FOREWORD

This wiring diagram incorporates the wiring schematics of the Mazda CX-5 and available optional equipment. Actual vehicle wiring may vary slightly depending on optional equipment or local specifications, or both.

For proper repair and maintenance, a thorough familiarization with this manual is important, and it should always be kept in a handy place for quick and easy reference.

All the contents of this manual, including drawings and specifications, are the latest available at the time of printing.
As modifications affecting repair or maintenance occur, relevant information supplementary to this volume will be made available at Mazda dealers. This manual should be kept up-to-date.

Ford Motor Company reserves the right to alter the specifications and contents of this manual without obligation or advance notice.

All rights reserved. No part of this book may be reproduced or used in any form or by any means, electronic or mechanical-including photocopying and recording and the use of any kind of information storage and retrieval system-without permission in writing.

WARNING

Servicing a vehicle can be dangerous. If you have not received service-related training, the risks of injury, property damage, and failure of servicing increase. The recommended servicing procedures for the vehicle in this workshop manual were developed with Mazda-trained technicians in mind. This manual may be useful to non-Mazda trained technicians, but a technician with our service-related training and experience will be at less risk when performing service operations. However, all users of this manual are accepted at least to know general safety procedures.

This manual contains “Warnings” and “Cautions” applicable to risks not normally encountered in a general technician’s experience. They should be followed to reduce the risk of injury and the risk that improper service or repair may damage the vehicle or render it unsafe. It is also important to understand that the “Warnings” and “Cautions” are not exhaustive. It is impossible to warn of all the hazardous consequences that might result from failure to follow the procedures.

The procedures recommended and described in this manual are effective methods of performing service and repair. Some require tools specifically designed for a specific purpose. Persons using procedures and tools which are not recommended by Mazda Motor Corporation must satisfy themselves thoroughly that neither personal safety nor safety of the vehicle will be jeopardized.

The contents of this manual, including drawings and specifications, are the latest available at the time of printing, and Mazda Motor Corporation reserves the right to change the vehicle designs and alter the contents of this manual without notice and without incurring obligation.

Parts should be replaced with genuine Mazda replacement parts or with parts which match the quality of genuine Mazda replacement parts. Persons using replacement parts of lesser quality than that of genuine Mazda replacement parts must satisfy themselves thoroughly that neither personal safety nor safety of the vehicle will be jeopardized. Mazda Motor Corporation is not responsible for any problems which may arise from the use of this manual. The cause of such problems includes but is not limited to insufficient service related training, use of improper tools, use of replacement parts of lesser quality than that of genuine Mazda replacement parts, or not being aware of any revision of this manual.

GENERAL INFORMATION

HOW TO USE THIS MANUAL

id000000800100

00

Range of Topics

- This manual contains procedures for performing all required service operations. The procedures are divided into the following five basic operations:
  — Removal/Installation
  — Disassembly/Assembly
  — Replacement
  — Inspection
  — Adjustment
- Simple operations which can be performed easily just by looking at the vehicle (i.e., removal/installation of parts, jacking, vehicle lifting, cleaning of parts, and visual inspection) have been omitted.

Advisory Messages

- You will find several **Warnings, Cautions, Notes, Specifications** and **Upper and Lower Limits** in this manual.
  Warning
  — A Warning indicates a situation in which serious injury or death could result if the warning is ignored.
  Caution
  — A Caution indicates a situation in which damage to the vehicle or parts could result if the caution is ignored.
  Note
  — A Note provides added information that will help you to complete a particular procedure.
  Specification
  — The values indicate the allowable range when performing inspections or adjustments.
  Upper and lower limits
  — The values indicate the upper and lower limits that must not be exceeded when performing inspections or adjustments.

Symbols

- There are nine symbols indicating oil, grease, fluids, sealant, and the use of **SST** or equivalent. These symbols show application points or use of these materials during service.

Symbol	Meaning	Kind
	Apply oil	New appropriate engine oil or gear oil
	Apply brake fluid	New appropriate brake fluid
	Apply automatic transmission/ transaxle fluid	New appropriate automatic transmission/ transaxle fluid
	Apply continuously variable transaxle fluid	New appropriate continuously variable transaxle fluid

Symbol	Meaning	Kind
	Apply grease	Appropriate grease
	Apply sealant	Appropriate sealant
	Apply petroleum jelly	Appropriate petroleum jelly
R	Replace part	O-ring, gasket, etc.
SST	Use SST or equivalent	Appropriate tools

GENERAL INFORMATION

Service Procedure
Inspection, adjustment

- Inspection and adjustment procedures are divided into steps. Important points regarding the location and contents of the procedures are explained in detail and shown in the illustrations.

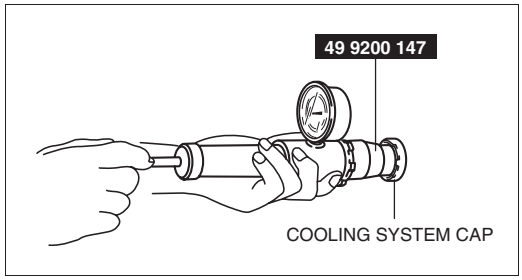
SHOWS PROCEDURE ORDER FOR SERVICE

COOLING SYSTEM CAP INSPECTION [MZR-CD 2.2]

1. Attach the cooling system cap to the **SST** and a radiator cap tester.
2. Hold the cooling system cap downward and apply pressure gradually. Verify that the pressure is held stable for **10 s**.
   - If the pressure is not held stable, replace the cooling system cap.

SHOWS SPECIFICATION

Cooling system cap valve opening pressure
93.2—122.6 kPa {0.951—1.250 kgf/cm^2, 13.6—17.7 psi}



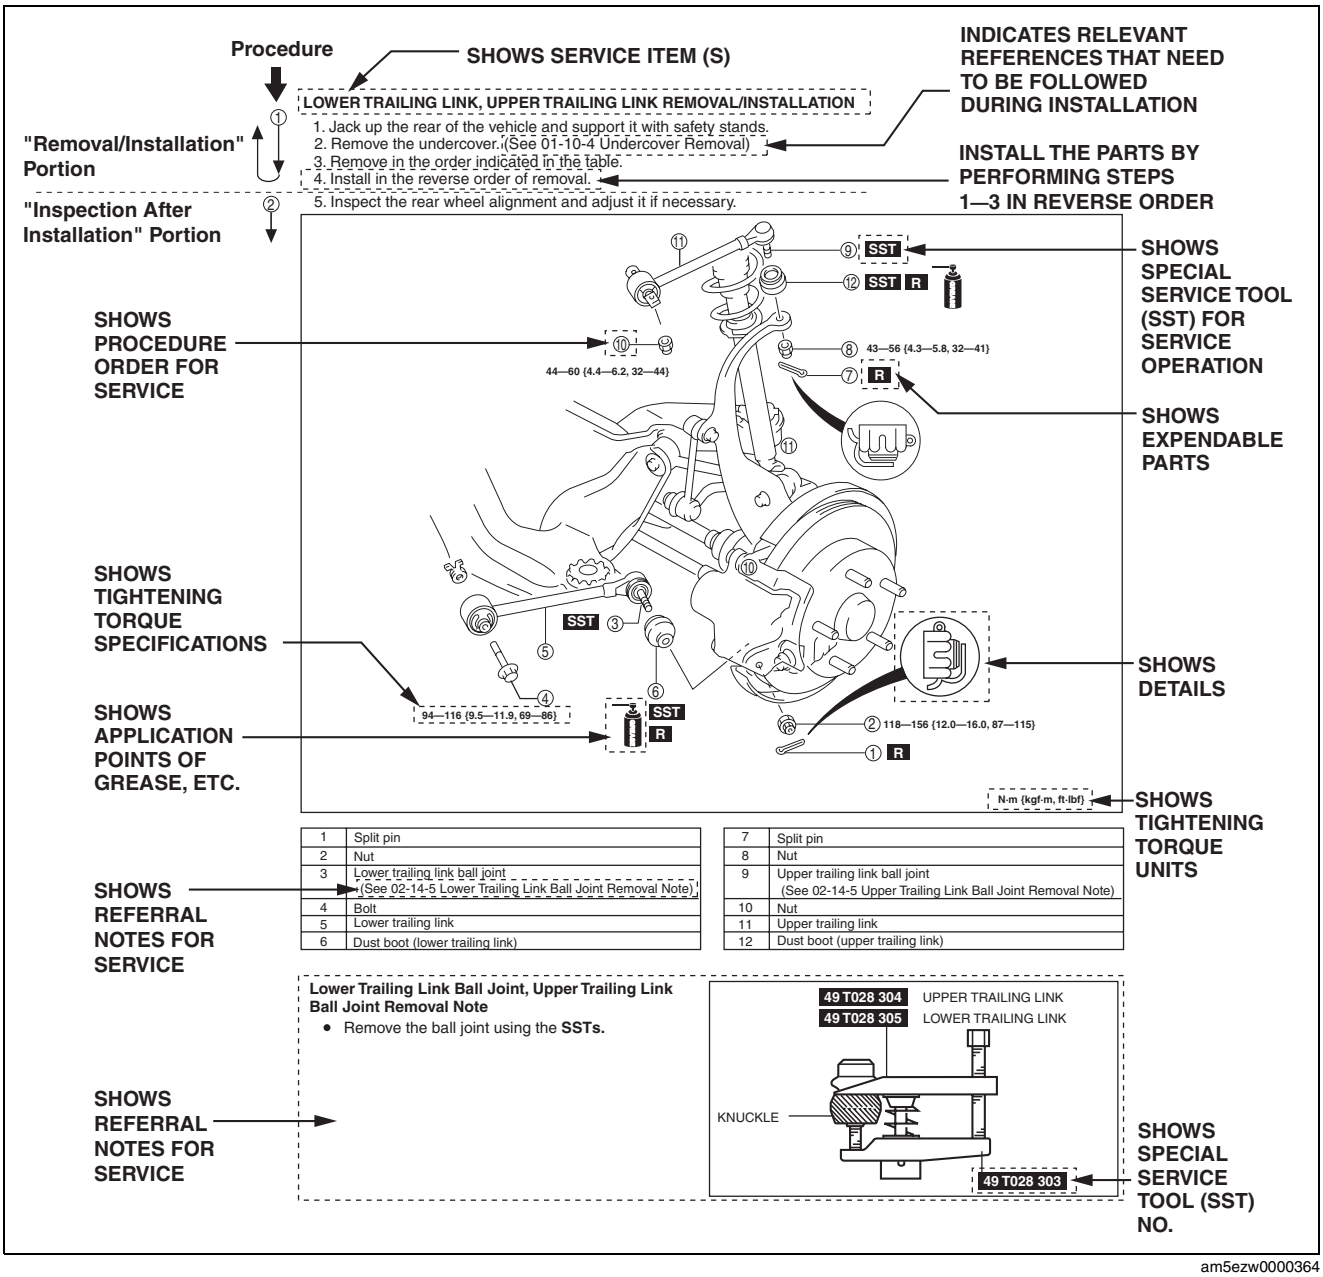
am5ezw0000364

GENERAL INFORMATION

00

Repair procedure

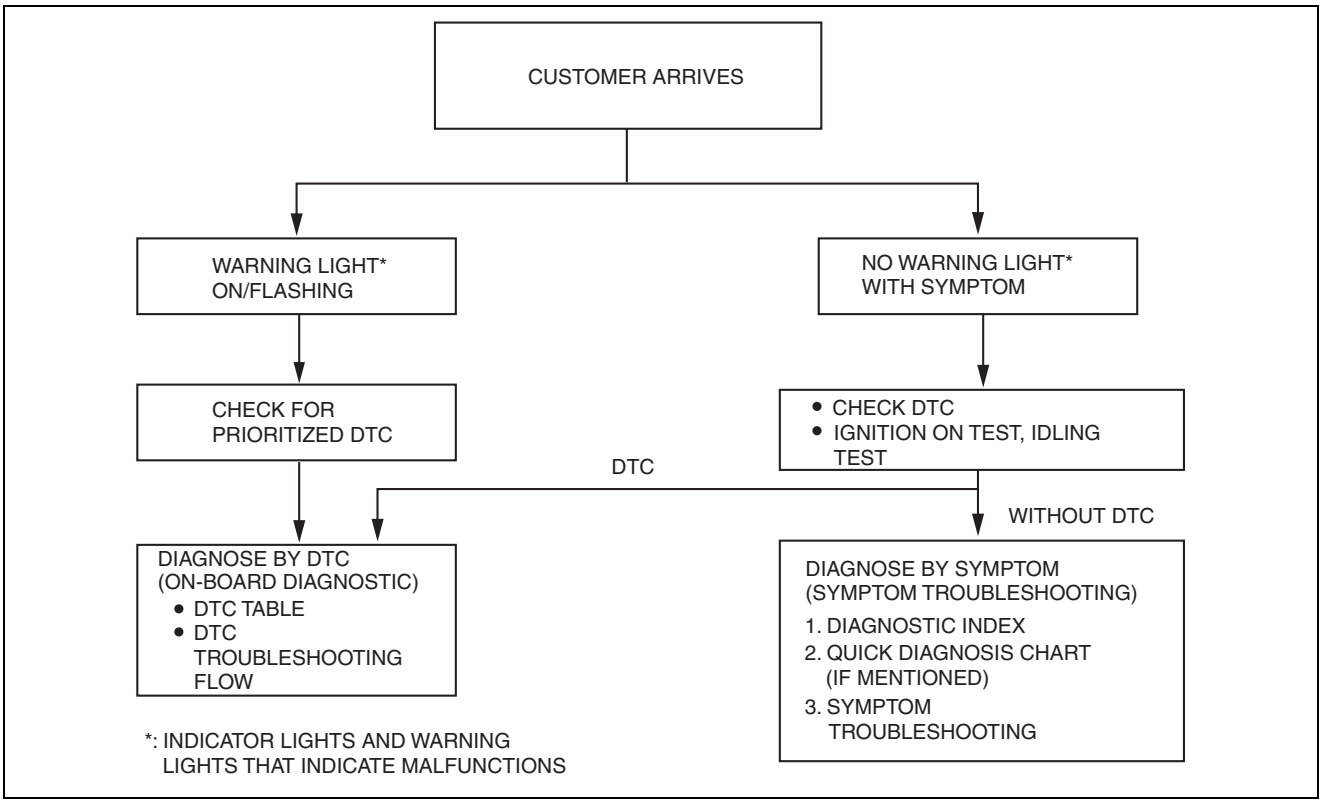
1. Most repair operations begin with an overview illustration. It identifies the components, shows how the parts fit together, and describes visual part inspection. However, only removal/installation procedures that need to be performed methodically have written instructions.
2. Expendable parts, tightening torques, and symbols for oil, grease, and sealant are shown in the overview illustration. In addition, symbols indicating parts requiring the use of special service tools or equivalent are also shown.
3. Procedure steps are numbered and the part that is the main point of that procedure is shown in the illustration with the corresponding number. Occasionally, there are important points or additional information concerning a procedure. Refer to this information when servicing the related part.



am5ezw0000364

GENERAL INFORMATION

Troubleshooting Procedure
Basic flow of troubleshooting



am5ezw0000364

DTC troubleshooting flow (on-board diagnostic)

- Diagnostic trouble codes (DTCs) are important hints for repairing malfunctions that are difficult to simulate. Perform the specific DTC diagnostic inspection to quickly and accurately diagnose the malfunction.
- The on-board diagnostic function is used during inspection. When a DTC is shown specifying the cause of a malfunction, continue the diagnostic inspection according to the items indicated by the on-board diagnostic function.

Diagnostic index

- The diagnostic index lists the symptoms of specific malfunctions. Select the symptoms related or most closely relating to the malfunction.

Quick diagnosis chart (If mentioned)

- The quick diagnosis chart lists diagnosis and inspection procedures to be performed specifically relating to the cause of the malfunction.

Symptom troubleshooting

- Symptom troubleshooting quickly determines the location of the malfunction according to symptom type.

GENERAL INFORMATION

00

Procedures for Use

Using the basic inspection (section 05)

- Perform the basic inspection procedure before symptom troubleshooting.
- Perform each step in the order shown.
- The reference column lists the location of the detailed procedure for each basic inspection.
- Although inspections and adjustments are performed according to the reference column procedures, if the cause of the malfunction is discovered during basic inspection, continue the procedures as indicated in the action column.

SHOWS INSPECTION ORDER

SHOWS ITEM NAMES FOR DETAILED PROCEDURES

SHOW POINTS REQUIRING ATTENTION BASED ON INSPECTION RESULTS

BASIC INSPECTION

STEP	INSPECTION		ACTION
1	Perform the mechanical system test. (See 05-13-3 MECHANICAL SYSTEM TEST.) Is mechanical system normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
2	Turn the ignition switch to the ON position. When the selector lever is moved, does the selector illumination indicate synchronized position to the lever location? Also, when other ranges are selected from N or P during idling, does the vehicle move within 1—2 s?	Yes	Go to next step.
		No	Inspect the selector lever and TR switch. Repair or replace malfunctioning parts. (See 05-14-5 SELECTOR LEVER INSPECTION.) (See 05-13-10 TRANSMISSION RANGE (TR) SWITCH INSPECTION.) If the selector lever and TR switch are normal, go to the next step.
3	Inspect the ATF color condition. (See 05-13-8 AUTOMATIC TRANSMISSION FLUID (ATF) INSPECTION.) Are ATF color and odor normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result. Flush ATX and cooler line as necessary.
4	Perform the line pressure test. (See 05-13-3 Line Pressure Test.) Is the line pressure normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
5	Perform the stall test. (See 05-13-4 Stall Speed Test.) Is the stall speed normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
	Inspect the voltage at the following TCM terminals. (See 05-13-29 TCM INSPECTION.) • Terminal 2J (TFT sensor) • Terminals 1D, 2B, 2C, 2E (TR switch) • Terminal 2G (turbine sensor) • Terminal 2D (down switch) • Terminal 2I (up switch) • Terminal 1E (M range switch) • Terminal 1W (steering shift switch) Is the voltage normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.

REFERENCE COLUMN

am5ezw0000364

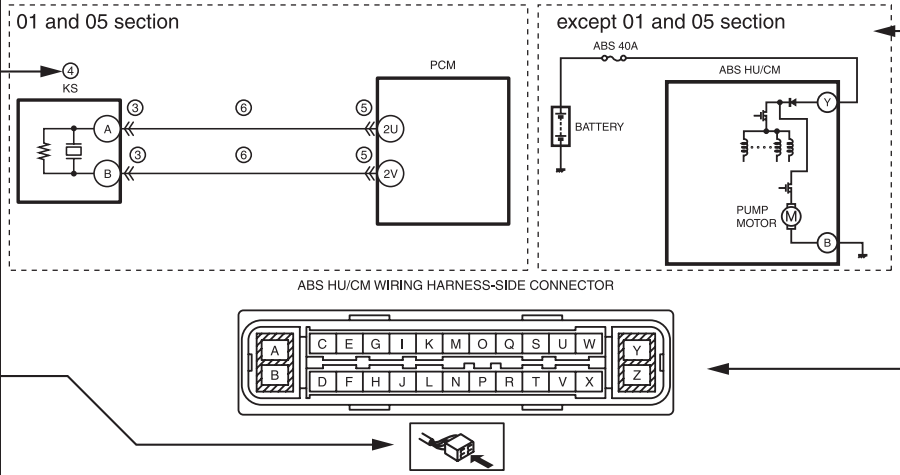
GENERAL INFORMATION

Using the DTC troubleshooting flow

- DTC troubleshooting flow shows diagnostic procedures, inspection methods, and proper action to take for each DTC.

DTC C0020:01/C0020:1C/C0020:71 [ABS]

DTC	C0020:01, C0020:1C, C0020:71	Pump motor, motor relay
DETECTION CONDITION	・C0020:01 — ABS motor relay signal does not correspond to ABS HU/CM ON signal. ・C0020:1C — ABS motor monitor signal does not correspond to ABS HU/CM OFF signal. — ABS motor monitor signal does not correspond to ABS HU/CM ON signal. ・C0020:71 — ABS HU/CM motor monitor ON signal is not input within specified time limit or more when motor signal is switched from ON to OFF by ABS HU/CM.	
FAIL-SAFE FUNCTION	・Illuminates the ABS warning light and TCS/DSC indicator light. ・Inhibits the ABS, TCS, DSC and brake assist controls.	
POSSIBLE CAUSE	・ABS 40A fuse malfunction ・Open or short circuit in ABS HU/CM internal motor relay, or stuck motor relay ・Open or short circuit in ABS HU/CM internal pump motor, or frozen pump motor ・Open circuit or short to ground in the wiring harness between the battery and ABS HU/CM terminal Y ・Open circuit in the wiring harness between ABS HU/CM terminal B and body ground ・Poor connection at connectors (female terminal)	



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ABS FUSE CONDITION** ・Is the ABS fuse (ABS 40A) normal?	Yes	Go to the next step.
		No	Replace the fuse, then go to Step 6.
2	**VERIFY PUMP MOTOR OPERATION** ・Switch the ignition to off. ・Connect the M-MDS to the DLC-2. ・Switch the ignition to ON. ・Access PMP_MTR active command modes using the M-MDS. ・Does the pump motor operate?	Yes	Go to the next step.
		No	Replace the ABS HU/CM, then go to Step 6. (See ABS HU/CM REMOVAL/INSTALLATION.)
3	**INSPECT MOTOR RELAY POWER SUPPLY FOR OPEN CIRCUIT** ・Switch the ignition to off. ・Disconnect the ABS HU/CM connector. ・Inspect for continuity between ABS HU/CM terminal Y and the positive battery terminal. ・Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 6.
4	**INSPECT MOTOR RELAY POWER SUPPLY FOR SHORT CIRCUIT** ・Inspect for continuity between ABS HU/CM terminal Y and body ground. ・Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 6.
		No	Go to the next step.
5	**INSPECT PUMP MOTOR GROUND FOR OPEN CIRCUIT** ・Inspect for continuity between ABS HU/CM terminal B and body ground. ・Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.
6	**VERIFY THAT THE SAME DTC IS NOT PRESENT** ・Reconnect all disconnected connectors. ・Clear the DTCs from the memory. (See ON-BOARD DIAGNOSIS [ABS].) ・Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. ・Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the ABS CM, then go to the next step. (See ABS HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCS ARE PRESENT** ・Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See ON-BOARD DIAGNOSIS [ABS].)
		No	DTC troubleshooting completed.

am5ezw0000535

DETECTION CONDITION describes the condition under which the DTC is detected.

TROUBLE CONDITION

FAIL-SAFE FUNCTION Indicates control status at time of DTC detection

POSSIBLE CAUSE describes possible point(s) of malfunction

Indicates the circuit to be inspected

Indicates the inspection step No. to be performed

Indicates the direction in which to visually inspect the connector

Indicates the connector related to the inspection

STEP shows the order of troubleshooting

INSPECTION describes the method to quickly determine the malfunctioning part(s).

ACTION describes the appropriate action to be taken according to the result (Yes/No) of the INSPECTION.

Reference item(s) to perform ACTION.

GENERAL INFORMATION

Using the diagnostic index

- Malfunction symptoms are listed in the diagnostic index under symptom troubleshooting.
- The exact malfunction symptoms can be selected by following the index.
- Correctly verify the malfunction symptom according to “DESCRIPTION”.

No.	TROUBLESHOOTING ITEM		DESCRIPTION	Page
1	Melting of main or other fuses		—	(See 01-03-6 MELT NO.1 MAIN OR OTHER FUSE)
2	MIL comes on		MIL is illuminated incorrectly.	(See 01-03-7 NO.2 MIL COMES ON)
3	Will not crank		Starter does not work.	(See 01-03-8 NO. 3 WILL NOT CRANK)
4	Hard start/long crank/erratic start/erratic crank		Starter cranks engine at normal speed but engine requires excessive cranking time before starting.	(See 01-03-9 NO. 4 HARD START/ LONG CRANK/ERRATIC CRANK)
5	Engine stalls.	After start/at idle	Engine stops unexpectedly at idle and/or after start.	(See 01-03-11 NO. 5 ENGINE-STALLS AFTER START/AT IDLE)
6	Cranks normally but will not start		Starter cranks engine at normal speed but engine will not run.	(See 01-03-15 NO.6 CRANKS NORMALLY BUT WILL NOT START)
7	Slow return to idle		Engine takes more time than normal to return to idle speed.	(See 01-03-19 NO. 7 SLOW RERUN TO IDLE)
8	Engine runs rough/rotling		Engine speed fluctuates between specified idle speed and lower speed and engine shakes excessively.	(See 01-03-20 NO. 8 ENGINE RUNS ROUGH/ROLLING IDLE)
9	Fast idle/runs on		Engine speed continues at fast idle after warm-up. Engine runs after ignition key is turned to OFF.	(See 01-03-23 NO. 9 FAST IDLE/RUNS ON)

am5ezw0000365

GENERAL INFORMATION

Using the quick diagnosis chart

- The related malfunction cause can be understood.
- The relation between the malfunction symptom and cause is indicated.
- The relation between the malfunction symptom and cause can be detected quickly, and if multiple malfunction symptoms occur, the area which is the common cause among the multiple malfunctions can be specified.
- The effective inspection procedure for the malfunction cause specified from the malfunction symptoms can be selected using the inspection procedure chart.

MALFUNCTION CAUSE SPECIFIED BY MALFUNCTION SYMPTOM

SYMPTOM QUICK DIAGNOSTIC CHART

② SPECIFY MALFUNCTIONING PART CORRESPONDING TO MALFUNCTION SYMPTOM

① SELECT MALFUNCTION SYMPTOM

Troubleshooting item \ Possible factor			Starter motor malfunction (Mechanical or electrical)	Starter circuit including ignition switch open	Improper engine oil level	Low or dead battery	Charging system malfunction	Improper engine compression	Improper valve timing	Hydrolocked engine	Improper engine oil viscosity	Improper dipstick	Base engine malfunction	Drive plate or flywheel seized	Improper tension or damaged drive belts	Improper engine coolant level	Water and anti-freeze mixture improperly	Cooling system malfunction (Radiator, hoses, overflow system, thermostat, etc.)	Cooling fan system malfunction	Engine or transsexual mounts improperly installed	Cooling fan or condenser fan seat improperly	Accelerator cable free play mis-adjustment	Fuel quality

am5ezw0000668

GENERAL INFORMATION

Using the symptom troubleshooting

- Determine the malfunctioning part quickly and accurately based on each malfunction symptom.
- After repair, verify that the malfunction symptom is eliminated.
- There are the troubleshooting procedures and actions for each malfunctioning part.
- Structured as procedures for verifying malfunction symptom quickly and accurately.

TROUBLE SYMPTOM

DESCRIPTION describes what kind of TROUBLE SYMPTOM

NO.2 VEHICLE MOVES IN N POSITION

2	Vehicle moves in N position
DESCRIPTION	• Vehicle creeps in N position. • Vehicle creeps if brake pedal is not depressed in N position.
POSSIBLE CAUSE	• If the vehicle moves in N position, basically, the malfunction is in the ATX. Since a malfunction in the sensor circuit or output circuit is the cause of the malfunction in the ATX, inspect the sensors, output circuit, and the related wiring harnesses. 1. Clutch burnt (Forward clutch) • Control valve body malfunction 2. Selector lever position disparity (Although the selector indicator shows N position, the hydraulic circuit shows D range or R position) **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

POSSIBLE CAUSE describes possible point of malfunction

STEP shows the order of troubleshooting.

Reference item(s) to perform ACTION.

INSPECTION describes the method to quickly determine the malfunctioning part(s).

Reference item(s) for additional information to perform INSPECTION.

ACTION describes the appropriate action to be taken according to the result (Yes/No) of the INSPECTION.

How to perform ACTION is described in the relative material shown.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Does the vehicle creep when the selector lever is moved slightly in N position?	Yes	Go to the next step.
		No	Adjust the selector cable. (See SELECTOR CABLE ADJUSTMENT.)
2	Disconnect the TCM connector. Is the resistance between the ground terminal at the TCM connector and the body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair open ground circuit. Reconnect the TCM connector.
3	Inspect the value at the following TCM PID using the M-MDS. (See PID/DATA MONITOR INSPECTION [FS5A-EL].) • LPS Is the LPS PID value normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)
		No	Repair or replace any malfunctioning parts
4	• Verify the test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the related Service Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting is completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

am5ezw0000669

SERVICE CAUTIONS

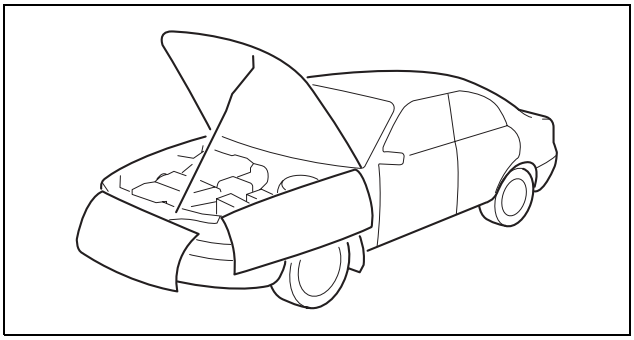
id000000800200

Injury/damage Prevention Precautions

- Depending on the vehicle, the cooling fan may operate suddenly even when the ignition is switched OFF (LOCK). Therefore, keep hands and tools away from the cooling fan even if the cooling fan is not operating to prevent injury to personnel or damage to the cooling fan. Always disconnect the negative battery cable when servicing the cooling fan or parts near the cooling fan.

Protection of the Vehicle

- Always be sure to cover fenders, seats and floor areas before starting work.

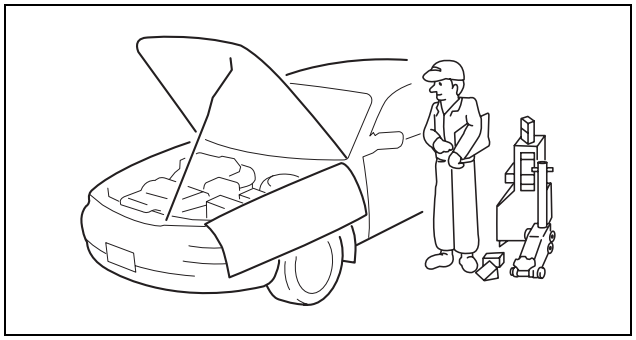


am6zzw0000415

GENERAL INFORMATION

Preparation of Tools and Measuring Equipment

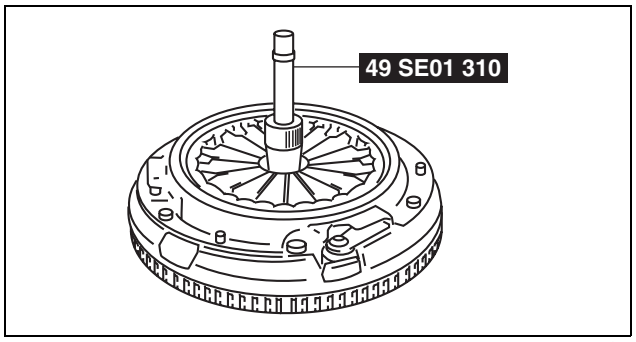
- Be sure that all necessary tools and measuring equipment are available before starting any work.



am6zzw0000415

Special Service Tools

- Use special service tools or the equivalent when they are required.



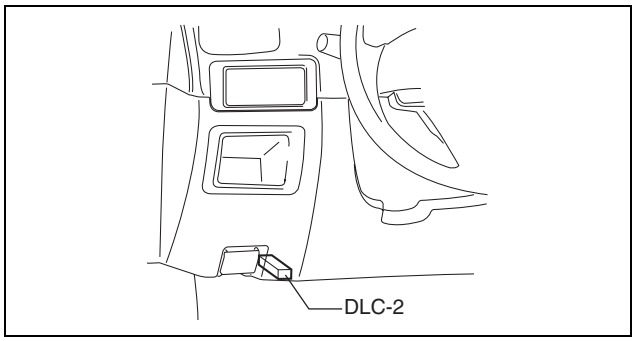
am3uuw0000193

Malfunction Diagnosis System

- Use the Mazda Modular Diagnostic System (M-MDS) for malfunction diagnosis.

Connection to malfunction diagnosis system

- With the ignition switched off, connect the malfunction diagnosis system to the DLC-2 connector shown in the figure.



ac5wzw0000287

GENERAL INFORMATION

Oil Leakage Inspection

- Use either of the following procedures to identify the type of oil that is leaking:

Using UV light (black light)

1. Remove any oil on the engine or transmission/transaxle.

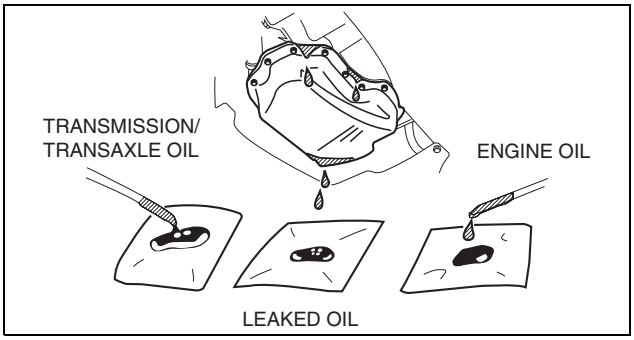
   Note
   - Referring to the fluorescent dye instruction manual, mix the specified amount of dye into the engine oil or transmission/transaxle oil.

2. Pour the fluorescent dye into the engine oil or transmission/transaxle oil.
3. Allow the engine to run for **30 min**.
4. Inspect for dye leakage by irradiating with UV light (black light), and identify the type of oil that is leaking.
5. If no dye leakage is found, allow the engine to run for another **30 min**. or drive the vehicle then reinspect.
6. Find where the oil is leaking from, then make necessary repairs.

   Note
   - To determine whether it is necessary to replace the oil after adding the fluorescent dye, refer to the fluorescent dye instruction manual.

Not using UV light (black light)

1. Gather sample of the leaking oil using an absorbent white tissue.
2. Then gather some sample of engine and transmission/transaxle oil onto a white cloth or piece of paper.
   - MT vehicles: Transmission/transaxle oil
   - AT vehicles: ATF
   - CVT vehicles: CVT fluid
3. Compare the appearance and smell, and identify the type of oil that is leaking.
4. Remove any oil on the engine or transmission/transaxle.
5. Allow the engine to run for **30 min**.
6. Check the area where the oil is leaking, then make necessary repairs.



am5ezw0000540

GENERAL INFORMATION

Negative Battery Cable Disconnection/Connection
Warning

- Before removing the SRS air bag system-related parts, always disconnect the negative battery cable and wait for 1 min. or more to allow the back-up power supply to deplete its stored power. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)

Required procedure after negative battery cable disconnection/connection

System name	Conditions after disconnecting the negative battery cable	Required procedure		Reference
		Before disconnecting negative battery cable	After connecting negative battery cable	
Power window system	Reset to initial setting and auto-function is disabled.	—	Perform the power window system initial setting.	(See 09-12-66 POWER WINDOW SYSTEM INITIALIZATION PROCEDURE.)
Sunroof system	Reset to initial setting and function is disabled.	—	Perform the sunroof system initial setting.	(See 09-15-18 SUNROOF SYSTEM INITIALIZATION PROCEDURE.)
Clock and audio	Clock display and audio system memory are reset.	Verify the setting content.	Set the verified content before disconnecting negative battery cable.	—
i-stop system	Specified information in the PCM cleared and the i-stop does not operate normaly.	Verify PID “BATT_SOC” value and record. *1	Perform battery condition initial setting (i-stop setting). *2	(See 01-17A-14 BATTERY CONDITION INITIALIZATION SETTING (i-stop SETTING) [SKYACTIV-G 2.0].) (See 01-17B-11 BATTERY CONDITION INITIALIZATION SETTING (i-stop SETTING) [SKYACTIV-D 2.2].)
Tire pressure monitoring system (TPMS)	The tire pressure monitoring system detection accuracy decreases.	—	Perform the tire pressure monitoring system initialization.	(See 02-12-4 TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE.)

*1 : For vehicles with i-stop, if the negative battery cable is disconnected and re-connected, battery condition initial setting (i-stop setting) must be performed.
*2 : Because the “BATT_SOC” value before disconnecting the negative battery cable is required for the battery condition initial setting (i-stop setting), record the “BATT_SOC” value before disconnecting the negative battery cable.

GENERAL INFORMATION

Switch The Power Supply Using The Push Button Start And Start The Engine

- The power supply switch using the push button start is performed by depressing the clutch pedal (MTX), depressing the brake pedal (ATX), and then pressing the push button start.

MTX

PUSH BUTTON START PRESSED WITHOUT DEPRESSING THE CLUTCH PEDAL

POWER SUPPLY	ENGINE STATE	SHIFT POSITION
		ALL
OFF	–	
ACC	–	
ON	ENGINE OFF	
	ENGINE ON	

ATX

PUSH BUTTON START PRESSED WITHOUT DEPRESSING THE BRAKE PEDAL

POWER SUPPLY	ENGINE STATE	SHIFT POSITION		
		P	N	OTHER THAN P, N
OFF	–			
ACC	–			
ON	ENGINE OFF			
	ENGINE ON			

ac5wzw0000250

- For engine starting using the push button start, depress the clutch pedal (MTX), depress the brake pedal (ATX), and then press the push button start.

MTX

PUSH BUTTON START PRESSED WITH THE CLUTCH PEDAL DEPRESSED

POWER SUPPLY	ENGINE STATE	SHIFT POSITION
		ALL
OFF	–	
ACC	–	
ON	ENGINE OFF	
	ENGINE ON	

ATX

PUSH BUTTON START PRESSED WITH THE BRAKE PEDAL DEPRESSED

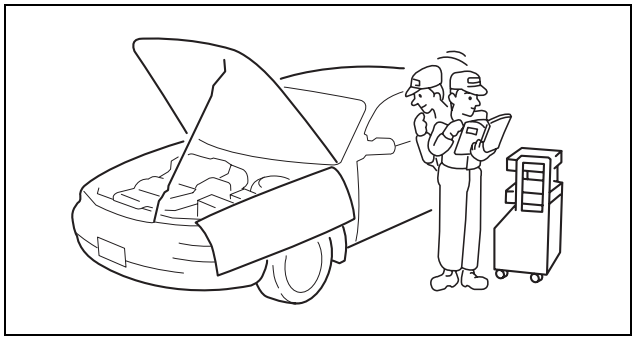
POWER SUPPLY	ENGINE STATE	SHIFT POSITION		
		P	N	OTHER THAN P, N
OFF	–			
ACC	–			
ON	ENGINE OFF			
	ENGINE ON			

amxzzw0000006

GENERAL INFORMATION

Removal of Parts

- While correcting a problem, also try to determine its cause. Begin work only after first learning which parts and sub-components must be removed and disassembled for replacement or repair. After removing the part, plug all holes and ports to prevent foreign material from entering.



am5ezw0000540

Control Unit Configuration (Initial Setting) Procedure Using M-MDS

- If the control unit is replaced, it is necessary to write the vehicle specification data to a new control unit using the M-MDS. This procedure is called configuration (initial setting).
- There are the following two methods of the configuration procedure for the control unit:
  - — Configuration by reading/writing data of vehicle information: Reads the vehicle information from the control unit prior to replacement, and writes the vehicle information to a new control unit.
  - — Configuration by As-Built data: Obtains the vehicle specification data when the vehicle is shipped from the factory, and writes the data to a new control unit.

Caution

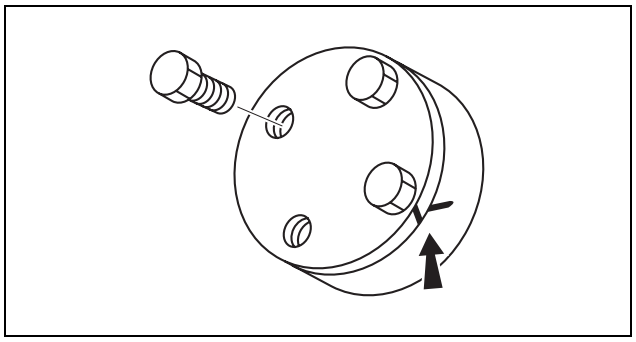
- **Normally perform the configuration using reading/writing function of vehicle information.**
- **The configuration using As-Built data is used if the vehicle information cannot be read due to a damaged control unit which is to be replaced, or if a DTC such as a configuration malfunction is detected.**
- **If a control unit having a personalization function is configured using As-Built data, the settings customized by the customer are initialized (to factory settings). In this case, verify the setting values made by the customer and change the customized setting values using the "Programmable Parameters" from the M-MDS menu.**
- **If the module programming menu of the M-MDS (Programmable Module Installation, As-Built, Programmable Parameters) is performed, perform the procedure while the battery monitor icon of the M-MDS is green or gray.**

Note

- For reading the vehicle information, the procedure is automatically performed during the procedure for the M-MDS vehicle identification and network test, and the vehicle specification information is temporarily stored in the M-MDS during vehicle identification.

Disassembly

- If the disassembly procedure is complex, requiring many parts to be disassembled, all parts should be marked in a place that will not affect their performance or external appearance, and identified so that reassembly can be performed easily and efficiently.

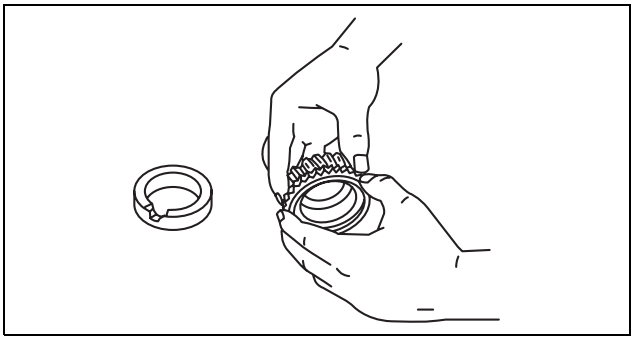


am6zzw0000559

GENERAL INFORMATION

Inspection During Removal, Disassembly

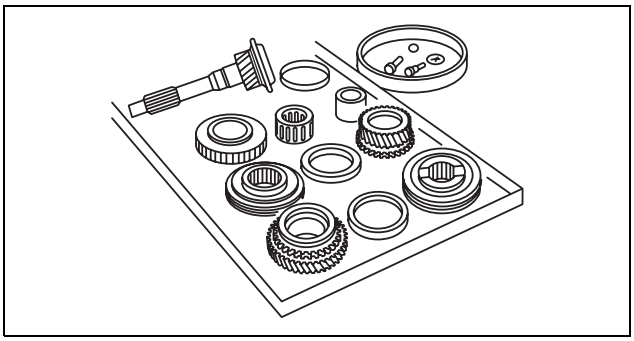
- When removed, each part should be carefully inspected for malfunction, deformation, damage and other problems.



am6zzw0000559

Arrangement of Parts

- All disassembled parts should be carefully arranged for reassembly.
- Be sure to separate or otherwise identify the parts to be replaced from those that will be reused.



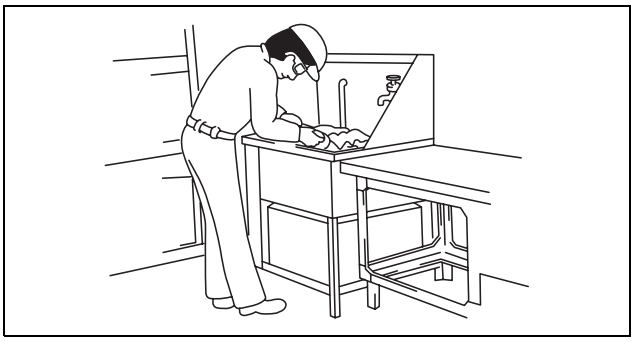
am6zzw0000559

Cleaning of Parts

- All parts to be reused should be carefully and thoroughly cleaned in the appropriate method.

Warning

- **Using compressed air can cause dirt and other particles to fly out causing injury to the eyes. Wear protective eye wear whenever using compressed air.**

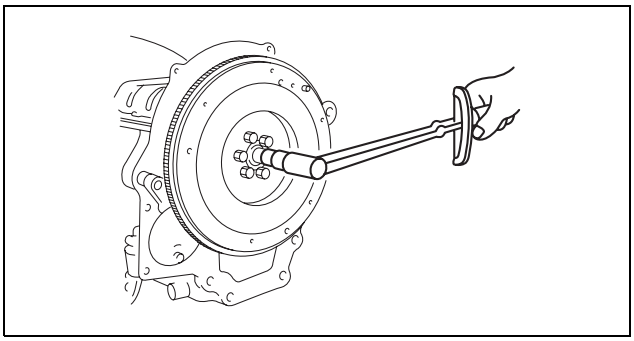


am6zzw0000559

Reassembly

- Standard values, such as torques and certain adjustments, must be strictly observed in the reassembly of all parts.
- If removed, these parts should be replaced with new ones:

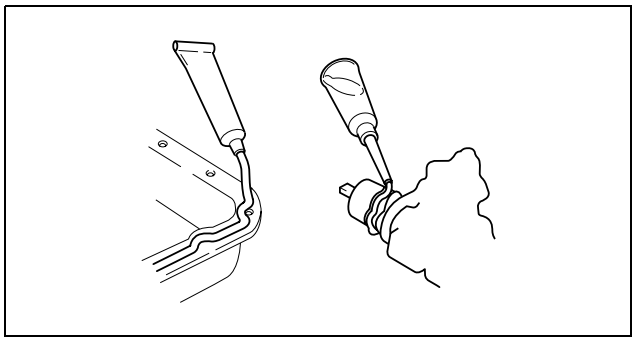
Oil seals	Cotter pins
Gaskets	Locknuts (Nylon nuts)
O-rings	Spring pins
Lock washers	—



am6zzw0000559

GENERAL INFORMATION

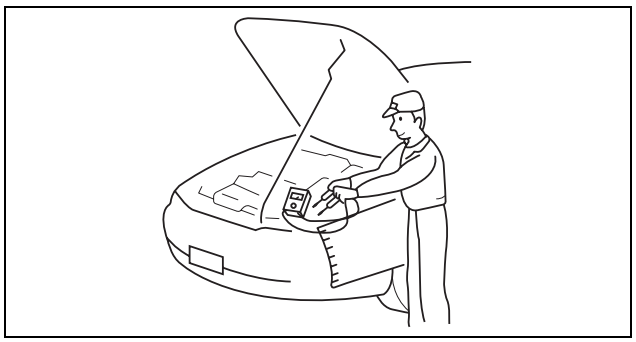
- Depending on location:
  - — Sealant and gaskets, or both, should be applied to specified locations. When sealant is applied, parts should be installed before sealant hardens to prevent leakage.
  - — Oil should be applied to the moving components of parts.
  - — Specified oil or grease should be applied at the prescribed locations (such as oil seals) before reassembly.



amxzzw0000006

Adjustment

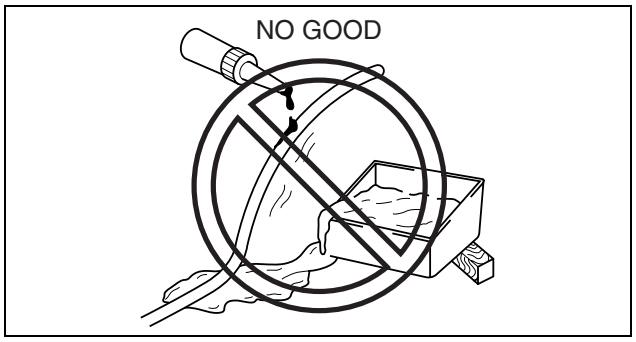
- Use suitable gauges and testers when making adjustments.



am5ezw0000540

Rubber Parts and Tubing

- Prevent gasoline or oil from getting on rubber parts or tubing.



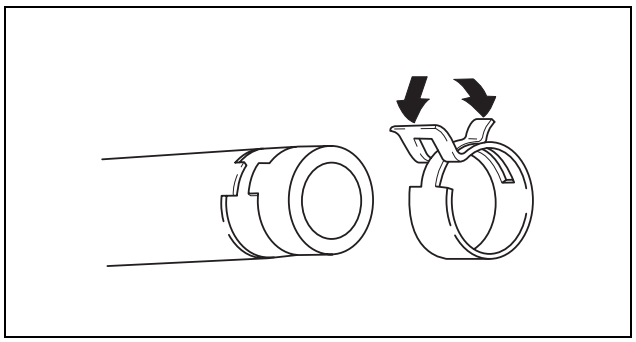
am6zzw0000266

Hose Clamps

- When reinstalling, position the hose clamp in the original location on the hose and squeeze the clamp lightly with large pliers to ensure a good fit.

Note

- Follow the description in each section because the clamps which are used with the fuel-related system differ from the one indicated above.



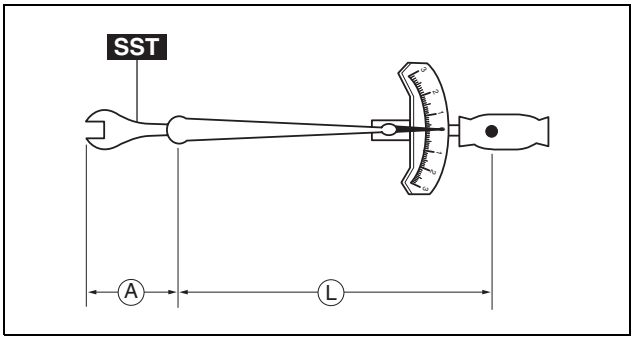
am6zzw0000416

GENERAL INFORMATION

Torque Formulas

- When using a torque wrench-**SST** or equivalent combination, the specified torque must be recalculated due to the extra length that the **SST** or equivalent adds to the torque wrench. Recalculate the torque by using the following formulas. Choose the formula that applies to you.

Torque Unit	Formula
N·m	N·m × [L/(L+A)]
kgf·m	kgf·m × [L/(L+A)]
kgf·cm	kgf·cm × [L/(L+A)]
ft·lbf	ft·lbf × [L/(L+A)]
in·lbf	in·lbf × [L/(L+A)]

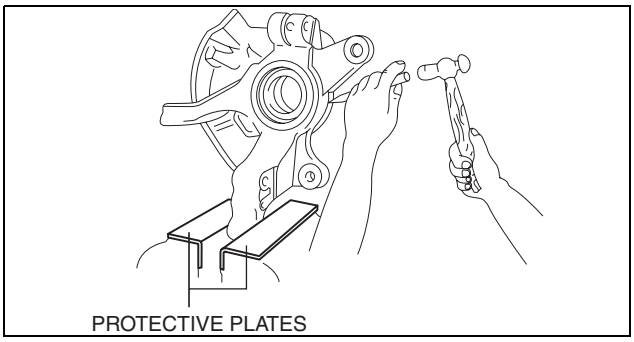


am3uuw0000193

A : The length of the **SST** past the torque wrench drive.
L : The length of the torque wrench.

Vise

- When using a vise, put protective plates in the jaws of the vise to prevent damage to parts.



am3uuw0000194

Dynamometer

- When inspecting and servicing the power train on the dynamometer or speedometer tester, pay attention to the following:
  - — Place a fan, preferably a vehicle-speed proportional type, in front of the vehicle.
  - — Make sure the vehicle is in a facility with an exhaust gas ventilation system.
  - — Keep the rear bumper cool by placing a cooling fan near the exhaust pipe so that the rear bumper does not get deformed by the heat from the exhaust.
  - — Keep the area around the vehicle uncluttered so that heat does not build up.
  - — Watch the water temperature gauge and do not overheat the engine.
  - — Avoid added load to the engine and maintain normal driving conditions as much as possible.

Note

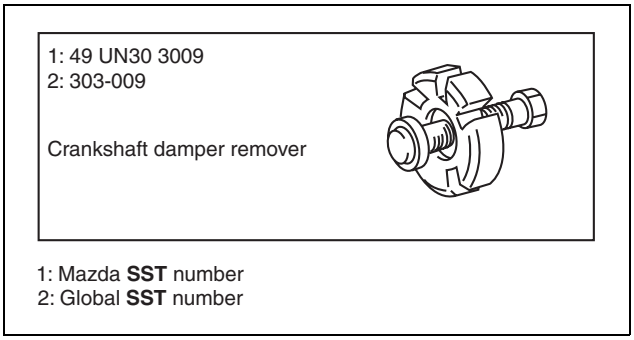
- When only the front or rear wheels are rotated on a chassis dynamometer or equivalent, the DSC HU/CM determines that there is a malfunction in the DSC and illuminates the following lights:
  - — with DSC
    - ABS warning light
    - Brake system warning light
    - TCS/DSC indicator light
- If the above lights are illuminated, dismount the vehicle from the chassis dynamometer and switch the ignition OFF (LOCK). Then, switch the ignition ON, run the vehicle at **10 km/h or more** and verify that the warning lights go out. In this case, a DTC will be stored in the memory. Clear the DTC from the memory by following the memory clearing procedure [DSC] in the on-board diagnostic system. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)

GENERAL INFORMATION

SST

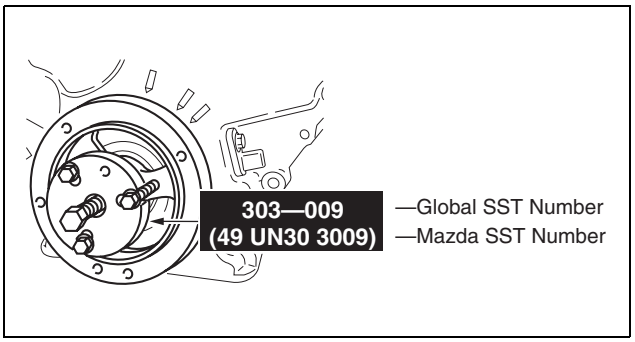
- Some global **SST** or equivalent are used as **SSTs** necessary for vehicle repair. Note that these **SSTs** are marked with global **SST** numbers.
- Note that a global **SST** number is written together with a corresponding Mazda **SST** number as shown below.

Example (SST List)



am5ezw0000675

Example (In text)



am6zzw0000559

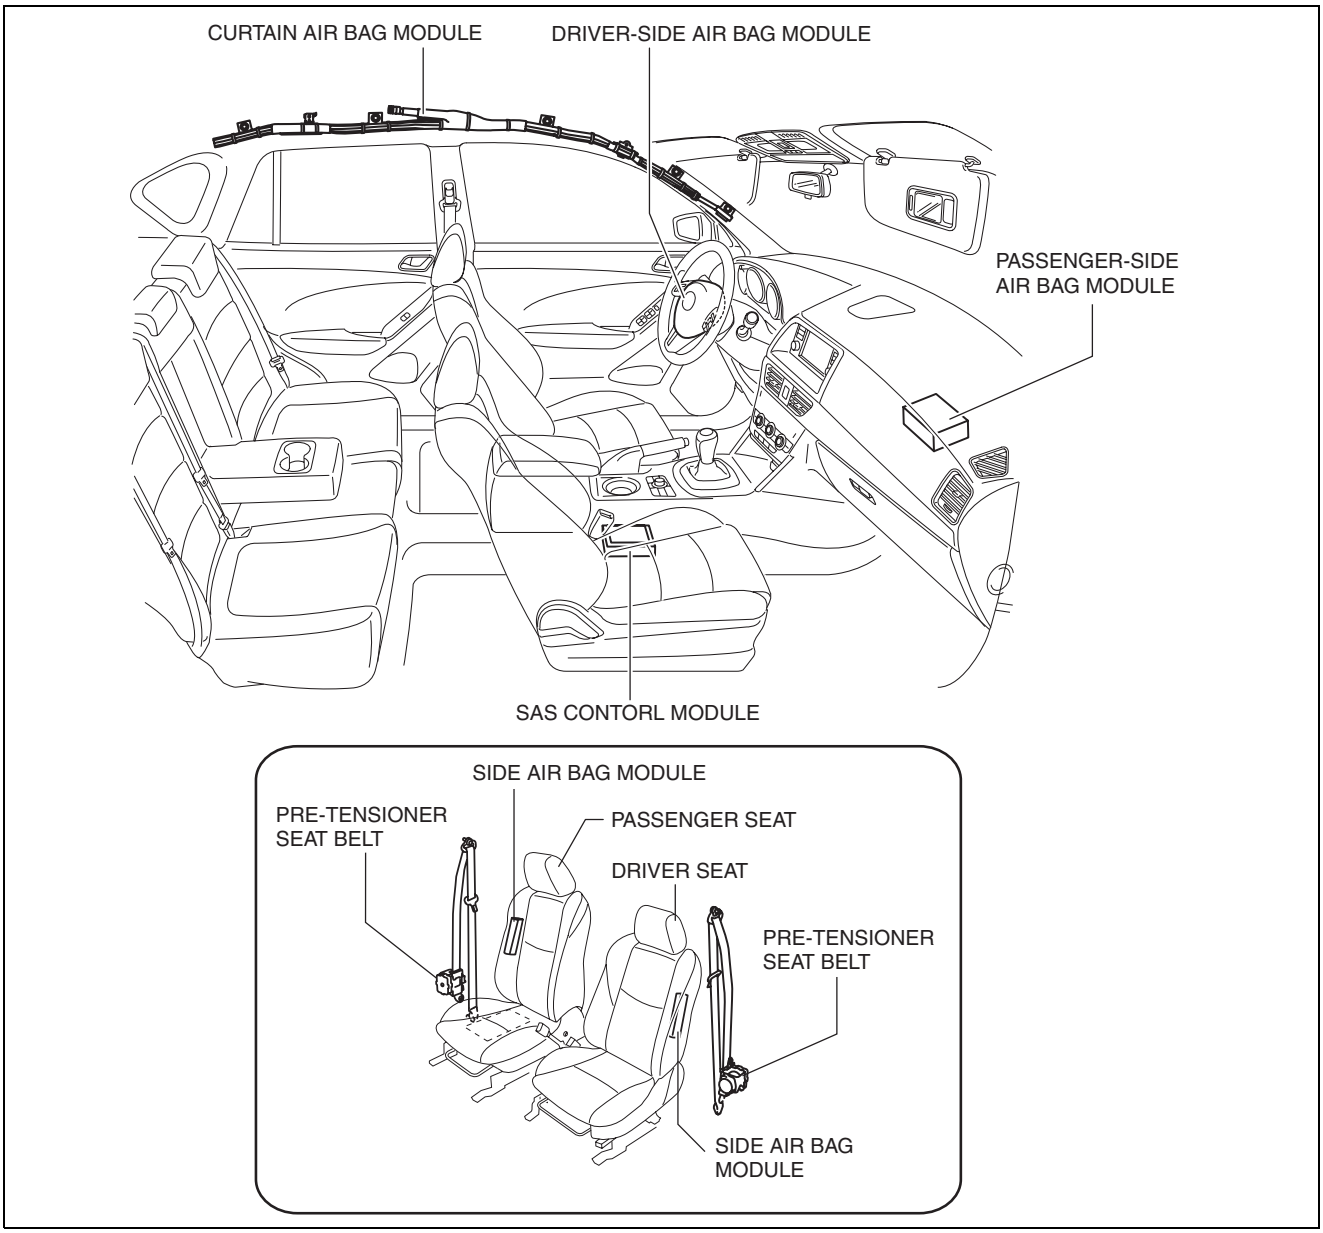
GENERAL INFORMATION

INSTALLATION OF RADIO SYSTEM

id000000800300

The control modules and control unit have been designed with sufficient attention to radio wave disturbances from the outside. However, observe the following precautions when installing the radio set to the vehicle to prevent adverse effects on the control modules and control unit.

- Install the radio set and its antenna as far away as possible from the control modules and control unit.
- The antenna feeder and power cable generate radio waves, therefore, keep them **100 mm {3.94 in}** or more from the control modules, control unit, and wiring harness. If the antenna feeder and power cable cross over the wiring harness, place them perpendicular to the wiring harness.
- Do not install a high output radio set.
- Do not use the control modules and control unit power source for the radio set. In addition, do not use the cigar lighter and accessory socket power source.
- Do not attach the antenna feeder or wiring harness of the radio set to the wiring harness, fuel pipe, or brake tube of the vehicle.
- Do not install any radio set-related devices in the area where the air bag module deploys to prevent a secondary accident if the air bag were to deploy.



ac5wzw0000088

- After installing the radio set, perform a test transmission with the engine idling to verify that it does not affect engine control.

GENERAL INFORMATION

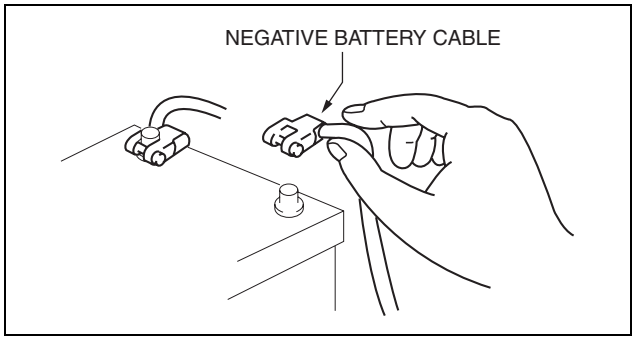
ELECTRICAL SYSTEM

id000000800400

Electrical Parts

Battery cable

- Before disconnecting connectors or removing electrical parts, disconnect the negative battery cable.



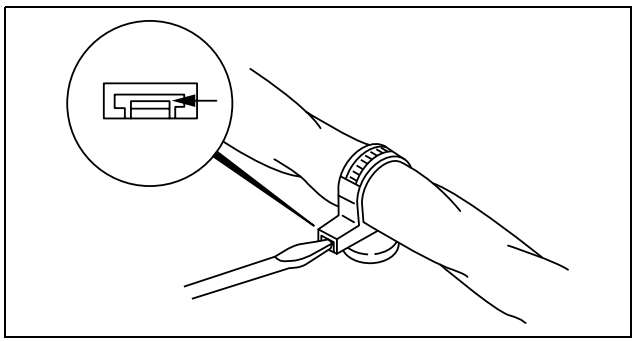
am6xuw0000003

Wiring Harness

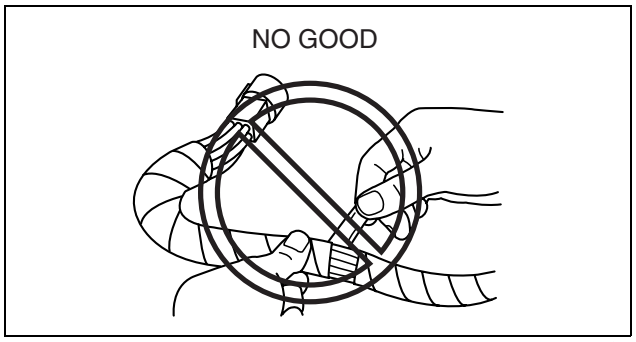
- To remove the wiring harness from the clip in the engine room, pry up the hook of the clip using a flathead screwdriver.

Caution

- **Do not remove the wiring harness protective tape. Otherwise, the wires could rub against the body, which could result in water penetration and electrical shorting.**



acxuuw00000452

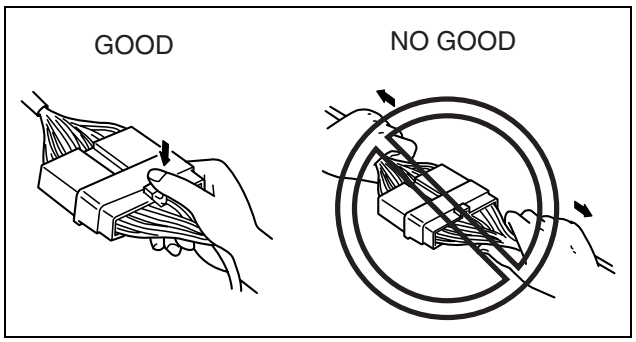


acxuuw00000453

Connectors

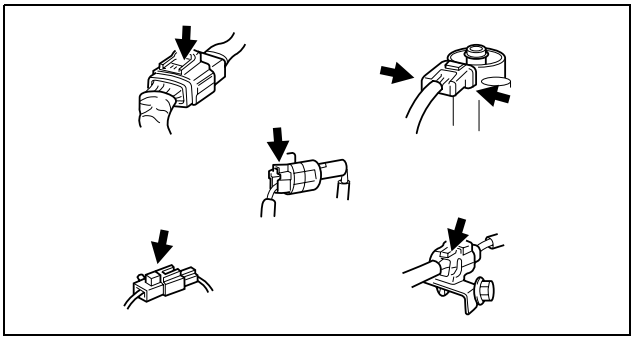
Disconnecting connectors

- When disconnecting a connector, grasp the connectors, not the wires.



acxuuw00000454

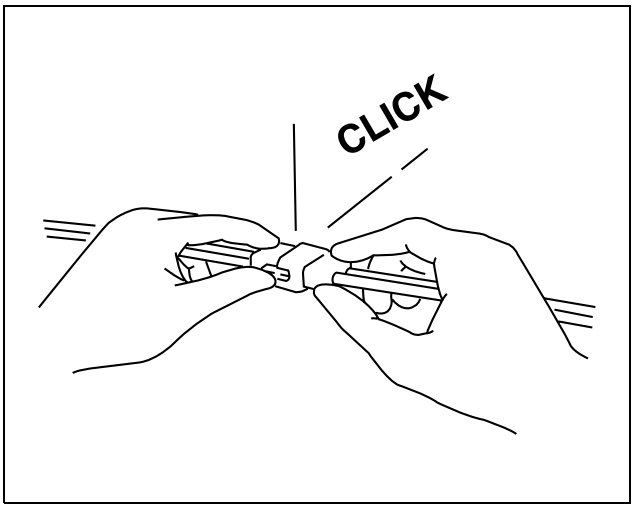
- Connectors can be disconnected by pressing or pulling the lock lever as shown.



acxuuw00000455

Locking connector

- When locking connectors, listen for a click indicating they are securely locked.



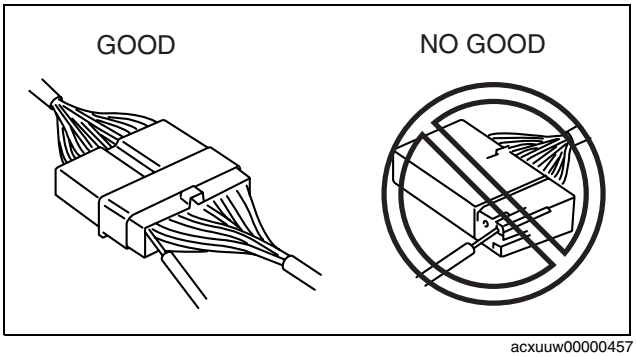
acxuuw00000456

Inspection

Caution

- **To prevent damage to the terminal, wrap a thin wire around the tester probe before inserting into terminal.**

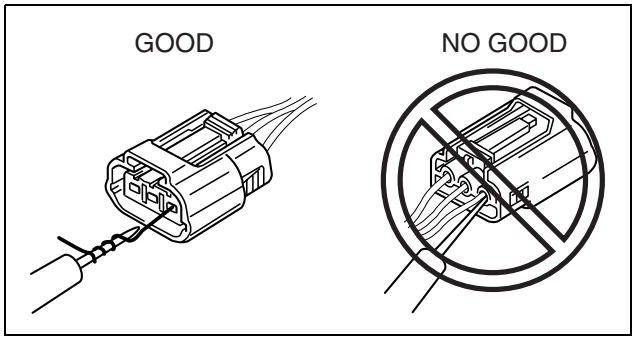
- When a tester is used to inspect for continuity or measuring voltage, insert the tester probe from the wiring harness side.



acxuuw00000457

GENERAL INFORMATION

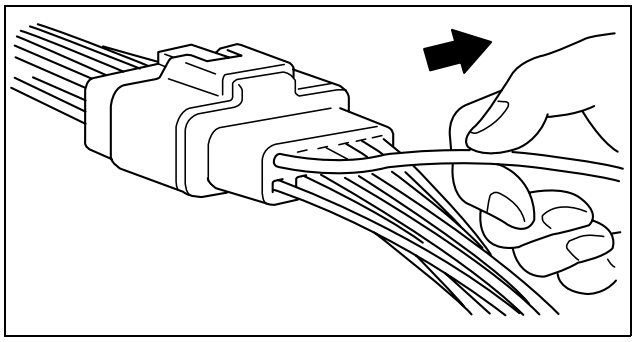
- Inspect the terminals of waterproof connectors from the connector side since they cannot be accessed from the wiring harness side.



acxuuw00000458

Terminals
Inspection

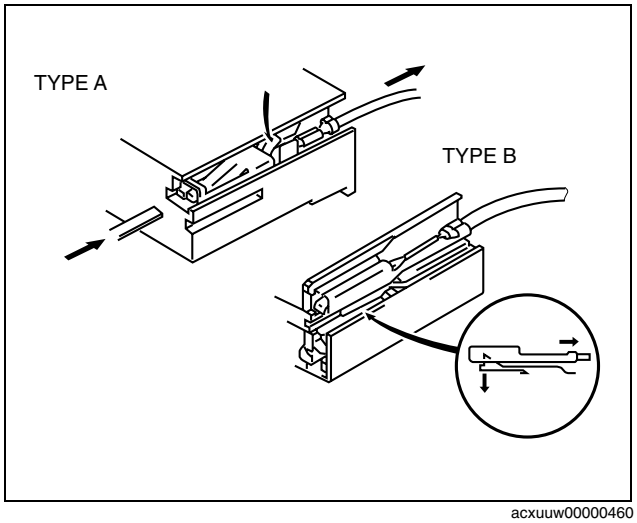
- Pull lightly on individual wires to verify that they are secured in the terminal.



acxuuw00000459

Replacement

- Use the appropriate tools to remove a terminal as shown. When installing a terminal, be sure to insert it until it locks securely.
- Insert a thin piece of metal from the terminal side of the connector and with the terminal locking tab pressed down, pull the terminal out from the connector.

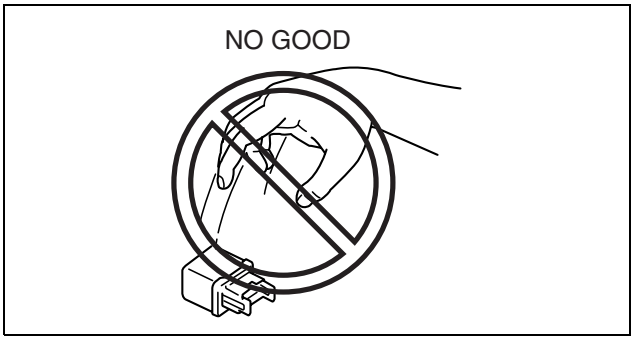


acxuuw00000460

GENERAL INFORMATION

Sensors, Switches, and Relays

- Handle sensors, switches, and relays carefully. Do not drop them or strike them against other objects.

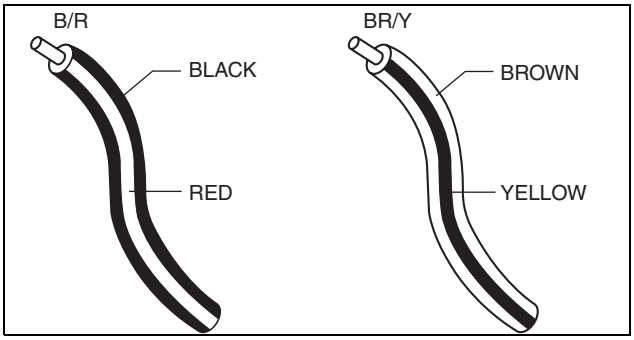


acxuuw00000461

Wiring Harness
Wiring color codes

- Two-color wires are indicated by a two-color code symbol.
- The first letter indicates the base color of the wire and the second is the color of the stripe.

CODE	COLOR	CODE	COLOR
B	Black	O	Orange
BR	Brown	P	Pink
G	Green	R	Red
GY	Gray	V	Violet
L	Blue	W	White
LB	Light Blue	Y	Yellow
LG	Light Green	–	–

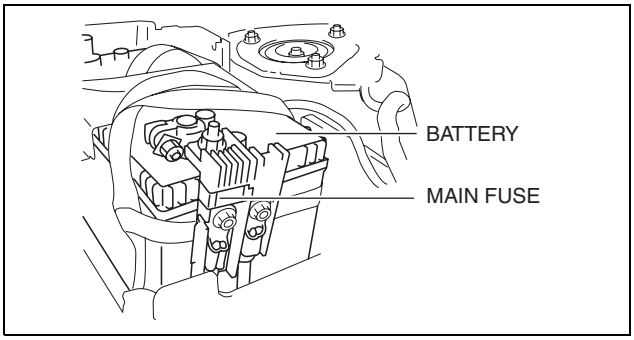


am6zzw0000567

Fuse
Replacement

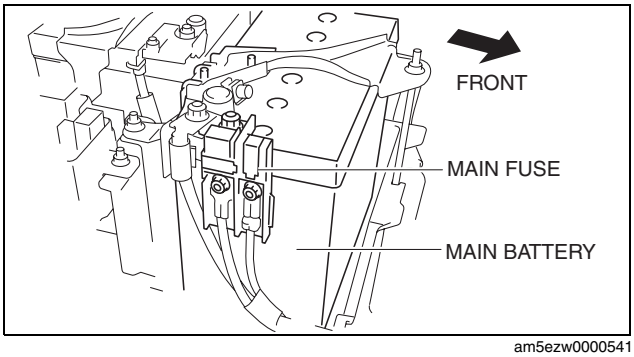
- When replacing a fuse, be sure to replace it with one of the same capacity. If a fuse malfunctions again, the circuit probably has a short and the wiring should be inspected.
- Be sure the negative battery terminal is disconnected before replacing a main fuse.

Without i-stop



am5ezw0000541

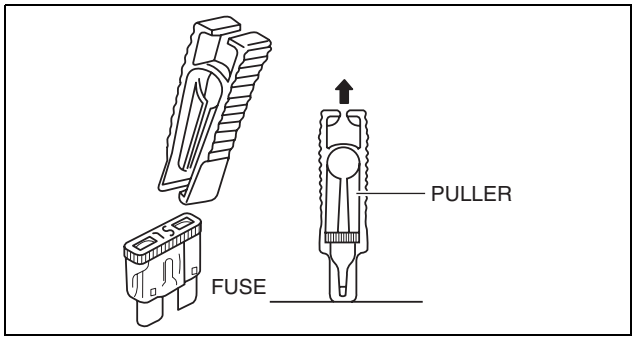
With i-stop



am5ezw0000541

GENERAL INFORMATION

- When replacing a pullout fuse, use the fuse puller.



am6xuw0000004

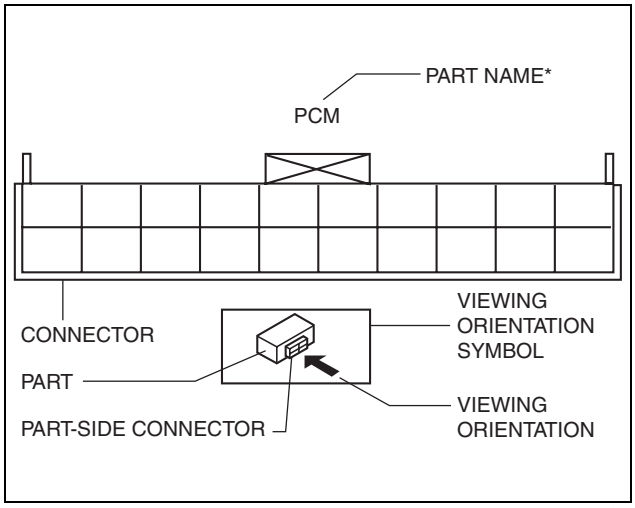
Viewing orientation for Connectors

- The viewing orientation for connectors is indicated with a symbol.
- The figures showing the viewing orientation are the same as those used in Wiring Diagrams.
- The viewing orientations are shown in the following three ways.

Part-side connector

The viewing orientation for part-side connectors is from the terminal side.

* : Part names are shown only when there are multiple connector drawings.

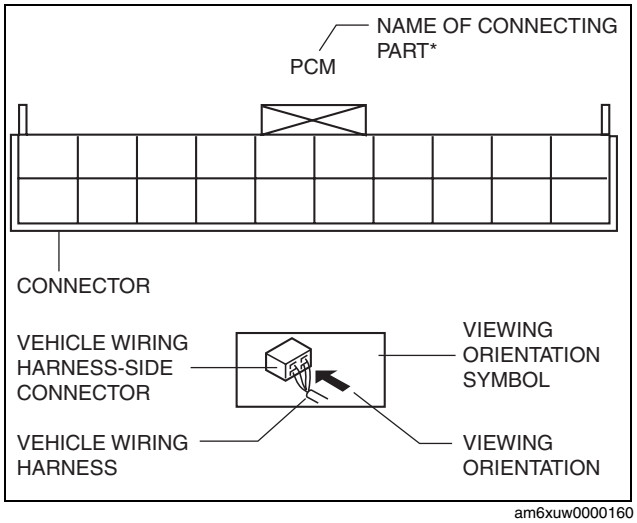


am6xuw0000160

Vehicle harness-side connector

The viewing orientation for vehicle wiring harness-side connectors is from the wiring harness side.

* : Part names are shown only when there are multiple connector drawings.



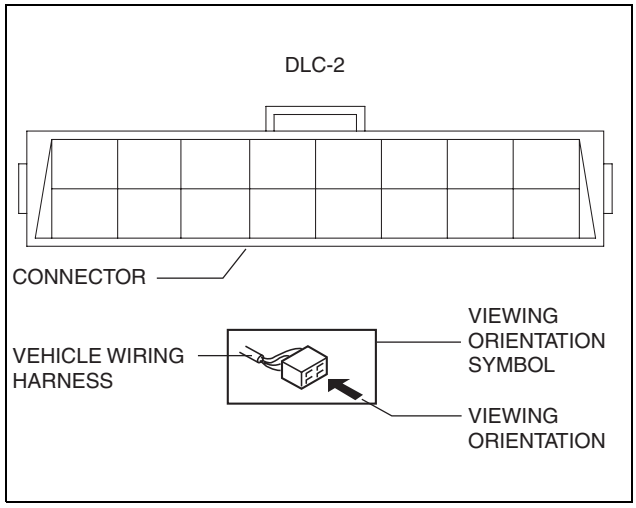
am6xuw0000160

GENERAL INFORMATION

Other

When it is necessary to show the terminal side of the vehicle wiring harness-side connectors, such as the following connectors, the viewing orientation is from the terminal side.

- Main fuse block and the main fuse block relays
- Data link connector
- Check connector
- Relay box



am3uuw0000684

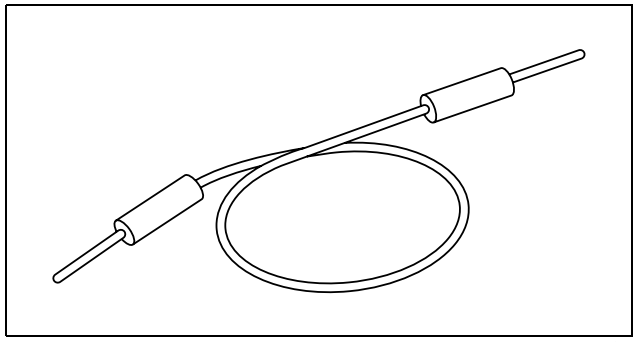
Electrical Troubleshooting Tools

Jumper wire

Caution

- **Do not connect a jumper wire from the power source line to a body ground. This may cause burning or other damage to wiring harnesses or electronic components.**

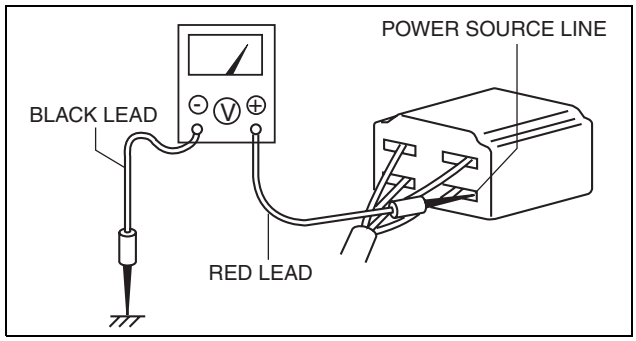
- A jumper wire is used to create a temporary circuit. Connect the jumper wire between the terminals of a circuit to bypass a switch.



acxuuw00000468

Voltmeter

- The direct current voltmeter is used to measure circuit voltage. A voltmeter with a range of **15 V or more** is used by connecting the positive (+) probe (red lead wire) to the point where voltage will be measured and the negative (-) probe (black lead wire) to a body ground.



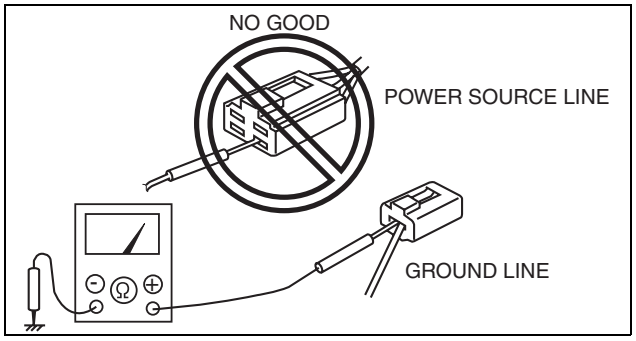
am6zzw0000567

GENERAL INFORMATION

Ohmmeter

Caution
- **Do not connect the ohmmeter to any circuit where voltage is applied. This will damage the ohmmeter.**

- The ohmmeter is used to measure the resistance between two points in a circuit and to inspect for continuity and short circuits.

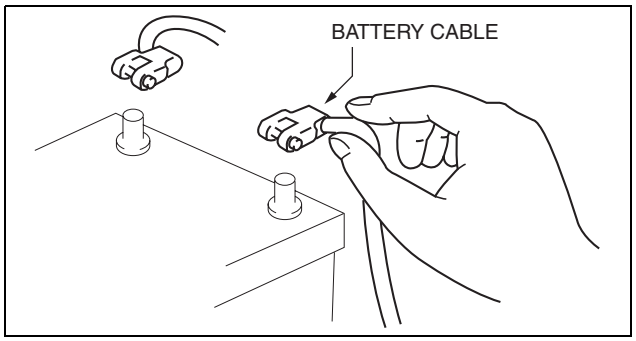


am6zzw0000739

Precautions Before Welding

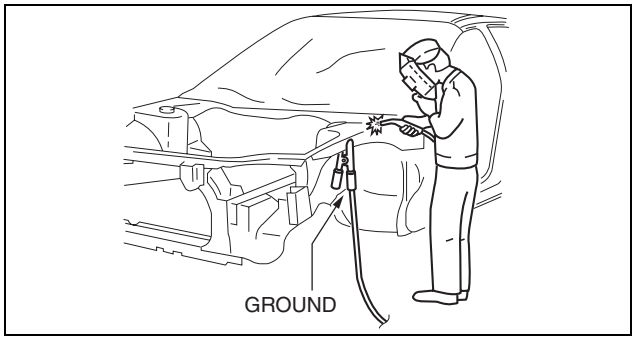
A vehicle has various electrical parts. To protect the parts from excessive current generated when welding, be sure to perform the following procedure.

1. Switch the ignition OFF (LOCK).
2. Disconnect the battery cables.



am6xuw0000005

3. Securely connect the welding machine ground near the welding area.
4. Cover the peripheral parts of the welding area to protect them from weld spatter.



am6xuw0000160

GENERAL INFORMATION

JACKING POSITIONS, VEHICLE LIFT (2 SUPPORTS) AND SAFETY STAND (RIGID RACK) POSITIONS

id000000800500

00

Jacking Positions

Warning

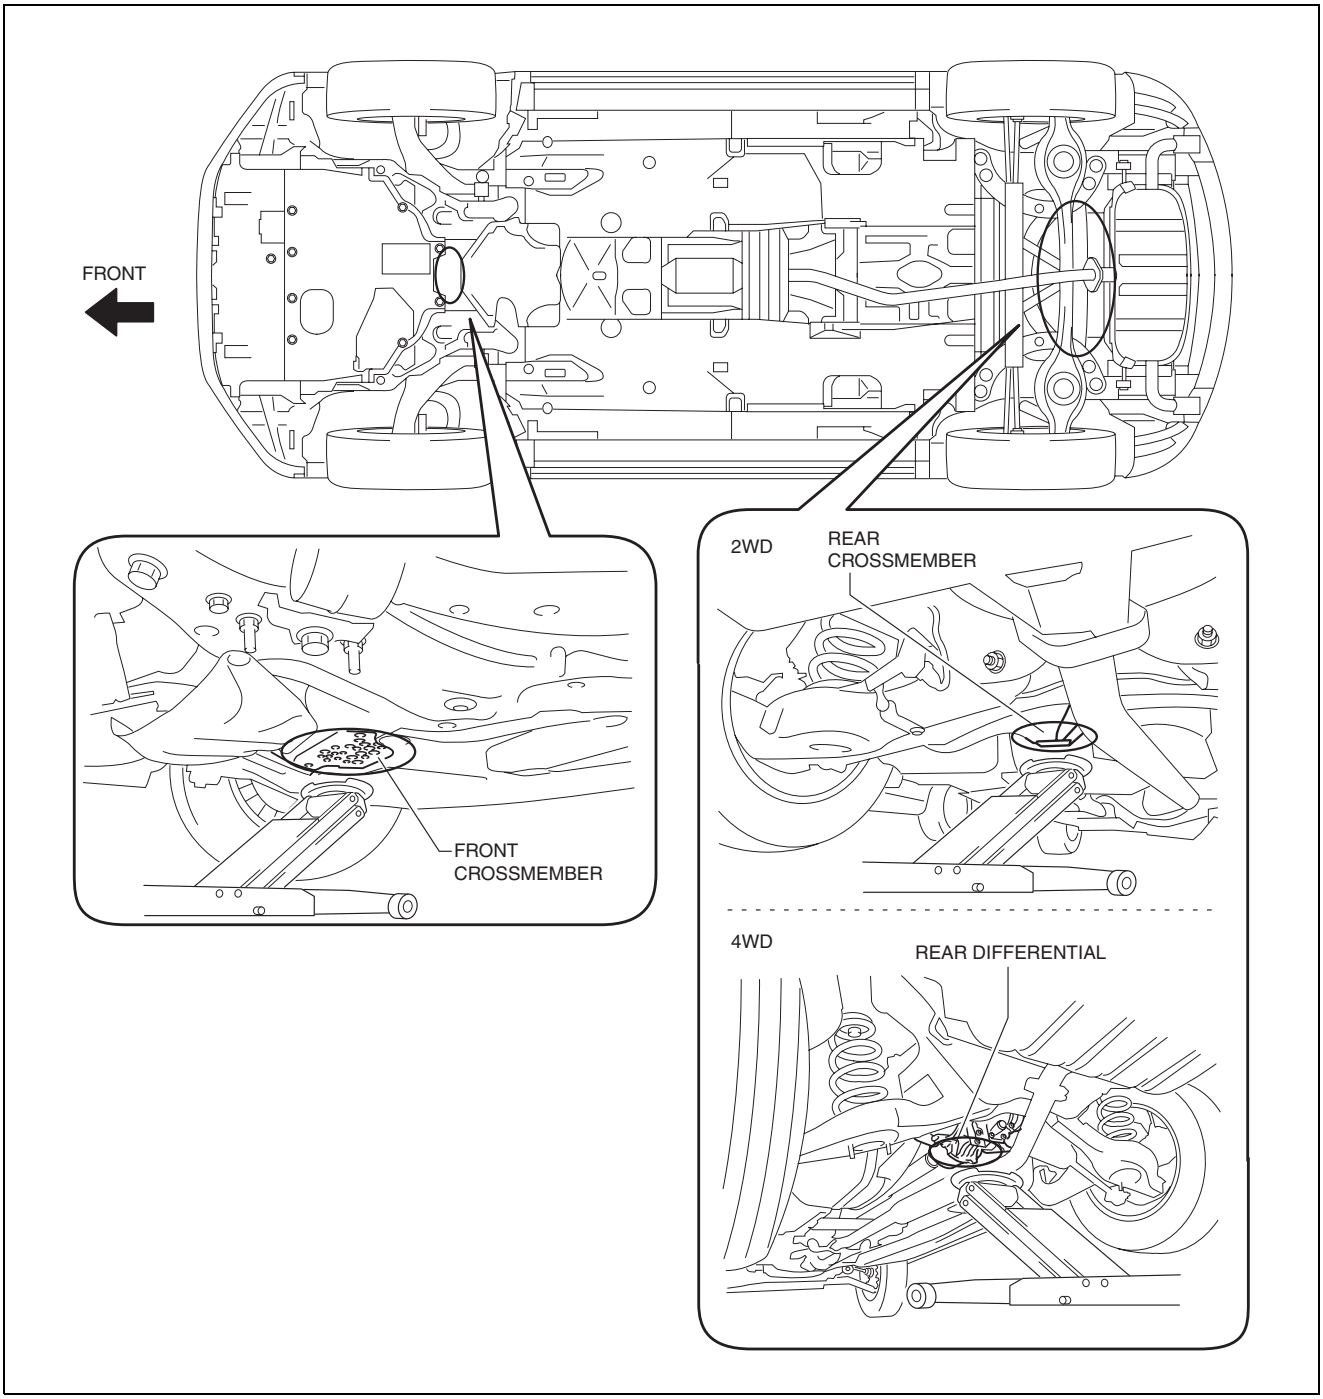
- **Improperly jacking a vehicle is dangerous. The vehicle can slip off the jack and cause serious injury. Use only the correct front and rear jacking points and block the wheels.**

Caution

- **Use safety stands to support the vehicle after it has been lifted.**

Note

- To prevent obstruction between the jack body and front bumper when the jack body is inserted, use a low-floor type jack.



ac5wzw0000015

GENERAL INFORMATION

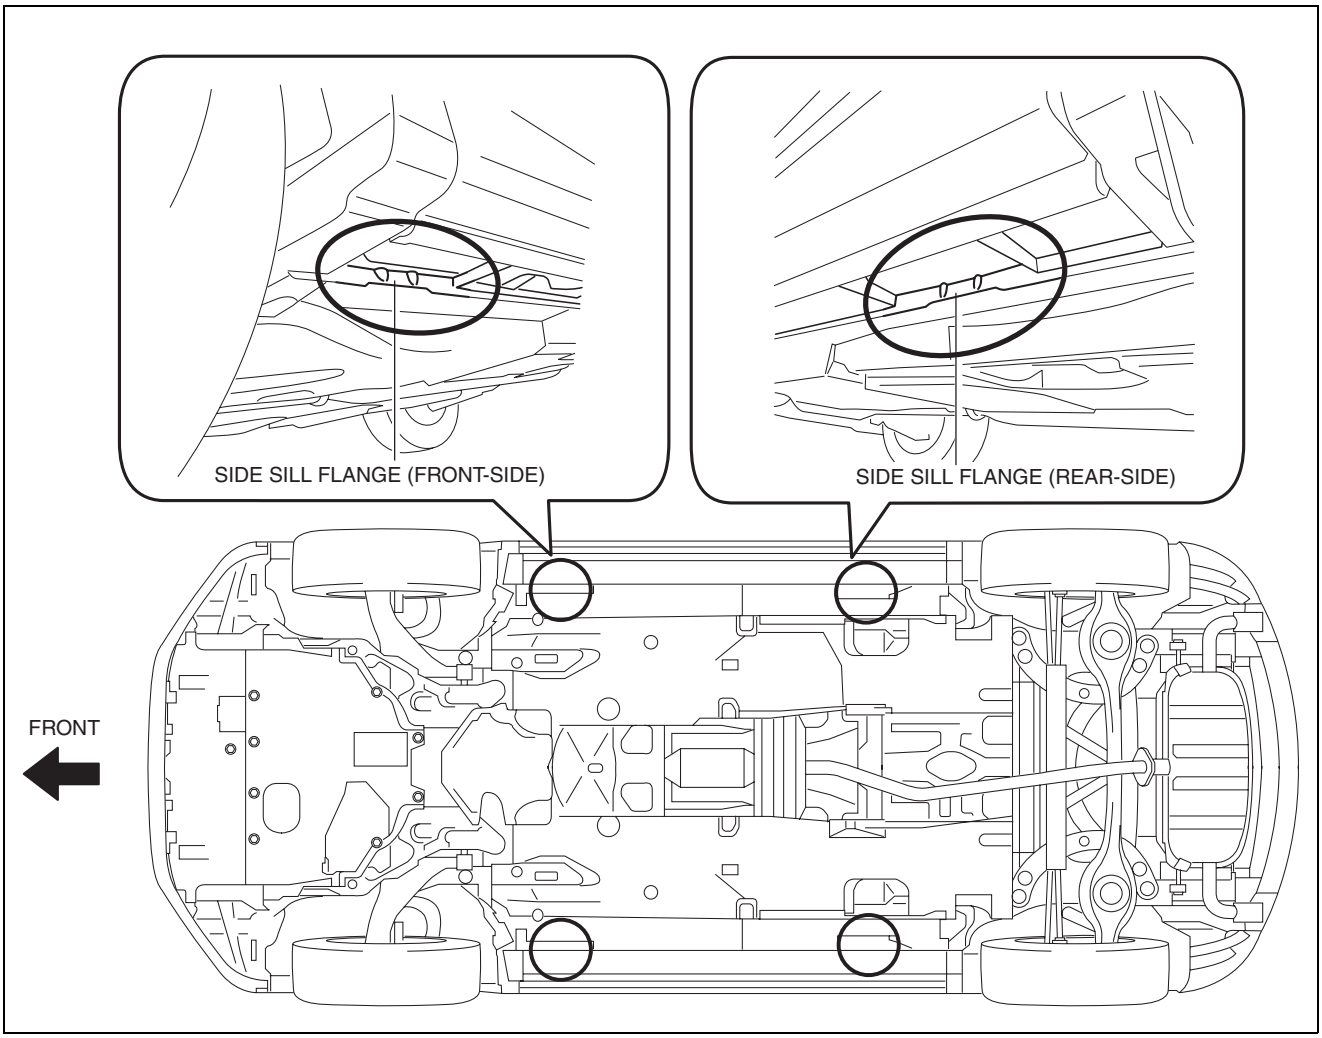
Vehicle Lift Positions

Warning

- **Lifting a vehicle is dangerous. The vehicle can slip off the lift and cause serious injury and/or vehicle damage. Make sure that the vehicle is on the lift horizontally by adjusting the height of support at the end of the arm of the lift.**

Front and rear

- Both sides of the vehicle, on side sills.

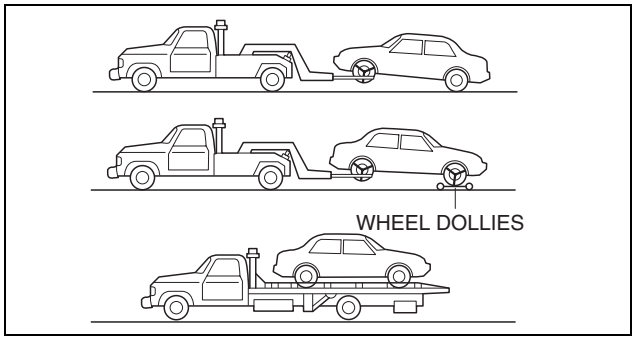


ac5wzw0000015

TOWING

id000000800600

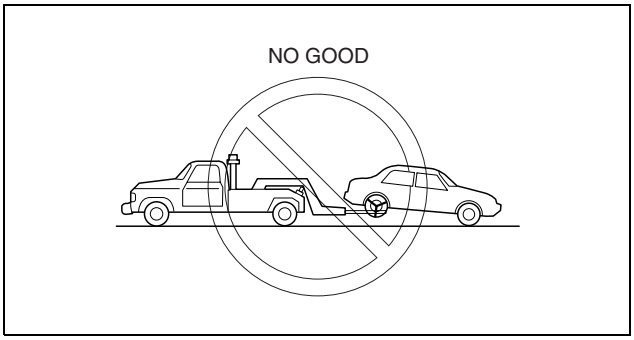
- Proper lifting and towing are necessary to prevent damage to the vehicle. Government and local laws must be followed.
- A towed vehicle usually should have its drive wheels (front wheels) off the ground. If excessive damage or other conditions prevent this, use wheel dollies.
- When towing with the rear wheels on the ground, release the parking brake.



am3zzw0000873

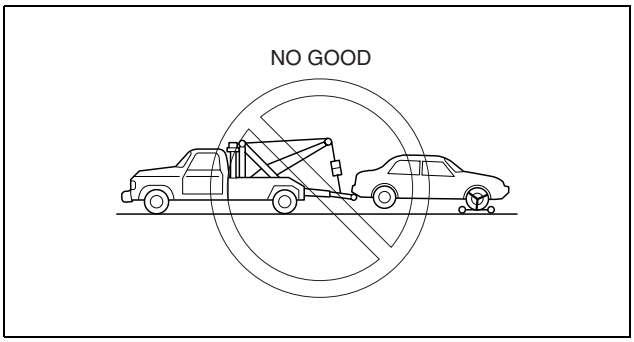
Caution

- **Do not tow the vehicle pointed backward with driving wheels on the ground. This may cause internal damage to the transaxle.**



am6zzw0000300

- **Do not tow with sling-type equipment. This could damage your vehicle. Use wheel-lift or flatbed equipment.**



am6zzw0000378

- If towing service is not available in an emergency, the vehicle may be towed with all four wheels on the ground using the towing hook at the front of the vehicle.
  Only tow the vehicle on paved surfaces for short distance at low speeds.

Caution

- **Follow these instruction when towing the vehicle with all wheels on the ground.**
  1. **Shift to neutral (MTX), or the N position (ATX).**
  2. **Switch the ignition to ACC to prevent the steering from looking up.**
  3. **Release the parking break.**
- **Remember that power assist for the brakes and steering will not be available when the engine is not running.**

Towing Hooks

Caution

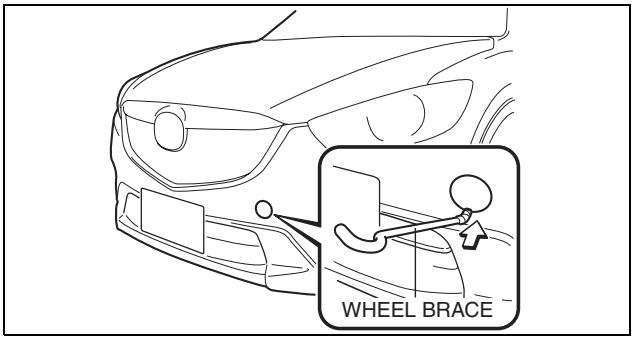
- **The towing eyelet or hook should be used in an emergency (to get the vehicle out of a ditch or a snow bank, for example).**
- **When using the towing eyelets or hooks, always pull the cable or chain in a straight direction with respect to the eyelet or hook. Apply no sideways force.**
- **For Australian specs. Do not use the tiedown hook under the rear for towing. It is designed ONLY for tying down the vehicle when it is being transported. Using it for towing will damage the bumper.**

Note

- When towing with chain or cable, wrap the chain or cable with a soft cloth near the bumper to prevent damage to the bumper.

Front

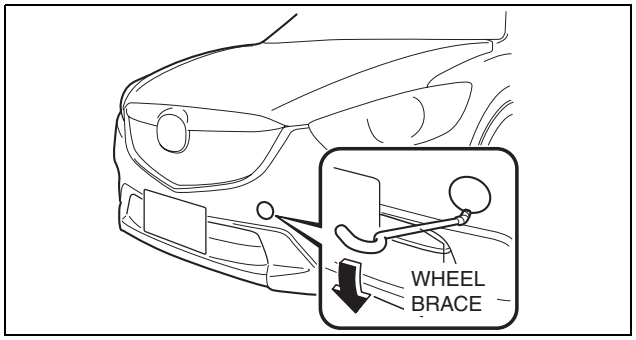
1. Pull the cover outward and insert a wheel brace wrapped in a soft cloth into the lower gap.



ac5wzw0000089

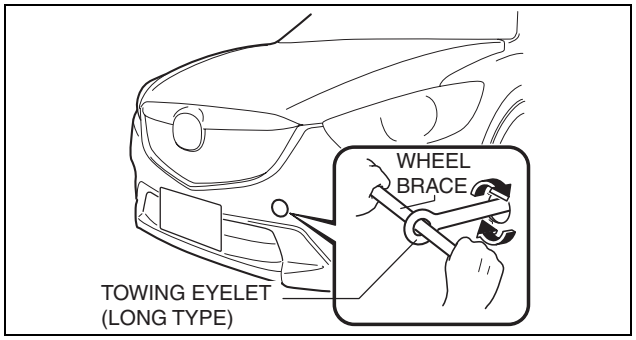
GENERAL INFORMATION

2. Wrap a screwdriver or similar tool with a soft cloth to prevent damage to the painted bumper and open the cap located on the front bumper.



ac5wzw0000089

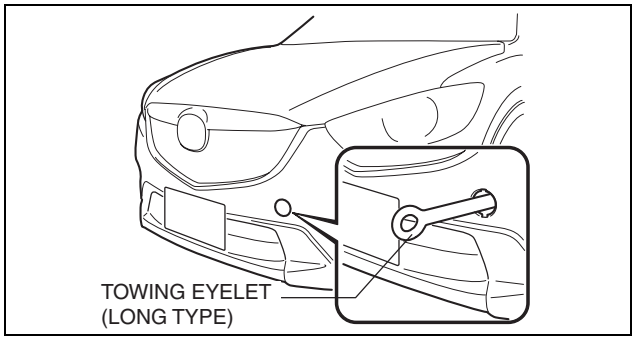
3. Securely install the towing eyelet (long type) using the wheel brace.



ac5wzw0000090

4. Hook the towing rope to the towing eyelet (long type).

Caution
- **If the towing eyelet is not securely tightened, it may loosen or disengage from the bumper when towing the vehicle. Make sure that the towing eyelet (long type) is securely tightened to the bumper.**

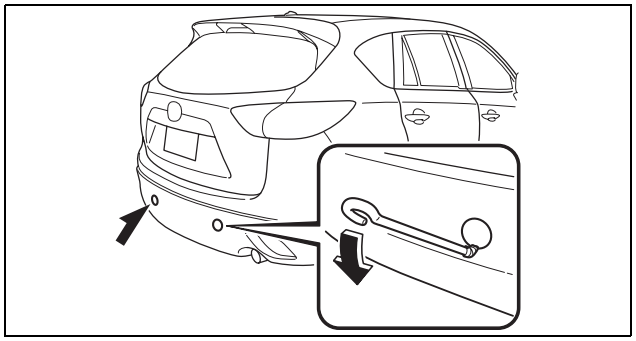


ac5wzw0000090

Rear
With towing cover

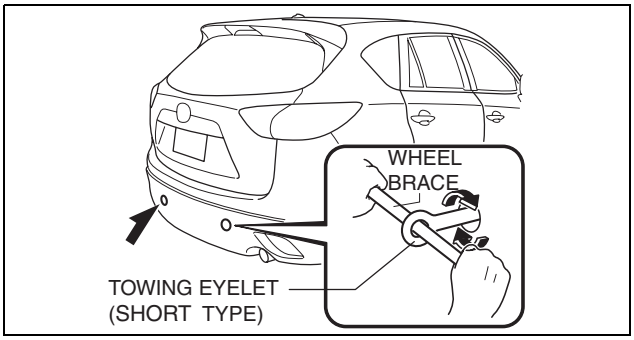
1. Wrap a wheel brace with a soft cloth to prevent damage to the bumper and open the cap located on the rear bumper.

Caution
- **The cap cannot be completely removed. Do not use excessive force as it may damage the cap or scratch the painted bumper surface.**



ac5wzw0000090

2. Securely install the towing eyelet (short type) using the wheel brace.

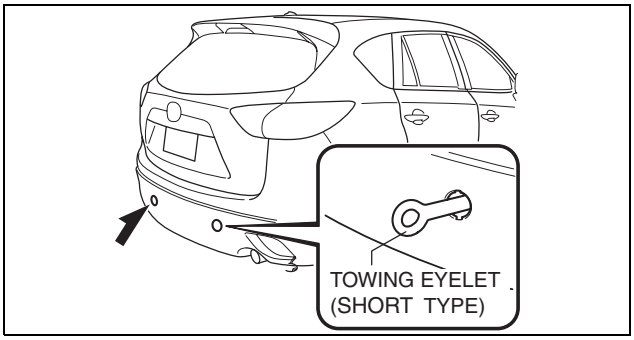


ac5wzw0000090

3. Hook the towing rope to the towing eyelet (short type).

Caution

- **If the towing eyelet is not securely tightened, it may loosen or disengage from the bumper when towing the vehicle. Make sure that the towing eyelet (short type) is securely tightened to the bumper.**



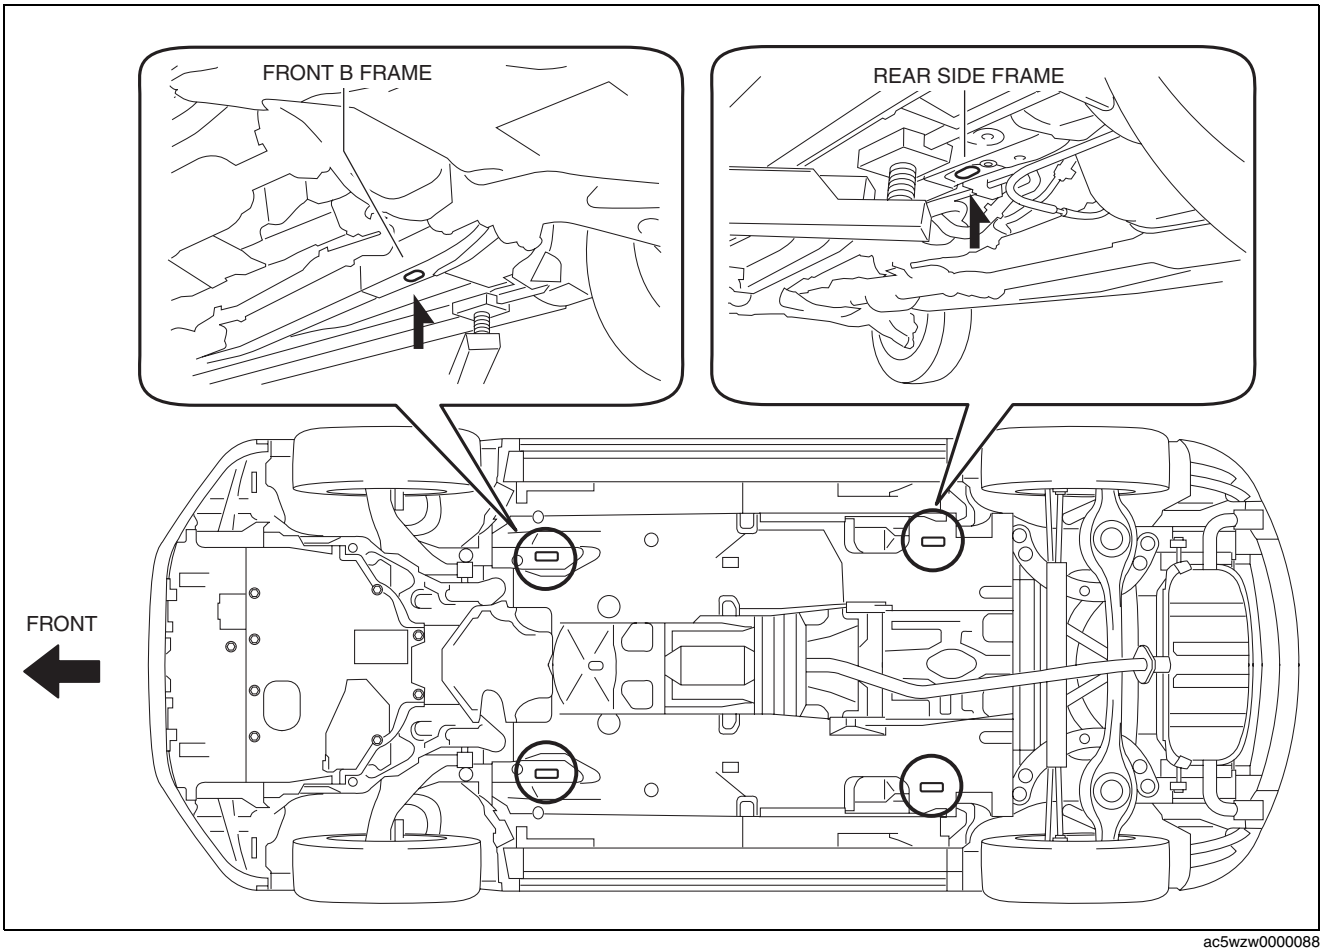
ac5wzw0000090

TIEDOWN HOOK

id000000800700

Caution

- **Do not use tie down hook for towing the vehicle. Use it only for securing the vehicle.**



ac5wzw0000088

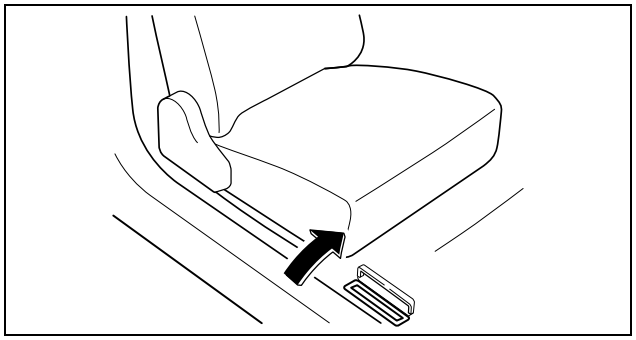
GENERAL INFORMATION

IDENTIFICATION NUMBER LOCATIONS

id000000800800

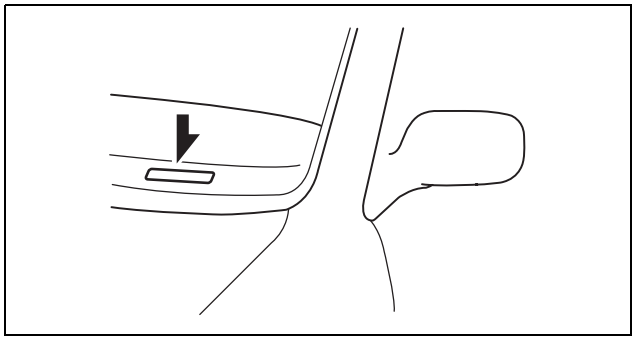
Vehicle Identification Number (VIN)

- The VIN marking position is located on the floor on the front passenger-side.



ac5wzw0000118

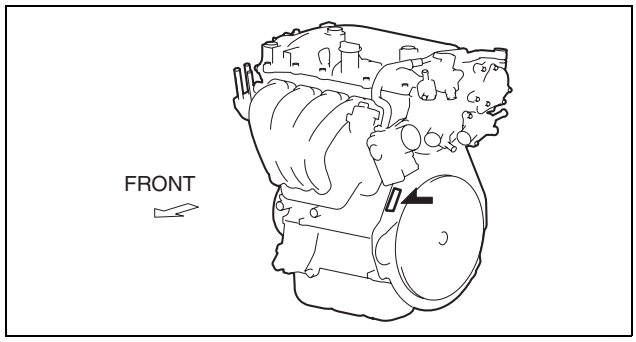
- If the VIN plate is adhered to the dashboard, it is located in the position shown in the figure.



am6zzw0000387

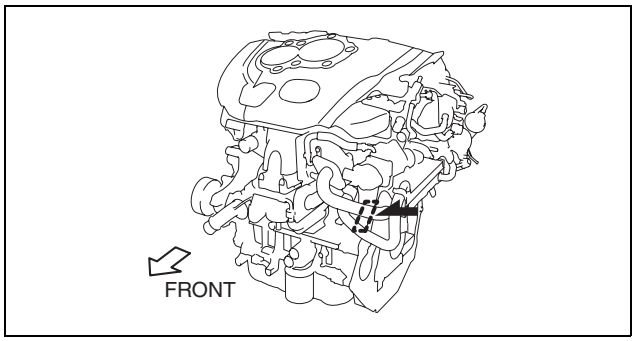
Engine Identification Type/Number

SKYACTIV-G 2.0



ac5wzw0000118

SKYACTIV-D 2.2



ac5wzw0000129

GENERAL INFORMATION

UNITS

id000000801600

Electric current	A (ampere)
Electric power	W (watt)
Electric resistance	ohm
Electric voltage	V (volt)
Length	mm (millimeter)
	in (inch)
Negative pressure	kPa (kilo pascal)
	mmHg (millimeters of mercury)
	inHg (inches of mercury)
Positive pressure	kPa (kilo pascal)
	kgf/cm^2 (kilogram force per square centimeter)
	psi (pounds per square inch)
Number of revolutions	rpm (revolutions per minute)

Torque	N·m (Newton meter)
	kgf·m (kilogram force meter)
	kgf·cm (kilogram force centimeter)
	ft·lbf (foot pound force)
	in·lbf (inch pound force)
Volume	L (liter)
	US qt (U.S. quart)
	Imp qt (Imperial quart)
	ml (milliliter)
	cc (cubic centimeter)
	cu in (cubic inch)
	fl oz (fluid ounce)
Weight	g (gram)
	oz (ounce)

Conversion From SI Units

- All numerical values in this manual are based on SI units. Numbers shown in conventional units are converted from these values.

Number Of Digits For Converted Values

- The number digits for converted values is the same as the number of significant figures*1 of the SI unit.
- For the torque value, the number of significant figures is, in principle, is 2 digits, in consideration of market practicalities. However, if the number of decimal places at the upper and lower limits of the converted value differs, the one with least number of decimal places is used. In addition, if the integer part is 3 digits or more, the integer part becomes the significant number of figures.

*1 : The number of significant figures is the number of digits from the left-most non-zero digit to the right-most digit including 0. (Example: 0.12 is 2 digits, 41.0 is 3 digits)

Converted Value Rounding Off And Rounding Up/down

- If there is no tolerance in the SI unit value, after conversion, rounding off is to within the number of significant digits.
- If there is tolerance in the SI unit value and the figure after conversion indicates the upper limit, the number of digits is rounded down to within the number of significant figures. If it indicates the lower limit, they are rounded up to within the number of significant figures.
- Even if the SI unit value is the same, the converted value may differ based on whether that value is the upper or lower limit.

GENERAL INFORMATION

NEW STANDARDS

id000000801400

- Following is a comparison of the previous standard and the new standard.

New Standard		Previous Standard		Remark
Abbreviation	Name	Abbreviation	Name	
AP	Accelerator Pedal	—	Accelerator Pedal	
APP	Accelerator Pedal Position	—	Accelerator Pedal Position	
ACL	Air Cleaner	—	Air Cleaner	
A/C	Air Conditioning	—	Air Conditioning

GENERAL INFORMATION

PRE-DELIVERY INSPECTION

id000000801100

Pre-Delivery Inspection Table
Exterior
INSPECT and **ADJUST**, if necessary, the following items to specification:
oGlass, exterior bright metal and paint for damage
oWheel lug nuts
oAll weatherstrips for damage or detachment
oAdjust tire pressures to specification
- Adjust the tire pressures when the tire are cool.
- Specified pressure is indicated on the door label.

Tire pressure record				
Left front	Right front	Left rear	Right rear	Spare

oAfter adjusting the tire pressures, switch the ignition ON (engine off or on) and long-press the tire pressure monitoring system set switch unit the tire pressure warning light flashes two times and the buzzer sounds one time (with tire pressure monitoring system switch).

Indicated that long-pressing of the tire pressure monitoring system set switch was implemented
Yes or No

oHeadlight cleaner and fluid level (if equipped)
oOperation of bonnet release and lock
oOperation of trunk lid and fuel-filler lid opener
oDoor operation and alignment including side door and back door
oHeadlight aiming
INSTALL the following parts:
oFlap (front)
oWheel caps or rings (if equipped)

Under bonnet—engine off
INSPECT and **ADJUST**, if necessary, the following items to specification:
oFuel, engine coolant, and hydraulic lines, fittings, connections, and components for leaks
oEngine oil level
oBrake and clutch fluid level
oWindshield washer reservoir fluid level
oRadiator coolant level and specific gravity
oTightness of water hose clamps
oTightness of battery terminals, electrolyte level and specific gravity

Interior
INSTALL the following items:
oFuse for accessories
oEquipment for push button start system (if equipped)
- After install the accessories fuse, assemble the key (transmitter and auxiliary key)

INSPECT the operations of the following items:
oSeat controls (slide and recline) and headrests
oFolding rear seat
oDoor locks, including childproof door locks
oSeat belts and warning system
oIgnition switch and steering lock
oTransmission/Transaxle range switch
oWarning buzzers
oIgnition key reminder alarm
oAir bag system using warning light
oCruise control system (if equipped)
oPower door lock
oShift-lock system (if equipped)
oStarter interlock
oAll lights including warning, and indicator lights
oHorn, wipers, and washers
oWiper blades performance
Clean wiper blades and windshield, if necessary
oAntenna

GENERAL INFORMATION

oAudio system
oCigarette lighter and clock
oPower windows (if equipped)
oHeater, defroster, and air conditioner at various mode selections (if equipped)
INSPECT the following items:
oPresence of spare fuse
oUpholstery and interior finish
INSPECT and **ADJUST**, if necessary, the following items:
oOperation and fit of windows
oPedal height and free play of brake and clutch pedals
oParking brake

Under bonnet—engine running at operating temperature
INSPECT the following items:
oAutomatic transmission/Transaxle fluid level
oOperation of idle-up system for electrical load, air conditioner or power steering (if equipped)
oOperation of throttle position sensor (When inspecting for wiring harness and connector poor connection)

On hoist
INSPECT the following items:
oManual transmission/Transaxle oil level
oUnderside fuel, coolant and hydraulic lines, fittings, connections, and components for leaks
oTires for cuts or bruises
oSteering linkage, suspension, exhaust system, and all underside hardware for looseness or damage
oDifferential oil level

Road test
INSPECT the following items:
oBrake operation
oClutch operation
oSteering control
oOperation of gauges
oSqueaks, rattles, and unusual noises
oEngine general performance
oEmergency locking retractors and automatic locking retractors
oCruise control system (if equipped)
oOperation of meters and gauges, squeaks, rattles, and abnormal noises

After road test
INSPECT for necessary owner information materials, tools, and spare tire in vehicle
The following items must be completed just before delivery to your customer.
oLoad test battery and charge if necessary (Load test result: Volts)
oAdjust tire pressures to specification
- Adjust the tire pressures when the tire are cool.
- Specified pressure is indicated on the door label.

Tire pressure record				
Left front	Right front	Left rear	Right rear	Spare

oAfter adjusting the tire pressures, switch the ignition ON (engine off or on) and long-press the tire pressure monitoring system set switch unit the tire pressure warning light flashes two times and the buzzer sounds one time (with tire pressure monitoring system switch).

Indicated that long-pressing of the tire pressure monitoring system set switch was implemented
Yes or No

oClean outside of vehicle
oRemove seat and cabin carpet protective covers
oVacuum inside of vehicle

GENERAL INFORMATION

SCHEDULED MAINTENANCE

id000000801200

Scheduled Maintenance Table for Europe (L.H.D., U.K.)

Maintenance Interval		Number of months or kilometers (miles), whichever comes first								
	Months	12	24	36	48	60	72	84	96	108
	×1000 km	20	40	60	80	100	120	140	160	180
	×1000 miles	12.5	25	37.5	50	62.5	75	87.5	100	112.5
Drive belts[*1]				I			I			I
Spark plugs[*2]		Replace every 120,000 km (75,000 miles)								
Air cleaner element[*3]				R			R			R
Evaporative system (if installed)				I			I			I
Engine oil[*4]		R	R	R	R	R	R	R	R	R
Engine oil filter[*4]		R	R	R	R	R	R	R	R	R
Cooling system			I		I		I		I	
Engine coolant	FL22 type[*5]	Replace at first 200,000 km (125,000 miles) or 10 years; after that, every 100,000km (62,500 miles) or 5 years.								
	Others	Replace every 2 years.								
Fuel lines and hoses			I		I		I		I	
Battery electrolyte level and specific gravity		I	I	I	I	I	I	I	I	I
Brake lines, hoses and connections		I	I	I	I	I	I	I	I	I
Brake fluid[*6]			R		R		R		R	
Parking brake		I	I	I	I	I	I	I	I	I
Disc brakes		I	I	I	I	I	I	I	I	I
Steering operation and linkages			I		I		I		I	
Manual transaxle oil		Replace every 180,000 km (112,500 miles)								
Rear differential oil		*7*8								
Transfer oil		*8								
Front and rear suspension, ball joints and wheel bearing axial play			I		I		I		I	
Driveshaft dust boots			I		I		I		I	
Exhaust system and heat shields		Inspect every 80,000 km (50,000 miles) or 5 years								
Bolts and nuts on chassis and body			T		T		T		T	
Body condition (for rust, corrosion and perforation)		Inspect annually								
Cabin air filter (if installed)			R		R		R		R	
Tires (including spare tire)(with inflation pressure adjustment)[*9]		I	I	I	I	I	I	I	I	I
Flat tire repair kit (if installed)[*10]		Inspect annually								

Chart symbols:
I: Inspect: Inspect and clean, repair, adjust, fill up, or replace if necessary.
R: Replace
T: Tighten

GENERAL INFORMATION

Remarks
Emission control and related systems

- The ignition and fuel systems are highly important to the emission control system and to efficient engine operation.
  All inspections and adjustments must be made by an expert repairer, we recommend an Authorized Mazda Repairer.
- After the prescribed period, continue to follow the described maintenance at the recommended intervals.
- Refer below for a description of items marked* in the maintenance chart.

*1: Also inspect the air conditioner drive belts, if installed.
If the vehicle is operated primarily under any of the following conditions, inspect the drive belts at every 20,000 km (12,500 miles) or 12 months.
a. Driving in dusty conditions
b. Extended periods of idling or low speed operation
c. Driving for long period in cold temperatures or driving regularly at short distance only
d. Driving in extremely hot conditions
e. Driving in mountainous conditions continually

*2: In the countries below, inspect the spark plugs at every 10,000 km (6,250 miles) or 12 months before replacing them at the said interval.
Albania, Bosnia and Herzegovina, Bulgaria, Croatia, Latvia, Macedonia, Moldova, Montenegro, Romania, Serbia, Ukraine

*3: If the vehicle is operated in very dusty or sandy areas, clean and if necessary, replace the air cleaner element more often than the recommended intervals.

*4: If the vehicle is operated primarily under any of the following conditions, replace the engine oil and oil filter at every 10,000 km (6,250 miles) or shorter.
a. Driving in dusty conditions
b. Extended periods of idling or low speed operation
c. Driving for long period in cold temperatures or driving regularly at short distance only
d. Driving in extremely hot conditions
e. Driving in mountainous conditions continually

*5: Use FL22 type coolant in vehicles with the inscription "FL22" on the radiator cap itself or the surrounding area. Use FL22 when replacing the coolant.

*6: If the brakes are used extensively (for example, continuous hard driving or mountain driving) or if the vehicle is operated in extremely humid climates, replace the brake fluid annually.

*7: If the vehicle is operated primarily under any of the following conditions, replace the rear differential oil at every 45,000 km (27,000 miles).
a. Towing a trailer or using a car-top carrier
b. Driving in dusty, sandy or wet condition
c. Extended periods of idling or low speed operation
d. Repeated short trips of less than 16 km (10 miles)

*8: If this component has been submerged in water, the oil should be replaced.

*9: Tire rotation is recommended every 10,000 km (6,250 miles).

*10: Check the tire repair fluid expiration date every year when performing the periodic maintenance. Replace the tire repair fluid bottle with new one before the expiration date.

Emission control and related systems

- The ignition and fuel systems are highly important to the emission control system and to efficient engine operation.
  All inspections and adjustments must be made by an expert repairer, we recommend an Authorized Mazda Repairer.
- After the prescribed period, continue to follow the described maintenance at the recommended intervals.
- Refer below for a description of items marked* in the maintenance chart.
  *1: If the vehicle is operated in very dusty or sandy areas, clean and if necessary, replace the air cleaner element more often than the recommended intervals.
  *2: Implement the fuel injection amount correction.
  *3: Also inspect the air conditioner drive belts, if installed.
  If the vehicle is operated primarily under any of the following conditions, inspect the drive belts more often than the recommended intervals.
  a. Driving in dusty conditions
  b. Extended periods of idling or low speed operation
  c. Driving for long period in cold temperatures or driving regularly at short distance only
  d. Driving in extremely hot conditions
  e. Driving in mountainous conditions continually
  *4: If the vehicle is operated primarily under any of the following conditions, replace the engine oil and oil filter more often than the recommended intervals.
  a. Driving in dusty conditions
  b. Extended periods of idling or low speed operation
  c. Driving for long period in cold temperatures or driving regularly at short distance only
  d. Driving in extremely hot conditions
  e. Driving in mountainous conditions continually
  *5: Reset the engine oil data after replacing the engine oil.
  *6: Use FL22 type coolant in vehicles with the inscription "FL22" on the radiator cap itself or the surrounding area. Use FL22 when replacing the coolant.
  *7: If the brakes are used extensively (for example, continuous hard driving or mountain driving) or if the vehicle is operated in extremely humid climates, replace the brake fluid annually.
  *8: If the vehicle is operated primarily under any of the following conditions, replace the rear differential oil at every 40,000 km.
  a. Towing a trailer or using a car-top carrier
  b. Driving in dusty, sandy or wet condition
  c. Extended periods of idling or low speed operation
  d. Repeated short trips of less than 16 km
  *9: If this component has been submerged in water, the oil should be replaced.
  *10: This is a full function check of electrical systems such as lights, wiper and washer systems (including wiper blades), and power windows.
  *11: If the vehicle is operated primarily under any of the following conditions, rotate the tires more often than the recommended intervals.
  a. Driving on bumpy roads, gravel roads, snowy roads or dirt roads
  b. Driving uphill and downhill frequently
  c. Repeated short-distance driving
  d. On roads having many roundabouts

GENERAL INFORMATION

Remarks
Emission control and related systems

- The ignition and fuel systems are highly important to the emission control system and to efficient engine operation.
  All inspections and adjustments must be made by an expert repairer, we recommend an Authorized Mazda Repairer.
- After the prescribed period, continue to follow the described maintenance at the recommended intervals.
- Refer below for a description of items marked* in the maintenance chart.

*1: Also inspect the air conditioner drive belts, if installed.
If the vehicle is operated primarily under any of the following conditions, inspect the drive belts at every 7,500 km or 6 months.
a. Driving in dusty conditions
b. Extended periods of idling or low speed operation
c. Driving for long period in cold temperatures or driving regularly at short distance only
d. Driving in extremely hot conditions
e. Driving in mountainous conditions continually

*2: If the vehicle is operated primarily under any of the following conditions, replace the engine oil and oil filter at every 7,500 km or 6 months.
a. Driving in dusty conditions
b. Extended periods of idling or low speed operation
c. Driving for long period in cold temperatures or driving regularly at short distance only
d. Driving in extremely hot conditions
e. Driving in mountainous conditions continually

*3: If the vehicle is operated primarily under any of the following conditions, replace the engine oil at every 2,500 km or 3 months.
a. Driving in dusty conditions
b. Extended periods of idling or low speed operation
c. Driving for long period in cold temperatures or driving regularly at short distance only
d. Driving in extremely hot conditions
e. Driving in mountainous conditions continually

*4: If the vehicle is operated primarily under any of the following conditions, replace the engine oil filter at every 5,000 km or 6 months.
a. Driving in dusty conditions
b. Extended periods of idling or low speed operation
c. Driving for long period in cold temperatures or driving regularly at short distance only
d. Driving in extremely hot conditions
e. Driving in mountainous conditions continually

*5: Use FL22 type coolant in vehicles with the inscription "FL22" on the radiator cap itself or the surrounding area. Use FL22 when replacing the coolant.

*6: If the vehicle is operated in very dusty or sandy areas, clean the air filter at every 7,500 km or 6 months.

*7: If the brakes are used extensively (for example, continuous hard driving or mountain driving) or if the vehicle is operated in extremely humid climates, replace the brake fluid annually.

*8: If the vehicle is operated primarily under any of the following conditions, replace the rear differential oil at every 45,000 km (27,000 miles).
a. Towing a trailer or using a car-top carrier
b. Driving in dusty, sandy or wet condition
c. Extended periods of idling or low speed operation
d. Repeated short trips of less than 16 km (10 miles)

*9: If this component has been submerged in water, the oil should be replaced.

*10: Tire rotation is recommended every 10,000 km (6,250 miles).

*11: Check the tire repair fluid expiration date every year when performing the periodic maintenance. Replace the tire repair fluid bottle with new one before the expiration date.

GENERAL INFORMATION

Scheduled Maintenance Service (Specific Work Required)

- The specific work required for each maintenance item is listed in the following table. (Please refer to the section applicable to the model serviced.)

Maintenance Item	Specific Work Required
ENGINE	
Engine valve clearance	Inspect engine valve clearance.
Engine timing belt	Replace engine timing belt.
Engine timing belt auto tensioner	Replace engine timing belt auto tensioner.
Drive belts	Inspect for wear, cracks, fraying and tension.
Engine oil	Replace engine oil and inspect for leakage.
Engine oil filter	Replace engine oil filter and inspect for leakage.
COOLING SYSTEM	
Cooling system (Including coolant level adjustment)	Check engine coolant level and quality, and inspect for leakage.
Radiator cap	Inspect radiator cap.
Engine coolant	Replace engine coolant.
FUEL SYSTEM	
Idle speed	Check engine idle rpm.
Idle mixture	Inspect the CO and HC concentrations (see W/M).
Choke system	Check system operation.
Air cleaner element	Inspect dirt, oil and damage. Clean air cleaner element (by blowing air). Replace air cleaner element.
Fuel filter	Replace fuel filter.
Fuel injection pump inlet filter	Clean fuel injection pump inlet filter.
Fuel lines and hoses Fuel lines, hoses and connections	Inspect for cracks, leakage and loose connection.
Fuel injection system	Update to injection amount correction with WDS (see W/M). Update to injection amount correction with M-MDS (see W/M).
Fuel system (Drain water)	Drain water in fuel system.
Urea solution (AdBlue) for SCR system	Top up or drain and fill up with urea solution (AdBlue).
Diesel particulate filter	Replace diesel particulate filter.
Fuel additive for diesel particulate filter	Fill up fuel additive.
IGNITION SYSTEM	
Initial ignition timing	Check initial ignition timing.
Spark plugs	Inspect for wear, damage, carbon, plug gap and high-tension lead condition. Replace spark plugs.
Ignition cables condition/security	Inspect for damage, condition and connection.
EMISSION CONTROL SYSTEM	
Evaporative system Evaporative emission control system	Check system operation (see W/M), vapor lines, vacuum fitting hoses and connection.
Crankcase emission control system	Check system operation (see W/M), PCV valve, blow-by lines, vacuum fitting hoses and connection.
E.G.R system	Check system operation (see W/M), vacuum fitting hoses and connection. MZR-CD (RF turbo) engine: Update to MAF correction for E.G.R control with WDS (see W/M). MZR-CD (RF turbo) engine: Update to MAF correction for E.G.R control with M-MDS (see W/M).
Air intake system	Update to MAF correction (see W/M).
Throttle positioner system	Check the diaphragm and system operation, vacuum fitting hoses and connection.
Dash pot	Check system operation.
ELECTRICAL SYSTEM	
Battery electrolyte level and specific gravity	Check battery electrolyte level and specific gravity.
Battery condition	Check battery for corroded or loose connections and cracks.
Battery	Check battery for leakage and corrosion.
All electrical system Lighting system and windshield wipers and washer	Check function of lighting system, windshield wiper (including wiper blade condition), washer and power windows.

GENERAL INFORMATION

Maintenance Item	Specific Work Required
Head light alignment	Check head light alignment.
CHASSIS AND BODY	
Brake and clutch pedals Brake pedals	Check pedal height and free play.
Brake fluid	Check brake fluid level and for leakage. Replace brake fluid.
Clutch fluid	Check Clutch fluid level and for leakage.
Brake lines, hoses and connections	Inspect for cracks, damage, chafing, corrosion, scars, swelling and fluid leakage.
Parking brake	Check parking lever stroke.
Power brake unit and hoses Power brake unit (Brake booster) and hoses	Check vacuum lines, connections, and check valve for improper attachment, air tightness, cracks chafing and deterioration.
Disc brakes	Inspect caliper for correct operation and fluid leakage, brake pads for wear. Check disc plate condition and thickness. Test for judder and noise.
Drum brakes	Inspect brake drum for wear and scratches: brake lining for wear, peeling and cracks; wheel cylinder for fluid leakage. Test for judder and noise.
Manual steering gear oil	Check manual gear oil level.
Power steering fluid, lines, hoses and connections Power steering fluid and lines	Check power steering fluid level and lines for improper attachment, leakage, cracks, damage, loose connections, chafing and deterioration.
Steering operation and gear housing Steering linkages tie rod ends and arms Steering operation and linkages	Check that the steering wheel has the specified play. Be sure to check for changes, such as excessive play, hard steering or strange noises. Check gear housing and boots for looseness, damage and grease/gear oil leakage. Check ball joint, dust cover and other components for looseness, wear, damage and grease leakage.
Front and rear suspension and ball joints Front suspension ball joints Front and rear suspension, ball joints and wheel bearing axial play	Inspect for grease leakage, crack, damage and looseness. Inspect for grease leakage, crack, damage, looseness and wheel bearing play/noise.
Wheel bearing axial play	Inspect for wheel bearing play/noise.
Manual transmission/transaxle oil	Check manual transmission/transaxle oil level and for leakage. Check manual transaxle for leakage (type "B76M-R" only) Replace manual transmission/transaxle oil.
Automatic transmission/transaxle fluid level	Check automatic transmission/transaxle fluid level.
Automatic transmission/transaxle fluid	Replace automatic transmission/transaxle fluid.
Front and rear differential oil Front differential oil Front axle oil Rear differential oil Rear axle oil	Check front and rear differential oil level and inspect for leakage. Replace front and rear differential oil.
Transfer oil	Check transfer oil level inspect for leakage. Replace transfer oil
Front and rear wheel bearing grease Front wheel bearing grease	Remove wheel bearing and replace wheel bearing grease.
Wheel bearing axial play Wheel bearing axial play (rear) and lateral play (front)	Inspect wheel bearing play and noise.
Propeller shaft joints Front propeller shaft joints Rear propeller shaft joints	Lubricate propeller shaft joints.
Driveshaft dust boots	Inspect for grease leakage, crack, damage and looseness.
Wheel nuts	Tighten wheel nuts.
Bolts and nuts on chassis and body Bolts and nuts on seats	Tighten bolts and nuts fastening suspension components, members and seat frames.
Body condition (for rust, corrosion and perforation)	Inspect body surface for paint damage, rust, corrosion and perforation.
Exhaust system and heat shields Exhaust pipe connections	Inspect for damage, corrosion, looseness of connections and gas leakage.
Tire rotation	Rotate tires.
Tires (Including spare tire) (with inflation pressure adjustment)	Check air pressure and inspect tires for tread wear, damage, cracks; and wheels for damage and corrosion.

GENERAL INFORMATION

Maintenance Item	Specific Work Required
Flat tire repair kit	Check tire repair fluid expiration date.
Hinges and catches	Lubricate hinges and catches of doors, trunk lid and hood.
Underside of vehicle	Inspect underside of vehicle (floor pans, frames, fuel lines, around exhaust system etc.) for damage and corrosion.
Road test	Check brake operation/clutch operation/steering control/operation of meters and gauges/squeaks, rattles, or unusual noises/engine general performance/ emergency locking retractors.
Diagnostic trouble code by WDS Diagnostic trouble code by M-MDS	Check diagnostic trouble code with WDS (see W/M). Check diagnostic trouble code with M-MDS (see W/M).
M-MDS check of Vehicle Management and Safety Systems	Check the items below with M-MDS (see W/M). 1. Retrieve All CMDTCs 2. PCM function test (except Tribute and diesel engine models) 3. PCM Input/Output Data Monitor (except Tribute and diesel engine models) 4. Adviser Comment (except Tribute and diesel engine models)
AIR CONDITIONER SYSTEM	
Cabin air filter	Replace cabin air filter.

ENGINE

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

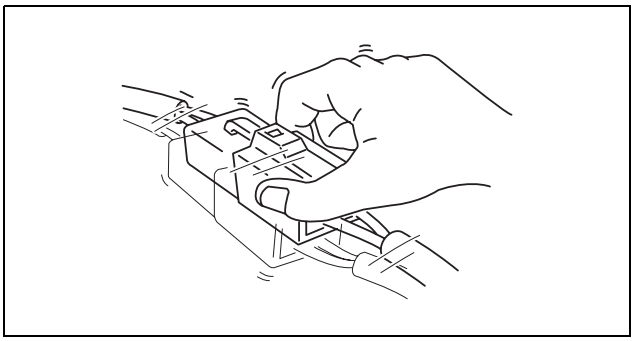
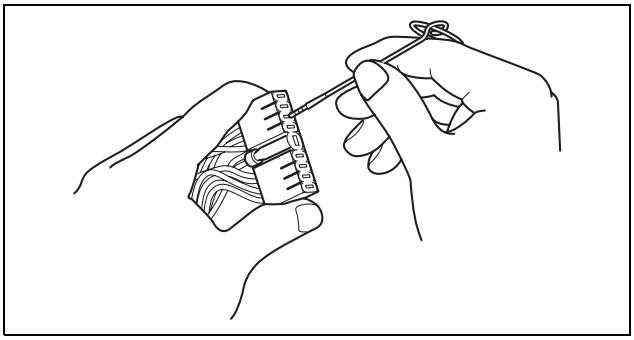
Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as PCM circuit voltage) at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

OBD PENDING TROUBLE CODE [SKYACTIV-G 2.0]

id0102h1816200

- These appear when a problem is detected in a monitored system. The code for a failed system is stored in the PCM memory in the first drive cycle. This code is called the pending code. If the PCM determines that the system returned to normal or the problem was mistakenly detected, it deletes the pending code. If the problem is found in a second drive cycle too, the PCM determines that the system has failed, and the DTC is stored.

OBD FREEZE FRAME DATA [SKYACTIV-G 2.0]

id0102h1815900

- This is technical data which indicates the engine condition at the time of the first malfunction. This data will remain in the memory even if another emission-related DTC is stored, with the exception of the Misfire or Fuel System DTCs. Once FREEZE FRAME DATA for the Misfire or Fuel System DTC is stored, it will overwrite any previous data and the FREEZE FRAME DATA will not be overwritten again.

OBD ON-BOARD SYSTEM READINESS TEST [SKYACTIV-G 2.0]

id0102h1816000

- This shows the OBD systems operating status. If any monitor function is incomplete, the M-MDS will identify which monitor function has not been completed. The Misfire, Fuel System and CCM are continuous monitoring-type functions. The A/F sensor, HO2S, A/F sensor heater, HO2S heater and catalyst will be monitored under drive cycles. The OBD diagnostic system is initialized by performing the DTC cancellation procedure or disconnecting the negative battery cable.

OBD READ/CLEAR DIAGNOSTIC TEST RESULTS [SKYACTIV-G 2.0]

id0102h1816300

- This retrieves all stored DTCs in the PCM and clears the DTC, FREEZE FRAME DATA, On-Board Readiness Test Results and Pending Trouble Codes.

OBD PARAMETER IDENTIFICATION (PID) ACCESS [SKYACTIV-G 2.0]

id0102h1816100

- The PID mode allows access the certain data values, analog and digital inputs and outputs, calculated values and system status information. Since the PID values for output devices are the PCM internal data values, inspect each device to identify which output devices are malfunctioning.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0]

id0102h1801000

DTC Reading Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “PCM”.
3. Then, select the “Retrieve CMDTCs” and perform procedures according to directions on the M-MDS screen.
4. Verify the DTC according to the directions on the M-MDS screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the PCM, while referring to “AFTER REPAIR PROCEDURE”.

Pending Trouble Code Access Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “PCM”.
3. Then, select the “Retrieve CMDTCs” and perform procedures according to directions on the M-MDS screen.
4. Retrieve the pending trouble codes according to the directions on the M-MDS screen.

Freeze Frame PID Data Access Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “PCM”.
3. Then, select the “Retrieve CMDTCs” and perform procedures according to directions on the M-MDS screen.
4. Retrieve the freeze frame PID data according to the directions on the M-MDS screen.

Note

- Freeze frame data/snapshot data appears at the top of the help screen when the displayed DTC is selected.

Freeze frame data

- The freeze frame data consists of data for vehicle and engine control system operation conditions when malfunctions in the engine control system are detected and stored in the PCM.
- Freeze frame data is stored at the instant the check engine light illuminates, and only a part of the DTC data is stored.
- For the freeze frame data, if there are several malfunctions in the engine control system, the data for the malfunction which occurred initially is stored. Thereafter, if a misfire or fuel injection control malfunction occurs, data from the misfire or fuel injection control malfunction is written over the initially stored data. However, if the initially stored freeze frame data is a misfire or fuel injection control malfunction, it is not overwritten.

Snapshot data

- The snapshot data stores the currently detected DTC data.
- The recording timing for the freeze frame data/snapshot data differs depending on the number of DTC drive cycles.
  — For a DTC with a drive cycle number 1, only the malfunction determination data is recorded.
  — For a DTC with a drive cycle number 2, both the malfunction determination and undetermined data is recorded.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Freeze frame data table

Note

- Refer to PID monitor table for confirm the engine control system operation status while the PCM does not store the DTC. (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)
- Freeze frame data items are not displayed, according to detected DTC.

Freeze frame data item	Unit	Description	Corresponding PID data monitor item
FUELSYS1	OL/CL/OL-Drive/OL-Fault/ CL-Fault	Fuel system status	FUELSYS
LOAD	%	Calculated engine load	—
ECT	°C, °F	Engine coolant temperature	ECT
SFT1	%	Short term fuel trim	SHRTFT1
LFT1	%	Long term fuel trim	LONGFT1
MAP	KPa {MPa}, mBar {Bar}, psi, in H20	Manifold absolute pressure	MAP
RPM	RPM	Engine speed	RPM
VS	KPH, MPH	Vehicle speed	VSS
SPARKADV	°	Ignition timing	SPARKADV
IAT	°C, °F	Intake air temperature	IAT
MAF	g/sec	Mass airflow	MAF
TP	%	Throttle valve position No.1	TP1
RUNTM	hh:mm:ss	Time from engine start	—
FRP	KPa {MPa}, mBar {Bar}, psi, in H20	Fuel pressure	FUEL_PRES
EVAPPCT	%	Purge solenoid valve controlled value	EVAPCP
FLI	%	Fuel level in fuel tank	FLI
WARMUPS	—	Number of warm-up cycle after DTC cleared	—
CLRDIST	km, ft {mi}	Mileage after DTC cleared	—
BARO	KPa {MPa}, mBar {Bar}, psi, in H20	Barometric pressure	BARO
CATTEMP11	°C, °F	Estimated catalytic converter temperature	CATT11_DSD
VPWR	V	Module supply voltage	VPWR
ALV	%	Engine load	LOAD
EQ_RAT	—	Target equivalence ratio (lambda)	EQ_RAT11_DSD
TP_REL	%	Relative throttle position	TP REL
AAT	°C, °F	Ambient air temperature	AAT
TP_B	%	Throttle valve position No.2	TP2
APP_D	%	Accelerator pedal position No.1	APP1
APP_E	%	Accelerator pedal position No.2	APP2
TAC_PCT	%	Target throttle valve position	ETC_DSD
STSO2FT1	%	Short term fuel trim (HO2S)	—
LGSO2FT1	%	Long term fuel trim (HO2S)	—
IAT11	°C, °F	Intake air temperature No.1	IAT
IAT12	°C, °F	Intake air temperature No.2	IAT2

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Snapshot data table

Note

- Refer to PID monitor table for confirm the engine control system operation status while the PCM does not store the DTC. (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)
- Snapshot data items are not displayed, according to detected DTC.

Snapshot data item	Unit	Definition	Corresponding PID data monitor item
FUELSYS	OL/CL/OL-Drive/OL-Fault/ CL-Fault	Fuel system status	FUELSYS
LOAD_C	%	Calculated engine load	—
ECT	°C, °F	Engine coolant temperature	ECT
SHRTFT1	%	Short term fuel trim	SHRTFT1
LONGFT1	%	Long term fuel trim	LONGFT1

BATT_RES	ohm	Battery inferred internal resistance	—
ALT_CUR_DSD	A	Generator current desired	—
TOTAL_DIST	km, ft {mi}	Total distance	—

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

On-Board System Readiness Tests Access Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Powertrain”.
   (2) Select “OBD Test Modes”.
   (3) Select “Mode 1 Powertrain Data”.
   (4) Select “PCM”.
3. Then, select the “***SUP” and “**EVAL” PIDs in the PID selection screen.
4. Monitor those PIDs and check it system monitor is completed.

Note

- If the on-board system readiness tests are not completed the PCM stores DTC P1000.

PID/DATA Monitor and Record Procedure

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “PCM”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the detections on the screen.

Diagnostic Monitoring Test Results Access Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Powertrain”.
   (2) Select “OBD Test Modes”.
   (3) Select “Mode 6 On-Board Test Results”.
3. Verify the diagnostic monitoring test result according to the directions on the M-MDS screen.

Active Command Modes Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “PCM”.
3. Select the simulation items from the PID table.
4. Using the active command modes function, inspect the operations for each parts.
   - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0]

id0102h1801100

1. Switch the ignition to off.
2. Connect the M-MDS to the DLC-2.
3. Switch the ignition ON (engine off).
4. Verify the DTC according to the directions on the M-MDS screen.
   - Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition off (LOCK) and continue it for **30 s or more**.

Caution
- **Always switch the ignition off (LOCK) after clearing the DTC.**
- **If the engine is accidentally started, disconnect the negative battery cable and reconnect it. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)**

6. Switch the ignition ON (engine on).
7. Verify all accessory loads are off.
8. Start the engine and maintain the engine speed at **2,800—3,200 rpm** until the cooling fan starts running (for A/F sensor and HO2S activation).
9. When the cooling fan starts running, idle the engine.
10. Maintain the idle status for **30 s or more** after the cooling fan has stopped (for fuel learning).
11. Perform the DTC inspection again and verify that no DTCs are stored. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
12. Switch the ignition to off.
13. Disconnect the M-MDS to the DLC-2.

KOEO/KOER SELF TEST [SKYACTIV-G 2.0]

id0102h1801200

KOEO Self Test

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “PCM”.
3. Then, select the “KOEO On Demand Self Test” and perform procedures according to directions on the M-MDS screen.
4. Verify the DTC according to the directions on the M-MDS screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the PCM, while referring to “AFTER REPAIR PROCEDURE”.

KOER Self Test

Note
- If a KOER self test is performed with the engine coolant temperature at **less than 60 °C {140 °F}**, a DTC for the variable valve timing may be detected even if the variable valve timing is normal.
- For vehicles with the variable valve timing control, execute a KOER self test after the variable valve timing learning is finished.
  — A KOER self test cannot be executed if the variable timing valve learning in not finished.
  — The variable valve timing learning is cleared if the PCM backup power supply is interrupted (including battery removal), or after reprogramming.
  — To perform variable valve timing learning, the engine speed needs to be increased momentarily to **approx. 2,000 rpm**.

1. Connect the M-MDS to the DLC-2.
2. Start engine and run it at idle.
3. After the vehicle is identified, access the ECT PID using the M-MDS.
4. Verify the ECT PID value is **above 60 °C {140 °F}**.
5. Select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “PCM”.
6. Then, select the “KOER On Demand Self Test” and perform procedures according to directions on the M-MDS screen.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

7. Verify the DTC according to the directions on the M-MDS screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
8. After completion of repairs, clear all DTCs stored in the PCM, while referring to “AFTER REPAIR PROCEDURE”.

OBD DRIVE MODE [SKYACTIV-G 2.0]

id0102h1815800

- Using the OBD Drive Mode, the monitoring item requested by OBD regulations can be easily diagnosed.
- Performing the Drive Mode inspects the OBD system for proper operation and must be performed to ensure that no additional DTCs are present.
- During the Drive Mode, the following systems are inspected:
  — Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode)

Caution

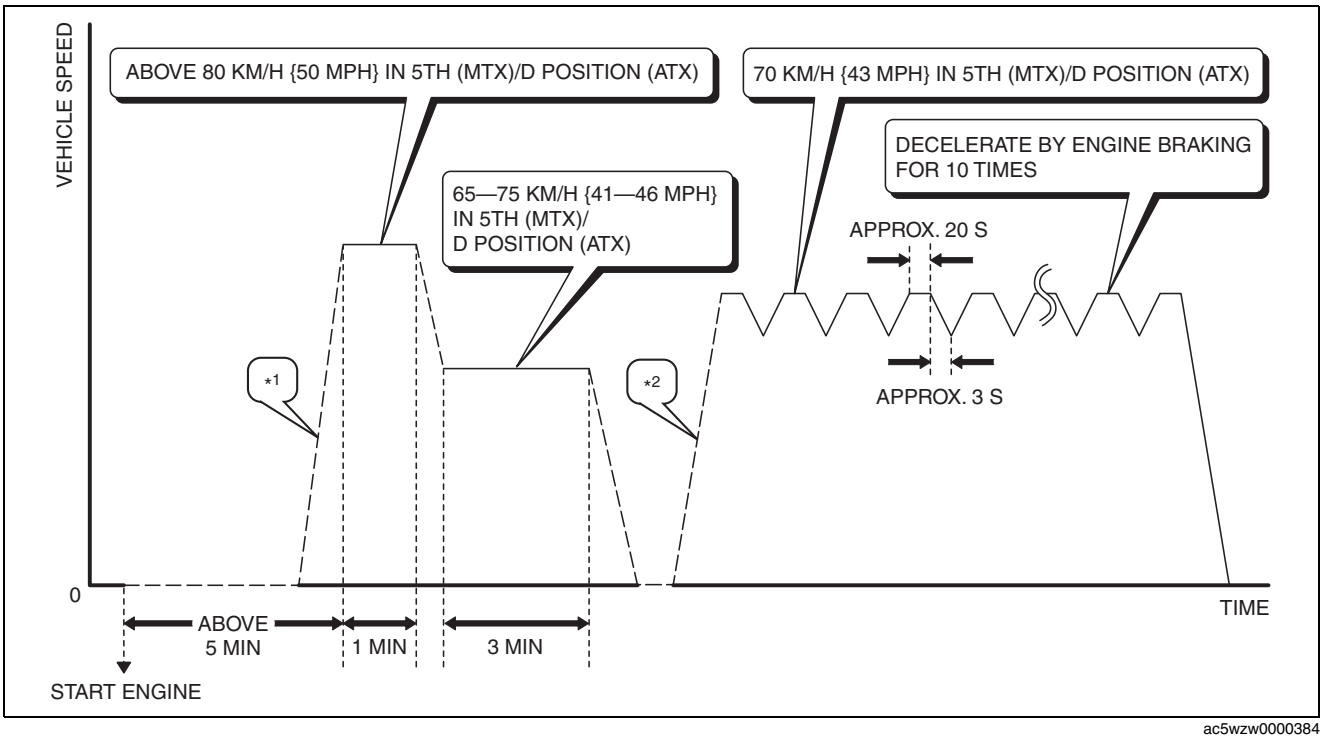
- **While performing the Drive Mode, always operate the vehicle in a safe and lawful manner.**
- **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD function and inspect later.**

Note

- Vehicle speed and engine speed detected by the PCM may differ from that indicated by the speedometer and tachometer. Use the M-MDS to monitor vehicle speed.
- If the OBD system inspection is not completed during the Drive Mode, the following causes are considered:
  — The OBD system detects the malfunction.
  — The Drive Mode procedure is not completed correctly.
- Disconnecting the battery will reset the memory. Do not disconnect the battery during and after Drive Mode.
- The M-MDS can be used at anytime through the course of the Drive Mode to monitor the completion status. Monitoring can be done by viewing the ON BOARD SYSTEM READINESS menu.

Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode)

1. Start the engine and warm it up completely.
2. Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
3. Drive the vehicle as shown in the graph. The driving conditions before driving at constant speed are not specified.



ac5wzw0000384

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

*1 : MTX: accelerate in 5th. (accelerate to **89 km/h {55 mph}** within **20 s**.)/ATX: accelerate in D position. (accelerate to **89 km/h {55 mph}** within **20 s**.)
*2 : MTX: accelerate in 5th. (accelerate to **45 km/h {28 mph}** within **15 s**.)/ATX: accelerate in D position. (accelerate to **45 km/h {28 mph}** within **15 s**.)

4. Stop the vehicle and access the ON BOARD SYSTEM READINESS to inspect the Drive Mode completion status.
   - If completed, RFC changes from No to Yes.
   - If not completed, switch the ignition to off, then repeat from Step 3.
5. Verify no DTCs are available.

DTC TABLE [SKYACTIV-G 2.0]

id0102h1801500

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

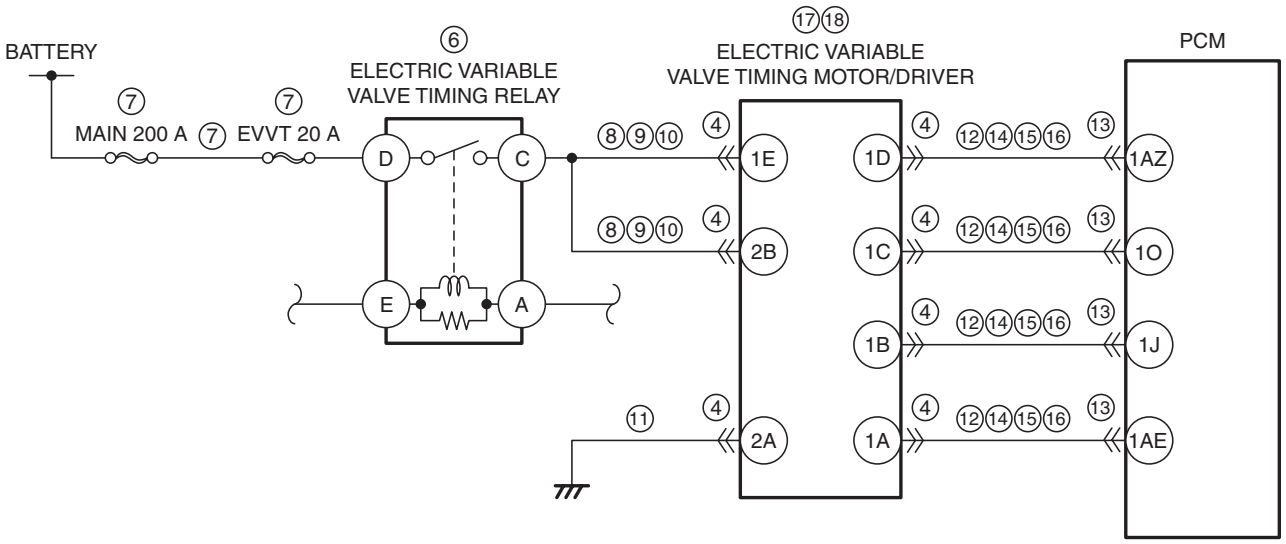
DTC P0010:00 [SKYACTIV-G 2.0]

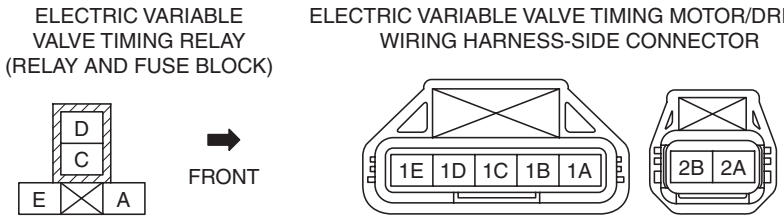
id0102h1310700

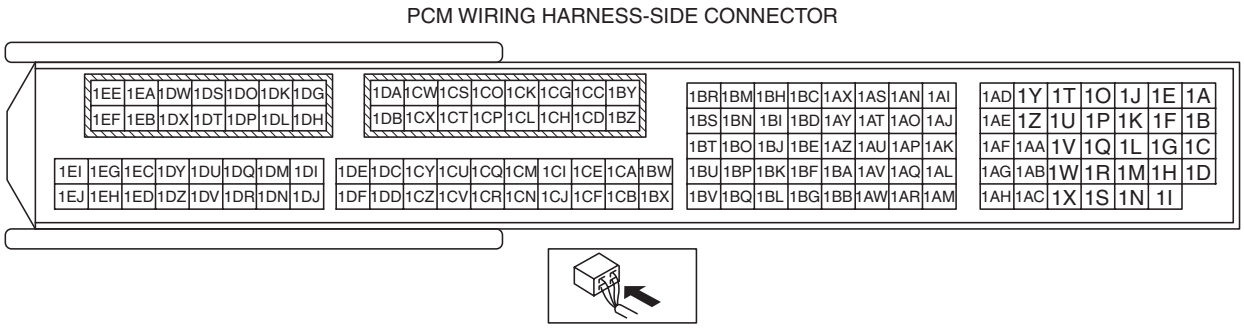
DTC P0010:00	Electric variable valve timing control circuit range/performance problem
DETECTION CONDITION	• A malfunction is detected in the results of the on-board diagnostic test received from electric variable valve timing driver. • The motor speed signal received from the electric variable valve timing driver is in error. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops activation of the electric variable valve timing driver.
POSSIBLE CAUSE	• Electric variable valve timing motor/driver connectors or terminals malfunction • Electric variable valve timing relay malfunction • Short to ground or open circuit in electric variable valve timing relay power supply circuit — Short to ground in wiring harness between MAIN 200 A fuse and electric variable valve timing relay terminal D — MAIN 200 A fuse and/or EVVT 20 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and electric variable valve timing relay terminal D • Short to ground in wiring harness between the following terminals: — Electric variable valve timing relay terminal C—Electric variable valve timing motor/driver terminal 1E — Electric variable valve timing relay terminal C—Electric variable valve timing motor/driver terminal 2B • Short to power supply in wiring harness between the following terminals: — Electric variable valve timing relay terminal C—Electric variable valve timing motor/driver terminal 1E — Electric variable valve timing relay terminal C—Electric variable valve timing motor/driver terminal 2B • Open circuit in wiring harness between the following terminals: — Electric variable valve timing relay terminal C—Electric variable valve timing motor/driver terminal 1E — Electric variable valve timing relay terminal C—Electric variable valve timing motor/driver terminal 2B • Open circuit in wiring harness between electric variable valve timing motor/driver terminal 2A and body ground • Short to ground in wiring harness between the following terminals: — Electric variable valve timing motor/driver terminal 1D—PCM terminal 1AZ — Electric variable valve timing motor/driver terminal 1C—PCM terminal 1O — Electric variable valve timing motor/driver terminal 1B—PCM terminal 1J — Electric variable valve timing motor/driver terminal 1A—PCM terminal 1AE • PCM connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: — Electric variable valve timing motor/driver terminal 1D—PCM terminal 1AZ — Electric variable valve timing motor/driver terminal 1C—PCM terminal 1O — Electric variable valve timing motor/driver terminal 1B—PCM terminal 1J — Electric variable valve timing motor/driver terminal 1A—PCM terminal 1AE • Electric variable valve timing motor/driver circuits are shorted to each other • Open circuit in wiring harness between the following terminals: — Electric variable valve timing motor/driver terminal 1D—PCM terminal 1AZ — Electric variable valve timing motor/driver terminal 1C—PCM terminal 1O — Electric variable valve timing motor/driver terminal 1B—PCM terminal 1J — Electric variable valve timing motor/driver terminal 1A—PCM terminal 1AE • Electric variable valve timing driver malfunction • Electric variable valve timing motor malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0010:00	Electric variable valve timing control circuit range/performance problem







Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P1380:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-290 DTC P1380:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
4	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the electric variable valve timing motor/driver connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 19.
		No	Go to the next step.
5	**DETERMINE IF MALFUNCTION CAUSE IS ELECTRIC VARIABLE VALVE TIMING MOTOR/ DRIVER POWER SUPPLY CIRCUIT OR OTHER** • Verify that the electric variable valve timing motor/driver connector is disconnected. • Start the engine. • Measure the voltage at the following terminals (wiring harness-side): — Electric variable valve timing motor/driver terminal 1E — Electric variable valve timing motor/driver terminal 2B • Is the voltage **B+**?	Yes	Go to Step 11.
		No	Go to the next step.
6	**INSPECT ELECTRIC VARIABLE VALVE TIMING RELAY** • Switch the ignition to off. • Remove the electric variable valve timing relay. • Inspect the electric variable valve timing relay. (See 09-21-29 RELAY INSPECTION.) • Is there any malfunction?	Yes	Replace the electric variable valve timing relay, then go to Step 19.
		No	Go to the next step.
7	**INSPECT ELECTRIC VARIABLE VALVE TIMING RELAY POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Electric variable valve timing relay is removed. • Verify that the electric variable valve timing motor/driver connector is disconnected. • Measure the voltage at the electric variable valve timing relay terminal D (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A fuse and EVVT 20 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the malfunctioning fuse. • If the fuse is deteriorated: — Replace the malfunctioning fuse. • If all fuses are normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 19.
8	**INSPECT ELECTRIC VARIABLE VALVE TIMING RELAY CONTROL CIRCUIT FOR SHORT TO GROUND** • Electric variable valve timing relay is removed. • Verify that the electric variable valve timing motor/driver connector is disconnected. • Inspect for continuity between electric variable valve timing relay terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 19.
		No	Go to the next step.
9	**INSPECT ELECTRIC VARIABLE VALVE TIMING RELAY CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Electric variable valve timing relay is removed. • Verify that the electric variable valve timing motor/driver connector is disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the electric variable valve timing relay terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 19.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
10	**INSPECT ELECTRIC VARIABLE VALVE TIMING RELAY CONTROL CIRCUIT FOR OPEN CIRCUIT** • Electric variable valve timing relay is removed. • Verify that the electric variable valve timing motor/driver connector is disconnected. • Switch the ignition to off. • Inspect for continuity between the following terminals (wiring harness-side): — Electric variable valve timing relay terminal C—Electric variable valve timing motor/driver terminal 1E — Electric variable valve timing relay terminal C—Electric variable valve timing motor/driver terminal 2B • Is there continuity?	Yes	Go to Step 19.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 19.
11	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the electric variable valve timing motor/driver connector is disconnected. • Switch the ignition to off. • Inspect for continuity between electric variable valve timing motor/driver terminal 2A (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 19.
12	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER CIRCUIT FOR SHORT TO GROUND** • Verify that the electric variable valve timing motor/driver connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Electric variable valve timing motor/driver terminal 1D — Electric variable valve timing motor/driver terminal 1C — Electric variable valve timing motor/driver terminal 1B — Electric variable valve timing motor/driver terminal 1A • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 19.
		No	Go to the next step.
13	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 19.
		No	Go to the next step.
14	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the electric variable valve timing motor/driver and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — Electric variable valve timing motor/driver terminal 1D — Electric variable valve timing motor/driver terminal 1C — Electric variable valve timing motor/driver terminal 1B — Electric variable valve timing motor/driver terminal 1A • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 19.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
15	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER CIRCUITS FOR SHORT TO EACH OTHER** • Verify that the electric variable valve timing motor/driver and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity electric variable valve timing motor/driver terminals 1D, 1C, 1B and 1A (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 19.
		No	Go to the next step.
16	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER CIRCUIT FOR OPEN CIRCUIT** • Verify that the electric variable valve timing motor/driver and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Electric variable valve timing motor/driver terminal 1D—PCM terminal 1AZ — Electric variable valve timing motor/driver terminal 1C—PCM terminal 1O — Electric variable valve timing motor/driver terminal 1B—PCM terminal 1J — Electric variable valve timing motor/driver terminal 1A—PCM terminal 1AE • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 19.
17	**INSPECT ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See 01-10A-15 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 19. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
18	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See 01-10A-15 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to the next step. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
19	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
20	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0011:00 [SKYACTIV-G 2.0]

id0102h1700100

DTC P0011:00	**Intake CMP timing over-advanced**
DETECTION CONDITION	• The actual intake valve timing advance is the specification or more compared to the target intake valve timing for a continuous specified time with the following condition met. **MONITORING CONDITIONS** — Engine speed: **below 5,000 rpm** — ECT: **above 60 °C {140 °F}** **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops activation of the electric variable valve timing driver.
POSSIBLE CAUSE	• Electric variable valve timing driver malfunction — Electric variable valve timing actuator is stuck in advanced position • Electric variable valve timing motor malfunction • Electric variable valve timing actuator malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P0010:00 or P1380:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-28 DTC P0010:00 [SKYACTIV-G 2.0].) (See 01-02-290 DTC P1380:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See 01-10A-15 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 7. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See 01-10A-15 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 7. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
6	**INSPECT ELECTRIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the electric variable valve timing actuator. (See 01-10A-22 ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing actuator, then go to the next step. (See 01-10A-23 ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0012:00 [SKYACTIV-G 2.0]

id0102h1700200

DTC P0012:00	**Intake CMP timing over-retarded**
DETECTION CONDITION	• The actual intake valve timing retard is the specification or more compared to the target intake valve timing for a continuous specified time with the following condition met. **MONITORING CONDITIONS** — Engine speed: **below 5,000 rpm** — ECT: **above 60 °C {140 °F}** **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops activation of the electric variable timing driver.
POSSIBLE CAUSE	• Electric variable valve timing driver malfunction — Electric variable valve timing actuator is stuck in retarded position • Electric variable valve timing motor malfunction • Electric variable valve timing actuator malfunction • Loose timing chain or improper intake valve timing due to timing chain slippage • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P0010:00 or P1380:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-28 DTC P0010:00 [SKYACTIV-G 2.0].) (See 01-02-290 DTC P1380:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See 01-10A-15 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 8. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See 01-10A-15 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 8. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
6	**INSPECT ELECTRIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the electric variable valve timing actuator. (See 01-10A-22 ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing actuator, then go to Step 8. (See 01-10A-23 ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
7	**VERIFY TIMING CHAIN INSTALLATION** • Stop the engine. • Remove the timing chain cover. (See 01-10A-39 TIMING CHAIN REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) • Is the intake camshaft timing mark at the correct point?	Yes	Go to the next step.
		No	Reinstall the timing chain, then go to the next step. (See 01-10A-39 TIMING CHAIN REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0014:00 [SKYACTIV-G 2.0]

id0102h1008000

DTC P0014:00	**Exhaust CMP timing over-advanced**
DETECTION CONDITION	• The actual exhaust valve timing is over-advanced by specification from the target exhaust valve timing for specified period when the oil control valve (OCV) is controlled in the feedback mode. **MONITORING CONDITIONS** — ECT: **above 60 °C {140 °F}** **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Performs the exhaust variable valve timing control with a maximum cam retard request.
POSSIBLE CAUSE	• Low engine oil pressure • Loose timing chain or improper exhaust valve timing due to timing chain slippage • OCV malfunction — Spool valve in OCV is stuck in advanced position • Engine oil runners are clogged or have leakage: — Between oil pressure switch and OCV — Between OCV and hydraulic variable valve timing actuator — In hydraulic variable valve timing actuator • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P2090:00 or P2091:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-305 DTC P2090:00 [SKYACTIV-G 2.0].) (See 01-02-307 DTC P2091:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**VERIFY ENGINE OIL PRESSURE** • Start the engine. • Does the engine oil pressure warning light illuminate?	Yes	Inspect the engine oil pressure. (See 01-11A-7 OIL PRESSURE INSPECTION [SKYACTIV-G 2.0].) Repair or replace the malfunctioning part according to the inspection results, then go to Step 8.
		No	Go to the next step.
5	**VERIFY TIMING CHAIN INSTALLATION** • Stop the engine. • Remove the timing chain cover. (See 01-10A-39 TIMING CHAIN REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) • Is the exhaust camshaft timing mark at the correct point?	Yes	Go to the next step.
		No	Reinstall the timing chain, then go to Step 8. (See 01-10A-39 TIMING CHAIN REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
6	**INSPECT OCV** • Inspect the OCV. (See 01-10A-37 OIL CONTROL VALVE (OCV) INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the OCV, then go to Step 8. (See 01-10A-38 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
7	**INSPECT ENGINE OIL RUNNER** • Inspect the engine oil runners for clogging or leakage: — Between oil pressure switch and OCV — Between OCV and hydraulic variable valve timing actuator — In hydraulic variable valve timing actuator • Is there any clogging or leakage?	Yes	Repair or replace the suspected runner, then go to the next step.
		No	Hydraulic variable valve timing mechanism is normal. **Note** • This DTC is detected as an intermittent concern. • The intermittent concern might be removed using the cleaning mode of the hydraulic variable valve timing control function. Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0015:00 [SKYACTIV-G 2.0]

id0102h1008100

DTC P0015:00	**Exhaust CMP timing over-retarded**
DETECTION CONDITION	• The actual exhaust valve timing is over-retarded by specification from the target exhaust valve timing for specified period when the oil control valve (OCV) system control is within the maximum cam retard mode. **MONITORING CONDITIONS** — ECT: **above 60 °C {140 °F}** **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Performs the exhaust variable valve timing control with a maximum cam retard request.
POSSIBLE CAUSE	• OCV malfunction — Spool valve in OCV is stuck in retard position • Hydraulic variable valve timing mechanism malfunction — Hydraulic variable valve timing mechanism not installed correctly — Loose timing chain or improper exhaust valve timing due to timing chain slippage • Stopper pin mechanism malfunction • Hydraulic variable valve timing actuator is stuck in retard position • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV** • Inspect the OCV. (See 01-10A-37 OIL CONTROL VALVE (OCV) INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the OCV, then go to Step 7. (See 01-10A-38 OIL CONTROL VALVE (OCV) REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**VERIFY VALVE TIMING MECHANISM INSTALLATION** • Verify the valve timing mechanism installation for the following parts: — Timing chain — Exhaust camshaft sprocket lock bolt — Crankshaft pulley lock bolt • Is there any malfunction?	Yes	Reinstall the parts correctly, then go to Step 7. (See 01-10A-39 TIMING CHAIN REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) (See 01-10A-23 ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT STOPPER PIN MECHANISM** • Remove the timing chain. (See 01-10A-39 TIMING CHAIN REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) • Inspect the stopper pin mechanism. (See 01-10A-21 HYDRAULIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the hydraulic variable valve timing actuator, then go to Step 7. (See 01-10A-23 ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

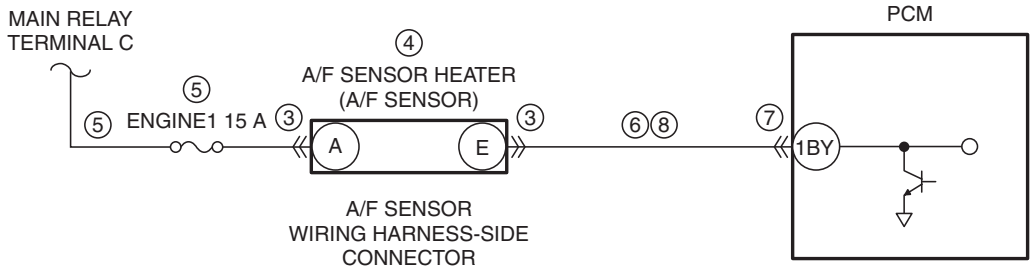
STEP	INSPECTION		ACTION
6	**INSPECT ROTOR POSITION** • Remove the hydraulic variable valve timing actuator. (See 01-10A-23 ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) • Is the rotor at the maximum valve timing advanced position?	Yes	Hydraulic variable valve timing mechanism is normal. **Note** • This DTC is detected as an intermittent concern. • The intermittent concern might be removed using the cleaning mode of the hydraulic variable valve timing control function. Go to the next step.
		No	Replace the hydraulic variable valve timing actuator, then go to the next step. (See 01-10A-23 ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

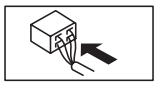
ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0031:00 [SKYACTIV-G 2.0]

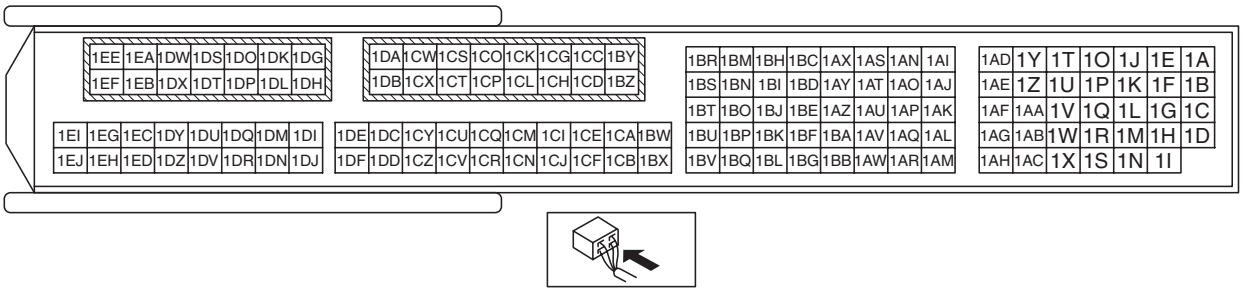
id0102h1700400

DTC P0031:00	**A/F sensor heater control circuit low input**
DETECTION CONDITION	• The PCM monitors the A/F sensor heater output voltage. If the PCM turns the A/F sensor heater off but the A/F sensor heater circuit remains low voltage, the PCM determines that the A/F sensor heater circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (A/F sensor heater, HO2S heater). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops the fuel feedback control.
POSSIBLE CAUSE	• A/F sensor connector or terminals malfunction • A/F sensor heater malfunction • Short to ground or open circuit in A/F sensor heater power supply circuit: — Short to ground in wiring harness between ENGINE1 15 A fuse and A/F sensor terminal A — ENGINE1 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and A/F sensor terminal A • Short to ground in wiring harness between A/F sensor terminal E and PCM terminal 1BY • PCM connector or terminals malfunction • Open circuit in wiring harness between A/F sensor terminal E and PCM terminal 1BY • PCM malfunction





PCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor heater, HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT A/F SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT A/F SENSOR HEATER** • Inspect the A/F sensor heater. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the A/F sensor, then go to Step 9. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT A/F SENSOR HEATER POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the A/F sensor connector is disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the A/F sensor terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE1 15 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 9.
6	**INSPECT A/F SENSOR HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the A/F sensor connector is disconnected. • Switch the ignition to off. • Inspect for continuity between A/F sensor terminal E (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
8	**INSPECT A/F SENSOR HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the A/F sensor and PCM connectors are disconnected. • Inspect for continuity between A/F sensor terminal E (wiring harness-side) and PCM terminal 1BY (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

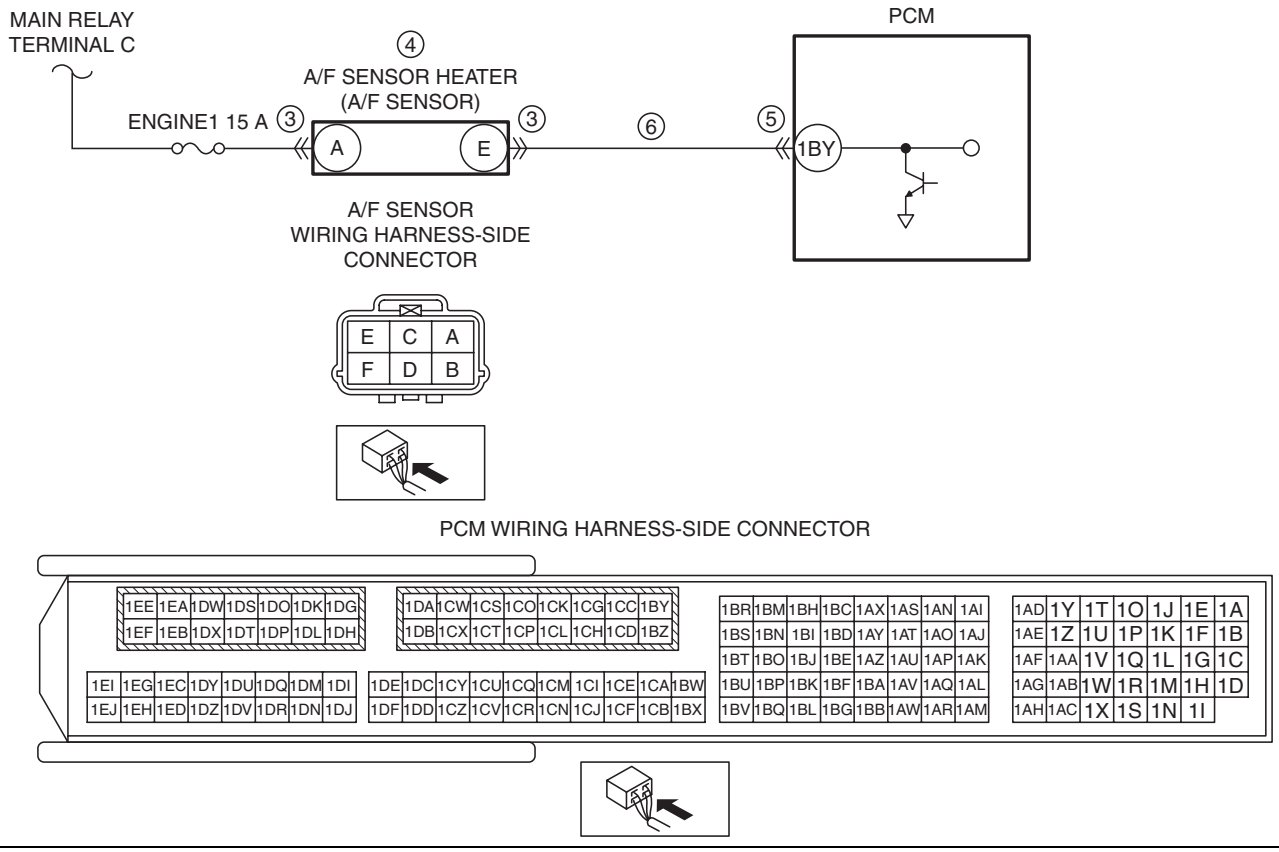
STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0032:00 [SKYACTIV-G 2.0]

id0102h1700500

DTC P0032:00	**A/F sensor heater control circuit high input**
DETECTION CONDITION	• The PCM monitors the A/F sensor heater output voltage. If the PCM turns the A/F sensor heater on but the A/F sensor heater circuit remains high voltage, the PCM determines that the A/F sensor heater circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (A/F sensor heater, HO2S heater). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops the fuel feedback control.
POSSIBLE CAUSE	• A/F sensor connector or terminals malfunction • A/F sensor heater malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between A/F sensor terminal E and PCM terminal 1BY • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor heater, HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

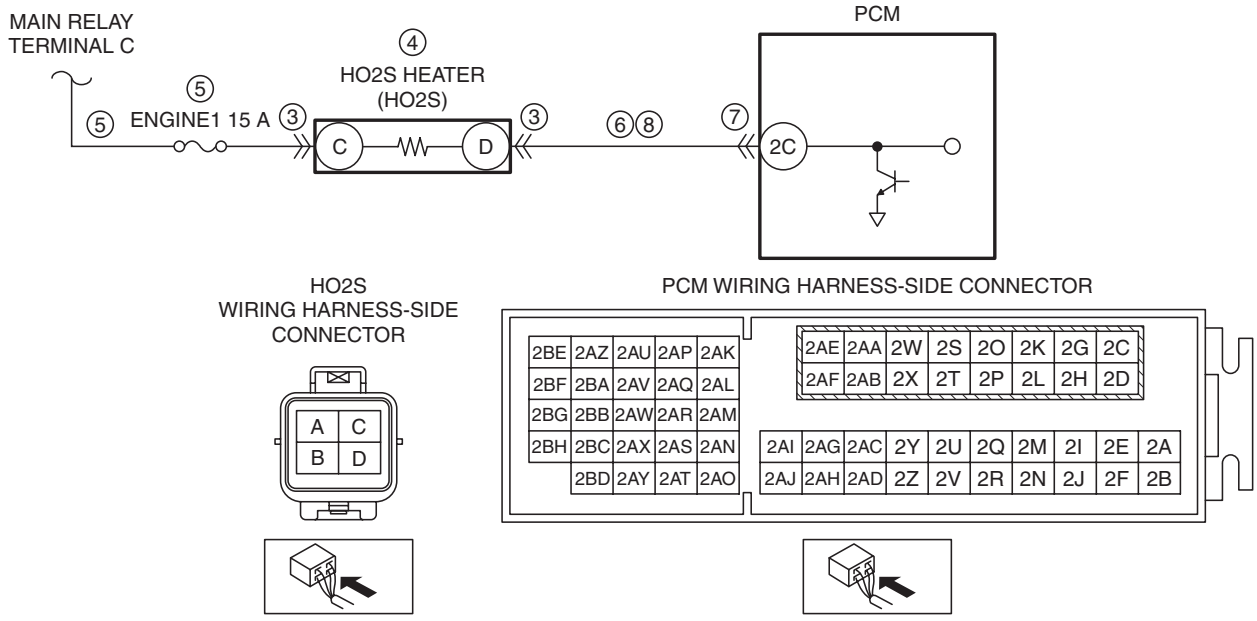
STEP	INSPECTION		ACTION
3	**INSPECT A/F SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
4	**INSPECT A/F SENSOR HEATER** • Inspect the A/F sensor heater. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the A/F sensor, then go to Step 7. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
6	**INSPECT A/F SENSOR HEATER CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the A/F sensor and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the A/F sensor terminal E (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to the next step.
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0037:00 [SKYACTIV-G 2.0]

id0102h1700600

DTC P0037:00	**HO2S heater control circuit low input**
DETECTION CONDITION	• The PCM monitors the HO2S heater output voltage. If the PCM turns the HO2S heater off but the HO2S heater circuit remains low voltage, the PCM determines that the HO2S heater circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (A/F sensor heater, HO2S heater). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops the fuel feedback control of the HO2S.
POSSIBLE CAUSE	• HO2S connector or terminals malfunction • HO2S heater malfunction • Short to ground or open circuit in HO2S heater power supply circuit — Short to ground in wiring harness between ENGINE1 15 A fuse and HO2S terminal C — ENGINE1 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and HO2S terminal C • Short to ground in wiring harness between HO2S terminal D and PCM terminal 2C • PCM connector or terminals malfunction • Open circuit in wiring harness between HO2S terminal D and PCM terminal 2C • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor heater, HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

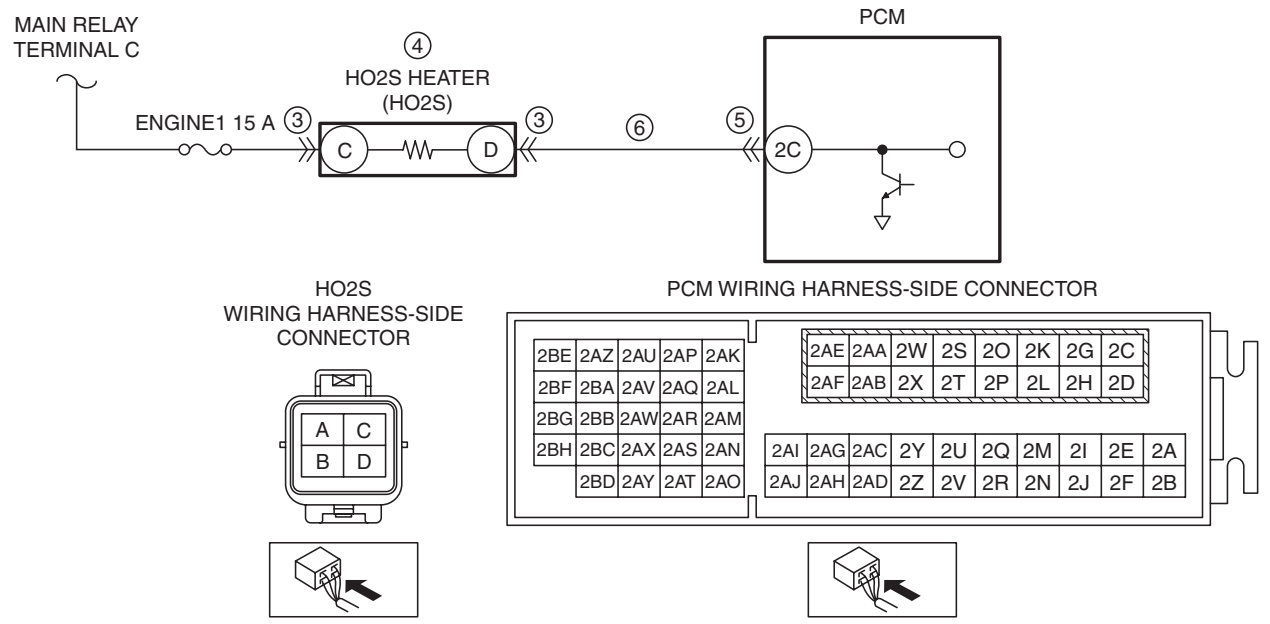
STEP	INSPECTION		ACTION
3	**INSPECT HO2S CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT HO2S HEATER** • Inspect the HO2S heater. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the HO2S, then go to Step 9. (See 01-40-56 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT HO2S HEATER POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the HO2S connector is disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the HO2S terminal C (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE1 15 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 9.
6	**INSPECT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the HO2S connector is disconnected. • Switch the ignition to off. • Inspect for continuity between HO2S terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
8	**INSPECT HO2S HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the HO2S and PCM connectors are disconnected. • Inspect for continuity between HO2S terminal D (wiring harness-side) and PCM terminal 2C (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0038:00 [SKYACTIV-G 2.0]

id0102h1700700

DTC P0038:00	**HO2S heater control circuit high input**
DETECTION CONDITION	• The PCM monitors the HO2S heater output voltage. If the PCM turns the HO2S heater on but the HO2S heater circuit remains high voltage, the PCM determines that the HO2S heater circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (A/F sensor heater, HO2S heater). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops the fuel feedback control of the HO2S.
POSSIBLE CAUSE	• HO2S connector or terminals malfunction • HO2S heater malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between HO2S terminal D and PCM terminal 2C • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor heater, HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT HO2S CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
4	**INSPECT HO2S HEATER** • Inspect the HO2S heater. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the HO2S, then go to Step 7. (See 01-40-56 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
6	**INSPECT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the HO2S and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the HO2S terminal D (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to the next step.
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0069:00 [SKYACTIV-G 2.0]

id0102h1300000

DTC P0069:00	**Manifold absolute pressure/atmospheric pressure correlation problem**
DETECTION CONDITION	• The PCM monitors difference between intake manifold vacuum and atmospheric pressure. If the difference is **below −12 kPa {−0.12 kgf/cm^2, −1.7 psi}** or **above 12 kPa {0.12 kgf/cm^2, 1.7 psi}** when the following conditions are met, the PCM determines that there is a MAP sensor performance problem. **MONITORING CONDITIONS** — **12—15 s** from when ignition is switched to off. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• MAP sensor malfunction • BARO sensor (built-into PCM) malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P0069:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P0107:00, P0108:00, P2228:00 or P2229:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-76 DTC P0107:00 [SKYACTIV-G 2.0].) (See 01-02-79 DTC P0108:00 [SKYACTIV-G 2.0].) (See 01-02-339 DTC P2228:00 [SKYACTIV-G 2.0].) (See 01-02-340 DTC P2229:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT MAP SENSOR** • Inspect the MAP sensor. (See 01-40-49 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to Step 7. (See 01-40-48 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

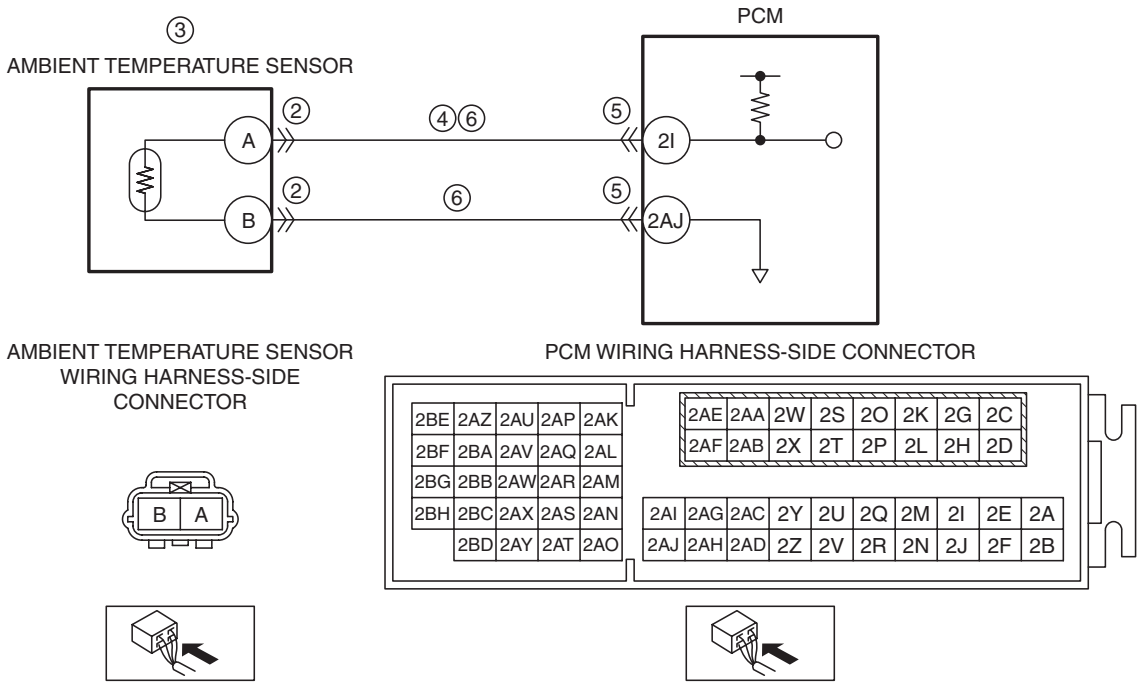
STEP	INSPECTION		ACTION
6	**INSPECT BARO SENSOR** • Inspect the BARO sensor. (See 01-40-49 BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0072:00 [SKYACTIV-G 2.0]

id0102h1145900

DTC P0072:00	Ambient temperature sensor circuit low input
DETECTION CONDITION	• The PCM monitors the input signal from the ambient temperature sensor. If the voltage from the ambient temperature sensor is **below 0.2 V** for **5 s**, the PCM determines that the ambient temperature sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Ambient temperature sensor connector or terminals malfunction • Ambient temperature sensor malfunction • Short to ground in wiring harness between ambient temperature sensor terminal A and PCM terminal 2I • PCM connector or terminals malfunction • Ambient temperature sensor signal circuit and ground circuit are shorted to each other • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT AMBIENT TEMPERATURE SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the ambient temperature sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

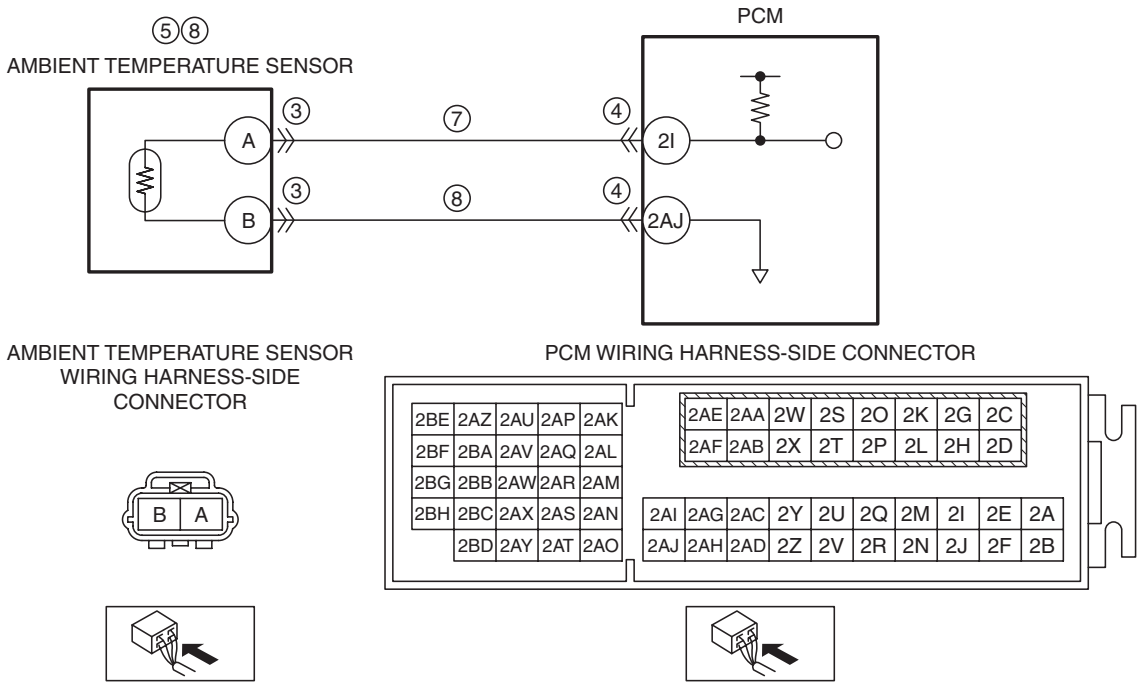
STEP	INSPECTION		ACTION
3	**INSPECT AMBIENT TEMPERATURE SENSOR** • Inspect the ambient temperature sensor. (See 07-40B-11 AMBIENT TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) (See 07-40A-23 AMBIENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the ambient temperature sensor, then go to Step 7. (See 07-40B-11 AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) (See 07-40A-22 AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Go to the next step.
4	**INSPECT AMBIENT TEMPERATURE SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the ambient temperature sensor connector is disconnected. • Inspect for continuity between ambient temperature sensor terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 7.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
6	**INSPECT AMBIENT TEMPERATURE SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the ambient temperature sensor and PCM connectors are disconnected. • Inspect for continuity between ambient temperature sensor terminals A and B (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to the next step.
		No	Go to the next step.
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0073:00 [SKYACTIV-G 2.0]

id0102h1146000

DTC P0073:00	Ambient temperature sensor circuit high input
DETECTION CONDITION	• The PCM monitors the input signal from the ambient temperature sensor. If the voltage from the ambient temperature sensor is **above 4.8 V** for **5 s**, the PCM determines that the ambient temperature sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Ambient temperature sensor connector or terminals malfunction • PCM connector or terminals malfunction • Ambient temperature sensor malfunction • Short to power supply in wiring harness between ambient temperature sensor terminal A and PCM terminal 2I • Open circuit in wiring harness between the following terminals: — Ambient temperature sensor terminal A—PCM terminal 2I — Ambient temperature sensor terminal B—PCM terminal 2AJ • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**CLASSIFY AMBIENT TEMPERATURE SENSOR MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Access the AAT PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the AAT PID value. • Is the AAT PID value **5 V** or **B+**?	Yes	Go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
3	**INSPECT AMBIENT TEMPERATURE SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the ambient temperature sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT AMBIENT TEMPERATURE SENSOR** • Inspect the ambient temperature sensor. (See 07-40B-11 AMBIENT TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) (See 07-40A-23 AMBIENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the ambient temperature sensor, then go to Step 9. (See 07-40B-11 AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) (See 07-40A-22 AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Go to Step 9.
6	**CLASSIFY AMBIENT TEMPERATURE SENSOR SIGNAL CIRCUIT MALFUNCTION OR AMBIENT TEMPERATURE SENSOR GROUND CIRCUIT MALFUNCTION** • Switch the ignition to off. • Disconnect the ambient temperature sensor connector. • Access the AAT PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the AAT PID value. • Is the AAT PID value **5 V** or **B+**?	Yes	Go to the next step.
		No	Go to Step 8.
7	**INSPECT AMBIENT TEMPERATURE SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the ambient temperature sensor connector is disconnected. • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for continuity between ambient temperature sensor terminal A (wiring harness-side) and PCM terminal 2I (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	**INSPECT AMBIENT TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the ambient temperature sensor connector is disconnected. • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for continuity between ambient temperature sensor terminal B (wiring harness-side) and PCM terminal 2AJ (wiring harness-side). • Is there continuity?	Yes	Replace the ambient temperature sensor, then go to the next step. (See 07-40B-11 AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) (See 07-40A-22 AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P0089:00 [SKYACTIV-G 2.0]

id0102h1008900

DTC P0089:00	Spill valve control solenoid valve control circuit range/performance problem
DETECTION CONDITION	• The average fuel pressure on the high pressure side, measured by the fuel pressure sensor while the camshaft is rotating at the specified speed, exceeds the specified value. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops the high pressure fuel pump control. • Limits the intake air amount. • Restricts the upper limit of the engine speed.
POSSIBLE CAUSE	• High pressure fuel pump connector or terminals malfunction • PCM connector or terminals malfunction • Fuel pressure sensor malfunction • High pressure fuel pump malfunction — Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction • High pressure fuel pipe clogging or damage • Fuel distributor malfunction • Fuel injector malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
3	**INSPECT HIGH PRESSURE FUEL PUMP CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the high pressure fuel pump connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Replace the following parts because the part for the high pressure fuel is damaged. • High pressure fuel pump (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • High pressure fuel pipe • Fuel injector No.1 (See 01-14A-51 FUEL INJECTOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) • Fuel injector No.2 • Fuel injector No.3 • Fuel injector No.4 • Fuel distributor Go to Step 9.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Replace the following parts because the part for the high pressure fuel is damaged. • PCM connector and/or terminals • High pressure fuel pump (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • High pressure fuel pipe • Fuel injector No.1 (See 01-14A-51 FUEL INJECTOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) • Fuel injector No.2 • Fuel injector No.3 • Fuel injector No.4 • Fuel distributor Go to Step 9.
		No	Go to the next step.
5	**INSPECT FUEL PRESSURE SENSOR** • Reconnect all disconnected connectors. • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel distributor, then go to Step 9. (See 01-14A-51 FUEL INJECTOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
6	**INSPECT HIGH PRESSURE FUEL PUMP** • Inspect the high pressure fuel pump. (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the following parts because the part for the high pressure fuel is damaged. • High pressure fuel pump (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • High pressure fuel pipe • Fuel injector No.1 (See 01-14A-51 FUEL INJECTOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) • Fuel injector No.2 • Fuel injector No.3 • Fuel injector No.4 • Fuel distributor Go to Step 9.
		No	Go to the next step.
7	**INSPECT HIGH PRESSURE FUEL PIPE** • Inspect the high pressure fuel pipe. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Is there clogging or damage in the high pressure fuel pipe?	Yes	Replace the following parts because the part for the high pressure fuel is damaged. • High pressure fuel pump (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • High pressure fuel pipe • Fuel injector No.1 (See 01-14A-51 FUEL INJECTOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) • Fuel injector No.2 • Fuel injector No.3 • Fuel injector No.4 • Fuel distributor Go to Step 9.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

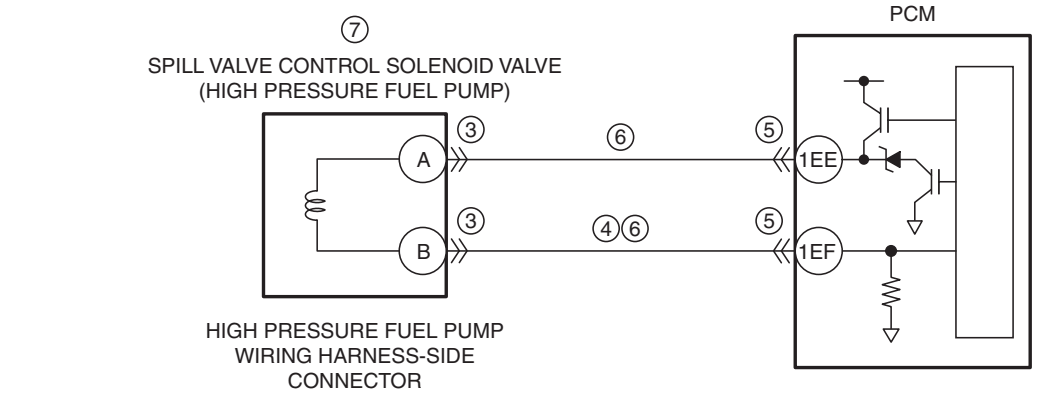
STEP	INSPECTION		ACTION
8	**INSPECT FUEL INJECTOR** • Inspect the fuel injector. (See 01-14A-62 FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the following parts because the part for the high pressure fuel is damaged. • High pressure fuel pump (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • High pressure fuel pipe • Fuel injector No.1 (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Fuel injector No.2 • Fuel injector No.3 • Fuel injector No.4 • Fuel distributor Go to the next step.
		No	Replace the fuel distributor, then go to the next step. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

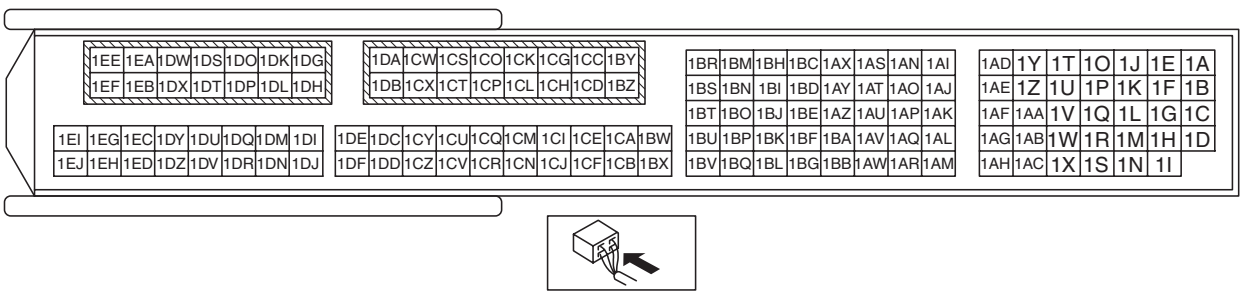
DTC P0091:00 [SKYACTIV-G 2.0]

id0102h1009100

DTC P0091:00	Fuel pressure regulator control circuit low input
DETECTION CONDITION	• When the PCM turns the spill valve control solenoid valve off but the spill valve control solenoid valve control circuit voltage is low for **5 s**, the PCM determines that the spill valve control solenoid valve control circuit has a malfunction. **MONITORING CONDITIONS** — The following conditions are met: • Engine speed: **5,700 rpm or less** • Battery voltage: **10.5 V or more** **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops the high pressure fuel pump control. • Limits the intake air amount.
POSSIBLE CAUSE	• High pressure fuel pump connector or terminals malfunction • Short to ground in wiring harness between high pressure fuel pump terminal B and PCM terminal 1EF • PCM connector or terminals malfunction • Open circuit in wiring harness between the following terminals: — High pressure fuel pump terminal A—PCM terminal 1EE — High pressure fuel pump terminal B—PCM terminal 1EF • Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction • PCM malfunction



PCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT HIGH PRESSURE FUEL PUMP CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the high pressure fuel pump connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
4	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the high pressure fuel pump connector is disconnected. • Inspect for continuity between high pressure fuel pump terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 8.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CIRCUIT FOR OPEN CIRCUIT** • Verify that the high pressure fuel pump and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — High pressure fuel pump terminal A—PCM terminal 1EE — High pressure fuel pump terminal B—PCM terminal 1EF • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
7	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE** • Reconnect all disconnected connectors. • Inspect the spill valve control solenoid valve. (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the high pressure fuel pump, then go to the next step. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

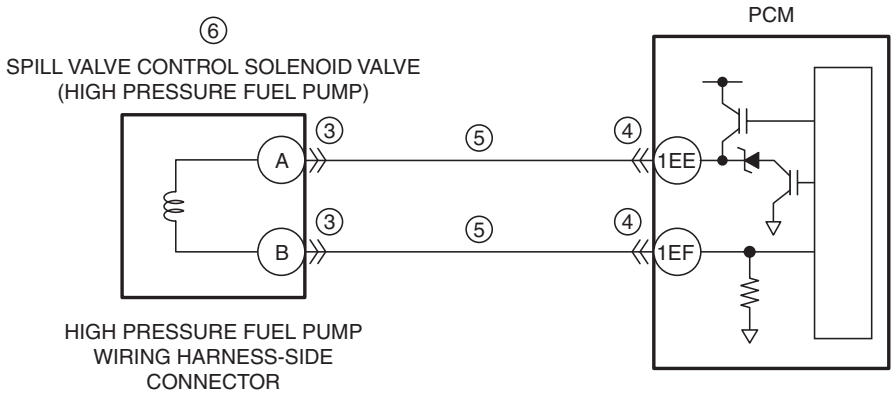
STEP	INSPECTION		ACTION
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

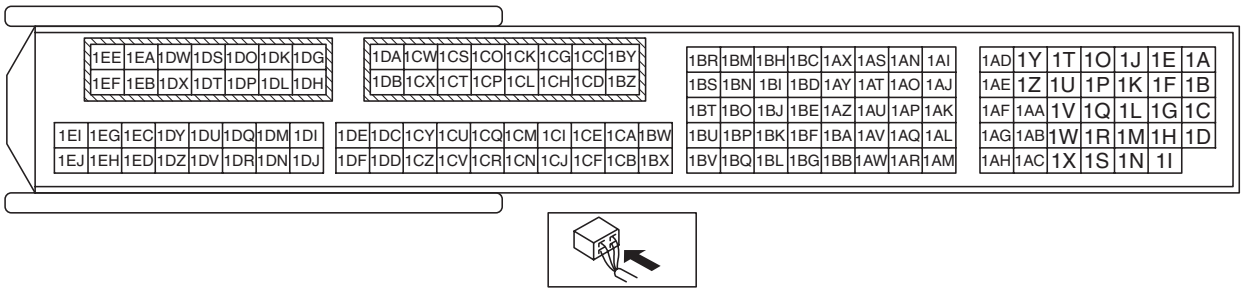
DTC P0092:00 [SKYACTIV-G 2.0]

id0102h1009200

DTC P0092:00	Fuel pressure regulator control circuit high input
DETECTION CONDITION	• When the PCM turns the spill valve control solenoid valve on but the spill valve control solenoid valve circuit voltage is high for **5 s**, the PCM determines that the spill valve control solenoid valve control circuit has a malfunction. **MONITORING CONDITIONS** — The following conditions are met: • Engine speed: **5,700 rpm or less** • Battery voltage: **10.5 V or more** **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops the high pressure fuel pump control. • Limits the intake air amount.
POSSIBLE CAUSE	• High pressure fuel pump connector or terminals malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: — High pressure fuel pump terminal A—PCM terminal 1EE — High pressure fuel pump terminal B—PCM terminal 1EF • Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction • PCM malfunction



PCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

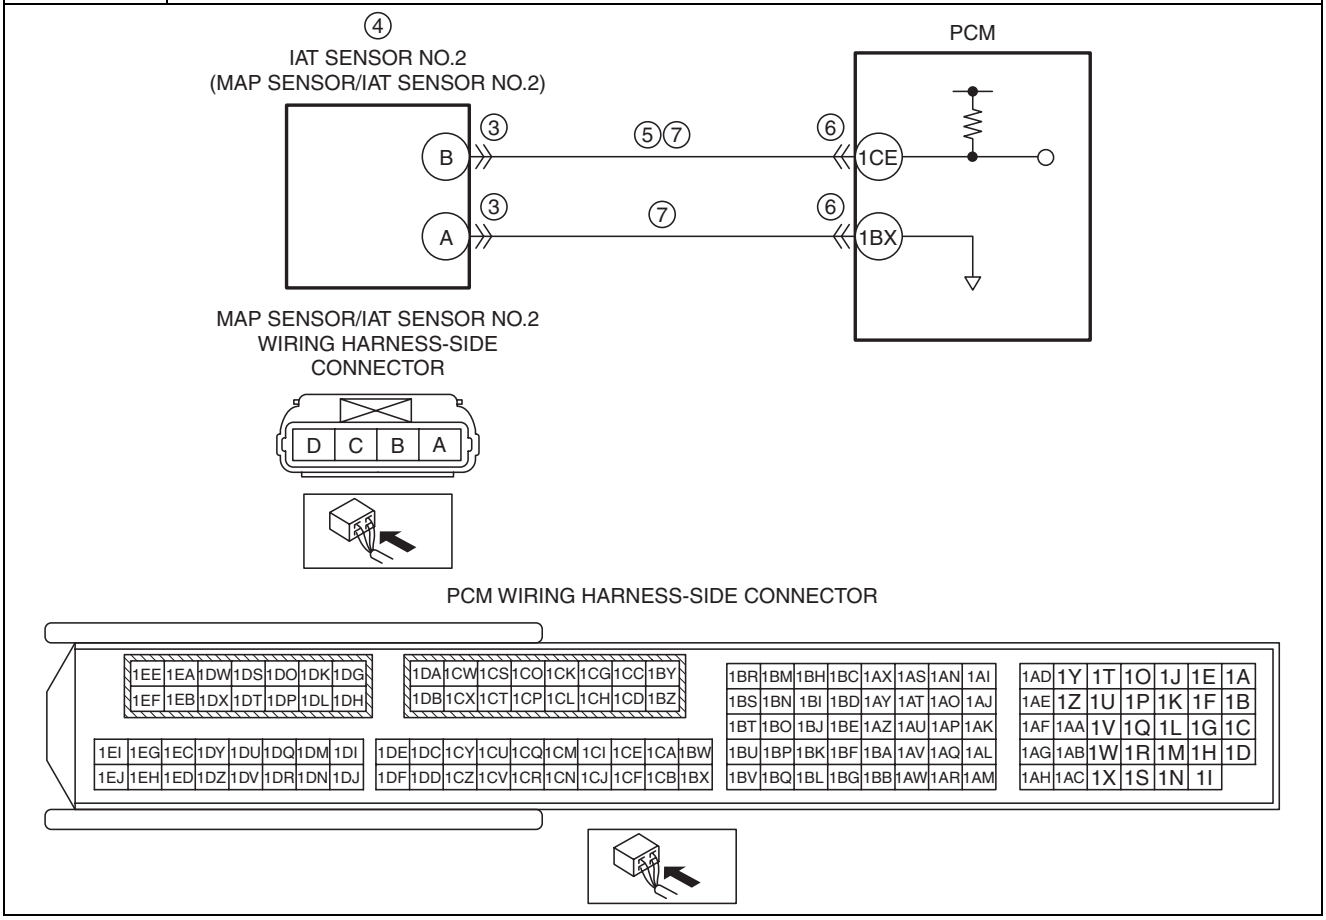
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT HIGH PRESSURE FUEL PUMP CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the high pressure fuel pump connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
5	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the high pressure fuel pump and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — High pressure fuel pump terminal A — High pressure fuel pump terminal B • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
6	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE** • Switch the ignition to off. • Reconnect all disconnected connectors. • Inspect the spill valve control solenoid valve. (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the high pressure fuel pump, then go to the next step. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0097:00 [SKYACTIV-G 2.0]

id0102h1146400

DTC P0097:00	IAT sensor No.2 circuit low input
DETECTION CONDITION	• If the PCM detects that the IAT sensor No.2 voltage at the PCM terminal 1CE is **0.33 V or less** for **5 s**, the PCM determines that the IAT sensor No.2 circuit voltage is low. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• MAP sensor/IAT sensor No.2 connector or terminals malfunction • IAT sensor No.2 malfunction • Short to ground in wiring harness between MAP sensor/IAT sensor No.2 terminal B and PCM terminal 1CE • PCM connector or terminals malfunction • IAT sensor No.2 signal circuit and ground circuit are shorted to each other • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

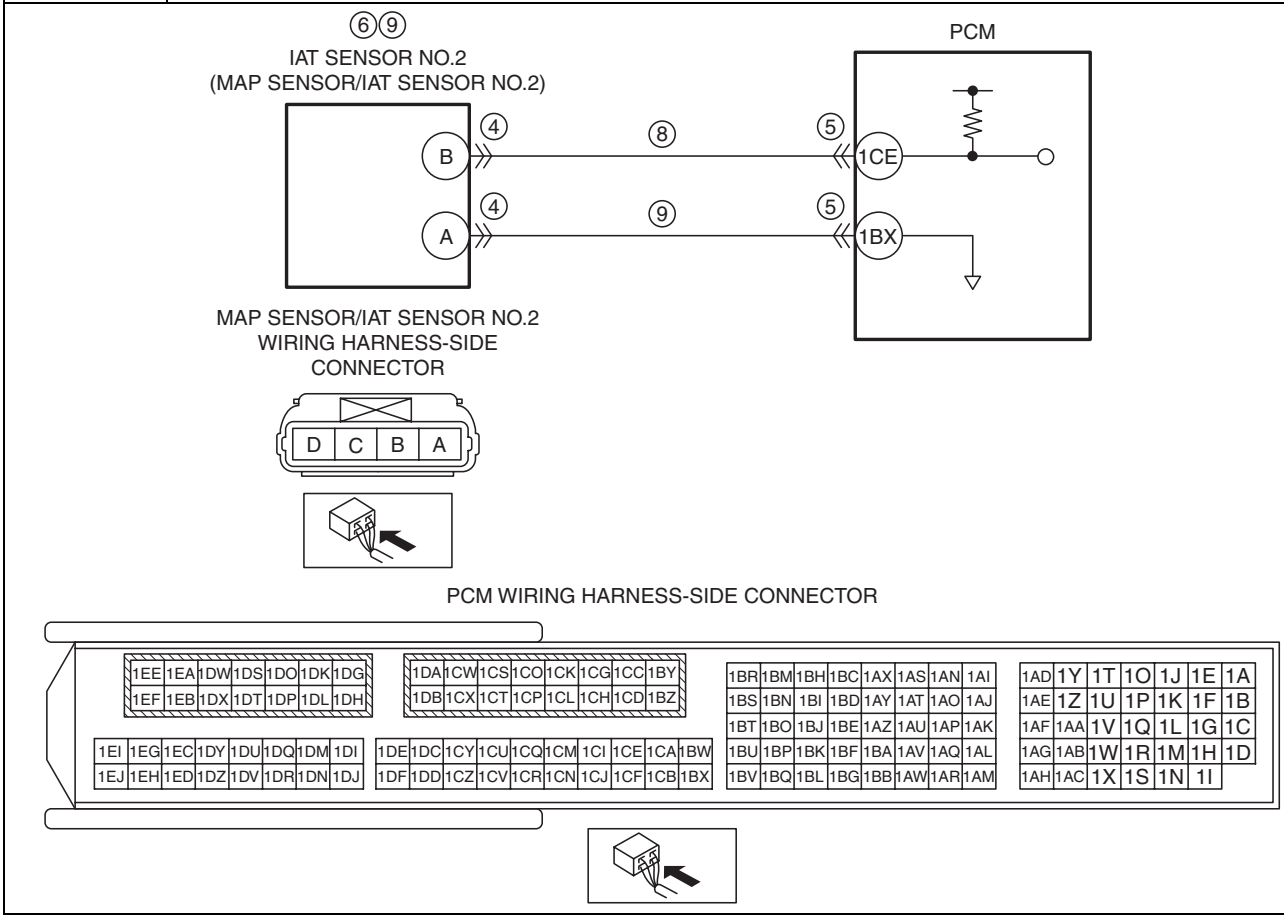
STEP	INSPECTION		ACTION
3	**INSPECT MAP SENSOR/IAT SENSOR NO.2 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the MAP sensor/IAT sensor No.2 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
4	**INSPECT IAT SENSOR NO.2** • Inspect the IAT sensor No.2. (See 01-40-46 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to Step 8. (See 01-40-48 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT IAT SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the MAP sensor/IAT sensor No.2 connector is disconnected. • Inspect for continuity between MAP sensor/IAT sensor No.2 terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 8.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
7	**INSPECT IAT SENSOR NO.2 SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the MAP sensor/IAT sensor No.2 and PCM connectors are disconnected. • Inspect for continuity between MAP sensor/IAT sensor No.2 terminals B and A (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to the next step.
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0098:00 [SKYACTIV-G 2.0]

id0102h1146500

DTC P0098:00	**IAT sensor No.2 circuit high input**
DETECTION CONDITION	• If the PCM detects that the IAT sensor No.2 voltage at the PCM terminal 1CE is **4.96 V or more** for **5 s**, the PCM determines that the IAT sensor No.2 circuit voltage is high. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• MAP sensor/IAT sensor No.2 connector or terminals malfunction • PCM connector or terminals malfunction • IAT sensor No.2 malfunction • Short to power supply in wiring harness between MAP sensor/IAT sensor No.2 terminal B and PCM terminal 1CE • Open circuit in wiring harness between the following terminals: — MAP sensor/IAT sensor No.2 terminal B—PCM terminal 1CE — MAP sensor/IAT sensor No.2 terminal A—PCM terminal 1BX • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
3	**CLASSIFY IAT SENSOR NO.2 MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Access the IAT2 PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the IAT2 PID value. • Is the IAT2 PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT MAP SENSOR/IAT SENSOR NO.2 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the MAP sensor/IAT sensor No.2 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT IAT SENSOR NO.2** • Inspect the IAT sensor No.2. (See 01-40-46 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to Step 10. (See 01-40-48 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 10.
7	**CLASSIFY IAT SENSOR NO.2 SIGNAL CIRCUIT MALFUNCTION OR IAT SENSOR NO.2 GROUND CIRCUIT MALFUNCTION** • Switch the ignition to off. • Disconnect the MAP sensor/IAT sensor No.2 connector. • Access the IAT2 PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the IAT2 PID value. • Is the IAT2 PID value **5 V** or **B+**?	Yes	Go to the next step.
		No	Go to Step 9.
8	**INSPECT IAT SENSOR NO.2 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the MAP sensor/IAT sensor No.2 connector is disconnected. • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for continuity between MAP sensor/IAT sensor No.2 terminal B (wiring harness-side) and PCM terminal 1CE (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 10.
9	**INSPECT IAT SENSOR NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the MAP sensor/IAT sensor No.2 connector is disconnected. • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for continuity between MAP sensor/IAT sensor No.2 terminal A (wiring harness-side) and PCM terminal 1BX (wiring harness-side). • Is there continuity?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to the next step. (See 01-40-48 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P0101:00 [SKYACTIV-G 2.0]

id0102h1700800

DTC P0101:00	MAF sensor circuit range/performance problem
DETECTION CONDITION	• When the conditions are as follows, the PCM compares the intake airflow amount with the estimated intake airflow amount (calculated from the barometric pressure, MAP sensor and throttle opening angle). **MONITORING CONDITIONS** — Engine speed: **above 500 rpm** — Intake manifold absolute pressure divided by barometric pressure: **below 0.93** — Throttle position (before **0.02 s**): **below 10 %** — Amount of fluctuation in intake camshaft position for **0.04 s**: **below 10 °CA** — Battery voltage: **above 8 V** • The difference between the intake air amount measured by the MAF sensor and the estimated intake air amount estimated by the MAP sensor is outside of the specified value. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• MAP sensor/IAT sensor No.2 connector or terminals malfunction • MAF sensor/IAT sensor No.1 connector or terminals malfunction • PCM connector or terminals malfunction • MAP sensor malfunction • MAF sensor malfunction • Air leakage from intake-air system • Purge solenoid valve malfunction • PCV valve malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
3	**VERIFY CURRENT INPUT SIGNAL STATUS IS CONCERN INTERMITTENT OR CONSTANT** • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — ECT — TP REL — RPM • Warm up the engine until the ECT PID is **above 70 °C {158 °F}**. • Perform the following: 1. Depress the accelerator pedal to increase the engine speed to **approx. 5,000 rpm**. 2. Release the accelerator pedal to decrease the engine speed to idle speed. 3. Repeat Step 1 and Step 2 operations above **3 times** in succession. • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Go to the next step.
		No	Intermittent concern exists. • Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03-116 INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0].)
4	**INSPECT MAP SENSOR/IAT SENSOR NO.2 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the MAP sensor/IAT sensor No.2 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 12.
		No	Go to the next step.
5	**INSPECT MAF SENSOR/IAT SENSOR NO.1 CONNECTOR CONDITION** • Disconnect the MAF sensor/IAT sensor No.1 connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 12.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 12.
		No	Go to the next step.
7	**INSPECT MAP SENSOR** • Reconnect all disconnected connectors. • Inspect the MAP sensor. (See 01-40-49 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to Step 12. (See 01-40-48 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
8	**INSPECT MAF SENSOR** • Inspect the MAF sensor. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to Step 12. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
9	**INSPECT INTAKE-AIR SYSTEM FOR AIR LEAKAGE** • Inspect for leakage in intake-air system. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 12.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
10	**INSPECT PURGE SOLENOID VALVE** • Inspect the purge solenoid valve. (See 01-16A-12 PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to Step 12. (See 01-16A-10 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
11	**INSPECT PCV VALVE OPERATION** • Inspect the PCV valve operation. (See 01-16A-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the PCV valve, then go to the next step. (See 01-16A-13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
12	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — ECT — TP REL — RPM • Warm up the engine until the ECT PID is **above 70 °C {158 °F}**. • Perform the following: 1. Depress the accelerator pedal to increase the engine speed to **approx. 5,000 rpm**. 2. Release the accelerator pedal to decrease the engine speed to idle speed. 3. Repeat Step 1 and Step 2 operations above **3 times** in succession. • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
13	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0102:00 [SKYACTIV-G 2.0]

id0102h1700900

DTC P0102:00	**MAF sensor circuit low input**
DETECTION CONDITION	• The PCM monitors input voltage from the MAF sensor when the engine is running. If the input voltage at the PCM terminal 2BC is **below 0.2 V** for **5 s**, the PCM determines that the MAF sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Inhibits the evaporative purge control.
POSSIBLE CAUSE	• MAF sensor/IAT sensor No.1 connector or terminals malfunction • Short to ground or open circuit in MAF sensor power supply circuit — Short to ground in wiring harness between ENGINE1 15 A fuse and MAF sensor/IAT sensor No.1 terminal E — ENGINE1 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and MAF sensor/IAT sensor No.1 terminal E • Short to ground in wiring harness between the following terminals: — MAF sensor/IAT sensor No.1 terminal D—PCM terminal 2BB — MAF sensor/IAT sensor No.1 terminal C—PCM terminal 2BC • PCM connector or terminals malfunction • MAF sensor signal circuit and ground circuit are shorted to each other • Open circuit in wiring harness between the following terminals: — MAF sensor/IAT sensor No.1 terminal D—PCM terminal 2BB — MAF sensor/IAT sensor No.1 terminal C—PCM terminal 2BC • MAF sensor malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF SENSOR/IAT SENSOR NO.1 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the MAF sensor/IAT sensor No.1 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
4	**INSPECT MAF SENSOR POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the MAF sensor/IAT sensor No.1 connector is disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the MAF sensor/IAT sensor No.1 terminal E (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE1 15 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 10.
5	**INSPECT MAF SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the MAF sensor/IAT sensor No.1 connector is disconnected. • Switch the ignition to off. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — MAF sensor/IAT sensor No.1 terminal D — MAF sensor/IAT sensor No.1 terminal C • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 10.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
7	**INSPECT MAF SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the MAF sensor/IAT sensor No.1 and PCM connectors are disconnected. • Inspect for continuity between MAF sensor/IAT sensor No.1 terminals C and B (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 10.
		No	Go to the next step.
8	**INSPECT MAF SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the MAF sensor/IAT sensor No.1 and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — MAF sensor/IAT sensor No.1 terminal D— PCM terminal 2BB — MAF sensor/IAT sensor No.1 terminal C— PCM terminal 2BC • Is there continuity?	Yes	Go to the next step.
		No	Repair or the replace the wiring harness for a possible open circuit, then go to Step 10.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

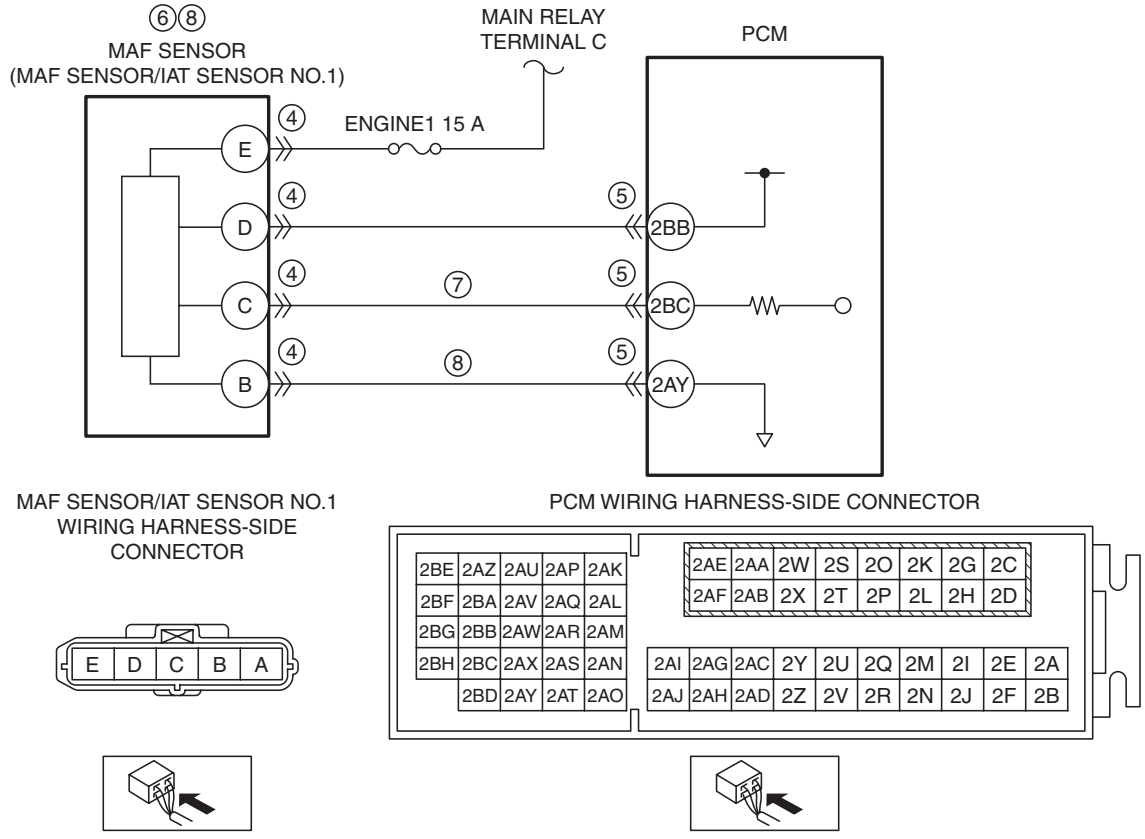
STEP	INSPECTION		ACTION
9	**INSPECT MAF SENSOR** • Inspect the MAF sensor. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to the next step. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0103:00 [SKYACTIV-G 2.0]

id0102h1701000

DTC P0103:00	MAF sensor circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from the MAF sensor when the engine is running. If the input voltage at the PCM terminal 2BC is **above 4.94 V** for **5 s**, the PCM determines that the MAF sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Inhibits the evaporative purge control.
POSSIBLE CAUSE	• MAF sensor/IAT sensor No.1 connector or terminals malfunction • PCM connector or terminals malfunction • MAF sensor malfunction • Short to power supply in wiring harness between MAF sensor/IAT sensor No.1 terminal C and PCM terminal 2BC • Open circuit in wiring harness between MAF sensor/IAT sensor No.1 terminal B and PCM terminal 2AY • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

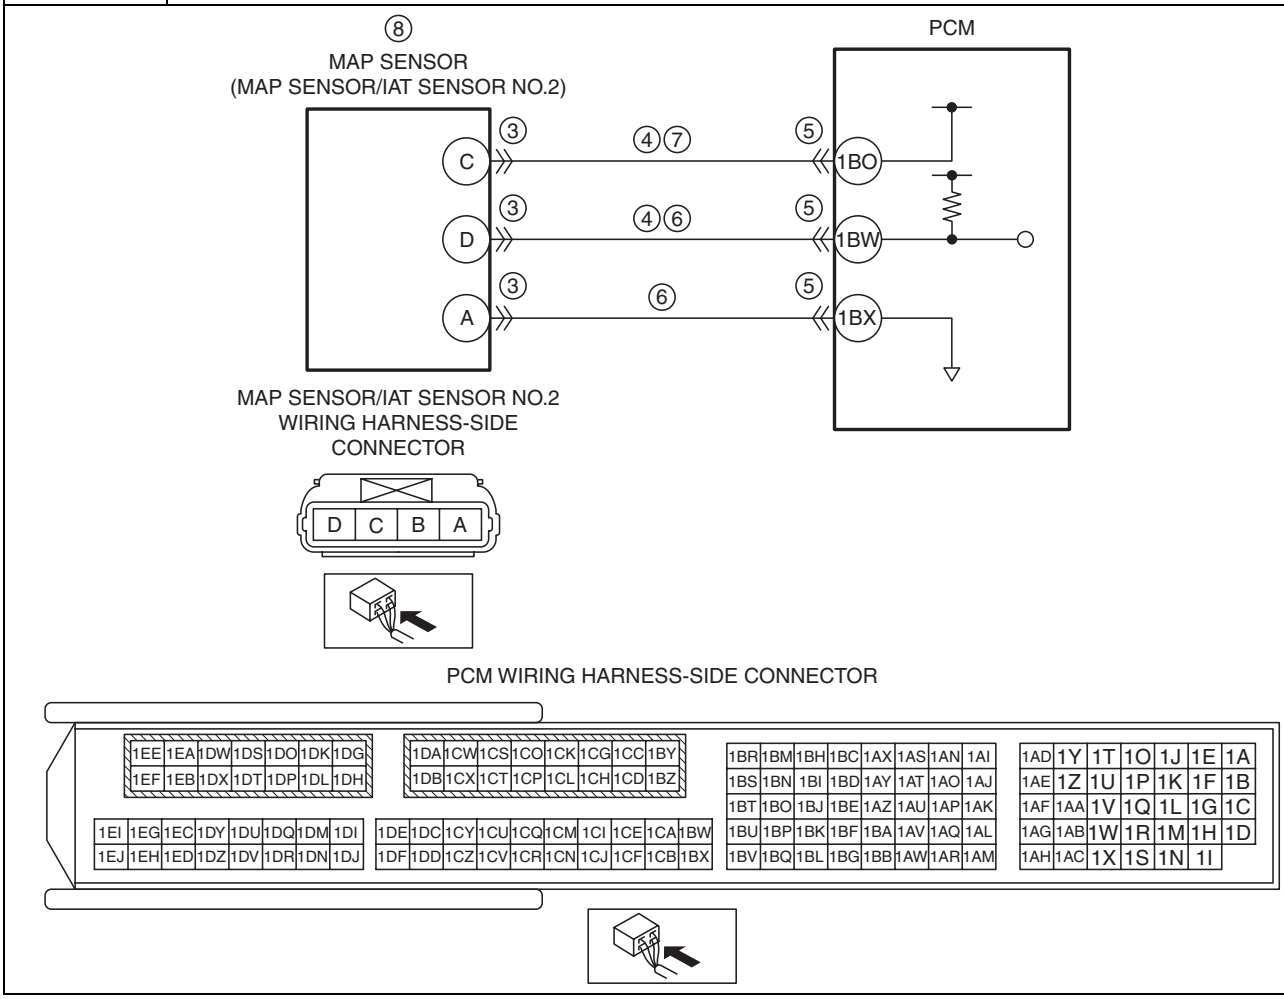
STEP	INSPECTION		ACTION
3	**CLASSIFY MAF SENSOR MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Access the MAF PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the MAF PID value. • Is the MAF PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT MAF SENSOR/IAT SENSOR NO.1 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the MAF sensor/IAT sensor No.1 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT MAF SENSOR** • Inspect the MAF sensor. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to Step 9. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 9.
7	**INSPECT MAF SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Switch the ignition to off. • Disconnect the MAF sensor/IAT sensor No.1 connector. • Access the MAF PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the MAF PID value. • Is the MAF PID value **5 V** or **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
8	**INSPECT MAF SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the MAF sensor/IAT sensor No.1 connector is disconnected. • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for continuity between MAF sensor/IAT sensor No.1 terminal B (wiring harness-side) and PCM terminal 2AY (wiring harness-side). • Is there continuity?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to the next step. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0107:00 [SKYACTIV-G 2.0]

id0102h1701100

DTC P0107:00	MAP sensor circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from the MAP sensor. If the input voltage at the PCM terminal 1BW is **below 0.08 V** for **5 s**, the PCM determines that the MAP sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Estimates MAP using MAF sensor and engine speed. • Restricts the upper limit of the engine speed. • Inhibits the evaporative purge control.
POSSIBLE CAUSE	• MAP sensor/IAT sensor No.2 connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — MAP sensor/IAT sensor No.2 terminal C—PCM terminal 1BO — MAP sensor/IAT sensor No.2 terminal D—PCM terminal 1BW • PCM connector or terminals malfunction • MAP sensor signal circuit and ground circuit are shorted to each other • Open circuit in wiring harness between MAP sensor/IAT sensor No.2 terminal C and PCM terminal 1BO • MAP sensor malfunction • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAP SENSOR/IAT SENSOR NO.2 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the MAP sensor/IAT sensor No.2 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT MAP SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the MAP sensor/IAT sensor No.2 connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — MAP sensor/IAT sensor No.2 terminal C — MAP sensor/IAT sensor No.2 terminal D • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT MAP SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the MAP sensor/IAT sensor No.2 and PCM connectors are disconnected. • Inspect for continuity between MAP sensor/IAT sensor No.2 terminals D and A (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 9.
		No	Go to the next step.
7	**INSPECT MAP SENSOR POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Verify that the MAP sensor/IAT sensor No.2 and PCM connectors are disconnected. • Inspect for continuity between MAP sensor/IAT sensor No.2 terminal C (wiring harness-side) and PCM terminal 1BO (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	**INSPECT MAP SENSOR** • Reconnect all disconnected connectors. • Inspect the MAP sensor. (See 01-40-49 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to the next step. (See 01-40-48 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

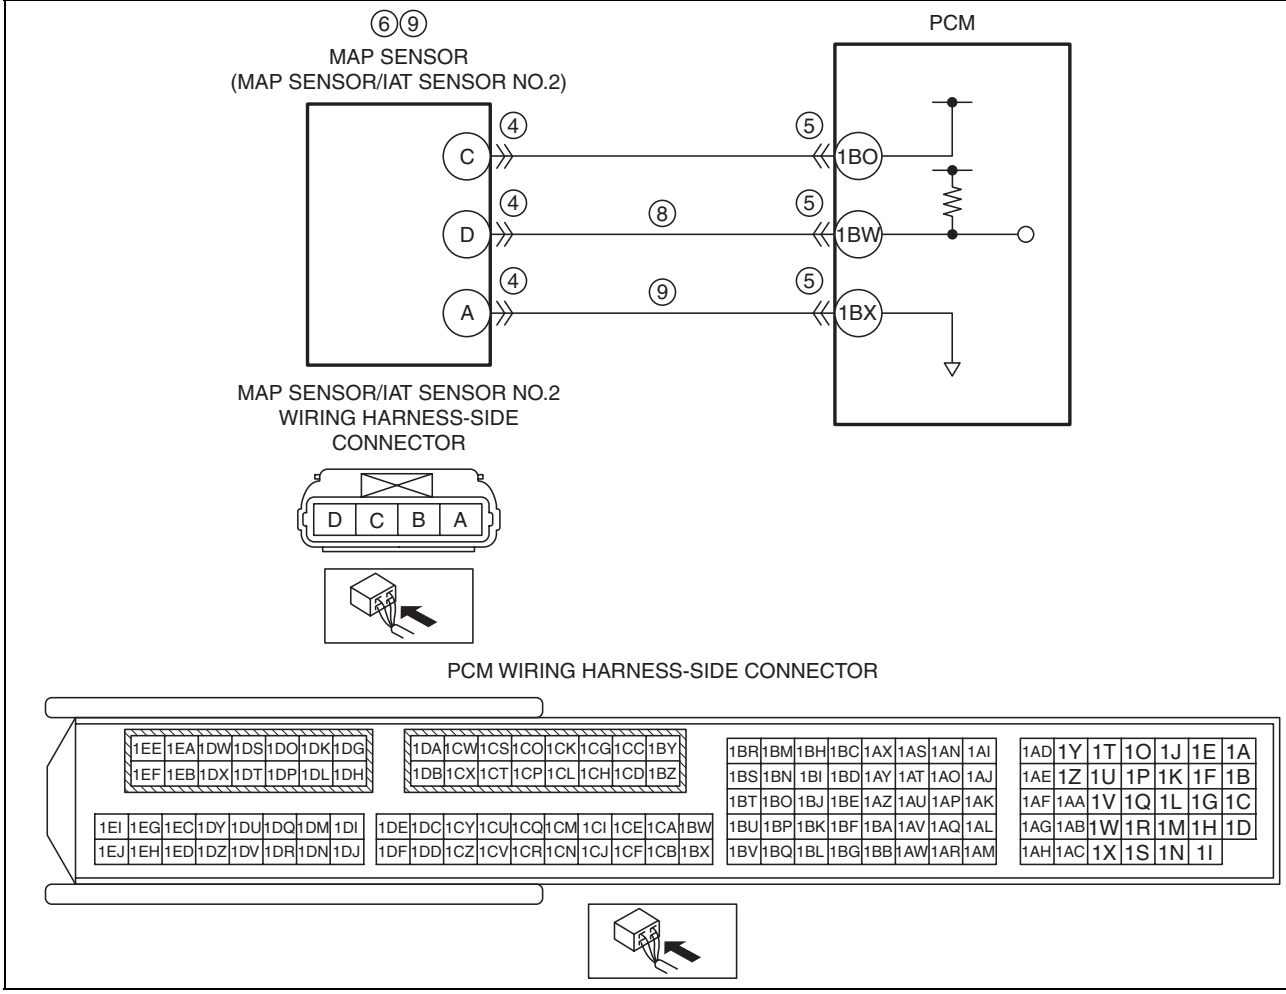
STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0108:00 [SKYACTIV-G 2.0]

id0102h1701200

DTC P0108:00	MAP sensor circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from the MAP sensor. If the input voltage at the PCM terminal 1BW is **above 4.89 V** for **5 s**, the PCM determines that the MAP sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Estimates MAP using MAF sensor and engine speed. • Restricts the upper limit of the engine speed. • Inhibits the evaporative purge control.
POSSIBLE CAUSE	• MAP sensor/IAT sensor No.2 connector or terminals malfunction • PCM connector or terminals malfunction • MAP sensor malfunction • Short to power supply in wiring harness between MAP sensor/IAT sensor No.2 terminal D and PCM terminal 1BW • Open circuit in wiring harness between the following terminals: — MAP sensor/IAT sensor No.2 terminal D—PCM terminal 1BW — MAP sensor/IAT sensor No.2 terminal A—PCM terminal 1BX • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY MAP SENSOR MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Access the MAP PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the MAP PID value. • Is the MAP PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT MAP SENSOR/IAT SENSOR NO.2 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the MAP sensor/IAT sensor No.2 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT MAP SENSOR** • Reconnect all disconnected connectors. • Inspect the MAP sensor. (See 01-40-49 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to Step 10. (See 01-40-48 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 10.
7	**CLASSIFY MAP SENSOR SIGNAL CIRCUIT MALFUNCTION OR MAP SENSOR GROUND CIRCUIT MALFUNCTION** • Switch the ignition to off. • Disconnect the MAP sensor/IAT sensor No.2 connector. • Access the MAP PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the MAP PID value. • Is the MAP PID value **5 V** or **B+**?	Yes	Go to the next step.
		No	Go to Step 9.
8	**INSPECT MAP SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the MAP sensor/IAT sensor No.2 connector is disconnected. • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for continuity between MAP sensor/IAT sensor No.2 terminal D (wiring harness-side) and PCM terminal 1BW (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 10.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

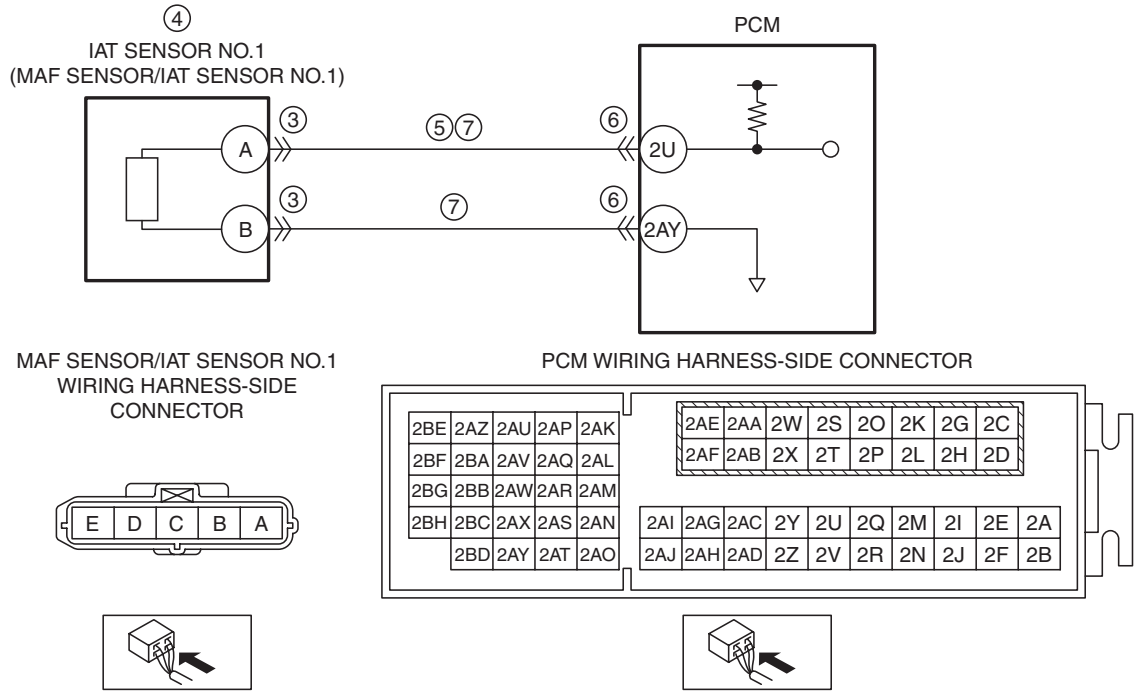
STEP	INSPECTION		ACTION
9	**INSPECT MAP SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the MAP sensor/IAT sensor No.2 connector is disconnected. • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for continuity between MAP sensor/IAT sensor No.2 terminal A (wiring harness-side) and PCM terminal 1BX (wiring harness-side). • Is there continuity?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to the next step. (See 01-40-48 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0112:00 [SKYACTIV-G 2.0]

id0102h1701400

DTC P0112:00	**IAT sensor No.1 circuit low input**
DETECTION CONDITION	• The PCM monitors the IAT sensor No.1 signal. If the PCM detects that the IAT sensor No.1 voltage at the PCM terminal 2U is **below 0.19 V** for **5 s**, the PCM determines that the IAT sensor No.1 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Illuminates the charging system warning light. • Fixes the intake air temperature (for engine control) at **20 °C {68 °F}**. • Inhibits the fuel cut control during shift change.
POSSIBLE CAUSE	• MAF sensor/IAT sensor No.1 connector or terminals malfunction • IAT sensor No.1 malfunction • Short to ground in wiring harness between MAF sensor/IAT sensor No.1 terminal A and PCM terminal 2U • PCM connector or terminals malfunction • IAT sensor No.1 signal circuit and ground circuit are shorted to each other • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF SENSOR/IAT SENSOR NO.1 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the MAF sensor/IAT sensor No.1 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

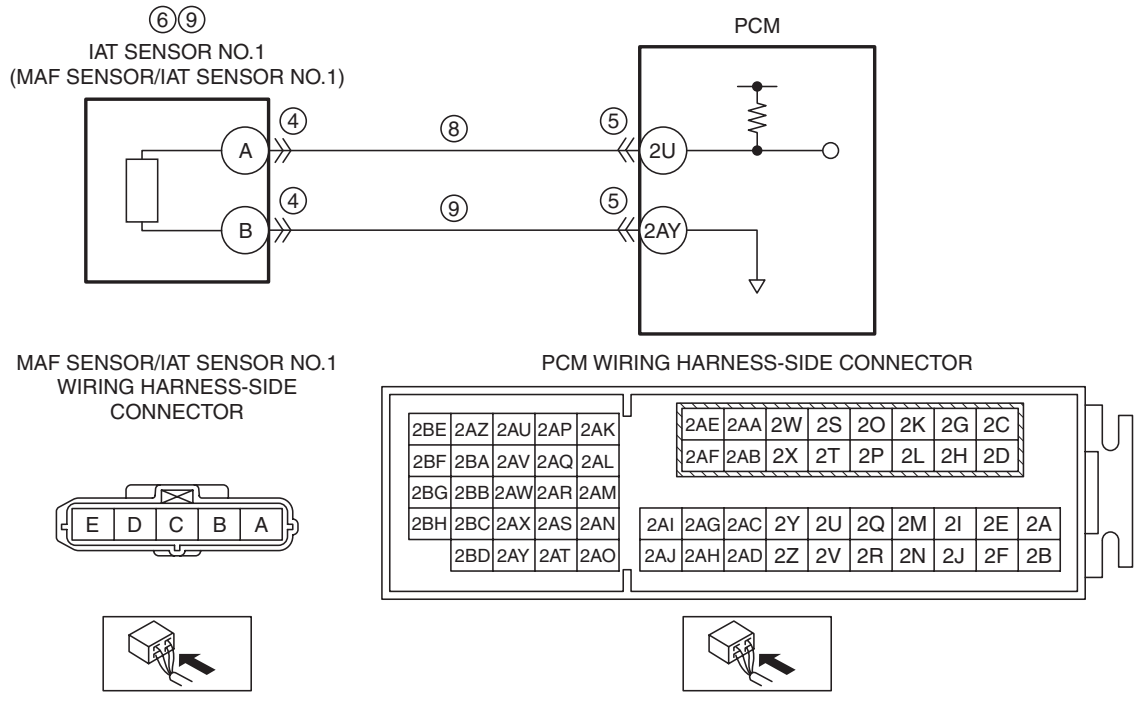
STEP	INSPECTION		ACTION
4	**INSPECT IAT SENSOR NO.1** • Inspect the IAT sensor No.1. (See 01-40-46 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to Step 8. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT IAT SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the MAF sensor/IAT sensor No.1 connector is disconnected. • Inspect for continuity between MAF sensor/IAT sensor No.1 terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 8.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
7	**INSPECT IAT SENSOR NO.1 SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the MAF sensor/IAT sensor No.1 and PCM connectors are disconnected. • Inspect for continuity between MAF sensor/IAT sensor No.1 terminals A and B (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to the next step.
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0113:00 [SKYACTIV-G 2.0]

id0102h1701500

DTC P0113:00	**IAT sensor No.1 circuit high input**
DETECTION CONDITION	• The PCM monitors the IAT sensor No.1 signal. If the PCM detects that the IAT sensor No.1 voltage at the PCM terminal 2U is **above 4.62 V** for **5 s**, the PCM determines that the IAT sensor No.1 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Illuminates the charging system warning light. • Fixes the intake air temperature (for engine control) at **20 °C {68 °F}**. • Inhibits the fuel cut control during shift change.
POSSIBLE CAUSE	• MAF sensor/IAT sensor No.1 connector or terminals malfunction • PCM connector or terminals malfunction • IAT sensor No.1 malfunction • Short to power supply in wiring harness between MAF sensor/IAT sensor No.1 terminal A and PCM terminal 2U • Open circuit in wiring harness between the following terminals: — MAF sensor/IAT sensor No.1 terminal A—PCM terminal 2U — MAF sensor/IAT sensor No.1 terminal B—PCM terminal 2AY • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
3	**CLASSIFY IAT SENSOR NO.1 MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Access the IAT PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the IAT PID value. • Is the IAT PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT MAF SENSOR/IAT SENSOR NO.1 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the MAF sensor/IAT sensor No.1 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT IAT SENSOR NO.1** • Inspect the IAT sensor No.1. (See 01-40-46 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to Step 10. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 10.
7	**CLASSIFY IAT SENSOR NO.1 SIGNAL CIRCUIT MALFUNCTION OR IAT SENSOR NO.1 GROUND CIRCUIT MALFUNCTION** • Switch the ignition to off. • Disconnect the MAF sensor/IAT sensor No.1 connector. • Access the IAT PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the IAT PID value. • Is the IAT PID value **5 V** or **B+**?	Yes	Go to the next step.
		No	Go to Step 9.
8	**INSPECT IAT SENSOR NO.1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the MAF sensor/IAT sensor No.1 connector is disconnected. • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for continuity between MAF sensor/IAT sensor No.1 terminal A (wiring harness-side) and PCM terminal 2U (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 10.
9	**INSPECT IAT SENSOR NO.1 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the MAF sensor/IAT sensor No.1 connector is disconnected. • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for continuity between MAF sensor/IAT sensor No.1 terminal B (wiring harness-side) and PCM terminal 2AY (wiring harness-side). • Is there continuity?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to the next step. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P0116:00 [SKYACTIV-G 2.0]

id0102h1146800

DTC P0116:00	ECT sensor circuit range/performance problem
DETECTION CONDITION	• The PCM monitors the maximum value and minimum value of engine coolant temperature when the engine is started and **5 min** have been passed after leaving the vehicle **6 h or more**. If difference between maximum and minimum values of engine coolant temperature is **below 6 °C {43 °F}** the PCM determines that there is an ECT sensor circuit range/performance problem. **Diagnostic support note** • This is a continuous monitor (engine cooling system). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• ECT sensor connector or terminals malfunction • PCM connector or terminals malfunction • ECT sensor malfunction • Thermostat malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P0116:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

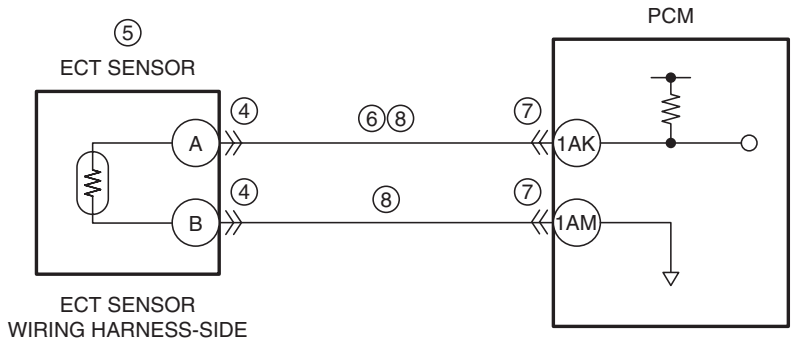
STEP	INSPECTION		ACTION
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT ECT SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the ECT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the ECT sensor, then go to Step 9. (See 01-40-41 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
7	**COMPARE ECT PID VALUE** • Prepare a new ECT sensor. • Connect the ECT sensor connector to the new one without installing to the engine. • Switch the ignition ON (engine off) and record the ECT PID value. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Switch the ignition to off. • Replace the malfunction ECT sensor with new one. • Start the engine and wait for **5 min**. • Record the ECT PID value. • Is the difference between each ECT PID values **more than 6 °C {43 °F}**?	Yes	Go to the next step.
		No	Go to Step 9.
8	**INSPECT THERMOSTAT** • Switch the ignition to off. • Inspect the thermostat. (See 01-12A-13 THERMOSTAT INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the thermostat, then go to the next step. (See 01-12A-12 THERMOSTAT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Switch the ignition to off. • Start the engine and warm it up completely. • Perform the DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

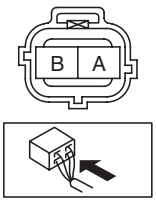
DTC P0117:00 [SKYACTIV-G 2.0]

id0102h1701600

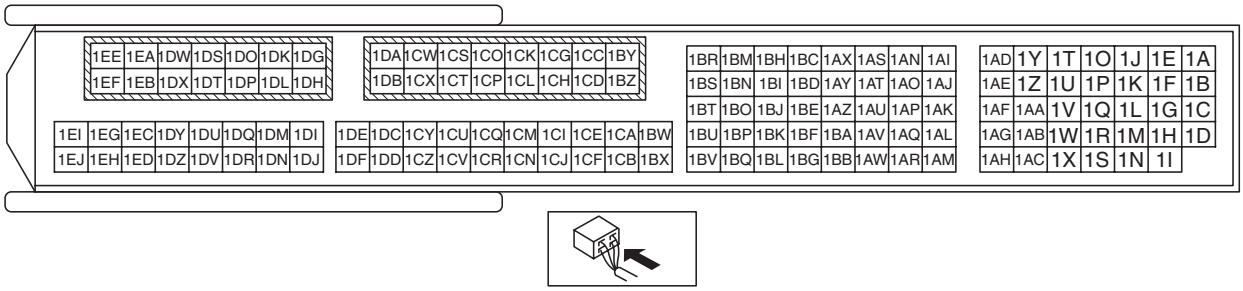
DTC P0117:00	ECT sensor circuit low input
DETECTION CONDITION	• The PCM monitors the ECT sensor signal. If the PCM detects that the ECT sensor voltage at the PCM terminal 1AK is **below 0.2 V** for **5 s**, the PCM determines that the ECT sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (engine cooling system). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the water temperature for the engine control at **40 °C {104 °F}**, and for the idle air control at **80 °C {176 °F}**. • Operates the cooling fan (high speed rotation). • Inhibits the fuel cut control during shift change.
POSSIBLE CAUSE	• Engine overheating (cooling system malfunction) • ECT sensor connector or terminals malfunction • ECT sensor malfunction • Short to ground in wiring harness between ECT sensor terminal A and PCM terminal 1AK • PCM connector or terminals malfunction • ECT sensor signal circuit and ground circuit are shorted to each other • PCM malfunction



ECT SENSOR WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY ENGINE CONDITION** • Verify the engine condition. • Is the engine overheating?	Yes	Perform the symptom troubleshooting “NO.17 COOLING SYSTEM CONCERNS-OVERHEATING”. (See 01-03-88 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT ECT SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the ECT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**CLASSIFY ECT SENSOR MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Reconnect all disconnected connectors. • Access the ECT PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the ECT PID value when disconnecting the ECT sensor connector. • Does the ECT PID value change?	Yes	Replace the ECT sensor, then go to Step 9. (See 01-40-41 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
6	**INSPECT ECT SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the ECT sensor connector is disconnected. • Switch the ignition to off. • Inspect for continuity between ECT sensor terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
8	**INSPECT ECT SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the ECT sensor and PCM connectors are disconnected. • Inspect for continuity between ECT sensor terminals A and B (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

