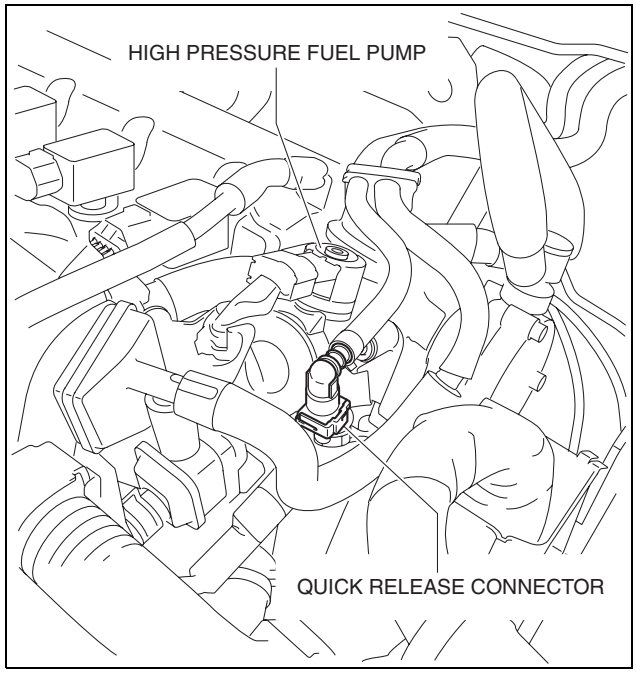
- **Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death and damage. To prevent this, complete the following inspection with the engine stopped.**
- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to the “BEFORE SERVICE PRECAUTION”.**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before performing work on the fuel system, discharge static electricity by touching the vehicle body.**

Caution

- **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using cloth or soft brush, and make sure that it is free of foreign material.**

1. Complete the “BEFORE SERVICE PRECAUTION”. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
3. Disconnect the quick release connector as shown in the figure. (See 01-14A-49 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Connect a long hose to the disconnected quick release connector and drain the fuel into a container used for collecting gasoline.
5. Drain the fuel from the fuel tank using the following procedure:
   Using M-MDS
   1. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
   2. Connect the M-MDS to the DLC-2.
   3. Using the simulation function “FP”, start the fuel pump. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)

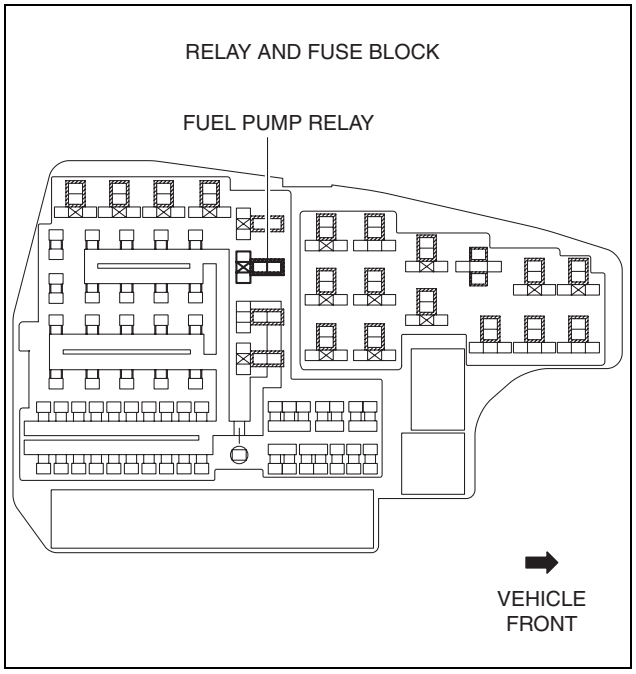


ac5uuw00000404

FUEL SYSTEM [SKYACTIV-G 2.0]

Without using M-MDS

1. Remove the fuel pump relay.

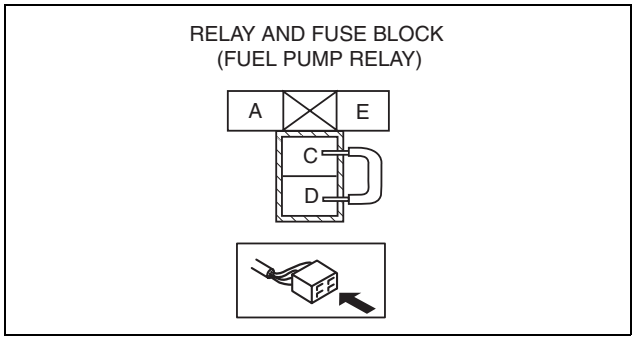


ac5uuw00000405

Caution

- **Short the specified terminals because shorting the wrong terminal of the relay and fuse block may cause malfunctions.**

2. Using a jumper wire, short fuel pump relay terminals C and D in the relay and fuse block.
3. Connect the negative battery cable and operate the fuel pump. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)



am6zzw0000026

Caution

- **The fuel pump could be damaged if it is operated while there is no fuel in the fuel tank. Verify the amount of fuel being discharged from the hose and stop operation of the fuel pump when essentially no fuel is being discharged.**

6. Stop the fuel pump using the following procedure.

Using M-MDS

1. Using the simulation function “FP”, stop the fuel pump. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)

Without using M-MDS

1. Remove the jumper wire to stop the fuel pump.
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)

FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0114z5801600

Warning

- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure", while referring to the "BEFORE SERVICE PRECAUTION".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.**

Caution

- **Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.**

2WD

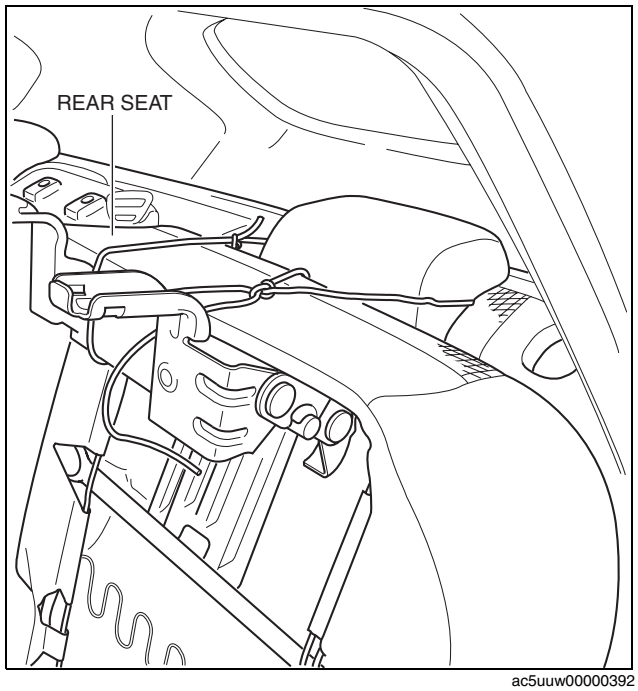
1. Level the vehicle.
2. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)
3. Drain the fuel. (See 01-14A-11 FUEL DRAINING PROCEDURE [SKYACTIV-G 2.0].)
4. Using the following procedure:

   6:4 split type

   1. Remove the rear seat cushion. (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)

   4:2:4 split type

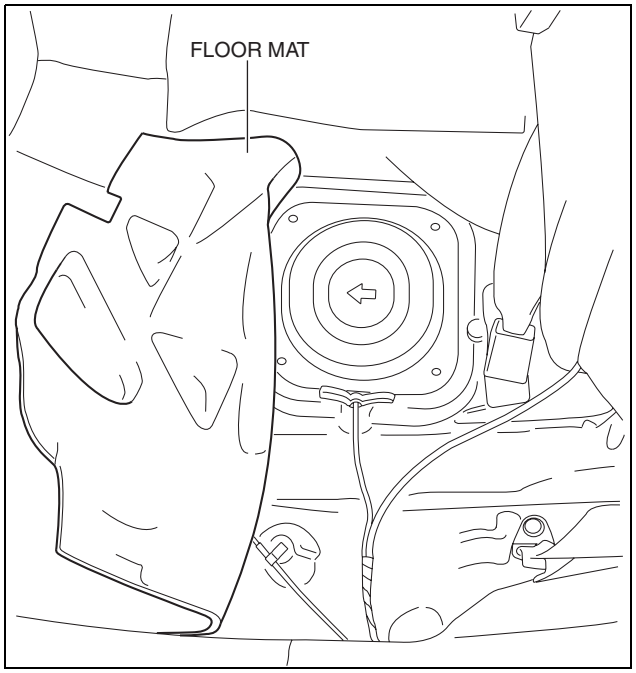
   1. Set the rear seat aside as shown in the figure. (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)



ac5uuw00000392

FUEL SYSTEM [SKYACTIV-G 2.0]

5. Partially peel back the floor mat as shown in the figure.



ac5uuw00000393

6. Remove the service hole cover.
7. Disconnect the following parts:
   - Fuel pump unit connector
   - Quick release connector (See 01-14A-49 QUICK RELEASE CONNECTOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
8. Remove the floor under cover. (See 09-16-44 FLOOR UNDER COVER REMOVAL/ INSTALLATION.)
9. Disconnect the HO2S connector.
10. Remove the TWC and HO2S as a single unit. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
11. Remove in the order indicated in the table.
12. Install in the reverse order of removal.
13. Complete the “AFTER SERVICE PRECAUTION”. (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)

FUEL TANK INSPECTION [SKYACTIV-G 2.0]

id0114z5803200

Warning

- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure", while referring to the "BEFORE SERVICE PRECAUTION".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.**

Note

- The rollover valve and the fuel shut-off valve (built into the fuel tank) and also fuel tank leakage are inspected in this inspection.

2WD

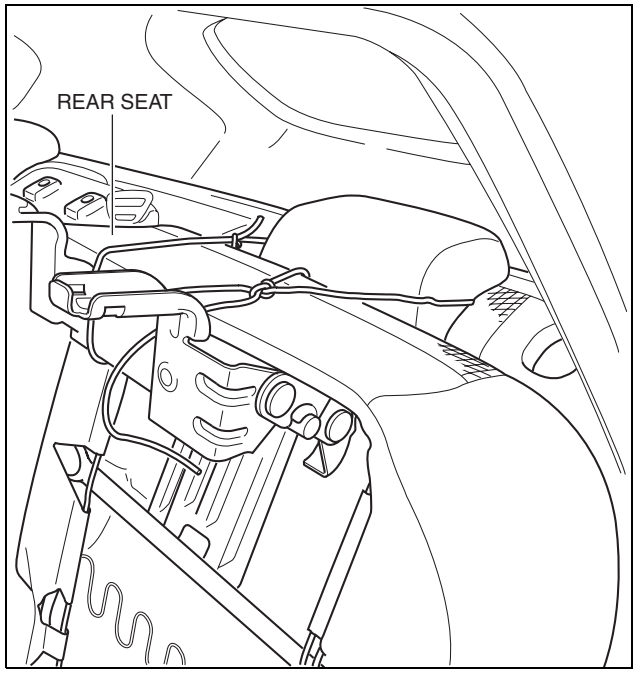
1. Level the vehicle.
2. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)
3. Drain the fuel. (See 01-14A-11 FUEL DRAINING PROCEDURE [SKYACTIV-G 2.0].)
4. Using the following procedure:

   6:4 split type

   1. Remove the rear seat cushion. (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)

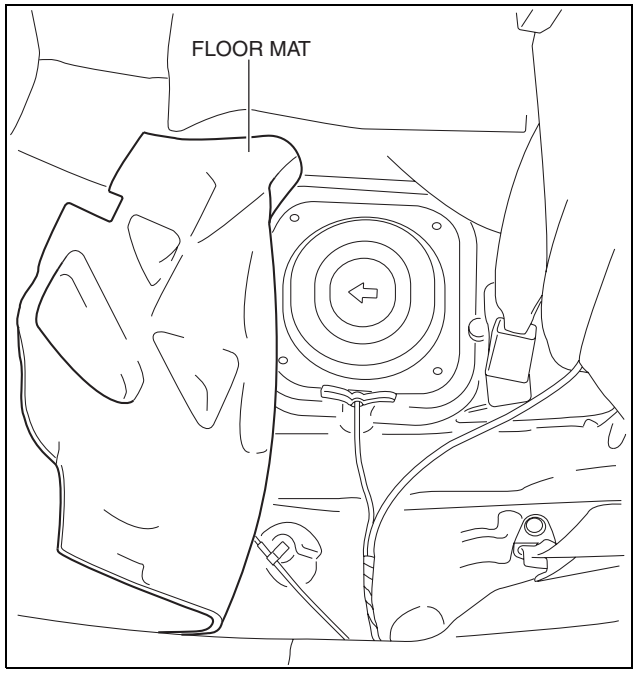
4:2:4 split type

1. Set the rear seat aside as shown in the figure. (See 09-13-56 REAR SEAT REMOVAL/ INSTALLATION.)



ac5uuw00000410

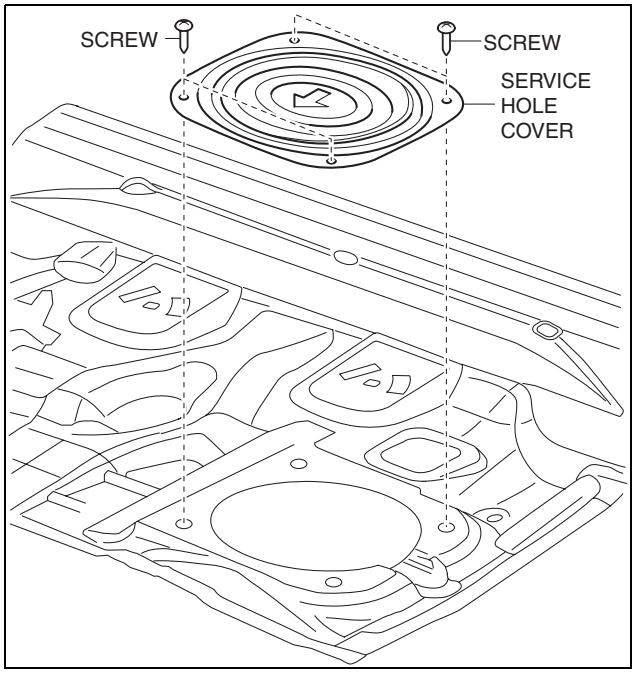
5. Partially peel back the floor mat as shown in the figure.



ac5uuw00000411

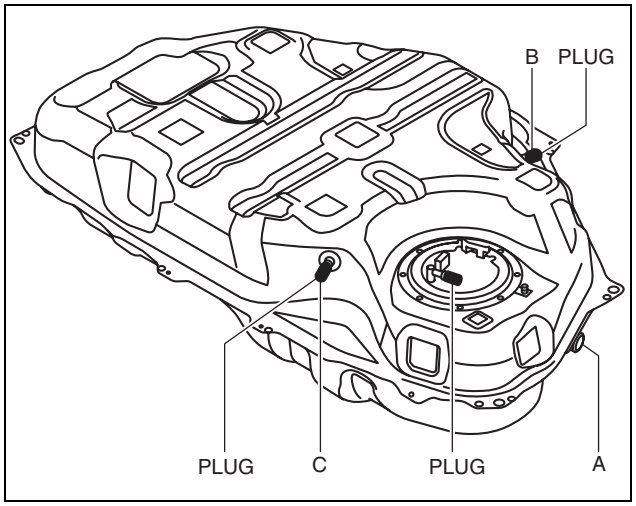
FUEL SYSTEM [SKYACTIV-G 2.0]

6. Remove the service hole cover.
7. Disconnect the following parts:
   - Fuel pump unit connector
   - Quick release connector (See 01-14A-49 QUICK RELEASE CONNECTOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0])
8. Remove the floor under cover. (See 09-16-44 FLOOR UNDER COVER REMOVAL/ INSTALLATION.)
9. Disconnect the HO2S connector.
10. Remove the TWC and HO2S as a single unit. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0])
11. Remove the fuel tank and fuel pump unit as a single unit. (See 01-14A-13 FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0])
12. Perform the following procedure to verify the fuel tank airtightness.



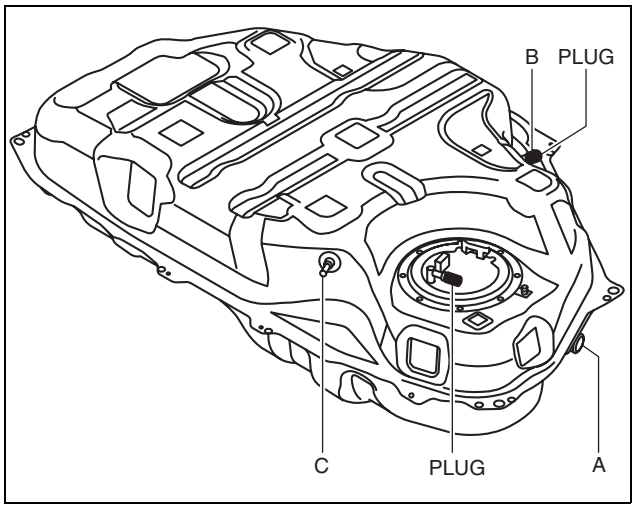
ac5uuw00000412

(1) Plug the fuel pump unit pipe, ports B and C.
(2) Apply a pressure of **3 kPa {23 mmHg, 0.9 inHg}** to port A and wait for a while.
(3) Verify that there is no air flow leakage from the fuel tank.
   - If there is air flow, replace the fuel tank. (See 01-14A-13 FUEL TANK REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)



ac5uuw00000413

13. Plug the fuel pump unit pipe and port B.
14. Level the fuel tank.
15. Apply a pressure of **3 kPa {23 mmHg, 0.9 inHg}** to port A and wait for a while.
16. With the pressure still applied, verify that there is air flow from port C and the pressure is **0—3 kPa {0—23 mmHg, 0—0.9 inHg}**.
    - If there is no air flow, replace the fuel tank. (See 01-14A-13 FUEL TANK REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
17. Apply a pressure of **-0.5 kPa {-3.8 mmHg, -0.1 inHg}** to port A and wait for a while.
18. With the pressure still applied, verify that there is air flow from port C and the pressure is **-0.5—0 kPa {-3.8—0 mmHg, -0.1—0 inHg}**.
    - If there is no air flow, replace the fuel tank. (See 01-14A-13 FUEL TANK REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)
    - If there is air flow, place the fuel tank upside down.



ac5uuw00000414

FUEL SYSTEM [SKYACTIV-G 2.0]

19. Apply a pressure to port A and wait for a while.
20. With the pressure still applied, verify that there is no air flow from port C.

FUEL-FILLER PIPE REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0114z5806900

Warning

- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure", while referring to the "BEFORE SERVICE PRECAUTION".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.**

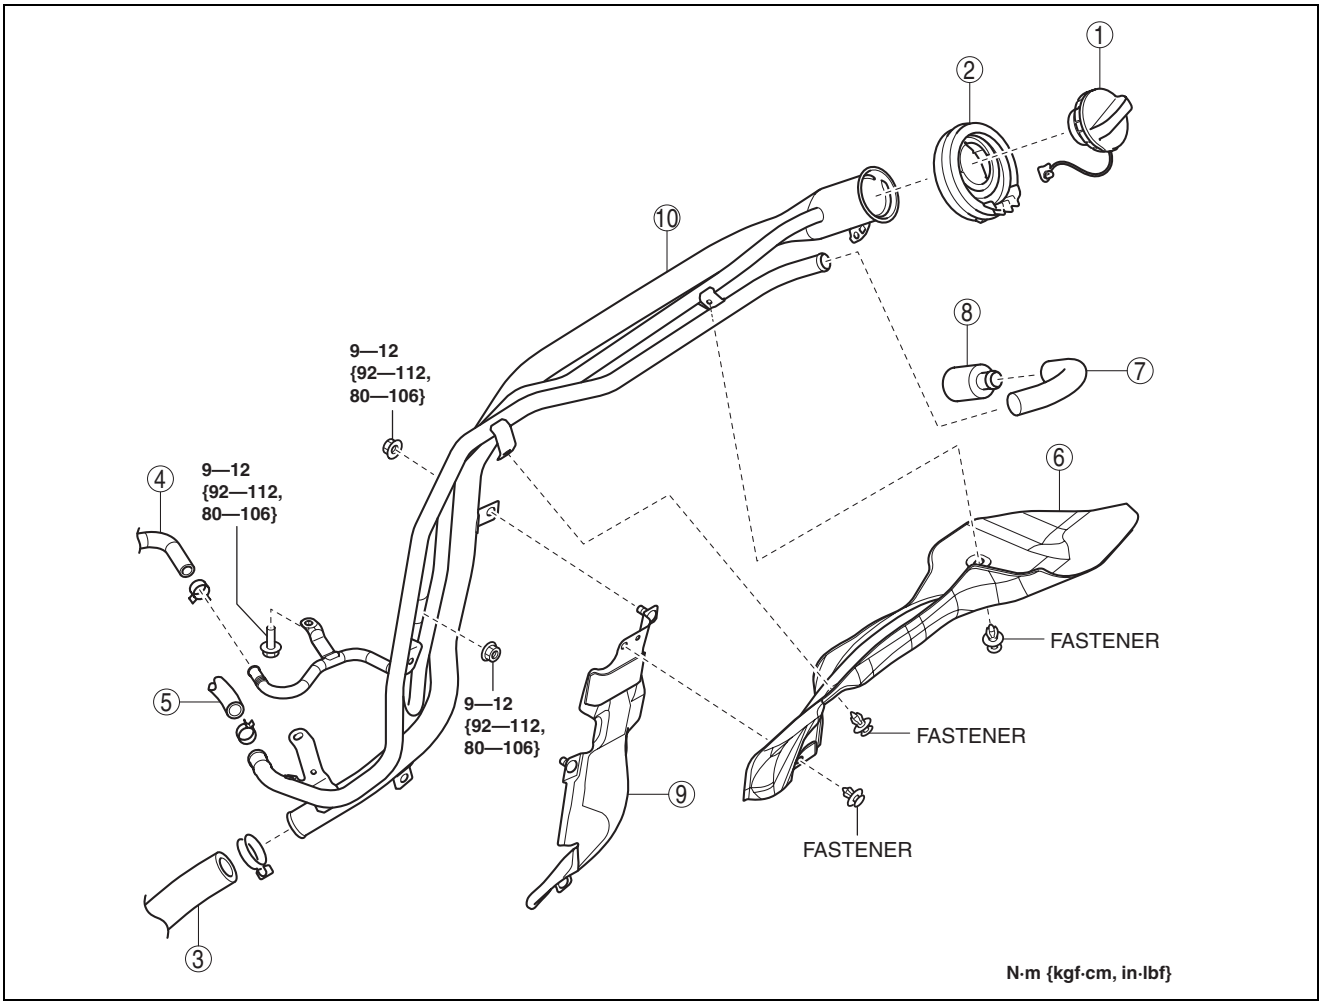
Caution

- **Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.**

1. Level the vehicle.
2. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)
3. Drain the fuel. (See 01-14A-11 FUEL DRAINING PROCEDURE [SKYACTIV-G 2.0].)
4. Open the fuel-filler lid.

FUEL SYSTEM [SKYACTIV-G 2.0]

5. Remove in the order indicated in the table.



ac5wzw0000139

1	Fuel-filler cap
2	Dust cover (See 01-14A-35 Dust Cover Removal Note.)
3	Joint hose (See 01-14A-36 Joint Hose Installation Note.)
4	Breather hose (See 01-14A-36 Breather Hose Installation Note.)

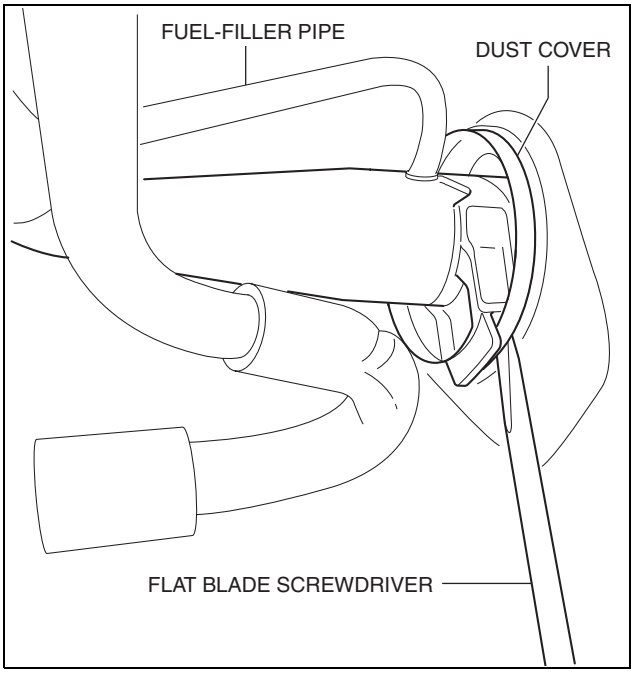
5	Evaporative hose No.1 (See 01-14A-35 Evaporative Hose No.1 Installation Note.)
6	Protector (if equipped)
7	Evaporative hose No.2
8	Plug
9	Fuel-filler pipe protector
10	Fuel-filler pipe (See 01-14A-35 Fuel-filler Pipe Removal Note.)

6. Install in the reverse order of removal.
7. Complete the “AFTER SERVICE PRECAUTION”. (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)

FUEL SYSTEM [SKYACTIV-G 2.0]

Dust Cover Removal Note

1. Remove the rear mudguard (LH). (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
2. Release the dust cover tab using a flathead screwdriver as shown in the figure.
3. Remove the dust cover.



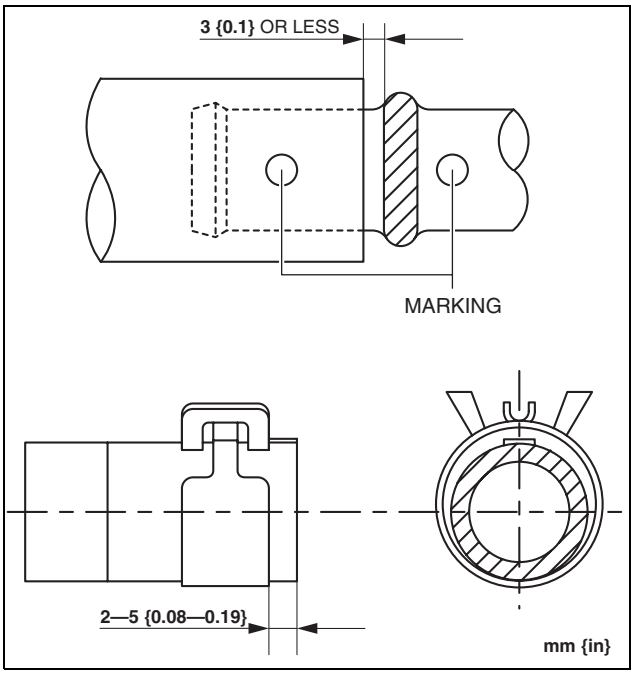
ac5uuw00000427

Fuel-filler Pipe Removal Note

1. Remove the rear tire (LH). (See 02-12-1 WHEEL AND TIRE SPECIFICATION.)
2. Remove the rear parking brake cable installation nut (LH). (See 04-12-7 REAR PARKING BRAKE CABLE REMOVAL/INSTALLATION.)
3. Remove the rear crossmember. (See 02-14-40 REAR CROSSMEMBER REMOVAL/INSTALLATION [2WD].) (See 02-14-44 REAR CROSSMEMBER REMOVAL/INSTALLATION [4WD].)
4. Remove the fuel-filler pipe.

Evaporative Hose No.1 Installation Note

1. Install the evaporative hose No.1 as shown in the figure.

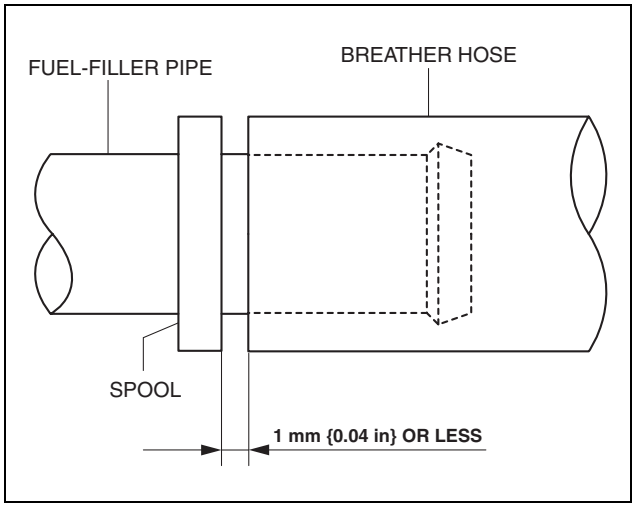


ac5wzw0000269

FUEL SYSTEM [SKYACTIV-G 2.0]

Breather Hose Installation Note

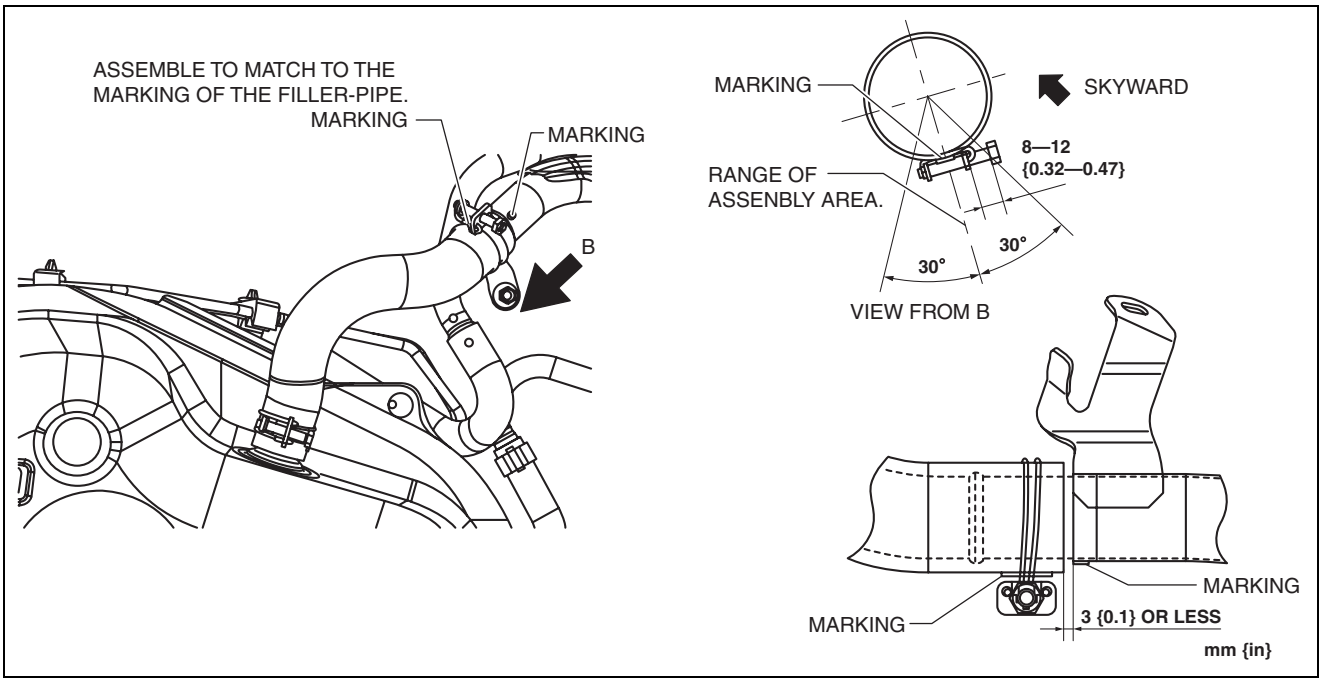
1. Install the breather hose as shown in the figure.



ac5wzw0000139

Joint Hose Installation Note

1. Install the joint hose as shown in the figure.



ac5uuw00000428

FUEL SYSTEM [SKYACTIV-G 2.0]

NON-RETURN VALVE INSPECTION [SKYACTIV-G 2.0]

id0114z5815300

Warning

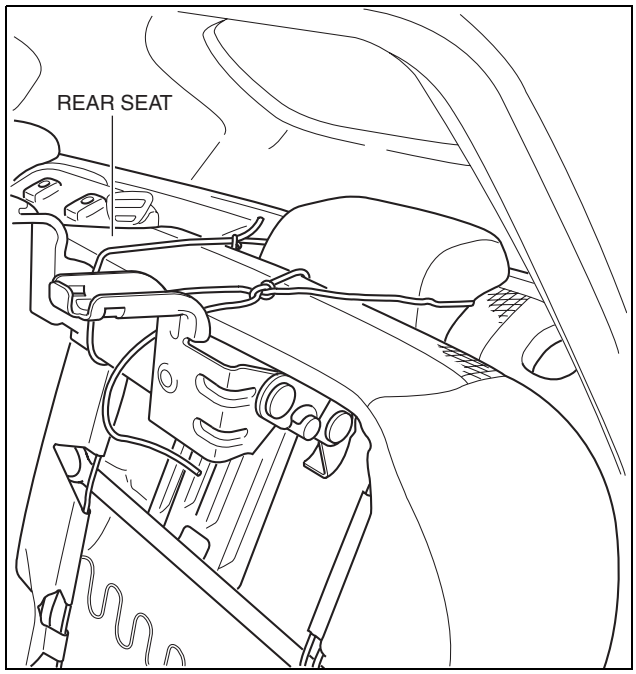
- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure", while referring to the "BEFORE SERVICE PRECAUTION".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.**

1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
3. Using the following procedure:
   6:4 split type
   1. Remove the rear seat cushion. (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)

   4:2:4 split type
   1. Set the rear seat aside as shown in the figure.
4. Remove the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Drain the fuel from the fuel tank to the position where the non-return valve is visible. (See 01-14A-11 FUEL DRAINING PROCEDURE [SKYACTIV-G 2.0].)

   Note
   - Non-return valve is integrated in the fuel tank.
   - The non-return valve is normally closed by the spring force.

6. Verify that the non-return valve is closed.
   - If the non-return valve is stuck open and does not open even when pulled up by a finger, replace the fuel tank. (See 01-14A-13 FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



ac5uuw00000429

FUEL SYSTEM [SKYACTIV-G 2.0]

FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0114z5800900

Warning

- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure", while referring to "BEFORE SERVICE PRECAUTION".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.**

Caution

- **Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.**

1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)
2. Using the following procedure:

Caution

- **Because the fuel surface is higher than the fuel pump unit installation surface, if the set plate is removed, it may result in fuel leakage. If the fuel gauge level indicates 1/2 or more, refer to the fuel draining procedure and drain 20 liters of fuel.**

Fuel gauge indicates 1/2 or more

1. Drain the fuel. (See 01-14A-11 FUEL DRAINING PROCEDURE [SKYACTIV-G 2.0].)

Fuel gauge indicates less than 1/2

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)

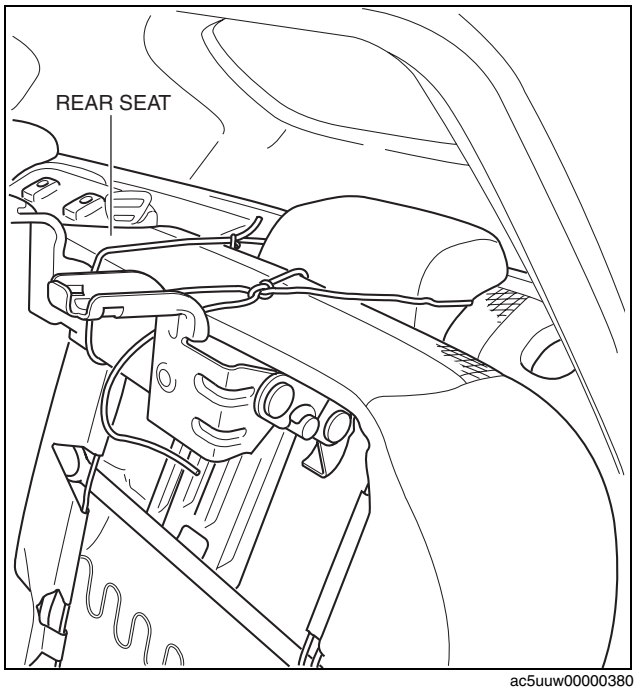
3. Remove the following part:

6:4 split type

1. Remove the rear seat cushion. (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)

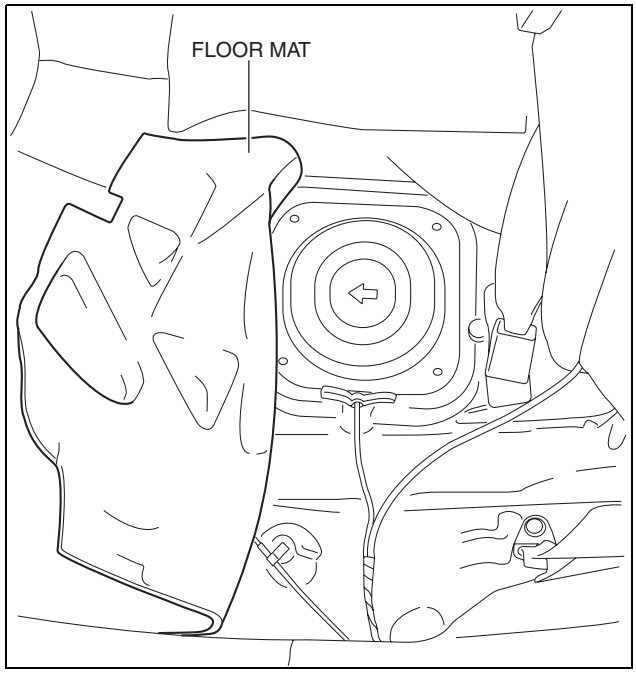
4:2:4 split type

1. Set the rear seat aside as shown in the figure. (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)



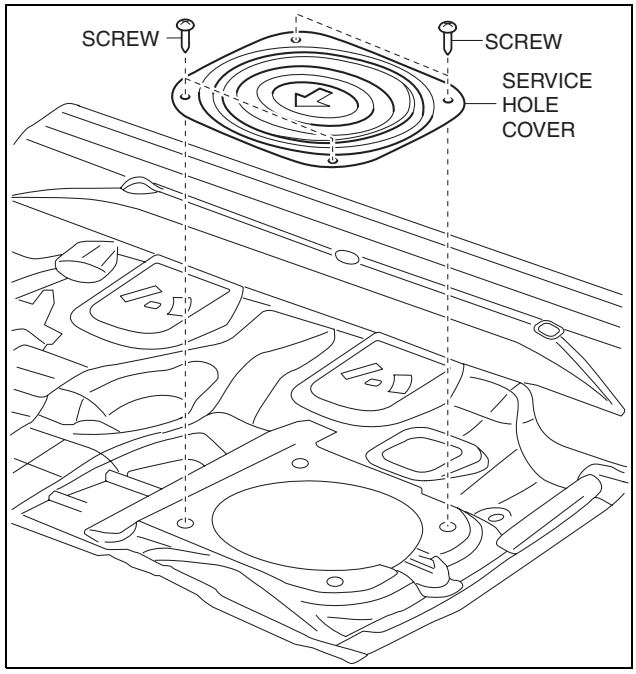
ac5uuw00000380

4. Partially peel back the floor mat as shown in the figure.



ac5uuw00000381

5. Remove the service hole cover.
6. Remove in the order indicated in the table.



ac5uuw00000382

ac5uuw00000384

FUEL SYSTEM [SKYACTIV-G 2.0]

FUEL PUMP UNIT DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0]

id0114z5801000

Warning

- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure", while referring to "BEFORE SERVICE PRECAUTION".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.**

Caution

- **Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.**

1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)
2. Using the following procedure:

Caution

- **Because the fuel surface is higher than the fuel pump unit installation surface, if the set plate is removed, it may result in fuel leakage. If the fuel gauge level indicates 1/2 or more, refer to the fuel draining procedure and drain 20 liters of fuel.**

Fuel gauge indicates 1/2 or more

1. Drain the fuel. (See 01-14A-11 FUEL DRAINING PROCEDURE [SKYACTIV-G 2.0].)

Fuel gauge indicates less than 1/2

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)

3. Remove the following part:

6:4 split type

1. Remove the rear seat cushion. (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)

4:2:4 split type

1. Set the rear seat aside as shown in the figure. (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)

4. Remove the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Disassemble in the order indicated in the table.
6. Assemble in the reverse order of disassembly.
7. Install in the reverse order of removal.
8. Complete the "AFTER SERVICE PRECAUTION". (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)

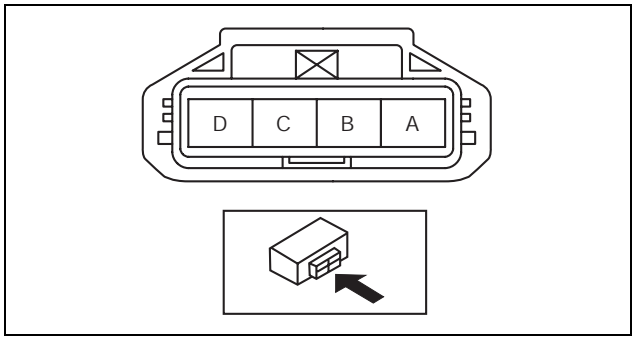
FUEL PUMP UNIT INSPECTION [SKYACTIV-G 2.0]

id0114z5801100

Continuity Inspection

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Disconnect the fuel pump unit connector.
3. Inspect for continuity between fuel pump unit terminals B—D.
   - If there is no continuity, replace the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



ac5wzw0000270

HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

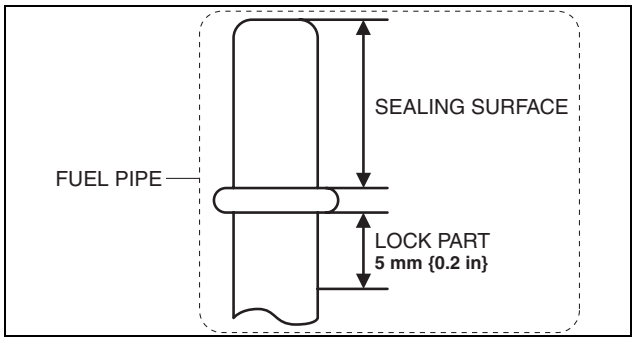
id0114z5801400

Warning

- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure", while referring to "BEFORE SERVICE PRECAUTION".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.**

Caution

- **Do not disassemble the high pressure fuel pump.**
- **Do not damage the sealing surface or the lock part of the fuel pipe.**
- **Damage or deformation to the end of the high pressure line pipe may cause fuel leakage.**
- **Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.**

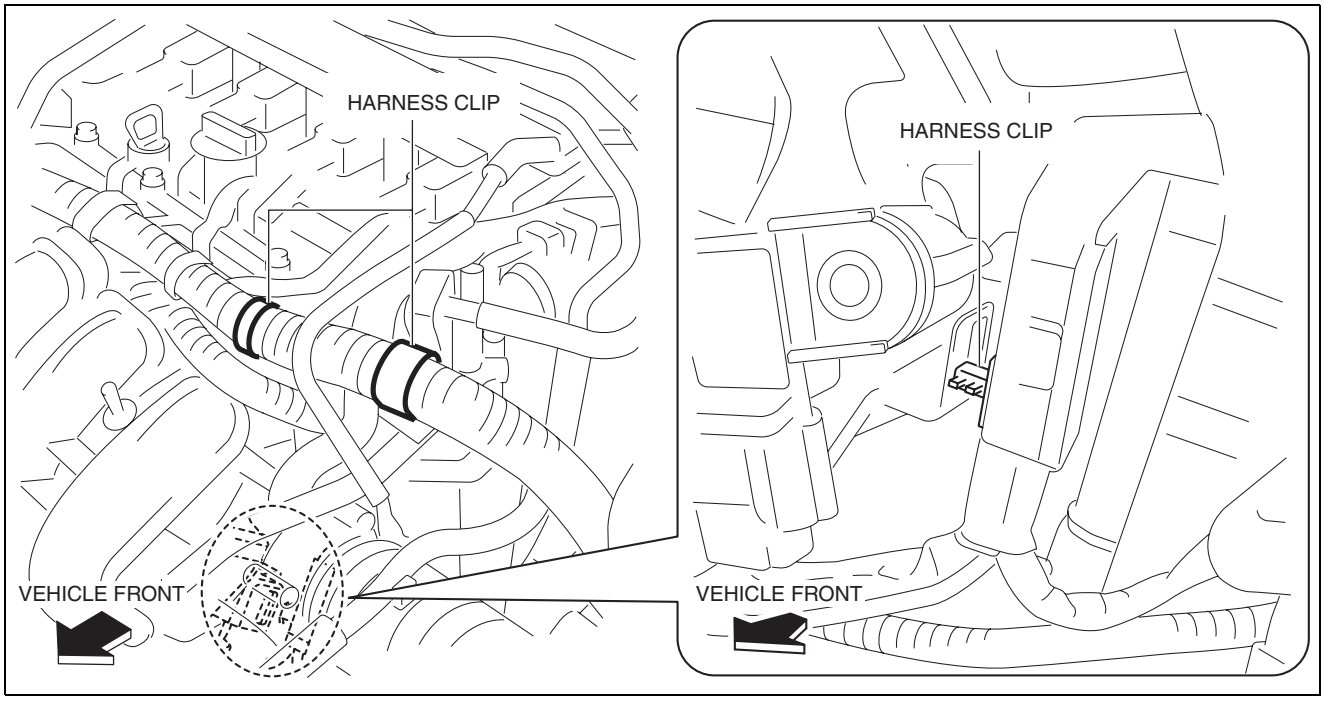


am3uuw0000804

1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
3. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Remove the air cleaner and air hose as a single unit. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

FUEL SYSTEM [SKYACTIV-G 2.0]

5. Disconnect the harness clip as shown in the figure.

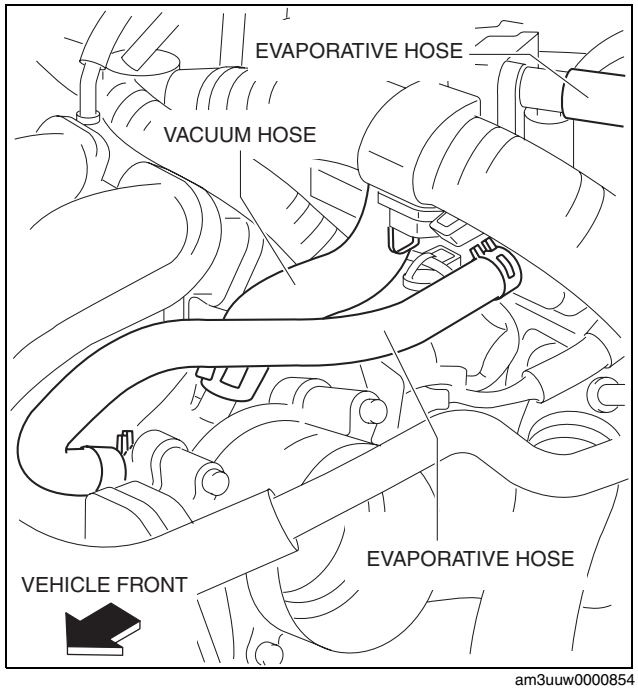


am3uuw0000860

6. Disconnect the hoses as shown in the figure.
7. Disconnect the following parts connectors.
   - Purge solenoid valve
   - High pressure fuel pump
   - Intake CMP sensor
8. Remove the purge solenoid valve and catch tank and purge solenoid valve bracket as a single unit. (See 01-16A-10 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
9. Remove in the order indicated in the table.

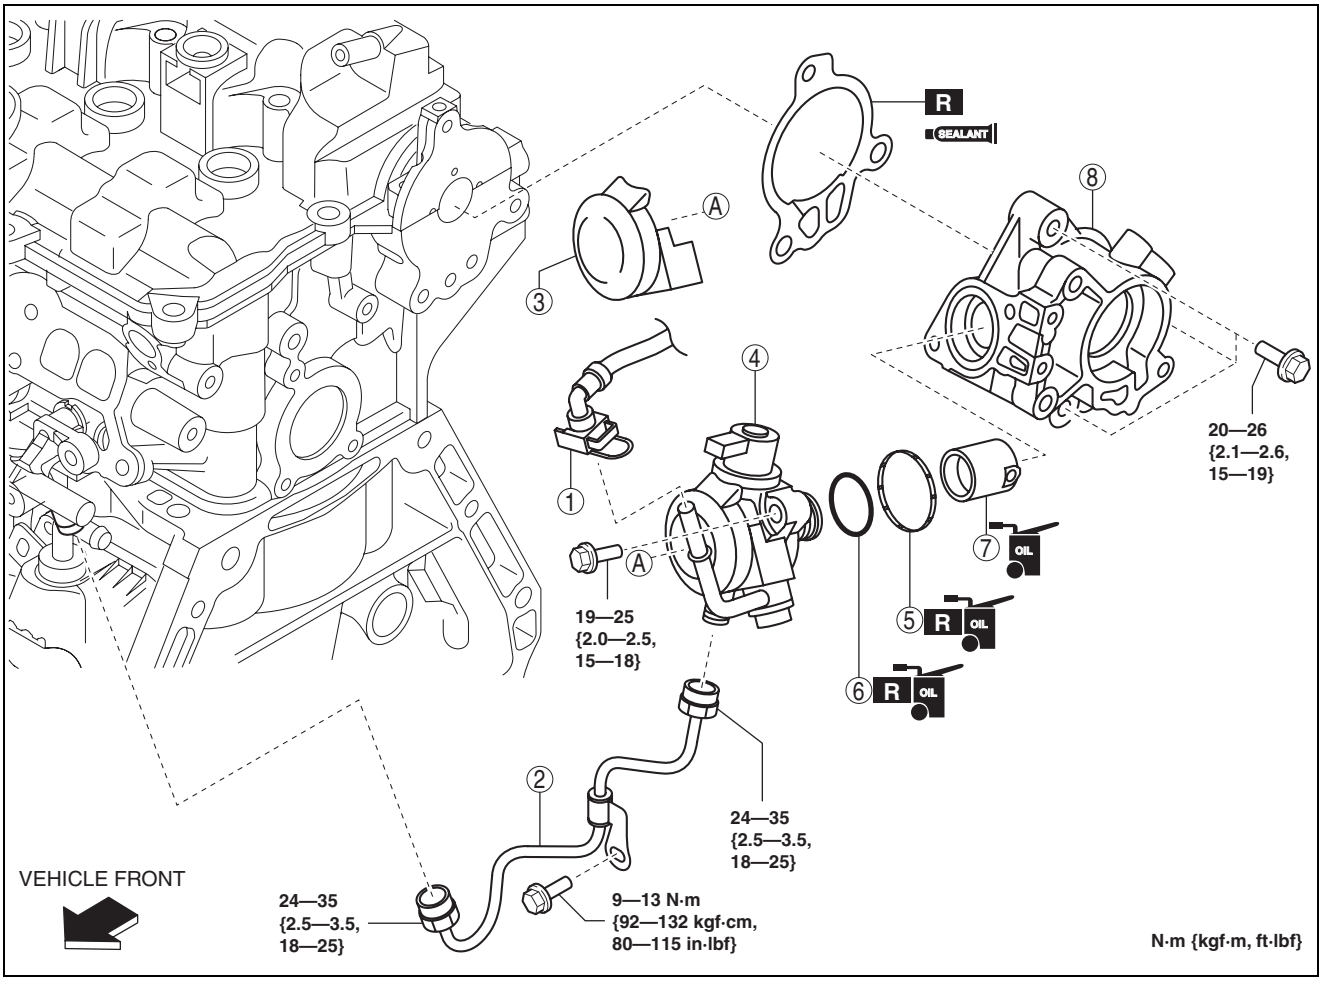
Note
- Only when the high pressure fuel pump (figure (4)) is removed, the rear housing (figure (8)) does not have to be removed.

10. Install in the reverse order of removal.
11. Complete the “AFTER SERVICE PRECAUTION”. (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)
12. Complete the “Fuel Leakage Inspection After High Pressure Fuel Pump Installation”. (See 01-14A-48 Fuel Leakage Inspection After High Pressure Fuel Pump Installation.)



am3uuw0000854

FUEL SYSTEM [SKYACTIV-G 2.0]



ac5wzw0000270

1	Quick release connector (See 01-14A-49 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

4	High pressure fuel pump (See 01-14A-48 High Pressure Fuel Pump Installation Note.)
5	Seal rubber
6	O-ring
7	Tension collar
8	Rear housing (See 01-14A-47 Rear Housing Removal Note.) (See 01-14A-47 Rear Housing Installation Note.)

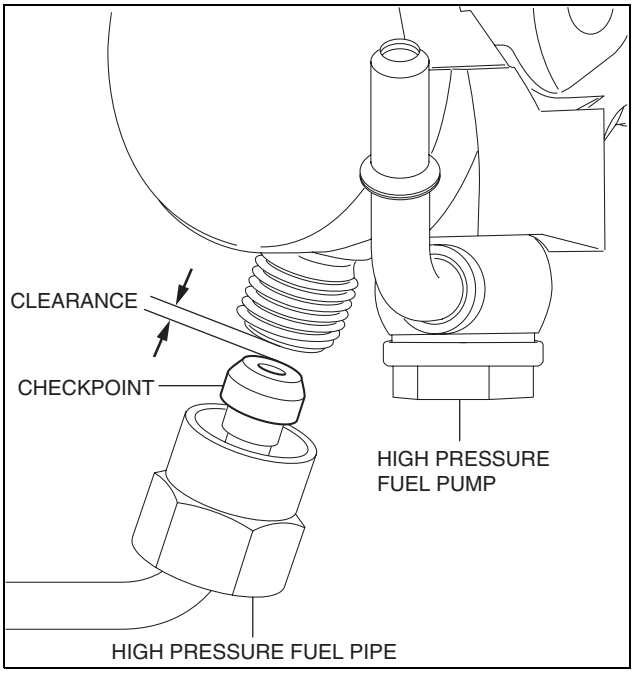
FUEL SYSTEM [SKYACTIV-G 2.0]

High Pressure Fuel Pipe Removal Note

Caution

- **When removing the high pressure fuel pipe, the end of the high pressure fuel pipe may be damaged because the clearance between the high pressure fuel pump and the high pressure fuel pipe is small. Be very careful when handling the end of the high pressure fuel pipe so as not to damage it.**
- **If the high pressure fuel pump is removed with the high pressure fuel pipe installed, the high pressure fuel pipe and fuel distributor may be damaged because of the excessive force caused by the spring force of the high pressure fuel pump. The high pressure fuel pipe and fuel distributor must be replaced if they are damaged. Always remove the high pressure fuel pipe before removing the high pressure fuel pump.**

1. Remove the high pressure fuel pipe.



am3uuw0000804

Rear Housing Removal Note

1. Remove the vacuum pump. (See 04-11-21 VACUUM PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
2. Remove the rear housing.

Rear Housing Installation Note

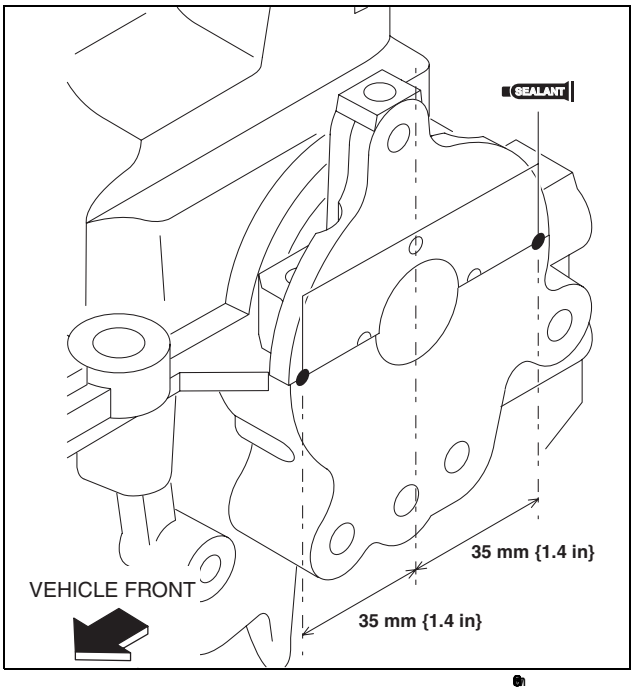
Note

- After applying silicone sealant, install the rear housing within 10 min. and then tighten all bolts within 5 min.

1. Apply silicone sealant to the areas shown in the figure.

   Thickness
   3.0—7.0 mm {0.12—0.27 in}

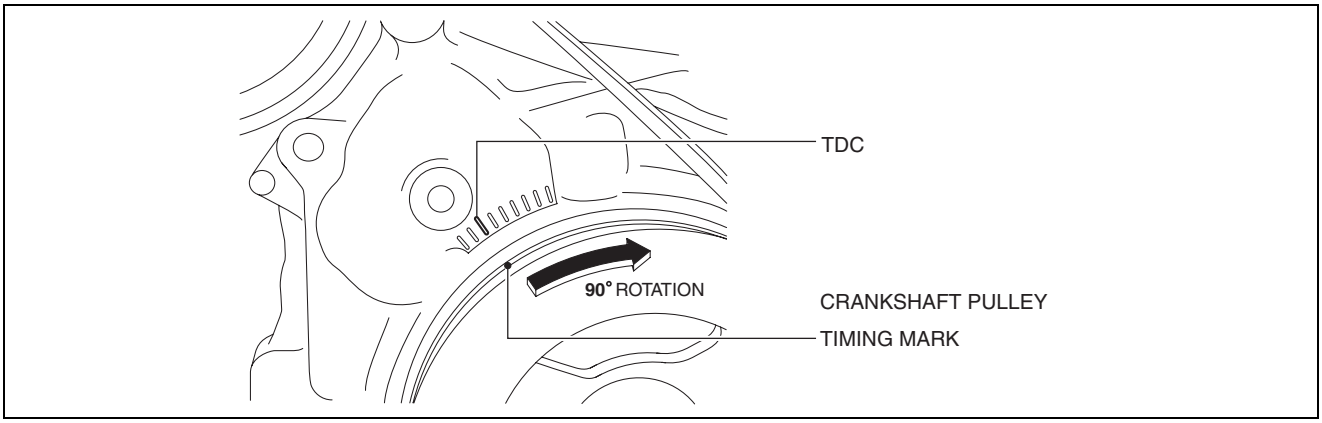
2. Install the rear housing.



FUEL SYSTEM [SKYACTIV-G 2.0]

High Pressure Fuel Pump Installation Note

1. Rotate the crankshaft approx. 90 degrees from TDC of cylinder No.1.



ac5wzw0000299

2. Insert the high pressure fuel pump into the rear housing.
3. Press in the high pressure fuel pump until the O-ring cannot be seen.
4. Temporarily tighten the high pressure fuel pump installation bolt on one side until its head contacts the high pressure fuel pump.
5. Tighten the high pressure fuel pump installation bolt which is not tightened in Step 5.

   High pressure fuel pump installation bolt tightening torque
   19—25 N·m {2.0—2.5 kgf·m, 15—18 ft·lbf}

6. Tighten the high pressure fuel pump installation bolt which was tightened in Step 5.

   High pressure fuel pump installation bolt tightening torque
   19—25 N·m {2.0—2.5 kgf·m, 15—18 ft·lbf}

High Pressure Fuel Pipe Installation Note

Caution

- **Damage or deformation to the end of the high pressure fuel pipe may cause fuel leakage. When installing the high pressure fuel pipe to the high pressure fuel pump, be very careful while handling the end of the high pressure fuel pipe.**
- **If parts are exposed to fuel, their function may be decreased or a fire may occur. Always wipe off any leaked fuel using a clean rag.**
- **Do not let foreign materials enter into the high pressure fuel pipe.**
- **The high pressure fuel pipe can be used up to 5 times in a row. When removing/installing the high pressure fuel pipe, always record the number of times in the service records. When removal of the high pressure fuel pipe reaches the 6th time, replace it with a new one.**

1. Temporarily tighten the nuts on both ends.
2. Temprarily tighten the high pressure fue pipe bracket installation bolt.
3. Tighten the nuts on both ends.

   High pressure fuel pipe tightening torque
   24—35 N·m {2.5—3.5 kgf·m, 18—25 ft·lbf}

4. Tighten the high pressure fuel pipe bracket installation bolt.

   High pressure fuel pipe bracket installation bolt tightening torque
   9—13 N·m {92—132 kgf·cm, 80—115 in·lbf}

Fuel Leakage Inspection After High Pressure Fuel Pump Installation

1. Verify that the high pressure fuel pump is assembled securely.
2. Verify that there is no fuel leakage around the high pressure fuel pump.

FUEL SYSTEM [SKYACTIV-G 2.0]

HIGH PRESSURE FUEL PUMP INSPECTION [SKYACTIV-G 2.0]

id0114z5801500

Note
- The following vacuum values are indicated by relative pressure from the fuel pressure sensor.

1. Verify that the fuel pressure sensor is normal. (See 01-40-52 FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0].)
2. Connect the M-MDS to the DLC-2.
3. Switch the ignition ON (engine off).
4. Select the “FUEL_PRES”, “LOAD” and “RPM” PIDs on the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)

Caution
- **If the engine is run at a high speed, it could be damaged. When racing the engine, be careful not to increase the engine speed suddenly.**

5. After the “LOAD” PID is **60% or more** while the engine is raced with the accelerator pedal fully depressed, verify that the “FUEL_PRES” PID is **approx. 15.0 MPa {153 kgf/cm^2, 2176 psi}**.
   — If not as specified, replace the high pressure fuel pump. (See 01-14A-44 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

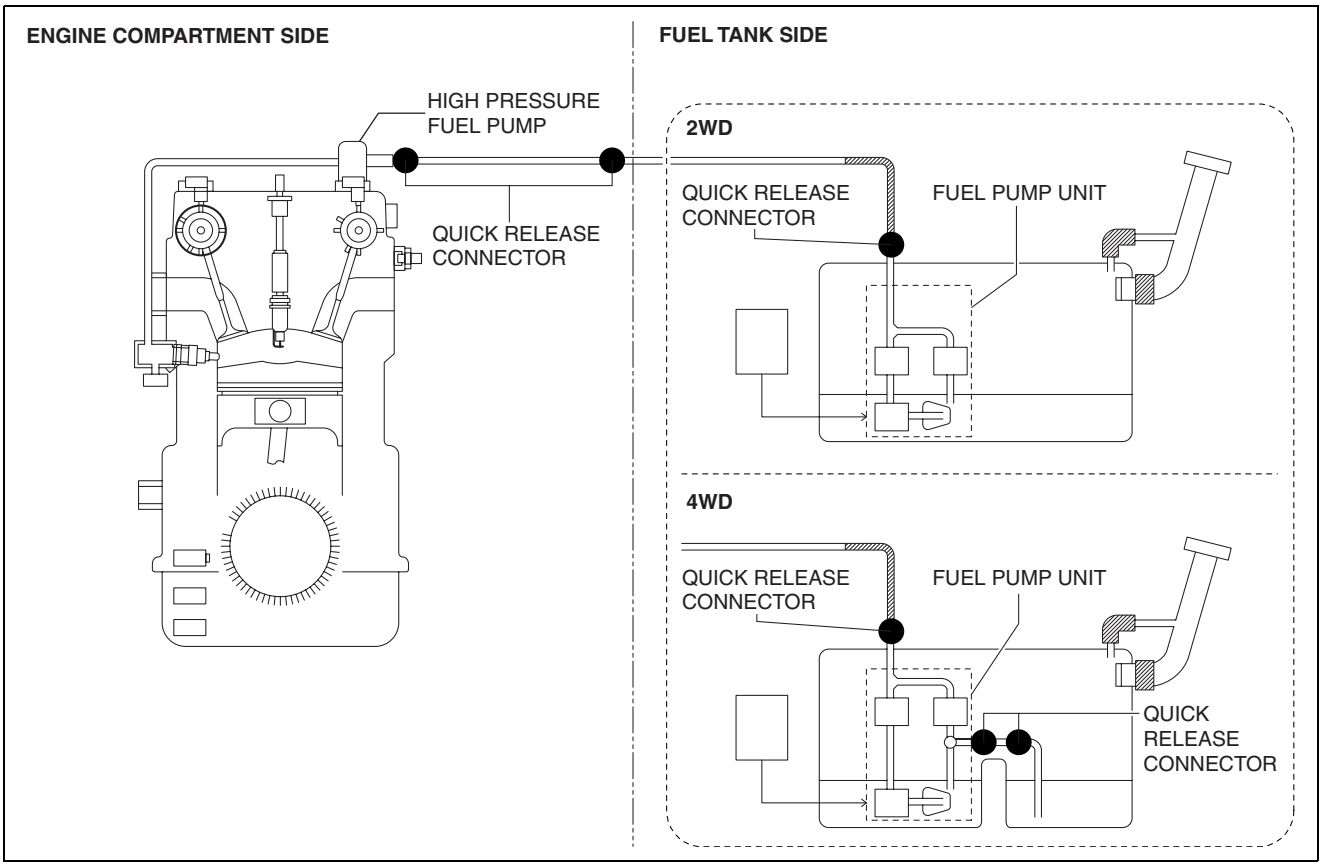
id0114z5801700

Warning
- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to the “BEFORE SERVICE PRECAUTION”.**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.**

Caution
- **Disconnecting/connecting the quick release connector without cleaning it may cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.**

FUEL SYSTEM [SKYACTIV-G 2.0]

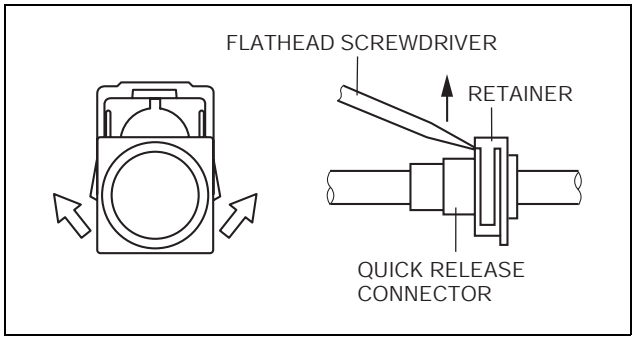
Quick Release Connector Position



ac5wzw0000137

Removal

1. Complete the “BEFORE SERVICE PRECAUTION”. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)
2. Move the retainer upward using a small flathead screwdriver or a similar tool.
3. Pull out the fuel hose straight from the fuel pipe and disconnect it.
4. Cover the disconnected quick release connector and fuel pipe with vinyl sheeting or a similar material to prevent it from getting scratched or dirty.



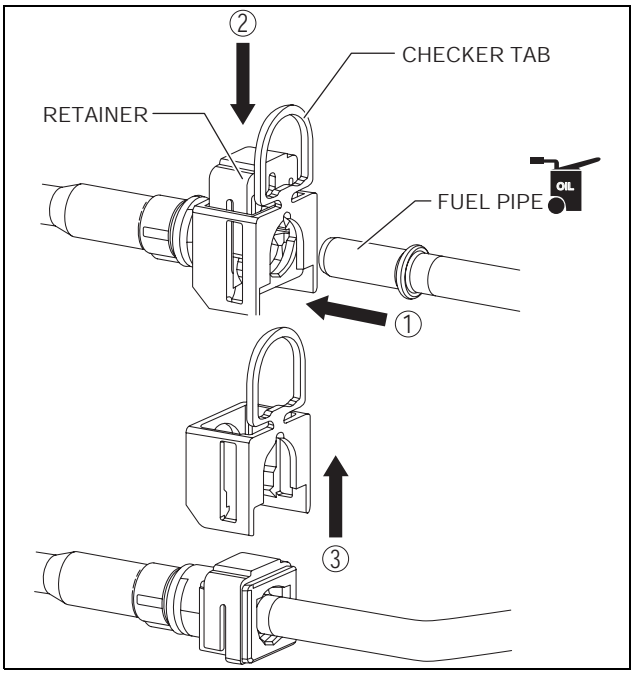
am6xuw0000138

FUEL SYSTEM [SKYACTIV-G 2.0]

Installation

Note
- If the quick release connector O-ring is damaged or has slipped, replace the fuel hose.
- A checker tab is integrated with the quick release connector for new fuel hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the fuel pipe.

1. Inspect the fuel hose and fuel pipe sealing surface for damage and deformation.
   - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the fuel pipe.
3. Install the quick release connector.
   - Insert the fuel pipe straight to the end of the quick release connector.
   - Push down the retainer using a finger.
     - — If the retainer cannot be pushed down, push the fuel pipe further to the quick release connector.
4. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.
5. Complete the “AFTER SERVICE PRECAUTION”. (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)



am3uuw0000456

FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0114z5800600

Warning
- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the “Fuel Line Safety Procedure”, while referring to the “BEFORE SERVICE PRECAUTION”.**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.**

Caution
- **Touching the end of the fuel injector by hand or pressing it to an object may cause a malfunction. Be very careful when handling the end of the fuel injector.**
- **When the fuel distributor is removed, air tightness of the fuel injector will be lost. Always replace the stopper ring, O-ring, back-up ring, and teflon seal of the fuel injector with new ones.**
- **Do not remove the fuel pressure sensor from the fuel distributor.**

1. Complete the “BEFORE SERVICE PRECAUTION”. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
3. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Remove the intake manifold. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.

FUEL SYSTEM [SKYACTIV-G 2.0]

7. Complete the “AFTER SERVICE PRECAUTION”. (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)

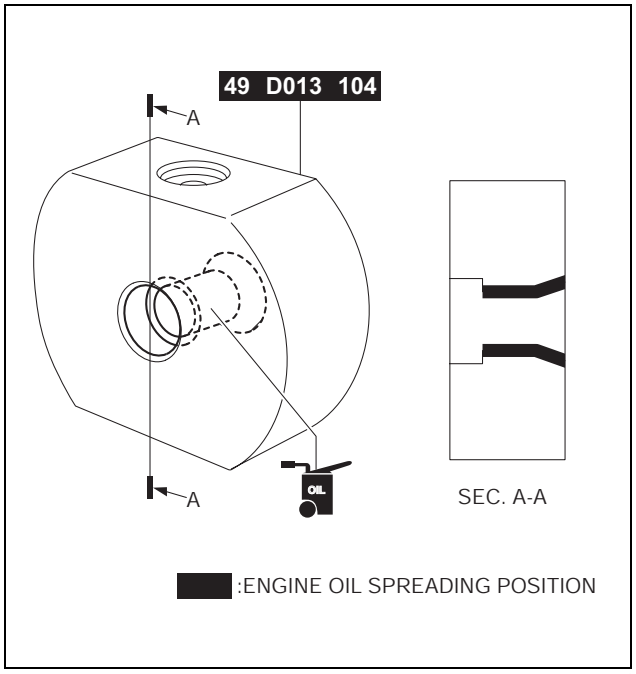
Teflon Seal Installation Note

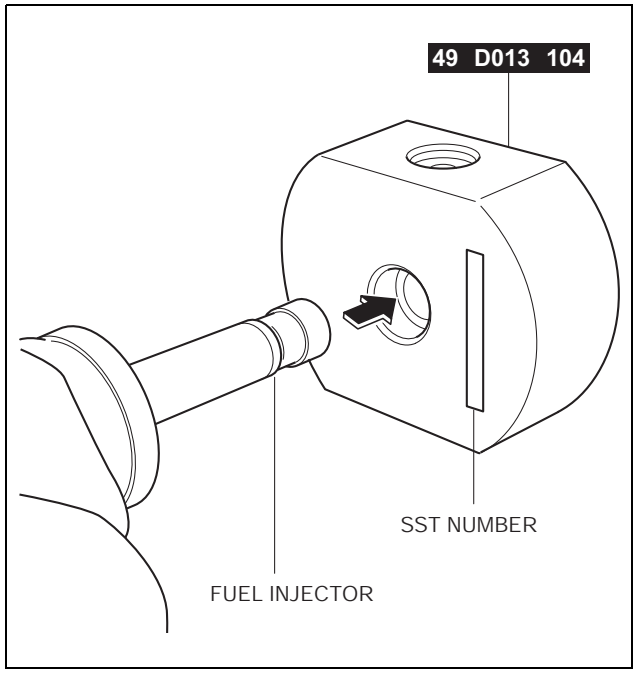
Note
- 49 D013 102, 49 D013 103, and 49 D013 104 are component parts for 49 D013 1A0.

1. Apply engine oil to the **SST**.



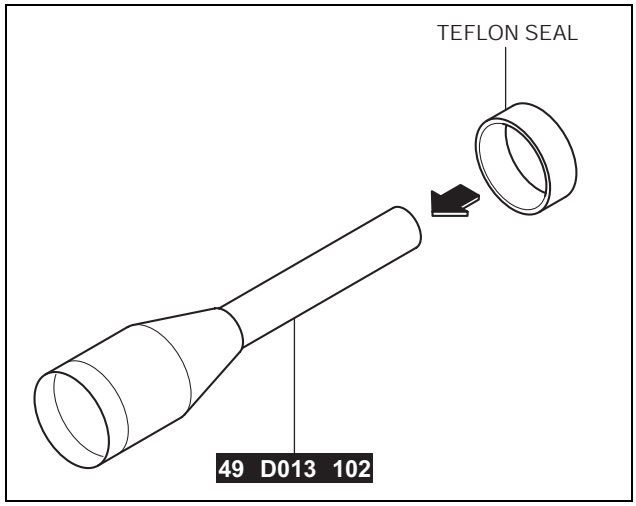
am3uuw0000801

2. Install the **SST** with the mark on the **SST** facing the fuel injector.



am3uuw0000727

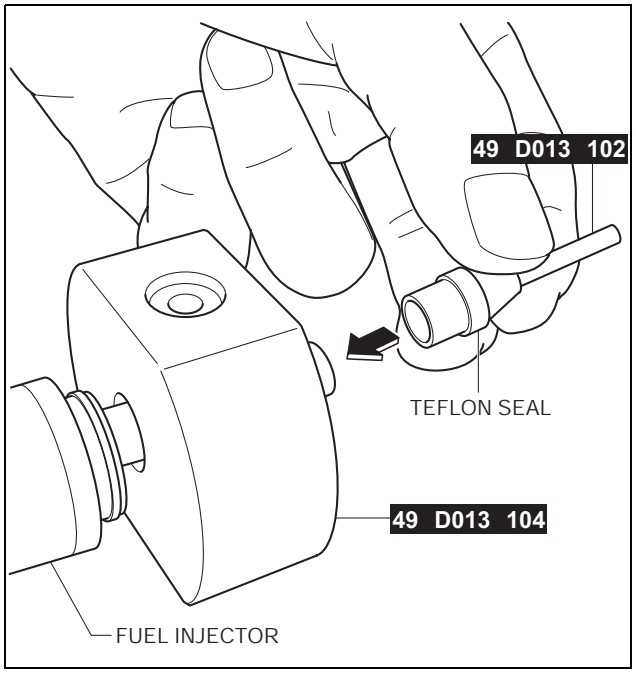
3. Insert a new teflon seal onto the **SST**.



am3uuw0000727

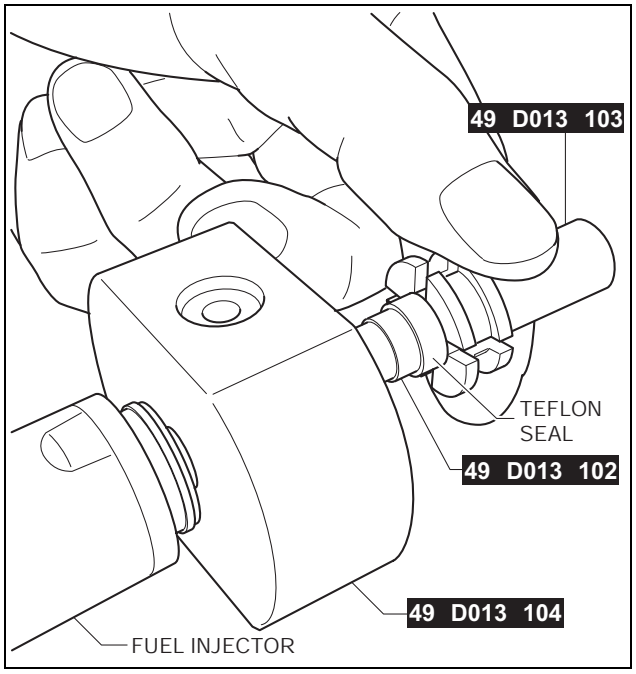
FUEL SYSTEM [SKYACTIV-G 2.0]

4. Install the **SST** equipped with the teflon seal to the end of the fuel injector.



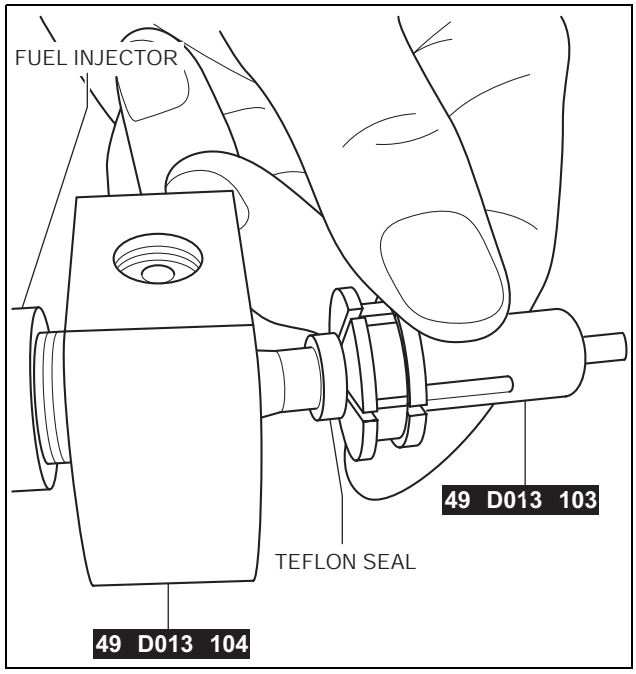
am3uuw0000727

5. Using the **SST**, press on the teflon seal to the fuel injector side.



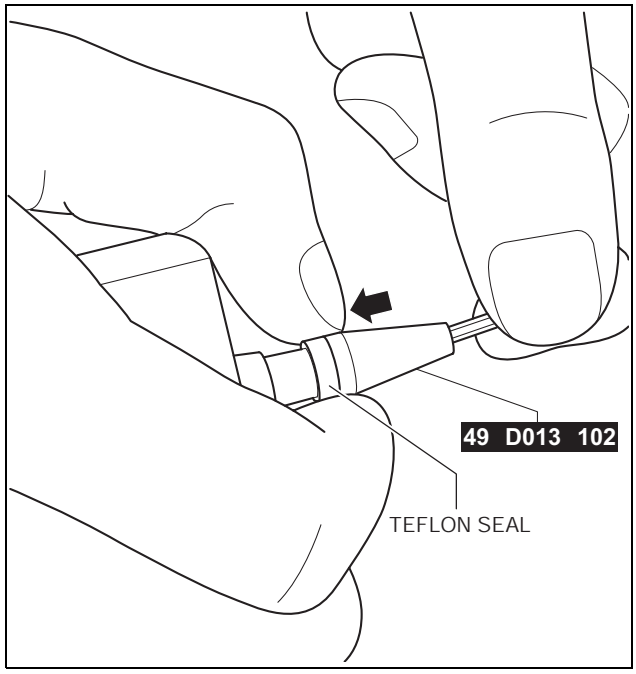
am3uuw0000727

6. Press on the teflon seal to the position indicated in the figure, then remove the **SST**.



am3uuw0000728

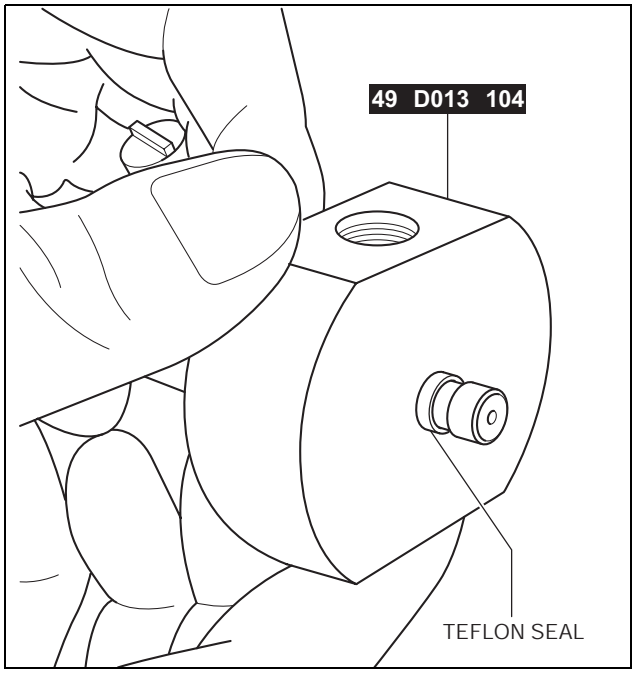
7. Install the teflon seal to the fuel injector by hand and remove the **SST**.



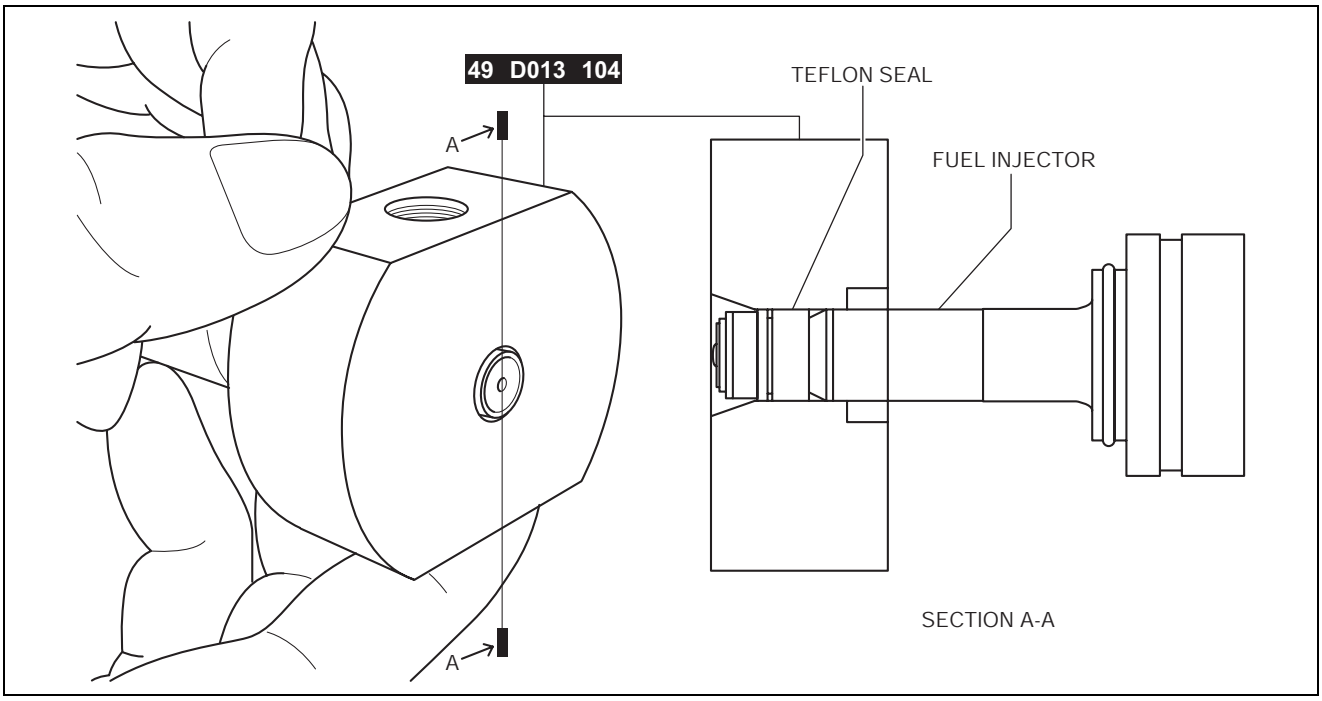
am3uuw0000728

FUEL SYSTEM [SKYACTIV-G 2.0]

8. Slide the **SST** to the end of the fuel injector.
9. Hold the **SST** at the position shown in the figure and correctly position the teflon seal for more than 30 sec.



am3uuw0000728

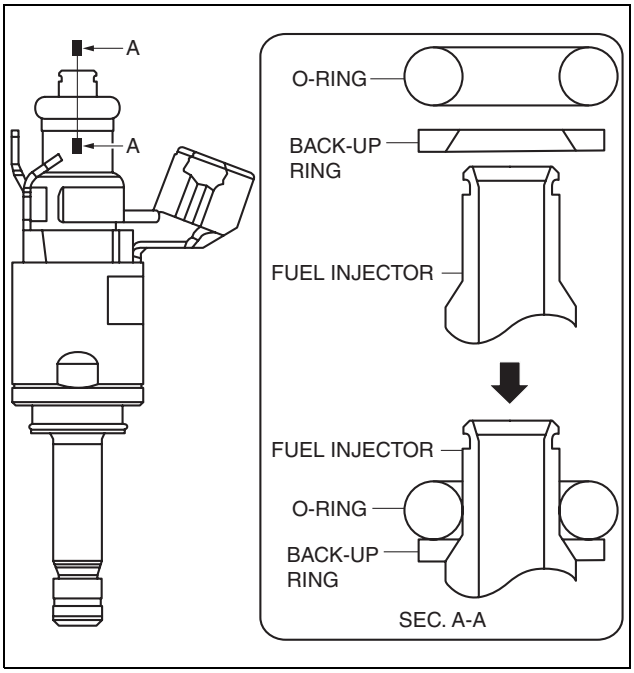


am3uuw0000728

FUEL SYSTEM [SKYACTIV-G 2.0]

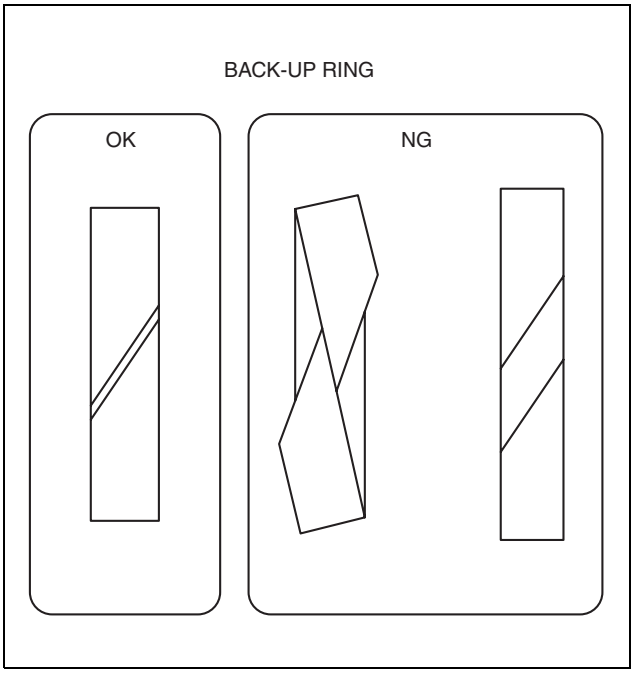
Back-up Ring Installation Note

1. Install the back-up ring, making sure it is installed in the right direction.



am3uuw0000859

2. After installing the back-up ring, verify that it is installed correctly.



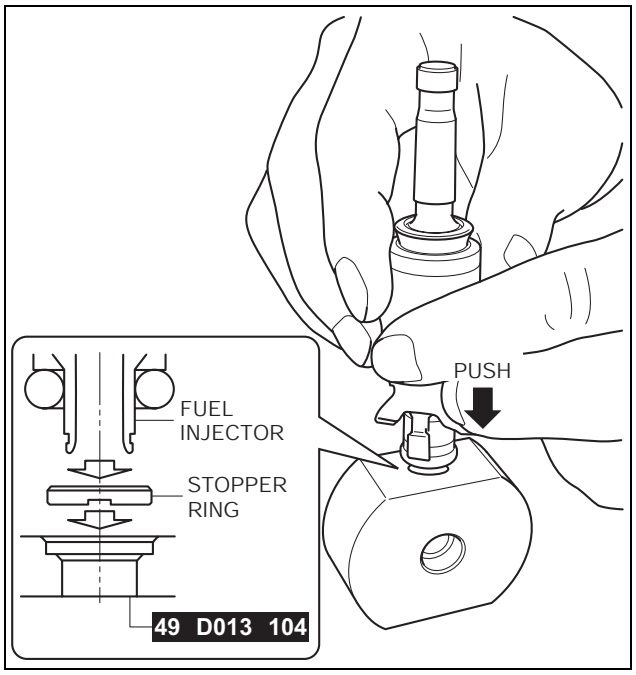
am3uuw0000859

FUEL SYSTEM [SKYACTIV-G 2.0]

Stopper Ring Installation Note

Note
- Do not insert the stopper ring at an angle, and always press it on straight to the SST.

1. Set a new stopper ring on the **SST** as shown in the figure being careful of the stopper ring orientation, and press down the fuel injector until a click sound is heard.

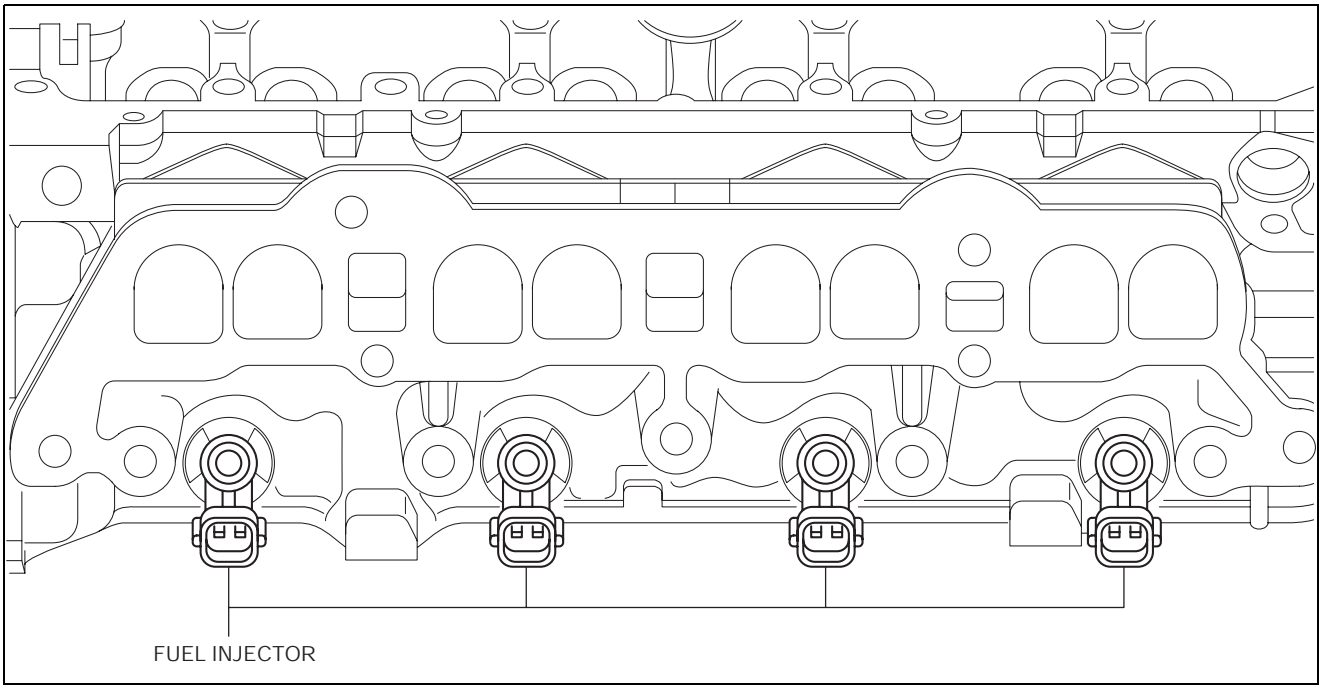


am3uuw0000728

Fuel Injector Installation Note

Caution
- **If engine oil is applied to the fuel injector, it could adhere to the injection holes and inhibit the fuel injector function. To prevent this, apply engine oil to the cylinder head side.**

1. Apply engine oil to the fuel injector installation holes.
2. Insert the fuel injectors to the installation holes one by one, being careful of the direction the fuel injectors are pointed.

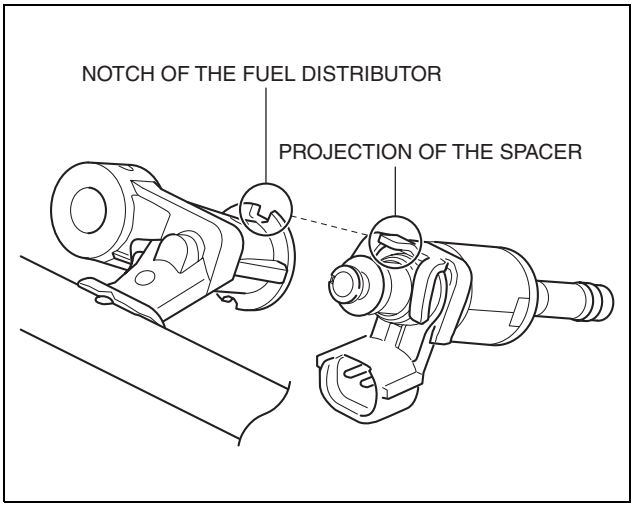


am3uuw0000728

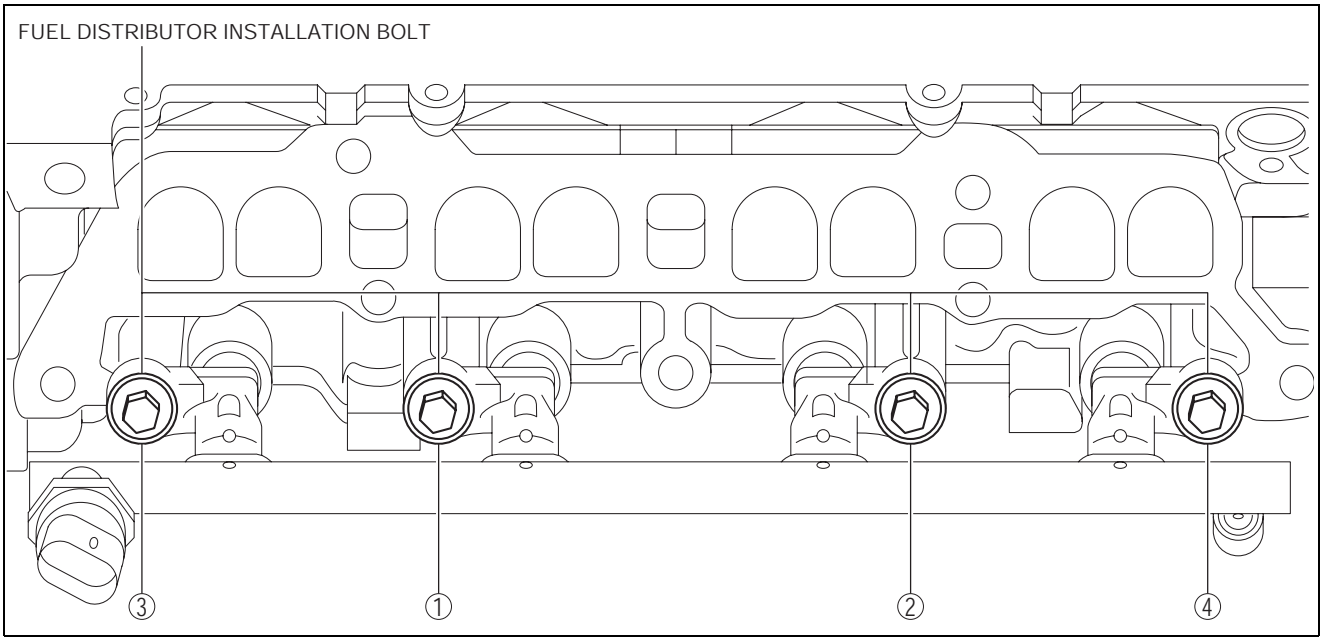
FUEL SYSTEM [SKYACTIV-G 2.0]

Fuel Distributor Installation Note

1. Install the fuel distributor to the fuel injectors while aligning the projection of the spacer to the notch of the fuel distributor.
2. Temporarily tighten the fuel distributor installation bolts until their heads contact the fuel distributors.
3. Turn the fuel distributor installation bolts a half a turn in the order shown in the figure.



ac5wzw0000270



am3uuw0000728

4. Turn the fuel distributor installation bolts another half a turn in the order shown in the figure (one turn including the half turn in Step 3).
5. Tighten the fuel distributor installation bolts in the order shown in the figure.

Fuel distributor installation bolt tightening torque
22—26 N·m {2.3—2.6 kgf·m, 17—19 ft·lbf}

FUEL INJECTOR INSPECTION [SKYACTIV-G 2.0]

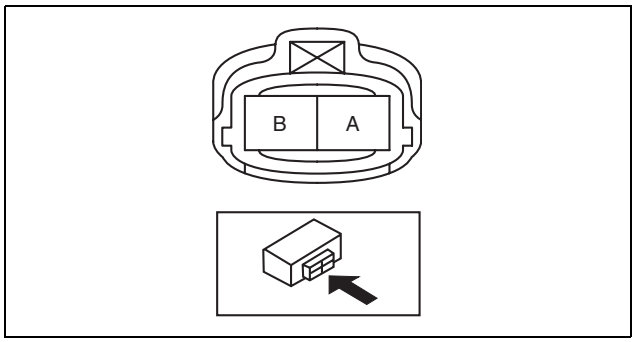
id0114z5800700

Resistance Inspection

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Disconnect the fuel injector connector.
4. Inspect the resistance between fuel injector terminals A and B.

   Fuel injector resistance
   1.74—2.04 ohms [20 °C {68 °F}]

   - If not within the specification, replace the fuel injector. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



am3uuw0000849

FUEL FILTER (HIGH-PRESSURE) REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0114z5803000

Warning

- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure", while referring to the "BEFORE SERVICE PRECAUTION".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.**

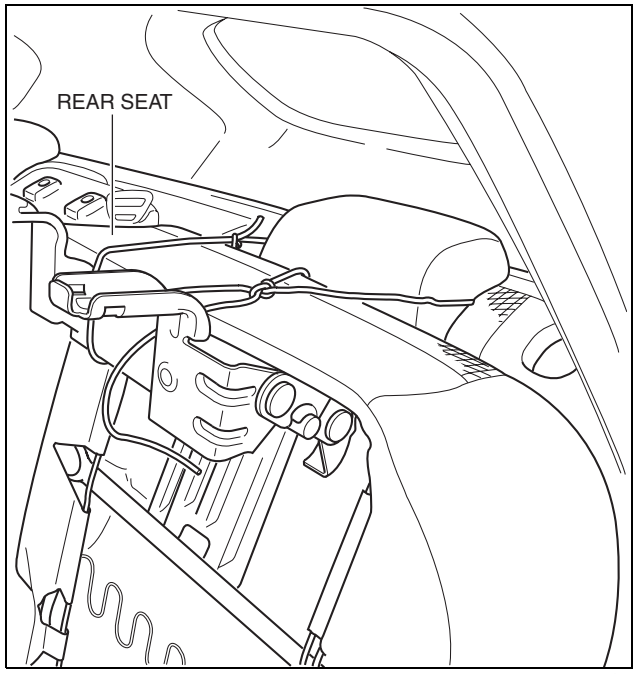
1. Complete the "BEFORE SERVICE PRECAUTION". (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
3. Using the following procedure:
   6:4 split type
   1. Remove the rear seat cushion. (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)

FUEL SYSTEM [SKYACTIV-G 2.0]

4:2:4 split type

1. Set the rear seat aside as shown in the figure. (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)

4. Remove the fuel pump unit. (See 01-14A-38 FUEL PUMP UNIT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Remove the fuel filter (high-pressure). (See 01-14A-41 FUEL PUMP UNIT DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0].)
6. Install in the reverse order of removal.
7. Complete the “AFTER SERVICE PRECAUTION”. (See 01-14A-7 AFTER SERVICE PRECAUTION [SKYACTIV-G 2.0].)

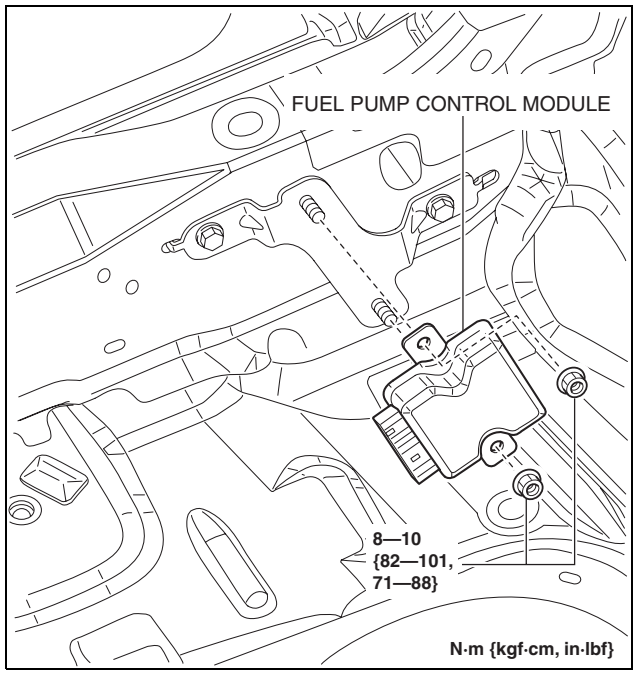


ac5uuw00000409

FUEL PUMP CONTROL MODULE REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0114z5175000

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Tip the rear seat (LH).
3. Disconnect the clip connected to trunk board.
4. Disconnect the fuel pump control module connector.
5. Remove the fuel pump control module.
6. Install in the reverse order of removal.



ac5wzw0000269

FUEL SYSTEM [SKYACTIV-G 2.0]

FUEL PUMP CONTROL MODULE INSPECTION [SKYACTIV-G 2.0]

id0114z5175100

1. Perform the KOEO self-test. (See 01-02-12 KOEO/KOER SELF TEST [SKYACTIV-G 2.0].)
2. Verify that a fuel pump control module related DTC is detected. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   - If DTCs are detected, repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
   - If a DTC is not detected, go to the next step.
3. Inspect the following:
   - Fuel pump control module damage
   - Fuel pump control module connector damage or corrosion
     — If there is any malfunction, repair or replace the malfunctioning part.

FUEL SYSTEM [SKYACTIV-D 2.2]

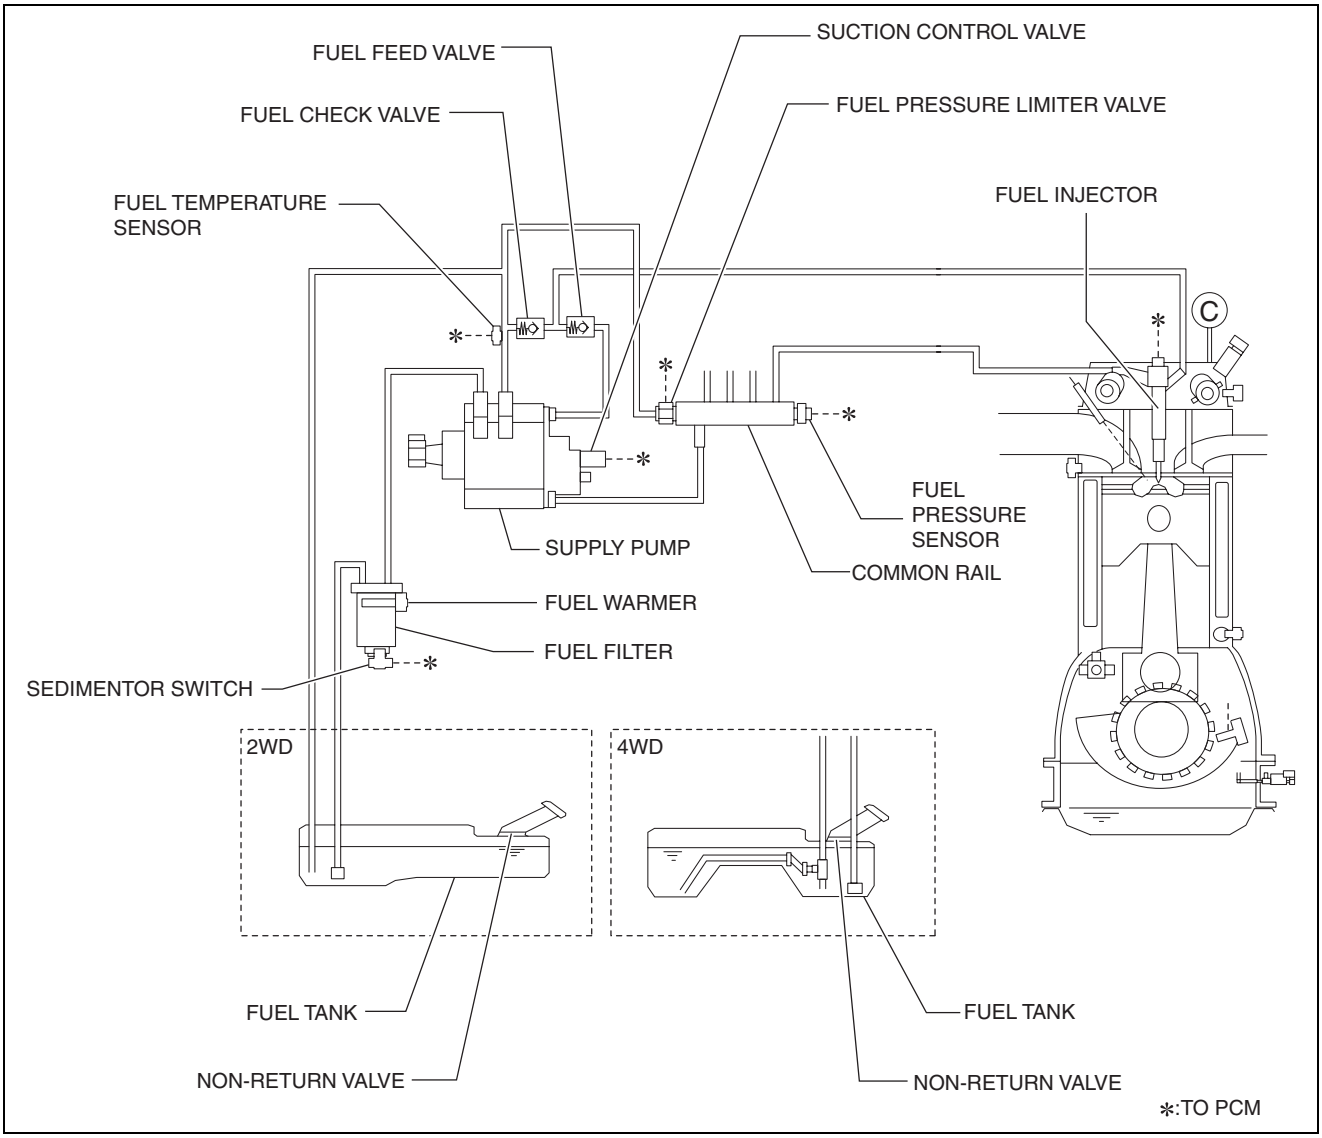
FUEL SYSTEM FLOW DIAGRAM [SKYACTIV-D 2.2]

id0114z7818400



ac5wzw0000475

BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2]

id0114z7802000

Warning

- **Always keep sparks and flames away from fuel. Fuel can be easily ignited which could cause serious injury or death, and damage to equipment**
- **Fuel line spills and leakage from the pressurized fuel system are dangerous. Fuel can ignite and cause serious injury or death, and damage to property and facilities. Fuel can also irritate the skin and eyes. To prevent this, always execute the following line safety procedure.**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before servicing the fuel system, make sure to discharge static electricity by touching a vehicle.**

Note

- When the engine is stopped, fuel in the fuel system is pressurized.

Fuel line safety procedure

1. To prevent fuel spatter and leakage of the fuel system, perform the following procedure:
   (1) Remove the fuel-filler cap to release the pressure inside the fuel tank.
   (2) Cover the fuel hose with a rag when disconnecting it.
   (3) Plug the hose after disconnection.

FUEL SYSTEM [SKYACTIV-D 2.2]

AFTER SERVICE PRECAUTION [SKYACTIV-D 2.2]

id0114z7801900

Warning

- **Fuel is highly flammable and dangerous. Fuel line spills and leakage can cause serious injury or death, and damage to equipment. If fuel comes into contact with the skin and eyes it will cause irritation. Always complete the "Fuel Hose Installation Procedure" when installing the fuel hose. (See 01-14B-9 Fuel Hose Installation Procedure.)**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before servicing the fuel system, make sure to discharge static electricity by touching a vehicle.**

Fuel line air bleeding

1. Verify that the fuel hose which has been serviced is connected securely.

Caution

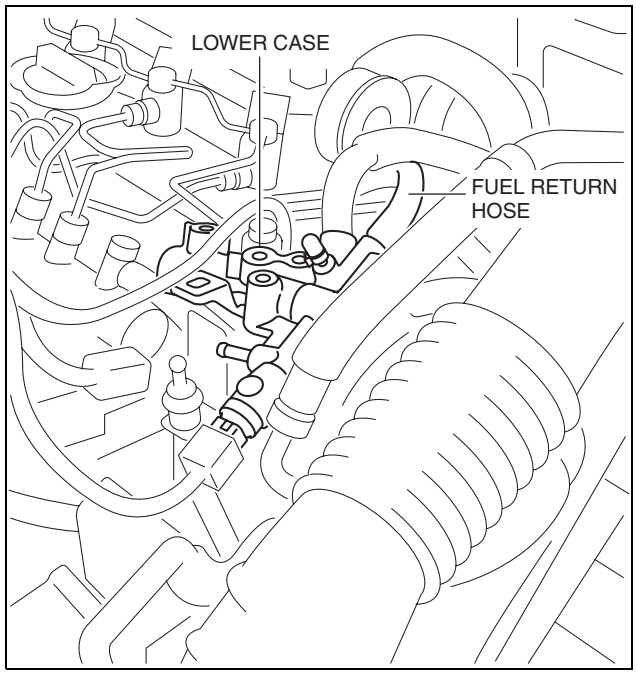
- **Prolonged clanking causes breakage of a battery and a starter. In order to prevent these, continuation clanking is carried out for a maximum of 10 s.**

2. Crank the engine until it starts.
   - If the engine starts, the procedure is completed.
   - If the engine does not start, go to the next step.
3. Wait **for 20 s**.

Caution

- **Prolonged clanking causes breakage of a battery and a starter. In order to prevent these, continuation clanking is carried out for a maximum of 10 s.**

4. Crank the engine until it starts.
   - If the engine starts, the procedure is completed.
   - If the engine does not start, go to the next step.
5. Perform the following procedure:
   EC and U.K. Specs.
   1. Disconnect the fuel return hose.

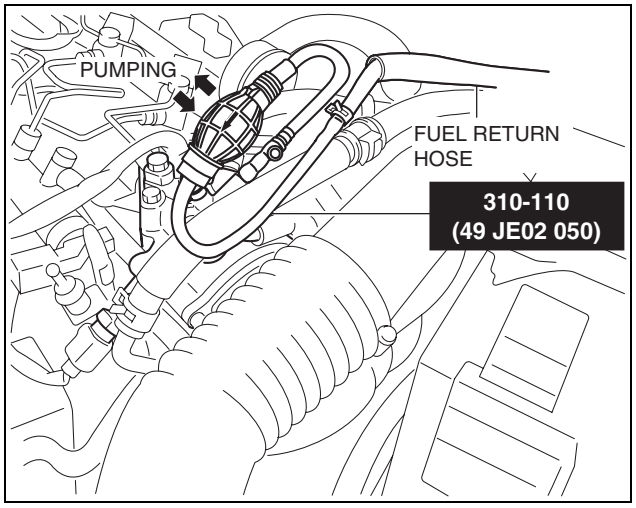


ac5wzw0000532

FUEL SYSTEM [SKYACTIV-D 2.2]

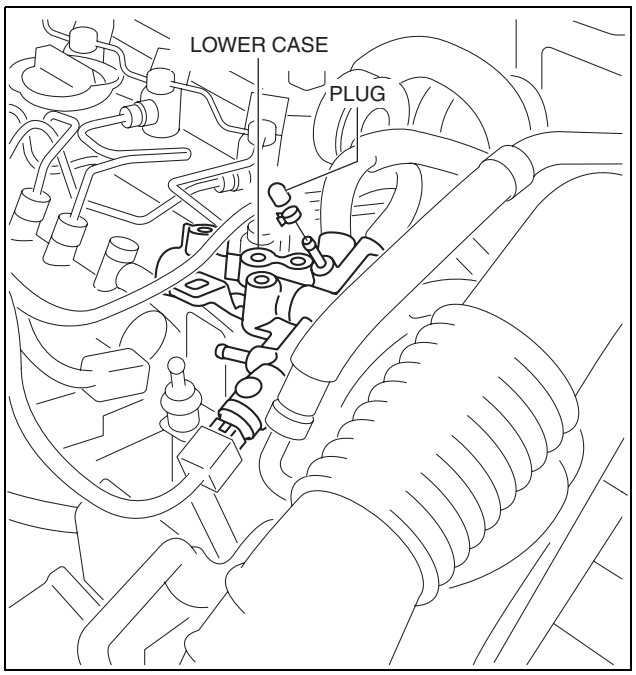
2. Connect the SST.
3. Operate the SST several times.
4. Disconnect the SST.
5. Connect the fuel return hose.
6. Crank the engine until it starts.
   - If the engine starts, the procedure is completed.
   - If the engine does not start, return to Step 5.

Except EC and U.K. Specs.



ac5wzw0000533

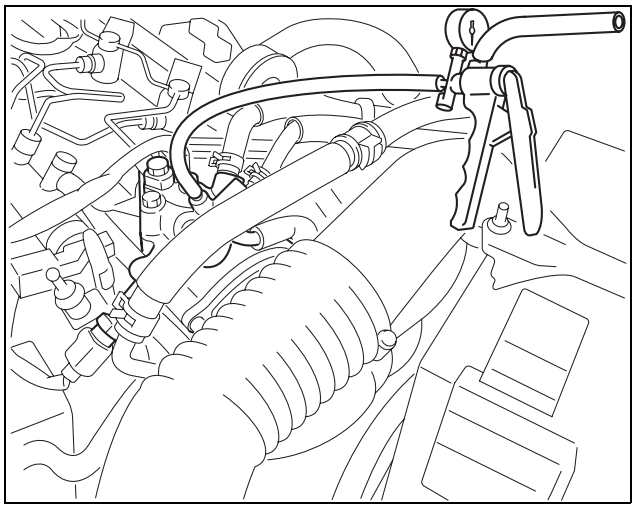
1. Remove the plug.



ac5wzw0000474

2. Install the vacuum pump as shown in the figure.
3. Drain fuel until the air is bled out.
4. Remove the vacuum pump and install the plug.
5. Crank the engine until it starts.
   - If the engine starts, the procedure is completed.
   - If the engine does not start, return to Step 5.

Caution
- **Prolonged clanking causes breakage of a battery and a starter. In order to prevent these, continuation clanking is carried out for a maximum of 10 s.**



ac5wzw0000474

6. Crank the engine until it starts.
   - If the engine starts, the procedure is completed.
   - If the engine does not start, return to Step 5.

FUEL SYSTEM [SKYACTIV-D 2.2]

Fuel Hose Installation Procedure

1. When connecting the fuel hose and fuel pipe, verify that there is no damage or deformity on the fuel pipe and no cracking on the fuel hose.
2. When installing the fuel hose, verify the main and return sides and install it to the specified position.

FUEL DRAINING PROCEDURE [SKYACTIV-D 2.2]

id0114z7853500

Warning

- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure", while referring to the "BEFORE SERVICE PRECAUTION".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.**

2WD

1. Perform the "Fuel Line Safety Procedure" referring to the "BEFORE SERVICE PRECAUTION". (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
2. The container for light oil is placed under a joint hose.
3. Disconnect the joint hose from the fuel-filler pipe side, drain the fuel. (See 01-14B-10 FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

4WD

1. Perform the "Fuel Line Safety Procedure" referring to the "BEFORE SERVICE PRECAUTION". (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
2. The container for light oil is placed under a joint hose.
3. Disconnect the joint hose from the fuel-filler pipe side, drain the fuel. (See 01-14B-10 FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the fuel gauge sender unit (sub). (See 09-22-27 FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION [4WD].)
5. Drain the fuel.

FUEL SYSTEM [SKYACTIV-D 2.2]

FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0114z7801600

Warning

- **Fuel is highly flammable and dangerous. Fuel line spills and leakage can cause serious injury or death, and damage to equipment. If fuel comes into contact with the skin and eyes it will cause irritation. To prevent this, always perform the "Fuel Line Safety Procedure" referring to the "BEFORE REPAIR PROCEDURE".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching a vehicle.**

2WD

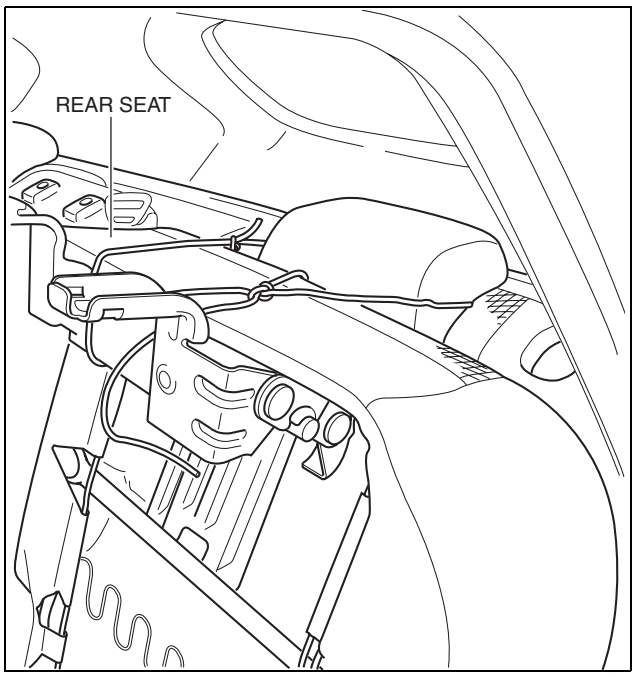
1. Park the vehicle on a level surface.
2. Perform the "Fuel Line Safety Procedure" referring to the "BEFORE SERVICE PRECAUTION". (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
3. Drain the fuel. (See 01-14B-9 FUEL DRAINING PROCEDURE [SKYACTIV-D 2.2].)
4. Perform the following procedure:

   6:4 split seat

   1. Remove the rear seat cushion. (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)

   4:2:4 split seat

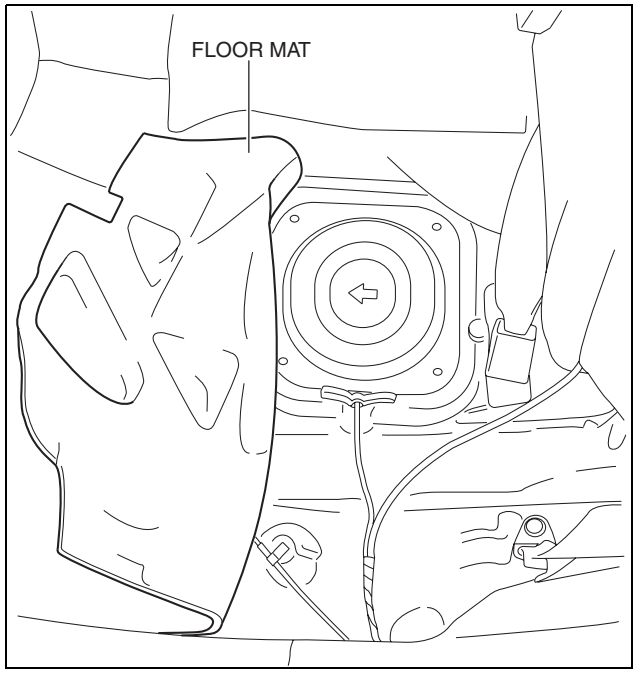
   1. Set the rear seat aside as shown in the figure. (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)



ac5wzw0000477

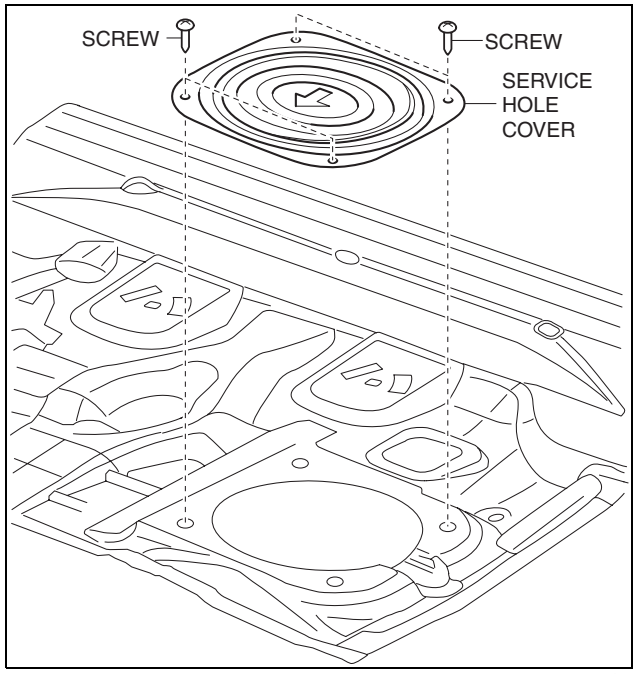
FUEL SYSTEM [SKYACTIV-D 2.2]

5. Partially peel back the floor mat as shown in the figure.



ac5wzw0000477

6. Remove the service hole cover.
7. Disconnect the following parts:
   - Fuel gauge sender unit (main) connector
   - Fuel hose (main side)
   - Fuel hose (return side)
8. Remove the floor under cover. (See 09-16-44 FLOOR UNDER COVER REMOVAL/ INSTALLATION.)
9. Remove the middle pipe. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
10. Remove in the order shown in the figure.
11. Install in the reverse order of removal.
12. Perform the fuel leakage inspection referring to “AFTER SERVICE PRECAUTION”. (See 01-14B-7 AFTER SERVICE PRECAUTION [SKYACTIV-D 2.2].)



ac5wzw0000477

FUEL TANK INSPECTION [SKYACTIV-D 2.2]

id0114z7803200

Warning

- **Fuel is highly flammable and dangerous. Fuel line spills and leakage can cause serious injury or death, and damage to equipment. If fuel comes into contact with the skin and eyes it will cause irritation. To prevent this, always perform the "Fuel Line Safety Procedure" referring to the "BEFORE REPAIR PROCEDURE".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching a vehicle.**

Note

- The rollover valve built into the fuel tank, and fuel tank leakage are inspected in this inspection.

2WD

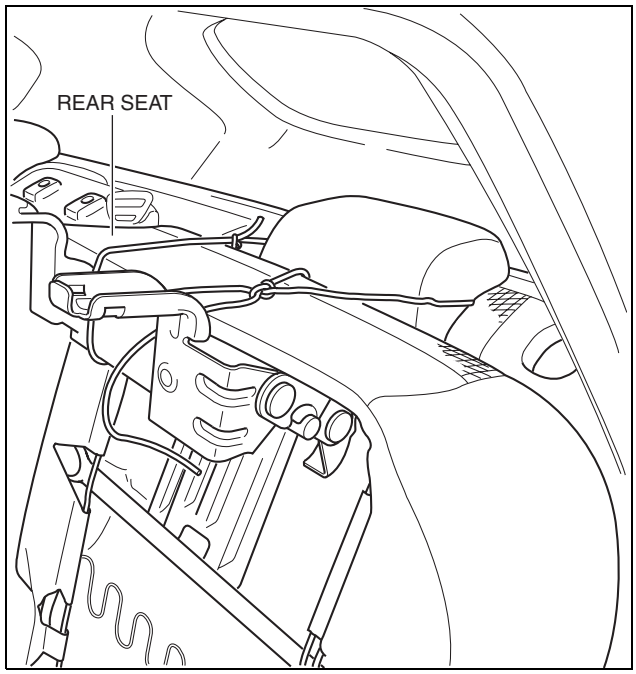
1. Park the vehicle on a level surface.
2. Perform the "Fuel Line Safety Procedure" referring to the "BEFORE SERVICE PRECAUTION". (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
3. Drain the fuel. (See 01-14B-9 FUEL DRAINING PROCEDURE [SKYACTIV-D 2.2].)
4. Perform the following procedure:

   6:4 split seat

   1. Remove the rear seat cushion. (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)

   4:2:4 split seat

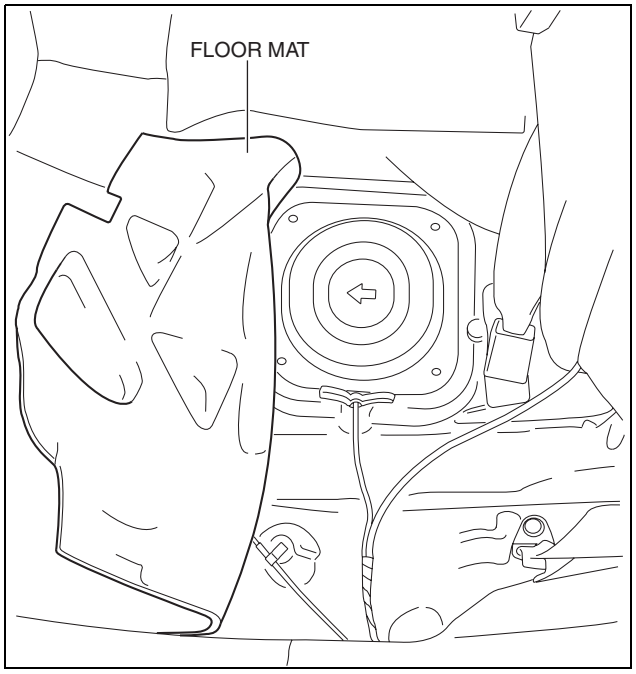
   1. Set the rear seat aside as shown in the figure. (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)



ac5wzw0000478

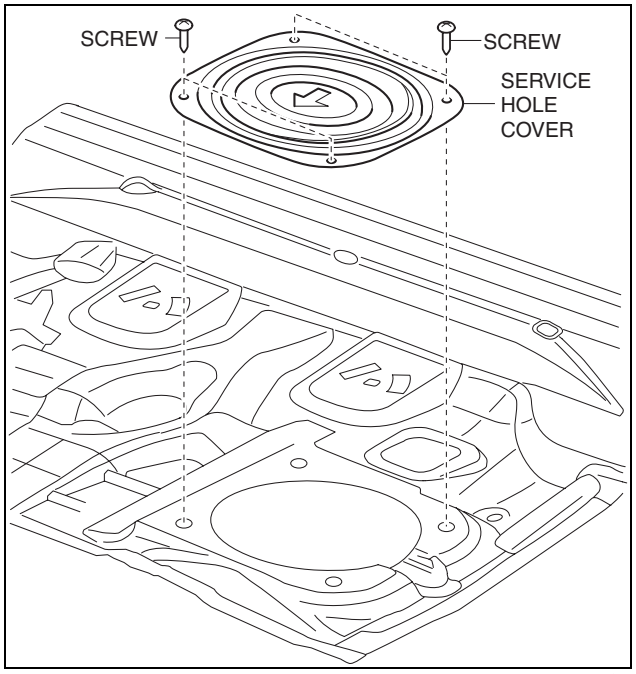
FUEL SYSTEM [SKYACTIV-D 2.2]

5. Set the floor mat aside as shown in the figure.



ac5wzw0000478

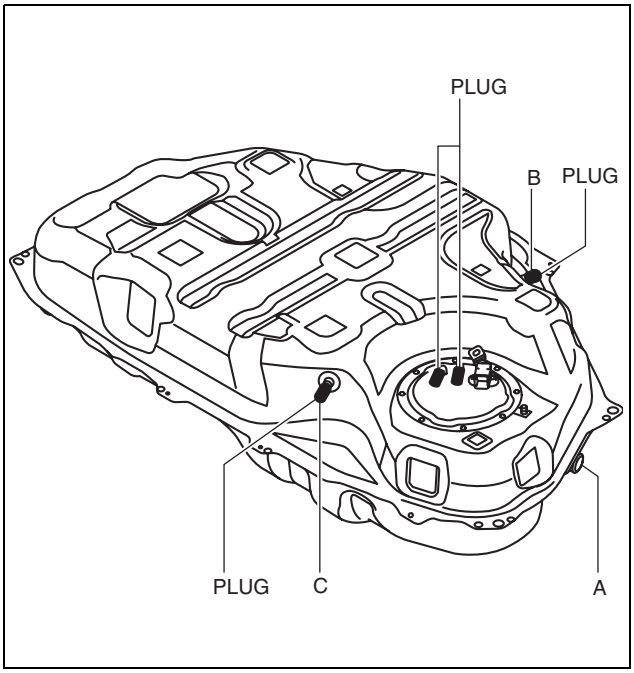
6. Remove the service hole cover.
7. Disconnect the following parts:
   - Fuel gauge sender unit connector
   - Fuel hose (main side)
   - Fuel hose (return side)
8. Remove the floor under cover. (See 09-16-44 FLOOR UNDER COVER REMOVAL/INSTALLATION.)
9. Remove the middle pipe. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
10. Remove the fuel tank and the fuel gauge sender unit as a single unit. (See 01-14B-10 FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
11. Perform the following procedure to verify fuel tank airtightness.



ac5wzw0000478

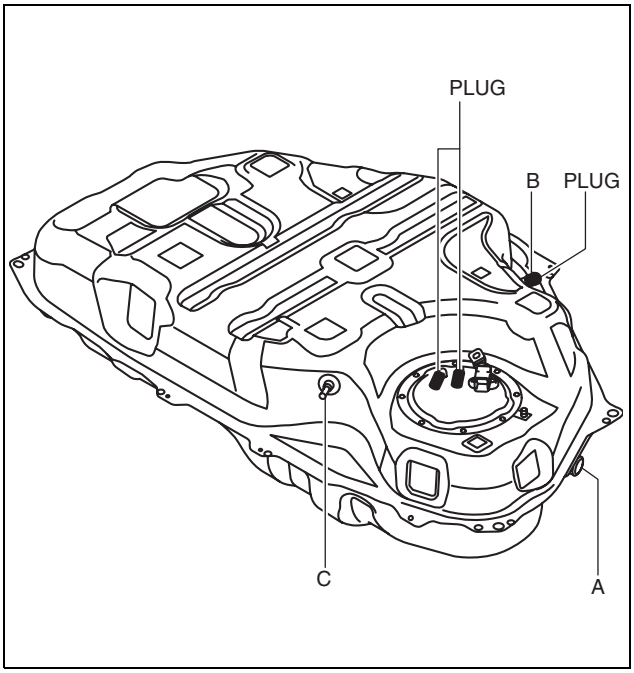
FUEL SYSTEM [SKYACTIV-D 2.2]

(1) Plug the fuel gauge sender unit pipe, and ports B and C.
(2) Apply pressure of **5.9 kPa {44 mmHg, 1.7 inHg}** to port A and wait for a while.
(3) Verify that there is no change in the pressure and no air leakage from the fuel tank.
- If there is air leakage, replace the fuel tank. (See 01-14B-10 FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000478

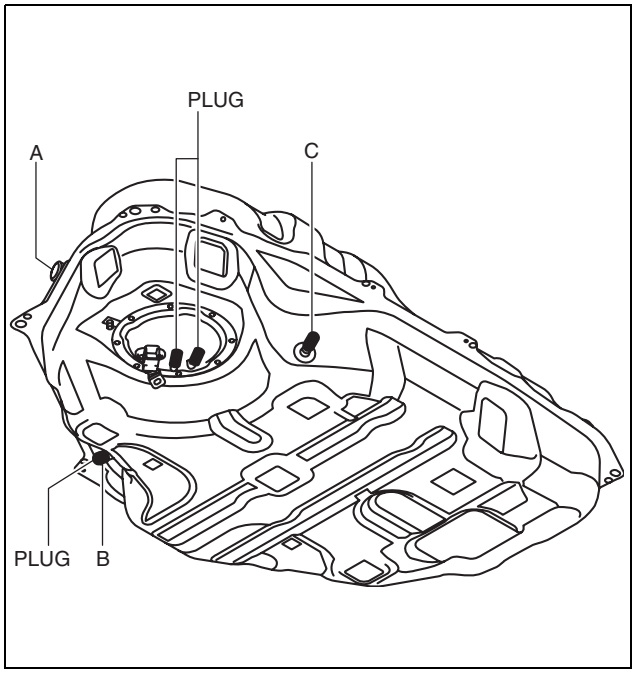
12. Remove the port C plug
13. Place the fuel tank in a level position.
14. Close port A and apply **5.9 kPa {44 mmHg, 1.7 inHg}** of pressure to port C, and leave it in this condition momentarily.
15. Open port A and verify that the pressure decreases from **5.9 kPa {44 mmHg, 1.7 inHg}**.
- If it cannot be verified, replace the fuel tank. (See 01-14B-10 FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
16. Close port A and apply **-2.0 kPa {-15 mmHg, -0.59 inHg}** vacuum to port C, and leave it in this condition momentarily.
17. Open port A and verify that the **-2.0 kPa {-15 mmHg, -0.59 inHg}** negative pressure condition restores to near positive pressure.
- If it cannot be verified, replace the fuel tank. (See 01-14B-10 FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
18. Turn the fuel tank upside down.



ac5wzw0000478

FUEL SYSTEM [SKYACTIV-D 2.2]

19. Apply pressure of **5.9 kPa {44 mmHg, 1.7 inHg}** to port C and wait for a while.
20. Verify that there is no change in the pressure and no air leakage from the fuel tank.
    - If there is air leakage, replace the fuel tank. (See 01-14B-10 FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000478

4WD

1. Park the vehicle on a level surface.
2. Perform the “Fuel Line Safety Procedure” referring to the “BEFORE SERVICE PRECAUTION”. (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
3. Drain the fuel. (See 01-14B-9 FUEL DRAINING PROCEDURE [SKYACTIV-D 2.2].)
4. Perform the following procedure:

6:4 split seat

1. Remove the rear seat cushion. (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)

4:2:4 split seat

1. Set the rear seat aside as shown in the figure. (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)

   Main side
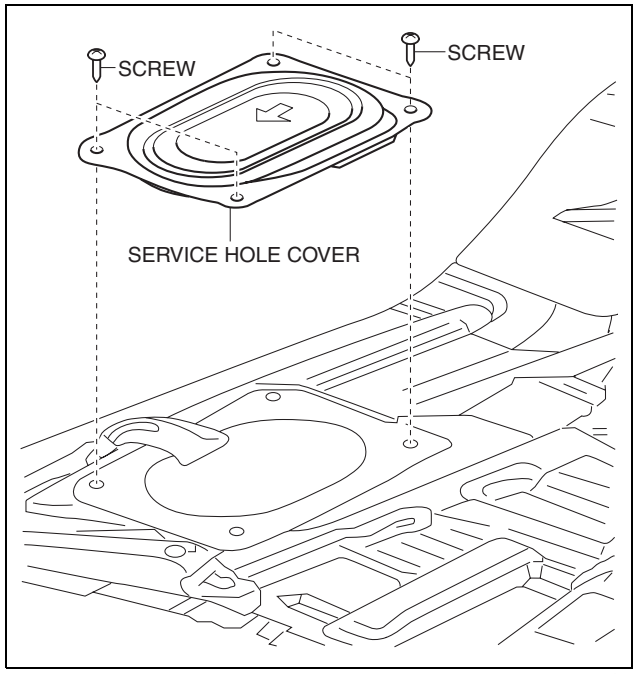
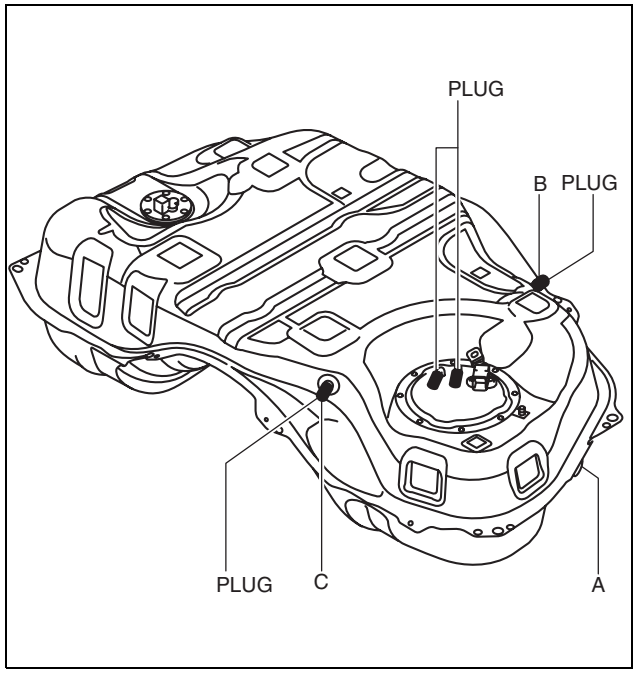
   - Fuel gauge sender unit (main) connector
   - Fuel hose (main side)
   - Fuel hose (return side)

   Sub side
   - Fuel gauge sender unit (sub) connector
8. Remove the floor under cover. (See 09-16-44 FLOOR UNDER COVER REMOVAL/INSTALLATION.)
9. Remove the middle pipe. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
10. Remove the propeller shaft. (See 03-15-2 PROPELLER SHAFT REMOVAL/INSTALLATION.)
11. Remove the fuel tank, fuel gauge sender unit (main), and fuel gauge sender unit (sub) as a single unit. (See 01-14B-10 FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
12. Perform the following procedure to verify fuel tank airtightness.



ac5wzw0000479

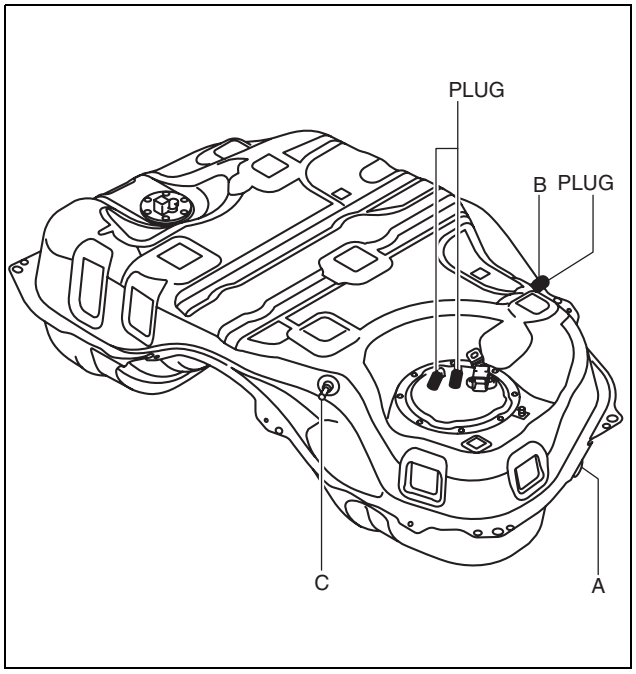
(1) Plug the fuel gauge sender unit pipe, and ports B and C.
(2) Apply pressure of **5.9 kPa {44 mmHg, 1.7 inHg}** to port A and wait for a while.
(3) Verify that there is no change in the pressure and no air leakage from the fuel tank.
   - If there is air leakage, replace the fuel tank. (See 01-14B-10 FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000479

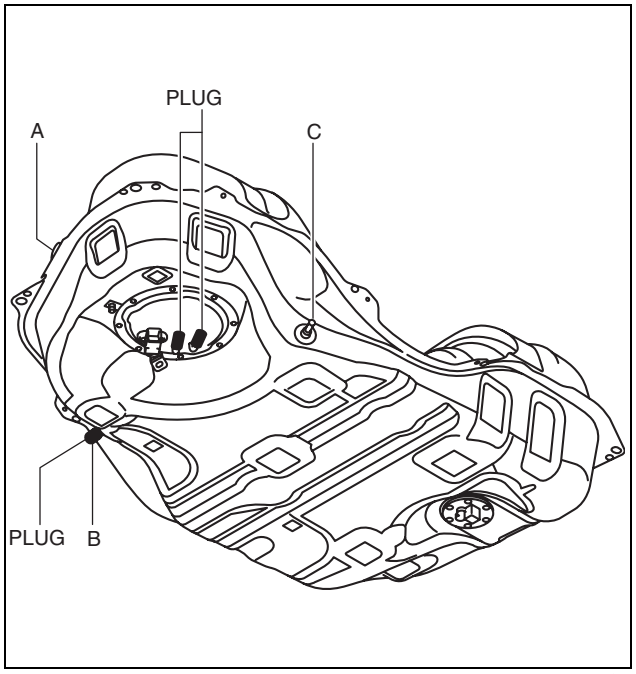
FUEL SYSTEM [SKYACTIV-D 2.2]

13. Remove the port C plug
14. Place the fuel tank in a level position.
15. Close port A and apply **5.9 kPa {44 mmHg, 1.7 inHg}** of pressure to port C, and leave it in this condition momentarily.
16. Open port A and verify that the pressure decreases from **5.9 kPa {44 mmHg, 1.7 inHg}**.
    - If it cannot be verified, replace the fuel tank. (See 01-14B-10 FUEL TANK REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)
17. Close port A and apply **-2.0 kPa {-15 mmHg, -0.59 inHg}** vacuum to port C, and leave it in this condition momentarily.
18. Open port A and verify that the **-2.0 kPa {-15 mmHg, -0.59 inHg}** negative pressure condition restores to near positive pressure.
    - If it cannot be verified, replace the fuel tank. (See 01-14B-10 FUEL TANK REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)
19. Turn the fuel tank upside down.



ac5wzw0000479

20. Apply pressure of **5.9 kPa {44 mmHg, 1.7 inHg}** to port C and wait for a while.
21. Verify that there is no change in the pressure and no air leakage from the fuel tank.
    - If there is air leakage, replace the fuel tank. (See 01-14B-10 FUEL TANK REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000479

FUEL SYSTEM [SKYACTIV-D 2.2]

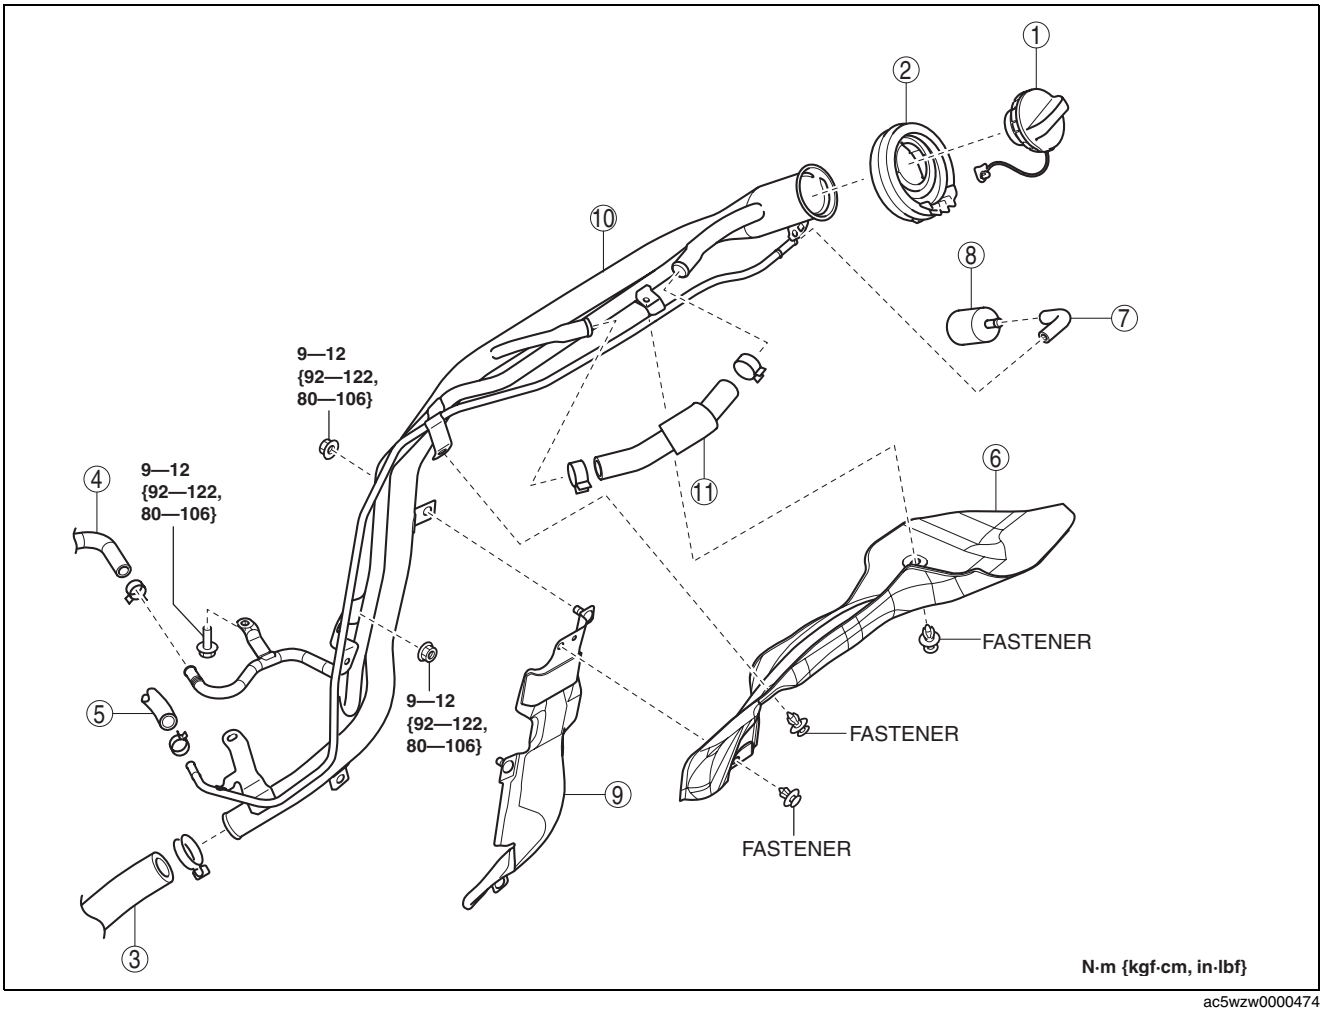
FUEL-FILLER PIPE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0114z7806900

Warning

- **Fuel is highly flammable and dangerous. Fuel line spills and leakage can cause serious injury or death, and damage to equipment. If fuel comes into contact with the skin and eyes it will cause irritation. To prevent this, always perform the "Fuel Line Safety Procedure" referring to the "BEFORE REPAIR PROCEDURE".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching a vehicle.**

1. Park the vehicle on a level surface.
2. Perform the "Fuel Line Safety Procedure" referring to the "BEFORE SERVICE PRECAUTION". (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
3. Drain the fuel. (See 01-14B-9 FUEL DRAINING PROCEDURE [SKYACTIV-D 2.2].)
4. Open the fuel-filler lid.
5. Remove in the order shown in the figure.



ac5wzw0000474

1	Fuel-filler cap
2	Dust cover (See 01-14B-30 Dust Cover Removal Note.)
3	Joint hose (See 01-14B-31 Joint Hose Installation Note.)
4	Breather hose (See 01-14B-31 Breather Hose Installation Note.)
5	Evaporative hose No.1 (See 01-14B-30 Evaporative Hose No.1 Installation Note.)

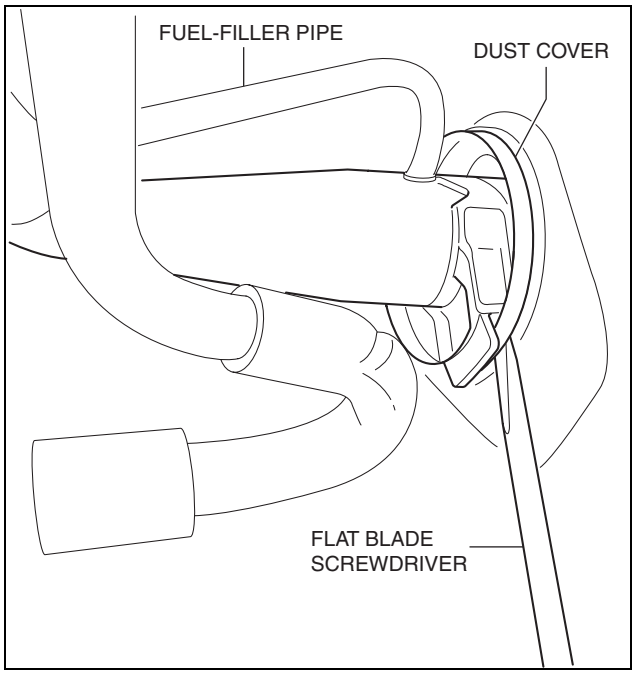
6	Protector
7	Evaporative hose No.2
8	Plug
9	Fuel-filler pipe protector
10	Fuel-filler pipe (See 01-14B-30 Fuel-filler Pipe Removal Note.)
11	Evaporative hose No.3

FUEL SYSTEM [SKYACTIV-D 2.2]

6. Install in the reverse order of removal.
7. Perform the fuel leakage inspection referring to “AFTER SERVICE PRECAUTION”. (See 01-14B-7 AFTER SERVICE PRECAUTION [SKYACTIV-D 2.2].)

Dust Cover Removal Note

1. Release the dust cover tab using a flathead screwdriver as shown in the figure.
2. Remove the dust cover.



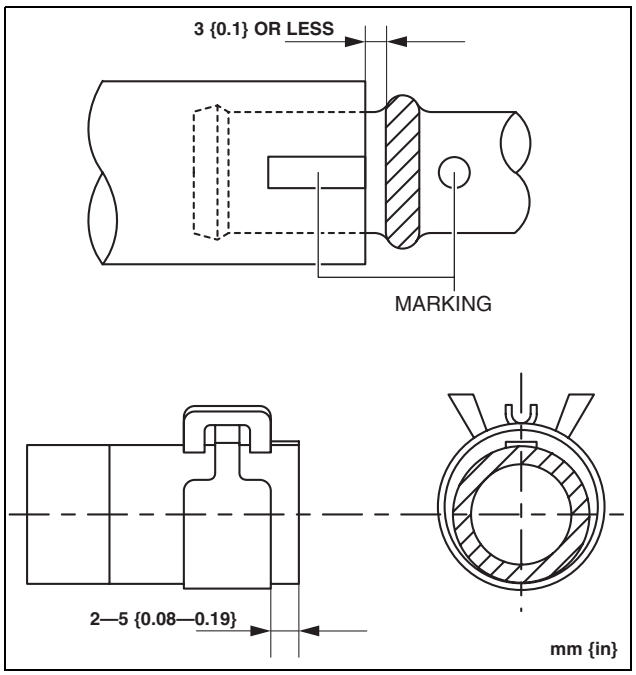
ac5wzw0000530

Fuel-filler Pipe Removal Note

1. Remove the rear tire (LH). (See 02-12-1 WHEEL AND TIRE SPECIFICATION.)
2. Remove the rear parking brake cable installation nuts (LH). (See 04-12-7 REAR PARKING BRAKE CABLE REMOVAL/INSTALLATION.)
3. Remove the rear crossmember. (See 02-14-40 REAR CROSSMEMBER REMOVAL/INSTALLATION [2WD].) (See 02-14-44 REAR CROSSMEMBER REMOVAL/INSTALLATION [4WD].)
4. Remove the fuel-filler pipe.

Evaporative Hose No.1 Installation Note

1. Align the marking and connect evaporative hose No.1 to the fuel-filler pipe as shown in the figure.

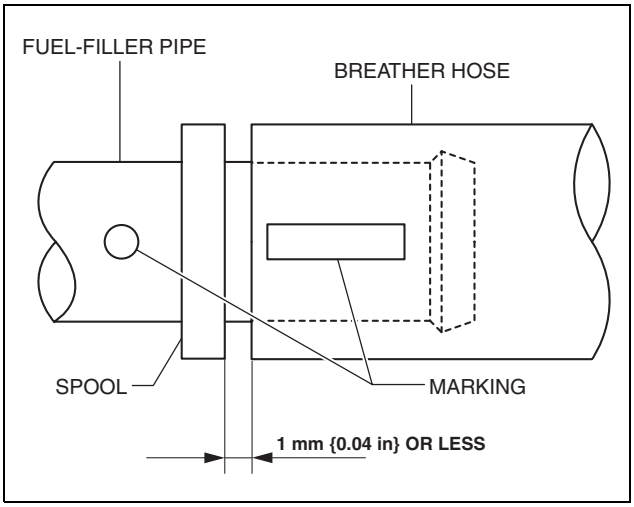


ac5wzw0000530

FUEL SYSTEM [SKYACTIV-D 2.2]

Breather Hose Installation Note

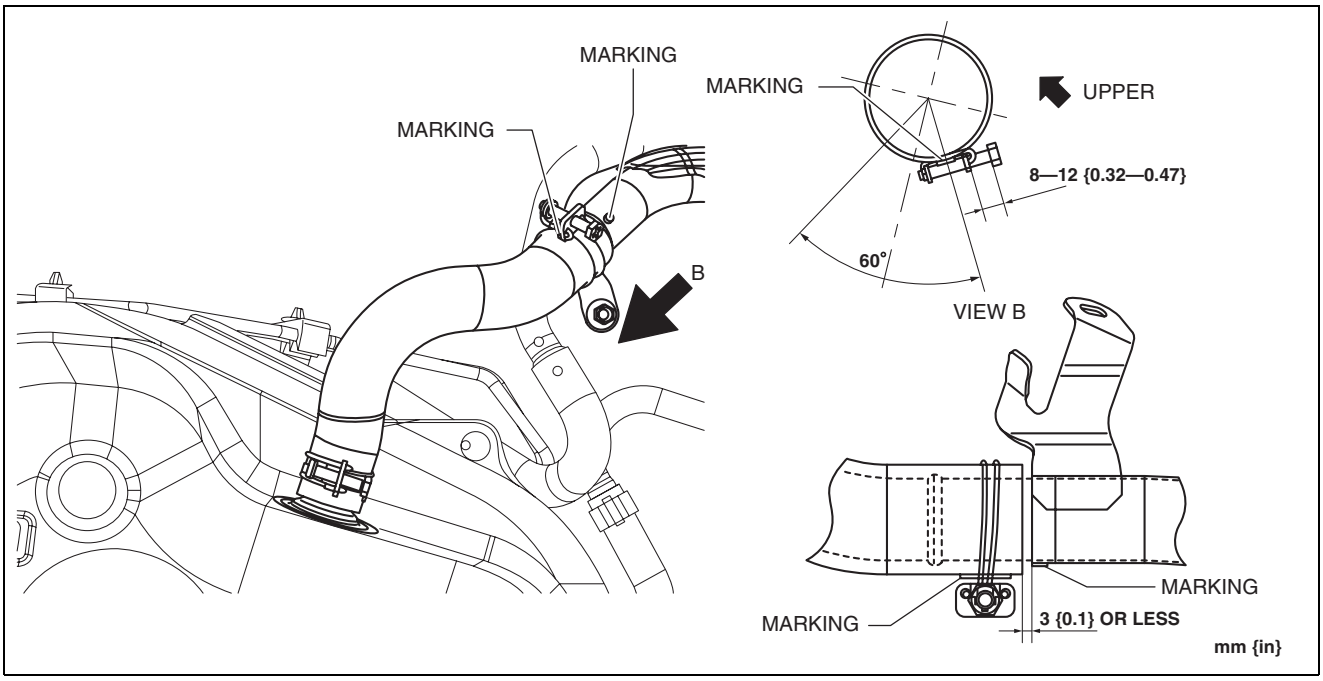
1. Align the marking and connect the breather hose to the fuel-filler pipe as shown in the figure.



ac5wzw0000530

Joint Hose Installation Note

1. Connect the joint hose to the fuel-filler pipe as shown in the figure.



ac5wzw0000530

FUEL SYSTEM [SKYACTIV-D 2.2]

NON-RETURN VALVE INSPECTION [SKYACTIV-D 2.2]

id0114z7815300

Warning

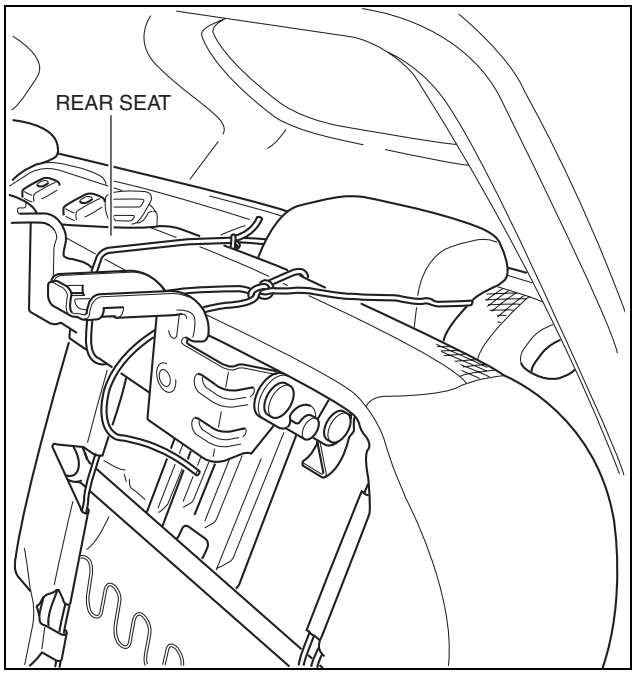
- **Fuel is highly flammable and dangerous. Fuel line spills and leakage can cause serious injury or death, and damage to equipment. If fuel comes into contact with the skin and eyes it will cause irritation. To prevent this, always perform the "Fuel Line Safety Procedure" referring to the "BEFORE REPAIR PROCEDURE".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching a vehicle.**

1. Perform the "Fuel Line Safety Procedure" referring to the "BEFORE SERVICE PRECAUTION". (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
2. Remove the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Perform the following procedure:
   6:4 split seat
   1. Remove the rear seat cushion. (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)

   4:2:4 split seat
   1. Set the rear seat aside as shown in the figure. (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)
4. Remove the fuel gauge sender unit. (See 09-22-23 FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION [2WD].) (See 09-22-27 FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION [4WD].)
5. Drain the fuel from the fuel tank to the position where the non-return valve is visible. (See 01-14B-9 FUEL DRAINING PROCEDURE [SKYACTIV-D 2.2].)

   Note
   - The non-return valve is built into the fuel tank.
   - The non-return valve is normally closed by spring force.

6. Verify that the non-return valve is closed.
   - If the non-return valve is left open or cannot open even though the non-return valve is pulled up with your finger, replace the fuel tank. (See 01-14B-10 FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000480

FUEL SYSTEM [SKYACTIV-D 2.2]

INJECTION PIPE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0114z7850200

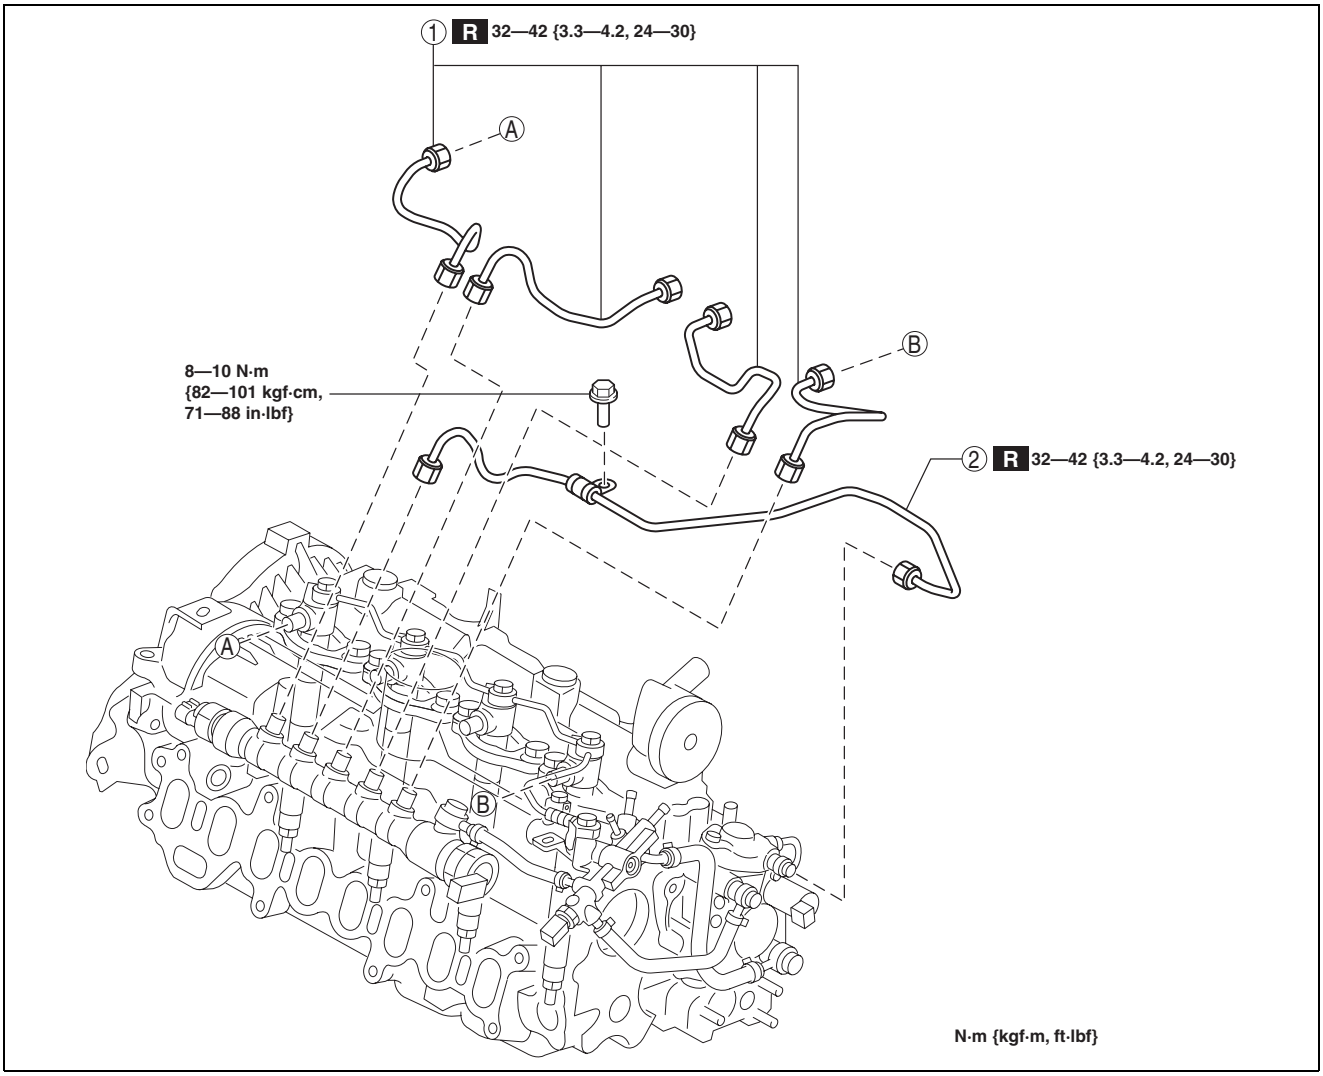
Warning

- **Fuel is highly flammable and dangerous. Fuel line spills and leakage can cause serious injury or death, and damage to equipment. If fuel comes into contact with the skin and eyes it will cause irritation. To prevent this, always perform the "Fuel Line Safety Procedure" referring to the "BEFORE REPAIR PROCEDURE".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before servicing the fuel system, make sure to discharge static electricity by touching a vehicle.**

Caution

- **If parts are exposed to the fuel, their function may be decreased or a fire may occur. Spread a rag to absorb any leaked fuel.**
- **Do not let foreign matter get into the injection pipe to prevent clogging. In addition, always tighten the injection pipe to the specified torque.**

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Perform the "Fuel Line Safety Procedure" referring to the "BEFORE SERVICE PRECAUTION". (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
3. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove in the order shown in the figure.
5. Install in the reverse order of removal.
6. Perform the "Fuel Hose Installation Procedure" and "Fuel Line Air Bleeding" referring to the "AFTER SERVICE PRECAUTION". (See 01-14B-7 AFTER SERVICE PRECAUTION [SKYACTIV-D 2.2].)



ac5wzw0000486

FUEL SYSTEM [SKYACTIV-D 2.2]

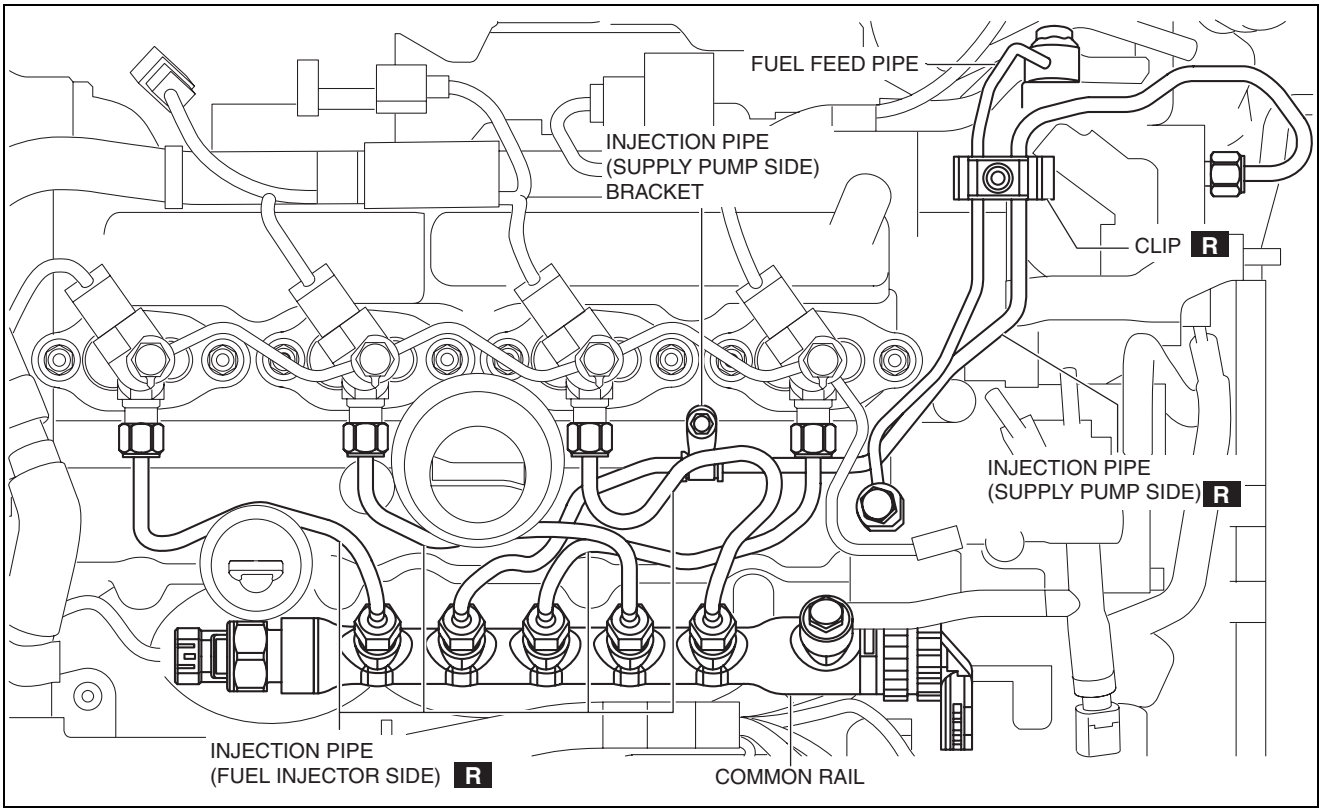
1	Injection pipe (fuel injector side) (See 01-14B-34 Injector Pipe Installation Note.)
2	Injection pipe (supply pump side) (See 01-14B-34 Injection Pipe (Supply Pump Side) Removal Note.) (See 01-14B-34 Injector Pipe Installation Note.)

Injection Pipe (Supply Pump Side) Removal Note

1. Remove the fuel return pipe (supply pump side). (See 01-14B-46 SUPPLY PUMP REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Remove the injection pipe (supply pump side).

Injector Pipe Installation Note

1. Loosen the common rail.



ac5wzw0000530

2. Temporarily tighten the new injection pipe (supply pump side).
3. Temporarily tighten the new injection pipes (fuel injector side).
4. Temporarily install the fuel return pipe (supply pump side).
5. Tighten the new clip.

Clip tightening torque
4.2—5.2 N·m {43—53 kgf·cm, 38—46 in·lbf}

6. Tighten the injection pipe (supply pump side) bracket.

Injection pipe (supply pump side) bracket tightening torque
8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

7. Tighten the injection pipe (supply pump side) and the injection pipes (fuel injector side) on the common rail side.

Tightening torque for injection pipe (supply pump side) and injection pipe (fuel injector side)
32—42 N·m {3.3—4.2 kgf·m, 24—30 ft·lbf}

8. Tighten the injection pipe (supply pump side) and the injection pipes (fuel injector side) on the fuel injector side.

   Tightening torque for injection pipe (supply pump side) and injection pipe (fuel injector side)
   32—42 N·m {3.3—4.2 kgf·m, 24—30 ft·lbf}

9. Tighten the common rail.

   Common rail tightening torque
   20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}

10. Tighten the fuel return pipe (supply pump side).

    Fuel return pipe (supply pump side) tightening torque
    Supply pump side: 18—26 N·m {1.9—2.6 kgf·m, 14—19 ft·lbf}
    Lower case side: 20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}

FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0114z7800600

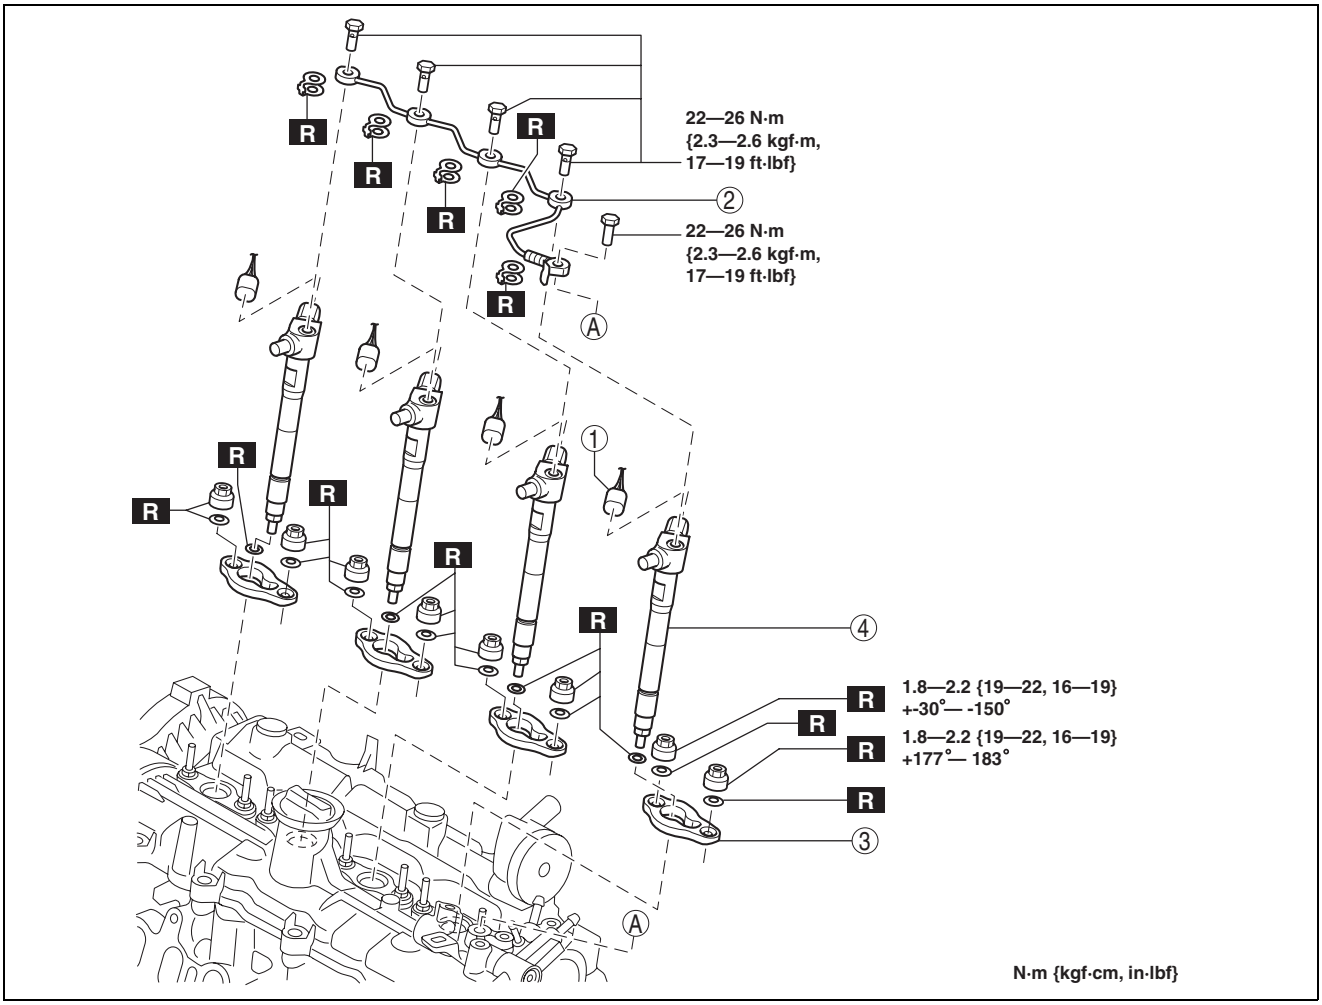
Warning
- **Fuel is highly flammable and dangerous. Fuel line spills and leakage can cause serious injury or death, and damage to equipment. If fuel comes into contact with the skin and eyes it will cause irritation. To prevent this, always perform the "Fuel Line Safety Procedure" referring to the "BEFORE REPAIR PROCEDURE".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before servicing the fuel system, make sure to discharge static electricity by touching a vehicle.**

Caution
- **If parts are exposed to the fuel, their function may be decreased or a fire may occur. Spread a rag to absorb any leaked fuel.**
- **Do not let foreign matter get into the injection pipe to prevent clogging. In addition, always install the injection pipe to the specified tightening torque.**

Note
- If the fuel injector is replaced, perform the "Fuel Injector Initial Setting".

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Perform the "Fuel Line Safety Procedure" referring to the "BEFORE SERVICE PRECAUTION". (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
3. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Disconnect the CMP sensor connector.
5. Remove the injection pipe (fuel injector side). (See 01-14B-33 INJECTION PIPE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Remove in the order shown in the figure.
7. Install in the reverse order of removal.
8. Refer to the "AFTER SERVICE PRECAUTION" and perform the fuel hose installation procedure and fuel line air bleeding. (See 01-14B-7 AFTER SERVICE PRECAUTION [SKYACTIV-D 2.2].)

FUEL SYSTEM [SKYACTIV-D 2.2]



ac5wzw0000529

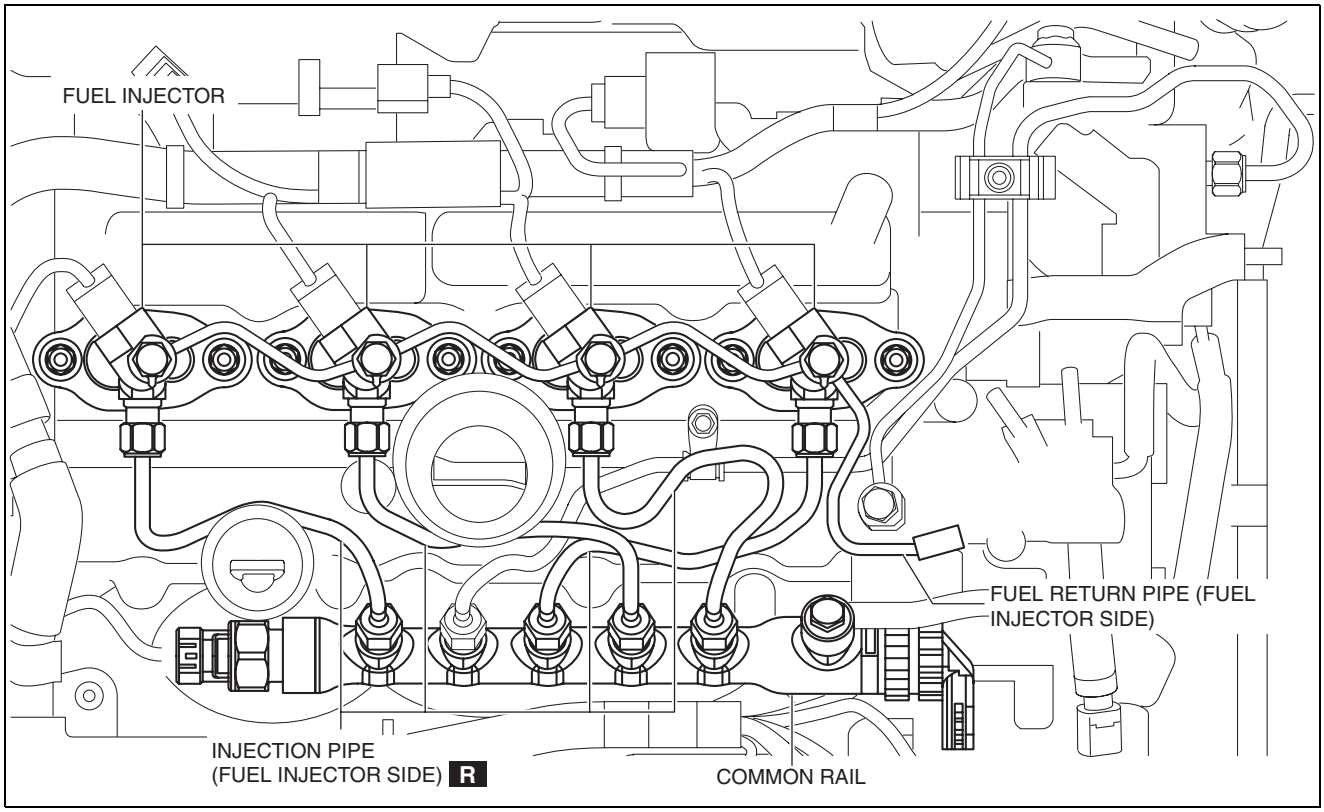
1	Fuel injector connector
2	Fuel return pipe (fuel injector side)

3	Fuel injector bracket
4	Fuel injector (See 01-14B-37 Fuel Injector Installation Note.)

FUEL SYSTEM [SKYACTIV-D 2.2]

Fuel Injector Installation Note

1. Temporarily install the fuel injector and the fuel injector bracket.



ac5wzw0000529

2. Loosen the common rail.
3. Temporarily tighten the new injection pipe (fuel injector side).

Caution

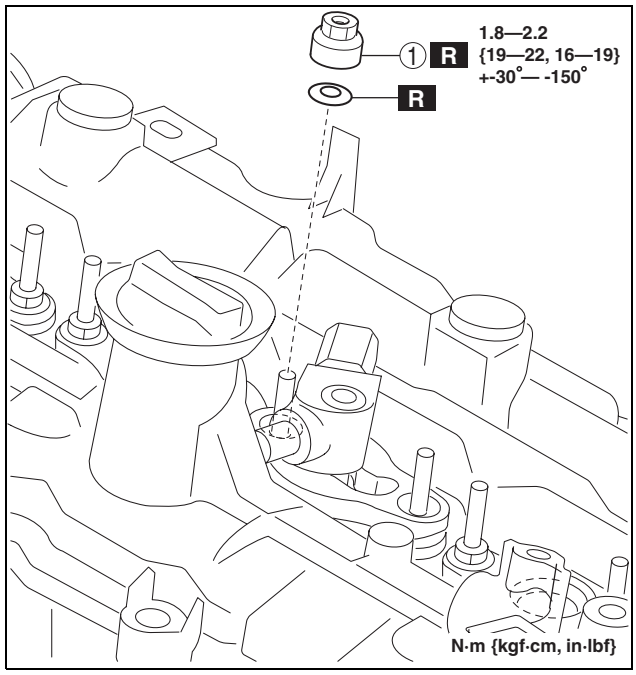
- **Do not tighten the nut on the opposite side when processing the step 4 and 5.**

4. Tighten the new nut shown in the figure (1).

Fuel injector bracket installation nut tightening torque
1.8—2.2 N·m {19—22 kgf·cm, 16—19 in·lbf}

5. Loosen the nut shown in the figure (1).

Angle of loosening the nut for installing the fuel injector bracket
-30°— -150°



ac5wzw0000529

FUEL SYSTEM [SKYACTIV-D 2.2]

6. Tighten the new nut shown in the figure (2).

   Fuel injector bracket installation nut tightening torque
   First time: 1.8—2.2 N·m {19—22 kgf·cm, 16—19 in·lbf}
   Second time: 177°—183°

7. Tighten the injection pipes (fuel injector side) on the common rail side.

   Tightening torque for injection pipe (fuel injector side)
   32—42 N·m {3.3—4.2 kgf·m, 24—30 ft·lbf}

8. Tighten the injection pipes (fuel injector side) on the fuel injector side.

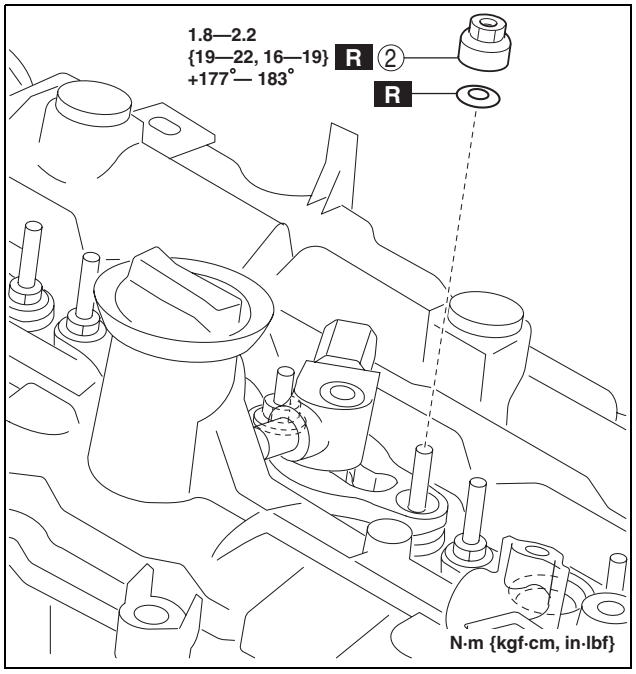
   Tightening torque for injection pipe (fuel injector side)
   32—42 N·m {3.3—4.2 kgf·m, 24—30 ft·lbf}

9. Tighten the common rail.

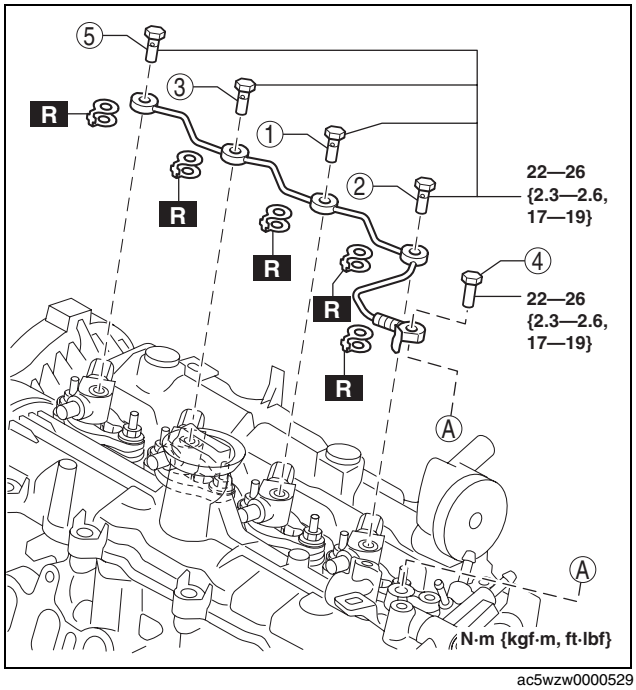
   Common rail tightening torque
   20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}

10. Tighten the fuel return pipe (fuel injector side) in the order shown in the figure.

    Fuel return pipe (fuel injector side) tightening torque
    22—26 N·m {2.3—2.6 kgf·m, 17—19 ft·lbf}



ac5wzw0000529



ac5wzw0000529

FUEL SYSTEM [SKYACTIV-D 2.2]

FUEL INJECTOR INSPECTION [SKYACTIV-D 2.2]

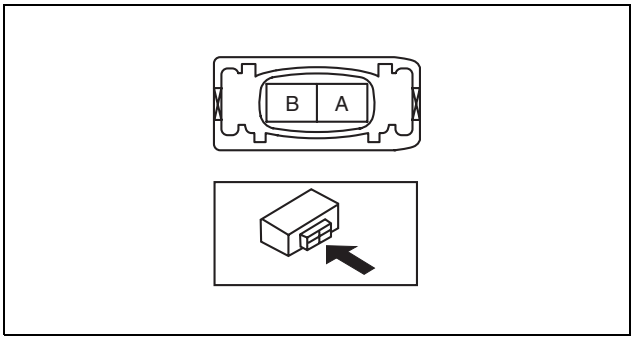
id0114z7800700

Resistance inspection

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Disconnect the fuel injector connector.
4. Measure the resistance between fuel injector terminals A and B.

   Fuel injector resistance (specification)
   0.9—1.1 Megohms [20 °C {68 °F}]

   - If not within the specification, replace the fuel injector. (See 01-14B-35 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5jjw00003524

FUEL FILTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0114z7800000

Warning

- **Fuel is highly flammable and dangerous. Fuel line spills and leakage can cause serious injury or death, and damage to equipment. If fuel comes into contact with the skin and eyes it will cause irritation. To prevent this, always perform the "Fuel Line Safety Procedure" referring to the "BEFORE REPAIR PROCEDURE".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before servicing the fuel system, make sure to discharge static electricity by touching a vehicle.**

Caution

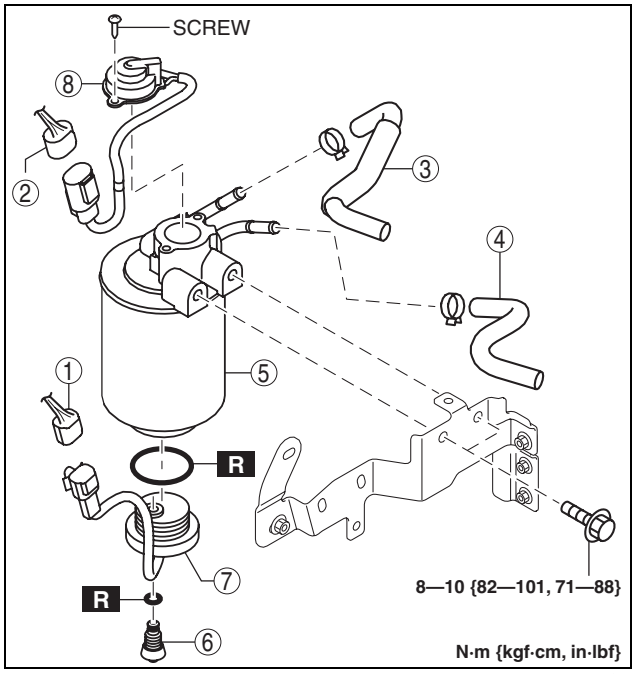
- **If parts are exposed to the fuel, their function may be decreased or a fire may occur. Spread a rag to absorb any leaked fuel.**
- **If fuel does not pass through the fuel filter, it could cause a fuel system malfunction. Therefore, do not install the fuel hoses (main and return side) in reverse. Always refer to the "AFTER SERVICE PRECAUTION" before installing the fuel hose, and execute the "Fuel Hose Installation Procedure".**

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Perform the "Fuel Line Safety Procedure" referring to the "BEFORE SERVICE PRECAUTION". (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
3. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the battery. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove in the order shown in the figure.

FUEL SYSTEM [SKYACTIV-D 2.2]

L.H.D.

1	Sedimentor switch connector
2	Fuel warmer connector (with fuel warmer)
3	Fuel main hose No.1
4	Fuel main hose No.2
5	Fuel filter
6	Drain plug
7	Sedimentor switch
8	Fuel warmer (with fuel warmer)

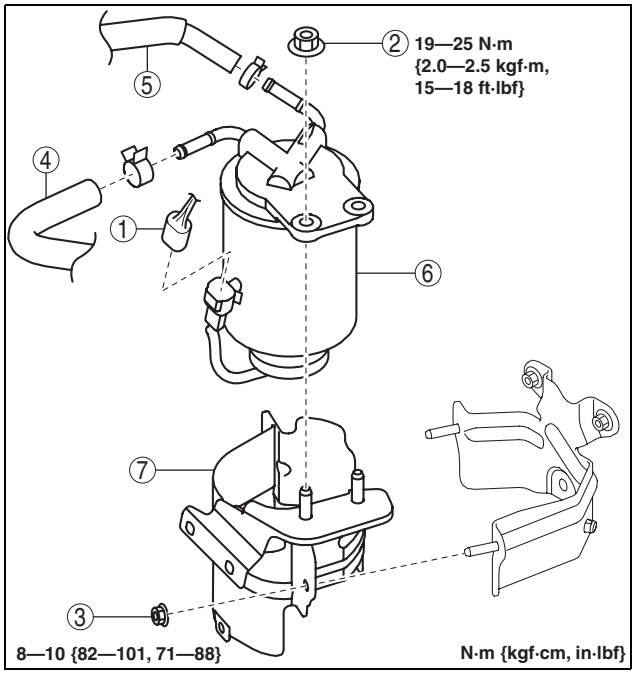


ac5wzw0000473

R.H.D.

1	Sedimentor switch connector
2	Fuel filter installation nut
3	Fuel filter bracket installation nut
4	Fuel main hose No.1 (See 01-14B-41 Fuel Main Hose No.1 Installation Note.)
5	Fuel main hose No.2
6	Fuel filter
7	Fuel filter bracket

6. Install in the reverse order of removal.
7. Perform the fuel hose installation procedure and fuel line air bleeding referring to the “AFTER SERVICE PRECAUTION”. (See 01-14B-7 AFTER SERVICE PRECAUTION [SKYACTIV-D 2.2].)

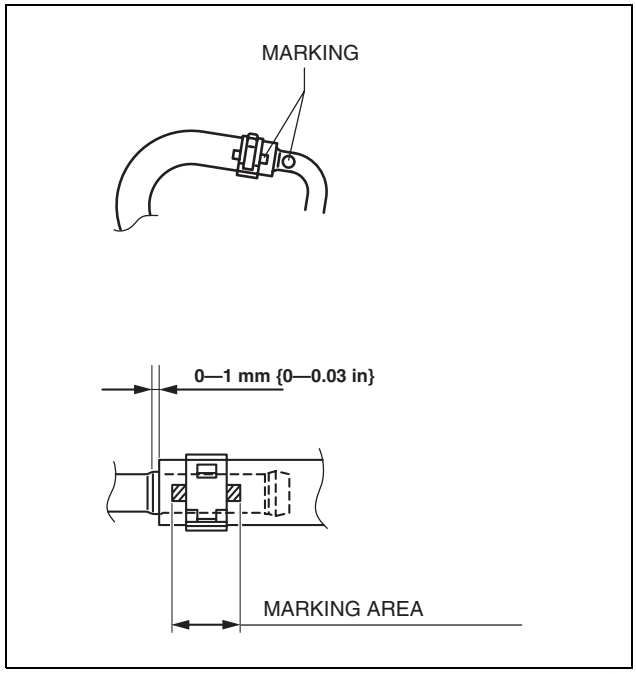


ac5wzw0000473

FUEL SYSTEM [SKYACTIV-D 2.2]

Fuel Main Hose No.1 Installation Note

1. Install fuel main hose No.1 as shown in the figure.



ac5wzw0000473

FUEL FILTER INSPECTION [SKYACTIV-D 2.2]

id0114z7089200

Warning

- **Fuel is highly flammable and dangerous. Fuel line spills and leakage can cause serious injury or death, and damage to equipment. If fuel comes into contact with the skin and eyes it will cause irritation. To prevent this, always perform the "Fuel Line Safety Procedure" referring to the "BEFORE REPAIR PROCEDURE".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before servicing the fuel system, make sure to discharge static electricity by touching a vehicle.**

1. Visually verify that there is no cracking, damage, or rust in the fuel filter.

Note

- If there is cracking, damage, or rust in the fuel filter, it could cause fuel leakage.

- If a malfunction is verified, replace the fuel filter. (See 01-14B-39 FUEL FILTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

FUEL FILTER WATER DRAINING [SKYACTIV-D 2.2]

id0114z7777600

1. Remove the fuel filter. (See 01-14B-39 FUEL FILTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Loosen the drain plug for the lower part of the fuel filter.
3. Drain the water.
4. After draining the water, tighten the drain plug by hand sufficiently.

FUEL SYSTEM [SKYACTIV-D 2.2]

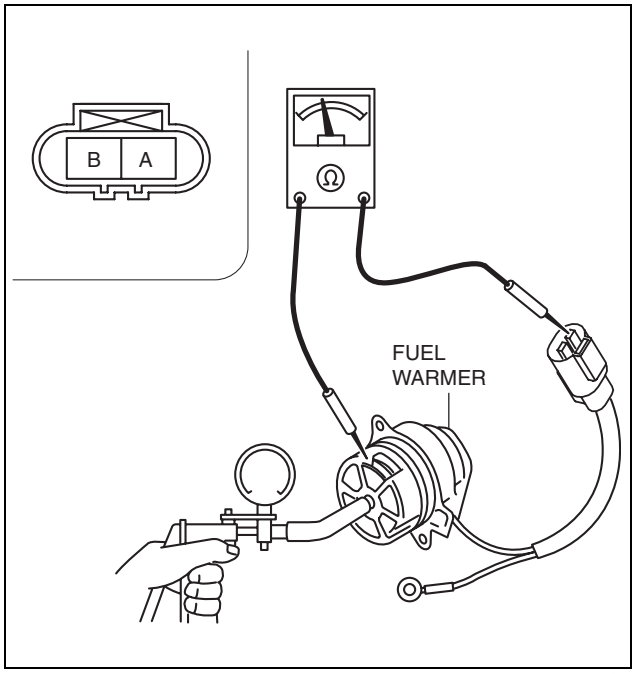
FUEL WARMER INSPECTION [SKYACTIV-D 2.2]

id0114z7089300

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Perform the “Fuel Line Safety Procedure” referring to the “BEFORE SERVICE PRECAUTION”. (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
3. Remove the fuel warmer.
4. Connect the vacuum pump to the fuel warmer.
5. When a fuel warmer vacuum is within **26.7—40.0 kPa**, measure the resistance between the fuel warmer and terminal B

   Fuel warmer resistance (specification)
   Approx. 0.5—2.0 ohms

   - If not within the specification, replace the fuel warmer. (See 01-14B-39 FUEL FILTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000473

FUEL CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0114z7706100

Note
- The fuel check valve cannot be removed as it is integrated with the lower case.

1. Remove the lower case. (See 01-14B-54 LOWER CASE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

FUEL CHECK VALVE INSPECTION [SKYACTIV-D 2.2]

id0114z7706000

- Fuel check valve cannot perform inspecting with a single article.

FUEL FEED VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0114z7706300

Note
- The fuel feed valve cannot be removed as it is integrated with the lower case.

1. Remove the lower case. (See 01-14B-54 LOWER CASE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

FUEL FEED VALVE INSPECTION [SKYACTIV-D 2.2]

id0114z7706200

- Fuel feed valve cannot perform inspecting with a single article.

FUEL PRESSURE LIMITER VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0114z7706500

Note
- The fuel pressure limiter valve cannot be removed as it is integrated with the common rail.

1. Remove the common rail. (See 01-14B-52 COMMON RAIL REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

FUEL SYSTEM [SKYACTIV-D 2.2]

FUEL PRESSURE LIMITER VALVE INSPECTION [SKYACTIV-D 2.2]

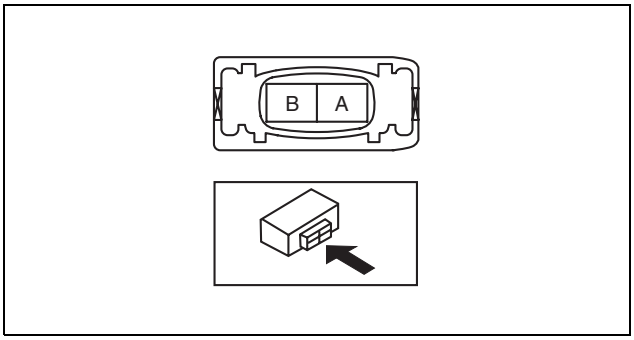
id0114z7706400

Resistance inspection

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Disconnect the fuel pressure limiter valve connector.
4. Inspect the resistance between fuel pressure limiter valve terminals A and B.

   Fuel pressure limiter valve resistance (specification)
   0.96—1.16 ohms [20 °C {68 °F}]

   - If not within the specification, replace the common rail. (See 01-14B-52 COMMON RAIL REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5jjw00003532

SUCTION CONTROL VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0114z7087900

Warning

- **Fuel is very flammable liquid. If fuel spills or leaks from the pressurized fuel system, it will cause serious injury or death and facility breakage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure", while referring to the "BEFORE SERVICE PRECAUTION".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching the vehicle body.**

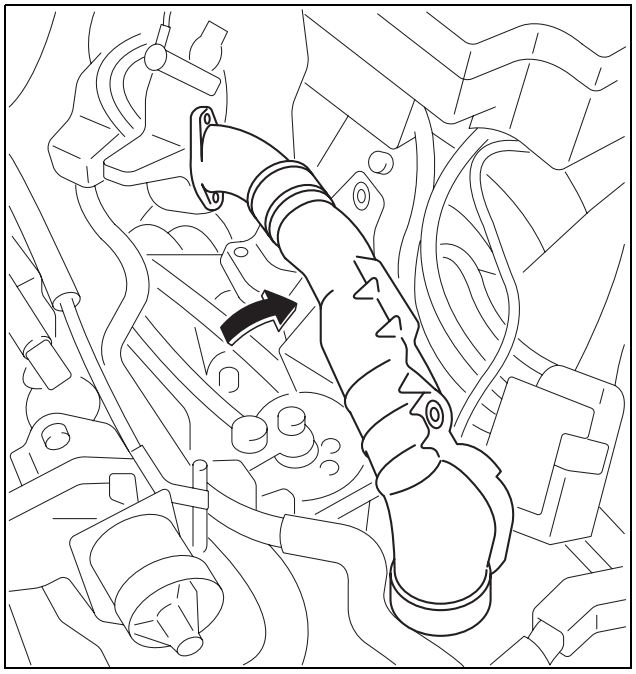
Caution

- **If parts are exposed to the fuel, their function may be decreased or a fire may occur. Spread a rag to absorb any leaked fuel.**
- **Do not let foreign matter get into the injection pipe to prevent clogging. In addition, always tighten the injection pipe to the specified torque.**

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Perform the "Fuel Line Safety Procedure" referring to the "BEFORE SERVICE PRECAUTION". (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
3. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the air cleaner. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove the following parts as a single unit: (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   - Air hose
   - Air inlet pipe
   - Breather hose
   - Turbocharger air inlet hose
   - PTC Heater

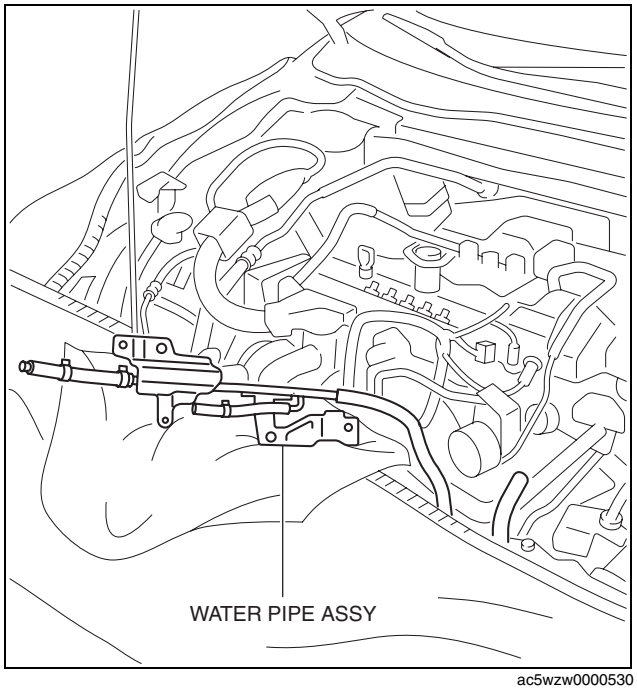
FUEL SYSTEM [SKYACTIV-D 2.2]

6. Set the turbocharger air outlet pipe, turbocharger air outlet hose, and air intake pipe aside as a single unit as shown in the figure. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)



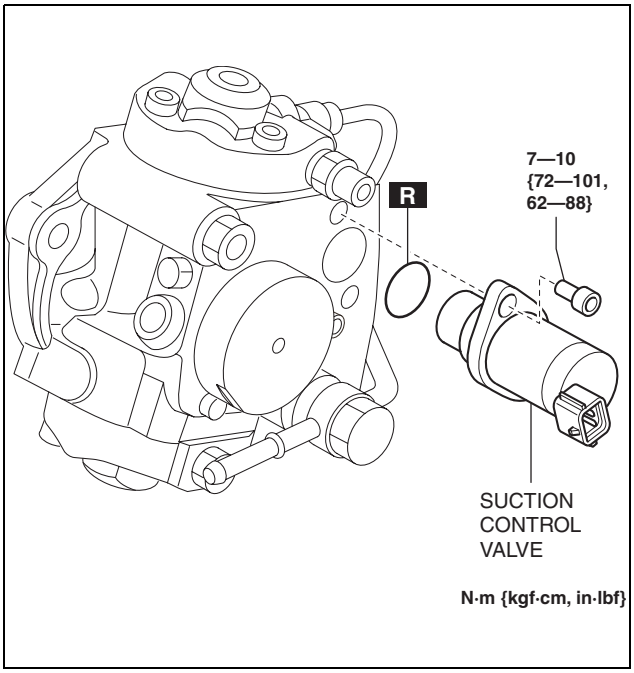
ac5wzw0000530

7. Set the water pipe assy aside as shown in the figure.
8. Disconnect the suction control valve connector.



ac5wzw0000530

9. Remove the suction control valve.
10. Install in the reverse order of removal.
11. Perform the fuel hose installation procedure and fuel line air bleeding referring to the “AFTER SERVICE PRECAUTION”. (See 01-14B-7 AFTER SERVICE PRECAUTION [SKYACTIV-D 2.2].)



ac5wzw0000473

SUCTION CONTROL VALVE INSPECTION [SKYACTIV-D 2.2]

id0114z7087800

Caution

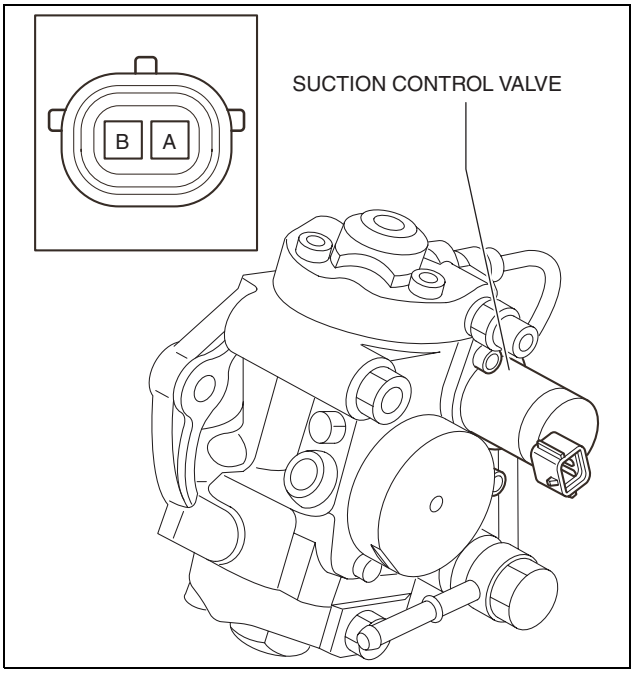
- **The supply pump is sealed to maintain the function. Therefore, SSTs and tester are required to disassemble the supply pump securely.**
- **If a malfunction in the supply pump is verified, place a repair order with the DENSO, Ltd. services network (supply pump manufacturer), and do not disassemble the supply pump yourself.**

Resistance inspection

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Disconnect suction control valve connector.
3. Measure the resistance between the suction control valve terminals.

Suction control valve resistance (specification)
Approx. 2.1 ohms [20 °C {68 °F}]

- **If not within the specification, place a repair order with the DENSO, Ltd. services network.**



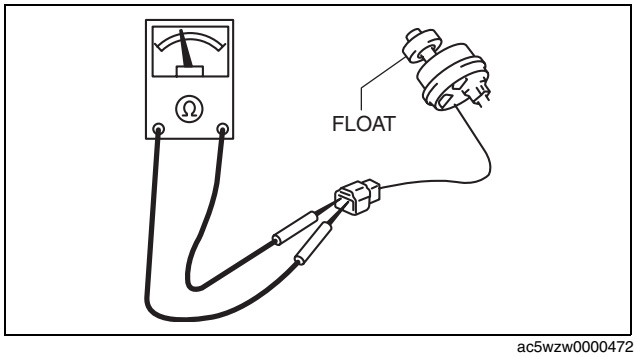
ac5wzw0000533

FUEL SYSTEM [SKYACTIV-D 2.2]

SEDIMENTOR SWITCH INSPECTION [SKYACTIV-D 2.2]

id0114z7085700

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Perform the “Fuel Line Safety Procedure” referring to the “BEFORE SERVICE PRECAUTION”. (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
3. Drain the fuel from the fuel filter.
4. Remove the sedimentor switch.
5. Verify that there is continuity when pulling up the float as shown in the figure.
   - If there is no continuity, replace the sedimentor switch. (See 01-14B-39 FUEL FILTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000472

SUPPLY PUMP REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0114z7805700

Warning

- **Fuel is highly flammable and dangerous. Fuel line spills and leakage can cause serious injury or death, and damage to equipment. If fuel comes into contact with the skin and eyes it will cause irritation. To prevent this, always perform the “Fuel Line Safety Procedure” referring to the “BEFORE REPAIR PROCEDURE”.**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before servicing the fuel system, make sure to discharge static electricity by touching a vehicle.**

Caution

- **If parts are exposed to the fuel, their function may be decreased or a fire may occur. Spread a rag to absorb any leaked fuel.**
- **Do not let foreign matter get into the injection pipe to prevent clogging. Always tighten the injection pipe to the specified torque.**
- **To prevent fuel leakage, when removing/installing the supply pump, always follow the procedure in the Workshop Manual and perform the procedure.**

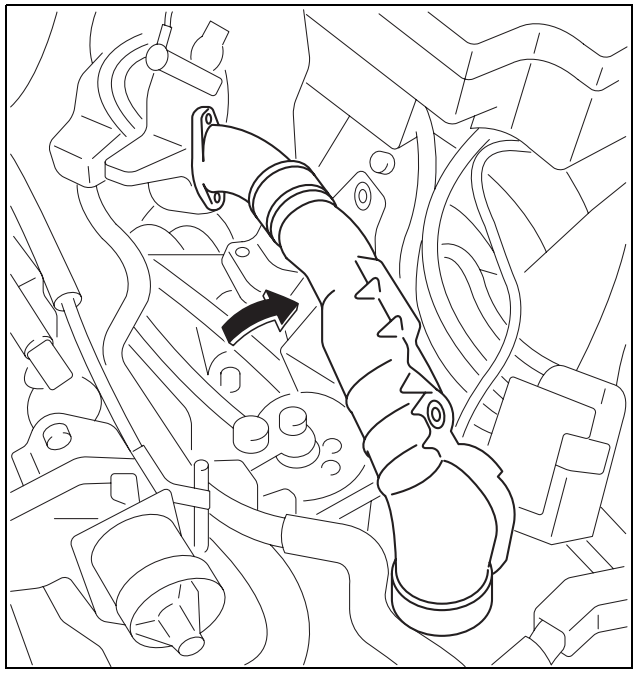
Note

- If the supply pump is replaced, perform the “Supply Pump Initialization Procedure”.

