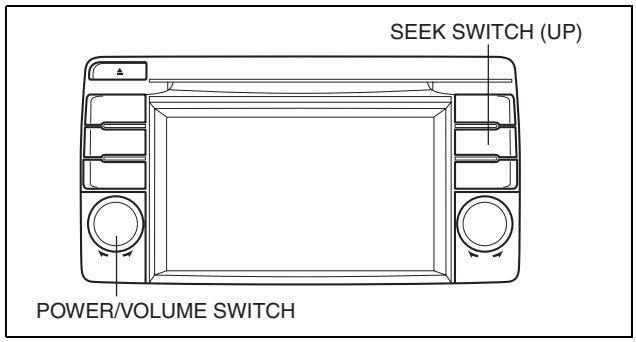
DIAGNOSTIC ASSIST FUNCTION [AUDIO]

id0902f6804500

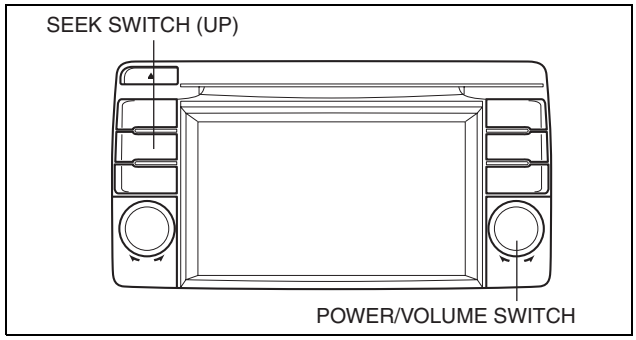
Audio unit (with color LCD)
Activation procedure

1. Switch the ignition to ACC or ON (engine off).
2. Press the POWER/VOLUME switch to turn the audio on.
3. Press the POWER/VOLUME switch and SEEK switch (up) simultaneously to launch the diagnostic assist function.

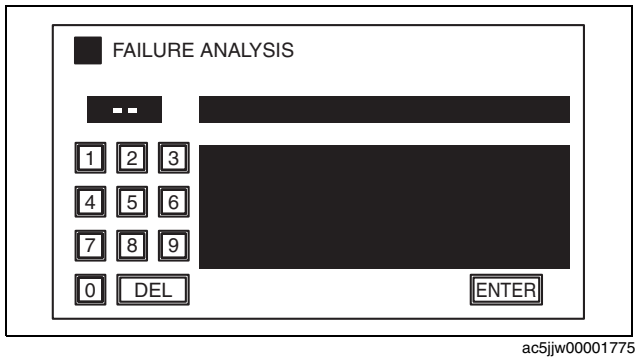
With POWER/VOLUME switch on left side



With POWER/VOLUME switch on right side

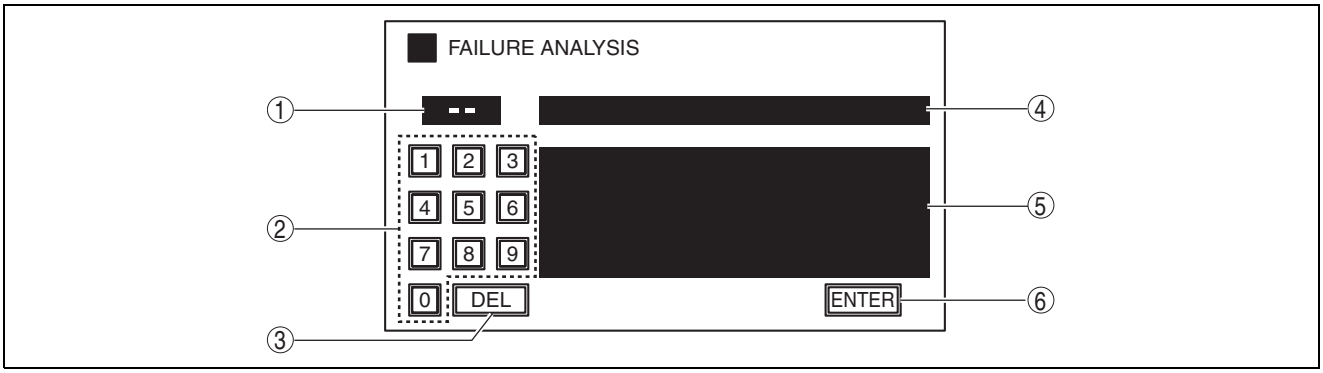


4. Verify that the launched diagnostic assist function is displayed on the screen.
5. Input each diagnostic assist code using the diagnostic assist screen. (See 09-02E-40 Diagnostic assist code list.)



ac5jjw00001775

Diagnostic assist screen



ac5wzw0000073

ON-BOARD DIAGNOSTIC [AUDIO]

No.	Name	Content/function
1	Diagnostic assist code display screen	Displays the diagnostic assist code.
2	Diagnostic assist code input switch	Inputs the diagnostic assist code.
3	DEL switch	Clears the diagnostic assist code.
4	Diagnostic content display screen	Displays the diagnostic content.
5	Diagnostic results display screen	Displays the diagnostic results.
6	ENTER switch	Transfers to the diagnostic assist function.

Diagnostic assist code list

Diagnostic assist code	Content/function
01	09-02E-40 Diagnostic assist code "01" display inspection
02	09-02E-40 Diagnostic assist code "02" switch inspection
03	09-02E-41 Diagnostic assist code "03"speaker inspection
04	09-02E-41 Diagnostic assist code "04"radio reception condition inspection
05	09-02E-42 Diagnostic assist code "05" antenna control output condition inspection
06	09-02E-43 Diagnostic assist code "06" manufacturer verification
07	09-02E-44 Diagnostic assist code "07"audio amplifier specification verification
09	09-02E-44 Diagnostic assist code "09" radio SEEK inspection
11	09-02E-44 Diagnostic assist code "11" CD diagnostic inspection
14	09-02E-45 Diagnostic assist code "14" dial inspection verification
15	09-02E-45 Diagnostic assist code "15" vehicle NAVI signal verification
16	09-02E-46 Diagnostic assist code "16" exterior device connection information clearing

Diagnostic assist code "01" display inspection

1. Launch the diagnostic assist function. (See 09-02E-39 Activation procedure.)
2. Input the diagnostic assist code "01"using the diagnostic input screen.
3. Select "ENTER".
4. Inspect according to the following table:

Inspection	Display	Action	
• Verify that the launched display inspection mode is displayed on the screen. • Verify the display.	Red→Green→Blue→White→ Black→Color bar→Gray bar	Display functions normally.	Display is normal.
		Display does not function normally.	If the display does not display/ operate normally, replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

5. Press the POWER/VOLUME switch and return to the diagnostic assist screen.
6. Press the POWER/VOLUME switch and end the diagnostic assist function.

Diagnostic assist code "02" switch inspection

1. Launch the diagnostic assist function. (See 09-02E-39 Activation procedure.)
2. Input the diagnostic assist code "02"using the diagnostic input screen.
3. Select "ENTER".
4. Inspect according to the following table:

Inspection	Display	Action	
• Verify that the launched switch inspection mode is displayed on the screen. • Operate all of the switches (press). • Does the buzzer sound?	Check SW	Yes	The switch is normal.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/ INSTALLATION.)

5. Press the POWER/VOLUME switch and return to the diagnostic assist screen.
6. Press the POWER/VOLUME switch and end the diagnostic assist function.

ON-BOARD DIAGNOSTIC [AUDIO]

Diagnostic assist code "03"speaker inspection

1. Launch the diagnostic assist function. (See 09-02E-39 Activation procedure.)
2. Input the diagnostic assist code "03"using the diagnostic input screen.
3. Select "ENTER".
4. Inspect according to the following table:

Inspection	Display	Action	
• Verify that the launched speaker inspection mode is displayed on the screen. • Does each speaker output sound in the following order?: **Without Bose®** 1. Front door speaker (LH) and tweeter (LH) 2. Front door speaker (RH) and tweeter (RH) 3. Rear door speaker (RH) 4. Rear door speaker (LH) **With Bose®** 1. Front door speaker (LH) and tweeter (LH)/front center speaker (LH) 2. Front door speaker (RH) and tweeter (RH)/front center speaker (RH) 3. Rear door speaker (RH) and D pillar speaker (RH) 4. Rear door speaker (LH) and D pillar speaker (LH)	Check Speaker	Yes	The speakers and the wiring harness between the audio unit/audio amplifier and speakers are normal.
		No	• If no sound is produced from all of the speakers. (See 09-03F-13 NO SOUND FROM ALL SPEAKERS [ENTIRE AUDIO SYSTEM].) • If no sound is produced from some of the speakers. (See 09-03F-19 NO SOUND FROM SOME SPEAKERS [ENTIRE AUDIO SYSTEM].)

5. Press the POWER/VOLUME switch and return to the diagnostic assist screen.
6. Press the POWER/VOLUME switch and end the diagnostic assist function.

Diagnostic assist code "04"radio reception condition inspection

1. Launch the diagnostic assist function. (See 09-02E-39 Activation procedure.)
2. Input the diagnostic assist code "04"using the diagnostic input screen.
3. Select "ENTER".
4. Inspect according to the following table:

Caution

- **Even if the system is normal, radio reception may be difficult depending on where the system is inspected (indoors/outdoors, or conditions at the location). Before inspecting the system, verify that radio reception is adequate.**
- **When performing the inspection, select the best area for receiving radio frequencies.**

ON-BOARD DIAGNOSTIC [AUDIO]

Inspection	Display	Action
Verify that the launched radio reception condition inspection mode is displayed on the screen.	LEVEL-10 879—LEVEL-5 879	Glass antenna, center roof antenna, antenna feeder and audio unit are normal.
	LEVEL-4 879—LEVEL-3 879	Change frequencies and re-perform the inspection.
	LEVEL-2 879—LEVEL-0 879	Inspect the glass antenna, center roof antenna, and antenna feeder. (See 09-20-31 GLASS ANTENNA INSPECTION.) (See 09-20-29 CENTER ROOF ANTENNA INSPECTION.) (See 09-20-38 ANTENNA FEEDER NO.1 INSPECTION.) (See 09-20-45 ANTENNA FEEDER NO.2 INSPECTION.) (See 09-20-52 ANTENNA FEEDER NO.3 INSPECTION.) • If the glass antenna, center roof antenna, or antenna feeder is not normal, replace the malfunctioning part. (See 09-12-38 FILAMENT REPAIR.) (See 09-20-28 CENTER ROOF ANTENNA REMOVAL/INSTALLATION.) (See 09-20-34 ANTENNA FEEDER NO.1 REMOVAL/INSTALLATION.) (See 09-20-43 ANTENNA FEEDER NO.2 REMOVAL/INSTALLATION.) (See 09-20-47 ANTENNA FEEDER NO.3 REMOVAL/INSTALLATION.) • If the glass antenna, center roof antenna, and antenna feeder are normal, replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

5. Press the POWER/VOLUME switch and return to the diagnostic assist screen.
6. Press the POWER/VOLUME switch and end the diagnostic assist function.

Diagnostic assist code "05" antenna control output condition inspection

1. Launch the diagnostic assist function. (See 09-02E-39 Activation procedure.)
2. Input the diagnostic assist code "05"using the diagnostic input screen.
3. Select "ENTER".
4. Inspect according to the following table:

Caution

- **Even if the system is normal, radio reception may be difficult depending on where the system is inspected (indoors/outdoors, or conditions at the location). Before inspecting the system, verify that radio reception is adequate.**
- **When performing the inspection, select the best area for receiving radio frequencies.**

5. Press the POWER/VOLUME switch and return to the diagnostic assist screen.
6. Press the POWER/VOLUME switch and end the diagnostic assist function.

Diagnostic assist code "06" manufacturer verification

1. Refer to the manufacturer verification procedure. (See 09-02E-6 SUPPLIER IDENTIFICATION PROCEDURE [AUDIO].)

ON-BOARD DIAGNOSTIC [AUDIO]

Diagnostic assist code "07"audio amplifier specification verification

1. Launch the diagnostic assist function. (See 09-02E-39 Activation procedure.)
2. Input the diagnostic assist code "07"using the diagnostic input screen.
3. Select "ENTER".
4. Inspect according to the following table:

Inspection	Display	Action	
• Verify that the launched audio amplifier specification inspection mode is displayed on the screen. • Verify the audio amplifier specifications. • Are the audio amplifier specifications correct?	**Without Bose®** •N **With Bose®** •L	Yes	System is normal.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/ INSTALLATION.)

5. Press the POWER/VOLUME switch and return to the diagnostic assist screen.
6. Press the POWER/VOLUME switch and end the diagnostic assist function.

Diagnostic assist code "09" radio SEEK inspection

1. Tune in the radio.
2. Launch the diagnostic assist function. (See 09-02E-39 Activation procedure.)
3. Input the diagnostic assist code "09"using the diagnostic input screen.
4. Select "ENTER".
5. Inspect according to the following table:

Inspection	Display	Action	
• Verify that the launched radio SEEK inspection mode is displayed on the screen. • Verify “ANY-CONT ON” is displayed and select “OK”. • Verify “MOV SIG AREA” is displayed and select “OK”. • “Now SEEKING” is displayed. • Is the inspection result normal?	--ch RECEIVED	Yes	System is normal.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/ INSTALLATION.)

6. Press the POWER/VOLUME switch and return to the diagnostic assist screen.
7. Press the POWER/VOLUME switch and end the diagnostic assist function.

Diagnostic assist code "11" CD diagnostic inspection

1. Verify that a CD is not inserted.
2. Launch the diagnostic assist function. (See 09-02E-39 Activation procedure.)
3. Input the diagnostic assist code "11"using the diagnostic input screen.
4. Select "ENTER".
5. Inspect according to the following table:

Inspection	Display	Action	
• Verify that the launched CD diagnostic inspection mode is displayed on the screen. • Verify “INSERT NEW DISC” is displayed and insert a disc. • “NOW CHECKING USER DISC DEFECT” is displayed. • Verify the inspection results.	OK/DISC DEFECT	Yes	System is normal.
	MALFUNCTION	No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/ INSTALLATION.)

6. Press the POWER/VOLUME switch and return to the diagnostic assist screen.
7. Press the POWER/VOLUME switch and end the diagnostic assist function.

ON-BOARD DIAGNOSTIC [AUDIO]

Diagnostic assist code "14" dial inspection verification

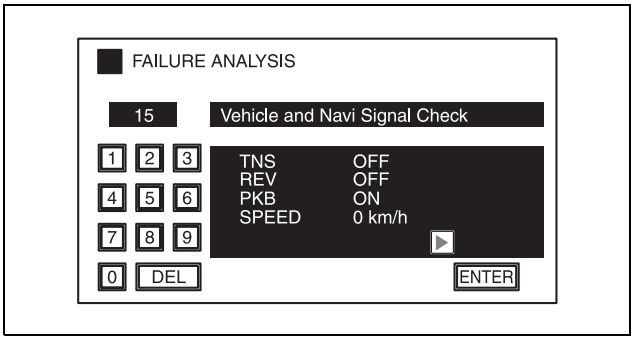
1. Launch the diagnostic assist function. (See 09-02E-39 Activation procedure.)
2. Input the diagnostic assist code "14"using the diagnostic input screen.
3. Select "ENTER".
4. Inspect according to the following table:

Inspection	Display	Action	
• Verify that the dial inspection screen is displayed. • Rotate the dial switch. • Does the switch rotation direction correspond to the direction displayed in the diagnostic assist screen?	VOL ENC ←→ TUNE ENC ←→ COMMANDAR ENC ←→	Yes	System is normal.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/ INSTALLATION.)

5. Press the POWER/VOLUME switch and return to the diagnostic assist screen.
6. Press the POWER/VOLUME switch and end the diagnostic assist function.

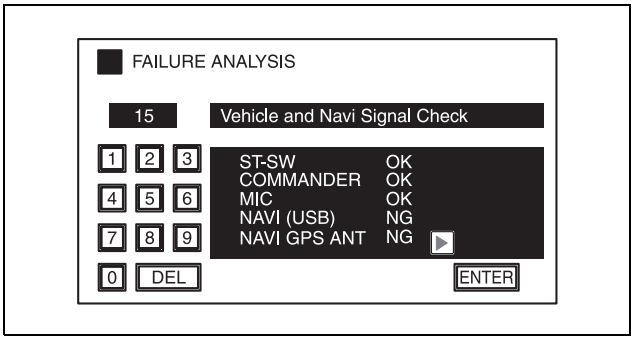
Diagnostic assist code "15" vehicle NAVI signal verification

1. Launch the diagnostic assist function. (See 09-02E-39 Activation procedure.)
2. Input the diagnostic assist code "15"using the diagnostic input screen.
3. Select "ENTER".
4. Verify that the vehicle NAVI signal verification screen is displayed.



ac5jjw00001776

5. Verify the vehicle NAVI signal status displayed in the display.



ac5jjw00001777

Name	Content/function
TNS	Displays the TNS signal status.
REV	Displays the reverse signal status.
PKB	Displays the parking brake signal status.
SPEED	Vehicle speed is displayed.
ST-SW	Displays the steering switch connection status.
COMMANDER	Displays the commander switch connection status.
MIC	Verifies the microphone connection status.
NAVI (USB)	Verifies the NAVI (USB) connection status.
NAVI GPS ANT	Verifies the GPS antenna connection status.

6. Press the POWER/VOLUME switch and return to the diagnostic assist screen.
7. Press the POWER/VOLUME switch and end the diagnostic assist function.

ON-BOARD DIAGNOSTIC [AUDIO]

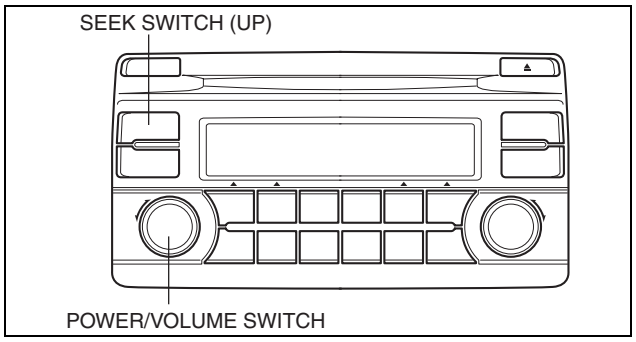
Diagnostic assist code "16" exterior device connection information clearing

Note
- Car navigation unit, Bluetooth unit, SIRIUS satellite radio unit, rear mount camera connection information, and commander connection information, which are detected when the ignition is switched to ACC or ON the first time after connecting the negative battery cable, are recorded. The exterior device connection information clearing is a function which clears this connection information.

1. Launch the diagnostic assist function. (See 09-02E-39 Activation procedure.)
2. Input the diagnostic assist code "16"using the diagnostic input screen.
3. Select "ENTER".
4. Verify that the exterior device connection information clearing screen is displayed.
5. Perform the exterior device connection information clearing according to the screen display.
6. Press the POWER/VOLUME switch and return to the diagnostic assist screen.
7. Press the POWER/VOLUME switch and end the diagnostic assist function.

Audio unit (without color LCD)
Display inspection
1. Switch the ignition to ACC or ON (engine off).
2. Press the POWER/VOLUME switch to turn the audio on.
3. Press the SEEK switch (up) for 0.2 s or more while simultaneously pressing the POWER/VOLUME switch to launch the display inspection mode.

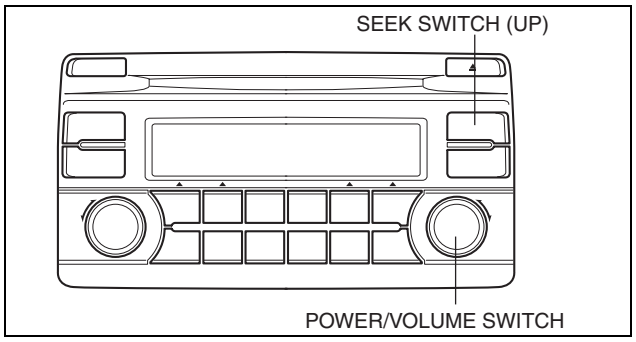
With POWER/VOLUME switch on left side



ac5wzw0000332

With POWER/VOLUME switch on right side

4. Inspect according to the following table:



ac5wzw0000332

Inspection	Display	Action	
• Verify that the launched display inspection mode is displayed on the screen. • Are the characters displayed normally in the display (no truncation or faintness)?		Yes	Display is normal.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/ INSTALLATION.)

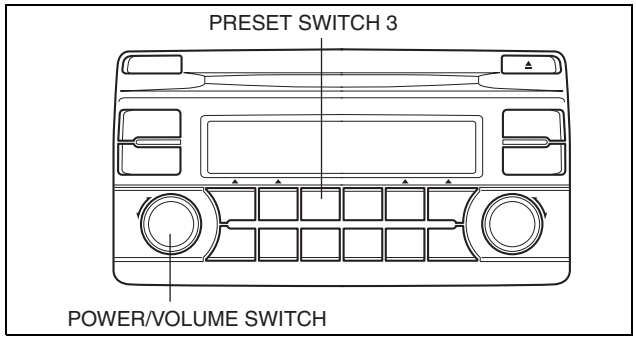
5. Switch the ignition off (LOCK) to complete the LCD display inspection mode.