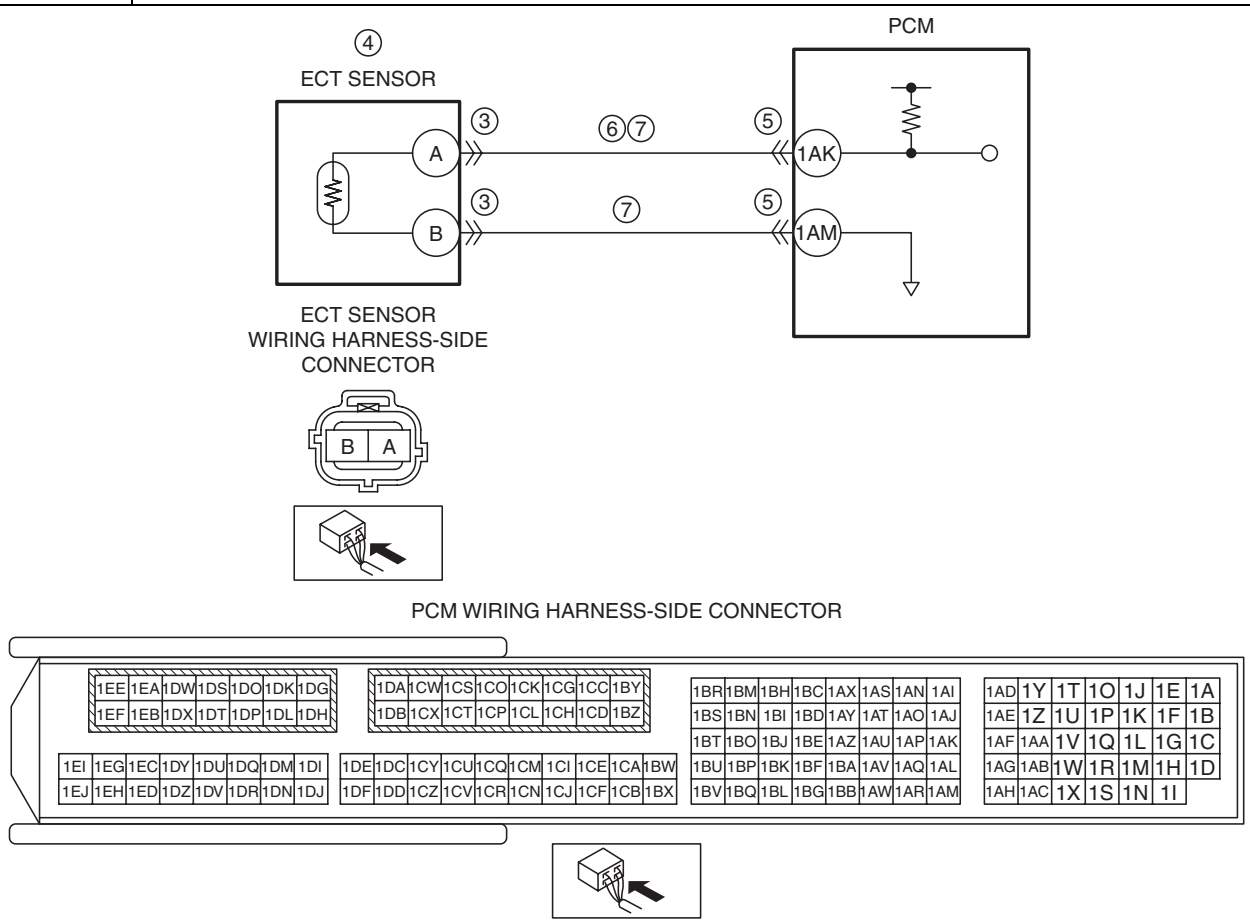
STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0118:00 [SKYACTIV-G 2.0]

id0102h1701700

DTC P0118:00	ECT sensor circuit high input
DETECTION CONDITION	• The PCM monitors the ECT sensor signal. If the PCM detects that the ECT sensor voltage at the PCM terminal 1AK is **above 4.6 V** for **5 s**, the PCM determines that the ECT sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (engine cooling system). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the water temperature for the engine control at **40 °C {104 °F}**, and for the idle air control at **80 °C {176 °F}**. • Operates the cooling fan (high speed rotation). • Inhibits the fuel cut control during shift change.
POSSIBLE CAUSE	• ECT sensor connector or terminals malfunction • ECT sensor malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between ECT sensor terminal A and PCM terminal 1AK • Open circuit in wiring harness between the following terminals: — ECT sensor terminal A—PCM terminal 1AK — ECT sensor terminal B—PCM terminal 1AM • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ECT SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the ECT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
4	**CLASSIFY ECT SENSOR MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Verify that the ECT sensor connector is disconnected. • Access the ECT PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Connect a jumper wire between ECT sensor terminals A and B (wiring harness-side). • Verify the ECT PID value. • Is the voltage **4.6 V or below**?	Yes	Replace the ECT sensor, then go to Step 8. (See 01-40-41 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	**INSPECT ECT SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the ECT sensor and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the ECT sensor terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
7	**INSPECT ECT SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the ECT sensor and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between the following terminals (wiring harness-side): — ECT sensor terminal A—PCM terminal 1AK — ECT sensor terminal B—PCM terminal 1AM • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

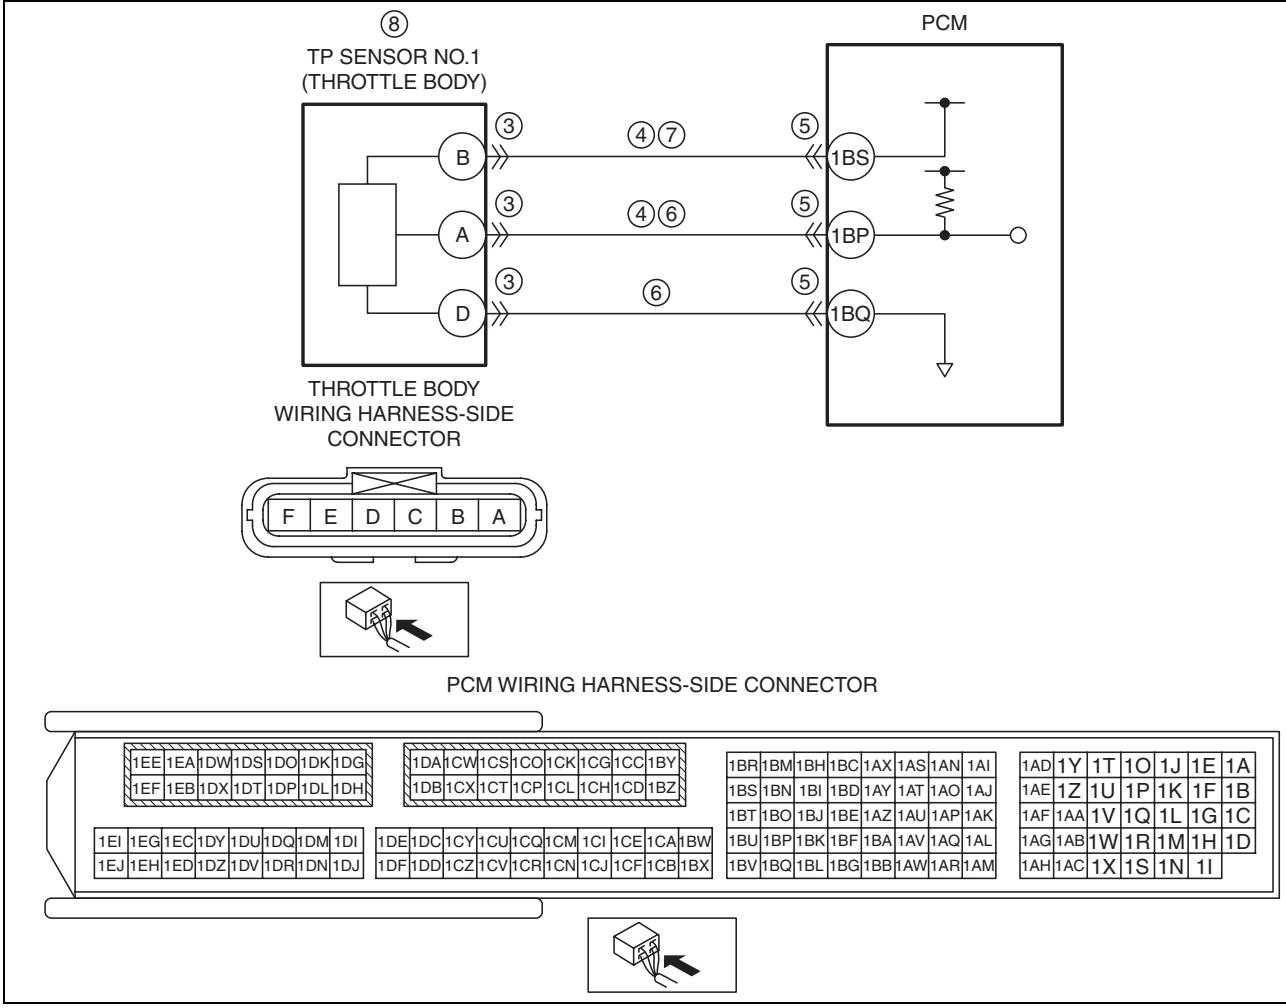
STEP	INSPECTION		ACTION
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0122:00 [SKYACTIV-G 2.0]

id0102h1701800

DTC P0122:00	TP sensor No.1 circuit low input
DETECTION CONDITION	• If the PCM detects that the TP sensor No.1 voltage at the PCM terminal 1BP is **below 0.1 V** while the engine is running, the PCM determines that the TP sensor No.1 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed.
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — Throttle body terminal B—PCM terminal 1BS — Throttle body terminal A—PCM terminal 1BP • PCM connector or terminals malfunction • TP sensor No.1 signal circuit and ground circuit are shorted to each other • Open circuit in wiring harness between throttle body terminal B and PCM terminal 1BS • TP sensor No.1 malfunction • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT TP SENSOR NO.1 CIRCUIT FOR SHORT TO GROUND** • Verify that the throttle body connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Throttle body terminal B — Throttle body terminal A • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT TP SENSOR NO.1 SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the throttle body and PCM connectors are disconnected. • Inspect for continuity between throttle body terminals A and D (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 9.
		No	Go to the next step.
7	**INSPECT TP SENSOR NO.1 POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Verify that the throttle body and PCM connectors are disconnected. • Inspect for continuity between throttle body terminal B (wiring harness-side) and PCM terminal 1BS (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	**INSPECT TP SENSOR NO.1** • Reconnect all disconnected connectors. • Inspect the TP sensor No.1. (See 01-40-50 THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

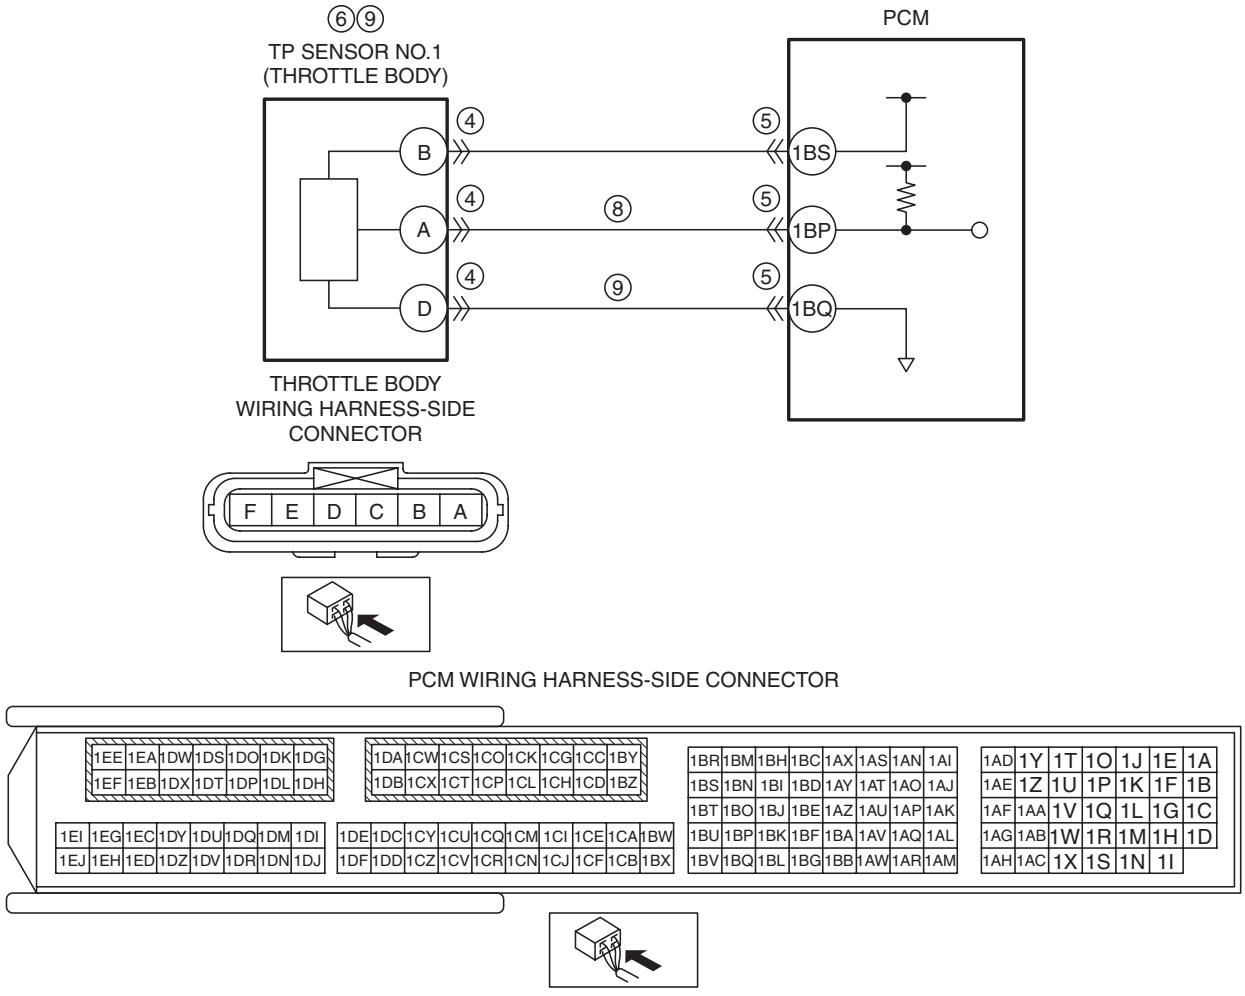
STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0123:00 [SKYACTIV-G 2.0]

id0102h1701900

DTC P0123:00	**TP sensor No.1 circuit high input**
DETECTION CONDITION	• If the PCM detects that the TP sensor No.1 voltage at the PCM terminal 1BP is **above 4.9 V** after the ignition is switched to ON, the PCM determines that the TP sensor No.1 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed.
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • PCM connector or terminals malfunction • TP sensor No.1 malfunction • Short to power supply in wiring harness between throttle body terminal A and PCM terminal 1BP • Open circuit in wiring harness between the following terminals: — Throttle body terminal A—PCM terminal 1BP — Throttle body terminal D—PCM terminal 1BQ • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY TP SENSOR NO.1 MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Access the TP1 PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the TP1 PID value. • Is the TP1 PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT TP SENSOR NO.1** • Reconnect all disconnected connectors. • Inspect the TP sensor No.1. (See 01-40-50 THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 10. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 10.
7	**CLASSIFY TP SENSOR NO.1 SIGNAL CIRCUIT MALFUNCTION OR TP SENSOR NO.1 GROUND CIRCUIT MALFUNCTION** • Switch the ignition to off. • Disconnect the throttle body connector. • Access the TP1 PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the TP1 PID value. • Is the TP1 PID value **5 V** or **B+**?	Yes	Go to the next step.
		No	Go to Step 9.
8	**INSPECT TP SENSOR NO.1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the throttle body connector is disconnected. • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for continuity between throttle body terminal A (wiring harness-side) and PCM terminal 1BP (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 10.
9	**INSPECT TP SENSOR NO.1 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the throttle body connector is disconnected. • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for continuity between throttle body terminal D (wiring harness-side) and PCM terminal 1BQ (wiring harness-side). • Is there continuity?	Yes	Replace the throttle body, then go to the next step. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P0130:00 [SKYACTIV-G 2.0]

id0102h1702100

DTC P0130:00	A/F sensor circuit problem
DETECTION CONDITION	• The PCM monitors the voltage between PCM terminal 1AG and 1AB while the A/F sensor active. If the voltage is **above 2.3 V** or **below** –**2.1 V**, the PCM determines that there is a A/F sensor circuit problem. **MONITORING CONDITIONS** — Battery voltage: **11—18 V** **Diagnostic support note** • This is an intermittent monitor (A/F sensor, HO2S). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the duty value of the A/F sensor heater. • Stops the fuel feedback control.
POSSIBLE CAUSE	• A/F sensor connector or terminals malfunction • PCM connector or terminals malfunction • A/F sensor malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

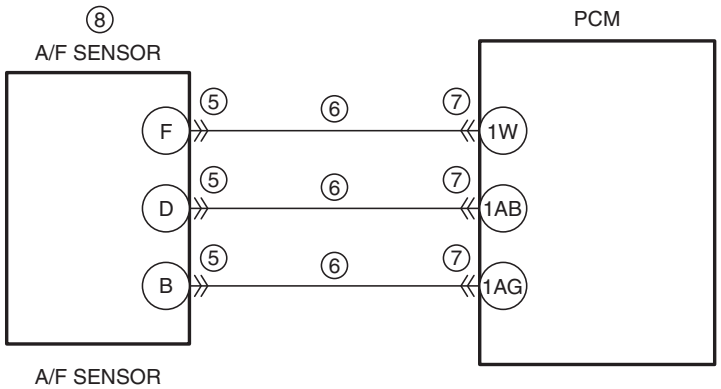
STEP	INSPECTION		ACTION
3	**INSPECT A/F SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
5	**INSPECT A/F SENSOR** • Reconnect all disconnected connectors. • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the A/F sensor, then go to the next step. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

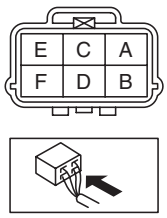
DTC P0131:00 [SKYACTIV-G 2.0]

id0102h1702200

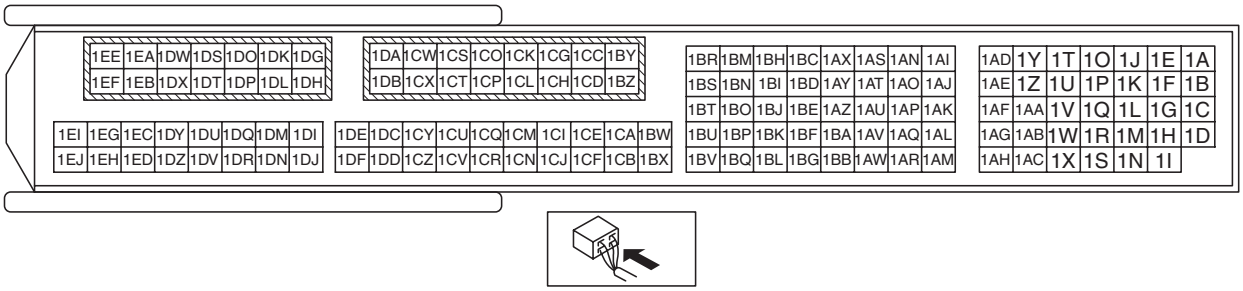
DTC P0131:00	A/F sensor circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from the A/F sensor when the engine is running. If the following PCM terminal voltage is below specified, the PCM determines that the A/F sensor circuit voltage is low. — PCM terminal 1W: **1.2 V** — PCM terminal 1AB: **1.2 V** — PCM terminal 1AG: **2 V** **MONITORING CONDITIONS** — Battery voltage: **11—18 V** **Diagnostic support note** • This is a continuous monitor (A/F sensor, HO2S). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the duty value of the A/F sensor heater. • Stops the fuel feedback control.
POSSIBLE CAUSE	• A/F sensor connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — A/F sensor terminal F—PCM terminal 1W — A/F sensor terminal D—PCM terminal 1AB — A/F sensor terminal B—PCM terminal 1AG • PCM connector or terminals malfunction • A/F sensor malfunction • PCM malfunction



A/F SENSOR WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P0131:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT A/F SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT A/F SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the A/F sensor connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — A/F sensor terminal F — A/F sensor terminal D — A/F sensor terminal B • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
8	**INSPECT A/F SENSOR** • Reconnect all disconnected connectors. • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the A/F sensor, then go to the next step. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Intermittent concern exists. • Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03-116 INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0].)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

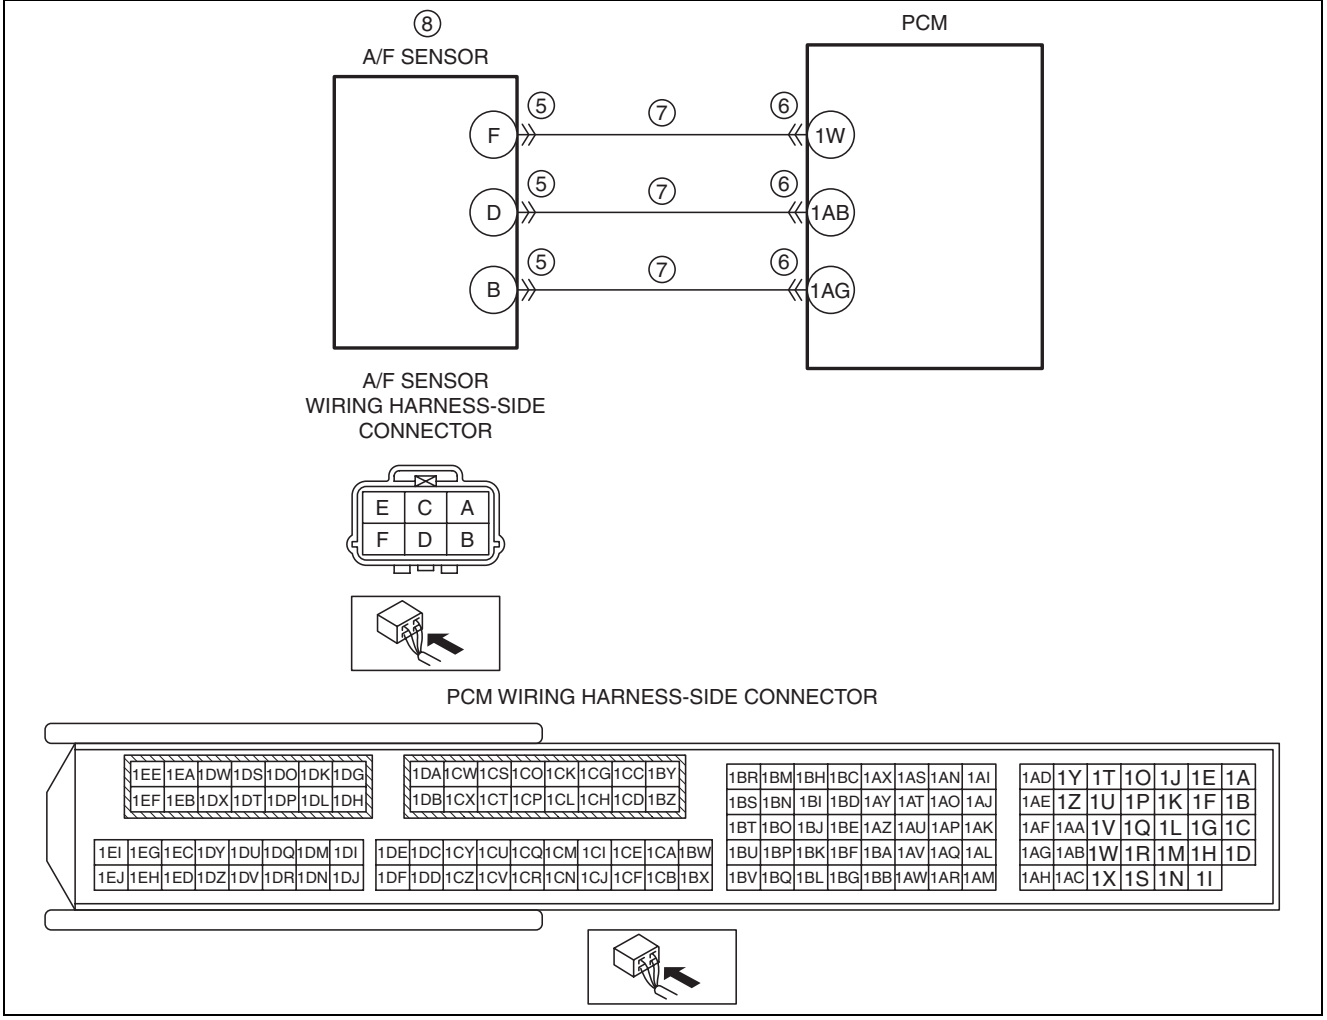
STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0132:00 [SKYACTIV-G 2.0]

id0102h1702300

DTC P0132:00	A/F sensor circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from the A/F sensor when the engine is running. If the following PCM terminal voltage is above specified, the PCM determines that the A/F sensor circuit voltage is high. — PCM terminal 1W: battery voltage–**1.2 V** — PCM terminal 1AB: **6.2 V** — PCM terminal 1AG: battery voltage–**1.2 V** **MONITORING CONDITIONS** — Battery voltage: **11—18 V** **Diagnostic support note** • This is a continuous monitor (A/F sensor, HO2S). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the duty value of the A/F sensor heater. • Stops the fuel feedback control.
POSSIBLE CAUSE	• A/F sensor connector or terminals malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: — A/F sensor terminal F—PCM terminal 1W — A/F sensor terminal D—PCM terminal 1AB — A/F sensor terminal B—PCM terminal 1AG • A/F sensor malfunction • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P0132:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT A/F SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	**INSPECT A/F SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the A/F sensor and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — A/F sensor terminal F — A/F sensor terminal D — A/F sensor terminal B • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
8	**INSPECT A/F SENSOR** • Switch the ignition to off. • Reconnect all disconnected connectors. • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the A/F sensor, then go to the next step. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Intermittent concern exists. • Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03-116 INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0].)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0133:00 [SKYACTIV-G 2.0]

id0102h1702400

DTC P0133:00	A/F sensor circuit slow response
DETECTION CONDITION	• The PCM monitors the peak differential value of the oxygen sensor signal after the A/F fluctuation being provided when the following conditions are met. If the peak differential value is lower than the threshold value, the PCM determines that the A/F sensor circuit is slow. **MONITORING CONDITIONS** — Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode) — Following conditions are met: • A/F sensor heater monitor is completed. • Fuel system loop status is closed loop fuel control. — ECT sensor and A/F sensor heater are normal. — Engine speed: **1,100—3,500 rpm** — Charging efficiency: **16—63 %** (at engine speed: **2,500 rpm**) — Intake airflow amount: **5—40 g/s {0.7—5.2 lb/min.}** — ECT: **above 50 °C {122 °F}** **Diagnostic support note** • This is an intermittent monitor (A/F sensor, HO2S). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Erratic signal from A/F sensor — A/F sensor loose — Exhaust system leakage • Purge solenoid valve malfunction — Improper connection of evaporative hose (purge solenoid valve side) • High-pressure side fuel delivery system malfunction — Fuel pressure sensor malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction — Relief valve (built-into high pressure fuel pump) malfunction — High pressure fuel pump malfunction • Low-pressure side fuel delivery system malfunction — Fuel leakage in fuel line — Low pressure side fuel line restriction (between fuel pump unit and high pressure fuel pump) — Fuel filter clogged — Pressure regulator (built-into fuel pump unit) malfunction — Fuel pump unit malfunction • Engine malfunction — Insufficient engine compression — Engine coolant leakage to combustion chamber • A/F sensor malfunction — A/F sensor deterioration • PCM malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P0133:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P0443:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-202 DTC P0443:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT CURRENT SIGNAL STATUS OF A/F SENSOR** • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 8.
6	**INSPECT INSTALLATION OF A/F SENSOR** • Inspect installation of A/F sensor. • Is the A/F sensor installed securely?	Yes	Go to the next step.
		No	Retighten the A/F sensor, then go to Step 18. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
7	**INSPECT EXHAUST SYSTEM FOR LEAKAGE** • Visually inspect for exhaust leakage between exhaust manifold and A/F sensor. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.
		No	Go to the next step.
8	**INSPECT PURGE SOLENOID VALVE AND EVAPORATIVE HOSE** • Inspect the purge solenoid valve and evaporative hose connection. (See 01-16A-12 PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0].) (See 01-13A-4 INTAKE-AIR SYSTEM VACUUM HOSE ROUTING DIAGRAM [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18. (See 01-16A-10 PURGE SOLENOID VALVE REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
9	**INSPECT FOR FUEL LINE LEAKAGE** • Visually inspect for leakage from fuel line between fuel distributor and fuel pump. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
10	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 14.
		No	Lower than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results, then go to Step 18. • If there is no malfunction: — Go to Step 13. Higher than **3 MPa {31 kgf/cm2, 435 psi}**: • Go to the next step.
11	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel distributor, then go to Step 18. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 14.
13	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 18.
		No	Replace the high pressure fuel pump, then go to Step 18. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
14	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 18.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
15	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.
16	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the “ENGINE COOLANT LEAKAGE INSPECTION”. (See 01-12A-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0].) • Does the radiator cap tester needle drop even though there is no engine coolant leakage from the radiator or the hoses?	Yes	Engine coolant leakage from the engine (between the combustion chamber and the engine coolant passage) may have occurred. • Verify the conditions of the gasket and the cylinder head. — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.
		No	Go to the next step.
17	**INSPECT A/F SENSOR** • Switch the ignition to off. • Reconnect all disconnected connectors. • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Inspect the related wiring harness. • If there is any malfunction: — Repair or replace the suspected wiring harness, then go to the next step. • If there is no malfunction: — Replace the A/F sensor, then go to the next step. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
18	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Drive the vehicle under the monitoring conditions. • Perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
19	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

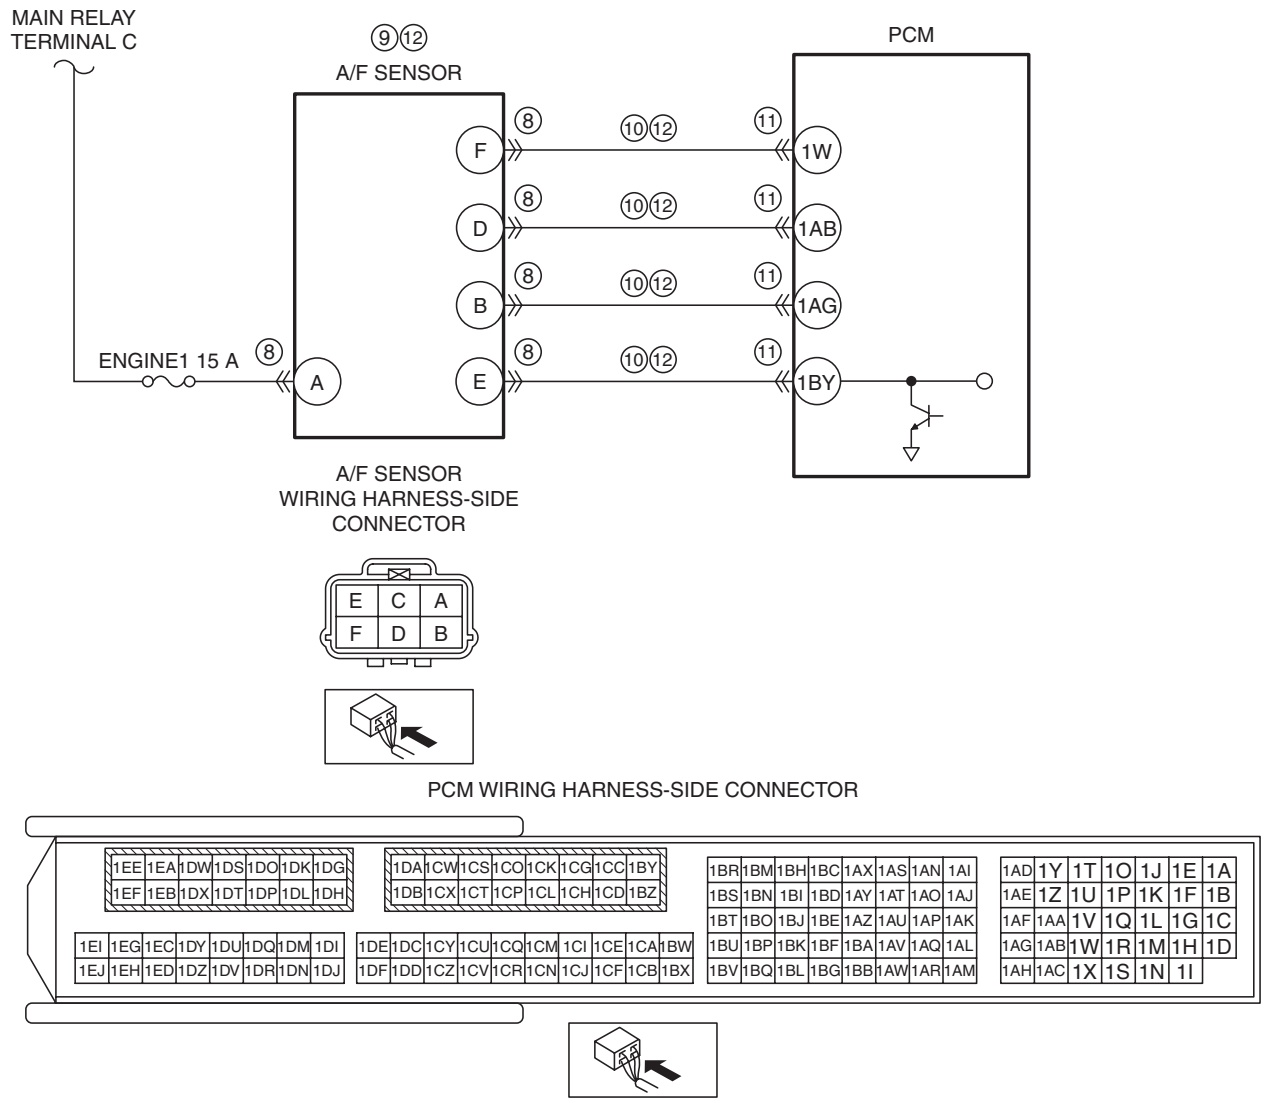
DTC P0134:00 [SKYACTIV-G 2.0]

id0102h1702500

DTC P0134:00	**A/F sensor circuit no activity detected**
DETECTION CONDITION	• The PCM monitors the element impedance of the A/F sensor when the following conditions are met. Under the following monitoring conditions, if the element impedance is more than specified value, the PCM determines that the A/F sensor is not activated. **MONITORING CONDITIONS** — Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode) — The following conditions are met: • A/F sensor heater is turned on for **above 35 s**. • Battery voltage: **11—18 V** **Diagnostic support note** • This is an intermittent monitor (A/F sensor, HO2S). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the duty value of the A/F sensor heater. • Stops the fuel feedback control.
POSSIBLE CAUSE	• Erratic signal from A/F sensor — A/F sensor loose — Exhaust system leakage — A/F sensor connector or terminals malfunction • A/F sensor heater malfunction • Short to ground in wiring harness between the following terminals: — A/F sensor terminal F—PCM terminal 1W — A/F sensor terminal D—PCM terminal 1AB — A/F sensor terminal B—PCM terminal 1AG — A/F sensor terminal E—PCM terminal 1BY • PCM connector or terminals malfunction • Open circuit in wiring harness between the following terminals: — A/F sensor terminal F—PCM terminal 1W — A/F sensor terminal D—PCM terminal 1AB — A/F sensor terminal B—PCM terminal 1AG — A/F sensor terminal E—PCM terminal 1BY • A/F sensor malfunction — A/F sensor deterioration • Engine malfunction — Insufficient engine compression — Engine coolant leakage to combustion chamber • PCM malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0134:00	A/F sensor circuit no activity detected



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P0134:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
4	**VERIFY RELATED PENDING CODE AND/OR DTC** **Note** • If the fuel monitor, DTC P0132:00 is retrieved, ignore it until DTC P0134:00 is fixed. • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P2237:00, P2243:00 or P2251:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-341 DTC P2237:00 [SKYACTIV-G 2.0].) (See 01-02-344 DTC P2243:00 [SKYACTIV-G 2.0].) (See 01-02-347 DTC P2251:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT CURRENT SIGNAL STATUS OF A/F SENSOR** • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 13.
6	**INSPECT INSTALLATION OF A/F SENSOR** • Inspect installation of A/F sensor. • Is the A/F sensor installed securely?	Yes	Go to the next step.
		No	Retighten the A/F sensor, then go to Step 15. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
7	**INSPECT EXHAUST SYSTEM FOR LEAKAGE** • Visually inspect for exhaust leakage between exhaust manifold and A/F sensor. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 15.
		No	Go to the next step.
8	**INSPECT A/F SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 15.
		No	Go to the next step.
9	**INSPECT A/F SENSOR HEATER** • Inspect the A/F sensor heater. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the A/F sensor, then go to Step 15. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
10	**INSPECT A/F SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the A/F sensor connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — A/F sensor terminal F — A/F sensor terminal D — A/F sensor terminal B — A/F sensor terminal E • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 15.
		No	Go to the next step.
11	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 15.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
12	**INSPECT A/F SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the A/F sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — A/F sensor terminal F—PCM terminal 1W — A/F sensor terminal D—PCM terminal 1AB — A/F sensor terminal B—PCM terminal 1AG — A/F sensor terminal E—PCM terminal 1BY • Is there continuity?	Yes	Replace the A/F sensor, then go to Step 15. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 15.
13	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 15.
14	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the “ENGINE COOLANT LEAKAGE INSPECTION”. (See 01-12A-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0].) • Does the radiator cap tester needle drop even though there is no engine coolant leakage from the radiator or the hoses?	Yes	Engine coolant leakage from the engine (between the combustion chamber and the engine coolant passage) may have occurred. • Verify the conditions of the gasket and the cylinder head. — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No	Go to the next step.
15	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

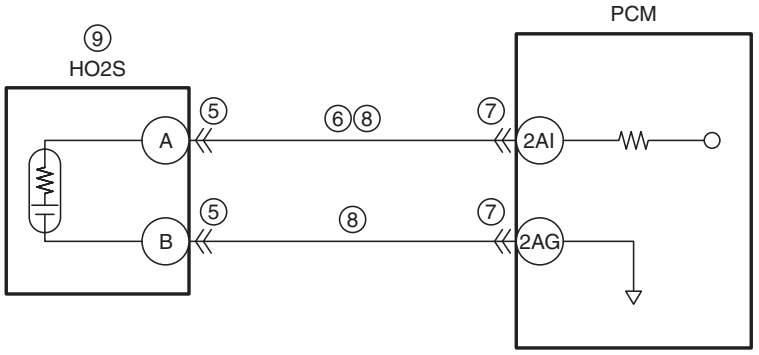
STEP	INSPECTION		ACTION
16	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

01

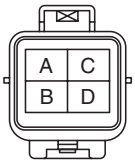
DTC P0137:00 [SKYACTIV-G 2.0]

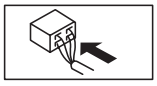
id0102h1300300

DTC P0137:00	HO2S circuit low input
DETECTION CONDITION	• The PCM monitors input voltage from HO2S. If the input voltage from the HO2S is **below** –**1.15 V** or HO2S bias voltage is **below 1.3 V** for **5 s** or the voltage from the HO2S is **below** –**0.15 V** for **25 s** while the HO2S is active, the PCM determines that the HO2S circuit input is low. **Diagnostic support note** • This is a continuous monitor (A/F sensor, HO2S). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• HO2S connector or terminals malfunction • Short to ground in wiring harness between HO2S terminal A and PCM terminal 2AI • PCM connector or terminals malfunction • Open circuit in wiring between the following terminals: — HO2S terminal A—PCM terminal 2AI — HO2S terminal B—PCM terminal 2AG • HO2S malfunction • PCM malfunction

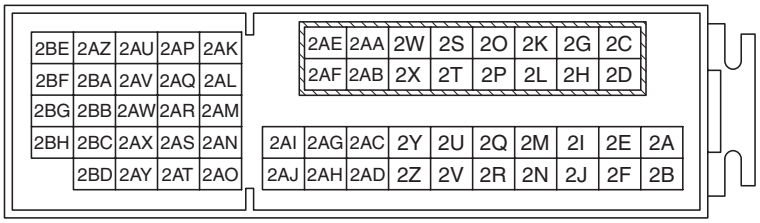


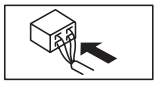
HO2S WIRING HARNESS-SIDE CONNECTOR





PCM WIRING HARNESS-SIDE CONNECTOR





ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P0137:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT HO2S CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT HO2S SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the HO2S connector is disconnected. • Inspect for continuity between HO2S terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 10.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
8	**INSPECT HO2S CIRCUIT FOR OPEN CIRCUIT** • Verify that the HO2S and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — HO2S terminal A—PCM terminal 2AI — HO2S terminal B—PCM terminal 2AG • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 10.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

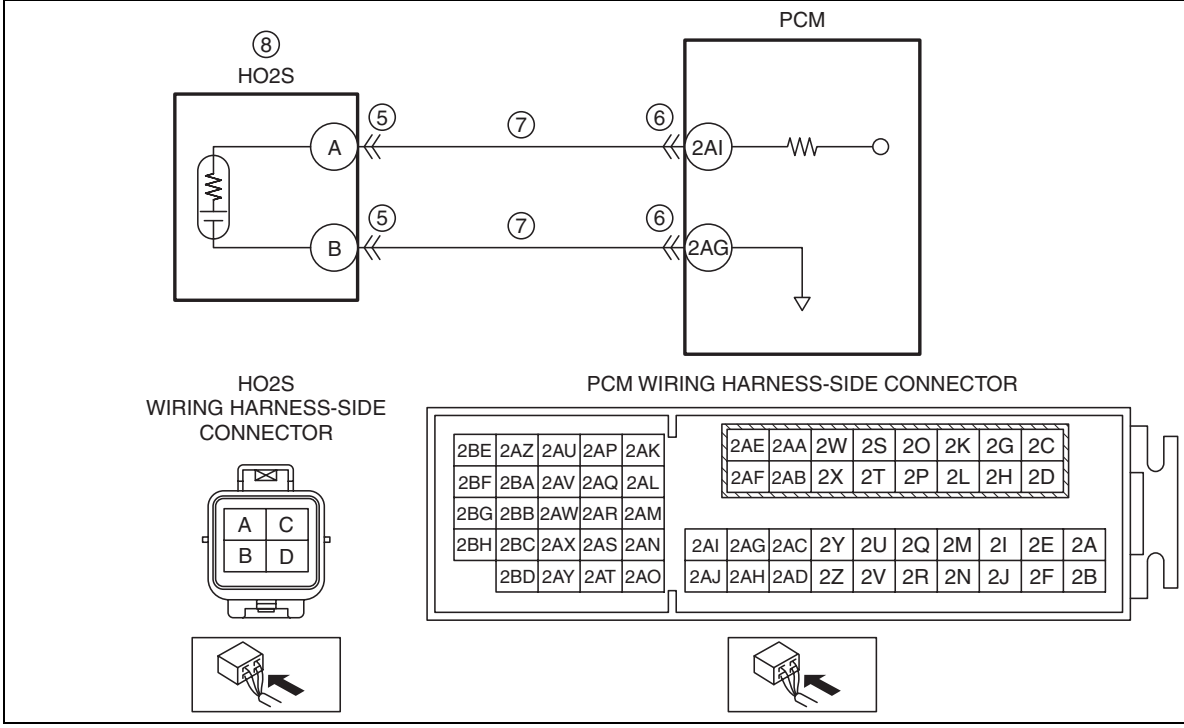
STEP	INSPECTION		ACTION
9	**INSPECT HO2S** • Reconnect all disconnected connectors. • Inspect the HO2S. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the HO2S, then go to the next step. (See 01-40-56 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Intermittent concern exists. • Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03-116 INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0].)
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0138:00 [SKYACTIV-G 2.0]

id0102h1702600

DTC P0138:00	**HO2S circuit high input**
DETECTION CONDITION	• The PCM monitors input voltage from HO2S. If the input voltage from the HO2S is **above 1.2 V** or HO2S bias voltage is **above 1.8 V** for **5 s**, the PCM determines that the HO2S circuit input is high. **Diagnostic support note** • This is a continuous monitor (A/F sensor, HO2S). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• HO2S connector or terminals malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: — HO2S terminal A—PCM terminal 2AI — HO2S terminal B—PCM terminal 2AG • HO2S malfunction • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P0138:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT HO2S CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	**INSPECT HO2S CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the HO2S and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — HO2S terminal A — HO2S terminal B • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
8	**INSPECT HO2S** • Switch the ignition to off. • Reconnect all disconnected connectors. • Inspect the HO2S. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the HO2S, then go to the next step. (See 01-40-56 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P013A:00 [SKYACTIV-G 2.0]

id0102h1310200

DTC P013A:00	HO2S circuit slow response
DETECTION CONDITION	• The PCM monitors the rich (**0.55 V**) to lean (**0.3 V**) response time of the HO2S. The PCM measures the response time when the following conditions are met. The PCM determines a HO2S response deterioration malfunction when the measured response time is **more than 0.2 s** for **2 of 3 times**. **MONITORING CONDITIONS** — Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode) — Following conditions are met: • During deceleration fuel cut • Estimated temperature of the zirconia element inside the HO2S: **above 450 °C {842 °F}** • The PCM monitors for a time-out malfunction (when HO2S remains **above 0.2 V** for longer than a specified period of time during fuel cut control). The PCM measures the amount of time from when the following conditions are met until the HO2S output voltage drops **below 0.2 V**. The PCM determines a HO2S time-out malfunction when the detected time is **more than 5 s** for **2 of 3 times**. **MONITORING CONDITIONS** — Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode) — Following conditions are met: • During deceleration fuel cut • Estimated temperature of the zirconia element inside the HO2S: **above 450 °C {842 °F}** **Diagnostic support note** • This is an intermittent monitor (A/F sensor, HO2S). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Erratic signal from HO2S — HO2S loose — Exhaust system leakage • Purge solenoid valve malfunction — Improper connection of evaporative hose (purge solenoid valve side) • High-pressure side fuel delivery system malfunction — Fuel pressure sensor malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction — Relief valve (built-into high pressure fuel pump) malfunction — High pressure fuel pump malfunction • Low-pressure side fuel delivery system malfunction — Fuel leakage in fuel line — Fuel leakage on fuel line (between fuel pump unit and high pressure fuel pump) — Fuel filter clogged — Pressure regulator (built-into fuel pump unit) malfunction — Fuel pump unit malfunction • Engine malfunction — Insufficient engine compression — Engine coolant leakage • HO2S malfunction — HO2S deterioration • PCM malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P013A:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P0443:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-202 DTC P0443:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT CURRENT SIGNAL STATUS OF HO2S** • Inspect the HO2S. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 8.
6	**INSPECT INSTALLATION OF HO2S** • Inspect installation of HO2S. • Is the HO2S installed securely?	Yes	Go to the next step.
		No	Retighten the HO2S, then go to Step 18. (See 01-40-56 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
7	**INSPECT EXHAUST SYSTEM FOR LEAKAGE** • Visually inspect for exhaust leakage between exhaust manifold and HO2S. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.
		No	Go to the next step.
8	**INSPECT PURGE SOLENOID VALVE AND EVAPORATIVE HOSE** • Inspect the purge solenoid valve and evaporative hose connection. (See 01-16A-12 PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0].) (See 01-13A-4 INTAKE-AIR SYSTEM VACUUM HOSE ROUTING DIAGRAM [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18. (See 01-16A-10 PURGE SOLENOID VALVE REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
9	**INSPECT FOR FUEL LINE LEAKAGE** • Visually inspect for leakage from fuel line between fuel distributor and fuel pump. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
10	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 14.
		No	Lower than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results, then go to Step 18. • If there is no malfunction: — Go to Step 13. Higher than **3 MPa {31 kgf/cm2, 435 psi}**: • Go to the next step.
11	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel distributor, then go to Step 18. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 14.
13	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 18.
		No	Replace the high pressure fuel pump, then go to Step 18. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
14	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 18.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
15	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.
16	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the “ENGINE COOLANT LEAKAGE INSPECTION”. (See 01-12A-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0].) • Does the radiator cap tester needle drop even though there is no engine coolant leakage from the radiator or the hoses?	Yes	Engine coolant leakage from the engine (between the combustion chamber and the engine coolant passage) may have occurred. • Verify the conditions of the gasket and the cylinder head. — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.
		No	Go to the next step.
17	**INSPECT HO2S** • Switch the ignition to off. • Reconnect all disconnected connectors. • Inspect the HO2S. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the HO2S, then go to the next step. (See 01-40-56 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
18	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
19	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P013B:00 [SKYACTIV-G 2.0]

id0102h1411500

DTC P013B:00	HO2S circuit slow response
DETECTION CONDITION	• During recovery from deceleration fuel cut, the HO2S voltage is **0.2 V or less**, and the following condition is met: — When the elapsed time for the HO2S voltage to transition from **0.3 V** to **0.55 V** is greater than the specification 2 out of 3 times or more. **MONITORING CONDITIONS** — Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode) — Following conditions are met: • During deceleration fuel cut • Estimated temperature of the zirconia element inside the HO2S: **above 450 °C {842 °F}** • Intake airflow amount: **above 8 g/s {1 lb/min}** **Diagnostic support note** • This is an intermittent monitor (A/F sensor, HO2S). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Erratic signal from HO2S — HO2S loose — Exhaust system leakage • Purge solenoid valve malfunction — Improper connection of evaporative hose (purge solenoid valve side) • High-pressure side fuel delivery system malfunction — Fuel pressure sensor malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction — Relief valve (built-into high pressure fuel pump) malfunction — High pressure fuel pump malfunction • Low-pressure side fuel delivery system malfunction — Fuel leakage in fuel line — Fuel leakage on fuel line (between fuel pump unit and high pressure fuel pump) — Fuel filter clogged — Pressure regulator (built-into fuel pump unit) malfunction — Fuel pump unit malfunction • Engine malfunction — Insufficient engine compression — Engine coolant leakage • HO2S malfunction — HO2S deterioration • PCM malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P013B:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P0443:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-202 DTC P0443:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT CURRENT SIGNAL STATUS OF HO2S** • Inspect the HO2S. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 8.
6	**INSPECT INSTALLATION OF HO2S** • Inspect installation of HO2S. • Is the HO2S installed securely?	Yes	Go to the next step.
		No	Retighten the HO2S, then go to Step 18. (See 01-40-56 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
7	**INSPECT EXHAUST SYSTEM FOR LEAKAGE** • Visually inspect for exhaust leakage between exhaust manifold and HO2S. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.
		No	Go to the next step.
8	**INSPECT PURGE SOLENOID VALVE AND EVAPORATIVE HOSE** • Inspect the purge solenoid valve and evaporative hose connection. (See 01-16A-12 PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0].) (See 01-13A-4 INTAKE-AIR SYSTEM VACUUM HOSE ROUTING DIAGRAM [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18. (See 01-16A-10 PURGE SOLENOID VALVE REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
9	**INSPECT FOR FUEL LINE LEAKAGE** • Visually inspect for leakage from fuel line between fuel distributor and fuel pump. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
10	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 14.
		No	Lower than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results, then go to Step 18. • If there is no malfunction: — Go to Step 13. Higher than **3 MPa {31 kgf/cm2, 435 psi}**: • Go to the next step.
11	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel distributor, then go to Step 18. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 14.
13	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 18.
		No	Replace the high pressure fuel pump, then go to Step 18. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
14	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 18.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

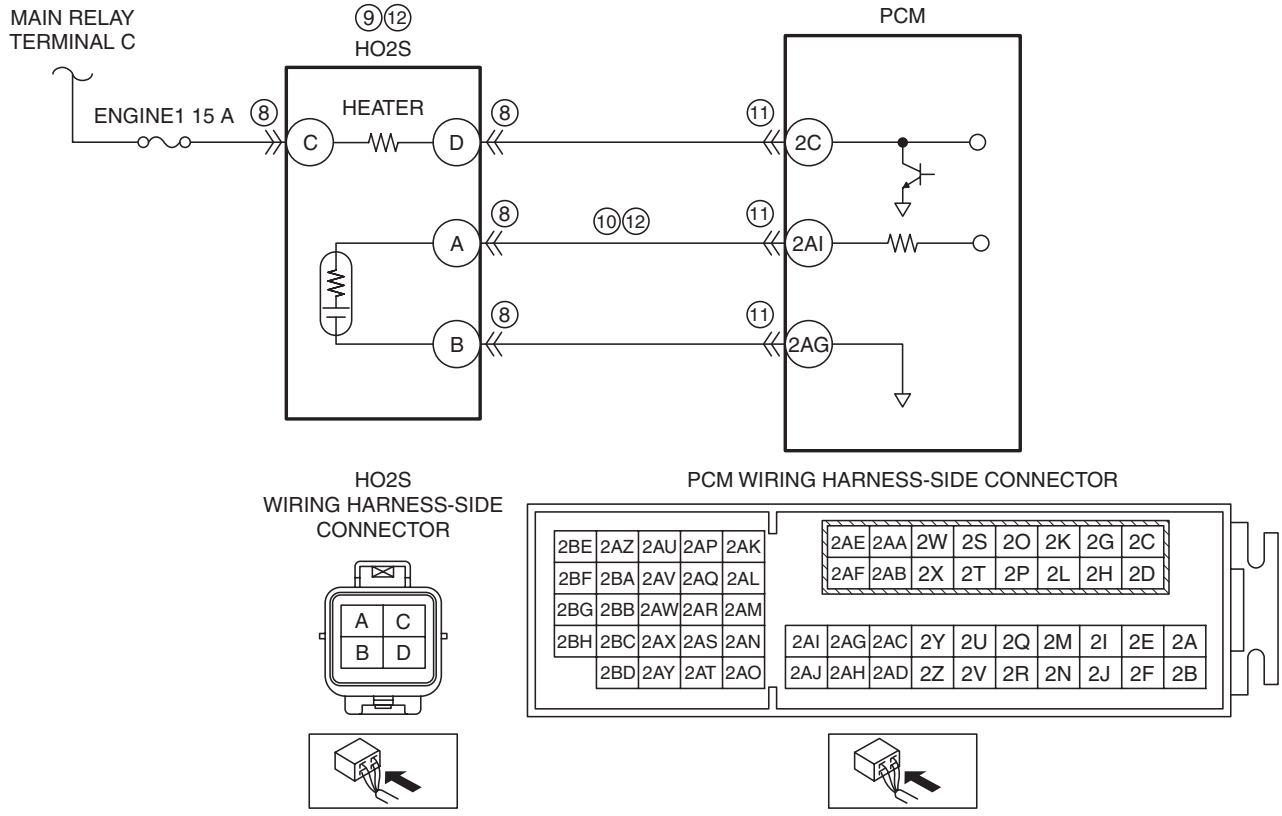
STEP	INSPECTION		ACTION
15	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.
16	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the “ENGINE COOLANT LEAKAGE INSPECTION”. (See 01-12A-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0].) • Does the radiator cap tester needle drop even though there is no engine coolant leakage from the radiator or the hoses?	Yes	Engine coolant leakage from the engine (between the combustion chamber and the engine coolant passage) may have occurred. • Verify the conditions of the gasket and the cylinder head. — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results, then go to Step 18.
		No	Go to the next step.
17	**INSPECT HO2S** • Switch the ignition to off. • Reconnect all disconnected connectors. • Inspect the HO2S. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the HO2S, then go to the next step. (See 01-40-56 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
18	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
19	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0140:00 [SKYACTIV-G 2.0]

id0102h1702700

DTC P0140:00	**HO2S circuit no activity detected**
DETECTION CONDITION	• The PCM monitors the input voltage from the HO2S when the following conditions are met. Under the following monitoring conditions, if the input voltage from the HO2S does not **exceed 0.75 V** even though the short term fuel trim is controlled up to **10 %** for specified period, the PCM determines that the HO2S circuit is not activated. **MONITORING CONDITIONS** — Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode) — Estimated temperature of the zirconia element inside the HO2S **above 450 °C {842 °F}** **Diagnostic support note** • This is an intermittent monitor (A/F sensor, HO2S). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Erratic signal from HO2S — HO2S loose — Exhaust system leakage — HO2S connector or terminals malfunction • HO2S heater malfunction • Short to ground in wiring harness between HO2S terminal A and PCM terminal 2AI • PCM connector or terminals malfunction • Open circuit in wiring harness between HO2S terminal A and PCM terminal 2AI • HO2S malfunction — HO2S deterioration • Engine malfunction — Insufficient engine compression — Engine coolant leakage to combustion chamber • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P0140:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY RELATED PENDING CODE AND/OR DTC** **Note** • If the fuel monitor, DTC P0132:00 is retrieved, ignore it until DTC P0140:00 is fixed. • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT CURRENT SIGNAL STATUS OF HO2S** • Inspect the HO2S. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 13.
6	**INSPECT INSTALLATION OF HO2S** • Inspect installation of HO2S. • Is the HO2S installed securely?	Yes	Go to the next step.
		No	Retighten the HO2S, then go to Step 15. (See 01-40-56 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
7	**INSPECT EXHAUST SYSTEM FOR LEAKAGE** • Visually inspect for exhaust leakage between exhaust manifold and HO2S. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 15.
		No	Go to the next step.
8	**INSPECT HO2S CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 15.
		No	Go to the next step.
9	**INSPECT HO2S HEATER** • Inspect the HO2S heater. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the HO2S, then go to Step 15. (See 01-40-56 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
10	**INSPECT HO2S SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the HO2S connector is disconnected. • Inspect for continuity between HO2S terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 15.
		No	Go to the next step.
11	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 15.
		No	Go to the next step.
12	**INSPECT HO2S SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the HO2S and PCM connectors are disconnected. • Inspect for continuity between HO2S terminal A (wiring harness-side) and PCM terminal 2AI (wiring harness-side). • Is there continuity?	Yes	Replace the HO2S, then go to Step 15. (See 01-40-56 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 15.
13	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 15.
14	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the “ENGINE COOLANT LEAKAGE INSPECTION”. (See 01-12A-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0].) • Does the radiator cap tester needle drop even though there is no engine coolant leakage from the radiator or the hoses?	Yes	Engine coolant leakage from the engine (between the combustion chamber and the engine coolant passage) may have occurred. • Verify the conditions of the gasket and the cylinder head. — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
15	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
16	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0171:00 [SKYACTIV-G 2.0]

id0102h1934200

DTC P0171:00	Fuel trim system too lean
DETECTION CONDITION	• When any of the following conditions is met: — During idling or driving, the correction amount of the fuel feedback correction plus the fuel learning correction is a volume increase correction exceeding the specified value. — During idling or driving, the amount of the fuel feedback increase correction reaches the upper limit. **Diagnostic support note** • This is a continuous monitor (fuel system). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Erratic signal to PCM — APP sensor signal malfunction — ECT sensor signal malfunction — MAF sensor signal malfunction — TP sensor signal malfunction — Related connector or terminals malfunction — Related wiring harness malfunction • Air suction in intake air system • MAF sensor malfunction • A/F sensor heater malfunction • A/F sensor malfunction — A/F sensor loose — Exhaust system leakage — A/F sensor deterioration • Improper operation of purge control system — Purge solenoid valve malfunction — Purge solenoid hoses improper connection • Improper operation of electric variable valve timing control system — Electric variable valve timing driver malfunction — Electric variable valve timing motor malfunction — Electric variable valve timing actuator malfunction • Improper operation of hydraulic variable valve timing control system • Improper operation of fuel injector • High-pressure side fuel delivery system malfunction — Fuel pressure sensor malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction — Relief valve (built-into high pressure fuel pump) malfunction — High pressure fuel pump malfunction • Low-pressure side fuel delivery system malfunction — Low pressure side fuel line restriction (between fuel pump unit and high pressure fuel pump) — Fuel filter clogged — Pressure regulator (built-into fuel pump unit) malfunction — Fuel pump unit malfunction • Ignition system malfunction — Spark plug malfunction — Ignition coil malfunction — Ignition coil related wiring harness malfunction • Insufficient engine compression • Misfire • PCM malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P0171:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	If misfire DTC is present: • Go to Step 7. If other DTC is present: • Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	If drive ability concern is present: • Go to Step 7. If drive ability concern is not present: • Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP1 — APP2 — ECT — MAF — TP REL • Is there any signal that is far out of specification when the ignition is switched to ON and the engine runs? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Inspect the suspected sensor and related wiring harness. Repair or replace the malfunctioning part according to the inspection results, then go to Step 26.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA (MODE 2) CONDITION** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the same PIDs as in Step 5 while simulating under the FREEZE FRAME DATA (Mode 2) conditions. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is there any signal which causes drastic changes?	Yes	Inspect the suspected sensor and related wiring harness. Repair or replace the malfunctioning part according to the inspection results, then go to Step 26.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Start the engine. • Access the MAF PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify that the MAF PID value changes quickly while increasing (racing) the engine rpm. • Is the MAF PID value normal? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to Step 9.
		No	Go to the next step.
8	**INSPECT INTAKE AIR SYSTEM FOR EXCESSIVE AIR SUCTION** • Visually inspect for loose, cracked or damaged hoses on intake air system. **Note** • Engine speed may change when rust penetrating agent is sprayed on the air suction area. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 26.
		No	Replace the MAF sensor/IAT sensor No.1, then go to Step 26. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
9	**INSPECT A/F SENSOR HEATER** • Inspect the A/F sensor heater. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the A/F sensor, then go to Step 26. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
10	**VERIFY CURRENT INPUT SIGNAL STATUS OF A/F SENSOR** • Reconnect all disconnected connectors. • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 13.
11	**INSPECT INSTALLATION OF A/F SENSOR** • Inspect installation of A/F sensor. • Is the A/F sensor installed securely?	Yes	Go to the next step.
		No	Retighten the A/F sensor, then go to Step 26. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
12	**INSPECT EXHAUST SYSTEM FOR LEAKAGE** • Visually inspect for exhaust leakage between exhaust manifold and A/F sensor. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 26.
		No	Replace the A/F sensor, then go to Step 26. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
13	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 26.
		No	Go to the next step.
14	**INSPECT ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See 01-10A-15 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 26. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
15	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See 01-10A-15 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 26. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
16	**INSPECT ELECTRIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the electric variable valve timing actuator. (See 01-10A-22 ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing actuator, then go to Step 26. (See 01-10A-23 ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
17	**INSPECT HYDRAULIC VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Perform the Hydraulic Variable Valve Timing Control System Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 26.
		No	Go to the next step.
18	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 26.
		No	Go to the next step.
19	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 23.
		No	Lower than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results, then go to Step 26. • If there is no malfunction: — Go to Step 22. Higher than **3 MPa {31 kgf/cm2, 435 psi}**: • Go to the next step.
20	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 22.
21	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel distributor, then go to Step 26. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 23.
22	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 26.
		No	Replace the high pressure fuel pump, then go to Step 26. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
23	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 26.
24	**INSPECT IGNITION SYSTEM OPERATION** • Perform the Spark Test. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 26.
25	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
26	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Stop the vehicle and access the ON BOARD READINESS TEST to inspect the Drive Mode completion status. • Verify the FUEL_EVAL PID changes to yes. — If not, perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
27	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0172:00 [SKYACTIV-G 2.0]

id0102h1934300

DTC P0172:00	Fuel trim system too rich
DETECTION CONDITION	• When any of the following conditions is met: — During idling or driving, the correction amount of the fuel feedback correction plus the fuel learning correction is a volume decrease correction exceeding the specified value. — During idling or driving, the amount of the fuel feedback decrease correction reaches the upper limit. **Diagnostic support note** • This is a continuous monitor (fuel system). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Erratic signal to PCM — APP sensor signal malfunction — ECT sensor signal malfunction — MAF sensor signal malfunction — TP sensor signal malfunction — Related connector or terminals malfunction — Related wiring harness malfunction • MAF sensor malfunction • A/F sensor heater malfunction • A/F sensor malfunction — A/F sensor loose — Exhaust system leakage — A/F sensor deterioration • Improper operation of purge control system — Purge solenoid valve malfunction (stuck open) — Purge solenoid hoses improper connection — Air cleaner element restricted • Improper operation of electric variable valve timing control system — Electric variable valve timing driver malfunction — Electric variable valve timing motor malfunction — Electric variable valve timing actuator malfunction • Improper operation of hydraulic variable valve timing control system • Improper operation of fuel injector • High-pressure side fuel delivery system malfunction — Fuel pressure sensor malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction — Relief valve (built-into high pressure fuel pump) malfunction — High pressure fuel pump malfunction • Low-pressure side fuel delivery system malfunction — Low pressure side fuel line restriction (between fuel pump unit and high pressure fuel pump) — Fuel filter clogged — Pressure regulator (built-into fuel pump unit) malfunction — Fuel pump unit malfunction • Ignition system malfunction — Spark plug malfunction — Ignition coil malfunction — Ignition coil related wiring harness malfunction • PCV valve malfunction • Misfire • PCM malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P0172:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	If misfire DTC is present: • Go to Step 7. If other DTC is present: • Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	If drive ability concern is present: • Go to Step 7. If drive ability concern is not present: • Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP1 — APP2 — ECT — MAF — TP REL • Is there any signal that is far out of specification when the ignition is switched to ON and the engine runs? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Inspect the suspected sensor and related wiring harness. Repair or replace the malfunctioning part according to the inspection results, then go to Step 27.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA (MODE 2) CONDITION** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the same PIDs as in Step 5 while simulating under the FREEZE FRAME DATA (Mode 2) conditions. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is there any signal which causes drastic changes?	Yes	Inspect the suspected sensor and related wiring harness. Repair or replace the malfunctioning part according to the inspection results, then go to Step 27.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Start the engine. • Access the MAF PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify that the MAF PID value changes quickly while increasing (racing) the engine rpm. • Is the MAF PID value normal? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to the next step.
		No	Replace the MAF sensor/IAT sensor No.1, then go to Step 27. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
8	**INSPECT A/F SENSOR HEATER** • Inspect the A/F sensor heater. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the A/F sensor, then go to Step 27. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
9	**VERIFY CURRENT INPUT SIGNAL STATUS OF A/F SENSOR** • Reconnect all disconnected connectors. • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 12.
10	**INSPECT INSTALLATION OF A/F SENSOR** • Inspect installation of A/F sensor. • Is the A/F sensor installed securely?	Yes	Go to the next step.
		No	Retighten the A/F sensor, then go to Step 27. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
11	**INSPECT EXHAUST SYSTEM FOR LEAKAGE** • Visually inspect for exhaust leakage between exhaust manifold and A/F sensor. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 27.
		No	Replace the A/F sensor, then go to Step 27. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
12	**INSPECT LONG TERM FUEL TRIM** • Switch the ignition to off. • Disconnect the evaporative hose (purge solenoid valve side) from intake manifold and plug opening end of hose and intake manifold. • Access the LONGFT1 PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Does it shift to positive value?	Yes	Go to the next step.
		No	Go to Step 14.
13	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 27.
		No	Go to the next step.
14	**INSPECT AIR CLEANER ELEMENT** • Remove the air cleaner element with the engine is running. (See 01-13A-12 AIR CLEANER ELEMENT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Does the engine speed increase?	Yes	Inspect the air cleaner element. (See 01-13A-12 AIR CLEANER ELEMENT INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Clean or replace the air cleaner element, then go to Step 27. (See 01-13A-12 AIR CLEANER ELEMENT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • If there is no malfunction: — Go to the next step.
		No	Go to the next step.
15	**INSPECT ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See 01-10A-15 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 27. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
16	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See 01-10A-15 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 27. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
17	**INSPECT ELECTRIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the electric variable valve timing actuator. (See 01-10A-22 ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing actuator, then go to Step 27. (See 01-10A-23 ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
18	**INSPECT HYDRAULIC VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Perform the Hydraulic Variable Valve Timing Control System Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 27.
		No	Go to the next step.
19	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 27.
		No	Go to the next step.
20	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 24.
		No	Lower than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results, then go to Step 27. • If there is no malfunction: — Go to Step 23. Higher than **3 MPa {31 kgf/cm2, 435 psi}**: • Go to the next step.
21	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 23.
22	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel distributor, then go to Step 27. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 24.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

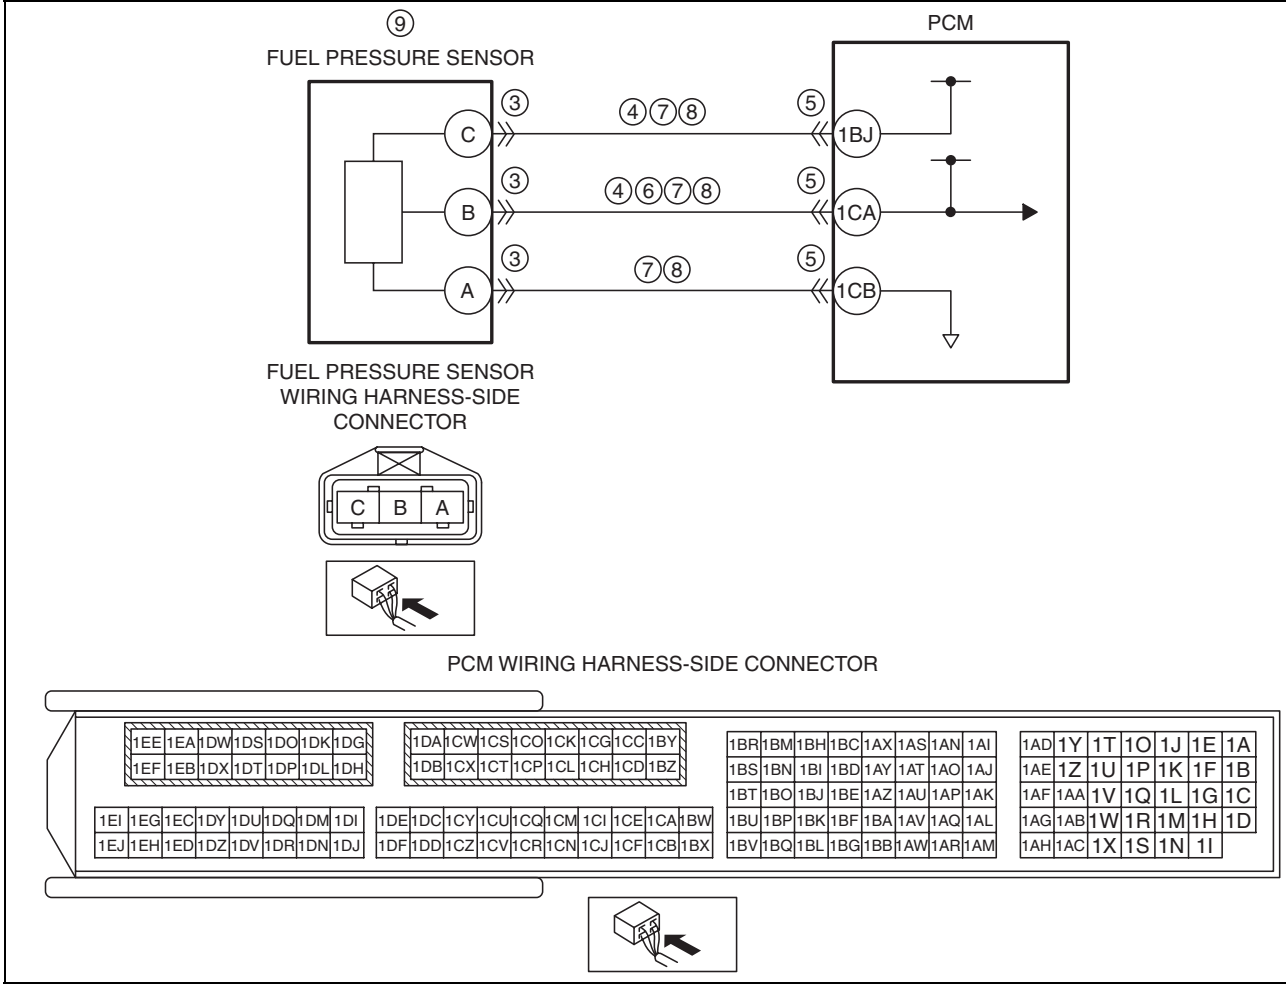
STEP	INSPECTION		ACTION
23	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 27.
		No	Replace the high pressure fuel pump, then go to Step 27. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
24	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 27.
25	**INSPECT IGNITION SYSTEM OPERATION** • Perform the Spark Test. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 27.
26	**INSPECT PCV VALVE OPERATION** • Inspect the PCV valve operation. (See 01-16A-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the PCV valve, then go to the next step. (See 01-16A-13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
27	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Stop the vehicle and access the ON BOARD READINESS TEST to inspect the Drive Mode completion status. • Verify the FUEL_EVAL PID changes to yes. — If not, perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
28	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0191:00 [SKYACTIV-G 2.0]

id0102h1147600

DTC P0191:00	Fuel pressure sensor circuit range/performance problem
DETECTION CONDITION	• The difference between the actual and target fuel pressure is equal to or more than the specification, even though the fuel pressure feedback amount is maintained low or high. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops the high pressure fuel pump control. • Limits the intake air amount.
POSSIBLE CAUSE	• Fuel pressure sensor connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — Fuel pressure sensor terminal C—PCM terminal 1BJ — Fuel pressure sensor terminal B—PCM terminal 1CA • PCM connector or terminals malfunction • Short to power supply in wiring harness between fuel pressure sensor terminal B and PCM terminal 1CA • Fuel pressure sensor circuits are shorted to each other • Open circuit in wiring harness between the following terminals: — Fuel pressure sensor terminal C—PCM terminal 1BJ — Fuel pressure sensor terminal B—PCM terminal 1CA — Fuel pressure sensor terminal A—PCM terminal 1CB • Fuel pressure sensor malfunction • High pressure fuel pump malfunction • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL PRESSURE SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the fuel pressure sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
4	**INSPECT FUEL PRESSURE SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel pressure sensor connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Fuel pressure sensor terminal C — Fuel pressure sensor terminal B • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 11.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
6	**INSPECT FUEL PRESSURE SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the fuel pressure sensor and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the fuel pressure sensor terminal B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 11.
7	**INSPECT FUEL PRESSURE SENSOR CIRCUITS FOR SHORT TO EACH OTHER** • Verify that the fuel pressure sensor and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between fuel pressure sensor terminals C, B and A (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 11.
		No	Go to the next step.
8	**INSPECT FUEL PRESSURE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel pressure sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Fuel pressure sensor terminal C—PCM terminal 1BJ — Fuel pressure sensor terminal B—PCM terminal 1CA — Fuel pressure sensor terminal A—PCM terminal 1CB • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

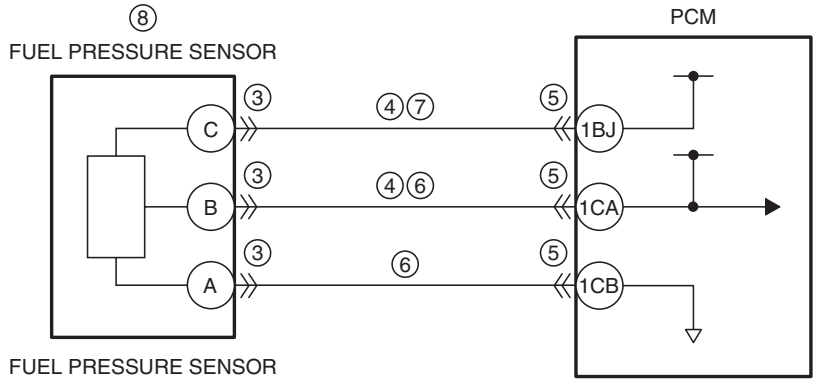
STEP	INSPECTION		ACTION
9	**INSPECT FUEL PRESSURE SENSOR** • Reconnect all disconnected connectors. • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel distributor, then go to Step 11. (See 01-14A-51 FUEL INJECTOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
10	**INSPECT HIGH PRESSURE FUEL PUMP** • Inspect the high pressure fuel pump. (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the high pressure fuel pump, then go to the next step. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Increase and keep the engine speed at **3,000 rpm** for **1 min**. • Perform the DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

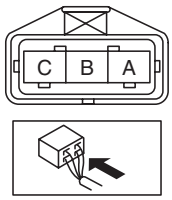
DTC P0192:00 [SKYACTIV-G 2.0]

id0102h1147700

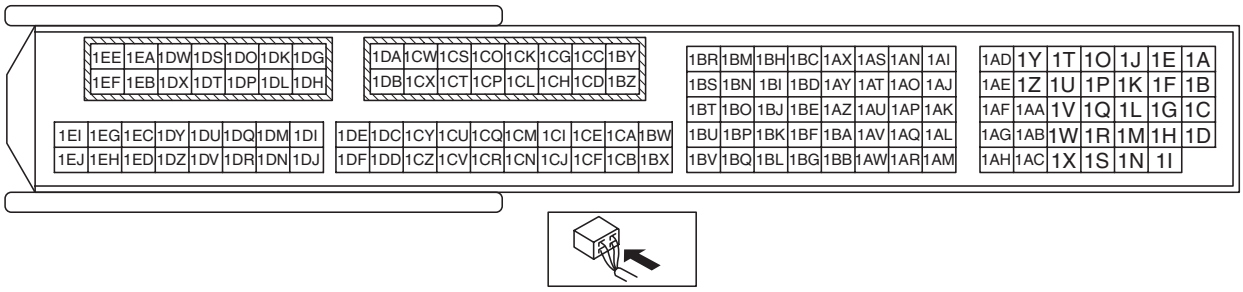
DTC P0192:00	Fuel pressure sensor circuit low input
DETECTION CONDITION	• If the input voltage at the PCM terminal 1CA is **less than 0.156 V** for **5 s**, the PCM determines that the fuel pressure sensor circuit is low. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops the high pressure fuel pump control. • Limits the intake air amount.
POSSIBLE CAUSE	• Fuel pressure sensor connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — Fuel pressure sensor terminal C—PCM terminal 1BJ — Fuel pressure sensor terminal B—PCM terminal 1CA • PCM connector or terminals malfunction • Fuel pressure sensor signal circuit and ground circuit are shorted to each other • Open circuit in wiring harness between fuel pressure sensor terminal C and PCM terminal 1BJ • Fuel pressure sensor malfunction • PCM malfunction



FUEL PRESSURE SENSOR WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL PRESSURE SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the fuel pressure sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT FUEL PRESSURE SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel pressure sensor connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Fuel pressure sensor terminal C — Fuel pressure sensor terminal B • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT FUEL PRESSURE SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the fuel pressure sensor and PCM connectors are disconnected. • Inspect for continuity between fuel pressure sensor terminals B and A (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FUEL PRESSURE SENSOR POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel pressure sensor and PCM connectors are disconnected. • Inspect for continuity between fuel pressure sensor terminal C (wiring harness-side) and PCM terminal 1BJ (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	**INSPECT FUEL PRESSURE SENSOR** • Reconnect all disconnected connectors. • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction**?**	Yes	Replace the fuel distributor, then go to the next step. (See 01-14A-51 FUEL INJECTOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

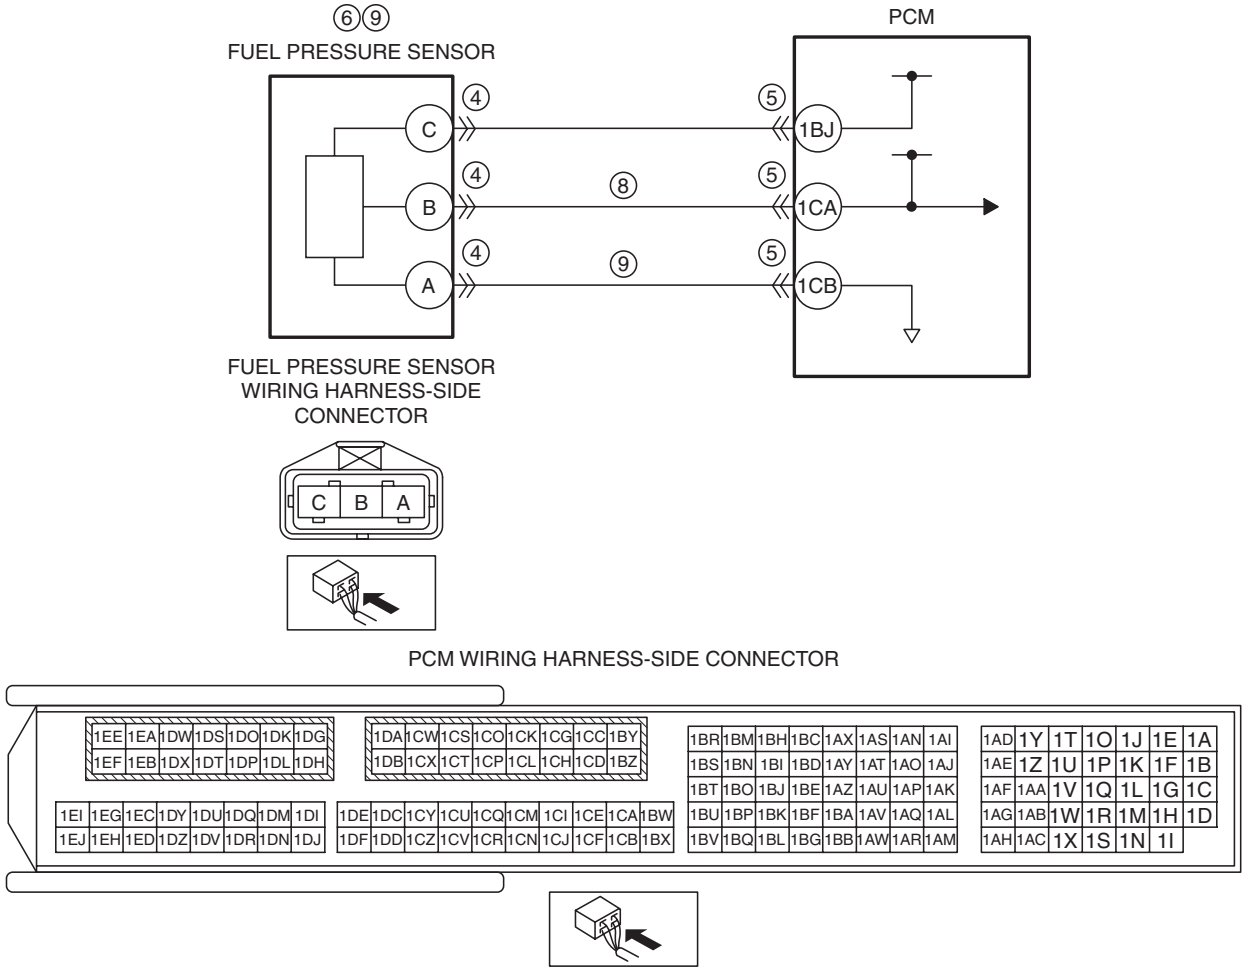
STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0193:00 [SKYACTIV-G 2.0]

id0102h1147800

DTC P0193:00	Fuel pressure sensor circuit high input
DETECTION CONDITION	• If the input voltage at the PCM terminal 1CA is **more than 4.86 V** for **5 s**, the PCM determines that the fuel pressure sensor circuit is high. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops the high pressure fuel pump control. • Limits the intake air amount.
POSSIBLE CAUSE	• Fuel pressure sensor connector or terminals malfunction • PCM connector or terminals malfunction • Fuel pressure sensor malfunction • Short to power supply in wiring harness between fuel pressure sensor terminal B and PCM terminal 1CA • Open circuit in wiring harness between the following terminals: — Fuel pressure sensor terminal B—PCM terminal 1CA — Fuel pressure sensor terminal A—PCM terminal 1CB • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY FUEL PRESSURE SENSOR MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Access the FUEL_PRES PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the FUEL_PRES PID value. • Is the FUEL_PRES PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT FUEL PRESSURE SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the fuel pressure sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT FUEL PRESSURE SENSOR** • Reconnect all disconnected connectors. • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction**?**	Yes	Replace the fuel distributor, then go to Step 10. (See 01-14A-51 FUEL INJECTOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 10.
7	**CLASSIFY FUEL PRESSURE SENSOR SIGNAL CIRCUIT MALFUNCTION OR FUEL PRESSURE SENSOR GROUND CIRCUIT MALFUNCTION** • Switch the ignition to off. • Disconnect the fuel pressure sensor connector. • Access the FUEL_PRES PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the FUEL_PRES PID value. • Is the FUEL_PRES PID value **5 V** or **B+**?	Yes	Go to the next step.
		No	Go to Step 9.
8	**INSPECT FUEL PRESSURE SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel pressure sensor connector is disconnected. • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for continuity between fuel pressure sensor terminal B (wiring harness-side) and PCM terminal 1CA (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 10.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

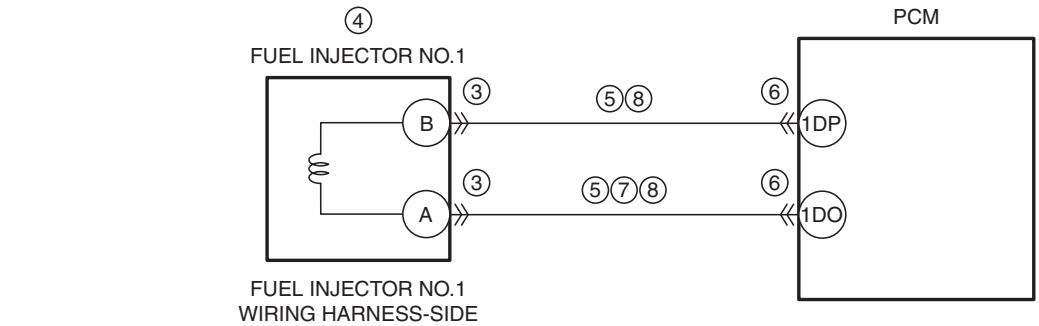
STEP	INSPECTION		ACTION
9	**INSPECT FUEL PRESSURE SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel pressure sensor connector is disconnected. • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for continuity between fuel pressure sensor terminal A (wiring harness-side) and PCM terminal 1CB (wiring harness-side). • Is there continuity?	Yes	Replace the fuel distributor, then go to the next step. (See 01-14A-51 FUEL INJECTOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

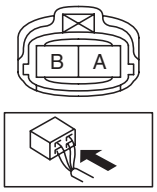
DTC P0201:00 [SKYACTIV-G 2.0]

id0102h1147900

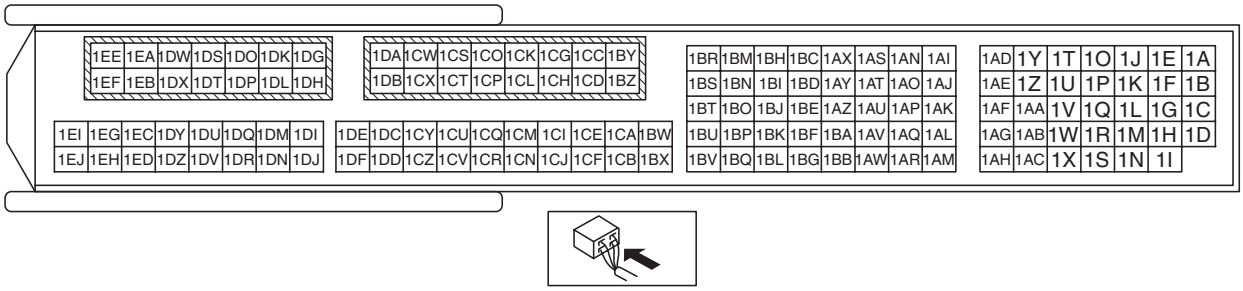
DTC P0201:00	**Fuel injector circuit/open cylinder No.1**
DETECTION CONDITION	• If the fuel injection verification signal is not input at **25 times** continuously even though the PCM drives the fuel injector No.1, the PCM determines that there is an open circuit in the fuel injector No.1 control circuit. **MONITORING CONDITIONS** — The following conditions are met: • Battery voltage: **10.5 V or more** • Fuel injection control: except during fuel cut **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Fuel injector No.1 connector or terminals malfunction • Fuel injector No.1 malfunction • Short to ground in wiring harness between the following terminals: — Fuel injector No.1 terminal B—PCM terminal 1DP — Fuel injector No.1 terminal A—PCM terminal 1DO • PCM connector or terminals malfunction • Short to power supply in wiring harness between fuel injector No.1 terminal A and PCM terminal 1DO • Open circuit in wiring harness between the following terminals: — Fuel injector No.1 terminal B—PCM terminal 1DP — Fuel injector No.1 terminal A—PCM terminal 1DO • PCM malfunction



FUEL INJECTOR NO.1 WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL INJECTOR NO.1 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the fuel injector No.1 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT FUEL INJECTOR NO.1** • Inspect the fuel injector No.1. (See 01-14A-62 FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel injector No.1, then go to Step 9. (See 01-14A-51 FUEL INJECTOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT FUEL INJECTOR NO.1 CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel injector No.1 connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Fuel injector No.1 terminal B — Fuel injector No.1 terminal A • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FUEL INJECTOR NO.1 CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the fuel injector No.1 and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the fuel injector No.1 terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
8	**INSPECT FUEL INJECTOR NO.1 CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel injector No.1 and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Fuel injector No.1 terminal B—PCM terminal 1DP — Fuel injector No.1 terminal A—PCM terminal 1DO • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

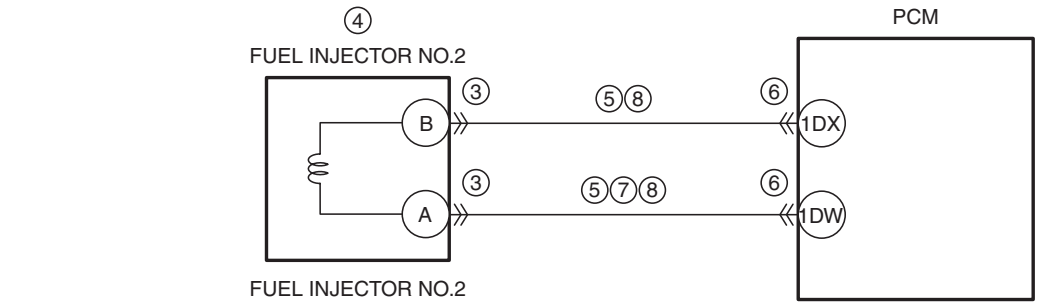
STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

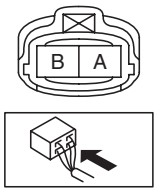
DTC P0202:00 [SKYACTIV-G 2.0]

id0102h1148000

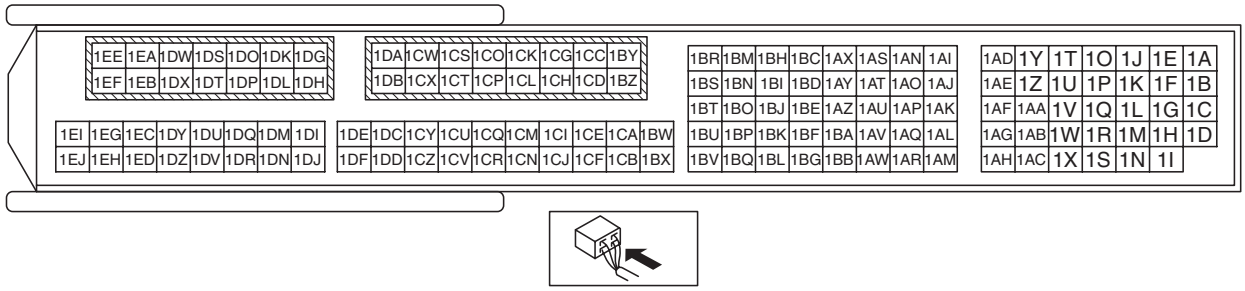
DTC P0202:00	**Fuel injector circuit/open cylinder No.2**
DETECTION CONDITION	• If the fuel injection verification signal is not input at **25 times** continuously even though the PCM drives the fuel injector No.2, the PCM determines that there is an open circuit in the fuel injector No.2 control circuit. **MONITORING CONDITIONS** — The following conditions are met: • Battery voltage: **10.5 V or more** • Fuel injection control: except during fuel cut **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Fuel injector No.2 connector or terminals malfunction • Fuel injector No.2 malfunction • Short to ground in wiring harness between the following terminals: — Fuel injector No.2 terminal B—PCM terminal 1DX — Fuel injector No.2 terminal A—PCM terminal 1DW • PCM connector or terminals malfunction • Short to power supply in wiring harness between fuel injector No.2 terminal A and PCM terminal 1DW • Open circuit in wiring harness between the following terminals: — Fuel injector No.2 terminal B—PCM terminal 1DX — Fuel injector No.2 terminal A—PCM terminal 1DW • PCM malfunction



FUEL INJECTOR NO.2 WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL INJECTOR NO.2 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the fuel injector No.2 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT FUEL INJECTOR NO.2** • Inspect the fuel injector No.2. (See 01-14A-62 FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel injector No.2, then go to Step 9. (See 01-14A-51 FUEL INJECTOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT FUEL INJECTOR NO.2 CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel injector No.2 connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Fuel injector No.2 terminal B — Fuel injector No.2 terminal A • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FUEL INJECTOR NO.2 CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the fuel injector No.2 and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the fuel injector No.2 terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
8	**INSPECT FUEL INJECTOR NO.2 CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel injector No.2 and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Fuel injector No.2 terminal B—PCM terminal 1DX — Fuel injector No.2 terminal A—PCM terminal 1DW • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

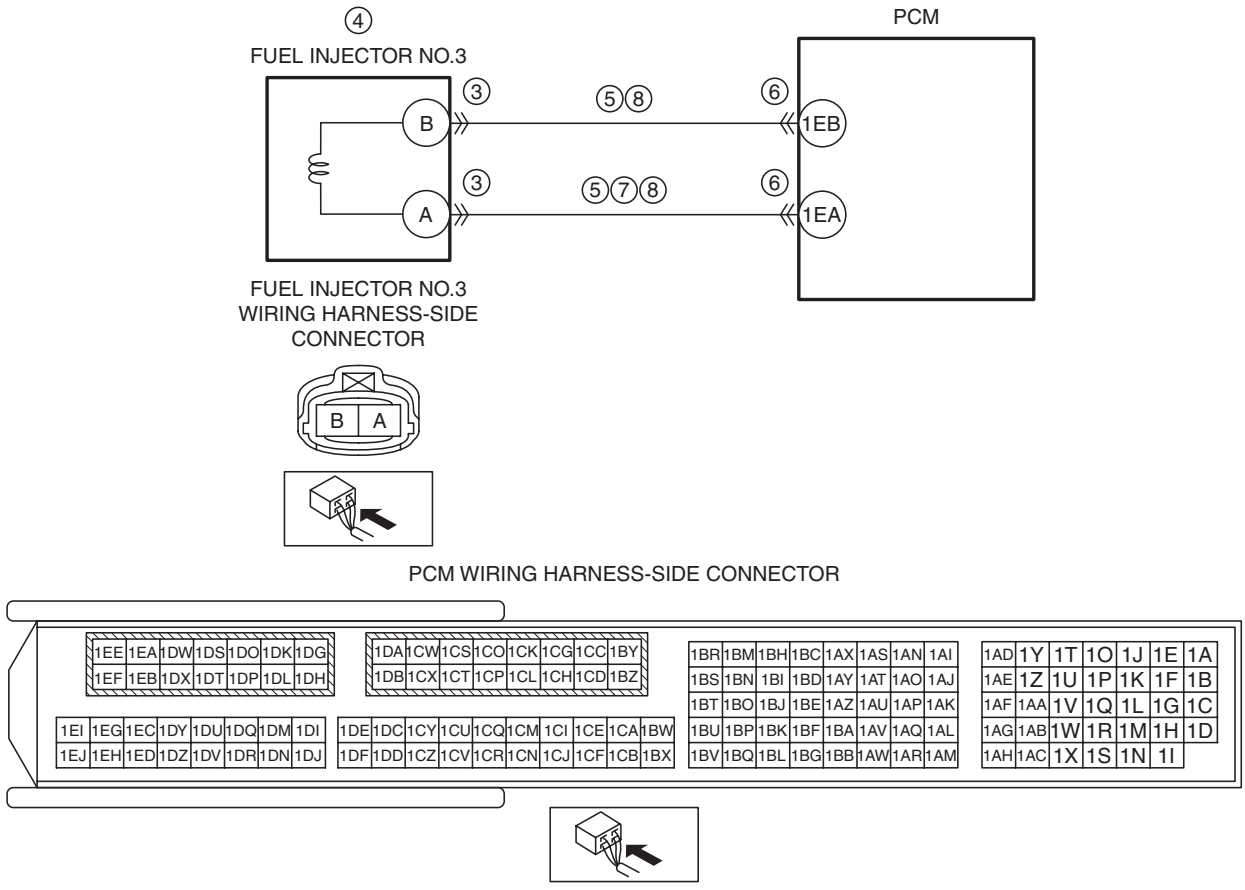
STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0203:00 [SKYACTIV-G 2.0]

id0102h1148100

DTC P0203:00	**Fuel injector circuit/open cylinder No.3**
DETECTION CONDITION	• If the fuel injection verification signal is not input at **25 times** continuously even though the PCM drives the fuel injector No.3, the PCM determines that there is an open circuit in the fuel injector No.3 control circuit. **MONITORING CONDITIONS** — The following conditions are met: • Battery voltage: **10.5 V or more** • Fuel injection control: except during fuel cut **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Fuel injector No.3 connector or terminals malfunction • Fuel injector No.3 malfunction • Short to ground in wiring harness between the following terminals: — Fuel injector No.3 terminal B—PCM terminal 1EB — Fuel injector No.3 terminal A—PCM terminal 1EA • PCM connector or terminals malfunction • Short to power supply in wiring harness between fuel injector No.3 terminal A and PCM terminal 1EA • Open circuit in wiring harness between the following terminals: — Fuel injector No.3 terminal B—PCM terminal 1EB — Fuel injector No.3 terminal A—PCM terminal 1EA • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL INJECTOR NO.3 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the fuel injector No.3 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT FUEL INJECTOR NO.3** • Inspect the fuel injector No.3. (See 01-14A-62 FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel injector No.3, then go to Step 9. (See 01-14A-51 FUEL INJECTOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT FUEL INJECTOR NO.3 CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel injector No.3 connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Fuel injector No.3 terminal B — Fuel injector No.3 terminal A • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FUEL INJECTOR NO.3 CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the fuel injector No.3 and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the fuel injector No.3 terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
8	**INSPECT FUEL INJECTOR NO.3 CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel injector No.3 and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Fuel injector No.3 terminal B—PCM terminal 1EB — Fuel injector No.3 terminal A—PCM terminal 1EA • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

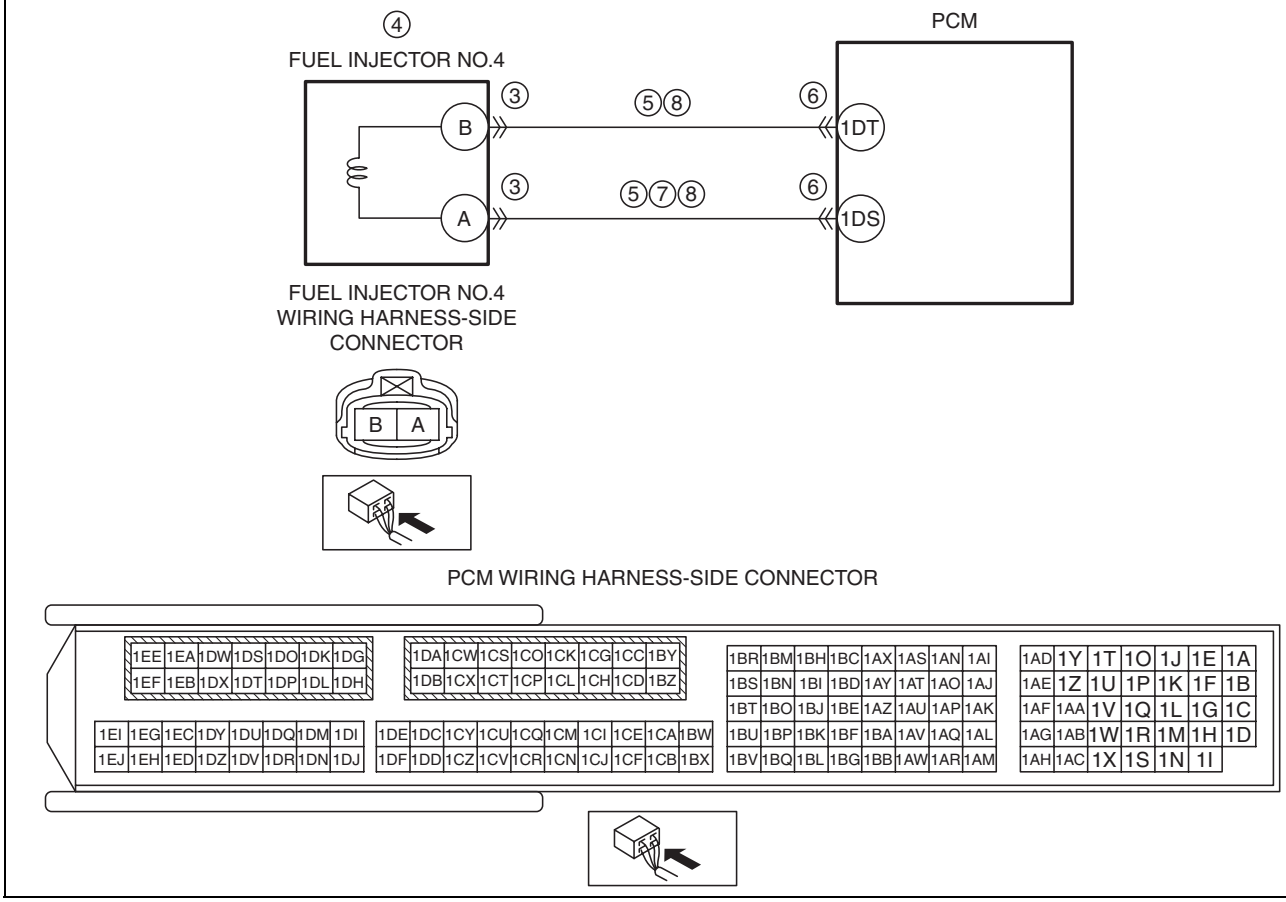
STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0204:00 [SKYACTIV-G 2.0]

id0102h1148200

DTC P0204:00	**Fuel injector circuit/open cylinder No.4**
DETECTION CONDITION	• If the fuel injection verification signal is not input at **25 times** continuously even though the PCM drives the fuel injector No.4, the PCM determines that there is an open circuit in the fuel injector No.4 control circuit. **MONITORING CONDITIONS** — The following conditions are met: • Battery voltage: **10.5 V or more** • Fuel injection control: except during fuel cut **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Fuel injector No.4 connector or terminals malfunction • Fuel injector No.4 malfunction • Short to ground in wiring harness between the following terminals: — Fuel injector No.4 terminal B—PCM terminal 1DT — Fuel injector No.4 terminal A—PCM terminal 1DS • PCM connector or terminals malfunction • Short to power supply in wiring harness between fuel injector No.4 terminal A and PCM terminal 1DS • Open circuit in wiring harness between the following terminals: — Fuel injector No.4 terminal B—PCM terminal 1DT — Fuel injector No.4 terminal A—PCM terminal 1DS • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL INJECTOR NO.4 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the fuel injector No.4 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT FUEL INJECTOR NO.4** • Inspect the fuel injector No.4. (See 01-14A-62 FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel injector No.4, then go to Step 9. (See 01-14A-51 FUEL INJECTOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT FUEL INJECTOR NO.4 CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel injector No.4 connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Fuel injector No.4 terminal B — Fuel injector No.4 terminal A • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FUEL INJECTOR NO.4 CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the fuel injector No.4 and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the fuel injector No.4 terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
8	**INSPECT FUEL INJECTOR NO.4 CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel injector No.4 and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Fuel injector No.4 terminal B—PCM terminal 1DT — Fuel injector No.4 terminal A—PCM terminal 1DS • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

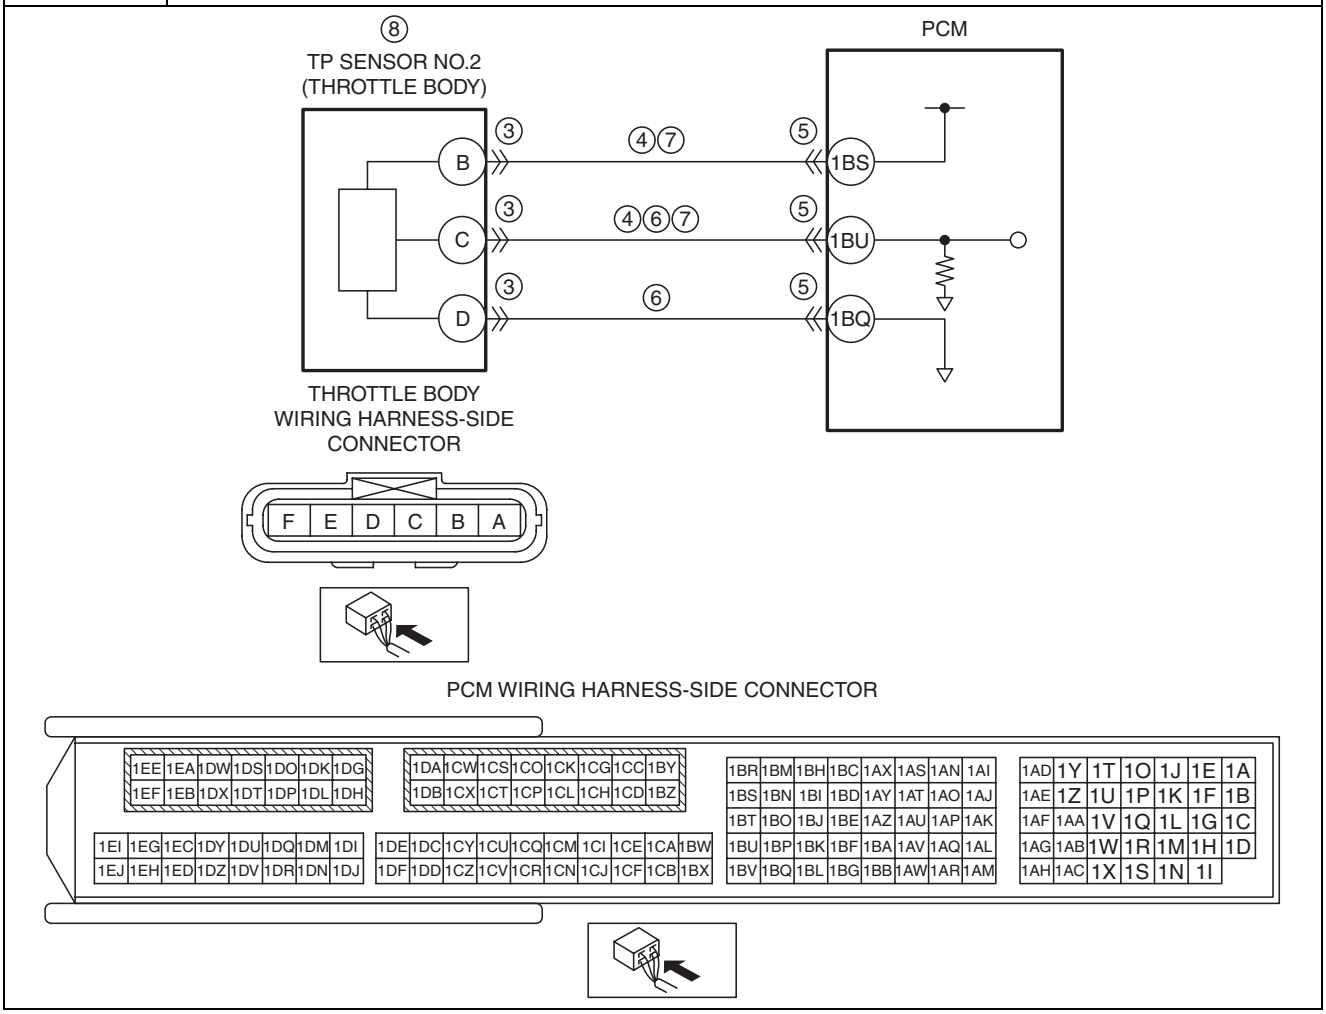
STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0222:00 [SKYACTIV-G 2.0]

id0102h1702800

DTC P0222:00	TP sensor No.2 circuit low input
DETECTION CONDITION	• If the PCM detects that the TP sensor No.2 voltage at the PCM terminal 1BU is **below 0.1 V**, the PCM determines that the TP sensor No.2 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed.
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — Throttle body terminal B—PCM terminal 1BS — Throttle body terminal C—PCM terminal 1BU • PCM connector or terminals malfunction • TP sensor No.2 signal circuit and ground circuit are shorted to each other • Open circuit in wiring harness between the following terminals: — Throttle body terminal B—PCM terminal 1BS — Throttle body terminal C—PCM terminal 1BU • TP sensor No.2 malfunction • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT TP SENSOR NO.2 CIRCUIT FOR SHORT TO GROUND** • Verify that the throttle body connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Throttle body terminal B — Throttle body terminal C • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT TP SENSOR NO.2 SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the throttle body and PCM connectors are disconnected. • Inspect for continuity between throttle body terminals C and D (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 9.
		No	Go to the next step.
7	**INSPECT TP SENSOR NO.2 CIRCUIT FOR OPEN CIRCUIT** • Verify that the throttle body and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Throttle body terminal B—PCM terminal 1BS — Throttle body terminal C—PCM terminal 1BU • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	**INSPECT TP SENSOR NO.2** • Reconnect all disconnected connectors. • Inspect the TP sensor No.2. (See 01-40-50 THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

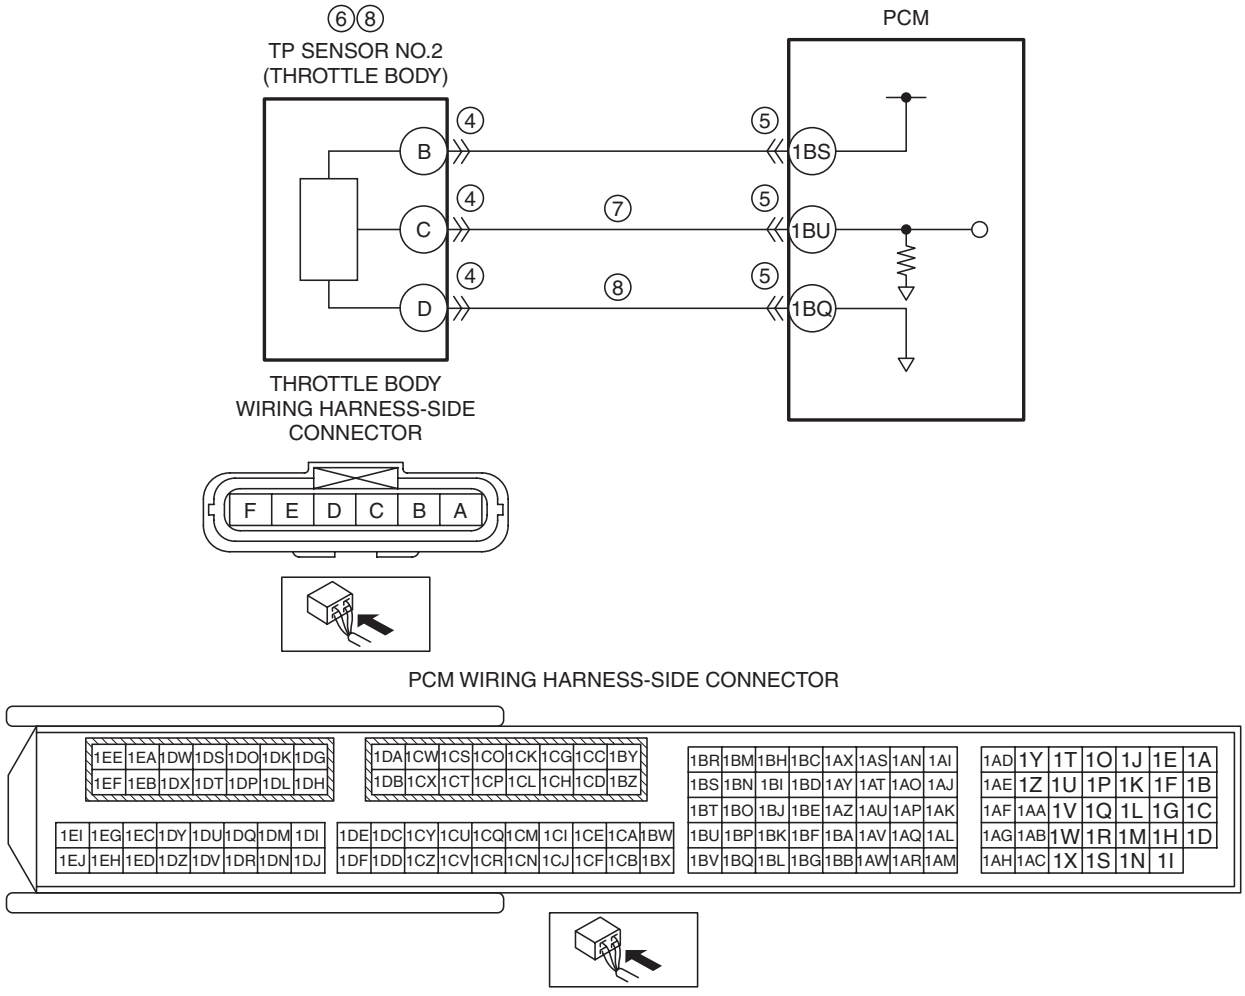
STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0223:00 [SKYACTIV-G 2.0]

id0102h1702900

DTC P0223:00	**TP sensor No.2 circuit high input**
DETECTION CONDITION	• If the PCM detects that the TP sensor No.2 voltage at the PCM terminal 1BU is **above 4.9 V**, the PCM determines that the TP sensor No.2 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed.
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • PCM connector or terminals malfunction • TP sensor No.2 malfunction • Short to power supply in wiring harness between throttle body terminal C and PCM terminal 1BU • Open circuit in wiring harness between throttle body terminal D and PCM terminal 1BQ • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY TP SENSOR NO.2 MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Access the TP2 PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the TP2 PID value. • Is the TP2 PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT TP SENSOR NO.2** • Reconnect all disconnected connectors. • Inspect the TP sensor No.2. (See 01-40-50 THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 9. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 9.
7	**INSPECT TP SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Switch the ignition to off. • Disconnect the throttle body connector. • Access the TP2 PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the TP2 PID value. • Is the TP2 PID value **5 V** or **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
8	**INSPECT TP SENSOR NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the throttle body connector is disconnected. • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for continuity between throttle body terminal D (wiring harness-side) and PCM terminal 1BQ (wiring harness-side). • Is there continuity?	Yes	Replace the throttle body, then go to the next step. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

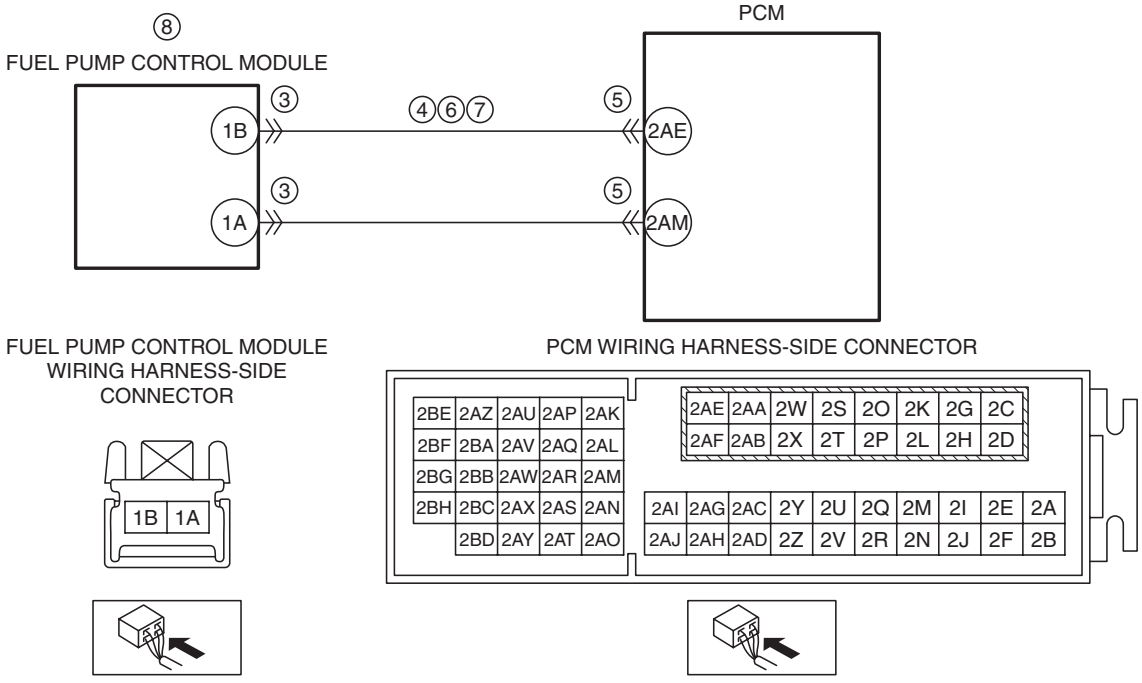
STEP	INSPECTION		ACTION
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

01

DTC P025B:00 [SKYACTIV-G 2.0]

id0102h1312600

DTC P025B:00	Fuel pump control module circuit range/performance problem
DETECTION CONDITION	• When any of the following conditions is met: — Engine overheating is detected. — Output duty ratio signal received from PCM is in error. — Output signal from fuel pump control module is erratic (noise overlap). **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops the fuel pump control (overheat detected).
POSSIBLE CAUSE	• Fuel pump control module connector or terminals malfunction • Short to ground in wiring harness between fuel pump control module terminal 1B and PCM terminal 2AE • PCM connector or terminals malfunction • Short to power supply in wiring harness between fuel pump control module terminal 1B and PCM terminal 2AE • Open circuit in wiring harness between fuel pump control module terminal 1B and PCM terminal 2AE • Fuel pump control module malfunction • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL PUMP CONTROL MODULE CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the fuel pump control module connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT FUEL PUMP CONTROL MODULE SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel pump control module connector is disconnected. • Inspect for continuity between fuel pump control module terminal 1B (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT FUEL PUMP CONTROL MODULE SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the fuel pump control module and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the fuel pump control module terminal 1B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
7	**INSPECT FUEL PUMP CONTROL MODULE SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel pump control module and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between fuel pump control module terminal 1B (wiring harness-side) and PCM terminal 2AE (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	**INSPECT FUEL PUMP CONTROL MODULE** • Reconnect all disconnected connectors. • Inspect the fuel pump control module. (See 01-14A-64 FUEL PUMP CONTROL MODULE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel pump control module, then go to the next step. (See 01-14A-63 FUEL PUMP CONTROL MODULE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

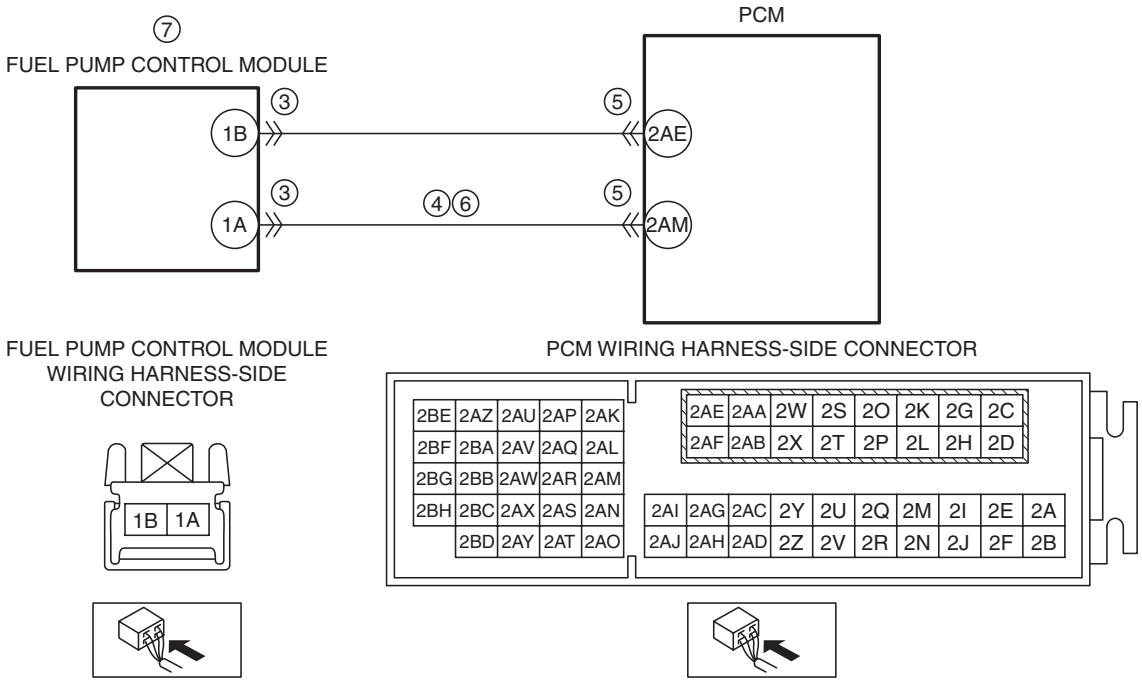
ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P025C:00 [SKYACTIV-G 2.0]

id0102h1008400

DTC P025C:00	**Fuel pump control module result of on-board diagnostic test low input**
DETECTION CONDITION	• Result of on-board test cannot be received from fuel pump control module (voltage is too low). **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Fuel pump control module connector or terminals malfunction • Short to ground in wiring harness between fuel pump control module terminal 1A and PCM terminal 2AM • PCM connector or terminals malfunction • Open circuit in wiring harness between fuel pump control module terminal 1A and PCM terminal 2AM • Fuel pump control module malfunction • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

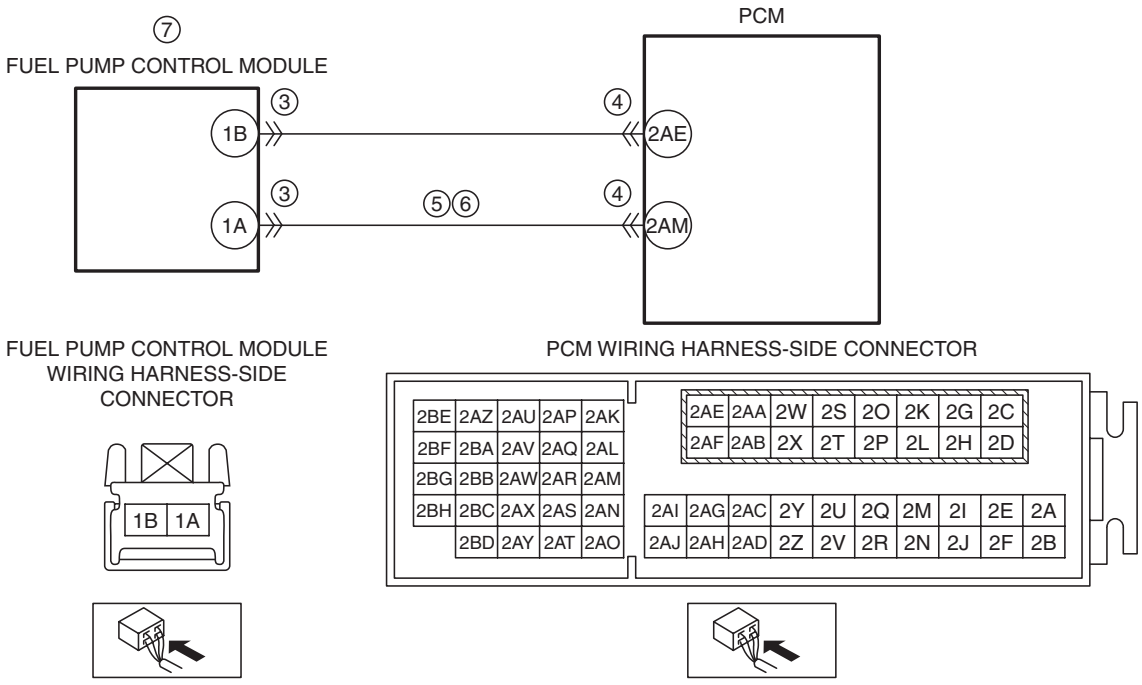
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL PUMP CONTROL MODULE CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the fuel pump control module connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
4	**INSPECT FUEL PUMP CONTROL MODULE SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel pump control module connector is disconnected. • Inspect for continuity between fuel pump control module terminal 1A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 8.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	**INSPECT FUEL PUMP CONTROL MODULE SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel pump control module and PCM connectors are disconnected. • Inspect for continuity between fuel pump control module terminal 1A (wiring harness-side) and PCM terminal 2AM (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
7	**INSPECT FUEL PUMP CONTROL MODULE** • Reconnect all disconnected connectors. • Inspect the fuel pump control module. (See 01-14A-64 FUEL PUMP CONTROL MODULE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel pump control module, then go to the next step. (See 01-14A-63 FUEL PUMP CONTROL MODULE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P025D:00 [SKYACTIV-G 2.0]

id0102h1008500

DTC P025D:00	**Fuel pump control module result of on-board diagnostic test high input**
DETECTION CONDITION	• Result of on-board test cannot be received from fuel pump control module (voltage is too high). **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Fuel pump control module connector or terminals malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between fuel pump control module terminal 1A and PCM terminal 2AM • Open circuit in wiring harness between fuel pump control module terminal 1A and PCM terminal 2AM • Fuel pump control module malfunction • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL PUMP CONTROL MODULE CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the fuel pump control module connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT FUEL PUMP CONTROL MODULE SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the fuel pump control module and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the fuel pump control module terminal 1A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
6	**INSPECT FUEL PUMP CONTROL MODULE SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel pump control module and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between fuel pump control module terminal 1A (wiring harness-side) and PCM terminal 2AM (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
7	**INSPECT FUEL PUMP CONTROL MODULE** • Reconnect all disconnected connectors. • Inspect the fuel pump control module. (See 01-14A-64 FUEL PUMP CONTROL MODULE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel pump control module, then go to the next step. (See 01-14A-63 FUEL PUMP CONTROL MODULE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0300:00 [SKYACTIV-G 2.0]

id0102h1703200

DTC P0300:00	Random misfire detected
DETECTION CONDITION	• The PCM monitors the CKP sensor input signal interval time. The PCM calculates the change of interval time for each cylinder. If the change of interval time exceeds the preprogrammed criteria, the PCM detects a misfire in the corresponding cylinder. While the engine is running, the PCM counts the number of misfires that occurred at **200 crankshaft revolutions** or **1000 crankshaft revolutions** and calculates the misfire ratio for each crankshaft revolution. If the ratio exceeds the preprogrammed criteria, the PCM determines that a misfire, which can damage the catalytic converter or affect emission performance, has occurred. **Diagnostic support note** • This is a continuous monitor (misfire). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The check engine light flashes if the PCM detects the misfire which can damage the catalytic converter during first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Limits the intake air amount.
POSSIBLE CAUSE	• Erratic signal to PCM — APP sensor signal malfunction — ECT sensor signal malfunction — IAT sensor No.1 signal malfunction — MAF sensor signal malfunction — CKP sensor signal malfunction — TP sensor signal malfunction — VSS signal malfunction — Related connector or terminals malfunction — Related wiring harness malfunction • Excessive air suction in intake air system (between MAF sensor and intake manifold) • MAF sensor malfunction • Improper operation of electric variable valve timing control system — Electric variable valve timing driver malfunction — Electric variable valve timing motor malfunction — Electric variable valve timing actuator malfunction • Improper operation of hydraulic variable valve timing control system • Improper operation of purge solenoid valve • Exhaust CMP sensor malfunction • CKP sensor loose • High-pressure side fuel delivery system malfunction — Fuel pressure sensor malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction — Relief valve (built-into high pressure fuel pump) malfunction — High pressure fuel pump malfunction • Low-pressure side fuel delivery system malfunction — Fuel leakage in fuel line — Restricted fuel line — Restricted fuel filter — Fuel pressure regulator (built-into fuel pump unit) malfunction — Fuel pump unit malfunction — Fuel runout • Ignition system malfunction — Spark plug is wet or covered with carbon — Spark plug malfunction — Ignition coil malfunction — Ignition coil related wiring harness malfunction • Engine malfunction — Insufficient engine compression — Engine coolant leakage to combustion chamber • PCV valve malfunction • Poor quality fuel • PCM malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (misfire related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**VERIFY CURRENT INPUT SIGNAL STATUS (KEY TO ON/IDLE)** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP1 — APP2 — ECT — IAT — MAF — RPM — TP REL — VSS • Is there any signal that is far out of specification when the ignition is switched to ON and the engine idles? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Inspect the suspected sensor and related wiring harness. Repair or replace the malfunctioning part according to the inspection results, then go to Step 30.
		No	Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA (MODE 2) CONDITION** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the same PIDs as in Step 4 while the simulating under the FREEZE FRAME DATA (Mode 2) conditions. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is there any signal which causes drastic changes?	Yes	Inspect the suspected sensor and related wiring harness. Repair or replace the malfunctioning part according to the inspection results, then go to Step 30.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
6	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Start the engine. • Access the MAF PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify that the MAF PID value changes quickly while increasing (racing) the engine rpm. • Is the MAF PID response normal? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to Step 8.
		No	Go to the next step.
7	**INSPECT INTAKE AIR SYSTEM FOR AIR SUCTION** • Inspect for air leakage between the following: — MAF sensor and throttle body — Throttle body and intake manifold **Note** • Engine speed may change when rust penetrating agent is sprayed on the air suction area. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 30.
		No	Replace the MAF sensor/IAT sensor No.1, then go to Step 30. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
8	**INSPECT ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See 01-10A-15 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 30. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
9	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See 01-10A-15 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 30. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
10	**INSPECT ELECTRIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the electric variable valve timing actuator. (See 01-10A-22 ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing actuator, then go to Step 30. (See 01-10A-23 ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
11	**INSPECT HYDRAULIC VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Perform the Hydraulic Variable Valve Timing Control System Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 30.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
12	**INSPECT PURGE SOLENOID VALVE OPERATION** • Switch the ignition to off. • Connect the vacuum pump to the purge solenoid valve and apply vacuum to the solenoid. • Verify that the solenoid holds vacuum. • Switch the ignition ON (engine off). • Access the EVAPCP PID of simulation item using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Set the purge solenoid value to **100 %** for the EVAPCP PID. • Apply vacuum while turning the solenoid from OFF to ON and simulating the EVAPCP PID with a **100 %** duty value. • Verify that the purge solenoid value releases vacuum while the solenoid is turned on. • Is the purge solenoid valve operation normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 30. (See 01-16A-10 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
13	**INSPECT EXHAUST CMP SENSOR** • Inspect the exhaust CMP sensor. (See 01-40-62 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Inspect the installation condition for damage to the timing chain and gears. • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Replace the exhaust CMP sensor. (See 01-40-61 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 30.
		No	Go to the next step.
14	**INSPECT INSTALLATION OF CKP SENSOR** • Inspect installation of CKP sensor. • Is the CKP sensor installed securely?	Yes	Go to the next step.
		No	Retighten the CKP sensor, then go to Step 30. (See 01-40-59 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
15	**INSPECT FUEL LINE PRESSURE (LOW-SIDE)** • Inspect the fuel line pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	If the fuel line pressure is too low: • Go to the next step. If the fuel line pressure is too high: • Replace the fuel pump unit, then go to Step 30. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 18.
16	**INSPECT FOR FUEL LINE LEAKAGE** • Visually inspect for leakage from fuel line between fuel distributor and fuel pump. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 30.
		No	Go to the next step.
17	**INSPECT FUEL FILTER** • Visually inspect for foreign materials or stain inside fuel filter (low-pressure side). • Is there any foreign materials or stain?	Yes	Clean the fuel tank and filter (low-pressure side), then go to Step 30.
		No	Replace the fuel pump unit, then go to Step 30. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
18	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 22.
		No	Lower than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results, then go to Step 30. • If there is no malfunction: — Go to Step 21. Higher than **3 MPa {31 kgf/cm2, 435 psi}**: • Go to the next step.
19	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 21.
20	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel distributor, then go to Step 30. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 22.
21	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 30.
		No	Replace the high pressure fuel pump, then go to Step 30. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
22	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 30.
23	**INSPECT IGNITION SYSTEM OPERATION** • Perform the Spark Test. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is a strong blue spark visible at each cylinder?	Yes	Go to Step 26.
		No	Go to the next step.
24	**INSPECT SPARK PULG** • Inspect the spark plugs for all cylinders. (See 01-18-3 SPARK PLUG INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the suspected spark plug, then go to Step 30. (See 01-18-3 SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
25	**INSPECT IGNITION COIL** • Inspect the ignition coils for all cylinders. (See 01-18-2 IGNITION COIL INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the suspected ignition coil, then go to Step 30. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Inspect the ignition coil related wiring harness condition (intermittent open or short) for all cylinders. Repair or replace the suspected wiring harness, then go to Step 30.
26	**VERIFY DTC TROUBLESHOOTING COMPLETED** **Note** • Because the malfunction may have been resolved by removing the carbon adhered to the spark plug during the spark inspection for the spark plug, verify that the repairs have been completed. • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Go to the next step.
		No	Go to Step 31.
27	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 30.
28	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the “ENGINE COOLANT LEAKAGE INSPECTION”. (See 01-12A-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0].) • Does the radiator cap tester needle drop even though there is no engine coolant leakage from the radiator or the hoses?	Yes	Engine coolant leakage from the engine (between the combustion chamber and the engine coolant passage) may have occurred. • Verify the conditions of the gasket and the cylinder head. — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results, then go to Step 30.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
29	**INSPECT PCV VALVE OPERATION** • Switch the ignition to off. • Remove the PCV valve. (See 01-16A-13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) • Inspect the PCV valve. (See 01-16A-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the PCV valve, then go to the next step. (See 01-16A-13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Poor quality fuel is used. • Replace the fuel, then go to the next step.
30	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
31	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0301:00, P0302:00, P0303:00, P0304:00 [SKYACTIV-G 2.0]

id0102h1703300

DTC P0301:00	**Cylinder No.1 misfire detected**
DTC P0302:00	**Cylinder No.2 misfire detected**
DTC P0303:00	**Cylinder No.3 misfire detected**
DTC P0304:00	**Cylinder No.4 misfire detected**
DETECTION CONDITION	• The PCM monitors the CKP sensor input signal interval time. The PCM calculates the change of interval time for each cylinder. If the change of interval time exceeds the preprogrammed criteria, the PCM detects a misfire in the corresponding cylinder. While the engine is running, the PCM counts the number of misfires that occurred at **200 crankshaft revolutions** or **1000 crankshaft revolutions** and calculates the misfire ratio for each crankshaft revolution. If the ratio exceeds the preprogrammed criteria, the PCM determines that a misfire, which can damage the catalytic converter or affect emission performance, has occurred. **Diagnostic support note** • This is a continuous monitor (misfire). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The check engine light flashes if the PCM detects the misfire which can damage the catalytic converter during first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops the fuel injection to the misfiring cylinder. • Limits the intake air amount.
POSSIBLE CAUSE	• Erratic signal to PCM — APP sensor signal malfunction — ECT sensor signal malfunction — IAT sensor No.1 signal malfunction — MAF sensor signal malfunction — CKP sensor signal malfunction — TP sensor signal malfunction — VSS signal malfunction — Related connector or terminals malfunction — Related wiring harness malfunction • Excessive air suction in intake air system (between dynamic chamber and cylinder head) • Fuel injector malfunction • Ignition system malfunction — Spark plug is wet or covered with carbon — Spark plug malfunction — Ignition coil malfunction — Ignition coil related wiring harness malfunction • Engine malfunction — Insufficient engine compression — Engine coolant leakage to combustion chamber • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (misfire related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**VERIFY CURRENT INPUT SIGNAL STATUS (KEY TO ON/IDLE)** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP1 — APP2 — ECT — IAT — MAF — RPM — TP REL — VSS • Is there any signal that is far out of specification when the ignition is switched to ON and the engine idles? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Inspect the suspected sensor and related wiring harness. Repair or replace the malfunctioning part according to the inspection results, then go to Step 14.
		No	Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA (MODE 2) CONDITION** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the same PIDs as in Step 4 while simulating under the FREEZE FRAME DATA (Mode 2) conditions. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is there any signal which causes drastic changes?	Yes	Inspect the suspected sensor and related wiring harness. Repair or replace the malfunctioning part according to the inspection results, then go to Step 14.
		No	Go to the next step.
6	**INSPECT INTAKE AIR SYSTEM FOR AIR SUCTION** • Inspect for air leakage at the following: — Around connection of dynamic chamber and intake manifold — Around connection of intake manifold and cylinder head **Note** • Engine speed may change when rust penetrating agent is sprayed on the air suction area. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 14.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
7	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 14.
		No	Go to the next step.
8	**INSPECT IGNITION SYSTEM OPERATION** • Perform the Spark Test. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is a strong blue spark visible at each cylinder?	Yes	Go to Step 11.
		No	Go to the next step.
9	**INSPECT SPARK PLUG CONDITION** • Remove the spark plug for suspected cylinder. (See 01-18-3 SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Inspect the spark plug for suspected cylinder. (See 01-18-3 SPARK PLUG INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the suspected spark plug, then go to Step 14. (See 01-18-3 SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
10	**INSPECT IGNITION COIL** • Inspect the ignition coil for suspected cylinder. (See 01-18-2 IGNITION COIL INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the suspected ignition coil, then go to Step 14. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Inspect the ignition coil related wiring harness condition (intermittent open or short) for all cylinders. Repair or replace the suspected wiring harness, then go to Step 14.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** **Note** • Because the malfunction may have been resolved by removing the carbon adhered to the spark plug during the spark inspection for the spark plug, verify that the repairs have been completed. • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Go to the next step.
		No	Go to Step 15.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

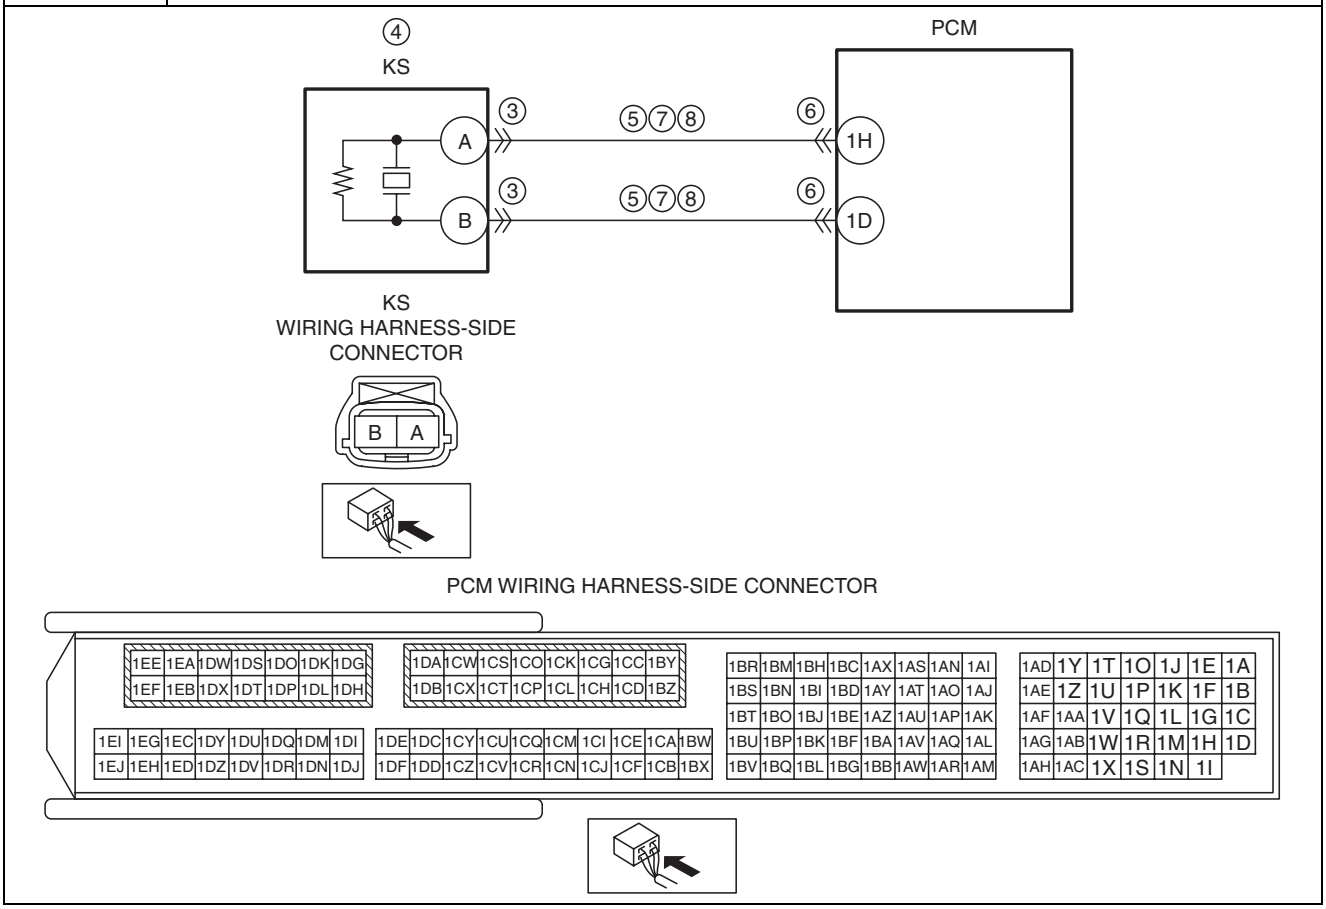
STEP	INSPECTION		ACTION
12	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 14.
13	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the “ENGINE COOLANT LEAKAGE INSPECTION”. (See 01-12A-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0].) • Does the radiator cap tester needle drop even though there is no engine coolant leakage from the radiator or the hoses?	Yes	Engine coolant leakage from the engine (between the combustion chamber and the engine coolant passage) may have occurred. • Verify the conditions of the gasket and the cylinder head. — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No	Go to the next step.
14	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0327:00 [SKYACTIV-G 2.0]

id0102h1703000

DTC P0327:00	KS circuit low input
DETECTION CONDITION	• The PCM monitors input signal from the KS when the engine is running. If the input voltage is **below 1.1 V** for **5 s**, the PCM determines that the KS circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Sets the knocking spark retard correction value of the ignition control to the fixed value.
POSSIBLE CAUSE	• KS connector or terminals malfunction • KS malfunction • Short to ground in wiring harness between the following terminals: — KS terminal A—PCM terminal 1H — KS terminal B—PCM terminal 1D • PCM connector or terminals malfunction • KS circuits are shorted to each other • Open circuit in wiring harness between the following terminals: — KS terminal A—PCM terminal 1H — KS terminal B—PCM terminal 1D • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT KS CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the KS connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT KS** • Inspect the KS. (See 01-40-65 KNOCK SENSOR (KS) INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the KS, then go to Step 9. (See 01-40-64 KNOCK SENSOR (KS) REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT KS CIRCUIT FOR SHORT TO GROUND** • Verify that the KS connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — KS terminal A — KS terminal B • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	**INSPECT KS CIRCUITS FOR SHORT TO EACH OTHER** • Verify that the KS and PCM connectors are disconnected. • Inspect for continuity between KS terminals A and B (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 9.
		No	Go to the next step.
8	**INSPECT KS CIRCUIT FOR OPEN CIRCUIT** • Verify that the KS and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — KS terminal A—PCM terminal 1H — KS terminal B—PCM terminal 1D • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.

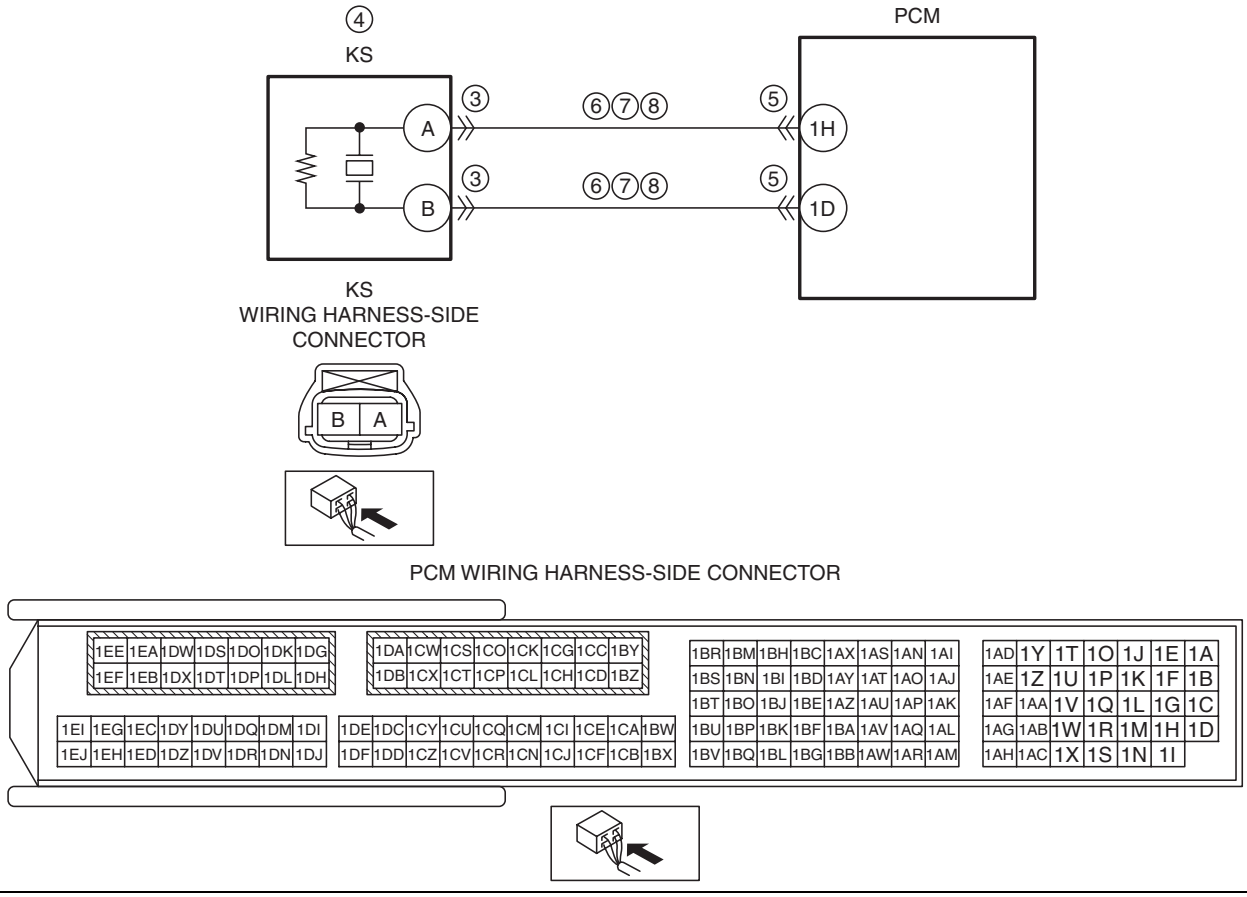
ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P0328:00 [SKYACTIV-G 2.0]

id0102h1703100

DTC P0328:00	KS circuit high input
DETECTION CONDITION	• The PCM monitors the input signal from the KS when the engine is running. If the input voltage is **above 2.4 V** for **5 s**, the PCM determines that the KS circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Sets the knocking spark retard correction value of the ignition control to the fixed value.
POSSIBLE CAUSE	• KS connector or terminals malfunction • KS malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: — KS terminal A—PCM terminal 1H — KS terminal B—PCM terminal 1D • KS circuits are shorted to each other • Open circuit in wiring harness between the following terminals: — KS terminal A—PCM terminal 1H — KS terminal B—PCM terminal 1D • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT KS CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the KS connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT KS** • Inspect the KS. (See 01-40-65 KNOCK SENSOR (KS) INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the KS, then go to Step 9. (See 01-40-64 KNOCK SENSOR (KS) REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT KS CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the KS and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — KS terminal A — KS terminal B • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
7	**INSPECT KS CIRCUITS FOR SHORT TO EACH OTHER** • Verify that the KS and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between KS terminals A and B (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 9.
		No	Go to the next step.
8	**INSPECT KS CIRCUIT FOR OPEN CIRCUIT** • Verify that the KS and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — KS terminal A—PCM terminal 1H — KS terminal B—PCM terminal 1D • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

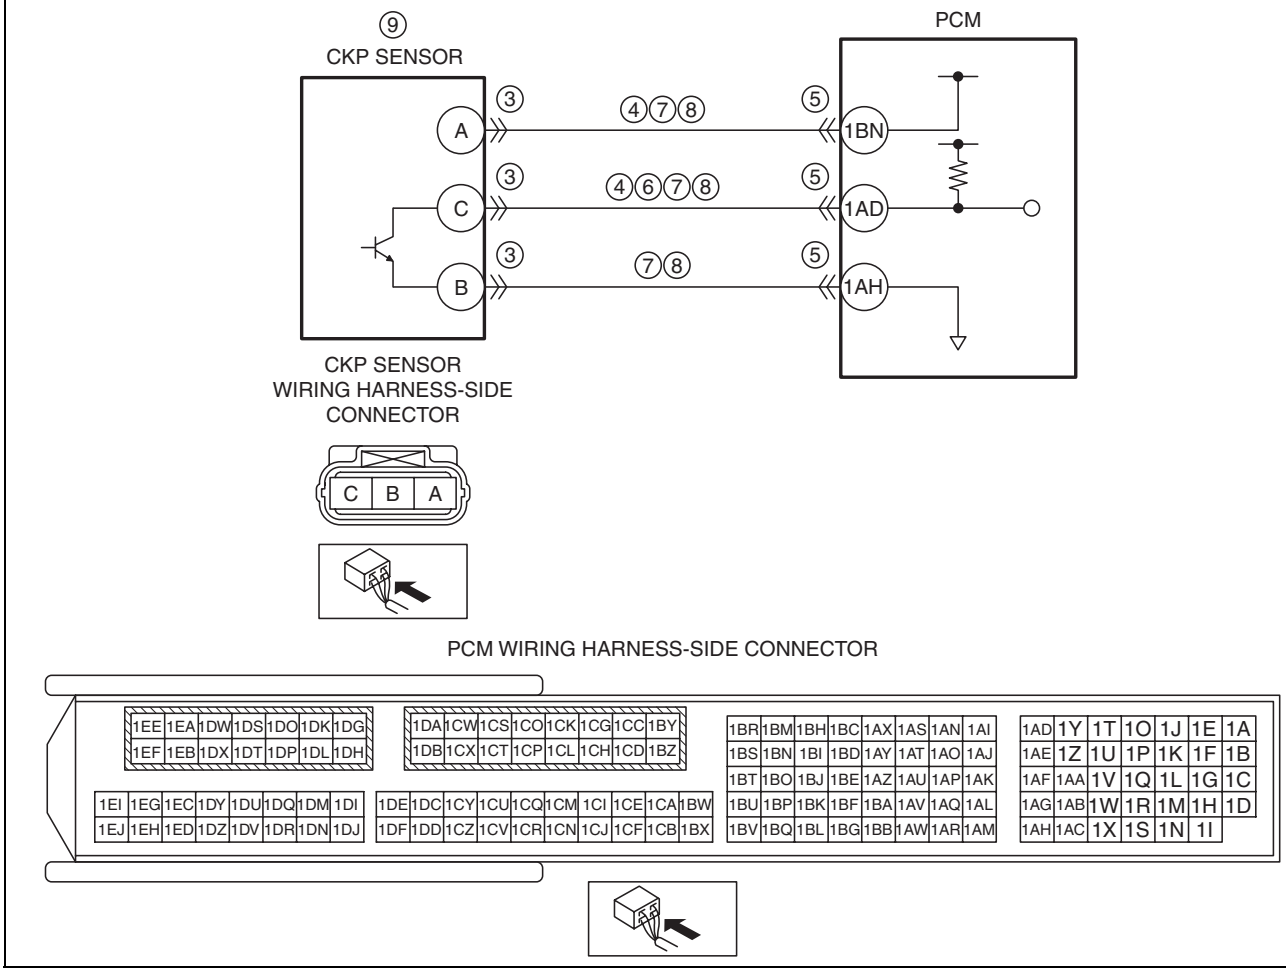
STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0335:00 [SKYACTIV-G 2.0]

id0102h1703600

DTC P0335:00	CKP sensor circuit problem
DETECTION CONDITION	• There is no CKP sensor signal input while the exhaust camshaft rotates **5 times**. • CKP sensor input signal pattern, received while crankshaft rotates **10 times**, is incorrect. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops the fuel injection. • Stops the ignition.
POSSIBLE CAUSE	• CKP sensor connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — CKP sensor terminal A—PCM terminal 1BN — CKP sensor terminal C—PCM terminal 1AD • PCM connector or terminals malfunction • Short to power supply in wiring harness between CKP sensor terminal C and PCM terminal 1AD • CKP sensor circuits are shorted to each other • Open circuit in wiring harness between the following terminals: — CKP sensor terminal A—PCM terminal 1BN — CKP sensor terminal C—PCM terminal 1AD — CKP sensor terminal B—PCM terminal 1AH • CKP sensor malfunction — CKP sensor is dirty — CKP sensor pulse wheel malfunction • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT CKP SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the CKP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
4	**INSPECT CKP SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the CKP sensor connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — CKP sensor terminal A — CKP sensor terminal C • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 10.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT CKP SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the CKP sensor and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the CKP sensor terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
7	**INSPECT CKP SENSOR CIRCUITS FOR SHORT TO EACH OTHER** • Verify that the CKP sensor and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between CKP sensor terminals A, C and B (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 10.
		No	Go to the next step.
8	**INSPECT CKP SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the CKP sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — CKP sensor terminal A—PCM terminal 1BN — CKP sensor terminal C—PCM terminal 1AD — CKP sensor terminal B—PCM terminal 1AH • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 10.
9	**INSPECT CKP SENSOR** • Inspect the CKP sensor. (See 01-40-60 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the CKP sensor, then go to the next step. (See 01-40-59 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

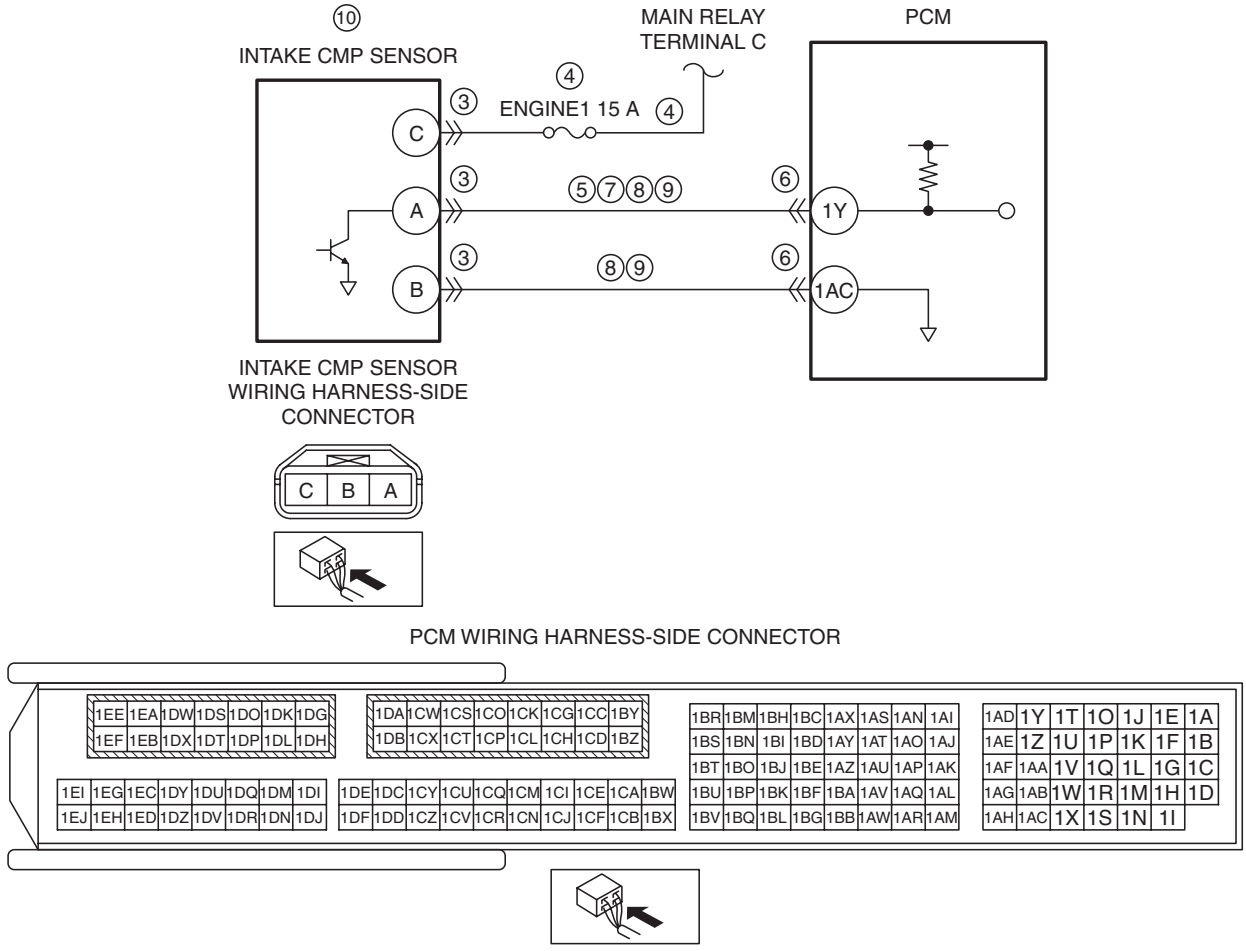
DTC P0340:00 [SKYACTIV-G 2.0]

id0102h1703700

DTC P0340:00	**Intake CMP sensor circuit problem**
DETECTION CONDITION	• Intake CMP sensor input signal pattern, received while crankshaft rotates **24 times**, is incorrect. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Set the electric variable valve timing control to the maximum cam retard mode.
POSSIBLE CAUSE	• Intake CMP sensor connector or terminals malfunction • Short to ground or open circuit in intake CMP sensor power supply circuit — Short to ground in wiring harness between ENGINE1 15 A fuse and intake CMP sensor terminal C — ENGINE1 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and intake CMP sensor terminal C • Short to ground in wiring harness between intake CMP sensor terminal A and PCM terminal 1Y • PCM connector or terminals malfunction • Short to power supply in wiring harness between intake CMP sensor terminal A and PCM terminal 1Y • Intake CMP sensor signal circuit and ground circuit are shorted to each other • Open circuit in wiring harness between the following terminals: — Intake CMP sensor terminal A—PCM terminal 1Y — Intake CMP sensor terminal B—PCM terminal 1AC • Intake CMP sensor malfunction — Intake CMP sensor is dirty — Intake CMP sensor pulse wheel malfunction — Damage to the detection area of the intake CMP sensor • CKP sensor connector or terminals malfunction • Electric variable valve timing mechanism not installed correctly — Loose timing chain or improper valve timing — Loose intake camshaft sprocket lock bolt — Loose crankshaft pulley lock bolt • PCM malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0340:00	Intake CMP sensor circuit problem



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT INTAKE CMP SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the intake CMP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 13.
		No	Go to the next step.
4	**INSPECT INTAKE CMP SENSOR POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the intake CMP sensor connector is disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the intake CMP sensor terminal C (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE1 15 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 13.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
5	**INSPECT INTAKE CMP SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the intake CMP sensor connector is disconnected. • Switch the ignition to off. • Inspect for continuity between intake CMP sensor terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 13.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 13.
		No	Go to the next step.
7	**INSPECT INTAKE CMP SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the intake CMP sensor and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the intake CMP sensor terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 13.
8	**INSPECT INTAKE CMP SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the intake CMP sensor and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between intake CMP sensor terminals A and B (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 13.
		No	Go to the next step.
9	**INSPECT INTAKE CMP SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the intake CMP sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Intake CMP sensor terminal A—PCM terminal 1Y — Intake CMP sensor terminal B—PCM terminal 1AC • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 13.
10	**INSPECT INTAKE CMP SENSOR** • Inspect the intake CMP sensor. (See 01-40-62 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the intake CMP sensor, then go to Step 13. (See 01-40-61 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
11	**INSPECT CKP SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the CKP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 13.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
12	**VERIFY VALVE TIMING MECHANISM INSTALLATION** • Verify the valve timing mechanism installation for the following parts: — Timing chain — Intake camshaft sprocket lock bolt — Crankshaft pulley lock bolt • Is the valve timing mechanism installed correctly?	Yes	Go to the next step.
		No	Reinstall the following parts correctly, then go to the next step. • Timing chain • Intake camshaft sprocket • Crankshaft pulley
13	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

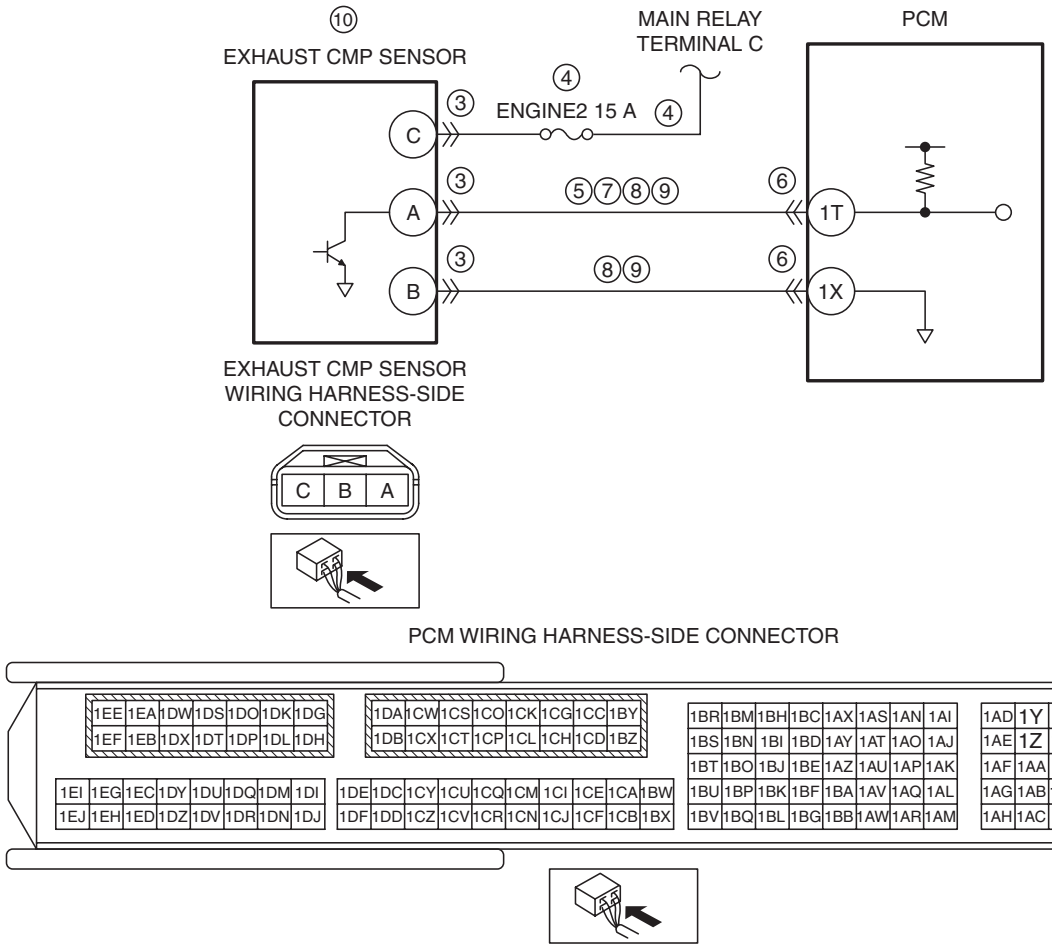
DTC P0365:00 [SKYACTIV-G 2.0]

id0102h1008700

DTC P0365:00	Exhaust CMP sensor circuit problem
DETECTION CONDITION	• Exhaust CMP sensor input signal pattern, received while crankshaft rotates **24 times**, is incorrect. • Cylinder identification is not completed while the crankshaft rotates **13 times**. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops the fuel injection. • Stops the ignition.
POSSIBLE CAUSE	• Exhaust CMP sensor connector or terminals malfunction • Short to ground or open circuit in exhaust CMP sensor power supply circuit — Short to ground in wiring harness between ENGINE2 15 A fuse and exhaust CMP sensor terminal C — ENGINE2 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and exhaust CMP sensor terminal C • Short to ground in wiring harness between exhaust CMP sensor terminal A and PCM terminal 1T • PCM connector or terminals malfunction • Short to power supply in wiring harness between exhaust CMP sensor terminal A and PCM terminal 1T • Exhaust CMP sensor signal circuit and ground circuit are shorted to each other • Open circuit in wiring harness between the following terminals: — Exhaust CMP sensor terminal A—PCM terminal 1T — Exhaust CMP sensor terminal B—PCM terminal 1X • Exhaust CMP sensor malfunction — Exhaust CMP sensor is dirty — Exhaust CMP sensor pulse wheel malfunction • CKP sensor connector or terminals malfunction • Hydraulic variable valve timing mechanism not installed correctly — Loose timing chain or improper valve timing — Loose exhaust camshaft sprocket lock bolt — Loose crankshaft pulley lock bolt • PCM malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0365:00	Exhaust CMP sensor circuit problem



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT EXHAUST CMP SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the exhaust CMP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 13.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
4	**INSPECT EXHAUST CMP SENSOR POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the exhaust CMP sensor connector is disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the exhaust CMP sensor terminal C (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE2 15 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 13.
5	**INSPECT EXHAUST CMP SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the exhaust CMP sensor connector is disconnected. • Switch the ignition to off. • Inspect for continuity between exhaust CMP sensor terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 13.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 13.
		No	Go to the next step.
7	**INSPECT EXHAUST CMP SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the exhaust CMP sensor and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the exhaust CMP sensor terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 13.
8	**INSPECT EXHAUST CMP SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the exhaust CMP sensor and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between exhaust CMP sensor terminals A and B (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 13.
		No	Go to the next step.
9	**INSPECT EXHAUST CMP SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the exhaust CMP sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Exhaust CMP sensor terminal A—PCM terminal 1T — Exhaust CMP sensor terminal B—PCM terminal 1X • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 13.
10	**INSPECT EXHAUST CMP SENSOR** • Inspect the exhaust CMP sensor. (See 01-40-62 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the exhaust CMP sensor, then go to Step 13. (See 01-40-61 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
11	**INSPECT CKP SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the CKP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 13.
		No	Go to the next step.
12	**VERIFY VALVE TIMING MECHANISM INSTALLATION** • Verify the valve timing mechanism installation for the following parts: — Timing chain — Exhaust camshaft sprocket lock bolt — Crankshaft pulley lock bolt • Is the valve timing mechanism installed correctly?	Yes	Go to the next step.
		No	Reinstall the following parts correctly, then go to the next step. • Timing chain • Exhaust camshaft sprocket • Crankshaft pulley
13	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0421:00 [SKYACTIV-G 2.0]

id0102h1704400

DTC P0421:00	Warm up catalyst system efficiency below threshold
DETECTION CONDITION	• The PCM compares the number of the A/F sensor and HO2S inversions for a predetermined time to detect the inversion ratio. It does this by monitoring the HO2S inversion counts when the following conditions are met. If the inversion ratio is below specification, the PCM determine that the catalyst system has deteriorated. — The A/F sensor inversion counts is as prescribed when the following monitoring conditions are met: — The accumulated occurrence time of the following monitoring conditions has exceeded the prescribed time limit: **MONITORING CONDITIONS** • Calculated TWC temperature: **above 400 °C {752 °F}** • Engine speed: **1,100—3,000 rpm** • LOAD: **19—63 %** (at engine speed of **1,500 rpm**) **Diagnostic support note** • This is an intermittent monitor (catalyst). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Exhaust system leakage • A/F sensor loose • HO2S loose • TWC deterioration or malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (catalyst related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT EXHAUST SYSTEM FOR LEAKAGE** • Visually inspect for exhaust leakage in the exhaust system. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 7.
		No	Go to the next step.
5	**INSPECT INSTALLATION OF A/F SENSOR AND HO2S** • Inspect installation of A/F sensor and HO2S. • Are the A/F sensor and HO2S installed securely?	Yes	Go to the next step.
		No	Retighten the A/F sensor and/or HO2S, then go to Step 7. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-40-56 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

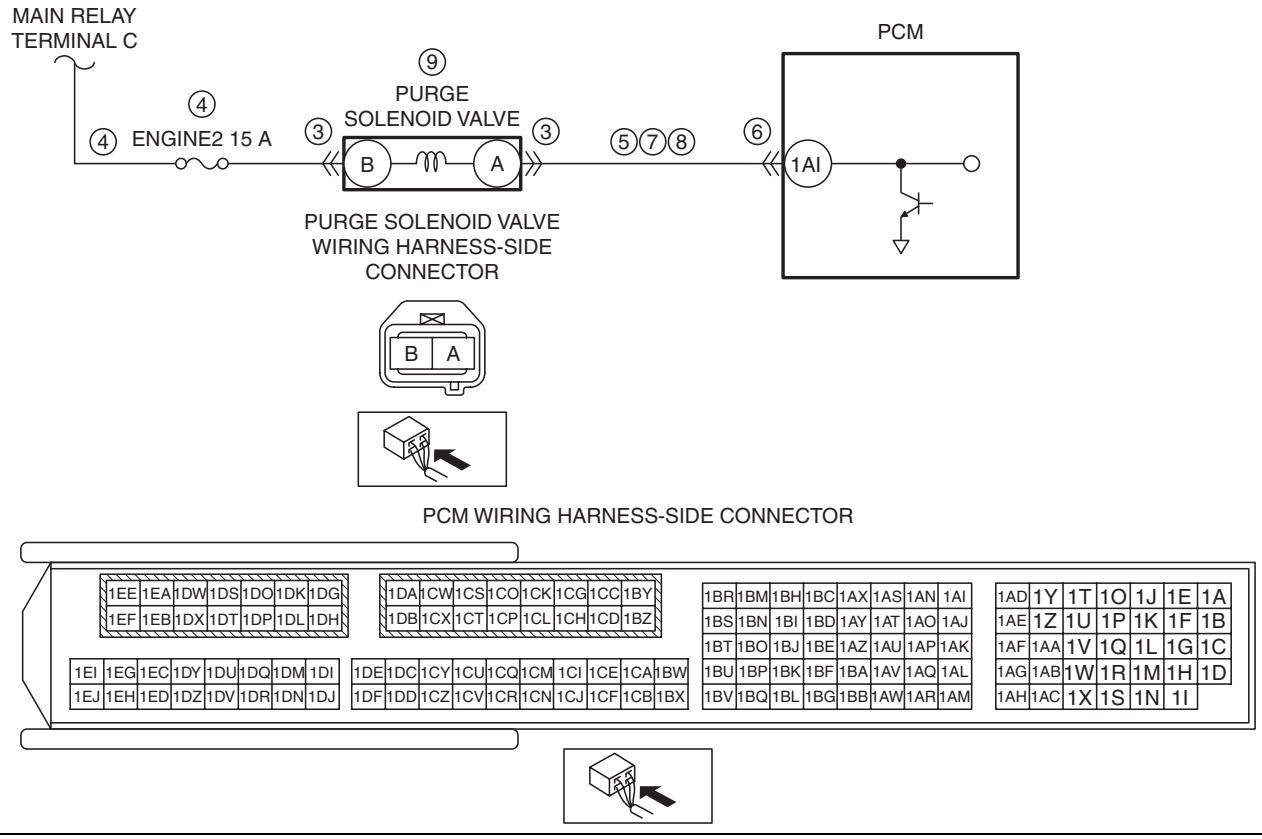
STEP	INSPECTION		ACTION
6	**VERIFY WHETHER MALFUNCTION IS IN TWC OR ELSEWHERE** • Perform the Idle Mixture Inspection. (See 01-10A-4 ENGINE TUNE-UP [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Perform the symptom troubleshooting “NO.15 EMISSION COMPLIANCE”. (See 01-03-84 NO.15 EMISSION COMPLIANCE [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Replace the TWC. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0443:00 [SKYACTIV-G 2.0]

id0102h1704500

DTC P0443:00	Purge solenoid valve circuit problem
DETECTION CONDITION	• The PCM monitors the purge solenoid valve control signal voltage and current. If the following conditions are met, the PCM determines that there is the purge solenoid valve control circuit problem. — The PCM turns the purge solenoid valve off, but the voltage of the purge solenoid valve control signal remains low. — The PCM turns the purge solenoid valve on, but the current of the purge solenoid valve control signal remains high. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Purge solenoid valve connector or terminals malfunction • Short to ground or open circuit in purge solenoid valve power supply circuit — Short to ground in wiring harness between ENGINE2 15 A fuse and purge solenoid valve terminal B — ENGINE2 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and purge solenoid valve terminal B • Short to ground in wiring harness between purge solenoid valve terminal A and PCM terminal 1AI • PCM connector or terminals malfunction • Short to power supply in wiring harness between purge solenoid valve terminal A and PCM terminal 1AI • Open circuit in wiring harness between purge solenoid valve terminal A and PCM terminal 1AI • Purge solenoid valve malfunction • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT PURGE SOLENOID VALVE CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the purge solenoid valve connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
4	**INSPECT PURGE SOLENOID VALVE POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the purge solenoid valve connector is disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the purge solenoid valve terminal B (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE2 15 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 10.
5	**INSPECT PURGE SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the purge solenoid valve connector is disconnected. • Switch the ignition to off. • Inspect for continuity between purge solenoid valve terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 10.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
7	**INSPECT PURGE SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the purge solenoid valve and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the purge solenoid valve terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
8	**INSPECT PURGE SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the purge solenoid valve and PCM connectors are disconnected. • Inspect for continuity between purge solenoid valve terminal A (wiring harness-side) and PCM terminal 1AI (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 10.
9	**INSPECT PURGE SOLENOID VALVE** • Inspect the purge solenoid valve. (See 01-16A-12 PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to the next step. (See 01-16A-10 PURGE SOLENOID VALVE REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0461:00 [SKYACTIV-G 2.0]

id0102h1301500

DTC P0461:00	**Fuel gauge sender unit circuit range/performance problem**
DETECTION CONDITION	• The PCM monitors the fuel tank level difference before and after the PCM-calculated fuel consumption has reached **more than 25 L {26 US qt, 22 Imp qt}**. If the difference is **less than 5 %**, the PCM determines that there is a fuel gauge sender unit circuit range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Fuel gauge sender unit malfunction • Instrument cluster malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL GAUGE SENDER UNIT** • Switch the ignition to off. • Inspect the fuel gauge sender unit. (See 09-22-34 FUEL GAUGE SENDER UNIT INSPECTION [2WD].) (See 09-22-36 FUEL GAUGE SENDER UNIT INSPECTION [4WD].) • Is there any malfunction?	Yes	Replace the fuel gauge sender unit, then go to Step 5. (See 09-22-23 FUEL GAUGE SENDER UNIT REMOVAL/ INSTALLATION [2WD].) (See 09-22-27 FUEL GAUGE SENDER UNIT REMOVAL/ INSTALLATION [4WD].)
		No	Go to the next step.
4	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is there any malfunction?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Drive the vehicle under the snapshot data condition. • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0462:00 [SKYACTIV-G 2.0]

id0102h1301600

DTC P0462:00	**Fuel gauge sender unit circuit low input**
DETECTION CONDITION	• The PCM monitors the fuel level signal and fuel gauge sender unit output voltage from the instrument cluster. If the PCM detects a fuel level or fuel gauge sender unit output voltage that is too low, the PCM determines that the fuel gauge sender unit circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Fuel gauge sender unit malfunction • Instrument cluster malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL GAUGE SENDER UNIT** • Switch the ignition to off. • Inspect the fuel gauge sender unit. (See 09-22-34 FUEL GAUGE SENDER UNIT INSPECTION [2WD].) (See 09-22-36 FUEL GAUGE SENDER UNIT INSPECTION [4WD].) • Is there any malfunction?	Yes	Replace the fuel gauge sender unit, then go to Step 5. (See 09-22-23 FUEL GAUGE SENDER UNIT REMOVAL/ INSTALLATION [2WD].) (See 09-22-27 FUEL GAUGE SENDER UNIT REMOVAL/ INSTALLATION [4WD].)
		No	Go to the next step.
4	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is there any malfunction?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to the next step.
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0463:00 [SKYACTIV-G 2.0]

id0102h1301700

DTC P0463:00	**Fuel gauge sender unit circuit high input**
DETECTION CONDITION	• The PCM monitors the fuel level signal and fuel gauge sender unit output voltage from the instrument cluster. If the PCM detects a fuel level or fuel gauge sender unit output voltage that is too high, the PCM determines that the fuel gauge sender unit circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Fuel gauge sender unit malfunction • Instrument cluster malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

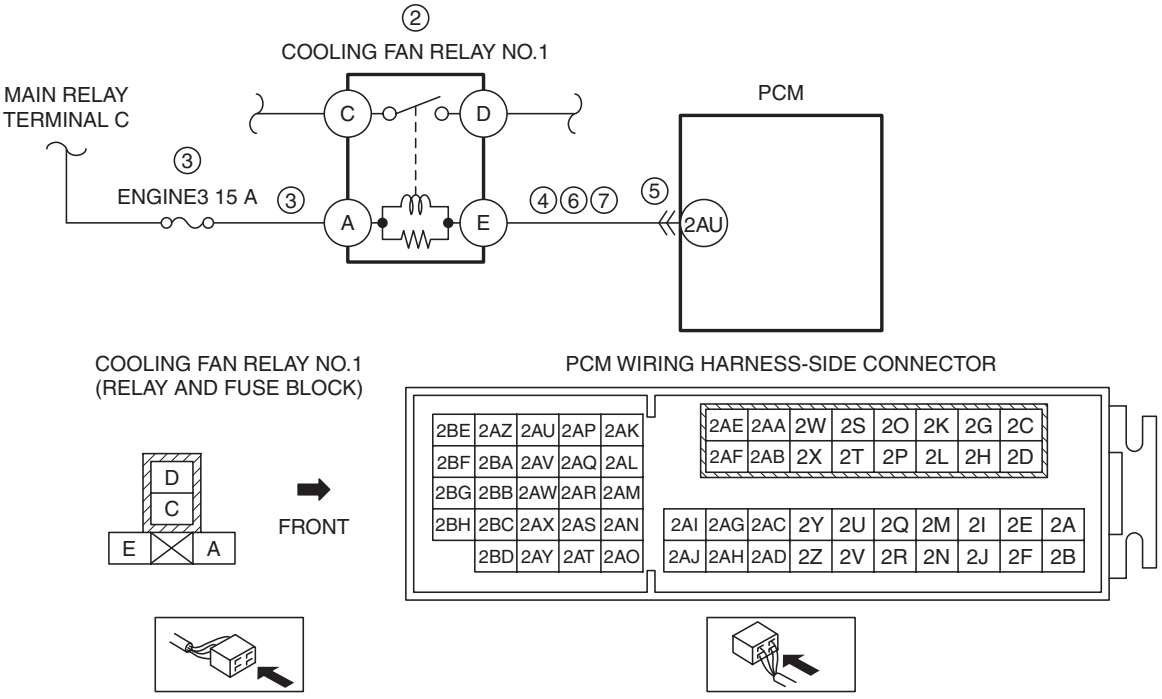
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL GAUGE SENDER UNIT** • Switch the ignition to off. • Inspect the fuel gauge sender unit. (See 09-22-34 FUEL GAUGE SENDER UNIT INSPECTION [2WD].) (See 09-22-36 FUEL GAUGE SENDER UNIT INSPECTION [4WD].) • Is there any malfunction?	Yes	Replace the fuel gauge sender unit, then go to Step 5. (See 09-22-23 FUEL GAUGE SENDER UNIT REMOVAL/ INSTALLATION [2WD].) (See 09-22-27 FUEL GAUGE SENDER UNIT REMOVAL/ INSTALLATION [4WD].)
		No	Go to the next step.
4	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is there any malfunction?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to the next step.
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0480:00 [SKYACTIV-G 2.0]

id0102h1704600

DTC P0480:00	**Cooling fan relay No.1 control circuit malfunction**
DETECTION CONDITION	• The PCM monitors the cooling fan relay No.1 control signal voltage and current. If the following conditions are met, the PCM determines that there is the cooling fan relay No.1 control circuit problem. — The PCM turns the cooling fan relay No.1 off, but the voltage of the cooling fan relay No.1 control signal remains low for **5 s**. — The PCM turns the cooling fan relay No.1 on, but the current of the cooling fan relay No.1 control signal remains high for **5 s**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Cooling fan relay No.1 malfunction • Short to ground or open circuit in cooling fan relay No.1 power supply circuit — Short to ground in wiring harness between ENGINE3 15 A fuse and cooling fan relay No.1 terminal A — ENGINE3 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and cooling fan relay No.1 terminal A • Short to ground in wiring harness between cooling fan relay No.1 terminal E and PCM terminal 2AU • PCM connector or terminals malfunction • Short to power supply in wiring harness between cooling fan relay No.1 terminal E and PCM terminal 2AU • Open circuit in wiring harness between cooling fan relay No.1 terminal E and PCM terminal 2AU • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT COOLING FAN RELAY NO.1** • Switch the ignition to off. • Remove the cooling fan relay No.1. • Inspect the cooling fan relay No.1. (See 09-21-29 RELAY INSPECTION.) • Is there any malfunction?	Yes	Replace the cooling fan relay No.1, then go to Step 8.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
3	**INSPECT COOLING FAN RELAY NO.1 POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Cooling fan relay No.1 is removed. • Switch the ignition ON (engine off or on). • Measure the voltage at the cooling fan relay No.1 terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE3 15 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 8.
4	**INSPECT COOLING FAN RELAY NO.1 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Cooling fan relay No.1 is removed. • Switch the ignition to off. • Inspect for continuity between cooling fan relay No.1 terminal E (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 8.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	**INSPECT COOLING FAN RELAY NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Cooling fan relay No.1 is removed. • Verify that the PCM connector is disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the cooling fan relay No.1 terminal E (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
7	**INSPECT COOLING FAN RELAY NO.1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Cooling fan relay No.1 is removed. • Verify that the PCM connector is disconnected. • Switch the ignition to off. • Inspect for continuity between cooling fan relay No.1 terminal E (wiring harness-side) and PCM terminal 2AU (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

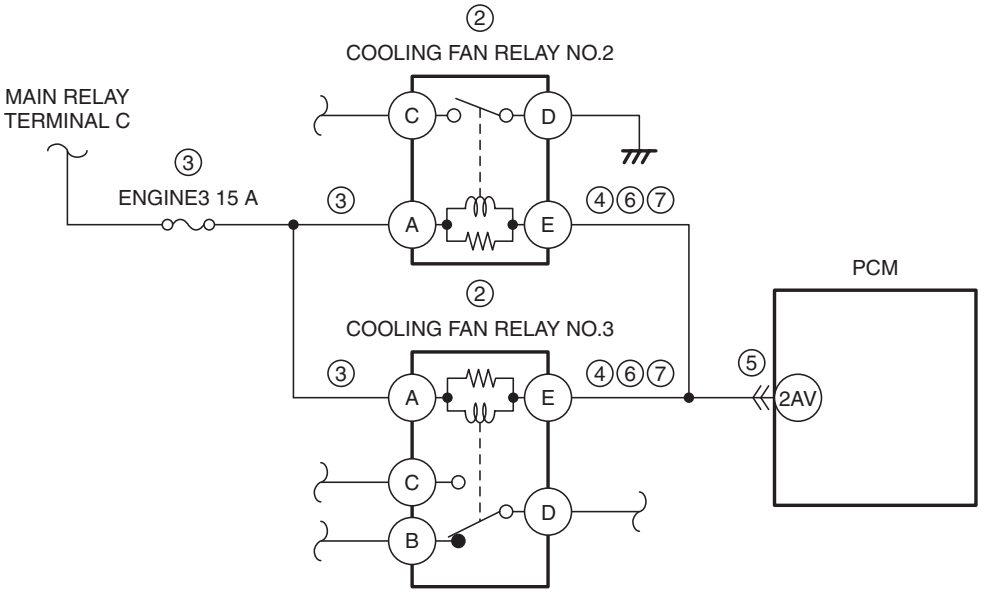
DTC P0482:00 [SKYACTIV-G 2.0]

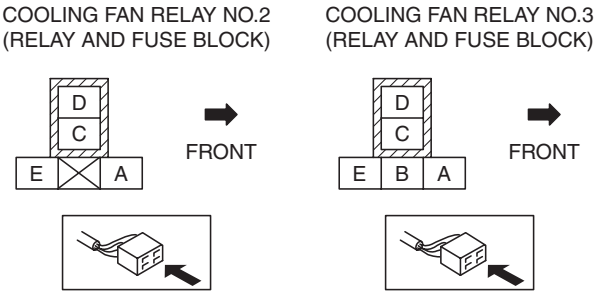
id0102h1850100

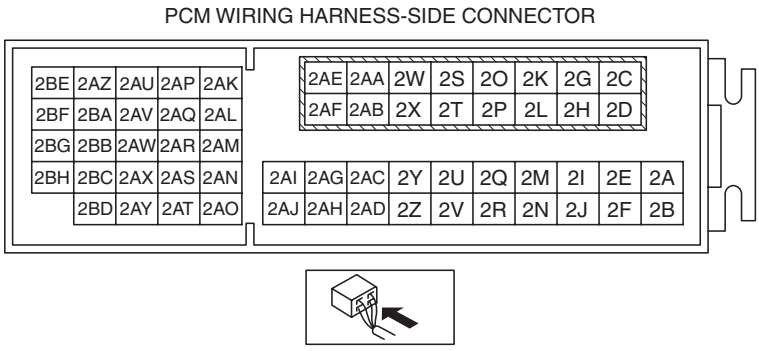
DTC P0482:00	Cooling fan relay No.2 and No.3 control circuit malfunction
DETECTION CONDITION	• The PCM monitors the cooling fan relay No.2 and No.3 control signal voltage and current. If the following conditions are met, the PCM determines that there is the cooling fan relay No.2 and No.3 control circuit problem. — The PCM turns the cooling fan relay No.2 and No.3 off, but the voltage of the cooling fan relay No.2 and No.3 control signal remains low for **5 s**. — The PCM turns the cooling fan relay No.2 and No.3 on, but the current of the cooling fan relay No.2 and No.3 control signal remains high for **5 s**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Cooling fan relay No.2 and/or No.3 malfunction • Short to ground or open circuit in cooling fan relay No.2 and/or No.3 power supply circuit — Short to ground in wiring harness between the following terminals: • ENGINE3 15 A fuse—Cooling fan relay No.2 terminal A • ENGINE3 15 A fuse—Cooling fan relay No.3 terminal A — ENGINE3 15 A fuse malfunction — Open circuit in wiring harness between the following terminals: • Main relay terminal C—Cooling fan relay No.2 terminal A • Main relay terminal C—Cooling fan relay No.3 terminal A • Short to ground in wiring harness between the following terminals: — Cooling fan relay No.2 terminal E—PCM terminal 2AV — Cooling fan relay No.3 terminal E—PCM terminal 2AV • PCM connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: — Cooling fan relay No.2 terminal E—PCM terminal 2AV — Cooling fan relay No.3 terminal E—PCM terminal 2AV • Open circuit in wiring harness between the following terminals: — Cooling fan relay No.2 terminal E—PCM terminal 2AV — Cooling fan relay No.3 terminal E—PCM terminal 2AV • PCM malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0482:00	Cooling fan relay No.2 and No.3 control circuit malfunction







Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT COOLING FAN RELAY NO.2 AND NO.3** • Switch the ignition to off. • Remove the cooling fan relay No.2 and No.3. • Inspect the cooling fan relay No.2 and No.3. (See 09-21-29 RELAY INSPECTION.) • Is there any malfunction?	Yes	Replace the cooling fan relay No.2 and/or No.3, then go to Step 8.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
3	**INSPECT COOLING FAN RELAY NO.2 AND NO.3 POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Cooling fan relay No.2 and No.3 are removed. • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — Cooling fan relay No.2 terminal A — Cooling fan relay No.3 terminal A • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE3 15 A fuse. • If the fuse is melted: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 8.
4	**INSPECT COOLING FAN RELAY NO.2 AND NO.3 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Cooling fan relay No.2 and No.3 are removed. • Switch the ignition to off. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Cooling fan relay No.2 terminal E — Cooling fan relay No.3 terminal E • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 8.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	**INSPECT COOLING FAN RELAY NO.2 AND NO.3 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Cooling fan relay No.2 and No.3 are removed. • Verify that the PCM connector is disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — Cooling fan relay No.2 terminal E — Cooling fan relay No.3 terminal E • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
7	**INSPECT COOLING FAN RELAY NO.2 AND NO.3 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Cooling fan relay No.2 and No.3 are removed. • Verify that the PCM connector is disconnected. • Switch the ignition to off. • Inspect for continuity between the following terminals (wiring harness-side): — Cooling fan relay No.2 terminal E—PCM terminal 2AV — Cooling fan relay No.3 terminal E—PCM terminal 2AV • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P0500:00 [SKYACTIV-G 2.0]

id0102h1704800

DTC P0500:00	VSS circuit problem
DETECTION CONDITION	• If an error in the wheel speed signal from the DSC HU/CM is detected by CAN when the following conditions are met: — Neutral switch No.1, neutral switch No.2 and CPP switch: OFF (MTX) — Shift position: except P or N position (ATX) — Absolute load: **above 40 %** — Engine speed: **above 2,000 rpm** — Brake switch: OFF **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the vehicle speed for the control at **0 km/h {0 mph}**.
POSSIBLE CAUSE	• DSC HU/CM DTC is stored. — DSC HU/CM connector or terminals malfunction — Front ABS wheel-speed sensor malfunction — DSC HU/CM malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY STORED DTC IN DSC HU/CM** • Retrieve the DSC HU/CM DTC using the M-MDS. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Access the RPM and LOAD PIDs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Drive the vehicle under the following conditions for **14 s**. — Neutral switch No.1, neutral switch No.2 and CPP switch: OFF (MTX) — Shift position: except P or N position (ATX) — Absolute load: **above 40 %** — Engine speed: **above 2,000 rpm** — Brake switch: OFF • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0506:00 [SKYACTIV-G 2.0]

id0102h1705000

DTC P0506:00	IAC system RPM lower than expected
DETECTION CONDITION	• The actual idle speed is lower than expected by **100 rpm** for **14 s**, when the brake pedal is depressed (brake switch is on). **Note** • If the atmospheric pressure is **less than 72.3 kPa {0.737 kgf/cm^2, 10.5 psi}** or the intake air temperature is **below −10 °C {14 °F}**, the PCM cancels the diagnosis of DTC P0506:00. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• A/C magnetic clutch malfunction • Drive-by-wire control system related sensor malfunction — TP sensor malfunction • Air mass measurement system malfunction • Purge solenoid valve malfunction • Air cleaner element restricted • Throttle body passage blockage • Engine malfunction — Insufficient engine compression (over capacity of blow-by gas) — Poor quality fuel • Generator malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT A/C MAGNETIC CLUTCH OPERATION** • Turn the fan switch off. • Is the magnetic clutch still on?	Yes	Perform the symptom troubleshooting “NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY”. (See 01-03-106 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
5	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM MALFUNCTION** • Inspect the TP sensor. (See 01-40-50 THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 11. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
6	**INSPECT PURGE SOLENOID VALVE** • Inspect the purge solenoid valve. (See 01-16A-12 PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to Step 11. (See 01-16A-10 PURGE SOLENOID VALVE REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
7	**INSPECT AIR CLEANER ELEMENT** • Remove the air cleaner element with the engine is running. • Does the engine speed increase?	Yes	Clean or replace the air cleaner element, then go to Step 11.
		No	Go to the next step.
8	**INSPECT THROTTLE BODY PASSAGE** • Visually inspect the throttle body passage. • Is the throttle body passage dirty and/or restricted?	Yes	Clean or replace the throttle body passage, then go to Step 11. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
9	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Overhaul the engine for repairs, then go to Step 11.
10	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step. (See 01-17A-25 GENERATOR DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0].) (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Depress the brake pedal for **14 s or more**. • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P0507:00 [SKYACTIV-G 2.0]

id0102h1705100

DTC P0507:00	IAC system RPM higher than expected
DETECTION CONDITION	• The actual idle speed is higher than expected by **200 rpm** for **14 s**, when the brake pedal is depressed (brake switch is on). **Note** • If the atmospheric pressure is **less than 72.3 kPa {0.737 kgf/cm^2, 10.5 psi}** or the intake air temperature is **below −10 °C {14 °F}**, the PCM cancels the diagnosis of DTC P0507:00. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Vacuum hose not installed correctly • Drive-by-wire control system related sensor malfunction — TP sensor malfunction • Air mass measurement system malfunction • Throttle valve malfunction (stuck open) • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

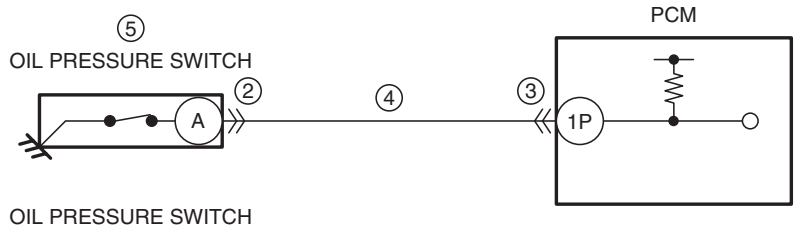
STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT VACUUM HOSE CONNECTION** • Visually inspect the vacuum hoses connection. (See 01-13A-4 INTAKE-AIR SYSTEM VACUUM HOSE ROUTING DIAGRAM [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Reconnect the vacuum hoses correctly, then go to Step 7.
		No	Go to the next step.
5	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM MALFUNCTION** • Inspect the TP sensor. (See 01-40-50 THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 7. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
6	**INSPECT THROTTLE BODY** • Inspect the throttle body. (See 01-13A-13 THROTTLE BODY INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Depress the brake pedal for **14 s or more.** • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

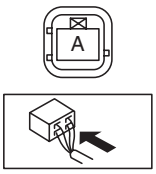
DTC P0520:00 [SKYACTIV-G 2.0]

id0102h1008800

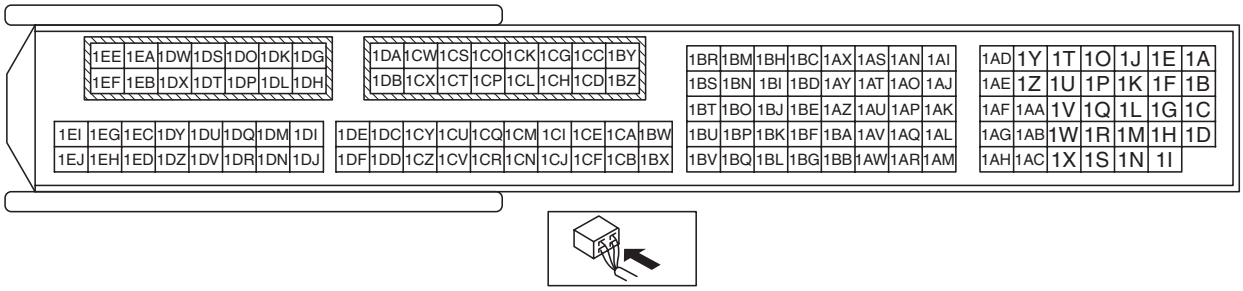
DTC P0520:00	**Oil pressure switch circuit problem**
DETECTION CONDITION	• The oil pressure switch is off for a continuous **5 s** even though the engine is stopped. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Oil pressure switch connector or terminals malfunction • PCM connector or terminals malfunction • Open circuit in wiring harness between oil pressure switch terminal A and PCM terminal 1P • Oil pressure switch malfunction • PCM malfunction



OIL PRESSURE SWITCH WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT OIL PRESSURE SWITCH CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the oil pressure switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
3	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

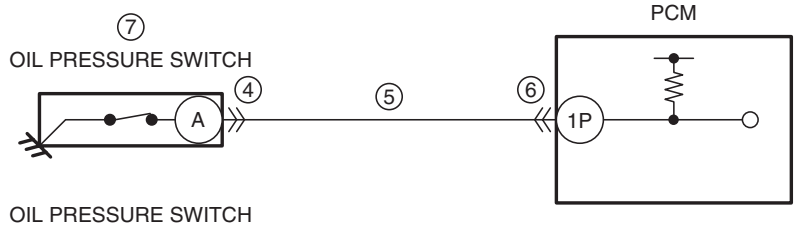
STEP	INSPECTION		ACTION
4	**INSPECT OIL PRESSURE SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the oil pressure switch and PCM connectors are disconnected. • Inspect for continuity between oil pressure switch terminal A (wiring harness-side) and PCM terminal 1P (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 6.
5	**INSPECT OIL PRESSURE SWITCH** • Inspect the oil pressure switch. (See 09-22-40 OIL PRESSURE SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the oil pressure switch, then go to the next step. (See 01-11A-10 ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

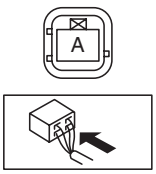
DTC P0524:00 [SKYACTIV-G 2.0]

id0102h1339700

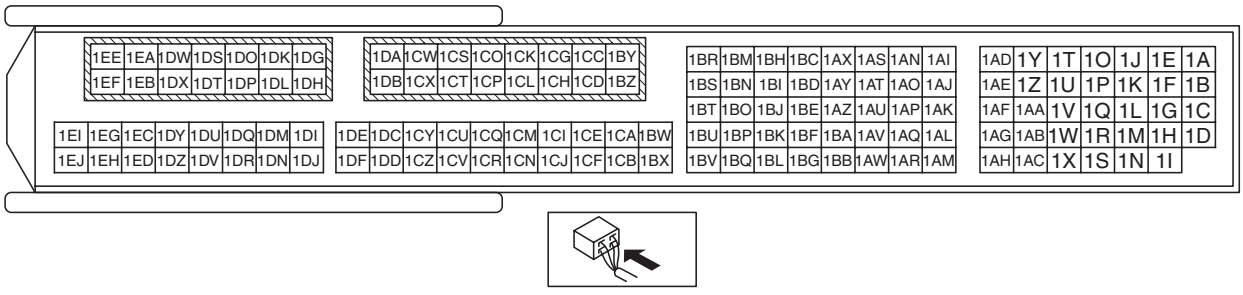
DTC P0524:00	**Engine oil pressure too low**
DETECTION CONDITION	• The oil pressure switch is on for a continuous **5 s** with the following condition met: (engine oil pressure warning light illuminates when **1 s** has elapsed) — When engine coolant temperature is **30 °C {86 °F} or less** and engine speed is **above 650 rpm** — When engine coolant temperature is **68 °C {154 °F} or less** and engine speed is **above 1,500 rpm** — When engine coolant temperature is **68 °C {154 °F} or more** and engine speed is **above 2,500 rpm** **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Engine oil leakage • Improper engine oil level • Oil pressure switch connector or terminals malfunction • Short to ground in wiring harness between oil pressure switch terminal A and PCM terminal 1P • PCM connector or terminals malfunction • Oil pressure switch malfunction • Oil pump malfunction • PCM malfunction



OIL PRESSURE SWITCH WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ENGINE OIL LEAKAGE** • Start the engine. • Verify that there is no engine oil leakage in the hydraulic circuit. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then add genuine motor oil. Go to Step 8.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

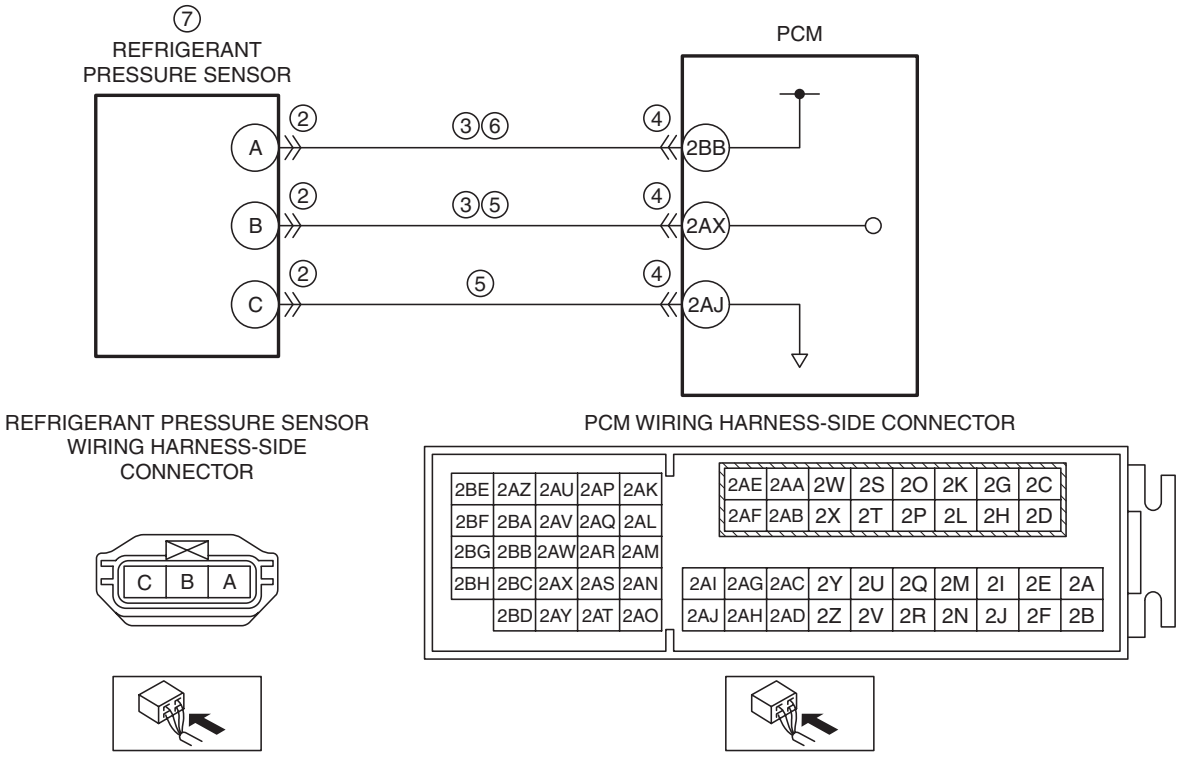
STEP	INSPECTION		ACTION
3	**INSPECT ENGINE OIL LEVEL** • Inspect the engine oil level. (See 01-11A-3 ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0].) • Is the engine oil level sufficient?	Yes	Go to the next step.
		No	Add genuine motor oil, then go to the next step. (See 01-11A-3 ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0].)
4	**INSPECT OIL PRESSURE SWITCH CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the oil pressure switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT OIL PRESSURE SWITCH CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the oil pressure switch connector is disconnected. • Inspect for continuity between oil pressure switch terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 8.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
7	**INSPECT ENGINE OIL PRESSURE** • Inspect the engine oil pressure. (See 01-11A-7 OIL PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the oil pump, then go to the next step. (See 01-11A-15 OIL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Replace the oil pressure switch, then go to the next step. (See 01-11A-10 ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Drive the vehicle under the following conditions for **5 s**. — Engine speed: **above 2,500 rpm** • Perform the DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0532:00 [SKYACTIV-G 2.0]

id0102h1850200

DTC P0532:00	Refrigerant pressure sensor circuit low input
DETECTION CONDITION	• The PCM monitors input voltage from the refrigerant pressure sensor when the ignition switch is ON. If the input voltage at the PCM terminal 2AX is **below 0.1 V** for **5 s**, the PCM determines that the refrigerant pressure sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Refrigerant pressure sensor connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — Refrigerant pressure sensor terminal A—PCM terminal 2BB — Refrigerant pressure sensor terminal B—PCM terminal 2AX • PCM connector or terminals malfunction • Refrigerant pressure sensor signal circuit and ground circuit are shorted to each other • Open circuit in wiring harness between refrigerant pressure sensor terminal A and PCM terminal 2BB • Refrigerant pressure sensor malfunction • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT REFRIGERANT PRESSURE SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the refrigerant pressure sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

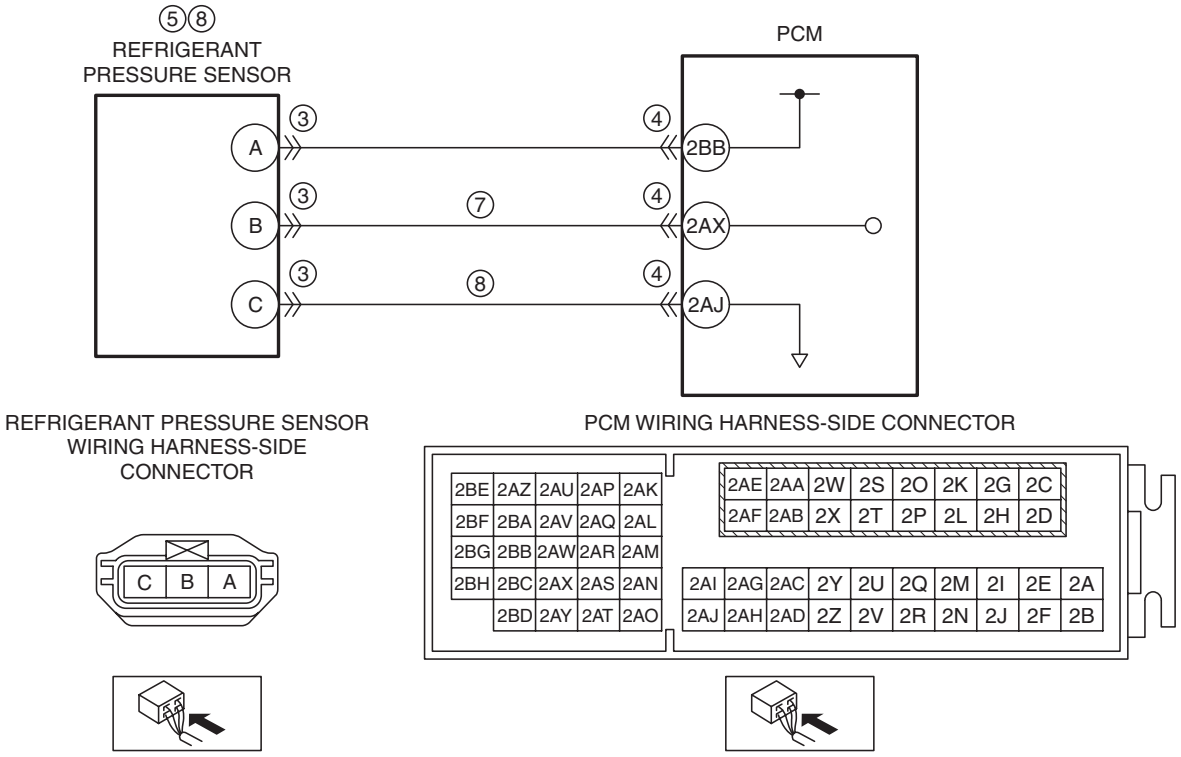
STEP	INSPECTION		ACTION
3	**INSPECT REFRIGERANT PRESSURE SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the refrigerant pressure sensor connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Refrigerant pressure sensor terminal A — Refrigerant pressure sensor terminal B • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 8.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT REFRIGERANT PRESSURE SENSOR SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the refrigerant pressure sensor and PCM connectors are disconnected. • Inspect for continuity between refrigerant pressure sensor terminals B and C (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 8.
		No	Go to the next step.
6	**INSPECT REFRIGERANT PRESSURE SENSOR POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Verify that the refrigerant pressure sensor and PCM connectors are disconnected. • Inspect for continuity between refrigerant pressure sensor terminal A (wiring harness-side) and PCM terminal 2BB (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
7	**INSPECT REFRIGERANT PRESSURE SENSOR** • Inspect the refrigerant pressure sensor. (See 07-40B-14 REFRIGERANT PRESSURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) (See 07-40A-30 REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the refrigerant pressure sensor, then go to the next step. (See 07-40B-13 REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) (See 07-40A-29 REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0533:00 [SKYACTIV-G 2.0]

id0102h1850300

DTC P0533:00	**Refrigerant pressure sensor circuit high input**
DETECTION CONDITION	• The PCM monitors the input voltage from the refrigerant pressure sensor when the ignition switch is ON. If the input voltage at the PCM terminal 2AX is **above 4.9 V** for **5 s**, the PCM determines that the refrigerant pressure sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Refrigerant pressure sensor connector or terminals malfunction • PCM connector or terminals malfunction • Refrigerant pressure sensor malfunction • Short to power supply in wiring harness between refrigerant pressure sensor terminal B and PCM terminal 2AX • Open circuit in wiring harness between the following terminals: — Refrigerant pressure sensor terminal B—PCM terminal 2AX — Refrigerant pressure sensor terminal C—PCM terminal 2AJ • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**CLASSIFY REFRIGERANT PRESSURE SENSOR MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Access the AC_PRES PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the AC_PRES PID value. • Is the AC_PRES PID value **5 V** or **B+**?	Yes	Go to Step 6.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
3	**INSPECT REFRIGERANT PRESSURE SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the refrigerant pressure sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT REFRIGERANT PRESSURE SENSOR** • Inspect the refrigerant pressure sensor. (See 07-40B-14 REFRIGERANT PRESSURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) (See 07-40A-30 REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the refrigerant pressure sensor, then go to Step 9. (See 07-40B-13 REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) (See 07-40A-29 REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Go to Step 9.
6	**CLASSIFY REFRIGERANT PRESSURE SENSOR SIGNAL CIRCUIT MALFUNCTION OR REFRIGERANT PRESSURE SENSOR GROUND CIRCUIT MALFUNCTION** • Switch the ignition to off. • Disconnect the refrigerant pressure sensor connector. • Access the AC_PRES PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the AC_PRES PID value. • Is the AC_PRES PID value **5 V** or **B+**?	Yes	Go to the next step.
		No	Go to Step 8.
7	**INSPECT REFRIGERANT PRESSURE SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the refrigerant pressure sensor connector is disconnected. • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for continuity between refrigerant pressure sensor terminal B (wiring harness-side) and PCM terminal 2AX (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	**INSPECT REFRIGERANT PRESSURE SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the refrigerant pressure sensor connector is disconnected. • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for continuity between refrigerant pressure sensor terminal C (wiring harness-side) and PCM terminal 2AJ (wiring harness-side). • Is there continuity?	Yes	Replace the refrigerant pressure sensor, then go to the next step. (See 07-40B-13 REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) (See 07-40A-29 REFRIGERANT PRESSURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

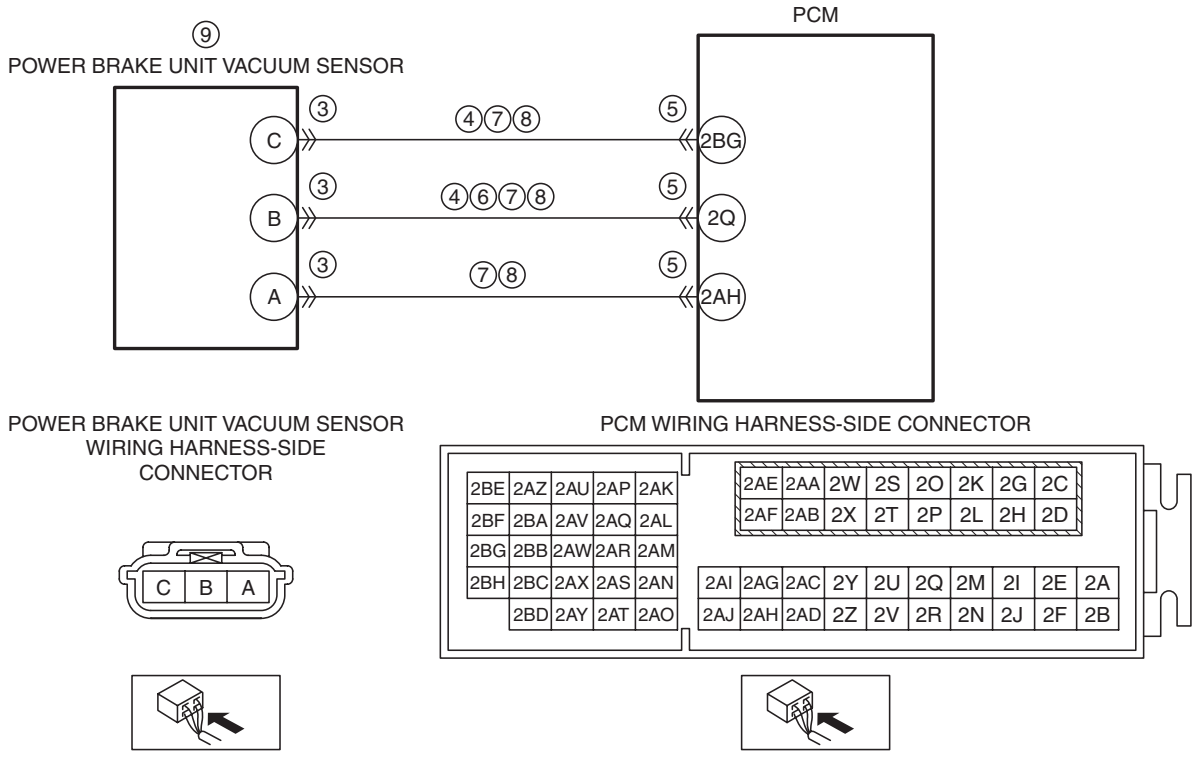
STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0555:00 [SKYACTIV-G 2.0]

id0102h1950200

DTC P0555:00	**Power brake unit vacuum sensor circuit problem**
DETECTION CONDITION	• The PCM monitors the power brake unit vacuum sensor signal voltage while the ignition switch is ON. If the PCM detects the power brake unit vacuum sensor voltage is **below 0.15 V** or **above 4.8 V** for **5 s**, the PCM determines that the power brake unit vacuum sensor circuit has problem. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Inhibits engine-stop by operating the i-stop function.
POSSIBLE CAUSE	• Power brake unit vacuum sensor connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — Power brake unit vacuum sensor terminal C—PCM terminal 2BG — Power brake unit vacuum sensor terminal B—PCM terminal 2Q • PCM connector or terminals malfunction • Short to power supply in wiring harness between power brake unit vacuum sensor terminal C and PCM terminal 2BG • Power brake unit vacuum sensor circuits are shorted to each other • Open circuit in wiring harness between the following terminals: — Power brake unit vacuum sensor terminal C—PCM terminal 2BG — Power brake unit vacuum sensor terminal B—PCM terminal 2Q — Power brake unit vacuum sensor terminal A—PCM terminal 2AH • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT POWER BRAKE UNIT VACUUM SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the power brake unit vacuum sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
4	**INSPECT POWER BRAKE UNIT VACUUM SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the power brake unit vacuum sensor connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Power brake unit vacuum sensor terminal C — Power brake unit vacuum sensor terminal B • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 10.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT POWER BRAKE UNIT VACUUM SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the power brake unit vacuum sensor and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the power brake unit vacuum sensor terminal B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
7	**INSPECT POWER BRAKE UNIT VACUUM SENSOR CIRCUITS FOR SHORT TO EACH OTHER** • Verify that the power brake unit vacuum sensor and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between power brake unit vacuum sensor terminals C, B and A (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 10.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

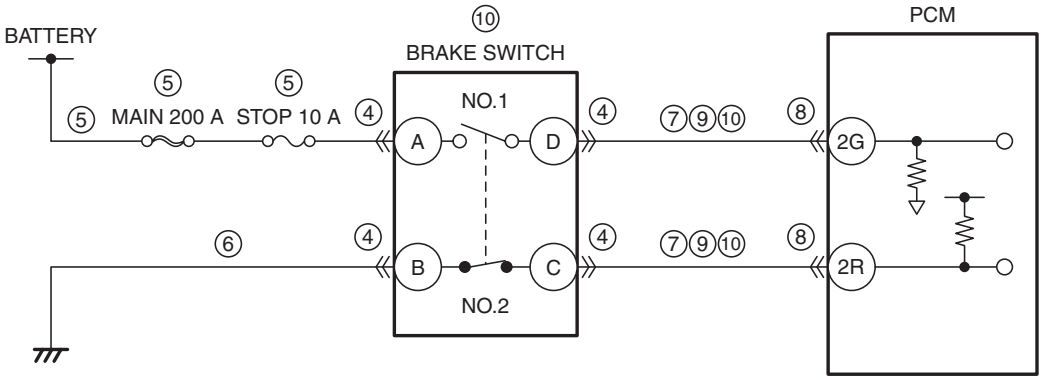
STEP	INSPECTION		ACTION
8	**INSPECT POWER BRAKE UNIT VACUUM SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the power brake unit vacuum sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Power brake unit vacuum sensor terminal C—PCM terminal 2BG — Power brake unit vacuum sensor terminal B—PCM terminal 2Q — Power brake unit vacuum sensor terminal A—PCM terminal 2AH • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 10.
9	**INSPECT POWER BRAKE UNIT VACUUM SENSOR** • Inspect the power brake unit vacuum sensor. (See 01-40-68 POWER BRAKE UNIT VACUUM SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the power brake unit vacuum sensor, then go to the next step. (See 04-11-19 POWER BRAKE UNIT VACUUM SENSOR REMOVAL/INSTALLATION.)
		No	Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

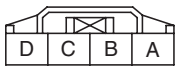
DTC P0571:00 [SKYACTIV-G 2.0]

id0102h1705500

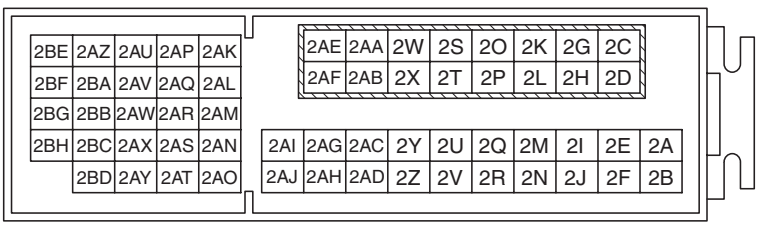
DTC P0571:00	**Brake switch circuit problem**
DETECTION CONDITION	• The PCM monitors changes in input voltage for brake switch No.1 and No.2. • The brake switch circuit malfunction is determined when the following **2 conditions** are repeated **5 times or more**. — Brake switch No.1 and No.2 are on or off simultaneously for a continuous **3 s or more**. — The brake is operated. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	**Caution** • **Inspect the brake switch with it installed to the brake pedal, otherwise the brake switch may not operate normally. If the brake switch is removed from the brake pedal, replace the brake switch with a new one.** • Brake switch connector or terminals malfunction • Short to ground or open circuit in brake switch No.1 power supply circuit — Short to ground in wiring harness between MAIN 200 A fuse and brake switch terminal A — MAIN 200 A fuse and/or STOP 10 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and brake switch terminal A • Open circuit in wiring harness between brake switch terminal B and body ground • Short to ground in wiring harness between the following terminals: — Brake switch terminal D—PCM terminal 2G — Brake switch terminal C—PCM terminal 2R • PCM connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: — Brake switch terminal D—PCM terminal 2G — Brake switch terminal C—PCM terminal 2R • Open circuit in wiring harness between the following terminals: — Brake switch terminal D—PCM terminal 2G — Brake switch terminal C—PCM terminal 2R • Brake switch malfunction • PCM malfunction

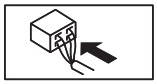


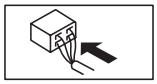
BRAKE SWITCH WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR







ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P0703:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-268 DTC P0703:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT BRAKE SWITCH CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the brake switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
5	**INSPECT BRAKE SWITCH NO.1 POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the brake switch connector is disconnected. • Measure the voltage at the brake switch terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A fuse and STOP 10 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the malfunctioning fuse. • If the fuse is deteriorated: — Replace the malfunctioning fuse. • If all fuses are normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 11.
6	**INSPECT BRAKE SWITCH NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the brake switch connector is disconnected. • Inspect for continuity between brake switch terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
7	**INSPECT BRAKE SWITCH CIRCUIT FOR SHORT TO GROUND** • Verify that the brake switch connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Brake switch terminal D — Brake switch terminal C • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 11.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
9	**INSPECT BRAKE SWITCH CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the brake switch and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — Brake switch terminal D — Brake switch terminal C • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 11.
10	**INSPECT BRAKE SWITCH CIRCUIT FOR OPEN CIRCUIT** • Verify that the brake switch and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between the following terminals (wiring harness-side): — Brake switch terminal D—PCM terminal 2G — Brake switch terminal C—PCM terminal 2R • Is there continuity?	Yes	Replace the brake switch, then go to the next step. (See 04-11-9 BRAKE PEDAL REMOVAL/INSTALLATION [R.H.D.].) (See 04-11-8 BRAKE PEDAL REMOVAL/INSTALLATION [L.H.D.].)
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Switch the ignition ON (engine off or on). • Depress the brake pedal for **15 s** and release **more than 5 times**. • Perform the DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P057F:00 [SKYACTIV-G 2.0]

id0102h1401000

DTC P057F:00	**Power supply malfunction**
DETECTION CONDITION	• The battery charge/discharge flow exceeds the specification. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Inhibits engine-stop by operating the i-stop function. • Inhibits a part of the generator output control.
POSSIBLE CAUSE	• Battery malfunction — Battery deterioration • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

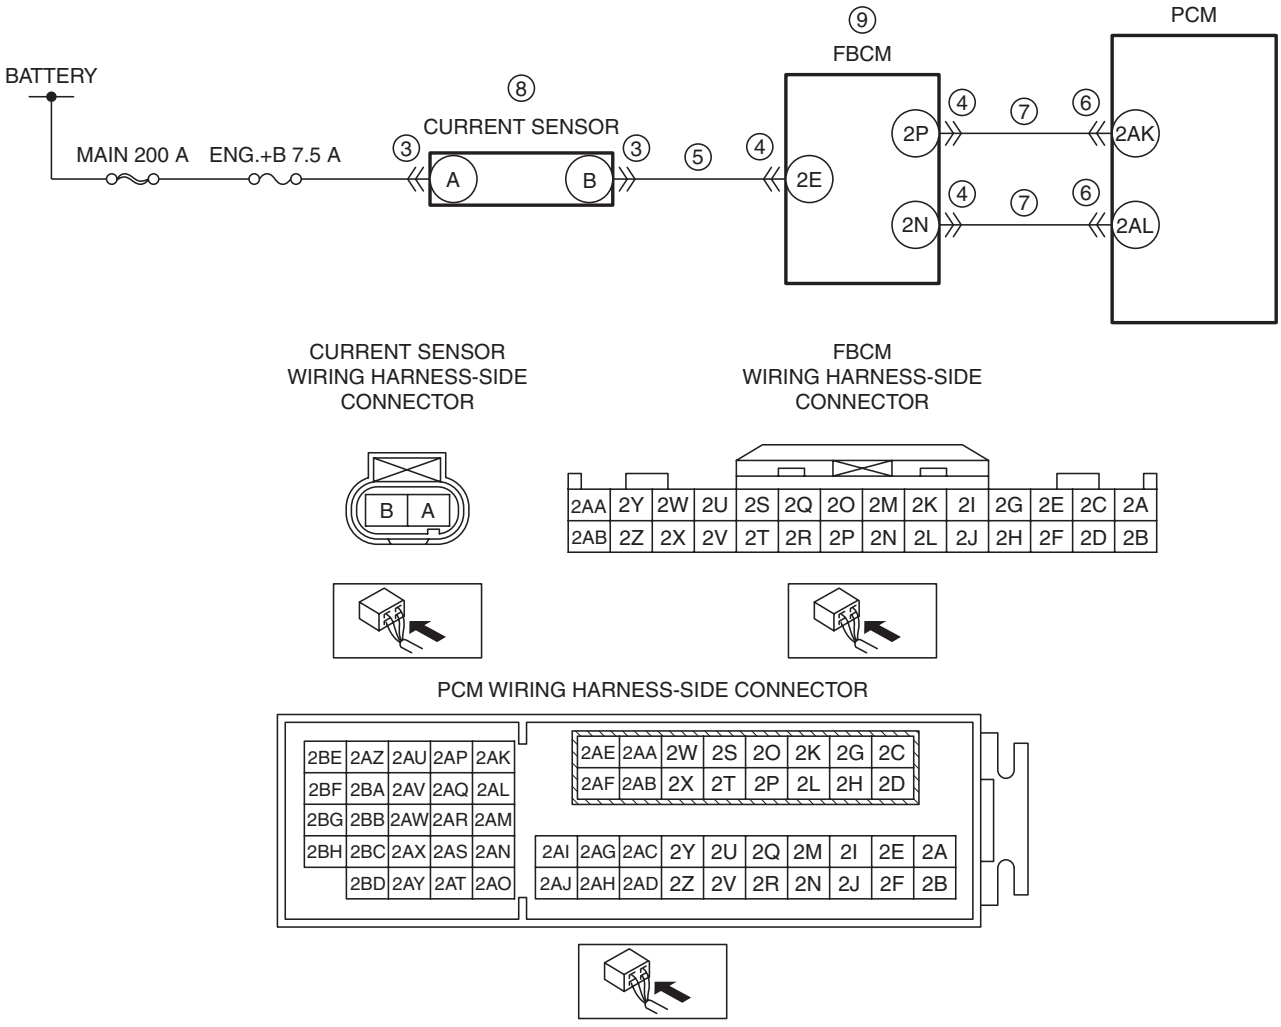
STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT BATTERY** • Switch the ignition to off. • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Recharge or replace the battery, then go to the next step. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P058A:00 [SKYACTIV-G 2.0]

id0102h1401100

DTC P058A:00	Current sensor problem
DETECTION CONDITION	• The following conditions are met: — Current sensor internal malfunction — Battery voltage malfunction — Battery fluid temperature malfunction **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Inhibits engine-stop by operating the i-stop function. • Inhibits a part of the generator output control.
POSSIBLE CAUSE	• Current sensor connector or terminals malfunction • Front body control module (FBCM) connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: — Battery positive terminal—Current sensor terminal A — Current sensor terminal B—Front body control module (FBCM) terminal 2E • PCM connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: — Front body control module (FBCM) terminal 2P—PCM terminal 2AK — Front body control module (FBCM) terminal 2N—PCM terminal 2AL • Current sensor malfunction • Front body control module (FBCM) malfunction • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT CURRENT SENSOR CONNECTOR CONDITION** **Note** • Always disconnect current sensor connector before disconnecting the negative battery cable. • Switch the ignition to off. • Disconnect the current sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
4	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT CURRENT SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the current sensor and front body control module (FBCM) connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — Current sensor terminal A — Current sensor terminal B • Is the voltage **above B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Switch the ignition to off. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
7	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the current sensor, front body control module (FBCM) and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — Front body control module (FBCM) terminal 2P — Front body control module (FBCM) terminal 2N • Is the voltage **above B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
8	**INSPECT CURRENT SENSOR** • Inspect the current sensor. (See 01-40-66 CURRENT SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the current sensor, then go to Step 10. (See 01-40-65 CURRENT SENSOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
9	**INSPECT FRONT BODY CONTROL MODULE (FBCM)** • Inspect the front body control module (FBCM). (See 09-40-3 FRONT BODY CONTROL MODULE (FBCM) INSPECTION.) • Is there any malfunction?	Yes	Replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P0600:00 [SKYACTIV-G 2.0]

id0102h1850400

DTC P0600:00	Serial communication link
DETECTION CONDITION	• PCM internal malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P0601:00 [SKYACTIV-G 2.0]

id0102h1705600

DTC P0601:00	PCM memory check sum error
DETECTION CONDITION	• PCM internal memory check sum error. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8** ° by return spring force).
POSSIBLE CAUSE	• PCM connector or terminals malfunction • PCM internal memory malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P0602:00 [SKYACTIV-G 2.0]

id0102h1705700

DTC P0602:00	PCM programming error
DETECTION CONDITION	• No configuration data in the PCM. **Note** • If the “PCM CONFIGURATION” is successful, the PCM stores the DTC P0602:00 and illuminates the check engine light (system is normal). Clear the DTC P0602:00 using the M-MDS after the “PCM CONFIGURATION”. • The check engine light goes out after three drive cycles with no failure (the DTCs remain in PCM). **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Configuration has not been completed • PCM connector or terminals malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
3	**PERFORM PCM CONFIGURATION** • Perform the PCM configuration (using read/write function). (See 01-40-39 PCM CONFIGURATION (USING READ/WRITE FUNCTION) [SKYACTIV-G 2.0].) • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Go to the next step.
		No	Go to Step 6.
4	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Perform the PCM configuration (using read/write function) again. (See 01-40-39 PCM CONFIGURATION (USING READ/WRITE FUNCTION) [SKYACTIV-G 2.0].) • If the malfunction recurs, perform the PCM configuration (using as-built data). (See 01-40-39 PCM CONFIGURATION (USING AS-BUILT DATA) [SKYACTIV-G 2.0].) Go to the next step.
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0604:00 [SKYACTIV-G 2.0]

id0102h1705800

DTC P0604:00	PCM RAM error
DETECTION CONDITION	• PCM internal RAM malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8** ° by return spring force).
POSSIBLE CAUSE	• PCM connector or terminals malfunction • PCM internal RAM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0606:00 [SKYACTIV-G 2.0]

id0102h1705900

DTC P0606:00	PCM processor error
DETECTION CONDITION	• PCM internal CPU malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8** ° by return spring force).
POSSIBLE CAUSE	• PCM connector or terminals malfunction • PCM malfunction — PCM internal CPU malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0607:00 [SKYACTIV-G 2.0]

id0102h1850500

DTC P0607:00	**Control module performance problem**
DETECTION CONDITION	• PCM internal malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• PCM internal malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0610:00 [SKYACTIV-G 2.0]

id0102h1706000

DTC P0610:00	PCM vehicle configuration error
DETECTION CONDITION	• PCM data configuration error. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Configuration procedure has not been completed • PCM connector or terminals malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**PERFORM PCM CONFIGURATION** • Perform the PCM configuration (using read/ write function). (See 01-40-39 PCM CONFIGURATION (USING READ/WRITE FUNCTION) [SKYACTIV-G 2.0].) • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Go to the next step.
		No	Go to Step 6.
4	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Perform the PCM configuration (using read/write function) again. (See 01-40-39 PCM CONFIGURATION (USING READ/ WRITE FUNCTION) [SKYACTIV-G 2.0].) • If the malfunction recurs, perform the PCM configuration (using as-built data). (See 01-40-39 PCM CONFIGURATION (USING AS-BUILT DATA) [SKYACTIV-G 2.0].) Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P0615:00 [SKYACTIV-G 2.0]

id0102h1061500

DTC P0615:00	**Starter relay circuit problem**
DETECTION CONDITION	• The PCM records DTCs when the number of times the engine has been started reaches the warranted performance frequency for the starter or starter relay. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Inhibits engine-stop by operating the i-stop function.
POSSIBLE CAUSE	• Number of times engine has been started has reached warranted performance frequency for starter or starter relay. • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**REPLACE STARTER AND STARTER RELAY** • Switch the ignition to off. • Replace the starter and starter relay. (See 01-19A-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)	—	Go to the next step.
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P061B:00 [SKYACTIV-G 2.0]

id0102h1302400

DTC P061B:00	**Internal control module torque calculation performance problem**
DETECTION CONDITION	• Indicates that a calculation error occurred in the PCM. • There is a malfunction in the sensor input signal to the PCM. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed.
POSSIBLE CAUSE	**Note** • This DTC is an informational DTC and may be set in combination with a number of other DTCs which are causing the FMEM. Diagnose other DTCs first. • PCM connector or terminals malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Reconnect the PCM connector and verify that the connector seat correctly, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P061D:00 [SKYACTIV-G 2.0]

id0102h1302500

DTC P061D:00	**Internal control module engine air mass performance problem**
DETECTION CONDITION	• Indicates an error occurred in the PCM. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed.
POSSIBLE CAUSE	• PCM connector or terminals malfunction • Software incompatibility issue • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 5.
		No	Reconnect the PCM connector and verify that the connector seat correctly, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
4	**INSPECT PCM FOR LATEST CALIBRATION** • Program the PCM to the latest calibration. • Switch the ignition to off. • Perform the KOEO self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Switch the ignition to off. • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Use the customer information to recreate the concern. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P061F:00 [SKYACTIV-G 2.0]

id0102h1302600

DTC P061F:00	**Internal control module throttle valve actuator controller performance problem**
DETECTION CONDITION	• When any of the following conditions is met: — CAN communication line between start stop unit and PCM malfunction — Start stop unit internal malfunction — PCM internal malfunction **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	**Note** • This DTC is an informational DTC and may be set in combination with a number of other DTCs which are causing the FMEM. Diagnose other DTCs first. • CAN communication line between start stop unit and PCM malfunction • Start stop unit connector or terminals malfunction • PCM connector or terminals malfunction • Start stop unit malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the start stop unit connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 5.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Reconnect the PCM connector and verify that the connector seat correctly, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

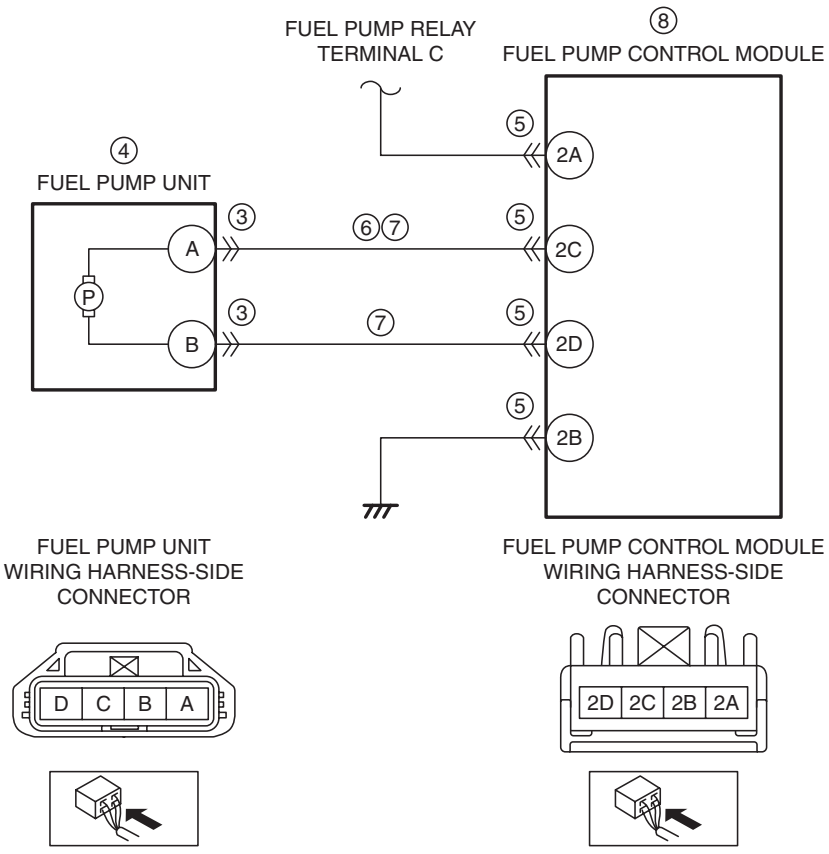
STEP	INSPECTION		ACTION
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0628:00 [SKYACTIV-G 2.0]

id0102h1148600

DTC P0628:00	**Fuel pump control module circuit low input**
DETECTION CONDITION	• When the PCM outputs a duty signal to the fuel pump control module, the difference in voltage between fuel pump unit terminals B and D is **less than 1.5 V** for a continuous **5 s**. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Fuel pump unit connector or terminals malfunction • Fuel pump unit malfunction • Fuel pump control module connector or terminals malfunction • Short to ground in wiring harness between fuel pump unit terminal A and fuel pump control module terminal 2C • Open circuit in wiring harness between the following terminals: — Fuel pump unit terminal A—Fuel pump control module terminal 2C — Fuel pump unit terminal B—Fuel pump control module terminal 2D • Fuel pump control module malfunction • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

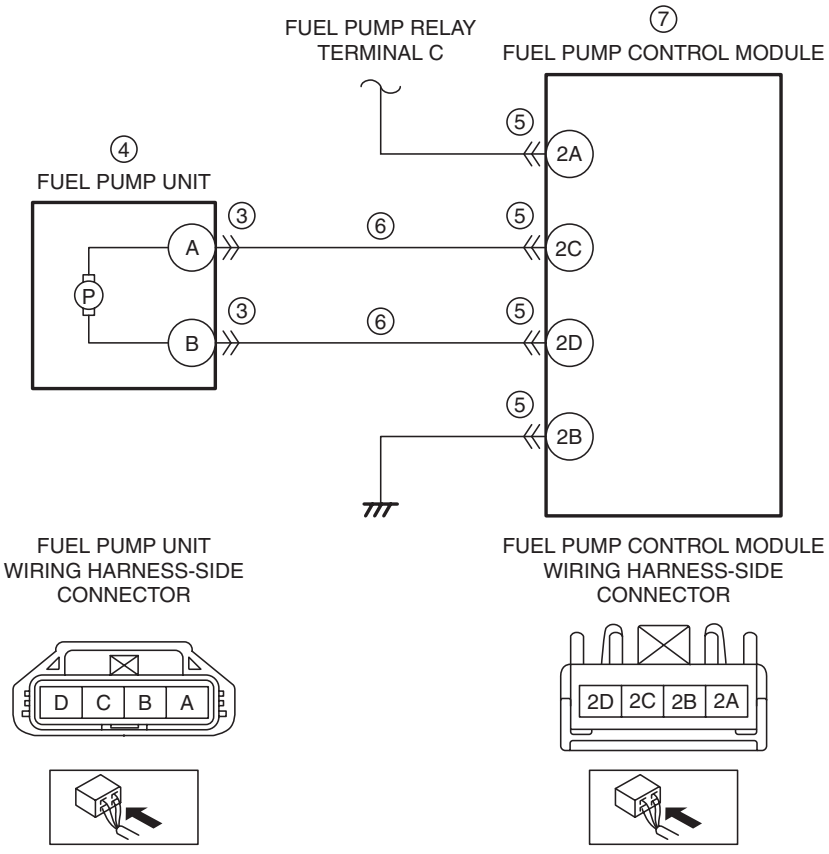
STEP	INSPECTION		ACTION
3	**INSPECT FUEL PUMP UNIT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the fuel pump unit connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT FUEL PUMP UNIT** • Inspect the fuel pump unit. (See 01-14A-44 FUEL PUMP UNIT INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel pump unit, then go to Step 9. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT FUEL PUMP CONTROL MODULE CONNECTOR CONDITION** • Disconnect the fuel pump control module connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT FUEL PUMP UNIT CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the fuel pump unit and fuel pump control module connectors are disconnected. • Inspect for continuity between fuel pump unit terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FUEL PUMP UNIT CIRCUIT FOR OPEN CIRCUIT** • Verify that the fuel pump unit and fuel pump control module connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Fuel pump unit terminal A—Fuel pump control module terminal 2C — Fuel pump unit terminal B—Fuel pump control module terminal 2D • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	**INSPECT FUEL PUMP CONTROL MODULE** • Inspect the fuel pump control module. (See 01-14A-64 FUEL PUMP CONTROL MODULE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel pump control module, then go to the next step. (See 01-14A-63 FUEL PUMP CONTROL MODULE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0629:00 [SKYACTIV-G 2.0]

id0102h1148700

DTC P0629:00	Fuel pump control module circuit high input
DETECTION CONDITION	• Over-current is detected. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops the fuel pump control.
POSSIBLE CAUSE	• Fuel pump unit connector or terminals malfunction • Fuel pump unit malfunction • Fuel pump control module connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: — Fuel pump unit terminal A—Fuel pump control module terminal 2C — Fuel pump unit terminal B—Fuel pump control module terminal 2D • Fuel pump control module malfunction • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

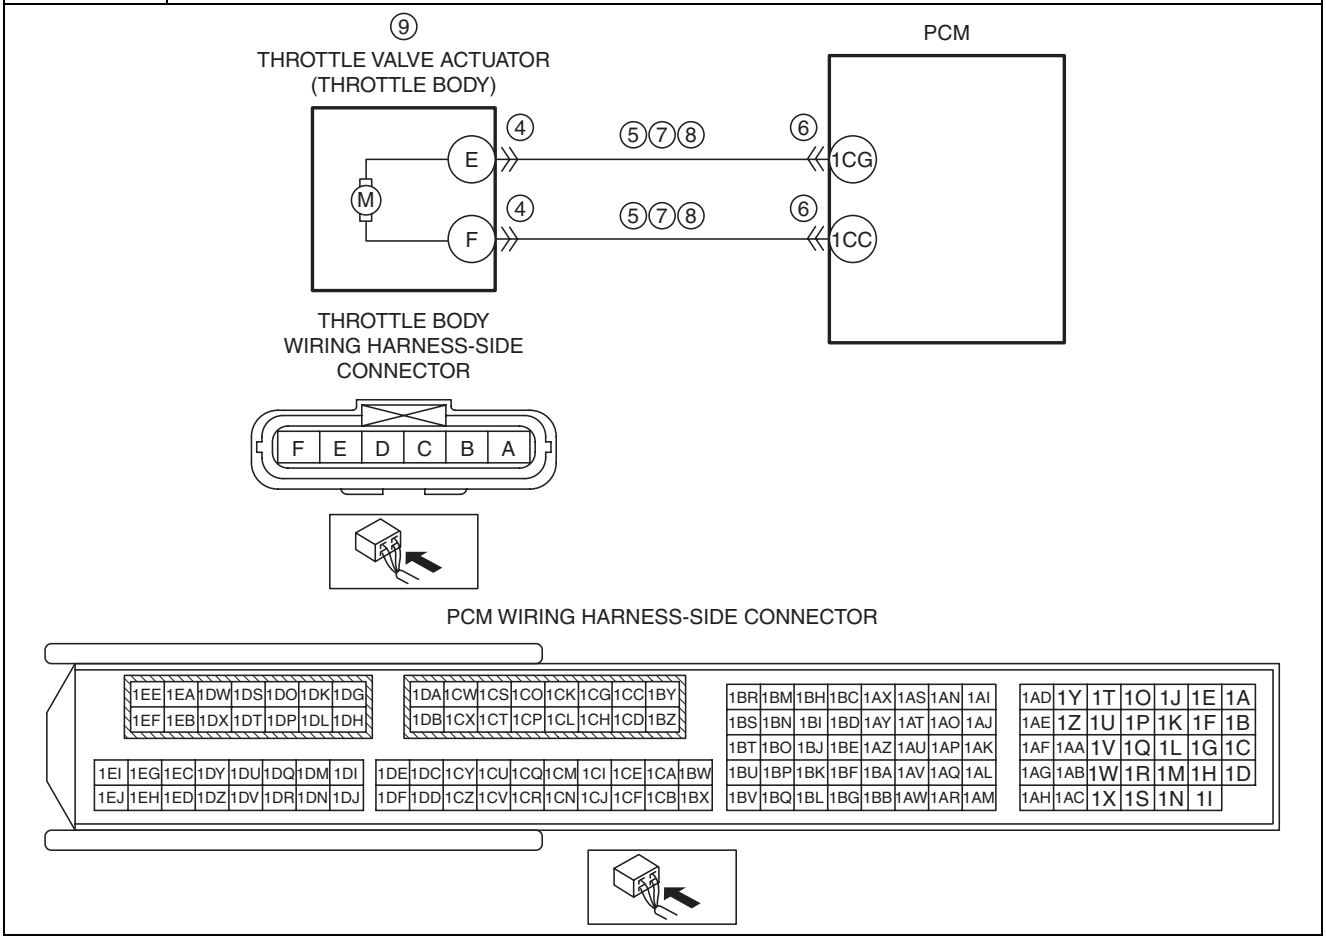
STEP	INSPECTION		ACTION
3	**INSPECT FUEL PUMP UNIT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the fuel pump unit connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
4	**INSPECT FUEL PUMP UNIT** • Inspect the fuel pump unit. (See 01-14A-44 FUEL PUMP UNIT INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel pump unit, then go to Step 8. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT FUEL PUMP CONTROL MODULE CONNECTOR CONDITION** • Disconnect the fuel pump control module connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	**INSPECT FUEL PUMP UNIT CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the fuel pump unit and fuel pump control module connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — Fuel pump unit terminal A — Fuel pump unit terminal B • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
7	**INSPECT FUEL PUMP CONTROL MODULE** • Inspect the fuel pump control module. (See 01-14A-64 FUEL PUMP CONTROL MODULE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel pump control module, then go to the next step. (See 01-14A-63 FUEL PUMP CONTROL MODULE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0638:00 [SKYACTIV-G 2.0]

id0102h1706100

DTC P0638:00	Throttle valve actuator control range/performance problem
DETECTION CONDITION	• The PCM compares the actual TP with the target TP. If the difference is more than the threshold value, the PCM determines that there is a throttle valve actuator control range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8** ° by return spring force).
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — Throttle body terminal E—PCM terminal 1CG — Throttle body terminal F—PCM terminal 1CC • PCM connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: — Throttle body terminal E—PCM terminal 1CG — Throttle body terminal F—PCM terminal 1CC • Open circuit in wiring harness between the following terminals: — Throttle body terminal E—PCM terminal 1CG — Throttle body terminal F—PCM terminal 1CC • Throttle valve actuator malfunction • Throttle valve malfunction • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT THROTTLE VALVE ACTUATOR CIRCUIT FOR SHORT TO GROUND** • Verify that the throttle body connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Throttle body terminal E — Throttle body terminal F • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 10.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
7	**INSPECT THROTTLE VALVE ACTUATOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the throttle body and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — Throttle body terminal E—PCM terminal 1CG — Throttle body terminal F—PCM terminal 1CC • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
8	**INSPECT THROTTLE VALVE ACTUATOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the throttle body and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between the following terminals (wiring harness-side): — Throttle body terminal E—PCM terminal 1CG — Throttle body terminal F—PCM terminal 1CC • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 10.
9	**INSPECT THROTTLE VALVE** • Perform the Electronic Control Throttle Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P064D:00 [SKYACTIV-G 2.0]

id0102h1302700

DTC P064D:00	Internal control module A/F sensor processor performance problem
DETECTION CONDITION	• The A/F sensor IC integrated in the PCM converts to the voltage value for the fuel control and for the diagnosis based on the A/F sensor signal current and sends to the CPU (integrated in the PCM). If there is a transmission format error from the A/F sensor IC to the PCM, the PCM will detect a transmission error. **MONITORING CONDITIONS** — Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode) — Following conditions are met: • Engine is running • Battery voltage: **11—18 V** **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the duty value of the A/F sensor heater. • Stops the fuel feedback control.
POSSIBLE CAUSE	• PCM internal malfunction (between CPU and A/F sensor control IC communication line)
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

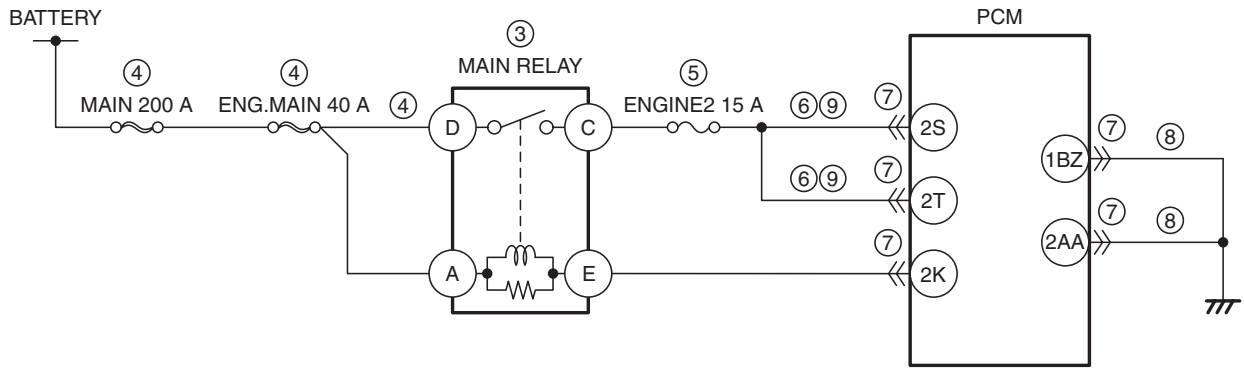
DTC P0685:00 [SKYACTIV-G 2.0]

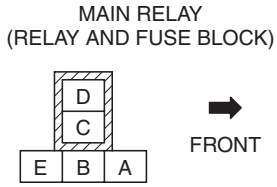
id0102h1302800

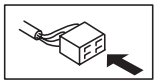
DTC P0685:00	Main relay control circuit open
DETECTION CONDITION	• This DTC sets when the ignition switch position run circuit indicates the key is in the off, ACC, or LOCK position, and the amount of time the PCM remains powered through the PCM power relay exceeds a predetermined amount of time. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Main relay malfunction • Short to ground or open circuit in main relay power supply circuit: — Short to ground in wiring harness between MAIN 200 A fuse and main relay terminal D — MAIN 200 A fuse and/or ENG.MAIN 40 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and main relay terminal D • ENGINE2 15 A fuse malfunction • Short to ground in wiring harness between the following terminals: — Main relay terminal C—PCM terminal 2S — Main relay terminal C—PCM terminal 2T • PCM connector or terminals malfunction • Open circuit in wiring harness between PCM terminal 1BZ and body ground • Open circuit in wiring harness between PCM terminal 2AA and body ground • Open circuit in wiring harness between the following terminals: — Main relay terminal C—PCM terminal 2S — Main relay terminal C—PCM terminal 2T • PCM malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

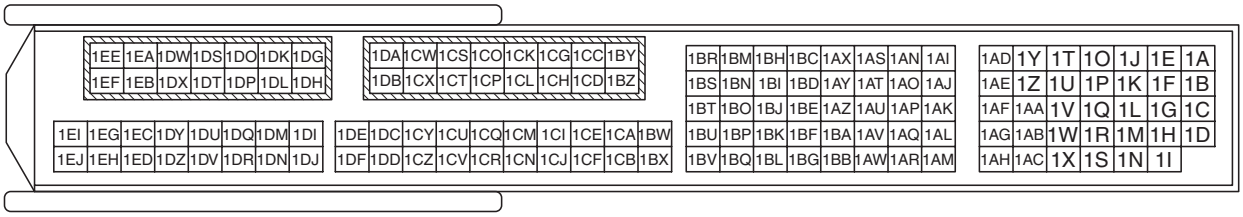
DTC P0685:00	Main relay control circuit open

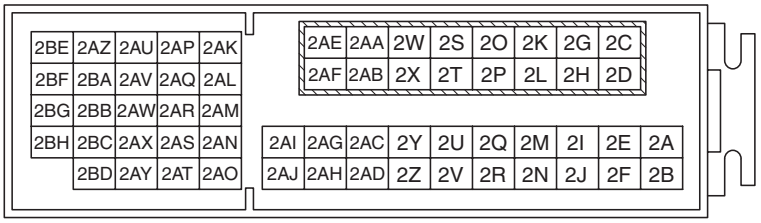


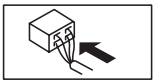




PCM WIRING HARNESS-SIDE CONNECTOR







Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAIN RELAY** • Switch the ignition to off. • Remove the main relay. • Inspect the main relay. (See 09-21-29 RELAY INSPECTION.) • Is there any malfunction?	Yes	Replace the main relay, then go to Step 10.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
4	**INSPECT MAIN RELAY POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Main relay is removed. • Measure the voltage at the main relay terminal D (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A fuse and ENG.MAIN 40 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the malfunctioning fuse. • If the fuse is deteriorated: — Replace the malfunctioning fuse. • If all fuses are normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 10.
5	**INSPECT ENGINE2 15 A FUSE** • Remove the ENGINE2 15 A fuse. • Inspect the ENGINE2 15 A fuse. • Is there any malfunction?	Yes	If the fuse is blown: • Repair or replace the wiring harness for a possible short to ground. • Replace the fuse. If the fuse is deteriorated: • Replace the fuse. Go to Step 10.
		No	Reinstall the ENGINE2 15 A fuse, then go to the next step.
6	**INSPECT PCM POWER SUPPLY CIRCUIT FOR SHORT TO GROUND** • Main relay is removed. • Inspect for continuity between main relay terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 10.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM GROUND CIRCUIT FOR OPEN CIRCUIT** • Main relay is removed. • Verify that the PCM connector is disconnected. • Inspect for continuity between the following harnesses: — PCM terminal 1BZ (wiring harness-side)—Body ground — PCM terminal 2AA (wiring harness-side)—Body ground • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 10.
9	**INSPECT PCM POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Main relay is removed. • Verify that the PCM connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Main relay terminal C—PCM terminal 2S — Main relay terminal C—PCM terminal 2T • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P06B8:00 [SKYACTIV-G 2.0]

id0102h1316200

DTC P06B8:00	**Internal control module non-volatile RAM error**
DETECTION CONDITION	• PCM internal EEPROM malfunction. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• PCM connector or terminals malfunction • PCM internal EEPROM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

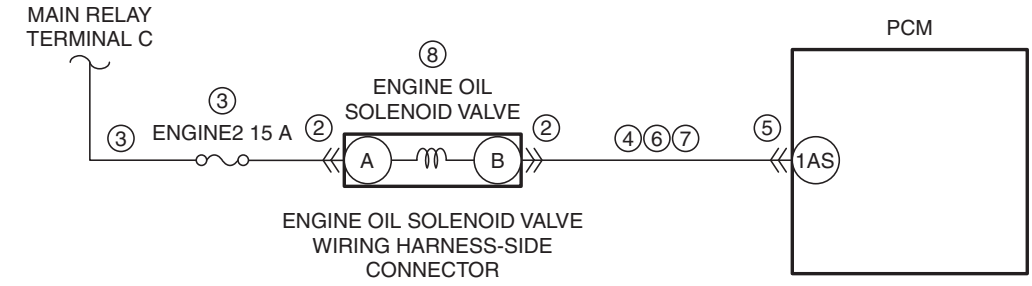
STEP	INSPECTION		ACTION
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