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Perform the “Fuel Line Safety Procedure” referring to the “BEFORE SERVICE PRECAUTION”. (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
3. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the air cleaner. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove the battery and the battery tray. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Remove the following parts as a single unit: (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   - Air hose
   - Air inlet pipe
   - Breather hose
   - Turbocharger air inlet hose
   - PTC Heater

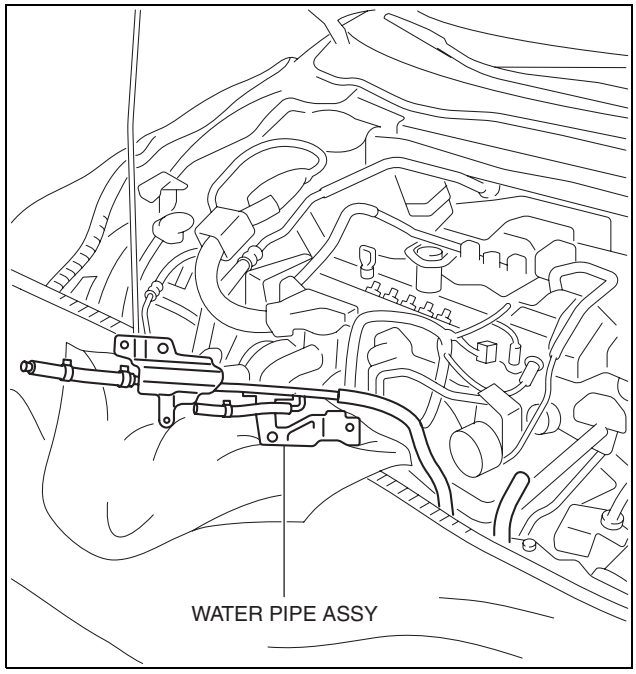
FUEL SYSTEM [SKYACTIV-D 2.2]

7. Set the turbocharger air outlet pipe, turbocharger air outlet hose, and air intake pipe aside as a single unit as shown in the figure. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)
8. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)



ac5wzw0000530

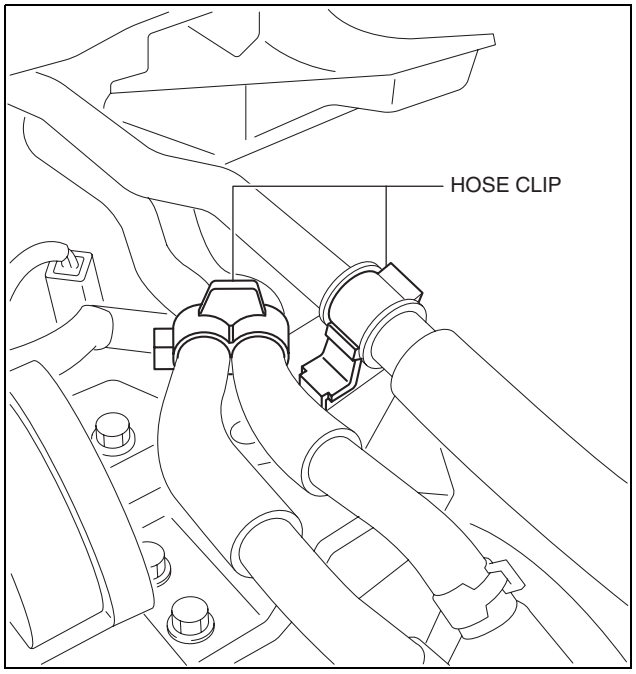
9. Set the water pipe assy aside as shown in the figure.



ac5wzw0000531

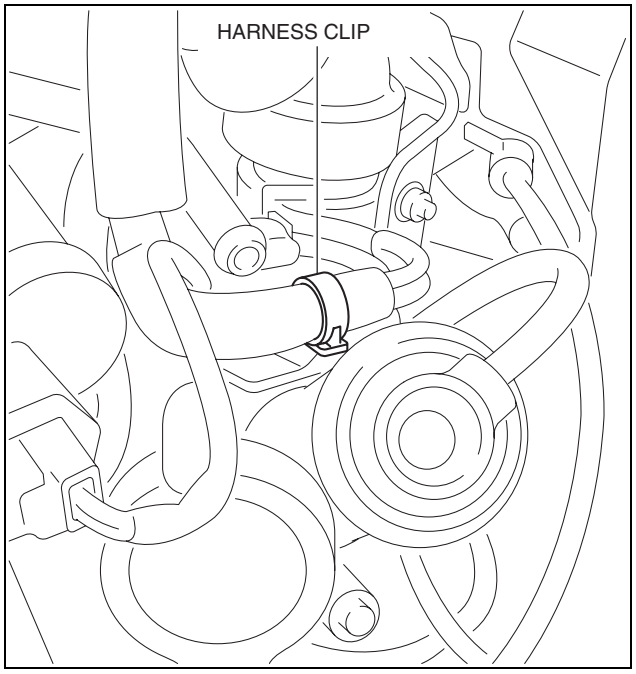
FUEL SYSTEM [SKYACTIV-D 2.2]

10. Detach the hose clip shown in the figure.



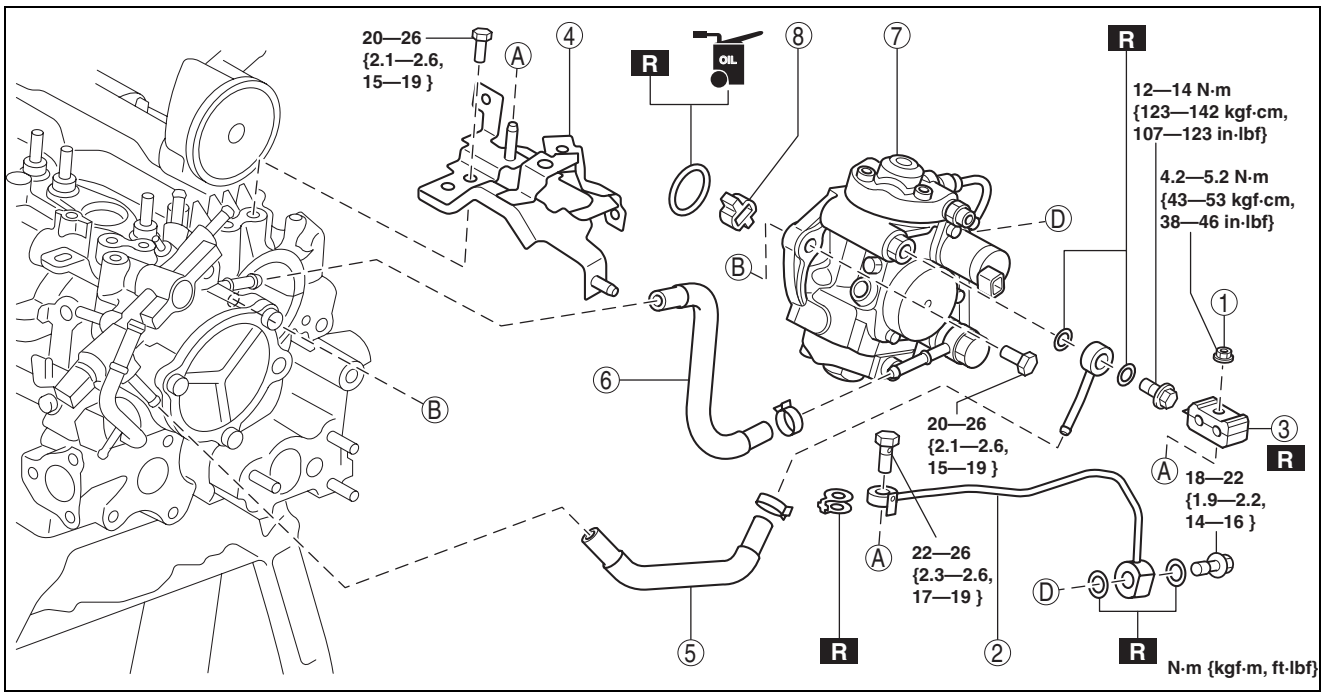
ac5wzw0000479

11. Detach the wiring harness clips shown in the figure.
12. Remove in the order shown in the figure.
13. Install in the reverse order of removal.
14. Perform the fuel hose installation procedure and fuel line air bleeding referring to the “AFTER SERVICE PRECAUTION”. (See 01-14B-7 AFTER SERVICE PRECAUTION [SKYACTIV-D 2.2].)



ac5wzw0000479

FUEL SYSTEM [SKYACTIV-D 2.2]



ac5wzw0000479

1	Clip installation nut
2	Fuel feed pipe (See 01-14B-49 Fuel Feed Pipe Removal Note.)
3	Clip (See 01-14B-50 Clip Removal Note.)
4	Bracket

5	Fuel return hose (See 01-14B-51 Fuel Return Hose Installation Note.)
6	Fuel main hose (See 01-14B-50 Fuel Main Hose Installation Note.)
7	Supply pump (See 01-14B-50 Supply Pump Removal Note.)
8	Spacer

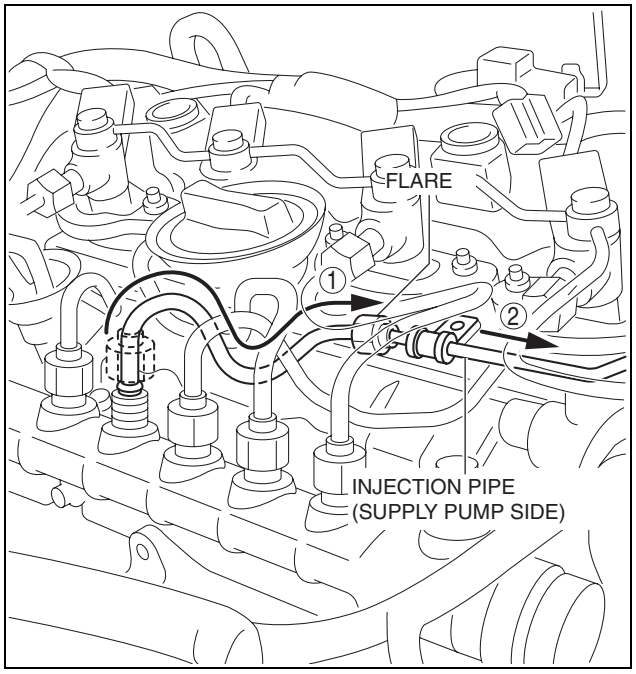
Fuel Feed Pipe Removal Note

1. Set the harness protector connected to a bracket.
2. Remove the fuel feed pipe.

FUEL SYSTEM [SKYACTIV-D 2.2]

Clip Removal Note

1. Remove the injection pipe (supply pump side) as shown in the figure. (See 01-14B-33 INJECTION PIPE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (1) Move the flared section.
   (2) Pull out the injection pipe (supply pump side).
2. Remove the clip.



ac5wzw0000479

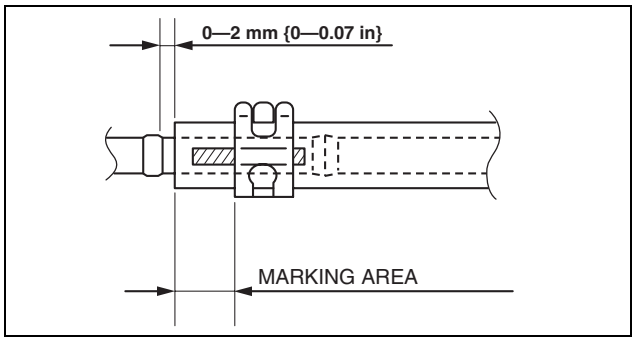
Supply Pump Removal Note

1. Remove the supply pump and the suction control valve as a single unit.
2. Remove the suction control valve from a supply pump.

Fuel Main Hose Installation Note

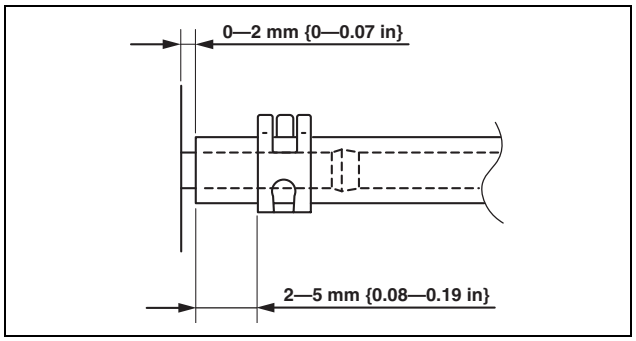
1. Install fuel main hose as shown in the figure.

Supply pump side



ac5wzw0000479

Lower case side



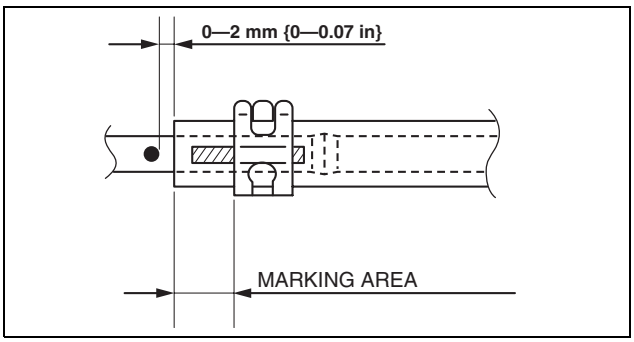
ac5wzw0000480

FUEL SYSTEM [SKYACTIV-D 2.2]

Fuel Return Hose Installation Note

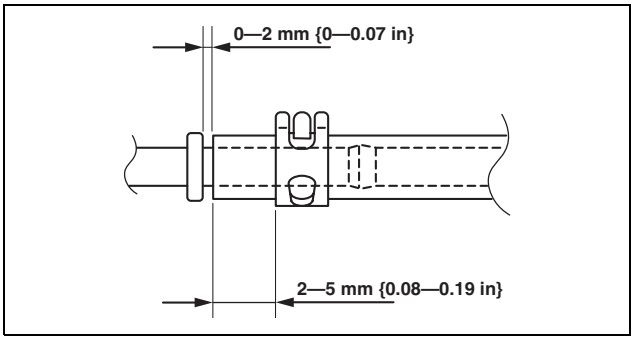
1. Install fuel return hose as shown in the figure.

Supply pump side



ac5wzw0000480

Lower case side



ac5wzw0000480

SUPPLY PUMP INSPECTION [SKYACTIV-D 2.2]

id0114z7805800

Caution

- **If a malfunction in the supply pump is verified, place a repair order with the DENSO, Ltd. services network (supply pump manufacturer), and do not disassemble the supply pump yourself.**

1. Verify that there is no malfunction in the following parts:
   - Supply pump
   - Suction control valve
     - — If there is a malfunction, ask the DENSO, Ltd services network or replace the supply pump. (See 01-14B-46 SUPPLY PUMP REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

FUEL SYSTEM [SKYACTIV-D 2.2]

COMMON RAIL REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0114z7803900

Warning

- **Fuel is highly flammable and dangerous. Fuel line spills and leakage can cause serious injury or death, and damage to equipment. If fuel comes into contact with the skin and eyes it will cause irritation. To prevent this, always perform the "Fuel Line Safety Procedure" referring to the "BEFORE REPAIR PROCEDURE".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before servicing the fuel system, make sure to discharge static electricity by touching a vehicle.**

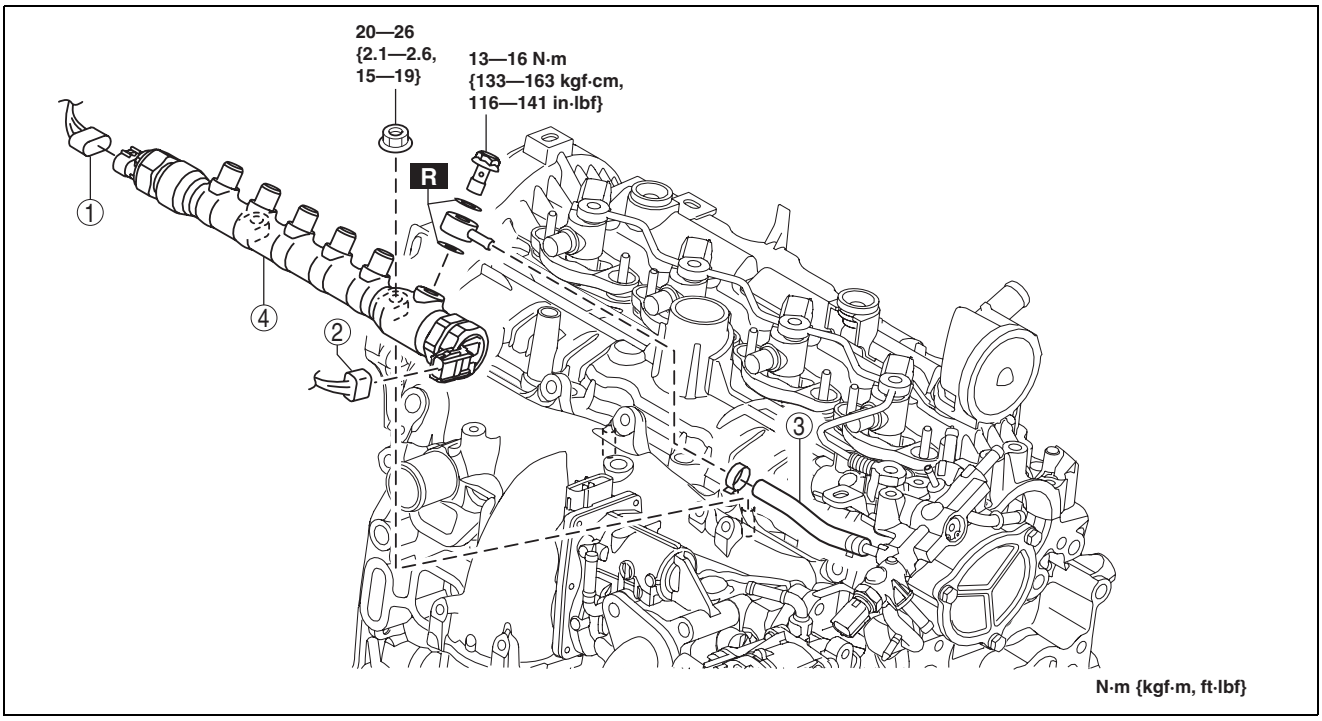
Caution

- **If parts are exposed to the fuel, their function may be decreased or a fire may occur. Spread a rag to absorb any leaked fuel.**
- **Do not let foreign matter get into the injection pipe to prevent clogging. In addition, always tighten the injection pipe to the specified torque.**

Note

- If the common rail is replaced, perform the "Fuel Injection Amount Learning".

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Perform the "Fuel Line Safety Procedure" referring to the "BEFORE SERVICE PRECAUTION". (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
3. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the injection pipes (fuel injector side) and the injection pipe (supply pump side). (See 01-14B-33 INJECTION PIPE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove in the order shown in the figure.
6. Install in the reverse order of removal.
7. Perform the "Fuel Hose Installation Procedure" and "Fuel Line Air Bleeding" referring to the "AFTER SERVICE PRECAUTION". (See 01-14B-7 AFTER SERVICE PRECAUTION [SKYACTIV-D 2.2].)



ac5wzw0000529

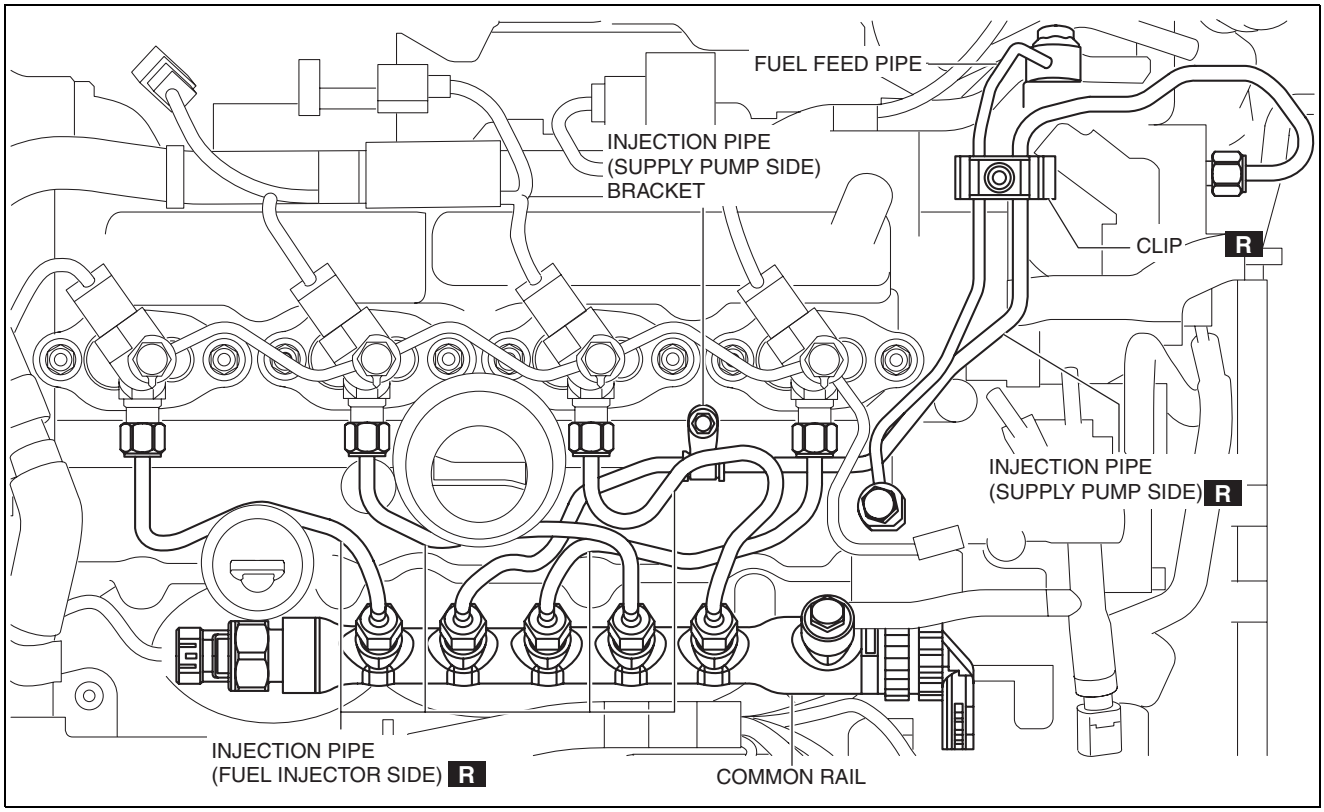
1	Fuel pressure sensor connector
2	Fuel pressure limiter valve connector

3	Fuel return hose (See 01-14B-54 Fuel Return Hose Installation Note.)
4	Common rail (See 01-14B-53 Common Rail Installation Note.)

FUEL SYSTEM [SKYACTIV-D 2.2]

Common Rail Installation Note

1. Temporarily tighten the common rail.



ac5wzw0000529

2. Temporarily tighten the new injection pipe (supply pump side).
3. Temporarily tighten the new injection pipes (fuel injector side).
4. Temporarily tighten the fuel return pipe (supply pump side).
5. Tighten the new clip.

   Clip tightening torque
   4.2—5.2 N·m {43—53 kgf·cm, 38—46 in·lbf}

6. Tighten the injection pipe (supply pump side) bracket.

   Injection pipe (supply pump side) bracket tightening torque
   8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

7. Tighten the injection pipe (supply pump side) and the injection pipes (fuel injector side) on the common rail side.

   Tightening torque for injection pipe (supply pump side) and injection pipe (fuel injector side)
   32—42 N·m {3.3—4.2 kgf·m, 24—30 ft·lbf}

8. Tighten the injection pipe (supply pump side) and the injection pipes (fuel injector side) on the fuel injector side.

   Tightening torque for injection pipe (supply pump side) and injection pipe (fuel injector side)
   32—42 N·m {3.3—4.2 kgf·m, 24—30 ft·lbf}

9. Tighten the common rail.

   Common rail tightening torque
   20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}

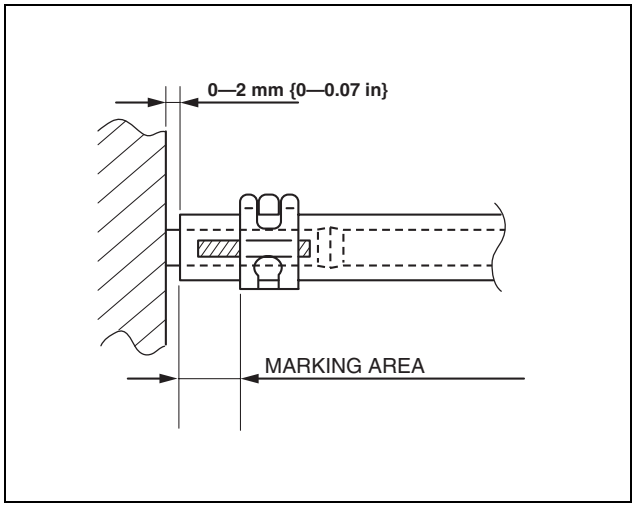
10. Tighten the fuel return pipe (supply pump side).

    Fuel return pipe (supply pump side) tightening torque
    Supply pump side: 18—22 N·m {1.9—2.2 kgf·m, 14—16 ft·lbf}
    Lower case side: 20—26 N·m {2.1—2.6 kgf·m, 15—19 ft·lbf}

FUEL SYSTEM [SKYACTIV-D 2.2]

Fuel Return Hose Installation Note

1. Install the fuel return hose as shown in the figure.



ac5wzw0000474

COMMON RAIL INSPECTION [SKYACTIV-D 2.2]

id0114z7803800

Caution

- **It is extremely dangerous to remove the fuel pressure sensor and fuel pressure limiter valve from the common rail as it could cause fuel leakage because the common rail is highly pressurized with fuel. Therefore, do not remove the fuel pressure sensor and the fuel pressure limiter valve installed to the common rail.**

1. Visually verify that there is no cracking, damage, or rust on the common rail.

Note

- If there is cracking , damage, or rust on the common rail, it could cause fuel leakage.

- If a malfunction is verified, replace the common rail. (See 01-14B-52 COMMON RAIL REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

LOWER CASE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0114z7266300

Warning

- **Fuel is highly flammable and dangerous. Fuel line spills and leakage can cause serious injury or death, and damage to equipment. If fuel comes into contact with the skin and eyes it will cause irritation. To prevent this, always perform the "Fuel Line Safety Procedure" referring to the "BEFORE REPAIR PROCEDURE".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before servicing the fuel system, make sure to discharge static electricity by touching a vehicle.**

Caution

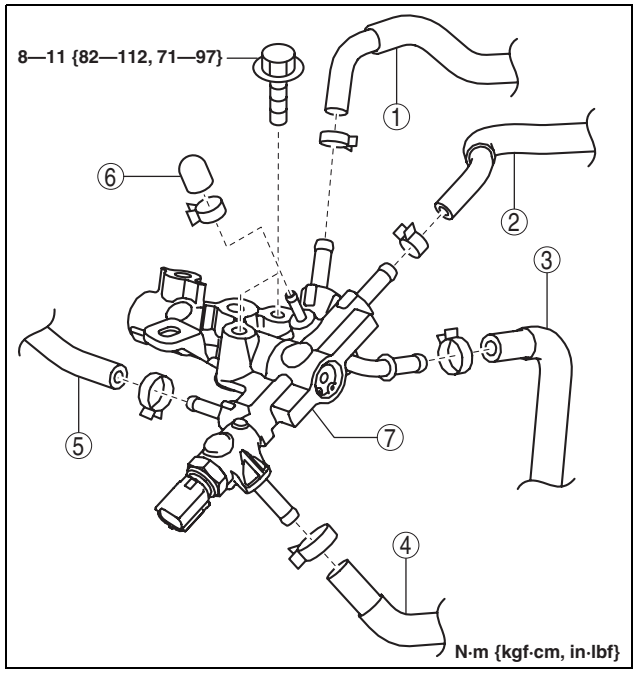
- **If parts are exposed to the fuel, their function may be decreased or a fire may occur. Spread a rag to absorb any leaked fuel.**
- **If fuel does not pass through the fuel filter, it could cause a fuel system malfunction. Therefore, do not install the fuel hoses (main and return side) in reverse. When installing the fuel hose, always refer to the "AFTER SERVICE PRECAUTION" and perform the "Fuel Hose Installation Procedure".**

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Perform the "Fuel Line Safety Procedure" referring to the "BEFORE SERVICE PRECAUTION". (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
3. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the fuel return pipe (supply pump side). (See 01-14B-46 SUPPLY PUMP REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove the fuel return pipe (fuel injector side). (See 01-14B-35 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

FUEL SYSTEM [SKYACTIV-D 2.2]

6. Remove in the order shown in the figure.

1	Fuel main hose
2	Fuel return hose No.1 (See 01-14B-57 Fuel Main Hose and Fuel Return Hose No.1 Installation Note.)
3	Fuel return hose No.2 (See 01-14B-56 Fuel Return Hose No.2 Installation Note.)
4	Fuel return hose No.3 (See 01-14B-56 Fuel Return Hose No.3 Installation Note.)
5	Fuel return hose No.4 (See 01-14B-56 Fuel Return Hose No.4 Installation Note.)
6	Plug (See 01-14B-55 Plug Installation Note.)
7	Lower case

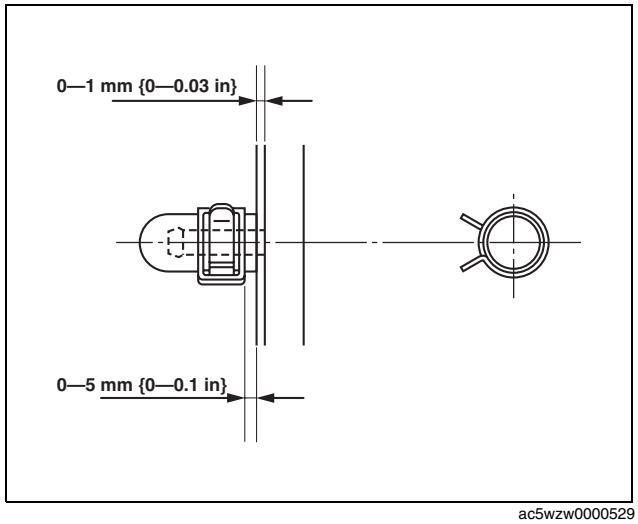


ac5wzw0000488

7. Install in the reverse order of removal.
8. Perform the Fuel Hose Installation and Fuel Line Air Bleeding referring to the “AFTER SERVICE PRECAUTION”. (See 01-14B-7 AFTER SERVICE PRECAUTION [SKYACTIV-D 2.2].)

Plug Installation Note

1. Install plug as shown in the figure.

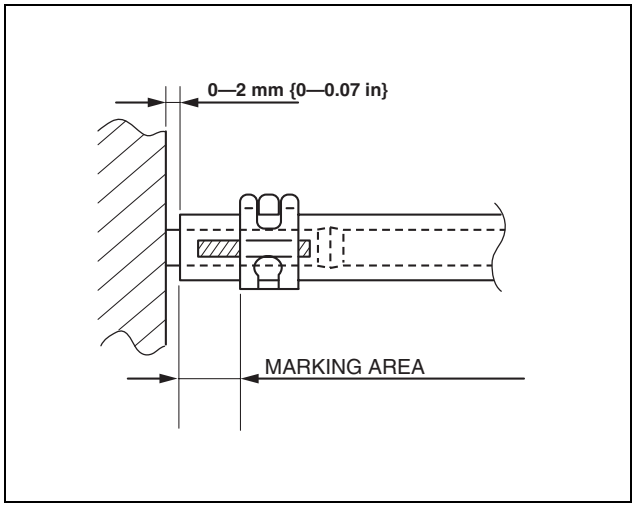


ac5wzw0000529

FUEL SYSTEM [SKYACTIV-D 2.2]

Fuel Return Hose No.4 Installation Note

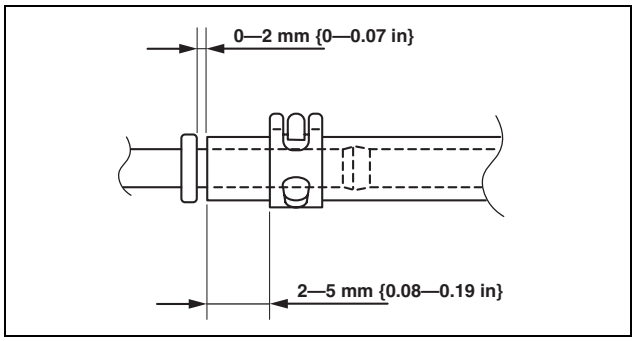
1. Install fuel return hose No.4 as shown in the figure.



ac5wzw0000488

Fuel Return Hose No.3 Installation Note

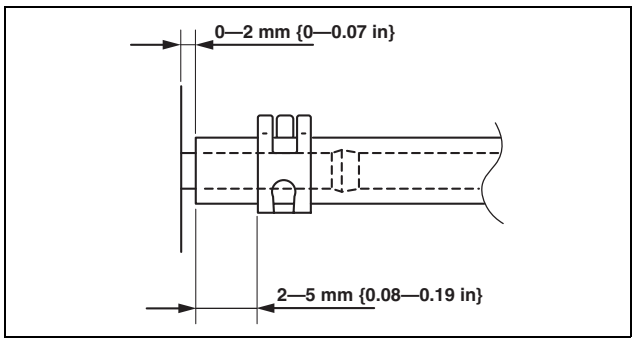
1. Install fuel return hose No.3 as shown in the figure.



ac5wzw0000488

Fuel Return Hose No.2 Installation Note

1. Install fuel return hose No.2 as shown in the figure.



ac5wzw0000488

FUEL SYSTEM [SKYACTIV-D 2.2]

Fuel Main Hose and Fuel Return Hose No.1 Installation Note

1. Install the fuel main hose and fuel return hose No.1 as shown in the figure.

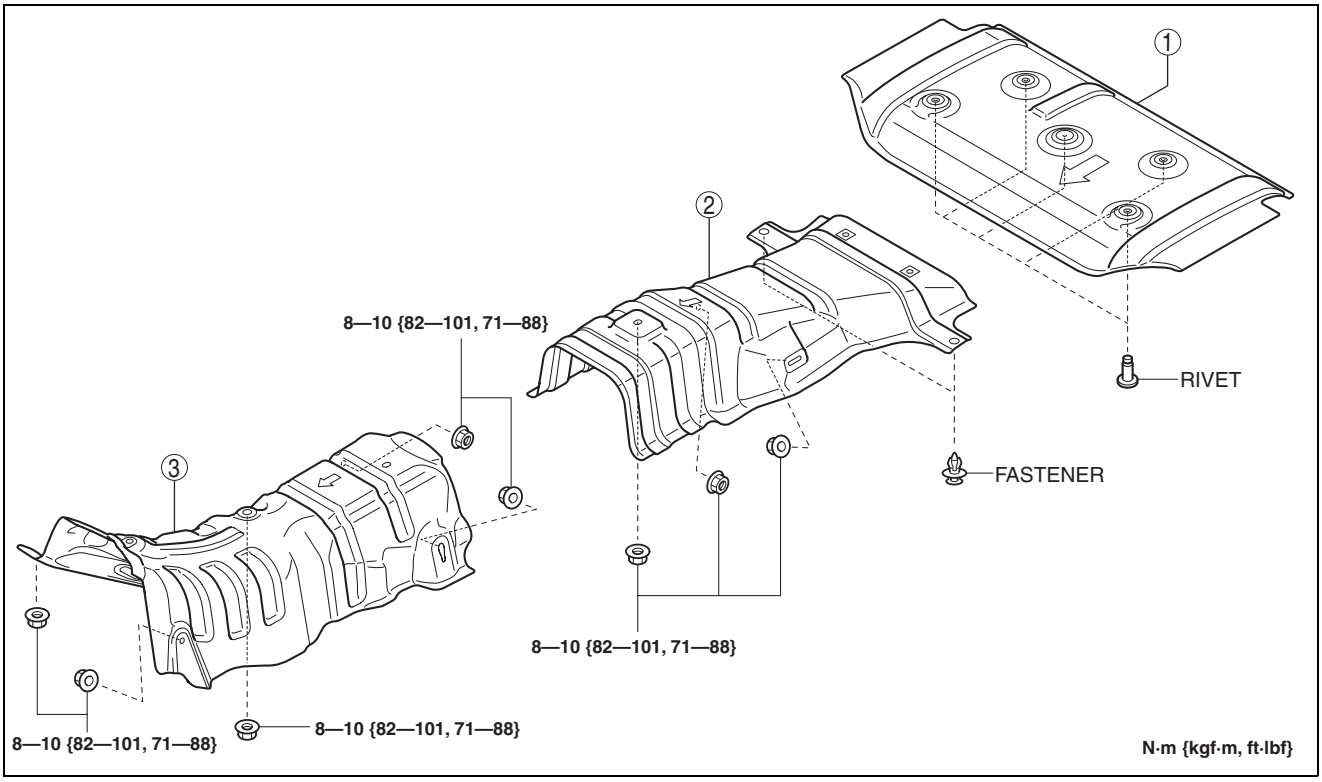
6	Exhaust manifold gasket

EXHAUST SYSTEM [SKYACTIV-G 2.0]

Exhaust system insulator removal/installation

1. Remove the exhaust system insulator in the order shown in the figure.
2. Install in the reverse order of removal.



ac5wzw0000298

1	Insulator (rear) (See 01-15A-4 Insulator (rear) removal note.)

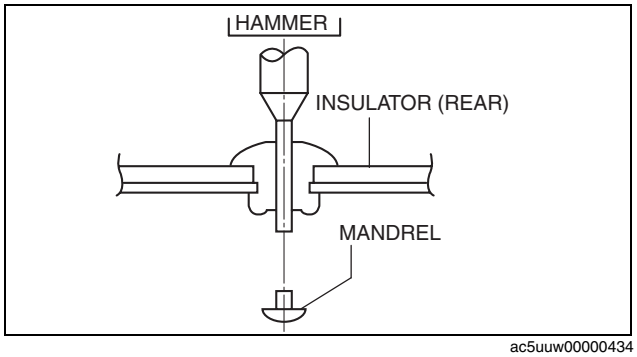
2	Insulator (middle)
3	Insulator (front)

Insulator (rear) removal note

Note

- The insulator (rear) are installed using rivets.

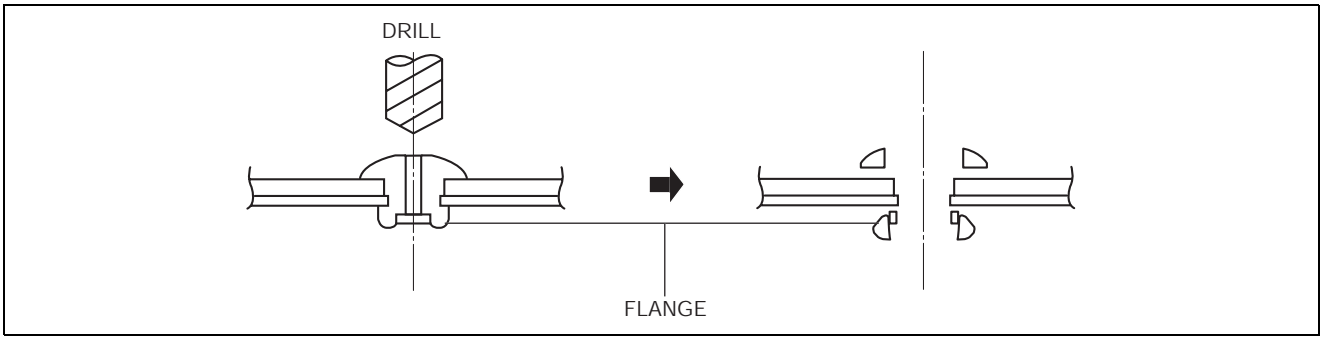
1. Push out the mandrel using a hammer and punch (**2—2.8 mm {0.08—0.11 in}** diameter).



ac5uuw00000434

EXHAUST SYSTEM [SKYACTIV-G 2.0]

2. Remove the flange using a drill (**5 mm {0.20 in}** drill bit).



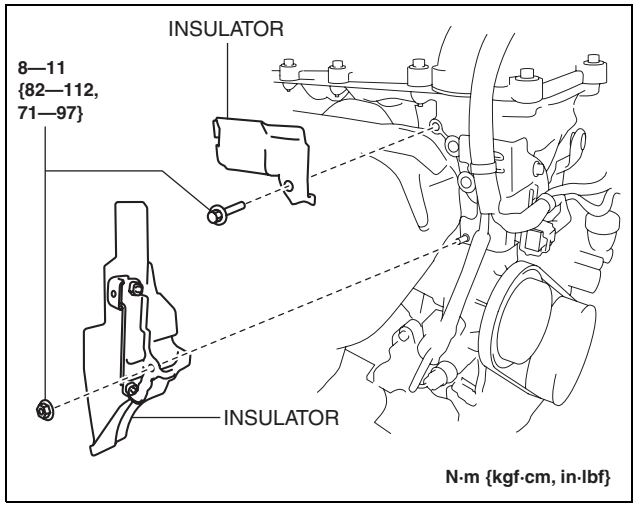
ar8uuw00001479

Brace bar removal note

1. Remove the floor under cover. (See 09-16-44 FLOOR UNDER COVER REMOVAL/INSTALLATION.)
2. Remove the brace bar.

Exhaust manifold insulator removal note

1. Remove the insulator as shown in the figure.
2. Remove the No.1 engine mount rubber. (See 01-10A-105 ENGINE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Move the engine.
4. Remove the exhaust manifold insulator.



ac5wzw0000271

Exhaust manifold removal note

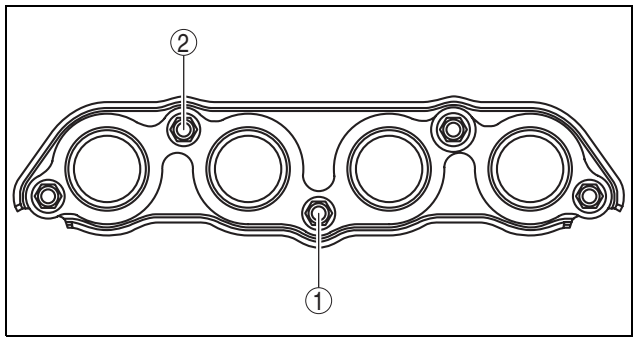
Note

- When removing the exhaust manifold, the bracket installed under the exhaust manifold does not have to be removed. Remove the exhaust manifold with the bracket installed.

1. Remove the front crossmember. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
2. Remove the exhaust manifold.

Exhaust manifold installation note

1. Temporarily tighten the exhaust manifold installation nuts (1) and (2) shown in the figure by hand.
2. Tighten the exhaust manifold installation nuts (1) and (2) shown in the figure to **33—53 N·m {3.4—5.4 kgf·m, 25—39 ft·lbf}**.



ac5wzw0000271

EXHAUST SYSTEM [SKYACTIV-G 2.0]

3. Temporarily tighten the exhaust manifold installation nuts (3) to (5) shown in the figure by hand.
4. Tighten the exhaust manifold installation nuts (3) to (5) shown in the figure.

   Exhaust manifold installation nut tightening torque
   43—64 N·m {4.4—6.5 kgf·m, 32—47 ft·lbf}

5. Tighten the exhaust manifold installation nuts (1) and (2) shown in the figure.

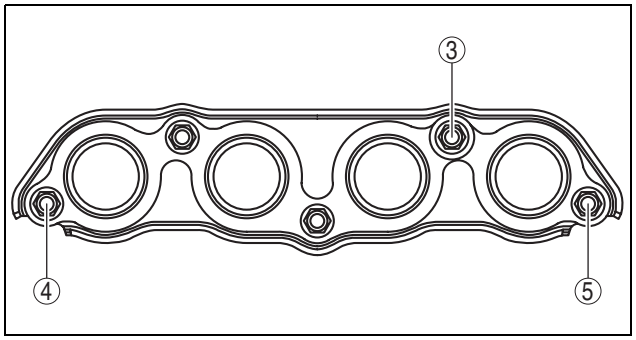
   Exhaust manifold installation nut tightening torque
   43—64 N·m {4.4—6.5 kgf·m, 32—47 ft·lbf}

6. Temporarily tighten the bolts (6) and (7) shown in the figure.
7. Tighten the bolt (6) shown in the figure.

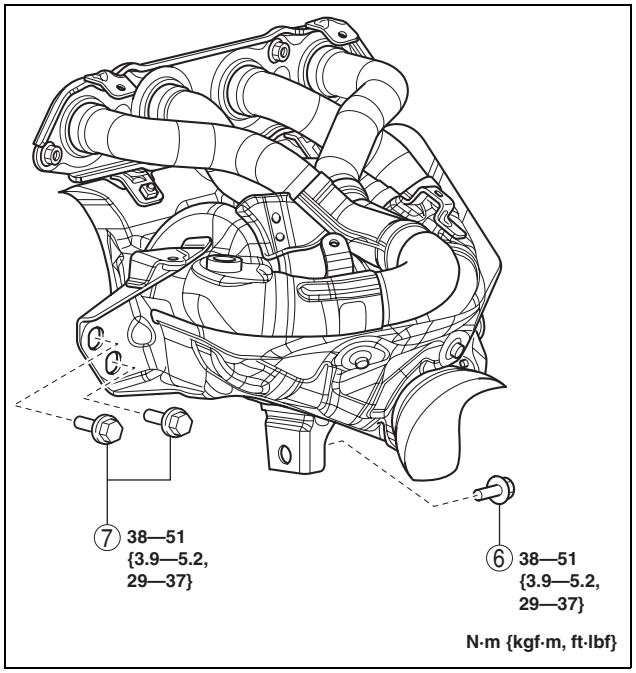
   Exhaust manifold installation bolt tightening torque
   38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

8. Tighten the bolt (7) shown in the figure.

   Exhaust manifold installation bolt tightening torque
   38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}



ac5wzw0000271



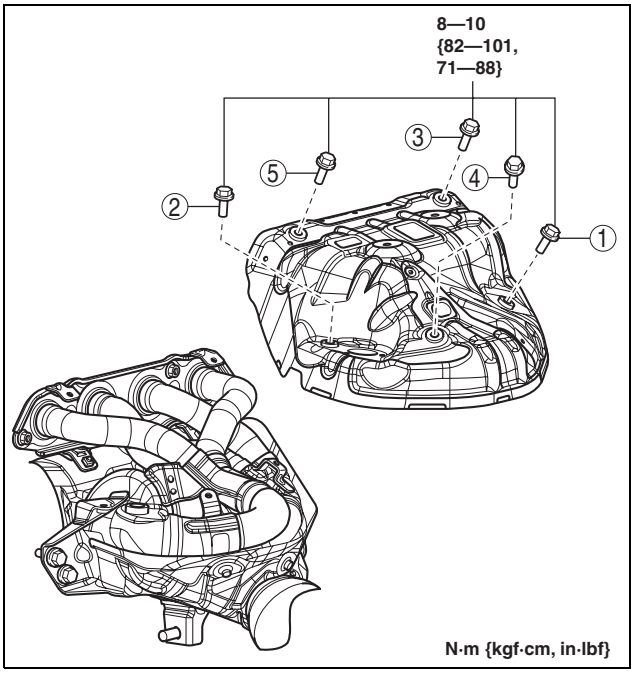
ac5wzw0000271

EXHAUST SYSTEM [SKYACTIV-G 2.0]

Exhaust manifold insulator installation note

1. Temporarily tighten the exhaust manifold insulator.
2. Tighten the exhaust manifold insulator in the order shown in the figure.

Exhaust manifold insulator (upper) tightening torque
8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

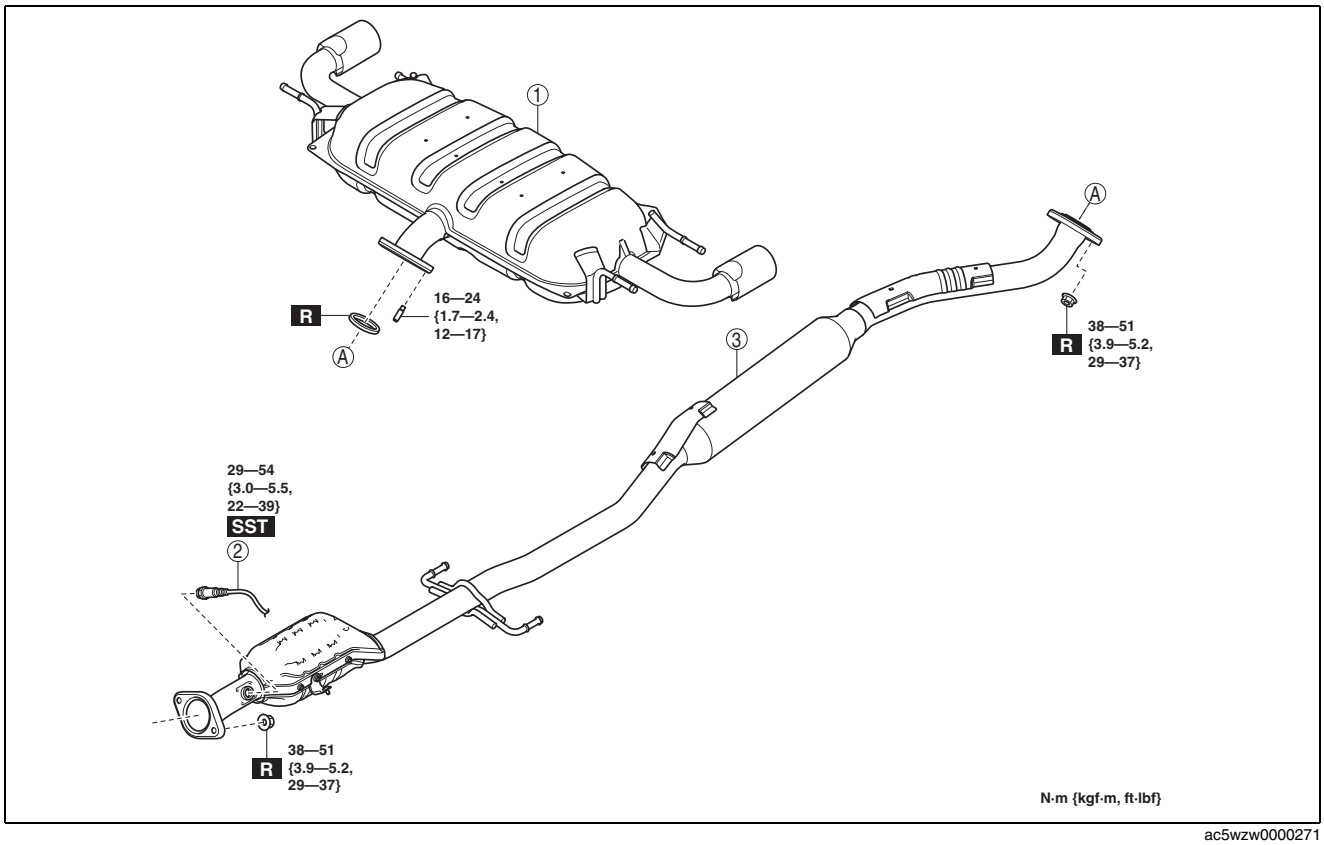


ac5wzw0000271

4WD

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove in the order indicated in the table.
3. Remove the insulator. (See 01-15A-9 Exhaust system insulator removal/installation.)
4. Install in the reverse order of removal.

Step 1



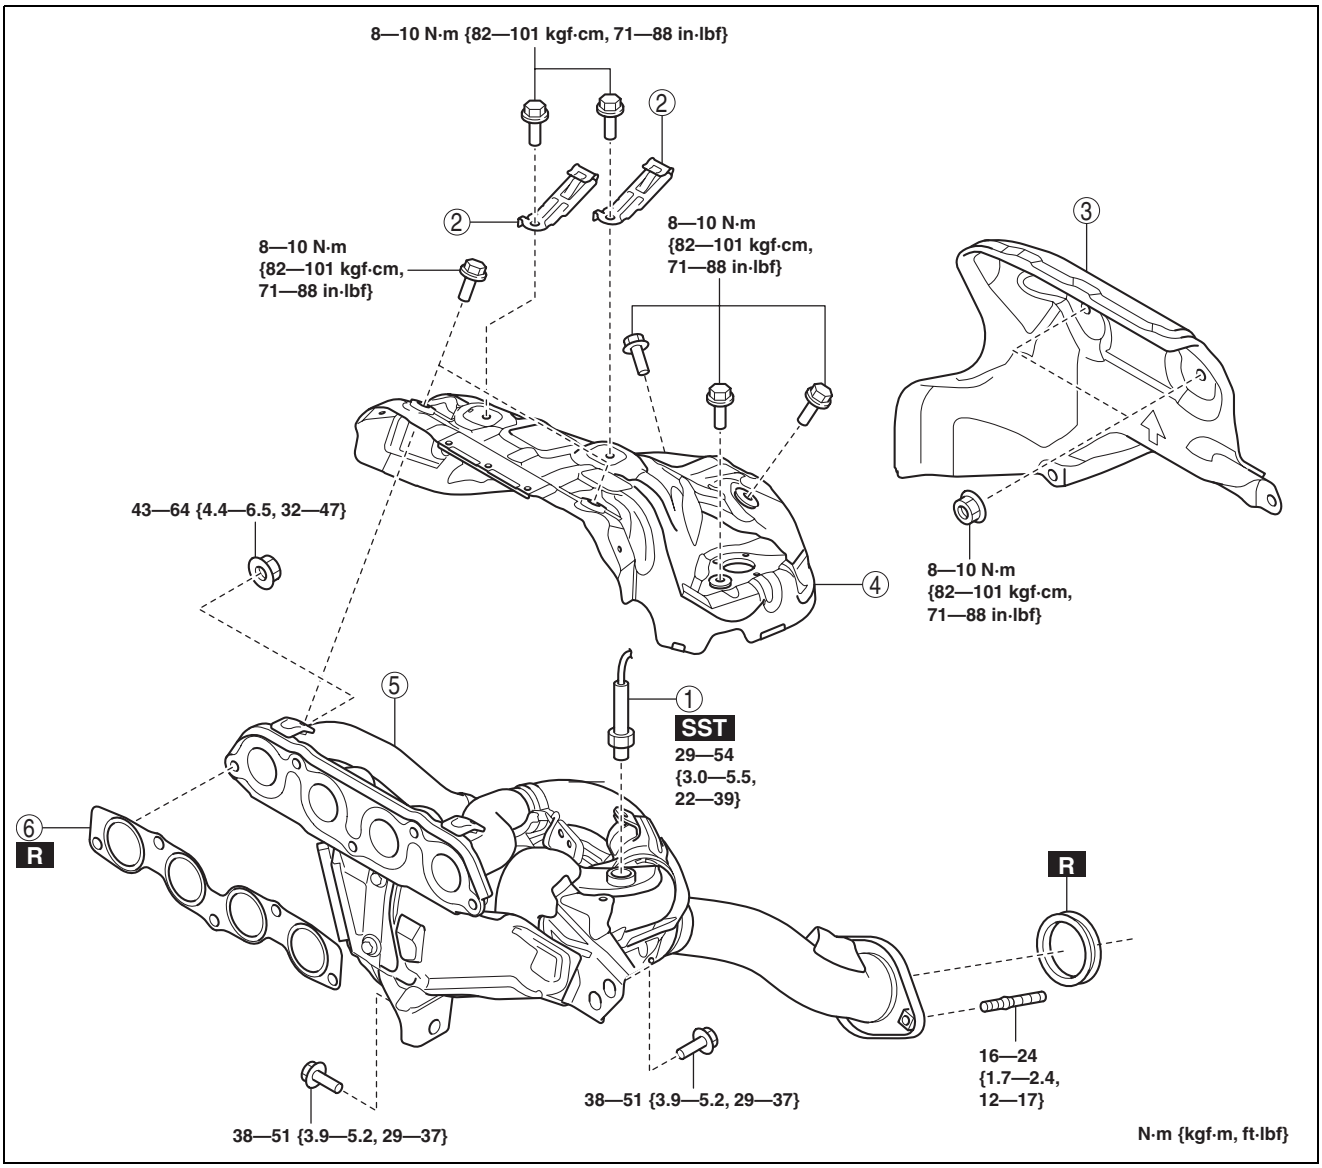
ac5wzw0000271

EXHAUST SYSTEM [SKYACTIV-G 2.0]

1	Main silencer
2	HO2S (See 01-40-56 HEATED OXYGEN SENSOR (HO2S) REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

3	TWC

Step 2



ac5wzw0000271

1	A/F sensor (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
2	Clip
3	Insulator

4	Exhaust manifold insulator (See 01-15A-10 Exhaust manifold insulator removal note.) (See 01-15A-12 Exhaust manifold insulator installation note.)

01-15B EXHAUST SYSTEM [SKYACTIV-D 2.2]

EXHAUST SYSTEM INSPECTION [SKYACTIV-D 2.2] 01-15B–1
EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2] 01-15B–1
2WD 01-15B–1
4WD 01-15B–9

EXHAUST SYSTEM [SKYACTIV-D 2.2]

EXHAUST SYSTEM INSPECTION [SKYACTIV-D 2.2]

id0115z7800100

1. Start the engine and inspect each exhaust system component for exhaust gas leakage.
   - If there is leakage, repair or replace the appropriate component. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0115z7800200

Warning
- **A hot engine and exhaust system can cause severe burns. Turn off the engine and wait until they are cool before removing the exhaust system.**

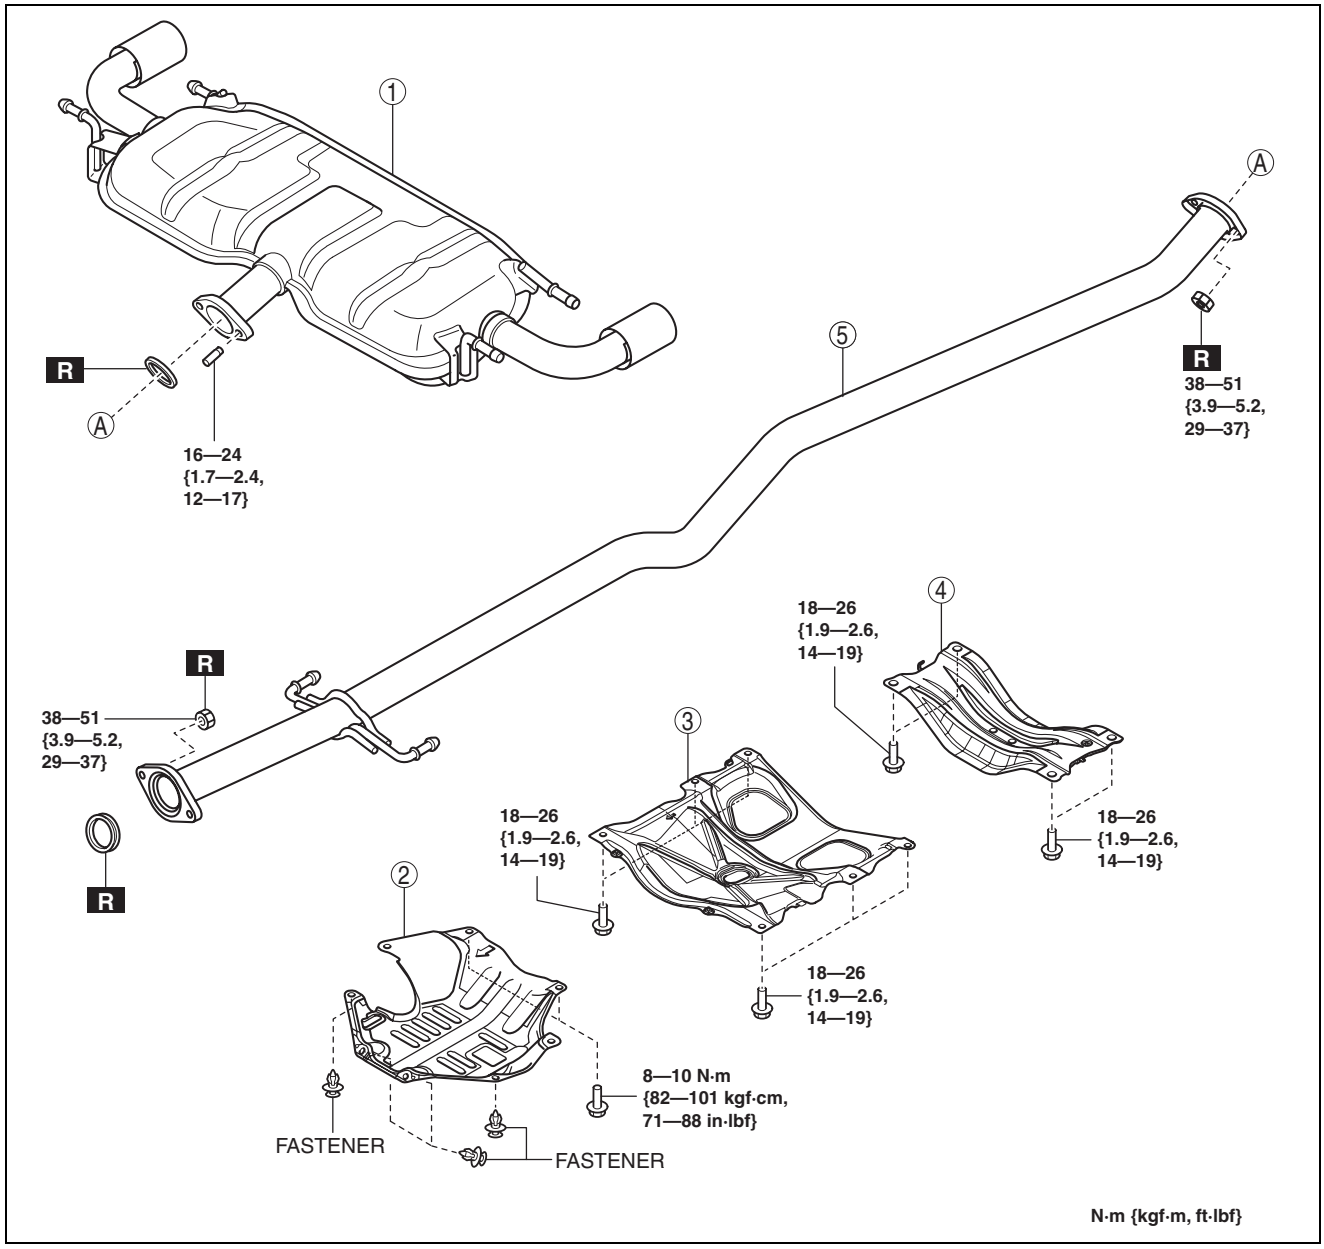
Caution
- **Perform exhaust gas temperature sensor removal/installation only when inspection or replacement is required, such as when DTCs for the sensor are displayed, because it may cause exhaust gas leakage. If the exhaust gas temperature sensor is removed/installed once, always verify that there is no exhaust gas leakage after reinstallation.**

Note
- When the DPF indicator light illuminates, refer to the adjustment procedure prior to part removal, and perform the DPF manual regeneration.
- When the DPF indicator light flashes, inspect according to the symptom troubleshooting “DPF lamp flashes” prior to part removal.
- If the catalytic converter is replaced, perform the DPF initialization procedure.

2WD
1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove in the order shown in the figure.
3. Remove the exhaust system insulator. (See 01-15B-4 Exhaust System Insulator Removal/Installation.)
4. Install in the reverse order of removal.

EXHAUST SYSTEM [SKYACTIV-D 2.2]

Step 1



ac5wzw0000531

1	Main silencer
2	Plate
3	Brace bar (See 01-15B-5 Brace Bar Removal Note.)

4	Tunnel member
5	Middle pipe

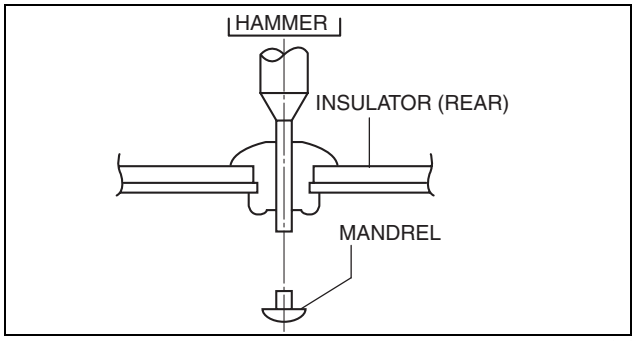
2	Insulator (middle)
3	Insulator (front)

Insulator (Rear) Removal Note

Note

- If re-installed, use the same rivets.

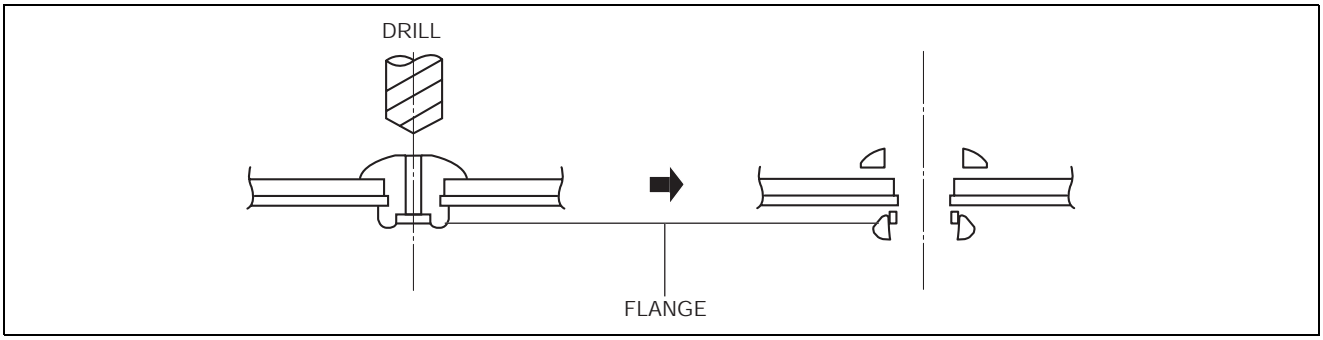
1. Using a hammer and punch (diam. **2—2.8 mm {0.08—0.11 in}**), punch out the mandrel.



ac5uuw00000434

EXHAUST SYSTEM [SKYACTIV-D 2.2]

2. Pull out and remove the flange using a drill (diam. **5 mm** {**0.2 in**}).



ar8uuw00001479

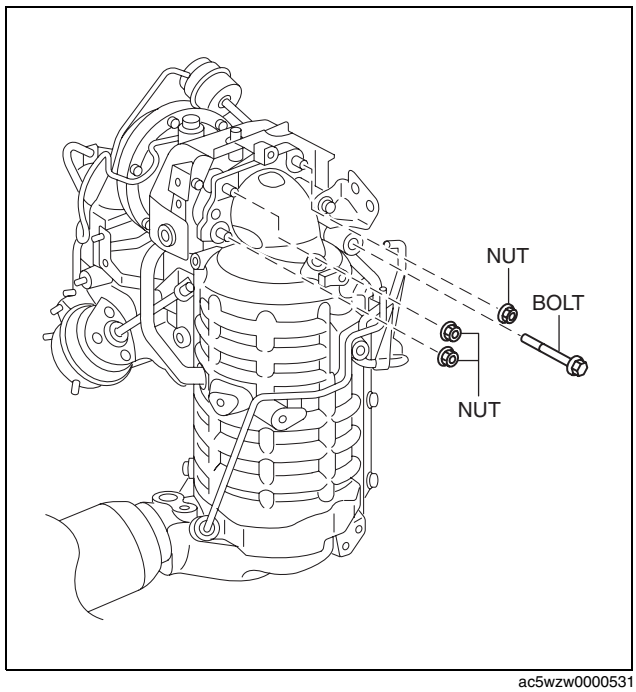
Brace Bar Removal Note
1. Remove the floor and cover. (See 09-16-44 FLOOR UNDER COVER REMOVAL/INSTALLATION.)
2. Remove the brace bar.

Insulator Removal Note
1. Remove the windshield wiper arm and blade. (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
2. Remove the cowl grille (See 09-16-3 COWL GRILLE REMOVAL/INSTALLATION.).
3. Remove the windshield wiper motor and link. (See 09-19-9 WINDSHIELD WIPER MOTOR AND LINK REMOVAL/INSTALLATION.)
4. Remove the cowl panel. (See 09-10-41 COWL PANEL REMOVAL/INSTALLATION.)
5. Remove the insulator.

Catalytic Converter Lower Bracket Removal Note
1. Remove the front crossmember. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
2. Remove the catalytic converter lower bracket.

Catalytic Converter Removal Note
1. Disconnect the exhaust gas temperature sensor No.1 connector.
2. Disconnect the exhaust gas sensor No.2 connector.
3. Remove the exhaust gas sensor No.2 wiring harness installation nuts.
4. Disconnect the A/F sensor connector.
5. Remove the catalytic converter.

Catalytic Converter Installation Note
1. Temporarily tighten bolt and nuts shown in the figure.



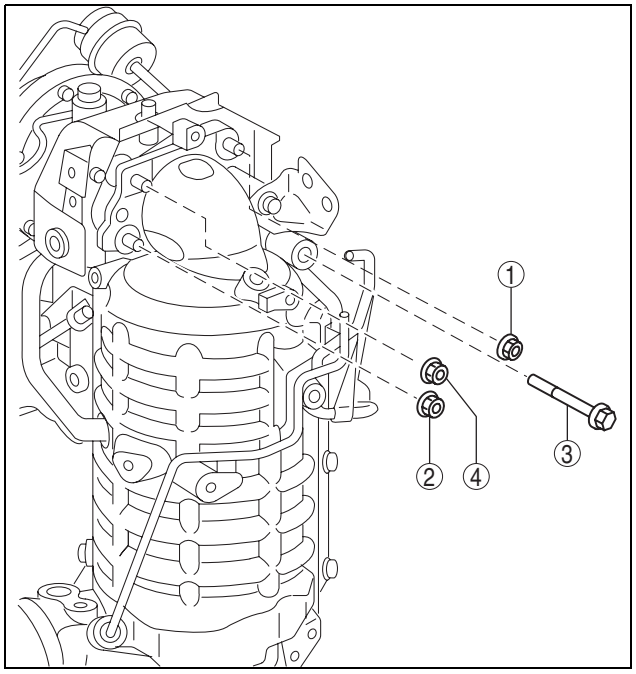
ac5wzw0000531

EXHAUST SYSTEM [SKYACTIV-D 2.2]

2. Tighten the bolt and nuts in the other shown in the figure.

   Catalytic converter installation bolt and nuts tightening torque
   38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

3. All the conclusions check after attachment whether it is the right torque.



ac5wzw0000531

Catalytic Converter Bracket Installation Note

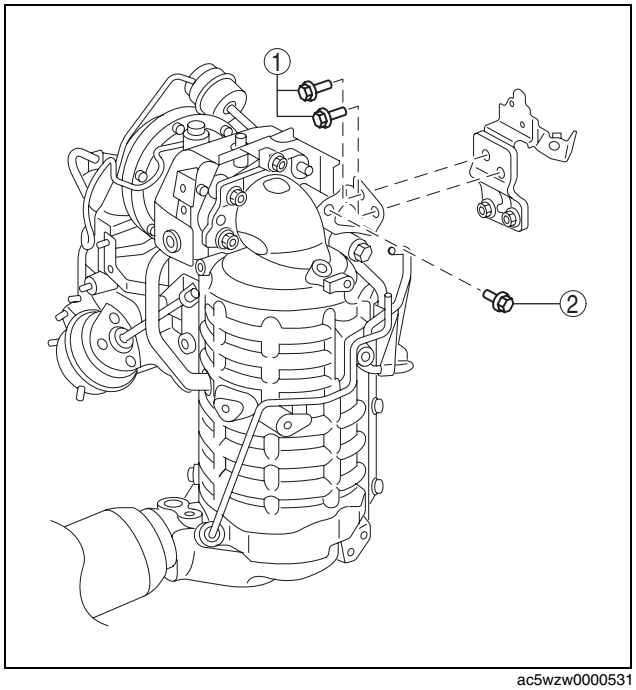
1. Temporarily tighten bolts 1 and bolt 2 shown in the figure.
2. Tighten bolts 1 shown in the figure.

   Catalytic converter upper bracket installation bolt (engine side) tightening torque
   38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

3. Tighten bolts 2 shown in the figure.

   Catalytic converter upper bracket installation bolt (catalytic converter side) tightening torque
   38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

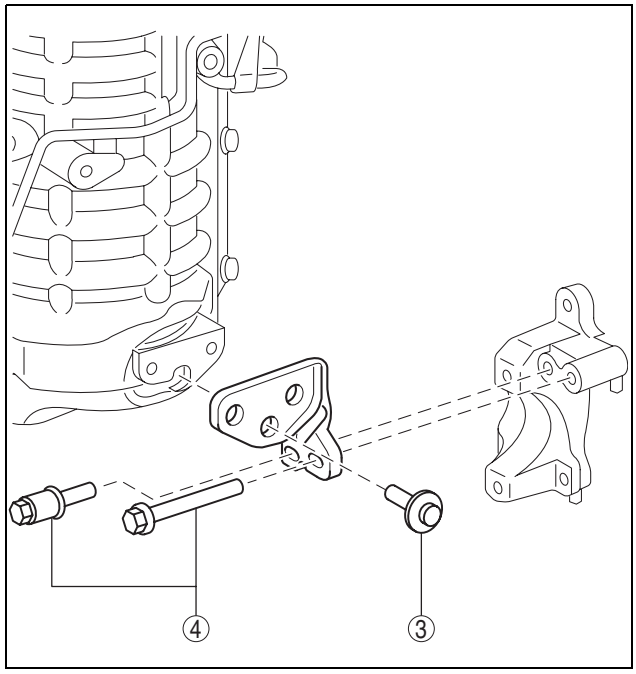
4. All the conclusions check after attachment whether it is the right torque.



ac5wzw0000531

5. Temporarily tighten bolts 3 and bolt 4 shown in the figure.
6. Tighten the bolts in the order shown in the figure.

Catalytic converter lower bracket installation bolt tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

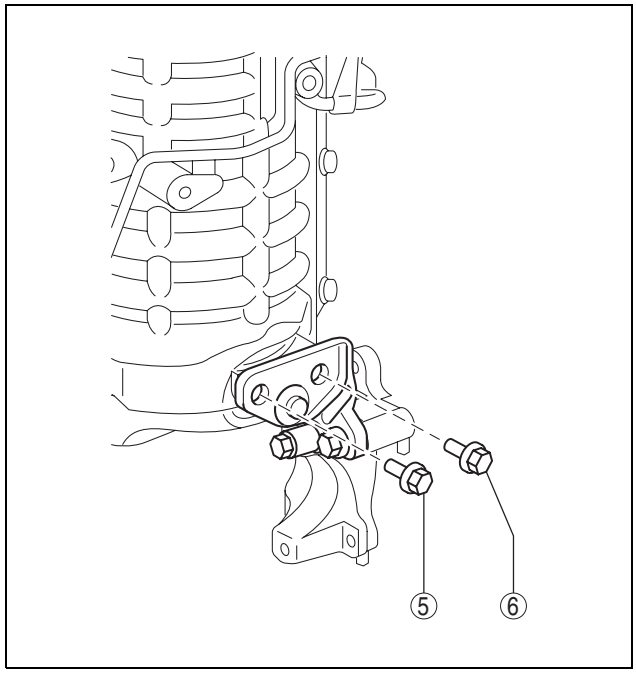


ac5wzw0000531

7. Temporarily tighten bolts 5 and bolt 6 shown in the figure.
8. Tighten the bolts in the order shown in the figure.

Catalytic converter lower bracket installation bolt tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

9. All the conclusions check after attachment whether it is the right torque.

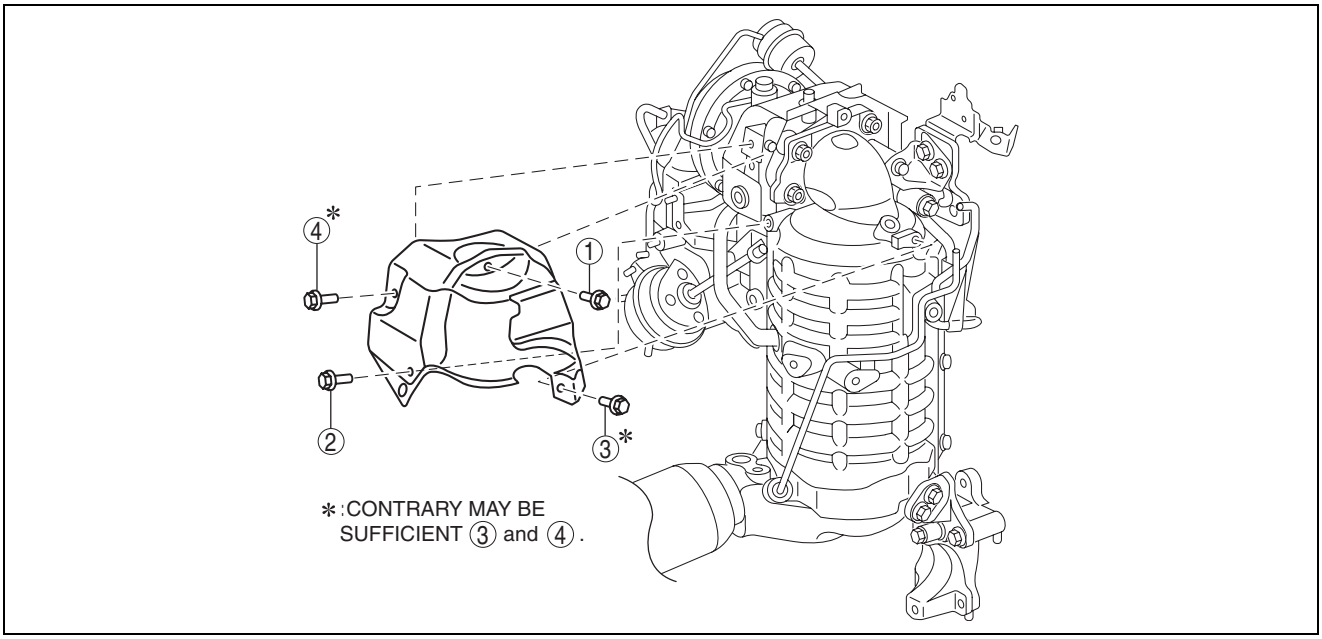


ac5wzw0000531

EXHAUST SYSTEM [SKYACTIV-D 2.2]

Catalytic Converter Insulator Installation Note

1. Temporarily tighten the catalytic converter insulator installation bolts.
2. Tighten the bolts in the order shown in the figure.



ac5wzw0000531

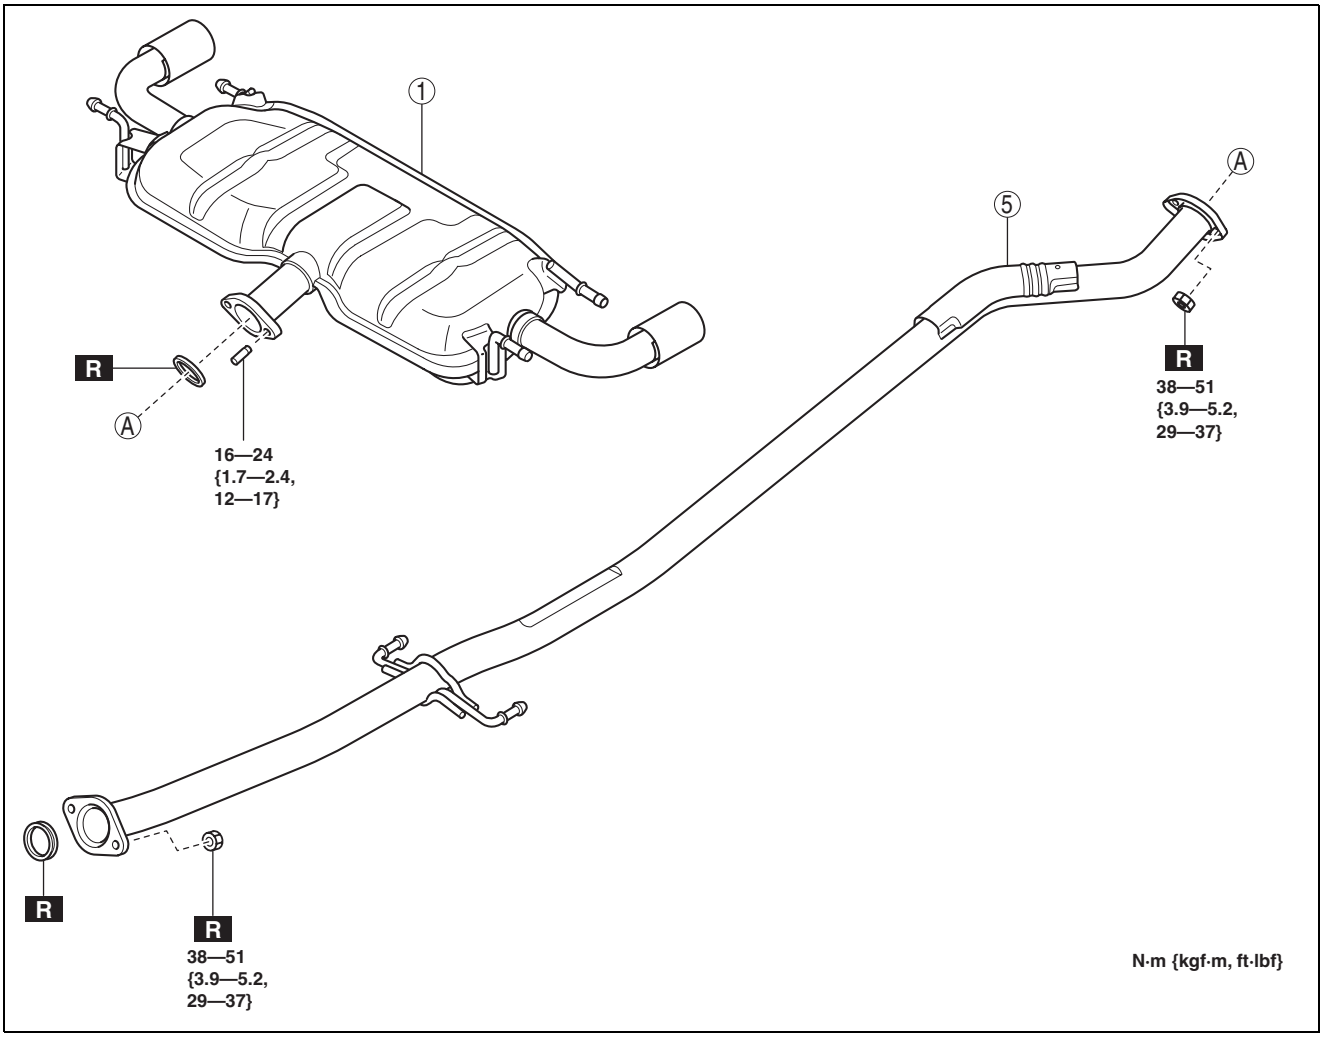
Catalytic converter insulator installation bolt tightening torque
8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

EXHAUST SYSTEM [SKYACTIV-D 2.2]

4WD

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove in the order shown in the figure.
3. Remove the exhaust system insulator. (See 01-15B-11 Exhaust system insulator removal/installation.)
4. Install in the reverse order of removal.

Step 1

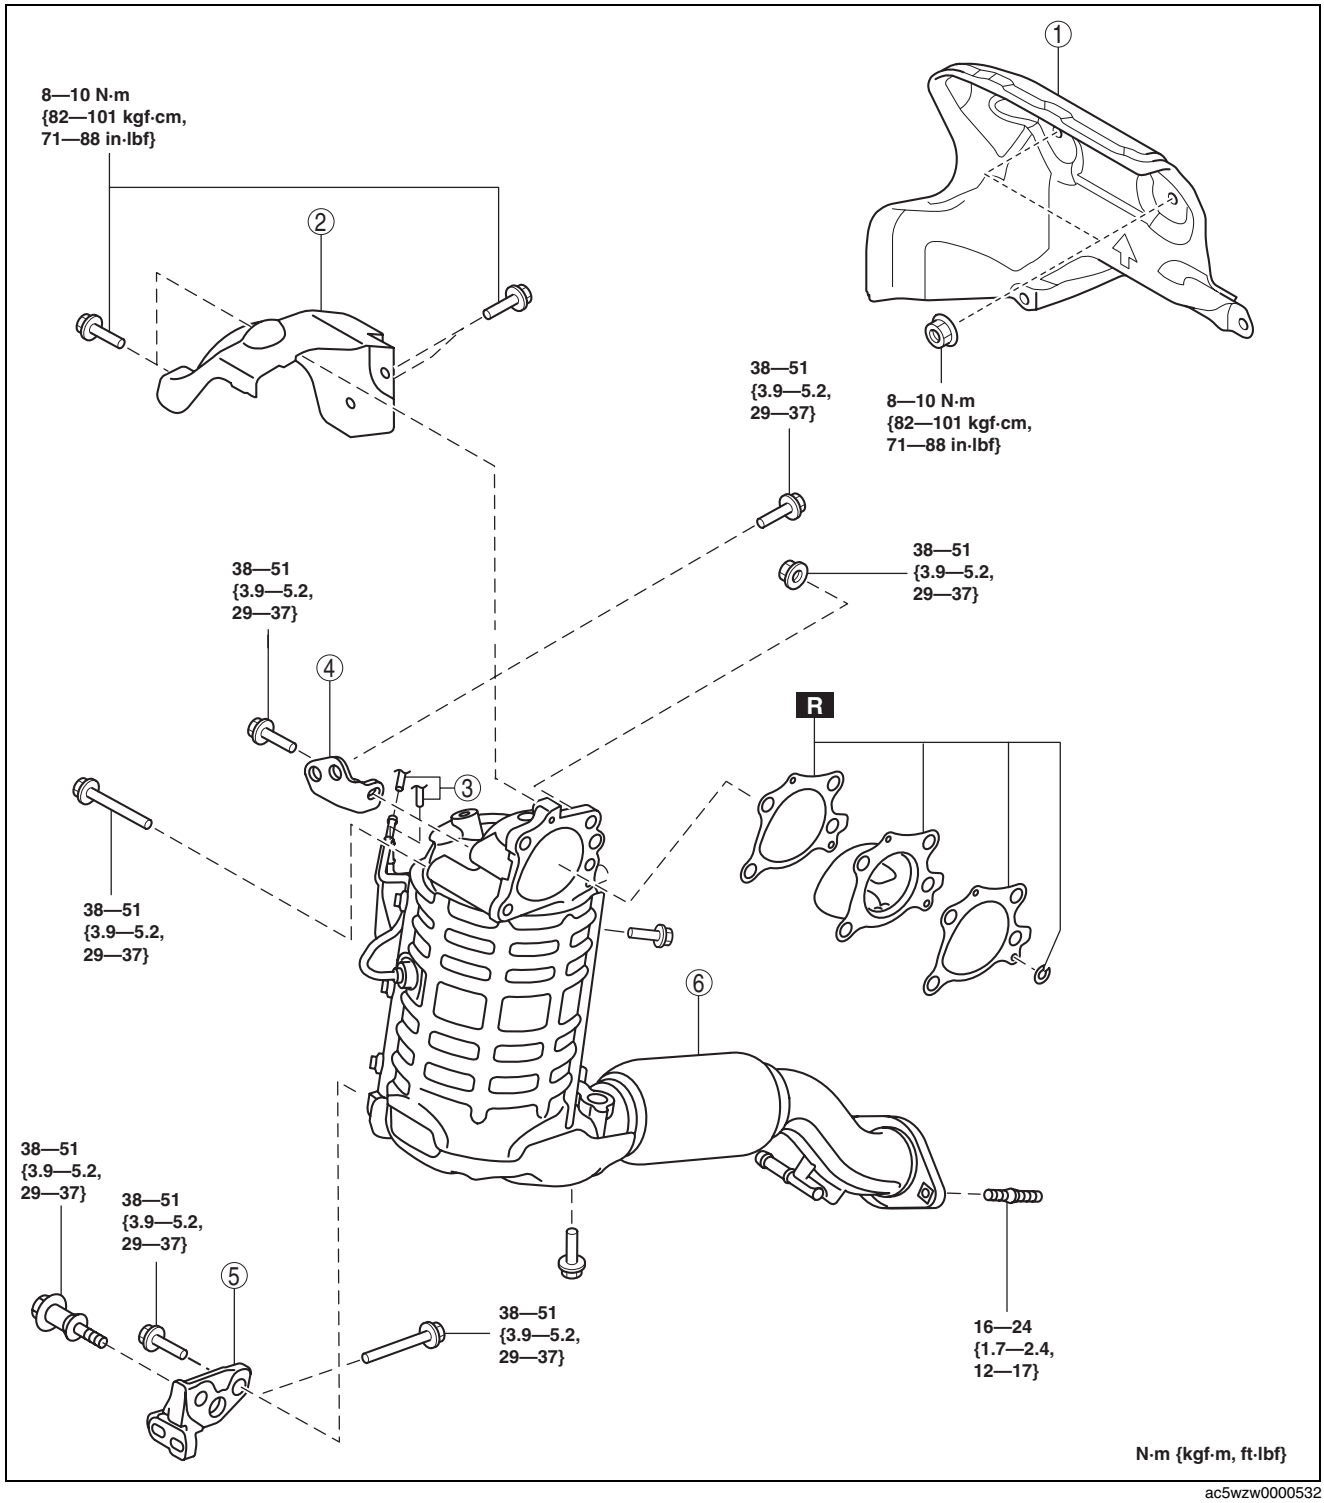


ac5wzw0000531

1	Main silencer	2	Middle pipe

EXHAUST SYSTEM [SKYACTIV-D 2.2]

Step 2



ac5wzw0000532

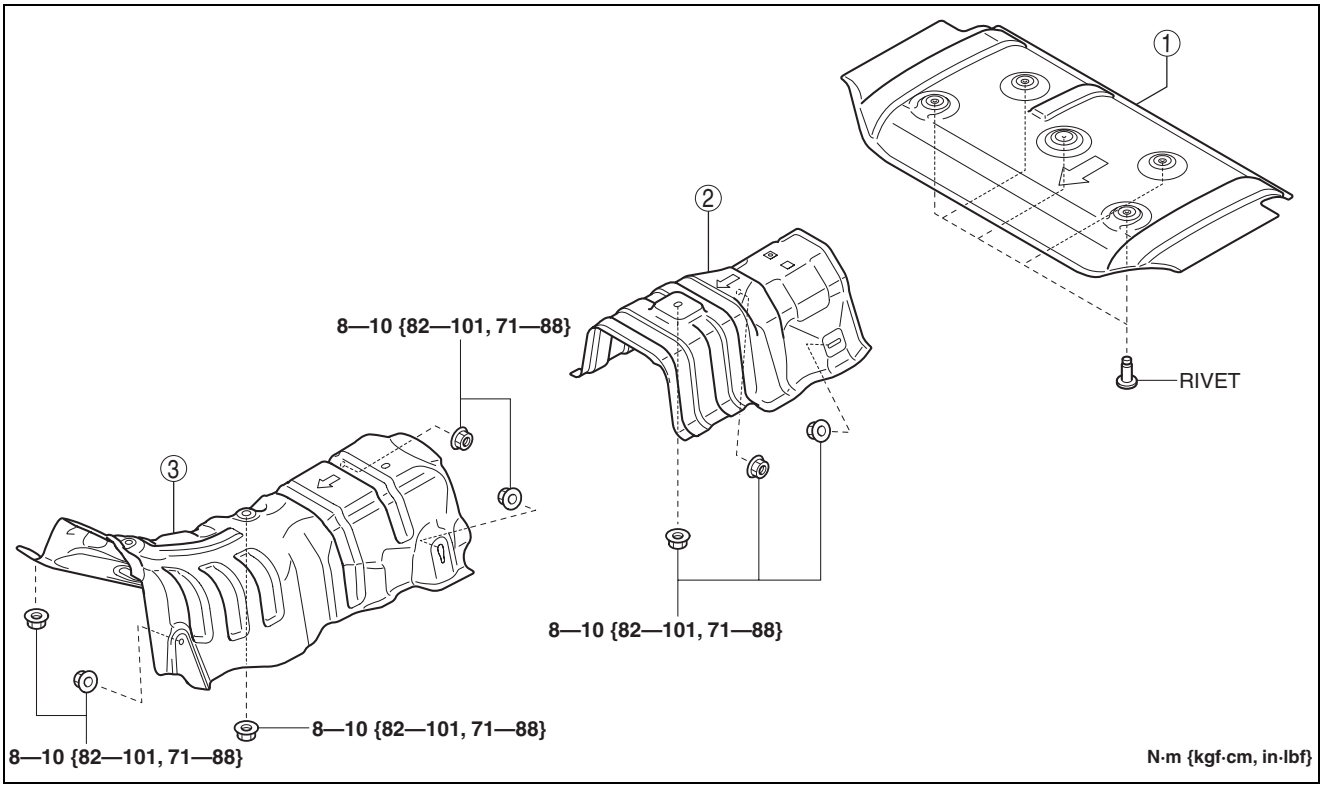
2	Catalytic converter insulator (See 01-15B-15 Catalytic Converter Insulator Installation Note.)
3	Exhaust hose
4	Catalytic converter upper bracket

5	Catalytic converter lower bracket (See 01-15B-12 Catalytic Converter Lower Bracket Removal Note.) (See 01-15B-13 Catalytic Converter Bracket Installation Note.)
6	Catalytic converter (See 01-15B-12 Catalytic Converter Removal Note.) (See 01-15B-12 Catalytic Converter Installation Note.)

EXHAUST SYSTEM [SKYACTIV-D 2.2]

Exhaust system insulator removal/installation

1. Remove the propeller shaft. (See 03-15-2 PROPELLER SHAFT REMOVAL/INSTALLATION.)
2. Remove in the order shown in the figure.
3. Install in the reverse order of removal.



ac5wzw0000481

1	Insulator (rear) (See 01-15B-11 Insulator (Rear) Removal Note.)

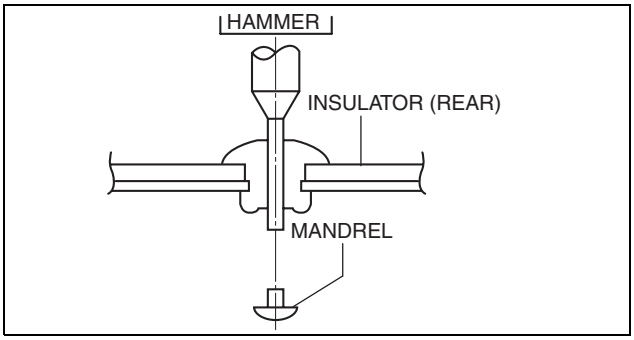
2	Insulator (middle)
3	Insulator (front)

Insulator (Rear) Removal Note

Note

- If re-installed, use the same rivets.

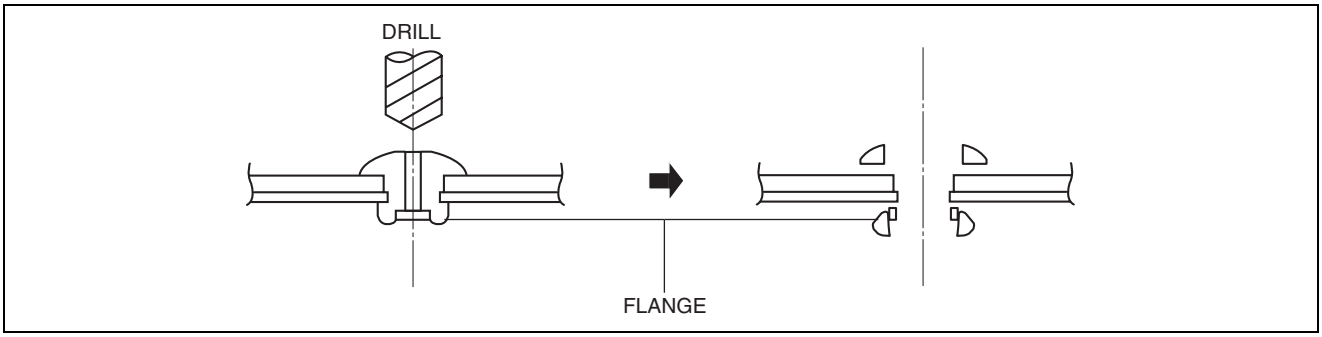
1. Using a hammer and punch (diam. **2—2.8 mm {0.08—0.11}**), punch out the mandrel.



ac5wzw0000481

EXHAUST SYSTEM [SKYACTIV-D 2.2]

2. Pull out and remove the flange using a drill (diam. **5 mm {0.2 in}**)



ac5wzw0000481

Insulator Removal Note

1. Remove the windshield wiper arm and blade. (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
2. Remove the cowl grille (See 09-16-3 COWL GRILLE REMOVAL/INSTALLATION.).
3. Remove the windshield wiper motor and link. (See 09-19-9 WINDSHIELD WIPER MOTOR AND LINK REMOVAL/INSTALLATION.)
4. Remove the cowl panel. (See 09-10-41 COWL PANEL REMOVAL/INSTALLATION.)
5. Remove the insulator.

Catalytic Converter Lower Bracket Removal Note

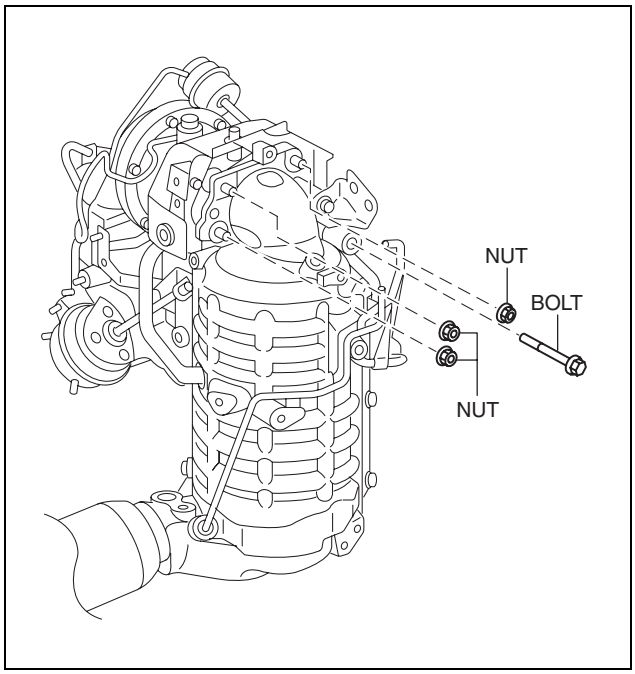
1. Remove the front crossmember. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
2. Remove the catalytic converter lower bracket.

Catalytic Converter Removal Note

1. Disconnect the exhaust temperature sensor No.1 connector.
2. Disconnect the exhaust temperature sensor No.2 connector.
3. Remove the exhaust temperature sensor No.2 wiring harness bracket installation nuts.
4. Disconnect the A/F sensor connector.
5. Remove the catalytic converter.

Catalytic Converter Installation Note

1. Temporarily tighten bolt and nuts shown in the figure.



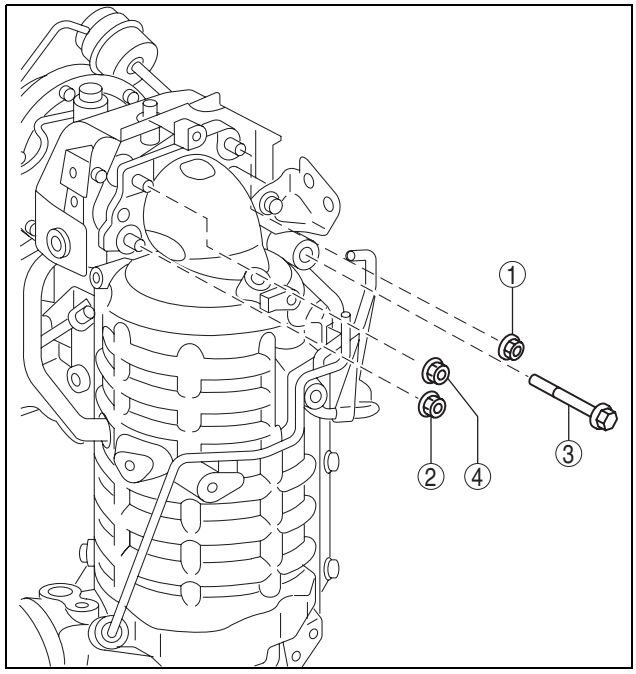
ac5wzw0000531

EXHAUST SYSTEM [SKYACTIV-D 2.2]

2. Tighten the bolt and nuts in the other shown in the figure.

   Catalytic converter installation bolt and nuts tightening torque
   38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

3. All the conclusions check after attachment whether it is the right torque.



ac5wzw0000531

Catalytic Converter Bracket Installation Note

1. Temporarily tighten bolts 1 and bolt 2 shown in the figure.
2. Tighten bolts 1 shown in the figure.

   Catalytic converter upper bracket installation bolt (engine side) tightening torque
   38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

3. Tighten bolts 2 shown in the figure.

EMISSION SYSTEM [SKYACTIV-G 2.0]

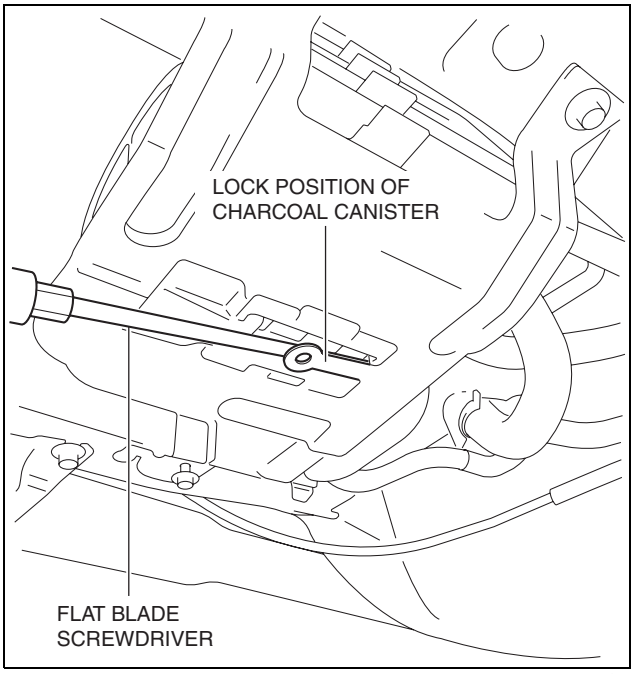
Charcoal Canister Removal Note

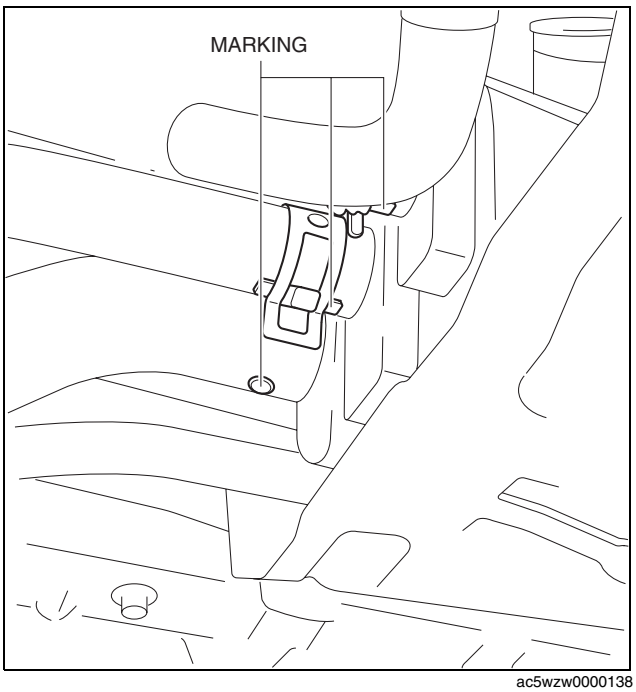
1. Release the lock as shown in the figure.
2. Remove the charcoal canister.



ac5wzw0000137

Evaporative Hose Installation Note

1. Connect the evaporative hose as shown in the figure.



ac5wzw0000138

EMISSION SYSTEM [SKYACTIV-G 2.0]

CHARCOAL CANISTER INSPECTION [SKYACTIV-G 2.0]

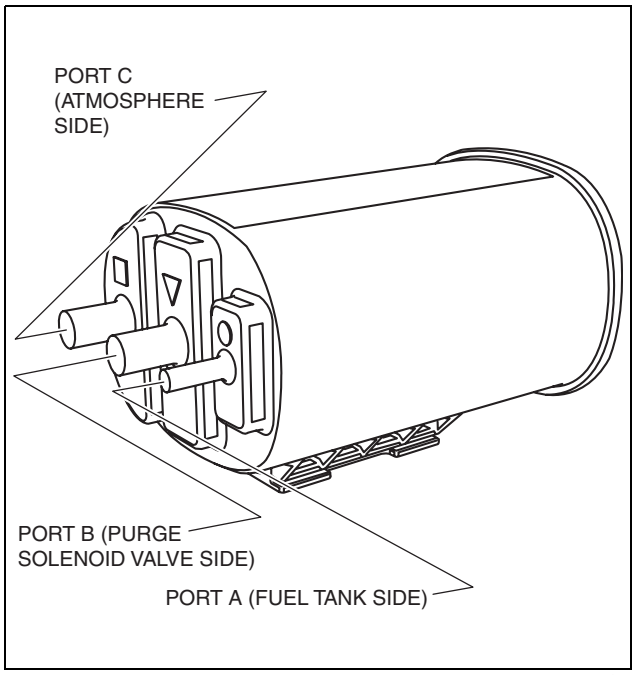
id0116z8800500

Leakage Inspection

1. Perform the following procedures:
   - Assemble the hose used for inspection to port A.
   - Cover ports B and C with the caps.

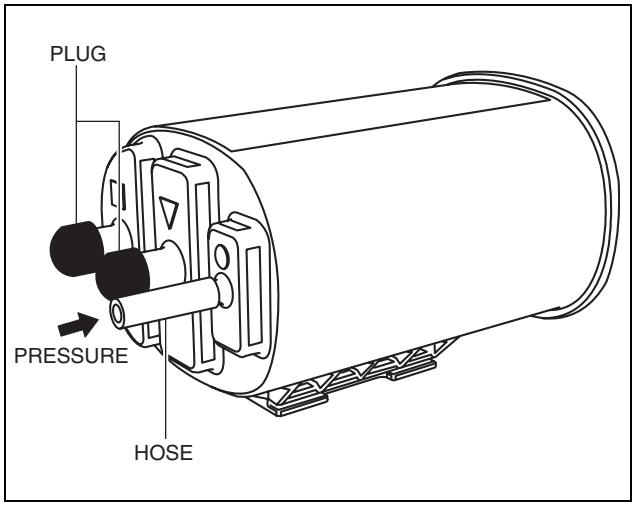
Caution

- **Do not apply a pressure 20 kPa {150 mmHg, 5.91 inHg} or more to the charcoal canister for 1 min. or more. Doing so will damage the charcoal canister.**



ac5wzw0000139

2. Apply pressure (**19.6 kPa {147 mmHg, 5.79 inHg}**) through the hose, and verify that air does not leak from the charcoal canister.
   - If there is airflow, replace the charcoal canister. (See 01-16A-6 CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   - If there is no airflow, perform the following “Airflow Inspection”. (See 01-16A-9 Airflow Inspection.)



ac5wzw0000139

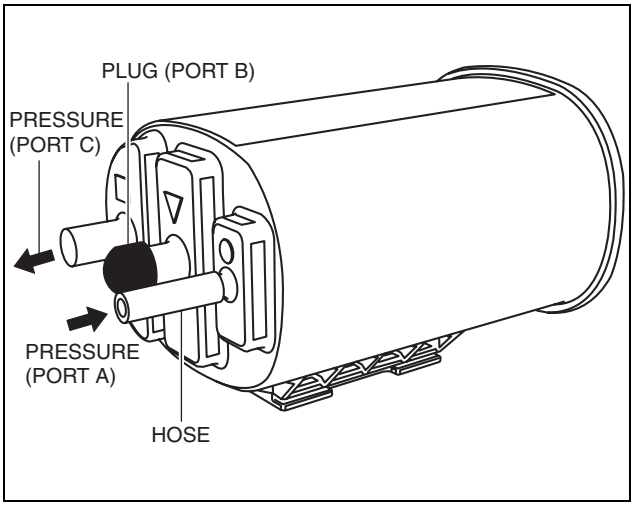
EMISSION SYSTEM [SKYACTIV-G 2.0]

Airflow Inspection

1. Perform the following procedure to verify the charcoal canister airflow.

Between port A and port C

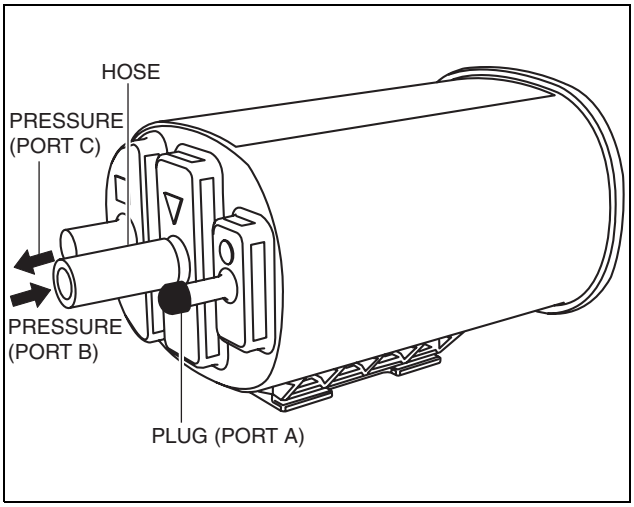
1. Plug the port B.
2. Apply a pressure of **0.98 kPa {7.4 mmHg, 0.29 inHg}** to port A.
3. Verify that there is airflow from port C.
   - If there is no airflow, replace the charcoal canister. (See 01-16A-6 CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



ac5wzw0000140

Between port B and port C

1. Plug the port A.
2. Apply a pressure of **0.98 kPa {7.4 mmHg, 0.29 inHg}** to port C.
3. Verify that there is airflow from port B.
   - If there is no airflow, replace the charcoal canister. (See 01-16A-6 CHARCOAL CANISTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



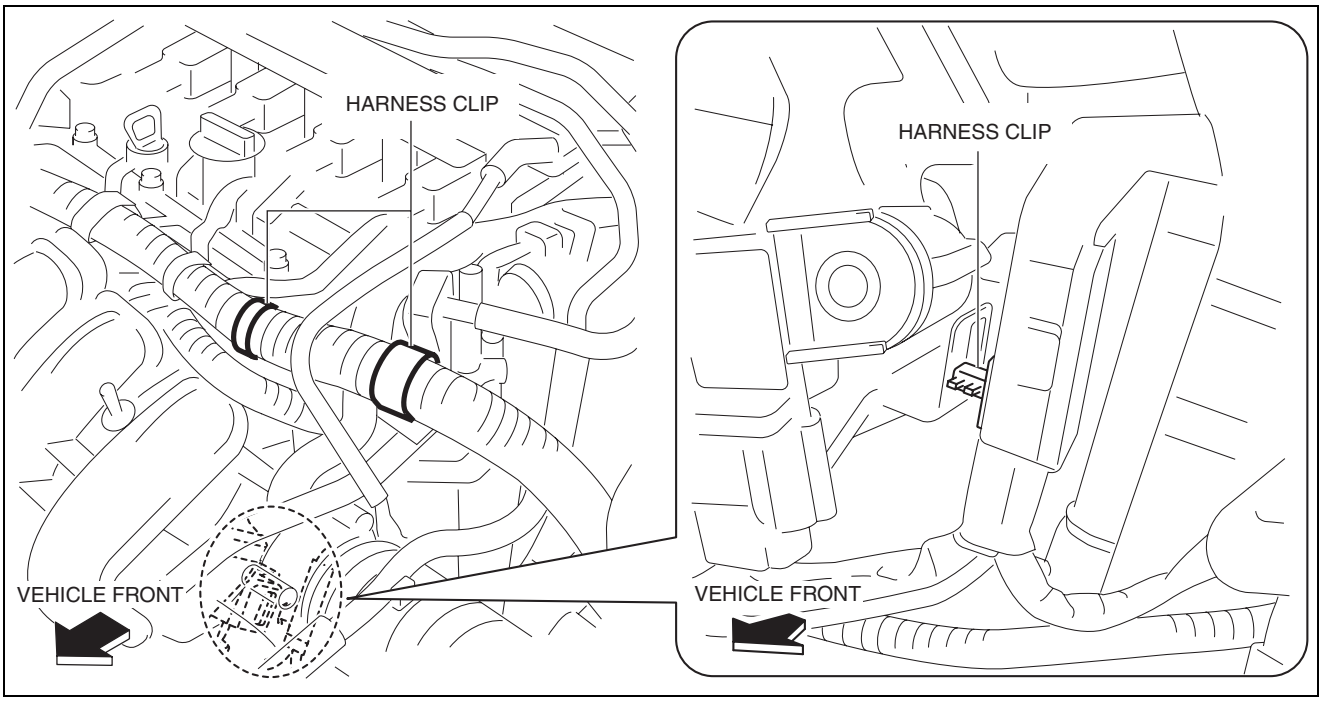
ac5wzw0000140

EMISSION SYSTEM [SKYACTIV-G 2.0]

PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0116z8804300

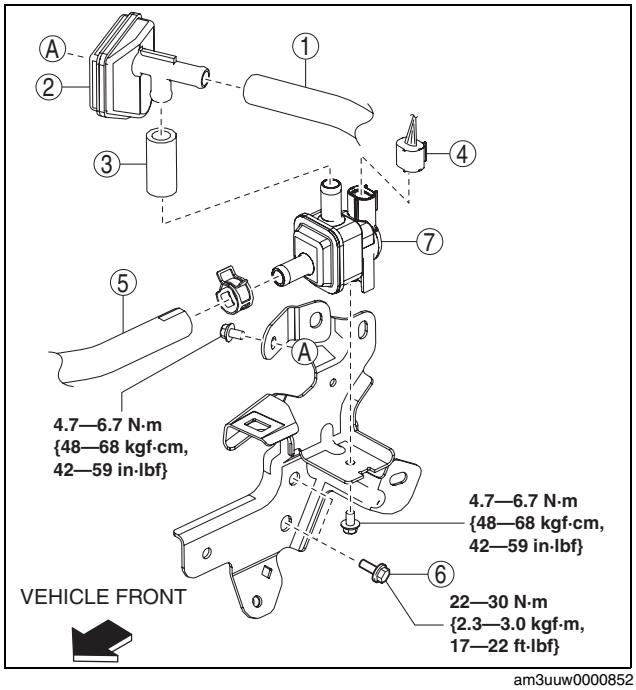
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the air cleaner and air hose as a single unit. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Disconnect the high pressure fuel pump connector.
5. Disconnect the harness clip as shown in the figure.



am3uuw0000859

6. Remove in the order indicated in the table.

1	Evaporative hose No.1 (See 01-16A-12 Evaporative Hose No.1 Installation Note.)
2	Catch tank
3	Evaporative hose No.2
4	Purge solenoid valve connector
5	Evaporative hose No.3 (See 01-16A-11 Evaporative Hose No.3 Installation Note.)
6	Purge solenoid valve bracket installation bolt
7	Purge solenoid valve (See 01-16A-11 Purge Solenoid Valve Installation Note.)



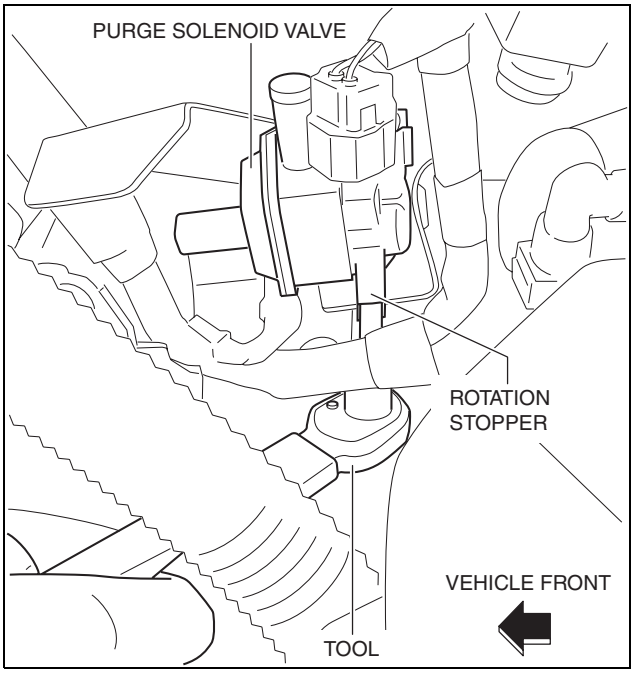
am3uuw0000852

7. Install in the reverse order of removal.

EMISSION SYSTEM [SKYACTIV-G 2.0]

Purge Solenoid Valve Installation Note

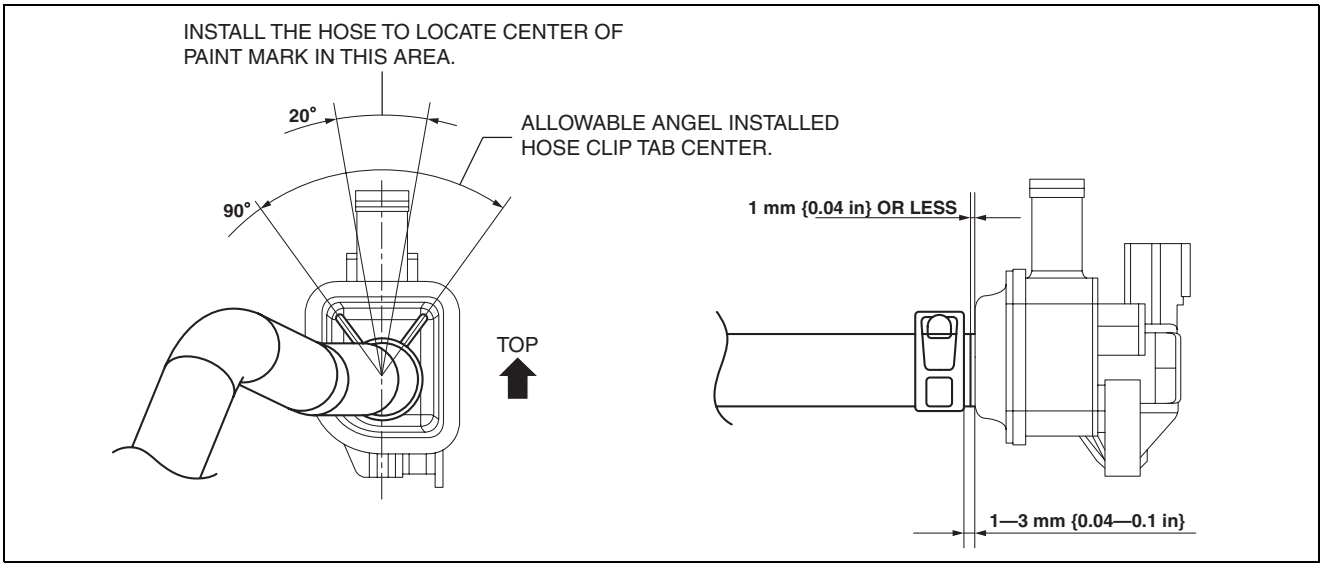
1. Temporarily install the purge solenoid valve to the bracket.
2. Lift up and tighten the purge solenoid valve as shown in the figure.



am3uuw0000859

Evaporative Hose No.3 Installation Note

1. Install the evaporative hose No.3 as shown in the figure.

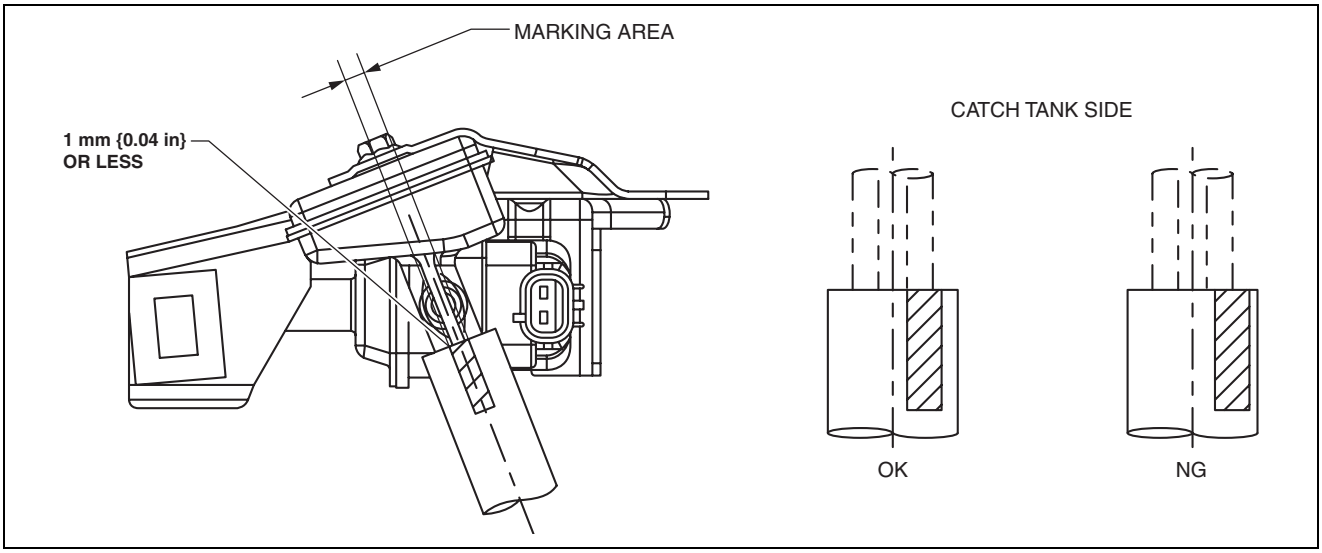


am3uuw0000852

EMISSION SYSTEM [SKYACTIV-G 2.0]

Evaporative Hose No.1 Installation Note

1. Install the evaporative hose No.1 as shown in the figure.



ac5wzw0000138

PURGE SOLENOID VALVE INSPECTION [SKYACTIV-G 2.0]

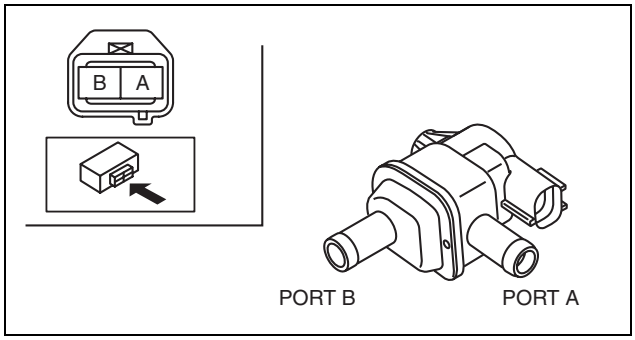
id0116z8800900

Airflow Inspection

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the purge solenoid valve. (See 01-16A-10 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Inspect airflow between the ports under the following conditions.

Measured condition	Continuity between ports A—B
When voltage is not applied between terminals A and B	No airflow
When voltage is applied between terminals A and B	Airflow detected

- If not as specified, replace the purge solenoid valve. (See 01-16A-10 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



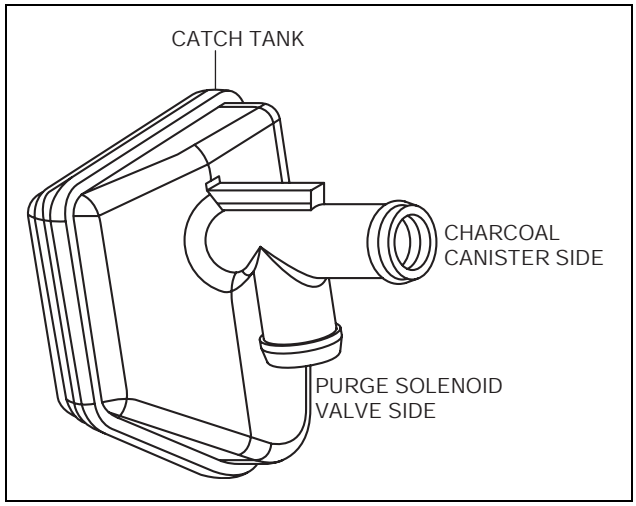
ac5wzw0000282

EMISSION SYSTEM [SKYACTIV-G 2.0]

CATCH TANK INSPECTION [SKYACTIV-G 2.0]

id0116z8804000

1. Remove the catch tank. (See 01-16A-10 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
2. Plug the purge solenoid valve side into the catch tank.
3. Inspect for air leakage when blowing air using your mouth into the charcoal canister side.
   - If there is air leakage, replace the catch tank. (See 01-16A-10 PURGE SOLENOID VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

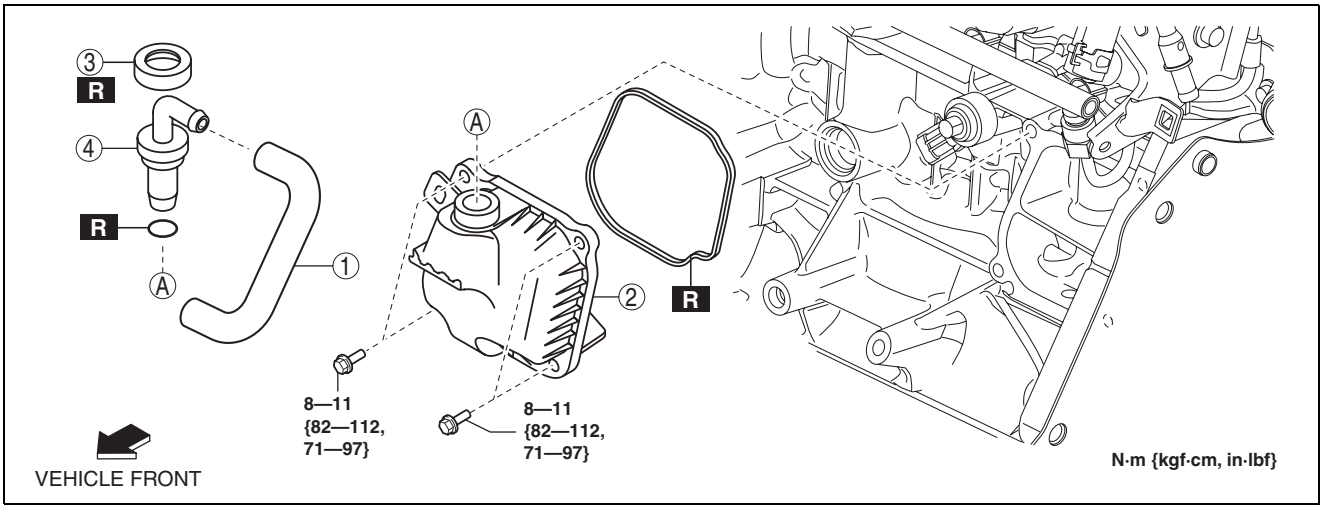


am3uuw0000730

POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0116z8819800

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0]) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the intake manifold. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.



am3uuw0000870

1	PCV hose
2	Oil separator

3	Retainer (See 01-16A-14 Retainer Removal Note.) (See 01-16A-14 Retainer Installation Note.)
4	PCV valve

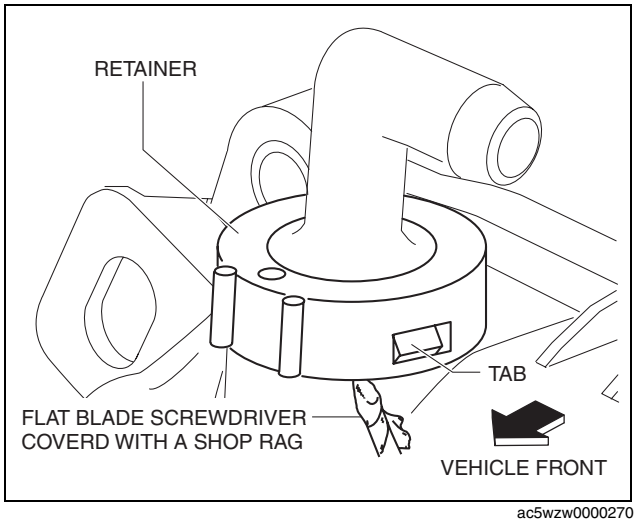
EMISSION SYSTEM [SKYACTIV-G 2.0]

Retainer Removal Note

Caution

- **Be sure to follow the removal procedures below to prevent the leakage of blow-by gas caused by the damage to the tab of the oil separator or the oil separator itself.**

1. Insert a flat blade screwdriver with its tip wrapped in a shop rag into the gap between the retainer and the oil separator as shown in the figure.
2. Spread the side surface of the retainer outward to dismount it with attention to the tab.



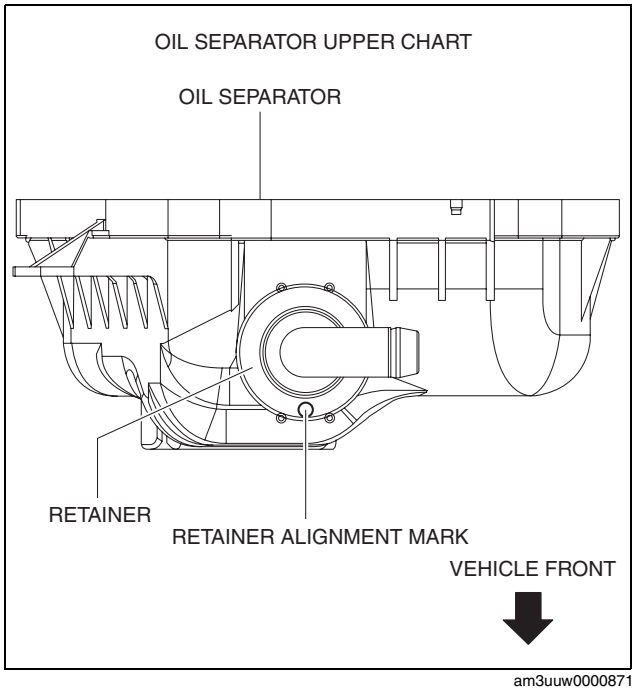
ac5wzw0000270

Retainer Installation Note

Caution

- **Be sure to replace the old retainer with a new one to prevent the escape of blow-by gas. Reinstalling the old retainer will reduce airtightness.**

1. Make sure that the retainer alignment mark is directed as shown in the left diagram before installing the retainer to the oil separator.



am3uuw0000871

EMISSION SYSTEM [SKYACTIV-G 2.0]

POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [SKYACTIV-G 2.0]

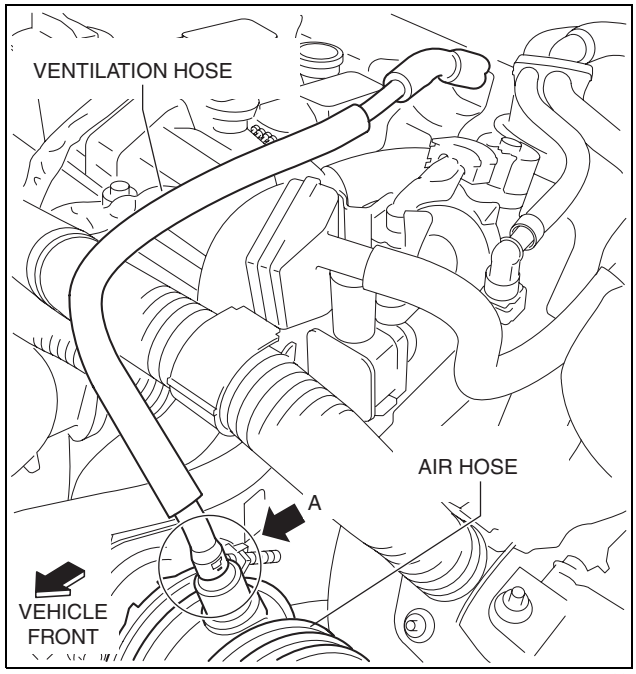
id0116z8800400

Airflow Inspection

1. Disconnect the section (A) of ventilation hose shown in the figure.
2. Start the engine and verify that vacuum is applied to the end of the disconnected ventilation hose while the engine is idling.
   - If vacuum is not applied to the ventilation hose, perform the procedure from Step 3.

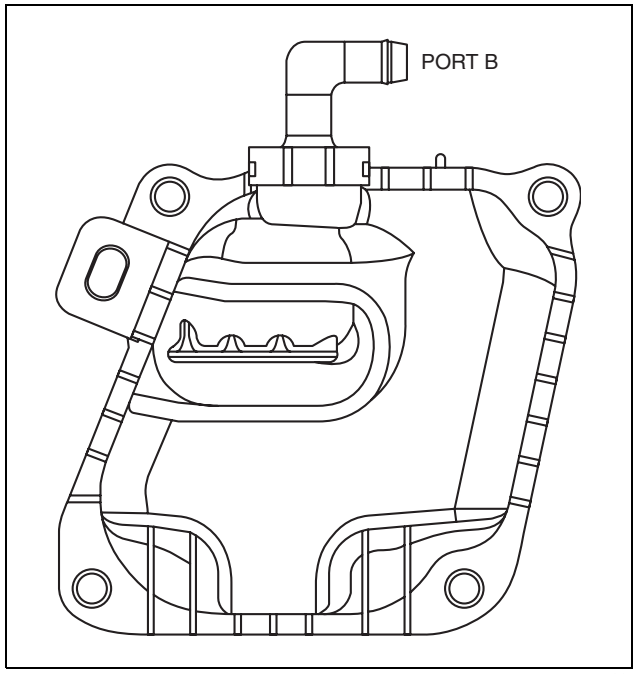
Note

- If the PCV valve is operating normally, vacuum occurs in the ventilation hose, however, if the PCV valve is not operating normally, vacuum does not occur in the ventilation hose because the blow-by gas is circulated to the air hose from the ventilation hose.
- Verify the ventilation hose vacuum as follows:
  - — When the tip of your figure is touching the end of the ventilation hose, the tip of your figure is suctioned by the hose.
  - — When a thin scrap of paper is contacting the end of the ventilation hose. the paper is suctioned by the hose.



ac5uuw00000447

3. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
4. Remove the intake manifold. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Remove the PCV valve and the oil separator as a single unit. (See 01-16A-13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
6. Verify that there is no airflow when pressure is applied to port B.
   - If there is airflow, replace the PCV valve and the oil separator as a single unit. (See 01-16A-13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
7. Verify that there is airflow when vacuum is applied to port B.
   - If there is no airflow, replace the PCV valve and the oil separator as a single unit. (See 01-16A-13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



ac5uuw00000448

ROLLOVER VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0116z8804600

Note

- The rollover valve cannot be removed as it is built into the fuel tank.

1. Remove the fuel tank. (See 01-14A-13 FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

EMISSION SYSTEM [SKYACTIV-G 2.0]

ROLLOVER VALVE INSPECTION [SKYACTIV-G 2.0]

id0116z8804500

Note
- The rollover valve cannot be disassembled and inspected as it is built into the fuel tank.

1. Perform the fuel tank inspection. (See 01-14A-26 FUEL TANK INSPECTION [SKYACTIV-G 2.0].)
   - If there is any malfunction, replace the fuel tank. (See 01-14A-13 FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

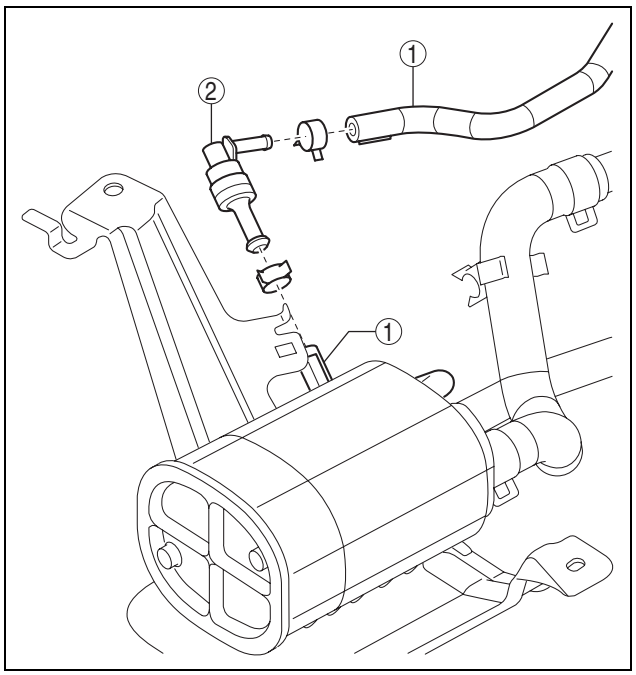
CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0116z8189700

1. Remove the floor under cover. (See 09-16-44 FLOOR UNDER COVER REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.

1	Evaporative hose
2	Check valve

3. Install in the reverse order of removal.

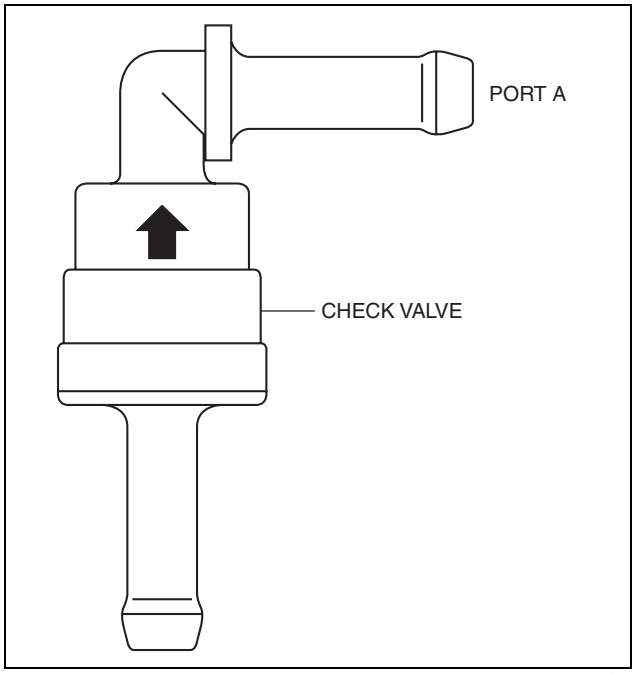


ac5wzw0000138

CHECK VALVE INSPECTION [SKYACTIV-G 2.0]

id0116z8189900

1. Remove the check valve. (See 01-16A-16 CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
2. Verify that there is no airflow when positive pressure is applied to port A.
   - If there is airflow, replace the check valve. (See 01-16A-16 CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Verify that there is no airflow when negative pressure is applied to port A.
   - If there is no airflow, replace the check valve. (See 01-16A-16 CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



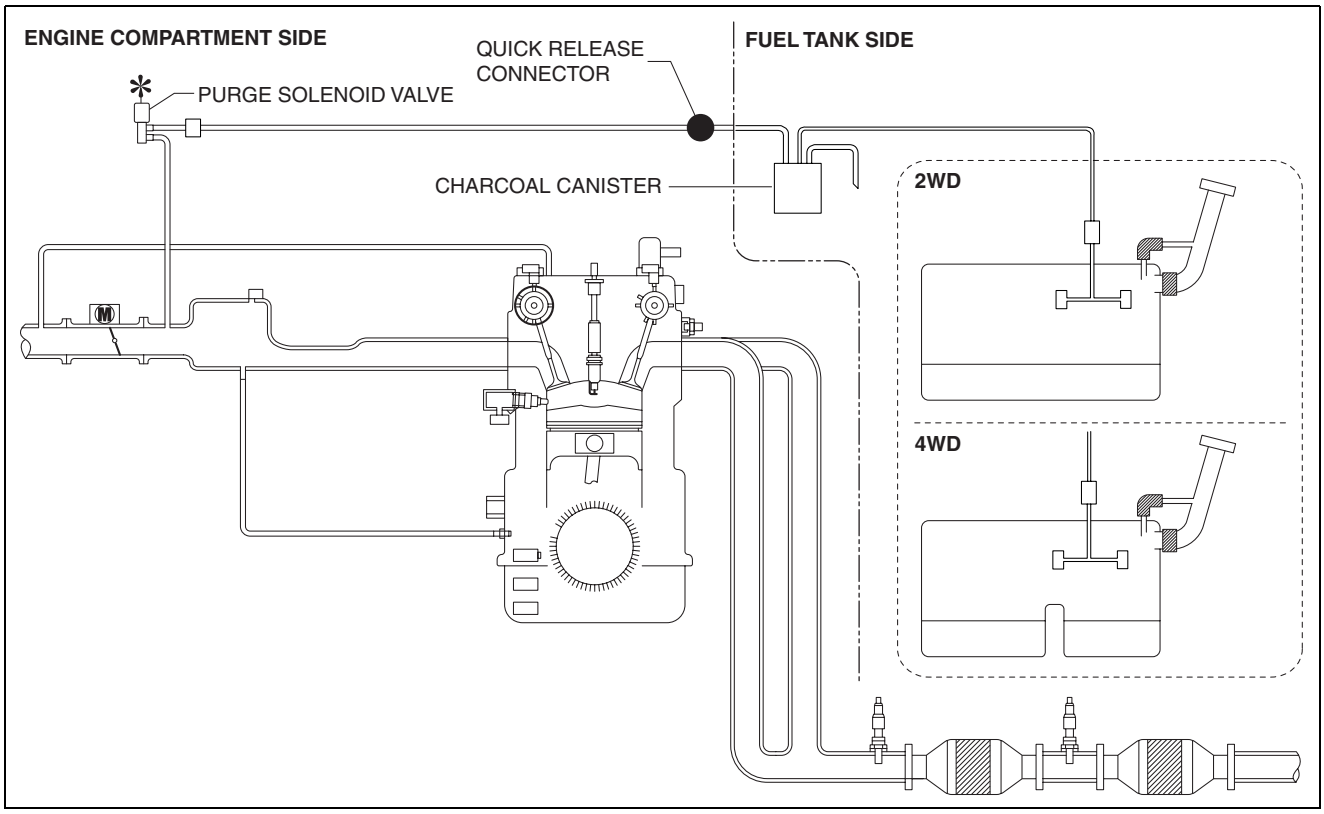
ac5wzw0000137

EMISSION SYSTEM [SKYACTIV-G 2.0]

QUICK RELEASE CONNECTOR (EMISSION SYSTEM) REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0116z8805500

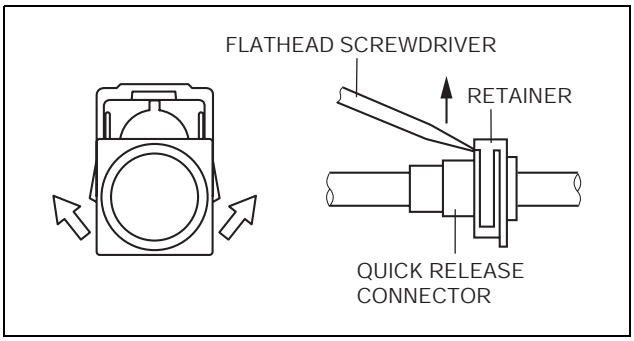
Quick Release Connector Position



ac5wzw0000138

Removal

1. Complete the “BEFORE SERVICE PRECAUTION”. (See 01-14A-6 BEFORE SERVICE PRECAUTION [SKYACTIV-G 2.0].)
2. Move the retainer upward using a small flathead screwdriver or a similar tool.
3. Pull out the evaporative hose straight from the evaporative pipe and disconnect it.
4. Cover the disconnected quick release connector and evaporative pipe with vinyl sheeting or a similar material to prevent it from getting scratched or dirty.



am6xuw0000138

EMISSION SYSTEM [SKYACTIV-G 2.0]

Installation

Note
- If the quick release connector O-ring is damaged or has slipped, replace the evaporative hose.
- A checker tab is integrated with the quick release connector for new evaporative hoses. Remove the checker tab from the quick release connector after the connector is completely engaged with the evaporative pipe.

1. Inspect the evaporative hose and evaporative pipe sealing surface for damage and deformation.
   - If there is any malfunction, replace it with a new one.
2. Apply a small amount of clean engine oil to the sealing surface of the evaporative pipe.
3. Install the quick release connector.
   - Insert the evaporative pipe straight to the end of the quick release connector.
   - Push down the retainer using a finger.
     — If the retainer cannot be pushed down, push the evaporative pipe further to the quick release connector.
4. Lightly pull and push the quick release connector a few times by hand, and then verify that it is connected securely.

EMISSION SYSTEM [SKYACTIV-D 2.2]

EGR VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

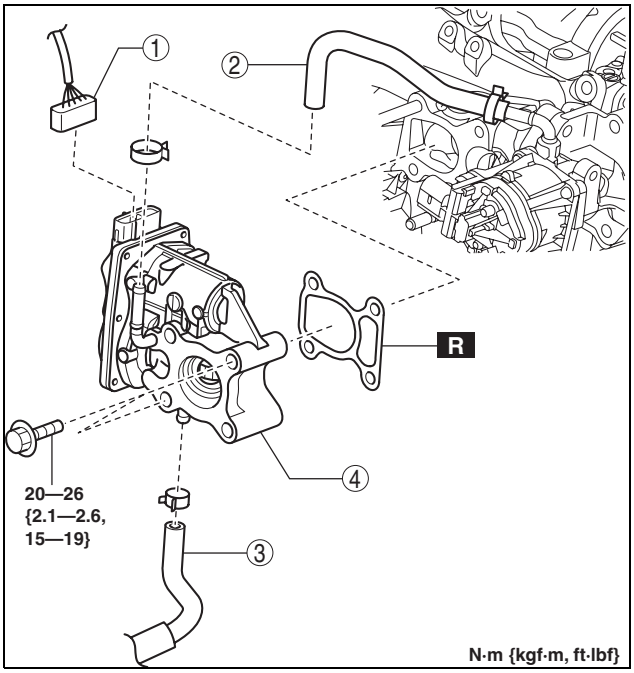
id0116e1801000

Note
- If the EGR valve is replaced, perform the EGR initialization procedure.

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the EGR pipe (EGR valve side). (See 01-16B-9 EGR PIPE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove in the order shown in the figure.

1	EGR valve connector
2	Water hose No.1 (See 01-16B-7 Water Hose No.1 Removal Note.) (See 01-16B-8 Water Hose No.1 Installation Note.)
3	Water hose No.2 (See 01-16B-7 Water Hose No.2 Removal Note.) (See 01-16B-8 Water Hose No.2 Installation Note.)
4	EGR valve (See 01-16B-7 EGR Valve Removal Note.)

5. Install in the reverse order of removal.



ac5wzw0000476

Water Hose No.1 Removal Note
1. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
2. Remove water hose No.1.

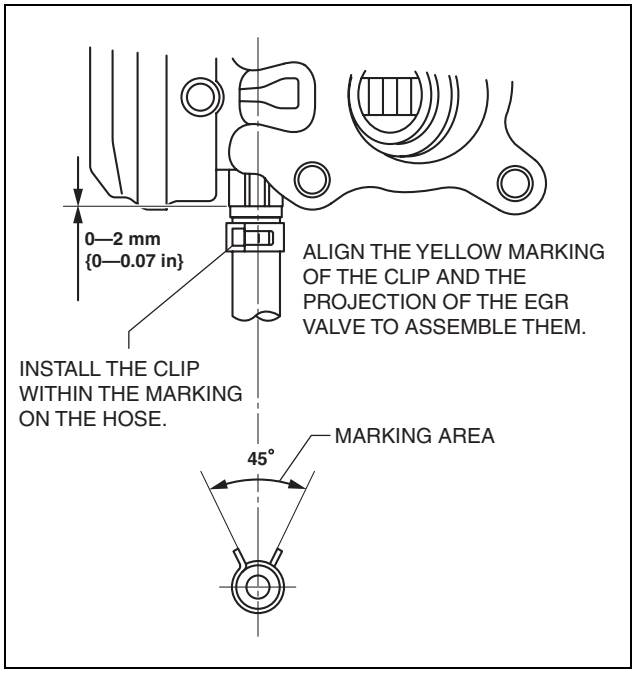
Water Hose No.2 Removal Note
1. Remove the coolant reserve tank. (See 01-12B-8 COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Remove water hose No.2.

EGR Valve Removal Note
1. Disconnect the EGR cooler bypass valve connector.
2. Remove the EGR valve.

EMISSION SYSTEM [SKYACTIV-D 2.2]

Water Hose No.2 Installation Note

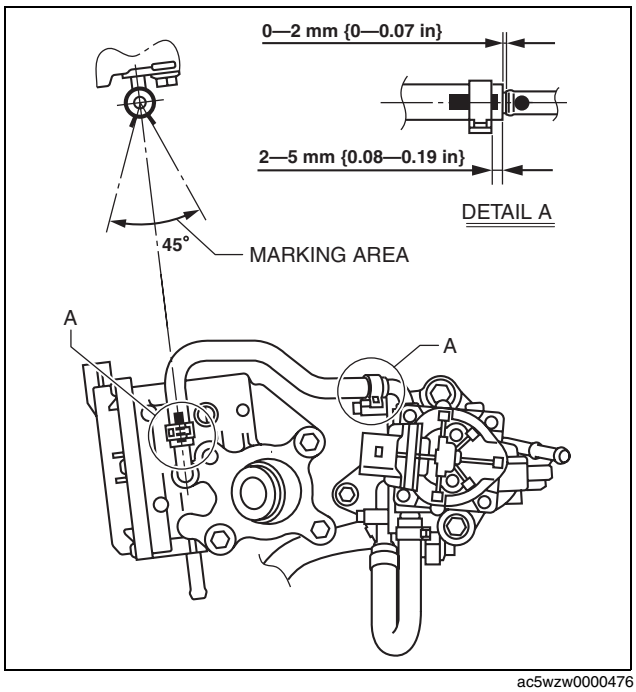
1. Install water hose No.2 as shown in the figure.



ac5wzw0000476

Water Hose No.1 Installation Note

1. Install water hose No.1 as shown in the figure.



ac5wzw0000476

EMISSION SYSTEM [SKYACTIV-D 2.2]

EGR VALVE INSPECTION [SKYACTIV-D 2.2]

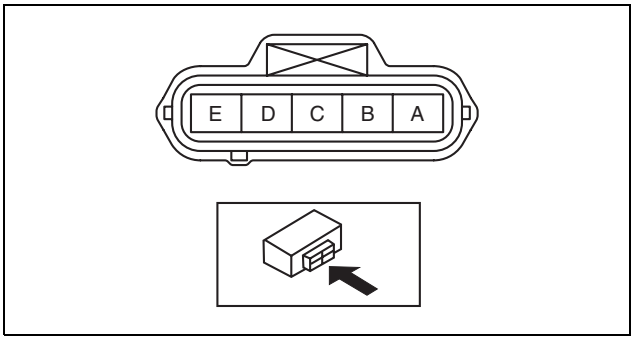
id0116e1801100

Resistance inspection

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Disconnect the EGR valve connector.
4. Inspect the resistance between EGR valve terminals A and E.

   EGR valve resistance (specification)
   0.3—100 ohms [20 °C {68 °F}]

   - If not within the specification, replace the EGR valve. (See 01-16B-7 EGR VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



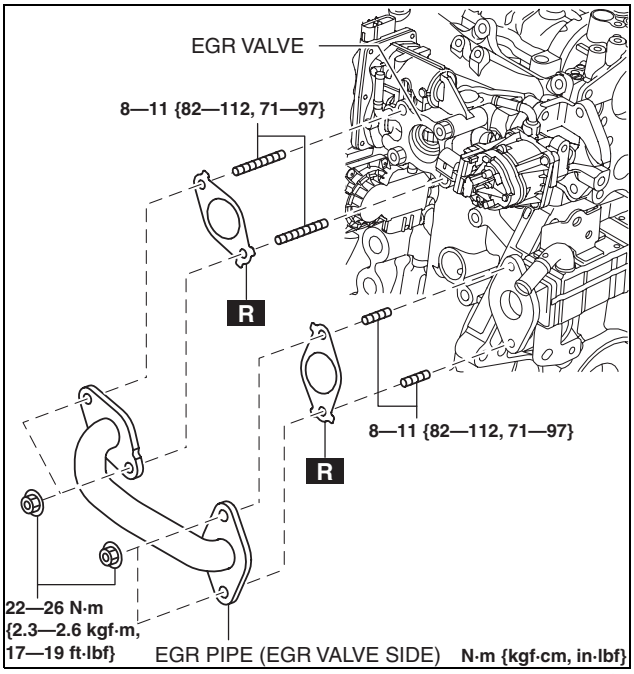
ac5wzw0000475

EGR PIPE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0116e1810000

EGR valve side

1. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Remove the EGR pipe.
3. Install in the reverse order of removal.

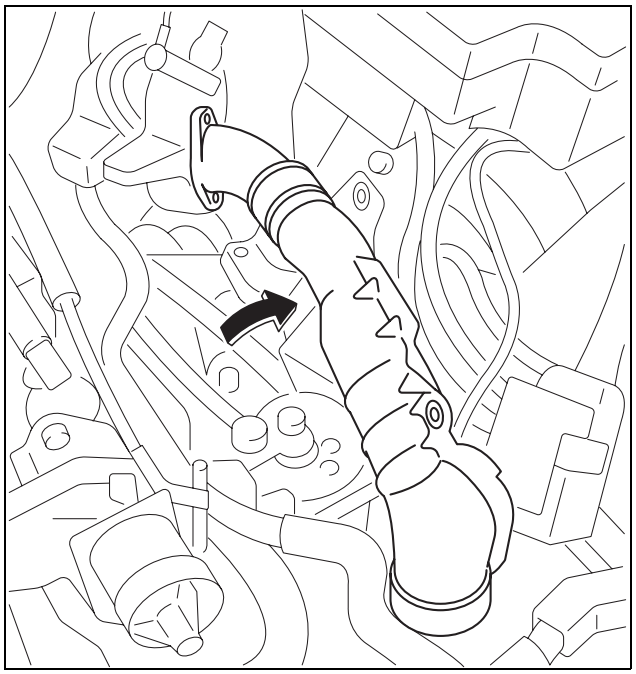


ac5wzw0000486

EMISSION SYSTEM [SKYACTIV-D 2.2]

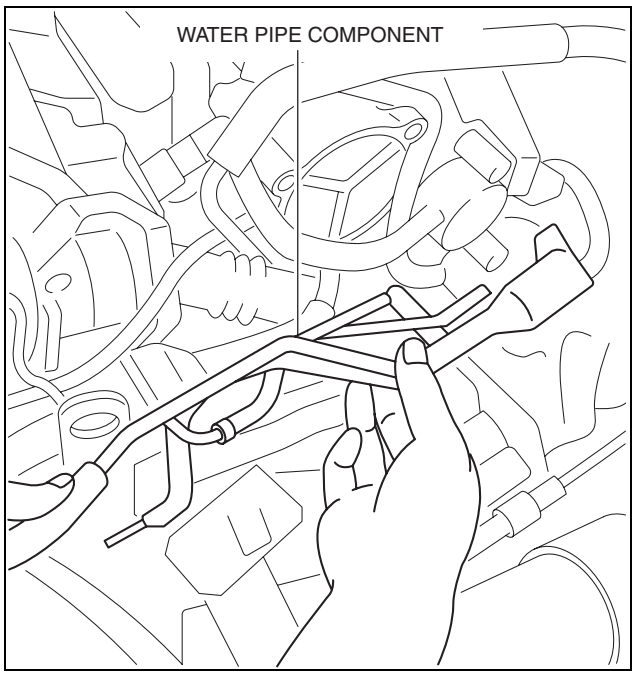
EGR cooler bypass valve side

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the air cleaner. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the battery and the battery tray. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove the following parts as a single unit: (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   - Air hose
   - Air inlet pipe
   - Breather hose
   - Turbocharger air inlet hose
   - PTC Heater
6. Set the turbocharger air outlet pipe, turbocharger air outlet hose, and air inlet pipe aside as a single unit as shown in the figure. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)
7. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)



ac5jjw00003612

8. Set the water pipe component aside as shown in the figure.
9. Remove the EGR pipe (EGR valve side). (See 01-16B-9 EGR valve side.)
10. Remove the EGR cooler insulator. (See 01-16B-12 EGR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
11. Set the EGR cooler out of the way. (See 01-16B-12 EGR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



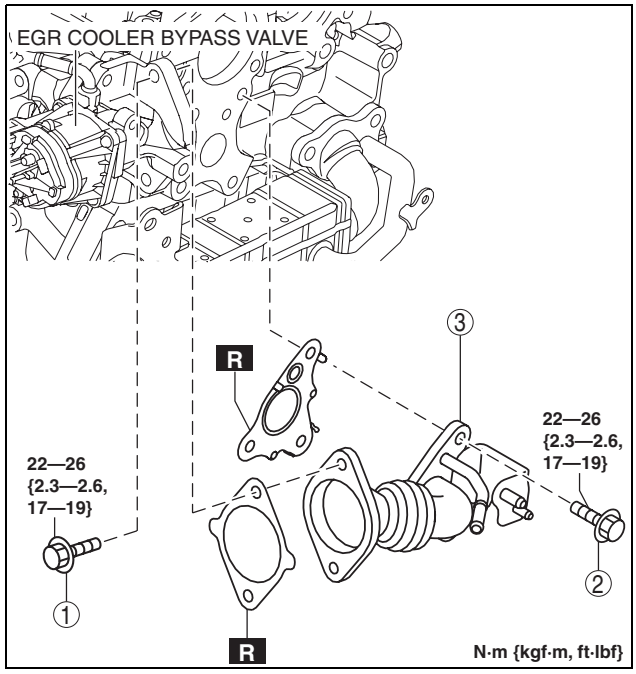
ac5wzw0000486

EMISSION SYSTEM [SKYACTIV-D 2.2]

12. Remove in the order shown in the figure.

1	EGR pipe (EGR cooler bypass valve side) installation bolt No.1 (See 01-16B-11 EGR pipe (EGR cooler bypass valve side) installation bolt removal note.) (See 01-16B-11 EGR pipe (EGR cooler bypass valve side) installation bolt installation note.)
2	EGR pipe (EGR cooler bypass valve side) installation bolt No.2 (See 01-16B-11 EGR pipe (EGR cooler bypass valve side) installation bolt installation note.)
3	EGR pipe (EGR cooler bypass valve side)

13. Install in the reverse order of removal.



ac5wzw0000486

EGR pipe (EGR cooler bypass valve side) installation bolt removal note

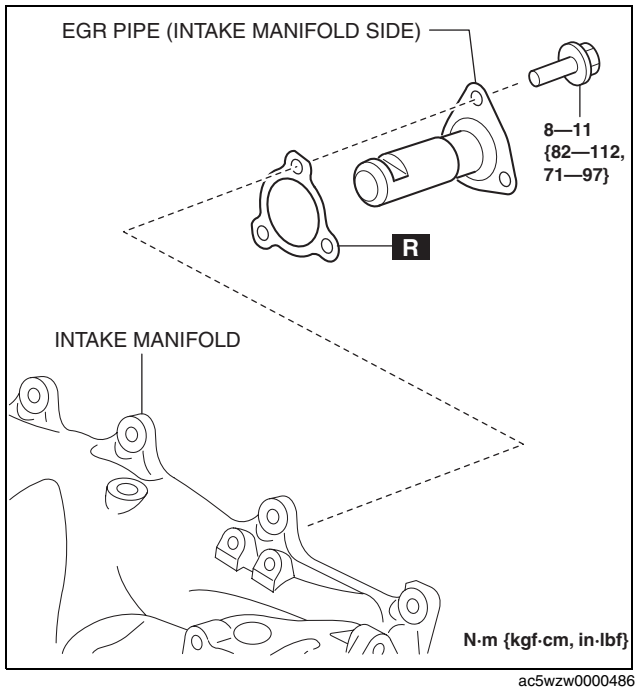
1. Remove the harness bracket.
2. Remove the EGR pipe (EGR cooler bypass valve side) installation bolt No.1.

EGR pipe (EGR cooler bypass valve side) installation bolt installation note

1. Temporarily tighten the bolt until the flanged of the retaining bolt No.1 and No.2 of the EGR pipe (of the EGR cooler bypass valve) are completely seated.
2. Tighten the EGR pipe (EGR cooler bypass valve side) installation bolt No.2.
3. Tighten the EGR pipe (EGR cooler bypass valve side) installation bolt No.1.

Intake manifold side

1. Remove the intake manifold. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Remove the EGR pipe (intake manifold side).
3. Install in the reverse order of removal.



ac5wzw0000486

EMISSION SYSTEM [SKYACTIV-D 2.2]

ROLLOVER VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0116e1804600

Note
- The rollover valve cannot be removed as it is built into the fuel tank.

1. Remove the fuel tank. (See 01-14B-10 FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

ROLLOVER VALVE INSPECTION [SKYACTIV-D 2.2]

id0116e1804500

Note
- The rollover valve cannot be disassembled and inspected as it is built into the fuel tank.

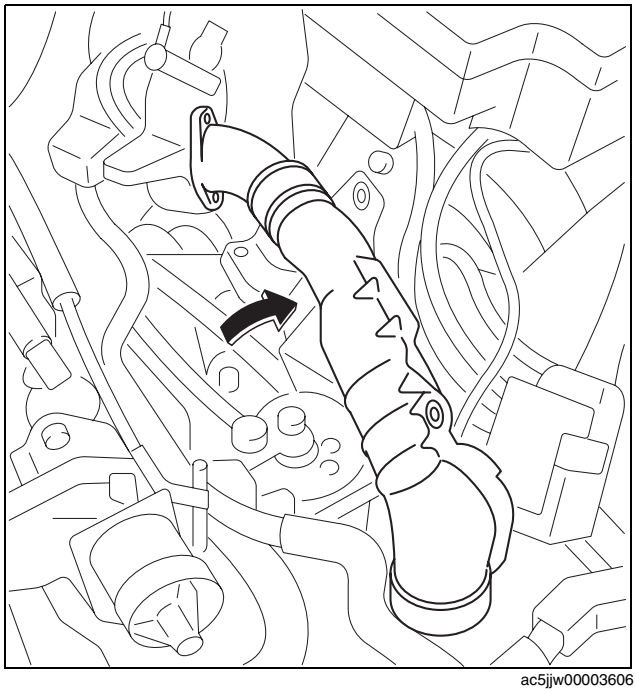
1. Perform the fuel tank inspection. (See 01-14B-21 FUEL TANK INSPECTION [SKYACTIV-D 2.2].)
   - If there is any malfunction, replace the fuel tank. (See 01-14B-10 FUEL TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

EGR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0116e1099000

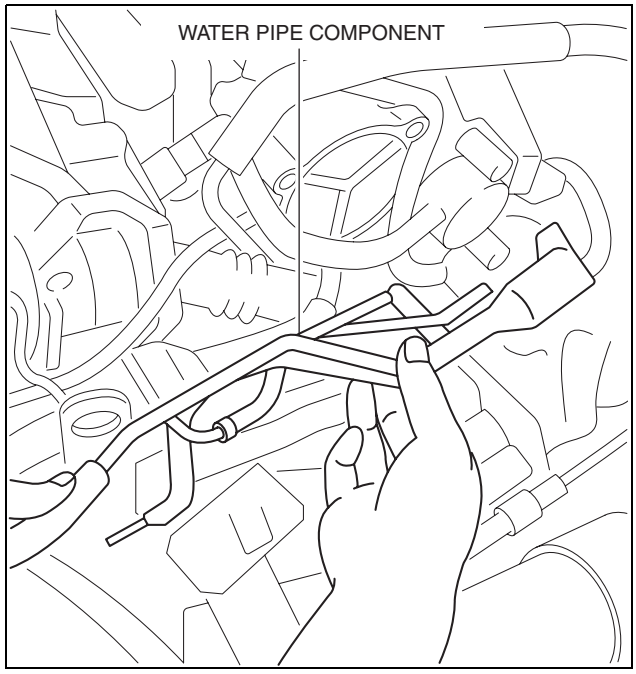
Note
- If the EGR cooler bypass valve is replaced, perform the EGR initialization procedure.

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the air cleaner. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the battery and the battery tray. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove the following parts as a single unit: (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   - Air hose
   - Air inlet pipe
   - Breather hose
   - Turbocharger air inlet hose
   - PTC Heater
6. Set the turbocharger air outlet pipe, turbocharger air outlet hose, and air inlet pipe aside as a single unit as shown in the figure. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)
7. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)



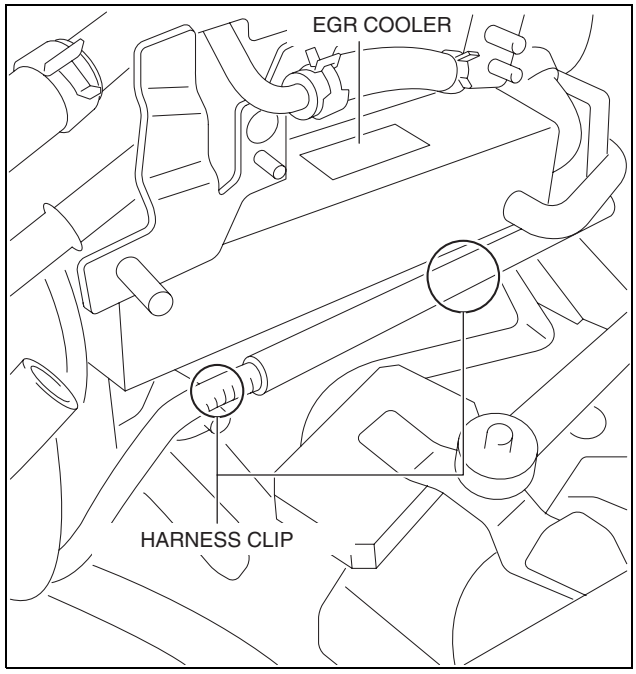
ac5jjw00003606

8. Set the water pipe component aside as shown in the figure.



ac5wzw0000481

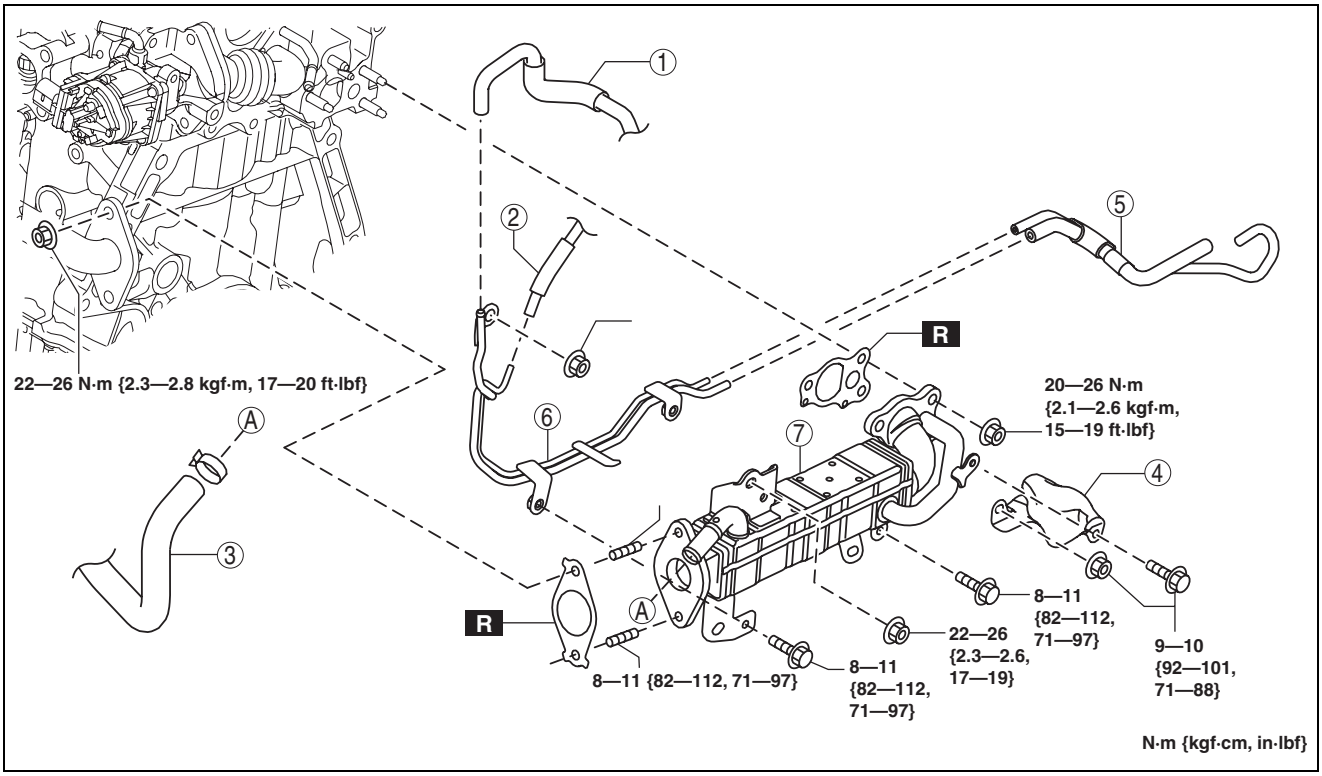
9. Detach the wiring harness clips shown in the figure.
10. Remove in the order shown in the figure.



ac5wzw0000532

EMISSION SYSTEM [SKYACTIV-D 2.2]

11. Install in the reverse order of removal.



ac5wzw0000532

1	Vacuum hose No.1 (See 01-16B-16 Vacuum Hose No.1 Installation Note.)
2	Vacuum hose No.2 (See 01-16B-16 Vacuum Hose No.2 Installation Note.)
3	Water hose

4	EGR cooler insulator
5	Vacuum hose No.3 (See 01-16B-14 Vacuum Hose No.3 Removal Note.) (See 01-16B-15 Vacuum Hose No.3 Installation Note.)
6	Vacuum pipe
7	EGR cooler

Vacuum Hose No.3 Removal Note

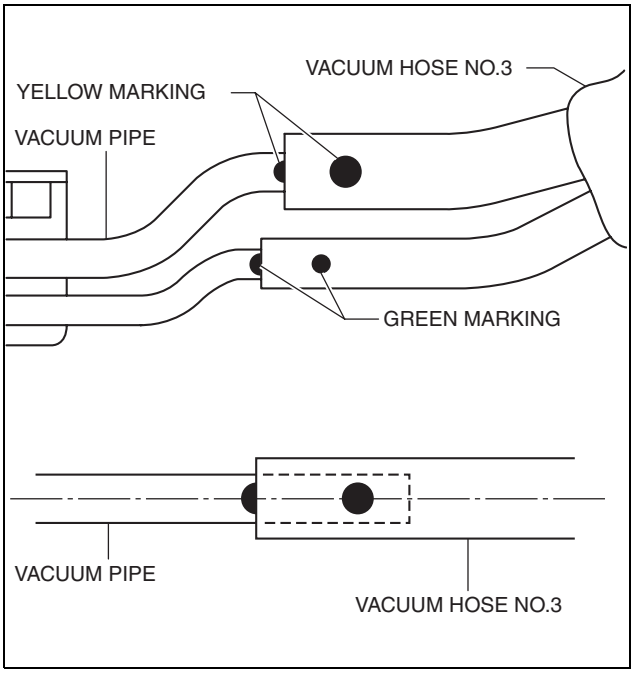
1. Disconnect vacuum hose No.3 on the vacuum pipe bracket side.
2. Disconnect vacuum hose No.3, the vacuum pipe and the EGR cooler as a single unit.
3. Remove vacuum hose No.3.

EMISSION SYSTEM [SKYACTIV-D 2.2]

Vacuum Hose No.3 Installation Note

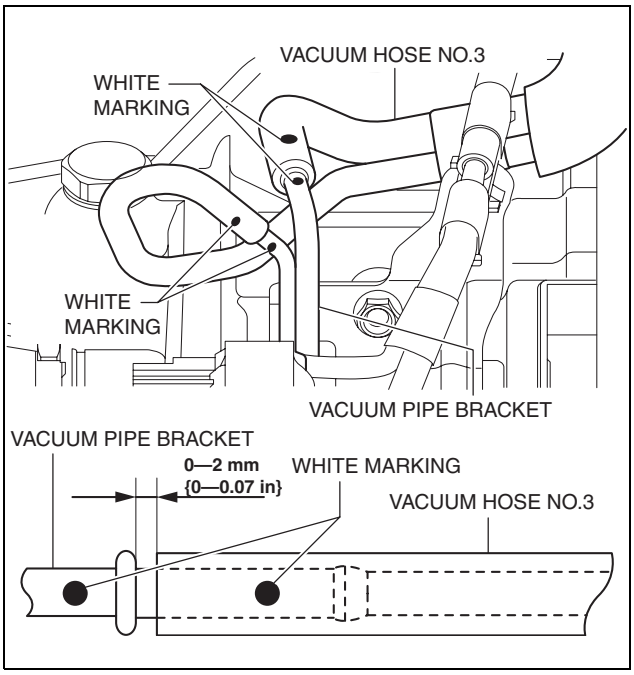
1. Install vacuum hose No.3 as shown in the figure.

Vacuum pipe side



ac5wzw0000532

Vacuum pipe bracket side

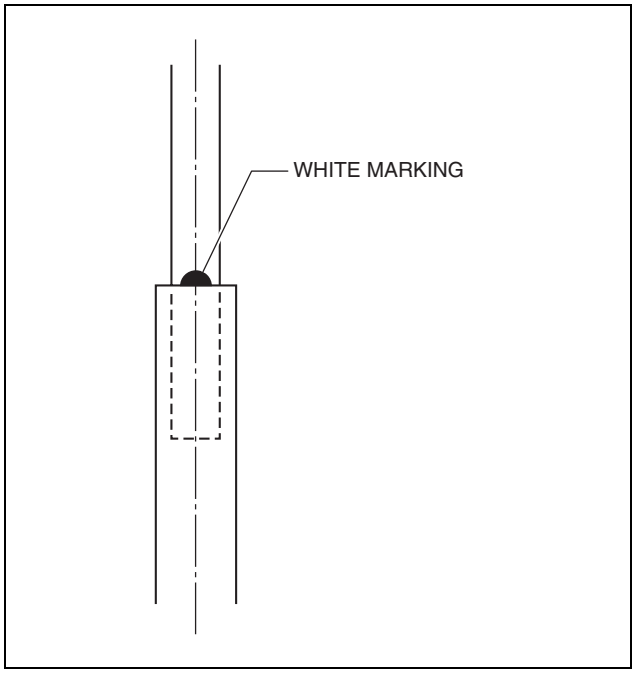


ac5wzw0000532

EMISSION SYSTEM [SKYACTIV-D 2.2]

Vacuum Hose No.2 Installation Note

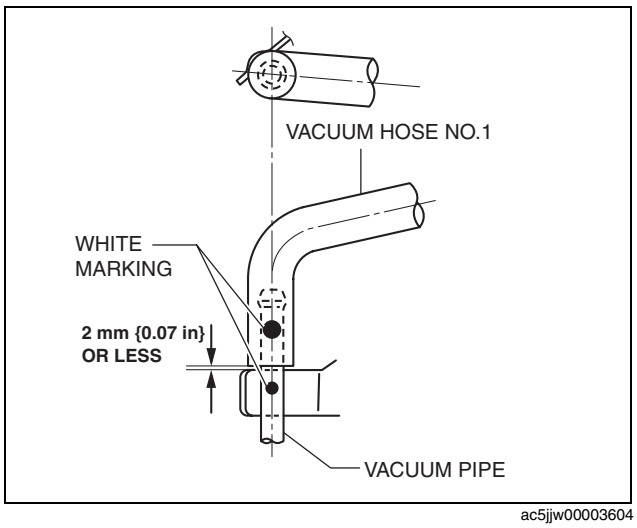
1. Install vacuum hose No.2 as shown in the figure.



ac5wzw0000532

Vacuum Hose No.1 Installation Note

1. Install vacuum hose No.1 as shown in the figure.



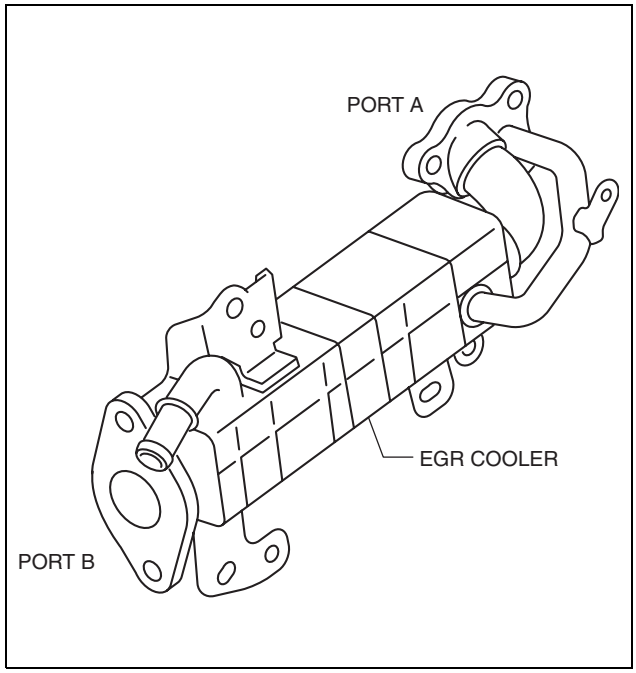
ac5jjw00003604

EMISSION SYSTEM [SKYACTIV-D 2.2]

EGR COOLER INSPECTION [SKYACTIV-D 2.2]

id0116e1099800

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the EGR cooler. (See 01-16B-12 EGR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Verify that there is airflow from port B when pressure is applied from port A.
   - If there is no airflow, replace the EGR cooler. (See 01-16B-12 EGR COOLER REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000475

EGR COOLER BYPASS VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

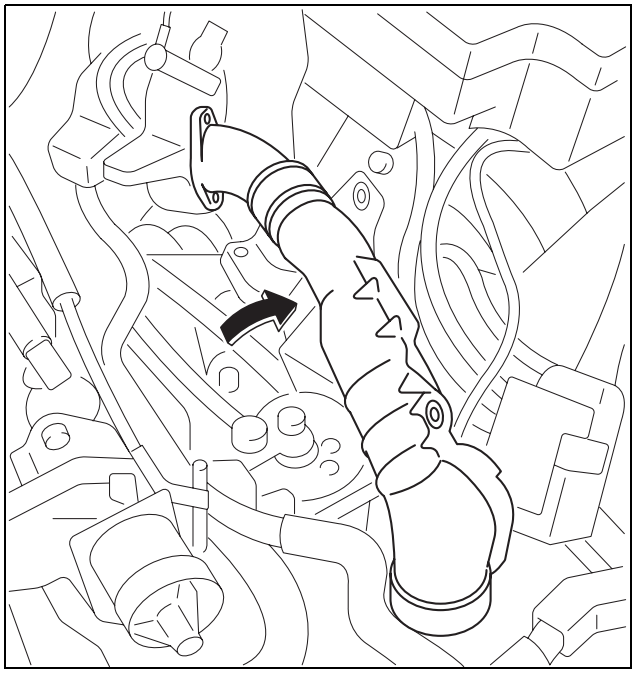
id0116e1299000

Note
- If the EGR cooler bypass valve is replaced, perform the EGR initialization procedure.

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the air cleaner. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the battery and the battery tray. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove the following parts as a single unit: (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   - Air hose
   - Air inlet pipe
   - Breather hose
   - Turbocharger air inlet hose
   - PTC Heater

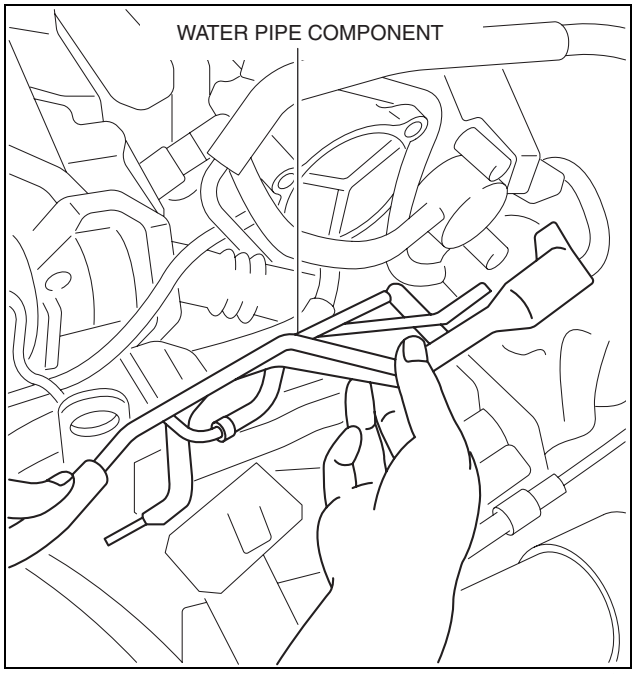
EMISSION SYSTEM [SKYACTIV-D 2.2]

6. Set the turbocharger air outlet pipe, turbocharger air outlet hose, and air inlet pipe aside as a single unit as shown in the figure. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)
7. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)



ac5jjw00003606

8. Set the water pipe component aside as shown in the figure.
9. Remove the EGR pipe (EGR valve side). (See 01-16B-9 EGR PIPE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
10. Set the EGR cooler out of the way. (See 01-16B-12 EGR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



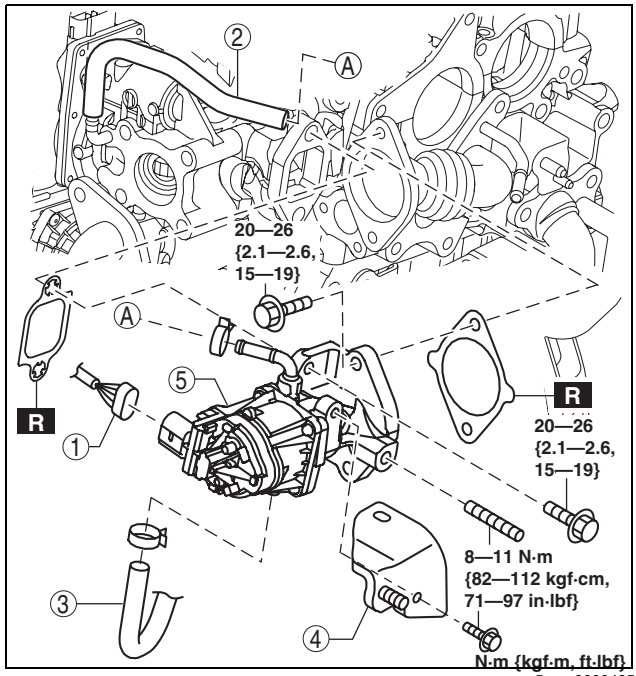
ac5wzw0000485

EMISSION SYSTEM [SKYACTIV-D 2.2]

11. Remove in the order shown in the figure.

1	EGR cooler bypass valve connector
2	Water hose No.1 (See 01-16B-20 Water Hose No.1 Installation Note.)
3	Water hose No.2 (See 01-16B-19 Water hose No.2 Removal Note.) (See 01-16B-19 Water Hose No.2 Installation Note.)
4	Wiring harness bracket
5	EGR cooler bypass valve installation bolt No.1 (See 01-16B-19 EGR Cooler Bypass Valve Installation Bolt Installation Note.)
6	EGR cooler bypass valve installation bolt No.2 (See 01-16B-19 EGR Cooler Bypass Valve Installation Bolt Installation Note.)
7	EGR cooler bypass valve

12. Install in the reverse order of removal.



ac5wzw0000485

Water hose No.2 Removal Note

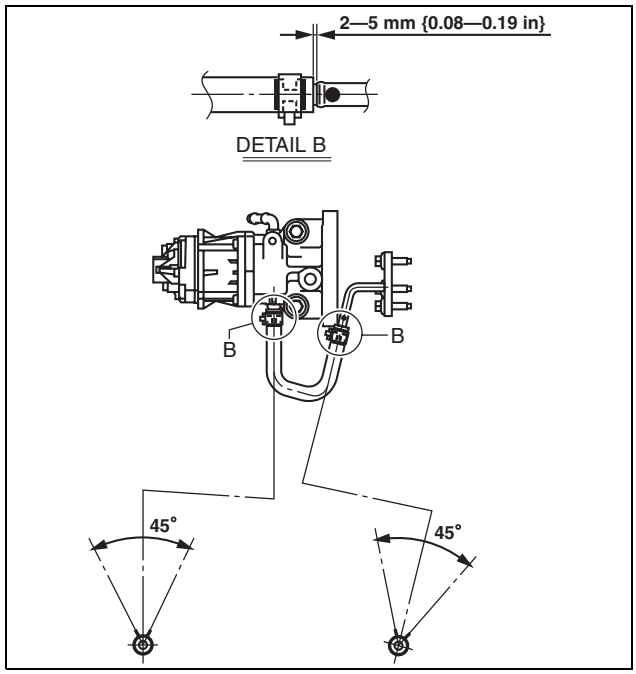
1. Remove the coolant reserve tank. (See 01-12B-8 COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Remove the water hose No.2.

EGR Cooler Bypass Valve Installation Bolt Installation Note

1. Temporarily tighten the bolt until the flanged of the retaining bolt No.1 and No.2 of the EGR pipe (of the EGR cooler bypass valve) are completely seated.
2. Tighten the EGR cooler bypass valve installation bolt No.2.
3. Tighten the EGR cooler bypass valve installation bolt No.1.

Water Hose No.2 Installation Note

1. Install water hose No.2 as shown in the figure.

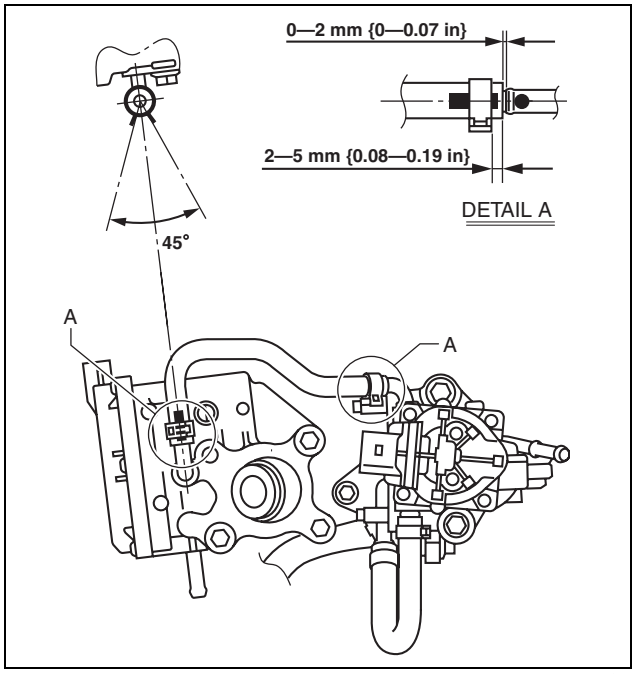


ac5wzw0000485

EMISSION SYSTEM [SKYACTIV-D 2.2]

Water Hose No.1 Installation Note

1. Install water hose No.1 as shown in the figure.



ac5wzw0000485

EGR COOLER BYPASS VALVE INSPECTION [SKYACTIV-D 2.2]

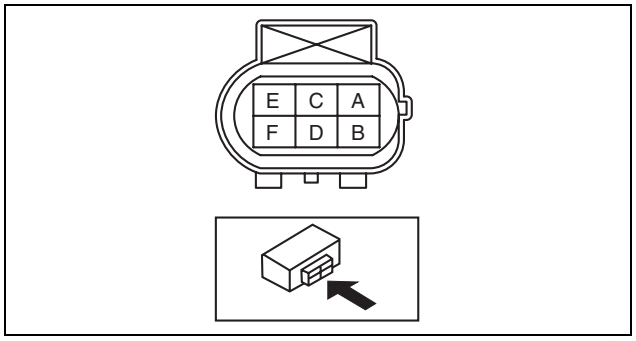
id0116e1299100

Resistance inspection

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Disconnect the EGR cooler bypass connector.
4. Inspect the resistance between EGR cooler bypass valve terminals A and E.

   EGR cooler bypass valve resistance (specification)
   1.45—2.95 ohms [20 °C {68 °F}]

   - If not within the specification, replace the EGR cooler bypass valve. (See 01-16B-17 EGR COOLER BYPASS VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000476

EMISSION SYSTEM [SKYACTIV-D 2.2]

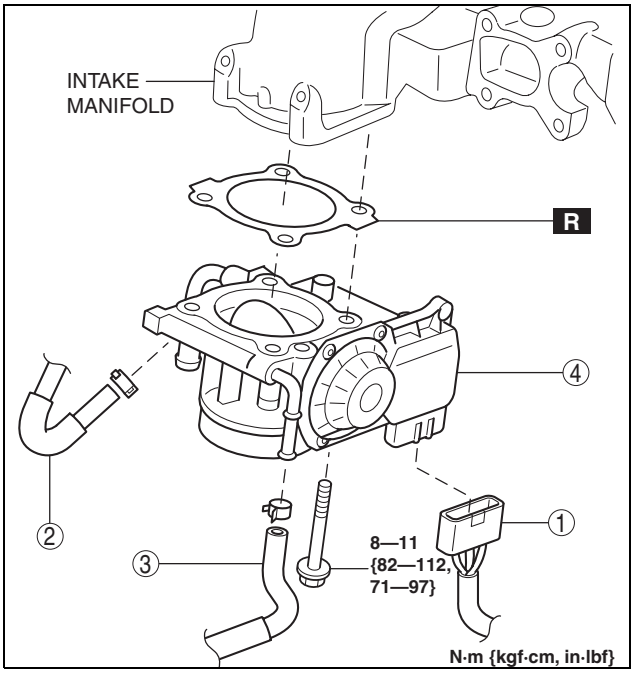
INTAKE SHUTTER VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0116e1708200

Note
- If the intake shutter valve is replaced, perform the intake shutter valve initialization procedure.

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove front under cover No.1 and front under cover No.2. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.) (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
3. Remove the charge air cooler outlet hose. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
5. Remove in the order shown in the figure.

1	Intake shutter valve connector
2	Water hose No.1 (See 01-16B-21 Water Hose No.1 Removal Note.) (See 01-16B-22 Water Pipe No.1 Installation Note.)
3	Water hose No.2 (See 01-16B-22 Water Hose No.2 Installation Note.)
4	Intake shutter valve

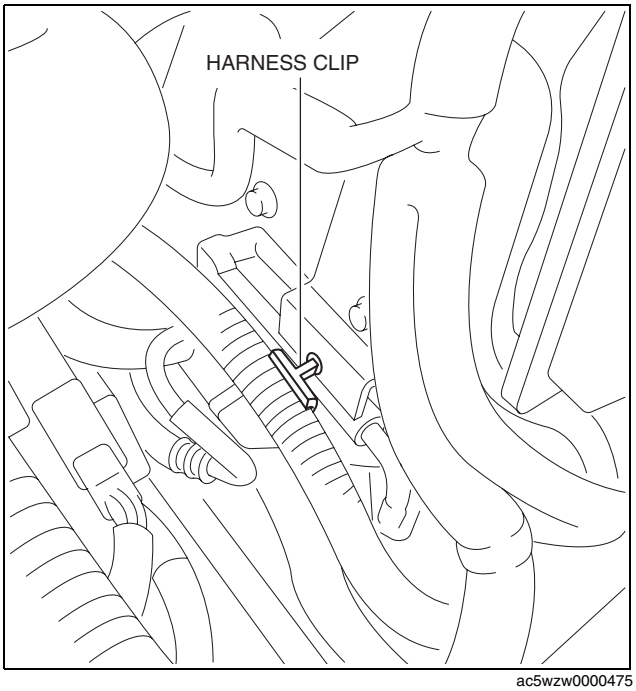


ac5wzw0000475

6. Install in the reverse order of removal.

Water Hose No.1 Removal Note

1. Remove the coolant reserve tank. (See 01-12B-8 COOLANT RESERVE TANK REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Detach the wiring harness clips shown in the figure.
3. Remove the water hose No.1

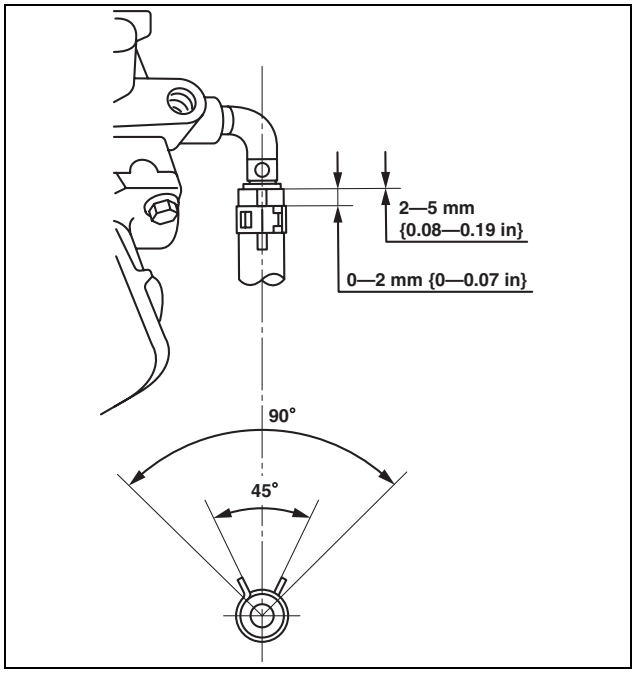


ac5wzw0000475

EMISSION SYSTEM [SKYACTIV-D 2.2]

Water Hose No.2 Installation Note

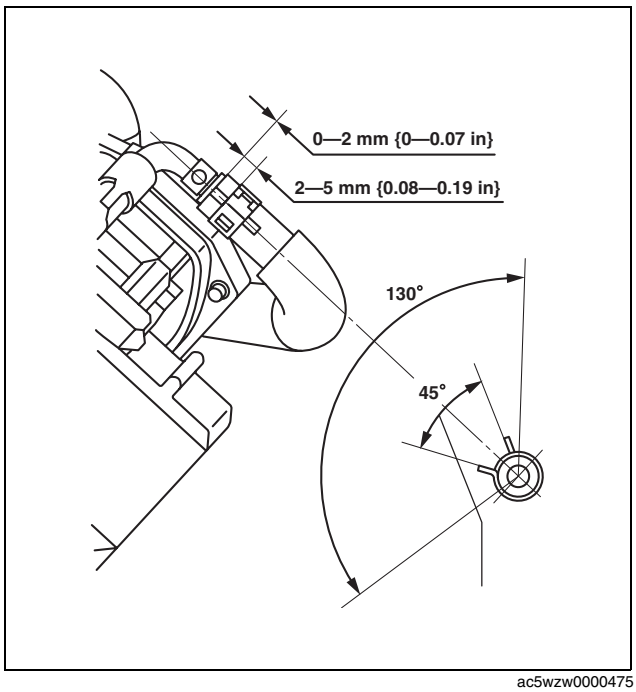
1. Install water hose No.2 as shown in the figure.



ac5wzw0000475

Water Pipe No.1 Installation Note

1. Install water hose No.1 as shown in the figure.



ac5wzw0000475

EMISSION SYSTEM [SKYACTIV-D 2.2]

INTAKE SHUTTER VALVE INSPECTION [SKYACTIV-D 2.2]

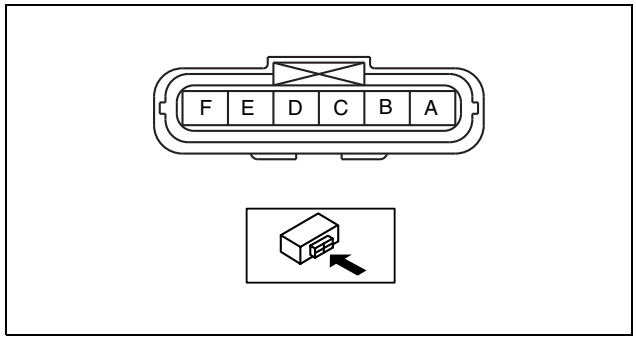
id0116e1093500

Resistance inspection

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Disconnect the intake shutter valve connector.
4. Inspect the resistance between intake shutter valve terminals A and B.

   Intake shutter valve resistance (specification)
   0.3—100 ohms [20 °C {68 °F}]

   - If not within the specification, replace the intake shutter valve. (See 01-16B-21 INTAKE SHUTTER VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

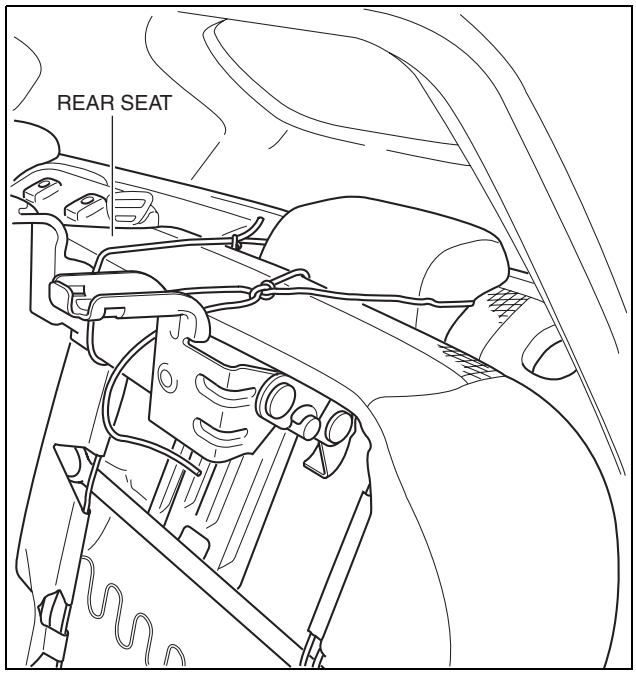


ac5jjw00003544

CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0116e1189700

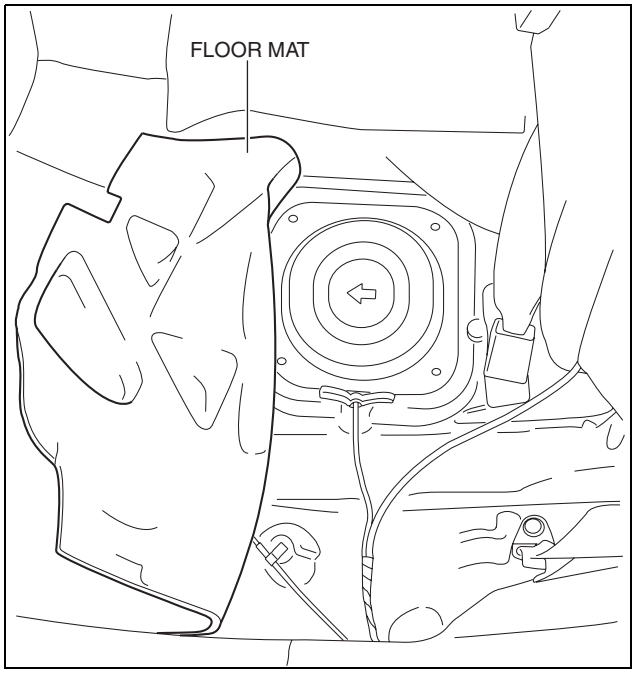
1. Perform the following procedure.
   6:4 split type seat
   1. Remove the rear seat cushion. (See 09-13-76 REAR SEAT CUSHION REMOVAL/INSTALLATION.)
   4:2:4 split type seat
   1. Set the rear seat aside as shown in the figure. (See 09-13-56 REAR SEAT REMOVAL/INSTALLATION.)



ac5wzw0000482

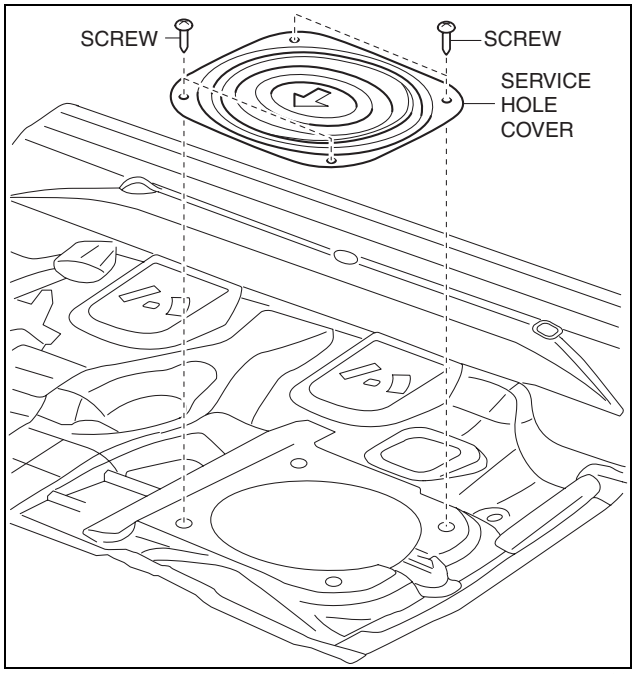
EMISSION SYSTEM [SKYACTIV-D 2.2]

2. Partially peel back the floor mat as shown in the figure.



ac5wzw0000482

3. Remove the service hole cover.



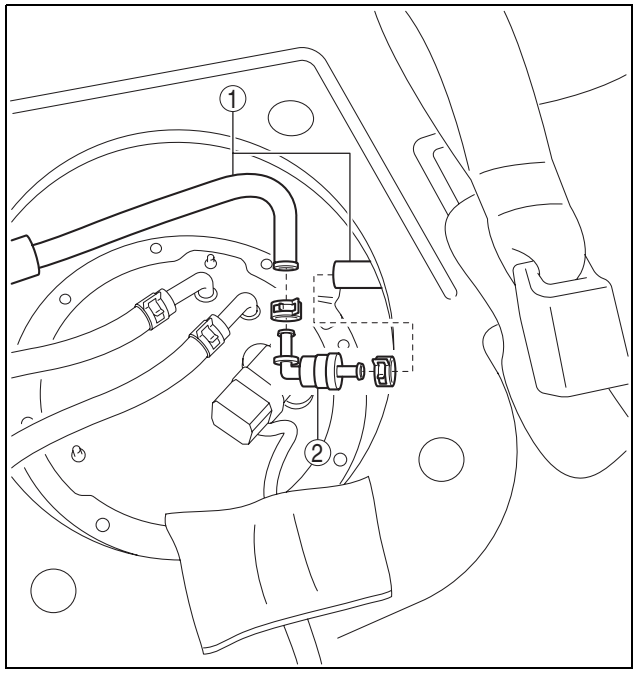
ac5wzw0000483

EMISSION SYSTEM [SKYACTIV-D 2.2]

4. Remove in the order shown in the figure.

1	Evaporative hose
2	Check valve

5. Install in the reverse order of removal.



ac5jjw00003605

CHECK VALVE INSPECTION [SKYACTIV-D 2.2]

id0116e1189900

1. Remove the check valve. (See 01-16B-23 CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Apply vacuum to port A and verify that there is no airflow.
   - If there is airflow, replace the check valve. (See 01-16B-23 CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Verify that there is airflow when vacuum is applied to port A.
   - If there is no airflow, replace the check valve. (See 01-16B-23 CHECK VALVE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

1	Generator (See 01-17A-17 GENERATOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) (See 01-17A-25 GENERATOR DISASSEMBLY/ ASSEMBLY [SKYACTIV-G 2.0].)

2	Battery (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-3 BATTERY REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17A-10 BATTERY RECHARGING [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-14 BATTERY CONDITION INITIALIZATION SETTING (i-stop SETTING) [SKYACTIV-G 2.0].)

CHARGING SYSTEM [SKYACTIV-G 2.0]

3	DC-DC converter (vehicle with i-stop) (See 01-17A-26 DC-DC CONVERTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17A-27 DC-DC CONVERTER INSPECTION [SKYACTIV-G 2.0].)

BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0117h5800500

Operation After Replacing Battery (Vehicle With i-stop)

Note

- If the battery charge/discharge flow (number of times battery can operate) exceeds the specification, a DTC is recorded and the i-stop warning light (amber) flashes. If the battery charge/discharge flow (number of times battery can operate) exceeds the specification, replace the battery with a new one.
- When replacing the battery, perform the following procedure: When replacing the PCM simultaneously, perform the PCM configuration first. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-40-39 PCM CONFIGURATION (USING READ/WRITE FUNCTION) [SKYACTIV-G 2.0].) (See 01-40-39 PCM CONFIGURATION (USING AS-BUILT DATA) [SKYACTIV-G 2.0].)

Without TFT LCD display

Step	Action
1	Switch the ignition ON (engine off).
2	Shift the selector lever to the N position.
3	Perform the following work with the brake pedal depressed. 1. Depress the accelerator pedal for 5 s or more. 2. Verify that the charging system warning light and the master warning light flash. 3. Depress and release the accelerator pedal 3 times. 4. Verify that the charging system warning light illuminates and the master warning light turns off.
4	Switch the ignition off and disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
5	Verifying battery condition initialization setting (i-stop setting). (See 01-17A-14 BATTERY CONDITION INITIALIZATION SETTING (i-stop SETTING) [SKYACTIV-G 2.0].)

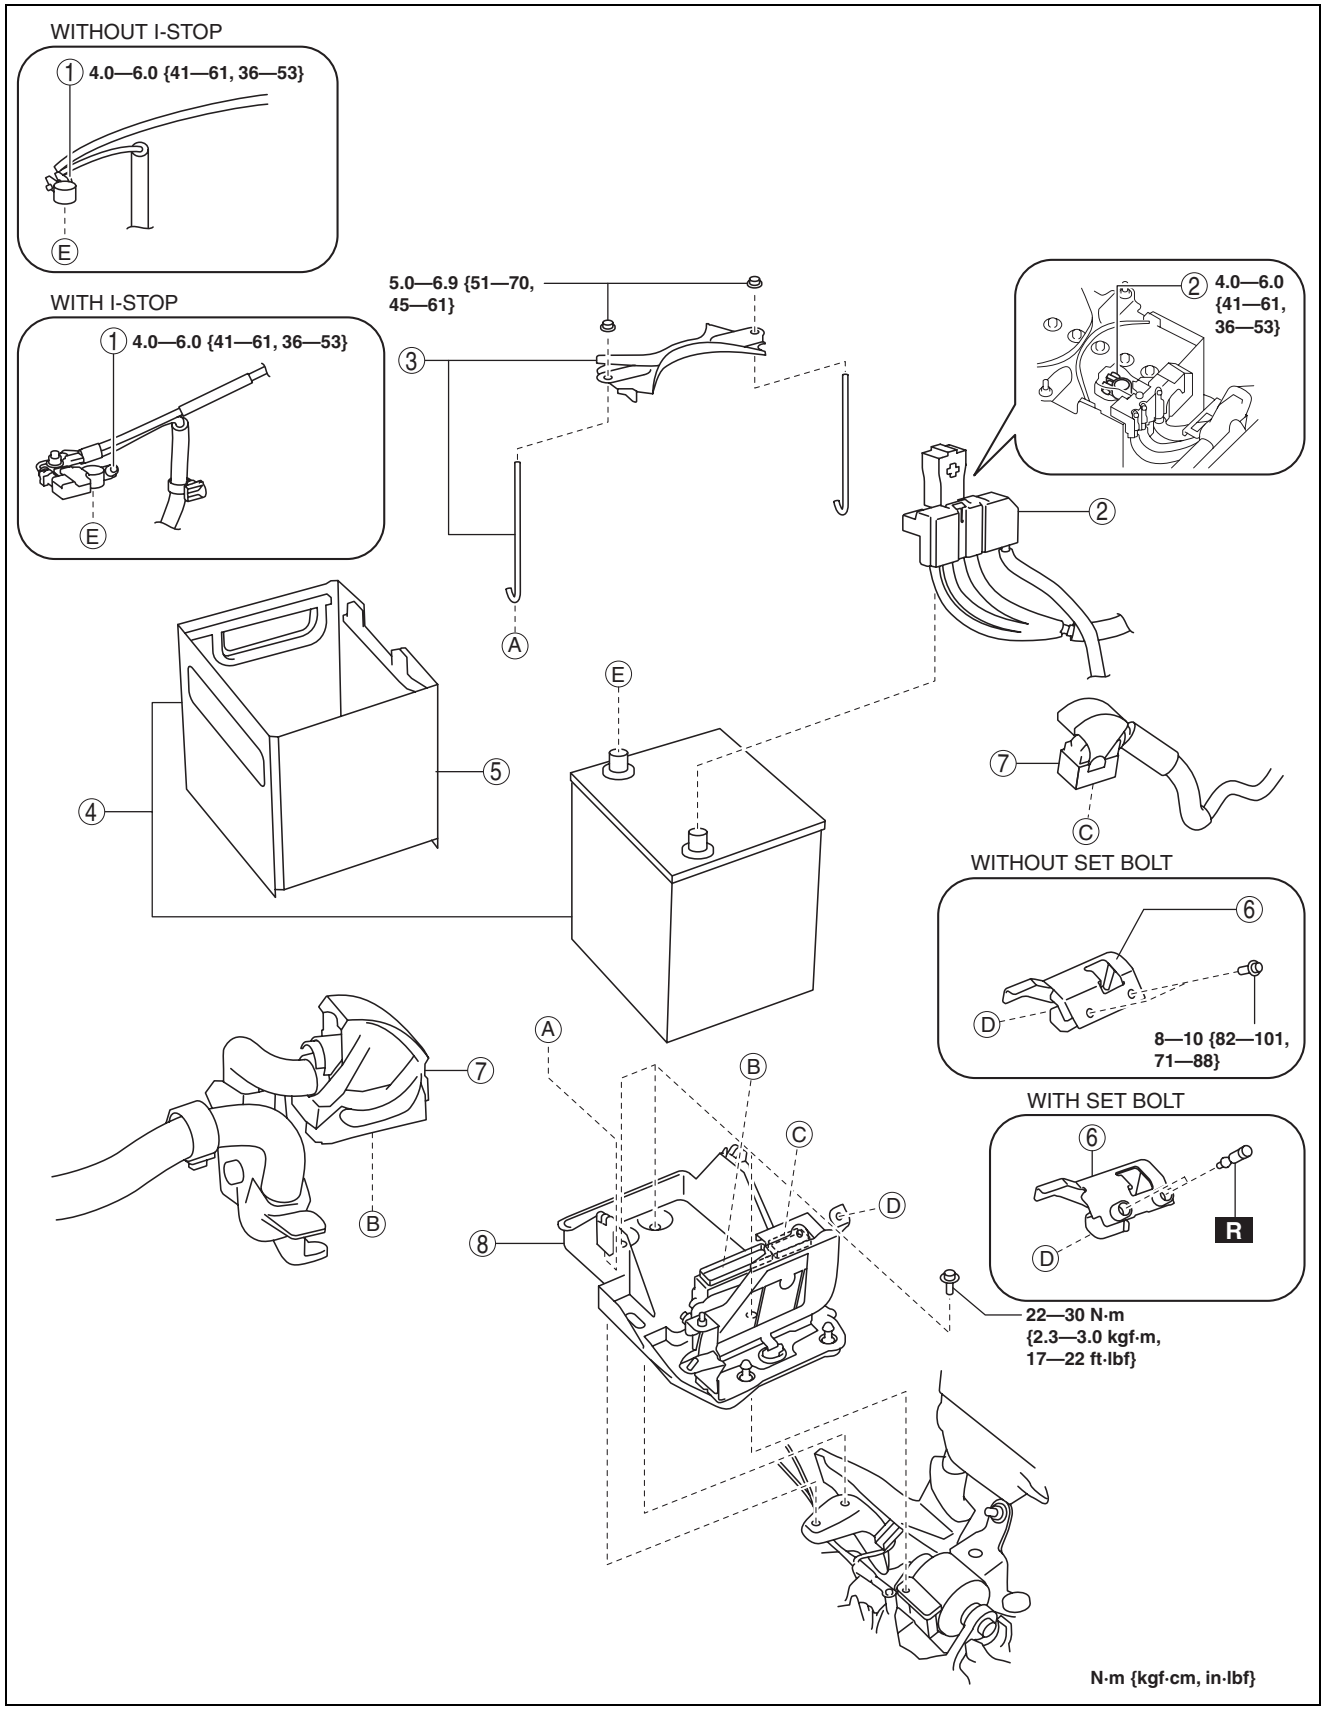
With TFT LCD display

Step	Action
1	Close the all doors.
2	Switch the ignition ON (engine off).
3	If a warning message is displayed in the LCD display, clear the screen using the INFO switch and then go to the next step.
4	Shift the selector lever to the N position.
5	Perform the following work with the brake pedal depressed. 1. Depress the accelerator pedal for 5 s or more. 2. Verify that a warning message (master warning light) on the LCD flashes. 3. Depress and release the accelerator pedal 3 times. 4. Verify that a warning message (master warning light) on the LCD turn off.
6	Switch the ignition off and disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
7	Verifying battery condition initialization setting (i-stop setting). (See 01-17A-14 BATTERY CONDITION INITIALIZATION SETTING (i-stop SETTING) [SKYACTIV-G 2.0].)