ON-BOARD DIAGNOSTIC [AUDIO]

Switch Inspection

1. Switch the ignition to ACC or ON (engine off).
2. Press the POWER/VOLUME switch to turn the audio on.
3. Press PRESET switch 3 for 0.2 s or more while simultaneously pressing the POWER/VOLUME switch to launch the switch inspection mode.

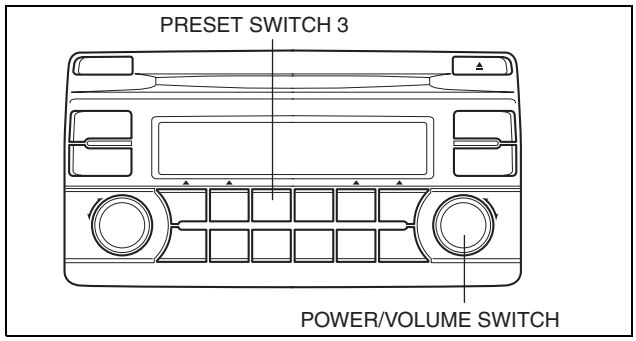
With POWER/VOLUME switch on left side



ac5wzw0000332

With POWER/VOLUME switch on right side

4. Inspect according to the following table:



ac5wzw0000332

Inspection	Display	Action	
• Verify that the launched switch inspection mode is displayed on the screen. • Operate all of the switches (press). • Does the buzzer sound?	—	Yes	The switch is normal.
		No	Verify the switch. (See 09-03F-7 CONFIRMATION STEP 1: AUDIO PANEL SWITCH CONFIRMATION [ENTIRE AUDIO SYSTEM].)

5. Switch the audio power supply off or switch the ignition off (LOCK) to complete the switch inspection mode.

Speaker Inspection

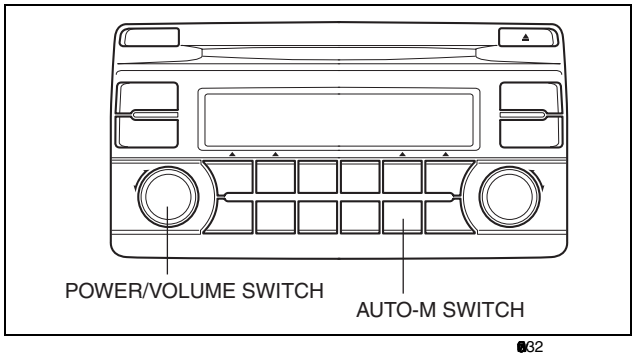
1. Switch the ignition to ACC or ON (engine off).
2. Press the POWER/VOLUME switch to turn the audio on.
3. Press the AUTO-M switch for 0.2 s or more while simultaneously pressing the POWER/VOLUME switch to launch the speaker inspection mode.

Note

- The AUTO-M function operates when the AUTO-M switch is pressed, however, press and hold it until the speaker inspection mode launches.

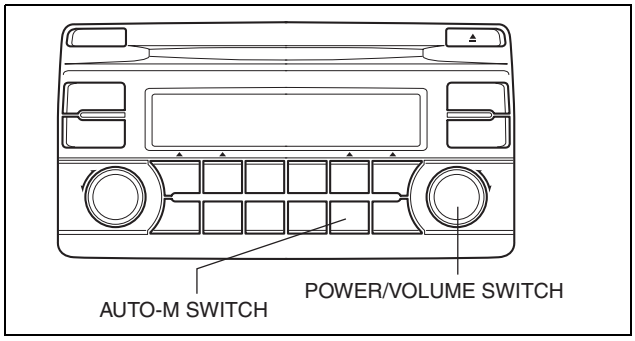
ON-BOARD DIAGNOSTIC [AUDIO]

With POWER/VOLUME switch on left side



With POWER/VOLUME switch on right side

4. Inspect according to the following table:



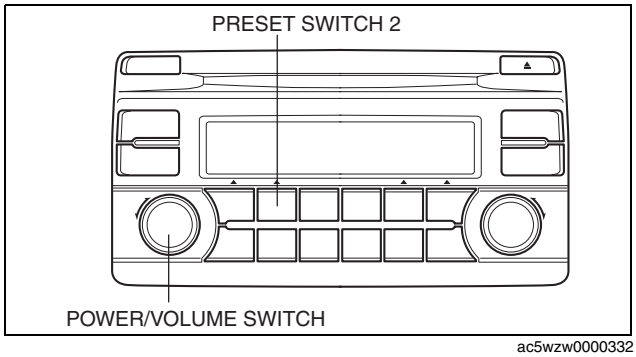
Inspection	Display	Action	
• Verify that the launched speaker inspection mode is displayed on the screen. • Does each speaker output sound in the following order?: 1. Front door speaker (LH) and tweeter (LH) 2. Front door speaker (RH) and tweeter (RH) 3. Rear door speaker (RH) 4. Rear door speaker (LH)	—	Yes	The speakers and the wiring harness between the audio unit and speakers are normal.
		No	• If no sound is produced from all of the speakers. (See 09-03F-13 NO SOUND FROM ALL SPEAKERS [ENTIRE AUDIO SYSTEM].) • If no sound is produced from some of the speakers. (See 09-03F-19 NO SOUND FROM SOME SPEAKERS [ENTIRE AUDIO SYSTEM].)

5. Switch the audio power supply off or switch the ignition off (LOCK) to complete the speaker inspection mode.

Radio Reception Condition Inspection

1. Switch the ignition to ACC or ON (engine off).
2. Press the POWER/VOLUME switch to turn the audio on.
3. Tune in the radio.
4. Press PRESET switch 2 for 0.2 s or more while simultaneously pressing the POWER/VOLUME switch to launch the radio reception condition inspection mode.

With POWER/VOLUME switch on left side



ac5wzw0000332

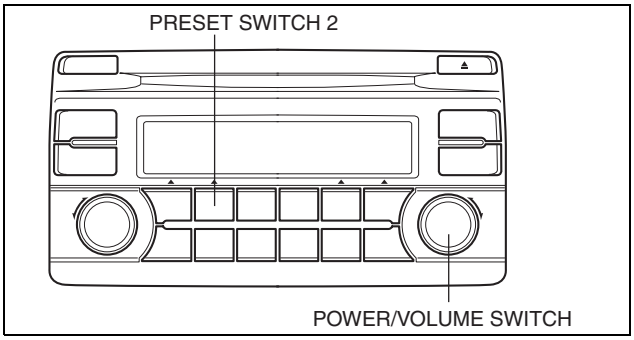
ON-BOARD DIAGNOSTIC [AUDIO]

With POWER/VOLUME switch on right side

5. Inspect according to the following table:

Caution

- **Even if the system is normal, radio reception may be difficult depending on where the system is inspected (indoors/ outdoors, or conditions at the location). Before inspecting the system, verify that radio reception is adequate.**
- **When performing the inspection, select the best area for receiving radio frequencies.**



ac5wzw0000332

Inspection	Display	Action
Verify that the launched radio reception condition inspection mode is displayed on the screen.	LEV 10 — LEV 5	Glass antenna, center roof antenna, antenna feeder and audio unit are normal.
	LEV 4 — LEV 3	Change frequencies and re-perform the inspection.
	LEV 2 — LEV 0	Inspect the glass antenna, center roof antenna, and antenna feeder. (See 09-20-31 GLASS ANTENNA INSPECTION.) (See 09-20-29 CENTER ROOF ANTENNA INSPECTION.) (See 09-20-38 ANTENNA FEEDER NO.1 INSPECTION.) (See 09-20-45 ANTENNA FEEDER NO.2 INSPECTION.) (See 09-20-52 ANTENNA FEEDER NO.3 INSPECTION.) • If the glass antenna, center roof antenna, or antenna feeder is not normal, replace the malfunctioning part. (See 09-12-38 FILAMENT REPAIR.) (See 09-20-28 CENTER ROOF ANTENNA REMOVAL/INSTALLATION.) (See 09-20-34 ANTENNA FEEDER NO.1 REMOVAL/INSTALLATION.) (See 09-20-43 ANTENNA FEEDER NO.2 REMOVAL/INSTALLATION.) (See 09-20-47 ANTENNA FEEDER NO.3 REMOVAL/INSTALLATION.) • If the glass antenna, center roof antenna, and antenna feeder are normal, replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/ INSTALLATION.)

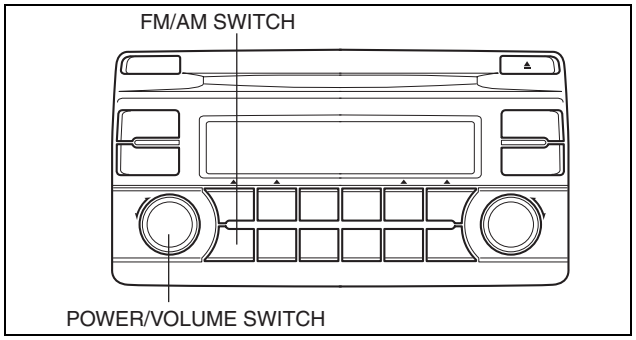
6. Switch the audio power supply off or switch the ignition off (LOCK) to complete the radio reception condition inspection mode.

Antenna control inspection

1. Switch the ignition to ACC or ON (engine off).
2. Press the POWER/VOLUME switch to turn the audio on.
3. Tune in the radio.
4. Press the FM/AM switch for 0.2 s or more while simultaneously pressing the POWER/VOLUME switch to launch the antenna control inspection mode.

ON-BOARD DIAGNOSTIC [AUDIO]

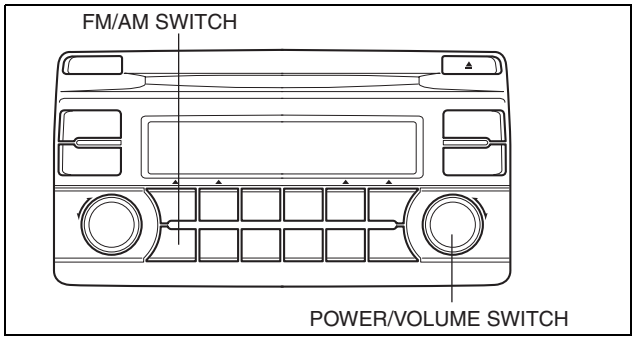
With POWER/VOLUME switch on left side



ac5wzw0000332

With POWER/VOLUME switch on right side

5. Inspect according to the following table:



ac5wzw0000333

Inspection	Display	Action	
Verify that the launched antenna control inspection mode is displayed on the screen.	ANT—ON	Good sound quality	System is normal.
		Bad sound quality	Inspect the glass antenna, center roof antenna, and antenna feeder. (See 09-20-31 GLASS ANTENNA INSPECTION.) (See 09-20-29 CENTER ROOF ANTENNA INSPECTION.) (See 09-20-38 ANTENNA FEEDER NO.1 INSPECTION.) (See 09-20-45 ANTENNA FEEDER NO.2 INSPECTION.) (See 09-20-52 ANTENNA FEEDER NO.3 INSPECTION.) • If the glass antenna, center roof antenna, or antenna feeder is not normal, replace the malfunctioning part. (See 09-12-38 FILAMENT REPAIR.) (See 09-20-28 CENTER ROOF ANTENNA REMOVAL/INSTALLATION.) (See 09-20-34 ANTENNA FEEDER NO.1 REMOVAL/INSTALLATION.) (See 09-20-43 ANTENNA FEEDER NO.2 REMOVAL/INSTALLATION.) (See 09-20-47 ANTENNA FEEDER NO.3 REMOVAL/INSTALLATION.) • If the glass antenna, center roof antenna, and antenna feeder are normal, replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)
	ANT—OFF	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)	

6. Switch the audio power supply off or switch the ignition off (LOCK) to complete the antenna control inspection mode.

ON-BOARD DIAGNOSTIC [AUDIO]

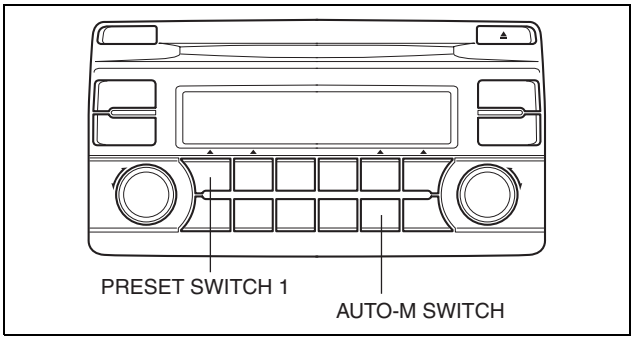
Dial inspection verification

1. Switch the ignition to ACC or ON (engine off).
2. Press the POWER/VOLUME switch to turn the audio on.
3. Simultaneously press the AUTO-M switch and PRESET switch 1 for 3 s or more to launch the dial inspection mode.

Note

- The AUTO-M function operates when the AUTO-M switch is pressed, however, press and hold it until the dial inspection mode launches.

4. Inspect according to the following table:



ac5wzw0000333

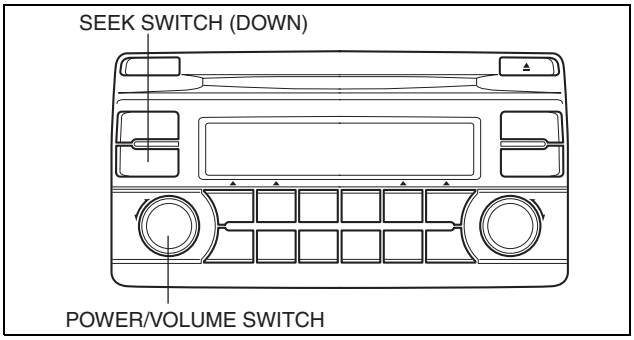
Inspection	Display	Action	
• Verify that the launched dial inspection mode is displayed on the screen. • Rotate the dial switch. • Does the switch rotation direction correspond to the direction displayed in audio display?	→ ←	Yes	System is normal.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/ INSTALLATION.)

5. Switch the audio power supply off or switch the ignition off (LOCK) to complete the dial inspection mode.

Audio amplifier specification verification.

1. Switch the ignition to ACC or ON (engine off).
2. Press the SEEK switch (down) for 3 s or more while simultaneously pressing the POWER/VOLUME switch to launch the audio amplifier specification inspection mode.

With POWER/VOLUME switch on left side

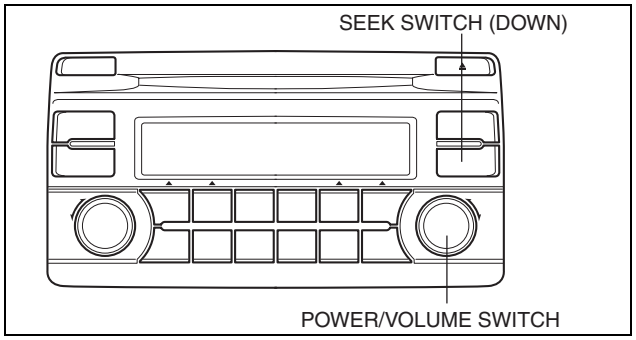


ac5wzw0000333

ON-BOARD DIAGNOSTIC [AUDIO]

With POWER/VOLUME switch on right side

3. Inspect according to the following table:



ac5wzw0000333

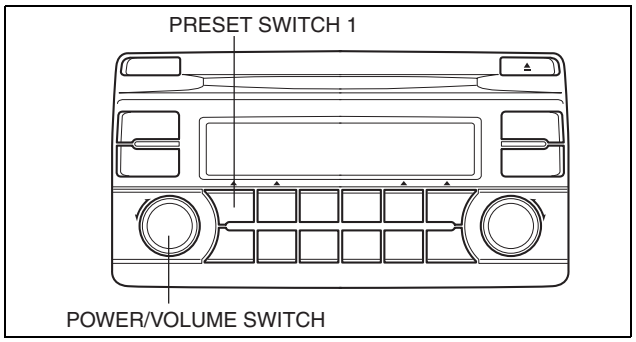
Inspection	Display	Action
• Verify that the launched audio amplifier specification inspection mode is displayed on the screen. • Verify the audio amplifier specifications. • Are the audio amplifier specifications correct?	**Without Bose** •N (Normal) **With Bose** •L (Line out)	System is normal.
		Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/ INSTALLATION.)

4. Switch the ignition off (LOCK) to complete the audio amplifier specification inspection mode.

AUTO-M inspection mode

1. Switch the ignition to ACC or ON (engine off).
2. Press the POWER/VOLUME switch to turn the audio on.
3. Press PRESET switch 1 for 3 s or more while simultaneously pressing the POWER/VOLUME switch to launch the AUTO-M inspection mode.

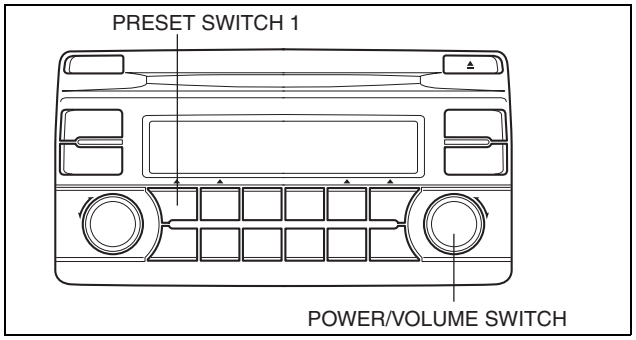
With POWER/VOLUME switch on left side



ac5wzw0000333

With POWER/VOLUME switch on right side

4. Inspect according to the following table:



ac5wzw0000333

ON-BOARD DIAGNOSTIC [AUDIO]

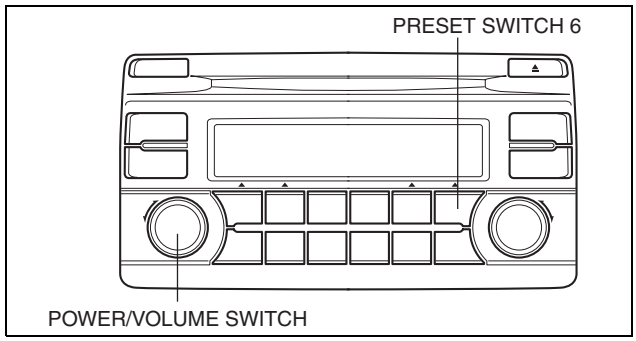
Inspection	Display	Action	
• Verify that the launched AUTO-M inspection mode is displayed on the screen. • Perform the AUTO-M inspection according to the screen instructions. • Is the inspection result normal?	--ch RECEIVED	Yes	System is normal.
		No	Inspect the glass antenna, center roof antenna, and antenna feeder. (See 09-20-31 GLASS ANTENNA INSPECTION.) (See 09-20-29 CENTER ROOF ANTENNA INSPECTION.) (See 09-20-38 ANTENNA FEEDER NO.1 INSPECTION.) (See 09-20-45 ANTENNA FEEDER NO.2 INSPECTION.) (See 09-20-52 ANTENNA FEEDER NO.3 INSPECTION.) • If the glass antenna, center roof antenna, or antenna feeder is not normal, replace the malfunctioning part. (See 09-12-38 FILAMENT REPAIR.) (See 09-20-28 CENTER ROOF ANTENNA REMOVAL/INSTALLATION.) (See 09-20-34 ANTENNA FEEDER NO.1 REMOVAL/INSTALLATION.) (See 09-20-43 ANTENNA FEEDER NO.2 REMOVAL/INSTALLATION.) (See 09-20-47 ANTENNA FEEDER NO.3 REMOVAL/INSTALLATION.) • If the glass antenna, center roof antenna, and antenna feeder are normal, replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.)

5. Switch the audio power supply off or switch the ignition off (LOCK) to complete the AUTO-M inspection mode.

CD diagnostic inspection

1. Switch the ignition to ACC or ON (engine off).
2. Press PRESET switch 6 for 3 s or more while simultaneously pressing the POWER/VOLUME switch to launch the CD diagnostic inspection mode.

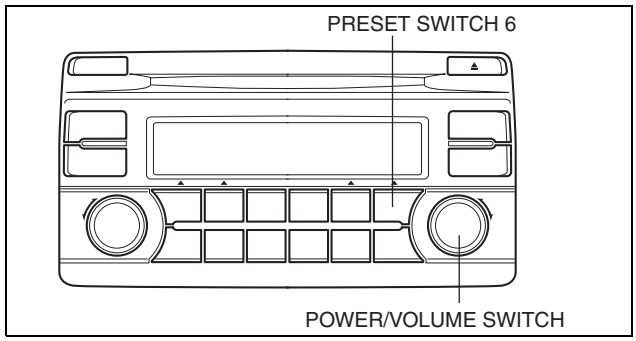
With POWER/VOLUME switch on left side



ac5wzw0000305

With POWER/VOLUME switch on right side

3. Inspect according to the following table:



ac5wzw0000333

ON-BOARD DIAGNOSTIC [AUDIO]

Inspection	Display	Action
• Verify that the launched CD diagnostic inspection mode is displayed on the screen. • After LOAD NEWDISC is displayed, insert the CD. • Is the inspection result normal?	CD DEFECTIVE	System is normal.
	MALFUNCTION	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/ INSTALLATION.)