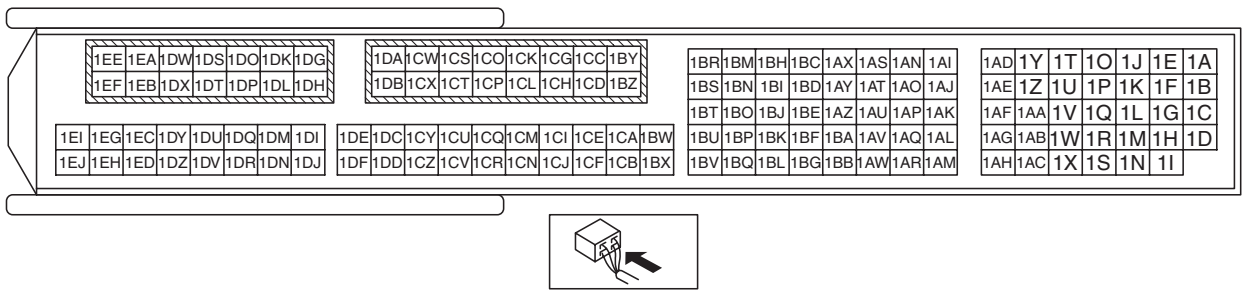
DTC P06DA:00 [SKYACTIV-G 2.0]

id0102h1009300

DTC P06DA:00	**Engine oil solenoid valve circuit problem**
DETECTION CONDITION	• The engine oil solenoid valve control current exceeds the specification or the control voltage at the PCM terminal 1AS is less than the specification relative to the PCM control condition. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Engine oil solenoid valve connector or terminals malfunction • Short to ground or open circuit in engine oil solenoid valve power supply circuit — Short to ground in wiring harness between ENGINE2 15 A fuse and engine oil solenoid valve terminal A — ENGINE2 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and engine oil solenoid valve terminal A • Short to ground in wiring harness between engine oil solenoid valve terminal B and PCM terminal 1AS • PCM connector or terminals malfunction • Short to power supply in wiring harness between engine oil solenoid valve terminal B and PCM terminal 1AS • Open circuit in wiring harness between engine oil solenoid valve terminal B and PCM terminal 1AS • Engine oil solenoid valve malfunction • PCM malfunction



PCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ENGINE OIL SOLENOID VALVE CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the engine oil solenoid valve connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
3	**INSPECT ENGINE OIL SOLENOID VALVE POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the engine oil solenoid valve connector is disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the engine oil solenoid valve terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE2 15 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 9.
4	**INSPECT ENGINE OIL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the engine oil solenoid valve connector is disconnected. • Switch the ignition to off. • Inspect for continuity between engine oil solenoid valve terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT ENGINE OIL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the engine oil solenoid valve and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the engine oil solenoid valve terminal B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
7	**INSPECT ENGINE OIL SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the engine oil solenoid valve and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between engine oil solenoid valve terminal B (wiring harness-side) and PCM terminal 1AS (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	**INSPECT ENGINE OIL SOLENOID VALVE** • Inspect the engine oil solenoid valve. (See 01-11A-12 ENGINE OIL SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the engine oil solenoid valve, then go to the next step. (See 01-11A-10 ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

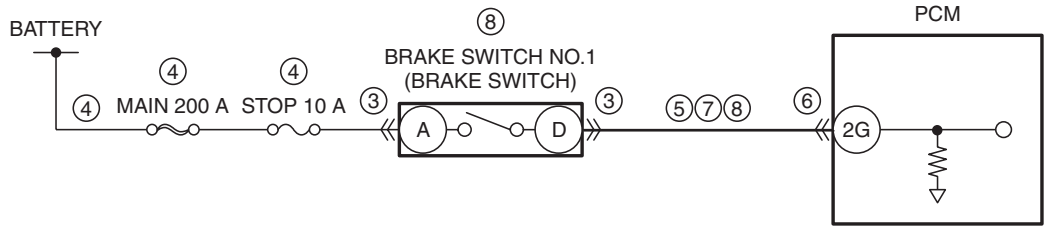
STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

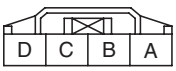
DTC P0703:00 [SKYACTIV-G 2.0]

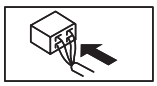
id0102h1706500

DTC P0703:00	**Brake switch input circuit problem**
DETECTION CONDITION	• The PCM monitors the input signal from the brake switch No.1. If the input signal does not change while following decelerating **8 times**, the PCM determines that there is a brake switch No.1 input circuit problem. **MONITORING CONDITIONS** — Vehicle speed: from **above 30 km/h {19 mph}** to **30 km/h {19 mph} or less** — Deceleration rate: **exceeds 2.4 km/h {1.5 mph} per sec** **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	**Caution** • **Inspect the brake switch with it installed to the brake pedal, otherwise the brake switch may not operate normally. If the brake switch is removed from the brake pedal, replace the brake switch with a new one.** • Brake switch connector or terminals malfunction • Short to ground or open circuit in brake switch No.1 power supply circuit — Short to ground in wiring harness between MAIN 200 A fuse and brake switch terminal A — MAIN 200 A fuse and/or STOP 10 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and brake switch terminal A • Short to ground in wiring harness between brake switch terminal D and PCM terminal 2G • PCM connector or terminals malfunction • Short to power supply in wiring harness between brake switch terminal D and PCM terminal 2G • Open circuit in wiring harness between brake switch terminal D and PCM terminal 2G • Brake switch No.1 malfunction • PCM malfunction

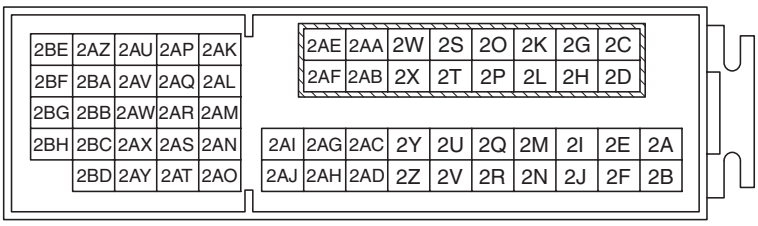


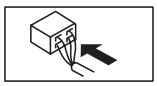
BRAKE SWITCH WIRING HARNESS-SIDE CONNECTOR





PCM WIRING HARNESS-SIDE CONNECTOR





ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BRAKE SWITCH CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the brake switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT BRAKE SWITCH NO.1 POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the brake switch connector is disconnected. • Measure the voltage at the brake switch terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A fuse and STOP 10 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the malfunctioning fuse. • If the fuse is deteriorated: — Replace the malfunctioning fuse. • If all fuses are normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 9.
5	**INSPECT BRAKE SWITCH NO.1 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the brake switch connector is disconnected. • Inspect for continuity between brake switch terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	**INSPECT BRAKE SWITCH NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the brake switch and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the brake switch terminal D (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
8	**INSPECT BRAKE SWITCH NO.1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the brake switch and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between brake switch terminal D (wiring harness-side) and PCM terminal 2G (wiring harness-side). • Is there continuity?	Yes	Replace the brake switch, then go to the next step. (See 04-11-9 BRAKE PEDAL REMOVAL/INSTALLATION [R.H.D.].) (See 04-11-8 BRAKE PEDAL REMOVAL/INSTALLATION [L.H.D.].)
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

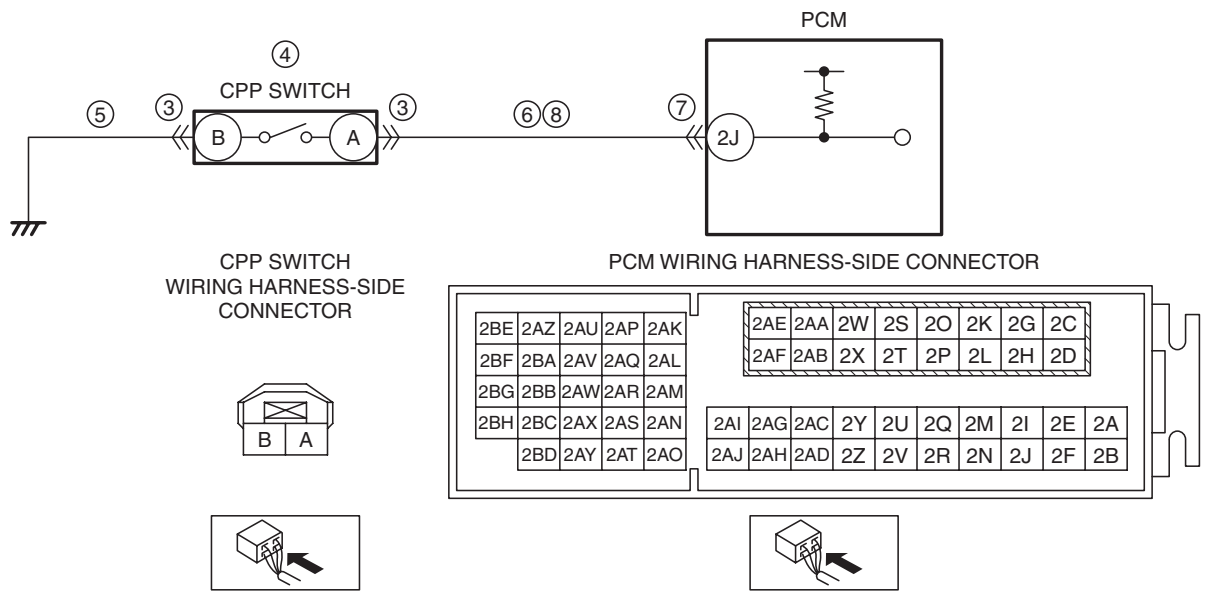
STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Drive the vehicle. • Repeat deceleration **8 times** under both of the following conditions: — Vehicle speed: from **above 30 km/h {19 mph}** to **30 km/h {19 mph} or less** — Deceleration rate: **exceeds 2.4 km/h {1.5 mph} per sec** • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0704:00 [SKYACTIV-G 2.0]

id0102h1706600

DTC P0704:00	**CPP switch input circuit problem**
DETECTION CONDITION	• The PCM monitors changes in input voltage from the CPP switch. If the PCM does not detect a voltage change while the vehicle runs with vehicle speed **above 30 km/h {19 mph}** and stops **8 times** alternately, the PCM determines that the CPP switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	**Caution** • **Inspect the CPP switch with it installed to the clutch pedal, otherwise the CPP switch may not operate normally after inspection. If the CPP switch is removed from the clutch pedal, replace the CPP switch with a new one.** • CPP switch connector or terminals malfunction • CPP switch malfunction • Open circuit in wiring harness between CPP switch terminal B and body ground • Short to ground in wiring harness between CPP switch terminal A and PCM terminal 2J • PCM connector or terminals malfunction • Open circuit in wiring harness between CPP switch terminal A and PCM terminal 2J • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

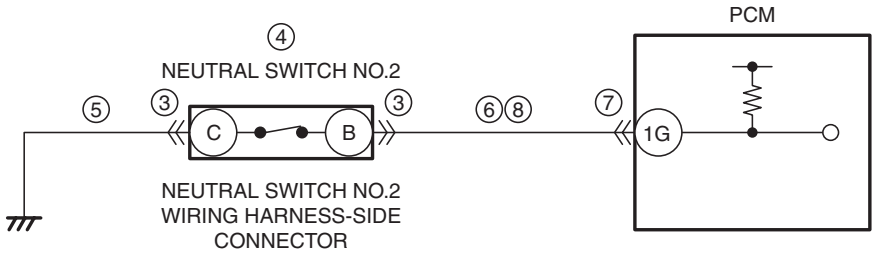
STEP	INSPECTION		ACTION
3	**INSPECT CPP SWITCH CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the CPP switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT CPP SWITCH** • Inspect the CPP switch. (See 01-40-40 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the CPP switch, then go to Step 9. (See 05-10A-13 CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
		No	Go to the next step.
5	**INSPECT CPP SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the CPP switch connector is disconnected. • Inspect for continuity between CPP switch terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
6	**INSPECT CPP SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the CPP switch connector is disconnected. • Inspect for continuity between CPP switch terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
8	**INSPECT CPP SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the CPP switch and PCM connectors are disconnected. • Inspect for continuity between CPP switch terminal A (wiring harness-side) and PCM terminal 2J (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Operate the clutch pedal while driving the vehicle **above 30 km/h {19 mph}** and stopping **8 times** alternately. • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

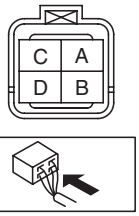
ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P07BE:00 [SKYACTIV-G 2.0]

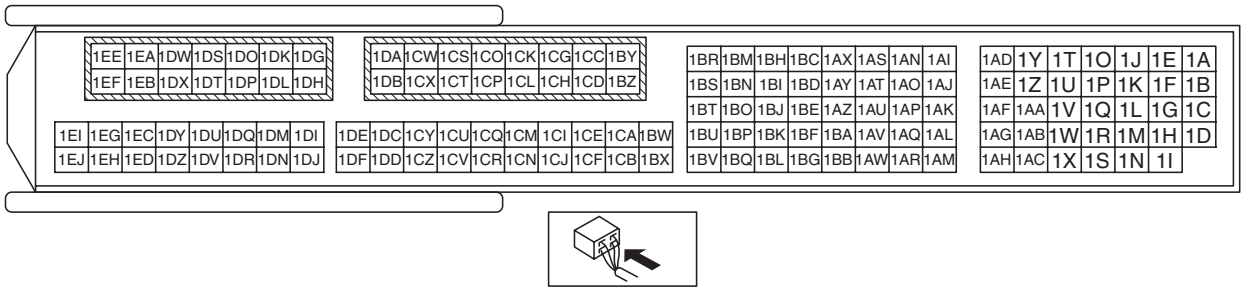
id0102h1950300

DTC P07BE:00	**Transmission indeterminate failure (failed to neutral)**
DETECTION CONDITION	• Correlation malfunction between neutral switches No.1 and No.2. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Neutral switch No.2 connector or terminals malfunction • Neutral switch No.2 malfunction • Open circuit in wiring harness between neutral switch No.2 terminal C and body ground • Short to ground in wiring harness between neutral switch No.2 terminal B and PCM terminal 1G • PCM connector or terminals malfunction • Open circuit in wiring harness between neutral switch No.2 terminal B and PCM terminal 1G • PCM malfunction





PCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P0850:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-275 DTC P0850:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

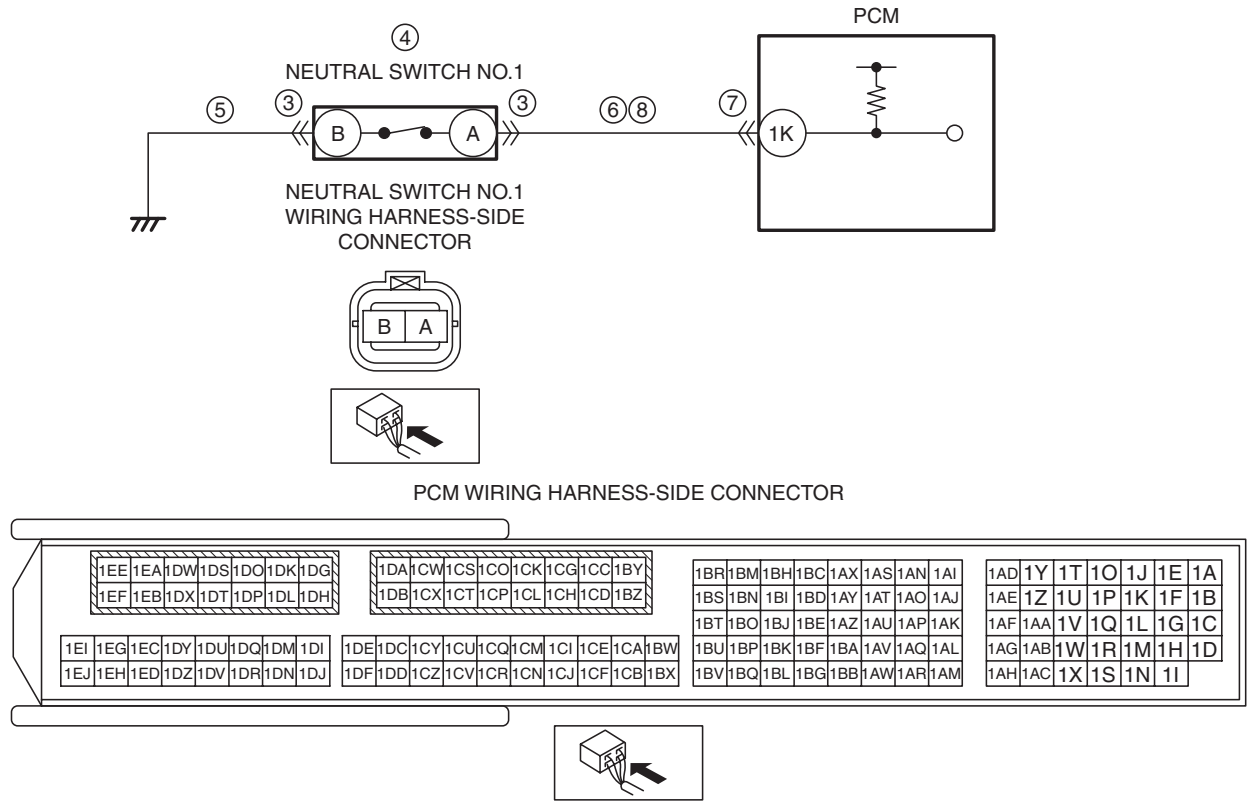
STEP	INSPECTION		ACTION
3	**INSPECT NEUTRAL SWITCH NO.2 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the neutral switch No.2 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT NEUTRAL SWITCH NO.2** • Inspect the neutral switch No.2. (See 01-40-40 NEUTRAL SWITCH INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the neutral switch No.2, then go to Step 9. (See 05-15A-2 NEUTRAL SWITCH REMOVAL/ INSTALLATION [C66M-R, C66MX-R].)
		No	Go to the next step.
5	**INSPECT NEUTRAL SWITCH NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the neutral switch No.2 connector is disconnected. • Inspect for continuity between neutral switch No.2 terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
6	**INSPECT NEUTRAL SWITCH NO.2 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the neutral switch No.2 connector is disconnected. • Inspect for continuity between neutral switch No.2 terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
8	**INSPECT NEUTRAL SWITCH NO.2 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the neutral switch No.2 and PCM connectors are disconnected. • Inspect for continuity between neutral switch No.2 terminal B (wiring harness-side) and PCM terminal 1G (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0850:00 [SKYACTIV-G 2.0]

id0102h1706700

DTC P0850:00	**Neutral switch No.1 input circuit problem**
DETECTION CONDITION	• The PCM monitors changes in input voltage from the neutral switch No.1. If the PCM does not detect a voltage change while driving the vehicle at a vehicle speed **above 30 km/h {19 mph}** and clutch pedal is pressed and released **10 times** repeatedly, the PCM determines that the neutral switch No.1 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Neutral switch No.1 connector or terminals malfunction • Neutral switch No.1 malfunction • Open circuit in wiring harness between neutral switch No.1 terminal B and body ground • Short to ground in wiring harness between neutral switch No.1 terminal A and PCM terminal 1K • PCM connector or terminals malfunction • Open circuit in wiring harness between neutral switch No.1 terminal A and PCM terminal 1K • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
3	**INSPECT NEUTRAL SWITCH NO.1 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the neutral switch No.1 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT NEUTRAL SWITCH NO.1** • Inspect the neutral switch No.1. (See 01-40-40 NEUTRAL SWITCH INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the neutral switch No.1, then go to Step 9. (See 05-15A-2 NEUTRAL SWITCH REMOVAL/ INSTALLATION [C66M-R, C66MX-R].)
		No	Go to the next step.
5	**INSPECT NEUTRAL SWITCH NO.1 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the neutral switch No.1 connector is disconnected. • Inspect for continuity between neutral switch No.1 terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
6	**INSPECT NEUTRAL SWITCH NO.1 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the neutral switch No.1 connector is disconnected. • Inspect for continuity between neutral switch No.1 terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
8	**INSPECT NEUTRAL SWITCH NO.1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the neutral switch No.1 and PCM connectors are disconnected. • Inspect for continuity between neutral switch No.1 terminal A (wiring harness-side) and PCM terminal 1K (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Drive the vehicle **above 30 km/h {19 mph}** and stop the vehicle. • Depress and release the clutch pedal **more than 10 times** during drive cycle. • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0A0F:00 [SKYACTIV-G 2.0]

id0102h1950400

DTC P0A0F:00	Engine failed to restart
DETECTION CONDITION	• Any of following conditions occurs: — When the engine should restart after it is stopped by the i-stop control, it does not start even though it is cranked for **3 s or more**. — When the engine should restart after it is stopped by the i-stop control, it does not cranked. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Inhibits engine-stop by operating the i-stop function.
POSSIBLE CAUSE	• Related parts malfunction — Starter relay malfunction — Battery malfunction — Wiring harness malfunction between starter relay and PCM, or poor connector contact — Starter malfunction • Piston stop position malfunction during idling stop — Generator control malfunction — CKP sensor signal malfunction — Throttle valve operation malfunction (drive-by-wire control malfunction) — Intake air system related malfunction (air suction, vacuum hose breakage) — Purge control malfunction — Generator drive belt wear — Engine starting system malfunction • Mechanical (engine) malfunction — Improper intake valve timing — Improper operation of electric variable valve timing control system • Electric variable valve timing driver malfunction • Electric variable valve timing motor malfunction • Electric variable valve timing actuator malfunction — Improper exhaust valve timing — Improper operation of hydraulic variable valve timing control system • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P1260:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-289 DTC P1260:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT FOR A MALFUNCTION RELATED INABILITY TO START ENGINE** • Start the engine. • Does the engine start normally?	Yes	Perform the applicable symptom troubleshooting. (See 01-03-19 NO.3 WILL NOT CRANK [SKYACTIV-G 2.0].) (See 01-03-25 NO.4 HARD TO START/LONG CRANK/ERRATIC START/ERRATIC CRANK [SKYACTIV-G 2.0].) (See 01-03-37 NO.6 CRANKS NORMALLY BUT WILL NOT START [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
4	**DETERMINE IF MALFUNCTION IS CAUSED BY ROUGH IDLING OR A PISTON-STOP POSITION CONTROL MALFUNCTION** • Start the engine and warm it up completely. • Is the idle speed stabilized?	Yes	Go to the next step.
		No	Go to Step 10.
5	**INSPECT GENERATOR CONTROL SYSTEM OPERATION** • Start the engine and let it idle. • Access the ALTT V PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Does the PID value increase when the rear window defroster, headlights, and blower motor are operated simultaneously?	Yes	Go to the next step.
		No	Inspect the following: • Wiring harness between generator terminal 2B and PCM terminal 1BE • Wiring harness between generator terminal 2A and PCM terminal 1AF • Generator (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results, then go to Step 17.
6	**INSPECT CKP SENSOR SIGNAL** • Verify the CKP sensor signal using the oscilloscope. (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 8.
7	**INSPECT CKP SENSOR PULSE WHEEL** • Visually inspect the CKP sensor pulse wheel. • Are there any damage or scratches at the CKP sensor pulse wheel?	Yes	Replace the CKP sensor pulse wheel, then go to Step 17.
		No	Inspect the wiring harness between the following terminals: • CKP sensor terminal A—PCM terminal 1BN • CKP sensor terminal C—PCM terminal 1AD • CKP sensor terminal B—PCM terminal 1AH — If there is any malfunction: • Repair or replace the suspected wiring harness, then go to Step 17. — If there is no malfunction: • Replace the CKP sensor, then go to Step 17. (See 01-40-59 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
8	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the Drive-by-wire Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 17.
		No	Go to the next step.
9	**INSPECT GENERATOR DRIVE BELT** • Inspect the generator drive belt. (See 01-10A-9 DRIVE BELT INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the drive belt, then go to Step 17. (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 17.
10	**INSPECT VACUUM HOSE CONNECTION** • Inspect the vacuum hose routine. (See 01-13A-4 INTAKE-AIR SYSTEM VACUUM HOSE ROUTING DIAGRAM [SKYACTIV-G 2.0].) • Are vacuum hoses routines properly?	Yes	Go to the next step.
		No	Reconnect the vacuum hose, then go to Step 17. (See 01-13A-4 INTAKE-AIR SYSTEM VACUUM HOSE ROUTING DIAGRAM [SKYACTIV-G 2.0].)
11	**INSPECT INTAKE-AIR SYSTEM FOR AIR SUCTION** • Inspect for leakage in intake-air system. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 17.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
12	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 17.
		No	Go to the next step.
13	**INSPECT ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See 01-10A-15 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 17. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
14	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See 01-10A-15 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 17. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
15	**INSPECT ELECTRIC VARIABLE VALVE TIMING ACTUATOR** • Inspect the electric variable valve timing actuator. (See 01-10A-22 ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing actuator, then go to Step 17. (See 01-10A-23 ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
16	**INSPECT HYDRAULIC VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Perform the Hydraulic Variable Valve Timing Control System Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step.
		No	Go to the next step.
17	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Stop the engine by operating the i-stop function. • Restart the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
18	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

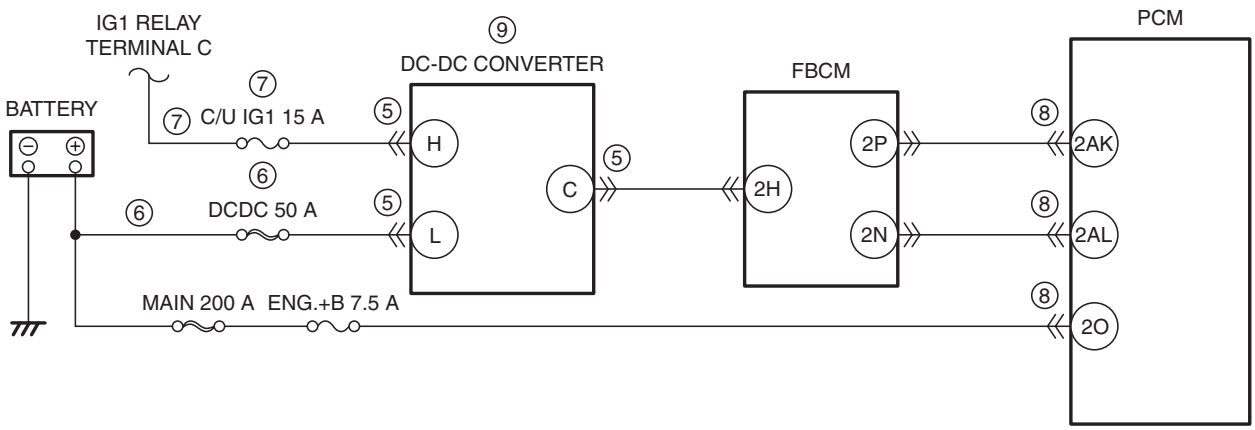
DTC P0A8D:00 [SKYACTIV-G 2.0]

id0102h1009400

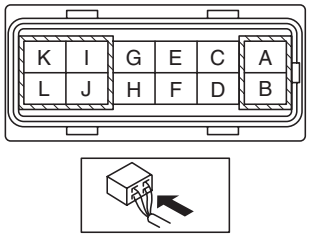
DTC P0A8D:00	Power supply system circuit low input
DETECTION CONDITION	• Any of the values for the battery voltage, voltage for PCM control, and voltage for DC-DC converter control is low when the engine is started. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Inhibits engine-stop by operating the i-stop function. • Inhibits a part of the generator output control.
POSSIBLE CAUSE	• Battery malfunction • DC-DC converter connector or terminals malfunction • Short to ground or open circuit in DC-DC converter power supply circuit — Short to ground in wiring harness between DCDC 50 A fuse and DC-DC converter terminal L — DCDC 50 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and DC-DC converter terminal L • Short to ground or open circuit in DC-DC converter power supply circuit — Short to ground in wiring harness between C/U IG1 15 A fuse and DC-DC converter terminal H — C/U IG1 15 A fuse malfunction — Open circuit in wiring harness between IG1 relay terminal C and DC-DC converter terminal H • PCM connector or terminals malfunction • DC-DC converter malfunction • Current sensor malfunction • Front body control module (FBCM) malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

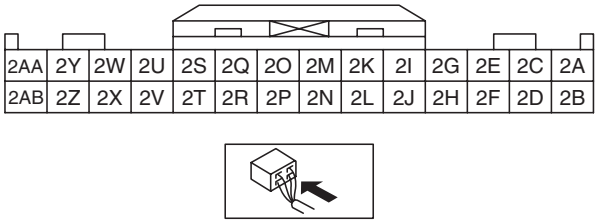
DTC P0A8D:00	Power supply system circuit low input



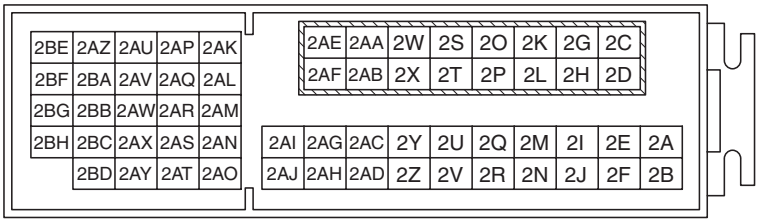
DC-DC CONVERTER WIRING HARNESS-SIDE CONNECTOR



FBCM WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**CONFIRM FRONT BODY CONTROL MODULE (FBCM) DTC** • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

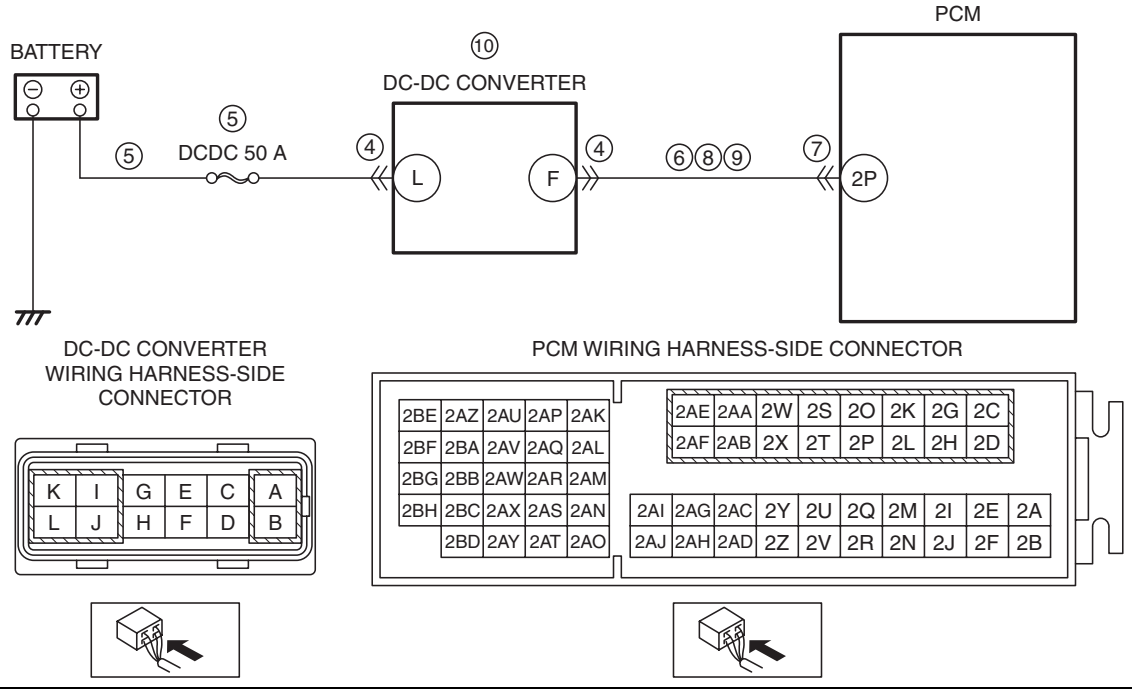
STEP	INSPECTION		ACTION
4	**INSPECT BATTERY** • Switch the ignition to off. • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Recharge or replace the battery, then go to Step 10. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT DC-DC CONVERTER CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the DC-DC converter connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT DC-DC CONVERTER POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the DC-DC converter connector is disconnected. • Measure the voltage at the DC-DC converter terminal L (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the DCDC 50 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 10.
7	**INSPECT DC-DC CONVERTER POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the DC-DC converter connector is disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the DC-DC converter terminal H (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the C/U IG1 15 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 10.
8	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 10.
		No	Go to the next step.
9	**INSPECT DC-DC CONVERTER** • Inspect the DC-DC converter. (See 01-17A-27 DC-DC CONVERTER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the DC-DC converter, then go to the next step. (See 01-17A-26 DC-DC CONVERTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Replace the current sensor, then go to the next step. (See 01-40-65 CURRENT SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P0A94:00 [SKYACTIV-G 2.0]

id0102h1004400

DTC P0A94:00	DC-DC converter control circuit signal error
DETECTION CONDITION	• Internal malfunction signal from DC-DC converter via front body control module (FBCM) is received.(CAN/LIN communication). • Input signal from the DC-DC converter limits the pressure increase time. • Input signal from the DC-DC converter does not implement pressure increase after a pressure increase command to the DC-DC converter. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Inhibits engine-stop by operating the i-stop function.
POSSIBLE CAUSE	• Battery malfunction • DC-DC converter connector or terminals malfunction • Short to ground or open circuit in DC-DC converter power supply circuit — Short to ground in wiring harness between DCDC 50 A fuse and DC-DC converter terminal L — DCDC 50 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and DC-DC converter terminal L • Short to ground in wiring harness between DC-DC converter terminal F and PCM terminal 2P • PCM connector or terminals malfunction • Short to power supply in wiring harness between DC-DC converter terminal F and PCM terminal 2P • Open circuit in wiring harness between DC-DC converter terminal F and PCM terminal 2P • DC-DC converter malfunction • Front body control module (FBCM) malfunction • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**CONFIRM FRONT BODY CONTROL MODULE (FBCM) DTC** • Perform the front body control module (FBCM) DTC inspection using the M-MDS. (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].)
		No	Go to the next step.
4	**INSPECT BATTERY** • Switch the ignition to off. • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Recharge or replace the battery, then go to Step 12. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT DC-DC CONVERTER CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the DC-DC converter connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 12.
		No	Go to the next step.
6	**INSPECT DC-DC CONVERTER POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the DC-DC converter connector is disconnected. • Measure the voltage at the DC-DC converter terminal L (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the DCDC 50 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 12.
7	**INSPECT DC-DC CONVERTER SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the DC-DC converter connector is disconnected. • Inspect for continuity between DC-DC converter terminal F (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 12.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 12.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
9	**INSPECT DC-DC CONVERTER SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the DC-DC converter and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the DC-DC converter terminal F (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 12.
10	**INSPECT DC-DC CONVERTER SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the DC-DC converter and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between DC-DC converter terminal F (wiring harness-side) and PCM terminal 2P (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 12.
11	**INSPECT DC-DC CONVERTER** • Inspect the DC-DC converter. (See 01-17A-27 DC-DC CONVERTER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the DC-DC converter, then go to the next step. (See 01-17A-26 DC-DC CONVERTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
12	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
13	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P111A:00 [SKYACTIV-G 2.0]

id0102h1415000

DTC P111A:00	**Engine coolant temperature is high**
DETECTION CONDITION	• The engine coolant temperature is **122 °C or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Limits the intake air amount.
POSSIBLE CAUSE	• Cooling system malfunction • High engine speed condition continues • ECT sensor malfunction • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT EFFECT OF VEHICLE CONDITION FOR MALFUNCTION** • Verify how the customer drives the vehicle by asking the customer the following: — Engine speed is high and remains high for continuous long periods like when climbing a long steep grade. • Is the engine generating excessive heat when driven?	Yes	Go to the next step.
		No	Go to Step 5.
4	**DETERMINE IF MALFUNCTION CAUSE IS OVERHEATING OR OTHER** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the ECT PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the ECT PID value **less than 122 °C {241 °F}** while the vehicle is driven on a flat road?	Yes	Explain to the customer that the vehicle is normal. Go to Step 6.
		No	The cause of this concern could be from the cooling system overheating. • Perform the symptom troubleshooting “NO.17 COOLING SYSTEM CONCERNS-OVERHEATING”. (See 01-03-88 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0].)
5	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the ECT sensor, then go to the next step. (See 01-40-41 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P117A:00 [SKYACTIV-G 2.0]

id0102h1316900

DTC P117A:00	**Engine oil temperature is high**
DETECTION CONDITION	• With the transmission in 4th gear or lower gear, an engine speed of **6,100 rpm** continues for **6 min**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Limits the intake air amount.
POSSIBLE CAUSE	• High engine speed condition continues • PCM malfunction

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P0335:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-191 DTC P0335:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT EFFECT OF VEHICLE CONDITION FOR MALFUNCTION** • Verify how the customer drives the vehicle by asking the customer the following: • Does the engine speed exceed **6,100 rpm** for **6 min or more** while driving in 4th gear or lower gear?	Yes	Explain to the customer that the vehicle is normal. (malfunction caused by continuous engine speed exceeding **6,100 rpm** for **6 min or more** while in 4th gear or lower gear) If there is a concern with customer's driving, provide the customer some pertinent advice (such as gear selection, how to use manual mode).
		No	Go to the next step.
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P1260:00 [SKYACTIV-G 2.0]

id0102h1856800

DTC P1260:00	**Immobilizer system problem**
DETECTION CONDITION	• The start stop unit detects an immobilizer system malfunction. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is not stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Immobilizer system malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

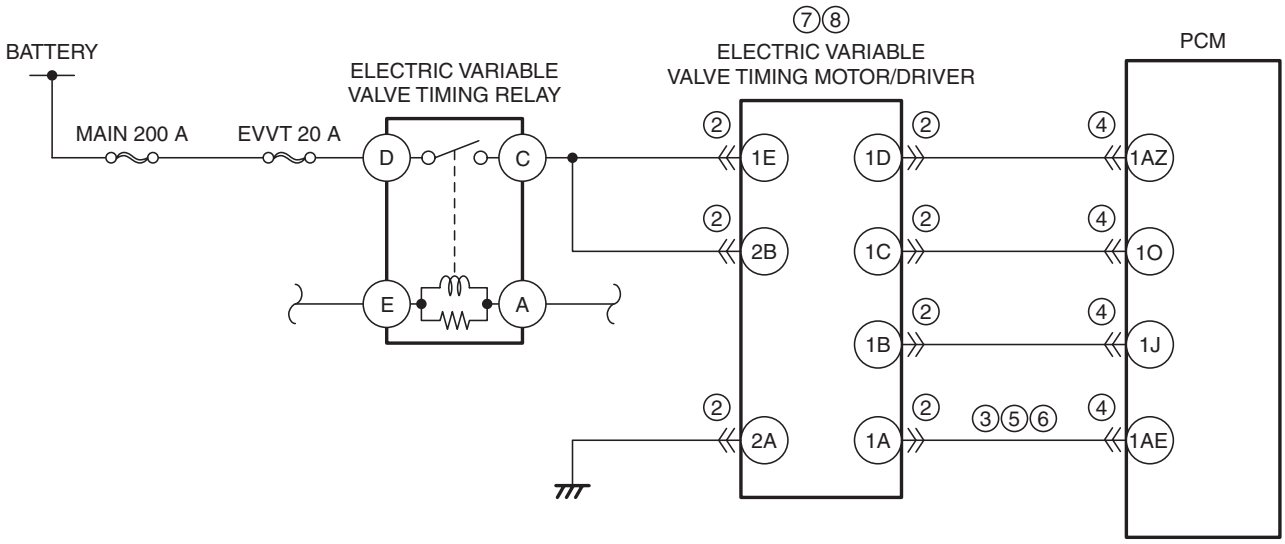
STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY IMMOBILIZER SYSTEM DTC** • Verify the immobilizer system DTC. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM].)
		No	Go to the next step.
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

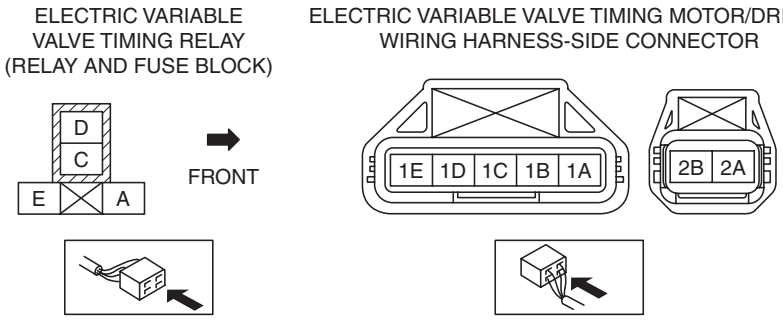
ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P1380:00 [SKYACTIV-G 2.0]

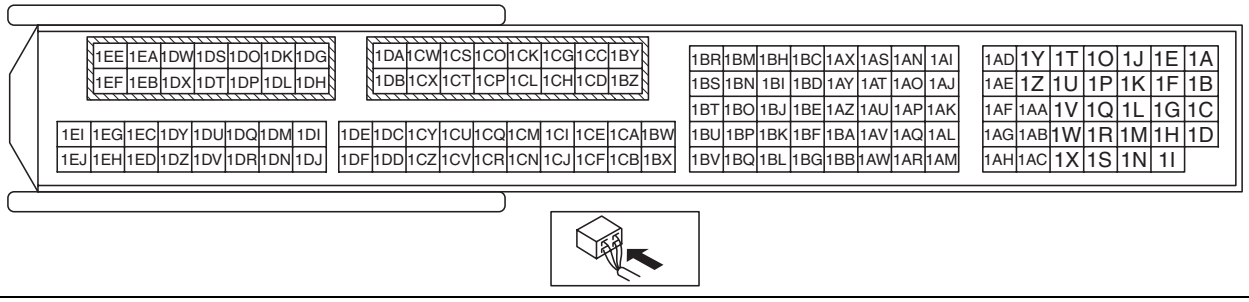
id0102h1009700

DTC P1380:00	Electric variable valve timing control circuit problem
DETECTION CONDITION	• A malfunction is detected in the results of the on-board diagnostic test received from electric variable valve timing driver. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Stops activation of the electric variable valve timing driver.
POSSIBLE CAUSE	• Electric variable valve timing motor/driver connectors or terminals malfunction • Short to ground in wiring harness between electric variable valve timing motor/driver terminal 1A and PCM terminal 1AE • PCM connector or terminals malfunction • Short to power supply in wiring harness between electric variable valve timing motor/driver terminal 1A and PCM terminal 1AE • Open circuit in wiring harness between electric variable valve timing motor/driver terminal 1A and PCM terminal 1AE • Electric variable valve timing driver malfunction • Electric variable valve timing motor malfunction • PCM malfunction





PCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the electric variable valve timing motor/driver connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
3	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the electric variable valve timing motor/driver connector is disconnected. • Inspect for continuity between electric variable valve timing motor/driver terminal 1A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the electric variable valve timing motor/driver and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the electric variable valve timing motor/driver terminal 1A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
6	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the electric variable valve timing motor/driver and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between electric variable valve timing motor/driver terminal 1A (wiring harness-side) and PCM terminal 1AE (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
7	**INSPECT ELECTRIC VARIABLE VALVE TIMING DRIVER** • Inspect the electric variable valve timing driver. (See 01-10A-15 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to Step 9. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
8	**INSPECT ELECTRIC VARIABLE VALVE TIMING MOTOR** • Inspect the electric variable valve timing motor. (See 01-10A-15 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the electric variable valve timing motor/driver, then go to the next step. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P151B:00 [SKYACTIV-G 2.0]

id0102h1889300

DTC P151B:00	**IAC system problem**
DETECTION CONDITION	• The PCM cannot control the idle speed toward the target idle speed during the KOER self test. **Diagnostic support note** • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• A/C magnetic clutch malfunction • Drive-by-wire control system related sensor malfunction — TP sensor malfunction • Purge solenoid valve malfunction • Air cleaner element restricted • Throttle body passage blockage • Engine malfunction — Insufficient engine compression (over capacity of blow-by gas) — Poor quality fuel • Generator malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT A/C MAGNETIC CLUTCH OPERATION** • Turn the fan switch off. • Is the magnetic clutch still on?	Yes	Perform the symptom troubleshooting “NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY”. (See 01-03-106 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM MALFUNCTION** • Inspect the TP sensor. (See 01-40-50 THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 10. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT PURGE SOLENOID VALVE** • Inspect the purge solenoid valve. (See 01-16A-12 PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to Step 10. (See 01-16A-10 PURGE SOLENOID VALVE REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
6	**INSPECT AIR CLEANER ELEMENT** • Remove the air cleaner element with the engine is running. • Does the engine speed increase?	Yes	Clean or replace the air cleaner element, then go to Step 10.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
7	**INSPECT THROTTLE BODY PASSAGE** • Visually inspect the throttle body passage. • Is the throttle body passage dirty and/or restricted?	Yes	Clean or replace the throttle body passage, then go to Step 10. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
8	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Overhaul the engine for repairs, then go to Step 10.
9	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step. (See 01-17A-25 GENERATOR DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0].) (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
10	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

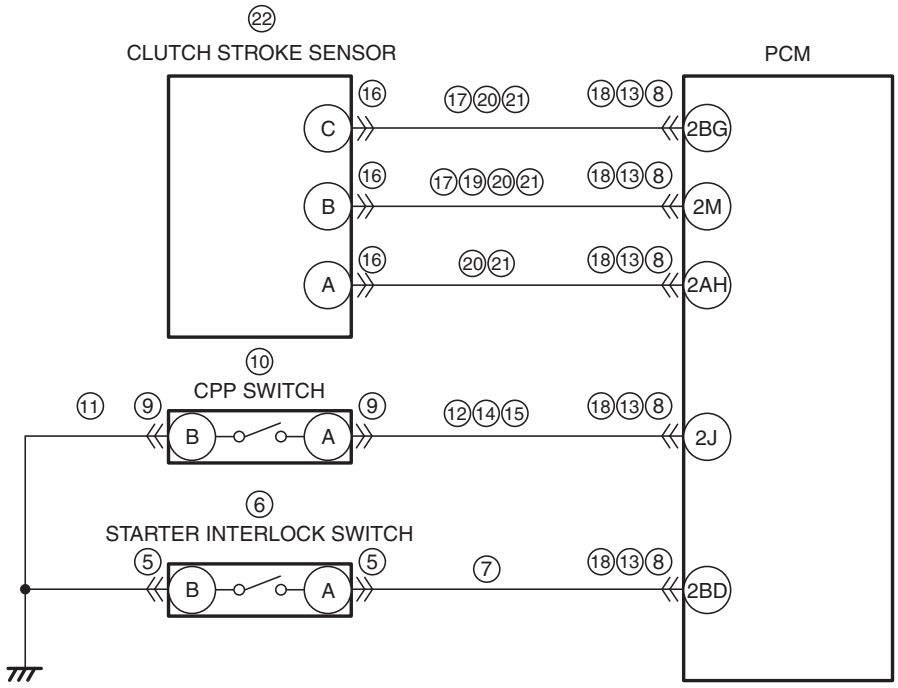
DTC P176E:00 [SKYACTIV-G 2.0]

id0102h1960100

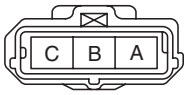
DTC P176E:00	Clutch stroke sensor/Starter interlock switch correlation problem
DETECTION CONDITION	• Correlation malfunction between clutch stroke sensor and starter interlock switch. — If the clutch stroke sensor circuit voltage **above 4.9 V** or **below 0.1 V** for **10 s**, the PCM determines that the clutch stroke sensor circuit has a malfunction. — CPP switch stuck ON or OFF. — Starter interlock switch stuck ON. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• CPP switch, clutch stroke sensor and/or starter interlock switch loose • Starter interlock switch connector or terminals malfunction • Starter interlock switch malfunction • Short to ground in wiring harness between starter interlock switch terminal A and PCM terminal 2BD • PCM connector or terminals malfunction • CPP switch connector or terminals malfunction • CPP switch malfunction • Open circuit in wiring harness between CPP switch terminal B and body ground • Short to ground in wiring harness between CPP switch terminal A and PCM terminal 2J • Open circuit in wiring harness between CPP switch terminal A and PCM terminal 2J • Short to power supply in wiring harness between CPP switch terminal A and PCM terminal 2J • Clutch stroke sensor connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — Clutch stroke sensor terminal C—PCM terminal 2BG — Clutch stroke sensor terminal B—PCM terminal 2M • Short to power supply in wiring harness between clutch stroke sensor terminal B and PCM terminal 2M • Clutch stroke sensor circuits are shorted to each other. • Open circuit in wiring harness between the following terminals: — Clutch stroke sensor terminal C—PCM terminal 2BG — Clutch stroke sensor terminal B—PCM terminal 2M — Clutch stroke sensor terminal A—PCM terminal 2AH • Clutch stroke sensor malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

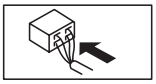
DTC P176E:00	Clutch stroke sensor/Starter interlock switch correlation problem



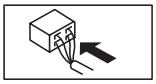
CLUTCH STROKE SENSOR WIRING HARNESS-SIDE CONNECTOR



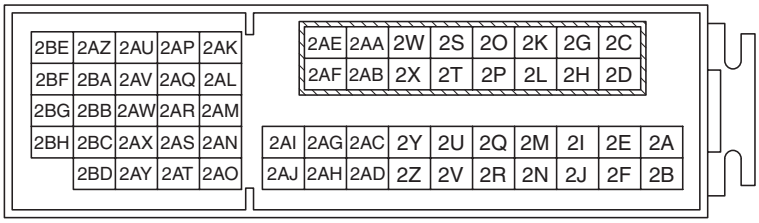
STARTER INTERLOCK SWITCH WIRING HARNESS-SIDE CONNECTOR

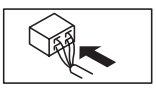


CPP SWITCH WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR





ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P0704:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-271 DTC P0704:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT INSTALLATION OF CPP SWITCH, CLUTCH STROKE SENSOR AND STARTER INTERLOCK SWITCH** • Inspect installation of CPP switch, clutch stroke sensor and starter interlock switch. • Are the CPP switch, clutch stroke sensor and starter interlock switch installed securely?	Yes	Go to the next step.
		No	Retighten the malfunctioning switch and/or sensor, then go to Step 23.
4	**DETERMINE MALFUNCTIONING SYSTEM** • Inspect the following: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — PCM PID: • CPP (OFF/ON) • CPP (%) — PCM terminal 2BD voltage • Is there any malfunction? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	If the PCM terminal 2BD voltage is not normal: • Go to the next step. If the CPP PID (OFF/ON) is not normal: • Go to Step 9. If the CPP PID (%) is not normal: • Go to Step 16.
		No	Intermittent concern exists. • Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03-116 INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0].)
5	**INSPECT STARTER INTERLOCK SWITCH CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the starter interlock switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 23.
		No	Go to the next step.
6	**INSPECT STARTER INTERLOCK SWITCH** • Inspect the starter interlock switch. (See 01-19A-9 STARTER INTERLOCK SWITCH INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the starter interlock switch, then go to Step 23.
		No	Go to the next step.
7	**INSPECT STARTER INTERLOCK SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the starter interlock switch connector is disconnected. • Inspect for continuity between starter interlock switch terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 23.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 23.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
9	**INSPECT CPP SWITCH CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the CPP switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 23.
		No	Go to the next step.
10	**INSPECT CPP SWITCH** • Inspect the CPP switch. (See 01-40-40 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the CPP switch, then go to Step 23. (See 05-10A-13 CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
		No	Go to the next step.
11	**INSPECT CPP SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the CPP switch connector is disconnected. • Inspect for continuity between CPP switch terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 23.
12	**INSPECT CPP SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the CPP switch connector is disconnected. • Inspect for continuity between CPP switch terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 23.
		No	Go to the next step.
13	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 23.
		No	Go to the next step.
14	**INSPECT CPP SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the CPP switch and PCM connectors are disconnected. • Inspect for continuity between CPP switch terminal A (wiring harness-side) and PCM terminal 2J (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 23.
15	**INSPECT CPP SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the CPP switch and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the CPP switch terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Repeat Step 4.
		No	Repair or replace harness for a possible short to power supply, then go to Step 23.
16	**INSPECT CLUTCH STROKE SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the clutch stroke sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 23.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
17	**INSPECT CLUTCH STROKE SENSOR CIRCUIT FOR SHORT TO GROUND** • Verify that the clutch stroke sensor connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Clutch stroke sensor terminal C — Clutch stroke sensor terminal B • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 23.
		No	Go to the next step.
18	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 23.
		No	Go to the next step.
19	**INSPECT CLUTCH STROKE SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the clutch stroke sensor and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the clutch stroke sensor terminal B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace harness for a possible short to power supply, then go to Step 23.
20	**INSPECT CLUTCH STROKE SENSOR CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the clutch stroke sensor and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between clutch stroke sensor terminals C, B and A (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 23.
		No	Go to the next step.
21	**INSPECT CLUTCH STROKE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the clutch stroke sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Clutch stroke sensor terminal C—PCM terminal 2BG — Clutch stroke sensor terminal B—PCM terminal 2M — Clutch stroke sensor terminal A—PCM terminal 2AH • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 23.
22	**INSPECT CLUTCH STROKE SENSOR** • Inspect the clutch stroke sensor. (See 01-40-67 CLUTCH STROKE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the clutch master cylinder, then go to the next step. (See 05-10A-17 CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
		No	Repeat Step 4.
23	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
24	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P2096:00 [SKYACTIV-G 2.0]

id0102h1707500

DTC P2096:00	Target A/F feedback system too lean
DETECTION CONDITION	• The PCM monitors the target A/F fuel trim when under the target A/F feedback control. If the fuel trim is more than the specification, the PCM determines that the target A/F feedback system is too lean. **Diagnostic support note** • This is a continuous monitor (fuel system). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Erratic signal to PCM — ECT sensor signal malfunction — MAF sensor signal malfunction — TP sensor signal malfunction — Related connector or terminals malfunction — Related wiring harness malfunction • Air suction in intake-air system • MAF sensor malfunction • Erratic signal from HO2S — Exhaust system leakage (between TWC and HO2S) — HO2S malfunction • Erratic signal from A/F sensor — Exhaust system leakage (between exhaust manifold and A/F sensor) — A/F sensor malfunction • IAT sensor No.1 malfunction • Improper operation of fuel injector — Fuel injector malfunction — Fuel injector related wiring harness malfunction • High-pressure side fuel delivery system malfunction — Fuel pressure sensor malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction — Relief valve (built-into high pressure fuel pump) malfunction — High pressure fuel pump malfunction • Low-pressure side fuel delivery system malfunction — Low pressure side fuel line restriction (between fuel pump unit and high pressure fuel pump) — Fuel filter clogged — Pressure regulator (built-into fuel pump unit) malfunction — Fuel pump unit malfunction • Improper operation of ignition system — Spark plug malfunction — Ignition coil malfunction — Ignition coil related wiring harness malfunction • Insufficient engine compression • ECT sensor malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P2096:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P0171:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-132 DTC P0171:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — ECT — MAF — TP REL • Are the PIDs normal? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to the next step.
		No	Inspect the suspected sensor and related wiring harness. Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA (MODE 2) CONDITION** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the same PIDs as in Step 5 while simulating under the FREEZE FRAME DATA (Mode 2) conditions. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are the PIDs normal? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to the next step.
		No	Inspect the suspected sensor and related wiring harness. Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Start the engine. • Access the MAF PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify that the MAF PID value changes quickly while increasing (racing) the engine rpm. • Is the MAF PID value normal? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to Step 9.
		No	Go to the next step.
8	**INSPECT INTAKE AIR SYSTEM FOR EXCESSIVE AIR SUCTION** • Visually inspect for loose, cracked or damaged hoses on intake air system. **Note** • Engine speed may change when rust penetrating agent is splayed on the air suction area. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
		No	Replace the MAF sensor/IAT sensor No.1, then go to Step 23. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
9	**INSPECT CURRENT SIGNAL STATUS OF HO2S** • Inspect the HO2S. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 11.
10	**INSPECT EXHAUST SYSTEM FOR LEAKAGE** • Visually inspect for exhaust leakage between TWC and HO2S. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
		No	Replace the HO2S, then go to Step 23. (See 01-40-56 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
11	**INSPECT CURRENT SIGNAL STATUS OF A/F SENSOR** • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT EXHAUST SYSTEM FOR LEAKAGE** • Visually inspect for exhaust leakage between exhaust manifold and A/F sensor. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
		No	Replace the A/F sensor, then go to Step 23. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
13	**INSPECT IAT SENSOR NO.1** • Inspect the IAT sensor No.1. (See 01-40-46 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to Step 23. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
14	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
15	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 19.
		No	Lower than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results, then go to Step 23. • If there is no malfunction: — Go to Step 18. Higher than **3 MPa {31 kgf/cm2, 435 psi}**: • Go to the next step.
16	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 18.
17	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel distributor, then go to Step 23. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 19.
18	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 23.
		No	Replace the high pressure fuel pump, then go to Step 23. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
19	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 23.
20	**INSPECT IGNITION SYSTEM OPERATION** • Perform the Spark Test. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

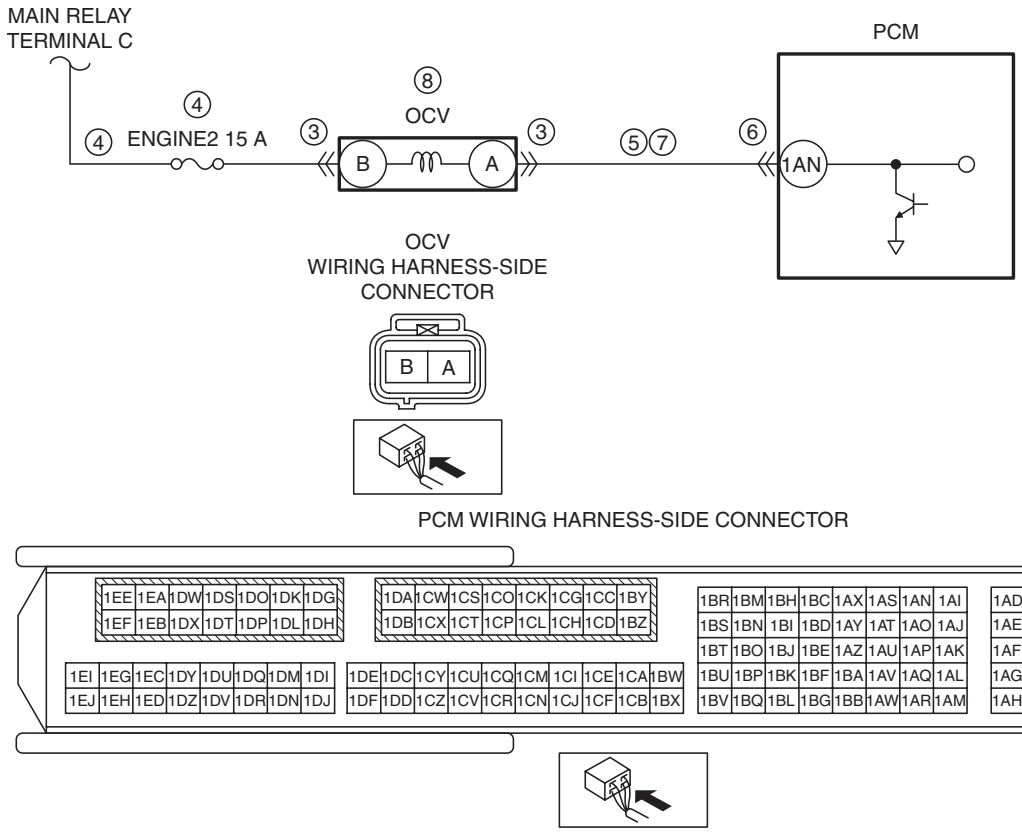
STEP	INSPECTION		ACTION
21	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 23.
		No	Go to the next step.
22	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the ECT sensor, then go to the next step. (See 01-40-41 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
23	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
24	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2090:00 [SKYACTIV-G 2.0]

id0102h1009800

DTC P2090:00	**OCV circuit low input**
DETECTION CONDITION	• The PCM monitors the OCV voltage. If the PCM detects the OCV control voltage (calculated from the OCV) is below the specification voltage (calculated from the battery positive voltage), the PCM determines that the OCV circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Performs the exhaust variable valve timing control with a maximum cam retard request.
POSSIBLE CAUSE	• OCV connector or terminals malfunction • Short to ground or open circuit in OCV power supply circuit — Short to ground in wiring harness between ENGINE2 15 A fuse and OCV terminal B — ENGINE2 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and OCV terminal B • Short to ground in wiring harness between OCV terminal A and PCM terminal 1AN • PCM connector or terminals malfunction • Open circuit in wiring harness between OCV terminal A and PCM terminal 1AN • OCV malfunction • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

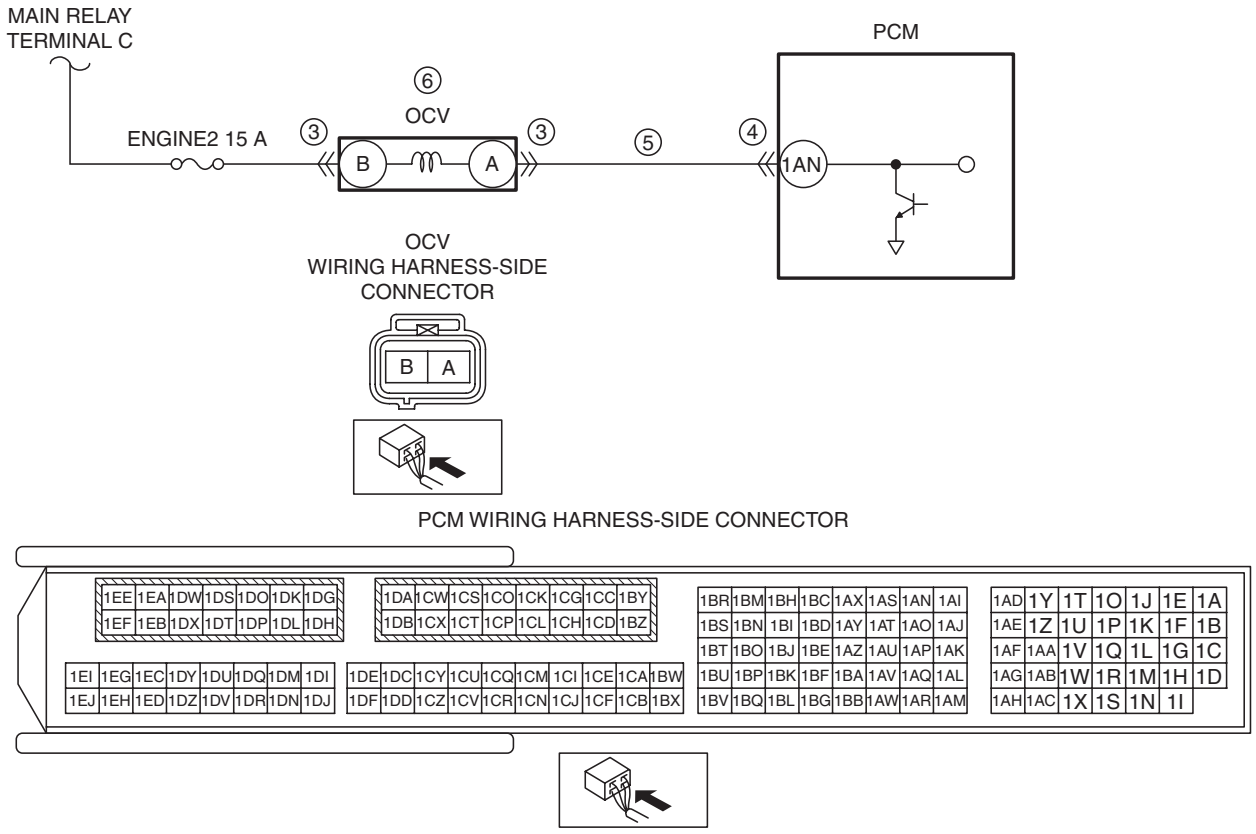
STEP	INSPECTION		ACTION
3	**INSPECT OCV CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the OCV connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT OCV POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the OCV connector is disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the OCV terminal B (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE2 15 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 9.
5	**INSPECT OCV SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the OCV connector is disconnected. • Switch the ignition to off. • Inspect for continuity between OCV terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	**INSPECT OCV SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the OCV and PCM connectors are disconnected. • Inspect for continuity between OCV terminal A (wiring harness-side) and PCM terminal 1AN (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	**INSPECT OCV** • Inspect the OCV. (See 01-10A-37 OIL CONTROL VALVE (OCV) INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the OCV, then go to the next step. (See 01-10A-38 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2091:00 [SKYACTIV-G 2.0]

id0102h1010000

DTC P2091:00	**OCV circuit high input**
DETECTION CONDITION	• The PCM monitors the OCV current. If the PCM detects that the OCV control current (calculated from the OCV) is above the specification current, the PCM determines that the OCV circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Performs the exhaust variable valve timing control with a maximum cam retard request.
POSSIBLE CAUSE	• OCV connector or terminals malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between OCV terminal A and PCM terminal 1AN • OCV malfunction • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
3	**INSPECT OCV CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the OCV connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
5	**INSPECT OCV CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the OCV and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the OCV terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
6	**INSPECT OCV** • Inspect the OCV. (See 01-10A-37 OIL CONTROL VALVE (OCV) INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the OCV, then go to the next step. (See 01-10A-38 OIL CONTROL VALVE (OCV) REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2097:00 [SKYACTIV-G 2.0]

id0102h1707600

DTC P2097:00	**Target A/F feedback system too rich**
DETECTION CONDITION	• The PCM monitors the target A/F fuel trim when under the target A/F feedback control. If the fuel trim is less than specification, the PCM determines that the target A/F feedback system is too rich. **Diagnostic support note** • This is a continuous monitor (fuel system). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Erratic signal to PCM — ECT sensor signal malfunction — MAF sensor signal malfunction — TP sensor signal malfunction — Related connector or terminals malfunction — Related wiring harness malfunction • Erratic signal from HO2S — HO2S malfunction • Erratic signal from A/F sensor — Exhaust system leakage (between exhaust manifold and A/F sensor) — A/F sensor malfunction • IAT sensor No.1 malfunction • Purge solenoid valve malfunction • Improper operation of fuel injector — Fuel injector malfunction — Fuel injector related wiring harness malfunction • High-pressure side fuel delivery system malfunction — Fuel pressure sensor malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction — Relief valve (built-into high pressure fuel pump) malfunction — High pressure fuel pump malfunction • Low-pressure side fuel delivery system malfunction — Low pressure side fuel line restriction (between fuel pump unit and high pressure fuel pump) — Fuel filter clogged — Pressure regulator (built-into fuel pump unit) malfunction — Fuel pump unit malfunction • Insufficient engine compression • ECT sensor malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P2097:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P0172:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-138 DTC P0172:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — ECT — MAF — TP REL • Are the PIDs normal? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to the next step.
		No	Inspect the suspected sensor and related wiring harness. Repair or replace the malfunctioning part according to the inspection results, then go to Step 21.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA (MODE 2) CONDITION** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the same PIDs as in Step 5 while simulating under the FREEZE FRAME DATA (Mode 2) conditions. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are the PIDs normal? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to the next step.
		No	Inspect the suspected sensor and related wiring harness. Repair or replace the malfunctioning part according to the inspection results, then go to Step 21.
7	**INSPECT CURRENT SIGNAL STATUS OF HO2S** • Inspect the HO2S. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the HO2S, then go to Step 21. (See 01-40-56 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
8	**INSPECT CURRENT SIGNAL STATUS OF A/F SENSOR** • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 10.
9	**INSPECT EXHAUST SYSTEM FOR LEAKAGE** • Visually inspect for exhaust leakage between exhaust manifold and A/F sensor. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 21.
		No	Replace the A/F sensor, then go to Step 21. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
10	**INSPECT IAT SENSOR NO.1** • Inspect the IAT sensor No.1. (See 01-40-46 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to Step 21. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
11	**INSPECT LONG TERM FUEL TRIM** • Access the LONGFT1 PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Compare the LONGFT1 PID value with recorded FREEZE FRAME DATA (Mode 2). • Is the LONGFT1 PID value above the FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT PURGE SOLENOID VALVE** • Inspect the purge solenoid valve. (See 01-16A-12 PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to Step 21. (See 01-16A-10 PURGE SOLENOID VALVE REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
13	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 21.
		No	Go to the next step.
14	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 18.
		No	Lower than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results, then go to Step 21. • If there is no malfunction: — Go to Step 17. Higher than **3 MPa {31 kgf/cm2, 435 psi}**: • Go to the next step.
15	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 17.
16	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel distributor, then go to Step 21. (See 01-14A-51 FUEL INJECTOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 18.
17	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 21.
		No	Replace the high pressure fuel pump, then go to Step 21. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
18	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 21.
19	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 21.
20	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the ECT sensor, then go to the next step. (See 01-40-41 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
21	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
22	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

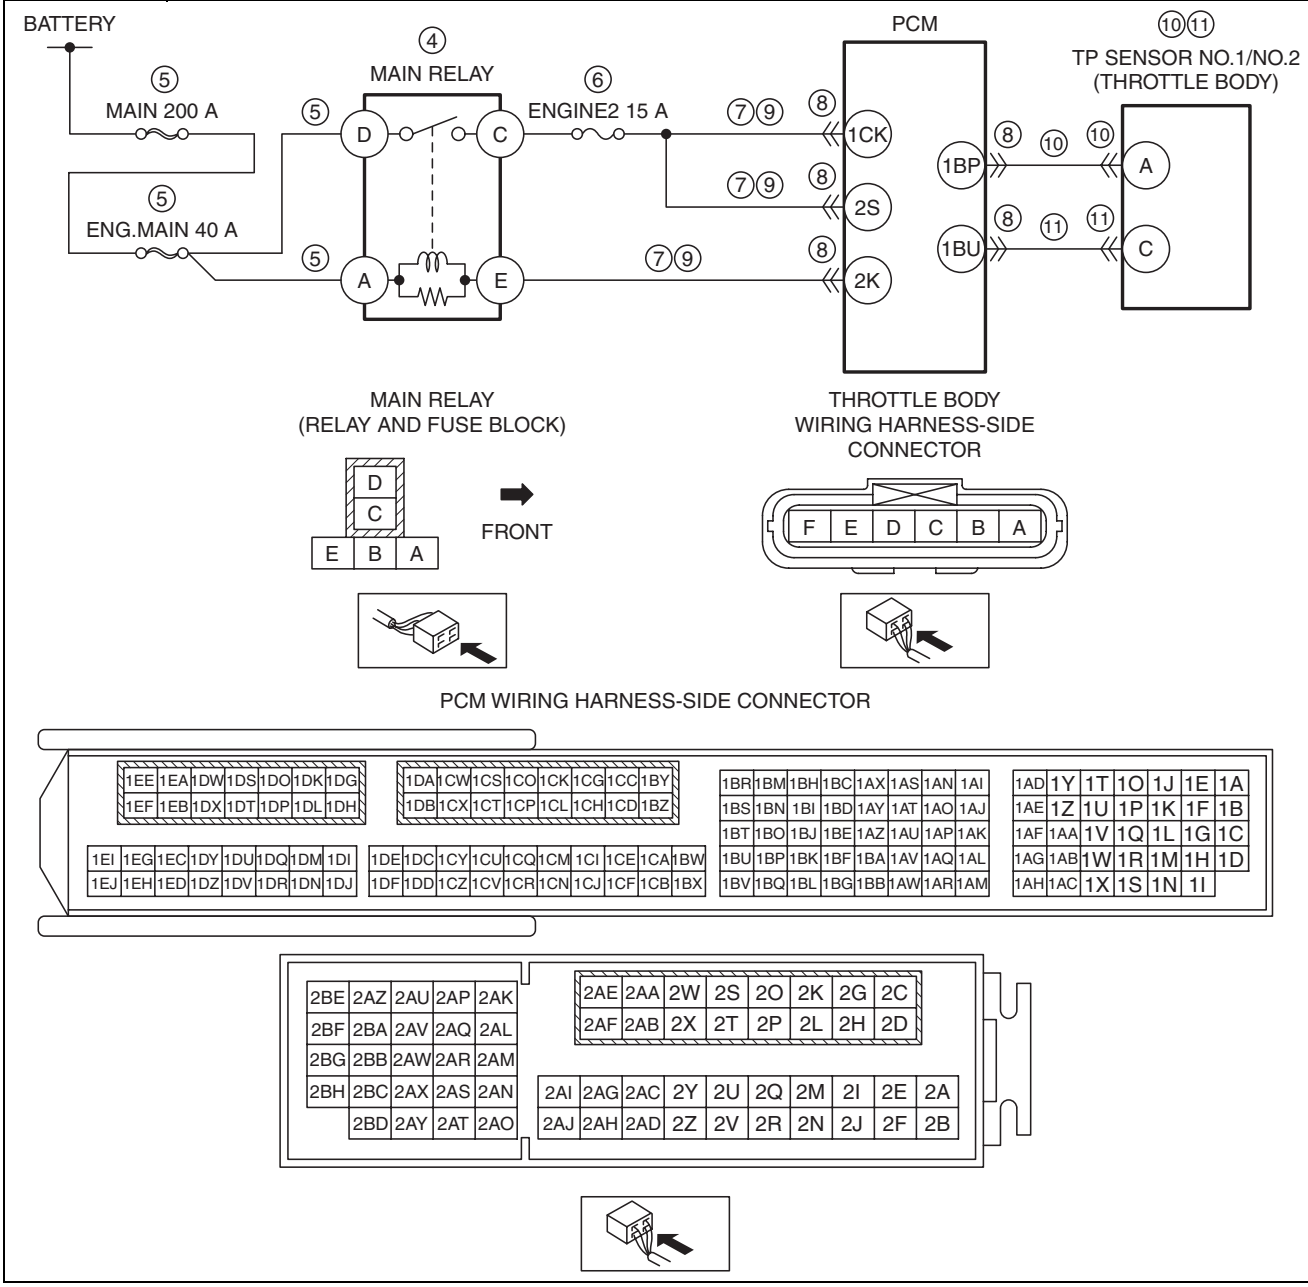
DTC P2101:00 [SKYACTIV-G 2.0]

id0102h1707700

DTC P2101:00	Throttle valve actuator control motor circuit range/performance problem
DETECTION CONDITION	• The PCM turns the main relay on, but if the input voltage is **6.0 V or less**, then the PCM determines that the main relay control circuit voltage is low. • There is a system error in the electrical throttle control system of the PCM. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8** ° by return spring force).
POSSIBLE CAUSE	• Main relay malfunction • Short to ground or open circuit in main relay power supply circuit: — Short to ground in wiring harness between the following terminals: • MAIN 200 A fuse—Main relay terminal D • MAIN 200 A fuse—Main relay terminal A — MAIN 200 A fuse and/or ENG.MAIN 40 A fuse malfunction — Open circuit in wiring harness between the following terminals: • Battery positive terminal—Main relay terminal D • Battery positive terminal—Main relay terminal A • ENGINE2 15 A fuse malfunction • Short to ground in wiring harness between the following terminals: — Main relay terminal C—PCM terminal 1CK — Main relay terminal C—PCM terminal 2S — Main relay terminal E—PCM terminal 2K • PCM connector or terminals malfunction • Open circuit in wiring harness between the following terminals: — Main relay terminal C—PCM terminal 1CK — Main relay terminal C—PCM terminal 2S — Main relay terminal E—PCM terminal 2K • TP sensor No.1 and/or related circuit malfunction • TP sensor No.1 malfunction • TP sensor No.2 and/or related circuit malfunction • TP sensor No.2 malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2101:00	Throttle valve actuator control motor circuit range/performance problem



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT MAIN RELAY** • Switch the ignition to off. • Remove the main relay. • Inspect the main relay. (See 09-21-29 RELAY INSPECTION.) • Is there any malfunction?	Yes	Replace the main relay, then go to Step 12.
		No	Go to the next step.
5	**INSPECT MAIN RELAY POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Main relay is removed. • Measure the voltage at the following terminals (wiring harness-side): — Main relay terminal D — Main relay terminal A • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A fuse and ENG.MAIN 40 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the malfunctioning fuse. • If the fuse is deteriorated: — Replace the malfunctioning fuse. • If all fuses are normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 12.
6	**INSPECT ENGINE2 15 A FUSE** • Remove the ENGINE2 15 A fuse. • Inspect the ENGINE2 15 A fuse. • Is there any malfunction?	Yes	If the fuse is blown: • Repair or replace the wiring harness for a possible short to ground. • Replace the fuse. If the fuse is deteriorated: • Replace the fuse. Go to Step 12.
		No	Reinstall the ENGINE2 15 A fuse, then go to the next step.
7	**INSPECT MAIN RELAY CIRCUIT FOR SHORT TO GROUND** • Main relay is removed. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Main relay terminal C — Main relay terminal E • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 12.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 12.
		No	Go to the next step.
9	**INSPECT MAIN RELAY CIRCUIT FOR OPEN CIRCUIT** • Main relay is removed. • Verify that the PCM connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Main relay terminal C—PCM terminal 1CK — Main relay terminal C—PCM terminal 2S — Main relay terminal E—PCM terminal 2K • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 12.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

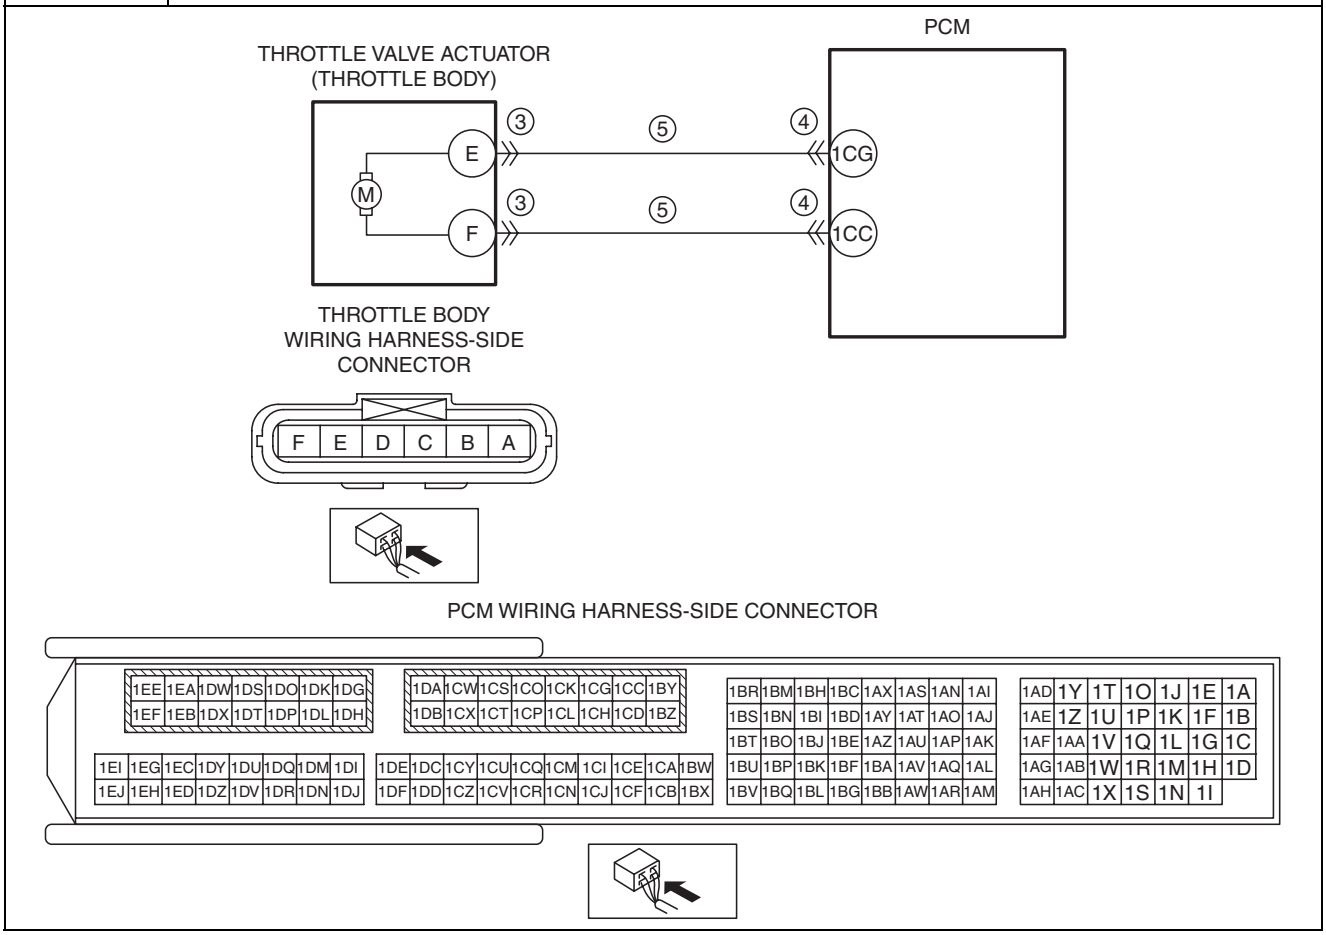
STEP	INSPECTION		ACTION
10	**INSPECT TP SENSOR NO.1** • Reconnect all disconnected connectors. • Inspect the TP sensor No.1. (See 01-40-50 THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Inspect the TP sensor No.1 related circuits and connectors. • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Replace the throttle body. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 12.
		No	Go to the next step.
11	**INSPECT TP SENSOR NO.2** • Inspect the TP sensor No.2. (See 01-40-50 THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Inspect the TP sensor No.2 related circuits and connectors. • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Replace the throttle body. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
12	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
13	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2107:00 [SKYACTIV-G 2.0]

id0102h1707800

DTC P2107:00	**Throttle valve actuator control module processor error**
DETECTION CONDITION	• Throttle valve actuator control module internal processor error. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8** ° by return spring force).
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • PCM connector or terminals malfunction • Throttle body circuits are shorted to each other • PCM malfunction — Throttle valve actuator control module internal processor malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

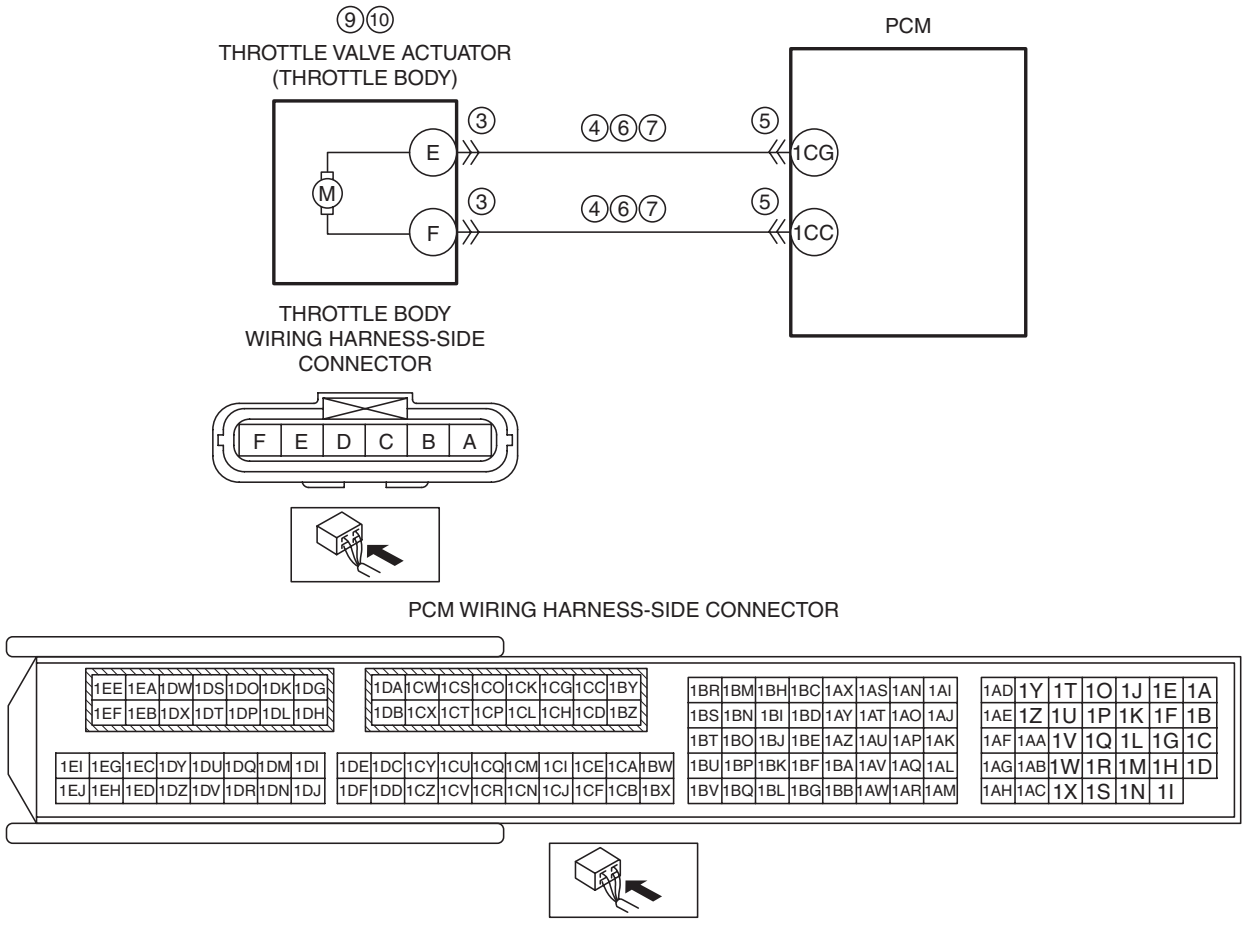
STEP	INSPECTION		ACTION
3	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
5	**INSPECT THROTTLE VALVE ACTUATOR CIRCUITS FOR SHORT TO EACH OTHER** • Verify that the throttle body and PCM connectors are disconnected. • Inspect for continuity between throttle body terminals E and F (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to the next step.
		No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2109:00 [SKYACTIV-G 2.0]

id0102h1708000

DTC P2109:00	**TP sensor minimum stop range/performance problem**
DETECTION CONDITION	• If the fully-close throttle position is **5.1 ° or lower**, or **15.9 ° or more** (even though the fully-close throttle position learning is finished), the PCM determines there is a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8 °** by return spring force).
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — Throttle body terminal E—PCM terminal 1CG — Throttle body terminal F—PCM terminal 1CC • PCM connector or terminals malfunction • Short to power supply in wiring harness between the following terminals: — Throttle body terminal E—PCM terminal 1CG — Throttle body terminal F—PCM terminal 1CC • Open circuit in wiring harness between the following terminals: — Throttle body terminal E—PCM terminal 1CG — Throttle body terminal F—PCM terminal 1CC • Improper operation of drive-by-wire control system • Throttle valve actuator malfunction • Throttle valve malfunction • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
4	**INSPECT THROTTLE VALVE ACTUATOR CIRCUIT FOR SHORT TO GROUND** • Verify that the throttle body connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Throttle body terminal E — Throttle body terminal F • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 11.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
6	**INSPECT THROTTLE VALVE ACTUATOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the throttle body and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the following terminals (wiring harness-side): — Throttle body terminal E—PCM terminal 1CG — Throttle body terminal F—PCM terminal 1CC • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 11.
7	**INSPECT THROTTLE VALVE ACTUATOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the throttle body and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between the following terminals (wiring harness-side): — Throttle body terminal E—PCM terminal 1CG — Throttle body terminal F—PCM terminal 1CC • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
8	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the Drive-by-wire Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 11.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
9	**INSPECT THROTTLE VALVE ACTUATOR** • Inspect the throttle valve actuator. (See 01-13A-13 THROTTLE BODY INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 11. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
10	**INSPECT THROTTLE VALVE** • Inspect the throttle valve. (See 01-13A-13 THROTTLE BODY INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P2110:00 [SKYACTIV-G 2.0]

id0102h1303500

DTC P2110:00	**Throttle valve actuator control system-forced limited RPM**
DETECTION CONDITION	• The throttle valve actuator control system is in the failure mode effects management mode. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8** ° by return spring force).
POSSIBLE CAUSE	• Throttle body malfunction • PCM malfunction — Throttle valve actuator control module internal processor error (built-into PCM) — Fuel injector control driver internal processor error (built-into PCM)
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

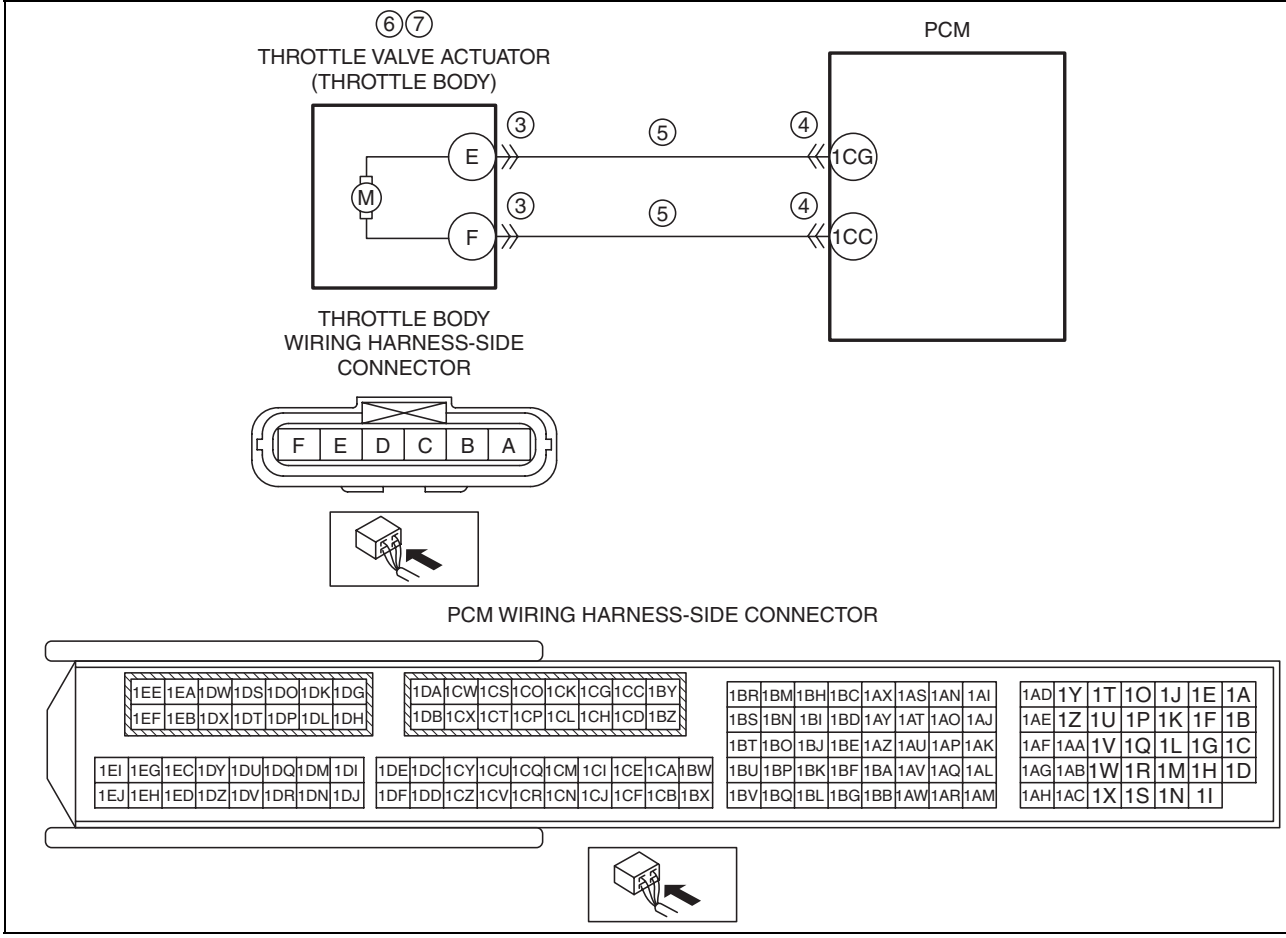
STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT THROTTLE BODY AND PCM** • Switch the ignition to off. • Visually inspect the following for obvious signs of damage: — Throttle body — PCM • Is a concern present?	Yes	Isolate the concern and repair if necessary, then go to Step 6.
		No	Go to the next step.
5	**INSPECT THROTTLE BODY** • Inspect the throttle body. (See 01-13A-13 THROTTLE BODY INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2112:00 [SKYACTIV-G 2.0]

id0102h1708100

DTC P2112:00	**Throttle valve actuator motor current range/performance problem**
DETECTION CONDITION	• If the duty ratio is **95 % or more**, the PCM determines that there is a throttle valve actuator control system range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8** ° by return spring force).
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • PCM connector or terminals malfunction • Open circuit in wiring harness between the following terminals: — Throttle body terminal E—PCM terminal 1CG — Throttle body terminal F—PCM terminal 1CC • Throttle valve actuator malfunction • Throttle valve malfunction • PCM malfunction — Throttle valve actuator control module malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT THROTTLE VALVE ACTUATOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the throttle body and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Throttle body terminal E—PCM terminal 1CG — Throttle body terminal F—PCM terminal 1CC • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
6	**INSPECT THROTTLE VALVE** • Inspect the throttle valve. (See 01-13A-13 THROTTLE BODY INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 8. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
7	**INSPECT THROTTLE VALVE ACTUATOR** • Inspect the throttle valve actuator. (See 01-13A-13 THROTTLE BODY INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2119:00 [SKYACTIV-G 2.0]

id0102h1708200

DTC P2119:00	**Throttle valve actuator control throttle body range/performance problem**
DETECTION CONDITION	• The PCM compares the actual TP with initial setting TP when the ignition is switched to off. If the TP is higher than the initial setting TP, the PCM determines that there is a throttle valve return spring malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed.
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • PCM connector or terminals malfunction • Drive-by-wire control malfunction • Throttle body (return spring) malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
5	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the Drive-by-wire Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 7.
		No	Go to the next step.
6	**INSPECT THROTTLE BODY** • Inspect the throttle body. (See 01-13A-13 THROTTLE BODY INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

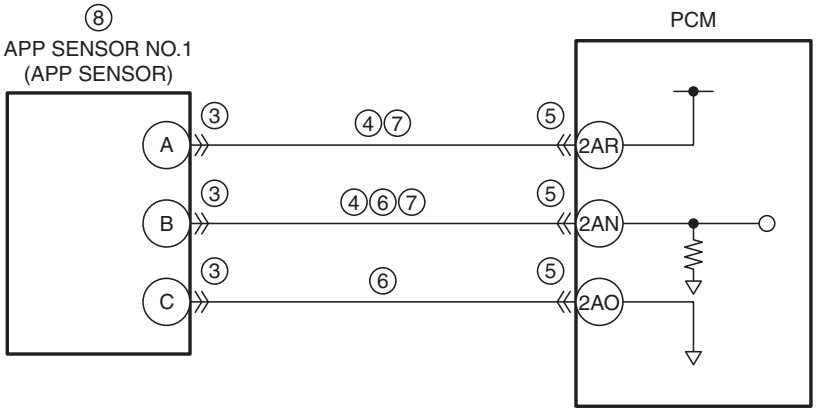
STEP	INSPECTION		ACTION
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Switch the ignition ON (engine off or on) and wait for **1 min or more**. • Switch the ignition to off. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

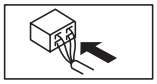
DTC P2122:00 [SKYACTIV-G 2.0]

id0102h1708300

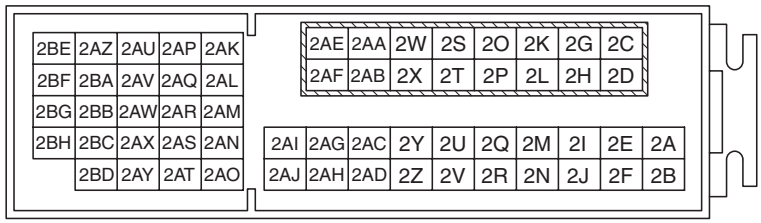
DTC P2122:00	**APP sensor No.1 circuit low input**
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.1 when the engine is running. If the input voltage at the PCM terminal 2AN is **less than 0.1 V**, the PCM determines that the APP sensor No.1 circuit input voltage is low. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Regulates the upper limit of the APP sensor output.
POSSIBLE CAUSE	• APP sensor connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — APP sensor terminal A—PCM terminal 2AR — APP sensor terminal B—PCM terminal 2AN • PCM connector or terminals malfunction • APP sensor No.1 signal circuit and ground circuit are shorted to each other • Open circuit in wiring harness between the following terminals: — APP sensor terminal A—PCM terminal 2AR — APP sensor terminal B—PCM terminal 2AN • APP sensor No.1 malfunction • PCM malfunction

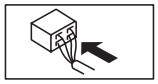


APP SENSOR WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR





Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

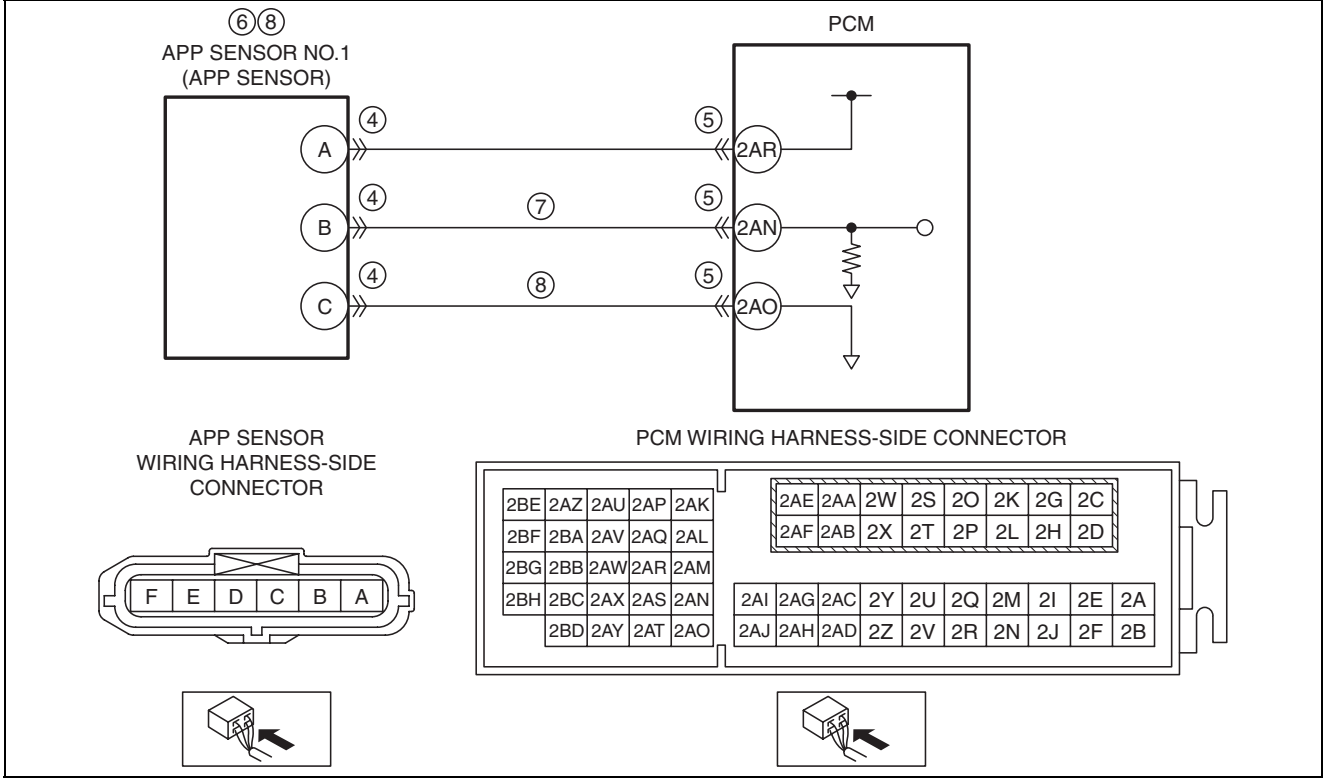
STEP	INSPECTION		ACTION
3	**INSPECT APP SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.1 CIRCUIT FOR SHORT TO GROUND** • Verify that the APP sensor connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — APP sensor terminal A — APP sensor terminal B • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT APP SENSOR NO.1 SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the APP sensor and PCM connectors are disconnected. • Inspect for continuity between APP sensor terminals B and C (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 9.
		No	Go to the next step.
7	**INSPECT APP SENSOR NO.1 CIRCUIT FOR OPEN CIRCUIT** • Verify that the APP sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — APP sensor terminal A—PCM terminal 2AR — APP sensor terminal B—PCM terminal 2AN • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	**INSPECT APP SENSOR NO.1** • Reconnect all disconnected connectors. • Inspect the APP sensor No.1. (See 01-40-51 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the accelerator pedal, then go to the next step. (See 01-13A-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2123:00 [SKYACTIV-G 2.0]

id0102h1708400

DTC P2123:00	**APP sensor No.1 circuit high input**
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.1 when the engine is running. If the input voltage at the PCM terminal 2AN is **above 4.9 V**, the PCM determines that the APP sensor No.1 circuit input voltage is high. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Regulates the upper limit of the APP sensor output.
POSSIBLE CAUSE	• APP sensor connector or terminals malfunction • PCM connector or terminals malfunction • APP sensor No.1 malfunction • Short to power supply in wiring harness between APP sensor terminal B and PCM terminal 2AN • Open circuit in wiring harness between APP sensor terminal C and PCM terminal 2AO • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

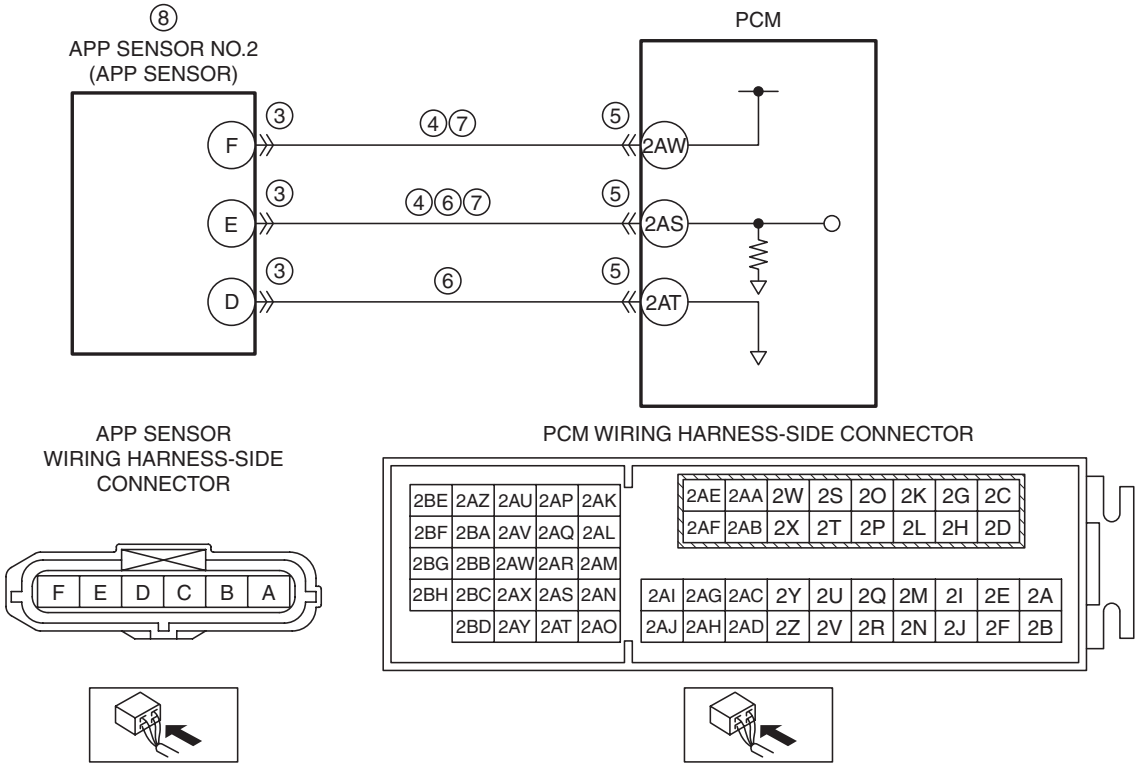
STEP	INSPECTION		ACTION
3	**CLASSIFY APP SENSOR NO.1 MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Access the APP1 PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the APP1 PID value. • Is the APP1 PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT APP SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT APP SENSOR NO.1** • Reconnect all disconnected connectors. • Inspect the APP sensor No.1. (See 01-40-51 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the accelerator pedal, then go to Step 9. (See 01-13A-14 ACCELERATOR PEDAL REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 9.
7	**INSPECT APP SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Switch the ignition to off. • Disconnect the APP sensor connector. • Access the APP1 PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the APP1 PID value. • Is the APP1 PID value **5 V** or **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
8	**INSPECT APP SENSOR NO.1 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the APP sensor connector is disconnected. • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for continuity between APP sensor terminal C (wiring harness-side) and PCM terminal 2AO (wiring harness-side). • Is there continuity?	Yes	Replace the accelerator pedal, then go to the next step. (See 01-13A-14 ACCELERATOR PEDAL REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2127:00 [SKYACTIV-G 2.0]

id0102h1708500

DTC P2127:00	**APP sensor No.2 circuit low input**
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.2 when the engine is running. If the input voltage at the PCM terminal 2AS is **less than 0.1 V**, the PCM determines that the APP sensor No.2 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Regulates the upper limit of the APP sensor output.
POSSIBLE CAUSE	• APP sensor connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — APP sensor terminal F—PCM terminal 2AW — APP sensor terminal E—PCM terminal 2AS • PCM connector or terminals malfunction • APP sensor No.2 signal circuit and ground circuit are shorted to each other • Open circuit in wiring harness between the following terminals: — APP sensor terminal F—PCM terminal 2AW — APP sensor terminal E—PCM terminal 2AS • APP sensor No.2 malfunction • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

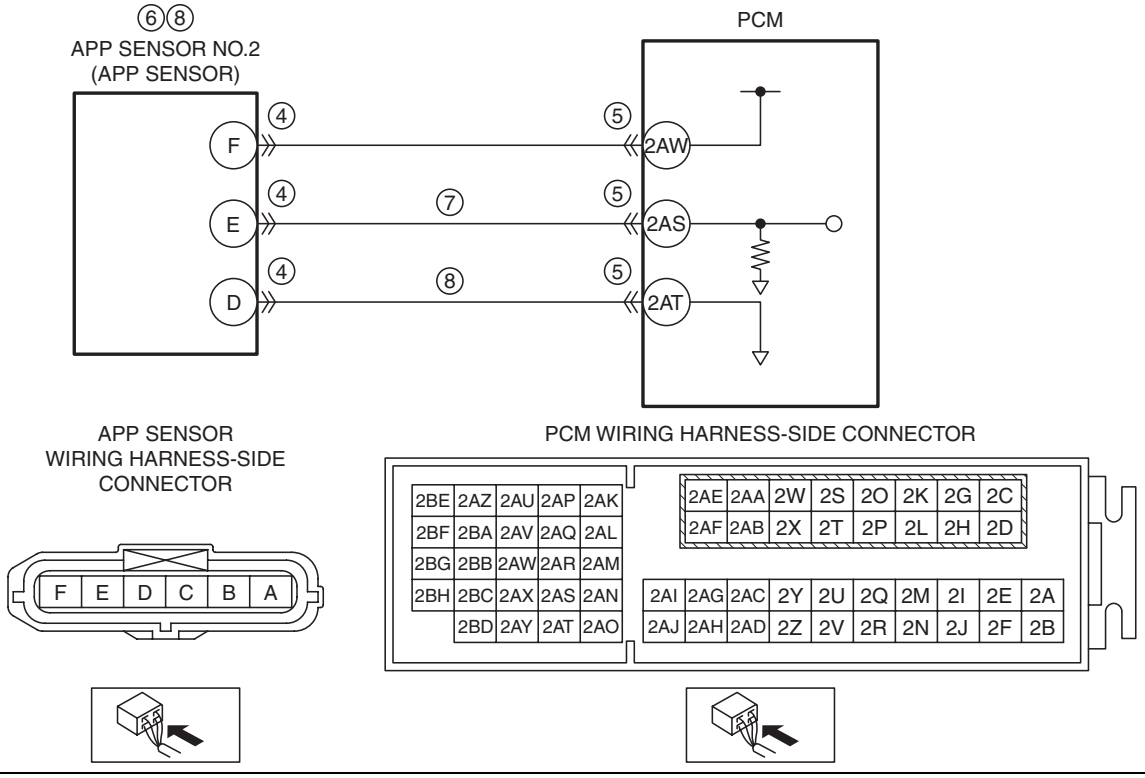
STEP	INSPECTION		ACTION
3	**INSPECT APP SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.2 CIRCUIT FOR SHORT TO GROUND** • Verify that the APP sensor connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — APP sensor terminal F — APP sensor terminal E • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT APP SENSOR NO.2 SIGNAL CIRCUIT AND GROUND CIRCUIT FOR SHORT TO EACH OTHER** • Verify that the APP sensor and PCM connectors are disconnected. • Inspect for continuity between APP sensor terminals E and D (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to each other, then go to Step 9.
		No	Go to the next step.
7	**INSPECT APP SENSOR NO.2 CIRCUIT FOR OPEN CIRCUIT** • Verify that the APP sensor and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — APP sensor terminal F—PCM terminal 2AW — APP sensor terminal E—PCM terminal 2AS • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	**INSPECT APP SENSOR NO.2** • Reconnect all disconnected connectors. • Inspect the APP sensor No.2. (See 01-40-51 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the accelerator pedal, then go to the next step. (See 01-13A-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2128:00 [SKYACTIV-G 2.0]

id0102h1708600

DTC P2128:00	**APP sensor No.2 circuit high input**
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.2 when the engine is running. If the input voltage at the PCM terminal 2AS is **more than 4.9 V**, the PCM determines that the APP sensor No.2 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Regulates the upper limit of the APP sensor output.
POSSIBLE CAUSE	• APP sensor connector or terminals malfunction • PCM connector or terminals malfunction • APP sensor No.2 malfunction • Short to power supply in wiring harness between APP sensor terminal E and PCM terminal 2AS • Open circuit in wiring harness between APP sensor terminal D and PCM terminal 2AT • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
3	**CLASSIFY APP SENSOR NO.2 MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Access the APP2 PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the APP2 PID value. • Is the APP2 PID value **5 V** or **B+**?	Yes	Go to Step 7.
		No	Go to the next step.
4	**INSPECT APP SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT APP SENSOR NO.2** • Reconnect all disconnected connectors. • Inspect the APP sensor No.2. (See 01-40-51 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the accelerator pedal, then go to Step 9. (See 01-13A-14 ACCELERATOR PEDAL REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 9.
7	**INSPECT APP SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Switch the ignition to off. • Disconnect the APP sensor connector. • Access the APP2 PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the APP2 PID value. • Is the APP2 PID value **5 V** or **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
8	**INSPECT APP SENSOR NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the APP sensor connector is disconnected. • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for continuity between APP sensor terminal D (wiring harness-side) and PCM terminal 2AT (wiring harness-side). • Is there continuity?	Yes	Replace the accelerator pedal, then go to the next step. (See 01-13A-14 ACCELERATOR PEDAL REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2135:00 [SKYACTIV-G 2.0]

id0102h1708700

DTC P2135:00	**TP sensor No.1/No.2 voltage correlation problem**
DETECTION CONDITION	• The PCM compares the input voltage from TP sensor No.1 with the input voltage from TP sensor No.2. If the difference is more than the specification, the PCM determines that there is a TP sensor No.1/No.2 voltage correlation problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8** ° by return spring force).
POSSIBLE CAUSE	• Throttle body connector or terminals malfunction • PCM connector or terminals malfunction • TP sensor No.1 malfunction • TP sensor No.2 malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P0122:00, P0123:00, P0222:00 or P0223:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-94 DTC P0122:00 [SKYACTIV-G 2.0].) (See 01-02-97 DTC P0123:00 [SKYACTIV-G 2.0].) (See 01-02-164 DTC P0222:00 [SKYACTIV-G 2.0].) (See 01-02-167 DTC P0223:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT THROTTLE BODY CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
6	**INSPECT TP SENSOR NO.1 AND NO.2** • Reconnect all disconnected connectors. • Inspect the TP sensor No.1 and No.2. (See 01-40-50 THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Intermittent concern exists. • Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03-116 INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0].)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P2138:00 [SKYACTIV-G 2.0]

id0102h1708800

DTC P2138:00	**APP sensor No.1/No.2 voltage correlation problem**
DETECTION CONDITION	• The PCM compares the input voltage from APP sensor No.1 with the input voltage from APP sensor No.2 when the engine is running. If the difference is more than the specification, the PCM determines that there is an APP sensor No.1/No.2 angle correlation problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Restricts the upper limit of the engine speed. • Stops the drive-by-wire control (throttle valve is open at **approx. 8** ° by return spring force).
POSSIBLE CAUSE	• APP sensor connector or terminals malfunction • PCM connector or terminals malfunction • APP sensor No.1 malfunction • APP sensor No.2 malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P2122:00, P2123:00, P2127:00 or P2128:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-327 DTC P2122:00 [SKYACTIV-G 2.0].) (See 01-02-329 DTC P2123:00 [SKYACTIV-G 2.0].) (See 01-02-331 DTC P2127:00 [SKYACTIV-G 2.0].) (See 01-02-333 DTC P2128:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
4	**INSPECT APP SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
6	**INSPECT APP SENSOR NO.1 AND NO.2** • Reconnect all disconnected connectors. • Inspect the APP sensor No.1 and No.2. (See 01-40-51 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the accelerator pedal, then go to the next step. (See 01-13A-14 ACCELERATOR PEDAL REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Intermittent concern exists. • Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03-116 INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0].)
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2199:00 [SKYACTIV-G 2.0]

id0102h1415100

DTC P2199:00	**IAT sensor No.2 circuit range/performance problem**
DETECTION CONDITION	• IAT sensor No.1 and IAT sensor No.2 are compared after the engine is started* and correlation error occurs. *: Ignition switch on when **6 h or more** has passed since the ignition was switched off. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• MAF sensor/IAT sensor No.1 connector or terminals malfunction • MAP sensor/IAT sensor No.2 connector or terminals malfunction • IAT sensor No.1 malfunction • IAT sensor No.2 malfunction • PCM connector or terminals malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF SENSOR/IAT SENSOR NO.1 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the MAF sensor/IAT sensor No.1 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
4	**INSPECT MAP SENSOR/IAT SENSOR NO.2 CONNECTOR CONDITION** • Disconnect the MAP sensor/IAT sensor No.2 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT IAT SENSOR NO.1** • Inspect the IAT sensor No.1. (See 01-40-46 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1, then go to Step 8. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
6	**INSPECT IAT SENSOR NO.2** • Inspect the IAT sensor No.2. (See 01-40-46 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2, then go to Step 8. (See 01-40-48 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and run the engine under the FREEZE FRAME DATA (Mode 2) condition. • Perform the Pending Trouble Code Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P2228:00 [SKYACTIV-G 2.0]

id0102h1153200

DTC P2228:00	BARO sensor circuit low input
DETECTION CONDITION	• The PCM monitors input voltage from the BARO sensor. If the input voltage is below specified value for **5 s**, the PCM determines that the BARO sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the barometric pressure for the engine control at **101.32 kPa {759.96 mmHg, 29.920 inHg}**.
POSSIBLE CAUSE	• BARO sensor (built-into PCM) malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BARO SENSOR** • Inspect the BARO sensor. (See 01-40-49 BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P2229:00 [SKYACTIV-G 2.0]

id0102h1153300

DTC P2229:00	BARO sensor circuit high input
DETECTION CONDITION	• The PCM monitors input voltage from the BARO sensor. If the input voltage is above specified value for **5 s**, the PCM determines that the BARO sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the barometric pressure for the engine control at **101.32 kPa {759.96 mmHg, 29.920 inHg}**.
POSSIBLE CAUSE	• BARO sensor (built-into PCM) malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BARO SENSOR** • Inspect the BARO sensor. (See 01-40-49 BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

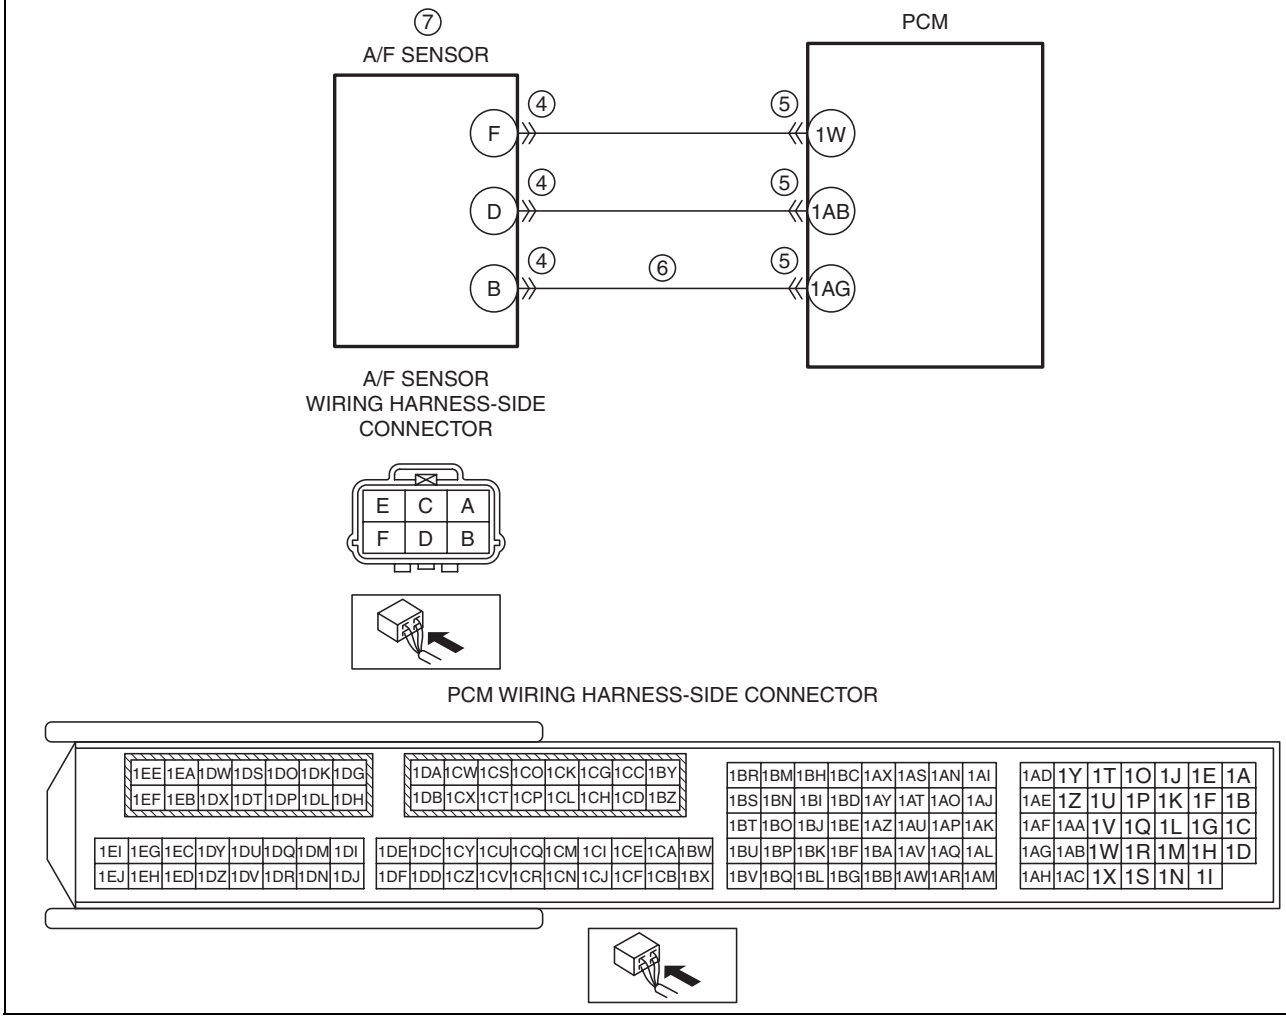
ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC P2237:00 [SKYACTIV-G 2.0]

id0102h1851200

DTC P2237:00	**A/F sensor positive current control circuit open**
DETECTION CONDITION	• The PCM monitors A/F sensor positive current control circuit voltage. If the voltage is between **2.2 V** and **2.4 V** while the engine is running, the PCM determines that the A/F sensor positive current control circuit is open. **Diagnostic support note** • This is a continuous monitor (A/F sensor, HO2S). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the duty value of the A/F sensor heater. • Stops the fuel feedback control.
POSSIBLE CAUSE	• A/F sensor connector or terminals malfunction • PCM connector or terminals malfunction • Open circuit in wiring harness between A/F sensor terminal B and PCM terminal 1AG • A/F sensor malfunction • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P2237:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT A/F SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	**INSPECT A/F SENSOR POSITIVE CURRENT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the A/F sensor and PCM connectors are disconnected. • Inspect for continuity between A/F sensor terminal B (wiring harness-side) and PCM terminal 1AG (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
7	**INSPECT A/F SENSOR** • Reconnect all disconnected connectors. • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the A/F sensor, then go to the next step. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

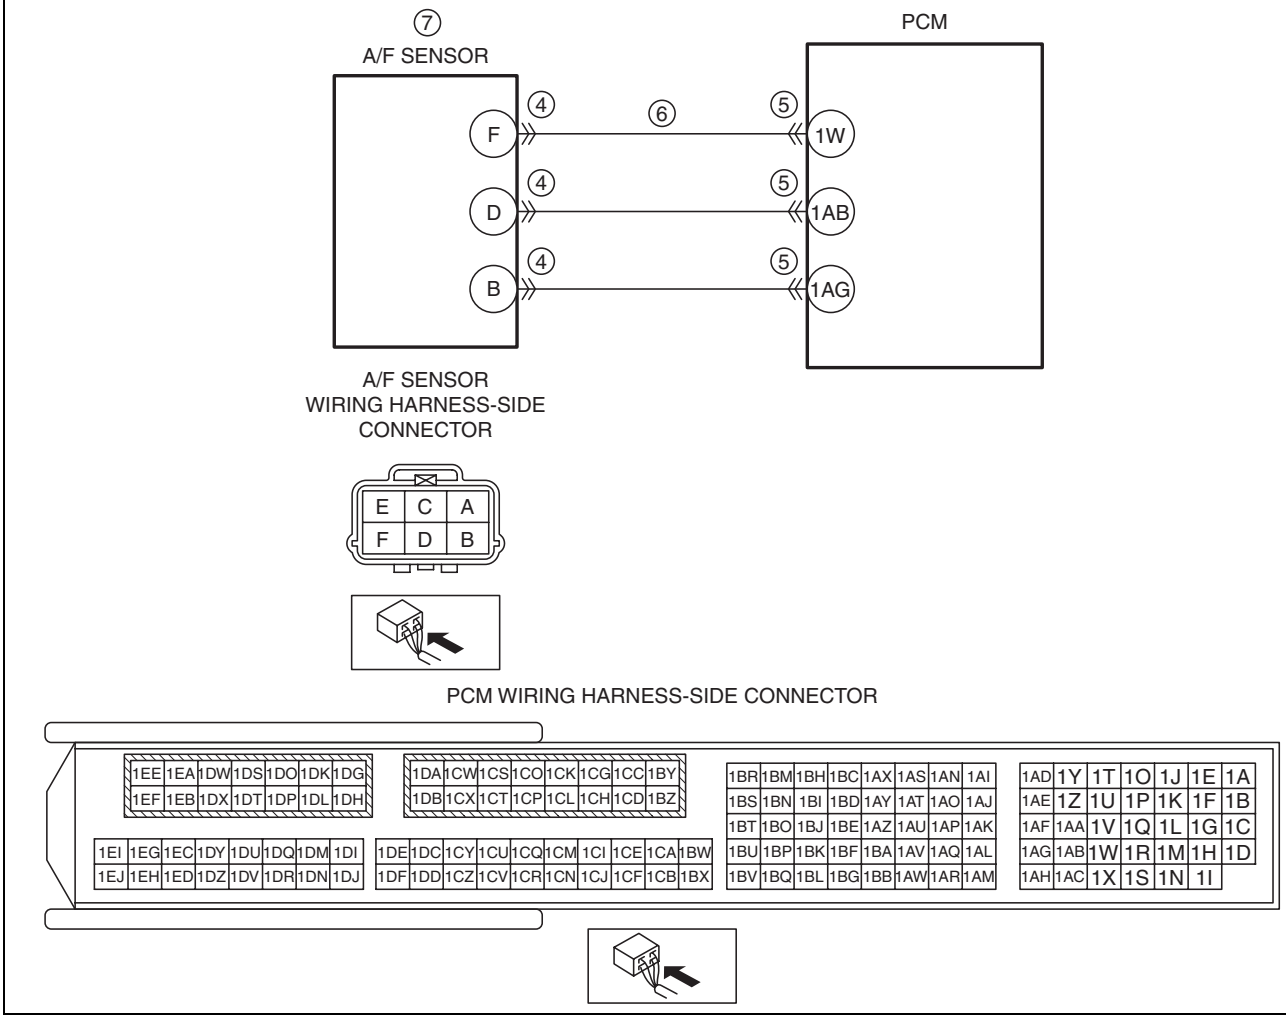
STEP	INSPECTION		ACTION
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test or Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2243:00 [SKYACTIV-G 2.0]

id0102h1303600

DTC P2243:00	A/F sensor reference voltage circuit open
DETECTION CONDITION	• The PCM monitors the A/F sensor signal voltage at the PCM terminal 1W. If either of the following conditions is met, the PCM determines that the A/F sensor reference voltage circuit is open. — The PCM terminal 1W voltage is **above 5.3 V** for **30 s**. — The PCM detects DTC P0134:00 while the pending code P2243:00 is stored. **MONITORING CONDITIONS** — Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode) — Following conditions are met: • Engine is running • Battery voltage: **11—18 V** • A/F sensor element impedance: specified or more **Diagnostic support note** • This is a continuous monitor (A/F sensor, HO2S). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the duty value of the A/F sensor heater. • Stops the fuel feedback control.
POSSIBLE CAUSE	• A/F sensor connector or terminals malfunction • PCM connector or terminals malfunction • Open circuit in wiring harness between A/F sensor terminal F and PCM terminal 1W • A/F sensor malfunction • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P2243:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT A/F SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	**INSPECT A/F SENSOR REFERENCE VOLTAGE CIRCUIT FOR OPEN CIRCUIT** • Verify that the A/F sensor and PCM connectors are disconnected. • Inspect for continuity between A/F sensor terminal F (wiring harness-side) and PCM terminal 1W (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
7	**INSPECT A/F SENSOR** • Reconnect all disconnected connectors. • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the A/F sensor, then go to the next step. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

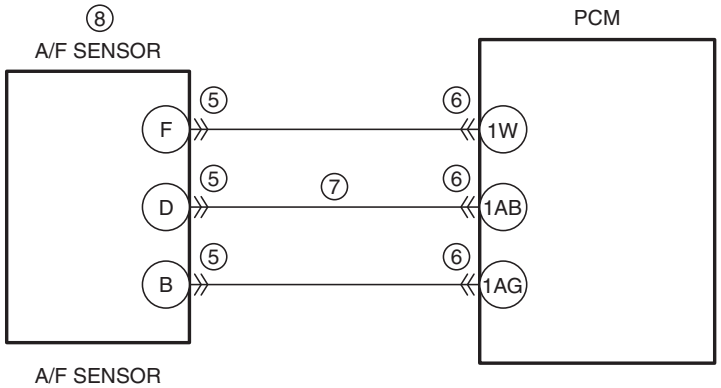
STEP	INSPECTION		ACTION
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test or Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

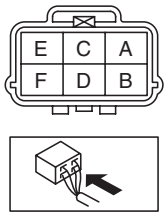
DTC P2251:00 [SKYACTIV-G 2.0]

id0102h1851300

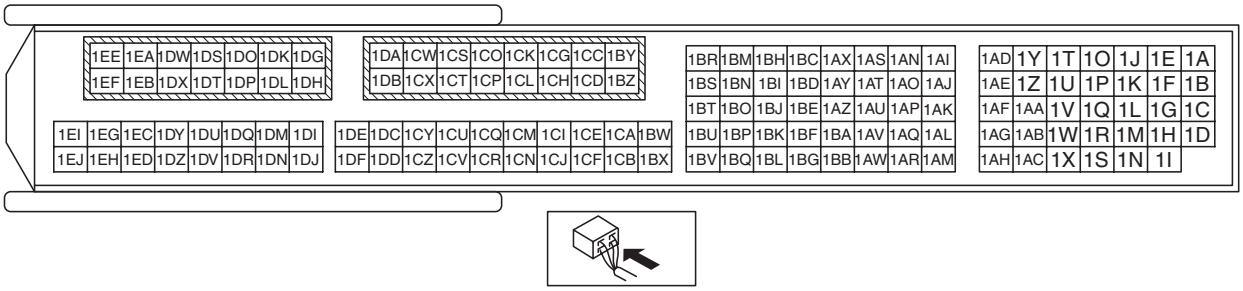
DTC P2251:00	**A/F sensor negative current control circuit open**
DETECTION CONDITION	• The PCM monitors the A/F sensor signal voltage at the PCM terminal 1W. If either of the following conditions is met, the PCM determines that the A/F sensor negative current control circuit is open. **MONITORING CONDITIONS** — Circuit voltage oscillation or the PCM terminal 1W voltage is **below 5.3 V**. — The PCM detects the DTC P0134:00 while the pending code P2251:00 is stored. — A/F sensor element impedance: specified or more — Battery voltage: **11—18 V** **Diagnostic support note** • This is a continuous monitor (A/F sensor, HO2S). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Fixes the duty value of the A/F sensor heater. • Stops the fuel feedback control.
POSSIBLE CAUSE	• A/F sensor connector or terminals malfunction • PCM connector or terminals malfunction • Open circuit in wiring harness between A/F sensor terminal D and PCM terminal 1AB • A/F sensor malfunction • PCM malfunction



A/F SENSOR WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA (MODE 2)** • Perform the Freeze Frame PID Data Access Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P2251:00 on FREEZE FRAME DATA (Mode 2)?	Yes	Go to the next step.
		No	Go to the troubleshooting procedure for DTC on FREEZE FRAME DATA (Mode 2). (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
2	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (A/F sensor, HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P0031:00 or P0032:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-41 DTC P0031:00 [SKYACTIV-G 2.0].) (See 01-02-44 DTC P0032:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT A/F SENSOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the A/F sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 9.
		No	Go to the next step.
7	**INSPECT A/F SENSOR NEGATIVE CURRENT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Verify that the A/F sensor and PCM connectors are disconnected. • Inspect for continuity between A/F sensor terminal D (wiring harness-side) and PCM terminal 1AB (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 9.
8	**INSPECT A/F SENSOR** • Reconnect all disconnected connectors. • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the A/F sensor, then go to the next step. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
9	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test or Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2299:00 [SKYACTIV-G 2.0]

id0102h1327200

DTC P2299:00	**Accelerator pedal: spring back malfunction**
DETECTION CONDITION	• Brake override system operates. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Controls the throttle valve so that the engine speed is at specification*. (Brake override system) *: For MTX vehicles, engine speed is **1,200 rpm** when in neutral, and **1,100 rpm** when not in neutral. For ATX vehicles, engine speed is **1,200 rpm** when in N position, and **1,100 rpm** when in D position.
POSSIBLE CAUSE	• Driver depresses accelerator and brake pedals simultaneously (during braking operation using left foot) • Accelerator pedal is pressed in by object such as floor mat • Accelerator pedal sticking • APP sensor signal malfunction — APP sensor malfunction — Related connector or terminals malfunction — Related wiring harness malfunction • Brake switch signal malfunction — Brake switch malfunction — Related connector or terminals malfunction — Related wiring harness malfunction — Brake pedal malfunction (increase in play due to joint pin wear) • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY DTC REPEATABILITY** • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Go to the next step.
		No	DTC troubleshooting completed. • Explain to the customer that P2299:00 is stored by the brake override system operation.
3	**VERIFY CONDITION OF FLOOR MAT** • Is the condition of the driver side floor mat one of the following? — Floor mat is doubled over — Floor mat is spread against the accelerator pedal	Yes	Explain to the customer that the floor mat is preventing the accelerator pedal from springing back after release. • Go to Step 11.
		No	Go to the next step.
4	**INSPECT APP SENSOR** • Is the condition of the accelerator pedal one of the following? — Accelerator pedal sticking has occurred when operated — There is evidence of accelerator pedal disassembly	Yes	Replace the accelerator pedal, then go to Step 11. (See 01-13A-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF APP SENSOR** • Access the APP PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the value for PID APP **0 %** when the accelerator pedal is not depressed? • Does the value for PID APP change when the accelerator pedal is continually depressed?	Yes	Go to Step 7.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

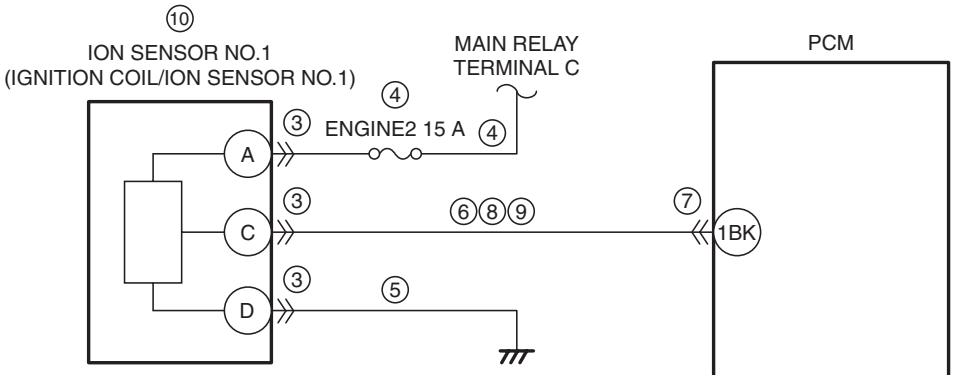
STEP	INSPECTION		ACTION
6	**INSPECT APP SENSOR RELATED WIRING HARNESS AND CONNECTOR** • Inspect the wiring harness related to the APP sensor for connector disconnection, short circuit, and poor contact. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 11.
		No	APP sensor malfunction. • Replace the accelerator pedal, then go to Step 11. (See 01-13A-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF BRAKE SWITCH** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — BOO — BPA • Are all PIDs normal?	Yes	Go to Step 10.
		No	Go to the next step.
8	**INSPECT BRAKE SWITCH** • Inspect the brake switch. (See 04-11-11 BRAKE SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the brake switch, then go to Step 11. (See 04-11-9 BRAKE PEDAL REMOVAL/INSTALLATION [R.H.D.].) (See 04-11-8 BRAKE PEDAL REMOVAL/INSTALLATION [L.H.D.].)
		No	Go to the next step.
9	**INSPECT BRAKE PEDAL PLAY AMOUNT** • Inspect the brake pedal play amount. (See 04-11-7 BRAKE PEDAL INSPECTION.) • Is the amount of brake pedal play normal?	Yes	Inspect the wiring harness related to the brake switch for connector disconnection, short circuit, and poor contact. • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results, then go to Step 11.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 11.
10	**VERIFY IF A DTC RELATED TO DRIVE-BY-WIRE CONTROL IS DETECTED** • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is a DTC related to the drive-by-wire control present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	It is possible that the accelerator and brake pedals have been depressed simultaneously. (during braking operation using left foot) • Go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

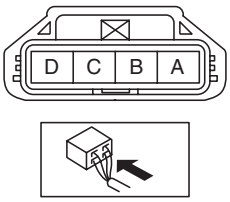
DTC P2302:00 [SKYACTIV-G 2.0]

id0102h1743000

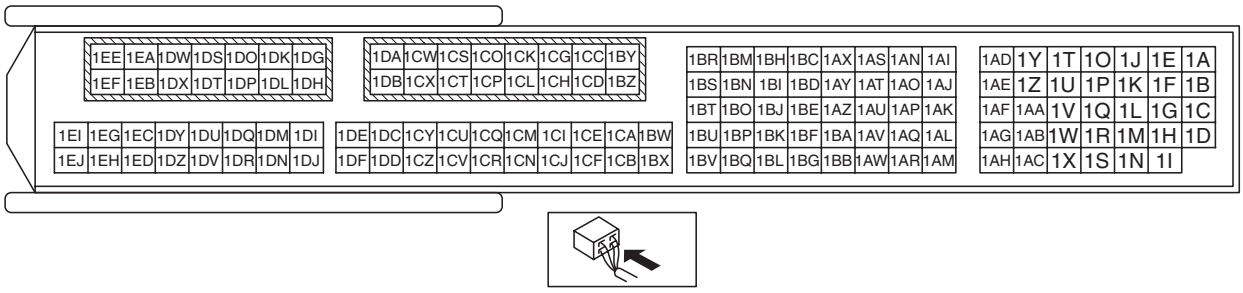
DTC P2302:00	**Ion sensor No.1 circuit problem**
DETECTION CONDITION	• After the engine is started, when the engine speed is **2,000 rpm or less**, the signal input to the PCM from ion sensor No.1 is in error. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Cylinder No.1 misfire • Ignition coil/ion sensor No.1 connector or terminals malfunction • Short to ground or open circuit in ion sensor No.1 power supply circuit — Short to ground in wiring harness between ENGINE2 15 A fuse and ignition coil/ion sensor No.1 terminal A — ENGINE2 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and ignition coil/ion sensor No.1 terminal A • Open circuit in wiring harness between ignition coil/ion sensor No.1 terminal D and body ground • Short to ground in wiring harness between ignition coil/ion sensor No.1 terminal C and PCM terminal 1BK • PCM connector or terminals malfunction • Short to power supply in wiring harness between ignition coil/ion sensor No.1 terminal C and PCM terminal 1BK • Open circuit in wiring harness between ignition coil/ion sensor No.1 terminal C and PCM terminal 1BK • Ion sensor No.1 malfunction • PCM malfunction



IGNITION COIL/ION SENSOR NO.1 WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P0301:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-182 DTC P0301:00, P0302:00, P0303:00, P0304:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT IGNITION COIL/ION SENSOR NO.1 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the ignition coil/ion sensor No.1 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
4	**INSPECT ION SENSOR NO.1 POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.1 connector is disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the ignition coil/ion sensor No.1 terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE2 15 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 11.
5	**INSPECT ION SENSOR NO.1 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.1 connector is disconnected. • Switch the ignition to off. • Inspect for continuity between ignition coil/ion sensor No.1 terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
6	**INSPECT ION SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the ignition coil/ion sensor No.1 connector is disconnected. • Inspect for continuity between ignition coil/ion sensor No.1 terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 11.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

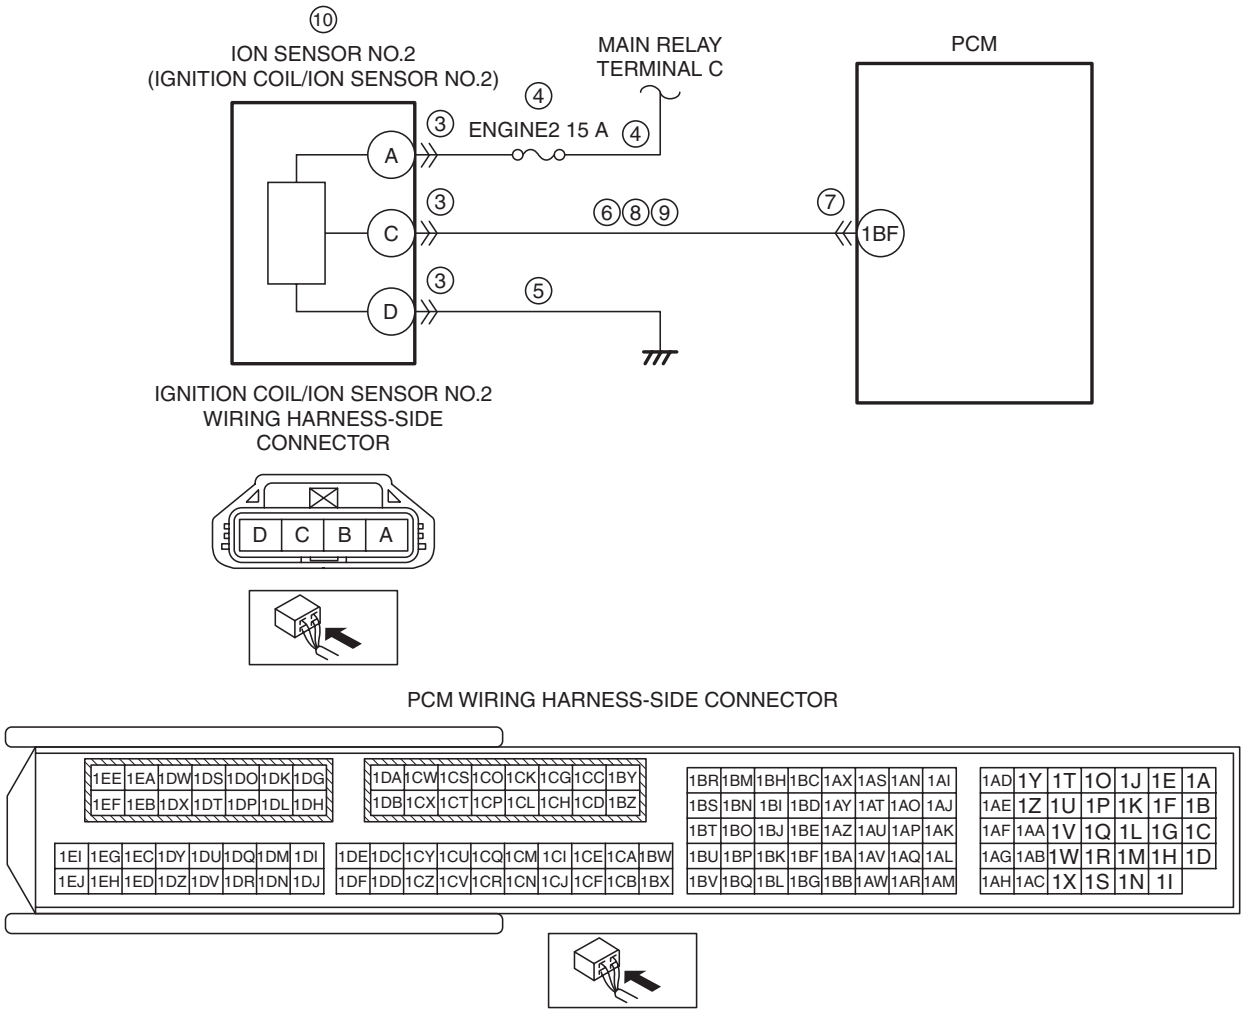
STEP	INSPECTION		ACTION
8	**INSPECT ION SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the ignition coil/ion sensor No.1 and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the ignition coil/ion sensor No.1 terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 11.
9	**INSPECT ION SENSOR NO.1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.1 and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between ignition coil/ion sensor No.1 terminal C (wiring harness-side) and PCM terminal 1BK (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
10	**INSPECT ION SENSOR NO.1** • Inspect the ion sensor No.1. (See 01-40-68 ION SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the ignition coil/ion sensor No.1, then go to the next step. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2305:00 [SKYACTIV-G 2.0]

id0102h1743100

DTC P2305:00	**Ion sensor No.2 circuit problem**
DETECTION CONDITION	• After the engine is started, when the engine speed is **2,000 rpm or less**, the signal input to the PCM from ion sensor No.2 is in error. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Cylinder No.2 misfire • Ignition coil/ion sensor No.2 connector or terminals malfunction • Short to ground or open circuit in ion sensor No.2 power supply circuit — Short to ground in wiring harness between ENGINE2 15 A fuse and ignition coil/ion sensor No.2 terminal A — ENGINE2 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and ignition coil/ion sensor No.2 terminal A • Open circuit in wiring harness between ignition coil/ion sensor No.2 terminal D and body ground • Short to ground in wiring harness between ignition coil/ion sensor No.2 terminal C and PCM terminal 1BF • PCM connector or terminals malfunction • Short to power supply in wiring harness between ignition coil/ion sensor No.2 terminal C and PCM terminal 1BF • Open circuit in wiring harness between ignition coil/ion sensor No.2 terminal C and PCM terminal 1BF • Ion sensor No.2 malfunction • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P0302:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-182 DTC P0301:00, P0302:00, P0303:00, P0304:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT IGNITION COIL/ION SENSOR NO.2 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the ignition coil/ion sensor No.2 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
4	**INSPECT ION SENSOR NO.2 POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.2 connector is disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the ignition coil/ion sensor No.2 terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE2 15 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 11.
5	**INSPECT ION SENSOR NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.2 connector is disconnected. • Switch the ignition to off. • Inspect for continuity between ignition coil/ion sensor No.2 terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
6	**INSPECT ION SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the ignition coil/ion sensor No.2 connector is disconnected. • Inspect for continuity between ignition coil/ion sensor No.2 terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 11.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

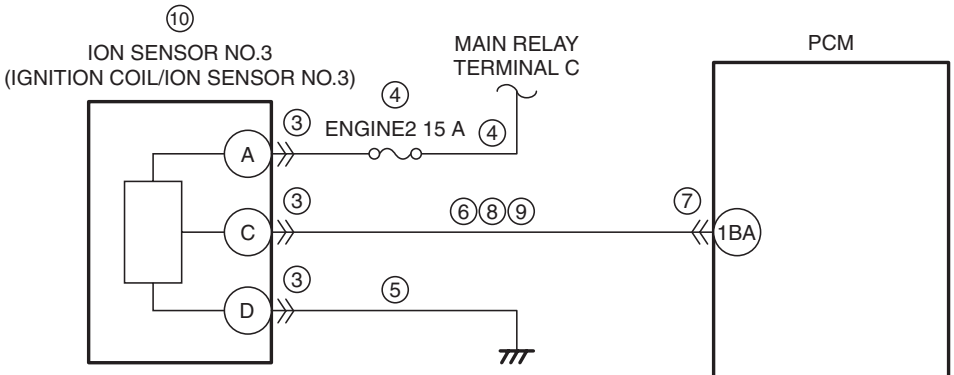
STEP	INSPECTION		ACTION
8	**INSPECT ION SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the ignition coil/ion sensor No.2 and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the ignition coil/ion sensor No.2 terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 11.
9	**INSPECT ION SENSOR NO.2 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.2 and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between ignition coil/ion sensor No.2 terminal C (wiring harness-side) and PCM terminal 1BF (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
10	**INSPECT ION SENSOR NO.2** • Inspect the ion sensor No.2. (See 01-40-68 ION SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the ignition coil/ion sensor No.2, then go to the next step. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

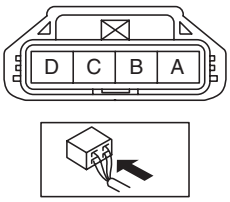
DTC P2308:00 [SKYACTIV-G 2.0]

id0102h1743200

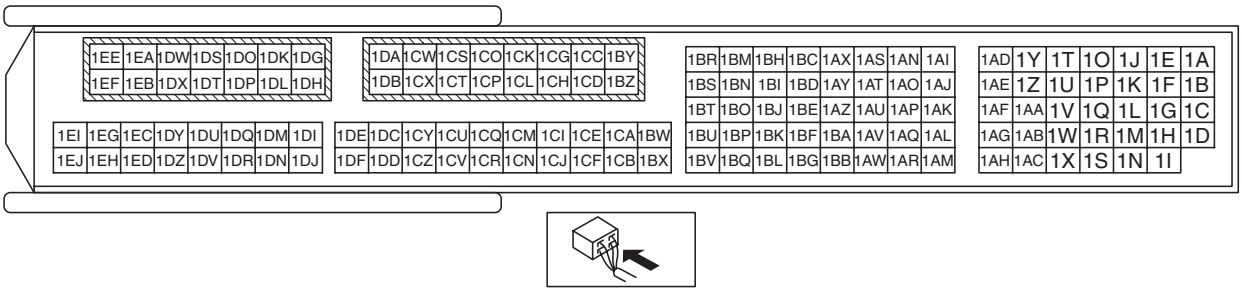
DTC P2308:00	**Ion sensor No.3 circuit problem**
DETECTION CONDITION	• After the engine is started, when the engine speed is **2,000 rpm or less**, the signal input to the PCM from ion sensor No.3 is in error. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Cylinder No.3 misfire • Ignition coil/ion sensor No.3 connector or terminals malfunction • Short to ground or open circuit in ion sensor No.3 power supply circuit — Short to ground in wiring harness between ENGINE2 15 A fuse and ignition coil/ion sensor No.3 terminal A — ENGINE2 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and ignition coil/ion sensor No.3 terminal A • Open circuit in wiring harness between ignition coil/ion sensor No.3 terminal D and body ground • Short to ground in wiring harness between ignition coil/ion sensor No.3 terminal C and PCM terminal 1BA • PCM connector or terminals malfunction • Short to power supply in wiring harness between ignition coil/ion sensor No.3 terminal C and PCM terminal 1BA • Open circuit in wiring harness between ignition coil/ion sensor No.3 terminal C and PCM terminal 1BA • Ion sensor No.3 malfunction • PCM malfunction



IGNITION COIL/ION SENSOR NO.3 WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P0303:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-182 DTC P0301:00, P0302:00, P0303:00, P0304:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT IGNITION COIL/ION SENSOR NO.3 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the ignition coil/ion sensor No.3 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
4	**INSPECT ION SENSOR NO.3 POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.3 connector is disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the ignition coil/ion sensor No.3 terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE2 15 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 11.
5	**INSPECT ION SENSOR NO.3 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.3 connector is disconnected. • Switch the ignition to off. • Inspect for continuity between ignition coil/ion sensor No.3 terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
6	**INSPECT ION SENSOR NO.3 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the ignition coil/ion sensor No.3 connector is disconnected. • Inspect for continuity between ignition coil/ion sensor No.3 terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 11.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

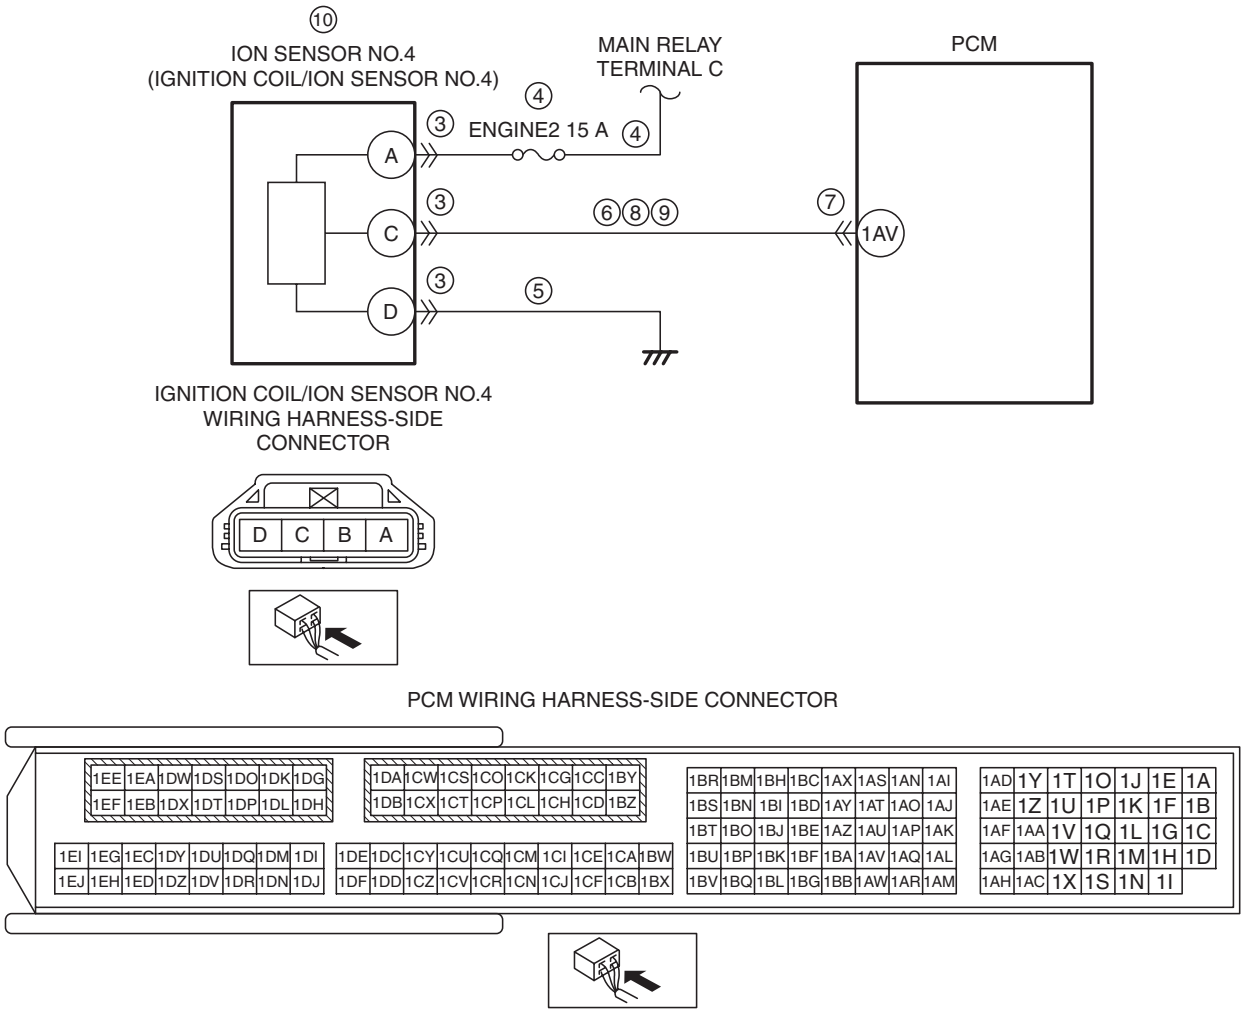
STEP	INSPECTION		ACTION
8	**INSPECT ION SENSOR NO.3 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the ignition coil/ion sensor No.3 and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the ignition coil/ion sensor No.3 terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 11.
9	**INSPECT ION SENSOR NO.3 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.3 and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between ignition coil/ion sensor No.3 terminal C (wiring harness-side) and PCM terminal 1BA (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
10	**INSPECT ION SENSOR NO.3** • Inspect the ion sensor No.3. (See 01-40-68 ION SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the ignition coil/ion sensor No.3, then go to the next step. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2311:00 [SKYACTIV-G 2.0]

id0102h1743300

DTC P2311:00	**Ion sensor No.4 circuit problem**
DETECTION CONDITION	• After the engine is started, when the engine speed is **2,000 rpm or less**, the signal input to the PCM from ion sensor No.4 is in error. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Cylinder No.4 misfire • Ignition coil/ion sensor No.4 connector or terminals malfunction • Short to ground or open circuit in ion sensor No.4 power supply circuit — Short to ground in wiring harness between ENGINE2 15 A fuse and ignition coil/ion sensor No.4 terminal A — ENGINE2 15 A fuse malfunction — Open circuit in wiring harness between main relay terminal C and ignition coil/ion sensor No.4 terminal A • Open circuit in wiring harness between ignition coil/ion sensor No.4 terminal D and body ground • Short to ground in wiring harness between ignition coil/ion sensor No.4 terminal C and PCM terminal 1AV • PCM connector or terminals malfunction • Short to power supply in wiring harness between ignition coil/ion sensor No.4 terminal C and PCM terminal 1AV • Open circuit in wiring harness between ignition coil/ion sensor No.4 terminal C and PCM terminal 1AV • Ion sensor No.4 malfunction • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE/DTC P0304:00 also present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-182 DTC P0301:00, P0302:00, P0303:00, P0304:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT IGNITION COIL/ION SENSOR NO.4 CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the ignition coil/ion sensor No.4 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
4	**INSPECT ION SENSOR NO.4 POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.4 connector is disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the ignition coil/ion sensor No.4 terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the ENGINE2 15 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 11.
5	**INSPECT ION SENSOR NO.4 GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.4 connector is disconnected. • Switch the ignition to off. • Inspect for continuity between ignition coil/ion sensor No.4 terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
6	**INSPECT ION SENSOR NO.4 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the ignition coil/ion sensor No.4 connector is disconnected. • Inspect for continuity between ignition coil/ion sensor No.4 terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 11.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

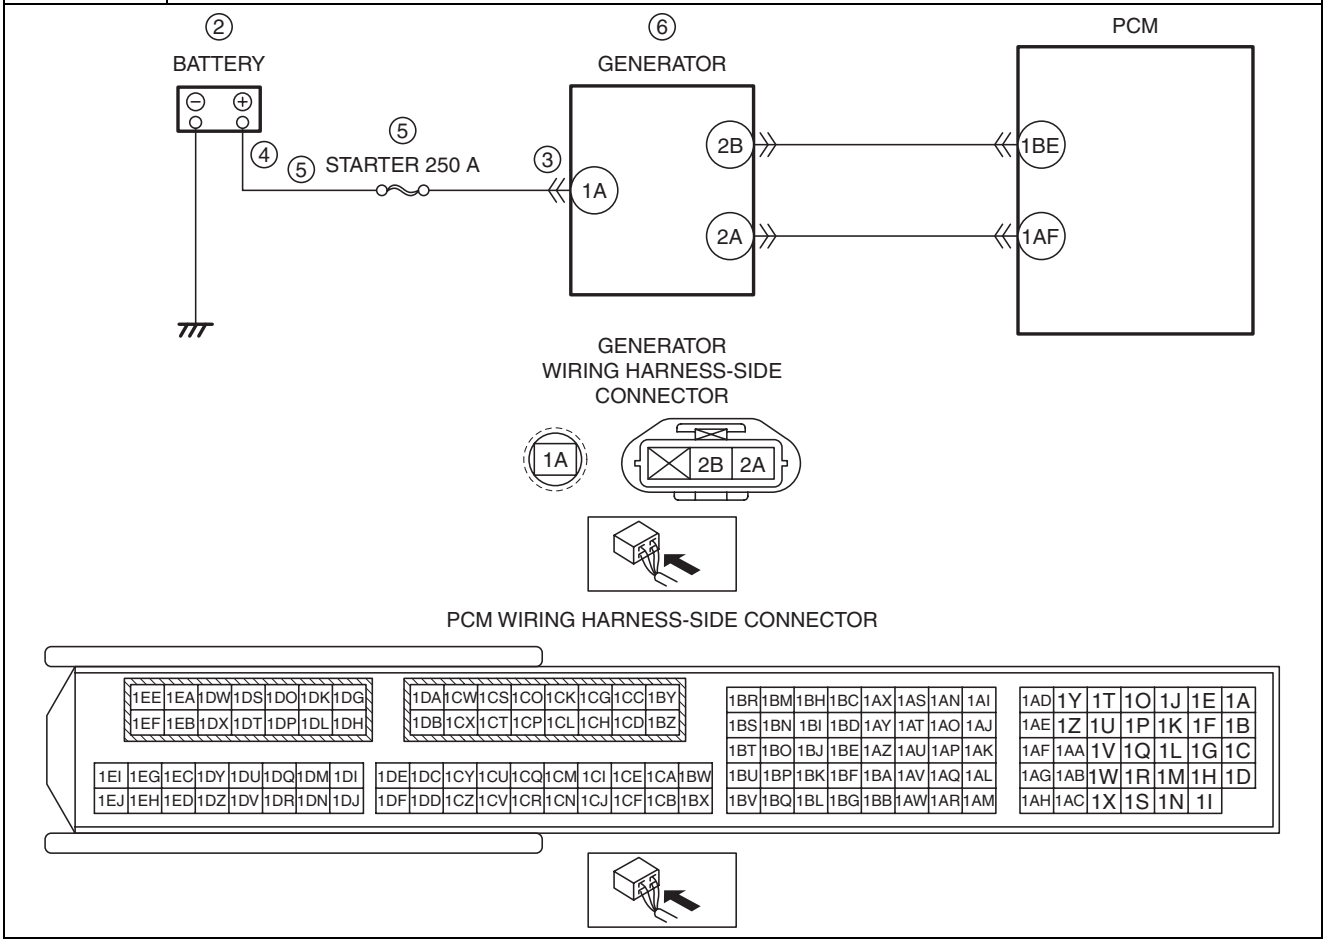
STEP	INSPECTION		ACTION
8	**INSPECT ION SENSOR NO.4 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the ignition coil/ion sensor No.4 and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the ignition coil/ion sensor No.4 terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 11.
9	**INSPECT ION SENSOR NO.4 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the ignition coil/ion sensor No.4 and PCM connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between ignition coil/ion sensor No.4 terminal C (wiring harness-side) and PCM terminal 1AV (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
10	**INSPECT ION SENSOR NO.4** • Inspect the ion sensor No.4. (See 01-40-68 ION SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the ignition coil/ion sensor No.4, then go to the next step. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine. • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2502:00 [SKYACTIV-G 2.0]

id0102h1709500

DTC P2502:00	**Charging system voltage problem**
DETECTION CONDITION	• The PCM determines that the generator output voltage is **more than 17 V**, and the battery voltage is **less than 11 V**, **for 5 s** while the engine is running. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Illuminates the charging system warning light.
POSSIBLE CAUSE	• Battery malfunction • Loose generator terminal 1A installation nut • Battery positive terminal is poorly connected • Short to ground or open circuit in battery charging circuit — Short to ground in wiring harness between STARTER 250 A fuse and generator terminal 1A — STARTER 250 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and generator terminal 1A • Generator malfunction • PCM malfunction



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

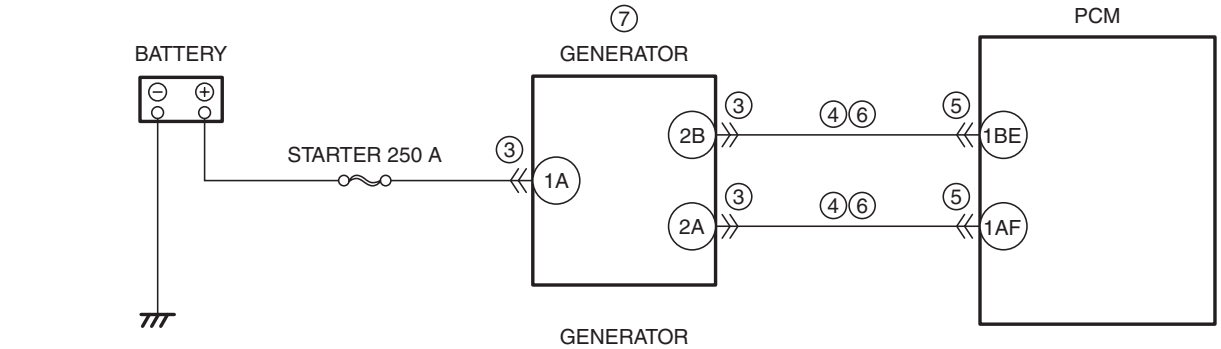
STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT BATTERY** • Switch the ignition to off. • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Is there any malfunction?	Yes	Recharge or replace the battery, then go to Step 7. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17A-10 BATTERY RECHARGING [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT POOR INSTALLATION OF GENERATOR TERMINAL** • Switch the ignition to off. • Inspect for looseness of the generator terminal 1A installation nut. • Is the nut loose?	Yes	Tighten the generator terminal 1A installation nut, then go to Step 7.
		No	Go to the next step.
4	**INSPECT POOR INSTALLATION OF BATTERY POSITIVE TERMINAL** • Inspect for looseness of the battery positive terminal. • Is the terminal loose?	Yes	Connect the battery positive terminal correctly, then go to Step 7.
		No	Go to the next step.
5	**INSPECT BATTERY CHARGING CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Disconnect the generator terminal 1A. • Measure the voltage at the generator terminal 1A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the STARTER 250 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 7.
6	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step. (See 01-17A-25 GENERATOR DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0].) (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

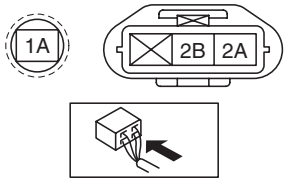
DTC P2503:00 [SKYACTIV-G 2.0]

id0102h1709600

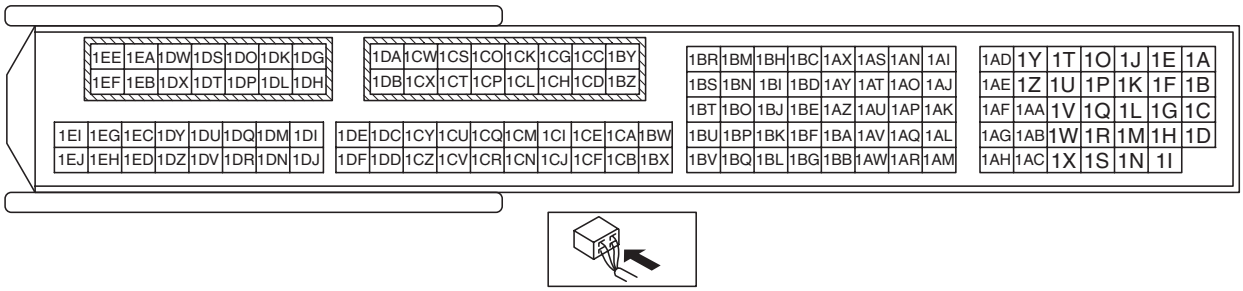
DTC P2503:00	Charging system voltage low input
DETECTION CONDITION	• The PCM determines that the generator output voltage is **less than 8.5 V**, and the generator target output current is **more than 20 A**, for **5 s** while the engine is running. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Illuminates the charging system warning light.
POSSIBLE CAUSE	• Drive belt exceeds limit • Generator connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — Generator terminal 2B—PCM terminal 1BE — Generator terminal 2A—PCM terminal 1AF • PCM connector or terminals malfunction • Open circuit in wiring harness between the following terminals: — Generator terminal 2B—PCM terminal 1BE — Generator terminal 2A—PCM terminal 1AF • Generator malfunction • PCM malfunction



GENERATOR WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT DRIVE BELT CONDITION** • Verify that the drive belt auto tensioner indicator mark does not exceed limit. (See 01-10A-9 DRIVE BELT INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the drive belt, then go to Step 8. (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT GENERATOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the generator connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
4	**INSPECT GENERATOR CIRCUIT FOR SHORT TO GROUND** • Verify that the generator connector is disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Generator terminal 2B — Generator terminal 2A • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 8.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	**INSPECT GENERATOR CIRCUIT FOR OPEN CIRCUIT** • Verify that the generator and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Generator terminal 2B—PCM terminal 1BE — Generator terminal 2A—PCM terminal 1AF • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 8.
7	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step. (See 01-17A-25 GENERATOR DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0].) (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.

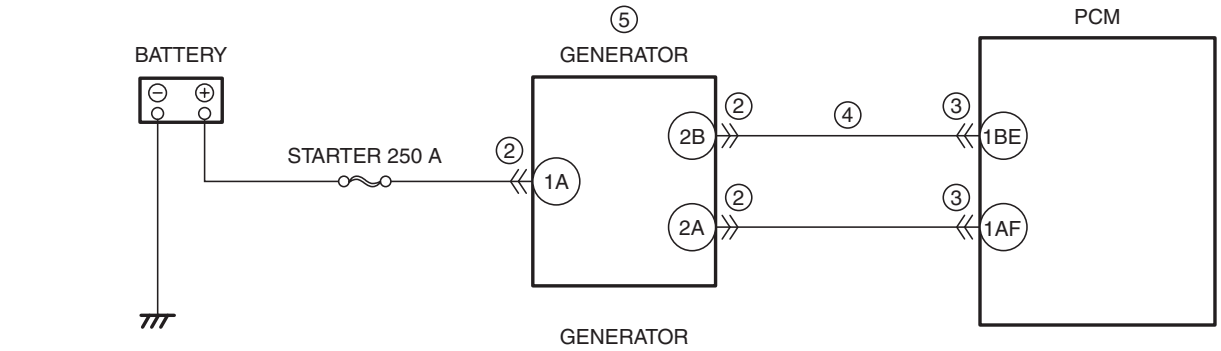
ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

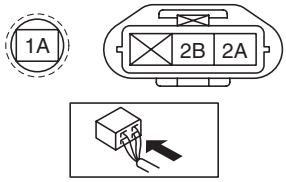
DTC P2504:00 [SKYACTIV-G 2.0]

id0102h1709700

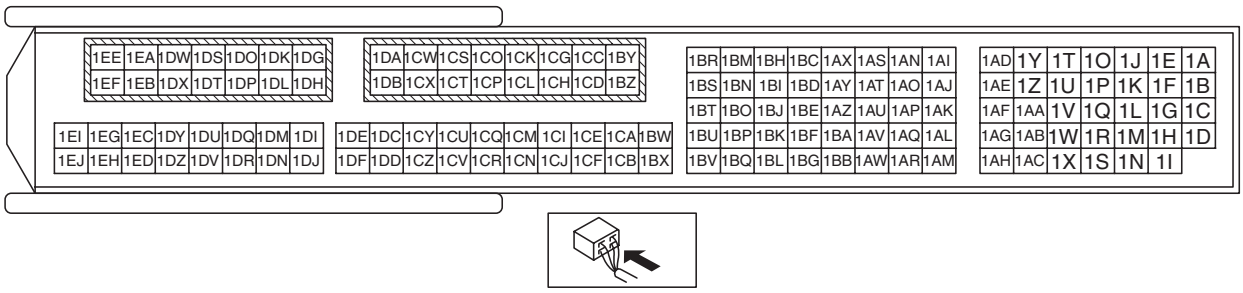
DTC P2504:00	**Charging system voltage high input**
DETECTION CONDITION	• The PCM determines that the generator output voltage is **more than 18.5 V**, or battery voltage is **more than 16.0 V**, for **5 s** while the engine is running. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Illuminates the charging system warning light.
POSSIBLE CAUSE	• Generator connector or terminals malfunction • PCM connector or terminals malfunction • Short to power supply in wiring harness between generator terminal 2B and PCM terminal 1BE • Generator malfunction • PCM malfunction



GENERATOR WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

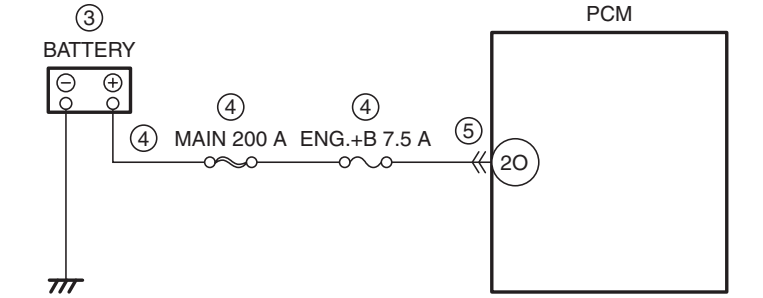
STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT GENERATOR CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the generator connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
3	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
4	**INSPECT GENERATOR CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the generator and PCM connectors are disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the generator terminal 2B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 6.
5	**INSPECT GENERATOR** • Switch the ignition to off. • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to the next step. (See 01-17A-25 GENERATOR DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0].) (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

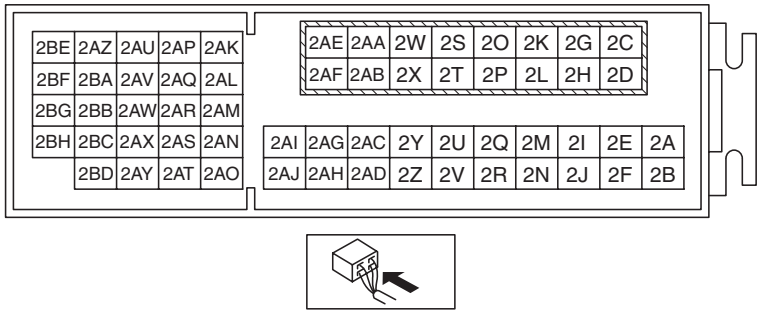
DTC P2507:00 [SKYACTIV-G 2.0]

id0102h1709800

DTC P2507:00	PCM battery voltage low input
DETECTION CONDITION	• The PCM monitors the voltage of backup battery positive terminal. If the PCM detects that the battery positive terminal voltage is **below 6 V** for **5 s**, the PCM determines that the backup voltage circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Battery malfunction • Short to ground or open circuit in backup voltage circuit — Short to ground in wiring harness between MAIN 200 A fuse and PCM terminal 2O — MAIN 200 A fuse and/or ENG.+B 7.5 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and PCM terminal 2O • PCM connector or terminals malfunction • PCM malfunction



PCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BATTERY** • Switch the ignition to off. • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Is there any malfunction?	Yes	Recharge or replace the battery, then go to Step 6. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17A-10 BATTERY RECHARGING [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
4	**INSPECT BACKUP VOLTAGE CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Reconnect all disconnected connectors. • Access the VPWR PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the VPWR PID value. • Is the VPWR PID value **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A fuse and ENG.+B 7.5 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the malfunctioning fuse. • If the fuse is deteriorated: — Replace the malfunctioning fuse. • If all fuses are normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 6.
5	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC P2610:00 [SKYACTIV-G 2.0]

id0102h1303800

DTC P2610:00	Instrument cluster internal engine off timer performance problem
DETECTION CONDITION	• Instrument cluster internal engine off timer is damaged. **Diagnostic support note** • This is a continuous monitor (CCM). • The check engine light illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Instrument cluster power supply circuit malfunction (In this case, the instrument cluster records DTC U3003:16.) • Instrument cluster internal engine off timer malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA (Mode 2)/ snapshot data been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY STORED DTC IN INSTRUMENT CLUSTER** • Switch the ignition to off, then to ON (engine off). • Retrieve the instrument cluster DTC using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
4	**INSPECT INSTRUMENT CLUSTER BACKUP VOLTAGE CIRCUIT** • Switch the ignition to off. • Remove the MAIN 200 A fuse and ROOM 15 A fuse. • Inspect the MAIN 200 A fuse and ROOM 15 A fuse. • Is there any malfunction?	Yes	Replace the malfunctioning fuse. Switch the ignition ON (engine on) and wait for **10 s or more**. Switch the ignition to off. Go to the next step.
		No	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC U0073:00, U0101:00, U0121:00, U0131:00, U0140:00, U0151:00, U0155:00, U0214:00, U0235:00 [SKYACTIV-G 2.0]

id0102h1910800

DTC U0073:00	CAN system communication error (HS CAN)
DETECTION CONDITION	• Malfunction in CAN bus communication line. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• CAN bus communication line malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

DTC U0101:00	CAN communication: communication error to TCM
DETECTION CONDITION	• Communication error between the TCM continues for **5 s or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Controls the turbine rotation signal at **0**. • Inhibits the AT torque reduction request.
POSSIBLE CAUSE	**Note** • During malfunction diagnosis, first verify the malfunction detection of DTC U0074:00 or U0115:00 for the TCM. • CAN communication line between PCM and TCM malfunction • TCM malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

DTC U0121:00	CAN communication: communication error to DSC HU/CM
DETECTION CONDITION	• Communication error between the DSC HU/CM continues for **5 s or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Inhibits the DSC control.
POSSIBLE CAUSE	• CAN communication line between PCM and DSC HU/CM malfunction • DSC HU/CM malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC U0131:00	**CAN communication: communication error to EPS control module**
DETECTION CONDITION	• Communication error between the EPS control module continues for **5 s or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• CAN communication line between PCM and EPS control module malfunction • EPS control module malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

DTC U0140:00	**CAN communication: communication error to front body control module (FBCM)**
DETECTION CONDITION	• Communication error between the front body control module (FBCM) continues for **5 s or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• CAN communication line between PCM and front body control module (FBCM) malfunction • Front body control module (FBCM) malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

DTC U0151:00	**CAN communication: communication error to SAS control module**
DETECTION CONDITION	• Communication error between the SAS control module continues for **5 s or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• CAN communication line between PCM and SAS control module malfunction • SAS control module malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

DTC U0155:00	**CAN communication: communication error to instrument cluster**
DETECTION CONDITION	• Communication error between the instrument cluster continues for **5 s or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC U0155:00	**CAN communication: communication error to instrument cluster**
POSSIBLE CAUSE	• CAN communication line between PCM and instrument cluster malfunction • Instrument cluster malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

DTC U0214:00	**CAN communication: communication error to start stop unit**
DETECTION CONDITION	• Communication error between the start stop unit continues for **5 s or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Inhibits the i-stop control and flashes the i-stop warning light (amber) (engine stalls while engine is stopped by i-stop control).
POSSIBLE CAUSE	• CAN communication line between PCM and start stop unit malfunction • Start stop unit malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

DTC U0235:00	**CAN communication: communication error to laser sensor**
DETECTION CONDITION	• Communication error between the laser sensor continues for **5 s or more**. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• The smart city brake support function is cancelled.
POSSIBLE CAUSE	• CAN communication line between PCM and laser sensor malfunction • Laser sensor malfunction • PCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

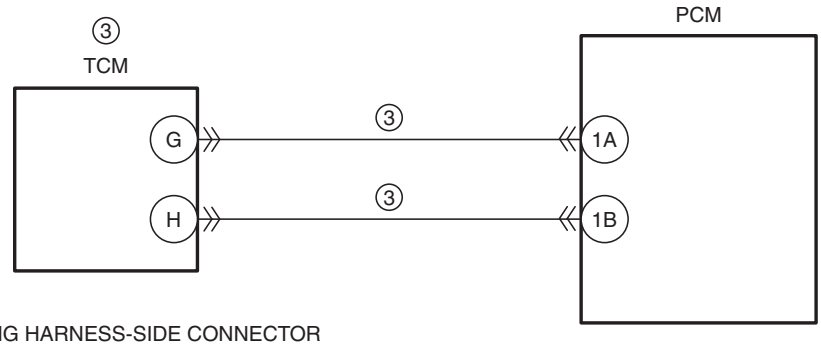
- Inspect according to the diagnostic procedure in ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]. (See 10-02A-1 FOREWORD [SKYACTIV-G 2.0 (L.H.D.)].) (See 10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)].)

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

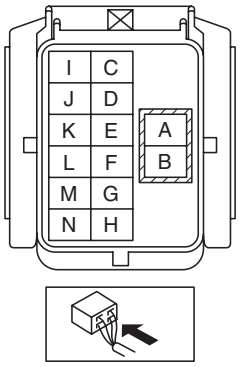
DTC U0074:00 [SKYACTIV-G 2.0]

id0102h1339600

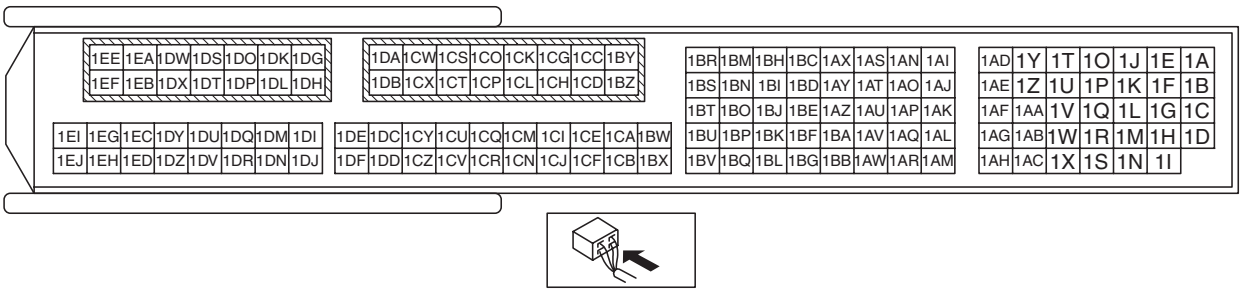
DTC U0074:00	**CAN system communication error (local CAN between PCM and TCM)**
DETECTION CONDITION	• Malfunction in CAN bus communication line. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• CAN communication line between PCM and TCM (local CAN between PCM and TCM) malfunction • TCM DTC is stored. • PCM malfunction • TCM malfunction



TCM WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**CONFIRM TCM DTC** • Perform the TCM DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	DTC U0074:00 or U0115:00 is displayed: • CAN communication line can be considered the cause. — Repair or replace the wiring harness between PCM and TCM, then go to the next step. DTC other than U0074:00 and U0115:00 is displayed: • Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	TCM can be considered the cause. • Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

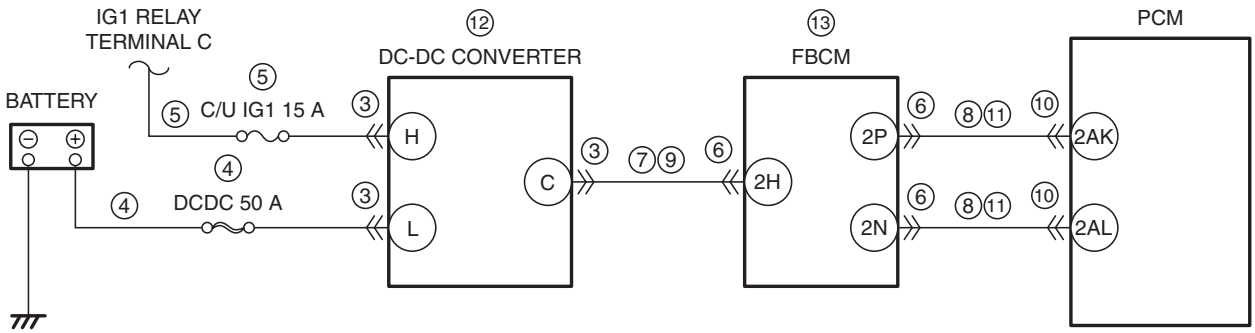
DTC U0298:00 [SKYACTIV-G 2.0]

id0102h1910500

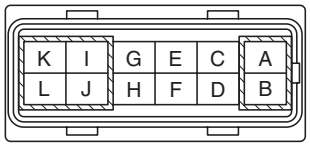
DTC U0298:00	CAN/LIN communication system: DC-DC converter information communication error with front body control module (FBCM)
DETECTION CONDITION	• PCM detects a DC-DC converter information communication error from front body control module (FBCM). **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Inhibits engine-stop by operating the i-stop function.
POSSIBLE CAUSE	• Communication line between DC-DC converter and front body control module (FBCM) malfunction • Communication line between front body control module (FBCM) and PCM malfunction • DC-DC converter connector or terminals malfunction • Short to ground or open circuit in DC-DC converter power supply circuit — Short to ground in wiring harness between DCDC 50 A fuse and DC-DC converter terminal L — DCDC 50 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and DC-DC converter terminal L • Short to ground or open circuit in DC-DC converter power supply circuit — Short to ground in wiring harness between C/U IG1 15 A fuse and DC-DC converter terminal H — C/U IG1 15 A fuse malfunction — Open circuit in wiring harness between IG1 relay terminal C and DC-DC converter terminal H • Front body control module (FBCM) connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — DC-DC converter terminal C—Front body control module (FBCM) terminal 2H — Front body control module (FBCM) terminal 2P—PCM terminal 2AK — Front body control module (FBCM) terminal 2N—PCM terminal 2AL • Open circuit in wiring harness between DC-DC converter terminal C and front body control module (FBCM) terminal 2H • PCM connector or terminals malfunction • Open circuit in wiring harness between the following terminals: — Front body control module (FBCM) terminal 2P—PCM terminal 2AK — Front body control module (FBCM) terminal 2N—PCM terminal 2AL • DC-DC converter malfunction • Front body control module (FBCM) malfunction • PCM malfunction

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

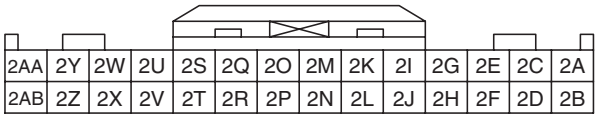
DTC U0298:00	CAN/LIN communication system: DC-DC converter information communication error with front body control module (FBCM)



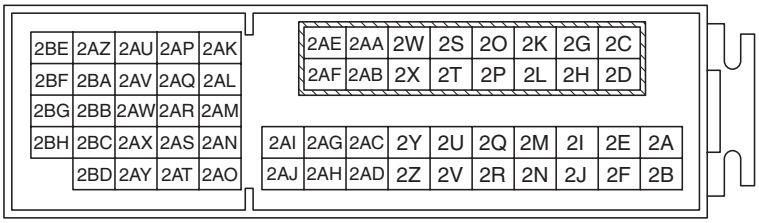
DC-DC CONVERTER WIRING HARNESS-SIDE CONNECTOR



FBCM WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT DC-DC CONVERTER CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the DC-DC converter connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 14.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
4	**INSPECT DC-DC CONVERTER POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the DC-DC converter connector is disconnected. • Measure the voltage at the DC-DC converter terminal L (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the DCDC 50 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 14.
5	**INSPECT DC-DC CONVERTER POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the DC-DC converter connector is disconnected. • Switch the ignition ON (engine off or on). • Measure the voltage at the DC-DC converter terminal H (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the C/U IG1 15 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the fuse. • If the fuse is deteriorated: — Replace the fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 14.
6	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the front body control module (FBCM) connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 14.
		No	Go to the next step.
7	**INSPECT DC-DC CONVERTER SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the DC-DC converter and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between DC-DC converter terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 14.
		No	Go to the next step.
8	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CIRCUIT FOR SHORT TO GROUND** • Verify that the DC-DC converter and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Front body control module (FBCM) terminal 2P — Front body control module (FBCM) terminal 2N • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 14.
		No	Go to the next step.
9	**INSPECT DC-DC CONVERTER SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the DC-DC converter and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between DC-DC converter terminal C (wiring harness-side) and front body control module (FBCM) terminal 2H (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 14.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

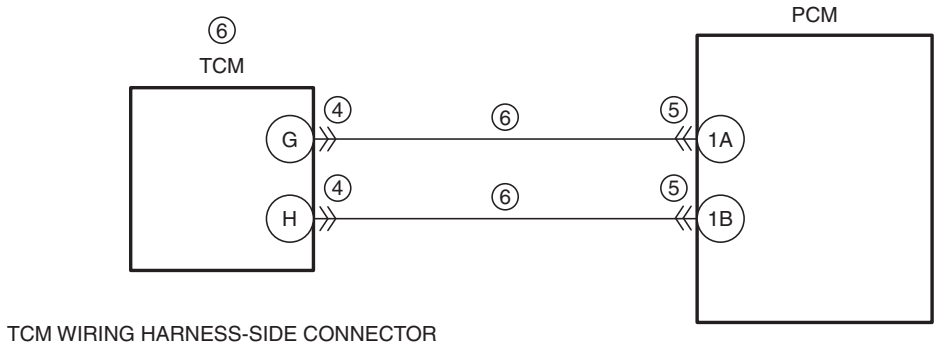
STEP	INSPECTION		ACTION
10	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 14.
		No	Go to the next step.
11	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CIRCUIT FOR OPEN CIRCUIT** • Verify that the DC-DC converter, front body control module (FBCM) and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Front body control module (FBCM) terminal 2P—PCM terminal 2AK — Front body control module (FBCM) terminal 2N—PCM terminal 2AL • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 14.
12	**INSPECT DC-DC CONVERTER** • Inspect the DC-DC converter. (See 01-17A-27 DC-DC CONVERTER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the DC-DC converter, then go to Step 14. (See 01-17A-26 DC-DC CONVERTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
13	**INSPECT FRONT BODY CONTROL MODULE (FBCM)** • Inspect the front body control module (FBCM). (See 09-40-3 FRONT BODY CONTROL MODULE (FBCM) INSPECTION.) • Is there any malfunction?	Yes	Replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
14	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

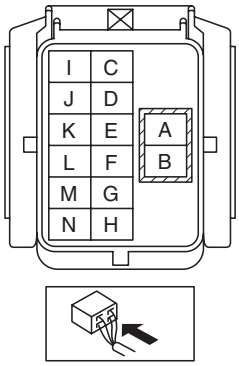
DTC U0302:00 [SKYACTIV-G 2.0]

id0102h1901000

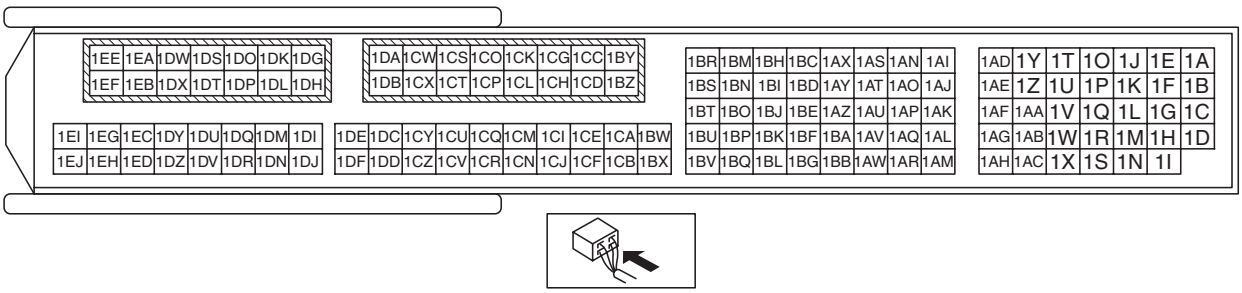
DTC U0302:00	TCM processor error
DETECTION CONDITION	• When any of the following conditions is met: — CAN communication line between TCM and PCM malfunction — TCM internal malfunction **Diagnostic support note** • This is a continuous monitor (other). • The check engine light illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA (Mode 2)/Snapshot data is available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• TCM connector or terminals malfunction • PCM connector or terminals malfunction • CAN communication line between PCM and TCM (local CAN between PCM and TCM) malfunction • TCM DTC is stored. • PCM malfunction • TCM malfunction



TCM WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA (MODE 2)/ SNAPSHOT DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA (Mode 2)/ snapshot data and DIAGNOSTIC MONITORING TEST RESULTS (other related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA (Mode 2)/snapshot data and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT TCM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
6	**CONFIRM TCM DTC** • Perform the TCM DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	DTC U0074:00 or U0115:00 is displayed: • CAN communication line can be considered the cause. — Repair or replace the wiring harness between PCM and TCM, then go to the next step. DTC other than U0074:00 and U0115:00 is displayed: • Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	TCM can be considered the cause. • Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

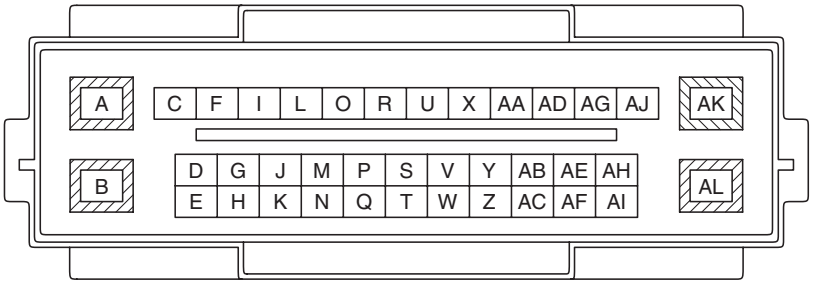
ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

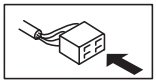
DTC U0315:00 [SKYACTIV-G 2.0]

id0102h1901200

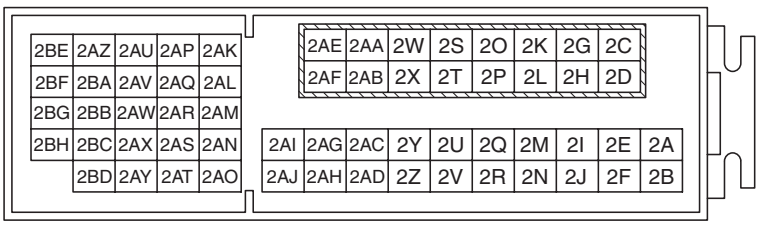
DTC U0315:00	DSC HU/CM error
DETECTION CONDITION	• When any of the following conditions is met: — CAN communication line between DSC HU/CM and PCM malfunction — DSC HU/CM internal malfunction **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• CAN drive error (instrument cluster or PCM) • CAN communication line between DSC HU/CM and PCM malfunction • DSC HU/CM connector or terminals malfunction • PCM connector or terminals malfunction • DSC HU/CM malfunction • PCM malfunction

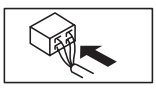
DSC HU/CM WIRING HARNESS-SIDE CONNECTOR





PCM WIRING HARNESS-SIDE CONNECTOR





ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

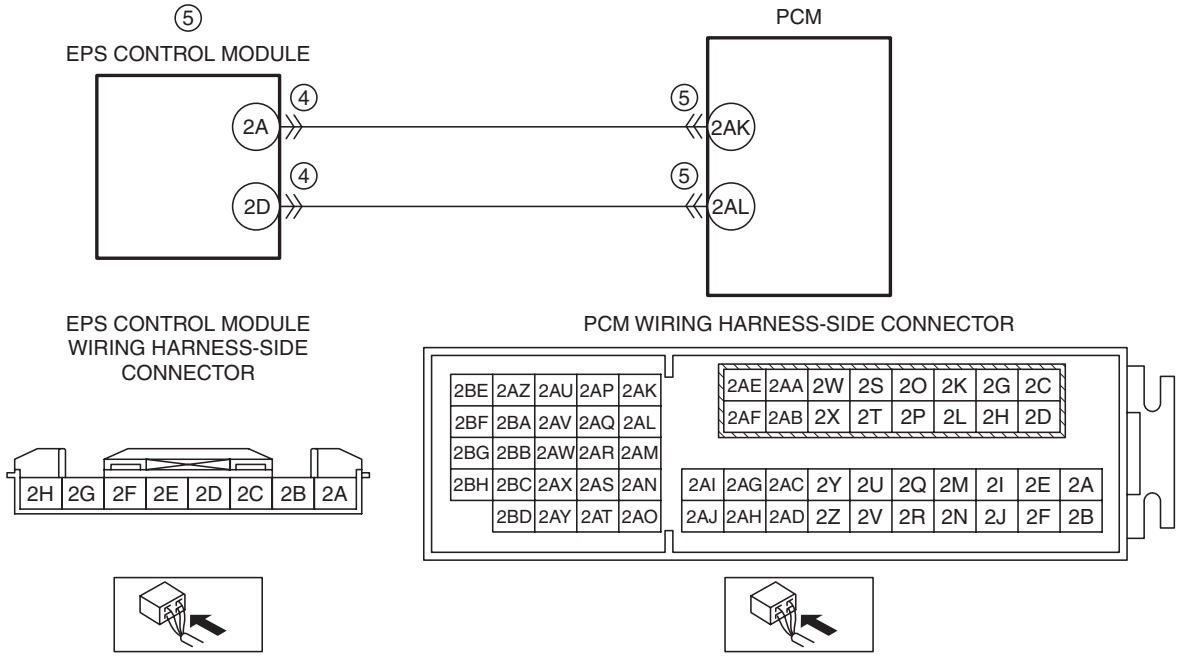
STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY DTC FOR MODULE COMMUNICATION** • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**CONFIRM DSC HU/CM DTC** • Perform the DSC HU/CM DTC inspection using the M-MDS. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
4	**INSPECT DSC HU/CM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the DSC HU/CM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	DSC HU/CM can be considered the cause. • Replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC U0320:00 [SKYACTIV-G 2.0]

id0102h1901300

DTC U0320:00	EPS control module error
DETECTION CONDITION	• When any of the following conditions is met: — CAN communication line between EPS control module and PCM malfunction — EPS control module internal malfunction **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• CAN drive error (instrument cluster or PCM) • CAN communication line between EPS control module and PCM malfunction • EPS control module connector or terminals malfunction • PCM connector or terminals malfunction • EPS control module malfunction • PCM malfunction



Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY DTC FOR MODULE COMMUNICATION** • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**CONFIRM EPS CONTROL MODULE DTC** • Perform the EPS control module DTC inspection using the M-MDS. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
4	**INSPECT EPS CONTROL MODULE CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the EPS control module connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 6.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to the next step.
		No	EPS control module can be considered the cause. • Replace the EPS control module, then go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**CONFIRM REAR BODY CONTROL MODULE (RBCM) DTC** • Switch the ignition to off, then to ON (engine off). • Perform the rear body control module (RBCM) DTC inspection using the M-MDS. (See 09-02L-9 DTC INSPECTION [REAR BODY CONTROL MODULE (RBCM)].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 09-02L-12 DTC TABLE [REAR BODY CONTROL MODULE (RBCM)].)
		No	Go to the next step.
3	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
4	**INSPECT INSTRUMENT CLUSTER CONNECTOR CONDITION** • Disconnect the instrument cluster connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
5	**INSPECT REAR BODY CONTROL MODULE (RBCM) CONNECTOR CONDITION** • Disconnect the rear body control module (RBCM) connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Rear body control module (RBCM) can be considered the cause. • Inspect the rear body control module (RBCM). (See 09-40-11 REAR BODY CONTROL MODULE (RBCM) INSPECTION.) — If there is any malfunction: • Replace the rear body control module (RBCM), then go to Step 7. (See 09-40-9 REAR BODY CONTROL MODULE (RBCM) REMOVAL/INSTALLATION.) — If there is no malfunction: • Go to the next step.
6	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is there any malfunction?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

DTC U1007:00	CAN/LIN communication system: current sensor information communication error with front body control module (FBCM)
DETECTION CONDITION	• PCM detects a current sensor information communication error from front body control module (FBCM). **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Inhibits engine-stop by operating the i-stop function. • Inhibits a part of the generator output control.
POSSIBLE CAUSE	• Communication line between current sensor and front body control module (FBCM) malfunction • Communication line between front body control module (FBCM) and PCM malfunction • Current sensor connector or terminals malfunction • Short to ground or open circuit in current sensor power supply circuit — Short to ground in wiring harness between MAIN 200 A fuse and current sensor terminal A — MAIN 200 A fuse and/or ENG.+B 7.5 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and current sensor terminal A • Front body control module (FBCM) connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — Current sensor terminal B—Front body control module (FBCM) terminal 2E — Front body control module (FBCM) terminal 2P—PCM terminal 2AK — Front body control module (FBCM) terminal 2N—PCM terminal 2AL • Open circuit in wiring harness between current sensor terminal B and front body control module (FBCM) terminal 2E • PCM connector or terminals malfunction • Open circuit in wiring harness between the following terminals: — Front body control module (FBCM) terminal 2P—PCM terminal 2AK — Front body control module (FBCM) terminal 2N—PCM terminal 2AL • Current sensor malfunction • Front body control module (FBCM) malfunction • PCM malfunction

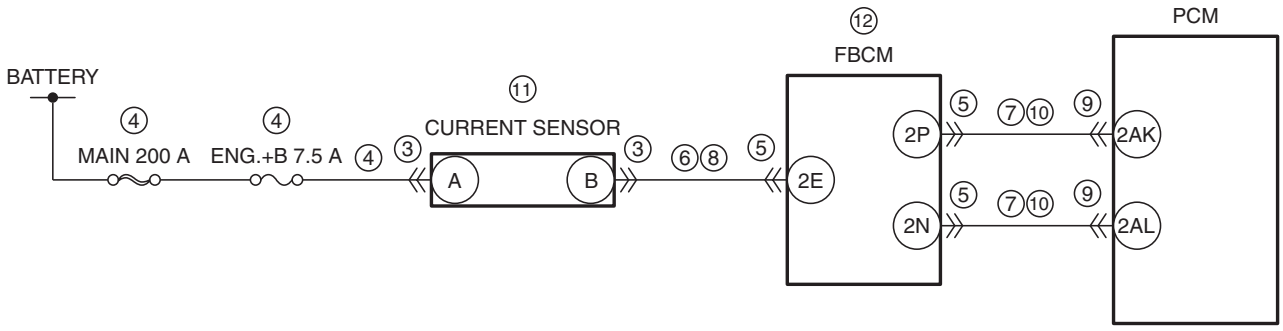
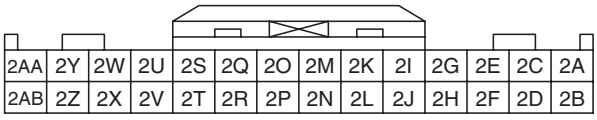
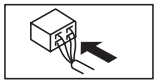
DTC U1007:00	CAN/LIN communication system: current sensor information communication error with front body control module (FBCM)

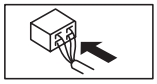


CURRENT SENSOR WIRING HARNESS-SIDE CONNECTOR

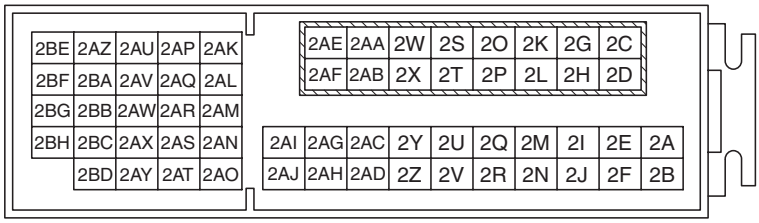
FBCM WIRING HARNESS-SIDE CONNECTOR

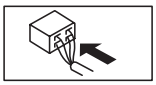






PCM WIRING HARNESS-SIDE CONNECTOR





Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING CODE AND/OR DTC** • Switch the ignition to off, then to ON (engine off). • Perform the Pending Trouble Code Access Procedure and DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any other PENDING CODEs and/or DTCs present?	Yes	Go to the applicable PENDING CODE or DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
3	**INSPECT CURRENT SENSOR CONNECTOR CONDITION** **Note** • Always disconnect current sensor connector before disconnecting the negative battery cable. • Switch the ignition to off. • Disconnect the current sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 13.
		No	Go to the next step.
4	**INSPECT CURRENT SENSOR POWER SUPPLY CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Verify that the current sensor connector is disconnected. • Measure the voltage at the current sensor terminal A (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the MAIN 200 A fuse and ENG.+B 7.5 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the malfunctioning fuse. • If the fuse is deteriorated: — Replace the malfunctioning fuse. • If all fuses are normal: — Repair or replace the wiring harness for a possible open circuit. Go to Step 13.
5	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CONNECTOR CONDITION** • Disconnect the front body control module (FBCM) connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 13.
		No	Go to the next step.
6	**INSPECT CURRENT SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verify that the current sensor and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between current sensor terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 13.
		No	Go to the next step.
7	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CIRCUIT FOR SHORT TO GROUND** • Verify that the current sensor and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Front body control module (FBCM) terminal 2P — Front body control module (FBCM) terminal 2N • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to Step 13.
		No	Go to the next step.
8	**INSPECT CURRENT SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the current sensor and front body control module (FBCM) connectors are disconnected. • Inspect for continuity between current sensor terminal B (wiring harness-side) and front body control module (FBCM) terminal 2E (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 13.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
9	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 13.
		No	Go to the next step.
10	**INSPECT FRONT BODY CONTROL MODULE (FBCM) CIRCUIT FOR OPEN CIRCUIT** • Verify that the current sensor, front body control module (FBCM) and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Front body control module (FBCM) terminal 2P—PCM terminal 2AK — Front body control module (FBCM) terminal 2N—PCM terminal 2AL • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 13.
11	**INSPECT CURRENT SENSOR** • Inspect the current sensor. (See 01-40-66 CURRENT SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the current sensor, then go to Step 13. (See 01-40-65 CURRENT SENSOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
12	**INSPECT FRONT BODY CONTROL MODULE (FBCM)** • Inspect the front body control module (FBCM). (See 09-40-3 FRONT BODY CONTROL MODULE (FBCM) INSPECTION.) • Is there any malfunction?	Yes	Replace the front body control module (FBCM), then go to the next step. (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
		No	Go to the next step.
13	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the PENDING CODE for this DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC U2300:00 [SKYACTIV-G 2.0]

id0102h1228300

DTC U2300:00	Global central configuration error
DETECTION CONDITION	• Any of following conditions occurs: — No configuration of instrument cluster — The configuration signal with the estimated CAN ID is not sent from the instrument cluster. — The configuration signal value sent via CAN from the instrument cluster is unknown or invalid. — The configuration signal value sent via CAN from the instrument cluster is a value other than the estimated value. — The configuration signal value sent via CAN from the instrument cluster does not match the PCM value. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is stored in the PCM memory.
FAIL-SAFE FUNCTION	• Operates by the previously learned configuration value.
POSSIBLE CAUSE	• CAN drive error (instrument cluster or PCM) • Configuration data for the instrument cluster is incorrectly set • CAN communication line between instrument cluster and PCM malfunction • PCM connector or terminals malfunction • Instrument cluster connector or terminals malfunction • Instrument cluster loose • Instrument cluster malfunction • Error in non-volatile memory in PCM • PCM malfunction

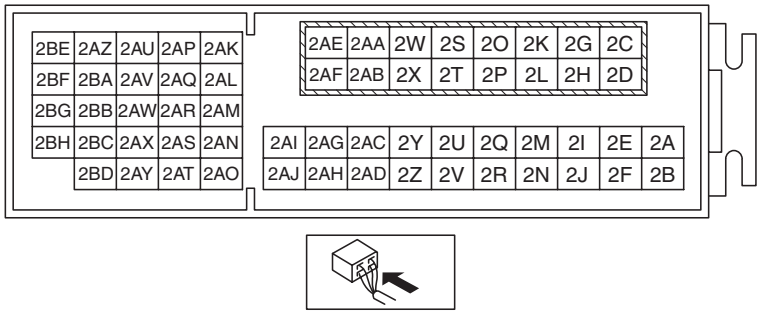
PCM WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY DTC FOR MODULE COMMUNICATION** • Switch the ignition to off, then to ON (engine off). • Perform the DTC Reading Procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC U0155:00 also present?	Yes	Go to the applicable DTC inspection. (See 01-02-373 DTC U0073:00, U0101:00, U0121:00, U0131:00, U0140:00, U0151:00, U0155:00, U0214:00, U0235:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**CONFIRM INSTRUMENT CLUSTER DTC** • Perform the instrument cluster DTC inspection using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
4	**INSPECT PCM CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
5	**INSPECT INSTRUMENT CLUSTER CONNECTOR CONDITION** • Disconnect the instrument cluster connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF INSTRUMENT CLUSTER** • Inspect installation of instrument cluster. • Is the instrument cluster installed securely?	Yes	Go to the next step.
		No	Retighten the instrument cluster, then go to Step 8. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
7	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is there any malfunction?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the M-MDS. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Switch the ignition ON (engine off or on) and wait for **15 s or more**. • Wait until the main relay is off (**approx. 1 min**). • Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Is the same DTC present?	Yes	Repeat the inspection from Step 1. • If the malfunction recurs, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Go to the next step.
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the “AFTER REPAIR PROCEDURE”. (See 01-02-12 AFTER REPAIR PROCEDURE [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [SKYACTIV-G 2.0]

DTC U3000:41 [SKYACTIV-G 2.0]

id0102h1851600

DTC U3000:41	**PCM processor error**
DETECTION CONDITION	• PCM internal EEPROM malfunction. **Diagnostic support note** • This is a continuous monitor (other). • The check engine light does not illuminate. • FREEZE FRAME DATA (Mode 2)/Snapshot data is not available. • The DTC is not stored in the PCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• PCM internal malfunction

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

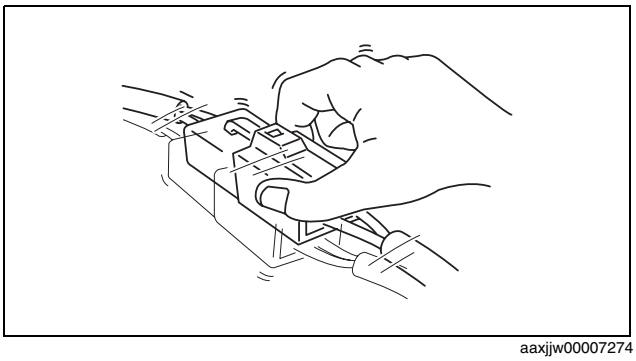
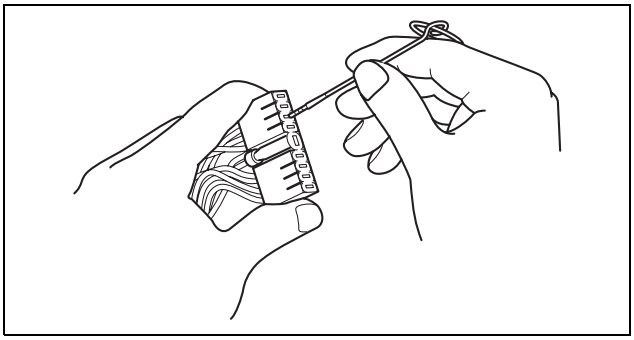
Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as PCM circuit voltage) at that time, and detect the malfunction cause.
  - — Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0]

id0103e6800500

- Verify malfunction symptoms using the following diagnostic index, then go to the appropriate troubleshooting chart.

Diagnostic Index

No.	TROUBLESHOOTING ITEM		DESCRIPTION
1	Blown fuses		—
2	Check engine light illuminates		• Check engine light illuminates incorrectly.
3	Will not crank		• Starter does not work.
4	Hard to start/long crank/erratic start/erratic crank		• Starter cranks engine at normal speed but engine requires excessive cranking time before starting. • Battery is operating normally.
5	Engine stalls	After start/at idle	• Engine stops unexpectedly at idle, after start, or both.
6	Cranks normally but will not start		• Starter cranks engine at normal speed but engine will not run. • Refer to symptom troubleshooting “NO.5 ENGINE STALLS-AFTER START/AT IDLE” if this symptom appears after engine stalls. • Fuel is in tank. • Battery is in normal condition.
7	Engine oil pressure warning light illuminates		• Engine oil pressure warning light illuminates incorrectly.
8	Engine runs rough/rolling idle		• Engine speed fluctuates between specified idle speed and lower speed and, engine shakes excessively. • Idle speed is too slow and engine shakes excessively.
9	Fast idle/runs on		• Engine speed continues at fast idle after warm-up. • Engine runs after ignition switch is turned off.
10	Low idle/stalls during deceleration		• Engine stops unexpectedly at beginning of deceleration or recovery from deceleration.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

No.	TROUBLESHOOTING ITEM		DESCRIPTION
11	Engine stalls/quits	Acceleration/cruise	• Engine stops unexpectedly at beginning of acceleration or during acceleration. • Engine stops unexpectedly while cruising.
	Engine runs rough	Acceleration/cruise	• Engine speed fluctuates during acceleration or cruising.
	Misses	Acceleration/cruise	• Engine misses during acceleration or cruising.
	Buck/jerk	Acceleration/cruise/ deceleration	• Vehicle bucks/jerks during acceleration, cruising, or deceleration.
	Hesitation/stumble	Acceleration	• Momentary pause at beginning of acceleration or during acceleration.
	Surges	Acceleration/cruise	• Momentary minor irregularity in engine output.
12	Lack/loss of power	Acceleration/cruise	• Performance is poor under load. (e.g., power down when climbing hills)
13	Knocking/pinging	Acceleration/cruise	• Sound is produced when air/fuel mixture is ignited by something other than spark plug. (e.g., hot spot in combustion chamber)
14	Poor fuel economy		• Fuel economy is unsatisfactory.
15	Emission compliance		• Fails emissions test.
16	High oil consumption/leakage		• Oil consumption is excessive.
17	Cooling system concerns	Overheating	• Engine runs at higher than normal temperature/overheats.
18	Cooling system concerns	Runs cold	• Engine does not reach normal operating temperature.
19	Exhaust smoke		• Blue, black, or white smoke from exhaust system.
20	Fuel odor (in engine compartment)		• Gasoline fuel smell or visible leakage.
21	Engine noise		• Engine noise from under bonnet.
22	Vibration concerns (engine)		• Vibration from under bonnet or driveline.
23	A/C does not work sufficiently		• A/C compressor magnetic clutch does not engage when A/C switch is turned on.
24	A/C is always on or A/C compressor runs continuously		• A/C compressor magnetic clutch does not disengage.
25	A/C is not cut off under wide open throttle conditions		• A/C compressor magnetic clutch does not disengage under WOT.
26	Exhaust sulphur smell		• Rotten egg smell (sulphur) from exhaust.
27	Spark plug condition		• Incorrect spark plug condition.
28	ATX concerns	Upshift/downshift/ engagement	• ATX concerns not related to engine performance.
i-stop related troubleshooting item			(See 11-03-9 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

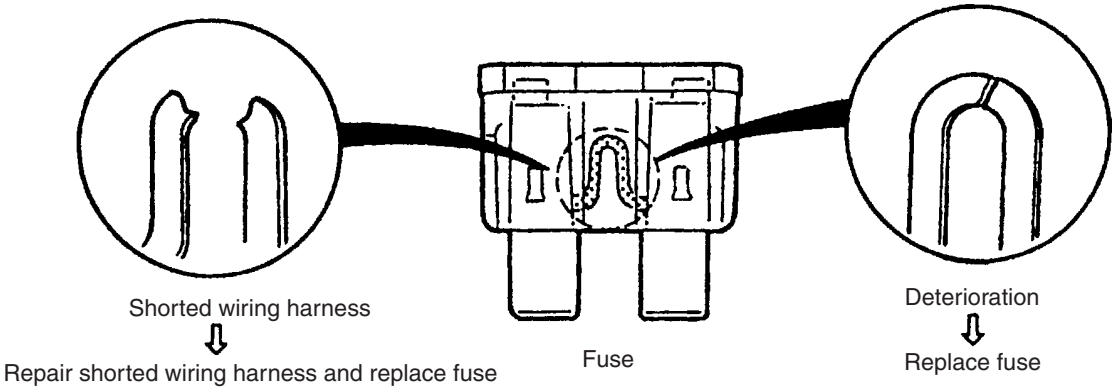
NO.1 BLOWN FUSES [SKYACTIV-G 2.0]

id0103e6507100

1	BLOWN FUSES

[TROUBLESHOOTING HINTS]

- Inspect condition of fuse.



Damaged fuse	Related wiring harness
MAIN	• FAN GE fuse • ADD FAN GE fuse • FUEL PUMP fuse • IG2 fuse • ENG.+B fuse • ENG.MAIN fuse • INJECTOR fuse • EVVT fuse
FAN GE	• Cooling fan relay No.1
ADD FAN GE	• Cooling fan relay No.3
ENGINE.IG1	• Fuel pump relay • PCM
FUEL PUMP	• Fuel pump relay
STARTER	• Generator • Starter
DCDC	• DC-DC converter
AUDIO2	• Ignition relay (ACC_STAB)
METER2	• Ignition relay (IG1_STAB)
C/U IG1	• DC-DC converter • Ignition relay (IG1_STAB)
IG2	• ACC relay • Starter relay
ENG.+B	• Current sensor • PCM
ENG.MAIN	• Main relay
INJECTOR	• Fuel injector relay
EVVT	• Electric variable valve timing relay
ENGINE1	• Electric variable valve timing relay • A/F sensor • HO2S • MAF sensor/IAT sensor No.1 • Intake CMP sensor
ENGINE2	• Fuel injector relay • Purge solenoid valve • OCV • PCM • Engine oil solenoid valve • Exhaust CMP sensor • Ignition coil/ion sensor No.1 • Ignition coil/ion sensor No.2 • Ignition coil/ion sensor No.3 • Ignition coil/ion sensor No.4

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Damaged fuse	Related wiring harness
ENGINE3	• Cooling fan relay No.1 • Cooling fan relay No.2 • Cooling fan relay No.3

NO.2 CHECK ENGINE LIGHT ILLUMINATES [SKYACTIV-G 2.0]

id0103e6205000

2	CHECK ENGINE LIGHT ILLUMINATES
DESCRIPTION	• Check engine light illuminates incorrectly.
POSSIBLE CAUSE	• Check engine light illuminates for emission-related concern (DTC is stored in PCM) • Short to ground in wiring harness between the following terminals: — Instrument cluster terminal B—PCM terminal 2AK — Instrument cluster terminal D—PCM terminal 2AL • Open circuit in wiring harness between the following terminals: — Instrument cluster terminal B—PCM terminal 2AK — Instrument cluster terminal D—PCM terminal 2AL • Instrument cluster malfunction **Note** • If check engine light blinks at a steady rate, a misfire condition could possibly exist.