CHARGING SYSTEM [SKYACTIV-G 2.0]

Battery Removal/Installation

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.



ac5wzw0000511

CHARGING SYSTEM [SKYACTIV-G 2.0]

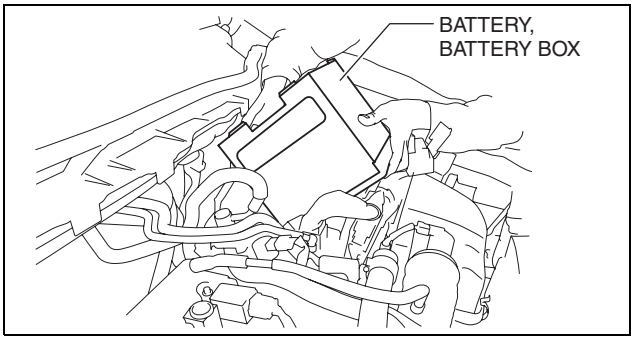
1	Negative battery cable (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0])
2	Positive battery cable
3	Battery clamp
4	Battery, battery box (See 01-17A-5 Battery, battery box removal Note.)
5	Battery box (See 01-17A-6 Battery box installation note.)
6	PCM cover (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0])
7	PCM connector (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0])
8	Battery tray and PCM component (See 01-17A-5 Battery tray and PCM component Removal note.)

Battery, battery box removal Note

Caution

- **When removing the battery, do not place the battery on the PCM connector or hit it with the battery. Otherwise, the PCM or PCM connector could be damaged.**

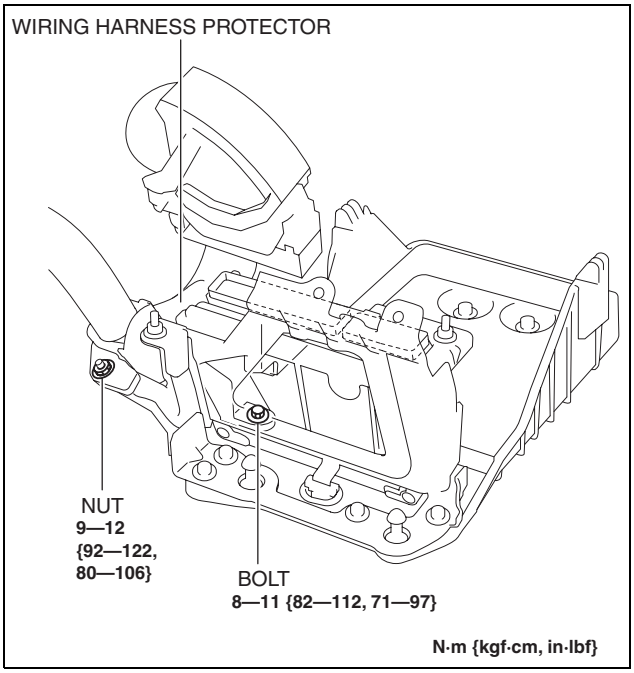
1. Remove the battery with the battery box while the battery is positioned at an angle as shown in the figure.



ac5wzw0000265

Battery tray and PCM component Removal note

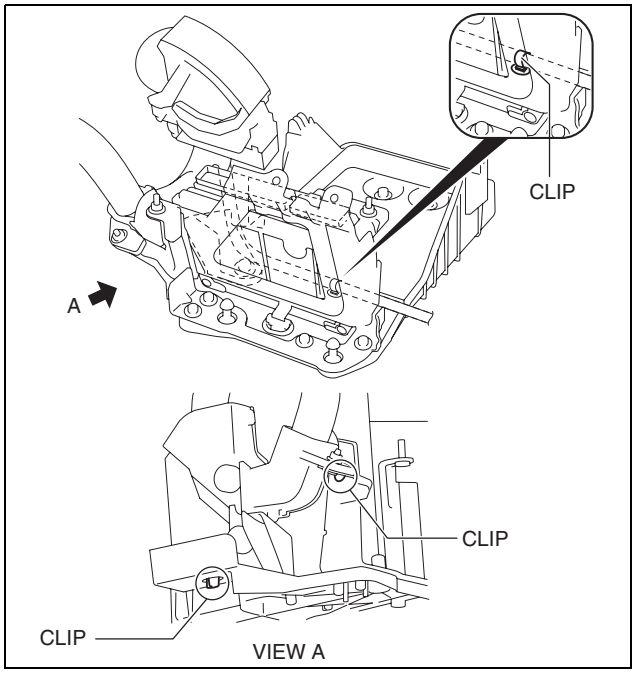
1. Remove the air cleaner, air hose and fresh air duct component. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
2. Remove the bolt and nut securing the wiring harness protector to the battery tray.
3. Remove three battery tray bolts so that the battery tray is free to move.



ac5wzw0000308

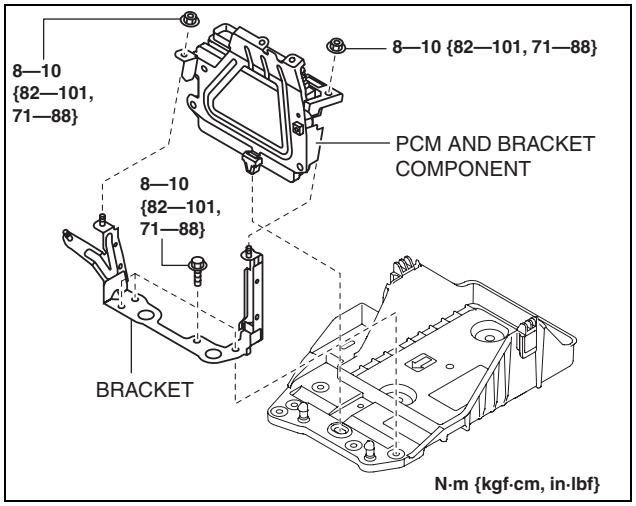
CHARGING SYSTEM [SKYACTIV-G 2.0]

4. Release the wiring harness clips at the three locations shown in the figure and remove the battery tray and PCM component.



ac5wzw0000308

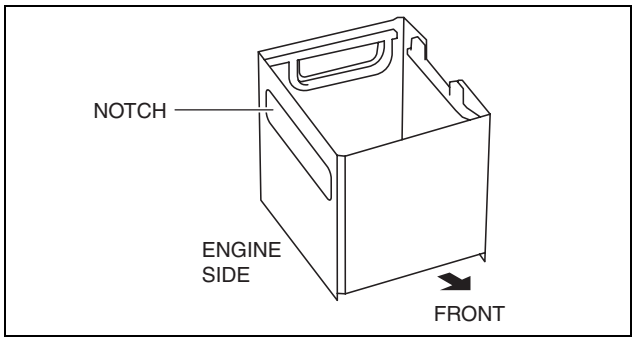
5. When replacing the battery tray with a new one, perform the following procedure:
   (1) Remove the PCM and bracket component.
   (2) Remove the bracket.



ac5wzw0000265

Battery box installation note

1. Install the battery box so that the side with the larger notch faces toward the engine side.



ac5wzw0000265

CHARGING SYSTEM [SKYACTIV-G 2.0]

BATTERY INSPECTION [SKYACTIV-G 2.0]

id0117h5800600

Warning
- **Since battery acid is toxic, be careful when handling the battery.**
- **Since battery acid is highly corrosive, be careful not to allow it to contact clothing or the vehicle.**
- **In case battery acid contacts skin, eyes, or clothing, flush it immediately with running water. If the acid gets in the eyes, flush with water for more than 15 min and get prompt medical attention.**

Electrolyte Specific Gravity

Purpose	Step	Inspection		Action
Battery examination (verification of dendrite short)	1	Using a hydrometer, measure the electrolyte gravity of all the cells and identify the one with the lowest electrolyte gravity value.	1.25 or more	Battery is normal.
			1.17—1.25	Recharge the battery. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].)
			Less than 1.17	Replace the battery because it can be determined as a dendrite short. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

Parasitic Draw

Caution
- **Operating electrical loads while the parasitic draw is being measured can damage the tester.**
- **Because the "BATT_SOC" value before disconnecting the negative battery cable is required for the battery condition initial setting (i-stop setting), always verify the "BATT_SOC" value before disconnecting the negative battery cable.**

1. Verify that the ignition is off (key has been removed) and that all doors are closed.
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)

Note
- If the battery is not left undisturbed for **10 min or more, but less than 30 min**, the tester will indicate a high value (**approx. 300 mA**).
- If the ignition or any electrical accessory is operated after the tester is connected, the battery must be left undisturbed for **10 min or more, but less than 30 min** from that point.
- For vehicles with the immobilizer system, the system periodically shifts synchronization of the security light flashing. Therefore, **65 mA (0.1 s)** current is supplied when the security light is illuminated, and **40 mA (2 s)** current is supplied when the security light is not illuminated. In addition, the measuring instrument, which shows the average value, indicates around **55 mA**.

3. Connect the tester between the negative battery terminal and negative battery cable, leave the battery undisturbed for **10 min or more, but less than 30 min**, and then measure the parasitic draw.
   - If not within specification, measure the parasitic draw while removing the fuses one by one from the inside of the main fuse block and the inside of the fuse block.
   - Inspect and repair wiring harnesses and connectors of the fuse where the current has decreased.

Battery parasitic draw (When the ignition is off (key is removed), all doors and the bonnet are closed.)
40—65 mA

Note
- If the battery is left for **30 min**, a battery parasitic draw value of **25—45 mA** is indicated.

CHARGING SYSTEM [SKYACTIV-G 2.0]

Battery inspection when i-stop warning light (amber) is flashing

1. Inspect the battery as follows:

Step	Inspection		Action
1	Was the vehicle engine not started for 5 days or more? (Ask the customer)	Yes	Replace the battery.
		No	Go to the next step.
2	Using a hydrometer, measure the electrolyte gravity of all the cells and identify the one with the lowest electrolyte gravity value.	1.25 or more	Battery is normal.
		1.17—1.25	Recharge the battery. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].)
		Less than 1.17	Replace the battery because it can be determined as a dendrite short. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3	After performing any of the following work, verify that the i-stop warning light (amber) turns off. • Battery cable is disconnected and ignition is switched ON (engine off) after reconnection • Ignition is switched ON (engine off) after 12 hours or more have elapsed with ignition switched off		

BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)]

id0117h58006h7

Warning

- **Since battery acid is toxic, be careful when handling the battery.**
- **Since battery acid is highly corrosive, be careful not to allow it to contact clothing or the vehicle.**
- **In case battery acid contacts skin, eyes, or clothing, flush it immediately with running water. If the acid gets in the eyes, flush with water for more than 15 min and get prompt medical attention.**

Electrolyte Specific Gravity

1. Measure the electrolyte specific gravity using a hydrometer.
   - If it is less than the specification, recharge the battery. (See 01-17A-10 BATTERY RECHARGING [SKYACTIV-G 2.0 (WITHOUT i-stop)].)

Battery electrolyte specific gravity [20 °C {68 °F}]
1.22—1.29

Battery Voltage

1. Inspect the battery as follows:

Step	Inspection		Action
1	Measure the battery positive voltage.	12.4 V or more	Go to Step 3.
		Less than 12.4 V	Go to the next step.
2	Quick charge for **30 min** and recheck voltage.	12.4 V or more	Go to the next step.
		Less than 12.4 V	Replace the battery.
3	Using the battery load tester, apply load current (see battery load test current) and record battery voltage after **15 s**. Is voltage more than the specification?	Yes	Normal
		No	Replace the battery.

Battery load test current
55D23L (48): 180 A
75D23L (52): 195 A

Standard specification

Battery temp. (°C {°F})	Minimum voltage (V)
4 {39}	9.3
10 {50}	9.4
16 {61}	9.5
21 {70}	9.6

CHARGING SYSTEM [SKYACTIV-G 2.0]

Parasitic Draw

1. Verify that the ignition is off (key has been removed) and that all doors are closed.
2. Disconnect the negative battery cable. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)])

Caution

- **Operating electrical loads while the parasitic draw is being measured can damage the tester.**

Note

- If the battery is not left undisturbed for **10 min or more, but less than 30 min**, the tester will indicate a high value (**approx. 300 mA**).
- If the ignition or any electrical accessory is operated after the tester is connected, the battery must be left undisturbed for **10 min or more, but less than 30 min** from that point.
- For vehicles with the immobilizer system, the system periodically shifts synchronization of the security light flashing. Therefore, **65 mA (0.1 s)** current is supplied when the security light is illuminated, and **40 mA (2 s)** current is supplied when the security light is not illuminated. In addition, the measuring instrument, which shows the average value, indicates around **55 mA**.

3. Connect the tester between the negative battery terminal and negative battery cable, leave the battery undisturbed for **10 min or more, but less than 30 min**, and then measure the parasitic draw.
   - If not within specification, measure the parasitic draw while removing the fuses one by one from the inside of the main fuse block and the inside of the fuse block.
   - Inspect and repair wiring harnesses and connectors of the fuse where the current has decreased.

Battery parasitic draw (When the ignition is off (key is removed), all doors and the bonnet are closed.)
40—65 mA

Note

- If the battery is left for **30 min**, a battery parasitic draw value of **25—45 mA** is indicated.

BATTERY RECHARGING [SKYACTIV-G 2.0]

id0117h5800700

Warning

- **Keep all flames away from the battery and perform the servicing in a well-ventilated area. Otherwise, evaporated gas from the battery could ignite.**
- **Remove the battery filler caps when recharging to prevent battery deformation or damage.**
- **Do not perform battery recharging with the battery in the vehicle as it is dangerous.**
- **When connecting to the battery recharger, make sure the battery cables are connected correctly.**

Caution

- **Do not perform quick recharging. If quick recharging is performed it could result in an i-stop control malfunction.**
- **After recharging, leave the battery as it is for as long as possible (6 hours or longer recommended) to dissipate the polarization in the battery.**

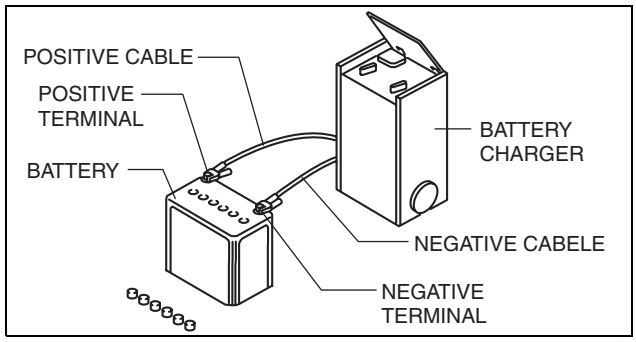
1. Remove the battery.
2. Remove the battery filler caps.
3. To prevent loss of battery fluid during recharging, verify the battery fluid level.

Battery fluid level is between upper and lower or less

- Add distilled water to the upper level.

Battery fluid level is between upper and lower or more

- Go to the next step.



ac5wzw0000518

CHARGING SYSTEM [SKYACTIV-G 2.0]

4. Connect a battery charger to the battery and adjust the charging current as follows.

Note
- Verify the current after 30 s have elapsed since the measurement was started because the current is not stabilized after the voltage adjustment.

(1) Adjust the voltage so that the recharge current is 10 to 15 A.
(2) Charge the battery for 60 min using current in Step (1).
(3) Readjust the battery so that the recharge current is 10 to 15 A.
(4) Charge the battery so that the total time for Step (2) is the time in table.

Battery recharge time

Cell with lowest electrolyte gravity	Recharge time
1.24 or more	180 min or more
1.21 or more	240 min or more
1.17 or more	360 min or more

5. Measure electrolyte gravity of all cells.
Cell with lowest electrolyte gravity is less than 1.25
- Replace the battery as battery charge could not be restored. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

Cell with lowest electrolyte gravity is 1.25 or more
- Battery charge was restored, therefore install the recharged battery into the vehicle. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

BATTERY RECHARGING [SKYACTIV-G 2.0 (WITHOUT i-stop)]

id0117h58007h7

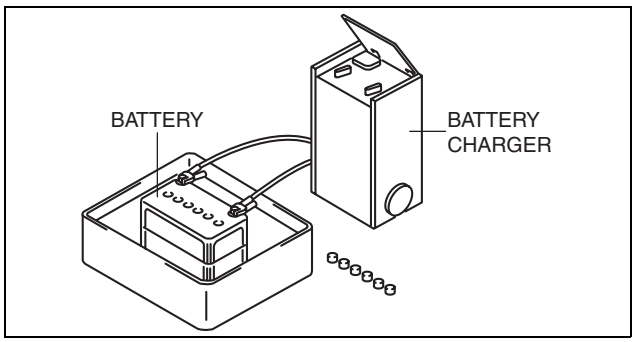
Warning
- **Keep all flames away from the battery, otherwise evaporated gas from the battery fluid may catch fire, and cause serious injury.**
- **Remove the battery filler caps when recharging to prevent battery deformation or damage.**

Caution
- **Do not quick charge for more than 30 min. It will damage the battery.**

1. Remove the battery and then place it in a pan of water.
2. Remove the battery filler caps.
3. Connect a battery charger to the battery and adjust the charging current as follows.

Battery slow charge current
55D23L (48): 4.5—5.5 A
75D23L (52): 5.0—6.0 A

Battery quick charge current [30 min]
55D23L (48): 30 A
75D23L (52): 35 A



am3uuw0000485

4. After the battery is recharged, verify that the voltage is within the specification and remains at the same value for **1 h or more** after the recharging has been completed.
- If not within the specification, replace the battery.

Standard voltage
12.4 V or more

CHARGING SYSTEM [SKYACTIV-G 2.0]

NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0]

id0117h5800800

Warning

- **Before removing the SRS air bag system-related parts, always disconnect the negative battery cable terminal and wait for 1 min. or more to allow the back-up power supply to deplete its stored power. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)**

Caution

- **With the battery connected and the ignition switched ON, or if servicing is performed for a long period (10 min or more) with the ignition switched off.**

Required procedure after negative battery cable terminal disconnection/connection

System name	Conditions after disconnecting the negative battery cable terminal	Required procedure		Reference
		Before disconnecting negative battery cable terminal	After connecting negative battery cable terminal	
Power window system	Reset to initial setting and auto-function is disabled.	—	Perform the power window system initial setting.	(See 09-12-66 POWER WINDOW SYSTEM INITIALIZATION PROCEDURE.)
Sunroof system	Reset to initial setting and function is disabled.	—	Perform the sunroof system initial setting.	(See 09-15-18 SUNROOF SYSTEM INITIALIZATION PROCEDURE.)
Clock and audio	Clock display and audio system memory are reset.	Verify the setting content.	Set the verified content before disconnecting negative battery cable terminal.	—
i-stop system	Specified information in the PCM cleared and the i-stop does not operate normaly.	Verify PID “BATT_SOC” value and record. *1	Perform battery condition initial setting (i-stop setting). *2	(See 01-17A-14 BATTERY CONDITION INITIALIZATION SETTING (i-stop SETTING) [SKYACTIV-G 2.0].)
Tire pressure monitoring system (TPMS)	The tire pressure monitoring system detection accuracy decreases.	—	Perform the tire pressure monitoring system initialization.	(See 02-12-4 TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE.)

*1 : For vehicles with i-stop, if the negative battery cable terminal is disconnected and re-connected, battery condition initial setting (i-stop setting) must be performed.
*2 : Because the “BATT_SOC” value before disconnecting the negative battery cable terminal is required for the battery condition initial setting (i-stop setting), record the “BATT_SOC” value before disconnecting the negative battery cable terminal.

CHARGING SYSTEM [SKYACTIV-G 2.0]

Negative Battery Cable Terminal Disconnection

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).
3. Verify the “BATT_SOC” value using the M-MDS data logger function. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
4. Record the “BATT_SOC” value.
   “BATT_SOC” value is less than 75%
   - Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].)

   “BATT_SOC” value is 75% or more
   - Go to the next step.
5. Switch the ignition off.

Caution

- **Disconnect the current sensor connector before disconnecting the negative battery cable terminal. If the negative battery cable terminal is disconnected first, the PCM may mistakenly recognize a signal from the current sensor causing interference with engine control.**

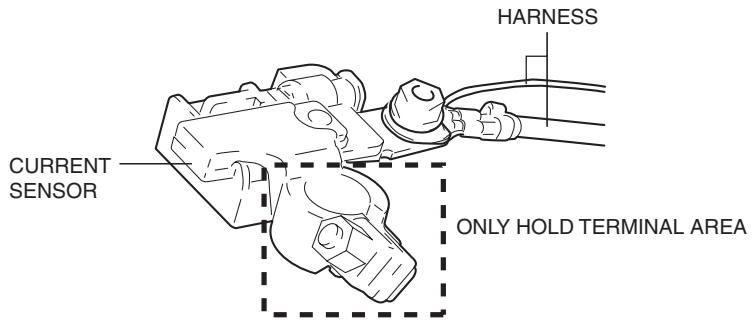
6. Disconnect the current sensor connector.
7. Disconnect the negative battery cable terminal.

Negative Battery Cable Terminal Connection

Caution

- **Verifying the tightness while holding the current sensor may apply excessive force to the terminal and the terminal could loosen, causing poor engine starting. When verifying the tightness of the negative battery cable terminal, only hold the terminal area, not the current sensor.**

VERIFICATION OF NEGATIVE BATTERY CABLE TERMINAL TIGHTENING



ac5wzw0000511

1. Perform battery condition initial setting (i-stop setting). (See 01-17A-14 BATTERY CONDITION INITIALIZATION SETTING (i-stop SETTING) [SKYACTIV-G 2.0].)

Note

- Connection of the negative battery cable terminal and the current sensor connector will be done in the battery condition initial setting (i-stop setting) procedure.

2. Perform services not related to i-stop control which are required after connecting the negative battery cable terminal. (See 01-17A-11 Required procedure after negative battery cable terminal disconnection/connection.)

CHARGING SYSTEM [SKYACTIV-G 2.0]

NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)]

id0117h58008h7

Warning

- **Before removing the SRS air bag system-related parts, always disconnect the negative battery cable and wait for 1 min. or more to allow the back-up power supply to deplete its stored power. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)**

Required procedure after negative battery cable disconnection/connection

System name	Conditions after disconnecting the negative battery cable terminal	Required procedure		Reference
		Before disconnecting negative battery cable terminal	After connecting negative battery cable terminal	
Power window system	Reset to initial setting and auto-function is disabled.	—	Perform the power window system initial setting.	(See 09-12-66 POWER WINDOW SYSTEM INITIALIZATION PROCEDURE.)
Clock and audio	Clock display and audio system memory are reset.	Verify the setting content.	Set the verified content before disconnecting negative battery cable terminal.	—

Negative Battery Cable Terminal Disconnection

1. Switch the ignition to off.
2. Disconnect the negative battery cable.

Negative Battery Cable Terminal Connection

Caution

- **When tightening the negative battery cable, tighten it to the specified torque. If it is not tightened to the specified torque, the battery charging/discharging may be affected. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)**

1. Connect the negative battery cable terminal.
2. Perform services which are required after connecting the negative battery cable terminal. (See 01-17A-13 Required procedure after negative battery cable disconnection/connection.)

CHARGING SYSTEM [SKYACTIV-G 2.0]

BATTERY CONDITION INITIALIZATION SETTING (i-stop SETTING) [SKYACTIV-G 2.0]

id0117h5801000

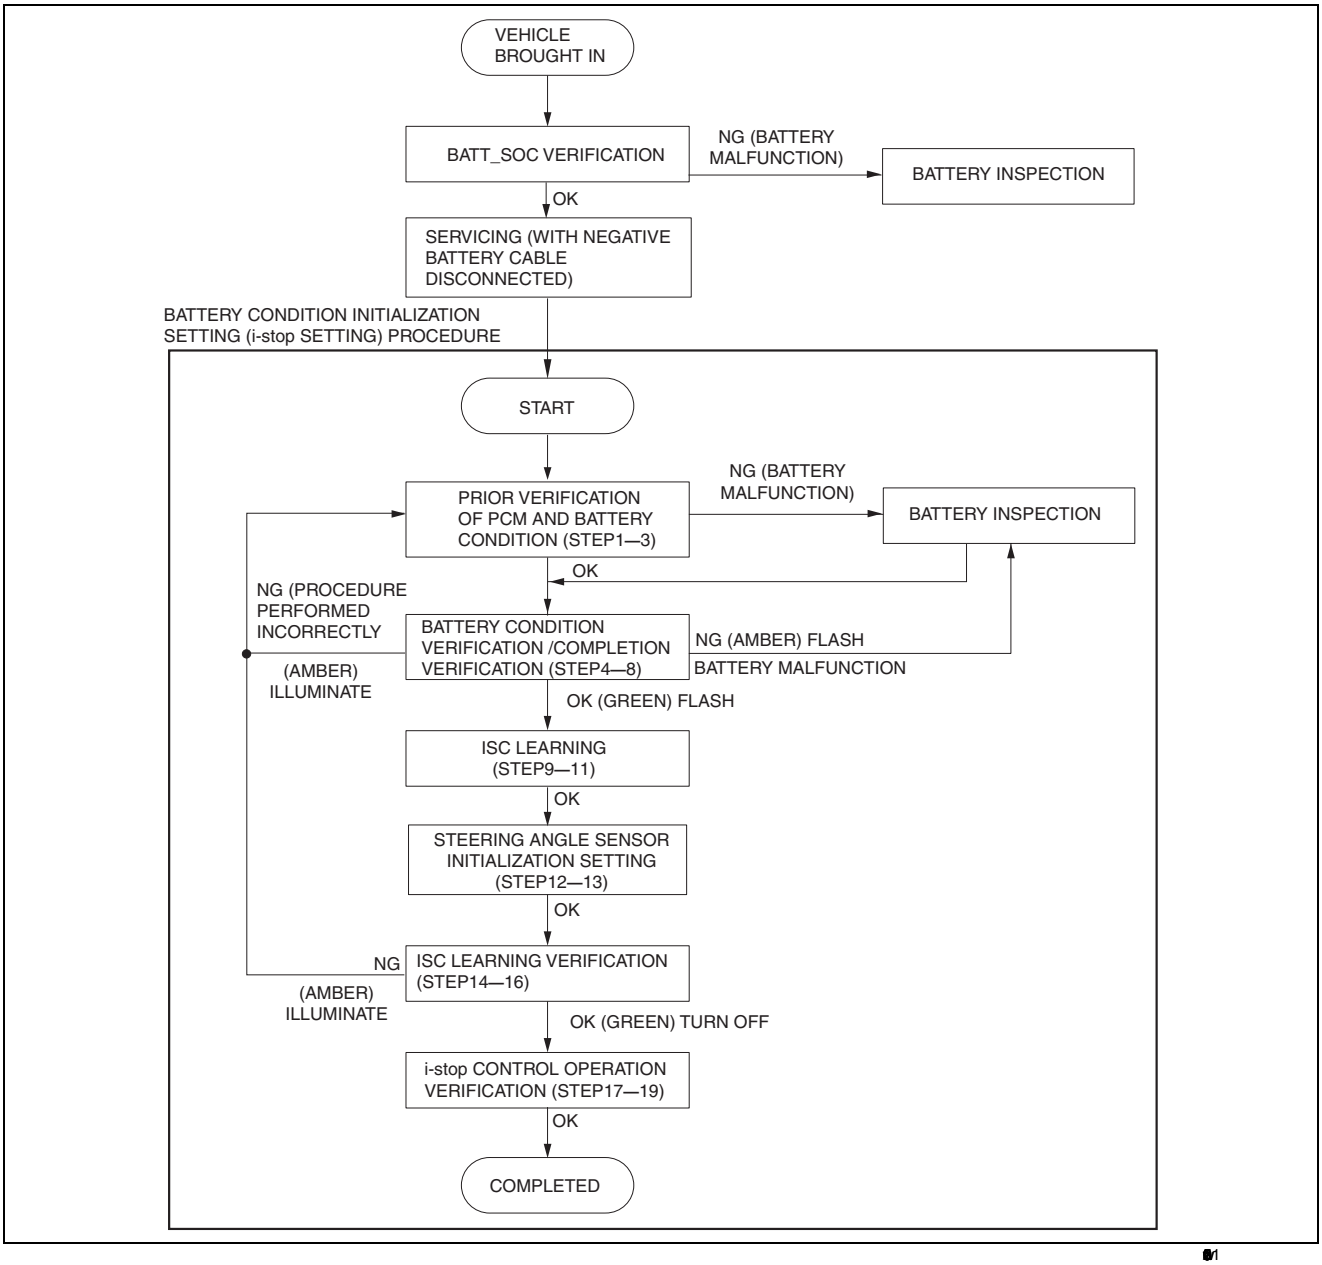
Battery Condition Initial setting (i-stop setting) Procedure

Caution

- **If the engine is started with the bonnet open, the i-stop function will not operate until the engine is restarted with the bonnet closed (not system malfunction). If the engine is started with the bonnet open, close the bonnet and restart the engine after the ignition is switched off once.**
- **If a vehicle with an i-stop non-operation condition is brought in, the malfunction will not be resolved by simply performing the battery condition initial setting (i-stop setting). Verify the PID "BATT_SOC" value and if the value is less than 75%, recharge the battery. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].)**
- **If the "BATT_SOC" value has not been verified before disconnecting the negative battery cable, perform battery condition initial setting (i-stop setting) after performing the battery inspection.**
- **The "BATT_SOC" value is displayed "0%" because the battery charge condition is not stabilized after connecting the negative battery cable (it is necessary to leave battery undisturbed for approx. 6 to 48 h to stabilize battery charge condition).**

- If the negative battery cable is disconnected, specific information stored in the PCM will be erased. Therefore, perform the following procedure after reconnecting.

Battery Condition Initial setting (i-stop setting) flow



CHARGING SYSTEM [SKYACTIV-G 2.0]

Purpose	Step	Procedure	Caution/Note
Prior verification of PCM and battery condition	1	Verify the value (BATT_SOC) measured before disconnecting the negative battery cable. **When BATT_SOC value is not verified or the value is 75% or more.** • Go to the next step. **When BATT_SOC value is less than 75%** • Perform battery inspection. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].)	—
	2	Verify that 5 min or more have elapsed since the negative battery cable was disconnected.	**Caution** • **It is necessary to leave the battery undisturbed for 5 min or more because the voltage is not stabilized, depending on the battery usage condition, and the PCM cannot determine the "BATT_SOC" value correctly.**
	3	Disconnect the current sensor connector. If the current sensor connector has already been disconnected, go to the next step.	**Note** • Disconnect the current sensor connector to prevent the current sensor from being damaged by connecting the negative battery cable.
Battery condition verification / completion verification	4	Connect the negative battery cable and wait for 10 s or more.	**Caution** **negative battery cable terminal tightening torque: 2.9—4.9 N·m {30—49 kgf·cm, 26—43 in·lbf}**
	5	Connect the current sensor connector.	—
	6	Switch the ignition ON (engine off) and wait for 15 s or more (within 1 min.).	—
	7	**VERIFY i-stop INDICATOR LIGHT (GREEN) AND i-stop WARNING LIGHT (AMBER) FLASHING CONDITION** • Press the i-stop OFF switch for 10 s and verify the flashing condition of the i-stop indicator light (green) and i-stop warning light (amber). **When i-stop indicator light (green) flashes** — Go to the next step. **When i-stop warning light (amber) flashes** — Perform the battery inspection. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) **When i-stop warning light (amber) illuminates** — Procedure is performed incorrectly. Switch the ignition off and repeat the procedure from Step 1 (Prior verification of PCM and battery condition).	**Note** • When the i-stop OFF switch is pressed, the illumination condition of the i-stop warning light (amber) changes to flashing of either the i-stop indicator light (green) or the i-stop warning light (amber).
	8	Switch the ignition off.	—
ISC learning	9	Close the bonnet.	**Note** • If the engine is not warmed up completely the ISC learning will not finish. — Warm-up is not completed even if the low engine coolant temperature indicator light (blue) turns off. As a guide, apply pressure to the radiator hose and if the radiator has warmed up, engine warming is complete.
	10	Start the engine.	
	11	Warm up the engine completely with no electrical load.	
Steering angle sensor initialization setting	12	Turn the steering wheel lock-to-lock.	**Note** • Perform steering angle sensor initialization setting because the initial value stored in the EPS control module is reset.
	13	Switch the ignition off.	

CHARGING SYSTEM [SKYACTIV-G 2.0]

Purpose	Step	Procedure	Caution/Note
ISC learning verification	14	Perform the following procedure within 25 s. 1. Switch the ignition ON (engine off) and within 5 s, long-press the i-stop OFF switch for 3 s or more. (The i-stop warning light (amber) illuminates.) 2. Start the engine. 3. Long-press the i-stop OFF switch one time. 4. Verify that the i-stop warning light (amber) stop illuminating and the i-stop indicator light (green) starts flashing. — If the amber light continues to illuminate, the procedure was performed incorrectly, therefore repeat the procedure from Step 1. (Prior verification of PCM and battery condition)	**Note** • Although the i-stop indicator light (green) may flash a few times right after the engine is started, then the i-stop warning light (amber) starts illuminating.
	15	Maintain the idle status (no electrical load) until the i-stop indicator light (green) turns off.	—
	16	After the i-stop indicator light (green) turns off, switch the ignition off.	—
i-stop control operation verification	17	Start the engine and verify that the i-stop indicator light (green) is turned off.	—
	18	Verify the i-stop control operation using the following procedure. 1. Vehicle is traveling at a speed of 4 km/h or more. (EC/Russia specs.) 1. While the vehicle is traveling at a speed of 4 km/h or more, verify that the i-stop indicator light (green) illuminates. (Except EC/Russia specs.) 2. Stop the vehicle and verify that the engine stops via the i-stop control and then restarts.	—
	19	Switch the ignition off.	—

CHARGING SYSTEM [SKYACTIV-G 2.0]

GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

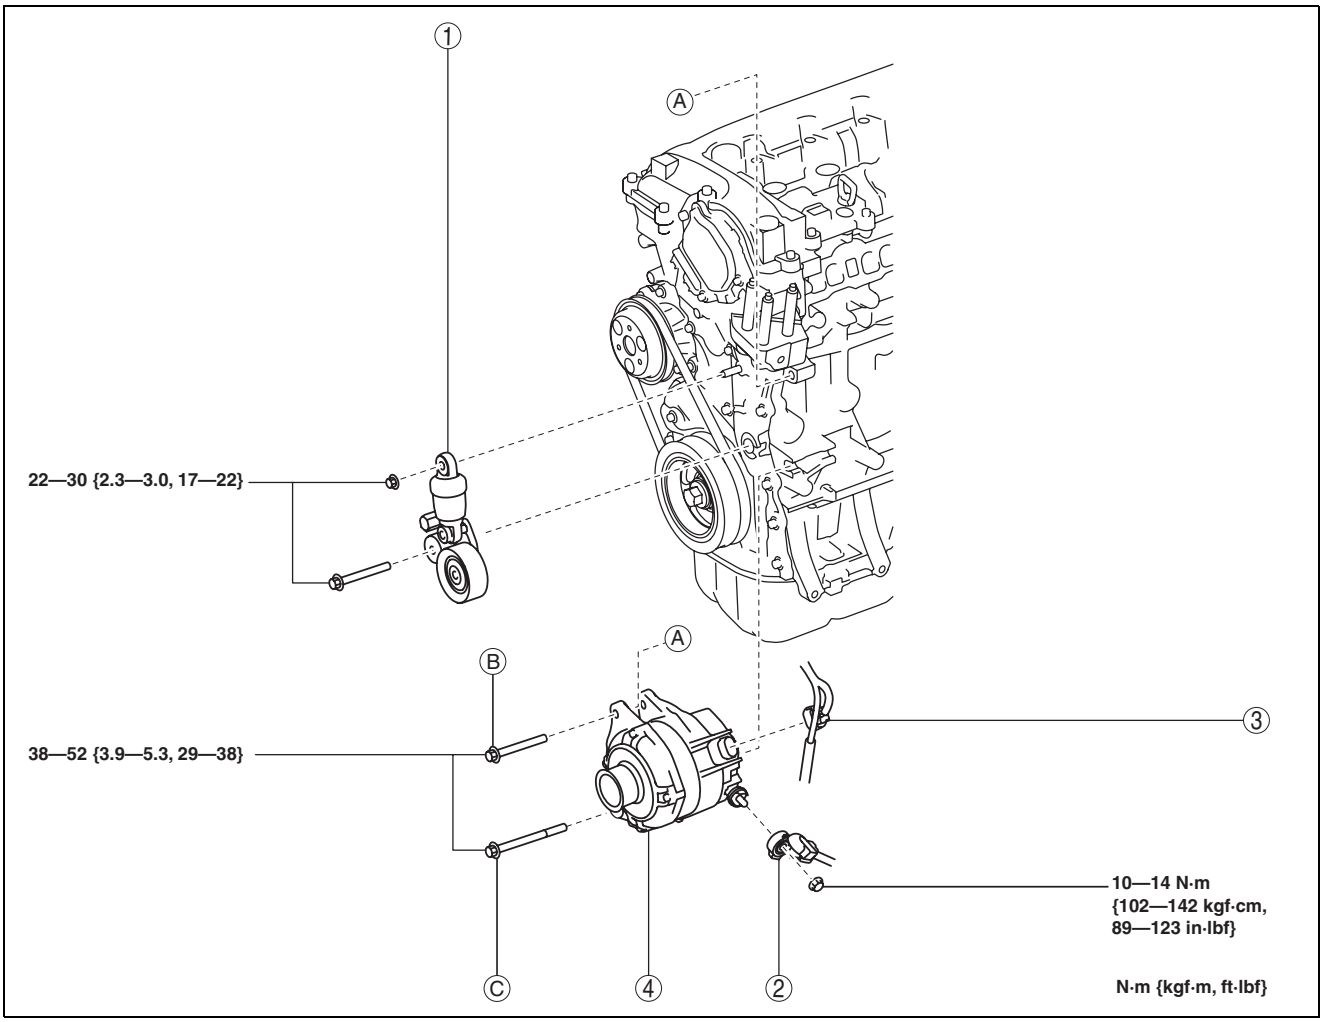
id0117h5800200

Warning

- **Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.**
- **When the battery cables are connected, touching the vehicle body with generator terminal B will generate sparks. This can cause personal injury, fire, and damage to the electrical components. Always disconnect the negative battery cable before performing the following operation.**

01

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)])
2. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
3. Remove the generator drive belt. (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Remove the A/C compressor with the cooler hose still connected and secure it using wire or rope so that it is out of the way. (See 07-11-25 A/C COMPRESSOR REMOVAL/INSTALLATION.)
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.



1	Drive belt tensioner (See 01-17A-19 Drive Belt Auto Tensioner Installation Note)
2	Terminal B nut
3	Generator
4	Generator (See 01-17A-17 Generator Removal Note) (See 01-17A-18 Generator Installation Note)

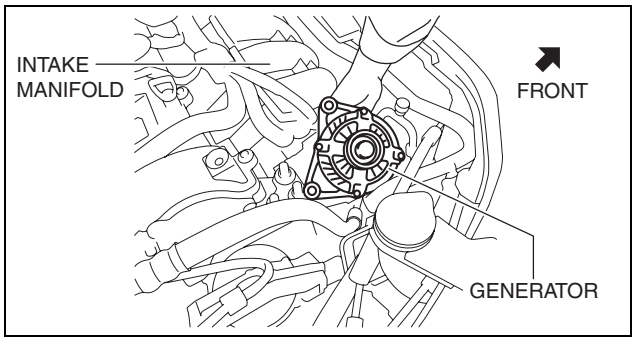
Generator Removal Note

1. Fully loosen the generator lower bolt and pull it outward until it contacts the body frame.

CHARGING SYSTEM [SKYACTIV-G 2.0]

Note
- The generator can be removed without fully removing the lower bolt from the engine.

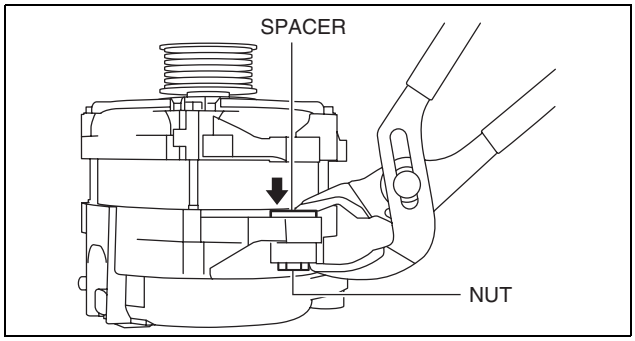
2. Remove the generator upper bolt.
3. Remove the generator together with the lower bolt from the engine.
4. Remove the generator from above the engine compartment.



ac5wzw0000264

Generator Installation Note

1. To facilitate the installation of the generator to the engine, grasp the spacer in the bolt installation hole using pliers and push it down to the nut side.
2. Temporarily install the generator to the engine with the bolt C.
3. Align the generator fixing hole with the engine side hole, then temporarily tighten the generator installation bolt B.
4. Securely tighten the generator installation bolts in the order of B, C.



ac5wzw0000265

CHARGING SYSTEM [SKYACTIV-G 2.0]

Drive Belt Auto Tensioner Installation Note

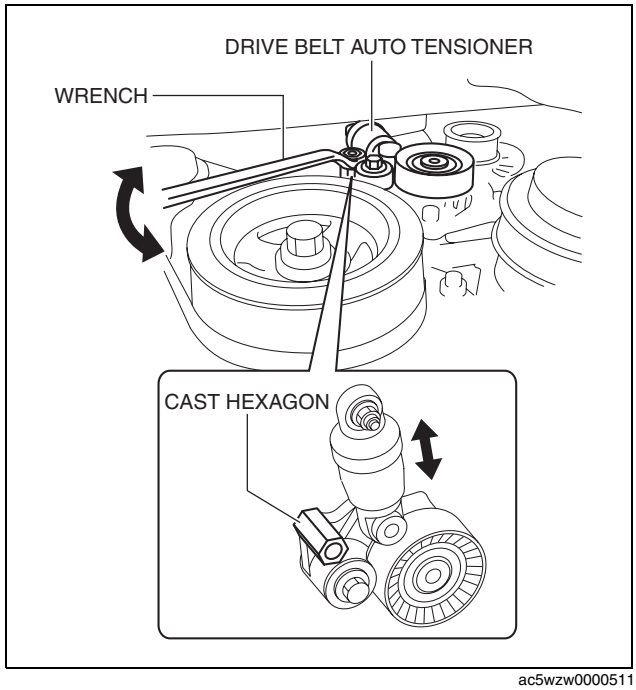
Caution
- **To allow the drive belt auto tensioner to function correctly, always bleed the air from the drive belt auto tensioner using the following procedure after assembling the drive belt auto tensioner.**

1. Install the drive belt auto tensioner to the engine.

Caution
- **To prevent damage to the drive belt auto tensioner, do not apply excessive torque after the tensioner moves full-stroke.**

2. Insert the wrench onto the cast hexagon on the drive belt auto tensioner, move the drive belt auto tensioner up and down at full-stroke three times to bleed the air.

Note
- By moving the drive belt auto tensioner up and down full-stroke three times, the piston inside the tensioner moves to bleed the air.



ac5wzw0000511

GENERATOR INSPECTION [SKYACTIV-G 2.0]

id0117h5800300

Caution
- **Do not apply direct battery positive voltage to generator terminal D, otherwise it could cause damage to the internal parts (power transistor) of the generator.**

Charging System Warning Light

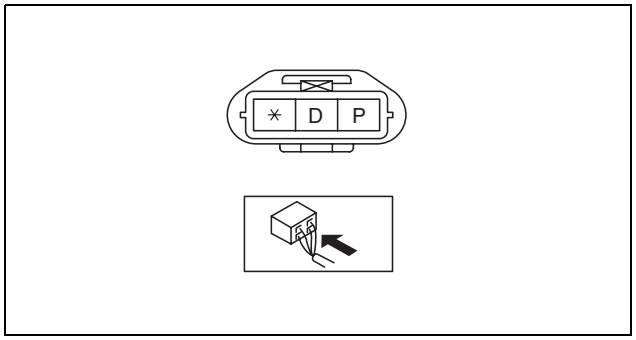
1. Verify that the battery is fully charged.
2. Verify that the drive belt is correct. (See 01-10A-9 DRIVE BELT INSPECTION [SKYACTIV-G 2.0].)
3. Switch the ignition to ON (engine off), verify that the charging system warning light illuminates.
   - If it does not illuminate, inspect the charging system warning light and the wiring harness.
     — If the charging system warning light and the wiring harness are normal, inspect the PCM.
4. Verify that the charging system warning light goes out after the engine is started.
   - If the charging system warning light does not go out, perform the DTC inspection, then perform troubleshooting according to the corresponding diagnostic procedure. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)

Generator
Voltage

1. Verify that the battery is fully charged.
2. Verify that the drive belt is correct. (See 01-10A-9 DRIVE BELT INSPECTION [SKYACTIV-G 2.0].)
3. Turn off all electrical loads.
4. Start the engine.
5. Verify that the generator rotates smoothly without any noise while the engine is running.
   - If there is any noise, find the cause and repair or replace the generator.

CHARGING SYSTEM [SKYACTIV-G 2.0]

6. Measure the voltage at each terminal using a tester.
   - If it is not as specified, find the cause and repair or replace the applicable part.



am6zzw0000234

Generator standard voltage [IG-ON]
Terminal B: B+
Terminal P: Approx. 1 V or less
Terminal D: Approx. 0 V

Generator standard voltage [Idle, 20 °C {68 °F}]
Terminal B: 13—15 V
Terminal P: Approx. 3—8 V
Terminal D: Turn the electrical loads (headlights, blower motor, rear window defroster, brake lights, etc.) on and verify that the voltage reading increases.

Current

Note
- Since the charging current decreases rapidly after starting the engine, carry out the following procedure quickly, and read the maximum current value.

1. Verify that the battery is fully charged.
2. Verify that the drive belt is correct. (See 01-10A-9 DRIVE BELT INSPECTION [SKYACTIV-G 2.0].)
3. Disconnect the negative battery cable.
4. Connect a tester, which can read **120 A or more**, between generator terminal B and the wiring harness.
5. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)])
6. Turn off all electrical loads.
7. Start the engine.
8. Increase engine speed to **2,500 rpm.** (Vehicle without i-stop)

Note
- When the electrical load on the vehicle is low, the specified current cannot be verified although the generator is normal. In this case, increase the electrical load (Leave the headlights turned on for a while, then discharge the battery, or use a similar method.) and recheck.
- When the generator itself or the ambient temperature are too high, the specified current also cannot be verified. In this case, cool down the generator and recheck.

Note
- When the electrical load on the vehicle is low, the specified current cannot be verified although the generator is normal. In this case, increase the electrical load (Leave the headlights turned on for a while, then discharge the battery, or use a similar method.) and recheck.
- When the generator itself or the ambient temperature are too high, the specified current also cannot be verified. In this case, cool down the generator and recheck.

9. With the electric loads such as headlights, blower motor, rear window defroster, brake lights turned on, verify that the current increases.
   — If it is not as specified, go to the PCM and generator shearing inspection. (See 01-17A-21 PCM and generator shearing inspection.)

Generator generated current minimum value (Vehicle without i-stop)
70% of the nominal output current (nominal output current: 100 A)
[Ambient temp. 20 °C {68 °F}, voltage 13.0—15.0 V, both engine and generator are hot]

CHARGING SYSTEM [SKYACTIV-G 2.0]

Generator generated current (reference value) [Ambient temperature: 20 °C {68 °F}, Engine hot] (Vehicle with i-stop)

Engine speed (rpm)	Terminal B voltage (V)	Generator output current (A)
1,000	13	83
1,000	15	83
2,000	13	98
2,000	15	105

*** Field coil current control signal 100%**

PCM and generator shearing inspection

1. Connect the M-MDS to the DLC-2.
2. Inspect as follows:

Step	Inspection		Action
1	Measure the generator terminal B voltage when the electrical loads*1 are on and off.	15 V or more	Go to Step 2.
		13—15 V	Normal*2
		13 V or less	Go to Step 3.
2	Monitor the ALTT V PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) Is the value normal?	Yes	Go to Step 4.
		No	Inspect the following, then repair or replace as necessary. • If there is no malfunction, replace the PCM. 1. Wiring harness between PCM terminal 1AF-generator terminal P. 2. Wiring harness between PCM terminal 1BE-generator terminal D. 3. Generator inner parts.
3	Monitor the ALTT V PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) Is the value normal?	Yes	Go to Step 5.
		No	Inspect the following, then repair or replace as necessary. • If there is no malfunction, replace the PCM. 1. Wiring harness between PCM terminal 1AF-generator terminal P. 2. Wiring harness between PCM terminal 1BE-generator terminal D. 3. Generator inner parts.
4	Monitor the ALTF PID using the M-MDS. Is the duty value 100%?	Yes	Replace PCM.
		No	Inspect the following, then repair or replace as necessary. • If there is no malfunction, replace the PCM. 1. Wiring harness between PCM terminal 1BE - generator terminal D. 2. Generator inner parts.
5	Monitor the ALTF PID using the M-MDS. Is the duty value 0%?	Yes	Replace PCM.
		No	Inspect the following, then repair or replace as necessary. • If there is no malfunction, replace the PCM. 1. Wiring harness between PCM terminal 1BE-generator terminal D. 2. Generator inner parts.

*1 : Headlights, blower motor, rear window defroster, brake lights, etc.
*2 : If the generator field coil duty value does not change when electrical loads (such as headlights, blower motor, rear window defroster, brake lights) are on or off, inspection with discharged battery is needed.

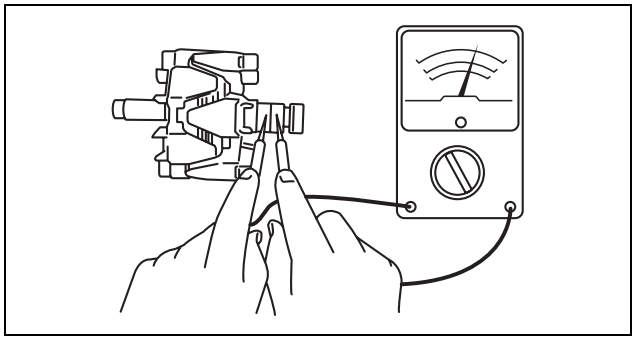
CHARGING SYSTEM [SKYACTIV-G 2.0]

Generator Inner Parts

Rotor

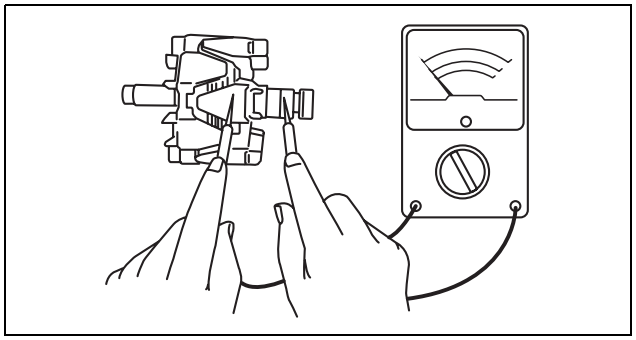
1. Measure the resistance between the slip rings using a tester.
   - If not within specification, replace the rotor.

   Generator rotor resistance (between slip rings) [20 °C {68 °F}]
   1.8—2.1 ohms



am6zzw0000235

2. Verify that there is no continuity between the slip ring and core using a tester.
   - If there is continuity, replace the rotor.
3. Inspect the slip ring surface condition.
   - If the slip ring surface is rough, use a lathe or fine sandpaper to make it smooth.



am6zzw0000235

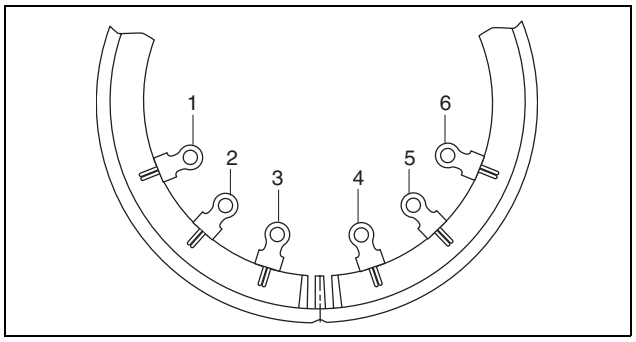
Stator coil

1. Verify that the continuity is as indicated in the table.

○—○ : Continuity

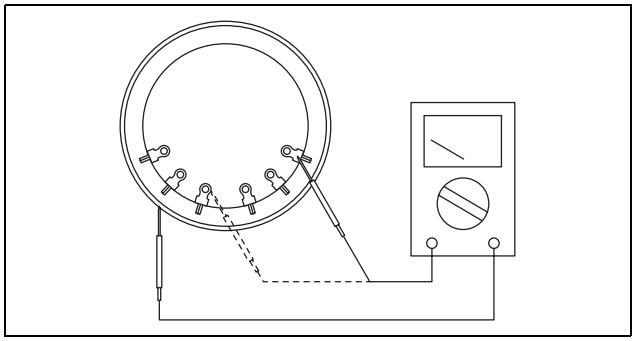
Terminal					
1	2	3	4	5	6
○—○					
○		○—○			
	○—○				
			○—○		
			○		○
				○—○	

am6zzw0000235



am6zzw0000235

   - If there is any malfunction, replace the stator.
2. Verify that there is no continuity between the stator coil leads and core using a tester.
   - If there is continuity, replace the stator coil.



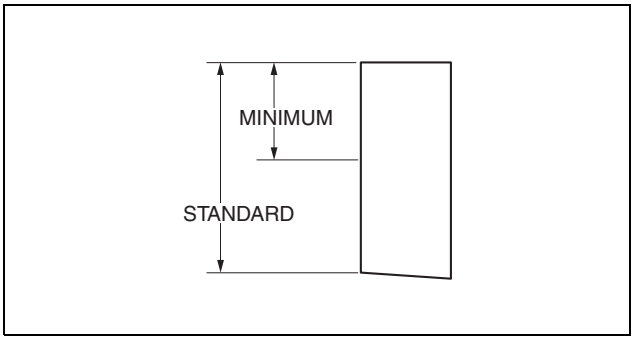
am3uuw0000326

CHARGING SYSTEM [SKYACTIV-G 2.0]

Brush

1. Inspect brushes for wear.
   - If any brush is worn almost to or beyond the limit, replace all of the brushes.

Generator brush length
Standard: 22.5 mm {0.886 in}
Minimum: 5.0 mm {0.20 in}

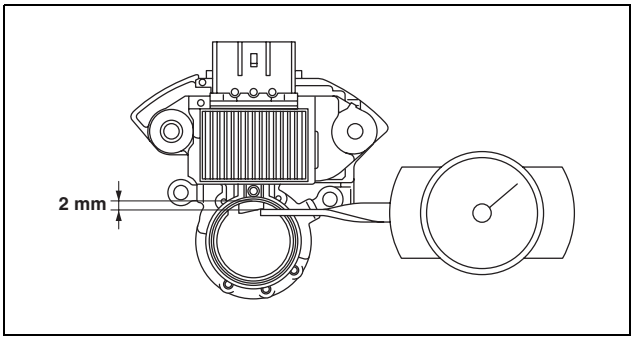


am6zzw0000235

Brush spring

1. Measure the force of the brush spring using a spring pressure gauge.
2. Read the spring pressure gauge at the brush tip projection of **2 mm {0.08 in}.**
   - If not within specification, replace the brush spring.

Generator brush spring force
Standard: 4.1—5.3 N {0.42—0.54 kgf, 1.0—1.1 lbf}
Minimum: 1.7 N {0.17 kgf, 0.38 lbf}



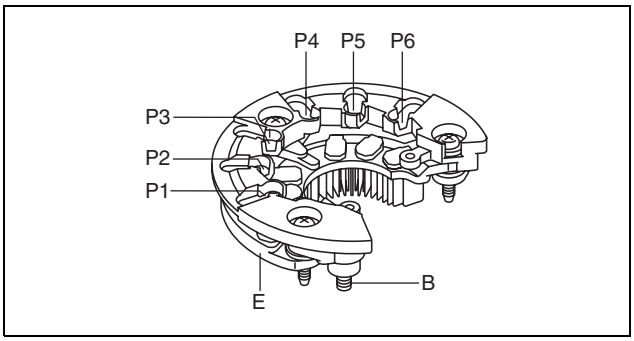
adejjw00007494

Rectifier (Using an analog circuit tester)

1. Inspect for continuity of the diodes using an analog circuit tester.
   - If not as specified, replace the rectifier.

Specification

Negative	Positive	Continuity
E	P1, P2, P3, P4, P5, P6	Yes
B		No
P1, P2, P3, P4, P5, P6	E	No
	B	Yes



adejjw00007495

CHARGING SYSTEM [SKYACTIV-G 2.0]

Rectifier (Using a digital circuit tester)

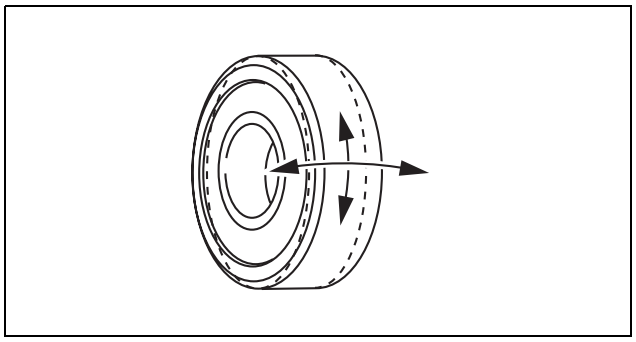
1. Inspect for continuity of the diodes using a digital circuit tester.
   - If not as specified, replace the rectifier.

Specification

Negative	Positive	Continuity
E	P1, P2, P3, P4, P5, P6	No
B		Yes
P1, P2, P3, P4, P5, P6	E	Yes
	B	No

Bearing

1. Inspect for abnormal noise, looseness, and sticking.
   - Replace the bearing if necessary.



am6zzw0000235

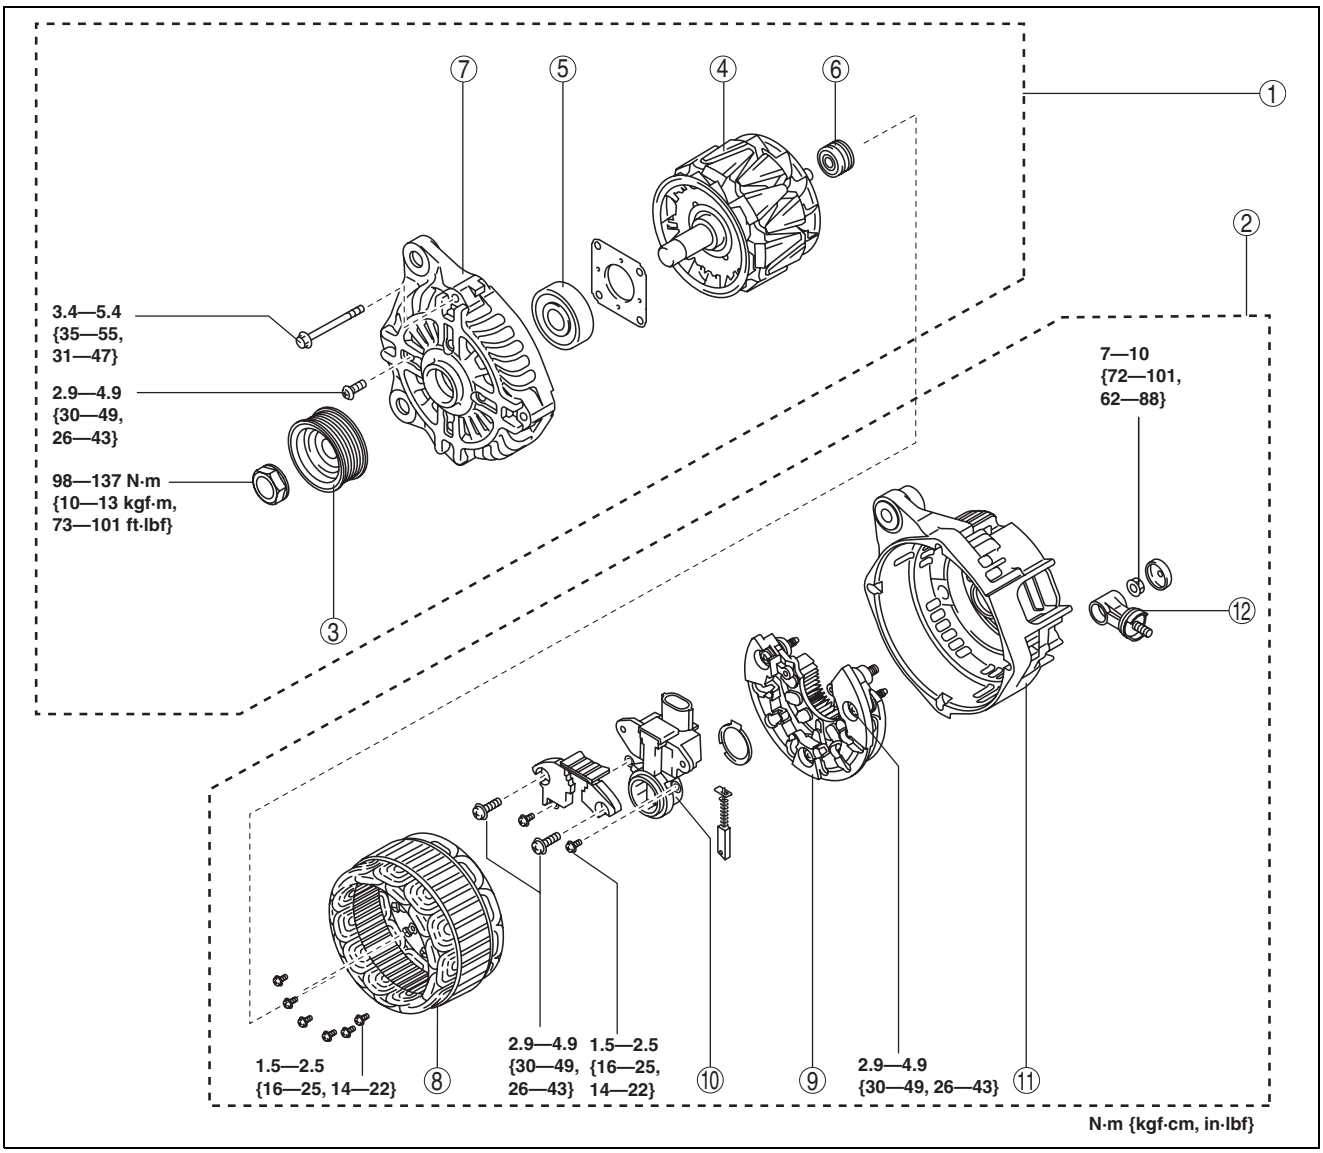
CHARGING SYSTEM [SKYACTIV-G 2.0]

GENERATOR DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0]

id0117h5800400

Caution
- **Melt the solder quickly, otherwise the diodes (rectifier) and regulator will be damaged by excessive heat.**

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.



ac5wzw0000265

1	Rotor component
2	Stator coil component
3	Pulley
4	Rotor
5	Front bearing
6	Rear bearing

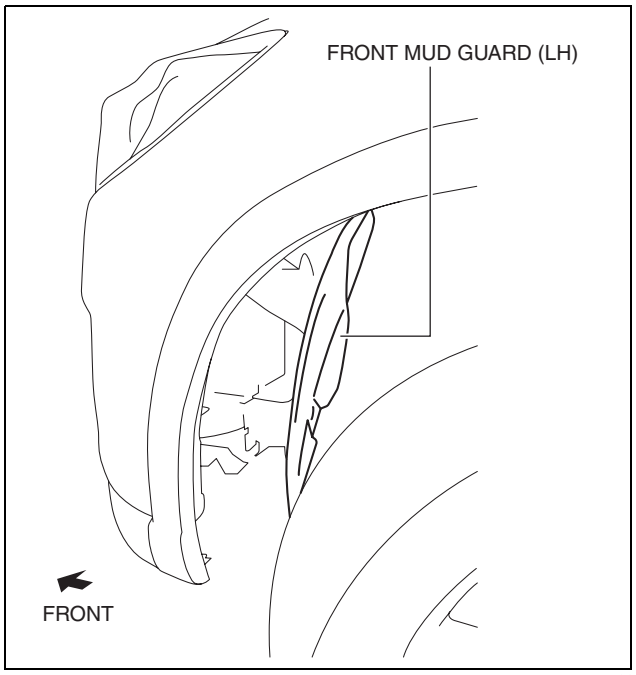
CHARGING SYSTEM [SKYACTIV-G 2.0]

DC-DC CONVERTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

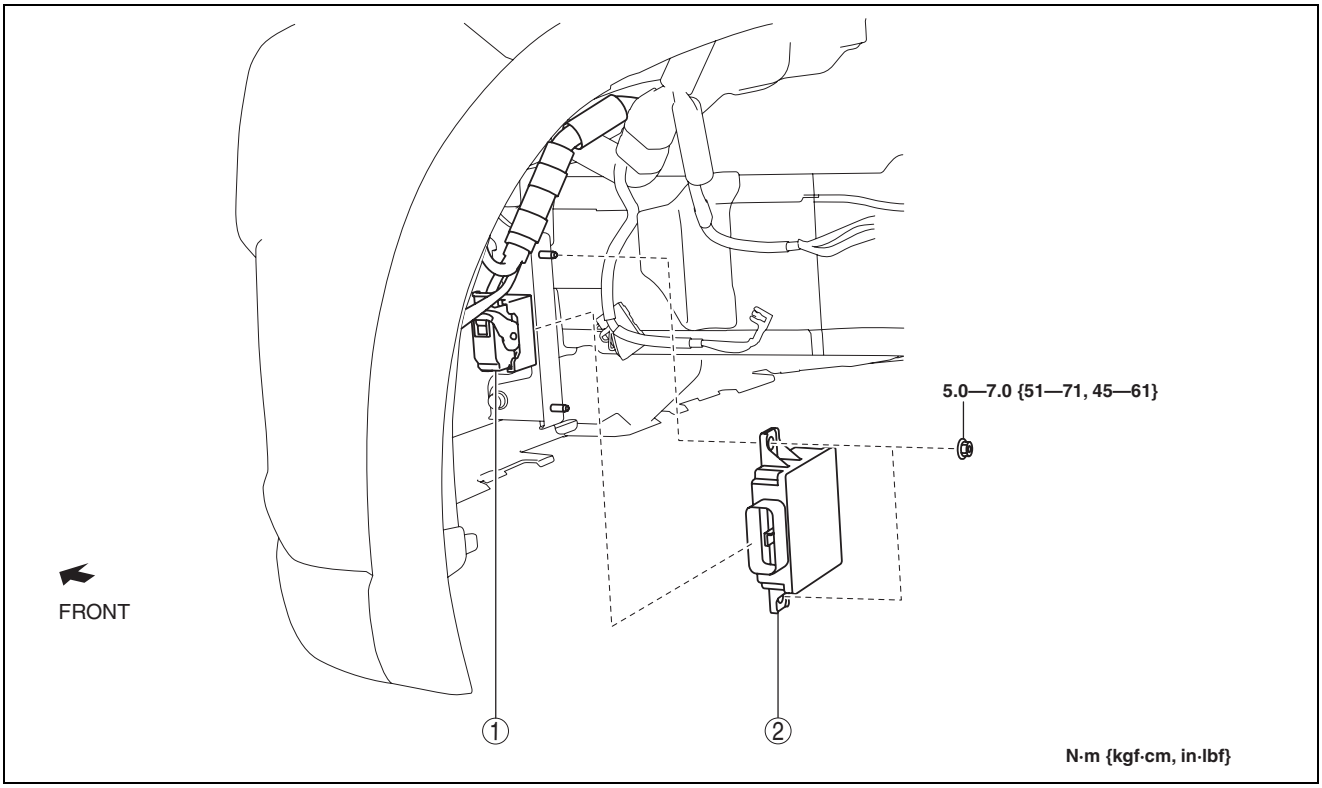
id0117h5004600

Vehicle With i-stop

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0].)
2. Remove the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
3. Set the front mud guard (LH) aside as shown in the figure. (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.



ac5wzw0000511



ac5wzw0000264

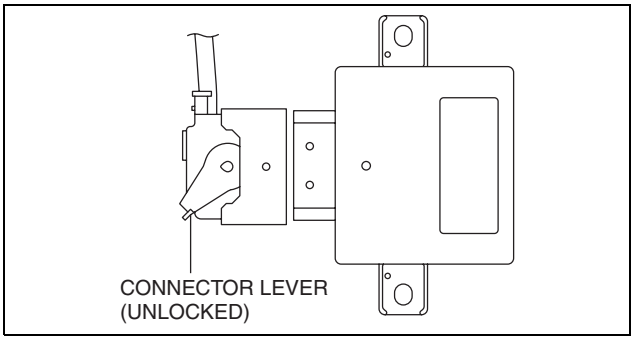
1	DC-DC converter connector (See 01-17A-26 Vehicle With i-stop.)

2	DC-DC converter

CHARGING SYSTEM [SKYACTIV-G 2.0]

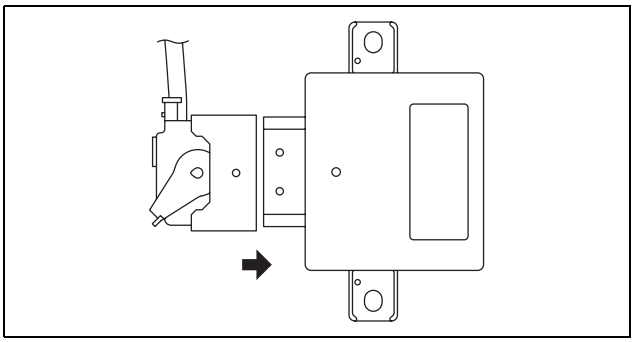
DC-DC converter connector installation note

1. Before installation, verify that the connector lever is unlocked position.
2. Connect the DC-DC converter connector using the following procedure:



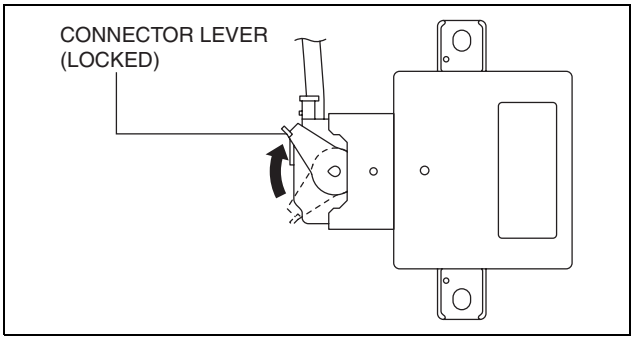
ac5wzw0000264

(1) Insert the DC-DC converter connector straight until it stops.



ac5wzw0000264

(2) Move the connector lever until a click sound is heard.



ac5wzw0000264

DC-DC CONVERTER INSPECTION [SKYACTIV-G 2.0]

id0117h5004700

DC-DC Converter Operation Inspection (Vehicle With i-stop)

1. Perform the KOER self-test.If the following DTCs are detected, repair the applicable malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0])
   - P058A:00, P0A8D:00, P0A94:00, U0298:00, U1007:00
2. Inspect the battery.If there is a malfunction, recharge or replace the battery, then go to the next step. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0]) (01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0]) (01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0])
3. When the engine is restarted by the i-stop control, verify that the following measured voltages are not lower than **11.5V**.
   - Rain sensor (auto light sensor) supply terminal (vehicle wiring harness-side connector terminal D)
   - Audio unit supply terminal (vehicle wiring harness-side connector terminal 1B)
     - — If it cannot be verified, go to the next step.
4. Inspect the wiring harness between the following terminals for an open or short circuit.
   - DC-DC converter terminal K-Rain sensor (auto light sensor) terminal D
   - DC-DC converter terminal K-audio unit terminal 1B
     - — If there is any open or short circuit in the wiring harness, repair or replace the malfunctioning part.
     - — If there is any open or short circuit in the wiring harness, replace the DC-DC converter. (See 01-17A-26 DC-DC CONVERTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0])

id0117h6800500

Operation After Replacing Battery

Note

- If the battery charge/discharge flow (number of times battery can operate) exceeds the specification, a DTC is recorded and the i-stop warning light (amber) flashes. If the battery charge/discharge flow (number of times battery can operate) exceeds the specification, replace the battery with a new one.
- When replacing the battery, perform the following procedure: When replacing the PCM simultaneously, perform the PCM configuration first.

Without TFT LCD display

Step	Action
1	Switch the ignition ON (engine off).
2	Shift the selector lever to the N position.
3	Perform the following work with the brake pedal depressed. 1. Depress the accelerator pedal for 5 s or more. 2. Verify that the charging system warning light and the master warning light flash. 3. Depress and release the accelerator pedal 3 times. 4. Verify that the charging system warning light illuminates and the master warning light turns off.
4	Switch the ignition off and disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
5	Verifying battery condition initialization setting (i-stop setting). (See 01-17B-11 BATTERY CONDITION INITIALIZATION SETTING (i-stop SETTING) [SKYACTIV-D 2.2].)

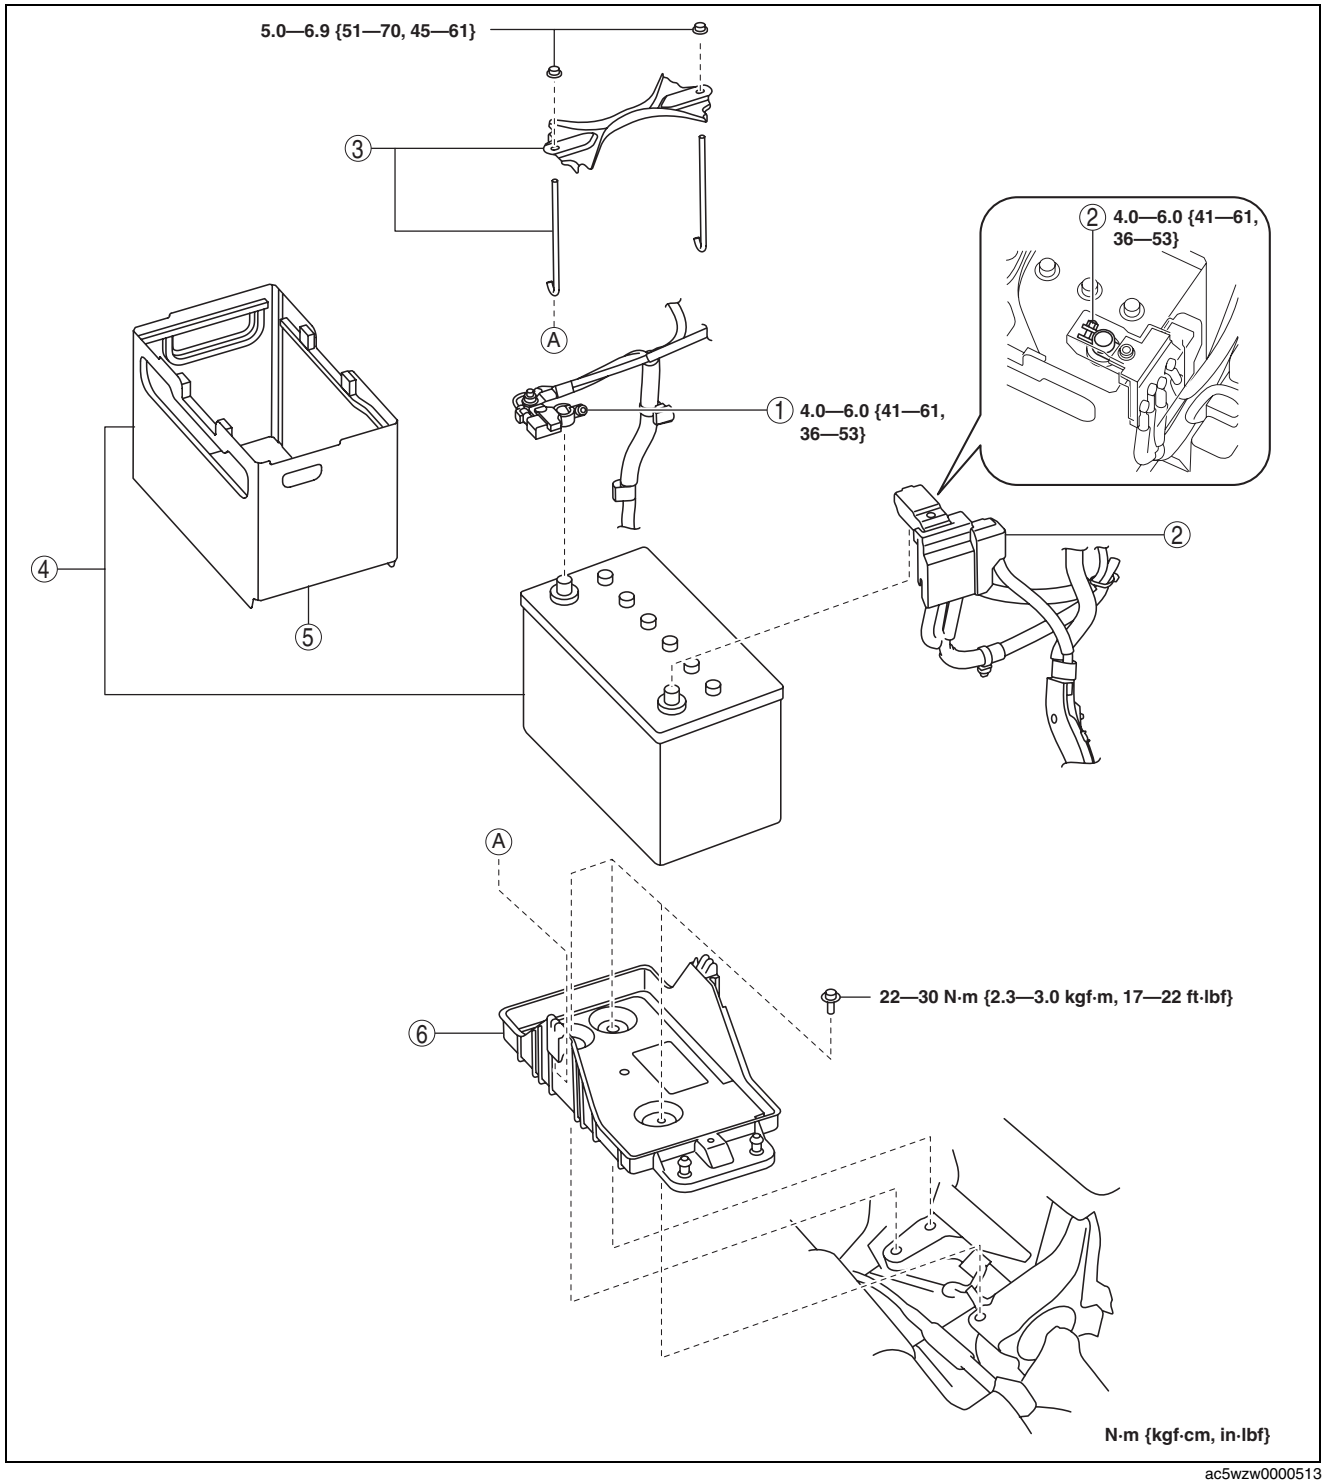
With TFT LCD display

Step	Action
1	Close the all doors.
2	Switch the ignition ON (engine off).
3	If a warning message is displayed in the LCD display, clear the screen using the INFO switch and then go to the next step.
4	Shift the selector lever to the N position.
5	Perform the following work with the brake pedal depressed. 1. Depress the accelerator pedal for 5 s or more. 2. Verify that a warning message (master warning light) on the LCD flashes. 3. Depress and release the accelerator pedal 3 times. 4. Verify that a warning message (master warning light) on the LCD turn off.
6	Switch the ignition off and disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
5	Verifying battery condition initialization setting (i-stop setting). (See 01-17B-11 BATTERY CONDITION INITIALIZATION SETTING (i-stop SETTING) [SKYACTIV-D 2.2].)

CHARGING SYSTEM [SKYACTIV-D 2.2]

Battery Removal/Installation

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.



ac5wzw0000513

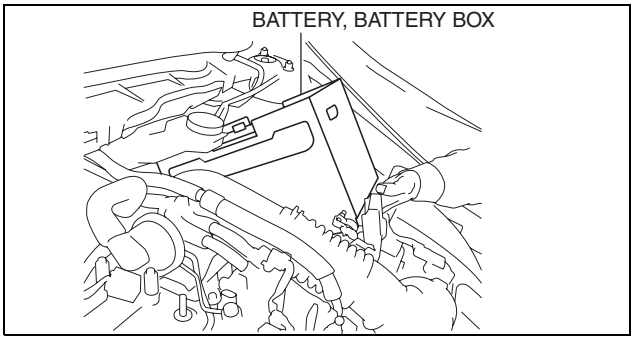
1	Negative battery cable (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0])
2	Positive battery cable
3	Battery clamp

4	Battery, battery box (See 01-17B-5 Battery, battery box removal note.) (See 01-17B-3 Operation After Replacing Battery.)
5	Battery box (See 01-17B-6 Battery box installation note.)
6	Battery tray (See 01-17B-5 Battery tray removal note.)

CHARGING SYSTEM [SKYACTIV-D 2.2]

Battery, battery box removal note

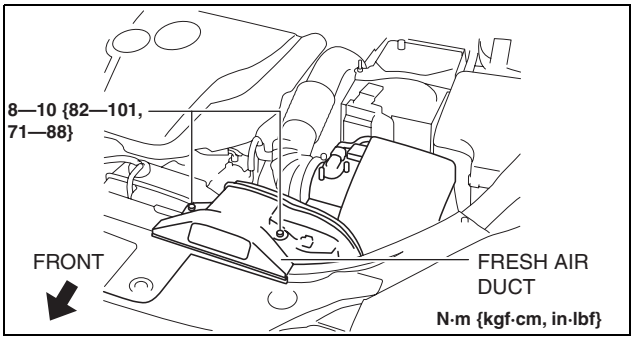
1. Remove the battery with the battery box while the battery is positioned at an angle as shown in the figure.



ac5wzw0000513

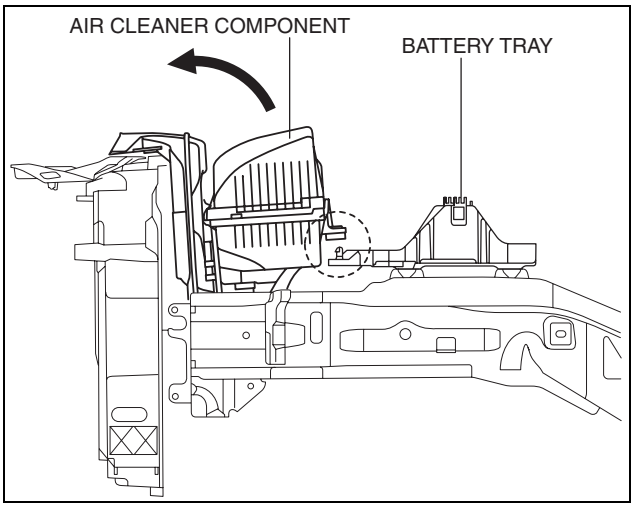
Battery tray removal note

1. Remove the battery tray using the following procedure:
   (1) Remove the two fresh air duct bolts shown in the figure.



ac5wzw0000513

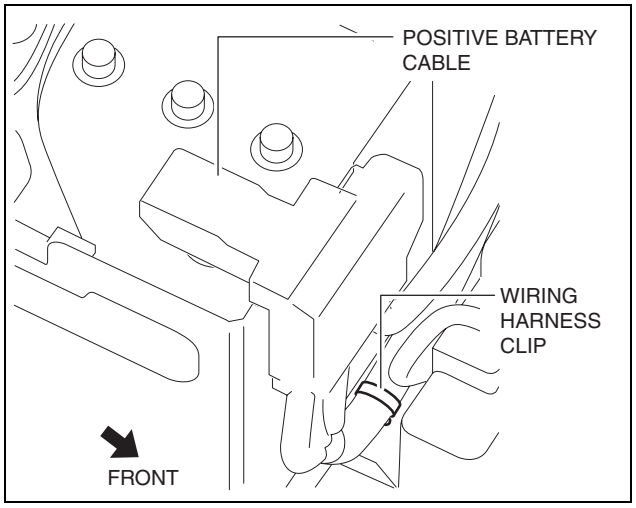
   (2) Lightly lift the air cleaner component and set the battery tray aside as shown in the figure.



ac5wzw0000513

CHARGING SYSTEM [SKYACTIV-D 2.2]

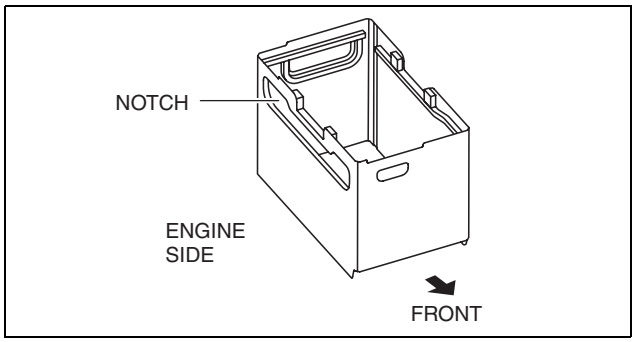
(3) Remove the wiring harness clip shown in the figure from the battery tray.
(4) Remove the battery tray.



ac5wzw0000513

Battery box installation note

1. Install the battery box so that the side with the larger notch faces toward the engine side.



ac5wzw0000514

BATTERY INSPECTION [SKYACTIV-D 2.2]

id0117h6800600

Warning

- **Since battery acid is toxic, be careful when handling the battery.**
- **Since battery acid is highly corrosive, be careful not to allow it to contact clothing or the vehicle.**
- **In case battery acid contacts skin, eyes, or clothing, flush it immediately with running water. If the acid gets in the eyes, flush with water for more than 15 min and get prompt medical attention.**

Electrolyte Specific Gravity

Purpose	Step	Inspection		Action
Battery examination (verification of dendrite short)	1	Using a hydrometer, measure the electrolyte gravity of all the cells and identify the one with the lowest electrolyte gravity value.	1.25 or more	Battery is normal.
			1.17—1.25	Recharge the battery. (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].)
			Less than 1.17	Replace the battery because it can be determined as a dendrite short. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

CHARGING SYSTEM [SKYACTIV-D 2.2]

Parasitic Draw

Caution
- **Operating electrical loads while the parasitic draw is being measured can damage the tester.**
- **Because the "BATT_SOC" value before disconnecting the negative battery cable is required for the battery condition initial setting (i-stop setting), always verify the "BATT_SOC" value before disconnecting the negative battery cable.**

1. Verify that the ignition is off (key has been removed) and that all doors are closed.
2. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

Note
- If the battery is not left undisturbed for **10 min or more, but less than 30 min**, the tester will indicate a high value (**approx. 300 mA**).
- If the ignition or any electrical accessory is operated after the tester is connected, the battery must be left undisturbed for **10 min or more, but less than 30 min** from that point.
- For vehicles with the immobilizer system, the system periodically shifts synchronization of the security light flashing. Therefore, **65 mA (0.1 s)** current is supplied when the security light is illuminated, and **40 mA (2 s)** current is supplied when the security light is not illuminated. In addition, the measuring instrument, which shows the average value, indicates around **55 mA**.

3. Connect the tester between the negative battery terminal and negative battery cable, leave the battery undisturbed for **10 min or more, but less than 30 min**, and then measure the parasitic draw.
   - If not within specification, measure the parasitic draw while removing the fuses one by one from the inside of the main fuse block and the inside of the fuse block.
   - Inspect and repair wiring harnesses and connectors of the fuse where the current has decreased.

Battery parasitic draw (When the ignition is off (key is removed), all doors and the bonnet are closed.)
40—65 mA

Note
- If the battery is left for **30 min**, a battery parasitic draw value of **25—45 mA** is indicated.

Battery inspection when i-stop warning light (amber) is flashing

1. Inspect the battery as follows:

Step	Inspection		Action
1	Was the vehicle engine not started for 5 days or more? (Ask the customer)	Yes	Replace the battery.
		No	Go to the next step.
2	Using a hydrometer, measure the electrolyte gravity of all the cells and identify the one with the lowest electrolyte gravity value.	1.25 or more	Battery is normal.
		1.17—1.25	Recharge the battery. (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].)
		Less than 1.17	Replace the battery because it can be determined as a dendrite short. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3	After performing any of the following work, verify that the i-stop warning light (amber) turns off. • Battery cable is disconnected and ignition is switched ON (engine off) after reconnection • Ignition is switched ON (engine off) after 12 hours or more have elapsed with ignition switched off		

CHARGING SYSTEM [SKYACTIV-D 2.2]

BATTERY RECHARGING [SKYACTIV-D 2.2]

id0117h6800700

Warning

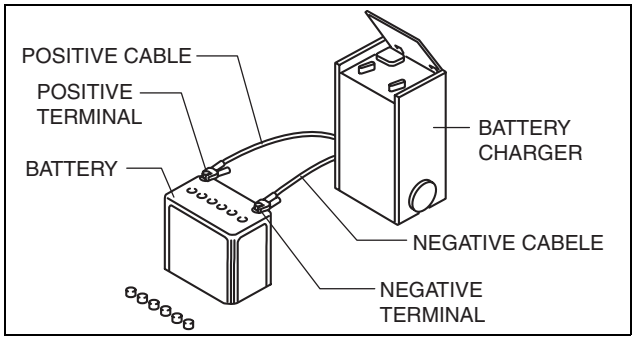
- **Keep all flames away from the battery and perform the servicing in a well-ventilated area. Otherwise, evaporated gas from the battery could ignite.**
- **Remove the battery filler caps when recharging to prevent battery deformation or damage.**
- **Do not perform battery recharging with the battery in the vehicle as it is dangerous.**
- **When connecting to the battery recharger, make sure the battery cables are connected correctly.**

Caution

- **Do not perform quick recharging. If quick recharging is performed it could result in an i-stop control malfunction.**
- **After recharging, leave the battery as it is for as long as possible (6 hours or longer recommended) to dissipate the polarization in the battery.**

1. Remove the battery.
2. Remove the battery filler caps.
3. To prevent loss of battery fluid during recharging, verify the battery fluid level.
   Battery fluid level is between upper and lower or less
   - Add distilled water to the upper level.

   Battery fluid level is between upper and lower or more
   - Go to the next step.
4. Connect a battery charger to the battery and adjust the charging current as follows.



ac5wzw0000518

Note

- Verify the current after 30 s have elapsed since the measurement was started because the current is not stabilized after the voltage adjustment.

(1) Adjust the voltage so that the recharge current is 10 to 15 A.
(2) Charge the battery for 60 min using current in Step (1).
(3) Readjust the battery so that the recharge current is 10 to 15 A.
(4) Charge the battery so that the total time for Step (2) is the time in table.

Battery recharge time

Cell with lowest electrolyte gravity	Recharge time
1.24 or more	180 min or more
1.21 or more	240 min or more
1.17 or more	360 min or more

5. Measure electrolyte gravity of all cells.
   Cell with lowest electrolyte gravity is less than 1.25
   - Replace the battery as battery charge could not be restored. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

   Cell with lowest electrolyte gravity is 1.25 or more
   - Battery charge was restored, therefore install the recharged battery into the vehicle. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

CHARGING SYSTEM [SKYACTIV-D 2.2]

NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2]

id0117h6800800

Warning

- **Before removing the SRS air bag system-related parts, always disconnect the negative battery cable terminal and wait for 1 min. or more to allow the back-up power supply to deplete its stored power. (See 08-10-3 AIR BAG SYSTEM SERVICE WARNINGS.)**

Caution

- **With the battery connected and the ignition switched ON, or if servicing is performed for a long period (10 min or more) with the ignition switched off.**

Required procedure after negative battery cable terminal disconnection/connection

System name	Conditions after disconnecting the negative battery cable terminal	Required procedure		Reference
		Before disconnecting negative battery cable terminal	After connecting negative battery cable terminal	
Power window system	Reset to initial setting and auto-function is disabled.	—	Perform the power window system initial setting.	(See 09-12-66 POWER WINDOW SYSTEM INITIALIZATION PROCEDURE.)
Sunroof system	Reset to initial setting and function is disabled.	—	Perform the sunroof system initial setting.	(See 09-15-18 SUNROOF SYSTEM INITIALIZATION PROCEDURE.)
Clock and audio	Clock display and audio system memory are reset.	Verify the setting content.	Set the verified content before disconnecting negative battery cable terminal.	—
i-stop system	Specified information in the PCM cleared and the i-stop does not operate normaly.	Verify PID “BATT_SOC” value and record. *1	Perform battery condition initial setting (i-stop setting). *2	(See 01-17B-11 BATTERY CONDITION INITIALIZATION SETTING (i-stop SETTING) [SKYACTIV-D 2.2].)
Tire pressure monitoring system (TPMS)	The tire pressure monitoring system detection accuracy decreases.	—	Perform the tire pressure monitoring system initialization.	(See 02-12-4 TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE.)

*1 : For vehicles with i-stop, if the negative battery cable terminal is disconnected and re-connected, battery condition initial setting (i-stop setting) must be performed.
*2 : Because the “BATT_SOC” value before disconnecting the negative battery cable terminal is required for the battery condition initial setting (i-stop setting), record the “BATT_SOC” value before disconnecting the negative battery cable terminal.

CHARGING SYSTEM [SKYACTIV-D 2.2]

Negative Battery Cable Terminal Disconnection

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).
3. Verify the “BATT_SOC” value using the M-MDS data logger function.
4. Record the “BATT_SOC” value.
   “BATT_SOC” value is less than 80%
   - Inspect the battery. (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].)

   “BATT_SOC” value is 80% or more
   - Go to the next step.
5. Switch the ignition off.

Caution

- **Disconnect the current sensor connector before disconnecting the negative battery cable terminal. If the negative battery cable terminal is disconnected first, the PCM may mistakenly recognize a signal from the current sensor causing interference with engine control.**

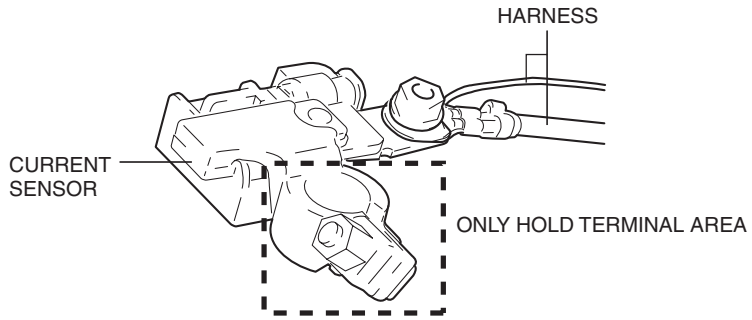
6. Disconnect the current sensor connector.
7. Disconnect the negative battery cable terminal.

Negative Battery Cable Terminal Connection

Caution

- **Verifying the tightness while holding the current sensor may apply excessive force to the terminal and the terminal could loosen, causing poor engine starting. When verifying the tightness of the negative battery cable terminal, only hold the terminal area, not the current sensor.**

VERIFICATION OF NEGATIVE BATTERY CABLE TERMINAL TIGHTENING



ac5wzw0000511

1. Perform battery condition initial setting (i-stop setting). (See 01-17B-11 BATTERY CONDITION INITIALIZATION SETTING (i-stop SETTING) [SKYACTIV-D 2.2].)

Note

- Connection of the negative battery cable terminal and the current sensor connector will be done in the battery condition initial setting (i-stop setting) procedure.

2. Perform services not related to i-stop control which are required after connecting the negative battery cable terminal. (See 01-17B-9 Required procedure after negative battery cable terminal disconnection/connection.)

CHARGING SYSTEM [SKYACTIV-D 2.2]

BATTERY CONDITION INITIALIZATION SETTING (i-stop SETTING) [SKYACTIV-D 2.2]

id0117h6801000

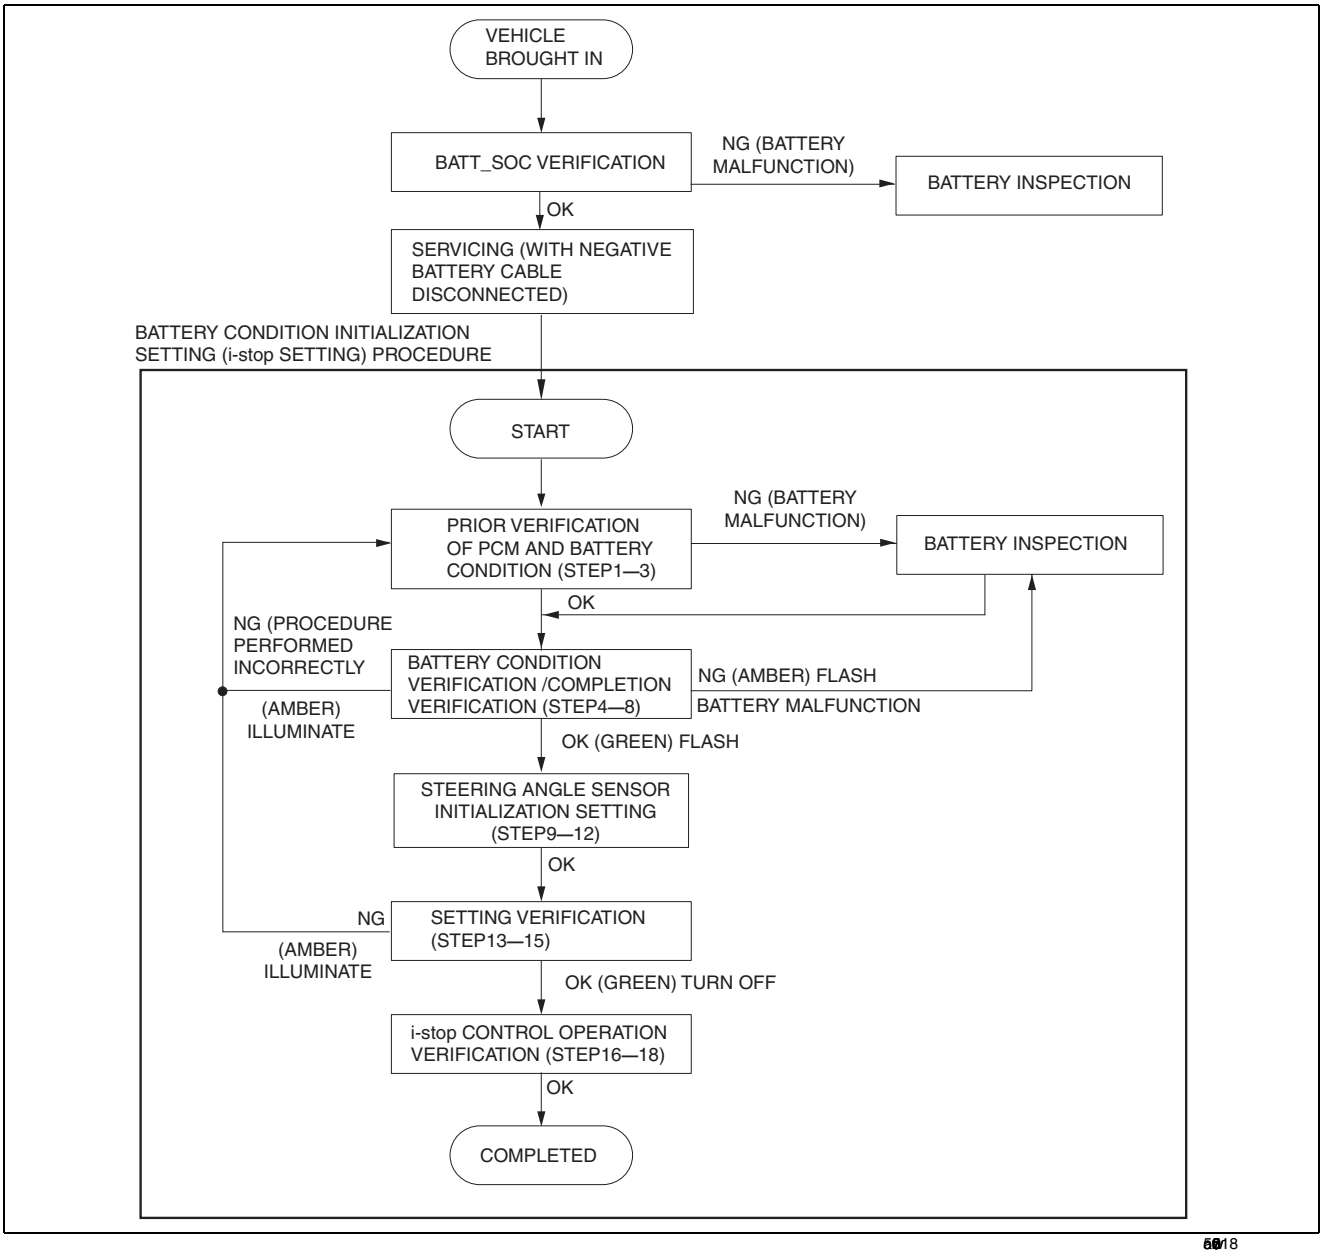
Battery Condition Initial setting (i-stop setting) Procedure

Caution

- **If the engine is started with the bonnet open, the i-stop function will not operate until the engine is restarted with the bonnet closed (not system malfunction). If the engine is started with the bonnet open, close the bonnet and restart the engine after the ignition is switched off once.**
- **If a vehicle with an i-stop non-operation condition is brought in, the malfunction will not be resolved by simply performing the battery condition initial setting (i-stop setting). Verify the PID "BATT_SOC" value and if the value is less than 80%, recharge the battery. (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].)**
- **If the "BATT_SOC" value has not been verified before disconnecting the negative battery cable, perform battery condition initial setting (i-stop setting) after performing the battery inspection.**
- **The "BATT_SOC" value is displayed "0%" because the battery charge condition is not stabilized after connecting the negative battery cable (it is necessary to leave battery undisturbed for approx. 6 to 48 h to stabilize battery charge condition).**

- If the negative battery cable is disconnected, specific information stored in the PCM will be erased. Therefore, perform the following procedure after reconnecting.

Battery Condition Initial setting (i-stop setting) flow



CHARGING SYSTEM [SKYACTIV-D 2.2]

Purpose	Step	Procedure	Caution/Note
Prior verification of PCM and battery condition	1	Verify the value (BATT_SOC) measured before disconnecting the negative battery cable. **When BATT_SOC value is not verified or the value is 80% or more.** • Go to the next step. **When BATT_SOC value is less than 80%** • Perform battery inspection. (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].)	—
	2	Verify that 5 min or more have elapsed since the negative battery cable was disconnected.	**Caution** • **It is necessary to leave the battery undisturbed for 5 min or more because the voltage is not stabilized, depending on the battery usage condition, and the PCM cannot determine the "BATT_SOC" value correctly.**
	3	Disconnect the current sensor connector. If the current sensor connector has already been disconnected, go to the next step.	**Note** • Disconnect the current sensor connector to prevent the current sensor from being damaged by connecting the negative battery cable.
Battery condition verification / completion verification	4	Connect the negative battery cable and wait for 10 s or more.	**Caution** **negative battery cable terminal tightening torque: 2.9—4.9 N·m {30—49 kgf·cm, 26—43 in·lbf}**
	5	Connect the current sensor connector.	—
	6	Switch the ignition ON (engine off) and wait for 15 s or more (within 1 min.).	—
	7	**VERIFY i-stop INDICATOR LIGHT (GREEN) AND i-stop WARNING LIGHT (AMBER) FLASHING CONDITION** • Press the i-stop OFF switch for 10 s and verify the flashing condition of the i-stop indicator light (green) and i-stop warning light (amber). **When i-stop indicator light (green) flashes** — Go to the next step. **When i-stop warning light (amber) flashes** — Perform the battery inspection. (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) **When i-stop warning light (amber) illuminates** — Procedure is performed incorrectly. Switch the ignition off and repeat the procedure from Step 1 (Prior verification of PCM and battery condition).	**Note** • When the i-stop OFF switch is pressed, the illumination condition of the i-stop warning light (amber) changes to flashing of either the i-stop indicator light (green) or the i-stop warning light (amber).
	8	Switch the ignition off.	—
Steering angle sensor initialization setting	9	Close the bonnet.	—
	10	Start the engine.	**Note** • Perform steering angle sensor initialization setting because the initial value stored in the EPS control module is reset.
	11	Turn the steering wheel lock-to-lock.	
	12	Switch the ignition off.	

CHARGING SYSTEM [SKYACTIV-D 2.2]

Purpose	Step	Procedure	Caution/Note
Setting verification	13	Perform the following procedure within 25 s. 1. Switch the ignition ON (engine off) and within 5 s, long-press the i-stop OFF switch for 3 s or more. (The i-stop warning light (amber) illuminates.) 2. Start the engine. 3. Long-press the i-stop OFF switch one time. 4. Verify that the i-stop warning light (amber) stop illuminating and the i-stop indicator light (green) starts flashing. — If the amber light continues to illuminate, the procedure was performed incorrectly, therefore repeat the procedure from Step 1. (Prior verification of PCM and battery condition)	**Note** • Although the i-stop indicator light (green) may flash a few times right after the engine is started, then the i-stop warning light (amber) starts illuminating.
	14	Maintain the idle status (no electrical load) until the i-stop indicator light (green) turns off.	—
	15	After the i-stop indicator light (green) turns off, switch the ignition off.	—
i-stop control operation verification	16	Start the engine and verify that the i-stop indicator light (green) is turned off.	—
	17	Verify the i-stop control operation using the following procedure. 1. Vehicle is traveling at a speed of 4 km/h or more. (EC/Russia specs.) 1. While the vehicle is traveling at a speed of 4 km/h or more, verify that the i-stop indicator light (green) illuminates. (Except EC/Russia specs.) 2. Stop the vehicle and verify that the engine stops via the i-stop control and then restarts.	—
	18	Switch the ignition off.	—

CHARGING SYSTEM [SKYACTIV-D 2.2]

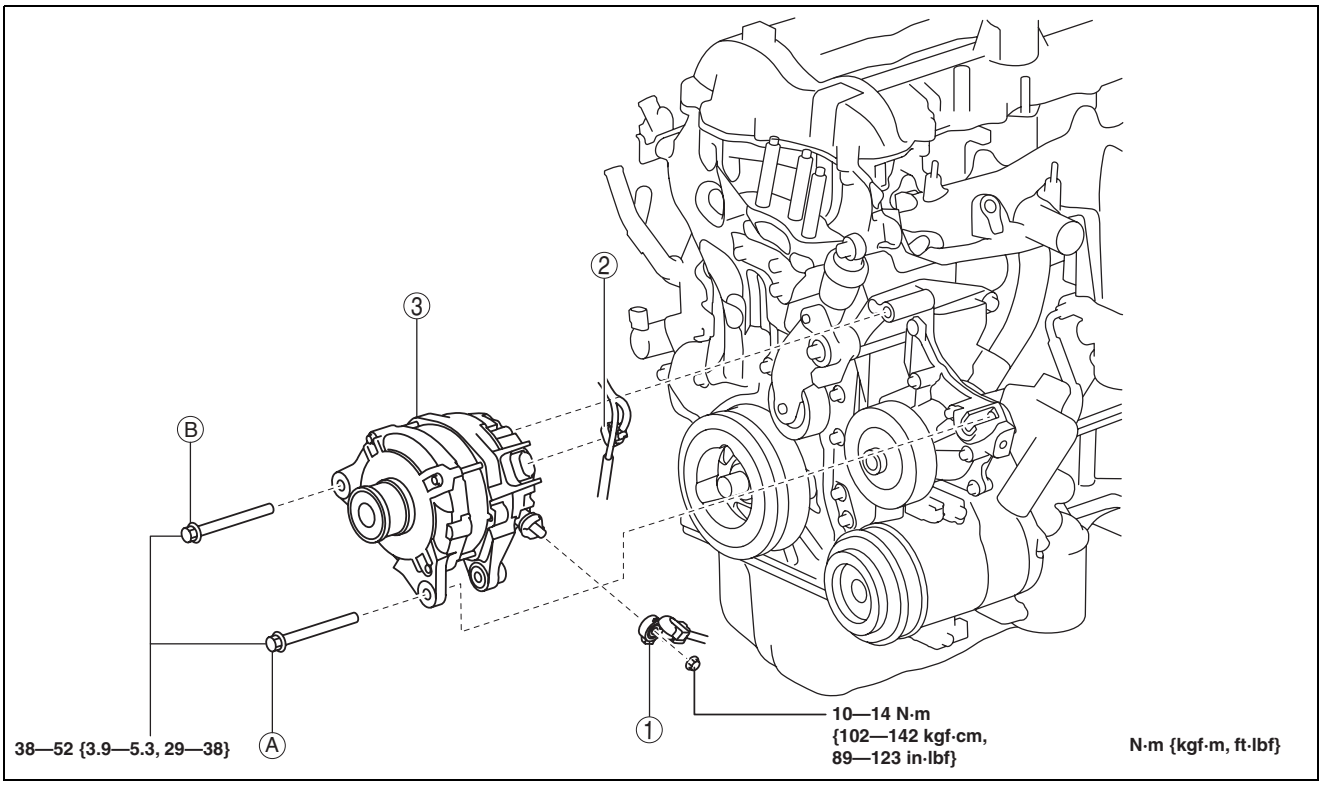
GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0117h6800200

Warning

- **Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.**
- **When the battery cables are connected, touching the vehicle body with generator terminal B will generate sparks. This can cause personal injury, fire, and damage to the electrical components. Always disconnect the negative battery cable before performing the following operation.**

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
3. Remove the splash shield (RH). (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
4. Remove the drive belt. (See 01-10B-8 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Remove in the order indicated in the table.
7. Install in the reverse order of removal.



ac5wzw0000512

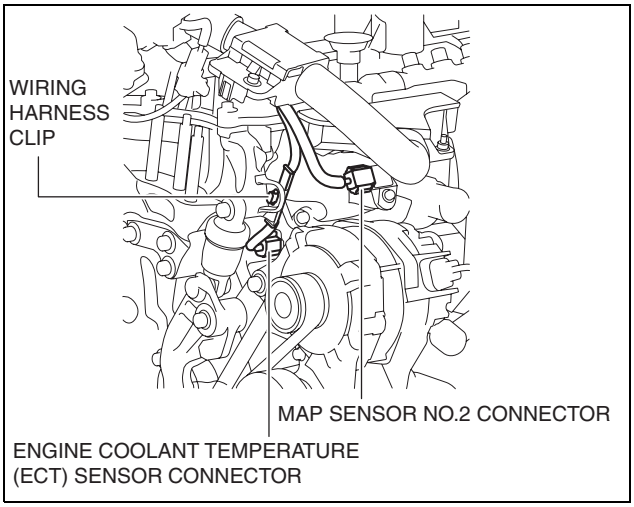
1	Terminal B cable
2	Generator connector

3	Generator (See 01-17B-15 Generator Removal Note.) (See 01-17B-16 Generator Installation Note.)

CHARGING SYSTEM [SKYACTIV-D 2.2]

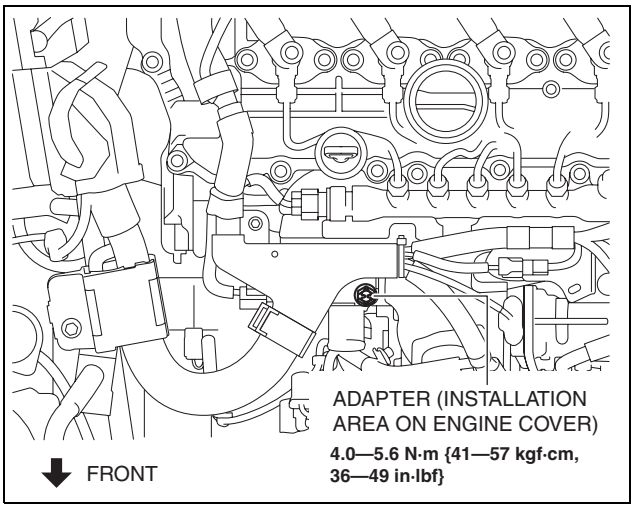
Generator Removal Note

1. Disconnect the connectors and wiring harness clip shown in the figure.



ac5wzw0000513

2. Remove the adapter shown in the figure.



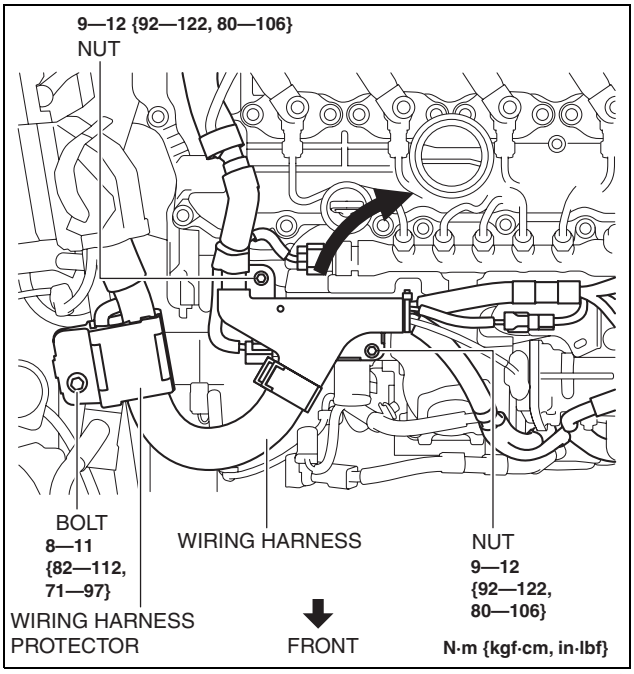
ac5wzw0000513

3. Remove the nuts and bolt shown in the figure and set the wiring harness aside.
4. Fully loosen the generator lower bolt and pull it outward until it contacts the body frame.

Note

- The generator can be removed without fully removing the lower bolt from the engine.

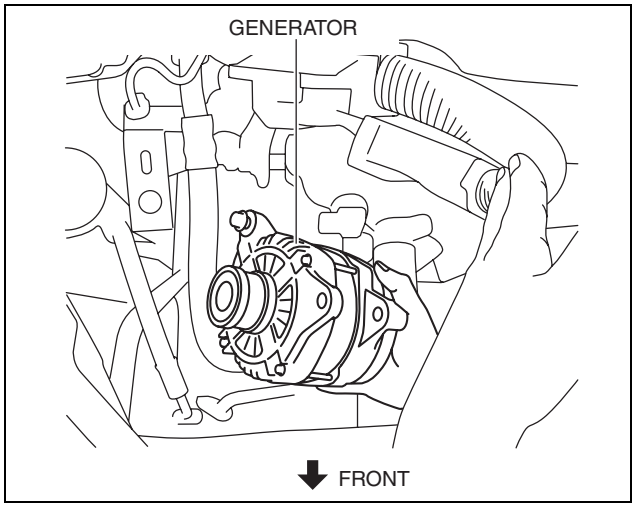
5. Remove the generator upper bolt.
6. Remove the generator together with the lower bolt from the engine.



ac5wzw0000513

CHARGING SYSTEM [SKYACTIV-D 2.2]

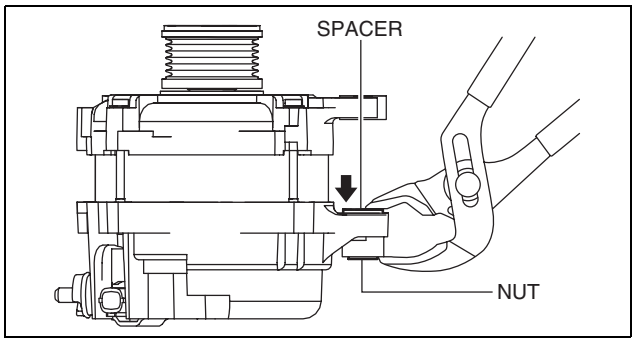
7. Remove the generator from above the engine compartment.



ac5wzw0000513

Generator Installation Note

1. To facilitate the installation of the generator to the engine, grasp the spacer in the lower and upper bolt installation parts using pliers and push it down to the nut side.
2. Insert generator installation bolt A into the generator.
3. Align the generator bolt installation holes on the engine and generator sides and temporarily tighten generator installation bolts A and B.
4. Tighten the generator installation bolts in the order of A, B.



ac5wzw0000513

GENERATOR INSPECTION [SKYACTIV-D 2.2]

id0117h6800300

Caution

- **Do not apply direct battery positive voltage to generator terminal D, otherwise it could cause damage to the internal parts (power transistor) of the generator.**

Charging System Warning Light

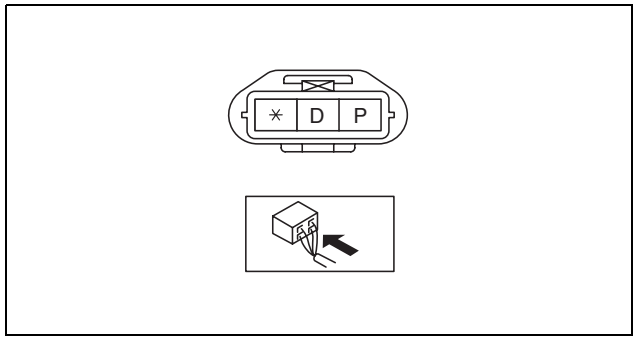
1. Verify that the battery is fully charged.
2. Verify that the drive belt is correct. (See 01-10B-7 DRIVE BELT INSPECTION [SKYACTIV-D 2.2].)
3. Switch the ignition to ON (engine off), verify that the charging system warning light illuminates.
   - If it does not illuminate, inspect the charging system warning light and the wiring harness.
     — If the charging system warning light and the wiring harness are normal, inspect the PCM.
4. Verify that the charging system warning light goes out after the engine is started.
   - If the charging system warning light does not go out, perform the DTC inspection, then perform troubleshooting according to the corresponding diagnostic procedure.

Generator
Voltage

1. Verify that the battery is fully charged.
2. Verify that the drive belt is correct. (See 01-10B-7 DRIVE BELT INSPECTION [SKYACTIV-D 2.2].)
3. Turn off all electrical loads.
4. Start the engine.
5. Verify that the generator rotates smoothly without any noise while the engine is running.
   - If there is any noise, find the cause and repair or replace the generator.

CHARGING SYSTEM [SKYACTIV-D 2.2]

6. Measure the voltage at each terminal using a tester.
   - If it is not as specified, find the cause and repair or replace the applicable part.



am6zzw0000234

Generator standard voltage [IG-ON]
Terminal B: B+
Terminal P: Approx. 1 V or less
Terminal D: Approx. 0 V

Generator standard voltage [Idle, 20 °C {68 °F}]
Terminal B: 13—15 V
Terminal P: Approx. 3—8 V
Terminal D: Turn the electrical loads (headlights, blower motor, rear window defroster, brake lights, etc.) on and verify that the voltage reading increases.

Current

Note
- Since the charging current decreases rapidly after starting the engine, carry out the following procedure quickly, and read the maximum current value.

1. Verify that the battery is fully charged.
2. Verify that the drive belt is correct. (See 01-10B-7 DRIVE BELT INSPECTION [SKYACTIV-D 2.2].)
3. Disconnect the negative battery cable.
4. Connect a tester, which can read **120 A or more**, between generator terminal B and the wiring harness.
5. Connect the negative battery cable. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Turn off all electrical loads.
7. Start the engine.

Note
- When the electrical load on the vehicle is low, the specified current cannot be verified although the generator is normal. In this case, increase the electrical load (Leave the headlights turned on for a while, then discharge the battery, or use a similar method.) and recheck.
- When the generator itself or the ambient temperature are too high, the specified current also cannot be verified. In this case, cool down the generator and recheck.

8. Turn the electrical loads (headlights, blower motor, rear window defroster, brake lights, etc.) on and verify that the current reading increases more than the minimum value indicated below.
   — If it is not as specified, go to the PCM and generator shearing inspection. (See 01-17B-18 PCM and generator shearing inspection.)

Generator generated current (reference value) [Ambient temperature: 20 °C {68 °F}, Engine hot]

Engine speed (rpm)	Terminal B voltage (V)	Generator output current (A)
1,000	13	125
1,000	15	128
2,000	13	148
2,000	15	163

*** Field coil current control signal 100%**

CHARGING SYSTEM [SKYACTIV-D 2.2]

PCM and generator shearing inspection

1. Connect the M-MDS to the DLC-2.
2. Inspect as follows:

Step	Inspection		Action
1	Measure the generator terminal B voltage when the electrical loads*1 are on and off.	15 V or more	Go to Step 2.
		13—15 V	Normal*2
		13 V or less	Go to Step 3.
2	Monitor the ALTT V PID using the M-MDS. Is the value normal?	Yes	Go to Step 4.
		No	Inspect the following, then repair or replace as necessary. • If there is no malfunction, replace the PCM. 1. Wiring harness between PCM terminal 1D- generator terminal P. 2. Wiring harness between PCM terminal 1EI- generator terminal D. 3. Generator inner parts.
3	Monitor the ALTT V PID using the M-MDS. Is the value normal?	Yes	Go to Step 5.
		No	Inspect the following, then repair or replace as necessary. • If there is no malfunction, replace the PCM. 1. Wiring harness between PCM terminal 1D- generator terminal P. 2. Wiring harness between PCM terminal 1EI- generator terminal D. 3. Generator inner parts.
4	Monitor the ALTF PID using the M-MDS. Is the duty value 100%?	Yes	Replace PCM.
		No	Inspect the following, then repair or replace as necessary. • If there is no malfunction, replace the PCM. 1. Wiring harness between PCM terminal 1EI - generator terminal D. 2. Generator inner parts.
5	Monitor the ALTF PID using the M-MDS. Is the duty value 0%?	Yes	Replace PCM.
		No	Inspect the following, then repair or replace as necessary. • If there is no malfunction, replace the PCM. 1. Wiring harness between PCM terminal 1EI- generator terminal D. 2. Generator inner parts.

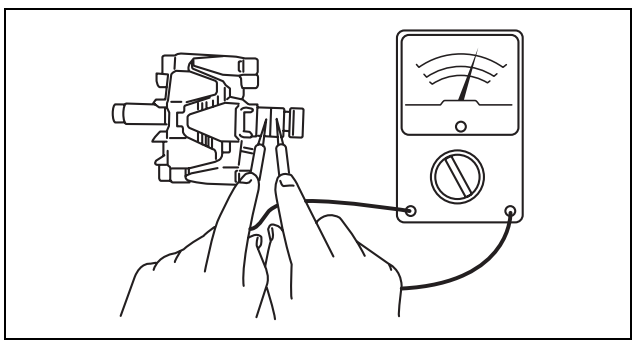
*1 : Headlights, blower motor, rear window defroster, brake lights, etc.
*2 : If the generator field coil duty value does not change when electrical loads (such as headlights, blower motor, rear window defroster, brake lights) are on or off, inspection with discharged battery is needed.

Generator Inner Parts

Rotor

1. Measure the resistance between the slip rings using a tester.
   - If not within specification, replace the rotor.

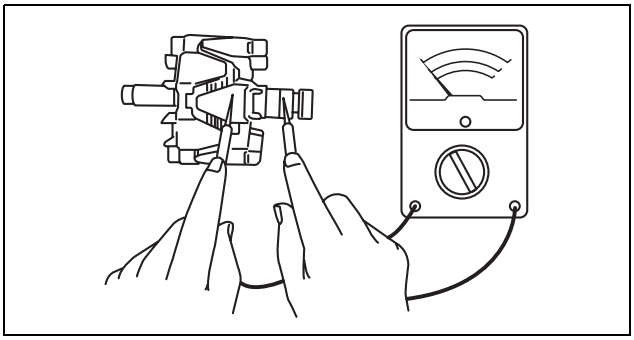
Generator rotor resistance (between slip rings) [20 °C {68 °F}]
1.8—2.1 ohms



am6zzw0000235

CHARGING SYSTEM [SKYACTIV-D 2.2]

2. Verify that there is no continuity between the slip ring and core using a tester.
   - If there is continuity, replace the rotor.
3. Inspect the slip ring surface condition.
   - If the slip ring surface is rough, use a lathe or fine sandpaper to make it smooth.



am6zzw0000235

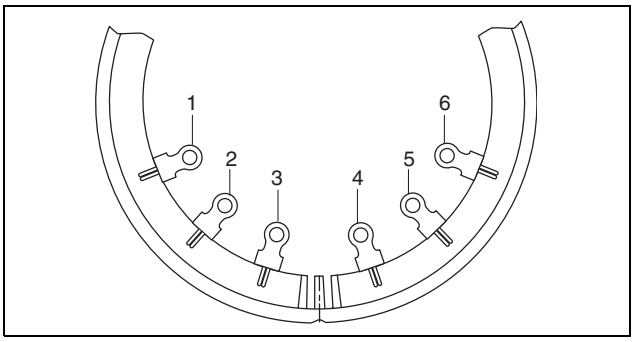
Stator coil

1. Verify that the continuity is as indicated in the table.

○—○ : Continuity

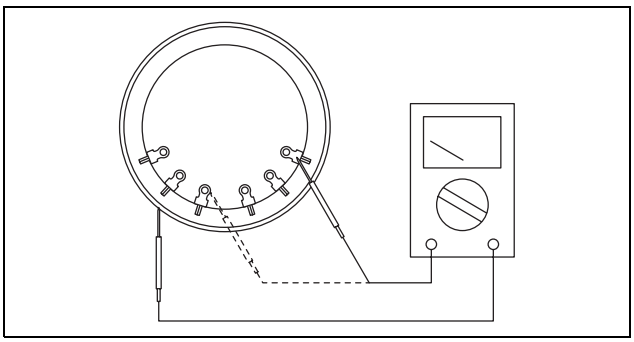
Terminal					
1	2	3	4	5	6
○—○					
○		○			
	○—○				
			○—○		
			○		○
				○—○	

am6zzw0000235



am6zzw0000235

   - If there is any malfunction, replace the stator.
2. Verify that there is no continuity between the stator coil leads and core using a tester.
   - If there is continuity, replace the stator coil.

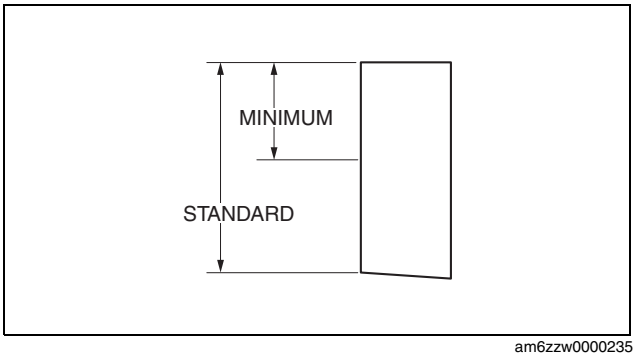


am3uuw0000326

Brush

1. Inspect brushes for wear.
   - If any brush is worn almost to or beyond the limit, replace all of the brushes.

Generator brush length
Standard: 22.5 mm {0.886 in}
Minimum: 5.0 mm {0.20 in}



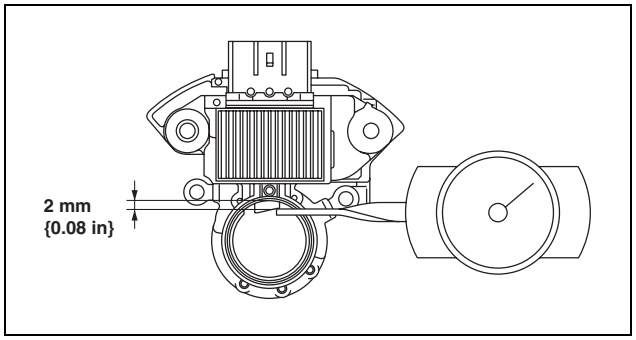
am6zzw0000235

CHARGING SYSTEM [SKYACTIV-D 2.2]

Brush spring

1. Measure the force of the brush spring using a spring pressure gauge.
2. Read the spring pressure gauge at the brush tip projection of **2 mm {0.08 in}.**
   - If not within specification, replace the brush spring.

Generator brush spring force
Standard: 4.1—5.3 N {0.42—0.54 kgf, 1.0—1.1 lbf}
Minimum: 1.7 N {0.17 kgf, 0.38 lbf}



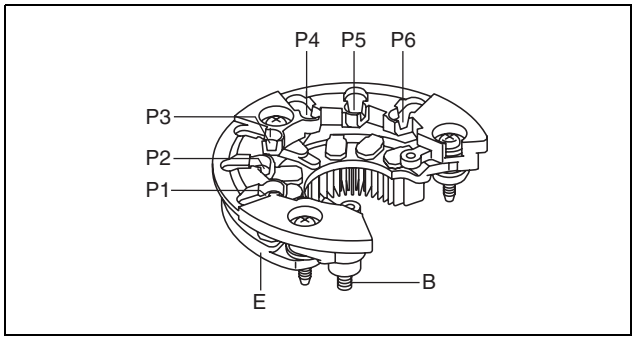
ac5uuw00000592

Rectifier (Using an analog circuit tester)

1. Inspect for continuity of the diodes using an analog circuit tester.
   - If not as specified, replace the rectifier.

Specification

Negative	Positive	Continuity
E	P1, P2, P3, P4, P5, P6	Yes
B		No
P1, P2, P3, P4, P5, P6	E	No
	B	Yes



ac5uuw00000593

Rectifier (Using a digital circuit tester)

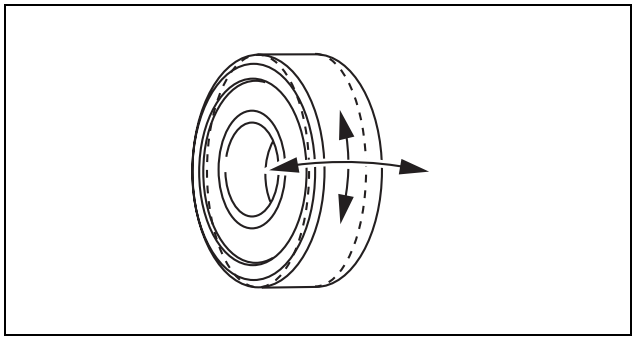
1. Inspect for continuity of the diodes using a digital circuit tester.
   - If not as specified, replace the rectifier.

Specification

Negative	Positive	Continuity
E	P1, P2, P3, P4, P5, P6	No
B		Yes
P1, P2, P3, P4, P5, P6	E	Yes
	B	No

Bearing

1. Inspect for abnormal noise, looseness, and sticking.
   - Replace the bearing if necessary.



am6zzw0000235

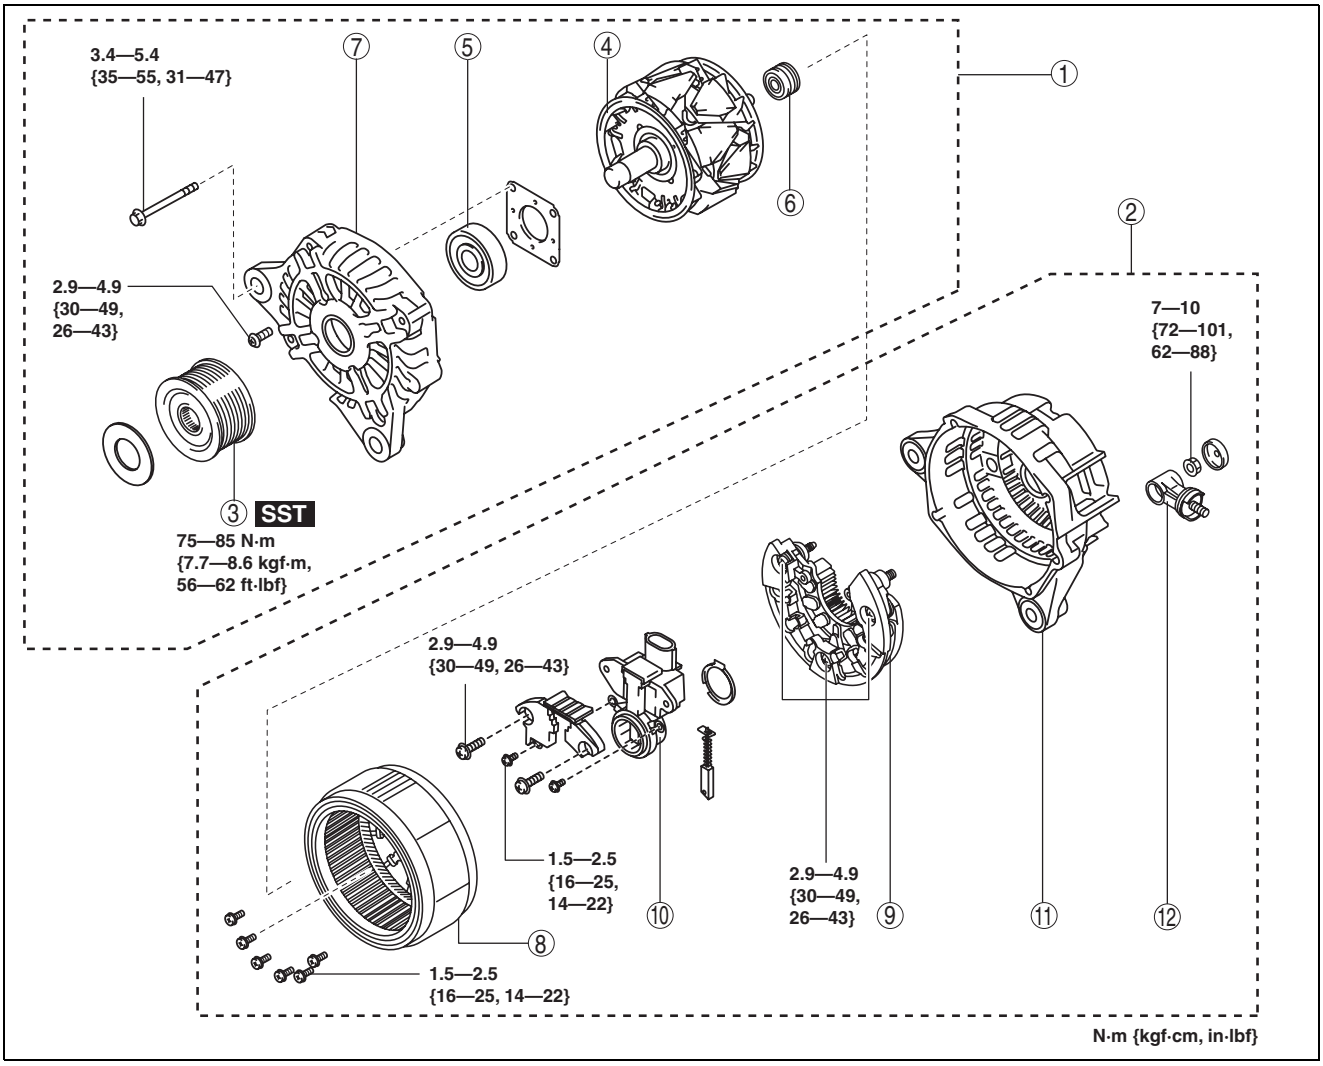
CHARGING SYSTEM [SKYACTIV-D 2.2]

GENERATOR DISASSEMBLY/ASSEMBLY [SKYACTIV-D 2.2]

id0117h6800400

Caution
- **Melt the solder quickly, otherwise the diodes (rectifier) and regulator will be damaged by excessive heat.**

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.



ac5wzw0000533

1	Rotor component
2	Stator coil component
3	Pulley (See 01-17B-22 Pulley Disassembly/Assembly Note.)
4	Rotor
5	Front bearing

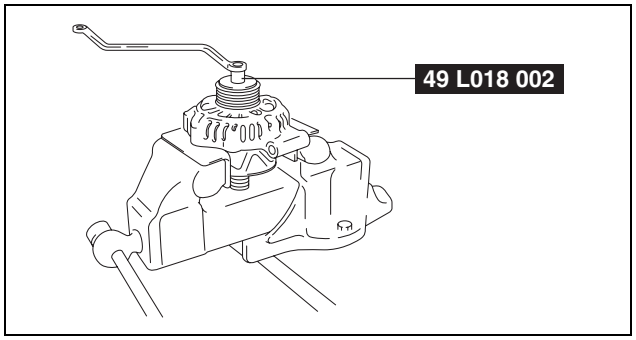
6	Rear bearing
7	Front cover
8	Stator coil
9	Rectifier
10	Regulator component
11	Rear cover
12	Terminal B component

CHARGING SYSTEM [SKYACTIV-D 2.2]

Pulley Disassembly/Assembly Note

1. Disassemble/assemble the pulley using the **SST**.

   Tightening torque
   75—85 N·m {7.7—8.6 kgf·m, 56—62 ft·lbf}

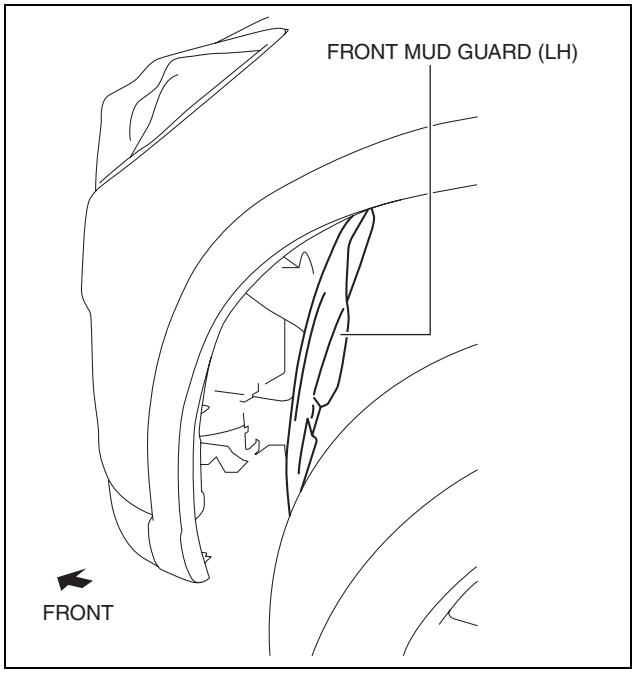


am3uuw0000609

DC-DC CONVERTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0117h6004600

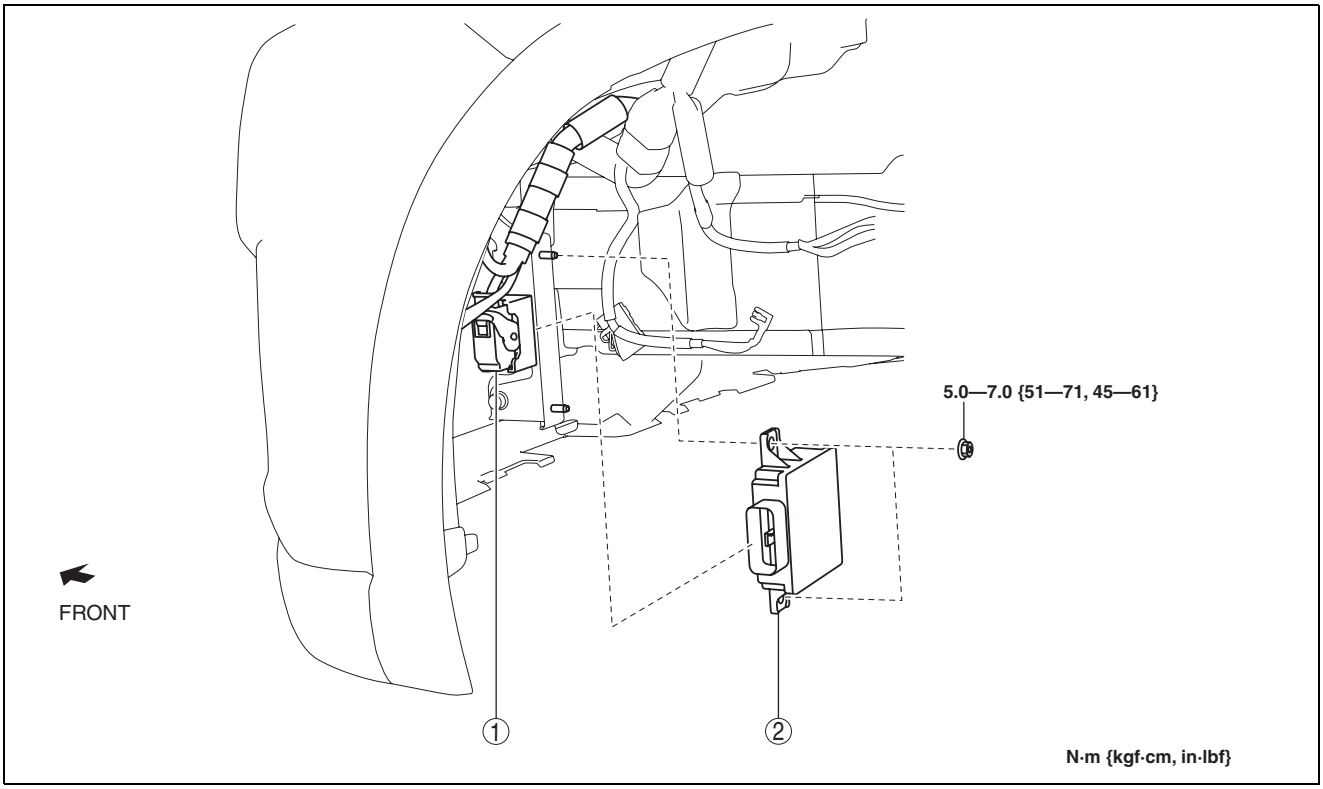
1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-D 2.2].)
2. Remove the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
3. Set the front mud guard (LH) aside as shown in the figure. (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.



ac5wzw0000512

CHARGING SYSTEM [SKYACTIV-D 2.2]

5. Install in the reverse order of removal.

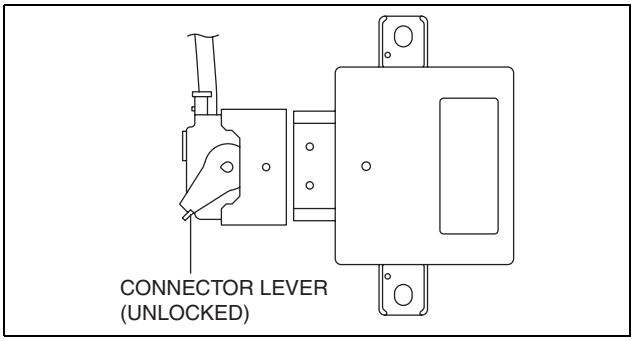


ac5wzw0000264

1	DC-DC converter connector (See 01-17B-23 DC-DC Converter Connector Installation Note.)
2	DC-DC converter

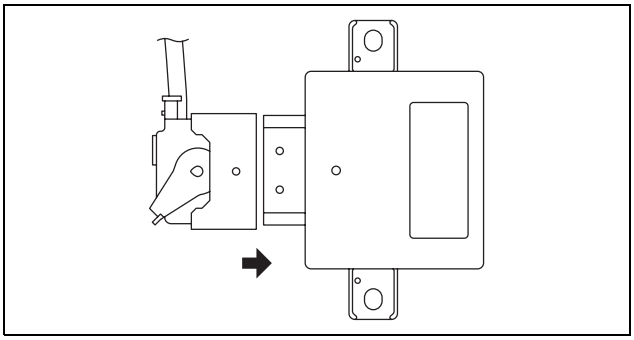
DC-DC Converter Connector Installation Note

1. Before installation, verify that the connector lever is unlocked position.
2. Connect the DC-DC converter connector using the following procedure:



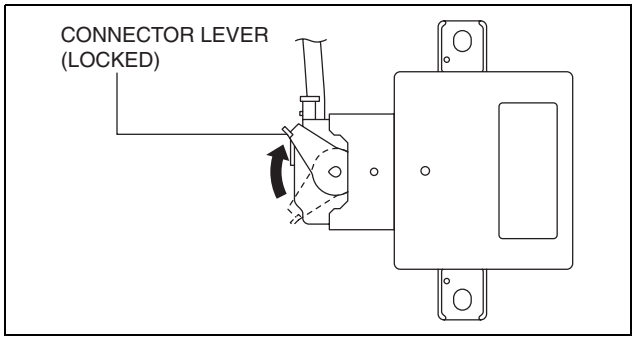
ac5wzw0000264

(1) Insert the DC-DC converter connector straight until it stops.



ac5wzw0000264

(2) Move the connector lever until a click sound is heard.



ac5wzw0000264

ac5uuw00000602

IGNITION COIL INSPECTION [SKYACTIV-G 2.0]

id0118h6800300

Ignition Coil Inspection

1. Perform the spark test and identify the malfunctioning cylinder. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].)
2. Replace the ignition coil/ion sensor of the malfunctioning cylinder with that of a normal cylinder, and perform the spark test again. (See 01-03-118 ENGINE CONTROL SYSTEM OPERATION INSPECTION [SKYACTIV-G 2.0].)
   - If the spark is not normal due to a malfunctioning ignition coil/ion sensor, replace that ignition coil/ion sensor.
   - It is unlikely that all four ignition coil/ion sensors fail to operate properly. To prevent replacing a normal component, perform the above procedure, identify the malfunctioning ignition coil/ion sensor, and replace it.

IGNITION SYSTEM [SKYACTIV-G 2.0]

SPARK PLUG REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0118h6800400

Caution
- **If a spark plug that is not as specified is installed, engine performance will be deteriorated. Install only the specified spark plug when replacing.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)])
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the ignition coils/ion sensors. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Remove the spark plugs using a plug-wrench.
5. Install in the reverse order of removal.

Tightening torque
15—20 N·m {1.6—2.0 kgf·m, 12—14 ft·lbf}

SPARK PLUG INSPECTION [SKYACTIV-G 2.0]

id0118h6800500

Specification

Spark plug type
PE01-18-110, PE02-18-110

Plug Gap Inspection

Caution
- **To avoid possible damage to the tip, do not adjust the plug gap.**
- **To prevent damaging the tip, use a wire type plug gap gauge when inspecting the plug gap.**

1. Measure the spark plug gap using a wire type plug gap gauge.
   - If not within the standard specification, replace the spark plug.

Spark plug gap
Standard: 0.75—1.10 mm {0.030—0.043 in}
New spark plug (reference): 0.75—0.85 mm {0.030—0.033 in}

Cleaning

Caution
- **Carbon may adhere to the tip of the spark plug during vehicle delivery or repeated short distance driving during the winter time. If there is any malfunction such as rough idling or start difficulty due to carbon adhesion causing plug fouling, burn off the carbon by performing no-load racing of the engine.**
- **When performing the no-load racing, apply the side brake and foot brake, move the shift lever to neutral (MTX), or the selector lever to P position (ATX) to prevent an accident and serious injury.**
- **To avoid possible damage to the spark plug tip, do not use a wire brush for cleaning.**

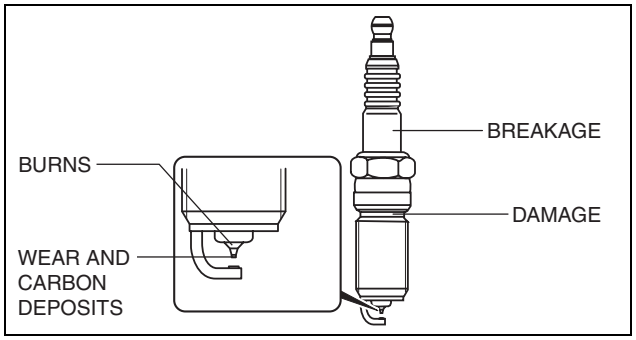
Note
- To avoid possible damage to the tip, use gasoline to clean the spark plugs after removing dirt.
- If the accelerator pedal is depressed continuously for a specified time, the engine speed may decrease to the idle speed. This is due to the PCM control operation, which prevents overheating, and it does not indicate a malfunction.
- Do not perform no-load racing at high engine speed continuously for **10 s or more**.

1. If there is carbon adhering to the spark plug, perform no-load racing at **4,000 rpm** for **2 min**, **2 times**.

IGNITION SYSTEM [SKYACTIV-G 2.0]

Visual Inspection

1. Inspect the following items:
   - If any of the following malfunctions are indicated, replace the spark plug.
     - — Insulator breakage
     - — Worn electrode
     - — Damaged gasket
     - — Badly burned insulator (sparking side)



am3uuw0000624

Resistance Inspection

1. Measure the resistance of the spark plug using a tester as shown in the figure.
   - If not within specification, replace the spark plug.

   Spark plug resistance [25°C {77 °F}]
   3.0—7.5 kilohms

STARTING SYSTEM [SKYACTIV-G 2.0]

STARTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0119h7800200

Operation After Replacing Starter (Vehicle With i-stop)

Note

- If the number of times the starter can operate exceeds the limit, or there is any malfunction of the i-stop system-related parts, the i-stop warning light (amber) flashes.In addition, DTCs are stored simultaneously.
- To ensure reliability of the i-stop system, replace the starter with a new one if the number of times the sub-battery can operate has exceeded the upper limit.
- When replacing the starter, perform the following procedure: When replacing the PCM simultaneously, perform the PCM configuration first. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-40-39 PCM CONFIGURATION (USING READ/WRITE FUNCTION) [SKYACTIV-G 2.0].) (See 01-40-39 PCM CONFIGURATION (USING AS-BUILT DATA) [SKYACTIV-G 2.0].)

Step	Action
1	**Note** • Perform the procedures from Step 1 to 5 within 2 min. — If the operation exceeds 2 min, switch the ignition off and repeat the procedures from Step 1. Switch the ignition ON (engine off).
2	Apply the parking brake firmly.
3	Shift the selector lever to the N position.
4	Perform the following work with the brake pedal depressed. 1. Depress and release the accelerator pedal 6 times. 2. Verify that the i-stop indicator light (green) flashes. • If the light does not flash, switch the ignition off and repeat the procedure from Step 1. 3. Depress and release the accelerator pedal 6 times. 4. Verify that the i-stop indicator light (green) changes from illumination to flashing. • If the light does not change to illumination, switch the ignition off and repeat the procedure from Step 1.
5	Long-press the i-stop OFF switch. Wait until the i-stop indicator light (green) turns off (for 5 s or more). • If the light does not turn off, switch the ignition off and repeat the procedure from Step 1.
6	Switch the ignition off.
7	Start the engine.
8	Verify that the i-stop warning light (amber) turns off. • If the light does not turn off, switch the ignition off and repeat the procedure from Step 1.
9	Switch the ignition off and disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
10	Verifying battery condition initialization setting (i-stop setting). (See 01-17A-14 BATTERY CONDITION INITIALIZATION SETTING (i-stop SETTING) [SKYACTIV-G 2.0].)

STARTING SYSTEM [SKYACTIV-G 2.0]

Starter Removal/Installation

Warning

- **Remove and install all parts when the engine is cold, otherwise they can cause severe burns or serious injury.**
- **When the battery cables are connected, touching the vehicle body with starter terminal B will generate sparks. This can cause personal injury, fire, and damage to the electrical components. Always disconnect the negative battery cable before performing the following operation.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)])
2. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

2	Terminal S connector

3	Starter

STARTING SYSTEM [SKYACTIV-G 2.0]

STARTER INSPECTION [SKYACTIV-G 2.0]

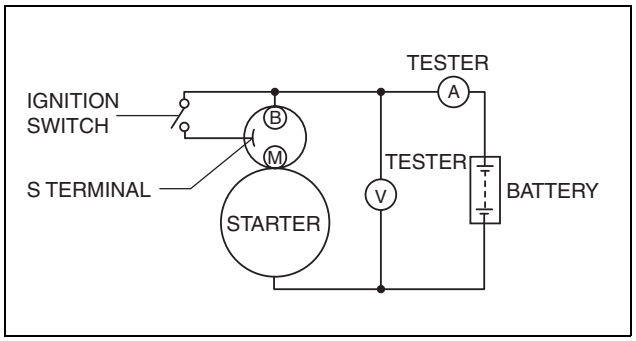
id0119h7800300

On-vehicle Inspection

1. Verify that the battery is fully charged.
2. The starter is normal if it rotates smoothly and without any noise when the engine is cranked.
   - If the starter does not operate, inspect the following:
     — Remove the starter, and inspect the starter unit.
     — Inspect the related wiring harnesses, the ignition switch, and the transaxle range switch (ATX) or starter interlock switch (MTX).

No-load Test

1. Verify that the battery is fully charged.
2. Connect the starter, battery, and a tester as shown in the figure.
3. Operate the starter and verify that it rotates smoothly.
   - If the starter does not rotate smoothly, inspect the starter unit.
4. Measure the voltage and current while the starter is operating.
   - If not within specification, replace the starter.



am6xuw0000234

Starter no-load test voltage
11 V

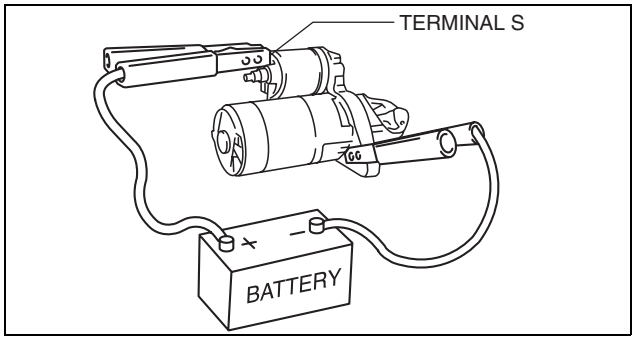
Starter no-load test current
Vehicle with i-stop: 90 A or less
Vehicle without i-stop: 95 A or less

Magnetic Switch Operation Inspection (Vehicle Without i-stop)

Pull-out test

Note
- Depending on the battery charge condition, the starter motor pinion may rotate while in an extended state. This is due to current flowing to the starter motor through the pull-in coil to turn the starter motor, and does not indicate an abnormality.

1. Verify that the starter motor pinion is extended while battery positive voltage is connected to terminal S and the starter body is grounded.
   - If the starter motor pinion is not extended, repair or replace the starter.

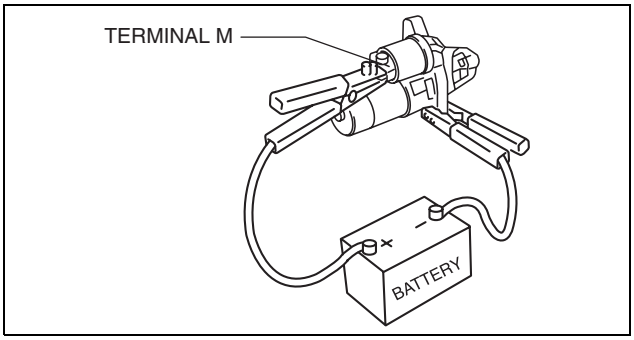


am6xuw0000234

STARTING SYSTEM [SKYACTIV-G 2.0]

Return test

1. Disconnect the motor wire from terminal M.
2. Connect battery positive voltage to terminal M and ground the starter body.
3. Pull out the drive pinion with a screwdriver. Verify that it returns to its original position when released.
   - If it does not return, repair or replace the starter.

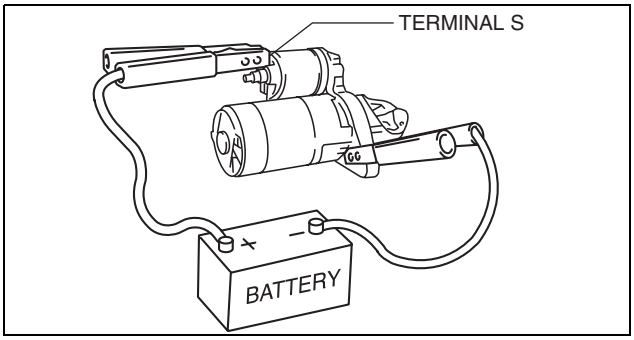


am6xuw0000234

Pinion Gap Inspection (Vehicle Without i-stop)

1. Pull out the drive pinion with the battery positive voltage connected to terminal S and the starter body grounded.

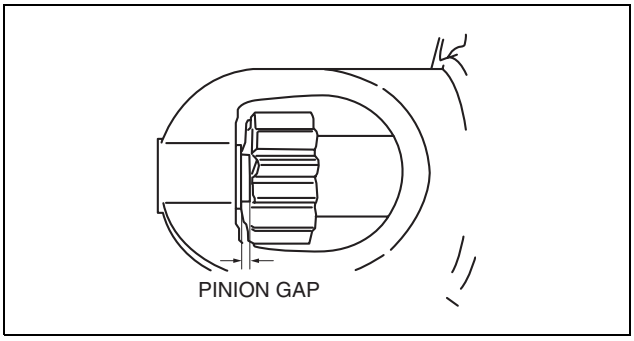
   Caution
   - **Applying power for more than 10 s can damage the starter. Do not apply power for more than 10 s.**



am6xuw0000234

2. Measure the pinion gap while the drive pinion is extended.
   - If not as specified, adjust with an adjustment washer (between drive housing front cover and magnetic switch).

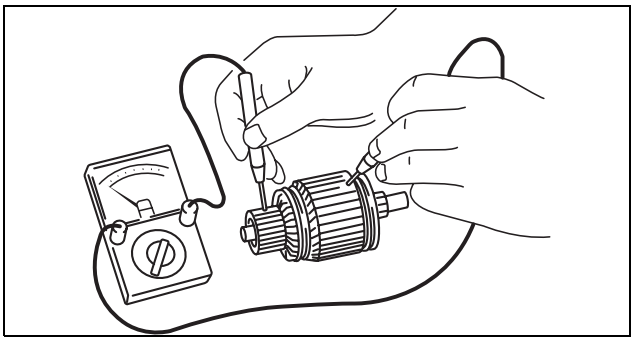
   Starter pinion gap
   0.5—2.0 mm {0.02—0.07 in}



am6zzw0000237

Starter Inner Parts Inspection (Vehicle Without i-stop)
Armature

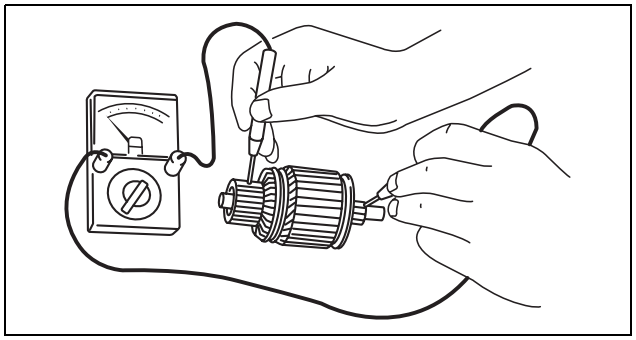
1. Verify that there is no continuity between the commutator and the core at each segment using a tester.
   - If there is continuity, replace the armature.



am6zzw0000237

STARTING SYSTEM [SKYACTIV-G 2.0]

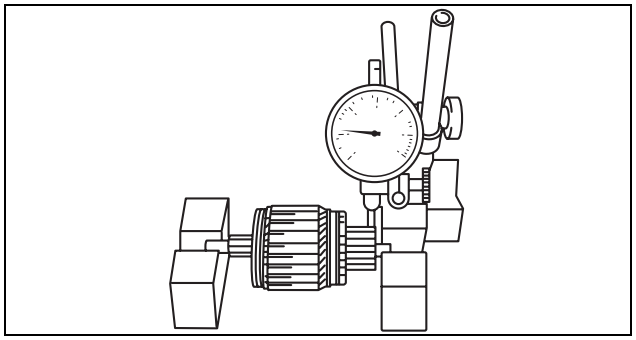
2. Verify that there is no continuity between the commutator and the shaft using a tester.
   - If there is continuity, replace the armature.



am6zzw0000237

3. Place the armature on V-blocks, and measure the runout using a dial indicator.
   - If not within specification, replace the armature.

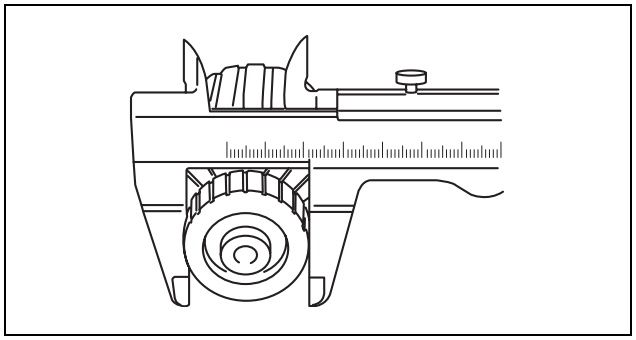
   Starter armature runout
   0.1 mm {0.004 in} max.



am6zzw0000238

4. Measure the commutator diameter.
   - If not within the minimum specification, replace the armature.

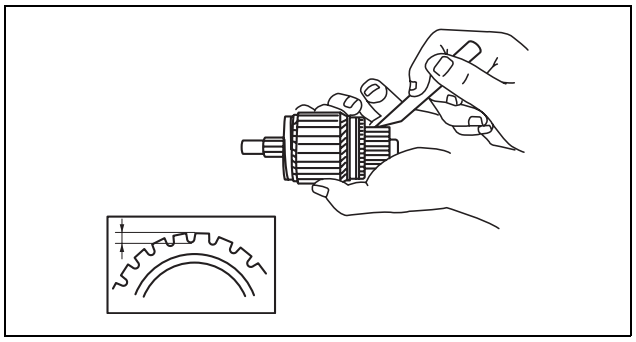
   Starter commutator diameter
   Standard: 29.4 mm {1.16 in}
   Minimum: 28.8 mm {1.13 in}



am6zzw0000238

5. Measure the segment groove depth of the commutator.
   - If not within the minimum specification, undercut the grooves to the standard depth.

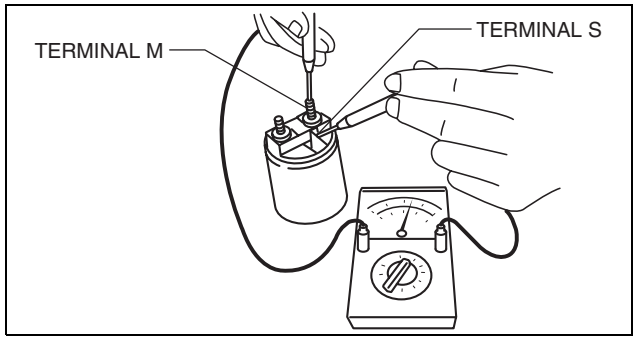
   Segment groove depth of starter commutator
   Standard: 0.5 mm {0.02 in}
   Minimum: 0.2 mm {0.008 in}



am6zzw0000238

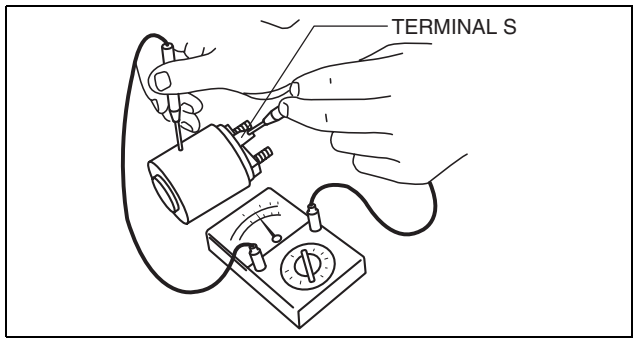
Magnetic switch

1. Inspect for continuity between terminals S and M using a tester.
   - If there is no continuity, replace the magnetic switch.



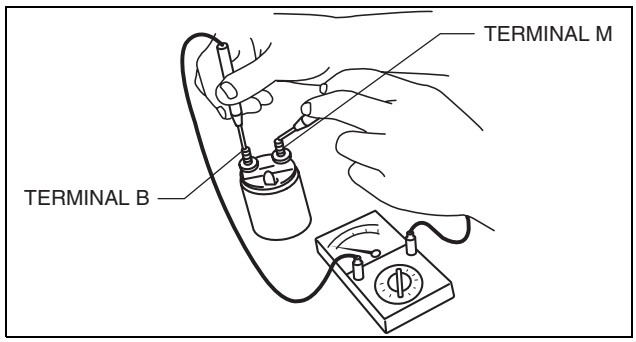
am6xuw0000234

2. Inspect for continuity between terminal S and the body using a tester.
   - If there is no continuity, replace the magnetic switch.



am6xuw0000234

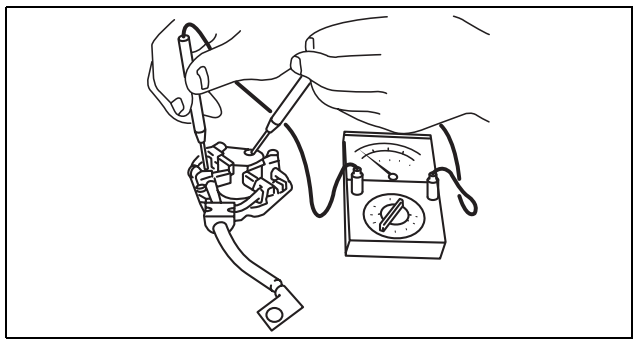
3. Verify that there is no continuity between terminals M and B using a tester.
   - If there is continuity, replace the magnetic switch.



am6xuw0000234

Brush and brush holder

1. Verify that there is no continuity between each insulated brush and plate using a tester.
   - If there is continuity, replace the brush holder.

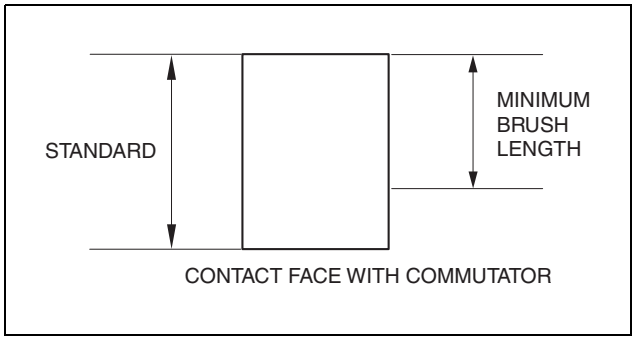


am6zzw0000238

STARTING SYSTEM [SKYACTIV-G 2.0]

2. Measure the brush length.
   - If any brush is worn almost to or beyond the minimum specification, replace all of the brushes.

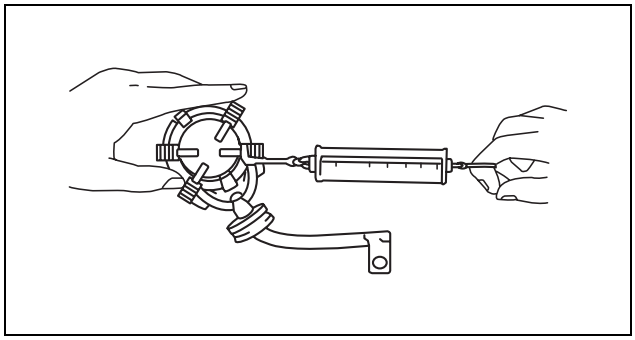
Starter brush length
Standard: 12.3 mm {0.484 in}
Minimum: 5.5 mm {0.22 in}



ac5uuw00002441

3. Measure the brush spring force using a spring balance.
   - If not within the minimum specification, replace the brush and brush holder component.

Starter brush spring force
Standard: 15.1—20.4 N {1.54—2.08 kgf, 3.40—4.58 lbf}
Minimum: 2.75 N {0.280 kgf, 0.618 lbf}



am6zzw0000238

STARTER DISASSEMBLY/ASSEMBLY [SKYACTIV-G 2.0 (WITHOUT i-stop)]

id0119h71045h9

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.

12	Gear shaft

STARTING SYSTEM [SKYACTIV-G 2.0]

STARTER INTERLOCK SWITCH INSPECTION [SKYACTIV-G 2.0]

id0119h7104200

Caution
- **Do not reuse the starter interlock switch if it is removed from the vehicle even once. Replace with a new starter interlock switch when installing.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)])
2. Disconnect the starter interlock switch connector.
3. Verify that the continuity is as indicated in the table using a tester.

: Continuity

Condition	Terminal	
	A	B
Clutch pedal is depressed	○—○	
Clutch pedal is not depressed		

am6zzw0000236

- If the continuity is not as indicated in the table, replace the starter interlock switch. (See 05-10A-8 CLUTCH PEDAL REMOVAL/INSTALLATION [C66M-R, C66MX-R].)

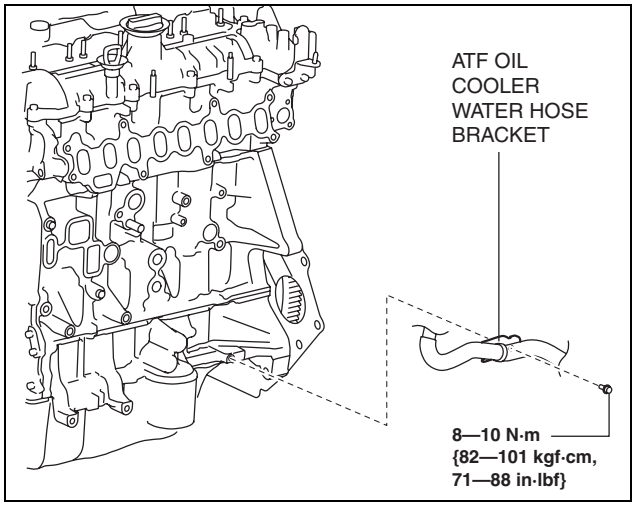
3	Starter (See 01-19B-4 Starter removal note.)

STARTING SYSTEM [SKYACTIV-D 2.2]

Starter removal note

1. Remove the starter upper bolt from above the engine compartment.
2. Remove the ATF oil cooler water hose bracket installation bolt shown in the figure, and set the water hose out of the way. (ATX)
3. Remove the two starter lower bolts and the starter from below the engine compartment.



ac5wzw0000514

STARTER INSPECTION [SKYACTIV-D 2.2]

id0119h8800300

On-vehicle Inspection

1. Verify that the battery is fully charged.
2. The starter is normal if it rotates smoothly and without any noise when the engine is cranked.
   - If the starter does not operate, inspect the following:
     — Remove the starter, and inspect the starter unit.
     — Inspect the related wiring harnesses, the ignition switch, and the transaxle range switch (ATX) or starter interlock switch (MTX).

No-load Test

1. Verify that the battery is fully charged.
2. Connect the starter, battery, and a tester as shown in the figure.
3. Operate the starter and verify that it rotates smoothly.
   - If the starter does not rotate smoothly, inspect the starter unit.
4. Measure the voltage and current while the starter is operating.
   - If not within specification, replace the starter.

CONTROL SYSTEM [SKYACTIV-G 2.0]

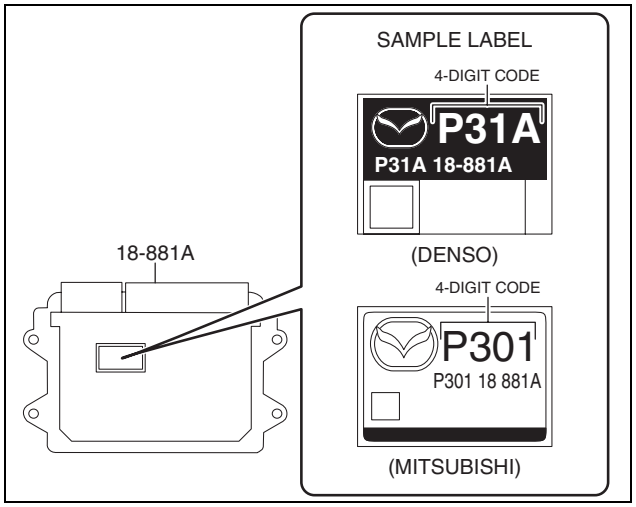
PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0140f4802400

Caution

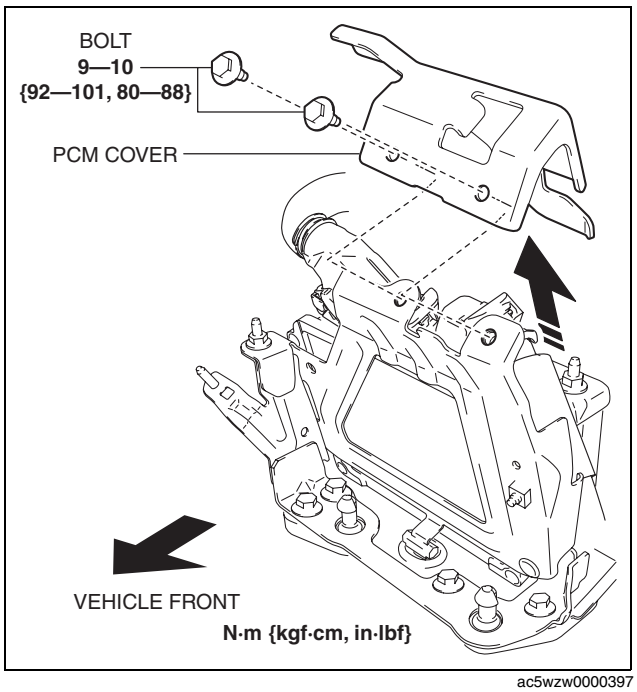
- **There are two types of PCM settings. If the incorrect PCM is installed, it could cause interference with engine control.**
- **When replacing the PCM, verify the first four digits of the part number indicated on the PCM label before replacement, and replace the PCM with one having the same part number.**



ac5wzw0000028

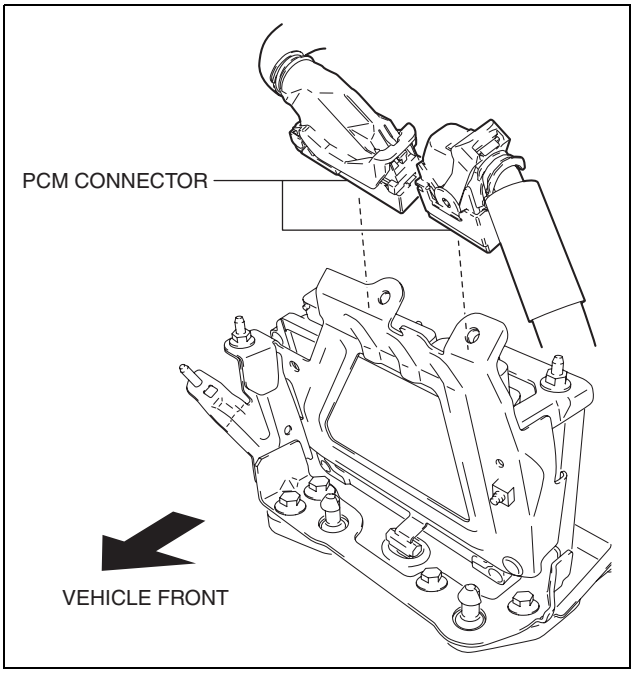
Without Set Bolt

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the PCM cover. (See 01-40-15 PCM Cover Installation Note.)



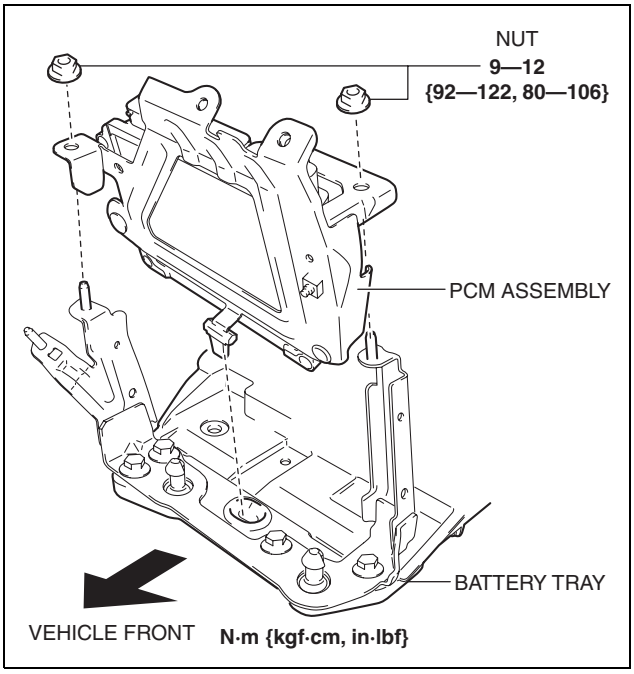
ac5wzw0000397

3. Disconnect the PCM connector. (See 01-40-15 PCM Connector Connection Note.)



ac5wzw0000028

4. Remove the PCM assembly from the battery tray.



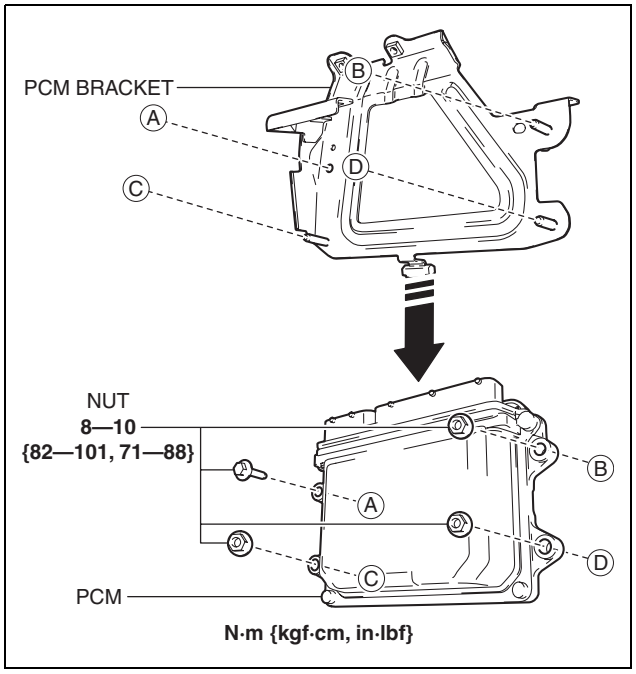
ac5wzw0000398

CONTROL SYSTEM [SKYACTIV-G 2.0]

5. Remove the PCM from the PCM bracket.
6. Install in the reverse order of removal.
7. When replacing the PCM on the vehicles, perform the following:
   - PCM configuration (See 01-40-39 PCM CONFIGURATION (USING READ/WRITE FUNCTION) [SKYACTIV-G 2.0].)

Note
- If configuration cannot be performed by reading/writing of the vehicle specification information, perform the configuration using As-Built information after replacing the PCM. (See 01-40-39 PCM CONFIGURATION (USING AS-BUILT DATA) [SKYACTIV-G 2.0].)

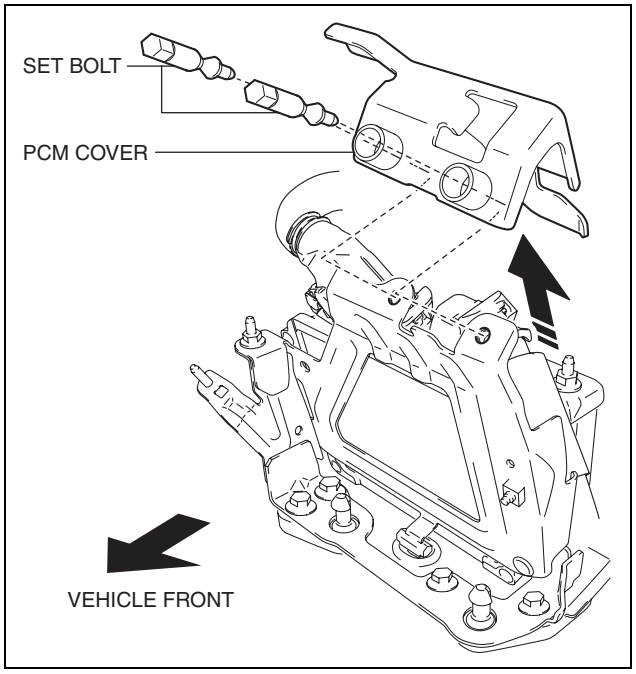
- Immobilizer system-related parts programming (See 09-14-78 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING.)



ac5wzw0000036

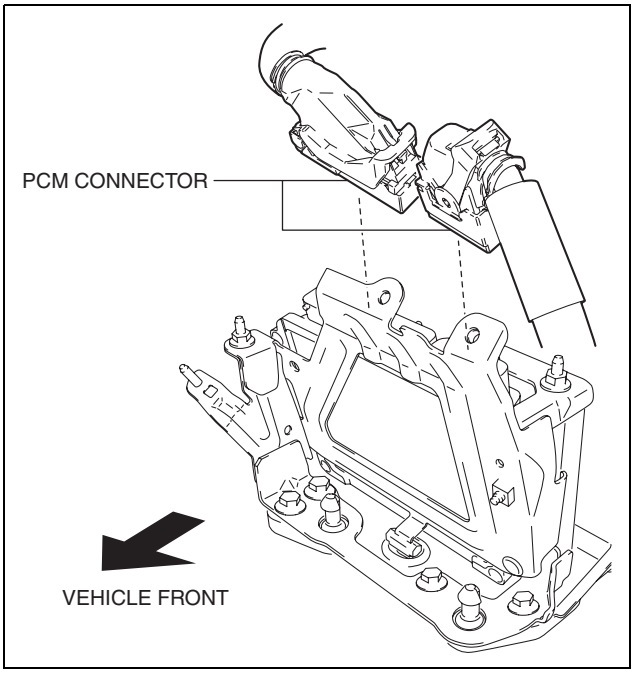
With Set Bolt

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the PCM cover. (See 01-40-15 PCM Cover Installation Note.) (See 01-40-14 Set Bolt Removal Note.) (See 01-40-14 Set Bolt Installation Note.)



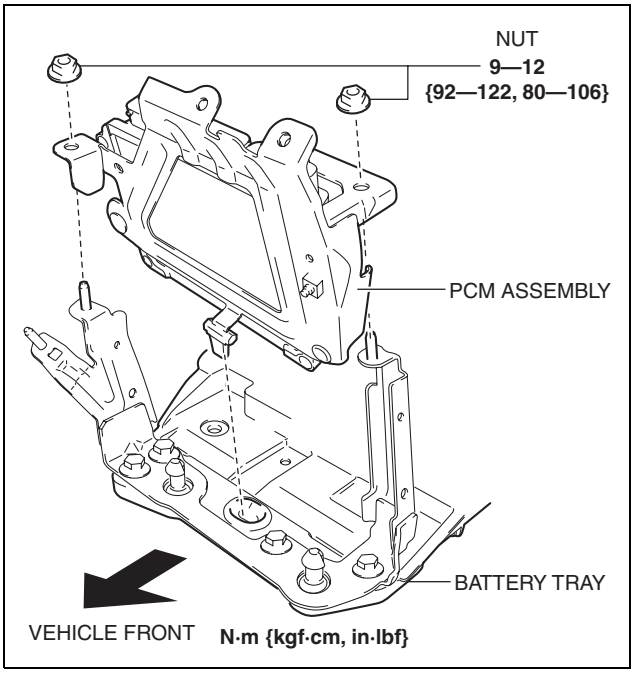
ac5wzw0000092

3. Disconnect the PCM connector. (See 01-40-15 PCM Connector Connection Note.)



ac5wzw0000028

4. Remove the PCM assembly from the battery tray.



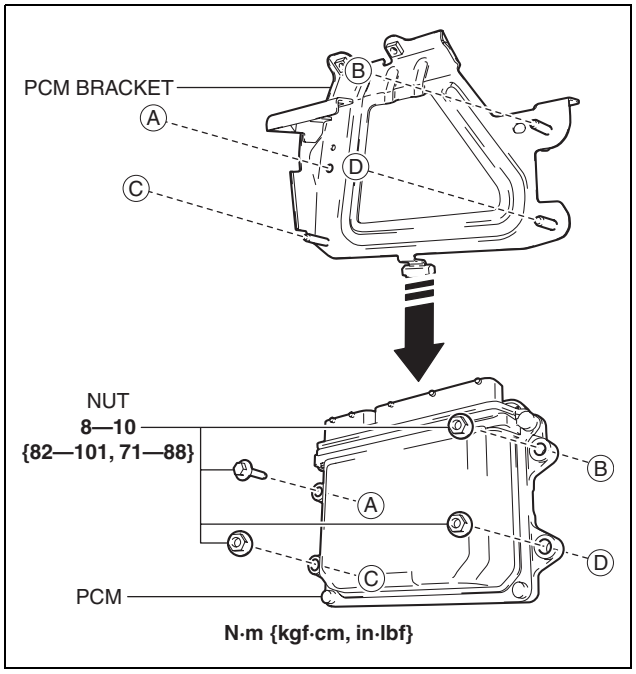
ac5wzw0000398

CONTROL SYSTEM [SKYACTIV-G 2.0]

5. Remove the PCM from the PCM bracket.
6. Install in the reverse order of removal.
7. When replacing the PCM on the vehicles, perform the following:
   - PCM configuration (See 01-40-39 PCM CONFIGURATION (USING READ/WRITE FUNCTION) [SKYACTIV-G 2.0].)

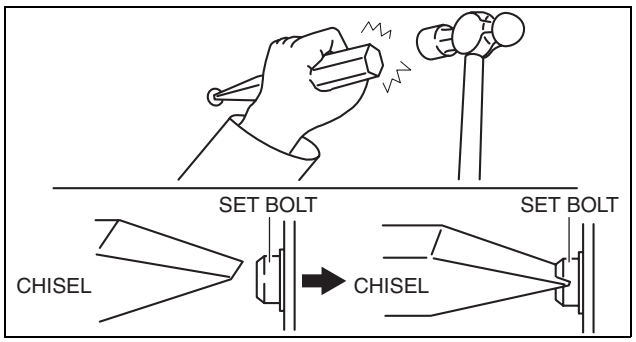
Note
- If configuration cannot be performed by reading/writing of the vehicle specification information, perform the configuration using As-Built information after replacing the PCM. (See 01-40-39 PCM CONFIGURATION (USING AS-BUILT DATA) [SKYACTIV-G 2.0].)

- Immobilizer system-related parts programming (See 09-14-78 IMMOBILIZER SYSTEM-RELATED PARTS PROGRAMMING.)



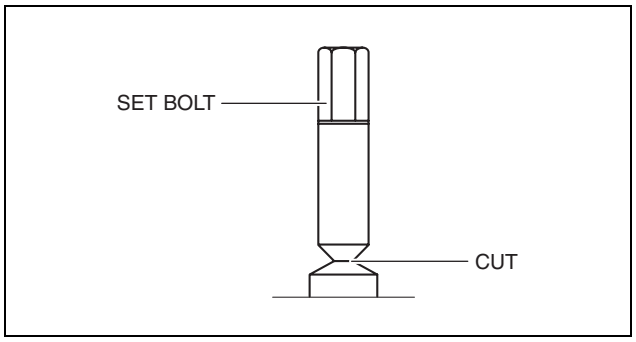
ac5wzw0000036

Set Bolt Removal Note
1. Using a chisel and a hammer, cut a groove on the head of the set bolt so that a screwdriver can be inserted.
2. Loose the set bolt using an impact screwdriver or pliers.



ac5wzw0000207

Set Bolt Installation Note
1. Install a new set bolt and tighten it until the neck of the bolt is cut.

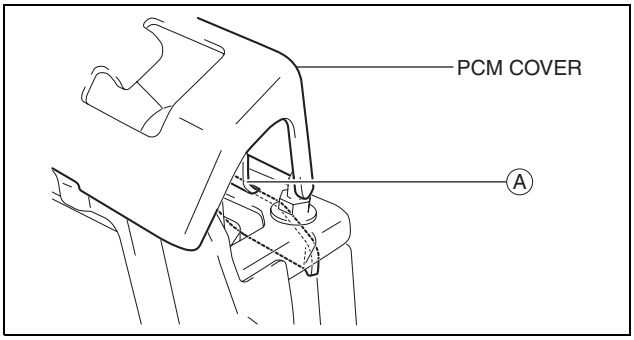


ac5wzw0000207

CONTROL SYSTEM [SKYACTIV-G 2.0]

PCM Cover Installation Note

1. Insert the PCM cover end into area A shown in the figure.
2. Temporarily tighten the two bolts, then completely tighten them.

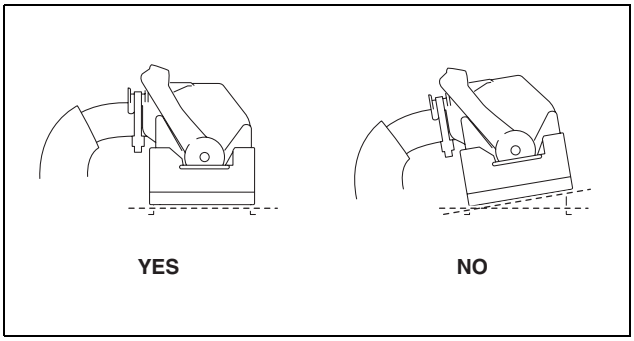


ac5wzw0000092

PCM Connector Connection Note

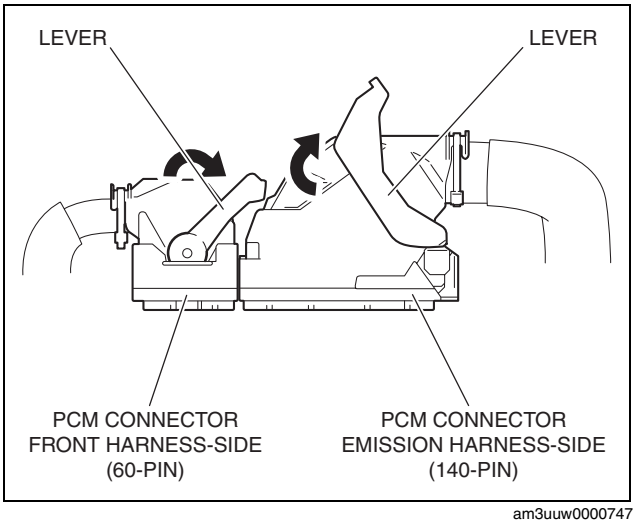
Caution

- **Do not touch the PCM connector terminal. The terminal is extremely thin and can be damaged by touching it.**
- **If the PCM connector is inserted at an angle and the lever is moved, the connector could be damaged. Verify that the PCM connector is inserted straight.**



am3zzw0001257

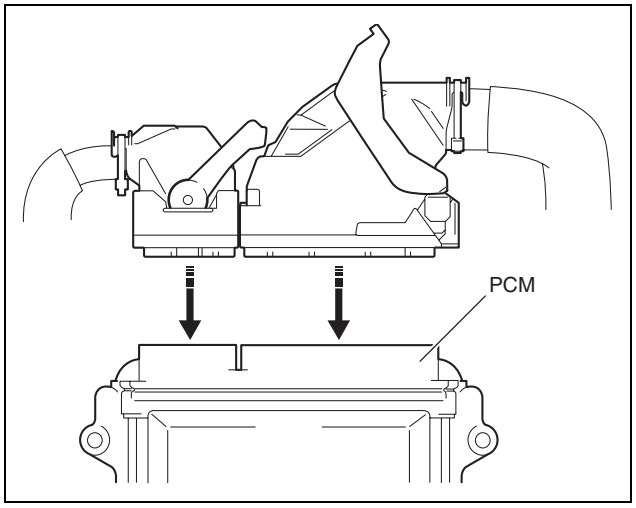
1. Set the PCM connector to the position shown in the figure.



am3uuw0000747

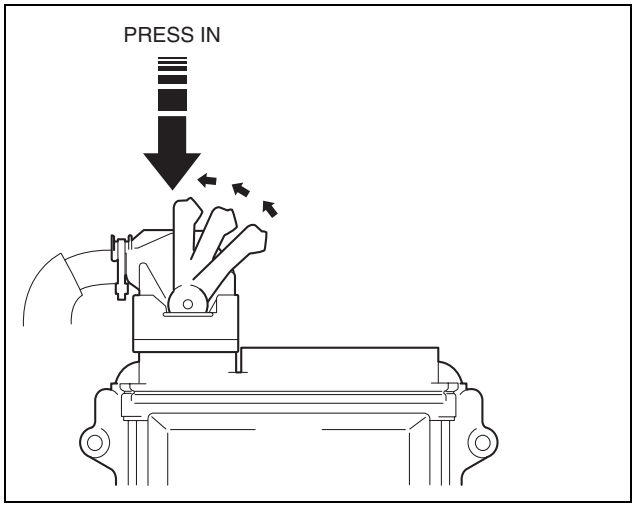
CONTROL SYSTEM [SKYACTIV-G 2.0]

2. Align the PCM connector straight against the connection surface.



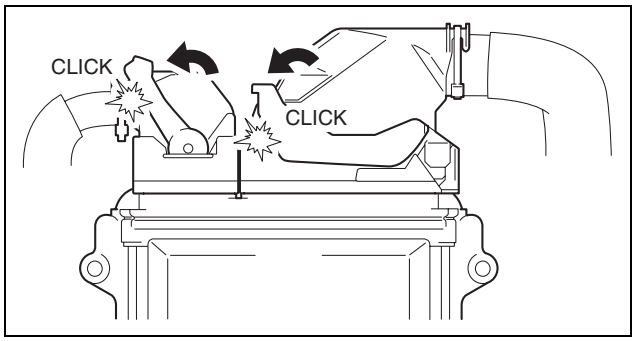
am3uuw0000747

3. Insert the PCM connector straight and press it in until the lever moves up naturally. (Front harness-side connector)



am3uuw0000747

4. Press the PCM connector lever until a click sound is heard.



am3uuw0000747

Operation After Replacing PCM (vehicles with i-stop system)

Step	Action
1	Replace the PCM.
2	Perform the PCM configuration using the M-MDS. (See 01-40-39 PCM CONFIGURATION (USING READ/WRITE FUNCTION) [SKYACTIV-G 2.0].)
3	Switch the ignition to off, and disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
4	Perform the Battery Condition Initialization Setting (i-stop setting) Procedure. (See 01-17A-14 BATTERY CONDITION INITIALIZATION SETTING (i-stop SETTING) [SKYACTIV-G 2.0].)

CONTROL SYSTEM [SKYACTIV-G 2.0]

PCM INSPECTION [SKYACTIV-G 2.0]

id0140f4802500

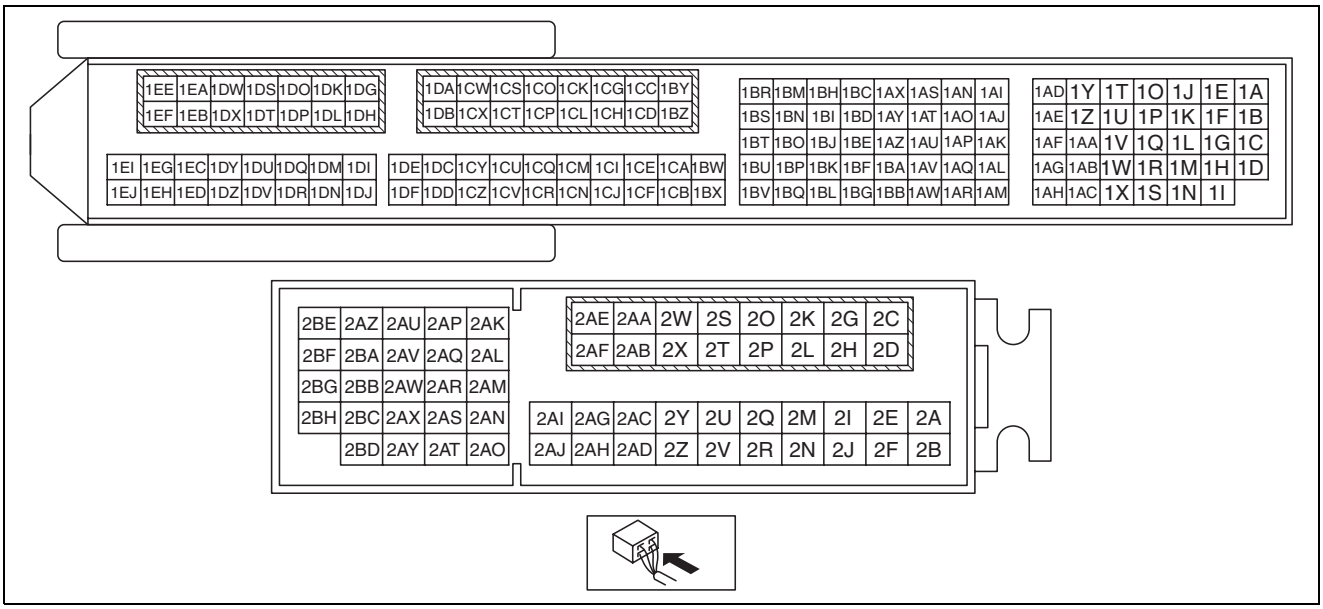
Without Using the M-MDS

Note

- Because the PCM uses a waterproof connector, the inspection for the voltage/wave pattern cannot be performed. The following values are for reference.