4. Press the POWER/VOLUME switch to complete the CD diagnostic inspection mode.

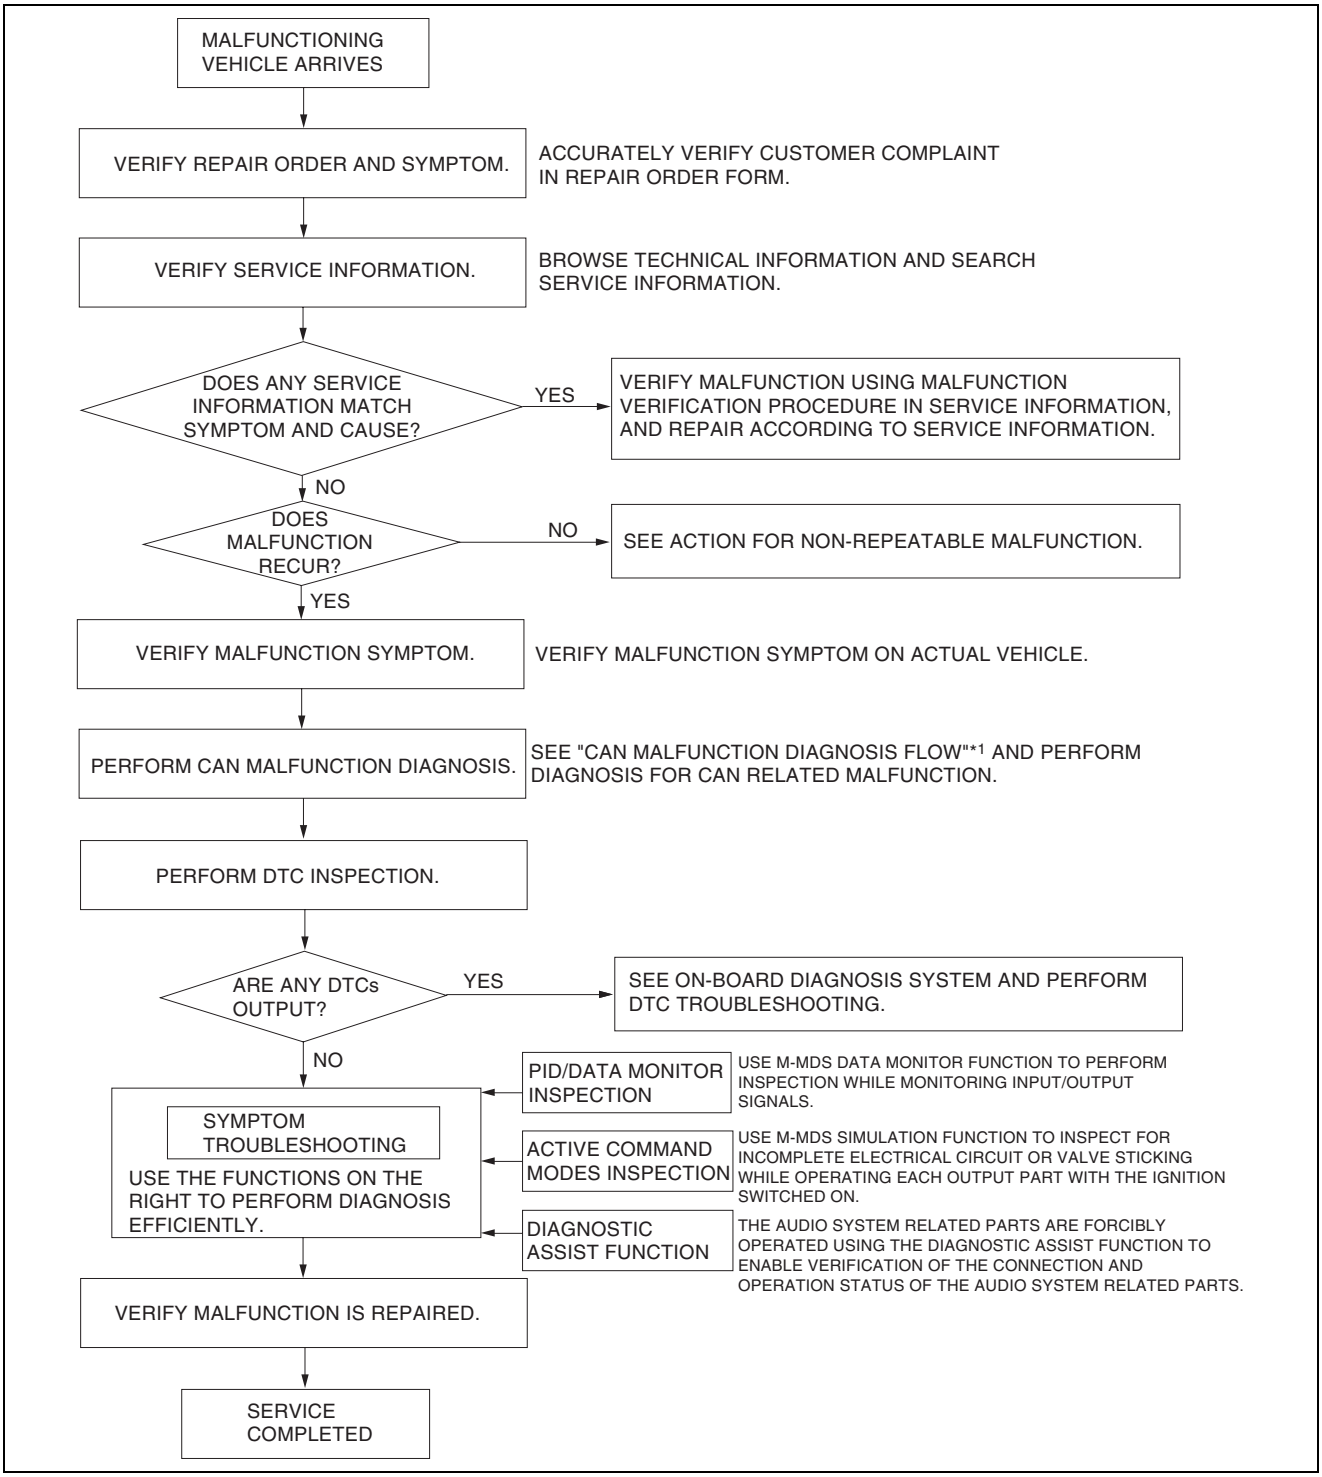
ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

FOREWORD [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

id0902g8441800

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



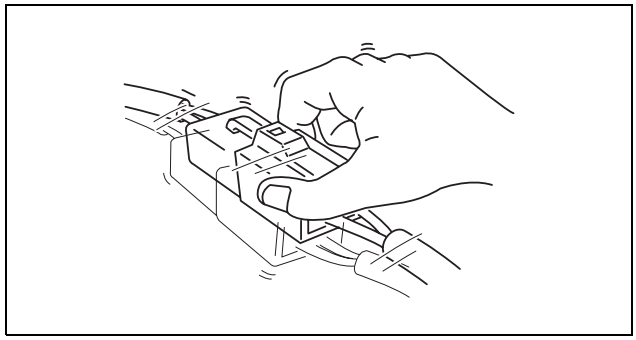
ac5wzw0000266

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)] / 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)] / 10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)] / 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

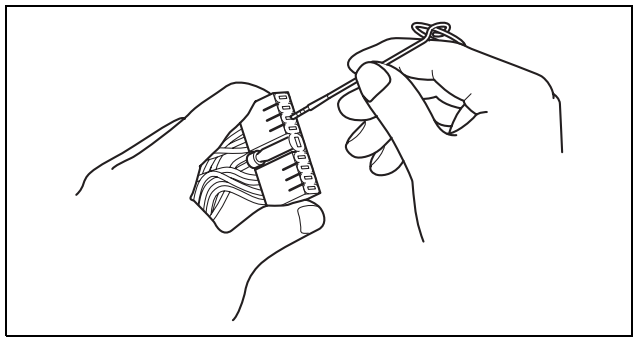
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Verify that a DTC has been recorded in the memory. (See 09-02F-6 DTC TABLE [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].)
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for occurrence of any malfunction or DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the poor connection malfunction.



am3uuw0000750

ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

DTC INSPECTION [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

id0902g8440500

Note

- For the DTC inspection, there is a method using the M-MDS and one that does not use it (on-board diagnostic test mode).
- Because the DTCs differ if using or not using the M-MDS, perform the DTC inspection using the M-MDS method and the method not using it.
- The DTCs are cleared if the ignition is switched off or the battery cable is disconnected.
- When performing the DTC inspection, input all of the displayed DTCs in the Audio Repair Order Form.
- If the malfunction persists even if the engine is switched off or the battery cable is disconnected, the DTCs are displayed again.

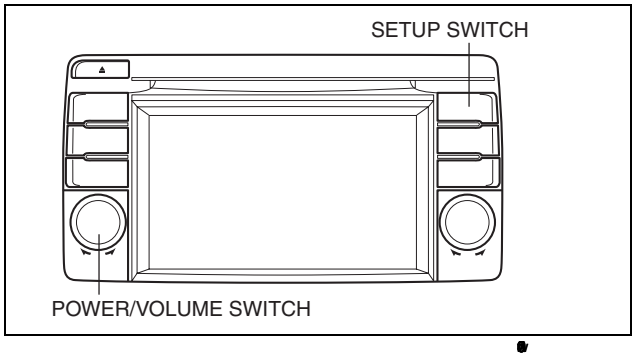
When using the M-MDS
ODDTC self test

1. Connect the M-MDS to the DLC-2.
2. After vehicle identification, select the following from the M-MDS initialization screen.
    1. “Self-test”
    2. “Module”
    3. “ACU”
3. Verify the DTC according to the directions on the screen.
    - If a DTC is displayed, repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02F-6 DTC TABLE [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].)

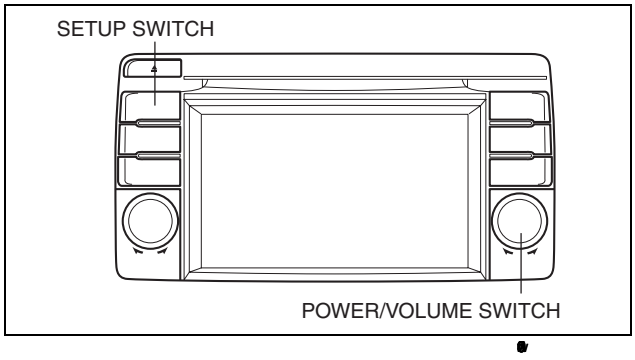
Not using M-MDS (on-board diagnostic test mode)

1. Switch the ignition to ACC or ON (engine off).
2. Verify that the audio is turned off. If the audio is turned on, press the POWER/VOLUME switch to turn it off.
3. Press the POWER/VOLUME switch and SETUP switch simultaneously to launch the on-board diagnostic test mode.

With POWER/VOLUME switch on left side

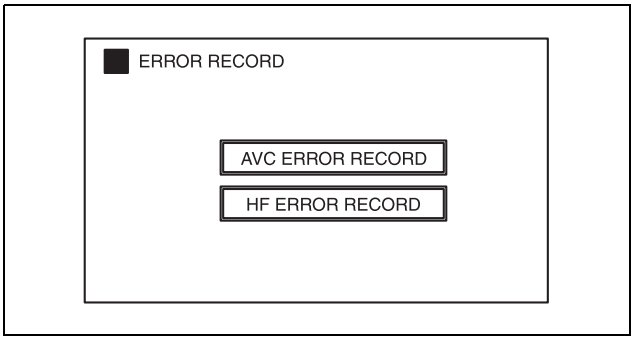


With POWER/VOLUME switch on right side



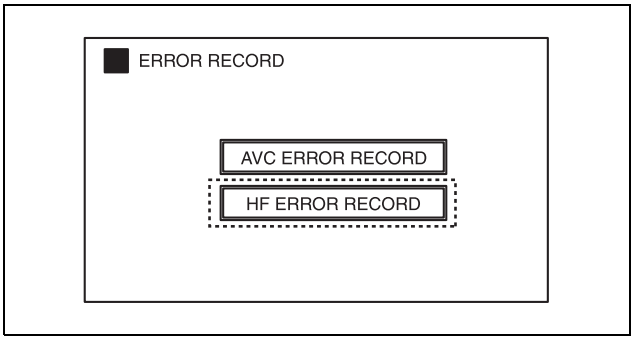
ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

4. Verify that the launched on-board diagnostic test mode is displayed on the screen.



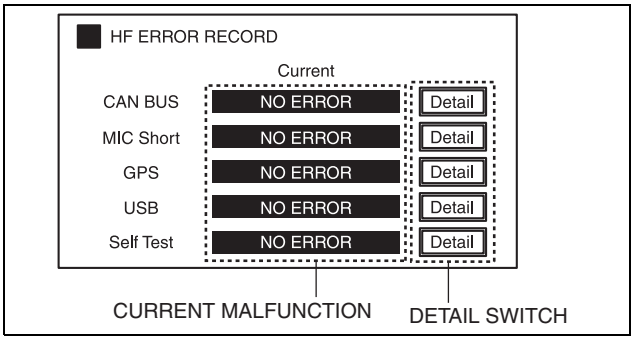
ac5jjw00001783

5. Select HF ERROR RECORD.



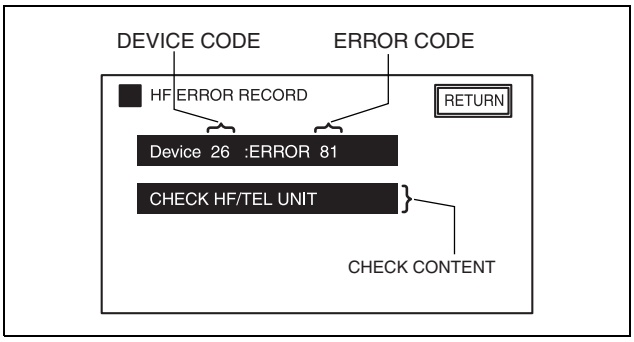
ac5wzw0000076

6. Verify the displayed DTCs.



ac5wzw0000076

7. If DTCs are displayed, press the Detail switch and verify the DTC details.
8. Complete the on-board diagnostic test mode by pressing the POWER/VOLUME switch to return to the on-board diagnostic mode screen and pressing the POWER/VOLUME switch again, or by switching the ignition off (LOCK).



ac5wzw0000305

ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

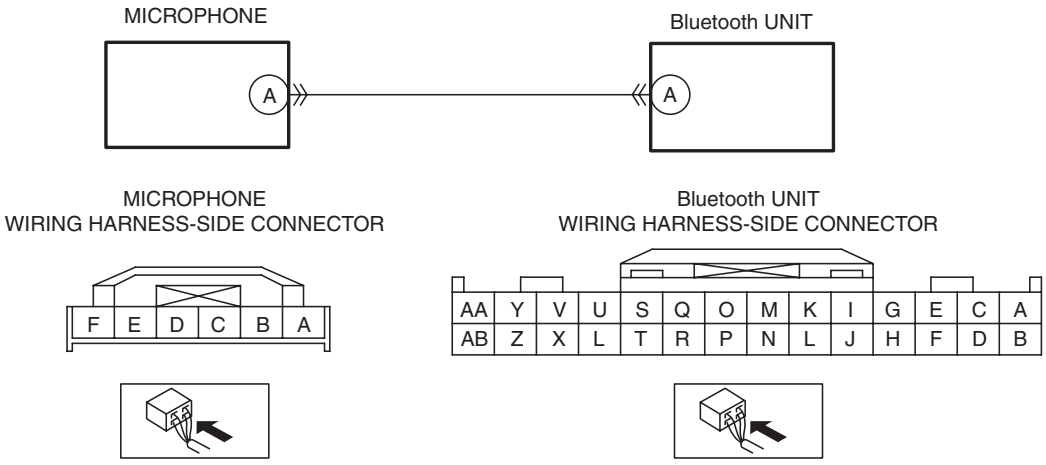
DTC: B116A:12, 26:Er82 [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

id0902g8440100

Description	Open circuit in microphone circuit
Detection condition	Short to power supply detected in microphone input circuit
Fail-safe function	—
Possible cause	• Connector or terminal malfunction • Open circuit in wiring harness between Bluetooth unit terminal A and microphone terminal A • Microphone malfunction • Bluetooth unit malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT MICROPHONE CONNECTOR STATUS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the microphone connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 4.
		No	Go to the next step.
2	**INSPECT BLUETOOTH UNIT CONDITION** • Disconnect the Bluetooth unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 4.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

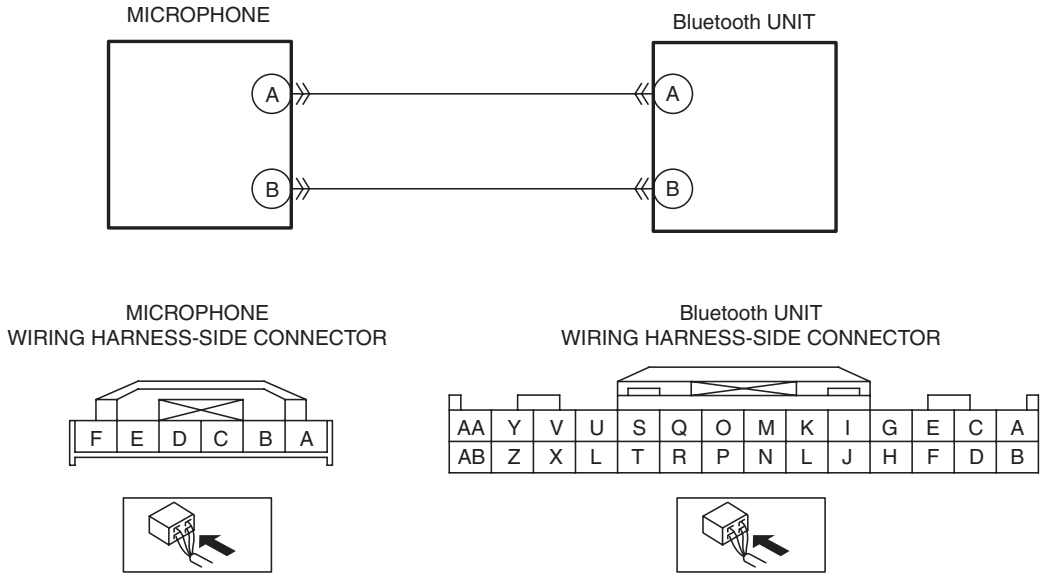
Step	Inspection		Action
3	**INSPECT FOR SHORT TO POWER SUPPLY IN MICROPHONE INPUT CIRCUIT** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off). • Measure the voltage of Bluetooth unit terminal A (vehicle wiring harness side). • Is the voltage B+?	Yes	Repair or replace the wiring harness which has a short to the power supply, then go to the next step.
		No	Go to the next step.
4	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS MICROPHONE OR BLUETOOTH UNIT** • Perform an inspection of the Bluetooth unit DTCs. (See 09-02F-4 DTC INSPECTION [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].) • Is the same DTC displayed?	Yes	Replace the microphone, then go to the next step. (See 09-20-65 MICROPHONE REMOVAL/INSTALLATION.)
		No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Perform an inspection of the Bluetooth unit DTCs. (See 09-02F-4 DTC INSPECTION [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].) • Is the same DTC displayed?	Yes	Replace the Bluetooth unit, then go to the next step. (See 09-20-67 Bluetooth UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02F-6 DTC TABLE [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

DTC: B116A:13 [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

id0902g8452100

Description	Open circuit in microphone circuit
Detection condition	Microphone non-connection signal constantly detected
Fail-safe function	—
Possible cause	• Connector or terminal malfunction • Open circuit in wiring harness between Bluetooth unit terminal B and microphone terminal B • Short to ground in wiring harness between Bluetooth unit terminal A and microphone terminal A • Microphone malfunction • Bluetooth unit malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT MICROPHONE CONNECTOR STATUS** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the microphone connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 5.
		No	Go to the next step.
2	**INSPECT BLUETOOTH UNIT CONDITION** • Disconnect the Bluetooth unit connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is there any malfunctioning part?	Yes	Repair or replace the connector, then go to Step 5.
		No	Go to the next step.
3	**INSPECT MICROPHONE CIRCUIT FOR OPEN CIRCUIT** • Inspect the wiring harness for continuity between Bluetooth unit terminal B and microphone terminal B (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 5.

Step	Inspection		Action
4	**INSPECT FOR SHORT TO GROUND IN MICROPHONE INPUT CIRCUIT** • Inspect for continuity between Bluetooth unit terminal A (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which has a short to ground, then go to the next step.
		No	Go to the next step.
5	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS MICROPHONE OR BLUETOOTH UNIT** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Perform an inspection of the Bluetooth unit DTCs. (See 09-02F-4 DTC INSPECTION [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].) • Is the same DTC displayed?	Yes	Replace the microphone, then go to the next step. (See 09-20-65 MICROPHONE REMOVAL/INSTALLATION.)
		No	Go to Step 7.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Perform an inspection of the Bluetooth unit DTCs. (See 09-02F-4 DTC INSPECTION [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].) • Is the same DTC displayed?	Yes	Replace the Bluetooth unit, then go to the next step. (See 09-20-67 Bluetooth UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02F-6 DTC TABLE [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].)
		No	DTC troubleshooting completed.