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is there any malfunction?	Yes	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Inspect for short or open circuit between the following terminals: • Instrument cluster terminal B—PCM terminal 2AK • Instrument cluster terminal D—PCM terminal 2AL Repair or replace the wiring harness if necessary.
3	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

NO.3 WILL NOT CRANK [SKYACTIV-G 2.0]

id0103e6800900

3	WILL NOT CRANK
DESCRIPTION	• Starter does not work.
POSSIBLE CAUSE	• Poor connection of push button start connector • Instrument cluster or related wiring harness malfunction • Immobilizer system malfunction • PCM continuous memory DTC is stored • Open circuit in wiring harness between the following terminals: — Main relay terminal E—PCM terminal 2K — Main relay terminal C—PCM terminal 2S, 1CK — DLC-2—PCM terminal 2AK, 2AL • Main relay malfunction (stuck open) • Open or poor ground circuit • Poor connection of vehicle body ground • Battery malfunction • Fuse malfunction • Starter relay malfunction • Starter relay related wiring harness malfunction — Between starter relay terminal E and PCM terminal 2AZ — Between starter relay terminal E and start stop unit terminal 1D — Between start stop unit terminal 2V and starter relay terminal A • Following circuit malfunction: — Between battery positive terminal and starter terminal 1A — Between battery positive terminal and starter relay terminal D — Between starter relay terminal C and starter terminal 2A • Starter interlock switch and related wiring harness malfunction (MTX) • Starting system malfunction • Following circuit and/or connector malfunction: — Between push button start terminal A and start stop unit terminal 1AC — Between push button start terminal B and start stop unit terminal 1AE — Between PCM terminal 2AK and start stop unit terminal 2M — Between PCM terminal 2AL and start stop unit terminal 2O • Seized engine, flywheel (MTX) or drive plate (ATX) • Engine damage during compression due to liquid (such as water, fuel, or engine oil) penetration into cylinder

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**DETERMINE IF MALFUNCTION CAUSE IS IMMOBILIZER SYSTEM OR OTHER** • Are any of the following conditions present? — Engine does not start completely. — PCM DTC P1260:00 is displayed.	Yes	Both conditions present: • Go to Step 4.
		No	Either or other condition present: • Go to the next step.
2	**INSPECT PUSH BUTTON START CONNECTOR CONNECTION** • Inspect the connection of push button start connector. • Is the push button start connector securely connected to the coil antenna?	Yes	Go to the next step.
		No	Reconnect the push button start securely, then repeat from Step 1.
3	**DETERMINE IF MALFUNCTION CAUSE IS INSTRUMENT CLUSTER OR OTHER** • Does the security indicator light illuminate?	Yes	Go to the next step.
		No	Inspect the instrument cluster and related wiring harness. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) Repair or replace the malfunctioning part according to the inspection results. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
4	**VERIFY IMMOBILIZER SYSTEM DTC** • Retrieve the immobilizer system DTC using the M-MDS. (See 09-02B-3 DTC INSPECTION [IMMOBILIZER SYSTEM].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 09-02B-4 DTC TABLE [IMMOBILIZER SYSTEM].)
		No	Go to the next step.
5	**DETERMINE IF MALFUNCTION CAUSE IS i-stop SYSTEM OR OTHER** • Turn off the i-stop system. • Verify the symptom. • Is the symptom confirmed?	Yes	Go to the next step.
		No	Perform the symptom troubleshooting “NO.6 ENGINE DOES NOT RESTART”. (See 11-03-30 NO.6 ENGINE DOES NOT RESTART [SKYACTIV-G 2.0].)
6	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any continuous memory DTCs present?	Yes	Continuous memory DTC is displayed: • Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].) Communication error message is displayed: • Inspect the following: — Open circuit in wiring harness between main relay terminal E and PCM terminal 2K — Open circuit in wiring harness between main relay terminal C and PCM terminal 1CK or 2S — Main relay (stuck open) — Open or short circuit in wiring harness between DLC-2 and PCM terminal 2AK or 2AL — Open or poor ground circuit (PCM terminal 1BZ, 1CL, 1CP, 1CT, 1CX, 1DB, 1DH, 1DL and 2AA) — Poor connection of vehicle body ground • Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
7	**INSPECT POWER SUPPLY** • Access the VPWR PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Verify the VPWR PID value. • Is the VPWR PID value **B+**?	Yes	Go to the next step.
		No	Inspect the following: • Battery connection • Battery condition (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) • Fuse (See 01-03-17 NO.1 BLOWN FUSES [SKYACTIV-G 2.0].) — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results, then repeat this step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
8	**DETERMINE IF MALFUNCTION CAUSE IS STARTER RELAY CONTROL SIGNAL CIRCUIT OR OTHER** • Switch the ignition to start. • Is a clicking sound heard from the starter relay?	Yes	Go to Step 18.
		No	ATX: • Go to Step 12. MTX: • Go to the next step.
9	**DETERMINE IF MALFUNCTION CAUSE IS STARTER INTERLOCK SWITCH OR OTHER** • Switch the ignition to off. • Short the starter interlock switch terminals A and B (wiring harness-side) using a jumper wire. • Switch the ignition to start. • Does the engine start?	Yes	Inspect the starter interlock switch. (See 01-19A-9 STARTER INTERLOCK SWITCH INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Replace the starter interlock switch, then repeat Step 8. (See 05-10A-14 STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].) • If there is no malfunction: — Go to the next step.
		No	Go to the next step.
10	**INSPECT STARTER INTERLOCK SWITCH CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the starter interlock switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then repeat Step 8.
		No	Go to the next step.
11	**INSPECT STARTER INTERLOCK SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the starter interlock switch connector is disconnected. • Inspect for continuity between starter interlock switch terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then repeat Step 8.
12	**INSPECT STARTER RELAY** • Remove the starter relay. • Inspect the starter relay. (See 09-21-29 RELAY INSPECTION.) • Is there any malfunction?	Yes	Replace the starter relay. Repeat Step 8.
		No	Go to the next step.
13	**INSPECT STARTER RELAY CONTROL CIRCUIT FOR SHORT TO GROUND OR OPEN CIRCUIT** • Starter relay is removed. • Verify that the starter interlock switch connector is disconnected. (MTX) • Measure the voltage at the starter relay terminal A (wiring harness-side) while cranking the engine. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to ground or open circuit. Repeat Step 8.
14	**INSPECT START STOP UNIT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the start stop unit connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then repeat Step 8.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
15	**INSPECT STARTER RELAY CONTROL CIRCUIT FOR SHORT TO GROUND** • Starter relay is removed. • Verify that the starter interlock switch and start stop unit connectors are disconnected. • Inspect for continuity between starter relay terminal E (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Repeat Step 8.
		No	Go to the next step.
16	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then repeat Step 8.
		No	Go to the next step.
17	**INSPECT STARTER RELAY CONTROL CIRCUIT FOR OPEN CIRCUIT** • Starter relay is removed. • Verify that the starter interlock switch, start stop unit and PCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side): — Starter relay terminal E—PCM terminal 2AZ — Starter interlock switch terminal A—PCM terminal 2BD (MTX) — Starter relay terminal E—Start stop unit terminal 1D • Is there continuity?	Yes	Inspect the start stop unit. (See 09-14-56 START STOP UNIT INSPECTION.) • If there is any malfunction: — Replace the start stop unit, then repeat Step 8. (See 09-14-54 START STOP UNIT REMOVAL/INSTALLATION.) • If there is no malfunction: — Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then repeat Step 8.
18	**INSPECT WIRING HARNESS OF STARTER POWER SUPPLY CIRCUIT** • Inspect the following circuit: — Between battery positive terminal and starter terminal 1A — Between battery positive terminal and starter relay terminal D — Between starter relay terminal C and starter terminal 2A • Is there any malfunction?	Yes	Repair or replace the suspected wiring harness.
		No	Go to the next step.
19	**INSPECT STARTING SYSTEM** • Inspect the starting system. (See 01-19A-4 STARTER INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
20	**INSPECT IMMOBILIZER SYSTEM RELATED CIRCUIT** • Inspect the following wiring harness and connectors: — Between push button start terminal A and start stop unit terminal 1AC — Between push button start terminal B and start stop unit terminal 1AE — Between PCM terminal 2AK and start stop unit terminal 2M — Between PCM terminal 2AL and start stop unit terminal 2O • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
21	**VERIFY PRESENT MALFUNCTION DTC** • Perform the KOEO self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
22	**DETERMINE IF MALFUNCTION CAUSE IS BASE ENGINE OR OTHER** • Inspect for a seized flywheel (MTX) or drive plate (ATX). • Is the flywheel (MTX) or drive plate (ATX) seized?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Base engine malfunction or engine damage during compression due to liquid (such as water, fuel, or engine oil) penetration into cylinder. • Overhaul or replace the engine.
23	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

NO.4 HARD TO START/LONG CRANK/ERRATIC START/ERRATIC CRANK [SKYACTIV-G 2.0]

id0103e6801000

4	HARD TO START/LONG CRANK/ERRATIC START/ERRATIC CRANK
DESCRIPTION	• Starter cranks engine at normal speed but engine requires excessive cranking time before starting. • Battery is operating normally.
POSSIBLE CAUSE	**Note** • If the ignition is not switched off (to LOCK or ACC) after the engine stalls, and then an engine restart is attempted, the PCM corrects the difference between CKP sensor and CMP sensor signals caused by engine stalling, which may result in more time needed to restart the engine. • Engine overheating • PCM DTC is stored • Erratic signal to PCM — ECT sensor or related circuit malfunction — MAF sensor or related circuit malfunction — MAP sensor or related circuit malfunction — A/F sensor or related circuit malfunction — HO2S or related circuit malfunction — Improper air/fuel mixture ratio control • Improper operation of drive-by-wire control system • Incorrect fuel injection timing • Fuel injector malfunction • Purge solenoid valve malfunction • Contamination in MAF sensor • Under the condition in which the engine starts and stops repeatedly while the vehicle is not driven, the fuel injected prior to complete ignition during engine start may drop into the oil pan from the cylinder and mix with the engine oil. The situation in which excess quantities of fuel continue to be injected due to an engine coolant temperature signal error is the same. • Intermittent open circuit in PCM ground circuit • Poor fuel quality • Fuel leakage • Air leakage from intake-air system • Intake-air system restriction • Vacuum leakage • Improper engine oil viscosity • Erratic signal from CMP sensor — Loose installation — Damaged trigger wheel (intake camshaft and/or exhaust camshaft) — Open or short circuit in related wiring harness • Erratic signal from CKP sensor — Loose installation — Damaged trigger wheel (crankshaft pulley) — Open or short circuit in related wiring harness • Inadequate fuel pressure (high or low pressure side) — Fuel pressure sensor malfunction — High pressure fuel pump malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve malfunction (built-into high pressure fuel pump) — Relief valve (built-into high pressure fuel pump) malfunction — Fuel line restriction — Fuel filter clogged — Fuel pump unit malfunction • Starting system malfunction • Low engine compression • Improper intake valve timing • Improper exhaust valve timing • Spark plug malfunction • Erratic signal to ignition coils • Exhaust system or TWC restriction • PCV valve malfunction • Injector driver (built-into PCM) malfunction

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

4	HARD TO START/LONG CRANK/ERRATIC START/ERRATIC CRANK
POSSIBLE CAUSE	**Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].) (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**DETERMINE IF MALFUNCTION CAUSE IS OVERHEATING OR OTHER** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the ECT PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the ECT PID value **less than 116 °C {241 °F}** during driving?	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. • Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See 01-03-88 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0].)
2	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
3	**VERIFY CURRENT INPUT SIGNAL STATUS** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — ECT — MAF — MAP — O2S11 — O2S12 — SHRTFT1 — LONGFT1 • Do the PIDs indicate the correct values under the trouble condition? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to the next step.
		No	ECT PID is not as specified: • Inspect the ECT sensor. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAF PID is not as specified: • Inspect the MAF sensor. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAP PID is not as specified: • Inspect the MAP sensor. (See 01-40-49 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S11, SHRTFT1, LONGFT1 PIDs are not as specified: • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S12 PID is not as specified: • Inspect the HO2S. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) Repair or replace the malfunctioning part according to the inspection results. • If the malfunction remains: — Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03-116 INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0].)
4	**DETERMINE IF MALFUNCTION CAUSE IS DRIVE-BY-WIRE CONTROL SYSTEM OR OTHER** • Will the engine run smoothly at part throttle?	Yes	Go to the next step.
		No	Go to Step 6.
5	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the TP sweep inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the drive-by-wire control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
6	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
7	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
8	**INSPECT MAF SENSOR** • Inspect the MAF sensor for the following: — Contamination • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
9	**INSPECT PCM FOR POOR GROUND** • Verify the PCM ground point condition. • Is there any ground point loose or lifting in the PCM?	Yes	Repair the ground point.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
10	**INSPECT RELATED PART CONDITION** • Inspect the following: — Fuel quality (proper octane, contamination, winter/summer blend) — Fuel leakage — Intake-air system leakage or restriction — Vacuum leakage — Engine oil viscosity — CKP sensor, intake CMP sensor and exhaust CMP sensor • Installation condition (See 01-40-59 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-40-61 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Damaged trigger wheel, intake camshaft and exhaust camshaft • Is there any malfunction?	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.
11	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 15.
		No	Lower than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Go to Step 14. Higher than **3 MPa {31 kgf/cm2, 435 psi}**: • Go to the next step.
12	**DETERMINE IF MALFUNCTION CAUSE IS FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 14.
13	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel distributor. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 15.
14	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground. • If the malfunction remains: — Replace the PCM. (damage to driver in PCM) (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Replace the high pressure fuel pump. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
15	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
16	**INSPECT STARTING SYSTEM** • Inspect the starting system. (See 01-19A-4 STARTER INSPECTION [SKYACTIV-G 2.0].) • Does the starting system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
17	**INSPECT ENGINE COMPRESSION** • Measure the compression pressure for each cylinder. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Inspect the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper intake valve timing • Improper exhaust valve timing Service if necessary.
18	**INSPECT IGNITION SYSTEM OPERATION** • Perform the Spark Test. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
19	**INSPECT EXHAUST SYSTEM FOR RESTRICTION** • Inspect for restriction in the exhaust system and the TWC. • Is there any restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
20	**INSPECT IF MALFUNCTION CAUSE IS PCV VALVE OR INJECTOR DRIVER (PCM INTEGRATED)** • Inspect the PCV valve. (See 01-16A-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16A-13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Injector driver malfunction. • Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) If the problem remains, overhaul the engine.
21	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

NO.5 ENGINE STALLS-AFTER START/AT IDLE [SKYACTIV-G 2.0]

id0103e6801100

5	ENGINE STALLS-AFTER START/AT IDLE
DESCRIPTION	• Engine stops unexpectedly at idle, after start, or both.
POSSIBLE CAUSE	• Engine overheating • PCM DTC is stored • Erratic signal to PCM — APP sensor or related circuit malfunction — ECT sensor or related circuit malfunction — MAF sensor or related circuit malfunction — MAP sensor or related circuit malfunction — A/F sensor or related circuit malfunction — HO2S or related circuit malfunction — Improper air/fuel mixture ratio control • Improper operation of A/C system • Improper operation of drive-by-wire control system • Purge solenoid valve malfunction • Open circuit in MAF sensor ground circuit • Intermittent open circuit in PCM ground circuit • Poor fuel quality • Air leakage from intake-air system • Intake-air system restriction • Electrical connector disconnected • No battery power supply to PCM or poor ground • Fuel leakage • Vacuum leakage • Erratic signal from CMP sensor — Loose installation — Damaged trigger wheel (intake camshaft and/or exhaust camshaft) — Open or short circuit in related wiring harness • No signal from CKP sensor — Loose installation — Damaged trigger wheel (crankshaft pulley) — Open or short circuit in related wiring harness • Inadequate fuel pressure (high or low pressure side) — Open or short circuit in the fuel pump (low-side) body or related wiring harness — Fuel pressure sensor or related circuit malfunction — Fuel pump (low-side) body mechanical malfunction — High pressure fuel pump malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve malfunction (built-into high pressure fuel pump) — Relief valve (built-into high pressure fuel pump) malfunction — Fuel line restriction — Fuel filter clogged • Fuel injector malfunction • Incorrect fuel injection timing • Improper operation of electric variable valve timing control system (PCM DTC is stored.) • Improper operation of hydraulic variable valve timing control system • Ignition system malfunction • Ignition coil malfunction • Low engine compression • Improper intake valve timing • Improper exhaust valve timing • Exhaust system and/or TWC restricted or clogged • PCV valve malfunction • Injector driver (built-into PCM) malfunction

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

5	ENGINE STALLS-AFTER START/AT IDLE
POSSIBLE CAUSE	**Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].) (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY IF MALFUNCTION CAUSE IS OVERHEATING** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the ECT PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the ECT PID value **less than 116 °C {241 °F}** during driving?	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. • Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See 01-03-88 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0].)
2	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
3	**VERIFY CURRENT INPUT SIGNAL STATUS** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP1 — APP2 — ECT — MAF — MAP — O2S11 — O2S12 — SHRTFT1 — LONGFT1 • Do the PIDs indicate the correct values under the trouble condition? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not as specified: • Inspect the APP sensor. (See 01-40-51 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0].) ECT PID is not as specified: • Inspect the ECT sensor. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAF PID is not as specified: • Inspect the MAF sensor. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAP PID is not as specified: • Inspect the MAP sensor. (See 01-40-49 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S11, SHRTFT1, LONGFT1 PIDs are not as specified: • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S12 PID is not as specified: • Inspect the HO2S. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) Repair or replace the malfunctioning part according to the inspection results. • If the malfunction remains: — Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03-116 INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0].)
4	**INSPECT PCM POWER SUPPLY VOLTAGE** • Access the VPWR PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the VPWR PID value **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between main relay terminal C and PCM terminal 2S and 1CK.
5	**INSPECT A/C CUT-OFF CONTROL SYSTEM OPERATION** • Perform the A/C Cut-off Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the A/C cut-off operation work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
6	**DETERMINE IF MALFUNCTION CAUSE IS DRIVE-BY-WIRE CONTROL SYSTEM OR OTHER** • Will the engine run smoothly at part throttle?	Yes	Go to the next step.
		No	Go to Step 8.
7	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the TP sweep inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the drive-by-wire control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
8	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
9	**INSPECT MAF SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect the MAF sensor for the following: — MAF sensor terminal B voltage (ground circuit) • Is there any malfunction?	Yes	Repair or replace the suspected wiring harness.
		No	Go to the next step.
10	**INSPECT PCM FOR POOR GROUND** • Verify the PCM ground point condition. • Is there any ground point loose or lifting in the PCM?	Yes	Repair the ground point.
		No	Go to the next step.
11	**INSPECT RELATED PART CONDITION** • Inspect the following: — Fuel quality (proper octane, contamination, winter/summer blend) — Intake-air system leakage or restriction — Electrical connectors — Poor connection for PCM ground and body ground — Fuel leakage — Vacuum leakage — CKP sensor, intake CMP sensor and exhaust CMP sensor • Installation condition (See 01-40-59 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-40-61 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Damaged trigger wheel, intake camshaft and exhaust camshaft • Is there any malfunction?	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.
12	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 16.
		No	Lower than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Go to Step 15. Higher than **3 MPa {31 kgf/cm2, 435 psi}**: • Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
13	**DETERMINE IF MALFUNCTION CAUSE IS FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 15.
14	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel distributor. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 16.
15	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground. • If the malfunction remains: — Replace the PCM. (damage to driver in PCM) (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Replace the high pressure fuel pump. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
16	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
17	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
18	**INSPECT HYDRAULIC VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Perform the Hydraulic Variable Valve Timing Control System Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the hydraulic variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
19	**INSPECT ENGINE COMPRESSION** • Measure the compression pressure for each cylinder. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Inspect the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper intake valve timing • Improper exhaust valve timing Service if necessary.
20	**INSPECT IGNITION SYSTEM OPERATION** • Perform the Spark Test. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
21	**INSPECT EXHAUST SYSTEM FOR RESTRICTION** • Inspect for restriction in the exhaust system and the TWC. • Is there any restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
22	**INSPECT IF MALFUNCTION CAUSE IS PCV VALVE OR INJECTOR DRIVER (PCM INTEGRATED)** • Inspect the PCV valve. (See 01-16A-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16A-13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Injector driver malfunction. • Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) If the problem remains, overhaul the engine.
23	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

NO.6 CRANKS NORMALLY BUT WILL NOT START [SKYACTIV-G 2.0]

id0103e6801200

6	CRANKS NORMALLY BUT WILL NOT START
DESCRIPTION	• Starter cranks engine at normal speed but engine will not run. • Refer to symptom troubleshooting “NO.5 ENGINE STALLS-AFTER START/AT IDLE” if this symptom appears after engine stalls. • Fuel is in tank. • Battery is in normal condition.
POSSIBLE CAUSE	• Because engine is started with accelerator pedal fully depressed, it goes into dechoke mode and fuel is not injected • Engine overheating • PCM DTC is stored • Erratic signal to PCM — APP sensor or related circuit malfunction — ECT sensor or related circuit malfunction — MAF sensor or related circuit malfunction — A/F sensor or related circuit malfunction — HO2S or related circuit malfunction — Improper air/fuel mixture ratio control • Power is not supplied from main relay • Power is not supplied from fuel injector relay and/or fuel pump relay • Improper operation of drive-by-wire control system • Purge solenoid valve malfunction • No signal from MAF sensor • Poor fuel quality • Air leakage from intake-air system • Intake-air system restriction • Electrical connector disconnected • No battery power supply to PCM or poor ground • Fuse malfunction • Fuel leakage • Vacuum leakage • No signal from CMP sensor — Loose installation — Damaged trigger wheel (exhaust camshaft) — Open or short circuit in related wiring harness • No signal from CKP sensor — Loose installation — Damaged trigger wheel (crankshaft pulley) — Open or short circuit in related wiring harness • Inadequate fuel pressure (high or low pressure side) — Open or short circuit in the fuel pump (low-side) body or related wiring harness — Fuel pressure sensor or related circuit malfunction — High pressure fuel pump malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve malfunction (built-into high pressure fuel pump) — Fuel line restriction — Fuel filter clogged — Fuel pump (low-side) body mechanical malfunction • Incorrect fuel injection timing • Fuel injector malfunction • Improper operation of electric variable valve timing control system (PCM DTC is stored.) • Improper operation of hydraulic variable valve timing control system • Low engine compression • Improper intake valve timing • Improper exhaust valve timing • Ignition system malfunction • Ignition coil malfunction • Vapor occurs around fuel pump (fuel problem) • Because vapor occurs in high pressure fuel pump, fuel injector cannot adjust fuel injection to correct amount • Exhaust system and/or TWC restricted or clogged • PCV valve malfunction • Injector driver (built-into PCM) malfunction

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

6	CRANKS NORMALLY BUT WILL NOT START
POSSIBLE CAUSE	**Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].) (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**INSPECT EFFECT OF VEHICLE CONDITION FOR MALFUNCTION** • Verify how the customer drives the vehicle by asking the customer the following: — Because engine is started with accelerator pedal fully depressed, it goes into dechoke mode and fuel is not injected • Is the engine started with accelerator pedal fully depressed?	Yes	Explain to the customer that the vehicle is normal and give them advice on how to start the engine and a specific example of the conditions in which the engine goes into dechoke mode.
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS OVERHEATING** • Access the ECT PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the ECT PID value **less than 116 °C {241 °F}** during driving?	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. • Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See 01-03-88 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0].)
3	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
4	**VERIFY CURRENT INPUT SIGNAL STATUS** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP1 — APP2 — ECT — MAF — O2S11 — O2S12 — SHRTFT1 — LONGFT1 • Do the PIDs indicate the correct values under the trouble condition? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not as specified: • Inspect the APP sensor. (See 01-40-51 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0].) ECT PID is not as specified: • Inspect the ECT sensor. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAF PID is not as specified: • Inspect the MAF sensor. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S11, SHRTFT1, LONGFT1 PIDs are not as specified: • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S12 PID is not as specified: • Inspect the HO2S. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) Repair or replace the malfunctioning part according to the inspection results. • If the malfunction remains: — Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03-116 INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0].)
5	**DETERMINE IF MALFUNCTION CAUSE IS DRIVE-BY-WIRE CONTROL SYSTEM OR OTHER** • Will the engine run smoothly at part throttle?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the TP sweep inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the drive-by-wire control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
7	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
8	**VERIFY IF MALFUNCTION CAUSE IS MAF SENSOR SIGNAL** **Note** • If the inspection in Step 8 is performed, the PCM detects a DTC and performs fail-safe control. After performing the inspection, clear DTCs using the M-MDS. • Switch the ignition to off. • Disconnect the MAF sensor/IAT sensor No.1 connector. • Start the engine. • Does the engine start normally?	Yes	Clean the MAF sensor. Verify that the symptom is solved. • If the symptom remains, inspect the MAF sensor related wiring harness and connector. — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the MAF sensor/IAT sensor No.1. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
9	**INSPECT FUEL INJECTOR RELAY** • Switch the ignition to off. • Remove the fuel injector relay. • Inspect the fuel injector relay. (See 09-21-29 RELAY INSPECTION.) • Is there any malfunction?	Yes	Replace the fuel injector relay.
		No	Reinstall the fuel injector relay, then go to the next step.
10	**INSPECT FUEL PUMP RELAY** • Remove the fuel pump relay. • Inspect the fuel pump relay. (See 09-21-29 RELAY INSPECTION.) • Is there any malfunction?	Yes	Replace the fuel pump relay.
		No	Inspect for short or open circuit between the following terminals: • IG1 relay terminal C—PCM terminal 2AQ • Battery positive terminal—PCM terminal 1CO • Battery positive terminal—PCM terminal 1CS • Battery positive terminal—PCM terminal 1CW • Battery positive terminal—PCM terminal 1DA • Battery positive terminal—PCM terminal 1DG • Battery positive terminal—PCM terminal 1DK • PCM terminal 2S—Body ground — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Reinstall the fuel pump relay, then go to the next step.
11	**INSPECT RELATED PART CONDITION** • Inspect the following: — Fuel quality (proper octane, contamination, winter/summer blend) — Intake-air system leakage or restriction — Electrical connectors — Poor connection for PCM ground and body ground — Fuses — Fuel leakage — Vacuum leakage — CKP sensor and exhaust CMP sensor • Installation condition (See 01-40-59 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-40-61 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Damaged trigger wheel exhaust camshaft • Is there any malfunction?	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
12	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access the FUEL_PRES PID using the M-MDS while cranking the engine. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value within specification? **Specification:** • **4—6 MPa {41—61 kgf/cm^2, 581—870 psi}**	Yes	Go to Step 14.
		No	Lower than specification: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Go to the next step. Higher than specification: • Go to the next step.
13	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground. • If the malfunction remains: — Replace the PCM. (damage to driver in PCM) (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Replace the high pressure fuel pump. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
14	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
15	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
16	**INSPECT HYDRAULIC VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Perform the Hydraulic Variable Valve Timing Control System Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the hydraulic variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
17	**INSPECT FUEL TANK** • Inspect the fuel tank. (See 01-14A-26 FUEL TANK INSPECTION [SKYACTIV-G 2.0].) • Is vapor occurring?	Yes	Replace the fuel tank. (See 01-14A-13 FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
18	**INSPECT HIGH PRESSURE FUEL PUMP** • Inspect the high pressure fuel pump. (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the high pressure fuel pump. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
19	**INSPECT ENGINE COMPRESSION** • Measure the compression pressure for each cylinder. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Inspect the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper intake valve timing • Improper exhaust valve timing Service if necessary.
20	**INSPECT IGNITION SYSTEM OPERATION** **Note** • Because the malfunction may have been resolved by removing the carbon adhered to the spark plug during the spark inspection for the spark plug, verify that the repairs have been completed. • Perform the Spark Test. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
21	**INSPECT EXHAUST SYSTEM FOR RESTRICTION** • Inspect for restriction in the exhaust system and the TWC. • Is there any restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
22	**INSPECT IF MALFUNCTION CAUSE IS PCV VALVE OR INJECTOR DRIVER (PCM INTEGRATED)** • Inspect the PCV valve. (See 01-16A-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16A-13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Injector driver malfunction. • Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) If the problem remains, overhaul the engine.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

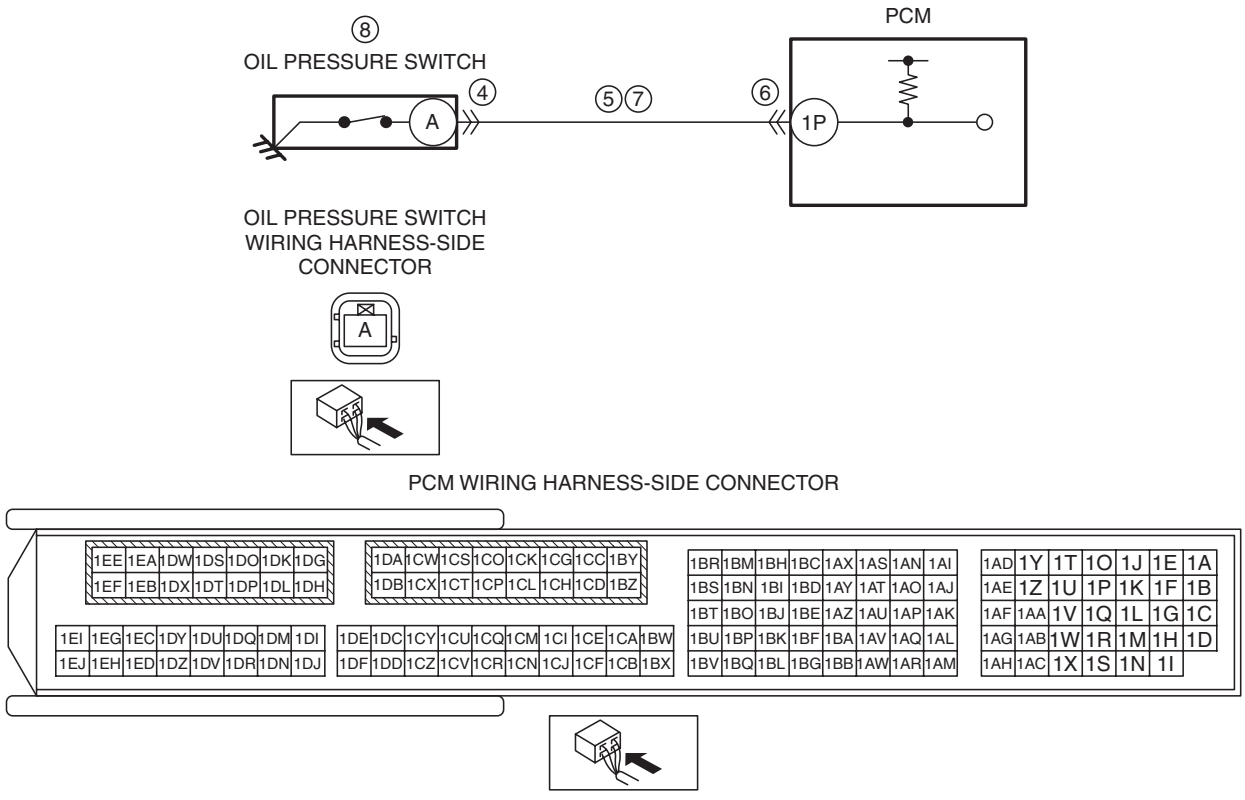
STEP	INSPECTION	RESULTS	ACTION
23	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

01

NO.7 ENGINE OIL PRESSURE WARNING LIGHT ILLUMINATES [SKYACTIV-G 2.0]

id0103e6893100

7	ENGINE OIL PRESSURE WARNING LIGHT ILLUMINATES
DESCRIPTION	• Engine oil pressure warning light illuminates incorrectly.
POSSIBLE CAUSE	• Improper engine oil level • Engine oil leakage • Oil pressure switch connector or terminals malfunction • Short to ground in wiring harness between oil pressure switch terminal A and PCM terminal 1P • Open circuit in wiring harness between oil pressure switch terminal A and PCM terminal 1P • PCM connector or terminals malfunction • Oil pressure switch malfunction • Oil pump malfunction • Instrument cluster malfunction • PCM malfunction



SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**INSPECT ENGINE OIL LEVEL** • Inspect the engine oil level. (See 01-11A-3 ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Engine oil level is below L: • Add genuine motor oil, then go to the next step. Engine oil level is above F: • Replace the engine oil, then go to the next step. (penetration of fuel into engine oil can be considered) (See 01-11A-3 ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0].)
		No	Go to Step 3.
2	**VERIFY IF ENGINE OIL PRESSURE WARNING LIGHT ILLUMINATES** • Start the engine. • Increase and keep the engine speed at **2,500 rpm** for **5 s**. • Does the engine oil pressure warning light illuminate?	Yes	Go to the next step.
		No	Symptom troubleshooting is completed.
3	**VERIFY DTC** • Retrieve the PCM and instrument cluster DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].) (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
4	**INSPECT OIL PRESSURE SWITCH CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the oil pressure switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals.
		No	Go to the next step.
5	**INSPECT OIL PRESSURE SWITCH CONTROL CIRCUIT FOR SHORT TO GROUND** • Verify that the oil pressure switch connector is disconnected. • Inspect for continuity between oil pressure switch terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	If the short to ground circuit could be detected in the wiring harness: • Repair or replace the wiring harness for a possible short to ground. If the short to ground circuit could not be detected in the wiring harness: • Replace the PCM (short to ground in the PCM internal circuit). (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR CONDITION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals.
		No	Go to the next step.
7	**INSPECT OIL PRESSURE SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Verify that the oil pressure switch and PCM connectors are disconnected. • Inspect for continuity between oil pressure switch terminal A (wiring harness-side) and PCM terminal 1P (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit.
8	**INSPECT ENGINE OIL PRESSURE** • Inspect the engine oil pressure. (See 01-11A-7 OIL PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the oil pump, then go to the next step. (See 01-11A-15 OIL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Replace the oil pressure switch, then go to the next step. (See 01-11A-10 ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
9	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

NO.8 ENGINE RUNS ROUGH/ROLLING IDLE [SKYACTIV-G 2.0]

id0103e6801400

8	ENGINE RUNS ROUGH/ROLLING IDLE
DESCRIPTION	• Engine speed fluctuates between specified idle speed and lower speed and, engine shakes excessively. • Idle speed is too slow and engine shakes excessively.
POSSIBLE CAUSE	• Engine overheating • PCM DTC is stored • Erratic signal to PCM — APP sensor or related circuit malfunction — ECT sensor or related circuit malfunction — MAF sensor or related circuit malfunction — MAP sensor or related circuit malfunction — A/F sensor or related circuit malfunction — HO2S or related circuit malfunction — Improper air/fuel mixture ratio control operation • Improper load signal input — Improper A/C request signal • Improper operation of A/C system • Improper operation of drive-by-wire control system • Incorrect fuel injection timing • Unbalanced fuel injection amount for each cylinder • Purge solenoid valve malfunction • Poor fuel quality • Air leakage from intake-air system • Intake-air system restriction • Electrical connector disconnected • Fuel leakage • Vacuum leakage • Improper engine oil viscosity • Erratic or no signal from CMP sensor — Loose installation — Damaged trigger wheel (intake camshaft and/or exhaust camshaft) — Open or short circuit in related wiring harness • Erratic signal from CKP sensor — Loose installation — Damaged trigger wheel (crankshaft pulley) — Open or short circuit in related wiring harness • Inadequate fuel pressure (high or low pressure side) — Fuel pressure sensor or related circuit malfunction — High pressure fuel pump malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction — Relief valve (built-into high pressure fuel pump) malfunction — Fuel pump (low-side) body mechanical malfunction — Fuel filter clogged — Fuel injector malfunction • Improper operation of electric variable valve timing control system (PCM DTC is stored.) • Improper operation of hydraulic variable valve timing control system • Low engine compression or excessive unbalance for each cylinder • Improper intake valve timing • Improper exhaust valve timing • Spark plug malfunction • Incorrect signal to ignition coil • Exhaust system or TWC restricted or clogged • PCV valve malfunction • Injector driver (built-into PCM) malfunction

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

8	ENGINE RUNS ROUGH/ROLLING IDLE
POSSIBLE CAUSE	**Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].) (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY IF MALFUNCTION INCLUDES HARD ENGINE STARTING** • Verify the vehicle engine condition. • Can idling be maintained?	Yes	Go to the next step.
		No	Perform the symptom troubleshooting "NO.5 ENGINE STALLS-AFTER START/AT IDLE". (See 01-03-31 NO.5 ENGINE STALLS-AFTER START/AT IDLE [SKYACTIV-G 2.0].)
2	**VERIFY IF MALFUNCTION CAUSE IS OVERHEATING** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the ECT PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the ECT PID value **less than 116 °C {241 °F}** during driving?	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. • Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See 01-03-88 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0].)
3	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
4	**VERIFY CURRENT INPUT SIGNAL STATUS** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP1 — APP2 — ECT — MAF — MAP — O2S11 — O2S12 — SHRTFT1 — LONGFT1 • Do the PIDs indicate the correct values under the trouble condition? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not as specified: • Inspect the APP sensor. (See 01-40-51 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0].) ECT PID is not as specified: • Inspect the ECT sensor. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAF PID is not as specified: • Inspect the MAF sensor. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAP PID is not as specified: • Inspect the MAP sensor. (See 01-40-49 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S11, SHRTFT1, LONGFT1 PIDs are not as specified: • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S12 PID is not as specified: • Inspect the HO2S. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) Repair or replace the malfunctioning part according to the inspection results. • If the malfunction remains: — Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03-116 INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0].)
5	**DETERMINE IF MALFUNCTION CAUSE IS A/C REQUEST SIGNAL OR OTHER** • Access the AC_REQ PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Monitor the AC_REQ PID while turning on and off the air conditioner with switch on the control panel. • Does the AC_REQ PID value change from on to off according to switch control panel?	Yes	Go to the next step.
		No	If the AC_REQ PID is always ON: • Perform the symptom troubleshooting “NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY”. (See 01-03-106 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0].) If the AC_REQ PID is always OFF: • Perform the symptom troubleshooting “NO.23 A/C DOES NOT WORK SUFFICIENTLY”. (See 01-03-101 NO.23 A/C DOES NOT WORK SUFFICIENTLY [SKYACTIV-G 2.0].)
6	**INSPECT A/C CUT-OFF CONTROL SYSTEM OPERATION** • Perform the A/C Cut-off Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the A/C cut-off operation work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
7	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the TP sweep inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the drive-by-wire control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
8	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
9	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
10	**INSPECT RELATED PART CONDITION** • Inspect the following: — Fuel quality (proper octane, contamination, winter/summer blend) — Intake-air system restriction or leakage — Electrical connectors connection — Fuel leakage in fuel system — Vacuum leakage — Engine oil viscosity — CKP sensor, intake CMP sensor and exhaust CMP sensor • Installation condition (See 01-40-59 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-40-61 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Damaged trigger wheel, intake camshaft and exhaust camshaft • Is there any malfunction?	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.
11	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 15.
		No	Lower than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Go to Step 14. Higher than **3 MPa {31 kgf/cm2, 435 psi}**: • Go to the next step.
12	**DETERMINE IF MALFUNCTION CAUSE IS FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 14.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
13	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel distributor. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 15.
14	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground. • If the malfunction remains: — Replace the PCM. (damage to driver in PCM) (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Replace the high pressure fuel pump. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
15	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
16	**INSPECT HYDRAULIC VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Perform the Hydraulic Variable Valve Timing Control System Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the hydraulic variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
17	**INSPECT ENGINE COMPRESSION** • Measure the compression pressure for each cylinder. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Inspect the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper intake valve timing • Improper exhaust valve timing Service if necessary.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
18	**INSPECT IGNITION SYSTEM OPERATION** • Perform the Spark Test. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
19	**INSPECT EXHAUST SYSTEM FOR RESTRICTION** • Inspect for restriction in the exhaust system and the TWC. • Is there any restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
20	**INSPECT IF MALFUNCTION CAUSE IS PCV VALVE OR INJECTOR DRIVER (PCM INTEGRATED)** • Inspect the PCV valve. (See 01-16A-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16A-13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Injector driver malfunction. • Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) If the problem remains, overhaul the engine.
21	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

NO.9 FAST IDLE/RUNS ON [SKYACTIV-G 2.0]

id0103e6801500

9	FAST IDLE/RUNS ON
DESCRIPTION	• Engine speed continues at fast idle after warm-up. • Engine runs after ignition switch is turned off.
POSSIBLE CAUSE	• Cooling system malfunction • PCM DTC is stored • Accelerator pedal stuck depressed • Erratic signal to PCM — APP sensor or related circuit malfunction — CPP switch or related circuit malfunction (MTX) — Neutral switch No.1 or related circuit malfunction (MTX) — Communication error between TCM and PCM (ATX) — A/F sensor or related circuit malfunction — HO2S or related circuit malfunction — Improper air/fuel mixture ratio control operation • Improper load signal input — Improper A/C request signal • Improper operation of drive-by-wire control system • Throttle body malfunction • Fuel injector malfunction • Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction • Improper operation of cruise control system • Air leakage from intake-air system • Injector driver (built-into PCM) malfunction **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].) (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**INSPECT COOLING SYSTEM FOR MALFUNCTION** • Access the ECT PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Start the engine and warm it up completely. • Is the ECT PID value between **82—112 °C {180—234 °F}**?	Yes	Go to the next step.
		No	ECT PID value is **higher than 112 °C {234 °F}**: • Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See 01-03-88 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0].) ECT PID value is **less than 82 °C {180 °F}**: • Perform the symptom troubleshooting "NO.18 COOLING SYSTEM CONCERNS-RUNS COLD". (See 01-03-90 NO.18 COOLING SYSTEM CONCERNS-RUNS COLD [SKYACTIV-G 2.0].)
2	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
3	**VERIFY CURRENT INPUT SIGNAL STATUS** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP1 — APP2 — CPP (MTX) — CPP/PNP (MTX) — O2S11 — O2S12 — SHRTFT1 — LONGFT1 • Do the PIDs indicate the correct values under the trouble condition? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not as specified: • Inspect the APP sensor. (See 01-40-51 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0].) CPP PID is not as specified: (MTX) • Inspect the CPP switch. (See 01-40-40 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [SKYACTIV-G 2.0].) CPP/PNP PID is not as specified: (MTX) • Inspect the neutral switch No.1. (See 01-40-40 NEUTRAL SWITCH INSPECTION [SKYACTIV-G 2.0].) O2S11, SHRTFT1, LONGFT1 PIDs are not as specified: • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S12 PID is not as specified: • Inspect the HO2S. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) Repair or replace the malfunctioning part according to the inspection results. • If the malfunction remains: — Inspect communication error between TCM and PCM. (ATX) • Repair or replace the malfunctioning part according to the inspection results if necessary. — Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03-116 INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0].)
4	**DETERMINE IF MALFUNCTION CAUSE IS A/C REQUEST SIGNAL OR OTHER** • Access the AC_REQ PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Monitor the AC_REQ PID while turning on and off the air conditioner with switch on the control panel. • Does the AC_REQ PID value change from on to off according to switch control panel?	Yes	Go to the next step.
		No	If the AC_REQ PID is always ON: • Perform the symptom troubleshooting “NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY”. (See 01-03-106 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0].) If the AC_REQ PID is always OFF: • Perform the symptom troubleshooting “NO.23 A/C DOES NOT WORK SUFFICIENTLY”. (See 01-03-101 NO.23 A/C DOES NOT WORK SUFFICIENTLY [SKYACTIV-G 2.0].)
5	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the TP sweep inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the drive-by-wire control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
6	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
7	**INSPECT HIGH PRESSURE FUEL PUMP** • Inspect the high pressure fuel pump. (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the high pressure fuel pump. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
8	**INSPECT CRUISE CONTROL SYSTEM** • Inspect the operation of cruise control system. • Does the cruise control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
9	**INSPECT INTAKE-AIR SYSTEM FOR AIR LEAKAGE** • Inspect for leakage in intake-air system. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Injector driver malfunction. • Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) If the problem remains, overhaul the engine.
10	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

NO.10 LOW IDLE/STALLS DURING DECELERATION [SKYACTIV-G 2.0]

id0103e6801600

10	LOW IDLE/STALLS DURING DECELERATION
DESCRIPTION	• Engine stops unexpectedly at beginning of deceleration or recovery from deceleration.
POSSIBLE CAUSE	• PCM DTC is stored • Erratic signal to PCM — APP sensor or related circuit malfunction — Brake switch or related circuit malfunction — CPP switch or related circuit malfunction (MTX) — Neutral switch No.1 or related circuit malfunction (MTX) — Communication error between TCM and PCM (ATX) — ECT sensor or related circuit malfunction — MAF sensor or related circuit malfunction — MAP sensor or related circuit malfunction — A/F sensor or related circuit malfunction — HO2S or related circuit malfunction — TP sensor or related circuit malfunction — Generator malfunction (part, system, control malfunction) • Amount of generator voltage is large — Improper air/fuel mixture ratio control • Improper operation of A/C magnetic clutch • Improper operation of drive-by-wire control system • Incorrect fuel injection timing • Fuel injector malfunction • Purge solenoid valve malfunction • Poor fuel quality • Air leakage from intake-air system • Intake-air system restriction • Fuel leakage • Vacuum leakage • Engine mount installation loose • Erratic signal from intake CMP sensor — Loose installation — Damaged trigger wheel (intake camshaft and/or exhaust camshaft) — Open or short circuit in related wiring harness • Erratic signal from CKP sensor — Loose installation — Damaged trigger wheel (crankshaft pulley) — Open or short circuit in related wiring harness • Inadequate fuel pressure (high or low pressure side) — Fuel pressure sensor or related circuit malfunction — High pressure fuel pump malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction — Relief valve (built-into high pressure fuel pump) malfunction — Fuel line restriction — Fuel filter clogged — Fuel pump unit malfunction • Low engine compression • Improper intake valve timing • Improper exhaust valve timing • Injector driver (built-into PCM) malfunction **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].) (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY IF MALFUNCTION INCLUDES HARD ENGINE STARTING** • Is the engine unable to start after it has stalled?	Yes	If the engine is unable to start, perform the symptom troubleshooting “NO.3 WILL NOT CRANK” and “NO.6 CRANKS NORMALLY BUT WILL NOT START”. (See 01-03-19 NO.3 WILL NOT CRANK [SKYACTIV-G 2.0].) (See 01-03-37 NO.6 CRANKS NORMALLY BUT WILL NOT START [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION INCLUDES ROUGH IDLING** • Does the engine idle rough?	Yes	Perform the symptom troubleshooting “NO.8 ENGINE RUNS ROUGH/ROLLING IDLE”. (See 01-03-45 NO.8 ENGINE RUNS ROUGH/ ROLLING IDLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
4	**VERIFY CURRENT INPUT SIGNAL STATUS** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP1 — APP2 — BOO — CPP (MTX) — CPP/PNP (MTX) — ECT — MAF — MAP — TP REL — O2S11 — O2S12 — SHRTFT1 — LONGFT1 — ALTT V • Do the PIDs indicate the correct values under the trouble condition? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not as specified: • Inspect the APP sensor. (See 01-40-51 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0].) BOO PID is not as specified: • Inspect the brake switch. (See 04-11-11 BRAKE SWITCH INSPECTION.) CPP PID is not as specified: (MTX) • Inspect the CPP switch. (See 01-40-40 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [SKYACTIV-G 2.0].) CPP/PNP PID is not as specified: (MTX) • Inspect the neutral switch No.1. (See 01-40-40 NEUTRAL SWITCH INSPECTION [SKYACTIV-G 2.0].) ECT PID is not as specified: • Inspect the ECT sensor. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAF PID is not as specified: • Inspect the MAF sensor. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAP PID is not as specified: • Inspect the MAP sensor. (See 01-40-49 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0].) TP REL PID is not as specified: • Inspect the TP sensor. (See 01-40-50 THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S11, SHRTFT1, LONGFT1 PIDs are not as specified: • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S12 PID is not as specified: • Inspect the HO2S. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) ALTT V PID is not as specified: • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) Repair or replace the malfunctioning part according to the inspection results. • If the malfunction remains: — Inspect communication error between TCM and PCM. (ATX) • Repair or replace the malfunctioning part according to the inspection results if necessary. — Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03-116 INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0].)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
5	**DETERMINE IF MALFUNCTION CAUSE IS A/C REQUEST SIGNAL OR OTHER** • Access the AC_REQ PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Monitor the AC_REQ PID while turning on and off the air conditioner with switch on the control panel. • Does the AC_REQ PID value change from on to off according to switch control panel?	Yes	Go to the next step.
		No	If the AC_REQ PID is always ON: • Perform the symptom troubleshooting “NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY”. (See 01-03-106 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0].) If the AC_REQ PID is always OFF: • Perform the symptom troubleshooting “NO.23 A/C DOES NOT WORK SUFFICIENTLY”. (See 01-03-101 NO.23 A/C DOES NOT WORK SUFFICIENTLY [SKYACTIV-G 2.0].)
6	**INSPECT A/C CUT-OFF CONTROL SYSTEM OPERATION** • Perform the A/C Cut-off Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the A/C cut-off operation work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
7	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the TP sweep inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the drive-by-wire control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
8	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
9	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
10	**INSPECT RELATED PART CONDITION** • Inspect the following: — Fuel quality (proper octane, contamination, winter/summer blend) — Intake-air system restriction or leakage — Fuel leakage in fuel system — Vacuum leakage — Engine mount loose — CKP sensor, intake CMP sensor and exhaust CMP sensor • Installation condition (See 01-40-59 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-40-61 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Damaged trigger wheel, intake camshaft and exhaust camshaft • Is there any malfunction?	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.
11	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 15.
		No	Lower than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Go to Step 14. Higher than **3 MPa {31 kgf/cm2, 435 psi}**: • Go to the next step.
12	**DETERMINE IF MALFUNCTION CAUSE IS FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 14.
13	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel distributor. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 15.
14	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground. • If the malfunction remains: — Replace the PCM. (damage to driver in PCM) (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Replace the high pressure fuel pump. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
15	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	ATX: • Inspect the TCC operation. — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Go to the next step. MTX: • Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
16	**INSPECT IF MALFUNCTION CAUSE IS ENGINE COMPRESSION OR INJECTOR DRIVER (PCM INTEGRATED)** • Measure the compression pressure for each cylinder. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Injector driver malfunction. • Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) If the problem remains, overhaul the engine.
		No	Inspect the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper intake valve timing • Improper exhaust valve timing Service if necessary.
17	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

NO.11 ENGINE STALLS/QUITS, ENGINE RUNS ROUGH, MISSES, BUCK/JERK, HESITATION/STUMBLE, SURGES [SKYACTIV-G 2.0]

id0103e6801700

11	**ENGINE STALLS/QUITS-ACCELERATION/CRUISE** **ENGINE RUNS ROUGH-ACCELERATION/CRUISE** **MISSES-ACCELERATION/CRUISE** **BUCK/JERK-ACCELERATION/CRUISE/DECELERATION** **HESITATION/STUMBLE-ACCELERATION** **SURGES-ACCELERATION/CRUISE**
DESCRIPTION	• Engine stops unexpectedly at beginning of acceleration or during acceleration. • Engine stops unexpectedly while cruising. • Engine speed fluctuates during acceleration or cruising. • Engine misses during acceleration or cruising. • Vehicle bucks/jerks during acceleration, cruising, or deceleration. • Momentary pause at beginning of acceleration or during acceleration. • Momentary minor irregularity in engine output.
POSSIBLE CAUSE	• Engine overheating • Drive-by-wire control system operates with brake override system • PCM DTC is stored • Erratic signal to PCM — APP sensor or related circuit malfunction — CPP switch or related circuit malfunction (MTX) — Neutral switch No.1 or related circuit malfunction (MTX) — Communication error between TCM and PCM (ATX) — ECT sensor or related circuit malfunction — Fuel pressure sensor or related circuit malfunction — IAT sensor No.1 (integrated in MAF sensor/IAT sensor No.1) or related circuit malfunction — MAF sensor or related circuit malfunction — MAP sensor or related circuit malfunction — A/F sensor or related circuit malfunction — HO2S or related circuit malfunction — Improper air/fuel mixture ratio control operation — Intermittent open or short circuit MAF sensor, APP sensor, TP sensor • Improper operation of A/C system • Improper operation of drive-by-wire control system • Throttle body malfunction • Incorrect fuel injection timing • Fuel injector malfunction • Purge solenoid valve malfunction • Improper A/F sensor signal — A/F sensor malfunction — Open or short circuit in related wiring harness — Loose installation — Exhaust system leakage • Main relay intermittent malfunction • Poor fuel quality • Air leakage from intake-air system • Intake-air system restriction • Air cleaner restriction • Clutch slippage (MTX) • Fuel leakage • Vacuum leakage • Engine mount installation loose • Erratic or no signal from CMP sensor — Loose installation — Damaged trigger wheel (intake camshaft and/or exhaust camshaft) — Open or short circuit in related wiring harness • Erratic signal from CKP sensor — Loose installation — Damaged trigger wheel (crankshaft pulley) — Open or short circuit in related wiring harness • Inadequate fuel pressure (high or low pressure side) — Fuel pressure sensor malfunction — High pressure fuel pump malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction — Relief valve (built-into high pressure fuel pump) malfunction — Fuel line restricted or clogged — Fuel pump mechanical malfunction

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

11	**ENGINE STALLS/QUITS-ACCELERATION/CRUISE** **ENGINE RUNS ROUGH-ACCELERATION/CRUISE** **MISSES-ACCELERATION/CRUISE** **BUCK/JERK-ACCELERATION/CRUISE/DECELERATION** **HESITATION/STUMBLE-ACCELERATION** **SURGES-ACCELERATION/CRUISE**
POSSIBLE CAUSE	• Improper intake valve timing due to timing chain jumping • Improper exhaust valve timing due to timing chain jumping • Low engine compression • Improper intake valve timing • Improper exhaust valve timing • Spark plug malfunction • Throttle valve restricted or clogged • Exhaust system and/or TWC restriction (PCM DTC is stored.) • PCV valve malfunction • Check valve (two-way) malfunction • Injector driver (built-into PCM) malfunction • ATX internal malfunction (ATX) **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].) (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY IF MALFUNCTION INCLUDES HARD ENGINE STARTING** • Is the engine unable to start after it has stalled?	Yes	If the engine is unable to start, perform the symptom troubleshooting "NO.3 WILL NOT CRANK" and "NO.6 CRANKS NORMALLY BUT WILL NOT START". (See 01-03-19 NO.3 WILL NOT CRANK [SKYACTIV-G 2.0].) (See 01-03-37 NO.6 CRANKS NORMALLY BUT WILL NOT START [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION INCLUDES ROUGH IDLING** • Does the engine idle rough?	Yes	Perform the symptom troubleshooting "NO.8 ENGINE RUNS ROUGH/ROLLING IDLE". (See 01-03-45 NO.8 ENGINE RUNS ROUGH/ROLLING IDLE [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
3	**VERIFY IF MALFUNCTION CAUSE IS OVERHEATING** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the ECT PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the ECT PID value **less than 116 °C {241 °F}** during driving?	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. • Perform the symptom troubleshooting “NO.17 COOLING SYSTEM CONCERNS-OVERHEATING”. (See 01-03-88 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0].)
4	**CONFIRM DRIVE-BY-WIRE CONTROL SYSTEM OPERATES WITH BRAKE OVERRIDE SYSTEM** • Retrieve the PCM DTC using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P2299:00 present?	Yes	Go to the applicable DTC inspection. (drive-by-wire control system operates with brake override system.) (See 01-02-350 DTC P2299:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
6	**VERIFY CURRENT INPUT SIGNAL STATUS** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP1 — APP2 — CPP (MTX) — CPP/PNP (MTX) — ECT — FUEL_PRES — IAT — MAF — MAP — O2S11 — O2S12 — SHRTFT1 — LONGFT1 • Do the PIDs indicate the correct values under the trouble condition? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not as specified: • Inspect the APP sensor. (See 01-40-51 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0].) CPP PID is not as specified: (MTX) • Inspect the CPP switch. (See 01-40-40 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [SKYACTIV-G 2.0].) CPP/PNP PID is not as specified: (MTX) • Inspect the neutral switch No.1. (See 01-40-40 NEUTRAL SWITCH INSPECTION [SKYACTIV-G 2.0].) ECT PID is not as specified: • Inspect the ECT sensor. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) FUEL_PRES PID is not as specified: • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) IAT PID is not as specified: • Inspect the IAT sensor No.1. (See 01-40-46 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAF PID is not as specified: • Inspect the MAF sensor. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAP PID is not as specified: • Inspect the MAP sensor. (See 01-40-49 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S11, SHRTFT1, LONGFT1 PIDs are not as specified: • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S12 PID is not as specified: • Inspect the HO2S. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) Repair or replace the malfunctioning part according to the inspection results. • If the malfunction remains: — Inspect communication error between TCM and PCM. (ATX) • Repair or replace the malfunctioning part according to the inspection results if necessary. — Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03-116 INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0].)
7	**INSPECT A/C CUT-OFF CONTROL SYSTEM OPERATION** • Perform the A/C Cut-off Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the A/C cut-off operation work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
8	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the TP sweep inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the drive-by-wire control system work properly?	Yes	Visually inspect the throttle body (damage/scratching). • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
9	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
10	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
11	**INSPECT CURRENT A/F SENSOR SIGNAL** • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 13.
12	**DETERMINE IF MALFUNCTION CAUSE IS A/F SENSOR MALFUNCTION OR A/F SENSOR RELATED WIRING HARNESS MALFUNCTION** **Note** • If the inspection in Step 12 is performed, the PCM detects a DTC and performs fail-safe control. After performing the inspection, clear DTCs using the M-MDS. • Switch the ignition to off. • Disconnect the A/F sensor connector. • Verify the symptom. • Does the symptom disappear?	Yes	Replace the A/F sensor. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Inspect the following: • Exhaust system leakage between exhaust manifold and A/F sensor • Loose installation of A/F sensor — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Inspect the A/F sensor signal circuit. • Repair or replace the suspected wiring harness if necessary.
13	**INSPECT MAIN RELAY OPERATION** • Perform the Main Relay Operation Inspection with wiggle the related harness. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the main relay operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
14	**INSPECT RELATED PART CONDITION** • Inspect the following: — Fuel quality (proper octane, contamination, winter/summer blend) — Air leakage from intake-air system — Intake-air system restriction — Air cleaner element — Clutch slippage (MTX) — Fuel leakage from fuel line — Vacuum leakage — Engine mount loose — CKP sensor, intake CMP sensor and exhaust CMP sensor • Installation condition (See 01-40-59 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-40-61 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Damaged trigger wheel, intake camshaft and exhaust camshaft • Is there any malfunction?	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.
15	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 19.
		No	Lower than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Go to Step 18. Higher than **3 MPa {31 kgf/cm2, 435 psi}**: • Go to the next step.
16	**DETERMINE IF MALFUNCTION CAUSE IS FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 18.
17	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel distributor. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 19.
18	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground. • If the malfunction remains: — Replace the PCM. (damage to driver in PCM) (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Replace the high pressure fuel pump. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
19	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
20	**INSPECT THROTTLE BODY FOR CLOGGING** • Visually inspect the throttle valve. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Is any foreign material adhering around the throttle valve?	Yes	Clean the throttle valve.
		No	Go to the next step.
21	**INSPECT ENGINE COMPRESSION** • Measure the compression pressure for each cylinder. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Inspect the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper intake valve timing • Improper exhaust valve timing Service if necessary.
22	**INSPECT IGNITION SYSTEM OPERATION** • Perform the Spark Test. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
23	**INSPECT EXHAUST SYSTEM FOR RESTRICTION** • Inspect for restriction in the exhaust system and the TWC. • Is there any restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
24	**INSPECT IF MALFUNCTION CAUSE IS PCV VALVE OR INJECTOR DRIVER (PCM INTEGRATED)** • Inspect the PCV valve. (See 01-16A-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16A-13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Injector driver malfunction. • Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) If the problem remains, overhaul the engine.
25	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

NO.12 LACK/LOSS OF POWER-ACCELERATION/CRUISE [SKYACTIV-G 2.0]

id0103e6801800

12	LACK/LOSS OF POWER-ACCELERATION/CRUISE
DESCRIPTION	• Performance is poor under load. (e.g., power down when climbing hills)
POSSIBLE CAUSE	• Engine overheating • Drive-by-wire control system operates with brake override system • PCM DTC is stored • Improper operation of A/C system • Improper operation of drive-by-wire control system • Throttle body malfunction • Incorrect fuel injection timing • Fuel injector malfunction • Purge solenoid valve malfunction • Erratic signal to PCM — APP sensor or related circuit malfunction — CPP switch or related circuit malfunction (MTX) — Neutral switch No.1 or related circuit malfunction (MTX) — Communication error between TCM and PCM (ATX) — ECT sensor or related circuit malfunction — Fuel pressure sensor or related circuit malfunction — IAT sensor No.1 (integrated in MAF sensor/IAT sensor No.1) or related circuit malfunction — MAF sensor or related circuit malfunction — MAP sensor or related circuit malfunction — A/F sensor or related circuit malfunction — HO2S or related circuit malfunction — Improper air/fuel mixture ratio control operation — Intermittent open or short circuit MAF sensor, APP sensor, TP sensor • Fuel leakage • Poor fuel quality • Air leakage or restriction in intake-air system • Air cleaner restricted or dirty • Vacuum leakage • Clutch slippage (MTX) • Brake dragging • Tire air pressure malfunction • Erratic or no signal from CMP sensor — Loose installation — Damaged trigger wheel (intake camshaft and/or exhaust camshaft) — Open or short circuit in related wiring harness • Erratic signal from CKP sensor — Loose installation — Damaged trigger wheel (crankshaft pulley) — Open or short circuit in related wiring harness • Inadequate fuel pressure (high or low pressure side) — Fuel pressure sensor malfunction — High pressure fuel pump malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction — Relief valve (built-into high pressure fuel pump) malfunction — Fuel line restricted or clogged — Fuel pump mechanical malfunction • Improper operation of electric variable valve timing control system (PCM DTC is stored.) • Improper operation of hydraulic variable valve timing control system • Throttle valve restricted or clogged • Low engine compression • Improper intake valve timing due to timing chain jumping • Improper exhaust valve timing due to timing chain jumping • Spark plug malfunction • Incorrect signal to ignition coil • Exhaust system and/or TWC restriction • PCV valve malfunction • Injector driver (built-into PCM) malfunction • ATX internal malfunction (ATX)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

12	LACK/LOSS OF POWER-ACCELERATION/CRUISE
POSSIBLE CAUSE	**Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].) (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY IF MALFUNCTION INCLUDES ROUGH IDLING** • Does the engine idle rough?	Yes	Perform the symptom troubleshooting "NO.8 ENGINE RUNS ROUGH/ROLLING IDLE". (See 01-03-45 NO.8 ENGINE RUNS ROUGH/ ROLLING IDLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS OVERHEATING** • Is the engine overheating?	Yes	Perform the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING". (See 01-03-88 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**CONFIRM DRIVE-BY-WIRE CONTROL SYSTEM OPERATES WITH BRAKE OVERRIDE SYSTEM** • Retrieve the PCM DTC using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC P2299:00 present?	Yes	Go to the applicable DTC inspection. (drive-by-wire control system operates with brake override system.) (See 01-02-350 DTC P2299:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
5	**VERIFY CURRENT INPUT SIGNAL STATUS** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP1 — APP2 — CPP (MTX) — CPP/PNP (MTX) — ECT — FUEL_PRES — IAT — MAF — MAP — TP REL — O2S11 — O2S12 — SHRTFT1 — LONGFT1 • Do the PIDs indicate the correct values under the trouble condition? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not as specified: • Inspect the APP sensor. (See 01-40-51 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0].) CPP PID is not as specified: (MTX) • Inspect the CPP switch. (See 01-40-40 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [SKYACTIV-G 2.0].) CPP/PNP PID is not as specified: (MTX) • Inspect the neutral switch No.1. (See 01-40-40 NEUTRAL SWITCH INSPECTION [SKYACTIV-G 2.0].) ECT PID is not as specified: • Inspect the ECT sensor. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) FUEL_PRES PID is not as specified: • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) IAT PID is not as specified: • Inspect the IAT sensor No.1. (See 01-40-46 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAF PID is not as specified: • Inspect the MAF sensor. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAP PID is not as specified: • Inspect the MAP sensor. (See 01-40-49 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0].) TP REL PID is not as specified: • Inspect the TP sensor. (See 01-40-50 THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S11, SHRTFT1, LONGFT1 PIDs are not as specified: • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S12 PID is not as specified: • Inspect the HO2S. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) Repair or replace the malfunctioning part according to the inspection results. • If the malfunction remains: — Inspect communication error between TCM and PCM. (ATX) • Repair or replace the malfunctioning part according to the inspection results if necessary. — Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03-116 INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0].)
6	**INSPECT A/C CUT-OFF CONTROL SYSTEM OPERATION** • Perform the A/C Cut-off Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the A/C cut-off operation work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
7	**INSPECT DRIVE-BY-WIRE CONTROL SYSTEM OPERATION** • Perform the TP sweep inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the drive-by-wire control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
8	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
9	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
10	**INSPECT FUEL SYSTEM FOR FUEL LEAKAGE** • Inspect for fuel leakage in the fuel line. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
11	**INSPECT RELATED PART CONDITION** • Inspect the following: — Fuel quality (proper octane, contamination, winter/summer blend) — Air leakage or restriction in intake-air system — Air cleaner restricted or dirty — Vacuum leakage — Clutch slippage (MTX) — Brake dragging — Tire air pressure — CKP sensor, intake CMP sensor and exhaust CMP sensor • Installation condition (See 01-40-59 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-40-61 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Damaged trigger wheel, intake camshaft and exhaust camshaft • Is there any malfunction?	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
12	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 14.
		No	Lower than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Go to the next step. Higher than **3 MPa {31 kgf/cm2, 435 psi}**: • Go to the next step.
13	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground. • If the malfunction remains: — Replace the PCM. (damage to driver in PCM) (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Replace the high pressure fuel pump. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
14	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
15	**INSPECT HYDRAULIC VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Perform the Hydraulic Variable Valve Timing Control System Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the hydraulic variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
16	**INSPECT THROTTLE BODY FOR CLOGGING** • Visually inspect the throttle valve. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Is any foreign material adhering around the throttle valve?	Yes	Clean the throttle valve.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
17	**INSPECT ENGINE COMPRESSION** • Measure the compression pressure for each cylinder. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Inspect the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper intake valve timing • Improper exhaust valve timing Service if necessary.
18	**VERIFY SPARK PLUG CONDITION** • Inspect the spark plug condition. (See 01-18-3 SPARK PLUG INSPECTION [SKYACTIV-G 2.0].) • Is the spark plug wet, covered with carbon or grayish white?	Yes	Spark plug is wet or covered with carbon: • Perform the Spark Test. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Repair or replace the malfunctioning part according to the inspection results. Spark plug is grayish white: • Inspect the fuel injector for restriction. — Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
19	**INSPECT EXHAUST SYSTEM FOR RESTRICTION** • Inspect for restriction in the exhaust system and the TWC. • Is there any restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
20	**INSPECT IF MALFUNCTION CAUSE IS PCV VALVE OR INJECTOR DRIVER (PCM INTEGRATED)** • Inspect the PCV valve. (See 01-16A-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16A-13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Injector driver malfunction. • Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) If the problem remains, overhaul the engine.
21	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

NO.13 KNOCKING/PINGING-ACCELERATION/CRUISE [SKYACTIV-G 2.0]

id0103e6812100

13	KNOCKING/PINGING-ACCELERATION/CRUISE
DESCRIPTION	• Sound is produced when air/fuel mixture is ignited by something other than spark plug. (e.g., hot spot in combustion chamber)
POSSIBLE CAUSE	• Poor fuel quality — Fuel RON is not specified — Excessive cleaning agents added in fuel • Combustion temperature is high — Engine overheating due to cooling system malfunction — Carbon accumulation (production of heat spot) — Plug thermal value is low — Plug malfunction (production of heat spot) • Ignition timing for calculating PCM is incorrect — PCM DTC is stored — Estimated intake air amount is deviated — ECT sensor or related circuit malfunction — IAT sensor No.2 (integrated in MAP sensor) or related circuit malfunction — Temperature correction is incorrect — Air leakage or restriction in intake-air system — MAF sensor or related circuit malfunction — MAP sensor or related circuit malfunction — KS or related circuit malfunction **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].) (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY IF MALFUNCTION INCLUDES ROUGH IDLING** • Does the engine idle rough?	Yes	Perform the symptom troubleshooting "NO.8 ENGINE RUNS ROUGH/ROLLING IDLE". (See 01-03-45 NO.8 ENGINE RUNS ROUGH/ ROLLING IDLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**REPLACE FUEL** • Drain the remaining fuel in the fuel tank and add the specified fuel. • Leave idling **for approx. 15 min** to refill the hose with fuel. • Does the symptom disappear?	Yes	Symptom troubleshooting completed. (If customer has used fuel additive, give them advice not to use it)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
3	**VERIFY IF MALFUNCTION CAUSE IS OVERHEATING** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the ECT PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the ECT PID value **less than 116 °C {241 °F}** during driving?	Yes	Go to the next step.
		No	The cause of this concern could be from the cooling system overheating. • Perform the symptom troubleshooting “NO.17 COOLING SYSTEM CONCERNS-OVERHEATING”. (See 01-03-88 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0].)
4	**VERIFY SPARK PLUG CONDITION** • Remove all spark plugs. (See 01-18-3 SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Inspect the spark plug. (See 01-18-3 SPARK PLUG INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the spark plug. (See 01-18-3 SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT INTAKE AIR SYSTEM FOR AIR SUCTION** • Verify if there is air suction into the intake air system (such as between MAF sensor and intake valve, vacuum hose). • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
6	**INSPECT MAP SENSOR** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — MAP — BARO • Measure the intake manifold vacuum when idling (no load). (See 01-13A-5 INTAKE MANIFOLD VACUUM INSPECTION [SKYACTIV-G 2.0].) • Does the difference between PIDs BARO and MAP nearly match the intake manifold vacuum value?	Yes	Go to the next step.
		No	Replace the MAP sensor/IAT sensor No.2. (See 01-40-48 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
7	**INSPECT MAF SENSOR** • Inspect the MAF sensor. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the MAF sensor/IAT sensor No.1. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
8	**INSPECT MAP SENSOR** • Inspect the MAP sensor resistance. (See 01-40-49 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the MAP sensor/IAT sensor No.2. (See 01-40-48 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
9	**INSPECT ECT SENSOR** • Inspect the ECT sensor resistance. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the ECT sensor. (See 01-40-41 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
10	**REPLACE KS** • Replace the KS. (See 01-40-64 KNOCK SENSOR (KS) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Does the symptom disappear?	Yes	Symptom troubleshooting completed.
		No	Remove the accumulated matter in the cylinder head using the following procedure: • Carbon remover • Overhauling
11	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

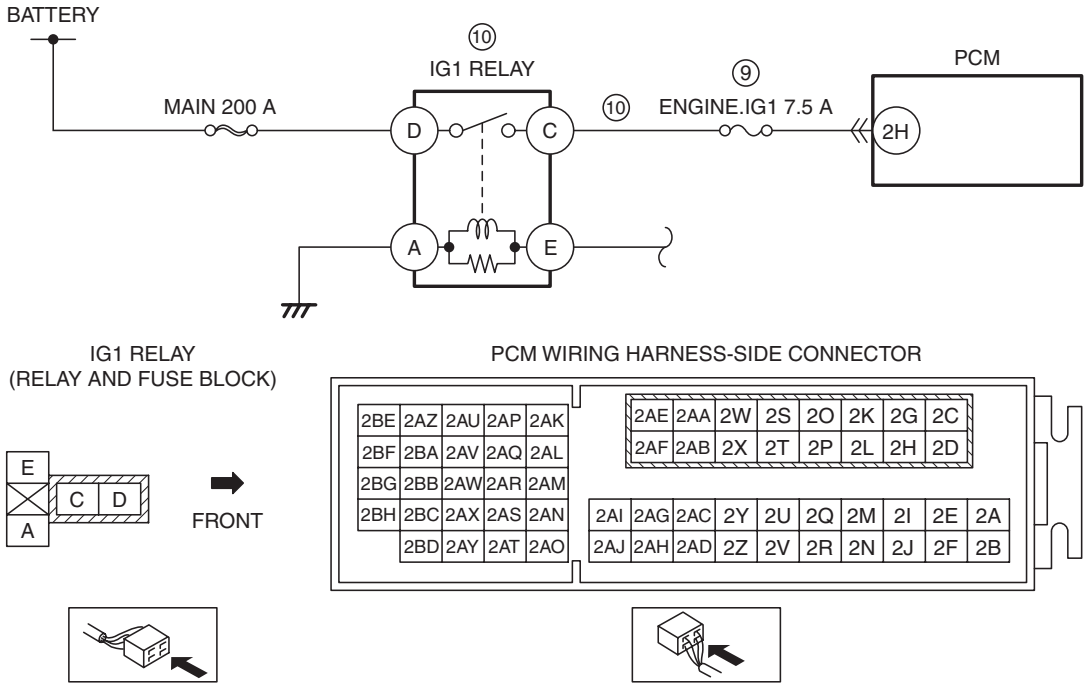
NO.14 POOR FUEL ECONOMY [SKYACTIV-G 2.0]

id0103e6802000

14	POOR FUEL ECONOMY
DESCRIPTION	• Fuel economy is unsatisfactory.
POSSIBLE CAUSE	• Engine cooling system malfunction • PCM DTC is stored • Erratic signal to PCM — APP sensor or related circuit malfunction — ECT sensor or related circuit malfunction — IAT sensor No.1 (integrated in MAF sensor/IAT sensor No.1) or related circuit malfunction — MAF sensor or related circuit malfunction — MAP sensor or related circuit malfunction — TP sensor or related circuit malfunction — Intermittent open or short circuit MAF sensor, APP sensor, TP sensor • Improper operation of cooling fan control system • Improper operation of A/C system • Incorrect fuel injection timing • Fuel injector malfunction • Short to power supply in wiring harness between IG1 relay terminal C and PCM terminal 2H • Contaminated air cleaner element • Air leakage or restriction in intake-air system • Poor fuel quality • Improper coolant level • Clutch slippage (MTX) • Improper ATF level (ATX) • Brake dragging • Tire air pressure malfunction • Vacuum leakage • Fuel leakage • Contamination in MAF sensor • Tires, wheels (large size) • Change of intake air system components and exhaust system components • Engine operation time is longer than traveled distance — Vehicle is driven in congested traffic frequently — Left idling for long periods • Amount of fuel injection increases — Overloaded — Frequent acceleration/deceleration — Frequently driving on ascending roads — Travel distance per one drive is short (amount of time for warm-up is long during engine operation) — Improper load signal input • Improper A/C request signal • Driver forgets to switch electronic device off • Electronic device is frequently used with engine stopped (no power generation) • Vehicle left undriven for long periods • Large amount of parasitic draw (especially after-market electronic devices) • Erratic or no signal from CMP sensor — Loose installation — Damaged trigger wheel (intake camshaft and/or exhaust camshaft) — Open or short circuit in related wiring harness • Erratic signal from CKP sensor — Loose installation — Damaged trigger wheel (crankshaft pulley) — Open or short circuit in related wiring harness • Inadequate fuel pressure (high-pressure side) — Fuel pressure sensor malfunction — High pressure fuel pump malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction — Relief valve (built-into high pressure fuel pump) malfunction — Fuel line restricted or clogged — Fuel pump unit malfunction • Improper engine compression • Improper intake valve timing due to timing chain jumping • Improper exhaust valve timing due to timing chain jumping • Spark plug malfunction • Exhaust system and/or TWC restriction • PCV valve malfunction • Injector driver (built-into PCM) malfunction

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

14	POOR FUEL ECONOMY
POSSIBLE CAUSE	**Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].) (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**



Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY IF MALFUNCTION CAUSED BY ENGINE MALFUNCTION** • Verify the vehicle engine condition. • Can malfunction symptoms other than "NO.14 POOR FUEL ECONOMY" be verified?	Yes	Go to the applicable symptom troubleshooting. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT COOLING SYSTEM FOR MALFUNCTION** • Is any cooling system concern (overheating, runs cold) present?	Yes	Perform the applicable symptom troubleshooting. (See 01-03-88 NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0].) (See 01-03-90 NO.18 COOLING SYSTEM CONCERNS-RUNS COLD [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
4	**VERIFY CURRENT INPUT SIGNAL STATUS** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP1 — APP2 — ECT — IAT — MAF — MAP — TP REL • Do the PIDs indicate the correct values under the trouble condition? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not as specified: • Inspect the APP sensor. (See 01-40-51 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0].) ECT PID is not as specified: • Inspect the ECT sensor. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) IAT PID is not as specified: • Inspect the IAT sensor No.1. (See 01-40-46 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAF PID is not as specified: • Inspect the MAF sensor. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAP PID is not as specified: • Inspect the MAP sensor. (See 01-40-49 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0].) TP REL PID is not as specified: • Inspect the TP sensor. (See 01-40-50 THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0].) Repair or replace the malfunctioning part according to the inspection results. • If the malfunction remains: — Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03-116 INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0].)
5	**DETERMINE IF MALFUNCTION CAUSE IS A/C REQUEST SIGNAL OR OTHER** • Access the AC_REQ PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Monitor the AC_REQ PID while turning on and off the air conditioner with switch on the control panel. • Does the AC_REQ PID value change from on to off according to switch control panel?	Yes	Go to the next step.
		No	If the AC_REQ PID is always ON: • Perform the symptom troubleshooting “NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY”. (See 01-03-106 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0].) If the AC_REQ PID is always OFF: • Perform the symptom troubleshooting “NO.23 A/C DOES NOT WORK SUFFICIENTLY”. (See 01-03-101 NO.23 A/C DOES NOT WORK SUFFICIENTLY [SKYACTIV-G 2.0].)
6	**INSPECT COOLING FAN CONTROL SYSTEM OPERATION** • Perform the Cooling Fan Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the cooling fan control system operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
7	**INSPECT A/C CUT-OFF CONTROL SYSTEM OPERATION** • Perform the A/C Cut-off Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the A/C cut-off operation work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
8	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
9	**INSPECT ENGINE.IG1 7.5 A FUSE** • Switch the ignition to off. • Remove the ENGINE.IG1 7.5 A fuse. • Inspect the ENGINE.IG1 7.5 A fuse. • Is there any malfunction?	Yes	If the fuse is blown: • Repair or replace the wiring harness for a possible short to ground. • Replace the fuse. If the fuse is deteriorated: • Replace the fuse. Go to the next step.
		No	Reinstall the ENGINE.IG1 7.5 A fuse, then go to the next step.
10	**INSPECT IG1 RELAY CIRCUIT FOR SHORT TO POWER SUPPLY** • Remove the IG1 relay. • Disconnect the PCM connector. • Measure the voltage at the IG1 relay terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Inspect the IG1 relay. (See 09-21-29 RELAY INSPECTION.) • If there is any malfunction: — Replace the IG1 relay. • If there is no malfunction: — Reconnect all disconnected connectors. — Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
11	**INSPECT RELATED PART CONDITION** • Inspect the following: — Air cleaner element for contamination — Intake-air system restriction — Fuel quality (proper octane, contamination, winter/summer blend) — Coolant level — Clutch slippage (MTX) — ATF level (ATX) — Brake dragging — Tire air pressure — Vacuum leakage — Fuel leakage — MAF sensor contaminated — Tires, wheels (large size) — Change of intake air system components and exhaust system components — Engine operation time is longer than traveled distance • Vehicle is driven in congested traffic frequently • Left idling for long periods — Amount of fuel injection increases • Overloaded • Frequent acceleration/deceleration • Frequently driving on ascending roads • Travel distance per one drive is short — Driver forgets to switch electronic device off — Electronic device is frequently used with engine stopped (no power generation) — Vehicle left undriven for long periods — Large amount of parasitic draw — CKP sensor, intake CMP sensor and exhaust CMP sensor • Installation condition (See 01-40-59 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-40-61 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Damaged trigger wheel, intake camshaft and exhaust camshaft • Is there any malfunction?	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
12	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 16.
		No	Lower than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Go to Step 15. Higher than **3 MPa {31 kgf/cm2, 435 psi}**: • Go to the next step.
13	**DETERMINE IF MALFUNCTION CAUSE IS FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 15.
14	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel distributor. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 16.
15	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground. • If the malfunction remains: — Replace the PCM. (damage to driver in PCM) (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Replace the high pressure fuel pump. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
16	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
17	**INSPECT ENGINE COMPRESSION** • Measure the compression pressure for each cylinder. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Inspect the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper intake valve timing • Improper exhaust valve timing Service if necessary.
18	**INSPECT IGNITION SYSTEM OPERATION** • Perform the Spark Test. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is the strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
19	**INSPECT EXHAUST SYSTEM FOR RESTRICTION** • Inspect for restriction in the exhaust system and the TWC. • Is there any restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
20	**INSPECT IF MALFUNCTION CAUSE IS PCV VALVE OR INJECTOR DRIVER (PCM INTEGRATED)** • Inspect the PCV valve. (See 01-16A-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16A-13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Injector driver malfunction. • Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) If the problem remains, overhaul the engine.
21	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

NO.15 EMISSION COMPLIANCE [SKYACTIV-G 2.0]

id0103e6802100

15	EMISSION COMPLIANCE
DESCRIPTION	• Fails emissions test.
POSSIBLE CAUSE	• Engine overheating • Cooling system malfunction • PCM DTC is stored • Incorrect ignition timing • Spark plug malfunction • Purge solenoid valve malfunction • Inadequate fuel pressure — Fuel leakage at the fuel line and/or fuel injector — Fuel pressure sensor or related circuit malfunction — High pressure fuel pump malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction — Relief valve (built-into high pressure fuel pump) malfunction — Fuel line restriction — Fuel pump unit malfunction • Air leakage from intake-air system • Vacuum lines leakage or blockage • Charcoal canister damage • Improper engine coolant level • Excessive carbon built-up in combustion chamber • Improper engine compression • Improper intake valve timing • Improper exhaust valve timing • Exhaust system and/or TWC restriction • TWC malfunction (PCM DTC is stored.) • PCV valve malfunction or incorrect valve installation **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].) (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**VERIFY DRIVE MODE CONDITION** • Verify that the drive mode is completed. • Is the drive mode completed?	Yes	Go to the next step.
		No	Perform the Drive Mode. (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].)
3	**INSPECT FOR ANY OTHER MALFUNCTION** • Can malfunction symptoms other than "NO.15 EMISSION COMPLIANCE" be verified?	Yes	Go to the applicable symptom troubleshooting. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
4	**VERIFY CO AND HC CONCENTRATION** • Verify CO and HC concentration. • Is the CO or HC concentration excessive?	Yes	Go to Step 6. **Note** • If the HC concentration is normal and the CO concentration is excessive, a rich A/F can be considered the cause. • If the CO concentration is normal and the HC concentration is excessive, a A/F lean can be considered the cause. • If the CO and HC concentration is excessive, incomplete combustion or a rich A/F can be considered the cause.
		No	Go to the next step.
5	**VERIFY NOx CONCENTRATION** • Verify NOx concentration. • Is the NOx concentration excessive?	Yes	Go to the next step.
		No	Symptom troubleshooting is completed.
6	**VERIFY IF MALFUNCTION CAUSED BY IGNITION TIMING MALFUNCTION** • Inspect the ignition timing. (See 01-10A-4 ENGINE TUNE-UP [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Inspect the following: • Spark plug (See 01-18-3 SPARK PLUG INSPECTION [SKYACTIV-G 2.0].) • Ignition coil/ion sensor No.1 (See 01-18-2 IGNITION COIL INSPECTION [SKYACTIV-G 2.0].) • Ignition coil/ion sensor No.2 • Ignition coil/ion sensor No.3 • Ignition coil/ion sensor No.4 — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results, then go to Step 17. — If there is no malfunction: • Go to Step 17.
		No	Go to the next step.
7	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the purge solenoid valve work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results, then go to Step 17.
8	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to the next step.
		No	Lower than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) Higher than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel line and fuel injector restriction — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (Relief valve clogged) Repair or replace the malfunctioning part according to the inspection results, then go to Step 17.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
9	**INSPECT INTAKE-AIR SYSTEM FOR AIR LEAKAGE** • Inspect for leakage in intake-air system. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 17.
		No	Go to the next step.
10	**INSPECT RESTRICTION IN VENTILATION HOSE** • Inspect for restriction in the ventilation hose. • Is there any restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 17.
		No	Go to the next step.
11	**VERIFY IF MALFUNCTION CAUSE IS CHARCOAL CANISTER** • Visually inspect the charcoal canister. (See 01-16A-8 CHARCOAL CANISTER INSPECTION [SKYACTIV-G 2.0].) • Is the charcoal canister damaged?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 17. (See 01-16A-6 CHARCOAL CANISTER REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
12	**VERIFY IF MALFUNCTION CAUSED BY LACK OF ENGINE COOLANT** • Inspect the engine coolant level. (See 01-12A-3 ENGINE COOLANT LEVEL INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Add engine coolant and verify that there is no engine coolant leakage. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].) (See 01-12A-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results, then go to Step 17. • If there is no malfunction: — Go to Step 17.
		No	Go to the next step.
13	**VERIFY CARBON ACCUMULATION CONDITION IN COMBUSTION CHAMBER** • Verify carbon accumulation condition in combustion chamber. • Has carbon accumulated?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 17.
		No	Go to the next step.
14	**INSPECT ENGINE COMPRESSION** • Measure the compression pressure for each cylinder. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Inspect the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper intake valve timing • Improper exhaust valve timing Repair or replace the malfunctioning part according to the inspection results, then go to Step 17.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
15	**INSPECT TWC FOR RESTRICTION** • Inspect for restriction in the TWC. • Is there any restriction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 17. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
16	**INSPECT PCV VALVE** • Inspect the PCV valve. (See 01-16A-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the PCV valve, then go to the next step. (See 01-16A-13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
17	**VERIFY SYMPTOM TROUBLESHOOTING COMPLETED** • Measure CO, HC, and NOx concentration again. • Is CO, HC, and NOx concentration within specification?	Yes	Symptom troubleshooting is completed.
		No	Repeat the inspection from Step 1.

NO.16 HIGH OIL CONSUMPTION/LEAKAGE [SKYACTIV-G 2.0]

id0103e6802200

16	HIGH OIL CONSUMPTION/LEAKAGE
DESCRIPTION	• Oil consumption is excessive.
POSSIBLE CAUSE	• Improper dipstick • Improper engine oil viscosity • Oil leakage • PCV valve malfunction • Engine internal parts malfunction

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**INSPECT ENGINE OIL AND RELATED PARTS** • Inspect the following: — Proper dipstick — Proper engine oil viscosity — Engine oil level • Is there any malfunction?	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.
2	**VISUALLY INSPECT FOR ENGINE OIL LEAKAGE** • Inspect for engine oil leakage outside of the engine. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
3	**INSPECT IF MALFUNCTION CAUSE IS PCV VALVE OR ENGINE INTERNAL PART** • Inspect the PCV valve. (See 01-16A-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16A-13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Inspect the internal engine parts such as valves, valve guides, valve stem seals, cylinder head drain passage, and piston rings. Repair or replace the malfunctioning part according to the inspection results, then install the removed parts.
4	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

NO.17 COOLING SYSTEM CONCERNS-OVERHEATING [SKYACTIV-G 2.0]

id0103e6802300

17	COOLING SYSTEM CONCERNS-OVERHEATING
DESCRIPTION	• Engine runs at higher than normal temperature/overheats.
POSSIBLE CAUSE	• Engine heat generation amount is too large — Engine speed is high and remains high for continuous long periods • PCM DTC is stored • Improper indication of low engine coolant temperature indicator light and/or high engine coolant temperature warning light — ECT sensor malfunction — Instrument cluster malfunction • Improper operation of A/C system • Cooling fan inoperative • Improper engine coolant level • Coolant leakage (engine internal, external) • Engine coolant performance deterioration • Improper water/anti-freeze mixture • Poor radiator condition • Radiator hose damage • Improper or damaged radiator cap • Coolant overflow system malfunction • Fans reverse rotation • Blown fuse • Leakage at coolant hoses and/or radiator • Leakage around heater unit in passenger compartment • Drive belt damage • Improper drive belt tension • Thermostat malfunction • Excessive A/C system pressure

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**INSPECT EFFECT OF VEHICLE CONDITION FOR MALFUNCTION** • Verify how the customer drives the vehicle by asking the customer the following: — Engine speed is high and remains high for continuous long periods like when climbing a long steep grade. • Is the engine generating excessive heat when driven?	Yes	Explain to the customer that the vehicle is normal and give them advice how to use vehicle and specific example of the conditions in which the engine overheats.
		No	Go to the next step.
2	**DETERMINE IF MALFUNCTION CAUSE IS A/C SYSTEM OR OTHER** • Start the engine and run it at idle speed. • Turn the A/C switch off. • Does the A/C compressor disengaged?	Yes	Go to the next step.
		No	Perform the symptom troubleshooting “NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY”. (See 01-03-106 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0].)
3	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
4	**INSPECT ECT SENSOR SIGNAL** • Access the ECT PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Compare the ECT PID and low engine coolant temperature indicator light and high engine coolant temperature warning light operation. • Is the ECT PID value same as indicator/ warning light readings?	Yes	Go to the next step.
		No	Inspect the ECT sensor. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Replace the ECT sensor. (See 01-40-41 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) • If there is no malfunction: — Perform the instrument cluster symptom troubleshooting “LOW ENGINE COOLANT TEMPERATURE INDICATOR LIGHT/HIGH ENGINE COOLANT TEMPERATURE WARNING LIGHT ILLUMINATES OR FLASHES CONTINUOUSLY”. (See 09-03K-4 LOW ENGINE COOLANT TEMPERATURE INDICATOR LIGHT/HIGH ENGINE COOLANT TEMPERATURE WARNING LIGHT ILLUMINATES OR FLASHES CONTINUOUSLY [INSTRUMENT CLUSTER].)
5	**INSPECT COOLING FAN CONTROL SYSTEM OPERATION** • Perform the Cooling Fan Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the cooling fan control system operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
6	**INSPECT RELATED PART CONDITION** • Inspect the following: — Engine coolant level — Engine coolant performance — Water and anti-freeze mixture — Radiator condition — Collapsed or restricted radiator hoses — Radiator pressure cap — Coolant overflow system — Fan rotational direction — Fuses • Is there any malfunction?	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.
7	**INSPECT COOLANT LEAKAGE AT COOLING SYSTEM PART** • Inspect for leakage at coolant hoses and/or radiator. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
8	**INSPECT COOLANT LEAKAGE AT HEATER UNIT** • Inspect for leakage around heater unit in passenger compartment. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
9	**INSPECT DRIVE BELT** • Inspect the drive belt. (See 01-10A-9 DRIVE BELT INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the drive belt. (See 01-10A-10 DRIVE BELT REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
10	**INSPECT THERMOSTAT** • Cool down the engine. • Remove the thermostat. (See 01-12A-12 THERMOSTAT REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) • Inspect the thermostat operation. (See 01-12A-13 THERMOSTAT INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the thermostat. (See 01-12A-12 THERMOSTAT REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Reinstall the thermostat. (See 01-12A-12 THERMOSTAT REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) The engine coolant temperature and thermostat are normal. • Inspect the engine block for leakage or blockage. • Repair or replace the malfunctioning part according to the inspection results.
11	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

NO.18 COOLING SYSTEM CONCERNS-RUNS COLD [SKYACTIV-G 2.0]

id0103e6802400

18	COOLING SYSTEM CONCERNS-RUNS COLD
DESCRIPTION	• Engine does not reach normal operating temperature.
POSSIBLE CAUSE	• Improper indication of low engine coolant temperature indicator light and/or high engine coolant temperature warning light — ECT sensor malfunction — Instrument cluster malfunction • Cooling fan system malfunction • Condenser fan system malfunction • Thermostat malfunction

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**DETERMINE IF MALFUNCTION CAUSE IS HVAC SYSTEM OR ENGINE** • Is a customer complaint “Lack of passenger compartment heat” only?	Yes	Inspect the A/C heater system. Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
2	**VERIFY IDLE SPEED** • Does the engine speed continue at fast idle?	Yes	Perform the symptom troubleshooting “NO.9 FAST IDLE/RUNS ON”. (See 01-03-51 NO.9 FAST IDLE/RUNS ON [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT ECT SENSOR SIGNAL** • Access the ECT PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Compare the ECT PID and low engine coolant temperature indicator light and high engine coolant temperature warning light operation. • Is the ECT PID value same as indicator/ warning light readings?	Yes	Go to the next step.
		No	Inspect the ECT sensor. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Replace the ECT sensor. (See 01-40-41 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) • If there is no malfunction: — Perform the instrument cluster symptom troubleshooting “LOW ENGINE COOLANT TEMPERATURE INDICATOR LIGHT/HIGH ENGINE COOLANT TEMPERATURE WARNING LIGHT ILLUMINATES OR FLASHES CONTINUOUSLY”. (See 09-03K-4 LOW ENGINE COOLANT TEMPERATURE INDICATOR LIGHT/HIGH ENGINE COOLANT TEMPERATURE WARNING LIGHT ILLUMINATES OR FLASHES CONTINUOUSLY [INSTRUMENT CLUSTER].)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
4	**INSPECT COOLING FAN CONTROL SYSTEM OPERATION** • Perform the Cooling Fan Control System Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Does the cooling fan control system operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
5	**INSPECT THERMOSTAT** • Cool down the engine. • Remove the thermostat. (See 01-12A-12 THERMOSTAT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Inspect the thermostat operation. (See 01-12A-13 THERMOSTAT INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the thermostat. (See 01-12A-12 THERMOSTAT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Reinstall the thermostat, then go to the next step. (See 01-12A-12 THERMOSTAT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
6	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

NO.19 EXHAUST SMOKE [SKYACTIV-G 2.0]

id0103e6802500

19	EXHAUST SMOKE
DESCRIPTION	• Blue, black, or white smoke from exhaust system.
POSSIBLE CAUSE	**Blue smoke (Burning oil):** • PCV valve malfunction • Engine internal oil leakage **White smoke (Water in combustion):** • Cooling system malfunction (coolant loss) • Engine internal coolant leakage **Black smoke (Rich fuel mixture):** • Erratic signal to PCM — APP sensor or related circuit malfunction — ECT sensor or related circuit malfunction — IAT sensor No.1 (integrated in MAF sensor/IAT sensor No.1) or related circuit malfunction — MAF sensor or related circuit malfunction — MAP sensor or related circuit malfunction — A/F sensor or related circuit malfunction — HO2S or related circuit malfunction — TP sensor or related circuit malfunction • Improper fuel injection timing and amount • Air cleaner restriction • Intake-air system is collapsed or restricted • Leakage at engine intake manifold and/or exhaust manifold • Inadequate/Excessive fuel pressure — Fuel pressure sensor malfunction — High pressure fuel pump malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction — Relief valve (built-into high pressure fuel pump) malfunction — Fuel line restricted or clogged — Fuel pump unit malfunction • Ignition system malfunction • Improper engine compression • Improper intake valve timing • Improper exhaust valve timing • Injector driver (built-into PCM) malfunction **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].) (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY EXHAUST COLOR** • What color is smoke coming from the exhaust system?	Blue	Burning oil is indicated. • Go to the next step.
		White	Water in combustion is indicated. • Go to Step 4.
		Black	Rich fuel mixture is indicated. • Go to Step 5.
2	**INSPECT PCV VALVE** • Inspect the PCV valve. (See 01-16A-15 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the PCV valve. (See 01-16A-13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**INSPECT ENGINE INTERNAL PARTS** • Inspect for the following engine internal parts: — Damaged valve guide, stems or valve seals — Blocked oil drain passage in cylinder head — Piston ring is not seated, seized or worn — Damage cylinder bore • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Engine internal parts are normal. • If other driveability symptoms are present: — Return to the diagnostic index to service additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].)
4	**INSPECT ENGINE FOR ENGINE COOLANT LEAKAGE** • Does the cooling system hold the coolant pressure? (See 01-12A-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0].)	Yes	Inspect the following: • Cylinder head gasket leakage • Intake manifold gasket leakage • Cracked or porous engine block Repair or replace the malfunctioning part according to the inspection results. • If other driveability symptoms are present: — Return to the diagnostic index to service additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].)
		No	Inspect for the cause. Repair or replace the malfunctioning part according to the inspection results.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
5	**VERIFY CURRENT INPUT SIGNAL STATUS** **Caution** • **While performing this step, always operate the vehicle in a safe and lawful manner.** • **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP1 — APP2 — ECT — IAT — MAF — MAP — TP REL — O2S11 — O2S12 — SHRTFT1 — LONGFT1 • Monitor the PIDs under the black smoke appeared engine condition. • Do the PIDs indicate normal according to engine conditions? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to the next step.
		No	APP1, APP2 PIDs are not as specified: • Inspect the APP sensor. (See 01-40-51 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0].) ECT PID is not as specified: • Inspect the ECT sensor. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) IAT PID is not as specified: • Inspect the IAT sensor No.1. (See 01-40-46 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAF PID is not as specified: • Inspect the MAF sensor. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAP PID is not as specified: • Inspect the MAP sensor. (See 01-40-49 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0].) TP REL PID is not as specified: • Inspect the TP sensor. (See 01-40-50 THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S11, SHRTFT1, LONGFT1 PIDs are not as specified: • Inspect the A/F sensor. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S12 PID is not as specified: • Inspect the HO2S. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) Repair or replace the malfunctioning part according to the inspection results. • If the malfunction remains: — Perform the “INTERMITTENT CONCERN TROUBLESHOOTING” procedure. (See 01-03-116 INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0].)
6	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
7	**INSPECT INTAKE AIR SYSTEM** • Inspect the following for intake-air system: — Air cleaner restriction — Collapsed or restricted air hose — Leakage • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
8	**INSPECT EXHAUST SYSTEM FOR LEAKAGE** • Visually inspect for exhaust leakage from exhaust manifold. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
9	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 13.
		No	Lower than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Go to Step 12. Higher than **3 MPa {31 kgf/cm2, 435 psi}**: • Go to the next step.
10	**DETERMINE IF MALFUNCTION CAUSE IS FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 12.
11	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel distributor. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 13.
12	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground. • If the malfunction remains: — Replace the PCM. (damage to driver in PCM) (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Replace the high pressure fuel pump. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
13	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
14	**INSPECT IGNITION SYSTEM OPERATION** • Perform the Spark Test. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
15	**INSPECT IF MALFUNCTION CAUSE IS ENGINE COMPRESSION OR INJECTOR DRIVER (PCM INTEGRATED)** • Measure the compression pressure for each cylinder. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Injector driver malfunction. • Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) If the problem remains, overhaul the engine.
		No	Inspect the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper intake valve timing • Improper exhaust valve timing Service if necessary.
16	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

NO.20 FUEL ODOR (IN ENGINE COMPARTMENT) [SKYACTIV-G 2.0]

id0103e6802600

20	FUEL ODOR (IN ENGINE COMPARTMENT)
DESCRIPTION	• Gasoline fuel smell or visible leakage.
POSSIBLE CAUSE	• Missing or loose fuel filler cap • Fuel leakage from fuel system • Improper connection of evaporative related vacuum hoses • Purge solenoid valve malfunction • Excessive fuel pressure • Charcoal canister malfunction • Fuel system vent system blockage • Fuel pressure sensor malfunction • High pressure fuel pump malfunction **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].) (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**INSPECT FOR MISSING OR LOOSE FUEL FILLER CAP** • Visually inspect if the fuel filler cap is missing or loose. • Is there any malfunction?	Yes	Repair or replace the fuel filler cap.
		No	Go to the next step.
2	**INSPECT FUEL SYSTEM FOR FUEL LEAKAGE** • Visually inspect the fuel leakage at the fuel line. • Is there any leakage?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
3	**INSPECT VACUUM HOSE CONNECTION** • Inspect the vacuum hose routing. (See 01-13A-4 INTAKE-AIR SYSTEM VACUUM HOSE ROUTING DIAGRAM [SKYACTIV-G 2.0].) • Are vacuum hoses routed properly?	Yes	Go to the next step.
		No	Reconnect the vacuum hose. (See 01-13A-4 INTAKE-AIR SYSTEM VACUUM HOSE ROUTING DIAGRAM [SKYACTIV-G 2.0].)
4	**INSPECT PURGE SOLENOID VALVE** • Inspect the airflow of purge solenoid valve. (See 01-16A-12 PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0].) • Is the purge solenoid airflow properly?	Yes	Go to the next step.
		No	Replace the purge solenoid valve. (See 01-16A-10 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
5	**INSPECT WHETHER MALFUNCTION IS IN HIGH PRESSURE FUEL PUMP OR CHARCOAL CANISTER** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Inspect the charcoal canister for fuel saturation. • If excess amount of liquid fuel is present: — Replace the charcoal canister. (See 01-16A-6 CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Inspect the fuel pressure sensor and the high pressure fuel pump. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) Replace the fuel distributor and/or the high pressure fuel pump if necessary. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
6	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

NO.21 ENGINE NOISE [SKYACTIV-G 2.0]

id0103e6802700

21	ENGINE NOISE
DESCRIPTION	• Engine noise from under bonnet.
POSSIBLE CAUSE	**Squeal, click or chirp noise:** • Improper engine oil level • Loose installation of solenoid valves • Improper drive belt tension • Generator installation • Auto tensioner bearing malfunction • Splash shield or under cover loose (splash water to drive belt) **Rumble or grinding sound noise:** • Improper drive belt tension • Loose parts **Hiss sound noise:** • Vacuum leakage • Loose spark plug • Air leakage from the intake-air system **Rattle noise:** • Loose parts **Rap or roar noise:** • Dynamic damper loose • Exhaust system loose • Intake-air system loose **Other noise:** • Electric variable valve timing actuator malfunction • Hydraulic variable valve timing actuator malfunction • Timing chain noise • Tappet noise **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].) (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY IF THERE IS SQUEAL, CLICK, OR CHIRP SOUND** • Is squeal, click or chirp sound present?	Yes	Inspect the following: • Engine oil level • Solenoid valves installation • Drive belt tension • Generator installation • Auto tensioner bearing damaged • Splash shield or under cover loose Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
2	**VERIFY IF THERE IS RUMBLE OR GRIND SOUND** • Is rumble or grinding sound present?	Yes	Inspect the following: • Drive belt tension • Loose parts in engine compartment If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
3	**VERIFY IF THERE IS RATTLE SOUND** • Is rattle sound present?	Yes	Inspect the location of rattle for loose parts. Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
4	**VERIFY IF THERE IS HISS SOUND** • Is hiss sound present?	Yes	Inspect the following: • Vacuum leakage • Spark plug loose • Intake-air system leakage Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
5	**VERIFY IF THERE IS RAP OR ROAR SOUND** • Is rap or roar sound present?	Yes	Inspect the following: • Exhaust system installation • Intake-air system installation • Dynamic damper installation Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
6	**VERIFY IF THERE IS KNOCK SOUND** • Is knocking noise present?	Yes	Perform the symptom troubleshooting “NO.13 KNOCKING/PINGING-ACCELERATION/CRUISE”. (See 01-03-74 NO.13 KNOCKING/PINGING-ACCELERATION/CRUISE [SKYACTIV-G 2.0].)
		No	If noise comes from engine internal: • Inspect the following: — Timing chain — Tappet noise — Electric variable valve timing actuator — Hydraulic variable valve timing actuator — Engine compression • Repair or replace the malfunctioning part according to the inspection results.
7	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

NO.22 VIBRATION CONCERNS (ENGINE) [SKYACTIV-G 2.0]

id0103e6802800

22	VIBRATION CONCERNS (ENGINE)
DESCRIPTION	• Vibration from under bonnet or driveline.
POSSIBLE CAUSE	• Loose attaching bolts or worn parts • Components malfunction such as worn parts

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY PART INSTALLATION CONDITION** • Inspect the following components for loose attaching bolts or worn parts: — Cooling fan — Condenser fan — Drive belt and pulley — Engine mounts — Exhaust system • Is there any malfunction?	Yes	Readjust installation position or retighten the suspect parts. Repair or replace the malfunctioning part according to the inspection results for other parts.
		No	Inspect the following systems: • Wheels • Transmission and mounts • Driveline • Suspension Repair or replace the malfunctioning part according to the inspection results.
2	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

NO.23 A/C DOES NOT WORK SUFFICIENTLY [SKYACTIV-G 2.0]

id0103e6802900

23	A/C DOES NOT WORK SUFFICIENTLY
DESCRIPTION	• A/C compressor magnetic clutch does not engage when A/C switch is turned on.
POSSIBLE CAUSE	• PCM, instrument cluster or climate control unit DTC is stored • Refrigerant pressure sensor malfunction • Improper refrigerant charging amount • Seized A/C compressor • Evaporator temperature sensor malfunction • Open or short circuit in wiring harness between the following terminals: — Evaporator temperature sensor terminal B—Climate control unit terminal H (vehicles with manual air conditioner) — Evaporator temperature sensor terminal A—Climate control unit terminal F (vehicles with manual air conditioner) — Evaporator temperature sensor terminal B—Climate control unit terminal 1F (vehicles with full-auto air conditioner) — Evaporator temperature sensor terminal A—Climate control unit terminal 1X (vehicles with full-auto air conditioner) • Instrument cluster malfunction (Does not receive A/C request signal from climate control unit or transmit it to PCM) • Climate control unit malfunction (A/C switch malfunction or climate control unit does not determine A/C request or transmit A/C request signal) • Open circuit in wiring harness between magnetic clutch and body ground • A/C relay stuck open • Open circuit in wiring harness between the following terminals: — Front body control module (FBCM) terminal 1C—A/C relay terminal A — Battery positive terminal—A/C relay terminal C — A/C relay terminal D—Magnetic clutch terminal A — A/C relay terminal E—PCM terminal 2AF

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

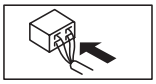
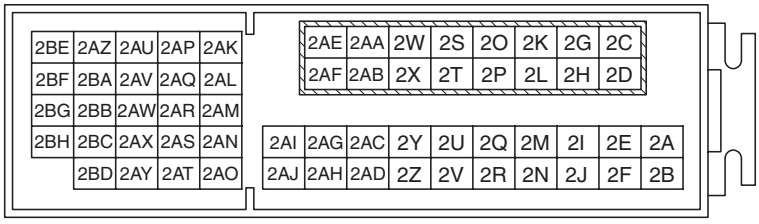
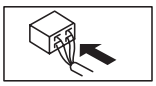
(FULL-AUTO A/C)



PCM WIRING HARNESS-SIDE CONNECTOR





SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY PCM, INSTRUMENT CLUSTER AND CLIMATE CONTROL UNIT DTC** • Retrieve the PCM, instrument cluster and climate control unit DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) (See 07-02-6 DTC DISPLAY [FULL-AUTO AIR CONDITIONER].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].) (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].) (See 07-02-7 DTC TABLE [FULL-AUTO AIR CONDITIONER].)
		No	Go to the next step.
2	**DETERMINE IF MALFUNCTION CAUSE IS A/C RELAY CONTROL SIGNAL OR A/C REQUEST SIGNAL** • Access the PCM PID ACCS using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Start the engine and idle it. • Turn the ACCS PID to ON from OFF using the M-MDS simulation function. • Is the magnetic clutch engaged?	Yes	Go to the next step.
		No	Go to Step 9.
3	**DETERMINE IF MALFUNCTION CAUSE IS REFRIGERANT PRESSURE SENSOR OR OTHER** • Access the PCM PID AC_REQ using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Monitor the AC_REQ PID while turning on and off the air conditioner with switch on the control panel. • Is the AC_REQ PID value normal? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to the next step.
		No	Go to Step 5.
4	**INSPECT REFRIGERANT PRESSURE SENSOR** • Inspect the refrigerant pressure sensor. (See 07-40B-14 REFRIGERANT PRESSURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) (See 07-40A-30 REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Inspect the following: • Refrigerant charging amount • A/C compressor seized Repair or replace the malfunctioning part according to the inspection results if necessary.
5	**DETERMINE IF MALFUNCTION CAUSE IS EVAPORATOR TEMPERATURE SENSOR OR OTHER** • Measure the voltage at the climate control unit terminal H (wiring harness-side). (vehicles with manual air conditioner) • Measure the voltage at the climate control unit terminal 1F (wiring harness-side). (vehicles with full-auto air conditioner) • Is the voltage normal? (See 07-40B-25 CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER].) (See 07-40A-33 CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].)	Yes	Vehicles with manual air conditioner: • Go to Step 7. Vehicles with full-auto air conditioner: • Go to Step 9.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
6	**INSPECT EVAPORATOR TEMPERATURE SENSOR** • Inspect the evaporator temperature sensor. (See 07-40B-12 EVAPORATOR TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) (See 07-40A-27 EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is there any malfunction?	Yes	Replace the evaporator temperature sensor. (See 07-40B-11 EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) (See 07-40A-26 EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Inspect for short or open circuit between the following terminals: • Evaporator temperature sensor terminal B—Climate control unit terminal H (vehicles with manual air conditioner) • Evaporator temperature sensor terminal A—Climate control unit terminal F (vehicles with manual air conditioner) • Evaporator temperature sensor terminal B—Climate control unit terminal 1F (vehicles with full-auto air conditioner) • Evaporator temperature sensor terminal A—Climate control unit terminal 1X (vehicles with full-auto air conditioner) Repair or replace the suspected wiring harness if necessary.
7	**DETERMINE IF MALFUNCTION CAUSE IS INSTRUMENT CLUSTER OR OTHER** • Verify the information display indication of A/C system while turning on and off the air conditioner with switch on the control panel. • Does the information display indicate properly?	Yes	Instrument cluster does not receive the A/C request signal from climate control unit or transmit it to PCM. • Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	**DETERMINE IF MALFUNCTION CAUSE IS A/C REQUEST SIGNAL RELATED WIRING HARNESS OR CLIMATE CONTROL UNIT** • Switch the ignition to off. • Inspect for open or short circuit between climate control unit terminal B (wiring harness-side) and instrument cluster terminal L (wiring harness-side). • Is there any malfunction?	Yes	Repair or replace the suspected wiring harness.
		No	A/C switch malfunction, or climate control unit can not determine the A/C request or transmit the A/C request signal. • Replace the climate control unit. (See 07-40B-16 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
9	**DETERMINE IF MALFUNCTION CAUSE IS A/C CONTROL SIGNAL OR MAGNETIC CLUTCH** • Start the engine and idle it. • Access the PCM PID ACCS using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Turn the ACCS PID to ON from OFF using the M-MDS simulation function. • Measure the voltage at the magnetic clutch terminal A (wiring harness-side). • Is the voltage **10.5 V or more**?	Yes	Go to the next step.
		No	Go to Step 11.
10	**INSPECT IF MALFUNCTION CAUSE IS MAGNETIC CLUTCH OR MAGNETIC CLUTCH GROUND CIRCUIT** • Switch the ignition to off. • Disconnect the magnetic clutch connector. • Inspect for continuity between magnetic clutch terminal A (part-side) and body ground. • Is there continuity?	Yes	Inspect the magnetic clutch. (See 07-40B-9 MAGNETIC CLUTCH INSPECTION [MANUAL AIR CONDITIONER].) (See 07-40A-19 MAGNETIC CLUTCH INSPECTION [FULL-AUTO AIR CONDITIONER].) Replace the magnetic clutch if necessary.
		No	Inspect the A/C compressor. (poor contact to ground) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Replace the A/C compressor. (internal circuit open)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

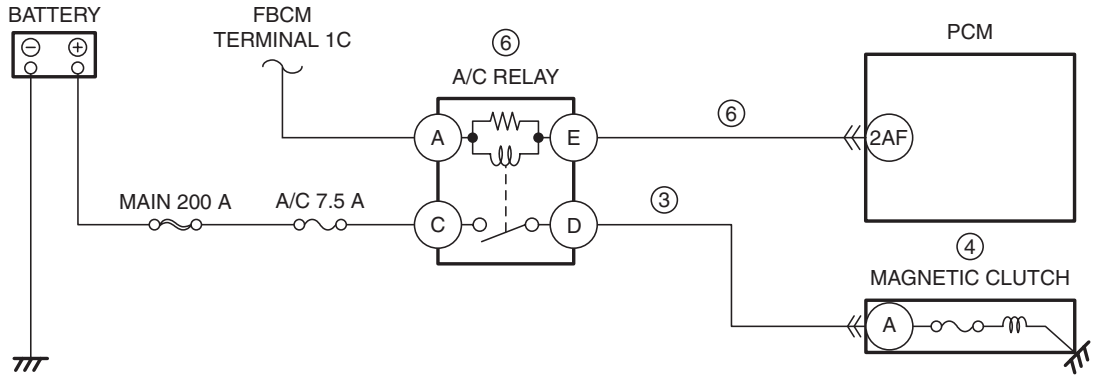
STEP	INSPECTION	RESULTS	ACTION
11	**INSPECT A/C RELAY** • Switch the ignition to off. • Remove the A/C relay. • Inspect the A/C relay. (See 09-21-29 RELAY INSPECTION.) • Is there any malfunction?	Yes	Replace the A/C relay.
		No	Go to the next step.
12	**INSPECT A/C RELAY CONTROL CIRCUIT FOR OPEN CIRCUIT** • A/C relay is removed. • Disconnect the PCM connector. • Inspect for continuity between A/C relay terminal E (wiring harness-side) and PCM terminal 2AF (wiring harness-side). • Is there continuity?	Yes	Inspect for continuity between the following: • Front body control module (FBCM) terminal 1C—A/C relay terminal A • Battery positive terminal—A/C relay terminal C • A/C relay terminal D—Magnetic clutch terminal A Repair or replace the wiring harness for a possible open circuit.
		No	Repair or replace the wiring harness for a possible open circuit.
13	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

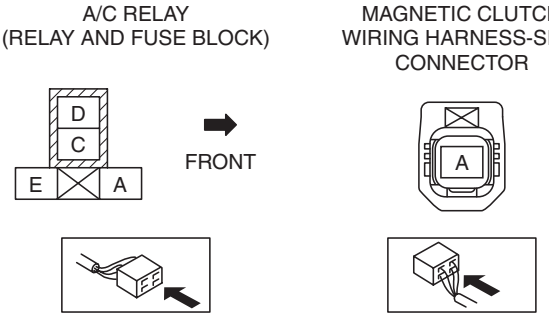
SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0]

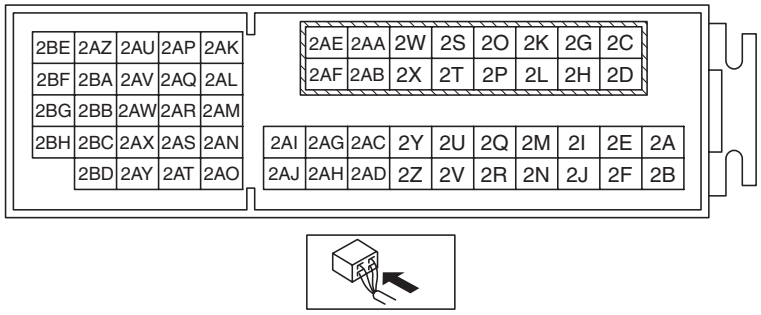
id0103e6803000

24	A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY
DESCRIPTION	• A/C compressor magnetic clutch does not disengage.
POSSIBLE CAUSE	• PCM, instrument cluster or climate control unit DTC is stored • Short to power supply in wiring harness between A/C relay terminal D and magnetic clutch terminal A • Magnetic clutch engagement is stuck • Climate control unit malfunction (Climate control unit always transmits A/C request signal) • A/C relay is stuck closed • Short to ground in wiring harness between A/C relay terminal E and PCM terminal 2AF





PCM WIRING HARNESS-SIDE CONNECTOR



SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY PCM, INSTRUMENT CLUSTER AND CLIMATE CONTROL UNIT DTC** • Retrieve the PCM, instrument cluster and climate control unit DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) (See 07-02-6 DTC DISPLAY [FULL-AUTO AIR CONDITIONER].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].) (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].) (See 07-02-7 DTC TABLE [FULL-AUTO AIR CONDITIONER].)
		No	Go to the next step.
2	**DETERMINE IF MALFUNCTION CAUSE IS MAGNETIC CLUTCH OR OTHER** • Start the engine and idle it. • Turn the A/C switch on. • Remove the A/C relay. • Does the magnetic clutch disengage?	Yes	Go to Step 5.
		No	Go to the next step.
3	**INSPECT IF MALFUNCTION CAUSE IS MAGNETIC CLUTCH POWER SUPPLY CIRCUIT OR MAGNETIC CLUTCH** • A/C relay is removed. • Switch the ignition to off. • Disconnect the magnetic clutch connector. • Start the engine and idle it. • Does the magnetic clutch disengage?	Yes	Inspect for short to power supply circuit between magnetic clutch terminal A and A/C relay terminal D. Repair or replace the wiring harness for a possible short to power supply if necessary.
		No	Go to the next step.
4	**INSPECT MAGNETIC CLUTCH CLEARANCE** • Verify the magnetic clutch clearance. (See 07-40B-9 MAGNETIC CLUTCH ADJUSTMENT [MANUAL AIR CONDITIONER].) (See 07-40A-18 MAGNETIC CLUTCH ADJUSTMENT [FULL-AUTO AIR CONDITIONER].) • Is the magnetic clutch clearance normal?	Yes	Inspect the magnetic clutch to see if it is stuck. (See 07-40B-9 MAGNETIC CLUTCH INSPECTION [MANUAL AIR CONDITIONER].) (See 07-40A-19 MAGNETIC CLUTCH INSPECTION [FULL-AUTO AIR CONDITIONER].) Replace the magnetic clutch if necessary. (See 07-40B-7 MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY [MANUAL AIR CONDITIONER].) (See 07-40A-17 MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY [FULL-AUTO AIR CONDITIONER].)
		No	Adjust the magnetic clutch clearance. (See 07-40B-9 MAGNETIC CLUTCH ADJUSTMENT [MANUAL AIR CONDITIONER].) (See 07-40A-18 MAGNETIC CLUTCH ADJUSTMENT [FULL-AUTO AIR CONDITIONER].)
5	**DETERMINE IF MALFUNCTION CAUSE IS A/C RELAY CONTROL SIGNAL OR A/C REQUEST SIGNAL** • Access the PCM PID ACCS using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Monitor the PID ACCS while turning on and off the air conditioner with switch on the control panel. • Is the ACCS PID value always ON?	Yes	Climate control unit always transmits A/C request signal. • Replace the climate control unit. (See 07-40B-16 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) (See 07-40A-32 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
		No	Go to the next step.
6	**INSPECT A/C RELAY** • Inspect the A/C relay. (See 09-21-29 RELAY INSPECTION.) • Is there any malfunction?	Yes	Replace the A/C relay.
		No	Inspect for short to ground circuit between A/C relay terminal E and PCM terminal 2AF. Repair or replace the wiring harness for a possible short to ground if necessary.
7	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

NO.25 A/C IS NOT CUT OFF UNDER WIDE OPEN THROTTLE CONDITIONS [SKYACTIV-G 2.0]

id0103e6803100

25	A/C IS NOT CUT OFF UNDER WIDE OPEN THROTTLE CONDITIONS
DESCRIPTION	• A/C compressor magnetic clutch does not disengage under WOT.
POSSIBLE CAUSE	• APP sensor malfunction • Loosely installed APP sensor • PCM DTC is stored

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**DETERMINE IF MALFUNCTION CAUSE IS A/C SYSTEM OR OTHER** • Turn the A/C switch off. • Does the magnetic clutch disengage?	Yes	Go to the next step.
		No	Perform the symptom troubleshooting “NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY”. (See 01-03-106 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0].)
2	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

NO.26 EXHAUST SULPHUR SMELL [SKYACTIV-G 2.0]

id0103e6803200

26	EXHAUST SULPHUR SMELL
DESCRIPTION	• Rotten egg smell (sulphur) from exhaust.
POSSIBLE CAUSE	• Electrical connectors are disconnected or connected poorly • Vacuum lines are disconnected or connected improperly. • Poor fuel quality • PCM DTC is stored • Inadequate fuel pressure — Fuel pressure sensor malfunction — High pressure fuel pump malfunction — Spill valve control solenoid valve control circuit malfunction (damage to driver in PCM caused by short circuit to ground system) — Spill valve control solenoid valve (built-into high pressure fuel pump) malfunction — Relief valve (built-into high pressure fuel pump) malfunction — Fuel line restricted or clogged — Fuel pump unit malfunction • Charcoal canister malfunction • Fuel tank vent system malfunction **Warning** **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services:** • **Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** • **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete “BEFORE SERVICE PRECAUTION” and “AFTER SERVICE PRECAUTION” described in this manual. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].) (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY IF THERE IS POOR DRIVEABILITY OR EXHAUST GAS RELATED MALFUNCTION** • Are any driveability or exhaust smoke concerns present?	Yes	Go to the applicable symptom troubleshooting. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT RELATED PART CONDITION** • Inspect the following: — Electrical connections — Vacuum lines — Fuel quality • Is there any malfunction?	Yes	Service if necessary. • Repeat this step.
		No	Go to the next step.
3	**VERIFY PCM DTC** • Retrieve any DTCs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Start the engine and warm it up completely. • Access the FUEL_PRES PID using the M-MDS at idle. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the FUEL_PRES PID value **approx. 3 MPa {31 kgf/cm^2, 435 psi}**?	Yes	Go to Step 8.
		No	Lower than **3 MPa {31 kgf/cm2, 435 psi}**: • Inspect the following: — Fuel leakage at the fuel line and fuel injector — Fuel pump • Perform the Fuel Pump (Low-pressure Side) Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) — Fuel pressure sensor (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) — High pressure fuel pump (See 01-14A-49 HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0].) • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Go to Step 7. Higher than **3 MPa {31 kgf/cm2, 435 psi}**: • Go to the next step.
5	**DETERMINE IF MALFUNCTION CAUSE IS FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle acceleration performance normal?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the fuel distributor. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to Step 8.
7	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the high pressure fuel pump and PCM connectors. • Inspect for continuity between high pressure fuel pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground. • If the malfunction remains: — Replace the PCM. (damage to driver in PCM) (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Replace the high pressure fuel pump. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
8	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Go to the next step.
		No	Inspect the following: • Fuel line restriction • Fuel filter clogged — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
9	**DETERMINE IF MALFUNCTION CAUSE IS CHARCOAL CANISTER OR FUEL TANK VENT SYSTEM** • Inspect the charcoal canister for fuel saturation. (See 01-16A-8 CHARCOAL CANISTER INSPECTION [SKYACTIV-G 2.0].) • Is there excess amount of liquid fuel present in canister?	Yes	Replace the charcoal canister. (See 01-16A-6 CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Inspect the fuel tank vent system. • If the fuel tank vent system is normal: — Suggest trying a different brand since sulfur content can vary in different fuels. • If fuel tank vent system is not normal: — Repair or replace the malfunctioning part according to the inspection results.
10	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

NO.27 SPARK PLUG CONDITION [SKYACTIV-G 2.0]

id0103e6804400

27	SPARK PLUG CONDITION
DESCRIPTION	• Incorrect spark plug condition.
POSSIBLE CAUSE	**Note** • Inspecting the spark plug conditions can determine whether a problem is related to a specific cylinder or possibly all cylinders. **Wet/carbon stuck on specific plug:** • Spark—Weak, not visible • Air/fuel mixture—Excessive fuel injection volume • Compression—No compression, low compression • Malfunction spark plug **Grayish white with specific plug:** • Air/fuel mixture—Insufficient fuel injection volume • Malfunction spark plug **Wet/carbon is stuck on all plugs:** • Spark—Spark weak • Air/fuel mixture—Too rich, excessive fuel line pressure • Erratic signal to PCM — ECT sensor or related circuit malfunction — MAF sensor or related circuit malfunction — A/F sensor or related circuit malfunction — HO2S or related circuit malfunction • Compression—Low compression • Restriction in intake/exhaust system **Grayish white with all plugs:** • Erratic signal to PCM — ECT sensor or related circuit malfunction — MAF sensor or related circuit malfunction — A/F sensor or related circuit malfunction — HO2S or related circuit malfunction • Air/fuel mixture—Too lean, insufficient fuel line pressure **Warning** • **The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before servicing the fuel system:** **— Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.** **— Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE SERVICE PRECAUTION" and "AFTER SERVICE PRECAUTION" described in this manual. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].) (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)** **Caution** • **Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and the quick release connector. Always clean the quick release connector joint area before disconnecting/connecting, and make sure that it is free of foreign material.**

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	**VERIFY SPARK PLUG CONDITION** • Remove all spark plugs. (See 01-18-3 SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Inspect the spark plug. (See 01-18-3 SPARK PLUG INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Specific plug is wet or covered with carbon: • Go to the next step. Specific plug looks grayish white: • Go to Step 7. All plugs are wet or covered with carbon: • Go to Step 9. All plugs look grayish white: • Go to Step 15.
		No	Symptom troubleshooting completed.
2	**DETERMINE IF MALFUNCTION CAUSE IS ENGINE OIL LOSS OR OTHER** • Are the spark plugs wet/covered with carbon from the engine oil?	Yes	Inspect all areas related to oil, working up and down. Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
3	**INSPECT SPARK PLUG** • Inspect the spark plugs for the following: — Air gap — Cracked insulator — Heat range — Worn electrode • Is there any malfunction?	Yes	Replace the spark plug. (See 01-18-3 SPARK PLUG REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT ENGINE COMPRESSION** • Inspect the compression pressure at the suspected cylinder. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
5	**INSPECT IGNITION SYSTEM OPERATION** • Reinstall all spark plugs. (See 01-18-3 SPARK PLUG REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) • Perform the Spark Test at the suspected cylinder. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is a strong blue spark visible (compare with normal cylinder)?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
6	**INSPECT FUEL LINE PRESSURE** • Inspect the fuel line pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Inspect the fuel injector for the following: • Injection volume • Leakage • Open or short circuit in injector Repair or replace the malfunctioning part according to the inspection results.
		No	Zero or low: • Inspect the fuel pump relay and the fuel pump circuit. (See 09-21-29 RELAY INSPECTION.) • Inspect the fuel line for restriction. — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (Pressure regulator or fuel pump malfunction) (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) High: • Replace the fuel pump unit. (Pressure regulator malfunction) (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
7	**INSPECT SPARK PLUG** • Inspect the spark plug for the following: — Air gap — Heat range • Is there any malfunction?	Yes	Replace the spark plug. (See 01-18-3 SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
8	**INSPECT FUEL INJECTOR OPERATION** • Perform the Fuel Injector Operation Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Do the fuel injectors operate properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
9	**INSPECT AIR CLEANER ELEMENT** • Is the air cleaner element clean?	Yes	Go to the next step.
		No	Replace the air cleaner element.
10	**VERIFY CURRENT INPUT SIGNAL STATUS** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — ECT — MAF — O2S11 (When engine can be started) — O2S12 (When engine can be started) • Are the PIDs normal? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to the next step.
		No	ECT PID is not as specified: • Inspect for an intermittent open circuit of the ECT sensor and the related wiring harness. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAF PID is not as specified: • Inspect for an intermittent open circuit of the MAF sensor and the related wiring harness. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S11 PID is not as specified: • Inspect for an intermittent open circuit of the A/F sensor and the related wiring harness. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S12 PID is not as specified: • Inspect for an intermittent open circuit of the HO2S and the related wiring harness. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) Repair or replace the malfunctioning part according to the inspection results.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
11	**INSPECT PURGE CONTROL SYSTEM OPERATION** • Perform the Purge Control System Inspection when the engine can be started. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
12	**INSPECT IGNITION SYSTEM OPERATION** • Perform the Spark Test. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
13	**INSPECT ENGINE COMPRESSION** • Measure the compression pressure for each cylinder. (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].) • Are compression pressures within specification? **Specification:** • Compression [European (L.H.D. U.K.) specs.] — Standard: **978 kPa {9.97 kgf/cm^2, 142 psi} (300 rpm)** — Minimum: **783 kPa {7.98 kgf/cm^2, 114 psi} (300 rpm)** — Maximum difference between cylinders: **166 kPa {1.69 kgf/cm^2, 24.1 psi}** • Compression [Except European (L.H.D. U.K.) specs.] — Standard: **885 kPa {9.02 kgf/cm^2, 128 psi} (300 rpm)** — Minimum: **708 kPa {7.22 kgf/cm^2, 103 psi} (300 rpm)** — Maximum difference between cylinders: **150 kPa {1.53 kgf/cm^2, 21.8 psi}** **Note** • Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
14	**INSPECT FUEL LINE PRESSURE** • Inspect the fuel line pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Visually inspect for deformed exhaust system parts. Repair or replace the malfunctioning part according to the inspection results.
		No	Zero or low: • Inspect the fuel pump relay and the fuel pump circuit. (See 09-21-29 RELAY INSPECTION.) • Inspect the fuel line for restriction. — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (Pressure regulator or fuel pump malfunction) (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) High: • Replace the fuel pump unit. (Pressure regulator malfunction) (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION	RESULTS	ACTION
15	**VERIFY CURRENT INPUT SIGNAL STATUS** • Access the following PIDs using the M-MDS: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — ECT — MAF — O2S11 (When engine can be started) — O2S12 (When engine can be started) • Are the PIDs normal? (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)	Yes	Go to the next step.
		No	ECT PID is not as specified: • Inspect for an intermittent open circuit of the ECT sensor and the related wiring harness. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].) MAF PID is not as specified: • Inspect for an intermittent open circuit of the MAF sensor and the related wiring harness. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S11 PID is not as specified: • Inspect for an intermittent open circuit of the A/F sensor and the related wiring harness. (See 01-40-55 AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0].) O2S12 PID is not as specified: • Inspect for an intermittent open circuit of the HO2S and the related wiring harness. (See 01-40-58 HEATED OXYGEN SENSOR (HO2S) INSPECTION [SKYACTIV-G 2.0].) Repair or replace the malfunctioning part according to the inspection results.
16	**INSPECT INTAKE-AIR SYSTEM FOR AIR SUCTION** • If the engine cannot be started: — Inspect the intake air system for air leakage. • If the engine can be started: — Perform the Intake Manifold Vacuum Inspection. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].) • Is air being sucked in from intake air system?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Go to the next step.
17	**INSPECT FUEL LINE PRESSURE** • Inspect the fuel line pressure. (See 01-14A-8 FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0].) • Is the low side fuel pressure within specification? **Specification:** • **405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}**	Yes	Inspect the PCM ground condition. Repair or replace the malfunctioning part according to the inspection results.
		No	Zero or low: • Inspect the fuel pump relay and the fuel pump circuit. (See 09-21-29 RELAY INSPECTION.) • Inspect the fuel line for restriction. — If there is any malfunction: • Repair or replace the malfunctioning part according to the inspection results. — If there is no malfunction: • Replace the fuel pump unit. (Pressure regulator or fuel pump malfunction) (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) High: • Replace the fuel pump unit. (Pressure regulator malfunction) (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
18	Verify the test results. • If normal, return to the diagnostic index to service any additional symptoms. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)		

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

INTERMITTENT CONCERN TROUBLESHOOTING [SKYACTIV-G 2.0]

id0103e6800400

Vibration Method

- If a malfunction occurs or becomes worse while driving on a rough road or when the engine is vibrating, perform the steps below.

Note

- There are several reasons why the vehicle or engine vibration could cause an electrical malfunction. Check the following:
  - — Connectors are not fully seated.
  - — Wiring harnesses do not have full play.
  - — Wires laying across brackets or moving parts.
  - — Wires routed too close to hot parts.
- An improperly routed, improperly clamped, or loose harness can cause a wiring harness to become pinched between parts.
- The connector joints, points of vibration, and places where the wiring harnesses pass through the firewall and body panels are the major areas to be checked.

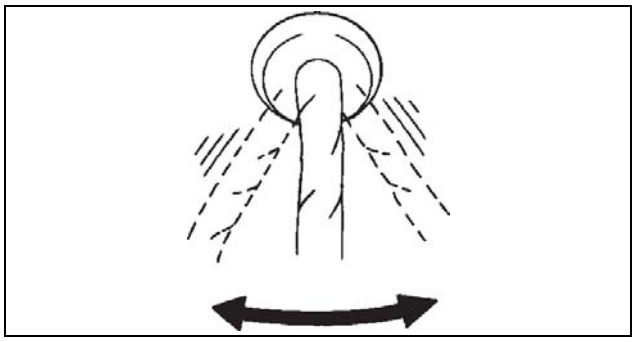
Inspection Method for Switch Connectors or Wires

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).

Note

- If engine starts and runs, perform the following steps during idle.

3. Access the PIDs for the switch you are inspecting.
4. Turn the switch on manually.
5. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
   - If the PID value is unstable, check for a poor connection.



acxuuw00002361

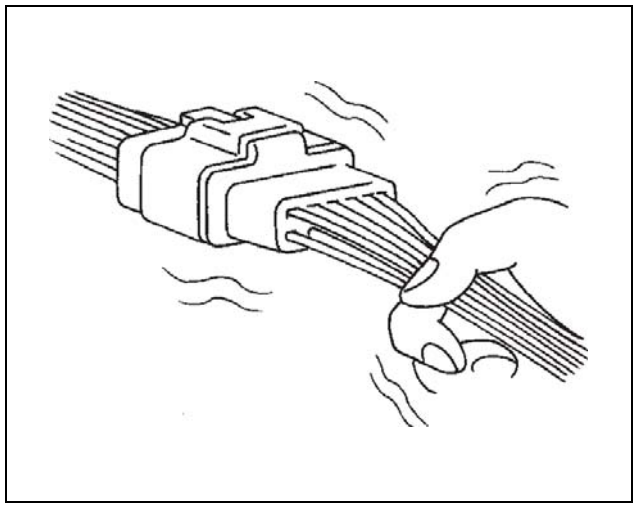
SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Inspection Method for Sensor Connectors or Wires

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).

Note
- If the engine starts and runs, perform the following steps during idling.

3. Access the PIDs for the switch you are inspecting.
4. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
   - If the PID value is unstable, check for poor connection.



am5ezw0000653

Inspection Method for Sensors

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).

Note
- If the engine starts and runs, perform the following steps during idle.

3. Access the PIDs for the switch you are inspecting.
4. Shake the sensor slightly with your finger.
   - If the PID value is unstable or a malfunction occurs, check for a poor connection or a poorly mounted sensor or both.

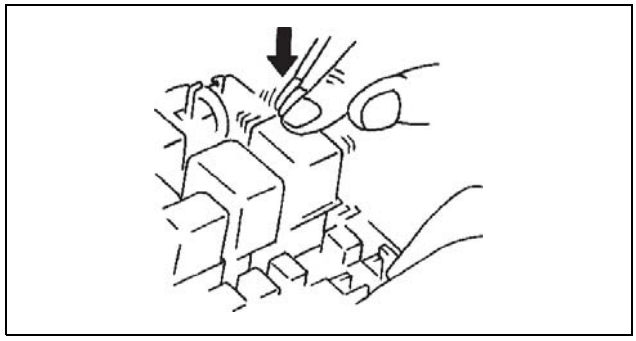
Inspection Method for Actuators or Relays

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).

Note
- If engine starts and runs, perform the following steps during idling.

3. Prepare the output state control function for actuators or relays that you are inspecting.
4. Shake the actuator or relay with your finger for **3 s** after the output state control function is activated.
   - If a variable click sound is heard, check for a poor connection or a poorly mounted actuator or both, or the relay.

Note
- Shake the relays too strongly may result in open circuits.



am5ezw0000653

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

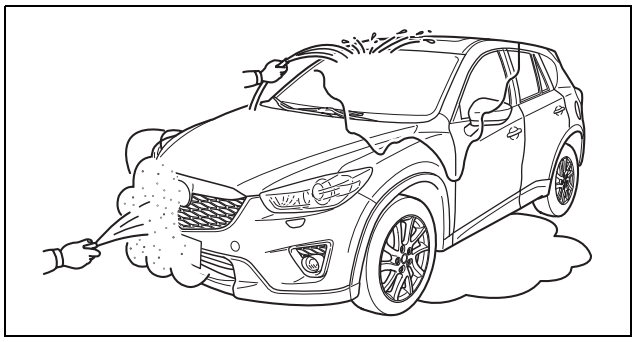
Water Sprinkling Method
If a malfunction occurs only during high humidity or rainy/snowy weather, perform the following steps:

Caution
- **Indirectly change the temperature and humidity by spraying water onto the front of the radiator.**
- **If a vehicle is subject to water leakage, the leakage may damage the control module. When testing a vehicle with a water leakage problem, special caution must be used.**

1. Connect the M-MDS to the DLC-2 if you are inspecting sensors or switches.
2. Switch the ignition ON (engine off).

Note
- If the engine starts and runs, perform the following steps at idle.

3. Access the PIDs for the sensor or the switch if you are inspecting sensors or switches.
4. If you are inspecting the switch, turn it on manually.
5. Spray water onto the vehicle or run it through a car wash.
   - If the PID value is unstable or a malfunction occurs, repair or replace parts if necessary.



ac5wzw0000060

ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0]

id0103e6803700

Main Relay Operation Inspection
1. Verify that the main relay clicks when the ignition is switched to ON and then off.
   - If there is no operation sound, inspect the following:
     — Main relay (See 09-21-29 RELAY INSPECTION.)
     — Wiring harness and connector between battery and main relay terminal A
     — Wiring harness and connector between PCM terminal 2K and main relay terminal E

Intake Manifold Vacuum Inspection
1. Verify the air intake hoses are installed properly.
2. Start the engine and let it idle.
3. Disconnect the vacuum hose between the intake manifold and purge solenoid valve from the intake manifold side.
4. Connect a vacuum gauge to the intake manifold and measure the intake manifold vacuum.
   - If not within specification, inspect the following:

Specification
–60.0 kPa {–450 mmHg, –17.7 inHg}

Note
- Air suction can be located by engine speed change when lubricant is sprayed on the area where suction is occurring. Check the following places:
  — Air suction at throttle body, charge air cooler, intake manifold and PCV valve installation points
  — Engine compression (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Electric Variable Valve Timing Driver Control System Inspection

1. Connect the M-MDS to the DLC-2.
2. Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].)
3. Verify that DTC P0010:00 or P1380:00 is not displayed. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   - If DTC P0010:00 or P1380:00 is displayed, perform the DTC inspection. (See 01-02-28 DTC P0010:00 [SKYACTIV-G 2.0].) (See 01-02-290 DTC P1380:00 [SKYACTIV-G 2.0].)
4. Perform the Drive Mode 03 (Variable Valve Timing, A/F Sensor Heater, HO2S Heater, A/F Sensor, HO2S and TWC Repair Verification Drive Mode). (See 01-02-13 OBD DRIVE MODE [SKYACTIV-G 2.0].)
5. Verify that DTC P0011:00 or P0012:00 is not displayed. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   - If DTC P0011:00 or P0012:00 is displayed, perform the DTC inspection. (See 01-02-33 DTC P0011:00 [SKYACTIV-G 2.0].) (See 01-02-35 DTC P0012:00 [SKYACTIV-G 2.0].)
6. Access the following PCM PIDs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   - VT_IN_ACT
   - VT_IN_DES

   Caution
   - **While performing this step, always operate the vehicle in a safe and lawful manner.**
   - **When the M-MDS is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the M-MDS using the PID/DATA MONITOR AND RECORD capturing function and inspect later.**

7. Accelerate and decelerate the vehicle, and drive at normal speed, and verify that the data monitor item VT_IN_ACT value changes in conjunction with the VT_IN_DES value.
   - If this change cannot be verified, replace the electric variable valve timing motor/driver. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

Engine Oil Solenoid Valve Control System Inspection

1. Connect the M-MDS to the DLC-2.
2. Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].)
3. Verify that DTC P06DA:00 is not displayed. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   - If DTC P06DA:00 is displayed, perform the DTC inspection. (See 01-02-265 DTC P06DA:00 [SKYACTIV-G 2.0].)
4. Inspect the engine oil pressure. (See 01-11A-7 OIL PRESSURE INSPECTION [SKYACTIV-G 2.0].)
   - If the engine oil pressure is not as specified, repair or replace the malfunctioning part according to the inspection results:
5. Access the following PCM PIDs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   - OIL_P_SOL
   - RPM
   - ECT
6. With the engine coolant temperature at **98 °C**, increase the engine speed to **4,000 rpm or higher**, and verify that the oil pressure gauge value changes when the data monitor item OIL_P_SOL value is changed from ON to OFF.
   - If the oil pressure gauge value change cannot be verified, inspect the engine oil solenoid valve. (Perform the Engine Oil Solenoid Valve Operation Inspection.) (See 01-11A-12 ENGINE OIL SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0].)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Drive-by-wire Control System Inspection
Engine coolant temperature compensation inspection

1. Connect the M-MDS to the DLC-2.
2. Select the following PIDs: (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   - ECT
   - IAT
   - RPM
3. Verify that the engine is cold, then start the engine.
4. Verify that the engine speed decreases as the engine warms up.
   - If the engine speed does not decrease or decreases slowly, inspect the following:
     — ECT sensor and related wiring harness (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].)
     — Throttle body and related wiring harness (See 01-13A-13 THROTTLE BODY INSPECTION [SKYACTIV-G 2.0].)

Load compensation inspection

1. Start the engine and let it idle.
2. Connect the M-MDS to the DLC-2.
3. Verify that DTC P0506:00 or P0507:00 is not displayed. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   - If DTC P0506:00 or P0507:00 is displayed, perform the DTC inspection. (See 01-02-216 DTC P0506:00 [SKYACTIV-G 2.0].) (See 01-02-218 DTC P0507:00 [SKYACTIV-G 2.0].)
4. Select the RPM PID.

   Note
   - Excludes temporary idle speed drop just after the loads are turned on.

5. Verify that the engine speed is within specification under each load condition.
   - If the load condition is not as specified, inspect the following:
     — A/C switch and related wiring harness system (A/C request signal is always on or off) (See 01-03-101 NO.23 A/C DOES NOT WORK SUFFICIENTLY [SKYACTIV-G 2.0].) (See 01-03-106 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [SKYACTIV-G 2.0].)
     — Electrical load
     — Charging system (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].)

Idle-up speed (MTX: Neutral position, ATX: P, N position)
No load: 470—570 rpm (MTX), 550—650 rpm (ATX)
A/C on: 650—800 rpm
Electrical loads on: 600—750 rpm

Electronic Control Throttle Operation Inspection

1. Connect the M-MDS to the DLC-2.
2. Perform the KOEO or KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].)
3. Verify that none of the following DTCs are displayed:
   - P0122:00, P0123:00, P0222:00, P0223:00, P0638:00, P2101:00, P2107:00, P2109:00, P2110:00, P2112:00, P2119:00, P2122:00, P2123:00, P2127:00, P2128:00, P2135:00, P2138:00
     — If any one DTC is displayed, perform the DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
4. Access the following PCM PIDs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   - ETC_ACT
   - ETC_DSD
5. With the accelerator pedal not depressed and with it depressed to the floor, verify that the data monitor item ETC_ACT value changes in conjunction with the ETC_DSD value.
   - If this change cannot be verified, perform the Resistance Inspection for the throttle body. (See 01-13A-13 THROTTLE BODY INSPECTION [SKYACTIV-G 2.0].)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Brake override system operation inspection

Note
- If the brake override system operates normally after performing the following inspection, the PCM detects DTC P2299:00.

1. Start the engine and let it idle.
2. Verify that the engine speed becomes **less than 1,200 rpm** under the following conditions.
   - Neutral (MTX)
   - N position (ATX)
   - Engine speed of **3,000 rpm or more** with accelerator pedal depressed
   - Brake pedal depressed
     - — If the engine speed becomes **approx. 1,200 rpm**, clear the PCM DTC using the M-MDS. (System operation is normal.)
     - — If the engine speed does not become **approx. 1,200 rpm**, inspect for the following parts, then repair or replace the malfunctioning part:
       - APP sensor (See 01-40-51 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0].)
       - Neutral switch No.1 (MTX) (See 01-40-40 NEUTRAL SWITCH INSPECTION [SKYACTIV-G 2.0].)
       - CPP switch (MTX) (See 01-40-40 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [SKYACTIV-G 2.0].)
       - Brake switch No.1 (See 04-11-11 BRAKE SWITCH INSPECTION.)
       - Brake switch No.2 (See 04-11-11 BRAKE SWITCH INSPECTION.)
       - Communication between PCM and TCM (ATX) (See 10-02A-1 FOREWORD [SKYACTIV-G 2.0 (L.H.D.)].) (See 10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)].)

Fuel Injector Operation Inspection
If simulation function of M-MDS is used:

STEP	INSPECTION		ACTION
1	Start the engine and warm it up completely. Access the INJ_1, INJ_2, INJ_3 and INJ_4 PIDs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) Turn each fuel injector from on to off using the PIDs for each cylinder. Does the engine speed drop?	Yes	Fuel injectors work properly.
		No	Engine speed does not drop an any cylinder: • Go to the next step. Engine speed drops on some cylinders: • Go to Step 4.
2	Perform the Main Relay Operation Inspection. (See01-03-118 Main Relay Operation Inspection.) Does the main relay work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results.
3	Inspect the fuel injector of the suspected cylinder. (See 01-14A-62 FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0].) Is there any malfunction?	Yes	Replace the fuel injector. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Inspect the fuel injector power and/or ground systems related wiring harness and connectors for the suspected cylinder. • If all items normal: — Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • If not: — Repair or replace the malfunctioning part according to the inspection results.
4	Perform the KOER self test using the M-MDS. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) Are the DTCs P0201:00, P0202:00, P0203:00 and/or P0204:00 present?	Yes	Go to the appropriate DTC inspection. (See 01-02-152 DTC P0201:00 [SKYACTIV-G 2.0].) (See 01-02-155 DTC P0202:00 [SKYACTIV-G 2.0].) (See 01-02-158 DTC P0203:00 [SKYACTIV-G 2.0].) (See 01-02-161 DTC P0204:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
5	Inspect the fuel injector of the suspected cylinder. (See 01-14A-62 FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0].) Is there any malfunction?	Yes	Replace the fuel injector. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Inspect the following for the suspected cylinder: • PCM terminals (pulled-out pins, corrosion) • Fuel injector terminals (pulled-out pins, corrosion) • If all items normal: — Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • If not: — Repair or replace the malfunctioning part according to the inspection results.

If simulation function of M-MDS is not used:

STEP	INSPECTION		ACTION
1	Perform the KOER self test using the M-MDS. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].) Are the DTCs P0201:00, P0202:00, P0203:00 and/or P0204:00 present?	Yes	Go to the appropriate DTC inspection. (See 01-02-152 DTC P0201:00 [SKYACTIV-G 2.0].) (See 01-02-155 DTC P0202:00 [SKYACTIV-G 2.0].) (See 01-02-158 DTC P0203:00 [SKYACTIV-G 2.0].) (See 01-02-161 DTC P0204:00 [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	Inspect the fuel injector of the suspected cylinder. (See 01-14A-62 FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0].) Is there any malfunction?	Yes	Replace the fuel injector. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	Inspect the following for the suspected cylinder: • Fuel injector power and/or ground system related wiring harnesses and connectors • PCM terminals (pulled-out pins, corrosion) • Fuel injector terminals (pulled-out pins, corrosion) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

Fuel Cut Control System Inspection

Note
- This inspection has to be performed after the Fuel Injector Operation Inspection.

If data monitor function of M-MDS is used:
1. Warm up the engine and idle it.
2. Connect the M-MDS to the DLC-2.
3. Select the RPM and the FUELPW PIDs. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
4. Monitor both PIDs while performing the following steps:
   (1) Depress the accelerator pedal and increase the RPM PID to **4,000 rpm**.
   (2) Quickly release the accelerator pedal (brake pedal is not depressed) and verify that the FUELPW PID is **0 msec**, and **2—5 msec** when the RPM PID drops **below 1,200 rpm**.
   - If not as specified, inspect the following:
     — ECT sensor and related wiring harness (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].)

If data monitor function of M-MDS is not used:
1. Warm up the engine and idle it.
2. Measure the fuel injector control signal wave profile using the oscilloscope while performing the following steps:
   (1) Depress the accelerator pedal and increase the engine speed to **4,000 rpm**.
   (2) Quickly release the accelerator pedal (brake pedal is not depressed) and verify that the wave profile constant **B+**, and the wave appears when the engine speed drops **below 1,200 rpm**. (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)
   - If not as specified, inspect the following:
     — ECT sensor and related wiring harness (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].)

Fuel Pump (Low-pressure Side) Operation Inspection
1. Connect the M-MDS to the DLC-2.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

2. Remove the fuel-filler cap.
3. Switch the ignition ON (engine off).
4. Turn the fuel pump relay from off to on using the FP PID and inspect if the operation sound of the fuel pump is heard. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   - If operation sound is heard, fuel pump is normal.
   - If no operation sound is heard, proceed to the next step.
5. Measure the voltage at the wiring harness side fuel pump unit terminal A with the FP PID turned on.
   - If the voltage is as specified, inspect the following:
     — Fuel pump continuity
     — Fuel pump ground
     — Wiring harness between the fuel pump relay and PCM terminal 2AQ
   - If not as specified, inspect the following:
     — Fuel pump relay (See 09-21-29 RELAY INSPECTION.)
     — Wiring harness connector (Battery—Fuel pump relay—Fuel pump control module—Fuel pump unit)

Specification
8.0—11.5 V (Ignition switch at ON)

Fuel Pump (Low-pressure Side) Control System Inspection
If simulation function of M-MDS is used:
1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).
3. Select the FP PID. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
4. Turn the fuel pump relay from off to on and inspect if the operation sound of the fuel pump relay is heard.
   - If no operation sound is heard, inspect the fuel pump relay. (See 09-21-29 RELAY INSPECTION.)
   - If the fuel pump relay is normal, inspect the following:
     — Wiring harness and connectors (Ignition switch—Fuel pump relay—PCM terminal 2AQ)

If simulation function of M-MDS is not used:
1. Crank the engine and verify that the fuel pump relay operation sound is heard.
2. If the operation sound is not heard, inspect the following:
   - Fuel pump relay (See 09-21-29 RELAY INSPECTION.)
   - Wiring harness and connectors (Ignition switch—Fuel pump relay—PCM terminal 2AQ)

Spark Test
1. Disconnect the fuel pump relay and fuel injector relay.
2. Verify that each ignition coil and connector is connected properly.
3. Inspect the ignition system in the following procedure:

Warning
- **High voltage in the ignition system can cause strong electrical shock which can result in serious injury. Avoid direct contact to the vehicle body during the following spark test.**

STEP	INSPECTION		ACTION
1	Disconnect the ignition coils from the spark plugs. Remove the spark plugs. (See 01-18-3 SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) Verify that the spark plugs do not have carbon deposits. Is there any malfunction?	Yes	Perform no-load racing at **4,000 rpm** for **2 min**, **2 times** to burn off the carbon deposits. Repeat this step.
		No	Go to the next step.
2	Inspect the spark plugs for damage, wear, and proper plug gap. Is there any malfunction?	Yes	Re-gap or replace the spark plugs, then go to the next step. (See 01-18-3 SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	Reconnect the spark plugs to the ignition coil. Ground the spark plugs to the engine. Is a strong blue spark visible at each cylinder while cranking the engine?	Yes	Ignition system is normal.
		No	Some cylinders do not spark: • Go to the next step. All cylinders do not spark: • Go to Step 5.

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

STEP	INSPECTION		ACTION
4	Switch the ignition to off. Inspect the wiring harness between the following terminals (wiring harness-side) for an open or short circuit: • Ignition coil/ion sensor No.1 terminal B—PCM terminal 1AY • Ignition coil/ion sensor No.2 terminal B—PCM terminal 1AT • Ignition coil/ion sensor No.3 terminal B—PCM terminal 1AO • Ignition coil/ion sensor No.4 terminal B—PCM terminal 1AJ Is there any malfunction?	Yes	Repair or replace the suspected wiring harness.
		No	Inspect the ignition coil. (See 01-18-2 IGNITION COIL INSPECTION [SKYACTIV-G 2.0].) Replace the ignition coil/ion sensor. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5	Switch the ignition to off. Disconnect the ignition coil/ion sensor connectors. Switch the ignition ON (engine off or on). Measure the voltage at each ignition coil/ion sensor terminal A (wiring harness-side). Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect for power supply circuit in wiring harness between ignition switch and ignition coils. Repair or replace the wiring harness for a possible short to power supply.
6	Switch the ignition to off. Inspect for continuity between terminal D (wiring harness-side) in each ignition coils and body ground. Is there continuity?	Yes	Go to the next step.
		No	Inspect the connection of PCM ground point. • If there is any malfunction: — Repair or replace the malfunctioning part according to the inspection results. • If there is no malfunction: — Repair or replace the wiring harness for a possible open circuit. Repeat from Step 1.
7	Inspect the connection of PCM and ignition coil/ion sensor connectors. Does the PCM connector or ignition coil/ion sensor connectors have poor connection?	Yes	Repair or replace the connector. Repeat from Step 1.
		No	Go to the next step.
8	Inspect the CKP sensor and crankshaft pulley. (See 01-40-60 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [SKYACTIV-G 2.0].) Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results. (See 01-40-59 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Inspect for an open or short circuit in wiring harness and connector of the CKP sensor. Repair or replace the malfunctioning part according to the inspection results.

Purge Control System Inspection
If simulation function of M-MDS is used:

1. Start the engine.
2. Disconnect the vacuum hose between the purge solenoid valve and the charcoal canister.
3. Put a finger to the purge solenoid valve and verify that there is no vacuum applied when the engine is cold.
   - If there is a vacuum, inspect the following:
     — Wiring harness and connectors (Purge solenoid valve—PCM terminal 1AI)
     — Purge solenoid valve (stuck open) (See 01-16A-12 PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0].)
4. Connect the M-MDS to the DLC-2 and verify that DTC P0443:00 is displayed. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   - Perform the DTC inspection. (See 01-02-202 DTC P0443:00 [SKYACTIV-G 2.0].)
5. Select the EVAPCP PID.
6. Increase the duty value of the purge solenoid valve to **50 %** and inspect if the operation sound of the valve is heard.
   - If the operation sound is heard, inspect for loose or damaged vacuum hoses. (Intake manifold—Purge solenoid valve—Charcoal canister)
   - If the operation sound is not heard, perform the purge solenoid valve inspection. (See 01-16A-12 PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0].)
7. Warm up the engine to normal operating temperature.
8. Monitor the EVAPCP PID using the M-MDS, and drive the vehicle **approx. 2000 rpm** for **30 s or more**. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   - If the EVAPCP PID is **0 %**, inspect the following PIDs:
     — MAF, APP1, APP2, TP REL and LOAD PIDs (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

If simulation function of M-MDS is not used:

1. Start the engine.
2. Disconnect the vacuum hose between the purge solenoid valve and the charcoal canister.
3. Put a finger to the purge solenoid valve and verify that there is no vacuum applied when the engine is cold.
   - If there is a vacuum, inspect the following:
     — Wiring harness and connectors (Purge solenoid valve—PCM terminal 1AI)
     — Purge solenoid valve (See 01-16A-12 PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0].)
4. Warm up the engine to the normal operating temperature.
5. Stop the engine.
6. Connect the M-MDS to the DLC-2 and verify that DTC P0443:00 is displayed.
   - Perform the DTC inspection. (See 01-02-202 DTC P0443:00 [SKYACTIV-G 2.0].)
7. Switch the ignition ON (engine off).
8. Select the ECT PID. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
9. Verify that the engine coolant temperature is **above 60 °C {140 °F}**.
   - If the M-MDS indicates that the temperature is **below 60 °C {140 °F}**, perform the ECT sensor inspection. (See 01-40-43 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0].)
10. Set the vehicle on a dynamometer or chassis roller.

    Warning
    - **When the dynamometer or chassis roller is operating, there is a possibility that the operator may come into contact with or be caught up in the rotating parts, leading to serious injuries or death. When performing work while the dynamometer or chassis roller is operating, be careful not to contact or be caught up in any of the rotating parts.**

11. Drive the vehicle at an engine speed to **approx. 2000 rpm** for **30 s or more**.
12. Put a finger to the purge solenoid valve and verify that there is no vacuum applied during Step 2.
    - If there is no vacuum, inspect the following:
      — Wiring harness and connector (Main relay—Purge solenoid valve—PCM terminal 1AI)
      — Purge solenoid valve (See 01-16A-12 PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0].)
      — MAF, APP1, APP2, TP REL and LOAD PIDs (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)
    - If there is vacuum, inspect the following:
      — Vacuum hose (Purge solenoid valve—Charcoal canister)

A/C Cut-off Control System Inspection

1. Start the engine.
2. Turn the A/C switch and fan switch on.
3. Verify that the A/C compressor magnetic clutch actuates.
   - If it does not actuate, perform the symptom troubleshooting “NO.23 A/C DOES NOT WORK SUFFICIENTLY“. (See 01-03-101 NO.23 A/C DOES NOT WORK SUFFICIENTLY [SKYACTIV-G 2.0].)
4. Fully open the throttle valve and verify that the A/C compressor magnetic clutch does not actuate for **2—5 s**.
   - If it actuates, inspect the following:
     — A/C relay (See 09-21-29 RELAY INSPECTION.)
     — Open or short to ground in wiring harness and connectors (Ignition switch—A/C relay—PCM terminal 2AF)
     — A/C related parts
     — APP1, APP2 PIDs (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)

Cooling Fan Control System Inspection

1. Connect the M-MDS to the DLC-2.
2. Start the engine and warm it up to normal operating temperature.
3. Perform the KOER self test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].)
4. Verify that DTC P0480:00 or P0482:00 is not shown and the cooling fan operates during the KOER self test.
   - If the DTC P0480:00 or P0482:00 is displayed, perform the DTC inspection. (See 01-02-209 DTC P0480:00 [SKYACTIV-G 2.0].) (See 01-02-211 DTC P0482:00 [SKYACTIV-G 2.0].)
   - If the cooling fans do not operate, proceed to the following:
     — Inspect the following parts in the indicated order in accordance with fan operation conditions.
       - Open circuit between cooling fan relay and battery positive terminal
       - Open circuit between cooling fan relay and ground
       - Poor connection of the cooling fan relay
     — If there is no malfunction:
       - Replace the cooling fan component. (See 01-12A-19 COOLING FAN MOTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

Hydraulic Variable Valve Timing Control System Operation Inspection
When idling cannot be continued

1. Connect the M-MDS to the DLC-2 and verify that DTC P2090:00 or P2091:00 is displayed. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   - Perform the DTC inspection. (See 01-02-305 DTC P2090:00 [SKYACTIV-G 2.0].) (See 01-02-307 DTC P2091:00 [SKYACTIV-G 2.0].)
2. Remove the OCV and verify that the spool valve is at maximum advanced position. (See 01-10A-38 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Connect the OCV.
4. Switch the ignition ON (engine off).
5. Verify that the spool valve is at the maximum advanced position.
   - If the spool valve is stuck in the retard direction, inspect for the following:
     — Short circuit in wiring harnesses or connectors between OCV and PCM
6. Inspect the hydraulic variable valve timing actuator. (See 01-10A-21 HYDRAULIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0].)

When idling can be continued
If simulation function of M-MDS is used:

1. Warm up the engine to normal operating temperature.
2. Connect the M-MDS to the DLC-2.
3. Verify that DTC P2090:00 or P2091:00 is displayed. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   — Perform the DTC inspection. (See 01-02-305 DTC P2090:00 [SKYACTIV-G 2.0].) (See 01-02-307 DTC P2091:00 [SKYACTIV-G 2.0].)
4. Start the engine and let it idle.
5. Select the VT EX_DES PID. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
6. Increase the OCV duty value and verify that the engine idles rough or stalls.
   - If as specified, inspect the timing belt component (valve timing deviation). (See 01-10A-21 HYDRAULIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0].)
   - If not as specified, go to the next step.
7. Remove the OCV while the connector is connected. (See 01-10A-38 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
8. Switch the ignition ON (engine off).
9. Select the VT EX_DES PID. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
10. Increase the OCV duty value and verify that the spool valve operates in the retard direction.
    - If as specified, inspect the following hydraulic passage for restriction and/or leakage:
      — Oil pressure switch—OCV
      — OCV—Exhaust camshaft
      — Exhaust camshaft internal passage
    - If not as specified, inspect the following:
      — OCV operation (See 01-10A-37 OIL CONTROL VALVE (OCV) INSPECTION [SKYACTIV-G 2.0].)
11. If they are normal, replace the exhaust camshaft pulley. (See 01-10A-23 ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

SYMPTOM TROUBLESHOOTING [SKYACTIV-G 2.0]

If simulation function of M-MDS is not used:

1. Connect the M-MDS to the DLC-2 and verify that DTC P2090:00 or P2091:00 is displayed.
   — Perform the DTC inspection. (See 01-02-305 DTC P2090:00 [SKYACTIV-G 2.0].) (See 01-02-307 DTC P2091:00 [SKYACTIV-G 2.0].)
2. Disconnect the OCV connector.
3. Warm up the engine and idle it.
4. Apply the battery voltage to the OCV and verify that the engine idles rough or stalls.
   - If the engine idles rough or stalls, inspect the timing belt component (valve timing deviation).
   - If the engine does not idle rough or stalls, go to the next step.
5. Remove the OCV and perform the spool valve operation inspection. (See 01-10A-38 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   - If not as specified, inspect the following:
     — OCV (See 01-10A-37 OIL CONTROL VALVE (OCV) INSPECTION [SKYACTIV-G 2.0].)
     — Harnesses and connectors between OCV and PCM have an open or short circuit
   - If as specified, inspect the following hydraulic passages for restriction or leakage or both:
     — Oil pressure switch—OCV
     — OCV—Exhaust camshaft
     — Exhaust camshaft internal passage
6. If they are normal, replace the exhaust camshaft pulley. (See 01-10A-23 ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

13	Electric variable valve timing motor/driver (See 01-10A-15 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0].) (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

ENGINE TUNE-UP [SKYACTIV-G 2.0]

id0110h2800600

Engine Tune-up Preparation

Note
- If the accelerator pedal is depressed continuously for a specified time, the engine speed may decrease to the idle speed. This is due to the fuel cut control operation, which prevents overheating, and it does not indicate a malfunction. The engine speed returns to normal control when the accelerator pedal is released.

1. Connect the M-MDS to the DLC-2.
2. Shift the selector lever (ATX) or shift lever (MTX) to the following position:
   - MTX: Shift lever is in neutral position.
   - ATX: Selector lever is in P or N position.

Note
- The engine coolant temperature and oil temperature can be verified by M-MDS PID “ECT” and “OIL_TEMP”.

3. Run the engine speed at a constant **2,500 to 3,000 rpm** and warm up the engine (engine coolant temperature: **80 °C {176 °F}** or more, oil temperature: **60 °C {140 °F}** or more).
4. Turn off all electrical loads with the engine idling.
5. If the cooling fan is operating, wait until is stops.

Idle Speed Inspection

Note
- The idle speed cannot be adjusted.
- The M-MDS is required to verify the idle speed.

1. Complete the engine tune-up preparation. (See 01-10A-4 Engine Tune-up Preparation.)
2. Verify that the idle speed (M-MDS PID: RPM) is within the specification using the PID/data monitor function of the M-MDS. (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)
   - If there is malfunction, refer to “ENGINE SYMPTOM TROUBLESHOOTING”. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].)

Idle speed (MTX: Neutral position, ATX: P, N position)
MTX: 500—600 rpm
ATX: 550—650 rpm

Ignition Timing Inspection

Note
- The ignition timing cannot be adjusted.
- The M-MDS is required to verify the ignition timing.

1. Complete the engine tune-up preparation. (See 01-10A-4 Engine Tune-up Preparation.)
2. Verify the ignition timing (M-MDS PID: SPARKADV) using the PID/data monitor function of the M-MDS. (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)

Ignition timing
Approx. BTDC 14°

3. Verify that ignition timing advances when the engine speed increases gradually.
   - If there is malfunction, refer to “ENGINE SYMPTOM TROUBLESHOOTING”. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].)

Idle Mixture Inspection
1. Verify that the idle speed and ignition timing are within the specification. (See 01-10A-5 Idle Speed Inspection.) (See 01-10A-5 Ignition Timing Inspection.)
2. Insert an exhaust gas analyzer into the tailpipe.
3. Verify that the CO and HC concentrations are within regulation.
   - If there is malfunction, refer to “ENGINE SYMPTOM TROUBLESHOOTING”. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].)
     — If no malfunction is detected, replace the catalytic converter. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

CO concentration
Within the regulation

HC concentration
Within the regulation

Idle-up Speed Control Inspection

Note
- The idle speed cannot be adjusted.
- The M-MDS is required to verify the idle speed.

1. Complete the engine tune-up preparation. (See 01-10A-4 Engine Tune-up Preparation.)
2. Verify that the idle speed according to each load (M-MDS PID: RPM) is within the specification using the PID/data monitor function of the M-MDS (except idle speed decrease after applying load). (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)
   - If the engine speed is not within the specification when a specified load is applied, inspect the related input parts, wiring harnesses, and connectors.

Idle-up speed (MTX: Neutral position, ATX: P, N position)
A/C on: 650—800 rpm
Electrical loads on: 600—750 rpm

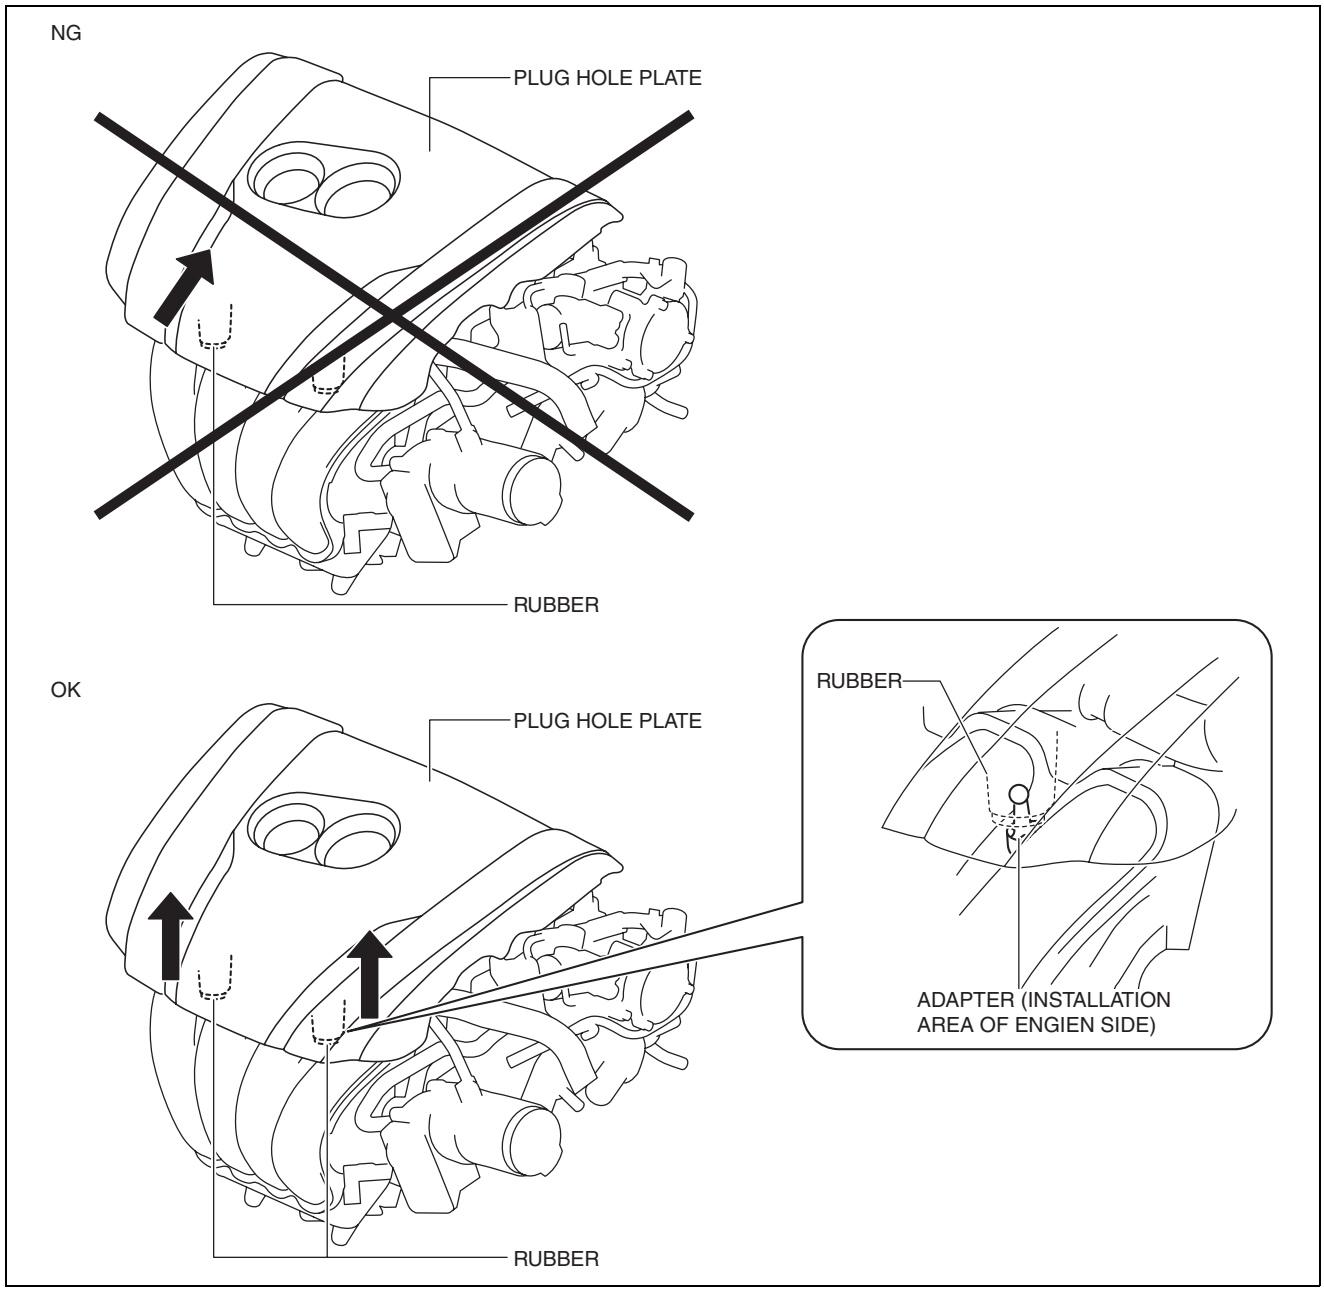
MECHANICAL [SKYACTIV-G 2.0]

PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0110h2803900

Caution

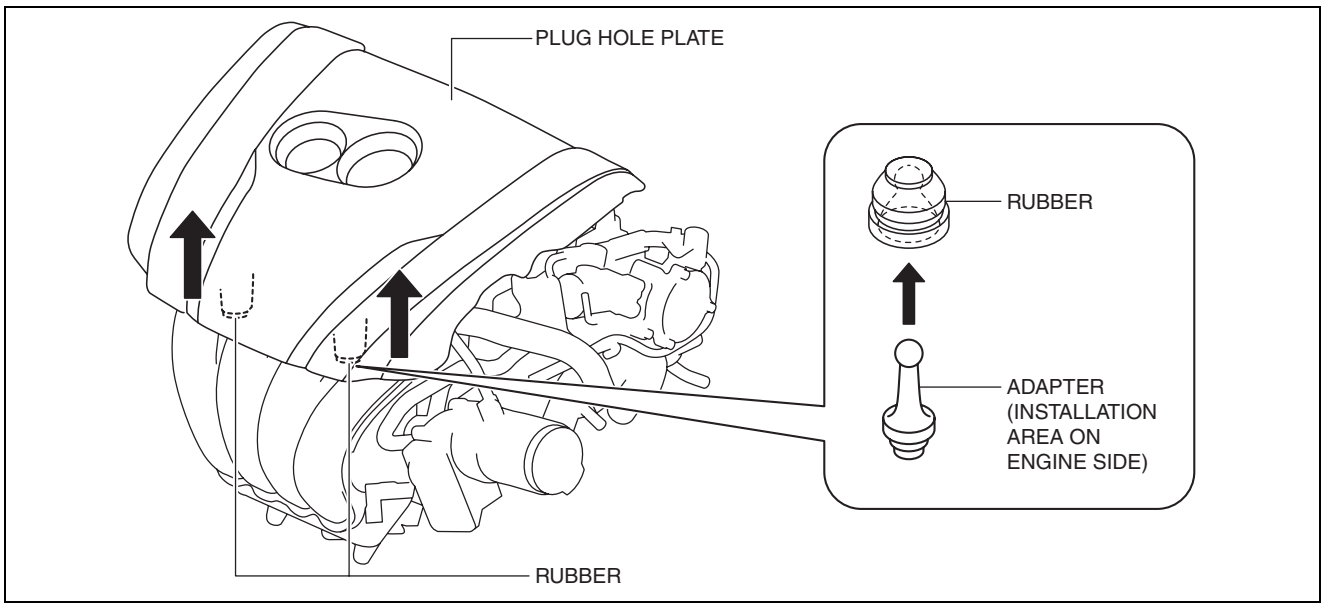
- **If the rubber on only one side of the plug hole plate front is lifted up, it could damage the adapter at the location shown in the figure. When removing the plug hole plate, lift up the rubbers at the same time.**



ac5wzw0000465

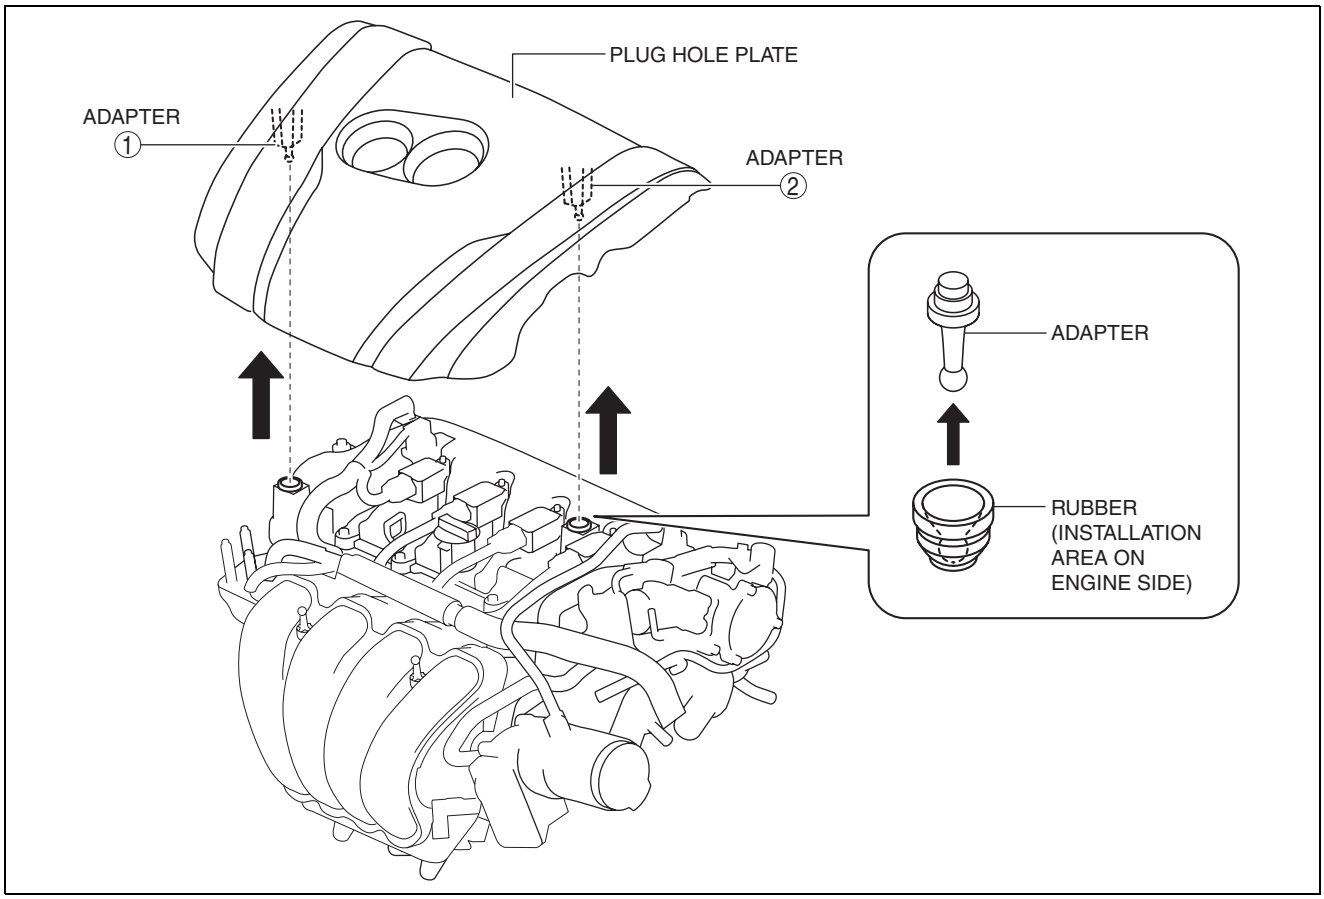
Removal

1. Pull up the front part of the plug hole plate at the same time and remove the rubber from the adapter on the engine side.



ac5uuw00000520

2. Pull up the plug hole plate in the order shown in the figure and remove the adapter from the rubber on the engine side.

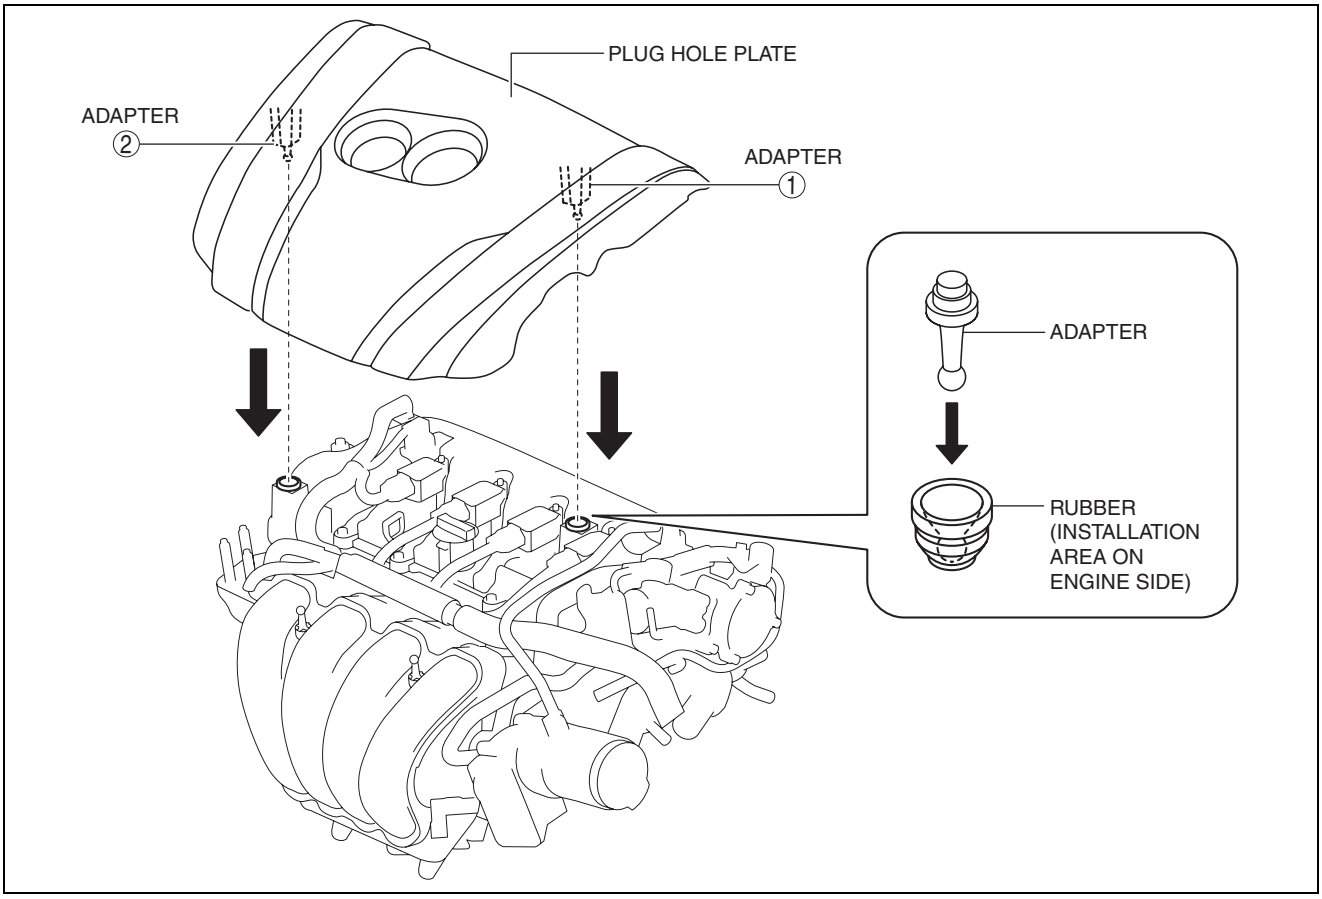


ac5uuw00000521

MECHANICAL [SKYACTIV-G 2.0]

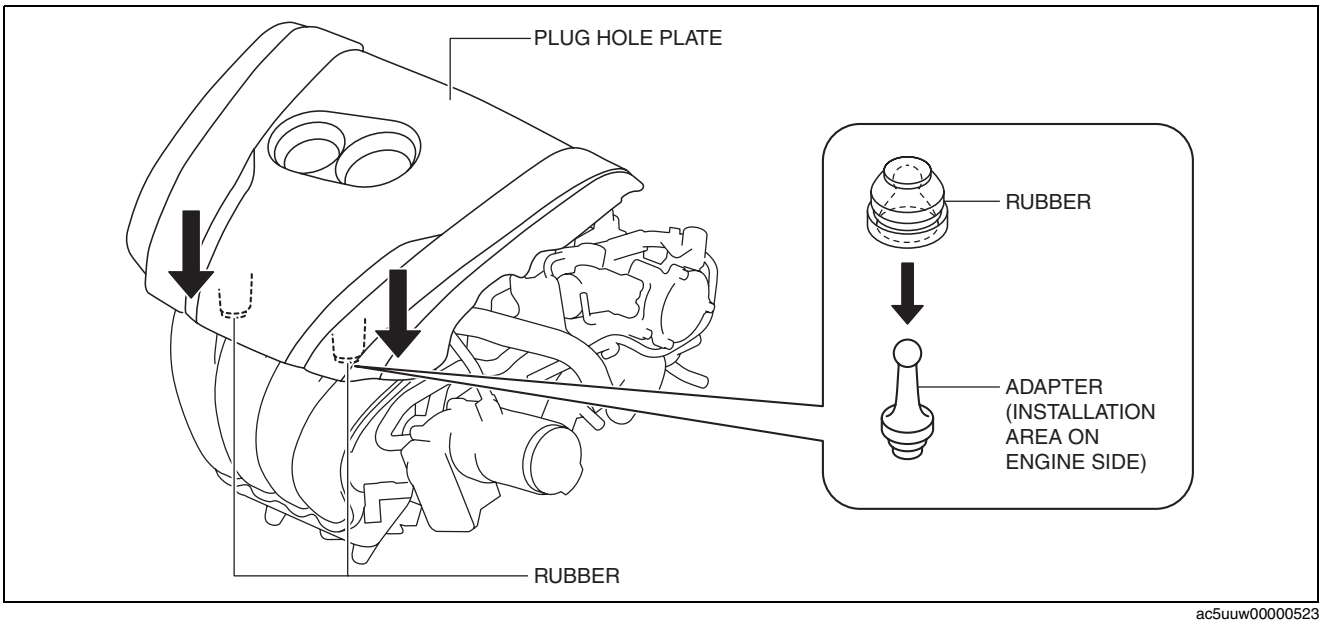
Installation

1. Press the plug hole plate in the order shown in the figure to insert the adapter to the rubber on the engine side.



ac5uuw00000522

2. Press the front part of the plug hole plate at the same time to insert the rubber to the adapter on the engine side.



ac5uuw00000523

MECHANICAL [SKYACTIV-G 2.0]

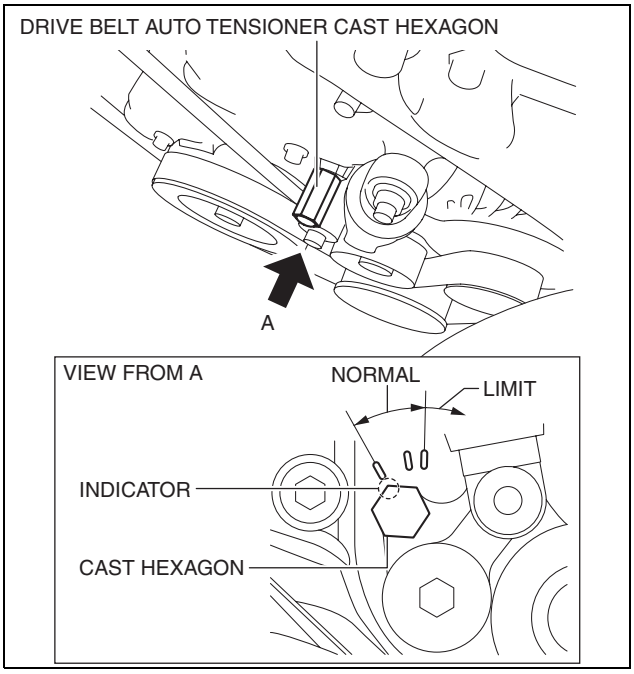
DRIVE BELT INSPECTION [SKYACTIV-G 2.0]

id0110h2801500

Generator Drive Belt

Note
- The generator drive belt deflection/tension inspection is not necessary with the adoption of the drive belt auto tensioner.

1. Verify that the indicator part of the cast hexagon on the drive belt auto tensioner is within the normal range.
   - If it exceeds the limit, replace the drive belt. (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



am3uuw0000888

Water Pump Drive Belt

Note
- The water pump drive belt deflection/tension inspection is not necessary with the adoption of the stretch-type water pump drive belt.

1. Visually inspect or feel that there is no wear, damage, or cracking on the inside and sides of the entire the belt.
   - Even if there is a little wear, damage, or cracking, replace the water pump drive belt. (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
2. Start the engine to verify that abnormal noise does not occur.
   - If abnormal noise occurs, replace the water pump drive belt. (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

MECHANICAL [SKYACTIV-G 2.0]

DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0110h2801600

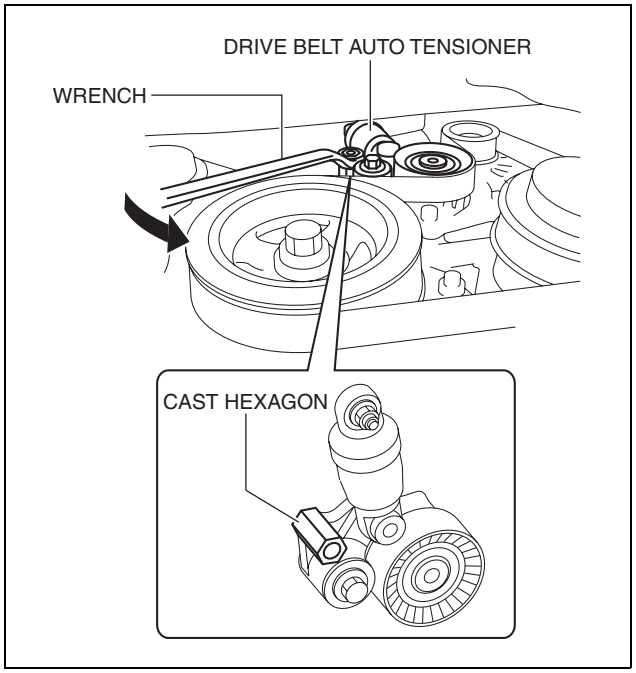
Warning
- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**

Note
- Remove/install the drive belt from the underside of the vehicle.

Generator Drive Belt Removal/Installation

Caution
- **To prevent damage to the drive belt auto tensioner, do not apply excessive torque after the tensioner moves full-stroke.**

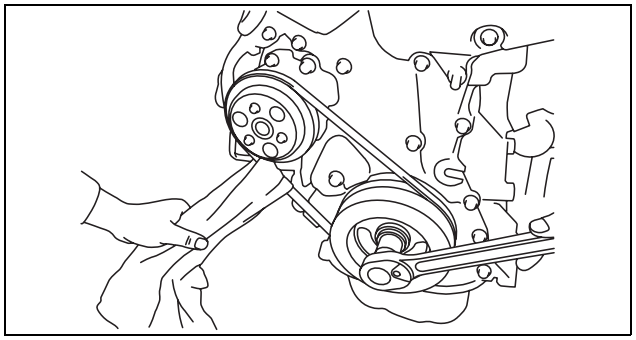
1. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
2. Insert a wrench onto the cast hexagon on the drive belt auto tensioner and release the tension by slowly turning in the direction shown in the figure.
3. Remove the generator drive belt.
4. Install the generator drive belt.
5. Rotate the crankshaft pulley clockwise approx. halfway and verify that the generator drive belt is installed correctly.
   - If the rib of the drive belt and the groove of each pulley are not aligned, remove the drive belt and re-install it.
6. Verify that the indicator part of the cast hexagon on the drive belt auto tensioner is within the normal range.(See 01-10A-9 DRIVE BELT INSPECTION [SKYACTIV-G 2.0].)
7. Install the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)



ac5uuw00000517

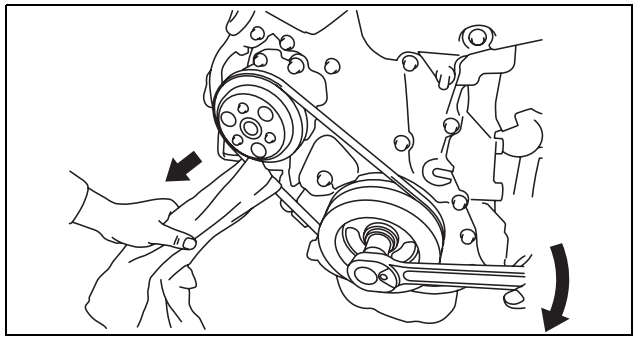
Water Pump Drive Belt
Removal

1. Remove the generator drive belt. (See 01-10A-10 Generator Drive Belt Removal/Installation.)
2. Apply a clean cloth to the water pump drive belt as shown in the figure.



am3uuw0000888

3. Pull the cloth in the direction of the arrow and rotate the crankshaft pulley clockwise.



am3uuw0000888

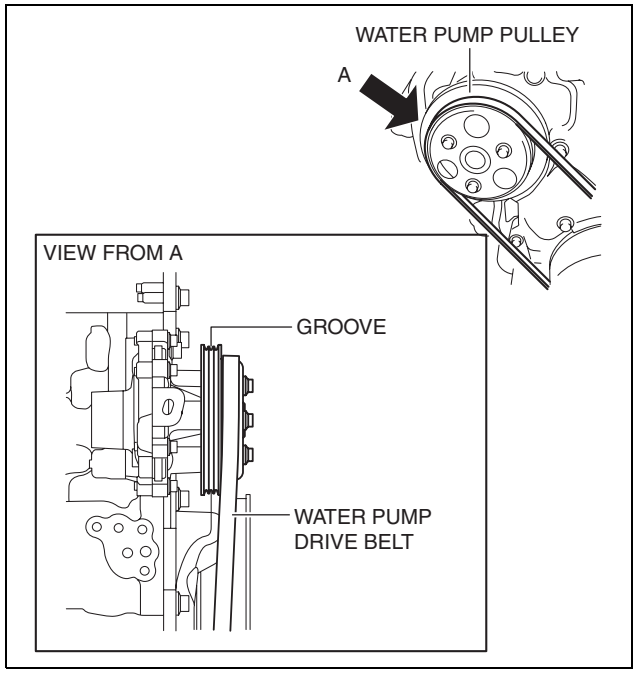
Caution
- **To prevent damaging the drive belt, do not stop rotating the crankshaft pulley while performing the removal procedure (with inserted cloth between drive belt and water pump pulley).**

Note
- The rib of the drive belt can be slid from the groove of the water pump pulley by rotating the crankshaft pulley while pulling the cloth in the direction of the arrow.

4. Remove the water pump drive belt.

Installation

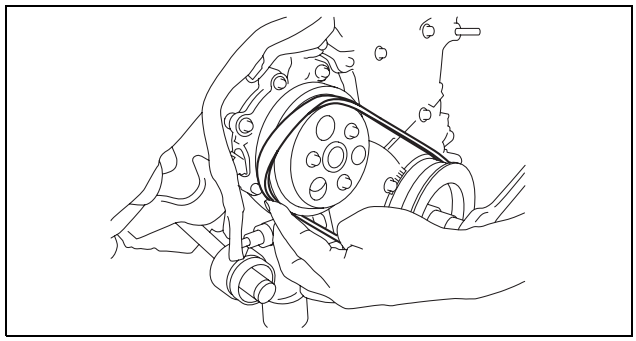
1. Set one side of the water pump drive belt into the groove of the crankshaft pulley.
2. Set the other side of the water pump drive belt into the groove of the water pump pulley with the smaller circumference.



am3uuw0000889

Caution
- **Be careful not to get a finger caught in between the drive belt and pulley when performing the following procedure.**
- **Wearing gloves could result in fingers getting caught between the drive belt and pulley. Do not wear cotton gloves when performing the procedure.**

3. Press the drive belt up from the smaller circumference pulley into the groove of the larger circumference pulley, and rotate the crankshaft pulley clockwise.



am3uuw0000889

Caution
- **To prevent damaging the drive belt, do not stop rotation of the crankshaft pulley while pressing the drive belt up from the height difference of the water pump pulley to the groove of the pulley.**

4. After drive belt installation, rotate the crankshaft pulley clockwise approx. halfway and verify that the water pump drive belt is installed correctly.
   - If the rib of the drive belt and the groove of the pulley are not aligned, remove the drive belt and re-install it.
5. Install the generator drive belt. (See 01-10A-10 Generator Drive Belt Removal/Installation.)

MECHANICAL [SKYACTIV-G 2.0]

DRIVE BELT AUTO TENSIONER INSPECTION [SKYACTIV-G 2.0]

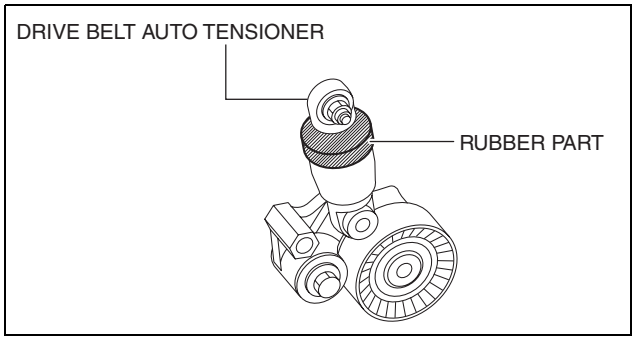
id0110h2801700

Warning
- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**

Caution
- **If the rubber part of the drive belt auto tensioner is damaged by a screwdriver or other tool, oil in the hydraulic pressure unit could leak and the tensioner may not operate normally. Be careful not to damage the rubber part of the drive belt auto tensioner.**

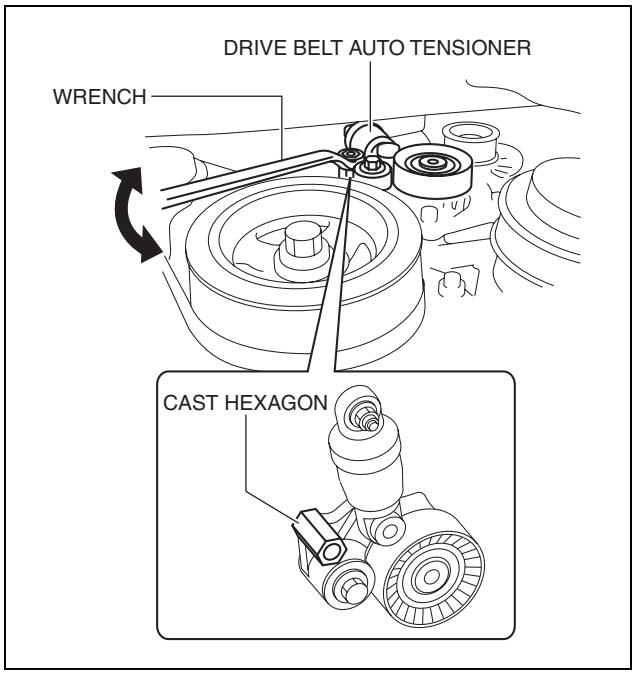
1. Remove the generator drive belt. (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

Caution
- **To prevent damage to the drive belt auto tensioner, do not apply excessive torque after the tensioner moves full-stroke.**



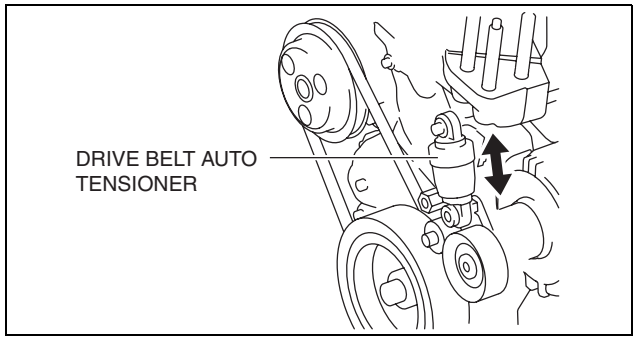
am3uuw0000889

2. Insert the wrench onto the cast hexagon on the drive belt auto tensioner, slowly turn it in the direction of the arrow shown in the figure, and fully depress.



ac5uuw00002801

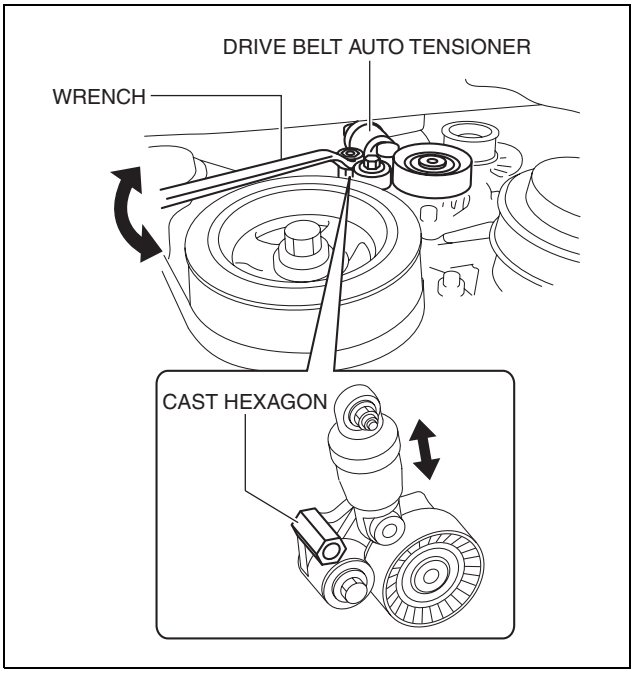
Note
- The drive belt auto tensioner is operated in the direction of the arrow by turning the wrench.



am3uuw0000889

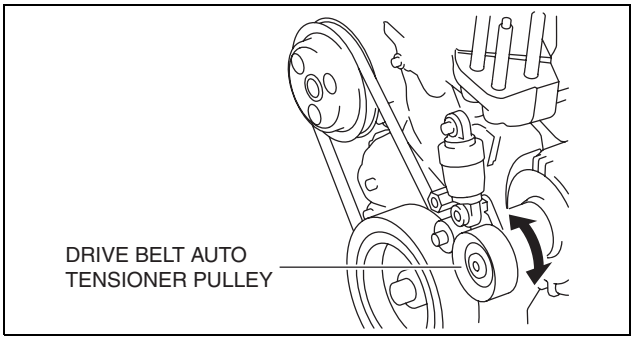
3. Verify that the drive belt auto tensioner moves smoothly in the operational direction.
   - If it does not move smoothly, air infiltration into the inner hydraulic pressure unit can be considered. Move the drive belt auto tensioner up and down at full stroke three times to bleed the air.
     — After bleeding the air, if the drive belt auto tensioner still does not move smoothly when re-inspecting, replace the drive belt auto tensioner. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0]).

   Note
   - By moving the drive belt auto tensioner up and down full-stroke three times, the piston inside the tensioner moves to bleed the air.



ac5wzw0000465

4. Turn the drive belt auto tensioner pulley by hand and verify that it rotates smoothly.
   - If it does not move smoothly, replace the drive belt auto tensioner. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Install the generator drive belt. (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



am3uuw0000889

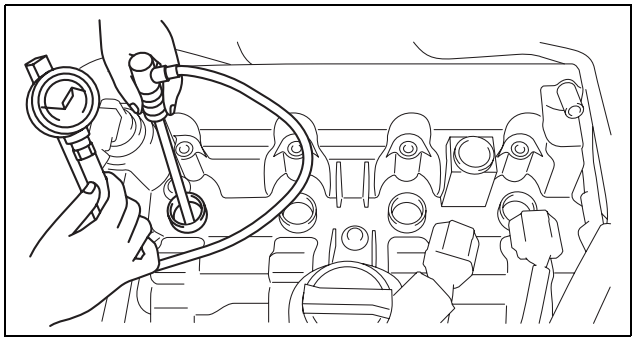
MECHANICAL [SKYACTIV-G 2.0]

COMPRESSION INSPECTION [SKYACTIV-G 2.0]

id0110h2800300

Warning
- **Hot engines and oil can cause severe burns. Be careful not to burn yourself during removal/ installation of each component.**
- **Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.**
- **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)**

1. Verify that the battery is fully charged. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].)
   - Recharge it if necessary. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].)
2. Warm up the engine to the normal operating temperature.
3. Perform "Fuel Line Safety Procedures". (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)
4. Remove the following parts.
   (1) Plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (2) Ignition coil/ion sensors. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (3) Spark plugs. (See 01-18-3 SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (4) Fuel pump relay
   (5) Fuel injector relay
5. Measure the compression pressure using the following procedure.
   (1) Press a compression gauge into the spark plug hole.
   (2) Fully depress the accelerator pedal.
   (3) Crank the engine and measure the compression pressure.



am3uuw0000879

Compression [European (L.H.D. U.K.) specs.]
Standard: 978 kPa {9.97 kgf/cm^2, 142 psi} [300 rpm]
Minimum: 783 kPa {7.98 kgf/cm^2, 114 psi} [300 rpm]
Maximum difference between cylinders: 166 kPa {1.69 kgf/cm^2, 24.1 psi}

Compression [Except European (L.H.D. U.K.) specs.]
Standard: 885 kPa {9.02 kgf/cm^2, 128 psi} [300 rpm]
Minimum: 708 kPa {7.22 kgf/cm^2, 103 psi} [300 rpm]
Maximum difference between cylinders: 150 kPa {1.53 kgf/cm^2, 21.8 psi}

Note
- Because the SKYACTIV-G 2.0 retards the intake valve closing timing, compression pressure is low.

   (4) Perform Steps (1) to (3) for all cylinders.
   (5) If it is less than the minimum specification, or there is a cylinder with a maximum value that exceeds the other cylinders, add a small quantity of engine oil through the spark plug hole and perform Steps (1) to (3).
      - If the pressure increases by adding the engine oil, the piston ring or the cylinder surface is worn, or they are damaged. Perform overhaul servicing.
      - If the pressure does not increase, valve seizure, valve attachment malfunction, or pressure leakage from the cylinder head gasket might be occurring. Perform overhaul servicing.
   (6) If the measured value is high, it is possible that there is an error in the electric variable valve timing system.
6. Remove the compression gauge.
7. Install the following parts.
   (1) Fuel injector relay
   (2) Fuel pump relay
   (3) Spark plugs. (See 01-18-3 SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (4) Ignition coil/ion sensors. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (5) Plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

MECHANICAL [SKYACTIV-G 2.0]

ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER INSPECTION [SKYACTIV-G 2.0]

id0110h2828100

Warning
- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**

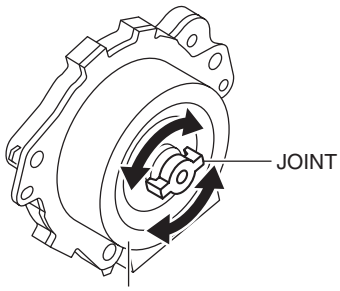
Caution
- **Do not disassemble the electric variable valve timing motor/driver because it is a precision unit.**
- **Do not apply excessive force when rotating the electric variable valve timing motor joint. If it is rotated with excessive force, the electric variable valve timing motor could be damaged.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the electric variable valve timing motor/driver. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Rotate the electric variable valve timing motor joint to the left and right by your fingers and verify that it rotates smoothly in **15**° increments.

Note
- Rotate the joint area smoothly using only the tips of your fingers.
- The electric variable valve timing motor joint moves in **15**° increments, and if the joint is moved **24** times, it rotates one full rotation.

- If it does not rotate smoothly, replace the electric variable valve timing motor/driver.(See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

5. Install in the reverse order of removal.



ELECTRIC VARIABLE VALVE TIMING MOTOR

am3uuw0000904

MECHANICAL [SKYACTIV-G 2.0]

ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0110h2808100

Warning

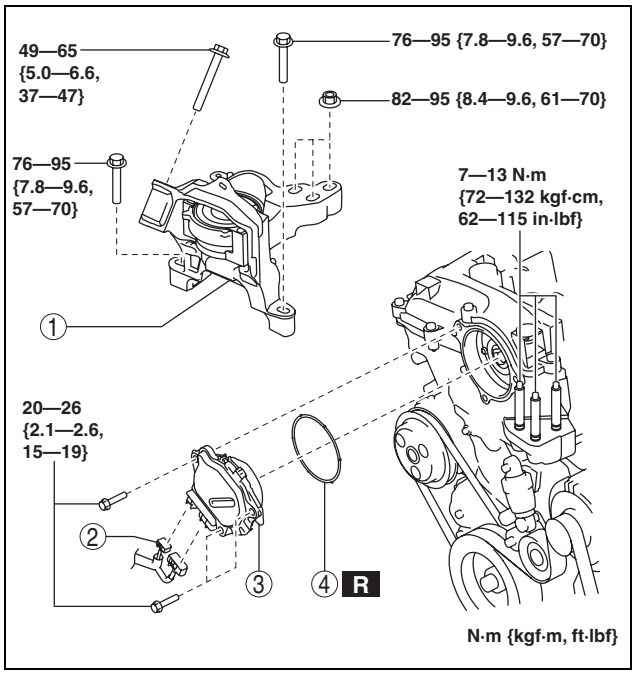
- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**

Caution

- **Applying excessive force (force of 100 N {10.2 kgf, 22.5 lbf} or more) to the electric variable valve timing motor/driver may cause a malfunction. When servicing, be careful not to apply excessive force to the electric variable valve timing motor/driver using other parts or tools.**
- **Do not disassemble the electric variable valve timing motor/driver because it is a precision unit.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

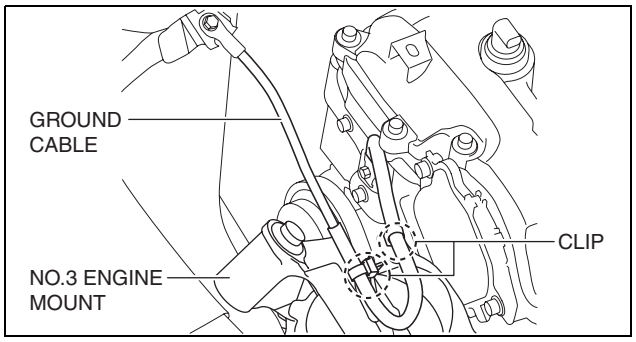
1	No. 3 engine mount (See 01-10A-16 No.3 Engine Mount Removal Note.) (See 01-10A-19 No.3 Engine Mount Installation Note.)
2	Electric variable valve timing motor/driver connector
3	Electric variable valve timing motor/driver (See 01-10A-17 Electric Variable Valve Timing Motor/Driver Installation Note.)
4	O-ring



ac5uuw00000670

No.3 Engine Mount Removal Note

1. Remove the clips shown in the figure and set the ground cable aside.
2. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)



ac5uuw00000671

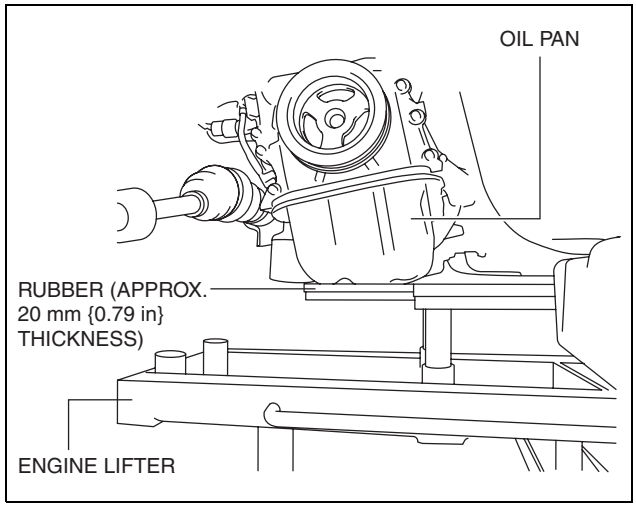
Caution

- **To prevent deformation of the oil pan, support the engine using the following methods.**
  - **— When using an engine lifter, insert rubber of appropriate size (approx. 20 mm {0.79 in} thickness) between the engine lifter and the oil pan to support the oil pan.**
  - **— When using a garage jack, place rubber of appropriate size (approx. 20 mm {0.79 in} thickness) on a batten which is large enough to cover the oil pan to support the oil pan.**

3. Before removing the No.3 engine mount, support the engine (oil pan) using a commercially available engine lifter or garage jack.

Caution

- **Slots have been adopted for the No.3 engine mount installation holes. If the No.3 engine mount is deviated from the original position when installing the No.3 engine mount, engine noise or vibration could increase. Before removing the No.3 engine mount, place alignment marks on the No.3 engine mount and body so that they can be assembled to the same positions as before removal.**



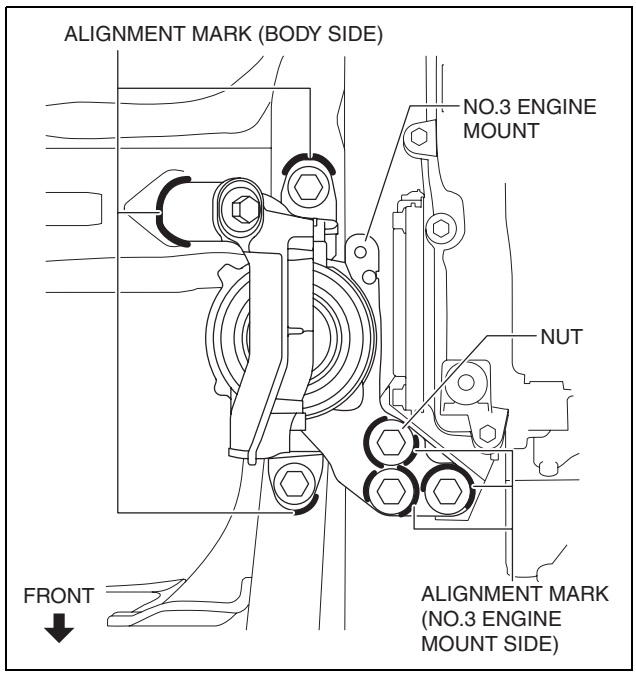
am3uuw0000890

4. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

Note

- Paint so that the No.3 engine mount is framed on the body side and the outline of the nut is framed on the No.3 engine mount side.

5. Remove the No. 3 engine mount.



ac5uuw00000672

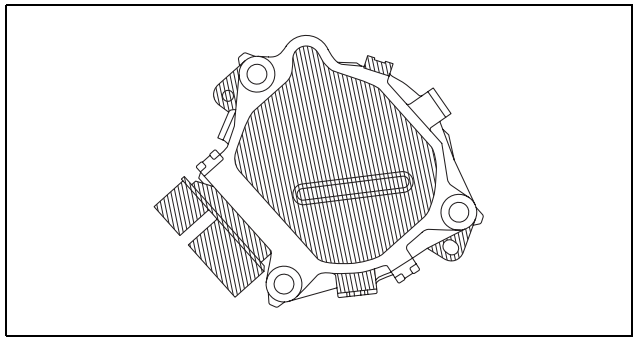
Electric Variable Valve Timing Motor/Driver Installation Note

1. Install a new O-ring to the O-ring installation groove of the engine front cover.

Caution

- **To prevent damage to the electric variable valve timing motor/driver, do not apply excessive force (force of 100 N {10.2 kgf, 22.5 lbf} or more) to the shaded areas shown in the figure.**

2. Install the electric variable valve timing motor/driver using the following procedures.

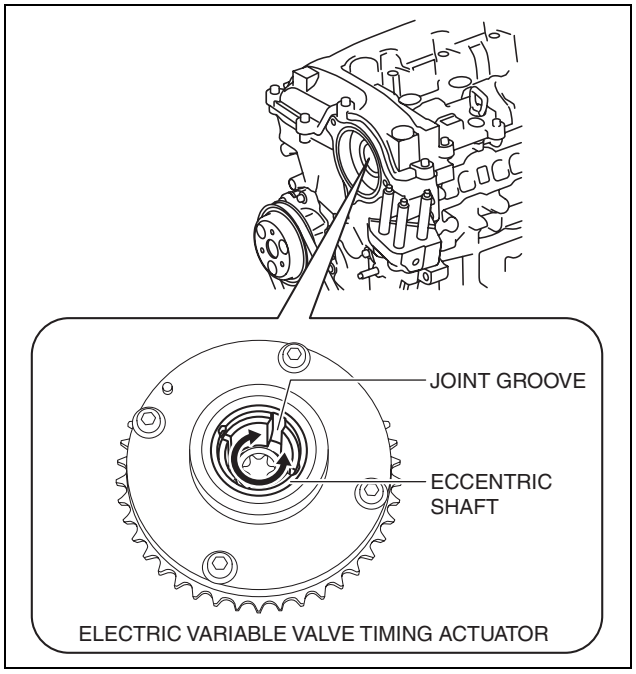


am3uuw0000890

MECHANICAL [SKYACTIV-G 2.0]

Note

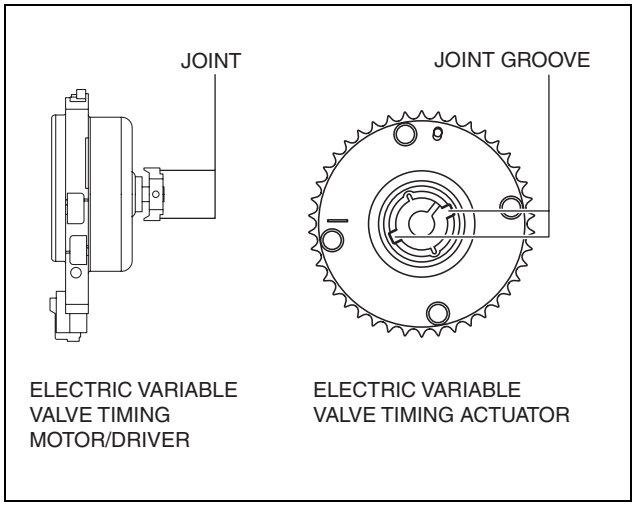
- The eccentric shaft on the electric variable valve timing actuator side can be rotated to the left and right.
- The electric variable valve timing motor/driver can be assembled with the joint groove of the eccentric shaft in any position, and it will not lead to vehicle damage or performance reduction.



am3uuw0000904

(1) Before installation, rotate the joint of the end of the electric variable valve timing motor so that it is aligned to the joint groove on the electric variable valve timing actuator side.
(2) Engage the joint on the end of the electric variable valve timing motor with the joint groove on the electric variable valve timing actuator side.
(3) Attach the seal surface.
(4) Tighten the electric variable valve timing motor/driver installation bolts.

Tightening torque
20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}



am3uuw0000904

MECHANICAL [SKYACTIV-G 2.0]

No.3 Engine Mount Installation Note

Caution

- **If the No.3 engine mount is deviated from the original position when installing the No.3 engine mount, engine noise or vibration could increase. When installing the No.3 engine mount, align the alignment mark placed during removal and install it to the original position.**

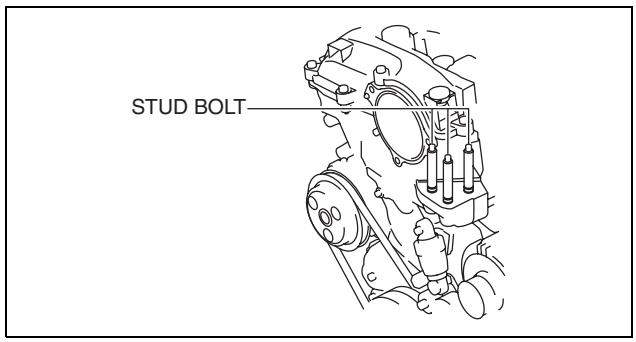
Note

- When replacing the No.3 engine mount, place a mark at the same position as the one placed before removal.
- If the No.3 engine mount nut is loosened, tighten the engine front cover stud bolts because they may be loosened.

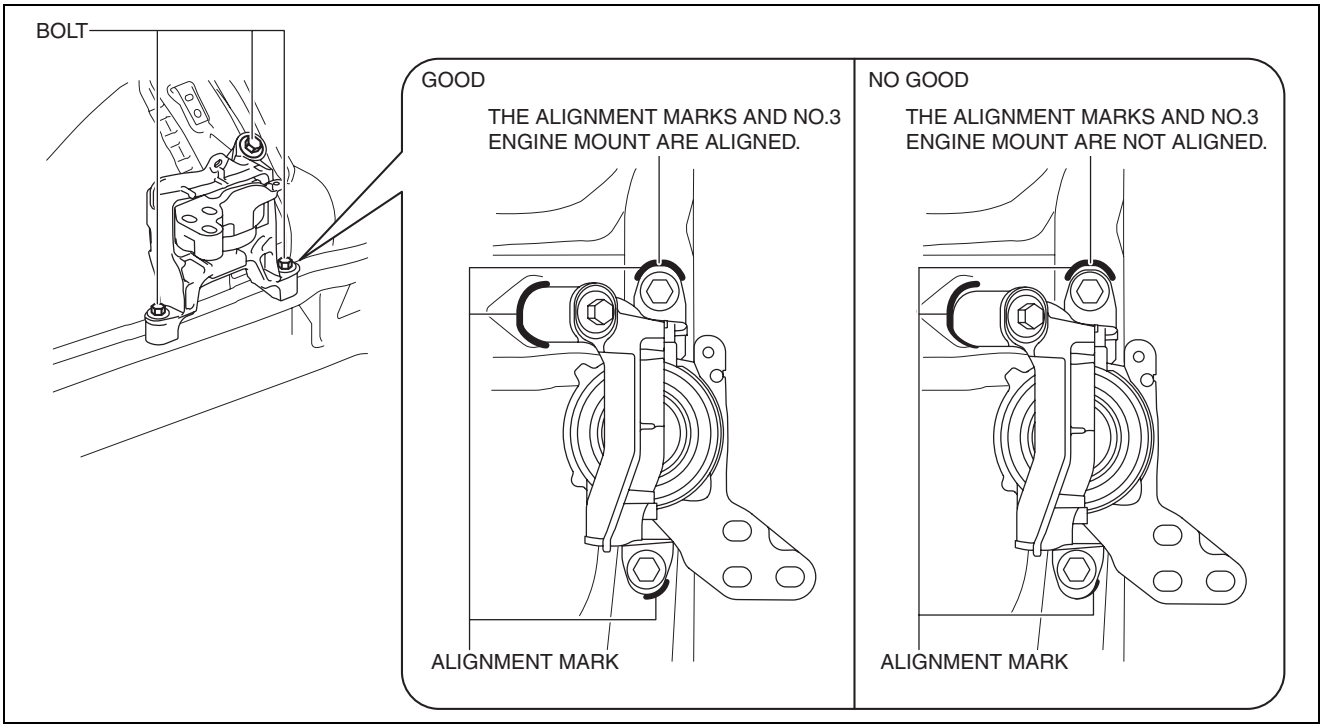
1. Tighten the engine front cover stud bolts.

   Tightening torque
   7—13 N·m {72—132 kgf·cm, 62—115 in·lbf}

2. Temporarily tighten the No.3 engine mount installation bolts and nuts using the following procedure:
   (1) Align the alignment marks on the body side and No.3 engine mount, and temporarily tighten the bolts shown in the figure.



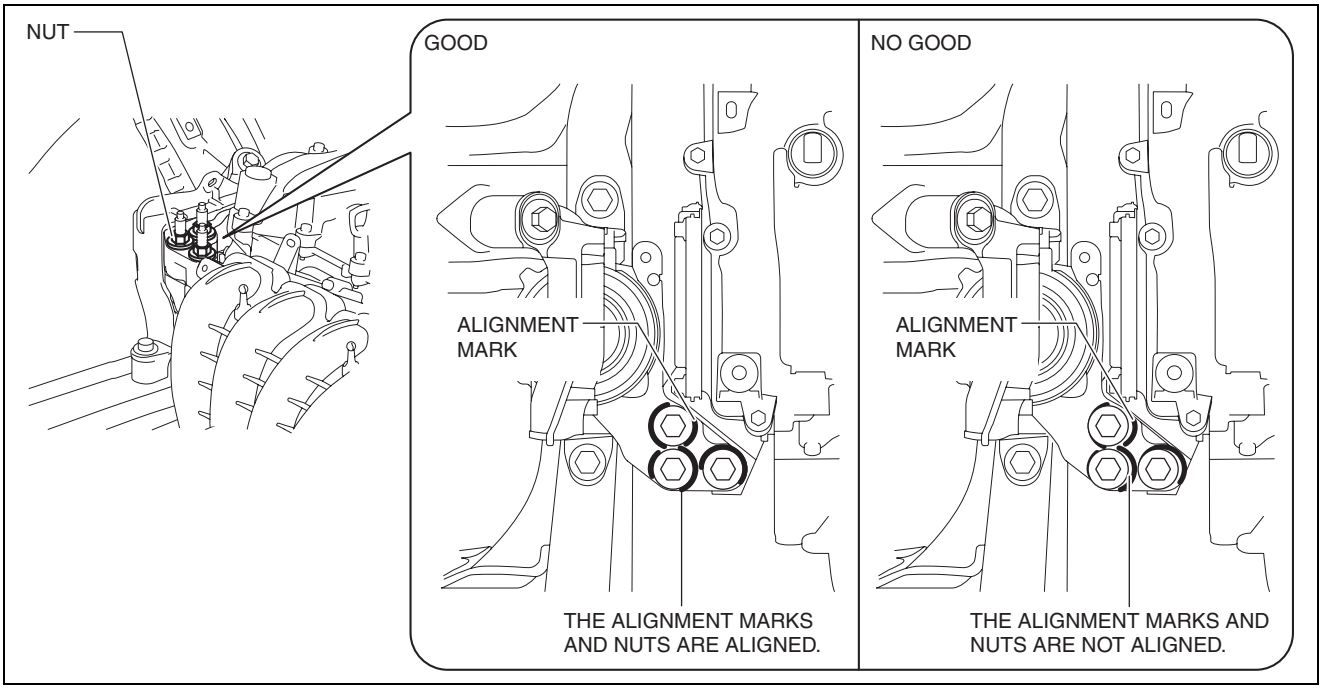
am3uuw0000902



ac5wzw0000520

MECHANICAL [SKYACTIV-G 2.0]

(2) Temporarily tighten the nuts shown in the figure while aligning the alignment marks of the No.3 engine mount and nuts.



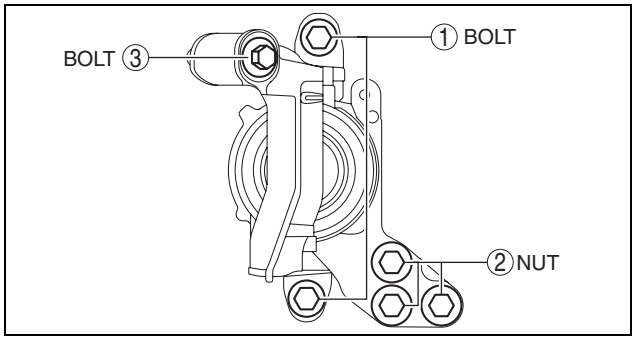
ac5wzw0000520

Note

- If the alignment marks are not aligned, align the alignment marks while slightly moving the engine and temporarily tighten the nuts.

3. Tighten the No.3 engine mount installation bolts and nuts in the order shown in the figure.

No.	Tightening torque
1	76—95 N·m {7.8—9.6 kgf·m, 57—70 ft·lbf}
2	82—95 N·m {8.4—9.6 kgf·m, 61—70 ft·lbf}
3	49—65 N·m {5.0—6.6 kgf·m, 37—47 ft·lbf}



ac5uuw00000675

4. Remove the engine lifter or garage jack.
5. Install in the reverse order of removal.

MECHANICAL [SKYACTIV-G 2.0]

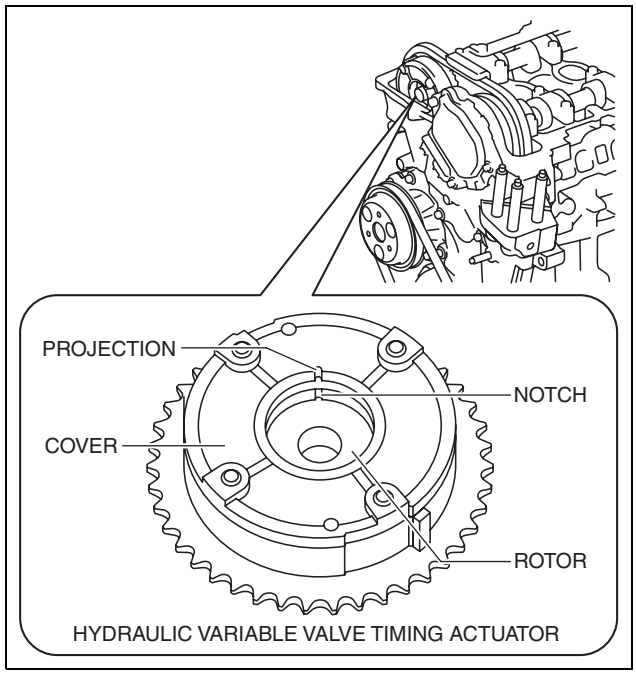
HYDRAULIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0]

id0110h2126800

Warning
- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**

Caution
- **Do not disassemble the hydraulic variable valve timing actuator because it is a precision unit.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the ignition coil/ion sensors. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Remove the cylinder head cover. (See 01-10A-39 TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Verify that the notch of the rotor and projection of the cover on the hydraulic variable valve timing actuator are aligned and fitted.
   - If the notch of the rotor and projection of the cover are not aligned, rotate the crankshaft in the direction the engine rotates two turns and verify that they are aligned.
     - — If the notch of the rotor and projection of the cover are still not aligned, replace the hydraulic variable valve timing actuator. (See 01-10A-23 ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   - If, when turning the crankshaft, there is a slapping noise from the hydraulic variable valve timing actuator each time before the cam reaches its maximum lift, it means that the actuator is not secured. Replace the hydraulic variable valve timing actuator. (See 01-10A-23 ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
6. Install in the reverse order of removal.



am3uuw0000888

MECHANICAL [SKYACTIV-G 2.0]

ELECTRIC VARIABLE VALVE TIMING ACTUATOR INSPECTION [SKYACTIV-G 2.0]

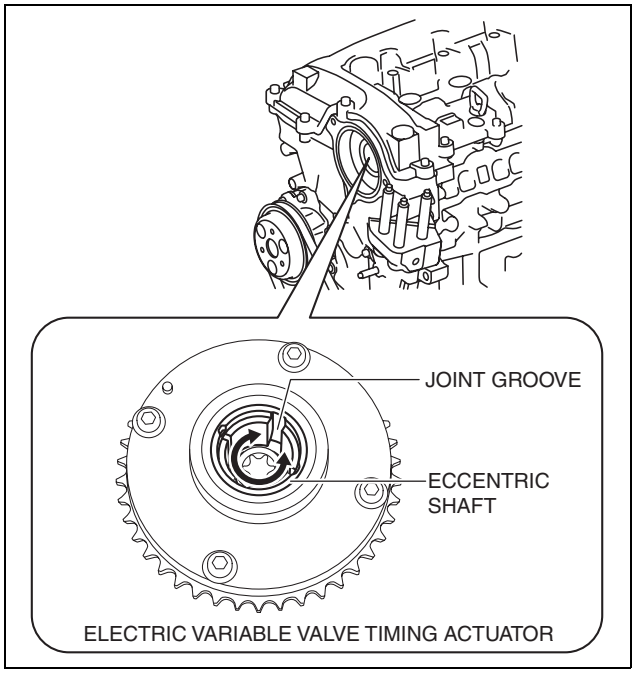
id0110h2555500

Warning
- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**

Caution
- **Do not disassemble the electric variable valve timing actuator because it is a precision unit.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the electric variable valve timing motor/driver. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Rotate the eccentric shaft of the electric variable valve timing actuator by hand and verify that it rotates smoothly.
   - If it does not rotate smoothly, replace the electric variable valve timing actuator. (See 01-10A-23 ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

   Note
   - Hook a finger onto the joint groove of the eccentric shaft to rotate the shaft easily.
   - The eccentric shaft stops rotating at the maximum retard position when it is rotated counterclockwise as viewed from the front, and at the maximum advance position when rotated clockwise.
   - The eccentric shaft rotates 15.8 turns from the maximum retard position to the maximum advance position.
5. Install in the reverse order of removal.



am3uuw0000903

MECHANICAL [SKYACTIV-G 2.0]

ELECTRIC VARIABLE VALVE TIMING ACTUATOR, HYDRAULIC VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

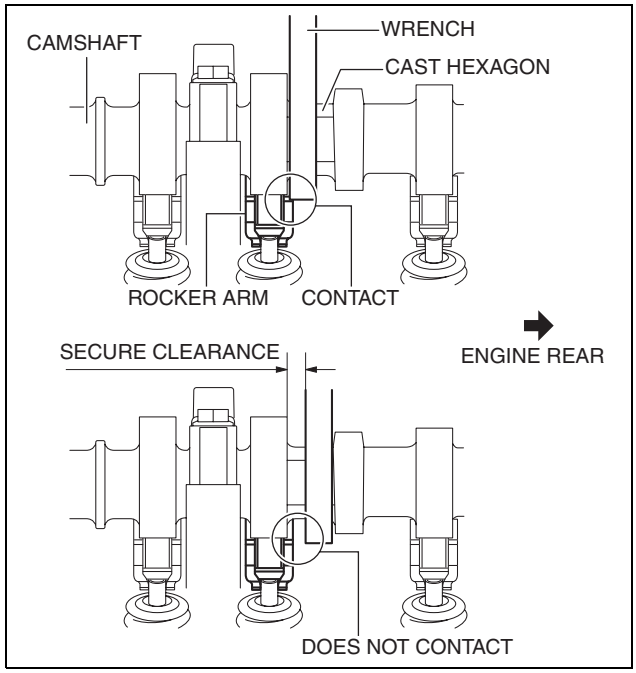
id0110h2126900

Warning

- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**

Caution

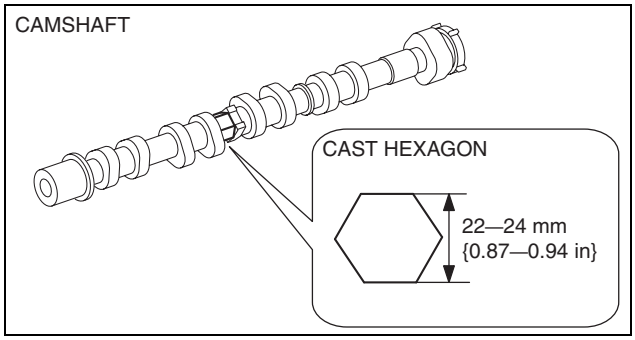
- **Do not disassemble the electric variable valve timing actuator and hydraulic variable valve timing actuator because they are precision units.**
- **If the camshaft is rotated with the timing chain removed and the piston at the top dead center position, the valve may contact the piston and the engine could be damaged. When rotating the camshaft with the timing chain removed, rotate it after lowering the piston from the top dead center position.**
- **When rotating the camshaft using a wrench on the cast hexagon, the wrench may contact the rocker arm and damage the rocker arm. To prevent damage to the rocker arm when holding the camshaft on the cast hexagon, use the wrench at engine rear side as shown in the figure to secure a clearance between the cam.**



am3uuw0000875

Note

- Width at the cast hexagon of the camshaft is 22—24 mm {0.87—0.94 in}.

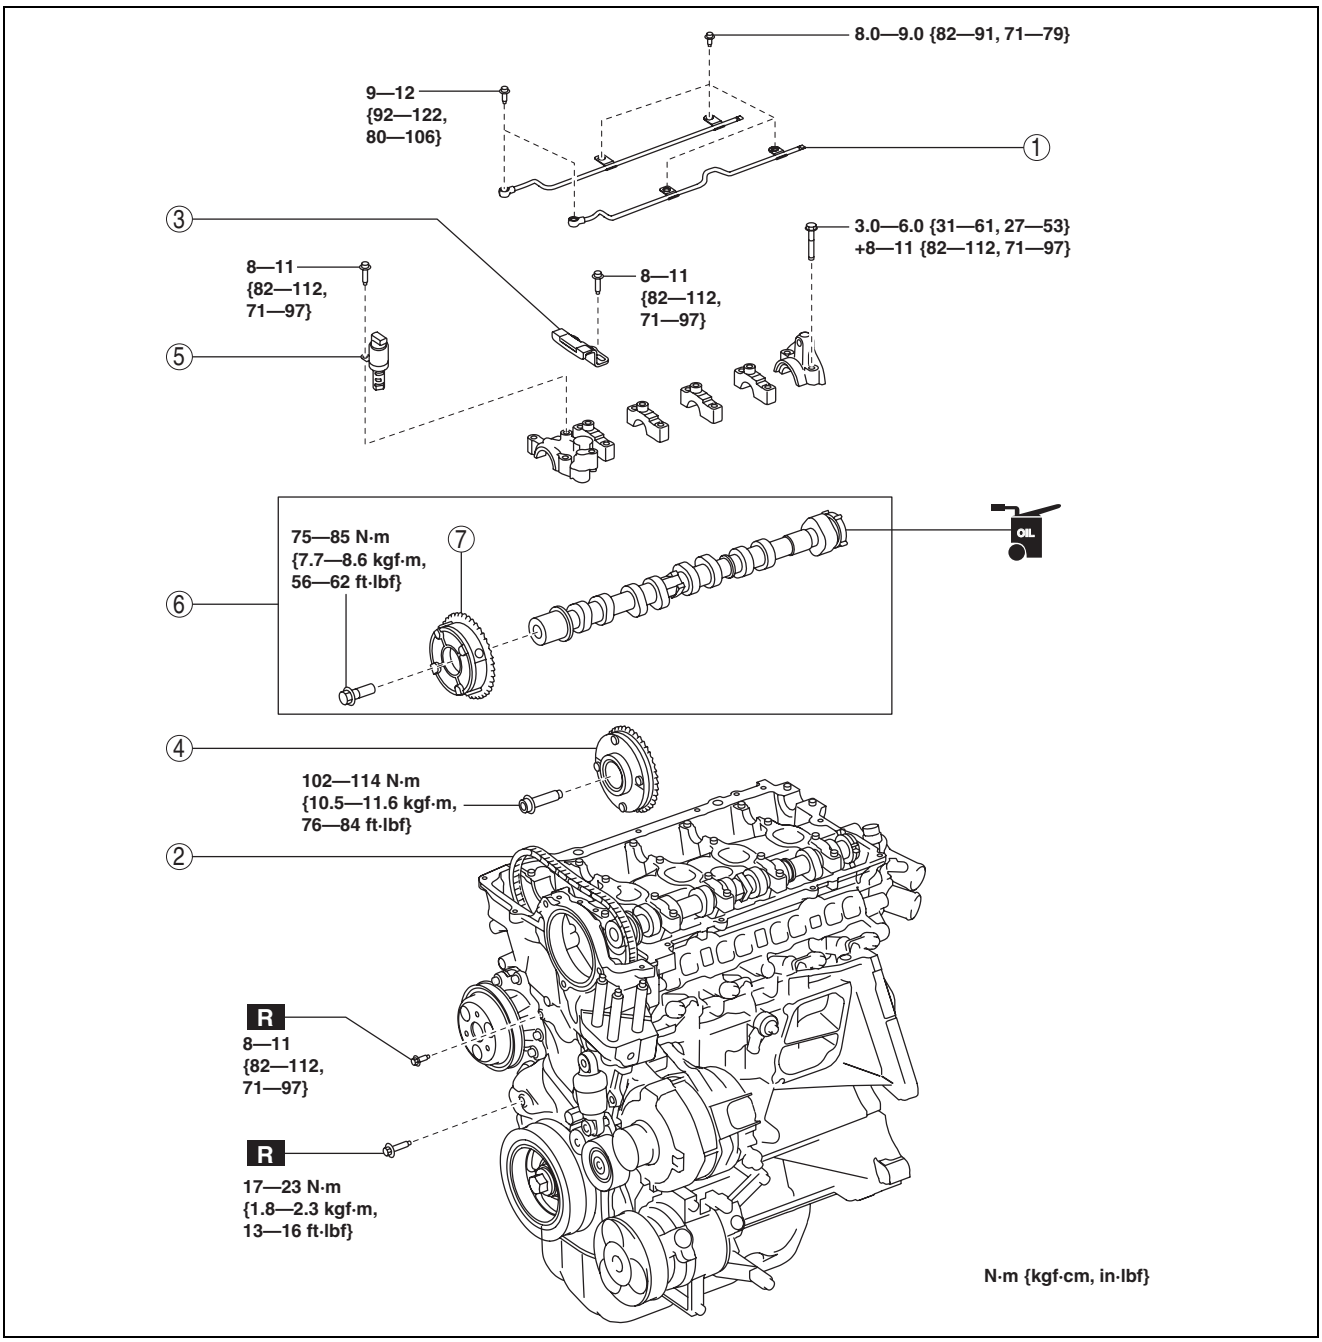


am3uuw0000902

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the ignition coil/ion sensors. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Remove the cylinder head cover. (See 01-10A-39 TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
6. Remove the electric variable valve timing motor/driver. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING

MECHANICAL [SKYACTIV-G 2.0]

MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
7. Remove the vacuum pump. (Only when hydraulic variable valve timing actuator is removed.) (See 04-11-21 VACUUM PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
8. Remove the high pressure fuel pump and rear housing. (Only when hydraulic variable valve timing actuator is removed.) (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
9. Remove in the order indicated in the table.
10. Install in the reverse order of removal.
11. Start the engine and inspect the following:
    - Ignition timing, idle speed and idle mixture. (See 01-10A-4 ENGINE TUNE-UP [SKYACTIV-G 2.0].)



ac5uuw00001623

1	Oil shower pipe (See 01-10A-37 Oil Shower Pipe Installation Note.)

3	Chain guide (No.1)

4	Electric variable valve timing actuator (See 01-10A-28 Electric Variable Valve Timing Actuator Removal Note.) (See 01-10A-35 Electric Variable Valve Timing Actuator Installation Note.)
5	OCV

MECHANICAL [SKYACTIV-G 2.0]

6	Hydraulic variable valve timing actuator and exhaust camshaft component (See 01-10A-30 Hydraulic Variable Valve Timing Actuator and Exhaust Camshaft Component Removal Note.) (See 01-10A-32 Hydraulic Variable Valve Timing Actuator and Exhaust Camshaft Component Installation Note.)

7	Hydraulic variable valve timing actuator (See 01-10A-31 Hydraulic Variable Valve Timing Actuator Removal Note.) (See 01-10A-31 Hydraulic Variable Valve Timing Actuator Installation Note.)

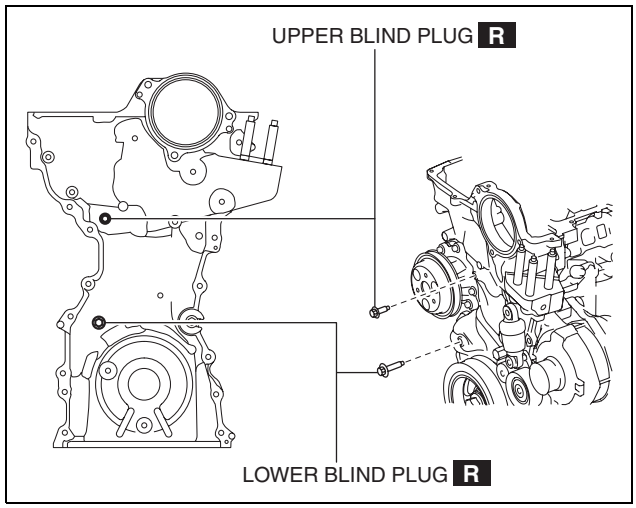
Timing Chain Removal Note

1. Release the tension on the timing chain using the following procedure:

Note

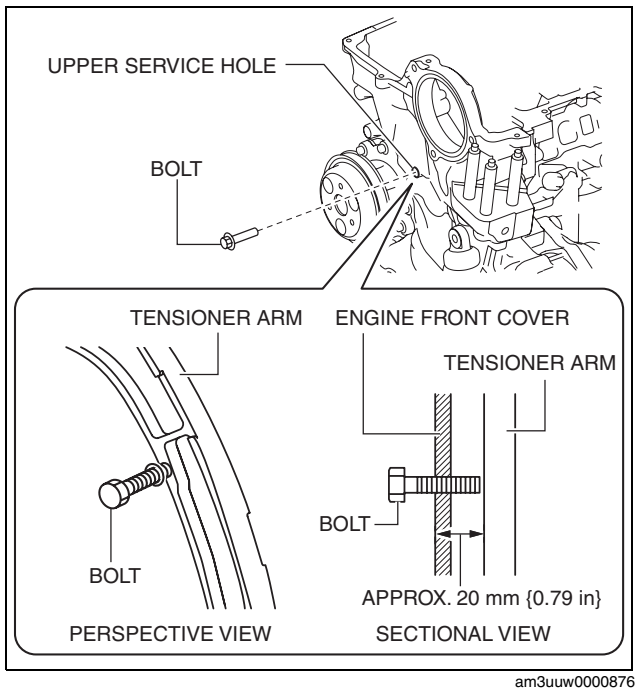
- Release the tension on the timing chain by securing the timing chain tensioner arm through the service hole on the engine front cover.

(1) Remove the blind plugs (upper and lower) on the engine front cover service holes.



am3uuw0000876

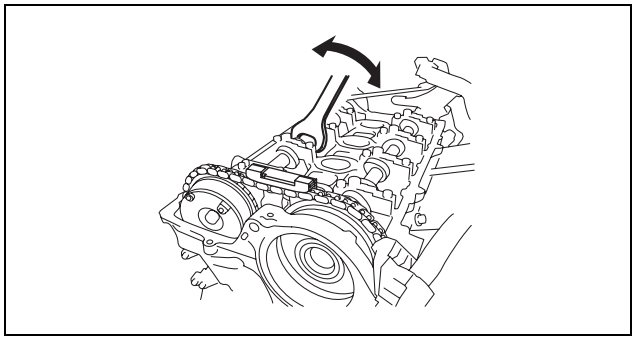
(2) Insert an M6 bolt (**35—60 mm {1.4—2.3 in}** length with thread to the end) to the upper service hole and tighten it until it contacts the tensioner arm, then loosen it **approx. 180 degrees**. (Set the bolt so that it sits slightly in front of the tensioner arm.)



am3uuw0000876

Note

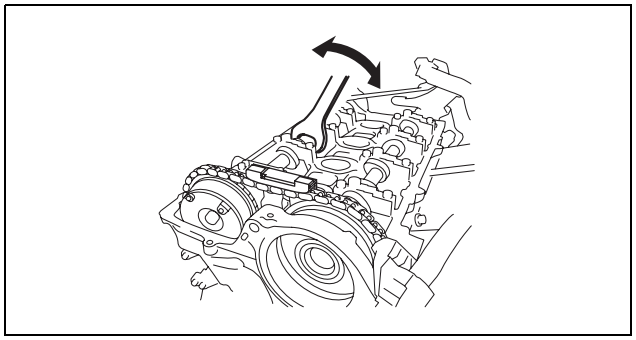
- The bolt contacts the tensioner arm when it is inserted **approx. 20 mm {0.79 in}**.
- Hold the exhaust camshaft using a wrench on the cast hexagon and move it back and forth a few times as shown in the figure. This will drain the oil from the chain tensioner and make the following servicing easier.



am3uuw0000876

(3) Insert a precision screwdriver into the lower service hole.

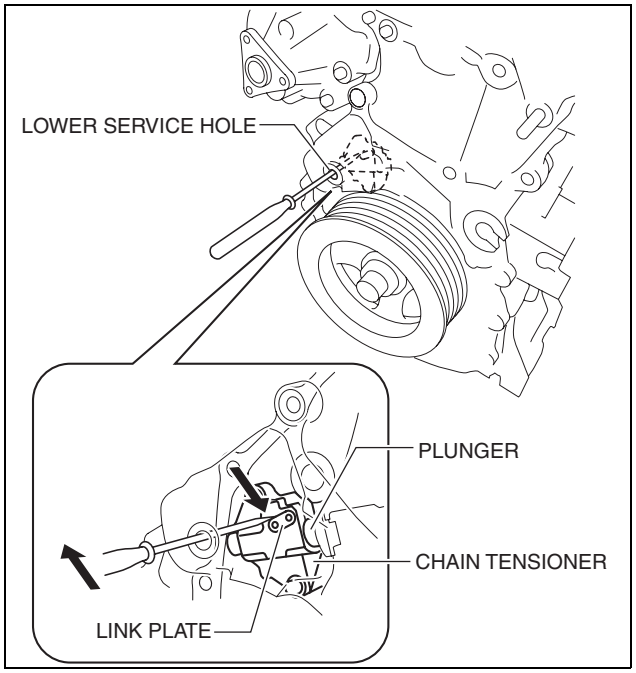
(4) While moving the exhaust camshaft back and forth in the direction of the arrow using a wrench on the cast hexagon, press down the link plate of the timing chain tensioner using a precision screwdriver and release the plunger lock.



am3uuw0000876

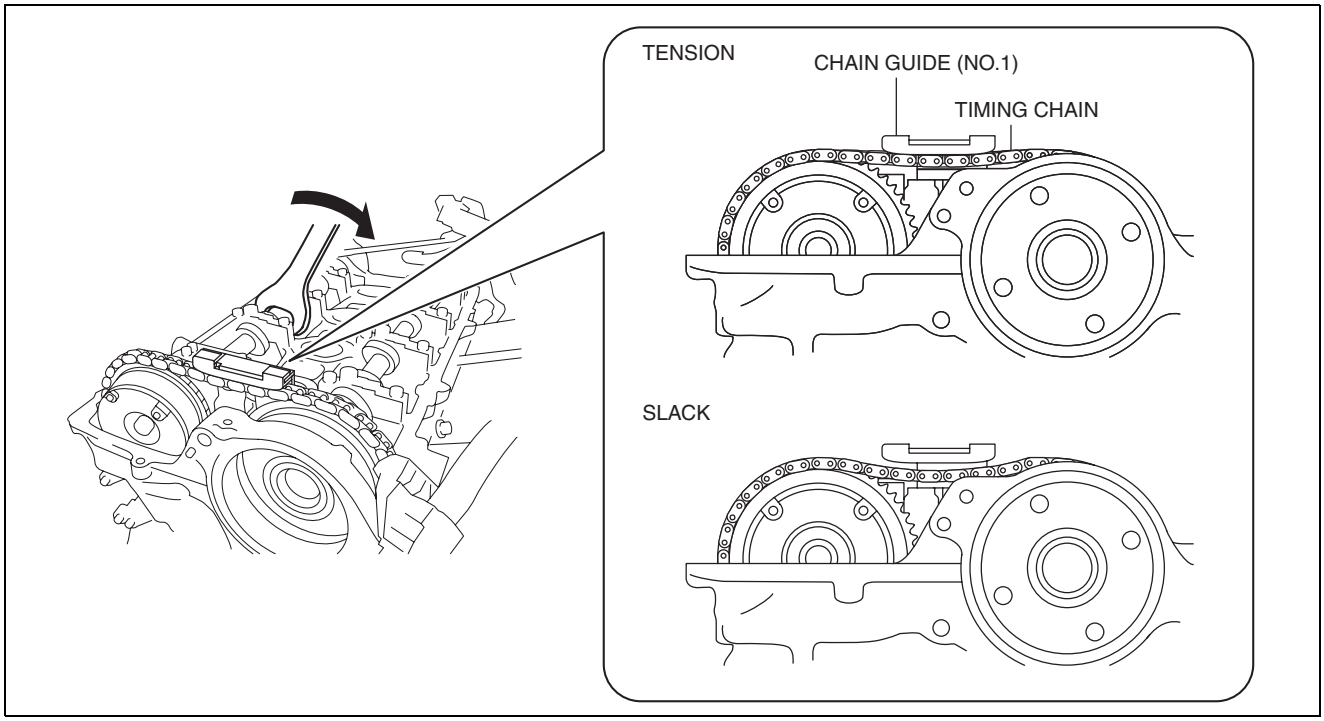
Note

- When moving the exhaust camshaft back and forth, the timing chain pushes the plunger in the chain tensioner making it easier to operate the link plate.



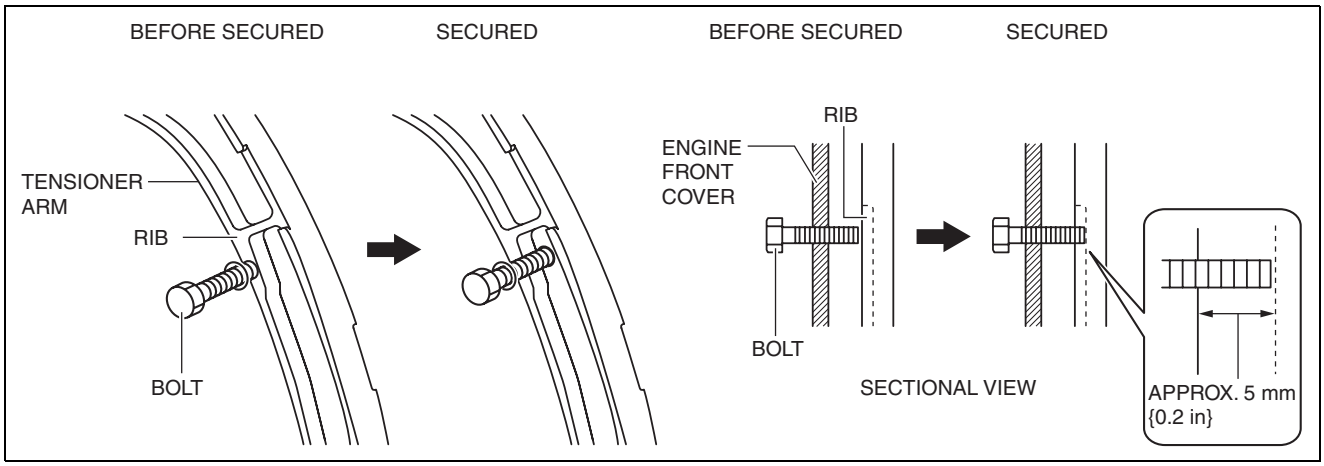
am3uuw0000876

(5) With the plunger lock released, rotate the exhaust camshaft clockwise until the timing chain loosens.



am3uuw0000876

(6) With the chain loosened, tighten the M6 bolt in the upper service hole so that the bolt is inserted **approx. 5 mm {0.2 in}** additionally to secure the tensioner arm.



am3uuw0000876

- If the bolt cannot be inserted **approx. 5 mm {0.2 in}**, the plunger lock of the chain tensioner may not release, or the chain may not loosen enough. Return the bolt to the original position and restart the procedure from step (3).

Note

- By rotating the exhaust camshaft clockwise, the timing chain pushes the tensioner arm and the rib position deviates. The entire tensioner arm can be secured by hooking the bolt onto the deviated rib.

(7) After securing the tensioner arm, remove the chain guide (No.1).

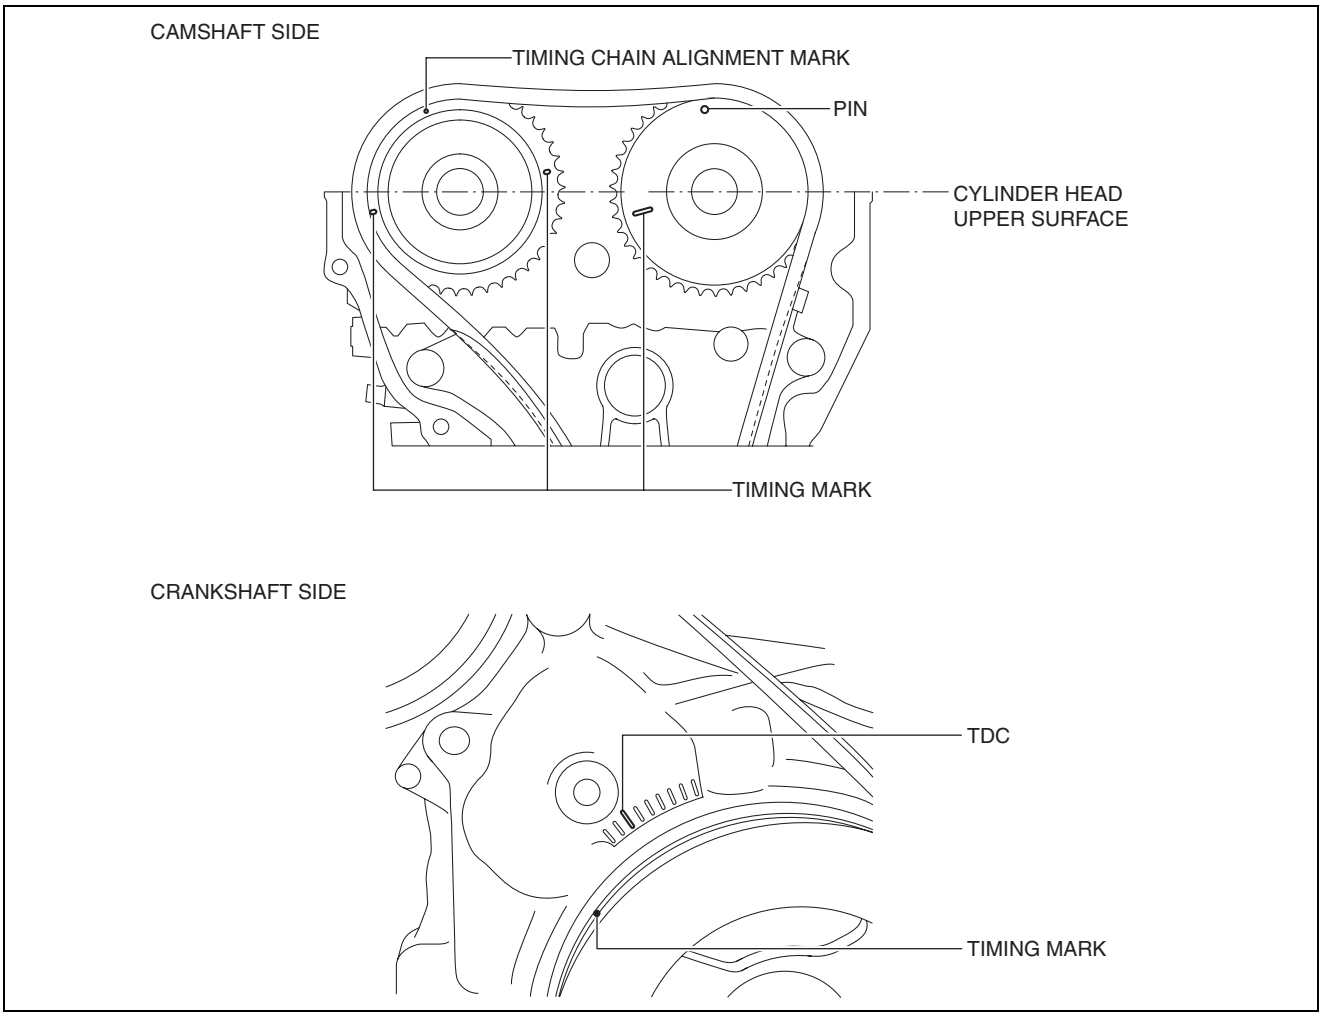
MECHANICAL [SKYACTIV-G 2.0]

Electric Variable Valve Timing Actuator Removal Note

Caution

- **Keep the timing chain pulled up during and after the work in which it has been set aside from the sprocket. If the chain falls down, it may disengage from the sprocket on the crankshaft side and deviate, leading to valve timing deviation.**
- **After servicing, always verify the valve timing.**

1. Rotate the crankshaft clockwise so that cylinder No.1 is positioned around before top dead center (TDC) as shown in the figure.

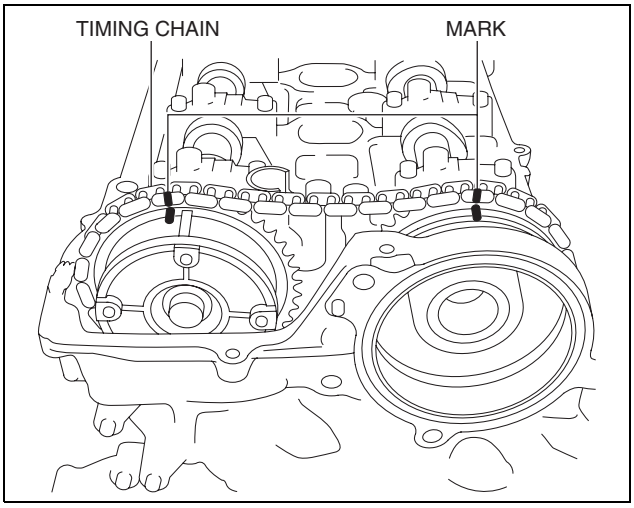


am3uuw0000876

Note

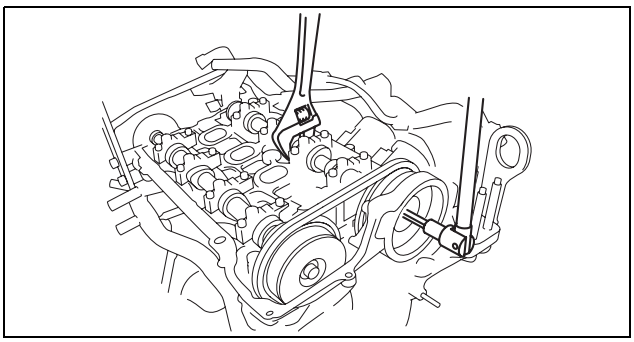
- With cylinder No.1 positioned around before top dead center (TDC), there is no large movement (rotation) of the exhaust camshaft when the timing chain is removed. Therefore, installation of the electric variable valve timing actuator to the camshaft will be easier. (If there is a large movement of the exhaust camshaft, installation of the electric variable valve timing actuator to the camshaft must be performed while loosening the chain by rotating the exhaust camshaft.)

2. Mark the timing chain and each actuator so that they can be reassembled in the same condition as before removal.



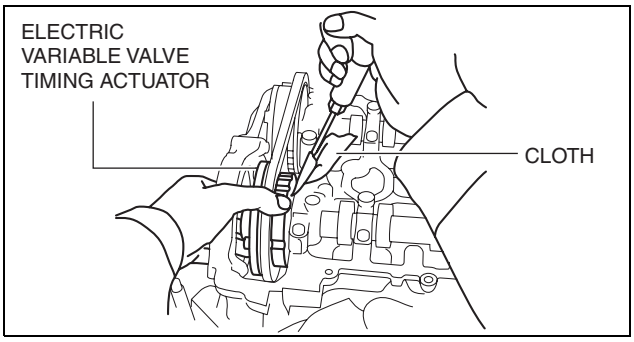
am3uuw0000877

3. Hold the intake camshaft using a wrench on the cast hexagon and remove the electric variable valve timing actuator installation bolt.



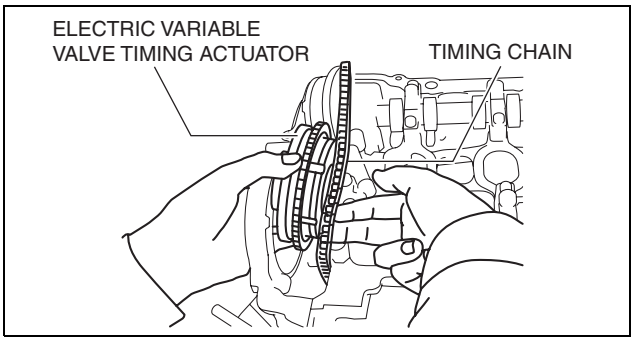
am3uuw0000877

4. Using a screwdriver wrapped in a clean cloth, lightly press the electric variable valve timing actuator to the front and separate the intake camshaft and the actuator.



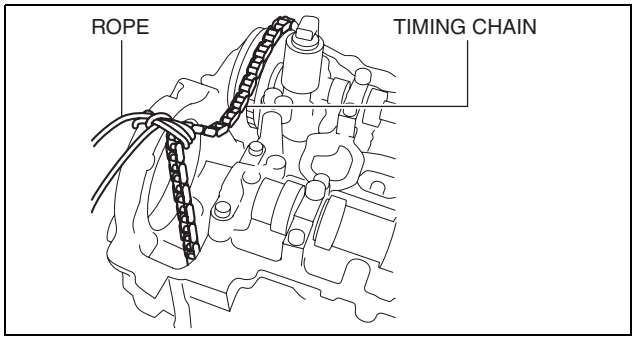
am3uuw0000903

5. Remove the timing chain from the exhaust and intake camshaft sprockets and set is aside, and remove the electric variable valve timing actuator.



am3uuw0000903

6. Return the timing chain to the exhaust camshaft sprocket, and pull the timing chain up and suspend it using a rope as shown in the figure.

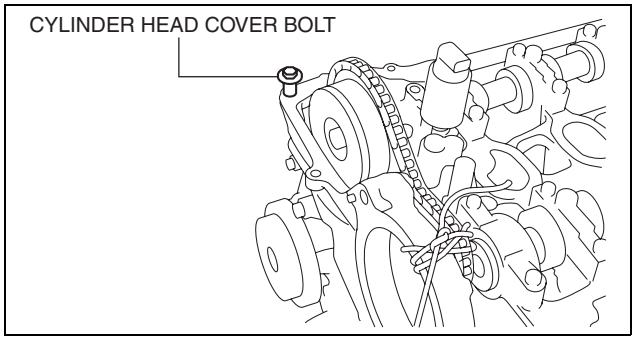


am3uuw0000877

Hydraulic Variable Valve Timing Actuator and Exhaust Camshaft Component Removal Note

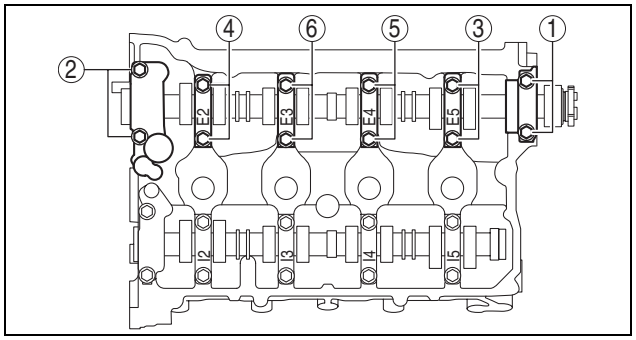
Caution
- **Keep the timing chain pulled up during and after the work in which it has been set aside from the sprocket. If the chain falls down, it may disengage from the sprocket on the crankshaft side and deviate, leading to valve timing deviation.**
- **After servicing, always verify the valve timing.**

1. Leave the timing chain as it is, which was suspended after electric variable valve timing actuator removal.
2. Temporarily install the cylinder head cover bolt to the position shown in the figure to use it for suspending the timing chain.



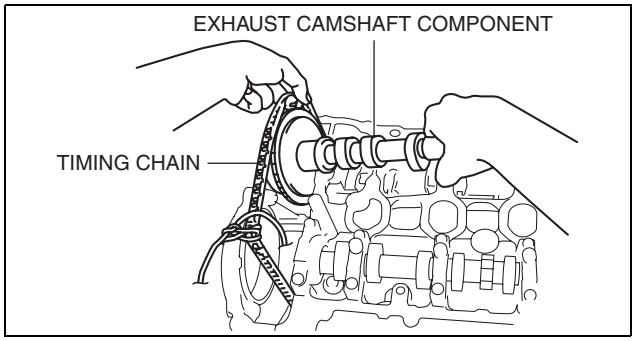
am3uuw0000877

3. Loosen the exhaust-side camshaft cap bolts in two or three passes in the order shown in the figure, and remove the camshaft cap.



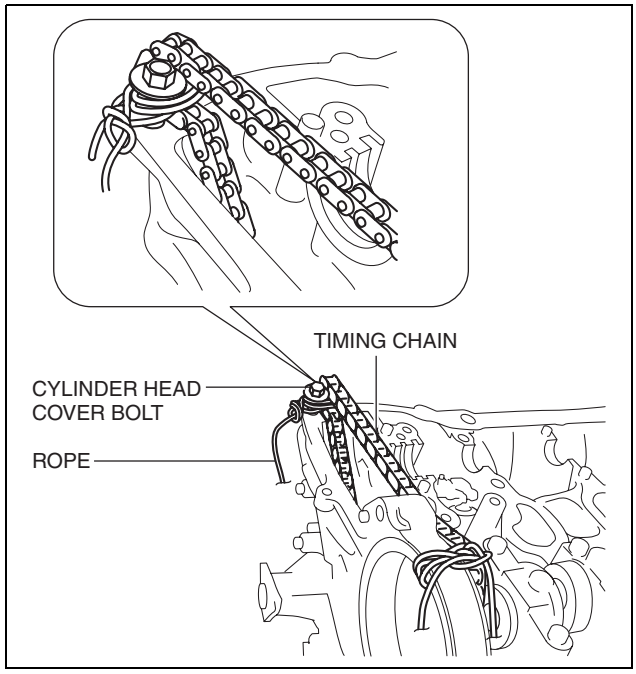
am3uuw0000877

4. While setting the timing chain aside, remove the hydraulic variable valve timing actuator and the exhaust camshaft as a single unit.



am3uuw0000877

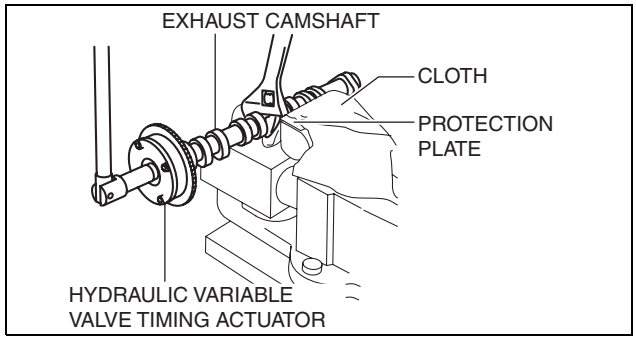
5. Pull up the timing chain and suspend it using a rope as shown in the figure.



am3uuw0000877

Hydraulic Variable Valve Timing Actuator Removal Note

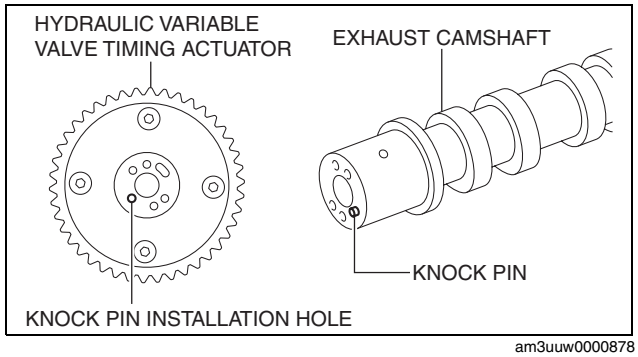
1. Lock the exhaust camshaft against rotation by holding the exhaust camshaft with a vise and securing the cast hexagon with a wrench.
2. Loosen the hydraulic variable valve timing actuator installation bolt and remove the actuator.



am3uuw0000877

Hydraulic Variable Valve Timing Actuator Installation Note

1. When replacing the hydraulic variable valve timing actuator, place a mark at the same position as the one placed before removal.
2. Align the knock pin on the end of the exhaust camshaft with the knock pin installation hole on the actuator side, and temporarily assemble the bolt.

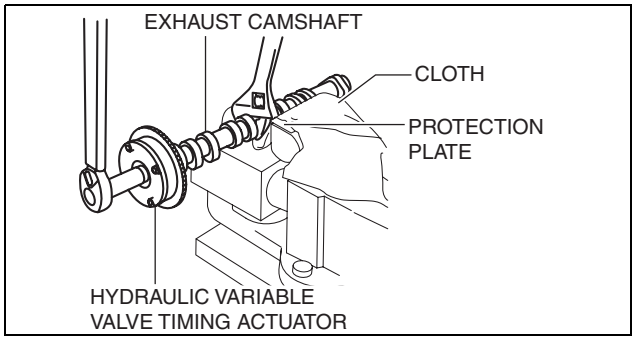


am3uuw0000878

MECHANICAL [SKYACTIV-G 2.0]

3. Lock the exhaust camshaft against rotation by holding the exhaust camshaft with a vise and securing the cast hexagon with a wrench.
4. Tighten the hydraulic variable valve timing actuator installation bolt.

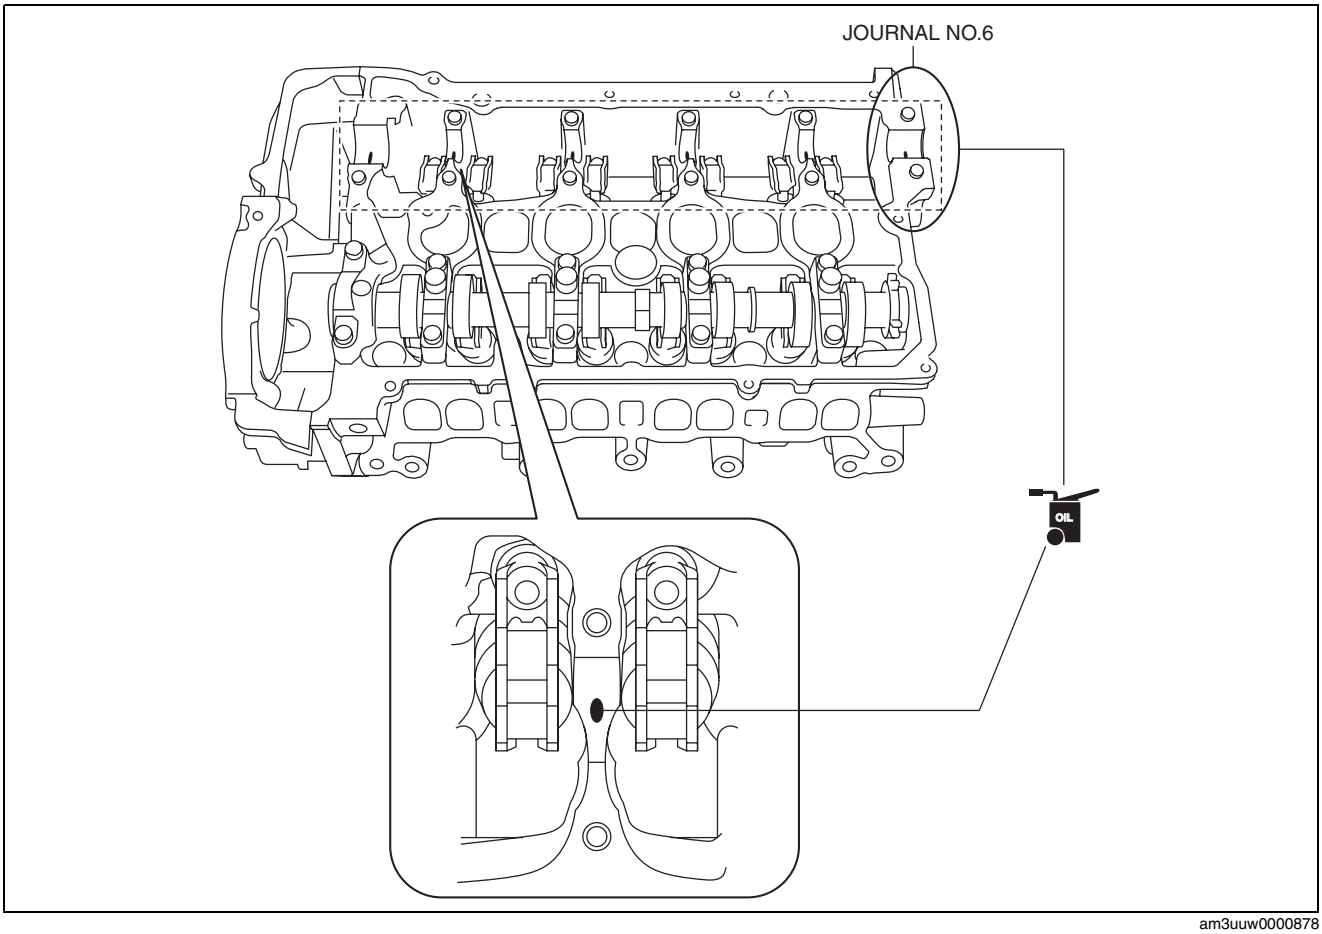
Tightening torque
75—85 N·m {7.7—8.6 kgf·m, 56—62 ft·lbf}



am3zzw0001258

Hydraulic Variable Valve Timing Actuator and Exhaust Camshaft Component Installation Note

1. As shown in the figure, apply gear oil (SAE No. 90 or equivalent) or engine oil to the center area (exhaust side) of each journal of the cylinder head.



am3uuw0000878

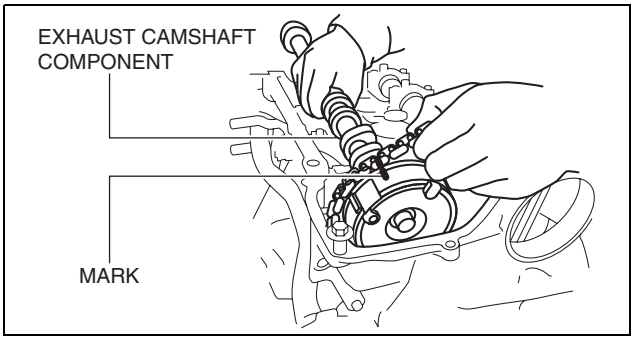
Caution

- **Apply 0.05 ml {0.05 cc, 0.003 in^3} or less of oil to journal No.6.**

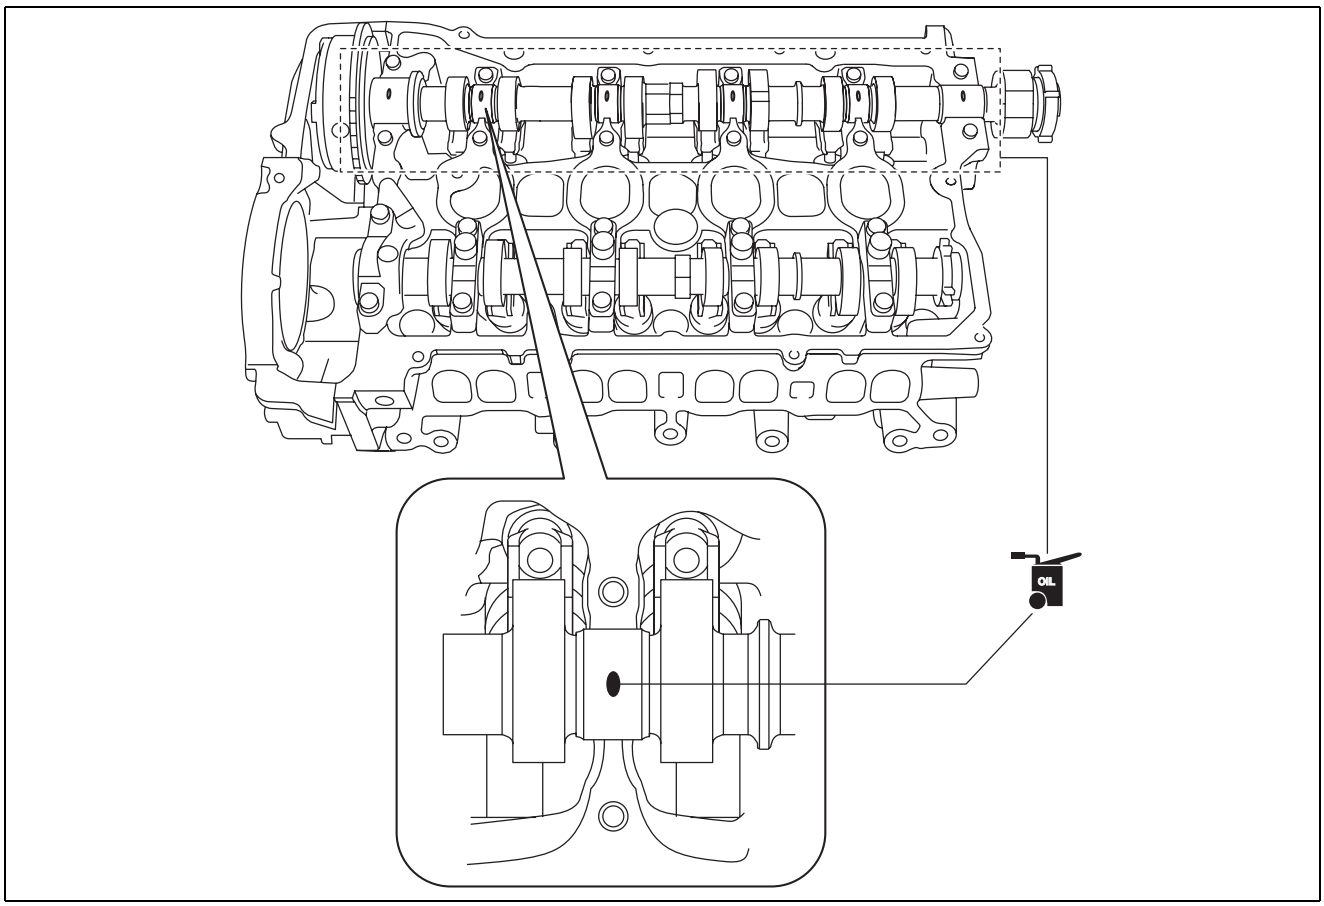
2. Remove the rope suspending the timing chain on the exhaust side.

MECHANICAL [SKYACTIV-G 2.0]

3. While aligning the mark on the timing chain placed during removal with the one on the hydraulic variable valve timing actuator, place the exhaust camshaft component on the cylinder head.
4. As shown in the figure, apply gear oil (SAE No. 90 or equivalent) or engine oil to the center area of each journal of the exhaust camshaft.



am3uuw0000878



am3uuw0000878

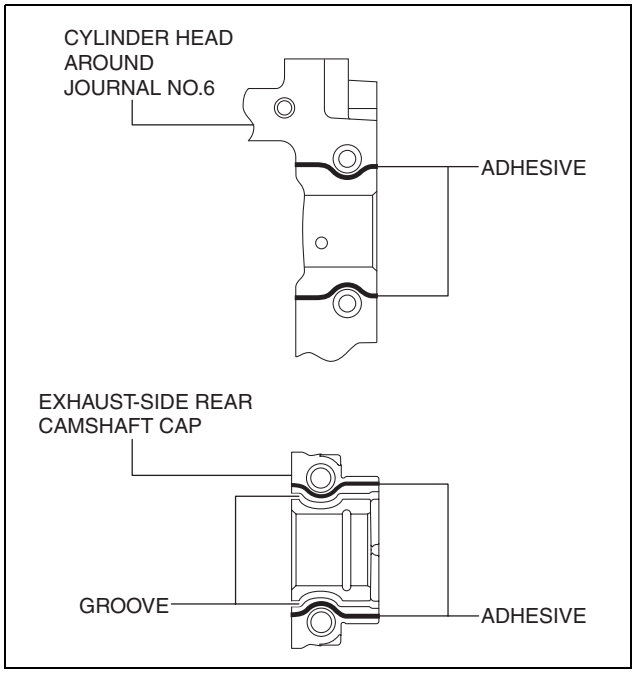
MECHANICAL [SKYACTIV-G 2.0]

5. Apply adhesive agent (Loctite 962T) around journal No.6 of the cylinder head or the exhaust-side rear camshaft cap.

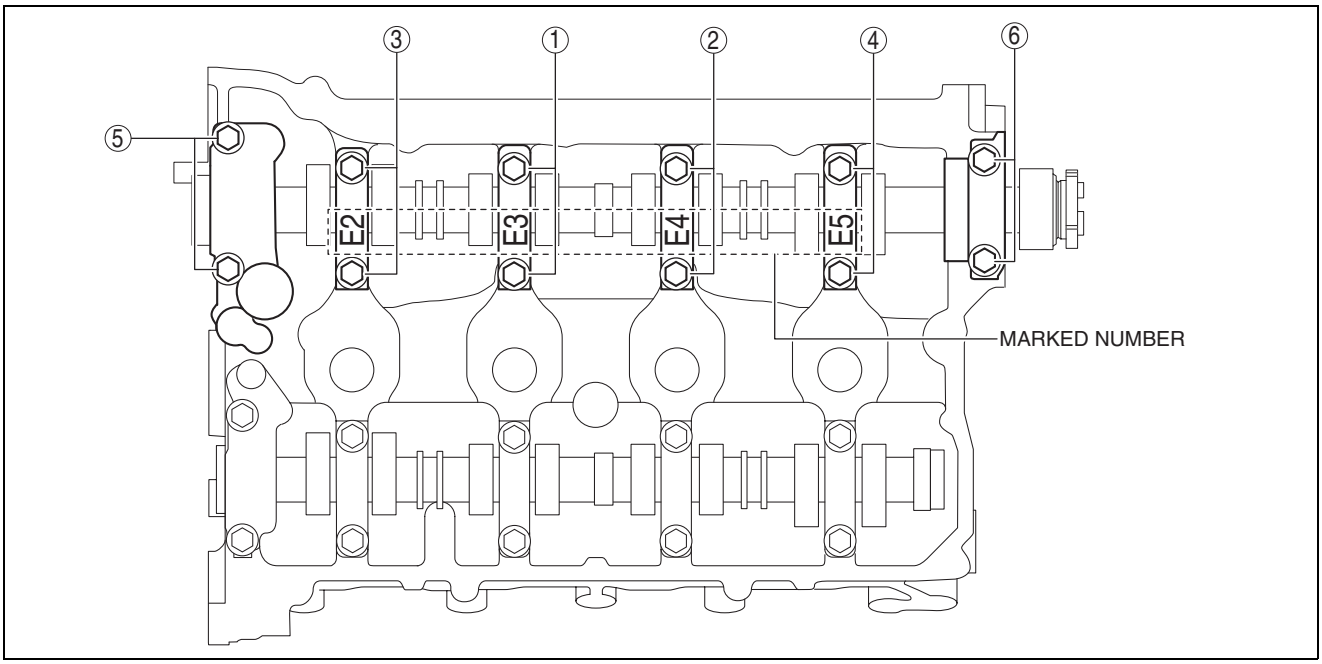
   Caution
   - **Verify that there is no adhesive agent on the journal.**

   Adhesive agent bead width
   0.5—1.5 mm {0.02—0.05 in}

6. Install the camshaft caps in the marked number order, and temporarily tighten the camshaft cap installation bolts in two or three passes evenly.
7. Tighten the camshaft cap installation bolts in two steps in the order shown in the figure.



ac5uuw00000473



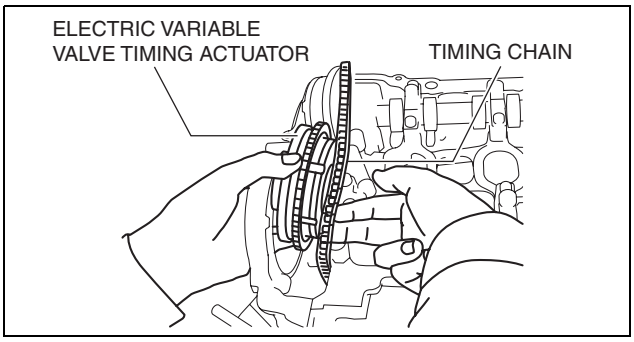
am3uuw0000878

Tightening torque
First step: 3.0—6.0 N·m {31—61 kgf·cm, 27—53 in·lbf}
Second step: 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

MECHANICAL [SKYACTIV-G 2.0]

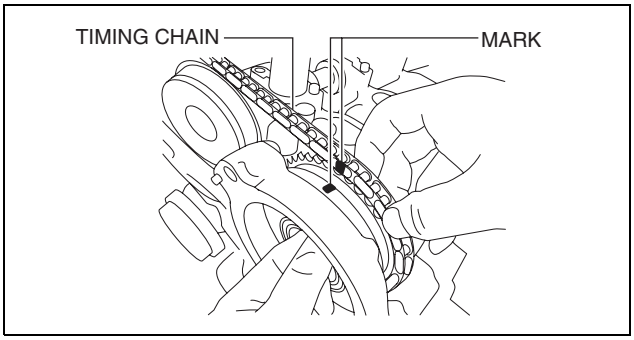
Electric Variable Valve Timing Actuator Installation Note

1. When replacing the electric variable valve timing actuator with a new one, place a mark at the same position as the one placed before removal.
2. Remove the rope suspending the timing chain on the intake side.
3. Remove the timing chain from the exhaust and intake camshaft sprockets and set it aside to the rear, then insert the electric variable valve timing actuator between the engine front cover and the cylinder head.
4. Return the timing chain to the exhaust camshaft sprocket.



am3uuw0000903

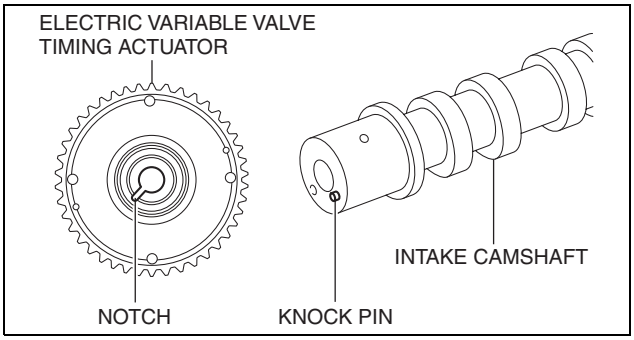
5. While aligning the mark on the timing chain placed during removal with the one on the electric variable valve timing actuator, engage the chain with the sprocket.



am3uuw0000878

6. Align the knock pin on the end of the intake camshaft with the notch on the actuator side, then assemble the actuator.

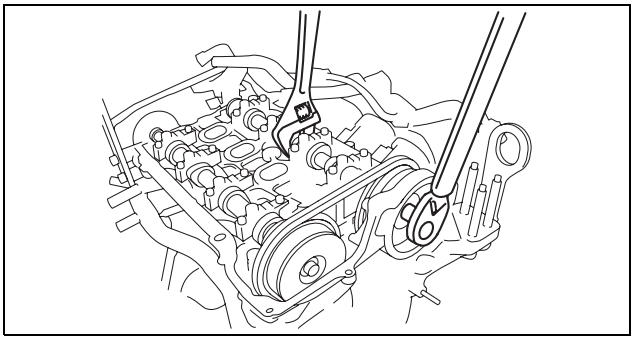
   Note
   - Adjust the knock pin with the notch while adjusting the knock pin position by rotating the camshaft.



am3uuw0000903

7. Hold the intake camshaft using a wrench on the cast hexagon, and tighten the electric variable valve timing actuator installation bolt.

   Tightening torque
   102—114 N·m {10.5—11.6 kgf·m, 76—84 ft·lbf}

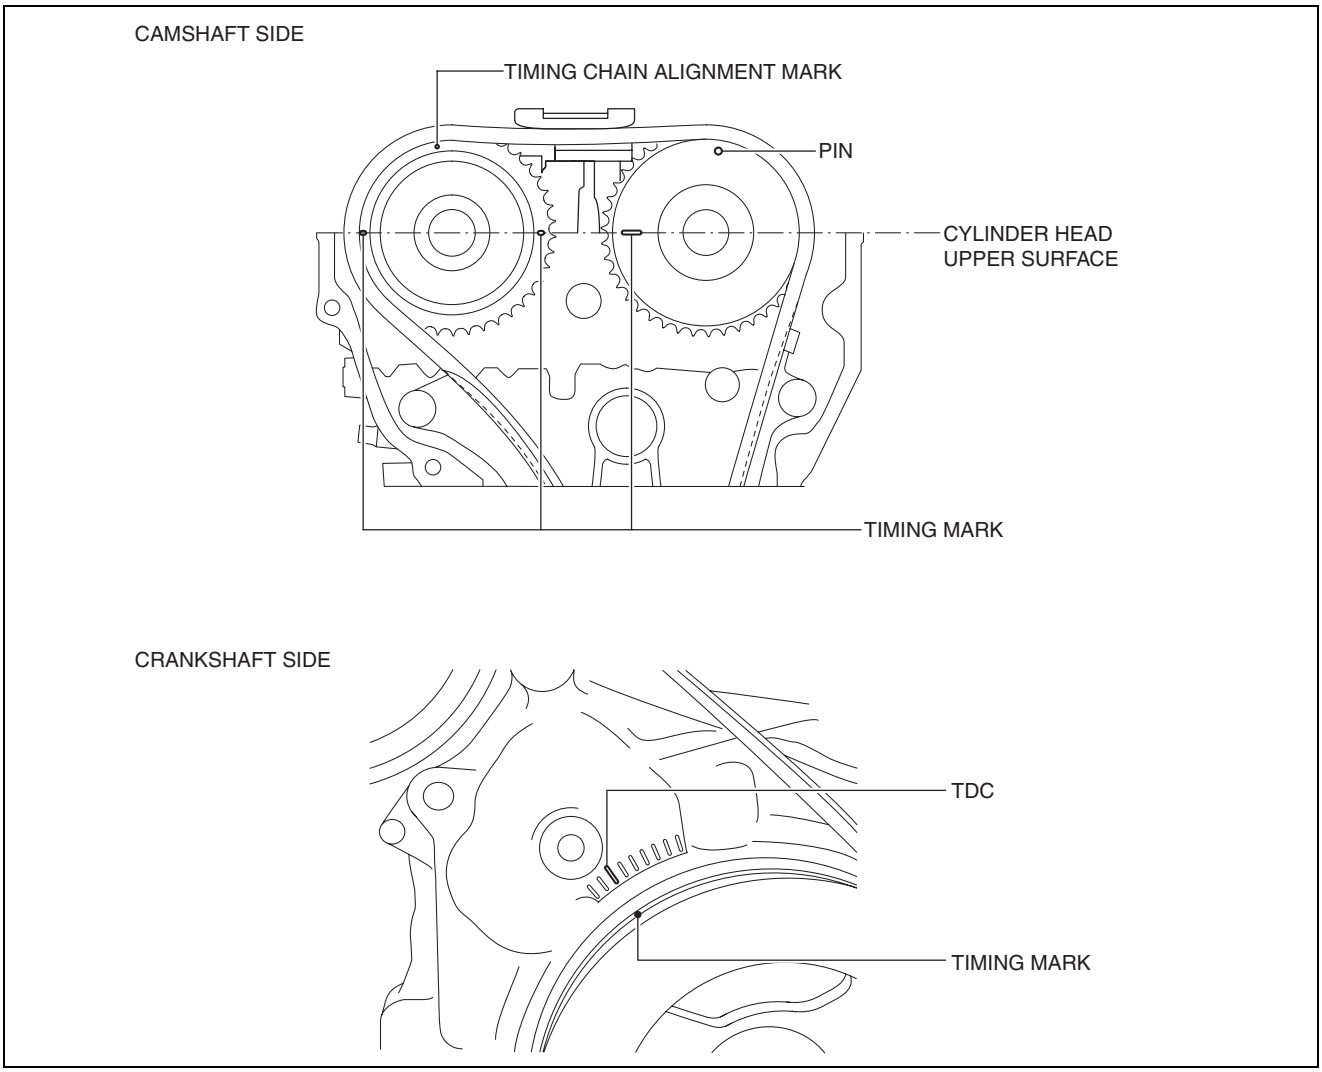


am3uuw0000878

MECHANICAL [SKYACTIV-G 2.0]

Timing Chain Installation Note

1. Install the chain guide (No.1).
2. Remove the bolt securing the tensioner arm and apply tension to the timing chain.
3. Rotate the crankshaft clockwise two turns and verify that the valve timing is correct.