01

Terminal voltage table (Reference)



am3zzw0001279

Terminal	Signal	Connected to	Test condition		Voltage (V)	inspection item
1A*1	CAN_2H	CAN system related modules	Because this terminal is for CAN, good/no good judgment by terminal voltage is not possible.			• Related wiring harness
1B*1	CAN_2L	CAN system related modules	Because this terminal is for CAN, good/no good judgment by terminal voltage is not possible.			• Related wiring harness
1C	—	—	—		—	—
1D	Knocking (–)	KS	Switch the ignition ON (Use digital type voltmeter, because measurement voltage will be detected less than true voltage when using analog type voltmeter)		Approx. 1.65	• KS • Related wiring harness
1E	—	—	—		—	—
1F	—	—	—		—	—
1G*5	Neutral switch No.2	Neutral switch No.2	Switch the ignition ON (engine off)	Neutral	Below 1.0	• Neutral switch No.2 • Related wiring harness
				Except above	B+	
1H	Knocking (+)	KS	Switch the ignition ON (Use digital type voltmeter, because measurement voltage will be detected less than true voltage when using analog type voltmeter)		Approx. 3.38	• KS • Related wiring harness
1I	GND	Sensor shield	Under any condition		Below 1.0	• Related wiring harness
1J	Electric variable valve timing motor (rotation direction)	Electric variable valve timing motor/driver	(See 01-40-26 Electric variable valve timing motor (rotation direction) signal.)			• Electric variable valve timing motor/driver • Related wiring harness

CONTROL SYSTEM [SKYACTIV-G 2.0]

Terminal	Signal	Connected to	Test condition	Voltage (V)	inspection item
1K*2	Neutral position	Neutral switch	Shift lever is at neutral position	Below 1.0	• Neutral switch • Related wiring harness
			Shift lever is not at neutral position	B+	
1L*2	Back up light	Back up light switch	Shift lever is at R position	Below 1.0	• Back up light switch • Related wiring harness
			Shift lever is not at R position	B+	
1M	—	—	—	—	—
1N	—	—	—	—	—
1O	Electric variable valve timing motor (rotation pulse)	Electric variable valve timing motor/driver	(See 01-40-26 Electric variable valve timing motor (rotation pulse) signal.)		• Electric variable valve timing motor/driver • Related wiring harness
1P	Oil pressure	Oil pressure switch	Switch the ignition ON (engine off)	Below 1.0	• Oil pressure switch • Related wiring harness
			Idle (after warm up)	B+	
1Q	—	—	—	—	—
1R	—	—	—	—	—
1S	—	—	—	—	—

CONTROL SYSTEM [SKYACTIV-G 2.0]

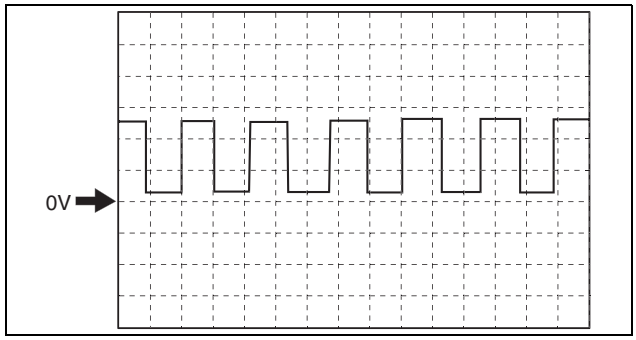
Inspection Using An Oscilloscope (Reference)
Electric variable valve timing motor (rotation direction) signal
PCM terminals
- 1J(+)—body ground(–)

Oscilloscope setting
- 2 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition
- Idle (after warm up)

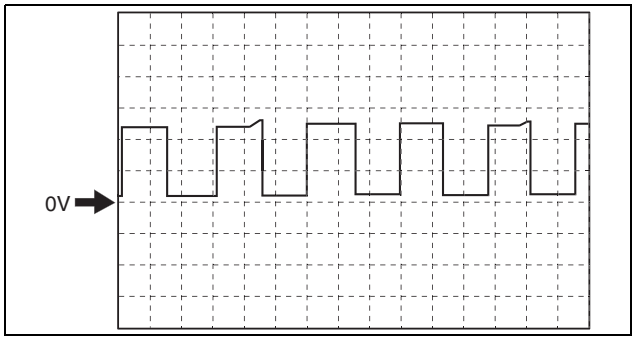


adejjw00007909

Electric variable valve timing motor (rotation pulse) signal
PCM terminals
- 1O(+)—body ground(–)

Oscilloscope setting
- 2 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition
- Idle (after warm up)

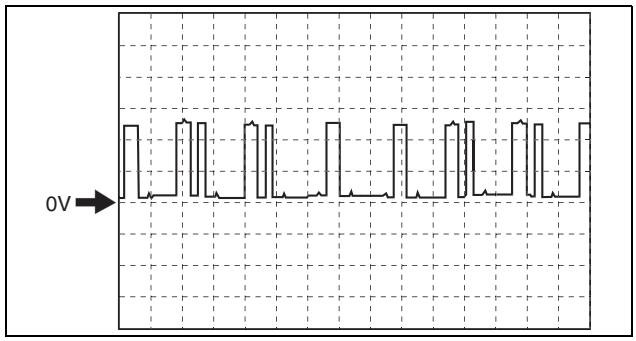


adejjw00007910

Exhaust CMP signal
PCM terminals
- 1T(+)—body ground(–)

Oscilloscope setting
- 2 V/DIV (Y), 20 ms/DIV (X), DC range

Vehicle condition
- Idle (after warm up)

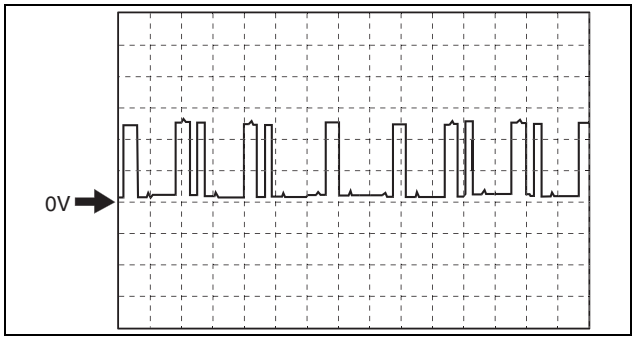


adejjw00007911

Intake CMP signal
PCM terminals
- 1Y(+)—body ground(–)

Oscilloscope setting
- 2 V/DIV (Y), 20 ms/DIV (X), DC range

Vehicle condition
- Idle (after warm up)



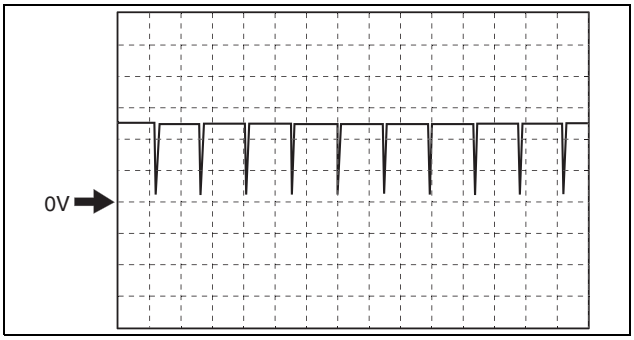
adejjw00007911

CONTROL SYSTEM [SKYACTIV-G 2.0]

CKP signal
PCM terminals
- 1AD(+)—body ground(–)

Oscilloscope setting
- 2 V/DIV (Y), 1 ms/DIV (X), DC range

Vehicle condition
- Idle (after warm up)

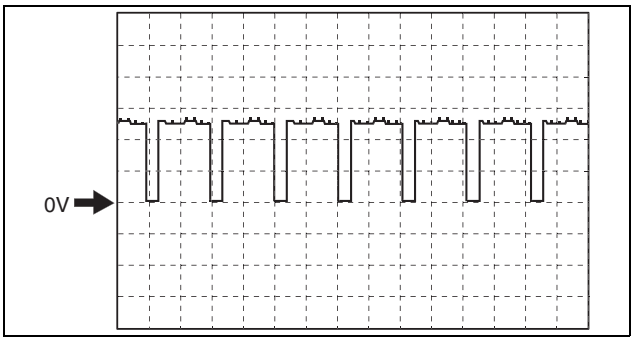


adejjw00007912

Electric variable valve timing driver (diagnostic) signal
PCM terminals
- 1AE(+)—body ground(–)

Oscilloscope setting
- 2 V/DIV (Y), 100 ms/DIV (X), DC range

Vehicle condition
- Idle (after warm up)

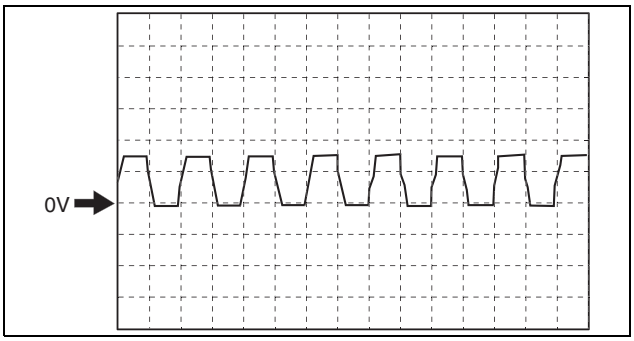


adejjw00007913

Generator output voltage
PCM terminals
- 1AF(+)—body ground(–)

Oscilloscope setting
- 5 V/DIV (Y), 2 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up

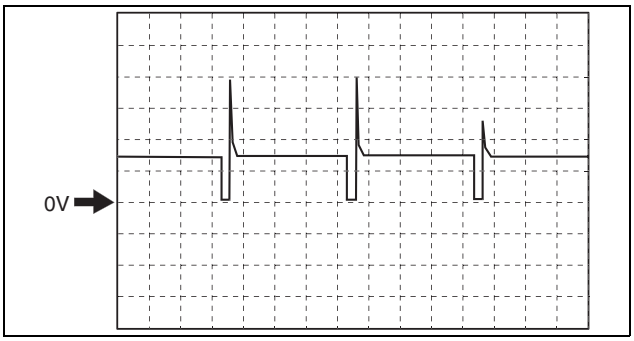


adejjw00007914

Purge control
PCM terminals
- 1AI(+)—body ground(–)

Oscilloscope setting
- 10 V/DIV (Y), 50 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up



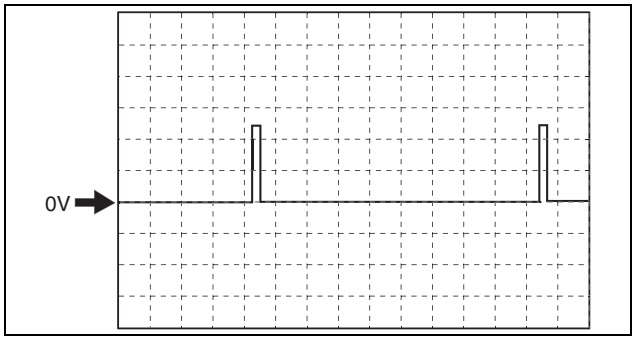
adejjw00007915

CONTROL SYSTEM [SKYACTIV-G 2.0]

IGT1, IGT2, IGT3, IGT4 control
PCM terminals
- IGT1(ignition coil No.1): 1AY(+)—body ground(–)
- IGT2(ignition coil No.2): 1AT(+)—body ground(–)
- IGT3(ignition coil No.3): 1AO(+)—body ground(–)
- IGT4(ignition coil No.4): 1AJ(+)—body ground(–)

Oscilloscope setting
- 2 V/DIV (Y), 20 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up

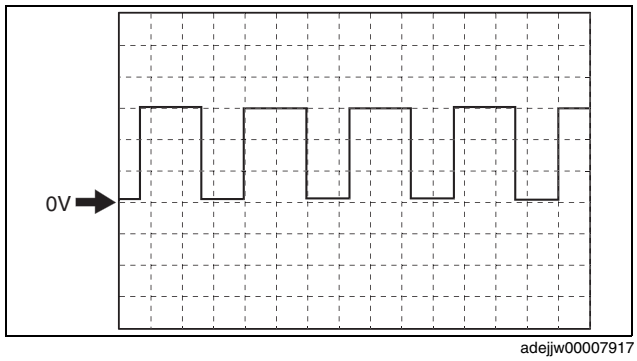


adejjw00007916

Hydraulic variable valve timing control signal
PCM terminals
- 1AN(+)—body ground(–)

Oscilloscope setting
- 5 V/DIV (Y), 1 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up

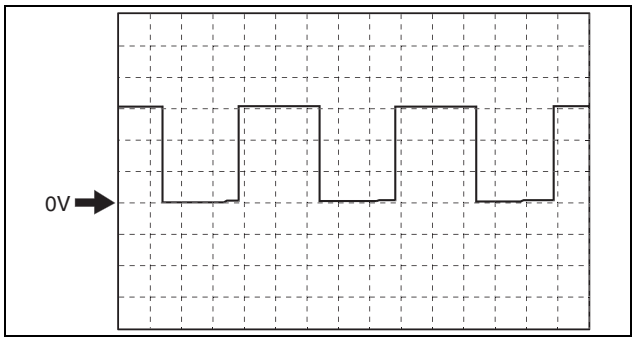


adejjw00007917

Engine oil control signal
PCM terminals
- 1AS(+)—body ground(–)

Oscilloscope setting
- 5 V/DIV (Y), 1 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up

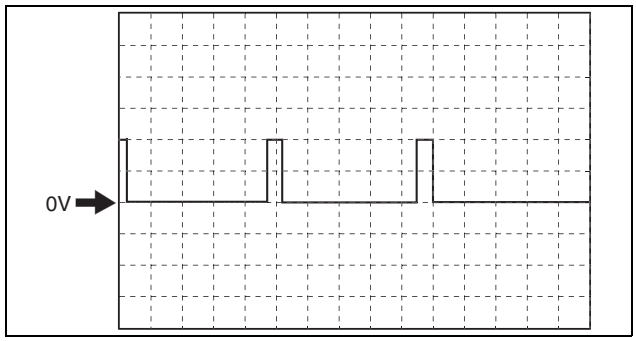


adejjw00007918

Electric variable valve timing control signal
PCM terminals
- 1AZ(+)—body ground(–)

Oscilloscope setting
- 2 V/DIV (Y), 2 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up



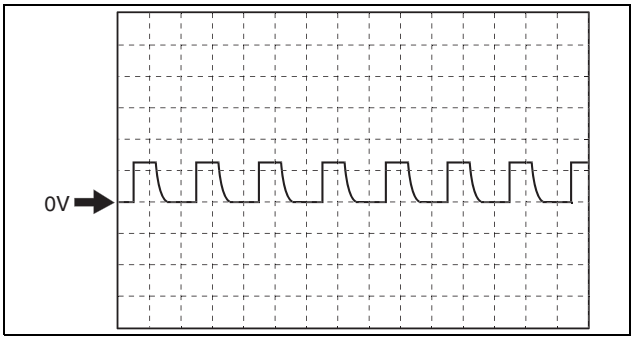
adejjw00007919

CONTROL SYSTEM [SKYACTIV-G 2.0]

Generator field coil control signal
PCM terminals
- 1BE(+)—body ground(–)

Oscilloscope setting
- 1 V/DIV (Y), 2 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up

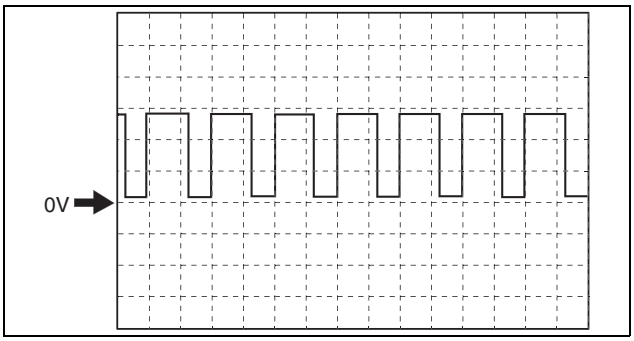


adejjw00007920

A/F sensor heater control signal
PCM terminals
- 1BY(+)—body ground(–)

Oscilloscope setting
- 5 V/DIV (Y), 50 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up

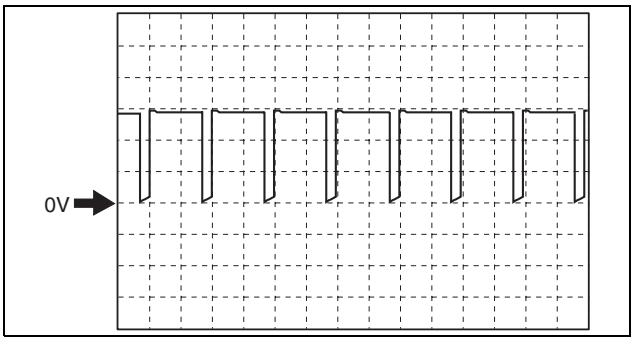


adejjw00007921

Drive-by-wire control (+) signal
PCM terminals
- 1CG(+)—body ground(–)

Oscilloscope setting
- 5 V/DIV (Y), 1 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up

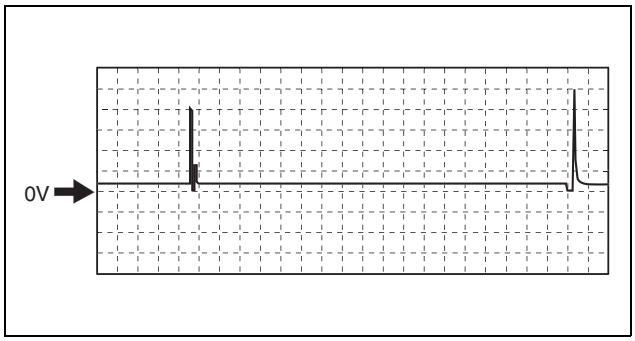


am3zzw0001279

Fuel injection control (-) signal
PCM terminals
- Fuel Injection No.1: 1DO(+)—body ground(–)
- Fuel Injection No.2: 1DW(+)—body ground(–)
- Fuel Injection No.3: 1EA(+)—body ground(–)
- Fuel Injection No.4: 1DS(+)—body ground(–)

Oscilloscope setting
- 10 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up



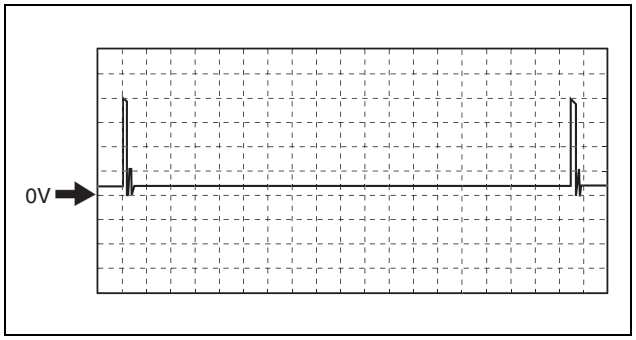
adejjw00007923

CONTROL SYSTEM [SKYACTIV-G 2.0]

Fuel injection control (+) signal
PCM terminals
- Fuel Injection No.1: 1DP(+)—body ground(–)
- Fuel Injection No.2: 1DX(+)—body ground(–)
- Fuel Injection No.3: 1EB(+)—body ground(–)
- Fuel Injection No.4: 1DT(+)—body ground(–)

Oscilloscope setting
- 10 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up

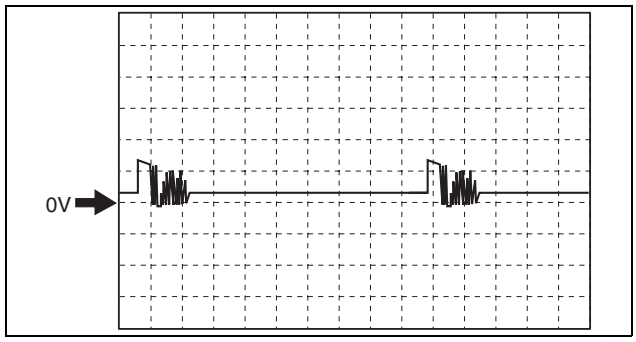


adejjw00007924

High pressure fuel pump control (+) signal
PCM terminals
- 1EE(+)—body ground(–)

Oscilloscope setting
- 10 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up

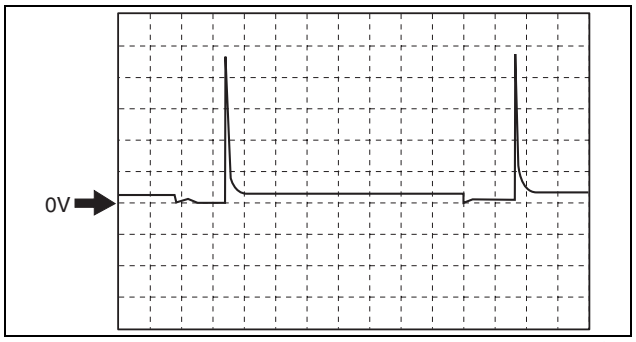


am3zzw0001279

High pressure fuel pump control (-) signal
PCM terminals
- 1EF(+)—body ground(–)

Oscilloscope setting
- 10 V/DIV (Y), 5 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up

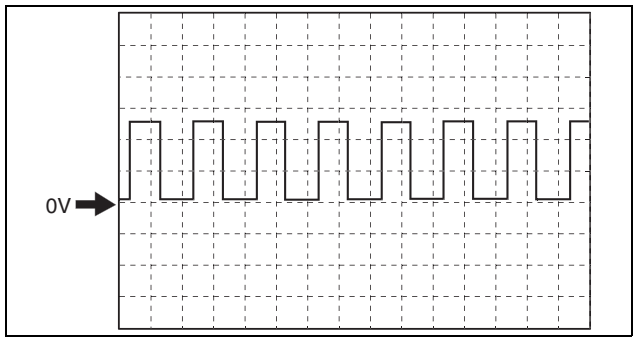


am3zzw0001279

HO2S heater control signal
PCM terminals
- 2C(+)—body ground(–)

Oscilloscope setting
- 5 V/DIV (Y), 50 ms/DIV (X), DC range

Vehicle condition
- Idle (immediately after starting the engine)



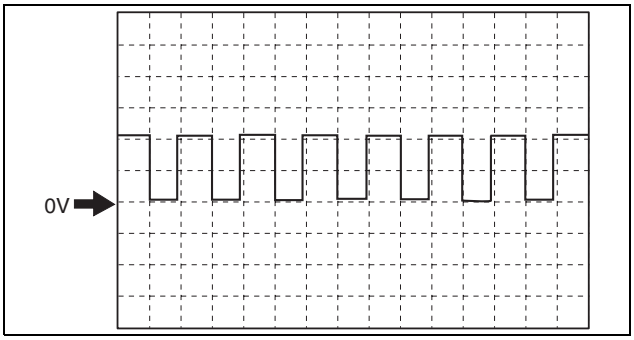
adejjw00007927

CONTROL SYSTEM [SKYACTIV-G 2.0]

Fuel pump control signal
PCM terminals
- 2AE(+)—body ground(–)

Oscilloscope setting
- 5 V/DIV (Y), 2 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up

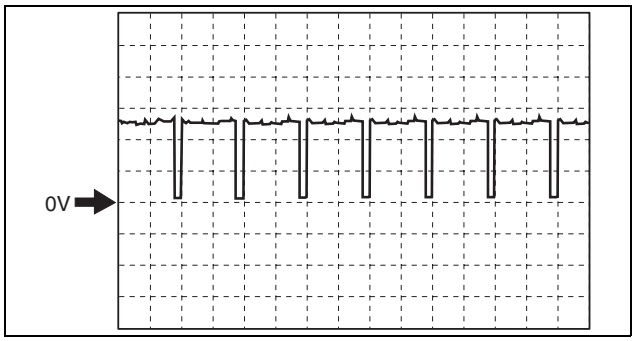


am3zzw0001279

Fuel pump control module (diagnostic) signal
PCM terminals
- 2AM(+)—body ground(–)

Oscilloscope setting
- 2 V/DIV (Y), 50 ms/DIV (X), DC range

Vehicle condition
- Idle after warm up

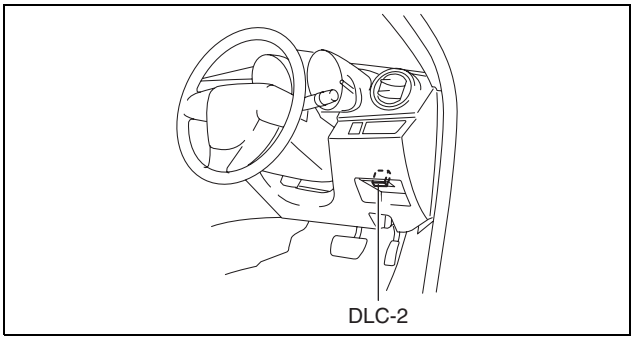


am3zzw0001280

Using The M-MDS

Note
- PIDs for the following parts are not available on this model. Go to the appropriate part inspection page.
  - — Intake CMP sensor and Exhaust CMP sensor (See 01-40-62 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [SKYACTIV-G 2.0].)
  - — Main relay (See 09-21-29 RELAY INSPECTION.)

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off).
3. Measure the PID value.
   - If PID value is not within the specification, follow the instructions in Action column.



am3zzw0001267

Note
- The PID/DATA MONITOR function monitors the calculated value of the input/output signals in the PCM. Therefore, an output device malfunction is not directly indicated as a malfunction of the monitored value for the output device. If a monitored value of an output device is out of specification, inspect the monitored value of the input device related to the output control.
- The simulation items that are used in the ENGINE CONTROL SYSTEM OPERATION INSPECTION are as follows.
  - — ACCS, ALTF, ARPMDES, EVAPCP, FAN1, FAN2, FAN3, FP, INJ_1, INJ_2, INJ_3, INJ_4, OIL_P_SOL, Test, VT EX_DES

CONTROL SYSTEM [SKYACTIV-G 2.0]

Item (definition)	Unit/Condition	Condition/Specification (Reference)	Inspection item(s)
AAT*4 (Ambient air temperature)	°C, °F	• Displays the ambient air temperature	• IAT sensor No.1
ACCS*4 (A/C relay)	OFF/ON	• A/C relay is OFF: Off • A/C relay is ON: On	• A/C relay • The following PIDs — AC_PRES, APP1, APP2, TP1, TP2, ECT, RPM
AC_PRES*4 (Refrigerant pressure)	kPa, Bar, psi	• Displays the refrigerant pressure	• Refrigerant pressure sensor
	V	• Refrigerant pressure is 1.0 MPa {10 kgf/cm^2, 145 psi}: Approx. 1.58 V • Refrigerant pressure is 1.1 MPa {11 kgf/cm^2, 160 psi}: Approx. 1.75 V • Refrigerant pressure is 1.2 MPa {12 kgf/cm^2, 174 psi}: Approx. 1.88 V	
AC_REQ*4 (A/C request signal)	OFF/ON	• A/C switch OFF: Off • A/C switch ON: On	• A/C switch
ALTF (Generator field coil control duty value)	%	• Switch the ignition ON (engine off): 0% • Idle: Approx. 42% • Racing (Engine speed is 2,000 rpm): Approx. 29%	• Generator • The following PIDs — IAT, ECT, RPM, VPWR
ALTT V (Generator output voltage)	V	• Idle (no E/L): Approx. 14 V (This is an internal calculation value and differs from the terminal voltage.)	• Generator
AMB_TEMP*4 (Ambient air temperature)	°C, °F	• Displays the ambient air temperature	• Ambient temperature sensor
APP (Accelerator pedal position)	%	• Accelerator pedal released: Approx. 0% • Accelerator pedal depressed: Approx. 100%	• The following PIDs — APP1, APP2
APP1 (APP sensor No.1)	%	• Accelerator pedal released: Approx. 15% • Accelerator pedal depressed: Approx. 82%	• APP sensor No.1
	V	• Accelerator pedal released: Approx. 0.75 V • Accelerator pedal depressed: Approx. 4.1 V	
APP2 (APP sensor No.2)	%	• Accelerator pedal released: Approx. 7.45% • Accelerator pedal depressed: Approx. 41%	• APP sensor No.2
	V	• Accelerator pedal released: Approx. 0.38 V • Accelerator pedal depressed: Approx. 2.05 V	
ARPMDES (Target engine speed)	RPM	• Displays the target engine speed	• The following PIDs — APP1, APP2, TP1, TP2, MAF, IAT, IAT2, MAP, RPM, ECT, FUEL_PRES, BARO, BOO, BPA, ALTT V, AC_REQ
BARO (Barometric pressure)	kPa, Bar, psi	• Displays the BARO	• BARO sensor
	V	• Switch the ignition ON (at sea level): Approx. 4.08 V	
BATT_CUR (Current sensor)	A	• Displays the battery charge/discharge current value	• Current sensor
BATT_DAY (Vehicle battery - days in service)	—	• Displays the vehicle battery days in service	• Current sensor
BATT_RES (Battery inferred internal resistance)	—	• Displays the battery inferred internal resistance	• Current sensor
BATT_SOC (Battery estimated state of charge)	%	• Displays the battery estimated state of charge	• Current sensor

CONTROL SYSTEM [SKYACTIV-G 2.0]

Item (definition)	Unit/Condition	Condition/Specification (Reference)	Inspection item(s)
BATT_TEMP (Battery fluid temperature sensor)	°C, °F	• Displays the battery fluid temperature	• Current sensor
BATT_V (Battery voltage)	V	• Displays the battery voltage	• Battery
BBP*3 (Power brake unit vacuum sensor)	kPa, psi, Bar	• Displays the power brake unit vacuum	• Power brake unit vacuum sensor
	V	• Power brake unit vacuum is 7.54 kPa {0.0769 kgf/cm^2, 1.09 psi}: approx. 0.29 V • Power brake unit vacuum is 96.7 kPa {0.986 kgf/cm^2, 14.0 psi}: approx. 3.81 V	
BFP (Brake fluid pressure)	kPa, psi, Bar	• Displays the brake fluid pressure	• DSC HU/CM
BOO (Brake switch)	OFF/ON	• Brake pedal released: Off • Brake pedal depressed: On	• Brake switch (No.1 signal)
BPA (Brake pressure applied switch)	OFF/ON	• Brake pedal released: Off • Brake pedal depressed: On	• Brake switch (No.2 signal)
CATT11_DSD (Estimated catalytic converter temperature)	°C, °F	• Displays the estimated catalytic converter temperature	• Perform applicable DTC troubleshooting.
CHRGLP (Charging system warning light)	OFF/ON	• Charging system warning light not illuminates: Off • Charging system warning light illuminates: On	• Charging system warning light • Perform applicable DTC troubleshooting.
COLP (Refrigerant pressure (middle))	OFF/ON	• Refrigerant pressure is less than the specification.: Off • Refrigerant pressure is more than the specification.: On	• Refrigerant pressure sensor
CLU_CUT_SW*1 (Starter interlock)	OFF/ON	• Starter interlock switch ON: On • Starter interlock switch OFF: Off	• Starter interlock switch
CPP*1 (Clutch pedal position)	OFF/ON	• Clutch pedal depressed: On • Clutch pedal released: Off	• CPP switch
CPP/PNP*1 (Shift lever position)	OFF/ON	• Neutral: On • Other than neutral: Off	• Neutral switch No.1
ECT (Engine coolant temperature)	°C, °F	• Displays the ECT	• ECT sensor
	V	• ECT is 20 °C {68 °F}: Approx. 3.10 V • ECT is 40 °C {104 °F}: Approx. 2.16 V • ECT is 60 °C {140 °F}: Approx. 1.40 V • ECT is 80 °C {176 °F}: Approx. 0.87 V • ECT is 100 °C {212 °F}: Approx. 0.54 V	
EQ_RAT11 (Equivalence ratio (lambda))	—	• idle (after warm up): Approx. 1	• A/F sensor
EQ_RAT11_DSD (Desired equivalence ratio (lambda))	—	• Indicate the target lambda (Excess air factor = supplied air amount / theoretical air/ fuel ratio)	• A/F sensor
ETC_ACT (Electric throttle control actual)	°	**Switch the ignition ON (engine off)** • Accelerator pedal released: Approx. 12.89 ° • Accelerator pedal depressed: Approx. 86.03 ° **Idle (after warm up)** • Accelerator pedal released: Approx. 3.2 °	• Throttle valve actuator • The following PIDs — APP1, APP2, TP1, TP2, MAF, IAT, IAT2, MAP, RPM, ECT, FUEL_PRES, BARO, BOO, BPA, ALTT V, AC_REQ

CONTROL SYSTEM [SKYACTIV-G 2.0]

Item (definition)	Unit/Condition	Condition/Specification (Reference)	Inspection item(s)
ETC_DSD (Electric throttle control desired)	%	• Displays the target TP angle (percent)	• Throttle valve actuator • The following PIDs — APP1, APP2, TP1, TP2, MAF, IAT, IAT2, MAP, RPM, ECT, FUEL_PRES, BARO, BOO, BPA, ALTT V, AC_REQ
	°	• Displays the target TP angle	
EVAPCP (Purge solenoid valve duty value)	%	• idle (after warm up): Approx. 0% • Racing (Engine speed 2,000 rpm): 4.3—35% • Racing (Engine speed 4,000 rpm): Approx. 66%	• Purge solenoid valve • The following PIDs — APP1, APP2, MAF, IAT, IAT2, MAP, RPM, ECT, BARO, O2S11, VPWR
FAN1(Cooling fan relay No.1)	OFF/ON	• Cooling fan relay No.1 not operating: OFF • Cooling fan relay No.1 operating: ON	• Cooling fan relay No.1 • The following PIDs — APP1, APP2, MAF, IAT, IAT2, RPM, ECT, BARO, Test, AC_PRES, COLP
FAN2(Cooling fan relay No.2)	OFF/ON	• Cooling fan relay No.2 not operating: OFF • Cooling fan relay No.2 operating: ON	• Cooling fan relay No.2 • The following PIDs — APP1, APP2, MAF, IAT, IAT2, RPM, ECT, BARO, Test, AC_PRES, COLP
FAN3(Cooling fan relay No.3)	OFF/ON	• Cooling fan relay No.3 not operating: OFF • Cooling fan relay No.3 operating: ON	• Cooling fan relay No.3 • The following PIDs — APP1, APP2, MAF, IAT, IAT2, RPM, ECT, BARO, Test, AC_PRES, COLP
FIA (Fuel injection amount)	%	• Displays the fuel injection amount	• Fuel injector • Fuel injector relay
FLI (Fuel level)	%	• Fuel gauge level F: Approx. 100% • Fuel gauge level E: Approx. 0%	• Fuel gauge sender unit • Perform applicable DTC troubleshooting.
FP (Fuel pump relay)	OFF/ON	• Switch the ignition ON (engine off): Off • Cranking: On • idle (after warm up): On	• Fuel pump relay • The following PIDs — FUEL_PRES, RPM, VPWR
FP_DUTY (Fuel pump control module)	%	• Switch the ignition ON (engine off): Approx. 55.74% • Cranking: Approx. 95% • Idle (after warm up): Approx. 55.74%	• Fuel pump control module • The following PIDs — FUEL_PRES, RPM, VPWR
FP_Hi_PRES (High pressure fuel pump)	OFF/ON	• When spill valve control solenoid valve is not energization: Off • When spill valve control solenoid valve is energization: On	• High pressure fuel pump • The following PIDs — MAF, ECT, FUEL_PRES, RPM, VPWR
FUELPW (Fuel injector duration)	sec	• idle (after warm up): Approx. 1.4 ms • Racing (engine speed is 2,000 rpm): Approx. 1.1 ms • Racing (engine speed is 4,000 rpm): Approx. 1.0 ms	• Fuel injector • The following PIDs — APP1, APP2, TP1, TP2, MAF, IAT, IAT2, MAP, RPM, ECT, FUEL_PRES, BARO, O2S11, O2S12
FUELSYS (Fuel system status)	OL/CL/ OL_Drive/ OL_Fault/ CL_Fault	• idle (after warm up): OL or CL • Racing (engine speed is 2,000 rpm): CL • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): OL-Drive	• Fuel injector • The following PIDs — APP1, APP2, TP1, TP2, MAF, IAT, IAT2, MAP, RPM, ECT, FUEL_PRES, BARO, O2S11, O2S12
FUEL_PRES (Fuel pressure sensor)	kPa, Bar, psi	• Displays the fuel pressure	• Fuel pressure sensor
	V	• Fuel pressure is 3.0 MPa {31 kgf/cm^2, 435 psi}: Approx. 0.92 V • Fuel pressure is 4.8 MPa {49 kgf/cm^2, 696 psi}: Approx. 1.17 V	
FUEL_P_DSD (Fuel pressure desired)	kPa, Bar, psi	• Displays the target fuel pressure.	• Fuel pressure sensor

CONTROL SYSTEM [SKYACTIV-G 2.0]

Item (definition)	Unit/Condition	Condition/Specification (Reference)	Inspection item(s)
GEAR*2 (Gear commanded)	1st, 2nd, 3rd, 4th, 5th, 6th, 7th, Park, Neutral, Drive, Reverse	• Selector lever at P position: Park • Selector lever at R position: Reverse • Selector lever at N position: Neutral • Selector lever in 1GR at D position: 1st	• Shift solenoid No.1 • Shift solenoid No.2 • Shift solenoid No.3 • Shift solenoid No.4 • Transaxle range sensor
HTR11 (A/F sensor heater)	OFF/ON	• Switch the ignition ON (engine off): Off • Idle (after warm up): On	• A/F sensor heater • Inspect following PIDs — MAF, ECT, RPM
	%	• Switch the ignition ON (engine off): 0% • Idle (after warm up): Approx. 42%	
HTR12 (HO2S heater control)	OFF/ON	• Switch the ignition ON (engine off): Off • Idle (after warm up): On	• HO2S heater • The following PIDs — MAF, ECT, RPM
	%	• Switch the ignition ON (engine off): 0% • Idle (after warm up): Approx. 40%	
IAT (Intake air temperature No.1)	°C, °F	• Displays the IAT (No.1)	• IAT sensor No.1
	V	• IAT is 20 °C {68 °F}: Approx. 2.70 V • IAT is 40 °C {104 °F}: Approx. 1.80 V • IAT is 60 °C {140 °F}: Approx. 1.20 V	
IAT2 (Intake air temperature No.2)	°C, °F	• Displays the IAT (No.2)	• IAT sensor No.2
	V	• IAT2 is 20 °C {68 °F}: Approx. 3.57 V • IAT2 is 40 °C {104 °F}: Approx. 2.70 V • IAT2 is 60 °C {140 °F}: Approx. 1.87 V	
ISC_FBK (ISC feedback value)	%	• Displays the ISC feedback value	• PCM
ISC_FBK_LRN (ISC feedback learning value)	%	• Displays the ISC feedback learning value	• PCM
I-Stop_OFF*3 (i-stop OFF switch)	OFF/ON	• i-stop OFF switch OFF: OFF • i-stop OFF switch ON: ON	• i-stop OFF switch
I-Stop_TRD*3 (i-stop transmission D position selected status)	OFF/ON	• D range:On • Except above: Off	• i-stop related system
I-Stop_VSP*3 (i-stop vehicle speed history flag)	OFF/ON	• Vehicle speed in which engine stop condition is met via i-stop control is detected: On • Except above: Off	• i-stop related system
I-Stop_VST*3 (i-stop vehicle stop flag)	OFF/ON	• Vehicle stop predicted: On • Except above: Off	• i-stop related system
IVS (CTP condition)	Idle/Off Idle	• Idle: Idle • Racing: Off Idle	• Perform applicable DTC troubleshooting.
KNOCKR (Knocking retard)	°	• Switch the ignition ON (engine off): 0 ° • idle (after warm up): 0 °	• KS
LOAD (Engine load)	%	• idle (after warm up): Approx. 17.64% • Racing (engine speed is 2,000 rpm): Approx. 14.51% • Racing (engine speed is 4,000 rpm): Approx. 21.17%	• The following PIDs — MAP, IAT, IAT2, MAF, RPM
LONGFT1 (Long term fuel trim)	%	• idle (after warm up): Approx. -2.34% • Racing (engine speed is 2,000 rpm): Approx. -0.78% • Racing (engine speed is 4,000 rpm): Approx. -0.78%	• The following PIDs — APP1, APP2, TP1, TP2, MAF, IAT, IAT2, MAP, RPM, ECT, FUEL_PRES, BARO, O2S11, O2S12
LONGFT12 (Long term fuel trim (HO2S))	%	• idle (after warm up): Approx. 0%	• The following PIDs — APP1, APP2, TP1, TP2, MAF, IAT, IAT2, MAP, RPM, ECT, FUEL_PRES, BARO, O2S11, O2S12
LOW_OIL (Engine Oil Level Status)	NO/YES	• Switch the ignition ON (engine off): YES • idle (after warm up): YES • Racing (engine speed is 2,000 rpm): NO	• Oil pressure switch

CONTROL SYSTEM [SKYACTIV-G 2.0]

Item (definition)	Unit/Condition	Condition/Specification (Reference)	Inspection item(s)
MAF (Mass airflow)	g/sec	• Displays the MAF	• MAF sensor
	V	• Switch the ignition ON (engine off) (MAF: 0.59 g/s {0.078 lb/min}): Approx. 0.72 V • Idle (after warm up) (MAF: 2.17 g/s {0.287 lb/min}): Approx. 0.86 V • Racing (engine speed is 2,000 rpm) (MAF: 4.73 g/s {0.626 lb/min}): Approx. 1.07 V	
MAP (Manifold absolute pressure)	kPa, Bar, psi	• Displays the MAP	• MAP sensor
	V	• Switch the ignition ON (engine off) (MAP:101 kPa {1.03 kgf/cm^2, 14.6 psi}): Approx. 4.07 V • Idle (after warm up) (MAP: 33 kPa {0.34 kgf/cm^2, 4.8 psi}): Approx. 1.34 V • Racing (engine speed is 2,000 rpm) (MAP: 26 kPa {0.27 kgf/cm^2, 3.8 psi}): Approx. 1.05 V	
MF_CAT1 (Number of misfires corresponding to possible catalytic converter damage (No.1 cylinder))	—	• Displays the number of misfires corresponding to possible catalytic converter damage (No.1 cylinder).	• Perform applicable DTC troubleshooting.
MF_CAT_2 (Number of misfires corresponding to possible catalytic converter damage (No.2 cylinder))	—	• Displays the number of misfires corresponding to possible catalytic converter damage (No.2 cylinder).	• Perform applicable DTC troubleshooting.
MF_CAT_3 (Number of misfires corresponding to possible catalytic converter damage (No.3 cylinder))	—	• Displays the number of misfires corresponding to possible catalytic converter damage (No.3 cylinder).	• Perform applicable DTC troubleshooting.
MF_CAT_4 (Number of misfires corresponding to possible catalytic converter damage (No.4 cylinder))	—	• Displays the number of misfires corresponding to possible catalytic converter damage (No.4 cylinder).	• Perform applicable DTC troubleshooting.
MF_CAT_FCC (Number of misfire determinations (for catalytic converter))	—	• Displays the number of misfire determinations (for catalytic converter).	• Perform applicable DTC troubleshooting.
MF_CAT_TTL (Number of misfires corresponding to possible catalytic converter damage (total))	—	• Displays the number of misfires corresponding to possible catalytic converter damage (total).	• Perform applicable DTC troubleshooting.
MF_EMI1 (Number of misfires possibly affecting emission (No.1 cylinder))	—	• Displays the number of misfires possibly affecting emission (No.1 cylinder).	• Perform applicable DTC troubleshooting.
MF_EMI_2 (Number of misfires possibly affecting emission (No.2 cylinder))	—	• Displays the number of misfires possibly affecting emission (No.2 cylinder).	• Perform applicable DTC troubleshooting.

CONTROL SYSTEM [SKYACTIV-G 2.0]

Item (definition)	Unit/Condition	Condition/Specification (Reference)	Inspection item(s)
MF_EMI_3 (Number of misfires possibly affecting emission (No.3 cylinder))	—	• Displays the number of misfires possibly affecting emission (No.3 cylinder).	• Perform applicable DTC troubleshooting.
MF_EMI_4 (Number of misfires possibly affecting emission (No.4 cylinder))	—	• Displays the number of misfires possibly affecting emission (No.4 cylinder).	• Perform applicable DTC troubleshooting.
MF_EMI_FCC (Number of misfire determinations (for emission))	—	• Displays the number of misfire determinations (for emission).	• Perform applicable DTC troubleshooting.
MF_EMI_TTL (Number of misfires possibly affecting emission (total))	—	• Displays the number of misfires possibly affecting emission (total).	• Perform applicable DTC troubleshooting.
M_GEAR*1 (Manual Gear Position)	OFF/ON	• Displays the manual gear position	• CPP switch • Neutral switch No.1
MIL (Malfunction indicator lamp)	OFF/ON	• MIL not illuminate: Off • MIL illuminate: ON	• MIL • Perform applicable DTC troubleshooting.
MIL_DIS (Travelled distance since the MIL illuminated)	km, ft, mi	• Displays the travelled distance since the MIL illuminated	• Perform applicable DTC troubleshooting.
NEUTRAL_SW1*1 (Neutral switch No.1)	OFF/ON	• Neutral: On • Other than neutral: Off	• Neutral switch No.1
NEUTRAL_SW2*5 (Neutral switch No.2)	OFF/ON	• Neutral: On • Other than neutral: Off	• Neutral switch No.2
O2S11 (A/F sensor)	A	• Idle (after warm up): Approx. -39 μA • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.84 mA	• A/F sensor
O2S12 (HO2S)	V	• Idle (after warm up): 0—1.0 V • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 0 V	• HO2S
OIL_P_SOL (Engine oil solenoid valve)	OFF/ON	• ECT below 98 °C {208 °F} and engine speed below 4,000 rpm: On • ECT above 98 °C {208 °F} or engine speed above 4,000 rpm: Off	• Engine oil solenoid valve • The following PIDs — MAF, MAP, RPM, ECT
OIL_TEMP (Estimated engine oil temperature)	°C, °F	• Displays the estimated engine oil temperature	• The following PIDs — ECT
PN_SW (Parking/neutral)	Open/Closed	• Selector lever at P position or N position: Closed • Except above: Open	• Transaxle range sensor
RO2FT1 (HO2S fuel trim)	%	• Idle (after warm up): Approx. 0.5% • Deceleration fuel cut (accelerator pedal released from engine speed of 4,000 rpm or more): Approx. 3.99%	• Perform applicable DTC troubleshooting.
RPM (Engine speed)	RPM	• Displays the engine speed	• CKP sensor
SHRTFT1 (Short term fuel trim)	%	• idle (after warm up): Approx. 1.56% • Racing (engine speed is 2,000 rpm): Approx. -3.12% • Racing (engine speed is 4,000 rpm): Approx. -8.59%	• Perform applicable DTC troubleshooting.

CONTROL SYSTEM [SKYACTIV-G 2.0]

Item (definition)	Unit/Condition	Condition/Specification (Reference)	Inspection item(s)
SHRTFT12 (Short term fuel trim (HO2S))	%	• idle (after warm up): Approx. 0%	• Perform applicable DTC troubleshooting.
SPARKADV (Ignition timing)	°	• Displays the ignition timing	• Ignition coil • The following PIDs — APP1, APP2, TP1, TP2, MAF, IAT, IAT2, ECT, RPM, KNOCKR, VPWR, ALTT V
Test (Test mode)	OFF/ON	• Test mode OFF: Off • Test mode ON: On	—
TP REL (Relative throttle position)	%	• Accelerator pedal released: Approx. 12% • Accelerator pedal depressed: Approx. 82%	• The following PIDs — TP1, TP2
TP1 (TP sensor No.1)	V	• Accelerator pedal released: Approx. 1.11 V • Accelerator pedal depressed: Approx. 4.59 V	• TP sensor No.1
	%	• Accelerator pedal released: Approx. 22% • Accelerator pedal depressed: Approx. 92%	
TP2 (TP sensor No.2)	V	• Accelerator pedal released: Approx. 3.92 V • Accelerator pedal depressed: Approx. 0.41 V	• TP sensor No.2
	%	• Accelerator pedal released: Approx. 22% • Accelerator pedal depressed: Approx. 82%	
TPCT (TP sensor No.1 voltage at CTP)	V	• Switch the ignition ON: Approx. 0.5 V	• TP sensor No.1
TPCT2 (TP sensor No.2 voltage at CTP)	V	• Switch the ignition ON: Approx. 4.5 V	• TP sensor No.2
VPWR (Battery positive voltage)	V	• Displays the battery voltage	• Battery
VSS (Vehicle speed)	KPH, MPH	• Displays the vehicle speed	• DSC HU/CM
VT_EX_ACT (Actual exhaust valve timing)	°	• Displays the actual exhaust valve timing	• OCV • The following PIDs — APP1, APP2, MAF, RPM, ECT, VPWR
VT_EX_DES (Desired exhaust valve timing)	°	• Displays the desired exhaust valve timing	• OCV • The following PIDs — APP1, APP2, MAF, RPM, ECT, VPWR
VT_EX_DUTY (OCV control)	%	• idle (after warm up): Approx. 0% • Racing (engine speed is 2,000 rpm): Approx. 46%	• OCV • The following PIDs — APP1, APP2, MAF, RPM, ECT, VPWR
VT_IN_ACT (Actual intake valve timing)	°	• Displays the actual intake valve timing	• Electric variable valve timing motor/driver • The following PIDs — MAF, IAT, IAT2, MAP, RPM, ECT, BARO
VT_IN_DES (Desired intake valve timing)	°	• Displays the desired intake valve timing	• Electric variable valve timing motor/driver • The following PIDs — MAF, IAT, IAT2, MAP, RPM, ECT, BARO

*1 : MTX
*2 : ATX
*3 : Vehicles with i-stop system
*4 : Vehicles with air conditioner
*5 : Vehicles with i-stop system (MTX)

CONTROL SYSTEM [SKYACTIV-G 2.0]

PCM CONFIGURATION (USING READ/WRITE FUNCTION) [SKYACTIV-G 2.0]

id0140f4816500

Note
- When performing configuration, it is necessary to read the vehicle specification information from the PCM before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the PCM. The vehicle specification information is temporarily stored in the M-MDS.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   1. Select “Module Programming”.
3. Then, select items from the screen menu in the following order.
   1. Select “Programmable Module Installation”.
   2. Select “PCM”.
4. Perform the configuration according to the directions on the screen.

Caution
- **When the configuration is performed, CAN communication between the PCM and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.**

5. Verify the DTCs for all of the control modules connected to the CAN line.
   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

PCM CONFIGURATION (USING AS-BUILT DATA) [SKYACTIV-G 2.0]

id0140f4816600

Note
- If the configuration is performed using As-Built data, the set value of the personalization function is reset to the initial value (condition when shipped from factory). Verify the set value with the customer and perform the personalization function setting after performing the configuration using As-Built data.

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   1. Select “Module Programming”.
3. Then, select items from the screen menu in the following order.
   1. Select “As-Built”.
   2. Select “PCM”.
4. Perform the configuration according to the directions on the screen.

Caution
- **When the configuration is performed, CAN communication between the PCM and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.**

5. Verify the DTCs for all of the control modules connected to the CAN line.
   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the configuration has been completed normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

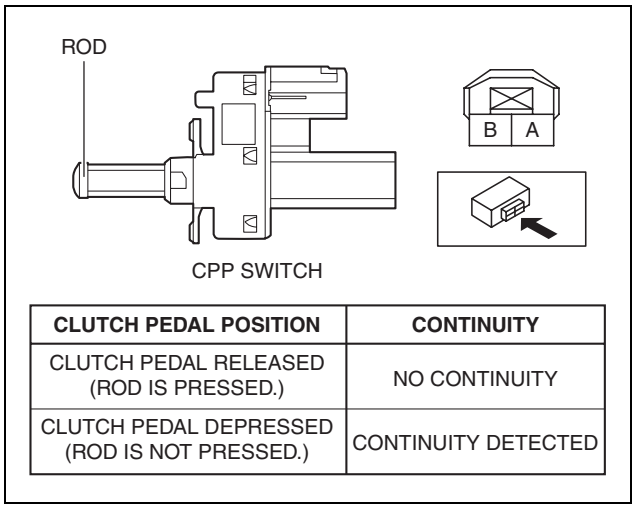
CONTROL SYSTEM [SKYACTIV-G 2.0]

CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [SKYACTIV-G 2.0]

id0140f4801600

Continuity Inspection

1. Verify that the CPP switch is installed properly. (See 05-10A-13 CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
3. Disconnect the CPP switch connector.
4. Verify that the continuity between CPP switch terminals A and B when the clutch pedal is depressed and when it is released is according to the following table:
   - If not as verified, replace the CPP switch. (See 05-10A-13 CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)



CLUTCH PEDAL POSITION	CONTINUITY
CLUTCH PEDAL RELEASED (ROD IS PRESSED.)	NO CONTINUITY
CLUTCH PEDAL DEPRESSED (ROD IS NOT PRESSED.)	CONTINUITY DETECTED

am3uuw0000874

NEUTRAL SWITCH INSPECTION [SKYACTIV-G 2.0]

id0140f4800800

Neutral switch No.1

Continuity Inspection

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the neutral switch. (See 05-15A-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
3. Inspect for continuity between neutral switch No.1 terminal A and B.
   - If not as specified, replace the neutral switch No.1. (See 05-15A-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)

Specification

Measured condition	Continuity
Rod pushed	Continuity detected
Rod not pushed	No continuity

Specification

Measured condition	Continuity
Rod pushed	Continuity detected
Rod not pushed	No continuity

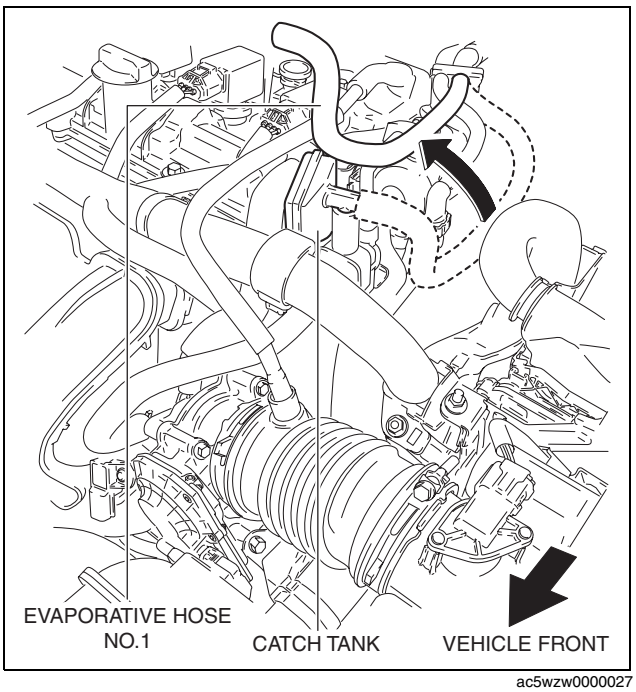
ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0140f4801900

Warning

- **When the engine is hot, it can badly burn. Turn off the engine and wait until it is cool before removing the ECT sensor.**

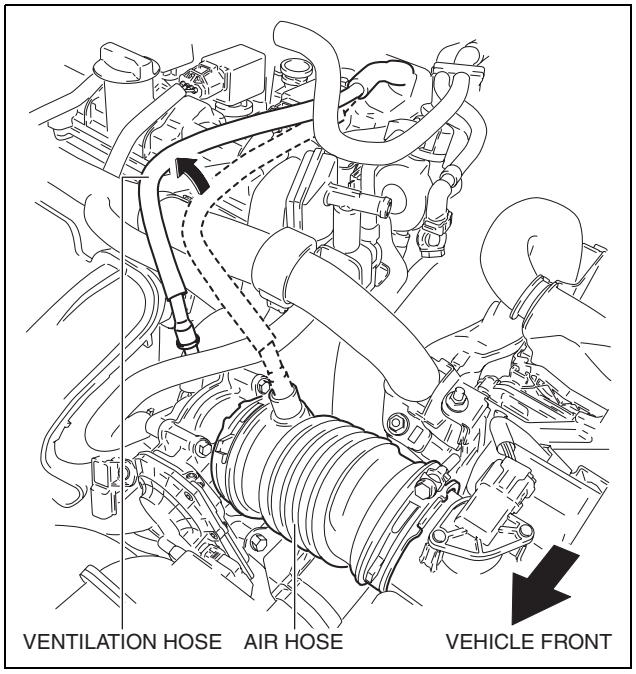
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)
4. Pull out the evaporative hose No.1 from the catch tank and set it aside.



ac5wzw0000027

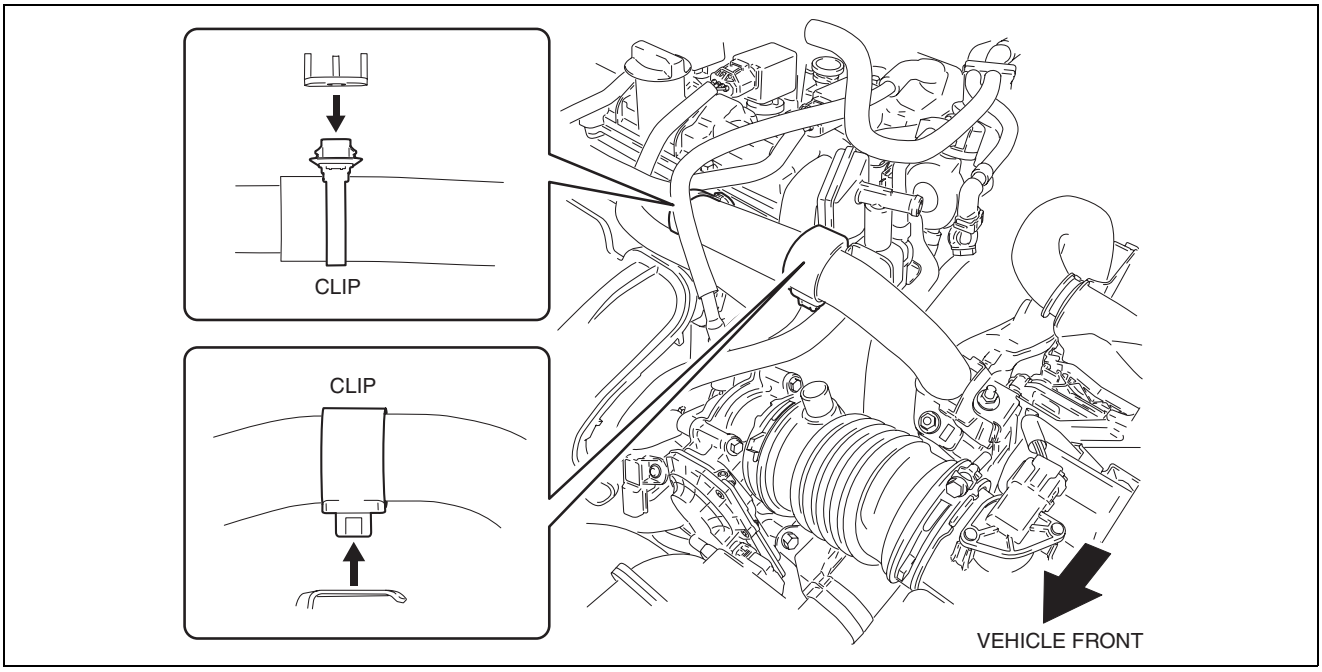
CONTROL SYSTEM [SKYACTIV-G 2.0]

5. Pull out the ventilation hose from the air hose and set it aside.



ac5wzw0000027

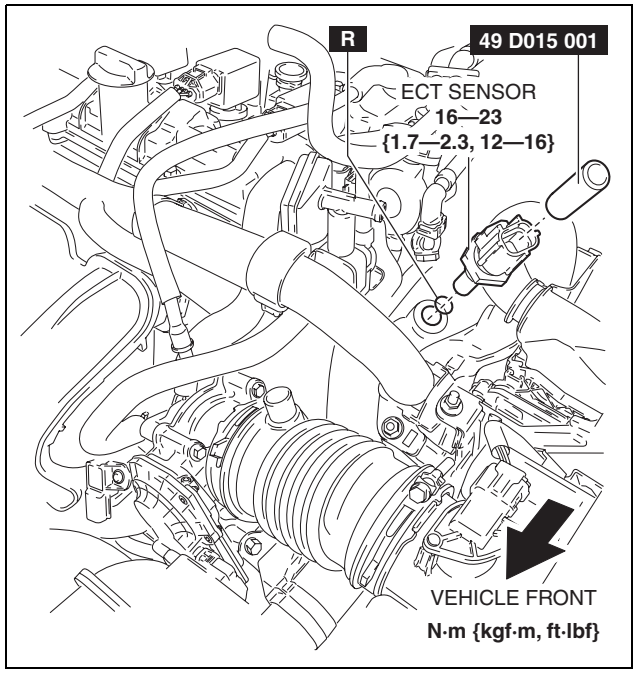
6. Remove the clip and loosen the wiring harness.



ac5wzw0000027

7. Disconnect the ECT sensor connector.

8. Remove the ECT sensor using the **SST**.
9. Install in the reverse order of removal.
10. Refill the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)



ac5wzw0000397

ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [SKYACTIV-G 2.0]

id0140f4802000

Resistance Inspection

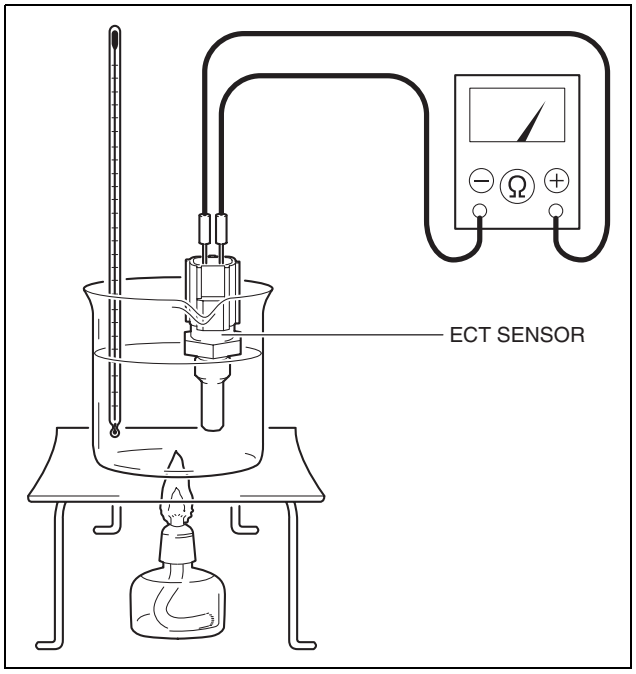
Warning

- **When the engine is hot, it can badly burn. Turn off the engine and wait until it is cool before removing the ECT sensor.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Drain the engine coolant. (See 01-12A-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-G 2.0].)
4. Pull out the evaporative hose No.1 from the catch tank and set it aside. (See 01-40-41 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Pull out the ventilation hose from the air hose and set it aside. (See 01-40-41 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
6. Remove the clip and loosen the wiring harness. (See 01-40-41 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
7. Disconnect the ECT sensor connector.
8. Remove the ECT sensor. (See 01-40-41 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

CONTROL SYSTEM [SKYACTIV-G 2.0]

9. Place the ECT sensor in water with a thermometer, and heat the water gradually.



am3zzw0001256

10. Measure the resistance between ECT sensor terminals A and B.
    - If not as specified, replace the ECT sensor. (See 01-40-41 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].)

Specification

ECT (°C {°F})	Resistance (Kilohms)
20 {68}	Approx. 2.45
80 {176}	Approx. 0.318

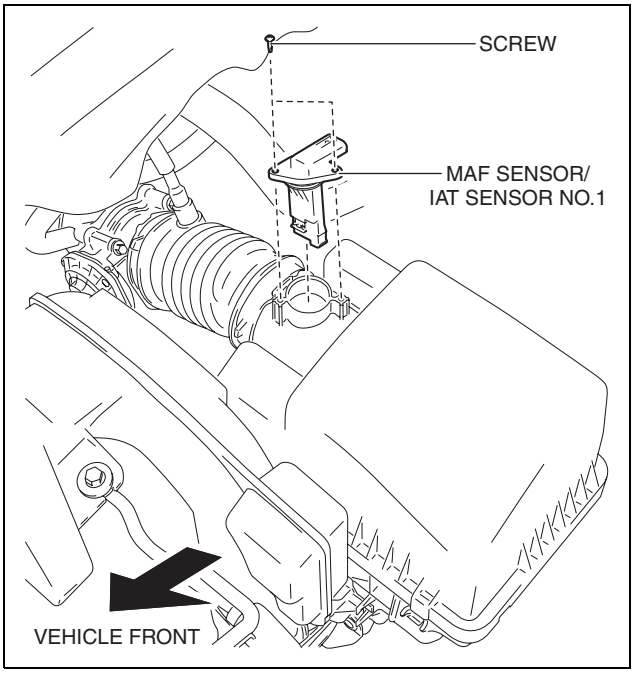
MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0140f4900300

Note
- Because the IAT sensor No.1 is integrated in the MAF sensor, replacing the IAT sensor No.1 includes replacement of the MAF sensor/IAT sensor No.1.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Disconnect the MAF sensor/IAT sensor No.1 connector.
3. Remove the MAF sensor/IAT sensor No.1.
4. Install in the reverse order of removal.



ac5wzw0000398

MASS AIR FLOW (MAF) SENSOR INSPECTION [SKYACTIV-G 2.0]

id0140f4800700

Visual Inspection

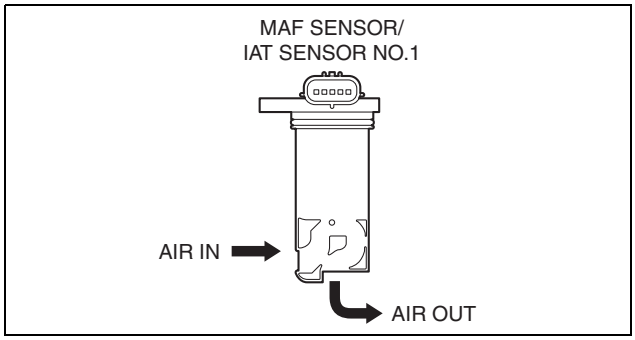
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Disconnect the MAF sensor/IAT sensor No.1 connector.
3. Remove the MAF sensor/IAT sensor No.1. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Visually inspect the MAF sensor for the following:
   - Damage, cracks, soiling
   - Rusted sensor terminal
   - Bent sensor terminal
     - — If there is any malfunction, repair or replace the MAF sensor/IAT sensor No.1. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

Voltage Inspection

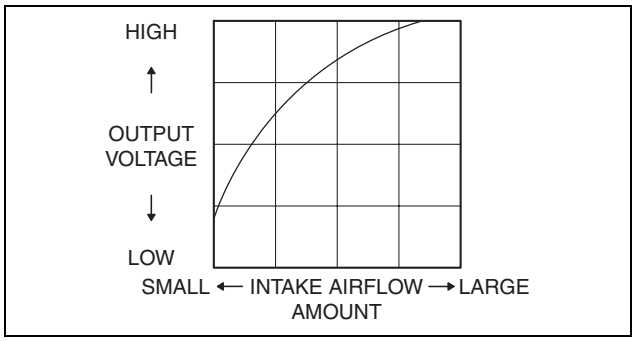
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the MAF sensor/IAT sensor No.1 without disconnect the connector. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Reconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
4. Connect the M-MDS to the DLC-2.
5. Switch the ignition ON (engine off or on).

CONTROL SYSTEM [SKYACTIV-G 2.0]

6. As the air gradually approaches the MAF detection part of the MAF sensor/IAT sensor No.1, verify that the MAF sensor output voltage (PID: MAF) varies. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   - If not as verified, replace the MAF sensor/IAT sensor No.1. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



Specification



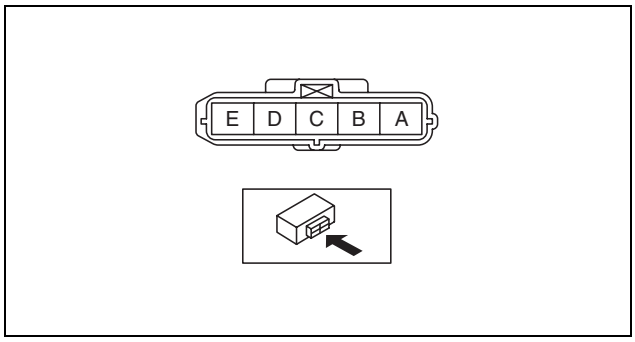
INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [SKYACTIV-G 2.0]

id0140f4802200

IAT Sensor No.1
Resistance inspection

Note
- Because the IAT sensor No.1 is integrated in the MAF sensor, replacing the IAT sensor No.1 includes replacement of the MAF sensor/IAT sensor No.1.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Disconnect the MAF sensor/IAT sensor No.1 connector.
3. Measure the resistance between MAF sensor/IAT sensor No.1 terminals A and B.
   - If not as specified, replace the MAF sensor/IAT sensor No.1. (See 01-40-45 MASS AIR FLOW (MAF) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.1 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



ac5wzw0000028

Specification

IAT (°C {°F})	Resistance (Kilohms)

CONTROL SYSTEM [SKYACTIV-G 2.0]

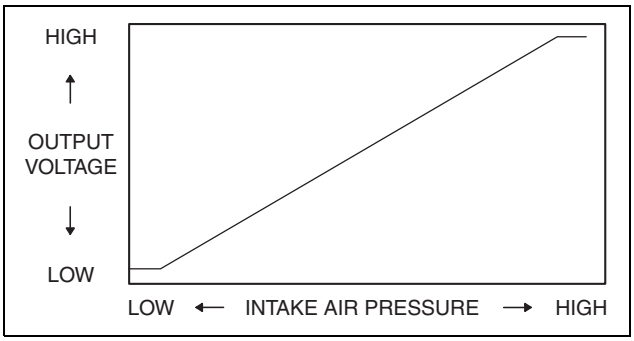
MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [SKYACTIV-G 2.0]

id0140f4800900

Voltage Inspection

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off or on).
3. Verify that the MAP sensor output voltage (PID: MAP) is within the specification. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)
   - If not as specified, replace the MAP sensor/IAT sensor No.2. (See 01-40-48 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/INTAKE AIR TEMPERATURE (IAT) SENSOR NO.2 REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

Specification



ac5wzw0000027

BAROMETRIC PRESSURE (BARO) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0140f4805600

Note

- Because the BARO sensor is integrated in the PCM, replacing the BARO sensor includes replacement of the PCM.

1. Remove the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION [SKYACTIV-G 2.0]

id0140f4801100

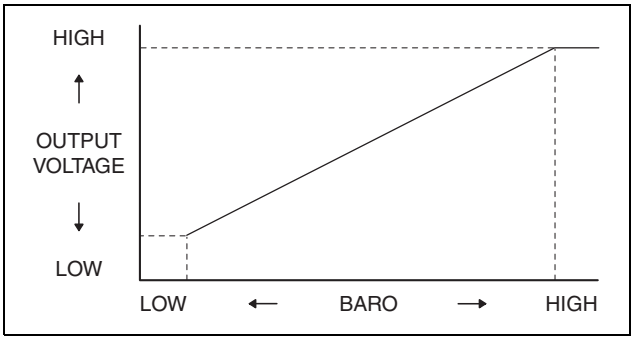
Voltage Inspection

Note

- Because the BARO sensor is integrated in the PCM, replacing the BARO sensor includes replacement of the PCM.

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off or on).
3. Verify that the BARO sensor output voltage (PID: BARO) is within the specification. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)
   - If not as specified, replace the PCM. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

Specification



ac5wzw0000027

CONTROL SYSTEM [SKYACTIV-G 2.0]

THROTTLE POSITION (TP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0140f4805100

Note
- The TP sensor cannot be removed as a single unit. When replacing the TP sensor, replace it together with the throttle body as a single unit.

1. Remove the throttle body. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

THROTTLE POSITION (TP) SENSOR INSPECTION [SKYACTIV-G 2.0]

id0140f4802700

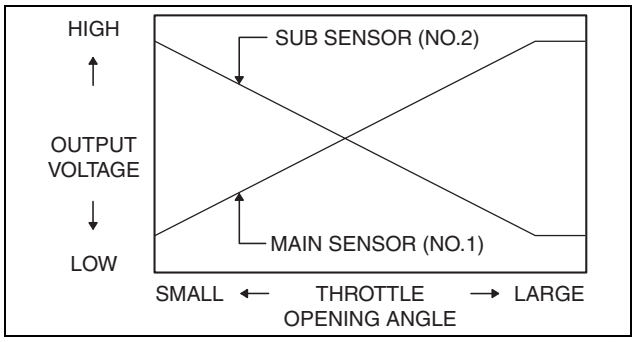
Voltage Inspection

Caution
- **The inspection cannot be performed with this method correctly if there is a malfunction of the APP sensor or throttle valve actuator. Verify that no DTCs related to the APP sensor or throttle valve actuator are stored before the inspection.**

Note
- The TP sensor cannot be removed as a single unit. When replacing the TP sensor, replace it together with the throttle body as a single unit.

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off or on).
3. Verify that the TP sensor output voltage (PID: TP1, TP2) varies according to the accelerator opening angle when the accelerator opening angle is gradually increased. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   - If verified, go to the next step.
   - If not as verified, replace the throttle body. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Verify that the TP sensor output voltage (PID: TP1, TP2) is within the specification when the accelerator pedal is depressed and not depressed. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)
   - If not as specified, replace the throttle body. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

Specification



am3uun0000167

ACCELERATOR PEDAL POSITION (APP) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0140f4877800

Note
- Because the APP sensor is integrated in the accelerator pedal, replacing the APP sensor includes replacement of the accelerator pedal.

1. Remove the accelerator pedal. (See 01-13A-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

CONTROL SYSTEM [SKYACTIV-G 2.0]

ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0]

id0140f4803200

Voltage Inspection

Note
- Because the APP sensor is integrated in the accelerator pedal, replacing the APP sensor includes replacement of the accelerator pedal.

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off or on).
3. Verify that the APP sensor output voltage (PID: APP1, APP2) increases according to the increase in the accelerator opening angle when the accelerator opening angle is gradually increased. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   - If verified, go to the next step.
   - If not as verified, replace the accelerator pedal. (See 01-13A-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Verify that the APP sensor output voltage (PID: APP1, APP2) is within the specification when the accelerator pedal is depressed and not depressed. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)
   - If not as specified, replace the accelerator pedal. (See 01-13A-14 ACCELERATOR PEDAL REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

FUEL PRESSURE SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0140f4801200

Note
- The fuel pressure sensor cannot be removed as a single unit. When replacing the fuel pressure sensor, replace it together with the fuel distributor as a single unit.

1. Remove the fuel distributor. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

CONTROL SYSTEM [SKYACTIV-G 2.0]

FUEL PRESSURE SENSOR INSPECTION [SKYACTIV-G 2.0]

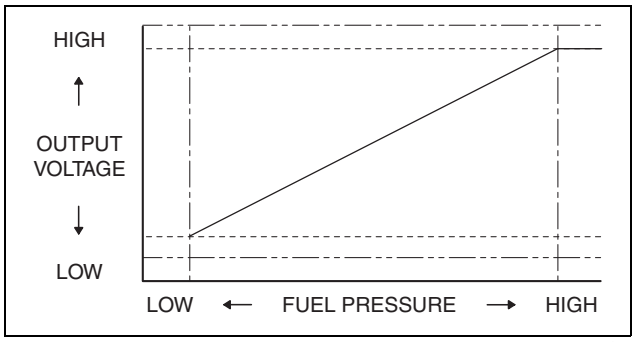
id0140f4801300

Voltage Inspection

Note
- The fuel pressure sensor cannot be removed as a single unit. When replacing the fuel pressure sensor, replace it together with the fuel distributor as a single unit.

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off or on).
3. Verify that the fuel pressure sensor output voltage (PID: FUEL_PRES) is within the specification. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)
   - If not as specified, replace the fuel distributor. (See 01-14A-51 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

Specification



am3uun0000172

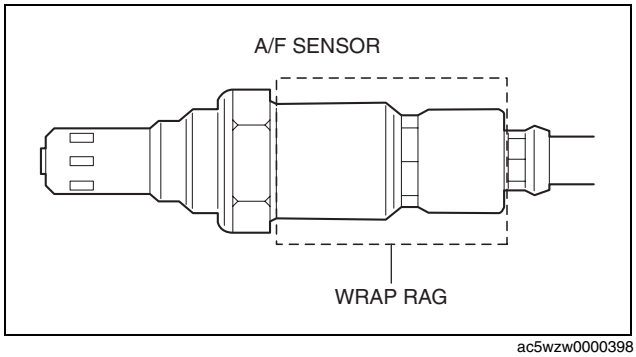
AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0140f4899700

Warning
- **A hot engine and exhaust system can cause severe burns. Turn off the engine and wait until they are cool before removing the exhaust system.**

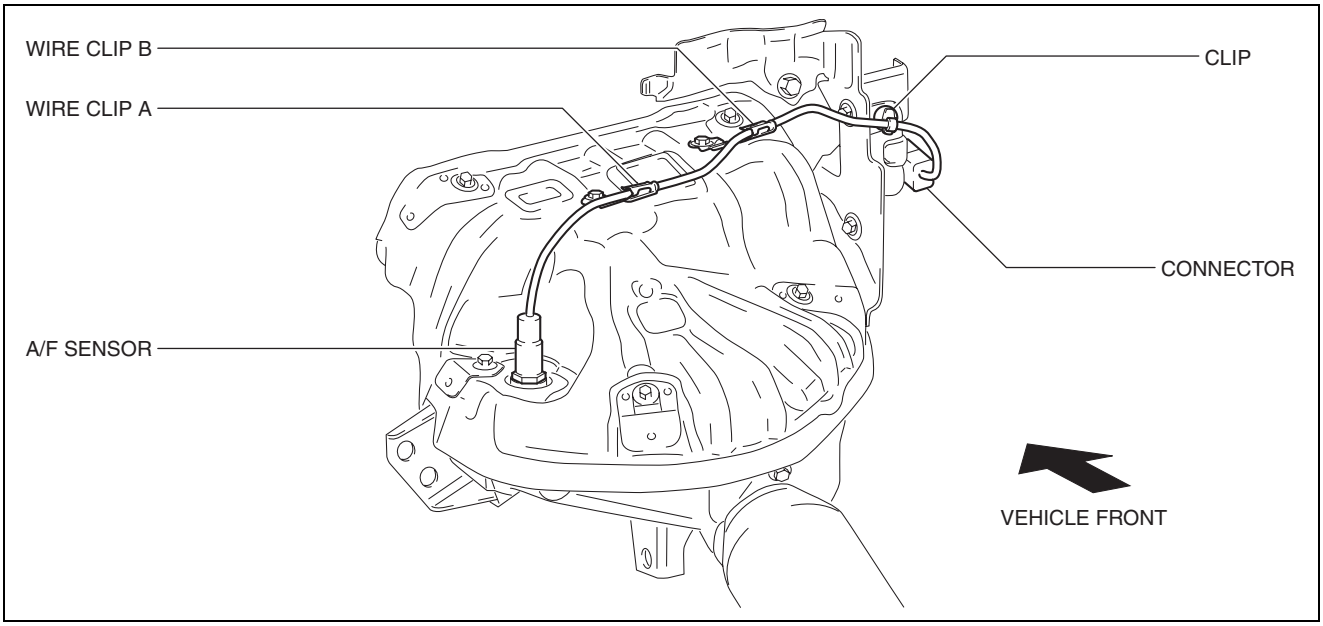
Caution
- **Do not allow flammable objects such as the taping for bundling wiring harness to come into contact with the exhaust manifold and silencer.**

Note
- If penetrant lubricating spray penetrates the airflow hole of the A/F sensor, it could cause interference with the A/F sensor function.
- When removing the A/F sensor, wrap a rag around the lower position so that penetrant lubricating spray does not get sprayed into the airflow hole.



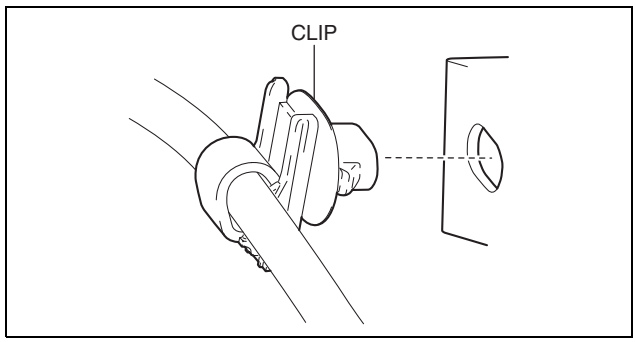
ac5wzw0000398

CONTROL SYSTEM [SKYACTIV-G 2.0]



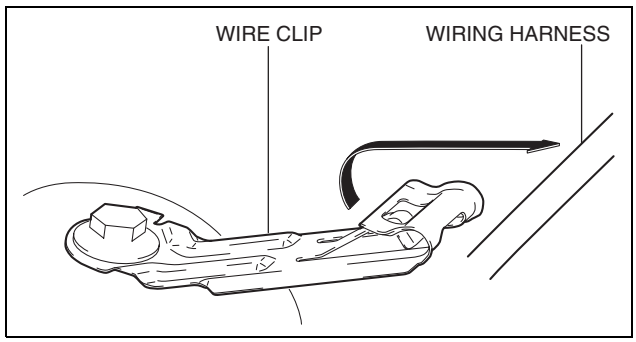
ac5wzw0000029

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Disconnect the A/F sensor connector.
4. Remove the clip from the heat insulator.



ac5wzw0000029

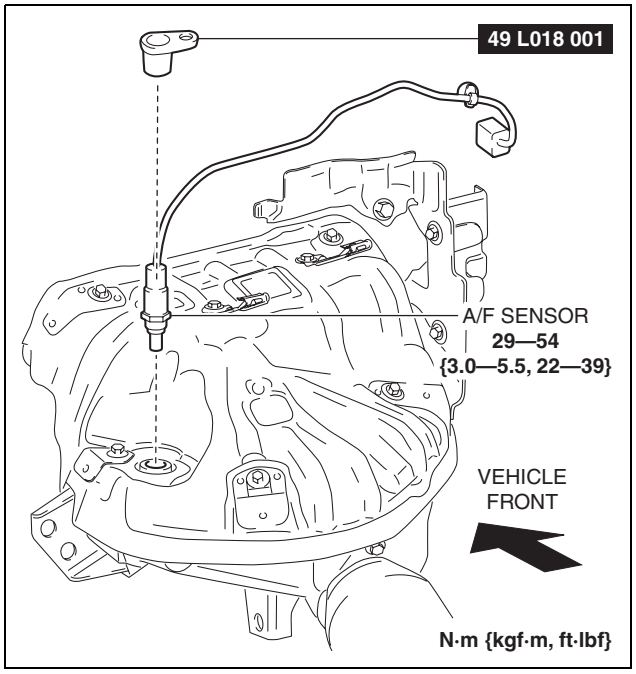
5. Remove the wiring harness from the wire clip A and B. (See 01-40-54 Assembly of Wiring Harness to Wire Clip Note.)



ac5wzw0000030

CONTROL SYSTEM [SKYACTIV-G 2.0]

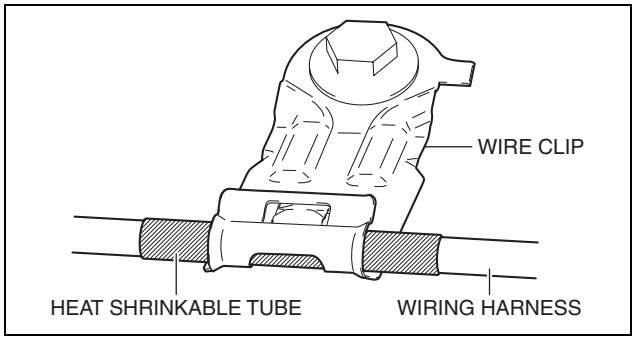
6. Remove the A/F sensor using the **SST**.
7. Install in the reverse order of removal.



ac5wzw0000398

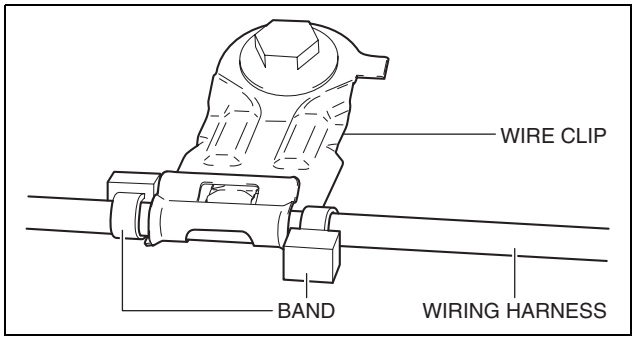
Assembly of Wiring Harness to Wire Clip Note

- Secure the heat shrinkable tube on the wiring harness to wire clip A.



ac5wzw0000036

- Secure the band on the wiring harness so that the band is positioned on both sides of wire clip B.



ac5wzw0000036

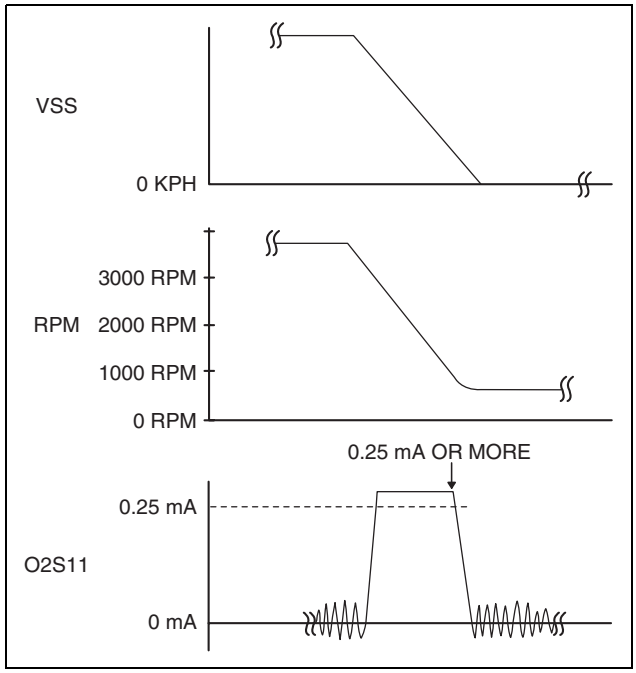
CONTROL SYSTEM [SKYACTIV-G 2.0]

AIR FUEL RATIO (A/F) SENSOR INSPECTION [SKYACTIV-G 2.0]

id0140f4899600

A/F Sensor Inspection

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine on).
3. Warm up the engine to normal operating temperature.
4. Access the following PIDs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   - — VSS (Vehicle speed)
   - — RPM (Engine speed)
   - — O2S11 (A/F sensor output current)
5. Drive the vehicle and decelerate the engine speed by releasing the accelerator pedal fully when the engine speed is **3,000 rpm or more**.
6. Verify that the A/F sensor output current (PID: O2S11) is **0.25 mA or more** while decelerating as shown in the figure.
   - If not as specified, replace the A/F sensor. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



am3uuw0000724

A/F Sensor Heater Inspection

Warning

- **A hot engine and exhaust system can cause severe burns. Turn off the engine and wait until they are cool before removing the exhaust system.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Disconnect the A/F sensor connector.
3. Measure the resistance between A/F sensor terminals A and E.
   - If not as specified, replace the A/F sensor. (See 01-40-52 AIR FUEL RATIO (A/F) SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

A/F sensor heater resistance
1—10 ohms [normal temperature]

id0140f4888800

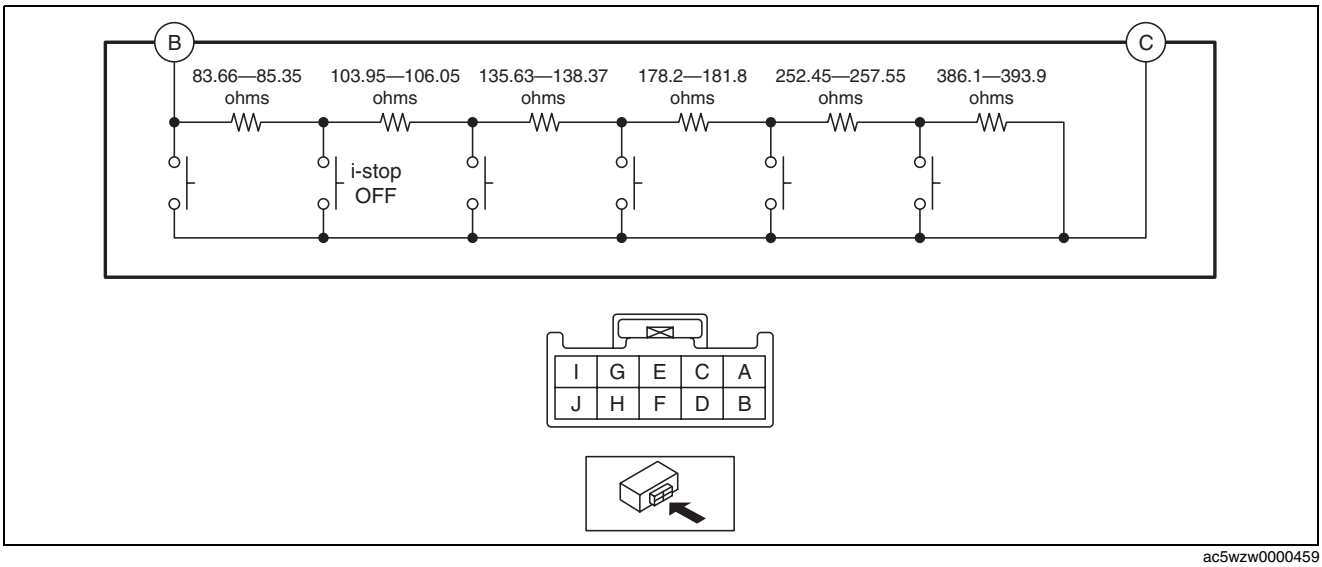
Note

- The i-stop OFF switch is integrated with the cluster switch.
- For the cluster switch removal/installation, refer to “SWITCH PANEL REMOVAL/INSTALLATION” because the cluster switch is installed to the switch panel. (See 09-17-18 SWITCH PANEL REMOVAL/INSTALLATION.)

i-stop OFF SWITCH INSPECTION [SKYACTIV-G 2.0]

id0140f4888900

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].)
2. Remove the switch panel. (See 09-17-18 SWITCH PANEL REMOVAL/INSTALLATION.)
3. Verify that the resistance between cluster switch terminals B and C is as indicated in the table.



ac5wzw0000459

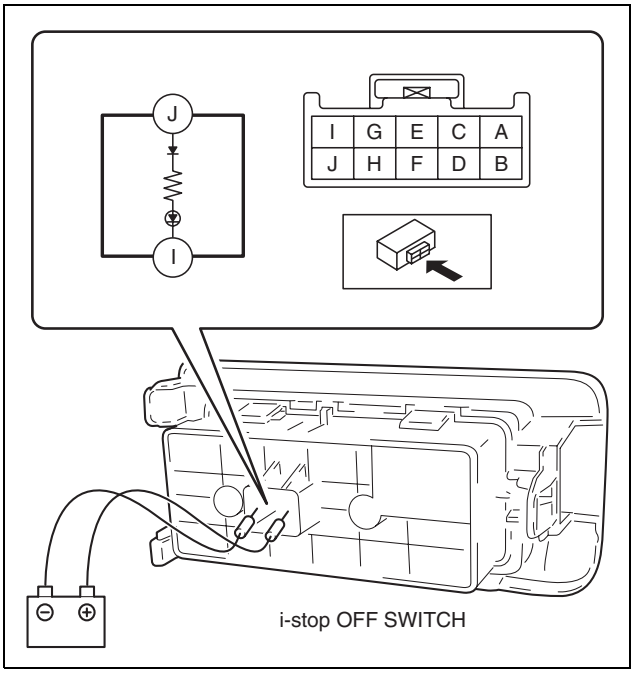
CONTROL SYSTEM [SKYACTIV-G 2.0]

- If the resistance can be verified as indicated in the table, go to the next step.
- If not as indicated in the table, replace the cluster switch.

Test condition	Resistance (ohms)
i-stop OFF switch pressed	83.66—85.35
All switches released	1,139.99—1,163.02

ac5wzw0000459

4. Apply battery positive voltage to cluster switch terminal J, and connect terminal I to ground.
5. Verify that the LED illuminates.
   - If the LED does not illuminate, replace the cluster switch.



ac5wzw0000460

CLUTCH STROKE SENSOR INSPECTION [SKYACTIV-G 2.0]

id0140f4889000

Note
- The clutch stroke sensor cannot be removed as a single unit. When replacing the clutch stroke sensor, replace it together with the clutch master cylinder as a single unit.

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition to ON.
3. Verify that the clutch stroke sensor output voltage (PID: CPP) within the specification. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)
   - If not as specified, replace the clutch master cylinder. (See 05-10A-17 CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION [C66M-R, C66MX-R].)

CONTROL SYSTEM [SKYACTIV-G 2.0]

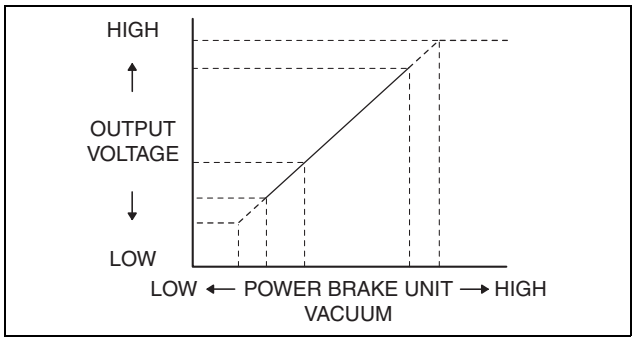
POWER BRAKE UNIT VACUUM SENSOR INSPECTION [SKYACTIV-G 2.0]

id0140f4889400

Voltage Inspection

1. Connect the M-MDS to the DLC-2.
2. Switch the ignition ON (engine off or on).
3. Verify that the power brake unit vacuum sensor output voltage (PID: BBP) is within the specification. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)
   - If not as specified, replace the power brake unit vacuum sensor. (See 04-11-19 POWER BRAKE UNIT VACUUM SENSOR REMOVAL/INSTALLATION.)

Specification



am3zzw0001258

ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0140f4954600

Note

- Because the ion sensor is integrated in the ignition coil, replacing the ion sensor includes replacement of the ignition coil/ion sensor.

1. Remove the ignition coil/ion sensor. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

ION SENSOR INSPECTION [SKYACTIV-G 2.0]

id0140f4954700

DTC Inspection

1. Connect the M-MDS to the DLC-2.
2. Perform the DTC inspection using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].)
   - If any DTC related to the ignition coil/ion sensor is present, repair the malfunctioning location according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)

Visual Inspection

Note

- Because the ion sensor is integrated in the ignition coil, replacing the ion sensor includes replacement of the ignition coil/ion sensor.

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the ignition coil/ion sensor. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Verify that there is no damage to the ignition coil/ion sensor, and no corrosion and damage to the connector.
   - If there is a malfunction, replace the ignition coil/ion sensor. (See 01-18-2 IGNITION COIL/ION SENSOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

Oil pressure (reference value) [coolant temperature: 80—90 °C {176—194 °F}]	Lo: 110—175 kPa {1.13—1.78 kgf/cm^2, 16.0—25.3 psi} [1,500 rpm] Hi: 300—430 kPa {3.06—4.38 kgf/cm^2, 43.6—62.3 psi} [4,500 rpm]
Engine coolant capacity [European (L.H.D.) specs.] (approx. quantity)	ATX: 7.6 L {8.0 US qt, 6.7 Imp qt} MTX: 7.4 L {7.8 US qt, 6.5 Imp qt}
Engine coolant capacity [European (U.K.) specs.] (approx. quantity)	7.4 L {7.8 US qt, 6.5 Imp qt}
Engine coolant capacity [General (R.H.D.) specs.] (approx. quantity)	ATX: 7.4 L {7.8 US qt, 6.5 Imp qt} MTX: 7.1 L {7.5 US qt, 6.2 Imp qt}
Engine coolant capacity [Israel, China] (approx. quantity)	7.5 L {7.9 US qt, 6.6 Imp qt}
Engine coolant capacity [Saudi] (approx. quantity)	7.8 L {8.2 US qt, 6.9 Imp qt}
Engine coolant capacity [Except European (L.H.D. U.K.) specs., General (R.H.D.) specs., Israel, Saudi, China] (approx. quantity)	ATX: 7.5 L {7.9 US qt, 6.6 Imp qt} MTX: 7.3 L {7.7 US qt, 6.4 Imp qt}
Cooling system cap valve opening pressure	93.2—122.6 kPa {0.951—1.250 kgf/cm^2, 13.6—17.7 psi}
Thermostat initial-opening temperature	80.5—83.5 °C {177—182 °F}
Thermostat full-open temperature	95 °C {203 °F}
Thermostat full-open lift	8.5 mm {0.33 in} or more
Fuel pressure	405—485 kPa {4.13—4.94 kgf/cm^2, 58.8—70.3 psi}
Fuel hold pressure	230 kPa {2.35 kgf/cm^2, 33.4 psi} or more
Fuel injector resistance	1.74—2.04 ohms [20 °C {68 °F}]
Battery parasitic draw (When the ignition is off (key is removed), all doors and the bonnet are closed.)	40—65 mA

TECHNICAL DATA [SKYACTIV-G 2.0]

Item	Specification
Battery electrolyte specific gravity [20 °C {68 °F}] (Vehicle without i-stop)	1.22—1.29
Battery load test current (Vehicle without i-stop)	55D23L (48): 180 A 75D23L (52): 195 A
Battery slow charge current (Vehicle without i-stop)	55D23L (48): 4.5—5.5 A 75D23L (52): 5.0—6.0 A
Battery quick charge current [30 min] (Vehicle without i-stop)	55D23L (48): 30 A 75D23L (52): 35 A
Generator standard voltage [IG-ON]	Terminal B: B+ Terminal P: Approx. 1 V or less Terminal D: Approx. 0 V
Generator standard voltage [Idle, 20 °C {68 °F}]	Terminal B: 13—15 V Terminal P: Approx. 3—8 V Terminal D: Turn the electrical loads (headlights, blower motor, rear window defroster, brake lights, etc.) on and verify that the voltage reading increases.
Generator generated current minimum value (Vehicle without i-stop)	70% of the nominal output current (nominal output current: 100 A) [Ambient temp. 20 °C {68 °F}, voltage 13.0—15.0 V, both engine and generator are hot]
Generator rotor resistance (between slip rings) [20 °C {68 °F}]	1.8—2.1 ohms
Generator brush length	Standard: 22.5 mm {0.886 in} Minimum: 5.0 mm {0.20 in}
Generator brush spring force	Standard: 4.1—5.3 N {0.42—0.54 kgf, 1.0—1.1 lbf} Minimum: 1.7 N {0.17 kgf, 0.38 lbf}
Firing order	1-3-4-2 (all cylinders independent firing) Spark plug type	PE01-18-110, PE02-18-110
Spark plug gap	Standard: 0.75—1.10 mm {0.030—0.043 in} New spark plug (reference): 0.75—0.85 mm {0.030—0.033 in}
Spark plug resistance [25°C {77 °F}]	3.0—7.5 kilohms
Starter no-load test voltage	11 V
Starter no-load test current	Vehicle with i-stop: 90 A or less Vehicle without i-stop: 95 A or less
Starter pinion gap (Vehicle Without i-stop)	0.5—2.0 mm {0.02—0.07 in}
Starter armature runout (Vehicle without i-stop)	0.1 mm {0.004 in} max.
Starter commutator diameter (Vehicle without i-stop)	Standard: 29.4 mm {1.16 in} Minimum: 28.8 mm {1.13 in}
Segment groove depth of starter commutator (Vehicle without i-stop)	Standard: 0.5 mm {0.02 in} Minimum: 0.2 mm {0.008 in}
Starter brush length (Vehicle without i-stop)	Standard: 12.3 mm {0.484 in} Minimum: 5.5 mm {0.22 in}
Starter brush spring force (Vehicle without i-stop)	Standard: 15.1—20.4 N {1.54—2.08 kgf, 3.40—4.58 lbf} Minimum: 2.75 N {0.280 kgf, 0.618 lbf}

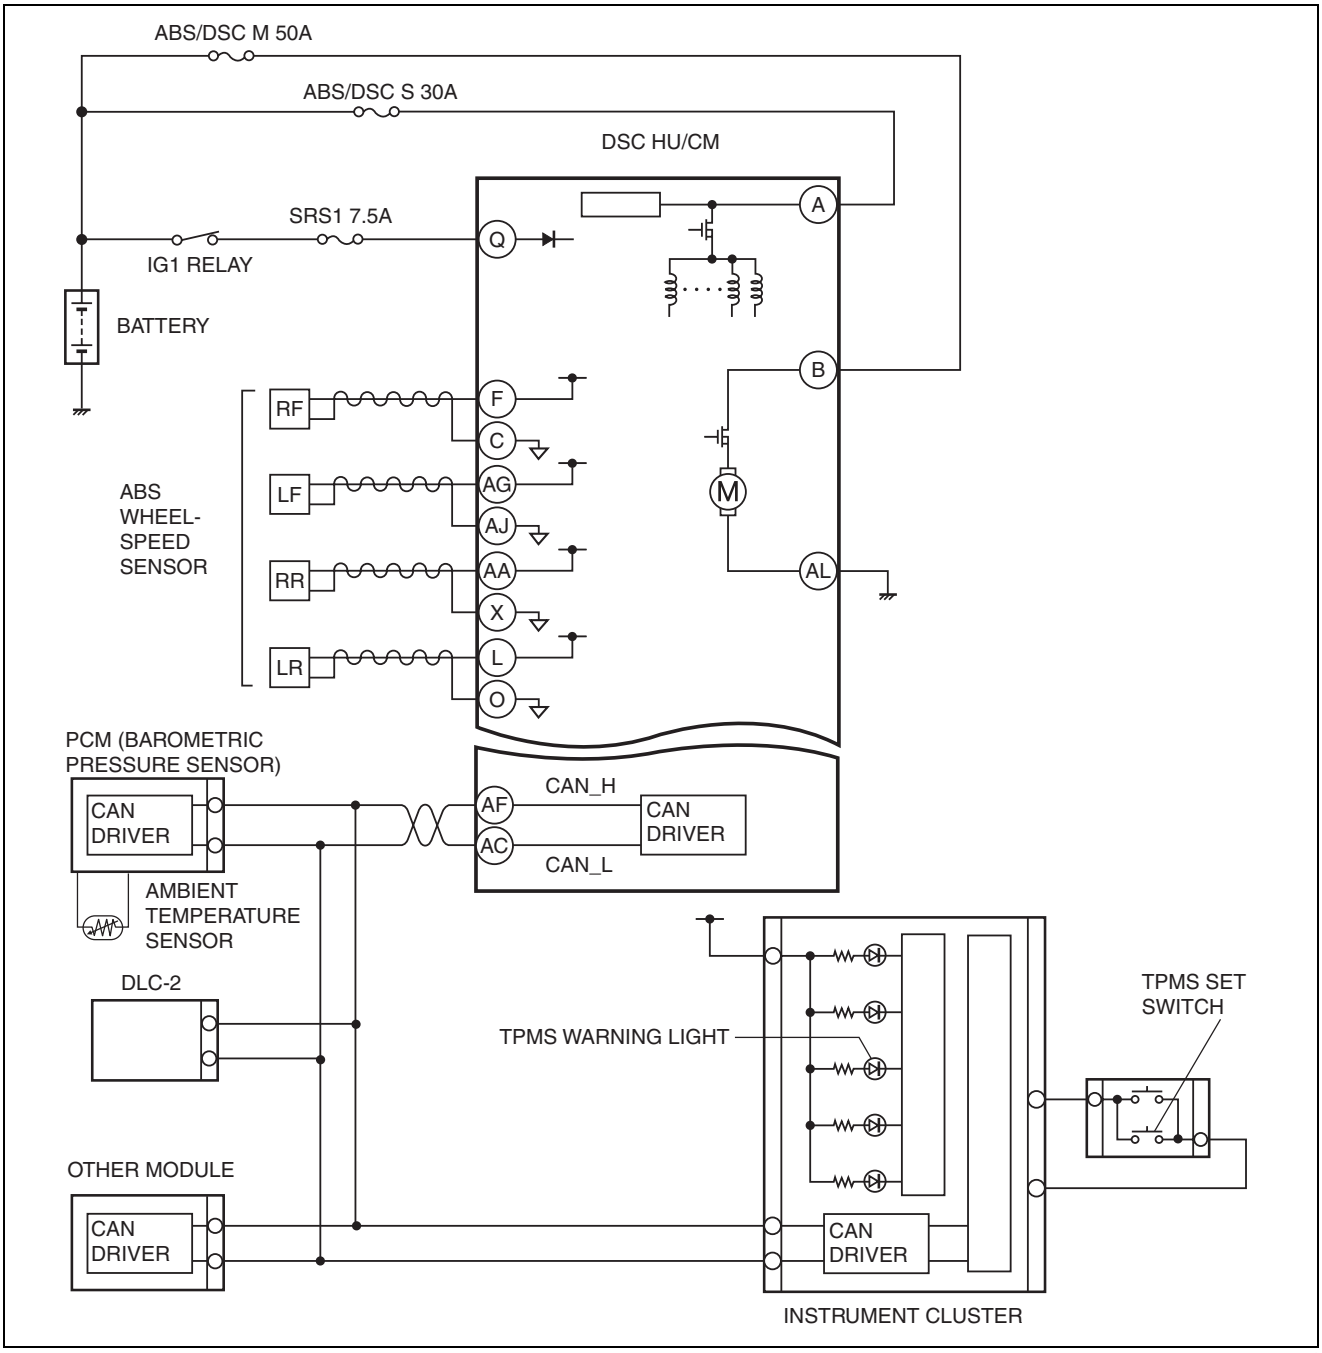
id020200800100



ac5wzw0000281

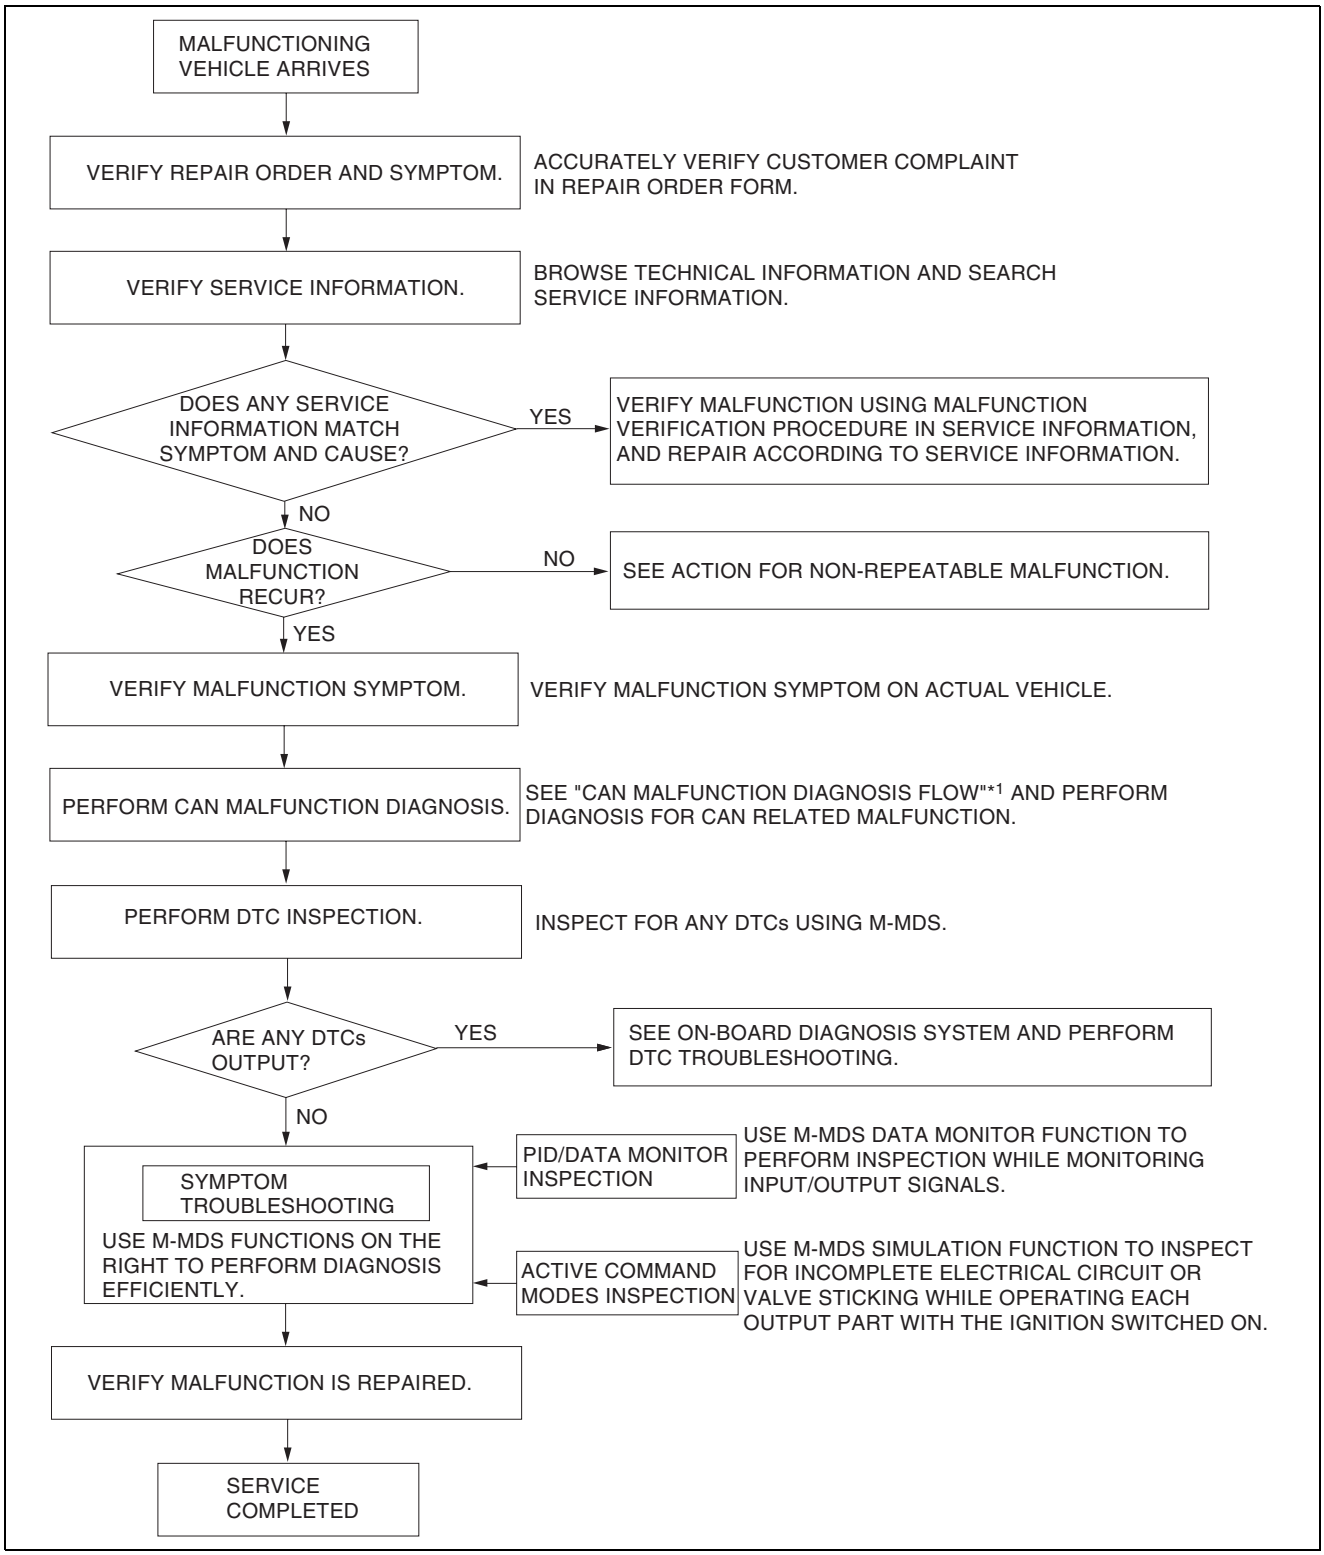
ON-BOARD DIAGNOSTIC

FOREWORD

id020200801700

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



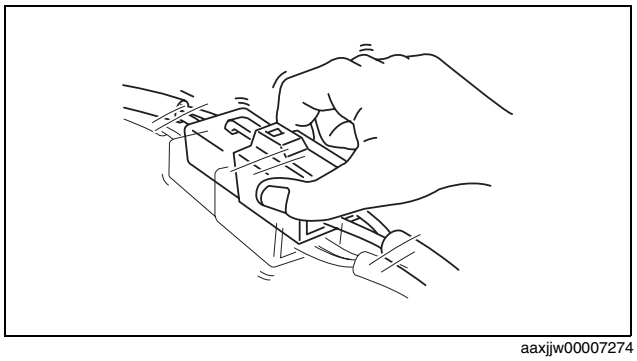
am3uuw0000731

ON-BOARD DIAGNOSTIC

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)]10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)]10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)]10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

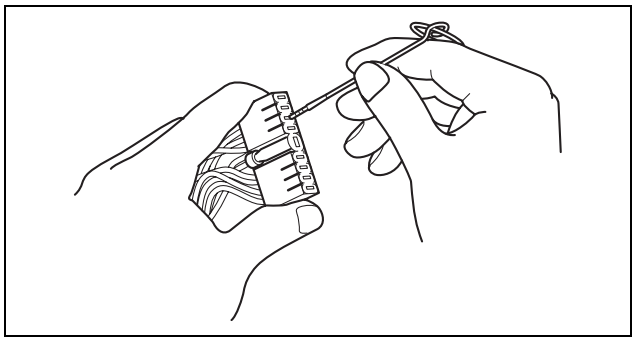
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as CAN circuit voltage) at that time, and detect the malfunction cause.
  - — Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

TIRE PRESSURE MONITORING SYSTEM (TPMS) ON-BOARD DIAGNOSIS

id020200800200

- For the tire pressure monitoring system on-board diagnostic system, refer to Sec 04 as it is controlled by the DSC CM. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)

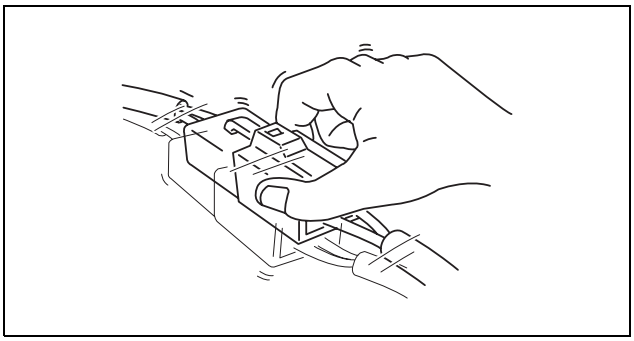
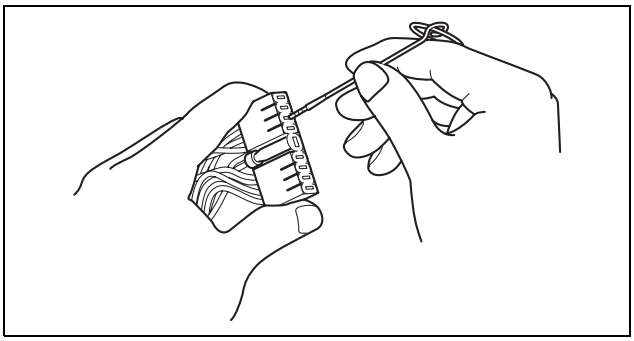
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as CAN circuit voltage) at that time, and detect the malfunction cause.
  - — Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

SYMPTOM TROUBLESHOOTING

id020300800400

No.	Symptom	Description
1	TPMS warning light illuminates.	The tire pressure monitoring system warning light illuminates according to the decrease in a tire air pressure (tire pressure monitoring system is normal).

SYMPTOM TROUBLESHOOTING

NO.1 TPMS WARNING LIGHT ILLUMINATES

id020300101000

Caution

- **The tire pressure monitoring system warning light illuminates according to the decrease in a tire air pressure (tire pressure monitoring system is normal).**
- **The No.1 TPMS WARNING LIGHT ILLUMINATES the diagnostic procedure if the tire pressure monitoring system warning light illuminated due to a decrease in a tire pressure although the tire pressure monitoring system is normal.**

Possible malfunction

- The air pressure of a tire has decreased. (Tire pressure monitoring system normal)
- The tire pressure monitoring warning light illuminates based on mis-use prevention logic. (Tire pressure monitoring system normal)

Diagnostic Procedure

Step	Inspection	Results	Action
1	TIRE PRESSURE INSPECTION • Inspect tire pressures while the tires are cold. (See 02-12-1 WHEEL AND TIRE SPECIFICATION.) • Are the tire pressures at the specification?	Yes	Go to the next step.
		No	Adjust the tire pressures to the specification while the tires are cold.
2	TIRE PRESSURE MONITORING SYSTEM INITIALIZATION • Perform tire pressure monitoring system initialization. (See 02-12-4 TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE.) • Was the tire pressure monitoring system initialization performed?	Yes	Go to the next step.
		No	Perform the tire pressure monitoring system initialization. (See 02-12-4 TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE.)
3	VERIFY MIS-USE PREVENTION LOGIC (FIRST TIME) • Drive the vehicle for several minutes after the tire pressure monitoring warning light turns off. • Does the tire pressure monitoring warning light illuminate?	Yes	Go to the next step.
		No	The tire pressure monitoring system is normal.
4	TIRE PRESSURE MONITORING SYSTEM INITIALIZATION • Perform the tire pressure monitoring system initialization. (See 02-12-4 TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE.) • Was the tire pressure monitoring system initialization performed?	Yes	Go to the next step.
		No	Perform the tire pressure monitoring system initialization. (See 02-12-4 TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE.)
5	MIS-USE PREVENTION LOGIC VERIFICATION (SECOND TIME) • Drive the vehicle for several minutes after the tire pressure monitoring warning light turns off. • Does the tire pressure monitoring warning light illuminate?	Yes	Go to the next step.
		No	The tire pressure monitoring system is normal.
6	TIRE PRESSURE MONITORING SYSTEM INITIALIZATION • Perform the tire pressure monitoring system initialization. (See 02-12-4 TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE.) • Was the tire pressure monitoring system initialization performed?	Yes	Go to the next step.
		No	Perform the tire pressure monitoring system initialization. (See 02-12-4 TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE.)

SYMPTOM TROUBLESHOOTING

Step	Inspection	Results	Action
7	MIS-USE PREVENTION LOGIC VERIFICATION (THIRD TIME) • Drive the vehicle for several minutes after the tire pressure monitoring warning light turns off. • Does the tire pressure monitoring warning light illuminate?	Yes	Inspect the tires and wheels for air leakage.
		No	The tire pressure monitoring system is normal.

02-10 GENERAL PROCEDURES

GENERAL PROCEDURES (SUSPENSION) **02-10–1**
Wheel and Tire Installation **02-10–1**
Suspension Links Removal/Installation **02-10–1**
Connector Disconnection **02-10–1**
Headlight Auto Leveling System Initialization (Vehicle with discharge headlight system) **02-10–1**

GENERAL PROCEDURES

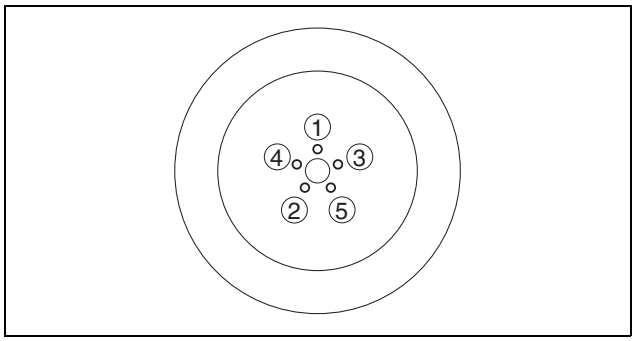
GENERAL PROCEDURES (SUSPENSION)

id021000800300

Wheel and Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts in a criss-cross pattern to the following tightening torque.

   Tightening torque
   108—147 N·m {12—14 kgf·m, 80—108 ft·lbf}



ac5wzw0000098

Suspension Links Removal/Installation

1. For the joint sections with rubber bushings, raise the vehicle using a lift, and then temporarily tighten the installation bolts and nuts. Lower the vehicle to the ground and tighten them to the specified tightening torque.

Connector Disconnection

1. Disconnect the negative battery cable before performing any work that requires handling of connectors. (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

Headlight Auto Leveling System Initialization (Vehicle with discharge headlight system)

1. Initialize the auto leveling sensor, when performing the following services. (See 09-18-82 HEADLIGHT AUTO LEVELING SYSTEM INITIALIZATION.)
   — Removing the auto leveling sensor
   — Disconnecting the auto leveling sensor link
   — Removing the suspension parts related the vehicle height

02-11 WHEEL ALIGNMENT

WHEEL ALIGNMENT
PRE-INSPECTION 02-11–1
FRONT WHEEL ALIGNMENT 02-11–1
Steering Angle Adjustment **02-11–2**
Total Toe-in Adjustment **02-11–2**
REAR WHEEL ALIGNMENT 02-11–3
Total Toe-in Adjustment **02-11–3**

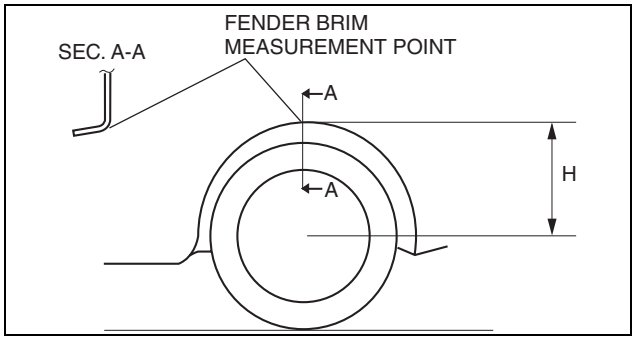
WHEEL ALIGNMENT

WHEEL ALIGNMENT PRE-INSPECTION

id021100800100

1. Park the vehicle on level ground, in an unloaded condition*, with the wheels straight forward.
   *: Unloaded condition.....Fuel tank is full. Engine coolant and engine oil are at specified level. Spare tire, jack and tools are in designated position.
2. Inspect the tire pressure.
   - Adjust to the recommended pressure if necessary. (See 02-50-1 SUSPENSION TECHNICAL DATA.)
3. Inspect the wheel bearing play.
   - Correct if necessary. (See 03-11-2 WHEEL HUB, STEERING KNUCKLE INSPECTION.)
4. Inspect the wheel runout.
   - Correct if necessary. (See 02-50-1 SUSPENSION TECHNICAL DATA.)
5. Rock the vehicle, and verify that there is no looseness in the steering wheel joint and suspension ball joint.
6. Rock the vehicle, and verify that the shock absorber operates properly.
7. Measure height H from the center of the wheel to the fender brim.
8. Verify that the difference between the left and right dimension H is within the specification.
   - If it exceeds the specification, repeat the Step 2—7.

Standard specification
10 mm {0.39 in} or less



ac5wzw0000098

FRONT WHEEL ALIGNMENT

id021100800200

Front wheel alignment (Unloaded)*1 [SKYACTIV-G 2.0]

Item			Fuel gauge indication				
			Empty	1/4	1/2	3/4	Full
Maximum steering angle [Tolerance ±3°]		Inner	37°48′				
		Outer	30°54′				
Total toe-in	Tire [Tolerance ±4 {0.2}]	(mm {in})	2 {0.08}				
	Rim inner [Tolerance ±3 {0.1}]		1.0 {0.04}				
		(degree)	0°10′±0°20′				
Caster angle*2 (Reference value) [Tolerance ±1°]			6°19′	6°21′	6°24′	6°27′	6°29′
Camber angle*2 (Reference value) [Tolerance ±1°]			-0°20′	-0°21′	-0°21′	-0°21′	-0°22′
Steering axis inclination (Reference value)			11°57′	11°58′	11°59′	11°59′	12°00′

***1 : Engine coolant and engine oil are at specified level. Spare tire, jack and tools are in designated position.**
***2 : Difference between left and right must not exceed 1°30′.**

WHEEL ALIGNMENT

Front wheel alignment (Unloaded)*1 [SKYACTIV-D 2.2]

Item			Fuel gauge indication				
			Empty	1/4	1/2	3/4	Full
Maximum steering angle [Tolerance ±3°]		Inner	37°48′				
		Outer	30°54′				
Total toe-in	Tire [Tolerance ±4 {0.2}]	(mm {in})	2 {0.08}				
	Rim inner [Tolerance ±3 {0.1}]	(mm {in})	1.0 {0.04}				
		(degree)	0°10′±0°20′				
Caster angle*2 (Reference value) [Tolerance ±1°]			6°15′	6°17′	6°20′	6°23′	6°25′
Camber angle*2 (Reference value) [Tolerance ±1°]			-0°20′	-0°21′	-0°21′	-0°21′	-0°22′
Steering axis inclination (Reference value)			11°57′	11°58′	11°59′	11°59′	12°00′

***1 : Engine coolant and engine oil are at specified level. Spare tire, jack and tools are in designated position.**
***2 : Difference between left and right must not exceed 1°30′.**

Steering Angle Adjustment

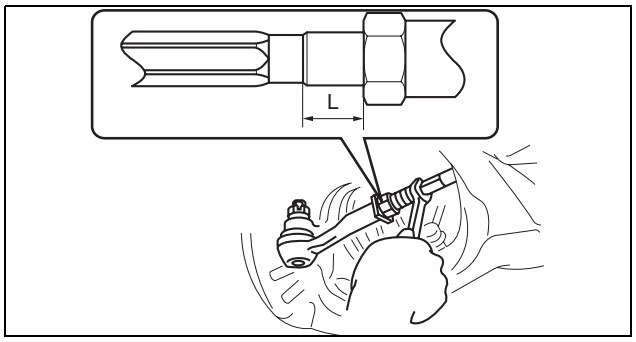
1. Loosen the tie-rod end locknuts.
2. Remove the steering gear boot clamp.
3. Turn the tie rods.

   Standard length L
   10.1—23.1 mm {0.4—0.9 in}

4. Turn the tie rods equally to provide the correct maximum steering angle.
5. Tighten the tie-rod end locknuts.

   Tightening torque
   69—98 N·m {7.1—9.9 kgf·m, 51—72 ft·lbf}

6. Verify that the boot is not twisted, and install the boot clamp.
7. Adjust the toe-in after adjusting the steering angle.



ac5wzw0000242

Total Toe-in Adjustment

1. Loosen the locknut of the tie-rod end.
2. Remove the rack boot clamp.
3. Adjust the total toe-in by rotating each tie rod (left and right) in the opposite directions by the same amount respectively.

   Note
   - Toe angle changes by **approx. 4 mm {0.2 in}** per one rotation of the tie rod for one wheel.
   - Each tie rod has a right-hand thread. When increasing the toe-in angle, rotate the right tie rod toward the front of the vehicle and rotate the left tie rod toward the rear of the vehicle by the same amount.

4. Tighten the locknut of the tie-rod end.

   Tightening torque
   69—98 N·m {7.1—9.9 kgf·m, 51—72 ft·lbf}

5. Verify that the rack boot does not have any twisting and install the rack boot clamp.

WHEEL ALIGNMENT

REAR WHEEL ALIGNMENT

id021100800300

Rear wheel alignment (Unloaded)*1

Item			Fuel gauge indication				
			Empty	1/4	1/2	3/4	Full
Total toe-in	Tire [Tolerance ±4 {0.2}]	(mm {in})	2 {0.08}				
	Rim inner [Tolerance ±3 {0.1}]		1.0 {0.04}				
		(degree)	0°10′±0°20′				
Camber angle*2 (Reference value) [Tolerance ±1°]			-0°51′	-0°54′	-0°56′	-0°58′	-1°01′
Thrust angle (Reference value) [Tolerance ±0°48′]			0°00′				

***1 : Engine coolant and engine oil are at specified level. Spare tire, jack and tools are in designated position.**
***2 : Difference between left and right must not exceed 1°30′.**

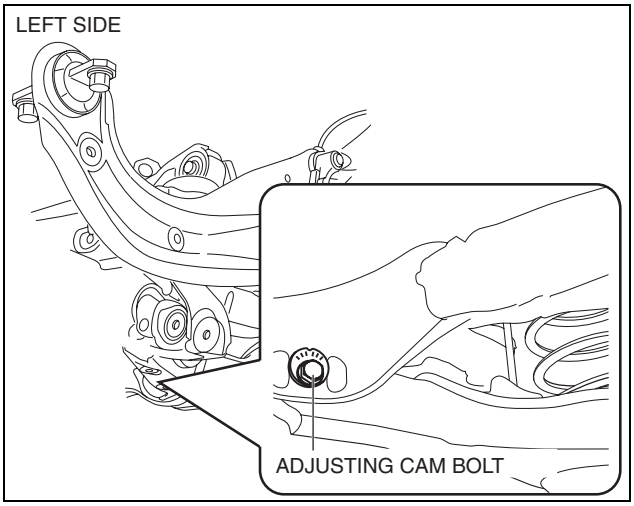
Total Toe-in Adjustment

1. Loosen the installation nut of the adjusting cam bolt.
2. Rotate the adjusting cam bolt in either direction to adjust the toe-in.

	Left wheel	Right wheel
Toe-out direction	Clockwise	Counterclockwise
Toe-in direction	Counterclockwise	Clockwise

3. Tighten the nut.

Tightening torque
84—101 N·m {8.6—10 kgf·m, 62—74 ft·lbf}



ac5wzw0000245

TIRE PRESSURE MONITORING SYSTEM SET SWITCH INSPECTION 02-12–5

WHEEL AND TIRES

WHEEL AND TIRE SPECIFICATION

id021200800100

Standard tire and wheel

Item				Specification	
Wheel	Size			17 × 7J	19 × 7J
	Inset (mm {in})			50 {2.0}	
	Pitch circle diameter (mm {in})			114.3 {4.50}	
	Material			Steel Aluminum alloy	Aluminum alloy
Tire	Size			225/65R17 102V	225/55R19 99V
	Air pressure (kPa {bar <psi>})	Front	Up to 3 persons	230 {2.3, <33>}*3 250 {2.5, <36>}*3	250 {2.5, <36>}
			Full load	260 {2.6, <38>}*3 270 {2.7, <39>}*3	260 {2.6, <38>}
		Rear	Up to 3 persons	230 {2.3, <33>}*3 250 {2.5, <36>}*3	250 {2.5, <36>}
			Full load	280 {2.8, <41>}*3 290 {2.9, <42>}*3	290 {2.9, <42>}
	Remaining tread (mm {in})			1.6 {0.063} min.	
Wheel and tire	Lug nut tightening torque (N·m {kgf·m, ft·lbf})			108—147 {12—14, 80—108}	
	Wheel and tire runout (mm {in})	Radial direction		1.5 {0.059} max.	
		Lateral direction		Steel:2.5 {0.098} max. Aluminum alloy:2.0 {0.079} max.	2.0 {0.079} max.
	Wheel imbalance (g {oz})			Adhesive-type*1: 13 {0.46} max. Knock-type*2: 8 {0.3} max.	Adhesive-type*1: 12 {0.42} max. Knock-type*2: 7 {0.2} max.

***1 : Total weight exceeds 160 g {5.64 oz}.**
***2 : One balance weight: 60 g {2.1 oz} max. If the total weight exceeds 100 g {3.53 oz} on one side, rebalance after moving the tire around on the rim. Do not use three or more balance weights.**
***3 : Verify the vehicle tire pressures.**

Temporary spare tire and wheel

Item			Specification
Wheel	Size		17 × 5 1/2J
	Inset	(mm {in})	45 {1.8}
	Pitch circle diameter	(mm {in})	114.3 {4.50}
	Material		Steel
Tire	Size		185/80R17 95M
	Air pressure	(kPa {bar <psi>})	250 {2.5, <36>}
	Remaining tread	(mm {in})	1.6 {0.063} min.
Wheel and tire	Lug nut tightening torque	(N·m {kgf·m, ft·lbf})	108—147 {12—14, 80—108}

WHEEL AND TIRES

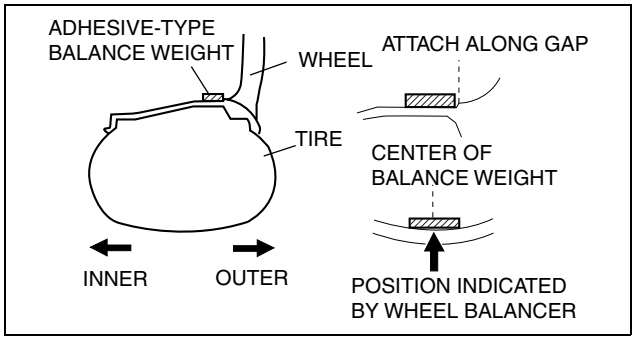
WHEEL BALANCE ADJUSTMENT (ALUMINUM ALLOY WHEEL)

id021200104300

Caution
- **Adjust the outer wheel balance first, then the inner wheel balance.**
- **Be careful not to scratch the wheels.**

Adhesive-type Balance Weight (Outer)

1. Remove the old balance weight from the wheel.
2. Remove the double-sided adhesive tape remaining on the wheel, then clean and degrease the bonding area.
3. Set the wheel on a wheel balancer, measure the amount of unbalance and the position with the mode set for knock-type balance weight.
4. Multiply the amount of unbalance by **1.6** to obtain the balance weight value.
5. Select a balance weight closest to the weight value and attach the balance weight on the position (outer) indicated by the wheel balancer.



am6uuw0000146

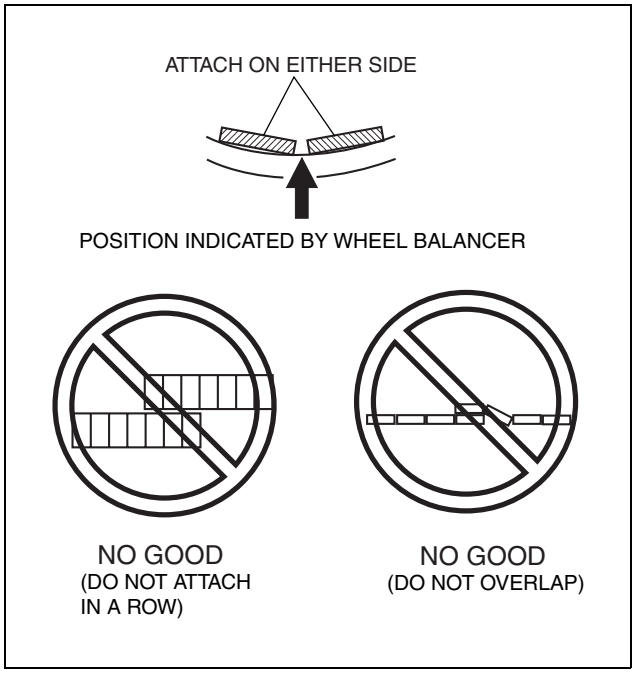
Example calculation of balance weight value
Indicated amount of unbalance: 23 g {0.81 oz}
23 g {0.81 oz}×1.6 = 36.8 g {1.30 oz}
Selected balance weight value: 35 g {1.24 oz}

Note
- When selecting a balance weight, select one closest to the calculated value.
  Example: **32.4 g {1.14 oz} = 30 g {1.06 oz}**

Caution
- **Use a genuine balance weight or equivalent (steel).**
- **When attaching the weight, press the weight with a force of 25 N {2.5 kgf, 5.5 lbf} per 5 g for 2 s or more.**

6. If attaching two balance weights, position them so that each is on either side of the position indicated by the wheel balancer.

Caution
- **Do not attach weight balances in a row.**
- **Do not overlap the balance weights.**
- **Total weight must not exceed 160g {5.65 oz}.**



am6uuw0000146

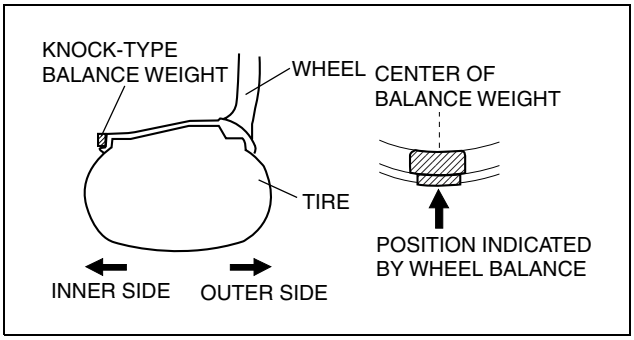
WHEEL AND TIRES

Knock-type Balance Weight (Inner)

1. Measure the amount of unbalance with a wheel balancer.
2. Attach a weight corresponding to the measured weight value on the position (inner) indicated by the wheel balancer.

Caution

- **Do not attach three or more balance weights.**
- **One balance weight must not exceed 60g {2.12 oz}, and a total of two balance weights must not exceed 100g {3.53 oz}.**



am6uuw0000146

Remaining Amount of Unbalance Confirmation

1. After installing the outer and inner balance weights, operate the wheel balancer again.
2. Confirm that the remaining unbalance does not exceed the following on either side.
   - If the remaining unbalance exceeds the specifications, adjust the wheel balance again.

Specifications

	Outer (Adhesive-type)	Inner (Knock-type)
17 inch wheel	13 g {0.46 oz}	8 g {0.28 oz}
19 inch wheel	12 g {0.42 oz}	7 g {0.25 oz}

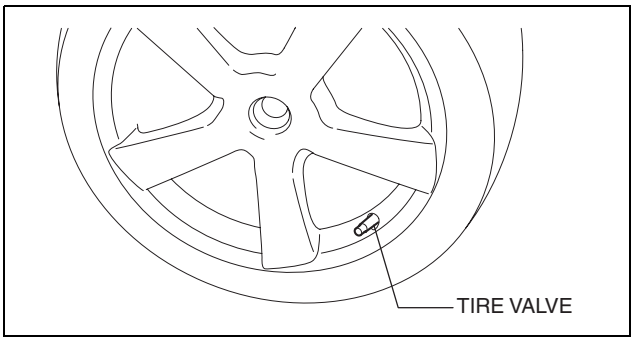
REPAIR AGENT REMOVAL

id021200800500

Caution

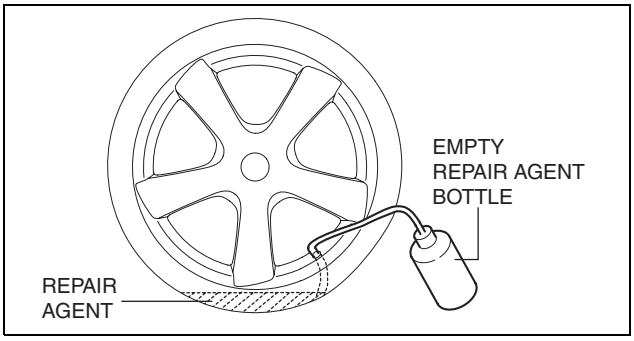
- **Be careful not to spill the repair agent from inside of the tire.**

1. Remove the flat tire from the vehicle, and let the air out of the tire.
2. Cut the tire valve by the root and push the remaining part of the wheel into the tire.



ac5wzw0000213

3. Insert the hose through the valve and into the tire. Stand the tire up so that the hose end sinks into the repair agent.
4. Pump out the repair agent.
5. Repeat the pumping procedure, changing the position of the hose end, until there is no repair agent left in the tire.
6. Remove the tire from the wheel and pick the wheel unit pushed in at Step 2 out.



ac5wzw0000214

WHEEL AND TIRES

7. Wipe off the repair agent remaining on the wheel, wheel unit and tire.

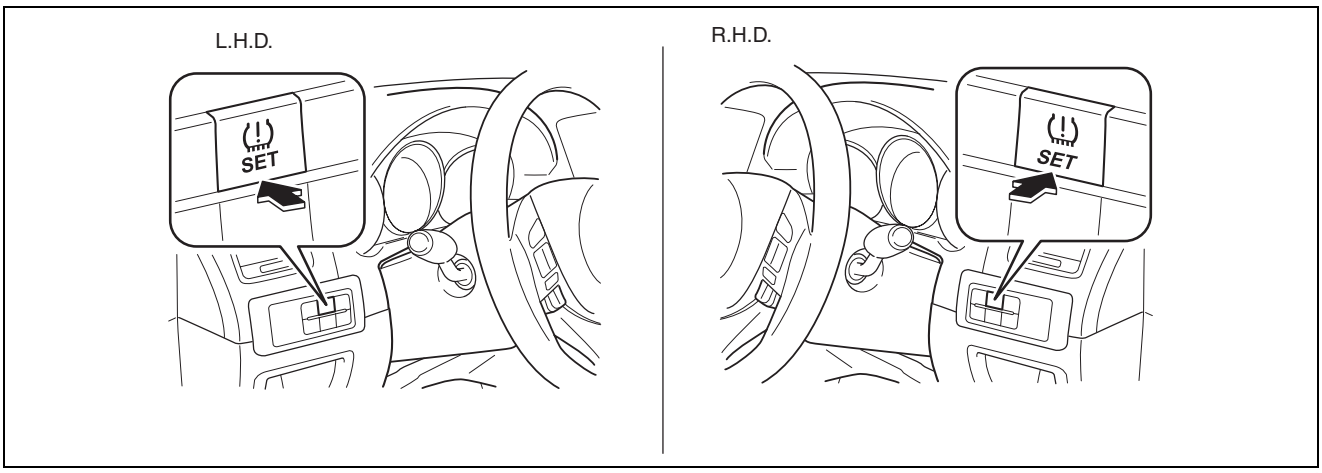
Note
- The expiration date of the repair agent is printed on the repair agent bottle. Do not use the repair agent if has passed the expiration date has expired.
- Dispose of waste repair agent according to local disposal law.
- The repair agent is composed of the following:
  — Deproteinized natural rubber latex
  — Emulsified adhesive resin
  — Propylene glycol
- The tire must be replaced with a new one and clean all tire repair agent off to the wheel.

TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE

id021200204000

- Perform the tire pressure monitoring system initialization when the following operations have been performed:
  — Tire pressures have been adjusted
  — Tires or wheels have been replaced
  — Tires have been rotated
  — DSC HU/CM replaced
  — DSC HU/CM connector disconnected
  — Battery replaced
  — Negative battery cable is disconnected

1. Park the vehicle on safe, level ground.
2. Adjust all four tire pressures to the specification while the tires are cold. (See 02-12-1 WHEEL AND TIRE SPECIFICATION.)
3. Switch the ignition ON (engine off or on).
4. Press and hold the tire pressure monitoring system set switch.



ac5wzw0000254

5. Press and hold the tire pressure monitoring system set switch until the tire pressure monitoring system warning light flashes 1 or 2 times and the indicator alarm sounds 1 time.

Note
- When the tire pressure monitoring system initialization is performed, learning initiates. Learning is completed by driving the vehicle for 20 min.
- While the tire pressure monitoring system is undergoing learning, its primary functions do not operate.

TIRE PRESSURE MONITORING SYSTEM SET SWITCH REMOVAL/INSTALLATION

id021200205000

Note
- The tire pressure monitoring system (TPMS) set switch is integrated with the cluster switch.
- Refer to SWITCH PANEL REMOVAL/INSTALLATION to remove the cluster switch.

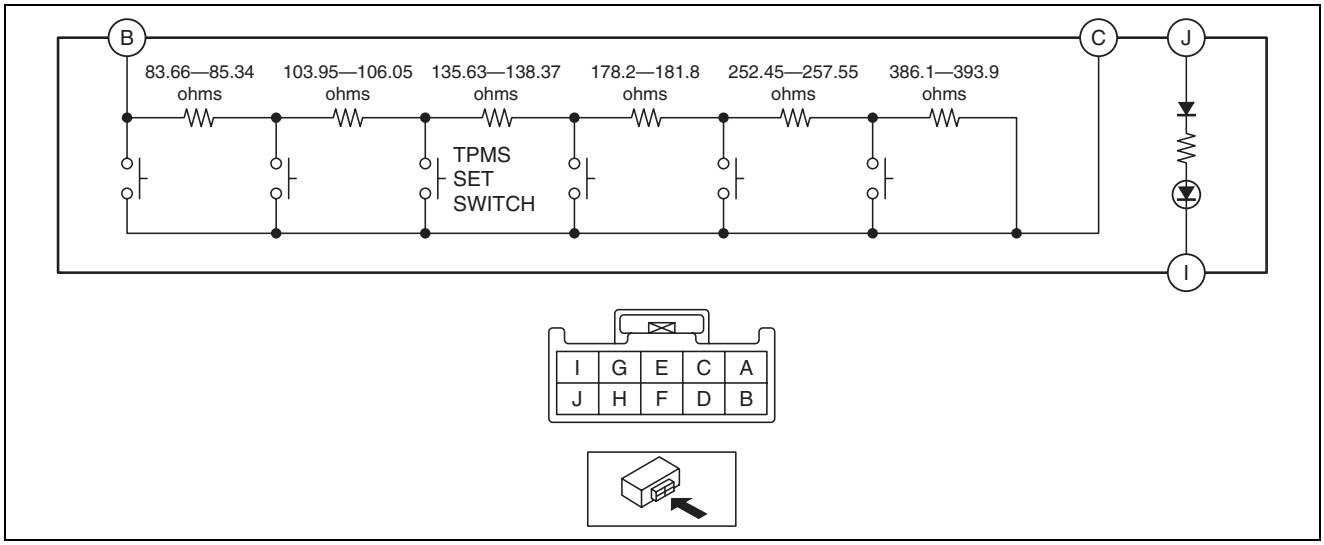
1. Remove the switch panel. (See 09-17-18 SWITCH PANEL REMOVAL/INSTALLATION.)
2. Install in the reverse order of removal.

WHEEL AND TIRES

TIRE PRESSURE MONITORING SYSTEM SET SWITCH INSPECTION

id021200206000

1. Remove the TPMS set switch. (See 02-12-4 TIRE PRESSURE MONITORING SYSTEM SET SWITCH REMOVAL/INSTALLATION.)
2. Verify that the resistance between the TPMS set switch terminals B and C is as indicated in the table.
   - If not as indicated in the table, replace the TPMS set switch.



ac5wzw0000024

TPMS set switch specification

Terminal	Test condition	Resistance (ohms)
B—C	TPMS set switch pressed	187.61—191.39
	All switches released	1139.99—1163.01

3. Apply battery voltage to TPMS set switch terminal J, and connect terminal I to ground.
4. Verify that the LED illuminates.
   - If there is any malfunction, replace the TPMS set switch.

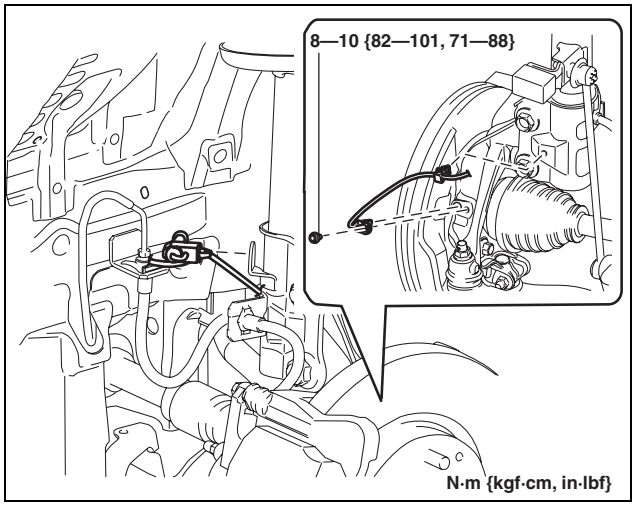
FRONT SHOCK ABSORBER AND COIL SPRING REMOVAL/INSTALLATION

id021300800200

Caution

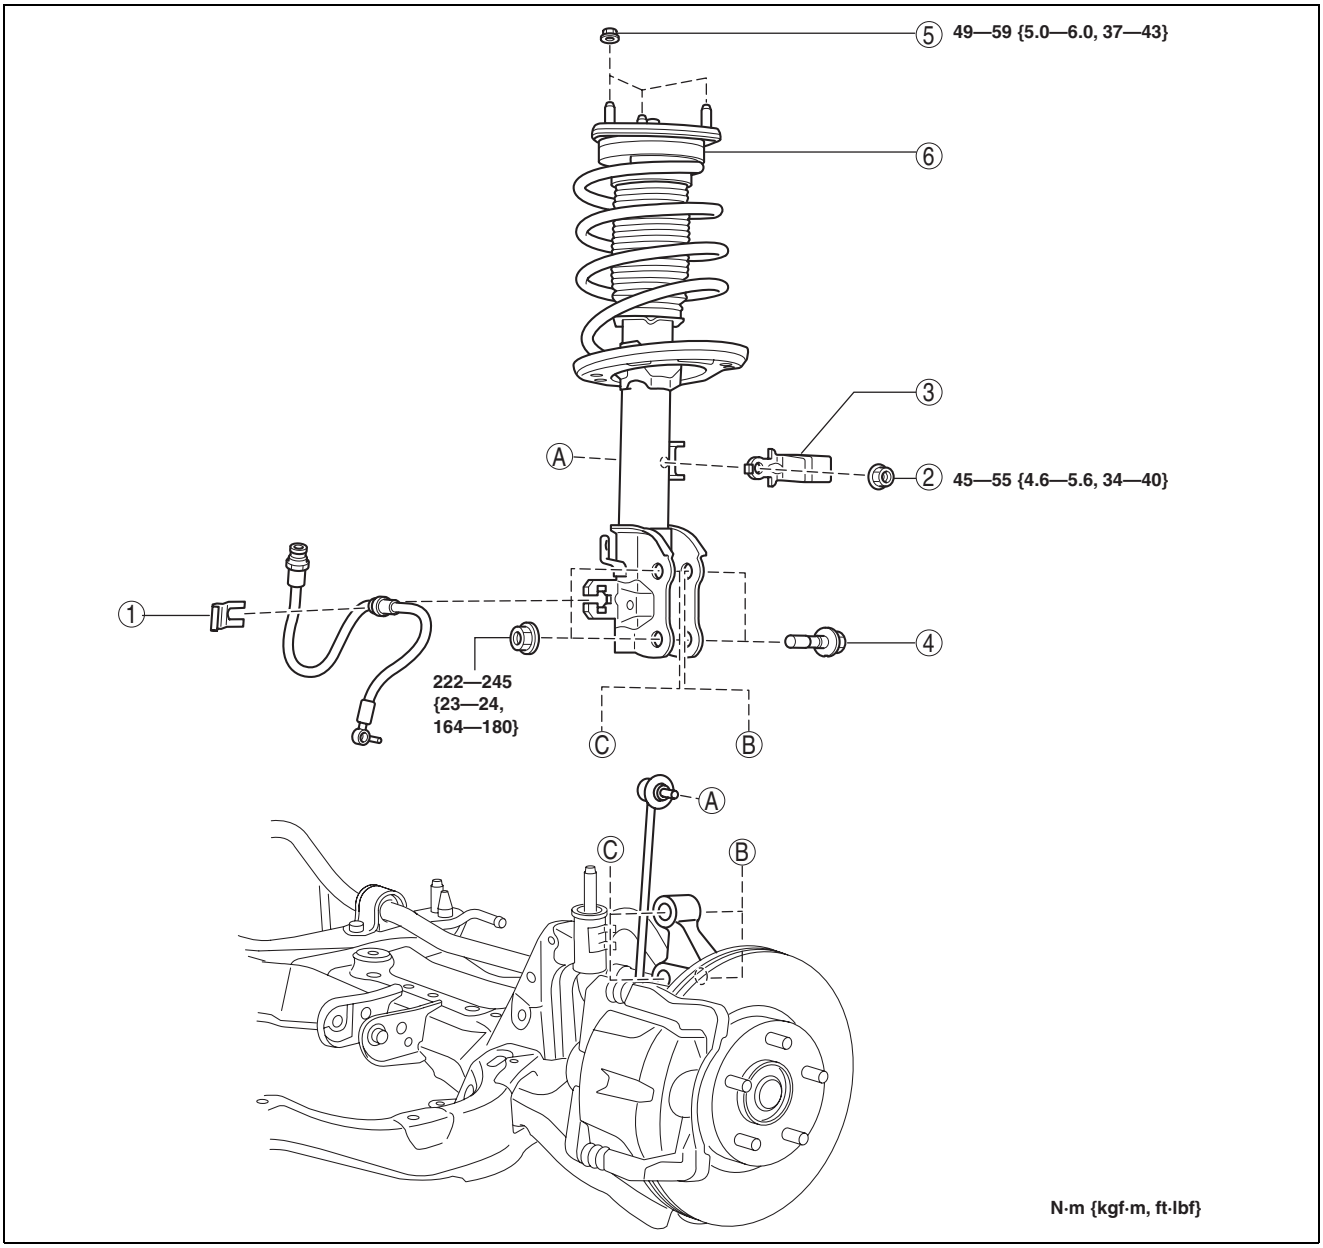
- **Performing the following procedures without first removing the front ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the front ABS wheel-speed sensor wiring harness (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.**

1. Disconnect the front ABS wheel-speed sensor wiring harness installed to the steering knuckle and set it aside. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Inspect the wheel alignment. (See 02-11-1 FRONT WHEEL ALIGNMENT.)



ac5uuw00000113

FRONT SUSPENSION



ac5uuw00000114

1	Front brake hose clip (See 04-11-30 BRAKE HOSE (FRONT) REMOVAL/ INSTALLATION.)
2	Front stabilizer control link upper nut (See 02-13-10 FRONT STABILIZER REMOVAL/ INSTALLATION.)

3	Dynamic damper (if equipped)
4	Front shock absorber lower bolt (See 02-13-3 Front Shock Absorber Lower Bolt Installation Note.)
5	Front shock absorber upper nut
6	Front shock absorber and coil spring

Front Shock Absorber Lower Bolt Installation Note

1. Install the steering knuckle to the front shock absorber, insert the bolts from the direction shown as follows, then tighten them to the specified torque.
   - — Vehicle right side: Insert the bolts from the vehicle front.
   - — Vehicle left side: Insert the bolts from the vehicle rear.

FRONT SUSPENSION

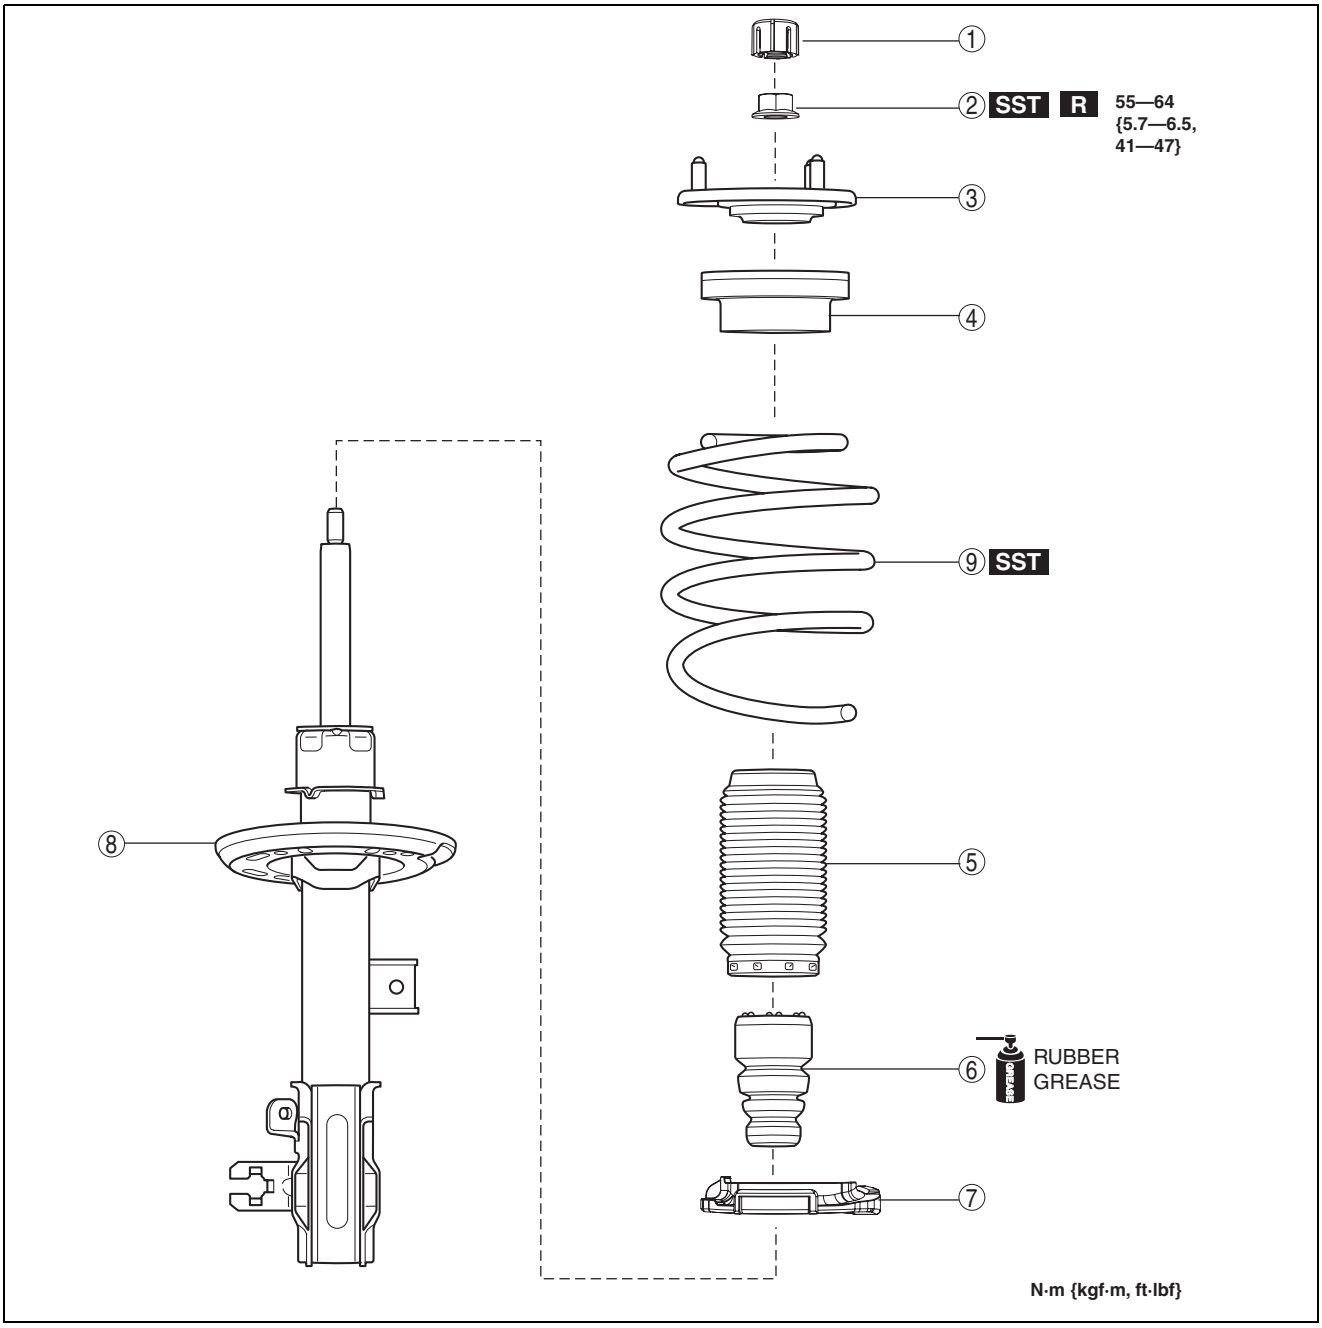
FRONT SHOCK ABSORBER AND COIL SPRING DISASSEMBLY/ASSEMBLY

id021300121900

Warning

- **Removing/installing the front shock absorber and coil spring is dangerous. The front shock absorber and coil spring could fly off and cause serious injury or death, and damage the vehicle.**

1. Remove the front shock absorber and coil spring. (See 02-13-2 FRONT SHOCK ABSORBER AND COIL SPRING REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.



ac5wzw0000272

FRONT SUSPENSION

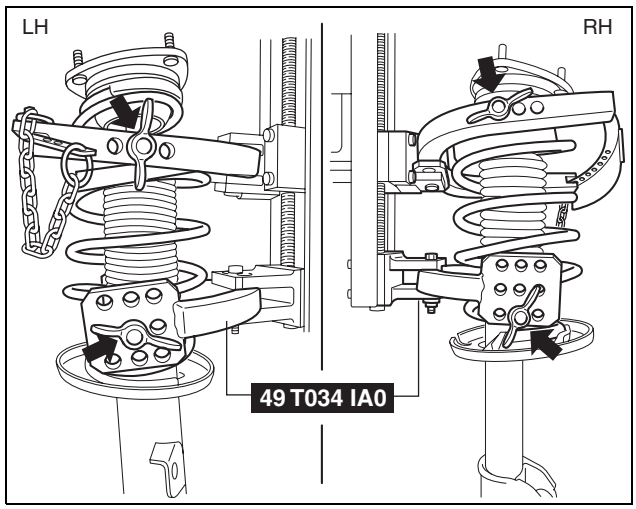
Piston Rod Nut Removal Note

Warning
- **Before removing the piston rod nut, secure the front shock absorber and coil spring in the SST. Otherwise, the coil spring could fly off under tremendous pressure and cause serious injury or death, or damage to vehicle parts.**

1. Install the front shock absorber and coil spring to the **SST** according to the following procedures.

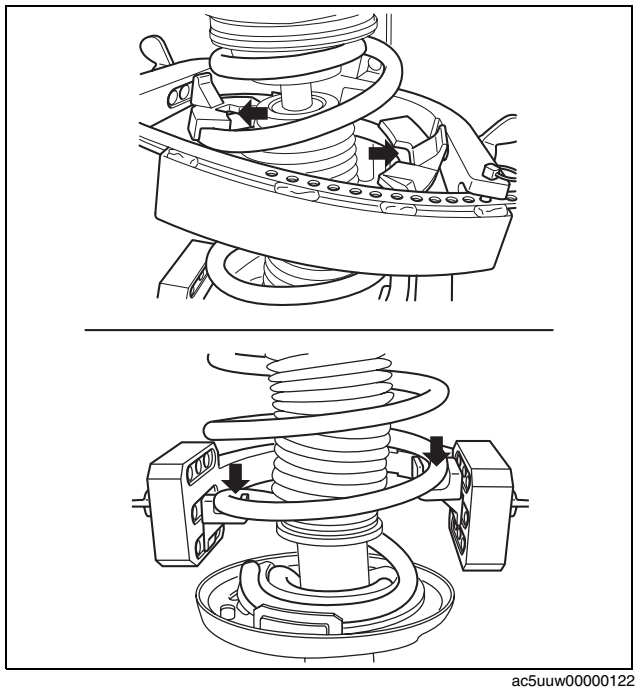
Note
- Install the **SST** using a clean rag to prevent the coil spring from being scratched.

(1) Set the **SST** attachments (tabs) to the positions shown in the figure.



ac5wzw0000272

(2) Install the front shock absorber and coil spring to the **SST** so that the coil spring is set to the position shown in the figure.
2. Compress the coil spring using the **SST**.
3. Remove the piston rod nut.

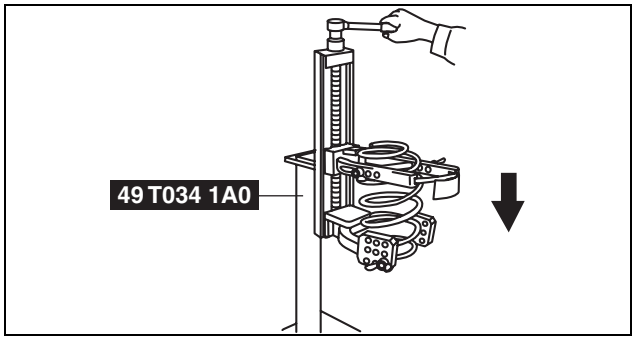


ac5uuw00000122

FRONT SUSPENSION

Coil Spring Installation Note

1. Compress the coil spring using the **SST**.
2. Install the front shock absorber so that the lower end of the coil spring is seated on the step of the lower spring seat.

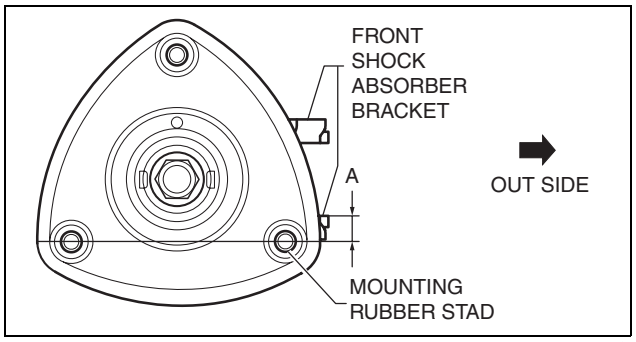


ac5uuw00000123

Mounting Rubber Installation Note

1. Install the mounting rubber so that the mounting rubber stud and the front shock absorber bracket are in position A shown in the following figure.

   A: 0°±5°



ac5wzw0000246

FRONT SHOCK ABSORBER INSPECTION

id021300800800

1. Remove the front shock absorber. (See 02-13-2 FRONT SHOCK ABSORBER AND COIL SPRING REMOVAL/INSTALLATION.) (See 02-13-4 FRONT SHOCK ABSORBER AND COIL SPRING DISASSEMBLY/ASSEMBLY.)
2. Inspect for damage and oil leakage.
3. Compress and extend the shock absorber piston rod **at least three times** at a steady rate. **From the fourth** compression stroke, verify that the operational force does not change and that there is no unusual noise.
   - If there is any malfunction, replace the front shock absorber.

FRONT SHOCK ABSORBER DISPOSAL

id021300800900

Warning

- **Whenever drilling into a front shock absorber, wear protective eye wear. The gas in the front shock absorber is pressurized, and could spray metal chips into the eyes and face when drilling.**

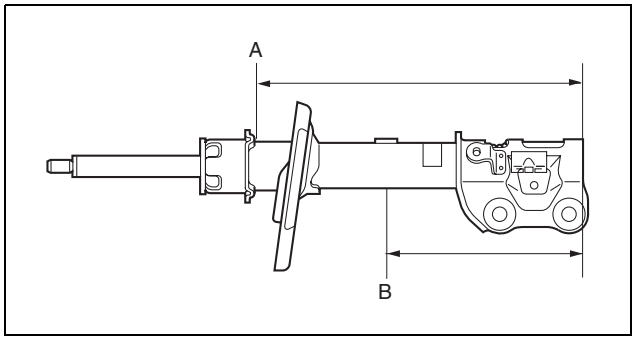
1. Place the shock absorber on a level surface or with the piston pointing downwards.
2. Drill a **2—3 mm {0.08—0.11 in}** hole at point A shown in the figure so the gas can escape.

   Point A: 340 mm {13.4 in}

3. Drill a **2—3 mm {0.08—0.11 in}** hole at the point B shown in the figure to drain the oil.

   Point B: 145 mm {5.71 in}

4. Turn the hole made in Step 3 downwards and drain the oil by pumping the piston rod up and down several times.
5. Cut off the bottom end of the front shock absorber.
6. Dispose of waste oil according to local waste disposal laws.



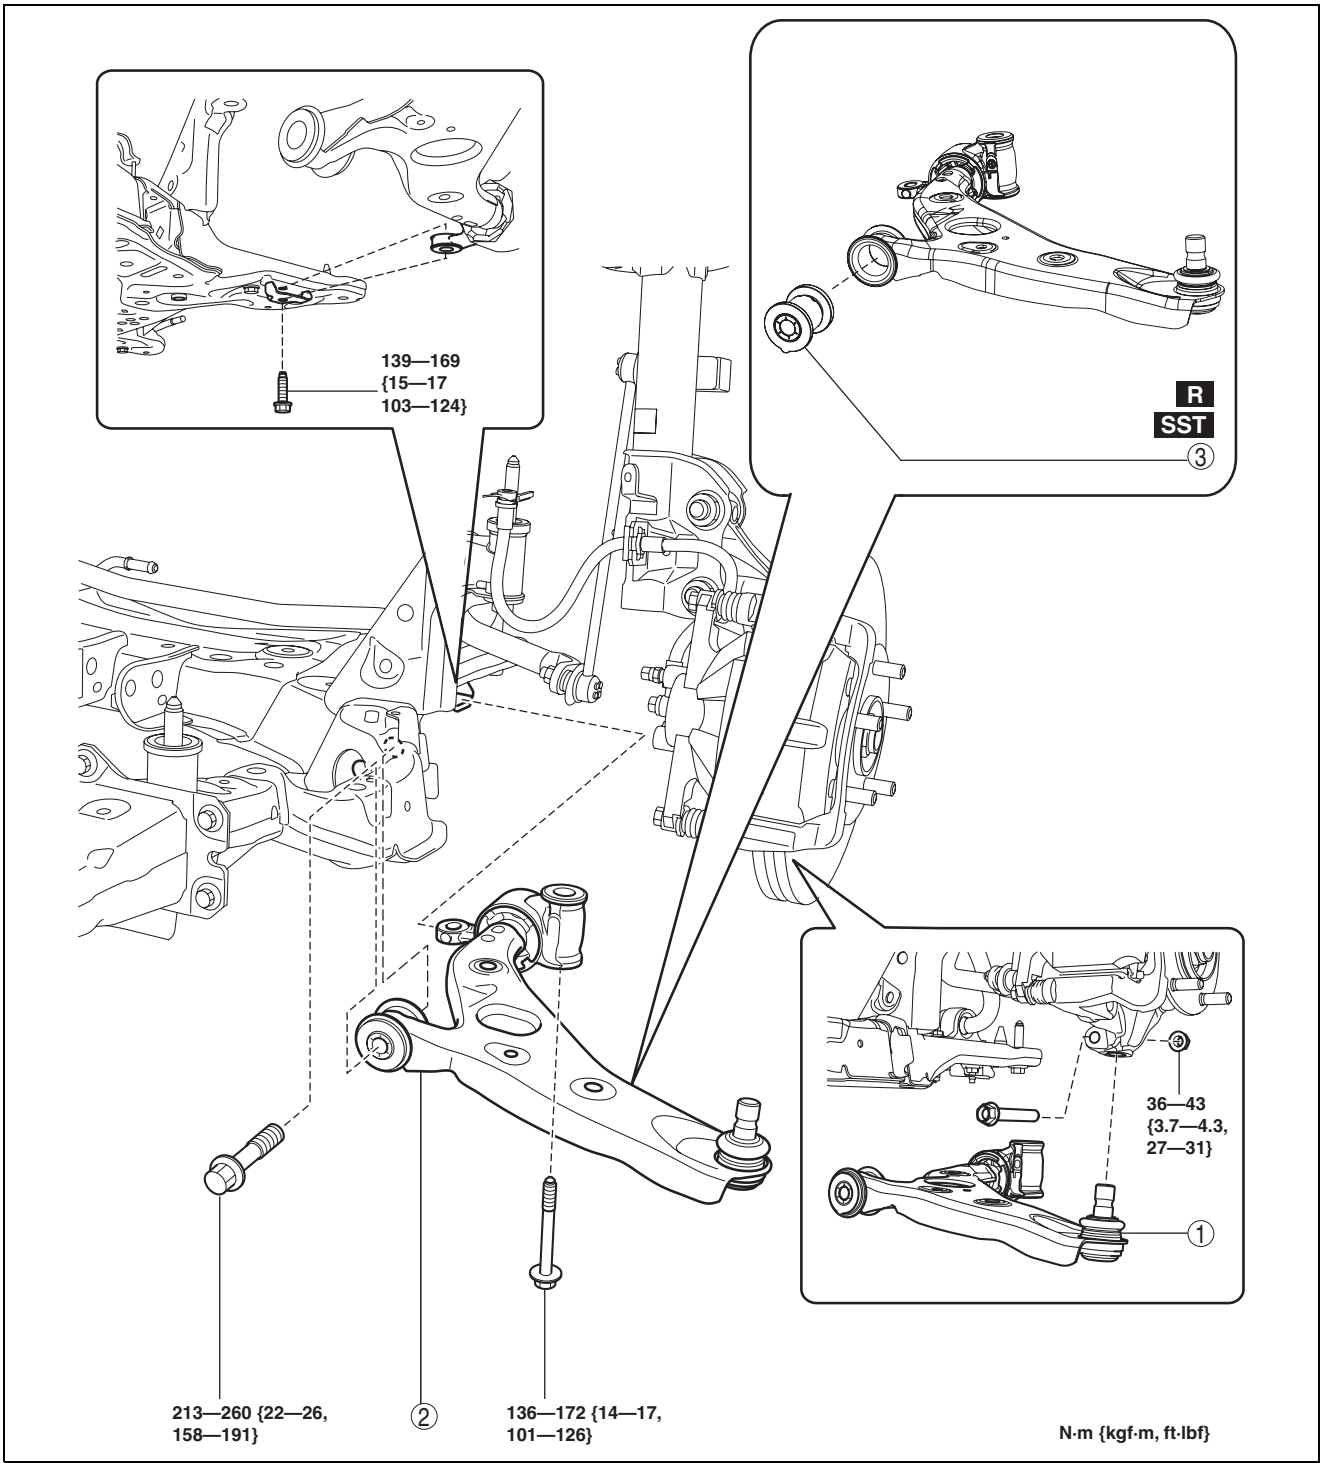
ac5wzw0000242

FRONT SUSPENSION

FRONT LOWER ARM REMOVAL/INSTALLATION

id021300800600

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Inspect the wheel alignment and adjust it if necessary. (See 02-11-1 FRONT WHEEL ALIGNMENT.)



ac5uuw00000119

1	Front lower arm ball joint
2	Front lower arm

3	Front lower arm bushing (See 02-13-8 Front Lower Arm Bushing Removal Note.) (See 02-13-9 Front Lower Arm Bushing Installation Note.)

FRONT SUSPENSION

Front Lower Arm Bushing Removal Note

1. Cut off the entire circumference of the knob on front lower arm bushing rear side using a hacksaw as shown in the figure.

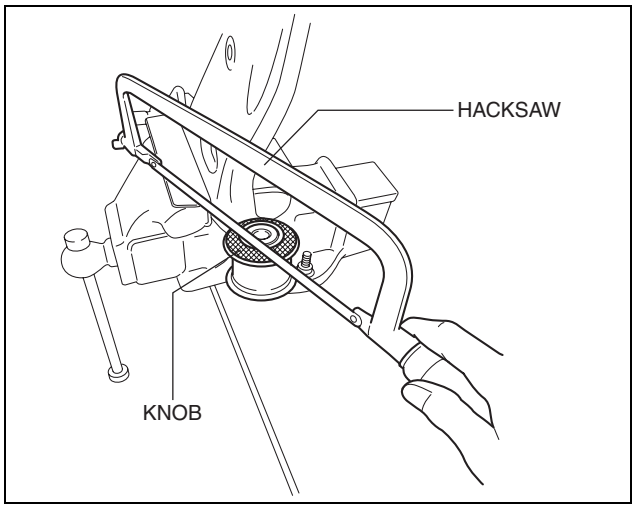
Caution

- **When using a hacksaw to cut off the knob on the rear side of the front lower arm bushing, be careful not to scratch or damage the front lower arm.**

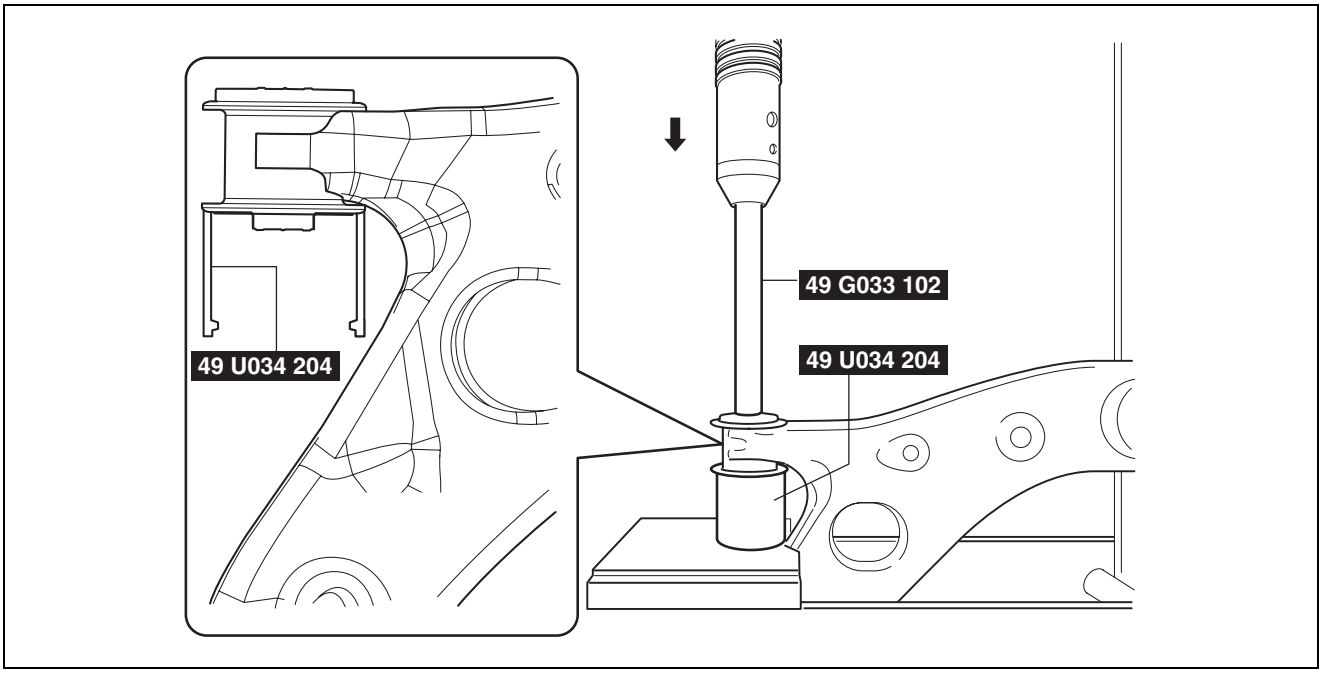
2. Remove the front lower arm bushing using the **SSTs**.

Caution

- **Set the SST (49 U034 204) as shown in the figure and remove the rear lower arm bushing.**



ac5wzw0000231



ac5wzw0000231

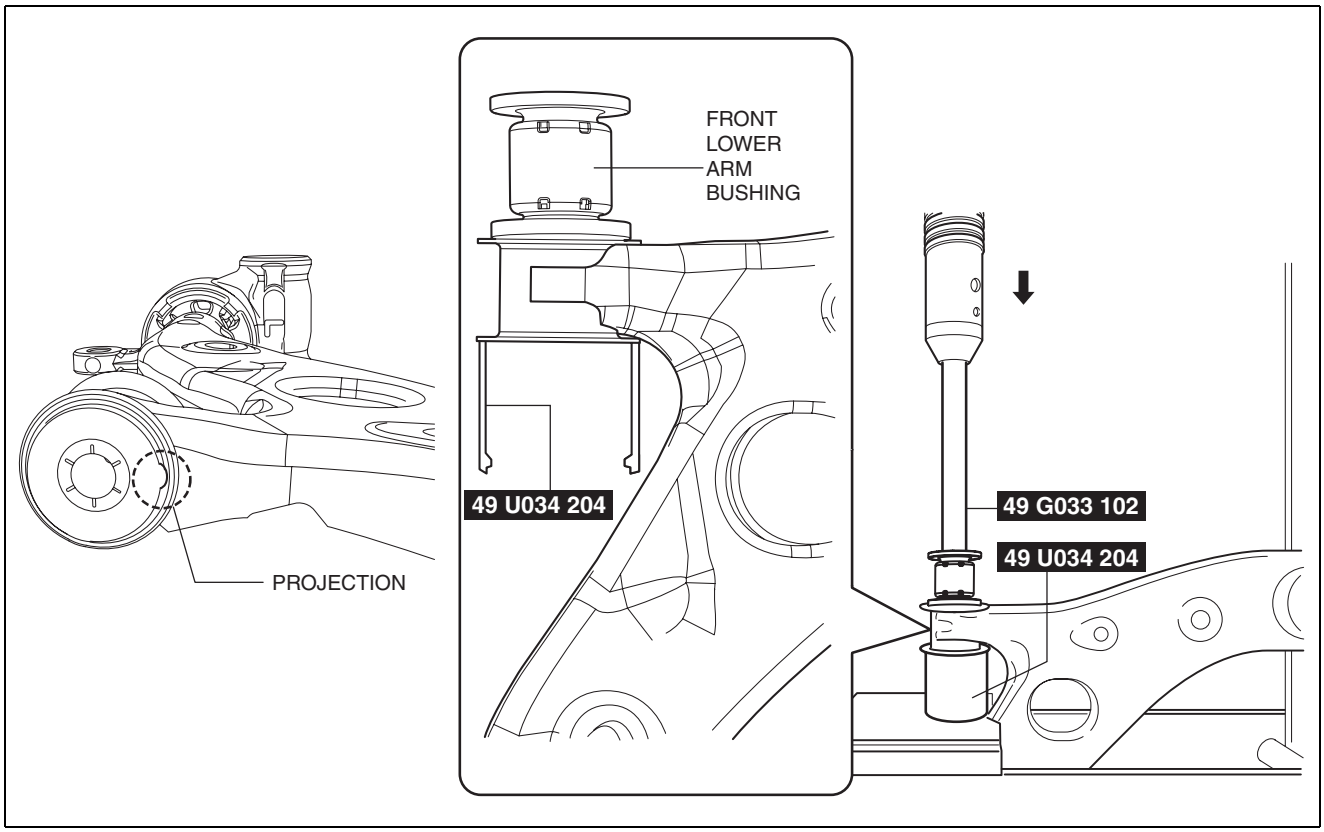
FRONT SUSPENSION

Front Lower Arm Bushing Installation Note

1. Install the front lower arm bushing using the **SSTs**.

Caution

- **Set the SST (49 U034 204) as shown in the figure and remove the rear lower arm bushing.**
- **Install the front lower arm bushing so that the projection shown in the figure is pointing toward the front of the vehicle.**



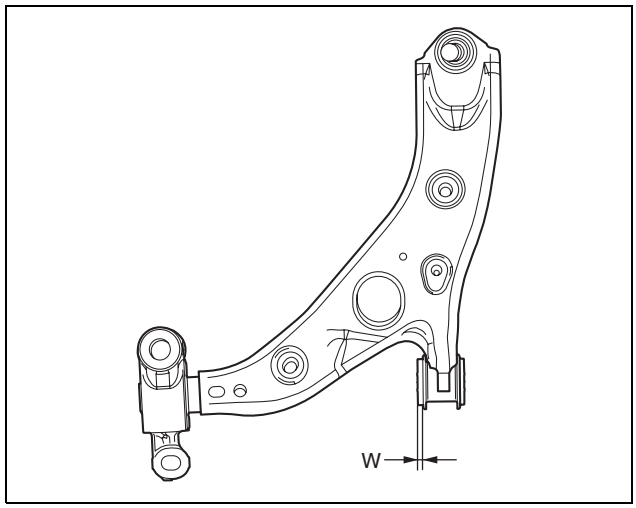
ac5wzw0000232

Note

- Applying soapy water to the front lower arm bushing facilitates installation.
- If soapy water gets in the inner pipe of the front lower arm bushing, always wipe it off using a cloth.

2. After installing the front lower arm bushing, verify that it is installed to the position shown in the figure.

W: 5.8±0.8 mm {0.23±0.03 in}



ac5wzw0000245

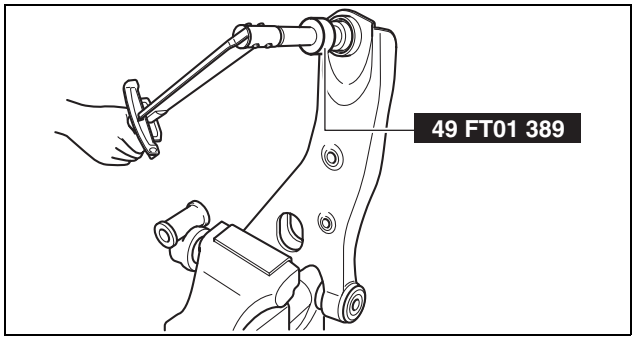
FRONT SUSPENSION

FRONT LOWER ARM INSPECTION

id021300800700

1. Remove the front lower arm. (See 02-13-7 FRONT LOWER ARM REMOVAL/INSTALLATION.)
2. Inspect the front lower arm for bending or damage, and the front lower arm ball joint for excessive looseness.
   - If there is any malfunction, replace the front lower arm.
3. Rotate the front lower arm ball joint stud **5 times**. Install the **SST** to the front lower arm ball joint stud, measure the rotational,starting torque using a torque wrench.
   - If not within the specification, replace the front lower arm.

Front lower arm ball joint stud starting torque
18 N·m {1.8 kgf·m,13 ft·lbf} max.
Front lower arm ball joint stud rotational torque
3.2 N·m {33 kgf·cm,28 in·lbf} max.



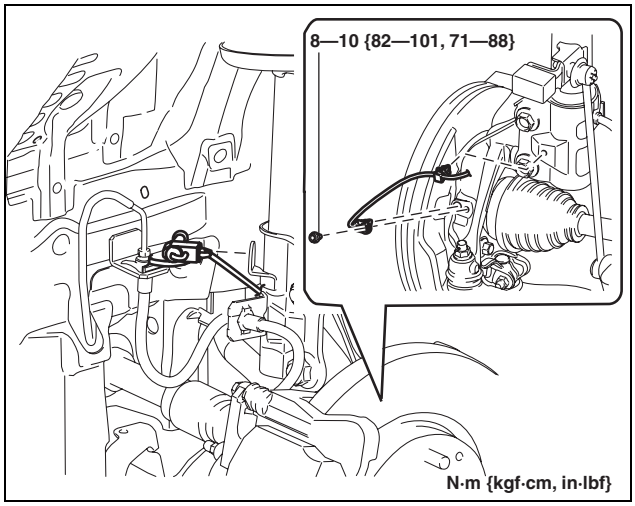
ac5uuw00000125

FRONT STABILIZER REMOVAL/INSTALLATION

id021300800400

Caution
- **Performing the following procedures without first removing the front ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the front ABS wheel-speed sensor wiring harness (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.**
- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**

1. Remove the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
2. Disconnect the intermediate shaft from the steering gear and linkage. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
3. Disconnect the front ABS wheel-speed sensor wiring harness installed to the steering knuckle and set it aside. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.
6. Inspect the wheel alignment and adjust it if necessary. (See 02-11-1 FRONT WHEEL ALIGNMENT.)



ac5uuw00000127

FRONT SUSPENSION

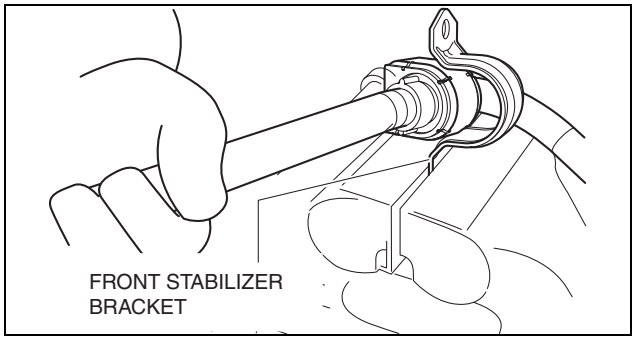
4	Front stabilizer bracket (See 02-13-12 Front Stabilizer Bushing, Front Stabilizer Bracket Installation Note.)

5	Front stabilizer bushing (See 02-13-12 Front Stabilizer Bracket Removal Note.) (See 02-13-12 Front Stabilizer Bushing, Front Stabilizer Bracket Installation Note.)
6	Front stabilizer (See 02-13-12 Front Stabilizer Bushing, Front Stabilizer Bracket Installation Note.)

FRONT SUSPENSION

Front Stabilizer Bracket Removal Note

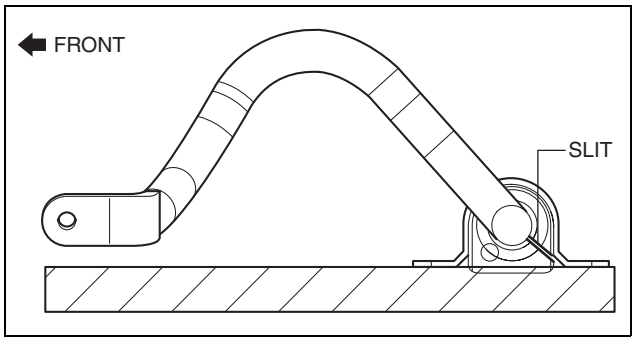
1. Secure the front stabilizer bracket flange using a vise.



ac5uuw00000902

Front Stabilizer Bushing, Front Stabilizer Bracket Installation Note

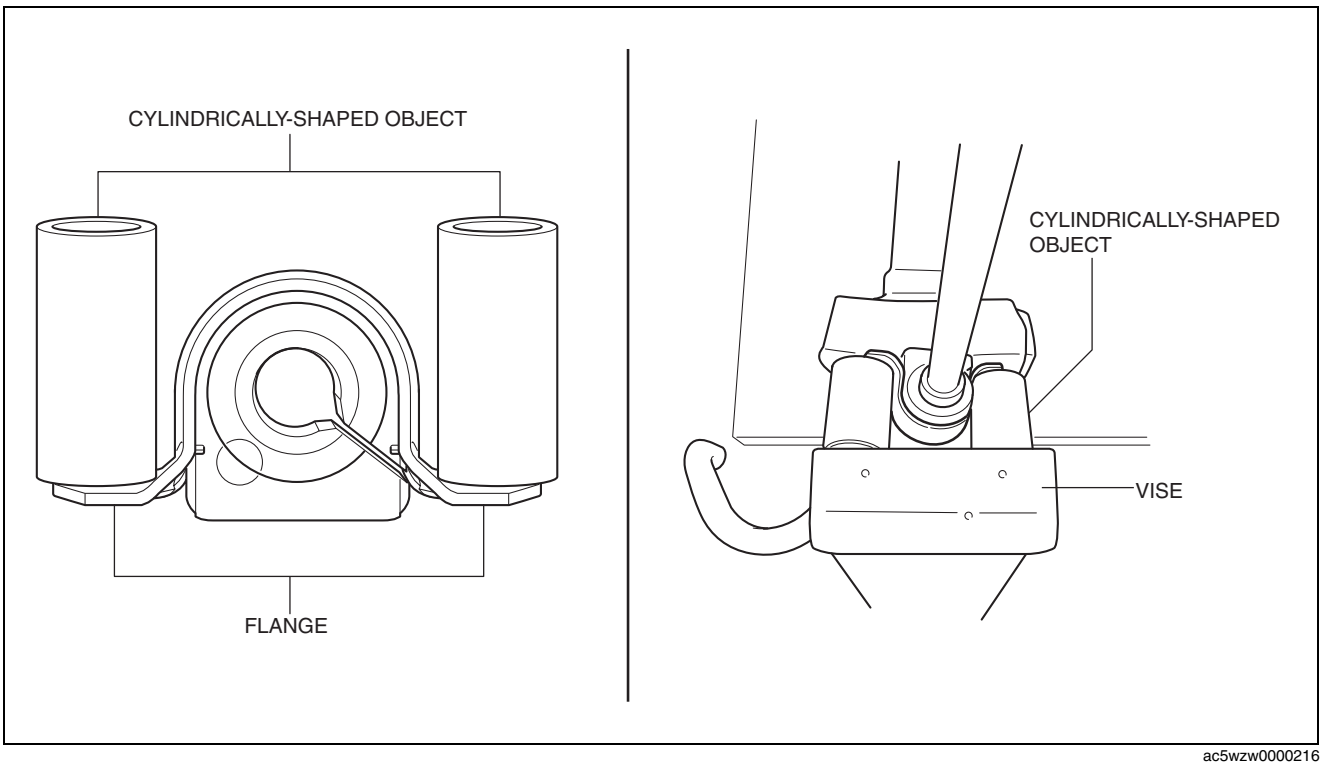
1. Install the front stabilizer bushing to the front stabilizer with its slit positioned rearward of the vehicle.
2. Install the front stabilizer bracket to the front stabilizer bushing by hand using the following procedure.
3. If the front stabilizer bracket cannot be installed by hand, install it using a vise.



ac5uuw00000903

Caution

- **If the front stabilizer bracket is installed using a vise, it could be deformed.**
- **Set a cylindrically-shaped object as shown in the figure so that pressure is applied to the front stabilizer bracket flange, and install the front stabilizer bracket to the front stabilizer bushing.**



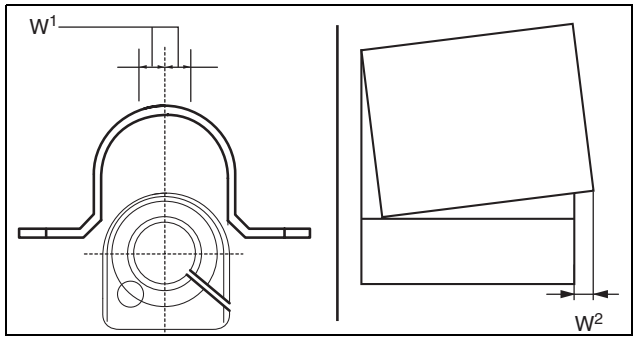
ac5wzw0000216

FRONT SUSPENSION

4. During front stabilizer bracket installation, keep the deviation in the positions of the front stabilizer bracket and the front stabilizer bushing within the range shown in the figure.

   W^1: 0.5 mm {0.21 in} max.

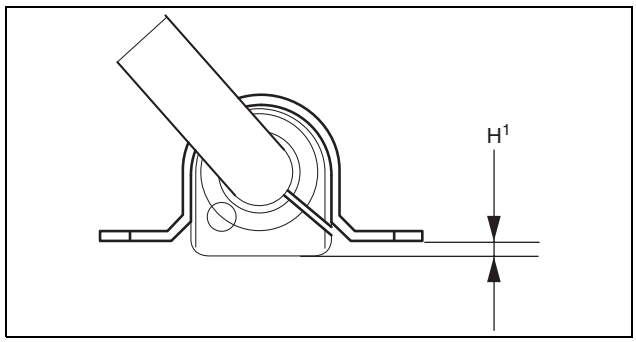
   W^2: 2 mm {0.08 in} max.



ac5wzw0000272

5. After installing the front stabilizer bracket, verify that the positions of the front stabilizer bracket and the front stabilizer bushing are within the range shown in the figure.

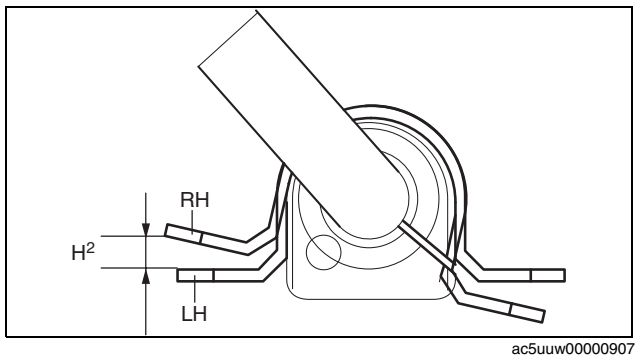
   H^1: 13 mm {0.51 in} max.



ac5uuw00000906

6. After installing the front stabilizer bracket, verify that the right and left-side positions of the front stabilizer bracket are within the range shown in the figure.

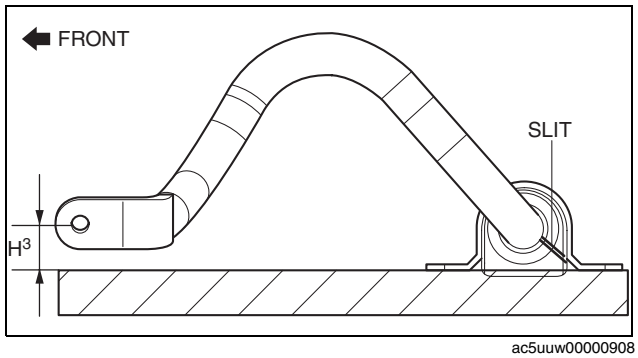
   H^2: 6 mm {0.2 in} max.



ac5uuw00000907

7. Place the front stabilizer component on a level workbench, and verify that it is within the range shown in the figure.

   H^3: 32.1—42.1 mm {1.27—1.65 in}



ac5uuw00000908

FRONT SUSPENSION

Front Stabilizer, Front Stabilizer Bushing and Front Stabilizer Bracket Installation Note

1. Temporarily tighten bolts A and B shown in the figure.
2. Tighten bolt A.

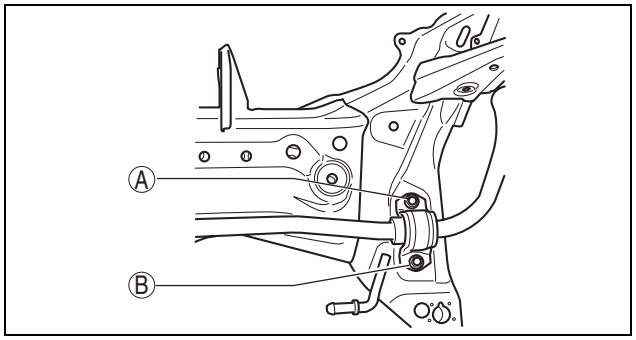
   Tightening torque
   25—29 N·m {2.6—2.9kgf·m, 19—21 ft·lbf}

3. Tighten bolt B.

   Tightening torque
   25—29 N·m {2.6—2.9kgf·m, 19—21 ft·lbf}

4. Tighten bolt A.

   Tightening torque
   25—29 N·m {2.6—2.9kgf·m, 19—21 ft·lbf}



ac5uuw00000117

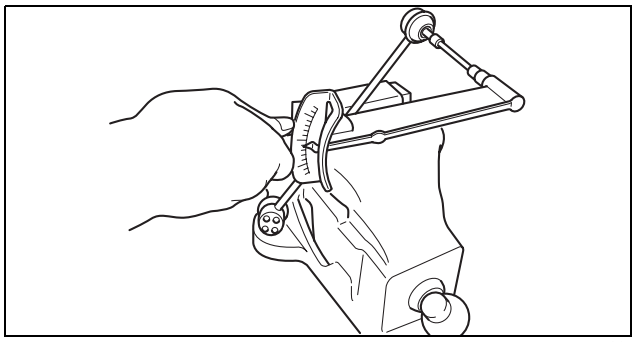
FRONT STABILIZER CONTROL LINK INSPECTION

id021300800500

1. Remove the front stabilizer control link. (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)
2. Inspect for bending or damage. If there is any malfunction, replace the front stabilizer control link.
3. Rotate the front stabilizer control link ball joint stud **10 times** and shake it side to side **10 times**.
4. Measure the front stabilizer control link ball joint rotational torque using an allen wrench and a torque wrench.

   Front stabilizer control link ball joint starting torque
   0.8—3.5 N·m {8.2—35 kgf·cm, 7.1—30 in·lbf}

   - If not within the specification, replace the front stabilizer control link.
   - Even when within the specification, if there is excessive play in the front stabilizer control link ball joint, replace the front stabilizer control link.



ac5uuw00000118

FRONT SUSPENSION

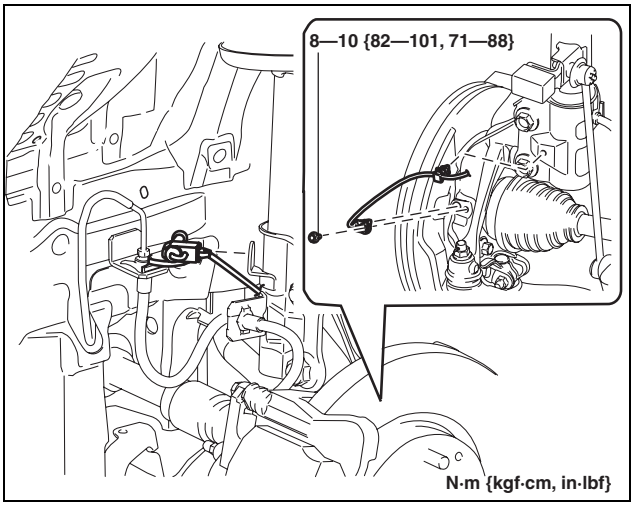
FRONT CROSSMEMBER REMOVAL/INSTALLATION

id021300801000

Caution

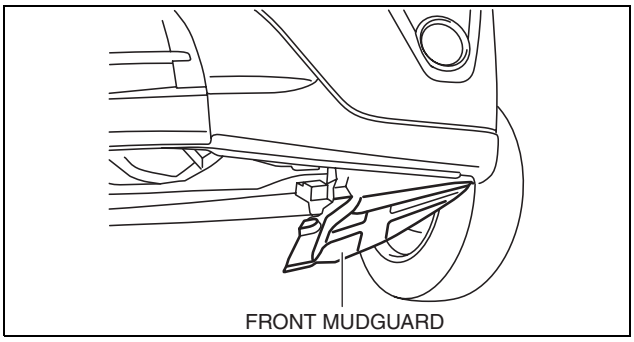
- **Performing the following procedures without first removing the front ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, disconnect the front ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor will not be pulled by mistake while servicing the vehicle.**
- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**

1. Remove the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
2. Disconnect the intermediate shaft from the steering gear and linkage. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
3. Disconnect the front ABS wheel-speed sensor wiring harness installed to the steering knuckle and set it aside. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
4. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
5. Remove the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
6. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)



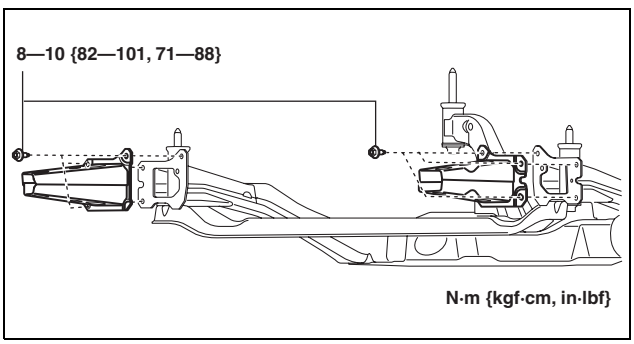
ac5uuw00000127

7. Set the front mudguard away from the front crossmember and front bumper. (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)



ac5uuw00000358

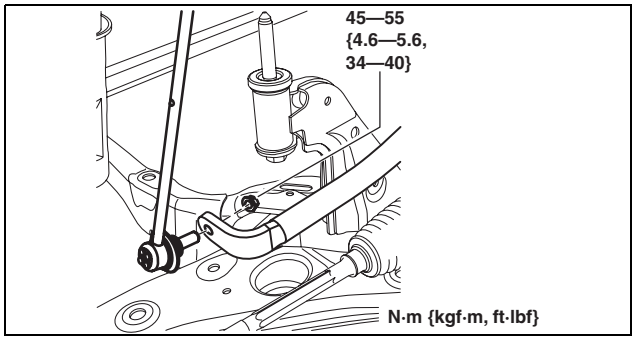
8. Disconnect the front crossmember extension.



ac5uuw00000131

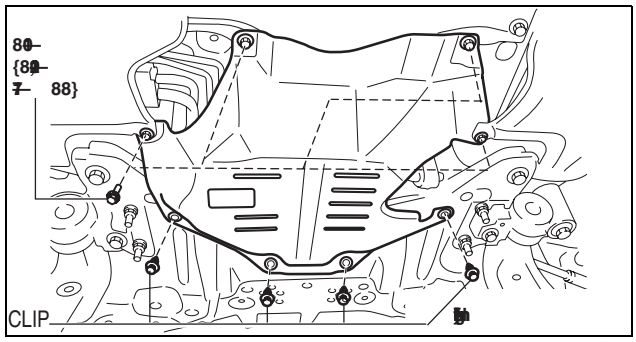
FRONT SUSPENSION

9. Disconnect the front stabilizer control link (front stabilizer side). (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)
10. Remove the front crossmember insulator.



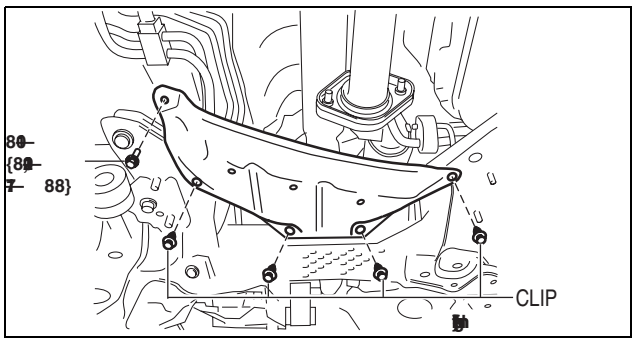
ac5uuw00000128

2WD



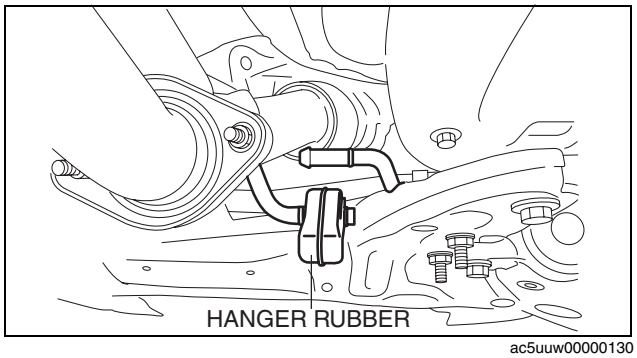
ac5uuw00001624

4WD



ac5uuw00000129

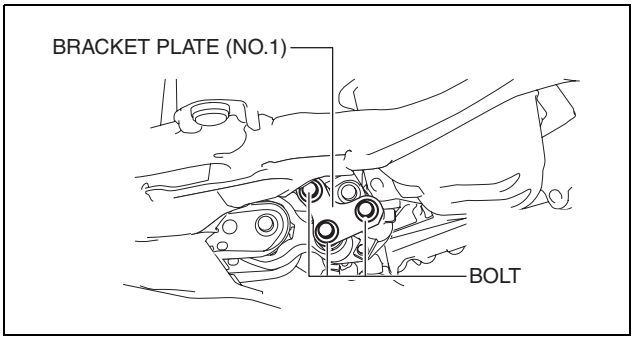
11. Disconnect the hanger rubber from the front crossmember and set it aside.



ac5uuw00000130

FRONT SUSPENSION

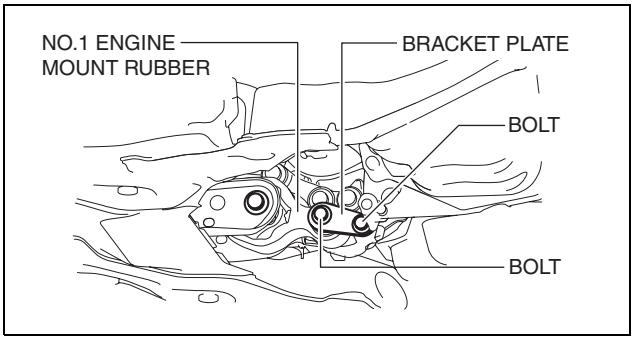
12. Remove the bracket plate (No.1). (2WD)



ac5wzw0000286

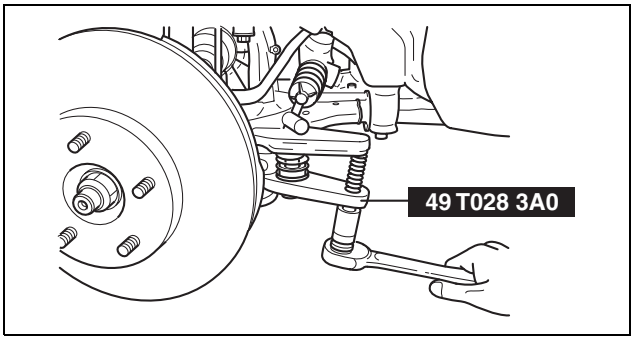
13. Remove the bracket plate. (4WD)
14. Remove the tie-rod end locknut.

Tightening torque
47—59 N·m {4.8—6.0 kgf·m, 35—43 ft·lbf}



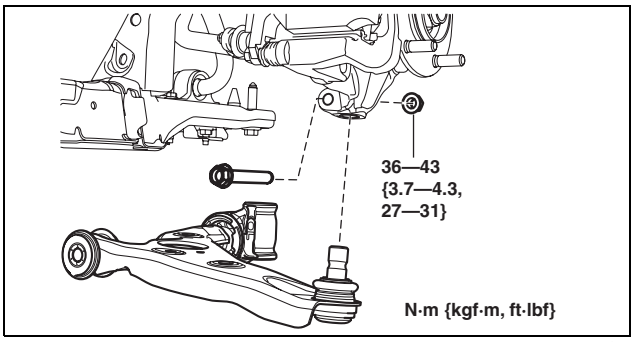
ac5wzw0000286

15. Detach the tie-rod end from the steering knuckle using the **SST**.



ac5uuw00000134

16. Disconnect the front lower arm ball joint.
17. Remove in the order indicated in the table.
18. Install in the reverse order of removal.
19. Inspect the wheel alignment and adjust it if necessary. (See 02-11-1 FRONT WHEEL ALIGNMENT.)



ac5uuw00000135

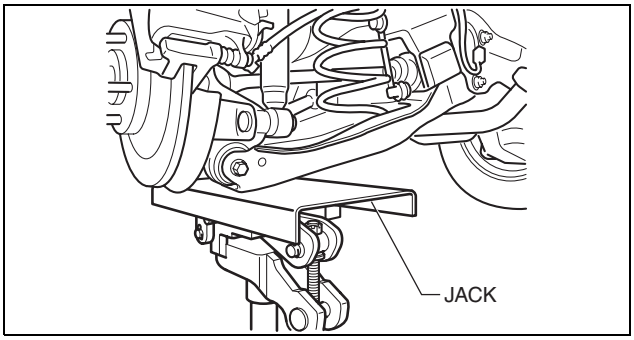
2	Rear shock absorber lower bolt
3	Rear shock absorber

REAR SUSPENSION

Rear Shock Absorber Upper Nut Installation Note

1. Lift up the rear lower arm using a jack and install the rear shock absorber upper nuts.



ac5wzw0000285

REAR SHOCK ABSORBER INSPECTION

id021400801400

1. Remove the rear shock absorber. (See 02-14-4 REAR SHOCK ABSORBER REMOVAL/INSTALLATION.)
2. Inspect for damage and oil leakage.
3. Compress and extend the shock piston at least three times. Verify that the operational force does not change and that there is no unusual noise.
   - If not as specified, replace the rear shock absorber.

REAR SHOCK ABSORBER DISPOSAL

id021400801500

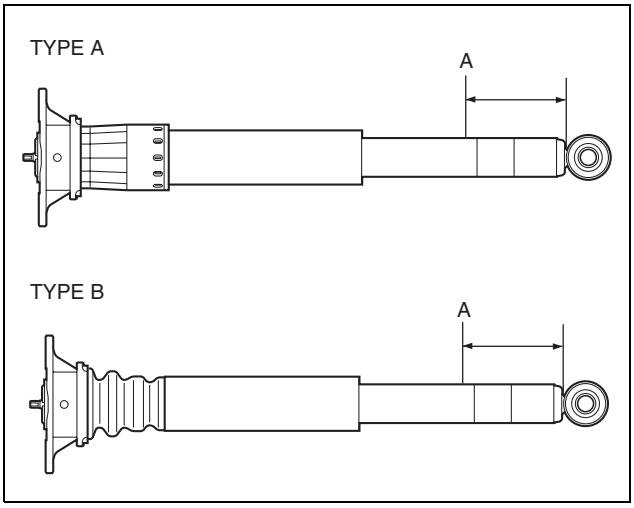
Warning

- **Whenever drilling into a rear shock absorber, wear protective eye wear. The gas in the rear shock absorber is pressurized, and could spray metal chips into the eyes and face when drilling.**

1. Clamp a rear shock absorber on a flat surface or with the piston pointing downwards.
2. Drill a **2—3 mm {0.08—0.11 in}** hole at a point A from the bottom of the tube, so that the gas can escape.

   Point A: 40—50 mm {1.6—1.8 in}

3. Turn the hole downwards.
4. The oil can be collected by moving the piston rod several times up and down and cutting the tube at the end.
5. Dispose of waste oil according to the waste disposal law.



ac5wzw0000242

REAR SUSPENSION

REAR COIL SPRING REMOVAL/INSTALLATION

id021400800700

Warning

- **Be careful not to allow the coil spring to fly off when removing/installing the coil spring. Otherwise, the coil spring could fly off and cause serious injure or death, or damage to the vehicle.**

1. When working on the left side of the vehicle, disconnect the auto leveling sensor link. (With auto leveling sensor) (See 09-18-79 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Inspect the wheel alignment and adjust it if necessary. (See 02-11-3 REAR WHEEL ALIGNMENT.)

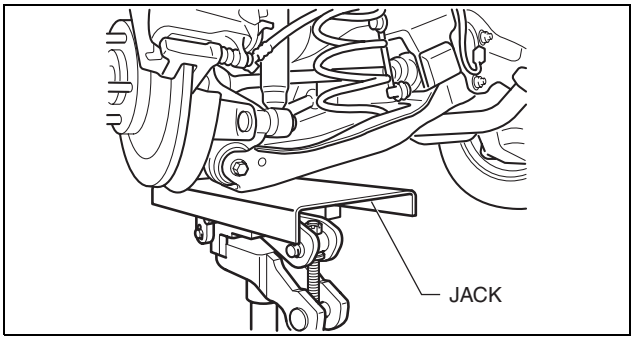
4	Rear lower arm inner nut
5	Rear lower arm

Rear Lower Arm Outer Bolt Removal Note

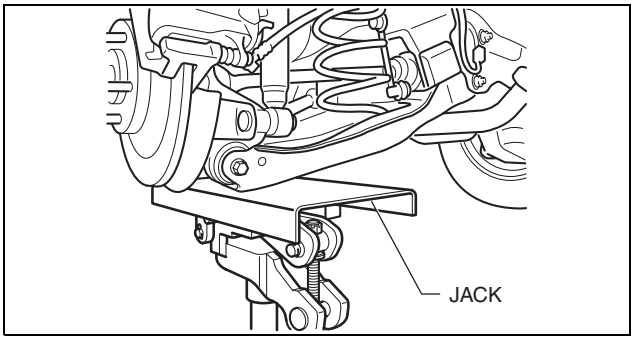
1. Support the rear lower arm using a jack.
2. Remove the rear lower arm outer bolt.



ac5wzw0000286

Rear Lower Arm Outer Bolt Installation Note

1. Position the jack under the rear lower arm and jack up slowly.
2. Align the upper end of the rear coil spring with the step of the upper spring seat rubber.
3. Align the lower end of the rear coil spring with the step of the lower spring seat rubber.
4. Install the lower arm outer bolt.



ac5wzw0000286

REAR SUSPENSION

REAR UPPER ARM REMOVAL/INSTALLATION [2WD]

id0214008008a1

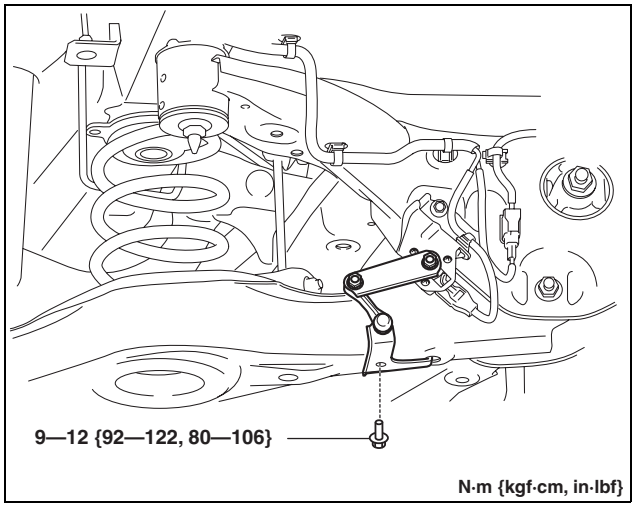
Caution

- **Performing the following procedures without first removing the rear ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, disconnect the rear ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor will not be pulled by mistake while servicing the vehicle.**

Note

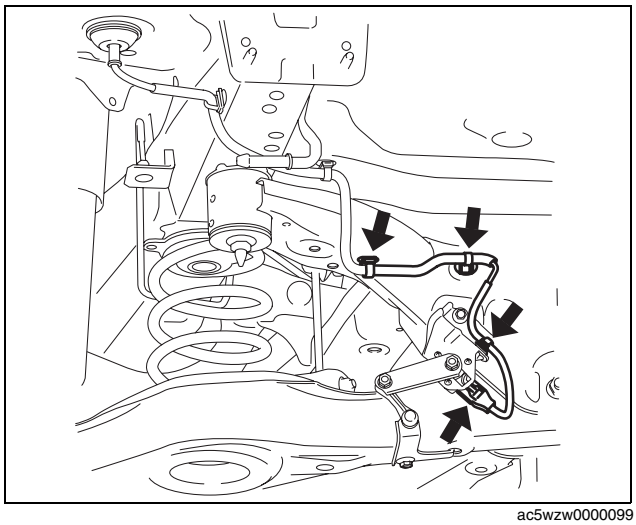
- Mark the position before removing the rear upper arm.
- Align the rear crossmember and rear upper arm markings when installing the rear upper arm.
- Tighten the rear upper arm inner bolt completely before installing the rear crossmember component to the vehicle.