DTC: B116A:44, 26:Er86 [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

id0902g8440400

Description	Bluetooth unit internal malfunction
Detection condition	Bluetooth unit internal malfunction detected
Fail-safe function	—
Possible cause	Bluetooth unit malfunction
System wiring diagram	—

Diagnostic Procedure

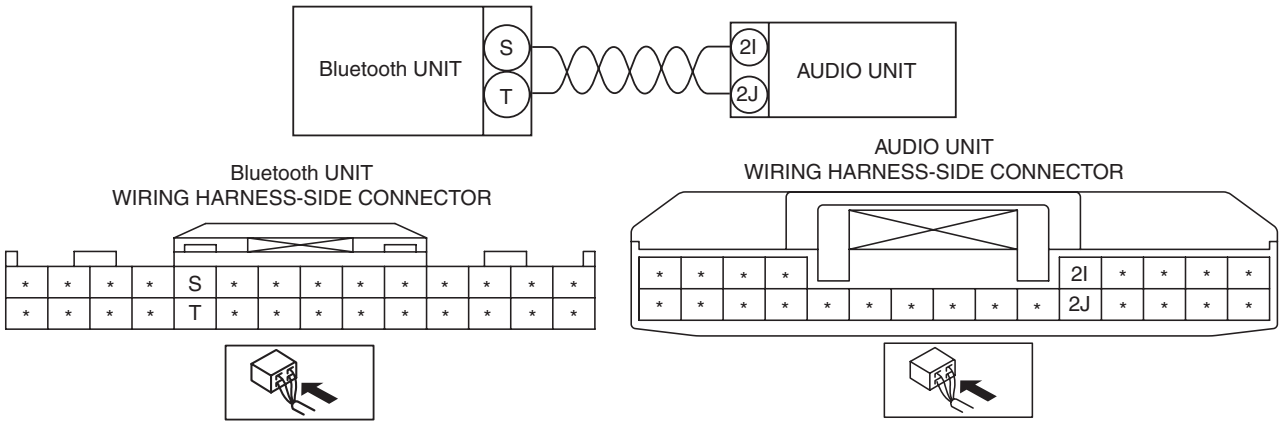
Step	Inspection		Action
1	**PERFORM INSPECTION OF BLUETOOTH UNIT DTCs** • Perform an inspection of the Bluetooth unit DTCs. (See 09-02F-4 DTC INSPECTION [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].) • Is the same DTC displayed?	Yes	Replace the Bluetooth unit, then go to the next step. (See 09-20-67 Bluetooth UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02F-6 DTC TABLE [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

DTC: U0197:00 [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

id0902g8441300

Description	Communication error with audio unit
Detection condition	CAN signal is not sent from Bluetooth unit
Fail-safe function	—
Possible cause	• Short in wiring harness between Bluetooth unit and audio unit, short to power supply, short or open circuit to ground • Audio unit malfunction • Bluetooth unit malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT FOR SHORT BETWEEN CAN CIRCUITS** • Remove the glove compartment. (See 09-17-30 GLOVE COMPARTMENT REMOVAL/INSTALLATION.) • Switch the ignition ON (engine off or on). • Measure the voltage between the following terminals: — Between Bluetooth unit terminal S and body ground — Between Bluetooth unit terminal T and body ground • Are the measured voltage values between the 2 terminals the same?	Yes	Go to the next step.
		No	Go to Step 4.

ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

Step	Inspection		Action
2	**DETERMINE IF SHORT OCCURRING BETWEEN LINES IS IN AUDIO UNIT** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) • Disconnect the audio unit connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage between the following terminals: — Audio unit connector (vehicle wiring harness) terminal 2I and body ground — Audio unit connector (vehicle wiring harness) terminal 2J and body ground • Are the measured voltage values between the 2 terminals the same?	Yes	Go to the next step.
		No	Replace the audio unit because there is a short between circuits in the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) After replacement, go to Step 13.

ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

Step	Inspection		Action
3	**DETERMINE IF SHORT OCCURRING BETWEEN LINES IS IN BLUETOOTH UNIT** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the Bluetooth unit. (See 09-20-67 Bluetooth UNIT REMOVAL/ INSTALLATION.) • Disconnect the Bluetooth unit connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage between the following terminals: — Audio unit connector (vehicle wiring harness) terminal 2I and body ground — Audio unit connector (vehicle wiring harness) terminal 2J and body ground • Are the measured voltage values between the 2 terminals the same?	Yes	Repair or replace the wiring harness between the audio unit and the Bluetooth unit because the wiring harness is shorted between circuits, then go to Step 13.
		No	Replace the Bluetooth unit because there is a short between circuits in the Bluetooth unit. (See 09-20-67 Bluetooth UNIT REMOVAL/ INSTALLATION.) After replacement, go to Step 13.
4	**INSPECT FOR SHORT TO POWER SUPPLY IN CAN CIRCUIT** • Measure the voltage between the following terminals: — Between Bluetooth unit terminal S and body ground — Between Bluetooth unit terminal T and body ground • Can B+ voltage be measured? **Note** • If a short to power supply other than the B+ power supply has occurred, a constant voltage other than B+ can be measured.	Yes	Go to the next step.
		No	Go to Step 7.

ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

Step	Inspection		Action
5	**DETERMINE IF SHORT TO POWER SUPPLY IS OCCURRING IN AUDIO UNIT** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) • Disconnect the audio unit connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage between the following terminals: — Audio unit connector (vehicle wiring harness) terminal 2I and body ground — Audio unit connector (vehicle wiring harness) terminal 2J and body ground • Can B+ voltage be measured? **Note** • If a short to power supply other than the B+ power supply has occurred, a constant voltage other than B+ can be measured.	Yes	Go to the next step.
		No	Replace the audio unit because there is a short to the power supply in the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) After replacement, go to Step 13.

ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

Step	Inspection		Action
6	**DETERMINE IF SHORT TO POWER IS OCCURRING IN BLUETOOTH UNIT** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the Bluetooth unit. (See 09-20-67 Bluetooth UNIT REMOVAL/ INSTALLATION.) • Disconnect the Bluetooth unit connector. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage between the following terminals: — Audio unit connector (vehicle wiring harness) terminal 2I and body ground — Audio unit connector (vehicle wiring harness) terminal 2J and body ground • Can B+ voltage be measured? **Note** • If a short to power supply other than the B+ power supply has occurred, a constant voltage other than B+ can be measured.	Yes	Repair or replace the wiring harness between the audio unit and the Bluetooth unit because the wiring harness is shorted to the power supply, then go to Step 13.
		No	Replace the Bluetooth unit because there is a short to the power supply in the Bluetooth unit. (See 09-20-67 Bluetooth UNIT REMOVAL/ INSTALLATION.) After replacement, go to Step 13.
7	**INSPECT FOR SHORT TO GROUND IN CAN CIRCUIT** • Switch the ignition off (LOCK). • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect for continuity between the following terminals: — Between Bluetooth unit terminal S and body ground — Between Bluetooth unit terminal T and body ground • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 10.

ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

Step	Inspection		Action
8	**DETERMINE IF SHORT TO GROUND IS OCCURRING IN AUDIO UNIT** • Remove the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) • Disconnect the audio unit connector. • Inspect for continuity between the following terminals: — Audio unit connector (vehicle wiring harness) terminal 2I and body ground — Audio unit connector (vehicle wiring harness) terminal 2J and body ground • Is there continuity?	Yes	Go to the next step.
		No	Replace the audio unit because there is a short to ground inside the unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) After replacement, go to Step 13.
9	**DETERMINE IF SHORT TO GROUND IS OCCURRING IN BLUETOOTH UNIT** • Remove the Bluetooth unit. (See 09-20-67 Bluetooth UNIT REMOVAL/INSTALLATION.) • Disconnect the Bluetooth unit connector. • Inspect for continuity between the following terminals: — Audio unit connector (vehicle wiring harness) terminal 2I and body ground — Audio unit connector (vehicle wiring harness) terminal 2J and body ground • Is there continuity?	Yes	Repair or replace the wiring harness between the audio unit and the Bluetooth unit because the wiring harness is shorted to ground, then go to Step 13.
		No	Replace the Bluetooth unit because there is a short to ground inside the unit. (See 09-20-67 Bluetooth UNIT REMOVAL/INSTALLATION.) After replacement, go to Step 13.
10	**INSPECT CAN CIRCUIT FOR OPEN CIRCUIT** • Remove the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) • Disconnect the audio unit connector. • Remove the Bluetooth unit. (See 09-20-67 Bluetooth UNIT REMOVAL/INSTALLATION.) • Disconnect the Bluetooth unit connector. • Inspect for continuity between the following terminals: — Inspect the wiring harness for continuity between Bluetooth unit connector (vehicle wiring harness side) terminal S and audio unit connector (vehicle wiring harness side) terminal 2I. — Inspect the wiring harness for continuity between Bluetooth unit connector (vehicle wiring harness side) terminal T and audio unit connector (vehicle wiring harness side) terminal 2J. • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 13.
11	**INSPECT AUDIO UNIT RESISTANCE** • Inspect the resistance between the audio unit terminal 2I and terminal 2J (part side). • Is the resistance **118**—**130** Ω?	Yes	Go to the next step.
		No	Replace the audio unit. (See 09-20-4 AUDIO UNIT REMOVAL/INSTALLATION.) After replacement, go to Step 13.
12	**INSPECT BLUETOOTH UNIT RESISTANCE** • Inspect the resistance between Bluetooth unit terminals S and T (part side). • Is the resistance **118**—**130** Ω?	Yes	Go to the next step.
		No	Replace the Bluetooth unit. (See 09-20-67 Bluetooth UNIT REMOVAL/INSTALLATION.) After replacement, go to the next step.
13	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Connect all the connectors. • Perform an inspection of the Bluetooth unit DTCs. (See 09-02F-4 DTC INSPECTION [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)].) • Is the same DTC displayed?	Yes	Return to Step 1 and inspect for other possible causes. If the malfunction recurs, replace the Bluetooth unit, then go to the next step. (See 09-20-67 Bluetooth UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

Step	Inspection		Action
14	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting.
		No	DTC troubleshooting completed.

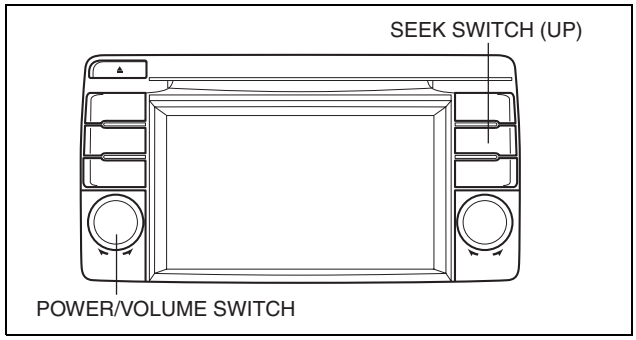
DIAGNOSTIC ASSIST FUNCTION [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

id0902g8804500

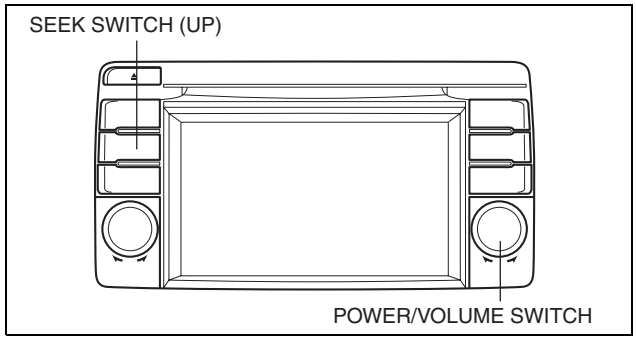
Activation procedure

1. Switch the ignition to ACC or ON (engine off).
2. Press the POWER/VOLUME switch to turn the audio on.
3. Press the POWER/VOLUME switch and SEEK switch (up) simultaneously to launch the diagnostic assist function.

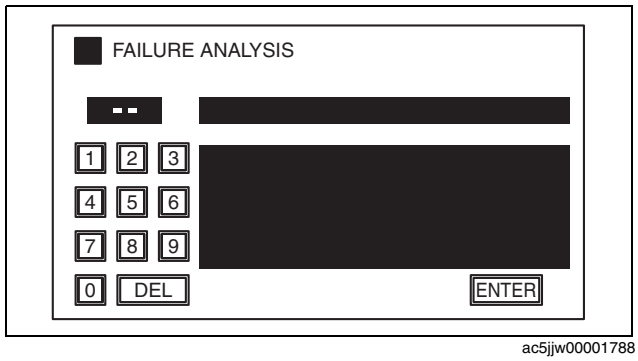
With POWER/VOLUME switch on left side



With POWER/VOLUME switch on right side



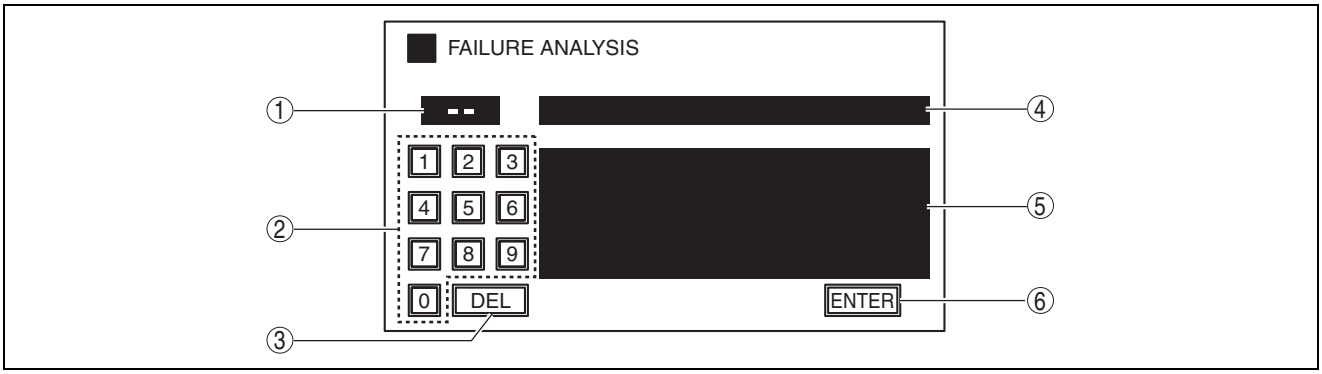
4. Verify that the launched diagnostic assist function is displayed on the screen.
5. Input each diagnostic assist code using the diagnostic assist code input screen. (See 09-02F-18 Diagnostic assist code table.)



ac5jjw00001788

ON-BOARD DIAGNOSTIC [Bluetooth SYSTEM (HANDS-FREE TELEPHONE (HF/TEL) SYSTEM)]

Diagnostic assist code input screen



ac5wzw0000077

No.	Name	Content/function
1	Diagnostic assist code display screen	Displays the diagnostic assist code.
2	Diagnostic assist code input switch	Inputs the diagnostic assist code.
3	DEL switch	Clears the diagnostic assist code.
4	Diagnostic content display screen	Displays the diagnostic content.
5	Diagnostic results display screen	Displays the diagnostic results.
6	ENTER switch	Transfers to the diagnostic assist function.

Diagnostic assist code table

Diagnostic assist code	Content/function
37	09-02F-18 Diagnostic assist code "37" HF unit connection information
38	09-02F-18 Diagnostic assist code "38" HF unit software version

Diagnostic assist code "37" HF unit connection information

1. Launch the diagnostic assist function. (See 09-02F-17 Activation procedure.)
2. Input the diagnostic assist code "37"using the diagnostic assist code input screen.
3. Select "ENTER".

Inspection	Display	Action
• Launch the connection information mode. • Verify the connection status.	CONNECT	The Bluetooth unit connection status is normal.
	CON ERR	Verify the Bluetooth unit connection status. (See 09-20-67 Bluetooth UNIT REMOVAL/ INSTALLATION.)

4. Press the POWER/VOLUME switch and return to the diagnostic assist code input screen.
5. Press the POWER/VOLUME switch and cancel the diagnostic assist mode.

Diagnostic assist code "38" HF unit software version

1. Launch the diagnostic assist function. (See 09-02F-17 Activation procedure.)
2. Input the diagnostic assist code "38"using the diagnostic assist code input screen.
3. Select "ENTER".

Inspection	Display	Action
• Launch the software version mode. • Verify the version.	Display the software version	—

4. Press the POWER/VOLUME switch and return to the diagnostic assist code input screen.
5. Press the POWER/VOLUME switch and end the diagnostic assist mode.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

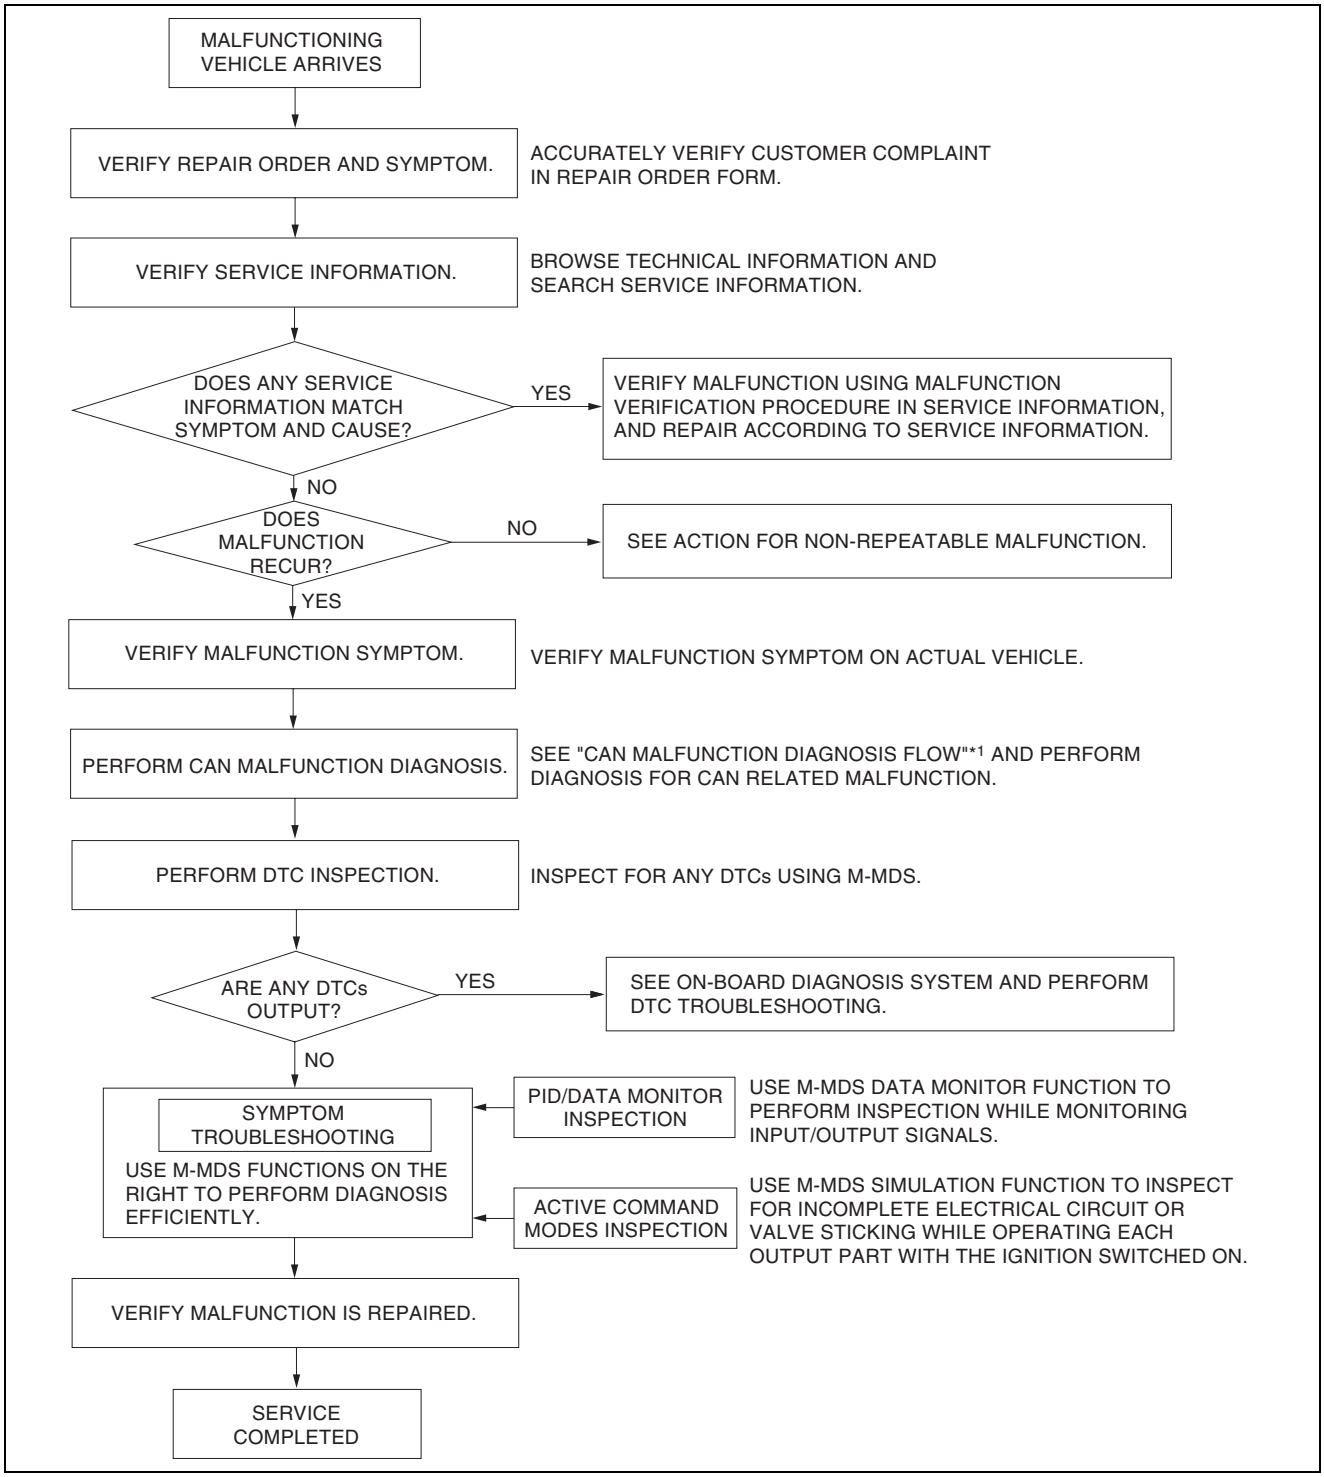
FOREWORD [INSTRUMENT CLUSTER]

id0902e8960100

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



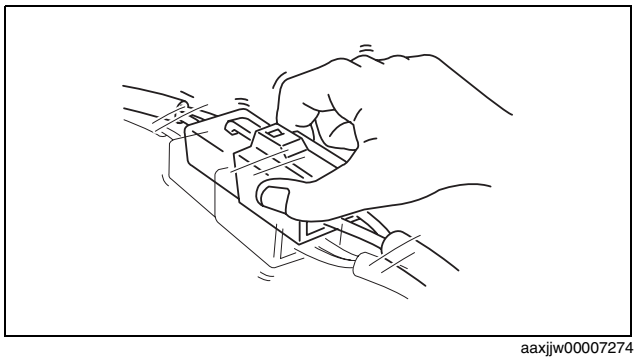
am3zzw0001242

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)]/10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)]/10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)]/10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