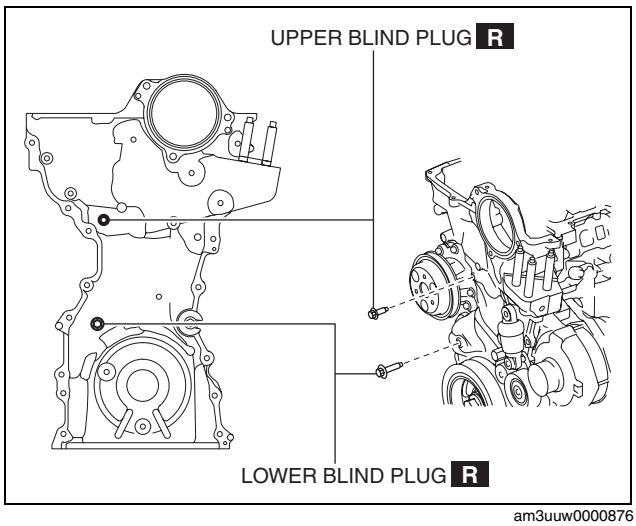


am3uuw0000879

- If the valve timing is not correct, remove the engine front cover and reassemble the timing chain to each sprocket. (See 01-10A-39 TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

4. Install the blind plugs (upper and lower) for the engine front cover service holes.

Tightening torque
Upper: 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}
Lower: 17—23 N·m {1.8—2.3 kgf·m, 13—16 ft·lbf}



am3uuw0000876

MECHANICAL [SKYACTIV-G 2.0]

Oil Shower Pipe Installation Note

1. Install the oil shower pipe in the order shown in the figure.

Tightening torque

Installation position	Tightening torque
1	9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}
2, 3	8.0—9.0 N·m {82—91 kgf·cm, 71—79 in·lbf}

OIL CONTROL VALVE (OCV) INSPECTION [SKYACTIV-G 2.0]

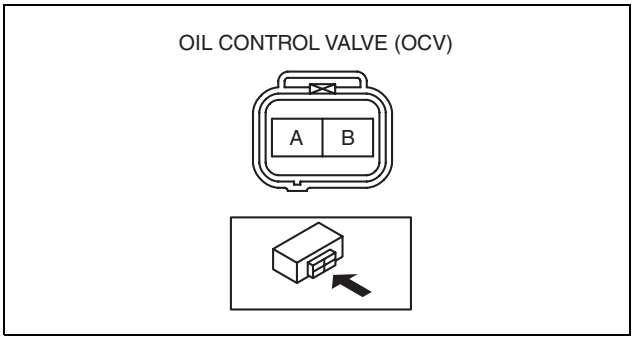
id0110h2801400

Coil Resistance Inspection

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Disconnect the OCV connector.
4. Measure the resistance between terminals A and B using an ohmmeter.

   OCV coil resistance
   6.9—7.5 ohms [20°C {68°F}]

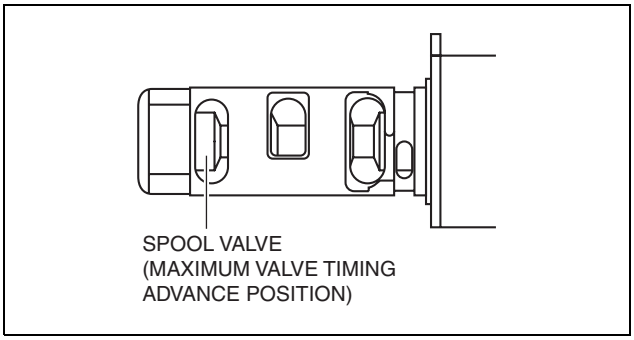
   - If not as specified, replace the OCV. (See 01-10A-38 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Install in the reverse order of removal.



ac5wzw0000319

Spool Valve Operation Inspection

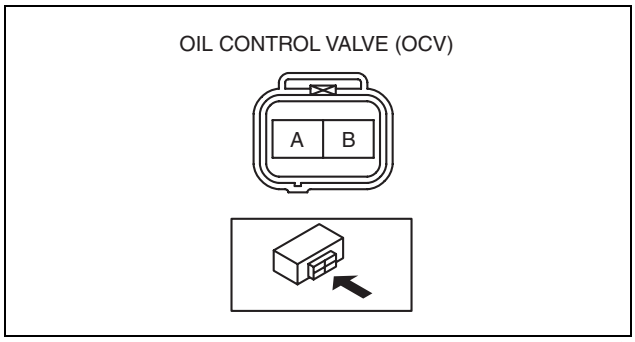
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the OCV. (See 01-10A-38 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Verify that the spool valve in the OCV is in the maximum valve timing advance position as indicated in the figure.
   - If not as specified, replace the OCV. (See 01-10A-38 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Verify that the battery is fully charged. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].)
   - If not as specified, recharge the battery. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].)



ac5wzw0000320

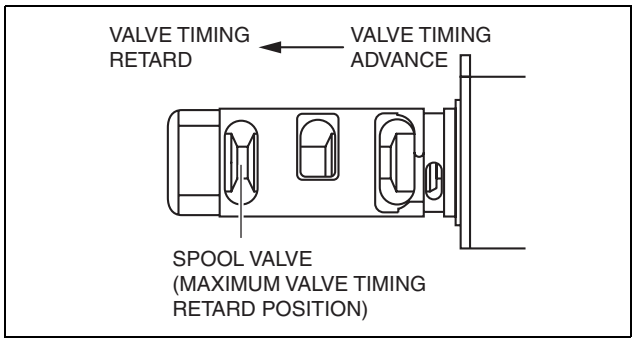
MECHANICAL [SKYACTIV-G 2.0]

Note
- When applying battery positive voltage between the OCV terminals, the connection can be either of the following:
  - — Positive battery cable to terminal A, negative battery cable to terminal B
  - — Positive battery cable to terminal B, negative battery cable to terminal A



ac5wzw0000319

5. Apply battery positive voltage between the OCV terminals and verify that the spool valve operates and moves to the maximum valve timing retard position.
   - If not as specified, replace the OCV. (See 01-10A-38 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
6. Stop applying battery positive voltage and verify that the spool valve returns to the maximum valve timing advance position.
   - If not as specified, replace the OCV. (See 01-10A-38 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



ac5wzw0000320

7. Install the OCV. (See 01-10A-38 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0110h2801300

Warning
- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the ignition coil/ion sensors. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Remove the cylinder head cover. (See 01-10A-39 TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Remove in the order indicated in the table.

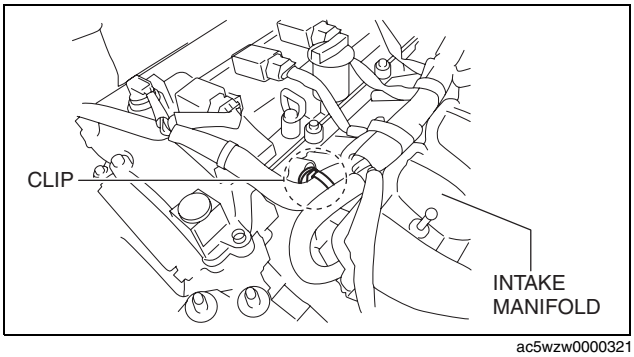
Cylinder Head Cover Removal Note

1. Disconnect the OCV connector.
2. Remove the wiring harness clips secured to the cylinder head cover.
3. Remove the wiring harness clip secured to the intake manifold as shown in the figure, and set the wiring harness aside.
4. Disconnect the ventilation hose.
5. Disconnect the brake vacuum hose from the intake manifold and set it aside.
6. Remove the cylinder head cover.



ac5wzw0000321

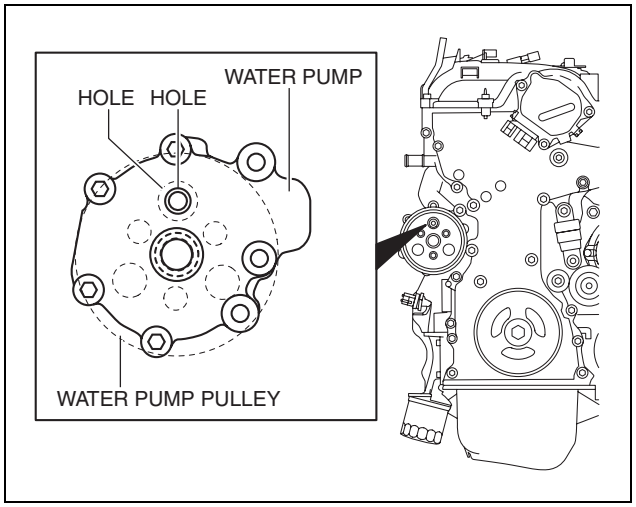
MECHANICAL [SKYACTIV-G 2.0]

Water Pump Pulley Removal Note

Caution

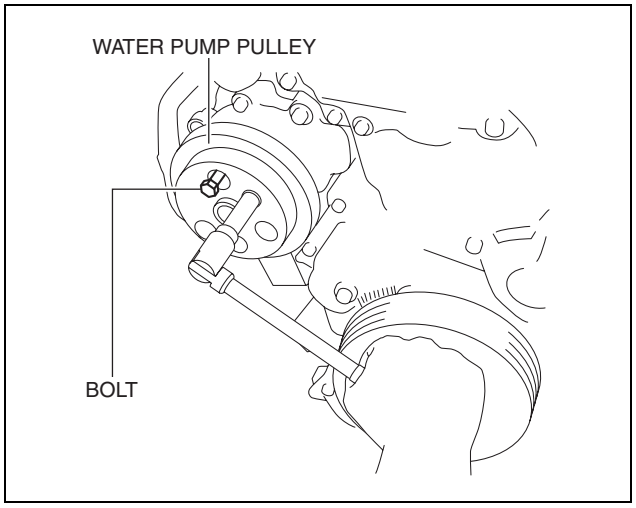
- **Be careful not to damage the belt groove and surface of the water pump pulley when using tools, otherwise it will cause wear, breakage, abnormal noise of the drive belt (stretch belt), damage to the pulley, and rust.**

1. Align the water pump pulley hole with the water pump hole as shown in the figure.



ac5wzw0000321

2. Insert an appropriate bolt (length **approx. 70 mm {2.8 in}**) into the water pump hole as shown in the figure, and lock the water pump pulley against rotation.
3. Remove the water pump pulley.
4. Remove the bolt used for locking the water pump pulley against rotation.



ac5wzw0000321

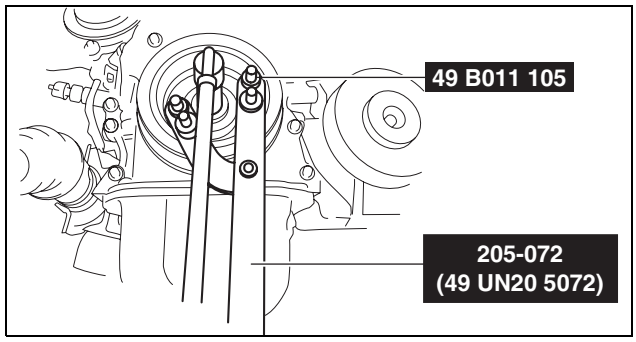
MECHANICAL [SKYACTIV-G 2.0]

Crankshaft Pulley Lock Bolt Removal Note

Caution

- **To prevent damage to the crankshaft pulley, protect the crankshaft pulley with a clean cloth so that the bar part (205-072) of the SST does not contact the crankshaft pulley.**
- **To prevent damage to the engine front cover, be careful not to allow the tab part (49 B011 105) of the SST to get caught between the crankshaft pulley and the engine front cover.**

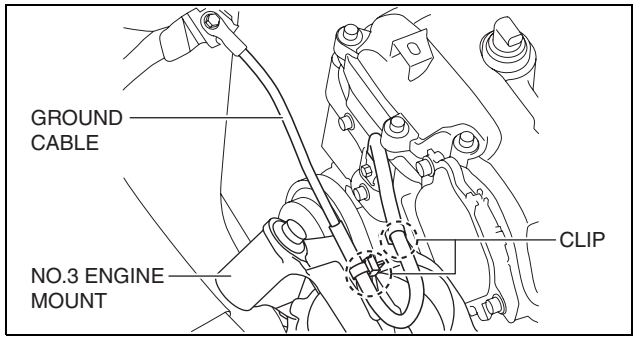
1. Install the **SST** to the crankshaft pulley, and lock the crankshaft against rotation.
2. Remove the crankshaft pulley lock bolt.



ac5wzw0000321

No.3 Engine Mount Removal Note

1. Remove the clips shown in the figure and set the ground cable aside.

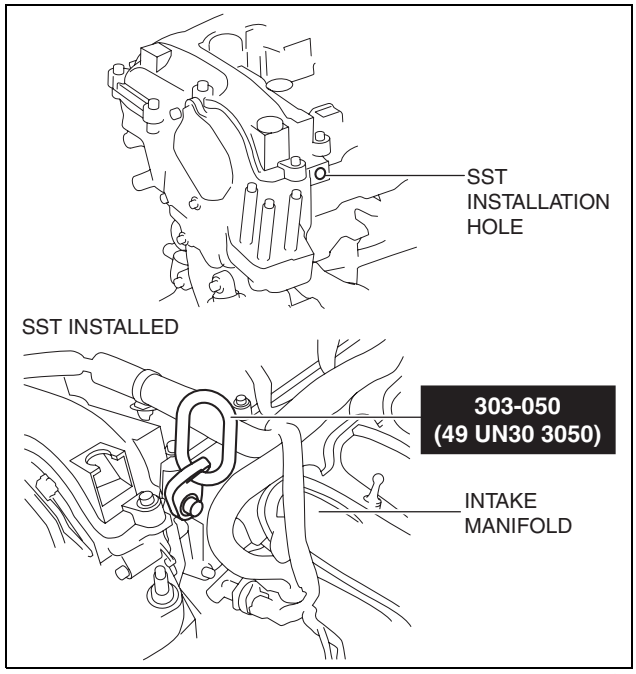


ac5wzw0000321

2. Install the **SST** using **part number 99794 1025** or an **M10 x 1.25**, length **25 mm {0.98 in}** bolt as shown in the figure.

Caution

- **Slots have been adopted for the No.3 engine mount installation holes. If the No.3 engine mount is deviated from the original position when installing the No.3 engine mount, engine noise or vibration could increase. Before removing the No.3 engine mount, place alignment marks on the No.3 engine mount and body so that they can be assembled to the same positions as before removal.**



ac5wzw0000465

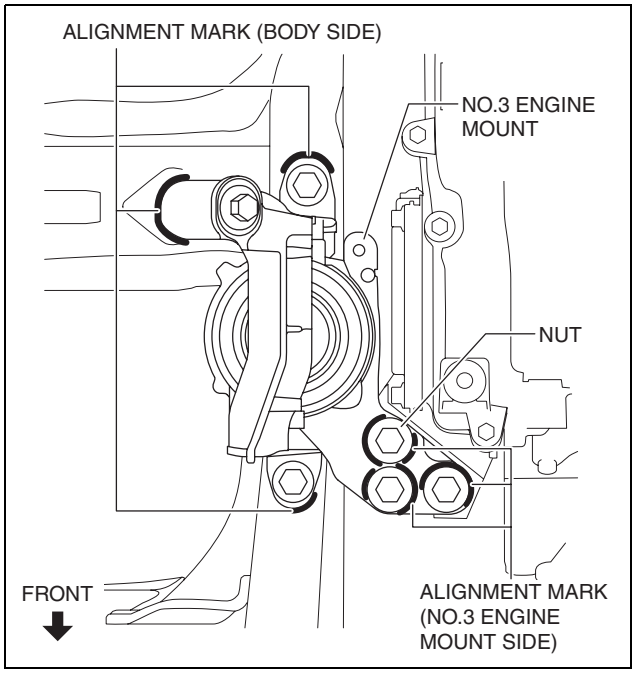
3. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

Note
- Paint so that the No.3 engine mount is framed on the body side and the outline of the nut is framed on the No.3 engine mount side.

4. Install the **SST** using the following procedures.

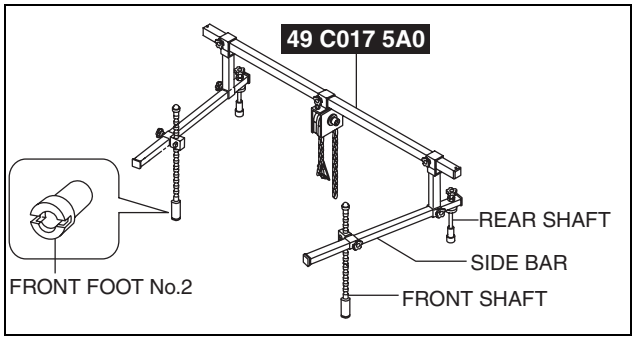
Caution
- **Refer to the SST instruction manual for the basic handing procedure.**

Note
- Install front feet No. 2 to the left and right front shafts of the **SST**.

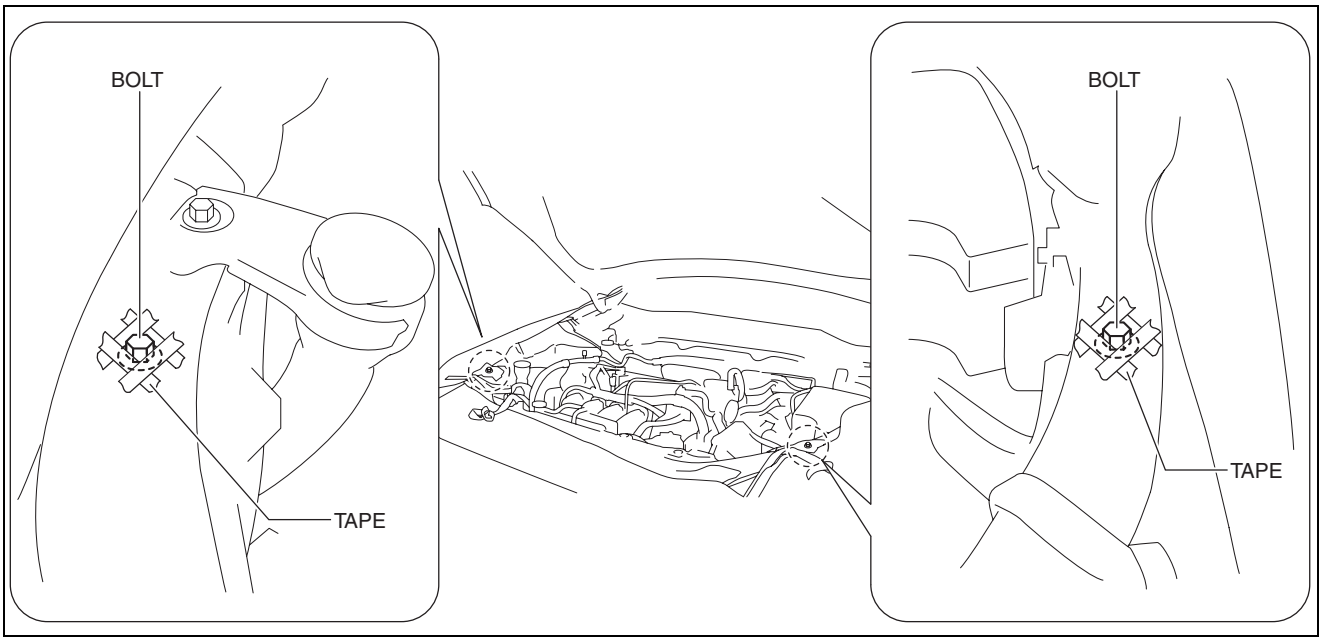


ac5wzw0000322

(1) Protect the positions shown in the figure using tape.

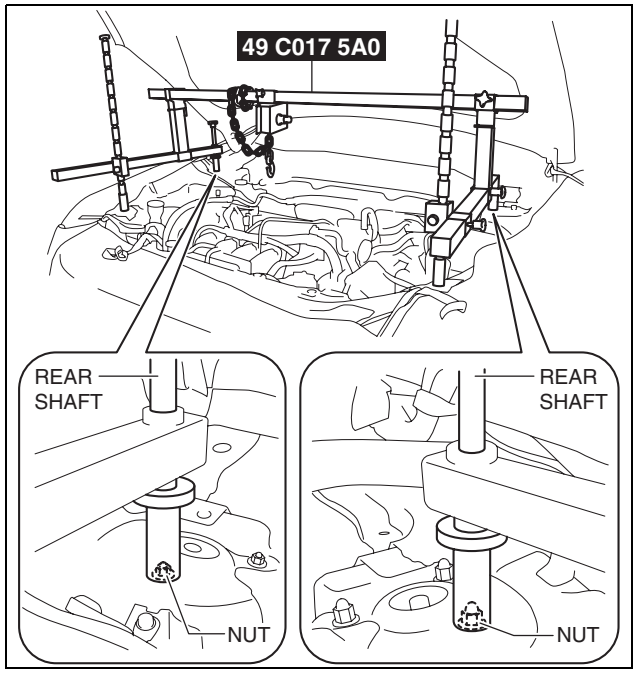


ac5wzw0000322



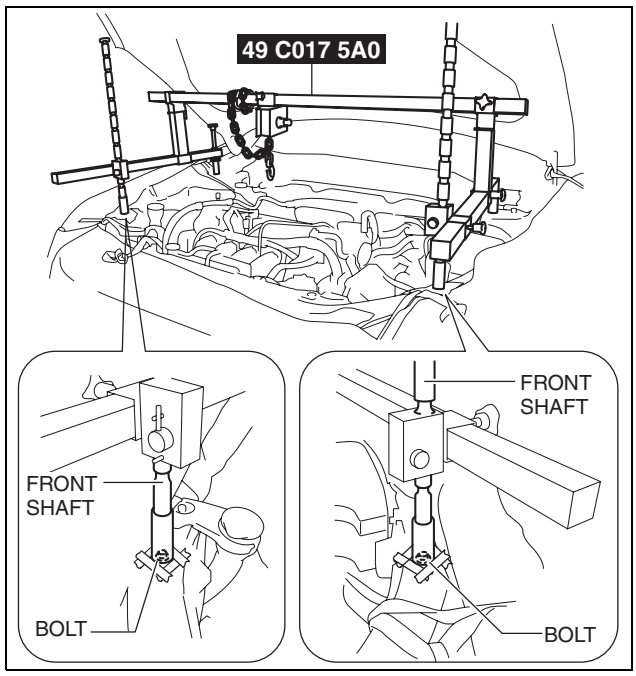
ac5wzw0000250

(2) As shown in the figure, set the rear shafts of the **SST** to the left and right shock absorber nuts.



ac5wzw0000322

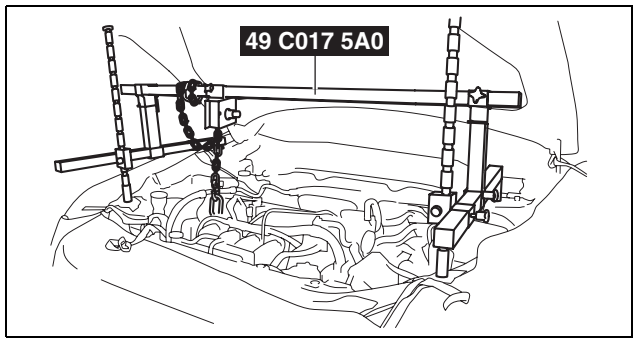
(3) As shown in the figure, set the front shafts of the SST to the left and right bolts.



ac5wzw0000285

(4) Adjust the height of the left and right side bars of the **SST** so that they are leveled, then tighten each part.
(5) Apply tension to the chain to hold the engine.

5. Remove the No.3 engine mount.

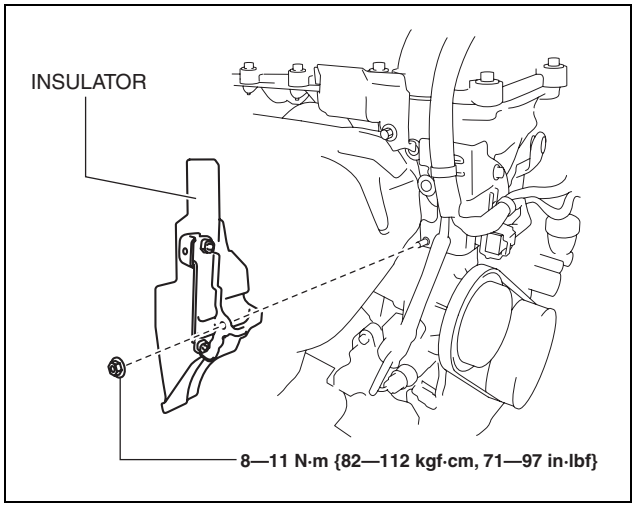


ac5uuw00000631

MECHANICAL [SKYACTIV-G 2.0]

Engine Front Cover Removal Note

1. Remove the insulator shown in the figure.

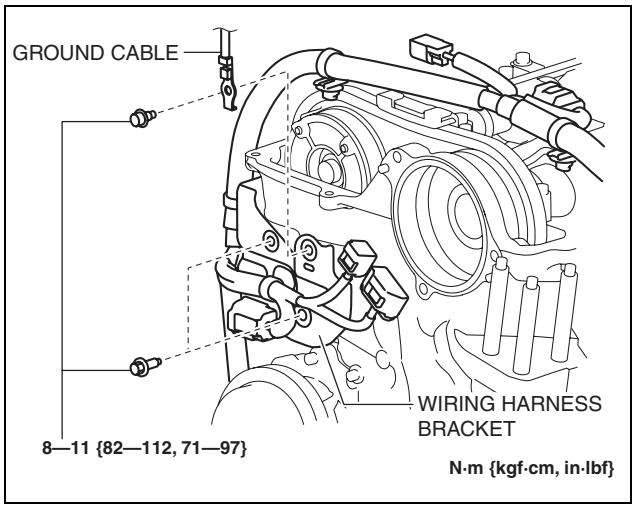


ac5wzw0000322

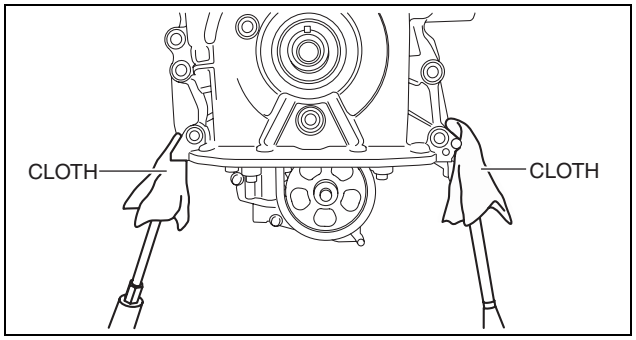
2. Set the ground cable and wiring harness bracket shown in the figure aside.
3. Remove the engine front cover installation bolts.
4. Using a screwdriver wrapped in a cloth, peel the sealant away a little at a time, and remove the engine front cover.

Caution

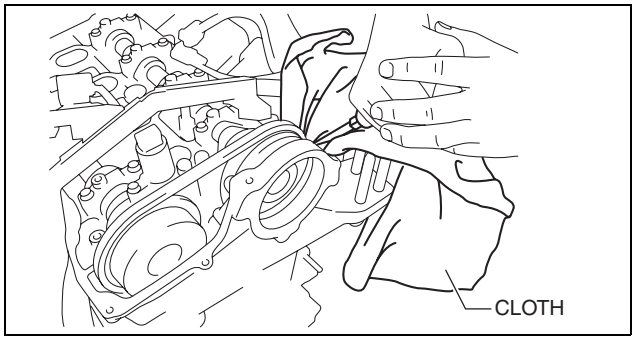
- **Do not apply excessive force to the screwdriver. Otherwise, the engine front cover could be damaged.**
- **Be careful not to scratch or damage the seal surface. Otherwise, it could cause oil leakage.**



ac5wzw0000322



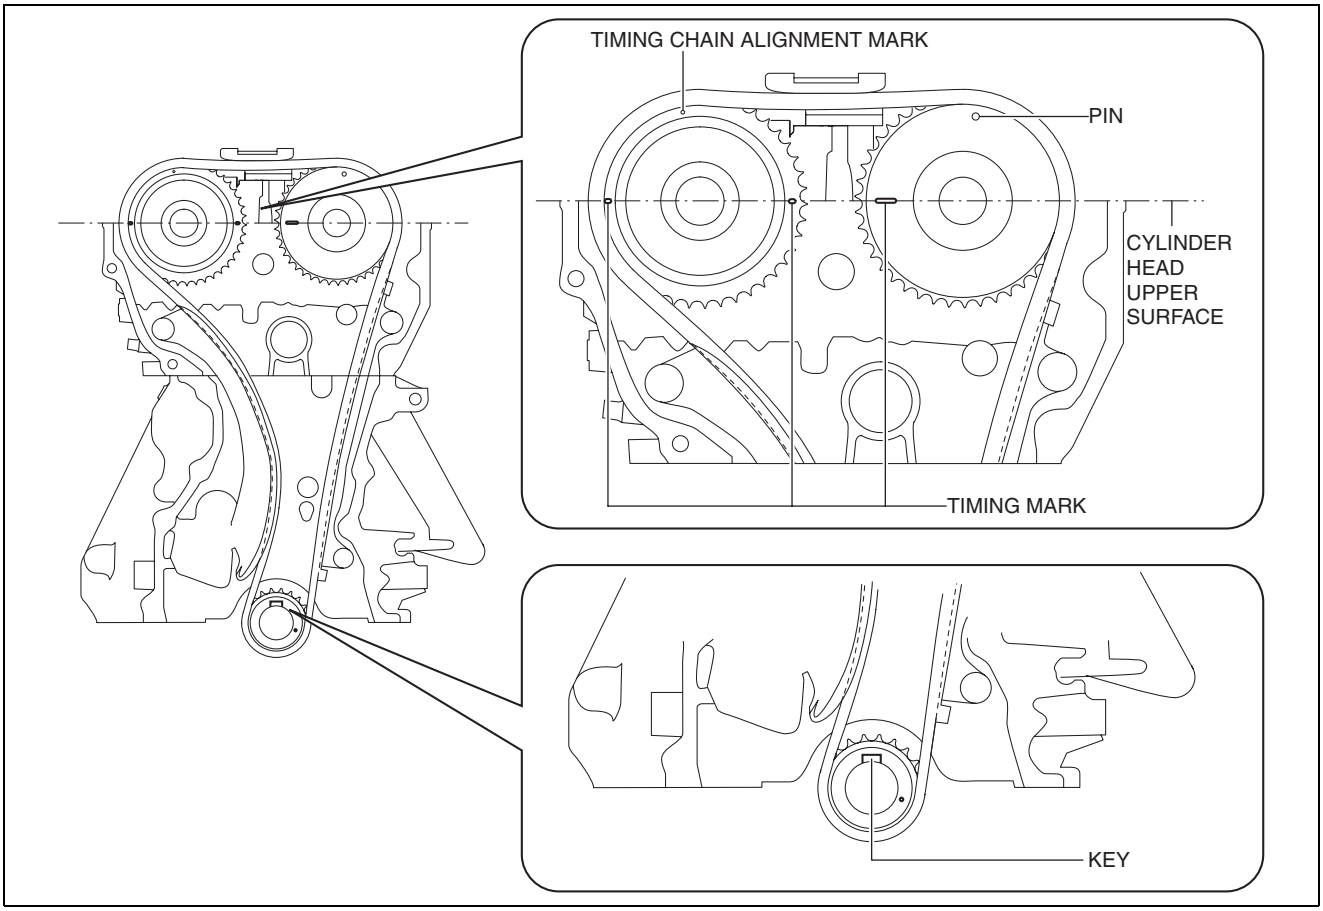
ac5wzw0000322



ac5wzw0000322

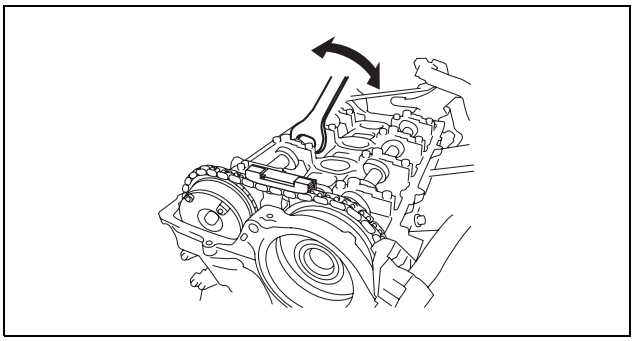
Timing Chain Removal Note

1. Rotate the crankshaft clockwise to align the timing marks and the key position as shown in the figure, and set cylinder No.1 at top dead center (TDC).



ac5wzw0000322

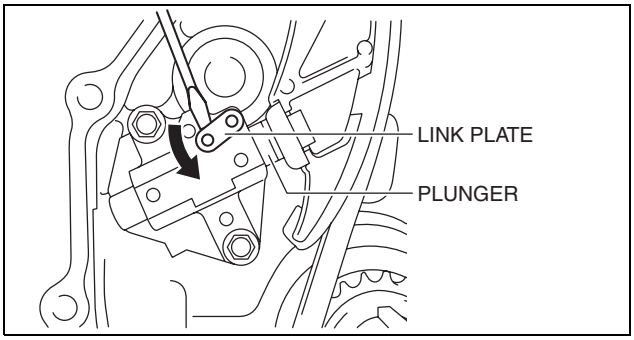
2. While moving the exhaust camshaft back and forth in the direction of the arrow using a wrench on the cast hexagon, press down the link plate of the timing chain tensioner using a precision screwdriver and release the plunger lock.



ac5wzw0000322

Note

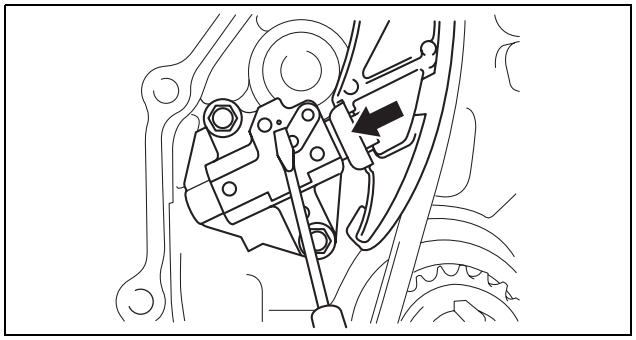
- When moving the exhaust camshaft back and forth, the timing chain pushes the plunger in the chain tensioner making it easier to operate the link plate.



ac5wzw0000323

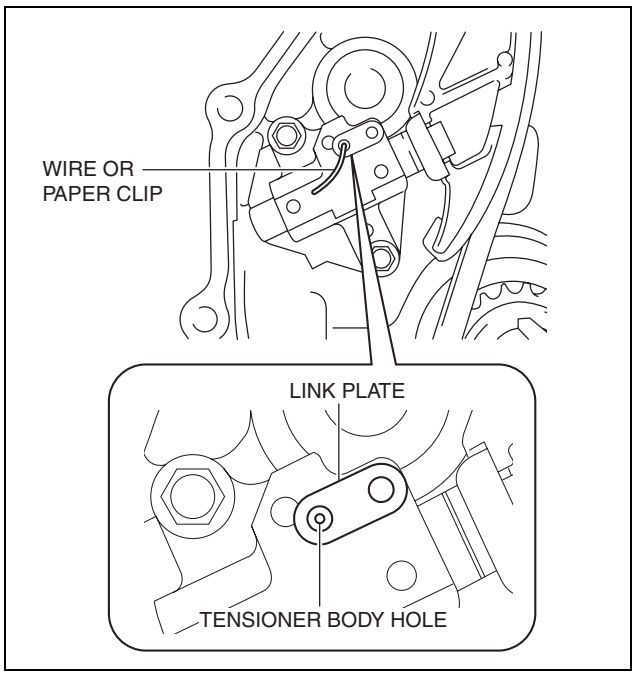
MECHANICAL [SKYACTIV-G 2.0]

3. Push back the plunger slowly in the direction shown in the figure with the link plate still pushed down.
4. Remove the screwdriver from the link plate with the plunger still pushed down.
5. Release the force slightly from the plunger, and move it back and forth **2—3 mm {0.08—0.11 in}**.



ac5wzw0000323

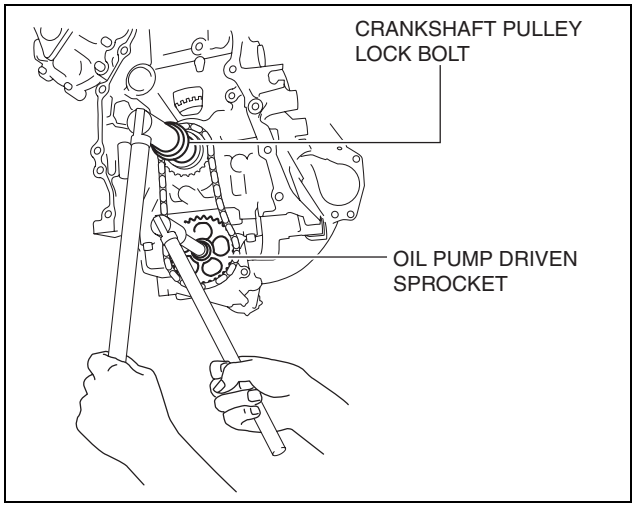
6. Insert a wire with an **approx. diameter of 1.5 mm {0.059 in}** or a paper clip where the link plate hole and the tensioner body hole overlap to secure the link plate and lock the plunger.
7. Remove the chain tensioner, tensioner arm, and the chain guide (No.1).
8. Remove the timing chain.



ac5wzw0000323

Oil Pump Driven Sprocket Removal Note

1. Temporarily assemble the crankshaft pulley lock bolt, and lock the oil pump against rotation as shown in the figure.
2. Remove the oil pump driven sprocket.
3. Remove the temporarily assembled crankshaft pulley lock bolt.



ac5wzw0000323

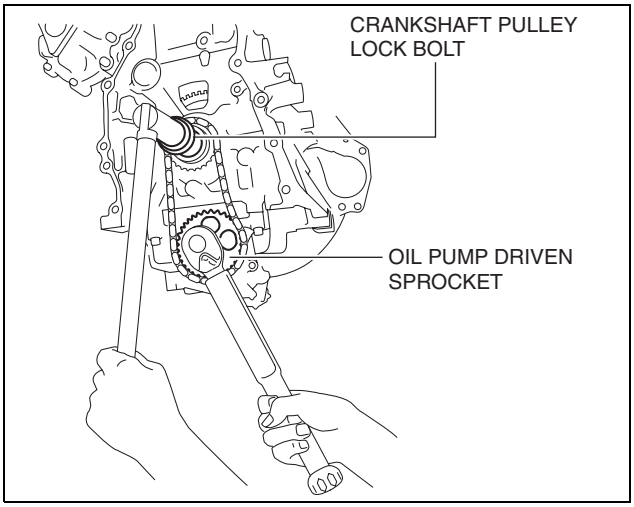
MECHANICAL [SKYACTIV-G 2.0]

Oil Pump Driven Sprocket Installation Note

1. Temporarily assemble the crankshaft pulley lock bolt, and lock the oil pump against rotation as shown in the figure.
2. Install the oil pump driven sprocket.

   Tightening torque
   20—30 N·m {2.1—3.0 kgf·m, 15—22 ft·lbf}

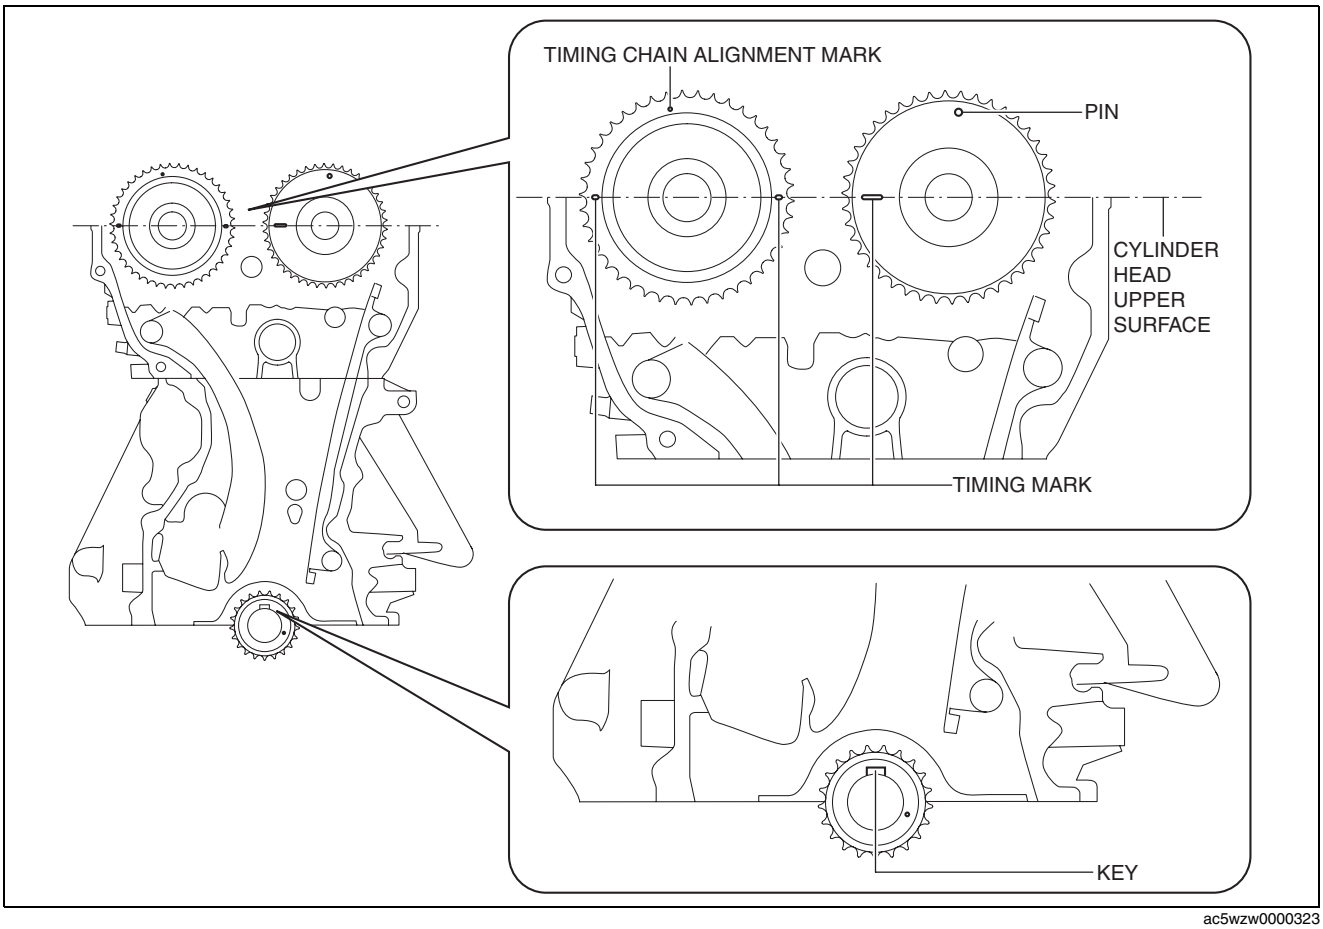
3. Remove the temporarily assembled crankshaft pulley lock bolt.



ac5wzw0000323

Timing Chain Installation Note

1. Verify that the timing marks and the key are aligned to the position shown in the figure.

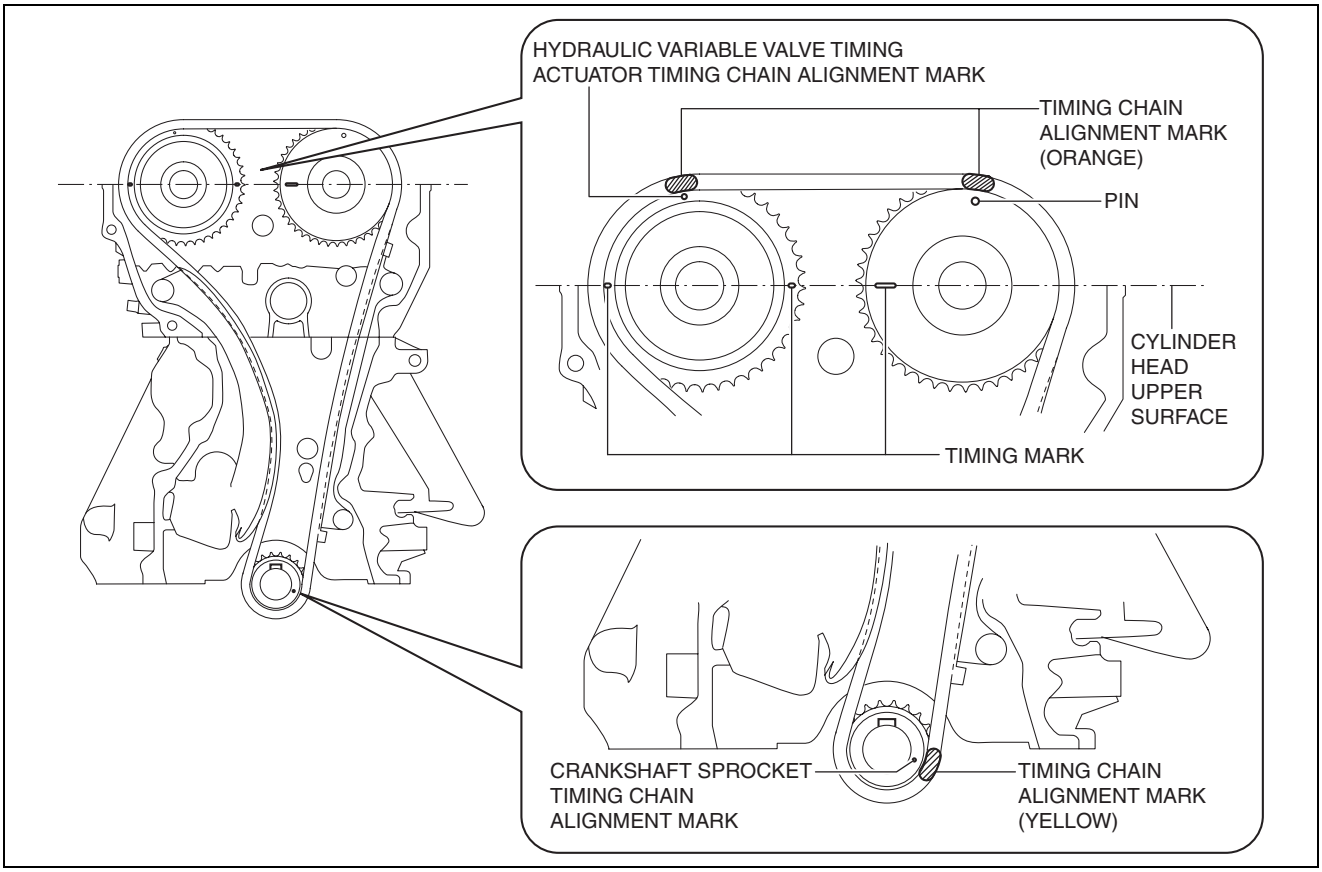


ac5wzw0000323

- If they are not in the position shown in the figure, rotate the camshaft and crankshaft to set the cylinder No.1 top dead center (TDC).

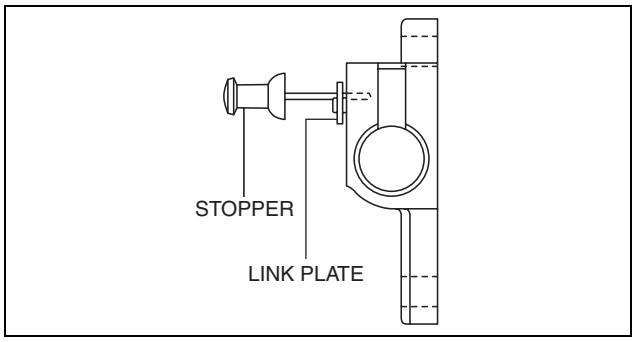
MECHANICAL [SKYACTIV-G 2.0]

2. Install the timing chain while aligning the marks on each sprocket and the timing chain as shown in the figure.



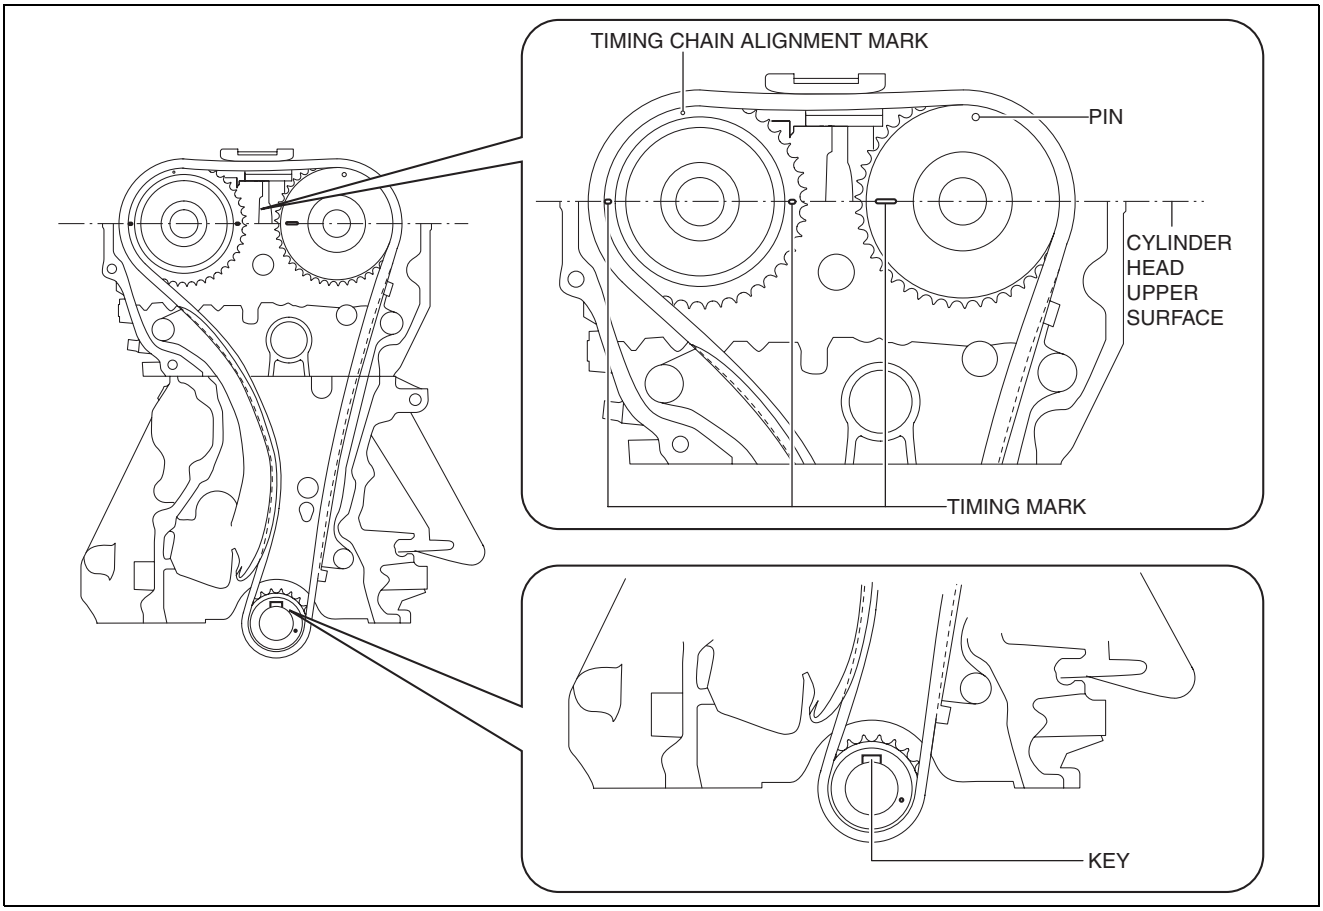
ac5wzw0000323

3. Install the chain guide (No.1).
4. Install the tensioner arm.
5. Install the chain tensioner.
6. After installing the chain tensioner, remove the installed wire or paper clip, and then apply tension to the timing chain.
   - If a new chain tensioner is used, remove the installed stopper.
7. Verify that there is no looseness in the timing chain, and re-verify that each sprocket is in the specified location.



ac5wzw0000323

8. Rotate the crankshaft clockwise two turns and inspect the valve timing.

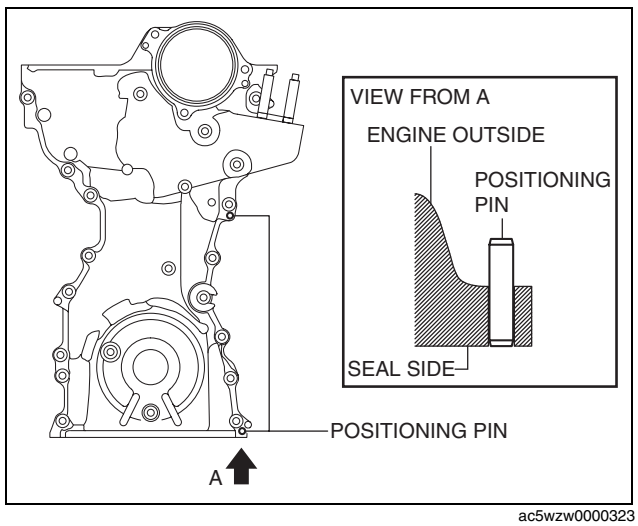


ac5wzw0000322

Engine Front Cover Installation Note

Note

- For a new engine front cover, the positioning pins in the two locations shown in the figure project to the outside of the engine.



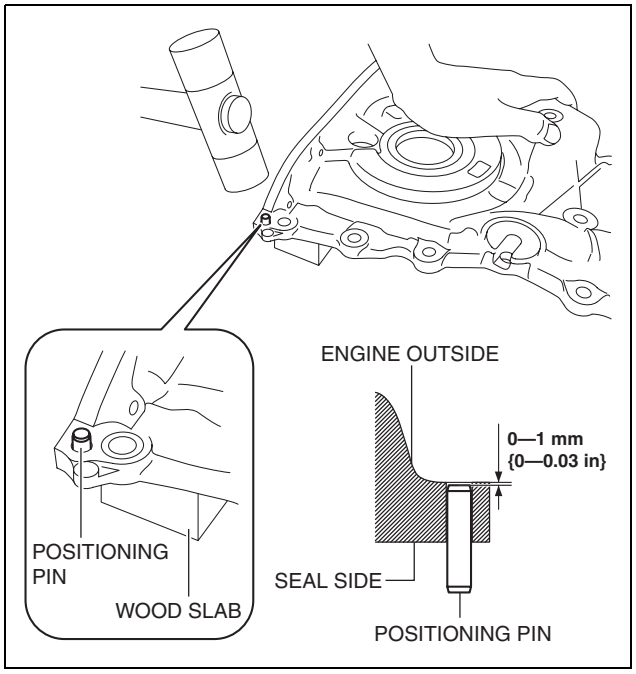
ac5wzw0000323

MECHANICAL [SKYACTIV-G 2.0]

1. If the engine front cover is newly replaced, tap the positioning pins in the two locations to the seal surface side.
2. Remove oil, dirt, and sealant adhering to the engine front cover, cylinder head, and cylinder block.
3. When reusing an engine front cover installation bolts, remove sealant adhering to the bolts.

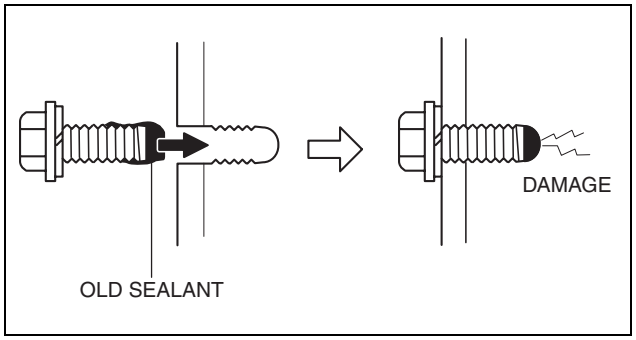
Caution

- **Apply the silicon sealant in a single, unbroken line.**
- **To prevent silicone sealant from hardening, adhere the engine front cover and the cylinder block firmly within 10 min. after applying silicone sealant. After adhering them, tighten the installation bolts immediately.**



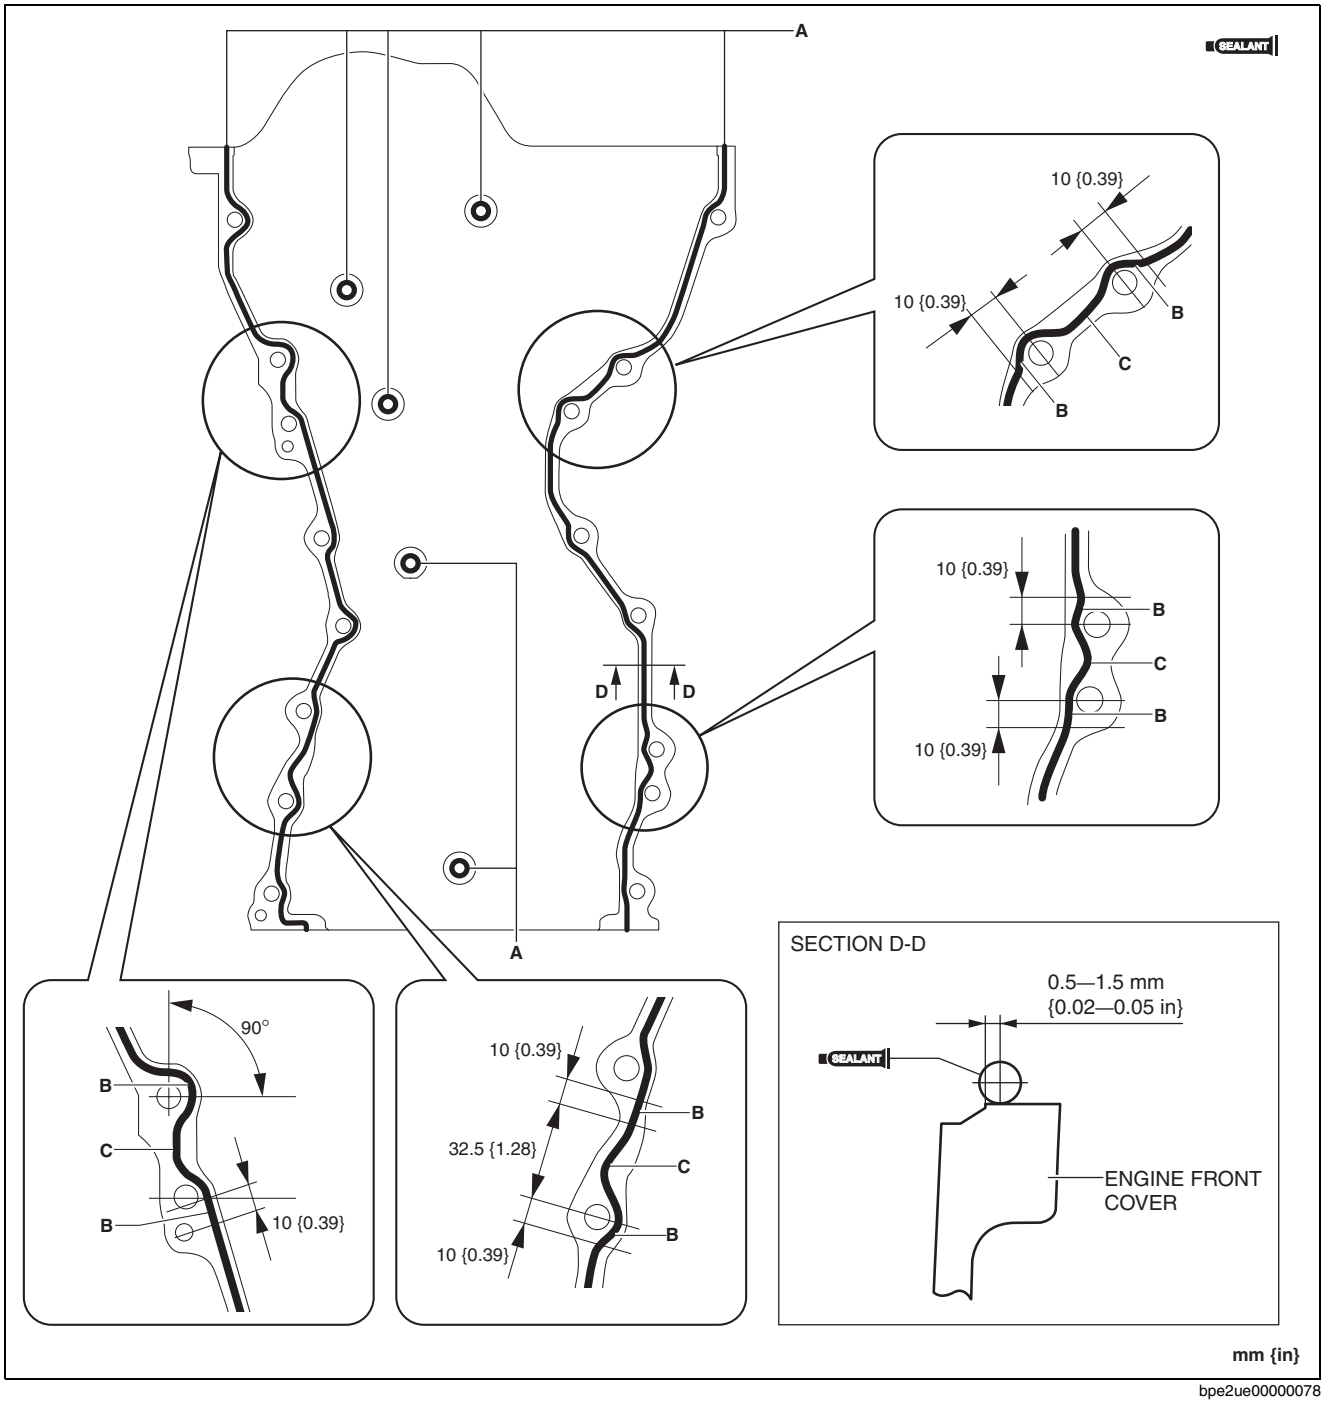
ac5wzw0000323

- **If a bolt with sealant adhering to it is used, it could result in cracks in the cylinder head and cylinder block.**



ac5wzw0000324

4. Apply silicone sealant to the engine front cover as shown in the figure.



bpe2ue00000078

Bead thickness
A: 2—6 mm {0.1—0.2 in}
B: 4—6 mm {0.16—0.23 in}
C: 4—8 mm {0.2—0.3 in}

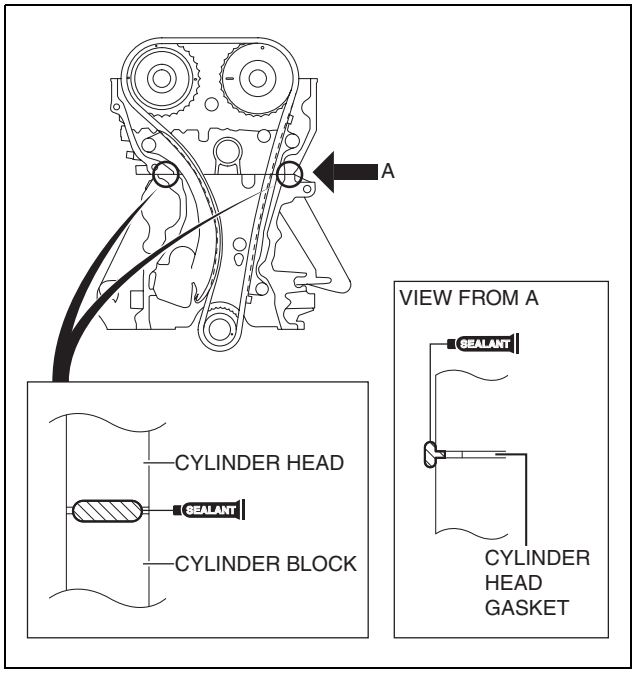
MECHANICAL [SKYACTIV-G 2.0]

5. Apply silicone sealant to the areas shown in the figure.

Caution
- **Apply the silicone sealant so that it goes into the cylinder head gasket.**

6. Install the engine front cover to the engine.

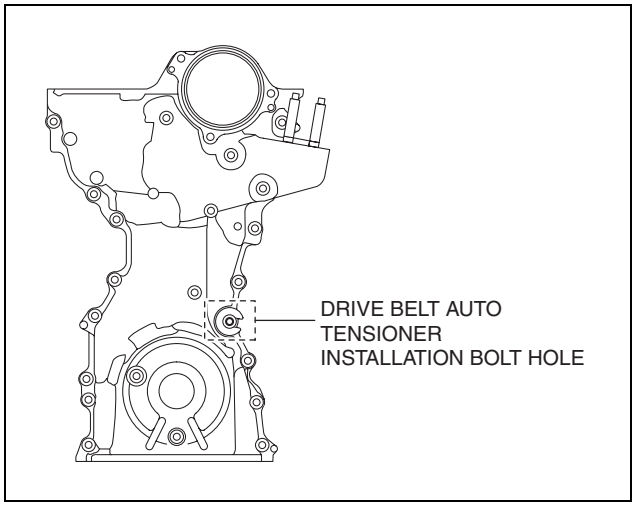
Note
- Temporarily install an appropriate bolt to the drive belt auto tensioner installation bolt hole to prevent:
  - — A silicone sealant adhesion malfunction in the drive belt auto tensioner installation bolt hole.
  - — A bolt mis-installation due to silicone sealant hardening.



ac5wzw0000324

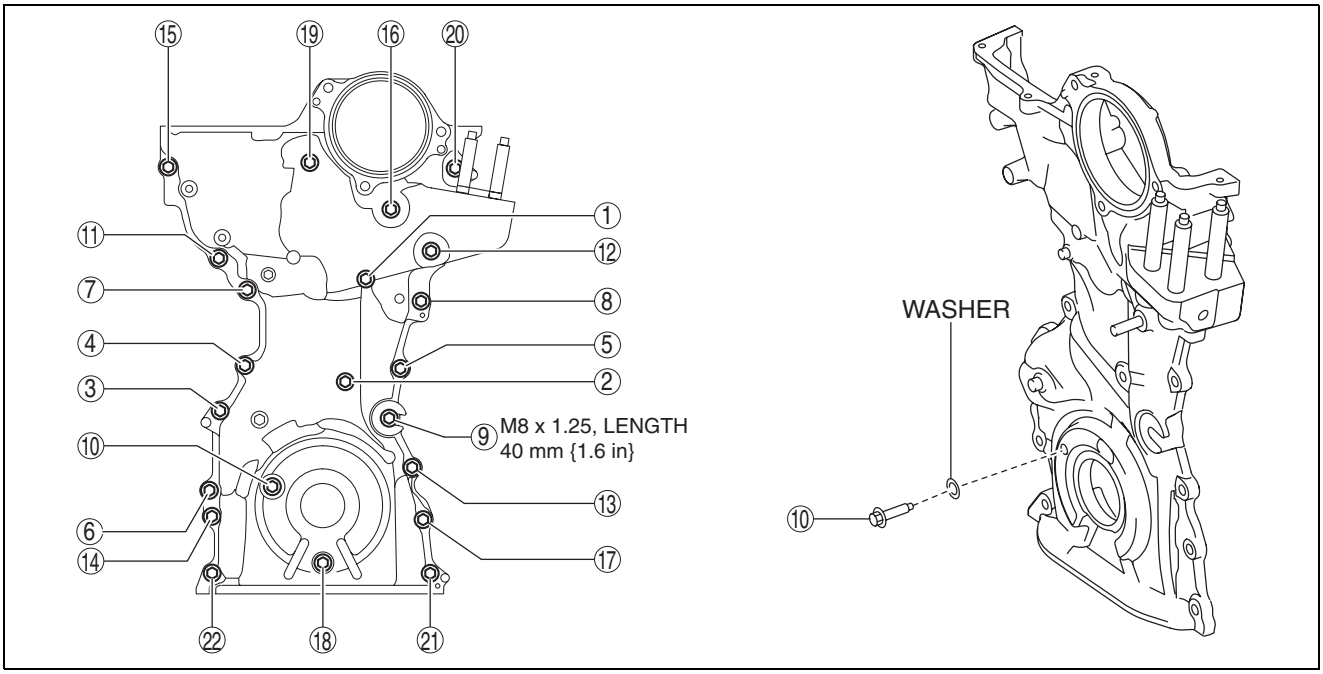
7. Prepare an appropriate **M8 x 1.25** bolt (length **40 mm {1.6 in}**).

Caution
- **For the number 10 bolt of the tightening order, install the bolts with washers.**



am3uuw0000886

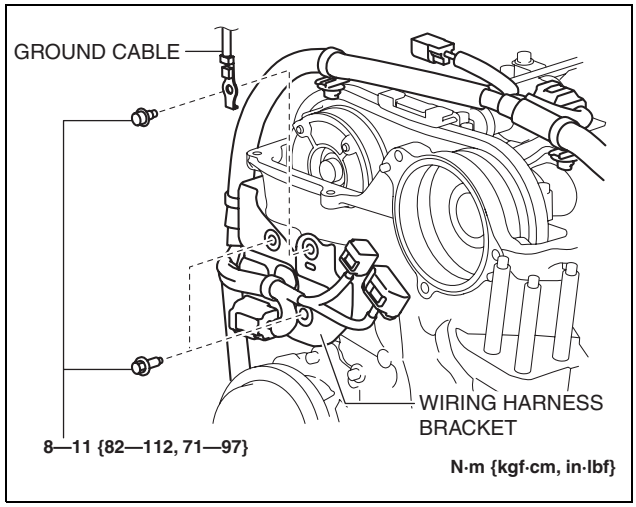
8. Tighten the engine front cover installation bolts in the order shown in the figure.



ac5wzw0000324

Tightening torque
20—26 N·m {2.1—2.6 kgf·cm, 15—19 in·lbf}

9. Remove the bolt installed to the drive belt auto tensioner installation bolt hole when installing the drive belt auto tensioner.
10. Install the ground cable and wiring harness bracket shown in the figure.



ac5wzw0000322

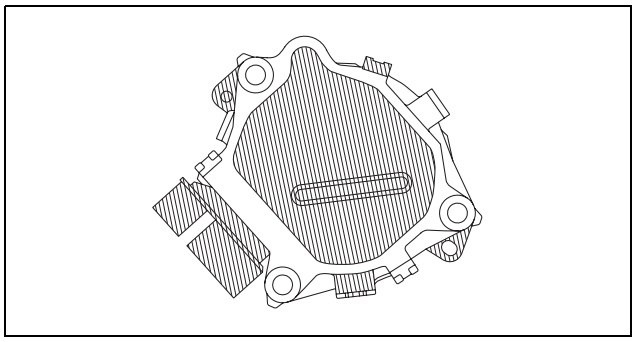
MECHANICAL [SKYACTIV-G 2.0]

Electric Variable Valve Timing Motor/Driver Installation Note

1. Install a new O-ring to the O-ring installation groove of the engine front cover.

Caution

- **To prevent damage to the electric variable valve timing motor/driver, do not apply excessive force (force of 100 N {10.2 kgf, 22.5 lbf} or more) to the shaded areas shown in the figure.**

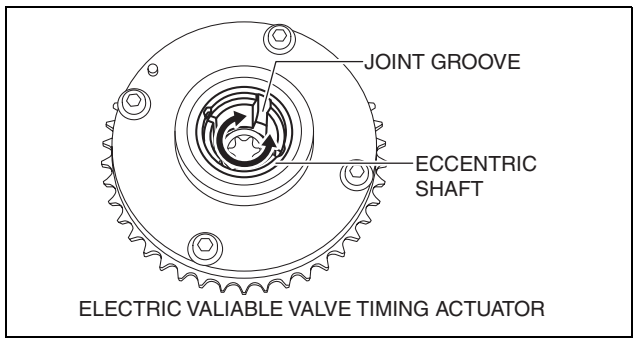


ac5wzw0000324

2. Install the electric variable valve timing motor/driver using the following procedures.

Note

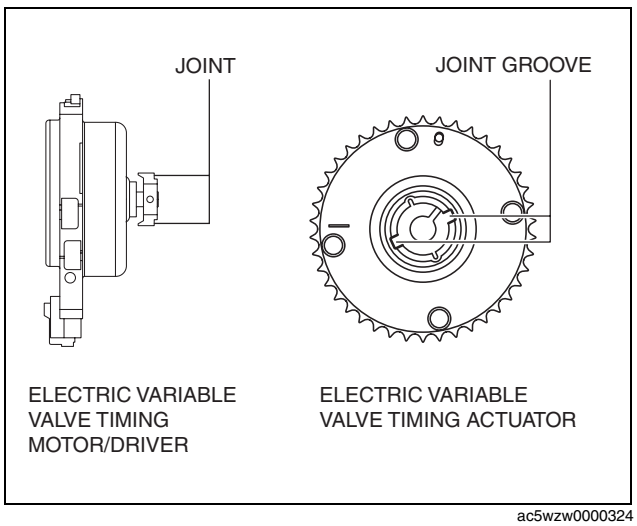
- The eccentric shaft on the electric variable valve timing actuator side can be rotated to the left and right.
- The electric variable valve timing motor/driver can be assembled with the joint groove of the eccentric shaft in any position, and it will not lead to vehicle damage or performance reduction.



ac5wzw0000324

(1) Before installation, rotate the joint of the end of the electric variable valve timing motor so that it is aligned to the joint groove on the electric variable valve timing actuator side.
(2) Engage the joint on the end of the electric variable valve timing motor with the joint groove on the electric variable valve timing actuator side.
(3) Attach the seal surface.
(4) Tighten the electric variable valve timing motor/driver installation bolts.

Tightening torque
20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}



ac5wzw0000324

MECHANICAL [SKYACTIV-G 2.0]

No.3 Engine Mount Installation Note

Caution

- **If the No.3 engine mount is deviated from the original position when installing the No.3 engine mount, engine noise or vibration could increase. When installing the No.3 engine mount, align the alignment mark placed during removal and install it to the original position.**

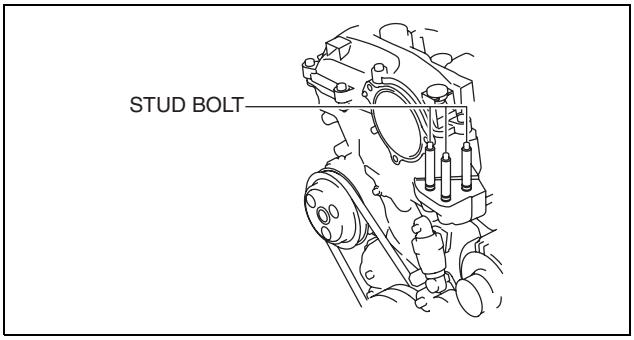
Note

- When replacing the No.3 engine mount, place a mark at the same position as the one placed before removal.
- If the No.3 engine mount nut is loosened, tighten the engine front cover stud bolts because they may be loosened.

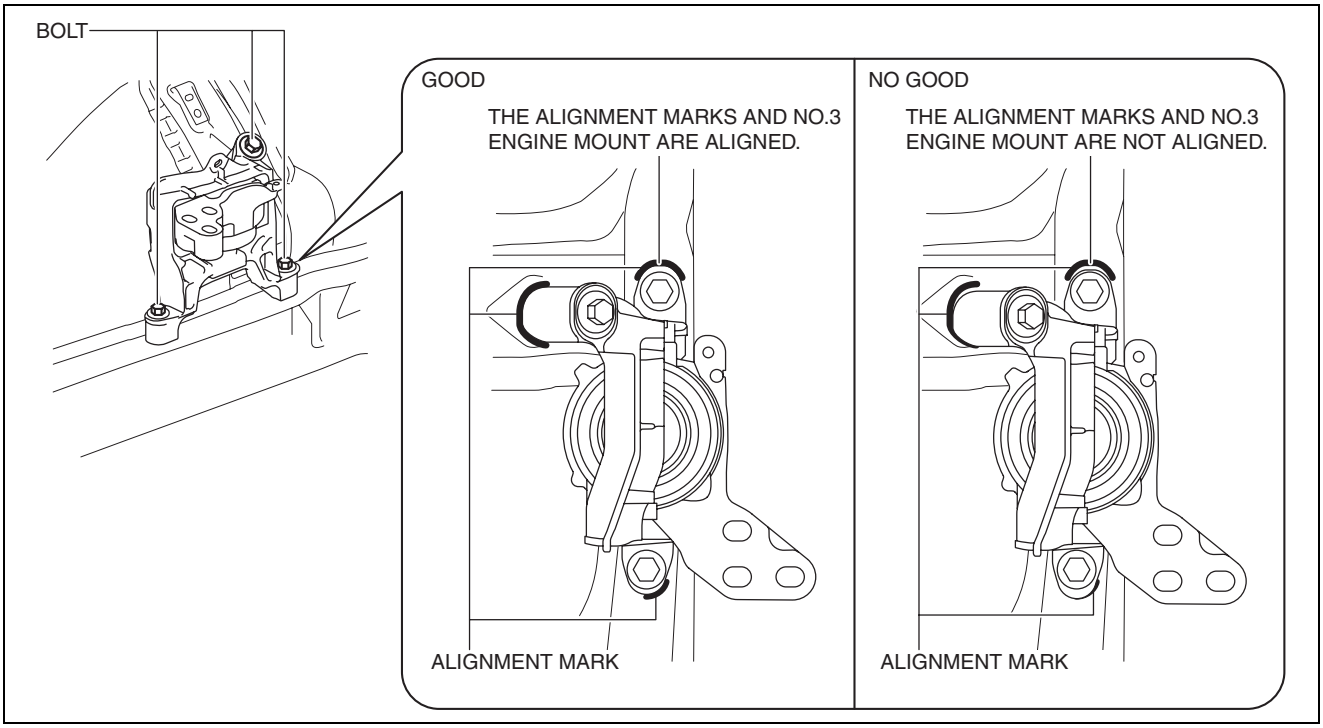
1. Tighten the engine front cover stud bolts.

   Tightening torque
   7—13 N·m {72—132 kgf·cm, 62—115 in·lbf}

2. Temporarily tighten the No.3 engine mount installation bolts and nuts using the following procedure:
   (1) Align the alignment marks on the body side and No.3 engine mount, and temporarily tighten the bolts shown in the figure.

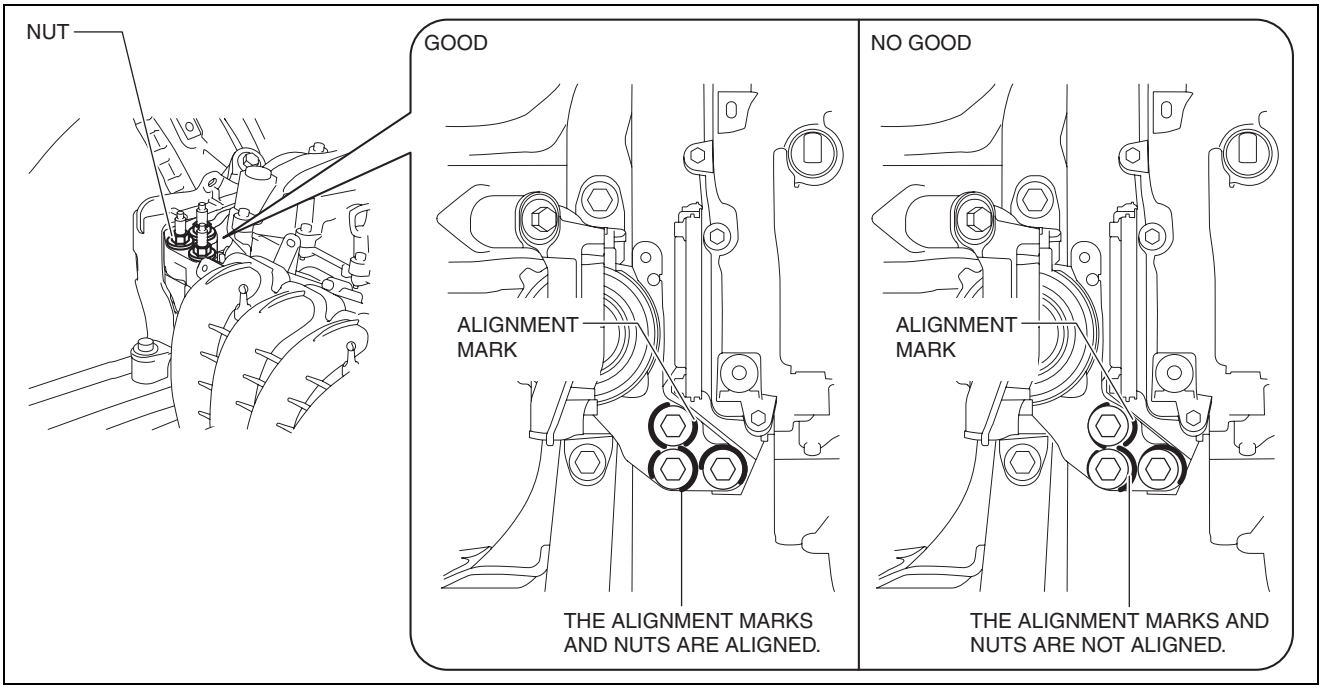


ac5wzw0000324



ac5wzw0000519

(2) Temporarily tighten the nuts shown in the figure while aligning the alignment marks of the No.3 engine mount and nuts.

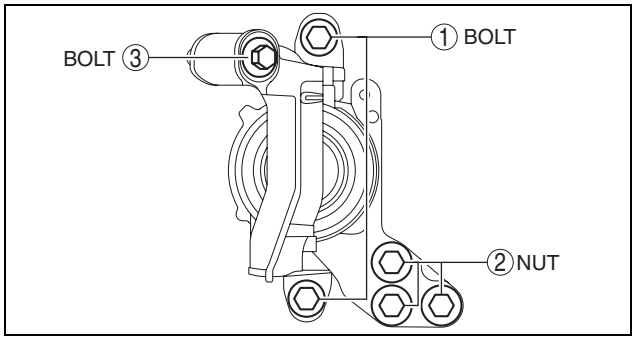


ac5wzw0000519

Note
- If the alignment marks are not aligned, align the alignment marks while slightly moving the engine and temporarily tighten the nuts.

3. Tighten the No.3 engine mount installation bolts and nuts in the order as shown in the figure.

No.	Tightening torque
1	76—95 N·m {7.8—9.6 kgf·m, 57—70 ft·lbf}
2	82—95 N·m {8.4—9.6 kgf·m, 61—70 ft·lbf}
3	49—65 N·m {5.0—6.6 kgf·m, 37—47 ft·lbf}



ac5wzw0000324

4. Remove the **SST**.
5. Install the clip of ground cable to the No.3 engine mount.

MECHANICAL [SKYACTIV-G 2.0]

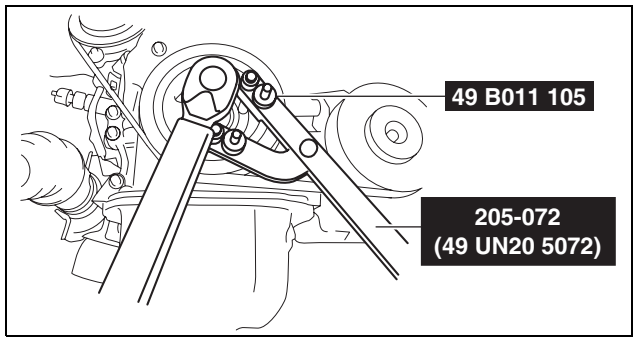
Crankshaft Pulley Lock Bolt Installation Note

Caution

- **To prevent damage to the crankshaft pulley, protect the crankshaft pulley with a clean cloth so that the bar part (205-072) of the SST does not contact the crankshaft pulley.**
- **To prevent damage to the engine front cover, be careful not to allow the tab part (49 B011 105) of the SST to get caught between the crankshaft pulley and the engine front cover.**

1. Install the **SST** on the crankshaft pulley to lock the crankshaft against rotation.
2. Tighten the crankshaft pulley lock bolt in the order shown in the following two steps.

Tightening procedure
Step 1: 90—110 N·m {9.2—11 kgf·m, 67—81 ft·lbf}
Step 2: 55—65°



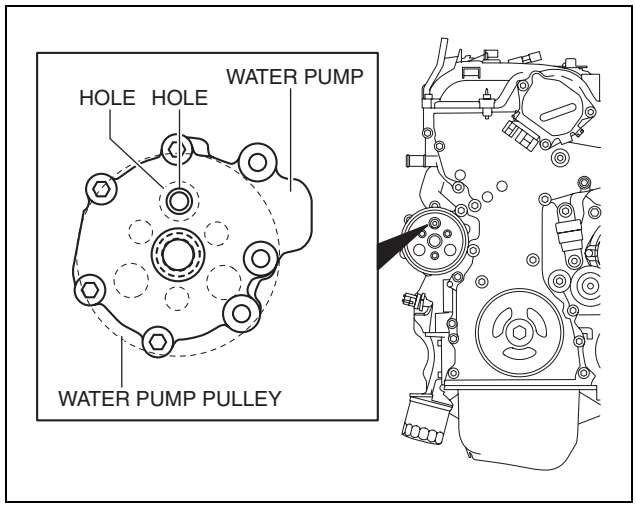
ac5wzw0000325

Water Pump Pulley Installation Note

Caution

- **Be careful not to damage the belt groove and surface of the water pump pulley when using tools, otherwise it will cause wear, breakage, abnormal noise of the drive belt (stretch belt), damage to the pulley, and rust.**

1. Install the water pump pulley to the water pump and temporarily tighten the bolt.
2. Align the water pump pulley hole with the water pump hole as shown in the figure.

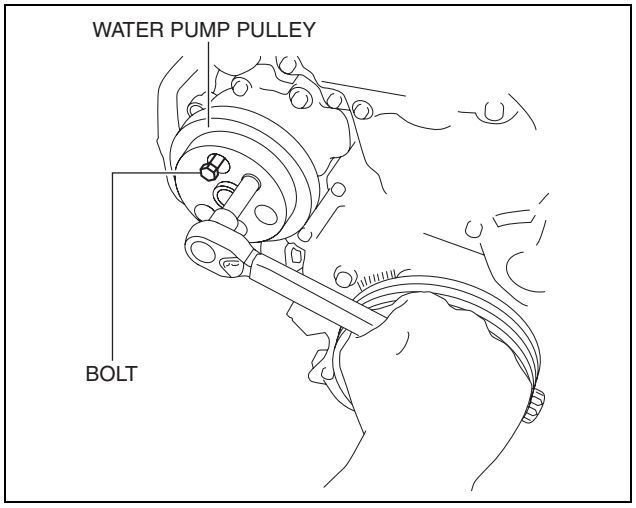


ac5wzw0000321

3. Insert an appropriate bolt (length **70 mm {2.8 in}**) into the water pump hole shown in the figure and lock the water pump pulley against rotation.
4. Completely tighten the water pump pulley bolt to the specified torque.

   Tightening torque
   8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

5. Remove the bolt used for locking the water pump pulley against rotation.



ac5wzw0000325

Drive Belt Auto Tensioner Installation Note

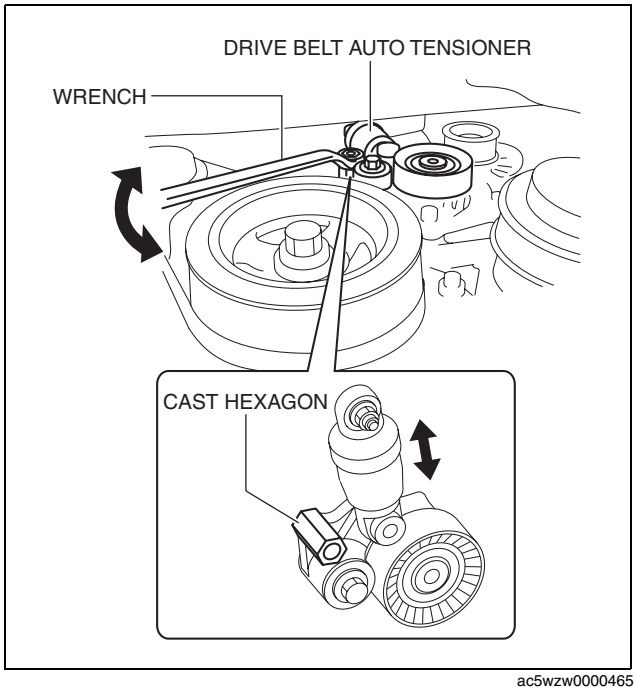
Caution
- **To allow the drive belt auto tensioner to function correctly, always bleed the air from the drive belt auto tensioner using the following procedure after assembling the drive belt auto tensioner.**

1. Install the drive belt auto tensioner to the engine.

   Caution
   - **To prevent damage to the drive belt auto tensioner, do not apply excessive torque after the tensioner moves full-stroke.**

2. Insert the wrench onto the cast hexagon on the drive belt auto tensioner, move the drive belt auto tensioner up and down at full-stroke three times to bleed the air.

   Note
   - By moving the drive belt auto tensioner up and down full-stroke three times, the piston inside the tensioner moves to bleed the air.



ac5wzw0000465

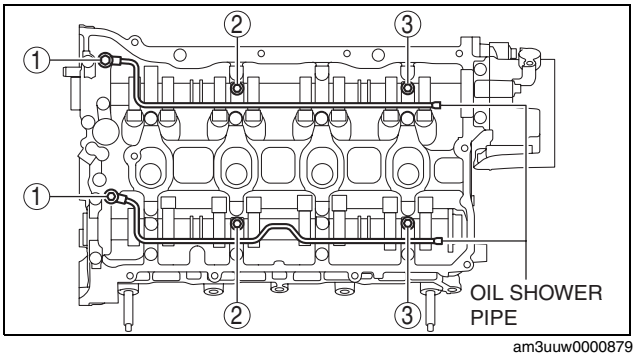
MECHANICAL [SKYACTIV-G 2.0]

Oil Shower Pipe Installation Note

1. Install the oil shower pipe in the order shown in the figure.

Tightening torque

Installation position	Tightening torque
1	9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}
2, 3	8.0—9.0 N·m {82—91 kgf·cm, 71—79 in·lbf}



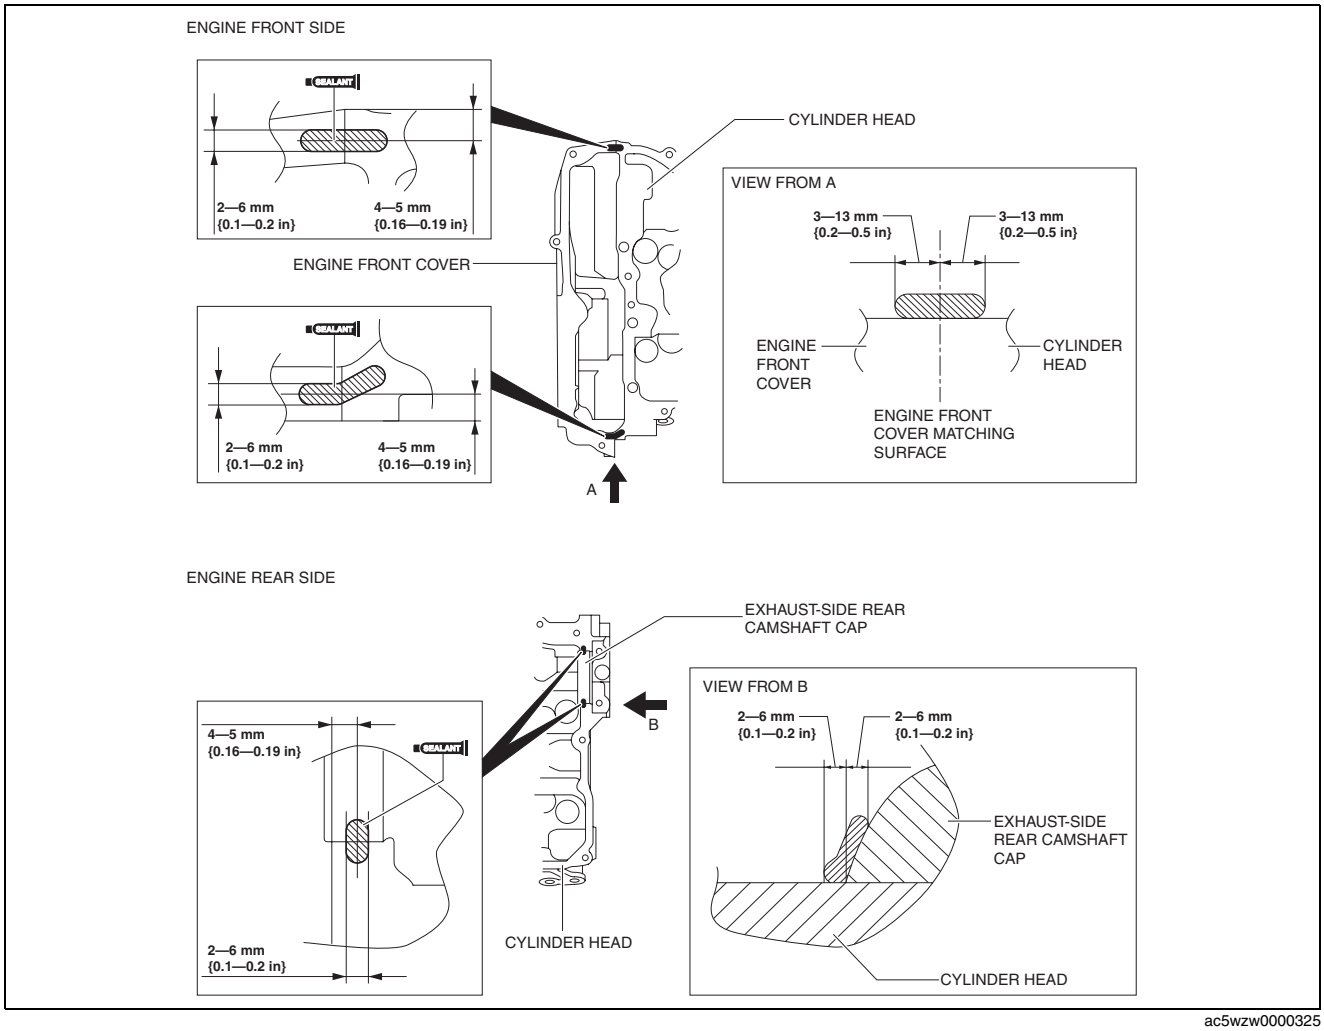
am3uuw0000879

Cylinder Head Cover Installation Note

Caution

- **To assure the sealing performance of the cylinder head cover, be careful of the following:**
  - **— Verify that the cylinder head cover gasket is inserted into the cylinder head cover groove and install the cylinder head cover.**
  - **— Remove oil, dirt, and sealant from the seal surface.**
- **To prevent silicone sealant from hardening, adhere the cylinder head cover and the cylinder head firmly within 10 min. after applying silicone sealant. After adhering them, tighten the installation bolts immediately.**

1. Insert a new cylinder head cover gasket into the cylinder head cover groove.
2. Apply silicone sealant to the areas shown in the figure.

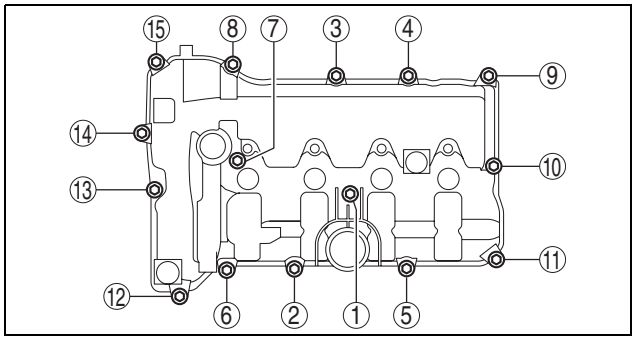


ac5wzw0000325

MECHANICAL [SKYACTIV-G 2.0]

3. Tighten the cylinder cover bolts in the order shown in the figure.

   Tightening torque
   4.5—7.0 N·m {46—71 kgf·cm, 40—61 in·lbf}



ac5wzw0000325

HYDRAULIC LASH ADJUSTER (HLA) INSPECTION [SKYACTIV-G 2.0]

id0110h2805000

HLA Troubleshooting

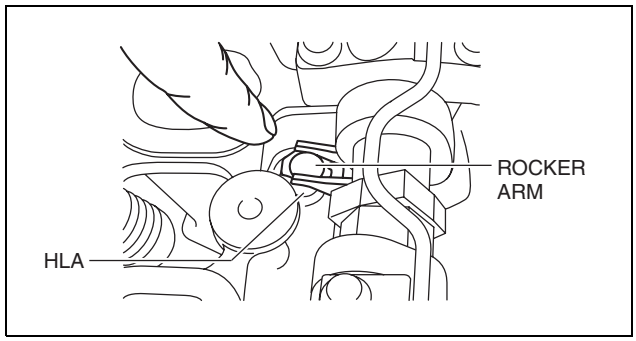
Item	Occurrence	Possible cause	Action
1	After replacing oil, sound occurs when starting engine	Oil shortage in oil passage	• Maintain the engine speed between 2,000 to 3,000 rpm for approx. 2 s and 10 min*, and verify that the sound disappears. — If the sound disappears, the HLA is normal. — If the sound does not disappear, go to item 5.
2	Sound occurs at instant when engine is started on vehicle left for 1 day		
3	Starter cranked for 3 s or more and sound occurs directly after engine is started	HLA oil shortage	
4	Sound occurs directly after engine is started with newly replaced HLA		
5	Sound occurs continuously for 10 min or more	Insufficient oil pressure	• Inspect the oil pressure. (See 01-11A-7 OIL PRESSURE INSPECTION [SKYACTIV-G 2.0].) — If less than the specification, inspect each part of the engine.
		HLA malfunction	• Inspect the HLA. (See 01-10A-63 HLA Inspection.)
6	Sound occurs during idling after high-speed driving	Incorrect engine oil level	• Inspect the engine oil level. (See 01-11A-3 ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0].)
		Engine oil deterioration	• Replace the engine oil. (See 01-11A-3 ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0].)

* : Period of time engine oil flows to the HLA, this value includes tolerance caused by the ambient temperature and the oil used.

MECHANICAL [SKYACTIV-G 2.0]

HLA Inspection

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the ignition coil/ion sensors. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Remove the cylinder head cover. (See 01-10A-39 TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Press the rocker arm from above and verify that the HLA does not drop.
   - If the HLA drops, replace the HLA. (See 01-10A-63 HYDRAULIC LASH ADJUSTER (HLA) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
6. Install in the reverse order of removal.



am3uuw0000890

HYDRAULIC LASH ADJUSTER (HLA) REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

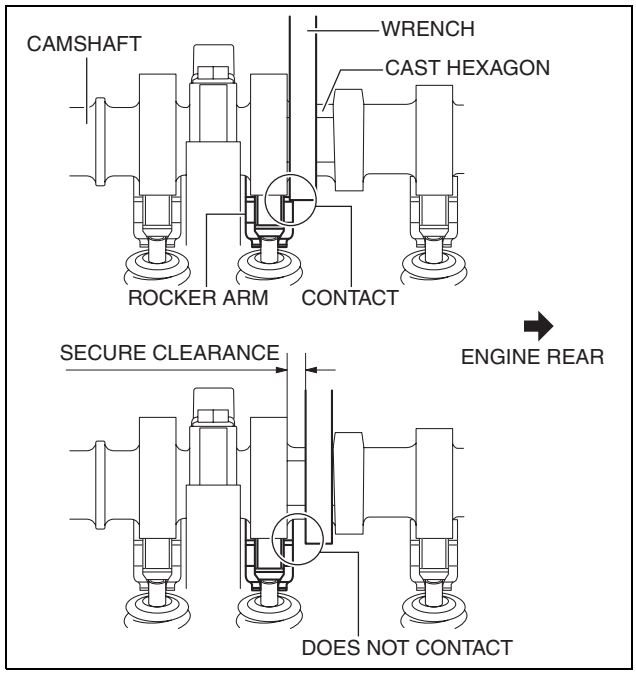
id0110h2804100

Warning

- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**

Caution

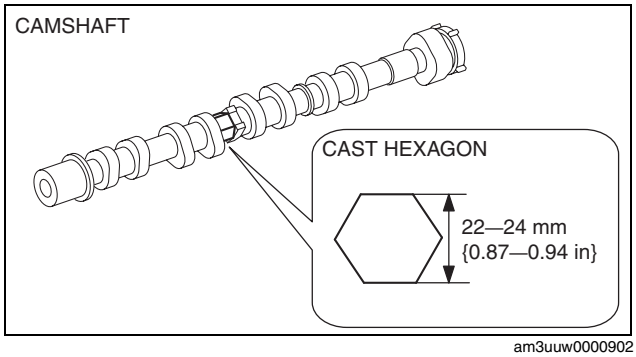
- **If the camshaft is rotated with the timing chain removed and the piston at the top dead center position, the valve may contact the piston and the engine could be damaged. When rotating the camshaft with the timing chain removed, rotate it after lowering the piston from the top dead center position.**
- **When rotating the camshaft using a wrench on the cast hexagon, the wrench may contact the rocker arm and damage the rocker arm. To prevent damage to the rocker arm when holding the camshaft on the cast hexagon, use the wrench at engine rear side as shown in the figure to secure a clearance between the cam.**



am3uuw0000896

MECHANICAL [SKYACTIV-G 2.0]

Note
- Width at the cast hexagon of the camshaft is 22—24 mm {0.87—0.94 in}.



am3uuw0000902

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the ignition coil/ion sensors. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Remove the cylinder head cover. (See 01-10A-39 TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
6. Remove the electric variable valve timing motor/driver. (See 01-10A-16 ELECTRIC VARIABLE VALVE TIMING MOTOR/DRIVER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
7. Remove the vacuum pump. (See 04-11-21 VACUUM PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
8. Remove the high pressure fuel pump and rear housing. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
9. Remove in the order indicated in the table.
10. Install in the reverse order of removal.
11. Start the engine and inspect the following:
    - Ignition timing, idle speed and idle mixture. (See 01-10A-4 ENGINE TUNE-UP [SKYACTIV-G 2.0].)

MECHANICAL [SKYACTIV-G 2.0]

3	Chain guide (No.1)

4	Electric variable valve timing actuator (See 01-10A-69 Electric Variable Valve Timing Actuator Removal Note.) (See 01-10A-76 Electric Variable Valve Timing Actuator Installation Note.)
5	OCV

MECHANICAL [SKYACTIV-G 2.0]

6	Camshaft (See 01-10A-71 Camshaft Removal Note.) (See 01-10A-73 Camshaft Installation Note.)
7	Rocker arm (See 01-10A-72 Rocker Arm Removal Note.) (See 01-10A-73 Rocker Arm Installation Note.)
8	HLA (See 01-10A-72 HLA Removal Note.) (See 01-10A-72 HLA Installation Note.)

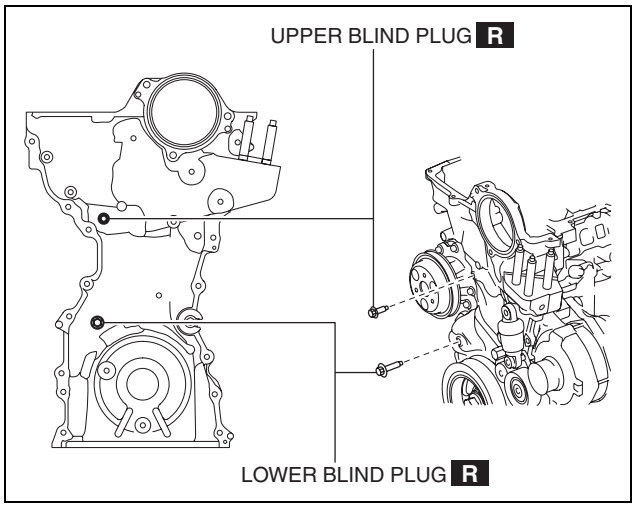
Timing Chain Removal Note

1. Release the tension on the timing chain using the following procedure:

Note

- Release the tension on the timing chain by securing the timing chain tensioner arm through the service hole on the engine front cover.

(1) Remove the blind plugs (upper and lower) on the engine front cover service holes.

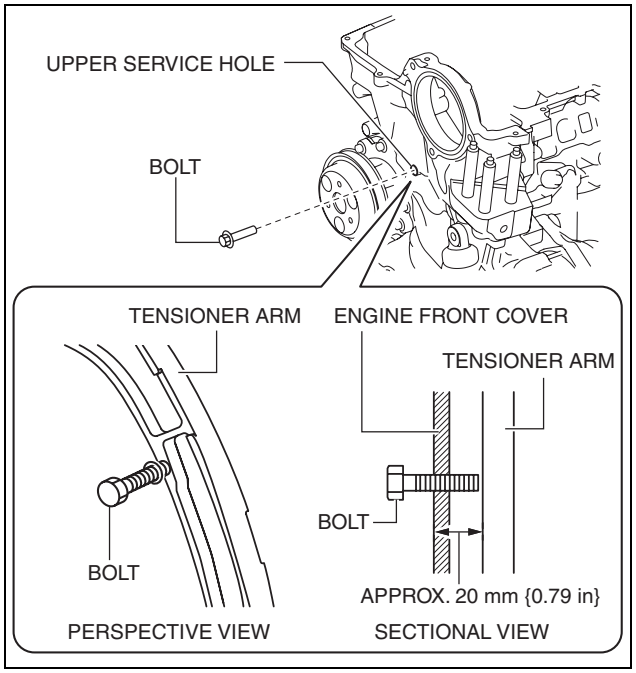


am3uuw0000897

(2) Insert an M6 bolt (**35—60 mm {1.4—2.3 in}** length with thread to the end) to the upper service hole and tighten it until it contacts the tensioner arm, then loosen it **approx. 180 degrees**. (Set the bolt so that it sits slightly in front of the tensioner arm.)

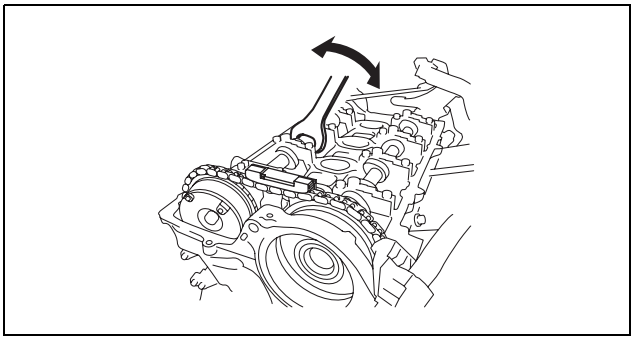
Note

- The bolt contacts the tensioner arm when it is inserted **approx. 20 mm {0.79 in}**.



am3uuw0000897

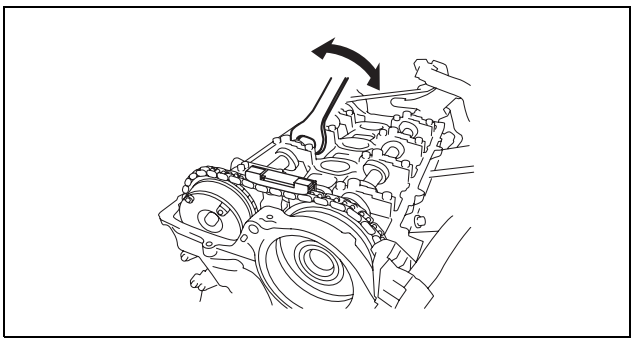
- Hold the exhaust camshaft using a wrench on the cast hexagon and move it back and forth a few times as shown in the figure. This will drain the oil from the chain tensioner and make the following servicing easier.



am3uuw0000897

(3) Insert a precision screwdriver into the lower service hole.

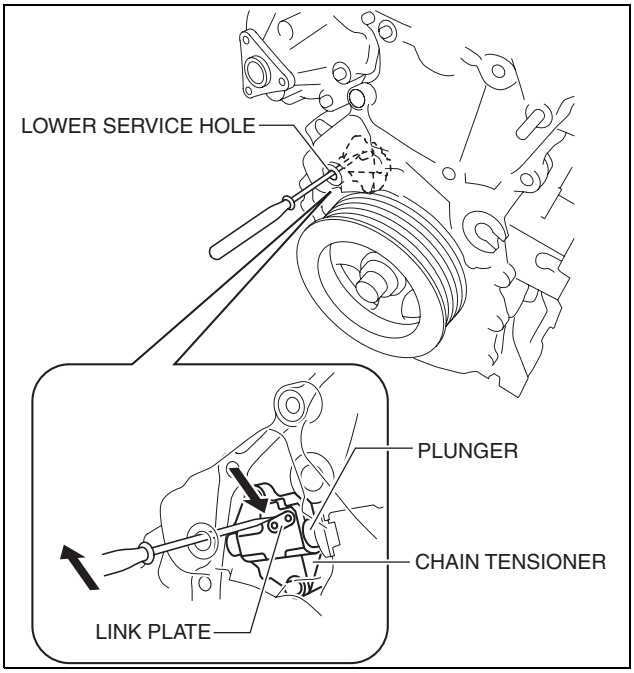
(4) While moving the exhaust camshaft back and forth in the direction of the arrow using a wrench on the cast hexagon, press down the link plate of the timing chain tensioner using a precision screwdriver and release the plunger lock.



am3uuw0000897

Note

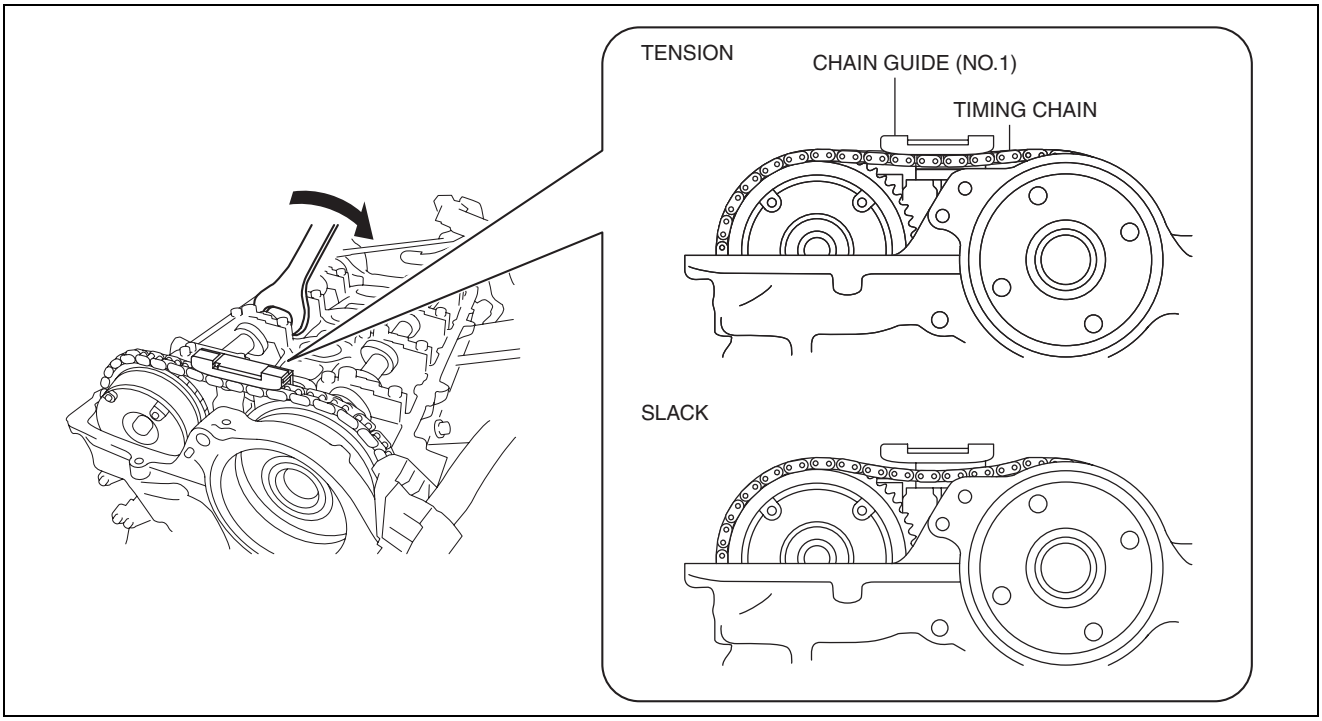
- When moving the exhaust camshaft back and forth, the timing chain pushes the plunger in the chain tensioner making it easier to operate the link plate.



am3uuw0000897

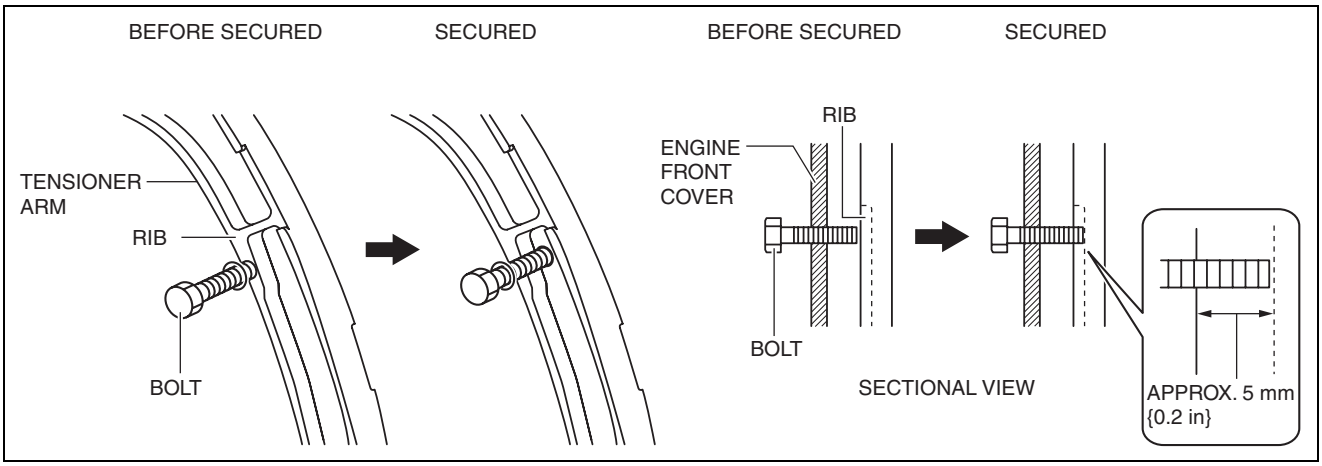
MECHANICAL [SKYACTIV-G 2.0]

(5) With the plunger lock released, rotate the exhaust camshaft clockwise until the timing chain loosens.



am3uuw0000897

(6) With the chain loosened, tighten the M6 bolt in the upper service hole so that the bolt is inserted **approx. 5 mm {0.2 in}** additionally to secure the tensioner arm.



am3uuw0000897

- If the bolt cannot be inserted **approx. 5 mm {0.2 in}**, the plunger lock of the chain tensioner may not release, or the chain may not loosen enough. Return the bolt to the original position and restart the procedure from step (3).

Note

- By rotating the exhaust camshaft clockwise, the timing chain pushes the tensioner arm and the rib position deviates. The entire tensioner arm can be secured by hooking the bolt onto the deviated rib.

(7) After securing the tensioner arm, remove the chain guide (No.1).

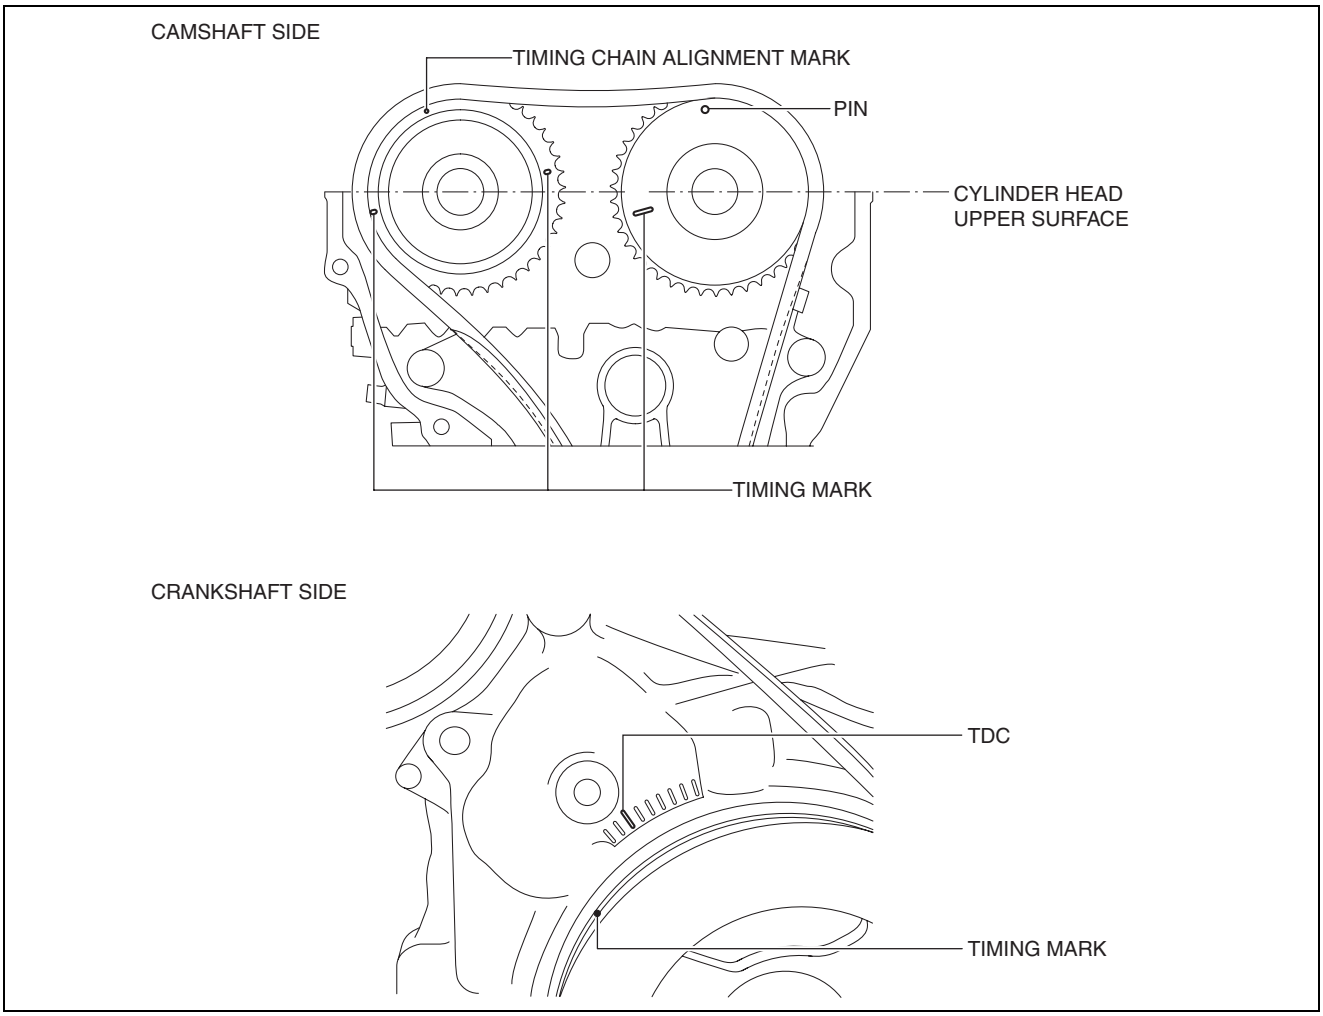
MECHANICAL [SKYACTIV-G 2.0]

Electric Variable Valve Timing Actuator Removal Note

Caution

- **Keep the timing chain pulled up during and after the work in which it has been set aside from the sprocket. If the chain falls down, it may disengage from the sprocket on the crankshaft side and deviate, leading to valve timing deviation.**
- **After servicing, always verify the valve timing.**

1. Rotate the crankshaft clockwise so that cylinder No.1 is positioned around before top dead center (TDC) as shown in the figure.



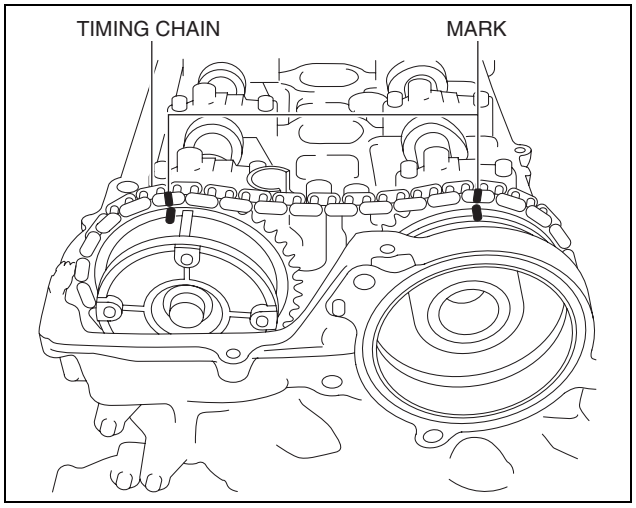
am3uuw0000897

Note

- With cylinder No.1 positioned around before top dead center (TDC), there is no large movement (rotation) of the exhaust camshaft when the timing chain is removed. Therefore, installation of the electric variable valve timing actuator to the camshaft will be easier. (If there is a large movement of the exhaust camshaft, installation of the electric variable valve timing actuator to the camshaft must be performed while loosening the chain by rotating the exhaust camshaft.)

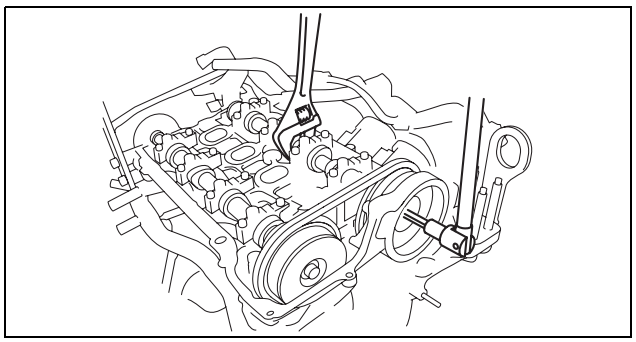
MECHANICAL [SKYACTIV-G 2.0]

2. Mark the timing chain and each actuator so that they can be reassembled in the same condition as before removal.



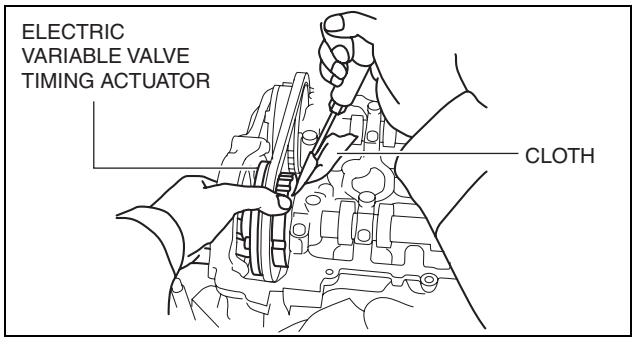
am3uuw0000897

3. Hold the intake camshaft using a wrench on the cast hexagon and remove the electric variable valve timing actuator installation bolt.



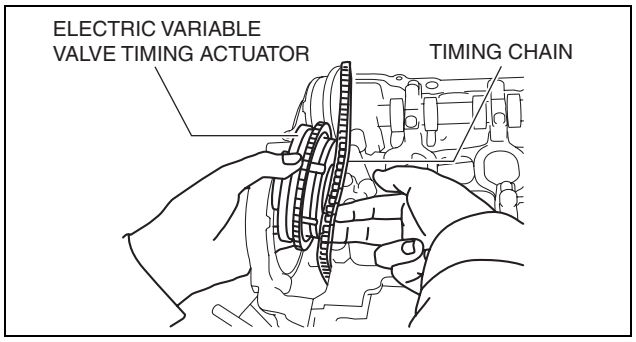
am3uuw0000898

4. Using a screwdriver wrapped in a clean cloth, lightly press the electric variable valve timing actuator to the front and separate the intake camshaft and the actuator.



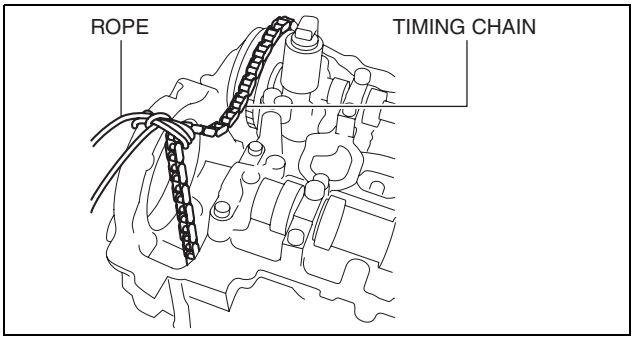
am3uuw0000904

5. Remove the timing chain from the exhaust and intake camshaft sprockets and set is aside, and remove the electric variable valve timing actuator.



am3uuw0000904

6. Return the timing chain to the exhaust camshaft sprocket, and pull the timing chain up and suspend it using a rope as shown in the figure.



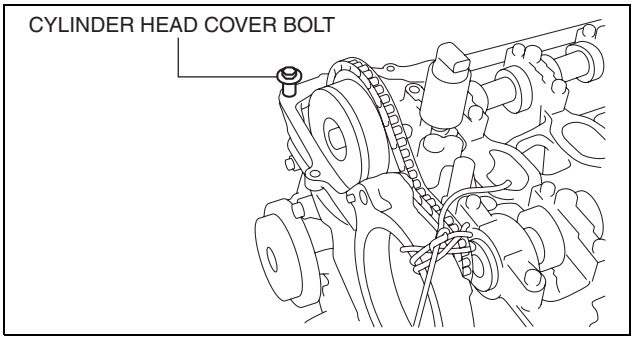
am3uuw0000898

Camshaft Removal Note

Caution
- **Keep the timing chain pulled up during and after the work in which it has been set aside from the sprocket. If the chain falls down, it may disengage from the sprocket on the crankshaft side and deviate, leading to valve timing deviation.**
- **After servicing, always verify the valve timing.**

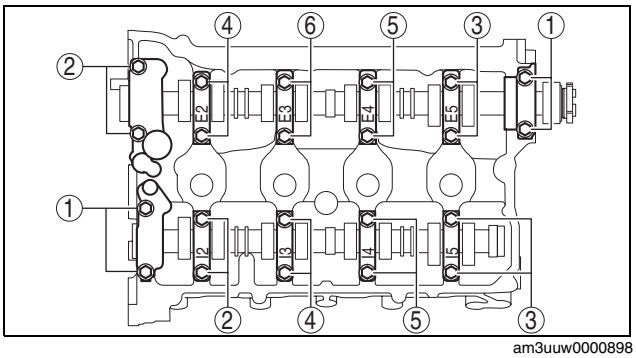
Note
- Remove the exhaust camshaft and the hydraulic variable valve timing actuator as a single unit.

1. Leave the timing chain as it is, which was suspended after electric variable valve timing actuator removal.
2. Temporarily install the cylinder head cover bolt to the position shown in the figure to use it for suspending the timing chain.



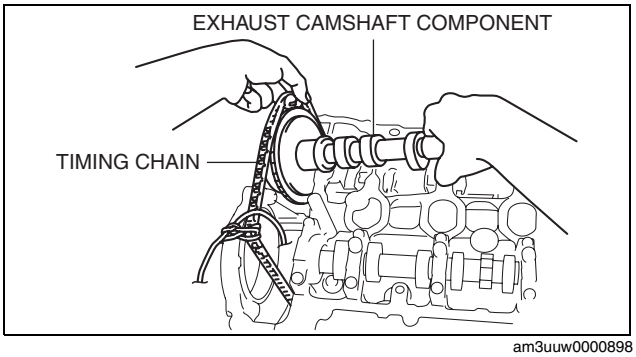
am3uuw0000898

3. Loosen the camshaft cap bolts in two or three passes in the order shown in the figure, and remove the camshaft cap.
4. Remove the intake camshaft.



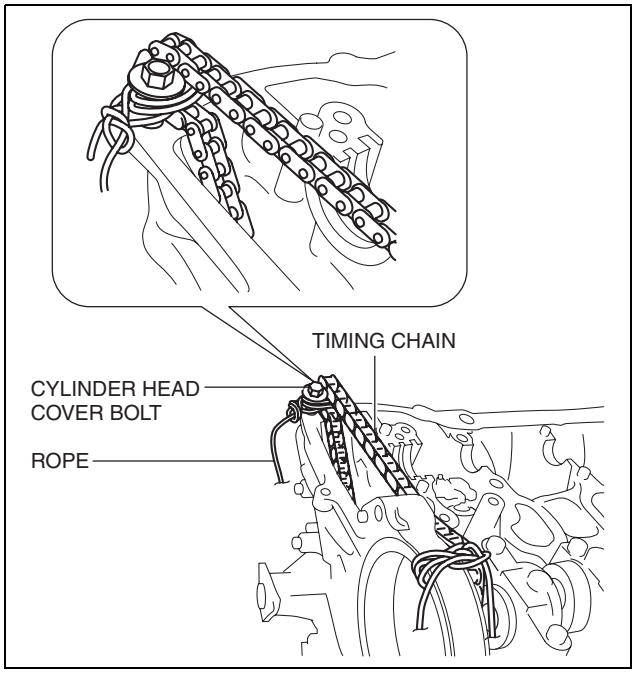
am3uuw0000898

5. While setting the timing chain aside, remove the hydraulic variable valve timing actuator and the exhaust camshaft as a single unit.



am3uuw0000898

6. Pull up the timing chain and suspend it using a rope as shown in the figure.



am3uuw0000898

Rocker Arm Removal Note

1. Keep the rocker arms in the order of removal to enable reassembly in their original positions.

HLA Removal Note

1. Keep the HLAs in the order of removal to enable reassembly in their original positions.

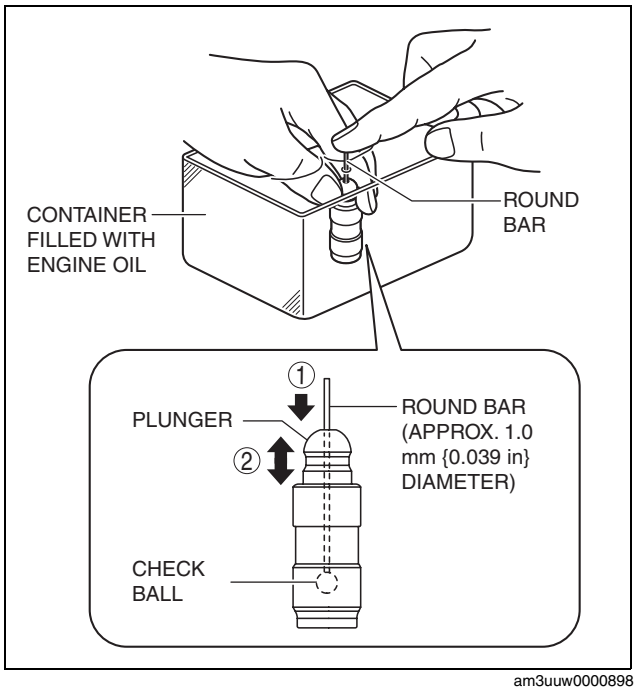
HLA Installation Note

1. Perform HLA air bleeding using the following procedure.
   (1) Put the HLA in a container filled with engine oil.

Caution

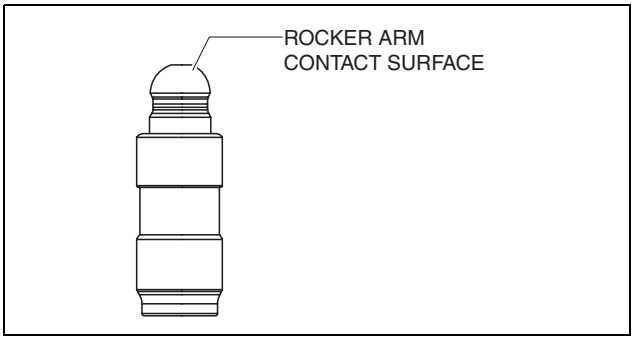
- **Do not insert the round bar firmly because the check ball spring force is extremely weak.**

   (2) While lightly pressing the check ball using a round bar (**approx. 1.0 mm {0.039 in}** diameter), bleed air by moving the plunger up and down.
   (3) Press the end of the plunger in the oil and verify that there is no rebounding feel.
      - If rebounding feel cannot be eliminated, replace the HLA.



am3uuw0000898

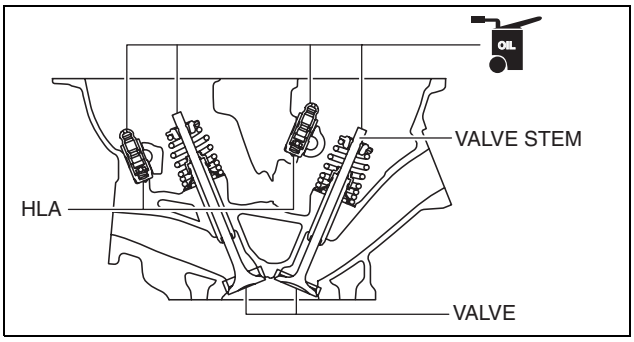
2. Visually inspect the HLA surface where it contacts the rocker arm for wear or damage.
   - If there is any malfunction, replace the HLA.
3. Assemble the HLAs to their original positions.



am3uuw0000898

Rocker Arm Installation Note

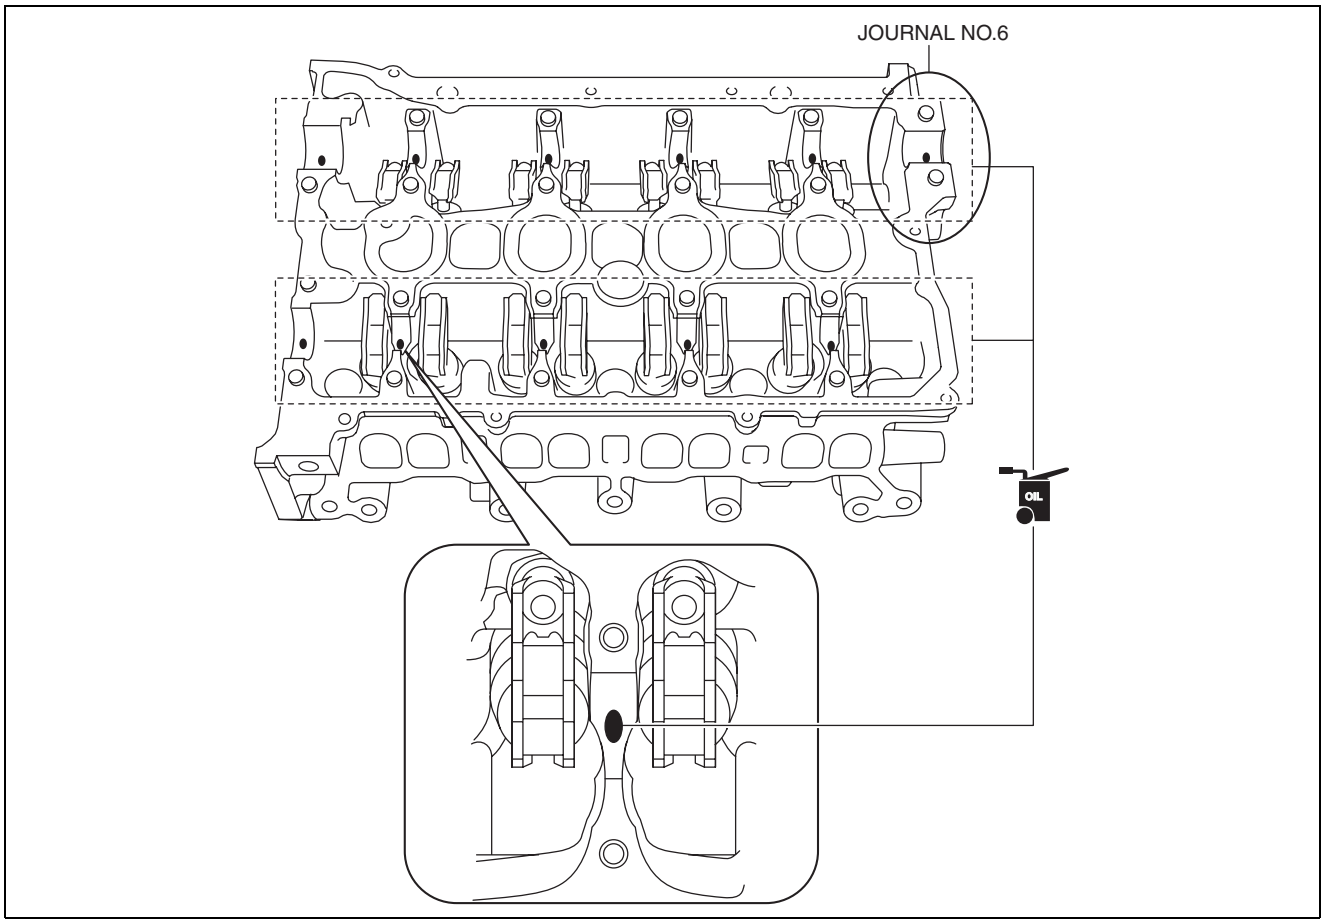
1. Apply engine oil to the HLAs and the end of the valve stems.
2. Install the rocker arms to the same positions as before removal.



am3uuw0000899

Camshaft Installation Note

1. As shown in the figure, apply gear oil (SAE No. 90 or equivalent) or engine oil to the center area of each journal of the cylinder head.



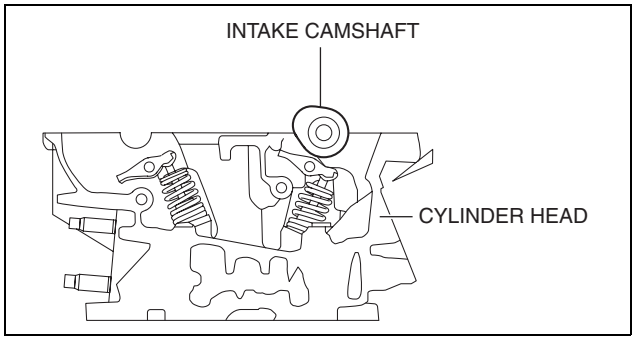
am3uuw0000899

MECHANICAL [SKYACTIV-G 2.0]

Caution

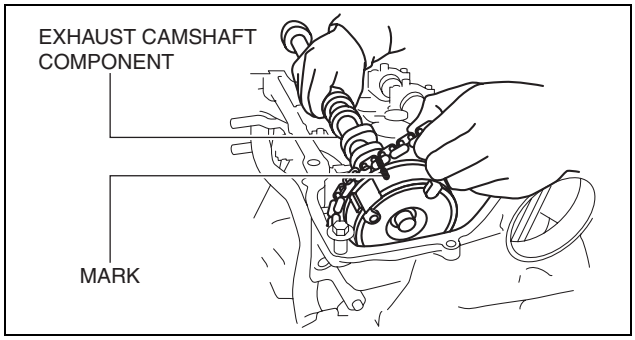
- **Apply 0.05 ml {0.05 cc, 0.003 in^3} or less of oil to journal No.6.**

2. As shown in the figure, align the cam position of cylinder No.1 around top dead center (TDC) and place the intake camshaft on the cylinder head.
3. Remove the rope suspending the timing chain on the exhaust side.

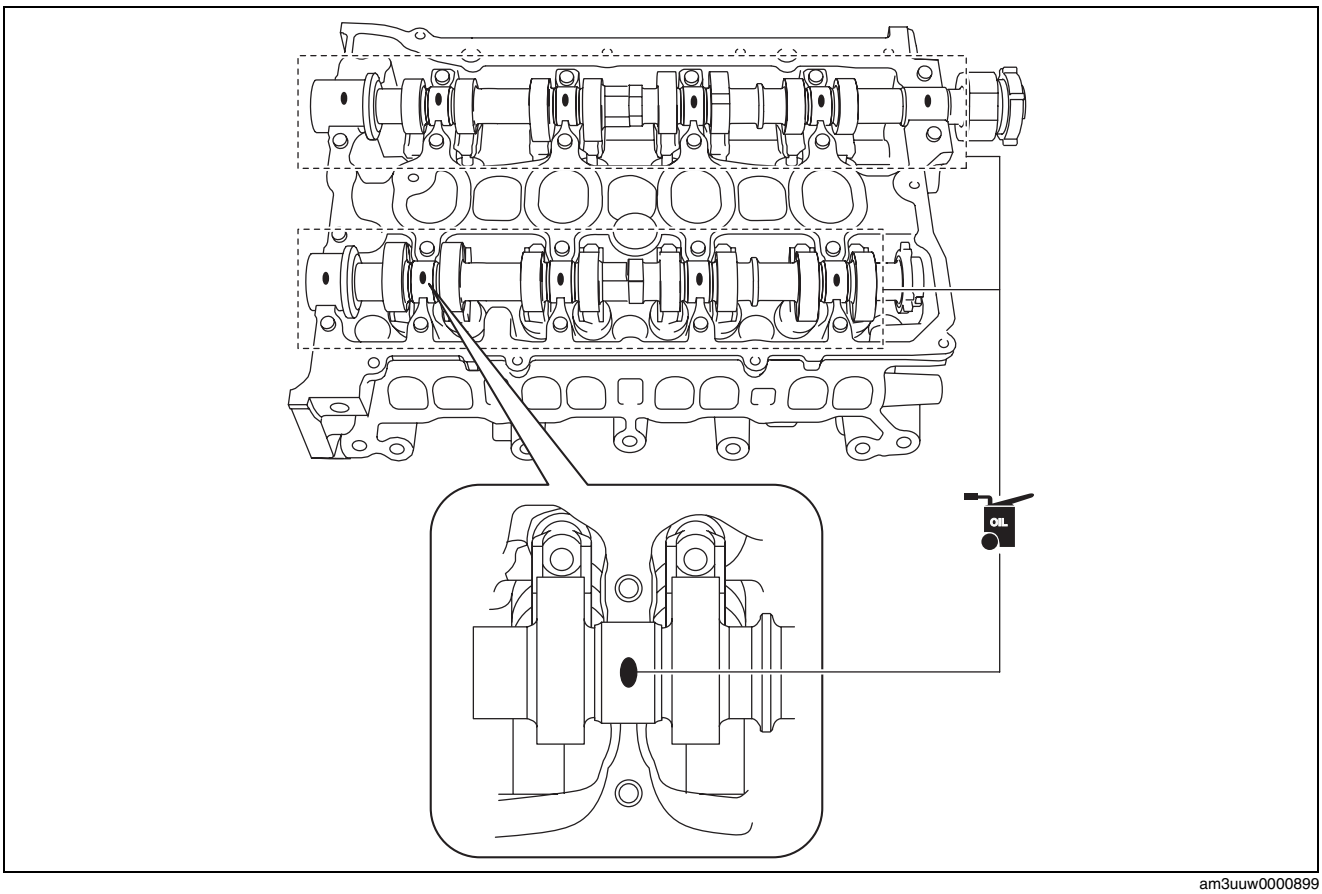


am3uuw0000899

4. While aligning the mark on the timing chain placed during removal with the one on the hydraulic variable valve timing actuator, place the exhaust camshaft component on the cylinder head.
5. As shown in the figure, apply gear oil (SAE No. 90 or equivalent) or engine oil to the center area of each journal of the camshaft.



am3uuw0000899



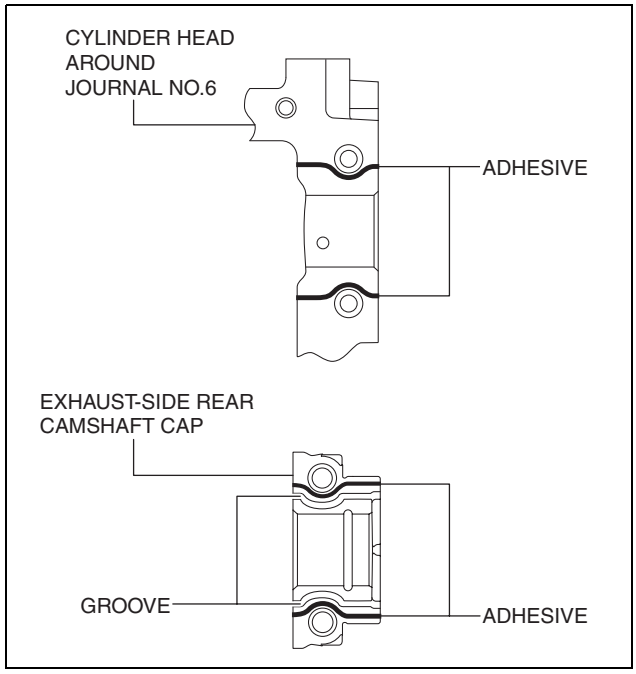
am3uuw0000899

6. Apply adhesive agent (Loctite 962T) around journal No.6 of the cylinder head or the exhaust-side rear camshaft cap.

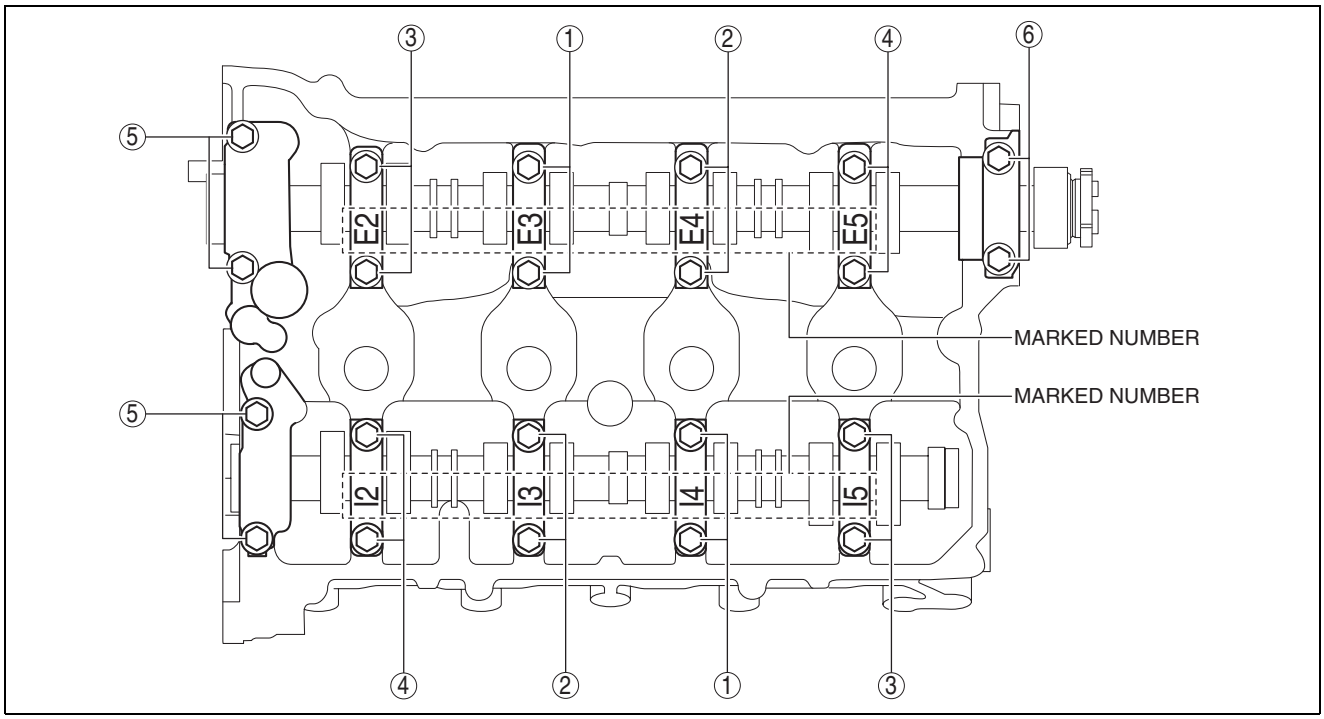
Caution
- **Verify that there is no adhesive agent on the journal.**

Adhesive agent bead width
0.5—1.5 mm {0.02—0.05 in}

7. Install the camshaft caps in the marked number order, and temporarily tighten the camshaft cap installation bolts in two or three passes evenly.
8. Tighten the camshaft cap installation bolts in two steps in the order shown in the figure.



ac5uuw00000525



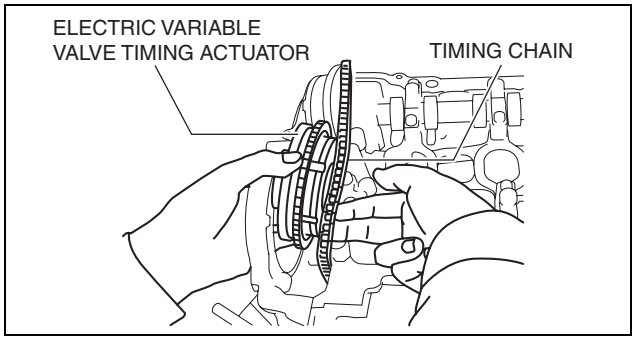
am3uuw0000899

Tightening torque
First step: 3.0—6.0 N·m {31—61 kgf·cm, 27—53 in·lbf}
Second step: 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

MECHANICAL [SKYACTIV-G 2.0]

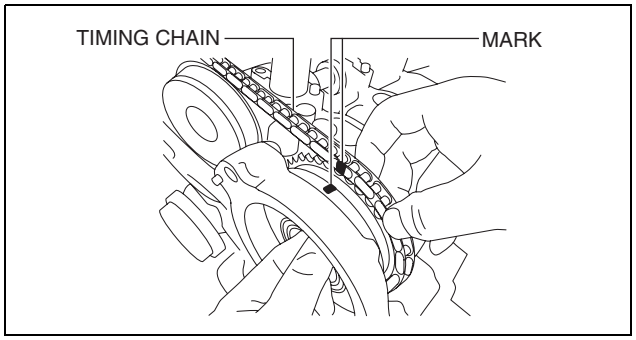
Electric Variable Valve Timing Actuator Installation Note

1. Remove the rope suspending the timing chain on the intake side.
2. Remove the timing chain from the exhaust and intake camshaft sprockets and set it aside to the rear, then insert the electric variable valve timing actuator between the engine front cover and the cylinder head.
3. Return the timing chain to the exhaust camshaft sprocket.



am3uuw0000904

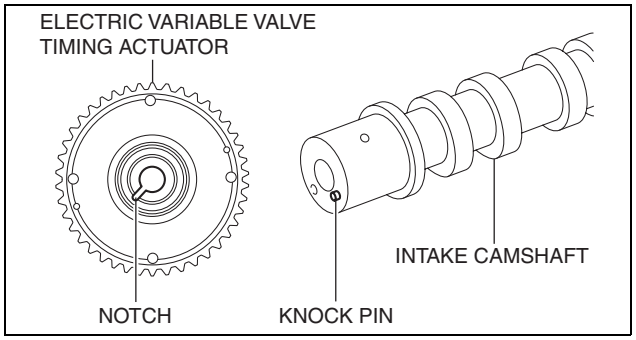
4. While aligning the mark on the timing chain placed during removal with the one on the electric variable valve timing actuator, engage the chain with the sprocket.



am3uuw0000899

5. Align the knock pin on the end of the intake camshaft with the notch on the actuator side, then assemble the actuator.

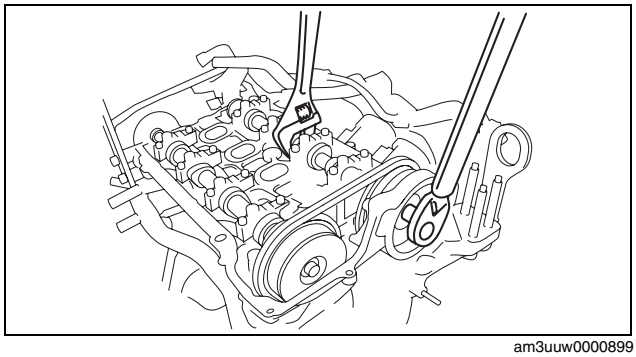
   Note
   - Adjust the knock pin with the notch while adjusting the knock pin position by rotating the camshaft.



am3uuw0000904

6. Hold the intake camshaft using a wrench on the cast hexagon, and tighten the electric variable valve timing actuator installation bolt.

   Tightening torque
   102—114 N·m {10.5—11.6 kgf·m, 76—84 ft·lbf}

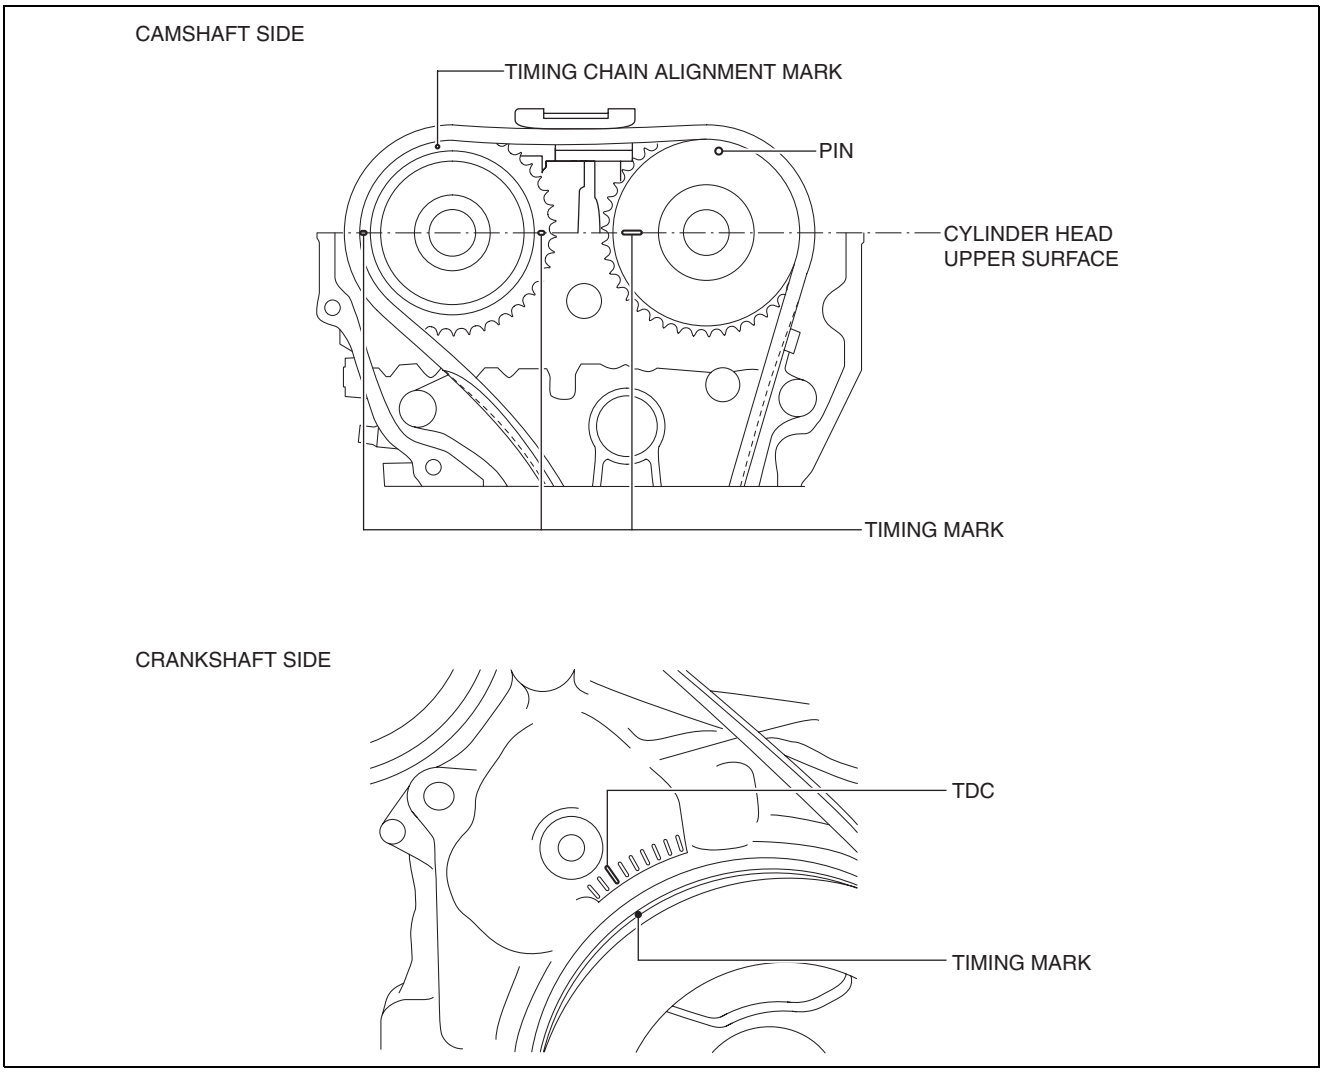


am3uuw0000899

MECHANICAL [SKYACTIV-G 2.0]

Timing Chain Installation Note

1. Install the chain guide (No.1).
2. Remove the bolt securing the tensioner arm and apply tension to the timing chain.
3. Rotate the crankshaft clockwise two turns and verify that the valve timing is correct.

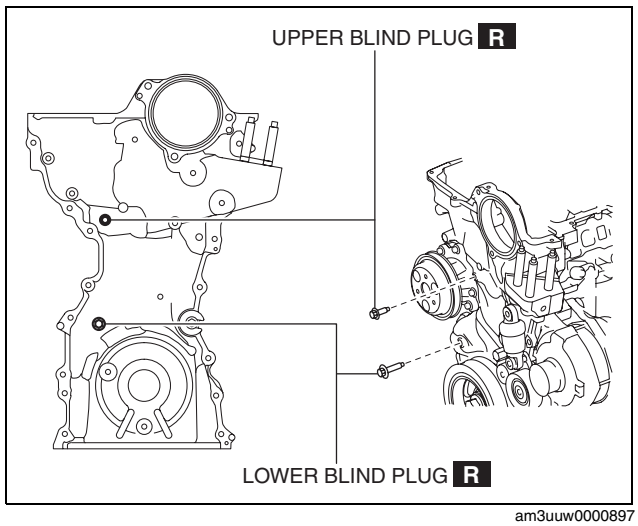


am3uuw0000900

- If the valve timing is not correct, remove the engine front cover and reassemble the timing chain to each sprocket. (See 01-10A-39 TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

4. Install the blind plugs (upper and lower) for the engine front cover service holes.

Tightening torque
Upper: 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}
Lower: 17—23 N·m {1.8—2.3 kgf·m, 13—16 ft·lbf}



am3uuw0000897

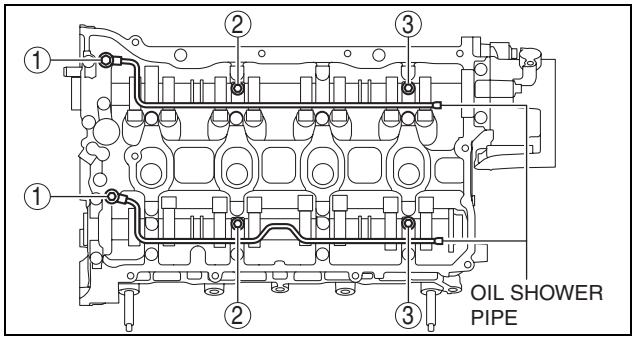
MECHANICAL [SKYACTIV-G 2.0]

Oil Shower Pipe Installation Note

1. Install the oil shower pipe in the order shown in the figure.

Tightening torque

Installation position	Tightening torque
1	9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}
2, 3	8.0—9.0 N·m {82—91 kgf·cm, 71—79 in·lbf}



am3uuw0000879

CYLINDER HEAD GASKET REPLACEMENT [SKYACTIV-G 2.0]

id0110h2800700

Warning

- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**
- **Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.**
- **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)**

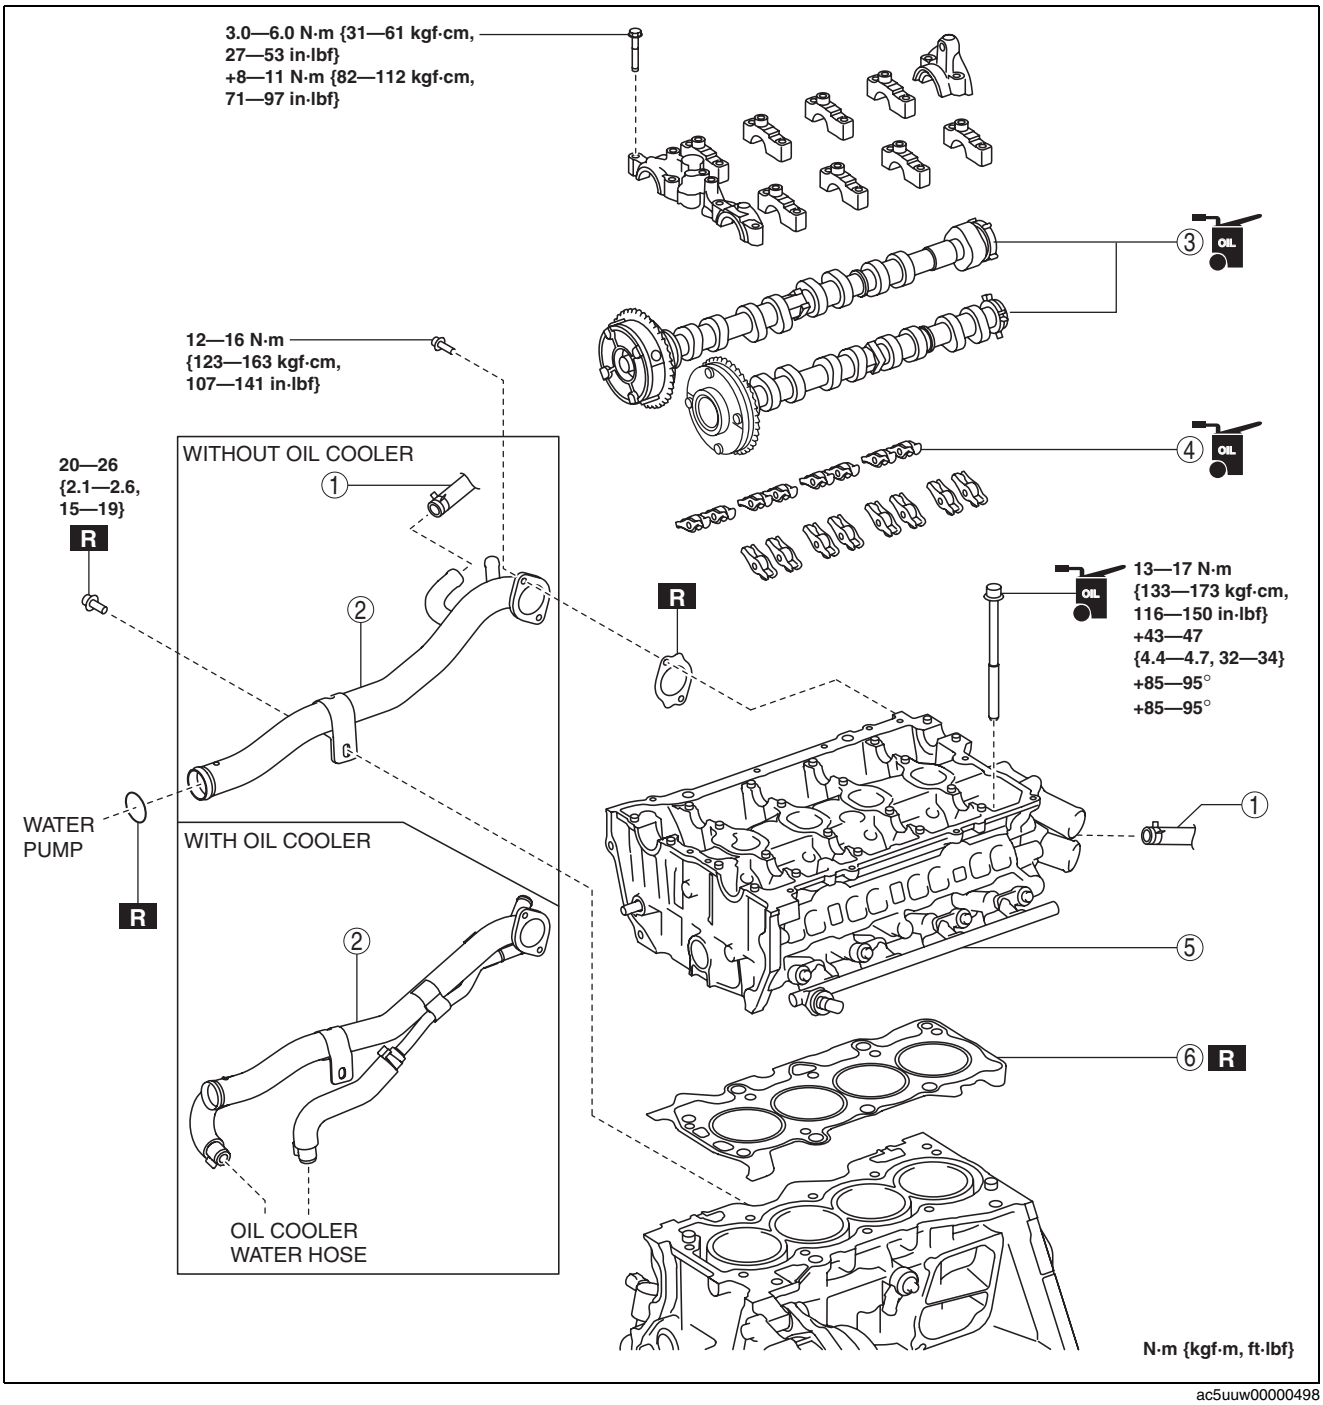
Caution

- **If the camshaft is rotated with the timing chain removed and the piston at the top dead center position, the valve may contact the piston and the engine could be damaged. When rotating the camshaft with the timing chain removed, rotate it after lowering the piston from the top dead center position.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the ignition coil/ion sensors. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
5. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
6. Remove the drive belt. (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
7. Drain the engine oil. (See 01-11A-3 ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0].)
8. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)
9. Remove the intake manifold. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
10. Set aside the exhaust manifold to the vehicle rear. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
11. Disconnect the radiator hose (upper, lower).
12. Remove the vacuum pump. (See 04-11-21 VACUUM PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
13. Remove the high pressure fuel pump and rear housing. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
14. Disconnect the heater hose from the water outlet and water inlet pipe.
15. Remove the oil pan. (See 01-11A-12 OIL PAN REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
16. Remove the timing chain and chain guide. (See 01-10A-39 TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
17. Remove the OCV. (See 01-10A-38 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
18. Remove in the order indicated in the table.
19. Install in the reverse order of removal.
20. Refill with the specified type and amount of the engine oil. (See 01-11A-3 ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0].)
21. Refill the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)

MECHANICAL [SKYACTIV-G 2.0]

22. Start the engine, and inspect and adjust the following:
    - Leakage of engine oil, engine coolant.
    - Runout and contact of pulley and belt.
    - Ignition timing, idle speed and idle mixture. (See 01-10A-4 ENGINE TUNE-UP [SKYACTIV-G 2.0].)
    - Compression pressure (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].)



ac5uuw00000498

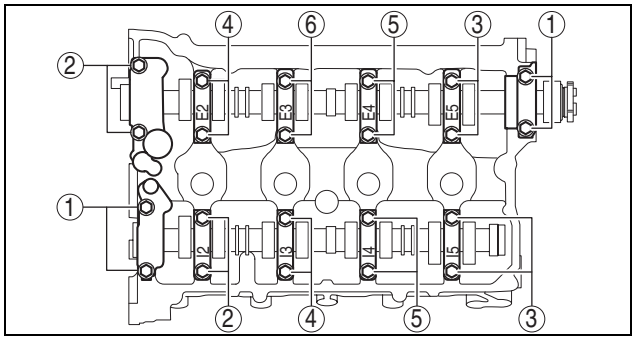
1	Water hose (if equipped)
2	Water inlet pipe (See 01-10A-85 Water Inlet Pipe Installation Note.)
3	Camshaft (See 01-10A-80 Camshaft Removal Note.) (See 01-10A-82 Camshaft Installation Note.)

4	Rocker arm (See 01-10A-80 Rocker Arm Removal Note.) (See 01-10A-81 Rocker Arm Installation Note.)
5	Cylinder head (See 01-10A-80 Cylinder Head Removal Note.) (See 01-10A-81 Cylinder Head Installation Note.)
6	Cylinder head gasket

MECHANICAL [SKYACTIV-G 2.0]

Camshaft Removal Note

1. Loosen the camshaft cap installation bolts in a few passes in the order shown in the figure and remove the camshaft caps.
2. Remove the camshaft.



am3uuw0000881

Rocker Arm Removal Note

1. Keep the rocker arms in the order of removal to enable reassembly in their original positions.

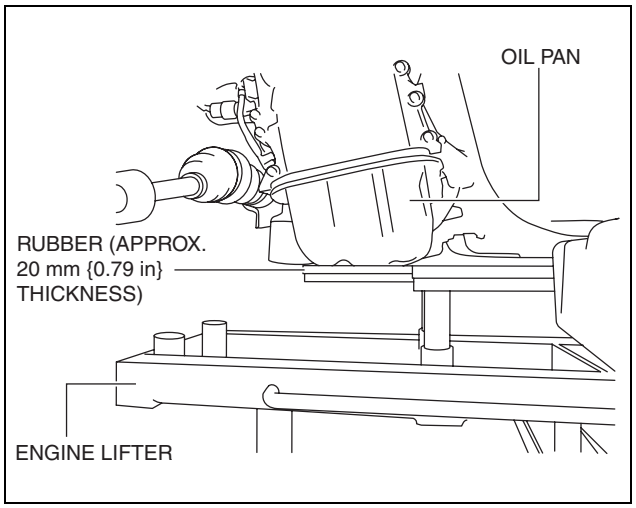
Cylinder Head Removal Note

1. Temporarily install the oil pan to support the engine from under the vehicle.

Caution

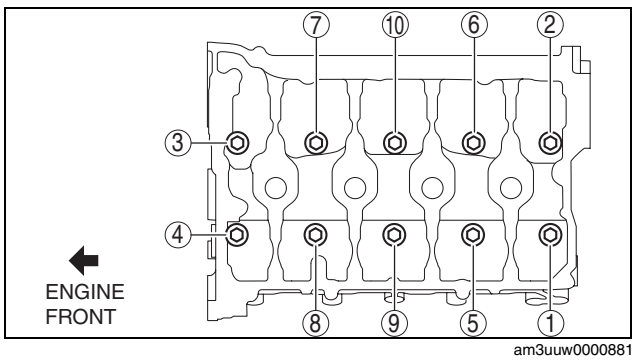
- **To prevent deformation of the oil pan, support the engine using the following methods.**
  - **— When using an engine lifter, insert rubber of appropriate size (approx. 20 mm {0.79 in} thickness) between the engine lifter and the oil pan to support the oil pan.**
  - **— When using a garage jack, place rubber of appropriate size (approx. 20 mm {0.79 in} thickness) on a batten which is large enough to cover the oil pan to support the oil pan.**

2. Support the engine (oil pan) using a commercially available engine lifter or garage jack.
3. Remove the chain on the **SST** that suspended the engine and set it aside.



am3uuw0000881

4. Loosen the cylinder head installation bolts in two or three passes in the order shown in the figure and remove them.
5. Remove the cylinder head.



am3uuw0000881

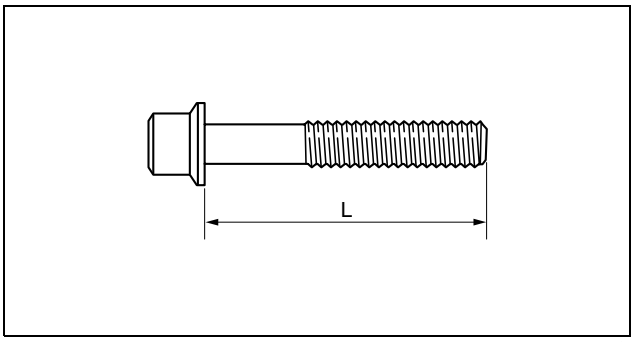
MECHANICAL [SKYACTIV-G 2.0]

Cylinder Head Installation Note

Caution
- **If the following condition is met, replace the cylinder head bolts.**
  - **— Length exceeds maximum specification**

Cylinder head bolt length L
145.2—145.8 mm {5.717—5.740 in}

Cylinder head bolt length L maximum
146.5 mm {5.767 in}

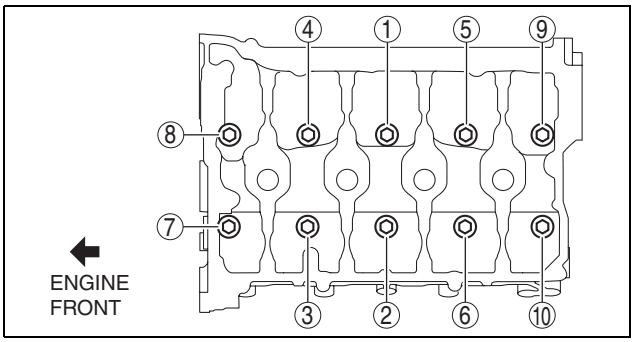


am3zzw0000245

1. When a cylinder head bolt is reused, apply engine oil to any part of the following:
   - Bolt seating surface
   - Cylinder head seating surface

2. Tighten the cylinder head bolts in the order shown in the following 4 steps.

   Tightening torque
   Step 1: 13—17 N·m {133—173 kgf·cm, 116—150 in·lbf}
   Step 2: 43—47 N·m {4.4—4.7 kgf·m, 32—34 ft·lbf}
   Step 3: 85—95°
   Step 4: 85—95°

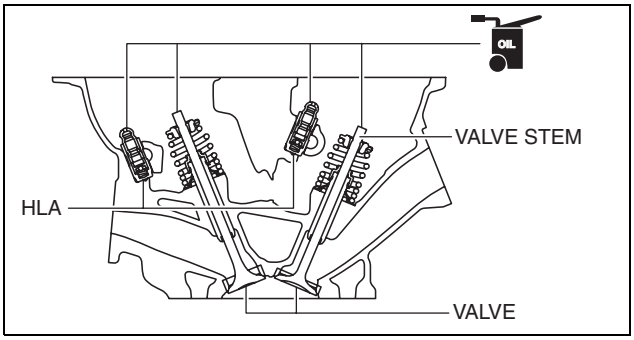


am3uuw0000881

3. Install the chain for the **SST** which was set aside and secure the engine.
4. Remove the engine lifter or garage jack.
5. Remove the temporarily assembled oil pan.

Rocker Arm Installation Note

1. Apply engine oil to the HLAs and the end of the valve stems.
2. Install the rocker arms to the same positions as before removal.



am3uuw0000881

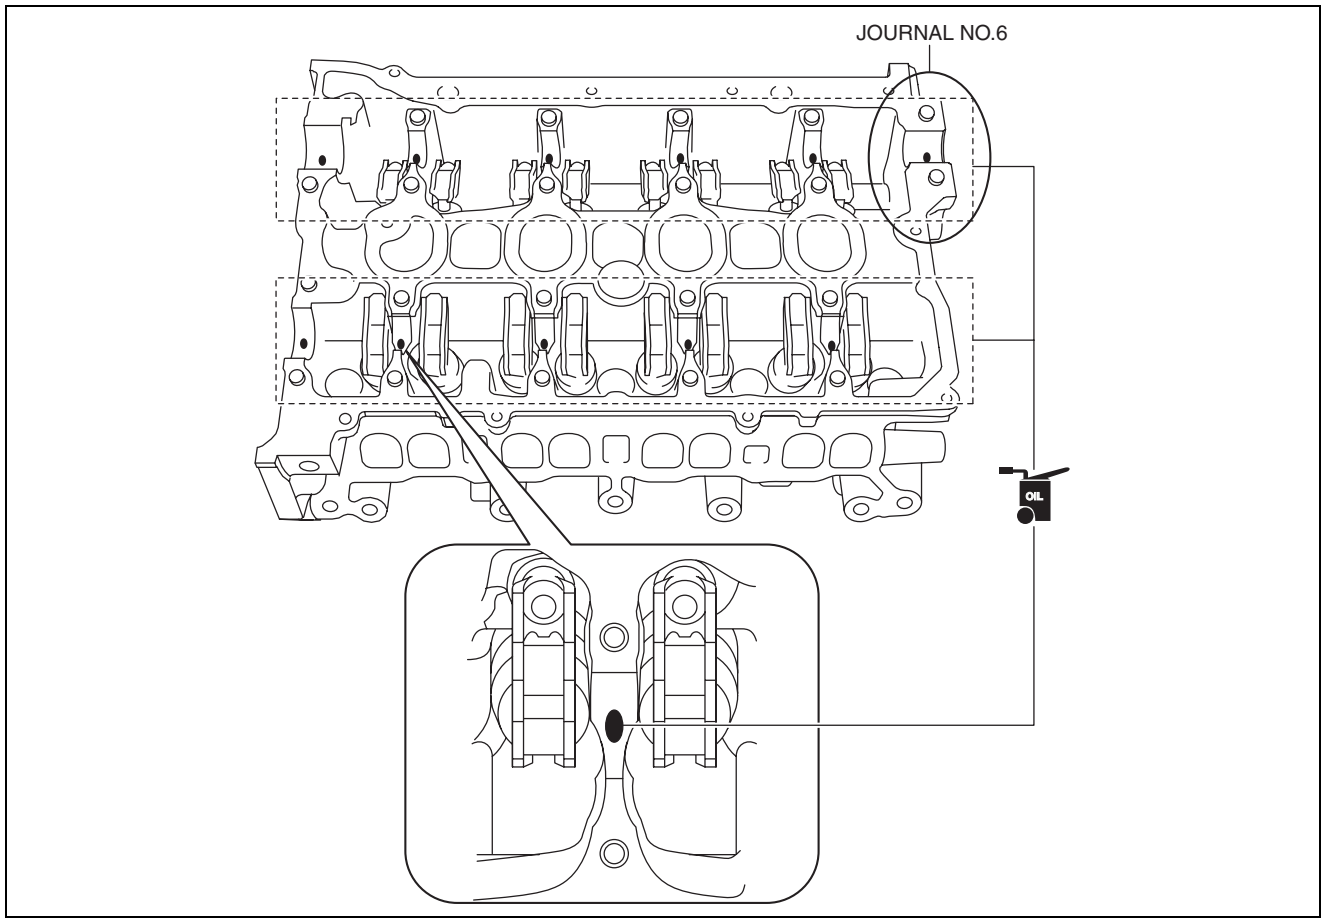
MECHANICAL [SKYACTIV-G 2.0]

Camshaft Installation Note

1. As shown in the figure, apply gear oil (SAE No. 90 or equivalent) or engine oil to the center area of each journal of the cylinder head.

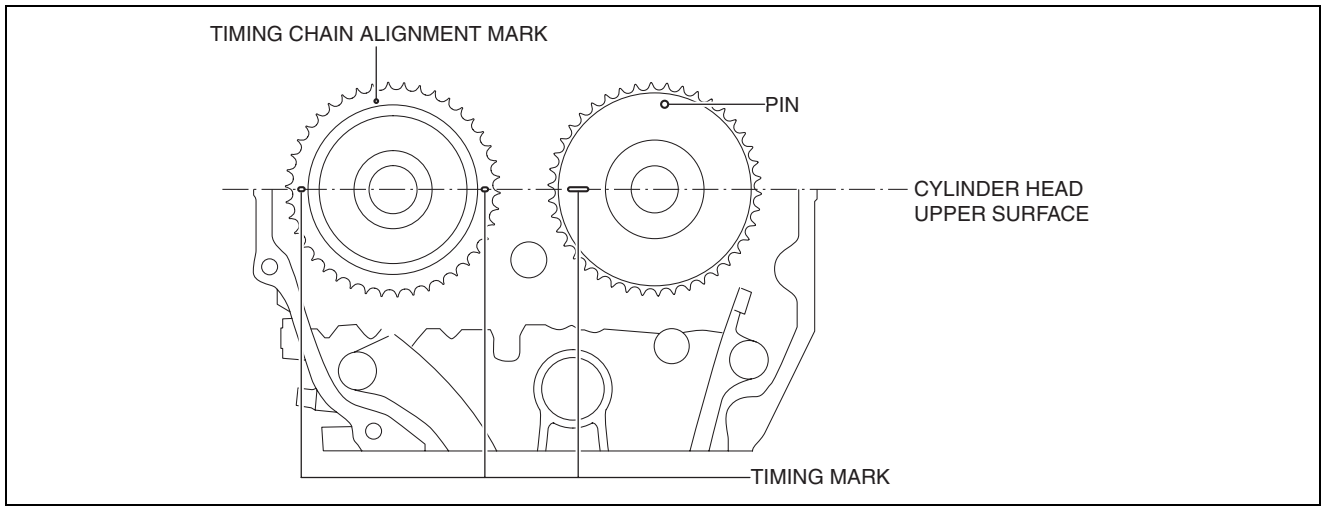
Caution

- **Apply 0.05 ml {0.05 cc, 0.003 in^3} or less of oil to journal No.6.**



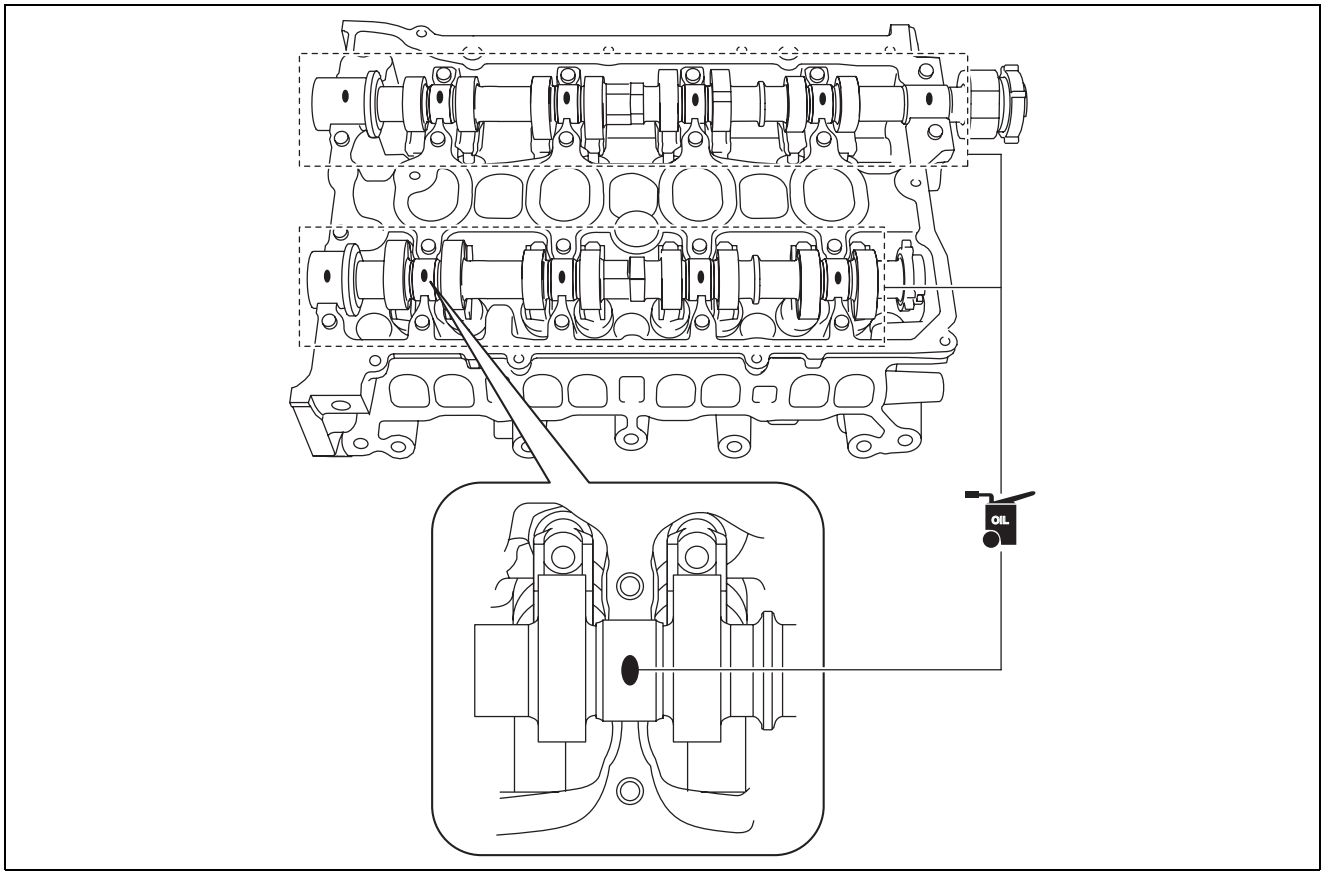
am3uuw0000882

2. Install the camshaft with cylinder No.1 cam aligned to the TDC position as shown in the figure.



am3uuw0000882

3. As shown in the figure, apply gear oil (SAE No. 90 or equivalent) or engine oil to the center area of each journal of the camshaft.



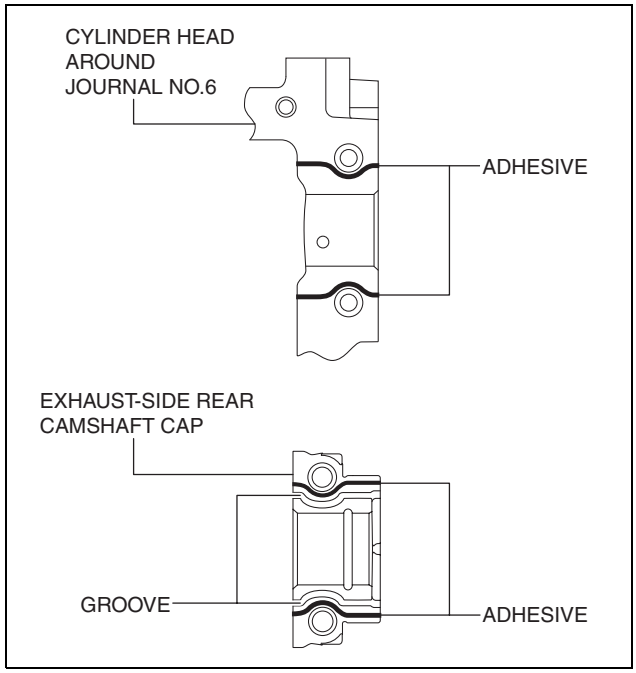
am3uuw0000882

4. Apply adhesive agent (Loctite 962T) around journal No.6 of the cylinder head or the exhaust-side rear camshaft cap.

Caution
- **Verify that there is no adhesive agent on the journal.**

Adhesive agent bead width
0.5—1.5 mm {0.02—0.05 in}

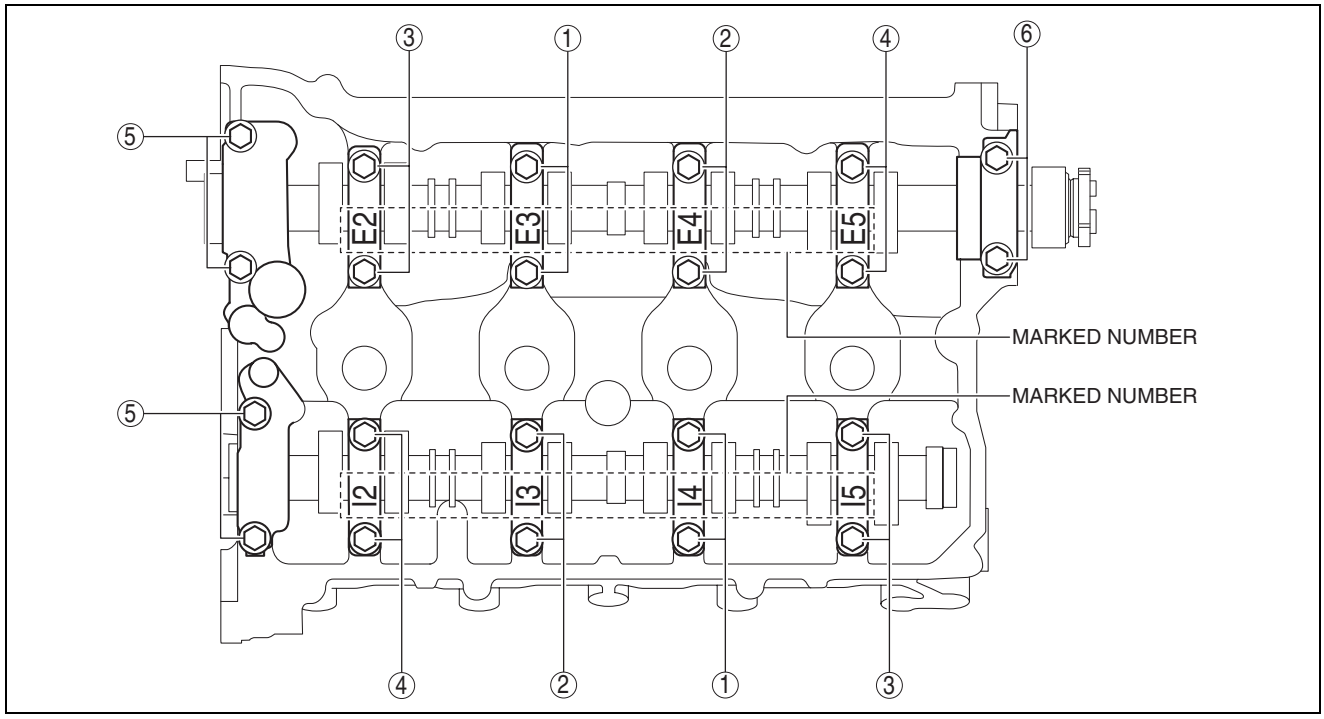
5. Install the camshaft caps in the marked number order, and temporarily tighten the camshaft cap installation bolts in two or three passes evenly.



ac5uuw00000499

MECHANICAL [SKYACTIV-G 2.0]

6. Tighten the camshaft cap installation bolts in two steps in the order shown in the figure.



am3uuw0000882

Tightening torque
First step: 3.0—6.0 N·m {31—61 kgf·cm, 27—53 in·lbf}
Second step: 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

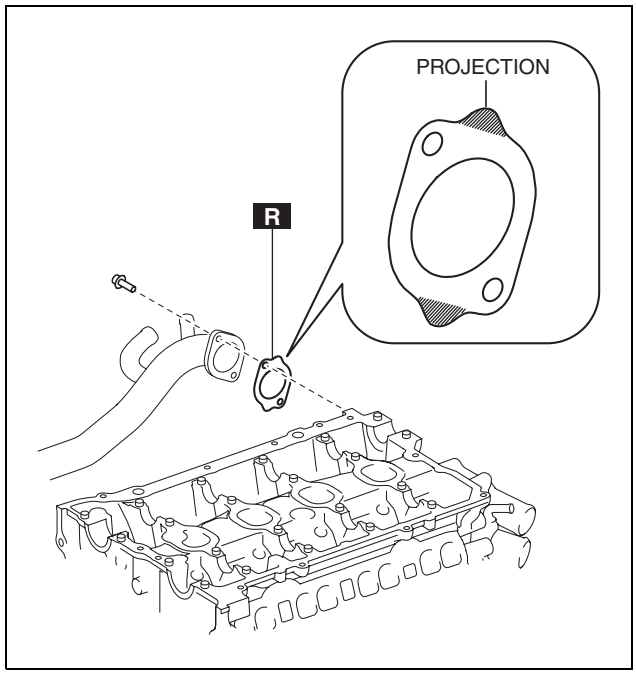
MECHANICAL [SKYACTIV-G 2.0]

Water Inlet Pipe Installation Note

Caution

- **Do not apply oil (engine oil, ATF etc.) to the O-ring of the water inlet pipe. Otherwise, the O-ring could swell causing a seal malfunction.**

1. Clean away the sealant adhering to the bolt hole on the cylinder block side of the water inlet pipe stay.
2. Apply engine coolant to the O-ring.
3. Install the O-ring to the water inlet pipe.
4. Insert the water inlet pipe into the water pump being careful not to damage the O-ring.
5. Install the water inlet pipe gasket with the gasket projection facing the direction shown in the figure.



ac5uuw00000500

6. Tighten the bolts in the order shown in the figure.

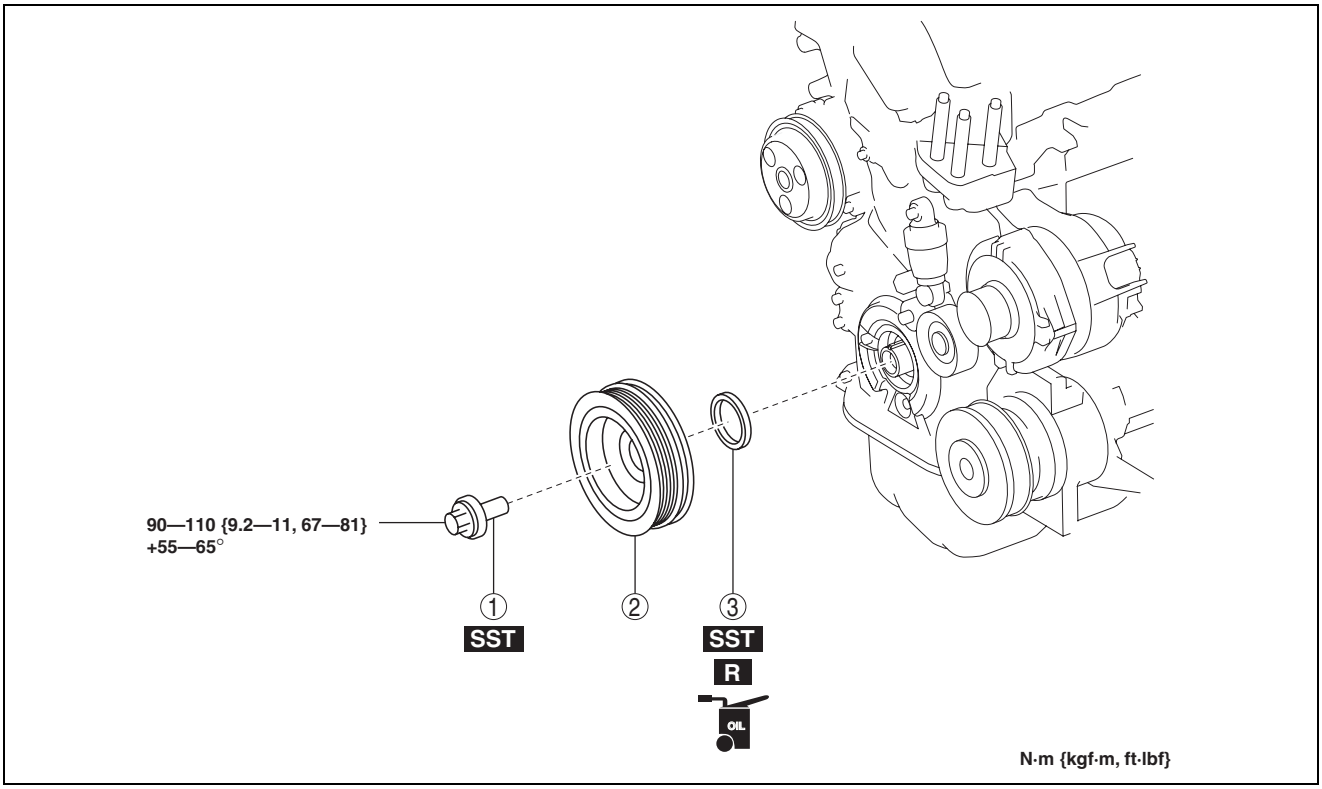
FRONT OIL SEAL REPLACEMENT [SKYACTIV-G 2.0]

id0110h2800800

Warning

- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
3. Remove the drive belt. (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.



am3uuw0000882

1	Crankshaft pulley lock bolt (See 01-10A-87 Crankshaft Pulley Lock Bolt Removal Note.) (See 01-10A-89 Crankshaft Pulley Lock Bolt Installation Note.)

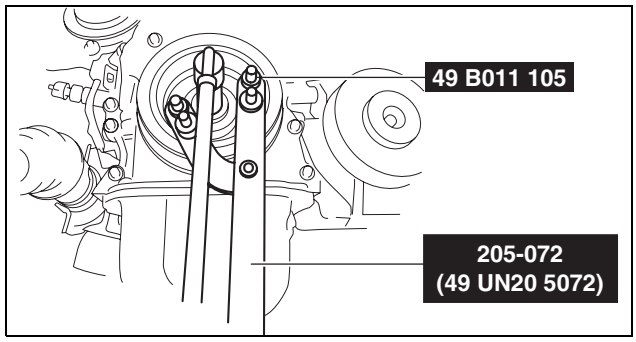
2	Crankshaft pulley
3	Front oil seal (See 01-10A-87 Front Oil Seal Removal Note.) (See 01-10A-88 Front Oil Seal Installation Note.)

Crankshaft Pulley Lock Bolt Removal Note

Caution

- **To prevent damage to the crankshaft pulley, protect the crankshaft pulley with a clean cloth so that the bar part (205-072) of the SST does not contact the crankshaft pulley.**
- **To prevent damage to the engine front cover, be careful not to allow the tab part (49 B011 105) of the SST to get caught between the crankshaft pulley and the engine front cover.**

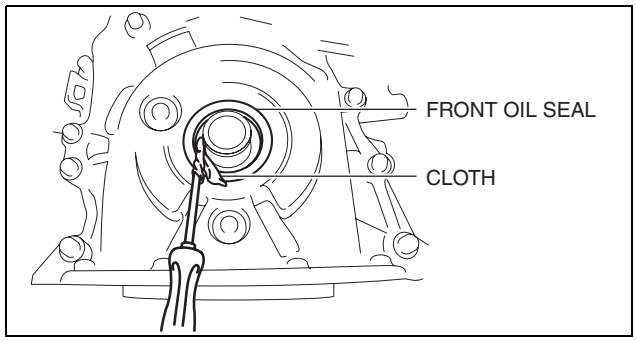
1. Hold the crankshaft pulley using the **SSTs**.
2. Remove the crankshaft pulley lock bolt.



ac5uuw00000501

Front Oil Seal Removal Note

1. Cut the oil seal lip using a utility knife.
2. Remove the oil seal using a flathead screwdriver with the tip protected by a clean cloth to prevent damage to the oil seal sliding part of the crankshaft.

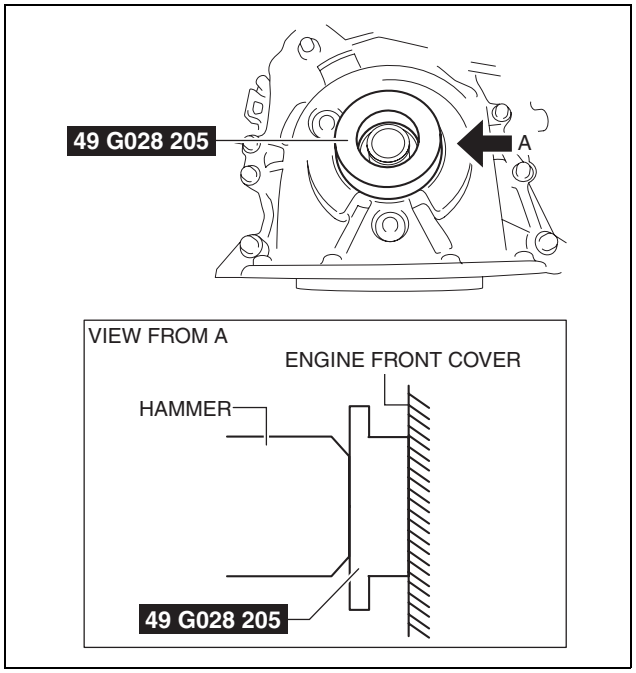


am3uuw0000882

MECHANICAL [SKYACTIV-G 2.0]

Front Oil Seal Installation Note

1. Apply clean engine oil to the inner surface of a new front oil seal.
2. Insert the front oil seal into the engine front cover by hand.
3. Tap the oil seal in evenly using the **SST** and a hammer.



am3uuw0000883

Front oil seal press-in amount
0—0.5 mm {0—0.019 in}

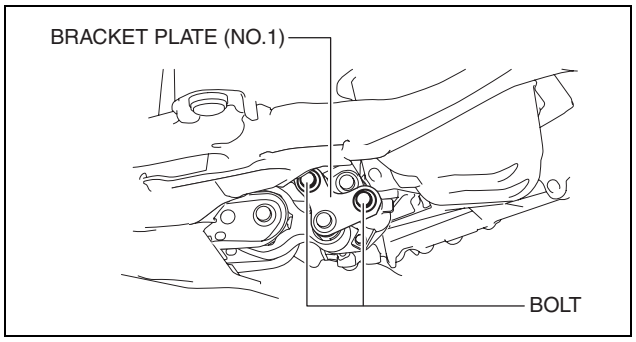
4	Bracket plate (No.2) (See 01-10A-92 No.1 engine mount installation note (2WD).)

No.1 engine mount rubber removal note (2WD)

1. Loosen the bolts shown in the figure.

   Note
   - The bracket plate (No.1) can move slightly by loosening the bolts shown in the figure and the No.1 engine mount rubber can be easily removed.

2. Remove the No.1 engine mount rubber.



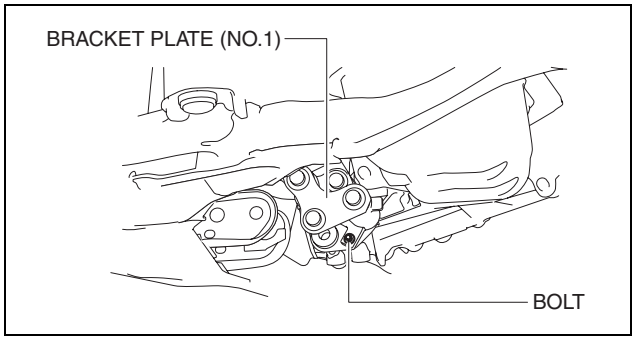
ac5uuw00000638

No.1 engine mount installation note (2WD)

1. Install the No.1 engine mount bracket, plate (No.1), and plate (No.2) and temporarily tighten the installation bolts.
2. Tighten the bolt shown in the figure.

   Tightening torque
   8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

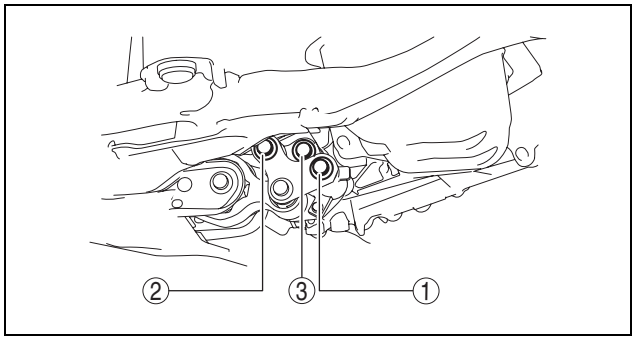
3. Install the No.1 engine mount rubber and temporarily tighten the installation bolts.



ac5uuw00000639

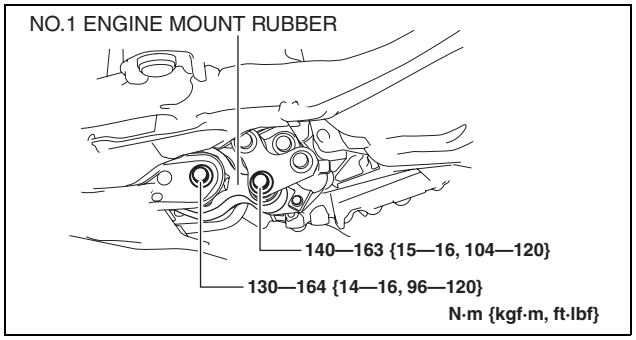
4. Tighten the No.1 engine mount bracket, plate (No.1) and plate (No.2) installation bolts in the order shown in the figure.

   Tightening torque
   84—98 N·m {8.6—9.9 kgf·m, 62—72 ft·lbf}



ac5uuw00000640

5. Tighten the No.1 engine mount rubber installation bolts.



ac5uuw00000641

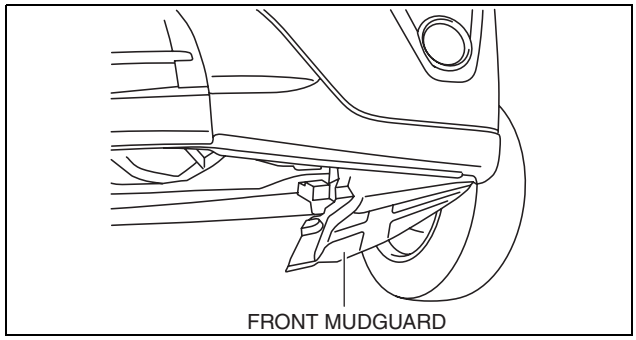
MECHANICAL [SKYACTIV-G 2.0]

No.1 Engine Mount (4WD)

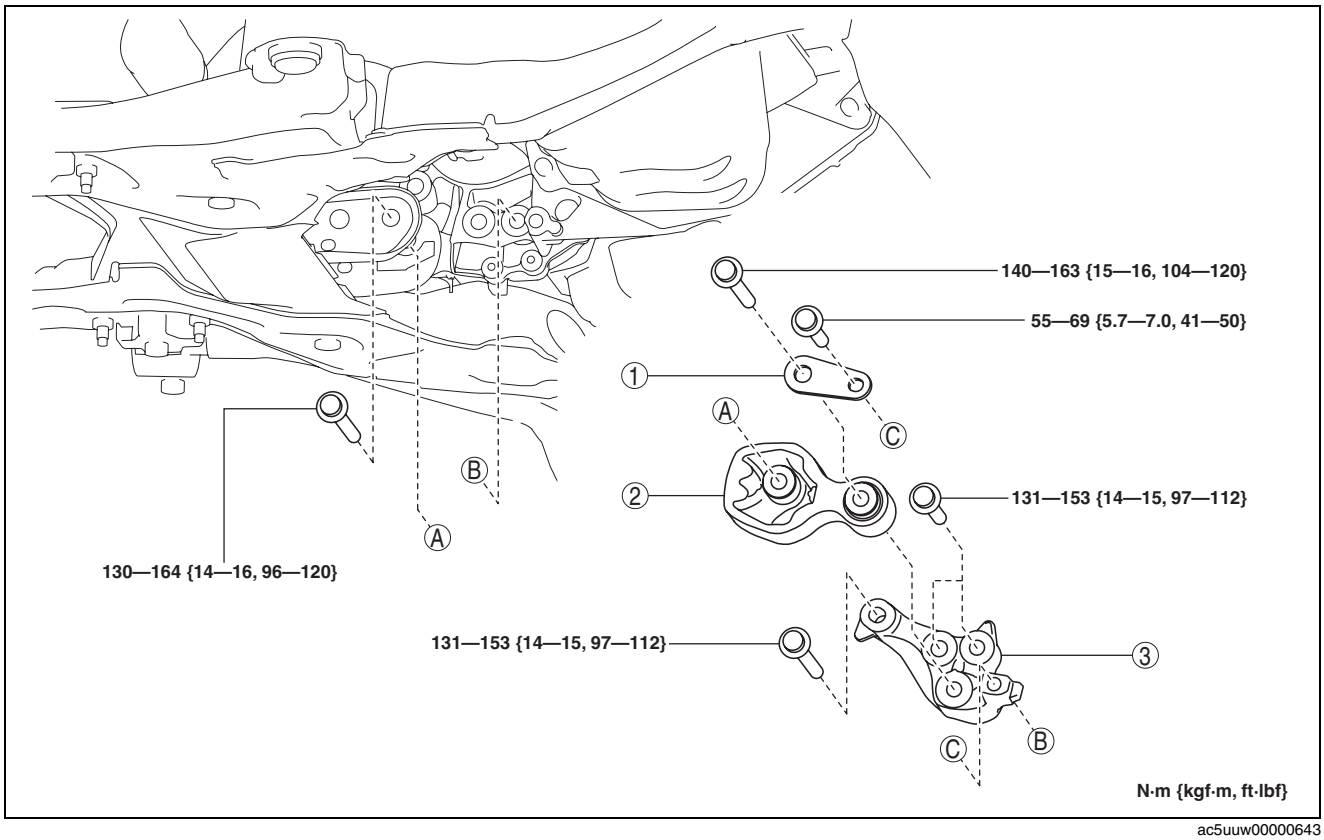
Note

- When removing the No.1 engine mount rubber for 4WD vehicles, loosen the front crossmember installation bolts and perform the procedure with the front crossmember component lowered to 15—20 mm {0.60—0.78 in}.
- When removing the No.1 engine mount bracket for 4WD vehicles, perform the procedure with the front crossmember component and transfer completely removed from the vehicle.

1. Remove the front under cover No.1 and front under cover No.2. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.) (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Set the front mudguard away from the front crossmember and front bumper. (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
3. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.
6. Inspect the front wheel alignment. (See 02-11-1 FRONT WHEEL ALIGNMENT.)



ac5uuw00000642



ac5uuw00000643

1	Bracket plate (See 01-10A-97 No.1 engine mount rubber, bracket plate installation note (4WD).)

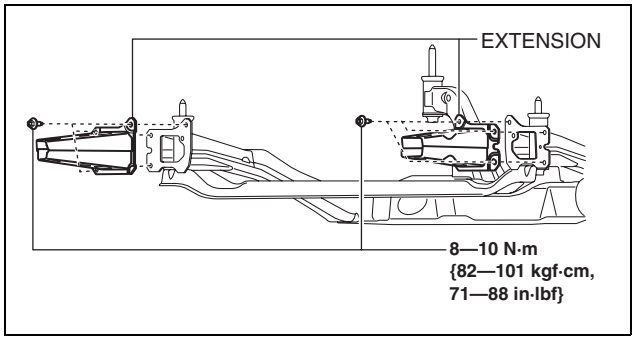
MECHANICAL [SKYACTIV-G 2.0]

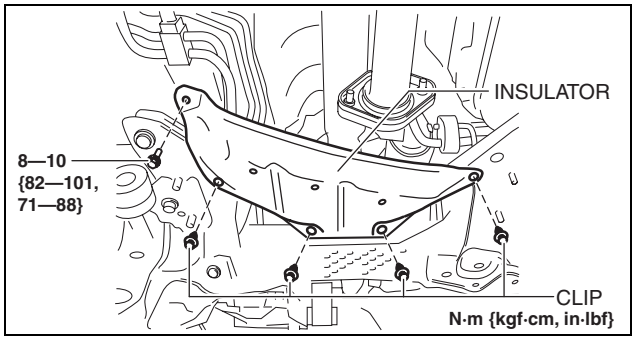
No.1 engine mount rubber removal note (4WD)

1. Remove the joint bolt (steering gear side) and disconnect the steering shaft from the steering gear and linkage. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
2. Remove the extension from the front crossmember.



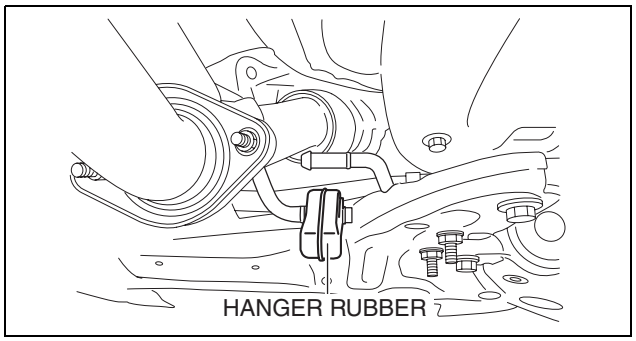
ac5uuw00000644

3. Remove the insulator shown in the figure.



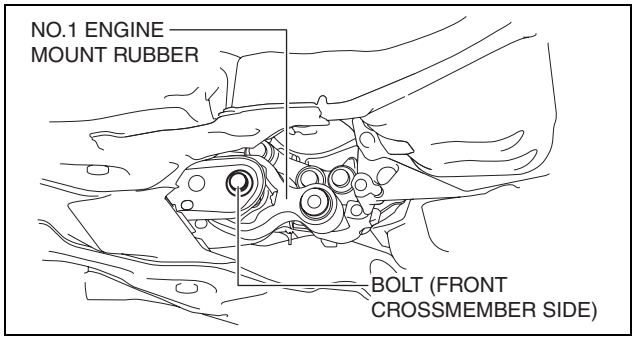
ac5uuw00000645

4. Remove the hanger rubber shown in the figure.
5. Disconnect the front stabilizer link (front stabilizer side). (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)



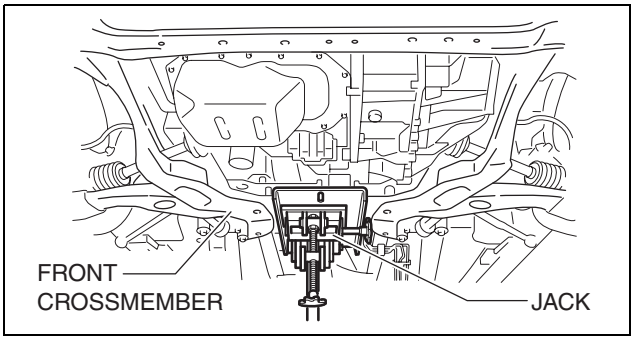
ac5uuw00000646

6. Remove the No.1 engine mount rubber installation bolt (front crossmember side).



ac5uuw00000647

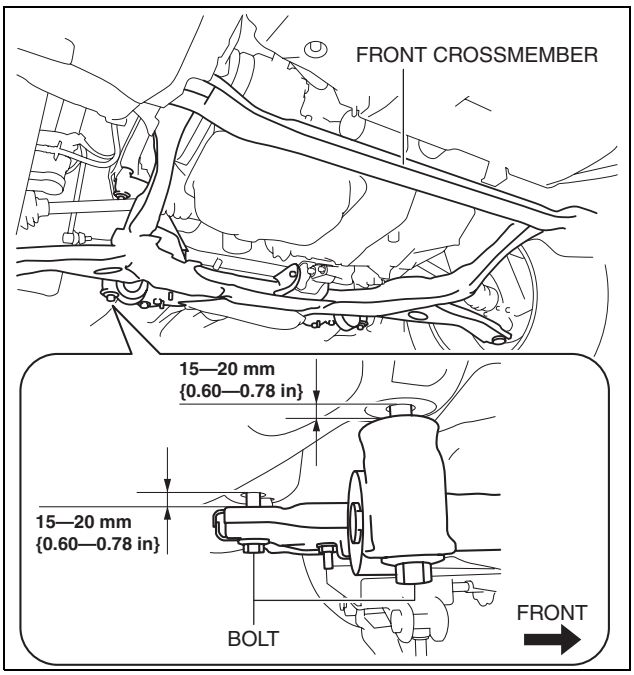
7. Support the front crossmember component using a jack.



ac5uuw00000648

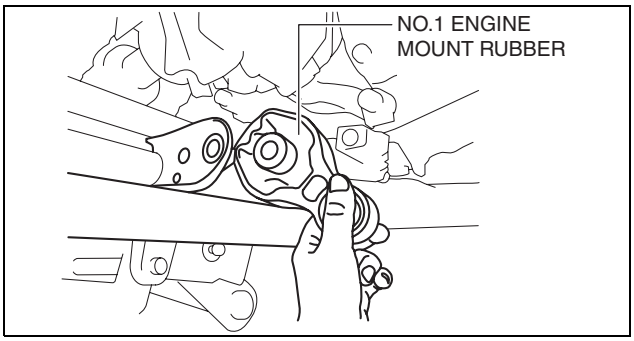
8. Loosen the front crossmember installation bolts (8) and lower the front crossmember component to 15—20 mm {0.60—0.78 in}.

Note
- To remove the No.1 engine mount rubber, lower the front crossmember component to make clearance between the component and transfer.



ac5uuw00000649

9. Remove the No.1 engine mount rubber.



ac5uuw00000650

No.1 engine mount bracket removal note (4WD)

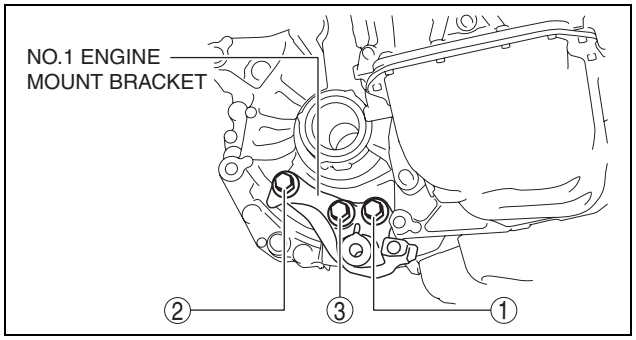
1. Remove the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
2. Remove the exhaust manifold. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the transfer. (See 03-16A-4 TRANSFER REMOVAL/INSTALLATION [C66MX-R] (MTX).) (See 03-16B-4 TRANSFER REMOVAL/INSTALLATION [FW6AX-EL] (ATX).)
4. Remove the No.1 engine mount bracket.

No.1 engine mount bracket installation note (4WD)

1. Install the No.1 engine mount bracket and tighten the bolts in the order shown in the figure.

   Tightening torque
   131—153 N·m {14—15 kgf·m, 97—112 ft·lbf}

2. Install in the reverse order of removal.

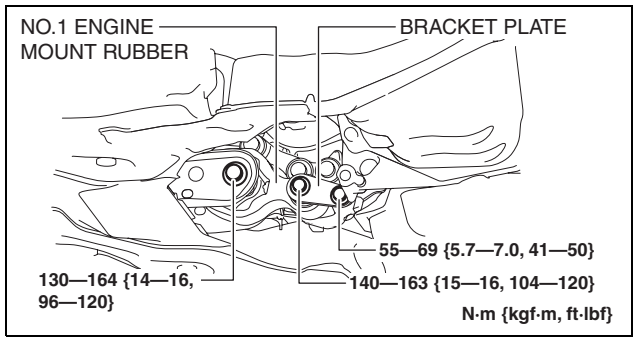


ac5uuw00000651

MECHANICAL [SKYACTIV-G 2.0]

No.1 engine mount rubber, bracket plate installation note (4WD)

1. Install the No.1 engine mount rubber to the front crossmember.
2. Tighten the front crossmember installation bolts. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
3. Remove the jack.
4. Tighten the No.1 engine mount rubber installation bolts.
5. Install in the reverse order of removal.



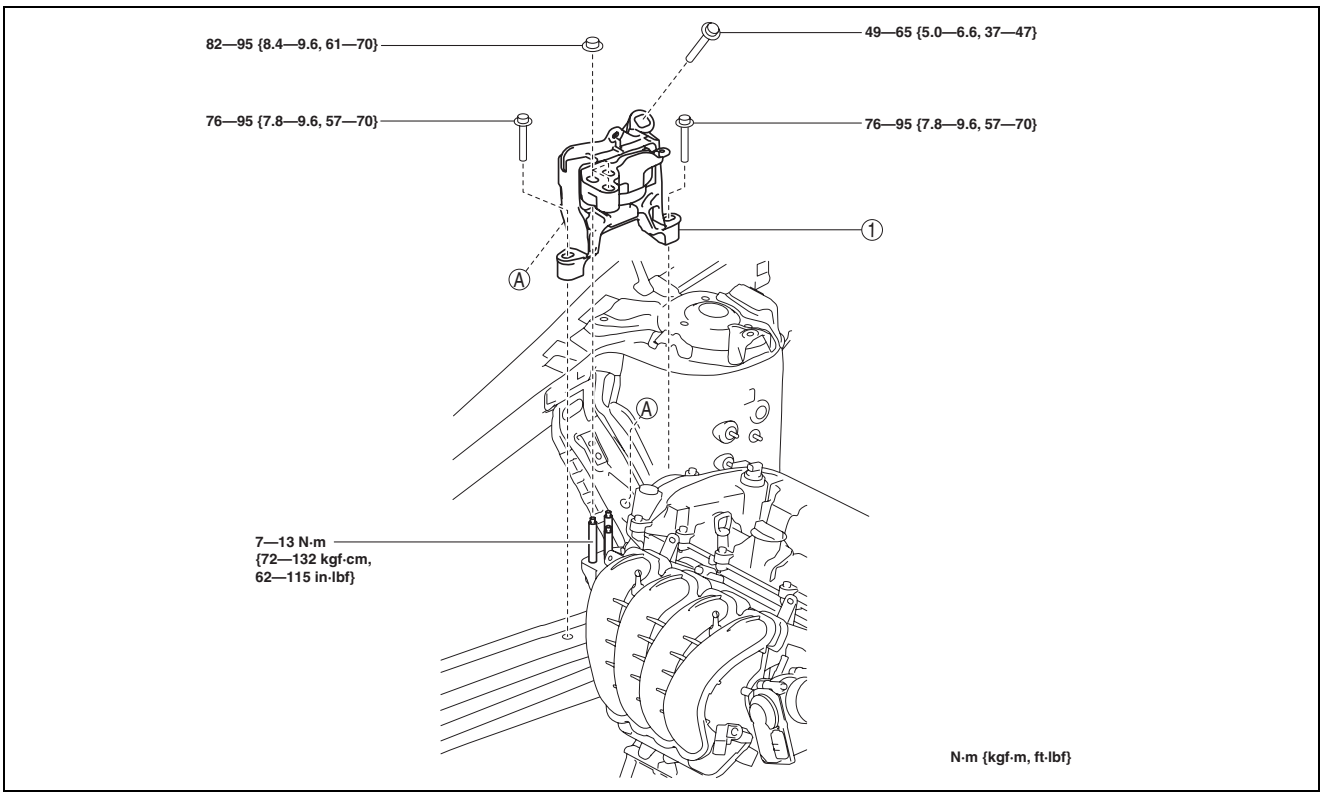
ac5uuw00000652

No.3 Engine Mount

Caution

- **Slots have been adopted for the No.3 engine mount installation holes. If the No.3 engine mount is deviated from the original position when installing the No.3 engine mount, engine noise or vibration could increase. Before removing the No.3 engine mount, place alignment marks on the No.3 engine mount and body so that they can be assembled to the same positions as before removal.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.



ac5wzw0000279

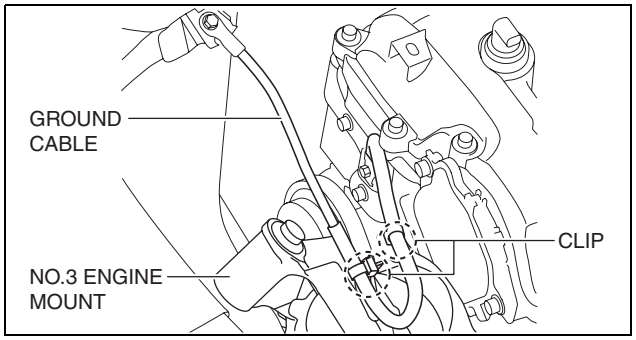
No.3 engine mount removal note

1. Remove the clips shown in the figure and set the ground cable aside.
2. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)

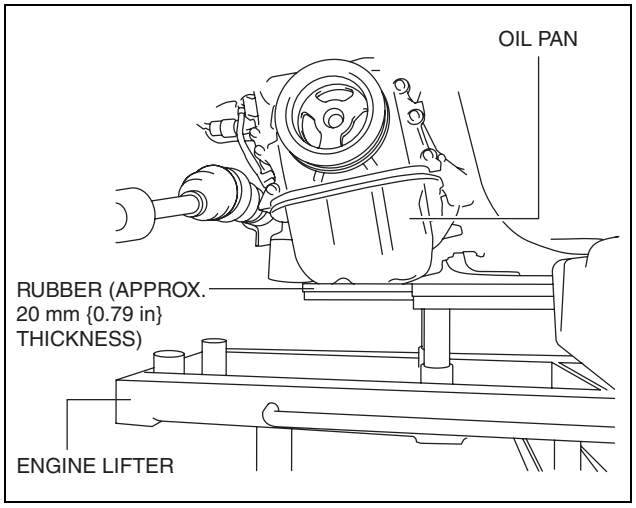


ac5uuw00000654

Caution

- **To prevent deformation of the oil pan, support the engine using the following methods.**
  - **— When using an engine lifter, insert rubber of appropriate size (approx. 20 mm {0.79 in} thickness) between the engine lifter and the oil pan to support the oil pan.**
  - **— When using a garage jack, place rubber of appropriate size (approx. 20 mm {0.79 in} thickness) on a batten which is large enough to cover the oil pan to support the oil pan.**

3. Before removing the No.3 engine mount, support the engine (oil pan) using a commercially available engine lifter or garage jack.

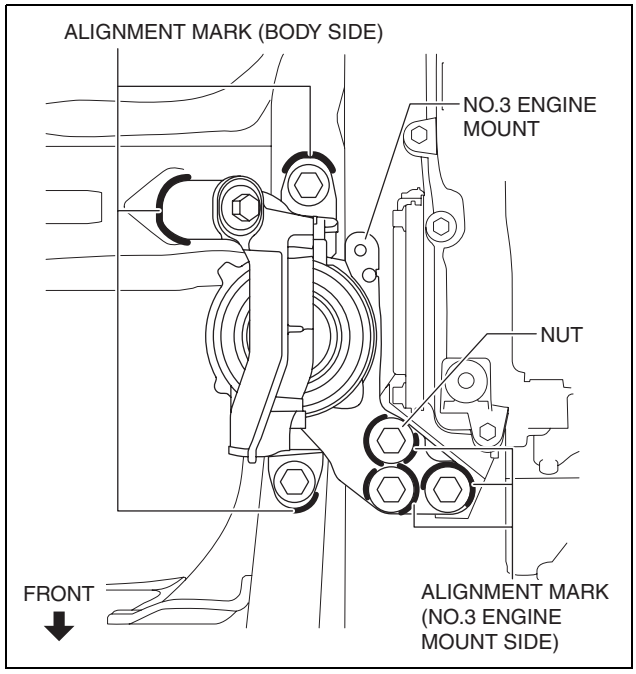


am3uuw0000890

4. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

   Note
   - Paint so that the No.3 engine mount is framed on the body side and the outline of the nut is framed on the No.3 engine mount side.

5. Remove the No.3 engine mount.



ac5uuw00000655

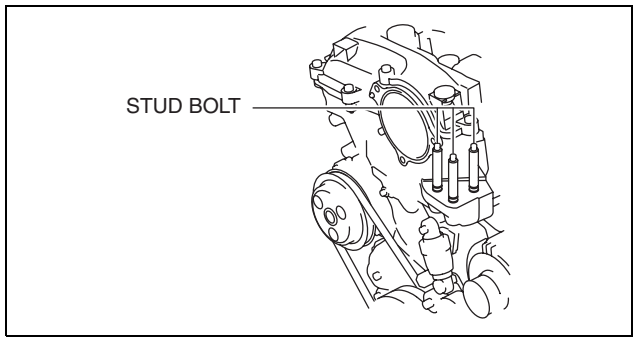
No.3 engine mount installation note

Note
- When replacing the No.3 engine mount, place a mark at the same position as the one placed before removal.
- If the No.3 engine mount nut is loosened, tighten the engine front cover stud bolts because they may be loosened.

1. Tighten the engine front cover stud bolts.

   Tightening torque
   7—13 N·m {72—132 kgf·cm, 62—115 in·lbf}

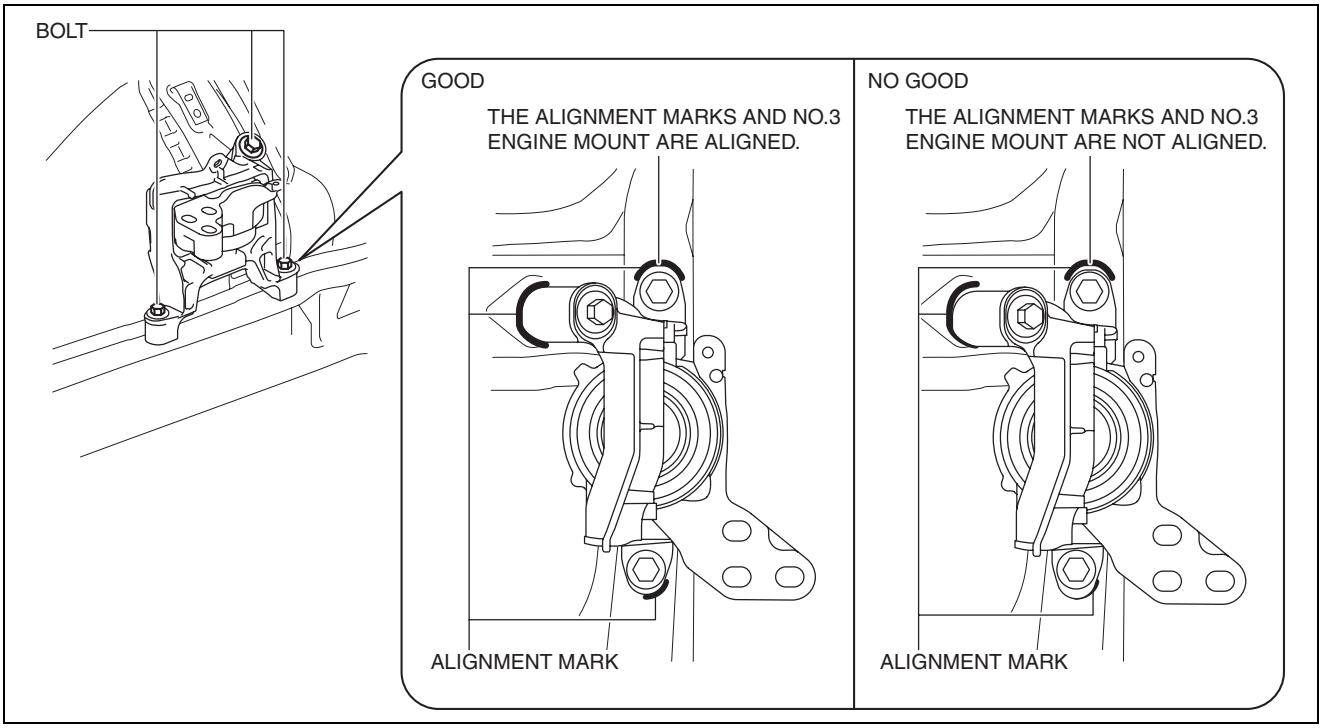
2. Temporarily tighten the No.3 engine mount installation bolts and nuts using the following procedure:



am3uuw0000880

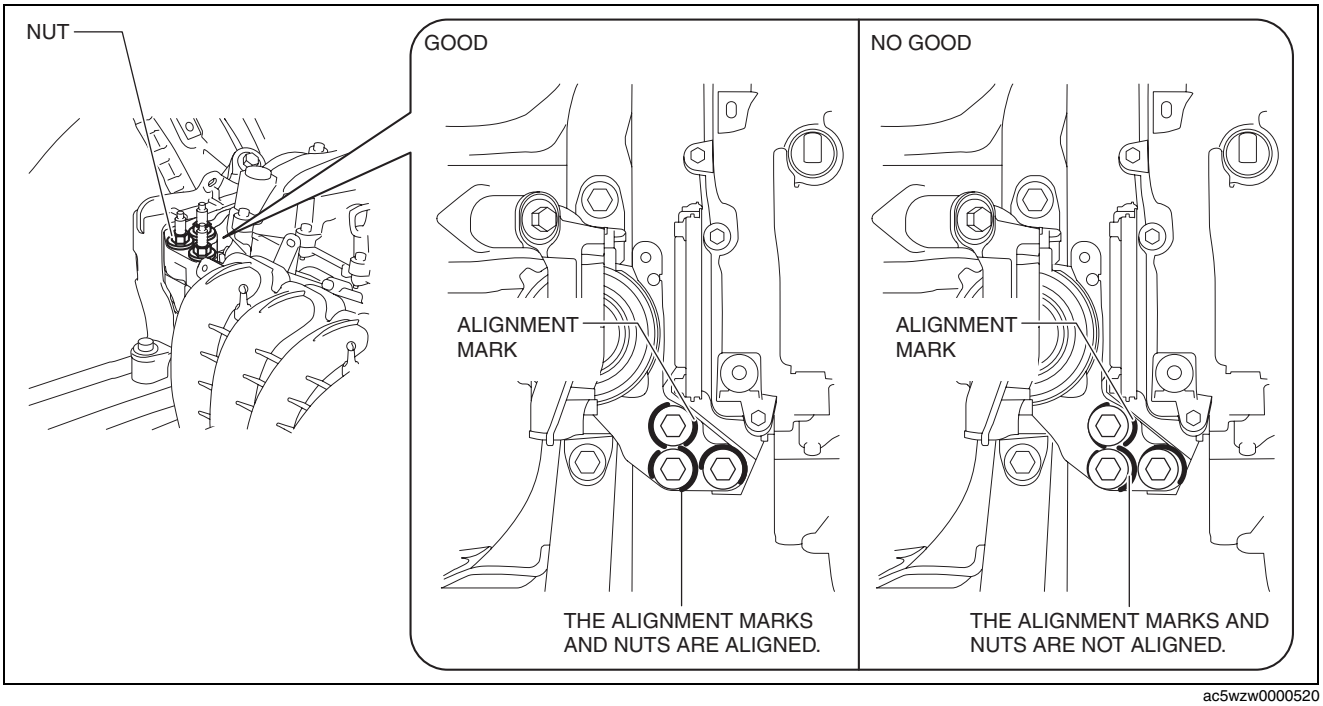
MECHANICAL [SKYACTIV-G 2.0]

(1) Align the alignment marks on the body side and No.3 engine mount, and temporarily tighten the bolts shown in the figure.



ac5wzw0000519

(2) Temporarily tighten the nuts shown in the figure while aligning the alignment marks of the No.3 engine mount and nuts.



ac5wzw0000520

Note

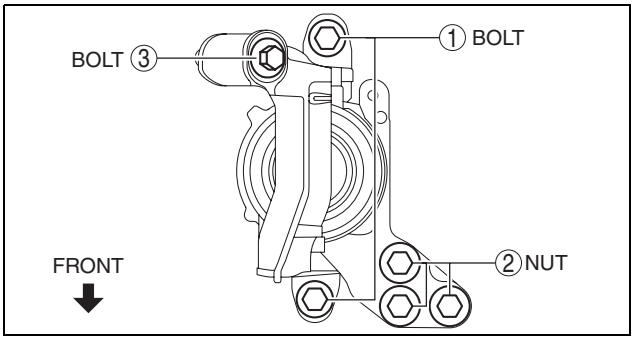
- If the alignment marks are not aligned, align the alignment marks while slightly moving the engine and temporarily tighten the nuts.

MECHANICAL [SKYACTIV-G 2.0]

3. Tighten the No.3 engine mount installation bolts and nuts in the order shown in the figure.

No.	Tightening torque
1	76—95 N·m {7.8—9.6 kgf·m, 57—70 ft·lbf}
2	82—95 N·m {8.4—9.6 kgf·m, 61—70 ft·lbf}
3	49—65 N·m {5.0—6.6 kgf·m, 37—47 ft·lbf}

4. Remove the engine lifter or garage jack.
5. Install in the reverse order of removal.



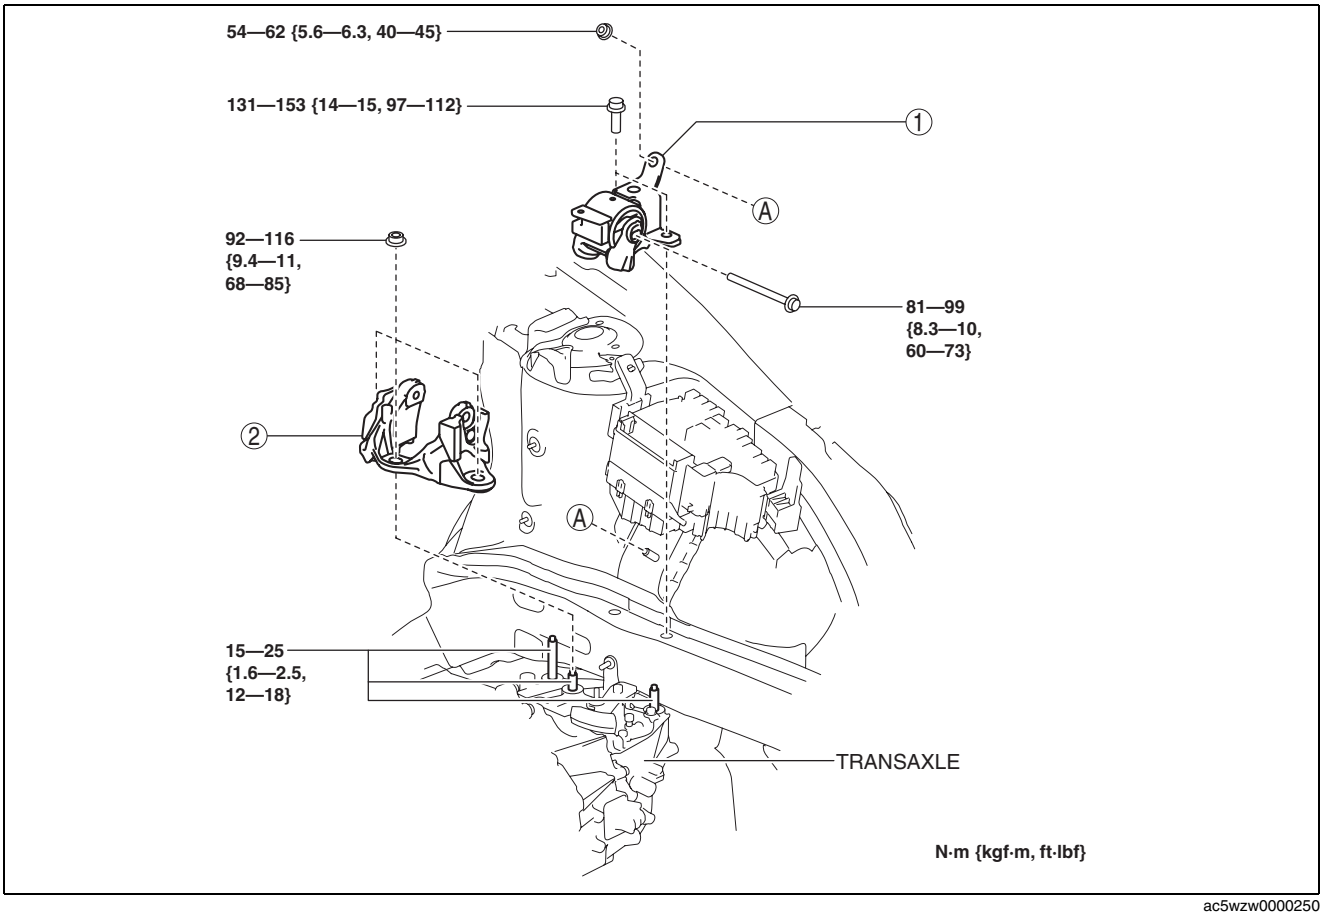
ac5uuw00000658

No.4 Engine Mount

Caution

- **Slots have been adopted for the No.4 engine mount bracket installation holes. If the No.4 engine mount bracket is deviated from the original position when installing the No.4 engine mount bracket, engine noise or vibration could increase. Before removing the No.4 engine mount bracket, place alignment marks on the No.4 engine mount bracket so that they can be assembled to the same positions as before removal.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the air cleaner, air hose and fresh air duct as a single unit. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the battery tray and PCM component. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.



ac5wzw0000250

MECHANICAL [SKYACTIV-G 2.0]

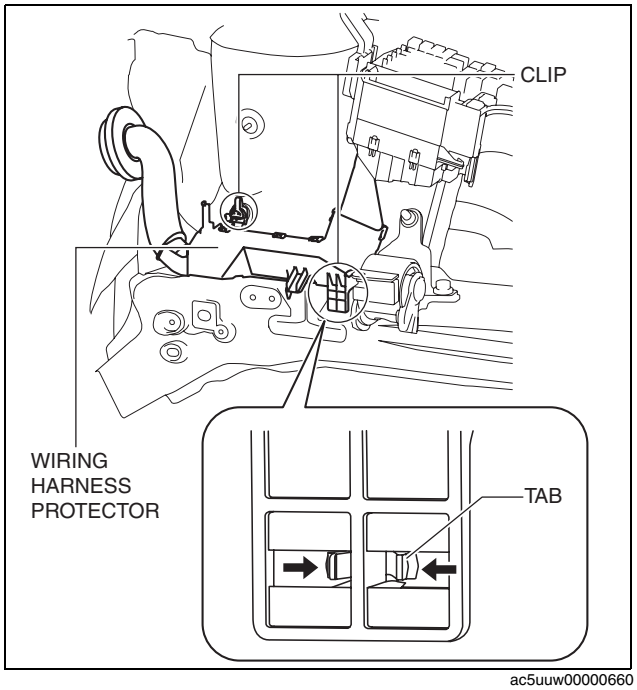
1	No.4 engine mount rubber (See 01-10A-102 No.4 engine mount rubber removal note.) (See 01-10A-104 No.4 engine mount rubber installation note.)
2	No.4 engine mount bracket (See 01-10A-103 No.4 engine mount bracket removal note.) (See 01-10A-103 No.4 engine mount bracket installation note.)

No.4 engine mount rubber removal note

1. Remove the clips shown in the figure and set the wiring harness protector aside.
2. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)

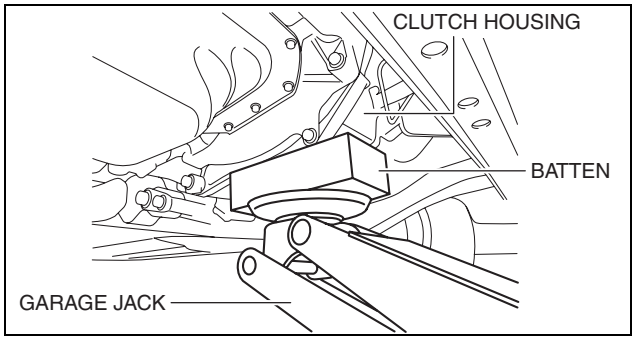
Caution

- **To prevent the damage to the transaxle, support the transaxle using the following methods.**



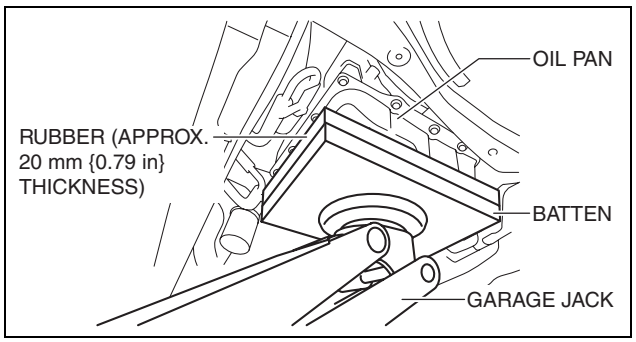
ac5uuw00000660

— **MTX: Support the clutch housing using a batten of appropriate size.**



ac5uuw00000661

— **ATX: Place rubber of appropriate size (approx. 20 mm {0.79 in} thickness) on a batten which is large enough to cover the oil pan to support the oil pan.**

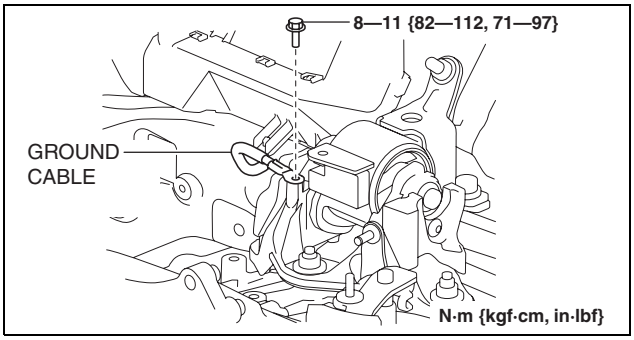


ac5uuw00000662

3. Before removing the No.4 engine mount rubber, support the transaxle using a commercially available engine lifter or garage jack.
4. Remove the No.4 engine mount rubber.

No.4 engine mount bracket removal note

1. Remove the bolt shown in the figure and set the ground cable aside.

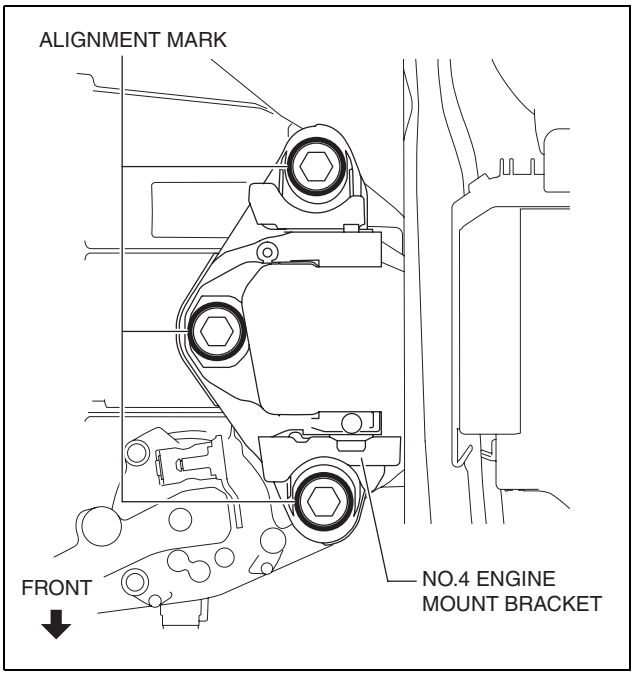


ac5uuw00000663

2. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

   Note
   - Paint so that the outline of the nut is framed on the bracket side.

3. Remove the No.4 engine mount bracket.



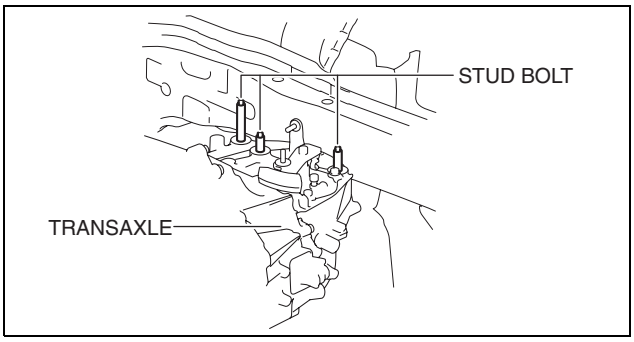
ac5uuw00000664

No.4 engine mount bracket installation note

Note
- When replacing the No.4 engine mount bracket, place a mark at the same position as the one placed before removal.
- If the No.4 engine mount bracket nut is loosened, tighten the transaxle stud bolts because they may be loosened.

1. Tighten the transaxle stud bolts.

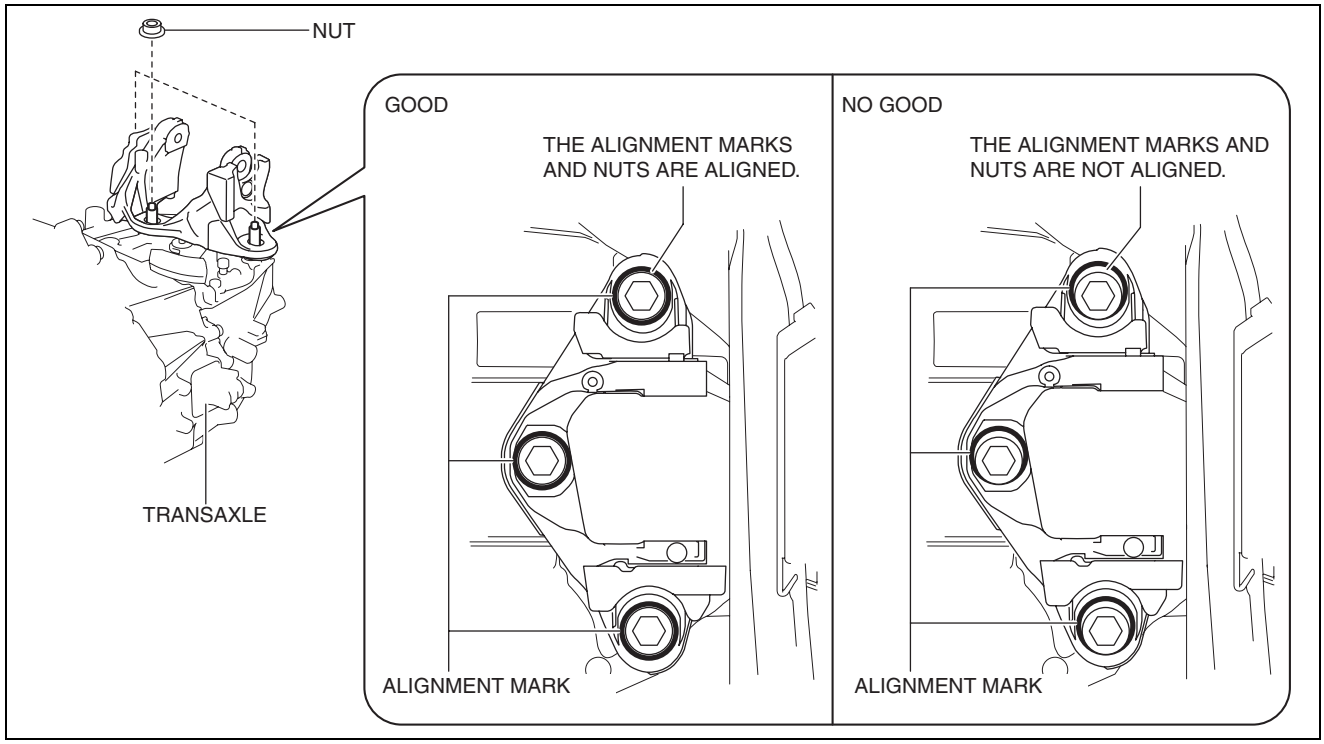
   Tightening torque
   15—25 N·m {1.6—2.5 kgf·m, 12—18 ft·lbf}



ac5uuw00000665

MECHANICAL [SKYACTIV-G 2.0]

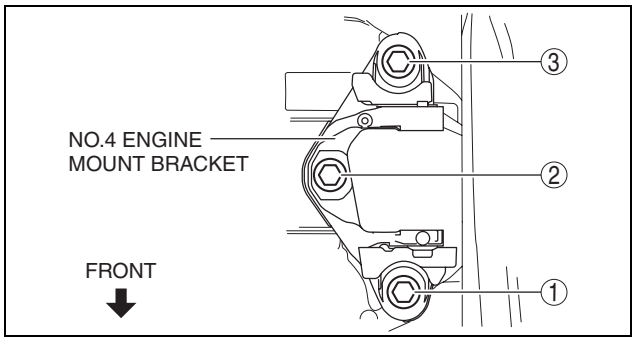
2. Align the alignment marks on the No.4 engine mount bracket and nuts, and temporarily tighten the nuts shown in the figure.



ac5wzw0000520

3. Tighten the No.4 engine mount bracket installation nuts in the order shown in the figure.

   Tightening torque
   92—116 N·m {9.4—11 kgf·m, 68—85 ft·lbf}

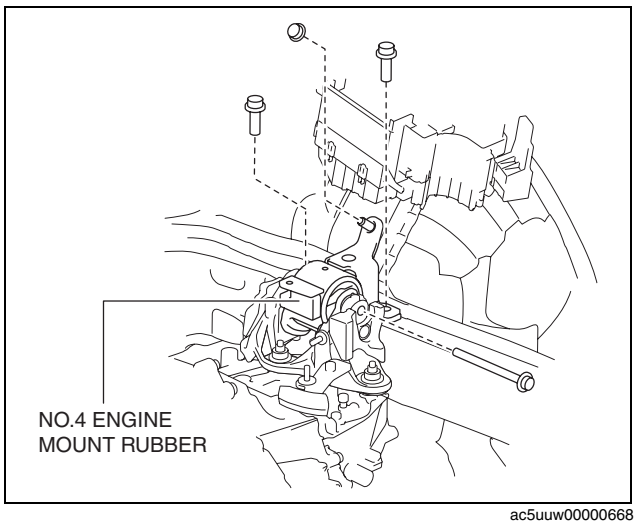


ac5uuw00000667

4. Install the ground cable to the No.4 engine mount bracket.

No.4 engine mount rubber installation note

1. Install the No.4 engine mount rubber and temporarily tighten the bolts and nut shown in the figure.

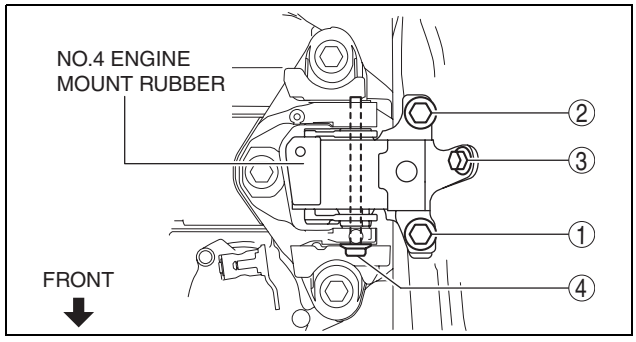


ac5uuw00000668

MECHANICAL [SKYACTIV-G 2.0]

2. Tighten the No.4 engine mount rubber installation bolts and nut in the order shown in the figure.

No.	Tightening torque
1, 2	131—153 N·m {14—15 kgf·m, 97—112 ft·lbf}
3	54—62 N·m {5.6—6.3 kgf·m, 40—45 ft·lbf}
4	81—99 N·m {8.3—10 kgf·m, 60—73 ft·lbf}



ac5uuw00000669

3. Remove the engine lifter or garage jack.
4. Install in the reverse order of removal.

ENGINE REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0110h2800400

Warning

- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**
- **Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.**
- **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)**

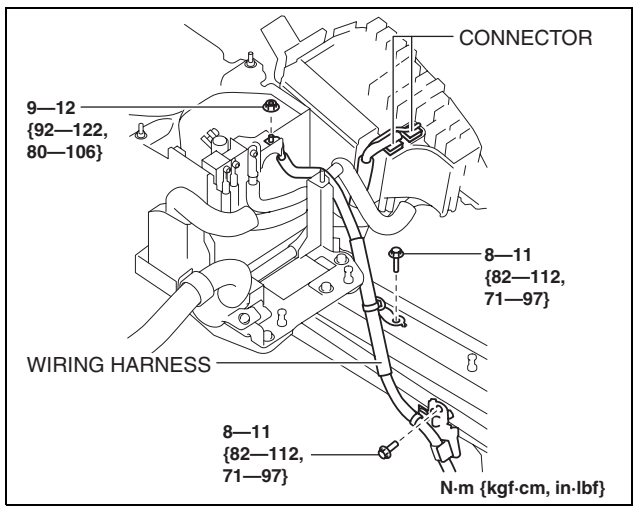
Caution

- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**
- **Applying excessive force (force of 100 N {10.2 kgf, 22.5 lbf} or more) to the electric variable valve timing motor/driver may cause a malfunction. When servicing, be careful not to apply excessive force to the electric variable valve timing motor/driver using other parts or tools.**

Note

- Perform the engine and transaxle component removal/installation from below the vehicle.