1. Disconnect the auto leveling sensor link. (With auto leveling sensor) (See 09-18-79 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)



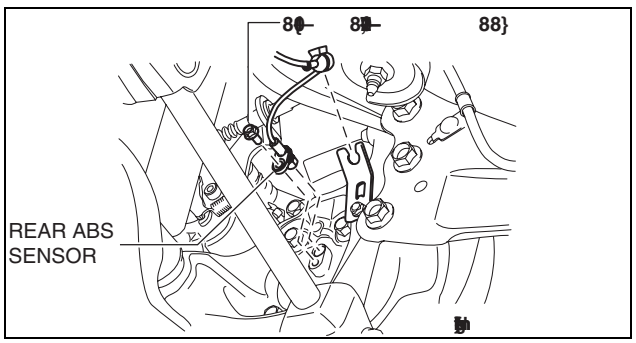
ac5wzw0000099

2. Disconnect the wiring harness clips and connector installed to the rear crossmember. (With auto leveling sensor)



ac5wzw0000099

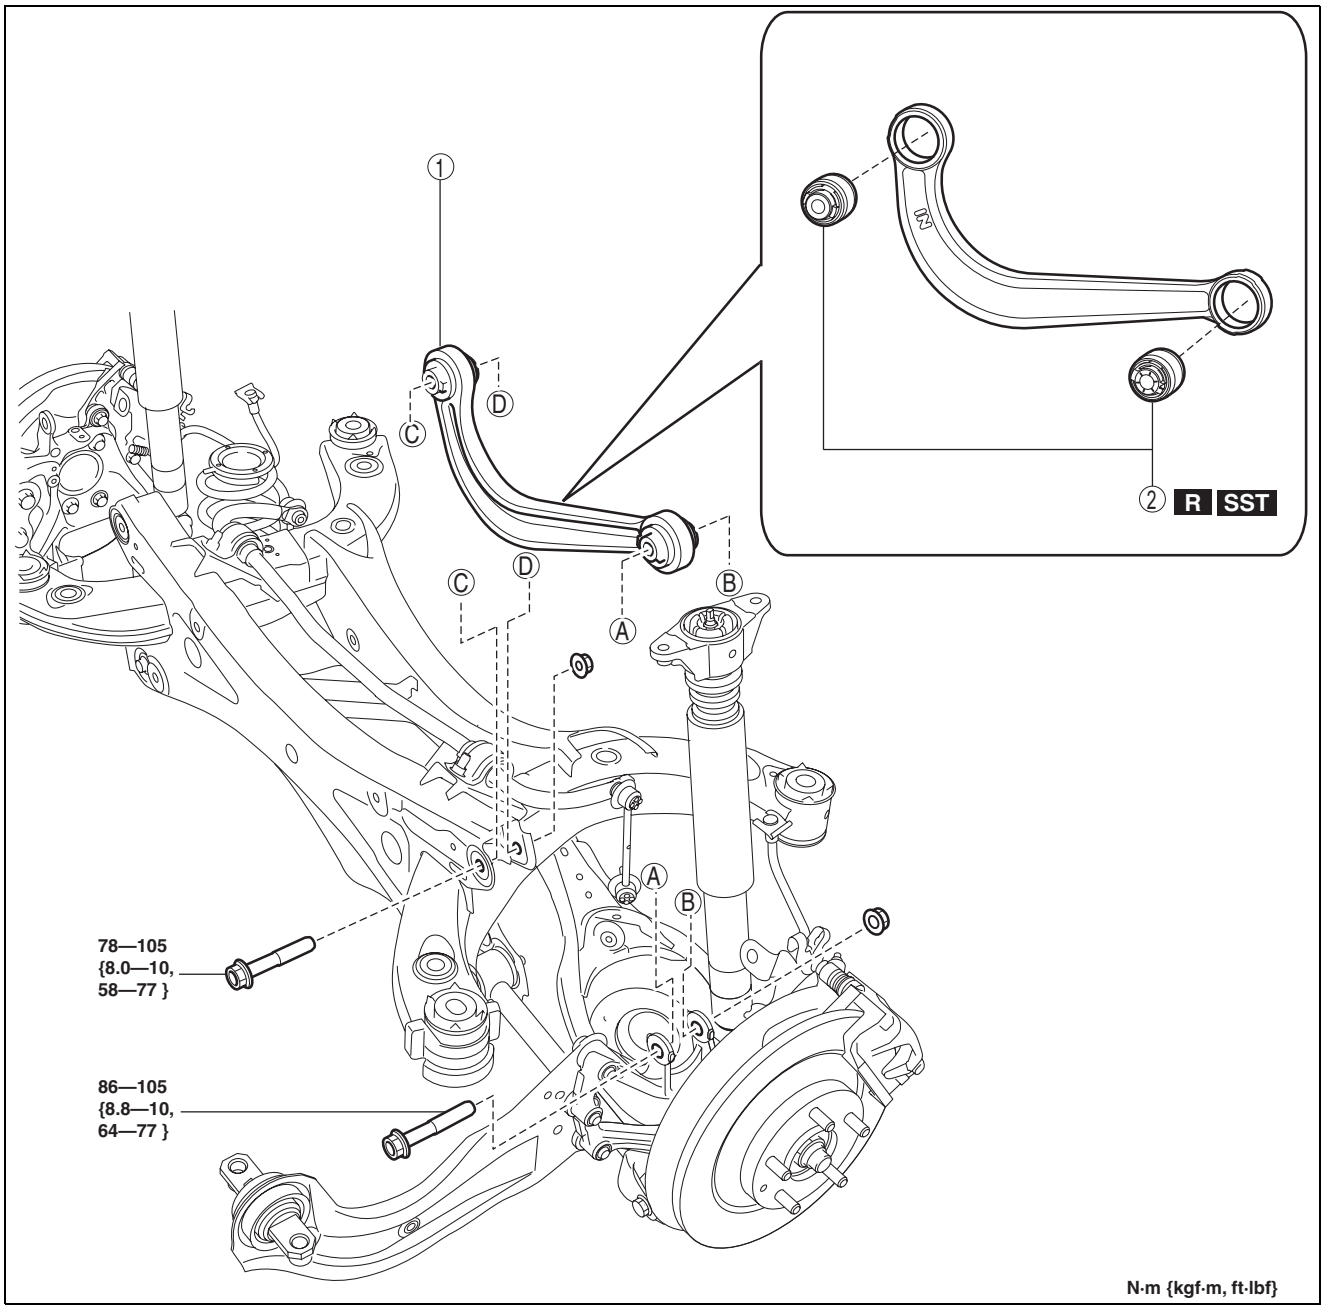
3. Disconnect the rear ABS wheel-speed sensor wiring harness installed to the hub support and set it aside. (See 04-15-11 REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
4. Remove the TWC. (SKYACTIV-G 2.0) (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Remove the middle pipe. (SKYACTIV-D 2.2) (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Remove the rear coil spring. (See 02-14-6 REAR COIL SPRING REMOVAL/INSTALLATION.)
7. Remove in the order indicated in the table.



ac5uuw00000178

REAR SUSPENSION

8. Install in the reverse order of removal.
9. Inspect the wheel alignment and adjust it if necessary. (See 02-11-3 REAR WHEEL ALIGNMENT.)



ac5uuw00000179

REAR UPPER ARM REMOVAL/INSTALLATION [4WD]

id0214008008a2

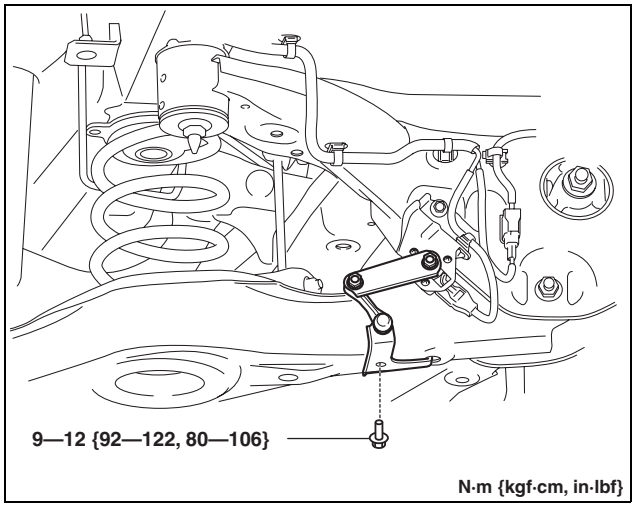
Caution

- **Performing the following procedures without first removing the rear ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, disconnect the rear ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor will not be pulled by mistake while servicing the vehicle.**

Note

- Mark the position before removing the rear upper arm.
- Align the rear crossmember and rear upper arm markings when installing the rear upper arm.
- Tighten the rear upper arm inner bolt completely before installing the rear crossmember component to the vehicle.

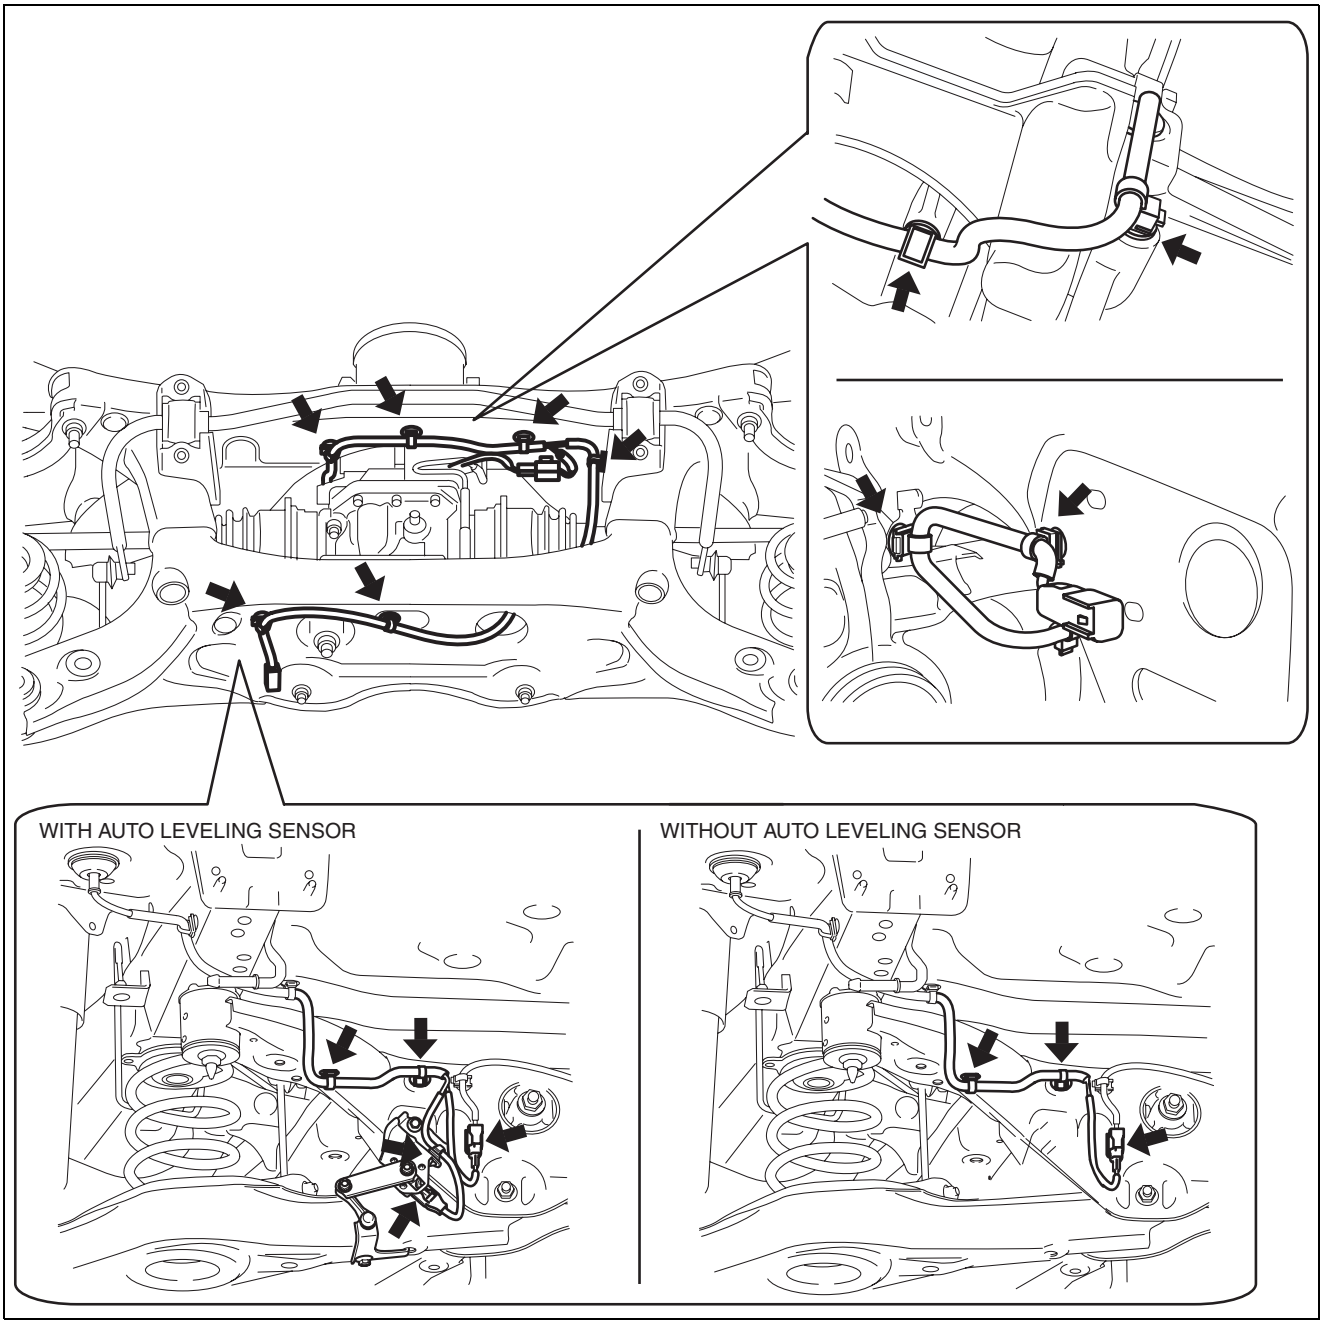
1. Disconnect the rear auto leveling sensor link. (With auto leveling sensor) (See 09-18-79 AUTO LEVELING SENSOR REMOVAL/INSTALLATION.)



ac5wzw0000099

REAR SUSPENSION

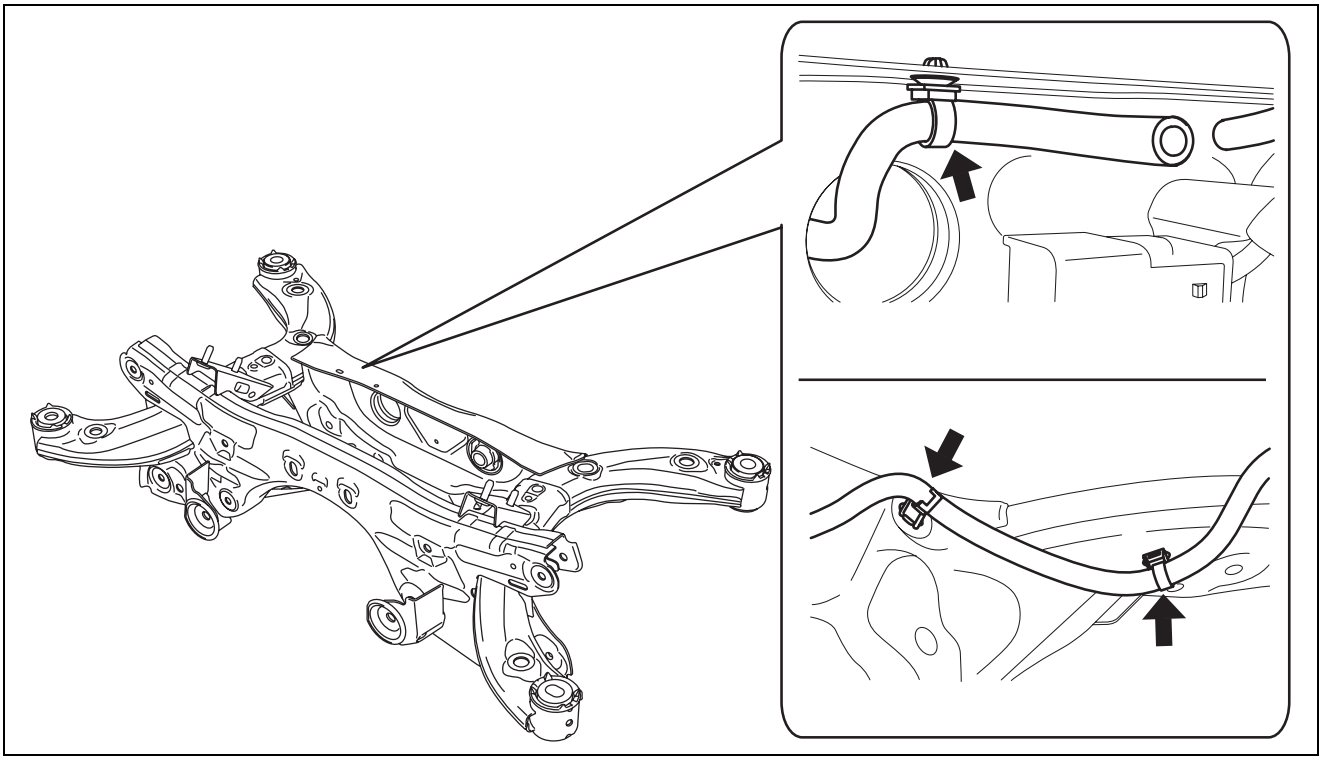
2. Disconnect the wiring harness clips and connectors installed to the rear crossmember.



ac5wzw0000100

REAR SUSPENSION

3. Set the rear differential breather hose aside.



ac5uuw00000172

4. Disconnect the rear ABS wheel-speed sensor wiring harness installed to the hub support and set it aside. (See 04-15-11 REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
5. Remove the propeller shaft. (See 03-15-2 PROPELLER SHAFT REMOVAL/INSTALLATION.)
6. Remove the TWC. (SKYACTIV-G 2.0) (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
7. Remove the middle pipe. (SKYACTIV-D 2.2) (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
8. Remove the rear coil spring. (See 02-14-6 REAR COIL SPRING REMOVAL/INSTALLATION.)
9. Remove in the order indicated in the table.
10. Install in the reverse order of removal.
11. Inspect the wheel alignment and adjust it if necessary. (See 02-11-3 REAR WHEEL ALIGNMENT.)

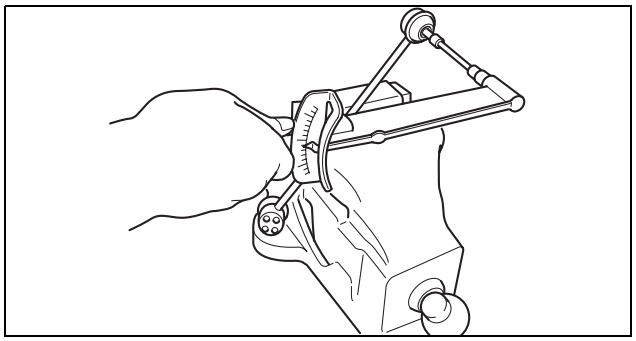
REAR STABILIZER CONTROL LINK INSPECTION

id021400800300

1. Remove the rear stabilizer control link. (See 02-14-27 REAR STABILIZER REMOVAL/INSTALLATION [2WD].) (See 02-14-33 REAR STABILIZER REMOVAL/INSTALLATION [4WD].)
2. Inspect for bending or damage. If there is any malfunction, replace the rear stabilizer control link.
3. Rotate the ball joint stud **10 times** and shake it side to side **10 times**.
4. Measure the ball-joint rotational torque using an allen wrench and a torque wrench.

   Rear stabilizer control link ball joint starting torque
   0.8—3.5 N·m {8.2—35 kgf·cm, 7.1—30 in·lbf}

   - If not within the specification, replace the rear stabilizer control link.
   - Even if within specification, if there is excessive play in the ball joint, replace the rear stabilizer control link.



ac5uuw00000143

REAR CROSSMEMBER REMOVAL/INSTALLATION [2WD]

id0214008010a1

Warning
- **Verify that the rear crossmember is securely supported by a jack. If the rear crossmember falls off, it can cause serious injury or death, and damage to the vehicle.**

Caution
- **Performing the following procedures without first removing the rear ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, disconnect the rear ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor will not be pulled by mistake while servicing the vehicle.**

Note
- Mark the position before removing the rear upper arm.
- Align the rear crossmember and rear upper arm markings when installing the rear upper arm.
- Tighten the rear upper arm inner bolt completely before installing the rear crossmember component to the vehicle.

1. Disconnect the wiring harness clips and connector installed to the rear crossmember. (With auto leveling sensor)

*2 : Difference between left and right must not exceed **1°30′**.

TECHNICAL DATA

Suspension

Item	Specification
Front lower arm ball joint stud starting torque	18 N·m {1.8 kgf·m, 13 ft·lbf} max.
Front lower arm ball joint stud rotational torque	3.2 N·m {33 kgf·cm, 28 in·lbf} max.
Front stabilizer control link ball joint starting torque	0.8—3.5 N·m {8.2—35 kgf·cm, 7.1—30 in·lbf}
Rear stabilizer control link ball joint starting torque	0.8—3.5 N·m {8.2—35 kgf·cm, 7.1—30 in·lbf}

Standard tire and wheel

Item				Specification	
Wheel	Size			17 × 7J	19 × 7J
	Inset (mm {in})			50 {2.0}	
	Pitch circle diameter (mm {in})			114.3 {4.50}	
	Material			Steel Aluminum alloy	Aluminum alloy
Tire	Size			225/65R17 102V	225/55R19 99V
	Air pressure (kPa {bar <psi>})	Front	Up to 3 persons	230 {2.3, <33>}*3 250 {2.5, <36>}*3	250 {2.5, <36>}
			Full load	260 {2.6, <38>}*3 270 {2.7, <39>}*3	260 {2.6, <38>}
		Rear	Up to 3 persons	230 {2.3, <33>}*3 250 {2.5, <36>}*3	250 {2.5, <36>}
			Full load	280 {2.8, <41>}*3 290 {2.9, <42>}*3	290 {2.9, <42>}
	Remaining tread (mm {in})			1.6 {0.063} min.	
Wheel and tire	Lug nut tightening torque (N·m {kgf·m, ft·lbf})			108—147 {12—14, 80—108}	
	Wheel and tire runout (mm {in})	Radial direction		1.5 {0.059} max.	
		Lateral direction		Steel:2.5 {0.098} max. Aluminum alloy:2.0 {0.079} max.	2.0 {0.079} max.
	Wheel imbalance (g {oz})			Adhesive-type*1: 13 {0.46} max. Knock-type*2: 8 {0.3} max.	Adhesive-type*1: 12 {0.42} max. Knock-type*2: 7 {0.2} max.

*1 : Total weight exceeds **160 g {5.64 oz}**.
*2 : One balance weight: **60 g {2.1 oz}** max. If the total weight exceeds **100 g {3.53 oz}** on one side, rebalance after moving the tire around on the rim. Do not use three or more balance weights.
*3 : Verify the vehicle tire pressures.

Temporary spare tire and wheel

Item			Specification
Wheel	Size		17 × 5 1/2J

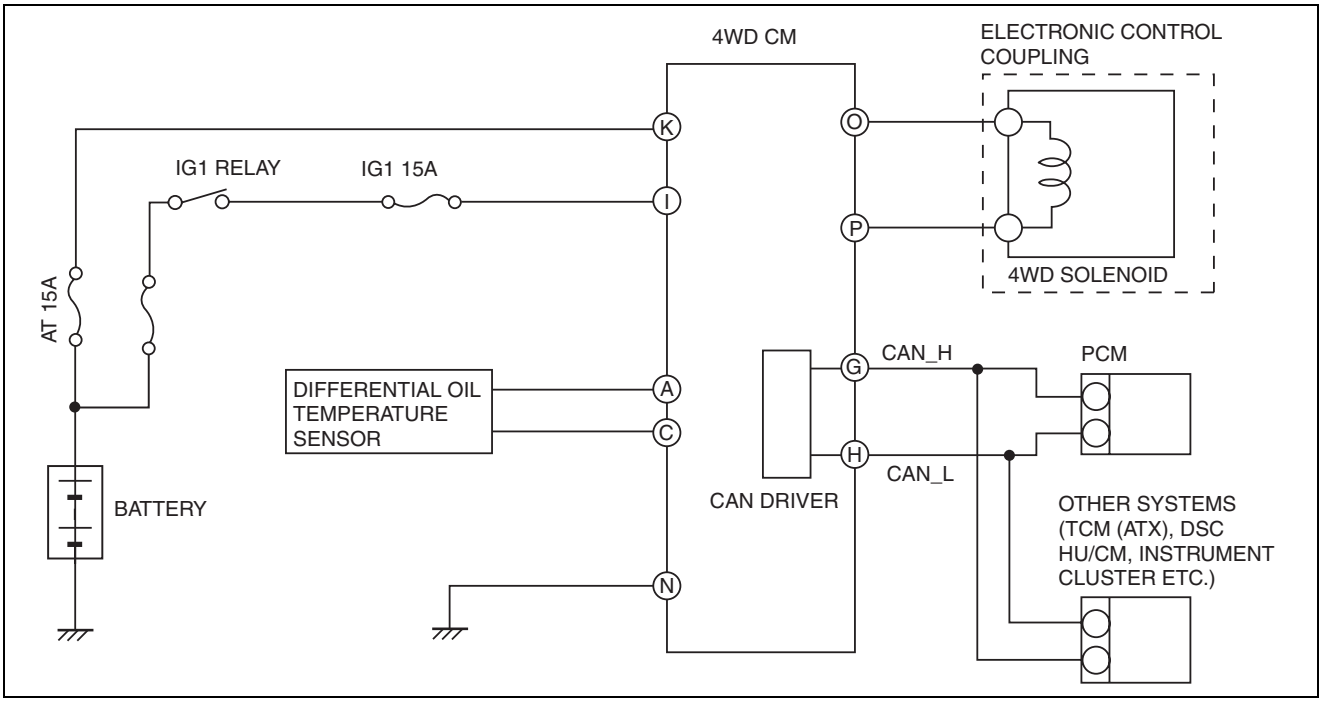
id030200802400



ac5wzw0000255

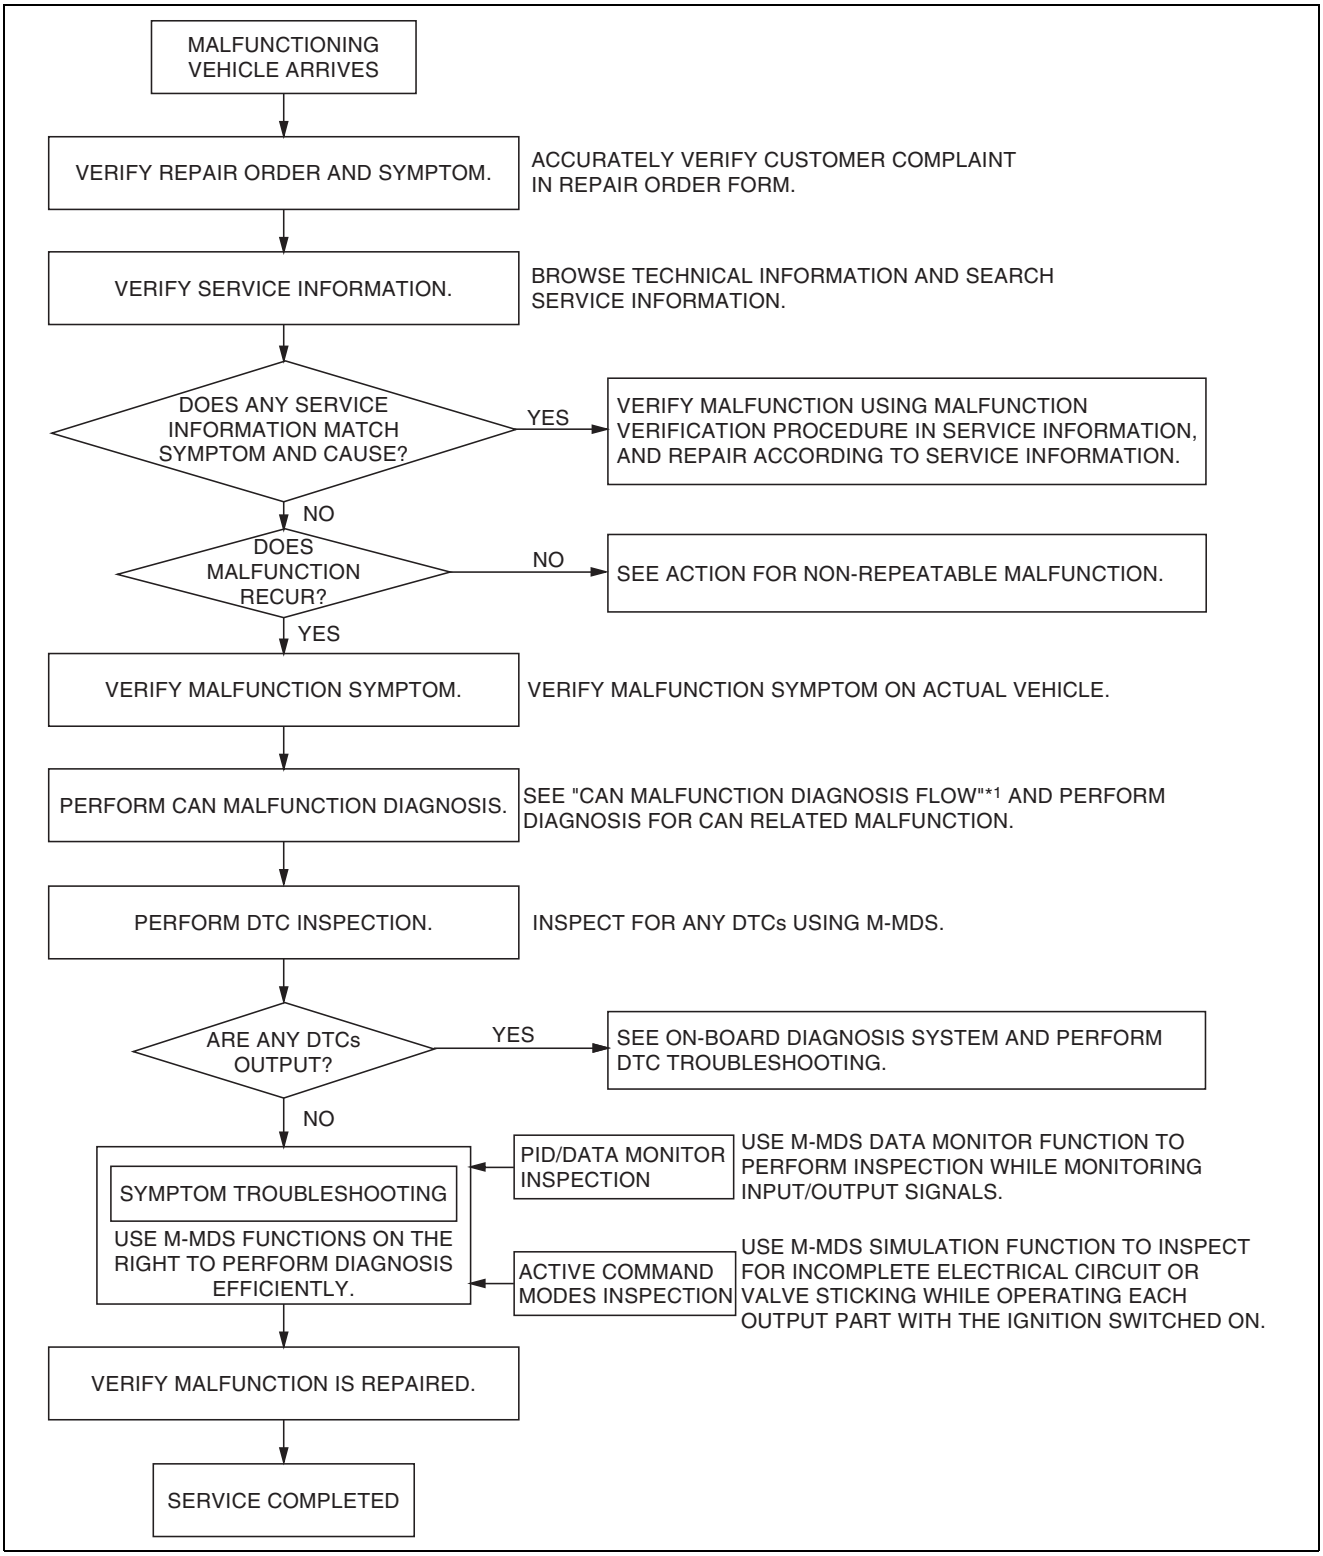
ON-BOARD DIAGNOSTIC

FOREWORD

id030200130500

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



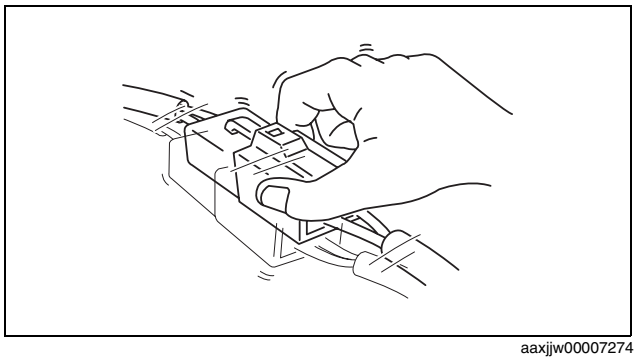
am3zzw0001266

ON-BOARD DIAGNOSTIC

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)], 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)] 10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)] 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

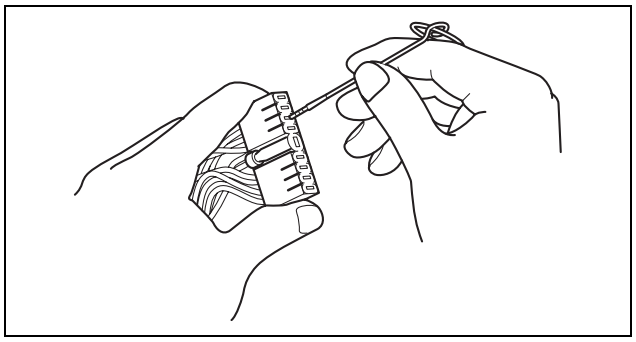
Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as PCM circuit voltage) at that time, and detect the malfunction cause.
  - Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for malfunction or occurrence of any DTCs.



aaxjjw00007274

  - Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS

id030200802500

On-Board Diagnostic (OBD) Test Description

- The OBD test inspects the integrity and function of the 4WD control module and outputs the results when requested by the specific tests.
- On-board diagnostic test also:
  - Provides a quick inspection of the 4WD control module usually performed at the start of each diagnostic procedure.
  - Provides verification after repairs to ensure that no other faults occurred during service.
- The OBD test is divided into 3 tests:
  - Read/clear diagnostic results, PID monitor and record and active command modes.

Read/clear diagnostic results

- This function allows you to read or clear DTCs in the 4WD control module memory.

PID/Data monitor and record

- This function allows you to access certain data values, input signals, calculated values, and system status information.

Active command modes

- This function allows you to control devices through the M-MDS.

ON-BOARD DIAGNOSTIC

Reading DTCs Procedure
CMDTC self test

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.

   Note
   - Snapshot data appears at the top of the help screen when the displayed DTC is selected.

3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection after recording the snapshot data.
4. After completion of repairs, clear all DTCs stored in the 4WD control module. (See 03-02-5 Clearing DTCs Procedure.)

Clearing DTCs Procedure
CMDTC self test

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition OFF (LOCK).
6. Switch the ignition to ON (engine off) and wait for **5 s or more**.
7. Perform DTC inspection. (See 03-02-5 Reading DTCs Procedure.)
8. Verify that no DTCs are displayed.

PID/Data Monitor and Record Procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “4X4”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

   Note
   - The PID data screen function is used for monitoring the calculated value of input/output signals in the module.Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
   - When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

Active Command Modes Procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “4X4”.
3. Select the simulation items from the PID table.
4. Perform the active command modes function, inspect the operations for each parts.
   - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

ON-BOARD DIAGNOSTIC

DTC Table

×: Applicable
—: Not applicable

DTC M-MDS	4WD warning light illumination status	Diagnosis system component	Fail-safe	Drive cycle	Self test type*1	Memory function	Page
P164D:00	Illuminated	4WD CM configuration	X	—	C	X	(See 03-02-8 DTC P164D:00.)
P182F:00	Flashed	4WD CM	X	—	C	X	(See 03-02-9 DTC P182F:00.)

ON-BOARD DIAGNOSTIC

Snapshot Data Table

Note
- Snapshot data items are not displayed, according to detected DTC.

Snapshot data item	Unit	Definition	Corresponding PID data monitor item
IG-ON_TIMER	hh:mm:ss	Times Since Ignition Switch ON	—
TOTAL_TIME	hh:mm:ss	Total Time	—
TOTAL_DIST	KPH, MPH	Total Distance	—
IC_VPWR	V	Instrument Cluster Power Supply	—
AAT	°C, °F	Ambient Air Temperature	AAT
PWR_MODE_KEY	—	Power Mode Key State	—

PID/DATA Monitor Table

PID name (definition)	Unit/Condition	Operation condition (reference)	Action
WARN_LAMP	—	• Displays the warning light state	Inspect the 4WD CM. (See 03-18-3 4WD CONTROL MODULE INSPECTION.)
AAT	°C, °F	• Displays the ambient air temperature	Inspect the ambient air temperature sensor. (See 07-40A-23 AMBIENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].)
APP	%	• Displays the accelerator pedal position	Inspect the accelerator pedal position sensor. (See 01-40-51 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [SKYACTIV-G 2.0].)
CAL_TABLE	—	• Displays the selected calibration table	—
CUP_SOL	%	• Displays the coupling solenoid duty cycle	Inspect the 4WD CM. (See 03-18-3 4WD CONTROL MODULE INSPECTION.)
GEAR	1st/2nd/3rd/4th/ 5th/6th/7th/Park/ Neutral/Drive/ Reverse	• Displays the gear position	Inspect the PCM. (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].)
OIL_TEMP	°C, °F	• Displays the differential oil temperature	Inspect the differential oil temperature sensor. (See 03-18-2 DIFFERENTIAL OIL TEMPERATURE SENSOR INSPECTION.)
RPM	RPM	• Displays the engine speed	Inspect the CKP sensor. (See 01-40-60 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [SKYACTIV-G 2.0].)
SHIFT	P/R/N/D/S/L	• Displays the select lever position	Perform the DTC inspection for the TCM. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
VPWR	V	• Engine stopped: **Approx. 12 V** • Idling: **Approx. 14 V**	Inspect the voltage of the 4WD control module terminal I. (See 03-18-3 4WD CONTROL MODULE INSPECTION.)

ON-BOARD DIAGNOSTIC

PID name (definition)	Unit/Condition	Operation condition (reference)	Action
WSPD_LF	KPH, MPH	• Vehicle stopped: **0 KPH, 0 MPH** • Vehicle running: Vehicle speed	Inspect the front ABS wheel-speed sensor. (See 04-15-10 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.)
WSPD_LR			Inspect the rear ABS wheel-speed sensor. (See 04-15-13 REAR ABS WHEEL-SPEED SENSOR INSPECTION [4WD].)
WSPD_RF			Inspect the front ABS wheel-speed sensor. (See 04-15-10 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.)
WSPD_RR			Inspect the rear ABS wheel-speed sensor. (See 04-15-13 REAR ABS WHEEL-SPEED SENSOR INSPECTION [4WD].)
TORQUE	Nm	• Displays the total wheel torque	—

Active Command Modes Table

Command name	Output part	Operation	Operating condition
CUP_SOL	4WD solenoid	on/off	Switch the ignition to ON (engine off or on)

DTC P164D:00

id030200200100

DTC P164D:00	Configuration data not recorded
DETECTION CONDITION	• 4WD CM detects coupling component calibration data error
FAIL-SAFE FUNCTION	• Control enabled with default data. • 4WD warning light: Illuminated
POSSIBLE CAUSE	• Module configuration procedure is not done properly

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**COUPLING COMPONENT CALIBRATION DATA WRITING** • Write the coupling component calibration data. (See 03-18-7 COUPLING COMPONENT CALIBRATION DATA WRITING.) • Clear the DTCs from the memory. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.) • Is the same DTC present?		Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1.
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC P182F:00

id030200200200

DTC P182F:00	Excessive load detected on 4WD part
DETECTION CONDITION	• 4WD CM detects excessive load
FAIL-SAFE FUNCTION	• 4WD protection condition (4WD control paused) • 4WD warning light: Flashed
POSSIBLE CAUSE	• Detects excessive load on 4WD part to switch to 2WD and protect the system

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**SWITCH THE IGNITION TO OFF AND ALLOW 4WD CM TO COOL DOWN.**		
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1.
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

DTC P187B:00

id030200200300

DTC P187B:00	A tire diameter is outside of the allowable range
DETECTION CONDITION	• 4WD CM detects a tire diameter is outside of the allowable range
FAIL-SAFE FUNCTION	• Control disabled. • 4WD warning light: Illuminated
POSSIBLE CAUSE	• Detects a tire diameter which is outside of the allowable range to switch to 2WD and protect the system. • Flat tire • Wrong tire pressure

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT A TIRE DIAMETER** • Is the tire diameter as specified?	Yes	Go to the next step.
		No	Replace with specified tire.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.) • Drive the vehicle in a straight line at **10 km/h or more** for **10 s or more**. • Is the same DTC present?	Yes	Repeat the inspection from Step 1.
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC P1886:00

id030200200400

DTC P1886:00	Configuration data not recorded
DETECTION CONDITION	• 4WD CM detects vehicle type information data error
FAIL-SAFE FUNCTION	• Control disabled. • 4WD warning light: Illuminated
POSSIBLE CAUSE	• PCM malfunction • Wrong 4WD CM is installed

Diagnostic procedure

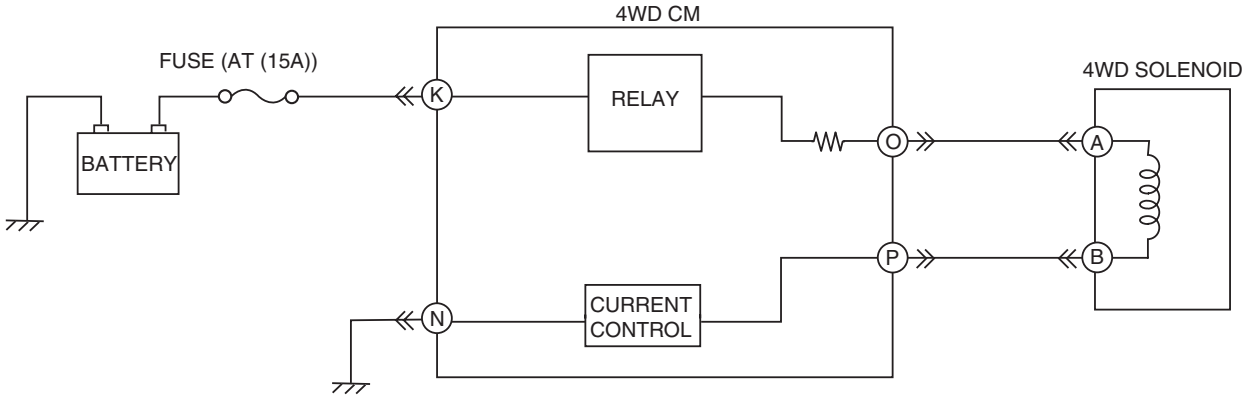
STEP	INSPECTION		ACTION
1	**INSPECT FOR PCM MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the PCM. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT THE 4WD CM** • Is correct 4WD CM installed?	Yes	Replace the 4WD CM. (See 03-18-4 4WD CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**COUPLING COMPONENT CALIBRATION DATA WRITING** • Write the coupling component calibration data. (See 03-18-7 COUPLING COMPONENT CALIBRATION DATA WRITING.) • Clear the DTCs from the memory. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.) • Is the same DTC present?		Go to the next step.
4	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1.
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

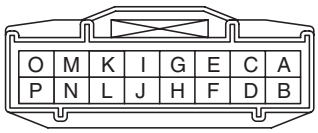
DTC P1887:11/P1887:12/P1887:13/P1887:14

id030200200500

DTC P1887:11 **DTC P1887:12** **DTC P1887:13** **DTC P1887:14**	**4WD solenoid circuit**
DETECTION CONDITION	• Current detection circuit in 4WD CM detects current above specification for more than specified period. • 4WD CM detects that 4WD solenoid control signal differs from current detected at current detection circuit for more than specified period. • Relay voltage detection circuit detects that voltage does not concur with relay ON/OFF signal for more than specified period.
FAIL-SAFE FUNCTION	• Control disabled. • 4WD warning light: Illuminated
POSSIBLE CAUSE	• 4WD solenoid malfunction • Open circuit or short to ground between 4WD CM terminal O and 4WD solenoid terminal A • Open circuit or short to ground between 4WD CM terminal P and 4WD solenoid terminal B • Open circuit or short to ground in harness between battery and 4WD CM terminal K • Open circuit between 4WD CM terminal N and body ground • Open or short circuit in 4WD CM internal circuit • AT (15A) fuse malfunction • 4WD CM malfunction • Poor connection of connectors (female terminals)



4WD CM CONNECTOR



4WD SOLENOID CONNECTOR

ON-BOARD DIAGNOSTIC

Diagnostic procedure

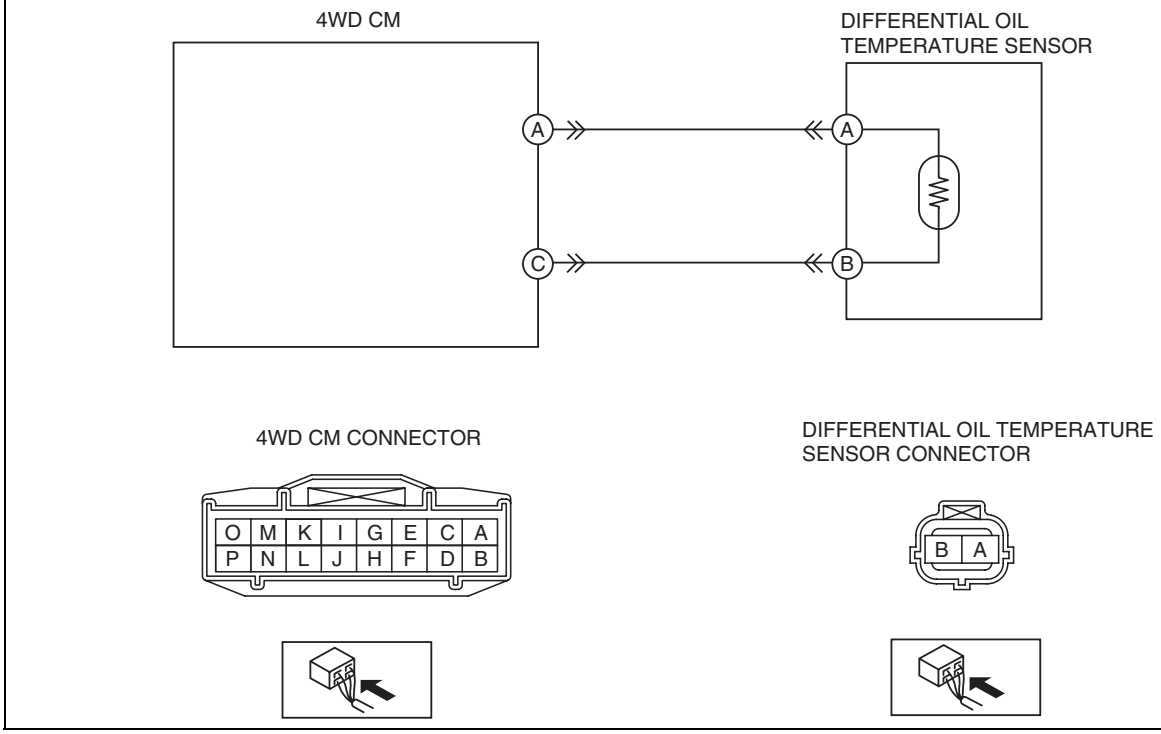
STEP	INSPECTION		ACTION
1	**INSPECT 4WD SOLENOID CONDITION** • Switch the ignition to OFF. • Disconnect 4WD solenoid connector. • Inspect 4WD solenoid. (See 03-18-3 4WD SOLENOID INSPECTION.) • Is 4WD solenoid normal?	Yes	Go to next step.
		No	Replace 4WD solenoid, then go to Step 8.
2	**INSPECT 4WD SOLENOID TO 4WD CM (POWER SUPPLY CIRCUIT) FOR OPEN CIRCUIT** • Disconnect 4WD CM connector. • Inspect for continuity between 4WD CM terminal O and 4WD solenoid terminal A. • Is there continuity?	Yes	Go to next step.
		No	Repair or replace harness for open circuit between 4WD CM and 4WD solenoid, then go to Step 8.
3	**INSPECT 4WD SOLENOID TO 4WD CM (POWER SUPPLY CIRCUIT) FOR SHORT TO GROUND** • Inspect for continuity between 4WD CM terminal O and ground. • Is there continuity?	Yes	Repair or replace harness for short to ground between 4WD CM and 4WD solenoid, then go to Step 8.
		No	Go to next step.
4	**INSPECT 4WD SOLENOID TO 4WD CM (GROUND CIRCUIT) FOR OPEN CIRCUIT** • Inspect for continuity between 4WD CM terminal P and 4WD solenoid terminal B. • Is there continuity?	Yes	Go to next step.
		No	Repair or replace harness for open circuit between 4WD CM and 4WD solenoid, then go to Step 8.
5	**INSPECT 4WD SOLENOID TO 4WD CM (GROUND CIRCUIT) FOR SHORT TO GROUND** • Inspect for continuity between 4WD CM terminal P and ground. • Is there continuity?	Yes	Repair or replace harness for short to ground between 4WD CM and 4WD solenoid, then go to Step 8.
		No	Go to next step.
6	**INSPECT 4WD CM POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Measure voltage between 4WD CM terminal K and ground. • Is voltage B+?	Yes	Replace 4WD CM, then go to Step 8.
		No	Repair or replace harness for open circuit between 4WD CM and 4WD solenoid, then go to next step.
7	**INSPECT FUSE CONDITION** • Turn ignition key to OFF. • Is AT (15A) fuse normal?	Yes	Go to next step.
		No	Replace fuse, then go to Step 9.
8	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from memory. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.) • Drive vehicle. • Is the same DTC present?	Yes	Replace 4WD CM, then go to next step.
		No	Go to next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Is there any other DTC present?	Yes	Go to applicable DTC inspection.
		No	Troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC P1888:11/P1888:15

id030200200600

DTC P1888:11 **DTC P1888:15**	**Differential oil temperature sensor circuit**
DETECTION CONDITION	• Differential oil temperature sensor voltage monitor circuit detects abnormal input voltage.
FAIL-SAFE FUNCTION	• Control disabled. • 4WD warning light: Illuminated
POSSIBLE CAUSE	• Differential oil temperature sensor malfunction • Open circuit, or short to power or ground between 4WD CM terminal A and differential oil temperature sensor terminal A • Open circuit or short to power between 4WD CM terminal C and differential oil temperature sensor terminal B • 4WD CM malfunction • Poor connection of connectors (female terminals)



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DIFFERENTIAL OIL TEMPERATURE SENSOR CONDITION** • Disconnect differential oil temperature sensor connector. • Inspect the differential oil temperature sensor. (See 03-18-2 DIFFERENTIAL OIL TEMPERATURE SENSOR INSPECTION.) • Is the differential oil temperature sensor normal?	Yes	Go to next step.
		No	Replace differential oil temperature sensor, then go to Step 7.
2	**INSPECT 4WD CM TO DIFFERENTIAL OIL TEMPERATURE SENSOR FOR OPEN CIRCUIT** • Disconnect 4WD CM connector. • Inspect for continuity between 4WD CM terminal A and differential oil temperature sensor terminal A. • Is there continuity?	Yes	Go to next step.
		No	Repair or replace harness for open circuit between 4WD CM and differential oil temperature sensor, then go to Step 7.

ON-BOARD DIAGNOSTIC

STEP	INSPECTION		ACTION
3	**INSPECT 4WD CM TO DIFFERENTIAL OIL TEMPERATURE SENSOR FOR SHORT TO POWER** • Inspect voltage between 4WD CM terminal A and ground. • Is voltage B+?	Yes	Repair or replace harness for short to power between 4WD CM and differential oil temperature sensor, then go to Step 7.
		No	Go to next step.
4	**INSPECT 4WD CM TO DIFFERENTIAL OIL TEMPERATURE SENSOR FOR SHORT TO GROUND** • Inspect for continuity between 4WD CM terminal A and ground. • Is there continuity?	Yes	Repair or replace harness for short to ground between 4WD CM and differential oil temperature sensor, then go to Step 7.
		No	Go to next step.
5	**INSPECT 4WD CM TO DIFFERENTIAL OIL TEMPERATURE SENSOR FOR OPEN CIRCUIT** • Inspect for continuity between 4WD CM terminal C and differential oil temperature sensor terminal B. • Is there continuity?	Yes	Go to next step.
		No	Repair or replace harness for open circuit between 4WD CM and differential oil temperature sensor, then go to Step 7.
6	**INSPECT 4WD CM TO DIFFERENTIAL OIL TEMPERATURE SENSOR FOR SHORT TO POWER** • Inspect voltage between 4WD CM terminal C and ground. • Is voltage B+?	Yes	Repair or replace harness for short to power between 4WD CM and differential oil temperature sensor, then go to next step.
		No	Go to next step.
7	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from memory. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.) • Drive vehicle. • Is the same DTC present?	Yes	Replace 4WD CM, then go to next step.
		No	Go to next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Is there any other DTC present?	Yes	Go to applicable DTC inspection.
		No	Troubleshooting completed.

DTC P188A:00

id030200200700

DTC P188A:00	Differential oil temperature is out of range
DETECTION CONDITION	• 4WD CM detects the differential oil temperature is out of range.
FAIL-SAFE FUNCTION	• 4WD protection condition (4WD control paused) • 4WD warning light: Flashed
POSSIBLE CAUSE	• Detects high differential oil temperature to switch to 2WD and protect the system

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**SWITCH THE IGNITION TO OFF AND ALLOW 4WD CM TO COOL DOWN.**		
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1.
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC U0001:88/U0100:00/U0101:00/U0121:00

id030200200800

DTC U0001:88	CAN system Communication error
DTC U0100:00	Communication error to PCM
DTC U0101:00	Communication error to TCM
DTC U0121:00	Communication error to DSC HU/CM
DETECTION CONDITION	• U0001:88 — Open or short circuit in CAN system wiring harness is detected. • U0100:00 — Communication error with PCM is detected in CAN communication. • U0101:00 — Communication error with TCM is detected in CAN communication. • U0121:00 — Communication error to DSC HU/CM is detected in CAN communication
FAIL-SAFE FUNCTION	• U0001:88, U0121:00 — Control disabled. • U0100:00 — Lost gear position signal (MTX): 4WD operates by the specified data. — Except above: Control disabled. • U0101:00 — Lost gear position signal (ATX): 4WD operates by the specified data. — Except above: Control disabled.
POSSIBLE CAUSE	• CAN system wiring harness open or short circuit • CAN system wiring harness open or short circuit with PCM • CAN system wiring harness open or short circuit with TCM • CAN system wiring harness open or short circuit with DSC HU/CM • CAN system wiring harness open or short circuit with instrument cluster • instrument cluster malfunction

Diagnostic procedure

- Inspect according to diagnostic procedure in BODY & ACCESSORIES.

DTC U0401:68

id030200201200

DTC U0401:68	Abnormal message from PCM
DETECTION CONDITION	• Correct data cannot be received from PCM
FAIL-SAFE FUNCTION	• Gear position signal error (MTX) — 4WD operates by the specified data. • Except for gear position signal error — Control disabled.
POSSIBLE CAUSE	• PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR PCM MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the PCM. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC U0402:68

id030200201300

DTC U0402:68	Error signal received from transaxle
DETECTION CONDITION	• The instrument cluster received error signals from the transaxle for **1 s or more** with the ignition switched ON (engine off or on).
FAIL-SAFE FUNCTION	• 4WD operates by the specified data.
POSSIBLE CAUSE	• The transaxle could not send a normal signal temporarily. (DTCs are stored in the TCM.) • Transaxle malfunction • Instrument cluster malfunction

Diagnostic Procedure

Step	Inspection	Results	Action
1	**VERIFY DTCs FOR TCM** • Verify DTCs for the TCM using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].) (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**DRIVE VEHICLE THEN VERIFY DTCs FOR TCM AGAIN** • Drive the vehicle at a vehicle speed of 30 km/h {19 mph} or more for 100 s or more. • Verify DTCs for the TCM using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].) (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
3	**VERIFY THAT REPAIRS HAVE BEEN COMPLETED** • Clear DTC for the instrument cluster using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Switch the ignition ON (engine off) and wait for 20 s or more. • Perform the DTC inspection for the instrument cluster using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Is DTC U0402:68 displayed?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC

DTC U0415:68

id030200201400

DTC U0415:68	Abnormal message from DSC HU/CM
DETECTION CONDITION	• Correct data cannot be received from DSC HU/CM
FAIL-SAFE FUNCTION	• Control disabled.
POSSIBLE CAUSE	• DSC HU/CM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR DSC HU/CM MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the DSC HU/CM. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

DTC U2100:00

id030200201500

DTC U2100:00	Configuration data not recorded
DETECTION CONDITION	• 4WD CM detects configuration data not record
FAIL-SAFE FUNCTION	• 4WD operates by the specified data. • 4WD warning light: Illuminated
POSSIBLE CAUSE	• Module configuration procedure is not done properly

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**COUPLING COMPONENT CALIBRATION DATA WRITING** • Write the coupling component calibration data. (See 03-18-7 COUPLING COMPONENT CALIBRATION DATA WRITING.) • Clear the DTCs from the memory. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.) • Is the same DTC present?		Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.) • Is the same DTC present?	Yes	Repeat the inspection from Step 1.
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.)
		No	DTC troubleshooting completed.

03-03 SYMPTOM TROUBLESHOOTING

ac5wzw0000272

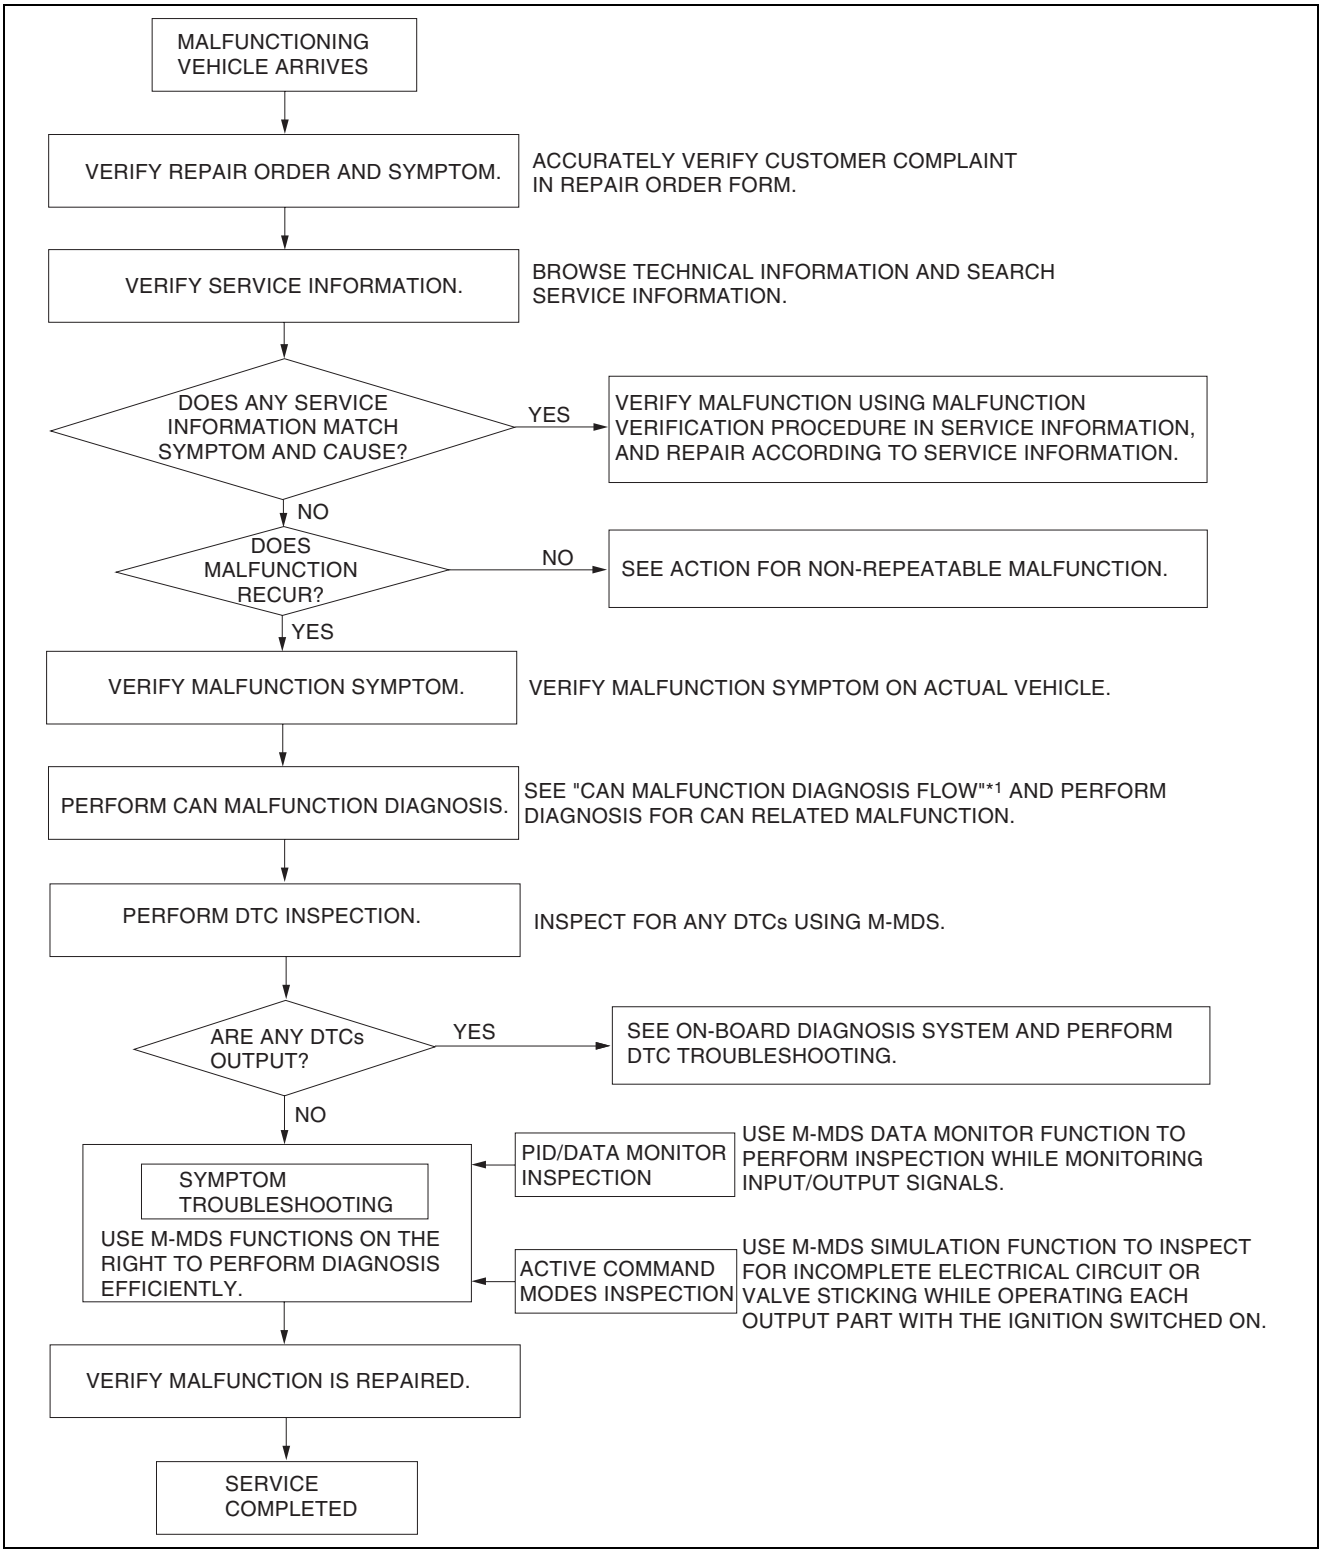
SYMPTOM TROUBLESHOOTING

FOREWORD

id030300800200

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



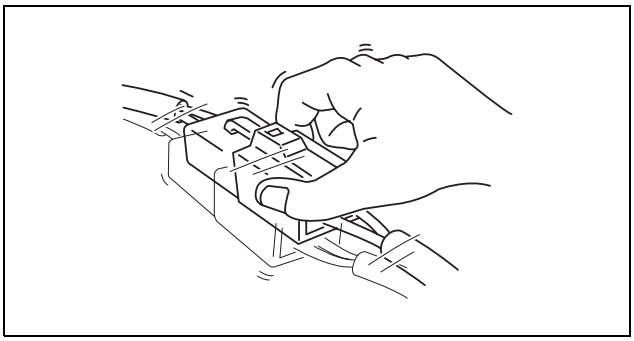
am3uuw0000731

SYMPTOM TROUBLESHOOTING

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)]10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)]10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)]10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

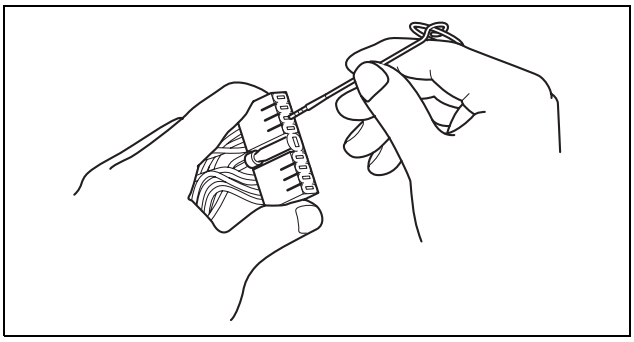
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data (such as CAN circuit voltage) at that time, and detect the malfunction cause.
  - — Refer to [Determining Open Circuit Location] based on the recorded DTC, shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for any changes in CAN system voltage or occurrence of any DTCs.



aaxjjw00007274

  - — Inspect the female terminals on the connector of the electric component which is suspected to be the cause of the malfunction for poor connection.



am3uuw0000750

SYMPTOM TROUBLESHOOTING

id030300800300

- Verify the symptoms, and perform troubleshooting according to the appropriate number.

No.	Symptom	Description
1	Frequent front wheel slip	Front wheels slip frequently during acceleration on low-friction road.
2	Tight corner braking effect	Brakes seem to be applied during tight cornering while driving very slowly on paved road.
3	Abnormal noise and/or vibration from coupling unit	There is abnormal noise and/or vibration from coupling unit during driving.

SYMPTOM TROUBLESHOOTING

NO.1 FREQUENT FRONT WHEEL SLIP

id030300800400

1	Frequent front wheel slip

[TROUBLESHOOTING HINTS]

- **Tire traction performance is extremely poor for given road friction. (4WD system is normal.)**
- **Improper wheel alignment (4WD system is normal.)**
- **Rear differential oil temperature is extremely high (Fail-safe condition)**
- **Differential oil temperature sensor malfunction (Fail-safe condition)**
- **Compare slip frequency with another vehicle of the same model (under the same road conditions and tire traction performance).**
- **Replace tires with others of the same model and perform test under the same road conditions to determine if the malfunction was caused by tire traction performance.**
- **Coupling component malfunction**
- **4WD solenoid malfunction**

Warning

- **During simulation driving, vehicle stability may decrease extremely and cause an accident. Be sure to perform the simulation test driving in a safe area.**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DSC, PCM, TCM, INSTRUMENT CLUSTER, EPS, AND 4WD SYSTEM DTCs** • Verify DSC, PCM, TCM (ATX), instrument cluster, EPS and 4WD system DTCs using the M-MDS. • Are there any DTCs present?	Yes	Go to applicable DTC inspection.
		No	Go to next step.
2	**VERIFY TIRE AIR PRESSURE** • Inspect tire air pressure. • Is it within specification?	Yes	Go to next step.
		No	Adjust tire air pressure, then go to next step.
3	**COMPARE WITH SAME MODEL TIRES** • Install tires of the same model. • Perform simulation driving. • Does malfunction recur?	Yes	Go to next step.
		No	4WD system is okay.
4	**COMPARE WITH SAME MODEL VEHICLE** • Install tires of malfunctioning vehicle to another same model vehicle. • Perform simulation driving. • Does malfunction recur?	Yes	4WD system is okay.
		No	Go to next step.
5	**INSPECT 4WD SOLENOID** • Inspect 4WD solenoid. (See 03-18-3 4WD SOLENOID INSPECTION.) • Is coupling component solenoid okay?	Yes	Inspect harness between 4WD solenoid and 4WD CM, then go to next step.
		No	Replace coupling component. (See 03-18-5 COUPLING COMPONENT REMOVAL/INSTALLATION.)
6	**INSPECT WHEEL ALIGNMENT** • Inspect wheel alignment. • Is it okay?	Yes	Replace coupling component. (See 03-18-5 COUPLING COMPONENT REMOVAL/INSTALLATION.)
		No	Inspect wheel alignment, and adjust it if necessary.

SYMPTOM TROUBLESHOOTING

NO.2 TIGHT CORNER BRAKING

id030300800500

2	Tight corner braking

[TROUBLESHOOTING HINTS]

- **Because the coupling component locks up easily (similar to direct 4WD), rotational difference between the front and rear wheels cannot be absorbed and brake-like phenomenon occurs.**
- **Due to the coupling component construction, slight tight corner braking effect occurs during tight cornering on a paved road. (4WD system is okay. Compare with another same model vehicle to determine malfunction.)**
- **Coupling component malfunction**
- **4WD solenoid malfunction**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DSC, PCM, TCM (ATX), INSTRUMENT CLUSTER, EPS, AND 4WD SYSTEM DTCS** • Verify DSC, PCM, TCM (ATX), instrument cluster, EPS, and 4WD system DTCs using the M-MDS. • Are there any DTCs present?	Yes	Go to applicable DTC inspection.
		No	Go to next step.
2	**VERIFY TIRE AIR PRESSURE** • Inspect tire air pressure. • Is it within specification?	Yes	Go to next step.
		No	Adjust tire air pressure, then go to next step.
3	**INSPECT ABS WHEEL-SPEED SENSOR** • Inspect ABS wheel-speed sensor. • Is it okay?	Yes	Go to next step.
		No	Repair or replace malfunctioning part.
4	**COMPARE WITH SAME MODEL VEHICLE** • Perform simulation driving with another same model vehicle. • Does malfunction recur on the same model vehicle?	Yes	4WD system is okay.
		No	Go to next step.
5	**USING THE ACTIVE COMMAND MODES FUNCTION, DRIVE THE VEHICLE WITHOUT THE COUPLING UNIT OPERATING (2WD CONDITION)** • (See 03-02-4 ELECTRONIC 4WD CONTROL SYSTEM ON-BOARD DIAGNOSIS.) • Perform simulation driving. • Does malfunction recur?	Yes	Replace coupling component. (See 03-18-5 COUPLING COMPONENT REMOVAL/ INSTALLATION.)
		No	Go to next step.
6	**INSPECT 4WD SOLENOID** • Inspect 4WD solenoid. (See 03-18-3 4WD SOLENOID INSPECTION.) • Is it okay?	Yes	Inspect harness between 4WD solenoid and 4WD CM, then go to next step.
		No	Replace coupling component. (See 03-18-5 COUPLING COMPONENT REMOVAL/ INSTALLATION.)

SYMPTOM TROUBLESHOOTING

NO.3 ABNORMAL NOISE AND/OR VIBRATION FROM COUPLING COMPONENT

id030300800600

3	Abnormal noise and/or vibration from coupling component

[TROUBLESHOOTING HINTS]
- Abnormal noise and/or vibration from coupling component during driving
- Propeller shaft is malfunctioning or attached improperly.
- Engine mount or differential mount malfunction
- Resonance of rotating parts on vehicle (engine, propeller shaft, rear differential, tire, etc.)
- Resonance with engine vibration (mainly with exhaust system parts)
- Rear differential malfunction
- Coupling component malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DSC, PCM, TCM (ATX), INSTRUMENT CLUSTER, EPS, AND 4WD SYSTEM DTCS** • Verify DSC, PCM, TCM (ATX), BCM (MTX), instrument cluster, EPS, and 4WD system DTCs using the M-MDS. • Are there any DTCs present?	Yes	Go to applicable DTC inspection.
		No	Go to next step.
2	**VERIFY INSTALLATION CONDITION OF VEHICLE PARTS** • Verify installation condition for following: — Propeller shaft (including bending and joint operation) — Center bearing — Engine mount — Differential mount — Hub bearing — Exhaust system parts — ABS wheel-speed sensor • Are they properly installed?	Yes	Go to next step.
		No	Repair or replace malfunctioning part.
3	**DETERMINE IF MALFUNCTION IS CAUSED BY REAR DIFFERENTIAL** • Install tires of another brand. **Note** • When tires of another brand are installed, the same malfunction can occur due to conditions different from customer explanation. Be careful not to confuse it with customer complaint. • Perform simulation driving at the same engine speed, gear position, and vehicle speed that customer vehicle had malfunction. • Does the same malfunction occur?	Yes	Reinstall customer's vehicle tire. Go to next step.
		No	4WD system is okay. Reinstall customer's vehicle tire.
4	**INSPECT REAR DIFFERENTIAL** • Inspect rear differential for following: — Backlash — Teeth contact (See 03-14-10 REAR DIFFERENTIAL ASSEMBLY.) • Are they okay?	Yes	Replace coupling component.
		No	Inspect malfunctioning part and adjust it if necessary.

03-10 GENERAL PROCEDURES

GENERAL PROCEDURES (FRONT AND REAR AXLES) 03-10–1
Wheel and Tire Installation **03-10–1**
Suspension Links Removal/Installation **03-10–1**
Connector Disconnection **03-10–1**
Electronic 4WD Control System Parts **03-10–1**

GENERAL PROCEDURES

GENERAL PROCEDURES (FRONT AND REAR AXLES)

id031000800100

Wheel and Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts in a criss-cross pattern to the following tightening torque.

   Tightening torque
   108—147 N·m {12—14 kgf·m, 80—108 ft·lbf}

Suspension Links Removal/Installation

1. For the joint sections with rubber bushings, raise the vehicle using a lift, and then temporarily tighten the installation bolts and nuts. Lower the vehicle to the ground and tighten them to the specified tightening torque.

Connector Disconnection

1. Disconnect the negative battery cable before performing any work that requires handling of connectors. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

Electronic 4WD Control System Parts

1. After servicing the electronic 4WD control system parts, verify that no DTC has been stored. Clear any DTCs remaining in the memory.

2	Wheel hub bolt (See 03-11-5 FRONT WHEEL HUB BOLT REPLACEMENT.)

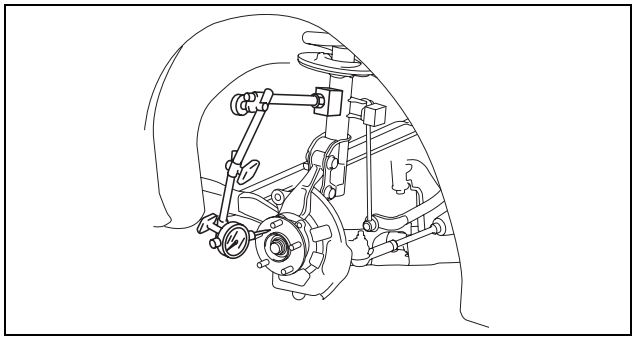
WHEEL HUB, STEERING KNUCKLE INSPECTION

id031100800300

Wheel Bearing Excessive Play Inspection

1. Install the magnetic base and dial gauge as shown in the figure and measure the wheel bearing axial excessive play.
   - If it exceeds the maximum specification, replace the wheel hub bearing.

   Front wheel bearing maximum play
   0.05 mm {0.002 in}



ac5wzw0000255

FRONT AXLE

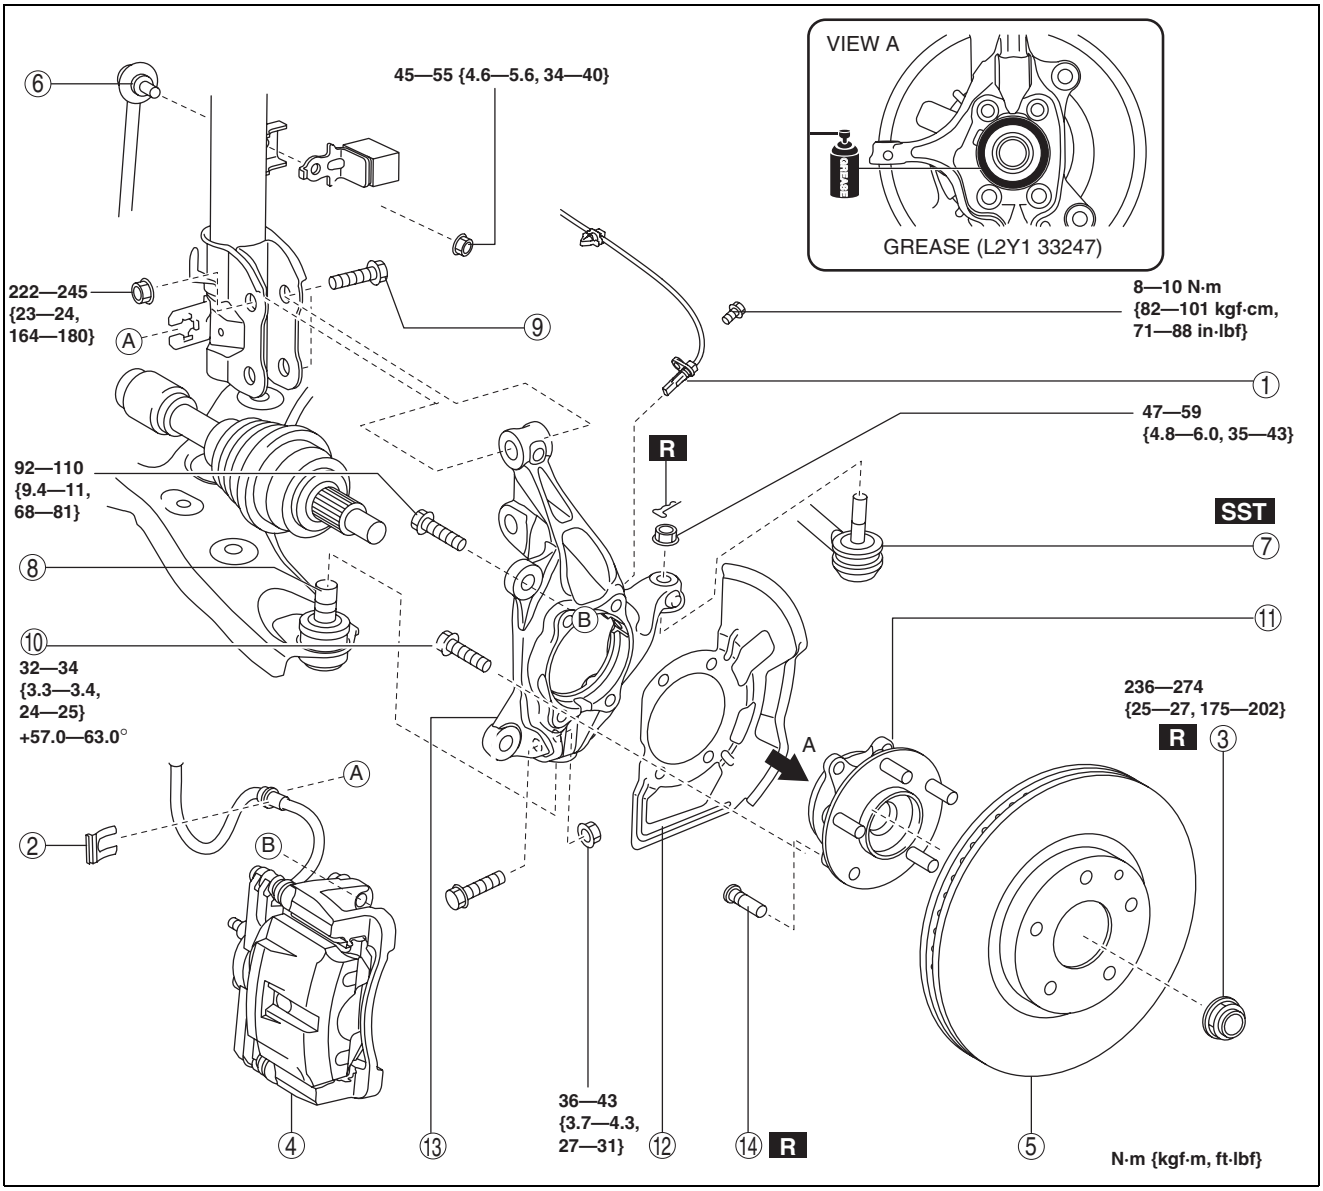
WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION

id031100800400

Caution

- **Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor connector (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.**

1. Disconnect the front ABS wheel-speed sensor. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. After installation, inspect the front wheel alignment and adjust it if necessary. (See 02-11-1 FRONT WHEEL ALIGNMENT.)



ac5uuw00000970

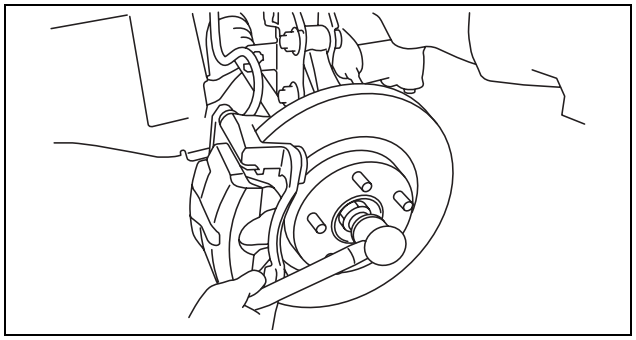
1	ABS wheel-speed sensor
2	Brake hose clip
3	Locknut (See 03-11-4 Locknut Removal Note.) (See 03-11-5 Locknut Installation Note.)
4	Brake caliper component (See 03-11-4 Brake Caliper Removal Note.)
5	Disc plate
6	Stabilizer control link (upper side)

FRONT AXLE

7	Tie-rod end ball joint (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
8	Front lower arm ball joint
9	Front shock absorber bolt (See 03-11-5 Locknut Installation Note.)
10	Bolt (wheel hub) (See 03-11-5 Front Shock Absorber Bolt Installation Note.)
11	Wheel hub (See 03-11-5 Wheel Hub Installation Note.)
12	Dust cover
13	Steering knuckle
14	Wheel hub bolt (See 03-11-4 Wheel Hub Bolt Removal Note.) (See 03-11-5 Wheel Hub Bolt Installation Note.)

Locknut Removal Note

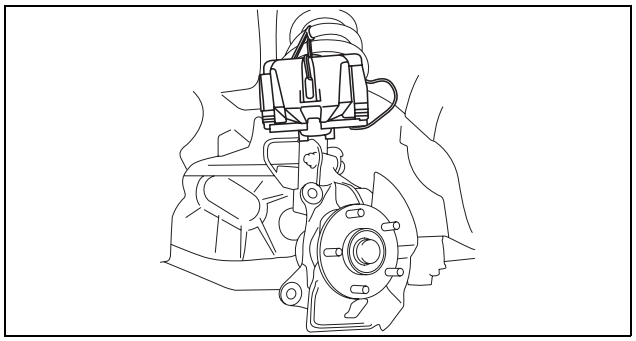
1. Remove the locknut.
2. Install a spare nut onto the drive shaft so that the nut is flush with the end of the drive shaft.
3. Tap the nut with a copper hammer to loosen the drive shaft from the front wheel hub.
4. Separate the drive shaft from the wheel hub.



ac5wzw0000255

Brake Caliper Removal Note

1. Remove the brake caliper component from the steering knuckle and suspend it out of the way using a cable.



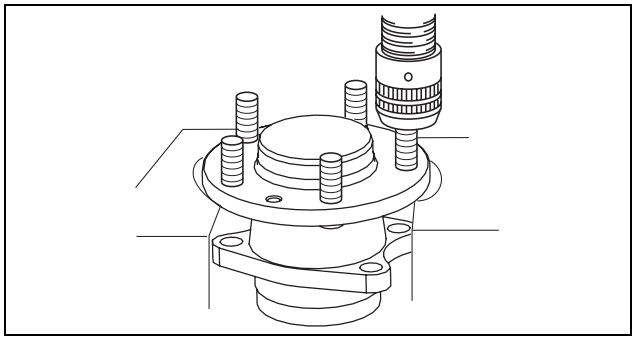
ac5wzw0000255

Wheel Hub Bolt Removal Note

Note

- The wheel hub bolts do not need to be removed unless they are being replaced.

1. Remove the wheel hub bolt using a press.

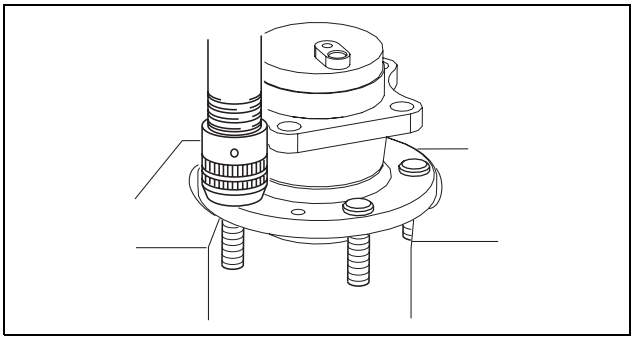


ac5wzw0000255

FRONT AXLE

Wheel Hub Bolt Installation Note

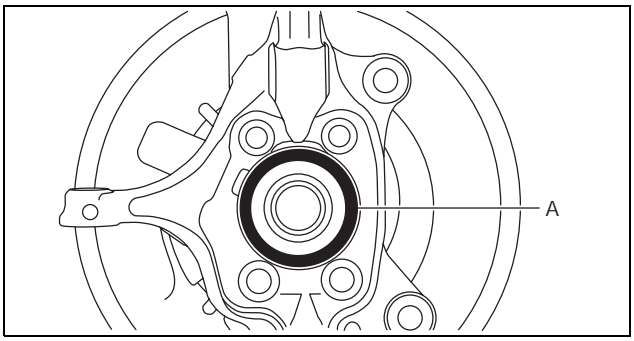
1. Install the new wheel hub bolt using a press.



ac5wzw0000255

Wheel Hub Installation Note

1. Apply grease (L2Y1 33247) to the wheel bearing inner race and drive shaft contact surface (Area A in figure).



ac5wzw0000255

Bolt (Wheel Hub) Installation Note

Caution

- **The wheel hub installation bolts are tightened to a specific angle, but they are not plastic tightening bolts. Accordingly, the bolt length inspection is not needed.**

Front Shock Absorber Bolt Installation Note

1. Install the steering knuckle to the front shock absorber, insert the bolts from the direction shown as follows, then tighten them to the specified torque.
   - — Vehicle right side: Insert the bolts from the vehicle front.
   - — Vehicle left side: Insert the bolts from the vehicle rear.

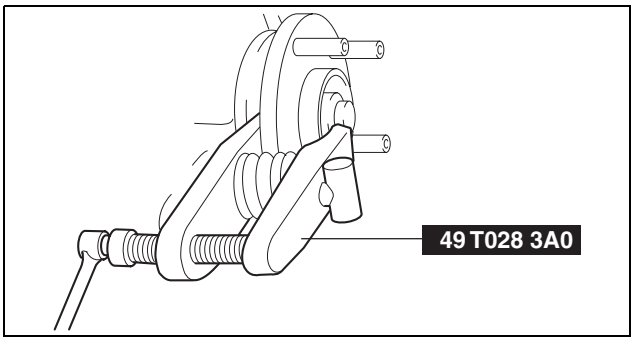
Locknut Installation Note

1. After tightening the locknut once at a torque of **390 N·m {40 kgf·m, 288 ft·lbf}**, return it temporarily **180 degrees**, then retighten it to a torque of **236—274 N·m {25—27 kgf·m, 175—202 ft·lbf}**.

FRONT WHEEL HUB BOLT REPLACEMENT

id031100800200

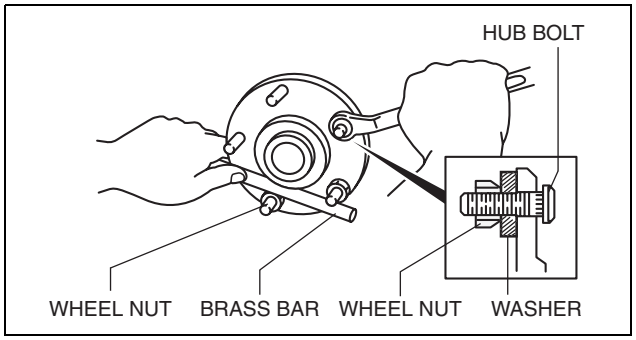
1. Remove the brake caliper component from the steering knuckle and suspend it out of the way using a cable.
2. Remove the disc plate.
3. Remove the wheel hub bolt using the **SST** as shown in the figure.
4. Place a new wheel hub bolt in the wheel hub.



ac5uuw00000254

FRONT AXLE

5. Install the wheel hub by placing a proper sized washer on the hub, and tightening the nut as shown in the figure.



am3uuw0000618

ac5uuw00000265

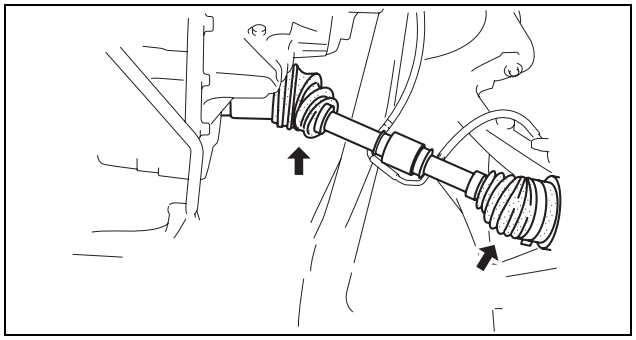
1	Front drive shaft (See 03-13-2 FRONT DRIVE SHAFT INSPECTION.) (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.) (See 03-13-7 FRONT DRIVE SHAFT (TRIPOD JOINT) DISASSEMBLY/ASSEMBLY.) (See 03-13-14 FRONT DRIVE SHAFT (DOUBLE OFFSET JOINT) DISASSEMBLY/ASSEMBLY.)

2	Rear drive shaft (4WD) (See 03-13-16 REAR DRIVE SHAFT INSPECTION.) (See 03-13-17 REAR DRIVE SHAFT REMOVAL/INSTALLATION.) (See 03-13-19 REAR DRIVE SHAFT DISASSEMBLY/ASSEMBLY.)

FRONT DRIVE SHAFT INSPECTION

id031300801200

1. Inspect the connections for any looseness.
   - If there is any malfunction, tighten or replace the applicable part.
2. Inspect the dust boot for damage and cracks.
   - If there is any malfunction, replace the applicable part.
3. Move the spline and joint up and down, left and right by hand and verify that there is no excessive play.
   - If there is any malfunction, replace the applicable part.



ac5wzw0000258

DRIVE SHAFT

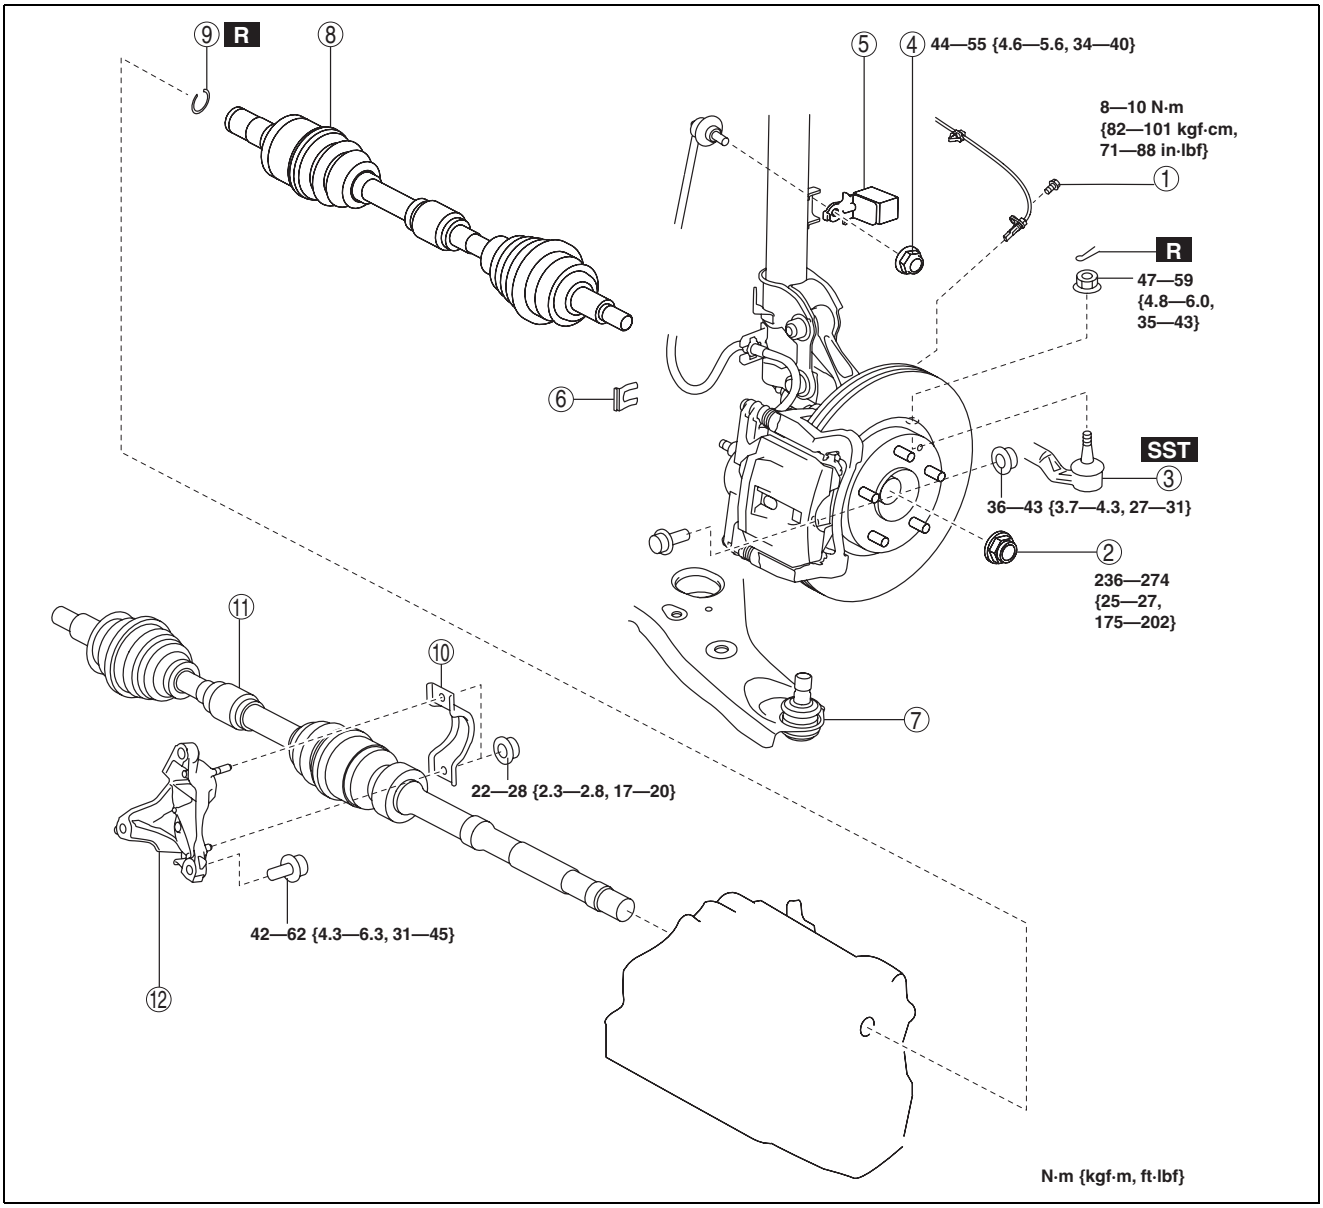
FRONT DRIVE SHAFT REMOVAL/INSTALLATION

id031300802500

Caution

- **Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor connector (axle side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.**
- **If the right side drive shaft is removed for 4WD vehicle, replace transfer oil seals (RH) No.1 and No.3.**

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
3. Drain the transaxle oil or ATF. (See 05-15A-2 MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R, C66MX-R].) (See 05-15B-2 MANUAL TRANSAXLE OIL REPLACEMENT [D66M-R, D66MX-R].) (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].) (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.



ac5uuw00000282

DRIVE SHAFT

1	ABS wheel-speed sensor
2	Locknut (See 03-13-6 Locknut Installation Note.)
3	Tie-rod end ball joint (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
4	Stabilizer control link upper nut
5	Dynamic damper (if equipped)
6	Brake hose clip
7	Front lower arm ball joint
8	Drive shaft (LH) (See 03-13-4 Drive Shaft Removal Note.) (See 03-13-6 Drive Shaft (LH) Installation Note.)
9	Drive shaft clip (See 03-13-5 Drive Shaft Clip Installation Note.)
10	Bracket No.2 (See 03-13-5 Bracket, Drive Shaft (RH) Installation Note.)

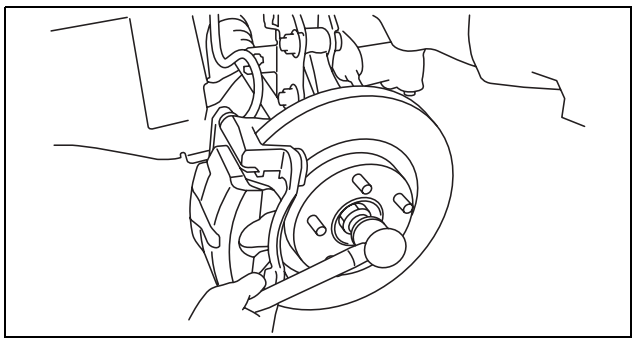
12	Bracket No.1 (See 03-13-4 Bracket No.1 Removal Note.) (See 03-13-5 Bracket, Drive Shaft (RH) Installation Note.)

Drive Shaft Removal Note

1. Install a spare nut onto the drive shaft.
2. Tap the nut with a copper hammer and separate the drive shaft from the axle.
3. Separate the drive shaft from the wheel hub.

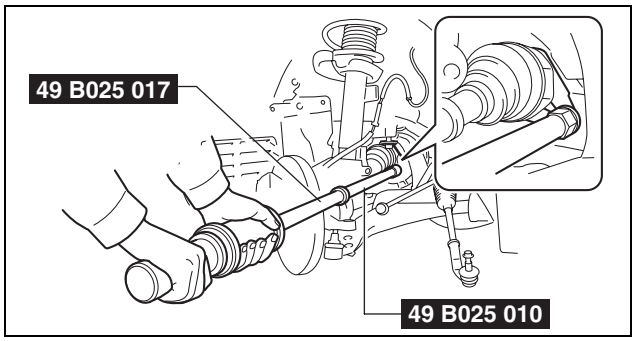


ac5wzw0000259

4. Separate the drive shaft (LH) from the transaxle using the **SSTs**.

Caution

- **Be careful not to damage the transaxle oil seal with the bar.**



ac5wzw0000259

Bracket No.1 Removal Note

1. Remove the exhaust manifold bracket. (Only for SKYACTIV-D 2.2).
2. Remove the bracket No.1

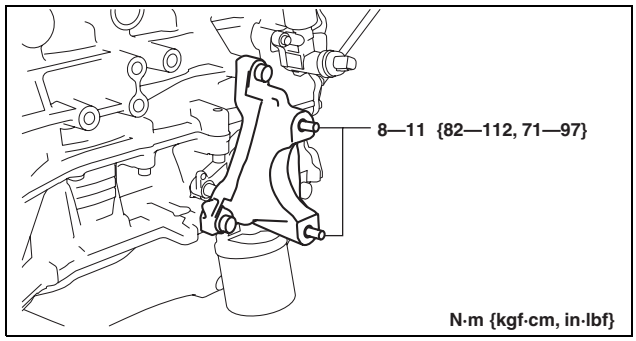
DRIVE SHAFT

Bracket, Drive Shaft (RH) Installation Note

Caution
- **Retighten the bracket No.1 stud bolts when the bracket No.2 nuts are loosened**

1. Tighten the bracket No.1 stud bolts.

Tightening torque
8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}



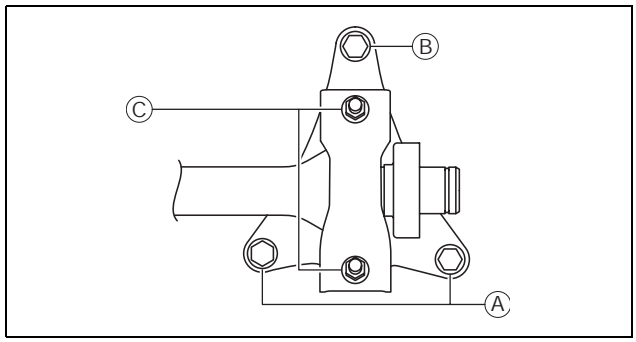
ac5wzw0000259

2. Temporarily tighten the bolts A and B.
3. Tighten the bolts A, then tighten the bolt B to the specified torque.

Tightening torque
42—62 N·m {4.3—6.3 kgf·m, 31—45 ft·lbf}

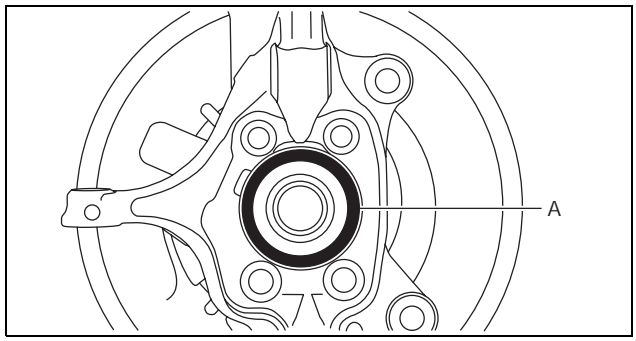
4. Insert the drive shaft into the transaxle until the drive shaft bearing contacts the bracket stopper.
5. Temporarily tighten the nuts C, then tighten the nuts C to the specified torque.

Tightening torque
22—28 N·m {2.3—2.8 kgf·m, 17—20 ft·lbf}



ac5wzw0000259

6. Apply transaxle oil to the oil seal lip.
7. Apply grease (L2Y1 33247) to the wheel bearing inner race and drive shaft contact surface (Area A in figure).

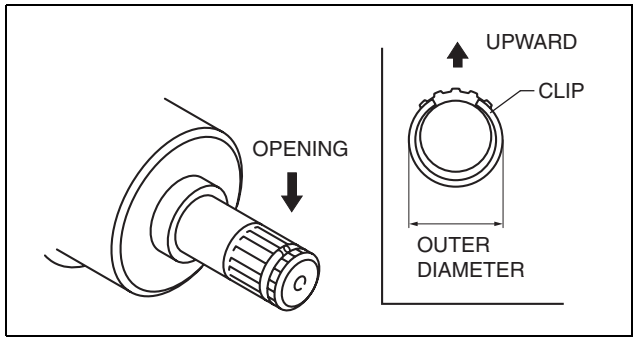


ac5wzw0000259

Drive Shaft Clip Installation Note

1. Install a new drive shaft clip to the clip groove at the end of the drive shaft with the clip opening facing upward.
2. After installation, measure the outer diameter.
   - If it exceeds the specification, repeat installation using a new clip.

Standard
34 mm {1.3 in}



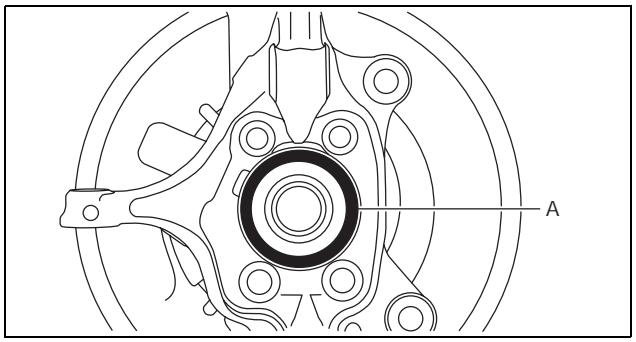
ac5wzw0000259

DRIVE SHAFT

Drive Shaft (LH) Installation Note

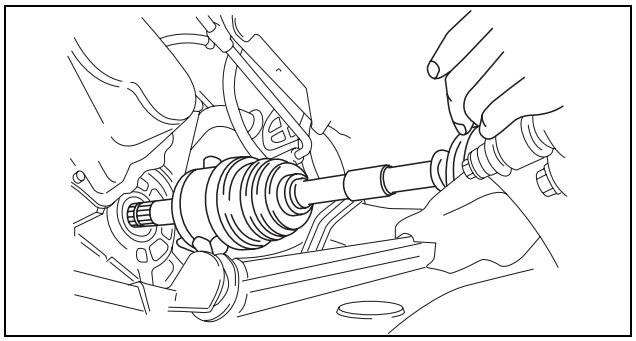
Caution
- **The sharp edges of the drive shaft can slice or puncture the oil seal. Be careful when installing the drive shaft to the transaxle.**

1. Apply transaxle oil to the oil seal lip.
2. Apply grease (L2Y1 33247) to the wheel bearing inner race and drive shaft contact surface (Area A in figure).
3. Insert the drive shaft into the wheel hub.



ac5wzw0000259

4. Install the drive shaft to the transaxle.
5. After installation, pull the transaxle side outer ring forward to confirm that the drive shaft is securely held by the clip.



ac5wzw0000259

Locknut Installation Note

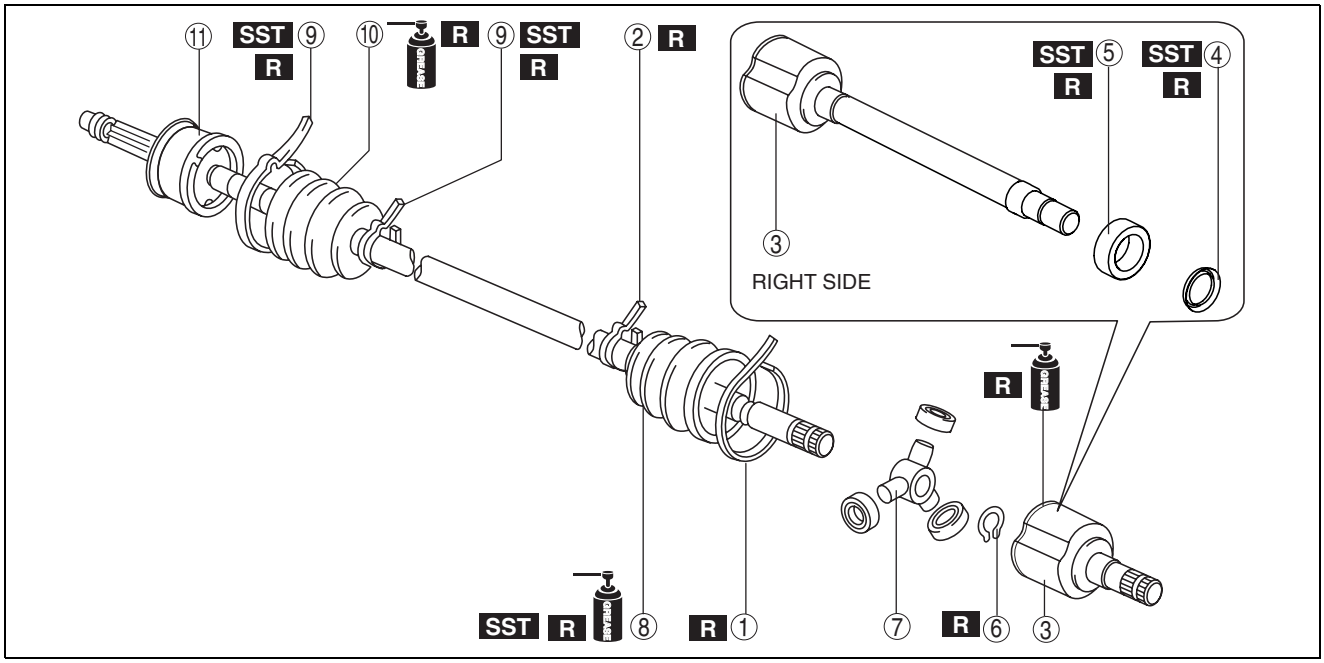
1. After tightening the locknut once at a torque of **390 N·m {40 kgf·m, 288 ft·lbf}**, return it temporarily **180 degrees**, then retighten it to a torque of **236—274 N·m {25—27 kgf·m, 175—202 ft·lbf}**.

DRIVE SHAFT

FRONT DRIVE SHAFT (TRIPOD JOINT) DISASSEMBLY/ASSEMBLY

id031300802600

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.



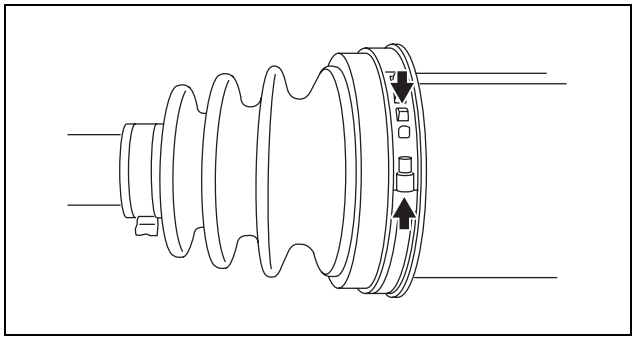
ac5wzw0000260

1	Boot band (transaxle side (large diameter)) (See 03-13-8 Boot Band (Transaxle Side (Large Diameter)) Disassembly Note.) (See 03-13-13 Boot Band (Transaxle Side (Large Diameter)) Assembly Note.)
2	Boot band (transaxle side (small diameter)) (See 03-13-8 Boot Band (Transaxle Side (Small Diameter), Wheel Side)) Disassembly Note.) (See 03-13-10 Boot Band (Transaxle Side (Small Diameter), Wheel Side)) Assembly Note.)
3	Outer ring (See 03-13-8 Outer Ring Disassembly Note.) (See 03-13-12 Outer Ring Assembly Note.)
4	Dust cover (if equipped) (See 03-13-9 Dust Cover Disassembly Note.) (See 03-13-9 Dust Cover Disassembly Note.)
5	Bearing (See 03-13-9 Bearing Disassembly Note.) (See 03-13-12 Bearing Assembly Note.)
6	Snap ring (See 03-13-9 Snap Ring, Tripod Joint Disassembly Note.) (See 03-13-11 Tripod Joint, Snap Ring Assembly Note.)
7	Tripod joint (See 03-13-9 Snap Ring, Tripod Joint Disassembly Note.) (See 03-13-11 Tripod Joint, Snap Ring Assembly Note.)
8	Boot (See 03-13-10 Boot Disassembly Note.) (See 03-13-10 Boot Assembly Note.)
9	Boot band (wheel side) (See 03-13-8 Boot Band (Transaxle Side (Small Diameter), Wheel Side)) Disassembly Note.) (See 03-13-10 Boot Band (Transaxle Side (Small Diameter), Wheel Side)) Assembly Note.)
10	Boot (See 03-13-10 Boot Disassembly Note.) (See 03-13-10 Boot Assembly Note.)
11	Shaft and ball joint component

DRIVE SHAFT

Boot Band (Transaxle Side (Large Diameter)) Disassembly Note

1. Pry up the boot band at the points indicated in the figure using pliers and remove the band.

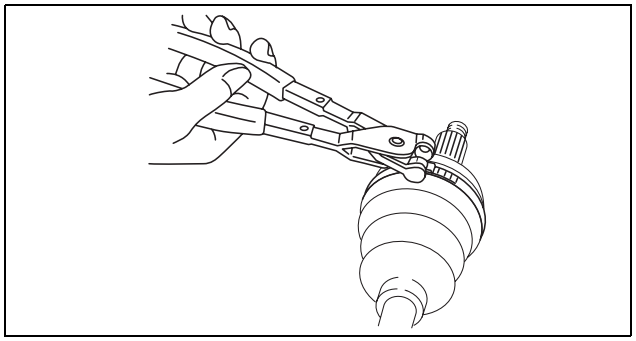


ac5wzw0000261

Boot Band (Transaxle Side (Small Diameter), Wheel Side)) Disassembly Note

Note
- Remove the boot band only if there is a malfunction.

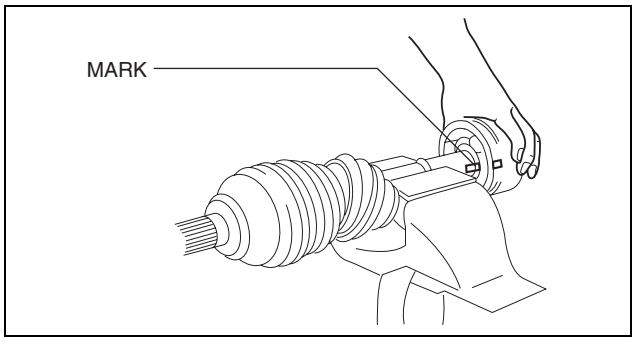
1. Remove the boot band using end clamp pliers.



ac5wzw0000261

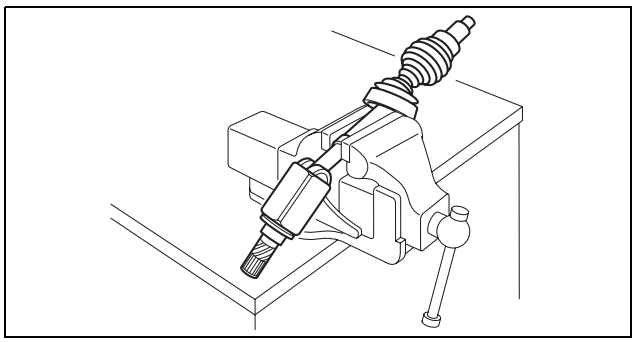
Outer Ring Disassembly Note

1. Mark the outer ring and the shaft for proper assembly.



ac5wzw0000261

2. Secure the drive shaft using a vise.

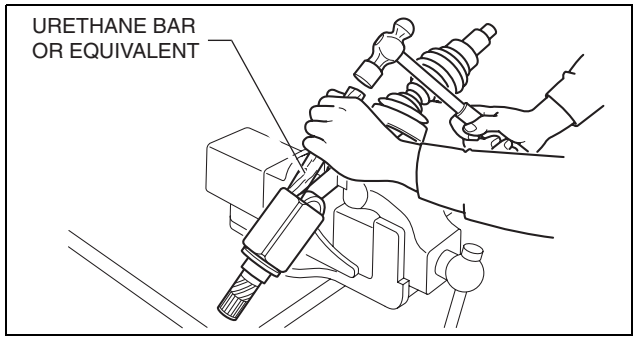


ac5wzw0000261

DRIVE SHAFT

3. Tap the outer ring slightly by using a hammer and urethane bar or equivalent, and remove the outer ring from the drive shaft.

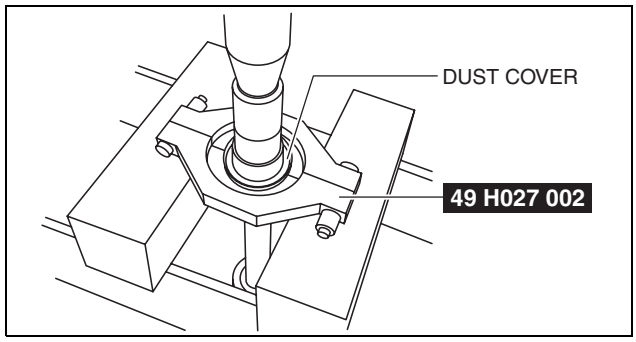
Caution
- **Lightly tap the outer ring carefully, otherwise the tripod joint rollers could be damaged.**



ac5wzw0000261

Dust Cover Disassembly Note

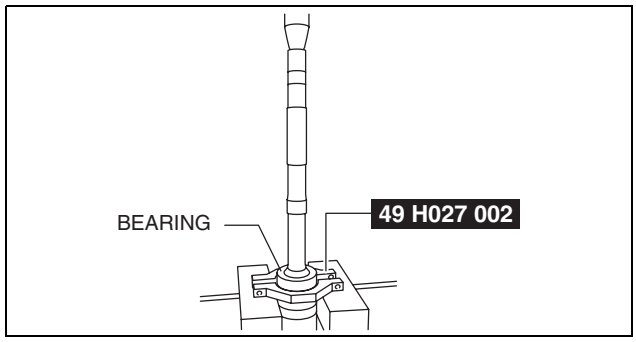
1. Disassemble the dust cover using the press and the **SST**.



ac5wzw0000261

Bearing Disassembly Note

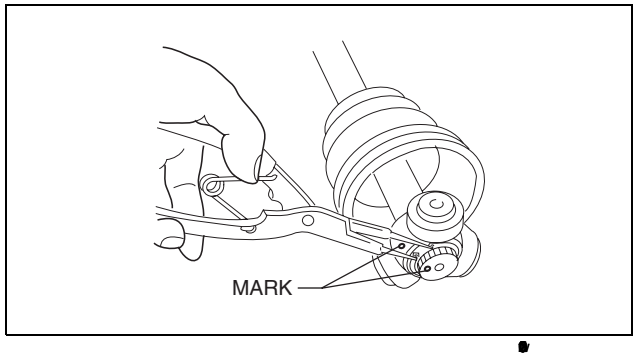
1. Disassemble the bearing using the press and the **SST**.



Snap Ring, Tripod Joint Disassembly Note

1. Place an alignment mark on the shaft and tripod joint.
2. Remove the snap ring using snap ring pliers.
3. Remove the tripod joint from the shaft.

Caution
- **Do not try to remove the tripod joint by hitting it with a hammer. The tripod joint could be damaged.**

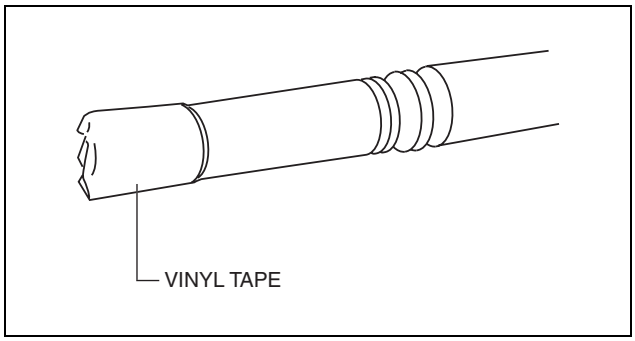


DRIVE SHAFT

Boot Disassembly Note

Note
- Remove the wheel side boot only if there is any malfunction.

1. Wrap the shaft splines with tape.
2. Remove the boot.



Boot Assembly Note

Note
- The boot shapes on the wheel side and the differential side are different. Do not install the wrong boot by mistake.

1. Fill the inside of the new dust boot (wheel side) with grease.

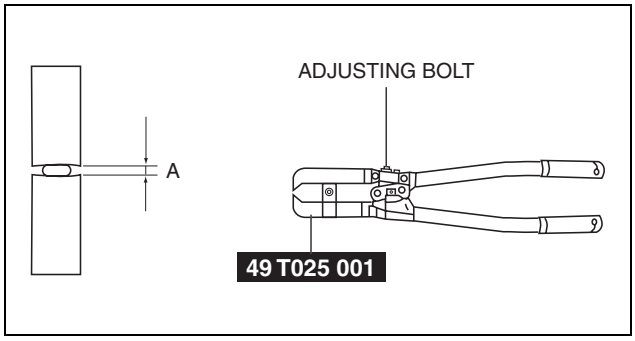
Note
- Do not touch the grease with your hand. Apply it from the tube to prevent foreign matter from entering the boot.

Grease amount
SKYACTIV-G 2.0: 96—106 g {3.4—3.7 oz}
SKYACTIV-D 2.2: 160—180 g {5.65—6.34 oz}

2. Install the boot with the drive shaft spline still wrapped with vinyl tape.
3. Remove the vinyl tape.

Boot Band (Transaxle Side (Small Diameter), Wheel Side)) Assembly Note
Boot band (small diameter side)
1. Adjust clearance A by turning the adjusting bolt of the **SST**.

Clearance A
2.9 mm {0.11 in}

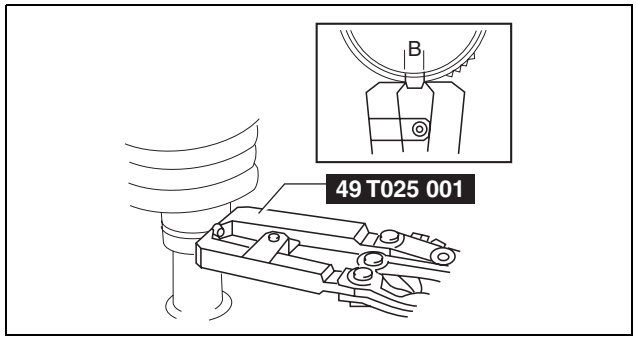


ac5wzw0000261

DRIVE SHAFT

2. Crimp the wheel side small boot band using the **SST**. Verify that clearance B is within the specification.
   - If clearance B is more than the specification, reduce clearance A of the **SST** and crimp the boot again.
   - If clearance B is less than the specification, replace the boot band, increase clearance A of the **SST**, and crimp the new boot.

   Clearance B
   2.4—2.8 mm {0.10—0.11 in}



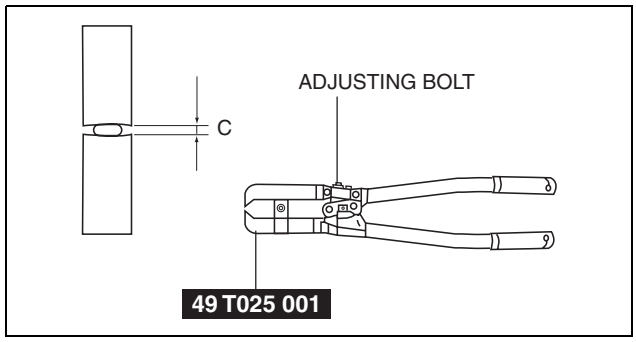
ac5wzw0000262

3. Verify that the boot band does not protrude from the boot band installation area.
   - If it does, replace the boot band and repeat Steps 2 and 3.

Boot band (Large diameter side)

1. Adjust clearance C by turning the adjusting bolt of the **SST**.

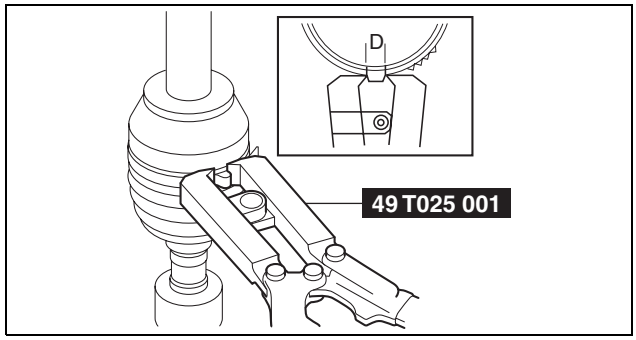
   Clearance C
   3.2 mm {0.13 in}



ac5wzw0000262

2. Crimp the wheel side small boot band using the **SST**. Verify that clearance D is within the specification.
   - If clearance B is more than the specification, reduce clearance C of the **SST** and crimp the boot again.
   - If clearance B is less than the specification, replace the boot band, increase clearance C of the **SST**, and crimp the new boot.

   Clearance D
   2.4—2.8 mm {0.10—0.11 in}

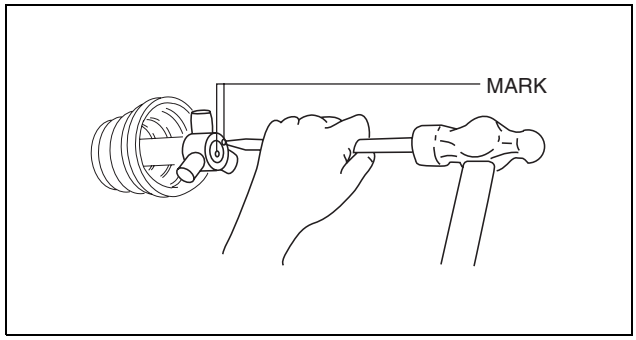


ac5wzw0000262

3. Verify that the boot band does not protrude from the boot band installation area.
   - If it does, replace the boot band and repeat Steps 2 and 3.

Tripod Joint, Snap Ring Assembly Note

1. While aligning the marks on the shaft and the tripod joint, insert the tripod joint using a bar and a hammer.
2. Insert a new snap ring using snap ring pliers.
3. Verify that the snap ring is engaged correctly in the groove of the shaft.

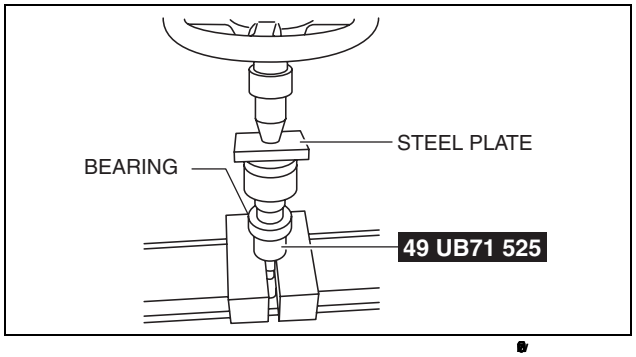


ac5wzw0000262

DRIVE SHAFT

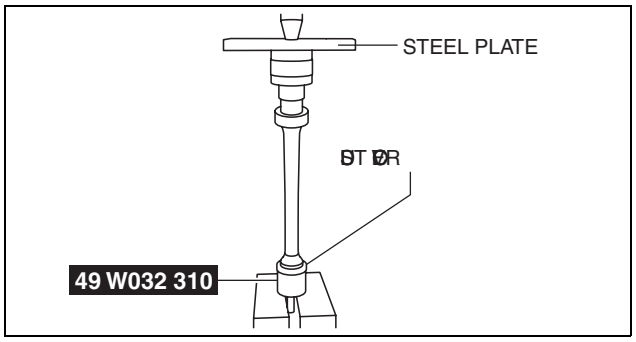
Bearing Assembly Note

1. Install a new bearing using the **SST**.



Dust Cover Assembly Note

1. Using the **SST**, install a new dust cover.



ac5wzw0000262

Outer Ring Assembly Note

1. Fill the outer ring and boot (transaxle side) with the specified grease.

Note

- Do not touch the grease with your hand. Apply it from the tube to prevent foreign matter from entering the boot.

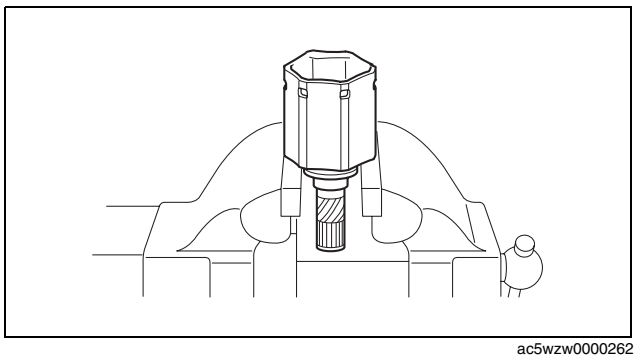
Grease amount

SKYACTIV-G 2.0: 89—99 g {3.2—3.4 oz}
SKYACTIV-D 2.2: 155—175 g {5.47—6.17 oz}

2. Secure the outer ring using a vise.

Caution

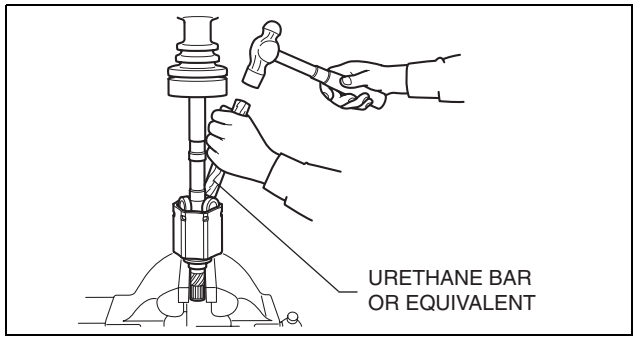
- **Carefully perform the work when securing the outer ring to the vise, otherwise other wise the oil seal could be deformed.**



ac5wzw0000262

DRIVE SHAFT

3. Align the roller with the outer ring, tap the roller slightly using a hammer and urethane bar or equivalent, and install the drive shaft to the outer ring with keeping the drive shaft verticality.



ac5wzw0000262

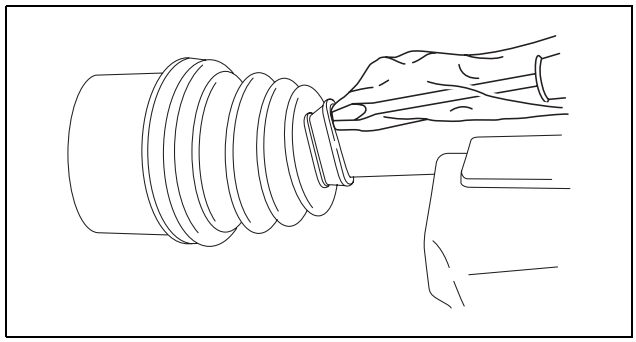
Caution
- **Be careful that no foreign matter such as dust or dirt gets into the outer ring, otherwise the drive shaft could be damaged.**

4. Set the drive shaft to the standard length.

Front drive shaft standard length (ATX)
LH
- **— SKYACTIV-G 2.0: 675.5—685.5 mm {26.60—26.98 in}**
- **— SKYACTIV-D 2.2: 672.5—682.5 mm {26.48—26.87 in}**

RH
- **— SKYACTIV-G 2.0: 1038.95—1048.95 mm {40.9036—41.2972 in}**
- **— SKYACTIV-D 2.2: 1052.50—1062.50 mm {41.4371—41.8307 in}**

5. Release any trapped air from the boots by carefully lifting up the small end of each boot with a cloth wrapped screwdriver.



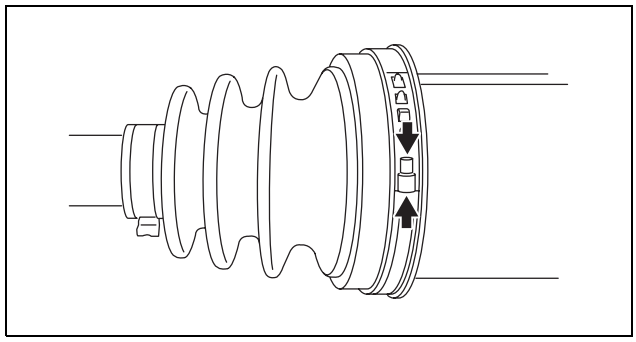
ac5wzw0000262

Note
- Verify that there is no grease leak while being careful not to damage the boot.
- If the boot is damaged, it may not be possible to perform the full-length adjustment of the drive shaft.

6. Verify that the drive shaft length is within the specification under atmospheric pressure inside the boot.
   - If not within the specification, repeat from Step 3.

Boot Band (Transaxle Side (Large Diameter)) Assembly Note

1. Pry up the boot band at the points indicated in the figure using pliers and tighten the boot band.
2. Verify that the boot band is installed to the boot slot securely.



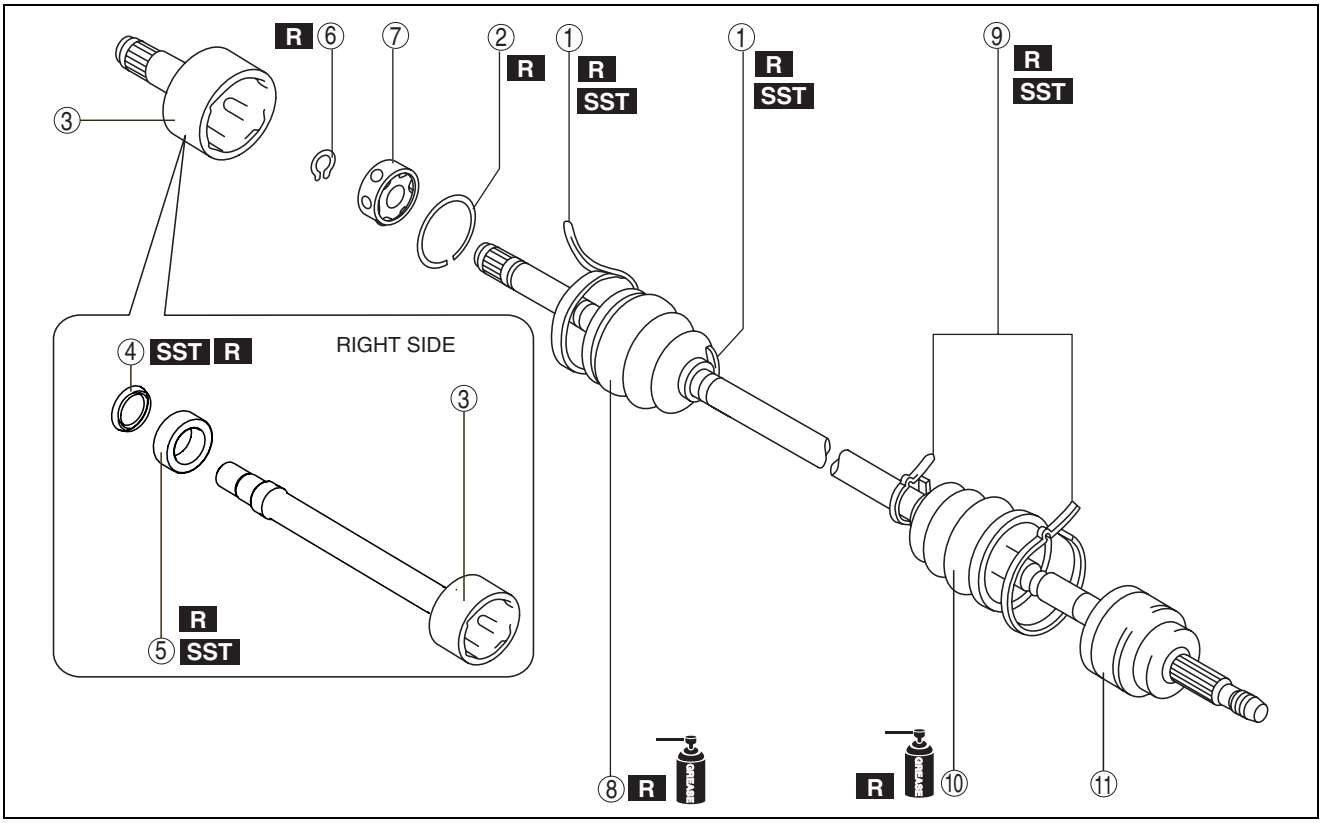
ac5uuw00000281

DRIVE SHAFT

FRONT DRIVE SHAFT (DOUBLE OFFSET JOINT) DISASSEMBLY/ASSEMBLY

id031300802700

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.



ac5wzw0000442

1	Boot band (transaxle side) (See 03-13-7 FRONT DRIVE SHAFT (TRIPOD JOINT) DISASSEMBLY/ASSEMBLY.)
2	Clip (See 03-13-15 Clip Disassembly Note.)
3	Outer ring (See 03-13-16 Outer Ring Assembly Note.)
4	Dust cover (if equipped) (See 03-13-7 FRONT DRIVE SHAFT (TRIPOD JOINT) DISASSEMBLY/ASSEMBLY.)
5	Bearing (See 03-13-7 FRONT DRIVE SHAFT (TRIPOD JOINT) DISASSEMBLY/ASSEMBLY.)

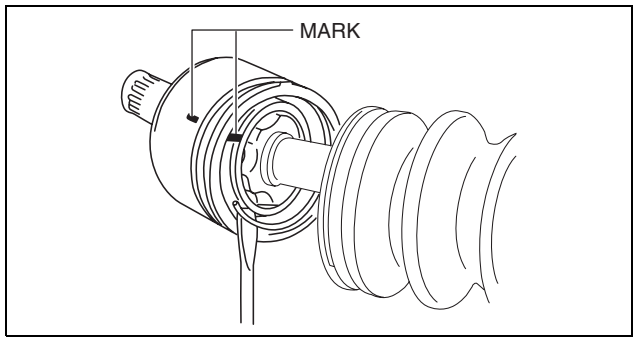
6	Snap ring (See 03-13-15 Snap Ring Disassembly Note.) (See 03-13-15 Cage, Inner Ring, Balls, Snap Ring Assembly Note.)
7	Balls, inner ring, cage (See 03-13-15 Cage, Inner Ring, Balls, Snap Ring Assembly Note.)
8	Boot (See 03-13-15 Boot Assembly Note.)
9	Boot band (wheel side) (See 03-13-7 FRONT DRIVE SHAFT (TRIPOD JOINT) DISASSEMBLY/ASSEMBLY.)
10	Boot (See 03-13-15 Boot Assembly Note.)
11	Shaft and ball joint component

DRIVE SHAFT

Clip Disassembly Note

Caution
- **Mark with paint; do not use a punch.**

1. Mark the drive shaft and outer ring for proper assembly.

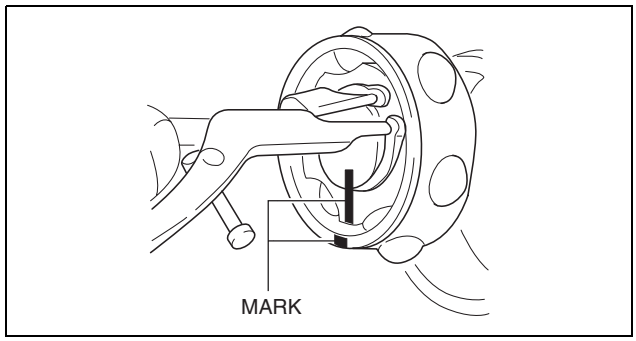


ac5wzw0000259

Snap Ring Disassembly Note

Caution
- **Mark with paint; do not use a punch.**

1. Mark the drive shaft end and inner ring for proper assembly.



ac5wzw0000259

Boot Assembly Note

Note
- The wheel-side and transaxle-side boots are different.

1. Fill the boot (wheel side) with the specified grease.

Note
- Do not touch grease with your hand. Apply it from the tube to prevent foreign matter from entering the boot.

Grease amount
SKYACTIV-G 2.0: 95—115 g {3.4—4.0 oz}
SKYACTIV-D 2.2: 125—145 g {4.41—5.11 oz}

2. Install the boot with the splines of the shaft still wrapped in tape from disassembly.
3. Remove the tape.

Cage, Inner Ring, Balls, Snap Ring Assembly Note

1. Align the marks and install the balls and cage to the inner ring in the direction shown in the figure.

Caution
- **Install the cage so that the major diameter is at the same side as the snap ring groove. If incorrectly installed, the drive shaft may become disengaged.**

2. Align the marks and install the inner ring to the shaft.
3. Install a new snap ring.

DRIVE SHAFT

Outer Ring Assembly Note

1. Fill the outer ring and boot (transaxle side) with the specified grease.

Note

- Do not touch grease with your hand. Apply it from the tube to prevent foreign matter from entering the boot.

Grease amount

SKYACTIV-G 2.0: 85—105 g {3.0—3.7 oz}
SKYACTIV-D 2.2: 100—120 g {3.53—4.23 oz}

2. Install the outer ring on to the shaft.
3. Install the boot.
4. Set the drive shaft to the standard length.

Front drive shaft standard length (MTX)

LH

— **SKYACTIV-G 2.0: 673.8—679.0 mm {26.6—26.7 in}**
— **SKYACTIV-D 2.2: 663.1—668.3 mm {26.11—26.31 in}**

RH

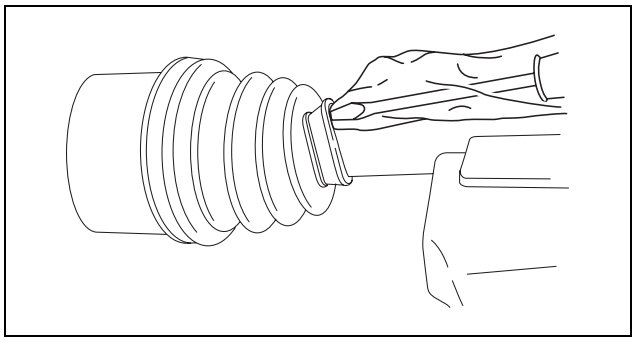
— **SKYACTIV-G 2.0: 1036.6—1042.8 mm {40.812—41.055 in}**
— **SKYACTIV-D 2.2: 1044.1—1049.3 mm {41.107—41.311 in}**

5. Release any trapped air from the boots by carefully lifting up the small end of each boot with a cloth wrapped screwdriver.

Caution

- **Be careful not to allow the grease to leak.**
- **Do not damage the boot.**

6. Verify that the drive shaft length is within the specification.

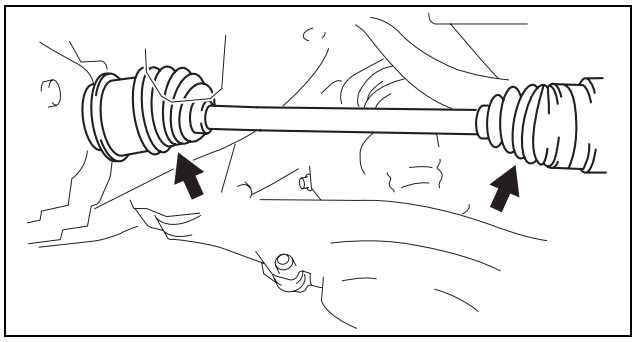


ac5wzw0000260

id031300801300

REAR DRIVE SHAFT INSPECTION

1. Inspect each connecting part for looseness.
   - Tighten or replace parts if necessary.
2. Inspect the dust boot on the drive shaft for cracks, damage, leaking grease, and looseness in the boot band.
3. Inspect the drive shaft for bends, cracks, and wear in the joints or splines.
   - Repair or replace the drive shaft or boot band if necessary.



ac5uuw00000271

DRIVE SHAFT

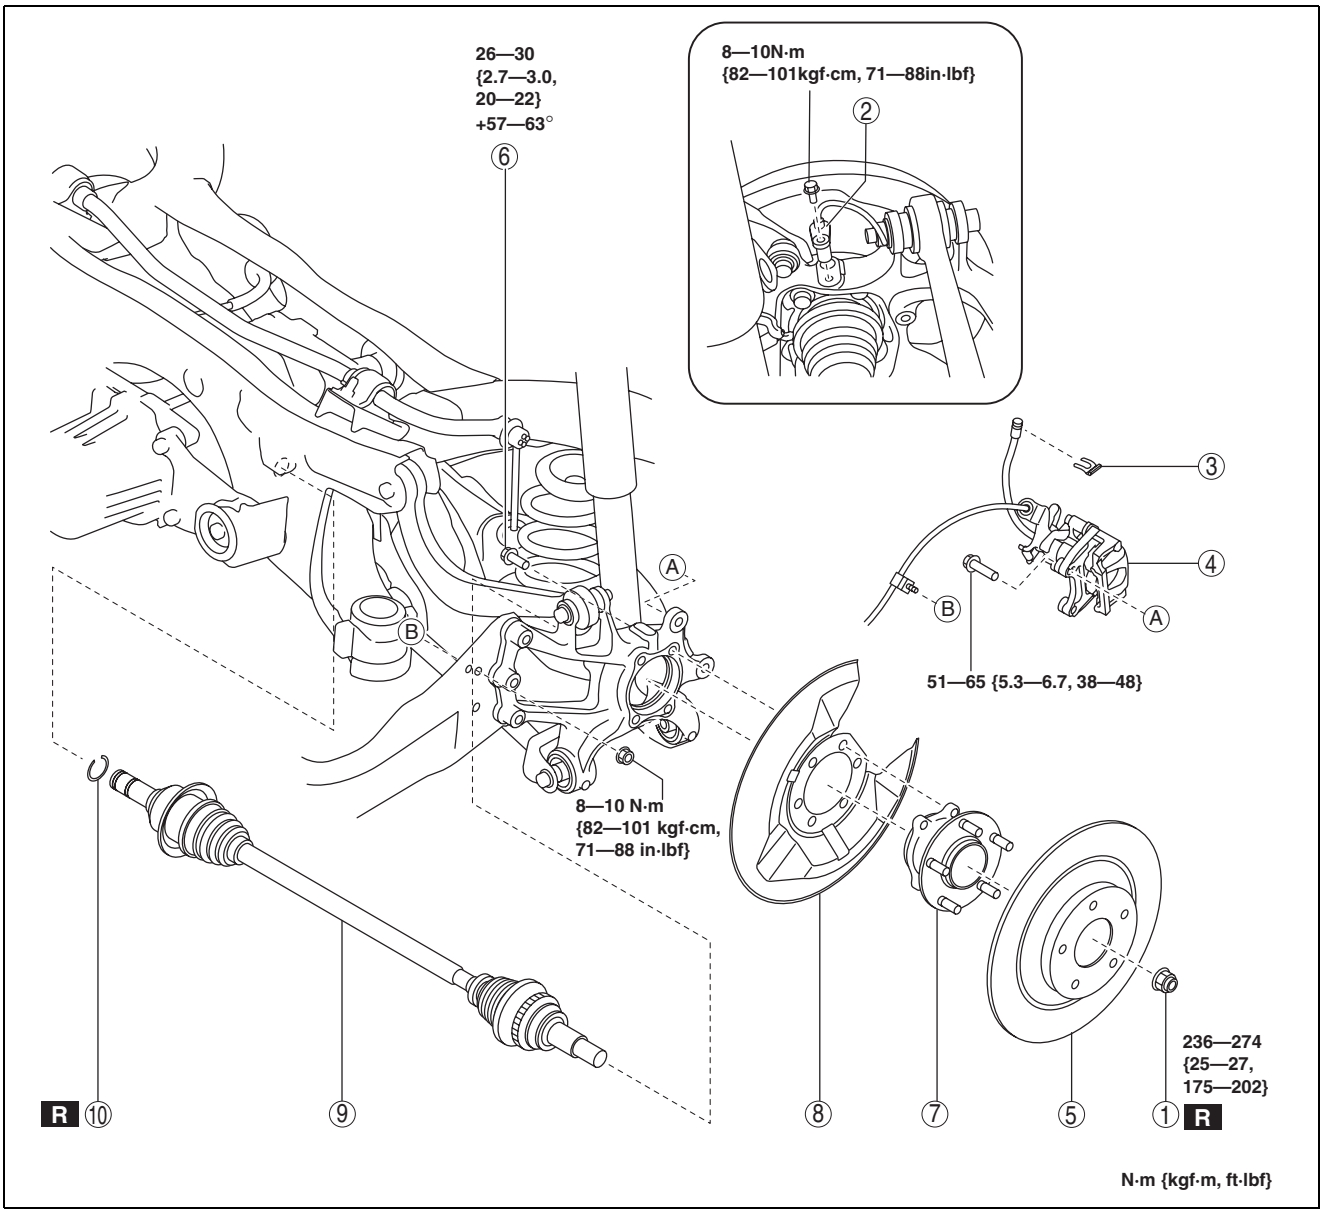
REAR DRIVE SHAFT REMOVAL/INSTALLATION

id031300800600

Caution

- **Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, remove the ABS wheel-speed sensor (wheel side) and fix it to an appropriate place where the sensor will not be pulled by mistake while the vehicle is being serviced.**

1. Drain the rear differential oil into a container. (See 03-14-2 DIFFERENTIAL OIL REPLACEMENT.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. After installation, add the specified rear differential oil. (See 03-14-2 DIFFERENTIAL OIL REPLACEMENT.)
5. Inspect the rear wheel alignment and adjust it if necessary. (See 02-11-3 REAR WHEEL ALIGNMENT.)



ac5uuw00000867

1	Locknut (See 03-13-18 Locknut Installation Note.)
2	ABS wheel-speed sensor (See 03-12-8 WHEEL HUB COMPONENT REMOVAL/INSTALLATION [4WD].)
3	Brake hose clip
4	Brake caliper component

5	Disc plate
6	Bolt (wheel hub) (See 03-12-3 WHEEL HUB COMPONENT REMOVAL/INSTALLATION [2WD].)
7	Wheel hub (See 03-13-18 Wheel Hub Removal Note.)
8	Dust cover

DRIVE SHAFT

9	Rear drive shaft (See 03-13-18 Rear Drive Shaft Removal Note.)
10	Clip (See 03-13-18 Clip Installation Note.)

Wheel Hub Removal Note

1. Before removing the wheel hub, place alignment marks on the wheel hub and the hub support so that they can be installed to the same position before removal.
2. Remove the wheel hub.

Rear Drive Shaft Removal Note

Caution

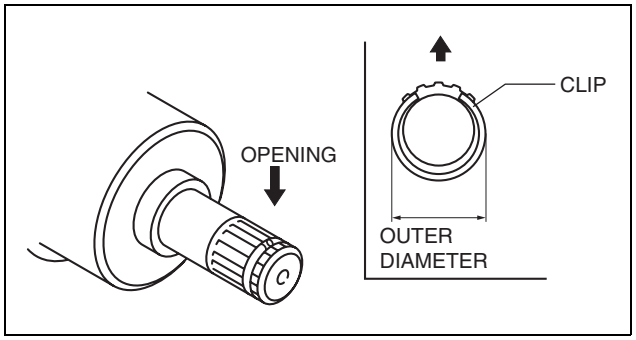
- **Be careful not to damage the rear differential oil seal.**
- **Be careful not to damage the drive shaft boots and ABS sensor rotor.**

1. Pull the drive shaft toward the wheel side, then remove the drive shaft.

Clip Installation Note

1. Install a new clip onto the joint shaft with the opening facing upward. Ensure that the diameter of the clip does not exceed the specification on installation.
2. After installation, measure the outer diameter. If it exceeds the specification, repeat Steps 1—2 using a new clip.

Clip outer diameter specification
25.2 mm {0.992 in} max.



ac5wzw0000257

Locknut Installation Note

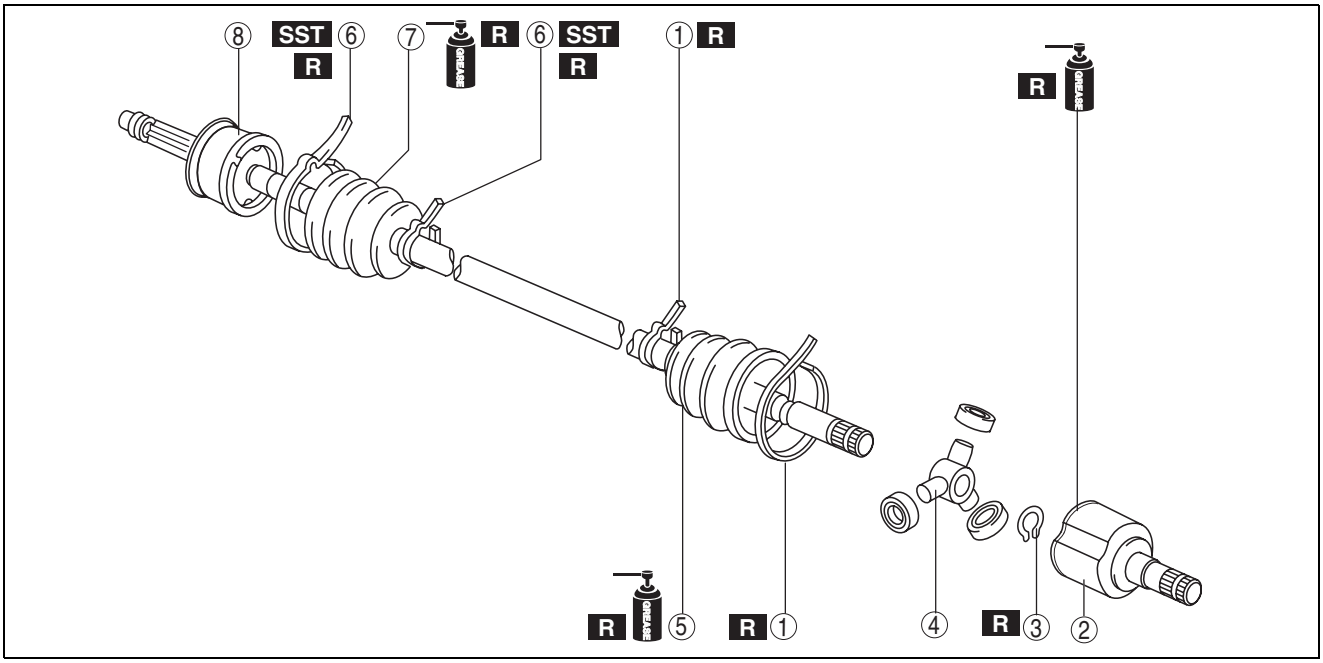
1. After tightening the locknut once at a torque of **390 N·m {40 kgf·m, 288 ft·lbf}**, return it temporarily **180 degrees**, then retighten it to a torque of **236—274 N·m {25—27 kgf·m, 175—202 ft·lbf}**.

DRIVE SHAFT

REAR DRIVE SHAFT DISASSEMBLY/ASSEMBLY

id031300800700

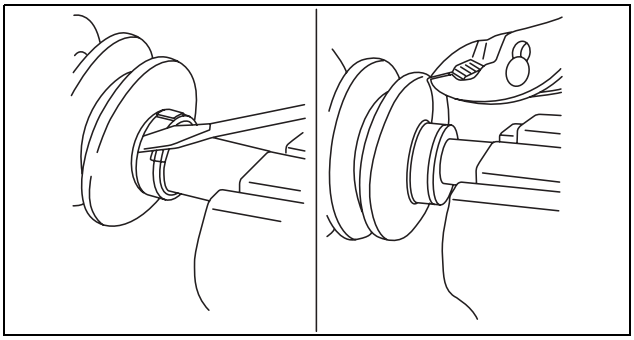
1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.



1	Boot band (differential side) (See 03-13-19 Boot Band (Differential Side) Disassembly Note.) (See 03-13-23 Boot Band (Differential Side) Assembly Note.)
2	Outer ring (See 03-13-20 Outer Ring Disassembly Note.) (See 03-13-23 Outer Ring Assembly Note)
3	Snap ring (See 03-13-20 Snap Ring, Tripod Joint Disassembly Note.) (See 03-13-22 Tripod Joint, Snap Ring Assembly Note.)
4	Tripod joint (See 03-13-20 Snap Ring, Tripod Joint Disassembly Note.) (See 03-13-22 Tripod Joint, Snap Ring Assembly Note.)
5	Boot (See 03-13-20 Boot Disassembly Note.) (See 03-13-21 Boot Assembly Note.)
6	Boot band (wheel side) (See 03-13-21 Boot Band (Wheel Side) Disassembly Note.) (See 03-13-21 Boot Band (Wheel Side) Assembly Note.)
7	Boot (See 03-13-20 Boot Disassembly Note.) (See 03-13-21 Boot Assembly Note.)
8	Shaft and ball joint component

Boot Band (Differential Side) Disassembly Note

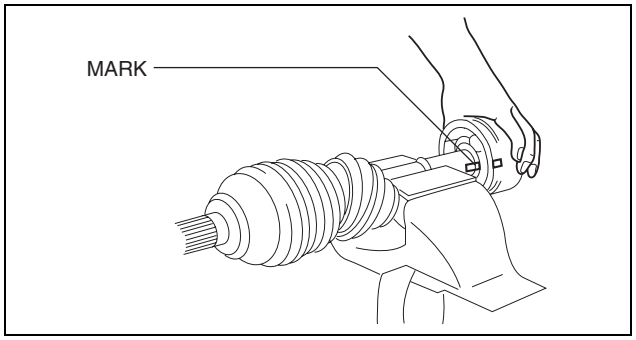
1. Pry up the boot band at the points indicated in the figure using pliers and remove the band.



DRIVE SHAFT

Outer Ring Disassembly Note

1. Mark the outer ring and the shaft for proper assembly.
2. Remove the outer ring



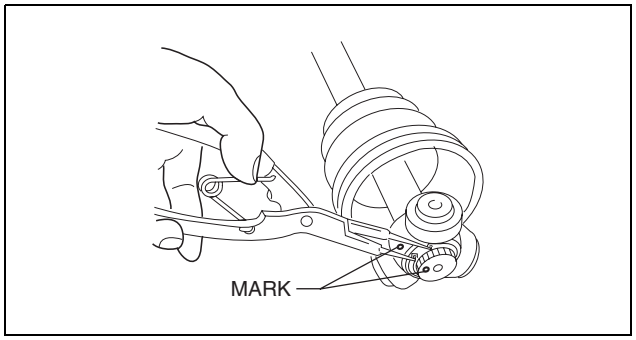
ac5wzw0000257

Snap Ring, Tripod Joint Disassembly Note

1. Place an alignment mark on the shaft and tripod joint.
2. Remove the snap ring using snap ring pliers.
3. Remove the tripod joint from the shaft.

Caution

- **Do not try to remove the tripod joint by hitting it with a hammer. The tripod joint could be damaged.**



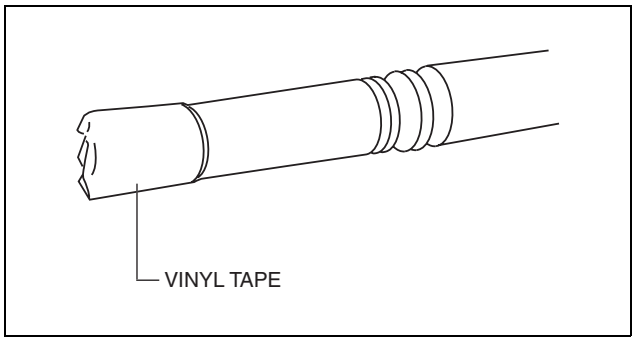
ac5wzw0000257

Boot Disassembly Note

Note

- Remove the wheel side boot only if there is any malfunction.

1. Wrap the shaft splines with tape.
2. Remove the boot.



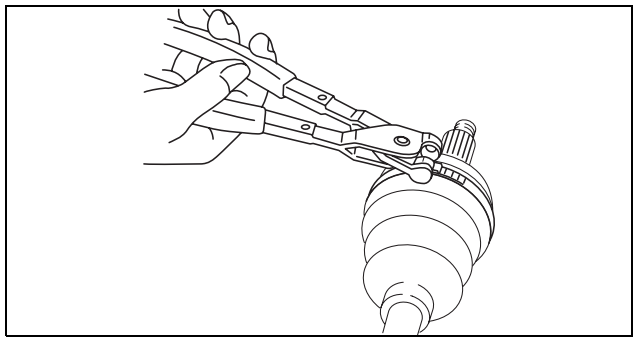
ac5wzw0000257

DRIVE SHAFT

Boot Band (Wheel Side) Disassembly Note

Note
- Remove the boot band only if there is a malfunction.

1. Remove the boot band using end clamp pliers.



ac5wzw0000258

Boot Assembly Note

Note
- The boot shapes on the wheel side and the differential side are different. Do not install the wrong boot by mistake.

1. Fill the inside of the new dust boot (wheel side) with grease.

Note
- Do not touch the grease with your hand. Apply it from the tube to prevent foreign matter from entering the boot.

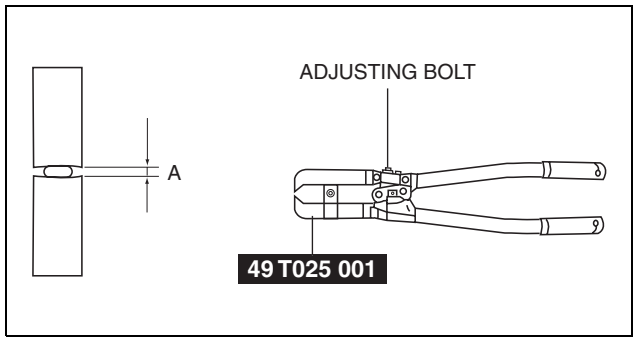
Grease amount
40—60 g {1.5—2.1 oz}

2. Install the boot with the drive shaft spline still wrapped with vinyl tape.
3. Remove the vinyl tape.

Boot Band (Wheel Side) Assembly Note
Boot band (small diameter side)

1. Adjust clearance A by turning the adjusting bolt of the **SST**.

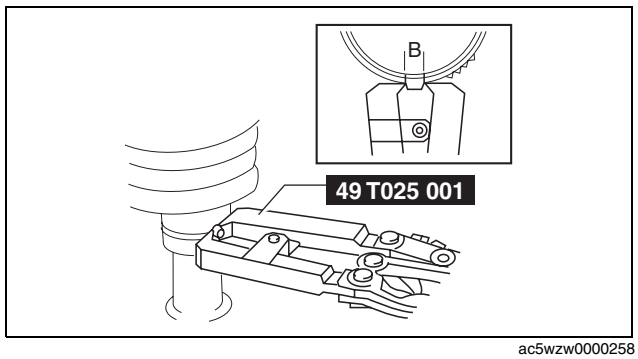
Clearance A
2.9 mm {0.11 in}



ac5wzw0000258

2. Crimp the wheel side small boot band using the **SST**. Verify that clearance B is within the specification.
   - If clearance B is more than the specification, reduce clearance A of the **SST** and crimp the boot again.
   - If clearance B is less than the specification, replace the boot band, increase clearance A of the **SST**, and crimp the new boot.

Clearance B
2.4—2.8 mm {0.10—0.11 in}



ac5wzw0000258

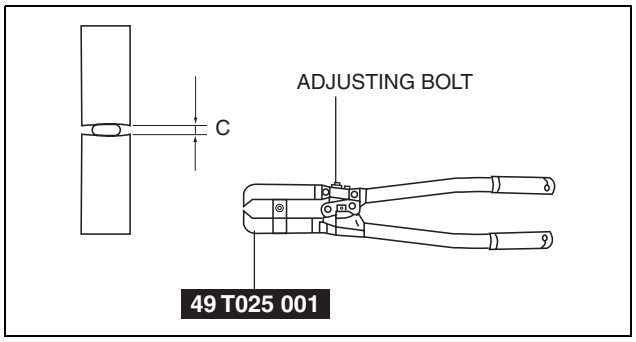
DRIVE SHAFT

3. Verify that the boot band does not protrude from the boot band installation area.
   - If it does, replace the boot band and repeat Steps 2 and 3.

Boot band (Large diameter side)

1. Adjust clearance C by turning the adjusting bolt of the **SST**.

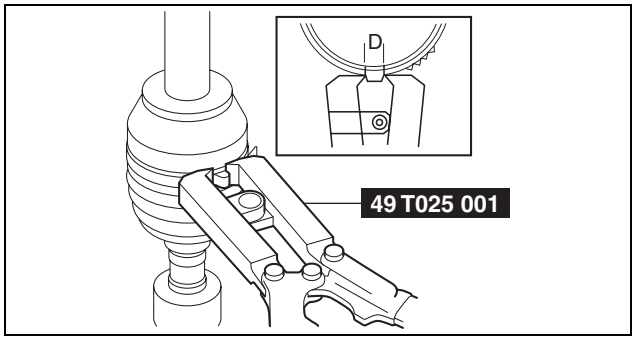
   Clearance C
   3.2 mm {0.13 in}



ac5wzw0000258

2. Crimp the wheel side small boot band using the **SST**. Verify that clearance D is within the specification.
   - If clearance B is more than the specification, reduce clearance C of the **SST** and crimp the boot again.
   - If clearance B is less than the specification, replace the boot band, increase clearance C of the **SST**, and crimp the new boot.

   Clearance D
   2.4—2.8 mm {0.10—0.11 in}

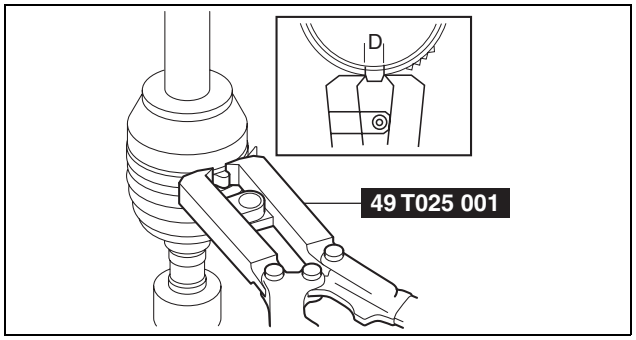


ac5wzw0000258

3. Verify that the boot band does not protrude from the boot band installation area.
   - If it does, replace the boot band and repeat Steps 2 and 3.

Tripod Joint, Snap Ring Assembly Note

1. While aligning the marks on the shaft and the tripod joint, insert the tripod joint using a bar and a hammer.
2. Insert a new snap ring using snap ring pliers.
3. Verify that the snap ring is engaged correctly in the groove of the shaft.



ac5wzw0000258

DRIVE SHAFT

Outer Ring Assembly Note

1. Fill the outer ring and boot (transaxle side) with the specified grease.

   Note
   - Do not touch the grease with your hand. Apply it from the tube to prevent foreign matter from entering the boot.

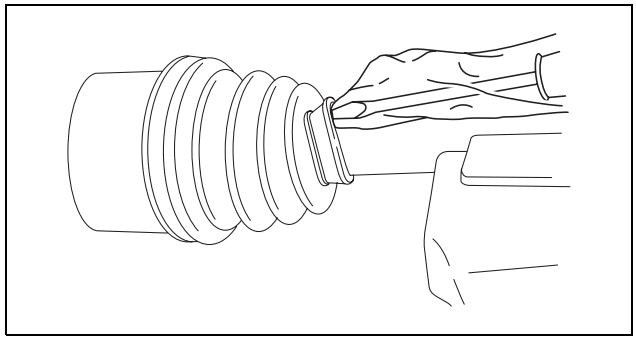
   Grease amount
   70—90 g {2.5—3.1 oz}

2. Assemble the outer ring.
3. Set the drive shaft to the standard length.

   Rear drive shaft standard length
   LH: 836.8—842.0 mm {32.95—33.14 in}
   RH: 874.8—880.0 mm {34.45—34.64 in}

4. Release any trapped air from the boots by carefully lifting up the small end of each boot with a cloth wrapped screwdriver.

   Note
   - Verify that there is no grease leak while being careful not to damage the boot.
   - If the boot is damaged, it may not be possible to perform the full-length adjustment of the drive shaft.

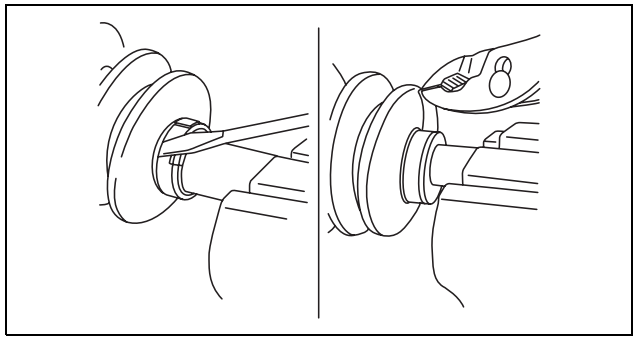


ac5wzw0000258

5. Verify that the drive shaft length is within the specification under atmospheric pressure inside the boot.
   - If not within the specification, repeat from Step 3.

Boot Band (Differential Side) Assembly Note

1. Fold the band in the direction opposite to the forward revolving direction of the drive shaft and use pliers to pull it tight.



ac5wzw0000258

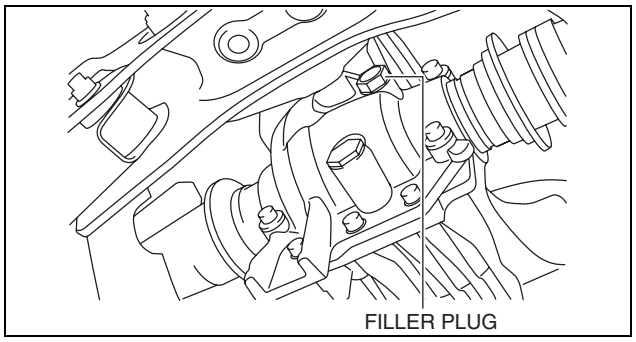
DIFFERENTIAL OIL INSPECTION

id031400800100

1. Place the vehicle on level ground.
2. Remove the filler plug and washer.
3. Verify that the oil is at the brim of the filler plug hole.
4. If it is low, add the specified oil.
5. Install a new washer and the filler plug, and tighten.

Tightening torque
40—53 N·m {4.1—5.4 kgf·m, 30—39 ft·lbf}



ac5uuw00000285

DIFFERENTIAL OIL REPLACEMENT

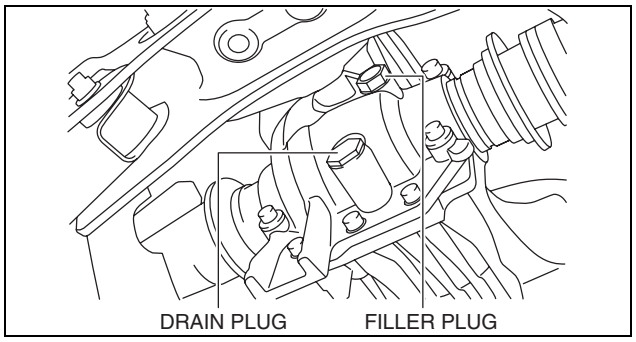
id031400800200

1. Place the vehicle on level ground.
2. Remove the filler plug.
3. Remove the drain plug and drain the differential oil into a container.
4. Install a new washer and the drain plug, and tighten.

Tightening torque
40—53 N·m {4.1—5.4 kgf·m, 30—39 ft·lbf}

5. Add the specified differential oil from the filler plug until the level reaches the brim of the plug hole.

Rear differential oil
Specified oil grade: API service GL-5
Specified oil viscosity: SAE 80W-90
Capacity (approx. quantity): 0.45 L {0.48 US qt, 0.40 Imp qt}



ac5uuw00000286

6. After filling with differential oil, perform oil level inspection.
7. Install a new washer and the drain plug, and tighten.

Tightening torque
40—53 N·m {4.1—5.4 kgf·m, 30—39 ft·lbf}

DIFFERENTIAL

OIL SEAL (SIDE GEAR) REPLACEMENT

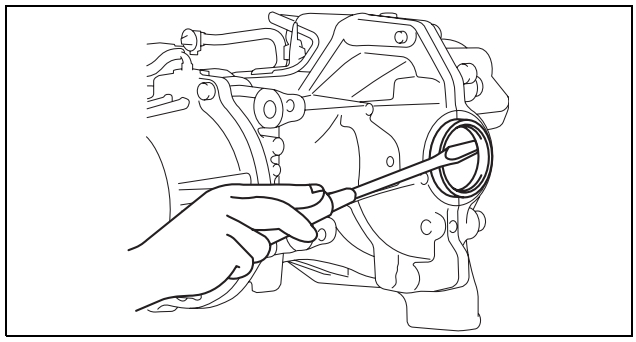
id031400800700

1. Remove the drain plug and the drain differential oil into a container.
2. Install a new washer and the drain plug, and tighten.
3. Remove the rear drive shaft. (See 03-13-17 REAR DRIVE SHAFT REMOVAL/INSTALLATION.)
4. Remove the clip from the drive shaft.

Caution
- **Wrap the end of a screwdriver with cloth to prevent scratches to the inside of the differential casing.**

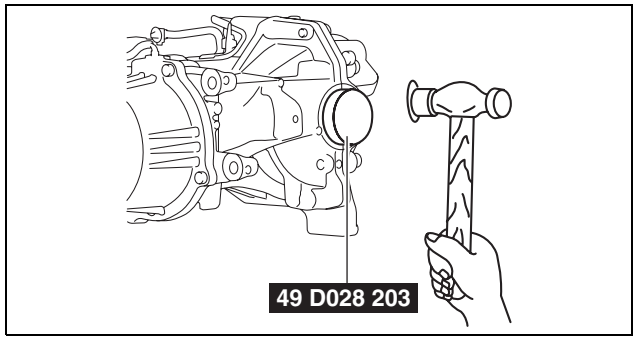
5. Remove the oil seal from the differential casing using a screwdriver.
6. Apply differential oil to the new oil seal lip.

Note
- Install the oil seal at a straight angle.



ac5uuw00000304

7. Install the new oil seal to the differential carrier using the **SST**.
8. After installing the new clip onto the drive shaft, insert the drive shaft into the differential. (See 03-13-17 REAR DRIVE SHAFT REMOVAL/INSTALLATION.)
9. Verify that the drive shaft cannot be pulled out.
10. Add the specified differential oil.
11. After adding the oil, perform an oil level inspection. (See 03-14-2 DIFFERENTIAL OIL INSPECTION.)
12. Install a new washer and the oil filler plug, and tighten.



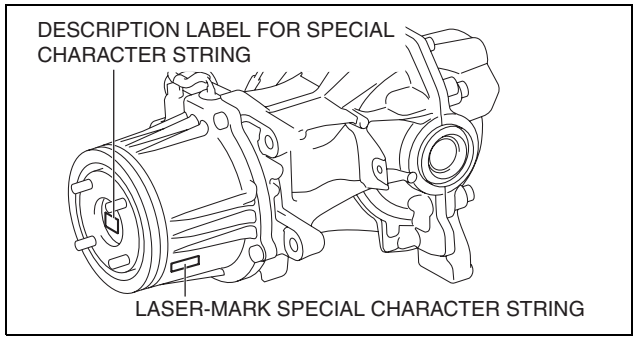
ac5uuw00000305

Tightening torque
40—53 N·m {4.1—5.4 kgf·m, 30—39 ft·lbf}

REAR DIFFERENTIAL REMOVAL/INSTALLATION

id031400800400

Warning
- **When replacing the coupling component, read the special character string before installing a new coupling component and write it to the 4WD control module after replacement. The special character string is indicated in the two locations shown in the figure.**



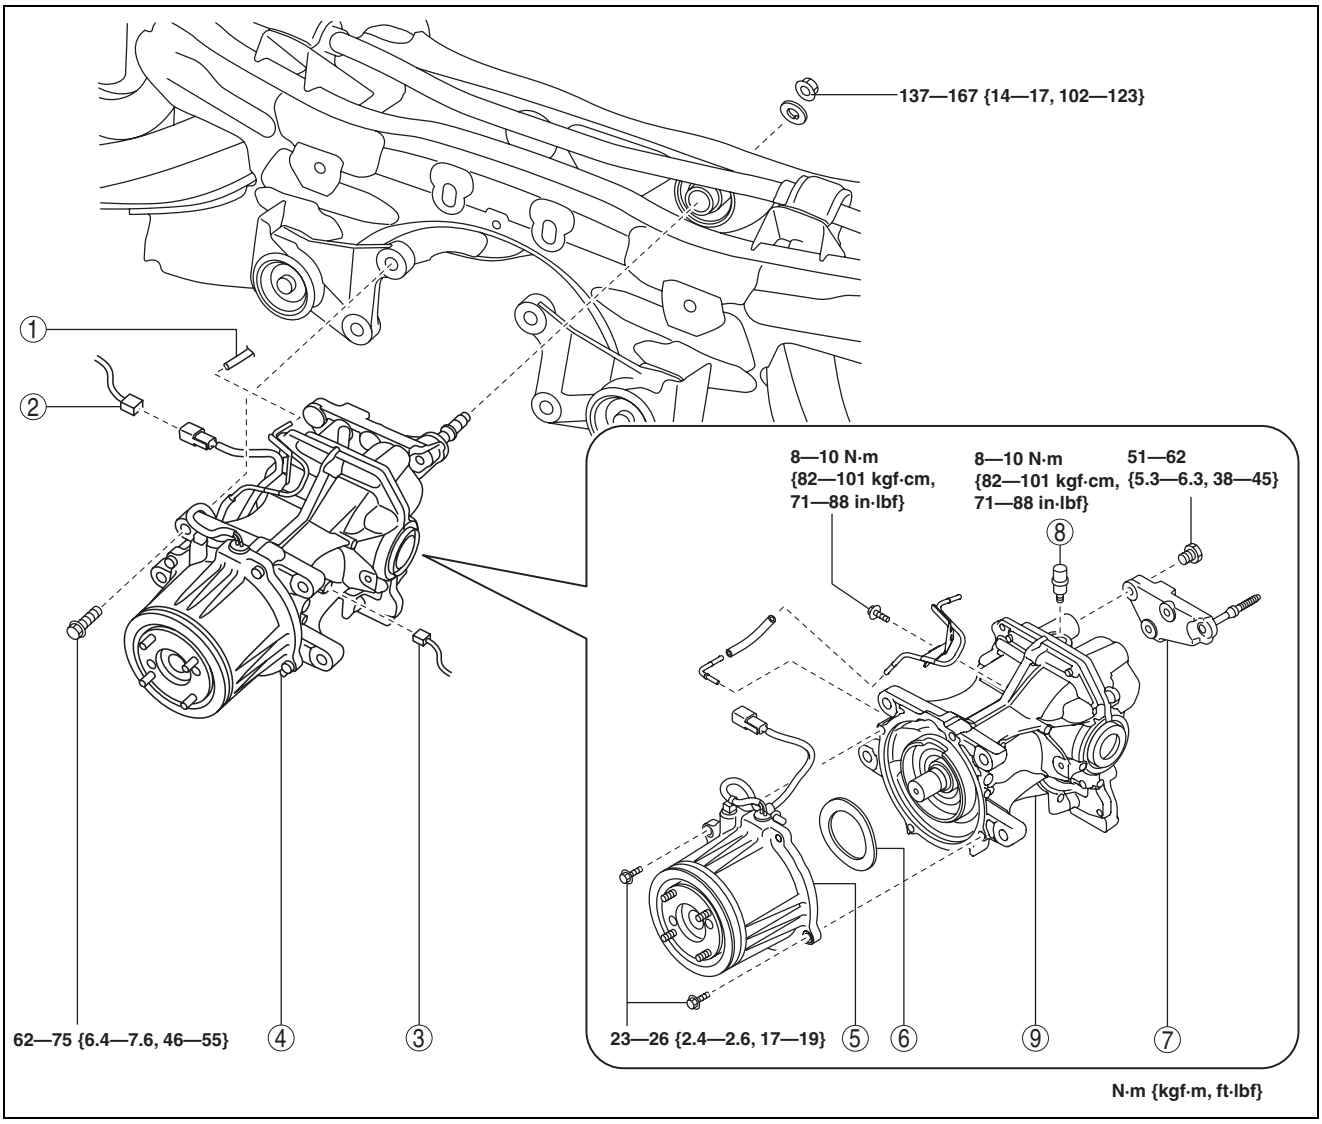
ac5wzw0000260

Caution
- **Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the wiring harness if it is pulled by mistake. Before performing the following procedures, disconnect the ABS wheel-speed sensor connector (body side) and fix the wiring harness to an appropriate place where it will not be pulled by mistake while servicing the vehicle.**

1. Drain the rear differential oil into a container.
2. Remove the propeller shaft. (See 03-15-2 PROPELLER SHAFT REMOVAL/INSTALLATION.)

DIFFERENTIAL

3. Remove the TWC. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the rear drive shaft. (See 03-13-17 REAR DRIVE SHAFT REMOVAL/INSTALLATION.)
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.
7. Add the specified rear differential oil. (See 03-14-2 DIFFERENTIAL OIL REPLACEMENT.)
8. Inspect the rear wheel alignment and adjust it if necessary. (See 02-11-3 REAR WHEEL ALIGNMENT.)



ac5wzw0000260

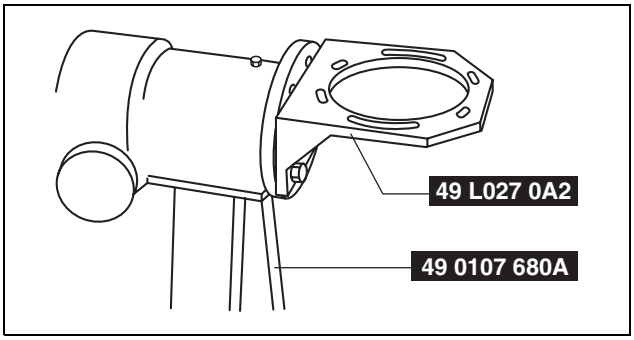
20	Side gear
21	Thrust washer

22	Side bearing inner race (See 03-14-9 Side Bearing Inner Race Disassembly Note.)
23	Gear case
24	Oil seal (side gear)

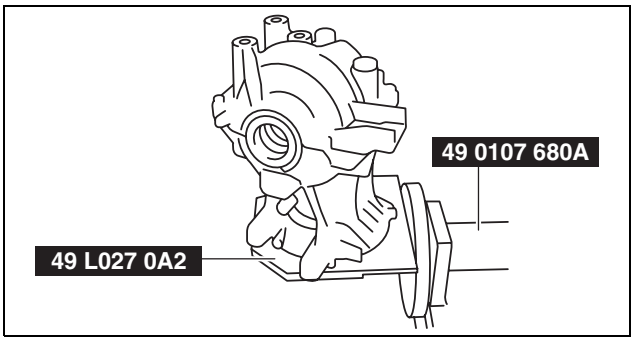
Rear Cover Disassembly Note

1. Install the **SSTs** to the engine stand.



ac5uuw00000289

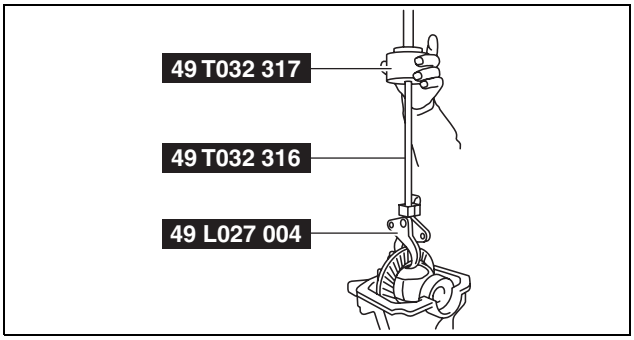
2. Install the rear differential to the **SSTs**.
3. Remove the rear cover.



ac5uuw00000290

Rear Differential Component Disassembly Note

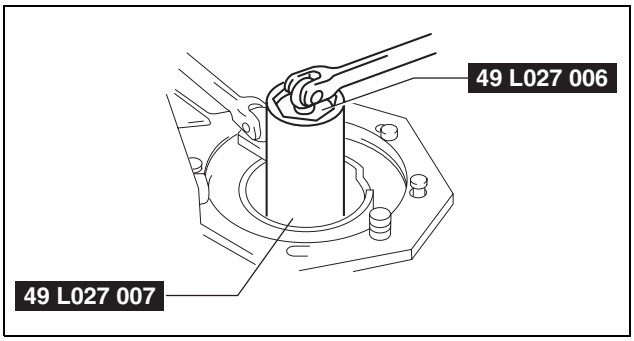
1. If the rear differential component cannot be removed by hand, remove the rear differential component using the **SSTs**.
2. Mark or otherwise distinguish between the removed left and right adjusting shims, spacers and side bearing outer races so that they are not mixed up at the time of reassembly.



ac5uuw00000291

Locknut Disassembly Note

1. Remove the locknut using the **SSTs**.

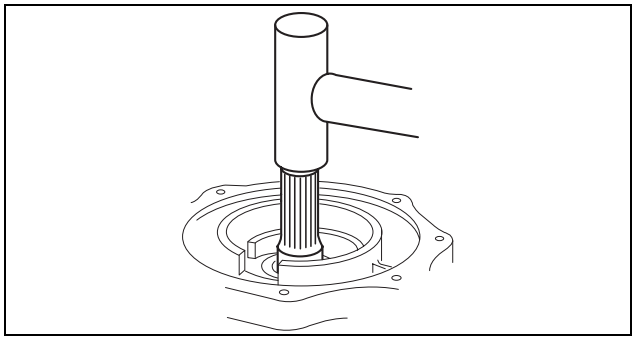


ac5uuw00000292

DIFFERENTIAL

Drive Pinion Disassembly Note

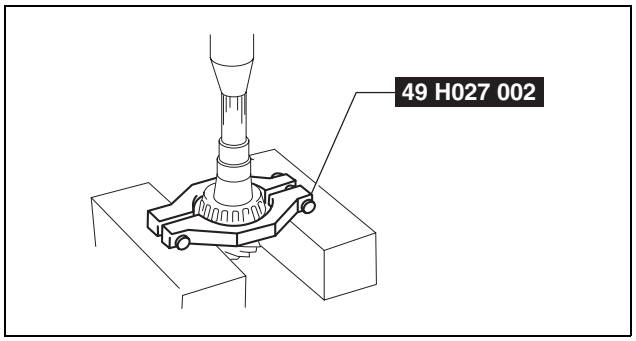
1. Remove the drive pinion by lightly tapping with a copper hammer.



acxuuw00004574

Bearing Inner Race (Rear Bearing) Disassembly Note

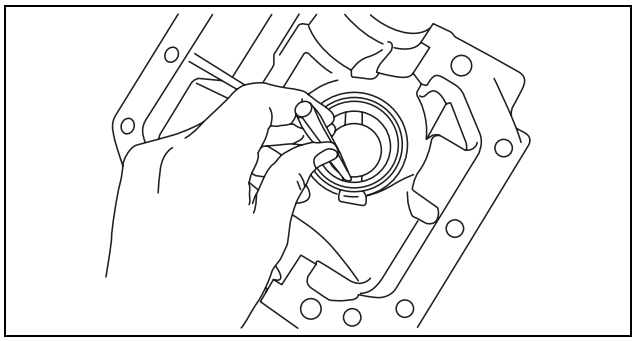
1. Remove the bearing inner races (rear bearing) using the **SST** and a press.



ac5uuw00000293

Bearing Outer Race Disassembly Note

1. Remove the bearing outer races using the 2 grooves in the carrier and alternately tapping the sides of the races with a brass bar.

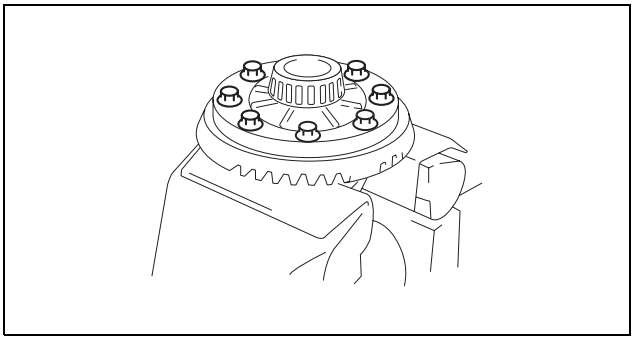


ac5uuw00000294

DIFFERENTIAL

Ring Gear Disassembly Note

1. Secure the gear case in a vice and remove the bolts.
2. Lightly tap around the ring gear using a plastic hammer to remove the ring gear from the gear case.



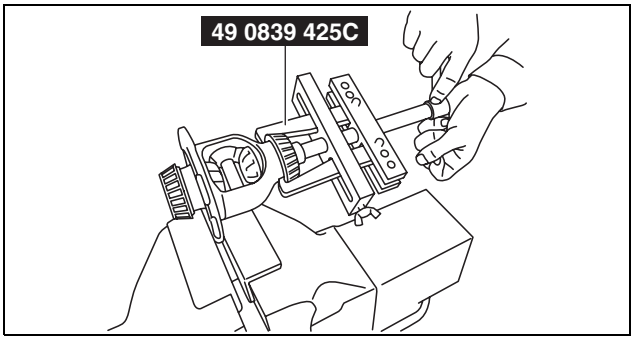
acxuuw00003143

Side Bearing Inner Race Disassembly Note

Note

- Mark or otherwise distinguish between the left and right side bearings so that they are not mixed up at the time of reassembly.

1. Remove the side bearing inner races from the gear case using the **SST.**



ac5uuw00000295

DIFFERENTIAL

REAR DIFFERENTIAL ASSEMBLY

id031400800600

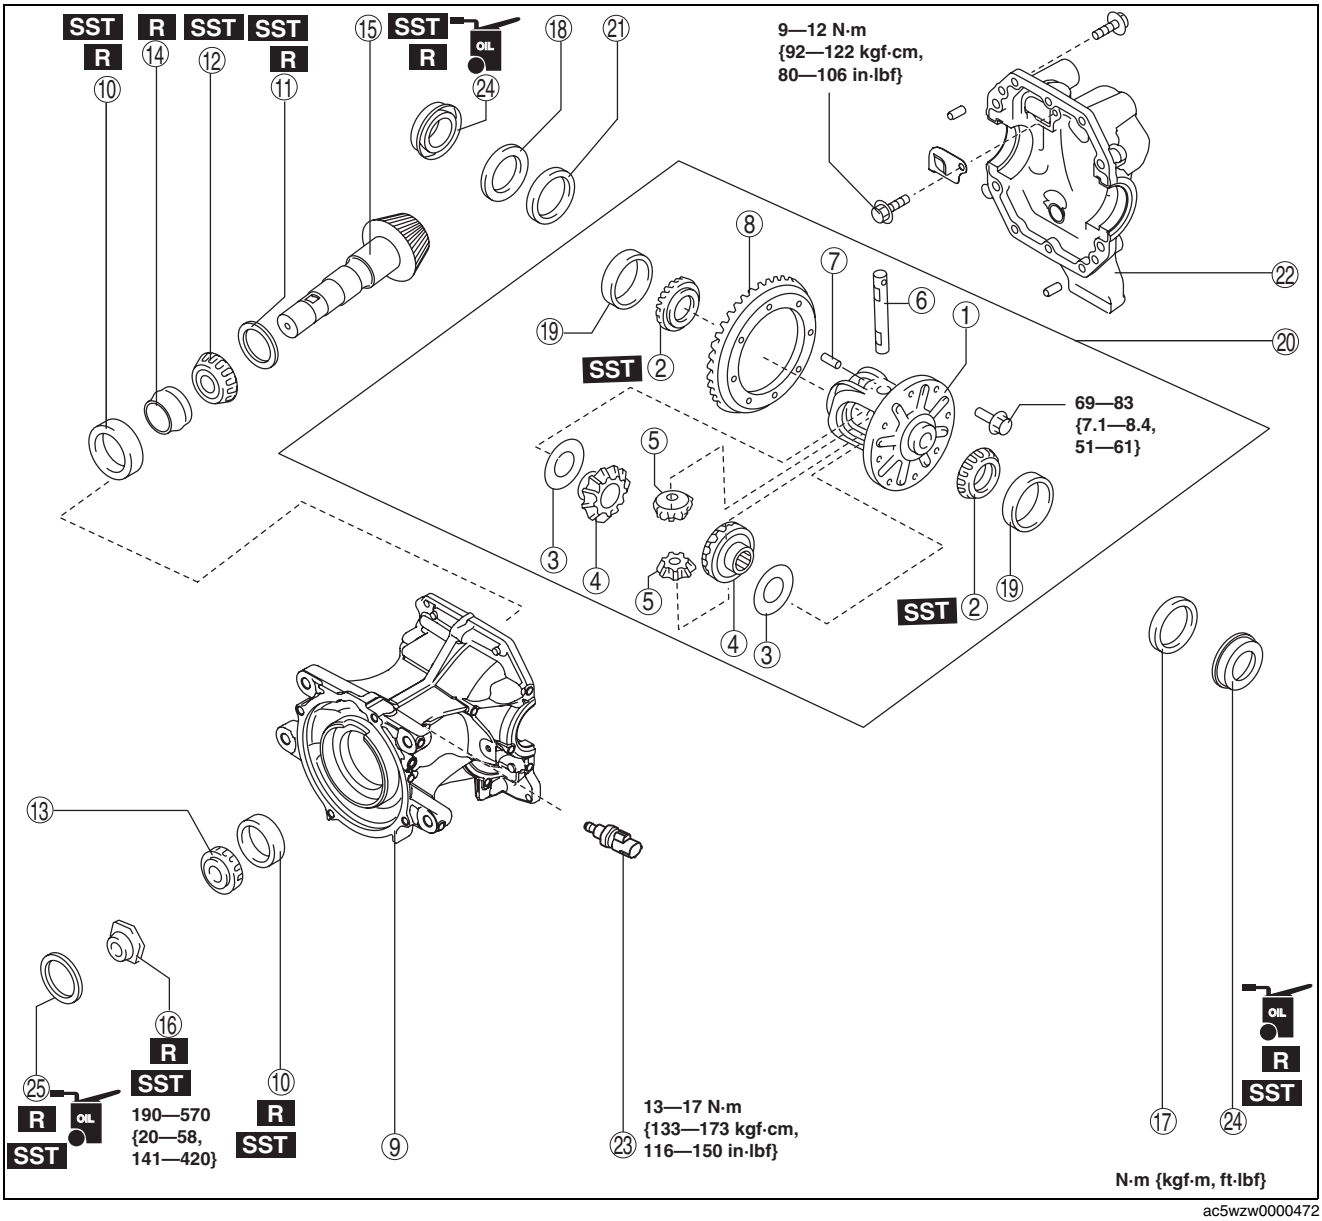
Warning

- **The engine stand is equipped with a self-lock mechanism, however, if the rear differential is in a tilted condition, the self-lock mechanism could become inoperative. If the rear differential unexpectedly rotates it could cause injury, therefore do not maintain the rear differential in a tilted condition. When turning the rear differential, grasp the rotation handle firmly.**

Caution

- **Clean away the old sealant before applying the new sealant.**
- **Install the rear cover before the applied sealant starts to harden.**
- **Allow the sealant to set at least 30 minutes after installation before filling the differential with the specified oil.**

1. Assemble in the order indicated in the table.



ac5wzw0000472

1	Gear case
2	Side bearing inner race (See 03-14-11 Side Bearing Inner Race Assembly Note.)
3	Thrust washer (See 03-14-12 Ring Gear Assembly Note.)

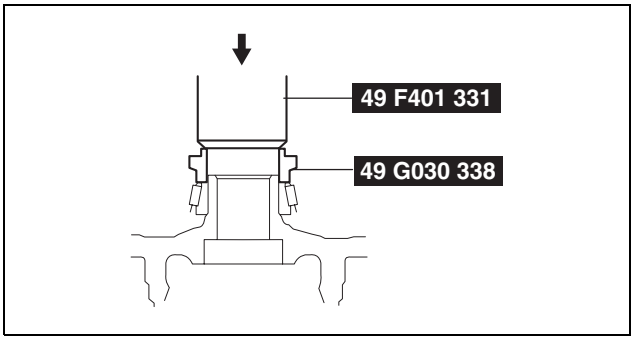
Side Bearing Inner Race Assembly Note

Caution
- **Do not mix up the left and right side bearing inner races.**

1. Press the side bearing inner races into the gear case using the **SSTs**.

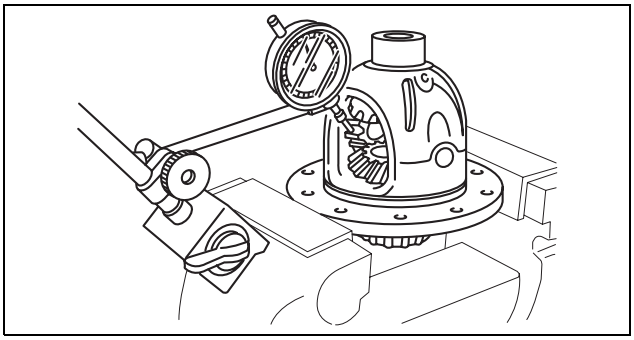


ac5uuw00000297

Thrust washer Assembly Note

1. Assemble the side gears, thrust washers and pinion gears to the gear case, then assemble the knock pin.
2. After assembling the knock pin, make a crimp so that the pin will not come out of the gear case.
3. Set a dial gauge to the pinion gear as indicated in the figure.
4. Secure one of the side gears.
5. Move the pinion gear and measure the backlash at the end of the pinion gear.
   - If the backlash exceeds the standard, use the thrust washers to adjust.

Rear differential backlash of pinion gear and side gear
0.1 mm {0.004 in} or less



ac5uuw00000872

Thrust washer thickness

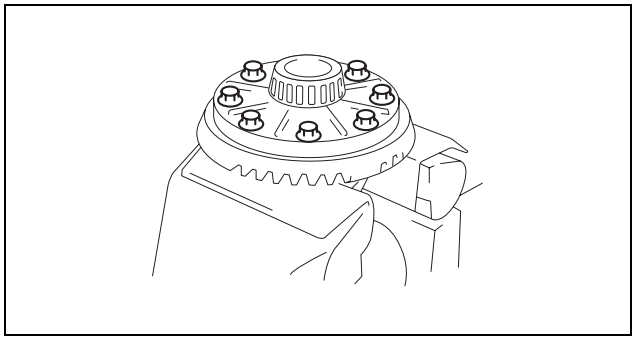
Identification mark	Thickness
9	0.90 mm {0.035 in}
95	0.95 mm {0.037 in}
0	1.00 mm {0.0394 in}
05	1.05 mm {0.0413 in}
1	1.10 mm {0.0433 in}

DIFFERENTIAL

Ring Gear Assembly Note

1. Align the marks placed on the ring gear case at the time of disassembly and tighten the bolts in diagonal order.

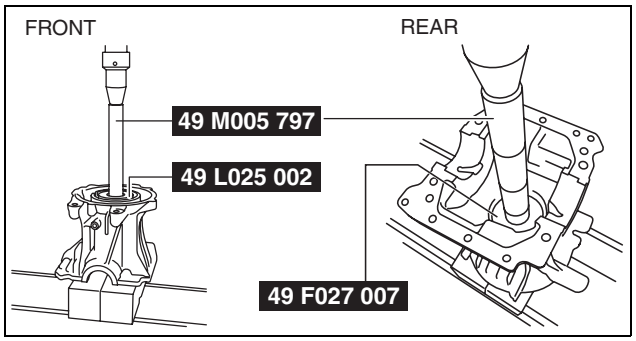
   Tightening torque
   69—83 N·m {7.1—8.4 kgf·m, 51—61 ft·lbf}



acxuuw00003149

Bearing Outer Race Assembly Note

1. Press in the bearing outer race using the **SSTs** and a press.



ac5uuw00000873

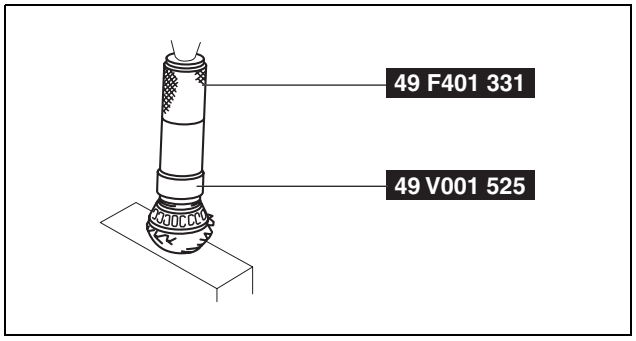
Spacer, Inner Race Assembly Note

1. Install a new spacer of the same size as the originally installed spacer.

Spacer thickness

Identification mark	Thickness (mm {in})	Identification mark	Thickness (mm {in})
08	3.08 {0.1213}	29	3.29 {0.1295}
09	3.095 {0.1219}	30	3.305 {0.1301}
11	3.11 {0.1224}	32	3.32 {0.1307}
12	3.125 {0.1230}	33	3.335 {0.1313}
14	3.14 {0.1236}	35	3.35 {0.1319}
15	3.155 {0.1242}	36	3.365 {0.1325}
17	3.17 {0.1248}	38	3.38 {0.1331}
18	3.185 {0.1254}	39	3.395 {0.1337}
20	3.20 {0.1260}	41	3.41 {0.1343}
21	3.215 {0.1266}	42	3.425 {0.1348}
23	3.23 {0.1272}	44	3.44 {0.1354}
24	3.245 {0.1278}	45	3.455 {0.1360}
26	3.26 {0.1283}	47	3.47 {0.1366}
27	3.275 {0.1289}	—	—

2. Press the bearing inner race (rear bearing) into the drive pinion using the **SSTs** and a press.



ac5uuw00000299

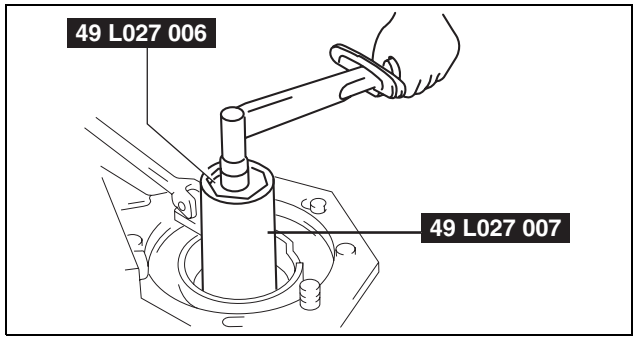
DIFFERENTIAL

Locknut Assembly Note
Drive pinion preload adjustment

1. Apply differential oil to a new locknut.
2. Assemble a new collapsible spacer, bearing inner race (front bearing), spacer and locknut to the drive pinion, and temporarily tighten the locknut.
3. Turn the serrated part of the drive pinion by hand to seat the bearing.
4. Tighten the locknut temporarily tightened in Step 1 from the lower limit of the specified tightening torque using the **SSTs**, and make this the specified preload.
   - If the specified preload cannot be obtained within the specified tightening torque, replace the collapsible spacer and inspect again.

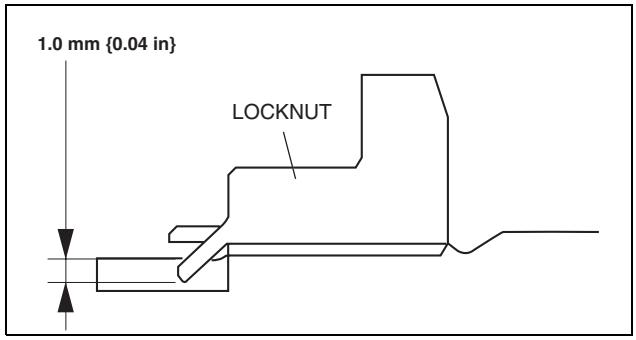
   Tightening torque
   190—570 N·m {20—58 kgf·m, 141—420 ft·lbf}

   Rear differential drive pinion preload
   0.9—1.6 N·m {9.2—16 kgf·cm, 8.0—14 in·lbf}



ac5uuw00000300

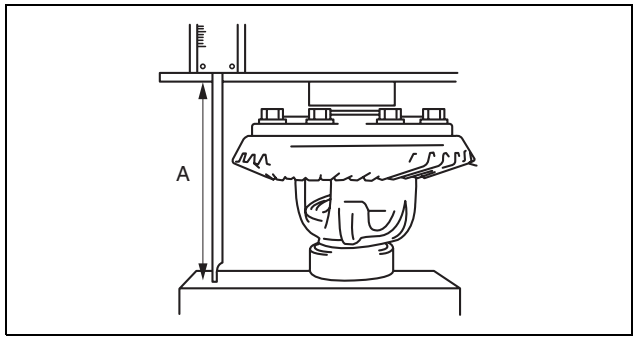
5. Crimp the locknut using a chisel and hammer.



acxuuw00003157

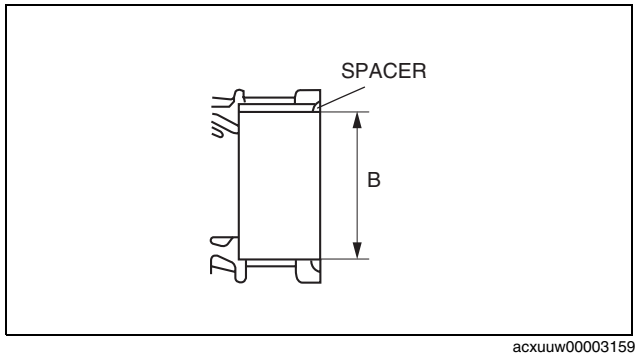
Adjust Shim Assembly Note

1. Assemble the differential carrier to the **SSTs**.
2. Assemble the spacer to the differential carrier.
3. Stack the side bearing outer race and gear case component on the surface plate as indicated in the figure, and measure the height using a caliper and a ruler. This is value A.



acxuuw00003158

4. Measure the width of the installed differential in the differential carrier with the spacer installed. This is value B.
5. The combined thickness of the left and right adjusting shims is obtained by the following formula.
   C_1 = B – A + 0.16 mm {0.0063 in}
   C_2 = B – A + 0.25 mm {0.0098 in}
6. If the combined thickness of the previously installed adjusting shims is between C1 and C2, use the shims as they are.
7. If the combined thickness of the previously installed adjusting shims is not between C1 and C2, or if the adjusting shims have to be replaced, select two appropriate adjusting shims from the table below.



acxuuw00003159

DIFFERENTIAL

Adjusting shim thickness

Identification mark	Thickness (mm {in})	Identification mark	Thickness (mm {in})
339	3.39{0.133}	393	3.93 {0.155}
342	3.42 {0.135}	396	3.96 {0.156}
345	3.45 {0.136}	399	3.99 {0.157}
348	3.48 {0.13}	402	4.02 {0.158}
351	3.51 {0.138}	405	4.05 {0.159}
354	3.54 {0.139}	408	4.08 {0.161}
357	3.57 {0.141}	411	4.11 {0.162}
360	3.60 {0.142}	414	4.14 {0.163}
363	3.63 {0.143}	417	4.17 {0.164}
366	3.66 {0.144}	420	4.20 {0.165}
369	3.69 {0.145}	423	4.23 {0.167}
372	3.72 {0.146}	426	4.26 {0.168}
375	3.75 {0.148}	429	4.29 {0.169}
378	3.78 {0.149}	432	4.32 {0.170}
381	3.81 {0.150}	435	4.35 {0.171}
384	3.84 {0.151}	438	4.38 {0.172}
387	3.87 {0.152}	441	4.41 {0.174}
390	3.90 {0.154}	—	—

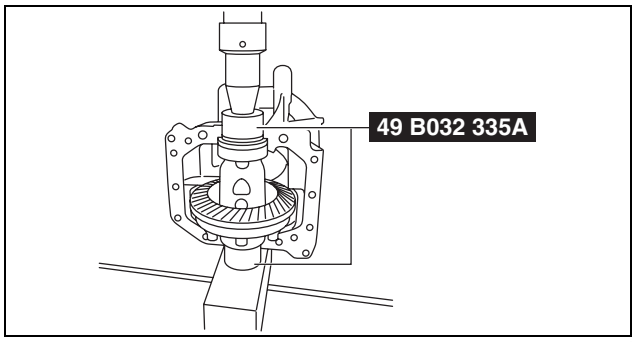
Caution
- **If adjusting shims are to be reused, do not mix up the left and right shims.**
- **Do not mix up the left and right side bearing outer races and spacers.**

8. Assemble the differential and bearing outer race to the differential carrier.
9. Tap the selected adjusting shim between the spacer and the bearing race with a plastic hammer.

Rear Cover Assembly Note

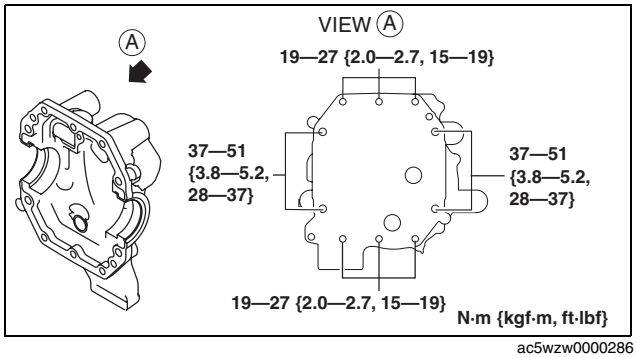
1. Clean the alignment surface of the carrier and rear cover.
2. Apply pressure to the case using a press and install the rear cover using the **SSTs** (49 B032 335A) as shown in the figure.

Caution
- **Do not apply pressure of 2 t or more.**



ac5uuw00000874

3. Install the bolts with the specified torque as shown in the figure.

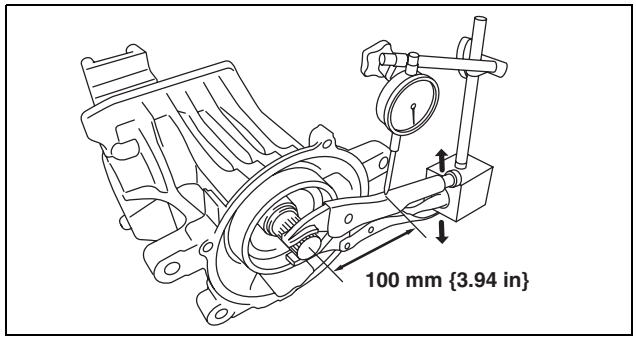


ac5wzw0000286

DIFFERENTIAL

4. Install the commercially-available tool (vise clamp) to the drive pinion shaft and measure **100 mm {3.94 in}** of backlash from the center of the shaft axle.

   Rear differential backlash of drive pinion and ring gear
   Standard: 0.13—0.21 mm {0.0052—0.0082 in}
   Minimum value: 0.07 mm {0.003 in}

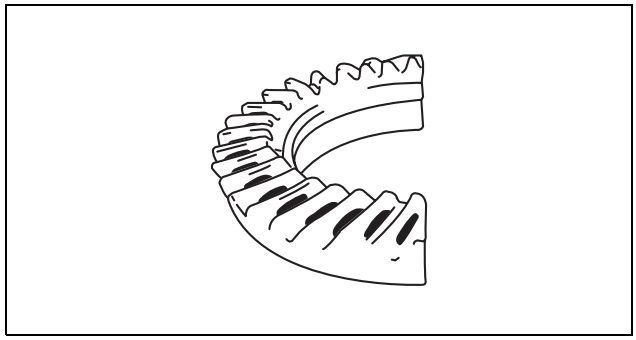


ac5uuw00001706

5. If the backlash is not within the specification, adjust the gear case component by moving it in the axial direction.

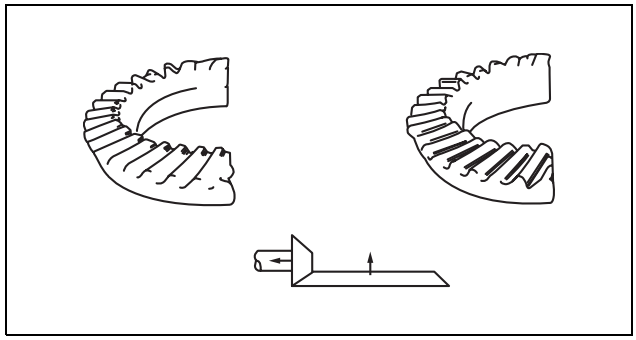
   Note
   - When moving the gear case component in the axial direction, replace the adjusting shims. If the adjusting shim on the right side is replaced with one that is **0.05 mm {0.002 in}** thicker, replace the one on the left with one that is **0.05 mm {0.002 in}** thinner.