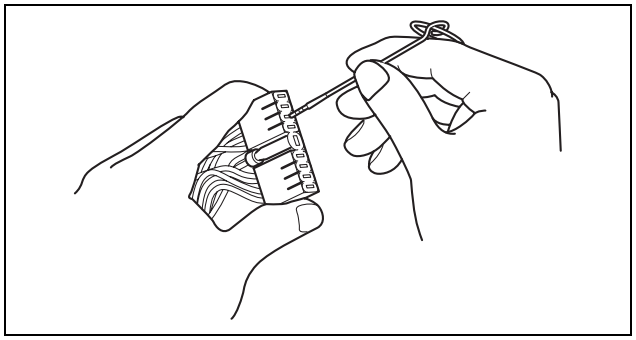
Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC INSPECTION [INSTRUMENT CLUSTER]

id0902e8960300

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the instrument cluster. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “IC”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the instrument cluster. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].)

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

Snapshot data

- The data for all DTCs currently detected is stored.

Snapshot data table

—: Not applicable

Snapshot data item	Unit		Data contents	Corresponding data monitor items
AAT	°C	°F	Ambient temperature	—
APP_STATUS	Accelerator Pedal Off/Under20%/Over20%/FAIL		Accelerator pedal position status	—
CFG_STATUS	Config Complete/Not Configured/Config Error		Configuration status	—
ECT_STATUS	Under 0 degrees C/0-Under 80 degrees C/Over 80 degrees C/FAIL		Engine coolant temperature status	—
IC_VPWR	V		Instrument cluster power supply voltage	—
IG-ON_TIMER	hh:mm:ss		Elapsed time since ignition switched ON (engine off or on)	—
PWR_MODE_KEY	Key Out/Key Recently Out/ Key Approved (Position 0)/ Post Accessory (Position 0)/ Accessory (Position 1)/ Post Ignition (Position 1)/ ignition On (Position 2)/ Running - Starting In Progress (Position 2)/ Crank (Position 3)		Push button start power position switching status	—
RPM_STATUS	Engine Stop/Under1500rpm/Over1500rpm/FAIL		Engine speed status	—
SHIFT_STATUS	P/N/ D/ R/ FAIL		Selector lever position status	—
TOTAL_DIST	Km	miles	Accumulated total traveled distance since vehicle completion	—
TOTAL_TIME	hh:mm:ss		Accumulated total elapsed time since vehicle completion **Note** • When the ROOM fuse is removed, or the ignition is switched off (LOCK), the time is not included in the elapsed time.	TOTAL_TIME
VPWR	V		Instrument cluster power supply voltage	VPWR
VSPD_STATUS	Stop/ 0-10km/h/ Over10km/h/ FAIL		Vehicle speed status	—
VSS	KPH, MPH		Vehicle speed	—

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

CLEARING DTC [INSTRUMENT CLUSTER]

id0902e8960400

CMDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].)
8. Verify that no DTCs are displayed.

ODDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “IC”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].)
8. Verify that no DTCs are displayed.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC B11D4:53 [INSTRUMENT CLUSTER]

id0902e8016100

System malfunction location	**Laser sensor malfunction**
Detection condition	• Instrument cluster detects the following malfunctions] — Laser sensor malfunction — Malfunction in smart city brake support related system (laser sensor, DSC HU/CM, PCM)
Fail-safe	• Inhibits the smart city brake support control. • Warning message related to the smart city brake support is displayed in the TFT LCD display.
Possible cause	• System related to the smart city brake support stores DTCs. • Laser sensor malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY ALL SYSTEM DTCs** • Switch the ignition to off. • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform a CMDTC self-test using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs other than DTC B11D4:53?	Yes	Repair the malfunctioning part according to the applicable system DTC troubleshooting.
		No	Go to the next step.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform a CMDTC self-test using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is DTC B11D4:53 displayed?	Yes	Replace the laser sensor, then go to the next step. (See 04-15-17 LASER SENSOR REMOVAL/ INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable system DTC troubleshooting.
		No	DTC troubleshooting completed.

DTC U0300:00 [INSTRUMENT CLUSTER]

id0902e8999700

System malfunction location	**Instrument cluster configuration error**
Detection condition	• Instrument cluster configuration error (incorrect value write) detected.
Fail-safe	—
Possible cause	• Instrument cluster configuration error • Instrument cluster malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration with the As-Built data. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).) • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is DTC U0300:00 displayed?	Yes	Using the M-MDS, re-perform the instrument cluster configuration using the As-Built data, then go to the next step. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is DTC U0300:00 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC U0401:68 [INSTRUMENT CLUSTER]

id0902e8988800

System malfunction location	**Error signal received from PCM**
Detection condition	• The instrument cluster receives error signals from the PCM with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• DTCs are stored in the PCM. • Instrument cluster malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition ON (engine off or on) and wait for **20 s or more**. • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is DTC U0401:68 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC U0402:68 [INSTRUMENT CLUSTER]

id0902e8988900

System malfunction location	**Error signal received from transmission/transaxle**
Detection condition	• The instrument cluster received error signals from the transmission/transaxle for **1 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• The transaxle could not send a normal signal temporarily. (DTCs are stored in the TCM.) • TCM malfunction • Instrument cluster malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection	Results	Action
1	**VERIFY DTCs FOR TCM** • Verify DTCs for the TCM using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].) (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**DRIVE VEHICLE THEN VERIFY DTCs FOR TCM AGAIN** • Drive the vehicle at a vehicle speed of **30 km/h {19 mph} or more** for **100 s or more**. • Verify DTCs for the TCM using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].) (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition ON and wait for **20 s or more**. • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is DTC U0402:68 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC U0422:68 [INSTRUMENT CLUSTER]

id0902e8950800

System malfunction location	**Error signal received from front body control module (FBCM)**
Detection condition	• The instrument cluster receives error signals from the front body control module (FBCM) for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• DTCs are stored in the front body control module (FBCM). • Instrument cluster malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**VERIFY FRONT BODY CONTROL MODULE (FBCM) DTCs** • Perform the DTC inspection for the front body control module (FBCM) using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	Go to the next step.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition ON (engine off or on) and wait for **20 s or more**. • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC U0422:68 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC U0433:00 [INSTRUMENT CLUSTER]

id0902e8016300

System malfunction location	**Error signal received from laser sensor**
Detection condition	• Instrument cluster detects the following conditions: — The smart city brake support operated normally in the past. — Malfunction of laser sensor or smart city brake support related system (laser sensor, DSC HU/CM, PCM) — Laser sensor control is temporarily inhibited.
Fail-safe	• Detection condition: The smart city brake support operated normally in the past. — Function not equipped. • Detection condition: Malfunction in laser sensor or smart city brake support related system (laser sensor, DSC HU/CM, PCM) — Inhibits the smart city brake support control. — Warning message related to the smart city brake support is displayed on the TFT LCD display. • Detection condition: Laser sensor control is temporarily inhibited. — Temporarily inhibits the smart city brake support control.
Possible cause	**Note** • The instrument cluster stores DTC U0433:00 as a record that the smart city brake support operated normally. • System related to the smart city brake support stores DTCs. • The laser sensor cannot temporarily function due to dirt on the windshield. • Laser sensor malfunction • Instrument cluster malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY ALL SYSTEM DTCs** • Switch the ignition to off. • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform a CMDTC self-test using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs other than DTC U0433:00 displayed?	Yes	Repair the malfunctioning part according to the applicable system DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**VERIFY DTCs AGAIN** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform a CMDTC self-test using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is DTC U0433:00 displayed?	Yes	Go to the next step.
		No	Go to Step 6.
3	**VERIFY TFT LCD DISPLAY** • Verify the TFT LCD display. • Is “SCBS Clear windshield completely” or “SCBS Not Available” displayed in the TFT LCD display?	Yes	Clean the windshield, then go to the next step.
		No	Go to Step 5.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

Step	Inspection		Action
4	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTION CAUSE IS LASER SENSOR** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform a CMDTC self-test using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is DTC U0433:00 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the laser sensor, then go to the next step. (See 04-15-17 LASER SENSOR REMOVAL/ INSTALLATION.)
		No	Go to Step 6.
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform a CMDTC self-test using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is DTC U0433:00 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable system DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

DTC U0433:68 [INSTRUMENT CLUSTER]

id0902e8016400

System malfunction location	**Error signal received from laser sensor**
Detection condition	• Instrument cluster detects a malfunction in the laser sensor.
Fail-safe	• Inhibits the smart city brake support control. • Warning message related to the smart city brake support is displayed in the TFT LCD display.
Possible cause	• Laser sensor stores DTCs. • Laser sensor malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY OTHER LASER SENSOR DTCs** • Switch the ignition to off. • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform the DTC inspection for the laser sensor using the M-MDS. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

Step	Inspection		Action
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition ON (engine off or on) and wait for **10 s or more**. • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC U0433:68 displayed?	Yes	Replace the laser sensor, then go to the next step. (See 04-15-17 LASER SENSOR REMOVAL/ INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

DTC U0515:68 [INSTRUMENT CLUSTER]

id0902e8988000

System malfunction location	**Error signal received from start stop unit**
Detection condition	• The instrument cluster receives error signals from the start stop unit with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• DTCs are stored in the start stop unit. • Instrument cluster malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**VERIFY START STOP UNIT DTCs** • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	Go to the next step.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition ON (engine off or on) and wait for **20 s or more**. • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is DTC U0515:68 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC U053B:00 [INSTRUMENT CLUSTER]

id0902e8016500

System malfunction location	**Error signal received from forward sensing camera (FSC)**
Detection condition	• The instrument cluster receives error signals from the forward sensing camera (FSC) for **1 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• DTCs are stored in the forward sensing camera (FSC). • Instrument cluster malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**VERIFY FORWARD SENSING CAMERA (FSC) DTCs** • Perform the DTC inspection for the forward sensing camera (FSC) using the M-MDS. (See 09-02J-4 DTC INSPECTION [FORWARD SENSING CAMERA (FSC)].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02J-5 DTC TABLE [FORWARD SENSING CAMERA (FSC)].)
		No	Go to the next step.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition ON (engine off or on) and wait for **20 s or more**. • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is DTC U053B:00 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC U2005:86 [INSTRUMENT CLUSTER]

id0902e8509800

System malfunction location	**Error signal received from PCM**
Detection condition	• The instrument cluster receives vehicle speed signal error from the PCM for **1 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• DTCs are stored in the PCM. • Instrument cluster malfunction
System wiring diagram	—

Diagnostic Procedure

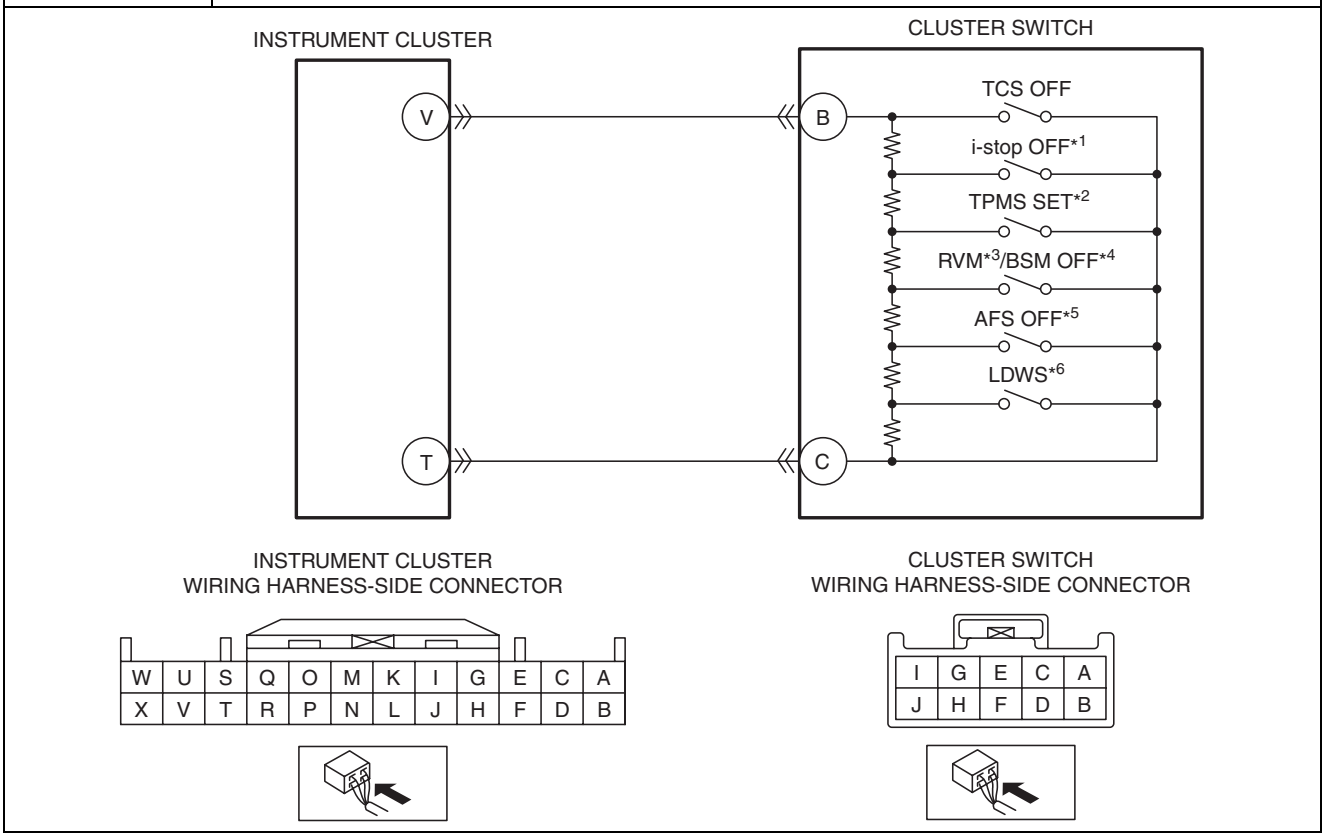
Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition ON (engine off or on) and wait for **20 s or more**. • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC U2005:86 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC U2013:13 [INSTRUMENT CLUSTER]

id0902e8016600

System malfunction location	**Cluster switch circuit malfunction**
Detection condition	• The instrument cluster detects an open circuit in the cluster switch circuit for **5 s or more** with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• Cluster switch connector or terminal malfunction • Instrument cluster connector or terminal malfunction • Open circuit in wiring harness between the following terminals: — Instrument cluster terminal V and cluster switch terminal B — Instrument cluster terminal T and cluster switch terminal C • Cluster switch malfunction • Instrument cluster malfunction



*1 : With i-stop system
*2 : With tire pressure monitoring system (TPMS)
*3 : With rear vehicle monitoring system
*4 : With BSM
*5 : With AFS
*6 : With LDWS

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT CLUSTER SWITCH CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the cluster switch connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
2	**INSPECT INSTRUMENT CLUSTER CONNECTOR CONDITION** • Disconnect the instrument cluster connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 5.
3	**INSPECT CLUSTER SWITCH CIRCUIT FOR OPEN CIRCUIT** • Verify that the cluster switch and instrument cluster connectors are disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — Instrument cluster terminal V and cluster switch terminal B — Instrument cluster terminal T and cluster switch terminal C • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 5.
4	**INSPECT CLUSTER SWITCH** • Inspect the cluster switch. (See 04-15-15 TCS OFF SWITCH INSPECTION.) (See 01-40-66 i-stop OFF SWITCH INSPECTION [SKYACTIV-G 2.0].) (See 02-12-5 TIRE PRESSURE MONITORING SYSTEM SET SWITCH INSPECTION.) (See 09-22-91 RVM SWITCH INSPECTION.) (See 09-22-76 BLIND SPOT MONITORING (BSM) OFF SWITCH INSPECTION.) (See 09-18-32 ADAPTIVE FRONT LIGHTING SYSTEM (AFS) OFF SWITCH INSPECTION.) (See 09-22-118 LDWS SWITCH INSPECTION.) • Is the cluster switch normal?	Yes	Go to the next step.
		No	Replace the cluster switch, then go to the next step. (See 09-17-18 SWITCH PANEL REMOVAL/ INSTALLATION.)