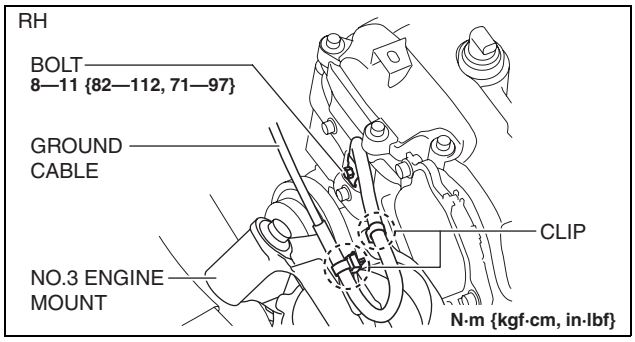
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the air cleaner, air hose and fresh air duct as a single unit. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Remove the bolts, nut and connector shown in the figure, and set the wiring harness aside.
5. Remove the battery tray and PCM component. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
6. Remove the front under cover No.1 and No.2. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.) (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
7. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
8. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)
9. Drain the transaxle oil (MTX) or ATF (ATX). (See 05-15A-2 MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R, C66MX-R].) (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
10. Remove the front wheels and tires. (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
11. Disconnect the selector cable. (ATX) (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)



ac5uuw00000605

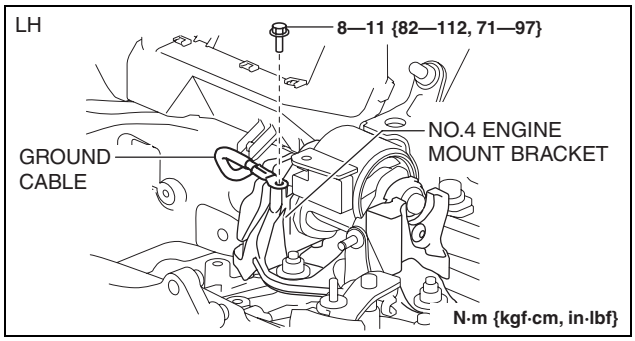
MECHANICAL [SKYACTIV-G 2.0]

12. Disconnect the control cable. (MTX) (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
13. Remove the clutch release cylinder with the pipe still connected. (MTX) (See 05-10A-24 CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
14. Disconnect the brake vacuum hose. (See 04-11-5 VACUUM HOSE REMOVAL/INSTALLATION.)
15. Disconnect the evaporative hose. (See 01-16A-10 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
16. Disconnect the fuel hose. (See 01-14A-49 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
17. Disconnect the lower radiator hose. (See 01-12A-9 RADIATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
18. Disconnect the upper radiator hose. (See 01-12A-19 COOLING FAN MOTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
19. Disconnect the heater hose. (See 07-11-11 A/C UNIT REMOVAL/INSTALLATION.)
20. Remove the generator drive belt. (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
21. Remove the A/C compressor with the cooler hose still connected and secure it using wire or rope so that it is out of the way. (See 07-11-25 A/C COMPRESSOR REMOVAL/INSTALLATION.)
22. Remove the propeller shaft. (4WD) (See 03-15-2 PROPELLER SHAFT REMOVAL/INSTALLATION.)
23. Remove the TWC installation nuts (exhaust manifold side) and secure the TWC using wire or rope so that it is out of the way. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
24. Disconnect the drive shaft (LH) from the transaxle side and set the drive shaft (LH) out of the way. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
25. Disconnect the drive shaft (RH) from the transaxle side and set the drive shaft (RH) out of the way. (2WD) (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
26. Remove the drive shaft (RH). (4WD) (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
27. Remove the bolt and clips, and set the ground cable aside.



ac5uuw00000606

28. Remove in the order indicated in the table.
29. Install in the reverse order of removal.
30. Refill the transaxle oil (MTX) or ATF (ATX). (See 05-15A-2 MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R, C66MX-R].) (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
31. Refill the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)
32. Start the engine, and inspect and adjust the following:
    - Front wheel alignment (See 02-11-1 FRONT WHEEL ALIGNMENT.)
    - Leakage of engine oil, engine coolant, ATF (ATX), transaxle oil (MTX), and fuel.
    - Runout and contact of pulley and belt.
    - Ignition timing, idle speed and idle mixture. (See 01-10A-4 ENGINE TUNE-UP [SKYACTIV-G 2.0].)
    - Engine-driven accessories operation.



ac5uuw00000607

Note
- If the engine is overhauled and assembled to the vehicle, perform a road test to verify that there is no abnormal vibration and noise.

4WD

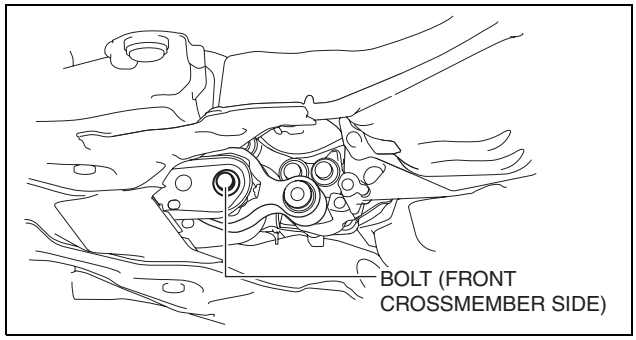
2. Remove the No.1 engine mount rubber and the front crossmember component as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)



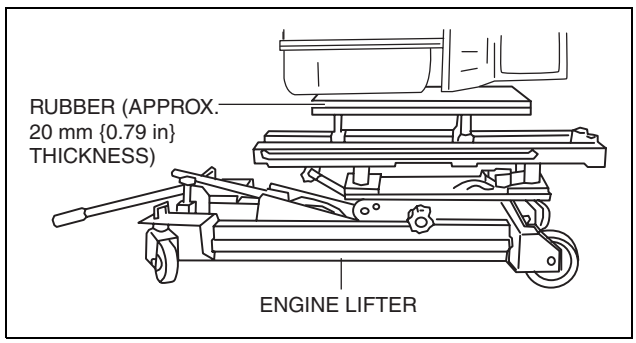
ac5uuw00000681

No.3 Engine Mount, No.4 Engine Mount Bracket Removal Note

Caution

- **When supporting the engine and transaxle, insert rubber of appropriate size (approx. 20 mm {0.79 in} thickness) between the engine lifter and the oil pan, transaxle to prevent the deformation of the oil pan and damage of the transaxle.**

1. Secure the engine and transaxle using a commercially available engine lifter.
2. Remove the No.4 engine mount bracket.
3. Remove the No.3 engine mount.



am3uuw0000880

MECHANICAL [SKYACTIV-G 2.0]

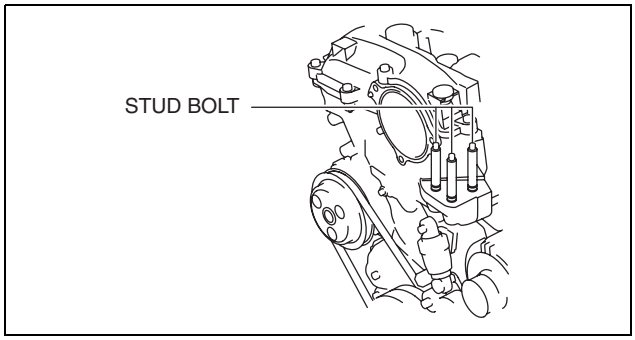
Engine Mount Installation Note

Caution
- **Slots have been adopted for the No.3 engine mount and No.4 engine mount bracket installation holes. Tighten the installation bolts and nuts so that they are centered on the slots. Otherwise, engine noise or vibration could increase.**

Note
- Retighten the engine front cover and transaxle stud bolts when the nuts of No.3 engine mount and No.4 engine mount bracket are loosened.

1. Tighten the engine front cover stud bolts.

   Tightening torque
   7—13 N·m {72—132 kgf·cm, 62—115 in·lbf}

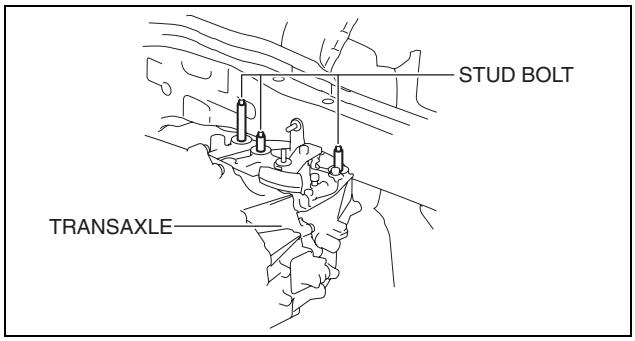


am3uuw0000880

2. Tighten the transaxle stud bolts.

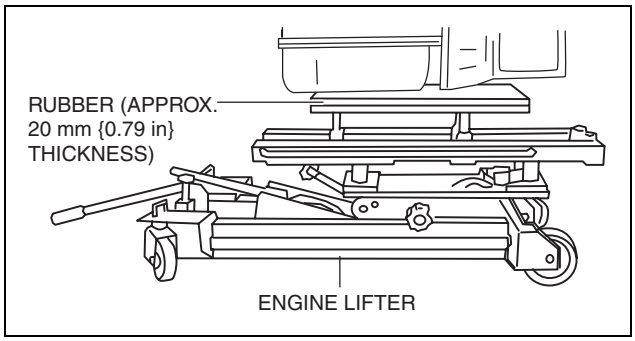
   Tightening torque
   15—25 N·m {1.6—2.5 kgf·m, 12—18 ft·lbf}

   Caution
   - **When supporting the engine and transaxle, insert rubber of appropriate size (approx. 20 mm {0.79 in} thickness) between the engine lifter and the oil pan, transaxle to prevent the deformation of the oil pan and damage of the transaxle.**



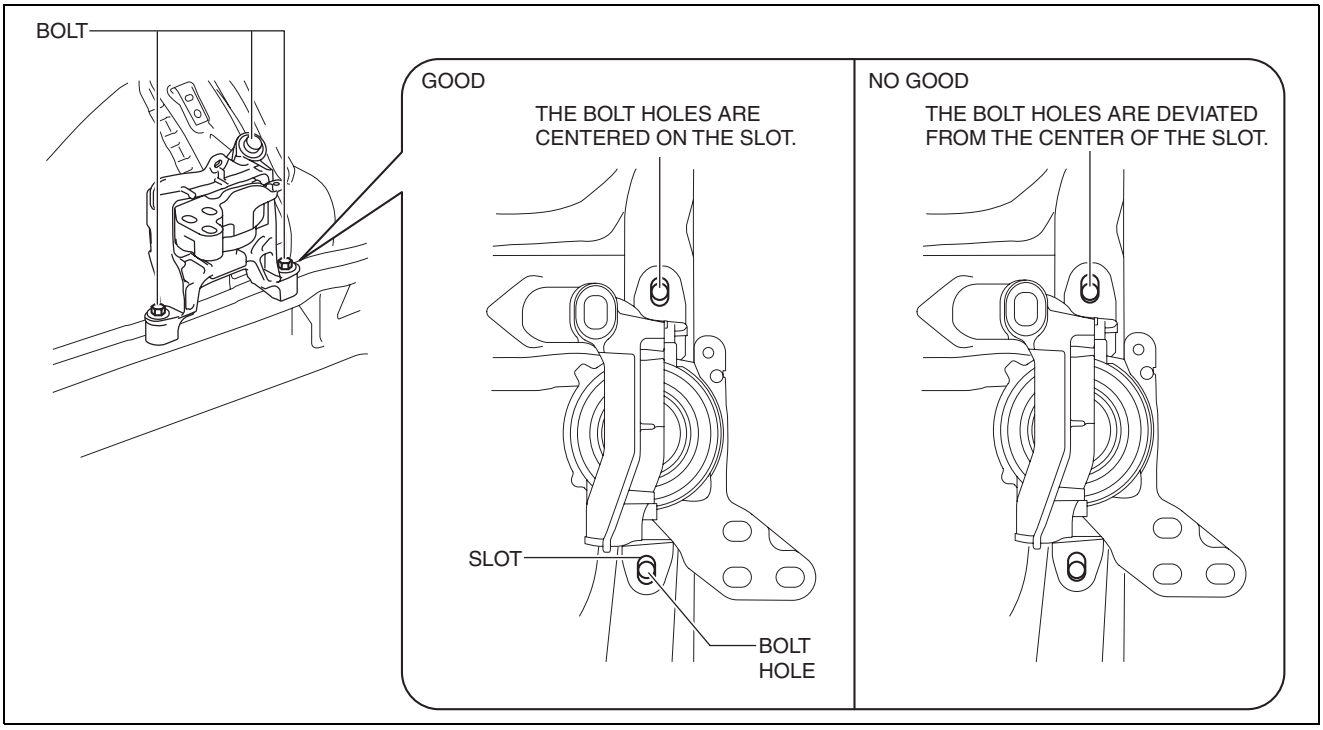
ac5uuw00000612

3. Secure the engine and transaxle using a commercially available engine lifter.
4. Temporarily tighten the No.3 engine mount installation bolts and nuts using the following procedure:



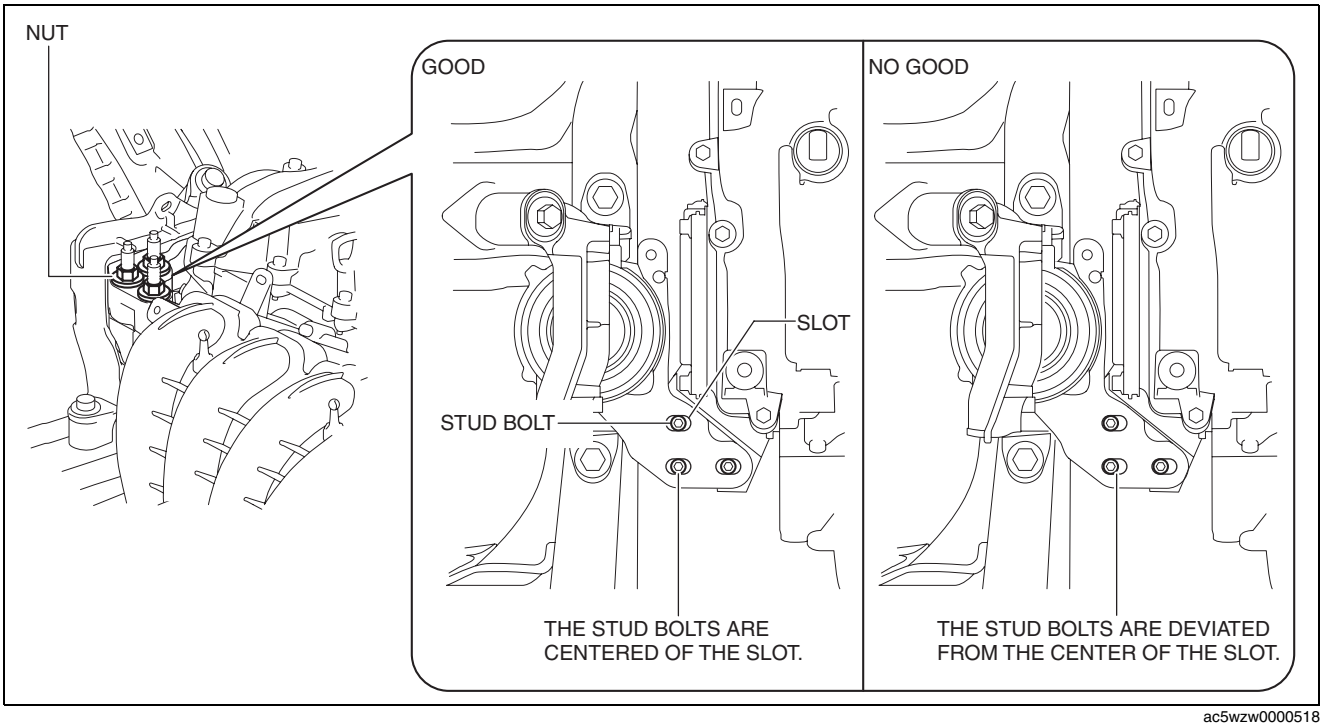
am3uuw0000880

(1) Temporarily tighten the bolts shown in the figure so that they are centered on the No.3 engine mount slots.



ac5wzw0000518

(2) Temporarily tighten the nuts shown in the figure so that the stud bolts of the engine front cover are centered on the No.3 engine mount slots.



ac5wzw0000518

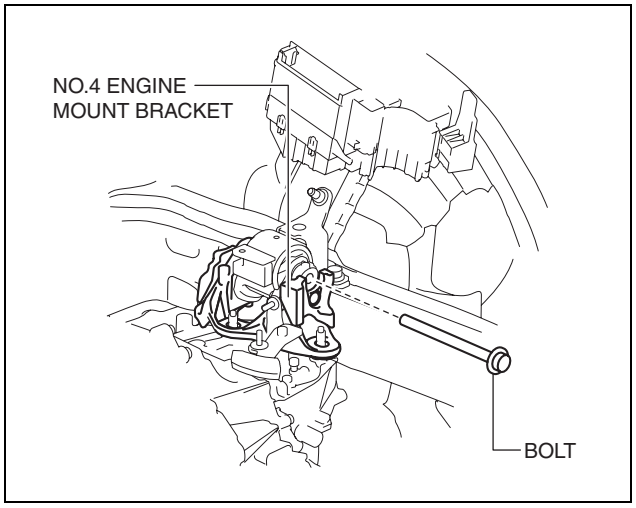
Note

- If the stud bolts are deviated from the center of the slot, align the stud bolts with the center of the slot while slightly moving the engine, and temporarily tighten the installation nuts.

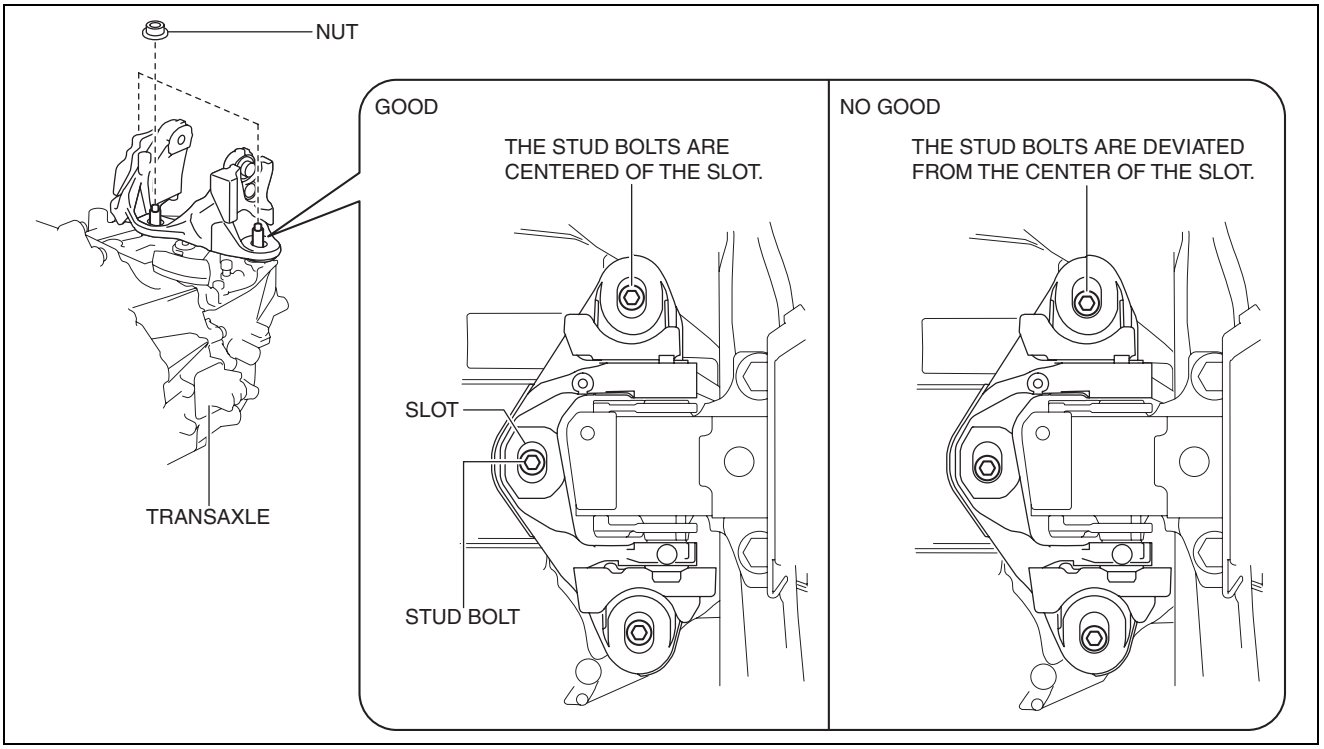
5. Temporarily tighten the No.4 engine mount bracket installation bolt and nuts using the following procedure:

MECHANICAL [SKYACTIV-G 2.0]

(1) Temporarily tighten the bolt shown in the figure.
(2) Temporarily tighten the nuts shown in the figure so that they are centered on the No.4 engine mount bracket slots.



ac5uuw00000615

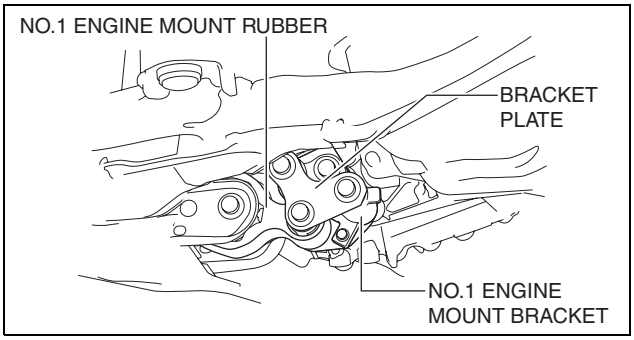


ac5wzw0000518

Note
- If the stud bolts are deviated from the center of the slot, align the stud bolts with the center of the slot while slightly moving the transaxle, and temporarily tighten the installation nuts.

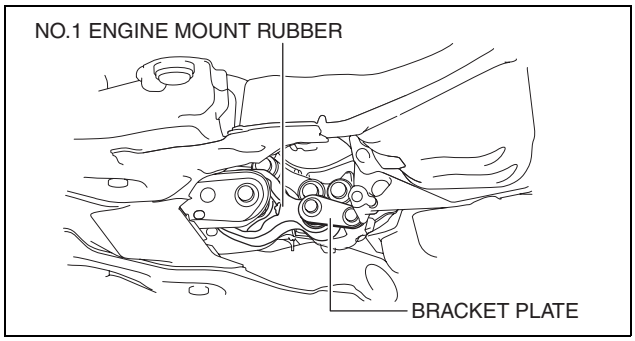
6. Install the No.1 engine mount rubber and the front crossmember component as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)

7. Temporarily tighten the following parts:
   2WD
   — No.1 engine mount bracket, No.1 engine mount rubber and bracket plate



ac5uuw00000683

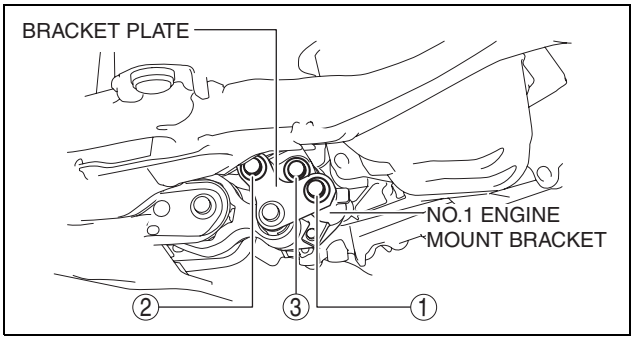
   4WD
   — No.1 engine mount rubber and bracket plate



ac5uuw00000618

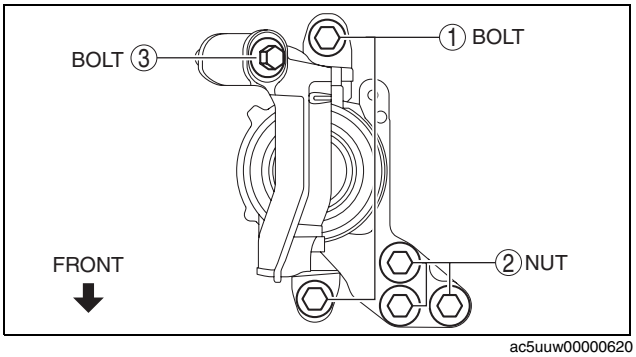
8. Tighten the No.1 engine mount bracket and bracket plate installation bolts in the order shown in the figure. (2WD)

   Tightening torque
   84—98 N·m {8.6—9.9 kgf·m, 62—72 ft·lbf}



ac5uuw00000619

9. Tighten the No.3 engine mount installation bolts and nuts in the order shown in the figure.



ac5uuw00000620

No.	Tightening torque
1	76—95 N·m {7.8—9.6 kgf·m, 57—70 ft·lbf}
2	82—95 N·m {8.4—9.6 kgf·m, 61—70 ft·lbf}
3	49—65 N·m {5.0—6.6 kgf·m, 37—47 ft·lbf}

MECHANICAL [SKYACTIV-G 2.0]

10. Tighten the No.4 engine mount bracket installation bolt and nuts in the order shown in the figure.

No.	Tightening torque
1, 2, 3	92—116 N·m {9.4—11 kgf·m, 68—85 ft·lbf}
4	81—99 N·m {8.3—10 kgf·m, 60—73 ft·lbf}

ENGINE TUNE-UP [SKYACTIV-D 2.2]

id0110s5800600

Engine Tune-up Preparation

Note
- If the accelerator pedal is depressed continuously for a specified time, the engine speed may decrease to the idle speed. This is due to the fuel cut control operation, which prevents overheating, and it does not indicate a malfunction. The engine speed returns to normal control when the accelerator pedal is released.

1. Connect the M-MDS to the DLC-2.
2. Shift the selector lever (ATX) or shift lever (MTX) to the following position:
   - MTX: Shift lever is in neutral position.
   - ATX: Selector lever is in P or N position.

Note
- The engine coolant temperature and oil temperature can be verified by M-MDS PID “ECT” and “OIL_TEMP”.

3. Run the engine speed at a constant **2,500 to 3,000 rpm** and warm up the engine (engine coolant temperature: **80 °C {176 °F}** or more, oil temperature: **60 °C {140 °F}** or more).
4. Turn off all electrical loads with the engine idling.
5. If the cooling fan is operating, wait until is stops.

Idle Speed Inspection

Note
- The idle speed cannot be adjusted.
- The M-MDS is required to verify the idle speed.

1. Complete the engine tune-up preparation. (See 01-10B-3 Engine Tune-up Preparation.)
2. Verify that the difference between the target idle speed (PID: ARPMDES) and the engine speed (PID: RPM) is within **50 rpm** using the M-MDS data monitor function.
   - If there is a malfunction, refer to “ENGINE SYMPTOM TROUBLESHOOTING”.

Difference between target idle speed and the engine speed
Within 50 rpm

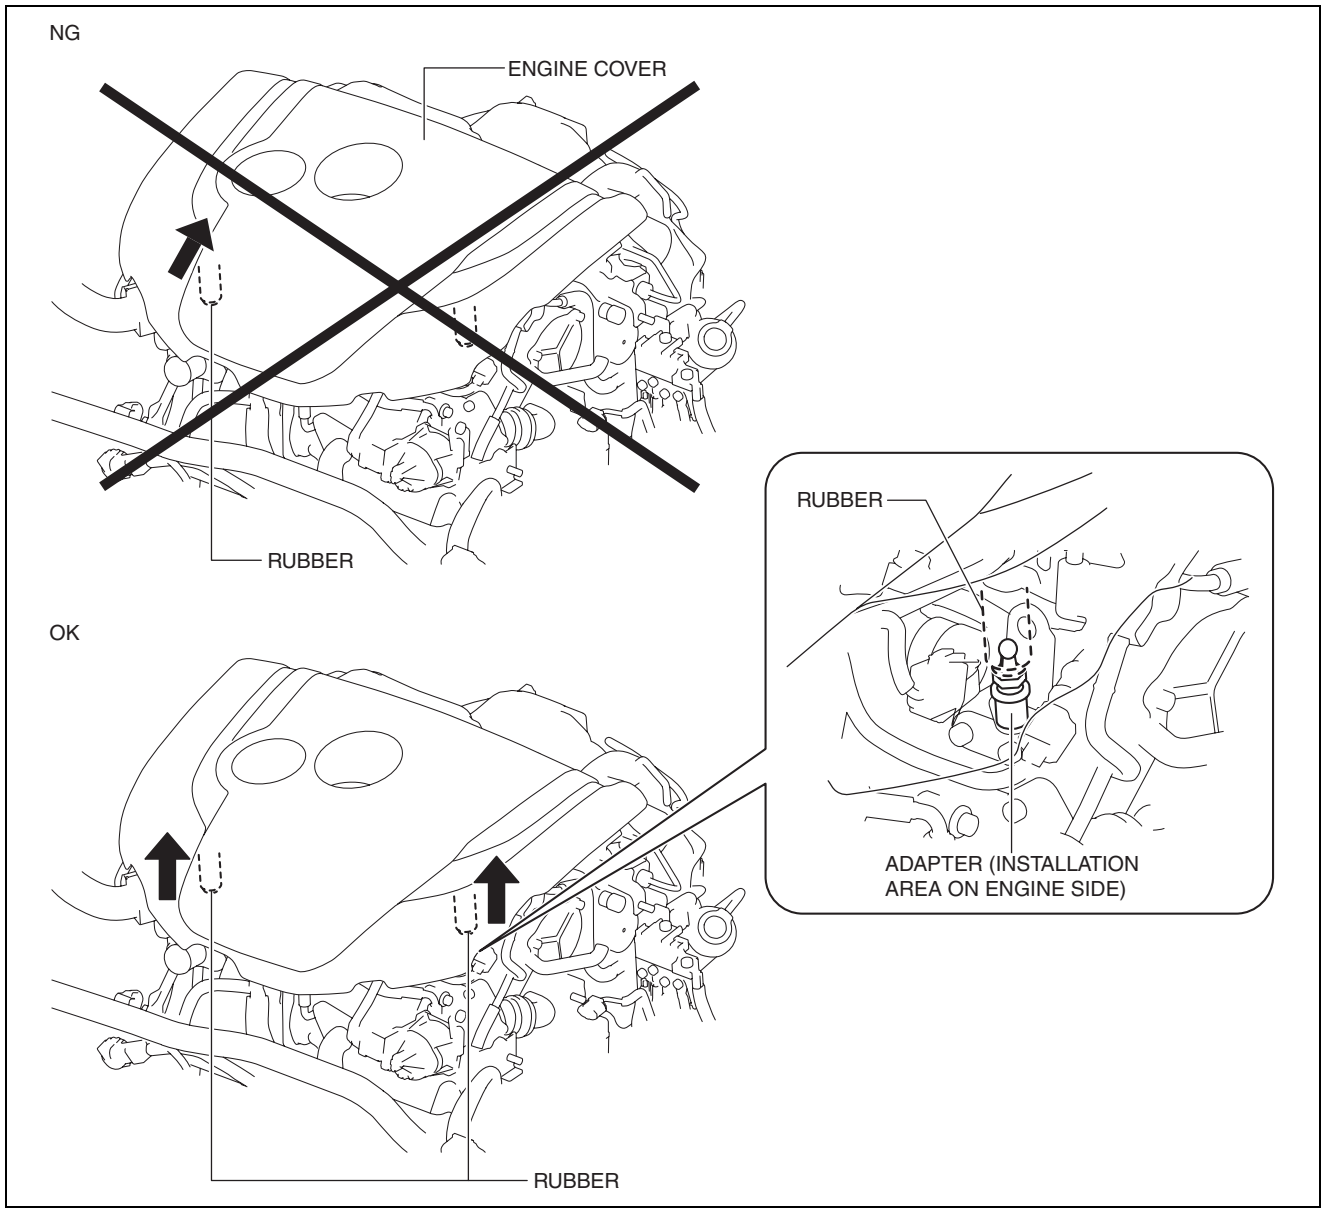
MECHANICAL [SKYACTIV-D 2.2]

Target idle speed (reference)
[MTX]
Normal: 750 rpm
DPF auto regeneration: 775 rpm
Injector learning: 775 rpm
[ATX]
Normal: 800 rpm
DPF auto regeneration: 800 rpm
Injector learning: 775 rpm

ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0110s5804300

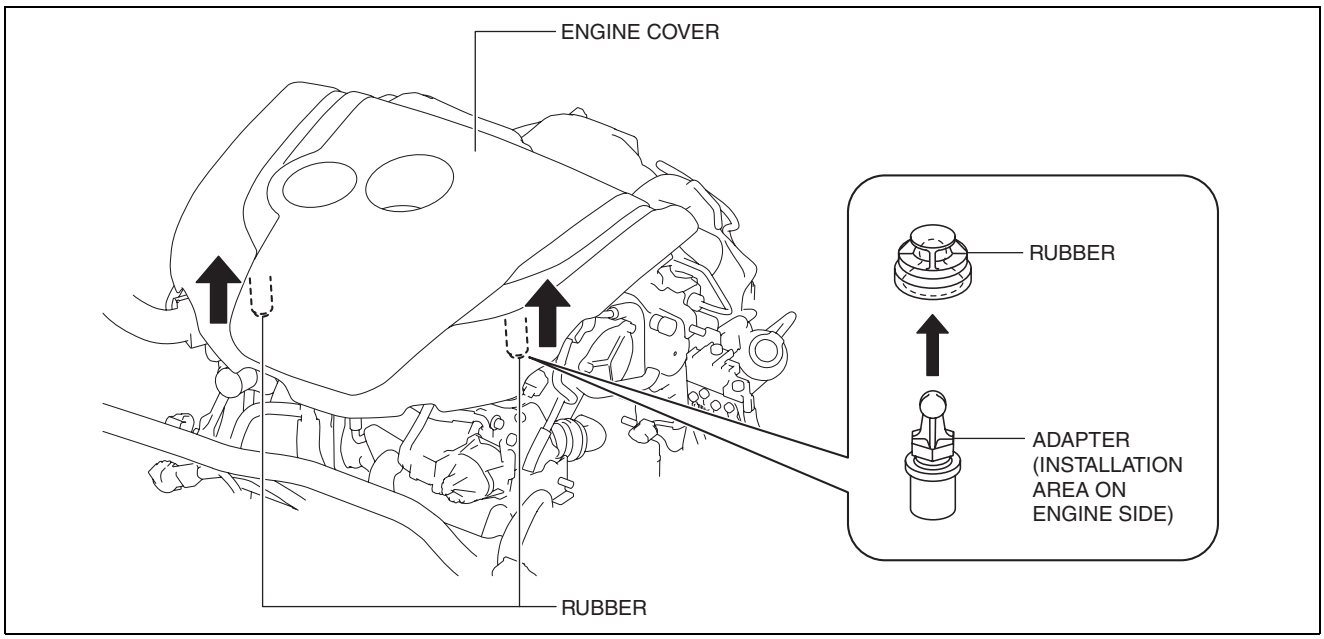
Caution
- **If the rubber on only one side of the engine cover front is lifted up, it could damage the adapter at the location shown in the figure. When removing the engine cover, lift up the rubbers at the same time.**



ac5wzw0000527

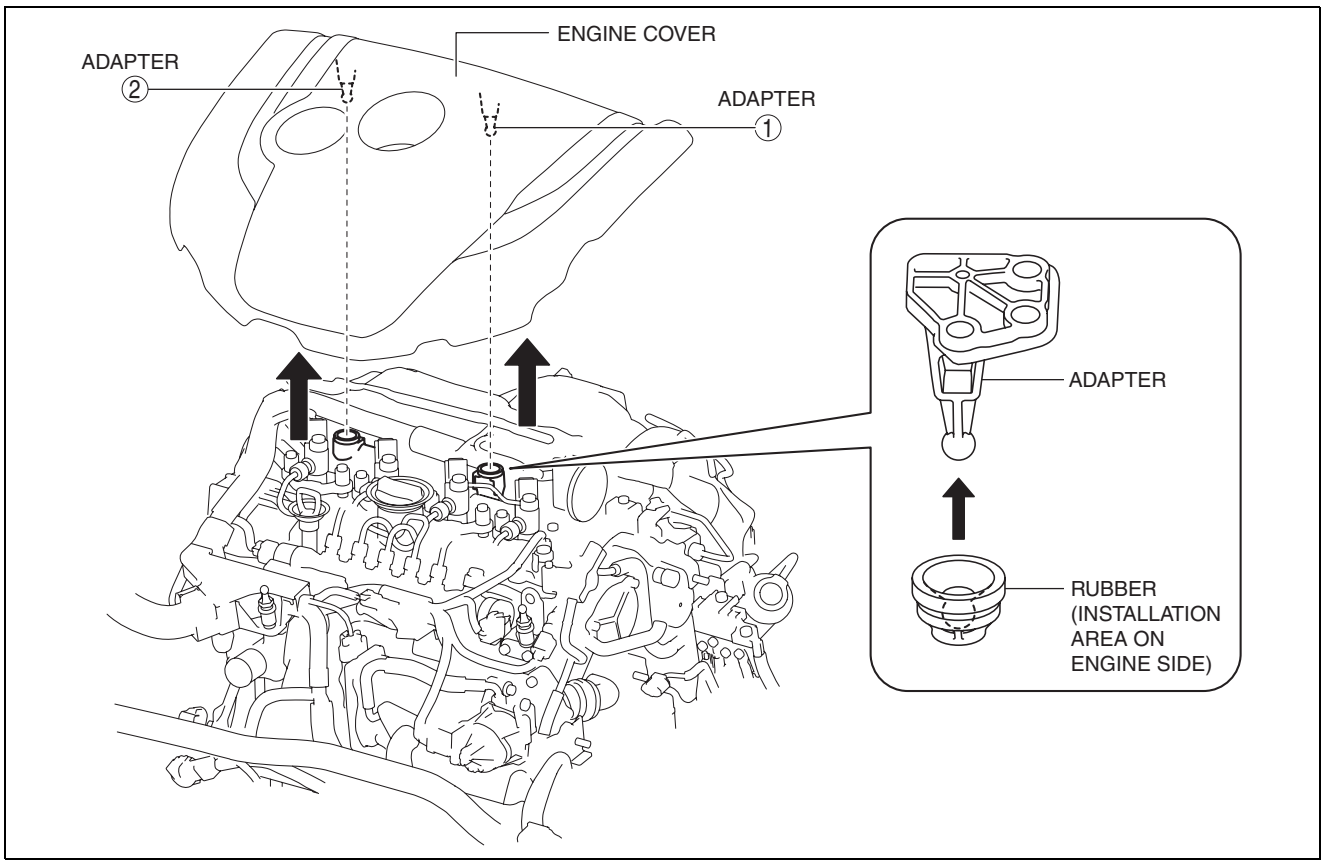
Removal

1. Pull up the front part of the engine cover at the same time and remove the rubber from the adapter on the engine side.



ac5wzw0000506

2. Pull up the engine cover in the order shown in the figure and remove the adapter from the rubber on the engine side.

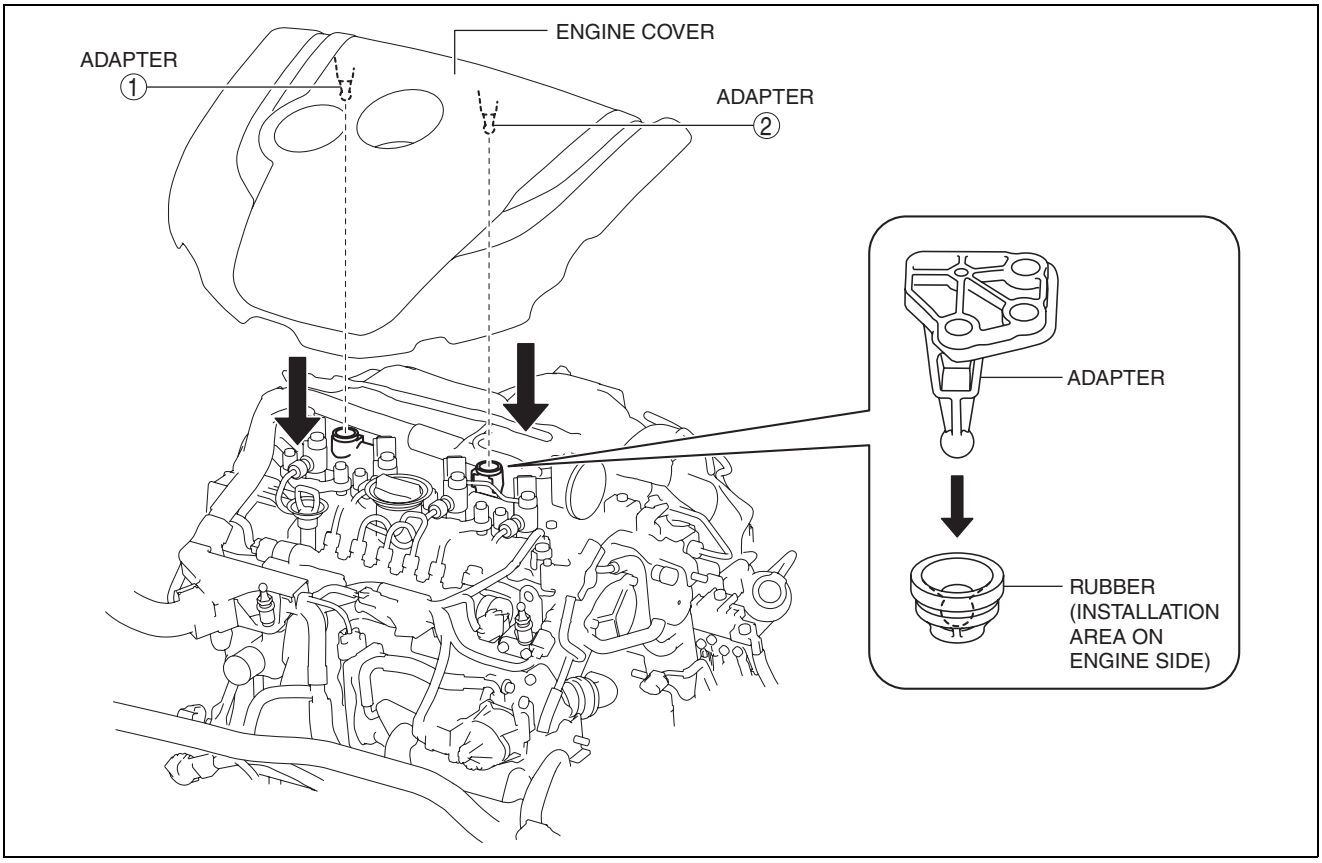


ac5wzw0000506

MECHANICAL [SKYACTIV-D 2.2]

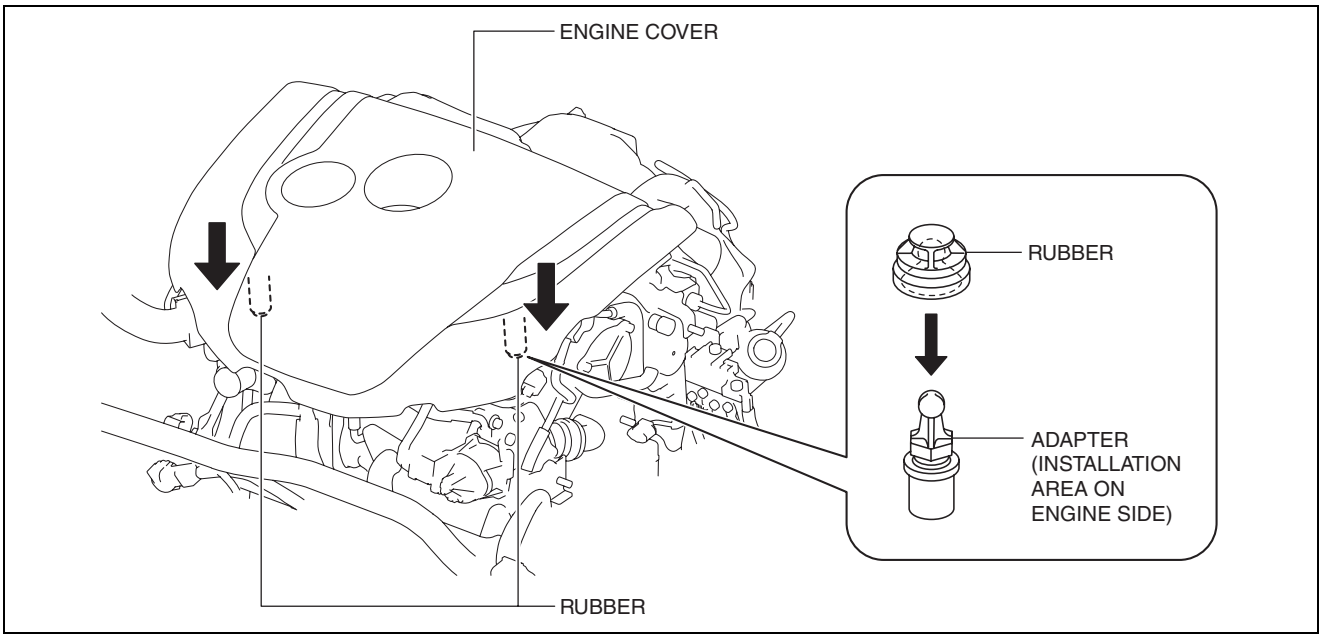
Installation

1. Press the engine cover in the order shown in the figure to insert the adapter to the rubber on the engine side.



ac5wzw0000506

2. Press the front part of the engine cover at the same time to insert the rubber to the adapter on the engine side.



ac5wzw0000506

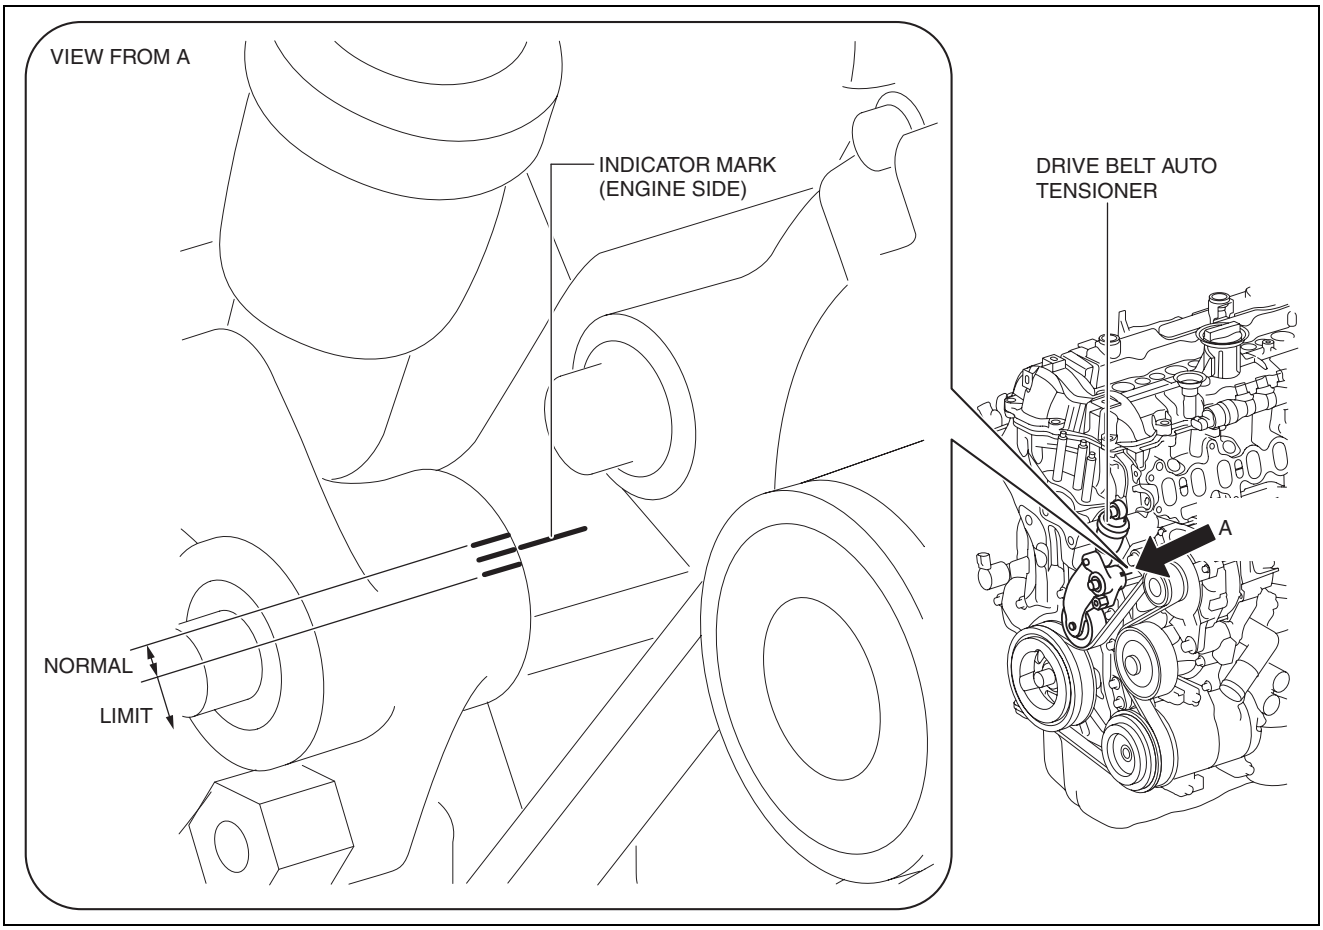
MECHANICAL [SKYACTIV-D 2.2]

DRIVE BELT INSPECTION [SKYACTIV-D 2.2]

id0110s5801500

Note
- The drive belt deflection/tension inspection is not necessary with the adoption of the drive belt auto tensioner.

1. Verify that the indicator part of the engine side is within the normal range of the drive belt auto tensioner indicator mark.



ac5wzw0000525

- If it exceeds the limit, replace the drive belt. (See 01-10B-8 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

MECHANICAL [SKYACTIV-D 2.2]

DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

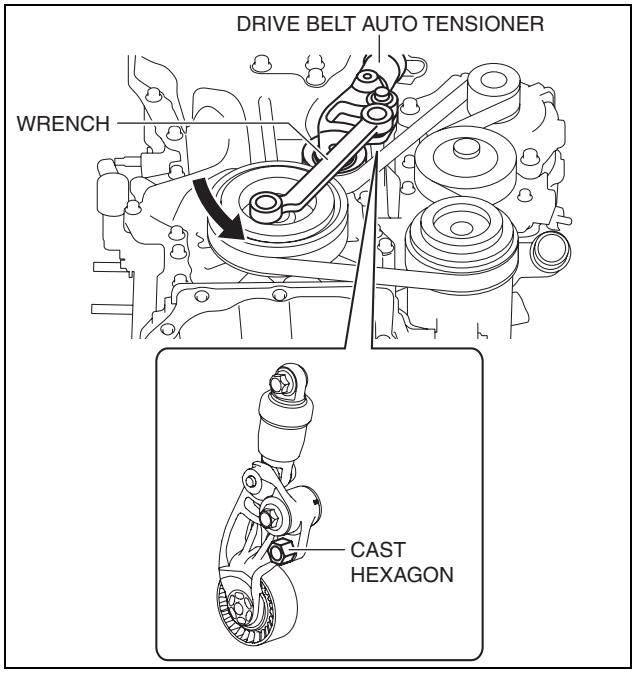
id0110s5801600

Warning
- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**

Caution
- **To prevent damage to the drive belt auto tensioner, do not apply excessive torque after the tensioner moves full-stroke.**

Note
- Remove/install the drive belt from the underside of the vehicle.

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Remove the splash shield. (RH) (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
3. Insert a wrench onto the cast hexagon on the drive belt auto tensioner and release the tension by slowly turning in the direction shown in the figure.
4. Remove the drive belt.
5. Install the drive belt.
6. Rotate the crankshaft pulley clockwise approx. halfway and verify that the drive belt is installed correctly.
   - If the rib of the drive belt and the groove of each pulley are not aligned, remove the drive belt and re-install it.
7. Verify that the drive belt auto tensioner indicator mark does not exceeds the limit.(See 01-10B-7 DRIVE BELT INSPECTION [SKYACTIV-D 2.2].)
8. Install the splash shield. (RH) (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
9. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)



ac5wzw0000502

MECHANICAL [SKYACTIV-D 2.2]

DRIVE BELT AUTO TENSIONER INSPECTION [SKYACTIV-D 2.2]

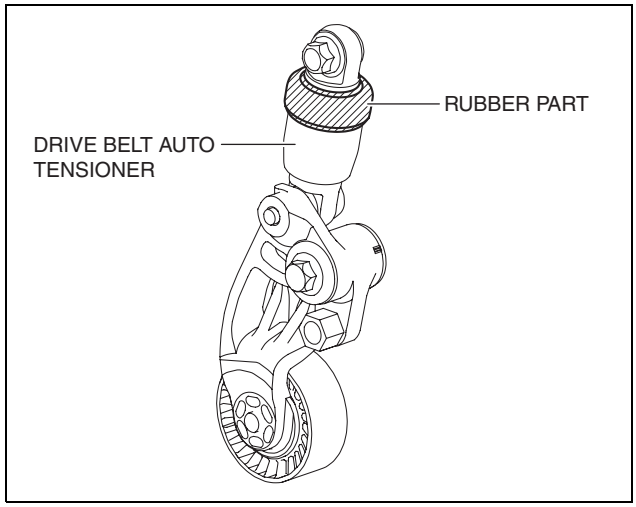
id0110s5801700

Warning
- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**

Caution
- **If the rubber part of the drive belt auto tensioner is damaged by a screwdriver or other tool, oil in the hydraulic pressure unit could leak and the tensioner may not operate normally. Be careful not to damage the rubber part of the drive belt auto tensioner.**

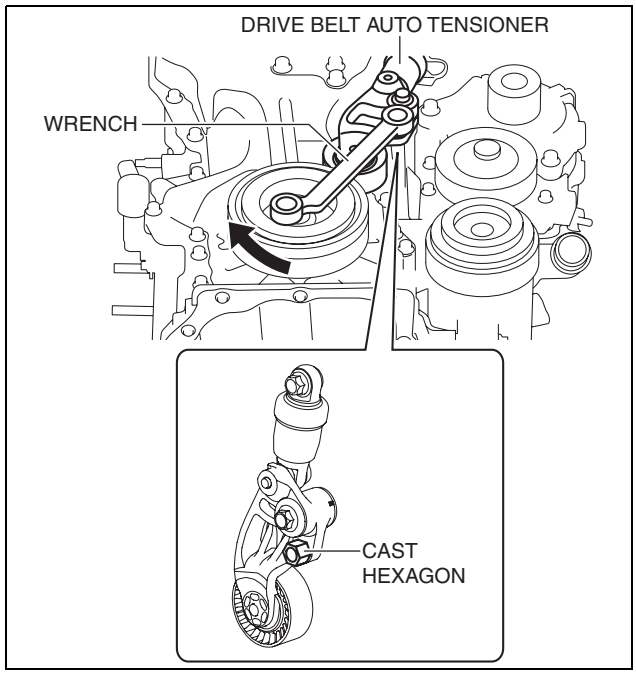
1. Remove the drive belt. (See 01-10B-8 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

Caution
- **To prevent damage to the drive belt auto tensioner, do not apply excessive torque after the tensioner moves full-stroke.**



ac5wzw0000502

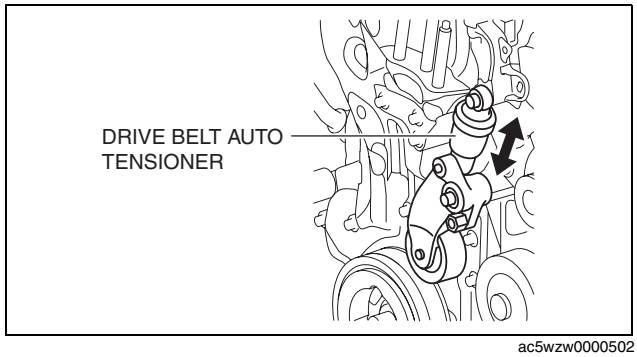
2. Insert the wrench onto the cast hexagon on the drive belt auto tensioner, slowly turn it in the direction of the arrow shown in the figure, and fully depress.



ac5wzw0000525

MECHANICAL [SKYACTIV-D 2.2]

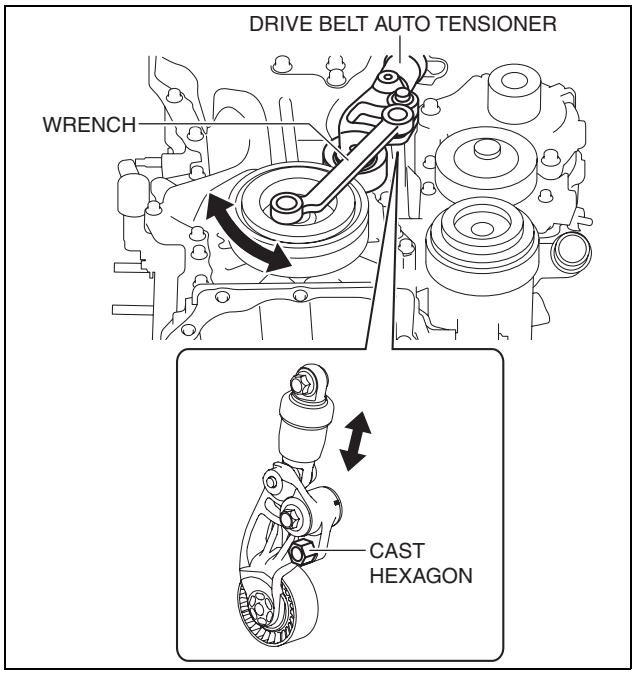
Note
- The drive belt auto tensioner is operated in the direction of the arrow by turning the wrench.



ac5wzw0000502

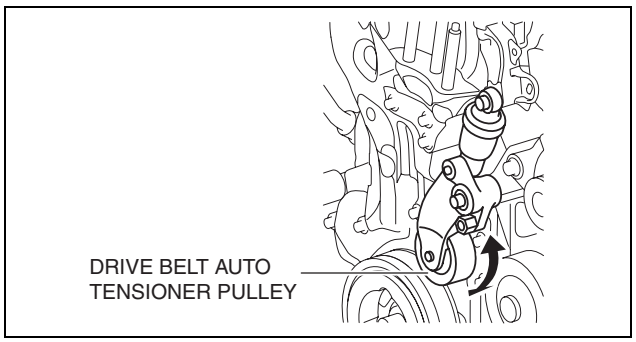
3. Verify that the drive belt auto tensioner moves smoothly in the operational direction.
   - If it does not move smoothly, air infiltration into the inner hydraulic pressure unit can be considered. Move the drive belt auto tensioner up and down at full stroke three times to bleed the air.
     — After bleeding the air, if the drive belt auto tensioner still does not move smoothly when re-inspecting, replace the drive belt auto tensioner. (See 01-10B-11 Drive Belt Auto Tensioner Removal Note.) (See 01-10B-11 Drive Belt Auto Tensioner Installation Note.)

Note
- By moving the drive belt auto tensioner up and down full-stroke three times, the piston inside the tensioner moves to bleed the air.



ac5wzw0000525

4. Turn the drive belt auto tensioner pulley by hand and verify that it rotates smoothly.
   - If it does not move smoothly, replace the drive belt auto tensioner. (See 01-10B-11 Drive Belt Auto Tensioner Removal Note.) (See 01-10B-11 Drive Belt Auto Tensioner Installation Note.)
5. Install the drive belt. (See 01-10B-8 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

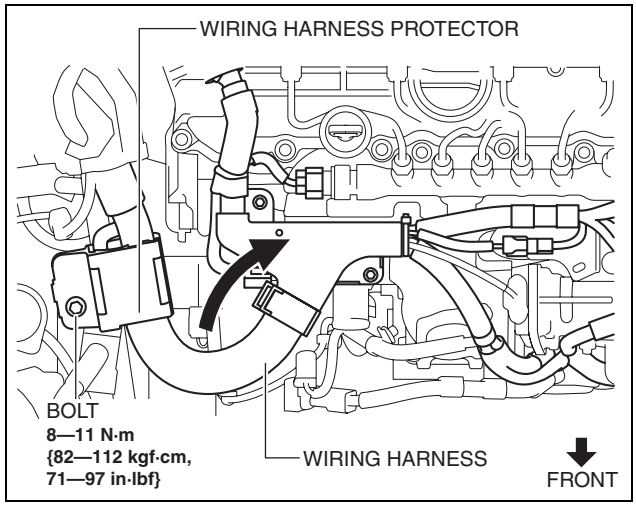


ac5wzw0000502

MECHANICAL [SKYACTIV-D 2.2]

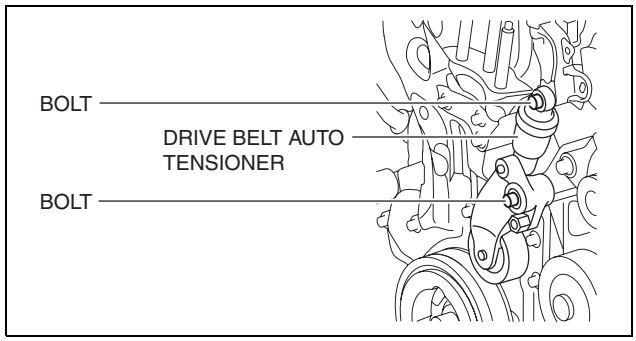
Drive Belt Auto Tensioner Removal Note

1. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Remove the wiring harness protector bolt and set the wiring harness aside.



ac5wzw0000525

3. Remove the drive belt auto tensioner installation bolt.
4. Remove the drive belt auto tensioner.



ac5wzw0000503

Drive Belt Auto Tensioner Installation Note

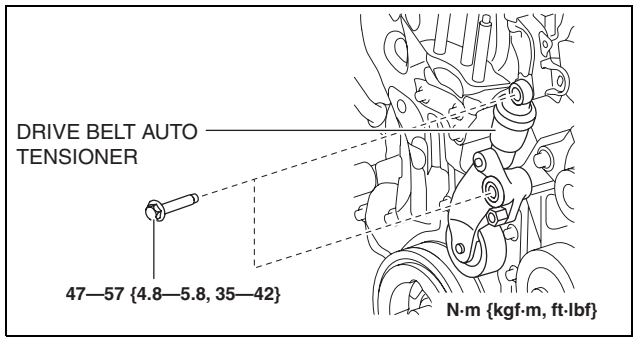
Caution

- **To allow the drive belt auto tensioner to function correctly, always bleed the air from the drive belt auto tensioner using the following procedure after assembling the drive belt auto tensioner.**

1. Install the drive belt auto tensioner to the engine.

Caution

- **To prevent damage to the drive belt auto tensioner, do not apply excessive torque after the tensioner moves full-stroke.**



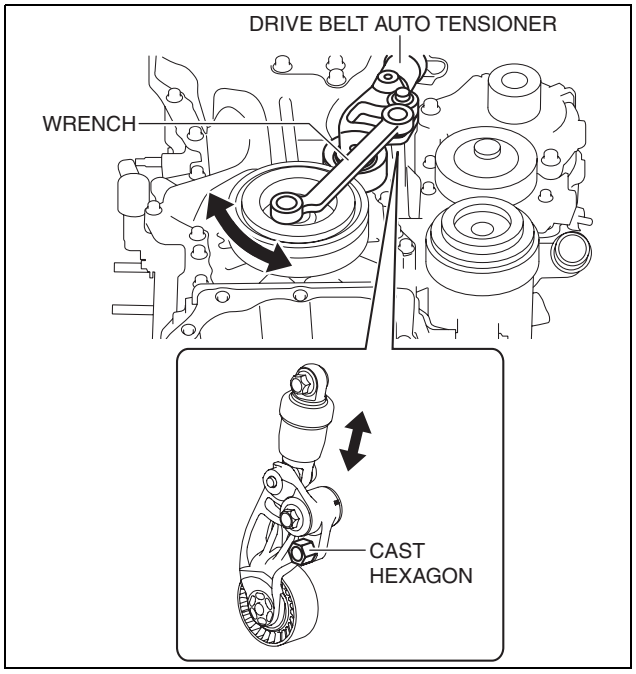
ac5wzw0000503

MECHANICAL [SKYACTIV-D 2.2]

2. Insert the wrench onto the cast hexagon on the drive belt auto tensioner, move the drive belt auto tensioner up and down at full-stroke three times to bleed the air.

   Note
   - By moving the drive belt auto tensioner up and down full-stroke three times, the piston inside the tensioner moves to bleed the air.

3. Install the wiring harness protector bolt.
4. Install the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000525

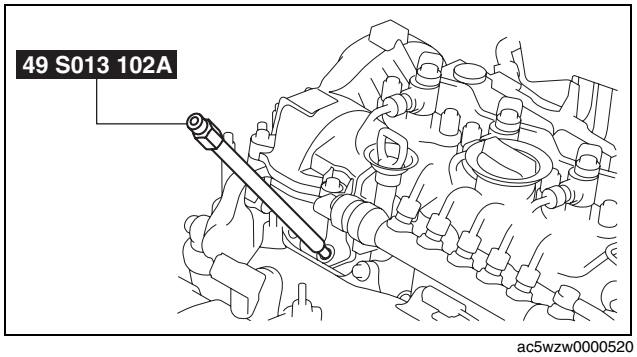
COMPRESSION INSPECTION [SKYACTIV-D 2.2]

id0110s5800300

Warning
- **Hot engines and oil can cause severe burns. Be careful not to burn yourself during removal/installation of each component.**
- **Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.**
- **Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death, and damage to property and facilities. If fuel comes into contact with the skin and eyes it will cause irritation. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)**

1. Verify that the battery is fully charged. (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].)
   - Recharge it if necessary. (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].)
2. Warm up the engine to the normal operating temperature.
3. Perform "Fuel Line Safety Procedures". (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
4. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove the glow plugs. (See 01-13B-28 GLOW PLUG REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Install the SST using the following procedure.
   (1) Install the SST (49 S013 102A) to the glow plug installation hole.
   (2) Tighten the SST to the specified torque.

   Tightening torque
   15—20 N·m {1.6—2.0 kgf·m, 12—14 ft·lbf}



ac5wzw0000520

MECHANICAL [SKYACTIV-D 2.2]

(3) Connect the SST (49 S010 1A0A) to the SST (49 S013 102A).

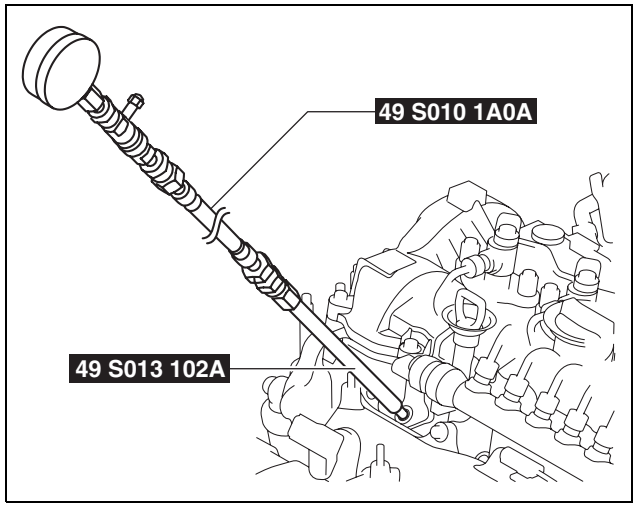
7. Measure the compression pressure using the following procedure.
   (1) Fully depress the accelerator pedal.
   (2) Crank the engine and measure the compression pressure.

Compression

Standard: 2255 kPa {22.99 kgf/cm^2, 327.1 psi} [180 rpm]

Minimum: 1804 kPa {18.40 kgf/cm^2, 261.6 psi} [180 rpm]

Maximum difference between cylinders: 147 kPa {1.50 kgf/cm^2, 21.3 psi} [180 rpm]



ac5wzw0000520

(3) Perform Steps (1) to (2) for all cylinders.
(4) If the measured value is less than the minimum value, or there is a cylinder whose compression value varies from that of other cylinders by **147 kPa {1.50 kgf/cm^2, 21.3 psi}** or more, add a small amount of engine oil through the glow plug installation hole and perform Steps (1) to (3).
   - If the pressure increases by adding the engine oil, the piston ring or the cylinder surface is worn, or they are damaged. Perform overhaul servicing.
   - If the pressure does not increase, valve seizure, valve attachment malfunction, or pressure leakage from the cylinder head gasket might be occurring. Perform overhaul servicing.

8. Remove the SSTs.
9. Install the glow plugs. (See 01-13B-28 GLOW PLUG REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
10. Install the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
11. Clear the DTC for the PCM using the M-MDS.

OIL CONTROL VALVE (OCV) INSPECTION [SKYACTIV-D 2.2]

id0110s5801400

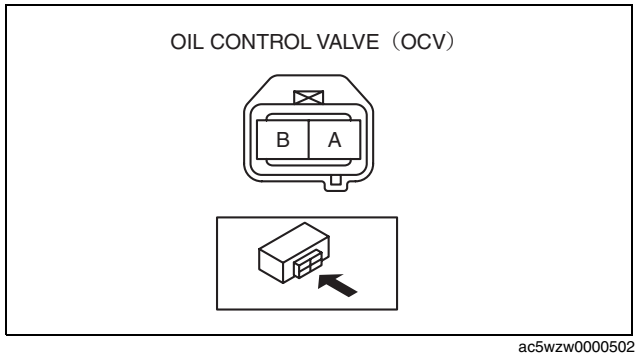
Coil Resistance Inspection

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the battery. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the air inlet pipe and turbocharger air inlet hose as a single unit. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Disconnect the OCV connector.
6. Measure the resistance between terminals A and B using an ohmmeter.

OCV coil resistance
6.9—7.9 ohms [20°C {68°F}]

   - If not as specified, replace the OCV. (See 01-10B-15 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

7. Install in the reverse order of removal.

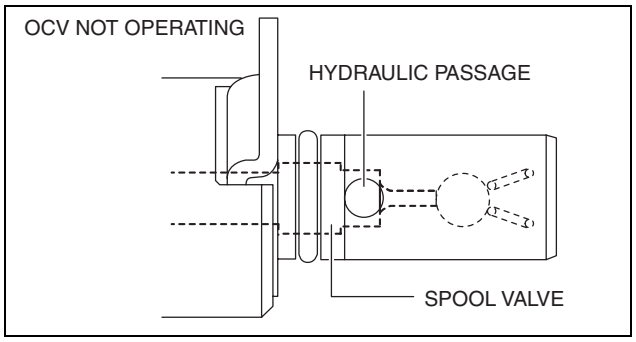


ac5wzw0000502

MECHANICAL [SKYACTIV-D 2.2]

Spool Valve Operation Inspection

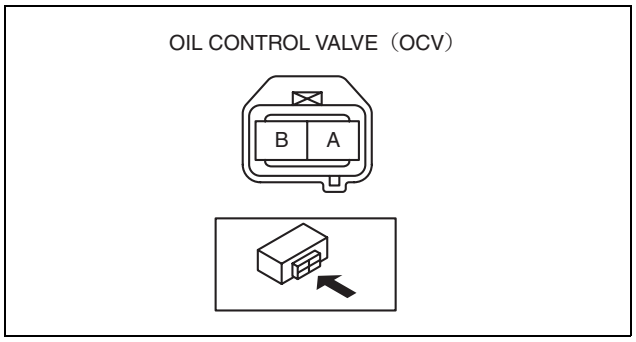
1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the battery. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the air inlet pipe and turbocharger air inlet hose as a single unit. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove the OCV. (See 01-10B-15 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Verify that the spool valve inside the OCV is at the position shown in the figure from the hydraulic passage.
   - If there is any malfunction, replace the OCV. (See 01-10B-15 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
7. Verify that the battery is fully charged. (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].)
   - If not as specified, recharge the battery. (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].)



ac5wzw0000502

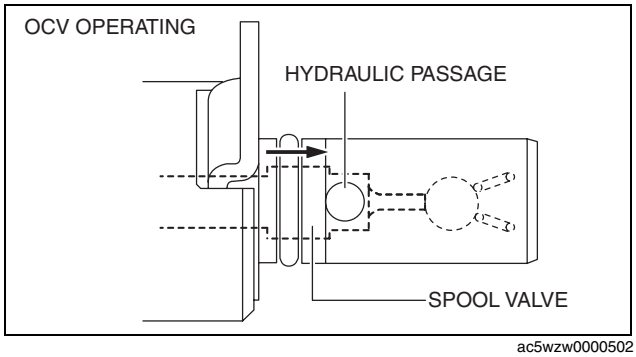
Note

- When applying battery positive voltage between the OCV terminals, the connection can be either of the following:
  - — Positive battery cable to terminal A, negative battery cable to terminal B
  - — Positive battery cable to terminal B, negative battery cable to terminal A



ac5wzw0000502

8. Verify that the spool valve operates and it moves to the position shown in the figure from the hydraulic passage when battery voltage is applied between OCV terminals A and B.
   - If there is any malfunction, replace the OCV. (See 01-10B-15 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
9. Stop applying battery positive voltage and verify that the spool valve returns to its original position.
   - If there is any malfunction, replace the OCV. (See 01-10B-15 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
10. Install the OCV. (See 01-10B-15 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
11. Install in the reverse order of removal.



ac5wzw0000502

MECHANICAL [SKYACTIV-D 2.2]

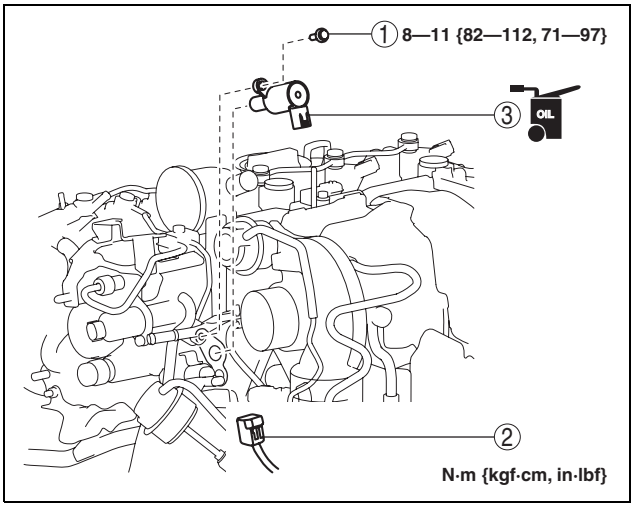
OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0110s5801300

Warning
- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the battery. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the air inlet pipe and turbocharger air inlet hose as a single unit. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.

1	OCV installation bolt (See 01-10B-15 OCV Installation Bolt Installation Note.)
2	OCV connector (See 01-10B-15 OCV Connector Disconnection Note.)
2	OCV (See 01-10B-15 OCV Installation Note.)



ac5wzw0000501

OCV Connector Disconnection Note
1. Pull out the OCV from the cylinder head with the OCV connector connected.
2. Disconnect the OCV connector.

OCV Installation Note

Caution
- **If the OCV is dropped accidentally, replace with a new one. Otherwise, the OCV may not operate normally.**
- **Do not allow foreign matter to get caught when installing. Otherwise, it could leak oil.**

OCV Installation Bolt Installation Note

Caution
- **If the installation bolt is tightened with oil adhering, the bolt could be twisted and cut. Always degrease the bolt.**

MECHANICAL [SKYACTIV-D 2.2]

TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

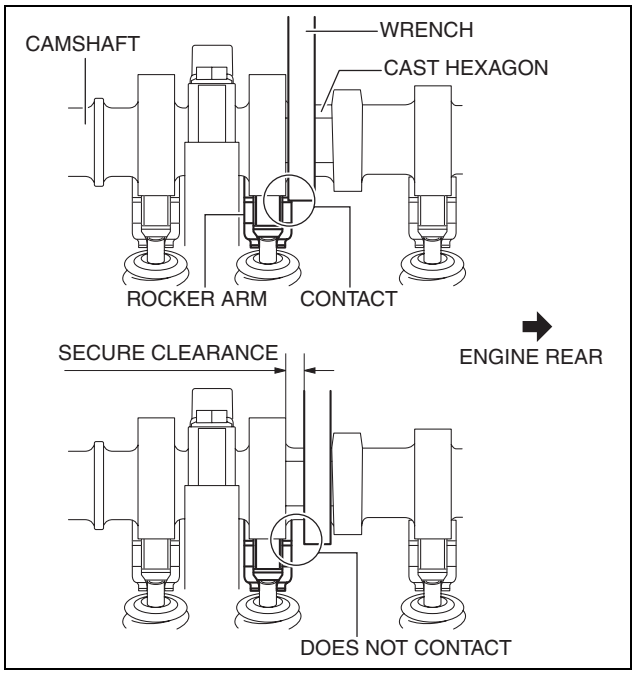
id0110s5801000

Warning

- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**

Caution

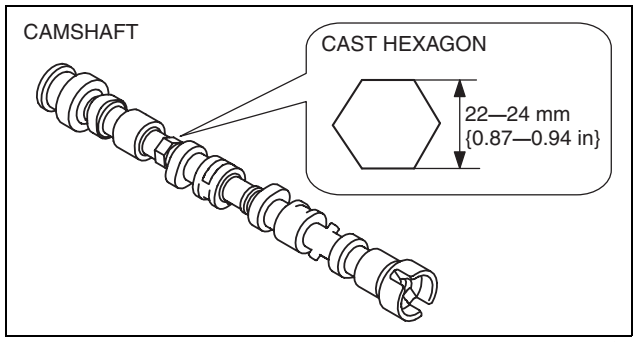
- **When rotating the camshaft using a wrench on the cast hexagon, the wrench may contact the rocker arm and damage the rocker arm. To prevent damage to the rocker arm when holding the camshaft on the cast hexagon, use the wrench at engine rear side as shown in the figure to secure a clearance between the cam.**



am3uuw0000883

Note

- Width at the cast hexagon of the camshaft is 22—24 mm {0.87—0.94 in}.



ac5wzw0000496

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
4. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
5. Remove the drive belt. (See 01-10B-8 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Drain the engine oil. (See 01-11B-4 ENGINE OIL REPLACEMENT [SKYACTIV-D 2.2].)
7. Remove the oil pan. (See 01-11B-15 OIL PAN REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
8. Remove the fuel injectors. (See 01-14B-35 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
9. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
10. Remove in the order indicated in the table.
11. Install in the reverse order of removal.
12. Refill with the specified type and amount of the engine oil. (See 01-11B-4 ENGINE OIL REPLACEMENT [SKYACTIV-D 2.2].)
13. Refill the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
14. Inspect for engine coolant leakage. (See 01-12B-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-D 2.2].)
15. Start the engine and inspect the following:

MECHANICAL [SKYACTIV-D 2.2]

- Leakage of engine oil.
- Oil level (See 01-11B-3 ENGINE OIL LEVEL INSPECTION [SKYACTIV-D 2.2].)
- Runout and contact of pulley and belt.
- Idle speed (See 01-10B-3 ENGINE TUNE-UP [SKYACTIV-D 2.2].)

MECHANICAL [SKYACTIV-D 2.2]

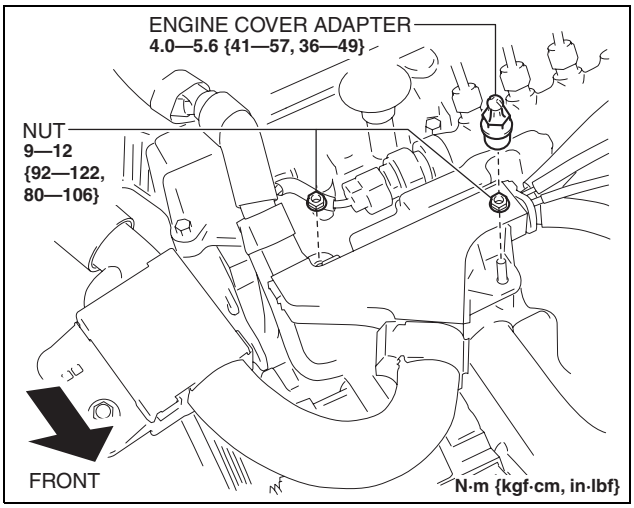
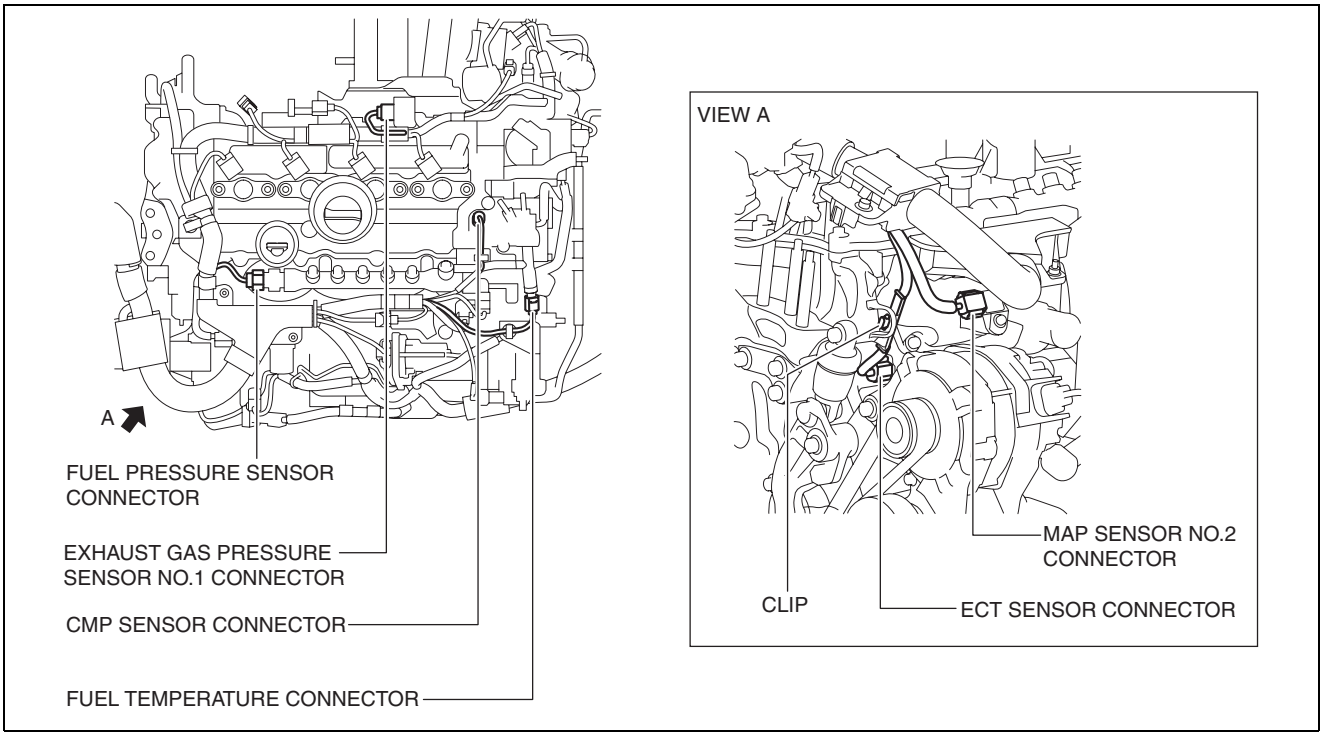
Cylinder Head Cover Removal Note

1. Remove the fuel feed pipe. (See 01-14B-46 SUPPLY PUMP REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Remove the injection pipe (supply pump side). (See 01-14B-33 INJECTION PIPE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Set the wiring harness and ground aside using the following procedure:
   (1) Remove the engine cover adapter and nuts shown in the figure.
   (2) Disconnect the connectors and clip shown in the figure.

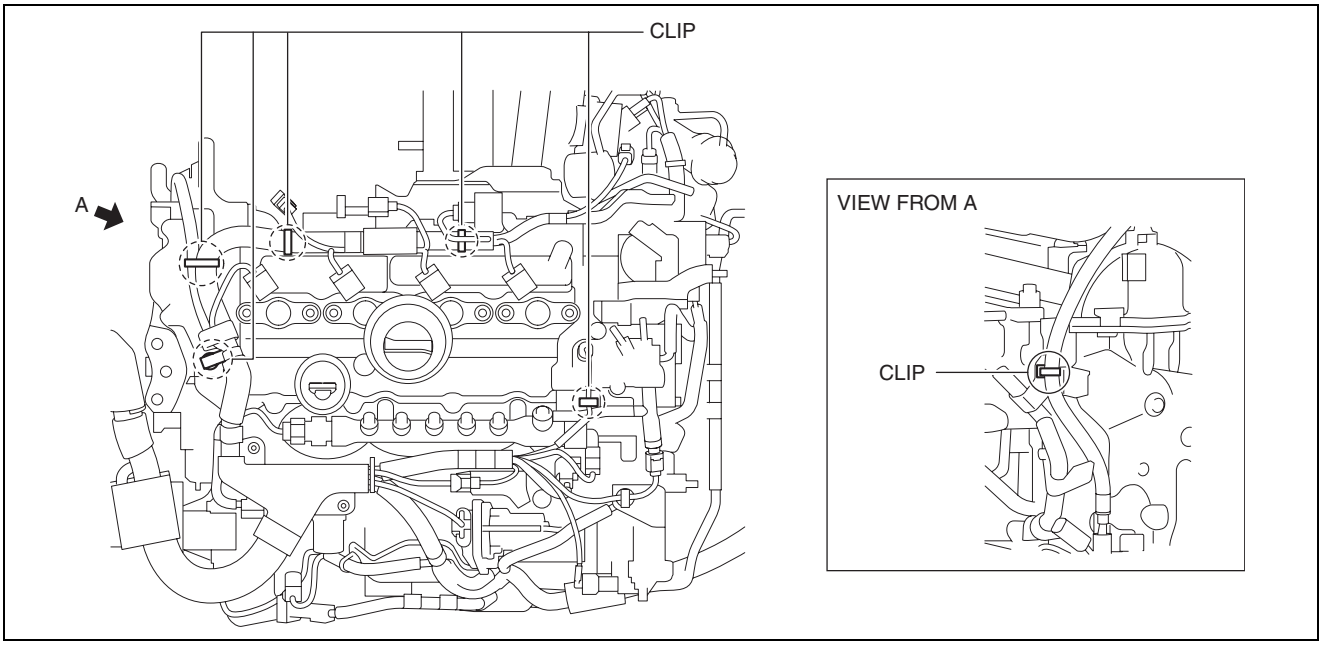


ac5wzw0000523



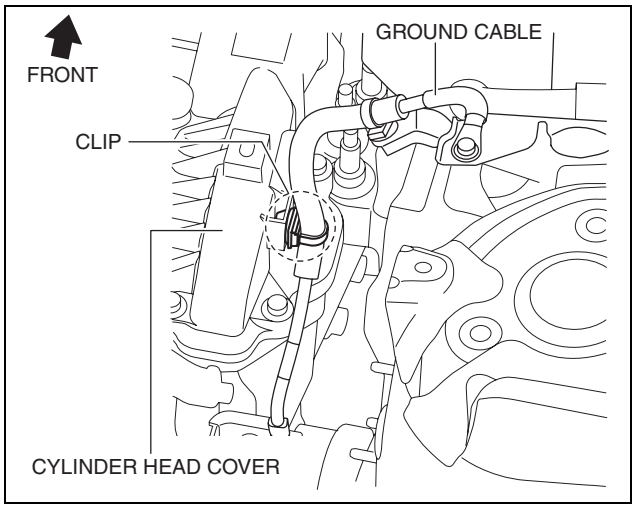
ac5wzw0000523

(3) Remove the clips shown in the figure and set the wiring harness aside.



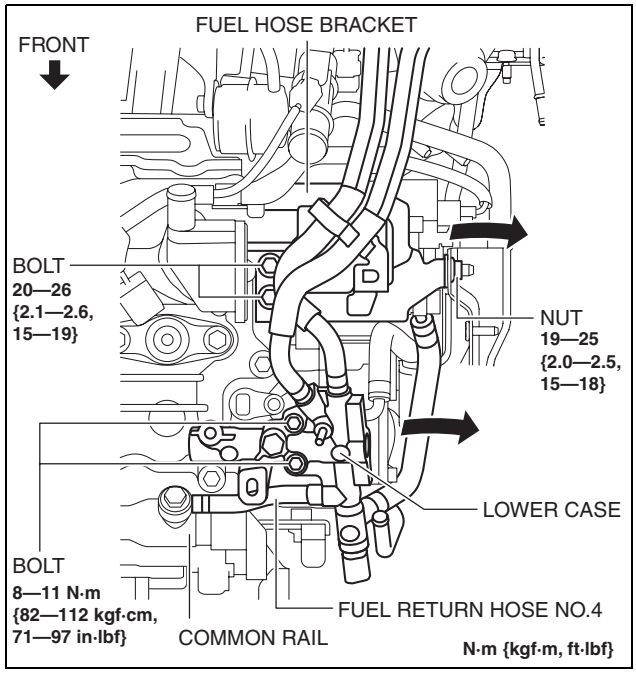
ac5wzw0000496

(4) Set the ground cable clip shown in the figure aside from the cylinder head cover.



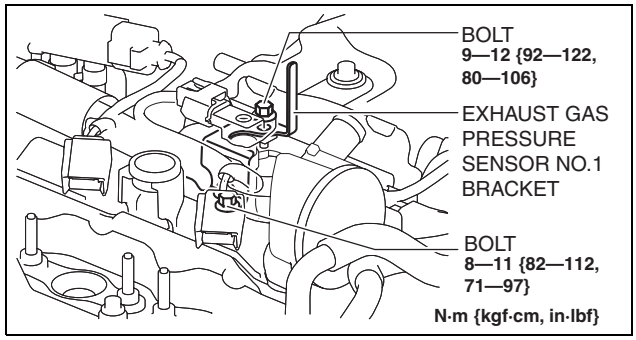
ac5wzw0000496

4. Set the lower case and fuel hose bracket aside using the following procedure:
   (1) Disconnect the vacuum hose from the vacuum pump.
   (2) Disconnect the fuel return hose No.4 from the common rail.
   (3) Remove the fuel hose bracket installation bolts and nut with the fuel main hose and return hose No.1 connected.
   (4) Remove the lower case with the fuel main hose and return hose No.1 and set it aside.



ac5wzw0000523

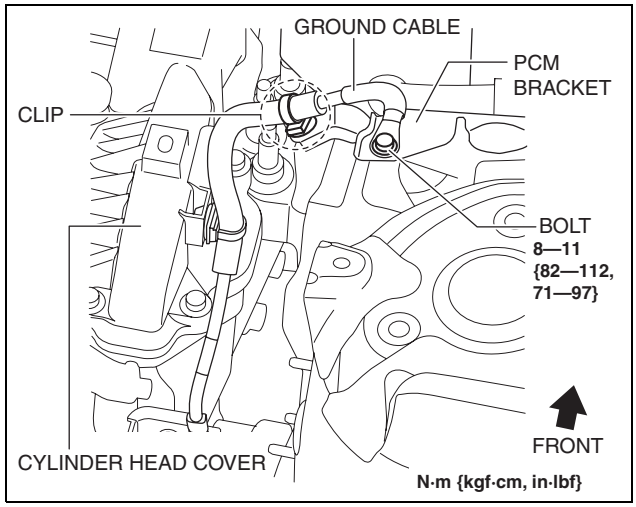
5. Remove the exhaust gas pressure sensor No.1 bracket.
6. Remove the cylinder head cover.



ac5wzw0000496

No.3 Engine Mount Removal Note

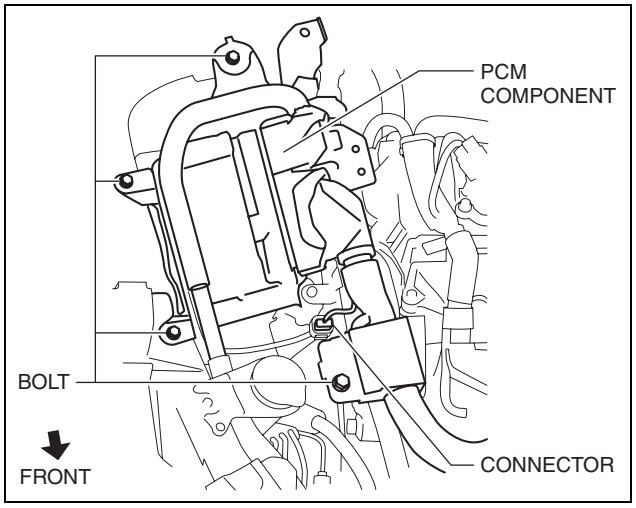
1. Remove the clip and bolt shown in the figure and set the ground cable aside.



ac5wzw0000497

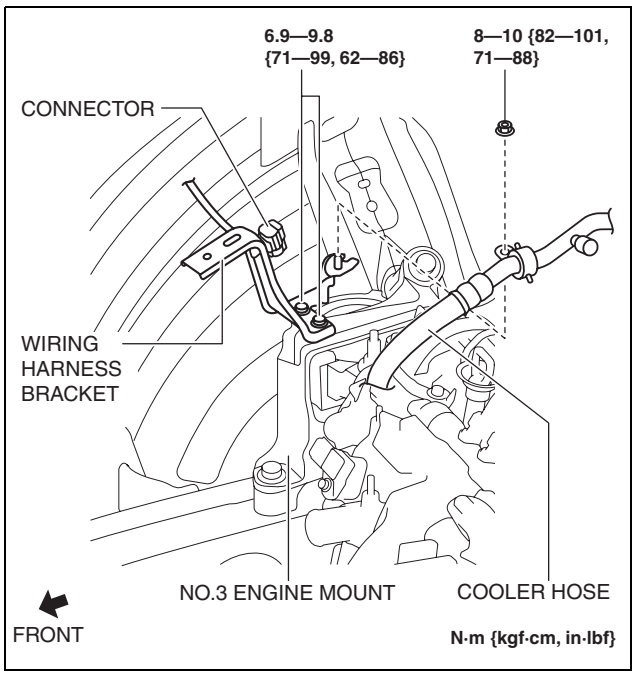
MECHANICAL [SKYACTIV-D 2.2]

2. Remove the bolts and connector shown in the figure and set the PCM component aside with the PCM connector connected.



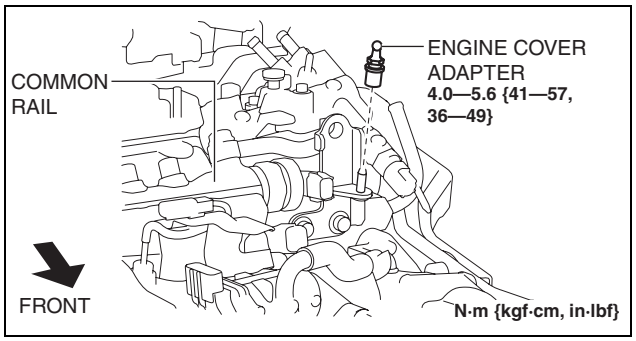
ac5wzw0000497

3. Set the connector and cooler hose shown in the figure aside and remove the wiring harness bracket.



ac5wzw0000497

4. Remove the engine cover adapter shown in the figure.

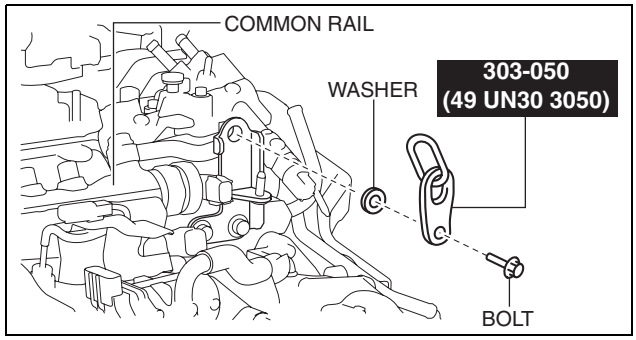


ac5wzw0000523

5. Install the SST to the position shown in the figure using the following bolt and washer.

   Bolt: part number 99794 1025 or an M10 x 1.25, length 25 mm {0.98 in}
   Washer: approx. 3 mm {0.1 in} thickness

   Tightening torque
   38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}



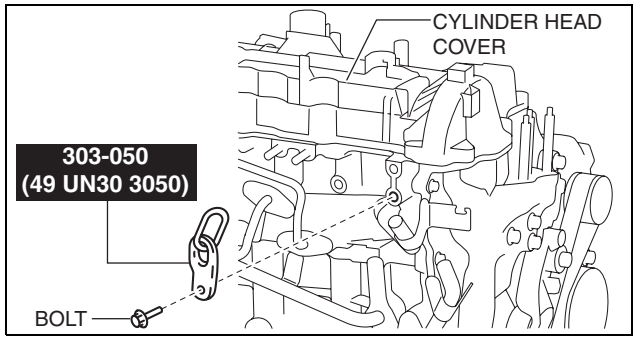
ac5wzw0000524

6. Install the SST to the position shown in the figure using the following bolt and washer.

   Bolt: part number 99794 1025 or an M10 x 1.25, length 25 mm {0.98 in}

   Tightening torque
   38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

   Caution
   - **Slots have been adopted for the No.3 engine mount installation holes. If the No.3 engine mount is deviated from the original position when installing the No.3 engine mount, engine noise or vibration could increase. Before removing the No.3 engine mount, place alignment marks on the No.3 engine mount and body so that they can be assembled to the same positions as before removal.**



ac5wzw0000497

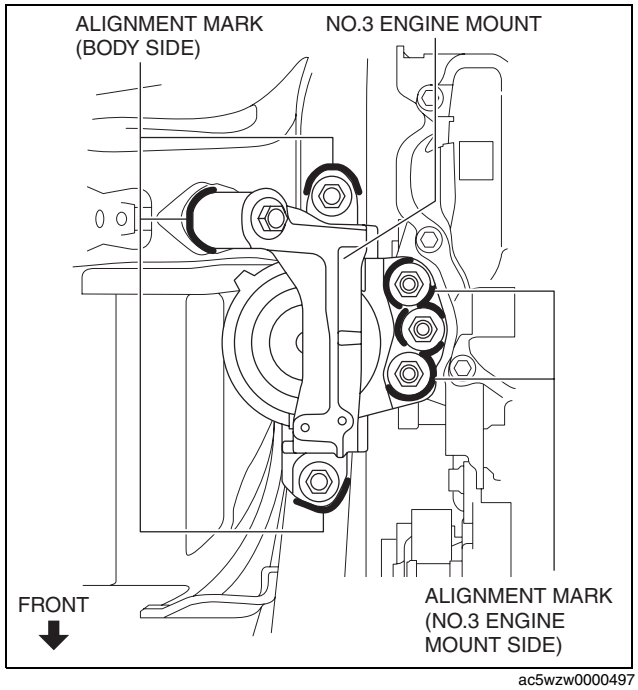
7. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

   Note
   - Paint so that the No.3 engine mount is framed on the body side and the outline of the nut is framed on the No.3 engine mount side.

8. Install the **SST** using the following procedures.

   Caution
   - **Refer to the SST instruction manual for the basic handing procedure.**

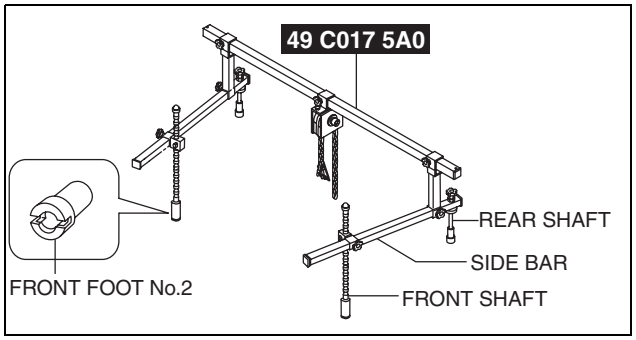
   Note
   - Install front feet No. 2 to the left and right front shafts of the **SST**.



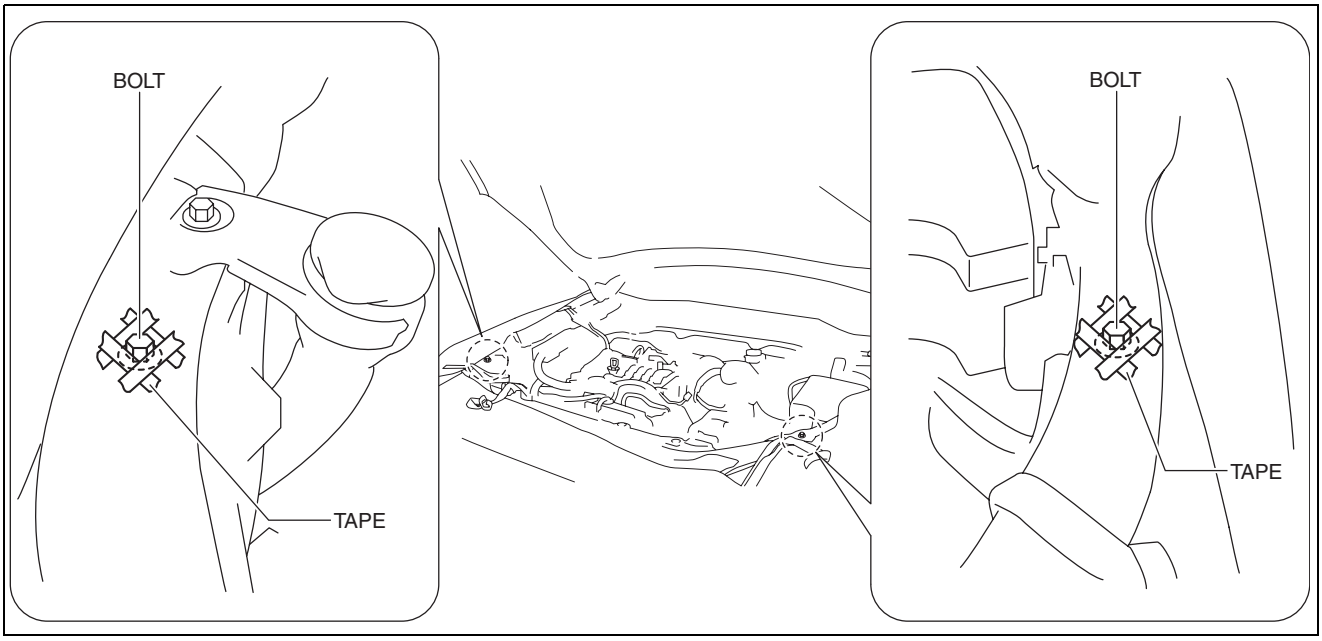
ac5wzw0000497

MECHANICAL [SKYACTIV-D 2.2]

(1) Protect the positions shown in the figure using tape.

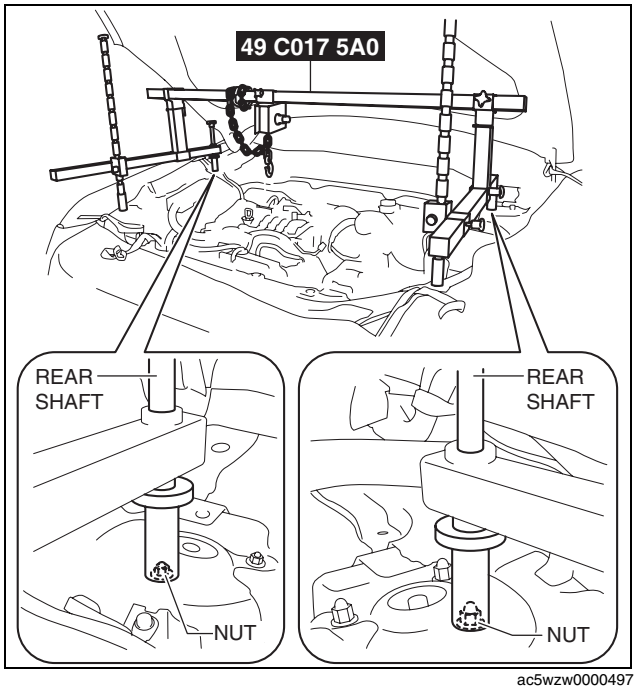


am3uuw0000884



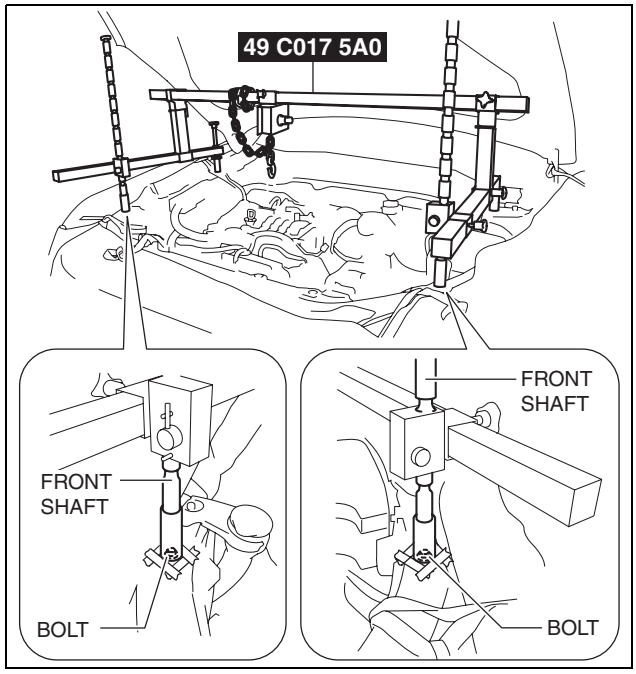
ac5wzw0000497

(2) As shown in the figure, set the rear shafts of the **SST** to the left and right shock absorber nuts.



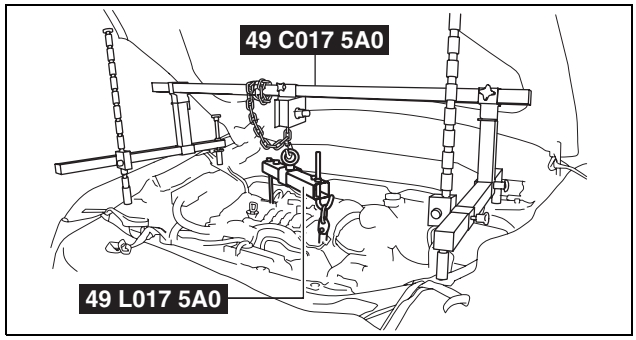
ac5wzw0000497

(3) As shown in the figure, set the front shafts of the SST to the left and right bolts.



ac5wzw0000497

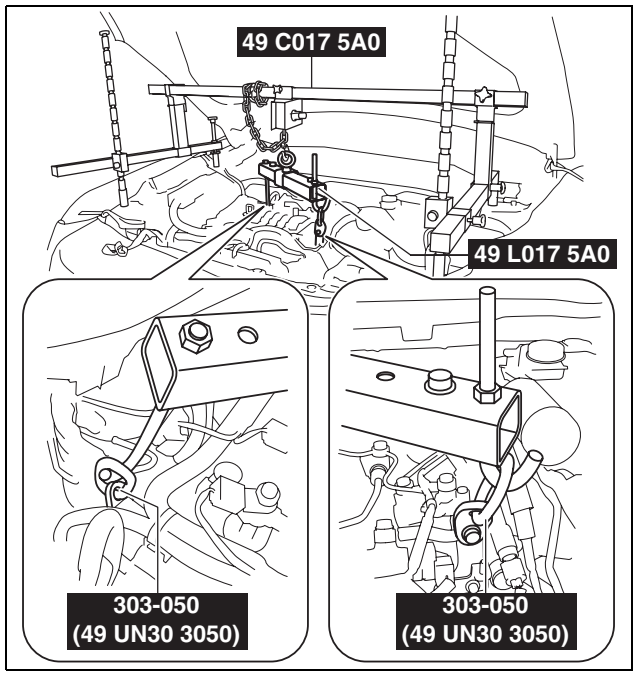
(4) Adjust the height of the left and right side bars of the **SST** so that they are leveled, then tighten each part.



ac5jjw00004540

(5) Install the SST (49 L017 5A0) to the SST (49 UN30 3050) with the hook of the SST (49 L017 5A0) facing outward.
(6) Adjust the height of the left and right side bars so that they are leveled, then tighten each part of the SST.
(7) Apply tension to the chain to secure the engine.

9. Remove the No.3 engine mount.

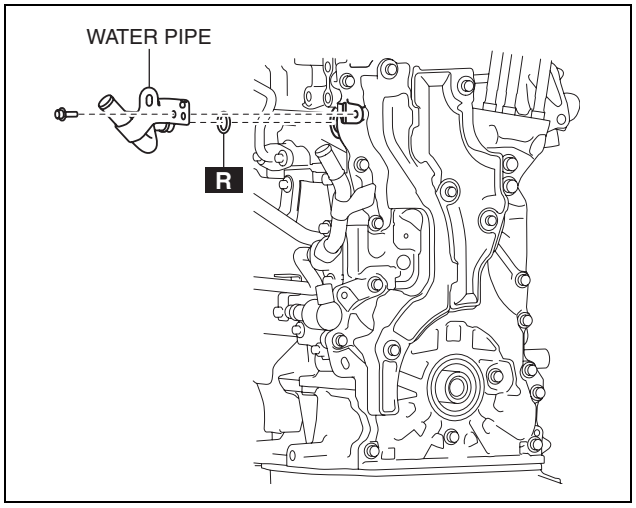


ac5jjw00004541

MECHANICAL [SKYACTIV-D 2.2]

Water Pipe Removal Note

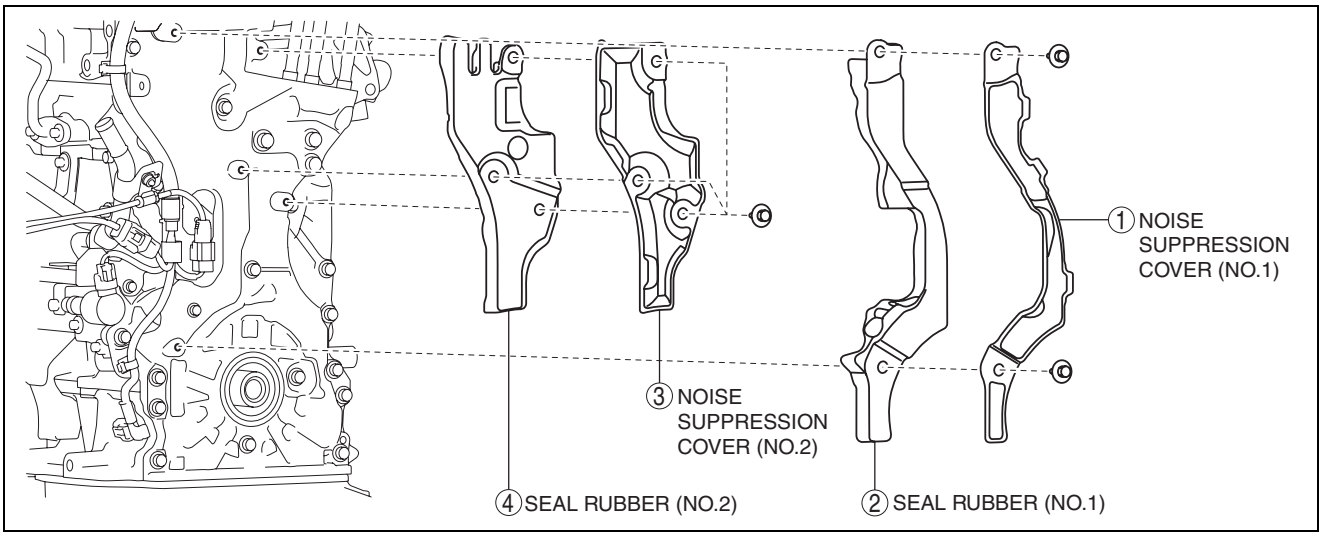
1. Remove the water pipe with the water hose connected and set it aside out of the way.



ac5wzw0000497

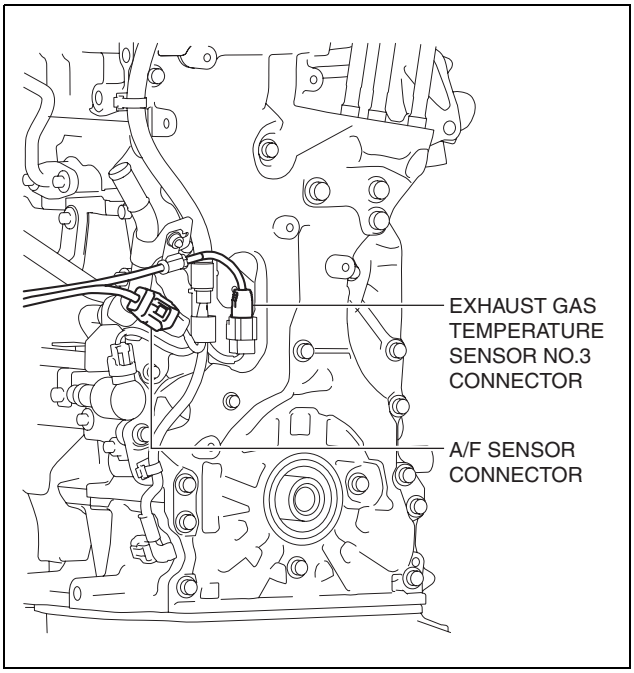
Noise Suppression Cover (No.1), Noise Suppression Cover (No.2), Seal Rubber Removal Note

1. Remove the noise suppression covers and seal rubbers in the order shown in the figure.



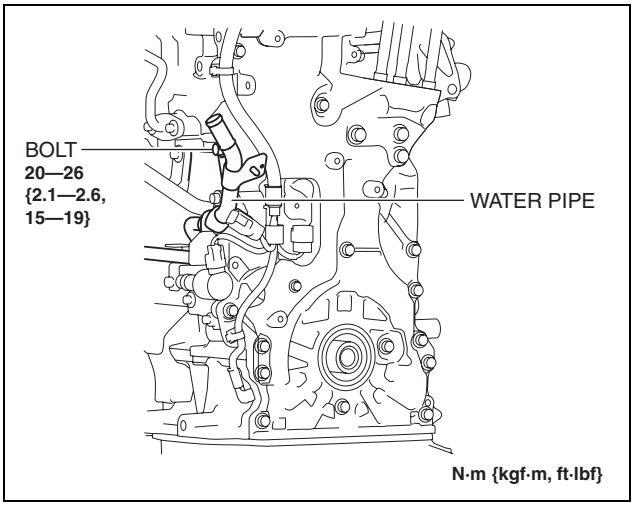
ac5wzw0000524

2. Remove the connectors shown in the figure and set the wiring harness aside.



ac5wzw0000524

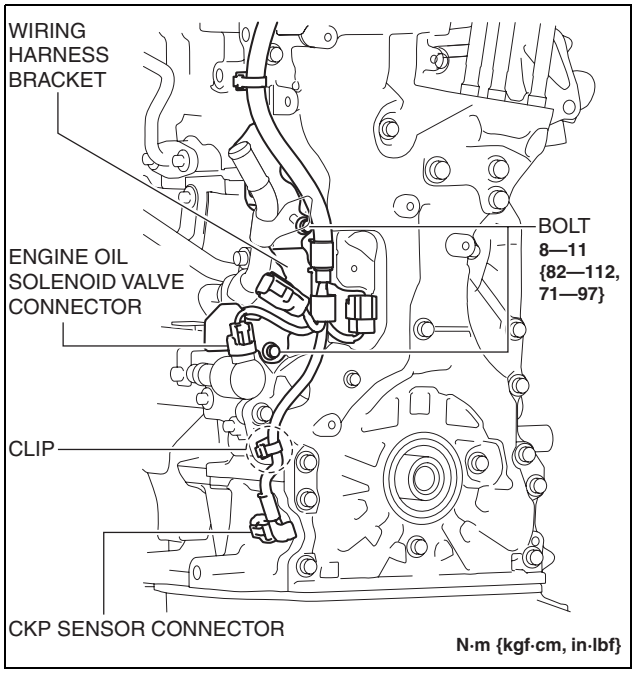
3. Remove the water pipe installation bolt shown in the figure.



ac5wzw0000524

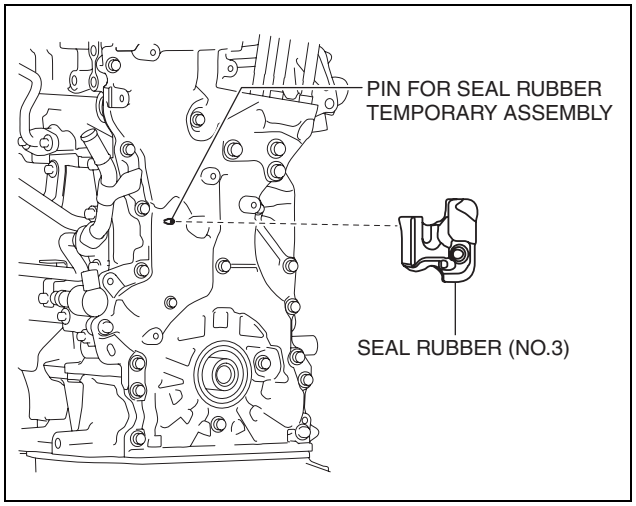
MECHANICAL [SKYACTIV-D 2.2]

4. Remove the connectors, clip, and bolts shown in the figure and set the wiring harness and wiring harness bracket aside.



ac5wzw0000524

5. Remove the seal rubber (No.3) shown in the figure.



ac5wzw0000524

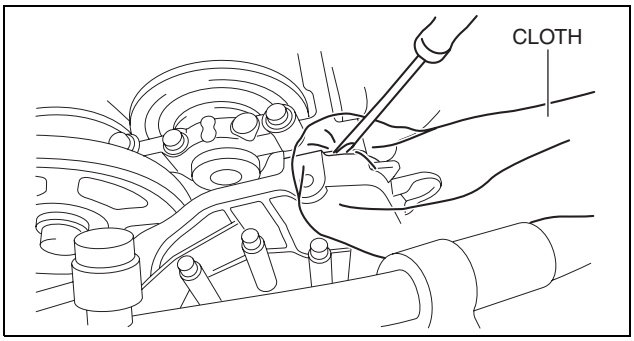
MECHANICAL [SKYACTIV-D 2.2]

Engine Front Cover Removal Note

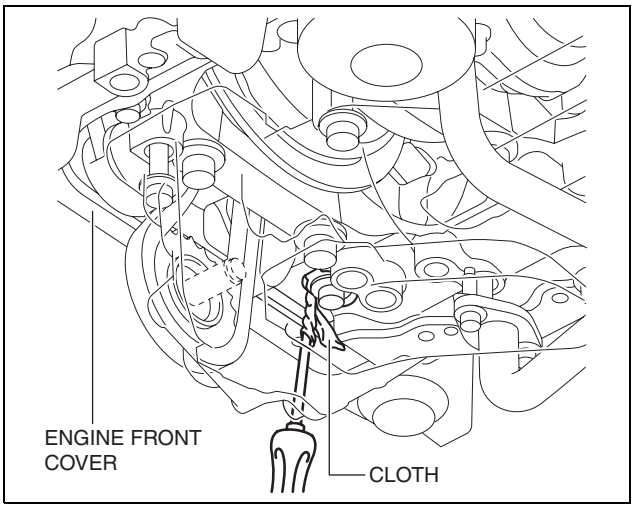
1. Remove the engine front cover installation bolt.
2. Using a screwdriver wrapped in a rag, peel the sealant away a little at a time, and remove the engine front cover.

Caution

- **Do not apply excessive force to the screwdriver. Otherwise, the engine front cover could be damaged.**
- **Be careful not to scratch or damage the seal surface. Otherwise, it could cause oil leakage.**



ac5wzw0000498

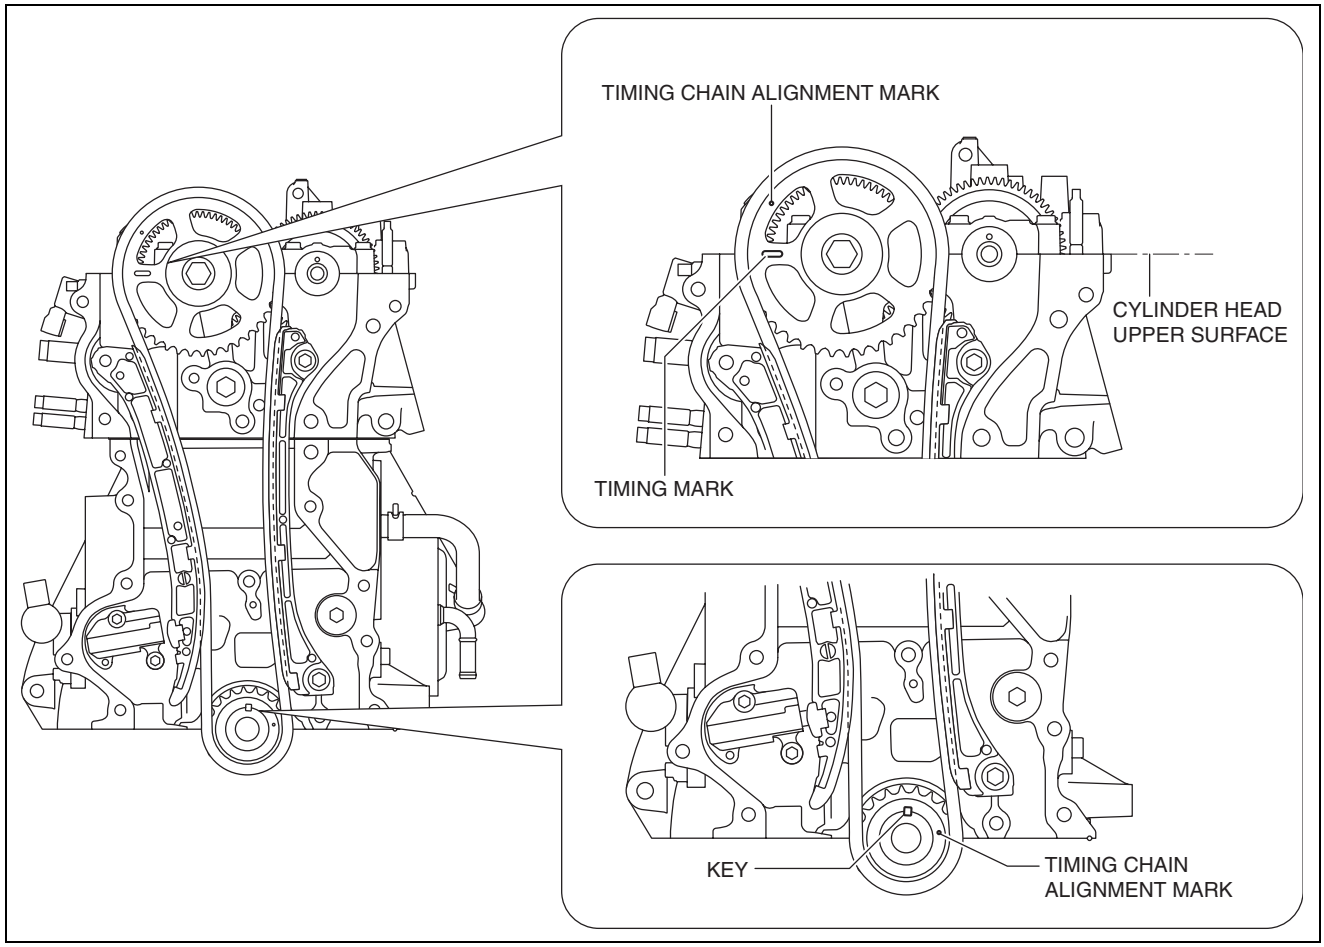


ac5wzw0000498

MECHANICAL [SKYACTIV-D 2.2]

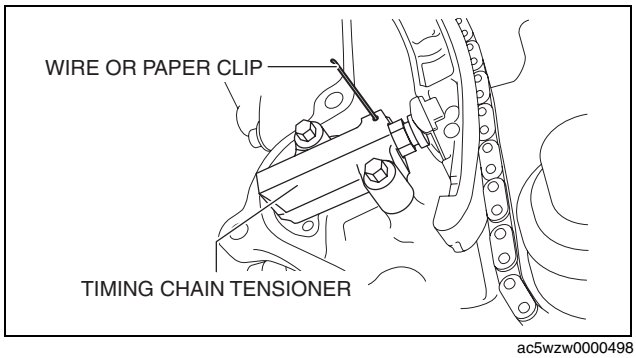
Timing Chain Removal Note

1. Rotate the crankshaft clockwise to adjust the timing marks and the key position as shown in the figure, and set cylinder No.1 at top dead center (TDC).



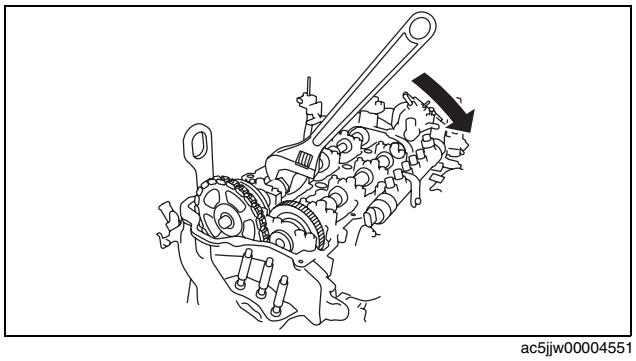
ac5wzw0000498

2. Loosen the timing chain tensioner using the following procedure:
   (1) Insert a wire with an approx. diameter of **1.4 mm {0.055 in}** or a paper clip into the body hole of the timing chain tensioner.



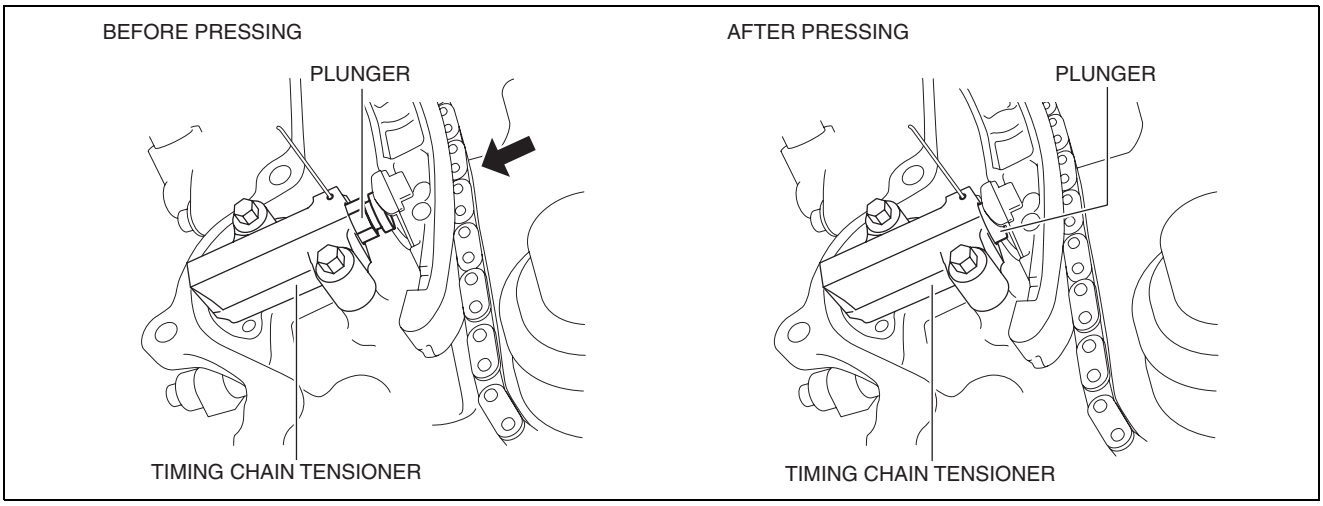
ac5wzw0000498

   (2) While moving the exhaust camshaft in the direction of the arrow using a wrench on the cast hexagon, press in the plunger of the timing chain tensioner.



ac5jjw00004551

Note
- By rotating the exhaust camshaft clockwise, the timing chain can be pulled slightly and the timing chain presses in the tensioner plunger.

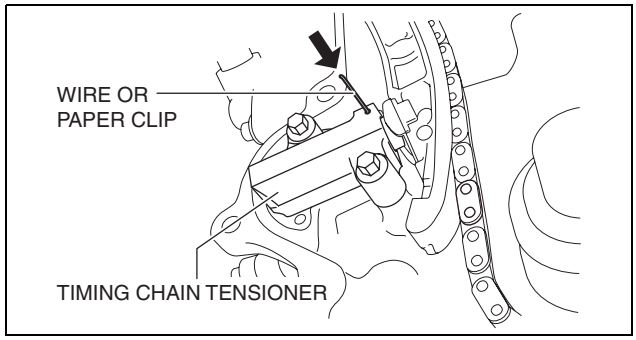


ac5wzw0000498

(3) Press the wire or paper clip set in Step 1 further with the plunger pressed.

Note
- The wire or paper clip secures the plunger, and the tension can be released.

(4) Remove the timing chain tensioner and timing chain tensioner arm.
(5) Remove the timing chain guide.
(6) Remove the timing chain.

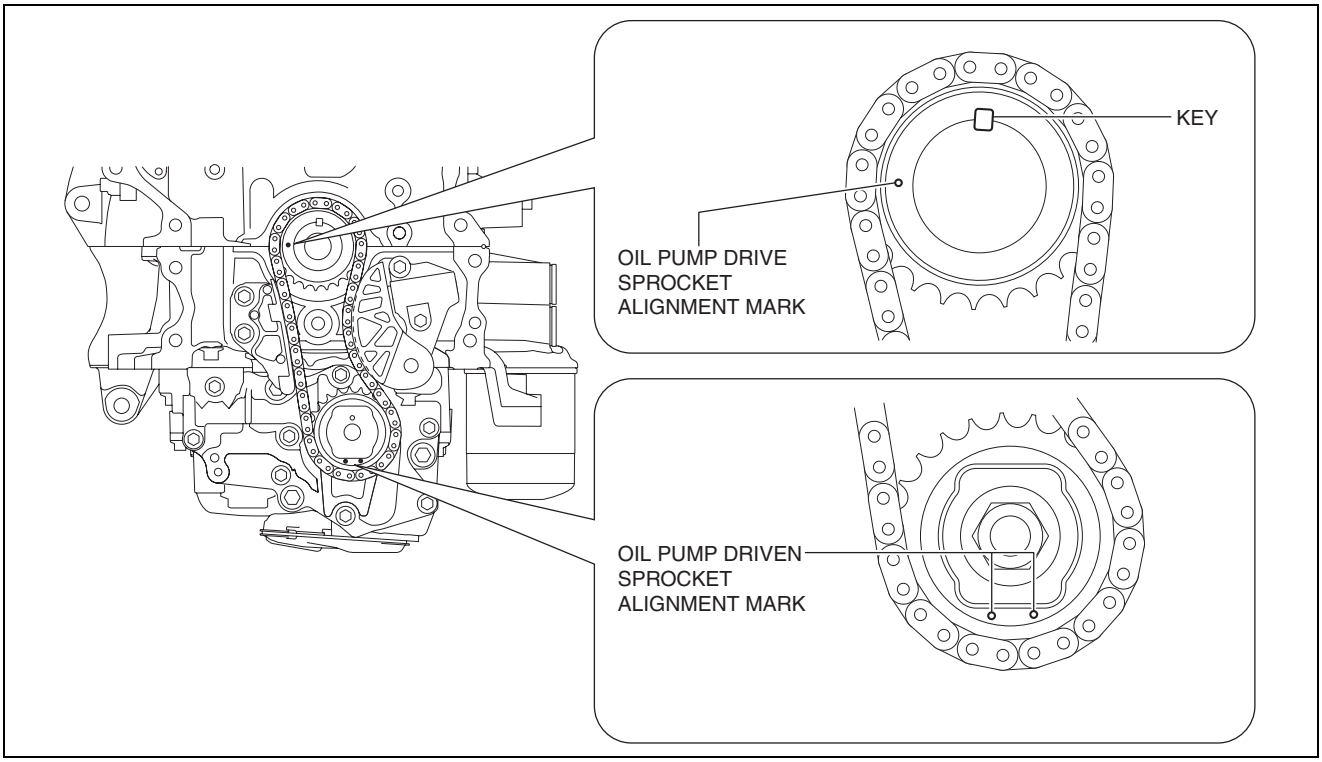


ac5wzw0000498

MECHANICAL [SKYACTIV-D 2.2]

Oil Pump Chain Removal Note

1. Verify that the oil pump driven sprocket alignment marks and key are aligned to the positions shown in the figure.



ac5wzw0000524

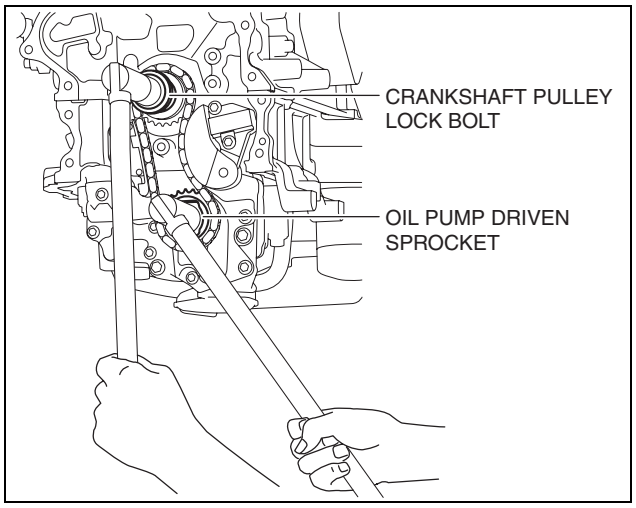
Note

- If they are not in the positions shown in the figure, rotate the crankshaft to set cylinder No.1 to top dead center (TDC).

2. Temporarily assemble the crankshaft pulley lock bolt, and lock the oil pump against rotation as shown in the figure.
3. Slightly loosen the oil pump driven sprocket installation bolt.

Note

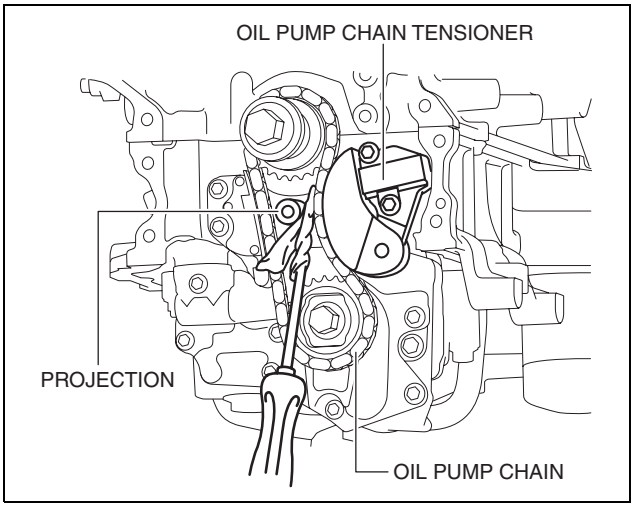
- At this stage, only loosen the oil pump driven sprocket installation bolt, do not remove it. Remove the bolt after removing the oil pump chain tensioner.



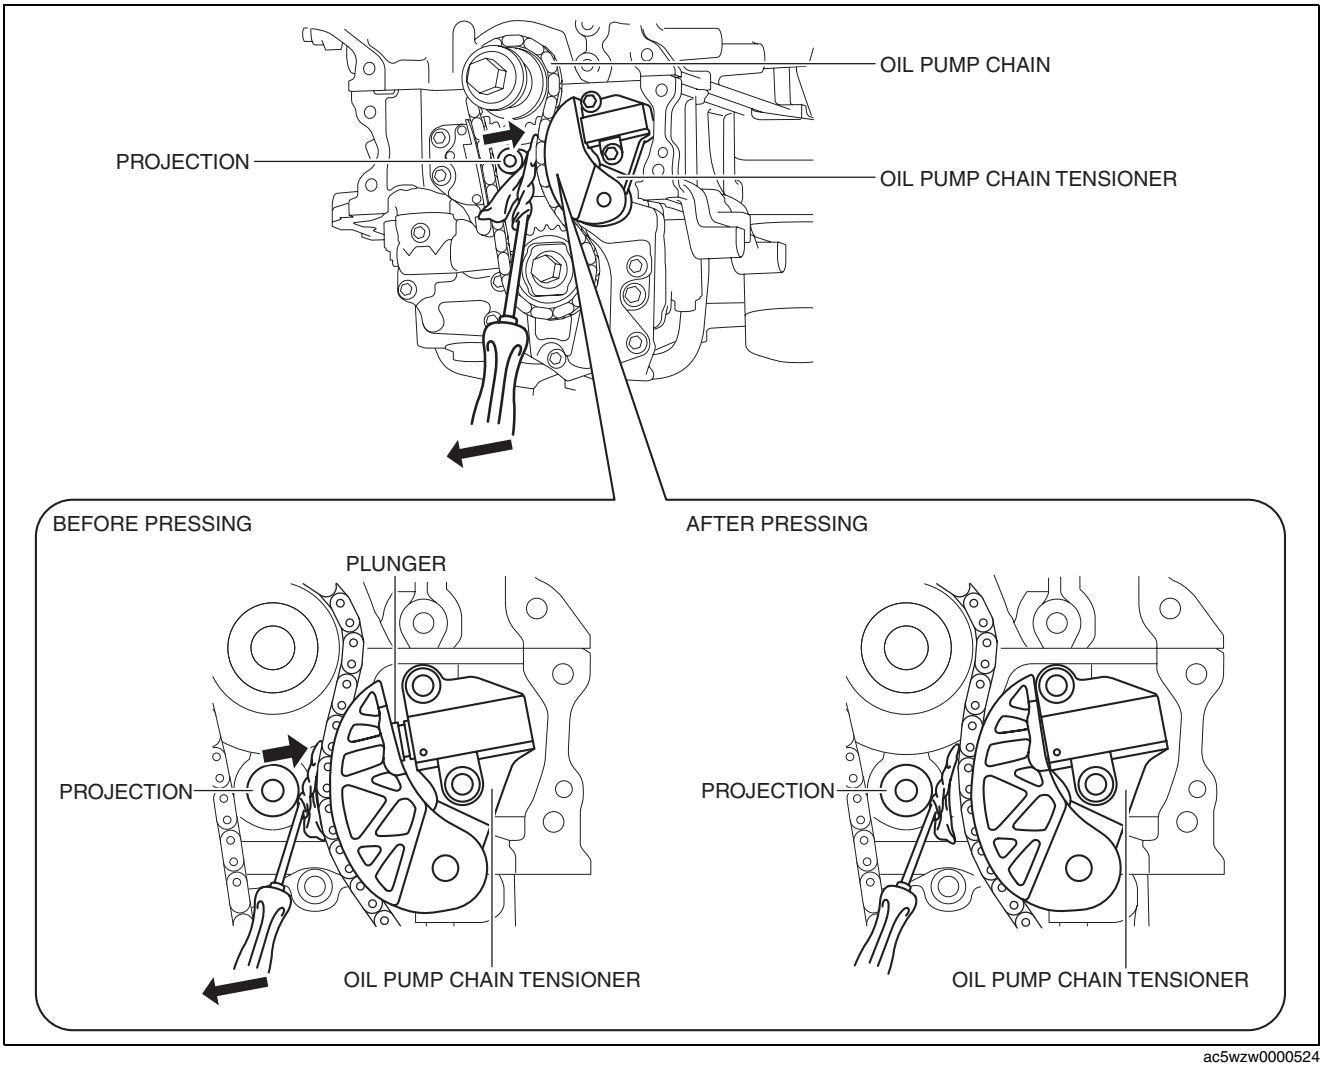
ac5wzw0000524

MECHANICAL [SKYACTIV-D 2.2]

4. Set a cloth wrapped flathead screwdriver in the gap between the lower cylinder block projection and the oil pump chain as shown in the figure.
5. Move the screwdriver in the direction of the arrow and press the oil pump chain, and then press in the plunger of the oil pump chain tensioner.



ac5wzw0000524

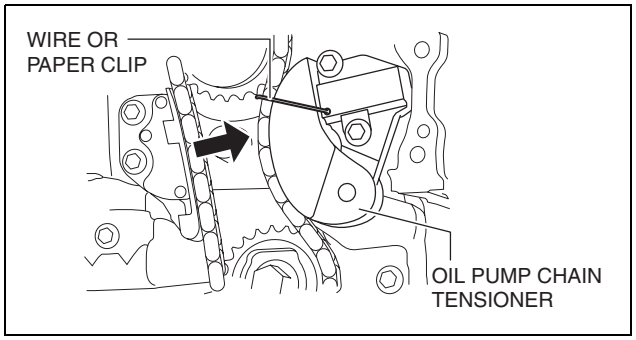


ac5wzw0000524

6. Insert a wire with an approx. diameter of **1.4 mm {0.055 in}** or a paper clip into the body hole of the oil pump chain tensioner with the plunger pressed.

Note
- The wire or paper clip secures the plunger, and the tension can be released.

7. Remove the oil pump chain tensioner.
8. Remove the oil pump chain and oil pump driven sprocket as a single unit.
9. Remove the temporarily assembled crankshaft pulley lock bolt.

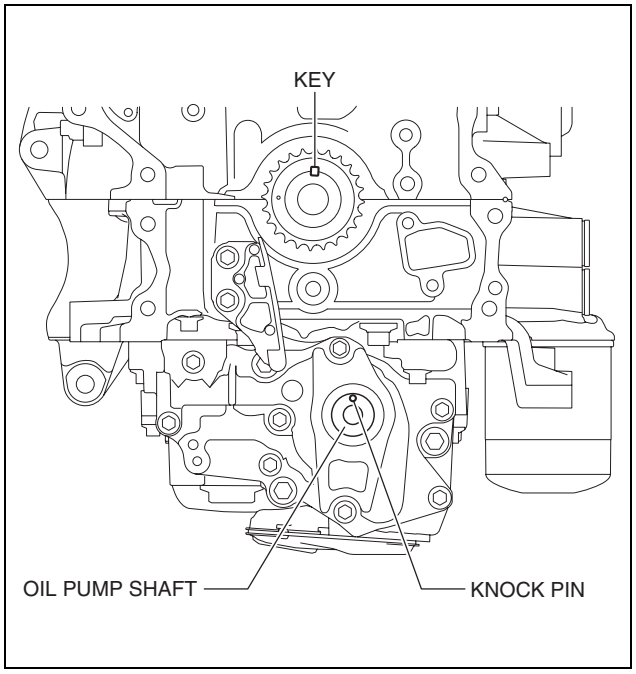


ac5wzw0000499

Oil Pump Chain Installation Note

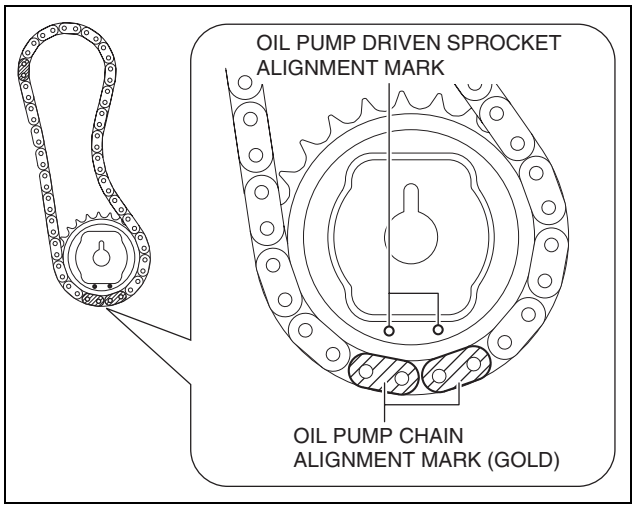
1. Verify that the key and knock pin are aligned to the positions shown in the figure.
   - If they are not in the positions shown in the figure, rotate the crankshaft and balancer shaft (No.1) to set cylinder No.1 to top dead center (TDC).

Note
- When rotating the balancer shaft (No.1), temporarily assemble the oil pump driven sprocket and rotate while holding the sprocket with a hand.



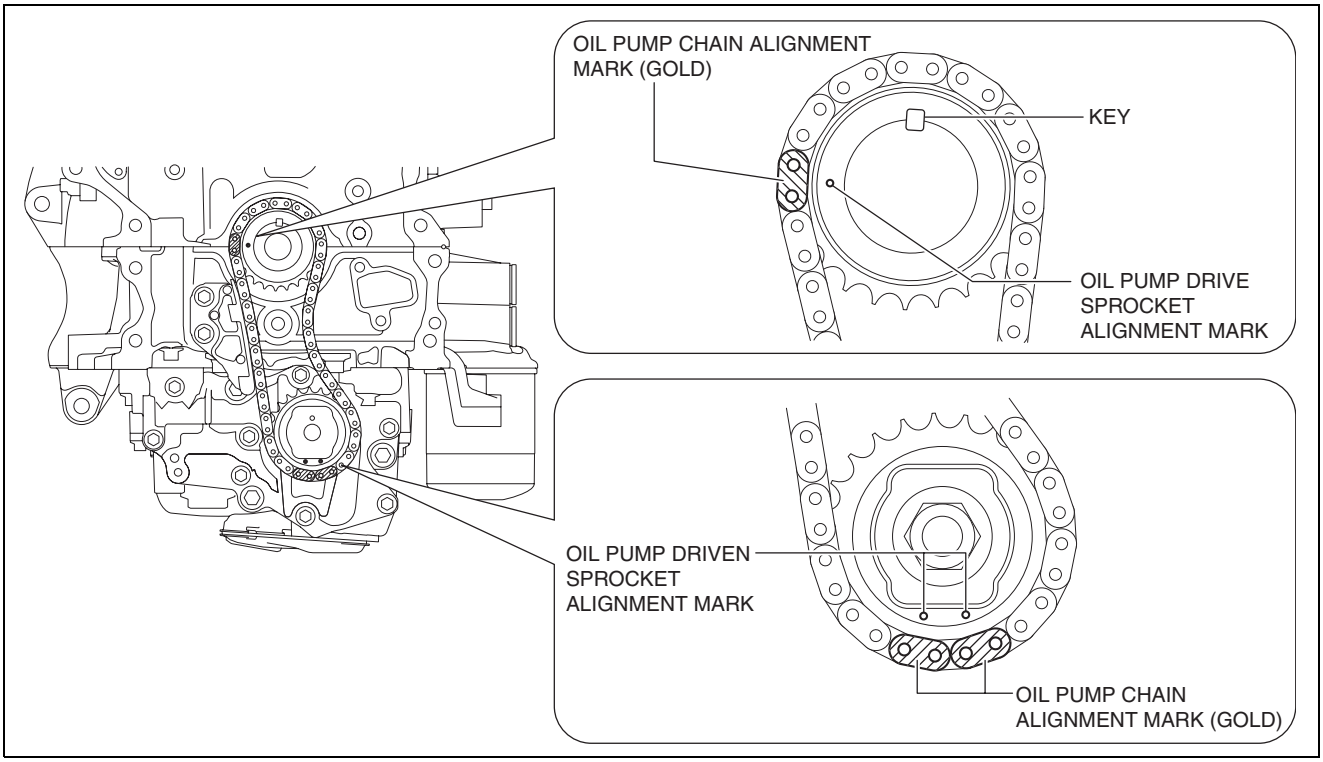
ac5wzw0000499

2. Align the oil pump chain alignment marks with the oil pump driven sprocket alignment marks.



ac5wzw0000525

3. Install the oil pump chain and oil pump driven sprocket as a single unit while aligning the alignment marks on each sprocket and oil pump chain as shown in the figure.



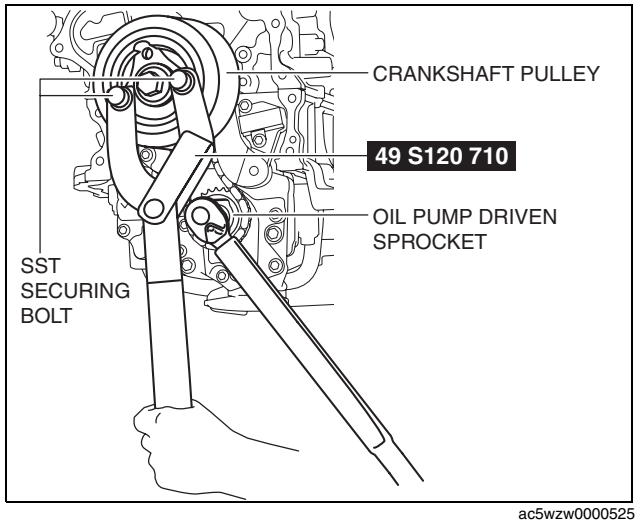
ac5wzw0000499

4. Temporarily tighten the oil pump driven sprocket installation bolt.
5. Install the oil pump chain tensioner.

Caution
- **At this stage, do not remove the wire or paper clip installed to the oil pump chain tensioner.**

6. Tighten the oil pump driven sprocket installation bolt using the following procedure:
   (1) Temporarily assemble the crankshaft pulley and crankshaft pulley lock bolt.
   (2) Install the SST shown in the figure and lock the oil pump against rotation. (See 01-10B-72 FRONT OIL SEAL REPLACEMENT [SKYACTIV-D 2.2].)
   (3) Tighten the oil pump driven sprocket installation bolt.

Tightening torque
123—140 N·m {13—14 kgf·m, 91—103 ft·lbf}



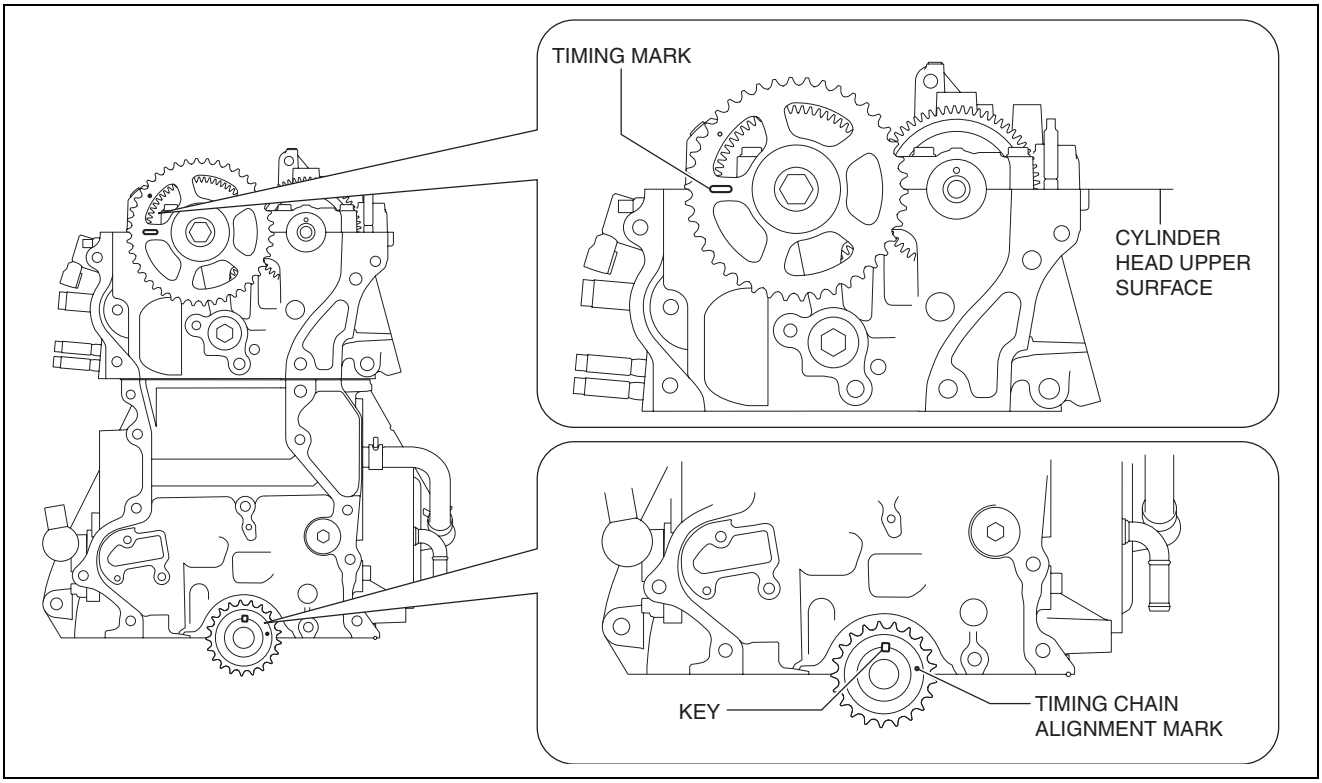
ac5wzw0000525

7. Remove the temporarily assembled crankshaft pulley and crankshaft pulley lock bolt.
8. Remove the wire or paper clip installed to the oil pump chain tensioner and apply tension to the oil pump chain.
   - If a new oil pump chain tensioner is used, remove the installed stopper.

MECHANICAL [SKYACTIV-D 2.2]

Timing Chain Installation Note

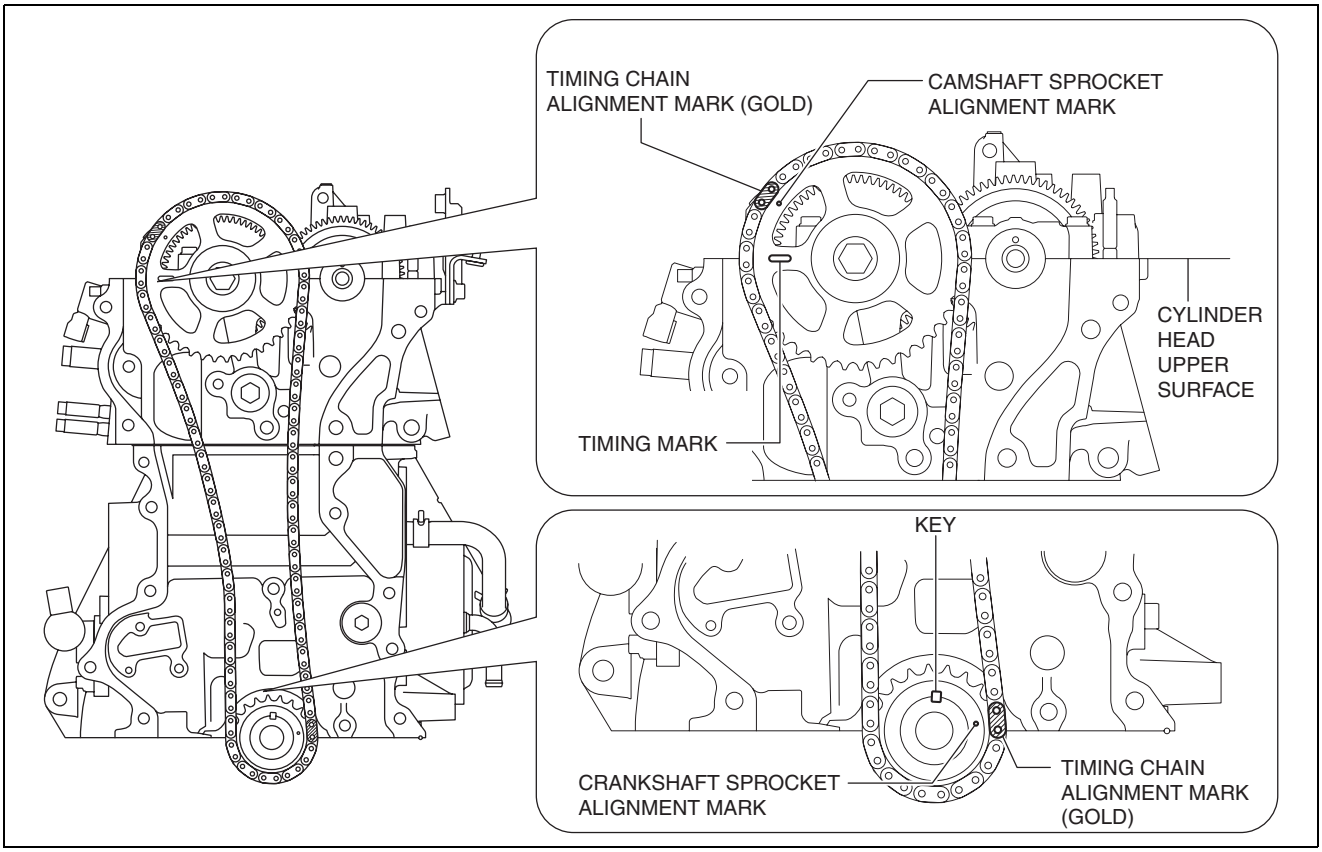
1. Verify that the timing marks and the key are aligned to the position shown in the figure.



ac5wzw0000499

- If they are not in the positions shown in the figure, rotate the camshaft and crankshaft to set the cylinder No.1 top dead center (TDC).

2. Install the timing chain while aligning the marks on each sprocket and the timing chain as shown in the figure.

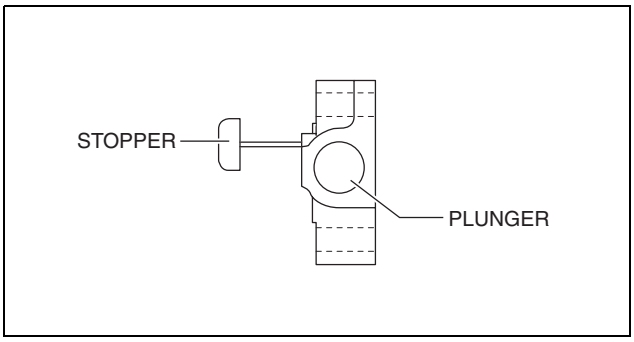


ac5wzw0000499

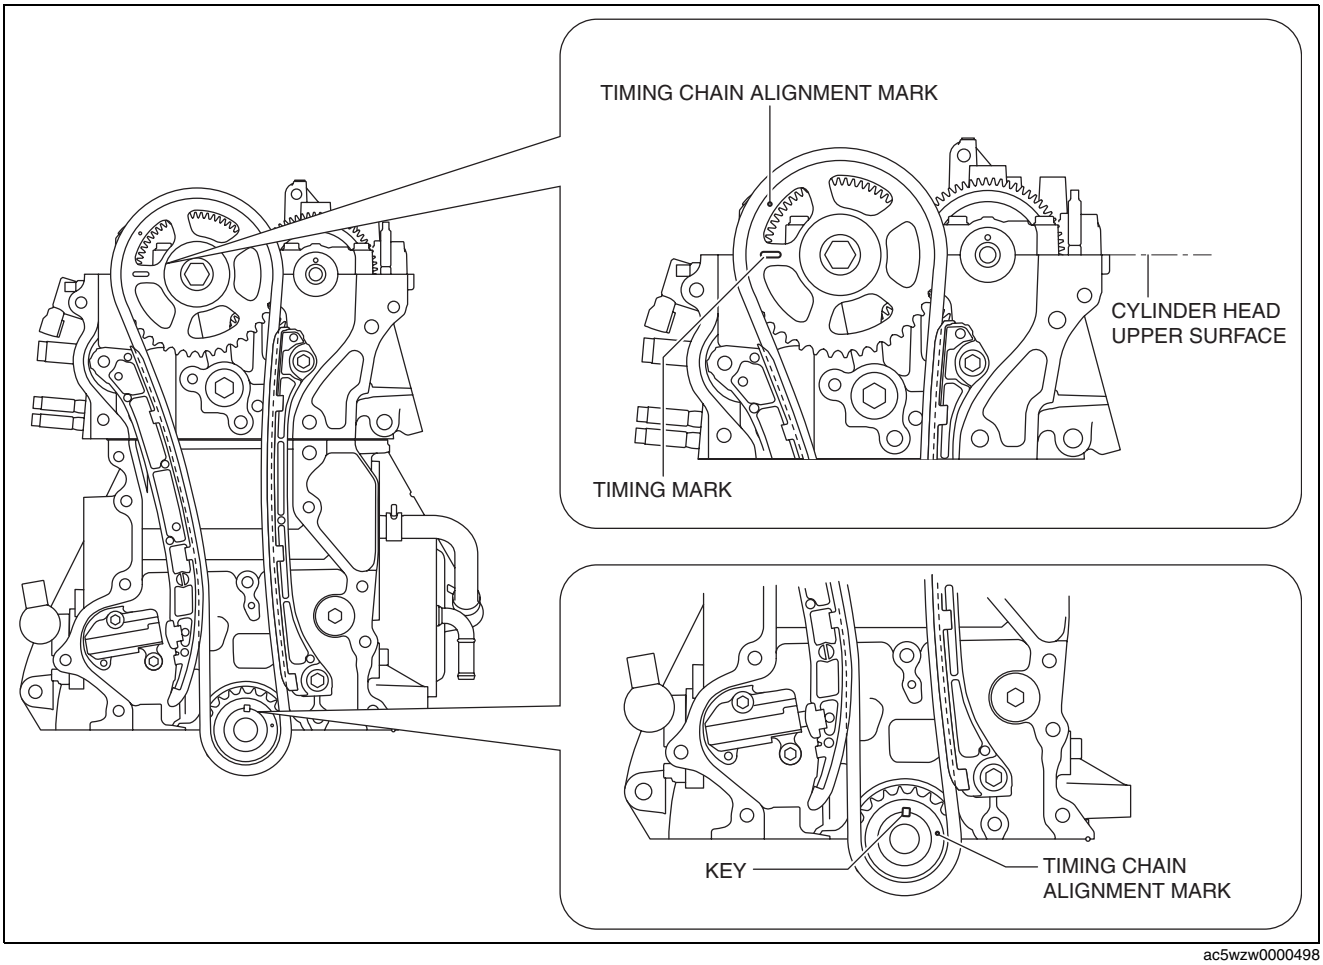
3. Install the timing chain guide.

MECHANICAL [SKYACTIV-D 2.2]

4. Install the timing chain tensioner arm.
5. Install the timing chain tensioner.
6. After installing the timing chain tensioner, remove the installed wire or paper clip, and then apply tension to the timing chain.
   - If a new chain tensioner is used, remove the installed stopper.
7. Verify that there is no looseness in the timing chain, and re-verify that each sprocket is in the specified location.
8. Rotate the crankshaft clockwise two turns and inspect the valve timing.



ac5wzw0000499



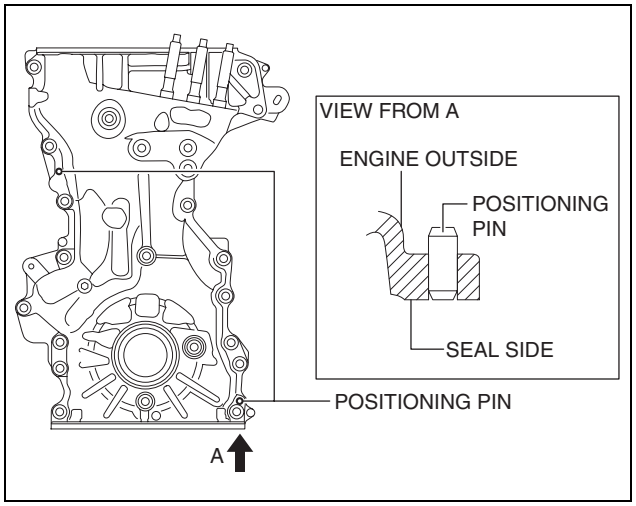
ac5wzw0000498

MECHANICAL [SKYACTIV-D 2.2]

Engine Front Cover Installation Note

Note

- For a new engine front cover, the positioning pins in the two locations shown in the figure project to the outside of the engine.

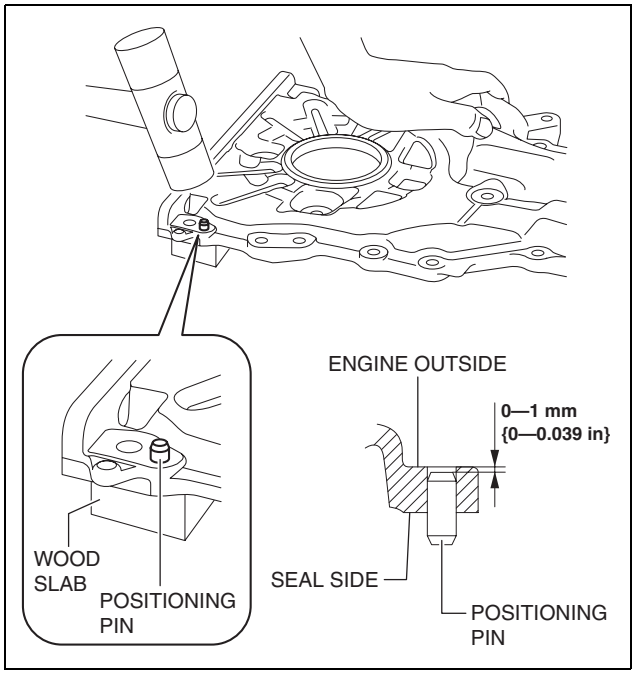


ac5wzw0000499

1. If the engine front cover is newly replaced, tap the positioning pins in the two locations to the seal surface side.
2. Remove oil, dirt, and sealant adhering to the engine front cover, cylinder head, and cylinder block.
3. When reusing an engine front cover installation bolts, remove sealant adhering to the bolts.

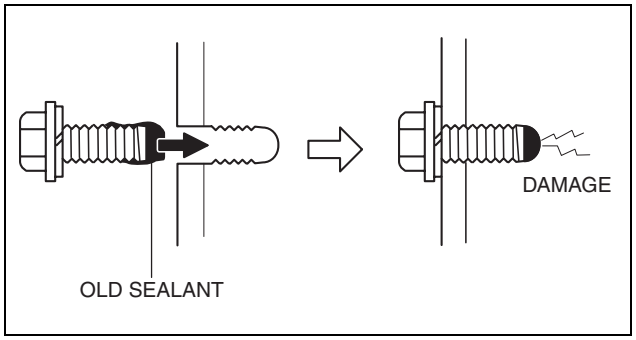
Caution

- **Apply the silicon sealant in a single, unbroken line.**
- **To prevent silicone sealant from hardening, adhere the engine front cover and the cylinder block firmly within 10 min. after applying silicone sealant. After adhering them, tighten the installation bolts immediately.**



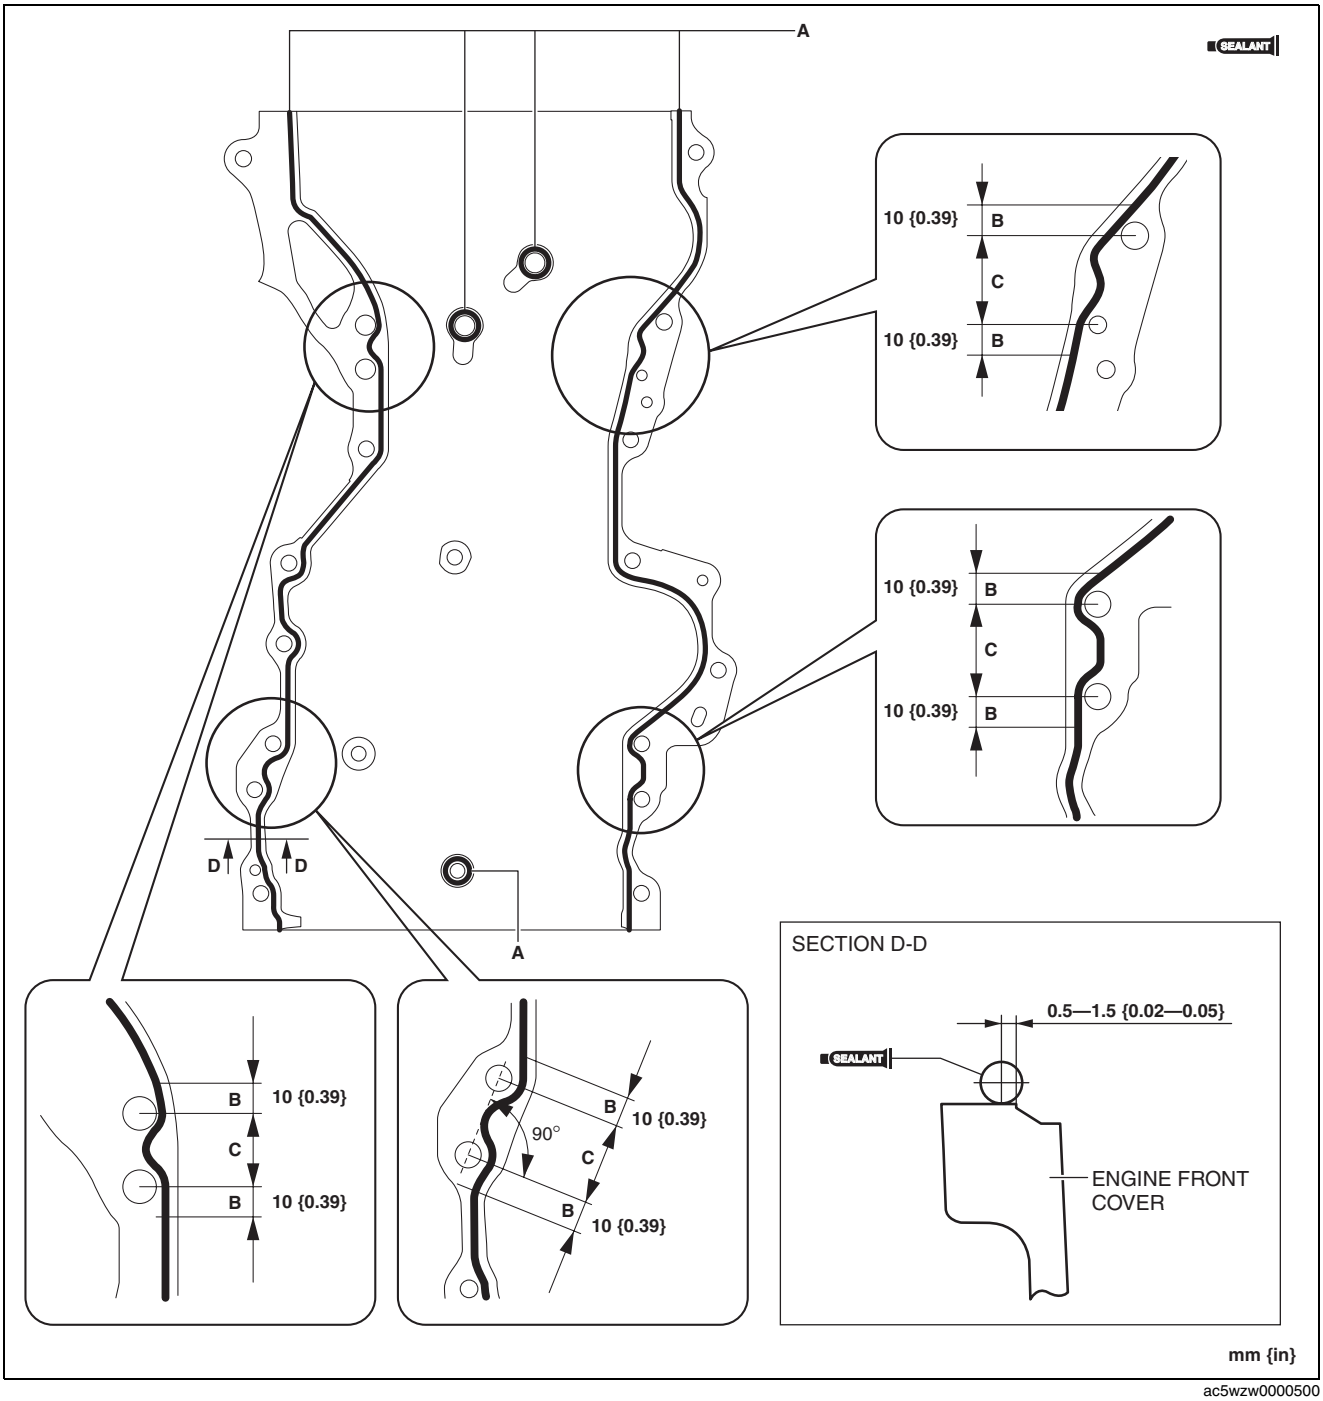
ac5wzw0000500

- **If a bolt with sealant adhering to it is used, it could result in cracks in the cylinder head and cylinder block.**



am3uuw0000886

4. Apply silicone sealant to the engine front cover as shown in the figure.



ac5wzw0000500

Bead thickness
A: 2—6 mm {0.1—0.2 in}
B: 4—6 mm {0.16—0.23 in}
C: 4—8 mm {0.2—0.3 in}

MECHANICAL [SKYACTIV-D 2.2]

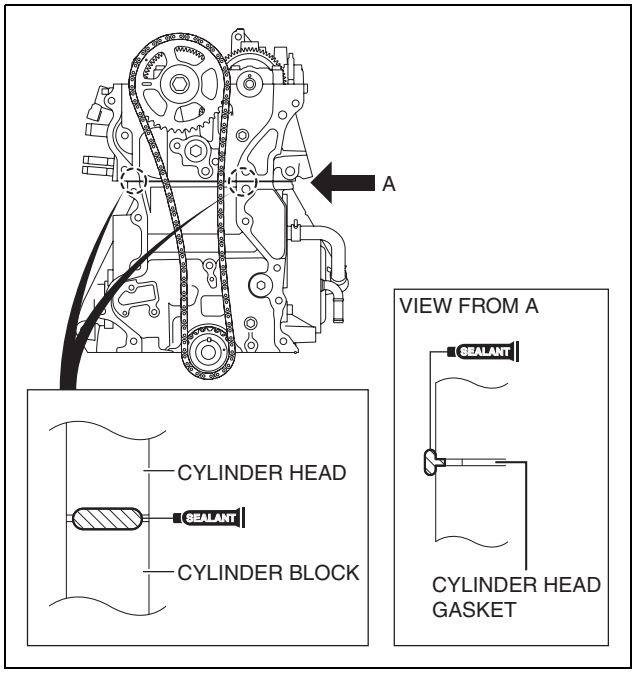
5. Apply silicone sealant to the areas shown in the figure.

   Caution
   - **Apply the silicone sealant so that it goes into the cylinder head gasket.**

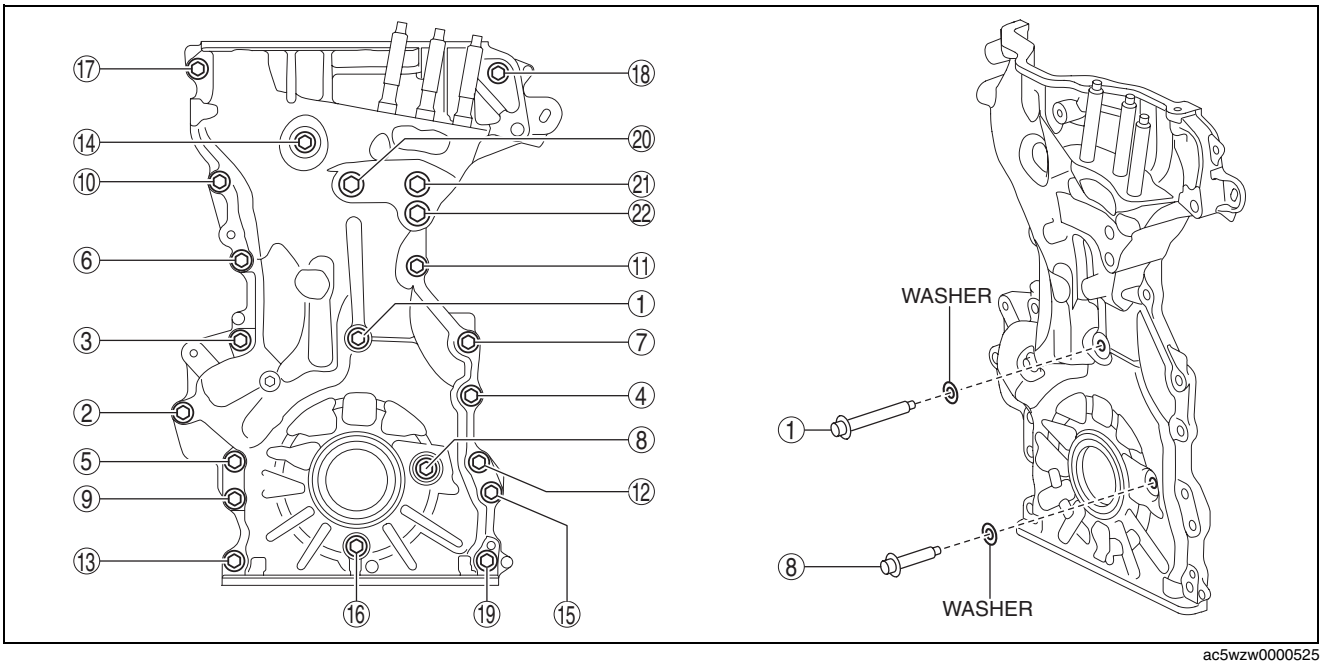
6. Install the engine front cover to the engine.

   Caution
   - **For the number 1 and 8 bolts of the tightening order, install the bolts with washers.**

7. Tighten the engine front cover installation bolts in the order shown in the figure.



ac5wzw0000500



ac5wzw0000525

Installation position	Tightening torque
1—19	20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}
20—22	40—55 N·m {4.1—5.6 kgf·m, 30—40 ft·lbf}

MECHANICAL [SKYACTIV-D 2.2]

Noise Suppression Cover (No.1), Noise Suppression Cover (No.2), Seal Rubber Installation Note

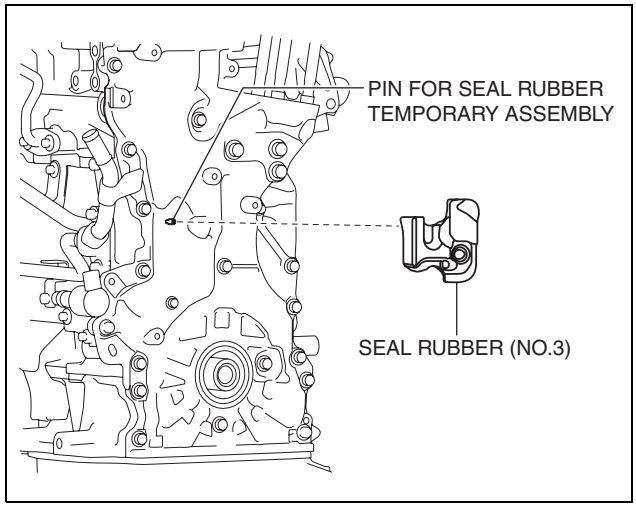
1. Temporarily put the seal rubber (No.3) on the engine front cover.
2. Install the wiring harness and wiring harness bracket.

Note
- The seal rubber (No.3) can be fixed by installing the wiring harness bracket.

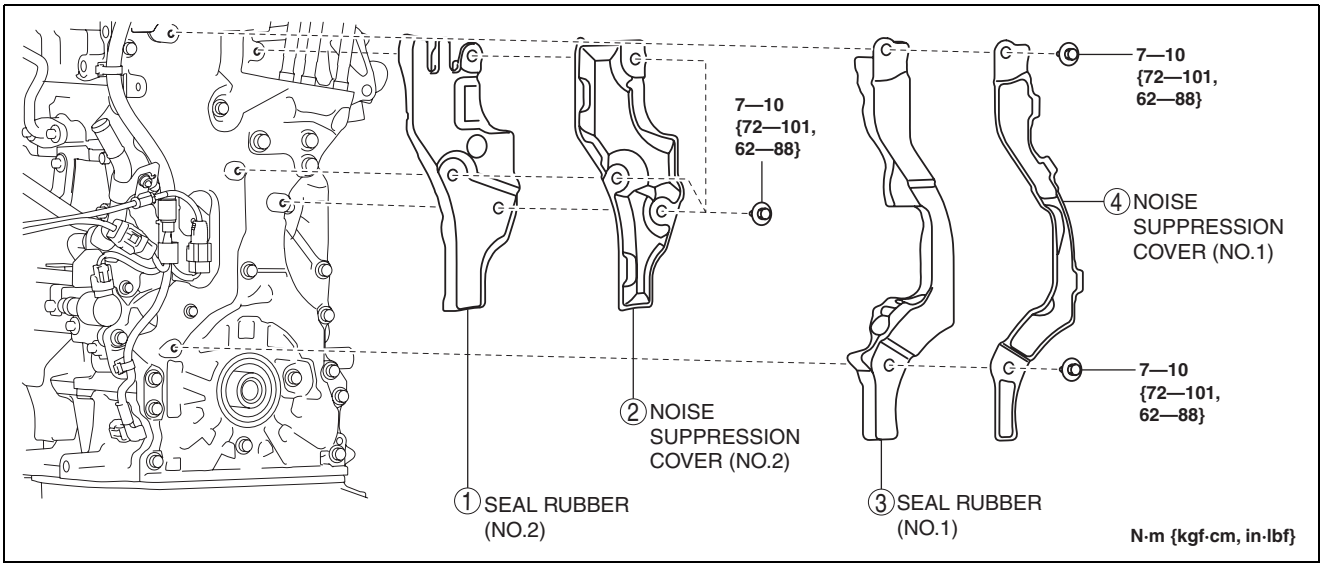
3. Tighten the water pipe installation bolt.
4. Connect the exhaust gas temperature sensor No.3 connector and A/F sensor connector.

Caution
- **Be careful that the covers and seal rubbers do not get hung up on the noise suppression cover installation bolts.**

5. Install the noise suppression covers and seal rubbers in the order shown in the figure.



ac5wzw0000524



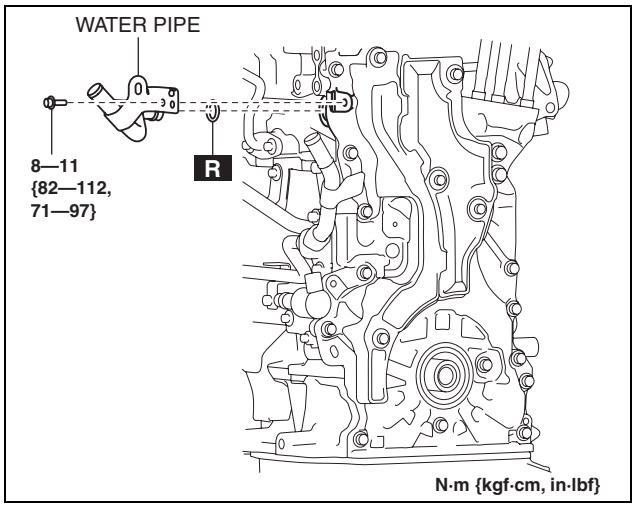
ac5wzw0000525

MECHANICAL [SKYACTIV-D 2.2]

Water Pipe Installation Note

Caution
- **Do not apply oil (such as engine oil, ATF) to the O-ring. Otherwise, the O-ring could swell causing a seal malfunction.**
- **Install the water pipe so as not to damage the O-ring. Otherwise, it could cause a seal malfunction.**

1. Install the water pipe following procedure:
   (1) Apply engine coolant to the O-ring.
   (2) Install the water pipe.



ac5wzw0000500

Drive Belt Auto Tensioner Installation Note

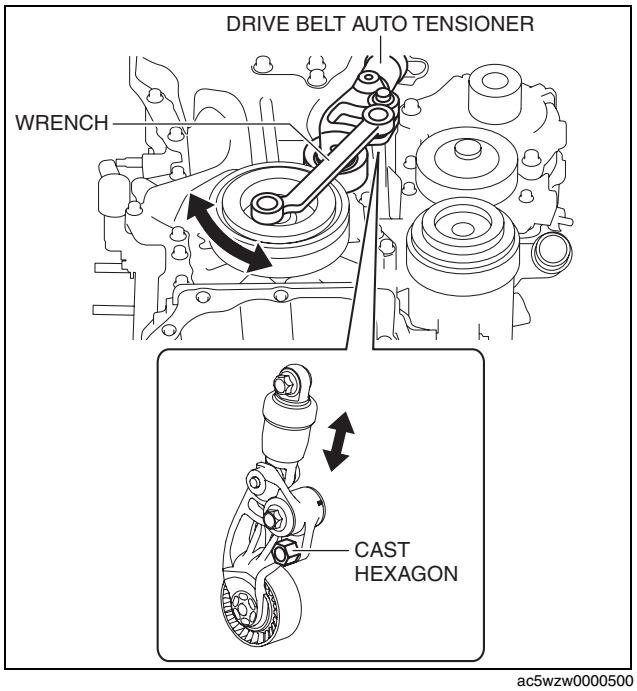
Caution
- **To allow the drive belt auto tensioner to function correctly, always bleed the air from the drive belt auto tensioner using the following procedure after assembling the drive belt auto tensioner.**

1. Install the drive belt auto tensioner to the engine.

Caution
- **To prevent damage to the drive belt auto tensioner, do not apply excessive torque after the tensioner moves full-stroke.**

2. Insert the wrench onto the cast hexagon on the drive belt auto tensioner, move the drive belt auto tensioner up and down at full-stroke three times to bleed the air.

Note
- By moving the drive belt auto tensioner up and down full-stroke three times, the piston inside the tensioner moves to bleed the air.



ac5wzw0000500

MECHANICAL [SKYACTIV-D 2.2]

No.3 Engine Mount Installation Note

Caution

- **If the No.3 engine mount is deviated from the original position when installing the No.3 engine mount, engine noise or vibration could increase. When installing the No.3 engine mount, align the alignment mark placed during removal and install it to the original position.**

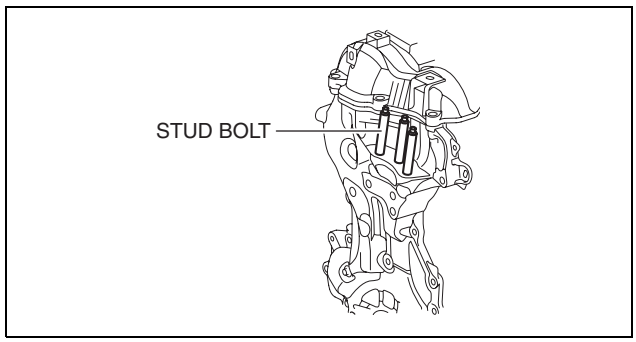
Note

- When replacing the No.3 engine mount, place a mark at the same position as the one placed before removal.
- If the No.3 engine mount nut is loosened, tighten the engine front cover stud bolts because they may be loosened.

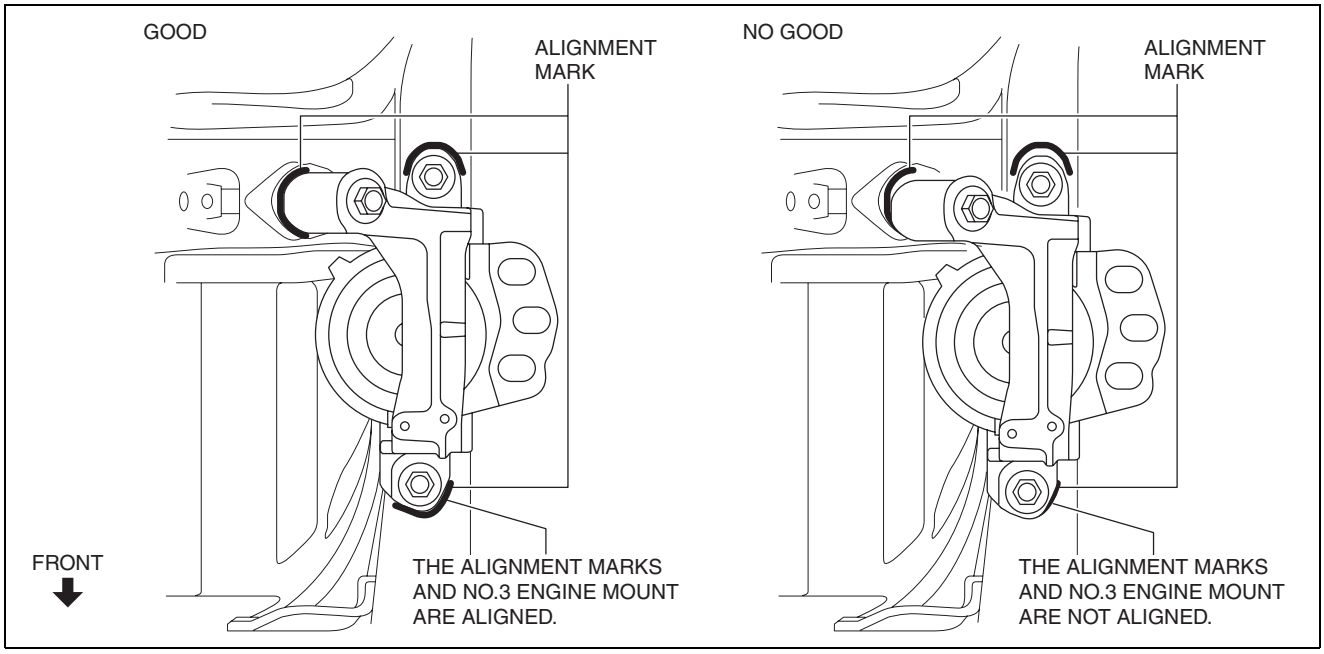
1. Tighten the engine front cover stud bolts.

   Tightening torque
   40—52 N·m {4.1—5.3 kgf·m, 30—38 ft·lbf}

2. Temporarily tighten the No.3 engine mount installation bolts and nuts using the following procedure:
   (1) Align the alignment marks on the body side and No.3 engine mount, and temporarily tighten the bolts shown in the figure.



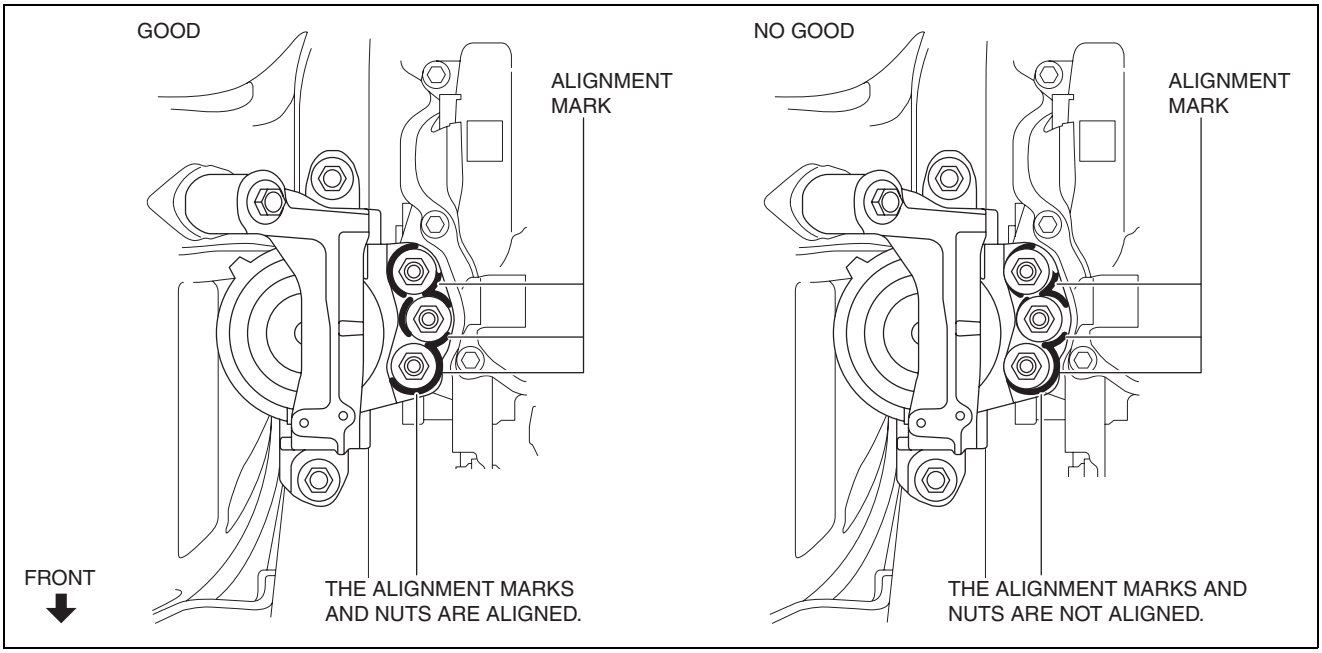
ac5wzw0000500



ac5wzw0000525

MECHANICAL [SKYACTIV-D 2.2]

(2) Temporarily tighten the nuts shown in the figure while aligning the alignment marks of the No.3 engine mount and nuts.



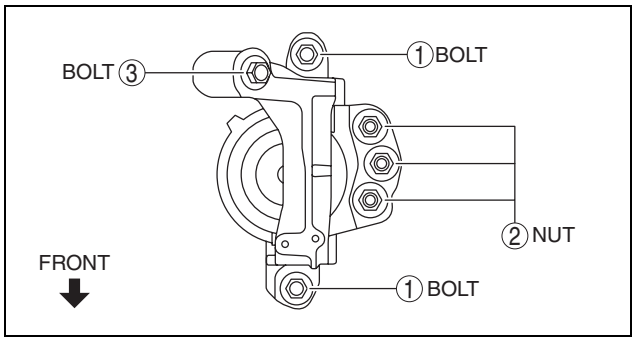
ac5wzw0000525

Note

- If the alignment marks are deviated, align the alignment marks while slightly moving the engine and temporarily tighten the nuts.

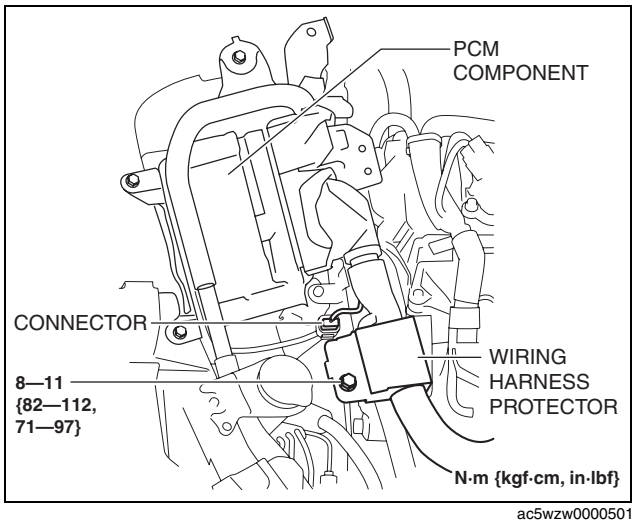
3. Tighten the No.3 engine mount installation bolts and nuts in the order as shown in the figure.

No.	Tightening torque
1	76—95 N·m {7.8—9.6 kgf·m, 57—70 ft·lbf}
2	82—95 N·m {8.4—9.6 kgf·m, 61—70 ft·lbf}
3	49—65 N·m {5.0—6.6 kgf·m, 37—47 ft·lbf}



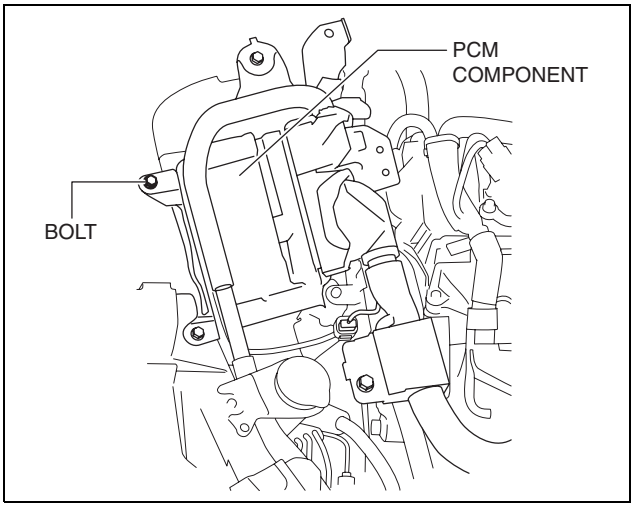
ac5wzw0000500

4. Remove the **SST**.
5. Install the wiring harness bracket, cooler hose and connector.
6. Install the PCM component using the following procedure:
   (1) Install the wiring harness protector and connector.



ac5wzw0000501

(2) Temporarily tighten the bolt shown in the figure.

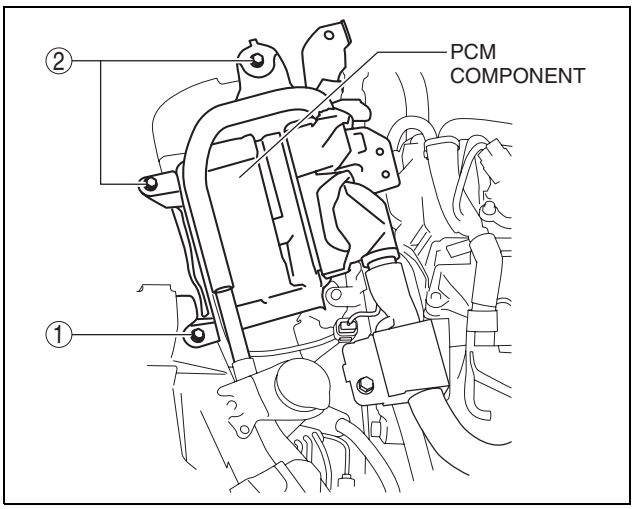


ac5wzw0000501

(3) Tighten the PCM component installation bolts in the order shown in the figure.

Tightening torque
9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}

7. Install the ground cable to the PCM bracket.



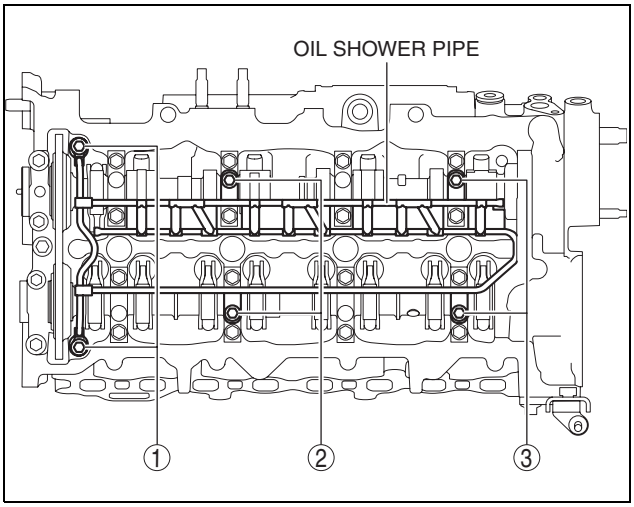
ac5wzw0000501

Oil Shower Pipe Installation Note

1. Install the oil shower pipe in the order shown in the figure.

Tightening torque

Installation position	Tightening torque
1	9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}
2, 3	8.0—9.0 N·m {82—91 kgf·cm, 71—79 in·lbf}



ac5wzw0000501

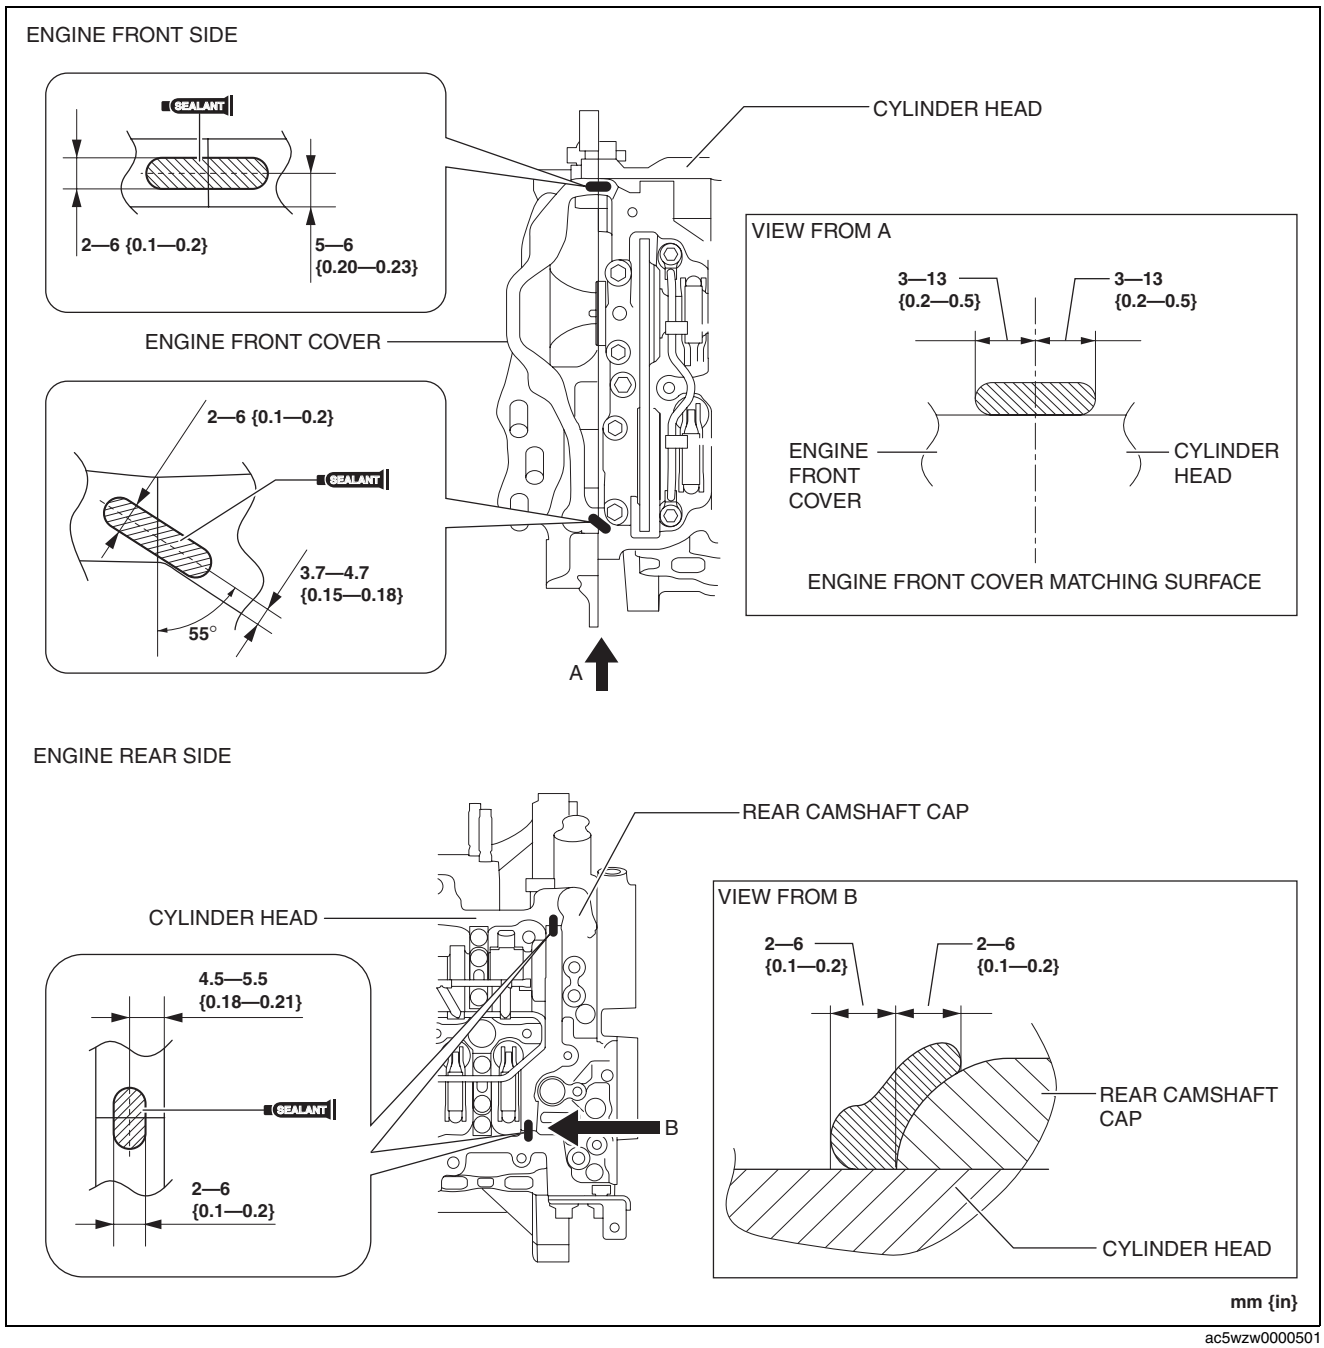
MECHANICAL [SKYACTIV-D 2.2]

Cylinder Head Cover Installation Note

Caution

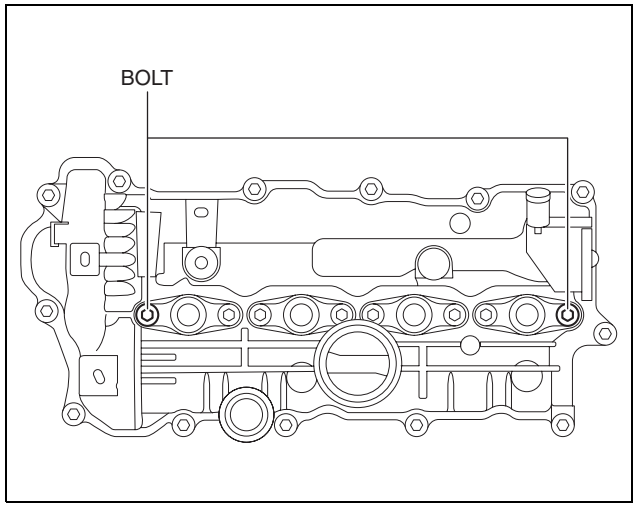
- **To assure the sealing performance of the cylinder head cover, be careful of the following:**
  - **— Verify that the cylinder head cover gasket is inserted into the cylinder head cover groove and install the cylinder head cover.**
  - **— Remove oil, dirt, and sealant from the seal surface.**
- **To prevent silicone sealant from hardening, adhere the cylinder head cover and the cylinder head firmly within 10 min. after applying silicone sealant. After adhering them, tighten the installation bolts immediately.**

1. Insert a new cylinder head cover gasket into the cylinder head cover groove.
2. Apply silicone sealant to the areas shown in the figure.



ac5wzw0000501

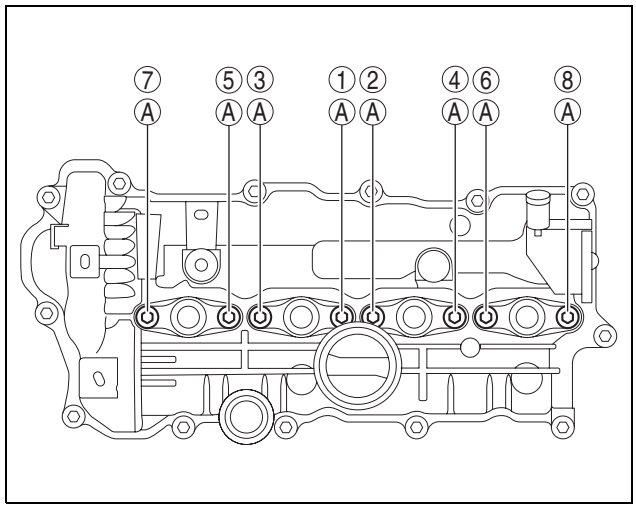
3. Tighten the cylinder head cover installation bolts using the following procedure:
   (1) Temporarily tighten the two bolts shown in the figure.



ac5wzw0000501

   (2) Tighten installation bolts A in the order shown in the figure.

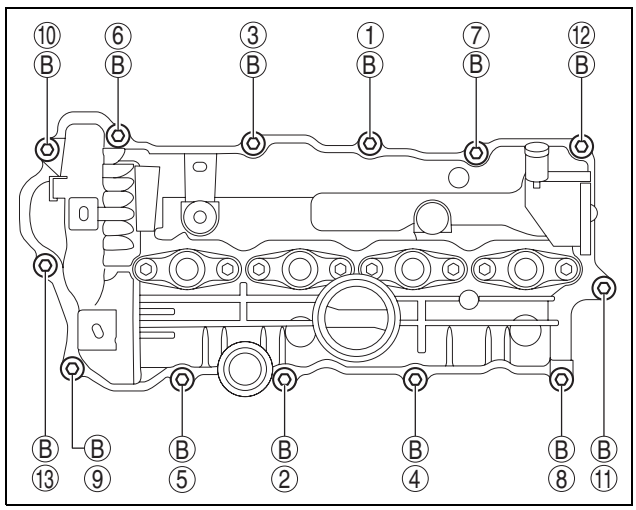
Tightening torque
4.5—7.0 N·m {46—71 kgf·cm, 40—61 in·lbf}



ac5jjw00004581

   (3) Tighten installation bolts B in the order shown in the figure.

Tightening torque
4.5—7.0 N·m {46—71 kgf·cm, 40—61 in·lbf}

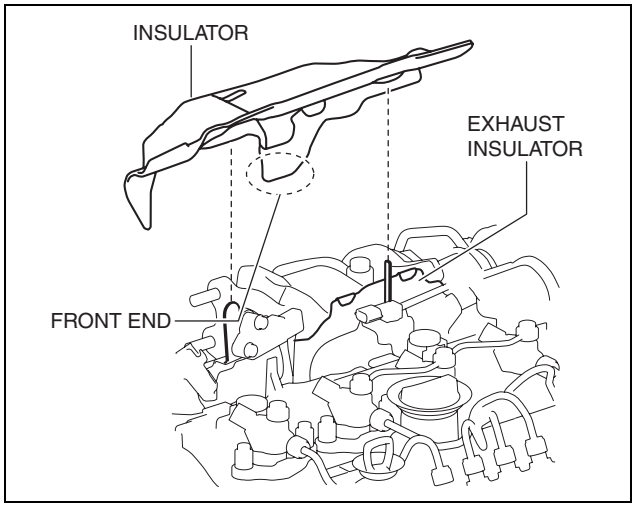


ac5jjw00004582

MECHANICAL [SKYACTIV-D 2.2]

Insulator Installation Note

1. Install the insulator using the following procedure.
   (1) Align the position so that the front end of the insulator is positioned at the front side of the vehicle from the exhaust insulator.
   (2) Insert the insulator until it contacts completely.



ac5wzw0000501

HYDRAULIC LASH ADJUSTER (HLA) INSPECTION [SKYACTIV-D 2.2]

id0110s5805000

HLA Troubleshooting

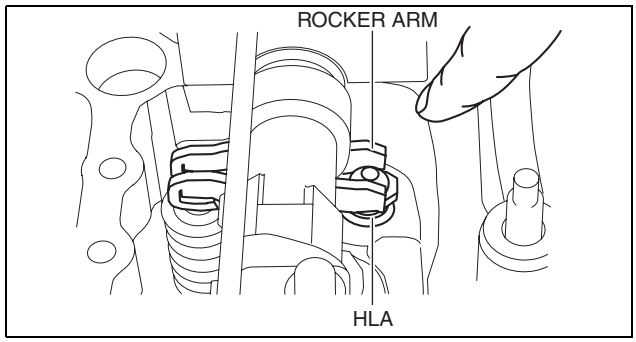
Item	Occurrence	Possible cause	Action
1	After replacing oil, sound occurs when starting engine	Oil shortage in oil passage	• Maintain the engine speed between 2,000 to 3,000 rpm for approx. 2 s and 10 min*, and verify that the sound disappears. — If the sound disappears, the HLA is normal. — If the sound does not disappear, go to item 5.
2	Sound occurs at instant when engine is started on vehicle left for 1 day		
3	Starter cranked for 3 s or more and sound occurs directly after engine is started	HLA oil shortage	
4	Sound occurs directly after engine is started with newly replaced HLA		
5	Sound occurs continuously for 10 min or more	Insufficient oil pressure	• Inspect the oil pressure. (See 01-11B-7 OIL PRESSURE INSPECTION [SKYACTIV-D 2.2].) — If less than the specification, inspect each part of the engine.
		HLA malfunction	• Inspect the HLA. (See 01-10B-49 HLA Inspection.)
6	Sound occurs during idling after high-speed driving	Incorrect engine oil level	• Inspect the engine oil level. (See 01-11B-3 ENGINE OIL LEVEL INSPECTION [SKYACTIV-D 2.2].)
		Engine oil deterioration	• Replace the engine oil. (See 01-11B-4 ENGINE OIL REPLACEMENT [SKYACTIV-D 2.2].)

* : Period of time engine oil flows to the HLA, this value includes tolerance caused by the ambient temperature and the oil used.

MECHANICAL [SKYACTIV-D 2.2]

HLA Inspection

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the fuel injectors. (See 01-14B-35 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the cylinder head cover. (See 01-10B-16 TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Press the rocker arm from above and verify that the HLA does not drop.
   - If the HLA drops, replace the HLA. (See 01-10B-49 HYDRAULIC LASH ADJUSTER (HLA) REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Install in the reverse order of removal.



ac5wzw0000506

HYDRAULIC LASH ADJUSTER (HLA) REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

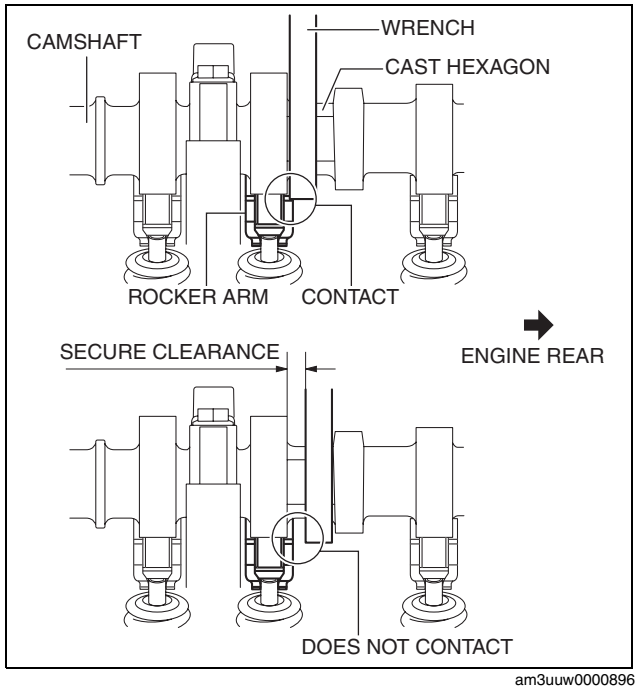
id0110s5804100

Warning

- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**

Caution

- **When rotating the camshaft using a wrench on the cast hexagon, the wrench may contact the rocker arm and damage the rocker arm. To prevent damage to the rocker arm when holding the camshaft on the cast hexagon, use the wrench at engine rear side as shown in the figure to secure a clearance between the cam.**

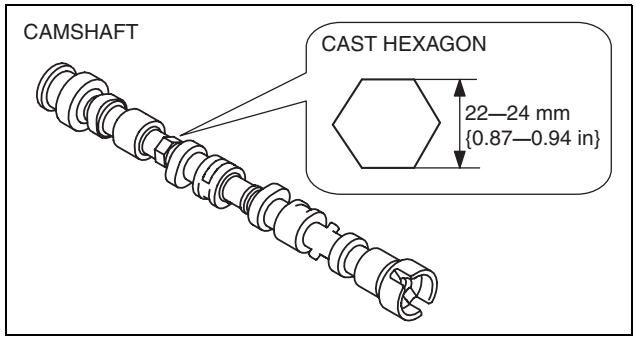


am3uuw0000896

MECHANICAL [SKYACTIV-D 2.2]

Note

- Width at the cast hexagon of the camshaft is 22—24 mm {0.87—0.94 in}.



ac5wzw0000503

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the fuel injectors. (See 01-14B-35 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the lower case. (See 01-14B-54 LOWER CASE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove the vacuum pump. (See 04-11-22 VACUUM PUMP REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Remove the supply pump. (See 01-14B-46 SUPPLY PUMP REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
7. Remove the cylinder head cover. (See 01-10B-16 TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
8. Remove the CMP sensor.
9. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
10. Remove in the order indicated in the table.
11. Install in the reverse order of removal.
12. Start the engine and inspect the following:
    - Idle speed (See 01-10B-3 ENGINE TUNE-UP [SKYACTIV-D 2.2].)

MECHANICAL [SKYACTIV-D 2.2]

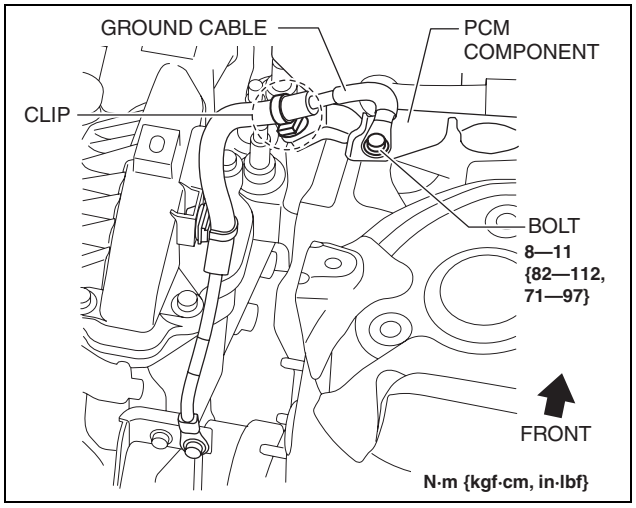
6	HLA (See 01-10B-56 HLA Removal Note.) (See 01-10B-57 HLA Installation Note.)

MECHANICAL [SKYACTIV-D 2.2]

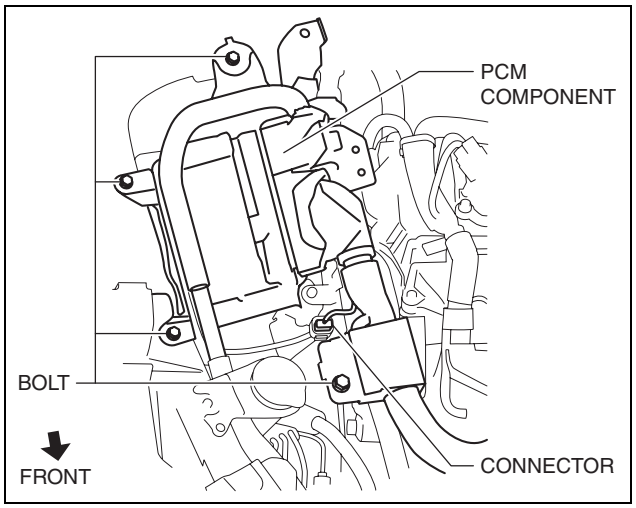
Noise Suppression Cover (No.1), Seal Rubber Removal Note

1. Remove the clip and bolt shown in the figure and set the ground cable aside.



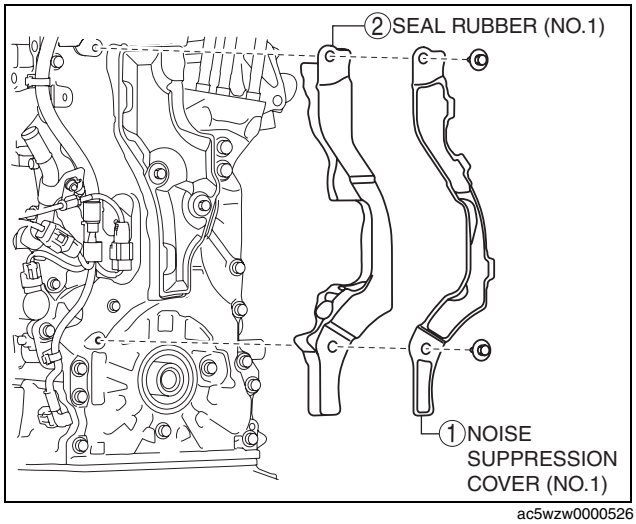
ac5wzw0000503

2. Remove the bolts and connector shown in the figure and set the PCM component aside with the PCM connector connected.



ac5wzw0000503

3. Remove the noise suppression cover and seal rubber in the order shown in the figure.



ac5wzw0000526

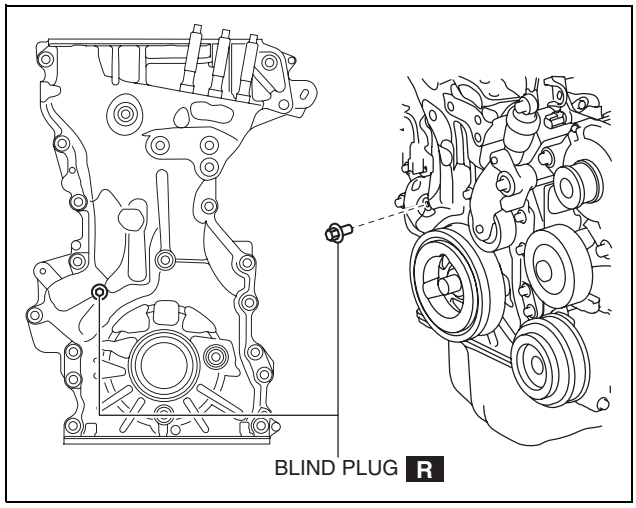
Timing Chain Removal Note

Caution
- **Keep the timing chain and camshaft sprocket pulled up during and after the work in which it has been set aside from the exhaust camshaft. If the chain falls down, it may disengage from the sprocket on the crankshaft side and deviate, leading to valve timing deviation.**
- **After servicing, always verify the valve timing.**

1. Release the tension on the timing chain using the following procedure:

Note
- Release the tension on the timing chain by securing the plunger of the timing chain tensioner through the service hole on the engine front cover.

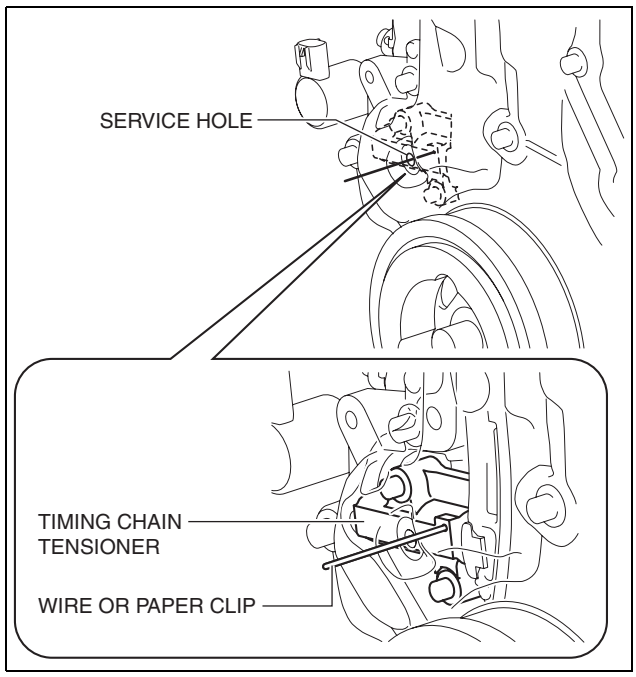
(1) Remove the blind plug on the engine front cover service hole.



ac5wzw0000503

(2) Insert a wire with an approx. diameter of **1.4 mm {0.055 in}** or a paper clip into the body hole of the timing chain tensioner through the service hole.

Note
- Before pressing the plunger of the timing chain tensioner, insert the wire or paper clip **approx. 22.5 mm {0.886 in}** from the engine front cover.

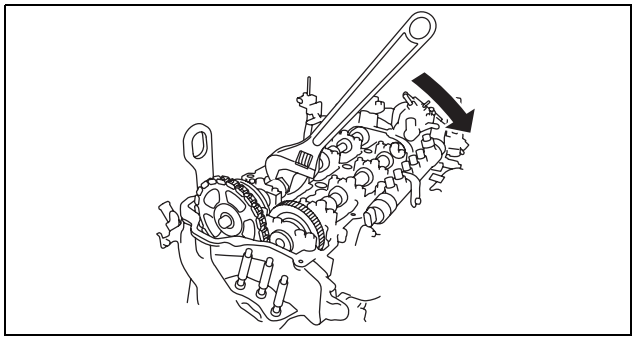


ac5wzw0000503

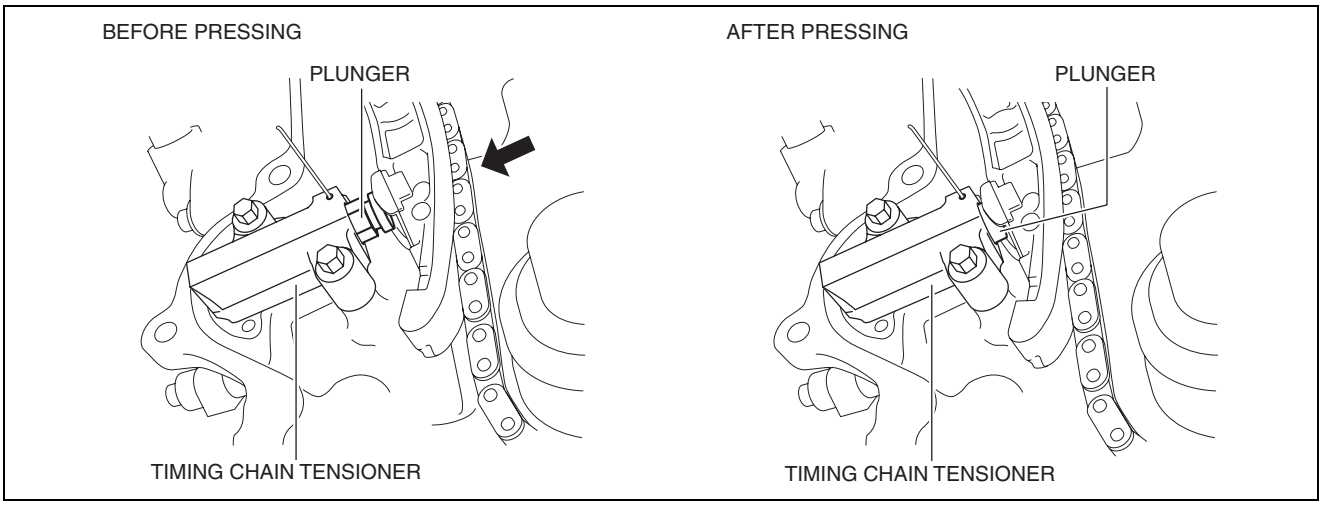
MECHANICAL [SKYACTIV-D 2.2]

(3) While moving the exhaust camshaft in the direction of the arrow using a wrench on the cast hexagon, press in the plunger of the timing chain tensioner.

Note
- By rotating the exhaust camshaft clockwise, the timing chain can be pulled slightly and the timing chain presses in the tensioner plunger.



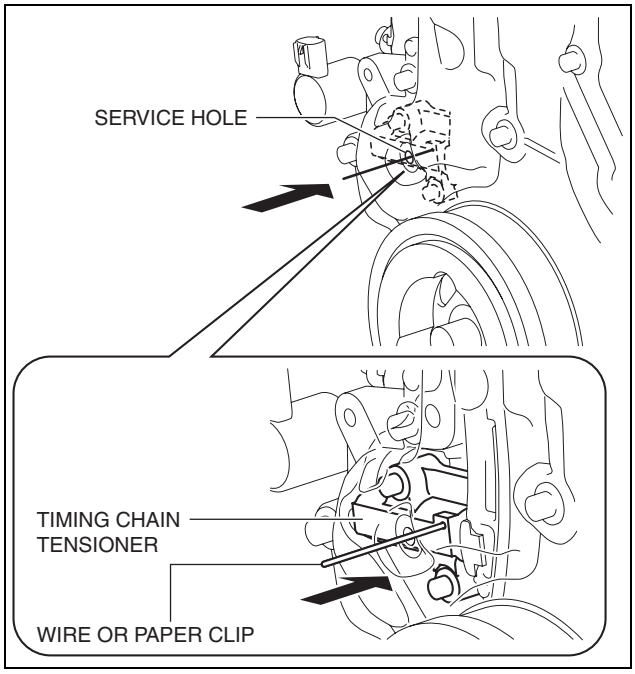
ac5jjw00004551



ac5wzw0000503

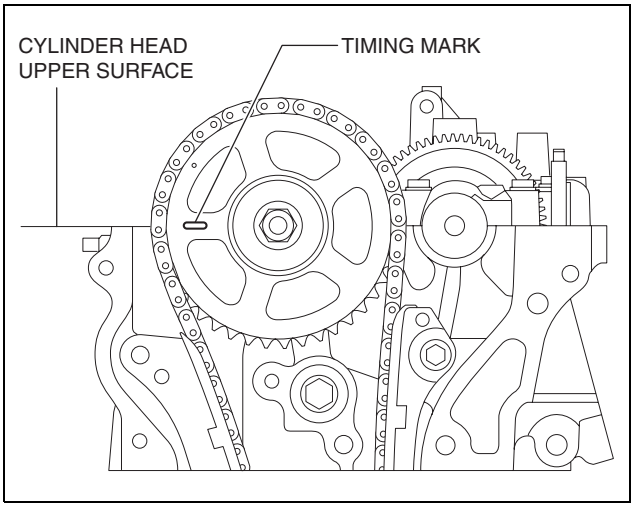
(4) Press in the wire set in Step 2 or paper clip further with the plunger pressed.

Note
- While the plunger of the timing chain tensioner is pressed, the wire or paper clip can be inserted further to **approx. 8 mm {0.3 in}**.
- The wire or paper clip secures the plunger, and the tension can be released.



ac5wzw0000504

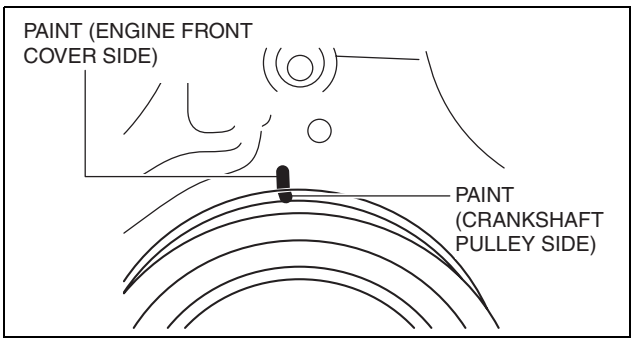
2. Rotate the crankshaft clockwise so that cylinder No.1 is positioned at top dead center (TDC) as shown in the figure.



ac5wzw0000504

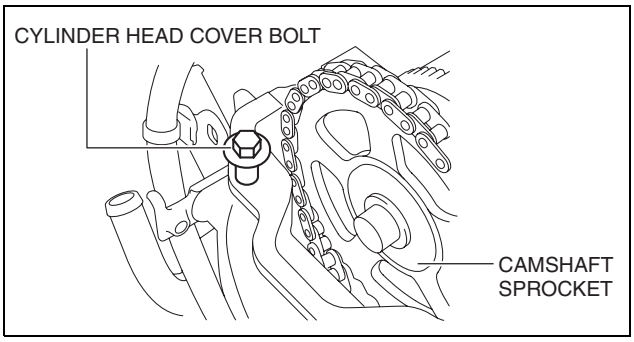
3. Place a paint mark on the engine front cover and crankshaft pulley so that the valve timing can be verified when assembling.

Note
- The position in while the paint mark is placed is not restricted. The marked position is fine as long as visual verification is possible after assembly.



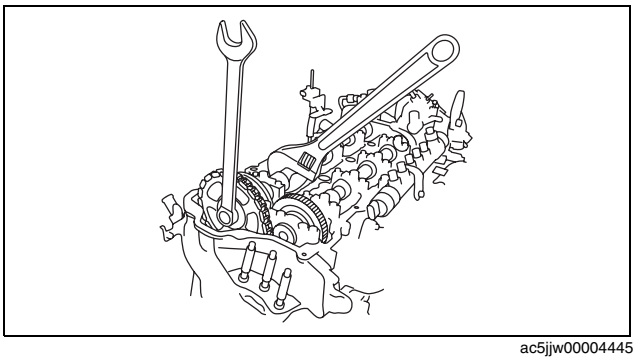
ac5wzw0000504

4. Temporarily install the cylinder head cover bolt to the position shown in the figure to use it for suspending the timing chain and camshaft sprocket.



ac5wzw0000504

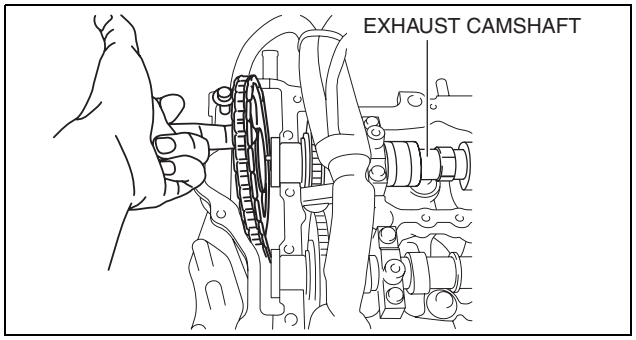
5. Hold the exhaust camshaft using a wrench on the cast hexagon and remove the camshaft sprocket installation bolt.



ac5jjw00004445

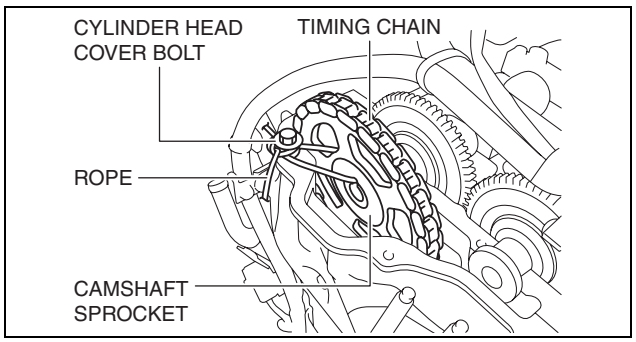
MECHANICAL [SKYACTIV-D 2.2]

6. Separate the camshaft sprocket and the exhaust camshaft while the timing chain is hung on the camshaft sprocket.



ac5wzw0000504

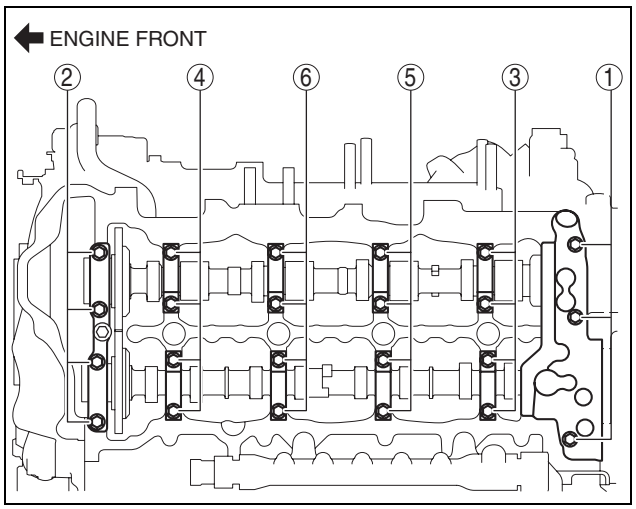
7. Pull up the camshaft sprocket using a rope while the timing chain is hung on the camshaft sprocket and pulled it up as shown in the figure.



ac5wzw0000504

Camshaft Removal Note

1. Loosen the camshaft cap bolts in two or three passes in the order shown in the figure, and remove the camshaft cap.
2. Remove the camshaft.



ac5wzw0000504

Rocker Arm Removal Note

1. Keep the rocker arms in the order of removal to enable reassembly in their original positions.

HLA Removal Note

1. Keep the HLAs in the order of removal to enable reassembly in their original positions.

MECHANICAL [SKYACTIV-D 2.2]

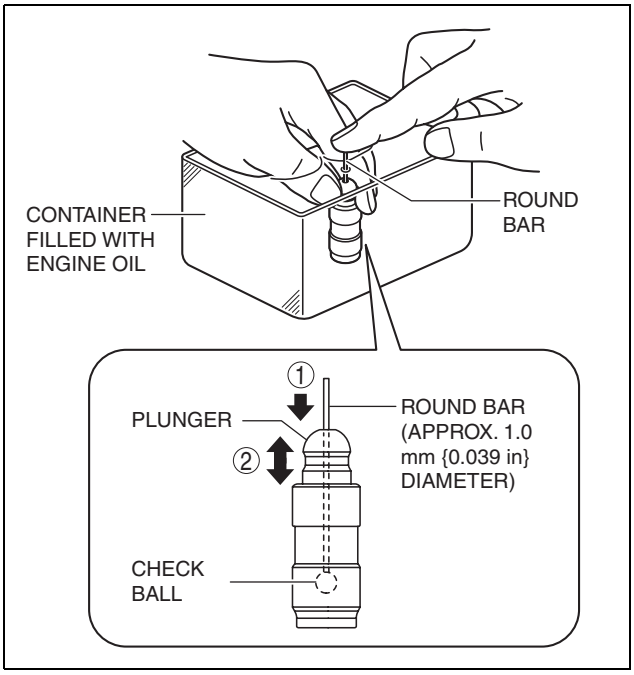
HLA Installation Note

1. Perform HLA air bleeding using the following procedure.
   (1) Put the HLA in a container filled with engine oil.

Caution

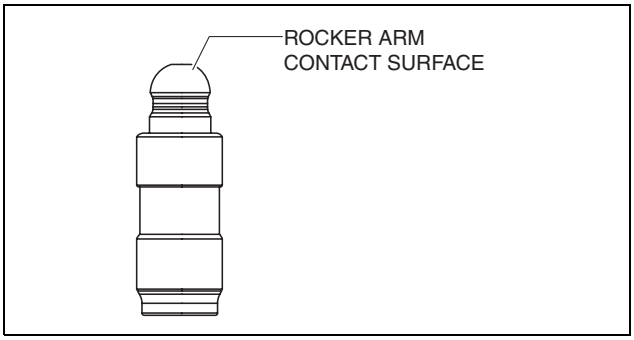
- **Do not insert the round bar firmly because the check ball spring force is extremely weak.**

   (2) While lightly pressing the check ball using a round bar (**approx. 1.0 mm {0.039 in}** diameter), bleed air by moving the plunger up and down.
   (3) Press the end of the plunger in the oil and verify that there is no rebounding feel.
      - If rebounding feel cannot be eliminated, replace the HLA.



am3uuw0000898

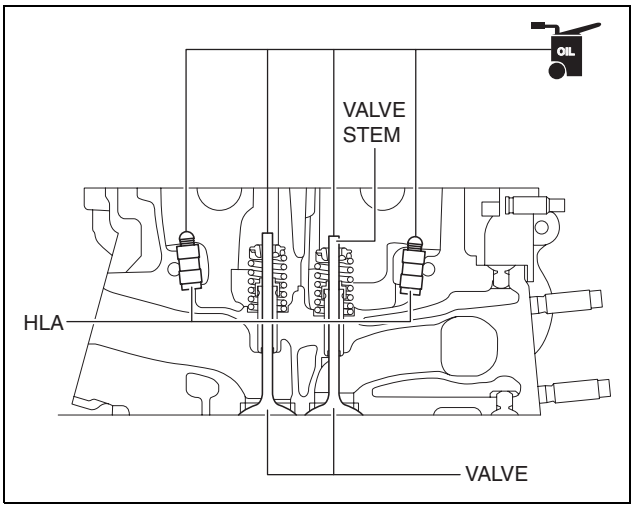
2. Visually inspect the HLA surface where it contacts the rocker arm for wear or damage.
   - If there is any malfunction, replace the HLA.
3. Assemble the HLAs to their original positions.



am3uuw0000898

Rocker Arm Installation Note

1. Apply engine oil to the HLAs and the end of the valve stems.
2. Install the rocker arms to the same positions as before removal.

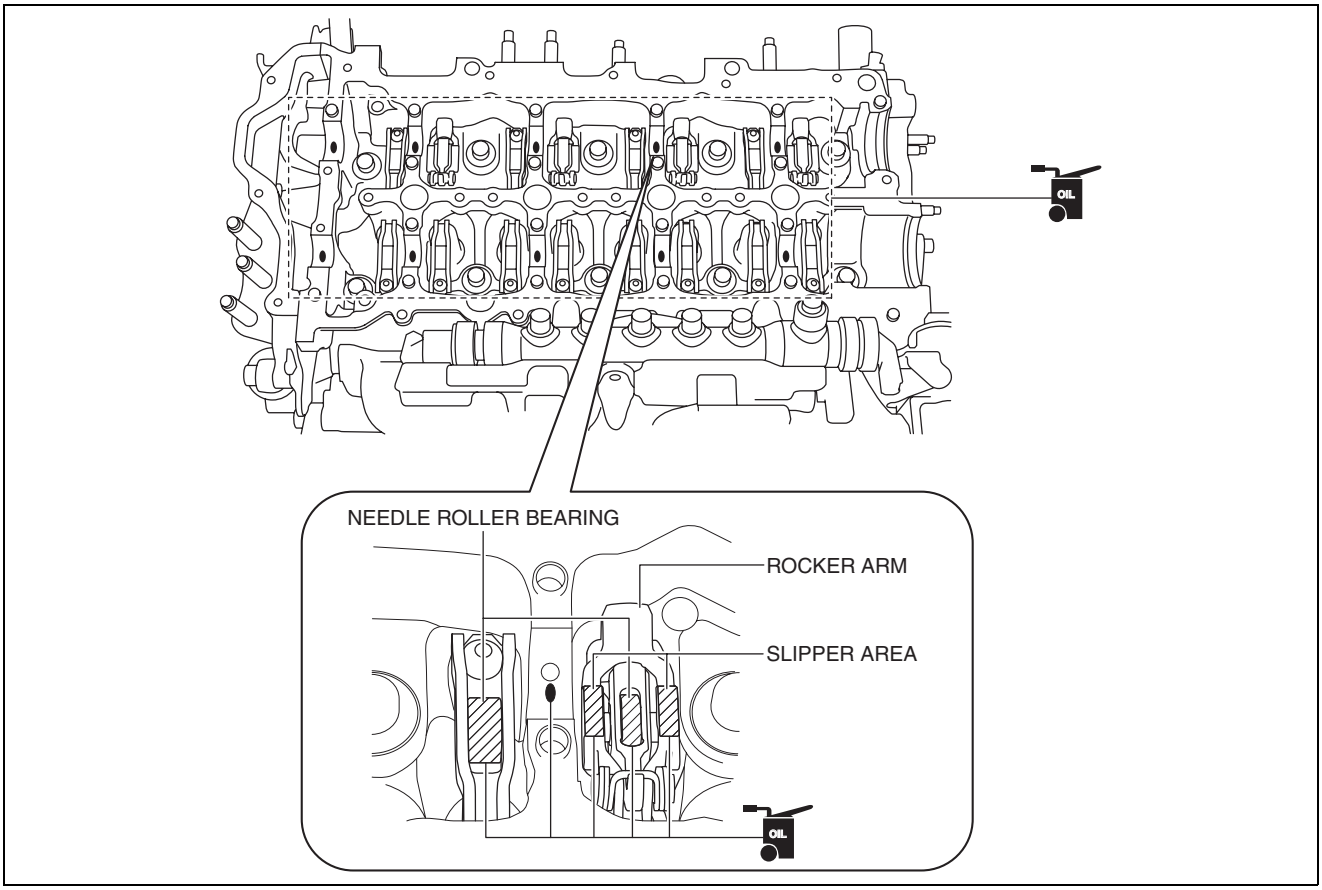


ac5wzw0000504

MECHANICAL [SKYACTIV-D 2.2]

Camshaft Installation Note

1. Apply gear oil (SAE No. 90 or equivalent) or engine oil to the following locations.
   - Each journal of the cylinder heads
   - Needle roller bearing and slipper area of the rocker arm

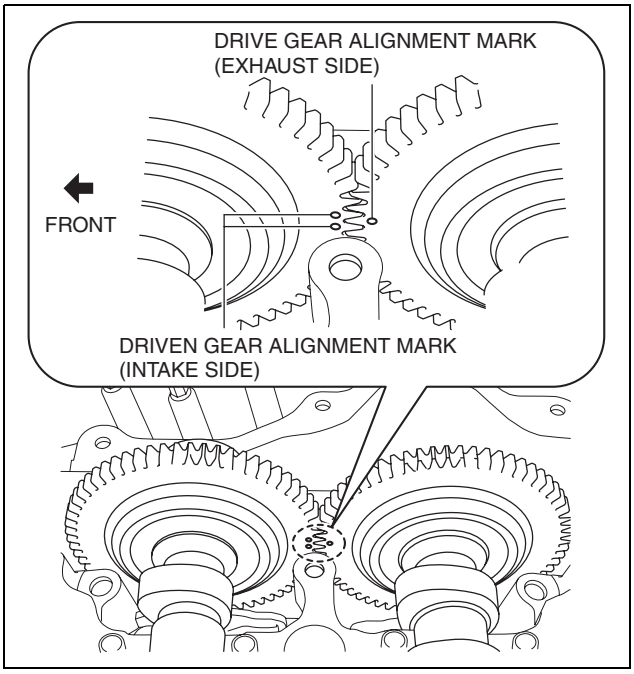


ac5wzw0000526

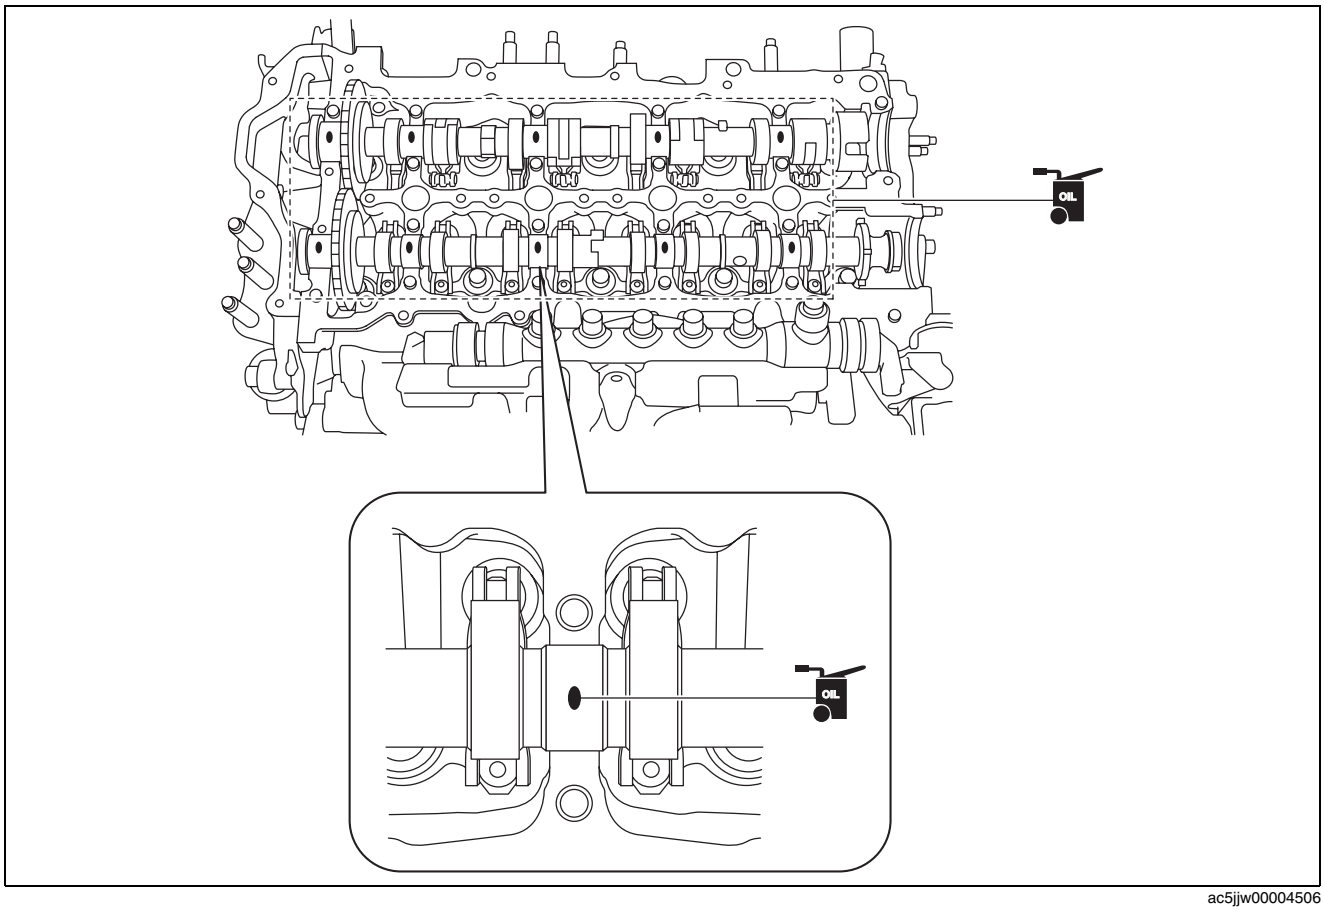
2. Apply gear oil (SAE 90 or equivalent) or engine oil to the following locations of each camshaft.
   - Gear sliding surfaces
   - Thrust surface of front journal

   Note
   - If oil is applied to the front camshaft cap, oil should not be applied to the thrust surface of the front journal.

3. Place the camshaft on the cylinder head and align the alignment marks for each gear as shown in the figure.
4. As shown in the figure, apply gear oil (SAE No. 90 or equivalent) or engine oil to the center area of each journal of the camshaft.



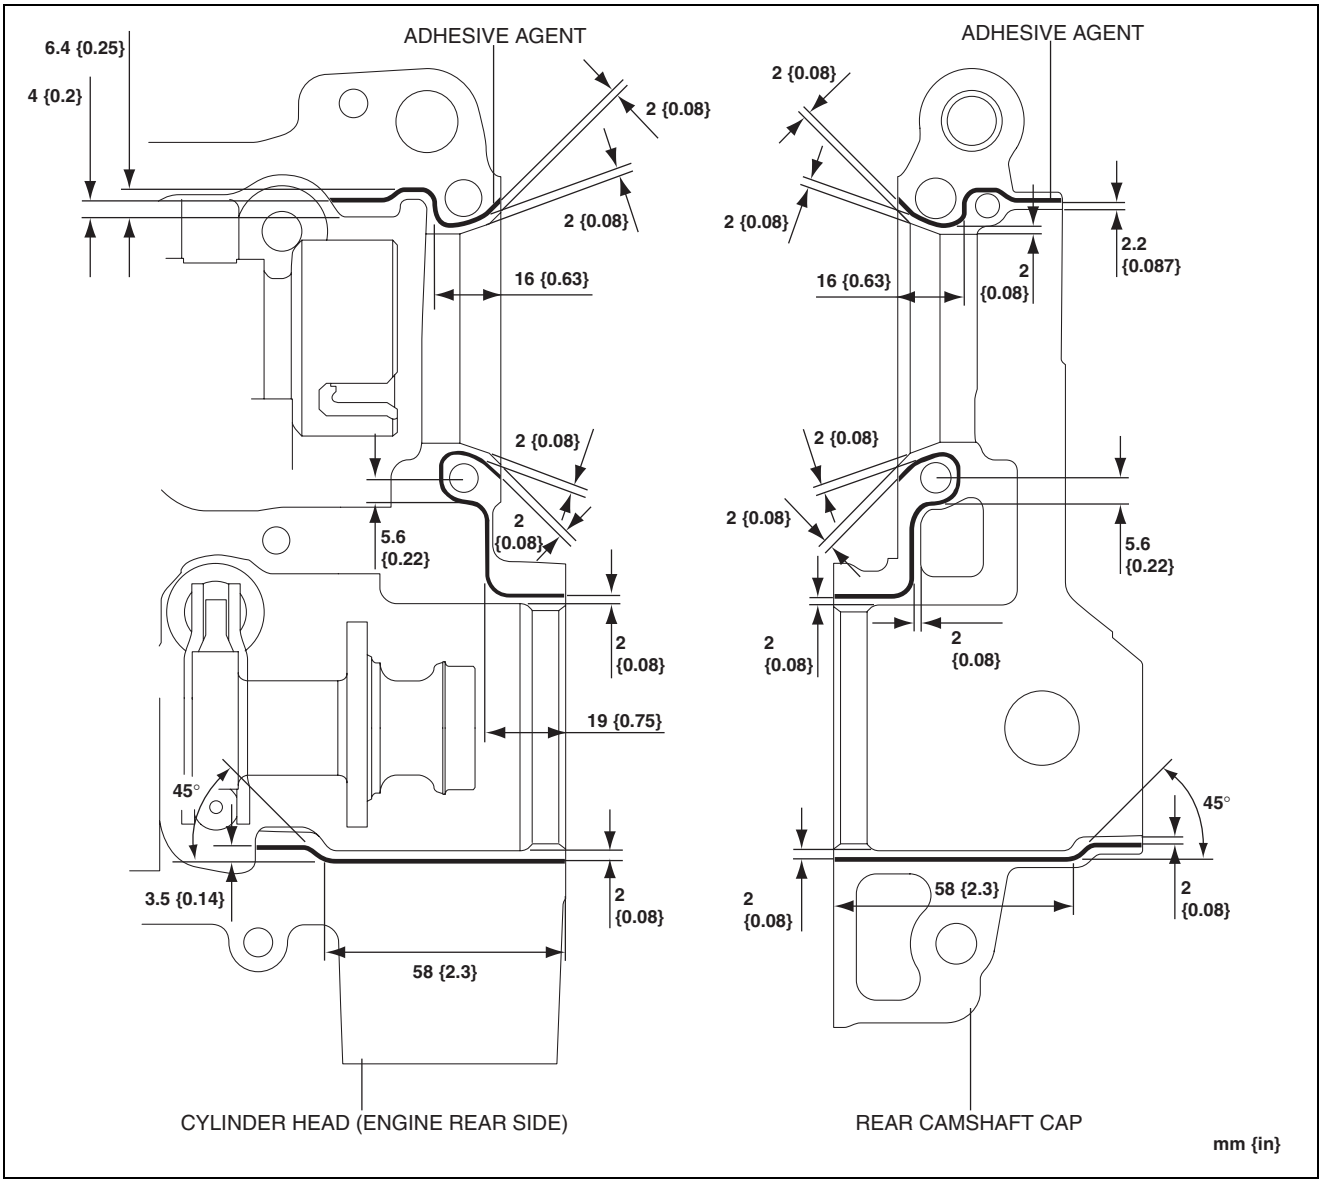
ac5wzw0000504



ac5jjw00004506

MECHANICAL [SKYACTIV-D 2.2]

5. Apply adhesive agent (Loctite#962T) to the rear side of the cylinder head or rear camshaft cap.



ac5wzw0000526

Caution
- **Do not spill adhesive agent on the journal.**
- **To prevent adhesive agent from hardening, adhere the rear camshaft cap to the cylinder head within 10 min after adhesive agent is applied. Tighten the installation bolts completely soon after adhering.**

Adhesive agent bead width
1—3 mm {0.04—0.11 in}

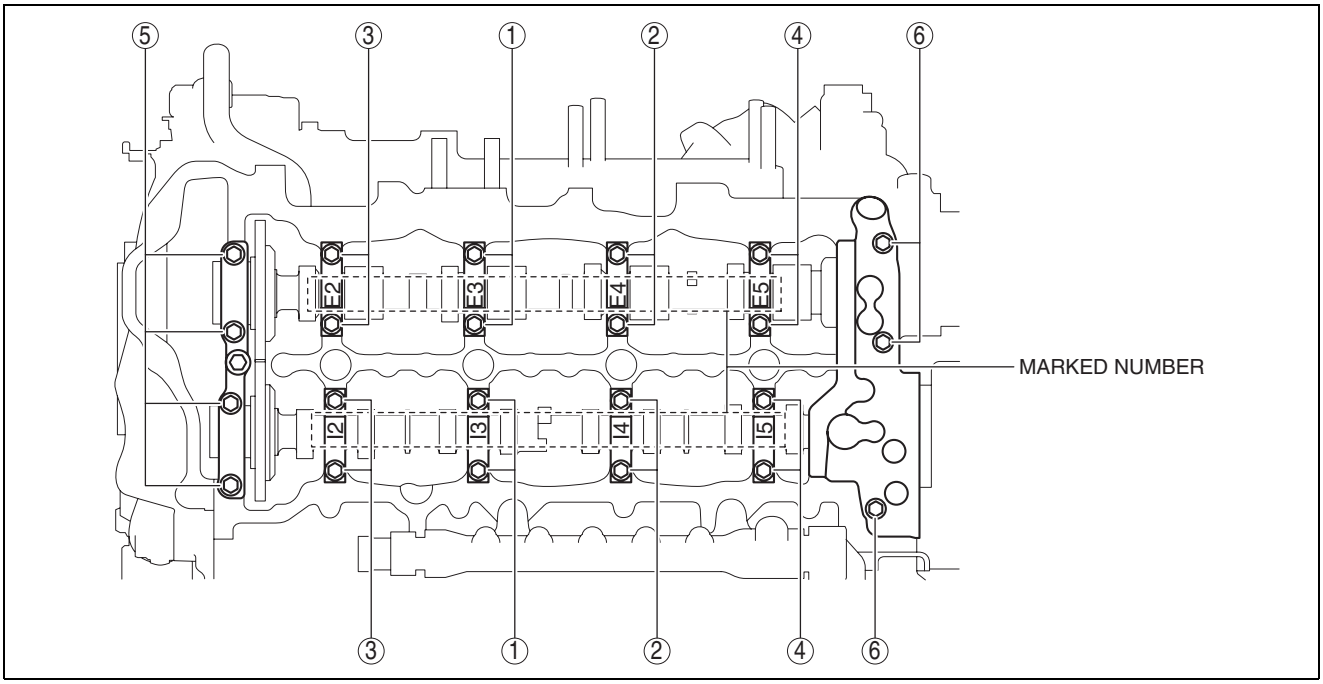
6. Apply engine oil to the new rear camshaft cap O-ring and install it to the rear camshaft cap.