6. Inspect the drive pinion and ring gear teeth contact points.
   (1) Coat both surfaces of the ring gear uniformly with a thin red lead coating.
   (2) While rotating the ring gear back and forth by hand, rotate the drive pinion several times and inspect the tooth contact.
   (3) Inspect the tooth contacts in four locations around the ring gear, and check that the tooth contacts showing the red lead coating are the same as the pattern indicated in the figure.
      - If the tooth contact is good, wipe off the red lead coating.
      - If it is not good, adjust the pinion height, then adjust the backlash.



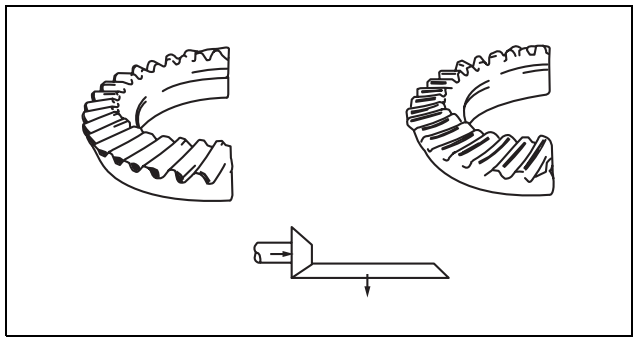
acxuuw00003162

   (4) If toe and flank contact appears as shown in the figure, replace the spacer with a thinner one, and move the drive pinion outward.



acxuuw00003163

   (5) If heel and face contact appears as indicated in the figure, replace the spacer with a thicker one and move the drive the pinion inward.



acxuuw00003164

7. If the backlash is within the specification and the tooth contact is correct, install the rear cover.

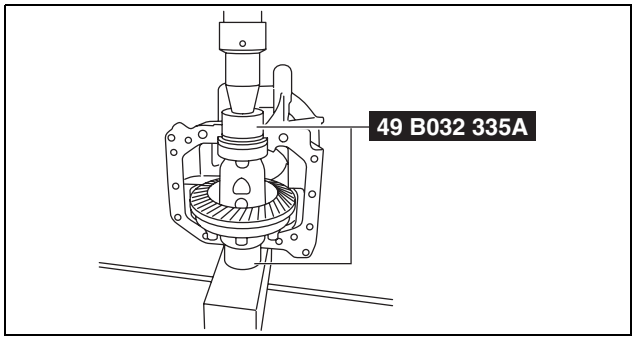
   Caution
   - **Clean away the old sealant before applying the new sealant.**
   - **Install the rear cover before the applied sealant starts to harden.**
   - **Allow the sealant to set at least 30 minutes after installation before filling the differential with the specified oil.**

8. Clean the alignment surface of the carrier and rear cover, and apply a thin coat of sealant.

DIFFERENTIAL

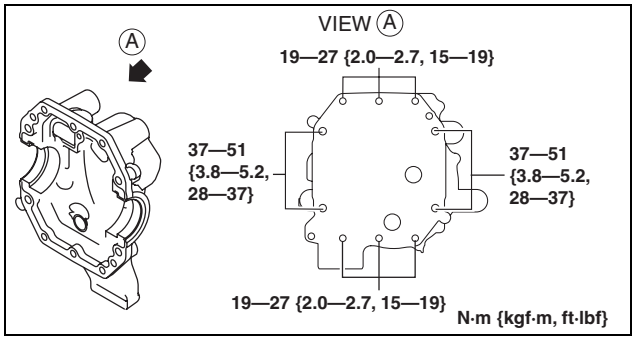
9. Apply pressure to the case using a press and install the rear cover using the **SSTs** (49 B032 335A) as shown in the figure.

Caution
- **Do not apply pressure of 2 t or more.**



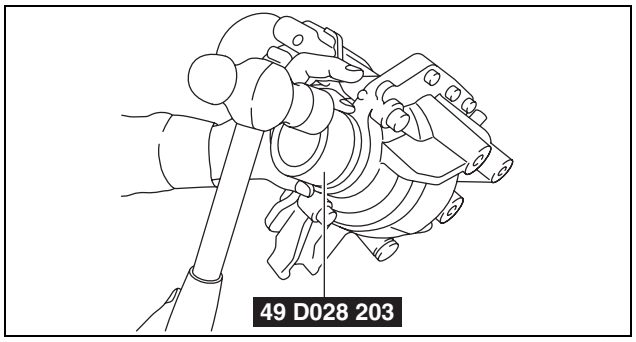
ac5uuw00000874

10. Install the bolts with the specified torque as shown in the figure.



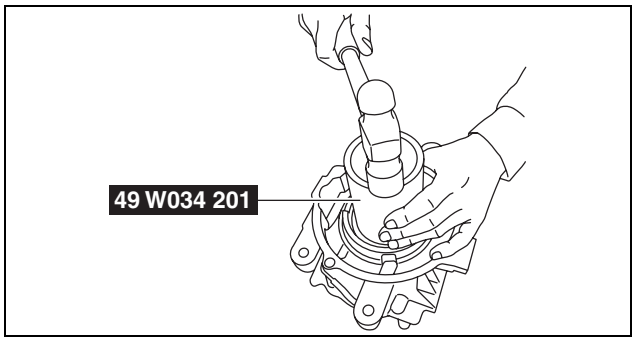
ac5wzw0000286

Oil Seal (Side Gear) Assembly Note
1. Apply differential oil to the new oil seal lip.
2. Assemble the oil seal using the **SST**.



ac5uuw00001707

Oil Seal (Coupling Component) Assembly Note
1. Apply differential oil to the new oil seal lip.
2. Assemble the oil seal using the **SST**.



ac5uuw00000303

DIFFERENTIAL

OIL SEAL (COUPLING COMPONENT) REPLACEMENT

id031400802000

1. Drain the differential oil into a container.
2. Remove the coupling component. (See 03-18-5 COUPLING COMPONENT REMOVAL/INSTALLATION.)
3. Remove the oil seal from the differential carrier using a screwdriver or similar tool.
4. Apply differential oil to the new oil seal lip.
5. Install the new oil seal to the differential carrier using the **SST**.
6. Install the coupling component. (See 03-18-5 COUPLING COMPONENT REMOVAL/INSTALLATION.)
7. Add the specified differential oil from the filler plug. (See 03-14-2 DIFFERENTIAL OIL REPLACEMENT.)

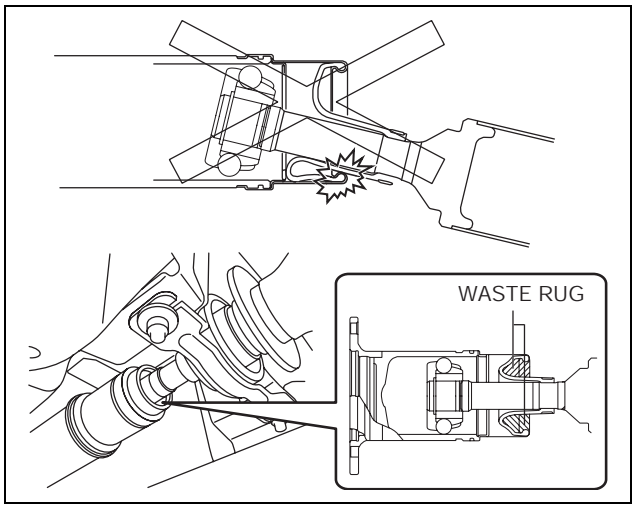
PROPELLER SHAFT REMOVAL/INSTALLATION

id031500800300

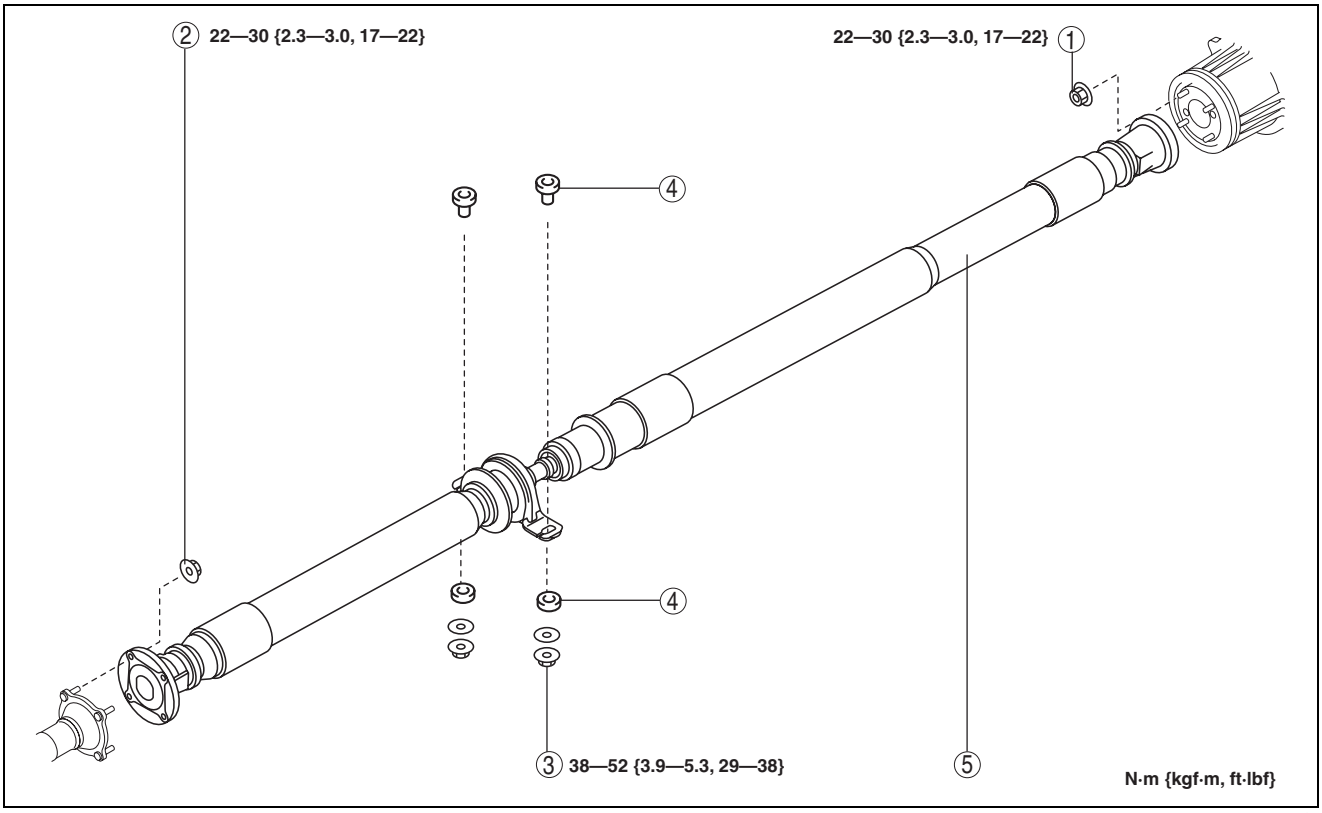
Caution

- **If the constant velocity joint is bent during propeller shaft removal/ installation or transportation after servicing, the constant velocity joint boot may contact the metallic cover and the boot may be damaged. Insert a rag between the boot and the metallic cover before servicing to protect the boot**



ac5wzw0000263

1. Remove the floor under cover. (See 09-16-44 FLOOR UNDER COVER REMOVAL/ INSTALLATION.)
2. Remove the center under cover.(See 09-16-42 CENTER UNDER COVER REMOVAL/ INSTALLATION.)
3. Remove the insulator (exhaust system). (See 01-15A-2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-G 2.0].) (See 01-15B-1 EXHAUST SYSTEM REMOVAL/ INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the tunnel member. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove the brace bar. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Remove in the order indicated in the figure.
7. Install in the reverse order of removal.



ac5uuw00000315

1	Nut (rear)
2	Nut (front)
3	Nut (center bearing support)

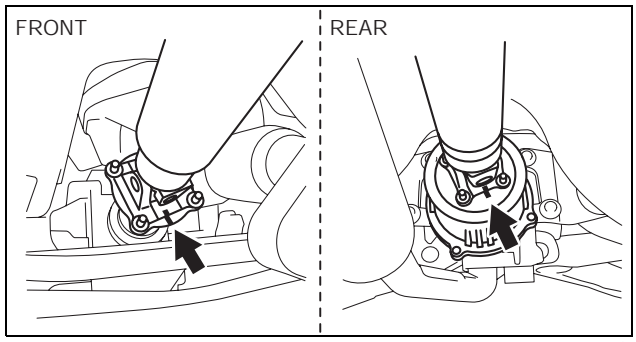
4	Bush, spacer
5	Propeller shaft (See03-15-3 Propeller Shaft Removal Note.) (See03-15-3 Propeller Shaft Installation Note.)

PROPELLER SHAFT

Propeller Shaft Removal Note

Caution
- **Do not mark with a punch to prevent imbalance.**

1. Before removing the nut, place alignment marks on the companion flange (front) and constant velocity joint, and on the coupling component (rear) and yoke.
2. Loosen the nuts (front, rear, center bearing support).
3. Remove the front and rear nuts.



ac5uuw00000316

Caution
- **Propeller shaft is attached to the stud.**

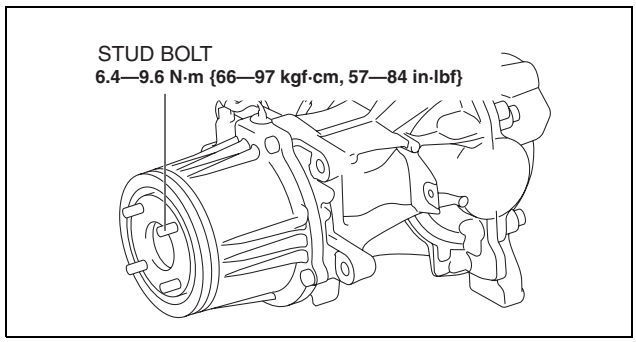
4. Press the propeller shaft and remove it from the rear side.

Caution
- **Do not bend the propeller shaft to the extent that it interferes with the boot.**

5. Remove the center bearing support nut, then remove the propeller shaft

Propeller Shaft Installation Note

Caution
- **If the nuts are loosened, verify that the stud bolt tightening torque against the coupling is 6.4 N {0.65 kgf, 1.4 lbf} or more. If the tightening torque is less than 6.4 N·m {65 kgf·cm, 57 in·lbf}, tighten the stud bolt with 6.4—9.6 N·m {66—97 kgf·cm, 57—84 in·lbf}.**
- **When loosening the nut, if a nut is stuck to a stud bolt, replace the stud bolt with a new one.**
- **When replacing the stud bolts, clean off oil and foreign matter on the bolts and coupling installation areas in advance.**



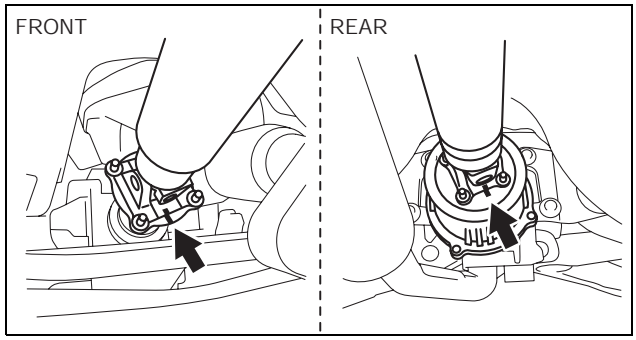
ac5uuw00000877

Note
- The stud bolts are entirely threaded with no front/rear distinction.

1. Degrease the tightening area.
2. Align the alignment marks, and temporarily install the nuts (front, rear, center bearing support).

Caution
- **Do not bend the propeller shaft to the extent that it interferes with the boot.**

3. Tighten the nut (front) with specified torque first, and then install the other nuts.
4. Perform a road test and verify that there is no abnormal vibration or noise.



ac5uuw00000316

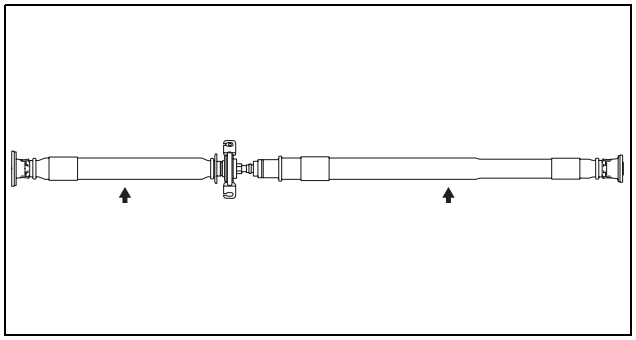
PROPELLER SHAFT

PROPELLER SHAFT INSPECTION

id031500800500

1. Measure the propeller shaft center runout using the dial gauge.
   - If it exceeds the maximum specification, replace the propeller shaft as a single component. (See 03-15-2 PROPELLER SHAFT REMOVAL/INSTALLATION.)

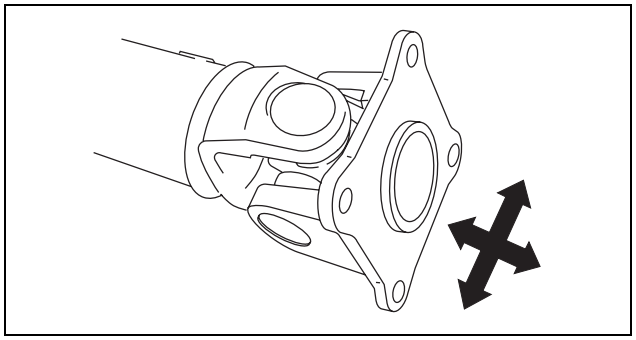
   Propeller shaft maximum runout
   0.8 mm {0.031 in}



ac5uuw00000317

2. Inspect the play and rotation of the joint by turning the universal joint in the directions shown by the arrows.
   - If it is not within the specification, replace the propeller shaft. (See 03-15-2 PROPELLER SHAFT REMOVAL/INSTALLATION.)

   Propeller shaft rotation torque
   0.29—1.47 N·m {3.0—14.9 kgf·cm, 2.6—13.0 in·lbf}



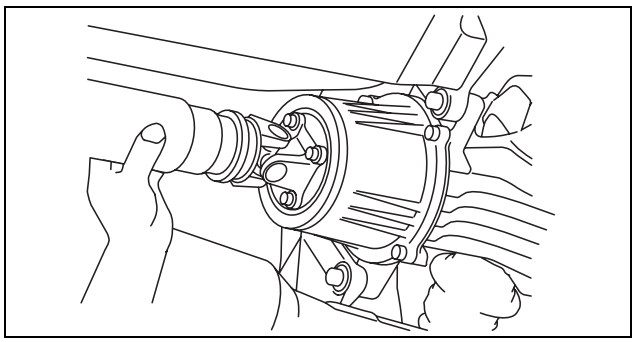
acxuuw00003098

PROPELLER SHAFT ON-VEHICLE INSPECTION

id031500800200

Joint Area Excessive Play Inspection

1. Shake the universal joint by hand and verify that there is no excessive play.
2. If there is any excessive play, replace the propeller shaft. (See 03-15-2 PROPELLER SHAFT REMOVAL/INSTALLATION.)



ac5wzw0000262

PROPELLER SHAFT

Propeller Shaft Runout Inspection

Caution
- **Do not rotate the propeller shaft using engine force when inspecting.**

1. Shift to neutral position and release the parking brake.
2. Rotate the rear wheel by hand and inspect the propeller shaft runout at the two locations shown in the figure.
   - If it exceeds the standard specification, replace the propeller shaft.

Standard propeller shaft runout (on-vehicle)
0.8 mm {0.031 in}

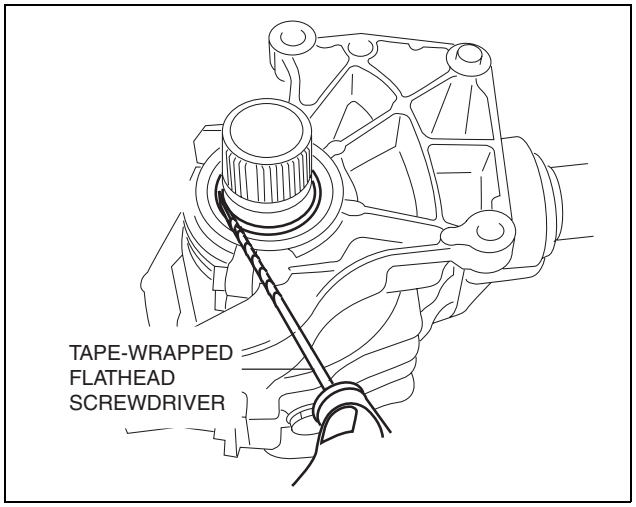
TRANSFER OIL SEAL REPLACEMENT [C66MX-R, D66MX-R]

id0316g5800400

Transfer oil seal (LH)

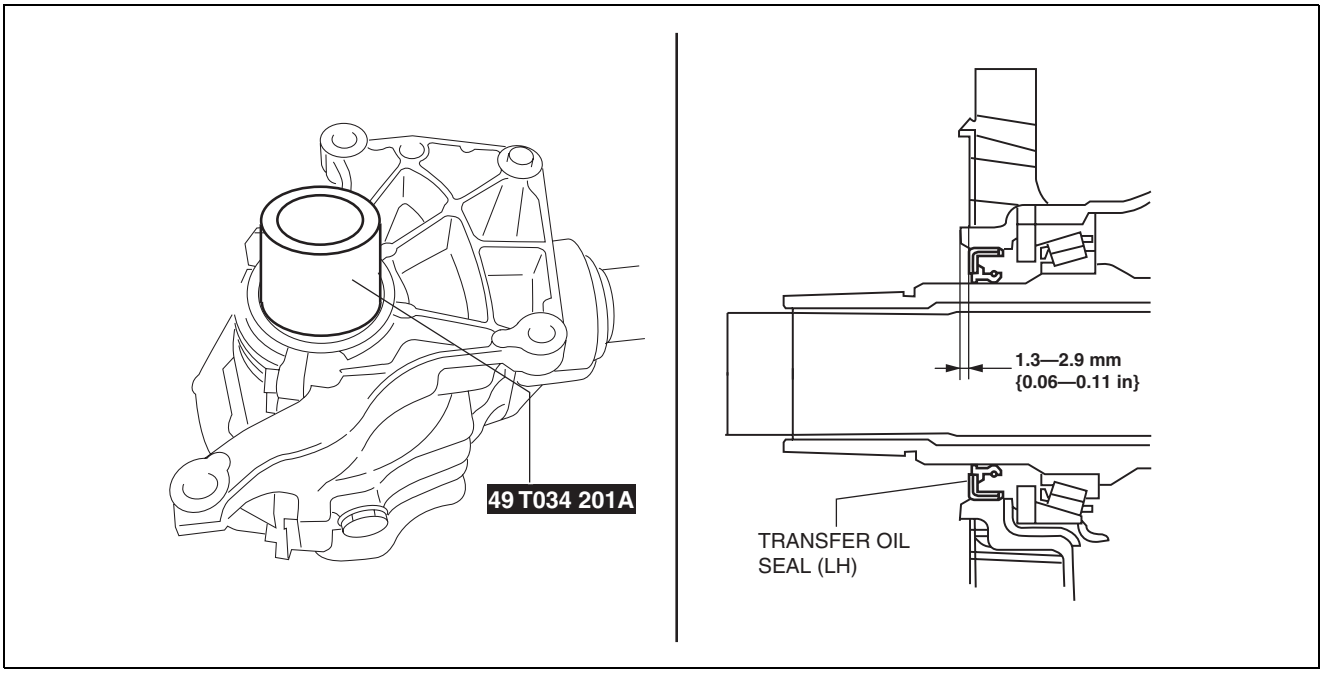
1. Drain the transfer oil. (See 03-16A-2 TRANSFER OIL REPLACEMENT [C66MX-R, D66MX-R].)
2. Remove the transfer from the vehicle. (See 03-16A-4 TRANSFER REMOVAL/INSTALLATION [C66MX-R].) (See 03-16A-6 TRANSFER REMOVAL/INSTALLATION [D66MX-R].)
3. Insert a tape-wrapped flathead screwdriver into the lip area of the oil seal (LH) as shown in the figure and remove the oil seal (LH).



ac5uuw00000098

TRANSFER [C66MX-R, D66MX-R]

4. Using the **SST** and a hammer, tap the new seal into place.

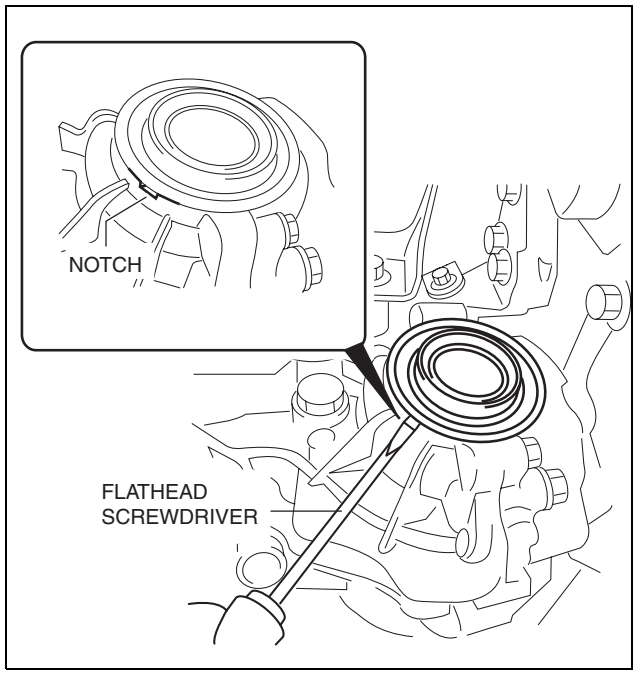


ac5wzw0000232

5. Apply the lip of the oil seal with transfer oil.
6. Install the transfer to the vehicle. (See 03-16A-4 TRANSFER REMOVAL/INSTALLATION [C66MX-R].) (See 03-16A-6 TRANSFER REMOVAL/INSTALLATION [D66MX-R].)
7. Add the specified amount and type of oil. (See 03-16A-2 TRANSFER OIL REPLACEMENT [C66MX-R, D66MX-R].)

Transfer oil seal (RH) No.1

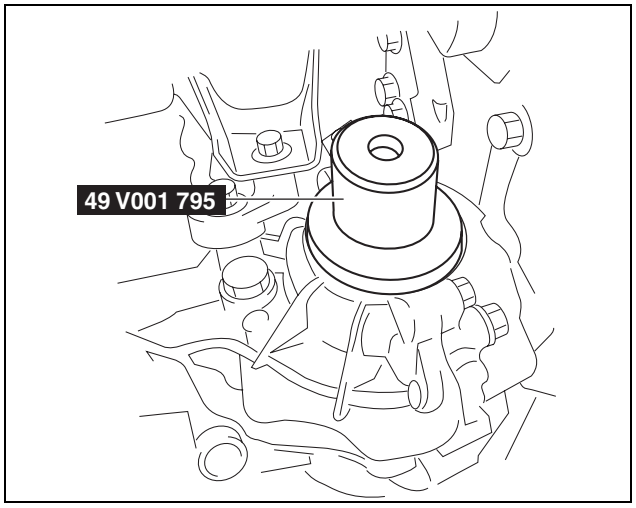
1. Remove the front drive shaft (RH). (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
2. Insert a flathead screwdriver into the notch of the transfer and remove the oil seal (RH) No.1.



ac5uuw00000100

TRANSFER [C66MX-R, D66MX-R]

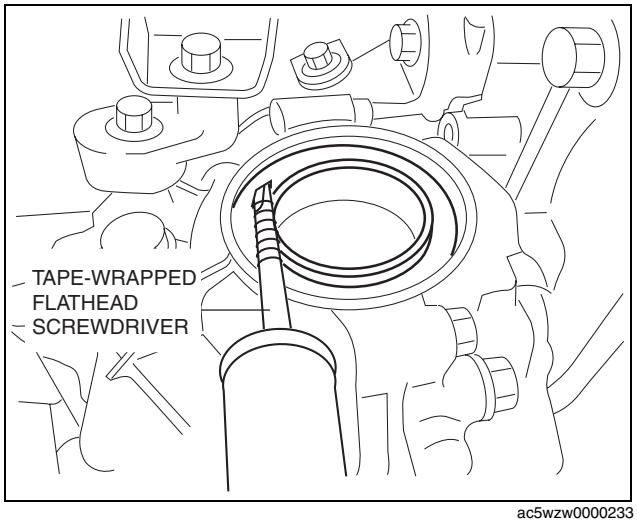
3. Using the **SST** and a hammer, tap the new seal into place.
4. Apply the lip of the oil seal with transfer oil.
5. Install the front drive shaft (RH). (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)



ac5wzw0000232

Transfer oil seal (RH) No.2

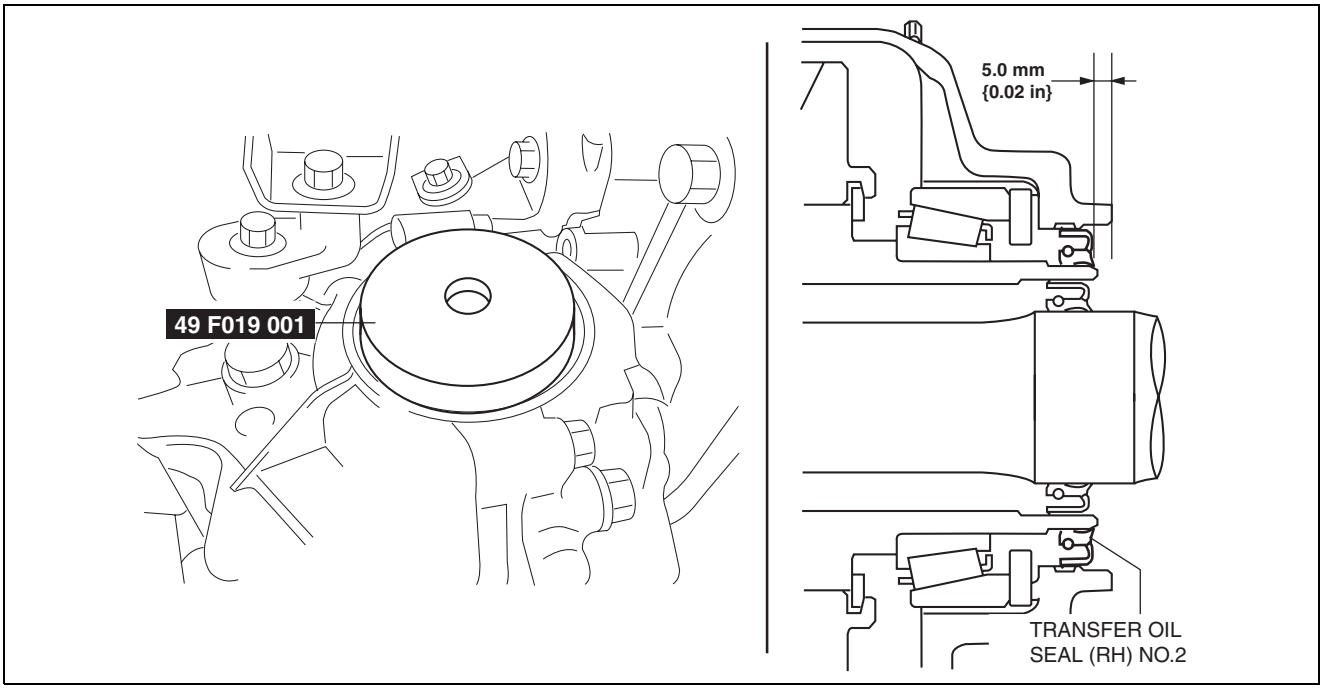
1. Drain the transfer oil. (See 03-16A-2 TRANSFER OIL REPLACEMENT [C66MX-R, D66MX-R].)
2. Remove the front drive shaft (RH). (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
3. Remove the transfer oil seal (RH) No.1. (See 03-16A-9 Transfer oil seal (RH) No.1.)
4. Insert a tape-wrapped flathead screwdriver into the lip area of the oil seal (RH) No.2 as shown in the figure and remove the oil seal (RH) No.2.



ac5wzw0000233

TRANSFER [C66MX-R, D66MX-R]

5. Using the **SST** and a hammer, tap the new seal into place.

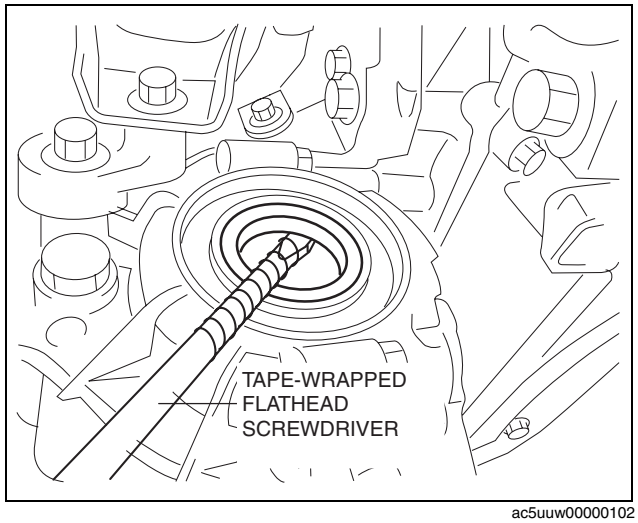


ac5wzw0000273

6. Apply the lip of the oil seal with transfer oil.
7. Install the transfer oil seal (RH) No.1. (See 03-16A-9 Transfer oil seal (RH) No.1.)
8. Install the front drive shaft (RH). (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
9. Add the specified amount and type of oil. (See 03-16A-2 TRANSFER OIL REPLACEMENT [C66MX-R, D66MX-R].)

Transfer oil seal (RH) No.3

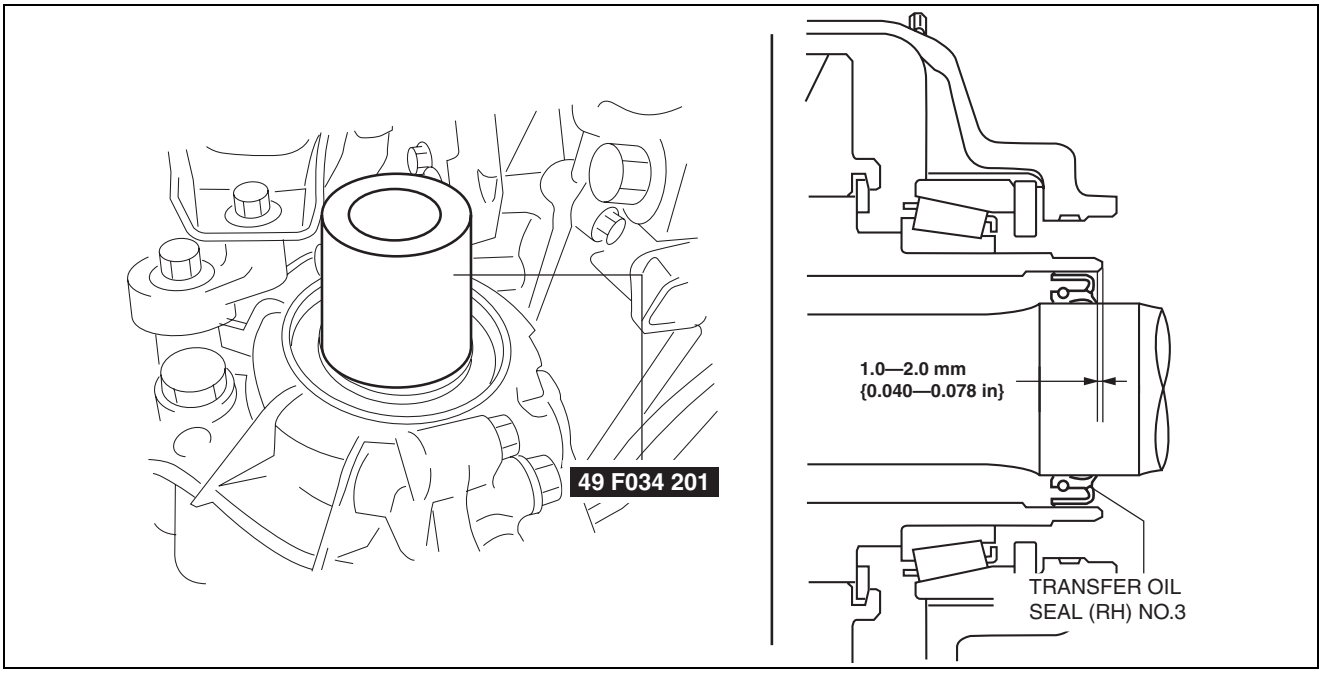
1. Drain the transfer oil. (See 03-16A-2 TRANSFER OIL REPLACEMENT [C66MX-R, D66MX-R].)
2. Remove the front drive shaft (RH). (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
3. Remove the transfer oil seal (RH) No.1. (See 03-16A-9 Transfer oil seal (RH) No.1.)
4. Remove the oil seals using a tape-wrapped flathead screwdriver.



ac5uuw00000102

TRANSFER [C66MX-R, D66MX-R]

5. Using the **SST** and a hammer, tap the new seal into place.



ac5wzw0000274

6. Apply the lip of the oil seal with transfer oil.
7. Install the transfer oil seal (RH) No.1. (See 03-16A-9 Transfer oil seal (RH) No.1.)
8. Install the front drive shaft (RH). (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
9. Add the specified amount and type of oil. (See 03-16A-2 TRANSFER OIL REPLACEMENT [C66MX-R, D66MX-R].)

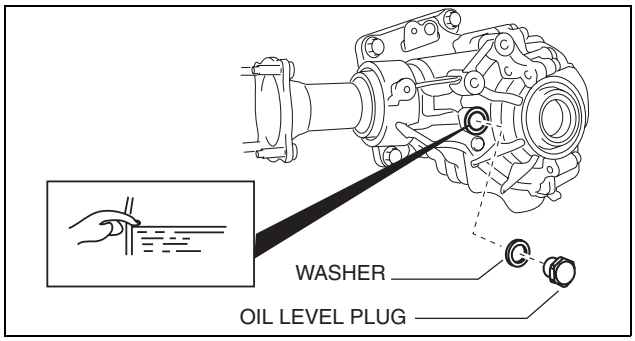
TRANSFER OIL INSPECTION [FW6AX-EL, GW6AX-EL]

id0316g6800200

1. Park the vehicle on level ground.
2. Remove the oil level plug and with the washer.
3. Verify that the oil is near the brim of the plug hole.
   - If the oil level is low, add the specified amount and type of oil through the oil level plug hole.

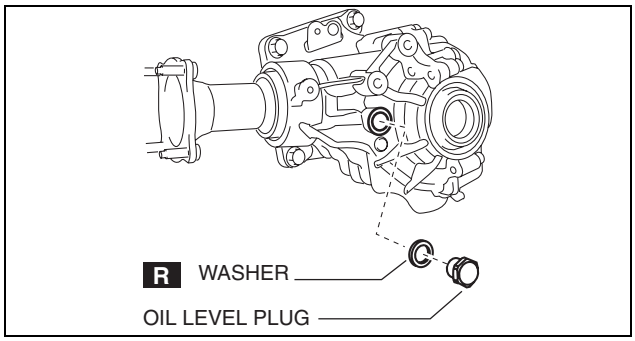
Transfer oil
Specified oil grade: API Service GL-5
Specified oil viscosity: SAE 80W-90
Capacity (approx quantity): 0.45 L {0.48 US qt, 0.40 Imp qt}



ac5uuw00000089

4. Tighten the oil level plug with a new washer.

Tightening torque
40—58 N·m {4.1—5.9 kgf·m, 30—42 ft·lbf}

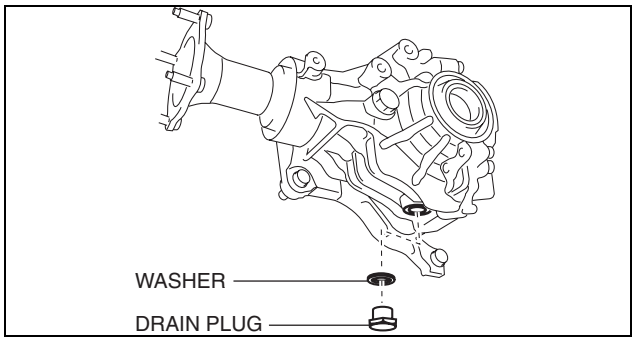


ac5uuw00000090

TRANSFER OIL REPLACEMENT [FW6AX-EL, GW6AX-EL]

id0316g6800300

1. Removal the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Remove the drain plug with the washer.
3. Drain the oil into a suitable container.

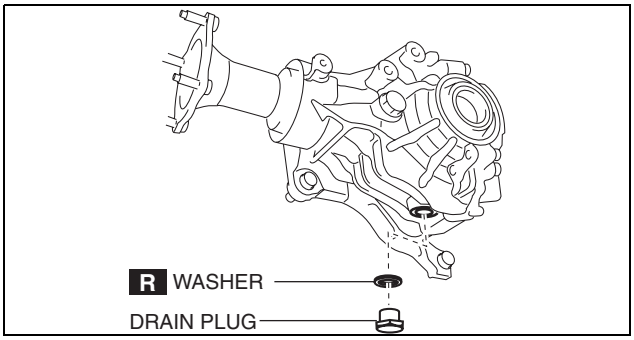


ac5uuw00000091

TRANSFER [FW6AX-EL, GW6AX-EL]

4. Tighten the drain plug with a new washer.

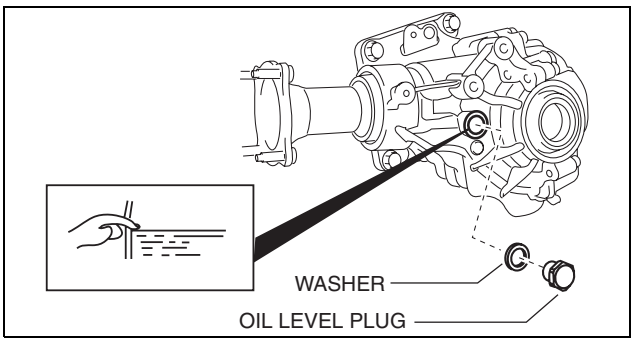
   Tightening torque
   40—58 N·m {4.1—5.9 kgf·m, 30—42 ft·lbf}



ac5uuw00000092

5. Remove the oil level plug with the washer and add the specified amount and type of oil through the oil level plug hole until the level reaches the bottom of the oil level plug hole.

   Transfer oil
   Specified oil grade: API Service GL-5
   Specified oil viscosity: SAE 80W-90
   Capacity (approx quantity) : 0.45 L {0.48 US qt, 0.40 Imp qt}

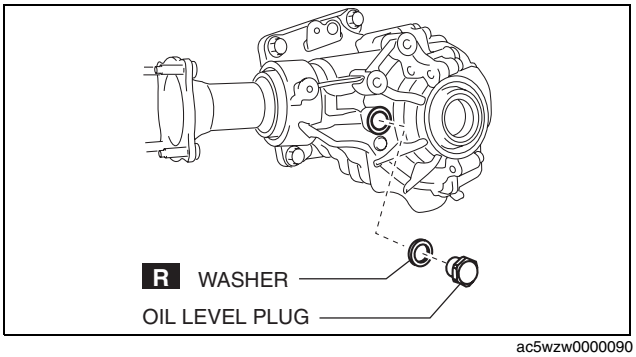


ac5uuw00000093

6. Tighten the oil level plug with a new washer.

   Tightening torque
   40—58 N·m {4.1—5.9 kgf·m, 30—42 ft·lbf}

7. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/ INSTALLATION.)



ac5wzw0000090

TRANSFER [FW6AX-EL, GW6AX-EL]

TRANSFER REMOVAL/INSTALLATION [FW6AX-EL]

id0316g68006g1

Caution

- **Performing the following procedures without first removing the front ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, disconnect the front ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor will not be pulled by mistake while servicing the vehicle.**
- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0].)
2. Remove the propeller shaft. (See 03-15-2 PROPELLER SHAFT REMOVAL/INSTALLATION.)
3. Remove the front crossmember component. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/ INSTALLATION.)
4. Remove the exhaust manifold (WU-TWC). (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Remove the front drive shaft (RH). (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
6. Remove the heat shield.
7. Install in the reverse order of removal.
8. Warm up the engine and transaxle, inspect for oil leakage, and inspect the transfer operation.

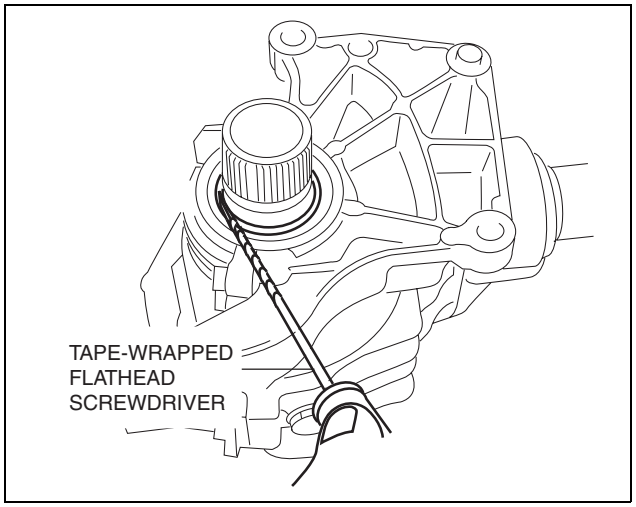
TRANSFER OIL SEAL REPLACEMENT [FW6AX-EL, GW6AX-EL]

id0316g6800400

Transfer oil seal (LH)

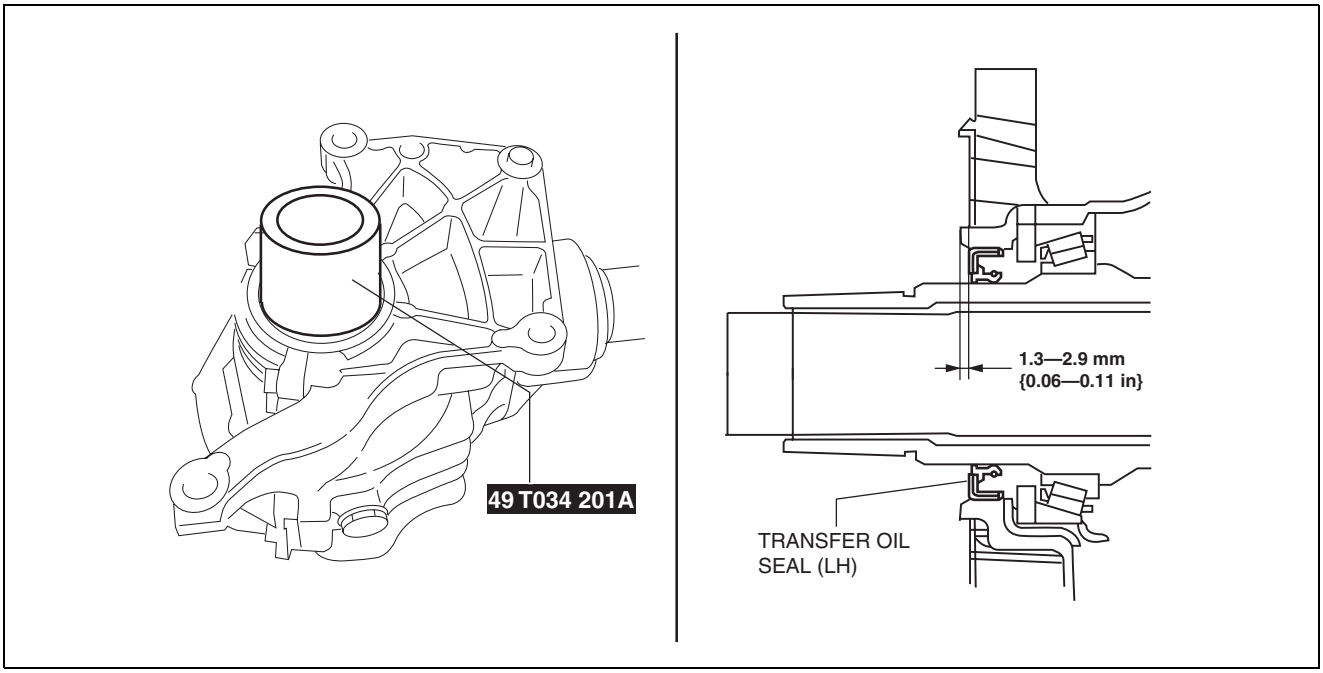
1. Drain the transfer oil. (See 03-16B-2 TRANSFER OIL REPLACEMENT [FW6AX-EL, GW6AX-EL].)
2. Remove the transfer from the vehicle. (See 03-16B-4 TRANSFER REMOVAL/INSTALLATION [FW6AX-EL].) (See 03-16B-6 TRANSFER REMOVAL/INSTALLATION [GW6AX-EL].)
3. Insert a tape-wrapped flathead screwdriver into the lip area of the oil seal (LH) as shown in the figure and remove the oil seal (LH).



ac5uuw00000098

TRANSFER [FW6AX-EL, GW6AX-EL]

4. Using the **SST** and a hammer, tap the new seal into place.

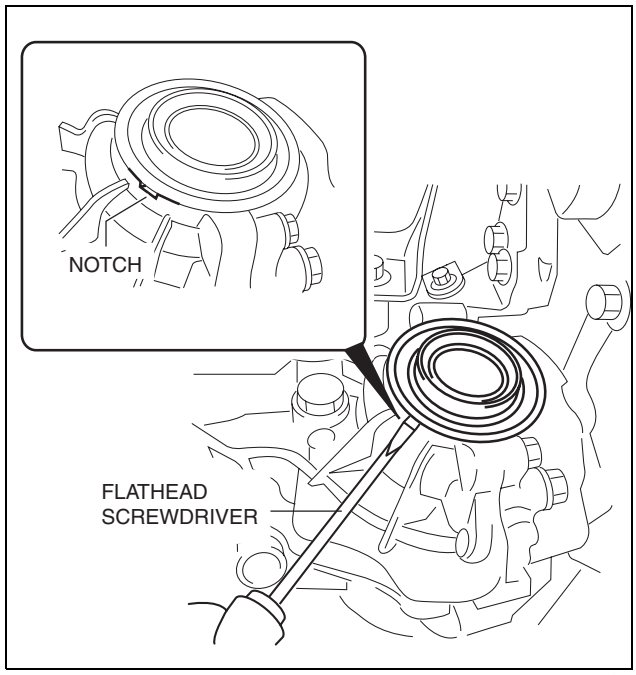


ac5wzw0000233

5. Apply the lip of the oil seal with transfer oil.
6. Install the transfer to the vehicle. (See 03-16B-4 TRANSFER REMOVAL/INSTALLATION [FW6AX-EL].) (See 03-16B-6 TRANSFER REMOVAL/INSTALLATION [GW6AX-EL].)
7. Add the specified amount and type of oil. (See 03-16B-2 TRANSFER OIL REPLACEMENT [FW6AX-EL, GW6AX-EL].)

Transfer oil seal (RH) No.1

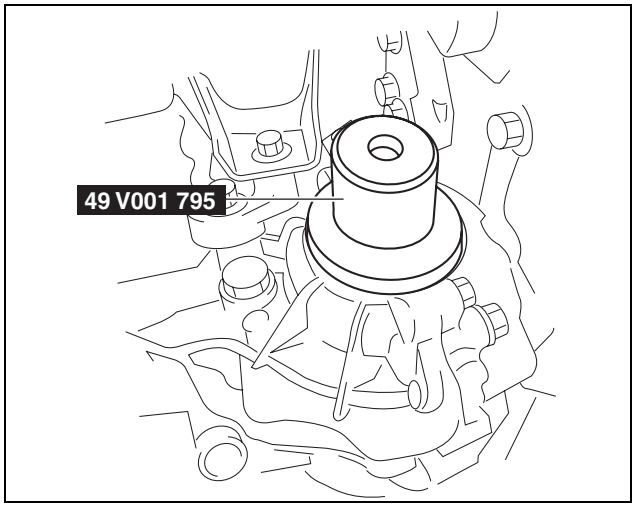
1. Remove the front drive shaft (RH). (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
2. Insert a flathead screwdriver into the notch of the transfer and remove the oil seal (RH) No.1.



ac5uuw00000100

TRANSFER [FW6AX-EL, GW6AX-EL]

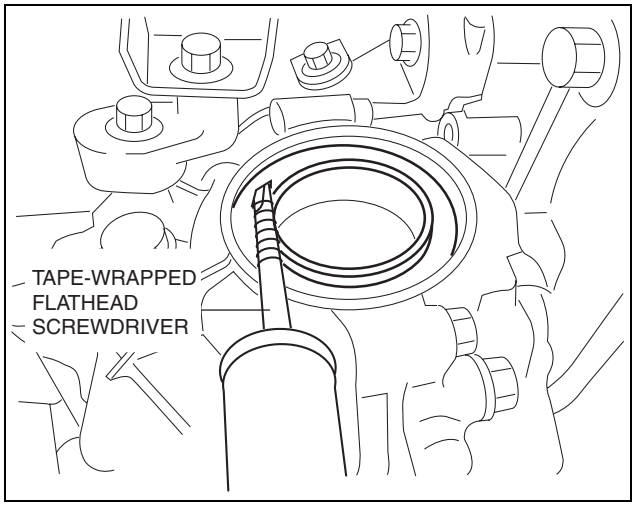
3. Using the **SST** and a hammer, tap the new seal into place.
4. Apply the lip of the oil seal with transfer oil.
5. Install the front drive shaft (RH). (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)



ac5wzw0000233

Transfer oil seal (RH) No.2

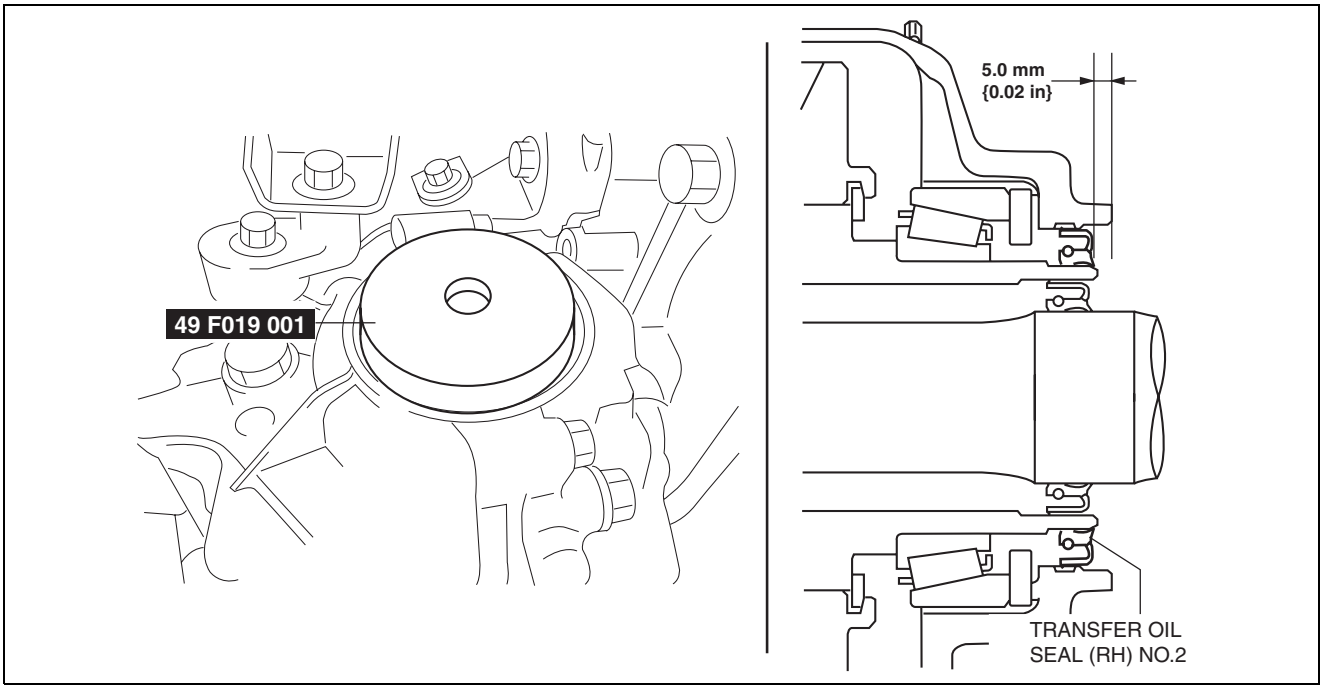
1. Drain the transfer oil. (See 03-16B-2 TRANSFER OIL REPLACEMENT [FW6AX-EL, GW6AX-EL].)
2. Remove the front drive shaft (RH). (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
3. Remove the transfer oil seal (RH) No.1. (See 03-16B-9 Transfer oil seal (RH) No.1.)
4. Insert a tape-wrapped flathead screwdriver into the lip area of the oil seal (RH) No.2 as shown in the figure and remove the oil seal (RH) No.2.



ac5wzw0000233

TRANSFER [FW6AX-EL, GW6AX-EL]

5. Using the **SST** and a hammer, tap the new seal into place.

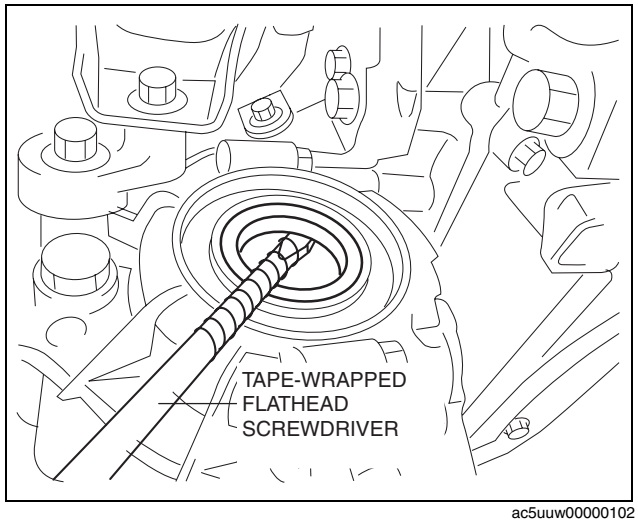


ac5wzw0000273

6. Apply the lip of the oil seal with transfer oil.
7. Install the transfer oil seal (RH) No.1 (See 03-16B-9 Transfer oil seal (RH) No.1.)
8. Install the front drive shaft (RH). (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
9. Add the specified amount and type of oil. (See 03-16B-2 TRANSFER OIL REPLACEMENT [FW6AX-EL, GW6AX-EL].)

Transfer oil seal (RH) No.3

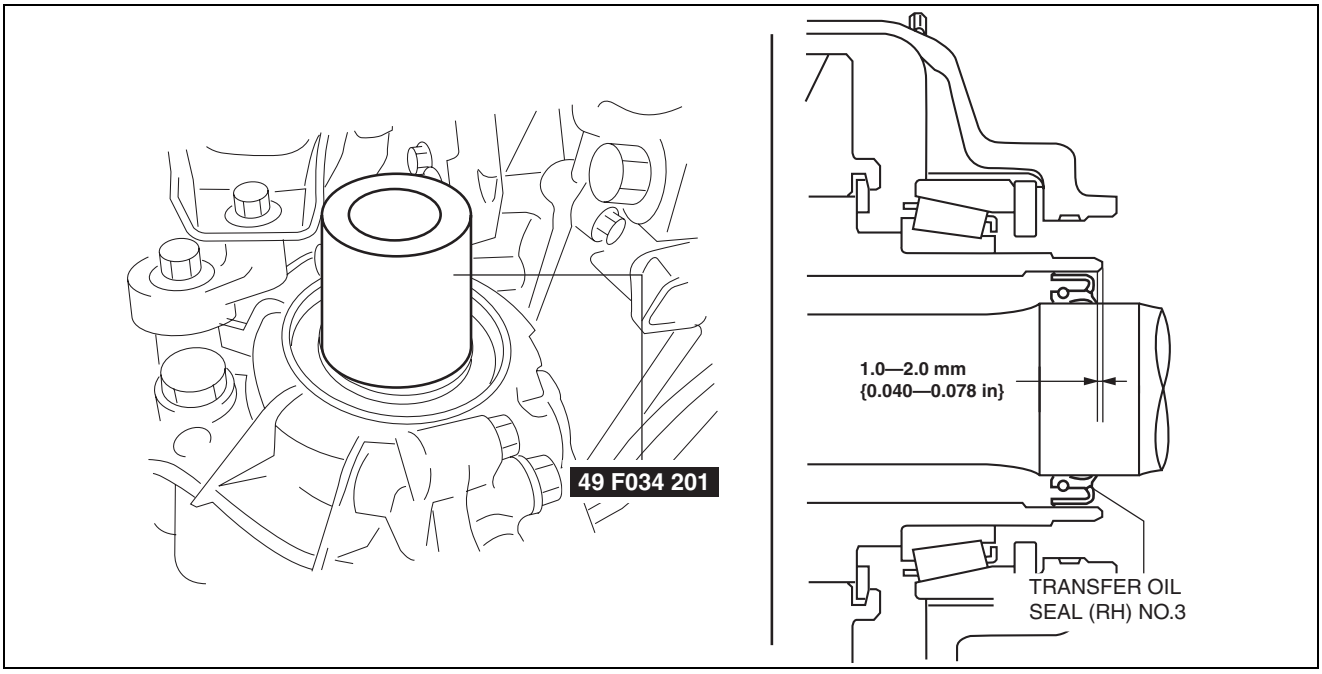
1. Drain the transfer oil. (See 03-16B-2 TRANSFER OIL REPLACEMENT [FW6AX-EL, GW6AX-EL].)
2. Remove the front drive shaft (RH). (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
3. Remove the transfer oil seal (RH) No.1 (See 03-16B-9 Transfer oil seal (RH) No.1.)
4. Remove the oil seals using a tape-wrapped flathead screwdriver.



ac5uuw00000102

TRANSFER [FW6AX-EL, GW6AX-EL]

5. Using the **SST** and a hammer, tap the new seal into place.



ac5wzw0000233

6. Apply the lip of the oil seal with transfer oil.
7. Install the transfer oil seal (RH) No.1 (See 03-16B-9 Transfer oil seal (RH) No.1.)
8. Install the front drive shaft (RH). (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
9. Add the specified amount and type of oil. (See 03-16B-2 TRANSFER OIL REPLACEMENT [FW6AX-EL, GW6AX-EL].)

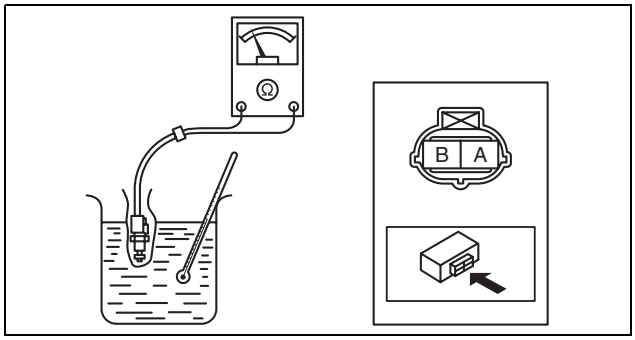
DIFFERENTIAL OIL TEMPERATURE SENSOR INSPECTION

id031800805600

Warning
- **Hot differential oil may cause severe burns. Do not perform maintenance while differential oil is hot.**

1. Disconnect the negative battery cable.
2. Disconnect the differential oil temperature sensor connector and remove the differential oil temperature sensor.
3. Wrap the differential oil temperature sensor with plastic wrap and immerse it into a beaker filled with water. Gradually raise the water temperature, and measure resistance between differential oil temperature sensor terminals A and B.
   - If not as specified, inspect the harness for continuity. If there is normal continuity between the terminals, replace the differential oil temperature sensor.



ac5wzw0000263

Differential oil temperature sensor specification

Water temperature (°C {°F})	Resistance (kilohm)
0 {32}	91—100
10 {50}	56—61
20 {68}	35—39
30 {86}	23—25
40 {104}	15—16
50 {122}	10—11
60 {140}	7.1—7.9
70 {158}	5.0—5.6
80 {176}	3.6—4.0

4. Install the differential oil temperature sensor and connect the connector.
5. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

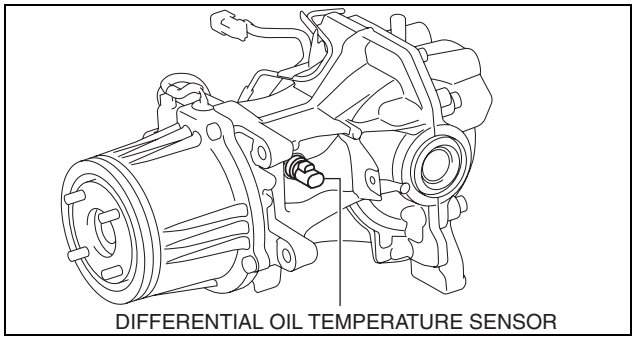
DIFFERENTIAL OIL TEMPERATURE SENSOR REMOVAL/INSTALLATION

id031800805700

Warning
- **Hot differential oil may cause severe burns. Do not perform maintenance while differential oil is hot.**

1. Disconnect the negative battery cable.
2. Disconnect the differential oil temperature sensor connector.
3. Remove the differential oil temperature sensor.
4. Apply differential oil to the O-ring.
5. Install the differential oil temperature sensor.

Tightening torque
13—17 N·m {133—173 kgf·cm, 116—150 in·lbf}



DIFFERENTIAL OIL TEMPERATURE SENSOR
ac5wzw0000263

6. Connect the differential oil temperature sensor connector.
7. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

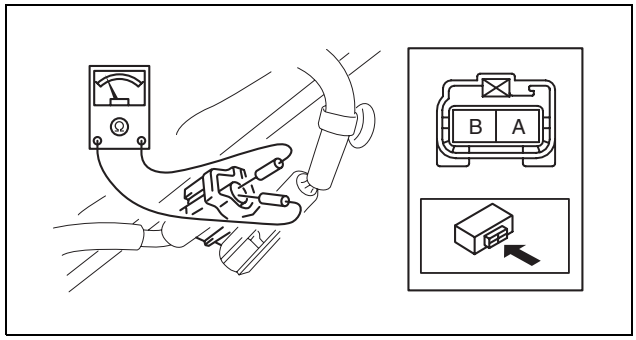
4-WHEEL DRIVE

4WD SOLENOID INSPECTION

id031800805800

1. Disconnect the negative battery cable.
2. Disconnect the 4WD solenoid connector.
3. Measure resistance between 4WD solenoid connector terminals A and B.
   - If the resistance is not within the specification, replace the coupling unit.

   4WD solenoid resistance
   2.2—2.7 ohms
   (Rear differential oil temperature at 20°C {68°F})



ac5wzw0000263

4. Connect the 4WD solenoid connector.
5. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

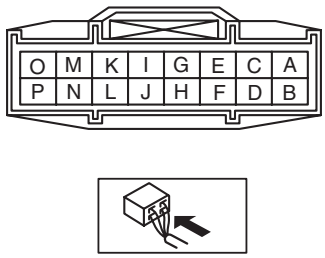
4WD CONTROL MODULE INSPECTION

id031800805900

Note
- 4WD CM terminal voltage can vary depending on measuring conditions and vehicle aging, resulting in misdiagnosis. Therefore, it is necessary to perform an overall inspection of the input/output systems and 4WD CM to determine which part is malfunctioning.
- With the 4WD CM connector connected, measure voltage by connecting the voltmeter negative (-) lead to the body ground and positive (+) lead to each 4WD CM terminal.

1. Measure voltage or resistance at each 4WD CM terminal using a voltmeter and an ohmmeter.
   - If not as specified, replace the 4WD CM.

Terminal Voltage List (Reference)



ac5wzw0000263

Terminal	Signal	Input/ output	Connected to	Measuring item	Test condition		Voltage (V)/ Continuity	Inspection location in case of failure
A	Differential oil temperature sensor signal	Input	Differential oil temperature sensor	Voltage	Ignition ON (engine off or on)	Differential oil temperature 20°C {68°F}	3.0	• Inspect differential oil temperature sensor • Inspect related harness
						Differential oil temperature 60°C {140°F}	1.4	
B	—	—	—	—	—	—	—	—

4WD CONTROL MODULE REMOVAL/INSTALLATION

id031800806000

Caution

- **When performing configuration, it is necessary to read the coupling component calibration data from the 4WD control module before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the 4WD control module. The coupling component calibration data is temporarily stored in the M-MDS.**
- **If the configuration was not performed after replacing with a new 4WD control module, the following conditions can be considered as occurring because the coupling component calibration data was not recorded in the 4WD control module.**
  - **— System does not operate normally**
  - **— Problem with coupling component durability may occur**

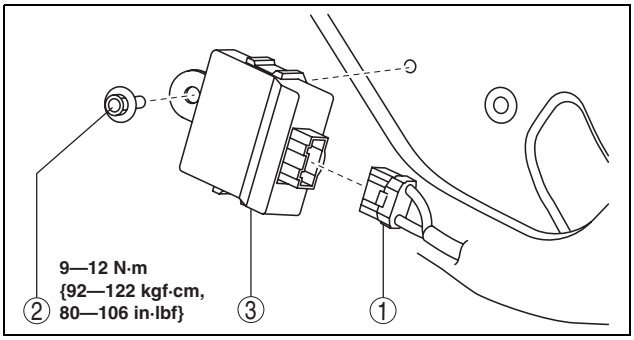
Note

- The 4WD control module prior to replacement stores the coupling component calibration data.
- If coupling component calibration data from the 4WD control module prior to replacement cannot be read, perform the coupling component calibration data writing. (See 03-18-7 COUPLING COMPONENT CALIBRATION DATA WRITING.)

1. When replacing the 4WD control module, perform the configuration. (See 03-18-7 4WD CONTROL MODULE CONFIGURATION.)
2. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/ CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Remove the front scuff plate. (See 09-17-61 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
4. Remove the front side trim. (See 09-17-62 FRONT SIDE TRIM REMOVAL/INSTALLATION.)

4-WHEEL DRIVE

1	Connector
2	Bolt
3	4WD control module (See 03-18-5 4WD Control module Removal Note.)

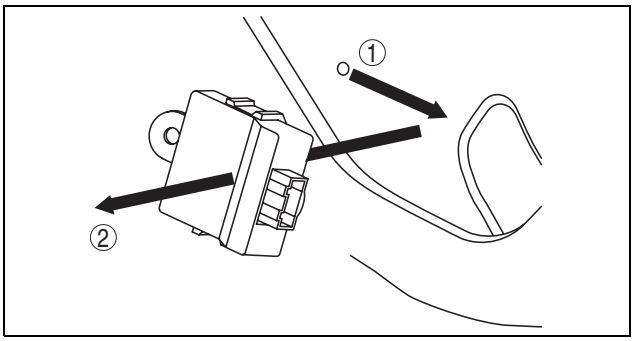


ac5uuw00000320

5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.

Note
- If configuration cannot be performed by reading/writing of the coupling component calibration data, perform the coupling component calibration data writing. (See 03-18-7 COUPLING COMPONENT CALIBRATION DATA WRITING.)

4WD Control module Removal Note
1. Slide the 4WD control module toward the connector, and remove it.

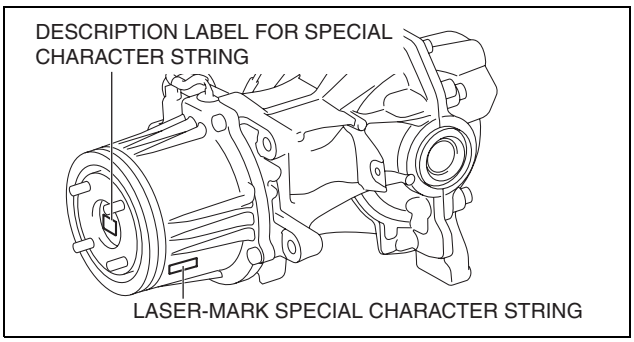


ac5uuw00000878

COUPLING COMPONENT REMOVAL/INSTALLATION

id031800805300

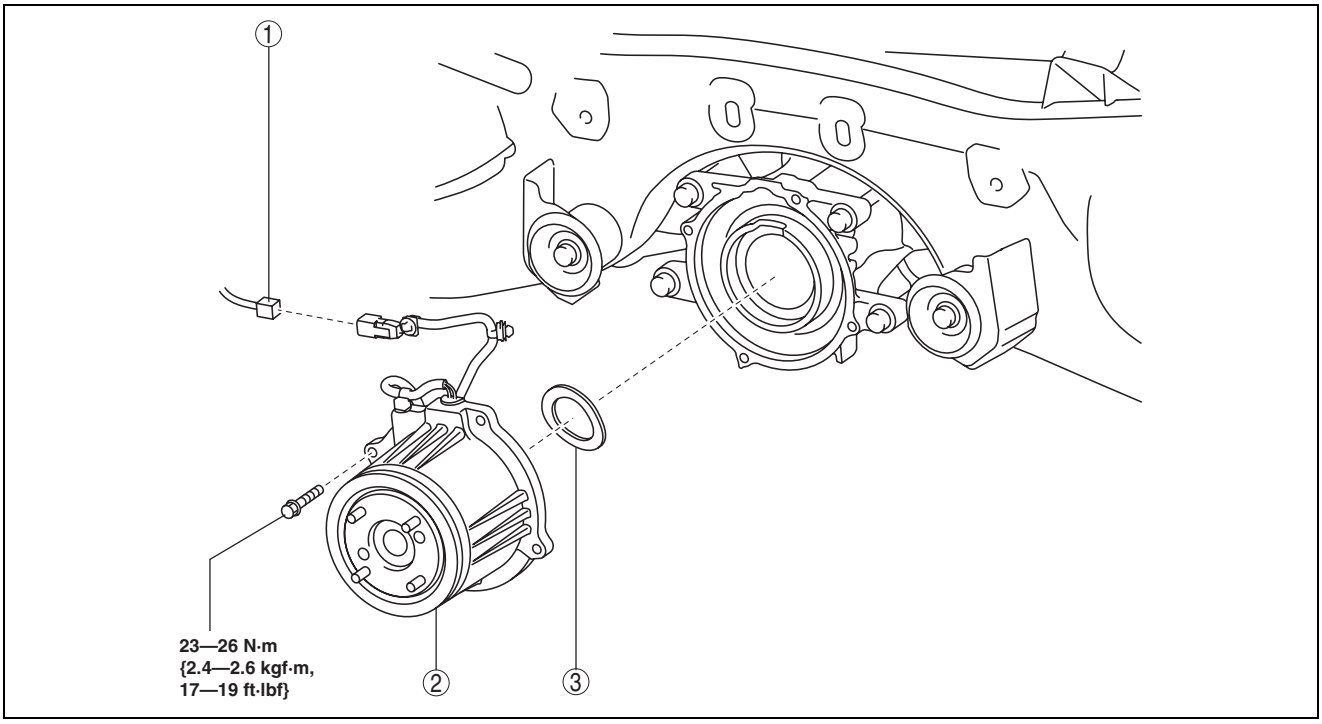
Warning
- **When replacing the coupling component, read the special character string before installing a new coupling component and write it to the 4WD control module after replacement. The special character string is indicated in the two locations shown in the figure.**



ac5uuw00000879

1. Drain the rear differential oil into a container.
2. Remove the propeller shaft. (See 03-15-2 PROPELLER SHAFT REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. Add rear differential oil. (See 03-14-2 DIFFERENTIAL OIL REPLACEMENT.)

4-WHEEL DRIVE

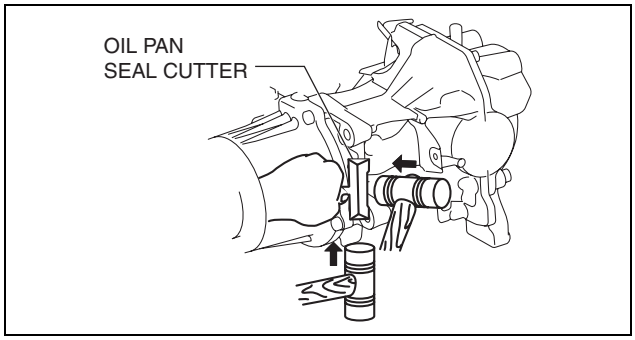


ac5uuw00000355

1	4WD solenoid connector
2	Coupling component (See 03-18-6 Coupling Component Removal Note.) (See 03-18-6 Coupling Component Installation Note.)
3	Washer

Coupling Component Removal Note

1. Support the coupling unit with a transmission jack.
2. Cut away the coupling unit using an oil pan seal cutter.



ac5uuw00000880

Coupling Component Installation Note

Note

- Clean away the old sealant before applying the new sealant.
- Install the coupling component before the applied sealant starts to harden.
- Allow the sealant to set at least **30 min** after installation before filling the differential with the specified oil.

1. Apply sealant to the coupling case surface that contacts the rear differential case.
2. Install the coupling unit to the rear differential.

Tightening torque

23—26 N·m {2.4—2.6 kgf·m, 17—19 ft·lbf}

4-WHEEL DRIVE

4WD CONTROL MODULE CONFIGURATION

id031800806100

Caution
- **When performing configuration, it is necessary to read the coupling component calibration data from the 4WD control module before replacing it. Connect the M-MDS to the vehicle and perform vehicle identification before removing the 4WD control module. The coupling component calibration data is temporarily stored in the M-MDS.**

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the toolbox of the M-MDS.
   1. Select “Module Programming”.
3. Then, select items from the screen menu in the following order.
   1. Select “Programmable Module Installation”.
   2. Select “4X4”.
4. Perform the configuration according to the directions on the screen.

Caution
- **When the configuration is performed, CAN communication between the 4WD control module and control module connected to the CAN line is cut temporarily, and communication error DTCs may be detected. After performing the configuration, verify the DTCs for the control module connected to the CAN line and clear it if any DTC is detected.**

5. Verify all the DTCs for the control module connected to the CAN line.
   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the configuration is completely normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

COUPLING COMPONENT CALIBRATION DATA WRITING

id031800806200

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the toolbox of the M-MDS.
   1. Select “Chassis”.
3. Then, select items from the screen menu in the following order.
   1. Select “4WD/AWD”.
   2. Select “Coupling Calibration Data Writing”.
4. Perform the Coupling calibration data writing according to the directions on the screen.
5. Verify all the DTCs for the control module connected to the CAN line.
   - If any DTC is stored, clear it.
   - If the DTC is cleared, finish the procedure because the calibration data writing is completely normally.
   - If the DTC remains, perform troubleshooting according to the DTC.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

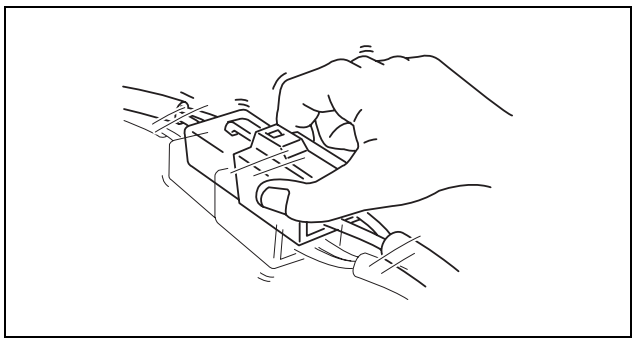
*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)], 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)], 10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)], 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

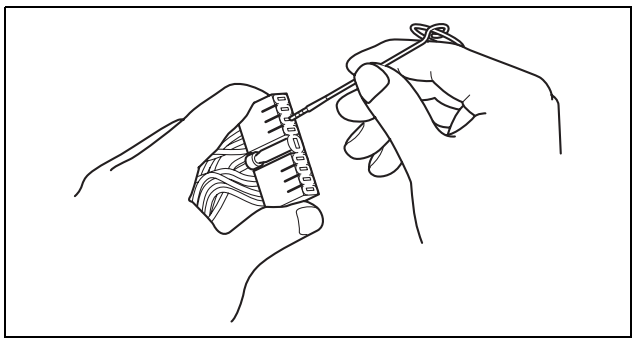
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  1. Verify that a DTC has been recorded in the memory using the M-MDS. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
  2. Perform a simulation test in the simulation mode based on the repair order form, record the data at that time, and detect the malfunction cause.
  3. Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for the occurrence of any malfunction or DTCs.



am3uuw0000813

  4. Inspect the female terminals for poor connection.



am3uuw0000813

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2800200

On-Board Diagnostic (OBD) Test Description

- The OBD test inspects the integrity and function of the DSC and outputs the results when requested by the specific tests.
- On-board diagnostic test also:
  - — Provides a quick inspection of the DSC usually performed at the start of each diagnostic procedure.
  - — Provides verification after repairs to ensure that no other faults occurred during service.
- The OBD test is divided into 3 tests:
  - — Read/clear diagnostic results, PID monitor and record and active command modes.

Read/clear diagnostic results

- This function allows you to read or clear DTCs in the DSC HU/CM memory.

PID/Data monitor and record

- This function allows you to access certain data values, input signals, calculated values, and system status information.

Active command modes

- This function allows you to control devices through the M-MDS.

Reading DTCs Procedure

CMDTC self test

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the DSC. (See 04-02A-7 Clearing DTCs Procedure.)

ODDTC self test

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “ABS”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the DSC. (See 04-02A-7 Clearing DTCs Procedure.)

Clearing DTCs Procedure

CMDTC clearing DTCs procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off) and wait for **5 s or more**.
7. Perform DTC inspection. (See 04-02A-7 Reading DTCs Procedure.)
8. Verify that no DTCs are displayed.

ODDTC clearing DTCs procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “ABS”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition ON (engine off) and wait for **5 s or more**.
7. Perform DTC inspection. (See 04-02A-7 Reading DTCs Procedure.)
8. Verify that no DTCs are displayed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

PID/Data Monitor and Record Procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “ABS”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module.Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

Active Command Modes Procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “ABS”.
3. Select the simulation items from the PID table.
4. Perform the active command modes function, inspect the operations for each parts.
   - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

Snapshot Data Access Procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “ABS”.
3. Then, select the “Retrieve CMDTCs” and perform procedures according to directions on the IDS screen.
4. Retrieve the snapshot data according to the directions on the IDS screen.

Note

- Snapshot data appears at the top of the help screen when the displayed DTC is selected.
- The snapshot data stores the currently detected DTC data.

*1 : ATX only
*2 : Vehicles with smart city brake support (SCBS)

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

*3 : Control disabled when two wheels or more have a malfunction.
*4 : Enabled depending on malfunction content.
*5 : 4WD only
*6 : When power supply voltage is **7.9—9.6 V** for **550 ms or more**.
*7 : When power supply voltage is **6.0—7.9 V** for **630 ms or more**.
*8 : When power supply voltage is **below 6 V** for **50 ms or more**.

PID/DATA Monitor Table

PID name (definition)	Unit/Condition	Operation condition (reference)	Action
BRAKE_SW	Off/On	• Brake pedal released: Off • Brake pedal depressed: On	Inspect the brake switch. (See 04-11-11 BRAKE SWITCH INSPECTION.)
BRK_F_P_C (Calculated Value) BRK_F_P_R (Raw Value)	Pa, psi	• Brake pedal depressed: Changes according to the brake fluid pressure	Inspect the brake fluid pressure sensor. (See 04-15-14 BRAKE FLUID PRESSURE SENSOR INSPECTION.)
DDS_MODE	Not_Learned/ Learning/ Learned	• During initialization: Not_Learned • During learning: Learning • Learning completed*: Learned	Perform the DTC inspection for the DSC HU/CM. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
DSC_OFF_SW	Off/On	• TCS OFF switch is released: Off • TCS OFF switch is depressed: On	Inspect the TCS OFF switch. (See 04-15-15 TCS OFF SWITCH INSPECTION.)
DSC_ST	Off/On	• During TCS OFF mode: Off • Other than TCS OFF mode: On	Perform the DTC inspection for the DSC HU/CM. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
LAT_ACCL_C (Calculated Value) LAT_ACCL_R (Raw Value)	G	• Vehicle stopped or driving at constant speed: **0 G** • Cornering to left: Changes **0 G—positive** • Cornering to right: Changes **0 G—negative**	Perform the DTC inspection for the SAS control module. (See 08-02-7 DTC INSPECTION.)
LON_ACCL_C (Calculated Value) LON_ACCL_R (Raw Value)	G	• Vehicle stopped or driving at constant speed: **0 G** • Vehicle is driving at a acceleration: Changes **0 G—positive** • Vehicle is driving at a deceleration: Changes **0 G—negative**	Perform the DTC inspection for the SAS control module. (See 08-02-7 DTC INSPECTION.)
P_BRAKE_SW	Off/On	• Parking brake lever released: OFF • Parking brake lever pulled: ON	Inspect the parking brake switch. (See 04-12-8 PARKING BRAKE SWITCH INSPECTION.)
PMP_MT PMP_MT_SP	Off/On	• Pump motor not activated: Off • Pump motor activated: On	Inspect the DSC HU/CM. (See 04-15-7 DSC HU/CM INSPECTION.)
R_GEAR_SW	Off/On	• Except shift/selector lever at R position: OFF • Shift/selector lever at R position: ON	Inspect the PCM. (MTX) (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].) Inspect the TCM. (ATX) (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].)
STR_ANG_C (Calculated Value) STR_ANG_R (Raw Value)	°	• Steering wheel in neutral position (not turned): **0°** • Steering wheel turned to left: Changes **0°—positive** • Steering wheel turned to right: Changes **0°—negative**	Inspect the EPS CM. (See 06-13-26 EPS CONTROL MODULE INSPECTION.)
TPMS_TYPE	No_DDS/ DDS+TOM_EU/ DDS+TOM_US	• TPMS not equipped: No_DDS • TPMS equipped (Corresponding to European regulations): DDS+TOM_EU • TPMS equipped (Corresponding to U.S. regulations): DDS+TOM_US	Perform the DTC inspection for the DSC HU/CM. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

PID name (definition)	Unit/Condition	Operation condition (reference)	Action
V_INLET_LF	Off/On	• Solenoid valve not activated: Off • Solenoid valve activated: On	Inspect the DSC HU/CM. (See 04-15-7 DSC HU/CM INSPECTION.)
V_INLET_LR			
V_INLET_RF			
V_INLET_RR			
V_OUTLET_LF			
V_OUTLET_LR			
V_OUTLET_RF			
V_OUTLET_RR			
V_STB_LF/RR	Off/On	• Solenoid valve activated: On • Solenoid valve not activated: Off	Inspect the DSC HU/CM. (See 04-15-7 DSC HU/CM INSPECTION.)
V_STB_RF/LR			
V_TRC_LF/RR	Off/On	• Solenoid valve activated: On • Solenoid valve not activated: Off	Inspect the DSC HU/CM. (See 04-15-7 DSC HU/CM INSPECTION.)
V_TRC_RF/LR			
VPWR_B_SOL	V	• Ignition switched ON (engine off): **Approx. 12.2 V** • Idling: **Approx. 14.1 V**	Inspect power supply circuit. (See 04-15-7 DSC HU/CM INSPECTION.)
VSPD	KPH, MPH	• Vehicle stopped: **0 KPH, 0 MPH** • Vehicle running: Vehicle speed	Inspect the DSC HU/CM. (See 04-15-7 DSC HU/CM INSPECTION.)
WSPD_SEN_LF	KPH, MPH	• Vehicle stopped: **0 KPH, 0 MPH** • Vehicle running: Vehicle speed	Inspect the front ABS wheel-speed sensor. (See 04-15-10 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.)
WSPD_SEN_LR			Inspect the rear ABS wheel-speed sensor. (See 04-15-13 REAR ABS WHEEL-SPEED SENSOR INSPECTION [2WD].) (See 04-15-13 REAR ABS WHEEL-SPEED SENSOR INSPECTION [4WD].)
WSPD_SEN_RF			Inspect the front ABS wheel-speed sensor. (See 04-15-10 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.)
WSPD_SEN_RR			Inspect the rear ABS wheel-speed sensor. (See 04-15-13 REAR ABS WHEEL-SPEED SENSOR INSPECTION [2WD].) (See 04-15-13 REAR ABS WHEEL-SPEED SENSOR INSPECTION [4WD].)
YAW_RATE_C (Calculated Value)	°/s	• Vehicle stopped or driving straight: **0 °/s** • Cornering to left: Changes **0 °/s—positive** • Cornering to right: Changes **0 °/s—negative**	Perform the DTC inspection for the SAS control module. (See 08-02-7 DTC INSPECTION.)
YAW_RATE_R (Raw Value)			

* : After ignition is switched off, switch it ON (engine off or on) and verify.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

Snapshot Data Table

Note

- Refer to PID monitor table for confirm the DSC system operation status while the DSC CM does not store the DTC. (See 04-02A-22 PID/DATA Monitor Table.)
- Snapshot data items are not displayed, according to detected DTC.

Snapshot data item	Unit	Definition	Corresponding data monitor items
AAT	°C, °F	Ambient air temperature	—
ABS	Inactive/ Active	Antilock braking system	—
APP_STATUS	Accelerator Pedal Off/ Under 20%/ Over 20%/ FAIL	Accelerator pedal position	—
AYC	Inactive/ Active	Active yaw control	—
BRK_F_P_R	Pa, psi	Brake fluid line hydraulic pressure (Raw Value)	BRK_F_P_R
BTCS	Inactive/ Active	Brake traction control system	—
CFG_STATUS	Config Complete/ Not Configured/ Config Error	Configuration status	—
ECT_STATUS	Under 0 degrees C/ 0 - Under 80 degrees C/ Over 80 degrees C/ FAIL	Engine coolant temperature status	—
EDC	Inactive/ Active	Engine drag control	—
IC_VPWR	V	Instrument cluster power supply	—
IG-ON_TIMER	hh:mm:ss	Times since ignition switch ON	—
LAT_ACCL_R	G	Lateral acceleration (Raw Value)	LAT_ACCL_R
LON_ACCL_R	G	Longitudinal acceleration (Raw Value)	LON_ACCL_R
PMP_MT	Off/On	Pump motor	PMP_MT
PWR_MODE_KEY	Key Out/ Key Recently Out/ Key Approved(Position 0)/ Post Accessory (Position 0)/ Accessory (Position 1)/ Post Ignition (Position 1)/ Ignition On (Position 2)/ Running (Position 2)/ Running - Starting In Progress (Position 2)/ Crank (Position 3)	Power mode key state	—
RPM_STATUS	Engine Stop/ Under 1500rpm/ Over 1500rpm/ FAIL	Engine RPM status	—
SHIFT_STATUS	P/N D/ R/ FAIL	Shift position status	—
STR_ANG_C	°	Steering wheel angle (Calculated Value)	STR_ANG_C

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

Snapshot data item	Unit	Definition	Corresponding data monitor items
TCS	Inactive/ Active	Traction control system	—
TOTAL_DIST	km, ft, mi	Total distance	—
TOTAL_TIME	hh:mm:ss	Total time	—
VPWR	V	Power supply	VPWR
VSPD	KPH, MPH	Vehicle speed	VSPD
VSPD_STATUS	Stop/ 0 - 10km/h/ Over 10km/h/ FAIL	Vehicle speed status	—
YAW_RATE_R	°/S	Yaw Rate (Raw Value)	YAW_RATE_R

Active Command Modes Table

Command name	Output part	Operation	Operating condition
PMP_MT_SP	Pump motor	Off/On	Switch the ignition ON (engine off)
V_INLET_LF	LF inlet solenoid valve		
V_INLET_LR	LR inlet solenoid valve		
V_INLET_RF	RF inlet solenoid valve		
V_INLET_RR	RR inlet solenoid valve		
V_OUTLET_LF	LF outlet solenoid valve		
V_OUTLET_LR	LR outlet solenoid valve		
V_OUTLET_RF	RF outlet solenoid valve		
V_OUTLET_RR	RR outlet solenoid valve		
V_STB_LF/RR	LF/RR stability control solenoid valve		
V_STB_RF/LR	RF/LR stability control solenoid valve		
V_TRC_LF/RR	LF/RR traction control solenoid valve		
V_TRC_RF/LR	RF/LR traction control solenoid valve		

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC B10DF:46/C1A08:1C/U2007:46/U2007:62/U3000:49 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2905700

DTC	B10DF:46, C1A08:1C, U2007:46, U2007:62, U3000:49	DSC HU/CM (internal malfunction)
DETECTION CONDITION	• The DSC CM on-board diagnostic function detects control module internal malfunction.	
FAIL-SAFE FUNCTION	• B10DF:46, U2007:46 — Illuminates the TCS/DSC indicator light and master warning light*1. — Inhibits the TCS, DSC, roll over mitigation (ROM), brake assist control, vehicle roll prevention function*2, hill launch assist (HLA), smart city brake support (SCBS)*1, and secondary collision reduction (SCR) controls. • C1A08:1C — Illuminates the TCS/DSC indicator light and master warning light*1. — Tire pressure monitoring system warning light illuminates after flashes. — Inhibits the TCS, DSC, roll over mitigation (ROM), brake assist control, vehicle roll prevention function*2, hill launch assist (HLA), TPMS, smart city brake support (SCBS)*1, and secondary collision reduction (SCR) controls. • U2007:62 — Illuminates the ABS warning light, brake system warning light, TCS/DSC indicator light, and master warning light*1. — Inhibits the ABS, EBD, TCS, DSC, roll over mitigation (ROM), brake assist control, vehicle roll prevention function*2, hill launch assist (HLA), smart city brake support (SCBS)*1, and secondary collision reduction (SCR) controls. • U3000:49 — Illuminates the ABS warning light*3, brake system warning light*3, TCS/DSC indicator light, and master warning light*1. — Tire pressure monitoring system warning light illuminates after flashes. (Not illuminated/flashed depending on malfunction content.) — Inhibits the ABS*4, EBD*4, TCS, DSC, roll over mitigation (ROM), brake assist control*4, vehicle roll prevention function*2, hill launch assist (HLA), TPMS*4, smart city brake support (SCBS)*1, and secondary collision reduction (SCR) controls. *1: Vehicles with smart city brake support (SCBS) *2: ATX only *3: Not illuminated depending on malfunction content. *4: Enabled depending on malfunction content.	
POSSIBLE CAUSE	• DSC HU/CM internal malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY NO DSC HU/CM MALFUNCTION** • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at **10km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC B11D4:08/U2107:68 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2905900

DTC	B11D4:08, U2107:68	Laser sensor
DETECTION CONDITION	• B11D4:08 — Correct data cannot be received from laser sensor • U2107:68 — The difference between the laser sensor request deceleration speed and the actual deceleration speed exceeds the specification.	
FAIL-SAFE FUNCTION	• Illuminates the master warning light. • Inhibits the smart city brake support (SCBS) control.	
POSSIBLE CAUSE	• Laser sensor malfunction • Brake fluid for clogging or leakage	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR LASER SENSOR MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the laser sensor. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].)
		No	Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the laser sensor, then go to the next step. (See 04-15-17 LASER SENSOR REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC C0001:01/C0002:01/C0003:01/C0004:01/C0010:01/C0011:01/C0014:01/C0015:01/C0018:01/C0019:01/C001C:01/C001D:01 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2878200

DTC	**C0001:01, C0002:01**	**Traction control solenoid valve system**
	C0003:01, C0004:01	**Stability control solenoid valve system**
	C0010:01	**LF inlet solenoid valve system**
	C0011:01	**LF outlet solenoid valve system**
	C0014:01	**RF inlet solenoid valve system**
	C0015:01	**RF outlet solenoid valve system**
	C0018:01	**LR inlet solenoid valve system**
	C0019:01	**LR outlet solenoid valve system**
	C001C:01	**RR inlet solenoid valve system**
	C001D:01	**RR outlet solenoid valve system**
DETECTION CONDITION	• Malfunction detected in the DSC HU/CM solenoid valve or internal circuit by the DSC HU/CM on-board diagnostic function	
FAIL-SAFE FUNCTION	• Illuminates the ABS warning light, brake system warning light, TCS/DSC indicator light, and master warning light*1. • Inhibits the ABS, EBD, TCS, DSC, roll over mitigation (ROM), brake assist control, vehicle roll prevention function*2, hill launch assist (HLA), smart city brake support (SCBS)*1, and secondary collision reduction (SCR) controls. *1: Vehicles with smart city brake support (SCBS) *2: ATX only	
POSSIBLE CAUSE	• Open or short circuit in the DSC HU/CM internal solenoid valves • Solenoid valve malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

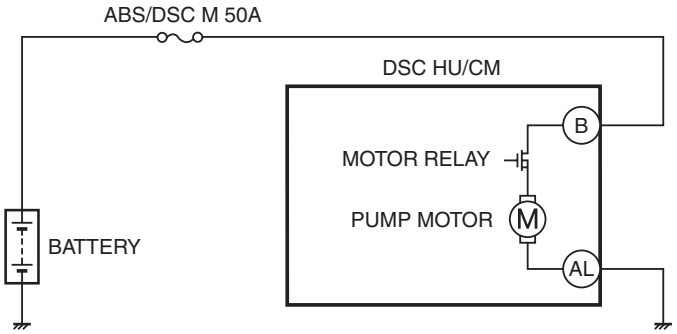
STEP	INSPECTION		ACTION
1	**VERIFY SOLENOID VALVE OPERATION** • Switch the ignition to off. • Connect the M-MDS to the DLC-2. • Switch the ignition ON (engine off). • Access the active command mode for the solenoid valve using the M-MDS. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Does the solenoid valve operate?	Yes	Go to the next step.
		No	Replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
2	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. • Gradually slow down and stop vehicle. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY AFTER REPAIR PROCEDURE** • Are any other DTCs present?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

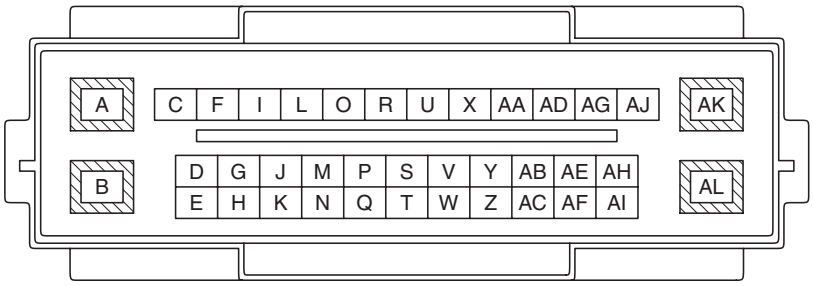
DTC C0020:11/C0020:12/C0020:13/C0020:71 [DYNAMIC STABILITY CONTROL (DSC)]

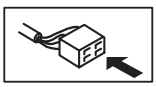
id0402b2906000

DTC	C0020:11, C0020:12, C0020:13, C0020:71	Pump motor, motor relay
DETECTION CONDITION	• C0020:11 — Motor relay signal does not correspond to DSC HU/CM OFF signal. • C0020:12 — DSC motor monitor signal does not correspond to DSC HU/CM OFF signal. — DSC motor monitor signal does not correspond to DSC HU/CM ON signal. • C0020:13 — Motor relay signal does not correspond to DSC HU/CM ON signal. • C0020:71 — DSC HU/CM motor monitor ON signal is not input within specified time limit or more when motor signal is switched from ON to OFF by DSC HU/CM.	
FAIL-SAFE FUNCTION	• Illuminates the ABS warning light, TCS/DSC indicator light and master warning light*1. • Inhibits the ABS, TCS, DSC, roll over mitigation (ROM), brake assist control, vehicle roll prevention function*2, hill launch assist (HLA), smart city brake support (SCBS)*1, and secondary collision reduction (SCR) controls. *1: Vehicles with smart city brake support (SCBS) *2: ATX only	
POSSIBLE CAUSE	• Fuse (ABS/DSC M 50A) malfunction • Open or short circuit in DSC HU/CM internal motor relay, or stuck motor relay • Open or short circuit in DSC HU/CM internal pump motor, or frozen pump motor • Open circuit or short to ground in the wiring harness between the battery and DSC HU/CM terminal B • Open circuit in the wiring harness between DSC HU/CM terminal AL and body ground • Poor connection at connectors (female terminal)	



DSC HU/CM WIRING HARNESS-SIDE CONNECTOR





ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FUSE CONDITION** • Is the fuse (ABS/DSC M 50A) normal?	Yes	Go to the next step.
		No	Replace the fuse, then go to Step 6.
2	**VERIFY PUMP MOTOR OPERATION** • Switch the ignition to off. • Connect the M-MDS to the DLC-2. • Switch the ignition ON (engine off). • Access PMP_MT_SP active command modes using the M-MDS. • Does the pump motor operate?	Yes	Go to the next step.
		No	Replace the DSC HU/CM, then go to Step 6. (See 04-15-4 DSC HU/CM REMOVAL/ INSTALLATION.)
3	**INSPECT MOTOR RELAY POWER SUPPLY FOR OPEN CIRCUIT** • Switch the ignition to off. • Disconnect the DSC HU/CM connector. • Inspect for continuity between DSC HU/CM terminal B (vehicle harness-side) and the positive battery terminal. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 6.
4	**INSPECT MOTOR RELAY POWER SUPPLY FOR SHORT CIRCUIT** • Inspect for continuity between DSC HU/CM terminal B (vehicle harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 6.
		No	Go to the next step.
5	**INSPECT PUMP MOTOR GROUND FOR OPEN CIRCUIT** • Inspect for continuity between DSC HU/CM terminal AL (vehicle harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.
6	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/ INSTALLATION.)
		No	Go to the next step.
7	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

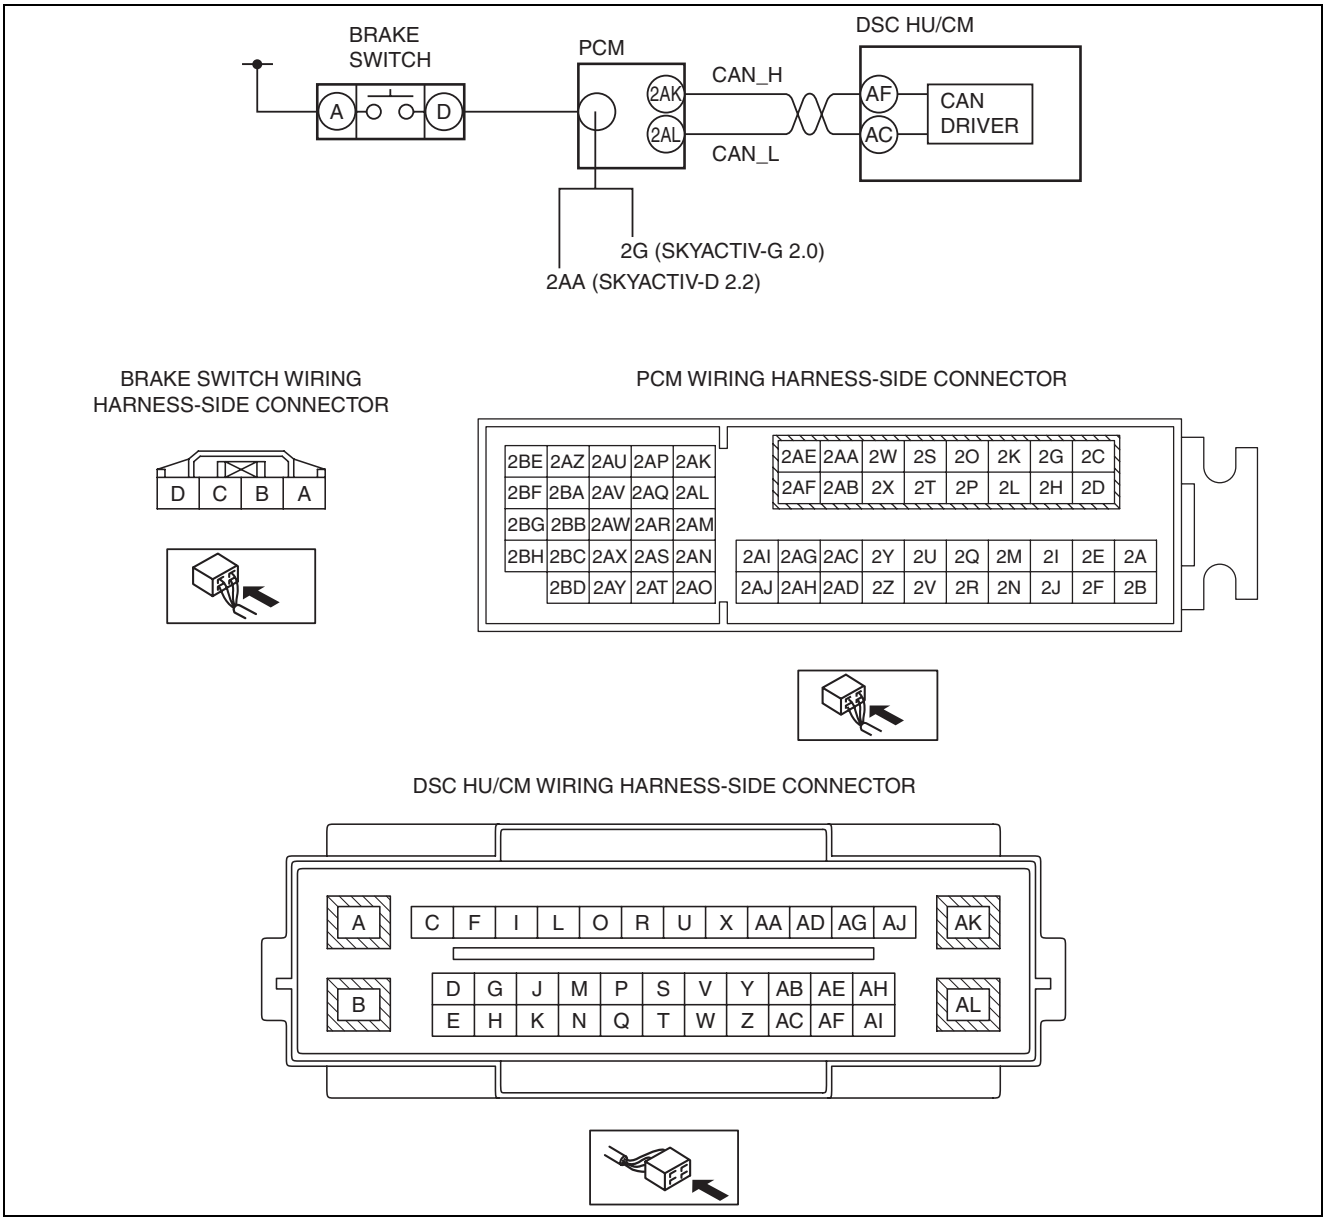
ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC C0023:62/C0040:64 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2906400

DTC	C0023:62, C0040:64	Brake switch
DETECTION CONDITION	• C0023:62 — Brake switch ON signal is not input even though the control module determines vehicle deceleration. • C0040:64 — Brake switch ON signal is input for **6 min or more** when driving at a vehicle speed of **20 km/h {12 mph} or more**. — A brake switch ON signal is not input when the brake fluid pressure sensor signal reaches the specified value.	
FAIL-SAFE FUNCTION	• C0023:62 — Illuminates the master warning light. — Inhibits the smart city brake support (SCBS) control. • C0040:64 — Illuminates the TCS/DSC indicator light and master warning light*1. — Tire pressure monitoring system warning light illuminates after flashes. — Inhibits the brake assist control, vehicle roll prevention function*2, hill launch assist (HLA), TPMS, and smart city brake support (SCBS)*1 controls. *1: Vehicles with smart city brake support (SCBS) *2: ATX only	
POSSIBLE CAUSE	• Open or short circuit in wiring harness between the brake switch and PCM terminal 2G (SKYACTIV-G 2.0) • Open or short circuit in wiring harness between the brake switch and PCM terminal 2AA (SKYACTIV-D 2.2) • Brake switch malfunction • Poor connection at connectors (female terminal)	

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY OPEN OR SHORT CIRCUIT IN BRAKE SWITCH SIGNAL** • Switch the ignition ON (engine off). • Measure the voltage between the PCM connector terminal 2G (vehicle harness-side) and body ground when the brake pedal is depressed and released. **Voltage** **Brake pedal depressed: B+** **Brake pedal released: 1 V or less** • Is the voltage normal?	Yes	Go to Step 5.
		No	If it is **B+** under any condition, then go to the next step. If it is **1 V or less** under any condition, then go to Step 3.
2	**INSPECT BRAKE SWITCH SIGNAL FOR SHORT TO POWER SUPPLY CIRCUIT** • Disconnect the brake switch connector. • Measure voltage between the brake switch connector terminal D (vehicle harness-side) and body ground. • Is the voltage **1 V or less**?	Yes	Go to Step 4.
		No	Repair or replace the wiring harness between the PCM and brake switch, then go to Step 5

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

STEP	INSPECTION		ACTION
3	**INSPECT BRAKE SWITCH SIGNAL FOR OPEN CIRCUIT** • Disconnect the PCM connectors. • Disconnect the brake switch connector. • Inspect continuity between the PCM and brake switch as follows. — SKYACTIV-G 2.0 • PCM connector terminal 2G (vehicle harness-side) and brake switch connector terminal D (vehicle harness-side) — SKYACTIV-D 2.2 • PCM connector terminal 2AA (vehicle harness-side) and brake switch connector terminal D (vehicle harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between the PCM and brake switch, then go to Step 5.
4	**INSPECT BRAKE SWITCH** • Inspect the brake switch. (See 04-11-11 BRAKE SWITCH INSPECTION.) • Is the brake switch normal?	Yes	Go to the next step.
		No	Replace the brake switch, then go to the next step. (See 04-11-8 BRAKE PEDAL REMOVAL/INSTALLATION [L.H.D.].) (See 04-11-9 BRAKE PEDAL REMOVAL/INSTALLATION [R.H.D.].)
5	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at **20 km/h {12 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1.
		No	Go to the next step.
6	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC C0030:07/C0031:07/C0031:29/C0031:2F/C0031:64/C0033:07/C0034:07/C0034:29/C0034:2F/C0034:64/C0036:07/C0037:07/C0037:29/C0037:2F/C0037:64/C0039:07/C003A:07/C003A:29/C003A:2F/C003A:64 [DYNAMIC STABILITY CONTROL (DSC)]

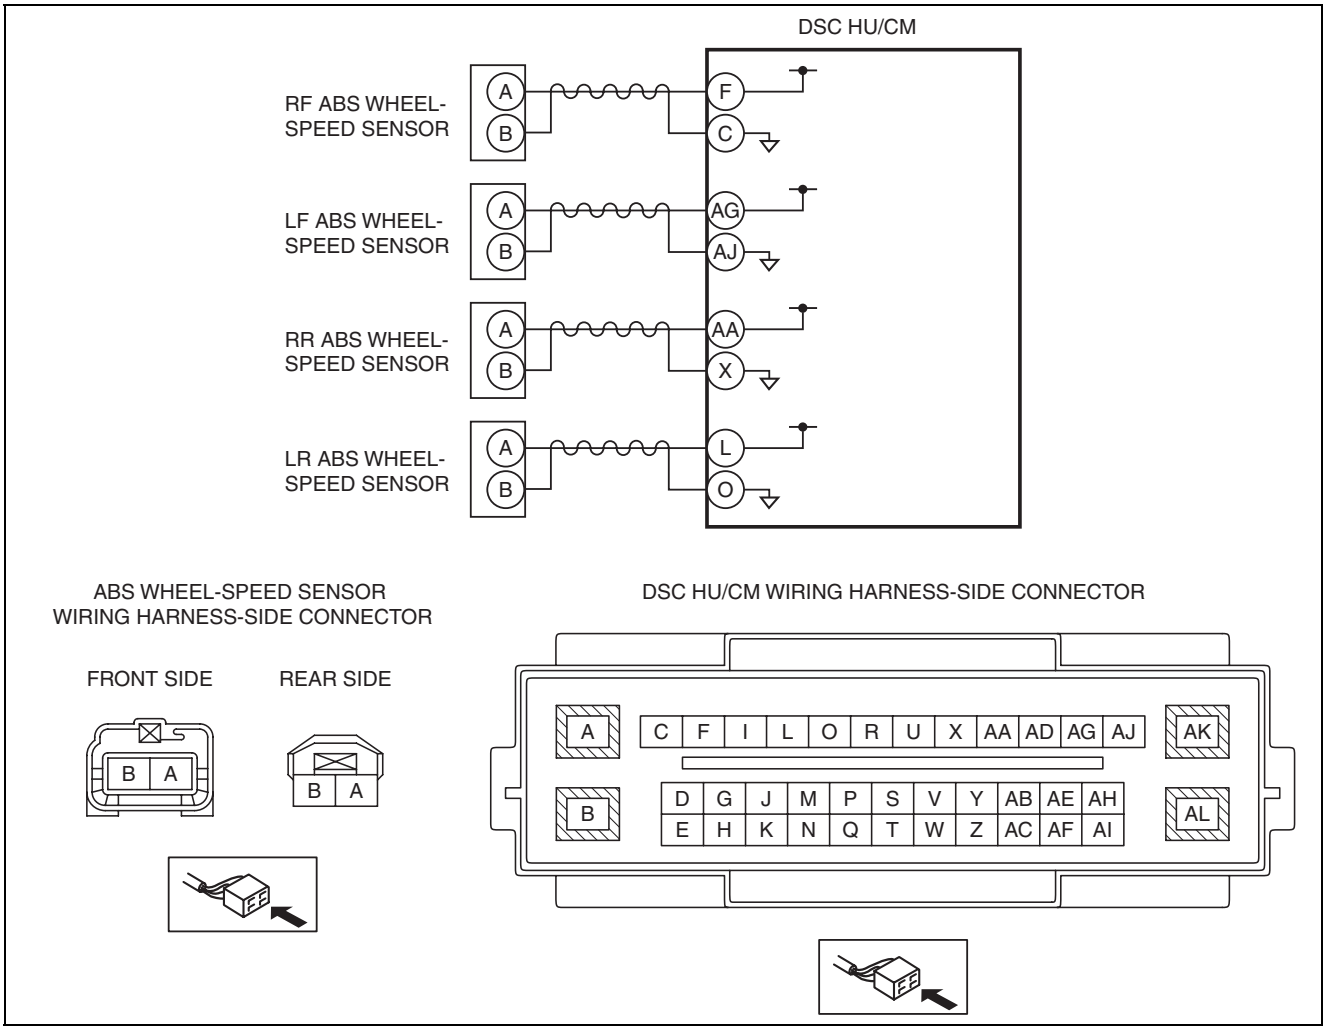
id0402b2906100

Note

- When only the driving wheels are rotated while the vehicle is jacked up, DTCs C0037:29 and C003A:29 are input to the memory.

DTC	**C0030:07**	**LF ABS sensor rotor**
	C0031:07, C0031:29, C0031:2F, C0031:64	**LF ABS wheel-speed sensor/ABS sensor rotor**
	C0033:07	**RF ABS sensor rotor**
	C0034:07, C0034:29, C0034:2F, C0034:64	**RF ABS wheel-speed sensor/ABS sensor rotor**
	C0036:07	**LR ABS sensor rotor**
	C0037:07, C0037:29, C0037:2F, C0037:64	**LR ABS wheel-speed sensor/ABS sensor rotor**
	C0039:07	**RR ABS sensor rotor**
	C003A:07, C003A:29, C003A:2F, C003A:64	**RR ABS wheel-speed sensor/ABS sensor rotor**
DETECTION CONDITION	• C0030:07, C0033:07, C0036:07, C0039:07 — Periodic abnormality is detected in the signal wave pattern from the ABS wheel-speed sensors. • C0031:07, C0034:07, C0037:07, C003A:07 — While the vehicle is traveling at a speed of **10 km/h {6.2 mph} or more**, no signal in any of the four wheels or an extremely low vehicle speed signal is detected. • C0031:29, C0034:29, C0037:29, C003A:29 — The wheel-speed signal is not input or an extremely low wheel-speed signal is detected from any of the four wheels when driving at a vehicle speed of **10 km/h {6.2 mph} or more** • C0031:2F, C0034:2F, C0037:2F, C003A:2F — The wheel speed or acceleration speed in any of the 4 wheels is not within the specification. — ABS control continues to operate for **28 s or more**. • C0031:64, C0034:64, C0037:64, C003A:64 — While the vehicle is traveling at a speed of **20 km/h {12 mph} or more**, an extremely high vehicle speed signal in any of the four wheels is detected.	
FAIL-SAFE FUNCTION	• Illuminates the ABS warning light, TCS/DSC indicator light, and master warning light*1. • Tire pressure monitoring system warning light illuminates after flashes. • Inhibits the ABS, TCS, DSC, roll over mitigation (ROM), brake assist control, vehicle roll prevention function*2, hill launch assist (HLA), TPMS, smart city brake support (SCBS)*1, and secondary collision reduction (SCR) controls. (Additionally, when any malfunction is detected in two wheels or more, EBD control is inhibited and the brake system warning light is illuminated.) *1: Vehicles with smart city brake support (SCBS) *2: ATX only	
POSSIBLE CAUSE	• ABS sensor rotor malfunction (missing ABS sensor rotor teeth due to foreign material obstruction) • ABS wheel-speed sensor or ABS sensor rotor installation malfunction (If the ABS sensor rotor is installed at an angle, it may cause output of abnormal wave pattern at high speeds.) • Excessive clearance between the ABS wheel-speed sensor and sensor rotor • ABS wheel-speed sensor malfunction • Continuous ABS operation	

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]



04

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PID FOR ABS WHEEL-SPEED SENSOR OUTPUT ERROR USING M-MDS** • Switch the ignition to off. • Connect the M-MDS to the DLC-2. • Select the following PIDs using the M-MDS: — WSPD_SEN_LF — WSPD_SEN_LR — WSPD_SEN_RF — WSPD_SEN_RR • Drive the vehicle. • Verify that the vehicle speeds detected by the four ABS wheel-speed sensors are approximately the same. • Are the vehicle speeds approximately the same?	Yes	Go to Step 3.
		No	Go to the next step.
2	**INSPECT FOR SHORT TO GROUND BETWEEN ABS WHEEL-SPEED SENSOR CONNECTORS AND GROUND** • Disconnect the ABS wheel-speed sensor connectors. • Inspect for no continuity between the following ABS wheel-speed sensor connector terminals (vehicle harness-side) and body ground: — ABS wheel-speed sensor (RF): B—Body ground — ABS wheel-speed sensor (LF): B—Body ground — ABS wheel-speed sensor (RR): B—Body ground — ABS wheel-speed sensor (LR): B—Body ground • Is the continuity normal?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 5.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

STEP	INSPECTION		ACTION
3	**INSPECT IF MALFUNCTION OCCURRED DUE TO IMPROPER SENSOR CLEARANCE.** • Inspect the clearance between the ABS wheel-speed sensor and the ABS sensor rotor. (See 04-15-10 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.) (See 04-15-13 REAR ABS WHEEL-SPEED SENSOR INSPECTION [2WD].) (See 04-15-13 REAR ABS WHEEL-SPEED SENSOR INSPECTION [4WD].) • Is the clearance normal?	Yes	Go to the next step.
		No	Replace the ABS wheel-speed sensor, then go to Step 5. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.) (See 04-15-11 REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
4	**VISUALLY INSPECT ABS SENSOR ROTOR FOR FOREIGN MATERIAL ADHERING OR IMPROPER INSTALLATION** • Is the result normal?	Yes	Go to the next step.
		No	Repair or replace the ABS sensor rotor, then go to the next step. • Front ABS sensor rotor (front wheel hub) (See 03-11-3 WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION.) • Rear ABS sensor rotor (rear wheel hub (2WD) or shaft and ball joint component (4WD)) (See 03-12-3 WHEEL HUB COMPONENT REMOVAL/INSTALLATION [2WD].) (See 03-13-19 REAR DRIVE SHAFT DISASSEMBLY/ASSEMBLY.)
5	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at **20 km/h {12 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

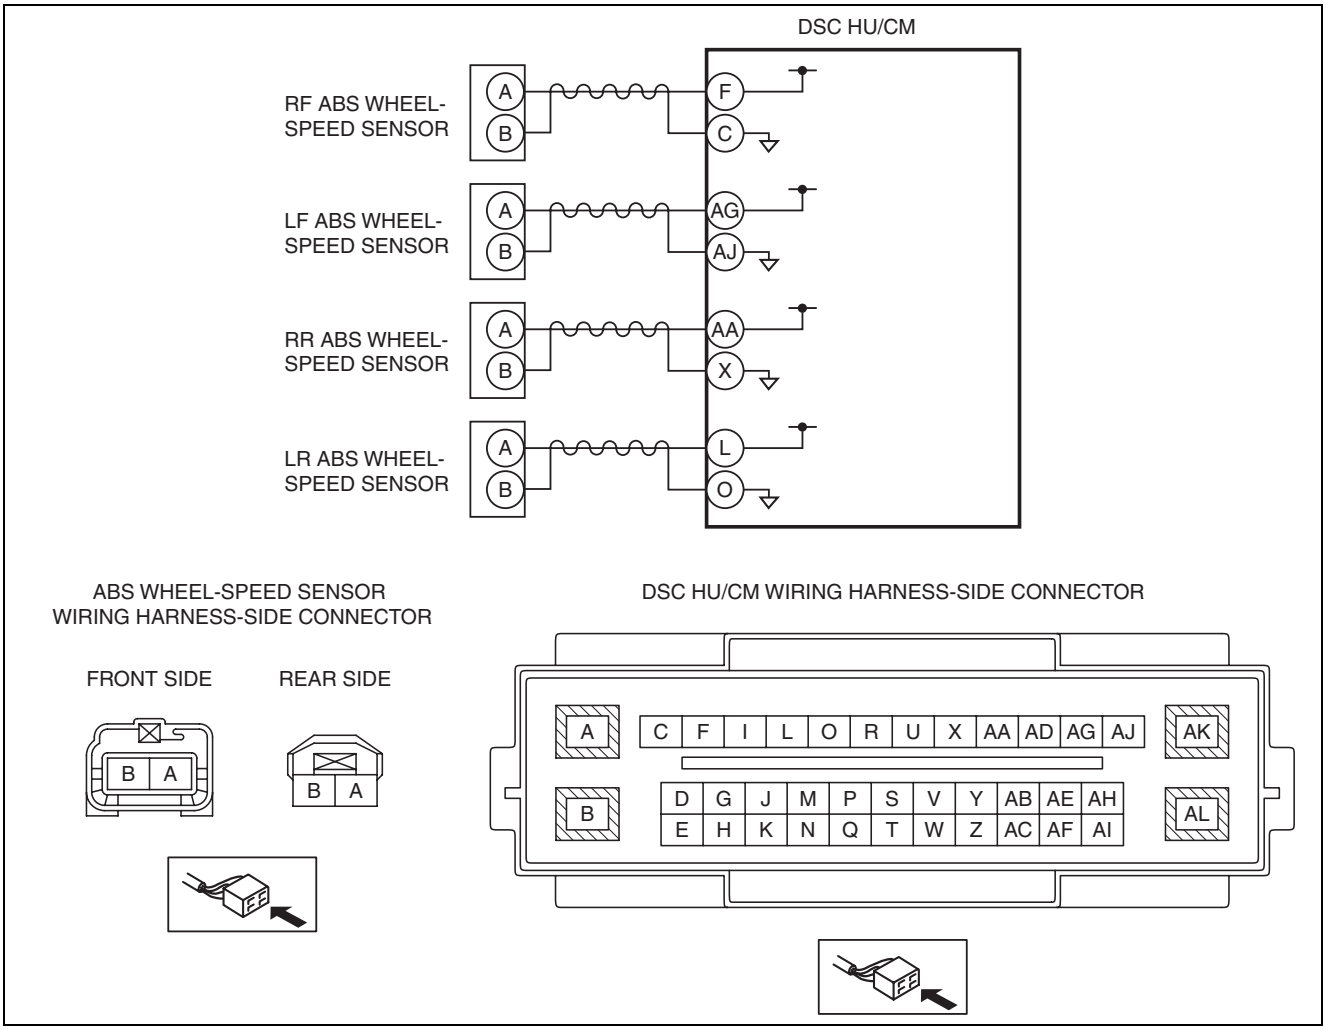
ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC C0031:11/C0031:15/C0034:11/C0034:15/C0037:11/C0037:15/C003A:11/C003A:15 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2180700

DTC	**C0031:11, C0031:15**	**LF ABS wheel-speed sensor**
	C0034:11, C0034:15	**RF ABS wheel-speed sensor**
	C0037:11, C0037:15	**LR ABS wheel-speed sensor**
	C003A:11, C003A:15	**RR ABS wheel-speed sensor**
DETECTION CONDITION	• C0031:11, C0034:11, C0037:11, C003A:11 — Short to ground has been detected in the ABS wheel-speed sensor wiring harness on any of the four vehicle wheels. • C0031:15, C0034:15, C0037:15, C003A:15 — Open circuit or short to power supply has been detected in the ABS wheel-speed sensor wiring harness on any of the four vehicle wheels.	
FAIL-SAFE FUNCTION	• Illuminates the ABS warning light, TCS/DSC indicator light, and master warning light*1. • Tire pressure monitoring system warning light illuminates after flashes. • Inhibits the ABS, TCS, DSC, roll over mitigation (ROM), brake assist control, vehicle roll prevention function*2, hill launch assist (HLA), TPMS, smart city brake support (SCBS)*1, and secondary collision reduction (SCR) controls. (Additionally, when any malfunction is detected in two wheels or more, EBD control is inhibited and the brake system warning light is illuminated.) *1: Vehicles with smart city brake support (SCBS) *2: ATX only	
POSSIBLE CAUSE	• Open circuit or short to ground/power supply in the wiring harness between the following DSC HU/CM terminals and ABS wheel-speed sensor terminals: — DSC HU/CM terminal F—RF ABS wheel-speed sensor terminal A — DSC HU/CM terminal C—RF ABS wheel-speed sensor terminal B — DSC HU/CM terminal AG—LF ABS wheel-speed sensor terminal A — DSC HU/CM terminal AJ—LF ABS wheel-speed sensor terminal B — DSC HU/CM terminal AA—RR ABS wheel-speed sensor terminal A — DSC HU/CM terminal X—RR ABS wheel-speed sensor terminal B — DSC HU/CM terminal L—LR ABS wheel-speed sensor terminal A — DSC HU/CM terminal O—LR ABS wheel-speed sensor terminal B • Malfunction in the ABS wheel-speed sensor • Poor connection at connectors (female terminal)	

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ABS WHEEL-SPEED SENSOR FOR SHORT TO GROUND** • Switch the ignition to off. • Disconnect the DSC HU/CM connectors. • Inspect for continuity between the following DSC HU/CM connector terminals (vehicle harness-side) and body ground: — RF ABS wheel-speed sensor (+): F — RF ABS wheel-speed sensor (-): C — LF ABS wheel-speed sensor (+): AG — LF ABS wheel-speed sensor (-): AJ — RR ABS wheel-speed sensor (+): AA — RR ABS wheel-speed sensor (-): X — LR ABS wheel-speed sensor (+): L — LR ABS wheel-speed sensor (-): O • Is there continuity?	Yes	Go to the next step.
		No	Go to Step 3.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

STEP	INSPECTION		ACTION
2	**INSPECT ABS WHEEL-SPEED SENSOR WIRING HARNESS FOR SHORT TO GROUND** • Disconnect the ABS wheel-speed sensor connectors. • Inspect for continuity between the following DSC HU/CM connector terminals (vehicle harness-side) and body ground: — RF ABS wheel-speed sensor (+): F — RF ABS wheel-speed sensor (-): C — LF ABS wheel-speed sensor (+): AG — LF ABS wheel-speed sensor (-): AJ — RR ABS wheel-speed sensor (+): AA — RR ABS wheel-speed sensor (-): X — LR ABS wheel-speed sensor (+): L — LR ABS wheel-speed sensor (-): O • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 5.
		No	Replace the ABS wheel-speed sensor, then go to Step 5. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.) (See 04-15-11 REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
3	**INSPECT FOR OPEN CIRCUIT IN ABS WHEEL-SPEED SENSOR WIRING HARNESS** • Inspect for continuity between the DSC HU/CM connectors (vehicle harness-side) and the following vehicle harness-side connector terminals of the ABS wheel-speed sensors: — RF ABS wheel-speed sensor (+): F—A — RF ABS wheel-speed sensor (-): C—B — LF ABS wheel-speed sensor (+): AG—A — LF ABS wheel-speed sensor (-): AJ—B — RR ABS wheel-speed sensor (+): AA—A — RR ABS wheel-speed sensor (-): X—B — LR ABS wheel-speed sensor (+): L—A — LR ABS wheel-speed sensor (-): O—B • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.
4	**INSPECT ABS WHEEL-SPEED SENSOR WIRING HARNESS FOR SHORT TO POWER SUPPLY** • Inspect for voltage between the following DSC HU/CM connector terminals (vehicle harness-side) and body ground: — RF ABS wheel-speed sensor (+): F — RF ABS wheel-speed sensor (-): C — LF ABS wheel-speed sensor (+): AG — LF ABS wheel-speed sensor (-): AJ — RR ABS wheel-speed sensor (+): AA — RR ABS wheel-speed sensor (-): X — LR ABS wheel-speed sensor (+): L — LR ABS wheel-speed sensor (-): O • Is the voltage **1 V or less**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.
5	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC C0044:01/C0044:28/C0044:54/C0044:64 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2888500

DTC	C0044:01, C0044:28, C0044:54, C0044:64	Brake fluid pressure sensor
DETECTION CONDITION	• C0044:01 — The voltage value from the brake fluid pressure sensor is not within specification. • C0044:28, C0044:64 — The pressure from the brake fluid pressure sensor is not within specification. • C0044:54 — The brake fluid pressure sensor detects the initialization procedure has not been perform.	
FAIL-SAFE FUNCTION	• C0044:01 — Illuminates the TCS/DSC indicator light and master warning light*1*2. — Tire pressure monitoring system warning light illuminates after flashes. (Not illuminated/flashed depending on malfunction content.) — Inhibits the TCS*3, DSC*3, roll over mitigation (ROM)*3, brake assist control, vehicle roll prevention function*3*4, hill launch assist (HLA)*3, TPMS*3, smart city brake support (SCBS)*1*3, and secondary collision reduction (SCR)*3 controls. • C0044:28, C0044:64 — Illuminates the TCS/DSC indicator light and master warning light*1. — Tire pressure monitoring system warning light illuminates after flashes. — Inhibits the TCS, DSC, roll over mitigation (ROM), brake assist control, vehicle roll prevention function*4, hill launch assist (HLA), TPMS, smart city brake support (SCBS)*1, and secondary collision reduction (SCR) controls. • C0044:54 — Illuminates the TCS/DSC indicator light and master warning light*1*2. — Tire pressure monitoring system warning light illuminates after flashes. (Not illuminated/flashed depending on malfunction content.) — Inhibits the TCS*3, DSC*3, roll over mitigation (ROM)*3, brake assist control*3, vehicle roll prevention function*3*4, hill launch assist (HLA)*3, TPMS*3, smart city brake support (SCBS)*1*3, and secondary collision reduction (SCR)*3 controls. *1: Vehicles with smart city brake support (SCBS) *2: Not illuminated depending on malfunction content. *3: Enabled depending on malfunction content. *4: ATX only	
POSSIBLE CAUSE	• The initialization procedure for the brake fluid pressure sensor has not been performed. • Brake fluid pressure sensor malfunction • Open or short circuit in the brake fluid pressure sensor circuit in DSC HU/CM	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY INITIALIZATION PROCEDURE** • Was the brake fluid pressure sensor initialization procedure been performed?	Yes	Go to the next step.
		No	Perform the brake fluid pressure sensor initialization procedure, then go to the next step. (See 04-15-7 DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE.)
2	**VERIFY NO ABNORMALITY ON BRAKE FLUID PRESSURE SENSOR** • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC C0051:62/C0051:64/C0051:67/C0051:85 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2906200

DTC	C0051:62, C0051:64, C0051:67, C0051:85	Steering angle sensor
DETECTION CONDITION	• C0051:62 — The difference between the steering angle calculated by each sensor and the steering angle from the steering angle sensor is the specification or more when the vehicle is driven in a straight line. • C0051:64 — The difference between the steering angle calculated by each sensor and the steering angle from the steering angle sensor exceeds the specification. • C0051:67 — The neutral position of the steering angle cannot be estimated from the signals from the ABS wheel-speed sensors and the SAS control module. • C0051:85 — The steering angle sensor detects signal modulation or steering angle that exceeds specification.	
FAIL-SAFE FUNCTION	• C0051:62, C0051:64, C0051:85 — Illuminates the TCS/DSC indicator light and master warning light*. — Tire pressure monitoring system warning light illuminates after flashes. — Inhibits the TCS, DSC, roll over mitigation (ROM), TPMS, smart city brake support (SCBS)*, and secondary collision reduction (SCR) controls. • C0051:67 — Illuminates the TCS/DSC indicator light and master warning light*. — Inhibits the TCS, DSC, roll over mitigation (ROM), smart city brake support (SCBS)*, and secondary collision reduction (SCR) controls. *: Vehicles with smart city brake support (SCBS)	
POSSIBLE CAUSE	• Improper installation or positioning of the steering angle sensor • Steering angle sensor malfunction • Connector or terminal malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**PERFORM EPS CM DTC INSPECTION** • Perform the EPS CM DTC inspection. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the EPS CM, then go to the next step. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC C0061:28/C0061:64/C0062:28/C0062:64/C0063:28/C0063:64 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2180800

DTC	C0061:28, C0061:64, C0062:28, C0062:64, C0063:28, C0063:64	SAS control module system

DETECTION CONDITION

Note
- The low-G sensor and the yaw rate sensor are built into the SAS control module.

- C0061:28, C0061:64
  — Out-of-specification signal modulation or lateral-G value is detected from the low-G sensor.
- C0062:28, C0062:64
  — Out-of-specification signal modulation or longitudinal-G value is detected from the low-G sensor.
- C0063:28, C0063:64
  — Out-of-specification signal modulation or yaw rate value is detected from the yaw rate sensor.

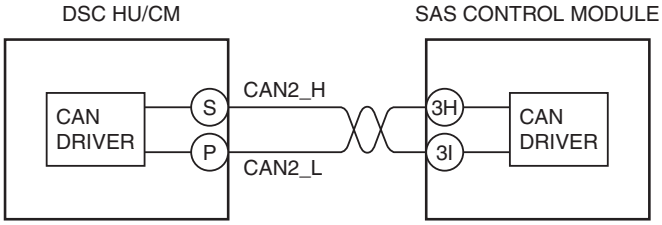
FAIL-SAFE FUNCTION

- C0061:28, C0061:64, C0063:28, C0063:64
  — Illuminates the TCS/DSC indicator light and master warning light*1.
  — Tire pressure monitoring system warning light illuminates after flashes.
  — Inhibits the TCS, DSC, roll over mitigation (ROM), TPMS, smart city brake support (SCBS)*1, and secondary collision reduction (SCR) controls.
- C0062:28, C0062:64
  — Illuminates the ABS warning light*2, TCS/DSC indicator light, and master warning light*1*2.
  — Inhibits the ABS*3, TCS*3, DSC*3, roll over mitigation (ROM)*3, brake assist control*3, vehicle roll prevention function*4, hill launch assist (HLA), smart city brake support (SCBS)*1*3, and secondary collision reduction (SCR)*3 controls.

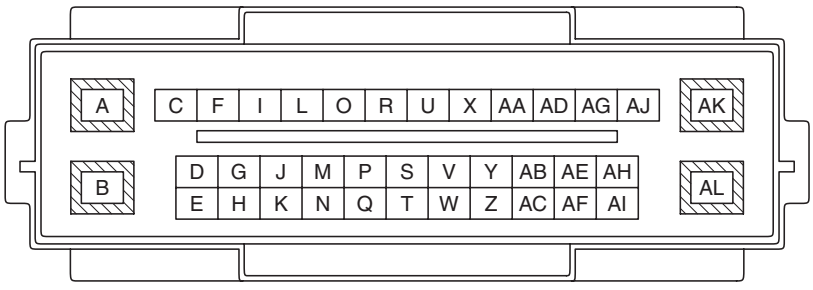
*1: Vehicles with smart city brake support (SCBS)
*2: Not illuminated depending on malfunction content.
*3: Enabled depending on malfunction content.
*4: ATX only

POSSIBLE CAUSE

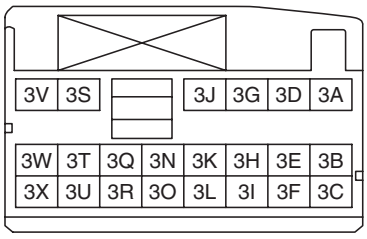
- SAS control module malfunction
- Open or short circuit in the CAN2_H wiring harness between DSC HU/CM terminal S and SAS control module terminal 3H
- Open or short circuit in the CAN2_L wiring harness between DSC HU/CM terminal P and SAS control module terminal 3I
- DSC HU/CM malfunction
- Poor connection at connectors (female terminal)



DSC HU/CM WIRING HARNESS-SIDE CONNECTOR



SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SAS CONTROL MODULE MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the SAS control module. (See 08-02-7 DTC INSPECTION.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 08-02-11 DTC TABLE.)
		No	Go to the next step.
2	**INSPECT SAS CONTROL MODULE SIGNAL (CAN2 LINE) FOR OPEN CIRCUIT** • Disconnect the DSC HU/CM connector. • Disconnect the SAS control module connectors. • Inspect for continuity between the following DSC HU/CM connector terminals (vehicle harness-side) and SAS control module connector terminals (vehicle harness-side): — DSC HU/CM terminal S—SAS control module terminal 3H — DSC HU/CM terminal P—SAS control module terminal 3I • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 4.
3	**INSPECT SAS CONTROL MODULE SIGNAL (CAN2 LINE) FOR SHORT CIRCUIT** • Inspect for continuity between the following DSC HU/CM connector terminals (vehicle harness-side) and body ground: — DSC HU/CM terminal S—body ground — DSC HU/CM terminal P—body ground • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
4	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC C0061:54/C0062:54/C0063:54 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2901200

DTC	C0061:54, C0062:54, C0063:54	DSC HU/CM system (unperformed initialization procedure)
DETECTION CONDITION	• C0061:54 — DSC HU/CM detects that the initialization procedure has not been performed. (Lateral acceleration sensor) • C0062:54 — DSC HU/CM detects that the initialization procedure has not been performed. (Longitudinal acceleration sensor) • C0063:54 — DSC HU/CM detects that the initialization procedure has not been performed. (Yaw rate sensor)	
FAIL-SAFE FUNCTION	• Illuminates the ABS warning light*1, TCS/DSC indicator light, and master warning light*1*2. • Tire pressure monitoring system warning light illuminates after flashes. (Not illuminated/flashed depending on malfunction content.) • Inhibits the ABS*3, TCS*3, DSC*3, roll over mitigation (ROM)*3, brake assist control*3, vehicle roll prevention function*3*4, hill launch assist (HLA)*3, TPMS*3, smart city brake support (SCBS)*2*3, and secondary collision reduction (SCR)*3 controls. *1: Not illuminated depending on malfunction content. *2: Vehicles with smart city brake support (SCBS) *3: Enabled depending on malfunction content. *4: ATX only	
POSSIBLE CAUSE	• Initialization procedure for the lateral acceleration sensor, longitudinal acceleration sensor or yaw rate sensor not performed • SAS control module malfunction • DSC HU/CM malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY INITIALIZATION PROCEDURE** • Was the DSC related parts sensor initialization procedure performed?	Yes	Go to the next step.
		No	Perform the DSC related parts sensor initialization procedure, then go to Step 3. (See 04-15-7 DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE.)
2	**INSPECT SAS CONTROL MODULE MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the SAS control module. (See 08-02-7 DTC INSPECTION.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 08-02-11 DTC TABLE.)
		No	Go to the next step.
3	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC C0062:76 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2901000

DTC	C0062:76	SAS control module system
DETECTION CONDITION	• Error is detected in communication with SAS control module by CAN communication (CAN2).	
FAIL-SAFE FUNCTION	• Illuminates the ABS warning light[*1], TCS/DSC indicator light, and master warning light[*1*2]. • Tire pressure monitoring system warning light illuminates after flashes. (Not illuminated/flashed depending on malfunction content.) • Inhibits the ABS[*3], TCS[*3], DSC[*3], roll over mitigation (ROM)[*3], brake assist control[*3], vehicle roll prevention function[*4], hill launch assist (HLA), TPMS[*3], smart city brake support (SCBS)[*2*3], and secondary collision reduction (SCR)[*3] controls. [*1]: Not illuminated depending on malfunction content. [*2]: Vehicles with smart city brake support (SCBS) [*3]: Enabled depending on malfunction content. [*4]: ATX only	
POSSIBLE CAUSE	• Poor SAS control module installation • Low-G sensor malfunction in SAS control module	

STEP	INSPECTION		ACTION
1	**VERIFY IF SAS CONTROL MODULE IS CORRECTLY INSTALLED** • Verify the SAS control module installation condition. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Is the installation condition normal?	Yes	Go to the next step.
		No	Install the SAS control module correctly, then go to the next step.
2	**INSPECT SAS CONTROL MODULE MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the SAS control module. (See 08-02-7 DTC INSPECTION.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 08-02-11 DTC TABLE.)
		No	Go to the next step.
3	**PERFORM DSC RELATED PARTS SENSOR INITIALIZATION** • Perform the DSC related parts sensor initialization for the PCM using the M-MDS. (See 04-15-7 DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE.) • Is the DSC sensor initialization completed normally?	Yes	Go to the next step.
		No	Replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
4	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC C006B:00/C0072:68 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2884600

DTC	C006B:00, C0072:68	TCS/DSC control system
DETECTION CONDITION	• C006B:00 — DSC control continues for a specified period of time or more • C0072:68 — Due to excessive braking, TCS control using braking is temporarily inhibited.	
FAIL-SAFE FUNCTION	• C006B:00 — Illuminates the TCS/DSC indicator light and master warning light*. — Tire pressure monitoring system warning light illuminates after flashes. — Inhibits the TCS, DSC, roll over mitigation (ROM), TPMS, smart city brake support (SCBS)*, and secondary collision reduction (SCR) controls. • C0072:68 — Illuminates the TCS/DSC indicator light. (Turns on if the slip of a specific wheel is 10km/h {6.2 mph} or more.) — Inhibits the TCS (brake control) control. *: Vehicles with smart city brake support (SCBS)	
POSSIBLE CAUSE	• This does not indicate a malfunction since constant TCS or DSC control over an extended period of time is inhibited to protect the DSC solenoid valve inside the DSC HU or the engine.	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

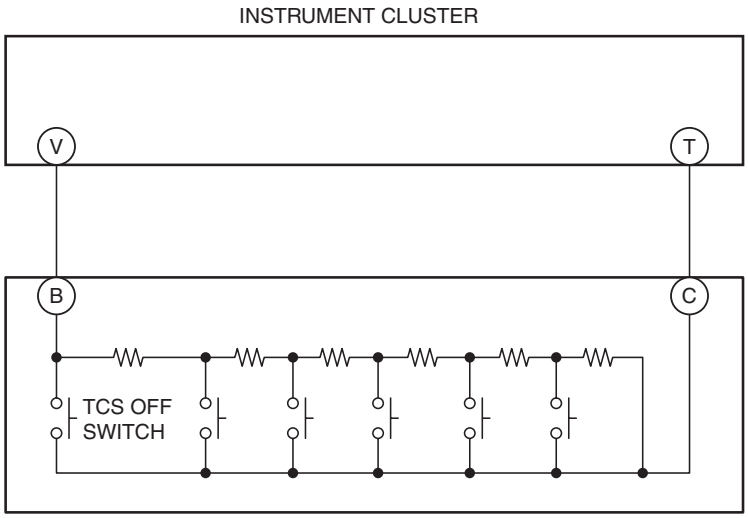
STEP	INSPECTION		ACTION
1	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

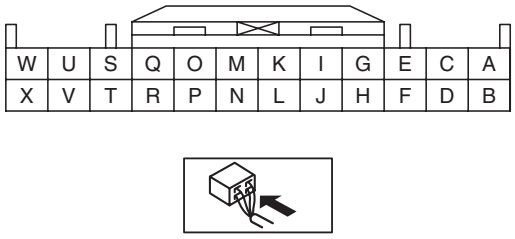
DTC C0089:64 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2906500

DTC	C0089:64	TCS OFF switch
DETECTION CONDITION	• Continuous ON signal from the TCS OFF switch for **10 s or more** is detected.	
FAIL-SAFE FUNCTION	• Permits the control and does not illuminate each warning/indicator light.	
POSSIBLE CAUSE	• The driver pressed and held the TCS OFF switch for **10 s or more**. • Short to ground in the wiring harness between the instrument cluster terminal V and TCS OFF switch terminal B • Open circuit in wiring harness between instrument cluster terminal T and TCS OFF switch terminal C • TCS OFF switch malfunction • Poor connection at connectors (female terminal)	



INSTRUMENT CLUSTER WIRING HARNESS-SIDE CONNECTOR



TCS OFF SWITCH WIRING HARNESS-SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR INSTRUMENT CLUSTER MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the instrument cluster. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**INSPECT TCS OFF SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Disconnect the TCS OFF switch. • Disconnect the instrument cluster connector. • Inspect for continuity between the TCS OFF switch connector terminal B (vehicle harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 5.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

STEP	INSPECTION		ACTION
3	**INSPECT TCS OFF SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the TCS OFF switch connector terminal C (vehicle harness-side) and instrument cluster connector terminal T (vehicle harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 5.
4	**INSPECT TCS OFF SWITCH** • Inspect the TCS OFF switch. (See 04-15-15 TCS OFF SWITCH INSPECTION.) • Is the TCS OFF switch normal?	Yes	Go to the next step.
		No	Replace the TCS OFF switch, then go to the next step. (See 04-15-15 TCS OFF SWITCH REMOVAL/INSTALLATION.)
5	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1.
		No	Go to the next step.
6	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

DTC C1031:35 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2906600

DTC	C1031:35	Tire pressure monitoring system (TPMS) set switch
DETECTION CONDITION	• Continuous ON signal from the TPMS set switch for **60 s or more** is detected.	
FAIL-SAFE FUNCTION	• Tire pressure monitoring system warning light illuminates after flashes. • Inhibits the TPMS control.	
POSSIBLE CAUSE	• The driver pressed and held the TPMS set switch for **60 s or more**. • TPMS set switch malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTCs FOR INSTRUMENT CLUSTER** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the instrument cluster. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**INSPECT TPMS SET SWITCH** • Inspect the TPMS set switch. (See 02-12-5 TIRE PRESSURE MONITORING SYSTEM SET SWITCH INSPECTION.) • Is the TPMS set switch normal?	Yes	Go to the next step.
		No	Replace the TPMS set switch, then go to the next step. (See 02-12-4 TIRE PRESSURE MONITORING SYSTEM SET SWITCH REMOVAL/INSTALLATION.)
3	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1.
		No	Go to the next step.
4	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC C1031:41 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2906700

DTC	C1031:41	Tire pressure monitoring system (TPMS) system
DETECTION CONDITION	• When the DSC HU/CM detects malfunction in the memory for storing a calculated tire pressure value.	
FAIL-SAFE FUNCTION	• Tire pressure monitoring system warning light illuminates after flashes. • Inhibits the TPMS control.	
POSSIBLE CAUSE	• DSC HU/CM internal error • DSC HU/CM malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INITIALIZE A TPMS MEMORY** • Switch the ignition to off. • Connect the M-MDS (IDS) to DLC-2. • After the vehicle is identified, select the following items from the initial screen of the IDS. 1. Select “Chassis”. 2. Select “ABS/DSC”. 3. Select “TPMS DTC Reset for ABS/DSC”. • Perform the procedure according to the directions on the screen. • Is the initialization normally completed?	Yes	Go to the next step.
		No	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC C1031:54 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2906900

DTC	C1031:54	Tire pressure monitoring system (TPMS) system
DETECTION CONDITION	• Detects that tire such as temporary spare tire with outer diameter of considerable difference is installed • There is a large fluctuation in steering angle and acceleration/deceleration speed repeatedly over short intervals.	
FAIL-SAFE FUNCTION	• Tire pressure monitoring system warning light illuminates after flashes. • Inhibits the TPMS control.	
POSSIBLE CAUSE	• Diameter of currently installed tires differs from Mazda recommended tires • There is a large fluctuation in steering angle and acceleration/deceleration speed repeatedly over short intervals. • DSC HU/CM malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE TIRE** • Verify that the currently equipped tire type (size, supplier, and type) conform to the Mazda recommendation. (See 02-12-1 WHEEL AND TIRE SPECIFICATION.) • Is the tire type as specified?	Yes	Go to the next step.
		No	Replace the tire, then go to Step 3. (See 02-12-1 WHEEL AND TIRE SPECIFICATION.)
2	**MEASURE THE TIRE PRESSURE** • Measure the tire pressure when the tires are cold. (See 02-12-1 WHEEL AND TIRE SPECIFICATION.) • Is the pressure as specified?	Yes	Go to the next step.
		No	Adjust the tire pressure to the specification when the tires are cold, then go to the next step. (See 02-12-1 WHEEL AND TIRE SPECIFICATION.)
3	**INITIALIZE THE TPMS** • Initialize the TPMS. (See 02-12-4 TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE.) • Is the initialization normally completed?	Yes	Go to the next step.
		No	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
4	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC C1031:68 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2907000

DTC	C1031:68	Tire pressure monitoring system (TPMS) system
DETECTION CONDITION	• Error is detected in ambient temperature sensor from PCM via CAN communication.	
FAIL-SAFE FUNCTION	• Tire pressure monitoring system warning light illuminates after flashes. • Inhibits the TPMS control.	
POSSIBLE CAUSE	• Ambient temperature sensor malfunction • PCM malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTCs FOR PCM** • Switch the ignition to off. • Verify DTCs for the PCM using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT AMBIENT TEMPERATURE SENSOR** • Inspect the AMBIENT TEMPERATURE SENSOR. (See 07-40B-11 AMBIENT TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) (See 07-40A-23 AMBIENT TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) • Is the ambient temperature sensor normal?	Yes	Go to the next step.
		No	Replace the ambient temperature sensor, then go to the next step. (See 07-40B-11 AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) (See 07-40A-22 AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
3	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC U0001:88/U0100:00/U0101:00/U0114:00/U0131:00/U0154:00/U0155:00/U0235:00 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2906300

DTC	U0001:88, U0100:00, U0101:00, U0114:00, U0131:00, U0154:00, U0155:00, U0235:00	CAN line

DETECTION CONDITION	• U0001:88 — Open or short circuit in CAN system wiring harness is detected. • U0100:00 — Communication error with PCM is detected in CAN communication. • U0101:00 — Communication error with TCM is detected in CAN communication. • U0114:00 — Communication error with 4WD control module is detected in CAN communication. • U0131:00 — Communication error with EPS CM is detected in CAN communication. • U0154:00 — Communication error with SAS control module is detected in CAN communication. • U0155:00 — Communication error with instrument cluster is detected in CAN communication. • U0235:00 — Communication error with laser sensor is detected in CAN communication.
FAIL-SAFE FUNCTION	• U0001:88 — Illuminates the ABS warning light, TCS/DSC indicator light, and master warning light*1. — Tire pressure monitoring system warning light illuminates after flashes. — Inhibits the ABS, TCS, DSC, roll over mitigation (ROM), brake assist control, vehicle roll prevention function*2, hill launch assist (HLA), TPMS, smart city brake support (SCBS)*1, and secondary collision reduction (SCR) controls. • U0100:00 — Illuminates the ABS warning light*3, TCS/DSC indicator light*3, and master warning light*1*3. — Tire pressure monitoring system warning light illuminates after flashes. (Not illuminated/flashed depending on malfunction content.) — Inhibits the ABS*4, TCS*4, DSC*4, roll over mitigation (ROM)*4, brake assist control*4, vehicle roll prevention function*2*4, hill launch assist (HLA)*4, TPMS*4, smart city brake support (SCBS)*1*4, and secondary collision reduction (SCR)*4 controls. • U0101:00 — Illuminates the TCS/DSC indicator light and master warning light*1. — Tire pressure monitoring system warning light illuminates after flashes. — Inhibits the TCS, DSC, roll over mitigation (ROM), vehicle roll prevention function, hill launch assist (HLA), TPMS, smart city brake support (SCBS)*1, and secondary collision reduction (SCR) controls. • U0114:00 — Tire pressure monitoring system warning light illuminates after flashes. — Inhibits the TPMS control. • U0131:00 — Illuminates the TCS/DSC indicator light and master warning light*1. — Tire pressure monitoring system warning light illuminates after flashes. — Inhibits the TCS, DSC, roll over mitigation (ROM), TPMS, smart city brake support (SCBS)*1, and secondary collision reduction (SCR) controls. • U0154:00 — Illuminates the TCS/DSC indicator light. — Inhibits the secondary collision reduction (SCR) control. • U0155:00 — Illuminates the ABS warning light*3, TCS/DSC indicator light*3, and master warning light*1*3. — Tire pressure monitoring system warning light illuminates after flashes. (Not illuminated/flashed depending on malfunction content.) — Inhibits the ABS*4, TCS*4, DSC*4, roll over mitigation (ROM)*4, brake assist control*4, vehicle roll prevention function*2*4, hill launch assist (HLA)*4, TPMS*4, smart city brake support (SCBS)*1*4, and secondary collision reduction (SCR)*4 controls. • U0235:00 — Illuminates the master warning light. — Inhibits the smart city brake support (SCBS) control. *1: Vehicles with smart city brake support (SCBS) *2: ATX only *3: Not illuminated depending on malfunction content. *4: Enabled depending on malfunction content.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

POSSIBLE CAUSE	• CAN system wiring harness open or short circuit • CAN system wiring harness open or short circuit with PCM • CAN system wiring harness open or short circuit with TCM • CAN system wiring harness open or short circuit with 4WD control module • CAN system wiring harness open or short circuit with EPS CM • CAN system wiring harness open or short circuit with SAS control module • CAN system wiring harness open or short circuit with instrument cluster • CAN system wiring harness open or short circuit with laser sensor • instrument cluster malfunction
SYSTEM WIRING DIAGRAM	—

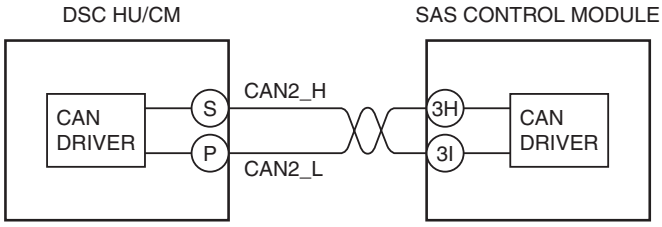
Diagnostic procedure

- Inspect according to diagnostic procedure in MULTIPLEX COMMUNICATION SYSTEM. (See 10-02A-1 FOREWORD [SKYACTIV-G 2.0 (L.H.D.)].), (See 10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)].), (See 10-02C-1 FOREWORD [SKYACTIV-D 2.2 (L.H.D.)].), (See 10-02D-1 FOREWORD [SKYACTIV-D 2.2 (R.H.D.)].)

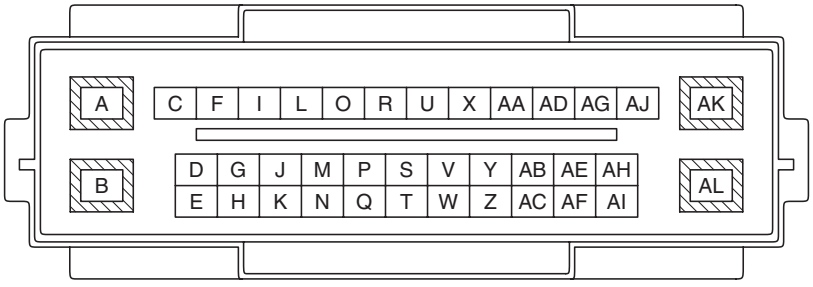
DTC U0151:00 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2883700

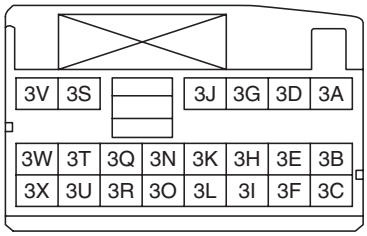
DTC	U0151:00	SAS control module system (CAN2 line malfunction)
DETECTION CONDITION	• Communication error with SAS control module is detected in CAN communication.	
FAIL-SAFE FUNCTION	• Illuminates the brake system warning light*1, TCS/DSC indicator light, and master warning light*1*2. • Tire pressure monitoring system warning light illuminates after flashes. (Not illuminated/flashed depending on malfunction content.) • Inhibits the ABS*3, TCS*3, DSC*3, roll over mitigation (ROM)*3, brake assist control*3, vehicle roll prevention function*3*4, hill launch assist (HLA)*3, TPMS*3, smart city brake support (SCBS)*2*3, and secondary collision reduction (SCR)*3 controls. *1: Not illuminated depending on malfunction content. *2: Vehicles with smart city brake support (SCBS) *3: Enabled depending on malfunction content. *4: ATX only	
POSSIBLE CAUSE	• SAS control module malfunction • Open or short circuit in the CAN2_H wiring harness between DSC HU/CM terminal S and SAS control module terminal 3H • Open or short circuit in the CAN2_L wiring harness between DSC HU/CM terminal P and SAS control module terminal 3I • DSC HU/CM malfunction • Poor connection at connectors (female terminal)	

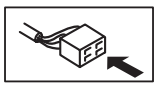


DSC HU/CM WIRING HARNESS-SIDE CONNECTOR



SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR





ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SAS CONTROL MODULE MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the SAS control module. (See 08-02-7 DTC INSPECTION.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 08-02-11 DTC TABLE.)
		No	Go to the next step.
2	**INSPECT SAS CONTROL MODULE SIGNAL (CAN2 LINE) FOR OPEN CIRCUIT** • Disconnect the DSC HU/CM connector. • Disconnect the SAS control module connectors. • Inspect for continuity between the following DSC HU/CM connector terminals (vehicle harness-side) and SAS control module connector terminals (vehicle harness-side): — DSC HU/CM terminal S—SAS control module terminal 3H — DSC HU/CM terminal P—SAS control module terminal 3I • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 4.
3	**INSPECT SAS CONTROL MODULE SIGNAL (CAN2 LINE) FOR SHORT CIRCUIT** • Inspect for continuity between the following DSC HU/CM connector terminals (vehicle harness-side) and body ground: — DSC HU/CM terminal S—body ground — DSC HU/CM terminal P—body ground • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
4	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at **10 km/h {6.2 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

DTC U0401:00 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2887900

DTC	U0401:00	Abnormal message from PCM
DETECTION CONDITION	• Correct data cannot be received from PCM	
FAIL-SAFE FUNCTION	• Illuminates the TCS/DSC indicator light*1 and master warning light*1*2. • Tire pressure monitoring system warning light illuminates after flashes. (Not illuminated/flashed depending on malfunction content.) • Inhibits the TCS*3, DSC*3, roll over mitigation (ROM)*3, vehicle roll prevention function*3*4, hill launch assist (HLA)*3, TPMS*3, smart city brake support (SCBS)*2*3, and secondary collision reduction (SCR)*3 controls. *1: Not illuminated depending on malfunction content. *2: Vehicles with smart city brake support (SCBS) *3: Enabled depending on malfunction content. *4: ATX only	
POSSIBLE CAUSE	• PCM malfunction	
SYSTEM WIRING DIAGRAM	—	

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR PCM MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the PCM. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC U0402:00 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2881800

DTC	U0402:00	Abnormal message from transmission/transaxle
DETECTION CONDITION	• The DSC HU/CM received error signals from the transmission/transaxle for **1 s or more** with the ignition switched ON (engine off or on).	
FAIL-SAFE FUNCTION	• Illuminates the TCS/DSC indicator light and master warning light*1. • Tire pressure monitoring system warning light illuminates after flashes. • Inhibits the TCS, DSC, roll over mitigation (ROM), vehicle roll prevention function*2, hill launch assist (HLA), TPMS, smart city brake support (SCBS)*1, and secondary collision reduction (SCR) controls. *1: Vehicles with smart city brake support (SCBS) *2: ATX only	
POSSIBLE CAUSE	• The transmission/transaxle could not send a normal signal temporarily. (DTCs are stored in the TCM.) • transmission/transaxle malfunction • DSC HU/CM malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTCs FOR TCM** • Switch the ignition to off. • Verify DTCs for the TCM using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Is the DTC displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear DTC for the DSC HU/CM using the M-MDS. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the TCM, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
3	**VERIFY IF OTHER DTCs DISPLAYED** • Are any other DTCs displayed?	Yes	Repair the malfunctioning part according to the applicable DTC troubleshooting. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC U0420:00 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2905000

DTC	U0420:00	Abnormal message from EPS CM
DETECTION CONDITION	• Correct data cannot be received from EPS CM	
FAIL-SAFE FUNCTION	• Illuminates the TCS/DSC indicator light and master warning light*. • Tire pressure monitoring system warning light illuminates after flashes. • Inhibits the TCS, DSC, roll over mitigation (ROM), TPMS, smart city brake support (SCBS)*, and secondary collision reduction (SCR) controls. *: Vehicles with smart city brake support (SCBS)	
POSSIBLE CAUSE	• EPS CM malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR EPS CM MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the EPS CM. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the EPS CM, then go to the next step. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC U0423:00/U0443:00 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2905300

DTC	U0423:00/U0443:00	Abnormal message from instrument cluster
DETECTION CONDITION	• Correct data cannot be received from instrument cluster	
FAIL-SAFE FUNCTION	• U0423:00 — Illuminates the master warning light*. — Tire pressure monitoring system warning light illuminates after flashes. — Inhibits the TPMS and smart city brake support (SCBS)* controls. • U0443:00 — Illuminates the master warning light*. — Inhibits the smart city brake support (SCBS)* controls. *: Vehicles with smart city brake support (SCBS)	
POSSIBLE CAUSE	• Instrument cluster malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR INSTRUMENT CLUSTER MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the instrument cluster. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the instrument cluster, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC U0433:00 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2905400

DTC	U0433:00	Abnormal message from laser sensor
DETECTION CONDITION	• Correct data cannot be received from laser sensor	
FAIL-SAFE FUNCTION	• Illuminates the master warning light. • Inhibits the smart city brake support (SCBS) control.	
POSSIBLE CAUSE	• Laser sensor malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR LASER SENSOR MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the laser sensor. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].)
		No	Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the laser sensor, then go to the next step. (See 04-15-17 LASER SENSOR REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC U0452:00/U0452:86 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2905600

DTC	U0452:00, U0452:86	Abnormal message from SAS control module
DETECTION CONDITION	• Correct data cannot be received from SAS control module	
FAIL-SAFE FUNCTION	• U0452:00 — Illuminates the TCS/DSC indicator light. — Inhibits the secondary collision reduction (SCR) control. • U0452:86 — Illuminates the ABS warning light*1, TCS/DSC indicator light, and master warning light*1*2. — Tire pressure monitoring system warning light illuminates after flashes. (Not illuminated/flashed depending on malfunction content.) — Inhibits the ABS*3, TCS*3, DSC*3, roll over mitigation (ROM)*3, brake assist control*3, vehicle roll prevention function*3*4, hill launch assist (HLA)*3, TPMS*3, smart city brake support (SCBS)*2*3, and secondary collision reduction (SCR)*3 controls. *1: Not illuminated depending on malfunction content. *2: Vehicles with smart city brake support (SCBS) *3: Enabled depending on malfunction content. *4: ATX only	
POSSIBLE CAUSE	• SAS control module malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR SAS CONTROL MODULE MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the SAS control module. (See 08-02-7 DTC INSPECTION.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 08-02-11 DTC TABLE.)
		No	Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the SAS control module, then go to the next step. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC U2101:00/U2300:52/U2300:54/U2300:55/U2300:56/U2300:64 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2905800

DTC	**U2101:00, U2300:52, U2300:54, U2300:55, U2300:56, U2300:64**	**Configuration data not recorded**
DETECTION CONDITION	• DSC CM detects configuration data not record or data error	
FAIL-SAFE FUNCTION	• Illuminates the ABS warning light, TCS/DSC indicator light, and master warning light*1. • Tire pressure monitoring system warning light illuminates after flashes. • Inhibits the ABS, TCS, DSC, roll over mitigation (ROM), brake assist control, vehicle roll prevention function*2, hill launch assist (HLA), TPMS, smart city brake support (SCBS)*1, and secondary collision reduction (SCR) controls. *1: Vehicles with smart city brake support (SCBS) *2: ATX only	
POSSIBLE CAUSE	• Module configuration procedure is not done properly • Correct data cannot be received from instrument cluster	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**RECORD THE CAR CONFIGURATION DATA** • Switch the ignition to off. • Switch the ignition ON (engine off) and wait for **10 s or more**. • Switch the ignition to off and wait for **3 s or more**. • Switch the ignition ON (engine off) and wait for **3 s or more**.		Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, go to the next step.
		No	Go to Step 6.
3	**VERIFY IF PARTS FROM ANOTHER VEHICLE INSTALLED TO INSTRUMENT CLUSTER OR PCM** • Verify if an instrument cluster or PCM from another vehicle is installed. • Has an instrument cluster, PCM or other vehicle part been installed to vehicle?	Yes	Install the correct instrument cluster or PCM, then go to Step 1. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.) (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT FOR INSTRUMENT CLUSTER/PCM MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the instrument cluster and PCM. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].) (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1.
		No	Go to the next step.
6	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

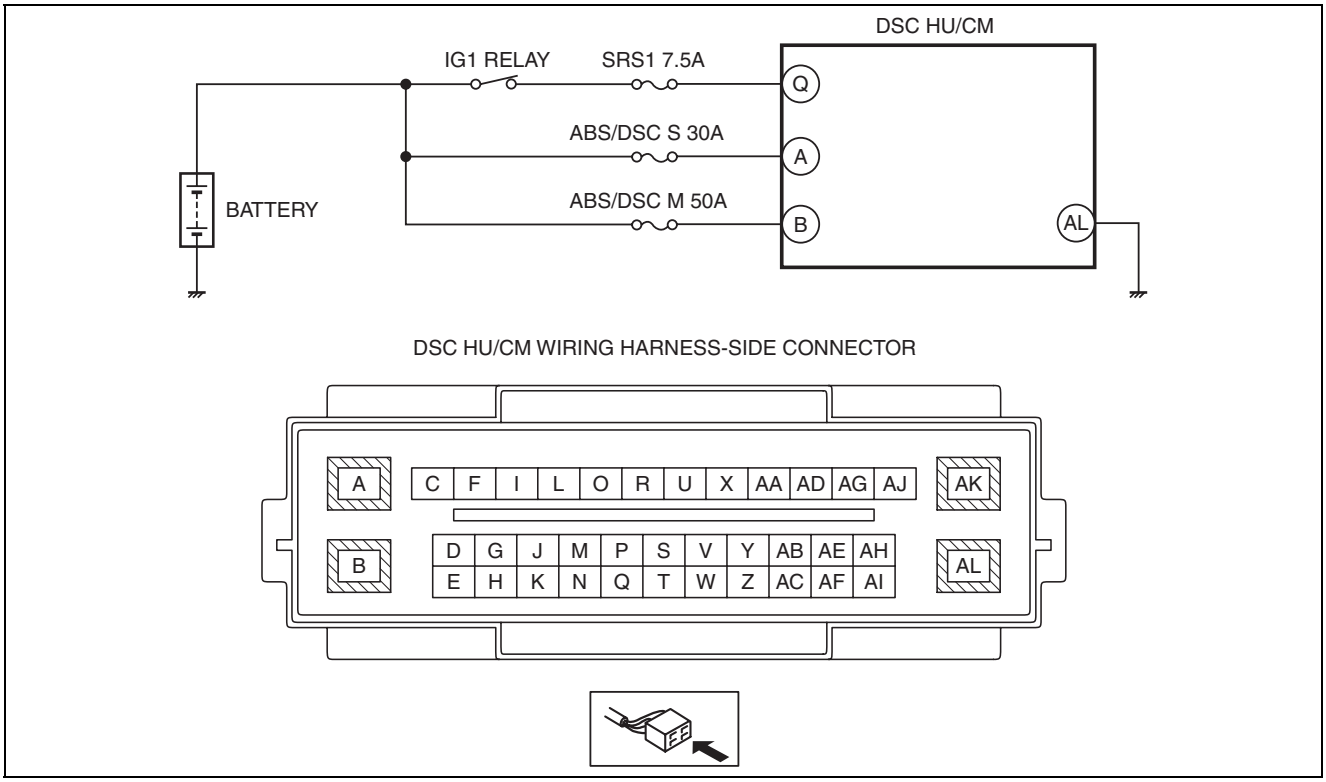
ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

DTC U3003:08/U3003:16/U3003:17 [DYNAMIC STABILITY CONTROL (DSC)]

id0402b2902000

DTC	U3003:08, U3003:16, U3003:17	Power supply system
DETECTION CONDITION	• U3003:08 — While the vehicle is traveling at a speed of **10km/h {6.2 mph} or more**, a CAN signal error caused by low power supply voltage is detected. • U3003:16 — Low ignition voltage (**7.9—9.6 V**) is detected at the voltage monitor of the solenoid valve or motor monitor. (Except engine cranking condition) — Low ignition voltage (**6.0—7.9 V**) is detected at the voltage monitor of the solenoid valve or motor monitor. — Low ignition voltage (**below 6.0 V**) is detected at the voltage monitor of the solenoid valve or motor monitor. • U3003:17 — High ignition voltage (**17 V or more**) is detected at the voltage monitor of the solenoid valve or motor monitor.	
FAIL-SAFE FUNCTION	• U3003:08 — Permits the control and does not illuminate each warning/indicator light. • U3003:16 — Illuminates the ABS warning light, TCS/DSC indicator light and master warning light*1. — Does not illuminate the brake warning light.*2 — Illuminates the brake warning light.*3*4 — Tire pressure monitoring system warning light illuminates after flashes. — Inhibits the ABS, TCS, DSC, roll over mitigation (ROM), brake assist control, vehicle roll prevention function*5, hill launch assist (HLA), TPMS, smart city brake support (SCBS)*1, and secondary collision reduction (SCR) controls. — Permits the EBD control.*2 — Inhibits the EBD control.*3*4 • U3003:17 — Illuminates the ABS warning light, brake system warning light, TCS/DSC indicator light, and master warning light*1. — Tire pressure monitoring system warning light illuminates after flashes. — Inhibits the ABS, EBD, TCS, DSC, roll over mitigation (ROM), brake assist control, vehicle roll prevention function*5, hill launch assist (HLA), TPMS, smart city brake support (SCBS)*1, and secondary collision reduction (SCR) controls. *1: Vehicles with smart city brake support (SCBS) *2: When power supply voltage is **7.9—9.6 V** for **550 ms or more**. *3: When power supply voltage is **6.0—7.9 V** for **630 ms or more**. *4: When power supply voltage is **below 6 V** for **50 ms or more**. *5: ATX only	
POSSIBLE CAUSE	• Battery deterioration • Generator malfunction • Fuse (SRS1 7.5A, ABS/DSC S 30A, ABS/DSC M 50A) malfunction • Open or short circuit in wiring harness between DSC HU/CM terminal A and battery • Open or short circuit in wiring harness between DSC HU/CM terminal B and battery • Open or short circuit in wiring harness between DSC HU/CM terminal Q and battery • Open circuit in wiring harness between DSC HU/CM terminal AL and body ground • Poor connection at connectors (female terminal)	

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BATTERY VOLTAGE** • Is the battery positive terminal voltage normal?	Yes	Inspect for normal connection of the battery terminals. Go to the next step.
		No	Charge or replace the battery, then go to Step 7. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17A-10 BATTERY RECHARGING [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2	**INSPECT BATTERY GRAVITY** • Is battery specific gravity as specified?	Yes	Go to the next step.
		No	Replace the battery, then go to Step 7. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3	**INSPECT CHARGING SYSTEM** • Are the generator and the drive belt tensions normal?	Yes	Go to the next step.
		No	Replace the generator and/or drive belt if necessary. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].) (See 01-10A-10 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-10B-8 DRIVE BELT REMOVAL/INSTALLATION [SKYACTIV-D 2.2].) Go to Step 7.
4	**INSPECT FUSE CONDITION** • Inspect the following fuses. — SRS1 7.5A — ABS/DSC S 30A — ABS/DSC M 50A • Is the fuse normal?	Yes	Go to the next step.
		No	Replace the fuse, then go to Step 7.

ON-BOARD DIAGNOSTIC [DYNAMIC STABILITY CONTROL (DSC)]

STEP	INSPECTION		ACTION
5	**INSPECT DSC HU/CM POWER SUPPLY FOR OPEN CIRCUIT** • Disconnect the DSC HU/CM connectors. • Switch the ignition ON (engine off). • Measure the voltage between following connector terminals of the DSC HU/CM (vehicle harness-side) and body ground: — DSC HU/CM: A—Body ground — DSC HU/CM: B—Body ground — DSC HU/CM: Q—Body ground • Is the voltage **10 V or more**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 7.
6	**INSPECT DSC HU/CM GROUND FOR POOR GROUND OR OPEN CIRCUIT** • Switch the ignition to off. • Measure the resistance between the DSC HU/CM terminal AL (vehicle harness-side) and body ground. • Is the resistance **within 0—1 ohm**?	Yes	Go to the next step.
		No	If there is open circuit: • Repair or replace the wiring harness, then go to the next step. If resistance is not within specification: • Repair or replace the poor ground part, then go to the next step.
7	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Start the engine and drive the vehicle at **20 km/h {12 mph} or more**. • Are the same DTCs present?	Yes	Repeat the inspection from Step 1.
		No	Go to the next step.
8	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LASER SENSOR]

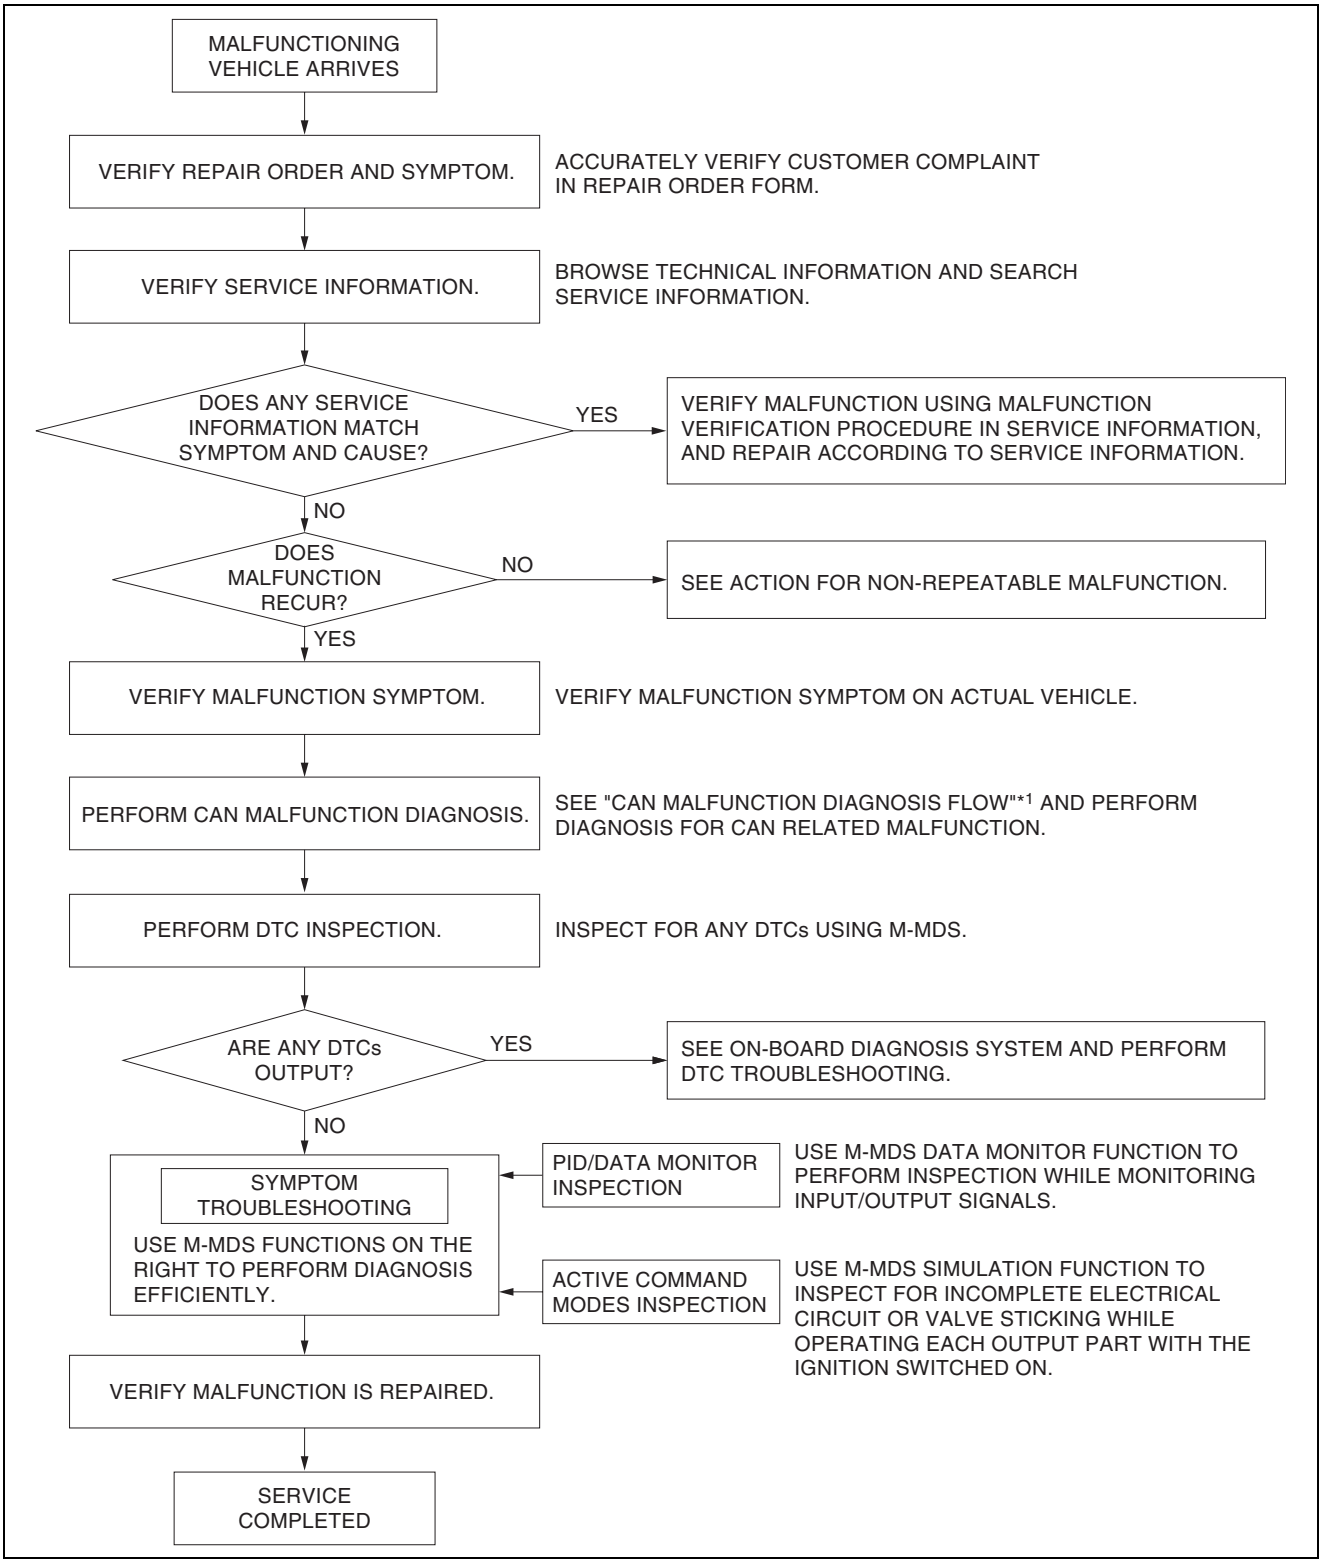
FOREWORD [LASER SENSOR]

id0402c4892400

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



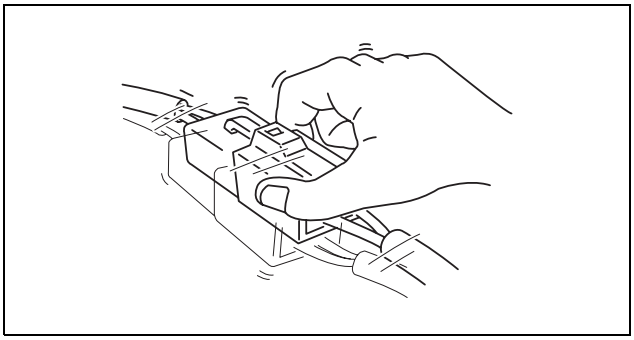
am3zzw0001144

ON-BOARD DIAGNOSTIC [LASER SENSOR]

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)], 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)], 10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)], 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

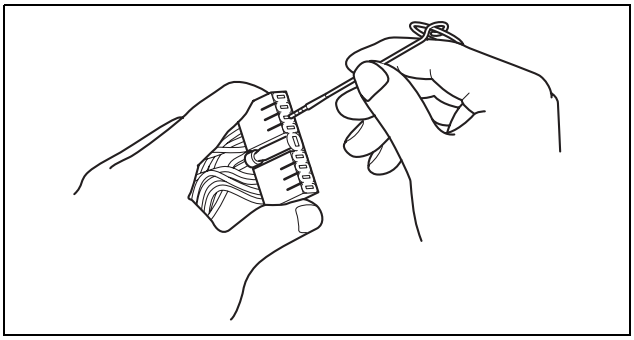
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  1. Verify that a DTC has been recorded in the memory using the M-MDS. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].)
  2. Perform a simulation test in the simulation mode based on the repair order form, record the data at that time, and detect the malfunction cause.
  3. Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for the occurrence of any malfunction or DTCs.



am3uuw0000813

  4. Inspect the female terminals for poor connection.



am3uuw0000813

ON-BOARD DIAGNOSTIC [LASER SENSOR]

ON-BOARD DIAGNOSIS [LASER SENSOR]

id0402c4800200

On-Board Diagnostic (OBD) Test Description

- The OBD test inspects the integrity and function of the laser sensor and outputs the results when requested by the specific tests.
- On-board diagnostic test also:
  - — Provides a quick inspection of the laser sensor usually performed at the start of each diagnostic procedure.
  - — Provides verification after repairs to ensure that no other faults occurred during service.
- The OBD test is divided into 3 tests:
  - — Read/clear diagnostic results, PID monitor and record and active command modes.

Read/clear diagnostic results

- This function allows you to read or clear DTCs in the laser sensor memory.

PID/Data monitor and record

- This function allows you to access certain data values, input signals, calculated values, and system status information.

Reading DTCs Procedure

CMDTC self test

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
4. After completion of repairs, clear all DTCs stored in the laser sensor. (See 04-02B-6 Clearing DTCs Procedure.)

Note

- Snapshot data appears at the top of the help screen when the displayed DTC is selected.
- The data for all DTCs currently detected is stored.

Clearing DTCs Procedure

CMDTC clearing DTCs procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “Self Test”.
   (2) Select “All CMDTCs”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition to ON and wait for **5 s or more**.
7. Perform DTC inspection. (See 04-02B-6 Reading DTCs Procedure.)
8. Verify that no DTCs are displayed.

PID/Data Monitor and Record Procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “DataLogger”.
   (2) Select “Modules”.
   (3) Select “SCBS”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.

ON-BOARD DIAGNOSTIC [LASER SENSOR]

Snapshot Data Access Procedure

1. Connect the M-MDS (IDS) to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the IDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “SCBS”.
3. Then, select the “Retrieve CMDTCs” and perform procedures according to directions on the IDS screen.
4. Retrieve the snapshot data according to the directions on the IDS screen.

Note

- Snapshot data appears at the top of the help screen when the displayed DTC is selected.
- The snapshot data stores the currently detected DTC data.

ON-BOARD DIAGNOSTIC [LASER SENSOR]

DTC U0001:00/U0100:00/U0121:00/U0131:00/U0155:00 [LASER SENSOR]

id0402c4894900

DTC	U0001:00, U0100:00, U0121:00, U0131:00, U0155:00	CAN line
DETECTION CONDITION	• U0001:00 — Open or short circuit in CAN system wiring harness is detected. • U0100:00 — Communication error with PCM is detected in CAN communication. • U0121:00 — Communication error with DSC HU/CM is detected in CAN communication. • U0131:00 — Communication error with EPS CM is detected in CAN communication. • U0155:00 — Communication error with instrument cluster is detected in CAN communication.	
FAIL-SAFE FUNCTION	• Inhibits the smart city brake support (SCBS) controls. • Illuminates the master warning light • The message “SCBS Inspection Required” is indicated in the display.	
POSSIBLE CAUSE	• CAN system wiring harness open or short circuit • CAN system wiring harness open or short circuit with PCM • CAN system wiring harness open or short circuit with DSC HU/CM • CAN system wiring harness open or short circuit with EPS CM • CAN system wiring harness open or short circuit with instrument cluster • instrument cluster malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

- Inspect according to diagnostic procedure in BODY & ACCESSORIES.

DTC U0401:68 [LASER SENSOR]

id0402c4895000

DTC	U0401:68	Abnormal message from PCM
DETECTION CONDITION	• Correct data cannot be received from PCM	
FAIL-SAFE FUNCTION	• Inhibits the smart city brake support (SCBS) controls. • Illuminates the master warning light • The message ”SCBS Inspection Required” is indicated in the display.	
POSSIBLE CAUSE	• PCM malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR PCM MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the PCM. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LASER SENSOR]

DTC U0415:68 [LASER SENSOR]

id0402c4895100

DTC	U0415:68	Abnormal message from DSC HU/CM
DETECTION CONDITION	• Correct data cannot be received from DSC HU/CM	
FAIL-SAFE FUNCTION	• Inhibits the smart city brake support (SCBS) controls. • Illuminates the master warning light • The message ”SCBS Inspection Required” is indicated in the display.	
POSSIBLE CAUSE	• DSC HU/CM malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR DSC HU/CM MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the DSC HU/CM. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LASER SENSOR]

DTC U0420:68 [LASER SENSOR]

id0402c4895200

DTC	U0420:68	Abnormal message from EPS control module
DETECTION CONDITION	• Correct data cannot be received from EPS CM	
FAIL-SAFE FUNCTION	• Inhibits the smart city brake support (SCBS) controls. • Illuminates the master warning light • The message ”SCBS Inspection Required” is indicated in the display.	
POSSIBLE CAUSE	• EPS CM malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR EPS CONTROL MODULE MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the EPS control module. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 06-02-5 ELECTRIC POWER STEERING (EPS) ON-BOARD DIAGNOSIS.)
		No	Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the EPS CM, then go to the next step. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LASER SENSOR]

DTC U0423:68 [LASER SENSOR]

id0402c4895300

DTC	U0423:68	Abnormal message from instrument cluster
DETECTION CONDITION	• Correct data cannot be received from instrument cluster	
FAIL-SAFE FUNCTION	• Inhibits the smart city brake support (SCBS) controls. • Illuminates the master warning light • The message ”SCBS Inspection Required” is indicated in the display.	
POSSIBLE CAUSE	• Instrument cluster malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR INSTRUMENT CLUSTER MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the instrument cluster . (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs detected?	Yes	Go to applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].) • Are the same DTCs present?	Yes	Configure the instrument cluster, then repeat the inspection from Step 1. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING READ/WRITE FUNCTION).) (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).) If the malfunction recurs, replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LASER SENSOR]

DTC U1A14:49 [LASER SENSOR]

id0402c4894700

DTC	U1A14:49	Laser sensor internal electronic malfunction
DETECTION CONDITION	• Laser sensor detects the internal electronic malfunction when the ignition switched ON.	
FAIL-SAFE FUNCTION	• Inhibits the smart city brake support (SCBS) controls. • Illuminates the master warning light • The message "SCBS Inspection Required" is indicated in the display.	
POSSIBLE CAUSE	• Laser sensor malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**RECORD THE CAR CONFIGURATION DATA** • Switch the ignition to off. • Switch the ignition ON (engine on).		Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the laser sensor, then go to the next step. (See 04-15-17 LASER SENSOR REMOVAL/ INSTALLATION.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].)
		No	DTC troubleshooting completed.

DTC U2300:55/U2300:56 [LASER SENSOR]

id0402c4894800

DTC	U2300:55, U2300:56	Configuration data not recorded
DETECTION CONDITION	• Laser sensor detects configuration data not recorded or data error.	
FAIL-SAFE FUNCTION	• Inhibits the smart city brake support (SCBS) controls. • Illuminates the master warning light • The message "SCBS Inspection Required" is indicated in the display.	
POSSIBLE CAUSE	• Laser sensor configuration procedure is not done properly • Correct data cannot be received from instrument cluster	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**RECORD THE CAR CONFIGURATION DATA** • Switch the ignition to off. • Switch the ignition ON (engine on).		Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, go to the next step.
		No	Go to step 5.
3	**INSPECT FOR INSTRUMENT CLUSTER MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the instrument cluster. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs detected?	Yes	Go to the applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].) After repairing the instrument cluster, then go to the next step.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [LASER SENSOR]

STEP	INSPECTION		ACTION
4	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].) • Are the same DTCs present?	Yes	Replace the laser sensor. (See 04-15-17 LASER SENSOR REMOVAL/ INSTALLATION.)
		No	Go to the next step.
5	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].)
		No	DTC troubleshooting completed.

DTC U3000:00/U3000:64 [LASER SENSOR]

id0402c4894600

DTC	U3000:00, U3000:64	Laser sensor internal malfunction
DETECTION CONDITION	• Laser sensor detects the internal malfunction when the ignition switched ON. • Laser sensor detects the invalid output signal.	
FAIL-SAFE FUNCTION	• Inhibits the smart city brake support (SCBS) controls. • Illuminates the master warning light • The message ”SCBS Inspection Required” is indicated in the display.	
POSSIBLE CAUSE	• Laser sensor malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**RECORD THE CAR CONFIGURATION DATA** • Switch the ignition to off. • Switch the ignition ON (engine on).		Go to the next step.
2	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the laser sensor, then go to the next step. (See 04-15-17 LASER SENSOR REMOVAL/ INSTALLATION.)
		No	Go to the next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [LASER SENSOR]

DTC U3000:66 [LASER SENSOR]

id0402c4895400

DTC	U3000:66	Laser sensor malfunction
DETECTION CONDITION	• Laser sensor detects a large number of consecutive drive cycles with the smart city brake support (SCBS) system malfunction.	
FAIL-SAFE FUNCTION	• Inhibits the smart city brake support (SCBS) controls. • Illuminates the master warning light • The message ”SCBS Inspection Required” is indicated in the display.	
POSSIBLE CAUSE	• Laser sensor malfunction • Instrument cluster malfunction	
SYSTEM WIRING DIAGRAM	—	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR INSTRUMENT CLUSTER MALFUNCTION** • Switch the ignition to off. • Using the M-MDS, perform the DTC inspection for the DSC HU/CM. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any other DTCs detected?	Yes	Go to the applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].)
		No	Go to the next step.
3	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Clear the DTCs from the memory. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the laser sensor. (See 04-15-17 LASER SENSOR REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

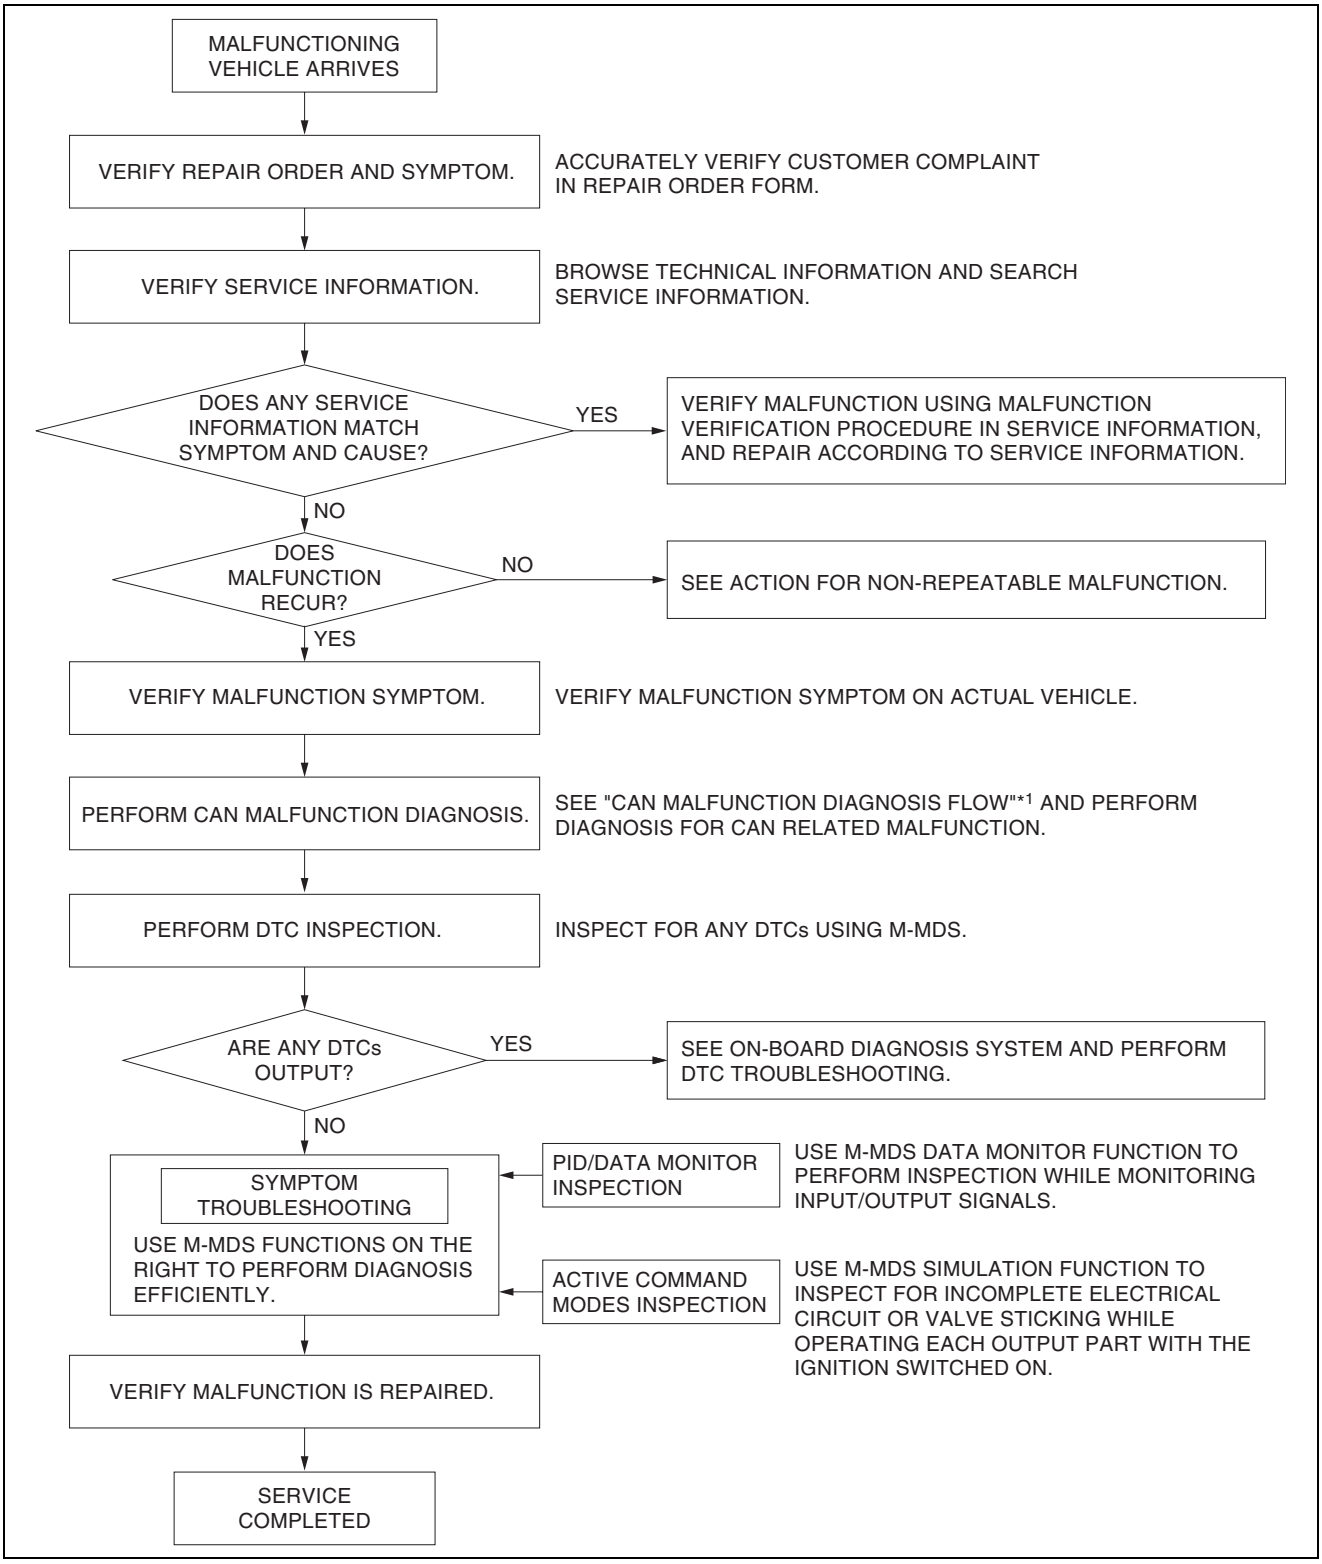
FOREWORD [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2804000

- If there is any vehicle malfunction complaint lodged by a customer, perform malfunction diagnosis according to the troubleshooting procedure.

Troubleshooting Procedure



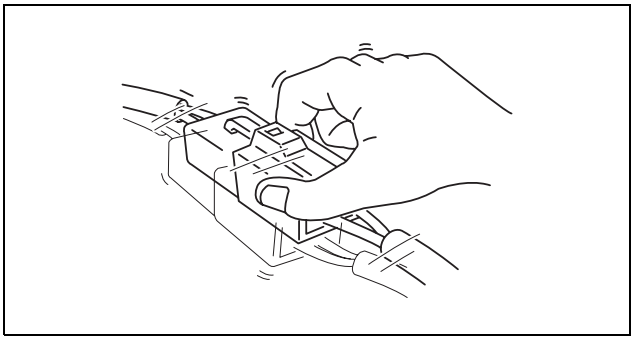
am3zzw0001144

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

*1 : 10-02A-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (L.H.D.)], 10-02B-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-G 2.0 (R.H.D.)], 10-02C-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (L.H.D.)], 10-02D-3 CONTROLLER AREA NETWORK (CAN) MALFUNCTION DIAGNOSIS FLOW [SKYACTIV-D 2.2 (R.H.D.)]

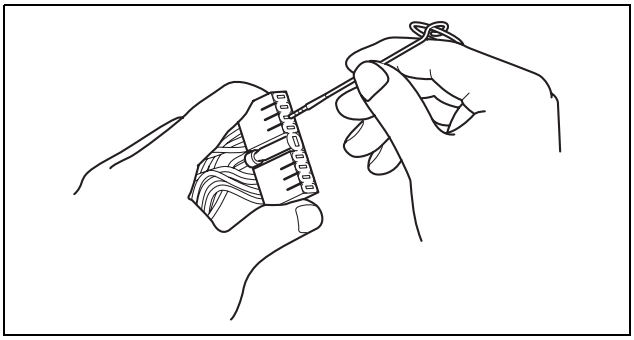
Action for non-repeatable malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  1. Verify that a DTC has been recorded in the memory using the M-MDS. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
  2. Perform a simulation test in the simulation mode based on the repair order form, record the data at that time, and detect the malfunction cause.
  3. Shake the wiring harness or connector of the electrical component which is suspected to be the cause of the malfunction, and inspect for the occurrence of any malfunction or DTCs.



am3uuw0000813

  4. Inspect the female terminals for poor connection.



am3uuw0000813

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

PRECAUTION [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2804100

1. The ABS warning light and/or brake system warning light and/or TCS/DSC indicator light and/or TCS OFF indicator light illuminate even when the system is normal.

Warning lights/Indicator lights that may illuminate and/or flash	Cases in which the light may illuminate	Conditions in which the light will go out	ABS, EBD, TCS and DSC control
• ABS warning light • Brake system warning light (*1) • TCS/DSC indicator light	Only the front wheels rotate under the following condition while jacked up, stuck, or on the chassis dynamometer: • Detected **8 times** for a continuous **20 s** while at a vehicle speed of **20 km/h {12 mph} or more**. (One detection period is when ignition is switched from ON to off.)	After turning off the ignition once and then restarting the engine, the vehicle is driven at **10km/h {6.2 mph} or more**, and then normal operation is verified.	• ABS: Cuts control. • EBD: Cuts control. • TCS: Cuts control. • DSC: Cuts control.
	Parking brake is not fully released while driving.		
	Brake drag.		
	Sudden acceleration/ deceleration.		
	Left/right or front/rear tires are different. (Size, radius, tire pressure, or wear is other than that listed on tire label.)		
	Battery voltage at DSC HU/ CM ignition terminal Y drops **below about 9.5 V**. (*2)	Battery voltage rises **above about 9.5 V**.	• ABS: Operates control. • EBD: Operates control. • TCS: Operates control. • DSC: Operates control.
Brake system warning light	Brake fluid amount is low.	Brake fluid level is with in the specification.	• ABS: Operates control. • EBD: Operates control. • TCS: Operates control. • DSC: Operates control.

*1 : In case where the light may illuminate, only when DSC HU/CM detects that a wheel-speed sensor determines that more than two wheels are malfunctioning.

*2 : If battery voltage drops **below 10 V** while vehicle speed is **greater than 3 km/h {2 mph}**, DSC HU/CM detects DTC U3003:16.

2. Precautions during servicing of DSC. The DSC is composed of electrical and mechanical parts. It is necessary to categorize malfunctions as being either electrical or hydraulic when performing troubleshooting.
   (1) Malfunction in electrical system
   - The control module has an on-board diagnostic function. With this function, the ABS warning light and/ or brake system warning light and/or TCS/DSC indicator light and/or TCS OFF indicator light will come on when there is a problem in the electrical system.
     Also, past and present malfunctions are recorded in the control module. This function can find malfunction that do not occur during periodic inspections. Connect the M-MDS (IDS) to the DLC-2. The stored malfunctions will be displayed in the order of occurrence. To find out the causes of DSC malfunction, use these on-board diagnostic results.
   - If a malfunction occurred in the past but is now normal, the cause is likely a temporary poor connection of the harness. The control module usually operates normally. Be careful when searching for the cause of malfunction.
   - After repair, it is necessary to clear the DTC from the control module memory. Also, if the DSC related parts have been replaced, verify that the no DTC has been displayed after repairs.
   - After repairing the ABS wheel-speed sensor or ABS sensor rotor, or after replacing the control module, the ABS warning light may not go off even when the ignition is switched to ON. In this case, drive the vehicle at a speed of **more than 10 km/h {6.2 mph}**, make sure the ABS warning light goes off, and then clear the DTC.
   - When repairing, if the DSC related connectors are disconnected and the ignition is switched to ON, the control module will mistakenly detect a fault and record it as a malfunction.

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

Caution

- **When any DSC HU/CM (brake fluid pressure sensor), SAS control module (yaw rate sensor, low-G sensor) are replaced. Perform the sensor standard point installation of each sensor.**

- To protect the control module, make sure the ignition is off before connecting or disconnecting the control module connector.

(2) Malfunctions in hydraulic system

- Symptoms in a hydraulic system malfunction are similar to those in a conventional brake malfunction. However, it is necessary to determine if the malfunction is in a DSC component or the conventional brake system.
- The hydraulic unit contains delicate mechanical parts. If foreign materials get into the component, the DSC may fail to operate. Also, it will likely become extremely difficult to find the location of the malfunction in the event that the brakes operate but the DSC does not. Make sure foreign materials do not get inside when servicing the DSC (e.g. brake fluid replacement, pipe removal).

Intermittent Concern Troubleshooting

Vibration method

- If malfunction occurs or becomes worse while driving on a rough road or when engine is vibrating, perform the steps below.

Note

- There are several reasons why vehicle or engine vibration could cause an electrical malfunction. Some of the things to check for are:
  - — Connectors not fully seated.
  - — Wire harnesses not having full play.
  - — Wires laying across brackets or moving parts.
  - — Wires routed too close to hot parts.
- An improperly routed, improperly clamped, or loose harness can cause wiring to become pinched between parts.
- The connector joints, points of vibration, and places where wire harnesses pass through the firewall, body panels, etc. are the major areas to be checked.

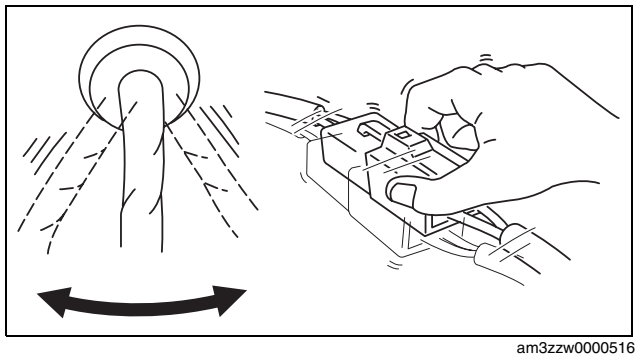
Inspection method for switch and/or sensor connectors or wires

1. Connect the M-MDS (IDS) to the DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If the engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch or sensor you are inspecting.
4. Turn the switch on manually.
5. Slightly shake each connector or wiring harness vertically and horizontally while monitoring the PID.
   - If the PID value is unstable, inspect for poor connection.



am3zzw0000516

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

Inspection method for switches and/or sensors

1. Connect the M-MDS (IDS) to the DLC-2.
2. Switch the ignition to ON (engine off).

Note

- If engine starts and runs, perform the following steps at idle.

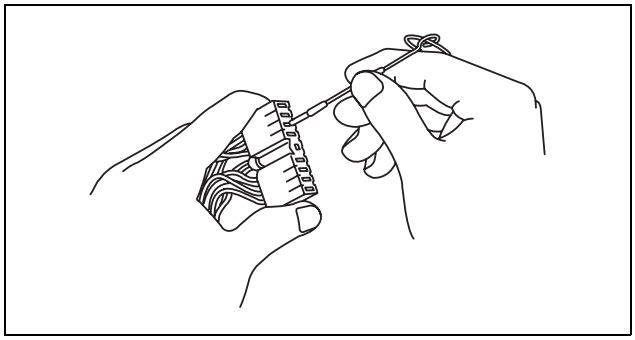
3. Access PIDs for the switch or sensor you are inspecting.
4. Vibrate the sensor slightly with your finger.
   - If PID value is unstable or malfunction occurs, check for poor connection and/or poorly mounted sensor.

Malfunction data monitor method

1. Perform malfunction reappearance test according to malfunction reappearance mode and malfunction data monitor. The malfunction cause is found in the malfunction data.

Connector terminal check method

1. Check the connection condition of each female terminal.
2. Insert male terminal; fit female terminal size to female terminal and check to see whether malfunction is in female terminal or not.



am6zzw0000002

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2804200

- Verify the symptoms, and perform troubleshooting according to the appropriate number.