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

Step	Inspection		Action
5	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC U2013:13 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

DTC U2100:00 [INSTRUMENT CLUSTER]

id0902e8999600

System malfunction location	**Instrument cluster configuration error**
Detection condition	• Instrument cluster configuration error detected as follows: — No configuration of instrument cluster — Instrument cluster configuration has not been correctly performed.
Fail-safe	—
Possible cause	• Instrument cluster configuration error • Instrument cluster malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration with the As-Built data. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).) • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is DTC U2100:00 displayed?	Yes	Using the M-MDS, re-perform the instrument cluster configuration using the As-Built data, then go to the next step. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 3.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

Step	Inspection		Action
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is DTC U2100:00 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

DTC U2300:41 [INSTRUMENT CLUSTER]

id0902e8016700

System malfunction location	**Instrument cluster configuration error**
Detection condition	• Instrument cluster configuration error (data error) detected.
Fail-safe	—
Possible cause	• Instrument cluster configuration error • Instrument cluster malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration using the As-Built data. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).) • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC U2300:41 displayed?	Yes	Using the M-MDS, re-perform the instrument cluster configuration using the As-Built data, then go to the next step. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC U2300:41 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC U2300:51 [INSTRUMENT CLUSTER]

id0902e8016800

System malfunction location	**Instrument cluster configuration error**
Detection condition	• Instrument cluster configuration error (no configuration) detected.
Fail-safe	—
Possible cause	• Instrument cluster configuration error • Instrument cluster malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration using the As-Built data. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).) • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC U2300:51 displayed?	Yes	Using the M-MDS, re-perform the instrument cluster configuration using the As-Built data, then go to the next step. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC U2300:51 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

DTC U2300:56 [INSTRUMENT CLUSTER]

id0902e8016900

System malfunction location	**Instrument cluster configuration error**
Detection condition	• Instrument cluster configuration error (incorrect value write) detected.
Fail-safe	—
Possible cause	• Instrument cluster configuration error • Instrument cluster malfunction
System wiring diagram	—

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration with the As-Built data. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).) • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC U2300:56 displayed?	Yes	Using the M-MDS, re-perform the instrument cluster configuration using the As-Built data, then go to the next step. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC U2300:56 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

DTC U2300:57 [INSTRUMENT CLUSTER]

id0902e8017000

System malfunction location	**Instrument cluster configuration error**
Detection condition	• Instrument cluster configuration error (data size error) detected.
Fail-safe	—
Possible cause	• Instrument cluster configuration error • Instrument cluster malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA)** • Using the M-MDS, perform the instrument cluster configuration using the As-Built data. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).) • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC U2300:57 displayed?	Yes	Using the M-MDS, re-perform the instrument cluster configuration using the As-Built data, then go to the next step. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to Step 3.
2	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC U2300:57 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

DTC U3000:41 [INSTRUMENT CLUSTER]

id0902e8999500

System malfunction location	**Malfunction inside instrument cluster**
Detection condition	• Malfunction inside instrument cluster detected.
Fail-safe	—
Possible cause	• Instrument cluster malfunction
System wiring diagram	—

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

Diagnostic Procedure

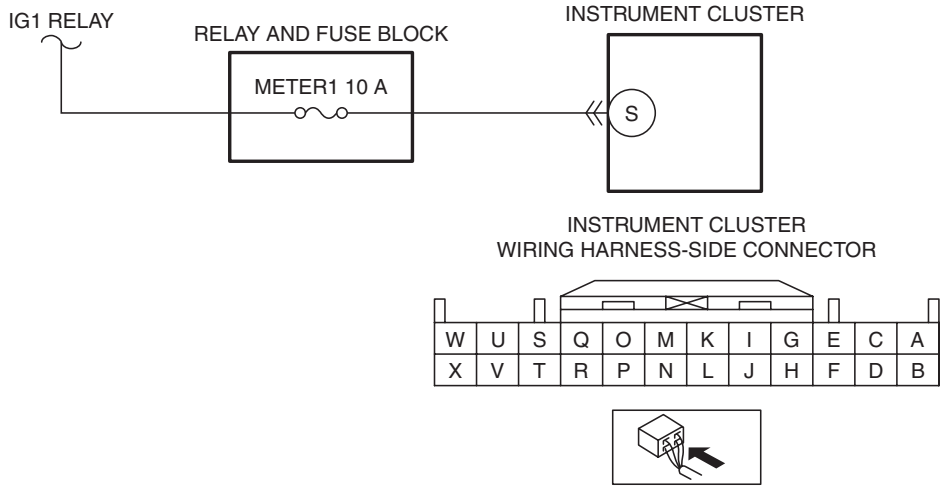
Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS INSTRUMENT CLUSTER** • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is DTC U3000:41 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

DTC U3003:16 [INSTRUMENT CLUSTER]

id0902e8999400

Without i-stop System

System malfunction location	**Low power supply voltage input to instrument cluster**
Detection condition	• Instrument cluster power supply circuit voltage of **10 V or less** is detected with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • Instrument cluster connector or terminal malfunction • Instrument cluster power supply circuit malfunction — Short to ground in wiring harness between METER1 10 A fuse and instrument cluster terminal S — METER1 10 A fuse malfunction — Open circuit in wiring harness between IG1 relay and instrument cluster terminal S • Instrument cluster malfunction



ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 6. (See 01-17A-10 BATTERY RECHARGING [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 6. (See 01-17A-17 GENERATOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
4	**INSPECT INSTRUMENT CLUSTER CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Disconnect the instrument cluster connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**VERIFY INSTRUMENT CLUSTER POWER SUPPLY VOLTAGE** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Display PID VPWR using the M-MDS. (See 09-02G-37 PID/DATA MONITOR INSPECTION [INSTRUMENT CLUSTER].) • Is the VPWR monitor value **B+**?	Yes	Go to the next step.
		No	Inspect the METER1 10 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the fuse. • If a fuse is damaged: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness which has an open circuit. Go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition ON (engine off or on). • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is DTC U3003:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

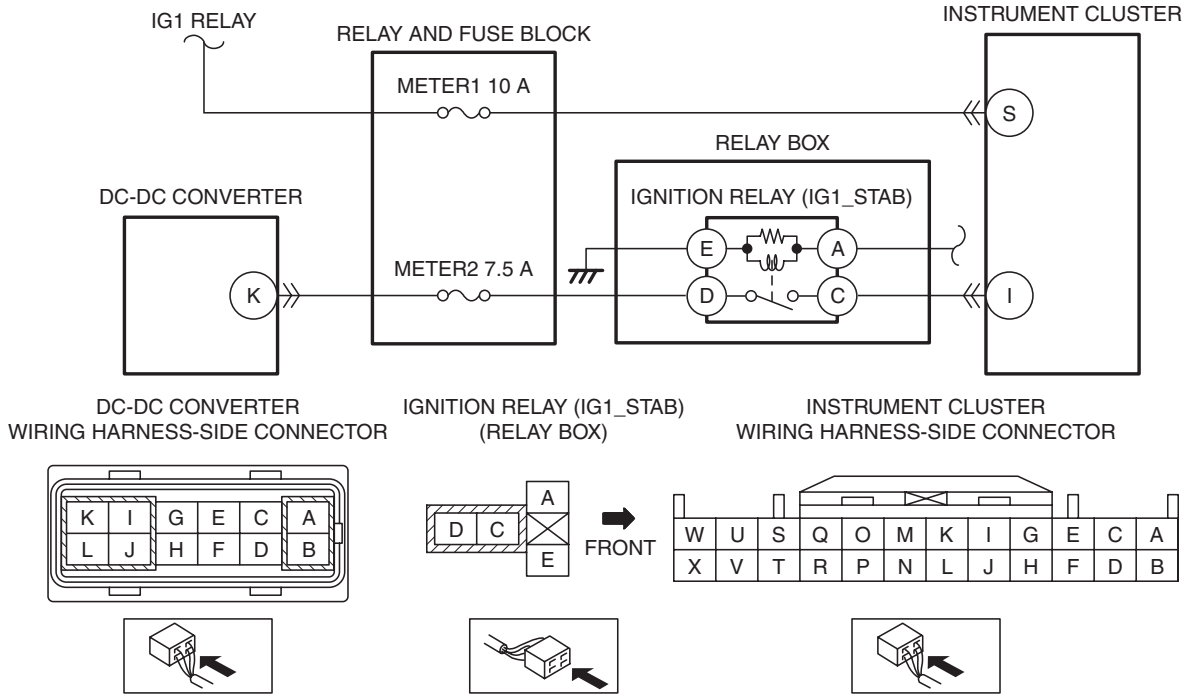
With i-stop System

System malfunction location	**Low power supply voltage input to instrument cluster**
Detection condition	• Instrument cluster power supply circuit voltage of **10 V or less** is detected with the ignition switched ON (engine off or on).
Fail-safe	—
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • Instrument cluster connector or terminal malfunction • Instrument cluster power supply circuit malfunction — Short to ground in wiring harness between METER1 10 A fuse and instrument cluster terminal S — METER1 10 A fuse malfunction — Open circuit in wiring harness between IG1 relay and instrument cluster terminal S • Ignition relay (IG1_STAB) malfunction • DC-DC converter connector or terminal malfunction • Short to ground in wiring harness between the following terminals: — DC-DC converter terminal K—Ignition relay (IG1_STAB) terminal D — Ignition relay (IG1_STAB) terminal C—Instrument cluster terminal I • Open circuit in wiring harness between the following terminals: — DC-DC converter terminal K—Ignition relay (IG1_STAB) terminal D — Ignition relay (IG1_STAB) terminal C—Instrument cluster terminal I • DC-DC converter malfunction • Instrument cluster malfunction

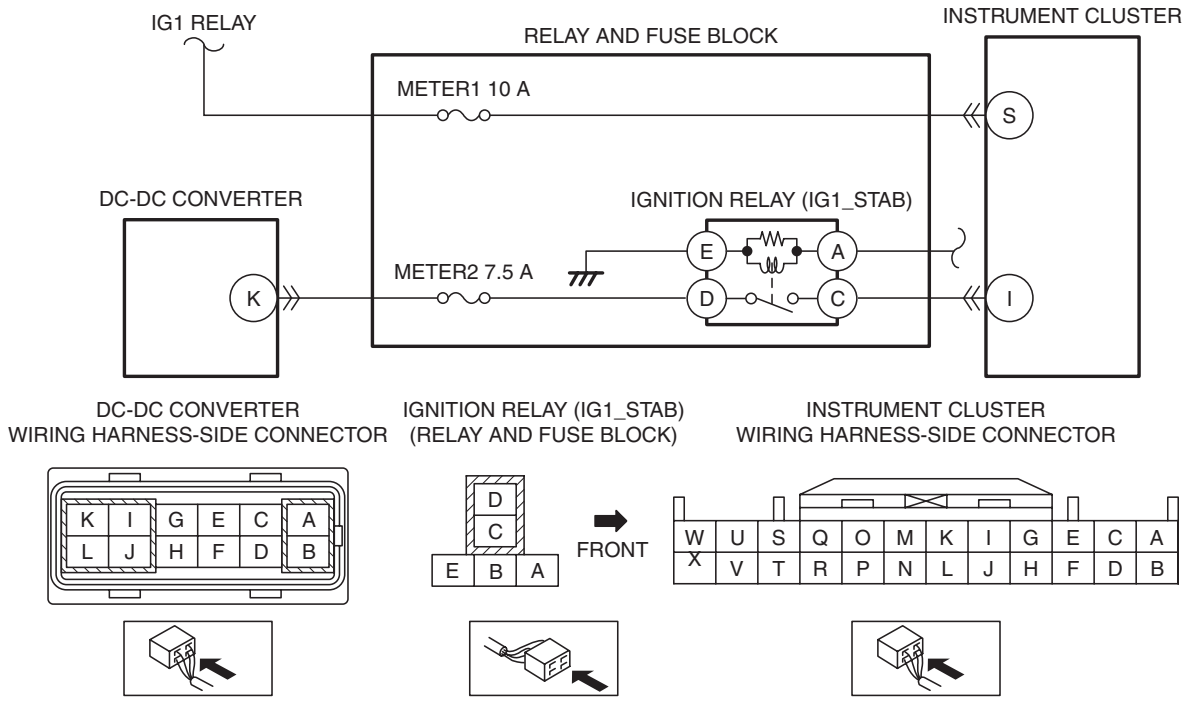
ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

System malfunction location	Low power supply voltage input to instrument cluster

SKYACTIV-G 2.0



SKYACTIV-D 2.2



ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 11. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 11. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4	**INSPECT INSTRUMENT CLUSTER CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the instrument cluster connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 11.
5	**VERIFY INSTRUMENT CLUSTER POWER SUPPLY VOLTAGE** • Reconnect all the disconnected connectors. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Display PID VPWR using the M-MDS. (See 09-02G-37 PID/DATA MONITOR INSPECTION [INSTRUMENT CLUSTER].) • Is the VPWR monitor value **B+**?	Yes	Go to the next step.
		No	Inspect the METER1 10 A fuse. • If a fuse is burnt out: — Repair or replace the wiring harness which is shorted to ground. — Replace the fuse. • If a fuse is damaged: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness which has an open circuit. Go to Step 11.
6	**INSPECT IGNITION RELAY (IG1_STAB)** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the ignition relay (IG1_STAB). (See 09-21-28 RELAY LOCATION.) • Inspect the ignition relay (IG1_STAB). (See 09-21-29 RELAY INSPECTION.) • Is the ignition relay (IG1_STAB) normal?	Yes	Go to the next step.
		No	Replace the ignition relay (IG1_STAB), then go to Step 11. (See 09-21-28 RELAY LOCATION.)

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

Step	Inspection		Action
7	**INSPECT DC-DC CONVERTER CONNECTOR CONDITION** • Disconnect the DC-DC converter connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 11.
8	**INSPECT DC-DC CONVERTER CIRCUIT FOR SHORT TO GROUND** • Verify that the DC-DC converter connector is disconnected. • Disconnect the instrument cluster connector. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) and body ground for continuity. — DC-DC converter terminal K — Ignition relay (IG1_STAB) terminal D — Instrument cluster terminal I • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, go to Step 11.
		No	Go to the next step.
9	**INSPECT DC-DC CONVERTER CIRCUIT FOR OPEN CIRCUIT** • Verify that the instrument cluster and DC-DC converter connectors are disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) for continuity. — DC-DC converter terminal K—Ignition relay (IG1_STAB) terminal D — Ignition relay (IG1_STAB) terminal C—Instrument cluster terminal I • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, go to Step 11.
10	**INSPECT DC-DC CONVERTER** • Inspect the DC-DC converter. (See 01-17A-27 DC-DC CONVERTER INSPECTION [SKYACTIV-G 2.0].) • Is the DC-DC converter normal?	Yes	Go to the next step.
		No	Replace the DC-DC converter, then go to the next step. (See 01-17A-26 DC-DC CONVERTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-22 DC-DC CONVERTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
11	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear DTC for the instrument cluster using the M-MDS. (See 09-02G-9 CLEARING DTC [INSTRUMENT CLUSTER].) • Switch the ignition ON (engine off or on). • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is DTC U3003:16 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
12	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

PID/DATA MONITOR INSPECTION [INSTRUMENT CLUSTER]

id0902e8960600

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “IC”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

PID/DATA MONITOR TABLE [INSTRUMENT CLUSTER]

id0902e8960700

PID	Unit/ Operation	Data contents	Inspection item(s)
AFS_OFF_SW*1	Off/On	• Off: AFS OFF switch is off. • On: AFS off switch is on.	AFS OFF switch
AFS_ST*1	Off/On	• Off: AFS not operated • On: AFS operated	• AFS OFF switch • AFS control module
AT_MAN_M_SW*2	Off/On/ Reserved/ Unknown	• Off: M range switch is off. • On: M range switch is on. • Unknown: M range switch signal is not determined.	M position switch
AT_S_DWN_SW*2	Off/On/ Reserved/ Unknown	• Off: Down switch switch is off. • On: Down switch is on. • Unknown: Down switch is not determined.	Down switch
AT_S_UP_SW*2	Off/On/ Reserved/ Unknown	• Off: Up switch is off. • On: Up switch is on. • Unknown: Up switch is not determined.	Up switch
BSM/ RVM_SW*3	Off/On	• Off: Off: BSM OFF switch is off. • On: BSM OFF switch is on.	BSM OFF switch
BSM/ RVM_SW*4	Off/On	• Off: RVM OFF switch is off. • On: RVM switch is on.	RVM switch
DSC_OFF_SW	Off/On	• Off: TCS OFF switch is off. • On: TCS off switch is on.	TCS OFF switch
FUEL_GAUGE	L	Fuel gauge is displayed.	Fuel gauge (instrument cluster)
FUEL_SEN_M	ohm	Fuel gauge sender unit resistance is displayed.	• Fuel gauge sender unit • Rear body control module (RBCM)
FUEL_SEN_S*5	ohm	Displays the fuel gauge sender unit (sub) resistance value.	• Fuel gauge sender unit (sub) • Rear body control module (RBCM)
I_ILLUMI_M	Off (Day)/On (Night)	• Off (Day): TNS switch is off. • On (Night): TNS switch is on.	• Instrument cluster • Front body control module (FBCM)
I-ST_OFF_SW*6	Off/On	• Off: i-stop OFF switch is off. • On: i-stop OFF switch is on.	i-stop OFF switch
LDWS_ON_SW*7	Off/On	• Off: LDWS switch is off. • On: LDWS switch is on.	LDWS switch
MULTI_SW_ST	O.K./FAULT	• O.K.: Cluster switch is normal. • FAULT: Cluster switch is malfunctioning.	Cluster switch
ODO_CNT	km, ft, mi	Displays the rolling count of the odometer.	Odometer (instrument cluster)

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

PID	Unit/ Operation	Data contents	Inspection item(s)
P_BRAKE_ SW	Off/On	• Off: Parking brake not applied • On: Parking brake applied	Parking brake switch
R_GEAR_S W	Off/On	ATX: • Off: Selector lever is in R position. • On: Selector lever is in R position. MTX: • Off: Back-up light switch is off. • On: Back-up light switch is on.	ATX: • Transaxle range sensor (TCM) • TCM MTX: • Back-up light switch • PCM
R_LMP	Off/On/ Unknown/ Fault	• Off: Back-up light is turned off. • On: Back-up light is turned on. • Unknown: Back-up light signal is not determined. • Fault: Back-up light malfunction	ATX: • Transaxle range sensor (TCM) • TCM • Instrument cluster MTX: • Back-up light switch • PCM • Instrument cluster
SPEEDOMT R	KPH, MPH	Vehicle speed is displayed. (100 % = 300 km/h {186 mph})	Speedometer (instrument cluster)
TACHOMTR	RPM	Displays the engine speed. (100 % = 10,000 rpm)	Tachometer (instrument cluster)
TOTAL_TIM E	hh:mm:ss	Cumulative elapsed time since vehicle completion is displayed.	Instrument cluster
TPMS_CAL _SW	Off/On	• Off: Tire pressure monitoring system set switch is off. • On: Tire pressure monitoring system set switch is on.	Tire pressure monitoring system set switch
VPWR	V	Displays the power supply voltage.	• Instrument cluster • IG1 relay • Battery

*1 : With AFS
*2 : ATX
*3 : With BSM
*4 : With rear vehicle monitoring system
*5 : 4WD
*6 : With i-stop
*7 : With LDWS

ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER]

id0902e8960800

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “IC”.
3. Select the simulation items from the PID table.
4. Perform the active command modes function, inspect the operations for each parts.
   - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

ACTIVE COMMAND MODES TABLE [INSTRUMENT CLUSTER]

id0902e8960900

Simulation item	Unit/ Operation	Data contents	Output part name
ALARM	On/Off	• On: Warning alarm sounds. • Off: Warning alarm does not sound.	Warning alarm (instrument cluster)
LCD_SEG	Off/On	Vehicles without TFT LCD display: • Off: Turns off the LCD. • On: Fully displays LCD. Vehicles with TFT LCD display: • Off: Turns off the LCD. • On: Illuminates the LCD.	Vehicles without TFT LCD display: • LCD (instrument cluster) Vehicles with TFT LCD display: • TFT LCD display (instrument cluster)

ON-BOARD DIAGNOSTIC [INSTRUMENT CLUSTER]

Simulation item	Unit/ Operation	Data contents	Output part name
SPEEDOMTR	Off/60 Km/h/ 120 Km/h	European (L.H.D./U.K.), General (L.H.D./R.H.D.) specs., Australian specs.: • Off: Moves speedometer needle to the bottom-most position. • 60 Km/h: Moves speedometer needle to **61—66 km/h {38—41 mph}**. • 120 Km/h: Moves speedometer needle to **122—129 km/h {75.9—80.1 mph}**. General (L.H.D./R.H.D.) specs.: • Off: Moves speedometer needle to the bottom-most position. • 60 Km/h: Moves speedometer needle to **58—62 km/h {36—39 mph}**. • 120 Km/h: Moves speedometer needle to **117—123 km/h {72.8—76.4 mph}**.	Speedometer (instrument cluster)
TACHOMTR	Off/3000 RPM/6000 RPM	• Off: Moves tachometer needle to the bottom-most position. • 3000 RPM: Moves tachometer needle to **approx. 3,050 rpm**. • 6000 RPM: Moves tachometer needle to **approx. 6,100 rpm**.	Tachometer (instrument cluster)
WL+IL	Off/On	• Off: Turns off all warning lights, indicator lights. • On: Illuminates all warning lights, indicator lights.	Warning lights, indicator lights (instrument cluster)