Caution
- **Be careful not to damage or drop the O-ring when installing the rear camshaft cap.**

7. Apply gear oil (SAE 90 or equivalent) or engine oil to the thrust surface of the front camshaft cap.

Note
- If oil is applied to the front journal thrust surface of each camshaft, oil should not be applied to the front camshaft cap.

8. Install the camshaft caps in the marked number order, and temporarily tighten the camshaft cap installation bolts in two or three passes evenly.
9. Tighten the camshaft cap installation bolts in two steps in the order shown in the figure.



ac5wzw0000505

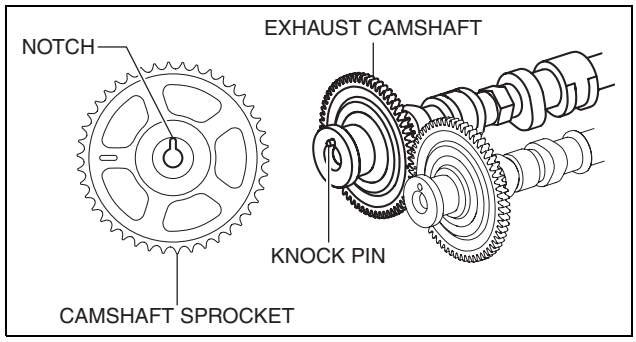
Timing Chain Installation Note

1. Pull the timing chain and the camshaft sprocket and remove the suspending rope.
2. Align the knock pin on the end of the exhaust camshaft with the notch on the camshaft sprocket side, then assemble the sprocket.

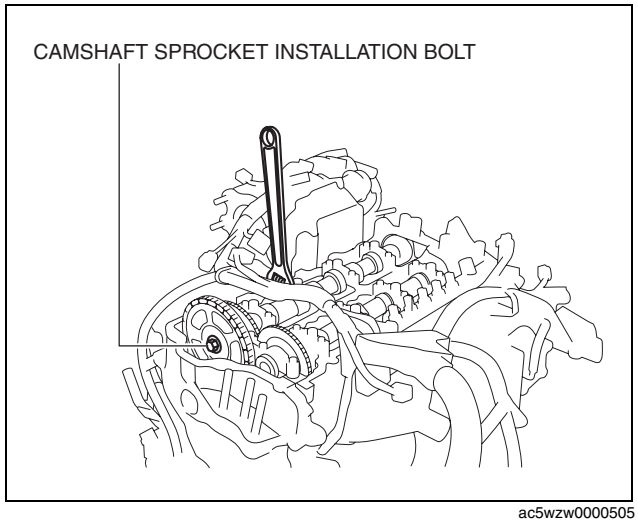
   Note
   - Align the knock pin and the notch while adjusting the knock pin position by rotating the camshaft.

3. Tighten the camshaft sprocket installation bolt using the following procedure:
   (1) Temporarily tighten the camshaft sprocket installation bolt.
   (2) Hold the exhaust camshaft using a wrench on the cast hexagon, and tighten the camshaft sprocket installation bolt.

   Tightening torque
   123—140 N·m {13—14 kgf·m, 91—103 ft·lbf}



ac5wzw0000505



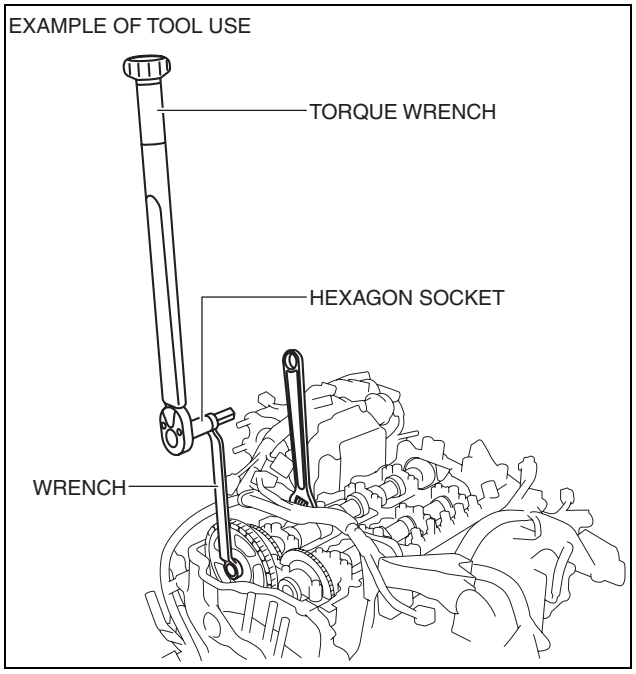
ac5wzw0000505

MECHANICAL [SKYACTIV-D 2.2]

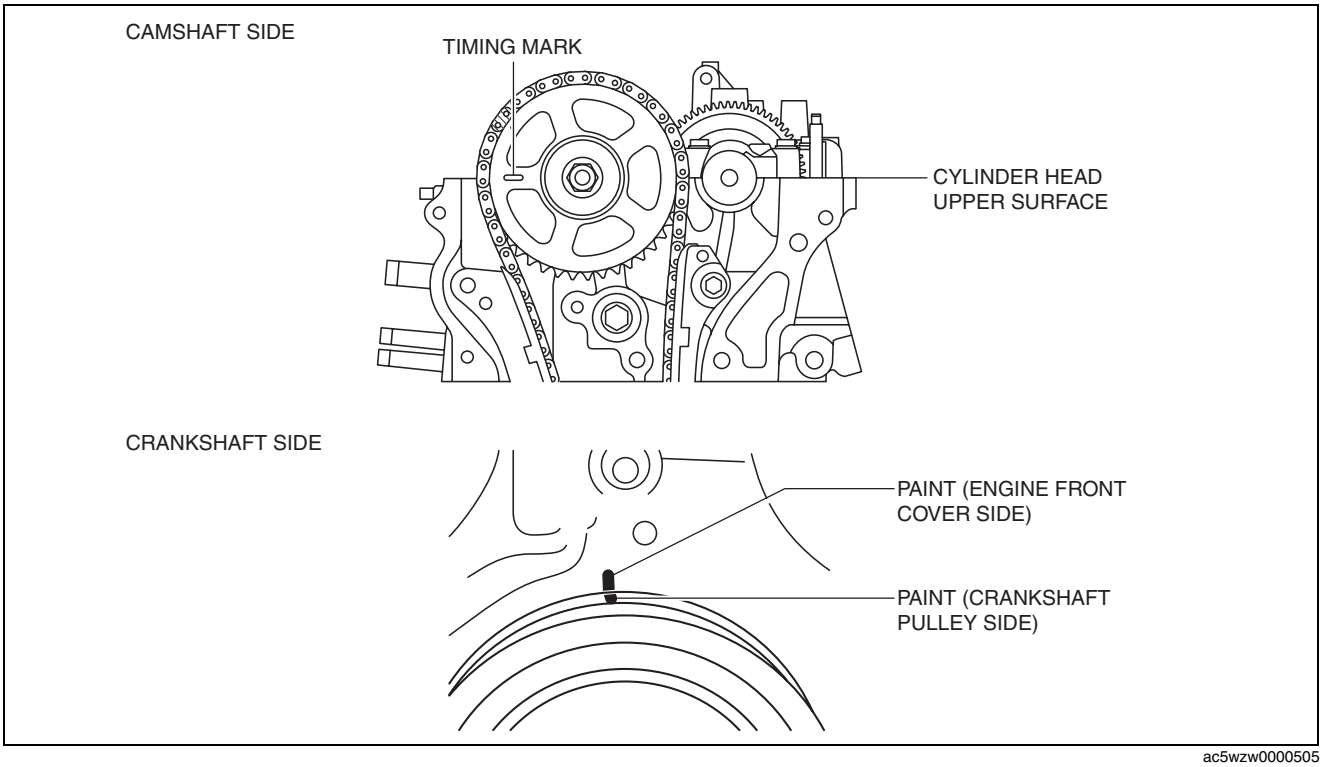
Note

- If there is no appropriate tool which can be used to tighten the camshaft sprocket installation bolt to the specified tightening torque, tighten the bolt using the method as shown in the figure. For the specified tightening torque calculation method if the tool is elongated, refer to the “SERVICE CAUTIONS” in the general information. (See 00-00-13 SERVICE CAUTIONS.)

4. Remove the wire or paper clip securing the plunger of the timing chain tensioner and apply tension to the timing chain.
5. Rotate the crankshaft clockwise **twice** and verify that the valve timing is correct.



ac5wzw0000505



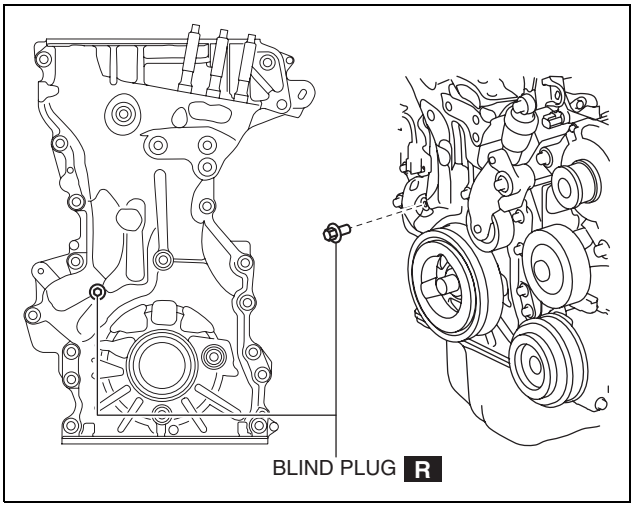
ac5wzw0000505

- If the valve timing is not correct, remove the engine front cover and reassemble the timing chain to each sprocket. (See 01-10B-16 TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

6. Remove the temporarily assembled cylinder head cover bolt.

7. Install the new blind plug for the engine front cover service hole.

Tightening torque
8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

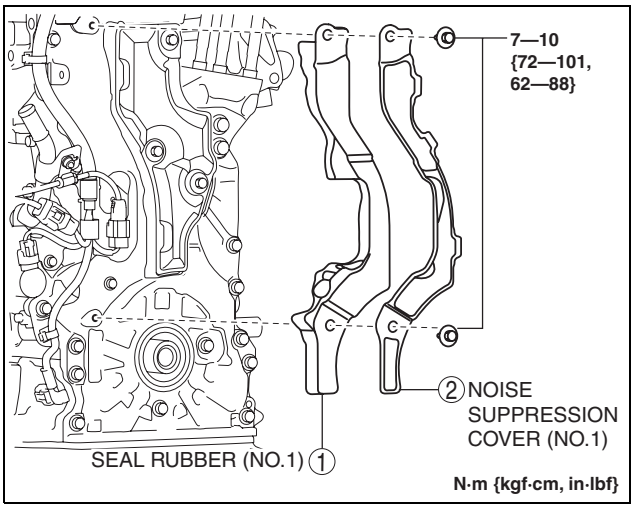


ac5wzw0000503

Noise Suppression Cover (No.1), Seal Rubber Installation Note

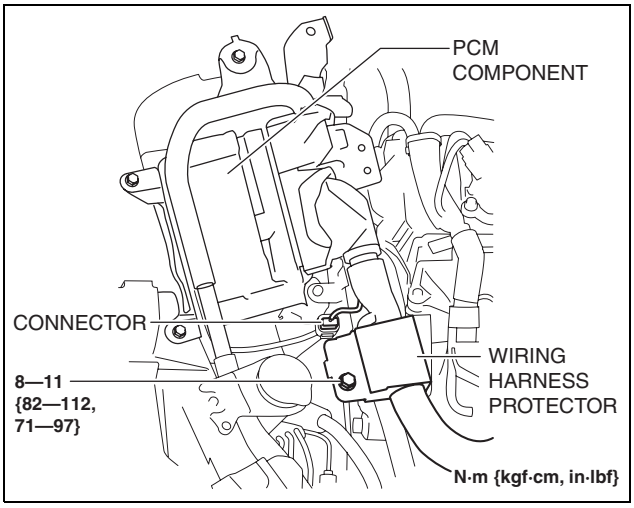
Caution
- **Be careful that the cover and seal rubber do not get hang up on the noise suppression cover installation bolts.**

1. Install the noise suppression cover and seal rubber in the order shown in the figure.
2. Install the PCM component using the following procedure:



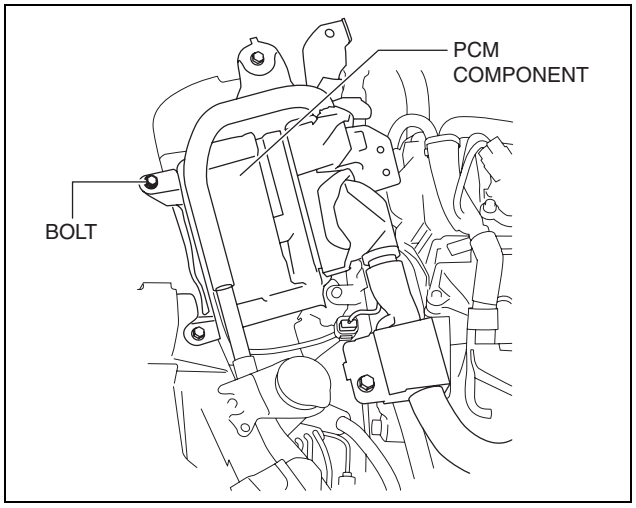
ac5wzw0000526

(1) Install the wiring harness protector and connector.



ac5wzw0000505

(2) Temporarily tighten the bolt shown in the figure.

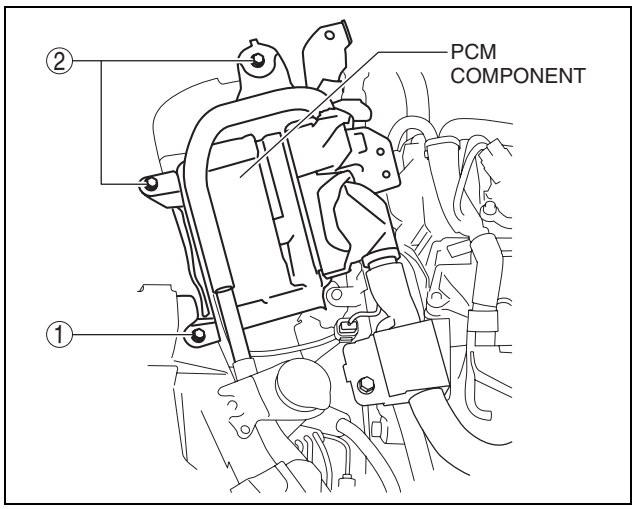


ac5wzw0000505

(3) Tighten the PCM component installation bolts in the order shown in the figure.

Tightening torque
9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}

3. Install the ground cable to the PCM bracket.



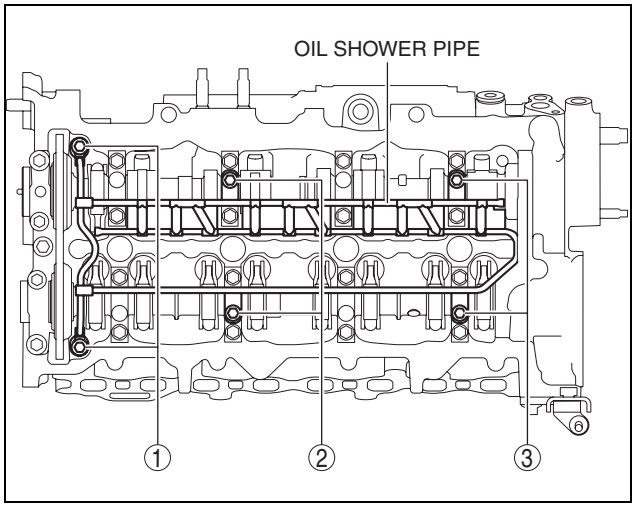
ac5wzw0000505

Oil Shower Pipe Installation Note

1. Install the oil shower pipe in the order shown in the figure.

Tightening torque

Installation position	Tightening torque
1	9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}
2, 3	8.0—9.0 N·m {82—91 kgf·cm, 71—79 in·lbf}



ac5wzw0000505

MECHANICAL [SKYACTIV-D 2.2]

CYLINDER HEAD GASKET REPLACEMENT [SKYACTIV-D 2.2]

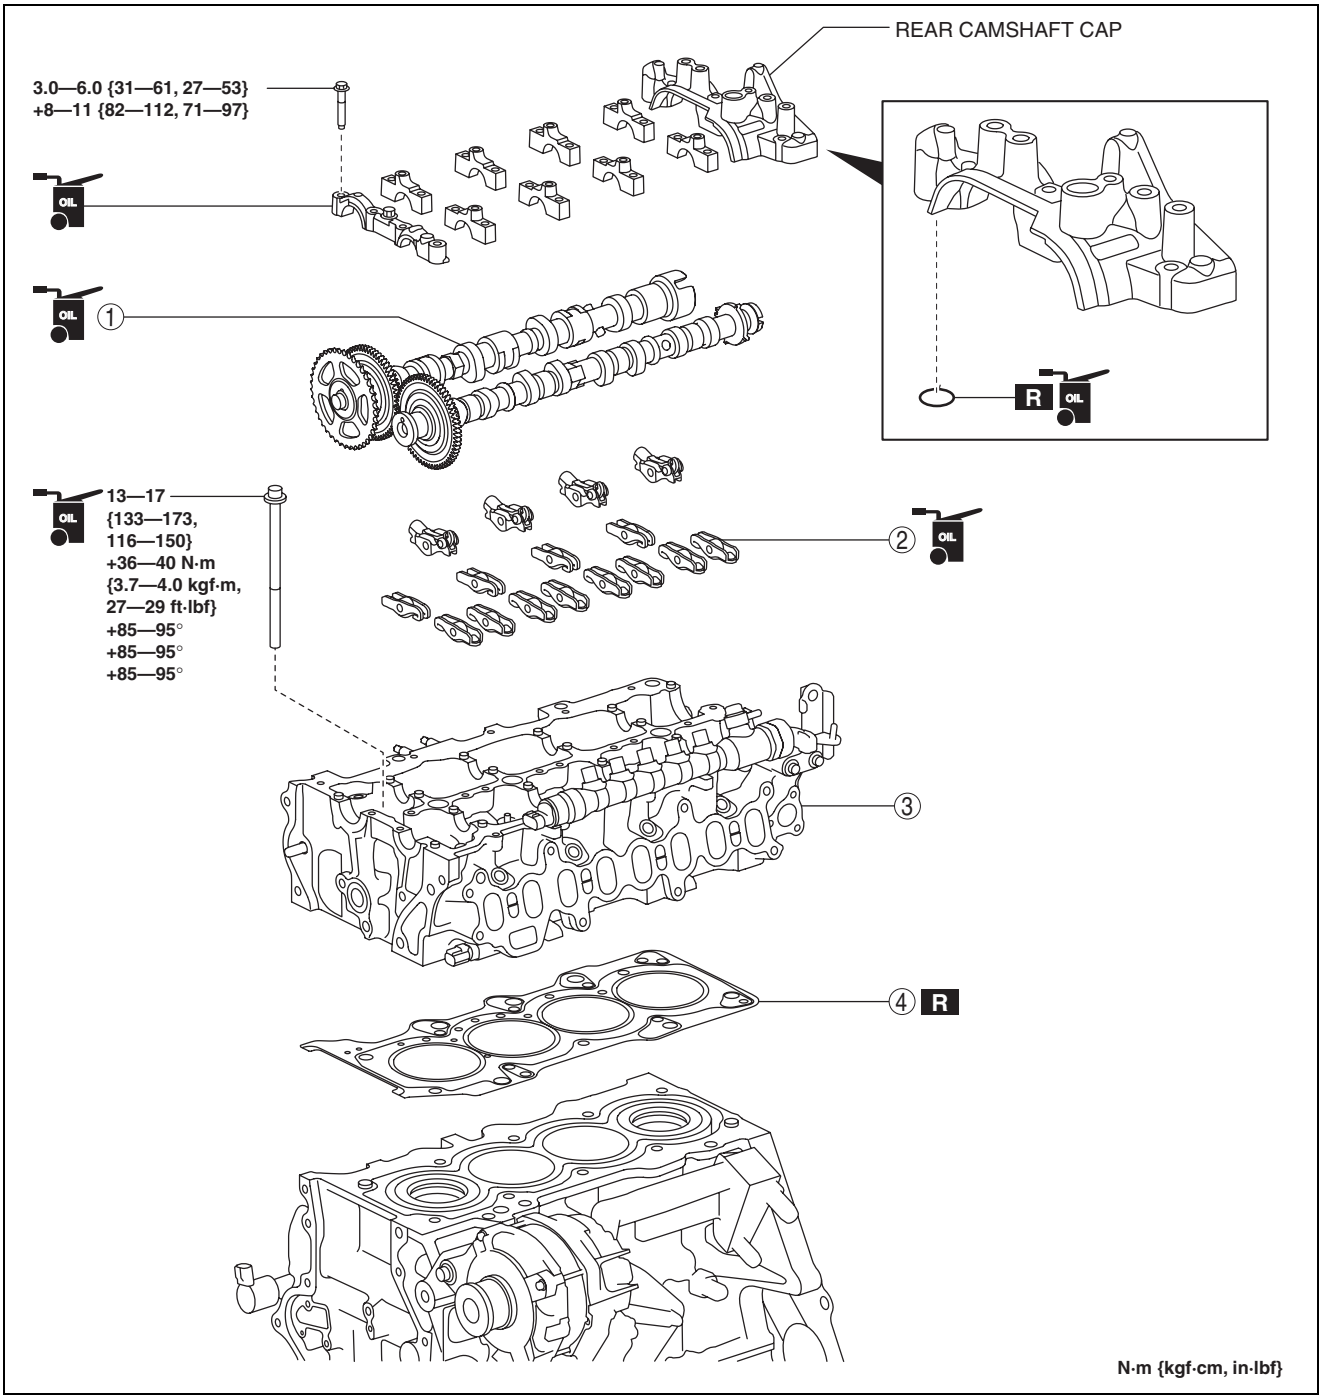
id0110s5800700

Warning

- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**
- **Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.**
- **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)**

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the fuel injectors. (See 01-14B-35 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
5. Remove the splash shield (RH). (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
6. Remove the drive belt. (See 01-10B-8 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
7. Drain the engine oil. (See 01-11B-4 ENGINE OIL REPLACEMENT [SKYACTIV-D 2.2].)
8. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
9. Disconnect the upper radiator hose.
10. Remove the intake manifold. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
11. Disconnect the catalytic converter from the middle pipe, and remove the catalytic converter. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
12. Remove the turbocharger. (See 01-13B-32 TURBOCHARGER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
13. Remove the lower case. (See 01-14B-54 LOWER CASE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
14. Remove the vacuum pump. (See 04-11-22 VACUUM PUMP REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
15. Remove the supply pump. (See 01-14B-46 SUPPLY PUMP REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
16. Remove the CMP sensor.
17. Disconnect the heater hose.
18. Remove the oil pan. (See 01-11B-15 OIL PAN REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
19. Remove the timing chain and chain guide. (See 01-10B-16 TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
20. Remove in the order indicated in the table.
21. Install in the reverse order of removal.
22. Refill with the specified type and amount of the engine oil. (See 01-11B-4 ENGINE OIL REPLACEMENT [SKYACTIV-D 2.2].)
23. Refill the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
24. Start the engine, and inspect and adjust the following:
    - Leakage of engine oil, engine coolant.
    - Engine oil amount.
    - Runout and contact of pulley and belt.
    - Idle speed. (See 01-10B-3 ENGINE TUNE-UP [SKYACTIV-D 2.2].)
    - Compression pressure (See 01-10B-12 COMPRESSION INSPECTION [SKYACTIV-D 2.2].)

MECHANICAL [SKYACTIV-D 2.2]



ac5wzw0000522

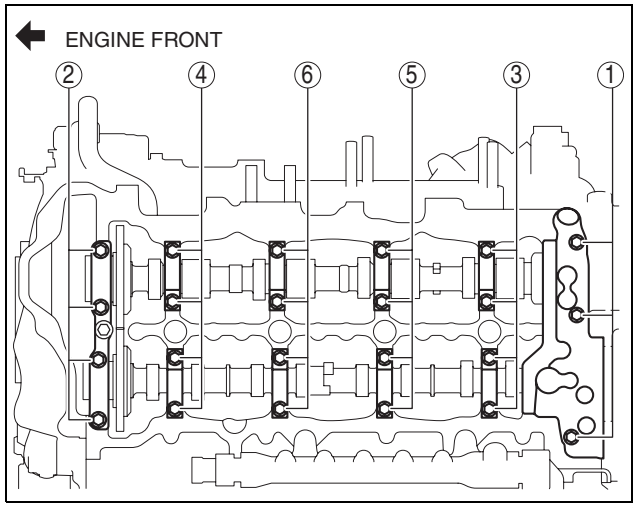
1	Camshaft (See 01-10B-67 Camshaft Removal Note.) (See 01-10B-69 Camshaft Installation Note.)
2	Rocker arm (See 01-10B-67 Rocker Arm Removal Note.) (See 01-10B-69 Rocker Arm Installation Note.)

3	Cylinder head (See 01-10B-67 Cylinder Head Removal Note.) (See 01-10B-68 Cylinder Head Installation Note.)
4	Cylinder head gasket

MECHANICAL [SKYACTIV-D 2.2]

Camshaft Removal Note

1. Loosen the camshaft cap installation bolts in a few passes in the order shown in the figure and remove the camshaft caps.
2. Remove the camshaft.



ac5wzw0000494

Rocker Arm Removal Note

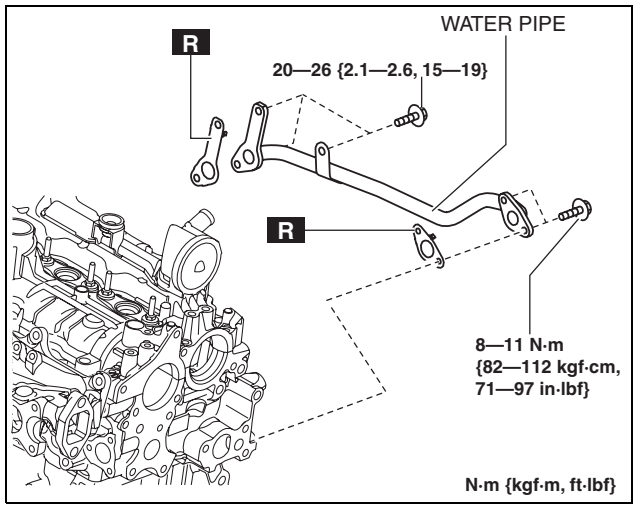
1. Keep the rocker arms in the order of removal to enable reassembly in their original positions.

Cylinder Head Removal Note

1. Remove the water pipe as shown in the figure.
2. Temporarily install the oil pan to support the engine from under the vehicle.

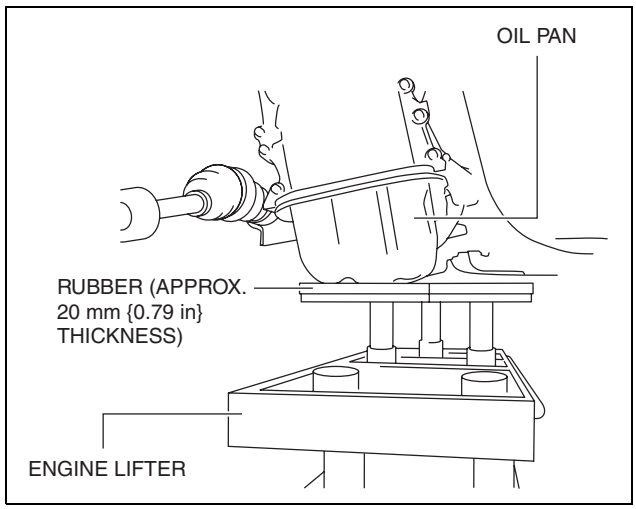
Caution

- **To prevent deformation of the oil pan, support the engine using the following methods.**
  - **— When using an engine lifter, insert rubber of appropriate size (approx. 20 mm {0.79 in} thickness) between the engine lifter and the oil pan to support the oil pan.**
  - **— When using a garage jack, place rubber of appropriate size (approx. 20 mm {0.79 in} thickness) on a batten which is large enough to cover the oil pan to support the oil pan.**



ac5wzw0000494

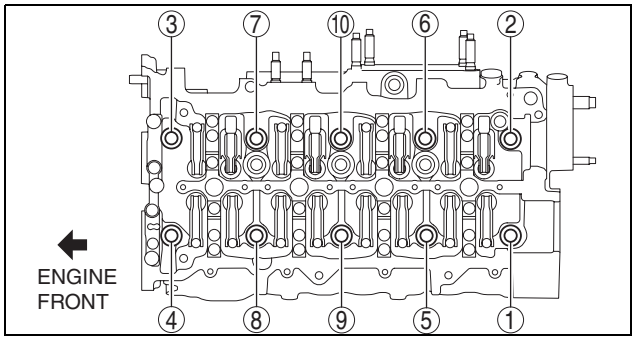
3. Support the engine (oil pan) using a commercially available engine lifter or garage jack.
4. Remove the **SST** (49 L017 5A0) that suspended the engine and set it aside.



ac5wzw0000494

MECHANICAL [SKYACTIV-D 2.2]

5. Loosen the cylinder head installation bolts in two or three passes in the order shown in the figure and remove them.
6. Remove the cylinder head.



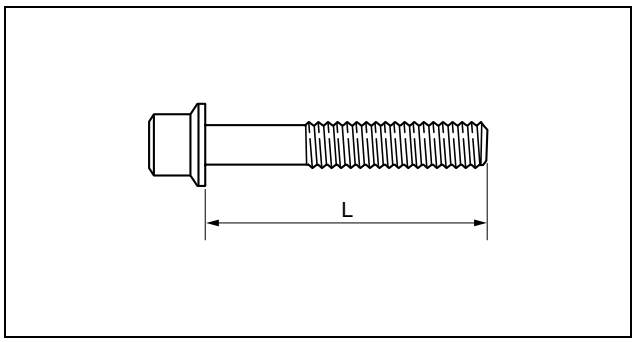
ac5wzw0000522

Cylinder Head Installation Note

Caution
- **If the following condition is met, replace the cylinder head bolts.**
  - **— Length exceeds maximum specification**

Cylinder head bolt length L
L: 169.2—169.8 mm {6.662—6.685 in}

Cylinder head bolt length L maximum
L: 170.5 mm {6.713 in}

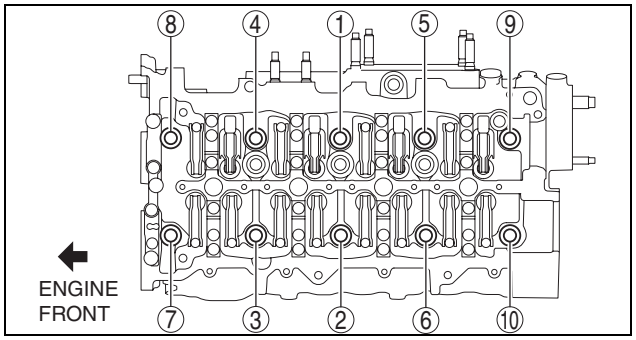


am3zzw0000245

1. When a cylinder head bolt is reused, apply engine oil to any part of the following:
   - Bolt seating surface
   - Cylinder head seating surface

2. Tighten the cylinder head bolts in the order shown in the following 5 steps.

Tightening torque
Step 1: 13—17 N·m {133—173 kgf·cm, 116—150 in·lbf}
Step 2: 36—40 N·m {3.7—4.0 kgf·m, 27—29 ft·lbf}
Step 3: 85—95°
Step 4: 85—95°
Step 5: 85—95°

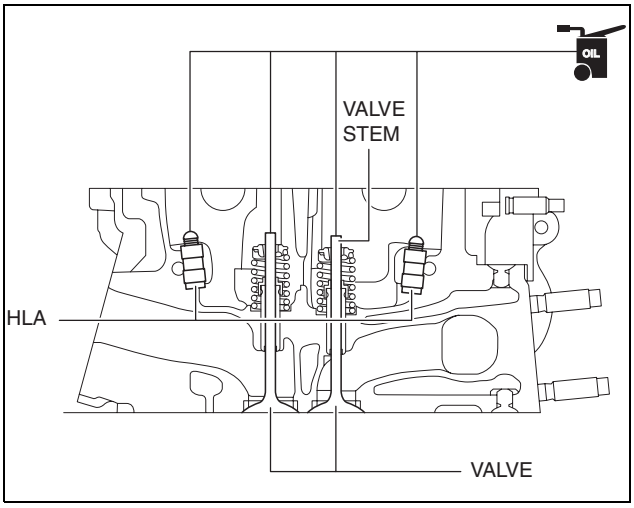


ac5wzw0000522

3. Install the **SST** which was set aside and secure the engine.
4. Remove the engine lifter or garage jack.
5. Remove the temporarily assembled oil pan.

Rocker Arm Installation Note

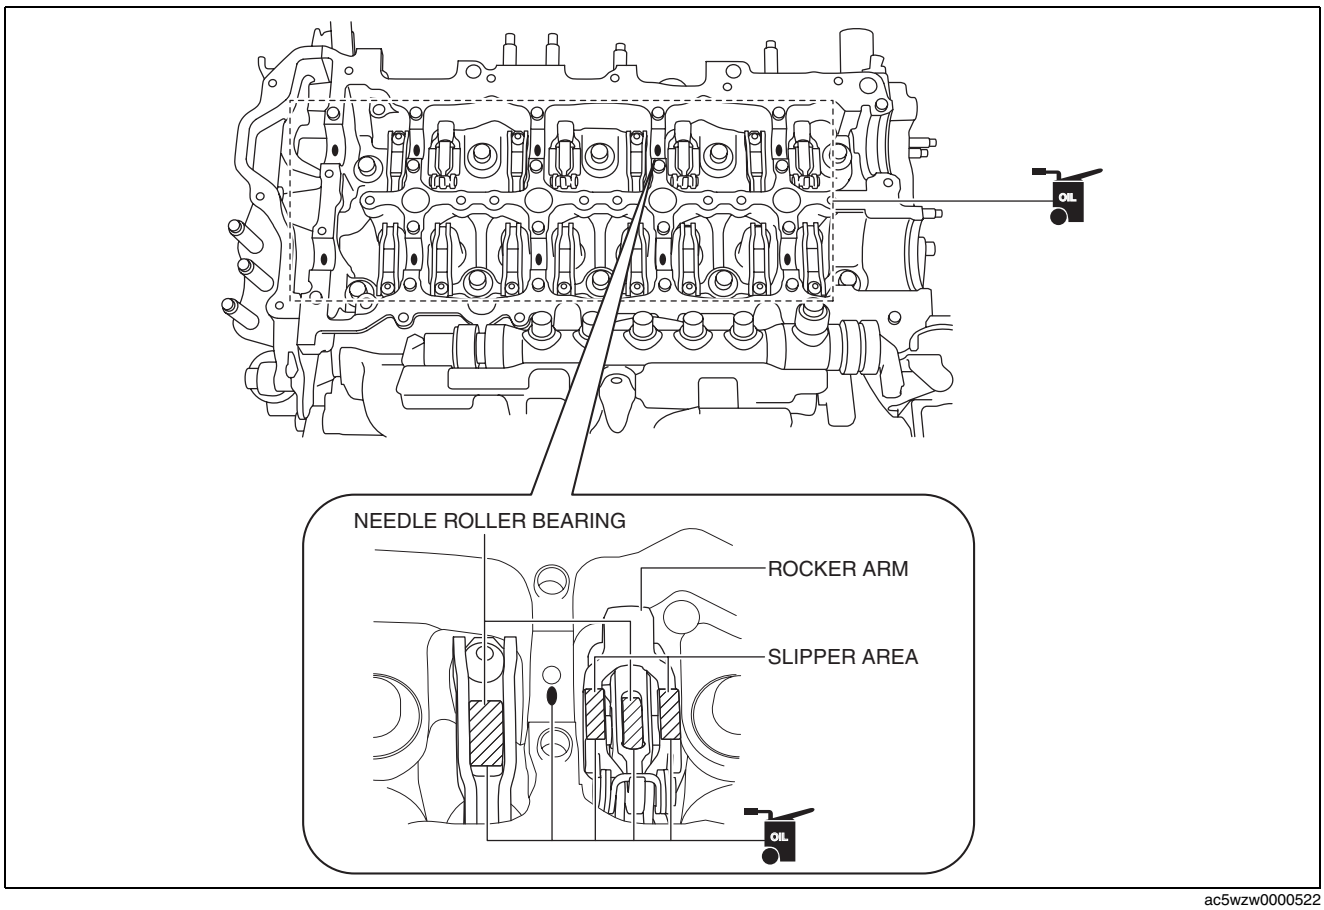
1. Apply engine oil to the HLAs and the end of the valve stems.
2. Install the rocker arms to the same positions as before removal.



ac5wzw0000495

Camshaft Installation Note

1. Apply gear oil (SAE No. 90 or equivalent) or engine oil to the following locations.
   - Each journal of the cylinder heads
   - Needle roller bearing and slipper area of the rocker arm



ac5wzw0000522

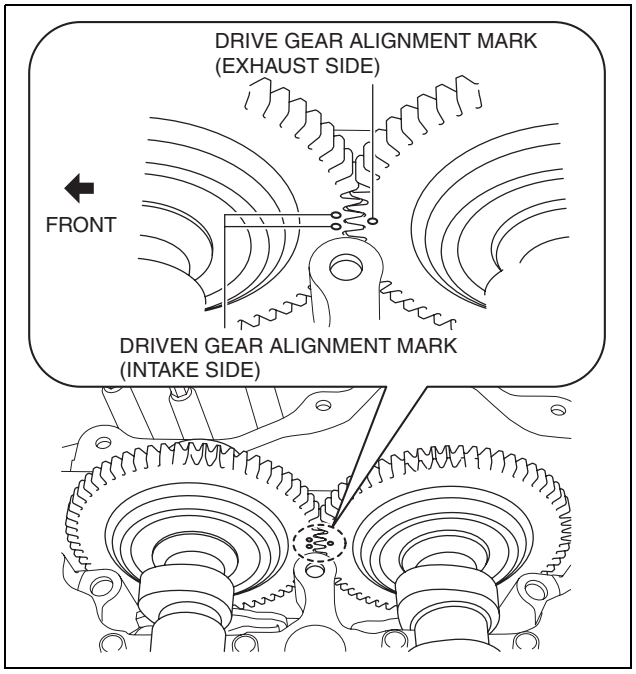
2. Apply gear oil (SAE 90 or equivalent) or engine oil to the following locations of each camshaft.
   - Gear sliding surfaces
   - Thrust surface of front journal

Note

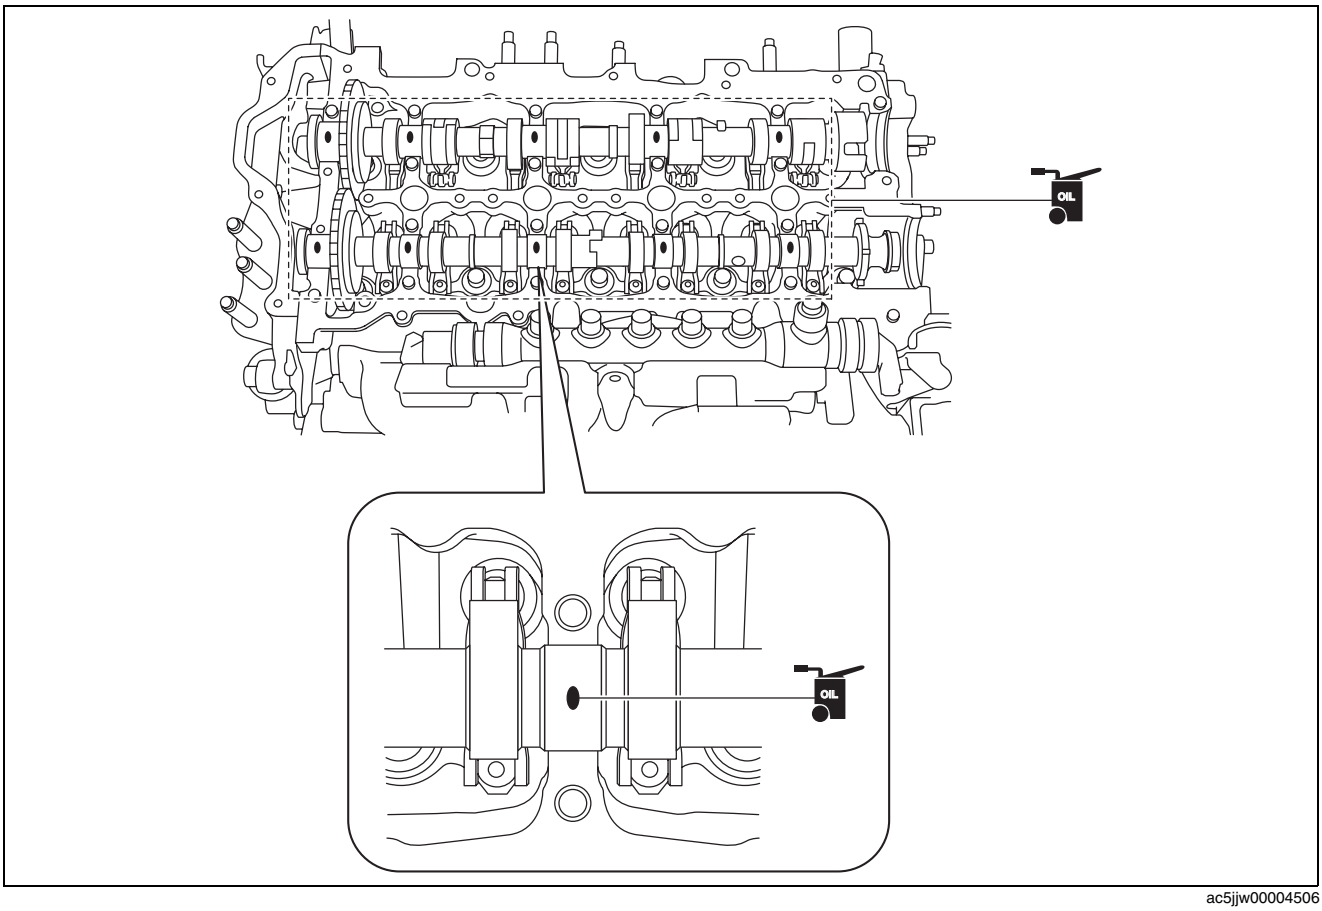
- If oil is applied to the front camshaft cap, oil should not be applied to the thrust surface of the front journal.

MECHANICAL [SKYACTIV-D 2.2]

3. Place the camshaft on the cylinder head and align the alignment marks for each gear as shown in the figure.
4. As shown in the figure, apply gear oil (SAE No. 90 or equivalent) or engine oil to the center area of each journal of the camshaft.

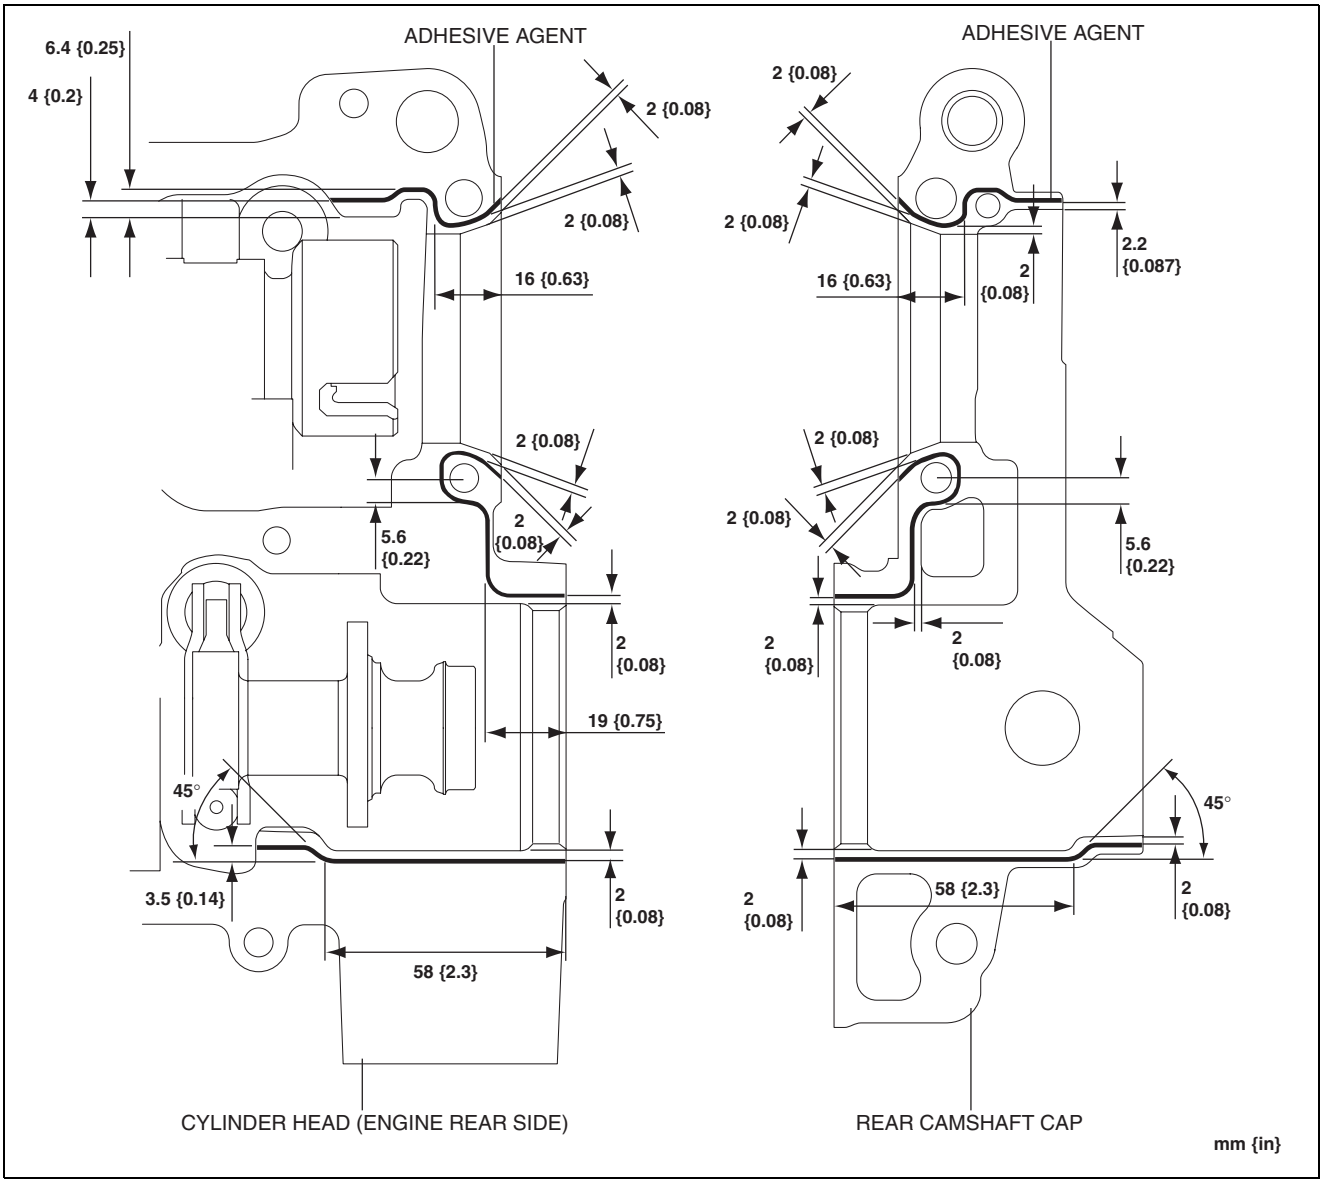


ac5wzw0000495



ac5jjw00004506

5. Apply adhesive agent (Loctite#962T) to the rear side of the cylinder head or rear camshaft cap.



ac5wzw0000522

Caution
- **Do not spill adhesive agent on the journal.**
- **To prevent adhesive agent from hardening, adhere the rear camshaft cap to the cylinder head within 10 min after adhesive agent is applied. Tighten the installation bolts completely soon after adhering.**

Adhesive agent bead width
1—3 mm {0.04—0.11 in}

6. Apply engine oil to the new rear camshaft cap O-ring and install it to the rear camshaft cap.

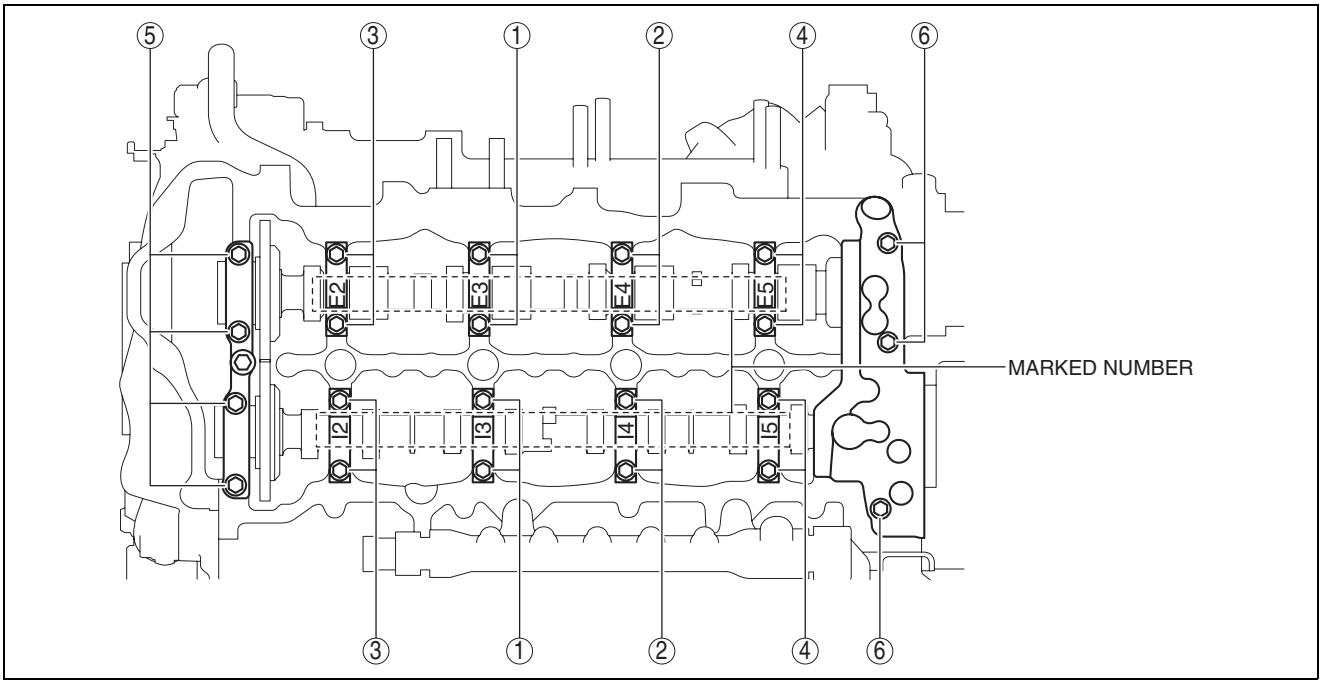
Caution
- **Be careful not to damage or drop the O-ring when installing the rear camshaft cap.**

7. Apply gear oil (SAE 90 or equivalent) or engine oil to the thrust surface of the front camshaft cap.

Note
- If oil is applied to the front journal thrust surface of each camshaft, oil should not be applied to the front camshaft cap.

MECHANICAL [SKYACTIV-D 2.2]

8. Install the camshaft caps in the marked number order, and temporarily tighten the camshaft cap installation bolts in two or three passes evenly.
9. Tighten the camshaft cap installation bolts in two steps in the order shown in the figure.



ac5wzw0000495

Tightening torque
First step: 3.0—6.0 N·m {31—61 kgf·cm, 27—53 in·lbf}
Second step: 8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

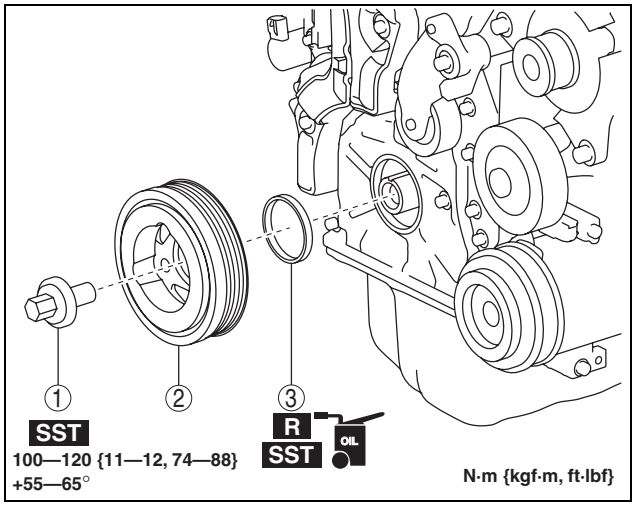
FRONT OIL SEAL REPLACEMENT [SKYACTIV-D 2.2]

id0110s5800800

Warning
- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
3. Remove the drive belt. (See 01-10B-8 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.

1	Crankshaft pulley lock bolt (See 01-10B-73 Crankshaft Pulley Lock Bolt Removal Note.) (See 01-10B-76 Crankshaft Pulley Lock Bolt Installation Note.)
2	Crankshaft pulley
3	Front oil seal (See 01-10B-74 Front Oil Seal Removal Note.) (See 01-10B-75 Front Oil Seal Installation Note.)



ac5wzw0000509

MECHANICAL [SKYACTIV-D 2.2]

Crankshaft Pulley Lock Bolt Removal Note

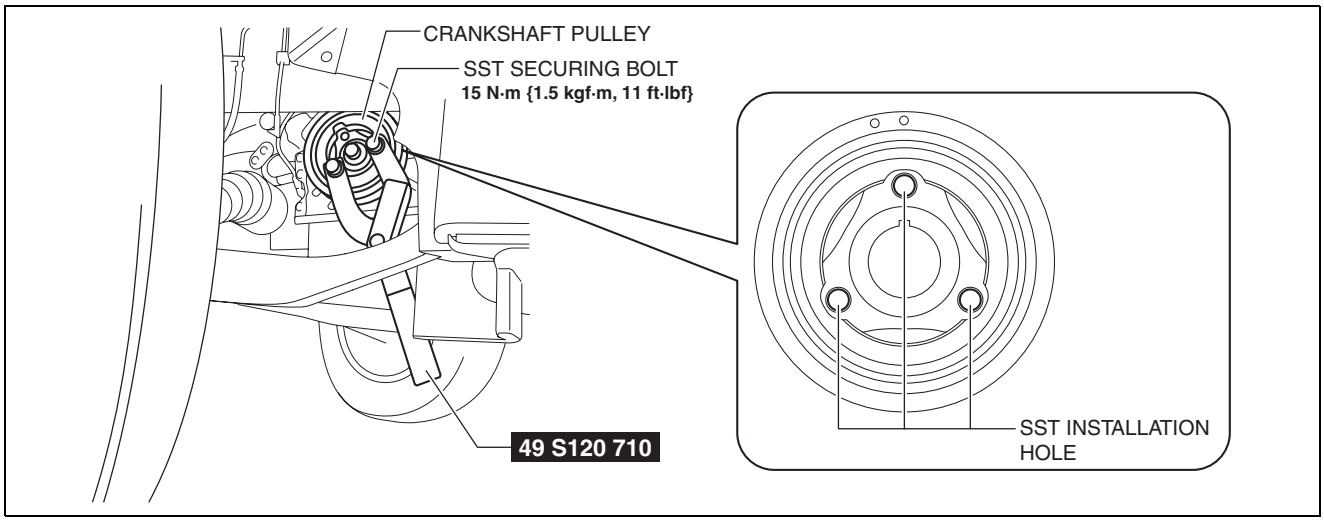
Note
- Perform the crankshaft pulley lock bolt removal with at least one other person.

1. Install the **SST** to the crankshaft pulley using the bolts of the following specification.

SST securing bolt specification
M12 x 1.75 strength classification of 8.8 or more, length 48—50 mm {1.89—1.96 in} (length can be adjusted by adding washer)

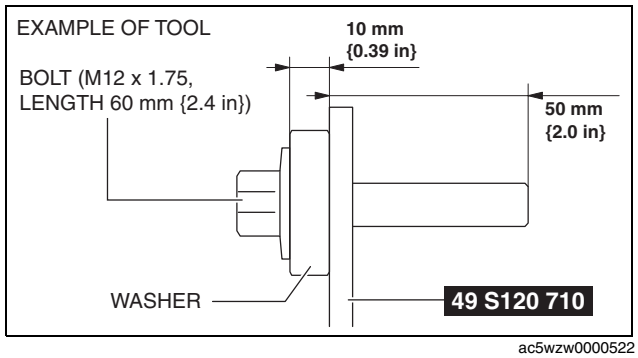
SST securing bolt tightening torque
15 N·m {1.5 kgf·m, 11 ft·lbf}

Caution
- **To prevent damage to the crankshaft pulley and engine front cover, always use a bolt and tightening torque of the specification above to install the SSTs to the crankshaft pulley.**
- **After installing the SSTs, verify that the SST securing bolts do not contact the engine front cover.**



ac5wzw0000522

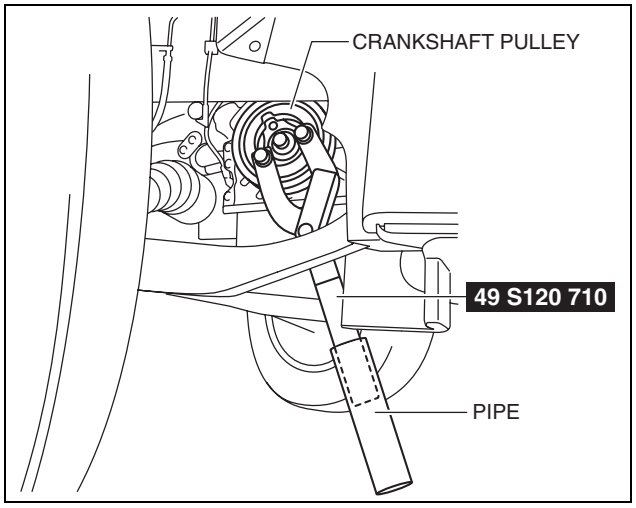
Note
- If a bolt with a length of **50 mm {2.0 in}** or more is used, add the appropriate washer and adjust the length to **48—50 mm {1.89—1.96 in}** to use.
  Example of use
  — Using the bolt (**M12 x 1.75 length 60 mm {2.4 in}**) supplied with the **SST 49 S011 102A** (crankshaft lock tool): Add a washer with a **10 mm {0.39 in}** thickness and adjust the length of the **SST** securing bolt to **50 mm {2.0 in}**.



ac5wzw0000522

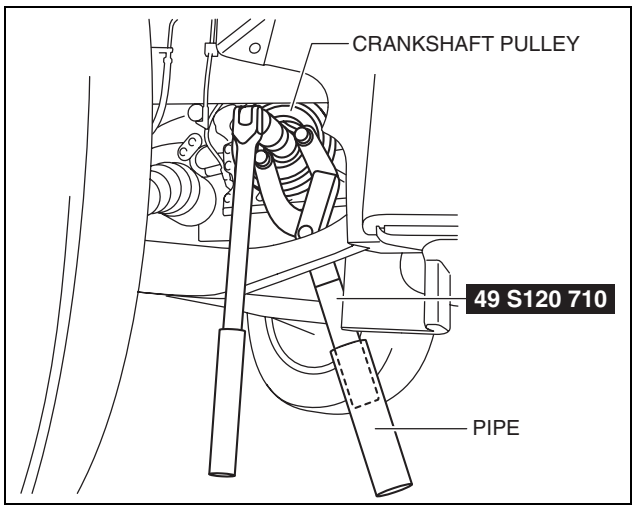
MECHANICAL [SKYACTIV-D 2.2]

2. One person connects an extension pipe of a suitable length with **100 mm {3.94 in}** or more to the **SST** to prevent the crankshaft pulley from rotating.



ac5wzw0000522

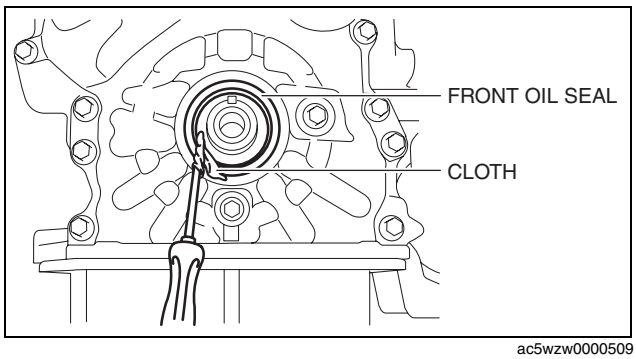
3. Another person loosens the crankshaft pulley lock bolt and removes it.
4. Remove the **SST**.



ac5wzw0000523

Front Oil Seal Removal Note

1. Cut the oil seal lip using a utility knife.
2. Remove the oil seal using a flathead screwdriver with the tip protected by a clean cloth to prevent damage to the oil seal sliding part of the crankshaft.

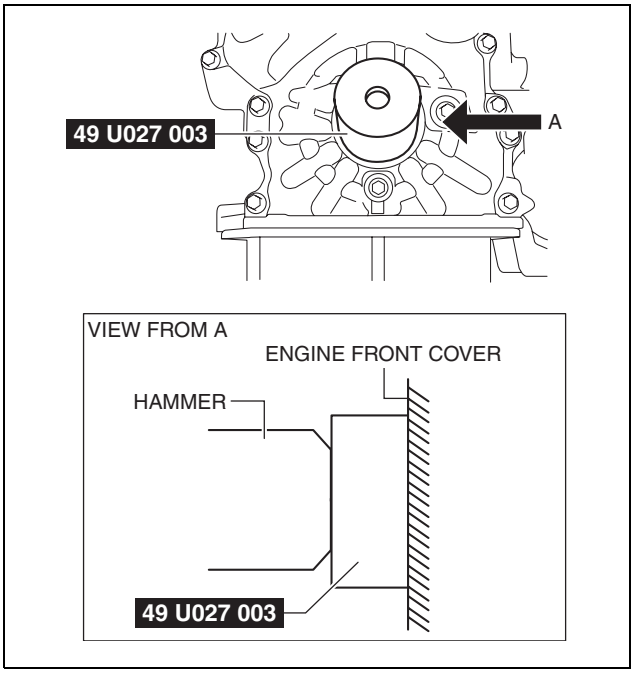


ac5wzw0000509

MECHANICAL [SKYACTIV-D 2.2]

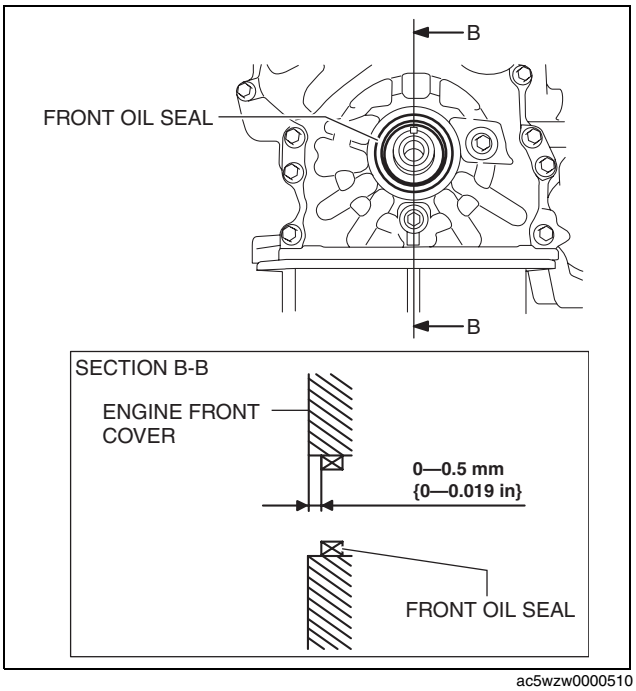
Front Oil Seal Installation Note

1. Apply clean engine oil to the inner surface of a new front oil seal.
2. Insert the front oil seal into the engine front cover by hand.
3. Tap the oil seal in evenly using the **SST** and a hammer.



ac5wzw0000509

Front oil seal press-in amount
0—0.5 mm {0—0.019 in}



ac5wzw0000510

MECHANICAL [SKYACTIV-D 2.2]

Crankshaft Pulley Lock Bolt Installation Note

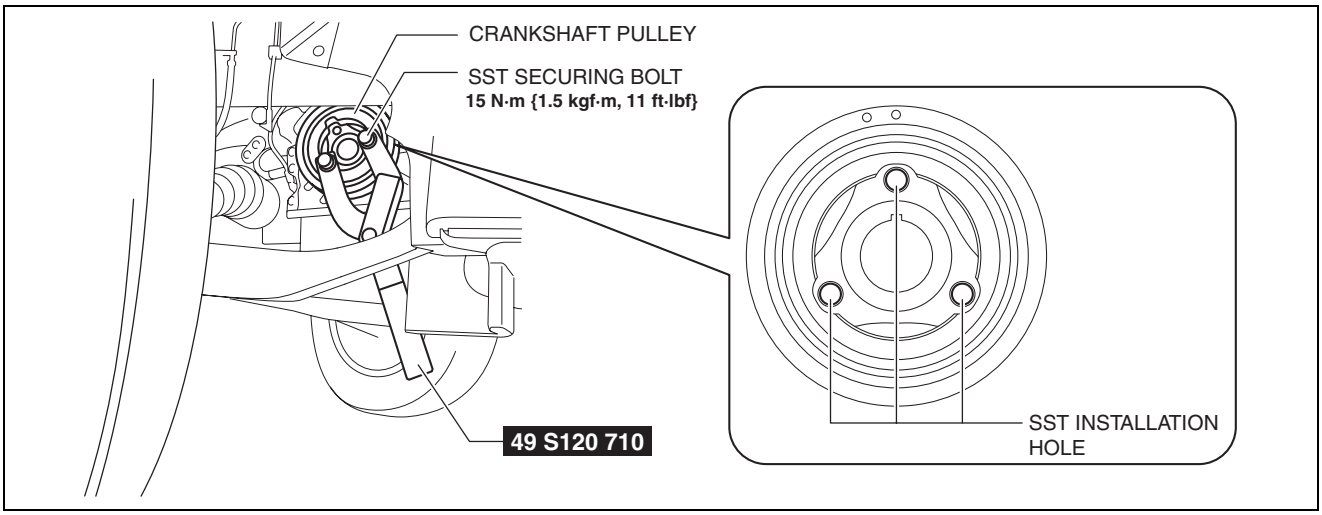
Note
- Tighten the crankshaft pulley lock bolt in two steps. Perform the second step for tightening to a specified angle using two people.

1. Install the crankshaft pulley.
2. Install the **SST** to the crankshaft pulley using the bolts of the following specification.

SST securing bolt specification
M12 x 1.75 strength classification of 8.8 or more, length 48—50 mm {1.89—1.96 in} (length can be adjusted by adding washer)

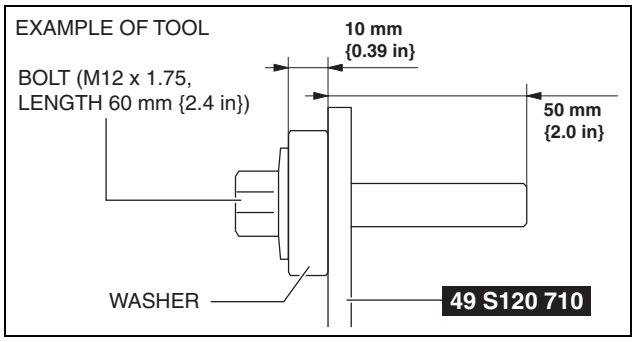
SST securing bolt tightening torque
15 N·m {1.5 kgf·m, 11 ft·lbf}

Caution
- **To prevent damage to the crankshaft pulley and engine front cover, always use a bolt and tightening torque of the specification above to install the SSTs to the crankshaft pulley.**
- **After installing the SSTs, verify that the SST securing bolts do not contact the engine front cover.**



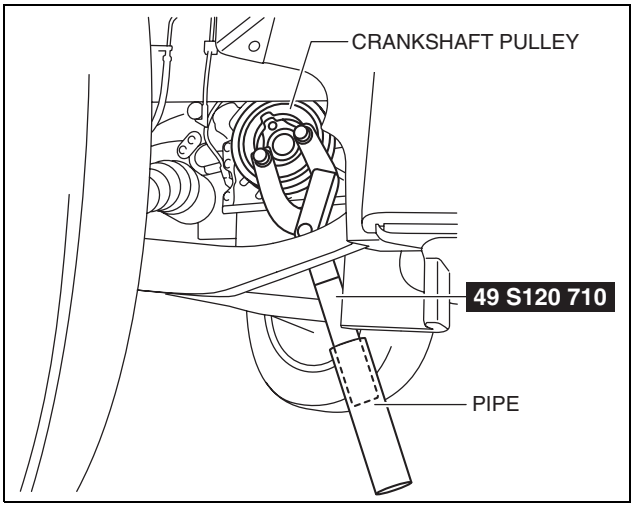
ac5wzw0000510

Note
- If a bolt with a length of **50 mm {2.0 in}** or more is used, add the appropriate washer and adjust the length to **48—50 mm {1.89—1.96 in}** to use.
  Example of use
  — Using the bolt (**M12 x 1.75 length 60 mm {2.4 in}**) supplied with the **SST 49 S011 102A** (crankshaft lock tool): Add a washer with a **10 mm {0.39 in}** thickness and adjust the length of the **SST** securing bolt to **50 mm {2.0 in}**.



ac5wzw0000522

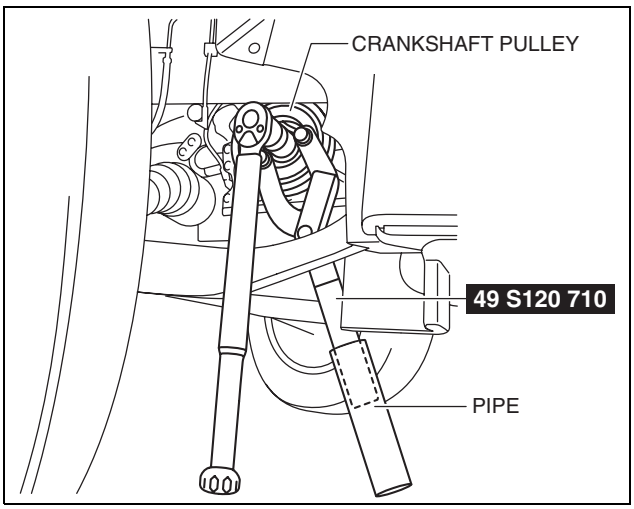
3. Connect an extension pipe of a suitable length of **100 mm {3.94 in}** or more to the **SST** to prevent the crankshaft pulley from rotating.



ac5wzw0000523

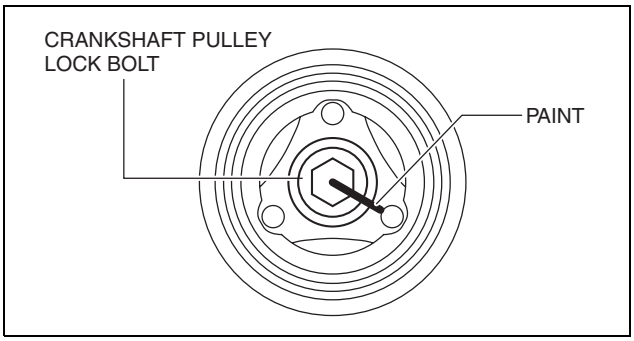
4. Tighten the crankshaft pulley lock bolt.

Tightening torque
First step: 100—120 N·m {11—12 kgf·m, 74—88 ft·lbf}



ac5wzw0000523

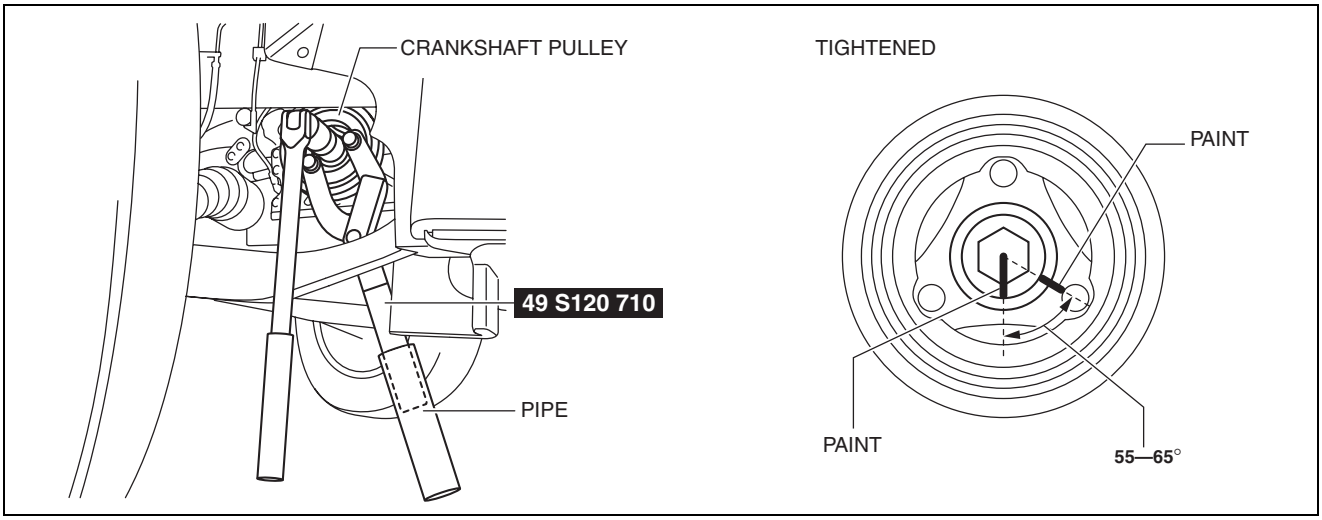
5. Place a paint mark on the crankshaft pulley lock bolt and crankshaft pulley as shown in the figure to tighten the bolt to the specified angle correctly.



ac5wzw0000510

MECHANICAL [SKYACTIV-D 2.2]

6. One person holds the **SST** and the other person tightens the crankshaft pulley lock bolt to the specified angle.



ac5wzw0000523

Tightening torque
Second: 55—65°

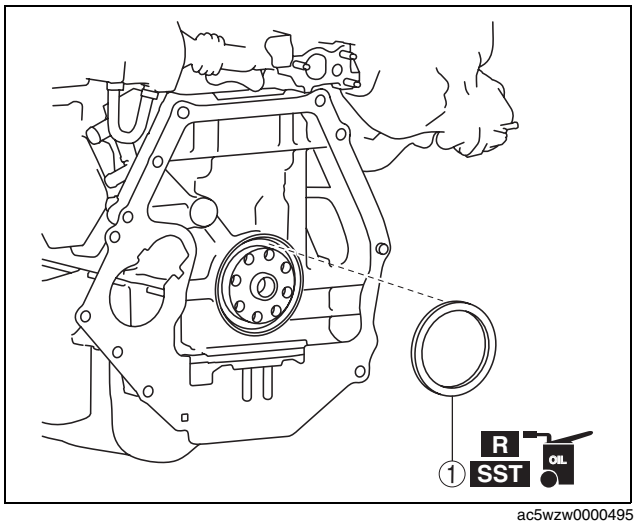
7. Remove the **SST**.

REAR OIL SEAL REPLACEMENT [SKYACTIV-D 2.2]

id0110s5800900

1. Remove the transaxle. (See 05-15B-4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [D66M-R] (MTX, 2WD).) (See 05-15B-18 MANUAL TRANSAXLE REMOVAL/INSTALLATION [D66MX-R] (MTX, AWD).) (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL] (ATX, 2WD).) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL] (ATX, AWD).)
2. Remove the flywheel (MTX) or the drive plate (ATX). (See 05-17B-64 DRIVE PLATE REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL] (ATX).)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

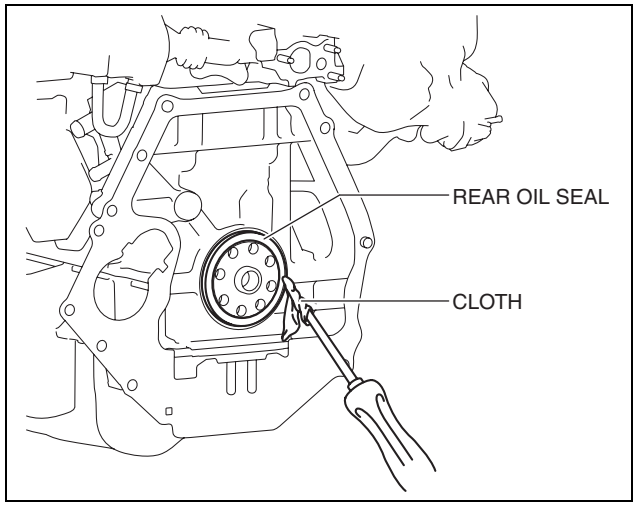
1	Rear oil seal (See 01-10B-79 Rear Oil Seal Removal Note.) (See 01-10B-79 Rear Oil Seal Installation Note.)



ac5wzw0000495

Rear Oil Seal Removal Note

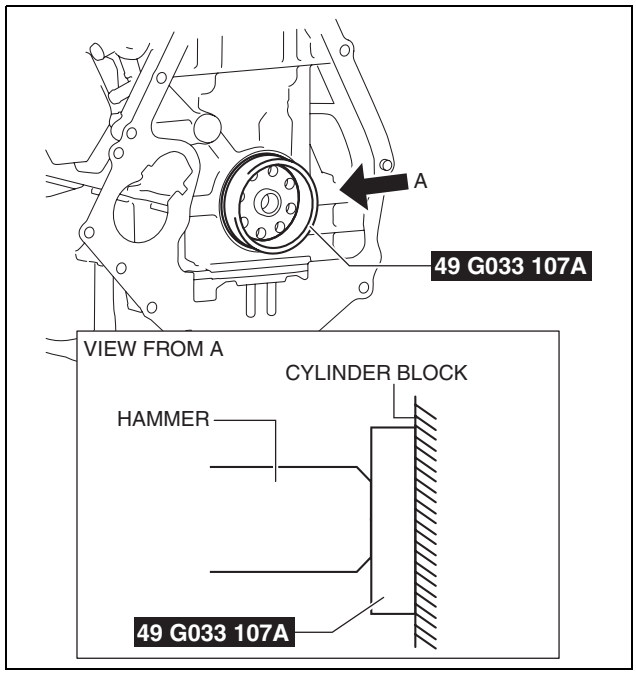
1. Cut the oil seal lip using a utility knife.
2. Remove the oil seal using a flathead screwdriver with the tip protected by a clean cloth to prevent damage to the oil seal sliding part of the crankshaft.



ac5wzw0000495

Rear Oil Seal Installation Note

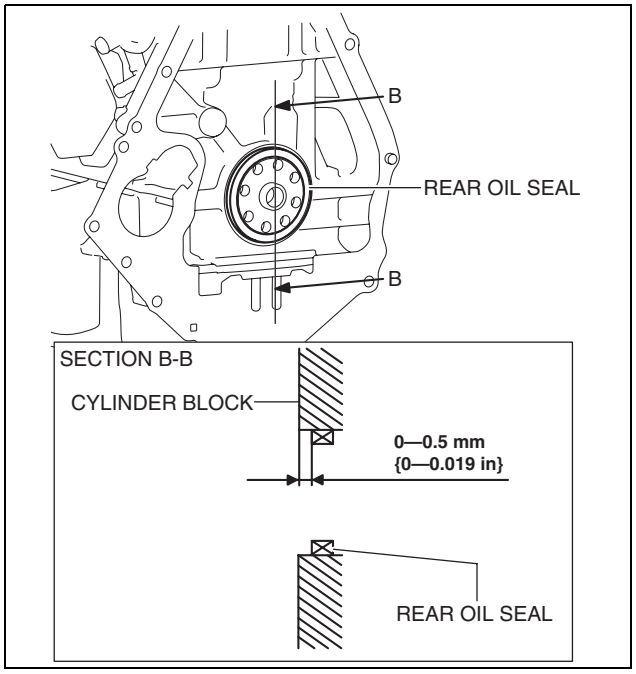
1. Apply clean engine oil to the inner surface of a new rear oil seal.
2. Insert the rear oil seal into the cylinder block by hand.
3. Tap the oil seal in evenly using the **SST** and a hammer.



ac5wzw0000523

MECHANICAL [SKYACTIV-D 2.2]

Rear oil seal press-in amount
0—0.5 mm {0—0.019 in}



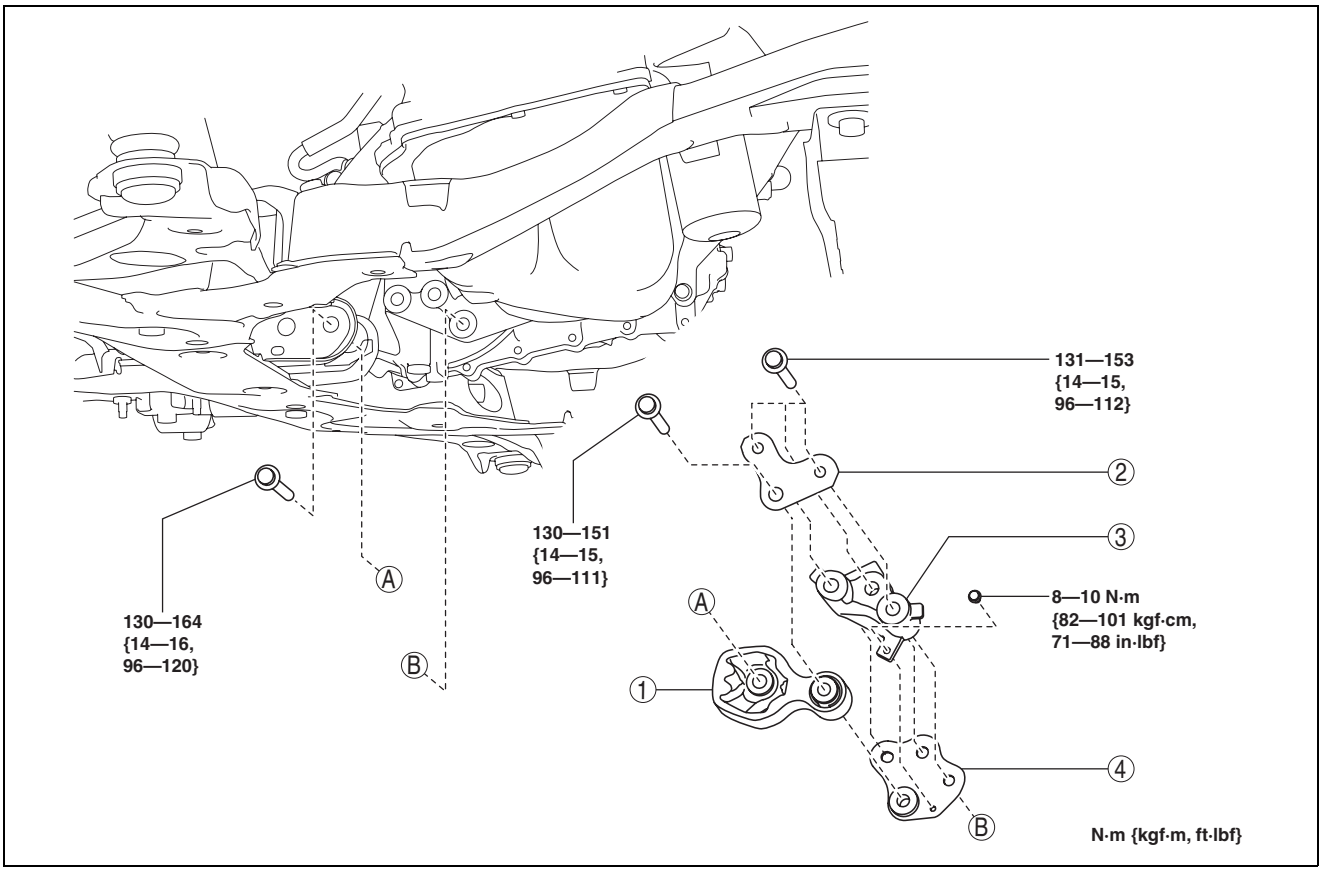
ac5wzw0000527

ENGINE MOUNT DISASSEMBLY/ASSEMBLY [SKYACTIV-D 2.2]

id0110s5806900

No.1 Engine Mount (2WD)

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.



ac5wzw0000506

MECHANICAL [SKYACTIV-D 2.2]

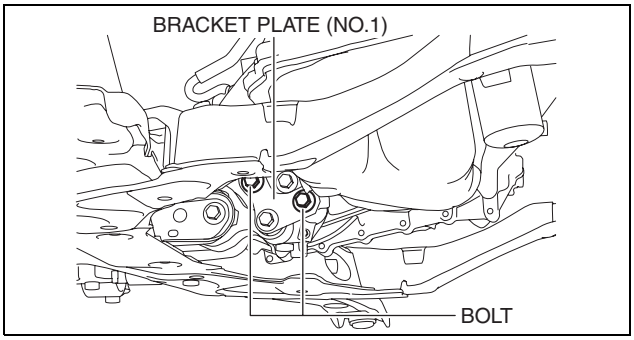
1	No.1 engine mount rubber (See 01-10B-81 No.1 Engine Mount Rubber Removal Note (2WD).) (See 01-10B-81 No.1 Engine Mount Installation Note (2WD).)
2	Bracket plate (No.1) (See 01-10B-81 No.1 Engine Mount Installation Note (2WD).)
3	No.1 engine mount bracket (See 01-10B-81 No.1 Engine Mount Installation Note (2WD).)
4	Bracket plate (No.2) (See 01-10B-81 No.1 Engine Mount Installation Note (2WD).)

No.1 Engine Mount Rubber Removal Note (2WD)

1. Loosen the bolts shown in the figure.

   Note
   - The bracket plate (No.1) can move slightly by loosening the bolts shown in the figure and the No.1 engine mount rubber can be easily removed.

2. Remove the No.1 engine mount rubber.



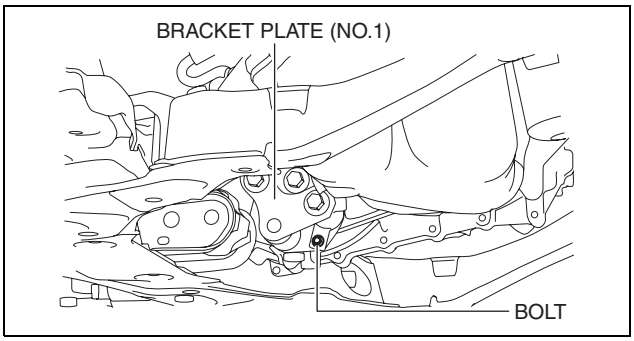
ac5wzw0000506

No.1 Engine Mount Installation Note (2WD)

1. Install the No.1 engine mount bracket, plate (No.1), and plate (No.2) and temporarily tighten the installation bolts.
2. Tighten the bolt shown in the figure.

   Tightening torque
   8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

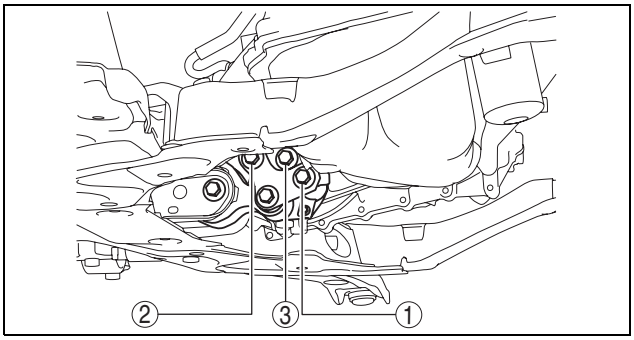
3. Install the No.1 engine mount rubber and temporarily tighten the installation bolts.



ac5wzw0000506

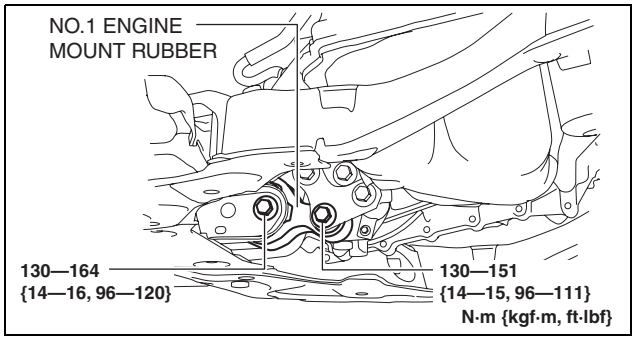
4. Tighten the No.1 engine mount bracket, plate (No.1) and plate (No.2) installation bolts in the order shown in the figure.

   Tightening torque
   131—153 N·m {14—15 kgf·m, 97—112 ft·lbf}



ac5jjw00003896

5. Tighten the No.1 engine mount rubber installation bolts.

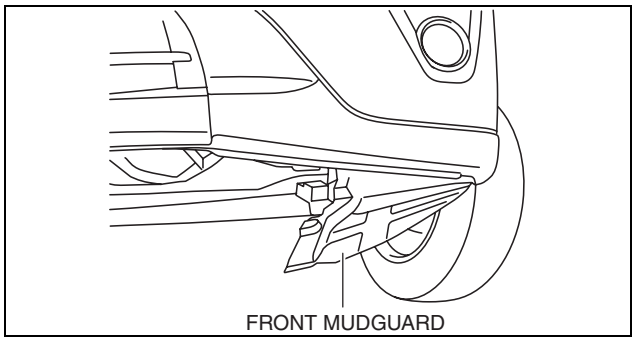


ac5wzw0000506

No.1 Engine Mount (4WD)

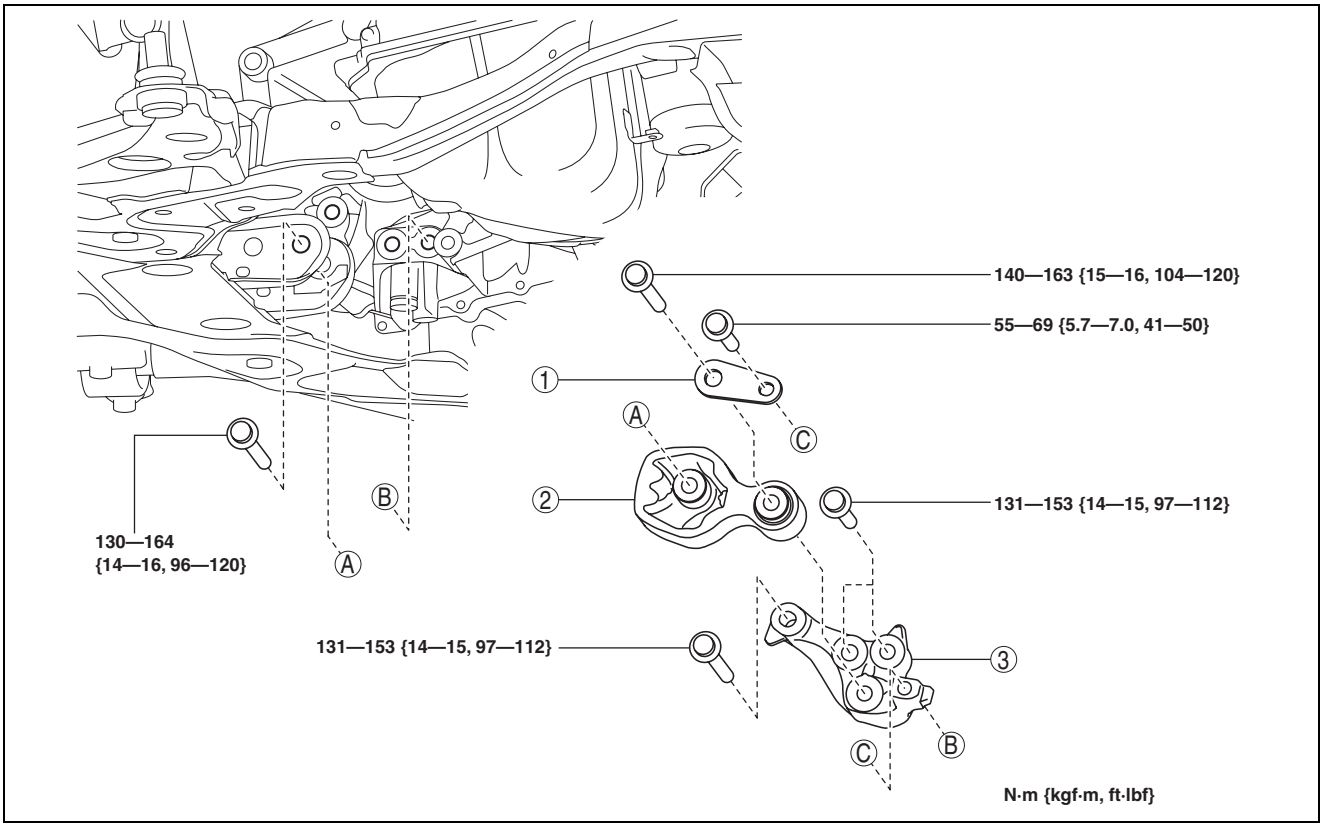
Note
- When removing the No.1 engine mount rubber for 4WD vehicles, loosen the front crossmember installation bolts and perform the procedure with the front crossmember component lowered to 15—20 mm {0.60—0.78 in}.
- When removing the No.1 engine mount bracket for 4WD vehicles, perform the procedure with the front crossmember component and transfer completely removed from the vehicle.

1. Remove the front under cover No.1 and No.2. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.) (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Set the front mudguard away from the front crossmember and front bumper. (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
3. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.
6. Inspect the front wheel alignment. (See 02-11-1 FRONT WHEEL ALIGNMENT.)



ac5uuw00000642

MECHANICAL [SKYACTIV-D 2.2]

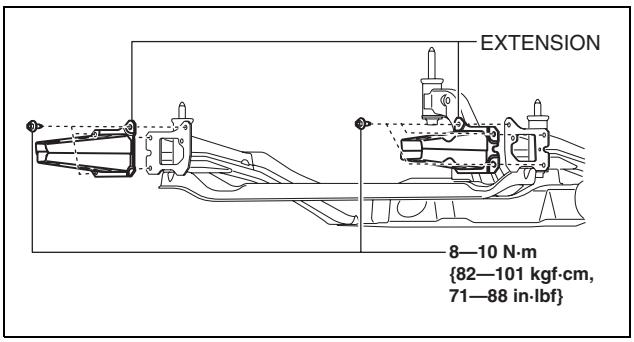


ac5wzw0000507

1	Bracket plate (See 01-10B-86 No.1 Engine Mount Rubber, Bracket Plate Installation Note (4WD).)
2	No.1 engine mount rubber (See 01-10B-83 No.1 Engine Mount Rubber Removal Note (4WD).) (See 01-10B-86 No.1 Engine Mount Rubber, Bracket Plate Installation Note (4WD).)
3	No.1 engine mount bracket (See 01-10B-85 No.1 Engine Mount Bracket Removal Note (4WD).) (See 01-10B-85 No.1 Engine Mount Bracket Installation Note (4WD).)

No.1 Engine Mount Rubber Removal Note (4WD)

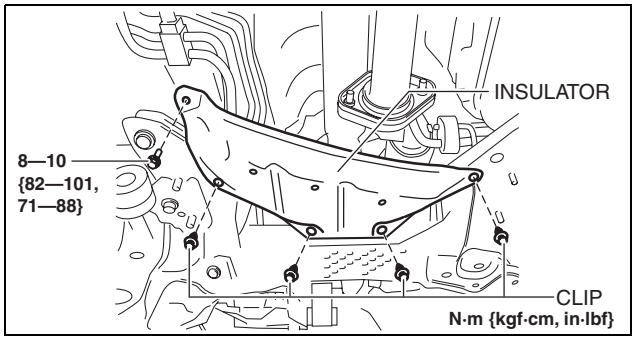
1. Remove the joint bolt (steering gear side) and disconnect the steering shaft from the steering gear and linkage. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
2. Disconnect the front crossmember extension.



ac5uuw00000644

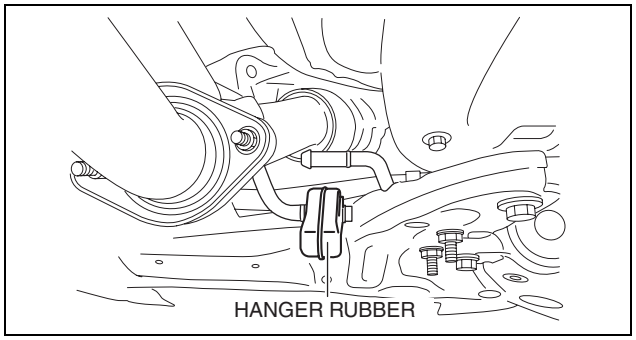
MECHANICAL [SKYACTIV-D 2.2]

3. Remove the insulator shown in the figure.



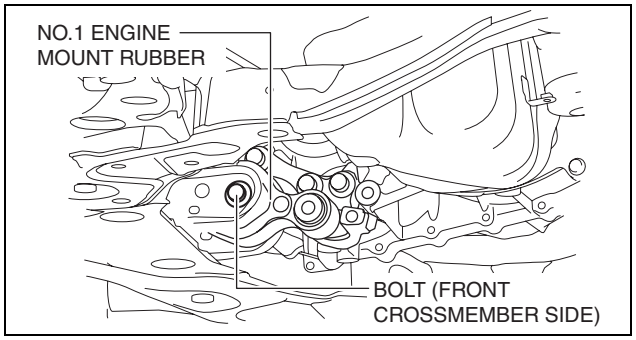
ac5uuw00000645

4. Disconnect the hanger rubber from the front crossmember and set it aside.
5. Disconnect the front stabilizer link (front stabilizer side). (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)



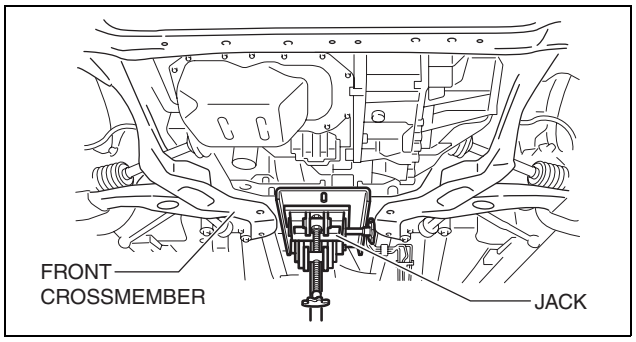
ac5wzw0000526

6. Remove the No.1 engine mount rubber installation bolt (front crossmember side).



ac5wzw0000507

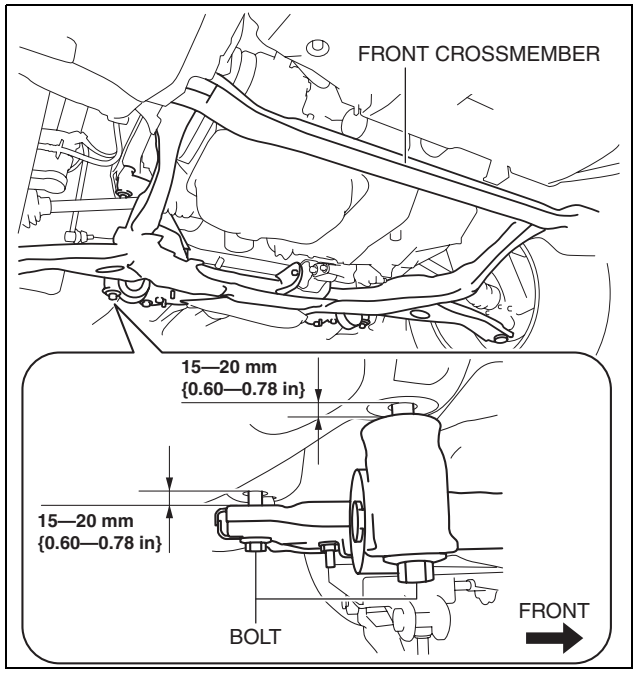
7. Support the front crossmember component using a jack.



ac5wzw0000526

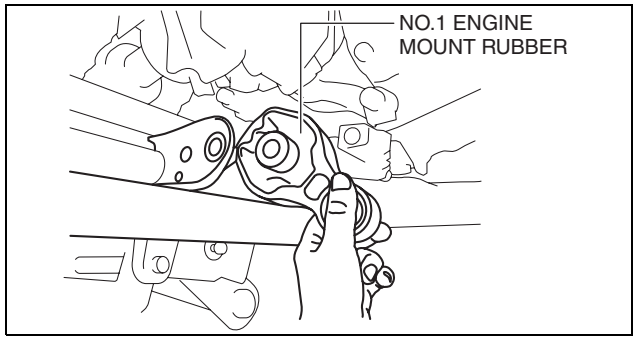
8. Loosen the front crossmember installation bolts (8) and lower the front crossmember component to 15—20 mm {0.60—0.78 in}.

Note
- To remove the No.1 engine mount, lower the front crossmember component to make clearance between the component and transfer.



ac5uuw00000649

9. Remove the No.1 engine mount rubber.



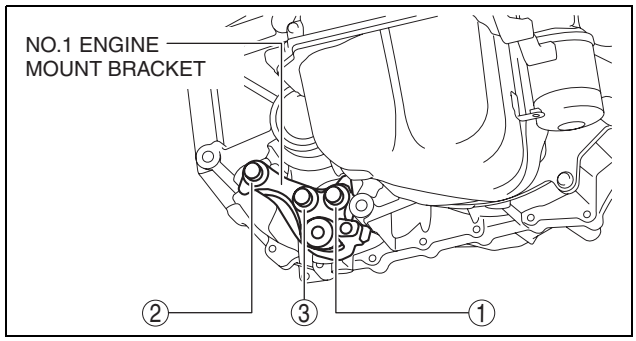
ac5uuw00000650

No.1 Engine Mount Bracket Removal Note (4WD)
1. Remove the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
2. Remove the transfer. (See 03-16A-6 TRANSFER REMOVAL/INSTALLATION [D66MX-R] (MTX).) (See 03-16B-6 TRANSFER REMOVAL/INSTALLATION [GW6AX-EL] (ATX).)
3. Remove the No.1 engine mount bracket.

No.1 Engine Mount Bracket Installation Note (4WD)
1. Install the No.1 engine mount bracket and tighten the bolts in the order shown in the figure.

Tightening torque
131—153 N·m {14—15 kgf·m, 97—112 ft·lbf}

2. Install in the reverse order of removal.

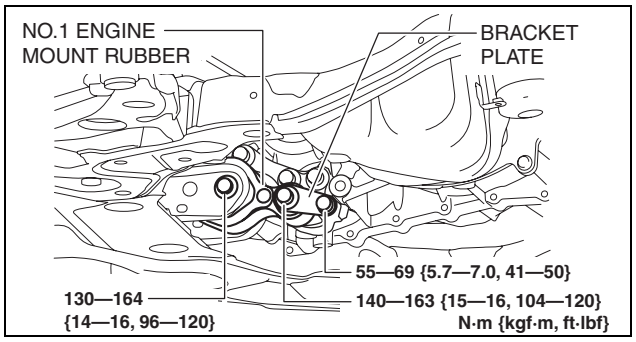


ac5wzw0000507

MECHANICAL [SKYACTIV-D 2.2]

No.1 Engine Mount Rubber, Bracket Plate Installation Note (4WD)

1. Install the No.1 engine mount rubber to the front crossmember.
2. Tighten the front crossmember installation bolts. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
3. Remove the jack.
4. Tighten the No.1 engine mount rubber installation bolts.
5. Install in the reverse order of removal.



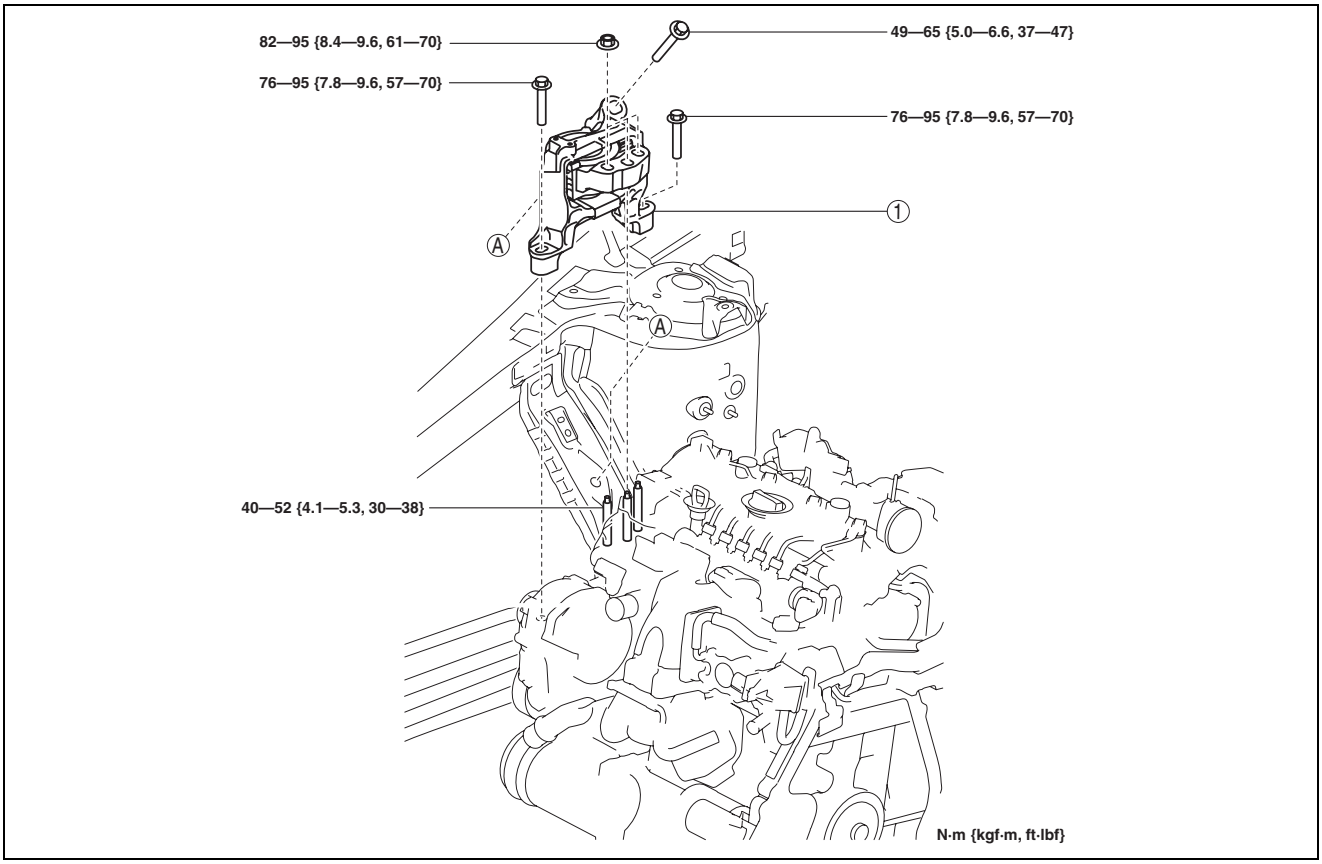
ac5wzw0000507

No.3 Engine Mount

Caution

- **Slots have been adopted for the No.3 engine mount installation holes. If the No.3 engine mount is deviated from the original position when installing the No.3 engine mount, engine noise or vibration could increase. Before removing the No.3 engine mount, place alignment marks on the No.3 engine mount and body so that they can be assembled to the same positions as before removal.**

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.



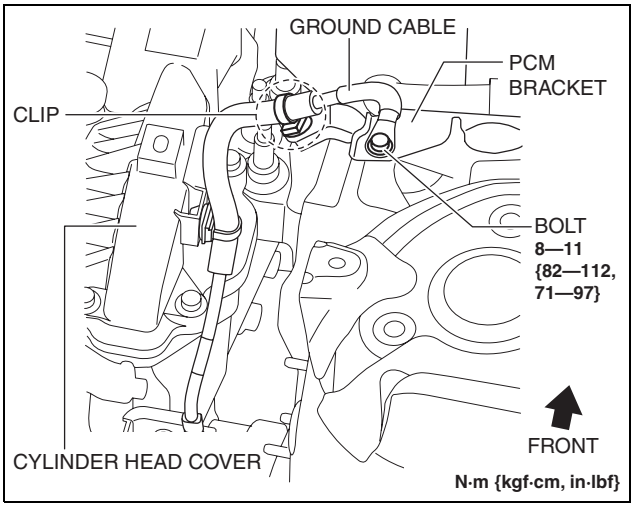
ac5wzw0000507

MECHANICAL [SKYACTIV-D 2.2]

1	No.3 engine mount (See 01-10B-87 No.3 Engine Mount Removal Note.) (See 01-10B-89 No.3 Engine Mount Installation Note.)

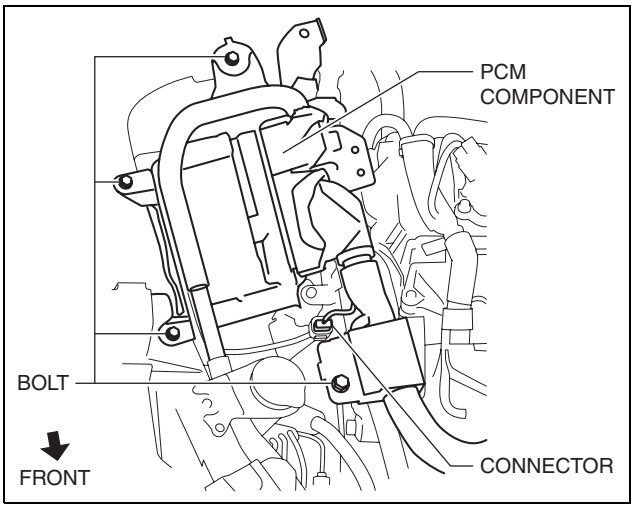
No.3 Engine Mount Removal Note

1. Remove the clip and bolt shown in the figure and set the ground cable aside.



ac5wzw0000526

2. Remove the bolts and connector shown in the figure and set the PCM component aside with the PCM connector connected.



ac5wzw0000507

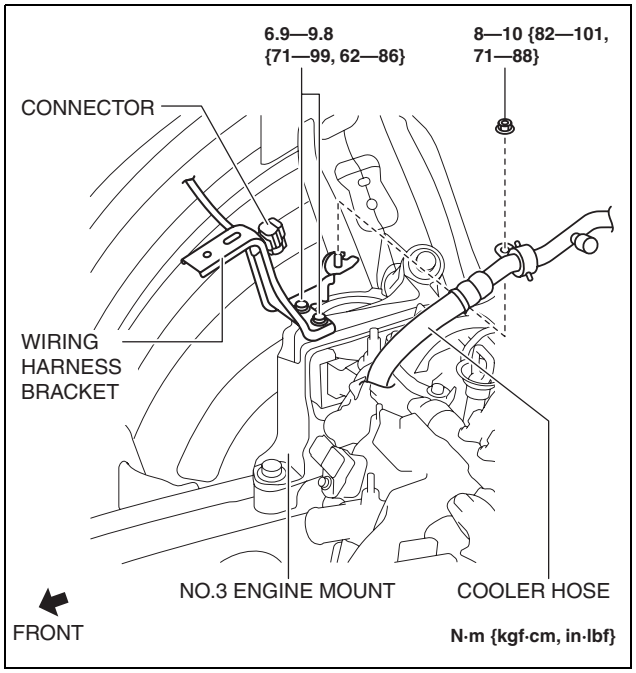
MECHANICAL [SKYACTIV-D 2.2]

3. Set the connector and cooler hose shown in the figure aside and remove the wiring harness bracket.
4. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
5. Remove the seal plate installed to the underside of the oil pan. (See 01-11B-15 OIL PAN REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

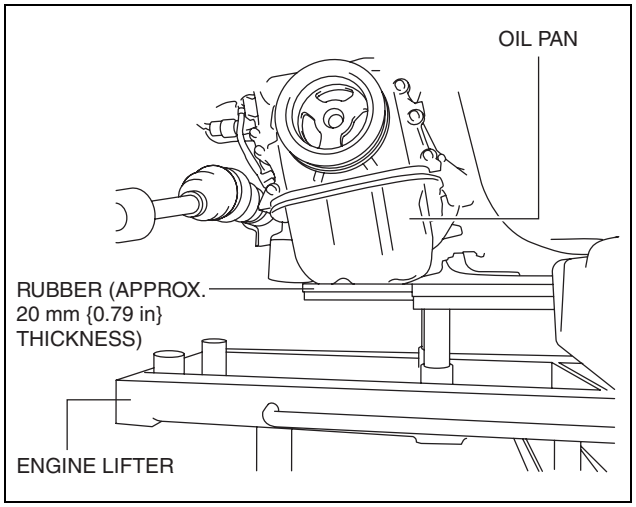
Caution

- **To prevent deformation of the oil pan, support the engine using the following methods.**
  - **— When using an engine lifter, insert rubber of appropriate size (approx. 20 mm {0.79 in} thickness) between the engine lifter and the oil pan to support the oil pan.**
  - **— When using a garage jack, place rubber of appropriate size (approx. 20 mm {0.79 in} thickness) on a batten which is large enough to cover the oil pan to support the oil pan.**

6. Before removing the No.3 engine mount, support the engine (oil pan) using a commercially available engine lifter or garage jack.



ac5wzw0000507

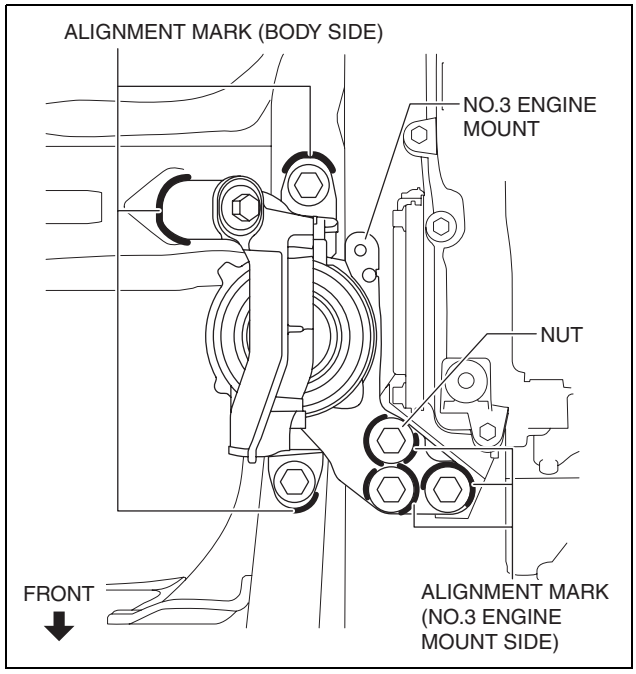


am3uuw0000890

7. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

   Note
   - Paint so that the No.3 engine mount is framed on the body side and the outline of the nut is framed on the No.3 engine mount side.

8. Remove the No.3 engine mount.



ac5uuw00000655

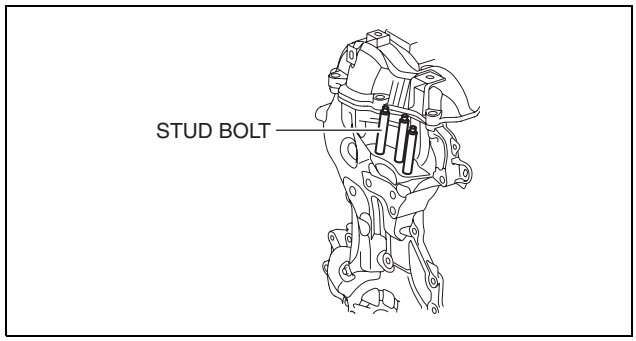
No.3 Engine Mount Installation Note

Note
- When replacing the No.3 engine mount, place a mark at the same position as the one placed before removal.
- If the No.3 engine mount nut is loosened, tighten the engine front cover stud bolts because they may be loosened.

1. Tighten the engine front cover stud bolts.

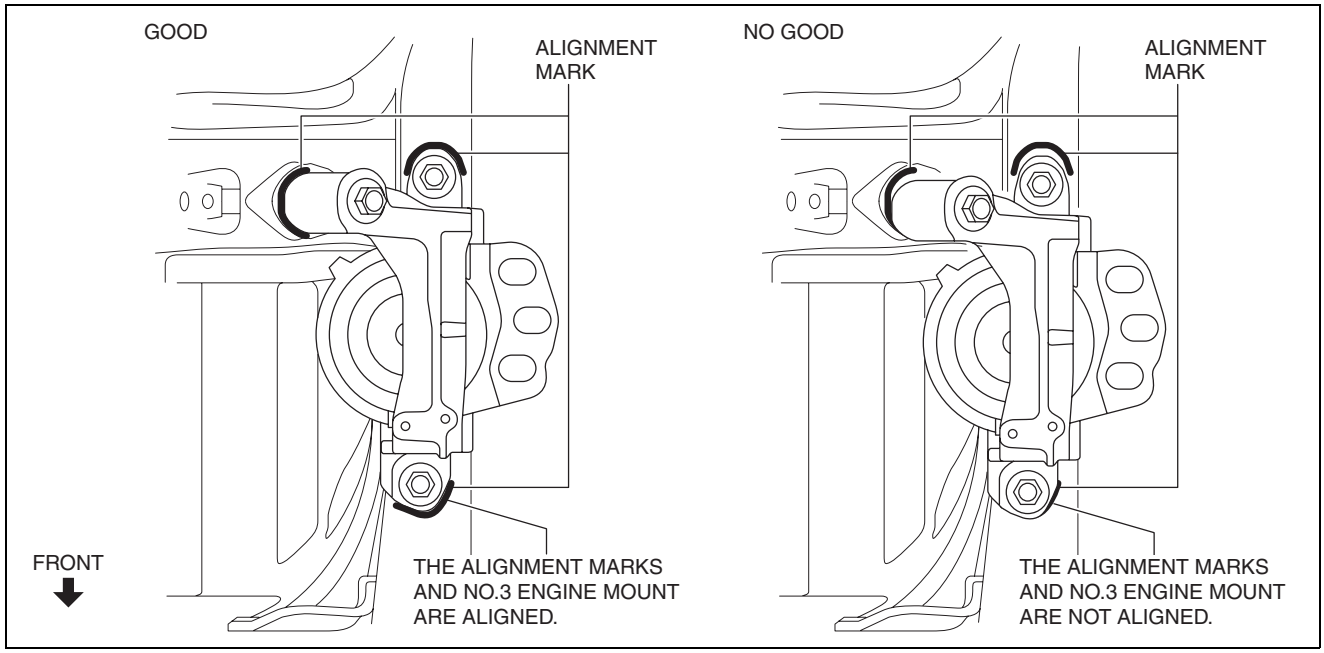
   Tightening torque
   40—52 N·m {4.1—5.3 kgf·m, 30—38 ft·lbf}

2. Temporarily tighten the No.3 engine mount installation bolts and nuts using the following procedure:



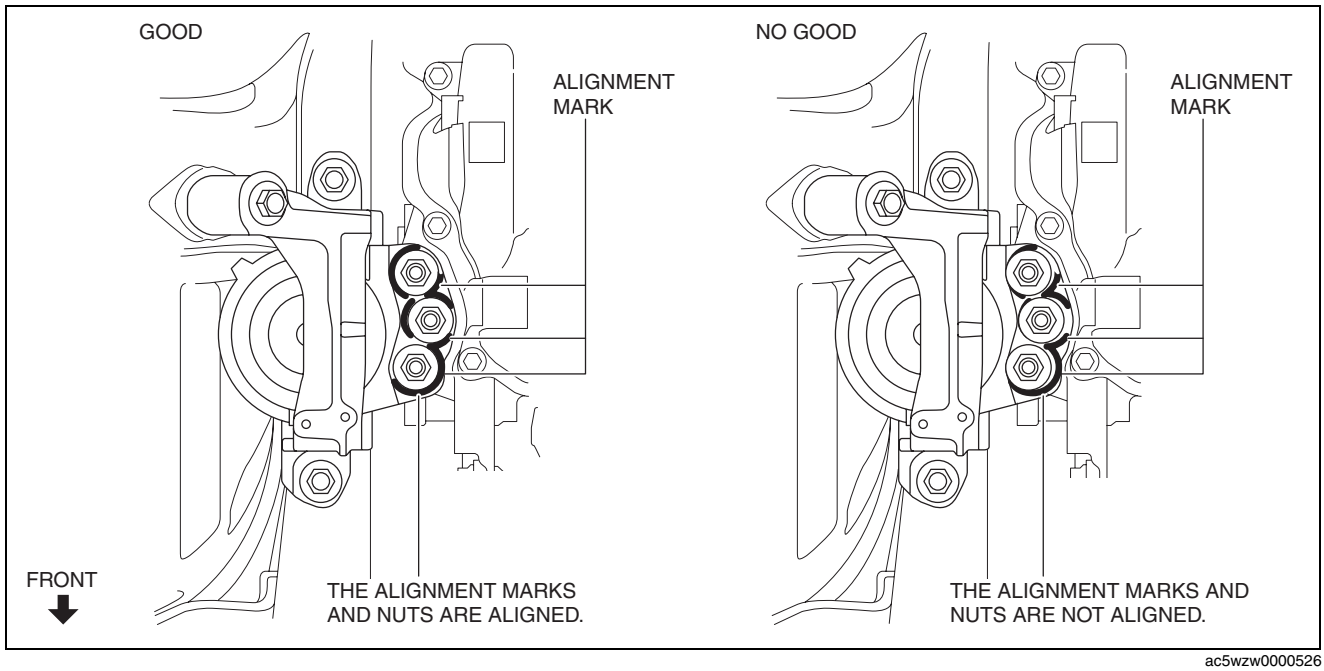
ac5wzw0000507

(1) Align the alignment marks on the body side and No.3 engine mount, and temporarily tighten the bolts shown in the figure.



ac5wzw0000526

(2) Temporarily tighten the nuts shown in the figure while aligning the alignment marks of the No.3 engine mount and nuts.



ac5wzw0000526

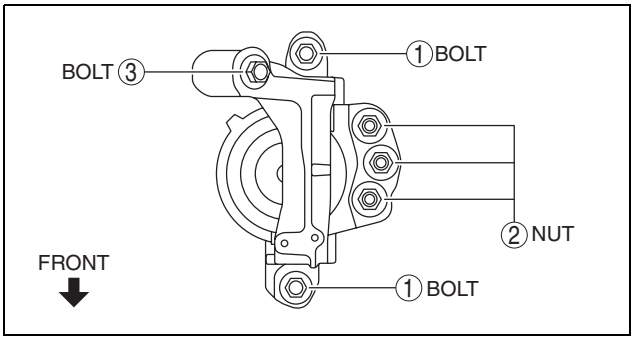
Note

- If the alignment marks are deviated, align the alignment marks while slightly moving the engine and temporarily tighten the nuts.

MECHANICAL [SKYACTIV-D 2.2]

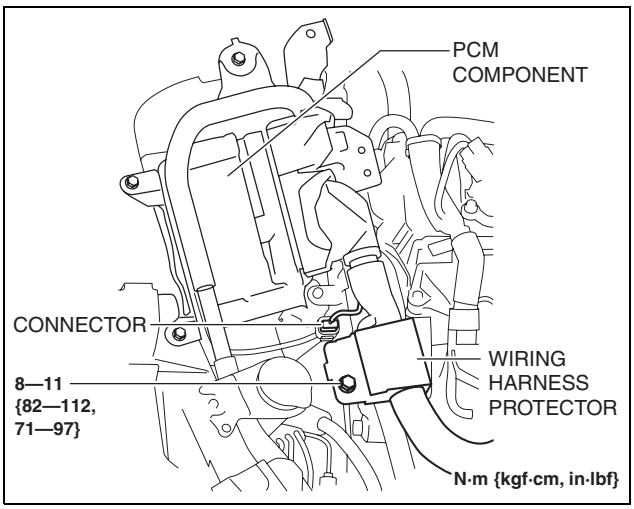
3. Tighten the No.3 engine mount installation bolts and nuts in the order as shown in the figure.

No.	Tightening torque
1	76—95 N·m {7.8—9.6 kgf·m, 57—70 ft·lbf}
2	82—95 N·m {8.4—9.6 kgf·m, 61—70 ft·lbf}
3	49—65 N·m {5.0—6.6 kgf·m, 37—47 ft·lbf}



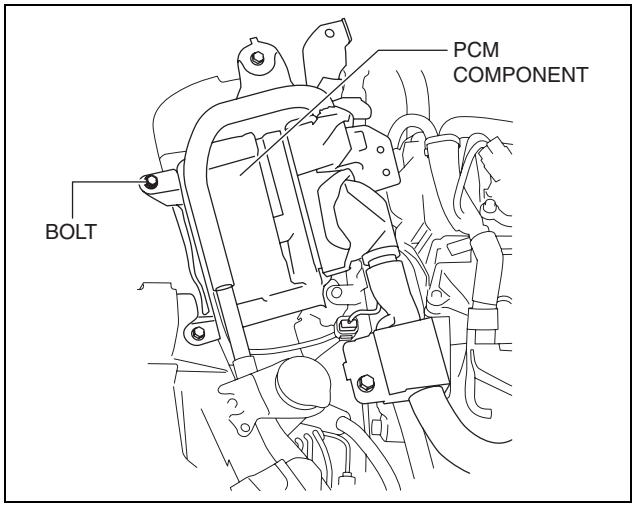
ac5wzw0000508

4. Remove the engine lifter or garage jack.
5. Install the seal plate. (See 01-11B-15 OIL PAN REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
7. Install the wiring harness bracket, cooler hose and connector.
8. Install the PCM component using the following procedure:
   (1) Install the wiring harness protector and connector.



ac5wzw0000508

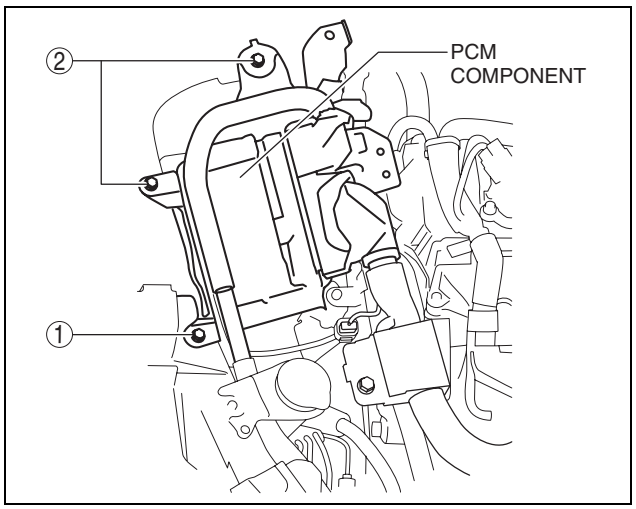
(2) Temporarily tighten the bolt shown in the figure.



ac5wzw0000508

(3) Tighten the PCM component installation bolts in the order shown in the figure.

Tightening torque
9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}



ac5wzw0000508

9. Install the ground cable to the PCM bracket.

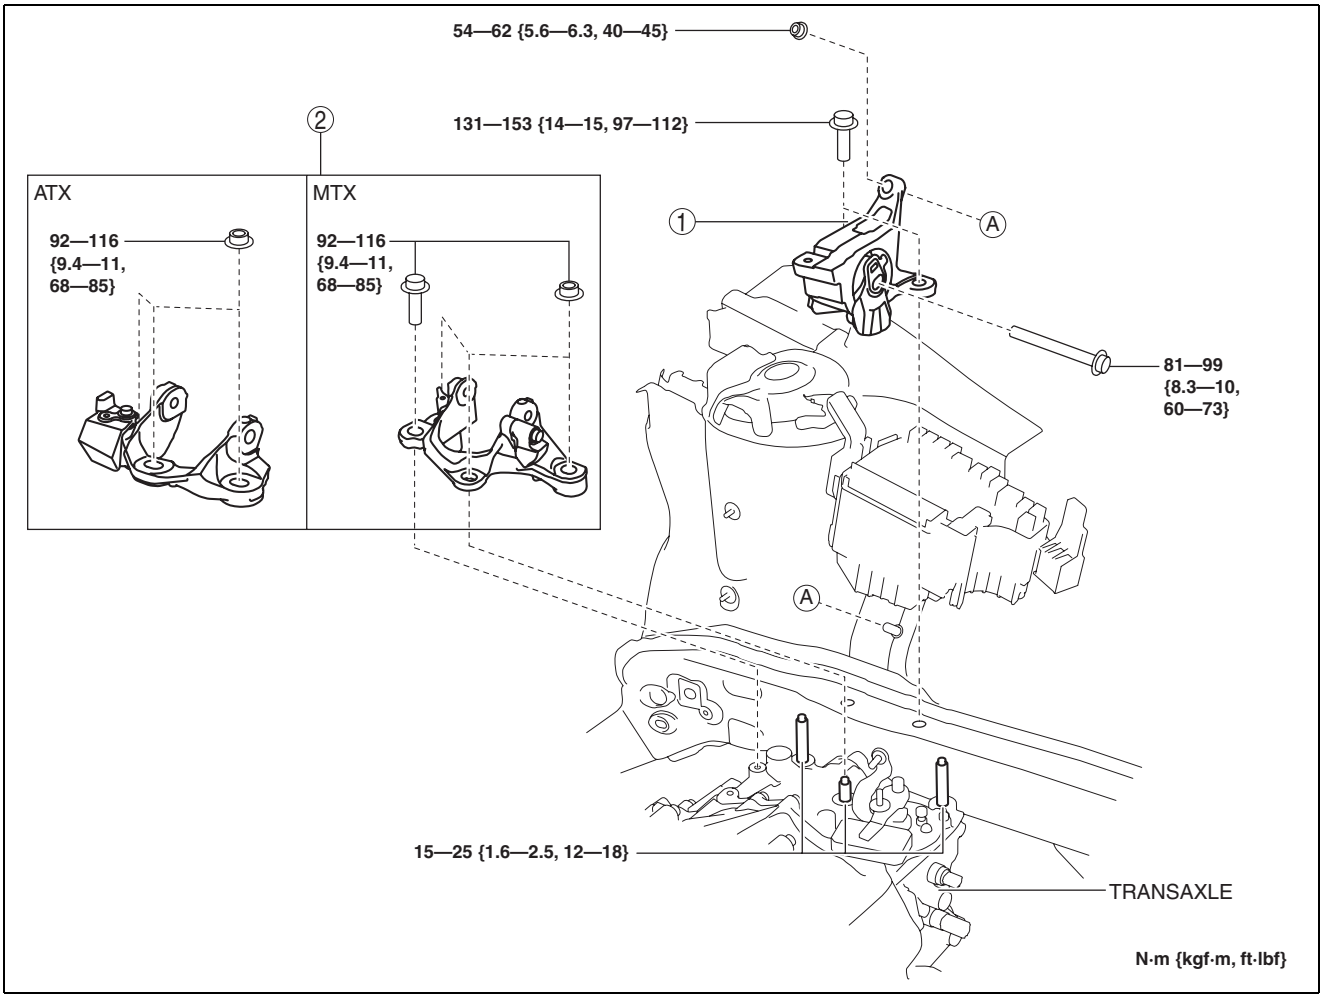
MECHANICAL [SKYACTIV-D 2.2]

No.4 Engine Mount

Caution

- **Slots have been adopted for the No.4 engine mount bracket installation holes. If the No.4 engine mount bracket is deviated from the original position when installing the No.4 engine mount bracket, engine noise or vibration could increase. Before removing the No.4 engine mount bracket, place alignment marks on the No.4 engine mount bracket so that they can be assembled to the same positions as before removal.**

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the air cleaner and air hose as a single unit. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the battery and battery tray. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.



ac5wzw0000527

1	No.4 engine mount rubber (See 01-10B-94 No.4 Engine Mount Rubber Removal Note.) (See 01-10B-97 No.4 Engine Mount Rubber Installation Note.)

MECHANICAL [SKYACTIV-D 2.2]

ENGINE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0110s5800400

Warning

- **A hot engine can cause severe burns. Turn off the engine and wait until it is cool before servicing.**
- **Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.**
- **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure". (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)**

Caution

- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**

Note

- Perform the engine and transaxle component removal/installation from the lower side of the vehicle after removing the front crossmember component.

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the air cleaner and air hose as a single unit. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the bolts, nut and connector shown in the figure, and set the wiring harness aside.
5. Remove the battery and battery tray. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Disconnect the ground cable shown in the figure.

7. Remove the following parts as a single unit (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].):
   - Turbocharger air outlet pipe
   - Turbocharger air outlet hose
   - Air intake pipe
   - Charge air cooler inlet hose
8. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
9. Drain the transaxle oil (MTX) or ATF (ATX). (See 05-15B-2 MANUAL TRANSAXLE OIL REPLACEMENT [D66M-R, D66MX-R].) (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
10. Disconnect the selector cable. (ATX) (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
11. Disconnect the control cable. (MTX) (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
12. Remove the clutch release cylinder with the pipe still connected. (MTX) (See 05-10B-24 CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
13. Disconnect the brake vacuum hose. (See 04-11-5 VACUUM HOSE REMOVAL/INSTALLATION.)
14. Disconnect the fuel main hose and fuel return hose No.1. (See 01-14B-54 LOWER CASE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
15. Disconnect the upper radiator hose and water hose (upper side of radiator). (See 01-12B-9 RADIATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
16. Disconnect the heater hose. (See 07-11-11 A/C UNIT REMOVAL/INSTALLATION.)
17. Remove the front wheels and tires. (See 02-10-1 GENERAL PROCEDURES (SUSPENSION).)
18. Remove the front under cover No.1 and No.2. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.) (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
19. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
20. Disconnect the ATF oil hose from the radiator. (if equipped) (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
21. Disconnect the lower radiator hose. (See 01-12B-12 THERMOSTAT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
22. Remove the charge air cooler outlet hose. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
23. Set the front mudguard (RH) aside. (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
24. Remove the charge air cooler outlet pipe. (See 01-13B-17 CHARGE AIR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
25. Remove the drive belt. (See 01-10B-8 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
26. Remove the A/C compressor with the pipes connected and secure the A/C compressor using wire or rope so that it is out of the way. (See 07-11-25 A/C COMPRESSOR REMOVAL/INSTALLATION.)
27. Remove the middle pipe installation nut (catalytic converter side) and secure the middle pipe using wire or rope so that it is out of the way. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
28. Remove the propeller shaft. (4WD) (See 03-15-2 PROPELLER SHAFT REMOVAL/INSTALLATION.)
29. Disconnect the front drive shaft (LH) from the transaxle side and set it aside. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
30. Disconnect the front drive shaft (RH) from the transaxle side and set it aside. (2WD) (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
31. Remove the drive shaft (RH). (4WD) (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
32. Remove in the order indicated in the table.
33. Install in the reverse order of removal.
34. Refill the transaxle oil (MTX) or ATF (ATX). (See 05-15B-2 MANUAL TRANSAXLE OIL REPLACEMENT [D66M-R, D66MX-R].) (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
35. Refill the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
36. Start the engine, and inspect and adjust the following:
    - Front wheel alignment (See 02-11-1 FRONT WHEEL ALIGNMENT.)
    - Leakage of engine oil, engine coolant, transaxle oil (MTX), ATF (ATX), and fuel.
    - Runout and contact of pulley and belt.
    - Idle speed (See 01-10B-3 ENGINE TUNE-UP [SKYACTIV-D 2.2].)
    - Engine-driven accessories operation.

Note

MECHANICAL [SKYACTIV-D 2.2]

- If the engine is overhauled and assembled to the vehicle, perform a road test to verify that there is no abnormal vibration and noise.

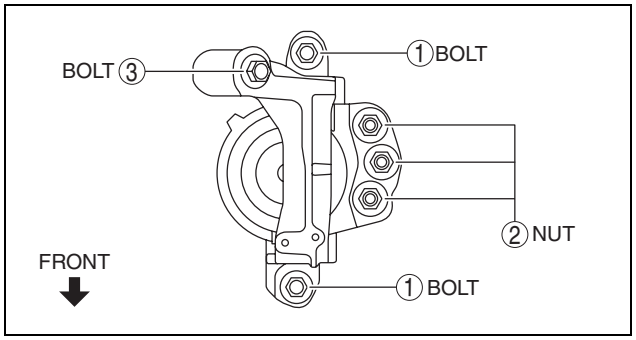
9. Tighten the No.3 engine mount installation bolts and nuts in the order shown in the figure.

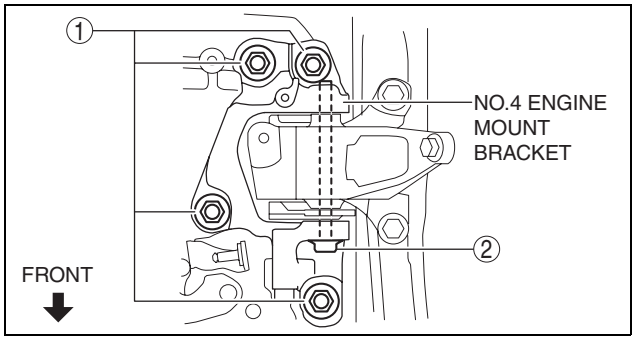
No.	Tightening torque
1	76—95 N·m {7.8—9.6 kgf·m, 57—70 ft·lbf}
2	82—95 N·m {8.4—9.6 kgf·m, 61—70 ft·lbf}
3	49—65 N·m {5.0—6.6 kgf·m, 37—47 ft·lbf}



ac5wzw0000493

10. Tighten the No.4 engine mount bracket installation bolt and nuts in the order shown in the figure.

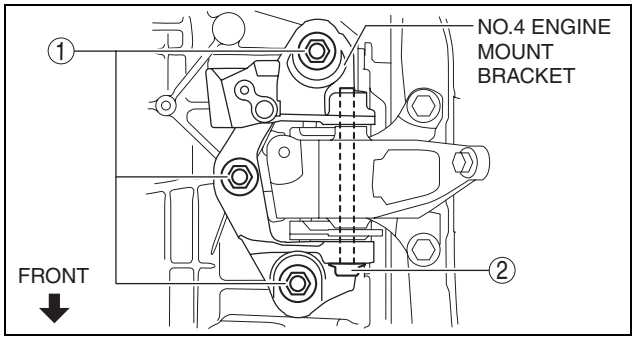
MTX



ac5wzw0000521

ATX

No.	Tightening torque
1	92—116 N·m {9.4—11 kgf·m, 68—85 ft·lbf}
2	81—99 N·m {8.3—10 kgf·m, 60—73 ft·lbf}

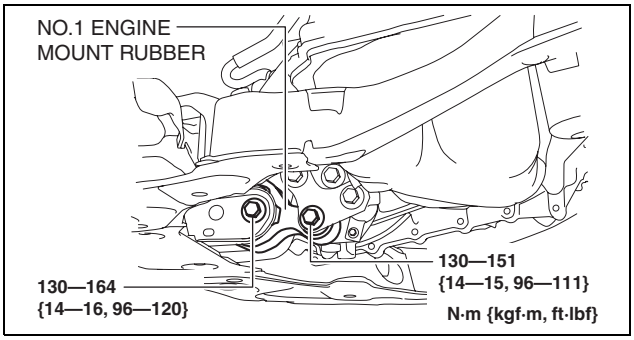


ac5wzw0000493

11. Tighten the No.1 engine mount rubber installation bolts.

MECHANICAL [SKYACTIV-D 2.2]

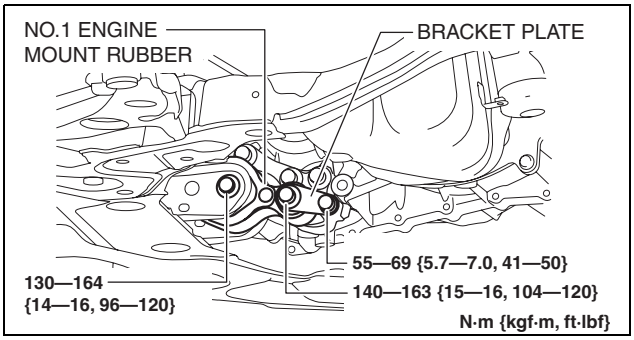
2WD



ac5wzw0000493

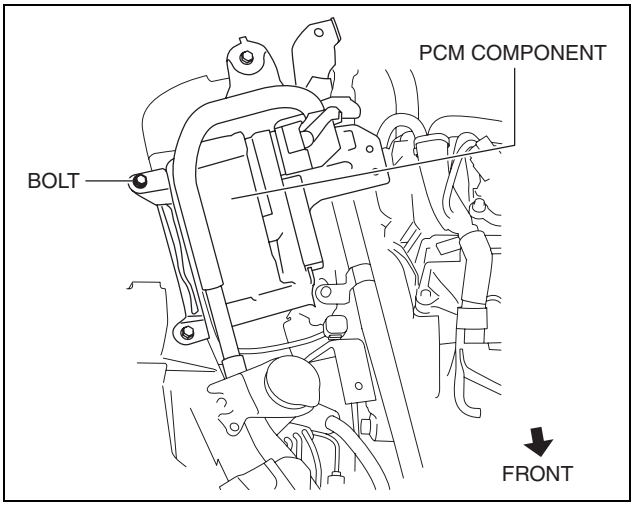
4WD

12. Install the seal plate. (See 01-11B-15 OIL PAN REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
13. Install the wiring harness bracket, cooler hose and connector.
14. Install the PCM component using the following procedure:



ac5wzw0000493

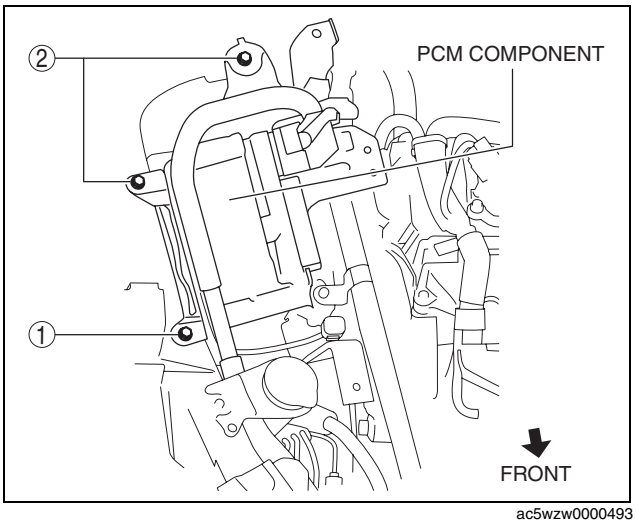
(1) Temporarily tighten the bolt as shown in the figure.



ac5wzw0000493

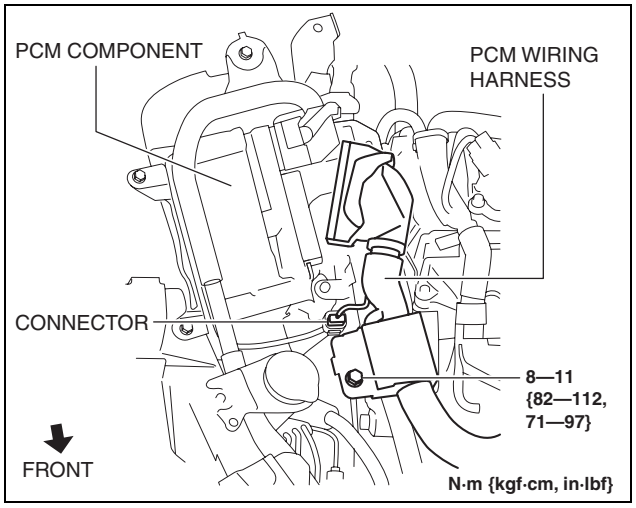
(2) Tighten the PCM component installation bolts in the order shown in the figure.

Tightening torque
9—10 N·m {92—101 kgf·cm, 80—88 in·lbf}



ac5wzw0000493

(3) Install the bolt and connector as shown in the figure.
(4) Connect the PCM connector (140 pin side) to the PCM.



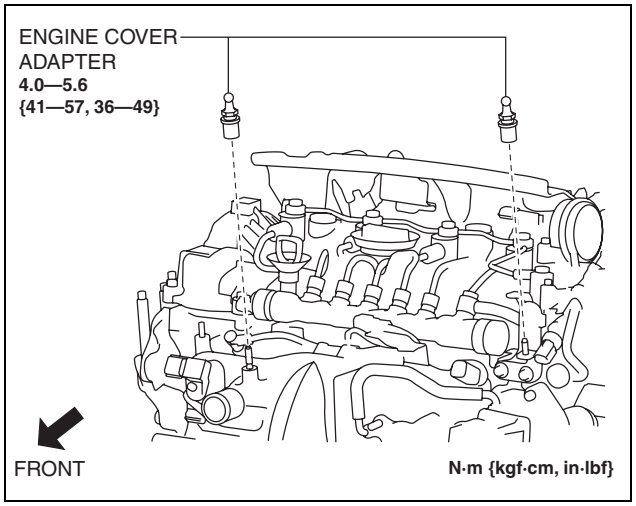
ac5wzw0000493

ENGINE DISASSEMBLY/ASSEMBLY [SKYACTIV-D 2.2]

id0110s5800500

Caution
- **When the transaxle is installed, do not suspend the engine. Otherwise, the SST installation area of the cylinder head may be damaged due to excess weight. Only suspend the engine after separating the engine and transaxle.**

1. Remove the engine cover adaptor.

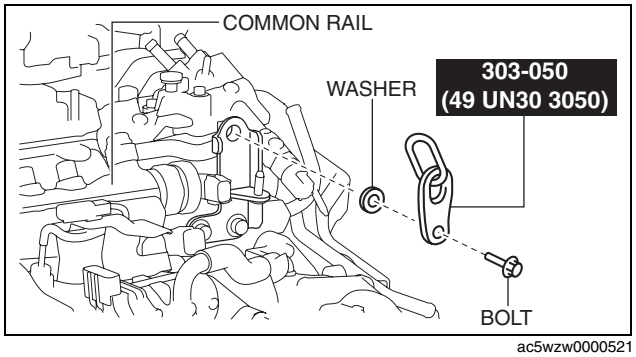


ac5wzw0000521

2. Install the SST to the position shown in the figure using the following bolt and washer.

Bolt: part number 99794 1025 or an M10 x 1.25, length 25 mm {0.98 in}
Washer: approx. 3 mm {0.1 in} thickness

Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}



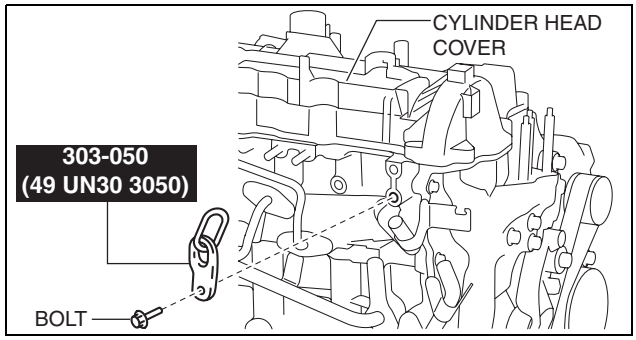
ac5wzw0000521

MECHANICAL [SKYACTIV-D 2.2]

3. Install the SST to the position shown in the figure using the following bolt and washer.

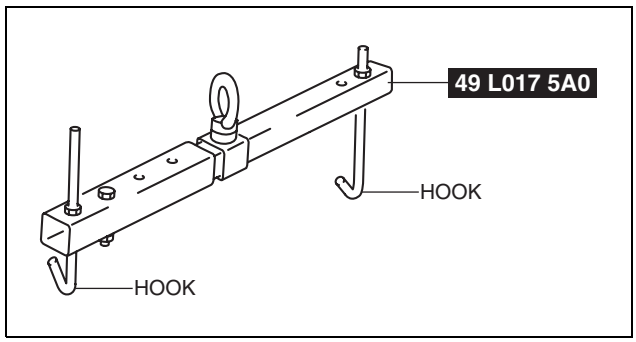
   Bolt: part number 99794 1025 or an M10 x 1.25, length 25 mm {0.98 in}

   Tightening torque
   38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}



ac5wzw0000493

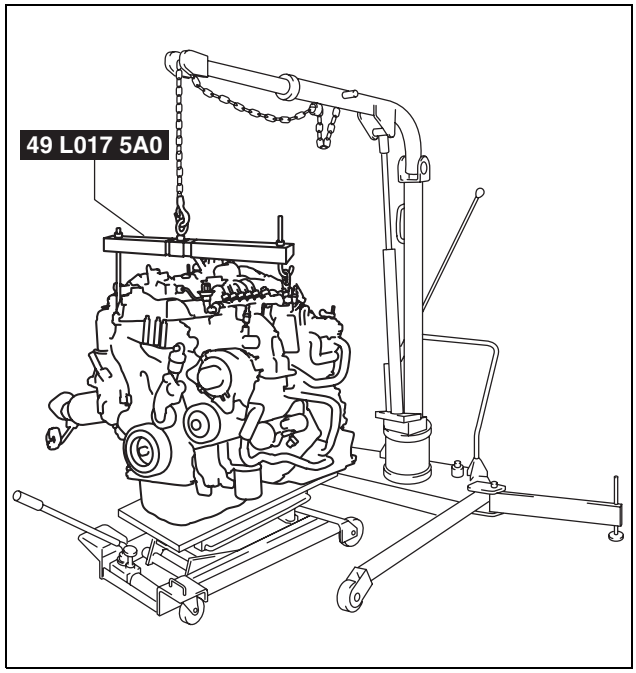
4. Engage the hook for the **SST (49 L017 5A0)** to the **SST (49 UN30 3050)**.



ac5wzw0000521

5. To ensure the safety of the work (control engine and transaxle sway), set a hoist as shown in the figure.

   Caution
   - **Do not lift up the engine.**



ac5jjw00005202

6. Remove the exhaust system. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
7. Remove the turbocharger. (See 01-13B-32 TURBOCHARGER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
8. Remove the vacuum chamber. (See 01-13B-37 VACUUM CHAMBER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
9. Remove the following emission system related parts:
   - EGR cooler bypass valve (See 01-16B-17 EGR COOLER BYPASS VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   - EGR pipe (See 01-16B-9 EGR PIPE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   - EGR valve (See 01-16B-7 EGR VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   - EGR cooler (See 01-16B-12 EGR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

MECHANICAL [SKYACTIV-D 2.2]

10. Remove the transfer bracket and transfer. (4WD) (See 03-16A-6 TRANSFER REMOVAL/INSTALLATION [D66MX-R] (MTX).) (See 03-16B-6 TRANSFER REMOVAL/INSTALLATION [GW6AX-EL] (ATX).)
11. Remove the bracket No.1. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
12. Remove the starter. (See 01-19B-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
13. Remove the generator. (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
14. Lock the drive plate against rotation using the crankshaft pulley lock bolt. (ATX)
15. Remove the torque converter installation nut from the starter installation hole. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL] (2WD).) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL] (4WD).)
16. Disconnect the engine and transaxle, and lower only the engine from the engine lifter. (See 05-15B-4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [D66M-R] (MTX, 2WD).) (See 05-15B-18 MANUAL TRANSAXLE REMOVAL/INSTALLATION [D66MX-R] (MTX, AWD).) (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL] (ATX, 2WD).) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL] (ATX, AWD).)
17. Remove the intake-air system. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
18. Remove the following fuel system related parts:
    - Injection pipe (See 01-14B-33 INJECTION PIPE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
    - Fuel injectors (See 01-14B-35 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
    - Supply pump (See 01-14B-46 SUPPLY PUMP REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
    - Lower case (See 01-14B-54 LOWER CASE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
    - Common rail (See 01-14B-52 COMMON RAIL REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
19. Remove the glow plugs. (See 01-13B-28 GLOW PLUG REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
20. Remove the vacuum pump. (See 04-11-22 VACUUM PUMP REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
21. Remove the oil cooler. (See 01-11B-10 OIL COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
22. Remove the oil filter. (See 01-11B-5 OIL FILTER REPLACEMENT [SKYACTIV-D 2.2].)
23. Remove the engine oil solenoid valve. (See 01-11B-11 ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
24. Remove the following control system related parts:
    - CMP sensor
    - Engine oil temperature sensor/engine oil pressure sensor
    - ECT sensor
    - CKP sensor
25. Remove in the order indicated in the table
26. Assemble in the reverse order of disassembly.

MECHANICAL [SKYACTIV-D 2.2]

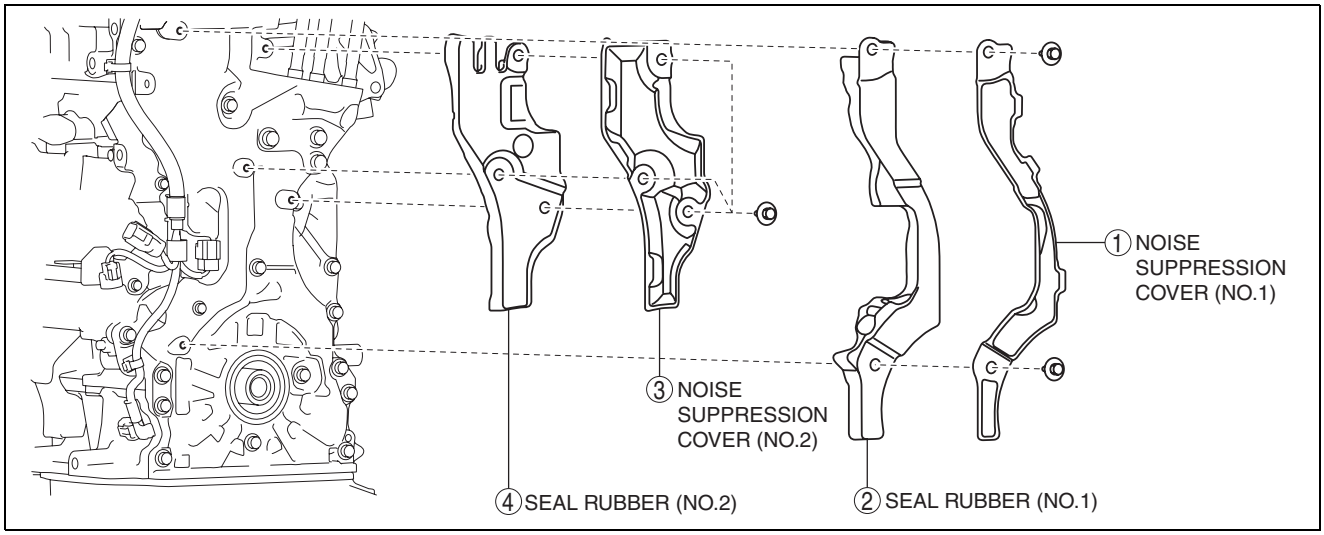
1	Exhaust gas pressure sensor No.1
2	Exhaust insulator
3	Exhaust gas pressure sensor No.2
4	Water pipe
5	Seal rubber
6	Noise suppression cover (No.3)
7	Drive belt auto tensioner (See 01-10B-117 Drive Belt Auto Tensioner Installation Note.)
8	Water pump component (See 01-10B-116 Water pump component installation note.)

9	Water pipe
10	Water hose and pipe (ATX)
11	Noise suppression cover (No.1), noise suppression cover (No.2), seal rubber (See 01-10B-115 Noise Suppression Cover (No.1), Noise Suppression Cover (No.2), Seal Rubber Removal Note.) (See 01-10B-116 Noise Suppression Cover (No.1), Noise Suppression Cover (No.2), Seal Rubber Installation Note.)

MECHANICAL [SKYACTIV-D 2.2]

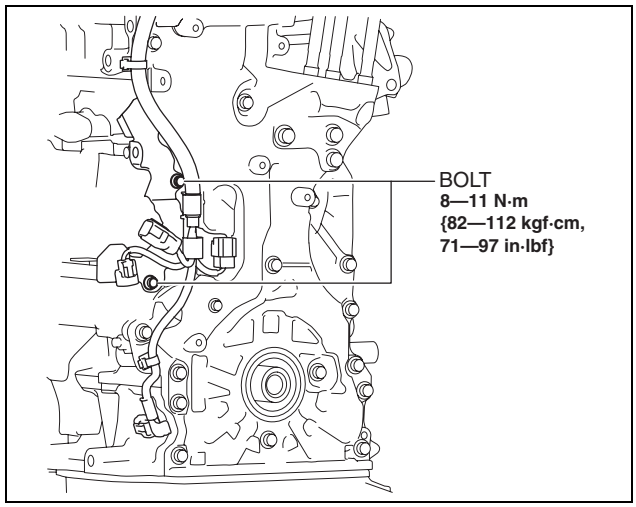
Noise Suppression Cover (No.1), Noise Suppression Cover (No.2), Seal Rubber Removal Note

1. Remove the noise suppression covers and seal rubbers in the order shown in the figure.



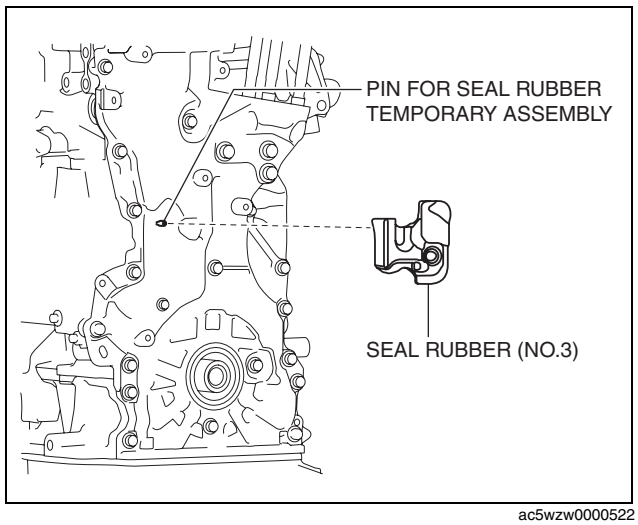
ac5wzw0000521

2. Remove the wiring harness using the following procedure:.
   (1) Remove the wiring harness bracket installation bolts shown in the figure.
   (2) Remove all of the related wiring harness clip.



ac5wzw0000521

3. Remove the seal rubber (No.3) shown in the figure.



ac5wzw0000522

MECHANICAL [SKYACTIV-D 2.2]

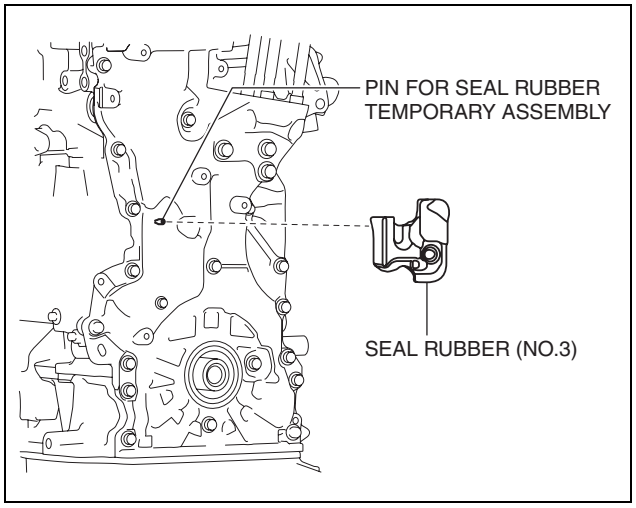
Noise Suppression Cover (No.1), Noise Suppression Cover (No.2), Seal Rubber Installation Note

1. Temporarily put the seal rubber (No.3) on the engine front cover.
2. Install the wiring harness and wiring harness bracket.

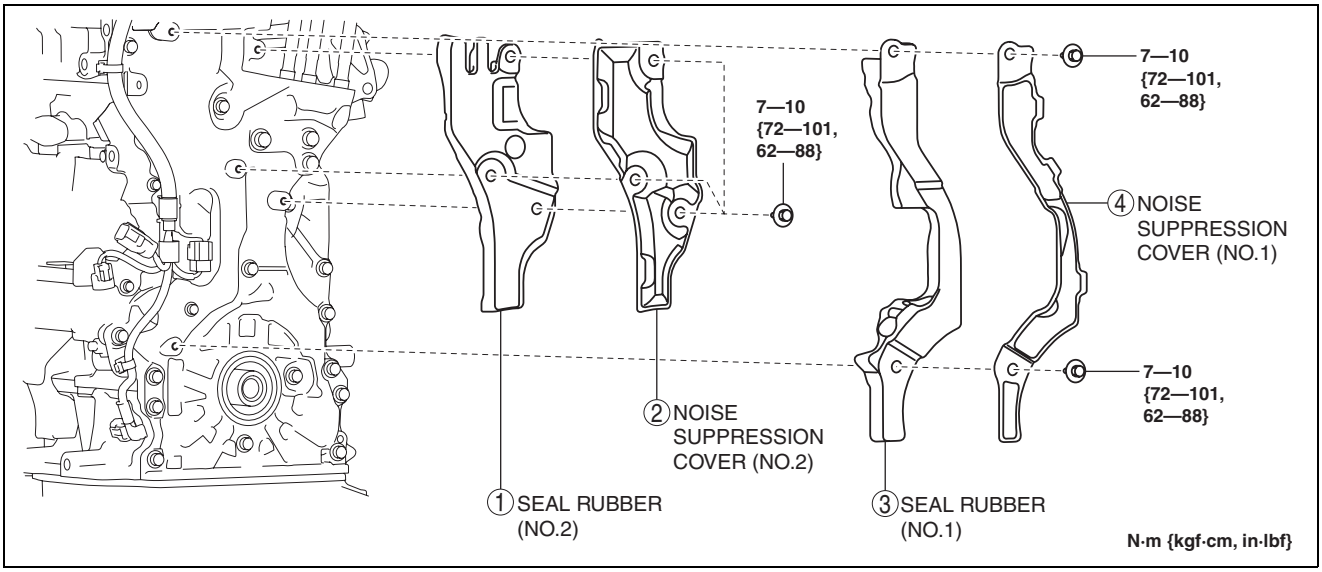
Note
- The seal rubber (No.3) can be fixed by installing the wiring harness bracket.

Caution
- **Be careful that the covers and seal rubbers do not get hung up on the noise suppression cover installation bolts.**

3. Install the noise suppression covers and seal rubbers in the order shown in the figure.



ac5wzw0000522

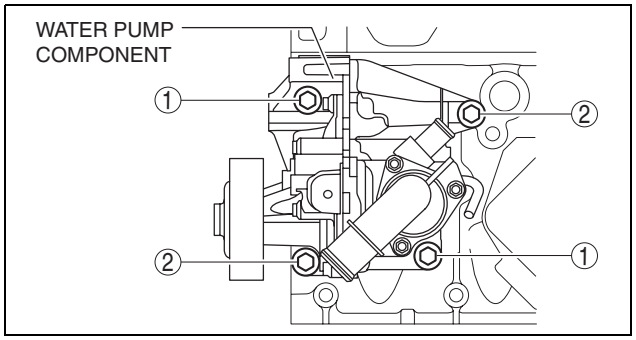


ac5wzw0000527

Water pump component installation note

1. Tighten the water pump component installation bolts in the order shown in the figure.

Tightening torque
44—54 N·m {4.5—5.5 kgf·m, 33—39 ft·lbf}



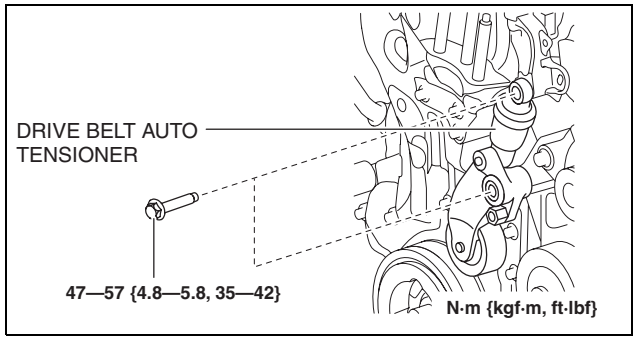
ac5wzw0000494

Drive Belt Auto Tensioner Installation Note

Caution
- **To allow the drive belt auto tensioner to function correctly, always bleed the air from the drive belt auto tensioner using the following procedure after assembling the drive belt auto tensioner.**

1. Install the drive belt auto tensioner to the engine.

Caution
- **To prevent damage to the drive belt auto tensioner, do not apply excessive torque after the tensioner moves full-stroke.**



ac5wzw0000532

2. Insert the wrench onto the cast hexagon on the drive belt auto tensioner, move the drive belt auto tensioner up and down at full-stroke three times to bleed the air.

Note
- By moving the drive belt auto tensioner up and down full-stroke three times, the piston inside the tensioner moves to bleed the air.

LUBRICATION [SKYACTIV-G 2.0]

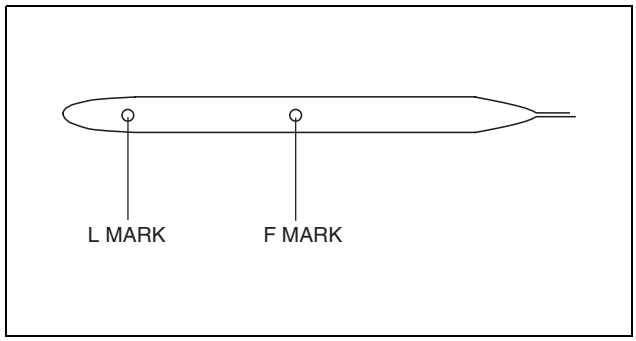
ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0]

id0111h3800500

1. Position the vehicle on level ground.
2. Warm up the engine.
3. Stop the engine and allow **at least 5 min** before continuing.
4. Remove the dipstick, wipe it cleanly, and reinstall it fully.
5. Remove the dipstick and verify that the oil level is between the F and L marks on the dipstick.
   - If the oil level is below or near the L mark, add engine oil. (See 01-11A-3 ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0].)
   - If the oil level is above the F mark, penetration of fuel into the engine oil can be considered. Replace the engine oil. (See 01-11A-3 ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0].)
6. Insert the oil level gauge completely until it attaches to the cylinder head cover.



am3uuw0000892

ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0]

id0111h3800400

Warning

- **Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

Caution

- **If engine oil is spilled on the exhaust system, wipe it off completely. If you fail to wipe the spilled engine oil, it will produce fumes because of the heat.**

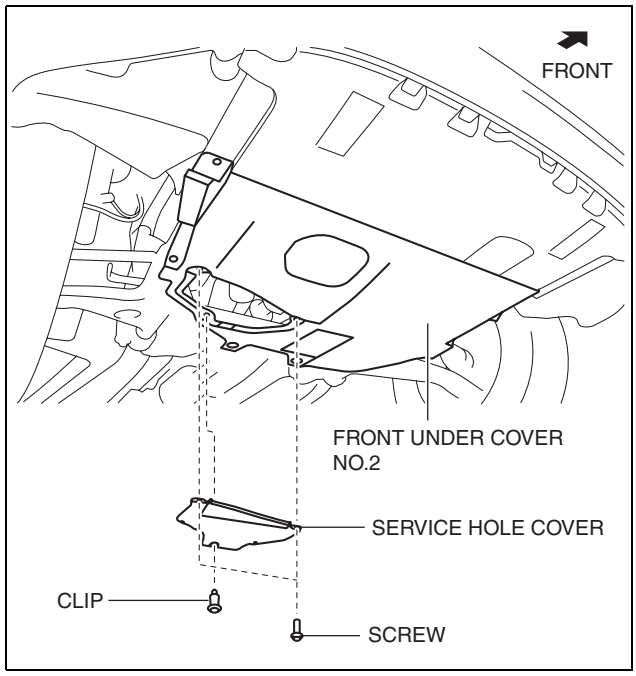
1. Position the vehicle on level ground.
2. Remove the oil filler cap.
3. Remove the service hole cover (installed to front under cover No.2) used to drain the engine oil.
4. Remove the oil pan drain plug.
5. Drain the engine oil into a container.
6. Install the oil pan drain plug with a new gasket.

Oil pan drain plug tightening torque
30—41 N·m {3.1—4.1 kgf·m, 23—30 ft·lbf}

Note

- The amount of residual oil in the engine can vary according to factors such as the replacement method and oil temperature. Verify the oil level after engine oil replacement.

7. Refill with the following type and amount of engine oil.



ac5uuw00000583

LUBRICATION [SKYACTIV-G 2.0]

Engine oil [Europe]

Recommended engine oil		Alternative engine oil	
Mazda Original Oil Supra 0W-20	Mazda Original Oil Ultra 5W-30	API SM/SN 0W-20	API SL/SM or ACEA A3/A5 5W-30

Engine oil [Except Europe]

Item	Specifications
Grade	API SG/SH/SJ/SL/SM/SN or ILSAC GF-2/GF-3/GF-4/GF-5
Viscosity (SAE)	10W-30, 10W-40, 10W-50, 5W-20, 5W-30, 5W-40, 0W-20, 0W-30*1

***1 : Except China**

Engine oil capacity [Without oil cooler] (approx. quantity)
Oil replacement: 4.0 L {4.2 US qt, 3.5 Imp qt}
Oil and oil filter replacement: 4.2 L {4.4 US qt, 3.7 Imp qt}
Total (dry engine): 4.9 L {5.2 US qt, 4.3 Imp qt}

Engine oil capacity [With oil cooler] (approx. quantity)
Oil replacement: 4.0 L {4.2 US qt, 3.5 Imp qt}
Oil and oil filter replacement: 4.2 L {4.4 US qt, 3.7 Imp qt}
Total (dry engine): 5.0 L {5.3 US qt, 4.4 Imp qt}

8. Install the oil filler cap.
9. Start the engine and confirm that there is no oil leakage.
   - If there is oil leakage, repair or replace the applicable part.
10. Inspect the oil level. (See 01-11A-3 ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0].)
11. Install the service hole cover.

LUBRICATION [SKYACTIV-G 2.0]

OIL FILTER REPLACEMENT [SKYACTIV-G 2.0]

id0111h3800700

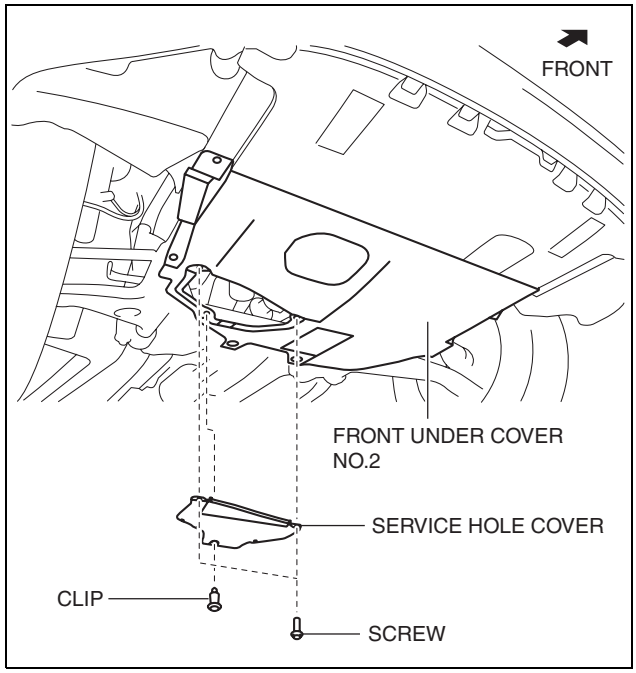
Warning

- **Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

Caution

- **If engine oil is spilled on the exhaust system, wipe it off completely. If you fail to wipe the spilled engine oil, it will produce fumes because of the heat.**

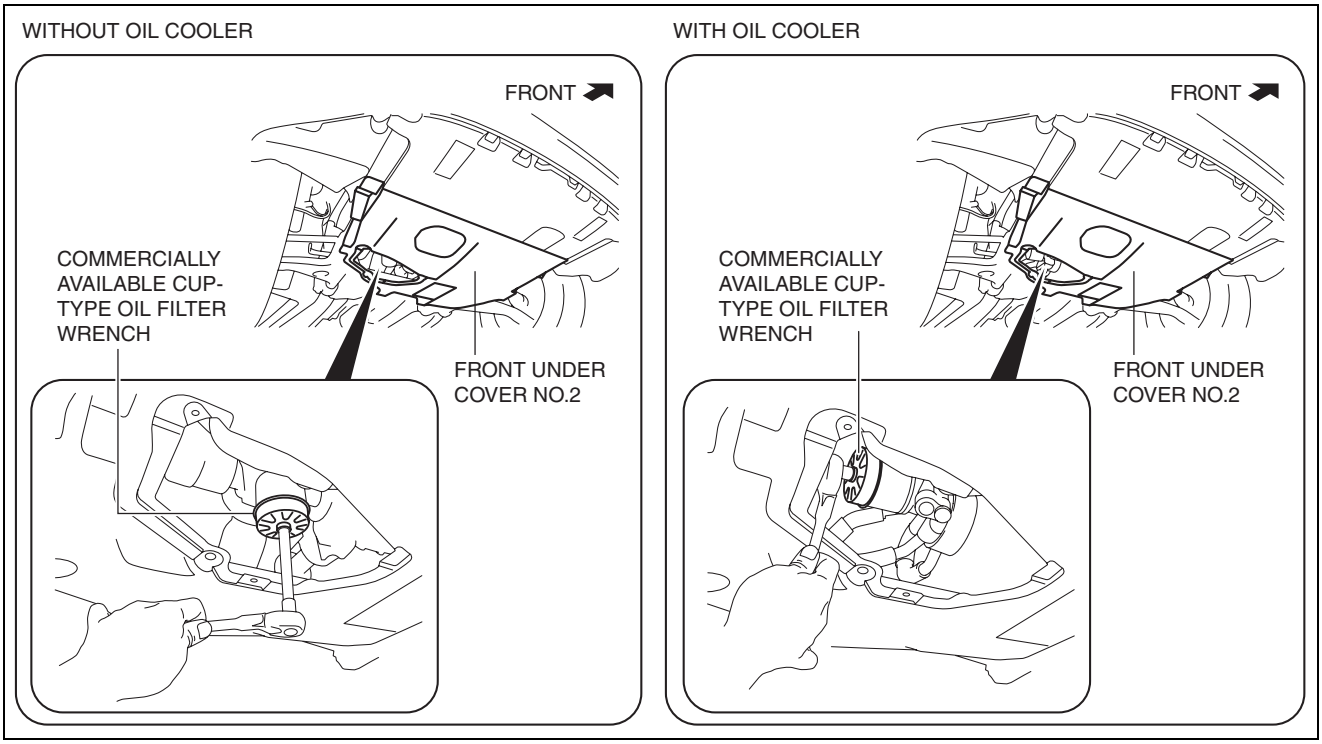
1. Remove the service hole cover (installed to front under cover No.2) used to remove the oil filter.



ac5uuw00000584

LUBRICATION [SKYACTIV-G 2.0]

2. Remove the oil filter using the commercially available, cup-type oil filter wrench (**67 mm {2.6 in} diameter, 14 sided**).



ac5uuw00002409

3. Use a clean rag to wipe off the mounting surface.
4. Apply clean engine oil to the O-ring of a new oil filter.
5. Tighten the oil filter according to the instructions on the package or side of the oil filter.

Tightening torque (reference value)
12—16 N·m {123—163 kgf·cm, 107—141 in·lbf}

6. Start the engine and confirm that there is no oil leakage.
   - If there is oil leakage, repair or replace the applicable part.
7. Inspect the oil level. (See 01-11A-3 ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0].)
8. Install the service hole cover.

LUBRICATION [SKYACTIV-G 2.0]

OIL PRESSURE INSPECTION [SKYACTIV-G 2.0]

id0111h3800300

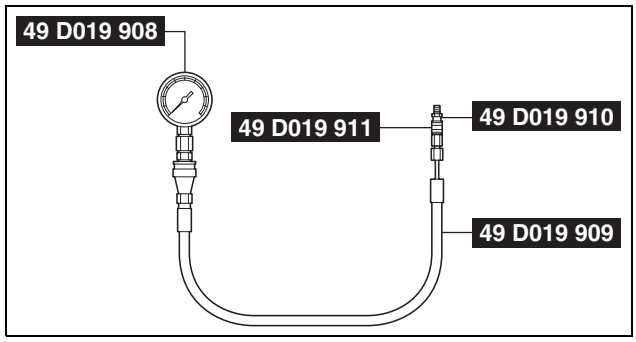
Warning

- **Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

1. Disconnect the negative battery cable.
2. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
3. Remove the oil pressure switch. (See 01-11A-10 ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

Note

- This inspection can be performed using a combination of **SSTs 49 D019 908** (gauge), **49 D019 909** (hose), **49 D019 910** (adapter), and **49 D019 911** (adapter).



am6zzw0000438

4. Install the **SSTs** to the oil pressure switch installation hole using the following procedure.
   (1) Assemble **SSTs 49 D019 908**, **49 D019 909**, and **49 D019 911** outside of the engine compartment beforehand.
   (2) Install **SST 49 D019 910** to the oil pressure switch installation hole.
   (3) Install **SST 49 D019 911** to the **SST 49 D019 910**.
5. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
6. Warm up the engine to normal operating temperature.
7. Run the engine at the specified speed, and note the gauge readings.
   - If not within the specification, inspect for the cause and repair or replace if necessary.

Note

- The oil pressure can vary with oil viscosity, temperature and engine speed.

Oil pressure (reference value) [coolant temperature: 80—90 °C {176—194 °F}]
Lo : 110—175 kPa {1.13—1.78 kgf/cm^2, 16.0—25.3 psi} [1,500 rpm]
Hi : 300—430 kPa {3.06—4.38 kgf/cm^2, 43.6—62.3 psi} [4,500 rpm]

8. Stop the engine and wait until it is cools.
9. Disconnect the negative battery cable.
10. Remove the **SSTs.**
11. Install the oil pressure switch. (See 01-11A-10 ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
12. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
13. Start the engine and confirm that there is no oil leakage.
    - If there is oil leakage, repair or replace the applicable part.
14. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)

LUBRICATION [SKYACTIV-G 2.0]

OIL COOLER REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

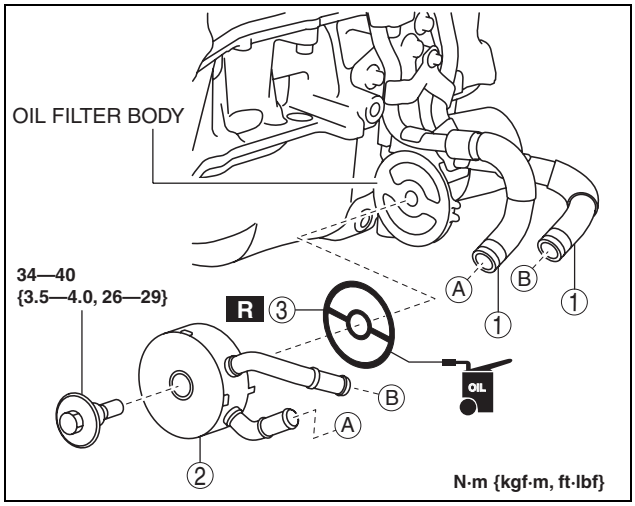
id0111h3800800

Warning

- **Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
3. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)
4. Remove in the order indicated in the table.
5. Use a clean rag to wipe off the mounting surface on the oil filter body and the oil cooler.
6. Install in the reverse order of the removal.
7. Refill the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)
8. Start the engine and confirm that there is no oil leakage.
   - If there is oil leakage, repair or replace the applicable part.
9. Inspect the oil level. (See 01-11A-3 ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0].)
10. Inspect for engine coolant leakage. (See 01-12A-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0].)

1	Water hose
2	Oil cooler (See 01-11A-9 Oil Cooler Installation Note.)
3	Gasket (See 01-11A-9 Gasket Installation Note.)



ac5uuw00000586

LUBRICATION [SKYACTIV-G 2.0]

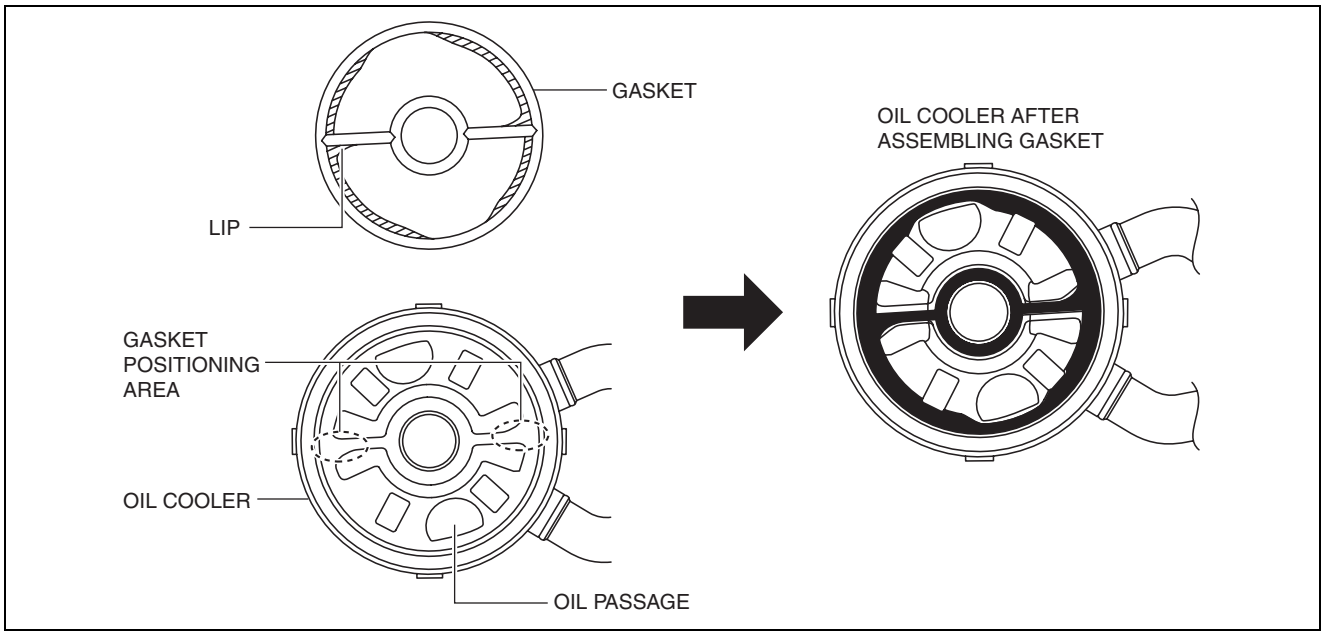
Gasket Installation Note

1. Apply engine oil to a new gasket.

Caution

- **Assemble the gasket to the correct position using the following procedure so that the gasket lip does not overlap the oil passage for the oil cooler. Otherwise, it could leak engine oil and damage the engine.**

2. Align the gasket lip to the gasket positioning areas of the oil cooler and assemble the gasket to the oil cooler.



ac5uuw00000587

Oil Cooler Installation Note

1. Install the oil cooler with the tab aligned with the notch of the oil filter body.

5	Gasket

LUBRICATION [SKYACTIV-G 2.0]

Engine Oil Solenoid Valve Removal Note

1. Cover the area around the engine oil solenoid valve with a rag because a small amount of engine oil will leak from the engine oil solenoid valve installation area.

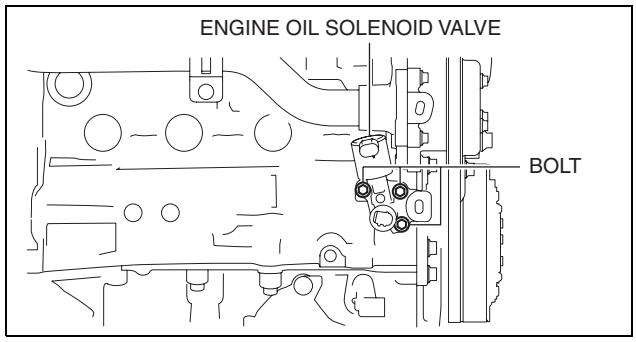
Caution
- **Do not let any leaked engine oil to contact the adjacent water pump gasket and O-ring of the water inlet pipe. Otherwise, the gasket could swell causing a seal malfunction.**

Engine Oil Solenoid Valve Installation Note

1. After tightening the three bolts shown in the figure, tighten the first tightened bolt to the specified tightening torque again.

Note
- The tightening order for the three bolts is optional.

Tightening torque
12—16 N·m {123—163 kgf·cm, 107—141 in·lbf}



am3uuw0000891

Oil Pressure Switch Installation Note

Caution
- **Be sure there is no sealant between 1.7—2.7 mm {0.07—0.10 in} from the end of the oil pressure switch to prevent a possible operation malfunction.**

1. Apply silicone sealant to the oil pressure switch threads as shown in the figure.

Caution
- **Install the oil pressure switch before the applied sealant starts to harden.**

2. Install the oil pressure switch.

Tightening torque
12—17 N·m {123—173 kgf·cm, 107—150 in·lbf}

LUBRICATION [SKYACTIV-G 2.0]

ENGINE OIL SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0]

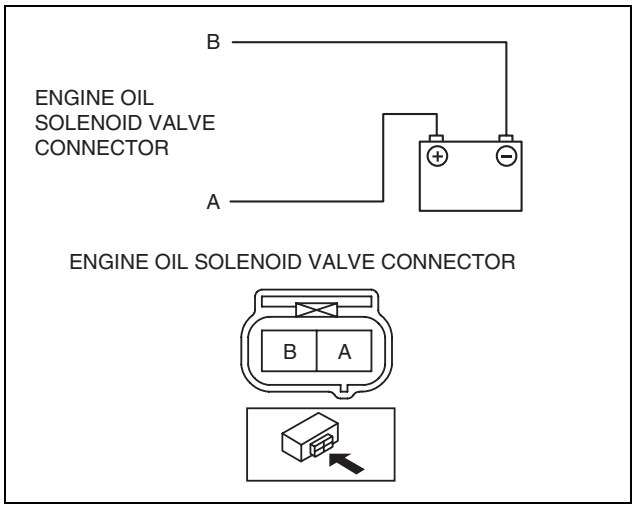
id0111h3002900

Engine Oil Solenoid Valve Operation Inspection

1. Remove the engine oil solenoid valve. (See 01-11A-10 ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
2. Verify that the battery is fully charged.
3. Connect the battery to the engine oil solenoid valve connector (2 terminals) as shown in the figure.
4. Verify that there is an operation sound from the engine oil solenoid valve when applying battery voltage between engine oil solenoid valve connector terminals A and B.

   Note
   - A click sound is heard when the engine oil solenoid valve operates normally.
   - If the operation sound cannot be heard, replace the engine oil solenoid valve.

5. Install the engine oil solenoid valve. (See 01-11A-10 ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



am3uuw0000891

OIL PAN REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0111h3800200

Warning
- **Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Drain the engine oil. (See 01-11A-3 ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0].)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. Refill with the specified type and amount of the engine oil. (See 01-11A-3 ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0].)
6. Start the engine and confirm that there is no oil leakage.
   - If there is oil leakage, repair or replace the applicable part.
7. Inspect the oil level. (See 01-11A-3 ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0].)

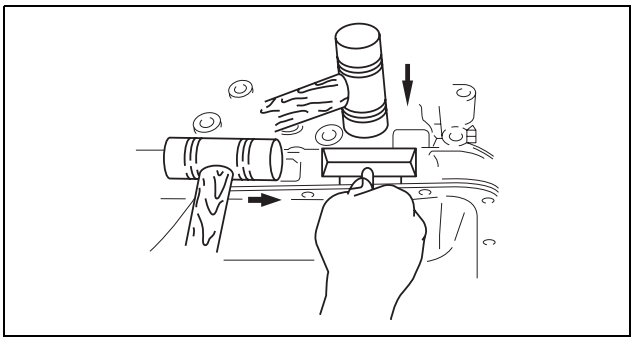
1	Oil pan (See 01-11A-13 Oil Pan Removal Note.) (See 01-11A-14 Oil Pan Installation Note.)

Oil Pan Removal Note

1. Remove the oil pan using a separator tool.



am6zzw0000230

LUBRICATION [SKYACTIV-G 2.0]

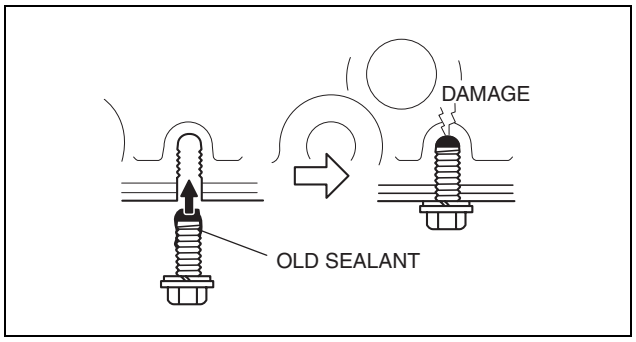
Oil Pan Installation Note

1. Completely clean and remove any oil, dirt, sealant or other foreign material that may be adhering to the cylinder block and oil pan.
2. When reusing the oil pan installation bolts, clean any old sealant from the bolts.

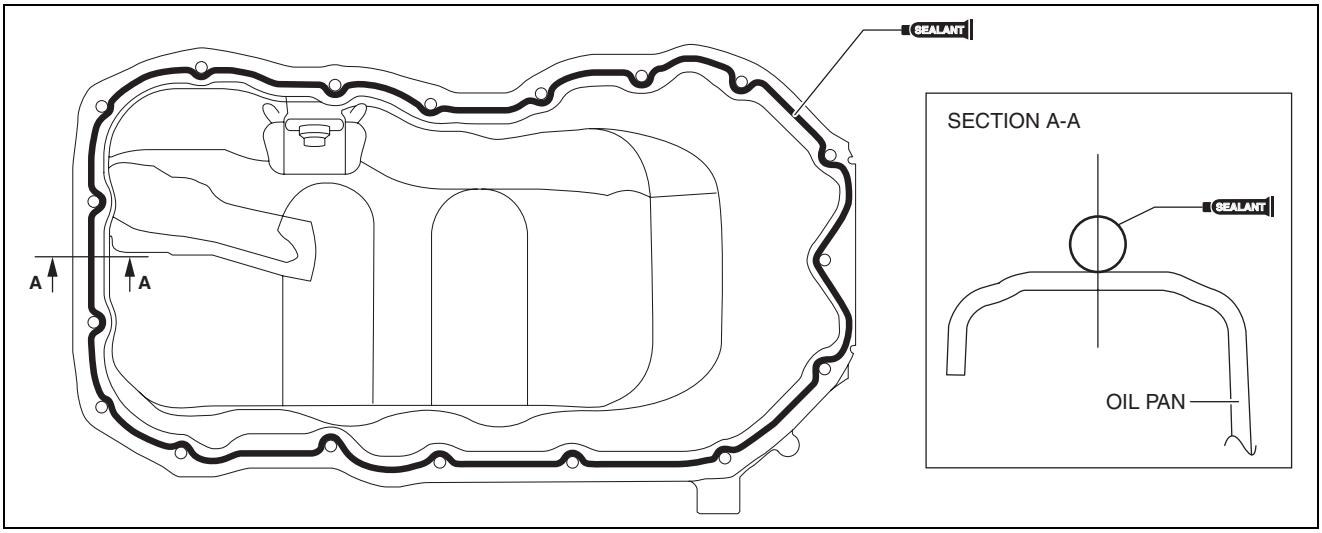
Caution

- **Apply the silicon sealant in a single, unbroken line around the whole perimeter.**
- **To prevent silicone sealant from hardening, adhere the oil pan to the cylinder block within 10 min after silicone sealant is applied. Tighten the installation bolts completely soon after adhering.**
- **Using bolts with the old seal adhering could cause cracks in the cylinder block.**

3. Apply silicone sealant to the oil pan along the inside of the bolt holes as shown in the figure.



am6zzw0000230



bpe2ue00000080

Thickness
2.0—6.0 mm {0.08—0.23 in}

4. Install the oil pan to the cylinder block.
5. Tighten the bolts in the order shown in the figure.

OIL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

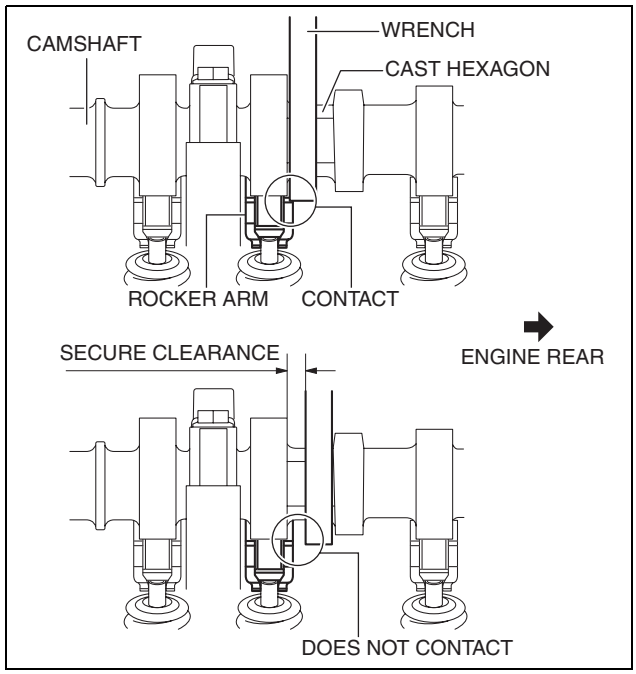
id0111h3800600

Warning

- **Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

Caution

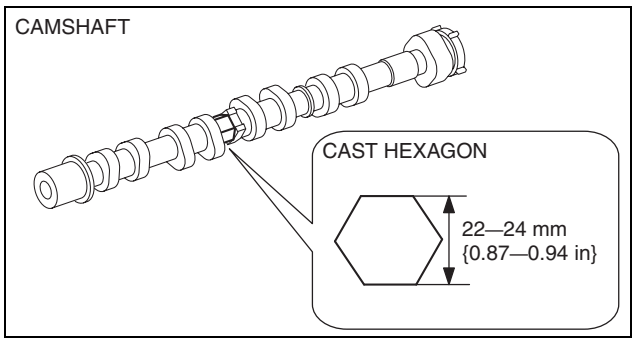
- **If the camshaft is rotated with the timing chain removed and the piston at the top dead center position, the valve may contact the piston and the engine could be damaged. When rotating the camshaft with the timing chain removed, rotate it after lowering the piston from the top dead center position.**
- **When rotating the camshaft using a wrench on the cast hexagon, the wrench may contact the rocker arm and damage the rocker arm. To prevent damage to the rocker arm when holding the camshaft on the cast hexagon, use the wrench at engine rear side as shown in the figure to secure a clearance between the cam.**



am3uuw0000883

Note

- Width at the cast hexagon of the camshaft is 22—24 mm {0.87—0.94 in}.



am3uuw0000902

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the ignition coil/ion sensors. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

LUBRICATION [SKYACTIV-G 2.0]

4. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
5. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
6. Remove the drive belt. (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
7. Drain the engine oil. (See 01-11A-3 ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0].)
8. Remove the oil pan. (See 01-11A-12 OIL PAN REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
9. Remove the engine front cover. (See 01-10A-39 TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
10. Remove in the order indicated in the table.
11. Install in the reverse order of removal.
12. Refill with the specified type and amount of the engine oil. (See 01-11A-3 ENGINE OIL REPLACEMENT [SKYACTIV-G 2.0].)
13. Start the engine and confirm that there is no oil leakage.
    - If there is oil leakage, repair or replace the applicable part.
14. Inspect the oil level. (See 01-11A-3 ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0].)
15. Inspect for the ignition timing and idle speed. (See 01-10A-4 ENGINE TUNE-UP [SKYACTIV-G 2.0].)
16. Inspect the oil pressure. (See 01-11A-7 OIL PRESSURE INSPECTION [SKYACTIV-G 2.0].)

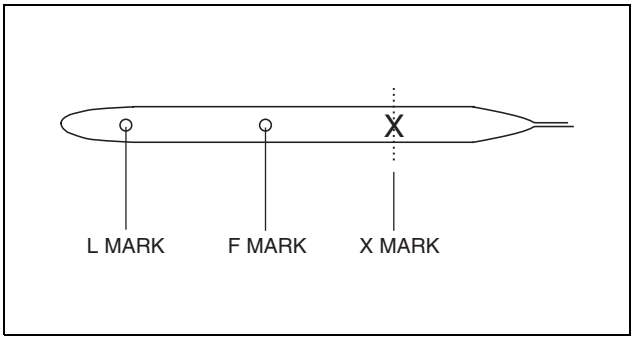
ENGINE OIL LEVEL INSPECTION [SKYACTIV-D 2.2]

id0111s6800500

1. Position the vehicle on level ground.
2. Warm up the engine.
3. Stop the engine and allow **at least 5 min** before continuing.
4. Remove the dipstick, wipe it cleanly, and reinstall it fully.
5. Remove the dipstick and verify that the oil level is between the X and L marks on the dipstick.
   - If the oil level is below or near the L mark, add engine oil. (See 01-11B-4 ENGINE OIL REPLACEMENT [SKYACTIV-D 2.2].)
   - If the oil level is close to or exceeds the X mark, replace the engine oil. (See 01-11B-4 ENGINE OIL REPLACEMENT [SKYACTIV-D 2.2].)
6. Insert the oil level gauge completely until it attaches to the cylinder head cover.



ac5wzw0000483

LUBRICATION [SKYACTIV-D 2.2]

ENGINE OIL REPLACEMENT [SKYACTIV-D 2.2]

id0111s6800400

Warning
- **Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

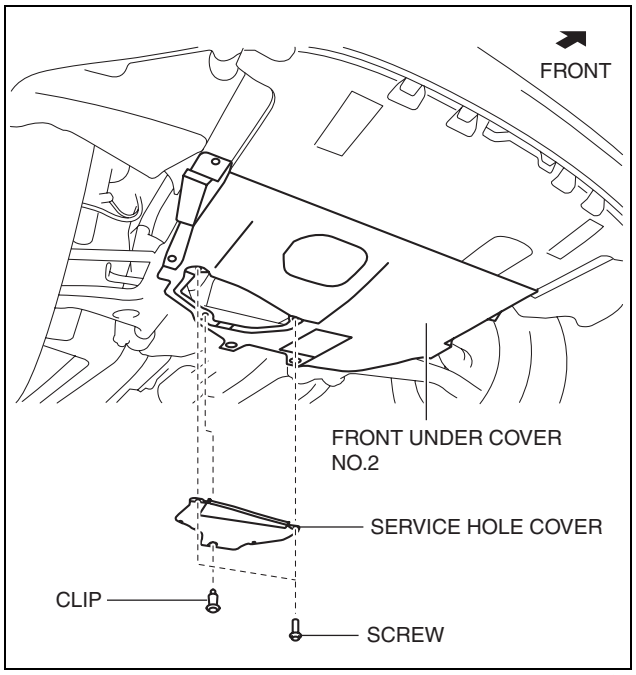
Caution
- **If engine oil is spilled on the exhaust system, wipe it off completely. If you fail to wipe the spilled engine oil, it will produce fumes because of the heat.**

1. Position the vehicle on level ground.
2. Remove the oil filler cap.
3. Remove the service hole cover (installed to front under cover No.2) used to drain the engine oil.
4. Remove the oil pan drain plug.
5. Drain the engine oil into a container.
6. Install the oil pan drain plug with a new gasket.

Oil pan drain plug tightening torque
30—41 N·m {3.1—4.1 kgf·m, 23—30 ft·lbf}

Note
- The amount of residual oil in the engine can vary according to factors such as the replacement method and oil temperature. Verify the oil level after engine oil replacement.

7. Refill with the following type and amount of engine oil.



ac5wzw0000483

Engine oil [Europe]

Recommended engine oil		Alternative engine oil
Mazda Original Oil Supra DPF 0W-30	Mazda Original Oil Ultra DPF 5W-30	ACEA C3 0W-30, 5W-30

Engine oil [Except Europe]

Item	Specifications	
Grade	ACEA C3	ACEA C1 or JASO DL-1
Viscosity (SAE)	0W-30, 5W-30	5W-30

Engine oil capacity (approx. quantity)
Oil replacement: 4.8 L {5.1 US qt, 4.2 Imp qt}
Oil and oil filter replacement: 5.1 L {5.4 US qt, 4.5 Imp qt}
Total (dry engine): 6.0 L {6.3 US qt, 5.3 Imp qt}

8. Install the oil filler cap.
9. Start the engine and confirm that there is no oil leakage.
   - If there is oil leakage, repair or replace the applicable part.
10. Inspect the oil level.
    - Verify that the oil level is between the F and L marks on the dipstick.
11. Install the service hole cover.
12. Perform engine oil data reset procedure.

LUBRICATION [SKYACTIV-D 2.2]

OIL FILTER REPLACEMENT [SKYACTIV-D 2.2]

id0111s6800700

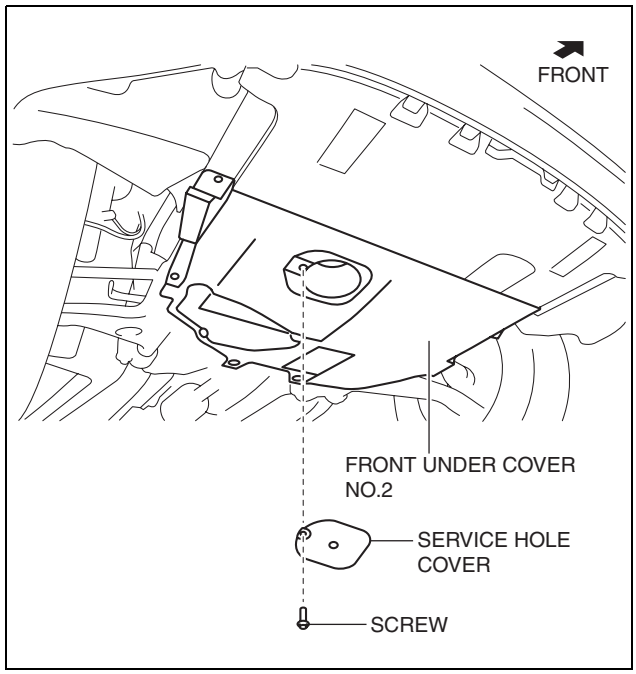
Warning

- **Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

Caution

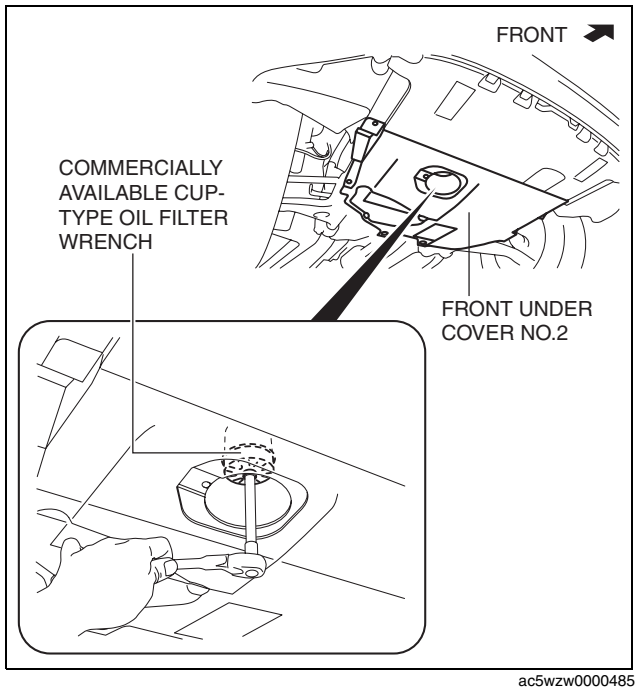
- **If engine oil is spilled on the exhaust system, wipe it off completely. If you fail to wipe the spilled engine oil, it will produce fumes because of the heat.**

1. Remove the service hole cover (installed to front under cover No.2) used to remove the oil filter.



ac5wzw0000485

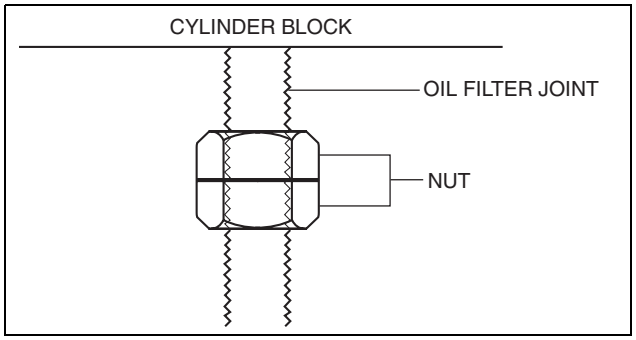
2. Remove the oil filter using the commercially available, cup-type oil filter wrench (**75 mm {3.0 in} diameter, 15 sided**).
3. If the oil filter joint is loose, tighten the oil filter joint using the following procedure:



ac5wzw0000485

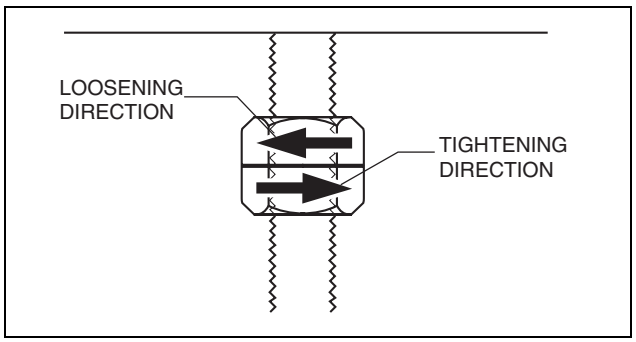
LUBRICATION [SKYACTIV-D 2.2]

(1) Install two nuts of appropriate size (parallel pipe thread 3/4 - 16 UNF screw) to the oil filter joint.



am2llw00000039

(2) Using a wrench, apply force in the directions of the arrows shown in the figure and lock the nuts.



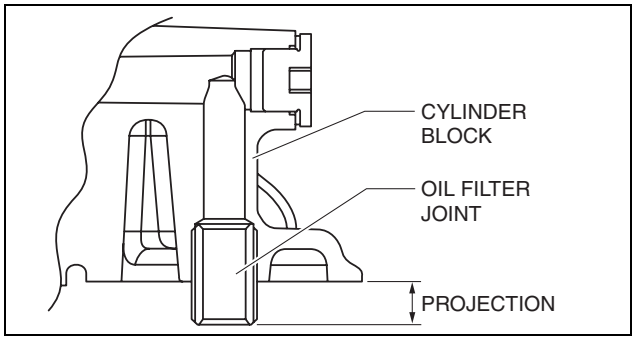
am2llw00000040

(3) Using a wrench, apply force in the tightening direction to the outside nut and install the oil filter joint. Verify the projection of the installed oil filter joint.

Tightening torque
30—40 N·m {3.1—4.0 kgf·m, 23—29 ft·lbf}

Oil filter joint projection
11.4—15.9 mm {0.449—0.625 in}

(4) Remove the 2 nuts installed in Step (1) of the procedure.



ac5wzw0000486

4. Use a clean rag to wipe off the mounting surface.
5. Apply clean engine oil to the O-ring of a new oil filter.
6. Tighten the oil filter according to the instructions on the package or side of the oil filter.

Tightening torque (reference value)
15—20 N·m {1.6—2.0 kgf·m, 12—14 ft·lbf}

7. Start the engine and confirm that there is no oil leakage.
   - If there is oil leakage, repair or replace the applicable part.
8. Inspect the oil level. (See 01-11B-3 ENGINE OIL LEVEL INSPECTION [SKYACTIV-D 2.2].)
9. Install the service hole cover.

LUBRICATION [SKYACTIV-D 2.2]

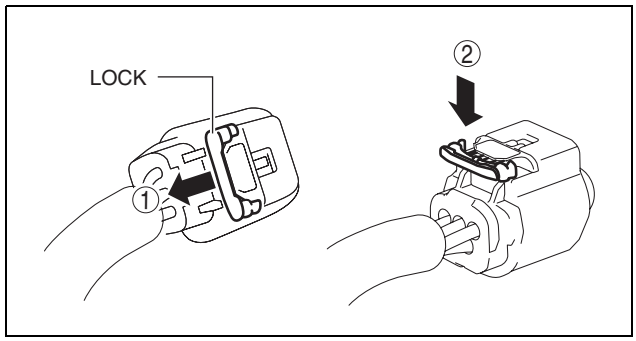
OIL PRESSURE INSPECTION [SKYACTIV-D 2.2]

id0111s6800300

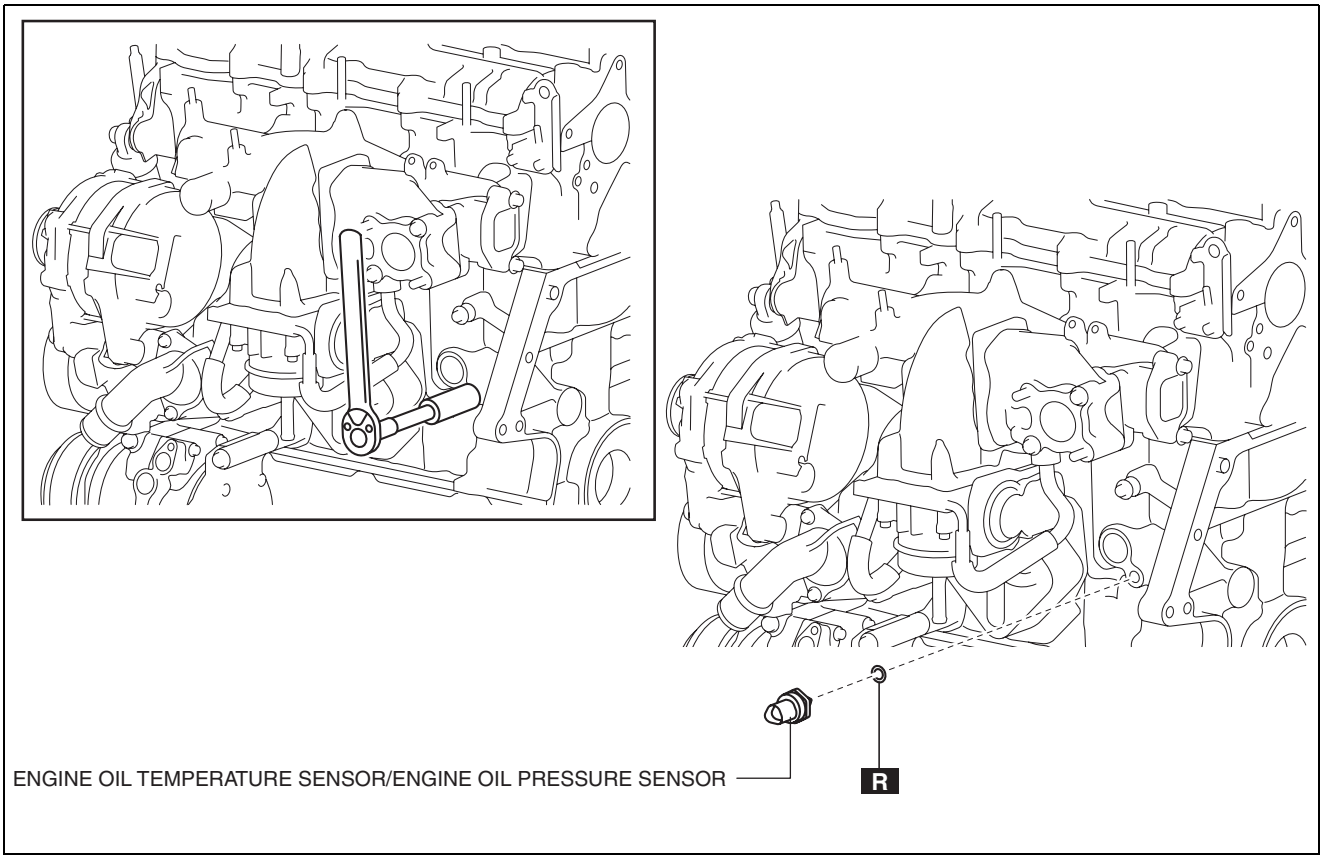
Warning

- **Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

1. Disconnect the negative battery cable.
2. Remove the coolant reserve tank. (See 01-12B-8 COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Disconnect the connector for the engine oil temperature sensor/engine oil pressure sensor using the following procedure:
   (1) Pull out the connector lock in the direction of the arrow.
   (2) Press the lock down in the direction of the arrow and disconnect the connector.
4. Disconnect starter terminal B and set the wiring harness aside. (See 01-19B-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove the engine oil temperature sensor/ engine oil pressure sensor.



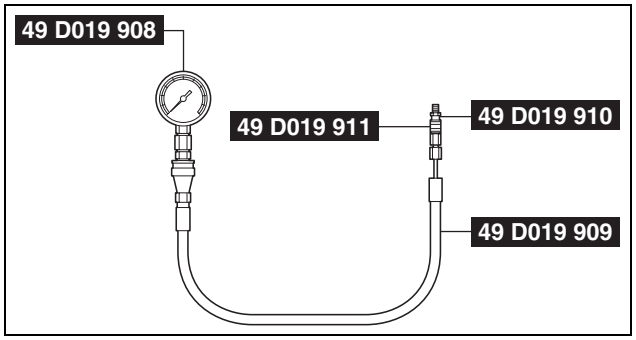
ac5wzw0000483



ac5wzw0000483

LUBRICATION [SKYACTIV-D 2.2]

Note
- This inspection can be performed using a combination of **SSTs 49 D019 908** (gauge), **49 D019 909** (hose), **49 D019 910** (adapter), and **49 D019 911** (adapter).



am6zzw0000438

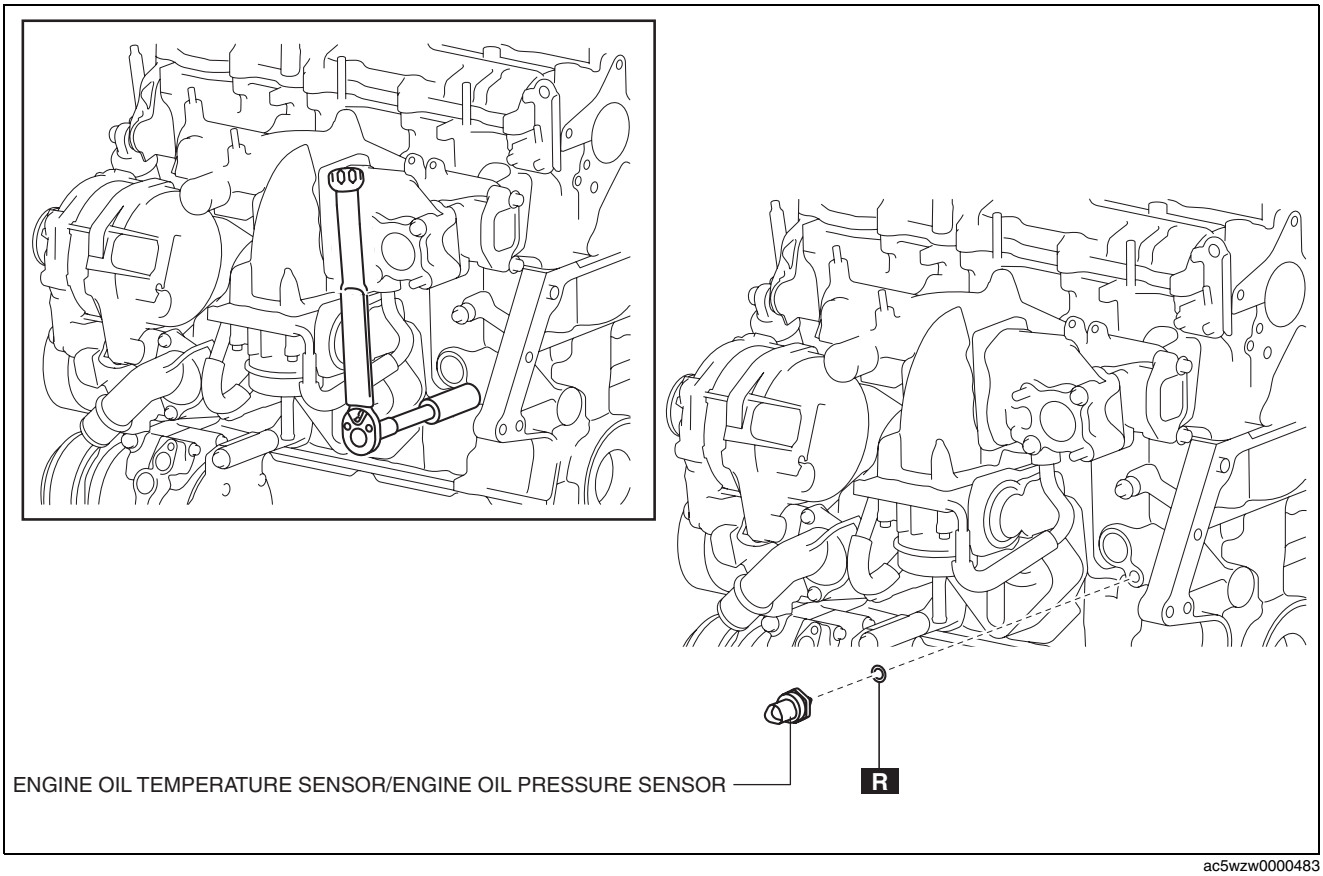
6. Install the **SSTs** to the engine oil temperature sensor/engine oil pressure sensor installation hole using the following procedure.
   (1) Assemble **SSTs 49 D019 908**, **49 D019 909**, and **49 D019 911** outside of the engine compartment beforehand.
   (2) Install **SST 49 D019 910** to the engine oil temperature sensor/engine oil pressure sensor installation hole.
   (3) Install **SST 49 D019 911** to the **SST 49 D019 910**.
7. Connect starter terminal B. (See 01-19B-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
8. Install the coolant reserve tank. (See 01-12B-8 COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
9. Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
10. Warm up the engine to normal operating temperature.
11. Run the engine at the specified speed, and note the gauge readings.
    - If not within the specification, inspect for the cause and repair or replace if necessary.

Note
- The oil pressure can vary with oil viscosity, temperature and engine speed.

Oil pressure (reference value) [oil temperature: 80—90 °C {176—194 °F}, coolant temperature: 80—90 °C {176—194 °F}]
Lo: 140—190 kPa {1.43—1.93 kgf/cm^2, 20.4—27.5 psi} [1,500 rpm]
Hi: 300—440 kPa {3.06—4.48 kgf/cm^2, 43.6—63.8 psi} [3,500 rpm]

12. Stop the engine and wait until it is cools.
13. Disconnect the negative battery cable.
14. Remove the coolant reserve tank. (See 01-12B-8 COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
15. Disconnect starter terminal B and set the wiring harness aside. (See 01-19B-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
16. Remove the **SSTs.**

17. Install the engine oil temperature sensor/engine oil pressure sensor.



ac5wzw0000483

Tightening torque
14—18 N·m {1.5—1.8 kgf·m, 11—13 ft·lbf}

18. Connect the connector for the engine oil temperature sensor/engine oil pressure sensor and press it in the lock direction of the arrow.
19. Connect starter terminal B. (See 01-19B-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
20. Install the coolant reserve tank. (See 01-12B-8 COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
21. Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
22. Start the engine and confirm that there is no oil leakage.
    - If there is oil leakage, repair or replace the applicable part.

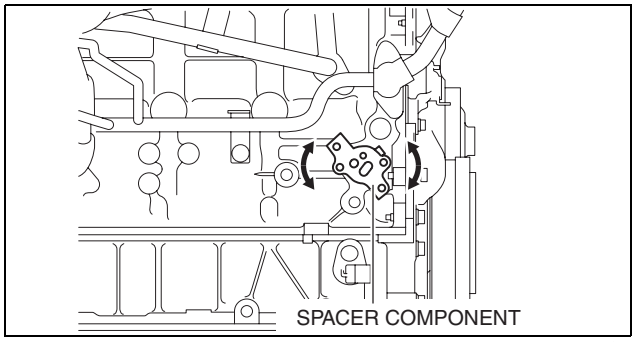
6	Spacer

Engine Oil Solenoid Valve Removal Note

1. Cover the area around the engine oil solenoid valve with a rag because a small amount of engine oil will leak from the engine oil solenoid valve installation area.

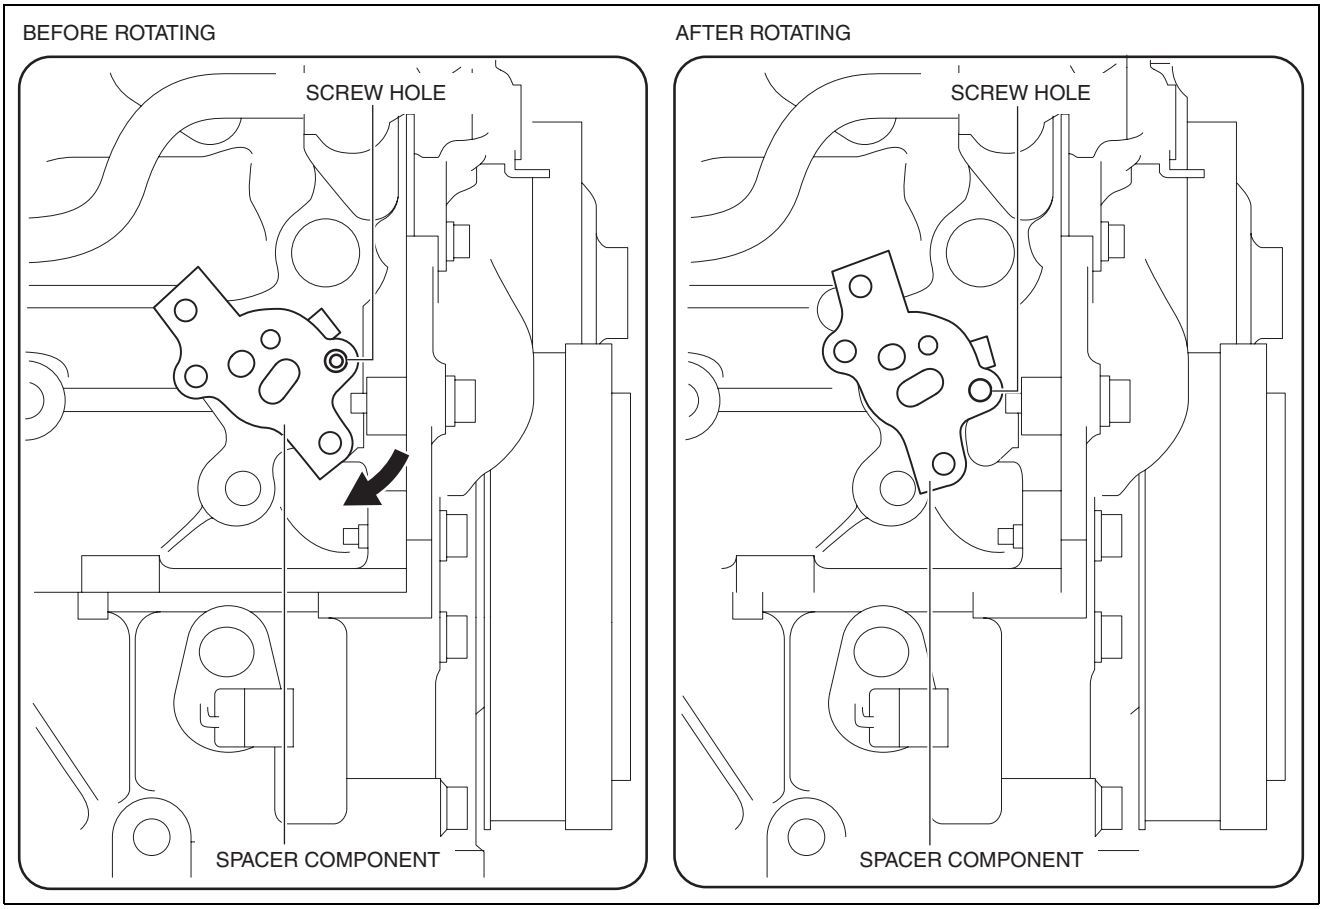
Spacer Component Removal Note

1. Remove the spacer component using the following procedure.
   (1) Rotate the space component in the direction shown in the figure.



ac5wzw0000480

(2) Rotate the spacer component in the direction of the arrow shown in the figure and position it so that the spacer component screw hole overlaps the wall surface of the cylinder block.

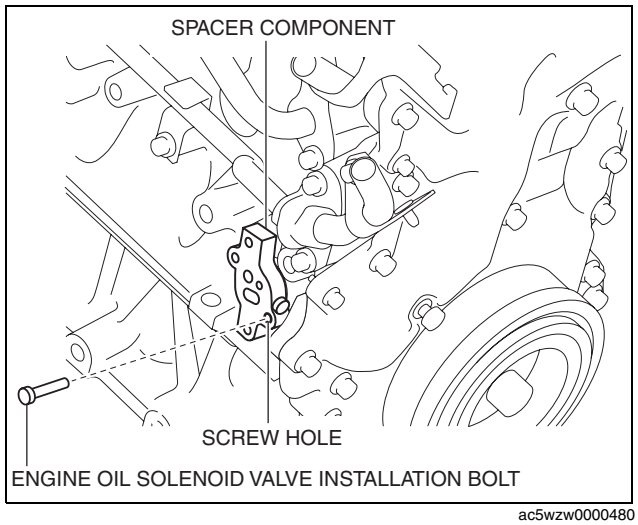


ac5wzw0000480

(3) Install the removed engine oil solenoid valve installation bolt into the screw hole of the spacer component shown in the figure.

Caution

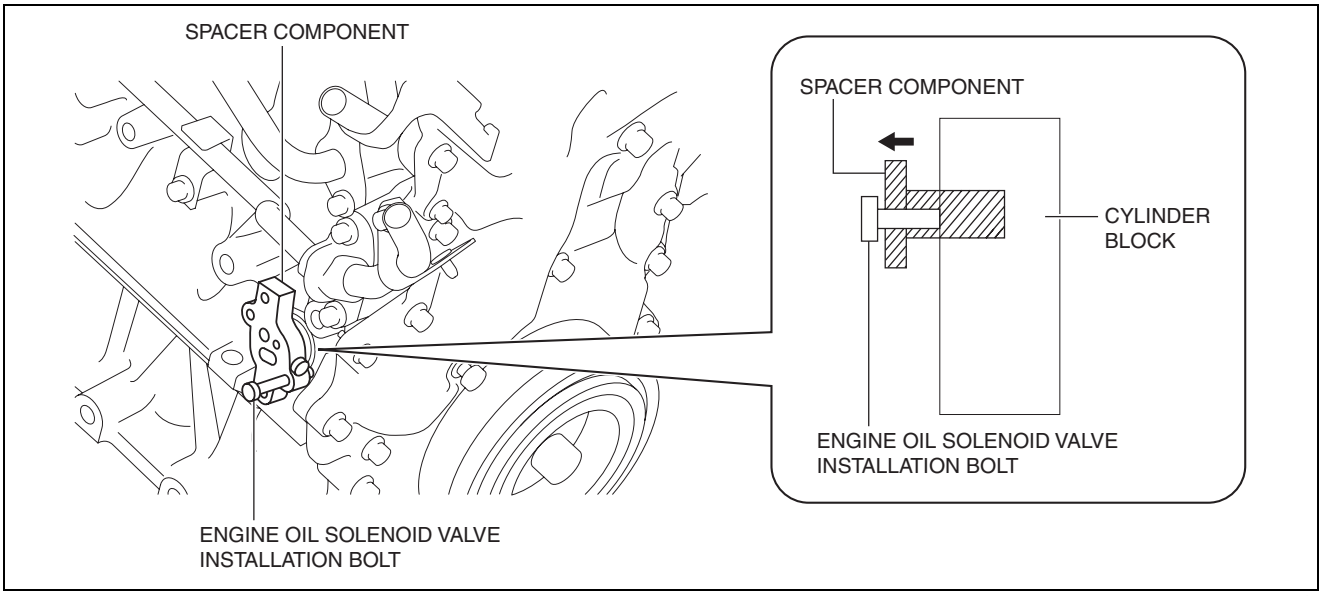
- **Do not use the new bolts which are used during assembly.**



ac5wzw0000480

LUBRICATION [SKYACTIV-D 2.2]

(4) Tighten to the point that the engine oil solenoid valve installation bolt contacts the cylinder block and the spacer component comes up.



ac5wzw0000518

(5) When the spacer component comes up, pull it out by hand.

ENGINE OIL SOLENOID VALVE INSPECTION [SKYACTIV-D 2.2]

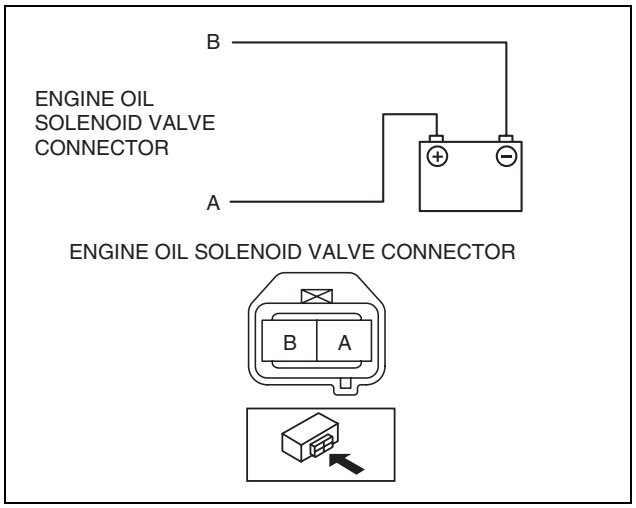
id0111s6002900

Engine Oil Solenoid Valve Operation Inspection

1. Remove the engine oil solenoid valve. (See 01-11B-11 ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Verify that the battery is fully charged.
3. Connect the battery to the engine oil solenoid valve connector (2 terminals) as shown in the figure.
4. Verify that there is an operation sound from the engine oil solenoid valve when applying battery voltage between engine oil solenoid valve connector terminals A and B.

   Note
   - A click sound is heard when the engine oil solenoid valve operates normally.
   - If the operation sound cannot be heard, replace the engine oil solenoid valve.

5. Install the engine oil solenoid valve. (See 01-11B-11 ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000480

LUBRICATION [SKYACTIV-D 2.2]

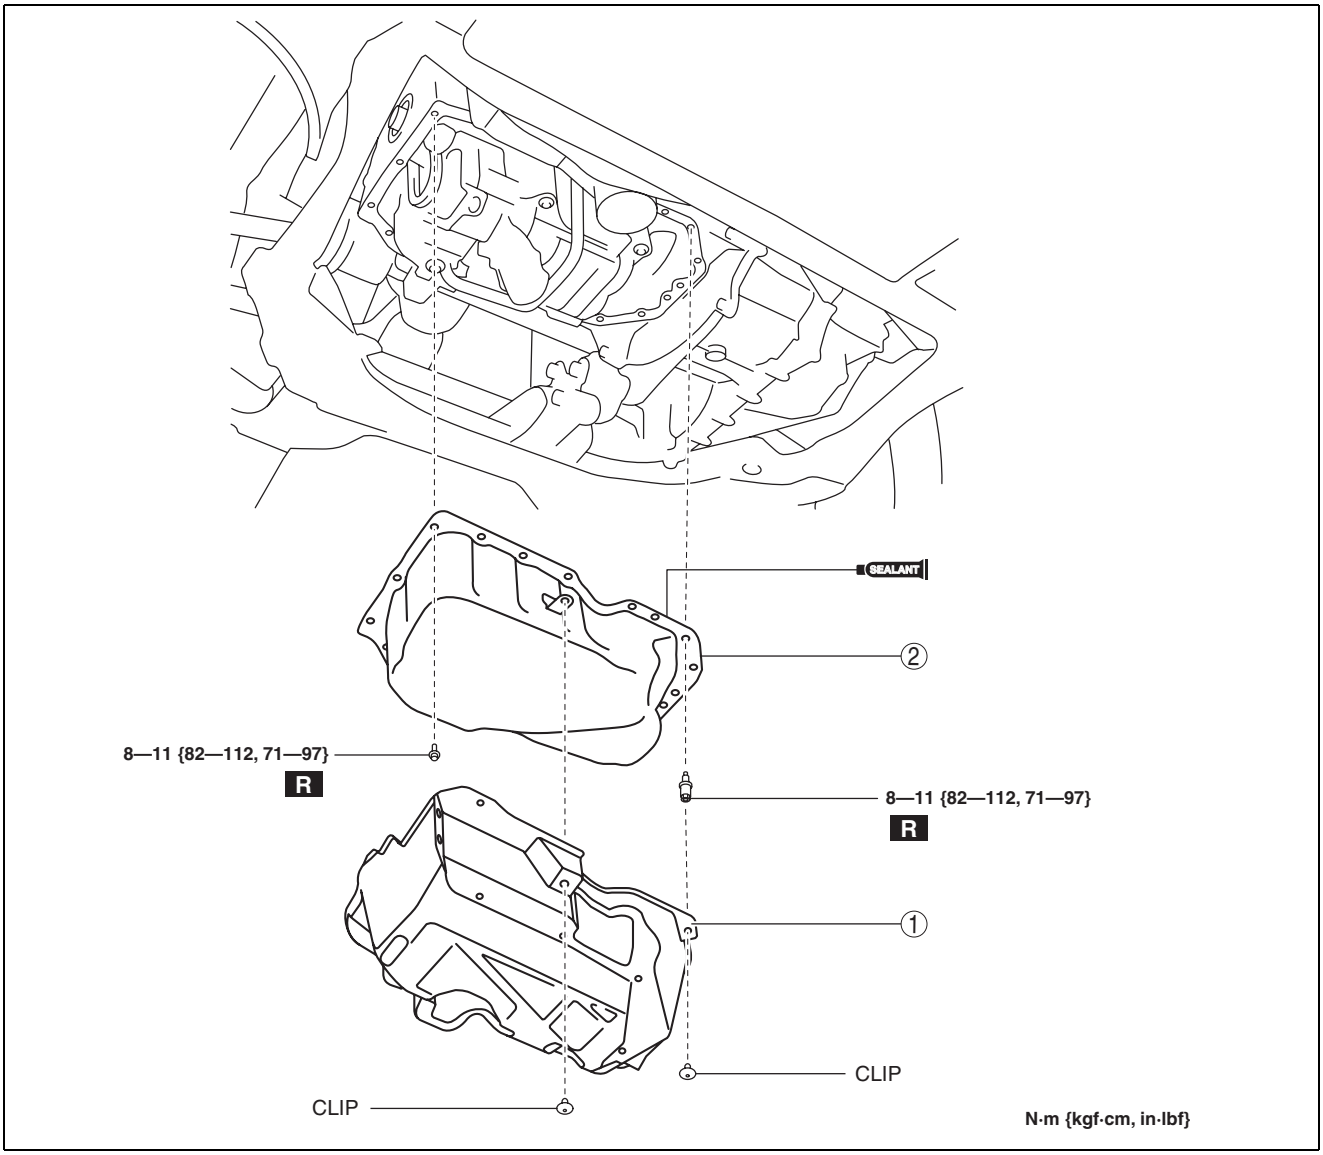
OIL PAN REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0111s6800200

Warning

- **Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Drain the engine oil. (See 01-11B-4 ENGINE OIL REPLACEMENT [SKYACTIV-D 2.2].)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. Refill with the specified type and amount of the engine oil. (See 01-11B-4 ENGINE OIL REPLACEMENT [SKYACTIV-D 2.2].)
6. Start the engine and confirm that there is no oil leakage.
   - If there is oil leakage, repair or replace the applicable part.
7. Inspect the oil level. (See 01-11B-3 ENGINE OIL LEVEL INSPECTION [SKYACTIV-D 2.2].)



ac5wzw0000482

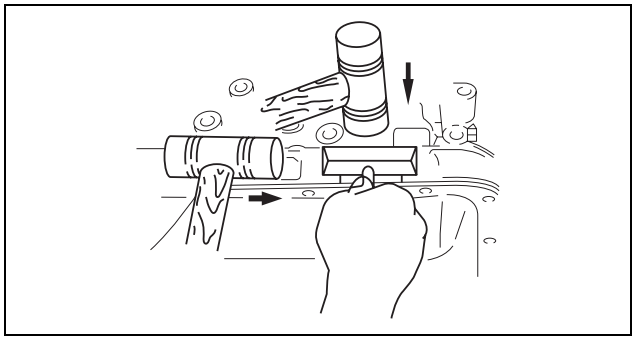
LUBRICATION [SKYACTIV-D 2.2]

1	Seal plate (See 01-11B-18 Seal Plate Installation Note.)

2	Oil pan (See 01-11B-16 Oil Pan Removal Note.) (See 01-11B-16 Oil Pan Installation Note.)

Oil Pan Removal Note

1. Remove the oil pan using a separator tool.



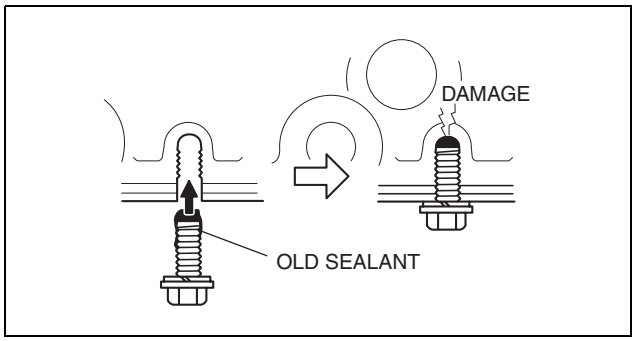
am6zzw0000230

Oil Pan Installation Note

1. Completely clean and remove any oil, dirt, sealant or other foreign material that may be adhering to the cylinder block and oil pan.

Caution

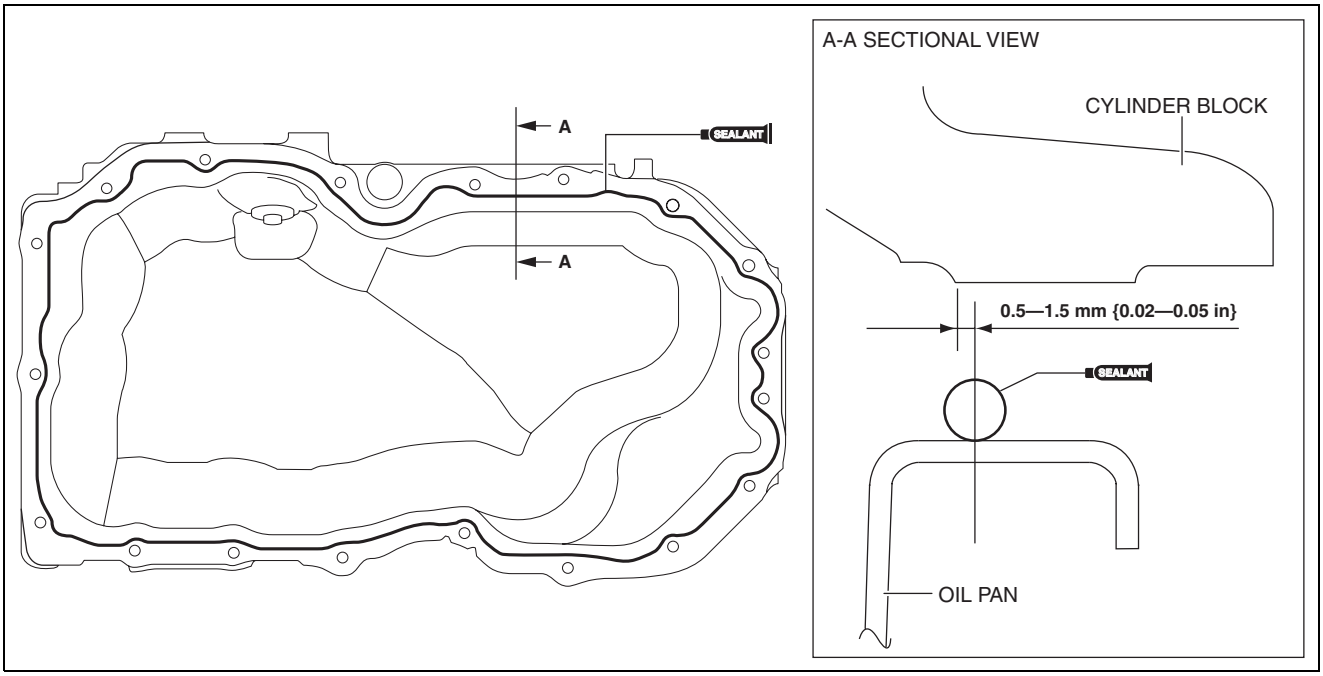
- **Apply the silicon sealant in a single, unbroken line around the whole perimeter.**
- **To prevent silicone sealant from hardening, adhere the oil pan to the cylinder block within 10 min after silicone sealant is applied. Tighten the installation bolts completely soon after adhering.**
- **Using bolts with the old seal adhering could cause cracks in the cylinder block.**



am6zzw0000230

LUBRICATION [SKYACTIV-D 2.2]

2. Apply silicone sealant to the oil pan along the inside of the bolt holes as shown in the figure.



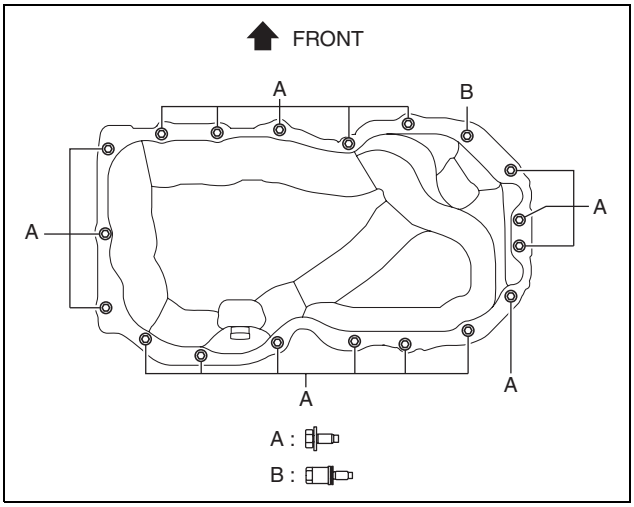
ac5wzw0000482

Thickness
3.0—7.0 mm {0.12—0.27 in}

3. Install the oil pan to the cylinder block.

Caution
- **There are two types of oil pan installation bolts of different lengths and shapes. Install each bolt to the specified position according to the following procedure. In addition, use new bolts because the oil pan installation bolts cannot be reused.**

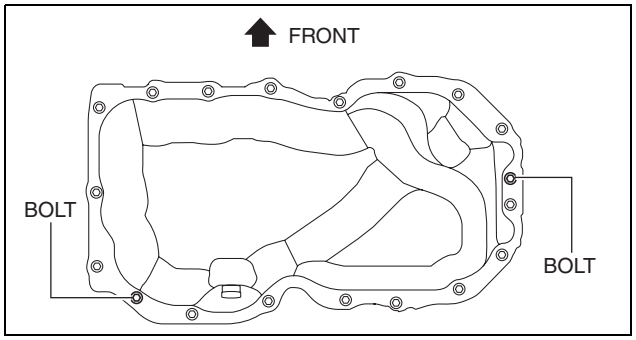
4. Install the oil pan using the following procedure:
   (1) Install the oil pan installation bolts as shown in the figure.



ac5wzw0000482

LUBRICATION [SKYACTIV-D 2.2]

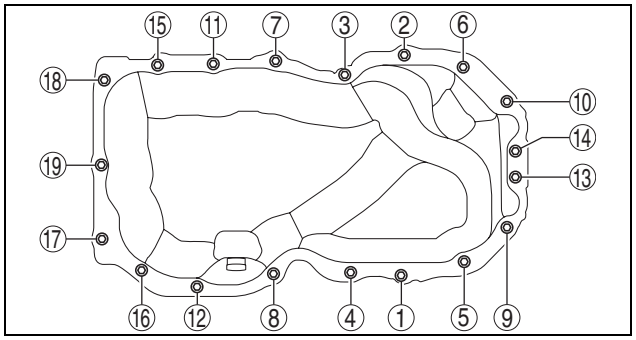
(2) Temporarily tighten the two bolts shown in the figure.



ac5wzw0000482

(3) Tighten the bolts in the order shown in the figure.

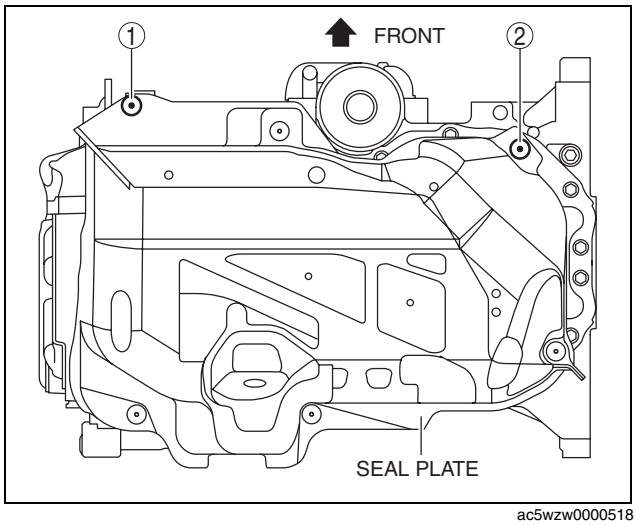
Tightening torque
8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}



ac5jjw00004192

Seal Plate Installation Note

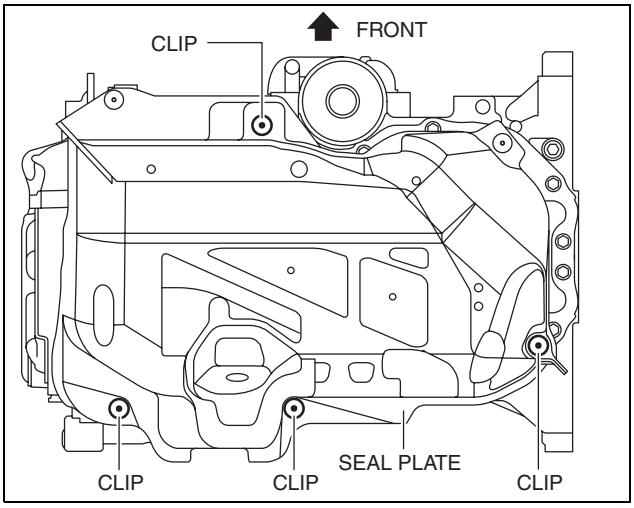
1. Install the seal plate using the following procedure:
   (1) Install the seal plate installation clips in the order shown in the figure.



ac5wzw0000518

LUBRICATION [SKYACTIV-D 2.2]

(2) Install the seal plate installation clips as shown in the figure.



ac5wzw0000519

OIL PUMP REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

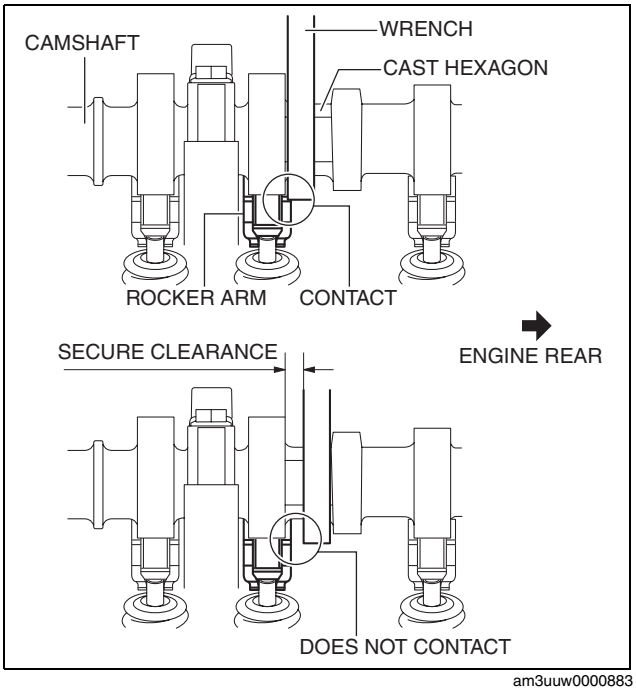
id0111s6800600

Warning

- **Hot engines and engine oil can cause severe burns. Turn off the engine and wait until it and the engine oil have cooled.**
- **A vehicle that is lifted but not securely supported on safety stands is dangerous. It can slip or fall, causing death or serious injury. Never work around or under a lifted vehicle if it is not securely supported on safety stands.**
- **Continuous exposure to USED engine oil has caused skin cancer in laboratory mice. Protect your skin by washing with soap and water immediately after working with engine oil.**

Caution

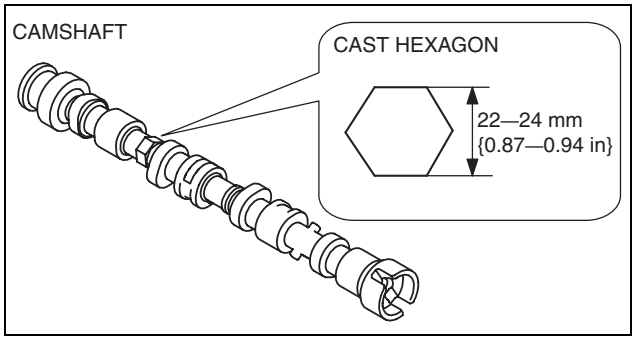
- **If the camshaft is rotated with the timing chain removed and the piston at the top dead center position, the valve may contact the piston and the engine could be damaged. When rotating the camshaft with the timing chain removed, rotate it after lowering the piston from the top dead center position.**
- **When rotating the camshaft using a wrench on the cast hexagon, the wrench may contact the rocker arm and damage the rocker arm. To prevent damage to the rocker arm when holding the camshaft on the cast hexagon, use the wrench at engine rear side as shown in the figure to secure a clearance between the cam.**



am3uuw0000883

LUBRICATION [SKYACTIV-D 2.2]

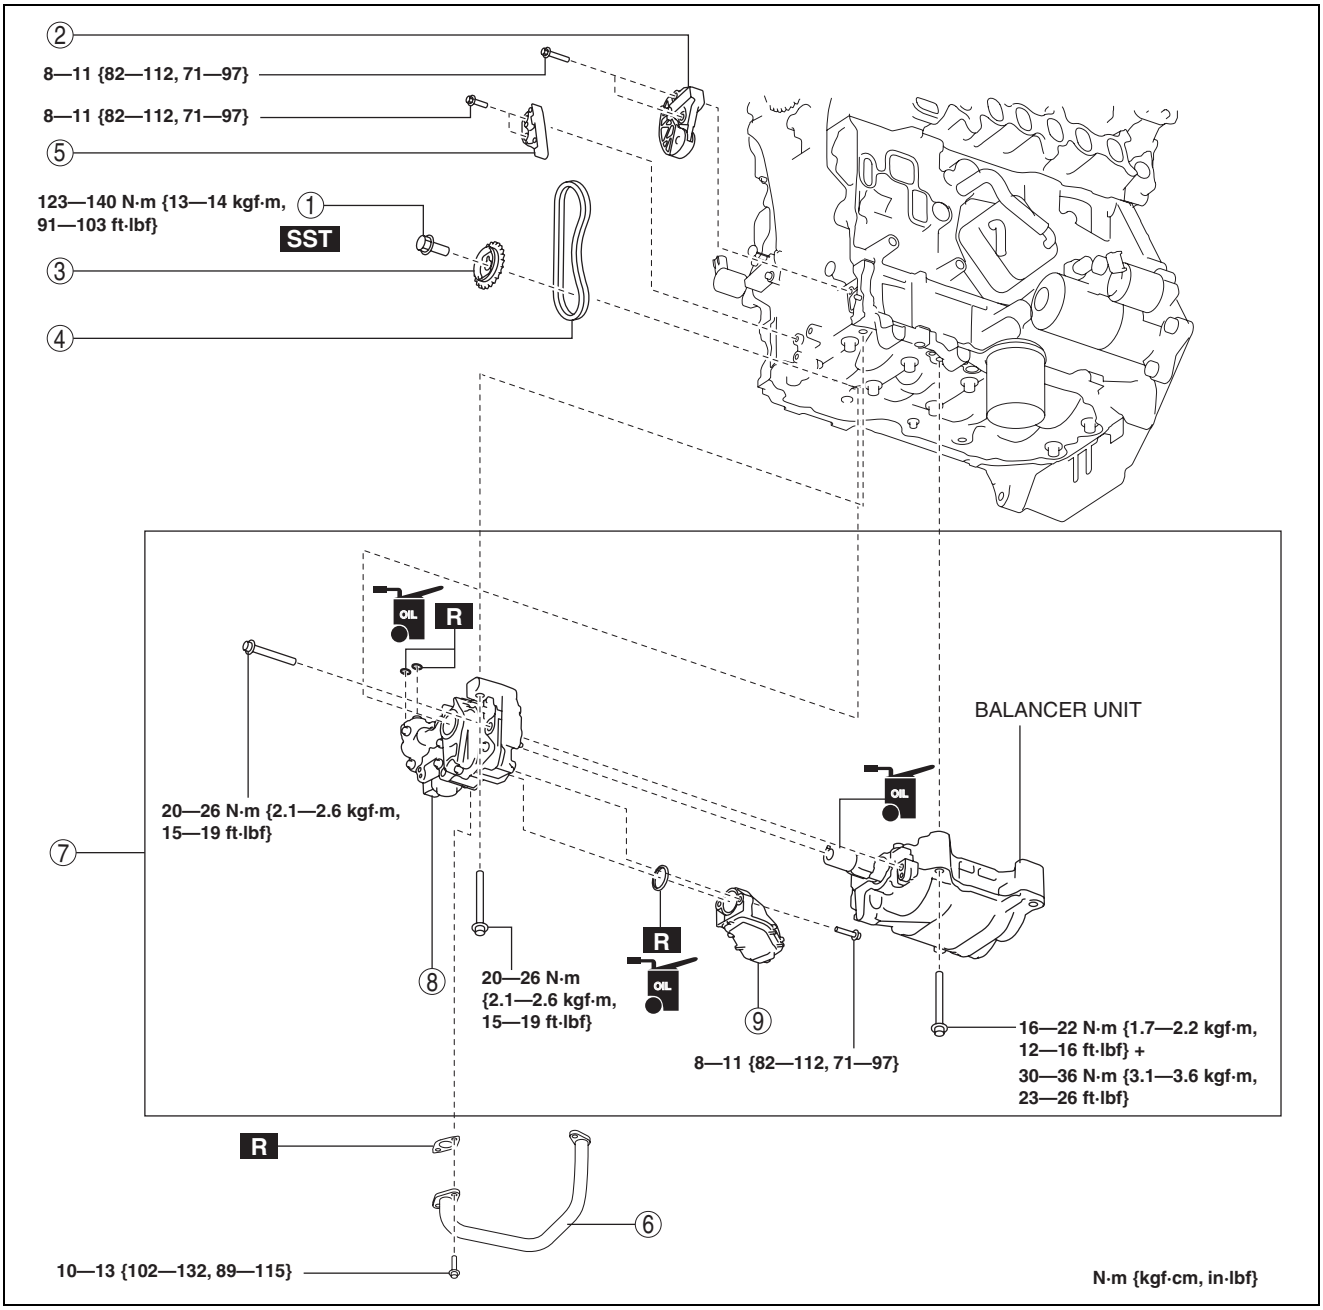
Note
- Width at the cast hexagon of the camshaft is 22—24 mm {0.87—0.94 in}.



ac5wzw0000483

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
4. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
5. Remove the drive belt. (See 01-10B-8 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Drain the engine oil. (See 01-11B-4 ENGINE OIL REPLACEMENT [SKYACTIV-D 2.2].)
7. Remove the oil pan. (See 01-11B-15 OIL PAN REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
8. Remove the fuel injectors. (See 01-14B-35 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
9. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
10. Remove the timing chain. (See 01-10B-16 TIMING CHAIN REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
11. Remove in the order indicated in the table.
12. Install in the reverse order of removal.
13. Refill with the specified type and amount of the engine oil. (See 01-11B-4 ENGINE OIL REPLACEMENT [SKYACTIV-D 2.2].)
14. Refill the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
15. Inspect for engine coolant leakage. (See 01-12B-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-D 2.2].)
16. Start the engine and inspect and adjust the following:
    - Leakage of engine oil.
    - Oil level (See 01-11B-3 ENGINE OIL LEVEL INSPECTION [SKYACTIV-D 2.2].)
    - Runout and contact of pulley and belt.
    - Idling speed (See 01-10B-3 ENGINE TUNE-UP [SKYACTIV-D 2.2].)