No.	Symptom
1	Any of the following lights do not illuminate with the ignition to ON: • ABS warning light • Brake system warning light • TCS/DSC indicator light • TCS OFF indicator light
2	Any of the following lights stay on: • ABS warning light • TCS/DSC indicator light • TCS OFF indicator light
3	Brake system warning light stay on
4	There is a malfunction in the system even though ABS warning light, brake system warning light, TCS/DSC indicator light and TCS OFF indicator light do not illuminate
5	ABS or TCS*1 operates frequently
	TCS does not work correctly
6	DSC*2 operates frequently
	DSC does not work correctly
7	TCS/DSC indicator light flashes (when neither the TCS nor the DSC are operating)
8	Hill launch assist (HLA) operates even on a downhill
	Hill launch assist (HLA) does not operate on a slope
9	Master warning light stay on and a message “SCBS Inspection Required” is indicated in the display

*1 : DSC system function contains traction control function, TCS/DSC indicator light goes on and off while TCS operates

*2 : TCS/DSC indicator light goes on and off while DSC operates

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

NO.1 ANY OF THE FOLLOWING LIGHTS DO NOT ILLUMINATE WITH THE IGNITION ON: (ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, TCS/DSC INDICATOR LIGHT AND/OR TCS OFF INDICATOR LIGHT) [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2895600

1	**Any of the following lights do not illuminate with the ignition to ON: (ABS warning light, brake system warning light, TCS/DSC indicator light and/or TCS OFF indicator light)**
POSSIBLE CAUSE	• DSC HU/CM does not operate. • Communication error between DSC HU/CM and instrument cluster • Instrument cluster malfunction • DSC HU/CM internal malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY WHERE MALFUNCTION IS IN WARNING LIGHTS AND INDICATOR LIGHTS' COMMON POWER SUPPLY, OR IN OTHER WARNING LIGHTS AND INDICATOR LIGHTS** • Connect the M-MDS (IDS) to the DLC-2. • Turn on all warning lights and indicator lights using the instrument cluster PID WL+IL of active command modes. (See 09-02G-38 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Do other warning and indicator lights illuminate?	Yes	Go to Step 5.
		No	If communication error message is displayed on the M-MDS (IDS) screen: • Go to the next step. If communication error message is not displayed: • Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
2	**INSPECT INSTRUMENT CLUSTER POWER SUPPLY FUSE** • Inspect the instrument cluster ignition power supply fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Inspect the blown fuse's circuit for short to ground. Repair or replace the wiring harness for a possible short to ground as necessary. Install appropriate amperage fuse.
*3	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN INSTRUMENT CLUSTER POWER SUPPLY AND INSTRUMENT CLUSTER FOR CONTINUITY) OR ELSEWHERE** • Switch the ignition to ON. • Measure the voltage at the instrument cluster terminal 2S (wiring harness-side). • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Inspect for open circuit between instrument cluster and ignition. Repair or replace the wiring harness for a possible open circuit as necessary.
*4	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN INSTRUMENT CLUSTER AND GROUND FOR CONTINUITY) OR INSTRUMENT CLUSTER** • Switch the ignition to off. • Disconnect the instrument cluster connector. • Inspect for continuity between instrument cluster terminal 2K (wiring harness-side) and body ground. • Is there continuity?	Yes	Replace the instrument cluster. (Open circuit in the instrument cluster) (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Repair or replace the wiring harness for a possible open circuit and poor contact in GND point.
5	**CONFIRM DSC HU/CM DTC** • Retrieve the DSC HU/CM DTC using the M-MDS (IDS). (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	If communication error message is displayed on the M-MDS (IDS) screen: • Go to the next step. If communication error message is not displayed: • Go to Step 9.
6	**INSPECT DSC HU/CM POWER SUPPLY FUSE** • Inspect the DSC HU/CM ignition power supply fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Inspect the blown fuse's circuit for short to ground. Repair or replace the wiring harness for a possible short to ground as necessary. Install appropriate amperage fuse.

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

STEP	INSPECTION		ACTION
*7	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN DSC HU/CM POWER SUPPLY AND DSC HU/CM FOR CONTINUITY) OR ELSEWHERE** • Switch the ignition to ON. • Measure the voltage at the DSC HU/CM terminal Q (wiring harness-side). • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Inspect for open circuit between DSC HU/CM and ignition. Repair or replace the wiring harness for a possible open circuit as necessary.
*8	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN DSC HU/CM AND GROUND FOR CONTINUITY) OR ELSEWHERE** • Switch the ignition to off. • Disconnect the DSC HU/CM connector. • Inspect for continuity between DSC HU/CM terminal AL (wiring harness-side) and body ground. • Is there continuity?	Yes	Replace the DSC HU/CM. (Open circuit in the DSC HU/CM) (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness for a possible open circuit and poor contact in GND point.
9	**CONFIRM INSTRUMENT CLUSTER DTC** • Retrieve the instrument cluster DTC using the M-MDS (IDS). (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

NO.2 ANY OF THE FOLLOWING LIGHTS STAY ON: (ABS WARNING LIGHT, TCS/DSC INDICATOR LIGHT AND/OR TCS OFF INDICATOR LIGHT) [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2895700

2	**Any of the following lights stay on: (ABS warning light, TCS/DSC indicator light and/or TCS OFF indicator light)**
POSSIBLE CAUSE	• No connection at DSC HU/CM connector (When DSC HU/CM connector comes off, ABS warning light, brake system warning light, TCS/DSC indicator light, and TCS OFF indicator light illuminate.) • DSC HU/CM detected malfunction. (Input and output device malfunction) • DSC HU/CM detects low voltage in power supply. • DSC HU/CM ground malfunction (When DSC HU/CM ground is not securely connected, ABS warning light, brake system warning light, TCS/DSC indicator light, and TCS OFF indicator light illuminate but diagnostic trouble code does not display.) • DSC HU/CM does not operate. • PCM detected malfunction. • Error signal input from PCM • Communication error between DSC HU/CM and instrument cluster • Communication error between DSC HU/CM and PCM • Communication error between DSC HU/CM and EPS CM • After replacing SAS control module low-G sensor and yaw rate sensor initialization have not been performed. • After replacing DSC HU/CM brake fluid pressure sensor initialization has not been performed. • Non-completion of module configuration (When module configuration does not carried out, after replacing DSC HU/CM, ABS warning light will stay on.) • DSC HU/CM internal malfunction

04

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CONFIRM DSC HU/CM DTC** • Retrieve the DSC HU/CM DTC using the M-MDS (IDS). (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	If communication error message is displayed on the M-MDS (IDS) screen: • Go to the next step. If communication error message is not displayed: • Go to Step 6.
2	**INSPECT CONNECTION OF DSC HU/CM CONNECTOR** • Inspect for connection of the DSC HU/CM connector. • Is the DSC HU/CM connector connected securely?	Yes	Go to the next step.
		No	Connect the DSC HU/CM connector securely, then go to Step 6.
3	**INSPECT DSC HU/CM POWER SUPPLY FUSE** • Inspect the DSC HU/CM ignition power supply fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Inspect the blown fuse's circuit for short to ground. Repair or replace the wiring harness for a possible short to ground as necessary. Install appropriate amperage fuse.
*4	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN DSC HU/CM POWER SUPPLY AND DSC HU/CM FOR CONTINUITY) OR ELSEWHERE** • Switch the ignition to ON. • Measure the voltage at the DSC HU/CM terminal Q (wiring harness-side). • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Inspect for open circuit between DSC HU/CM and ignition. Repair or replace the wiring harness for a possible open circuit as necessary.
*5	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN DSC HU/CM AND GND FOR CONTINUITY) OR ELSEWHERE** • Switch the ignition to off. • Disconnect the DSC HU/CM connector. • Inspect for continuity between DSC HU/CM terminal AL (wiring harness-side) and body ground. • Is there continuity?	Yes	Replace the DSC HU/CM. (open circuit in the DSC HU/CM) (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness for a possible open circuit and poor contact in ground point.

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

STEP	INSPECTION		ACTION
6	**CONFIRM PCM DTCs** • Retrieve the PCM DTCs using the M-MDS (IDS). (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
7	**VERIFY IF MALFUNCTION CAUSED BY INITIALIZATION PROCEDURE FOR MODULE NOT PERFORMED** • Verify if malfunction caused by initialization procedure for brake fluid pressure sensor not performed. • Has the initial setting for the brake fluid pressure sensor been performed after replacing the DSC HU/CM?	Yes	Go to the next step.
		No	Perform the brake fluid pressure sensor initial setting. (See 04-15-7 DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE.)
8	**VERIFY IF MALFUNCTION CAUSED BY INITIALIZATION PROCEDURE FOR LOW-G SENSOR NOT PERFORMED** • Verify if malfunction caused by initialization procedure for low-G sensor not performed. • Has the initial setting for the low-G sensor been performed after replacing the DSC HU/CM and the SAS control module?	Yes	Go to the next step.
		No	Perform the low-G sensor initial setting. (See 04-15-7 DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE.)
9	**VERIFY IF MALFUNCTION CAUSED BY INITIALIZATION PROCEDURE FOR YAW RATE SENSOR NOT PERFORMED** • Verify if malfunction caused by initialization procedure for yaw rate sensor not performed. • Has the initial setting for the yaw rate sensor been performed after replacing the DSC HU/CM and the SAS control module?	Yes	Go to the next step.
		No	Perform the yaw rate sensor initial setting. (See 04-15-7 DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE.)
10	**VERIFY WHETHER MALFUNCTION IS IN INSTRUMENT CLUSTER OR DSC HU/CM** • Connect the M-MDS (IDS) to the DLC-2. • Turn off and on all warning light and indicator lights using the instrument cluster PID WL+IL of active command modes. (See 09-02G-38 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Do the ABS warning light, brake system warning light, TCS/DSC indicator light and DSC OFF indicator light turn on and off according to the active command modes?	Yes	Replace the DSC HU/CM. (Internal malfunction) (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

NO.3 BRAKE SYSTEM WARNING LIGHT STAY ON [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2895800

3	Brake system warning lights stay on
POSSIBLE CAUSE	• Brake fluid amount is low. • Parking brake does not release. • Parking brake switch or brake fluid level sensor stuck on. • Short to ground in following circuit: — Between parking brake switch and instrument cluster — Between brake fluid level sensor and front body control module (FBCM) • No connection at DSC HU/CM connector (When DSC HU/CM connector comes off, ABS warning light, brake system warning light, TCS/DSC indicator light, and TCS OFF indicator light illuminate.) • DSC HU/CM detected malfunction. (Input and output device malfunction) • DSC HU/CM detects low voltage in power supply. • DSC HU/CM ground malfunction (When DSC HU/CM ground is not securely connected, ABS warning light, brake system warning light, TCS/DSC indicator light, and TCS OFF indicator light illuminate but diagnostic trouble code does not display.) • DSC HU/CM does not operate. • Front body control module (FBCM) detected malfunction. • DSC HU/CM internal malfunction • Instrument cluster detected malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BRAKE FLUID AMOUNT AND VERIFY THAT PARKING BRAKE RELEASED** • Inspect the brake fluid amount and verify that the parking brake released. • Is the brake fluid amount normal? • Is the parking brake lever released?	Yes	Go to the next step.
		No	Add the brake fluid or release the parking brake lever. If the brake fluid refilled: • Inspect and repair the brake line for leakage.
2	**CONFIRM DSC HU/CM DTC** • Retrieve the DSC HU/CM DTC using the M-MDS (IDS). (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	If communication error message is displayed on the M-MDS (IDS) screen: • Go to the next step. If communication error message is not displayed: • Go to Step 4.
3	**INSPECT CONNECTION OF DSC HU/CM CONNECTOR** • Inspect for connection of the DSC HU/CM connector. • Is the DSC HU/CM connector connected securely?	Yes	Go to the next step.
		No	Connect the DSC HU/CM connector securely, then go to the next step.
4	**CONFIRM INSTRUMENT CLUSTER OPERATION RECORD** • Retrieve the warning system operation history using the M-MDS (IDS). (See 09-22-20 INSTRUMENT CLUSTER OPERATION RECORD.) • Is the brake system warning light illumination history recorded?	Yes	If the Brake Waning Lamp recorded: • Go to Step 5. If the Brake Waning Lamp (Brake fluid low) recorded: • Go to Step 6. If the Brake Waning Lamp (Parking Brake ON over 20 km/h or 12.4 mile/h) recorded: • Go to Step 8.
		No	Go to Step 10.
5	**VERIFY WHETHER MALFUNCTION IS IN INSTRUMENT CLUSTER OR ELSEWHERE** • Connect the M-MDS (IDS) to the DLC-2. • Turn off and on all warning light and indicator lights using the instrument cluster PID WL+IL of active command modes. (See 09-02G-38 ACTIVE COMMAND MODES INSPECTION [INSTRUMENT CLUSTER].) • Do the ABS warning light, brake system warning light, TCS/DSC indicator light and DSC OFF indicator light turn on and off according to the active command modes?	Yes	Go to Step 10.
		No	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

STEP	INSPECTION		ACTION
6	**INSPECT WHETHER MALFUNCTION IS IN BRAKE FLUID LEVEL SENSOR OR ELSEWHERE** • Inspect the brake fluid level sensor for continuity. (See 04-11-14 BRAKE FLUID LEVEL SENSOR INSPECTION.) • Is the continuity condition normal?	Yes	Go to the next step.
		No	Replace the malfunctioning part. (See 04-11-11 MASTER CYLINDER REMOVAL/INSTALLATION.)
*7	**INSPECT FOR SHORT TO GROUND IN WIRING HARNESS BETWEEN FRONT BODY CONTROL MODULE (FBCM) AND BRAKE FLUID LEVEL SWITCH** • Inspect for short to ground in the following circuit: — Between brake fluid level switch and front body control module (FBCM) terminal 2Q • Is the short to ground detected?	Yes	Repair or replace the wiring harness for a possible short to ground.
		No	Retrieve the front body control module (FBCM) DTC using the M-MDS (IDS). (See 09-02K-10 DTC INSPECTION [FRONT BODY CONTROL MODULE (FBCM)].) If the DTC remains: • Go to the applicable DTC inspection. (See 09-02K-13 DTC TABLE [FRONT BODY CONTROL MODULE (FBCM)].) If the DTC does not remain: • Replace the front body control module (FBCM). (See 09-40-2 FRONT BODY CONTROL MODULE (FBCM) REMOVAL/INSTALLATION.)
8	**INSPECT WHETHER MALFUNCTION IS IN PARKING BRAKE SWITCH OR ELSEWHERE** • Inspect the following parts for continuity: — Parking brake switch (See 04-12-8 PARKING BRAKE SWITCH INSPECTION.) • Is the continuity condition normal?	Yes	Go to the next step.
		No	Replace the malfunctioning part. (See 04-12-3 PARKING BRAKE LEVER REMOVAL/INSTALLATION.)
*9	**INSPECT FOR SHORT TO GROUND IN WIRING HARNESS BETWEEN INSTRUMENT CLUSTER AND PARKING BRAKE SWITCH** • Inspect for short to ground in the following circuit: — Between parking brake switch and instrument cluster terminal 2X • Is the short to ground detected?	Yes	Repair or replace the wiring harness for a possible short to ground.
		No	Retrieve the instrument cluster DTC using the M-MDS (IDS). (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) If the DTC remains: • Go to the applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].) If the DTC does not remain: • Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
10	**INSPECT DSC HU/CM POWER SUPPLY FUSE** • Inspect the DSC HU/CM ignition power supply fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Inspect the blown fuse's circuit for short to ground. Repair or replace the wiring harness for a possible short to ground as necessary. Install appropriate amperage fuse.
*11	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN DSC HU/CM POWER SUPPLY AND DSC HU/CM FOR CONTINUITY) OR ELSEWHERE** • Switch the ignition to ON. • Measure the voltage at the DSC HU/CM terminal Q (wiring harness-side). • Is the voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Inspect for open circuit between DSC HU/CM and ignition. Repair or replace the wiring harness for a possible open circuit as necessary.
*12	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN DSC HU/CM AND GROUND FOR CONTINUITY) OR ELSEWHERE** • Switch the ignition to off. • Disconnect the DSC HU/CM connector. • Inspect for continuity between DSC HU/CM terminal AL (wiring harness-side) and body ground. • Is there continuity?	Yes	Replace the DSC HU/CM. (open circuit in the DSC HU/CM) (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness for a possible open circuit and poor contact in ground point.

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

NO.4 THERE IS A MALFUNCTION IN THE SYSTEM EVEN THOUGH ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, TCS/DSC INDICATOR LIGHT AND TCS OFF INDICATOR LIGHT DO NOT ILLUMINATE [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2895900

4	**There is a malfunction in the system even though ABS warning light, brake system warning light, TCS/DSC indicator light and DSC OFF indicator light do not illuminate**
POSSIBLE CAUSE	• There is a mechanical malfunction in system.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CONFIRM DSC HU/CM DTC** • Retrieve the DSC HU/CM DTC using the M-MDS (IDS). (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	**VERIFY SOLENOID VALVE OPERATION** • Switch the ignition to off. • Connect the M-MDS (IDS) to the DLC-2. • Switch the ignition to ON (engine off). • Access the active command mode for the solenoid valve using the M-MDS (IDS). (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Does the solenoid valve operate?	Yes	Inspect the conventional brake system. If there is a malfunction: • Repair or replace any malfunctioning parts according to the inspection result.
		No	Repair or replace any malfunctioning parts according to the inspection result.

NO.5 ABS OR TCS*1 OPERATES FREQUENTLY/TCS DOES NOT WORK CORRECTLY *1: DSC SYSTEM FUNCTION CONTAINS TRACTION CONTROL FUNCTION, TCS/DSC INDICATOR LIGHT GOES ON AND OFF WHILE TCS OPERATES [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2896000

5	**ABS or TCS*1 operates frequently** **TCS does not work correctly** ***1: DSC system function contains traction control function, TCS/DSC indicator light goes on and off while TCS operates**
POSSIBLE CAUSE	• There is a difference in size or air pressure between front and rear tires. • Incorrect ABS wheel-speed signal is inputted to DSC HU/CM. • There is a malfunction in engine control system. (TCS malfunction)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CONFIRM DSC HU/CM AND PCM DTC** • Retrieve the DSC HU/CM DTC using the M-MDS (IDS). (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Retrieve the PCM DTC using the M-MDS (IDS), if the traction control function has problem. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**INSPECT TIRE SIZE AND AIR PRESSURE** • Inspect tire size and air pressure. • Tire size and air pressure as specified?	Yes	Go to the next step.
		No	Replace with specified tires and adjust tire air pressure.

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

STEP	INSPECTION		ACTION
*3	**INSPECT ABS WHEEL-SPEED SENSOR OUTPUT PULSE** • Perform the Voltage Pattern Inspection for each ABS wheel-speed sensor. (See 04-15-10 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.) (See 04-15-13 REAR ABS WHEEL-SPEED SENSOR INSPECTION [2WD].) (See 04-15-13 REAR ABS WHEEL-SPEED SENSOR INSPECTION [4WD].) • Is the output voltage pattern normal?	Yes	Found malfunctioning part according to the “INTERMITTENT CONCERN TROUBLESHOOTING”. (See 04-03-6 PRECAUTION [DYNAMIC STABILITY CONTROL (DSC)].)
		No	ABS wheel-speed sensor installation inspection: • Inspect the ABS wheel-speed sensor for looseness and confirm it is securely adhered. ABS sensor rotor installation inspection: • Inspect the ABS sensor rotor for poor installation. Repair or replace any malfunctioning parts according to the inspection result.

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

NO.6 DSC*2 OPERATES FREQUENTLY/DSC DOES NOT WORK CORRECTLY *2: TCS/DSC INDICATOR LIGHT GOES ON AND OFF WHILE DSC OPERATES [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2896100

6	**DSC*2 operates frequently** **DSC does not work correctly** ***2: TCS/DSC indicator light goes on and off while DSC operates**
POSSIBLE CAUSE	• DSC HU/CM detected malfunction. (Input and output device malfunction) • There is a difference in size or air pressure between front or rear tires. • Poor installation with SAS control module (yaw rate sensor, low-G sensor) (If SAS control module is poorly installed, DSC may operate intermittently.) • When replacing DSC HU/CM initialization is not performed. (If initialization is not performed correctly, DSC may not work correctly.) • Incorrect ABS wheel speed sensor is inputted to DSC HU/CM.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CONFIRM DSC HU/CM DTC** • Retrieve the DSC HU/CM DTC using the M-MDS (IDS). (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	**VERIFY THAT SAS CONTROL MODULE IS INSTALLED** • Verify that each sensor is installed. • Is SAS control module (yaw rate sensor, low-G sensor) securely installed?	Yes	Go to the next step.
		No	Install the malfunctioning sensor securely.
3	**VERIFY THAT BRAKE FLUID PRESSURE SENSOR IS INITIALIZED** • Verify that each sensor is initialized. • Has the initialization for the DSC HU/CM been performed after replacing the DSC HU/CM and the SAS control module?	Yes	Go to the next step.
		No	Perform the initialization procedure. (See 04-15-7 DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE.)
4	**INSPECT TIRE SIZE AND AIR PRESSURE** • Inspect tire size and air pressure. • Tire size and air pressure as specified?	Yes	Go to the next step.
		No	Replace with specified tires and adjust tire air pressure.
5*	**INSPECT ABS WHEEL-SPEED SENSOR OUTPUT PULSE** • Perform the Voltage Pattern Inspection for each ABS wheel-speed sensor. (See 04-15-10 FRONT ABS WHEEL-SPEED SENSOR INSPECTION.) (See 04-15-13 REAR ABS WHEEL-SPEED SENSOR INSPECTION [2WD].) (See 04-15-13 REAR ABS WHEEL-SPEED SENSOR INSPECTION [4WD].) • Is the output voltage pattern normal?	Yes	Found malfunctioning part according to the “INTERMITTENT CONCERN TROUBLESHOOTING”. (See 04-03-6 PRECAUTION [DYNAMIC STABILITY CONTROL (DSC)].)
		No	ABS wheel-speed sensor installation inspection: • Inspect the ABS wheel-speed sensor for looseness and confirm it is securely adhered. ABS sensor rotor installation inspection: • Inspect the ABS sensor rotor for poor installation. Repair or replace any malfunctioning parts according to the inspection result.

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

NO.7 TCS/DSC INDICATOR LIGHT FLASHES (WHEN NEITHER THE TCS NOR THE DSC ARE OPERATING) [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2896200

7	TCS/DSC indicator light flashes (when neither the TCS nor the DSC are operating)
POSSIBLE CAUSE	• Non-completion of DSC related parts sensor initialization. (If the initialization is not carried out after replacing the DSC HU/CM and/or SAS control module, a TCS/DSC indicator light will flash. In this case, the DSC is not detected.)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT CONNECTION OF DSC HU/CM AND SAS CONTROL MODULE CONNECTORS** • Inspect for connection of DSC HU/CM and SAS control module (yaw rate sensor, low-G sensor) connectors. • Are DSC HU/CM and SAS control module connectors connected securely?	Yes	Perform the initialization procedure. (See 04-15-7 DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE.)
		No	Perform the initialization procedure after connect the suspected connector securely. (See 04-15-7 DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE.)

NO.8 HILL LAUNCH ASSIST (HLA) OPERATES EVEN ON A DOWNHILL/HILL LAUNCH ASSIST (HLA) DOES NOT OPERATE ON A SLOPE [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2896300

8	**Hill launch assist (HLA) operates even on a downhill** **Hill launch assist (HLA) does not operate on a slope**
POSSIBLE CAUSE	**Note** • HLA operates on an up slope of **about 3% or more** when the shift lever is in a position other than the reverse (R) position. (MTX) • HLA operates on an up slope of **about 6% or more** when selector lever position is in a forward gear. (ATX) • HLA operates on a down slope of **about 3% or more** when shift lever is in a reverse (R) position. (MTX) • HLA operates on a down slope of **about 6% or more** when selector lever is in a R position. (ATX) • HLA operates for a maximum of **2 s** after releasing brake pedal. • DSC HU/CM detects a malfunction (Input/output device malfunction). • PCM and/or instrument cluster detect a malfunction. • SAS control module installation malfunction (If there is a malfunction resulting from SAS control module removal, HLA may not operate at desired inclination angle.) • Tire malfunction (Differing air pressure on four wheels, use of tires with differing conditions of wear) • DSC HU/CM initial setting and low-G sensor initialization have not been performed after replacing DSC HU/CM and SAS control module. (If initial setting and initialization are not performed, HLA may not operate at desired inclination angle.) • Center point of low-G sensor has deviated. • Input signal malfunction from ABS wheel-speed sensor • Input signal malfunction from PCM (Engine torque signal, engine speed signal, accelerator pedal position signal, reverse gear signal, and clutch pedal signal) • Input signal malfunction from instrument cluster (Parking brake signal) • Input signal malfunction from TCM (Selector lever position signal) • Communication error between DSC HU/CM and PCM • Communication error between DSC HU/CM and instrument cluster • Brake (foot brake/parking brake) drag

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC FOR RELATED MODULES** • Retrieve the DSC HU/CM, PCM, TCM (ATX) and instrument cluster DTC using the M-MDS. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].) (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].) (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
2	**VERIFY IF FALSE DETECTION OF INCLINATION ANGLE CAUSED BY MALFUNCTIONING SAS CONTROL MODULE INSTALLATION** • Inspect the SAS control module installation condition for the following: — Is the module installed with any twisting? — Is the module installed correctly?	Yes	Go to the next step.
		No	Repair the SAS control module installation condition. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
3	**VERIFY IF MALFUNCTION CAUSED BY INITIALIZATION PROCEDURE FOR LOW-G SENSOR NOT PERFORMED** • Verify if malfunction caused by initialization procedure for low-G sensor not performed. • Has the initialization for the low-G sensor been performed after replacing the DSC HU/CM and the SAS control module?	Yes	Go to the next step.
		No	Perform the initialization procedure. (See 04-15-7 DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE.)
4	**VERIFY IF MALFUNCTION CAUSED BY TIRE MALFUNCTION PERFORMED** • Inspect the tire pressure and condition. • Are tire pressure and condition normal?	Yes	Go to the next step.
		No	If the pressure is incorrect, adjust the tire pressure to the specification. If the tires are worn, replace the tires.

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

STEP	INSPECTION		ACTION
5	**INSPECT RELATED MODULES FOR MALFUNCTION CAUSED BY FALSE SIGNAL** • Access the following DSC HU/CM, PCM and instrument cluster PIDs using the M-MDS: (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) (See 01-40-17 PCM INSPECTION [SKYACTIV-G 2.0].) (See 05-02A-94 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FW6A-EL, FW6AX-EL].) (See 09-02G-37 PID/DATA MONITOR INSPECTION [INSTRUMENT CLUSTER].) **DSC HU/CM** — BRAKE_SW (Brake signal) — LON_ACCL_C (Low-G sensor (longitudinal G) calculated value signal) — LON_ACCL_R (Low-G sensor (longitudinal G) raw value signal) — BRK_F_P_C (Brake fluid pressure calculated value signal) — BRK_F_P_R (Brake fluid pressure raw value signal) — WSPD_LF (ABS wheel-speed sensor (LF) signal) — WSPD_RF (ABS wheel-speed sensor (RF) signal) — WSPD_LR (ABS wheel-speed sensor (LR) signal) — WSPD_RR (ABS wheel-speed sensor (RR) signal) **PCM** — RPM (Engine speed signal) — APP (APP sensor signal) — CPP (Clutch pedal signal: MTX) — M_GEAR (Manual gear position signal: MTX) — GEAR (Gear commanded signal: ATX) **TCM (ATX)** — TR (Transaxle range sensor signal) **INSTRUMENT CLUSTER** — P_BRAKE_SW (Parking brake signal) • Are all PID values normal?	Yes	Inspect the following: • Brake (foot brake/parking brake) drag • Engine output malfunction Repair or replace any malfunctioning parts according to the inspection result.
		No	Inspect the related parts and wiring harness. Repair or replace any malfunctioning parts according to the inspection result.

SYMPTOM TROUBLESHOOTING [DYNAMIC STABILITY CONTROL (DSC)]

NO.9 MASTER WARNING LIGHT STAY ON AND A MESSAGE "SCBS Inspection Required" IS INDICATED IN THE DISPLAY [DYNAMIC STABILITY CONTROL (DSC)]

id0403b2896400

9	Master warning light stay on and a message “SCBS Inspection Required” is indicated in the display*
POSSIBLE CAUSE	• Laser sensor detects a malfunction. • DSC HU/CM internal malfunction. • DSC HU/CM detected malfunction (input and output device malfunction). • PCM and/or instrument cluster detect a malfunction.

* : Vehicle with TFT LCD display.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CONFIRM LASER SENSOR DTC** • Retrieve the DSC HU/CM and laser sensor DTC using the M-MDS. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 04-02B-6 ON-BOARD DIAGNOSIS [LASER SENSOR].)
		No	Go to the next step.
2	**CONFIRM DSC HU/CM DTC** • Retrieve the DSC HU/CM and laser sensor DTC using the M-MDS. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
3	**CONFIRM PCM DTC** • Retrieve the PCM DTC using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Retrieve the instrument cluster DTC using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • If any DTCs are present, go to the applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].) • If there is not a DTC, replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)

04-10 GENERAL PROCEDURES

GENERAL PROCEDURES (BRAKE) . . . 04-10–1
Wheel and Tire Installation **04-10–1**
Brake Lines Disconnection. **04-10–1**
Brake Pipe Flare Nut Tightening **04-10–1**
Connector Disconnection. **04-10–1**
DSC Related Parts **04-10–1**
DSC Related Part Sensor
Initialization Procedure **04-10–1**
Tire Pressure Monitoring System
Initialization Procedure **04-10–2**

GENERAL PROCEDURES

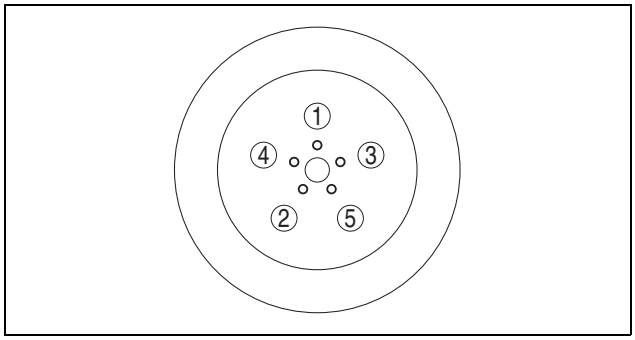
GENERAL PROCEDURES (BRAKE)

id041000800100

Wheel and Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts in a criss-cross pattern to the following tightening torque.

   Tightening torque
   108—147 N·m {12—14 Kgf·m, 80—108 ft·lbf}



ac5wzw0000037

Brake Lines Disconnection

1. If any brake line has been disconnected during the procedures, add brake fluid, bleed the brakes, and inspect for leakage after the procedure has been completed.

   Caution
   - **Brake fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. If it is spilled, wipe it off immediately.**

Brake Pipe Flare Nut Tightening

1. Tighten the brake pipe flare nut using any commercially available flare nut wrench.

Connector Disconnection

1. Disconnect the negative battery cable before performing any work that requires handling of connectors. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].), (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].), (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)

DSC Related Parts

1. Make sure that there are no DTCs in the DSC memory after working on DSC related parts. If there are any DTCs in the memory, clear them. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)

DSC Related Part Sensor Initialization Procedure

Warning
- **If the initialization procedure is not completed, the DSC will not operate properly and it might cause an unexpected accident. Therefore, when replacing or removing the following parts, make sure to perform the initialization procedure to insure proper DSC operation.**

1. When replacing or removing the following parts, perform the initialization procedure. (See 04-15-7 DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE.)
   - DSC HU/CM

GENERAL PROCEDURES

Tire Pressure Monitoring System Initialization Procedure

Caution

- **If the tire pressure monitoring system initialization procedure is performed with the tire pressures not to specification, the system may not operate normally. Therefore, always inspect and adjust the tire pressure of all 4 tires before performing the tire pressure monitoring system initialization procedure.**

Note

- Perform the tire pressure monitoring system initialization when the following operations have been performed: (See 02-12-4 TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE.)
  - Tire pressures have been adjusted
  - Tires or wheels have been replaced
  - Tires have been rotated
  - DSC HU/CM replaced
  - DSC HU/CM connector disconnected
  - Battery replaced
  - Negative battery cable is disconnected

1. Perform the tire pressure monitoring system initialization procedure when the tire pressure monitoring system warning light illuminates. (See 02-12-4 TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE.)

CONVENTIONAL BRAKE SYSTEM

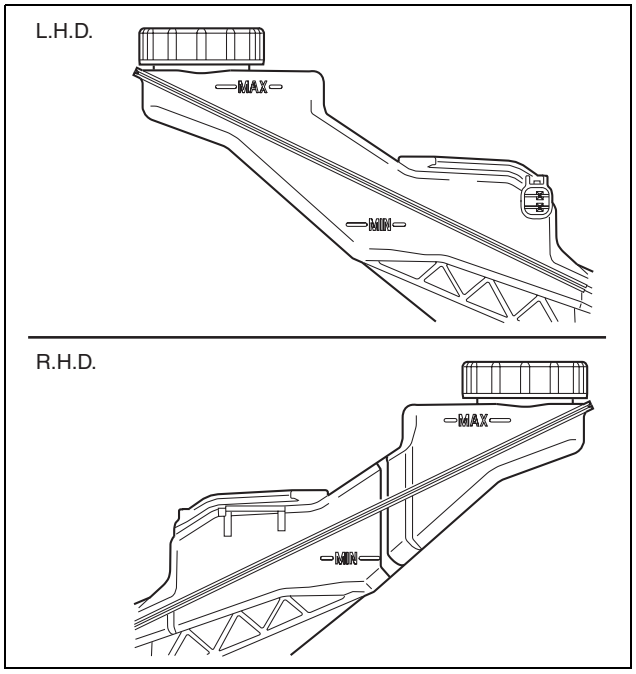
BRAKE FLUID INSPECTION

id041100815200

1. Verify that the brake fluid level in the brake fluid reserve tank is between the MAX and MIN marks.
   - If the brake fluid level is below the MIN mark, add brake fluid.



ac5wzw0000021

BRAKE FLUID AIR BLEEDING

id041100815300

Caution
- **Brake fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. If it is spilled, wipe it off immediately.**

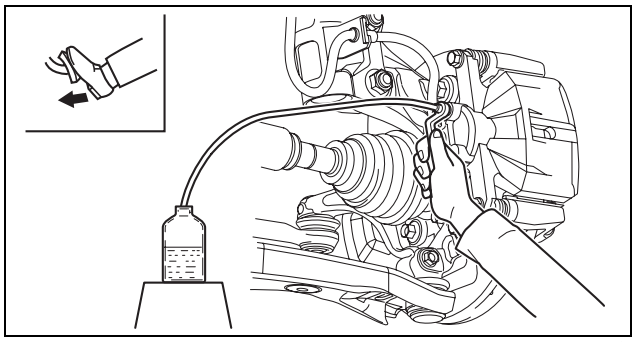
Note
- Keep the fluid level in the brake fluid reserve tank at 3/4 full or more during the air bleeding.
- Begin air bleeding with the brake caliper that is furthest from the master cylinder.

Brake fluid type
European (L.H.D. U.K.) specs.: SAE J1703 or FMVSS116 DOT-3 or DOT-4
Australian, China, and General (L.H.D. R.H.D.) specs.: SAE J1703 or FMVSS116 DOT-3

1. Remove the cap from the brake fluid reserved tank and add brake fluid.
2. Remove the bleeder cap on the brake caliper, and attach a vinyl tube to the bleeder screw.
3. Place the other end of the vinyl tube in a clear container and fill the container with fluid during air bleeding.
4. Working with two people, one should pump the brake pedal several times and depress and hold the pedal down.
5. While the brake pedal is depressed, the other should loosen the bleeder screw using a commercially available flare nut wrench, drain out any fluid containing air bubbles, and tighten the bleeder screw.

   Tightening torque
   6.9—9.8 N·m {71—99 kgf·cm, 62—86 in·lbf}

6. Repeat Steps 4 and 5 until no air bubbles are seen.
7. Perform air bleeding as described in the above procedures for all brake calipers.
8. Clean the brake calipers.
9. After air bleeding, inspect the following:
   - Brake operation
   - Fluid leakage
   - Fluid level



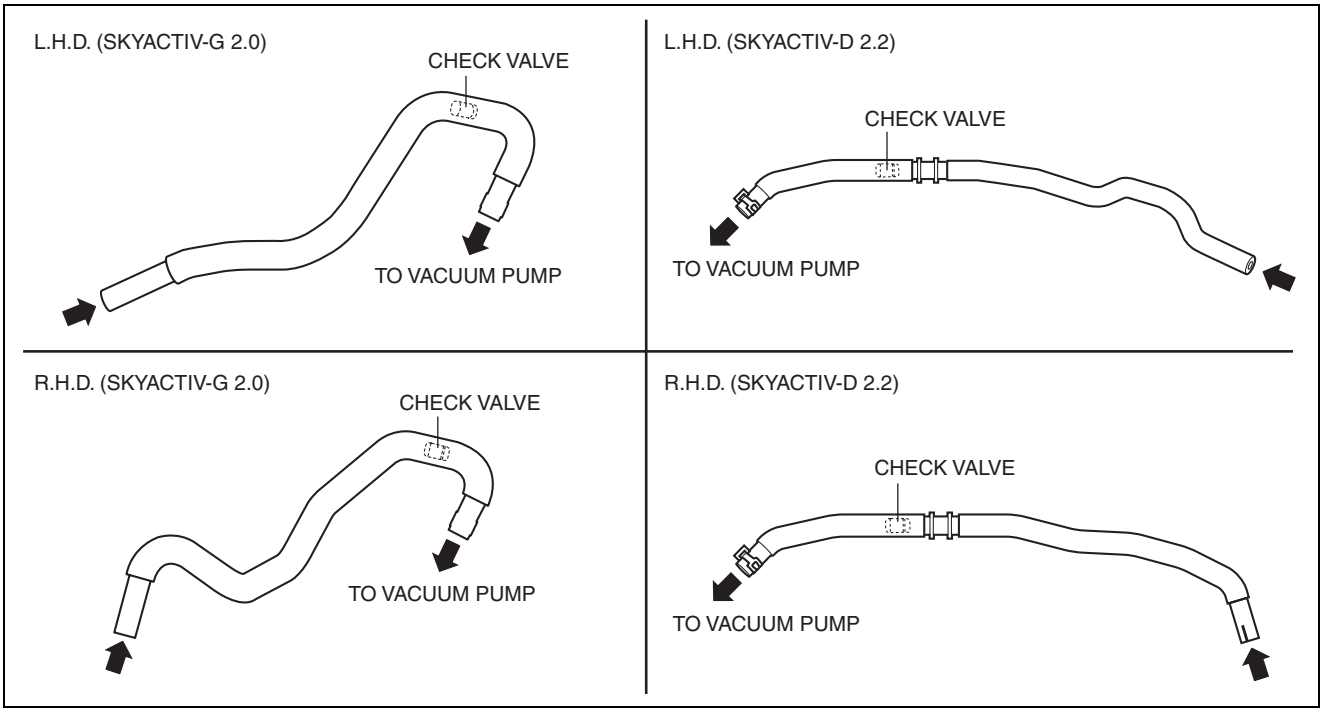
ac5wzw0000218

CONVENTIONAL BRAKE SYSTEM

VACUUM LINE INSPECTION

id041100801500

1. Remove the vacuum hose. (See 04-11-5 VACUUM HOSE REMOVAL/INSTALLATION.)
2. Verify that air can be blown from the power brake unit side of the vacuum hose towards the vacuum pump side, and that air cannot be blown in the opposite direction.



ac5wzw0000020

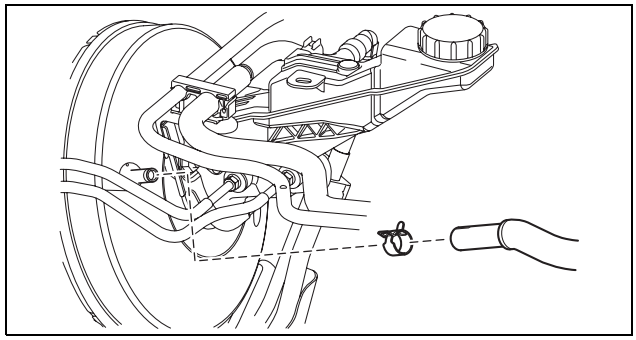
- If there is any malfunction of the inner check valve, replace it together with the vacuum hose as a single unit.

VACUUM HOSE REMOVAL/INSTALLATION

id041100801600

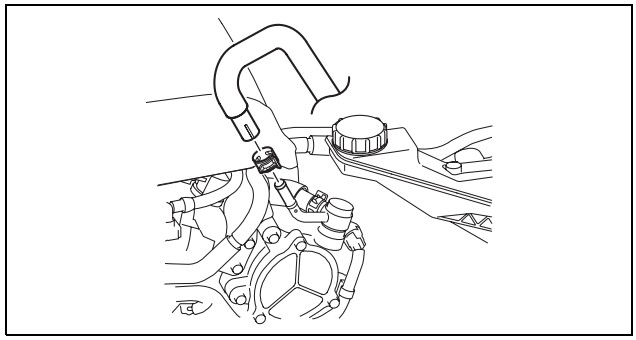
L.H.D.

1. Remove the engine cover. (SKYACTIV-D 2.2) (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Pinch open the clamp using pliers and disconnect the vacuum hose.



ac5wzw0000021

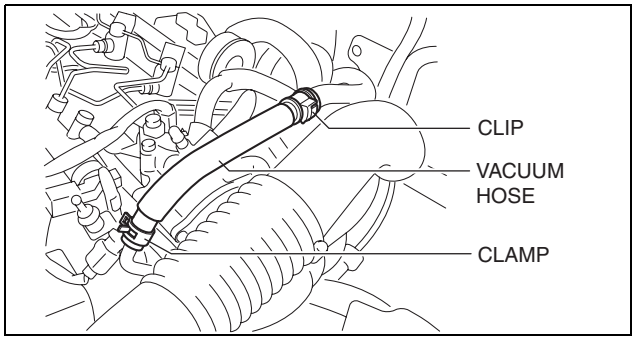
3. Pinch open the clamp using pliers and disconnect the vacuum hose. (SKYACTIV-G 2.0)



ac5wzw0000021

CONVENTIONAL BRAKE SYSTEM

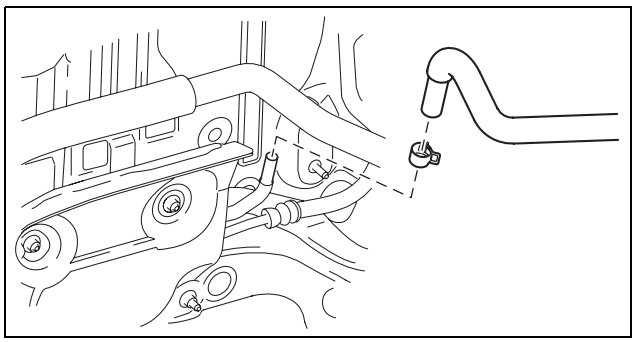
4. Detach the vacuum hose from the clip. (SKYACTIV-D 2.2)
5. Pinch open the clamp using pliers and disconnect the vacuum hose. (SKYACTIV-D 2.2)
6. Remove the vacuum hose.
7. Install in the reverse order of removal.



ac5wzw0000450

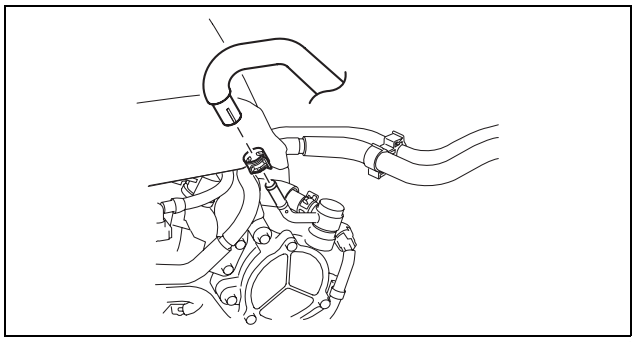
R.H.D.

1. Remove the engine cover. (SKYACTIV-D 2.2) (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Pinch open the clamp using pliers and disconnect the vacuum hose.



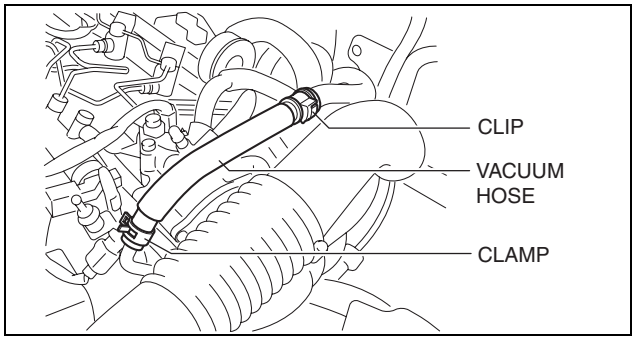
ac5wzw0000021

3. Pinch open the clamp using pliers and disconnect the vacuum hose. (SKYACTIV-G 2.0)



ac5wzw0000021

4. Detach the vacuum hose from the clip. (SKYACTIV-D 2.2)
5. Pinch open the clamp using pliers and disconnect the vacuum hose. (SKYACTIV-D 2.2)
6. Remove the vacuum hose.
7. Install in the reverse order of removal.



ac5wzw0000450

CONVENTIONAL BRAKE SYSTEM

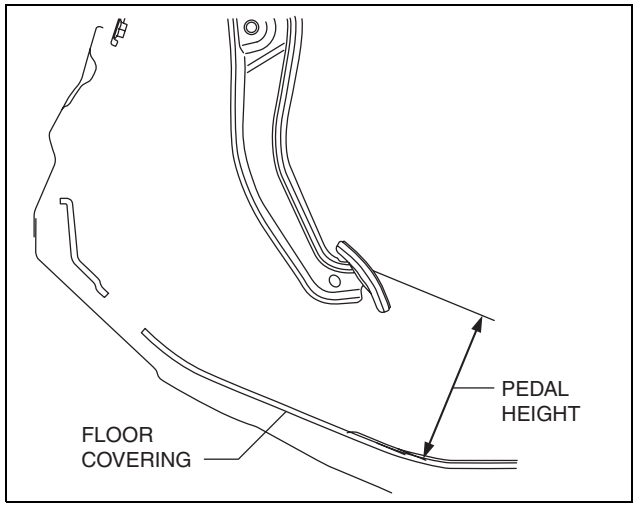
BRAKE PEDAL INSPECTION

id041100801100

Pedal Height Inspection

1. Measure the distance from the center of the upper surface of the pedal pad to the insulator and verify that it is as specified.
   - If not within the specification, inspect the following items and repair or replace the applicable part if there is any malfunction.
     — Power brake unit installation condition
     — Deformation of or damage to the power brake unit fork
     — Brake pedal installation condition
     — Clevis pin wear
   - If there is no malfunction in the above items, replace the brake pedal.

Brake pedal height (reference value)
134 mm {5.28 in}



ac5wzw0000149

04

Pedal Play Inspection

1. Pump the pedal several times to release the vacuum in the power brake unit.
2. Gently depress the pedal by hand and measure the pedal play.
   - If not within the specification, inspect the wear of the clevis pin. Replace it if there is any malfunction.

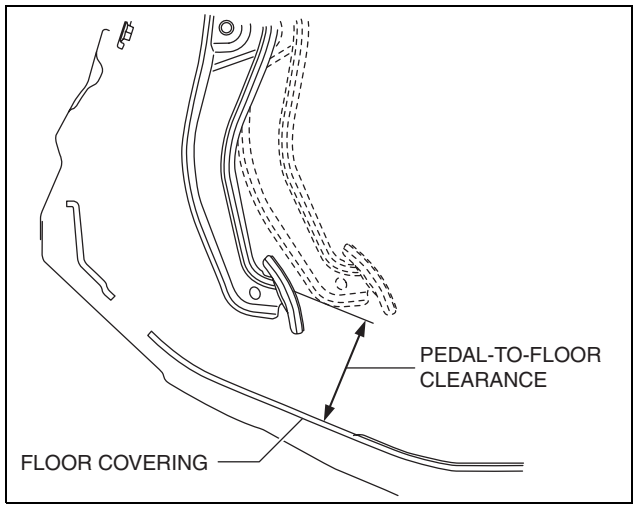
Brake pedal play
3—5 mm {0.12—0.19 in}

Note
- If there is no malfunction in the clevis pin, there is a possibility that the power brake unit has some malfunction. Verify that there are no malfunctions, and replace it if necessary.

Pedal-to-floor Clearance Inspection

1. Start the engine and depress the brake pedal with a force of **147 N {15.0 kgf, 33.0 lbf}**.
2. Measure the distance from the center of the upper surface of the pedal pad to the floor covering and verify that it is as specified.
   - If it is less than the specification, inspect for air in the brake line.

Brake pedal-to-floor clearance (Brake pedal when depressed at 147 N {15.0 kgf, 33.0 lbf})
95 mm {3.7 in} or more



ac5wzw0000149

CONVENTIONAL BRAKE SYSTEM

BRAKE PEDAL REMOVAL/INSTALLATION [R.H.D.]

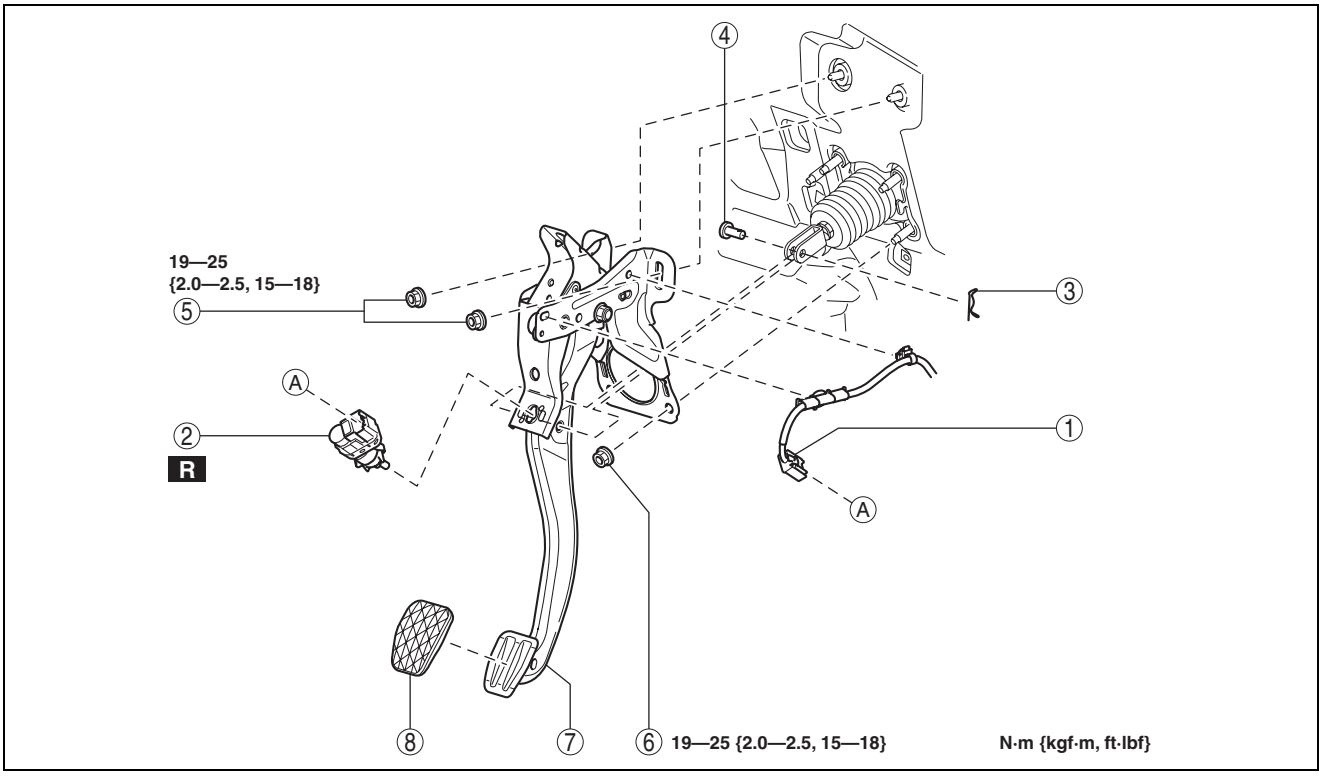
id041100801252

Caution

- **The clearance between the brake switch and the brake pedal is automatically adjusted to the correct amount when the brake switch is inserted into the installation hole on the brake pedal and rotated to fix in place. If the brake switch is not properly installed, the clearance may be incorrect, causing a brake light malfunction. Therefore, always verify that the brake pedal is properly installed and fully released before installing the brake switch to the pedal.**
- **Once the brake switch clearance has automatically been adjusted, it cannot be adjusted again. Therefore, replace the switch with a new one when replacing the power brake unit or the pedal, or performing any procedure that changes the pedal stroke.**
- **Secure the steering wheel using tape or a cable to prevent the intermediate shaft from rotating after disconnecting the intermediate shaft. If the steering wheel rotates after the intermediate shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**

1. Disconnect the brake pipes from the master cylinder. (See 04-11-11 MASTER CYLINDER REMOVAL/INSTALLATION.)
2. Disconnect the clutch reserve hose from the master cylinder. (MTX) (See 04-11-11 MASTER CYLINDER REMOVAL/INSTALLATION.)
3. Disconnect the intermediate shaft from the steering gear and linkage. (See 06-13-10 INTERMEDIATE SHAFT REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.
6. After installation, add brake fluid, bleed the air, and inspect for fluid leakage. (See 04-11-4 BRAKE FLUID AIR BLEEDING.)

CONVENTIONAL BRAKE SYSTEM



ac5wzw0000020

4	Clevis pin

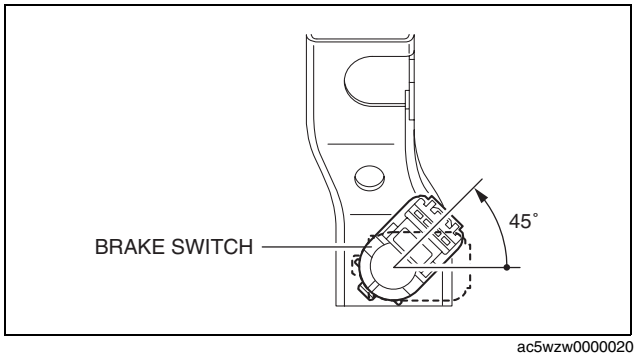
5	Nut
6	Nut
7	Brake pedal (See 04-11-10 Brake Pedal Removal Note.)
8	Pedal pad

Brake Pedal Removal Note

1. Move the power brake unit to the vehicle front where the power brake unit fork does not interfere with the brake pedal arm.
2. Remove the brake pedal.

Brake Switch Installation Note

1. Inspect the brake pedal. (See 04-11-7 BRAKE PEDAL INSPECTION.)
2. With the brake pedal fully released, insert a new brake switch into the installation hole on the brake pedal.
3. Secure the brake switch by turning it counterclockwise **45**°.



ac5wzw0000020

CONVENTIONAL BRAKE SYSTEM

BRAKE SWITCH INSPECTION

id041100801900

Caution
- **Inspect the brake switch with it installed to the brake pedal, otherwise the brake switch may not operate normally. If the brake switch is removed from the brake pedal, replace the brake switch with a new one.**

1. Remove the lower panel. (See 09-17-35 LOWER PANEL REMOVAL/INSTALLATION.)
2. For L.H.D., remove the front heat duct (LH). (See 07-11-22 FRONT HEAT DUCT REMOVAL/INSTALLATION.)
3. Disconnect the brake switch connector.
4. Verify that the continuity is as indicated in the table.
   - If not as indicated in the table, replace the brake switch. (See 04-11-8 BRAKE PEDAL REMOVAL/INSTALLATION [L.H.D.].) (See 04-11-9 BRAKE PEDAL REMOVAL/INSTALLATION [R.H.D.].)

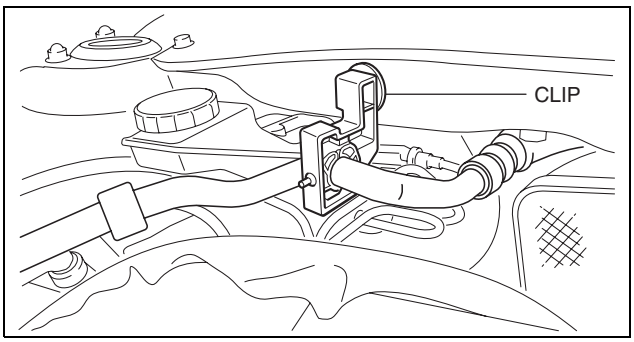
MASTER CYLINDER REMOVAL/INSTALLATION

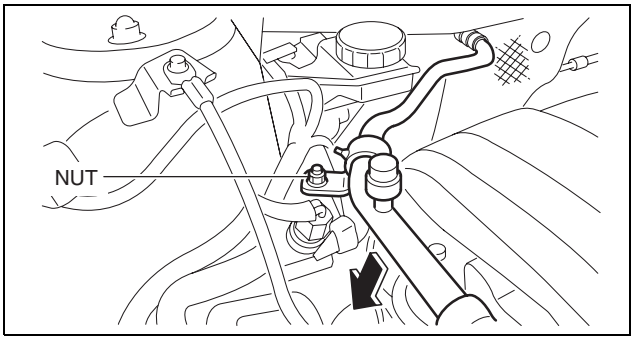
id041100801300

1. For the L.H.D., remove the battery. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. For the R.H.D., perform the following procedure:
   (1) Remove the cooler hose (LO) from the clip. (See 07-11-36 REFRIGERANT LINE REMOVAL/INSTALLATION.)



ac5wzw0000252

   (2) Remove the cooler hose (LO) installation nut. (See 07-11-36 REFRIGERANT LINE REMOVAL/INSTALLATION.)
   (3) Move the cooler hose (LO) in the direction of the arrow.
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. After installation, add brake fluid, bleed the air, and inspect for fluid leakage. (See 04-11-4 BRAKE FLUID AIR BLEEDING.)



ac5wzw0000252

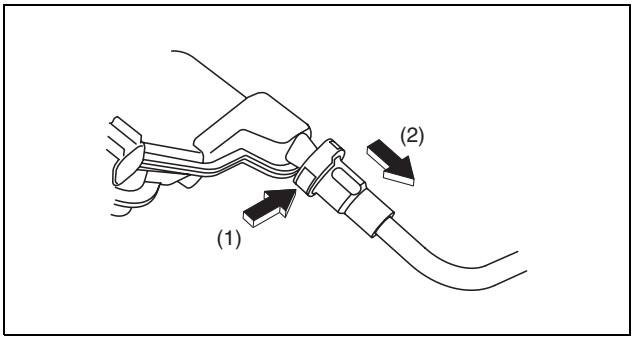
6	Bracket
7	Master cylinder
8	Cap
9	Brake fluid reserve tank
10	Cylinder component

Clutch Reserve Hose Removal Note (MTX)

1. Disconnect the clutch reserve hose in the order shown in the figure.



ac5wzw0000252

Clutch Reserve Hose Installation Note (MTX)

1. Insert the clutch reserve hose to the master cylinder.
2. Pull the clutch reserve hose to verify that it does not come off, and reinsert it completely.

CONVENTIONAL BRAKE SYSTEM

BRAKE FLUID LEVEL SENSOR INSPECTION

id041100801400

1. Disconnect the brake fluid level sensor connector from the master cylinder.
2. Inspect for continuity according to fluid level between the brake fluid level sensor terminals.
   - If not as indicated in the table, replace the reserve tank. (See 04-11-11 MASTER CYLINDER REMOVAL/INSTALLATION.)

Below MIN		

acxuuw00003731

POWER BRAKE UNIT INSPECTION

id041100801700

Note
- The following inspection methods are simple inspection methods to judge the function of the power brake unit.
- If there is any malfunction in the power brake unit, replace the power brake unit as a single unit.

Without Using SST
Operation inspection
1. With the engine stopped, pump the pedal a few times.
2. With the pedal depressed, start the engine.
3. If the pedal moves down slightly immediately after starting the engine, the unit is normal.

Vacuum function inspection
1. Start the engine.
2. Stop the engine after driving the vehicle for **1—2 min**.
3. Depress the pedal with normal force.
4. If the first pedal stroke is long and becomes shorter with subsequent strokes, the unit is normal.
   - If a problem is found, inspect for damage to or improper installation of the check valve and vacuum hose. After repairing, inspect again.

Vacuum loss function inspection
1. Start the engine.
2. Depress the pedal with normal force.
3. With the pedal depressed, stop the engine.
4. Hold the pedal depressed for **approx. 30 s**.
5. If the pedal height does not change during this time, the unit is normal.

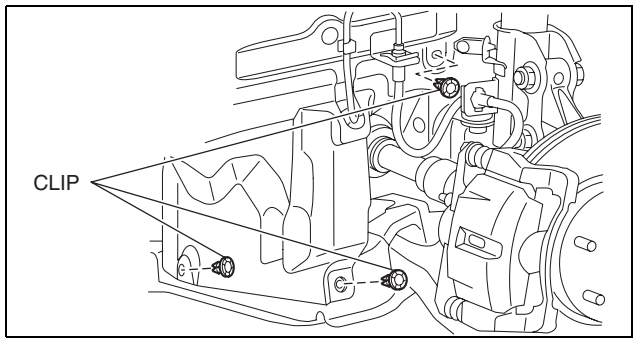
CONVENTIONAL BRAKE SYSTEM

Using SST

Note
- When performing the inspection using the **SST**, inspect the brake pipe on the left or right front wheel.
- The following procedure and figures show the inspection for the brake pipe on the left front wheel.

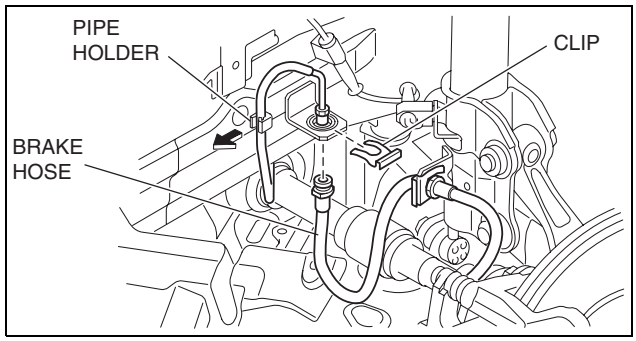
Pre-inspection preparation

1. Remove the clips.
2. Set the splash shield out of the way.



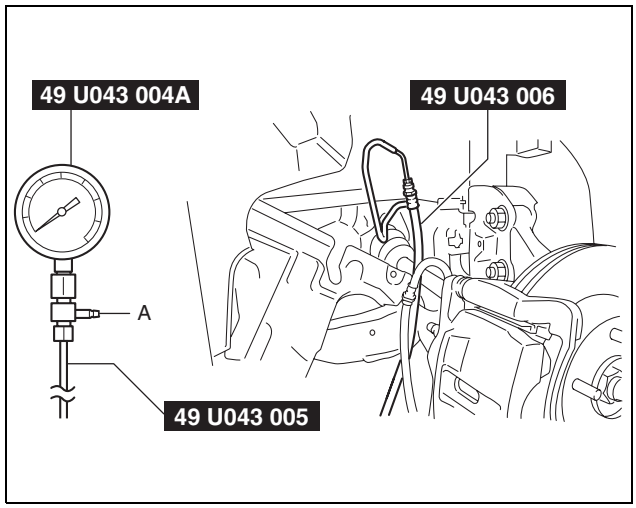
ac5wzw0000021

3. Disconnect the brake pipe from the brake hose.
4. Remove the clip.
5. Remove the brake hose from the bracket.
6. Detach the brake pipe from the pipe holder.



ac5wzw0000021

7. Install the **SST** to the brake pipe as shown in the figure.
8. Bleed the brake line and the **SSTs** of air. Bleed the air form the **SSTs** using bleeder screw A.
9. Install the pedal force gauge to the brake pedal.
10. Connect the vacuum gauge to the vacuum line.



ac5wzw0000021

Vacuum loss inspection

1. Start the engine.
2. Depress the brake pedal with a force of **200 N {20.4 kgf, 45.0 lbf}**.
3. Stop the engine when the vacuum gauge reading reaches **68 kPa {510 mmHg, 20 inHg}** with the pedal depressed.
4. With the engine off, observe the vacuum gauge for **15 s**.
5. If the gauge has dropped **3.3 kPa {25 mmHg, 1.0 inHg}** or less, the unit is normal.

CONVENTIONAL BRAKE SYSTEM

Lack of hydraulic pressure inspection

1. If the pedal force and fluid pressure correlation is within the specification with the engine stopped and a vacuum amount of **0 kPa {0 mmHg, 0 inHg}**, the system is normal.

Master cylinder fluid pressure

Vacuum amount at 0 kPa {0 mmHg, 0 inHg}	
Pedal force	**Fluid pressure**
200 N {20.4 kgf, 45.0 lbf}	630 kPa {6.42 kgf/cm^2, 91.4 psi} or more

Hydraulic pressure inspection

1. Start the engine. Depress the brake pedal when the vacuum reaches **66.7 kPa {500 mmHg, 19.7 inHg}**.
2. At this time, apply the indicated pedal force and if the fluid pressure is within the specification, the unit is normal.

Master cylinder fluid pressure

Vacuum amount at 66.7 kPa {500 mmHg, 19.7 inHg}	
Pedal force	**Fluid pressure**
200 N {20.4 kgf, 45.0 lbf}	6,900 kPa {70.36 kgf/cm^2, 1,001 psi} or more

After-inspection procedure

1. After the inspection, remove the **SSTs**, install the brake hose, clamp, and brake pipe to the original positions, and then bleed the air from the brake line. (See 04-11-30 BRAKE HOSE (FRONT) REMOVAL/INSTALLATION.) (See 04-11-4 BRAKE FLUID AIR BLEEDING.)

CONVENTIONAL BRAKE SYSTEM

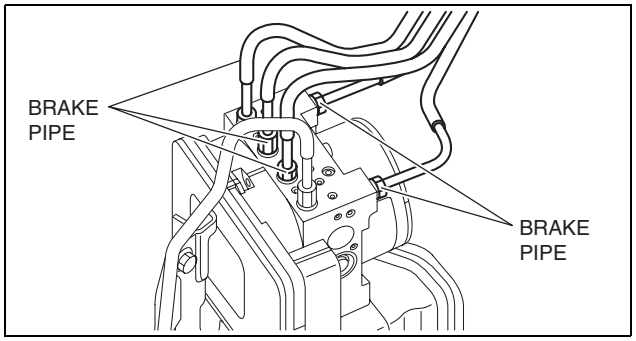
POWER BRAKE UNIT REMOVAL/INSTALLATION [R.H.D.]

id041100801852

Caution

- **Once the brake switch clearance has automatically been adjusted, it cannot be adjusted again. Therefore, replace the switch with a new one when replacing the power brake unit or performing any procedure that changes the pedal stroke.**

1. Remove the windshield wiper arm and blade. (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
2. Remove the cowl grille. (See 09-16-3 COWL GRILLE REMOVAL/INSTALLATION.)
3. Remove the windshield wiper motor and link. (See 09-19-9 WINDSHIELD WIPER MOTOR AND LINK REMOVAL/INSTALLATION.)
4. Remove the cowl panel. (See 09-10-41 COWL PANEL REMOVAL/INSTALLATION.)
5. Remove the insulator. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Remove the master cylinder. (See 04-11-11 MASTER CYLINDER REMOVAL/INSTALLATION.)
7. Remove the power brake unit vacuum sensor. (See 04-11-19 POWER BRAKE UNIT VACUUM SENSOR REMOVAL/INSTALLATION.)
8. Remove the washer funnel. (See 09-19-16 WASHER TANK REMOVAL/INSTALLATION.)
9. Disconnect the brake pipes from the DSC HU/CM.



ac5wzw0000228

10. Detach the brake pipe holder from the vehicle.
11. Remove in the order indicated in the table.
12. Install in the reverse order of removal.
13. After installation, add brake fluid, bleed the air, and inspect for fluid leakage. (See 04-11-4 BRAKE FLUID AIR BLEEDING.)
14. Remove the brake switch. (See 04-11-9 BRAKE PEDAL REMOVAL/INSTALLATION [R.H.D.].)
15. Inspect the brake pedal. (See 04-11-7 BRAKE PEDAL INSPECTION.)
16. Install a new brake switch. (See 04-11-9 BRAKE PEDAL REMOVAL/INSTALLATION [R.H.D.].)

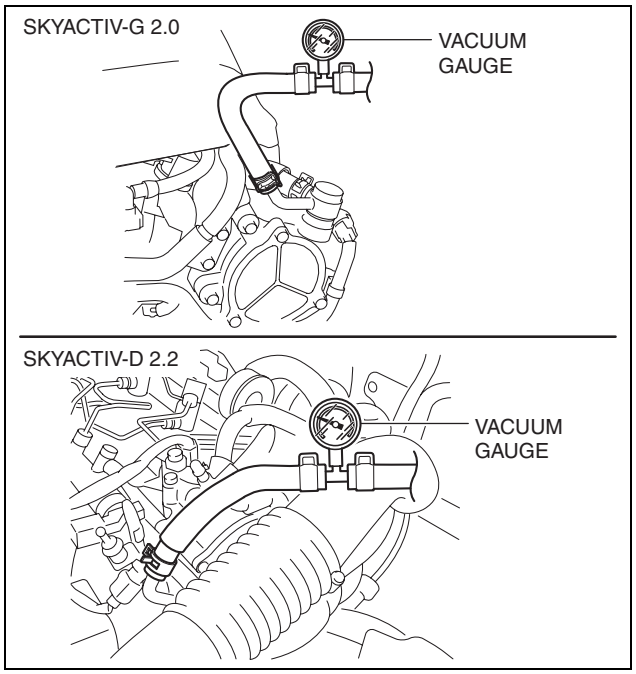
VACUUM PUMP INSPECTION

id041100811000

1. Remove the engine cover. (SKYACTIV-D 2.2) (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2])
2. Pinch open the clamp using pliers and disconnect the vacuum hose from the vacuum pump. (See 04-11-5 VACUUM HOSE REMOVAL/INSTALLATION.)
3. Install the vacuum gauge as shown in the figure, then check the vacuum.
4. Warn up the engine.
   - If the pressure is less than the specification, inspect for the following.
     — Malfunction of the vacuum pump
     — Shortage of the lubrication oil pressure



ac5wzw0000442

CONVENTIONAL BRAKE SYSTEM

Vacuum pump vacuum specification (reference value)

Engine type	Measurement condition		Specification
	Engine speed	Change in vacuum amount	Period of time change in vacuum amount condition met
SKYACTIV-G 2.0	While idling (520—700 rpm (reference value))	From 60 kPa {450 mmHg, 18 inHg} to 67 kPa {503 mmHg, 20 inHg}	8 s or less
SKYACTIV-D 2.2			9 s or less

Vacuum pump maximum vacuum specification (reference value)

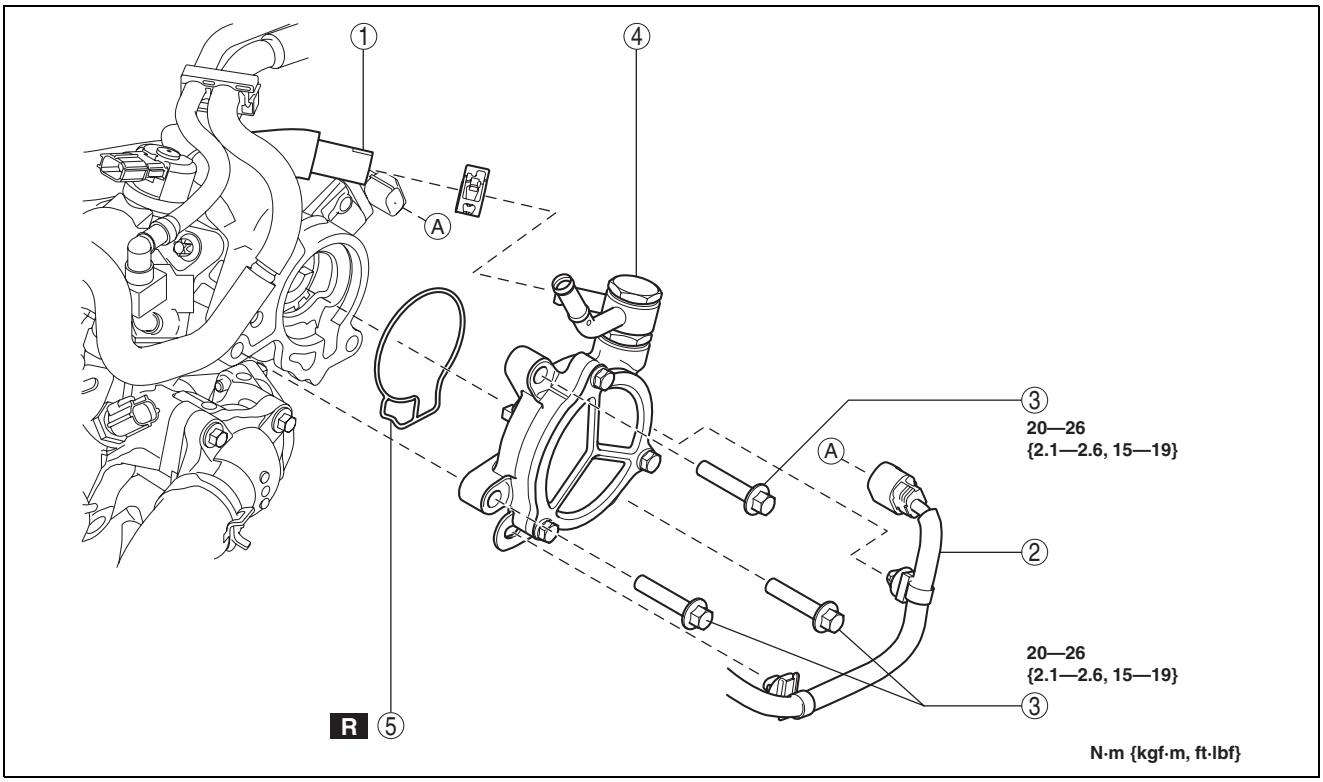
Engine type	Measurement condition	Specification
SKYACTIV-G 2.0	While idling (no time designation)	93.3 kPa {700 mmHg, 27.6 inHg} or more
SKYACTIV-D 2.2		

5. Install in the reverse order of the removal.

VACUUM PUMP REMOVAL/INSTALLATION [SKYACTIV-G 2.0]

id0411008036q3

1. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
2. Remove the battery. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Set the PCM wiring harness out of the way.
4. Pinch open the clamp using pliers and disconnect the vacuum hose from the vacuum pump. (See 04-11-5 VACUUM HOSE REMOVAL/INSTALLATION.)
5. Remove in the order shown in the table.
6. Install in the reverse order of removal.



ac5wzw0000021

1	Vacuum hose
2	Exhaust CMP sensor connector and wiring harness
3	Bolt

4	Vacuum pump (See 04-11-22 Vacuum Pump Removal Note.) (See 04-11-22 Vacuum Pump and O-ring Installation Note.)
5	O-ring (See 04-11-22 Vacuum Pump and O-ring Installation Note.)

CONVENTIONAL BRAKE SYSTEM

Vacuum Pump Removal Note

1. When removing the vacuum pump, place a rag under the installation surface of the vacuum pump so that engine oil does not get on other parts.
2. Remove the vacuum pump.

Vacuum Pump and O-ring Installation Note

1. Rotate the vacuum pump by hand to drain the remainder of the engine oil in the vacuum pump.
2. Degrease the O-ring installation groove and installation surface.
3. Install the new O-ring to the vacuum pump.
4. Install the vacuum pump.

VACUUM PUMP REMOVAL/INSTALLATION [SKYACTIV-D 2.2]

id0411008036s8

1. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Remove the battery and battery tray. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Pinch open the clamp using pliers and disconnect the vacuum hose from the vacuum pump. (See 04-11-5 VACUUM HOSE REMOVAL/INSTALLATION.)
4. Remove the following parts.
   (1) Air cleaner cover (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (2) Air cleaner element (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (3) Flesh-air duct (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (4) Air cleaner case (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (5) Air hose (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (6) Air inlet pipe (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Remove the turbo charger air outlet hose along with the air intake pipe. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
6. Disconnect the fuel temperature sensor connector.
7. Disconnect the CMP sensor connector.
8. Remove the CMP sensor harness from the lower case.
9. Perform the “BEFORE SERVICE PRECAUTION”. (See 01-14B-6 BEFORE SERVICE PRECAUTION [SKYACTIV-D 2.2].)
10. Remove the water pipe assembly installation bolts, then set the water pipe assembly out of the way. (See 01-14B-46 SUPPLY PUMP REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
11. Remove the fuel return pipe (supply pump-side). (See 01-14B-46 SUPPLY PUMP REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
12. Remove the fuel return pipe (fuel injector-side). (See 01-14B-35 FUEL INJECTOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
13. Remove fuel return hose No.1 and fuel return hose No.2. (See 01-14B-46 SUPPLY PUMP REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
14. Remove the lower case installation bolts, then set the lower case out of the way. (See 01-14B-54 LOWER CASE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
15. Remove in the order shown in the table.
16. Install in the reverse order of removal.
17. Perform the “AFTER SERVICE PRECAUTION”. (See 01-14B-7 AFTER SERVICE PRECAUTION [SKYACTIV-D 2.2].)

Brake Judder Repair Hints
Description

1. Brake judder concern has the following 3 characteristics:

Steering wheel vibration

1. The steering wheel vibrates in the rotation direction. This characteristic is most noticeable when applying brakes at a vehicle speed of **100—140 km/h {62.2—86.9 mph}**.

Floor vibration

1. When applying the brakes, the vehicle body shakes back and forth. The seriousness of the shaking is not influenced by vehicle speed.

Brake pedal vibration

1. When applying the brakes, a pulsating force tries to push the brake pad back. The pulsation is transmitted to the brake pedal.
2. The following are the main possible causes of brake judder:

Due to an excessive runout (side-to-side wobble) of the disc plate, the thickness of the disc plate is uneven.

1. If the runout is **more than 0.04 mm {0.002 in}** at the position **10 mm {0.39 in}** from the disc plate edge, uneven wear occurs on the disc plate because the pad contacts the plate unevenly.
2. If the runout is **less than 0.04 mm {0.002 in}**, uneven wear does not occur.

The disc plate is deformed by heat.

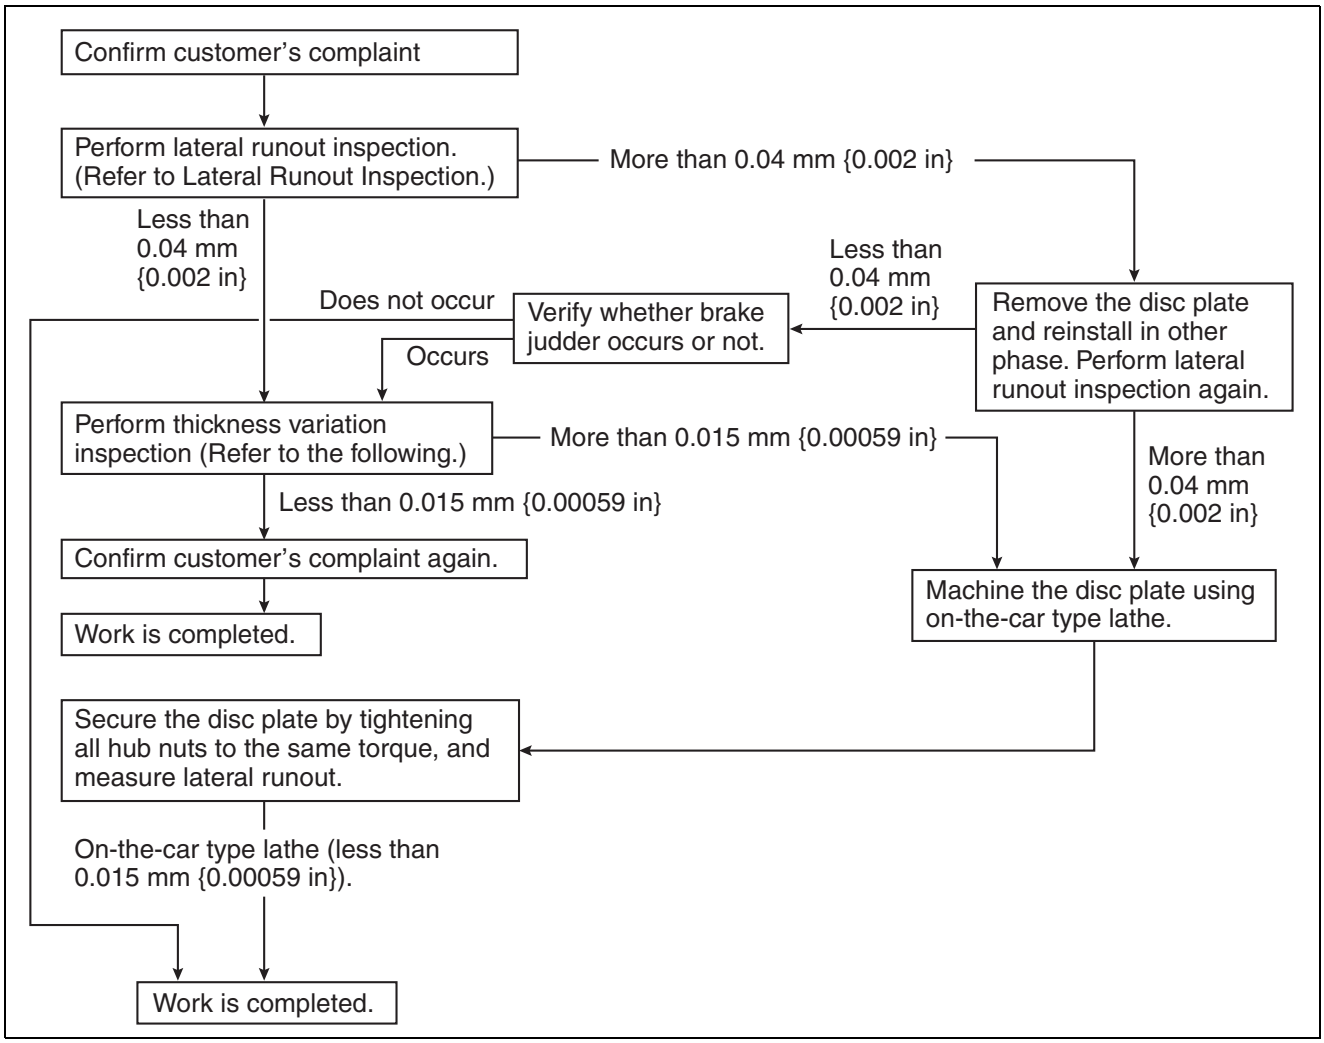
1. Repeated panic braking may raise the temperature in some portions of the disc plate by **approx. 1,000 °C {1,832 °F}**. This results in a deformed disc plate.

Due to corrosion, the thickness and friction coefficient of the disc plate change.

1. If the vehicle is parked in damp conditions for a long time, corrosion occurs on the friction surface of the disc plate.
2. The thickness of corrosion is uneven and sometimes appears like a wave pattern, which changes the friction coefficient and causes a reaction force.

CONVENTIONAL BRAKE SYSTEM

Inspection and repair procedure



am5ezw0000429

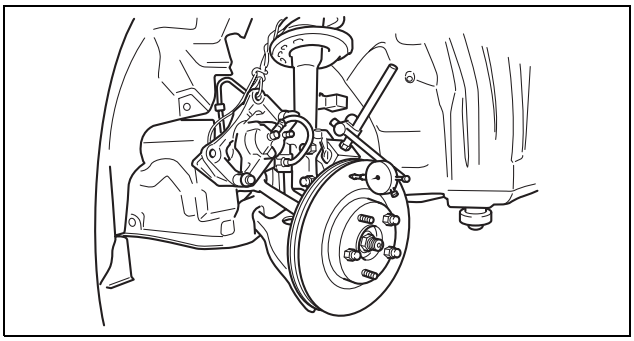
Lateral runout inspection

1. To secure the disc plate and the hub, insert the washer (thickness **10 mm {0.39 in}**, inner diameter **more than 12 mm {0.47 in}**) between each hub bolt and the hub nut, then tighten all the hub nuts.

   Note
   - The component parts of the **SST** (49 B017 001 or 49 G019 003) can be used as a suitable washer.

2. After tightening all the hub nuts to the same torque, put the dial gauge on the friction surface of the disc plate **10 mm {0.39 in}** from the disc plate edge.
3. Rotate the disc plate one time and measure the runout.

   Front disc plate runout limit
   0.04 mm {0.002 in}



ac5wzw0000019

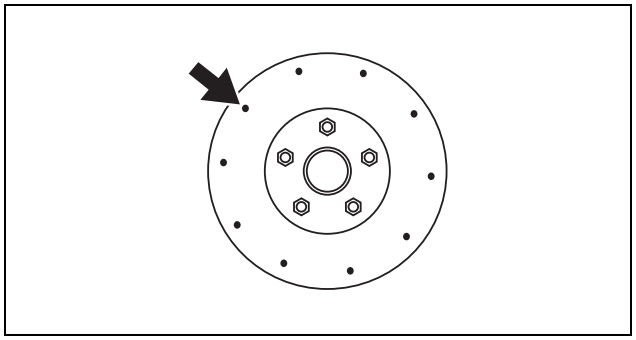
CONVENTIONAL BRAKE SYSTEM

Thickness variation inspection

1. Clean the disc plate-to-pad friction surface using a brake cleaner.
2. Measure the points indicated in the illustration using a caliper (micrometer).
3. Subtract the minimum value from the maximum, and if the result is not within the specification, machine the disc plate using a lathe.

Thickness variation limit
0.015 mm {0.00059 in}

Warning
- **Do not exceed minimum disc plate thickness.**



am5ezw0000430

Disc Plate Thickness Inspection

Caution
- **Excessive runout may result if the disc plate is removed from the vehicle then machined. Machine the disc plate while installed on the vehicle.**

1. Measure the thickness of the disc plate.
   - If the thickness is not within the specification, replace the disc plate.

Minimum front disc plate thickness
26.0 mm {1.02 in}

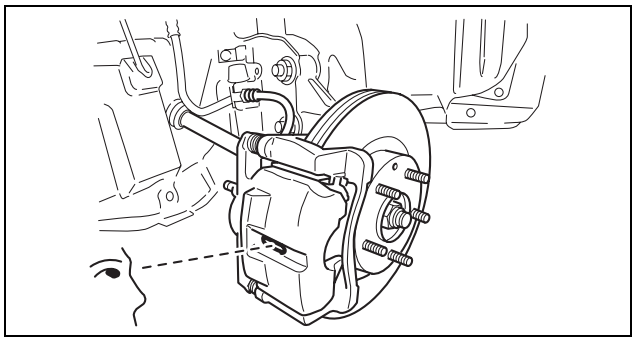
Minimum front disc plate thickness after machining using a brake lathe on-vehicle
26.8 mm {1.06 in}

Disc Pad Thickness Inspection

1. Jack up the front of the vehicle and support it with safety stands.
2. Remove the wheels and tires.
3. Verify the remaining thickness of the pads.

Minimum front disc pad thickness
2.0 mm {0.079 in} min.

4. Replace the pads as a set (right and left wheels) if either one is at or less than the minimum thickness.



ac5wzw0000019

CONVENTIONAL BRAKE SYSTEM

FRONT BRAKE (DISC) REMOVAL/INSTALLATION

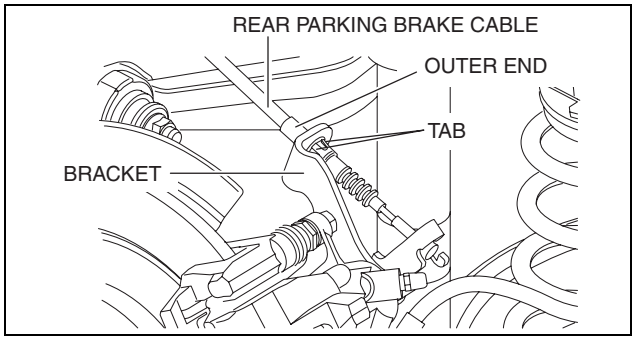
Rear Parking Brake Cable Removal Note

1. Remove the rear parking brake cable from the front parking brake cable. (See 04-12-5 FRONT PARKING BRAKE CABLE REMOVAL/INSTALLATION.)
2. Remove the rear parking brake cable from the rear caliper.
3. Remove the rear parking brake cable.

PARKING BRAKE SYSTEM

Rear Parking Brake Cable Installation Note

1. Install the rear parking brake cable to the rear caliper.
2. Verify that the outer end tabs of the rear parking brake cable is securely engaged with the bracket.



ac5wzw0000025

PARKING BRAKE SWITCH INSPECTION

id041200800700

1. Disconnect the parking brake switch connector.
2. Verify that the continuity is as indicated in the table.
   - If not as indicated in the table, replace the parking brake switch.

DYNAMIC STABILITY CONTROL

DSC HU/CM REMOVAL/INSTALLATION

id041500801000

Warning

- **If the DSC HU/CM configuration is not completed, it could result in an unexpected accident due to the DSC being inoperative. If the DSC HU/CM is replaced, always use the automatic configuration function so that the DSC operation conditions are correct.**
- **If the DSC related parts sensor initialization procedure is not completed, the DSC will not operate properly and it might cause an unexpected accident. Therefore, after replacing or removing the DSC HU/CM, make sure to perform the DSC related parts sensor initialization procedure to insure proper DSC operation.**

Caution

- **The internal parts of the DSC HU/CM could be damaged if dropped. Be careful not to drop the DSC HU/CM. Replace the DSC HU/CM if it is subjected to an impact.**

Note

- When the ignition is switched to ON or the engine is started after the DSC HU/CM have been replaced, the DSC CM reads data from the instrument cluster via CAN communication to perform automatic configuration.
- The DSC HU/CM prior to replacement stores the vehicle specification information.
- A new DSC HU/CM does not store any vehicle specification information.

1. Remove the following parts.
   - Plug hole plate. (SKYACTIV-G 2.0) (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   - Engine cover. (SKYACTIV-D 2.2) (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
2. Perform the following procedure. (SKYACTIV-D 2.2)
   (1) Disconnect the PCM connector (vehicle front-side).
   (2) Remove the harness blacket from the No.3 engine mount. (See 01-10B-80 ENGINE MOUNT DISASSEMBLY/ASSEMBLY [SKYACTIV-D 2.2].)
   (3) Set the PCM harness out of the way.
3. Remove the bracket.
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.
6. After installation, add brake fluid, bleed the air, and inspect for fluid leakage. (See 04-11-4 BRAKE FLUID AIR BLEEDING.)
7. Perform the following procedure to implement the DSC HU/CM automatic configuration.
   (1) Switch the ignition ON (engine off) and wait for **10 s or more**.
   (2) Switch the ignition to off and wait for **3 s or more**.
   (3) Switch the ignition ON (engine off) and wait for **3 s or more**.
   (4) The automatic configuration procedure is completed.
8. Perform the DSC related parts sensor initialization procedure. (See 04-15-7 DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE.)
9. Perform the tire pressure monitoring system initialization procedure. (See 02-12-4 TIRE PRESSURE MONITORING SYSTEM INITIALIZATION PROCEDURE.)
10. Clear the DTCs from the memory. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)

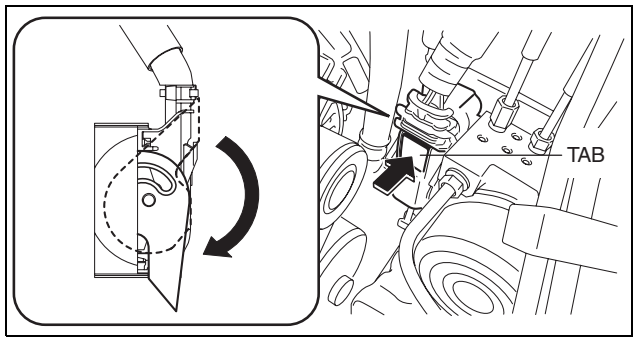
DSC HU/CM Connector Removal Note

1. Pull the lock lever down in the direction of the arrow while pressing the tab of the connector cover.
2. Pull the connector toward the vehicle rear and remove it.

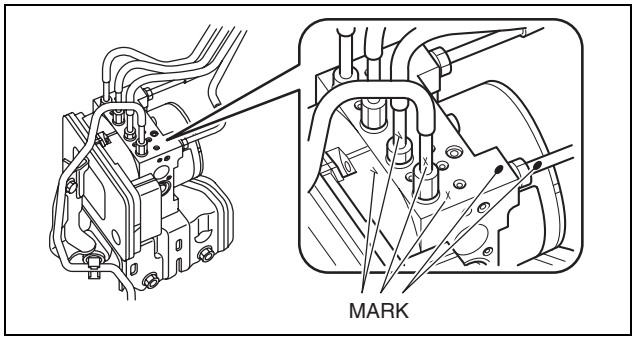


ac5wzw0000023

DYNAMIC STABILITY CONTROL

Brake Pipe Removal Note

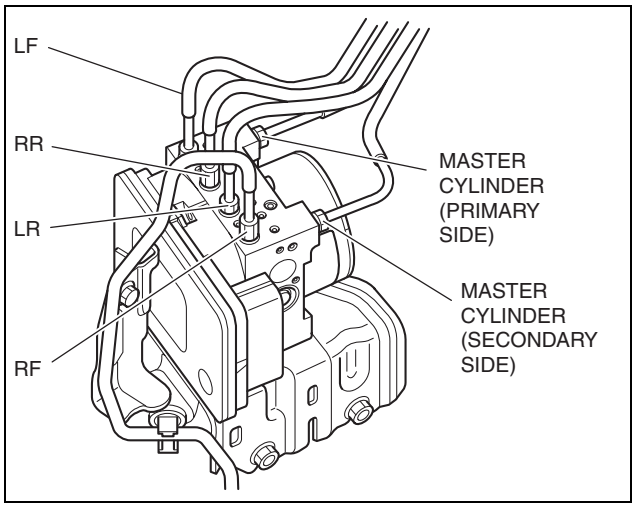
1. Place an alignment mark on the brake pipe and DSC HU/CM.
2. Apply protective tape to the connector to prevent brake fluid from entering.
3. Disconnect the brake pipes.



ac5wzw0000023

Brake Pipe Installation Note

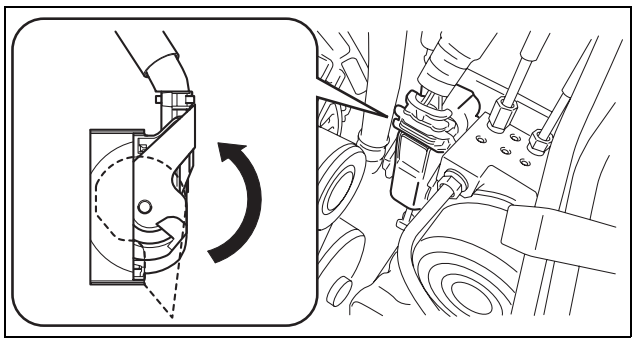
1. Align the marks made before removal and install the brake pipe to the DSC HU/CM and brake pipe joint referring to the figure.
2. Tighten the brake pipe to the specified torque using the commercially available flare nut wrench.



ac5wzw0000253

DSC HU/CM Connector Installation Note

1. Connect the connector and pull the lock lever up in the direction of the arrow.
2. After connecting the connector, verify that the connector cover is completely pushed in.



ac5wzw0000023

DYNAMIC STABILITY CONTROL

DSC RELATED PARTS SENSOR INITIALIZATION PROCEDURE

id041500870200

Warning

- **If the initialization procedure is not completed, the DSC will not operate properly and it might cause an unexpected accident. Therefore, after replacing or removing the DSC HU/CM or SAS control module, make sure to perform the initialization procedure to insure proper DSC operation.**

1. Inspect the wheel alignment and the tire pressure.
   - If there is any malfunction, adjust the applicable part.
2. Position the vehicle on level ground.
3. Switch the ignition to off.
4. Connect the M-MDS (IDS) to DLC-2.
5. After the vehicle is identified, select the following items from the initial screen of the IDS.
   1. Select “Chassis”.
   2. Select “ABS/DSC”.
   3. Select “Sensor Initialization”.
6. Then, select an item from the screen menu.
   - “Brake fluid pressure sensor”
   - “Lateral Acceleration Sensor”
   - “Yaw Rate Sensor”
   - “Longitudinal Acceleration Sensor”
7. Perform the procedure according to the directions on the screen.
8. Drive the vehicle.
9. After **5 min or more** of driving, verify that the DSC system is normal.

DSC HU/CM INSPECTION

id041500801100

1. Disconnect the DSC HU/CM connector. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
2. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].), (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].), (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
3. Attach the tester lead to the DSC HU/CM wiring harness-side connector and inspect voltage, continuity, or resistance according to the standard (reference) on the table.

Standard (Reference)

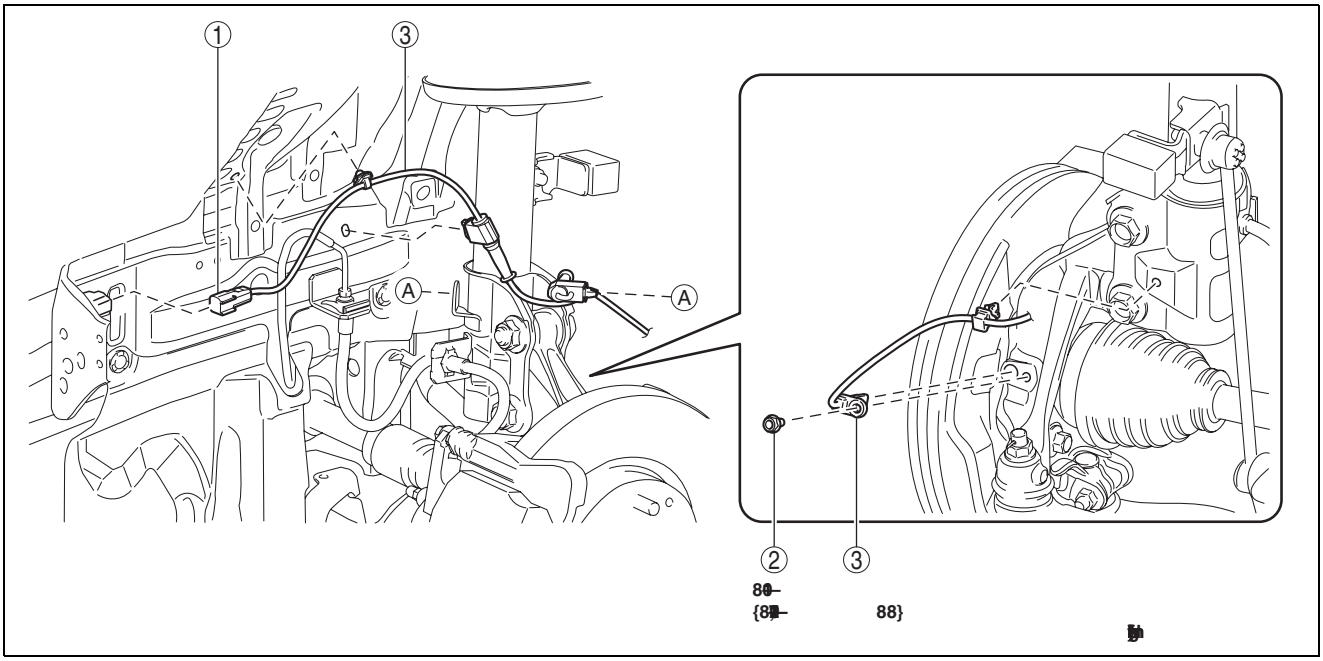
FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

id041500800300

1. Remove the mudguard. (See 09-16-47 MUDGUARD REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. After installation, verify that there is no twisting in the front ABS wheel-speed sensor.



ac5wzw0000022

1	Connector
2	Bolt
3	Front ABS wheel-speed sensor

DYNAMIC STABILITY CONTROL

FRONT ABS WHEEL-SPEED SENSOR INSPECTION

id041500800400

Sensor Output Value Inspection

Caution
- **Resistance inspection using other testers may cause damage to the ABS wheel-speed sensor internal circuit. Be sure to use the M-MDS to inspect the ABS wheel-speed sensor.**

1. Switch the ignition to off.
2. Connect the M-MDS to the DLC-2.
3. Select the following PIDs using the M-MDS:
   - WSPD_SEN_LF (LF wheel-speed sensor)
   - WSPD_SEN_RF (RF wheel-speed sensor)
4. Start the engine and drive the vehicle.
5. Verify that the display of the M-MDS shows the same value as the speedometer.
   - If there is any malfunction, replace the ABS wheel-speed sensor.

Installation Visual Inspection

1. Inspect for the following:
   - If there is any malfunction, replace the part.

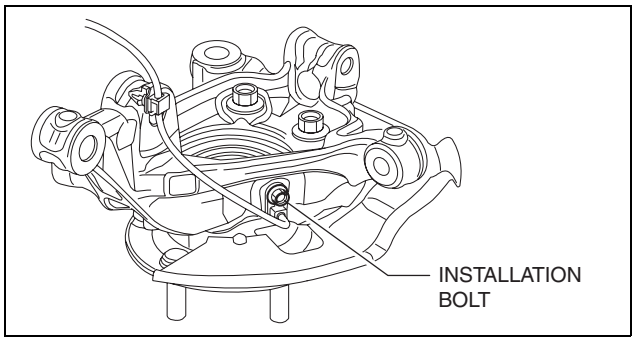
(1) Excessive play of the ABS wheel-speed sensor
(2) Deformation of the ABS wheel-speed sensor
(3) Deformation or damage of the ABS sensor rotor

Clearance Inspection

Preparation prior to inspection

1. Remove the ABS wheel-speed sensor. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
2. Remove the wheel hub and steering knuckle as a single unit. (See 03-11-3 WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION.)
3. Install the ABS wheel-speed sensor to the removed wheel hub, steering knuckle component, and tighten to the specified torque.

   Tightening torque
   8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}



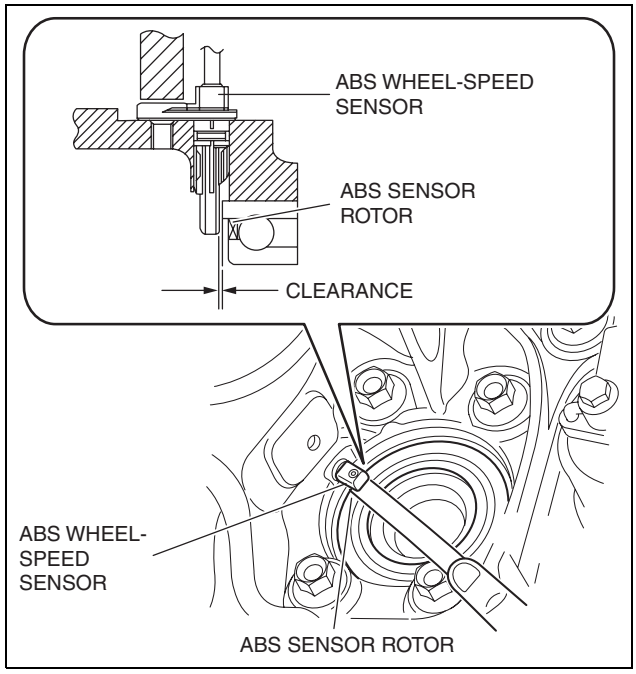
ac5wzw0000085

DYNAMIC STABILITY CONTROL

Clearance Inspection

1. Measure the gap between the ABS sensor rotor and ABS wheel-speed sensor using a feeler gauge.
   - If not within the specification, verify the following items and repair or replace if necessary.
     — Is there deformation or damage to the ABS sensor rotor?
     — Is there deformation or damage to the ABS wheel speed sensor?
     — Is there foreign material adhering?

Clearance
0.87—1.53 mm {0.035—0.060 in}



ac5wzw0000229

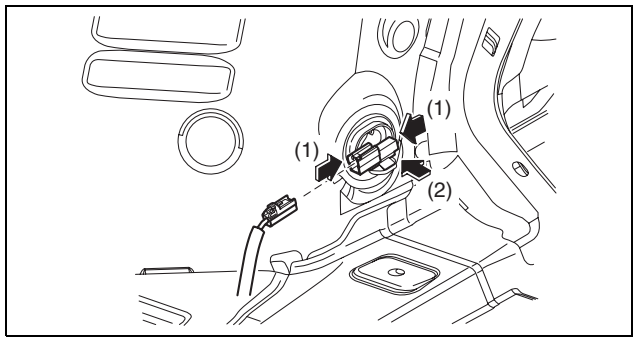
Servicing after inspection

1. Remove the ABS wheel-speed sensor from the wheel hub, steering knuckle component.
2. Install the wheel hub, steering knuckle component. (See 03-11-3 WHEEL HUB, STEERING KNUCKLE REMOVAL/INSTALLATION.)
3. Install the ABS wheel-speed sensor. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
4. Inspect the front wheel alignment. (See 02-11-1 FRONT WHEEL ALIGNMENT.)

REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

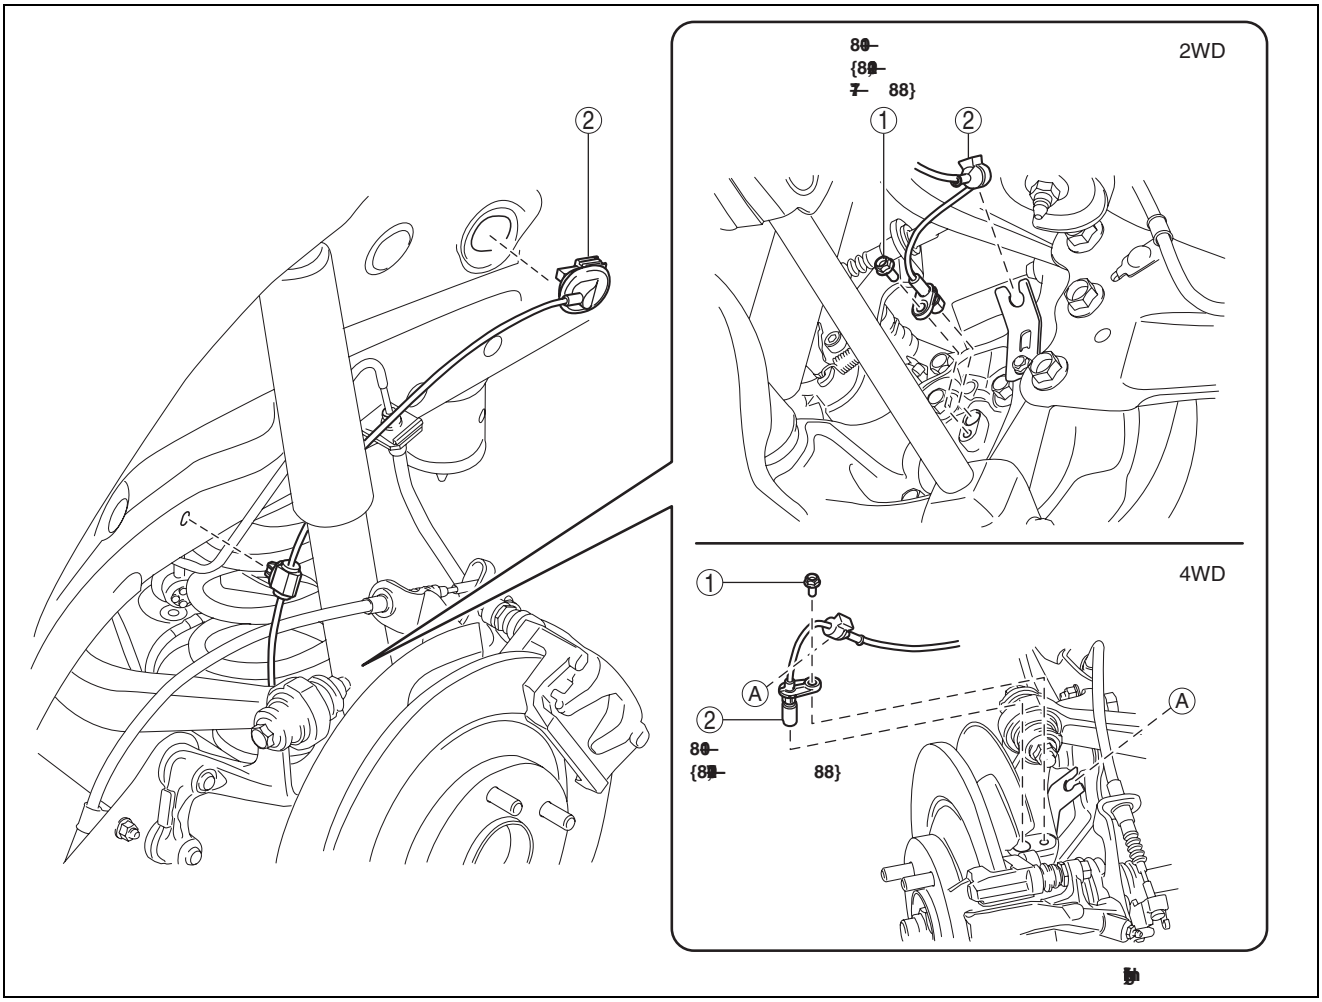
id041500800100

1. Remove the trunk board. (See 09-17-85 TRUNK BOARD REMOVAL/INSTALLATION.)
2. Remove the trunk end trim. (See 09-17-78 TRUNK END TRIM REMOVAL/INSTALLATION.)
3. Remove the rear scuff plate. (See 09-17-63 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
4. Remove the trunk side trim. (See 09-17-80 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
5. Disconnect the rear ABS wheel-speed sensor connector.
6. Press the rear ABS wheel-speed sensor tabs and press out the sensor toward the outside of the vehicle.
7. Remove in the order indicated in the table.
8. Install in the reverse order of removal.
9. After installation, verify that there is no twisting in the rear ABS wheel-speed sensor.



ac5wzw0000022

DYNAMIC STABILITY CONTROL



ac5wzw0000022

1	Bolt

2	Rear ABS wheel-speed sensor (See 04-15-12 Rear ABS Wheel-speed Sensor Removal Note.)

Rear ABS Wheel-speed Sensor Removal Note

1. Pull aside the mudguard and remove the rear ABS wheel-speed sensor.

DYNAMIC STABILITY CONTROL

REAR ABS WHEEL-SPEED SENSOR INSPECTION [2WD]

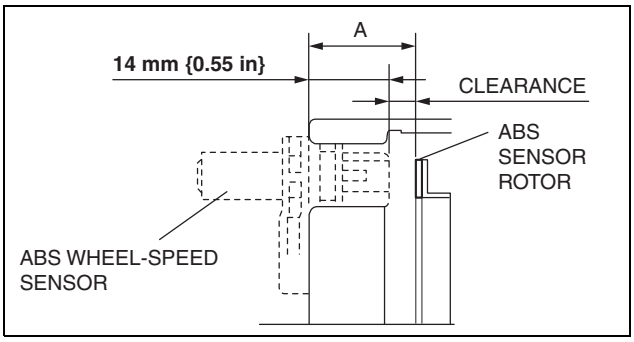
id0415008002a1

Installation Visual Inspection

1. Inspect the following items:
   - If there is any malfunction, replace the applicable part.
   (1) Excessive play of the ABS wheel-speed sensor
   (2) Deformation of the ABS wheel-speed sensor

Clearance Inspection

1. Remove the ABS wheel-speed sensor.
2. Measure the distance between the ABS wheel-speed sensor installation surface and the ABS sensor rotor. This is dimension A.
3. Calculate the clearance between the front ABS wheel-speed sensor and the ABS sensor rotor using the following formula:
   Clearance (mm {in}) = A-14 {0.55}
4. Verify that the clearance between the ABS sensor rotor and the ABS wheel-speed sensor is as indicated below.
   - If there is any malfunction, replace it.



ac5wzw0000228

Clearance
- **0.28—1.17 mm {0.012—0.046 in}**

Sensor Output Value Inspection

1. Switch the ignition to off.
2. Connect the M-MDS to the DLC-2.
3. Select the following PIDs using the M-MDS:
   - WSPD_SEN_LR (LR ABS wheel-speed sensor)
   - WSPD_SEN_RR (RR ABS wheel-speed sensor)
4. Start the engine and drive the vehicle.
5. Verify that the display of the M-MDS shows the same value as the speedometer.
   - If there is any malfunction, replace the ABS wheel-speed sensor.

REAR ABS WHEEL-SPEED SENSOR INSPECTION [4WD]

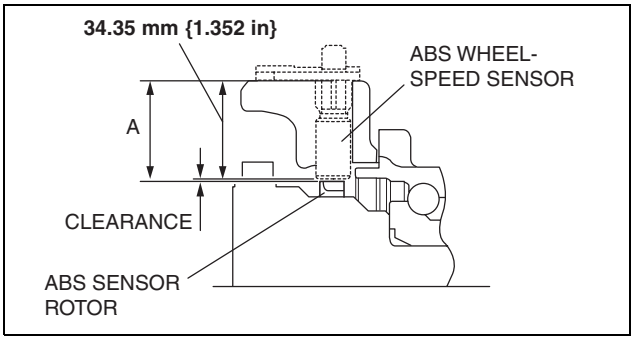
id0415008002a5

Installation Visual Inspection

1. Inspect the following items:
   - If there is any malfunction, replace the applicable part.
   (1) Excessive play of the ABS wheel-speed sensor
   (2) Deformation of the ABS wheel-speed sensor
   (3) Deformation or damage of the ABS sensor rotor

Clearance Inspection

1. Remove the ABS wheel-speed sensor.
2. Measure the distance between the ABS wheel-speed sensor installation surface and the ABS sensor rotor. This is dimension A.
3. Calculate the clearance between the front ABS wheel-speed sensor and the ABS sensor rotor using the following formula:
   Clearance (mm {in}) = A-34.35 {1.352}
4. Verify that the clearance between the ABS sensor rotor and the ABS wheel-speed sensor is as indicated below.
   - If there is any malfunction, replace it.



ac5wzw0000228

Clearance
- **0.3—1.4 mm {0.02—0.05 in}**

DYNAMIC STABILITY CONTROL

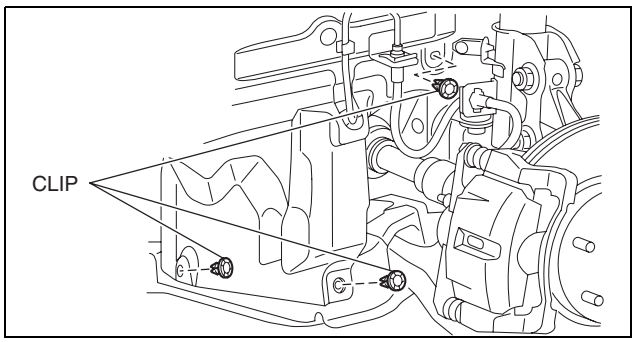
Sensor Output Value Inspection

1. Switch the ignition to off.
2. Connect the M-MDS to the DLC-2.
3. Select the following PIDs using the M-MDS:
   - WSPD_SEN_LR (LR ABS wheel-speed sensor)
   - WSPD_SEN_RR (RR ABS wheel-speed sensor)
4. Start the engine and drive the vehicle.
5. Verify that the display of the M-MDS shows the same value as the speedometer.
   - If there is any malfunction, replace the ABS wheel-speed sensor.

BRAKE FLUID PRESSURE SENSOR INSPECTION

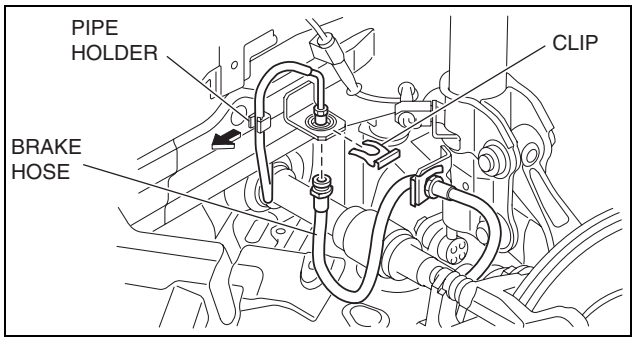
id041500801500

1. Switch the ignition to off.
2. Remove the clips.
3. Set the splash shield out of the way.



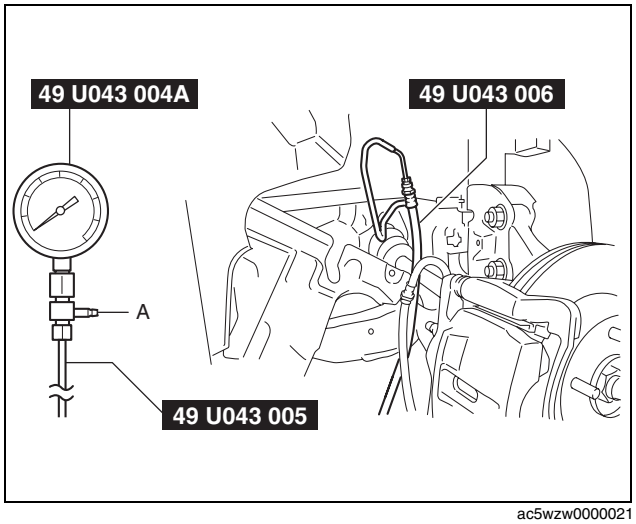
ac5wzw0000021

4. Disconnect the brake pipe from the LF brake hose.
5. Remove the clip.
6. Remove the LF brake hose from the bracket.
7. Detach the brake pipe from the pipe holder.



ac5wzw0000021

8. Install the **SST** to the brake pipe as shown in the figure.
9. Bleed the brake line and the **SSTs** of air. Bleed the air form the **SSTs** using bleeder screw A.
10. Connect the M-MDS to the DLC-2.
11. Select the “BRK_F_P_R” PID.
12. Start the engine.
13. Depress the brake pedal, and confirm that the fluid pressure value of the **SST** (Gauge) and the value shown on the M-MDS are equal
    - If the fluid pressures are different, replace the DSC HU/CM. (See 04-15-4 DSC HU/CM REMOVAL/INSTALLATION.)
14. After the inspection, remove the **SSTs**, install the brake hose, clamp, and brake pipe to the original positions, and then bleed the air from the brake line. (See 04-11-30 BRAKE HOSE (FRONT) REMOVAL/INSTALLATION.) (See 04-11-4 BRAKE FLUID AIR BLEEDING.)



ac5wzw0000021

DYNAMIC STABILITY CONTROL

TCS OFF SWITCH REMOVAL/INSTALLATION

id041500803000

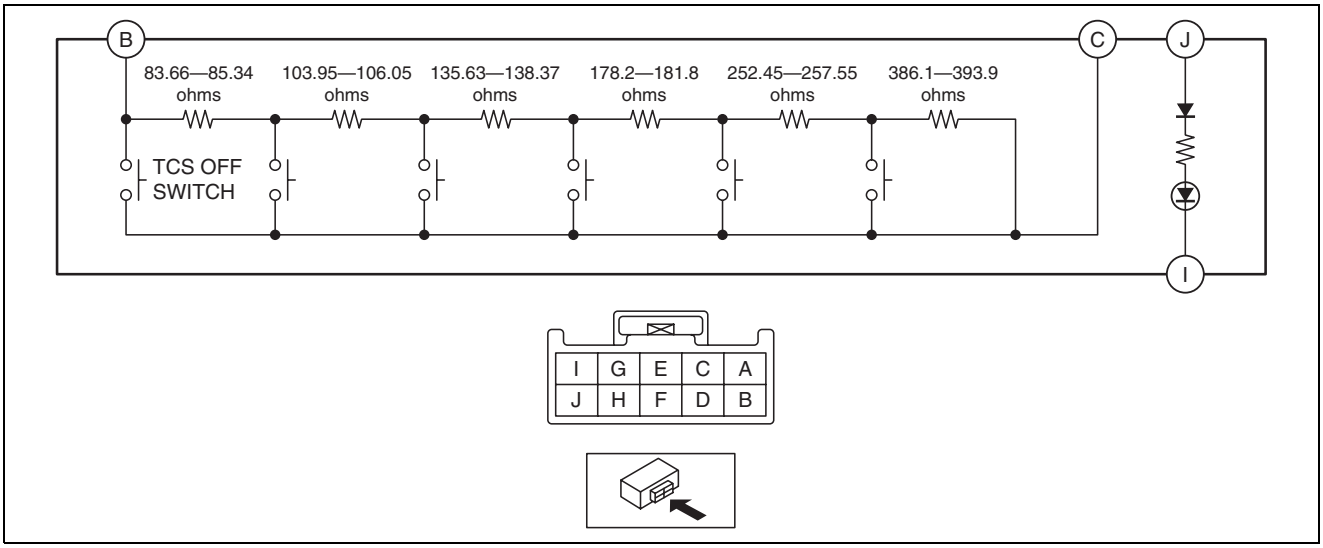
Note
- The TCS OFF switch is integrated with the cluster switch.
- Refer to SWITCH PANEL REMOVAL/INSTALLATION to remove the cluster switch.

1. Remove the cluster switch from the switch panel. (See 09-17-18 SWITCH PANEL REMOVAL/INSTALLATION.)
2. Install in the reverse order of removal.

TCS OFF SWITCH INSPECTION

id041500803100

1. Remove the TCS OFF switch. (See 04-15-15 TCS OFF SWITCH REMOVAL/INSTALLATION.)
2. Verify that the resistance between the TCS OFF switch terminals B and C is as indicated in the table.
   - If not as indicated in the table, replace the TCS OFF switch.



ac5wzw0000024

TCS OFF switch specification

Terminal	Test condition	Resistance (ohms)
B—C	Switch pressed	0
	Switch released	1139.99—1163.01

3. Apply battery voltage to TCS OFF switch terminal J, and connect terminal I to ground.
4. Verify that the LED illuminates.
   - If there is any malfunction, replace the TCS OFF switch.

DYNAMIC STABILITY CONTROL

LASER SENSOR INSPECTION

id041500802700

Simple Inspection

Warning

- **To prevent eye injury, do not peer directly into the laser sensor using optical instruments with a magnification function such as magnifying glasses or microscopic and objective lenses within a distance of 100 mm {3.94 in} from the sensor.**
- **Because a simple reflector held with a hand is required, if heavy material such as a steel plate is used, it could be dropped resulting in an accident. Therefore, use light materials such as a plastic plate or cardboard when making the reflector.**

Caution

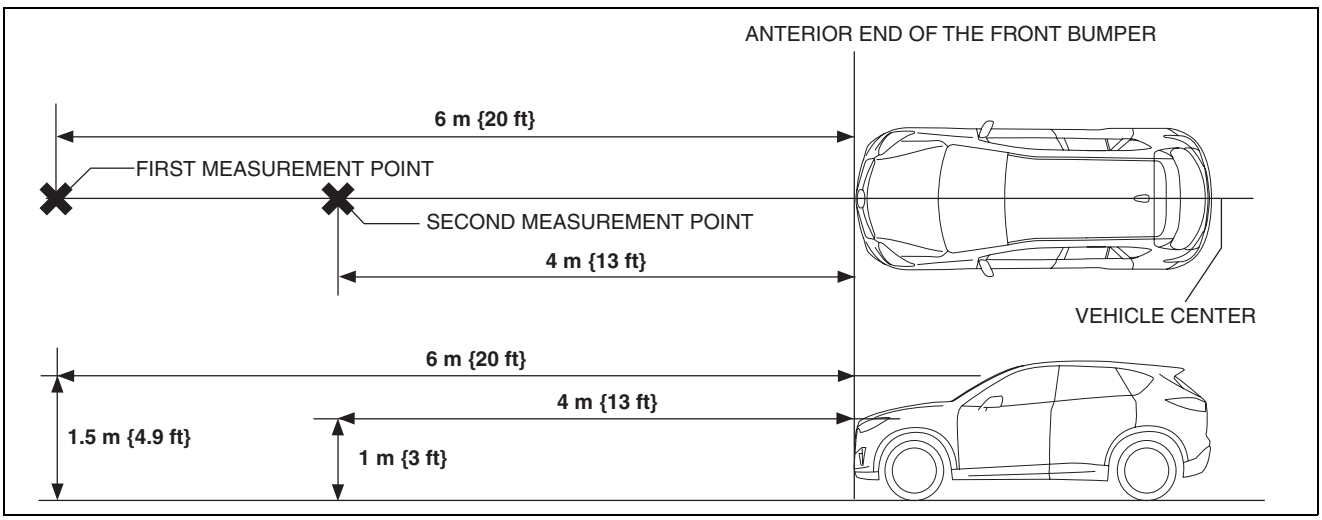
- **Perform the work in an area where 6 m or more of space from the front of the vehicle is available.**
- **Remove cargo from the cabin and trunk compartment so that the vehicle is in an unloaded condition.**
- **Adjust the air pressure of each tire to the specified value.**

1. To make the simple reflector, overlap three pieces of commercially available aluminum foil and adhere them to a plastic plate or piece of cardboard with a length of 50 cm or more on one side.

Note

- If two or fewer pieces of aluminum foil are used, near-infrared reflection may weaken and the M-MDS will be unable to measure the correct distance.
- A reflective material or material which facilitates near-infrared light reflection can be substituted for the aluminum foil.

2. Park the vehicle on level ground.
3. Connect the M-MDS to the DLC-2.
4. After vehicle identification, the following can be selected from the IDS initialization screen.
   (1) [Data logger]
   (2) [Module]
   (3) [SCBS]
5. Select “DIST_BMP_TGT” from PID/DATA Monitor Table.
6. **Stand at the position 6 m {20 ft}** from the front end of the front bumper and hold the simple reflector made in Step 1 at a height of **1.5 m {4.9 ft}** from the ground to verify that the M-MDS screen display is at **6 m**.
7. Then, move to the position **4 m {13 ft}** from the front end of the front bumper and hold the simple reflector at a height of **1 m {3 ft}** from the ground to verify that the M-MDS screen display is at **4 m**.



ac5wzw0000455

Note

- The brand emblem of the front bumper indicates the center position at the rear of the vehicle.
- The “DIST_BMP_TGT” monitoring value is displayed in **0.5 m** increments.

DYNAMIC STABILITY CONTROL

8. If there is a malfunction, verify that there is no damage with the laser sensor tab and in the laser sensor installation area of the windshield. (See 04-15-17 LASER SENSOR REMOVAL/INSTALLATION.)
   - If there is a malfunction with the laser sensor tab, replace the laser sensor. (See 04-15-17 LASER SENSOR REMOVAL/INSTALLATION.)
   - If there is a malfunction in the laser sensor installation area of the windshield, replace the windshield. (See 09-12-17 WINDSHIELD REMOVAL.) (See 09-12-19 WINDSHIELD INSTALLATION.)

LASER SENSOR REMOVAL/INSTALLATION

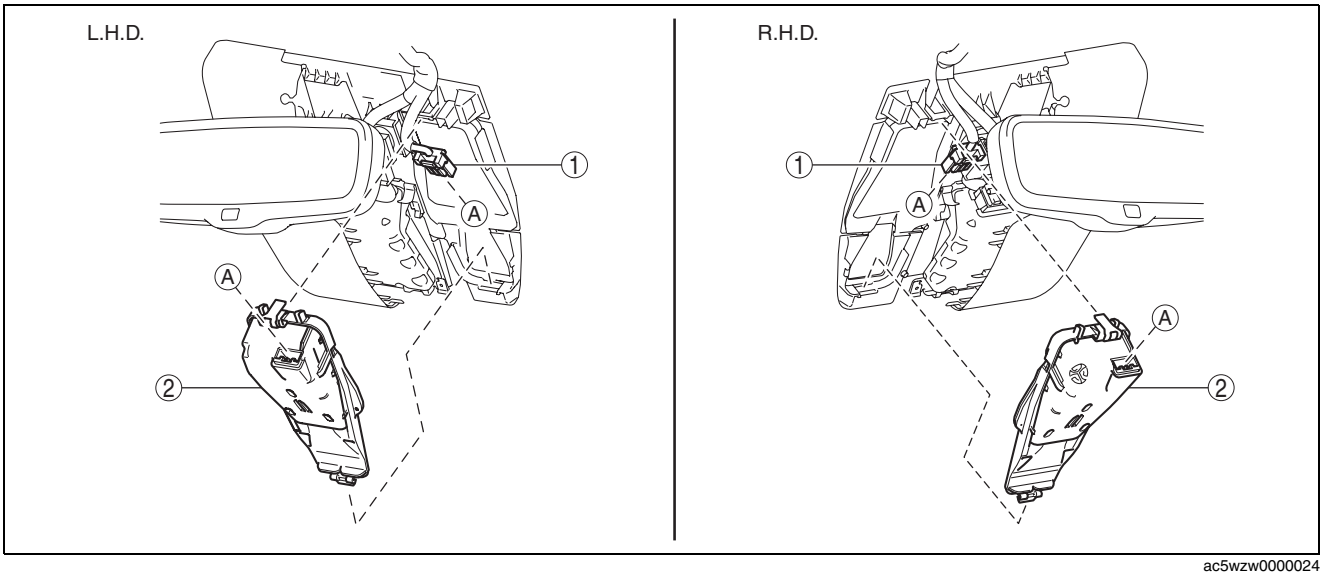
id041500802600

Warning
- **A removed laser sensor will not meet the conditions for a class 1M laser under the IEC 60825-1 specification and therefore eye safety cannot be assured.**
- **To prevent eye injury, do not peer directly into the laser sensor using optical instruments with a magnification function such as magnifying glasses or microscopic and objective lenses within a distance of 100 mm {3.94 in} from the sensor.**

Caution
- **If the laser sensor is installed at an incorrect angle, the laser sensor cannot detect obstructions correctly which could result in an accident. When installing the laser sensor, verify that there is no damage or deformation to the installation part (bracket) and perform the installation correctly.**
- **If the laser sensor (windshield) gets hit, the laser sensor angle could change and the obstructions cannot be detected correctly which could result in an accident. If the laser sensor has been hit, always inspect for DTCs and verify that there is no malfunction in the Smart City Brake Support (SCBS) system.**
- **Do not disassemble the laser sensor because it cannot be disassembled together with the lens. If it has been disassembled, replace the laser sensor.**
- **The internal parts of the laser sensor could be damaged if dropped. Be careful not to drop the laser sensor. Replace the laser sensor if it is subjected to an impact.**

Note
- The laser sensor prior to replacement stores the vehicle specification information.
- A new laser sensor does not store any vehicle specification information.

1. Remove the cover A. (See 09-18-94 FORWARD SENSING CAMERA (FSC) REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.



ac5wzw0000024

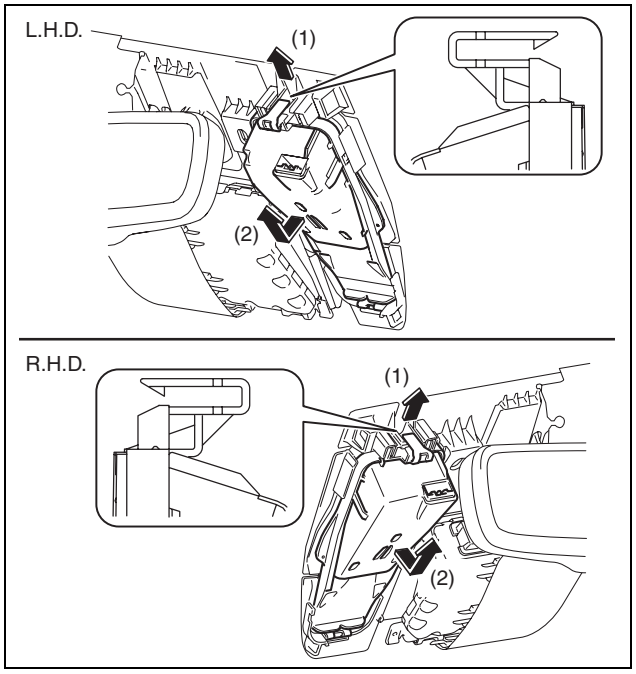
1	Connector

2	Laser sensor (See 04-15-18 Laser Sensor Removal Note.) (See 04-15-18 Laser Sensor Installation Note.)

DYNAMIC STABILITY CONTROL

Laser Sensor Removal Note

1. Remove the laser sensor in the order shown in the figure.



ac5wzw0000024

Laser Sensor Installation Note

1. When installing the laser sensor, listen for a click indicating the laser sensor is securely installed.
2. Make sure that the laser sensor tab is caught properly.

04-50 TECHNICAL DATA

BRAKES TECHNICAL DATA 04-50–1

TECHNICAL DATA

BRAKES TECHNICAL DATA

id045000800100

Item	Specification
Brake fluid type	European (L.H.D. U.K.) specs.: SAE J1703 or FMVSS116 DOT-3 or DOT-4 Australian, China, and General (L.H.D. R.H.D.) specs.: SAE J1703 or FMVSS116 DOT-3
Brake pedal height (reference value)	134 mm {5.28 in}
Brake pedal play	3—5 mm {0.12—0.19 in}
Brake pedal-to-floor clearance (Brake pedal when depressed at 147 N {15.0 kgf, 33.0 lbf})	95 mm {3.7 in} or more
Front disc plate runout limit	0.04 mm {0.002 in}
Minimum front disc plate thickness	26.0 mm {1.02 in}
Minimum front disc plate thickness after machining using a brake lathe on-vehicle	26.8 mm {1.06 in}
Minimum front disc pad thickness	2.0 mm {0.079 in} min.
Rear disc plate runout limit	0.1 mm {0.004 in}
Minimum rear disc plate thickness	8.0 mm {0.31 in}
Minimum rear disc plate thickness after machining using a brake lathe on-vehicle	8.8 mm {0.35 in}
Minimum rear disc pad thickness	2.0 mm {0.079 in} min.
Parking brake lever stroke when pulled at 98 N {10 kgf, 22 lbf}	2—3 notches

Master cylinder fluid pressure

Vacuum amount at 0 kPa {0 mmHg, 0 inHg}	
Pedal force	**Fluid pressure**
200 N {20.4 kgf, 45.0 lbt}	630 kPa {6.42 kgf/cm^2, 91.4 psi} or more

Master cylinder fluid pressure

Vacuum amount at 66.7 kPa {500 mmHg, 19.7 inHg}	
Pedal force	**Fluid pressure**
200 N {20.4 kgf, 45.0 lbt}	6,900 kPa {70.36 kgf/cm^2, 1,001 psi} or more

Vacuum pump vacuum specification (reference value)

Measurement condition		**Specification**
Engine speed	**Change in vacuum amount**	**Period of time change in vacuum amount condition met**
While idling (520—700 rpm (reference value))	From 60 kPa {450 mmHg, 18 inHg} to 67 kPa {503 mmHg, 20 inHg}	8 s or less

Vacuum pump maximum vacuum specification (reference value)

Measurement condition	Specification
While idling (no time designation)	93.3 kPa {700 mmHg, 27.6 inHg} or more

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Verify that no DTCs are stored. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].)
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
- If the malfunction does not recur after the above servicing, explain to the customer that the vehicle is normal.

ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL]

id050227290100

Reading DTCs Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “TCM”.

   Note
   - Freeze frame data/snapshot data appears at the top of the help screen when the displayed DTC is selected.

   Freeze frame data
   - The freeze frame data consists of data for vehicle and transaxle control system operation conditions when malfunctions in the transaxle control system are detected and stored in the TCM.
   - Freeze frame data is stored at the instant the malfunction indicator lamp illuminates, and only a part of the DTC data is stored.

   Snapshot data
   - The data for all DTCs currently detected is stored.
     Recorded DTC timing
     - — For DTCs with one drive cycle, data is recorded during the malfunction determination period.
     - — For DTCs with two drive cycles, data is recorded during non-determination (1st diagnosis) periods.
3. Then, select the “Retrieve CMDTCs” and perform procedures according to directions on the M-MDS screen.
4. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the TCM. (See 05-02A-7 Freeze frame data item table.)

Freeze frame data item table

Note
- Refer to PID/DATA monitor table for confirm the transaxle control system operation status while the TCM does not store the DTC. (See 05-02A-94 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FW6A-EL, FW6AX-EL].)
- Freeze frame data items are not displayed, according to detected DTC.

—: Not applicable

Freeze frame data item	Unit	Description	Corresponding PID/DATA monitor item
LOAD	%	Calculated engine load	—
ECT	°C {°F}	Engine coolant temperature	ECT

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Clearing DTCs Procedures

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “TCM”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition to ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 05-02A-7 Reading DTCs Procedure.)
8. Verify that no DTCs are displayed.

ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL]

id050227950000

Foreword

- The on-board diagnosis test displays DTCs for locations determined to be malfunctioning based on the operation results from the forced operation of each solenoid and selection of each gear. Therefore, this is an effective mode if DTCs which do not specify the malfunctioning location, such as a gear ratio malfunction, are displayed.
- When the following DTCs displayed, perform the on-board diagnostic test.

DTC No.	Description
P0729:00	6GR incorrect ratio
P0731:00	1GR incorrect ratio
P0732:00	2GR incorrect ratio
P0733:00	3GR incorrect ratio
P0734:00	4GR incorrect ratio
P0735:00	5GR incorrect ratio
P0736:00	Gear reverse incorrect ratio
P0780:00	Gear shifting malfunction
P079A:00	Shift solenoid No.3 stuck off/On/off solenoid stuck on
P1738:00	Automatic transaxle internal malfunction
P1784:00	Hi cut valve stuck off/R-3-5 cut valve stuck on

- When DTCs are displayed by the on-board diagnosis test, perform the instructions in the applicable DTC troubleshooting.

Warning

- **The on-board diagnosis test forcibly changes gears within the driving shift range while the engine is running. Before implementing the on-board diagnosis test, securely apply the parking brake and set the wheel blocks for both the front and rear wheels. Otherwise, the vehicle will move which could cause injury or property damage.**

Note

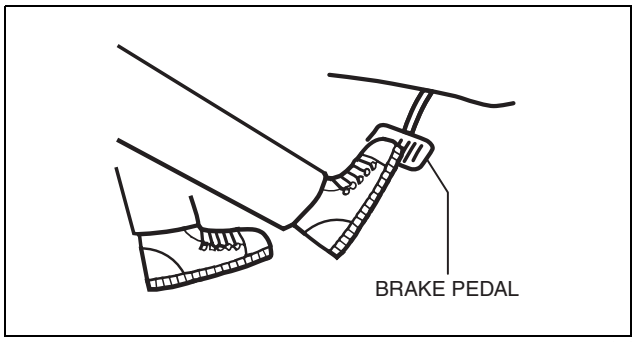
- The time required to perform the diagnostic is **2 to 3 min**.
- If unsafe actions such as shift operation and brake pedal release are detected before the shift position indicator light flashes, the on-board diagnostic test mode is canceled and the shift position indicator light flashes **5 times**.

1. Apply the parking brake firmly, and set the wheel blocks for both the front and rear wheels.
2. Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].)
3. Connect the M-MDS to the DLC-2.
4. Perform vehicle identification using the M-MDS.
5. Start the engine.
6. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Data Logger”.
   (2) Select “Modules”.
   (3) Select “TCM”.
7. While checking the PID TFT (ATF temperature), warm-up the engine completely and allow the ATF temperature to reach **55 °C {131 °F} or more**.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

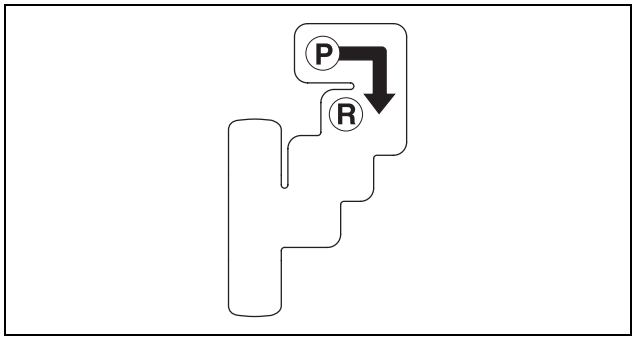
8. Select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “TCM”.
9. Perform the following steps (1) to (5) with the brake pedal depressed.

Note
- If the on-board diagnosis test is shut down (Shift position indicator light flashes 5 times), resume the procedure from Step 1.



ac5wzw0000404

(1) Shift the selector lever to the R position.

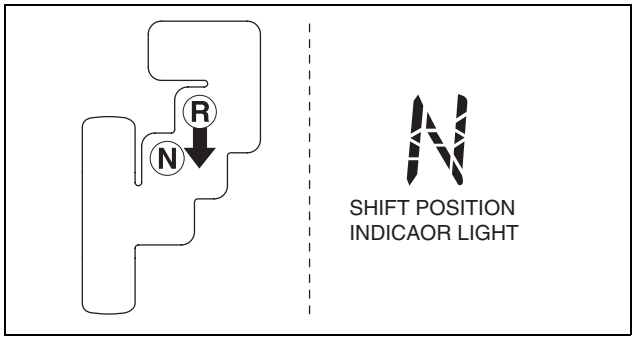


am3uuw0000875

(2) Clear DTCs using the M-MDS and verify that the shift position indicator light flashes 2 times. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].)

ac5wzw0000239

(3) Within **5 s** after the shift position indicator light flashes 2 times, shift the selector lever to the N position and verify that the shift position indicator light flashes 2 times.

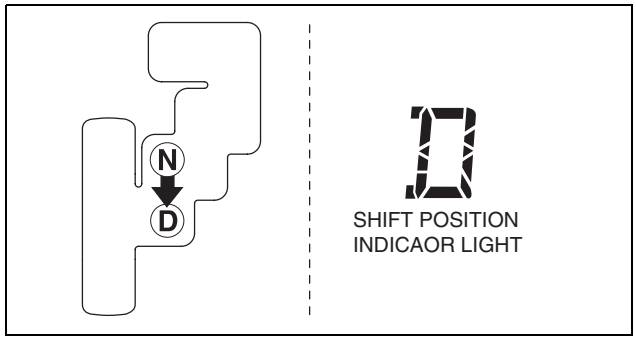


ac5wzw0000239

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

(4) Within **5 s** after the shift position indicator light flashes 2 times, shift the selector lever to the D position and verify that the shift position indicator light flashes 3 times.

Note
- **Approx. 30 s** is required until the shift position indicator light flashes. In addition, shift shock occurs a few times during stand-by.



ac5wzw0000239

(5) After the shift position indicator light flashes 3 times, shift the selector lever to the P position.

10. Release the brake pedal.
11. Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].)
    - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].)

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

*1 : :C: CMDTC self test, O: KOEO self test

DTC P0218:00 [FW6A-EL, FW6AX-EL]

id050227903700

DTC P0218:00	Automatic transaxle protection control
DETECTION CONDITION	• Under the following conditions, the ATF temperature is **135 °C {275 °F} or more** for **10 s**: — Engine is running. — Battery voltage is **8 V or more**. — TFT sensor related DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Oil cooler malfunction • ATF is more than specified value
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to Step 5. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
4	**INSPECT OIL COOLER** • Visually inspect the oil cooler. • Is there any malfunction?	Yes	Replace the oil cooler, then go to the next step. (See 05-17A-66 OIL COOLER REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine and wait for **10 s or more**. • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0500:00 [FW6A-EL, FW6AX-EL]

id050227321400

DTC P0500:00	Vehicle speed signal circuit malfunction
DETECTION CONDITION	• Under the following conditions, the vehicle speed signal input from DSC HU/CM is incorrect for **10 s**: — Engine is running. — Battery voltage is **8 V or more**. — Vehicle speed is **16 km/h {9.9 mph} or more**. — There is no difference in speed between turbine/input shaft speed sensor and output shaft speed sensor. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• DSC HU/CM DTC is stored. — ABS wheel-speed sensor malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY STORED DTC IN DSC HU/CM** • Perform the DSC HU/CM DTC inspection using the M-MDS. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Drive the vehicle for **10 s or more** under the following conditions: • Battery voltage: **8 V or more** • Vehicle speed: **45 km/h {28 mph} or more** • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0666:00 [FW6A-EL, FW6AX-EL]

id050227903800

DTC P0666:00	ECU internal temperature sensor circuit(s) malfunction
DETECTION CONDITION	• Under the following condition, there is malfunction in circuits of two or more ECU internal temperature sensors: — Battery voltage is **8 V or more**. • Under the following conditions, one ECU internal temperature sensor has malfunction, with difference in temperature between remaining two ECU internal temperature sensors being **10 °C {18 °F} or more**: — Battery voltage is **8 V or more**. — Soaked for **6 hours or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control.
POSSIBLE CAUSE	• Control valve body malfunction — ECU internal temperature sensor (built-into TCM) malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0667:00 [FW6A-EL, FW6AX-EL]

id050227903900

DTC P0667:00	**ECU internal temperature sensor two-range/performance problem**
DETECTION CONDITION	• Under the following conditions, the difference between ECU internal temperatures of three ECU internal temperature sensors is **10 °C {18 °F} or more**: — Engine is running. — Battery voltage is **8 V or more**. — Soaked for **6 hours or more**. — No malfunction in ECU internal temperature sensor circuit **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control.
POSSIBLE CAUSE	• Control valve body malfunction — ECU internal temperature sensor (built-into TCM) malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Soak for **6 hours or more**. 2. Start the engine, and warm it up until the ATF temperature is **60 °C {140 °F} or more**, and the engine coolant temperature is **80 °C {176 °F} or more**. • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P06B8:00 [FW6A-EL, FW6AX-EL]

id050227325000

DTC P06B8:00	NVRAM malfunction
DETECTION CONDITION	• Under the following condition, TCM internal NVRAM data retention/read/write disabled: — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• TCM initial learning error • Control valve body malfunction — TCM internal NVRAM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**PERFORM INITIAL LEARNING** • Perform the initial learning. (See 05-17A-74 INITIAL LEARNING [FW6A-EL, FW6AX-EL].) • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Is the DTC P06B8:00 also present?	Yes	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0706:00 [FW6A-EL, FW6AX-EL]

id050227817000

DTC P0706:00	Transaxle range sensor range/performance problem
DETECTION CONDITION	• Under the following condition, pattern identification error in switch condition of transaxle range sensors 1 to 4: — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Transaxle range sensor (built-into TCM) malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0707:00 [FW6A-EL, FW6AX-EL]

id050227817100

DTC P0707:00	**Transaxle range sensor circuit low input**
DETECTION CONDITION	• Under the following condition, incorrect voltage in any of transaxle range sensors 1 to 4: — Battery voltage is **8 V or more**. **Diagnostic support note** • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Transaxle range sensor (built-into TCM) malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0708:00 [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CONFIRM IAT SENSOR PENDING CODE/DTC** • Perform the PCM DTC inspection using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are IAT sensor pending codes/DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the coupler component. (See 05-17A-16 COUPLER COMPONENT REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].) Go to the next step.
		No	Replace the coupler component, then go to the next step. (See 05-17A-16 COUPLER COMPONENT REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition to ON (engine off or on) and wait for **5 s or more**. 2. Verify that the IAT is **–25 °C {–13 °F} or more**. • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0716:00 [FW6A-EL, FW6AX-EL]

id050227904000

DTC P0716:00	Turbine/Input shaft speed sensor range/performance problem
DETECTION CONDITION	• Under the following conditions, the turbine/input shaft speed is **9,000 rpm or more** for **1 s**: — Engine is running. — Battery voltage is **10 V or more**. — Engine speed is **7,500 rpm or less**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to TCC control. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS. • Inhibits 5GR and 6GR. • Inhibits shift down when the accelerator pedal is depressed.
POSSIBLE CAUSE	• Turbine/Input shaft speed sensor malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Drive the vehicle for **1 s or more** under the following condition: • Vehicle speed: **30 km/h {19 mph} or more** • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0717:00 [FW6A-EL, FW6AX-EL]

id050227821300

DTC P0717:00	**Open circuit in turbine/input shaft speed sensor circuit**
DETECTION CONDITION	• Under the following conditions, the turbine/input shaft speed sensor signal is not input for **1 s**: — Engine is running. — Battery voltage is **10 V or more**. — Vehicle speed signal related DTC is not recorded. — Vehicle speed is **16 km/h {9.9 mph} or more**. — There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. — DTC U0121:00 is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to TCC control. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS. • Inhibits 5GR and 6GR. • Inhibits shift down when the accelerator pedal is depressed.
POSSIBLE CAUSE	• Turbine/Input shaft speed sensor malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Drive the vehicle for **1 s or more** under the following condition: • Vehicle speed: **16 km/h {9.9 mph} or more** • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0721:00 [FW6A-EL, FW6AX-EL]

id050227904100

DTC P0721:00	Output shaft speed sensor range/performance problem
DETECTION CONDITION	• Under the following conditions, the output shaft speed is **13,560 rpm or more** for **1 s**: — Engine is running. — Battery voltage is **10 V or more**. • Under the following conditions, the vehicle speed signal from the DSC HU/CM and the output shaft speed sensor signal differ by **520 rpm or more** for **1 s**: — Engine is running. — Battery voltage is **10 V or more**. — Vehicle speed signal related DTC is not recorded. — Vehicle speed is **16 km/h {9.9 mph} or more**. — Vehicle speed signal from DSC HU/CM and turbine/input shaft speed sensor signal do not differ. — Output shaft speed sensor signal is input. — Output shaft speed is **13,560 rpm or less**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Output shaft speed sensor malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CONFIRM DSC HU/CM DTC** • Perform the DSC HU/CM DTC inspection using the M-MDS. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	**VERIFY THE INSTRUMENT CLUSTER REPAIR HISTORY** • Does the instrument cluster have a record of replacement?	Yes	Perform the instrument cluster configuration, then go to Step 6. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to the next step.
3	**VERIFY THE AUTOMATIC TRANSMISSION REPAIR HISTORY** • Does the automatic transmission (with control valve body) have a record of replacement?	Yes	Perform the TCM configuration. (See 05-17A-79 TCM CONFIGURATION [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
4	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
5	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Drive the vehicle for **1 s or more** under the following condition: • Vehicle speed: **30 km/h {19 mph} or more** • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0722:00 [FW6A-EL, FW6AX-EL]

id050227821500

DTC P0722:00	**Open circuit in output shaft speed sensor circuit**
DETECTION CONDITION	• Under the following conditions, the output shaft speed sensor signal is not input for **1 s**: — Engine is running. — Battery voltage is **10 V or more**. — Vehicle speed signal related DTC is not recorded. — Vehicle speed is **16 km/h {9.9 mph} or more**. — There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. — DTC U0121:00 is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Output shaft speed sensor malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Drive the vehicle for **1 s or more** under the following condition: • Vehicle speed: **16 km/h {9.9 mph} or more** • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0729:00 [FW6A-EL, FW6AX-EL]

id050227822000

DTC P0729:00	6GR incorrect ratio
DETECTION CONDITION	• In D position, 6GR, the following phenomenon occurs: — Engine speed and turbine/input shaft speed deviates by **600 rpm** for **230 to 1,980 ms** (varies with ATF temperature and ECT) during shift-up. — Engine speed and turbine/input shaft speed deviates by **300 rpm** for **1,500 to 3,900 ms** (varies with ATF temperature) while driving without shifting. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch burnt • Shift solenoid malfunction • ATF leakage from clutch circuit • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Are any the following DTCs displayed? — P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P079A:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

DTC P0731:00 [FW6A-EL, FW6AX-EL]

id050227817800

DTC P0731:00	**1GR incorrect ratio**
DETECTION CONDITION	• In D position, 1GR, the following phenomenon occurs: — Speed ratio is **0.75 to 1.2** for **2,000 ms** while vehicle is stopped in D position. — Engine speed and turbine/input shaft speed deviates by **600 rpm** for **230 to 1,980 ms** (varies with ATF temperature and ECT) during shift-up. — Engine speed and turbine/input shaft speed deviates by **300 rpm** for **1,500 to 3,900 ms** (varies with ATF temperature) while driving without shifting. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch burnt • Shift solenoid malfunction • ATF leakage from clutch circuit • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Are any the following DTCs displayed? — P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P079A:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

DTC P0732:00 [FW6A-EL, FW6AX-EL]

id050227817900

DTC P0732:00	2GR incorrect ratio
DETECTION CONDITION	• In D position, 2GR, the following phenomenon occurs: — Engine speed and turbine/input shaft speed deviates by **600 rpm** for **230 to 1,980 ms** (varies with ATF temperature and ECT) during shift-up. — Engine speed and turbine/input shaft speed deviates by **300 rpm** for **1,500 to 3,900 ms** (varies with ATF temperature) while driving without shifting. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch burnt • Shift solenoid malfunction • ATF leakage from clutch circuit • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Are any the following DTCs displayed? — P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P079A:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

DTC P0733:00 [FW6A-EL, FW6AX-EL]

id050227818000

DTC P0733:00	3GR incorrect ratio
DETECTION CONDITION	• In D position, 3GR, the following phenomenon occurs: — Engine speed and turbine/input shaft speed deviates by **600 rpm** for **230 to 1,980 ms** (varies with ATF temperature and ECT) during shift-up. — Engine speed and turbine/input shaft speed deviates by **300 rpm** for **1,500 to 3,900 ms** (varies with ATF temperature) while driving without shifting. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch burnt • Shift solenoid malfunction • ATF leakage from clutch circuit • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Are any the following DTCs displayed? — P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P079A:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

DTC P0734:00 [FW6A-EL, FW6AX-EL]

id050227818100

DTC P0734:00	4GR incorrect ratio
DETECTION CONDITION	• In D position, 4GR, the following phenomenon occurs: — Engine speed and turbine/input shaft speed deviates by **600 rpm** for **230 to 1,980 ms** (varies with ATF temperature and ECT) during shift-up. — Engine speed and turbine/input shaft speed deviates by **300 rpm** for **1,500 to 3,900 ms** (varies with ATF temperature) while driving without shifting. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch burnt • Shift solenoid malfunction • ATF leakage from clutch circuit • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Are any the following DTCs displayed? — P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P079A:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

DTC P0735:00 [FW6A-EL, FW6AX-EL]

id050227825100

DTC P0735:00	5GR incorrect ratio
DETECTION CONDITION	• In D position, 5GR, the following phenomenon occurs: — Engine speed and turbine/input shaft speed deviates by **600 rpm** for **230 to 1,980 ms** (varies with ATF temperature and ECT) during shift-up. — Engine speed and turbine/input shaft speed deviates by **300 rpm** for **1,500 to 3,900 ms** (varies with ATF temperature) while driving without shifting. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch burnt • Shift solenoid malfunction • ATF leakage from clutch circuit • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Are any the following DTCs displayed? — P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P079A:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

DTC P0736:00 [FW6A-EL, FW6AX-EL]

id050227823200

DTC P0736:00	Gear reverse incorrect ratio
DETECTION CONDITION	• Speed ratio is **0.75 to 1.2** for **2,000 ms** while vehicle is stopped in R position. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch burnt • Shift solenoid malfunction • ATF leakage from clutch circuit • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Are any the following DTCs displayed? — P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P079A:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

DTC P0741:00 [FW6A-EL, FW6AX-EL]

id050227818200

DTC P0741:00	**TCC control solenoid stuck off**
DETECTION CONDITION	• Under the following conditions, difference in slip amount **over 5 s** compared to target slip amount is **200 rpm or more**, and TCC feedback hydraulic pressure is **200 kPa {2.04 kgf/cm^2, 29.0 psi} or more** occurs: — Battery voltage is **8 V or more**. — Selector lever position is D position. — No electrical malfunction in TCC control solenoid — During TCC or TCC feedback — DTC P0716:00 and P0717:00 are not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits TCC control. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• TCC control solenoid malfunction • ATF leakage from clutch circuit • TCC clutch burnt • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) Go to the next step.
		No	Replace the automatic transaxle, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Drive the vehicle for **5 s or more** under the following conditions: • Selector lever position: D position • During TCC or TCC feedback • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0743:00 [FW6A-EL, FW6AX-EL]

id050227822200

DTC P0743:00	TCC control solenoid circuit malfunction
DETECTION CONDITION	• Under the following condition, the TCM detects the TCC control solenoid circuit malfunction: — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in TCC control solenoid circuit • TCC control solenoid malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0746:00 [FW6A-EL, FW6AX-EL]

id050227904200

DTC P0746:00	**Pressure control solenoid stuck off**
DETECTION CONDITION	• Under the following conditions, pressure control solenoid stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Pressure control solenoid malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02A-81 DTC P1738:00 [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
5	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

DTC P0748:00 [FW6A-EL, FW6AX-EL]

id050227904300

DTC P0748:00	**Pressure control solenoid circuit malfunction**
DETECTION CONDITION	• Under the following condition, the TCM detects the pressure control solenoid circuit malfunction: — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in pressure control solenoid circuit • Pressure control solenoid malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0751:00 [FW6A-EL, FW6AX-EL]

id050227818600

DTC P0751:00	**Shift solenoid No.1 stuck off**
DETECTION CONDITION	• Under the following conditions, shift solenoid No.1 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Shift solenoid No.1 malfunction • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02A-81 DTC P1738:00 [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
5	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any the following DTCs displayed? — P0751:00, P0843:00	Yes	ATF amount in Step 4 is correct: • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) ATF amount adjusted in Step 4: • Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL])
6	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0752:00 [FW6A-EL, FW6AX-EL]

id050227818700

DTC P0752:00	**Shift solenoid No.1 stuck on**
DETECTION CONDITION	• Under the following conditions, shift solenoid No.1 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Shift solenoid No.1 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02A-81 DTC P1738:00 [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are P0752:00 present?	Yes	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL])
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL])
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0753:00 [FW6A-EL, FW6AX-EL]

id050227818800

DTC P0753:00	**Shift solenoid No.1 circuit malfunction**
DETECTION CONDITION	• Under the following condition, the TCM detects the shift solenoid No.1 circuit malfunction: — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in shift solenoid No.1 circuit • Shift solenoid No.1 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0756:00 [FW6A-EL, FW6AX-EL]

id050227818900

DTC P0756:00	**Shift solenoid No.2 stuck off**
DETECTION CONDITION	• Under the following conditions, shift solenoid No.2 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Shift solenoid No.2 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02A-81 DTC P1738:00 [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
5	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any the following DTCs displayed? — P0756:00, P0848:00	Yes	ATF amount in Step 4 is correct: • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) ATF amount adjusted in Step 4: • Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL])
6	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0757:00 [FW6A-EL, FW6AX-EL]

id050227819000

DTC P0757:00	**Shift solenoid No.2 stuck on**
DETECTION CONDITION	• Under the following conditions, shift solenoid No.2 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Shift solenoid No.2 malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02A-81 DTC P1738:00 [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are P0757:00 present?	Yes	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL])
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL])
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0758:00 [FW6A-EL, FW6AX-EL]

id050227819100

DTC P0758:00	**Shift solenoid No.2 circuit malfunction**
DETECTION CONDITION	• Under the following condition, the TCM detects the shift solenoid No.2 circuit malfunction: — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in shift solenoid No.2 circuit • Shift solenoid No.2 malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0761:00 [FW6A-EL, FW6AX-EL]

id050227819200

DTC P0761:00	**Shift solenoid No.3 stuck off**
DETECTION CONDITION	• Under the following conditions, shift solenoid No.3 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Shift solenoid No.3 malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02A-81 DTC P1738:00 [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are P0761:00 present?	Yes	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL])
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL])
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0762:00 [FW6A-EL, FW6AX-EL]

id050227819300

DTC P0762:00	**Shift solenoid No.3 stuck on**
DETECTION CONDITION	• Under the following conditions, shift solenoid No.3 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Shift solenoid No.3 malfunction • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02A-81 DTC P1738:00 [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
5	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any the following DTCs displayed? — P0762:00, P0873:00	Yes	ATF amount in Step 4 is correct: • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) ATF amount adjusted in Step 4: • Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL])
6	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0763:00 [FW6A-EL, FW6AX-EL]

id050227819400

DTC P0763:00	**Shift solenoid No.3 circuit malfunction**
DETECTION CONDITION	• Under the following condition, the TCM detects the shift solenoid No.3 circuit malfunction: — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in shift solenoid No.3 circuit • Shift solenoid No.3 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0766:00 [FW6A-EL, FW6AX-EL]

id050227819500

DTC P0766:00	**Shift solenoid No.4 stuck off**
DETECTION CONDITION	• Under the following conditions, shift solenoid No.4 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Shift solenoid No.4 malfunction

Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
5	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any the following DTCs displayed? — P0767:00, P0878:00	Yes	ATF amount in Step 4 is correct: • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) ATF amount adjusted in Step 4: • Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL])
6	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0768:00 [FW6A-EL, FW6AX-EL]

id050227819700

DTC P0768:00	**Shift solenoid No.4 circuit malfunction**
DETECTION CONDITION	• Under the following condition, the TCM detects the shift solenoid No.4 circuit malfunction: — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in shift solenoid No.4 circuit • Shift solenoid No.4 malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0771:00 [FW6A-EL, FW6AX-EL]

id050227819800

DTC P0771:00	**On/off solenoid stuck off**
DETECTION CONDITION	• Under the following conditions, on/off solenoid stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• On/off solenoid malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02A-81 DTC P1738:00 [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are P0771:00 present?	Yes	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0772:00 [FW6A-EL, FW6AX-EL]

id050227819900

DTC P0772:00	On/off solenoid stuck on
DETECTION CONDITION	• Under the following conditions, on/off solenoid stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • On/off solenoid malfunction • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02A-81 DTC P1738:00 [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Replace the on/off solenoid, then go to the next step. (See 05-17A-25 ON/OFF SOLENOID REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
5	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	ATF amount in Step 4 is correct • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) ATF amount adjusted in Step 4: • Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.
6	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0773:00 [FW6A-EL, FW6AX-EL]

id050227820000

DTC P0773:00	On/off solenoid circuit malfunction
DETECTION CONDITION	• Under the following condition, the TCM detects the on/off solenoid circuit malfunction: — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in on/off solenoid circuit • On/off solenoid malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the on/off solenoid. (See 05-17A-25 ON/OFF SOLENOID REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].) Go to the next step.
		No	Replace the on/off solenoid, then go to the next step. (See 05-17A-25 ON/OFF SOLENOID REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0780:00 [FW6A-EL, FW6AX-EL]

id050227824500

DTC P0780:00	Gear shifting malfunction
DETECTION CONDITION	• Under the following conditions, the gear shifting inhibited: — Engine is running. — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • On/off solenoid malfunction • Pressure control solenoid malfunction • Shift solenoid malfunction • Oil pressure switch circuit malfunction • Oil pressure switch malfunction • Clutch slippage • ATF leakage from clutch circuit • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Are any the following DTCs displayed? — P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P079A:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P079A:00 [FW6A-EL, FW6AX-EL]

id050227904400

DTC P079A:00	Shift solenoid No.3 stuck off/On/off solenoid stuck on
DETECTION CONDITION	• Under the following conditions, shift solenoid No.3 stuck-off or on/off solenoid stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Shift solenoid No.3 malfunction • On/off solenoid malfunction • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

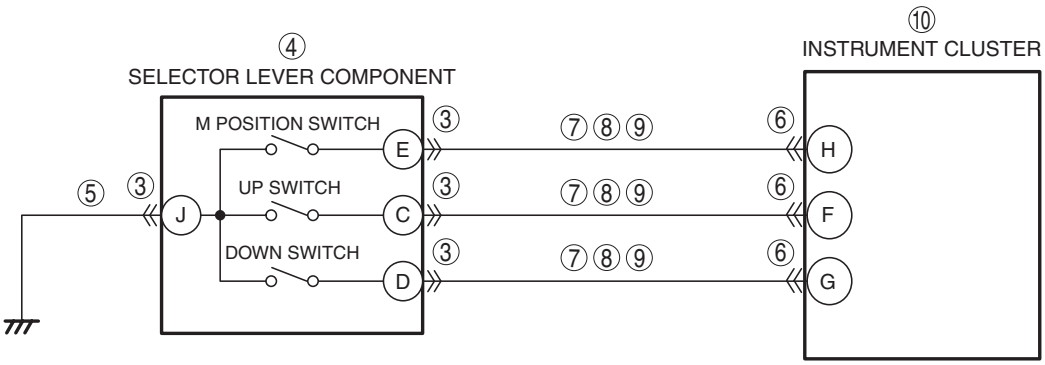
STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Are any the following DTCs displayed? — P0762:00, P0772:00, P1738:00	Yes	Go to the applicable DTC inspection. (See 05-02A-49 DTC P0762:00 [FW6A-EL, FW6AX-EL].) (See 05-02A-56 DTC P0772:00 [FW6A-EL, FW6AX-EL].) (See 05-02A-81 DTC P1738:00 [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

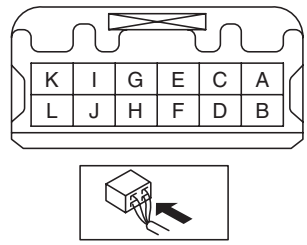
DTC P0819:00 [FW6A-EL, FW6AX-EL]

id050227822400

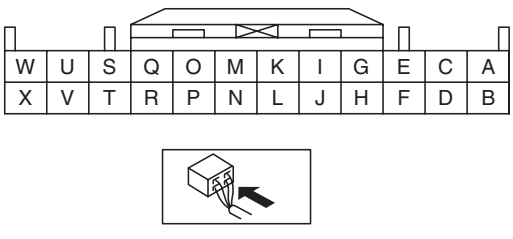
DTC P0819:00	**M position switch/Up switch/Down switch signal error**
DETECTION CONDITION	• Under the following conditions, any of (1) to (4) conditions occurs for **1 s**: — Engine is running. — Battery voltage is **8 V or more**. — Transaxle range sensor related DTC is not recorded. (1) M position switch signal is on even though forward oil pressure switch is on in any position other than D position. (2) M position switch signal is off even though up or down switch signal is on in D position. (3) Up switch signal is on even though M position switch signal is off in any position other than D position. (4) Down switch signal is on even though M position switch signal is off in any position other than D position. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits manual mode.
POSSIBLE CAUSE	• Instrument cluster DTC is stored. • Selector lever component connector or terminals malfunction • Selector lever component malfunction — M position switch malfunction — Up switch malfunction — Down switch malfunction • Open circuit in wiring harness between selector lever component terminal J and body ground • Instrument cluster connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — Selector lever component terminal E—Instrument cluster terminal H — Selector lever component terminal C—Instrument cluster terminal F — Selector lever component terminal D—Instrument cluster terminal G • Short to power supply in wiring harness between the following terminals: — Selector lever component terminal E—Instrument cluster terminal H — Selector lever component terminal C—Instrument cluster terminal F — Selector lever component terminal D—Instrument cluster terminal G • Open circuit in wiring harness between the following terminals: — Selector lever component terminal E—Instrument cluster terminal H — Selector lever component terminal C—Instrument cluster terminal F — Selector lever component terminal D—Instrument cluster terminal G • Instrument cluster malfunction



SELECTOR LEVER COMPONENT WIRING HARNESS-SIDE CONNECTOR



INSTRUMENT CLUSTER WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**CONFIRM INSTRUMENT CLUSTER DTC** • Perform the instrument cluster DTC inspection using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
3	**INSPECT SELECTOR LEVER COMPONENT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the selector lever component connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
4	**INSPECT SELECTOR LEVER COMPONENT** • Inspect the M position switch, up switch and down switch. (See 05-17A-13 M POSITION SWITCH INSPECTION [FW6A-EL, FW6AX-EL].) (See 05-17A-14 UP SWITCH INSPECTION [FW6A-EL, FW6AX-EL].) (See 05-17A-15 DOWN SWITCH INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Replace the selector lever component, then go to Step 11. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**INSPECT SELECTOR LEVER COMPONENT GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the selector lever component connector is disconnected. • Inspect for continuity between selector lever component terminal J (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
6	**INSPECT INSTRUMENT CLUSTER CONNECTOR CONDITION** • Disconnect the instrument cluster connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
7	**INSPECT SELECTOR LEVER COMPONENT CIRCUIT FOR SHORT TO GROUND** • Verify that the selector lever component and instrument cluster connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Selector lever component terminal E — Selector lever component terminal C — Selector lever component terminal D • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 11.
		No	Go to the next step.
8	**INSPECT SELECTOR LEVER COMPONENT CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the selector lever component and instrument cluster connectors are disconnected. • Switch the ignition ON (engine on). • Measure the voltage at the following terminals (wiring harness-side): — Selector lever component terminal E — Selector lever component terminal C — Selector lever component terminal D • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 11.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
9	**INSPECT SELECTOR LEVER COMPONENT CIRCUIT FOR OPEN CIRCUIT** • Verify that the selector lever component and instrument cluster connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between the following terminals (wiring harness-side): — Selector lever component terminal E— Instrument cluster terminal H — Selector lever component terminal C— Instrument cluster terminal F — Selector lever component terminal D— Instrument cluster terminal G • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
10	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is there any malfunction?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Verify that the battery voltage is **8 V or more**. 2. Drive the vehicle for **1 s or more** under the following condition: • Selector lever position: Except D position 3. Drive the vehicle for **1 s or more** under the following conditions: • Selector lever position: D position • Up switch: On 4. Drive the vehicle for **1 s or more** under the following conditions: • Selector lever position: D position • Down switch: On • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0842:00 [FW6A-EL, FW6AX-EL]

id050227822600

DTC P0842:00	**Oil pressure switch No.1 stuck on**
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.1 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Oil pressure switch No.1 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02A-81 DTC P1738:00 [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are P0842:00 present?	Yes	Replace the oil pressure switch No.1, then go to the next step. (See 05-17A-20 OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL])
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0843:00 [FW6A-EL, FW6AX-EL]

id050227822700

DTC P0843:00	**Oil pressure switch No.1 stuck off**
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.1 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Oil pressure switch No.1 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02A-81 DTC P1738:00 [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY THAT DTC IS PRESENT** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **20 °C {68 °F} or more**. • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Is the DTC P0843:00 or P0878:00 present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
5	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to Step 7. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	DTC P0843:00 and P0878:00 are displayed in Step 4: • Repair or replace the wiring harness between TCM and oil pressure switch A, then go to Step 7. Only DTC P0843:00 is displayed in Step 4: • Go to the next step.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
6	**INSPECT OIL PRESSURE SWITCH A CONNECTOR AND OIL PRESSURE SWITCH NO.1 CIRCUIT** • Visually inspect for poor connection and open circuit. • Is there any malfunction?	Yes	Repair or replace the wiring harness between TCM and oil pressure switch A, then go to the next step.
		No	Replace the oil pressure switch A, then go to the next step. (See 05-17A-20 OIL PRESSURE SWITCH REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
7	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	ATF amount in Step 5 is correct • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [FW6AX-EL].) ATF amount adjusted in Step 5: • Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.
8	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0847:00 [FW6A-EL, FW6AX-EL]

id050227904500

DTC P0847:00	**Oil pressure switch No.2 stuck on**
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.2 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Oil pressure switch No.2 malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02A-81 DTC P1738:00 [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are P0847:00 present?	Yes	Replace the oil pressure switch No.2, then go to the next step. (See 05-17A-20 OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL])
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0848:00 [FW6A-EL, FW6AX-EL]

id050227904600

DTC P0848:00	**Oil pressure switch No.2 stuck off**
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.2 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Oil pressure switch No.2 malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02A-81 DTC P1738:00 [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY THAT DTC IS PRESENT** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **20 °C {68 °F} or more**. • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Is the DTC P0848:00 or P0873:00 present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
5	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to Step 7. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	DTC P0848:00 and P0873:00 are displayed in Step 4: • Repair or replace the wiring harness between TCM and oil pressure switch B, then go to Step 7. Only DTC P0848:00 is displayed in Step 4: • Go to the next step.
6	**INSPECT OIL PRESSURE SWITCH B CONNECTOR AND OIL PRESSURE SWITCH NO.2 CIRCUIT** • Visually inspect for poor connection and open circuit. • Is there any malfunction?	Yes	Repair or replace the wiring harness between TCM and oil pressure switch B, then go to the next step.
		No	Replace the oil pressure switch B, then go to the next step. (See 05-17A-20 OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
7	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	ATF amount in Step 5 is correct • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) ATF amount adjusted in Step 5: • Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.
8	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0872:00 [FW6A-EL, FW6AX-EL]

id050227904700

DTC P0872:00	**Oil pressure switch No.3 stuck on**
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.3 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Oil pressure switch No.3 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02A-81 DTC P1738:00 [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are P0872:00 present?	Yes	Replace the oil pressure switch No.3, then go to the next step. (See 05-17A-20 OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL])
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0873:00 [FW6A-EL, FW6AX-EL]

id050227904800

DTC P0873:00	**Oil pressure switch No.3 stuck off**
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.3 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Oil pressure switch No.3 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02A-81 DTC P1738:00 [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY THAT DTC IS PRESENT** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **20 °C {68 °F} or more**. • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Is the DTC P0848:00 or P0873:00 present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
5	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to Step 7. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	DTC P0848:00 and P0873:00 are displayed in Step 4: • Repair or replace the wiring harness between TCM and oil pressure switch B, then go to Step 7. Only DTC P0873:00 is displayed in Step 4: • Go to the next step.
6	**INSPECT OIL PRESSURE SWITCH B CONNECTOR AND OIL PRESSURE SWITCH NO.3 CIRCUIT** • Visually inspect for poor connection and open circuit. • Is there any malfunction?	Yes	Repair or replace the wiring harness between TCM and oil pressure switch B, then go to the next step.
		No	Replace the oil pressure switch B, then go to the next step. (See 05-17A-20 OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
7	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	ATF amount in Step 5 is correct • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) ATF amount adjusted in Step 5: • Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.
8	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0877:00 [FW6A-EL, FW6AX-EL]

id050227904900

DTC P0877:00	**Oil pressure switch No.4 stuck on**
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.4 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Oil pressure switch No.4 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02A-81 DTC P1738:00 [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are P0877:00 present?	Yes	Replace the oil pressure switch No.4, then go to the next step. (See 05-17A-20 OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL])
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0878:00 [FW6A-EL, FW6AX-EL]

id050227905000

DTC P0878:00	**Oil pressure switch No.4 stuck off**
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.4 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Oil pressure switch No.4 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02A-81 DTC P1738:00 [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY THAT DTC IS PRESENT** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **20 °C {68 °F} or more**. • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Is the DTC P0843:00 or P0878:00 present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
5	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to Step 7. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	DTC P0843:00 and P0878:00 are displayed in Step 4: • Repair or replace the wiring harness between TCM and oil pressure switch A, then go to Step 7. Only DTC P0878:00 is displayed in Step 4: • Go to the next step.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
6	**INSPECT OIL PRESSURE SWITCH A CONNECTOR AND OIL PRESSURE SWITCH NO.4 CIRCUIT** • Visually inspect for poor connection and open circuit. • Is there any malfunction?	Yes	Repair or replace the wiring harness between TCM and oil pressure switch A, then go to the next step.
		No	Replace the oil pressure switch A, then go to the next step. (See 05-17A-20 OIL PRESSURE SWITCH REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
7	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	ATF amount in Step 5 is correct • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [FW6AX-EL].) ATF amount adjusted in Step 5: • Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.
8	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0882:00 [FW6A-EL, FW6AX-EL]

id050227823100

DTC P0882:00	**TCM power supply voltage low**
DETECTION CONDITION	• Under the following conditions, the TCM power supply voltage is **8—10.5 V or less** (varies with ATF temperature): — **5 s or more** has elapsed or battery voltage exceeds **11 V or more** for **0.2 s** since engine speed increases –**200 rpm or more** of target idle speed. — Selector lever position is D or R position. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• PCM DTC is stored. • Battery malfunction • Generator malfunction • TCM connector or terminals malfunction • TCM power supply circuit malfunction — Short to ground in wiring harness between TCM 15 A fuse and TCM terminal 1A — TCM 15 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and TCM terminal 1A
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CONFIRM PCM DTC** • Perform the PCM DTC inspection using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Is there any malfunction?	Yes	Recharge or replace the battery, then go to Step 8. (See 01-17A-9 BATTERY RECHARGING [SKYACTIV-G 2.0].) (See 01-17A-10 BATTERY RECHARGING [SKYACTIV-G 2.0 (WITHOUT i-stop)].) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the generator, then go to Step 8. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
6	**INSPECT TCM CONNECTOR AND TERMINALS** • Switch the ignition to off. • Disconnect the TCM connector. • Visually inspect the TCM connector and terminals. • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
7	**INSPECT TCM POWER SUPPLY CIRCUIT** • Make sure to reconnect all disconnected connectors. • Access the PID VPWR using the M-MDS. (See 05-02A-94 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FW6A-EL, FW6AX-EL].) • Is the PID value **B+**?	Yes	Go to the next step.
		No	Inspect the TCM 15 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the malfunctioning fuse. • If the fuse is deteriorated: — Replace the malfunctioning fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Drive the vehicle for **5 s or more** under the following condition: • Selector lever position: D or R position • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0883:00 [FW6A-EL, FW6AX-EL]

id050227820100

DTC P0883:00	**TCM power supply voltage high**
DETECTION CONDITION	• TCM power supply voltage is **18 V or more** for **5 s**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• PCM DTC is stored. • Battery malfunction • Generator malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CONFIRM PCM DTC** • Perform the PCM DTC inspection using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
4	**INSPECT BATTERY** • Inspect the battery. (See 01-17A-7 BATTERY INSPECTION [SKYACTIV-G 2.0].) (See 01-17A-8 BATTERY INSPECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Is there any malfunction?	Yes	Replace the battery, then go to Step 6. (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.
5	**INSPECT GENERATOR** • Inspect the generator. (See 01-17A-19 GENERATOR INSPECTION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Replace the generator, then go to the next step. (See 01-17A-17 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

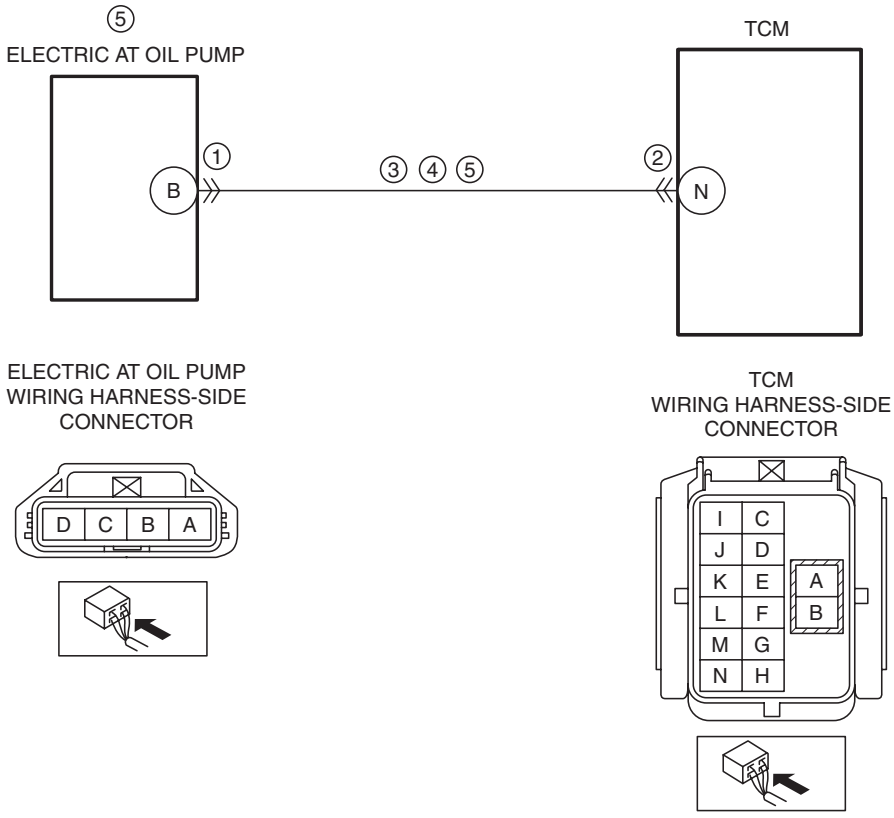
STEP	INSPECTION		ACTION
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P0C2C:00 [FW6A-EL, FW6AX-EL]

id050227832600

DTC P0C2C:00	**Electric AT oil pump rotation malfunction**
DETECTION CONDITION	• The actual electric AT oil pump rotation speed under the following conditions is **100 rpm or less** for a continuous **10 s**: — Electric AT oil pump rotation speed command value is **500 rpm or more**. — Electric AT oil pump relay is ON. — DTC P181F:00 is not recorded. **Diagnostic support note** • The MIL does not illuminate. • The shift position indicator light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits i-stop control.
POSSIBLE CAUSE	• Electric AT oil pump connector or terminals malfunction • TCM connector or terminals malfunction • Short to ground in wiring harness between electric AT oil pump terminal B and TCM terminal N • Short to power supply in wiring harness between electric AT oil pump terminal B and TCM terminal N • Open circuit in wiring harness between electric AT oil pump terminal B and TCM terminal N • Electric AT oil pump malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ELECTRIC AT OIL PUMP CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the electric AT oil pump connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
3	**INSPECT TCM CONNECTOR CONDITION** • Disconnect the TCM connector. • Visually inspect the TCM connector and terminals. • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
4	**INSPECT ELECTRIC AT OIL PUMP CIRCUIT FOR SHORT TO GROUND** • Verify that the electric AT oil pump and TCM connectors are disconnected. • Inspect for continuity between electric AT oil pump terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 7.
		No	Go to the next step.
5	**INSPECT ELECTRIC AT OIL PUMP CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the electric AT oil pump and TCM connectors are disconnected. • Switch the ignition ON (engine on). • Measure the voltage at the electric AT oil pump terminal B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
6	**INSPECT ELECTRIC AT OIL PUMP CIRCUIT FOR OPEN CIRCUIT** • Verify that the electric AT oil pump and TCM connectors are disconnected. • Switch the ignition to off. • Visually inspect the wiring harness between electric AT oil pump terminal B (wiring harness-side) and TCM terminal N (wiring harness-side). • Is there any malfunction?	Yes	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
		No	Replace the electric AT oil pump, then go to the next step. (See 05-17A-27 ELECTRIC AT OIL PUMP REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Operates the i-stop. • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P1728:00 [FW6A-EL, FW6AX-EL]

id050227905100

DTC P1728:00	Clutch slippage
DETECTION CONDITION	• Under the following conditions, turbine/input shaft speed suddenly increases **300 rpm or more** for **1,450 ms**: — Engine is running. — Battery voltage is **8 V or more**. — Vehicle speed is **5 km/h {3 mph} or more**. — There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. — Not shifting — Selector lever position is D position. — Turbine/Input shaft speed is **1,200 rpm or more**. — Oil pressure switch pattern (1st—6th) is normal. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Maximizes the line pressure. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch slippage
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Replace the automatic transaxle, then go to the next step. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Drive the vehicle without shifting for **20 min or more** under the following conditions: • Vehicle speed: **5 km/h {3 mph} or more** • Selector lever position: D position • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	ATF amount in Step 2 is correct • Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].) ATF amount adjusted in Step 2: • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P1738:00 [FW6A-EL, FW6AX-EL]

id050227578400

DTC P1738:00	**Automatic transaxle internal malfunction**
DETECTION CONDITION	• Malfunction location cannot be determined based on combination of gear ratio malfunction and oil pressure switch pattern malfunction. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Automatic transaxle internal malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].)
2	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].)
		No	Drive the vehicle for **10 min or more**. DTCs are displayed: • Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) No DTCs are displayed: • DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P1784:00 [FW6A-EL, FW6AX-EL]

id050227905200

DTC P1784:00	**Hi cut valve stuck off/R-3-5 cut valve stuck on**
DETECTION CONDITION	• Under the following conditions, hi cut valve stuck-off or R-3-5 cut valve stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control.
POSSIBLE CAUSE	• ATF is less than specified value • Hi cut valve malfunction • R-3-5 cut valve malfunction • Clutch burnt
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].)
3	**PERFORM STALL TEST TO VERIFY THAT DTC** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the stall test in the reverse (R) position. (See 05-17A-4 MECHANICAL SYSTEM TEST [FW6A-EL, FW6AX-EL].) • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the on-board diagnostic test. (See 05-02A-9 ON-BOARD DIAGNOSTIC TEST MODE [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].)
		No	Drive the vehicle for **10 min or more**. DTCs are displayed: • Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].) No DTCs are displayed: • DTC troubleshooting completed.

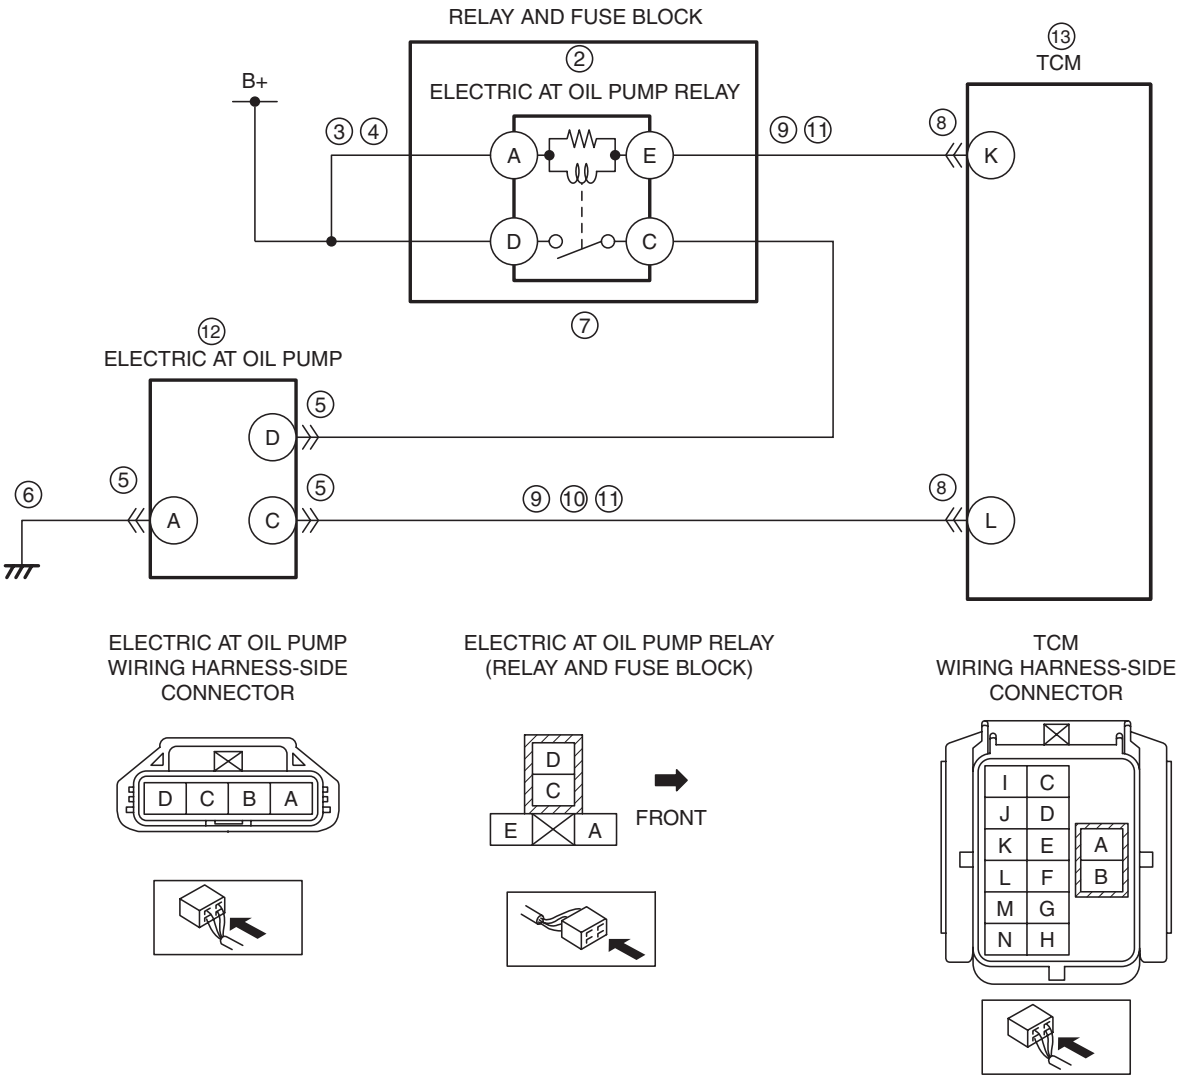
DTC P181F:00 [FW6A-EL, FW6AX-EL]

id050227960600

DTC P181F:00	**Electric AT oil pump/Electric AT oil pump relay circuit malfunction**
DETECTION CONDITION	• If the TCM detects any of the following conditions for a continuous **5 s**: — Electric AT oil pump circuit has a malfunction. — Electric AT oil pump relay circuit has a malfunction. **Diagnostic support note** • The MIL does not illuminate. • The shift position indicator light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits i-stop control.
POSSIBLE CAUSE	• Electric AT oil pump relay malfunction • Short to ground in wiring harness between electric AT oil pump relay terminal A and electric AT oil pump relay terminal D • Open circuit in wiring harness between electric AT oil pump relay terminal A and electric AT oil pump relay terminal D • Electric AT oil pump connector or terminals malfunction • Open circuit in wiring harness between electric AT oil pump terminal A and body ground • Short to ground or open circuit in wiring harness between battery positive terminal and electric AT oil pump terminal D • TCM connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — Electric AT oil pump relay terminal E—TCM terminal K — Electric AT oil pump terminal C—TCM terminal L • Short to power supply in wiring harness between electric AT oil pump terminal C and TCM terminal L • Open circuit in wiring harness between the following terminals: — Electric AT oil pump relay terminal E—TCM terminal K — Electric AT oil pump terminal C—TCM terminal L • Electric AT oil pump malfunction • TCM malfunction

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P181F:00	Electric AT oil pump/Electric AT oil pump relay circuit malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ELECTRIC AT OIL PUMP RELAY** • Switch the ignition to off. • Remove the electric AT oil pump relay. (See 09-21-28 RELAY LOCATION.) • Inspect the electric AT oil pump relay. (See 09-21-29 RELAY INSPECTION.) • Is there any malfunction?	Yes	Replace the electric AT oil pump relay, then go to Step 13. (See 09-21-28 RELAY LOCATION.)
		No	Go to the next step.
3	**INSPECT ELECTRIC AT OIL PUMP RELAY CIRCUIT FOR SHORT TO GROUND** • Verify that the electric AT oil pump relay is removed. • Inspect for continuity between electric AT oil pump relay terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 13.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
4	**INSPECT ELECTRIC AT OIL PUMP RELAY CIRCUIT FOR OPEN CIRCUIT** • Verify that the electric AT oil pump relay is removed. • Inspect for continuity between electric AT oil pump relay terminal A (wiring harness-side) and electric AT oil pump relay terminal D (wiring harness-side). • Is there continuity?	Yes	Install the electric AT oil pump relay, then go to the next step. (See 09-21-28 RELAY LOCATION.)
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 13.
5	**INSPECT ELECTRIC AT OIL PUMP CONNECTOR CONDITION** • Disconnect the electric AT oil pump connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction	Yes	Repair or replace the connector and/or terminals, then go to Step 13.
		No	Go to the next step.
6	**INSPECT ELECTRIC AT OIL PUMP GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the electric AT oil pump connector is disconnected. • Inspect for continuity between electric AT oil pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 13.
7	**INSPECT ELECTRIC AT OIL PUMP POWER SUPPLY CIRCUIT FOR SHORT TO GROUND AND OPEN CIRCUIT** • Verify that the electric AT oil pump connector is disconnected. • Switch the electric AT oil pump relay to ON using the simulation item EOP_RLY. (See 05-02A-103 ON-BOARD DIAGNOSTIC SYSTEM SIMULATION INSPECTION [FW6A-EL, FW6AX-EL].) • Measure the voltage at the electric AT oil pump terminal D (wiring harness-side). • Is the voltage **0 V**?	Yes	Repair or replace the wiring harness for a possible short to ground or open circuit, then go to Step 13.
		No	Go to the next step.
8	**INSPECT TCM CONNECTOR CONDITION** • Disconnect the TCM connector. • Visually inspect the TCM connector and terminals. • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 13.
		No	Go to the next step.
9	**INSPECT ELECTRIC AT OIL PUMP CIRCUIT FOR SHORT TO GROUND** • Verify that the electric AT oil pump and TCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Electric AT oil pump relay terminal E — Electric AT oil pump terminal C • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 13.
		No	Go to the next step.
10	**INSPECT ELECTRIC AT OIL PUMP CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the electric AT oil pump and TCM connectors are disconnected. • Switch the ignition ON (engine on). • Measure the voltage at the electric AT oil pump terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 13.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
11	**INSPECT ELECTRIC AT OIL PUMP CIRCUIT FOR OPEN CIRCUIT** • Verify that the electric AT oil pump and TCM connectors are disconnected. • Switch the ignition to off. • Visually inspect the wiring harness between the following terminals (wiring harness-side): — Electric AT oil pump relay terminal E—TCM terminal K — Electric AT oil pump terminal C—TCM terminal L • Is there any malfunction?	Yes	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
		No	Go to the next step.
12	**INSPECT ELECTRIC AT OIL PUMP** • Remove the electric AT oil pump. (See 05-17A-27 ELECTRIC AT OIL PUMP REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].) • Verify that the resistance according to the following: — Between electric AT oil pump terminal D and A: **Approx. 18.2 Kilohms** — Between electric AT oil pump terminal C and A: **Approx. 21.5 Kilohms** • Is the resistance normal?	Yes	Go to the next step.
		No	Replace the electric AT oil pump, then go to the next step. (See 05-17A-27 ELECTRIC AT OIL PUMP REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
13	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Operates the i-stop. • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Is the DTC P181F:00 present?	Yes	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
14	**VERIFY NO DTC HAS BEEN PRESENTED** • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC P2530:00 [FW6A-EL, FW6AX-EL]

id050227310000

DTC P2530:00	**Ignition switch stuck off**
DETECTION CONDITION	• If the IG ON time count of the instrument cluster proceeds **5 s** under the following condition: — Ignition switch signal off
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Start stop unit malfunction — Ignition switch signal output stuck off • Wiring harness malfunction — Short or open signal in ignition switch — Ignition switch signal terminal (start stop unit terminal 1B) malfunction • Control valve body malfunction — Ignition switch signal terminal (start stop unit terminal 1B) pin deformity
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY STORED DTC IN START STOP UNIT** • Perform the start stop unit DTC inspection using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	Go to the next step.
4	**INSPECT THE IGNITION CIRCUIT FOR OPEN CIRCUIT** • Switch the ignition to off. • Disconnect the negative battery cable. • Verify that the following connector are disconnected. — IG1 relay — Start stop unit • Inspect for continuity between the following terminals (wiring harness-side): — IG1 relay terminal C—Start stop unit terminal 1B • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 6.
5	**VERIFY THE ENGINE START** • Reconnect all disconnected connectors. • Reconnect the negative battery cable. • Does the engine start normally?	Yes	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on) and wait for **10 s or more**. 2. Switch the ignition to off. • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P2712:00 [FW6A-EL, FW6AX-EL]

id050227960500

DTC P2712:00	**Oil pump shift valve stuck**
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.1 OFF output continues for **10 s**: — DTC P0753:00, P0C2C:00 and P181F:00 are not recorded. — During i-stop operation — Selector lever position is D or N position. — During electric AT oil pump operation — Oil pressure switch, low clutch and transaxle range sensor are normal. — Rate of speed change normal **Diagnostic support note** • The MIL does not illuminate. • The shift position indicator light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits i-stop control.
POSSIBLE CAUSE	• Oil pump shift valve stuck
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
2	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Operates the i-stop. • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

05

DTC U0073:00, U0100:00, U0121:00, U0141:00, U0155:00 [FW6A-EL, FW6AX-EL]

id050227905500

DTC U0073:00	CAN system communication error (HS CAN)
DETECTION CONDITION	• Under the following condition, a communication error (HS CAN) occurs: — Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• CAN bus communication line malfunction (HS CAN) • TCM malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC U0100:00	Communication error to PCM (HS CAN)
DETECTION CONDITION	• Under the following condition, the TCM cannot receive the signal from PCM (HS CAN): — Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• CAN communication line between PCM and TCM malfunction (HS CAN) • TCM malfunction
SYSTEM WIRING DIAGRAM	—

DTC U0121:00	Communication error to DSC HU/CM
DETECTION CONDITION	• Under the following condition, the TCM cannot receive the signal from DSC HU/CM: — Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• CAN communication line between TCM and DSC HU/CM malfunction • TCM malfunction
SYSTEM WIRING DIAGRAM	—

DTC U0141:00	Communication error to front body control module (FBCM)
DETECTION CONDITION	• Under the following condition, the TCM cannot receive the signal from front body control module (FBCM): — Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control.
POSSIBLE CAUSE	• CAN communication line between TCM and front body control module (FBCM) malfunction • TCM malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

DTC U0155:00	**Communication error to instrument cluster**
DETECTION CONDITION	• Under the following condition, the TCM cannot receive the signal from instrument cluster: — Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control.
POSSIBLE CAUSE	• CAN communication line between TCM and instrument cluster malfunction • TCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

- Inspect according to the diagnostic procedure in ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]. (See 10-02A-1 FOREWORD [SKYACTIV-G 2.0 (L.H.D.)].) (See 10-02B-1 FOREWORD [SKYACTIV-G 2.0 (R.H.D.)].)

DTC U0074:00 [FW6A-EL, FW6AX-EL]

id050227908000

DTC U0074:00	**CAN system communication error (local CAN between TCM and PCM)**
DETECTION CONDITION	• Under the following condition, a communication error (local CAN between TCM and PCM) occurs: — Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to TCC control. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS. • Inhibits 5GR and 6GR. • Inhibits shift down when the accelerator pedal is depressed.
POSSIBLE CAUSE	• CAN communication line between TCM and PCM (local CAN between TCM and PCM) malfunction • PCM DTC is stored. • TCM malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**CONFIRM PCM DTC** • Perform the PCM DTC inspection using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	DTC U0074:00 is displayed: • CAN communication line can be considered the cause. — Repair or replace the wiring harness between TCM and PCM. DTC other than U0074:00 is displayed: • Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: — Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Is the same DTC present?	Yes	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
4	**VERIFY NO DTC HAS BEEN PRESENTED** • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

DTC U0115:00 [FW6A-EL, FW6AX-EL]

id050227908100

DTC U0115:00	**Communication error to PCM (local CAN between TCM and PCM)**
DETECTION CONDITION	• Under the following condition, the TCM cannot receive the signal from PCM (local CAN between TCM and PCM): — Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to TCC control. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS. • Inhibits 5GR and 6GR. • Inhibits shift down when the accelerator pedal is depressed.
POSSIBLE CAUSE	• PCM DTC is stored. • PCM malfunction • TCM malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CONFIRM PCM DTC** • Perform the PCM DTC inspection using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	PCM can be considered the cause. • Replace the PCM, then go to the next step. (See 01-40-10 PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: — Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Is the same DTC present?	Yes	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
5	**VERIFY NO DTC HAS BEEN PRESENTED** • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

DTC U0442:00 [FW6A-EL, FW6AX-EL]

id050227905300

DTC U0442:00	**Invalid data received from PCM (local CAN between TCM and PCM)**
DETECTION CONDITION	• Under the following condition, the TCM detects the invalid PCM signal for **0.5 s**: — Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to TCC control. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits 5GR and 6GR. • Inhibits shift down when the accelerator pedal is depressed.
POSSIBLE CAUSE	• PCM DTC is stored.
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**CONFIRM PCM DTC** • Perform the PCM DTC inspection using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01-02-14 DTC TABLE [SKYACTIV-G 2.0].)
		No	Go to the next step.
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine and warm it up completely. 2. Drive the vehicle for a while under the following conditions: • Selector lever position: D position • Perform the DTC inspection using the M-MDS. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FW6A-EL, FW6AX-EL]

id050227290300

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Data Logger”.
   (2) Select “Modules”.
   (3) Select “TCM”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

PID/DATA monitor item table (Reference)

—: Not applicable

Item	Unit/ Condition	Test condition	Specification (Reference)	Output part name
DGP_DIS_1	km {mile}	Displays the traveled distance since the differential protection control operated due to excessive rotation difference between left/right drive wheels.		—
DGP_DIS_2	km {mile}	Displays the traveled distance since the DGP_MAX_DIF is updated.		—
DGP_MAX_DIF	RPM	Displays the maximum rotation difference since the differential protection control operated due to excessive rotation difference between left/right drive wheels.		—
DGP_SPD	KPH {MPH}	Displays the vehicle speed with trailing wheels since the differential protection control operated due to excessive rotation difference between left/right drive wheels.		—
ECT	°C {°F}	Displays the ECT.		ECT sensor
ECU_A	°C {°F}	Displays the ECU internal temperature A.		ECU internal temperature sensor A
ECU_B	°C {°F}	Displays the ECU internal temperature B.		ECU internal temperature sensor B
ECU_C	°C {°F}	Displays the ECU internal temperature C.		ECU internal temperature sensor C
EOP_DUTY	%	Displays the drive duty ratio for electric AT oil pump.		Electric AT oil pump
EOP_RLY	Off/On	Electric AT oil pump relay stopped	Off	Electric AT oil pump relay
		Electric AT oil pump relay operating	On	
GEAR_RA	Ratio	Selector lever in 1GR at D position	Approx. 3.5526	• Shift solenoid No.1 • Shift solenoid No.2 • Shift solenoid No.3 • Shift solenoid No.4
		Selector lever in 2GR at D position	Approx. 2.0228	
		Selector lever in 3GR at D position	Approx. 1.4522	
		Selector lever in 4GR at D position	Approx. 1.0000	
		Selector lever in 5GR at D position	Approx. 0.7084	
		Selector lever in 6GR at D position	Approx. 0.5993	
GEAR_SEL	1/2/3/4/5/6	Selector lever in 1GR at D position	1	• Shift solenoid No.1 • Shift solenoid No.2 • Shift solenoid No.3 • Shift solenoid No.4
		Selector lever in 2GR at D position	2	
		Selector lever in 3GR at D position	3	
		Selector lever in 4GR at D position	4	
		Selector lever in 5GR at D position	5	
		Selector lever in 6GR at D position	6	
HI_TEMP	—	Displays the ATF high temperature mode determination amount. (ATF temperature 132 °C {270 °F} or more)		—
HTM_CNT	—	Displays the ATF high temperature mode determination amount. (ATF temperature 132 °C {270 °F} or more)		—
HTM_DIS	km {mile}	Displays the traveled distance after determining the ATF high temperature mode. (ATF temperature 132 °C {270 °F} or more)		—
LINEDES	kPa {kgf/cm^2, psi}	Idle at P position after warm-up	Approx. 500 kPa {5.10 kgf/cm^2, 72.5 psi}	—
LN_C_CLUTCH	kPa {kgf/cm^2, psi}	Displays the hydraulic control learning value data.		—
LN_O_CLUTCH	kPa {kgf/cm^2, psi}	Displays the hydraulic control learning value data.		—
LN_OV_SCOPE	—	Displays the hydraulic control learning value data.		—
LN_T_CLUTCH	kPa {kgf/cm^2, psi}	Displays the hydraulic control learning value data.		—

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

Item	Unit/ Condition	Test condition	Specification (Reference)	Output part name
LOCK_UP	OFF/SLIP/ON	OFF: • Except below SLIP: • "SLIP" is displayed during TCC control with the difference between the engine speed and turbine shaft speed less than the control value. • Resets while TCC control is stopped or if the difference between the engine speed and turbine/shaft speed is the specification or more. ON: • "ON" is displayed during TCC control and there is almost no difference between the engine speed and turbine shaft speed*. • Resets while TCC control is stopped or if the difference between the engine speed and turbine shaft speed is the specification or more. *: The TCC controls the TCC hydraulic pressure to suppress hydraulic pressure loss and transaxle vibration due to TCC clutch engagement. Therefore, normally, there is a difference between the engine speed and turbine shaft speed. Because the TCC hydraulic pressure is increased by the fail-safe and TCC is performed while the ATF is hot, there is almost no difference.		—
LONGI_ACCEL	—	Displays the acceleration calculated from the drive wheels.		—
OP_SW1	Off/On	Selector lever at P position	Off	Oil pressure switch No.1
		Selector lever at R position	Off	
		Selector lever at N position	Off	
		Selector lever in 1GR at D position	On	
		Selector lever in 2GR at D position	On	
		Selector lever in 3GR at D position	On	
		Selector lever in 4GR at D position	On	
		Selector lever in 5GR at D position	Off	
		Selector lever in 6GR at D position	Off	
OP_SW1_OFF	kPa {kgf/cm^2, psi}	After performing on-board diagnostic test mode	More than 50 kPa {0.51 kgf/cm^2, 7.3 psi} (0 kPa {0 kgf/cm^2, 0 psi} before performing on-board diagnostic test mode)	Oil pressure switch No.1
OP_SW1_ON	kPa {kgf/cm^2, psi}	After performing on-board diagnostic test mode	Less than 320 kPa {3.26 kgf/cm^2, 46.4 psi} (0 kPa {0 kgf/cm^2, 0 psi} before performing on-board diagnostic test mode)	Oil pressure switch No.1
OP_SW2	Off/On	Selector lever at P position	Off	Oil pressure switch No.2
		Selector lever at R position	Off	
		Selector lever at N position	Off	
		Selector lever in 1GR at D position	Off	
		Selector lever in 2GR at D position	On	
		Selector lever in 3GR at D position	Off	
		Selector lever in 4GR at D position	Off	
		Selector lever in 5GR at D position	Off	
		Selector lever in 6GR at D position	On	
OP_SW2_OFF	kPa {kgf/cm^2, psi}	After performing on-board diagnostic test mode	More than 50 kPa {0.51 kgf/cm^2, psi} (0 kPa {0 kgf/cm^2, 0 psi} before performing on-board diagnostic test mode)	Oil pressure switch No.2
OP_SW2_ON	kPa {kgf/cm^2, psi}	After performing on-board diagnostic test mode	Less than 260 kPa {2.65 kgf/cm^2, 37.7 psi} (0 kPa {0 kgf/cm^2, 0 psi} before performing on-board diagnostic test mode)	Oil pressure switch No.2

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

ON-BOARD DIAGNOSTIC [FW6A-EL, FW6AX-EL]

ON-BOARD DIAGNOSTIC SYSTEM SIMULATION INSPECTION [FW6A-EL, FW6AX-EL]

id050227290400

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Data Logger”.
   (2) Select “Modules”.
   (3) Select “TCM”.
3. Select the simulation items from the PID table.
4. Perform the active command modes function, inspect the operations for each parts.
   - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

Simulation item table

Item	Description	Unit/Condition	Operation condition
EOP	Electric AT oil pump condition	Off/On	Under the following conditions: • Vehicle stopped • Accelerator pedal fully closed
EOP_DUTY	Electric AT oil pump duty cycle	%	Under the following conditions: • Vehicle stopped • Accelerator pedal fully closed
EOP_RLY	Electric AT oil pump relay condition	Off/On	Under the following conditions: • Vehicle stopped • Accelerator pedal fully closed
SS_ON-OFF	On/off solenoid condition	Off/On	Under the following conditions: • Vehicle stopped • Idling at P or N position
SS1_C	Shift solenoid No.1 target current	A	Under the following conditions: • Vehicle stopped • Idling at P or N position
SS2_C	Shift solenoid No.2 target current	A	Under the following conditions: • Vehicle stopped • Idling at P or N position
SS3_C	Shift solenoid No.3 target current	A	Under the following conditions: • Vehicle stopped • Idling at P or N position
SS4_C	Shift solenoid No.4 target current	A	Under the following conditions: • Vehicle stopped • Idling at P or N position
SSLU_C	TCC control solenoid target current	A	Under the following conditions: • ATF temperature (PID: TFT) is 20 °C {68 °F} or more. • Output shaft speed (PID: OSS) is 10 rpm or more. • Turbine/input shaft speed (PID: TSS) is 1,000 rpm or more. • Brake pedal released
SSP_C	Pressure control solenoid target current	A	Idling at P or N position

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Verify that no DTCs are stored. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].)
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
- If the malfunction does not recur after the above servicing, explain to the customer that the vehicle is normal.

ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL]

id050230290100

Reading DTCs Procedure

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “TCM”.

   Note
   - Freeze frame data/snapshot data appears at the top of the help screen when the displayed DTC is selected.

   Freeze frame data
   - The freeze frame data consists of data for vehicle and transaxle control system operation conditions when malfunctions in the transaxle control system are detected and stored in the TCM.
   - Freeze frame data is stored at the instant the malfunction indicator lamp illuminates, and only a part of the DTC data is stored.

   Snapshot data
   - The data for all DTCs currently detected is stored.
     Recorded DTC timing
     - — For DTCs with one drive cycle, data is recorded during the malfunction determination period.
     - — For DTCs with two drive cycles, data is recorded during non-determination (1st diagnosis) periods.
3. Then, select the “Retrieve CMDTCs” and perform procedures according to directions on the M-MDS screen.
4. Verify the DTC according to the directions on the screen.
   - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection.
5. After completion of repairs, clear all DTCs stored in the TCM. (See 05-02B-6 Freeze frame data item table.)

Freeze frame data item table

Note
- Refer to PID/DATA monitor table for confirm the transaxle control system operation status while the TCM does not store the DTC. (See 05-02B-92 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [GW6A-EL, GW6AX-EL].)
- Freeze frame data items are not displayed, according to detected DTC.

—: Not applicable

Freeze frame data item	Unit	Description	Corresponding PID/DATA monitor item
LOAD	%	Calculated engine load	—
ECT	°C {°F}	Engine coolant temperature	ECT
RPM	RPM	Engine speed	RPM
VS	KPH {MPH}	Vehicle speed	VSS
IAT	°C {°F}	Intake air temperature	—
TP	%	Throttle valve position No.1	TP
RUNTM	hh:mm:ss	Time from engine start	—
VPWR	V	Module supply voltage	VPWR
APP_D	%	Accelerator pedal position No.1	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Snapshot data item table

Note

- Refer to PID/DATA monitor table for confirm the transaxle control system operation status while the TCM does not store the DTC. (See 05-02B-92 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [GW6A-EL, GW6AX-EL].)
- Snapshot data items are not displayed, according to detected DTC.