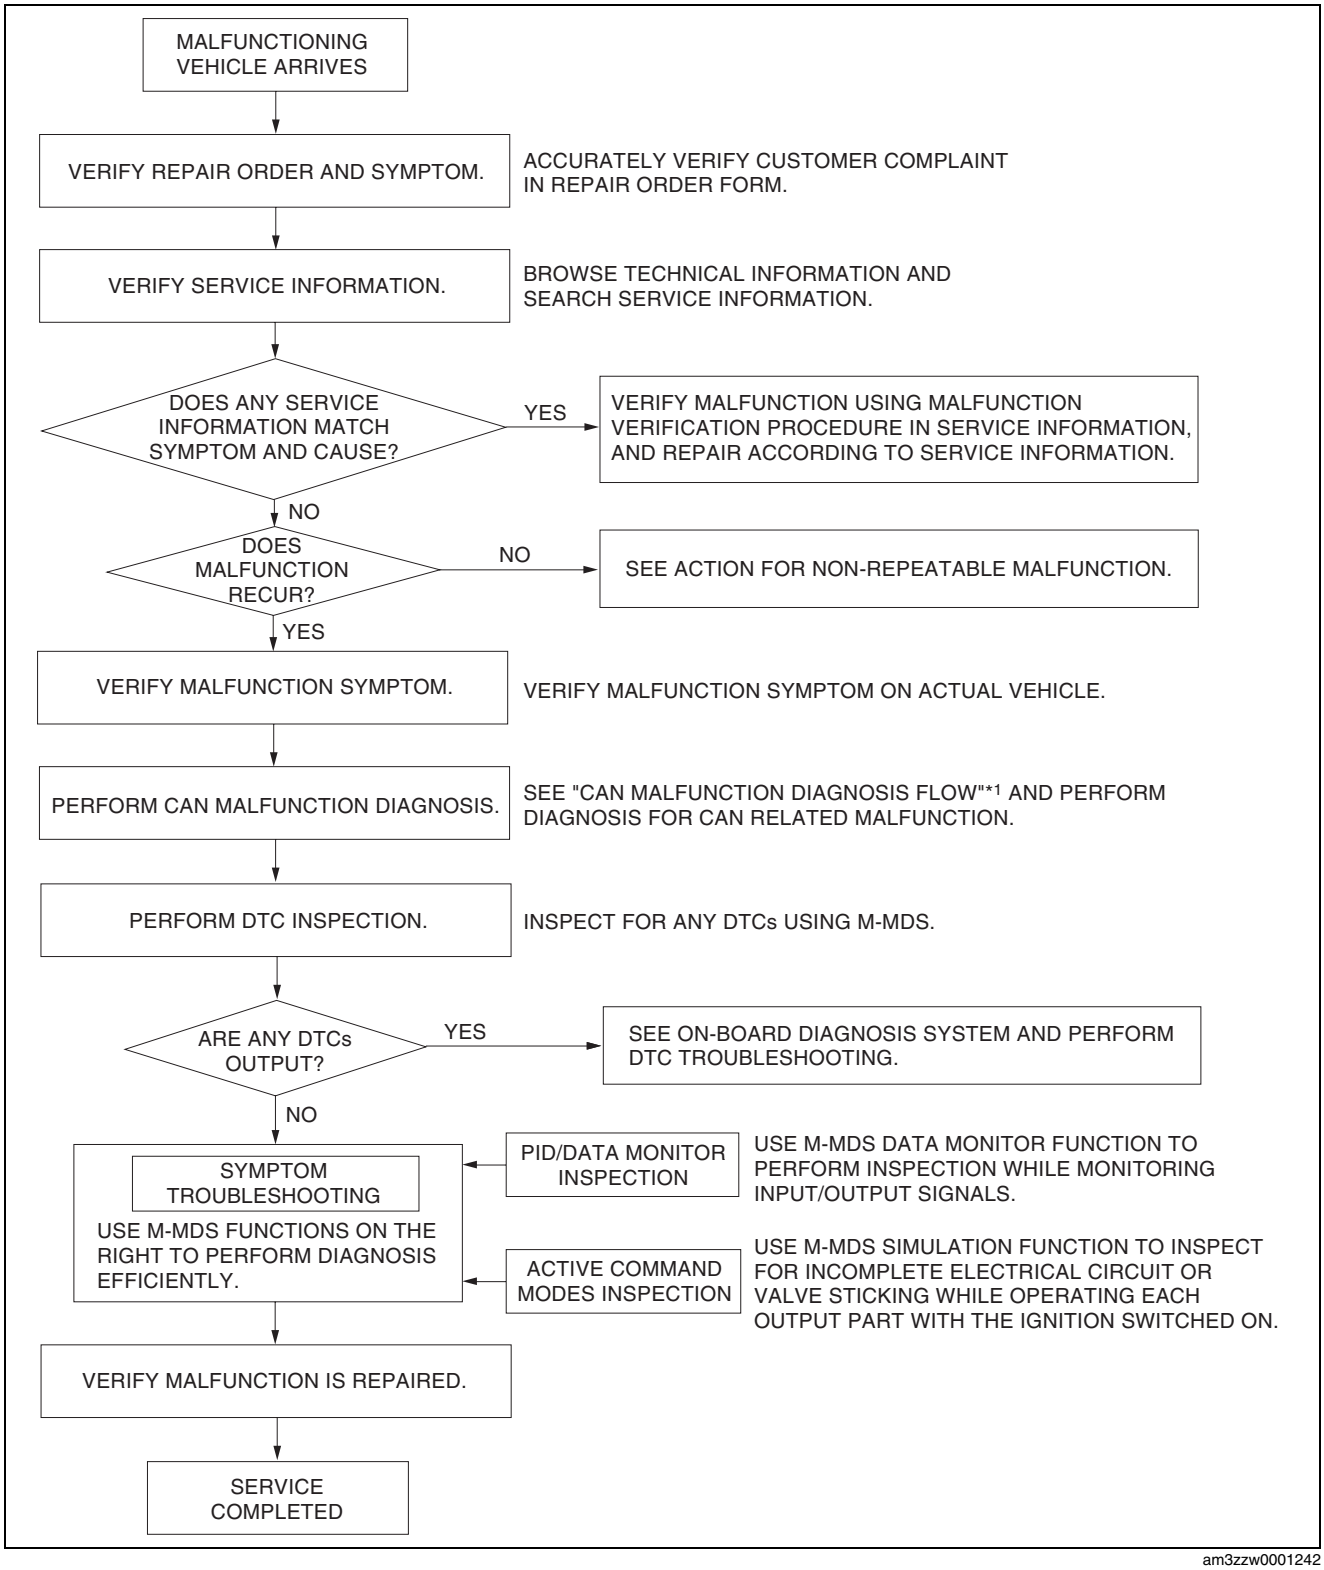
FOREWORD [BLIND SPOT MONITORING (BSM)]

id0902i3960100

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



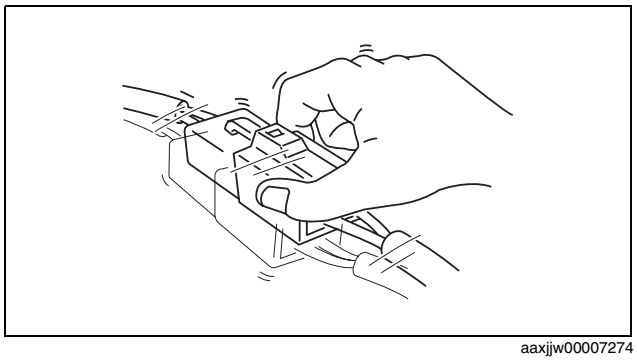
am3zzw0001242

*1 : 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)]/10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

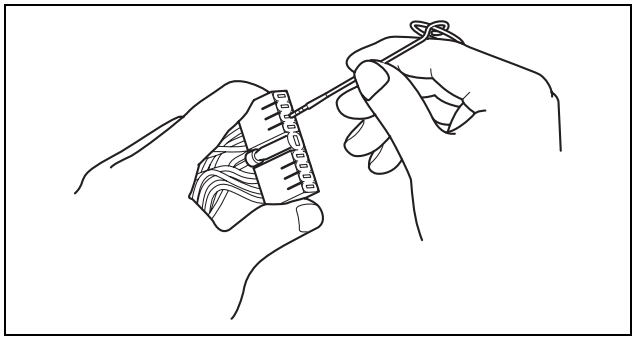
Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

DTC INSPECTION [BLIND SPOT MONITORING (BSM)]

id0902i3960300

CMDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the BSM control module (LH) or (RH). (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].)

ODDTC Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “BSML” or “BSMR”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the BSM control module (LH) or (RH). (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].)

CLEARING DTC [BLIND SPOT MONITORING (BSM)]

id0902i3960400

CMDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].)
8. Verify that no DTCs are displayed.

ODDTC Memory Clearing Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “BSML” or “BSMR”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].)
8. Verify that no DTCs are displayed.

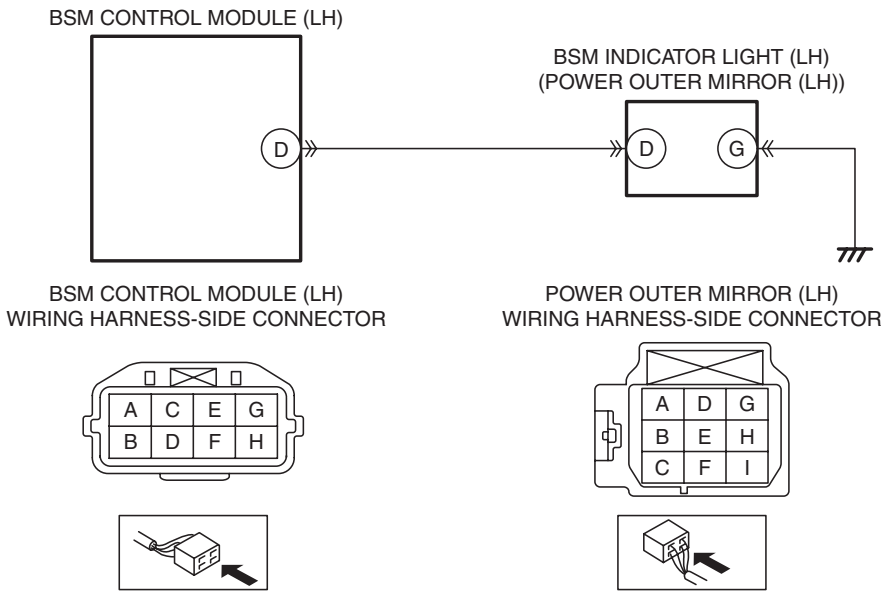
DTC B118C:11 [BLIND SPOT MONITORING (BSM)]

id0902i3354500

System malfunction location	BSM indicator light (LH) circuit malfunction
Detection condition	• While the BSM indicator light (LH) is operated, the BSM control module (LH) monitors the BSM indicator light (LH) load voltage. Increase in the monitored BSM indicator light (LH) load voltage is the specified value or more, and the BSM control module (LH) determined that there is a short to ground in the BSM indicator light (LH) circuit.
Fail-safe	• BSM is stopped.
Possible cause	• Malfunction in power outer mirror (LH) connector or terminal • Malfunction in BSM control module (LH) connector or terminal • Short to ground in wiring harness between BSM control module (LH) terminal D and power outer mirror (LH) terminal D • Power outer mirror (LH) malfunction • BSM indicator light (LH) malfunction • BSM control module (LH) malfunction



ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT POWER OUTER MIRROR (LH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the power outer mirror (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT BSM CONTROL MODULE (LH) CONNECTOR CONDITION** • Disconnect the BSM control module (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
3	**INSPECT BSM INDICATOR LIGHT (LH) CIRCUIT FOR SHORT TO GROUND** • Verify that the BSM control module (LH) and power outer mirror (LH) connectors are disconnected. • Inspect for continuity between power outer mirror (LH) terminal D (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 6.
		No	Go to the next step.
4	**INSPECT POWER OUTER MIRROR (LH)** • Inspect the power outer mirror (LH). (See 09-12-69 POWER OUTER MIRROR INSPECTION.) • Is the power outer mirror (LH) normal?	Yes	Go to the next step.
		No	Replace the power outer mirror (LH), then go to Step 6. (See 09-12-67 POWER OUTER MIRROR REMOVAL/INSTALLATION.)
5	**INSPECT BSM INDICATOR LIGHT (LH)** • Inspect the BSM indicator light (LH). (See 09-12-81 OUTER MIRROR GLASS INSPECTION.) • Is the BSM indicator light (LH) normal?	Yes	Go to the next step.
		No	Replace the outer mirror glass (LH), then go to the next step. (See 09-12-73 OUTER MIRROR GLASS REMOVAL.) (See 09-12-78 OUTER MIRROR GLASS INSTALLATION.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the BSM control module (LH) DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module (LH) using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is DTC B118C:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module (LH), then go to the next step. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.

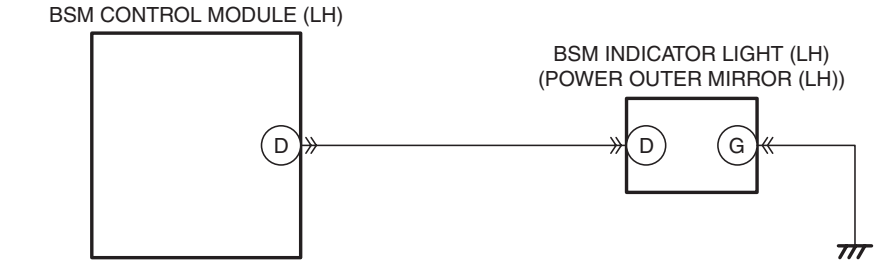
ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

Step	Inspection		Action
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02H-6 DTC TABLE [BLIND SPOT MONITORING (BSM)].)
		No	DTC troubleshooting completed.

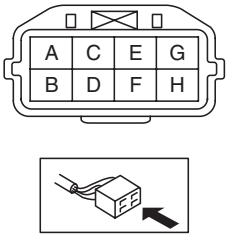
DTC B118C:15 [BLIND SPOT MONITORING (BSM)]

id0902i3354600

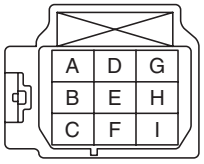
System malfunction location	**BSM indicator light (LH) circuit malfunction**
Detection condition	• While the BSM indicator light (LH) is operated, the BSM control module (LH) monitors the BSM indicator light (LH) load voltage. Decrease in the BSM indicator light (LH) load voltage is the specified value or less, and the BSM control module (LH) determined that there is a short to power supply or an open circuit in the BSM indicator light (LH) circuit.
Fail-safe	• BSM is stopped.
Possible cause	• Malfunction in power outer mirror (LH) connector or terminal • Open circuit in wiring harness between power outer mirror (LH) terminal G and body ground • Malfunction in BSM control module (LH) connector or terminal • Short to power supply in wiring harness between BSM control module (LH) terminal D and power outer mirror (LH) terminal D • Power outer mirror (LH) malfunction • BSM indicator light (LH) malfunction • Open circuit in wiring harness between BSM control module (LH) terminal D and power outer mirror (LH) terminal D • BSM control module (LH) malfunction



BSM CONTROL MODULE (LH)
WIRING HARNESS-SIDE CONNECTOR



POWER OUTER MIRROR (LH)
WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT POWER OUTER MIRROR (LH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the power outer mirror (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
2	**INSPECT BSM INDICATOR LIGHT (LH) GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the power outer mirror (LH) connector is disconnected. • Inspect for continuity between power outer mirror (LH) terminal G (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 8.
3	**INSPECT BSM CONTROL MODULE (LH) CONNECTOR CONDITION** • Disconnect the BSM control module (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
4	**INSPECT BSM INDICATOR LIGHT (LH) SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the BSM control module (LH) and power outer mirror (LH) connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at power outer mirror (LH) terminal D (vehicle wiring harness side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which is shorted to power supply, then go to Step 8.
5	**INSPECT POWER OUTER MIRROR (LH)** • Inspect the power outer mirror (LH). (See 09-12-69 POWER OUTER MIRROR INSPECTION.) • Is the power outer mirror (LH) normal?	Yes	Go to the next step.
		No	Replace the power outer mirror (LH), then go to Step 8. (See 09-12-67 POWER OUTER MIRROR REMOVAL/ INSTALLATION.)
6	**INSPECT BSM INDICATOR LIGHT (LH)** • Inspect the BSM indicator light (LH). (See 09-12-81 OUTER MIRROR GLASS INSPECTION.) • Is the BSM indicator light (LH) normal?	Yes	Go to the next step.
		No	Replace the outer mirror glass (LH), then go to Step 8. (See 09-12-73 OUTER MIRROR GLASS REMOVAL.) (See 09-12-78 OUTER MIRROR GLASS INSTALLATION.)

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

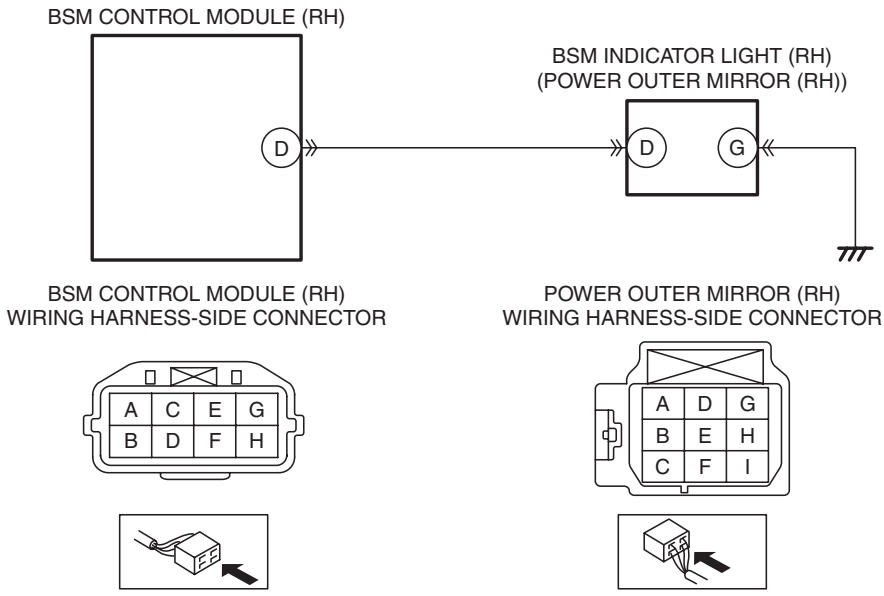
Step	Inspection		Action
7	**INSPECT BSM INDICATOR LIGHT (LH) SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the BSM control module (LH) and power outer mirror (LH) connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect for continuity between BSM control module (LH) terminal D (vehicle wiring harness side) and power outer mirror (LH) terminal D (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to the next step.
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the BSM control module (LH) DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module (LH) using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is DTC B118C:15 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module (LH), then go to the next step. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02H-6 DTC TABLE [BLIND SPOT MONITORING (BSM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

DTC B118D:11 [BLIND SPOT MONITORING (BSM)]

id0902i3354700

System malfunction location	**BSM indicator light (RH) circuit malfunction**
Detection condition	• While the BSM indicator light (RH) is operated, the BSM control module (RH) monitors the BSM indicator light (RH) load voltage. Increase in the monitored BSM indicator light (RH) load voltage is the specified value or more, and the BSM control module (RH) determined that there is a short to ground in the BSM indicator light (RH) circuit.
Fail-safe	• BSM is stopped.
Possible cause	• Malfunction in power outer mirror (RH) connector or terminal • Malfunction in BSM control module (RH) connector or terminal • Short to ground in wiring harness between BSM control module (RH) terminal D and power outer mirror (RH) terminal D • Power outer mirror (RH) malfunction • BSM indicator light (RH) malfunction • BSM control module (RH) malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT POWER OUTER MIRROR (RH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the power outer mirror (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
2	**INSPECT BSM CONTROL MODULE (RH) CONNECTOR CONDITION** • Disconnect the BSM control module (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

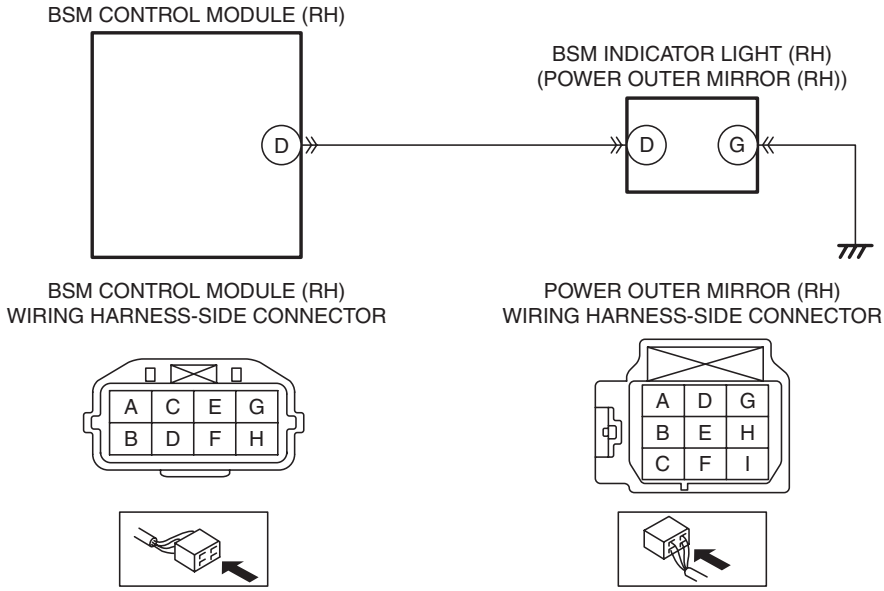
Step	Inspection		Action
3	**INSPECT BSM INDICATOR LIGHT (RH) CIRCUIT FOR SHORT TO GROUND** • Verify that the BSM control module (RH) and power outer mirror (RH) connectors are disconnected. • Inspect for continuity between power outer mirror (RH) terminal D (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness which is shorted to ground, then go to Step 6.
		No	Go to the next step.
4	**INSPECT POWER OUTER MIRROR (RH)** • Inspect the power outer mirror (RH). (See 09-12-69 POWER OUTER MIRROR INSPECTION.) • Is the power outer mirror (RH) normal?	Yes	Go to the next step.
		No	Replace the power outer mirror (RH), then go to Step 6. (See 09-12-67 POWER OUTER MIRROR REMOVAL/INSTALLATION.)
5	**INSPECT BSM INDICATOR LIGHT (RH)** • Inspect the BSM indicator light (RH). (See 09-12-81 OUTER MIRROR GLASS INSPECTION.) • Is the BSM indicator light (RH) normal?	Yes	Go to the next step.
		No	Replace the outer mirror glass (RH), then go to the next step. (See 09-12-73 OUTER MIRROR GLASS REMOVAL.) (See 09-12-78 OUTER MIRROR GLASS INSTALLATION.)
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the BSM control module (RH) DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module (RH) using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is DTC B118D:11 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module (RH), then go to the next step. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02H-6 DTC TABLE [BLIND SPOT MONITORING (BSM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