LUBRICATION [SKYACTIV-D 2.2]



ac5wzw0000483

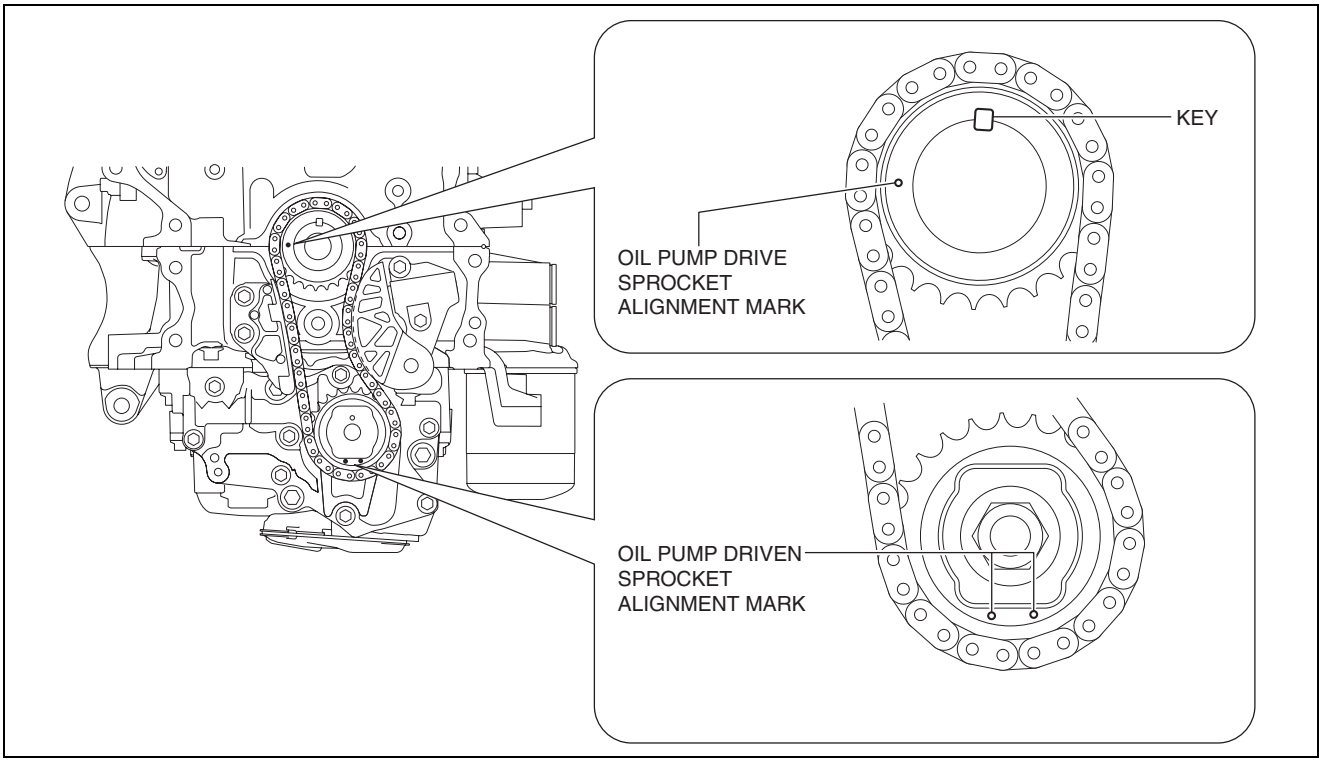
1	Oil pump driven sprocket installation bolt (See 01-11B-22 Oil Pump Chain Removal Note.) (See 01-11B-27 Oil Pump Chain Installation Note.)
2	Oil pump chain tensioner (See 01-11B-22 Oil Pump Chain Removal Note.) (See 01-11B-27 Oil Pump Chain Installation Note.)
3	Oil pump driven sprocket (See 01-11B-22 Oil Pump Chain Removal Note.) (See 01-11B-27 Oil Pump Chain Installation Note.)
4	Oil pump chain (See 01-11B-22 Oil Pump Chain Removal Note.) (See 01-11B-27 Oil Pump Chain Installation Note.)
5	Oil pump chain guide

6	Oil pipe
7	Balancer component (See 01-11B-24 Oil Pump, Balancer Unit Installation Note.)
8	Oil pump (See 01-11B-24 Oil Pump, Balancer Unit Installation Note.)
9	Oil strainer (See 01-11B-24 Oil Pump, Balancer Unit Installation Note.)

LUBRICATION [SKYACTIV-D 2.2]

Oil Pump Chain Removal Note

1. Verify that the oil pump driven sprocket alignment marks and key are aligned to the positions shown in the figure.



ac5wzw0000519

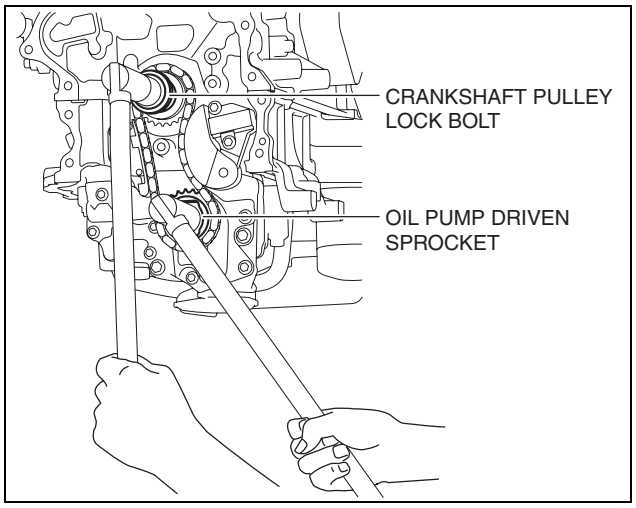
Note

- If they are not in the positions shown in the figure, rotate the crankshaft to set cylinder No.1 to top dead center (TDC).

2. Temporarily assemble the crankshaft pulley lock bolt, and lock the oil pump against rotation as shown in the figure.
3. Slightly loosen the oil pump driven sprocket installation bolt.

Note

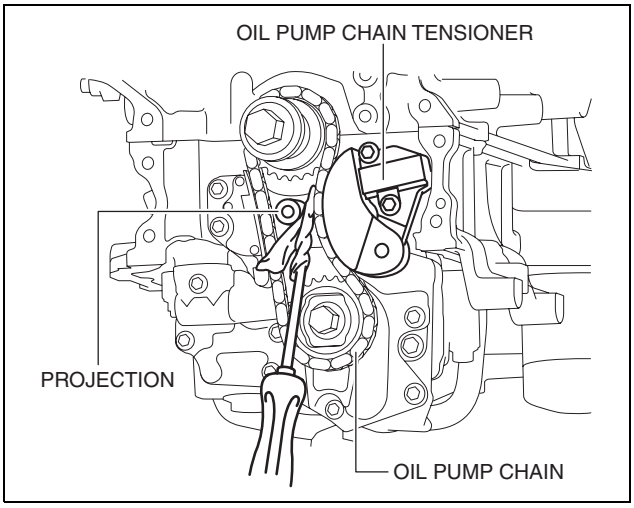
- At this stage, only loosen the oil pump driven sprocket installation bolt, do not remove it. Remove the bolt after removing the oil pump chain tensioner.



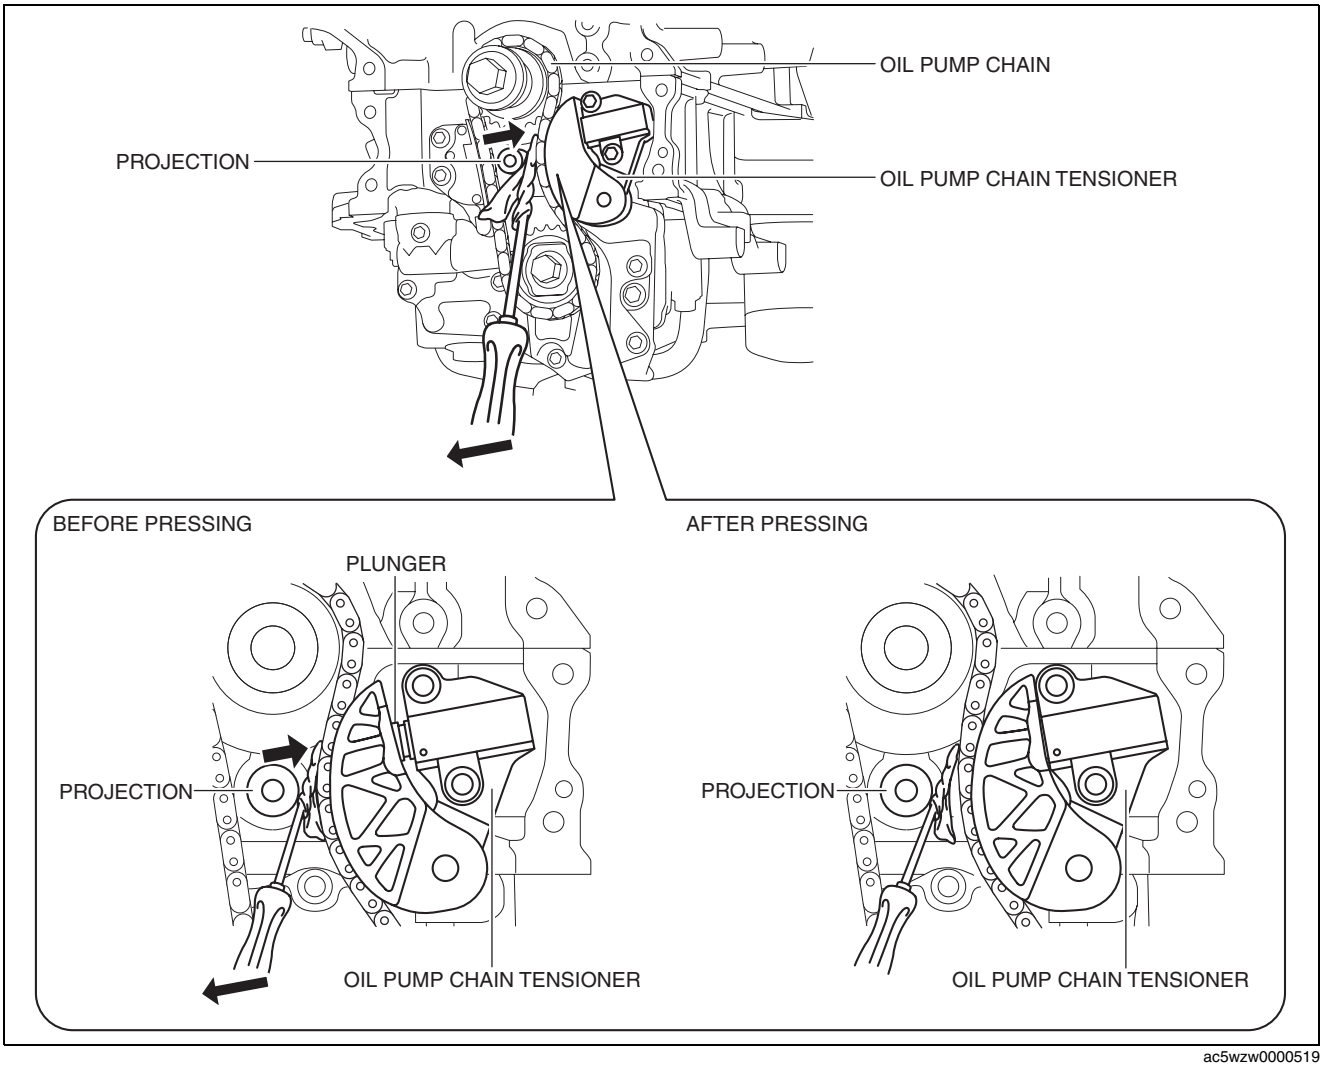
ac5wzw0000519

LUBRICATION [SKYACTIV-D 2.2]

4. Set a cloth wrapped flathead screwdriver in the gap between the lower cylinder block projection and the oil pump chain as shown in the figure.
5. Move the screwdriver in the direction of the arrow and press the oil pump chain, and then press in the plunger of the oil pump chain tensioner.



ac5wzw0000519



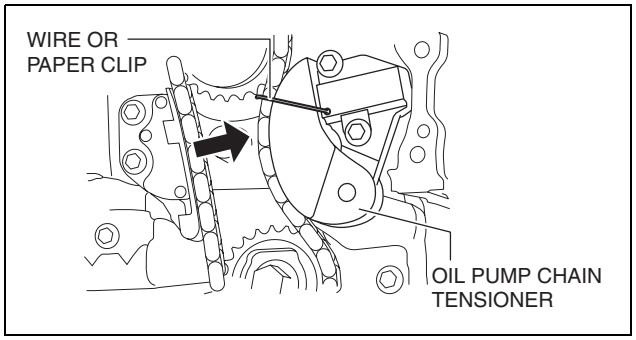
ac5wzw0000519

LUBRICATION [SKYACTIV-D 2.2]

6. Insert a wire with an approx. diameter of **1.4 mm {0.055 in}** or a paper clip into the body hole of the oil pump chain tensioner with the plunger pressed.

   Note
   - The wire or paper clip secures the plunger, and the tension can be released.

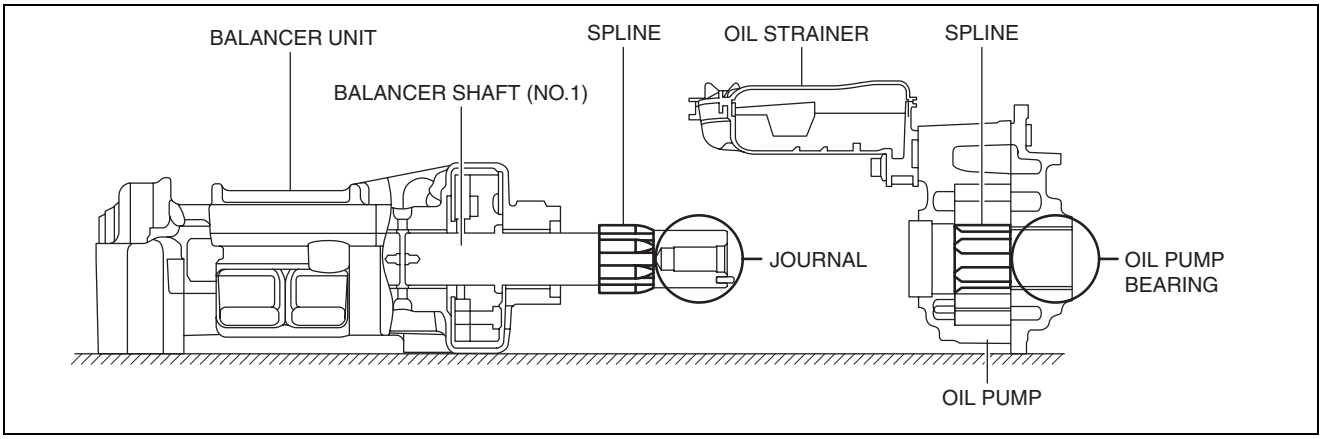
7. Remove the oil pump chain tensioner.
8. Remove the oil pump chain and oil pump driven sprocket as a single unit.
9. Remove the temporarily assembled crankshaft pulley lock bolt.



ac5wzw0000499

Oil Pump, Balancer Unit Installation Note

Caution
- **If the balancer shaft (No.1) spline is scratched or damaged, the engagement with the oil pump spline could worsen and it may not be possible to assemble the oil pump. Therefore, be careful not to scratch or damage the spline.**
- **Because the balancer shaft (No.1) journal slides with oil pump bearing, if the journal is scratched or damaged, the bearing could become damaged. Therefore, be careful not to scratch or damage the journal.**



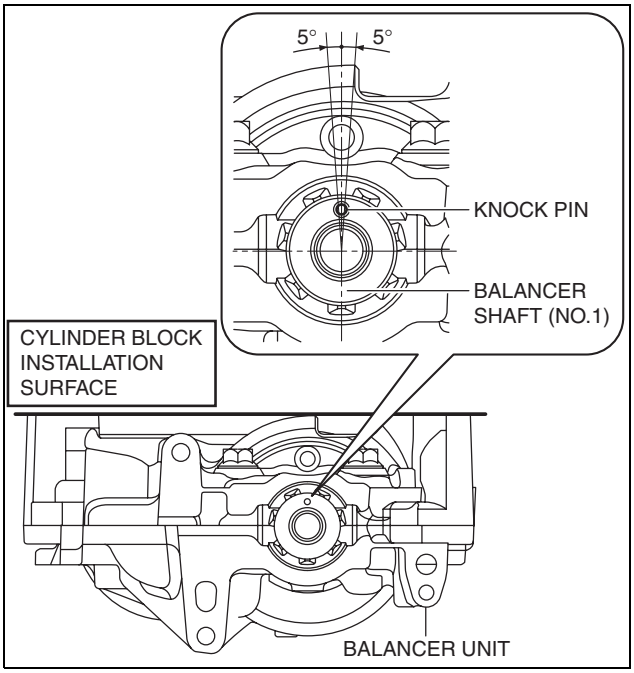
ac5wzw0000484

LUBRICATION [SKYACTIV-D 2.2]

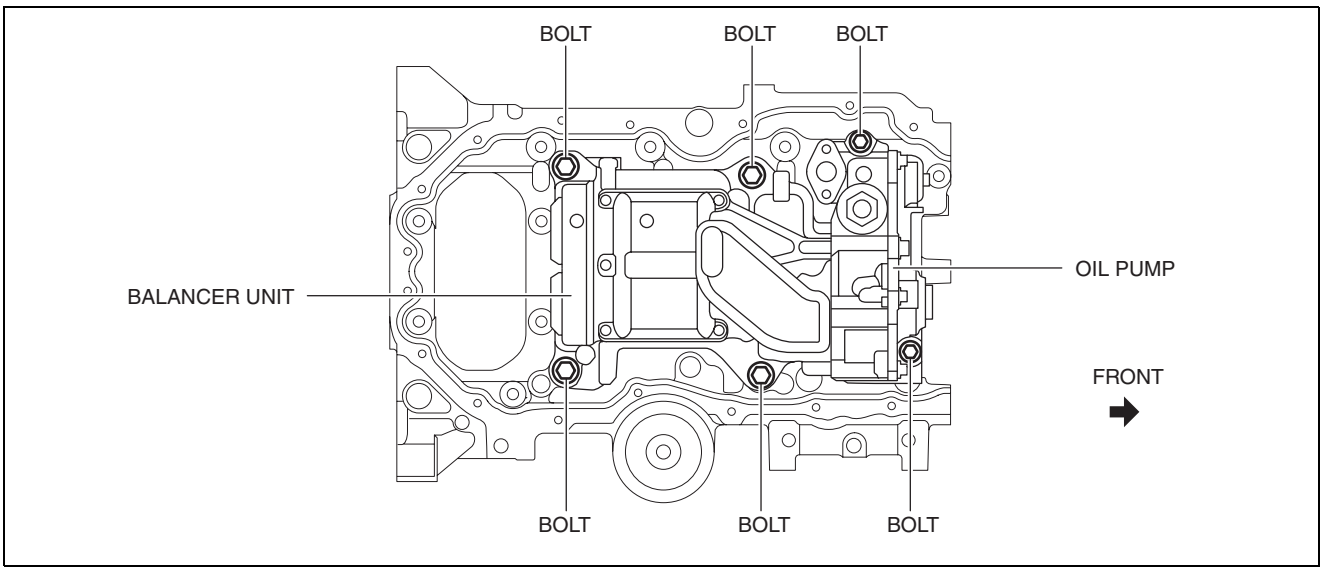
1. Install the oil pump and balancer component using the following procedure:
   (1) Apply clean engine oil to a new oil strainer O-ring.
   (2) Assemble the oil strainer to the oil pump.
   (3) Verify that the balancer shaft (No.1) knock pin position is perpendicular to the cylinder block installation surface.
      - If the knock pin position has deviated, rotate the balancer shaft (No.1) and correct.
   (4) Apply engine oil to the balancer shaft (No.1) journal area.
   (5) Align the heights of the balancer shaft (No.1) spline and oil pump spline and install the oil pump to the balancer unit.

   Note
   - The balancer shaft (No.1) spline and oil pump spline timing does not need to be matched.

   (6) Temporarily tighten the bolts until the seating surfaces of the oil pump installation bolts are completely seated.
   (7) Install the oil pump and balancer unit to the cylinder block and temporarily tighten the seating face of the bolts shown in the figure until they are completely seated.



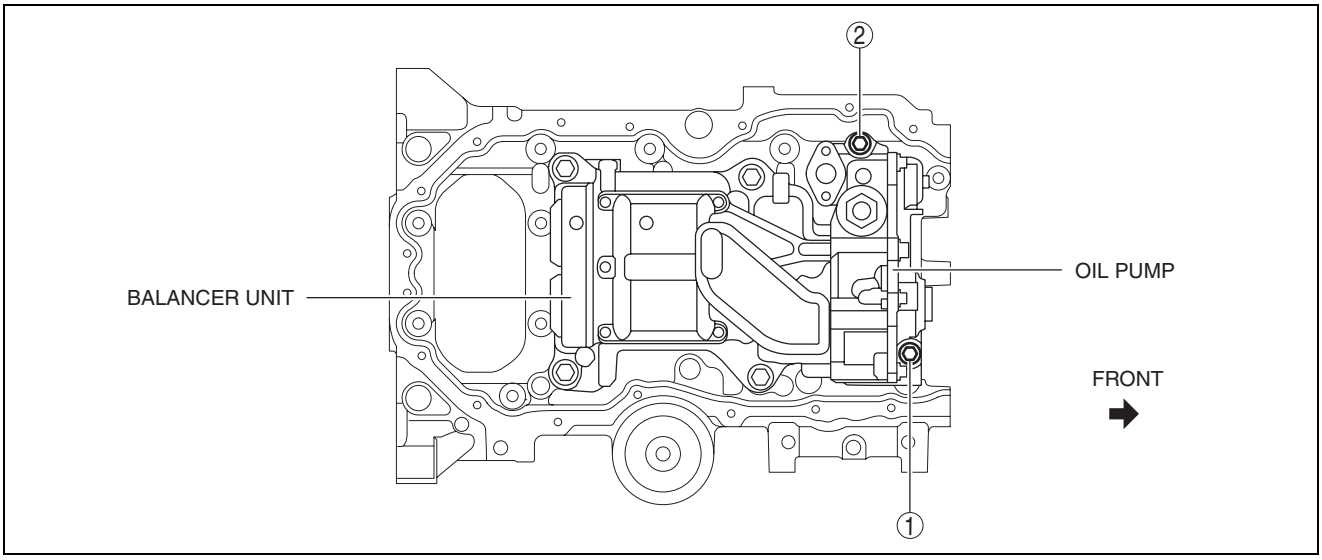
ac5wzw0000484



ac5wzw0000484

LUBRICATION [SKYACTIV-D 2.2]

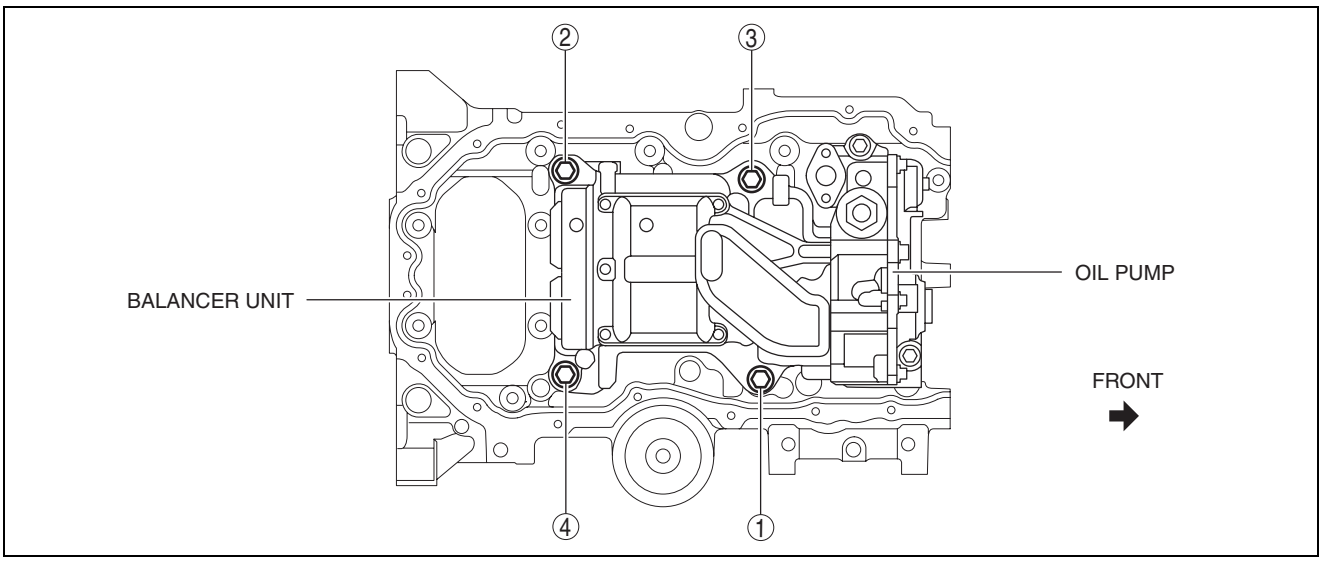
(8) Tighten oil pump installation bolts in the order shown in the figure to the specified torque.



ac5wzw0000484

Tightening torque
20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}

(9) Tighten the balancer unit installation bolts in two steps in the order shown in the figure to the specified torque.

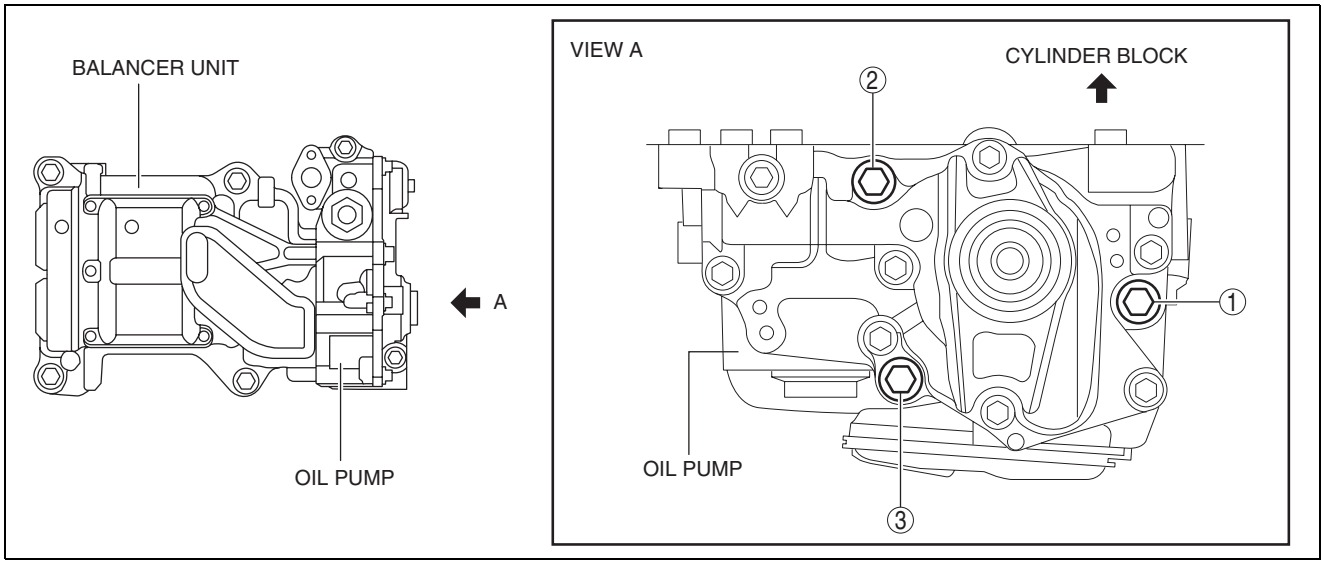


ac5wzw0000484

Tightening torque
First step: 16—22 N·m {1.7—2.2 kgf·m, 12—16 ft·lbf}
Second step: 30—36 N·m {3.1—3.6 kgf·m, 23—26 ft·lbf}

LUBRICATION [SKYACTIV-D 2.2]

(10)Tighten the oil pump installation bolts in the order shown in the figure.



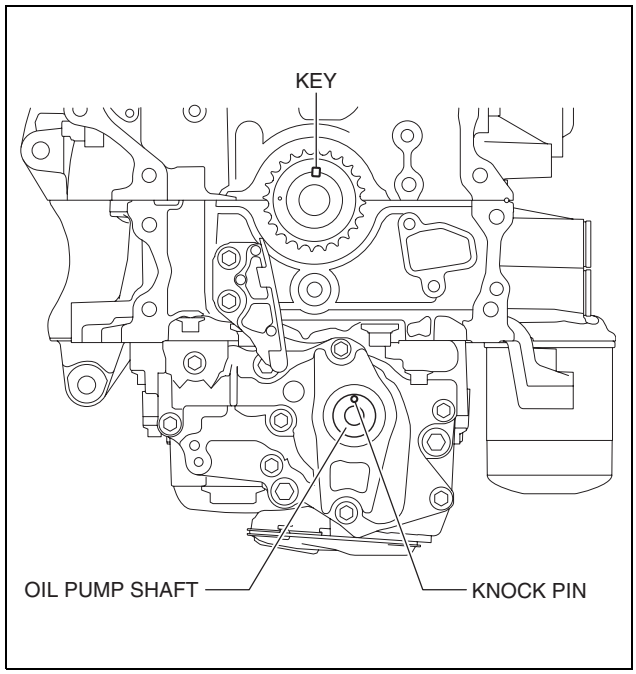
ac5wzw0000484

Tightening torque
20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}

Oil Pump Chain Installation Note

1. Verify that the key and knock pin are aligned to the positions shown in the figure.
   - If they are not in the positions shown in the figure, rotate the crankshaft and balancer shaft (No.1) to set cylinder No.1 to top dead center (TDC).

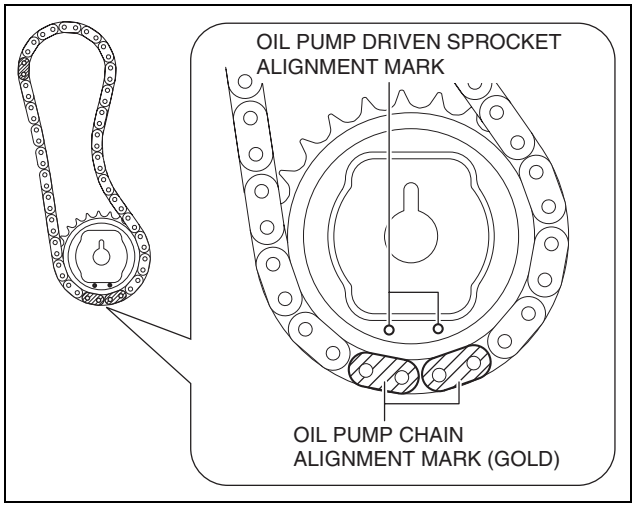
   Note
   - When rotating the balancer shaft (No.1), temporarily assemble the oil pump driven sprocket and rotate while holding the sprocket with a hand.



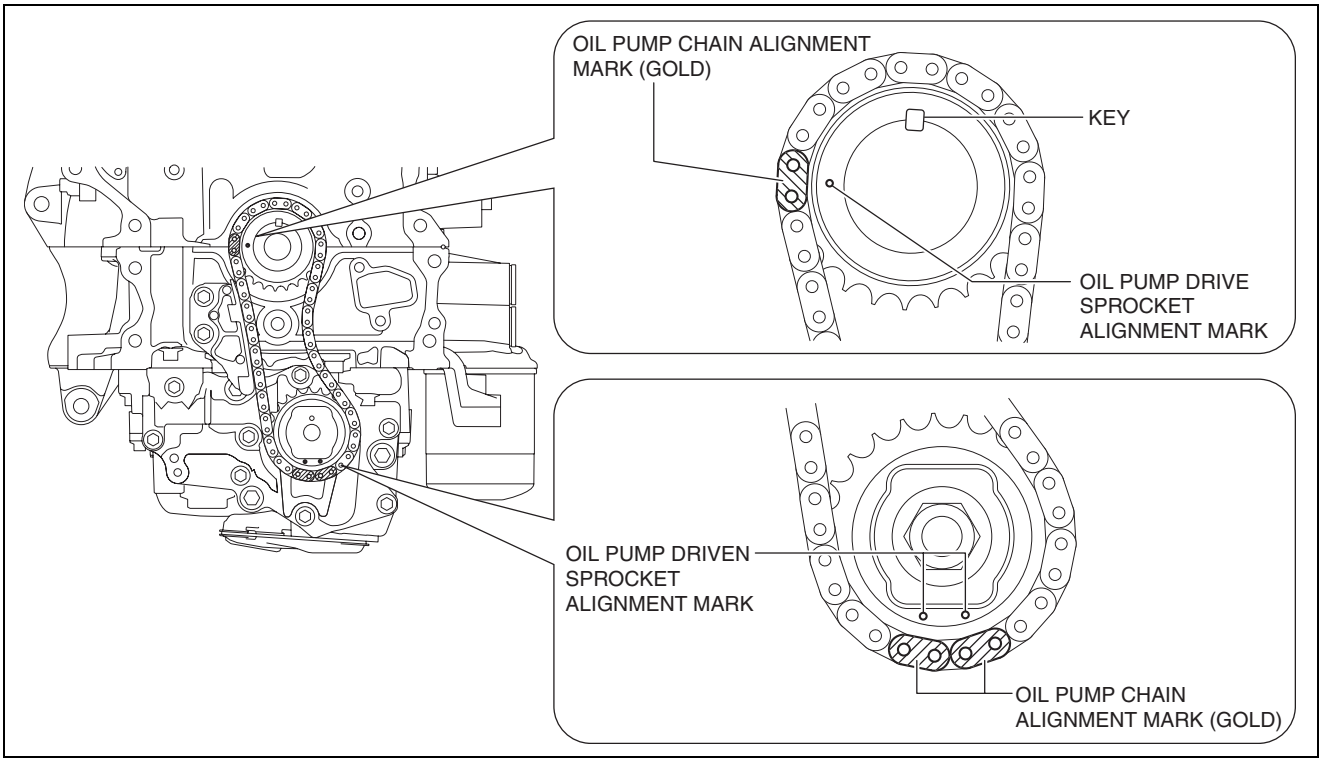
ac5wzw0000499

LUBRICATION [SKYACTIV-D 2.2]

2. Align the oil pump chain alignment marks with the oil pump driven sprocket alignment marks.
3. Install the oil pump chain and oil pump driven sprocket as a single unit while aligning the alignment marks on each sprocket and oil pump chain as shown in the figure.



ac5wzw0000519



ac5wzw0000499

4. Temporarily tighten the oil pump driven sprocket installation bolt.
5. Install the oil pump chain tensioner.

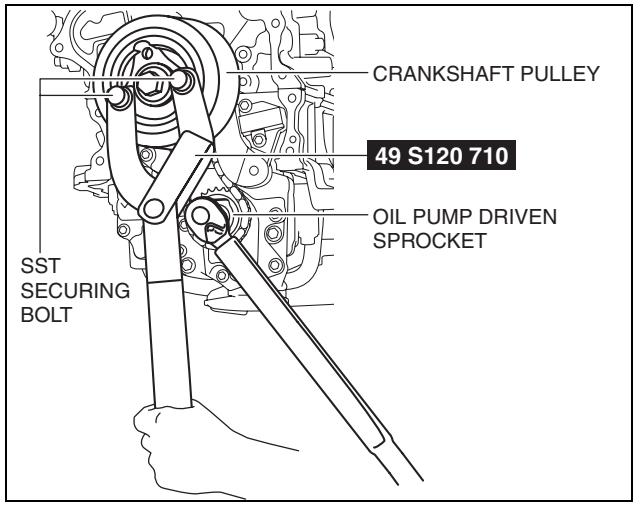
Caution

- **At this stage, do not remove the wire or paper clip installed to the oil pump chain tensioner.**

LUBRICATION [SKYACTIV-D 2.2]

6. Tighten the oil pump driven sprocket installation bolt using the following procedure:
   (1) Temporarily assemble the crankshaft pulley and crankshaft pulley lock bolt.
   (2) Install the **SST** shown in the figure and lock the oil pump against rotation. (See 01-10B-72 FRONT OIL SEAL REPLACEMENT [SKYACTIV-D 2.2].)
   (3) Tighten the oil pump driven sprocket installation bolt.

   Tightening torque
   123—140 N·m {13—14 kgf·m, 91—103 ft·lbf}



ac5wzw0000519

7. Remove the temporarily assembled crankshaft pulley and crankshaft pulley lock bolt.
8. Remove the wire or paper clip installed to the oil pump chain tensioner and apply tension to the oil pump chain.
   - If a new oil pump chain tensioner is used, remove the installed stopper.

COOLING SYSTEM [SKYACTIV-G 2.0]

COOLING SYSTEM SERVICE WARNINGS [SKYACTIV-G 2.0]

id0112h4800200

Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.**
- **Depending on the vehicle, the cooling fan may operate suddenly even when the ignition is off. Therefore, keep hands and tools away from the cooling fan even if the cooling fan is not operating to prevent injury to personnel or damage to the cooling fan. Always disconnect the negative battery cable when servicing the cooling fan or parts near the cooling fan.**

ENGINE COOLANT LEVEL INSPECTION [SKYACTIV-G 2.0]

id0112h4800300

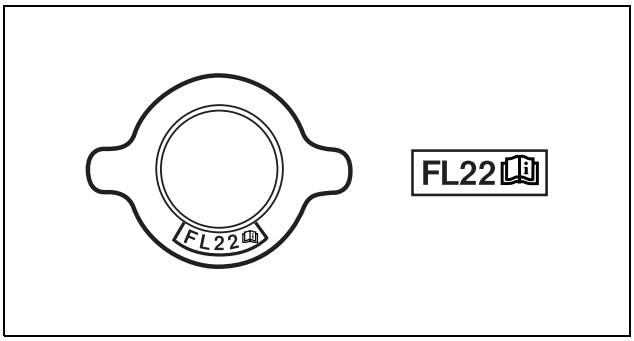
Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.**

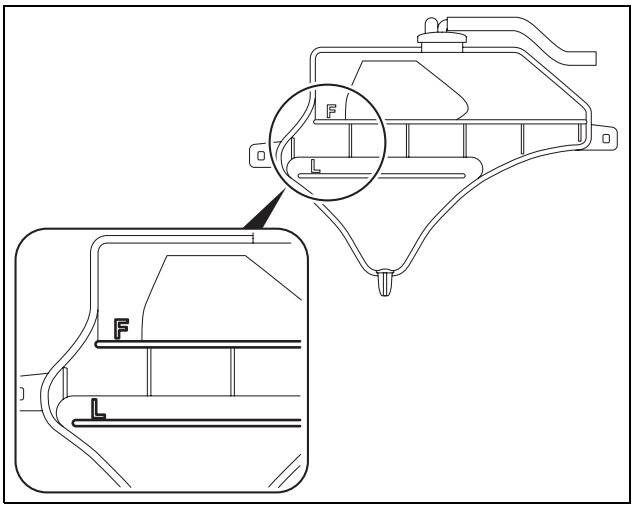
Note

- If the “FL22” mark is shown on or near the cooling system cap, use FL22 type engine coolant.
- FL22 type engine coolant is shipped as a diluted solution. Use the solution as is when replacing coolant.

1. Remove the cooling system cap.
2. Verify that the engine coolant is filled close to the top of the radiator filler neck.
   - If the engine coolant level is low, add engine coolant.
3. Verify that the engine coolant level in the coolant reserve tank is between the F and L marks.
   - If the engine coolant level is below the L mark, add engine coolant.



acxuuw00002056



ac5uuw00000566

COOLING SYSTEM [SKYACTIV-G 2.0]

ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0]

id0112h4800600

Warning

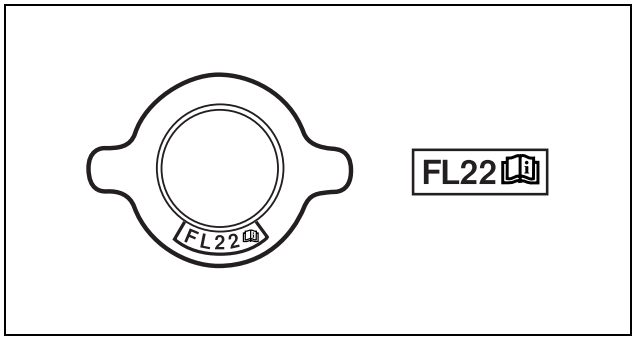
- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.**

Caution

- **Use engine coolant at a concentration that meets the environmental conditions in which the vehicle is driven, otherwise engine damage could occur.**
- **The engine has aluminum parts and must be protected by an ethylene-glycol-based coolant to prevent corrosion and freezing.**
- **Do not use coolants containing Alcohol, Methanol, Borate or Silicate. These coolants could damage the cooling system.**
- **Use only soft (demineralized) water in the coolant mixture. Water that contains minerals will cut down on the coolant's effectiveness.**
- **Engine coolant damages paint. If engine coolant does get on a painted surface, rinse it off quickly.**

Note

- If the “FL22” mark is shown on or near the cooling system cap, use FL22 type engine coolant.
- FL22 type engine coolant is shipped as a diluted solution. Use the solution as is when replacing coolant.



acxuuw00002061

Engine coolant capacity [European (L.H.D.) specs.] (approx. quantity)
ATX: 7.6 L {8.0 US qt, 6.7 Imp qt}
MTX: 7.4 L {7.8 US qt, 6.5 Imp qt}

Engine coolant capacity [European (U.K.) specs.] (approx. quantity)
7.4 L {7.8 US qt, 6.5 Imp qt}

Engine coolant capacity [General (R.H.D.) specs.] (approx. quantity)
ATX: 7.4 L {7.8 US qt, 6.5 Imp qt}
MTX: 7.1 L {7.5 US qt, 6.2 Imp qt}

Engine coolant capacity [Israel, China] (approx. quantity)
7.5 L {7.9 US qt, 6.6 Imp qt}

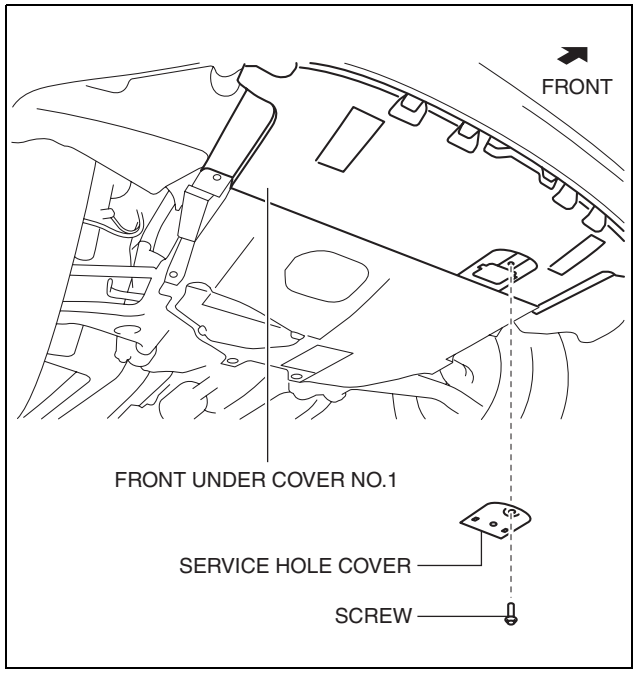
Engine coolant capacity [Saudi] (approx. quantity)
7.8 L {8.2 US qt, 6.9 Imp qt}

Engine coolant capacity [Except European (L.H.D. U.K.) specs., General (R.H.D.) specs., Israel, Saudi, China] (approx. quantity)
ATX: 7.5 L {7.9 US qt, 6.6 Imp qt}
MTX: 7.3 L {7.7 US qt, 6.4 Imp qt}

1. Remove the cooling system cap.

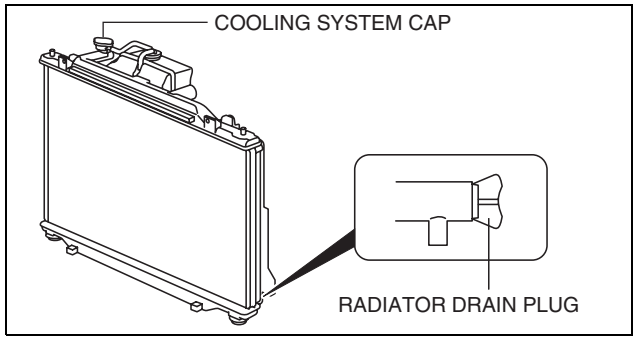
COOLING SYSTEM [SKYACTIV-G 2.0]

2. Remove the service hole cover (installed to front under cover No.1) used to drain the engine coolant.



ac5uuw00000567

3. Loosen the radiator drain plug and drain the engine coolant into a container.
4. Flush the cooling system with water until all traces of color are gone.
5. Let the system drain completely.
6. Tighten the radiator drain plug.
7. Referring to the following chart, select the correct volume percentage of the water and engine coolant.



ac5uuw00000568

Antifreeze solution mixture percentage (Except FL22 type engine coolant)

Engine coolant protection	Volume percentage (%)		Gravity at 20 °C {68 °F}
	Water	Coolant	
Above -16 °C {3 °F}	65	35	1.057
Above -26 °C {-15 °F}	55	45	1.072
Above -40 °C {-40 °F}	45	55	1.086

8. Refill the engine coolant from the radiator filler neck until it is close to the top of the radiator filler neck.
9. Refill the engine coolant into the coolant reserve tank up to the F mark on the tank.
10. Install the cooling system cap.

Caution

- **If the high engine coolant temperature warning light flashes, stop the engine to lower the engine coolant temperature and prevent overheating. Then, verify the malfunctioning part and repair or replace it.**

11. Start the engine and warm up the engine by idling.

COOLING SYSTEM [SKYACTIV-G 2.0]

12. After the engine warms up, perform the following steps. At this time, be careful of the engine coolant temperature to prevent overheating.

    Note
    - If the accelerator pedal is depressed continuously for a specified time, the engine speed may decrease to the idle speed. This is due to the fuel cut control operation, which prevents overheating, and it does not indicate a malfunction.

    (1) Run the engine at **2,500 rpm** for **5 min**.
    (2) Maintain the engine speed at **3,000 rpm** for **5 s, and then idle**.
    (3) Repeat steps (1), (2) several times.
13. Stop the engine, and inspect the engine coolant level after the engine coolant temperature decreases. If it is low, repeat steps 8—12.
14. Inspect for engine coolant leakage. (See 01-12A-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0].)
15. Install the service hole cover.

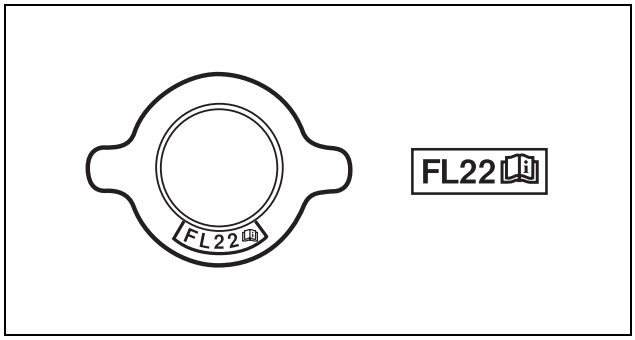
ENGINE COOLANT PROTECTION INSPECTION [SKYACTIV-G 2.0]

id0112h4800400

1. Measure the engine coolant temperature and specific gravity using a thermometer and a hydrometer.

    Caution
    - **Use engine coolant at a concentration that meets the environmental conditions in which the vehicle is driven, otherwise engine damage could occur.**
    - **The engine has aluminum parts and must be protected by an ethylene-glycol-based coolant to prevent corrosion and freezing.**
    - **Do not use coolants containing Alcohol, Methanol, Borate or Silicate. These coolants could damage the cooling system.**
    - **Use only soft (demineralized) water in the coolant mixture. Water that contains minerals will cut down on the coolant's effectiveness.**
    - **Engine coolant damages paint. If engine coolant does get on a painted surface, rinse it off quickly.**

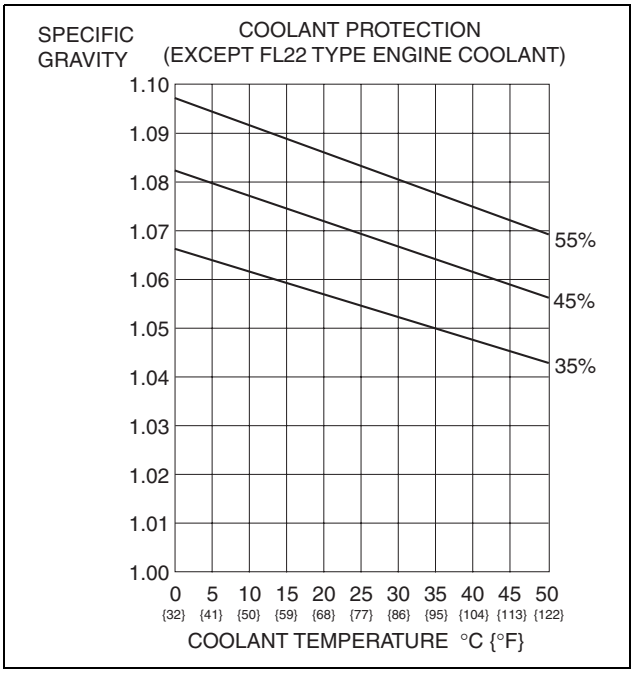
    Note
    - If the "FL22" mark is shown on or near the cooling system cap, use FL22 type engine coolant.
    - FL22 type engine coolant is shipped as a diluted solution. Use the solution as is when replacing coolant.



am2zzw0000169

COOLING SYSTEM [SKYACTIV-G 2.0]

2. Determine the engine coolant protection level by referring to the graph shown in the figure.
   - If the engine coolant protection level is not correct, add water or engine coolant.



am2zzw0000169

ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0]

id0112h4800500

Warning

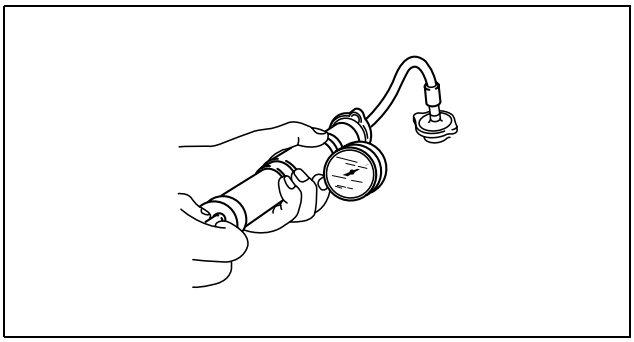
- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.**

1. Inspect the engine coolant level. (See 01-12A-3 ENGINE COOLANT LEVEL INSPECTION [SKYACTIV-G 2.0].)
2. Remove the cooling system cap.
3. Install the radiator cap tester to the radiator filler neck.
4. Apply pressure using the radiator cap tester.

Caution

- **Applying more than 122.6 kPa {1.250 kgf/cm^2, 17.78 psi} can damage the hoses, fittings, and other components, and cause leakage.**

Engine coolant leakage inspection pressure
122.6 kPa {1.250 kgf/cm^2, 17.78 psi} [1 min]



ampjjw00003132

5. When pressurizing the cooling system, verify that the pressure is maintained.
   - If the gauge needle drops, it may indicate water leakage. Repair or replace the applicable part.

COOLING SYSTEM [SKYACTIV-G 2.0]

COOLING SYSTEM CAP INSPECTION [SKYACTIV-G 2.0]

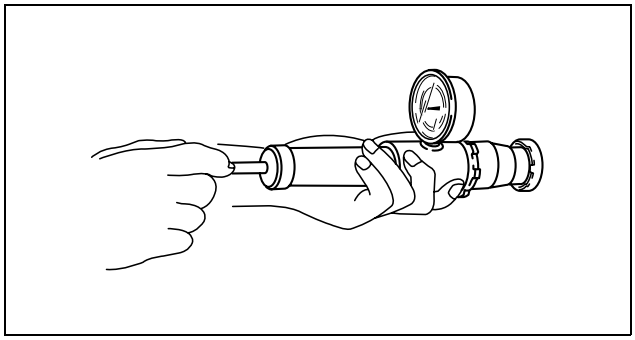
id0112h4801500

Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.**

1. Clean the cooling system cap and the sealed part.
2. Inspect the cooling system cap for cracks or everted seal.
   - If there is any malfunction, replace the cooling system cap.
3. Attach the cooling system cap to the radiator cap tester.
4. Hold the cooling system cap downward and apply pressure gradually. Verify that the pressure is held stable for **10 s.**
   - If the pressure is not held stable, replace the cooling system cap.

Cooling system cap valve opening pressure
93.2—122.6 kPa {0.951—1.250 kgf/cm^2, 13.6—17.7 psi}



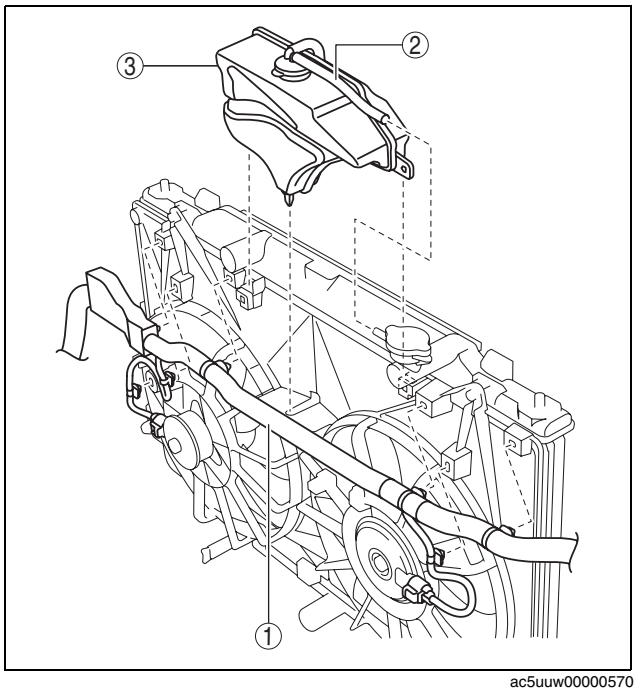
ampjjw00001686

COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0112h4801000

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.

1	Wiring harness
2	Hose
3	Coolant reserve tank (See 01-12A-9 Coolant Reserve Tank Removal Note.)

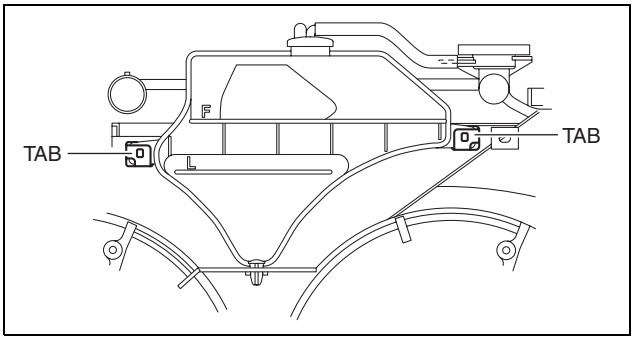


ac5uuw00000570

COOLING SYSTEM [SKYACTIV-G 2.0]

Coolant Reserve Tank Removal Note

1. Remove the coolant reserve tank from the radiator cowling tabs shown in the figure by lifting them with a flathead screwdriver.



ac5uuw00000571

RADIATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0112h4801400

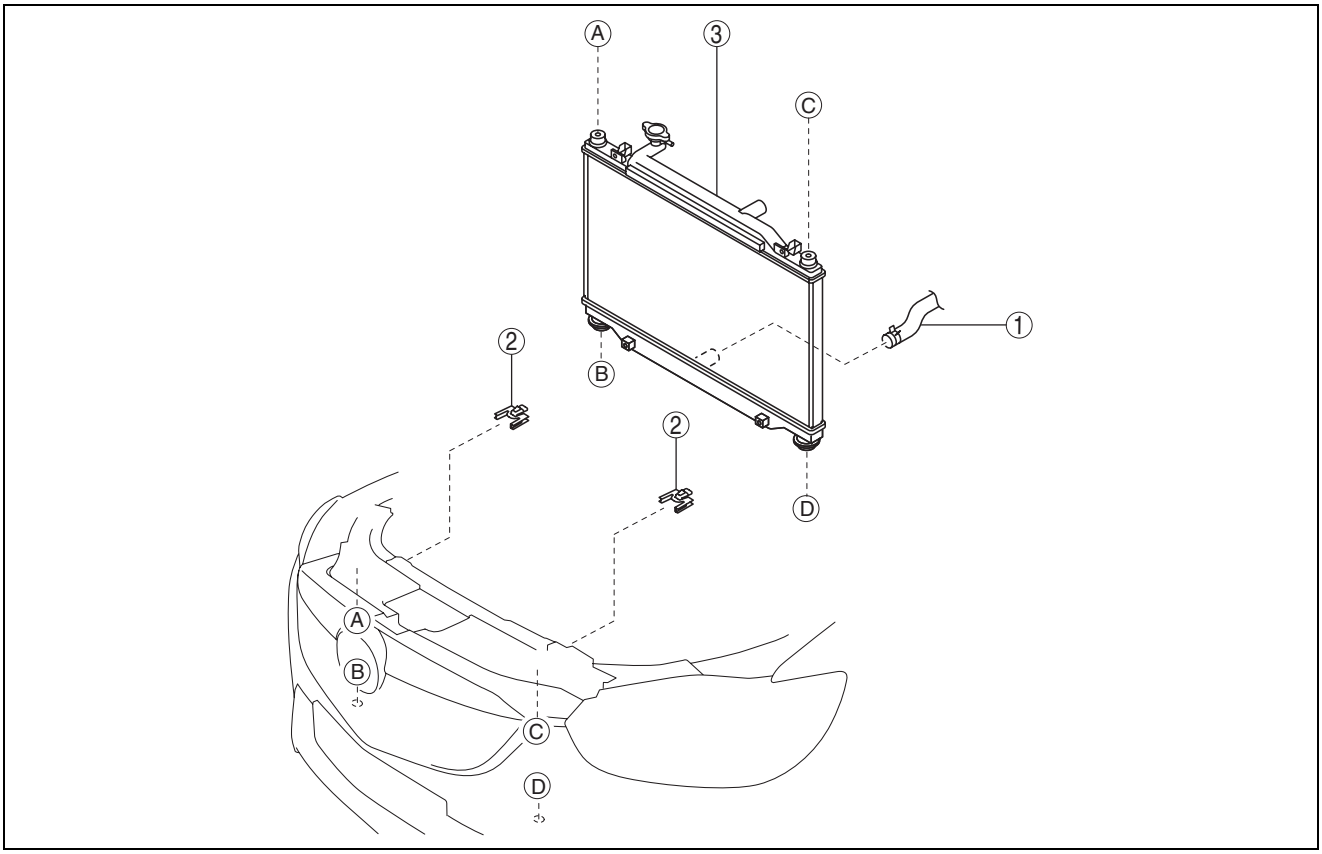
Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
3. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)
4. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Remove the air cleaner, air hose and fresh air duct component. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
6. Remove the coolant reserve tank. (See 01-12A-8 COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
7. Remove the cooling fan component. (See 01-12A-19 COOLING FAN MOTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
8. Remove in the order indicated in the table.
9. Install in the reverse order of removal.
10. Refill the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)

COOLING SYSTEM [SKYACTIV-G 2.0]

11. Inspect for engine coolant leakage. (See 01-12A-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0].)



ac5uuw00000573

1	Lower radiator hose
2	Upper mount rubber bracket (See 01-12A-11 Upper Mount Rubber Bracket Removal Note.)

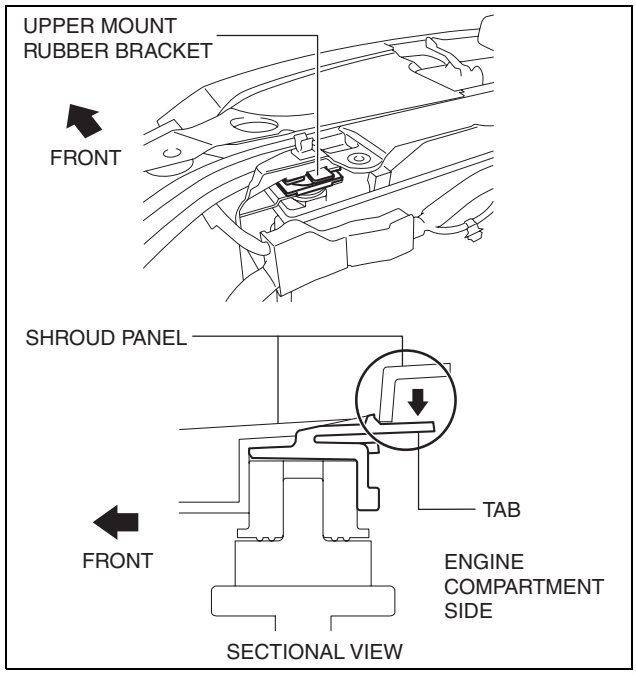
3	Radiator (See 01-12A-11 Radiator Removal Note.)

COOLING SYSTEM [SKYACTIV-G 2.0]

Upper Mount Rubber Bracket Removal Note

Caution
- **To prevent damage to the upper mount rubber bracket tab, do not apply excessive force.**

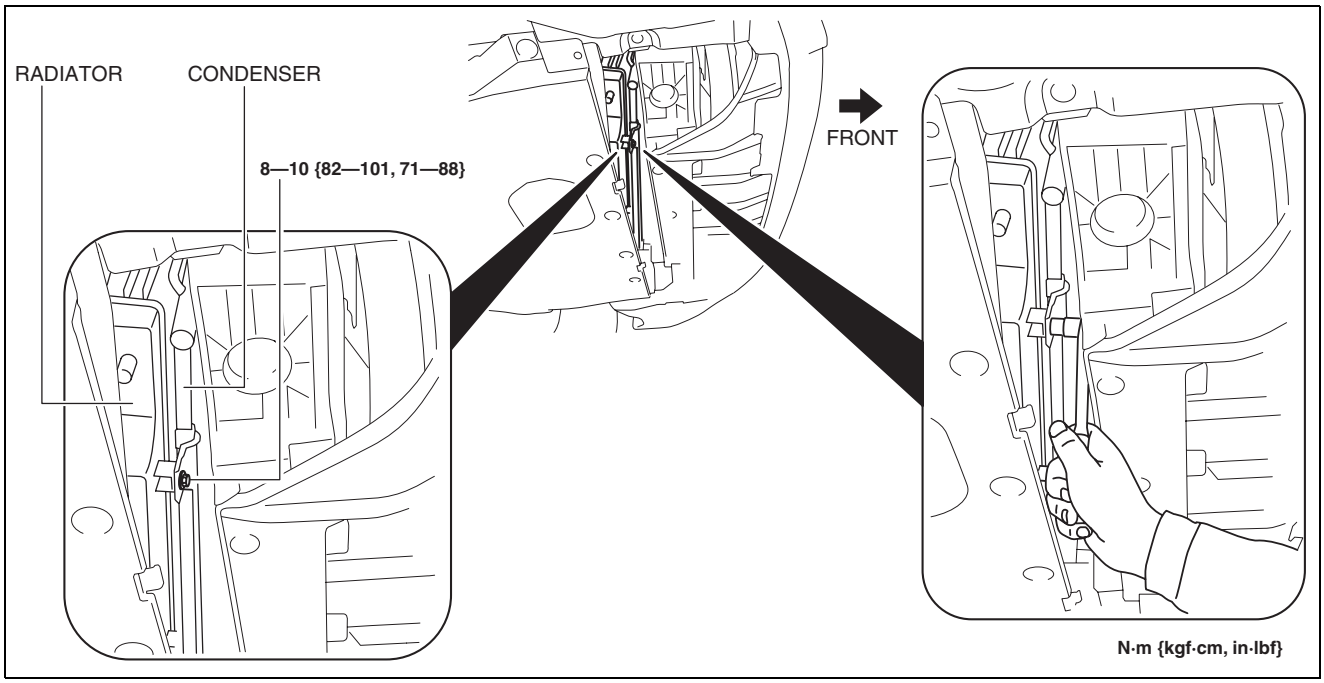
1. While pressing down the upper mount rubber bracket tab lightly in the direction of the arrow shown in the figure, pull out the upper mount rubber bracket toward the vehicle rear.
2. Remove the upper mount rubber bracket.



ac5uuw00000574

Radiator Removal Note

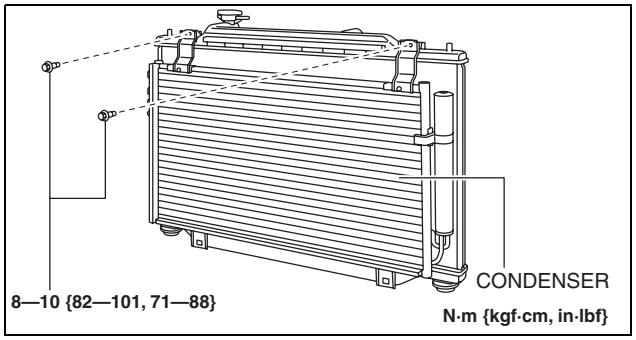
1. To prevent damage to the radiator core, protect it by covering the radiator surface with cardboard.
2. Lift the radiator and remove it from the radiator installation holes on the shroud panel.
3. Move the radiator and condenser to the engine side.
4. Remove the two bolts (lower side) which secure the condenser to the radiator.



ac5wzw0000266

COOLING SYSTEM [SKYACTIV-G 2.0]

5. Remove the two bolts (upper side) which secure the condenser to the radiator.
6. Remove the radiator from above the engine compartment.



ac5wzw0000266

THERMOSTAT REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

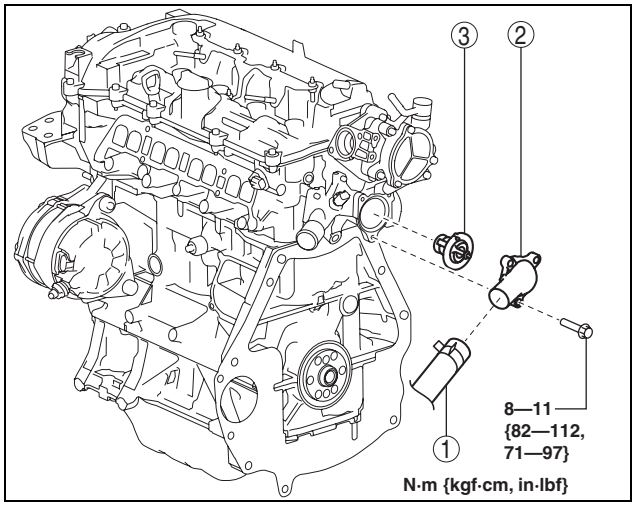
id0112h4801200

Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)
3. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Remove the air cleaner, air hose and fresh air duct component. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Remove the battery, battery tray and PCM component. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
6. Remove in the order indicated in the table.
7. Install in the reverse order of removal.
8. Refill the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)
9. Inspect for engine coolant leakage. (See 01-12A-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0].)

1	Lower radiator hose (Thermostat cover side)
2	Thermostat cover (See 01-12A-13 Thermostat Cover Removal Note.)
3	Thermostat (See 01-12A-13 Thermostat Installation Note.)



am3uuw0000894

COOLING SYSTEM [SKYACTIV-G 2.0]

Thermostat Cover Removal Note

1. Place rags on the transaxle case around the area under the thermostat cover.
2. Slightly loosen the **three** thermostat cover bolts and use the rags to absorb the draining engine coolant.

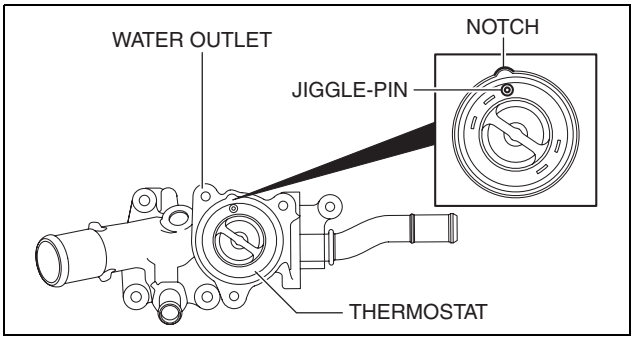
Caution

- **Do not remove the thermostat cover completely at this time because the engine coolant remaining in the engine will drain out.**

3. After the engine coolant stops draining, remove the thermostat cover.

Thermostat Installation Note

1. Install the thermostat with the jiggle pin aligned with the notch of the water outlet.



ac5uuw00000572

THERMOSTAT INSPECTION [SKYACTIV-G 2.0]

id0112h4801300

1. Remove the thermostat. (See 01-12A-12 THERMOSTAT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
2. Visually check that the thermostat valve is closed.
3. Place the thermostat in water.

Warning

- **During inspection, the thermostat and water are extremely hot and can cause severe burns. Do not touch the thermostat and water.**

4. Heat the water and check the following.
   - Opening temperature and valve lift
     — If there is a malfunction, replace the thermostat.

Thermostat initial-opening temperature
80.5—83.5 °C {177—182 °F}

Thermostat full-open temperature
95 °C {203 °F}

Thermostat full-open lift
8.5 mm {0.33 in} or more

COOLING SYSTEM [SKYACTIV-G 2.0]

WATER PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0112h4800700

Warning

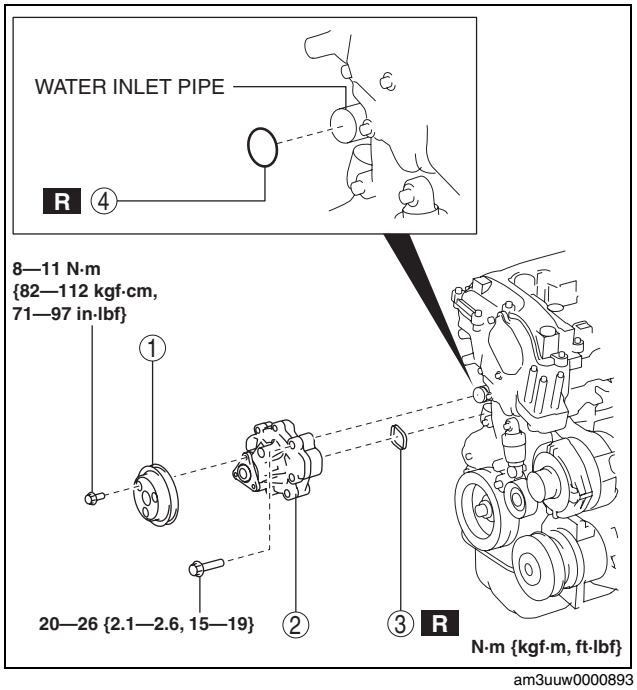
- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.**

Note

- Do not disassemble the water pump because it is a precision unit.
- Remove/install the water pump pulley and water pump from the underside of the vehicle.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
3. Remove the splash shield (RH). (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
4. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)
5. Remove the water pump drive belt with the generator drive belt still installed and set it out of the way. (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
6. Remove in the order indicated in the table.
7. Install in the reverse order of removal.
8. Refill the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)
9. Inspect for engine coolant leakage. (See 01-12A-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0].)

1	Water pump pulley (See 01-12A-14 Water Pump Pulley Removal Note.) (See 01-12A-18 Water Pump Pulley Installation Note.)
2	Water pump component (See 01-12A-15 Water Pump Component Removal Note.) (See 01-12A-16 Water Pump Component Installation Note.)
3	Gasket
4	O-ring (See 01-12A-16 O-ring Installation Note.)



am3uuw0000893

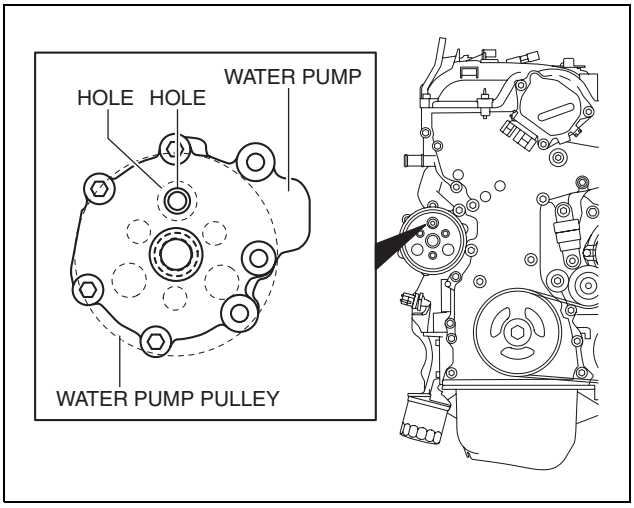
Water Pump Pulley Removal Note

Caution

- **Be careful not to damage the belt groove and surface of the water pump pulley when using tools, otherwise it will cause wear, breakage, abnormal noise of the drive belt (stretch belt), damage to the pulley, and rust.**

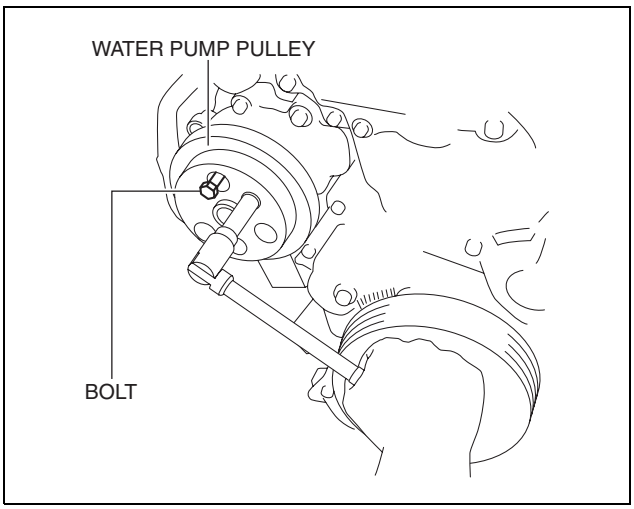
COOLING SYSTEM [SKYACTIV-G 2.0]

1. Align the water pump pulley hole with the water pump hole as shown in the figure.



am3uuw0000893

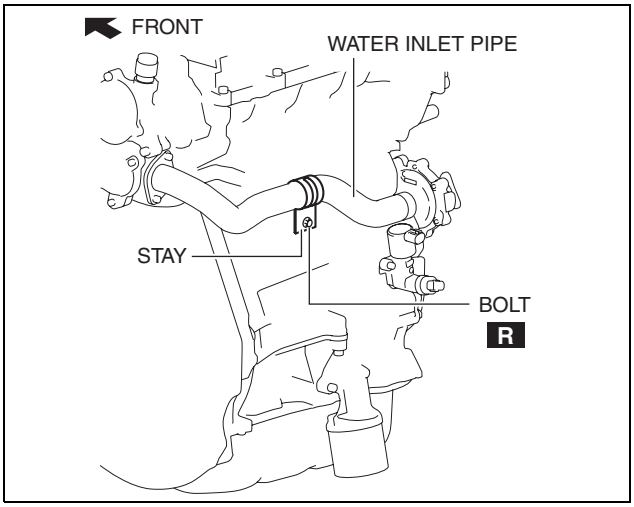
2. Insert an appropriate bolt (length 70 mm {2.8 in}) into the water pump hole shown in the figure and lock the water pump pulley against rotation.
3. Remove the bolt used for locking the water pump pulley against rotation.



am3uuw0000893

Water Pump Component Removal Note

1. Remove the water inlet pipe stay bolt.
2. Place a container under the engine to collect the engine coolant remaining in the engine.



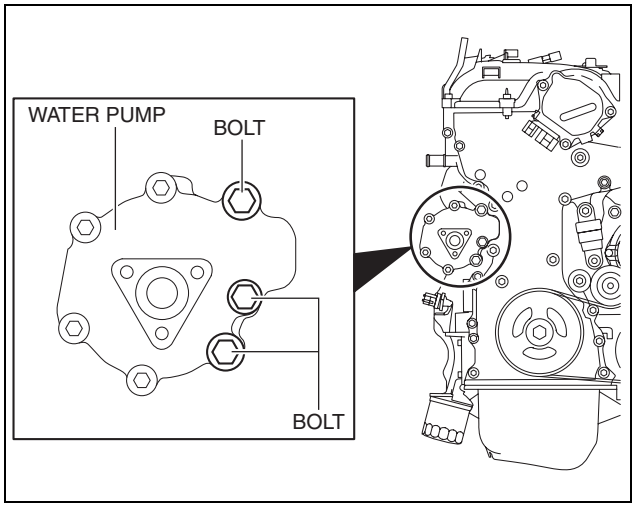
am3uuw0000893

COOLING SYSTEM [SKYACTIV-G 2.0]

3. Slightly loosen the three water pump component bolts shown in the figure and collect the draining engine coolant into a container.

Caution
- **Do not remove the water pump component completely at this time because the remaining approx. 2 L or less of engine coolant flowing in the engine will drain out.**

4. After the engine coolant stops draining, remove the water pump component.



am3uuw0000893

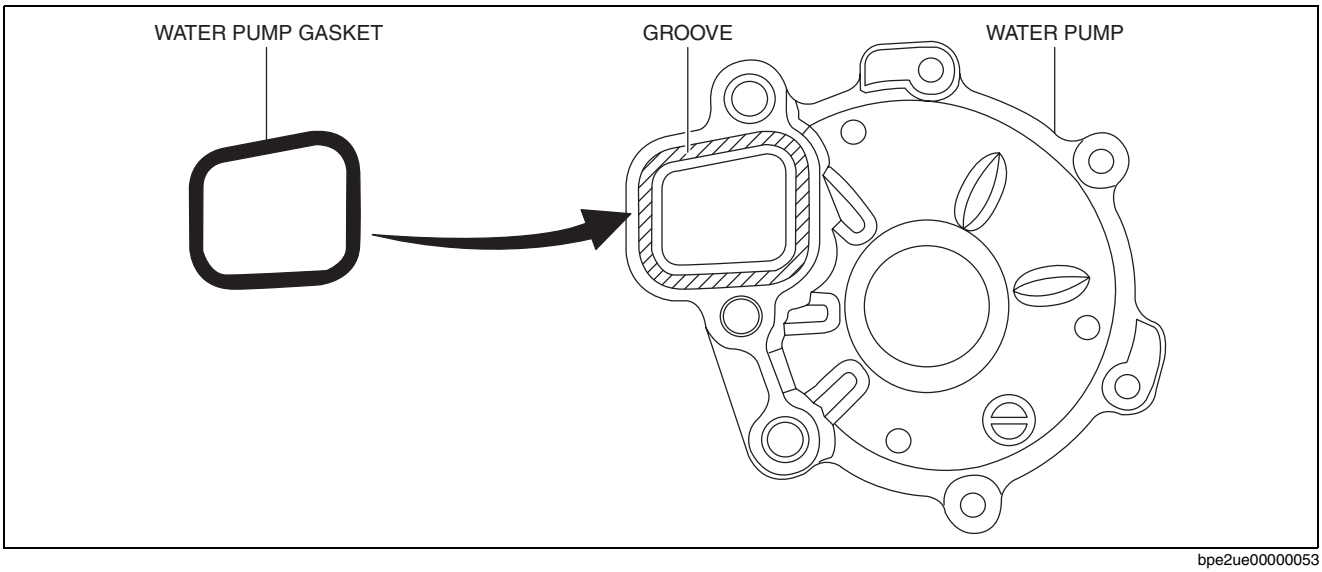
O-ring Installation Note

Caution
- **Do not apply oil (engine oil, ATF etc.) to the O-ring of the water inlet pipe. Otherwise, the O-ring could swell causing a seal malfunction.**

1. Apply engine coolant to a new O-ring.
2. Install the O-ring to the water inlet pipe.

Water Pump Component Installation Note

Caution
- **Assemble the water pump gasket to the correct direction shown in the figure. Otherwise, it could leak engine coolant and damage the engine.**



bpe2ue00000053

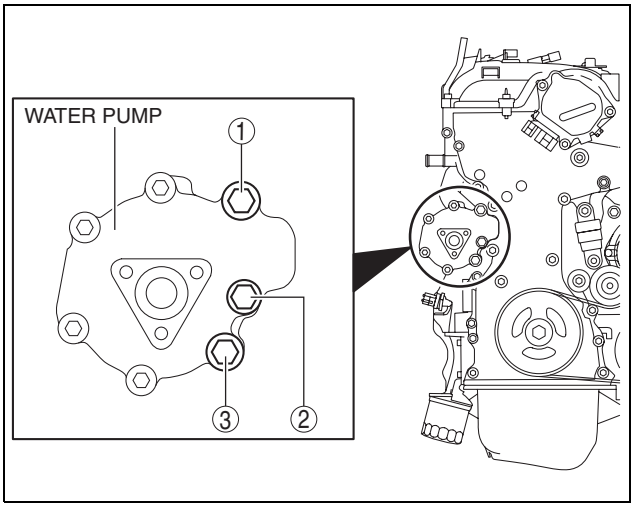
1. Insert a new water pump gasket into the water pump groove.
2. Install the water pump.

COOLING SYSTEM [SKYACTIV-G 2.0]

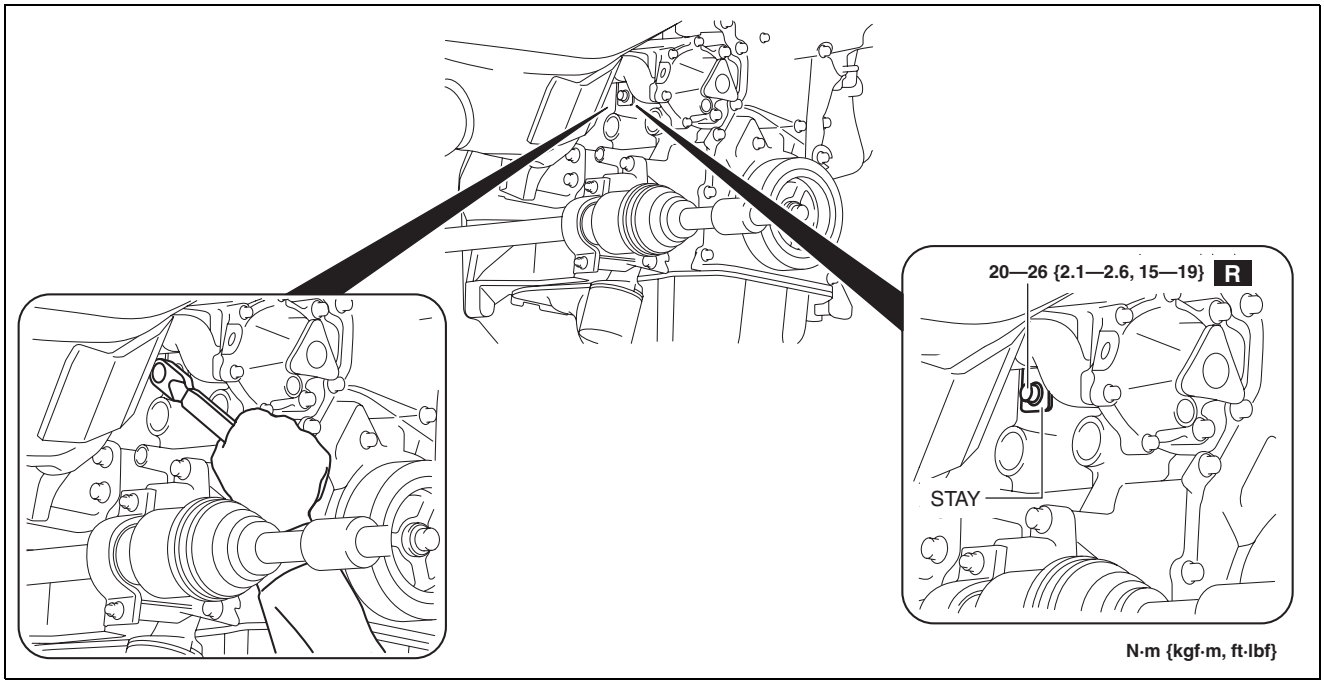
3. Tighten the bolts in the order shown in the figure.

   Tightening torque
   20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}

4. Clean away the sealant adhering to the bolt hole on the cylinder block side of the water inlet pipe stay.
5. Remove the engine oil solenoid valve to secure a sufficient space for installing the water inlet pipe stay bolt. (See 01-11A-10 ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
6. Install a new water inlet pipe stay bolt.



am3uuw0000894



ac5uuw00000569

7. Install the engine oil solenoid valve. (See 01-11A-10 ENGINE OIL SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

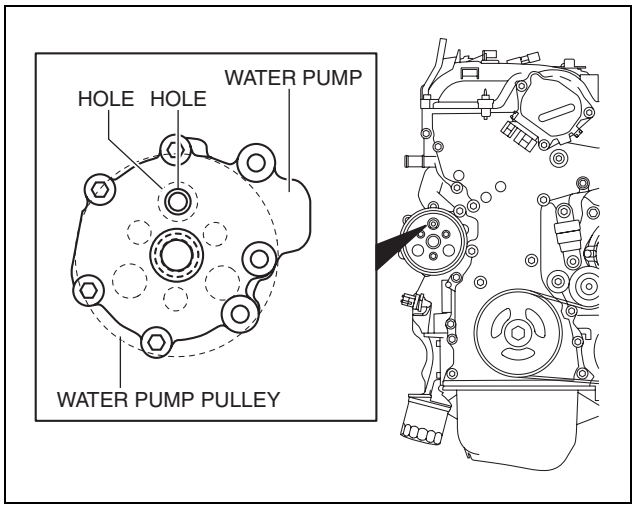
COOLING SYSTEM [SKYACTIV-G 2.0]

Water Pump Pulley Installation Note

Caution

- **Be careful not to damage the belt groove and surface of the water pump pulley when using tools, otherwise it will cause wear, breakage, abnormal noise of the drive belt (stretch belt), damage to the pulley, and rust.**

1. Install the water pump pulley to the water pump and temporarily tighten the bolt
2. Align the water pump pulley hole with the water pump hole as shown in the figure.

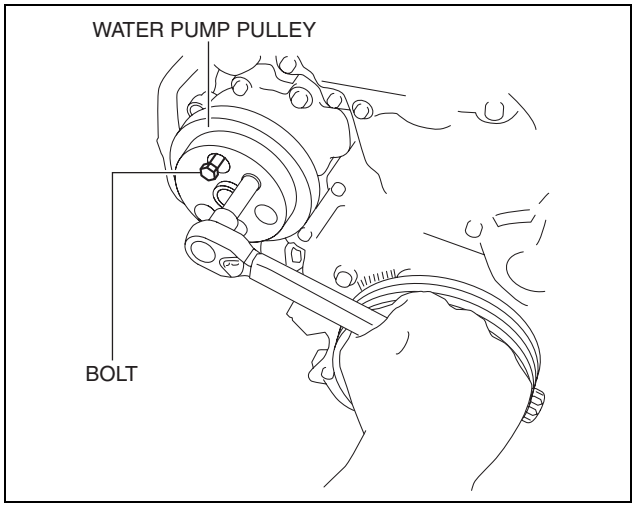


am3uuw0000893

3. Insert an appropriate bolt (length 70 mm {2.8 in}) into the water pump hole shown in the figure and lock the water pump pulley against rotation.
4. Completely tighten the water pump pulley bolt to the specified torque.

   Tightening torque
   8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

5. Remove the bolt used for locking the water pump pulley against rotation.



am3uuw0000894

COOLING SYSTEM [SKYACTIV-G 2.0]

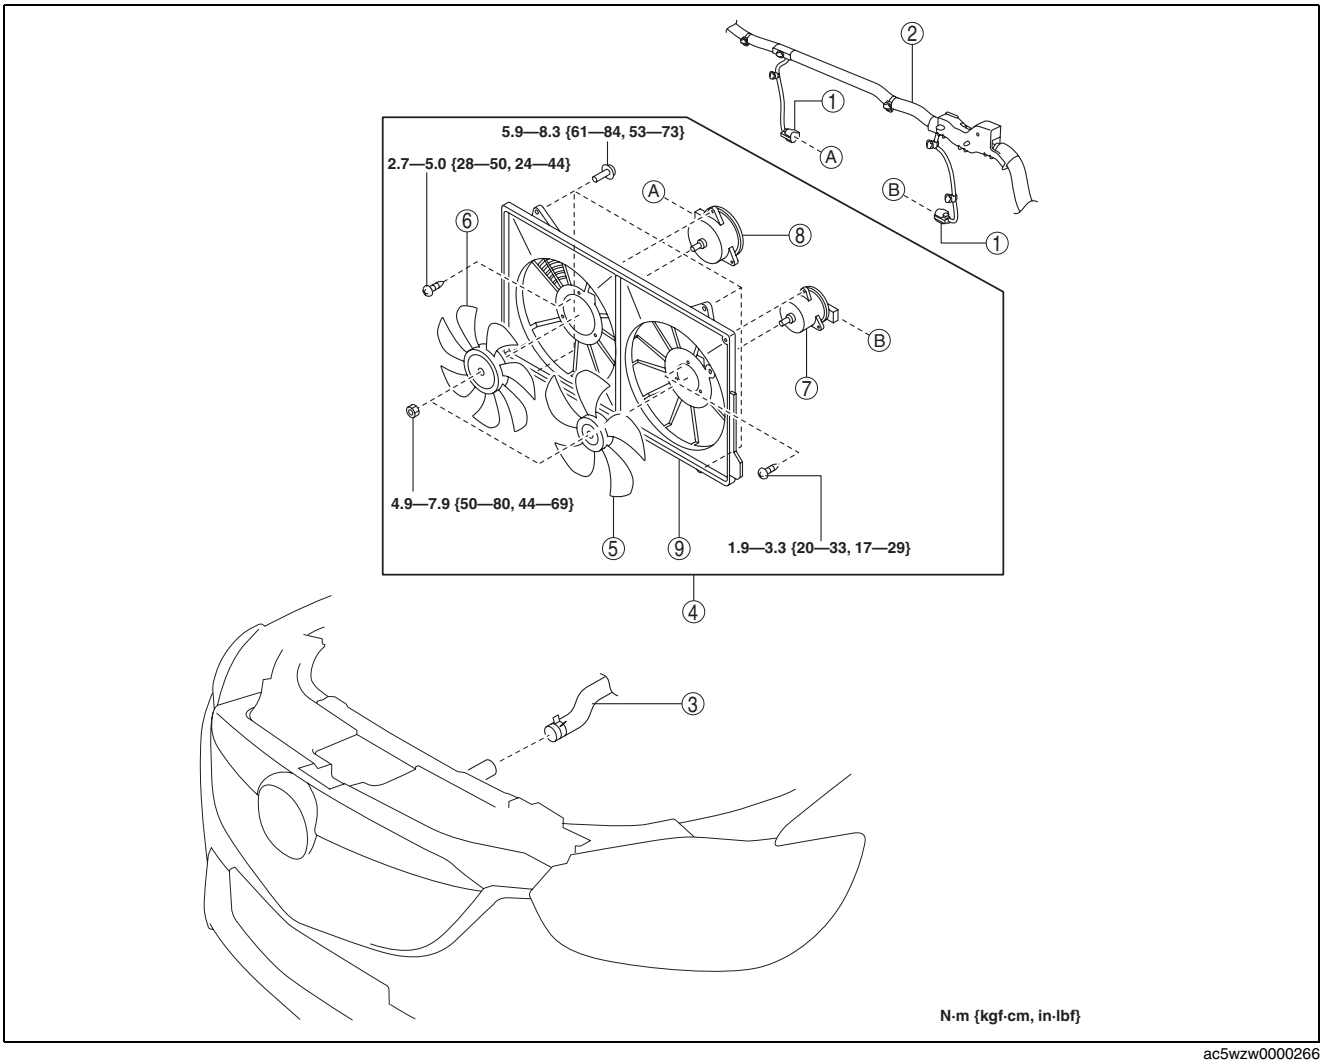
COOLING FAN MOTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0112h4801900

Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)
3. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Remove the air cleaner, air hose and fresh air duct component. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Remove the coolant reserve tank. (See 01-12A-8 COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
6. Remove in the order indicated in the table.
7. Install in the reverse order of removal.
8. Refill the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)
9. IInspect for engine coolant leakage. (See 01-12A-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-G 2.0])



ac5wzw0000266

COOLING SYSTEM [SKYACTIV-G 2.0]

COOLING SYSTEM SERVICE WARNINGS [SKYACTIV-D 2.2]

id0112s6800200

Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.**
- **Depending on the vehicle, the cooling fan may operate suddenly even when the ignition is off. Therefore, keep hands and tools away from the cooling fan even if the cooling fan is not operating to prevent injury to personnel or damage to the cooling fan. Always disconnect the negative battery cable when servicing the cooling fan or parts near the cooling fan.**

ENGINE COOLANT LEVEL INSPECTION [SKYACTIV-D 2.2]

id0112s6800300

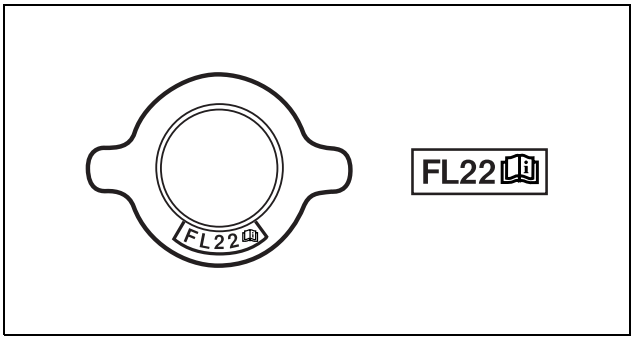
Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.**

Note

- If the “FL22” mark is shown on or near the cooling system cap, use FL22 type engine coolant.
- FL22 type engine coolant is shipped as a diluted solution. Use the solution as is when replacing coolant.

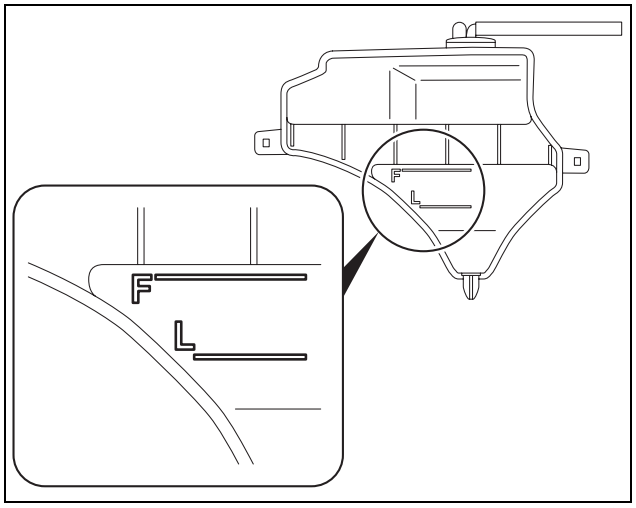
1. Remove the cooling system cap.
2. Verify that the engine coolant is filled close to the top of the radiator filler neck.
   - If the engine coolant level is low, add engine coolant.



acxuuw00002056

COOLING SYSTEM [SKYACTIV-D 2.2]

3. Verify that the engine coolant level in the coolant reserve tank is between the F and L marks.
   - If the engine coolant level is below the L mark, add engine coolant.



ac5wzw0000486

ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2]

id0112s6800600

Warning

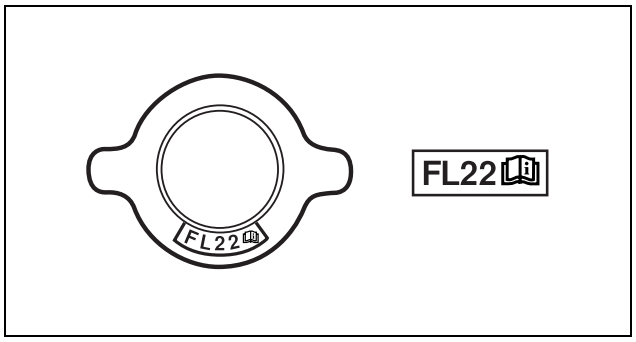
- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.**

Caution

- **Use engine coolant at a concentration that meets the environmental conditions in which the vehicle is driven, otherwise engine damage could occur.**
- **The engine has aluminum parts and must be protected by an ethylene-glycol-based coolant to prevent corrosion and freezing.**
- **Do not use coolants containing Alcohol, Methanol, Borate or Silicate. These coolants could damage the cooling system.**
- **Use only soft (demineralized) water in the coolant mixture. Water that contains minerals will cut down on the coolant's effectiveness.**
- **Engine coolant damages paint. If engine coolant does get on a painted surface, rinse it off quickly.**

Note

- If the “FL22” mark is shown on or near the cooling system cap, use FL22 type engine coolant.
- FL22 type engine coolant is shipped as a diluted solution. Use the solution as is when replacing coolant.



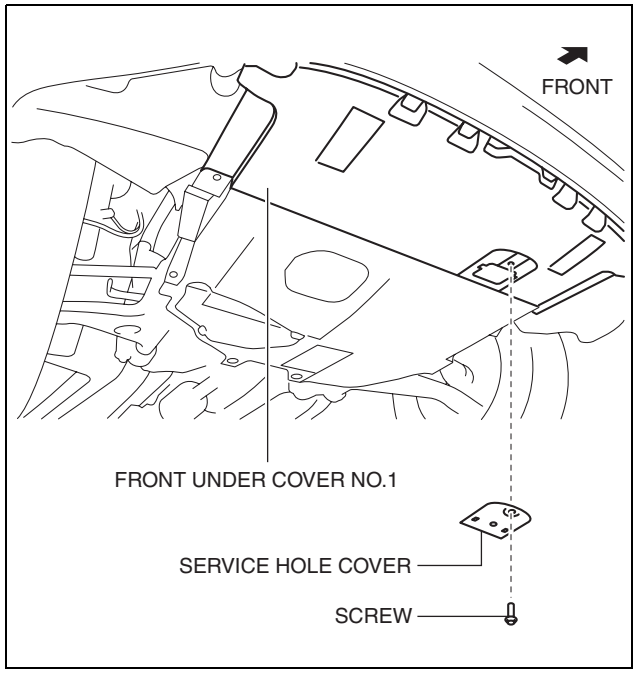
acxuuw00002061

Engine coolant capacity (approx. quantity)
European (L.H.D.) specs.: 8.9 L {9.4 US qt, 7.8 Imp qt}
European (R.H.D.) specs.: 9.1 L {9.6 US qt, 8.0 Imp qt}
Except European specs.: 9.2 L {9.7 US qt, 8.1 Imp qt}

1. Remove the cooling system cap.

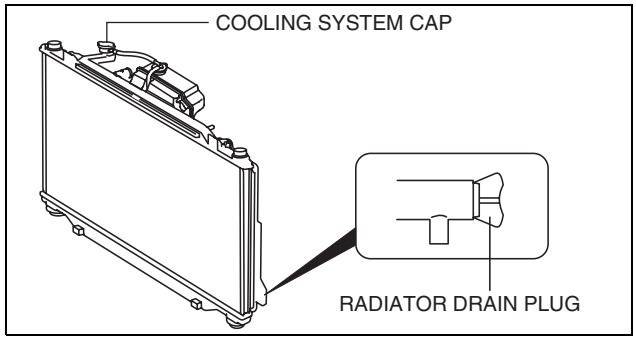
COOLING SYSTEM [SKYACTIV-D 2.2]

2. Remove the service hole cover (installed to front under cover No.1) used to drain the engine coolant.



ac5uuw00000567

3. Loosen the radiator drain plug and drain the engine coolant into a container.
4. Flush the cooling system with water until all traces of color are gone.
5. Let the system drain completely.
6. Tighten the radiator drain plug.
7. Referring to the following chart, select the correct volume percentage of the water and engine coolant.



ac5wzw0000487

Antifreeze solution mixture percentage (Except FL22 type engine coolant)

Engine coolant protection	Volume percentage (%)		Gravity at 20 °C {68 °F}
	Water	Coolant	
Above -16 °C {3 °F}	65	35	1.057
Above -26 °C {-15 °F}	55	45	1.072
Above -40 °C {-40 °F}	45	55	1.086

8. Refill the engine coolant from the radiator filler neck until it is close to the top of the radiator filler neck.
9. Refill the engine coolant into the coolant reserve tank up to the F mark on the tank.
10. Install the cooling system cap.

Caution

- **If the high engine coolant temperature warning light flashes, stop the engine to lower the engine coolant temperature and prevent overheating. Then, verify the malfunctioning part and repair or replace it.**

11. Start the engine and warm up the engine by idling.

COOLING SYSTEM [SKYACTIV-D 2.2]

12. After the engine warms up, perform the following steps. At this time, be careful of the engine coolant temperature to prevent overheating.

    Note
    - If the accelerator pedal is depressed continuously for a specified time, the engine speed may decrease to the idle speed. This is due to the fuel cut control operation, which prevents overheating, and it does not indicate a malfunction.

    (1) Run the engine at **2,500 rpm** for **5 min**.
    (2) Maintain the engine speed at **3,000 rpm** for **5 s, and then idle**.
    (3) Repeat steps (1), (2) several times.
13. Stop the engine, and inspect the engine coolant level after the engine coolant temperature decreases. If it is low, repeat steps 8—12.
14. Inspect for engine coolant leakage. (See 01-12B-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-D 2.2].)
15. Install the service hole cover.

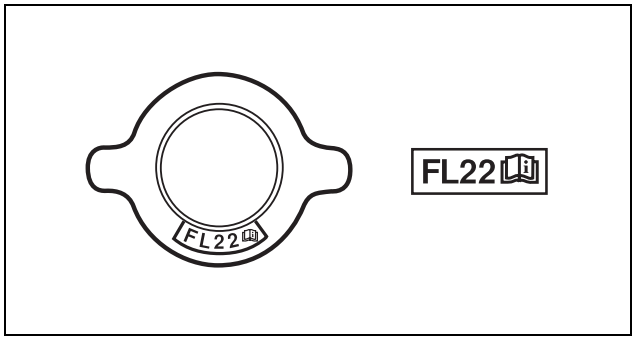
ENGINE COOLANT PROTECTION INSPECTION [SKYACTIV-D 2.2]

id0112s6800400

1. Measure the engine coolant temperature and specific gravity using a thermometer and a hydrometer.

    Caution
    - **Use engine coolant at a concentration that meets the environmental conditions in which the vehicle is driven, otherwise engine damage could occur.**
    - **The engine has aluminum parts and must be protected by an ethylene-glycol-based coolant to prevent corrosion and freezing.**
    - **Do not use coolants containing Alcohol, Methanol, Borate or Silicate. These coolants could damage the cooling system.**
    - **Use only soft (demineralized) water in the coolant mixture. Water that contains minerals will cut down on the coolant's effectiveness.**
    - **Engine coolant damages paint. If engine coolant does get on a painted surface, rinse it off quickly.**

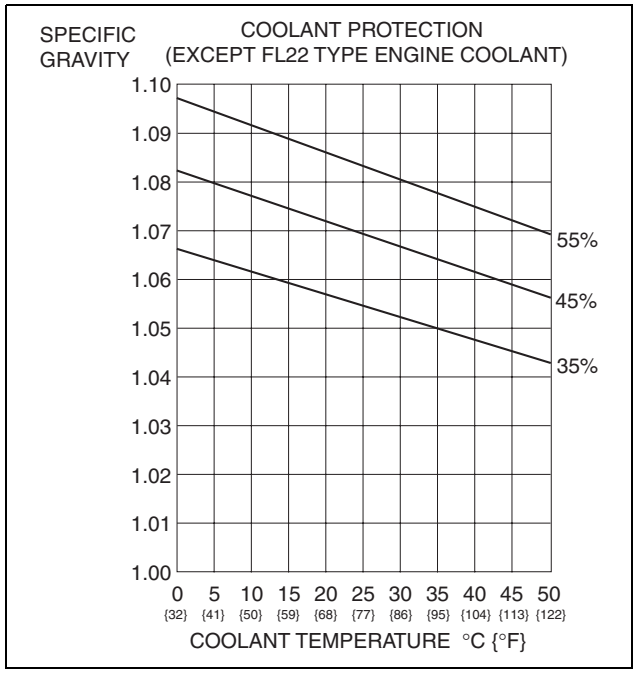
    Note
    - If the "FL22" mark is shown on or near the cooling system cap, use FL22 type engine coolant.
    - FL22 type engine coolant is shipped as a diluted solution. Use the solution as is when replacing coolant.



am2zzw0000169

COOLING SYSTEM [SKYACTIV-D 2.2]

2. Determine the engine coolant protection level by referring to the graph shown in the figure.
   - If the engine coolant protection level is not correct, add water or engine coolant.



am2zzw0000169

ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-D 2.2]

id0112s6800500

Warning

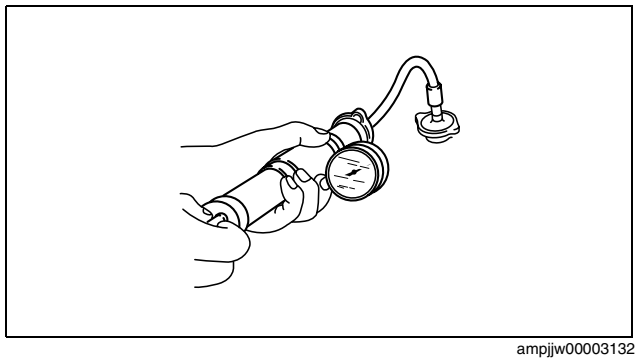
- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.**

1. Inspect the engine coolant level. (See 01-12B-3 ENGINE COOLANT LEVEL INSPECTION [SKYACTIV-D 2.2].)
2. Remove the cooling system cap.
3. Install the radiator cap tester to the radiator filler neck.
4. Apply pressure using the radiator cap tester.

Caution

- **Applying more than 122.6 kPa {1.250 kgf/cm^2, 17.78 psi} can damage the hoses, fittings, and other components, and cause leakage.**

Engine coolant leakage inspection pressure
122.6 kPa {1.250 kgf/cm^2, 17.78 psi} [1 min]



ampjjw00003132

5. When pressurizing the cooling system, verify that the pressure is maintained.
   - If the gauge needle drops, it may indicate water leakage. Repair or replace the applicable part.

COOLING SYSTEM [SKYACTIV-D 2.2]

COOLING SYSTEM CAP INSPECTION [SKYACTIV-D 2.2]

id0112s6801500

Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.**

1. Clean the cooling system cap and the sealed part.
2. Inspect the cooling system cap for cracks or everted seal.
   - If there is any malfunction, replace the cooling system cap.
3. Attach the cooling system cap to the radiator cap tester.
4. Hold the cooling system cap downward and apply pressure gradually. Verify that the pressure is held stable for **10 s.**
   - If the pressure is not held stable, replace the cooling system cap.

Cooling system cap valve opening pressure
93.2—122.6 kPa {0.951—1.250 kgf/cm^2, 13.6—17.7 psi}

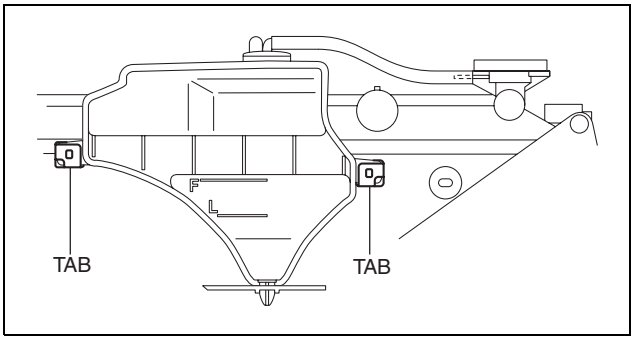
COOLING SYSTEM [SKYACTIV-D 2.2]

Coolant Reserve Tank Removal Note

1. Remove the coolant reserve tank from the radiator cowling tabs shown in the figure by lifting them with a flathead screwdriver.



ac5wzw0000487

RADIATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0112s6801400

Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.**

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
3. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
4. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove the air cleaner and fresh air duct component. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)
6. Remove the coolant reserve tank. (See 01-12B-8 COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
7. Remove the cooling fan component. (See 01-12B-18 COOLING FAN MOTOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
8. Remove the charge air cooler inlet hose and charge air cooler outlet hose. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
9. Disconnect the ATF oil cooler hose from the radiator. (if equipped) (See 05-17B-71 OIL COOLER REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].)
10. Remove in the order indicated in the table.
11. Install in the reverse order of removal.
12. Refill the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
13. Inspect for engine coolant leakage. (See 01-12B-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-D 2.2].)
14. Inspect the ATF level. (if equipped) (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].)

COOLING SYSTEM [SKYACTIV-D 2.2]

2	Upper mount rubber bracket (See 01-12B-11 Upper Mount Rubber Bracket Removal Note.)

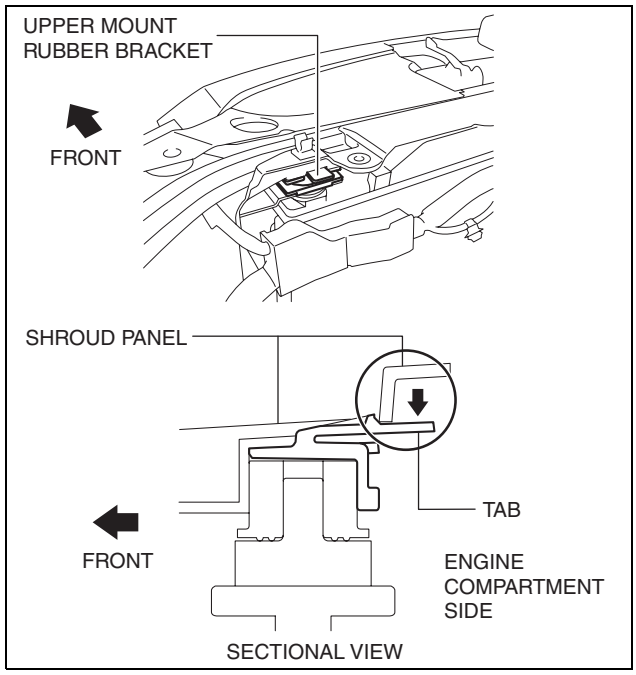
3	Radiator (See 01-12B-11 Radiator Removal Note.)

COOLING SYSTEM [SKYACTIV-D 2.2]

Upper Mount Rubber Bracket Removal Note

Caution
- **To prevent damage to the upper mount rubber bracket tab, do not apply excessive force.**

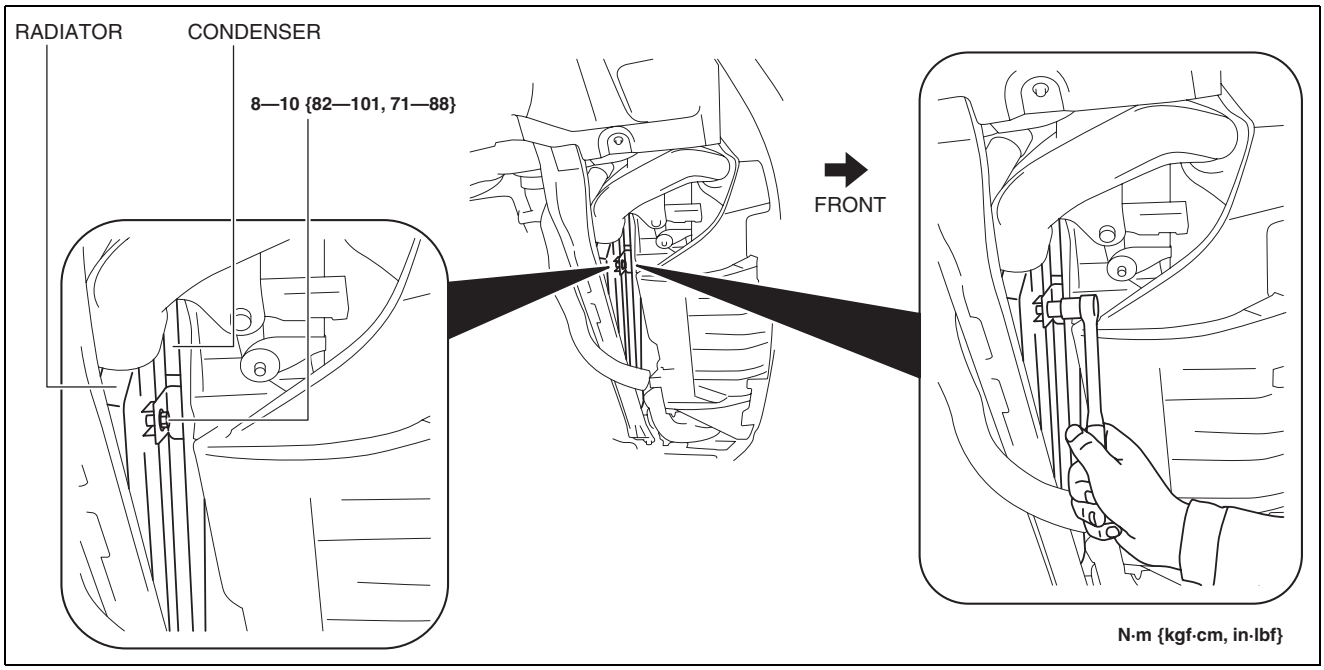
1. While pressing down the upper mount rubber bracket tab lightly in the direction of the arrow shown in the figure, pull out the upper mount rubber bracket toward the vehicle rear.
2. Remove the upper mount rubber bracket.



ac5uuw00000574

Radiator Removal Note

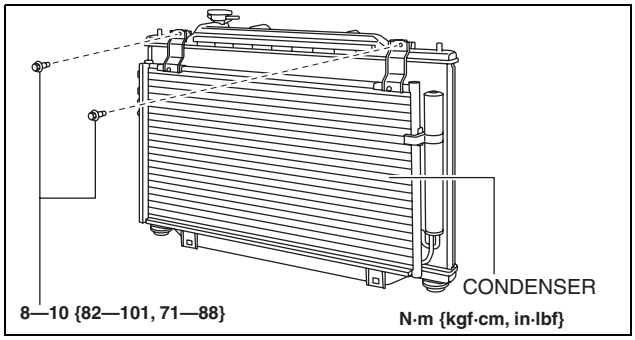
1. To prevent damage to the radiator core, protect it by covering the radiator surface with cardboard.
2. Lift the radiator and remove it from the radiator installation holes on the shroud panel.
3. Move the radiator and condenser to the engine side.
4. Remove the two bolts (lower side) which secure the condenser to the radiator.



ac5wzw0000488

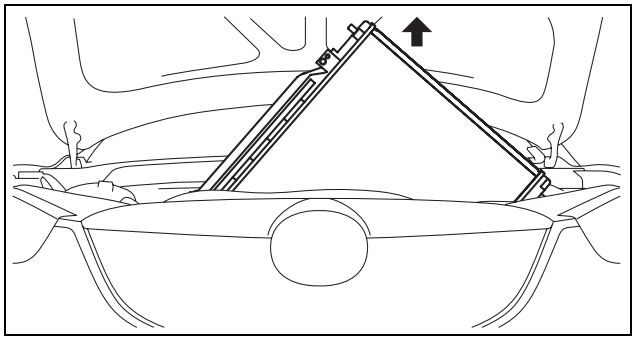
COOLING SYSTEM [SKYACTIV-D 2.2]

5. Remove the two bolts (upper side) which secure the condenser to the radiator.



ac5wzw0000488

6. Remove the radiator from above the engine compartment.



ac5jjw00004212

THERMOSTAT REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0112s6801200

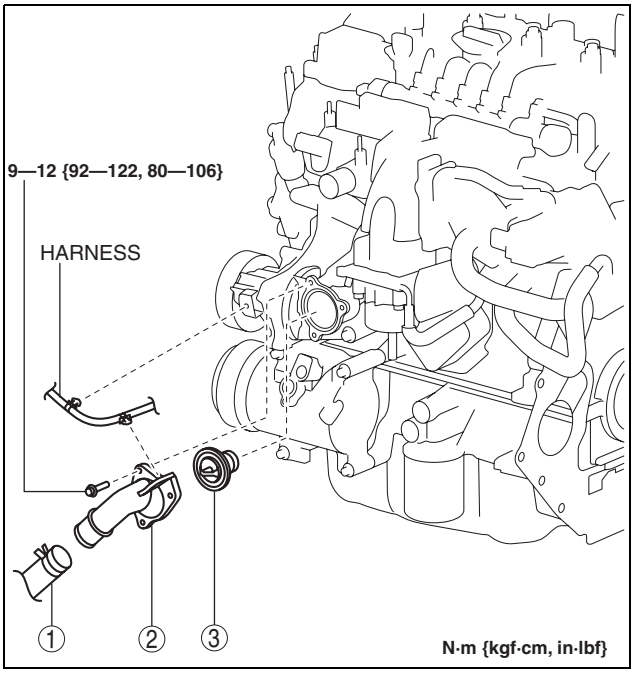
Warning

- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.**

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
4. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
5. Disconnect generator terminal B and set the wiring harness aside. (See 01-17B-14 GENERATOR REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)
6. Remove in the order indicated in the table.
7. Install in the reverse order of removal.
8. Refill the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
9. Inspect for the engine coolant leakage. (See 01-12B-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-D 2.2].)

COOLING SYSTEM [SKYACTIV-D 2.2]

1	Lower radiator hose (Thermostat cover side)
2	Thermostat cover (See 01-12B-13 Thermostat Cover Removal Note.) (See 01-12B-14 Thermostat Cover Installation Note.)
3	Thermostat (See 01-12B-13 Thermostat Installation Note.)



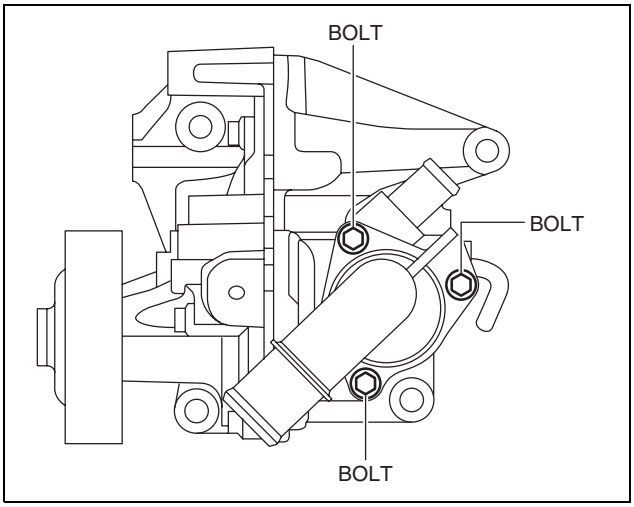
ac5wzw0000487

Thermostat Cover Removal Note

1. Slightly loosen the three thermostat bolts shown in the figure and collect the draining engine coolant into a container.

   Caution
   - **Do not remove the thermostat cover completely at this time because a small amount of the engine coolant remaining in the engine will drain out.**

2. After the engine coolant stops draining, remove the thermostat cover.

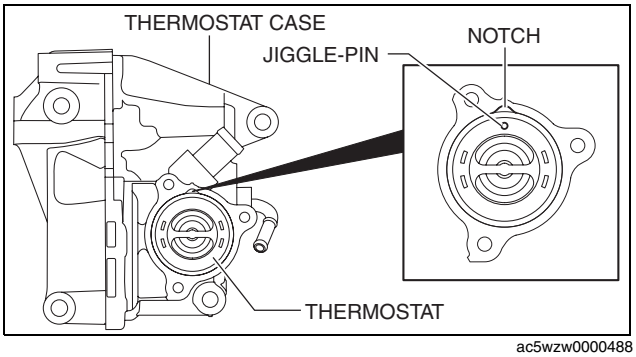


ac5wzw0000487

Thermostat Installation Note

Caution
- **Do not apply oil (engine oil, ATF etc.) to the rubber seal part of the thermostat. Otherwise, the O-ring could swell causing a seal malfunction.**

1. Install the thermostat with the jiggle pin aligned with the notch of the thermostat case.

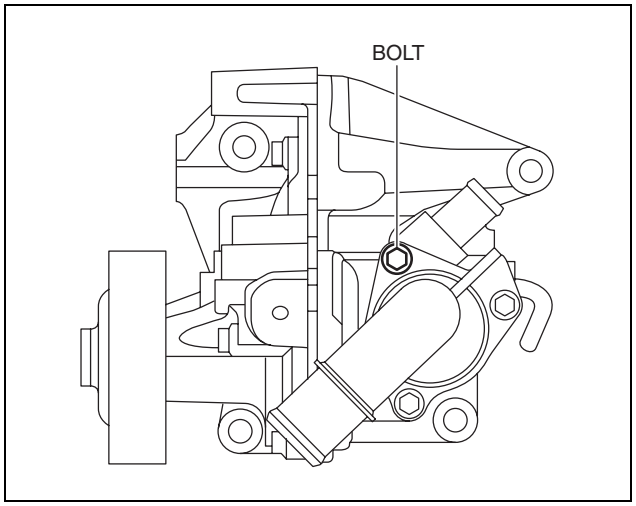


ac5wzw0000488

COOLING SYSTEM [SKYACTIV-D 2.2]

Thermostat Cover Installation Note

1. Install the thermostat cover using the following procedure:
   (1) Temporarily tighten the bolts shown in the figure.

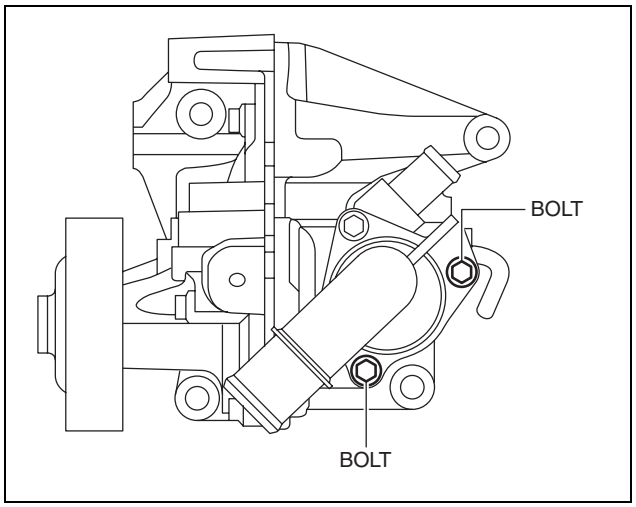


ac5wzw0000488

   (2) Tighten the two bolts shown in the figure to the specified torque.

Note
- The tightening order for the two bolts is optional.

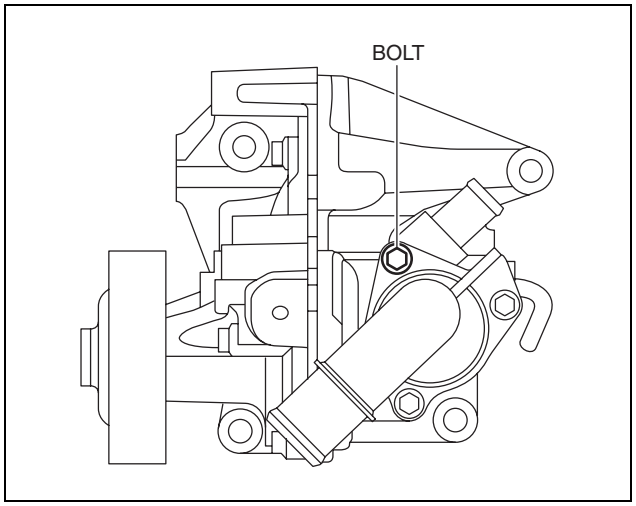
Tightening torque
9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}



ac5wzw0000488

   (3) Finally, tighten the bolt shown in the figure to the specified torque.

Tightening torque
9—12 N·m {92—122 kgf·cm, 80—106 in·lbf}



ac5wzw0000488

COOLING SYSTEM [SKYACTIV-D 2.2]

THERMOSTAT INSPECTION [SKYACTIV-D 2.2]

id0112s6801300

1. Remove the thermostat. (See 01-12B-12 THERMOSTAT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Visually check that the thermostat valve is closed.
3. Place the thermostat in water.

Warning
- **During inspection, the thermostat and water are extremely hot and can cause severe burns. Do not touch the thermostat and water.**

4. Heat the water and check the following.
   - Opening temperature and valve lift
     — If there is a malfunction, replace the thermostat.

Thermostat initial-opening temperature
80—84 °C {176—183 °F}

Thermostat full-open temperature
95 °C {203 °F}

Thermostat full-open lift
8.5 mm {0.33 in} or more

WATER PUMP REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0112s6800700

Warning
- **Never remove the cooling system cap or loosen the radiator drain plug while the engine is running, or when the engine and radiator are hot. Scalding engine coolant and steam may shoot out and cause serious injury. It may also damage the engine and cooling system.**
- **Turn off the engine and wait until it is cool. Even then, be very careful when removing the cap. Wrap a thick cloth around it and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes.**
- **When you are sure all the pressure is gone, press down on the cap using the cloth, turn it, and remove it.**

Caution
- **Be careful not to damage the exterior circumference surface of the water pump pulley when using tools, otherwise it will cause wear, breakage, abnormal noise of the drive belt, damage to the pulley, and rust.**

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
3. Remove the splash shield (RH). (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
4. Remove the drive belt. (See 01-10B-8 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Remove the generator. (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
7. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
8. Remove in the order indicated in the table.
9. Install in the reverse order of removal.
10. Refill the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
11. Inspect for engine coolant leakage. (See 01-12B-7 ENGINE COOLANT LEAKAGE INSPECTION [SKYACTIV-D 2.2].)

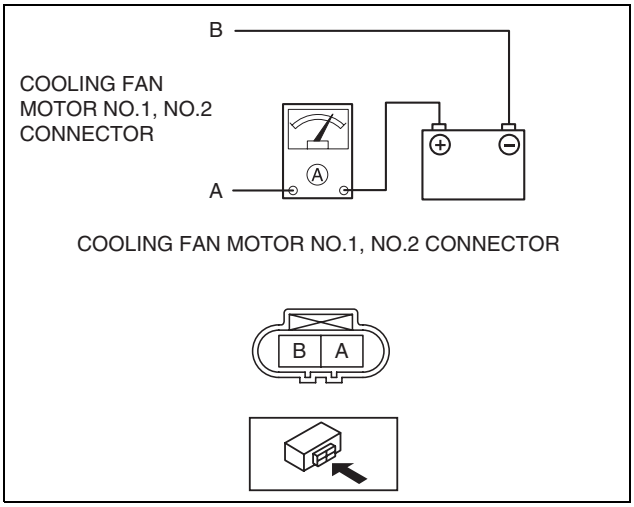
COOLING FAN MOTOR INSPECTION [SKYACTIV-D 2.2]

id0112s6801800

Part Inspection

1. Verify that the battery is fully charged. (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].)
2. Disconnect the cooling fan motor connector (2 terminals).
3. Install a tester and battery to the cooling fan motor connector (2 terminals) as shown in the figure.
4. Verify that each cooling fan motors operate smoothly at the standard current.
   - If there is any malfunction, replace the applicable part.

Cooling fan motor No.1, No.2 standard current
15—21 A [12 V]



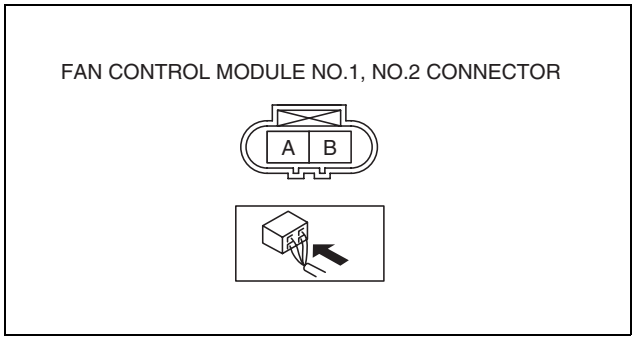
ac5wzw0000488

COOLING SYSTEM [SKYACTIV-D 2.2]

FAN CONTROL MODULE INSPECTION [SKYACTIV-D 2.2]

id0112s6801100

1. Connect the M-MDS to the DLC-2.
2. Start and warm up the engine.
3. Monitor the engine coolant temperature with the M-MDS.
4. Measure the voltage at terminal A of the fan control module connector (2 terminals) as shown in the table.
   - If not within the specification, inspect the input signals from the following parts.
     - — Engine Coolant Temperature (ECT) sensor
     - — Refrigerant pressure sensor
     - — Battery
     - — DSC (HU/CM)



ac5wzw0000487

Fan control module No.1, No.2 [A/C OFF]

Inspection	Result	
Engine coolant temp. (°C {°F})	**PID FAN DUTY (%)**	**Voltage (V)**
100 {212}	30	3.6
100—106 {212—222}	30—75	3.6—9.0
106—108 {223—226}	75	9.0
more than 108 {226}	100	0.4 LOWER THAN BATTERY VOLTAGE

Fan control module No.1, No.2 [A/C ON (Engine coolant temp. less than 98 °C {208 °F} and idling)]

Inspection	Result	
Refrigerant pressure (MPa{kgf/cm^2, psi})	**PID FAN DUTY (%)**	**Voltage (V)**
less than 1.0 {10, 145}	30	3.6
1.0—1.7 {11—17, 146—246}	30—75	3.6—9.0
1.7—1.9 {18—19, 247—275}	75	9.0
more than 1.9 {19, 276}	100	0.4 LOWER THAN BATTERY VOLTAGE

5. If all the above parts are normal, replace the fan control module.

INTAKE MANIFOLD VACUUM INSPECTION [SKYACTIV-G 2.0]

id0113z5801500

1. Disconnect the evaporative hose No.3 (purge solenoid valve side) and install the vacuum gauge. (See 01-16A-10 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
2. Verify that the intake air hoses are installed securely.
3. Warm up the engine.
4. Measure the intake manifold vacuum while idling (no load) using the vacuum gauge.
   - If not within the specification, perform the following inspections.
     - — Compression pressure (See 01-10A-14 COMPRESSION INSPECTION [SKYACTIV-G 2.0].)
     - — Check valve (See 01-13A-13 CHECK VALVE INSPECTION [SKYACTIV-G 2.0].)
     - — Air suction
       - Installation areas of each vacuum hose
       - Installation area of throttle body
       - Installation area of fuel injector
       - Installation area of PCV valve
       - Installation area of intake manifold

Standard
Approx. –60.0 kPa {–450.0 mmHg, –17.7 inHg}

INTAKE-AIR SYSTEM [SKYACTIV-G 2.0]

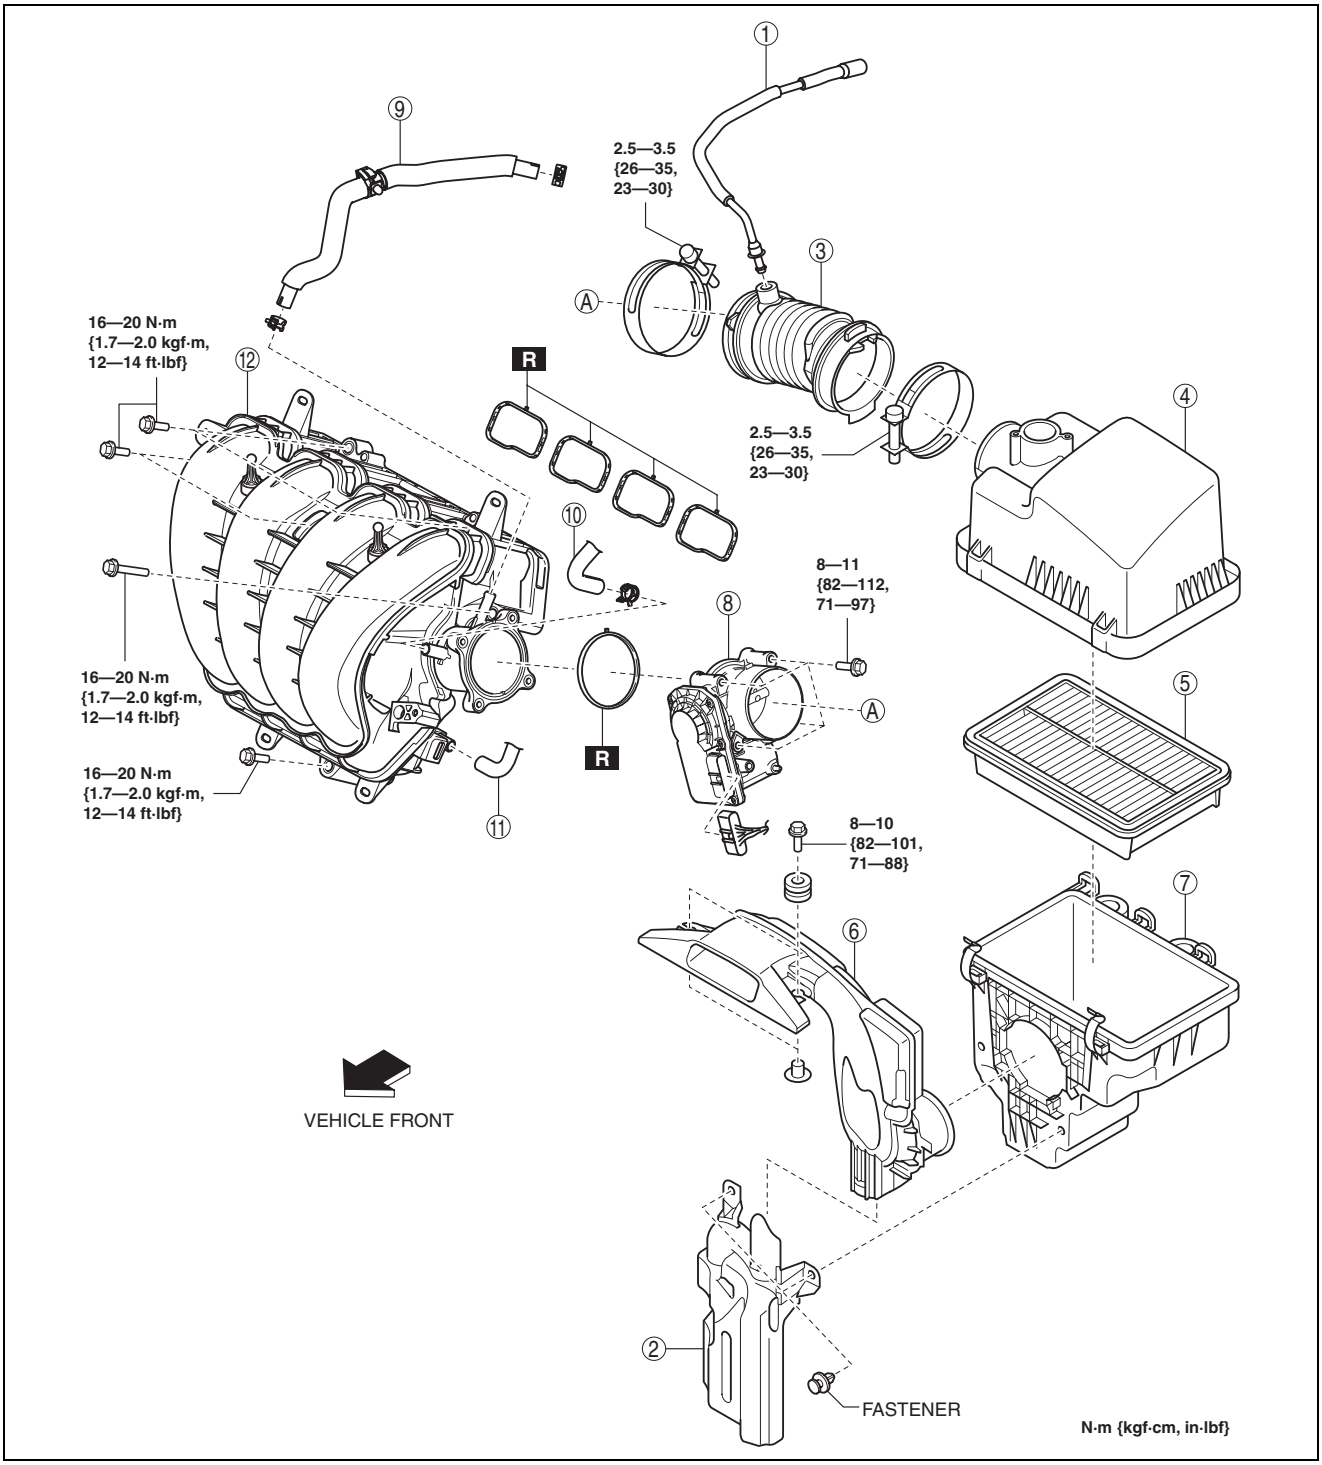
INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0113z5801900

Warning

- **A hot engine and intake air system can cause severe burns. Turn off the engine and wait until they are cool before removing the intake air system.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.



ac5wzw0000269

INTAKE-AIR SYSTEM [SKYACTIV-G 2.0]

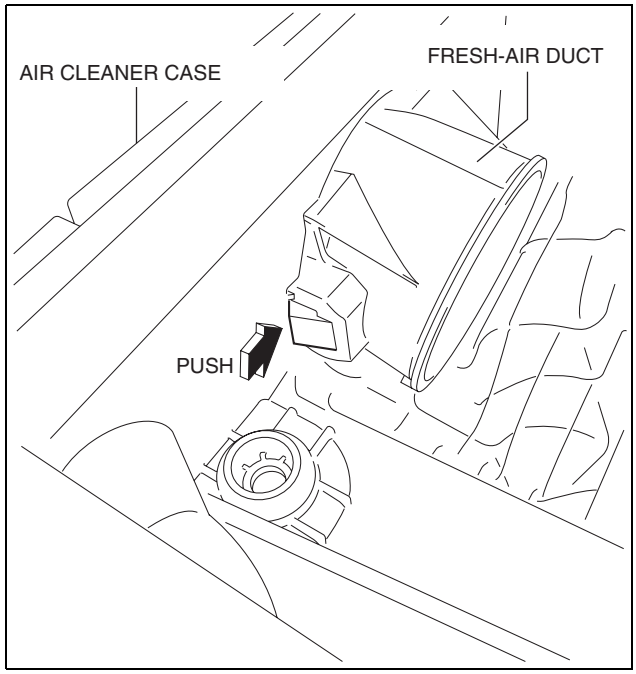
1	Ventilation hose (See 01-13A-11 Ventilation Hose Installation Note.)
2	Resonance chamber (See 01-13A-7 Resonance Chamber Removal Note.)
3	Air hose (See 01-13A-10 Air Hose Installation Note)
4	Air cleaner cover
5	Air cleaner element
6	Fresh-air duct (See 01-13A-7 Fresh-air Duct Removal Note.) (See 01-13A-10 Fresh-air Duct Installation Note.)
7	Air cleaner case (See 01-13A-9 Air Cleaner Case Installation Note.)
8	Throttle body
9	Vacuum hose (See 01-13A-7 Vacuum Hose Removal Note.) (See 01-13A-9 Vacuum Hose Installation Note.)
10	Evaporative hose (See 01-13A-8 Evaporative Hose Installation Note)
11	PCV hose
12	Intake manifold (See 01-13A-8 Intake Manifold Removal Note)

Resonance Chamber Removal Note

1. Remove the MAF sensor/IAT sensor No.1. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
2. Remove the following parts as a single unit:
   - Air hose
   - Air cleaner cover
   - Air cleaner element
   - Air cleaner case
   - Fresh-air duct
   - Resonance chamber
3. Remove the resonance chamber.

Fresh-air Duct Removal Note

1. Pull out the fresh-air duct while pressing the tab shown in the figure.



ac5uuw00000365

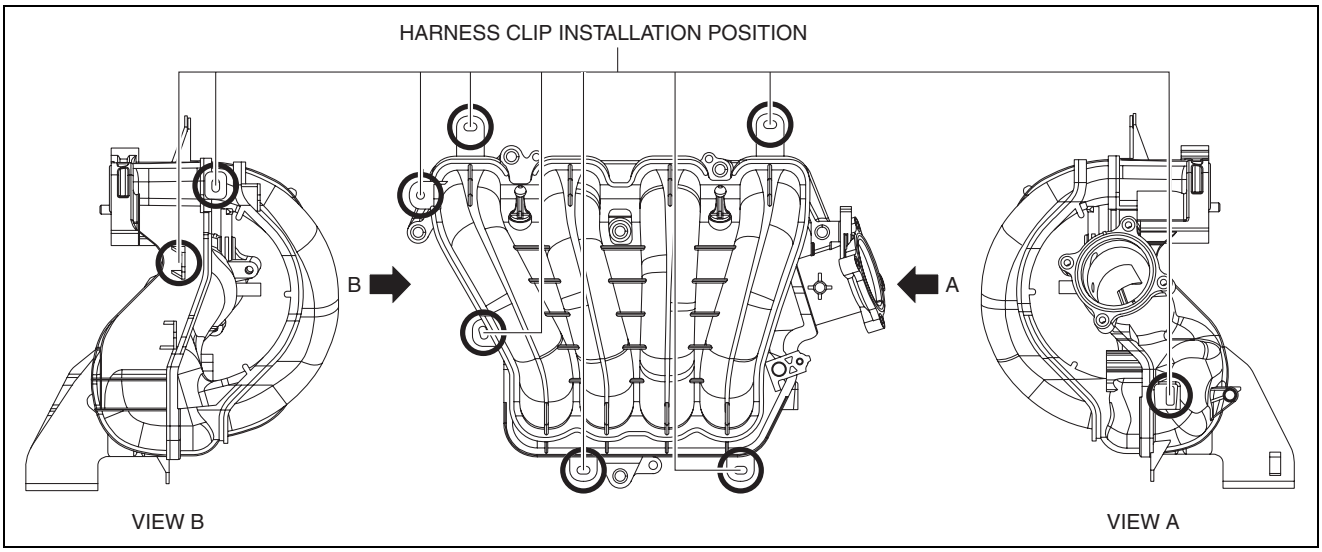
Vacuum Hose Removal Note

1. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
2. Remove the vacuum hose.

INTAKE-AIR SYSTEM [SKYACTIV-G 2.0]

Intake Manifold Removal Note

1. Remove the MAP sensor/IAT sensor No.2. (See 01-40-48 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
2. Disconnect the harness clip from the intake manifold as shown in the figure.

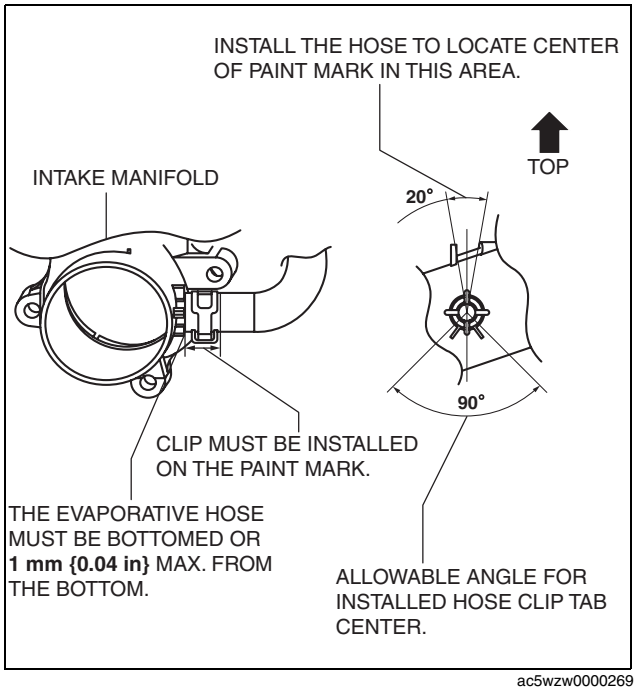


ac5uuw00000366

3. Remove the intake manifold.

Evaporative Hose Installation Note

1. Install the evaporative hose as shown in the figure.

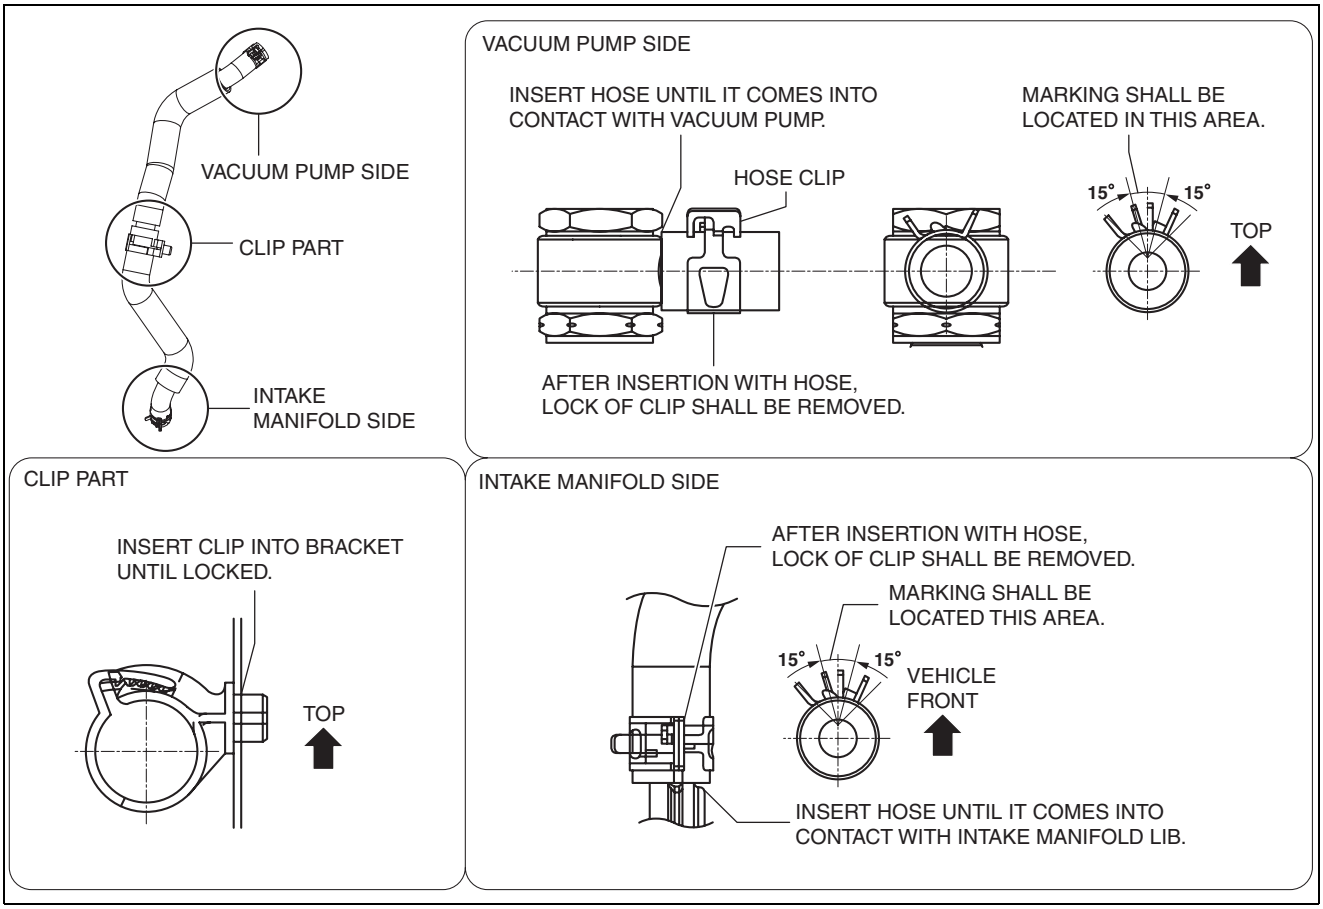


ac5wzw0000269

INTAKE-AIR SYSTEM [SKYACTIV-G 2.0]

Vacuum Hose Installation Note

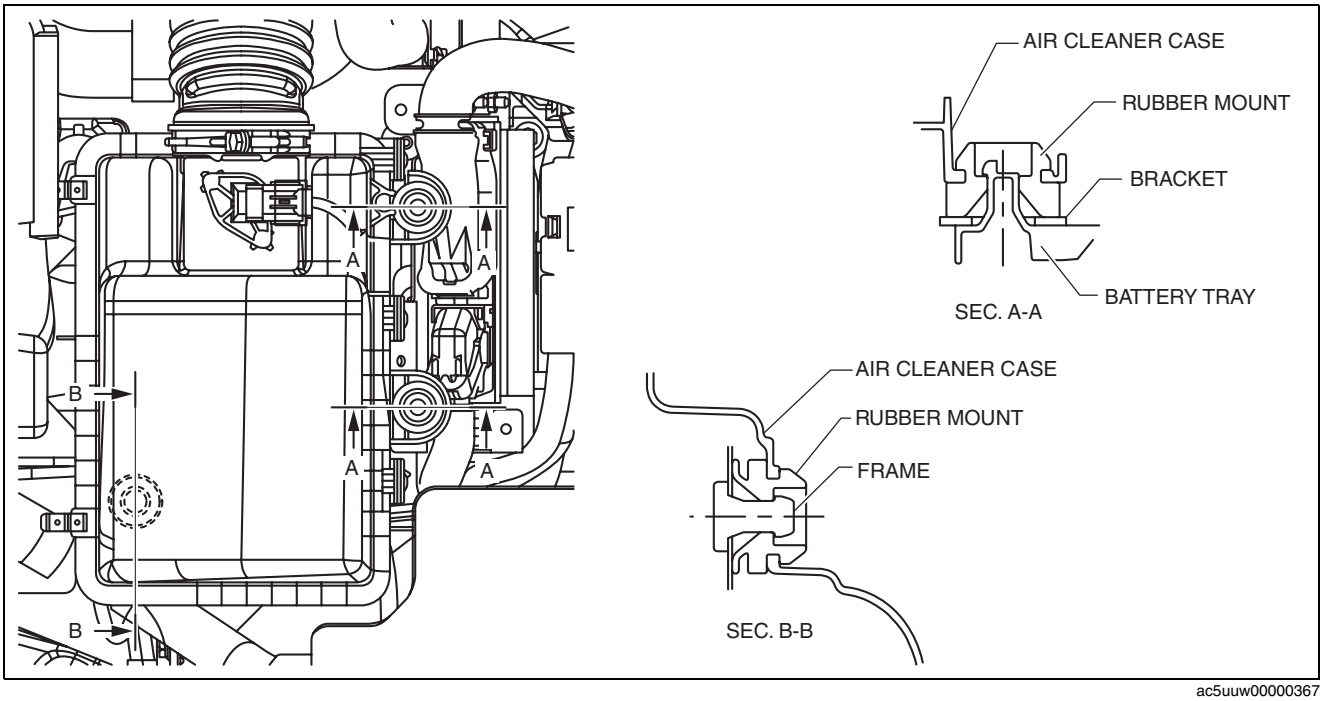
1. Install the vacuum hose as shown in the figure.



ac5wzw0000270

Air Cleaner Case Installation Note

1. Install the air cleaner case as shown in the figure.

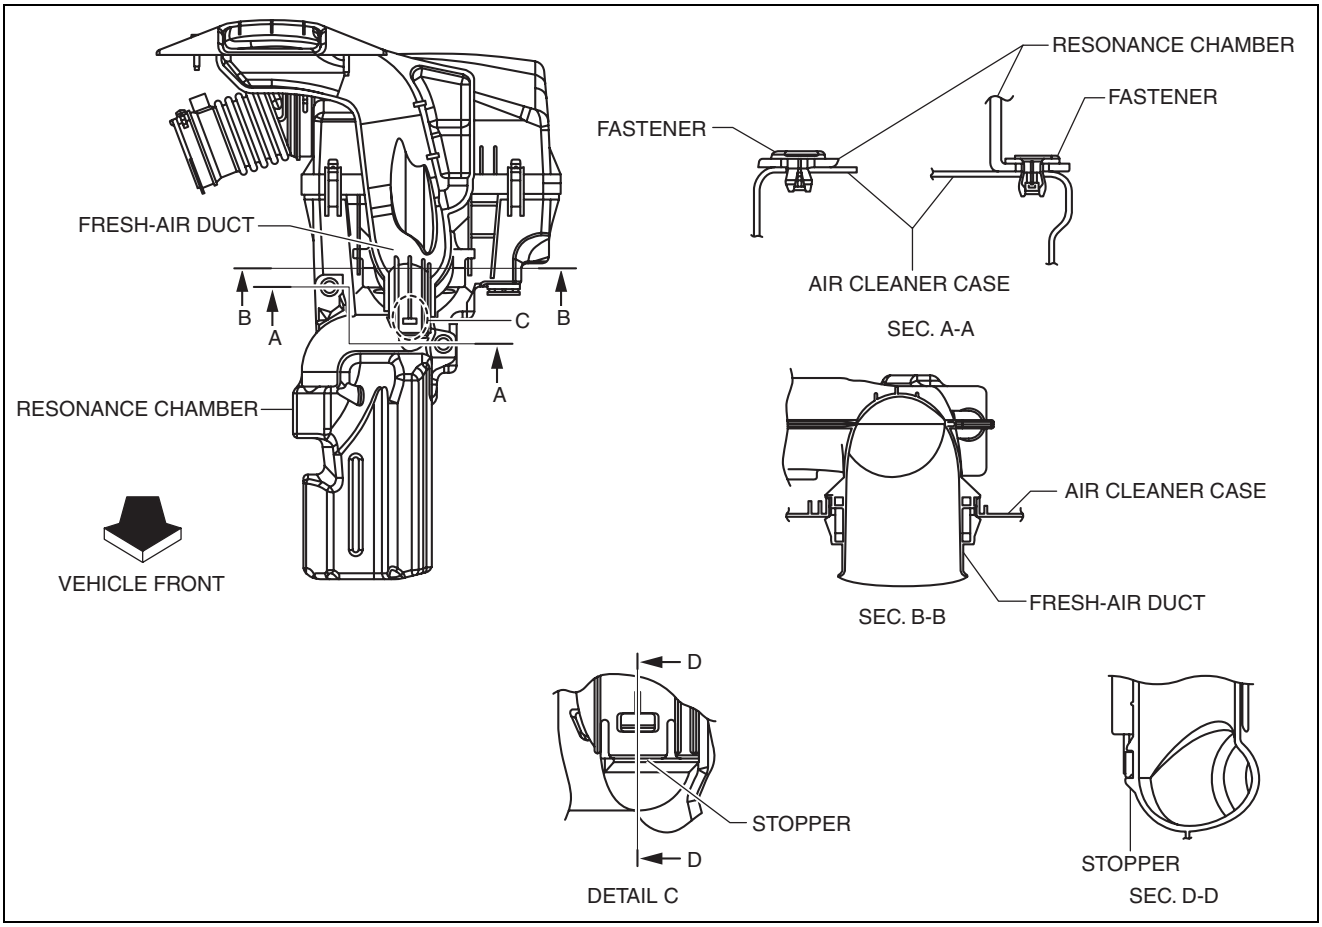


ac5uuw00000367

INTAKE-AIR SYSTEM [SKYACTIV-G 2.0]

Fresh-air Duct Installation Note

1. Install the fresh-air duct as shown in the figure.

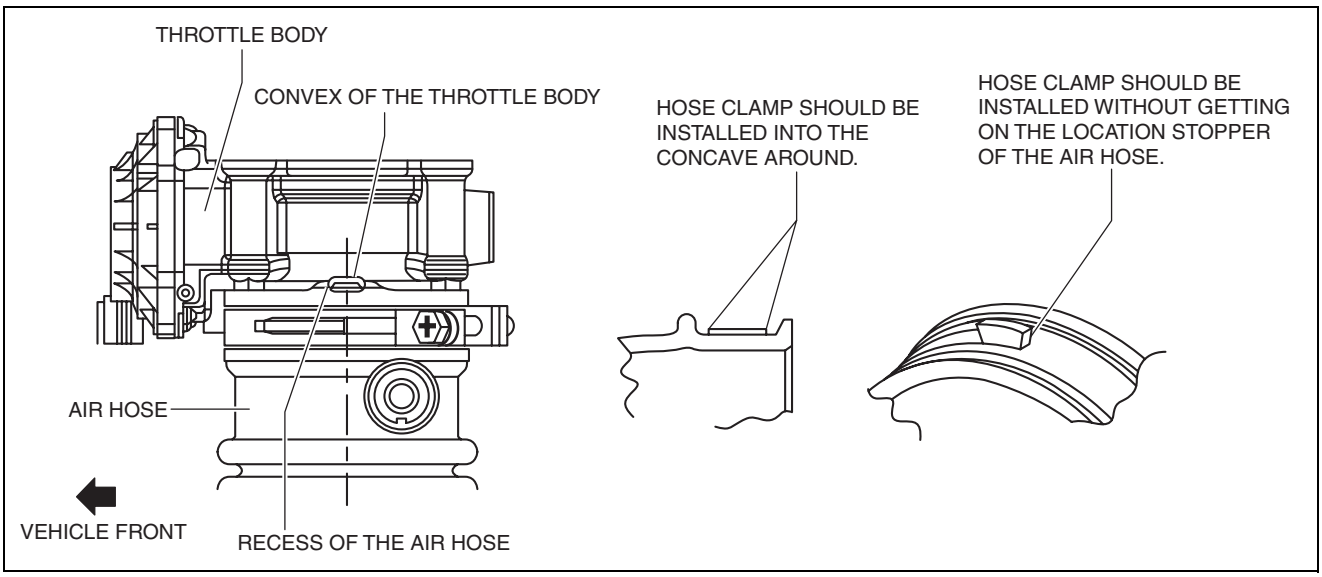


ac5uuw00000368

Air Hose Installation Note

1. Install the air hose as shown in the figure.

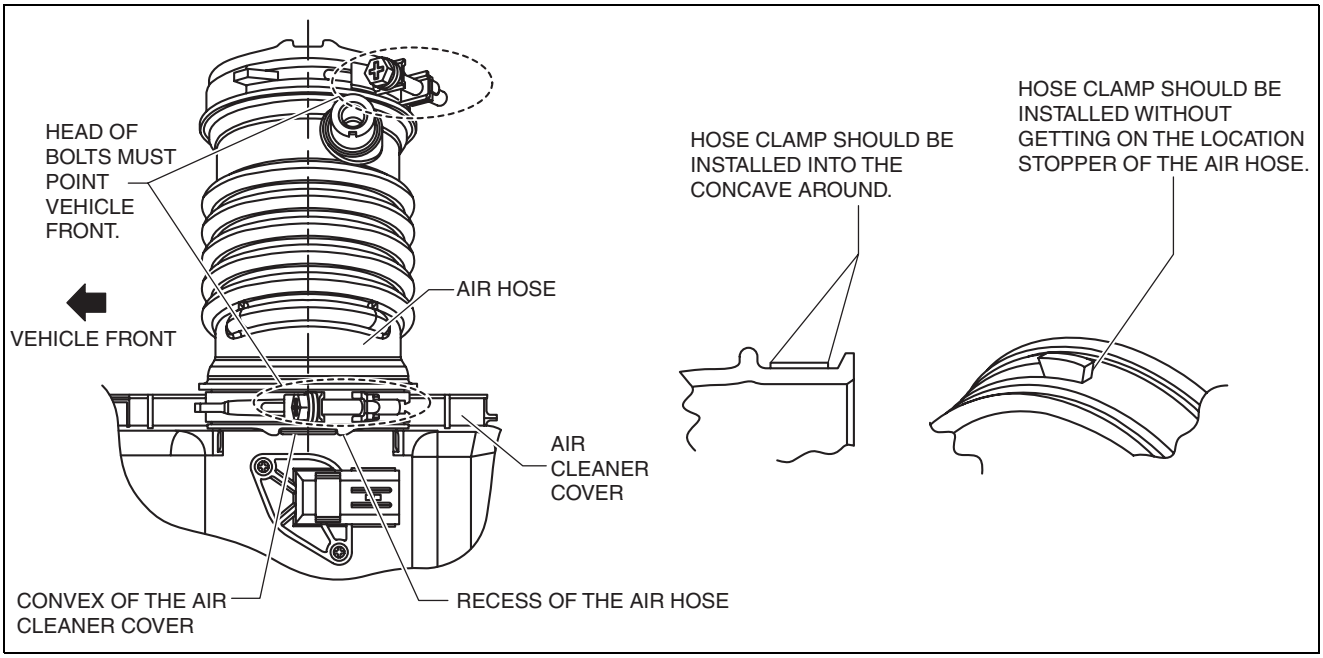
Throttle body side



ac5wzw0000270

INTAKE-AIR SYSTEM [SKYACTIV-G 2.0]

Air cleaner side

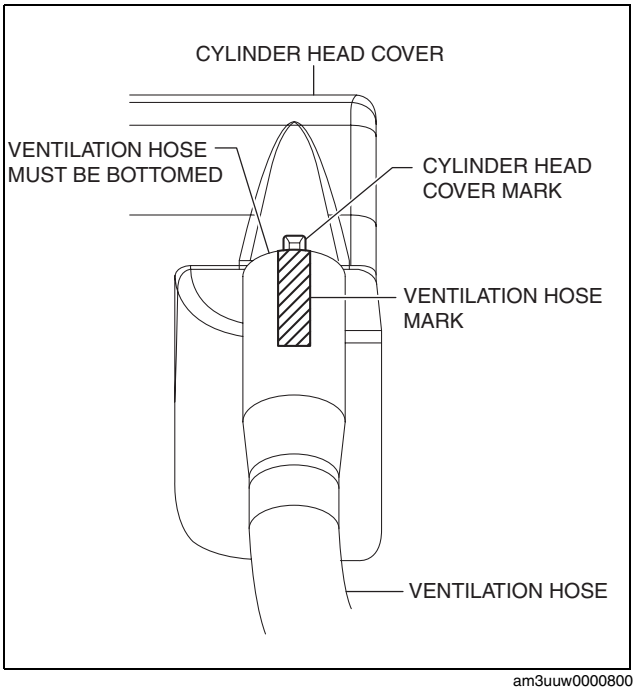


ac5wzw0000270

Ventilation Hose Installation Note

1. Install the ventilation hose as shown in the figure.

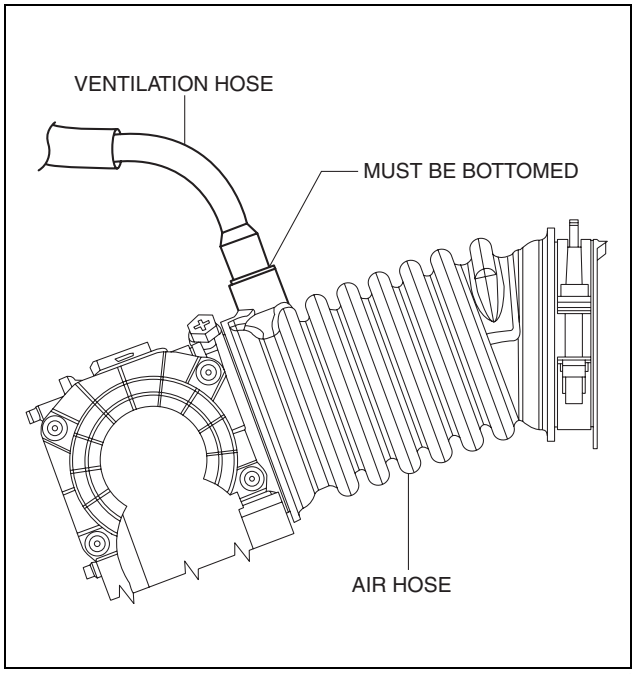
Cylinder head cover side



am3uuw0000800

INTAKE-AIR SYSTEM [SKYACTIV-G 2.0]

Air hose side

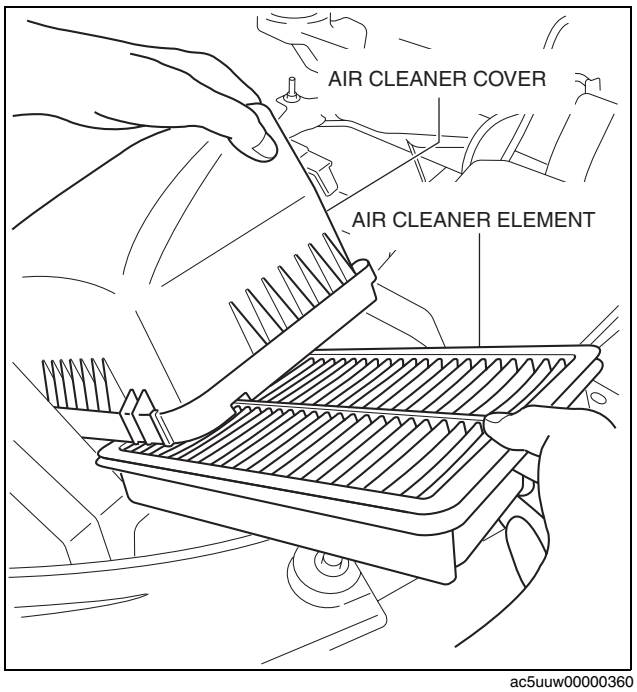


ac5uuw00000371

AIR CLEANER ELEMENT REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0113z5800200

1. Remove the air cleaner element as shown in the figure.
2. Install in the reverse order of removal.



ac5uuw00000360

AIR CLEANER ELEMENT INSPECTION [SKYACTIV-G 2.0]

id0113z5800800

1. Remove the air cleaner element. (See 01-13A-12 AIR CLEANER ELEMENT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
2. Inspect the following items:
   - Has the replacement interval past?
   - Is the air cleaner element soiled, damaged, or bent?
   - Are the air cleaner case and the air cleaner element correctly sealed?
   - Is the correct air cleaner element installed?
     — If there is any abnormality, clean or replace the air cleaner element. (See 01-13A-12 AIR CLEANER ELEMENT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

INTAKE-AIR SYSTEM [SKYACTIV-G 2.0]

THROTTLE BODY INSPECTION [SKYACTIV-G 2.0]

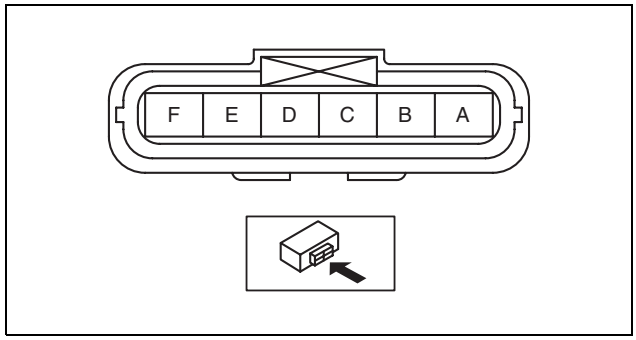
id0113z5802600

Resistance Inspection

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Disconnect the throttle body connector.
3. Measure the resistance between throttle body terminals E and F.

   Throttle body resistance
   1.38 ohms [20°C {68 °F}]

   - If not as specified, replace the throttle body. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



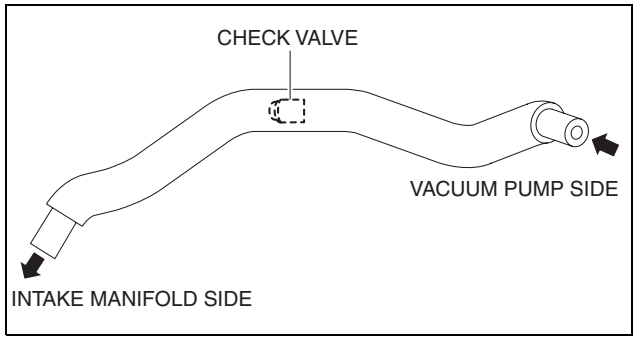
am3uuw0000847

CHECK VALVE INSPECTION [SKYACTIV-G 2.0]

id0113z5082800

Airflow Inspection

1. Remove the vacuum hose. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
2. Blow air into the vacuum hose using your mouth from the vacuum pump side and verify that the air flows to the intake manifold side, then blow air from the intake manifold side and verify that the air does not flow to the vacuum pump side.
   - If there is any malfunction in the check valve, replace it with the vacuum hose as a single unit. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



am3uuw0000870

INTAKE-AIR SYSTEM [SKYACTIV-G 2.0]

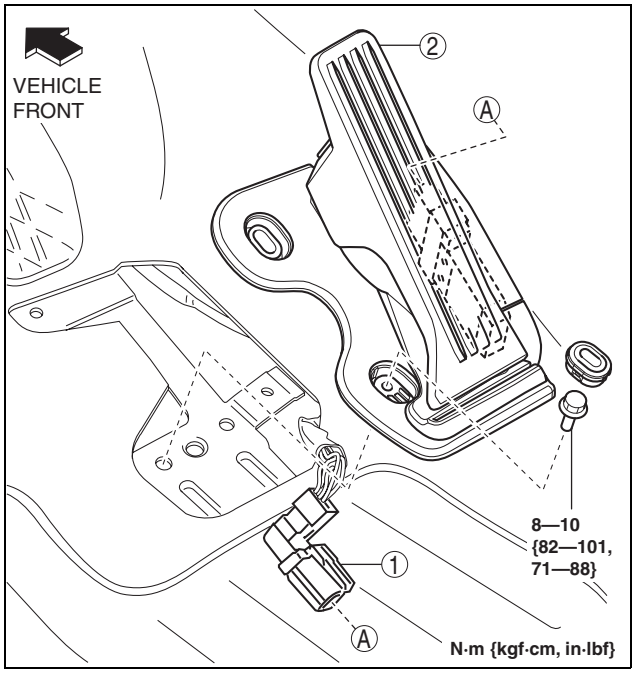
ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0113z5801400

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove in the order indicated in the table.

1	APP sensor connector
2	Accelerator pedal

3. Install in the reverse order of removal.



ac5uuw00000361

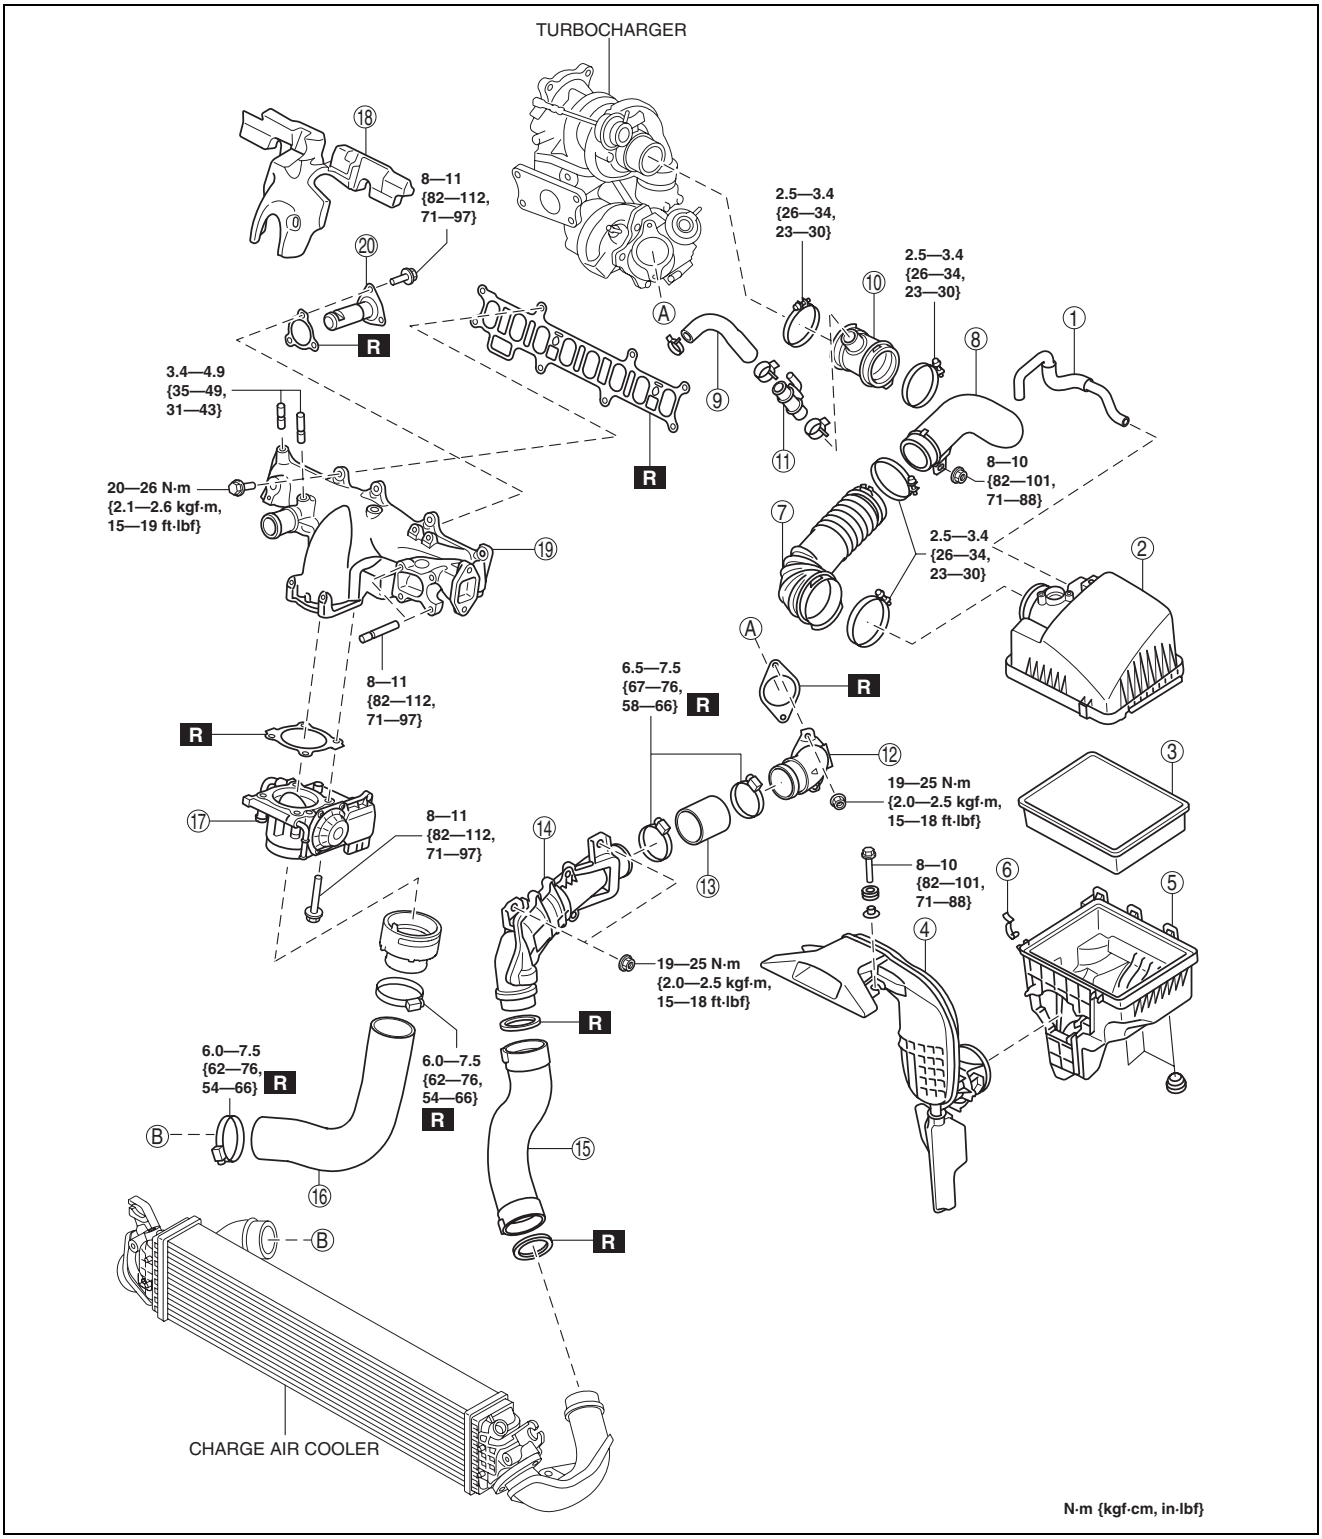
id0113z7801900

Warning

- **A hot engine and intake air system can cause severe burns. Turn off the engine and wait until they are cool before removing the intake-air system.**

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove in the order shown in the figure.
3. Install in the reverse order of removal.



ac5wzw0000471

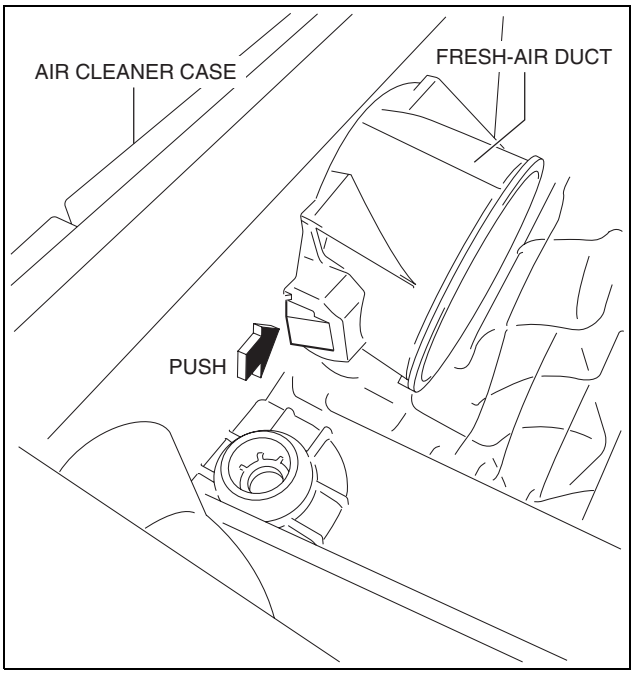
10	Turbocharger air inlet hose
11	PTC Heater
12	Turbocharger air outlet pipe (See 01-13B-7 Turbocharger Air Outlet Pipe Removal Note.)
13	Turbocharger air outlet hose
14	Air intake pipe
15	Charge air cooler inlet hose (See 01-13B-8 Charge Air Cooler Inlet Hose Removal Note.)
16	Charge air cooler outlet hose (See 01-13B-9 Charge Air Cooler Outlet Hose Removal Note.) (See 01-13B-10 Charge Air Cooler Outlet Hose Installation Note.)
17	Intake shutter valve (See 01-16B-21 INTAKE SHUTTER VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
18	Intake manifold insulator (See 01-13B-9 Intake Manifold Insulator Removal Note.)
19	Intake manifold (See 01-13B-10 Intake Manifold Removal Note.)
20	EGR pipe (Intake manifold side)

Air Cleaner Cover Removal Note

1. Remove the MAF sensor/IAT sensor No.1.
2. Remove the air cleaner cover.

Fresh-air Duct Removal Note

1. Pull out the fresh-air duct from the air cleaner case while pressing the tab shown in the figure.



ac5wzw0000471

Air Inlet Pipe Removal Note

1. Remove the battery. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Remove the air inlet pipe.

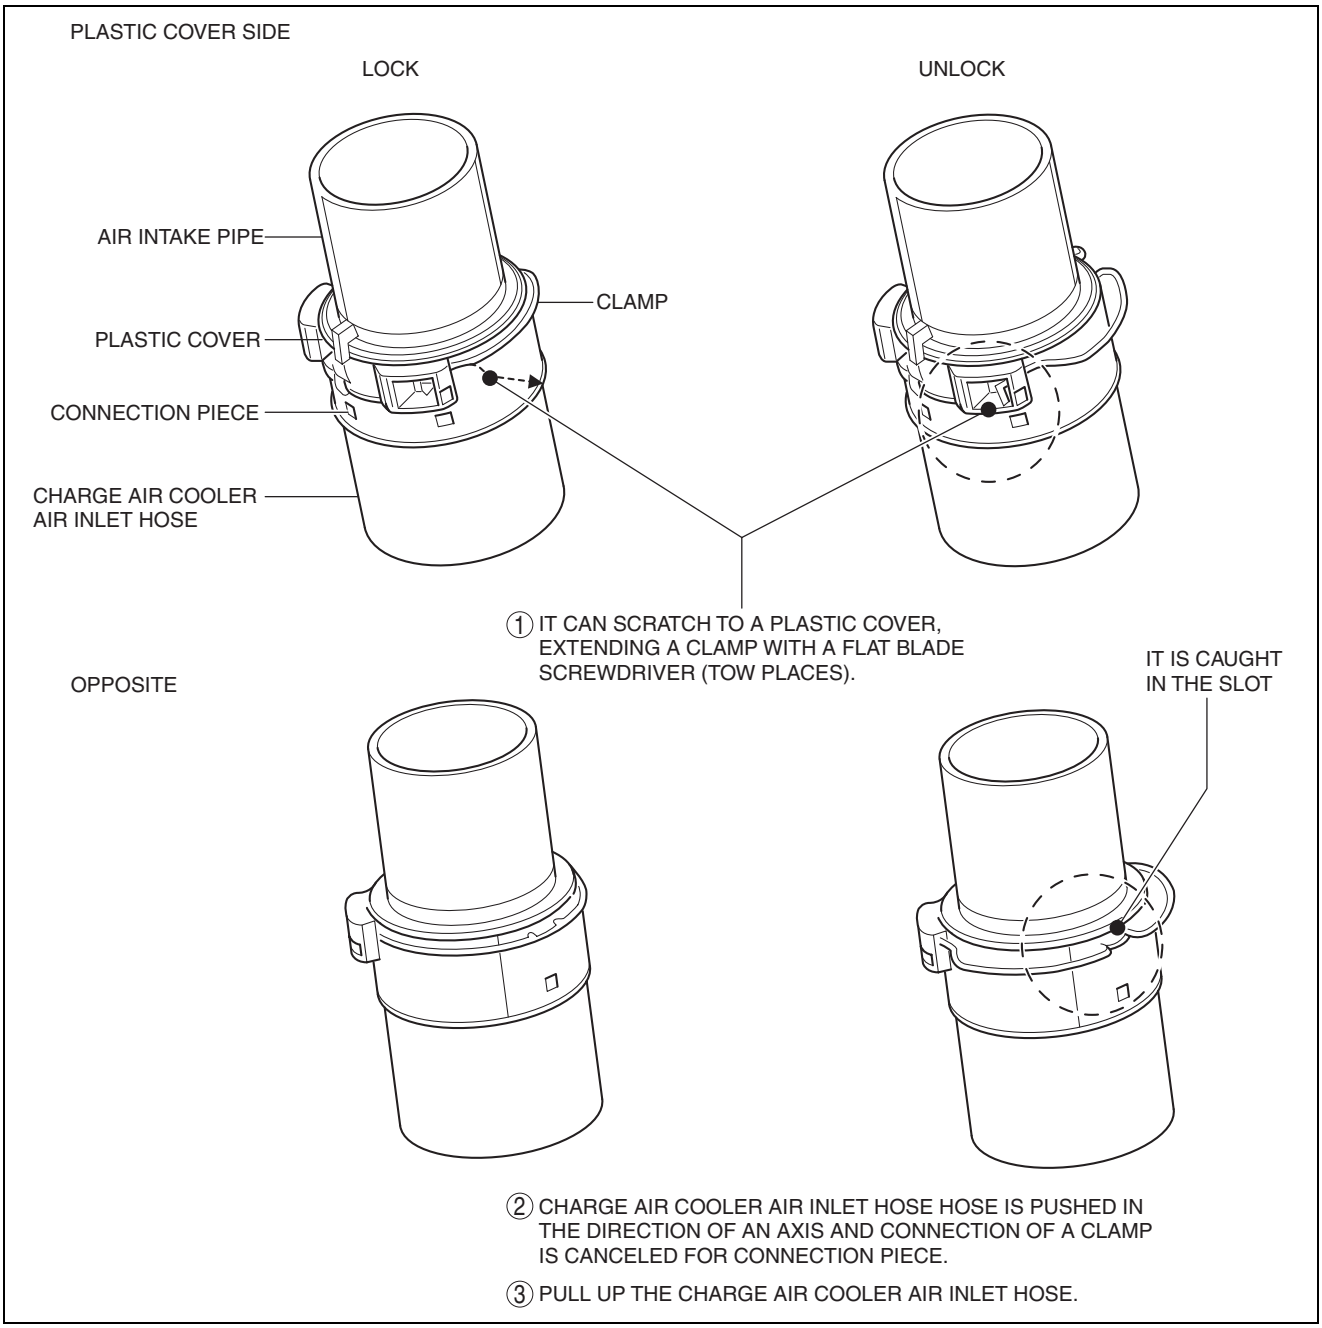
Turbocharger Air Outlet Pipe Removal Note

1. Remove the battery tray. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Remove the turbocharger air outlet pipe.

INTAKE-AIR SYSTEM [SKYACTIV-D 2.2]

Charge Air Cooler Inlet Hose Removal Note

1. Release the lock and remove the charge air cooler inlet hose as shown in the figure.

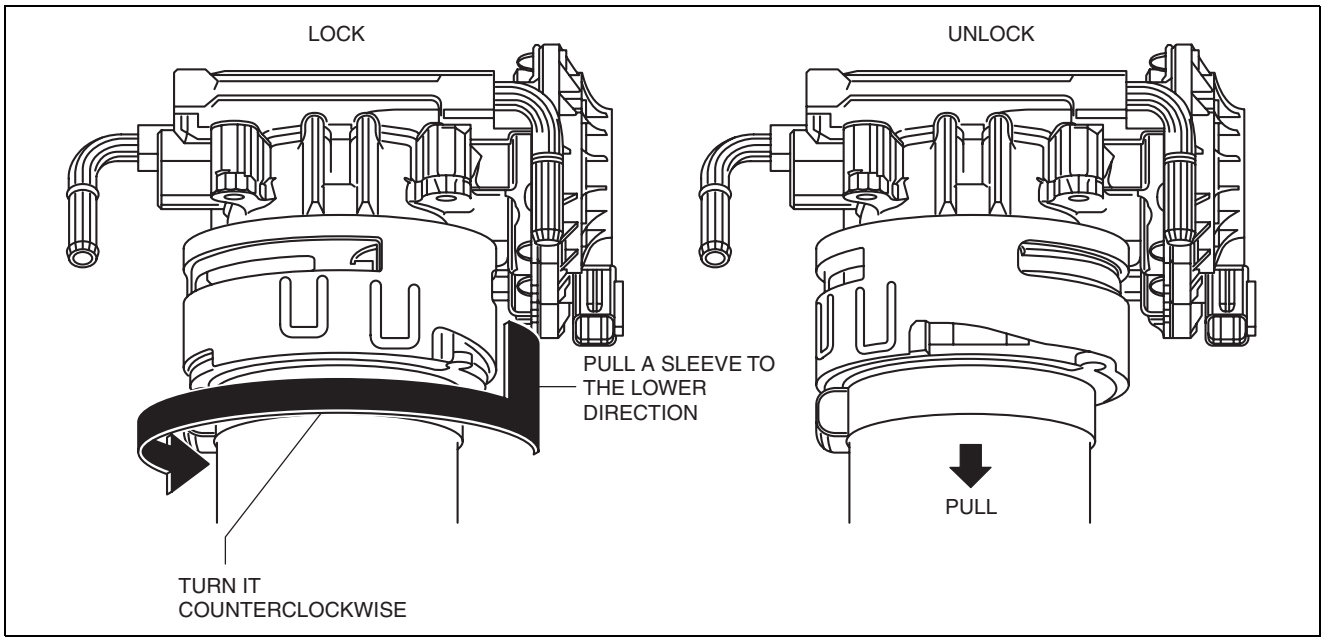


ac5wzw0000528

INTAKE-AIR SYSTEM [SKYACTIV-D 2.2]

Charge Air Cooler Outlet Hose Removal Note

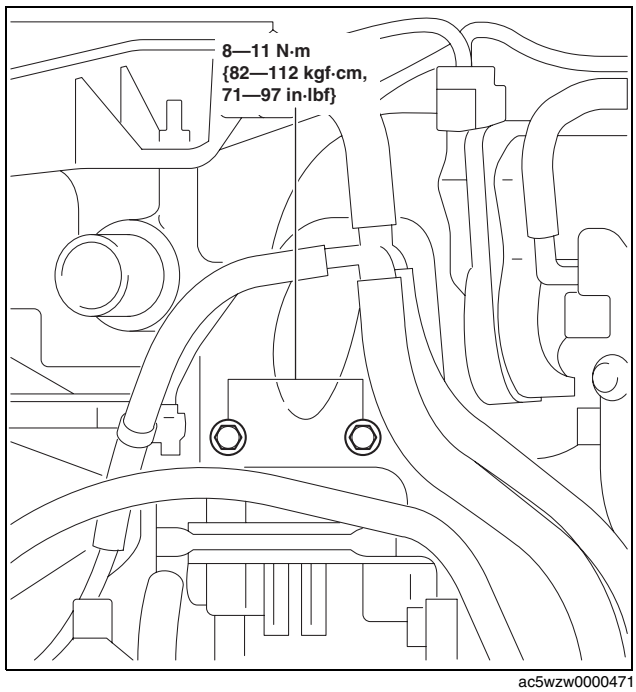
1. Release the lock of connector and remove the charge air cooler air outlet hose.



ac5wzw0000528

Intake Manifold Insulator Removal Note

1. Remove the bolts shown in the figure.
2. Remove the intake manifold insulator.

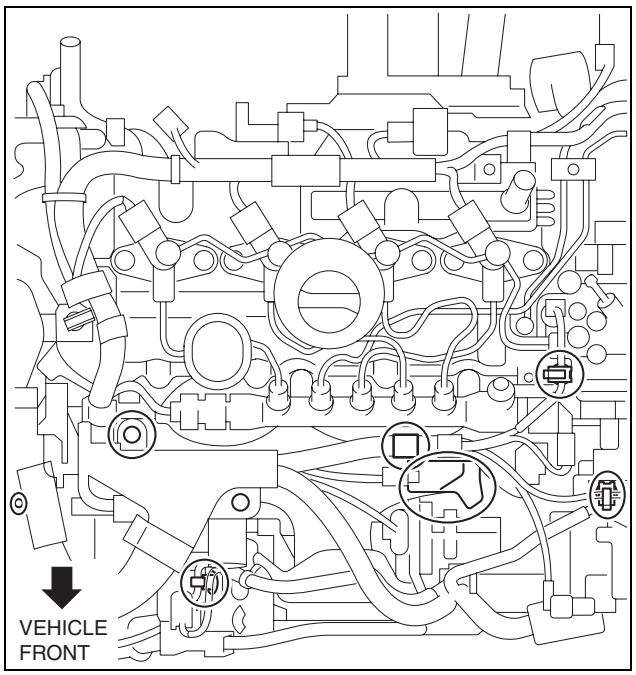


ac5wzw0000471

INTAKE-AIR SYSTEM [SKYACTIV-D 2.2]

Intake Manifold Removal Note

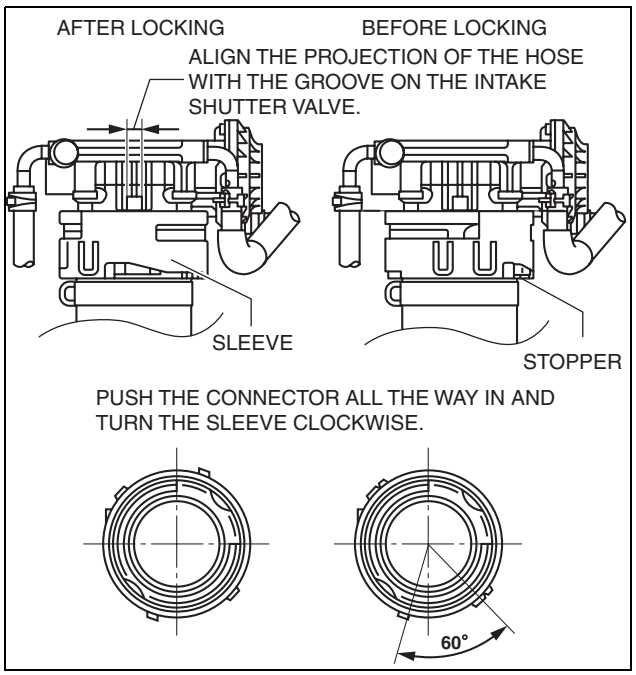
1. Disconnect the connectors of the following parts:
   - Engine oil temperature sensor/engine oil pressure sensor
   - ECT sensor
   - MAP sensor No.2
   - Fuel pressure sensor
   - Fuel temperature sensor
   - Fuel pressure limiter valve
   - Glow plug short-cord
   - IAT sensor No.2
   - Camshaft position sensor
   - EGR bypass valve
   - Starter
2. Remove the wiring harness clips, bolts, nuts and harness bracket shown in the figure.
3. Disconnect the upper radiator hose from the intake manifold side.
4. Remove the EGR valve. (See 01-16B-7 EGR VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Set the EGR cooler out of the way. (See 01-16B-12 EGR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Set the EGR cooler bypass valve out of the way. (See 01-16B-17 EGR COOLER BYPASS VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
7. Remove the intake manifold.



ac5wzw0000528

Charge Air Cooler Outlet Hose Installation Note

1. Install the charge air cooler outlet hose as shown in the figure.



ac5wzw0000528

INTAKE-AIR SYSTEM [SKYACTIV-D 2.2]

Breather Hose Installation Note

1. Install the breather hose as shown in the figure.

Cylinder head cover side

ac5wzw0000472

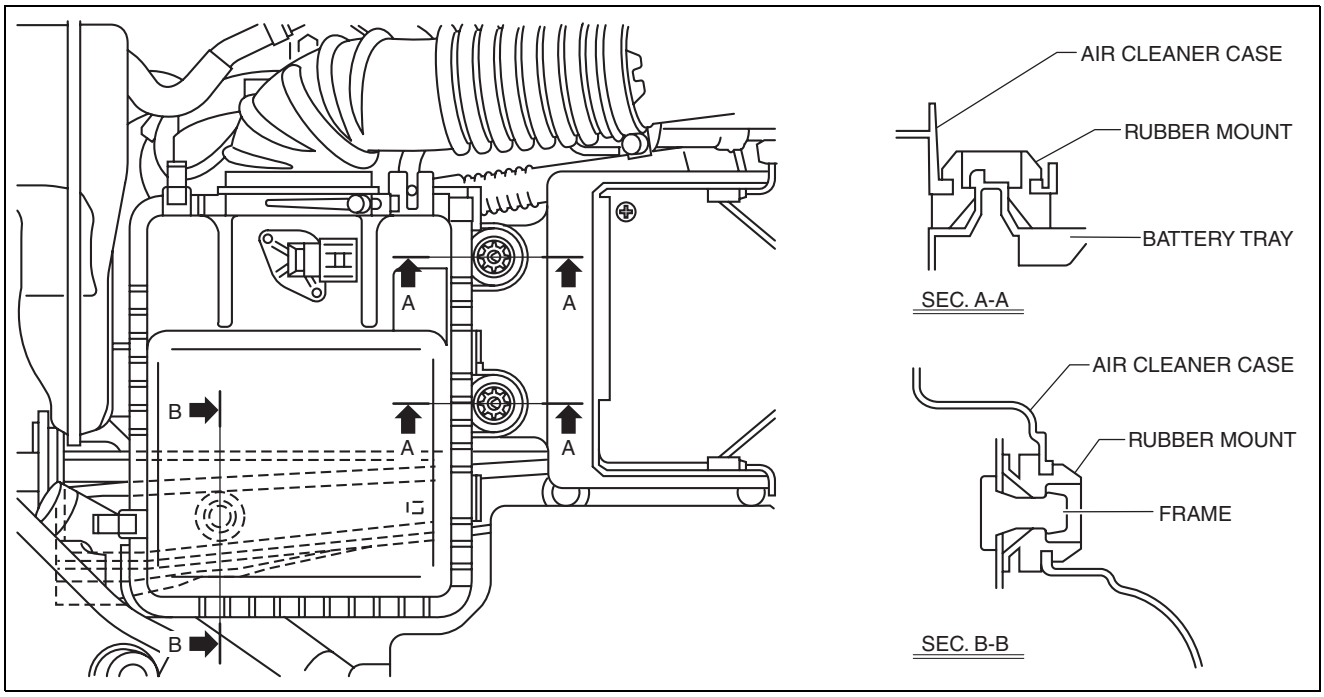
INTAKE-AIR SYSTEM [SKYACTIV-D 2.2]

Air Cleaner Case Installation Note

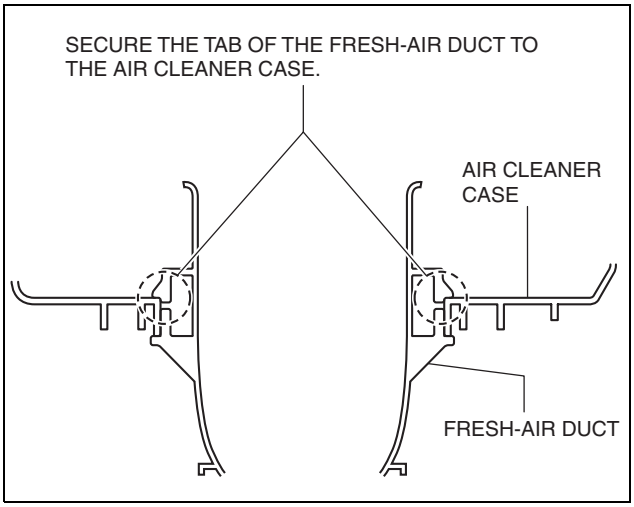
1. Install the air cleaner case as shown in the figure.



ac5wzw0000472

Fresh-air Duct Installation Note

1. Install the fresh-air duct as shown in the figure.

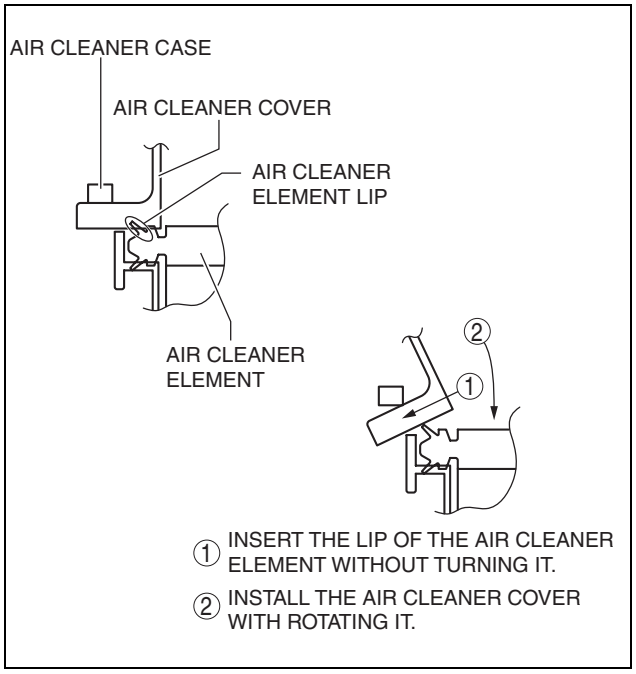


ac5wzw0000528

INTAKE-AIR SYSTEM [SKYACTIV-D 2.2]

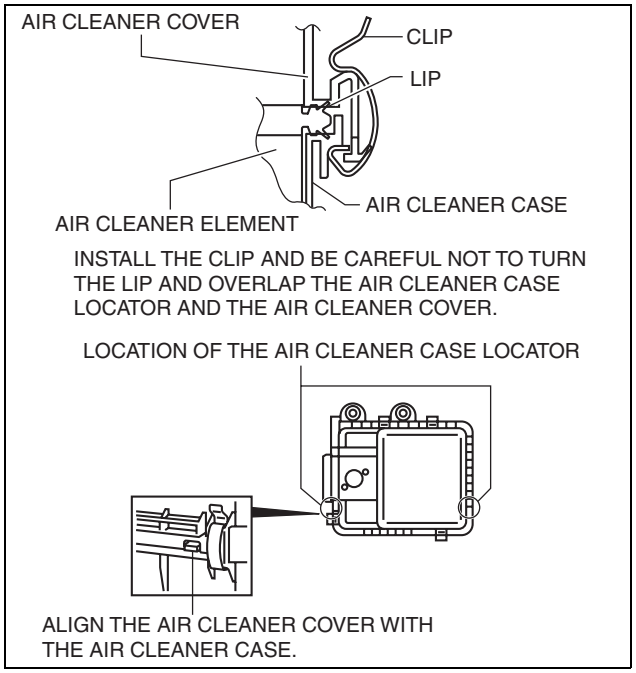
Air Cleaner Cover Installation Note

1. Install the air cleaner cover as shown in the figure.



ac5wzw0000528

2. Secure the air cleaner cover and the air cleaner case with the clip.

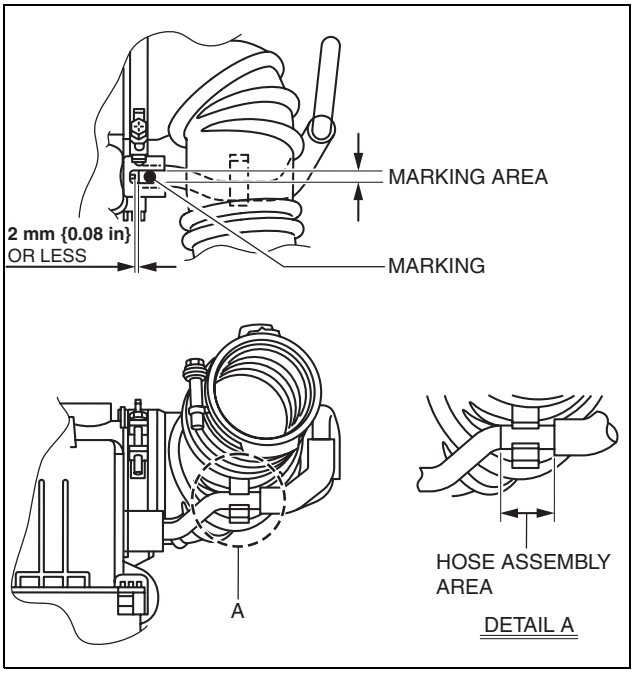


ac5wzw0000529

INTAKE-AIR SYSTEM [SKYACTIV-D 2.2]

Vacuum Hose Installation Note

1. Install the vacuum hose as shown in the figure.

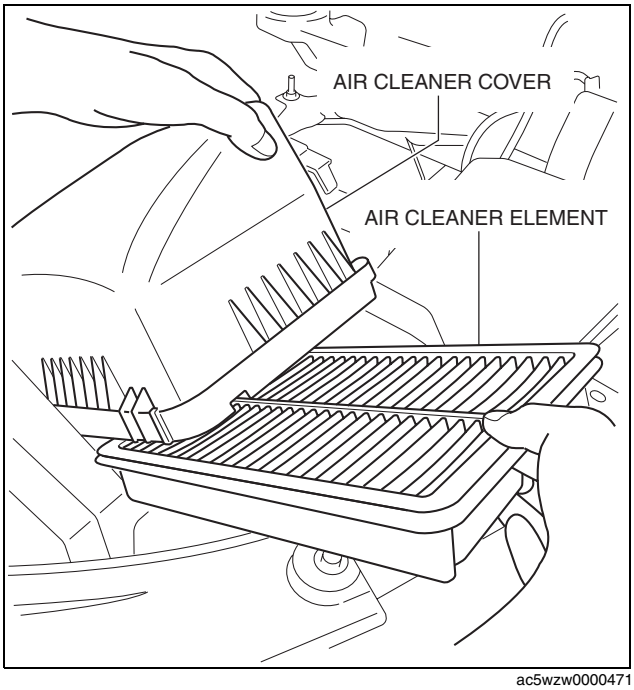


ac5wzw0000472

AIR CLEANER ELEMENT REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0113z7800200

1. Remove the air cleaner element as shown in the figure.
2. Install in the reverse order of removal. (See 01-13B-16 Air Cleaner Cover Installation Note.)

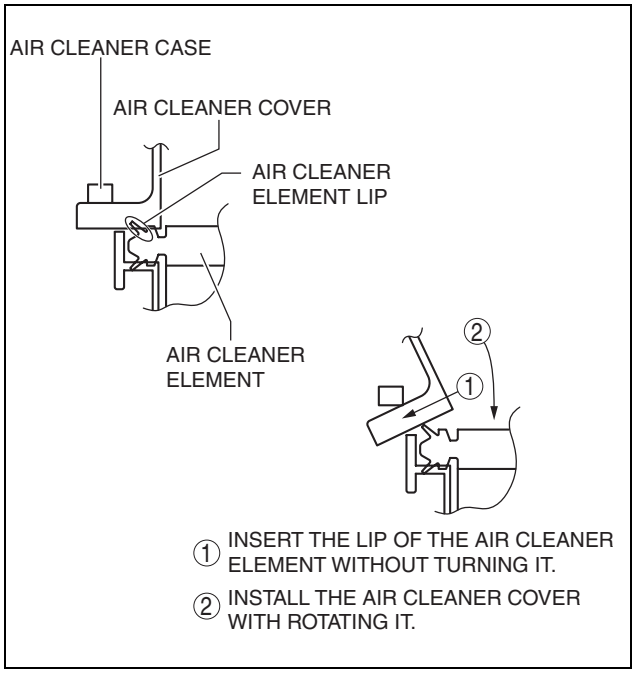


ac5wzw0000471

INTAKE-AIR SYSTEM [SKYACTIV-D 2.2]

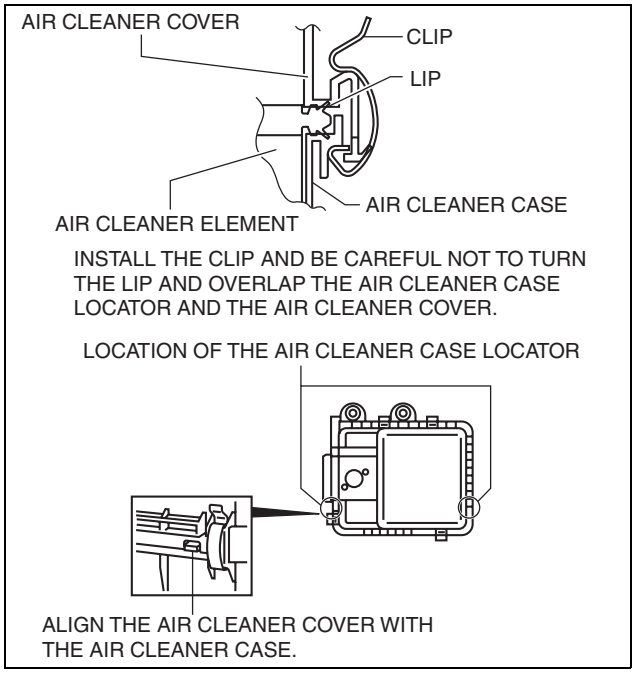
Air Cleaner Cover Installation Note

1. Install the air cleaner cover as shown in the figure.



ac5wzw0000528

2. Secure the air cleaner cover and the air cleaner case with the clip.



ac5wzw0000528

AIR CLEANER ELEMENT INSPECTION [SKYACTIV-D 2.2]

id0113z7800800

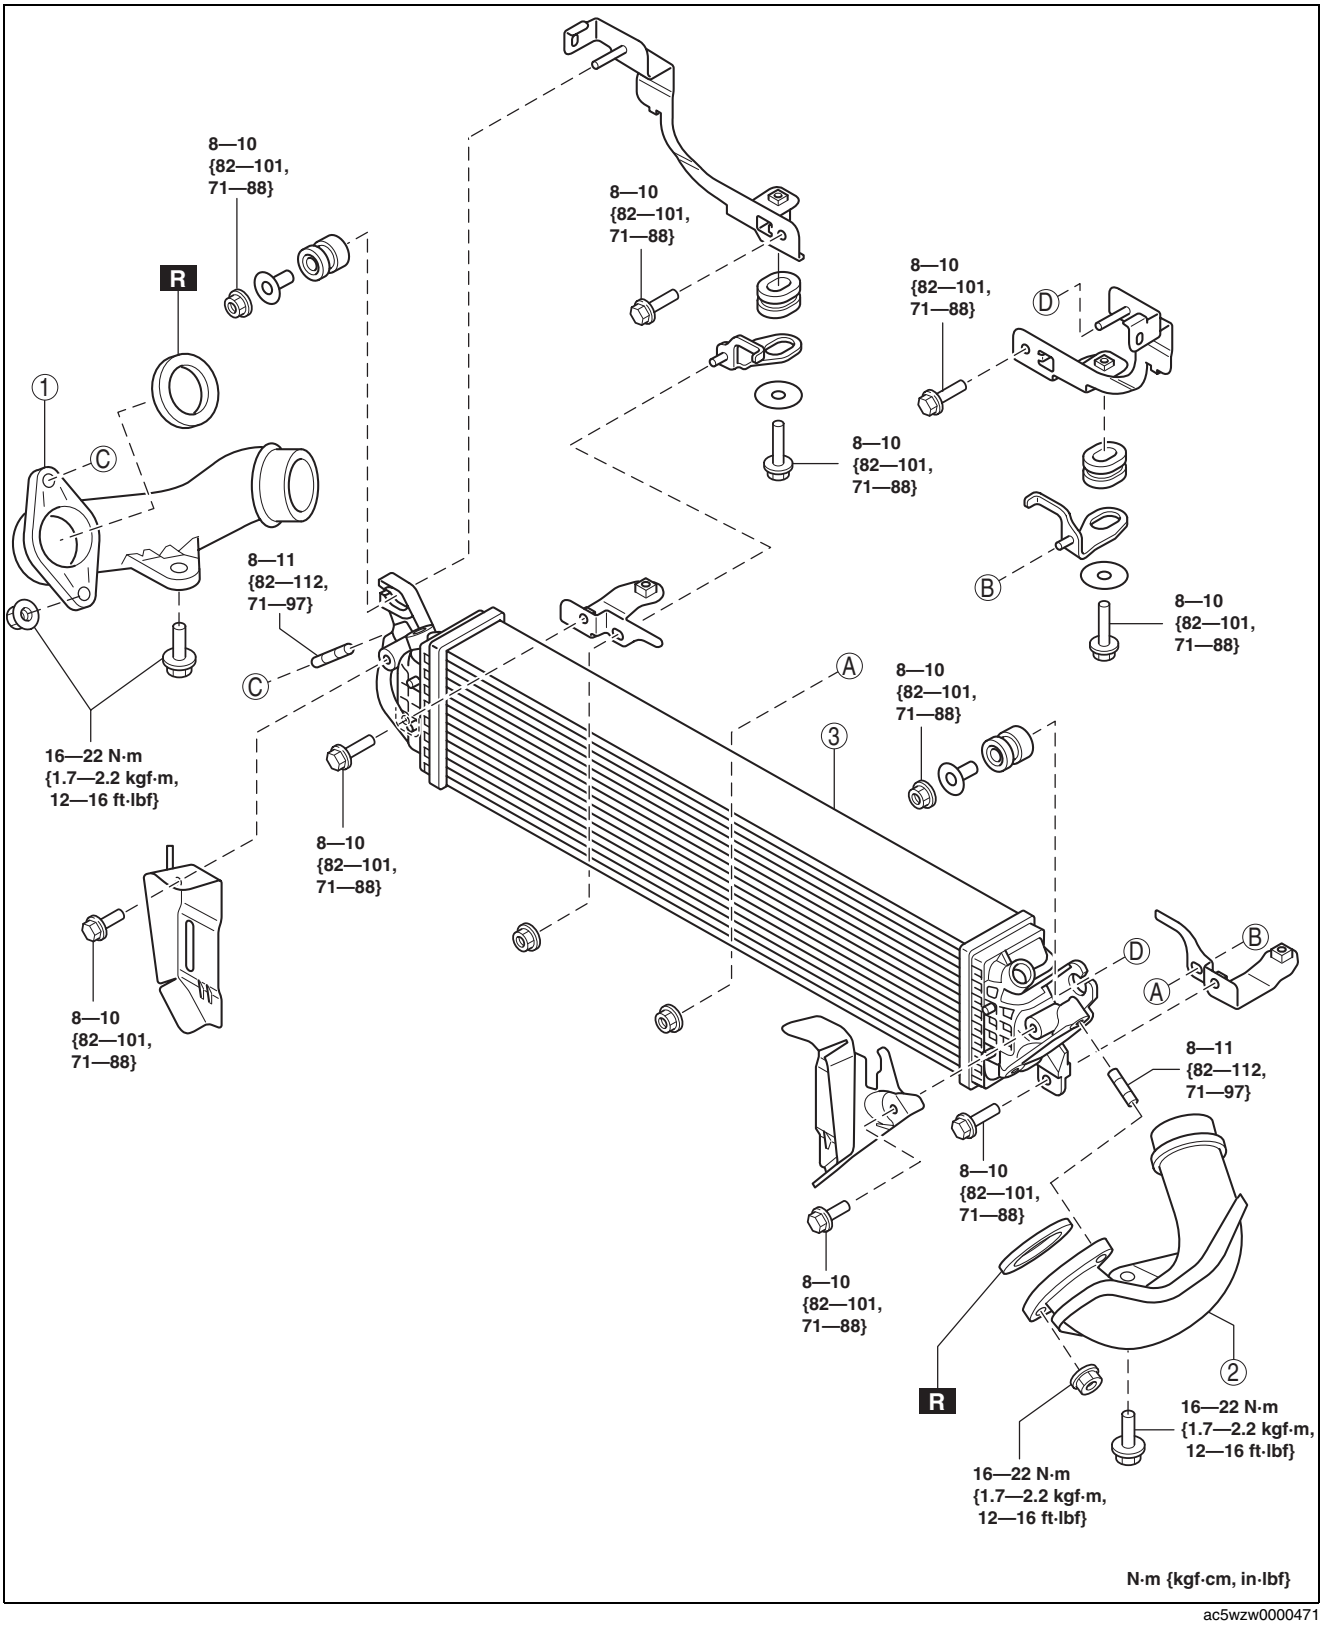
1. Remove the air cleaner element. (See 01-13B-15 AIR CLEANER ELEMENT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Inspect the following items:
   - Has the replacement date expired?
   - Is there dirt, damage, or deformity on the air cleaner element?
   - Is the sealing for the air cleaner case and air cleaner element in good condition?
   - Is the correct air cleaner element installed?
     — If there is any malfunction, clean or replace the air cleaner element. (See 01-13B-15 AIR CLEANER ELEMENT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

INTAKE-AIR SYSTEM [SKYACTIV-D 2.2]

CHARGE AIR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0113z7705900

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front bumper. (See 09-10-10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove in the order shown in the figure.



ac5wzw0000471

1	Charge air cooler outlet pipe
2	Charge air cooler inlet pipe

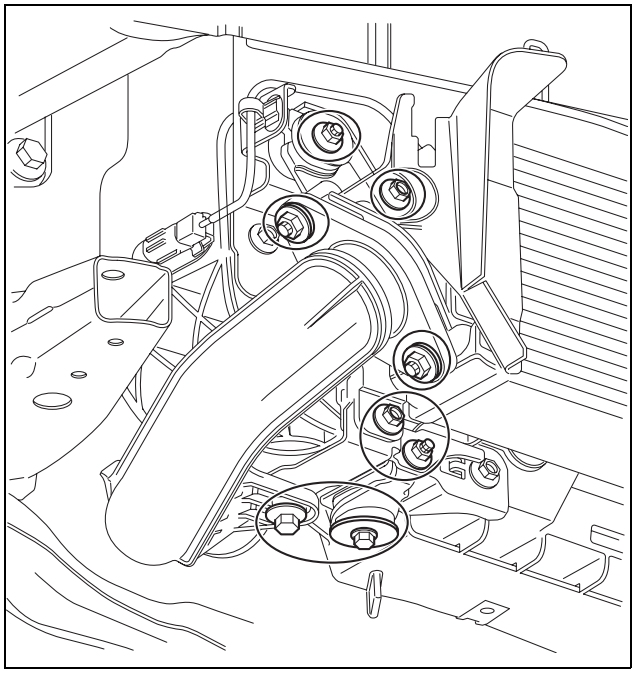
3	Charge air cooler (See 01-13B-18 Charge Air Cooler Installation Note.)

INTAKE-AIR SYSTEM [SKYACTIV-D 2.2]

4. Install in the reverse order of removal.

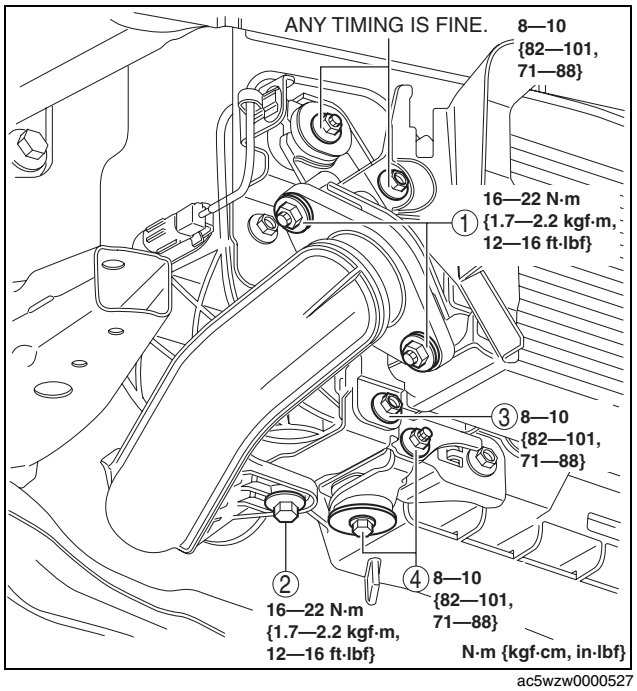
Charge Air Cooler Installation Note

1. Temporarily install the parts shown in the diagram.



ac5wzw0000527

2. Tighten the charge air cooler in the order shown in the figure.



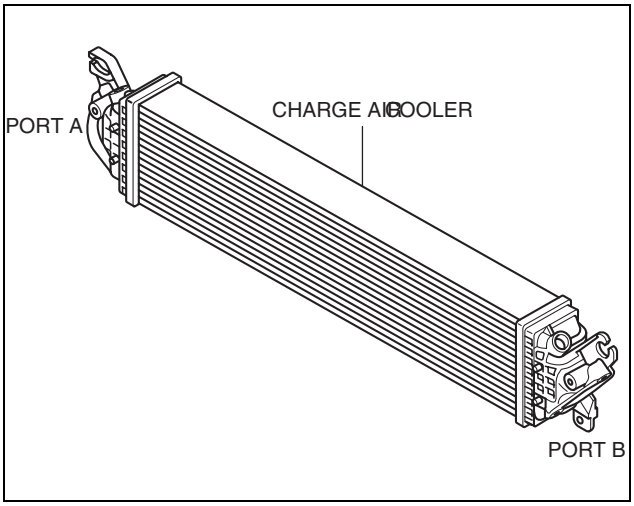
ac5wzw0000527

INTAKE-AIR SYSTEM [SKYACTIV-D 2.2]

CHARGE AIR COOLER INSPECTION [SKYACTIV-D 2.2]

id0113z7800900

1. Remove the charge air cooler. (See 01-13B-17 CHARGE AIR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Plug port A.
3. Apply pressure from port B and verity that there is no airflow.
   - If there is airflow, replace the charge air cooler. (See 01-13B-17 CHARGE AIR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000471

CHECK VALVE INSPECTION [SKYACTIV-D 2.2]

id0113z7082800

1. Remove the check valve. (See 01-13B-20 CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Verify that there is airflow through port B when pressure is applied from port A.
   - If there is no airflow, replace the check valve. (See 01-13B-20 CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Verify that there is no airflow through port A when pressure is applied from port B.
   - If there is airflow, replace the check valve. (See 01-13B-20 CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

GLOW PLUG INSPECTION [SKYACTIV-D 2.2]

id0113z7804300

1. Remove the glow plug short-cord. (See 01-13B-28 GLOW PLUG REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Measure the resistance between the glow plug terminal and the body ground.

Glow plug resistance (specification)
Approx. 1.0 ohms [20 °C {68 °F}]

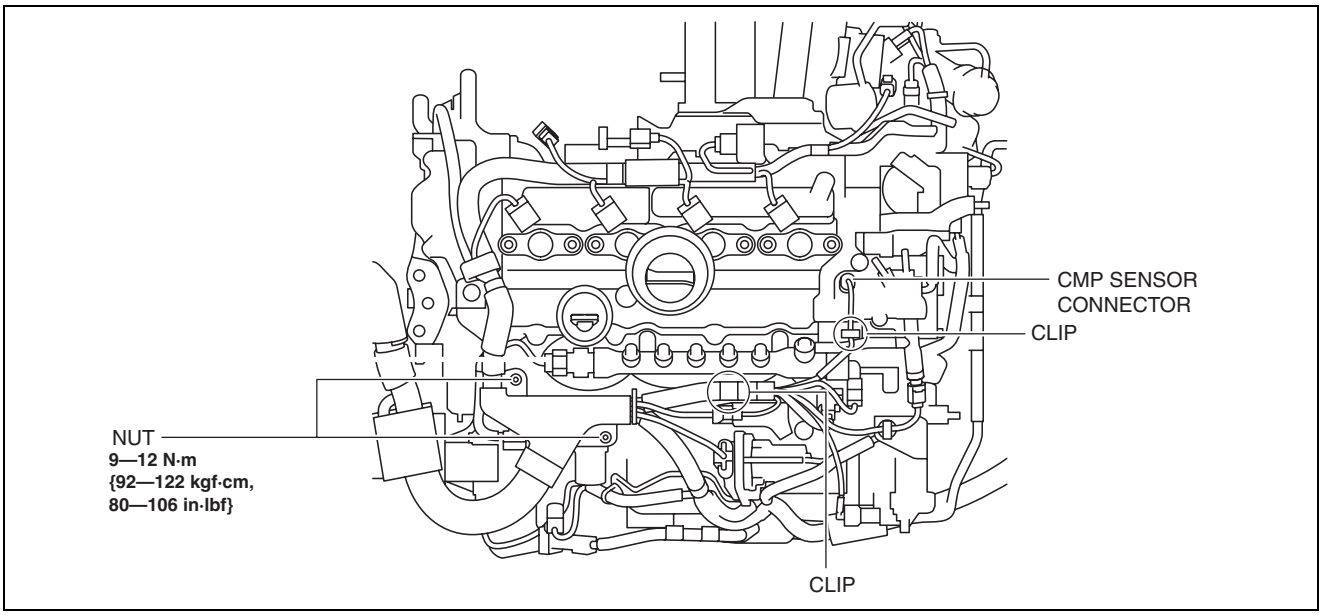
- If not within the specification, replace the glow plug. (See 01-13B-28 GLOW PLUG REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

GLOW PLUG REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0113z7804400

Caution
- **Do not reuse a glow plug which has been dropped from a height exceeding 10 cm even though there is no damage and the resistance is normal.**

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the components shown in the figure and set them aside.

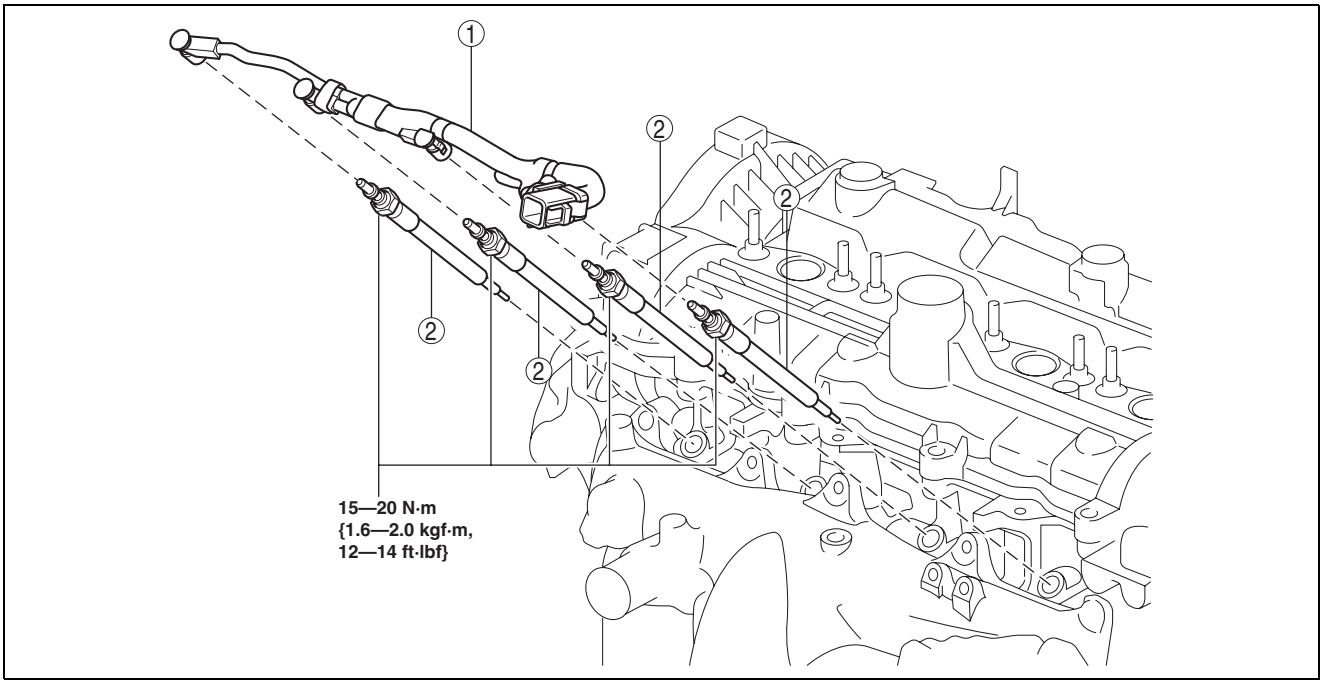


ac5wzw0000476

4. Remove the intake manifold insulator. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

INTAKE-AIR SYSTEM [SKYACTIV-D 2.2]

5. Remove in the order shown in the figure.



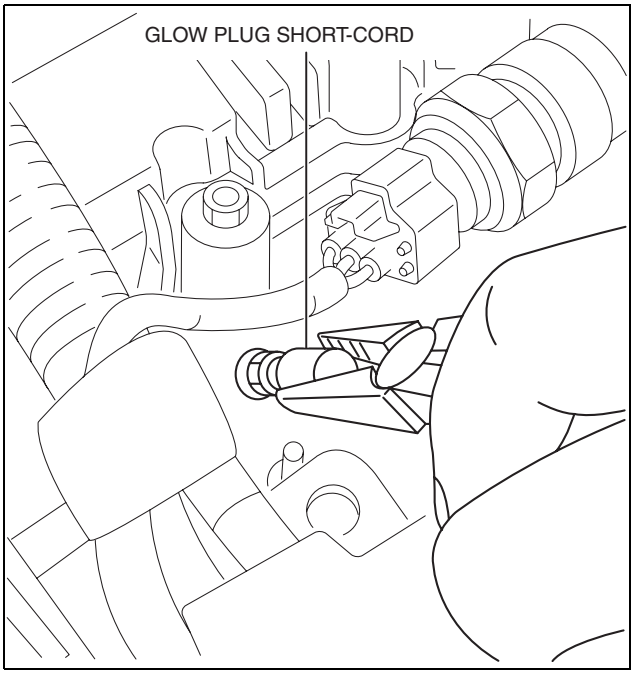
ac5wzw0000476

1	Glow plug short-cord (See 01-13B-29 Glow Plug Short-cord Removal Note.)

2	Glow plug (See 01-13B-29 Glow Plug Removal Note.) (See 01-13B-30 Cleaning Before Glow Plug Installation.) (See 01-13B-30 Glow Plug Installation Note.)

Glow Plug Short-cord Removal Note

1. Pull out the glow plug from the glow plug short-cord as shown in the figure.



ac5wzw0000476

Glow Plug Removal Note

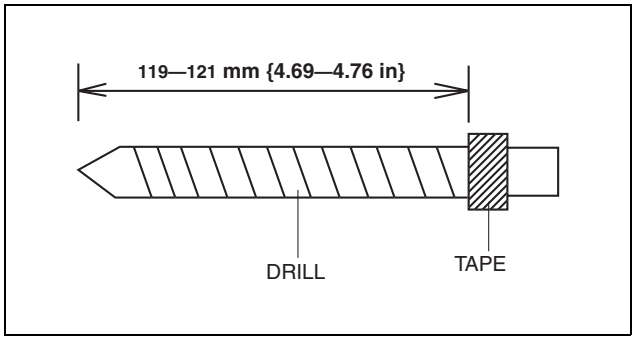
1. Loosen the glow plug using the tool until the thread is held by one thread, loosen it by hand, and then remove it.

INTAKE-AIR SYSTEM [SKYACTIV-D 2.2]

Cleaning Before Glow Plug Installation

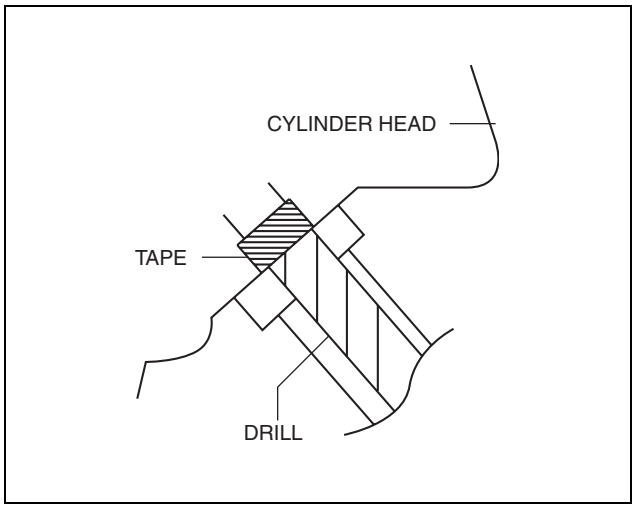
Caution
- **If carbon adheres to the glow plug, it could damage the glow plug and the engine. Before installing the glow plug, remove the carbon adhering to the glow plug and the glow plug installation hole.**

1. Wrap the drill (**5.0—5.2 mm** {0.197—0.204 in} and **5.2—5.4 mm {0.205—0.212 in}** drill bit) from the end to the **119—121 mm {4.69—4.76 in}** position with tape.



ac5wzw0000476

2. Press the drill (**5.0—5.2 mm {0.197—0.204 in}** drill bit) until the wrapped part is inserted completely.
3. Rotate the drill by hand and remove the carbon from the glow plug installation hole.
4. Perform Steps 2 and 3 using a drill (**5.2—5.4 mm {0.205—0.212 in}** drill bit).



ac5wzw0000530

Glow Plug Installation Note

1. Tighten the glow plug by hand until the thread is installed to one thread and tighten it using the tool.

INTAKE-AIR SYSTEM [SKYACTIV-D 2.2]

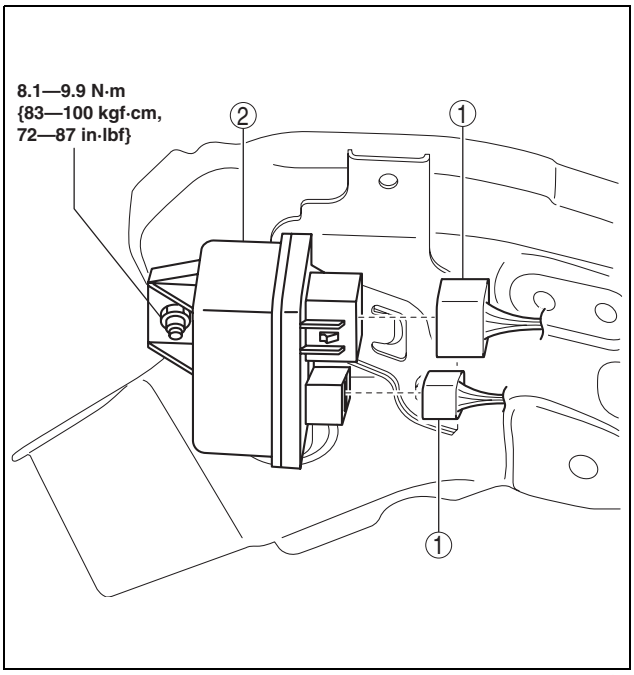
GLOW PLUG CONTROL MODULE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0113z7705400

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the battery and the battery tray. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove in the order shown in the figure.

1	Glow control module connector
2	Glow control module

4. Install in the reverse order of removal.



ac5wzw0000470

GLOW PLUG CONTROL MODULE INSPECTION [SKYACTIV-D 2.2]

id0113z7705500

1. Perform the KOEO self-test.
2. Verify that a glow control module related DTC is detected.
   - If DTCs are detected, repair the malfunctioning part according to the applicable DTC troubleshooting.
   - If a DTC is not detected, go to the next step.
3. Inspect the following items:
   - Glow control module damage
   - Glow control module connector damage or corrosion
     — If there is any malfunction, repair or replace the malfunctioning part.
     — If there is no malfunction, replace the glow control module. (See 01-13B-31 GLOW PLUG CONTROL MODULE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

INTAKE-AIR SYSTEM [SKYACTIV-D 2.2]

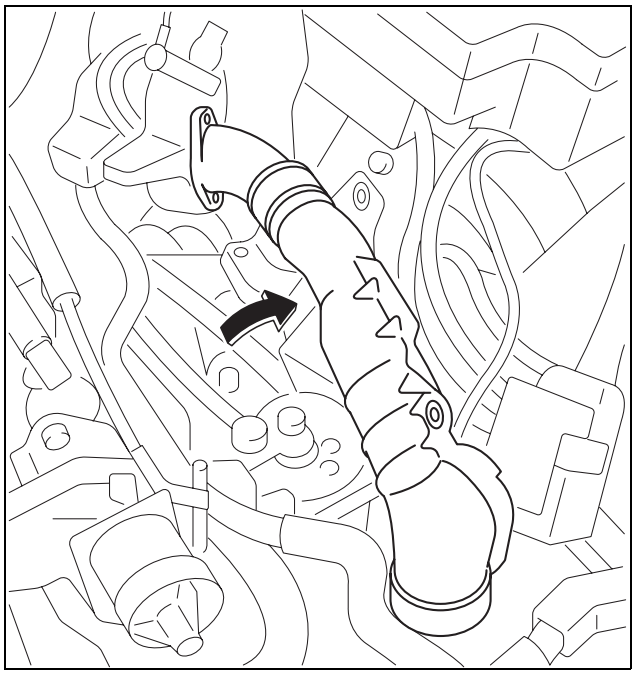
TURBOCHARGER REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0113z7705800

Warning
- **A hot engine and exhaust system can cause severe burns. Turn off the engine and wait until they are cool before removing the exhaust system.**

Caution
- **Perform exhaust gas temperature sensor removal/installation only when inspection or replacement is required, such as when DTCs for the sensor are displayed, because it may cause exhaust gas leakage. If the exhaust gas temperature sensor is removed once, always verify that there is no exhaust gas leakage after reinstallation.**

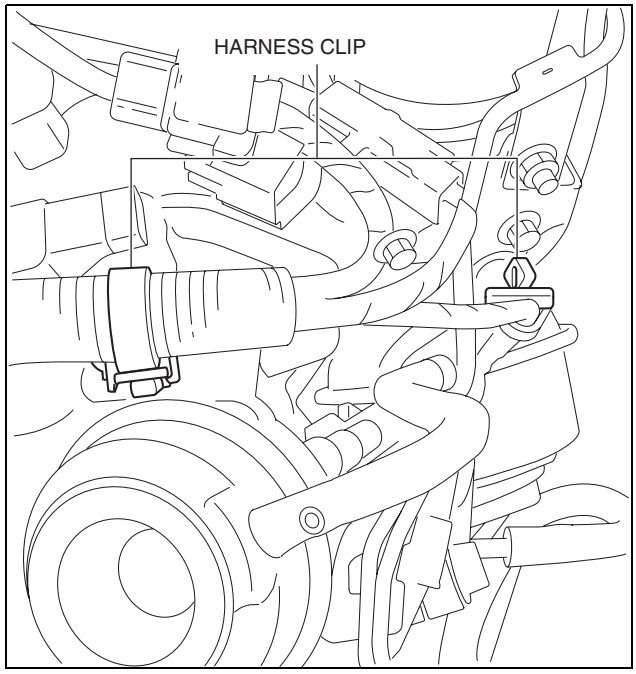
1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
4. Remove the air cleaner. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove the battery and the battery tray. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Remove the following parts as a single unit: (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   - Air hose
   - Air inlet pipe
   - Breather hose
   - Turbocharger air inlet hose
   - PTC Heater
7. Set the turbocharger air outlet pipe, turbocharger air outlet hose, and air intake pipe aside as a single unit as shown in the figure. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)



ac5jjw00003612

INTAKE-AIR SYSTEM [SKYACTIV-D 2.2]

8. Remove the wiring harness clip shown in the figure.
9. Disconnect the regulating valve position sensor connector.



ac5wzw0000470

10. Detach the wiring harness clips shown in the figure.
11. Remove the front crossmember. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
12. Remove the catalytic converter. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
13. Remove the transfer. (See 03-16B-6 TRANSFER REMOVAL/INSTALLATION [GW6AX-EL].)
14. Remove in the order shown in the figure.
15. Install in the reverse order of removal.

FUEL SYSTEM [SKYACTIV-G 2.0]

BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0]

id0114z5802000

Warning

- **Fuel vapor is hazardous. It can very easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.**
- **Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before performing work on the fuel system, discharge static electricity by touching the vehicle body.**

Fuel Line Safety Procedure

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the fuel-filler cap to release the pressure inside the fuel tank.
3. Remove the fuel pump relay.
4. Disconnect the high pressure fuel pump connector.
5. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
6. Start the engine.
7. After the engine stalls, crank the engine 2—3 times.
8. Switch the ignition to off.
9. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
10. Install the fuel pump relay.
11. Connect the high pressure fuel pump connector.

FUEL SYSTEM [SKYACTIV-G 2.0]

AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0]

id0114z5801900

Warning

- **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. When installing the fuel hose, perform "Fuel Leakage Inspection" described below.**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before performing work on the fuel system, discharge static electricity by touching the vehicle body.**

Fuel Leakage Inspection
Using M-MDS

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON (engine off).
3. Using the simulation function "FP", start the fuel pump. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
4. Verify that there is no fuel leakage from the pressurized parts.

Standard
There shall be no leakage after 5 min.

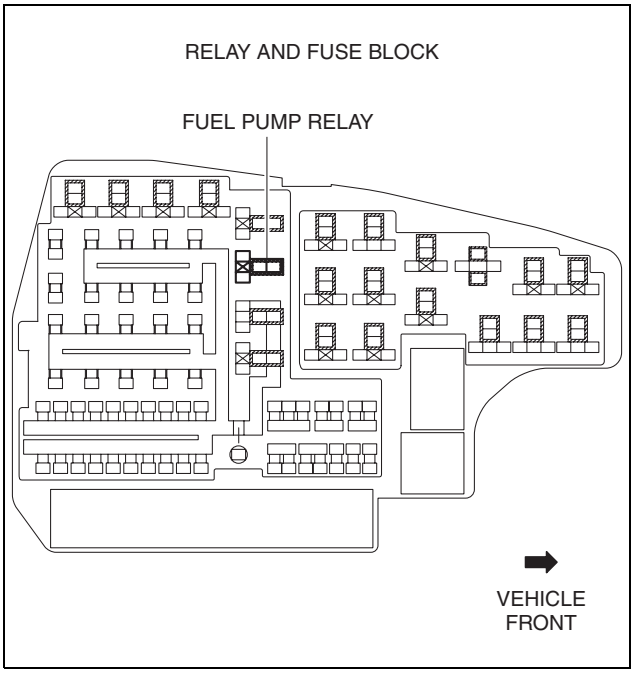
5. In the case of fuel leakage, replace the following components and then recheck using the fuel leakage checking procedure.
   - If there is leakage, replace the fuel hoses and clips.
   - If there is damage on the seal on the fuel pipe side, replace the fuel pipe.

Without using M-MDS

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the fuel pump relay.

Caution

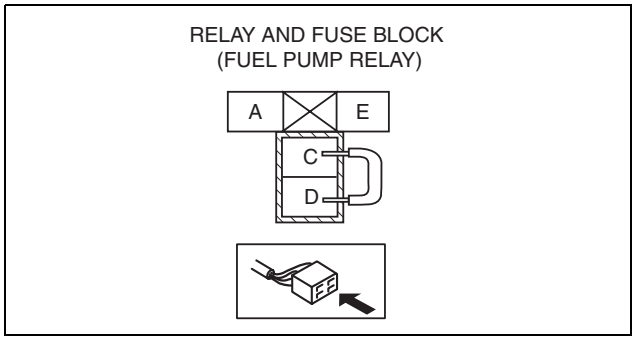
- **Short the specified terminals because shorting the wrong terminal of the relay and fuse block may cause malfunctions.**



ac5uuw00000407

FUEL SYSTEM [SKYACTIV-G 2.0]

3. Using a jumper wire, short fuel pump relay terminals C and D in the relay and fuse block.
4. Connect the negative battery cable and operate the fuel pump. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
5. Verify that there is no fuel leakage from the pressurized parts.



am6zzw0000028

Standard
There shall be no leakage after 5 min.

6. In the case of fuel leakage, replace the following components and then recheck using the fuel leakage checking procedure.
   - If there is leakage, replace the fuel hoses and clips.
   - If there is damage on the seal on the fuel pipe side, replace the fuel pipe.

FUEL LINE PRESSURE INSPECTION [SKYACTIV-G 2.0]

id0114z5800500

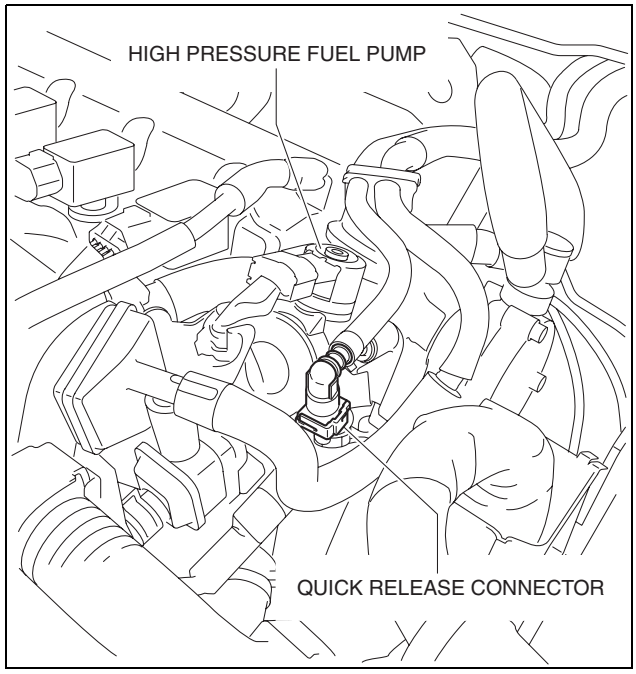
Warning
- **Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death and damage. To prevent this, complete the following inspection with the engine stopped.**
- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure", while referring to the "BEFORE SERVICE PRECAUTION".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before performing work on the fuel system, discharge static electricity by touching the vehicle body.**

Caution
- **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using cloth or soft brush, and make sure that it is free of foreign material.**

1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)

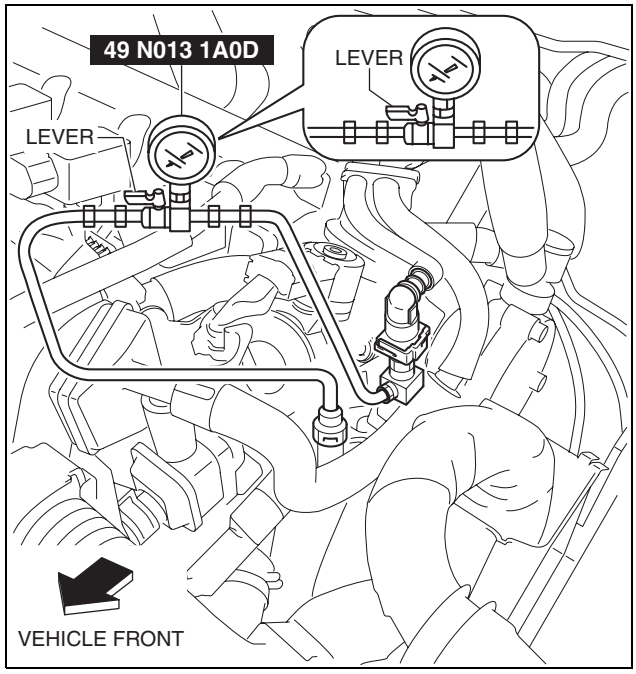
FUEL SYSTEM [SKYACTIV-G 2.0]

3. Disconnect the quick release connector as shown in the figure. (See 01-14A-49 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



ac5uuw00000377

4. Turn the lever of the **SST** parallel to the hose as shown in the figure.
5. Insert the **SST** quick release connector into the fuel pipe until a click is heard.
6. Verify that the quick release connector is firmly connected by pulling it by hand.
7. Start the fuel pump using the following procedure.
   Using M-MDS
   1. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
   2. Connect the M-MDS to the DLC-2.
   3. Using the simulation function “FP”, start the fuel pump. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)



ac5uuw00000378

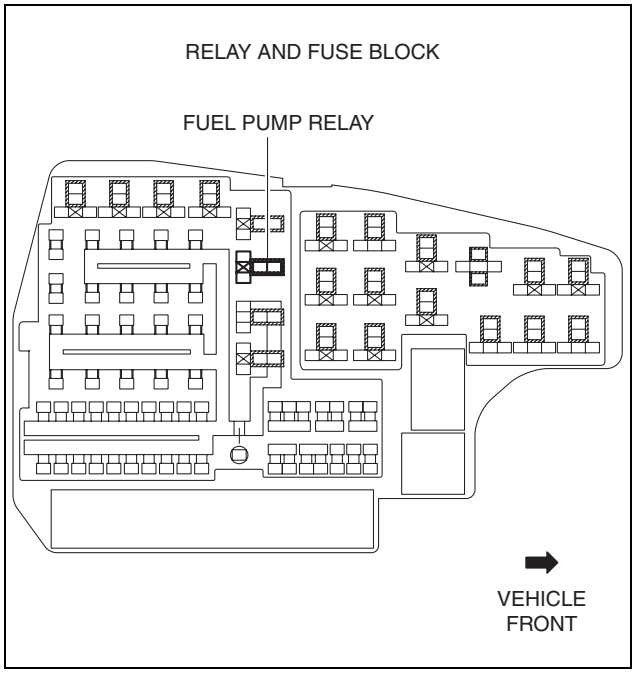
FUEL SYSTEM [SKYACTIV-G 2.0]

Without using M-MDS

1. Remove the fuel pump relay.

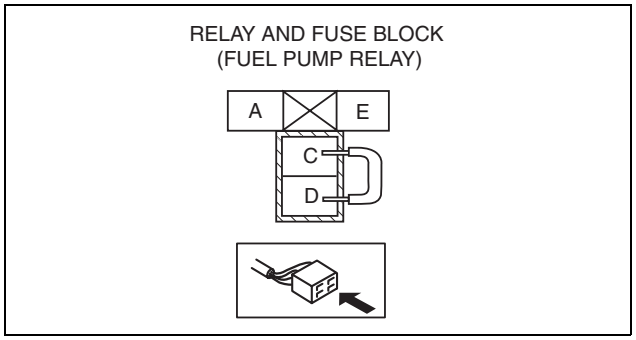
Caution

- **Short the specified terminals because shorting the wrong terminal of the relay and fuse block may cause malfunctions.**



ac5uuw00000379

2. Using a jumper wire, short fuel pump relay terminals C and D in the relay and fuse block.
3. Connect the negative battery cable and operate the fuel pump. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)



am6zzw0000028

8. Operate the fuel pump for **10 s**.
9. Measure the fuel line pressure.
   - If not within the specification, inspect the following:
     If it less than the specification:
     — Fuel pump unit
     — Fuel line for restriction or leakage
     If it exceeds the specification:
     — Fuel line restriction

Fuel pressure

405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}

10. Stop the fuel pump using the following procedure.
    Using M-MDS
    1. Using the simulation function “FP”, stop the fuel pump. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)

    Without using M-MDS
    1. Disconnect the negative battery cable to stop the fuel pump. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
11. Measure the fuel hold pressure **after 5 min**.
    - If not within the specification, inspect the following:
      — Fuel line leakage

Fuel hold pressure

230 kPa {2.35 kgf/cm^2, 33.4 psi} or more

FUEL SYSTEM [SKYACTIV-G 2.0]

12. Complete the “BEFORE SERVICE PRECAUTION”. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)
13. Disconnect the **SST**.
14. Connect the quick release connector. (See 01-14A-49 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
15. Complete the “AFTER SERVICE PRECAUTION”. (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)

FUEL DRAINING PROCEDURE [SKYACTIV-G 2.0]

id0114z5853500

Warning