DTC B118D:15 [BLIND SPOT MONITORING (BSM)]

id0902i3393000

System malfunction location	**BSM indicator light (RH) circuit malfunction**
Detection condition	• While the BSM indicator light (RH) is operated, the BSM control module (RH) monitors the BSM indicator light (RH) load voltage. Decrease in the BSM indicator light (RH) load voltage is the specified value or less, and the BSM control module (RH) determined that there is a short to power supply or an open circuit in the BSM indicator light (RH) circuit.
Fail-safe	• BSM is stopped.
Possible cause	• Malfunction in power outer mirror (RH) connector or terminal • Open circuit in wiring harness between power outer mirror (RH) terminal G and body ground • Malfunction in BSM control module (RH) connector or terminal • Short to power supply in wiring harness between BSM control module (RH) terminal D and power outer mirror (RH) terminal D • Power outer mirror (RH) malfunction • BSM indicator light (RH) malfunction • Open circuit in wiring harness between BSM control module (RH) terminal D and power outer mirror (RH) terminal D • BSM control module (RH) malfunction



Diagnostic Procedure

Step	Inspection		Action
1	**INSPECT POWER OUTER MIRROR (RH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the power outer mirror (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

Step	Inspection		Action
2	**INSPECT BSM INDICATOR LIGHT (RH) GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the power outer mirror (RH) connector is disconnected. • Inspect for continuity between power outer mirror (RH) terminal G (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 8.
3	**INSPECT BSM CONTROL MODULE (RH) CONNECTOR CONDITION** • Disconnect the BSM control module (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 8.
4	**INSPECT BSM INDICATOR LIGHT (RH) SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the BSM control module (RH) and power outer mirror (RH) connectors are disconnected. • Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Switch the ignition ON (engine off or on). • Measure the voltage at power outer mirror (RH) terminal D (vehicle wiring harness side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which is shorted to power supply, then go to Step 8.
5	**INSPECT POWER OUTER MIRROR (RH)** • Inspect the power outer mirror (RH). (See 09-12-69 POWER OUTER MIRROR INSPECTION.) • Is the power outer mirror (RH) normal?	Yes	Go to the next step.
		No	Replace the power outer mirror (RH), then go to Step 8. (See 09-12-67 POWER OUTER MIRROR REMOVAL/INSTALLATION.)
6	**INSPECT BSM INDICATOR LIGHT (RH)** • Inspect the BSM indicator light (RH). (See 09-12-81 OUTER MIRROR GLASS INSPECTION.) • Is the BSM indicator light (RH) normal?	Yes	Go to the next step.
		No	Replace the outer mirror glass (RH), then go to Step 8. (See 09-12-73 OUTER MIRROR GLASS REMOVAL.) (See 09-12-78 OUTER MIRROR GLASS INSTALLATION.)
7	**INSPECT BSM INDICATOR LIGHT (RH) SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the BSM control module (RH) and power outer mirror (RH) connectors are disconnected. • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Inspect for continuity between BSM control module (RH) (vehicle wiring harness side) terminal D and power outer mirror (RH) terminal D (vehicle wiring harness side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

Step	Inspection		Action
8	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear the BSM control module (RH) DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module (RH) using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is DTC B118D:15 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module (RH), then go to the next step. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02H-6 DTC TABLE [BLIND SPOT MONITORING (BSM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

DTC U0001:88/U0100:00/U0131:00/U0155:00/U0214:00/U0232:00/U0233:00 [BLIND SPOT MONITORING (BSM)]

id0902i3018200

System malfunction location	**U0001:88** • **Module communication error (HS-CAN)** **U0100:00** • **Communication error with PCM** **U0131:00** • **Communication error with EPS control module** **U0155:00** • **Communication error with instrument cluster** **U0214:00** • **Communication error with start stop unit** **U0232:00** • **Communication error with BSM control module (LH)** **U0233:00** • **Communication error with BSM control module (RH)**
Detection condition	• U0001:88 — The BSM control module detected a CAN bus communication line (HS-CAN) malfunction. • U0100:00 — The BSM control module could not receive a CAN signal from the PCM. • U0131:00 — The BSM control module could not receive a CAN signal from the EPS control module. • U0155:00 — The BSM control module could not receive a CAN signal from the instrument cluster. • U0214:00 — The BSM control module could not receive a CAN signal from the start stop unit. • U0232:00 — The BSM control module (RH) could not receive a CAN signal from the BSM control module (LH). • U0233:00 — The BSM control module (LH) could not receive a CAN signal from the BSM control module (RH).
Fail-safe	• U0001:88 — BSM is stopped. • U0100:00 — BSM is stopped. • U0131:00 — BSM is stopped. • U0155:00 — BSM is stopped. • U0214:00 — BSM is stopped. • U0232:00 — BSM is stopped. • U0233:00 — BSM is stopped.
Possible cause	• Malfunction in CAN bus communication line • Malfunction in CAN communication line between PCM and BSM control module • Malfunction in CAN communication line between EPS control module and BSM control module • Malfunction in CAN communication line between instrument cluster and BSM control module • Malfunction in CAN communication line between start stop unit and BSM control module • Malfunction in CAN communication line between BSM control module (RH) and BSM control module (LH)
System wiring diagram	—

Diagnostic Procedure

- Perform the malfunction diagnosis according to the troubleshooting procedure for the multiplex communication system. (See 10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)].) (See 10-02D-1 FOREWORD [SKYACTIV-D 2.2 (R.H.D.)].)

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

DTC U0401:68 [BLIND SPOT MONITORING (BSM)]

id0902i3952000

System malfunction location	**Error signal received from PCM**
Detection condition	• The BSM control module received an error signal from the PCM.
Fail-safe	• BSM is stopped.
Possible cause	• DTCs are stored in the PCM. • PCM malfunction • BSM control module malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS PCM** • Clear BSM control module DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is DTC U0401:68 displayed?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear BSM control module DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is DTC U0401:68 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module, then go to the next step. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02H-6 DTC TABLE [BLIND SPOT MONITORING (BSM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

DTC U0420:68 [BLIND SPOT MONITORING (BSM)]

id0902i3018300

System malfunction location	**Error signal received from EPS control module**
Detection condition	• The BSM control module received an error signal from the EPS control module.
Fail-safe	• BSM is stopped.
Possible cause	• DTCs are stored in the EPS control module. • EPS control module malfunction • BSM control module malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY EPS CONTROL MODULE DTCs** • Perform the DTC inspection for the EPS control module using the M-MDS. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS EPS CONTROL MODULE** • Clear BSM control module DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is DTC U0420:68 displayed?	Yes	Replace the EPS control module, then go to the next step. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear BSM control module DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is DTC U0420:68 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module, then go to the next step. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02H-6 DTC TABLE [BLIND SPOT MONITORING (BSM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

DTC U0423:68 [BLIND SPOT MONITORING (BSM)]

id0902i3018400

System malfunction location	**Error signal received from instrument cluster**
Detection condition	• The BSM control module received an error signal from the instrument cluster.
Fail-safe	• BSM is stopped.
Possible cause	• DTCs are stored in the instrument cluster. • Instrument cluster malfunction • BSM control module malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY INSTRUMENT CLUSTER DTCs** • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS INSTRUMENT CLUSTER** • Clear BSM control module DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is the DTC U0423:68 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear BSM control module DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is the DTC U0423:68 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module, then go to the next step. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02H-6 DTC TABLE [BLIND SPOT MONITORING (BSM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

DTC U0515:68 [BLIND SPOT MONITORING (BSM)]

id0902i3018500

System malfunction location	**Error signal received from start stop unit**
Detection condition	• The BSM control module received an error signal from the start stop unit.
Fail-safe	• BSM is stopped.
Possible cause	• DTCs are stored in the start stop unit. • Start stop unit malfunction • BSM control module malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY START STOP UNIT DTCs** • Perform the DTC inspection for the start stop unit using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	Go to the next step.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS START STOP UNIT** • Clear BSM control module DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is DTC U0515:68 displayed?	Yes	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.)
		No	Go to Step 4.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear BSM control module DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is DTC U0515:68 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module, then go to the next step. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02H-6 DTC TABLE [BLIND SPOT MONITORING (BSM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

DTC U0533:68 [BLIND SPOT MONITORING (BSM)]

id0902i3393300

System malfunction location	**Error signal received from BSM control module (LH)**
Detection condition	• The BSM control module (RH) received an error signal from the BSM control module (LH).
Fail-safe	• BSM is stopped.
Possible cause	• BSM control module (LH) malfunction • BSM control module (RH) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS BSM CONTROL MODULE (LH)** • Clear the BSM control module (RH) DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module (RH) using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is the DTC U0533:68 displayed?	Yes	Replace the BSM control module (LH), then go to the next step. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to Step 3.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS BSM CONTROL MODULE (RH)** • Clear the BSM control module (RH) DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module (RH) using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is the DTC U0533:68 displayed?	Yes	Replace the BSM control module (RH), then go to the next step. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02H-6 DTC TABLE [BLIND SPOT MONITORING (BSM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

DTC U0534:68 [BLIND SPOT MONITORING (BSM)]

id0902i3393400

System malfunction location	**Error signal received from BSM control module (RH)**
Detection condition	• The BSM control module (LH) received an error signal from the BSM control module (RH).
Fail-safe	• BSM is stopped.
Possible cause	• BSM control module (RH) malfunction • BSM control module (LH) malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS BSM CONTROL MODULE (RH)** • Clear the BSM control module (LH) DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module (LH) using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is the DTC U0534:68 displayed?	Yes	Replace the BSM control module (RH), then go to the next step. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to Step 3.
2	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS BSM CONTROL MODULE (LH)** • Clear the BSM control module (LH) DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module (LH) using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is the DTC U0534:68 displayed?	Yes	Replace the BSM control module (LH), then go to the next step. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02H-6 DTC TABLE [BLIND SPOT MONITORING (BSM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

DTC U3000:01 [BLIND SPOT MONITORING (BSM)]

id0902i3393200

System malfunction location	**Electrical malfunction inside BSM control module**
Detection condition	• An electrical malfunction inside BSM control module is detected.
Fail-safe	• BSM is stopped.
Possible cause	• BSM control module malfunction
System wiring diagram	—

Diagnostic Procedure

Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS BSM CONTROL MODULE** • Clear BSM control module DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is DTC U3000:01 displayed?	Yes	Replace the BSM control module, then go to the next step. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02H-6 DTC TABLE [BLIND SPOT MONITORING (BSM)].)
		No	DTC troubleshooting completed.

DTC U3000:09 [BLIND SPOT MONITORING (BSM)]

id0902i3393100

System malfunction location	**BSM control module internal malfunction**
Detection condition	• The BSM control module detected a malfunction inside the voltage control oscillator.
Fail-safe	• BSM is stopped.
Possible cause	• BSM control module malfunction
System wiring diagram	—

Diagnostic Procedure

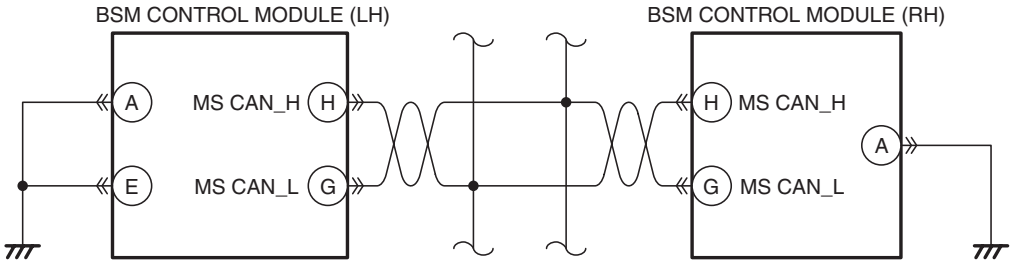
Step	Inspection		Action
1	**PERFORM DTC INSPECTION AND VERIFY IF MALFUNCTIONING PART IS BSM CONTROL MODULE** • Clear BSM control module DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is the DTC U3000:09 displayed?	Yes	Replace the BSM control module, then go to the next step. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02H-6 DTC TABLE [BLIND SPOT MONITORING (BSM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

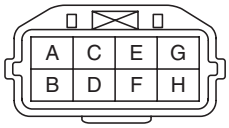
DTC U3000:4A [BLIND SPOT MONITORING (BSM)]

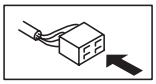
id0902i3393500

System malfunction location	**BSM control module assembly malfunction**
Detection condition	• The left and right BSM control modules are installed in reverse, or an open circuit is detected in the BSM control module circuit.
Fail-safe	—
Possible cause	• The BSM control modules (LH) and (RH) are installed in reverse. • Malfunction in BSM control module (LH) connector or terminal • Open circuit in wiring harness between the following terminals: — BSM control module (LH) terminal A and body ground — BSM control module (LH) terminal E and body ground • Malfunction in BSM control module (RH) connector or terminal • Open circuit in wiring harness between BSM control module (RH) terminal A and body ground • BSM control module malfunction



BSM CONTROL MODULE (LH)/(RH)
WIRING HARNESS-SIDE CONNECTOR





Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY IF LEFT AND RIGHT BSM CONTROL MODULES ARE INSTALLED IN REVERSE** • Verify that the left and right indication labels are attached to the BSM control modules. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.) • Are the left and right BSM control modules installed correctly?	Yes	Go to the next step.
		No	Install the BSM control modules in their proper positions, then go to Step 6.
2	**INSPECT BSM CONTROL MODULE (LH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the BSM control module (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

Step	Inspection		Action
3	**INSPECT BSM CONTROL MODULE (LH) CIRCUIT FOR OPEN CIRCUIT** • Verify that the BSM control module (LH) connector is disconnected. • Inspect the wiring harness between the following terminals (vehicle wiring harness side) and body ground for continuity. — BSM control module (LH) terminal A — BSM control module (LH) terminal E • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to Step 6.
4	**INSPECT BSM CONTROL MODULE (RH) CONNECTOR CONDITION** • Disconnect the BSM control module (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 6.
5	**INSPECT BSM CONTROL MODULE (RH) CIRCUIT FOR OPEN CIRCUIT** • Verify that the BSM control module (RH) connector is disconnected. • Inspect for continuity between BSM control module (RH) terminal A (vehicle wiring harness side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness which has an open circuit, then go to the next step.
6	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Reconnect all the disconnected connectors. • Reconnect the disconnected negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Clear BSM control module DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is DTC U3000:4A displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module, then go to the next step. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02H-6 DTC TABLE [BLIND SPOT MONITORING (BSM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

DTC U3000:97 [BLIND SPOT MONITORING (BSM)]

id0902i3393600

System malfunction location	**Radar performance malfunction**
Detection condition	• BSM control module internal radar sensor sensitivity is decreased. • BSM control module internal radar sensor axis is deviated.
Fail-safe	—
Possible cause	• Rear bumper malfunction (Dirt or foreign material (reflective object) is adhered.) • BSM control module malfunction (Dirt or foreign material (reflective object) is adhered.) • Concavity and convexity on the surface of the repaired rear bumper • BSM control module malfunction
System wiring diagram	—

Diagnostic Procedure

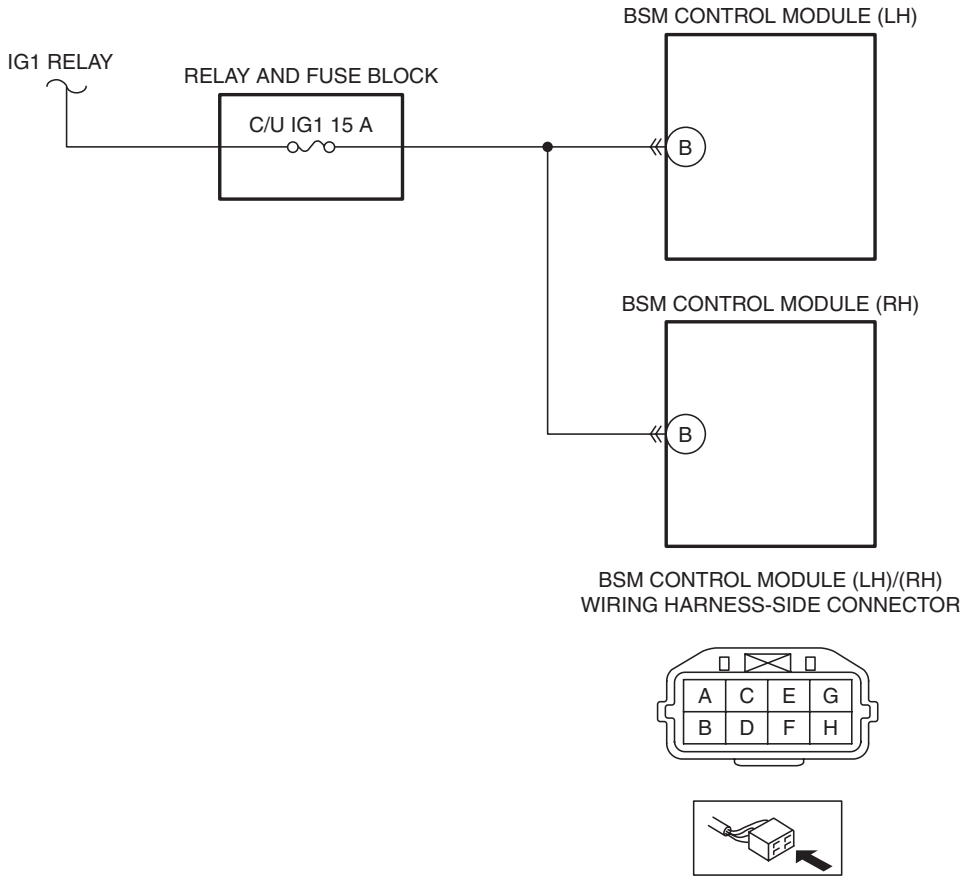
Step	Inspection		Action
1	**INSPECT REAR BUMPER SURFACE** • Visually inspect the rear bumper surface for the following: — Dirt — Adhered foreign material (reflective object) • Is the rear bumper normal?	Yes	Go to the next step.
		No	Remove dirt or foreign material (reflective object), then go to Step 4.
2	**INSPECT AREA AROUND BSM CONTROL MODULE** • Visually inspect the area around the BSM control module for the following: — Dirt — Adhered foreign material (reflective object) • Is the area around the BSM control module normal?	Yes	Go to the next step.
		No	Remove dirt or foreign material (reflective object), then go to Step 4.
3	**VERIFY REAR BUMPER REPAIR HISTORY** • Verify if the rear bumper had been repaired or repainted before. • Is the paint Mazda genuine?	Yes	Go to the next step.
		No	Replace the rear bumper, then go to the next step. (See 09-10-24 REAR BUMPER REMOVAL/INSTALLATION.)
4	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear BSM control module DTCs using the M-MDS. (See 09-02H-5 CLEARING DTC [BLIND SPOT MONITORING (BSM)].) • Perform the DTC inspection for the BSM control module using the M-MDS. (See 09-02H-5 DTC INSPECTION [BLIND SPOT MONITORING (BSM)].) • Is DTC U3000:97 displayed?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the BSM control module, then go to the next step. (See 09-22-67 BLIND SPOT MONITORING (BSM) CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 09-02H-6 DTC TABLE [BLIND SPOT MONITORING (BSM)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

DTC U3003:16 [BLIND SPOT MONITORING (BSM)]

id0902i3394000

System malfunction location	**BSM control module low power supply voltage input (less than 9 V)**
Detection condition	• BSM control module power supply voltage of **less than 9 V** is detected for **10 s or more**.
Fail-safe	• BSM is stopped.
Possible cause	• DTCs are stored in the PCM. • Battery malfunction • Generator malfunction • Malfunction in BSM control module (LH) connector or terminal • Malfunction in BSM control module (RH) connector or terminal • BSM control module power supply circuit malfunction — Short to ground in wiring harness between C/U IG1 15 A fuse and BSM control module terminal B — C/U IG1 15 A fuse malfunction — Open circuit in wiring harness between IG1 relay and BSM control module terminal B • BSM control module malfunction



ON-BOARD DIAGNOSTIC [BLIND SPOT MONITORING (BSM)]

Diagnostic Procedure

Step	Inspection		Action
1	**VERIFY PCM DTCs** • Perform the DTC inspection for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is the battery normal?	Yes	Go to the next step.
		No	Recharge or replace the battery, then go to Step 7. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is the generator normal?	Yes	Go to the next step.
		No	Replace the generator, then go to Step 7. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4	**INSPECT BSM CONTROL MODULE (LH) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Disconnect the BSM control module (LH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
5	**INSPECT BSM CONTROL MODULE (RH) CONNECTOR CONDITION** • Disconnect the BSM control module (RH) connector. • Inspect the connector engagement and connection condition and inspect the terminals for damage, deformation, corrosion, or disconnection. • Is the connector normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 7.