—: Not applicable

SLIP_VALUE	RPM	Actual slip value between TSS and OSS	—
HTM_DIS	km {mile}	Travel distance since determination of ATF high temperature mode	HTM_DIS

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Clearing DTCs Procedures

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “TCM”.
3. Verify the DTC according to the directions on the screen.
4. Press the clear button on the DTC screen to clear the DTC.
5. Switch the ignition to off.
6. Switch the ignition to ON (engine off or on) and wait for **5 s or more**.
7. Perform DTC inspection. (See 05-02B-6 Reading DTCs Procedure.)
8. Verify that no DTCs are displayed.

ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL]

id050230950000

Foreword

- The on-board diagnosis test displays DTCs for locations determined to be malfunctioning based on the operation results from the forced operation of each solenoid and selection of each gear. Therefore, this is an effective mode if DTCs which do not specify the malfunctioning location, such as a gear ratio malfunction, are displayed.
- When the following DTCs displayed, perform the on-board diagnostic test.

DTC No.	Description
P0729:00	6GR incorrect ratio
P0731:00	1GR incorrect ratio
P0732:00	2GR incorrect ratio
P0733:00	3GR incorrect ratio
P0734:00	4GR incorrect ratio
P0735:00	5GR incorrect ratio
P0736:00	Gear reverse incorrect ratio
P0780:00	Gear shifting malfunction
P079A:00	Shift solenoid No.3 stuck off/On/off solenoid stuck on
P1738:00	Automatic transaxle internal malfunction
P1784:00	Hi cut valve stuck off/R-3-5 cut valve stuck on

- When DTCs are displayed by the on-board diagnosis test, perform the instructions in the applicable DTC troubleshooting.

Warning

- **The on-board diagnosis test forcibly changes gears within the driving shift range while the engine is running. Before implementing the on-board diagnosis test, securely apply the parking brake and set the wheel blocks for both the front and rear wheels. Otherwise, the vehicle will move which could cause injury or property damage.**

Note

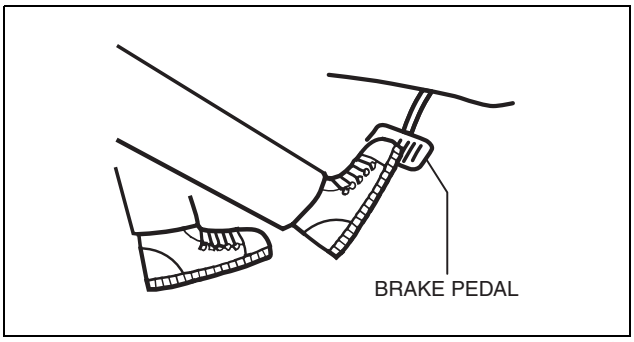
- The time required to perform the diagnostic is **2 to 3 min**.
- If unsafe actions such as shift operation and brake pedal release are detected before the shift position indicator light flashes, the on-board diagnostic test mode is canceled and the shift position indicator light flashes **5 times**.

1. Apply the parking brake firmly, and set the wheel blocks for both the front and rear wheels.
2. Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].)
3. Connect the M-MDS to the DLC-2.
4. Perform vehicle identification using the M-MDS.
5. Start the engine.
6. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Data Logger”.
   (2) Select “Modules”.
   (3) Select “TCM”.
7. While checking the PID TFT (ATF temperature), warm-up the engine completely and allow the ATF temperature to reach **55 °C {131 °F} or more**.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

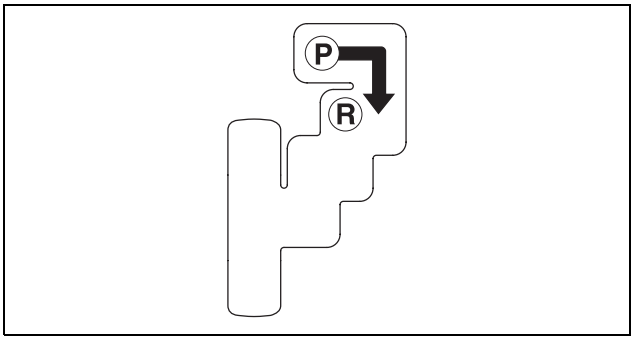
8. Select the following items from the initialization screen of the M-MDS.
   (1) Select “Self Test”.
   (2) Select “Modules”.
   (3) Select “TCM”.
9. Perform the following steps (1) to (5) with the brake pedal depressed.

Note
- If the on-board diagnosis test is shut down (Shift position indicator light flashes 5 times), resume the procedure from Step 1.



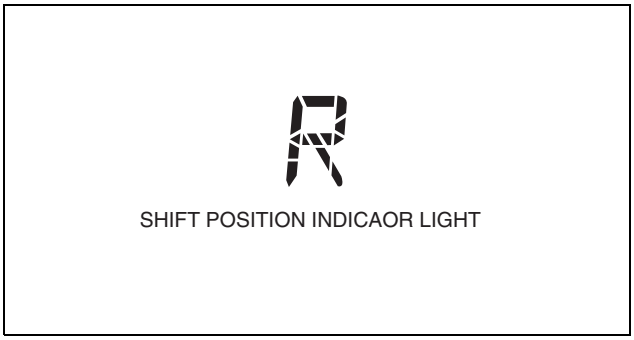
ac5wzw0000404

(1) Shift the selector lever to the R position.



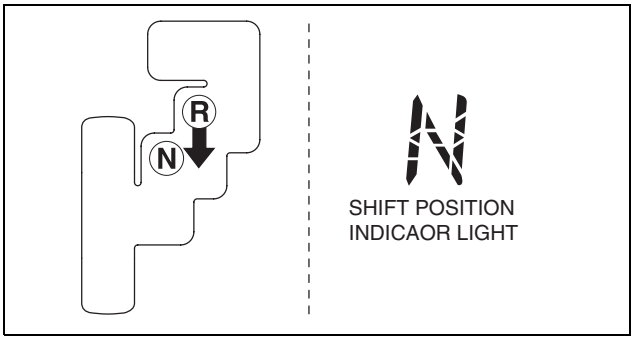
am3uuw0000875

(2) Clear DTCs using the M-MDS and verify that the shift position indicator light flashes 2 times. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].)



ac5wzw0000239

(3) Within **5 s** after the shift position indicator light flashes 2 times, shift the selector lever to the N position and verify that the shift position indicator light flashes 2 times.

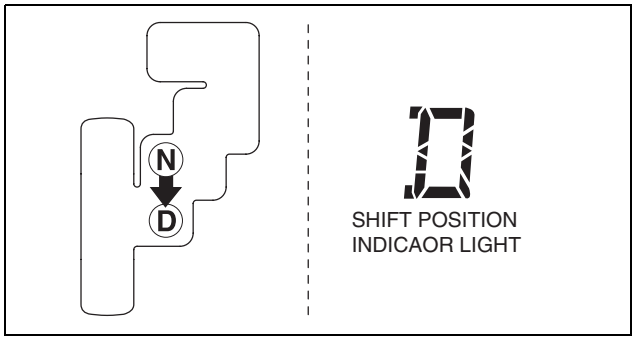


ac5wzw0000239

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

(4) Within **5 s** after the shift position indicator light flashes 2 times, shift the selector lever to the D position and verify that the shift position indicator light flashes 3 times.

Note
- **Approx. 30 s** is required until the shift position indicator light flashes. In addition, shift shock occurs a few times during stand-by.



ac5wzw0000239

(5) After the shift position indicator light flashes 3 times, shift the selector lever to the P position.

10. Release the brake pedal.
11. Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].)
    - If any DTCs are displayed, perform troubleshooting according to the corresponding DTC inspection. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].)

*1 : :C: CMDTC self test, O: KOEO self test

DTC P0218:00 [GW6A-EL, GW6AX-EL]

id050230903700

DTC P0218:00	Automatic transaxle protection control
DETECTION CONDITION	• Under the following conditions, the ATF temperature is **135 °C {275 °F} or more** for **10 s**: — Engine is running. — Battery voltage is **8 V or more**. — TFT sensor related DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Oil cooler malfunction • ATF is more than specified value
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to Step 5. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
4	**INSPECT OIL COOLER** • Visually inspect the oil cooler. • Is there any malfunction?	Yes	Replace the oil cooler, then go to the next step. (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
5	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine and wait for **10 s or more**. • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0500:00 [GW6A-EL, GW6AX-EL]

id050230321400

DTC P0500:00	Vehicle speed signal circuit malfunction
DETECTION CONDITION	• Under the following conditions, the vehicle speed signal input from DSC HU/CM is incorrect for **10 s**: — Engine is running. — Battery voltage is **8 V or more**. — Vehicle speed is **16 km/h {9.9 mph} or more**. — There is no difference in speed between turbine/input shaft speed sensor and output shaft speed sensor. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• DSC HU/CM DTC is stored. — ABS wheel-speed sensor malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY STORED DTC IN DSC HU/CM** • Perform the DSC HU/CM DTC inspection using the M-MDS. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Drive the vehicle for **10 s or more** under the following conditions: • Battery voltage: **8 V or more** • Vehicle speed: **45 km/h {28 mph} or more** • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0666:00 [GW6A-EL, GW6AX-EL]

id050230903800

DTC P0666:00	ECU internal temperature sensor circuit(s) malfunction
DETECTION CONDITION	• Under the following condition, there is malfunction in circuits of two or more ECU internal temperature sensors: — Battery voltage is **8 V or more**. • Under the following conditions, one ECU internal temperature sensor has malfunction, with difference in temperature between remaining two ECU internal temperature sensors being **10 °C {18 °F} or more**: — Battery voltage is **8 V or more**. — Soaked for **6 hours or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control.
POSSIBLE CAUSE	• Control valve body malfunction — ECU internal temperature sensor (built-into TCM) malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0667:00 [GW6A-EL, GW6AX-EL]

id050230903900

DTC P0667:00	ECU internal temperature sensor two-range/performance problem
DETECTION CONDITION	• Under the following conditions, the difference between ECU internal temperatures of three ECU internal temperature sensors is **10 °C {18 °F} or more**: — Engine is running. — Battery voltage is **8 V or more**. — Soaked for **6 hours or more**. — No malfunction in ECU internal temperature sensor circuit **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control.
POSSIBLE CAUSE	• Control valve body malfunction — ECU internal temperature sensor (built-into TCM) malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Soak for **6 hours or more**. 2. Start the engine, and warm it up until the ATF temperature is **60 °C {140 °F} or more**, and the engine coolant temperature is **80 °C {176 °F} or more**. • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P06B8:00 [GW6A-EL, GW6AX-EL]

id050230325000

DTC P06B8:00	NVRAM malfunction
DETECTION CONDITION	• Under the following condition, TCM internal NVRAM data retention/read/write disabled: — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• TCM initial learning error • Control valve body malfunction — TCM internal NVRAM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**PERFORM INITIAL LEARNING** • Perform the initial learning. (See 05-17B-93 INITIAL LEARNING [GW6A-EL, GW6AX-EL].) • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Is the DTC P06B8:00 also present?	Yes	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0706:00 [GW6A-EL, GW6AX-EL]

id050230817000

DTC P0706:00	Transaxle range sensor range/performance problem
DETECTION CONDITION	• Under the following condition, pattern identification error in switch condition of transaxle range sensors 1 to 4: — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Transaxle range sensor (built-into TCM) malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0707:00 [GW6A-EL, GW6AX-EL]

id050230817100

DTC P0707:00	**Transaxle range sensor circuit low input**
DETECTION CONDITION	• Under the following condition, incorrect voltage in any of transaxle range sensors 1 to 4: — Battery voltage is **8 V or more**. **Diagnostic support note** • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Transaxle range sensor (built-into TCM) malfunction

DTC P0713:00 [GW6A-EL, GW6AX-EL]

id050230817500

DTC P0713:00	TFT sensor circuit high input
DETECTION CONDITION	• Under the following conditions, the ATF temperature is **–40 °C {–40 °F} or less** for **5 s**: — Battery voltage is **8 V or more**. — IAT is **–25 °C {–13 °F} or more**. — IAT sensor related DTC is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control.
POSSIBLE CAUSE	• TFT sensor malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CONFIRM IAT SENSOR PENDING CODE/DTC** • Perform the PCM DTC inspection using the M-MDS. • Are IAT sensor pending codes/DTCs present?	Yes	Go to the applicable DTC inspection.
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the coupler component. (See 05-17B-17 COUPLER COMPONENT REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].) Go to the next step.
		No	Replace the coupler component, then go to the next step. (See 05-17B-17 COUPLER COMPONENT REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition to ON (engine off or on) and wait for **5 s or more**. 2. Verify that the IAT is **–25 °C {–13 °F} or more**. • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0716:00 [GW6A-EL, GW6AX-EL]

id050230904000

DTC P0716:00	**Turbine/Input shaft speed sensor range/performance problem**
DETECTION CONDITION	• Under the following conditions, the turbine/input shaft speed is **9,000 rpm or more** for **1 s**: — Engine is running. — Battery voltage is **10 V or more**. — Engine speed is **7,500 rpm or less**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to TCC control. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS. • Inhibits 5GR and 6GR. • Inhibits shift down when the accelerator pedal is depressed.
POSSIBLE CAUSE	• Turbine/Input shaft speed sensor malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Drive the vehicle for **1 s or more** under the following condition: • Vehicle speed: **30 km/h {19 mph} or more** • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0717:00 [GW6A-EL, GW6AX-EL]

id050230821300

DTC P0717:00	Open circuit in turbine/input shaft speed sensor circuit
DETECTION CONDITION	• Under the following conditions, the turbine/input shaft speed sensor signal is not input for **1 s**: — Engine is running. — Battery voltage is **10 V or more**. — Vehicle speed signal related DTC is not recorded. — Vehicle speed is **16 km/h {9.9 mph} or more**. — There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. — DTC U0121:00 is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to TCC control. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS. • Inhibits 5GR and 6GR. • Inhibits shift down when the accelerator pedal is depressed.
POSSIBLE CAUSE	• Turbine/Input shaft speed sensor malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Drive the vehicle for **1 s or more** under the following condition: • Vehicle speed: **16 km/h {9.9 mph} or more** • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0721:00 [GW6A-EL, GW6AX-EL]

id050230904100

DTC P0721:00	Output shaft speed sensor range/performance problem
DETECTION CONDITION	• Under the following conditions, the output shaft speed is **13,560 rpm or more** for **1 s**: — Engine is running. — Battery voltage is **10 V or more**. • Under the following conditions, the vehicle speed signal from the DSC HU/CM and the output shaft speed sensor signal differ by **520 rpm or more** for **1 s**: — Engine is running. — Battery voltage is **10 V or more**. — Vehicle speed signal related DTC is not recorded. — Vehicle speed is **16 km/h {9.9 mph} or more**. — Vehicle speed signal from DSC HU/CM and turbine/input shaft speed sensor signal do not differ. — Output shaft speed sensor signal is input. — Output shaft speed is **13,560 rpm or less**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Output shaft speed sensor malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CONFIRM DSC HU/CM DTC** • Perform the DSC HU/CM DTC inspection using the M-MDS. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 04-02A-7 ON-BOARD DIAGNOSIS [DYNAMIC STABILITY CONTROL (DSC)].)
		No	Go to the next step.
2	**VERIFY THE INSTRUMENT CLUSTER REPAIR HISTORY** • Does the instrument cluster have a record of replacement?	Yes	Perform the instrument cluster configuration, then go to Step 6. (See 09-22-19 INSTRUMENT CLUSTER CONFIGURATION (USING AS-BUILT DATA).)
		No	Go to the next step.
3	**VERIFY THE AUTOMATIC TRANSMISSION REPAIR HISTORY** • Does the automatic transmission (with control valve body) have a record of replacement?	Yes	Perform the TCM configuration. (See 05-17B-98 TCM CONFIGURATION [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
4	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
5	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Drive the vehicle for **1 s or more** under the following condition: • Vehicle speed: **30 km/h {19 mph} or more** • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0722:00 [GW6A-EL, GW6AX-EL]

id050230821500

DTC P0722:00	Open circuit in output shaft speed sensor circuit
DETECTION CONDITION	• Under the following conditions, the output shaft speed sensor signal is not input for **1 s**: — Engine is running. — Battery voltage is **10 V or more**. — Vehicle speed signal related DTC is not recorded. — Vehicle speed is **16 km/h {9.9 mph} or more**. — There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. — DTC U0121:00 is not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Output shaft speed sensor malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Drive the vehicle for **1 s or more** under the following condition: • Vehicle speed: **16 km/h {9.9 mph} or more** • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0729:00 [GW6A-EL, GW6AX-EL]

id050230822000

DTC P0729:00	**6GR incorrect ratio**
DETECTION CONDITION	• In D position, 6GR, the following phenomenon occurs: — Engine speed and turbine/input shaft speed deviates by **600 rpm** for **230 to 1,980 ms** (varies with ATF temperature and ECT) during shift-up. — Engine speed and turbine/input shaft speed deviates by **300 rpm** for **1,500 to 3,900 ms** (varies with ATF temperature) while driving without shifting. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch burnt • Shift solenoid malfunction • ATF leakage from clutch circuit • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Are any the following DTCs displayed? — P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P079A:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

DTC P0731:00 [GW6A-EL, GW6AX-EL]

id050230817800

DTC P0731:00	1GR incorrect ratio
DETECTION CONDITION	• In D position, 1GR, the following phenomenon occurs: — Speed ratio is **0.75 to 1.2** for **2,000 ms** while vehicle is stopped in D position. — Engine speed and turbine/input shaft speed deviates by **600 rpm** for **230 to 1,980 ms** (varies with ATF temperature and ECT) during shift-up. — Engine speed and turbine/input shaft speed deviates by **300 rpm** for **1,500 to 3,900 ms** (varies with ATF temperature) while driving without shifting. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch burnt • Shift solenoid malfunction • ATF leakage from clutch circuit • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Are any the following DTCs displayed? — P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P079A:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

DTC P0732:00 [GW6A-EL, GW6AX-EL]

id050230817900

DTC P0732:00	2GR incorrect ratio
DETECTION CONDITION	• In D position, 2GR, the following phenomenon occurs: — Engine speed and turbine/input shaft speed deviates by **600 rpm** for **230 to 1,980 ms** (varies with ATF temperature and ECT) during shift-up. — Engine speed and turbine/input shaft speed deviates by **300 rpm** for **1,500 to 3,900 ms** (varies with ATF temperature) while driving without shifting. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch burnt • Shift solenoid malfunction • ATF leakage from clutch circuit • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Are any the following DTCs displayed? — P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P079A:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

DTC P0733:00 [GW6A-EL, GW6AX-EL]

id050230818000

DTC P0733:00	3GR incorrect ratio
DETECTION CONDITION	• In D position, 3GR, the following phenomenon occurs: — Engine speed and turbine/input shaft speed deviates by **600 rpm** for **230 to 1,980 ms** (varies with ATF temperature and ECT) during shift-up. — Engine speed and turbine/input shaft speed deviates by **300 rpm** for **1,500 to 3,900 ms** (varies with ATF temperature) while driving without shifting. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch burnt • Shift solenoid malfunction • ATF leakage from clutch circuit • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Are any the following DTCs displayed? — P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P079A:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

DTC P0734:00 [GW6A-EL, GW6AX-EL]

id050230818100

DTC P0734:00	4GR incorrect ratio
DETECTION CONDITION	• In D position, 4GR, the following phenomenon occurs: — Engine speed and turbine/input shaft speed deviates by **600 rpm** for **230 to 1,980 ms** (varies with ATF temperature and ECT) during shift-up. — Engine speed and turbine/input shaft speed deviates by **300 rpm** for **1,500 to 3,900 ms** (varies with ATF temperature) while driving without shifting. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch burnt • Shift solenoid malfunction • ATF leakage from clutch circuit • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Are any the following DTCs displayed? — P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P079A:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

DTC P0735:00 [GW6A-EL, GW6AX-EL]

id050230825100

DTC P0735:00	5GR incorrect ratio
DETECTION CONDITION	• In D position, 5GR, the following phenomenon occurs: — Engine speed and turbine/input shaft speed deviates by **600 rpm** for **230 to 1,980 ms** (varies with ATF temperature and ECT) during shift-up. — Engine speed and turbine/input shaft speed deviates by **300 rpm** for **1,500 to 3,900 ms** (varies with ATF temperature) while driving without shifting. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch burnt • Shift solenoid malfunction • ATF leakage from clutch circuit • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Are any the following DTCs displayed? — P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P079A:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

DTC P0736:00 [GW6A-EL, GW6AX-EL]

id050230823200

DTC P0736:00	**Gear reverse incorrect ratio**
DETECTION CONDITION	• Speed ratio is **0.75 to 1.2** for **2,000 ms** while vehicle is stopped in R position. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch burnt • Shift solenoid malfunction • ATF leakage from clutch circuit • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Are any the following DTCs displayed? — P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P079A:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

DTC P0741:00 [GW6A-EL, GW6AX-EL]

id050230818200

DTC P0741:00	TCC control solenoid stuck off
DETECTION CONDITION	• Under the following conditions, difference in slip amount **over 5 s** compared to target slip amount is **200 rpm or more**, and TCC feedback hydraulic pressure is **200 kPa {2.04 kgf/cm^2, 29.0 psi} or more** occurs: — Battery voltage is **8 V or more**. — Selector lever position is D position. — No electrical malfunction in TCC control solenoid — During TCC or TCC feedback — DTC P0716:00 and P0717:00 are not recorded. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits TCC control. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• TCC control solenoid malfunction • ATF leakage from clutch circuit • TCC clutch burnt • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) Go to the next step.
		No	Replace the automatic transaxle, then go to the next step. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Drive the vehicle for **5 s or more** under the following conditions: • Selector lever position: D position • During TCC or TCC feedback • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

05

DTC P0743:00 [GW6A-EL, GW6AX-EL]

id050230822200

DTC P0743:00	TCC control solenoid circuit malfunction
DETECTION CONDITION	• Under the following condition, the TCM detects the TCC control solenoid circuit malfunction: — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in TCC control solenoid circuit • TCC control solenoid malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0746:00 [GW6A-EL, GW6AX-EL]

id050230904200

DTC P0746:00	**Pressure control solenoid stuck off**
DETECTION CONDITION	• Under the following conditions, pressure control solenoid stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Pressure control solenoid malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
5	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

DTC P0748:00 [GW6A-EL, GW6AX-EL]

id050230904300

DTC P0748:00	**Pressure control solenoid circuit malfunction**
DETECTION CONDITION	• Under the following condition, the TCM detects the pressure control solenoid circuit malfunction: — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in pressure control solenoid circuit • Pressure control solenoid malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0751:00 [GW6A-EL, GW6AX-EL]

id050230818600

DTC P0751:00	**Shift solenoid No.1 stuck off**
DETECTION CONDITION	• Under the following conditions, shift solenoid No.1 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Shift solenoid No.1 malfunction • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
5	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any the following DTCs displayed? — P0751:00, P0843:00	Yes	ATF amount in Step 4 is correct: • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) ATF amount adjusted in Step 4: • Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL])
6	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0752:00 [GW6A-EL, GW6AX-EL]

id050230818700

DTC P0752:00	**Shift solenoid No.1 stuck on**
DETECTION CONDITION	• Under the following conditions, shift solenoid No.1 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Shift solenoid No.1 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are P0752:00 present?	Yes	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL])
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL])
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0753:00 [GW6A-EL, GW6AX-EL]

id050230818800

DTC P0753:00	**Shift solenoid No.1 circuit malfunction**
DETECTION CONDITION	• Under the following condition, the TCM detects the shift solenoid No.1 circuit malfunction: — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in shift solenoid No.1 circuit • Shift solenoid No.1 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0756:00 [GW6A-EL, GW6AX-EL]

id050230818900

DTC P0756:00	**Shift solenoid No.2 stuck off**
DETECTION CONDITION	• Under the following conditions, shift solenoid No.2 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Shift solenoid No.2 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
5	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any the following DTCs displayed? — P0756:00, P0848:00	Yes	ATF amount in Step 4 is correct: • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) ATF amount adjusted in Step 4: • Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL])
6	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

05

DTC P0757:00 [GW6A-EL, GW6AX-EL]

id050230819000

DTC P0757:00	**Shift solenoid No.2 stuck on**
DETECTION CONDITION	• Under the following conditions, shift solenoid No.2 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Shift solenoid No.2 malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are P0757:00 present?	Yes	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL])
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL])
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0758:00 [GW6A-EL, GW6AX-EL]

id050230819100

DTC P0758:00	**Shift solenoid No.2 circuit malfunction**
DETECTION CONDITION	• Under the following condition, the TCM detects the shift solenoid No.2 circuit malfunction: — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in shift solenoid No.2 circuit • Shift solenoid No.2 malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0761:00 [GW6A-EL, GW6AX-EL]

id050230819200

DTC P0761:00	**Shift solenoid No.3 stuck off**
DETECTION CONDITION	• Under the following conditions, shift solenoid No.3 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Shift solenoid No.3 malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are P0761:00 present?	Yes	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL])
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL])
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0762:00 [GW6A-EL, GW6AX-EL]

id050230819300

DTC P0762:00	**Shift solenoid No.3 stuck on**
DETECTION CONDITION	• Under the following conditions, shift solenoid No.3 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Shift solenoid No.3 malfunction • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
5	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any the following DTCs displayed? — P0762:00, P0873:00	Yes	ATF amount in Step 4 is correct: • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) ATF amount adjusted in Step 4: • Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL])
6	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0763:00 [GW6A-EL, GW6AX-EL]

id050230819400

DTC P0763:00	**Shift solenoid No.3 circuit malfunction**
DETECTION CONDITION	• Under the following condition, the TCM detects the shift solenoid No.3 circuit malfunction: — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.

DTC P0767:00	**Shift solenoid No.4 stuck on**
DETECTION CONDITION	• Under the following conditions, shift solenoid No.4 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Shift solenoid No.4 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
5	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any the following DTCs displayed? — P0767:00, P0878:00	Yes	ATF amount in Step 4 is correct: • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) ATF amount adjusted in Step 4: • Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL])
6	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

05

DTC P0768:00 [GW6A-EL, GW6AX-EL]

id050230819700

DTC P0768:00	**Shift solenoid No.4 circuit malfunction**
DETECTION CONDITION	• Under the following condition, the TCM detects the shift solenoid No.4 circuit malfunction: — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in shift solenoid No.4 circuit • Shift solenoid No.4 malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].) Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0771:00 [GW6A-EL, GW6AX-EL]

id050230819800

DTC P0771:00	**On/off solenoid stuck off**
DETECTION CONDITION	• Under the following conditions, on/off solenoid stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• On/off solenoid malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are P0771:00 present?	Yes	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0772:00 [GW6A-EL, GW6AX-EL]

id050230819900

DTC P0772:00	On/off solenoid stuck on
DETECTION CONDITION	• Under the following conditions, on/off solenoid stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • On/off solenoid malfunction • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Replace the on/off solenoid, then go to the next step. (See 05-17B-25 ON/OFF SOLENOID REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
5	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	ATF amount in Step 4 is correct • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) ATF amount adjusted in Step 4: • Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.
6	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0773:00 [GW6A-EL, GW6AX-EL]

id050230820000

DTC P0773:00	**On/off solenoid circuit malfunction**
DETECTION CONDITION	• Under the following condition, the TCM detects the on/off solenoid circuit malfunction: — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Short or open circuit in on/off solenoid circuit • On/off solenoid malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the on/off solenoid. (See 05-17B-25 ON/OFF SOLENOID REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].) Go to the next step.
		No	Replace the on/off solenoid, then go to the next step. (See 05-17B-25 ON/OFF SOLENOID REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0780:00 [GW6A-EL, GW6AX-EL]

id050230824500

DTC P0780:00	Gear shifting malfunction
DETECTION CONDITION	• Under the following conditions, the gear shifting inhibited: — Engine is running. — Battery voltage is **8 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • On/off solenoid malfunction • Pressure control solenoid malfunction • Shift solenoid malfunction • Oil pressure switch circuit malfunction • Oil pressure switch malfunction • Clutch slippage • ATF leakage from clutch circuit • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Are any the following DTCs displayed? — P0738:00, P0746:00, P0751:00, P0752:00, P0756:00, P0757:00, P0761:00, P0762:00, P0766:00, P0767:00, P0771:00, P0772:00, P079A:00, P0842:00, P0843:00, P0847:00, P0848:00, P0872:00, P0873:00, P0877:00, P0878:00, P1784:00	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P079A:00 [GW6A-EL, GW6AX-EL]

id050230904400

DTC P079A:00	Shift solenoid No.3 stuck off/On/off solenoid stuck on
DETECTION CONDITION	• Under the following conditions, shift solenoid No.3 stuck-off or on/off solenoid stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Shift solenoid No.3 malfunction • On/off solenoid malfunction • Control valve body malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

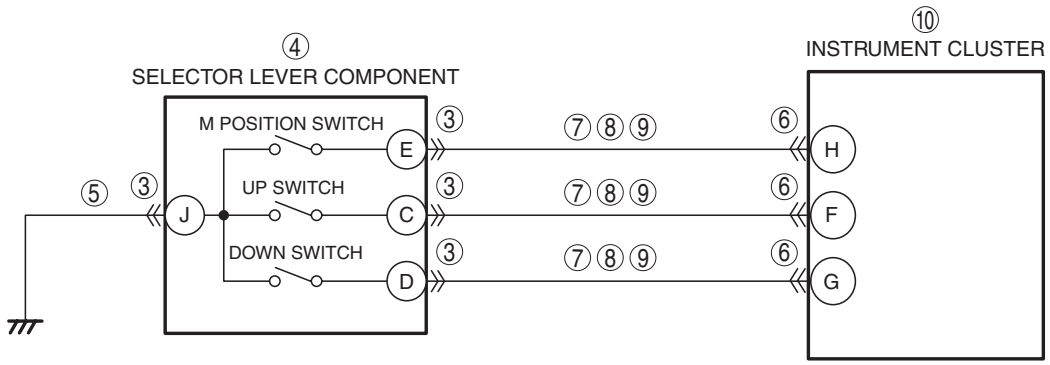
STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Are any the following DTCs displayed? — P0762:00, P0772:00, P1738:00	Yes	Go to the applicable DTC inspection. (See 05-02B-48 DTC P0762:00 [GW6A-EL, GW6AX-EL].) (See 05-02B-55 DTC P0772:00 [GW6A-EL, GW6AX-EL].) (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
3	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	ATF amount in Step 2 is correct: • Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) ATF amount adjusted in Step 2: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

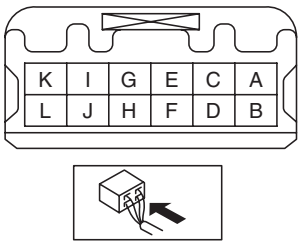
DTC P0819:00 [GW6A-EL, GW6AX-EL]

id050230822400

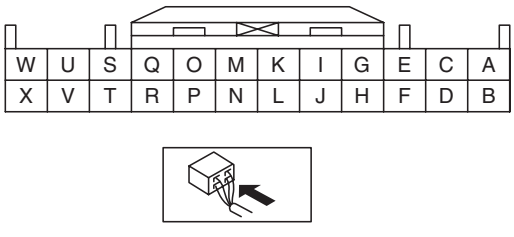
DTC P0819:00	**M position switch/Up switch/Down switch signal error**
DETECTION CONDITION	• Under the following conditions, any of (1) to (4) conditions occurs for **1 s**: — Engine is running. — Battery voltage is **8 V or more**. — Transaxle range sensor related DTC is not recorded. (1) M position switch signal is on even though forward oil pressure switch is on in any position other than D position. (2) M position switch signal is off even though up or down switch signal is on in D position. (3) Up switch signal is on even though M position switch signal is off in any position other than D position. (4) Down switch signal is on even though M position switch signal is off in any position other than D position. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits manual mode.
POSSIBLE CAUSE	• Instrument cluster DTC is stored. • Selector lever component connector or terminals malfunction • Selector lever component malfunction — M position switch malfunction — Up switch malfunction — Down switch malfunction • Open circuit in wiring harness between selector lever component terminal J and body ground • Instrument cluster connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — Selector lever component terminal E—Instrument cluster terminal H — Selector lever component terminal C—Instrument cluster terminal F — Selector lever component terminal D—Instrument cluster terminal G • Short to power supply in wiring harness between the following terminals: — Selector lever component terminal E—Instrument cluster terminal H — Selector lever component terminal C—Instrument cluster terminal F — Selector lever component terminal D—Instrument cluster terminal G • Open circuit in wiring harness between the following terminals: — Selector lever component terminal E—Instrument cluster terminal H — Selector lever component terminal C—Instrument cluster terminal F — Selector lever component terminal D—Instrument cluster terminal G • Instrument cluster malfunction



SELECTOR LEVER COMPONENT WIRING HARNESS-SIDE CONNECTOR



INSTRUMENT CLUSTER WIRING HARNESS-SIDE CONNECTOR



ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**CONFIRM INSTRUMENT CLUSTER DTC** • Perform the instrument cluster DTC inspection using the M-MDS. (See 09-02G-7 DTC INSPECTION [INSTRUMENT CLUSTER].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 09-02G-10 DTC TABLE [INSTRUMENT CLUSTER].)
		No	Go to the next step.
3	**INSPECT SELECTOR LEVER COMPONENT CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the selector lever component connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
4	**INSPECT SELECTOR LEVER COMPONENT** • Inspect the M position switch, up switch and down switch. (See 05-17B-14 M POSITION SWITCH INSPECTION [GW6A-EL, GW6AX-EL].) (See 05-17B-15 UP SWITCH INSPECTION [GW6A-EL, GW6AX-EL].) (See 05-17B-16 DOWN SWITCH INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Replace the selector lever component, then go to Step 11. (See 05-18-2 AUTOMATIC TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**INSPECT SELECTOR LEVER COMPONENT GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the selector lever component connector is disconnected. • Inspect for continuity between selector lever component terminal J (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
6	**INSPECT INSTRUMENT CLUSTER CONNECTOR CONDITION** • Disconnect the instrument cluster connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 11.
		No	Go to the next step.
7	**INSPECT SELECTOR LEVER COMPONENT CIRCUIT FOR SHORT TO GROUND** • Verify that the selector lever component and instrument cluster connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Selector lever component terminal E — Selector lever component terminal C — Selector lever component terminal D • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 11.
		No	Go to the next step.
8	**INSPECT SELECTOR LEVER COMPONENT CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the selector lever component and instrument cluster connectors are disconnected. • Switch the ignition ON (engine on). • Measure the voltage at the following terminals (wiring harness-side): — Selector lever component terminal E — Selector lever component terminal C — Selector lever component terminal D • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 11.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
9	**INSPECT SELECTOR LEVER COMPONENT CIRCUIT FOR OPEN CIRCUIT** • Verify that the selector lever component and instrument cluster connectors are disconnected. • Switch the ignition to off. • Inspect for continuity between the following terminals (wiring harness-side): — Selector lever component terminal E— Instrument cluster terminal H — Selector lever component terminal C— Instrument cluster terminal F — Selector lever component terminal D— Instrument cluster terminal G • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 11.
10	**INSPECT INSTRUMENT CLUSTER** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is there any malfunction?	Yes	Replace the instrument cluster, then go to the next step. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
11	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Verify that the battery voltage is **8 V or more**. 2. Drive the vehicle for **1 s or more** under the following condition: • Selector lever position: Except D position 3. Drive the vehicle for **1 s or more** under the following conditions: • Selector lever position: D position • Up switch: On 4. Drive the vehicle for **1 s or more** under the following conditions: • Selector lever position: D position • Down switch: On • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0842:00 [GW6A-EL, GW6AX-EL]

id050230822600

DTC P0842:00	**Oil pressure switch No.1 stuck on**
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.1 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Oil pressure switch No.1 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are P0842:00 present?	Yes	Replace the oil pressure switch No.1, then go to the next step. (See 05-17B-20 OIL PRESSURE SWITCH REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL])
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0843:00 [GW6A-EL, GW6AX-EL]

id050230822700

DTC P0843:00	Oil pressure switch No.1 stuck off
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.1 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Oil pressure switch No.1 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY THAT DTC IS PRESENT** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **20 °C {68 °F} or more**. • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Is the DTC P0843:00 or P0878:00 present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
5	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to Step 7. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	DTC P0843:00 and P0878:00 are displayed in Step 4: • Repair or replace the wiring harness between TCM and oil pressure switch A, then go to Step 7. Only DTC P0843:00 is displayed in Step 4: • Go to the next step.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
6	**INSPECT OIL PRESSURE SWITCH A CONNECTOR AND OIL PRESSURE SWITCH NO.1 CIRCUIT** • Visually inspect for poor connection and open circuit. • Is there any malfunction?	Yes	Repair or replace the wiring harness between TCM and oil pressure switch A, then go to the next step.
		No	Replace the oil pressure switch A, then go to the next step. (See 05-17B-20 OIL PRESSURE SWITCH REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].)
7	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	ATF amount in Step 5 is correct • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [GW6AX-EL].) ATF amount adjusted in Step 5: • Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.
8	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0847:00 [GW6A-EL, GW6AX-EL]

id050230904500

DTC P0847:00	**Oil pressure switch No.2 stuck on**
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.2 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Oil pressure switch No.2 malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are P0847:00 present?	Yes	Replace the oil pressure switch No.2, then go to the next step. (See 05-17B-20 OIL PRESSURE SWITCH REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL])
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P0848:00 [GW6A-EL, GW6AX-EL]

id050230904600

DTC P0848:00	**Oil pressure switch No.2 stuck off**
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.2 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Oil pressure switch No.2 malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY THAT DTC IS PRESENT** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **20 °C {68 °F} or more**. • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Is the DTC P0848:00 or P0873:00 present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
5	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to Step 7. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	DTC P0848:00 and P0873:00 are displayed in Step 4: • Repair or replace the wiring harness between TCM and oil pressure switch B, then go to Step 7. Only DTC P0848:00 is displayed in Step 4: • Go to the next step.
6	**INSPECT OIL PRESSURE SWITCH B CONNECTOR AND OIL PRESSURE SWITCH NO.2 CIRCUIT** • Visually inspect for poor connection and open circuit. • Is there any malfunction?	Yes	Repair or replace the wiring harness between TCM and oil pressure switch B, then go to the next step.
		No	Replace the oil pressure switch B, then go to the next step. (See 05-17B-20 OIL PRESSURE SWITCH REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
7	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	ATF amount in Step 5 is correct • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) ATF amount adjusted in Step 5: • Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.
8	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0872:00 [GW6A-EL, GW6AX-EL]

id050230904700

DTC P0872:00	Oil pressure switch No.3 stuck on
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.3 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Oil pressure switch No.3 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are P0872:00 present?	Yes	Replace the oil pressure switch No.3, then go to the next step. (See 05-17B-20 OIL PRESSURE SWITCH REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL])
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0873:00 [GW6A-EL, GW6AX-EL]

id050230904800

DTC P0873:00	Oil pressure switch No.3 stuck off
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.3 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Oil pressure switch No.3 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY THAT DTC IS PRESENT** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **20 °C {68 °F} or more**. • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Is the DTC P0848:00 or P0873:00 present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
5	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to Step 7. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	DTC P0848:00 and P0873:00 are displayed in Step 4: • Repair or replace the wiring harness between TCM and oil pressure switch B, then go to Step 7. Only DTC P0873:00 is displayed in Step 4: • Go to the next step.
6	**INSPECT OIL PRESSURE SWITCH B CONNECTOR AND OIL PRESSURE SWITCH NO.3 CIRCUIT** • Visually inspect for poor connection and open circuit. • Is there any malfunction?	Yes	Repair or replace the wiring harness between TCM and oil pressure switch B, then go to the next step.
		No	Replace the oil pressure switch B, then go to the next step. (See 05-17B-20 OIL PRESSURE SWITCH REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
7	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	ATF amount in Step 5 is correct • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) ATF amount adjusted in Step 5: • Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.
8	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0877:00 [GW6A-EL, GW6AX-EL]

id050230904900

DTC P0877:00	**Oil pressure switch No.4 stuck on**
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.4 stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• Oil pressure switch No.4 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are P0877:00 present?	Yes	Replace the oil pressure switch No.4, then go to the next step. (See 05-17B-20 OIL PRESSURE SWITCH REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL])
		No	No DTCs are displayed: • Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. If a DTC other than the one indicated on the left is displayed: • Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
5	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0878:00 [GW6A-EL, GW6AX-EL]

id050230905000

DTC P0878:00	Oil pressure switch No.4 stuck off
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.4 stuck-off detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Oil pressure switch No.4 malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY THE DTC OUTPUT STATUS** • Is the DTC P1738:00 also present?	Yes	Go to the applicable DTC inspection. (See 05-02B-79 DTC P1738:00 [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
2	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
3	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
4	**VERIFY THAT DTC IS PRESENT** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **20 °C {68 °F} or more**. • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Is the DTC P0843:00 or P0878:00 present?	Yes	Go to the next step.
		No	DTC troubleshooting completed.
5	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to Step 7. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	DTC P0843:00 and P0878:00 are displayed in Step 4: • Repair or replace the wiring harness between TCM and oil pressure switch A, then go to Step 7. Only DTC P0878:00 is displayed in Step 4: • Go to the next step.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
6	**INSPECT OIL PRESSURE SWITCH A CONNECTOR AND OIL PRESSURE SWITCH NO.4 CIRCUIT** • Visually inspect for poor connection and open circuit. • Is there any malfunction?	Yes	Repair or replace the wiring harness between TCM and oil pressure switch A, then go to the next step.
		No	Replace the oil pressure switch A, then go to the next step. (See 05-17B-20 OIL PRESSURE SWITCH REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].)
7	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	ATF amount in Step 5 is correct • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [GW6AX-EL].) ATF amount adjusted in Step 5: • Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	Drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete.
8	**RE-PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine. 2. Verify that the ATF temperature is **55 °C {131 °F} or more**. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

05

DTC P0882:00 [GW6A-EL, GW6AX-EL]

id050230823100

DTC P0882:00	TCM power supply voltage low
DETECTION CONDITION	• Under the following conditions, the TCM power supply voltage is **8—10.5 V or less** (varies with ATF temperature): — **5 s or more** has elapsed or battery voltage exceeds **11 V or more** for **0.2 s** since engine speed increases –**200 rpm or more** of target idle speed. — Selector lever position is D or R position. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• PCM DTC is stored. • Battery malfunction • Generator malfunction • TCM connector or terminals malfunction • TCM power supply circuit malfunction — Short to ground in wiring harness between TCM 15 A fuse and TCM terminal 1A — TCM 15 A fuse malfunction — Open circuit in wiring harness between battery positive terminal and TCM terminal 1A
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CONFIRM PCM DTC** • Perform the PCM DTC inspection using the M-MDS. • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	Go to the next step.
4	**INSPECT BATTERY** • Inspect the battery. (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is there any malfunction?	Yes	Recharge or replace the battery, then go to Step 8. (See 01-17B-8 BATTERY RECHARGING [SKYACTIV-D 2.2].) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
		No	Go to the next step.
5	**INSPECT GENERATOR** • Inspect the generator. (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is there any malfunction?	Yes	Replace the generator, then go to Step 8. (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
		No	Go to the next step.
6	**INSPECT TCM CONNECTOR AND TERMINALS** • Switch the ignition to off. • Disconnect the TCM connector. • Visually inspect the TCM connector and terminals. • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 8.
		No	Go to the next step.
7	**INSPECT TCM POWER SUPPLY CIRCUIT** • Make sure to reconnect all disconnected connectors. • Access the PID VPWR using the M-MDS. (See 05-02B-92 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [GW6A-EL, GW6AX-EL].) • Is the PID value **B+**?	Yes	Go to the next step.
		No	Inspect the TCM 15 A fuse. • If the fuse is blown: — Repair or replace the wiring harness for a possible short to ground. — Replace the malfunctioning fuse. • If the fuse is deteriorated: — Replace the malfunctioning fuse. • If the fuse is normal: — Repair or replace the wiring harness for a possible open circuit. Go to the next step.
8	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Drive the vehicle for **5 s or more** under the following condition: • Selector lever position: D or R position • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0883:00 [GW6A-EL, GW6AX-EL]

id050230820100

DTC P0883:00	**TCM power supply voltage high**
DETECTION CONDITION	• TCM power supply voltage is **18 V or more** for **5 s**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to emergency mode. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• PCM DTC is stored. • Battery malfunction • Generator malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

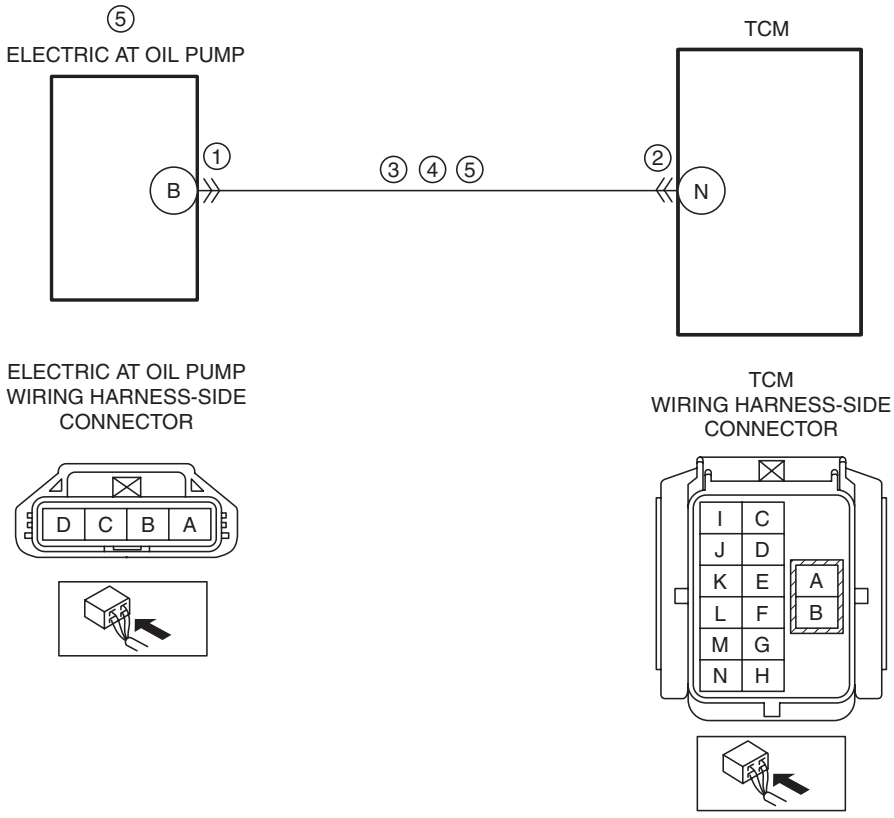
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CONFIRM PCM DTC** • Perform the PCM DTC inspection using the M-MDS. • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	Go to the next step.
4	**INSPECT BATTERY** • Inspect the battery. (See 01-17B-6 BATTERY INSPECTION [SKYACTIV-D 2.2].) • Is there any malfunction?	Yes	Replace the battery, then go to Step 6. (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
		No	Go to the next step.
5	**INSPECT GENERATOR** • Inspect the generator. (See 01-17B-16 GENERATOR INSPECTION [SKYACTIV-D 2.2].) • Is there any malfunction?	Yes	Replace the generator, then go to the next step. (See 01-17B-14 GENERATOR REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
		No	Go to the next step.
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on) and wait for **5 s or more**. • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P0C2C:00 [GW6A-EL, GW6AX-EL]

id050230832600

DTC P0C2C:00	Electric AT oil pump rotation malfunction
DETECTION CONDITION	• The actual electric AT oil pump rotation speed under the following conditions is **100 rpm or less** for a continuous **10 s**: — Electric AT oil pump rotation speed command value is **500 rpm or more**. — Electric AT oil pump relay is ON. — DTC P181F:00 is not recorded. **Diagnostic support note** • The MIL does not illuminate. • The shift position indicator light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits i-stop control.
POSSIBLE CAUSE	• Electric AT oil pump connector or terminals malfunction • TCM connector or terminals malfunction • Short to ground in wiring harness between electric AT oil pump terminal B and TCM terminal N • Short to power supply in wiring harness between electric AT oil pump terminal B and TCM terminal N • Open circuit in wiring harness between electric AT oil pump terminal B and TCM terminal N • Electric AT oil pump malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ELECTRIC AT OIL PUMP CONNECTOR CONDITION** • Switch the ignition to off. • Disconnect the electric AT oil pump connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
3	**INSPECT TCM CONNECTOR CONDITION** • Disconnect the TCM connector. • Visually inspect the TCM connector and terminals. • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 7.
		No	Go to the next step.
4	**INSPECT ELECTRIC AT OIL PUMP CIRCUIT FOR SHORT TO GROUND** • Verify that the electric AT oil pump and TCM connectors are disconnected. • Inspect for continuity between electric AT oil pump terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 7.
		No	Go to the next step.
5	**INSPECT ELECTRIC AT OIL PUMP CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the electric AT oil pump and TCM connectors are disconnected. • Switch the ignition ON (engine on). • Measure the voltage at the electric AT oil pump terminal B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
6	**INSPECT ELECTRIC AT OIL PUMP CIRCUIT FOR OPEN CIRCUIT** • Verify that the electric AT oil pump and TCM connectors are disconnected. • Switch the ignition to off. • Visually inspect the wiring harness between electric AT oil pump terminal B (wiring harness-side) and TCM terminal N (wiring harness-side). • Is there any malfunction?	Yes	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
		No	Replace the electric AT oil pump, then go to the next step. (See 05-17B-28 ELECTRIC AT OIL PUMP REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
7	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Operates the i-stop. • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P1728:00 [GW6A-EL, GW6AX-EL]

id050230905100

DTC P1728:00	Clutch slippage
DETECTION CONDITION	• Under the following conditions, turbine/input shaft speed suddenly increases **300 rpm or more** for **1,450 ms**: — Engine is running. — Battery voltage is **8 V or more**. — Vehicle speed is **5 km/h {3 mph} or more**. — There is no difference between vehicle speed signal from DSC HU/CM and output shaft speed sensor signal. — Not shifting — Selector lever position is D position. — Turbine/Input shaft speed is **1,200 rpm or more**. — Oil pressure switch pattern (1st—6th) is normal. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Maximizes the line pressure. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Clutch slippage
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Replace the automatic transaxle, then go to the next step. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].)
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Drive the vehicle without shifting for **20 min or more** under the following conditions: • Vehicle speed: **5 km/h {3 mph} or more** • Selector lever position: D position • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	ATF amount in Step 2 is correct • Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].) ATF amount adjusted in Step 2: • Replace the automatic transaxle, then drive the vehicle to check it, and if there is no problem then the DTC troubleshooting is complete. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P1738:00 [GW6A-EL, GW6AX-EL]

id050230578400

DTC P1738:00	**Automatic transaxle internal malfunction**
DETECTION CONDITION	• Malfunction location cannot be determined based on combination of gear ratio malfunction and oil pressure switch pattern malfunction. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• ATF is less than specified value • Automatic transaxle internal malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].)
2	**PERFORM ON-BOARD DIAGNOSTIC TEST TO SPECIFY MALFUNCTIONING PART** **Note** • If only DTCs in which the malfunctioning part is not confirmed are displayed as in the following DTCs, all of the diagnosis may not have been completed. In such cases, the malfunction cause can be determined by performing the on-board diagnostic test. • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].)
		No	Drive the vehicle for **10 min or more**. DTCs are displayed: • Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) No DTCs are displayed: • DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P1784:00 [GW6A-EL, GW6AX-EL]

id050230905200

DTC P1784:00	**Hi cut valve stuck off/R-3-5 cut valve stuck on**
DETECTION CONDITION	• Under the following conditions, hi cut valve stuck-off or R-3-5 cut valve stuck-on detected by combination of gear ratio malfunction and oil pressure switch pattern malfunction: — Engine is running. — Battery voltage is **8 V or more**. — ATF temperature is **20 °C {68 °F} or more**. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits malfunctioning gear. • Limits engine torque. • Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control.
POSSIBLE CAUSE	• ATF is less than specified value • Hi cut valve malfunction • R-3-5 cut valve malfunction • Clutch burnt
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification, then go to the next step. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].)
3	**PERFORM STALL TEST TO VERIFY THAT DTC** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the stall test in the reverse (R) position. (See 05-17B-4 MECHANICAL SYSTEM TEST [GW6A-EL, GW6AX-EL].) • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].)
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
4	**PERFORM ON-BOARD DIAGNOSTIC TEST** • Perform the on-board diagnostic test. (See 05-02B-8 ON-BOARD DIAGNOSTIC TEST MODE [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].)
		No	Drive the vehicle for **10 min or more**. DTCs are displayed: • Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].) No DTCs are displayed: • DTC troubleshooting completed.

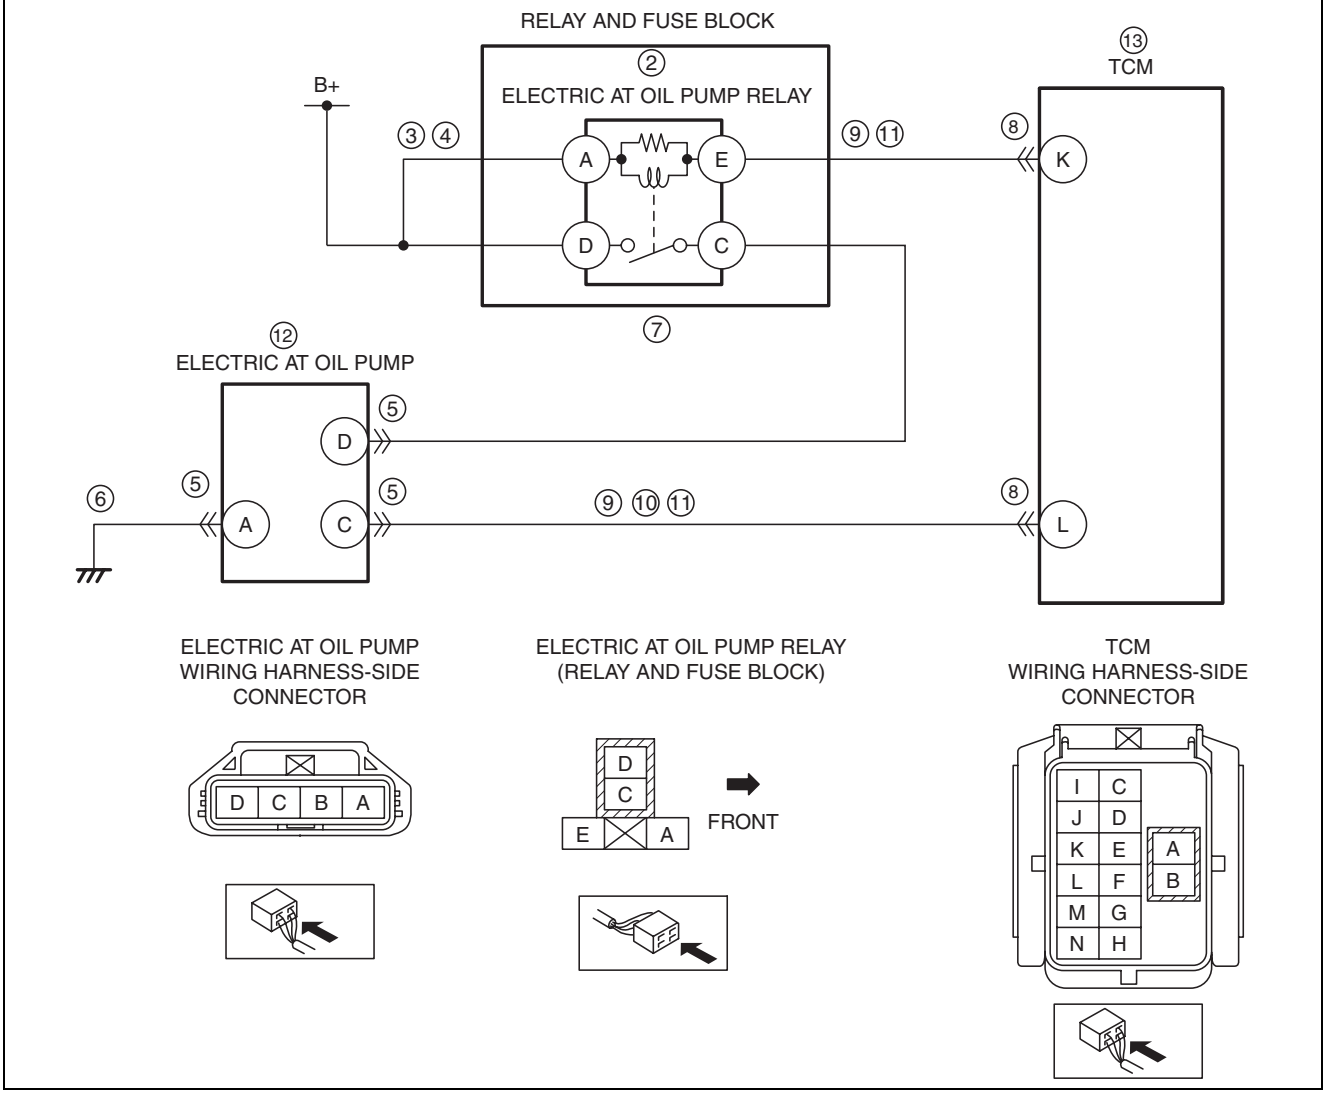
DTC P181F:00 [GW6A-EL, GW6AX-EL]

id050230960600

DTC P181F:00	**Electric AT oil pump/Electric AT oil pump relay circuit malfunction**
DETECTION CONDITION	• If the TCM detects any of the following conditions for a continuous **5 s**: — Electric AT oil pump circuit has a malfunction. — Electric AT oil pump relay circuit has a malfunction. **Diagnostic support note** • The MIL does not illuminate. • The shift position indicator light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits i-stop control.
POSSIBLE CAUSE	• Electric AT oil pump relay malfunction • Short to ground in wiring harness between electric AT oil pump relay terminal A and electric AT oil pump relay terminal D • Open circuit in wiring harness between electric AT oil pump relay terminal A and electric AT oil pump relay terminal D • Electric AT oil pump connector or terminals malfunction • Open circuit in wiring harness between electric AT oil pump terminal A and body ground • Short to ground or open circuit in wiring harness between battery positive terminal and electric AT oil pump terminal D • TCM connector or terminals malfunction • Short to ground in wiring harness between the following terminals: — Electric AT oil pump relay terminal E—TCM terminal K — Electric AT oil pump terminal C—TCM terminal L • Short to power supply in wiring harness between electric AT oil pump terminal C and TCM terminal L • Open circuit in wiring harness between the following terminals: — Electric AT oil pump relay terminal E—TCM terminal K — Electric AT oil pump terminal C—TCM terminal L • Electric AT oil pump malfunction • TCM malfunction

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P181F:00	Electric AT oil pump/Electric AT oil pump relay circuit malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ELECTRIC AT OIL PUMP RELAY** • Switch the ignition to off. • Remove the electric AT oil pump relay. (See 09-21-28 RELAY LOCATION.) • Inspect the electric AT oil pump relay. (See 09-21-29 RELAY INSPECTION.) • Is there any malfunction?	Yes	Replace the electric AT oil pump relay, then go to Step 13. (See 09-21-28 RELAY LOCATION.)
		No	Go to the next step.
3	**INSPECT ELECTRIC AT OIL PUMP RELAY CIRCUIT FOR SHORT TO GROUND** • Verify that the electric AT oil pump relay is removed. • Inspect for continuity between electric AT oil pump relay terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 13.
		No	Go to the next step.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
4	**INSPECT ELECTRIC AT OIL PUMP RELAY CIRCUIT FOR OPEN CIRCUIT** • Verify that the electric AT oil pump relay is removed. • Inspect for continuity between electric AT oil pump relay terminal A (wiring harness-side) and electric AT oil pump relay terminal D (wiring harness-side). • Is there continuity?	Yes	Install the electric AT oil pump relay, then go to the next step. (See 09-21-28 RELAY LOCATION.)
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 13.
5	**INSPECT ELECTRIC AT OIL PUMP CONNECTOR CONDITION** • Disconnect the electric AT oil pump connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction	Yes	Repair or replace the connector and/or terminals, then go to Step 13.
		No	Go to the next step.
6	**INSPECT ELECTRIC AT OIL PUMP GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the electric AT oil pump connector is disconnected. • Inspect for continuity between electric AT oil pump terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 13.
7	**INSPECT ELECTRIC AT OIL PUMP POWER SUPPLY CIRCUIT FOR SHORT TO GROUND AND OPEN CIRCUIT** • Verify that the electric AT oil pump connector is disconnected. • Switch the electric AT oil pump relay to ON using the simulation item EOP_RLY. (See 05-02B-101 ON-BOARD DIAGNOSTIC SYSTEM SIMULATION INSPECTION [GW6A-EL, GW6AX-EL].) • Measure the voltage at the electric AT oil pump terminal D (wiring harness-side). • Is the voltage **0 V**?	Yes	Repair or replace the wiring harness for a possible short to ground or open circuit, then go to Step 13.
		No	Go to the next step.
8	**INSPECT TCM CONNECTOR CONDITION** • Disconnect the TCM connector. • Visually inspect the TCM connector and terminals. • Is there any malfunction?	Yes	Repair or replace the connector and/or terminals, then go to Step 13.
		No	Go to the next step.
9	**INSPECT ELECTRIC AT OIL PUMP CIRCUIT FOR SHORT TO GROUND** • Verify that the electric AT oil pump and TCM connectors are disconnected. • Inspect for continuity between the following terminals (wiring harness-side) and body ground: — Electric AT oil pump relay terminal E — Electric AT oil pump terminal C • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 13.
		No	Go to the next step.
10	**INSPECT ELECTRIC AT OIL PUMP CIRCUIT FOR SHORT TO POWER SUPPLY** • Verify that the electric AT oil pump and TCM connectors are disconnected. • Switch the ignition ON (engine on). • Measure the voltage at the electric AT oil pump terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible short to power supply, then go to Step 13.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
11	**INSPECT ELECTRIC AT OIL PUMP CIRCUIT FOR OPEN CIRCUIT** • Verify that the electric AT oil pump and TCM connectors are disconnected. • Switch the ignition to off. • Visually inspect the wiring harness between the following terminals (wiring harness-side): — Electric AT oil pump relay terminal E—TCM terminal K — Electric AT oil pump terminal C—TCM terminal L • Is there any malfunction?	Yes	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
		No	Go to the next step.
12	**INSPECT ELECTRIC AT OIL PUMP** • Remove the electric AT oil pump. (See 05-17B-28 ELECTRIC AT OIL PUMP REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].) • Verify that the resistance according to the following: — Between electric AT oil pump terminal D and A: **Approx. 18.2 Kilohms** — Between electric AT oil pump terminal C and A: **Approx. 21.5 Kilohms** • Is the resistance normal?	Yes	Go to the next step.
		No	Replace the electric AT oil pump, then go to the next step. (See 05-17B-28 ELECTRIC AT OIL PUMP REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].)
13	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Operates the i-stop. • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Is the DTC P181F:00 present?	Yes	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
14	**VERIFY NO DTC HAS BEEN PRESENTED** • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC P2530:00 [GW6A-EL, GW6AX-EL]

id050230310000

DTC P2530:00	**Ignition switch stuck off**
DETECTION CONDITION	• If the IG ON time count of the instrument cluster proceeds **5 s** under the following condition: — Ignition switch signal off
FAIL-SAFE FUNCTION	—
POSSIBLE CAUSE	• Start stop unit malfunction — Ignition switch signal output stuck off • Wiring harness malfunction — Short or open signal in ignition switch — Ignition switch signal terminal (start stop unit terminal 1B) malfunction • Control valve body malfunction — Ignition switch signal terminal (start stop unit terminal 1B) pin deformity
SYSTEM WIRING DIAGRAM	—

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY STORED DTC IN START STOP UNIT** • Perform the start stop unit DTC inspection using the M-MDS. (See 09-02C-6 DTC INSPECTION [START STOP UNIT].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 09-02C-8 DTC TABLE [START STOP UNIT].)
		No	Go to the next step.
4	**INSPECT THE IGNITION CIRCUIT FOR OPEN CIRCUIT** • Switch the ignition to off. • Disconnect the negative battery cable. • Verify that the following connector are disconnected. — IG1 relay — Start stop unit • Inspect for continuity between the following terminals (wiring harness-side): — IG1 relay terminal C—Start stop unit terminal 1B • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 6.
5	**VERIFY THE ENGINE START** • Reconnect all disconnected connectors. • Reconnect the negative battery cable. • Does the engine start normally?	Yes	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	Replace the start stop unit, then go to the next step. (See 09-14-54 START STOP UNIT REMOVAL/ INSTALLATION.)

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
6	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Switch the ignition ON (engine off or on) and wait for **10 s or more**. 2. Switch the ignition to off. • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

DTC P2712:00 [GW6A-EL, GW6AX-EL]

id050230960500

DTC P2712:00	**Oil pump shift valve stuck**
DETECTION CONDITION	• Under the following conditions, oil pressure switch No.1 OFF output continues for **10 s**: — DTC P0753:00, P0C2C:00 and P181F:00 are not recorded. — During i-stop operation — Selector lever position is D or N position. — During electric AT oil pump operation — Oil pressure switch, low clutch and transaxle range sensor are normal. — Rate of speed change normal **Diagnostic support note** • The MIL does not illuminate. • The shift position indicator light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits i-stop control.
POSSIBLE CAUSE	• Oil pump shift valve stuck
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, replace the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].)
2	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Operates the i-stop. • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

05

DTC U0073:00, U0100:00, U0121:00, U0141:00, U0155:00 [GW6A-EL, GW6AX-EL]

id050230905500

DTC U0073:00	CAN system communication error (HS CAN)
DETECTION CONDITION	• Under the following condition, a communication error (HS CAN) occurs: — Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• CAN bus communication line malfunction (HS CAN) • TCM malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC U0100:00	Communication error to PCM (HS CAN)
DETECTION CONDITION	• Under the following condition, the TCM cannot receive the signal from PCM (HS CAN): — Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• CAN communication line between PCM and TCM malfunction (HS CAN) • TCM malfunction
SYSTEM WIRING DIAGRAM	—

DTC U0121:00	Communication error to DSC HU/CM
DETECTION CONDITION	• Under the following condition, the TCM cannot receive the signal from DSC HU/CM: — Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS.
POSSIBLE CAUSE	• CAN communication line between TCM and DSC HU/CM malfunction • TCM malfunction
SYSTEM WIRING DIAGRAM	—

DTC U0141:00	Communication error to front body control module (FBCM)
DETECTION CONDITION	• Under the following condition, the TCM cannot receive the signal from front body control module (FBCM): — Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits neutral idle control. • Inhibits i-stop control.
POSSIBLE CAUSE	• CAN communication line between TCM and front body control module (FBCM) malfunction • TCM malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

DTC U0155:00	**Communication error to instrument cluster**
DETECTION CONDITION	• Under the following condition, the TCM cannot receive the signal from instrument cluster: — Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control.
POSSIBLE CAUSE	• CAN communication line between TCM and instrument cluster malfunction • TCM malfunction
SYSTEM WIRING DIAGRAM	—

Diagnostic Procedure

- Inspect according to the diagnostic procedure in ON-BOARD DIAGNOSTIC [MULTIPLEX COMMUNICATION SYSTEM]. (See 10-02C-1 FOREWORD [SKYACTIV-D 2.2 (L.H.D.)].) (See 10-02D-1 FOREWORD [SKYACTIV-D 2.2 (R.H.D.)].)

05

DTC U0074:00 [GW6A-EL, GW6AX-EL]

id050230908000

DTC U0074:00	**CAN system communication error (local CAN between TCM and PCM)**
DETECTION CONDITION	• Under the following condition, a communication error (local CAN between TCM and PCM) occurs: — Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to TCC control. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS. • Inhibits 5GR and 6GR. • Inhibits shift down when the accelerator pedal is depressed.
POSSIBLE CAUSE	• CAN communication line between TCM and PCM (local CAN between TCM and PCM) malfunction • PCM DTC is stored. • TCM malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**CONFIRM PCM DTC** • Perform the PCM DTC inspection using the M-MDS. • Are any DTCs present?	Yes	DTC U0074:00 is displayed: • CAN communication line can be considered the cause. — Repair or replace the wiring harness between TCM and PCM. DTC other than U0074:00 is displayed: • Go to the applicable DTC inspection.
		No	Go to the next step.
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: — Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Is the same DTC present?	Yes	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
4	**VERIFY NO DTC HAS BEEN PRESENTED** • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

DTC U0115:00 [GW6A-EL, GW6AX-EL]

id050230908100

DTC U0115:00	**Communication error to PCM (local CAN between TCM and PCM)**
DETECTION CONDITION	• Under the following condition, the TCM cannot receive the signal from PCM (local CAN between TCM and PCM): — Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to TCC control. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits i-stop control. • Inhibits AAS. • Inhibits 5GR and 6GR. • Inhibits shift down when the accelerator pedal is depressed.
POSSIBLE CAUSE	• PCM DTC is stored. • PCM malfunction • TCM malfunction
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA/SNAPSHOT DATA HAS BEEN RECORDED** • Has the freeze frame data/snapshot data been recorded on the repair order?	Yes	Go to the next step.
		No	Record the freeze frame data/snapshot data on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CONFIRM PCM DTC** • Perform the PCM DTC inspection using the M-MDS. • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	PCM can be considered the cause. • Replace the PCM, then go to the next step.
4	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: — Switch the ignition ON (engine off or on). • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Is the same DTC present?	Yes	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
5	**VERIFY NO DTC HAS BEEN PRESENTED** • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

DTC U0442:00 [GW6A-EL, GW6AX-EL]

id050230905300

DTC U0442:00	**Invalid data received from PCM (local CAN between TCM and PCM)**
DETECTION CONDITION	• Under the following condition, the TCM detects the invalid PCM signal for **0.5 s**: — Battery voltage is **10 V or more**. **Diagnostic support note** • The check engine light does not illuminate. • The automatic transaxle warning light does not illuminate. • PENDING CODE is available. • FREEZE FRAME DATA is not available. • The DTC is stored in the TCM memory.
FAIL-SAFE FUNCTION	• Set to TCC control. • Inhibits learning control. • Inhibits manual mode. • Inhibits neutral idle control. • Inhibits 5GR and 6GR. • Inhibits shift down when the accelerator pedal is depressed.
POSSIBLE CAUSE	• PCM DTC is stored.
SYSTEM WIRING DIAGRAM	—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**CONFIRM PCM DTC** • Perform the PCM DTC inspection using the M-MDS. • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	Go to the next step.
3	**VERIFY DTC TROUBLESHOOTING COMPLETED** • Clear the DTC using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Perform the following procedure to ensure that the DTC has been resolved: 1. Start the engine and warm it up completely. 2. Drive the vehicle for a while under the following conditions: • Selector lever position: D position • Perform the DTC inspection using the M-MDS. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	DTC troubleshooting completed.

ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [GW6A-EL, GW6AX-EL]

id050230290300

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Data Logger”.
   (2) Select “Modules”.
   (3) Select “TCM”.
3. Select the applicable PID from the PID table.
4. Verify the PID data according to the directions on the screen.

Note

- The PID data screen function is used for monitoring the calculated value of input/output signals in the module. Therefore, if the monitored value of the output parts is not within the specification, it is necessary to inspect the monitored value of input parts corresponding to the applicable output part control. In addition, because the system does not display an output part malfunction as an abnormality in the monitored value, it is necessary to inspect the output parts individually.
- When detecting DTCs, PIDs related to a malfunctioning system may not display even if the module is normal. Therefore, if a PID is not displayed, it is necessary to verify the DTC, perform malfunction diagnosis of the DTC that was detected, and do repairs.

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

PID/DATA monitor item table (Reference)

—: Not applicable

Item	Unit/ Condition	Test condition	Specification (Reference)	Output part name
DGP_DIS_1	km {mile}	Displays the traveled distance since the differential protection control operated due to excessive rotation difference between left/right drive wheels.		—
DGP_DIS_2	km {mile}	Displays the traveled distance since the DGP_MAX_DIF is updated.		—
DGP_MAX_DIF	RPM	Displays the maximum rotation difference since the differential protection control operated due to excessive rotation difference between left/right drive wheels.		—
DGP_SPD	KPH {MPH}	Displays the vehicle speed with trailing wheels since the differential protection control operated due to excessive rotation difference between left/right drive wheels.		—
ECT	°C {°F}	Displays the ECT.		ECT sensor
ECU_A	°C {°F}	Displays the ECU internal temperature A.		ECU internal temperature sensor A
ECU_B	°C {°F}	Displays the ECU internal temperature B.		ECU internal temperature sensor B
ECU_C	°C {°F}	Displays the ECU internal temperature C.		ECU internal temperature sensor C
EOP_DUTY	%	Displays the drive duty ratio for electric AT oil pump.		Electric AT oil pump
EOP_RLY	Off/On	Electric AT oil pump relay stopped	Off	Electric AT oil pump relay
		Electric AT oil pump relay operating	On	
GEAR_RA	Ratio	Selector lever in 1GR at D position	Approx. 3.4872	• Shift solenoid No.1 • Shift solenoid No.2 • Shift solenoid No.3 • Shift solenoid No.4
		Selector lever in 2GR at D position	Approx. 1.9929	
		Selector lever in 3GR at D position	Approx. 1.4499	
		Selector lever in 4GR at D position	Approx. 1.0000	
		Selector lever in 5GR at D position	Approx. 0.7073	
		Selector lever in 6GR at D position	Approx. 0.6008	
GEAR_SEL	1/2/3/4/5/6	Selector lever in 1GR at D position	1	• Shift solenoid No.1 • Shift solenoid No.2 • Shift solenoid No.3 • Shift solenoid No.4
		Selector lever in 2GR at D position	2	
		Selector lever in 3GR at D position	3	
		Selector lever in 4GR at D position	4	
		Selector lever in 5GR at D position	5	
		Selector lever in 6GR at D position	6	
HI_TEMP	—	Displays the ATF high temperature mode determination amount. (ATF temperature 132 °C {270 °F} or more)		—
HTM_CNT	—	Displays the ATF high temperature mode determination amount. (ATF temperature 132 °C {270 °F} or more)		—
HTM_DIS	km {mile}	Displays the traveled distance after determining the ATF high temperature mode. (ATF temperature 132 °C {270 °F} or more)		—
LINEDES	kPa {kgf/cm^2, psi}	Idle at P position after warm-up	Approx. 500 kPa {5.10 kgf/cm^2, 72.5 psi}	—
LN_C_CLUTCH	kPa {kgf/cm^2, psi}	Displays the hydraulic control learning value data.		—
LN_O_CLUTCH	kPa {kgf/cm^2, psi}	Displays the hydraulic control learning value data.		—
LN_OV_SCOPE	—	Displays the hydraulic control learning value data.		—
LN_T_CLUTCH	kPa {kgf/cm^2, psi}	Displays the hydraulic control learning value data.		—

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Item	Unit/ Condition	Test condition	Specification (Reference)	Output part name
LOCK_UP	OFF/SLIP/ON	OFF: • Except below SLIP: • "SLIP" is displayed during TCC control with the difference between the engine speed and turbine shaft speed less than the control value. • Resets while TCC control is stopped or if the difference between the engine speed and turbine/shaft speed is the specification or more. ON: • "ON" is displayed during TCC control and there is almost no difference between the engine speed and turbine shaft speed*. • Resets while TCC control is stopped or if the difference between the engine speed and turbine shaft speed is the specification or more. *: The TCC controls the TCC hydraulic pressure to suppress hydraulic pressure loss and transaxle vibration due to TCC clutch engagement. Therefore, normally, there is a difference between the engine speed and turbine shaft speed. Because the TCC hydraulic pressure is increased by the fail-safe and TCC is performed while the ATF is hot, there is almost no difference.		—
LONGI_ACCEL	—	Displays the acceleration calculated from the drive wheels.		—
OP_SW1	Off/On	Selector lever at P position	Off	Oil pressure switch No.1
		Selector lever at R position	Off	
		Selector lever at N position	Off	
		Selector lever in 1GR at D position	On	
		Selector lever in 2GR at D position	On	
		Selector lever in 3GR at D position	On	
		Selector lever in 4GR at D position	On	
		Selector lever in 5GR at D position	Off	
		Selector lever in 6GR at D position	Off	
OP_SW1_OFF	kPa {kgf/cm^2, psi}	After performing on-board diagnostic test mode	More than 50 kPa {0.51 kgf/cm^2, 7.3 psi} (0 kPa {0 kgf/cm^2, 0 psi} before performing on-board diagnostic test mode)	Oil pressure switch No.1
OP_SW1_ON	kPa {kgf/cm^2, psi}	After performing on-board diagnostic test mode	Less than 320 kPa {3.26 kgf/cm^2, 46.4 psi} (0 kPa {0 kgf/cm^2, 0 psi} before performing on-board diagnostic test mode)	Oil pressure switch No.1
OP_SW2	Off/On	Selector lever at P position	Off	Oil pressure switch No.2
		Selector lever at R position	Off	
		Selector lever at N position	Off	
		Selector lever in 1GR at D position	Off	
		Selector lever in 2GR at D position	On	
		Selector lever in 3GR at D position	Off	
		Selector lever in 4GR at D position	Off	
		Selector lever in 5GR at D position	Off	
		Selector lever in 6GR at D position	On	
OP_SW2_OFF	kPa {kgf/cm^2, psi}	After performing on-board diagnostic test mode	More than 50 kPa {0.51 kgf/cm^2, psi} (0 kPa {0 kgf/cm^2, 0 psi} before performing on-board diagnostic test mode)	Oil pressure switch No.2
OP_SW2_ON	kPa {kgf/cm^2, psi}	After performing on-board diagnostic test mode	Less than 260 kPa {2.65 kgf/cm^2, 37.7 psi} (0 kPa {0 kgf/cm^2, 0 psi} before performing on-board diagnostic test mode)	Oil pressure switch No.2

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

Item	Unit/ Condition	Test condition	Specification (Reference)	Output part name
OP_SW3	Off/On	Selector lever at P position	Off	Oil pressure switch No.3
		Selector lever at R position	On	
		Selector lever at N position	Off

ON-BOARD DIAGNOSTIC [GW6A-EL, GW6AX-EL]

ON-BOARD DIAGNOSTIC SYSTEM SIMULATION INSPECTION [GW6A-EL, GW6AX-EL]

id050230290400

1. Connect the M-MDS to the DLC-2.
2. After the vehicle is identified, select the following items from the initialization screen of the M-MDS.
   (1) Select “Data Logger”.
   (2) Select “Modules”.
   (3) Select “TCM”.
3. Select the simulation items from the PID table.
4. Perform the active command modes function, inspect the operations for each parts.
   - If the operation of output parts cannot be verified after the active command mode inspection is performed, this could indicate the possibility of an open or short circuit, sticking, or operation malfunction in the output parts.

Simulation item table

Item	Description	Unit/Condition	Operation condition
EOP	Electric AT oil pump condition	Off/On	Under the following conditions: • Vehicle stopped • Accelerator pedal fully closed
EOP_DUTY	Electric AT oil pump duty cycle	%	Under the following conditions: • Vehicle stopped • Accelerator pedal fully closed
EOP_RLY	Electric AT oil pump relay condition	Off/On	Under the following conditions: • Vehicle stopped • Accelerator pedal fully closed
SS_ON-OFF	On/off solenoid condition	Off/On	Under the following conditions: • Vehicle stopped • Idling at P or N position
SS1_C	Shift solenoid No.1 target current	A	Under the following conditions: • Vehicle stopped • Idling at P or N position
SS2_C	Shift solenoid No.2 target current	A	Under the following conditions: • Vehicle stopped • Idling at P or N position
SS3_C	Shift solenoid No.3 target current	A	Under the following conditions: • Vehicle stopped • Idling at P or N position
SS4_C	Shift solenoid No.4 target current	A	Under the following conditions: • Vehicle stopped • Idling at P or N position
SSLU_C	TCC control solenoid target current	A	Under the following conditions: • ATF temperature (PID: TFT) is 20 °C {68 °F} or more. • Output shaft speed (PID: OSS) is 10 rpm or more. • Turbine/input shaft speed (PID: TSS) is 1,000 rpm or more. • Brake pedal released
SSP_C	Pressure control solenoid target current	A	Idling at P or N position

SYMPTOM TROUBLESHOOTING [FW6A-EL, FW6AX-EL]

Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Verify that no DTCs are stored. (See 05-02A-7 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [FW6A-EL, FW6AX-EL].)
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
- If the malfunction does not recur after the above servicing, explain to the customer that the vehicle is normal.

SYMPTOM TROUBLESHOOTING ITEM TABLE [FW6A-EL, FW6AX-EL]

id050317100300

- Use the chart below to verify the symptoms of the trouble in order to diagnose the appropriate area.

Note

- If a tire of a different diameter from the standard tire is installed, the TCM determines that the driving mode is the AAS mode, and may change to a different shift timing from the normal timing.

Troubleshooting item	Description	Page
Vehicle does not move in D, M or R position	• Vehicle does not move when accelerator pedal is depressed. • The engine revs up but the vehicle does not move even though the accelerator pedal is depressed. • Tires are locked and do not move even though the accelerator pedal is depressed.	(See 05-03A-9 VEHICLE DOES NOT MOVE IN D, M OR R POSITION [FW6A-EL, FW6AX-EL].)
Vehicle moves in P position, or parking gear does not disengage when P is disengaged	• Vehicle rolls when on a downward slope in P position. • Vehicle does not move in D, M and R position when accelerator pedal is depressed, and engine remains in stalled condition.	(See 05-03A-10 VEHICLE MOVES IN P POSITION, OR PARKING GEAR DOES NOT DISENGAGE WHEN P IS DISENGAGED [FW6A-EL, FW6AX-EL].)
Excessive creep	• Vehicle accelerates in D and R position when accelerator pedal is not depressed.	(See 05-03A-10 EXCESSIVE CREEP [FW6A-EL, FW6AX-EL].)
No creep at all	• Vehicle does not move in D, M or R position when idling on flat paved road.	(See 05-03A-10 NO CREEP AT ALL [FW6A-EL, FW6AX-EL].)
Low maximum speed and poor acceleration	• Vehicle acceleration is poor at start. • Delayed acceleration when accelerator pedal is depressed while driving.	(See 05-03A-11 LOW MAXIMUM SPEED AND POOR ACCELERATION [FW6A-EL, FW6AX-EL].)
No shifting	• Single shift position only. • Sometimes shifts correctly.	(See 05-03A-12 NO SHIFTING [FW6A-EL, FW6AX-EL].)
Does not shift to 5GR or 6GR	• Vehicle does not upshift from 4GR to 5GR or 5GR to 6GR even though vehicle speed is increased. • At a vehicle speed range where the transaxle should shift up to 5GR and 6GR gears in D position based on the shift pattern, the transaxle does not shift to 5GR and 6GR gears by gradually releasing the accelerator pedal.	(See 05-03A-13 DOES NOT SHIFT TO 5GR OR 6GR [FW6A-EL, FW6AX-EL].)
Abnormal shifting	• Shifts incorrectly (incorrect shift pattern).	(See 05-03A-14 ABNORMAL SHIFTING [FW6A-EL, FW6AX-EL].)
Frequent shifting	• Downshifting occurs suddenly even when accelerator pedal is depressed slightly in D position.	(See 05-03A-14 FREQUENT SHIFTING [FW6A-EL, FW6AX-EL].)
Shift point is high or low	• Shift point considerably different from automatic shift diagram. • Shift delays when accelerating. • Shift occurs suddenly when accelerating and engine speed does not increase.	(See 05-03A-15 SHIFT POINT IS HIGH OR LOW [FW6A-EL, FW6AX-EL].)
No kickdown	• Does not downshift when accelerator pedal is fully depressed within kickdown range.	(See 05-03A-15 NO KICKDOWN [FW6A-EL, FW6AX-EL].)

SYMPTOM TROUBLESHOOTING [FW6A-EL, FW6AX-EL]

Troubleshooting item	Description	Page
Engine flares up or slips when upshifting or downshifting	• When accelerator pedal is depressed, engine speed increases normally but vehicle speed increases slowly. • When accelerator pedal is depressed while driving, engine speed increases but vehicle speed does not.	(See 05-03A-16 ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING [FW6A-EL, FW6AX-EL].)
Judder upon torque converter clutch (TCC) operation	• Vehicle jolts when TCC is engaged.	(See 05-03A-16 JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION [FW6A-EL, FW6AX-EL].)
Excessive shift shock from N to D or N to R position	• Strong shock is felt when shifting from N to D or N to R position at idle.	(See 05-03A-17 EXCESSIVE SHIFT SHOCK FROM N TO D OR N TO R POSITION [FW6A-EL, FW6AX-EL].)
Excessive shift shock is felt when upshifting and downshifting	• Excessive shift shock is felt when depressing accelerator pedal to accelerate at upshifting. • During cruising, excessive shift shock is felt when depressing accelerator pedal at downshifting.	(See 05-03A-17 EXCESSIVE SHIFT SHOCK IS FELT WHEN UPSHIFTING AND DOWNSHIFTING [FW6A-EL, FW6AX-EL].)
Excessive shift shock on torque converter clutch (TCC)	• Strong shock is felt when TCC is engaged.	(See 05-03A-18 EXCESSIVE SHIFT SHOCK ON TORQUE CONVERTER CLUTCH (TCC) [FW6A-EL, FW6AX-EL].)
Noise occurs at idle when vehicle is stopped in all positions	• Transaxle is noisy in all positions when vehicle idling.	(See 05-03A-18 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS [FW6A-EL, FW6AX-EL].)
Noise occurs at idle when vehicle is stopped in D, M or R position	• Transaxle is noisy in driving positions when vehicle is idling.	(See 05-03A-19 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN D, M OR R POSITION [FW6A-EL, FW6AX-EL].)
Transaxle overheats	• Burnt smell emitted from the transaxle. • Smoke is emitted from the transaxle.	(See 05-03A-19 TRANSAXLE OVERHEATS [FW6A-EL, FW6AX-EL].)
Engine stalls when shifted to D, M or R position	• Engine stalls when shifting from N or P position to D, M or R position at idle.	(See 05-03A-20 ENGINE STALLS WHEN SHIFTED TO D, M OR R POSITION [FW6A-EL, FW6AX-EL].)
Starter does not work	• Starter does not work even when in P or N position.	(See 05-03A-21 STARTER DOES NOT WORK [FW6A-EL, FW6AX-EL].)
Gear position indicator does not illuminate in M position	• Gear position indicator in instrument cluster does not illuminate in M position with the ignition is ON (engine off or on).	(See 05-03A-21 GEAR POSITION INDICATOR DOES NOT ILLUMINATE IN M POSITION [FW6A-EL, FW6AX-EL].)
Gear position indicator illuminates in P, R, N and D positions	• Gear position indicator in instrument cluster illuminates in P, R, N and D positions with the ignition is ON (engine off or on).	(See 05-03A-22 GEAR POSITION INDICATOR ILLUMINATES IN P, R, N AND D POSITIONS [FW6A-EL, FW6AX-EL].)
M position indicator light does not illuminate in M position/M position indicator light illuminates in D position	• M position indicator light in instrument cluster does not illuminate in M position or M position indicator light in instrument cluster in P, R, N and D positions with the ignition is ON (engine off or on).	(See 05-03A-22 M POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M POSITION/M POSITION INDICATOR LIGHT ILLUMINATES IN D POSITION [FW6A-EL, FW6AX-EL].)
ATF seeping from automatic transaxle	• ATF is seeping from the automatic transaxle case. • Foreign matter mixed with ATF is in the automatic transaxle case.	(See 05-03A-23 ATF SEEPING FROM AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL].)

SYMPTOM TROUBLESHOOTING [FW6A-EL, FW6AX-EL]

SYMPTOM TROUBLESHOOTING [FW6A-EL, FW6AX-EL]

VEHICLE DOES NOT MOVE IN D, M OR R POSITION [FW6A-EL, FW6AX-EL]

id050317100500

TROUBLESHOOTING ITEM	Vehicle does not move in D, M or R position
DESCRIPTION	• Vehicle does not move when accelerator pedal is depressed. • The engine revs up but the vehicle does not move even though the accelerator pedal is depressed. • Tires are locked and do not move even though the accelerator pedal is depressed.
POSSIBLE CAUSE	1. Improper operation of parking mechanism 2. Manual shaft (manual valve) stuck 3. Torque converter malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PARKING MECHANISM FOR MALFUNCTION** • When the vehicle is stopped on a flat, level road and the engine is off, does the vehicle move when pushed? (In D, N or R position with the brake pedal released.)	Yes	Go to the next step.
		No	Replace the parking mechanism. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].)
2	**VERIFY IF MALFUNCTION CAUSE IS MANUAL SHAFT OR TORQUE CONVERTER** • Move the vehicle to a level surface and apply the parking brake. • Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].) • Remove the battery component (ex: battery, battery tray and PCM component). (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Remove the air cleaner component. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].) • Can the manual shaft be rotated by hand?  	Yes	Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].)
		No	Replace the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)

SYMPTOM TROUBLESHOOTING [FW6A-EL, FW6AX-EL]

VEHICLE MOVES IN P POSITION, OR PARKING GEAR DOES NOT DISENGAGE WHEN P IS DISENGAGED [FW6A-EL, FW6AX-EL]

id050317100600

TROUBLESHOOTING ITEM	Vehicle moves in P position, or parking gear does not disengage when P is disengaged
DESCRIPTION	• Vehicle rolls when on a downward slope in P position. • Vehicle does not move in D, M and R position when accelerator pedal is depressed, and engine remains in stalled condition.
POSSIBLE CAUSE	1. Parking mechanism malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PARKING MECHANISM FOR MALFUNCTION** • When the vehicle is stopped on a flat, level road and the engine is off, does the vehicle move when pushed? (In D, N or R position with the brake pedal released.)	Yes	Symptom troubleshooting is completed.
		No	Replace the parking mechanism. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].)

EXCESSIVE CREEP [FW6A-EL, FW6AX-EL]

id050317100700

TROUBLESHOOTING ITEM	Excessive creep
DESCRIPTION	• Vehicle accelerates in D and R position when accelerator pedal is not depressed.
POSSIBLE CAUSE	1. Not within idle speed specification

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ENGINE CONTROL SYSTEM FOR MALFUNCTION** • Perform the symptom troubleshooting “NO.9 FAST IDLE/RUNS ON”. (See 01-03-51 NO.9 FAST IDLE/RUNS ON [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Symptom troubleshooting is completed.

NO CREEP AT ALL [FW6A-EL, FW6AX-EL]

id050317100800

TROUBLESHOOTING ITEM	No creep at all
DESCRIPTION	• Vehicle does not move in D, M or R position when idling on flat paved road.
POSSIBLE CAUSE	1. Not within idle speed specification

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ENGINE CONTROL SYSTEM FOR MALFUNCTION** • Perform the symptom troubleshooting “NO.9 FAST IDLE/RUNS ON”. (See 01-03-51 NO.9 FAST IDLE/RUNS ON [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS TORQUE CONVERTER** • Is the same level compared to a vehicle of the same model?	Yes	Symptom troubleshooting is completed.
		No	Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].)

SYMPTOM TROUBLESHOOTING [FW6A-EL, FW6AX-EL]

LOW MAXIMUM SPEED AND POOR ACCELERATION [FW6A-EL, FW6AX-EL]

id050317100900

TROUBLESHOOTING ITEM	**Low maximum speed and poor acceleration**
DESCRIPTION	• Vehicle acceleration is poor at start. • Delayed acceleration when accelerator pedal is depressed while driving.
POSSIBLE CAUSE	• Engine control system malfunction • Signal malfunction — APP sensor malfunction — CKP sensor malfunction — MAF sensor malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ENGINE CONTROL SYSTEM FOR MALFUNCTION** • Perform the symptom troubleshooting “NO.12 LACK/LOSS OF POWER-ACCELERATION/ CRUISE”. (See 01-03-68 NO.12 LACK/LOSS OF POWER-ACCELERATION/CRUISE [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP (APP sensor) — MAF (MAF sensor) — RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Explain to the customer that the vehicle is not malfunctioning and they should keep an eye on it.

SYMPTOM TROUBLESHOOTING [FW6A-EL, FW6AX-EL]

NO SHIFTING [FW6A-EL, FW6AX-EL]

id050317101000

TROUBLESHOOTING ITEM	**No shifting**
DESCRIPTION	• Single shift position only. • Sometimes shifts correctly.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction — BARO sensor malfunction — Brake switch malfunction — CKP sensor malfunction — IAT sensor No.1 malfunction — MAF sensor malfunction 2. Low-G (XY) sensor (built into SAS control module) malfunction **Note** • If a tire of a different diameter from the standard tire is installed, the TCM determines that the driving mode is the AAS mode, and may change to a different shift timing from the normal timing.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP (APP sensor) — BARO (BARO sensor) — BOO (Brake switch) — IAT (IAT sensor No.1) — MAF (MAF sensor) — RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS LOW-G (XY) SENSOR** • Is there any malfunction?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Symptom troubleshooting is completed.

SYMPTOM TROUBLESHOOTING [FW6A-EL, FW6AX-EL]

DOES NOT SHIFT TO 5GR OR 6GR [FW6A-EL, FW6AX-EL]

id050317101100

TROUBLESHOOTING ITEM	Does not shift to 5GR or 6GR
DESCRIPTION	• Vehicle does not upshift from 4GR to 5GR or 5GR to 6GR even though vehicle speed is increased. • At a vehicle speed range where the transaxle should shift up to 5GR and 6GR gears in D position based on the shift pattern, the transaxle does not shift to 5GR and 6GR gears by gradually releasing the accelerator pedal.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction — BARO sensor malfunction — CKP sensor malfunction — IAT sensor No.1 malfunction — MAF sensor malfunction 2. Low-G (XY) sensor (built into SAS control module) malfunction **Note** • If a tire of a different diameter from the standard tire is installed, the TCM determines that the driving mode is the AAS mode, and may change to a different shift timing from the normal timing.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP (APP sensor) — BARO (BARO sensor) — IAT (IAT sensor No.1) — MAF (MAF sensor) — RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS LOW-G (XY) SENSOR** • Is there any malfunction?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Symptom troubleshooting is completed.

SYMPTOM TROUBLESHOOTING [FW6A-EL, FW6AX-EL]

ABNORMAL SHIFTING [FW6A-EL, FW6AX-EL]

id050317101200

TROUBLESHOOTING ITEM	Abnormal shifting
DESCRIPTION	• Shifts incorrectly (incorrect shift pattern).
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction — BARO sensor malfunction — Brake switch malfunction — CKP sensor malfunction — ECT sensor No.1 malfunction — IAT sensor No.1 malfunction — MAF sensor malfunction 2. Low-G (XY) sensor (built into SAS control module) malfunction **Note** • If a tire of a different diameter from the standard tire is installed, the TCM determines that the driving mode is the AAS mode, and may change to a different shift timing from the normal timing.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP (APP sensor) — BARO (BARO sensor) — BOO (Brake switch) — ECT (ECT sensor No.1) — IAT (IAT sensor No.1) — MAF (MAF sensor) — RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS LOW-G (XY) SENSOR** • Is there any malfunction?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Symptom troubleshooting is completed.

FREQUENT SHIFTING [FW6A-EL, FW6AX-EL]

id050317101300

TROUBLESHOOTING ITEM	Frequent shifting
DESCRIPTION	• Downshifting occurs suddenly even when accelerator pedal is depressed slightly in D position.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction 2. Low-G (XY) sensor (built into SAS control module) malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP (APP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE LOW-G (XY) SENSOR** • Is there any malfunction?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Symptom troubleshooting is completed.

SYMPTOM TROUBLESHOOTING [FW6A-EL, FW6AX-EL]

SHIFT POINT IS HIGH OR LOW [FW6A-EL, FW6AX-EL]

id050317101400

TROUBLESHOOTING ITEM	Shift point is high or low
DESCRIPTION	• Shift point considerably different from automatic shift diagram. • Shift delays when accelerating. • Shift occurs suddenly when accelerating and engine speed does not increase.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction — BARO sensor malfunction — Brake switch malfunction — ECT sensor No.1 malfunction — IAT sensor No.1 malfunction 2. Low-G (XY) sensor (built into SAS control module) malfunction **Note** • If a tire of a different diameter from the standard tire is installed, the TCM determines that the driving mode is the AAS mode, and may change to a different shift timing from the normal timing.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP (APP sensor) — BARO (BARO sensor) — BOO (Brake switch) — ECT (ECT sensor No.1) — IAT (IAT sensor No.1) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS LOW-G (XY) SENSOR** • Is there any malfunction?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Symptom troubleshooting is completed.

NO KICKDOWN [FW6A-EL, FW6AX-EL]

id050317101600

TROUBLESHOOTING ITEM	No kickdown
DESCRIPTION	• Does not downshift when accelerator pedal is fully depressed within kickdown range.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP (APP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Symptom troubleshooting is completed.

SYMPTOM TROUBLESHOOTING [FW6A-EL, FW6AX-EL]

ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING [FW6A-EL, FW6AX-EL]

id050317101700

TROUBLESHOOTING ITEM	Engine flares up or slips when upshifting or downshifting
DESCRIPTION	• When accelerator pedal is depressed, engine speed increases normally but vehicle speed increases slowly. • When accelerator pedal is depressed while driving, engine speed increases but vehicle speed does not.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction — CKP sensor malfunction — MAF sensor malfunction 2. Learning is not performed

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY MALFUNCTION SYMPTOM** • Is the malfunction symptom at the same level compared to a vehicle of the same model?	Yes	Symptom troubleshooting is completed.
		No	Go to the next step.
2	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP (APP sensor) — MAF (MAF sensor) — RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Symptom troubleshooting is completed.

JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION [FW6A-EL, FW6AX-EL]

id050317101900

TROUBLESHOOTING ITEM	Judder upon torque converter clutch (TCC) operation
DESCRIPTION	• Vehicle jolts when TCC is engaged.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction — CKP sensor malfunction 2. Torque converter malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY MALFUNCTION SYMPTOM** • Is the malfunction symptom at the same level compared to a vehicle of the same model?	Yes	Symptom troubleshooting is completed.
		No	Go to the next step.
2	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP (APP sensor) — RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].)

SYMPTOM TROUBLESHOOTING [FW6A-EL, FW6AX-EL]

EXCESSIVE SHIFT SHOCK FROM N TO D OR N TO R POSITION [FW6A-EL, FW6AX-EL]

id050317102000

TROUBLESHOOTING ITEM	Excessive shift shock from N to D or N to R position
DESCRIPTION	• Strong shock is felt when shifting from N to D or N to R position at idle.
POSSIBLE CAUSE	1. Not within idle speed specification 2. Signal malfunction — APP sensor malfunction — CKP sensor malfunction 3. Poor installation or worn of engine mount, suspension

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY MALFUNCTION SYMPTOM** • Is the malfunction symptom (shift shock/shifting time) at the same level compared to a vehicle of the same model?	Yes	Symptom troubleshooting is completed.
		No	Go to the next step.
2	**PERFORM ON-BOARD DIAGNOSTIC TO VERIFY HYDRAULIC PRESSURE SWITCH OPERATION PRESSURE** • Is the operation pressure normal?	Yes	Go to the next step.
		No	Replace the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
3	**INSPECT ENGINE CONTROL SYSTEM FOR MALFUNCTION** • Perform the symptom troubleshooting “NO.9 FAST IDLE/RUNS ON”. (See 01-03-51 NO.9 FAST IDLE/RUNS ON [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
4	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP (APP sensor) — RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
5	**INSPECT ENGINE MOUNT/SUSPENSION FOR POOR TIGHTENING** • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result. (See 01-10A-105 ENGINE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
		No	Symptom troubleshooting is completed.

EXCESSIVE SHIFT SHOCK IS FELT WHEN UPSHIFTING AND DOWNSHIFTING [FW6A-EL, FW6AX-EL]

id050317102100

TROUBLESHOOTING ITEM	Excessive shift shock is felt when upshifting and downshifting
DESCRIPTION	• Excessive shift shock is felt when depressing accelerator pedal to accelerate at upshifting. • During cruising, excessive shift shock is felt when depressing accelerator pedal at downshifting.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction 2. Poor installation or worn of engine mount, suspension

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY MALFUNCTION SYMPTOM** • Is the malfunction symptom (shift shock/shifting time) at the same level compared to a vehicle of the same model?	Yes	Symptom troubleshooting is completed.
		No	Go to the next step.
2	**PERFORM ON-BOARD DIAGNOSTIC TO VERIFY HYDRAULIC PRESSURE SWITCH OPERATION PRESSURE** • Is the operation pressure normal?	Yes	Go to the next step.
		No	Replace the control valve body. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)

SYMPTOM TROUBLESHOOTING [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
3	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PID using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP (APP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
4	**INSPECT ENGINE MOUNT/SUSPENSION FOR POOR TIGHTENING** • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result. (See 05-02A-11 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [FW6A-EL, FW6AX-EL].)
		No	Symptom troubleshooting is completed.

EXCESSIVE SHIFT SHOCK ON TORQUE CONVERTER CLUTCH (TCC) [FW6A-EL, FW6AX-EL]

id050317102200

TROUBLESHOOTING ITEM	Excessive shift shock on torque converter clutch (TCC)
DESCRIPTION	• Strong shock is felt when TCC is engaged.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction — CKP sensor malfunction 2. Torque converter malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP (APP sensor) — RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].)

NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS [FW6A-EL, FW6AX-EL]

id050317102300

TROUBLESHOOTING ITEM	Noise occurs at idle when vehicle is stopped in all positions
DESCRIPTION	• Transaxle is noisy in all positions when vehicle idling.
POSSIBLE CAUSE	1. Engine control system malfunction 2. Automatic transaxle internal parts malfunction — Oil pump malfunction — Torque converter internal parts malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY IF MALFUNCTION CAUSE IS ENGINE CONTROL SYSTEM OR TORQUE CONVERTER** • Inspect the engine condition. • Is there any malfunction?	Yes	Go to the appropriate symptom troubleshooting. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].)
		No	Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].)

SYMPTOM TROUBLESHOOTING [FW6A-EL, FW6AX-EL]

NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN D, M OR R POSITION [FW6A-EL, FW6AX-EL]

id050317102400

TROUBLESHOOTING ITEM	**Noise occurs at idle when vehicle is stopped in D, M or R position**
DESCRIPTION	• Transaxle is noisy in driving positions when vehicle is idling.
POSSIBLE CAUSE	1. Engine control system malfunction 2. Automatic transaxle internal parts malfunction — Torque converter internal parts malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY IF MALFUNCTION CAUSE IS ENGINE CONTROL SYSTEM OR TORQUE CONVERTER** • Inspect the engine condition. • Is there any malfunction?	Yes	Go to the appropriate symptom troubleshooting. (See 01-03-5 SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0].)
		No	Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL].)

TRANSAXLE OVERHEATS [FW6A-EL, FW6AX-EL]

id050317102600

TROUBLESHOOTING ITEM	**Transaxle overheats**
DESCRIPTION	• Burnt smell emitted from the transaxle. • Smoke is emitted from the transaxle.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction — Brake switch malfunction — CKP sensor malfunction — ECT sensor No.1 malfunction 2. ATF malfunction 3. Oil cooler malfunction 4. Control valve body malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. (See 01-02-8 ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0].) — APP (APP sensor) — BOO (Brake switch) — ECT (ECT sensor No.1) — RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification. (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.
3	**VISUALLY INSPECT OIL COOLER** • Visually inspect the oil cooler. • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result. (See 05-17A-66 OIL COOLER REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [FW6A-EL, FW6AX-EL]

STEP	INSPECTION		ACTION
4	**VERIFY IF MALFUNCTION CAUSE IS CONTROL VALVE BODY** • Inspect the value at the following TCM PIDs using the M-MDS. (See 05-02A-94 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [FW6A-EL, FW6AX-EL].) — ECU_A — ECU_B — ECU_C — GEAR_SEL — LINEDES — OP_SW1 — OP_SW2 — OP_SW3 — OP_SW4 — OSS — SS1 — SS2 — SS3 — SS4 — SSLU — SSLU_PRES — SSP — SSP_PRES — TR — TSS — VSS • Is there any malfunction?	Yes	Replace the control valve body, then go to the next step. (See 05-17A-67 CONTROL VALVE BODY REMOVAL/ INSTALLATION [FW6A-EL, FW6AX-EL].)
		No	Symptom troubleshooting is completed.

ENGINE STALLS WHEN SHIFTED TO D, M OR R POSITION [FW6A-EL, FW6AX-EL]

id050317102700

TROUBLESHOOTING ITEM	Engine stalls when shifted to D, M or R position
DESCRIPTION	• Engine stalls when shifting from N or P position to D, M or R position at idle.
POSSIBLE CAUSE	1. Not within idle speed specification 2. TCC piston malfunction (solenoid drive circuit, hydraulic passage blockage, poor operation) — Output solenoid valve malfunction (stuck) • TCC control solenoid 3. Torque converter malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY IF MALFUNCTION CAUSE IS ENGINE CONTROL SYSTEM OR TORQUE CONVERTER** • Perform the symptom troubleshooting “NO.5 ENGINE STALLS-AFTER START/AT IDLE” and “NO.10 LOW IDLE/STALLS DURING DECELERATION”. (See 01-03-31 NO.5 ENGINE STALLS-AFTER START/AT IDLE [SKYACTIV-G 2.0].) (See 01-03-54 NO.10 LOW IDLE/STALLS DURING DECELERATION [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Replace the automatic transaxle. (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [FW6AX-EL].)

SYMPTOM TROUBLESHOOTING [FW6A-EL, FW6AX-EL]

STARTER DOES NOT WORK [FW6A-EL, FW6AX-EL]

id050317102900

TROUBLESHOOTING ITEM	Starter does not work
DESCRIPTION	• Starter does not work even when in P or N position.
POSSIBLE CAUSE	1. Wiring harness between TCM terminal J and PCM terminal 2BD malfunction 2. Wiring harness between TCM terminal J, start stop unit terminal 1F and LF control unit terminal K malfunction (Vehicle with advanced keyless entry system) 3. Immobilizer system operating or system malfunction 4. Engine control system malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT WIRING HARNESS BETWEEN TCM AND PCM** • Switch the ignition to off. • Disconnect the PCM connector. • Disconnect the TCM connector. • Visually inspect for pin deformity, open circuit, or wiring harness non-insulation between TCM terminal J and PCM terminal 2BD. • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Vehicle without advanced keyless entry system: • Go to step3. Vehicle with advanced keyless entry system: • Go to the next step.
2	**INSPECT WIRING HARNESS BETWEEN TCM, START STOP UNIT AND LF CONTROL UNIT** • Switch the ignition to off. • Disconnect the start stop unit connector. • Disconnect the TCM connector. • Disconnect the LF control unit connector. • Visually inspect for pin deformity, open circuit, or wiring harness non-insulation between TCM terminal J, start stop unit terminal 1F and LF control unit terminal K. • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
3	**INSPECT IMMOBILIZER SYSTEM AND ENGINE CONTROL SYSTEM FOR MALFUNCTION** • Perform the symptom troubleshooting “NO.3 WILL NOT CRANK”. (See 01-03-19 NO.3 WILL NOT CRANK [SKYACTIV-G 2.0].) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Symptom troubleshooting is completed.

GEAR POSITION INDICATOR DOES NOT ILLUMINATE IN M POSITION [FW6A-EL, FW6AX-EL]

id050317103400

TROUBLESHOOTING ITEM	Gear position indicator does not illuminate in M position
DESCRIPTION	• Gear position indicator in instrument cluster does not illuminate in M position with the ignition is ON (engine off or on).
POSSIBLE CAUSE	1. Instrument cluster malfunction **Note** • When the ATF temperature is **132 °C {270 °F} or more**, gear fixing is inhibited, the gear position indicator is turned off, and he control is changed to the automatic shift control.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT INSTRUMENT CLUSTER FOR MALFUNCTION** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is there any malfunction?	Yes	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Symptom troubleshooting is completed.

SYMPTOM TROUBLESHOOTING [FW6A-EL, FW6AX-EL]

GEAR POSITION INDICATOR ILLUMINATES IN P, R, N AND D POSITIONS [FW6A-EL, FW6AX-EL]

id050317103500

TROUBLESHOOTING ITEM	Gear position indicator illuminates in P, R, N and D positions
DESCRIPTION	• Gear position indicator in instrument cluster illuminates in P, R, N and D positions with the ignition is ON (engine off or on).
POSSIBLE CAUSE	1. Instrument cluster malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT INSTRUMENT CLUSTER FOR MALFUNCTION** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is there any malfunction?	Yes	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Symptom troubleshooting is completed.

M POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M POSITION/M POSITION INDICATOR LIGHT ILLUMINATES IN D POSITION [FW6A-EL, FW6AX-EL]

id050317103200

TROUBLESHOOTING ITEM	M position indicator light does not illuminate in M position/M position indicator light illuminates in D position
DESCRIPTION	• M position indicator light in instrument cluster does not illuminate in M position or M position indicator light in instrument cluster in P, R, N and D positions with the ignition is ON (engine off or on).
POSSIBLE CAUSE	1. Instrument cluster malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT INSTRUMENT CLUSTER FOR MALFUNCTION** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is there any malfunction?	Yes	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Symptom troubleshooting is completed.

SYMPTOM TROUBLESHOOTING [FW6A-EL, FW6AX-EL]

ATF SEEPING FROM AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

id050317103800

TROUBLESHOOTING ITEM	**ATF seeping from automatic transaxle**
DESCRIPTION	• ATF is seeping from the automatic transaxle case. • Foreign matter mixed with ATF is in the automatic transaxle case.
POSSIBLE CAUSE	**Note** • ATF seeping radiates from ATF leak source. • Identify the type of seeping oil referring to “SERVICE CAUTIONS, Oil Leakage Inspection” in the general information. (See 00-00-13 SERVICE CAUTIONS.) • To prevent misdiagnosis, remove any grease or dirt from the seep location and verify the location of the seeping after driving the vehicle. • ATF leakage from the following locations — Oil pan (Part of drain plug etc.) — Converter housing (Part of torque converter etc.) — End cover — Oil cooler — Oil seal (differential) — Oil seal (control valve body) — Oil seal (manual shaft) — Dipstick — Line pressure detection port — Air breather

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY IF THE MALFUNCTION CAUSE IS ATF LEAKAGE FROM THE FOLLOWING LOCATIONS** • Verify if ATF is leaking from the locations described above. • Is there ATF seeping from a location?	Yes	Verify the installation and damage condition of the part at the location where the ATF is seeping and repair or replace the malfunctioning part.
		No	Symptom troubleshooting is completed.

05-03B SYMPTOM TROUBLESHOOTING [GW6A-EL, GW6AX-EL]

SYMPTOM TROUBLESHOOTING [GW6A-EL, GW6AX-EL]

Action for Non-repeatable Malfunction

- If the malfunction does not recur, verify the malfunction cause by performing the following actions:
  - — Verify that no DTCs are stored. (See 05-02B-6 ON-BOARD DIAGNOSTIC SYSTEM DTC INSPECTION [GW6A-EL, GW6AX-EL].)
  - — Based on the repair order form, attempt to drive the vehicle or perform tests to replicate the malfunction, record the data at that time, and detect the malfunction cause.
- If the malfunction does not recur after the above servicing, explain to the customer that the vehicle is normal.

SYMPTOM TROUBLESHOOTING ITEM TABLE [GW6A-EL, GW6AX-EL]

id050320100300

- Use the chart below to verify the symptoms of the trouble in order to diagnose the appropriate area.

Note

- If a tire of a different diameter from the standard tire is installed, the TCM determines that the driving mode is the AAS mode, and may change to a different shift timing from the normal timing.

Troubleshooting item	Description	Page
Vehicle does not move in D, M or R position	• Vehicle does not move when accelerator pedal is depressed. • The engine revs up but the vehicle does not move even though the accelerator pedal is depressed. • Tires are locked and do not move even though the accelerator pedal is depressed.	(See 05-03B-9 VEHICLE DOES NOT MOVE IN D, M OR R POSITION [GW6A-EL, GW6AX-EL].)
Vehicle moves in P position, or parking gear does not disengage when P is disengaged	• Vehicle rolls when on a downward slope in P position. • Vehicle does not move in D, M and R position when accelerator pedal is depressed, and engine remains in stalled condition.	(See 05-03B-10 VEHICLE MOVES IN P POSITION, OR PARKING GEAR DOES NOT DISENGAGE WHEN P IS DISENGAGED [GW6A-EL, GW6AX-EL].)
Excessive creep	• Vehicle accelerates in D and R position when accelerator pedal is not depressed.	(See 05-03B-10 EXCESSIVE CREEP [GW6A-EL, GW6AX-EL].)
No creep at all	• Vehicle does not move in D, M or R position when idling on flat paved road.	(See 05-03B-10 NO CREEP AT ALL [GW6A-EL, GW6AX-EL].)
Low maximum speed and poor acceleration	• Vehicle acceleration is poor at start. • Delayed acceleration when accelerator pedal is depressed while driving.	(See 05-03B-11 LOW MAXIMUM SPEED AND POOR ACCELERATION [GW6A-EL, GW6AX-EL].)
No shifting	• Single shift position only. • Sometimes shifts correctly.	(See 05-03B-11 NO SHIFTING [GW6A-EL, GW6AX-EL].)
Does not shift to 5GR or 6GR	• Vehicle does not upshift from 4GR to 5GR or 5GR to 6GR even though vehicle speed is increased. • At a vehicle speed range where the transaxle should shift up to 5GR and 6GR gears in D position based on the shift pattern, the transaxle does not shift to 5GR and 6GR gears by gradually releasing the accelerator pedal.	(See 05-03B-12 DOES NOT SHIFT TO 5GR OR 6GR [GW6A-EL, GW6AX-EL].)
Abnormal shifting	• Shifts incorrectly (incorrect shift pattern).	(See 05-03B-13 ABNORMAL SHIFTING [GW6A-EL, GW6AX-EL].)
Frequent shifting	• Downshifting occurs suddenly even when accelerator pedal is depressed slightly in D position.	(See 05-03B-13 FREQUENT SHIFTING [GW6A-EL, GW6AX-EL].)
Shift point is high or low	• Shift point considerably different from automatic shift diagram. • Shift delays when accelerating. • Shift occurs suddenly when accelerating and engine speed does not increase.	(See 05-03B-14 SHIFT POINT IS HIGH OR LOW [GW6A-EL, GW6AX-EL].)
No kickdown	• Does not downshift when accelerator pedal is fully depressed within kickdown range.	(See 05-03B-14 NO KICKDOWN [GW6A-EL, GW6AX-EL].)

SYMPTOM TROUBLESHOOTING [GW6A-EL, GW6AX-EL]

Troubleshooting item	Description	Page
Engine flares up or slips when upshifting or downshifting	• When accelerator pedal is depressed, engine speed increases normally but vehicle speed increases slowly. • When accelerator pedal is depressed while driving, engine speed increases but vehicle speed does not.	(See 05-03B-15 ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING [GW6A-EL, GW6AX-EL].)
Judder upon torque converter clutch (TCC) operation	• Vehicle jolts when TCC is engaged.	(See 05-03B-15 JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION [GW6A-EL, GW6AX-EL].)
Excessive shift shock from N to D or N to R position	• Strong shock is felt when shifting from N to D or N to R position at idle.	(See 05-03B-16 EXCESSIVE SHIFT SHOCK FROM N TO D OR N TO R POSITION [GW6A-EL, GW6AX-EL].)
Excessive shift shock is felt when upshifting and downshifting	• Excessive shift shock is felt when depressing accelerator pedal to accelerate at upshifting. • During cruising, excessive shift shock is felt when depressing accelerator pedal at downshifting.	(See 05-03B-16 EXCESSIVE SHIFT SHOCK IS FELT WHEN UPSHIFTING AND DOWNSHIFTING [GW6A-EL, GW6AX-EL].)
Excessive shift shock on torque converter clutch (TCC)	• Strong shock is felt when TCC is engaged.	(See 05-03B-17 EXCESSIVE SHIFT SHOCK ON TORQUE CONVERTER CLUTCH (TCC) [GW6A-EL, GW6AX-EL].)
Noise occurs at idle when vehicle is stopped in all positions	• Transaxle is noisy in all positions when vehicle idling.	(See 05-03B-17 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS [GW6A-EL, GW6AX-EL].)
Noise occurs at idle when vehicle is stopped in D, M or R position	• Transaxle is noisy in driving positions when vehicle is idling.	(See 05-03B-18 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN D, M OR R POSITION [GW6A-EL, GW6AX-EL].)
Transaxle overheats	• Burnt smell emitted from the transaxle. • Smoke is emitted from the transaxle.	(See 05-03B-18 TRANSAXLE OVERHEATS [GW6A-EL, GW6AX-EL].)
Engine stalls when shifted to D, M or R position	• Engine stalls when shifting from N or P position to D, M or R position at idle.	(See 05-03B-19 ENGINE STALLS WHEN SHIFTED TO D, M OR R POSITION [GW6A-EL, GW6AX-EL].)
Starter does not work	• Starter does not work even when in P or N position.	(See 05-03B-20 STARTER DOES NOT WORK [GW6A-EL, GW6AX-EL].)
Gear position indicator does not illuminate in M position	• Gear position indicator in instrument cluster does not illuminate in M position with the ignition is ON (engine off or on).	(See 05-03B-20 GEAR POSITION INDICATOR DOES NOT ILLUMINATE IN M POSITION [GW6A-EL, GW6AX-EL].)
Gear position indicator illuminates in P, R, N and D positions	• Gear position indicator in instrument cluster illuminates in P, R, N and D positions with the ignition is ON (engine off or on).	(See 05-03B-21 GEAR POSITION INDICATOR ILLUMINATES IN P, R, N AND D POSITIONS [GW6A-EL, GW6AX-EL].)
M position indicator light does not illuminate in M position/M position indicator light illuminates in D position	• M position indicator light in instrument cluster does not illuminate in M position or M position indicator light in instrument cluster in P, R, N and D positions with the ignition is ON (engine off or on).	(See 05-03B-21 M POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M POSITION/M POSITION INDICATOR LIGHT ILLUMINATES IN D POSITION [GW6A-EL, GW6AX-EL].)
ATF seeping from automatic transaxle	• ATF is seeping from the automatic transaxle case. • Foreign matter mixed with ATF is in the automatic transaxle case.	(See 05-03B-22 ATF SEEPING FROM AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL].)

SYMPTOM TROUBLESHOOTING [GW6A-EL, GW6AX-EL]

VEHICLE DOES NOT MOVE IN D, M OR R POSITION [GW6A-EL, GW6AX-EL]

id050320100500

TROUBLESHOOTING ITEM	Vehicle does not move in D, M or R position
DESCRIPTION	• Vehicle does not move when accelerator pedal is depressed. • The engine revs up but the vehicle does not move even though the accelerator pedal is depressed. • Tires are locked and do not move even though the accelerator pedal is depressed.
POSSIBLE CAUSE	1. Improper operation of parking mechanism 2. Manual shaft (manual valve) stuck 3. Torque converter malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PARKING MECHANISM FOR MALFUNCTION** • When the vehicle is stopped on a flat, level road and the engine is off, does the vehicle move when pushed? (In D, N or R position with the brake pedal released.)	Yes	Go to the next step.
		No	Replace the parking mechanism. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].)
2	**VERIFY IF MALFUNCTION CAUSE IS MANUAL SHAFT OR TORQUE CONVERTER** • Move the vehicle to a level surface and apply the parking brake. • Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].) • Remove the battery component (ex: battery, battery tray and PCM component). (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].) • Remove the air cleaner component. (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].) • Can the manual shaft be rotated by hand?  	Yes	Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].)
		No	Replace the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)

SYMPTOM TROUBLESHOOTING [GW6A-EL, GW6AX-EL]

VEHICLE MOVES IN P POSITION, OR PARKING GEAR DOES NOT DISENGAGE WHEN P IS DISENGAGED [GW6A-EL, GW6AX-EL]

id050320100600

TROUBLESHOOTING ITEM	Vehicle moves in P position, or parking gear does not disengage when P is disengaged
DESCRIPTION	• Vehicle rolls when on a downward slope in P position. • Vehicle does not move in D, M and R position when accelerator pedal is depressed, and engine remains in stalled condition.
POSSIBLE CAUSE	1. Parking mechanism malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PARKING MECHANISM FOR MALFUNCTION** • When the vehicle is stopped on a flat, level road and the engine is off, does the vehicle move when pushed? (In D, N or R position with the brake pedal released.)	Yes	Symptom troubleshooting is completed.
		No	Replace the parking mechanism. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].)

EXCESSIVE CREEP [GW6A-EL, GW6AX-EL]

id050320100700

TROUBLESHOOTING ITEM	Excessive creep
DESCRIPTION	• Vehicle accelerates in D and R position when accelerator pedal is not depressed.
POSSIBLE CAUSE	1. Not within idle speed specification

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ENGINE CONTROL SYSTEM FOR MALFUNCTION** • Perform the symptom troubleshooting “NO.9 FAST IDLE/RUNS ON”. • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Symptom troubleshooting is completed.

NO CREEP AT ALL [GW6A-EL, GW6AX-EL]

id050320100800

TROUBLESHOOTING ITEM	No creep at all
DESCRIPTION	• Vehicle does not move in D, M or R position when idling on flat paved road.
POSSIBLE CAUSE	1. Not within idle speed specification

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ENGINE CONTROL SYSTEM FOR MALFUNCTION** • Perform the symptom troubleshooting “NO.9 FAST IDLE/RUNS ON”. • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS TORQUE CONVERTER** • Is the same level compared to a vehicle of the same model?	Yes	Symptom troubleshooting is completed.
		No	Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].)

SYMPTOM TROUBLESHOOTING [GW6A-EL, GW6AX-EL]

LOW MAXIMUM SPEED AND POOR ACCELERATION [GW6A-EL, GW6AX-EL]

id050320100900

TROUBLESHOOTING ITEM	Low maximum speed and poor acceleration
DESCRIPTION	• Vehicle acceleration is poor at start. • Delayed acceleration when accelerator pedal is depressed while driving.
POSSIBLE CAUSE	• Engine control system malfunction • Signal malfunction — APP sensor malfunction — CKP sensor malfunction — MAF sensor malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ENGINE CONTROL SYSTEM FOR MALFUNCTION** • Perform the symptom troubleshooting “NO.12 LACK/LOSS OF POWER-ACCELERATION/ CRUISE”. • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. — APP (APP sensor) — MAF (MAF sensor) — RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Explain to the customer that the vehicle is not malfunctioning and they should keep an eye on it.

NO SHIFTING [GW6A-EL, GW6AX-EL]

id050320101000

TROUBLESHOOTING ITEM	No shifting
DESCRIPTION	• Single shift position only. • Sometimes shifts correctly.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction — BARO sensor malfunction — Brake switch malfunction — CKP sensor malfunction — IAT sensor No.1 malfunction — MAF sensor malfunction 2. Low-G (XY) sensor (built into SAS control module) malfunction **Note** • If a tire of a different diameter from the standard tire is installed, the TCM determines that the driving mode is the AAS mode, and may change to a different shift timing from the normal timing.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. — APP (APP sensor) — BARO (BARO sensor) — BOO (Brake switch) — IAT (IAT sensor No.1) — MAF (MAF sensor) — RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS LOW-G (XY) SENSOR** • Is there any malfunction?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	Symptom troubleshooting is completed.

SYMPTOM TROUBLESHOOTING [GW6A-EL, GW6AX-EL]

DOES NOT SHIFT TO 5GR OR 6GR [GW6A-EL, GW6AX-EL]

id050320101100

TROUBLESHOOTING ITEM	Does not shift to 5GR or 6GR
DESCRIPTION	• Vehicle does not upshift from 4GR to 5GR or 5GR to 6GR even though vehicle speed is increased. • At a vehicle speed range where the transaxle should shift up to 5GR and 6GR gears in D position based on the shift pattern, the transaxle does not shift to 5GR and 6GR gears by gradually releasing the accelerator pedal.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction — BARO sensor malfunction — CKP sensor malfunction — IAT sensor No.1 malfunction — MAF sensor malfunction 2. Low-G (XY) sensor (built into SAS control module) malfunction **Note** • If a tire of a different diameter from the standard tire is installed, the TCM determines that the driving mode is the AAS mode, and may change to a different shift timing from the normal timing.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. — APP (APP sensor) — BARO (BARO sensor) — IAT (IAT sensor No.1) — MAF (MAF sensor) — RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS LOW-G (XY) SENSOR** • Is there any malfunction?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Symptom troubleshooting is completed.

SYMPTOM TROUBLESHOOTING [GW6A-EL, GW6AX-EL]

ABNORMAL SHIFTING [GW6A-EL, GW6AX-EL]

id050320101200

TROUBLESHOOTING ITEM	Abnormal shifting
DESCRIPTION	• Shifts incorrectly (incorrect shift pattern).
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction — BARO sensor malfunction — Brake switch malfunction — CKP sensor malfunction — ECT sensor No.1 malfunction — IAT sensor No.1 malfunction — MAF sensor malfunction 2. Low-G (XY) sensor (built into SAS control module) malfunction **Note** • If a tire of a different diameter from the standard tire is installed, the TCM determines that the driving mode is the AAS mode, and may change to a different shift timing from the normal timing.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. — APP (APP sensor) — BARO (BARO sensor) — BOO (Brake switch) — ECT (ECT sensor No.1) — IAT (IAT sensor No.1) — MAF (MAF sensor) — RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS LOW-G (XY) SENSOR** • Is there any malfunction?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	Symptom troubleshooting is completed.

FREQUENT SHIFTING [GW6A-EL, GW6AX-EL]

id050320101300

TROUBLESHOOTING ITEM	Frequent shifting
DESCRIPTION	• Downshifting occurs suddenly even when accelerator pedal is depressed slightly in D position.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction 2. Low-G (XY) sensor (built into SAS control module) malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PID using the M-MDS. — APP (APP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE LOW-G (XY) SENSOR** • Is there any malfunction?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	Symptom troubleshooting is completed.

SYMPTOM TROUBLESHOOTING [GW6A-EL, GW6AX-EL]

SHIFT POINT IS HIGH OR LOW [GW6A-EL, GW6AX-EL]

id050320101400

TROUBLESHOOTING ITEM	Shift point is high or low
DESCRIPTION	• Shift point considerably different from automatic shift diagram. • Shift delays when accelerating. • Shift occurs suddenly when accelerating and engine speed does not increase.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction — BARO sensor malfunction — Brake switch malfunction — ECT sensor No.1 malfunction — IAT sensor No.1 malfunction 2. Low-G (XY) sensor (built into SAS control module) malfunction **Note** • If a tire of a different diameter from the standard tire is installed, the TCM determines that the driving mode is the AAS mode, and may change to a different shift timing from the normal timing.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. — APP (APP sensor) — BARO (BARO sensor) — BOO (Brake switch) — ECT (ECT sensor No.1) — IAT (IAT sensor No.1) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**VERIFY IF MALFUNCTION CAUSE IS LOW-G (XY) SENSOR** • Is there any malfunction?	Yes	Replace the SAS control module. (See 08-10-20 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Symptom troubleshooting is completed.

NO KICKDOWN [GW6A-EL, GW6AX-EL]

id050320101600

TROUBLESHOOTING ITEM	No kickdown
DESCRIPTION	• Does not downshift when accelerator pedal is fully depressed within kickdown range.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PID using the M-MDS. — APP (APP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Symptom troubleshooting is completed.

SYMPTOM TROUBLESHOOTING [GW6A-EL, GW6AX-EL]

ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING [GW6A-EL, GW6AX-EL]

id050320101700

TROUBLESHOOTING ITEM	Engine flares up or slips when upshifting or downshifting
DESCRIPTION	• When accelerator pedal is depressed, engine speed increases normally but vehicle speed increases slowly. • When accelerator pedal is depressed while driving, engine speed increases but vehicle speed does not.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction — CKP sensor malfunction — MAF sensor malfunction 2. Learning is not performed

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY MALFUNCTION SYMPTOM** • Is the malfunction symptom at the same level compared to a vehicle of the same model?	Yes	Symptom troubleshooting is completed.
		No	Go to the next step.
2	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. — APP (APP sensor) — MAF (MAF sensor) — RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Symptom troubleshooting is completed.

05

JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION [GW6A-EL, GW6AX-EL]

id050320101900

TROUBLESHOOTING ITEM	Judder upon torque converter clutch (TCC) operation
DESCRIPTION	• Vehicle jolts when TCC is engaged.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction — CKP sensor malfunction 2. Torque converter malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY MALFUNCTION SYMPTOM** • Is the malfunction symptom at the same level compared to a vehicle of the same model?	Yes	Symptom troubleshooting is completed.
		No	Go to the next step.
2	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. — APP (APP sensor) — RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].)

SYMPTOM TROUBLESHOOTING [GW6A-EL, GW6AX-EL]

EXCESSIVE SHIFT SHOCK FROM N TO D OR N TO R POSITION [GW6A-EL, GW6AX-EL]

id050320102000

TROUBLESHOOTING ITEM	Excessive shift shock from N to D or N to R position
DESCRIPTION	• Strong shock is felt when shifting from N to D or N to R position at idle.
POSSIBLE CAUSE	1. Not within idle speed specification 2. Signal malfunction — APP sensor malfunction — CKP sensor malfunction 3. Poor installation or worn of engine mount, suspension

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY MALFUNCTION SYMPTOM** • Is the malfunction symptom (shift shock/shifting time) at the same level compared to a vehicle of the same model?	Yes	Symptom troubleshooting is completed.
		No	Go to the next step.
2	**PERFORM ON-BOARD DIAGNOSTIC TO VERIFY HYDRAULIC PRESSURE SWITCH OPERATION PRESSURE** • Is the operation pressure normal?	Yes	Go to the next step.
		No	Replace the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
3	**INSPECT ENGINE CONTROL SYSTEM FOR MALFUNCTION** • Perform the symptom troubleshooting “NO.9 FAST IDLE/RUNS ON”. • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
4	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. — APP (APP sensor) — RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
5	**INSPECT ENGINE MOUNT/SUSPENSION FOR POOR TIGHTENING** • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result. (See 01-10B-98 ENGINE REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
		No	Symptom troubleshooting is completed.

EXCESSIVE SHIFT SHOCK IS FELT WHEN UPSHIFTING AND DOWNSHIFTING [GW6A-EL, GW6AX-EL]

id050320102100

TROUBLESHOOTING ITEM	Excessive shift shock is felt when upshifting and downshifting
DESCRIPTION	• Excessive shift shock is felt when depressing accelerator pedal to accelerate at upshifting. • During cruising, excessive shift shock is felt when depressing accelerator pedal at downshifting.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction 2. Poor installation or worn of engine mount, suspension

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY MALFUNCTION SYMPTOM** • Is the malfunction symptom (shift shock/shifting time) at the same level compared to a vehicle of the same model?	Yes	Symptom troubleshooting is completed.
		No	Go to the next step.
2	**PERFORM ON-BOARD DIAGNOSTIC TO VERIFY HYDRAULIC PRESSURE SWITCH OPERATION PRESSURE** • Is the operation pressure normal?	Yes	Go to the next step.
		No	Replace the control valve body. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
3	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PID using the M-MDS. — APP (APP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
4	**INSPECT ENGINE MOUNT/SUSPENSION FOR POOR TIGHTENING** • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result. (See 05-02B-10 ON-BOARD DIAGNOSTIC SYSTEM DTC TABLE [GW6A-EL, GW6AX-EL].)
		No	Symptom troubleshooting is completed.

EXCESSIVE SHIFT SHOCK ON TORQUE CONVERTER CLUTCH (TCC) [GW6A-EL, GW6AX-EL]

id050320102200

TROUBLESHOOTING ITEM	Excessive shift shock on torque converter clutch (TCC)
DESCRIPTION	• Strong shock is felt when TCC is engaged.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction — CKP sensor malfunction 2. Torque converter malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. — APP (APP sensor) — RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].)

05

NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS [GW6A-EL, GW6AX-EL]

id050320102300

TROUBLESHOOTING ITEM	Noise occurs at idle when vehicle is stopped in all positions
DESCRIPTION	• Transaxle is noisy in all positions when vehicle idling.
POSSIBLE CAUSE	1. Engine control system malfunction 2. Automatic transaxle internal parts malfunction — Oil pump malfunction — Torque converter internal parts malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY IF MALFUNCTION CAUSE IS ENGINE CONTROL SYSTEM OR TORQUE CONVERTER** • Inspect the engine condition. • Is there any malfunction?	Yes	Go to the appropriate symptom troubleshooting.
		No	Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].)

SYMPTOM TROUBLESHOOTING [GW6A-EL, GW6AX-EL]

NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN D, M OR R POSITION [GW6A-EL, GW6AX-EL]

id050320102400

TROUBLESHOOTING ITEM	**Noise occurs at idle when vehicle is stopped in D, M or R position**
DESCRIPTION	• Transaxle is noisy in driving positions when vehicle is idling.
POSSIBLE CAUSE	1. Engine control system malfunction 2. Automatic transaxle internal parts malfunction — Torque converter internal parts malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY IF MALFUNCTION CAUSE IS ENGINE CONTROL SYSTEM OR TORQUE CONVERTER** • Inspect the engine condition. • Is there any malfunction?	Yes	Go to the appropriate symptom troubleshooting.
		No	Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [GW6AX-EL].)

TRANSAXLE OVERHEATS [GW6A-EL, GW6AX-EL]

id050320102600

TROUBLESHOOTING ITEM	**Transaxle overheats**
DESCRIPTION	• Burnt smell emitted from the transaxle. • Smoke is emitted from the transaxle.
POSSIBLE CAUSE	1. Signal malfunction — APP sensor malfunction — Brake switch malfunction — CKP sensor malfunction — ECT sensor No.1 malfunction 2. ATF malfunction 3. Oil cooler malfunction 4. Control valve body malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SIGNAL PARTS FOR MALFUNCTION** • Inspect the value at the following PCM PIDs using the M-MDS. — APP (APP sensor) — BOO (Brake switch) — ECT (ECT sensor No.1) — RPM (CKP sensor) • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
2	**INSPECT ATF LEVEL** • Inspect the ATF level. (See 05-17B-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [GW6A-EL, GW6AX-EL].) • Is there any malfunction?	Yes	Adjust the ATF level to the specification. (See 05-17B-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.
3	**VISUALLY INSPECT OIL COOLER** • Visually inspect the oil cooler. • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result. (See 05-17B-71 OIL COOLER REMOVAL/INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	Go to the next step.

SYMPTOM TROUBLESHOOTING [GW6A-EL, GW6AX-EL]

STEP	INSPECTION		ACTION
4	**VERIFY IF MALFUNCTION CAUSE IS CONTROL VALVE BODY** • Inspect the value at the following TCM PIDs using the M-MDS. (See 05-02B-92 ON-BOARD DIAGNOSTIC SYSTEM PID/DATA MONITOR INSPECTION [GW6A-EL, GW6AX-EL].) — ECU_A — ECU_B — ECU_C — GEAR_SEL — LINEDES — OP_SW1 — OP_SW2 — OP_SW3 — OP_SW4 — OSS — SS1 — SS2 — SS3 — SS4 — SSLU — SSLU_PRES — SSP — SSP_PRES — TR — TSS — VSS • Is there any malfunction?	Yes	Replace the control valve body, then go to the next step. (See 05-17B-81 CONTROL VALVE BODY REMOVAL/ INSTALLATION [GW6A-EL, GW6AX-EL].)
		No	Symptom troubleshooting is completed.

ENGINE STALLS WHEN SHIFTED TO D, M OR R POSITION [GW6A-EL, GW6AX-EL]

id050320102700

TROUBLESHOOTING ITEM	Engine stalls when shifted to D, M or R position
DESCRIPTION	• Engine stalls when shifting from N or P position to D, M or R position at idle.
POSSIBLE CAUSE	1. Not within idle speed specification 2. TCC piston malfunction (solenoid drive circuit, hydraulic passage blockage, poor operation) — Output solenoid valve malfunction (stuck) • TCC control solenoid 3. Torque converter malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY IF MALFUNCTION CAUSE IS ENGINE CONTROL SYSTEM OR TORQUE CONVERTER** • Perform the symptom troubleshooting “NO.5 ENGINE STALLS-AFTER START/AT IDLE” and “NO.10 LOW IDLE/STALLS DURING DECELERATION”. • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Replace the automatic transaxle. (See 05-17B-29 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [GW6A-EL].) (See 05-17B-47 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [GW6AX-EL].)

SYMPTOM TROUBLESHOOTING [GW6A-EL, GW6AX-EL]

STARTER DOES NOT WORK [GW6A-EL, GW6AX-EL]

id050320102900

TROUBLESHOOTING ITEM	Starter does not work
DESCRIPTION	• Starter does not work even when in P or N position.
POSSIBLE CAUSE	1. Wiring harness between TCM terminal J and PCM terminal 2AI malfunction 2. Wiring harness between TCM terminal J, start stop unit terminal 1F and LF control unit terminal K malfunction (Vehicle with advanced keyless entry system) 3. Immobilizer system operating or system malfunction 4. Engine control system malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT WIRING HARNESS BETWEEN TCM AND PCM** • Switch the ignition to off. • Disconnect the PCM connector. • Disconnect the TCM connector. • Visually inspect for pin deformity, open circuit, or wiring harness non-insulation between TCM terminal J and PCM terminal 2AI. • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Vehicle without advanced keyless entry system: • Go to step3. Vehicle with advanced keyless entry system: • Go to the next step.
2	**INSPECT WIRING HARNESS BETWEEN TCM, START STOP UNIT AND LF CONTROL UNIT** • Switch the ignition to off. • Disconnect the start stop unit connector. • Disconnect the TCM connector. • Disconnect the LF control unit connector. • Visually inspect for pin deformity, open circuit, or wiring harness non-insulation between TCM terminal J, start stop unit terminal 1F and LF control unit terminal K. • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Go to the next step.
3	**INSPECT IMMOBILIZER SYSTEM AND ENGINE CONTROL SYSTEM FOR MALFUNCTION** • Perform the symptom troubleshooting “NO.3 WILL NOT CRANK”. • Is there any malfunction?	Yes	Repair or replace any malfunctioning parts according to the inspection result.
		No	Symptom troubleshooting is completed.

GEAR POSITION INDICATOR DOES NOT ILLUMINATE IN M POSITION [GW6A-EL, GW6AX-EL]

id050320103400

TROUBLESHOOTING ITEM	Gear position indicator does not illuminate in M position
DESCRIPTION	• Gear position indicator in instrument cluster does not illuminate in M position with the ignition is ON (engine off or on).
POSSIBLE CAUSE	1. Instrument cluster malfunction **Note** • When the ATF temperature is **132 °C {270 °F} or more**, gear fixing is inhibited, the gear position indicator is turned off, and he control is changed to the automatic shift control.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT INSTRUMENT CLUSTER FOR MALFUNCTION** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is there any malfunction?	Yes	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Symptom troubleshooting is completed.

SYMPTOM TROUBLESHOOTING [GW6A-EL, GW6AX-EL]

GEAR POSITION INDICATOR ILLUMINATES IN P, R, N AND D POSITIONS [GW6A-EL, GW6AX-EL]

id050320103500

TROUBLESHOOTING ITEM	Gear position indicator illuminates in P, R, N and D positions
DESCRIPTION	• Gear position indicator in instrument cluster illuminates in P, R, N and D positions with the ignition is ON (engine off or on).
POSSIBLE CAUSE	1. Instrument cluster malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT INSTRUMENT CLUSTER FOR MALFUNCTION** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is there any malfunction?	Yes	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Symptom troubleshooting is completed.

M POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M POSITION/M POSITION INDICATOR LIGHT ILLUMINATES IN D POSITION [GW6A-EL, GW6AX-EL]

id050320103200

TROUBLESHOOTING ITEM	M position indicator light does not illuminate in M position/M position indicator light illuminates in D position
DESCRIPTION	• M position indicator light in instrument cluster does not illuminate in M position or M position indicator light in instrument cluster in P, R, N and D positions with the ignition is ON (engine off or on).
POSSIBLE CAUSE	1. Instrument cluster malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT INSTRUMENT CLUSTER FOR MALFUNCTION** • Inspect the instrument cluster. (See 09-22-11 INSTRUMENT CLUSTER INSPECTION.) • Is there any malfunction?	Yes	Replace the instrument cluster. (See 09-22-6 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Symptom troubleshooting is completed.

SYMPTOM TROUBLESHOOTING [GW6A-EL, GW6AX-EL]

ATF SEEPING FROM AUTOMATIC TRANSAXLE [GW6A-EL, GW6AX-EL]

id050320103800

TROUBLESHOOTING ITEM	**ATF seeping from automatic transaxle**
DESCRIPTION	• ATF is seeping from the automatic transaxle case. • Foreign matter mixed with ATF is in the automatic transaxle case.
POSSIBLE CAUSE	**Note** • ATF seeping radiates from ATF leak source. • Identify the type of seeping oil referring to “SERVICE CAUTIONS, Oil Leakage Inspection” in the general information. (See 00-00-13 SERVICE CAUTIONS.) • To prevent misdiagnosis, remove any grease or dirt from the seep location and verify the location of the seeping after driving the vehicle. • ATF leakage from the following locations — Oil pan (Part of drain plug etc.) — Converter housing (Part of torque converter etc.) — End cover — Oil cooler — Oil seal (differential) — Oil seal (control valve body) — Oil seal (manual shaft) — Dipstick — Line pressure detection port — Air breather

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY IF THE MALFUNCTION CAUSE IS ATF LEAKAGE FROM THE FOLLOWING LOCATIONS** • Verify if ATF is leaking from the locations described above. • Is there ATF seeping from a location?	Yes	Verify the installation and damage condition of the part at the location where the ATF is seeping and repair or replace the malfunctioning part.
		No	Symptom troubleshooting is completed.

05

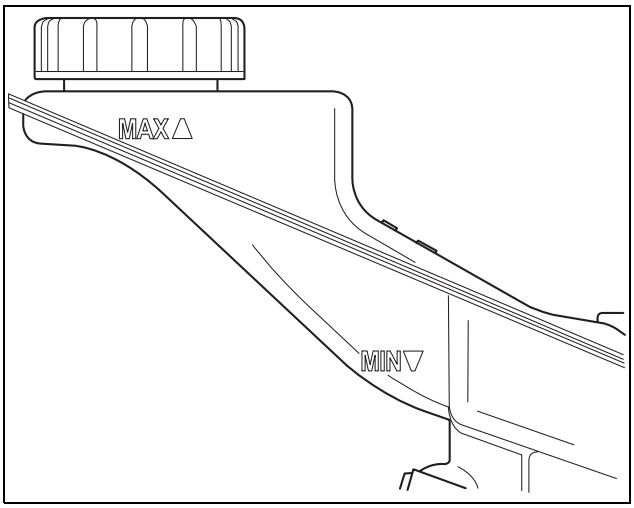
CLUTCH FLUID INSPECTION [C66M-R, C66MX-R]

id0510mc156400

Note
- A common reserve tank is used for the clutch system and brake system.

1. Verify that the clutch fluid is between the MIN mark and the MAX mark.
   - If fluid level is lower than MIN mark, perform the following procedure:
     1. Verify that there is no fluid leakage. (See 05-10A-4 CLUTCH FLUID LEAKAGE INSPECTION [C66M-R, C66MX-R].)
     2. Add fluid to the level between MIN mark and the MAX mark.

Clutch fluid
European (L.H.D. U.K.) specs.: SAE J1703 or FMVSS116 DOT-3 or DOT-4
Australian and General (L.H.D. R.H.D.) specs.: SAE J1703 or FMVSS116 DOT-3



am3uuw0000824

CLUTCH [C66M-R, C66MX-R]

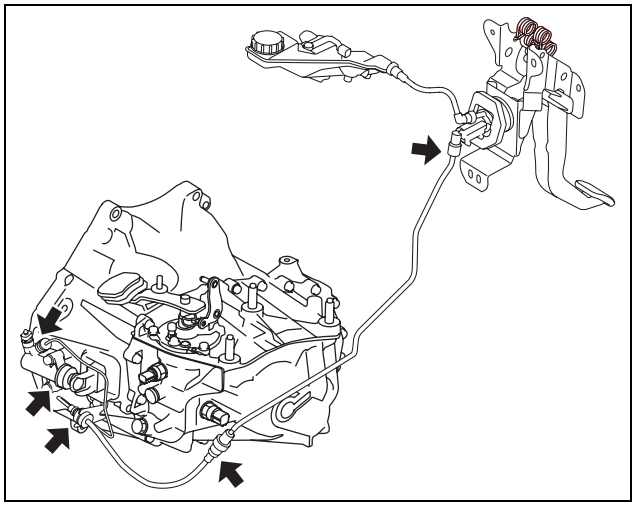
CLUTCH FLUID LEAKAGE INSPECTION [C66M-R, C66MX-R]

id0510mc158400

Caution
- **Do not allow clutch fluid to get on a painted surface. Clutch fluid contains properties which can dissolve the paint. If clutch fluid gets on a painted surface, wash it off with water immediately and wipe the area off completely.**

1. Verify reserve tank cap is on tight.
2. Pump the clutch pedal a few times.
3. Inspect for the clutch fluid leakage at the points indicated in the figure.

L.H.D.

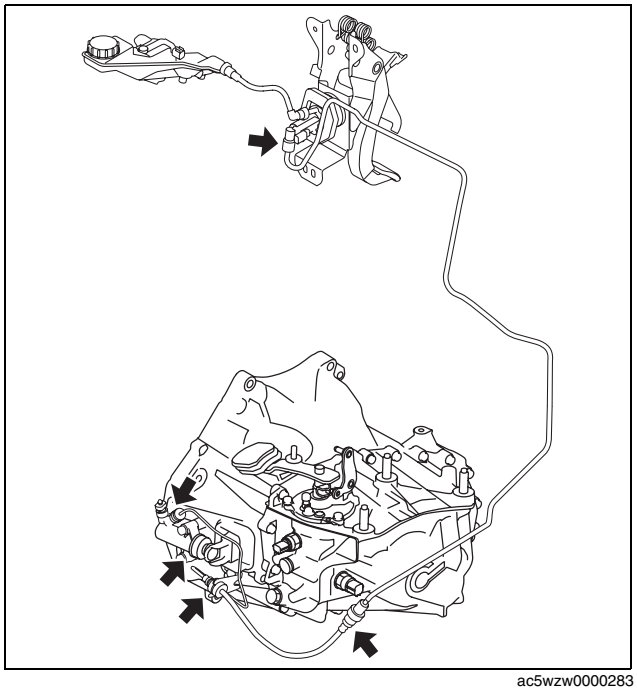


ac5wzw0000283

R.H.D.

Note
- If there is clutch fluid leakage from the piston in the clutch release cylinder, there is clutch fluid in the boot of clutch release cylinder.

- If there is clutch fluid leakage, repair or replace the malfunctioning location.



ac5wzw0000283

CLUTCH [C66M-R, C66MX-R]

CLUTCH FLUID REPLACEMENT/AIR BLEEDING [C66M-R, C66MX-R]

id0510mc166800

Caution
- **Do not allow clutch fluid to get on a painted surface. Clutch fluid contains properties which can dissolve the paint. If clutch fluid gets on a painted surface, wash it off with water immediately and wipe the area off completely.**
- **Do not mix different types of clutch fluid, otherwise the clutch may not operate normally.**
- **Do not reuse old clutch fluid, otherwise the clutch may not operate normally.**

Note
- A common reserve tank is used for the clutch system and brake system.

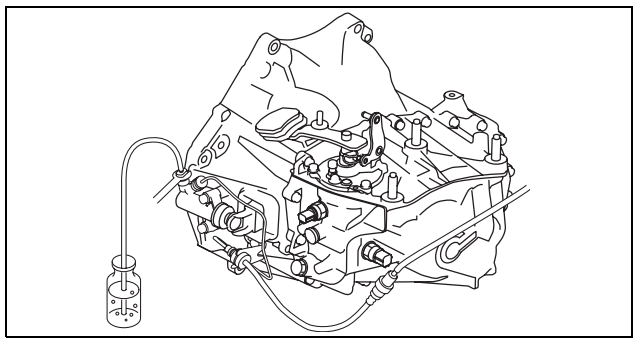
1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Remove the reserve tank cap.
3. Drain the clutch fluid from bleeder screw.
4. Add new clutch fluid to the MAX mark of the reserve tank.

Clutch fluid
European (L.H.D. U.K.) specs.: SAE J1703 or FMVSS116 DOT-3 or DOT-4
Australian and General (L.H.D. R.H.D.) specs.: SAE J1703 or FMVSS116 DOT-3

5. Bleed the air from the clutch system.

Caution
- **Keep the clutch fluid level in the reserve tank at 3/4 full or more during air bleeding.**

(1) Connect a vinyl tube to the bleeder screw.
(2) Place the other end of the vinyl tube in a clear container, and fill clutch fluid in the container during air bleeding.
(3) Working with two people, one loosens the bleeder screw.
(4) The other person depresses the clutch pedal to full stroke taking approx. 3 s or more, and then holding the pedal depressed.
(5) After waiting approx. 5 s or more, tighten the bleeder screw.
(6) Return the clutch pedal slowly taking 3 s or more while suppressing the spring force.
(7) Wait approx. 5 s or more.
(8) Continue to perform air bleeding (Steps (3) - (7)) until no air comes from the vinyl tube.
(9) Fill the reserve tank to MAX mark with the clutch fluid.



ac5wzw0000283

Clutch fluid
European (L.H.D. U.K.) specs.: SAE J1703 or FMVSS116 DOT-3 or DOT-4
Australian and General (L.H.D. R.H.D.) specs.: SAE J1703 or FMVSS116 DOT-3

6. Install the reserve tank cap.
7. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)

CLUTCH [C66M-R, C66MX-R]

CLUTCH PEDAL INSPECTION [C66M-R, C66MX-R]

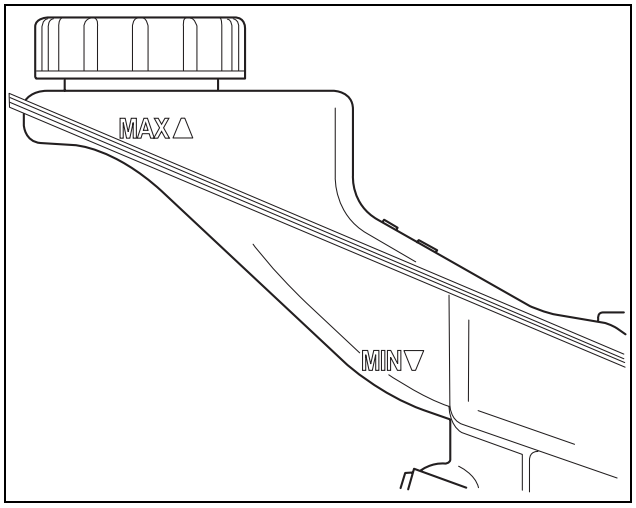
id0510mc156600

Note

- For the clutch pedal inspection, note the following and measure each inspection location.
  - — Measure the center of the upper surface of the pedal pad for each inspection.
  - — If the distance from the pedal pad to the floor covering is measured, measure the shortest distance from the center of the upper surface of the pedal pad to the floor covering.

Pedal Inspection Preparation

1. Verify that the clutch fluid is between the MIN mark and the MAX mark.
2. Verify that there is no clutch fluid leakage. (See 05-10A-4 CLUTCH FLUID LEAKAGE INSPECTION [C66M-R, C66MX-R].)



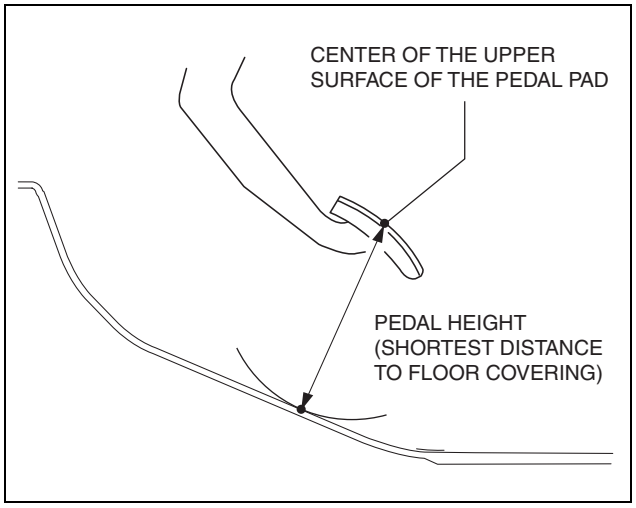
am3uuw0000824

Pedal Height Inspection

1. Perform “Pedal Inspection Preparation”. (See 05-10A-6 Pedal Inspection Preparation.)
2. Measure the pedal height with the clutch pedal released as shown in the figure.

   Pedal height (reference value)
   150 mm {5.91 in}

   - If it is not the specification, replace the clutch pedal. (See 05-10A-8 CLUTCH PEDAL REMOVAL/INSTALLATION [C66M-R, C66MX-R].)



ac5uuw00000697

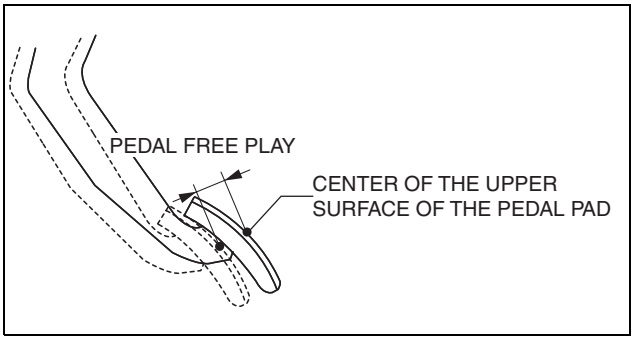
CLUTCH [C66M-R, C66MX-R]

Pedal Free Play Inspection

1. Perform “Pedal Inspection Preparation”. (See 05-10A-6 Pedal Inspection Preparation.)
2. Depress the clutch pedal by hand until clutch resistance is felt, and measure the pedal free play as shown in the figure.

   Pedal free play (reference value)
   10 mm {0.39 in} or less

   - If it exceeds the specification, replace the clutch pedal. (See 05-10A-8 CLUTCH PEDAL REMOVAL/INSTALLATION [C66M-R, C66MX-R].)



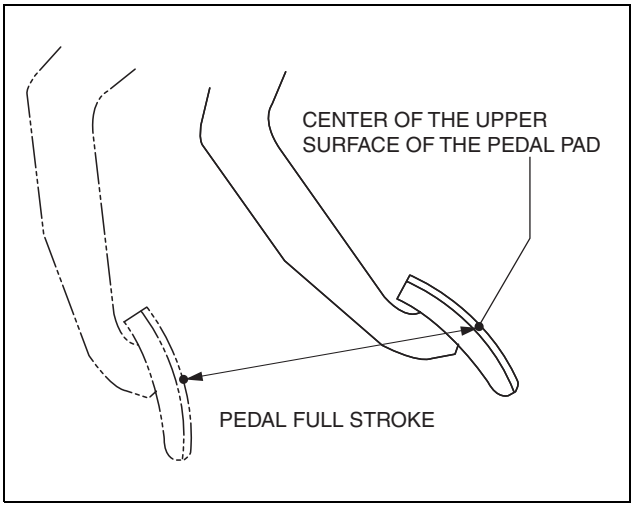
am5uuw0000369

Pedal Full Stroke Inspection

1. Perform “Pedal Inspection Preparation”. (See 05-10A-6 Pedal Inspection Preparation.)
2. Depress the clutch pedal from the released condition to the full depression position, and measure the pedal full stroke as shown in the figure.

   Pedal full stroke (reference value)
   146 mm {5.75 in}

   - If it is not the specification, replace the clutch pedal. (See 05-10A-8 CLUTCH PEDAL REMOVAL/INSTALLATION [C66M-R, C66MX-R].)



ac5uuw00000698

CLUTCH [C66M-R, C66MX-R]

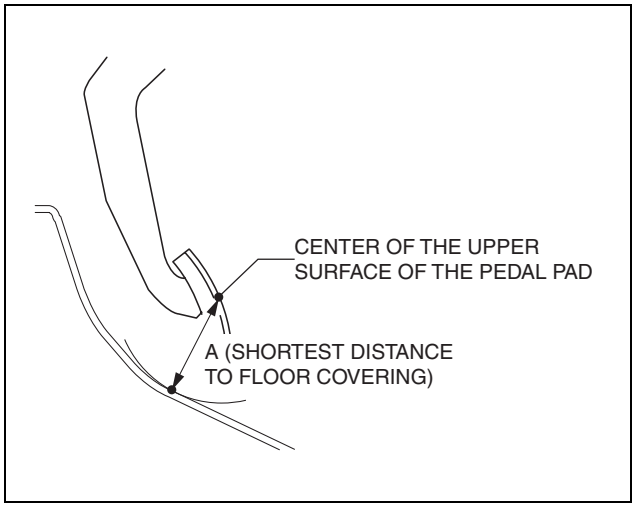
Clutch Disengagement Point Inspection

Warning
- **When performing the following procedure, make sure that the area around the vehicle is free of people or objects as the vehicle might move suddenly.**

1. Perform “Pedal Inspection Preparation”. (See 05-10A-6 Pedal Inspection Preparation.)
2. Verify that the pedal height is normal. (See 05-10A-6 Pedal Height Inspection.)
3. Verify that the pedal free play is normal. (See 05-10A-7 Pedal Free Play Inspection.)
4. Verify that the pedal full stroke is normal. (See 05-10A-7 Pedal Full Stroke Inspection.)
5. Apply the parking brake and fix the front and rear wheels with wheel chocks.
6. Start the engine.
7. With the clutch pedal depressed, move the shift lever to the position just before engaging the reverse gear. (Do not shift completely to reverse position)
8. Gradually release the clutch pedal and then hold it at the point where the sound of gear-grinding begins (clutch disengagement point).
9. Measure distance A as shown in the figure when the clutch pedal is at the clutch disengagement point.

   Distance A (reference value)
   82 mm {3.2 in} or more

   - If it is less than the specification, bleed the air from the clutch system. (See 05-10A-5 CLUTCH FLUID REPLACEMENT/AIR BLEEDING [C66M-R, C66MX-R].)



ac5uuw00000699

CLUTCH PEDAL REMOVAL/INSTALLATION [C66M-R, C66MX-R]

id0510mc156700

Caution
- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**
- **Do not allow clutch fluid to get on a painted surface. Clutch fluid contains properties which can dissolve the paint. If clutch fluid gets on a painted surface, wash it off with water immediately and wipe the area off completely.**

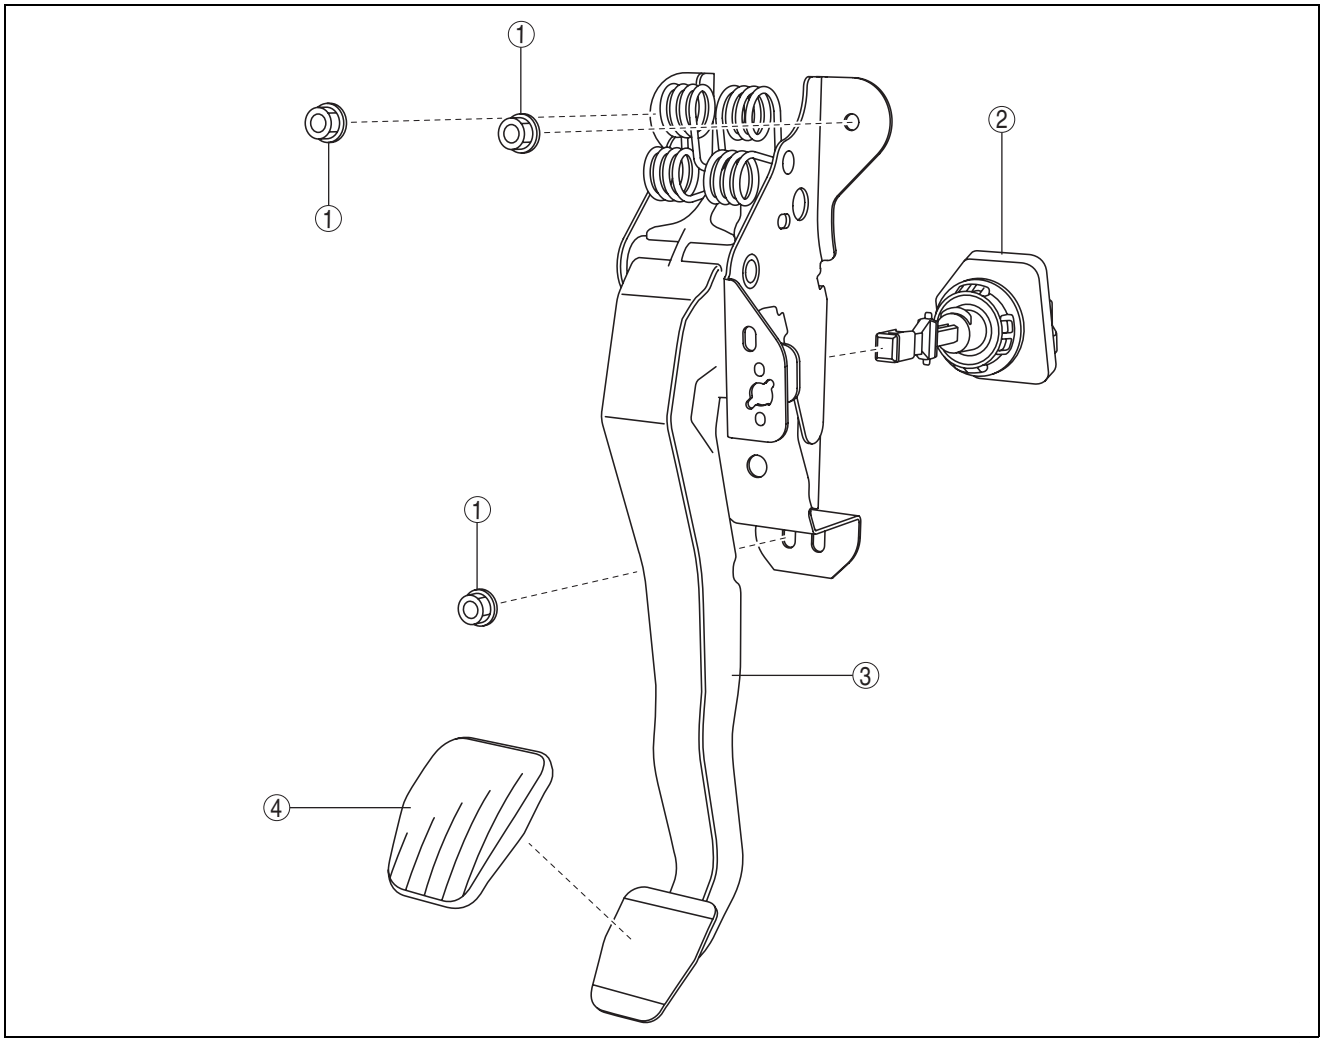
Removal

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the air cleaner component. (ex: air cleaner, air hose) (L.H.D.) (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the battery component. (ex: battery, battery tray and PCM component) (L.H.D.) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Remove the bracket from the steering shaft. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
5. Remove the clutch pedal position switch. (See 05-10A-13 CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
6. Remove the starter interlock switch. (See 05-10A-14 STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
7. Remove the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
8. Disconnect the steering shaft from steering gear. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
9. Remove the insulator. (R.H.D.) (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

CLUTCH [C66M-R, C66MX-R]

10. Disconnect the clutch pipe and hose No.1 from clutch master cylinder, and plug it to avoid clutch fluid leakage. (See 05-10A-21 CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
11. Disconnect the clutch reserve hose from clutch master cylinder, and plug it to avoid clutch fluid leakage. (See 05-10A-21 CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
12. Remove in the order indicated in the table.

R.H.D.



ac5wzw0000129

1	Nut
2	Clutch master cylinder (See 05-10A-17 CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION [C66M-R, C66MX-R].)

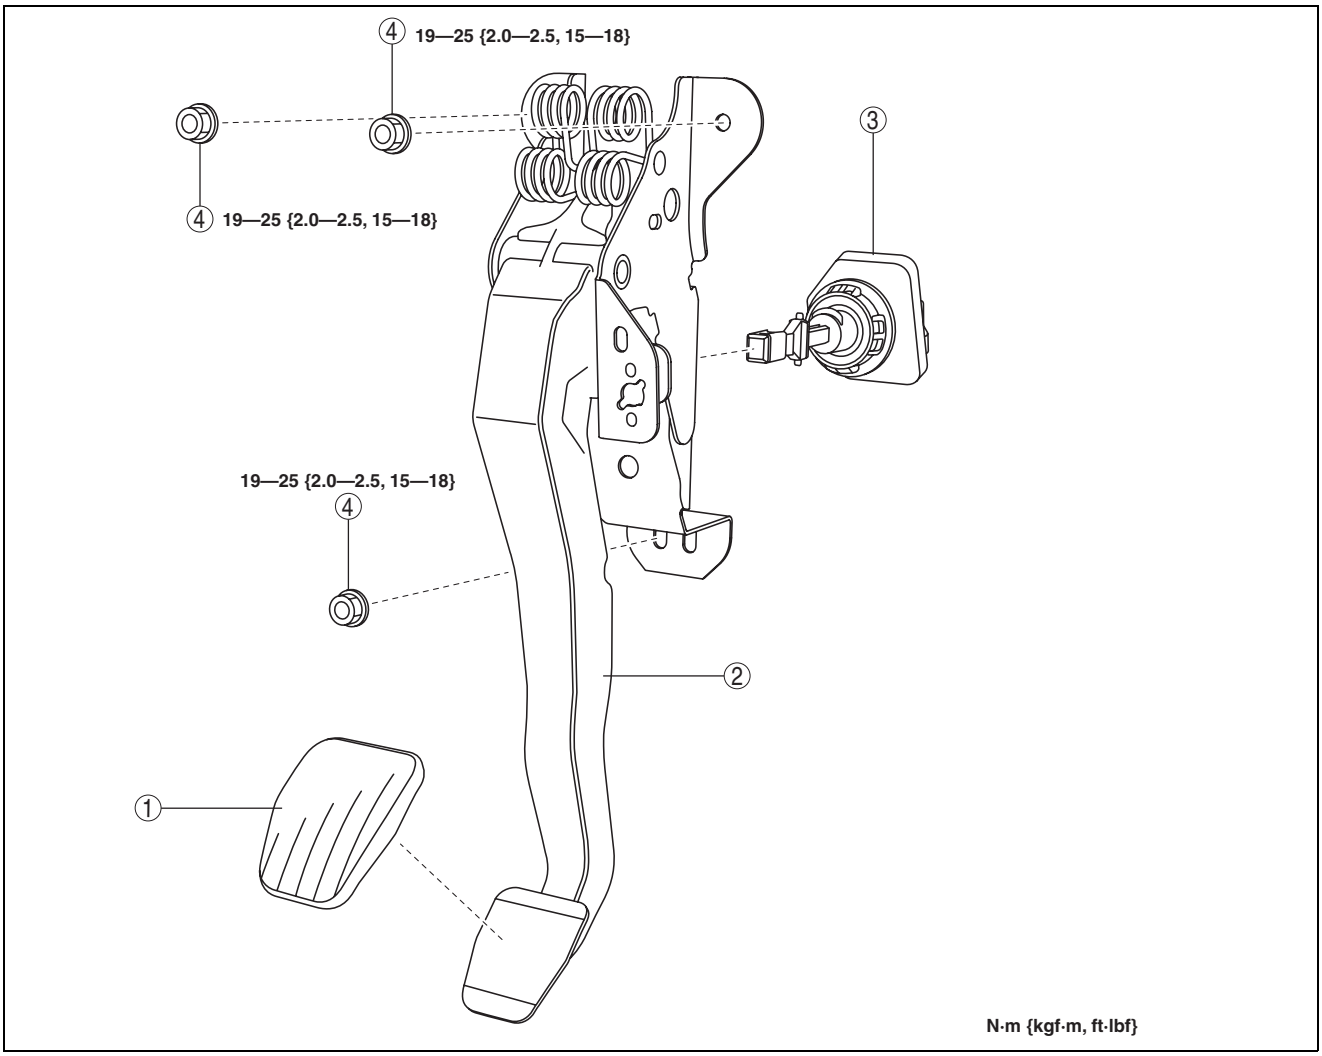
3	Clutch pedal
4	Pedal pad

CLUTCH [C66M-R, C66MX-R]

Installation

1. Install in the order indicated in the table.

R.H.D.



ac5wzw0000129

1	Pedal pad
2	Clutch pedal

3	Clutch master cylinder (See 05-10A-17 CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
4	Nut

2. Connect the clutch reserve hose to clutch master cylinder. (See 05-10A-21 CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
3. Connect the clutch pipe and hose No.1 to clutch master cylinder. (See 05-10A-21 CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
4. Connect the steering shaft. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
5. Install the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
6. Bleed the air from the clutch system. (See 05-10A-5 CLUTCH FLUID REPLACEMENT/AIR BLEEDING [C66M-R, C66MX-R].)
7. Inspect the clutch pedal. (See 05-10A-6 CLUTCH PEDAL INSPECTION [C66M-R, C66MX-R].)
8. Install a new starter interlock switch. (See 05-10A-14 STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
9. Install a new clutch pedal position switch. (See 05-10A-13 CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
10. Install the insulator. (R.H.D.) (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
11. Install the bracket to the steering shaft. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
12. Install the battery component. (ex: battery, battery tray and PCM component) (L.H.D.) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)

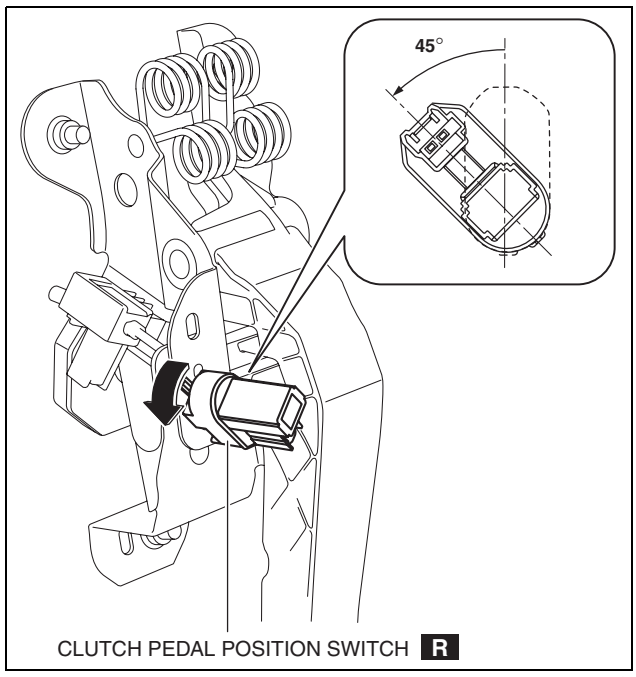
CLUTCH [C66M-R, C66MX-R]

13. Install the air cleaner component. (ex: air cleaner, air hose) (L.H.D.) (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
14. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
15. Fully depress the clutch pedal, and verify that the engine starts.

CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R]

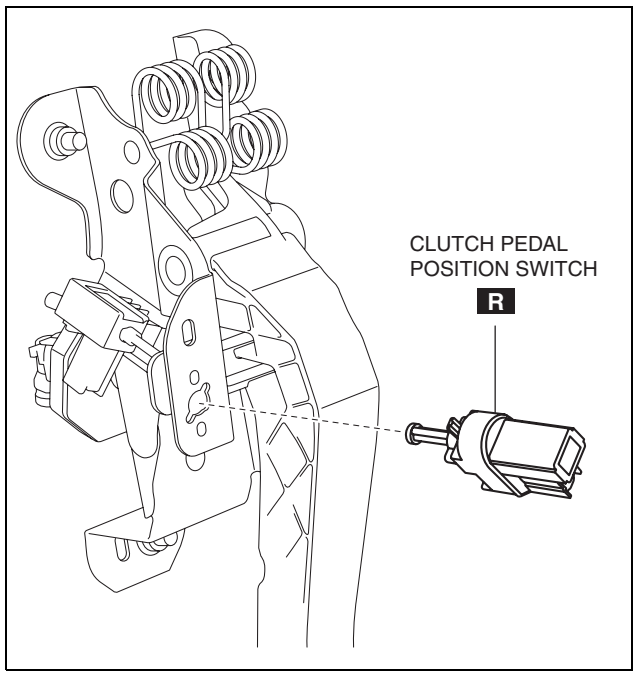
id0510mc160000

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Disconnect the clutch pedal position switch connector.
3. Rotate the clutch pedal position switch 45° counterclockwise.



ac5wzw0000319

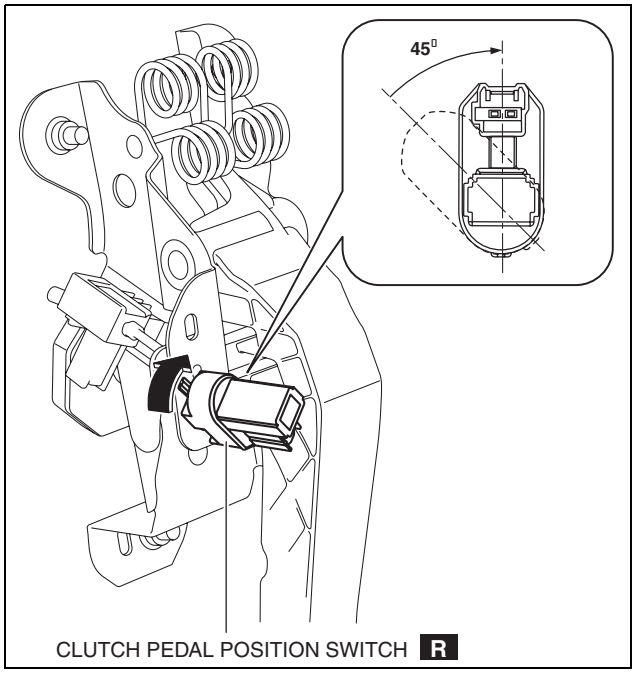
4. Remove the clutch pedal position switch from the clutch pedal.
5. Insert a new clutch pedal position switch into the clutch pedal hole until the switch stops.



ac5uuw00000723

CLUTCH [C66M-R, C66MX-R]

6. Rotate the clutch pedal position switch 45° clockwise.
7. Verify that the clutch pedal position switch is locked securely.
8. Install in the reverse order of removal.

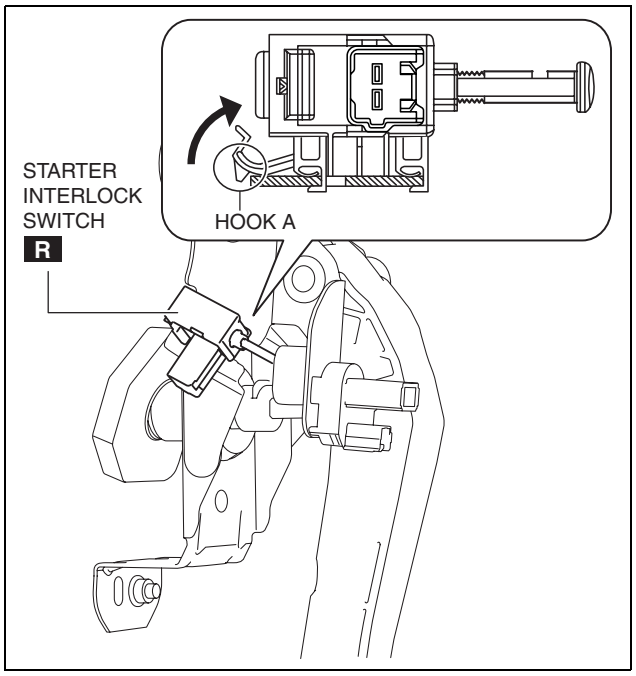


ac5wzw0000319

STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R]

id0510mc160100

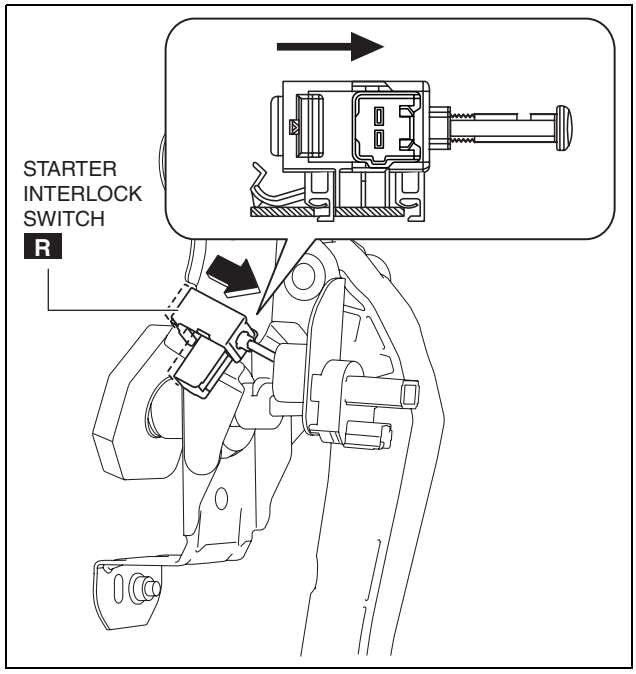
1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Disconnect the starter interlock switch connector.
3. Remove the starter interlock switch using the following procedure:
   (1) Detach hook A in the direction of the arrow shown in the figure.



ac5uuw00000725

CLUTCH [C66M-R, C66MX-R]

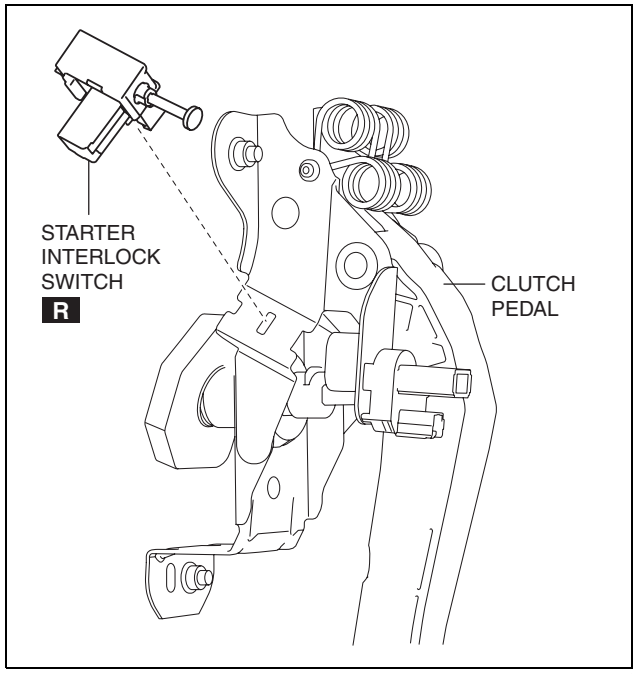
(2) Slide the starter interlock switch in the direction of the arrow shown in the figure.



ac5uuw00000726

(3) Remove the starter interlock switch from the clutch pedal.

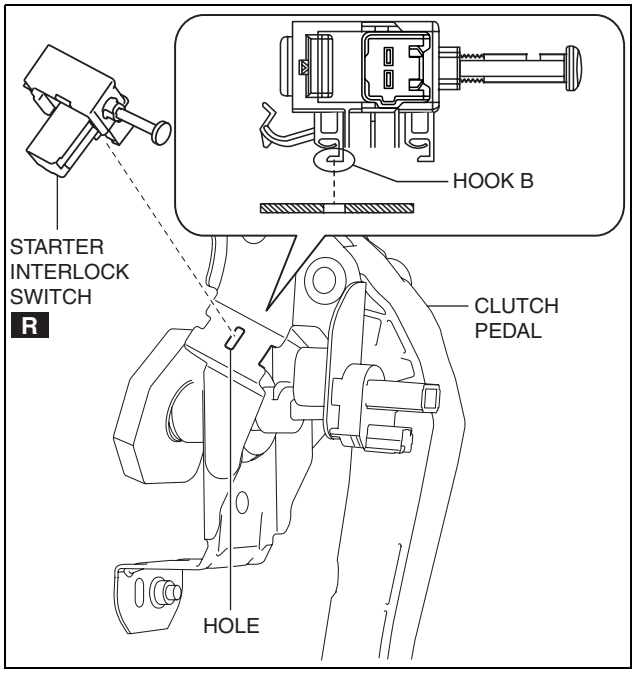
4. Install the starter interlock switch using the following procedure:



ac5wzw0000331

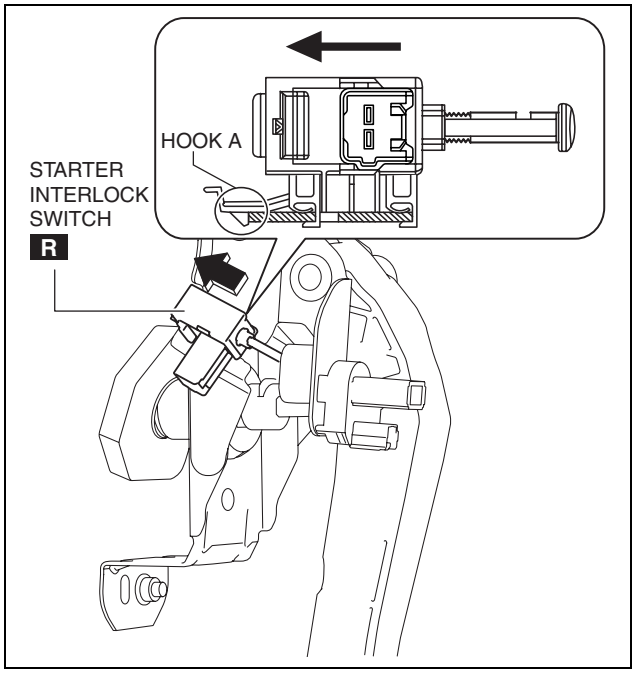
CLUTCH [C66M-R, C66MX-R]

(1) Insert hook B of a new starter interlock switch into the clutch pedal hole.



ac5uuw00000728

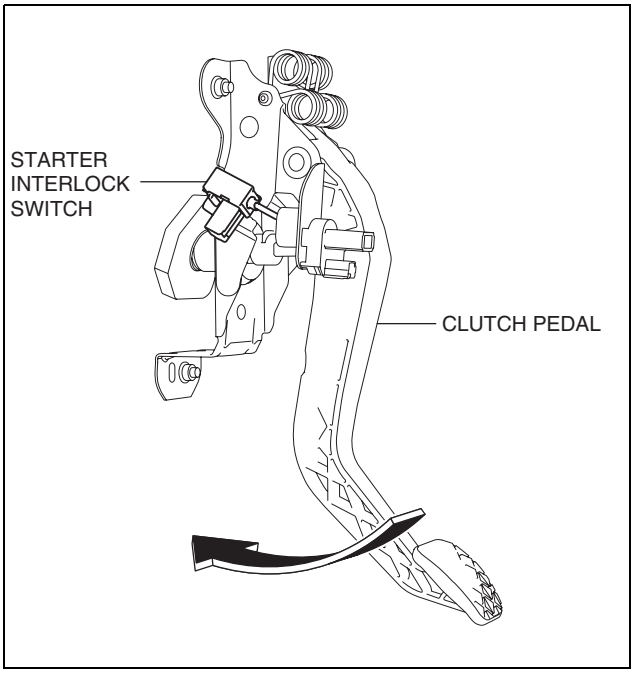
(2) While pressing the starter interlock switch against the clutch pedal, slide the starter interlock switch until hook A is locked in the direction of the arrow shown in the figure.



ac5uuw00000729

CLUTCH [C66M-R, C66MX-R]

5. Fully depress the clutch pedal in the direction of arrow, and verify that a click sound from the starter interlock switch is heard.
6. Install in the reverse order of removal.
7. Fully depress the clutch pedal, and verify that the engine starts.



ac5uuw00000730

CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION [C66M-R, C66MX-R]

id0510mc156800

05

Caution

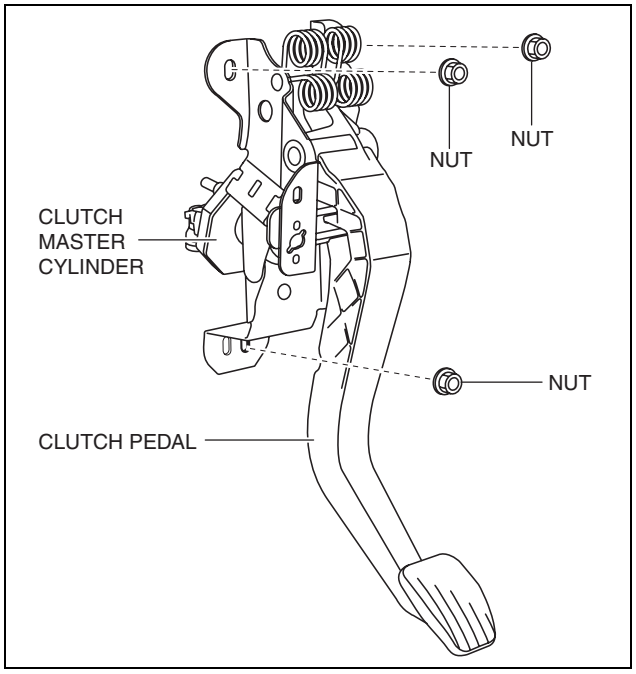
- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**
- **Do not allow clutch fluid to get on a painted surface. Clutch fluid contains properties which can dissolve the paint. If clutch fluid gets on a painted surface, wash it off with water immediately and wipe the area off completely.**

Removal

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the air cleaner component. (ex: air cleaner, air hose) (L.H.D.) (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the battery component. (ex: battery, battery tray and PCM component) (L.H.D.) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Remove the bracket from the steering shaft. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
5. Remove the clutch pedal position switch. (See 05-10A-13 CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
6. Remove the starter interlock switch. (See 05-10A-14 STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
7. Remove the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
8. Disconnect the steering shaft from steering gear. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
9. Remove the insulator. (R.H.D.) (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
10. Disconnect the clutch pipe and hose No.1 from clutch master cylinder, and plug it to avoid clutch fluid leakage. (See 05-10A-21 CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
11. Disconnect the clutch reserve hose from clutch master cylinder, and plug it to avoid clutch fluid leakage. (See 05-10A-21 CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R, C66MX-R].)

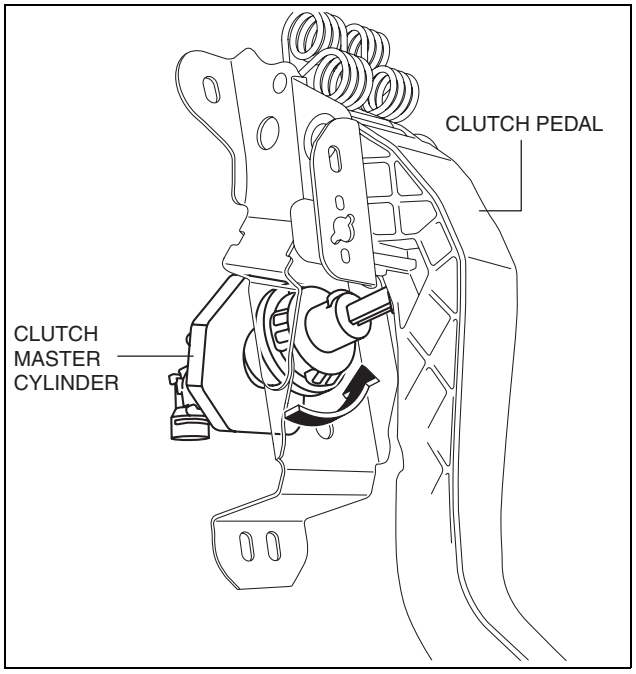
CLUTCH [C66M-R, C66MX-R]

12. Remove the clutch master cylinder using the following procedure:
    (1) Remove the clutch pedal and the clutch master cylinder as a single unit.



ac5uuw00000703

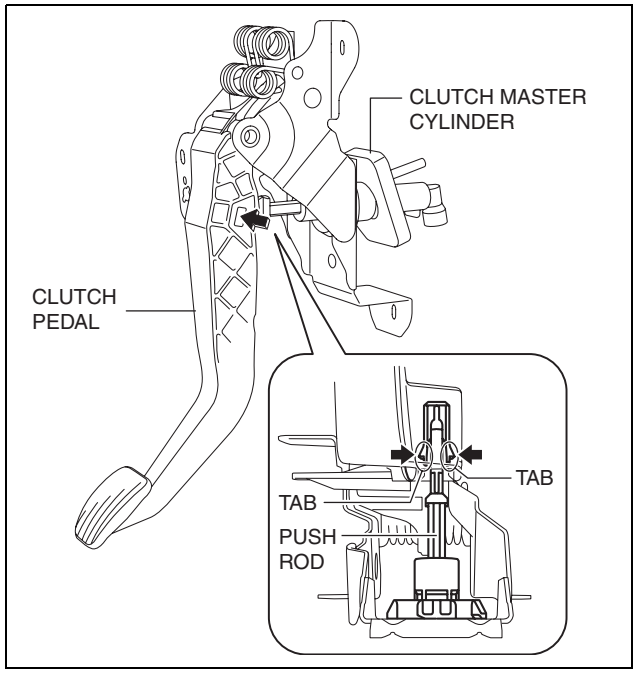
    (2) Rotate the clutch master cylinder in the direction of the arrow shown in the figure to disconnect the clutch master cylinder (body) and clutch pedal.



ac5uuw00000704

CLUTCH [C66M-R, C66MX-R]

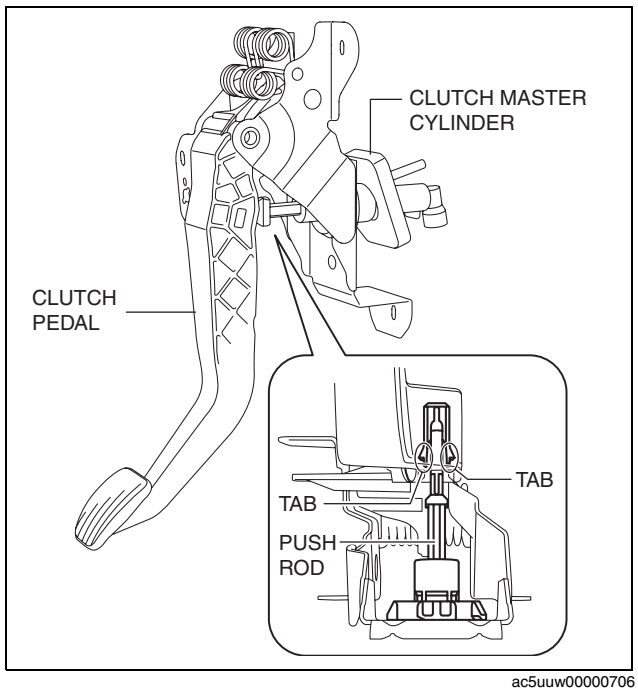
(3) Disengage the tabs of the push rod and remove the master cylinder.



ac5uuw00000705

Installation

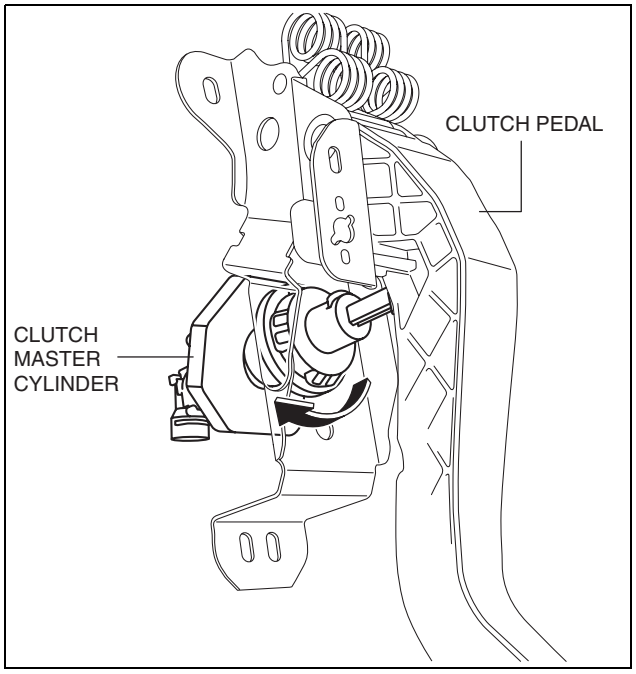
1. Install the clutch master cylinder using the following procedure:
   (1) Engage the tabs of the push rod with the clutch pedal as shown in the figure.



ac5uuw00000706

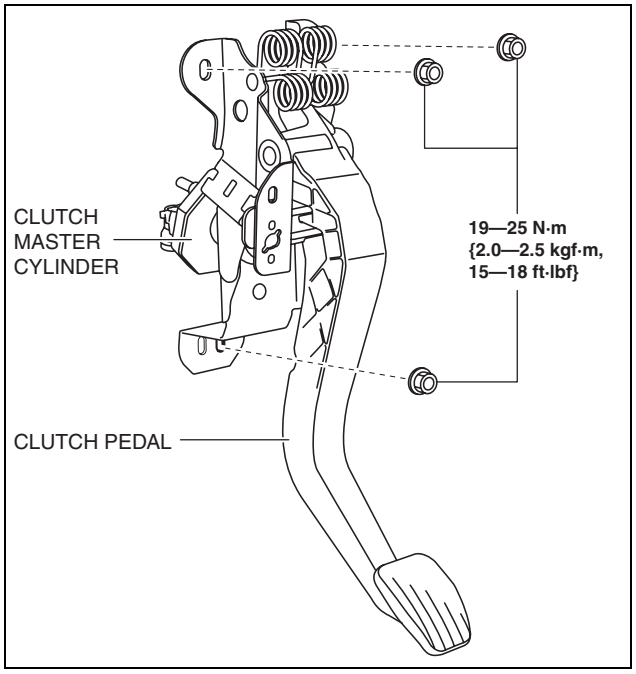
CLUTCH [C66M-R, C66MX-R]

(2) Rotate the clutch master cylinder in the direction shown until it stops.



ac5uuw00000707

(3) Install the clutch pedal and the clutch master cylinder as a single unit.



ac5wzw0000462

2. Connect the clutch reserve hose to clutch master cylinder. (See 05-10A-21 CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
3. Connect the clutch pipe and hose No.1 to clutch master cylinder. (See 05-10A-21 CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
4. Connect the steering shaft. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
5. Install the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
6. Bleed the air from the clutch system. (See 05-10A-5 CLUTCH FLUID REPLACEMENT/AIR BLEEDING [C66M-R, C66MX-R].)
7. Inspect the clutch pedal. (See 05-10A-6 CLUTCH PEDAL INSPECTION [C66M-R, C66MX-R].)
8. Install a new starter interlock switch. (See 05-10A-14 STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
9. Install a new clutch pedal position switch. (See 05-10A-13 CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
10. Install the insulator. (R.H.D.) (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
11. Install the bracket to the steering shaft (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
12. Install the battery component. (ex: battery, battery tray and PCM component) (L.H.D.) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
13. Install the air cleaner component. (ex: air cleaner, air hose) (L.H.D.) (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
14. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
15. Fully depress the clutch pedal, and verify that the engine starts.

CLUTCH [C66M-R, C66MX-R]

CLUTCH STROKE SENSOR REMOVAL/INSTALLATION [C66M-R, C66MX-R]

id0510mc156900

Note
- The clutch stroke sensor is equipped only on vehicles with i-stop.
- The clutch stroke sensor is built into the clutch master cylinder.

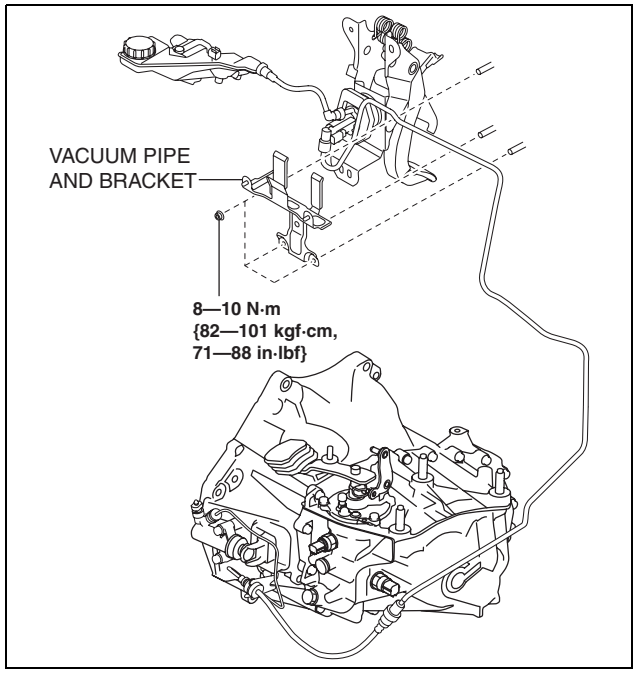
1. Replace the clutch master cylinder. (See 05-10A-17 CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION [C66M-R, C66MX-R].)

CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R, C66MX-R]

id0510mc157000

Caution
- **Do not allow clutch fluid to get on a painted surface. Clutch fluid contains properties which can dissolve the paint. If clutch fluid gets on a painted surface, wash it off with water immediately and wipe the area off completely.**

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the air cleaner component. (ex: air cleaner, air hose) (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the battery component. (ex: battery, battery tray and PCM component) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
4. Remove the insulator. (R.H.D.) (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
5. Disconnect the vacuum pipe and bracket. (R.H.D.)

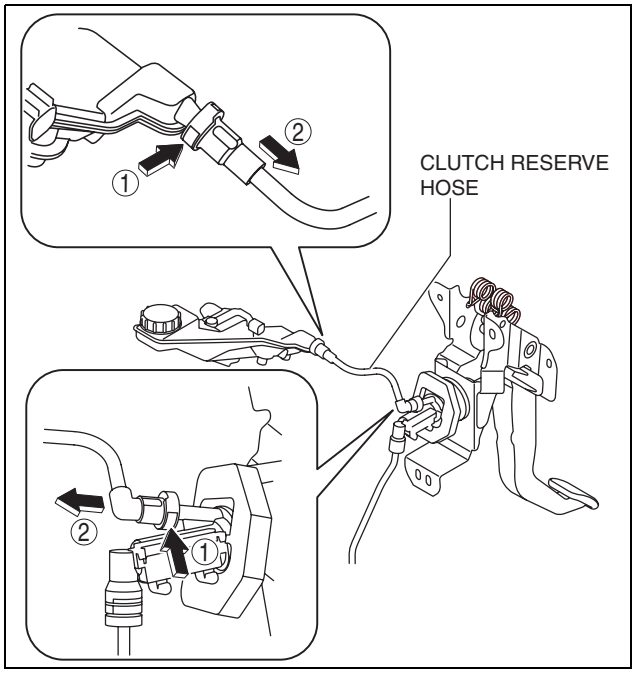


ac5wzw0000282

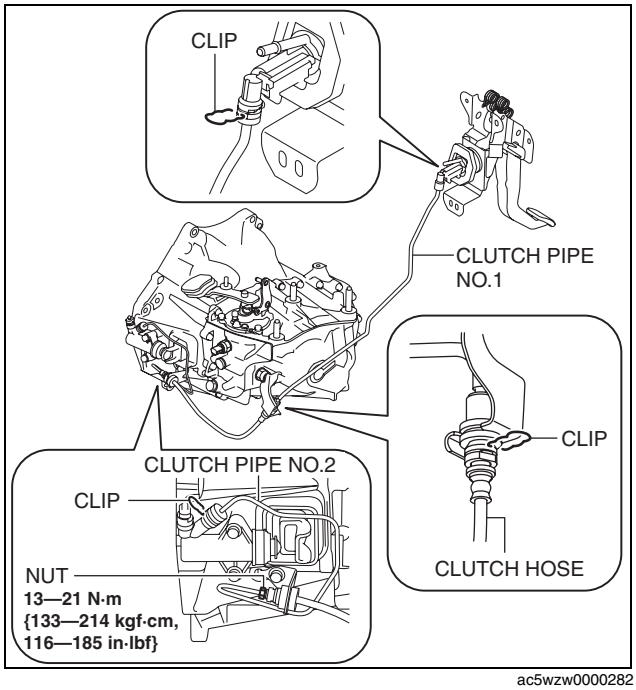
CLUTCH [C66M-R, C66MX-R]

6. Remove the clutch reserve hose while pressing the point indicated by the arrow in the figure.
7. Remove the clutch pipe and hose using the following procedure:

L.H.D.



ac5uuw00000709

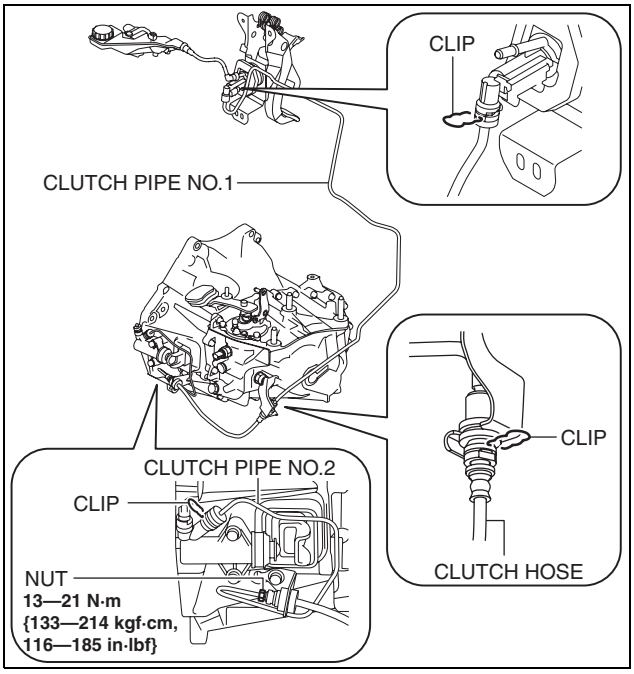


ac5wzw0000282

CLUTCH [C66M-R, C66MX-R]

R.H.D.

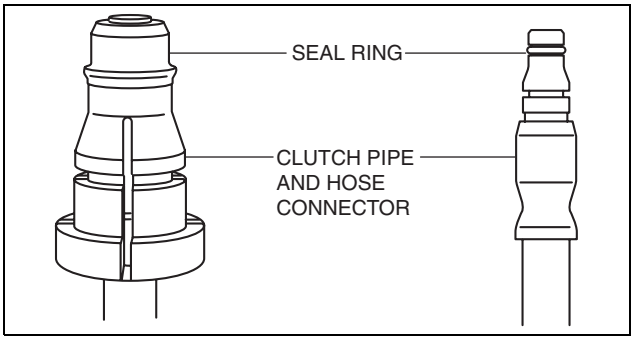
(1) Lift the connector clip.
(2) Pull out the clutch pipe and hose connector straight to detach it.
(3) Remove the clutch pipe and hose.



ac5wzw0000245

8. Verify that the seal ring is installed to the clutch pipe and hose connector.

Caution
- **When removing the clutch pipe and hose, the seal ring for the clutch pipe and hose could remain on the receiving area of the connector. If the clutch pipe and hose is assembled under this condition, it could cause clutch fluid leakage from the connector.**



am5ezw0000544

9. Install the clutch pipe and hose.
(1) Press in the connector clip.
(2) Insert the clutch pipe and hose connector straight.

Note
- When the connector is engaged, a click sound is heard.

(3) Install the clutch pipe and hose.
10. Insert the clutch reserve hose connector straight.

Note
- When the connector is engaged, a click sound is heard.

11. Pull each engagement of the clutch reserve hose and clutch pipe and hose, verify that they are engaged, and then press all of them again.
12. Install in the reverse order of removal.
13. Bleed the air from the clutch system. (See 05-10A-5 CLUTCH FLUID REPLACEMENT/AIR BLEEDING [C66M-R, C66MX-R].)

CLUTCH [C66M-R, C66MX-R]

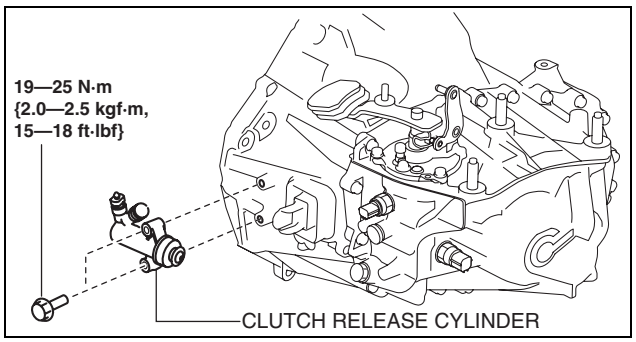
CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [C66M-R, C66MX-R]

id0510mc157100

Caution

- **Do not allow clutch fluid to get on a painted surface. Clutch fluid contains properties which can dissolve the paint. If clutch fluid gets on a painted surface, wash it off with water immediately and wipe the area off completely.**

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Disconnect the clutch pipe and hose No.2 from clutch release cylinder, and plug it to avoid clutch fluid leakage. (See 05-10A-21 CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
3. Remove the clutch release cylinder.
4. Install in the reverse order of removal.
5. Bleed the air from the clutch system. (See 05-10A-5 CLUTCH FLUID REPLACEMENT/AIR BLEEDING [C66M-R, C66MX-R].)



ac5wzw0000282

CLUTCH [C66M-R, C66MX-R]

CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R, C66MX-R]

id0510mc157200

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the MTX. (See 05-15A-4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [C66M-R].) (See 05-15A-18 MANUAL TRANSAXLE REMOVAL/INSTALLATION [C66MX-R].)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.
5. Add the specified amount of specified transaxle oil. (See MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R].)

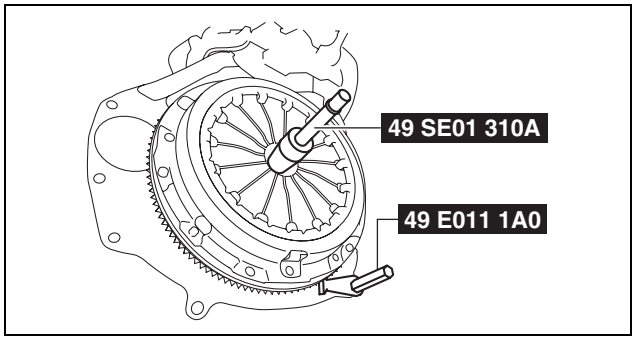
3	Clutch release collar
4	Pivot pin

CLUTCH [C66M-R, C66MX-R]

5	Clutch cover (See 05-10A-26 Clutch Cover and Disc Removal Note.) (See 05-10A-27 Clutch Disc and Cover Installation Note.)
6	Clutch disc (See 05-10A-26 Clutch Cover and Disc Removal Note.) (See 05-10A-27 Clutch Disc and Cover Installation Note.)
7	Pilot bearing (See 05-10A-26 Pilot Bearing Removal Note.) (See 05-10A-27 Pilot Bearing Installation Note.)
8	Plate
9	Flywheel (See 05-10A-26 Flywheel Removal Note.) (See 05-10A-27 Flywheel Installation Note.)

Clutch Cover and Disc Removal Note

1. Hold the clutch unit using the **SST**.
2. Loosen each bolt one turn at a time in a crisscross pattern until spring tension is released.
3. Remove the clutch cover and disc.

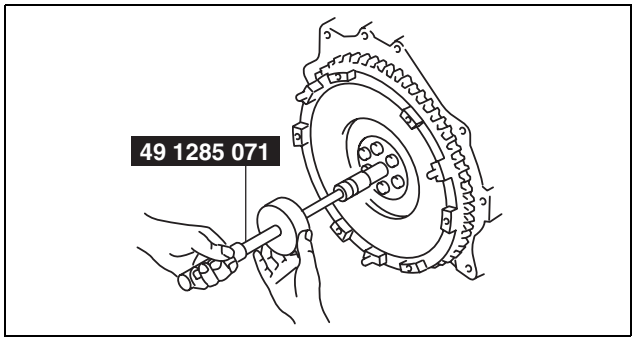


am3uuw0000826

Pilot Bearing Removal Note

Note
- The pilot bearing does not need to be removed unless you are replacing it.

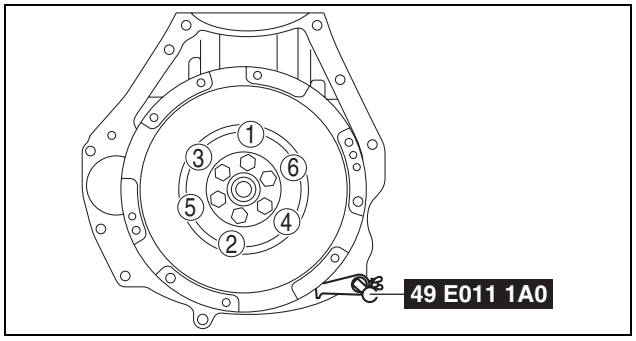
1. Use the **SST** to remove the pilot bearing.



am3uuw0000208

Flywheel Removal Note

1. Hold the flywheel using the **SST**.
2. Remove the lock bolts, and remove the plate and the flywheel.
3. Inspect for oil leakage from the crankshaft rear oil seal.
   - If there is any malfunction, replace the crankshaft rear oil seal. (See 01-10A-89 REAR OIL SEAL REPLACEMENT [SKYACTIV-G 2.0].)



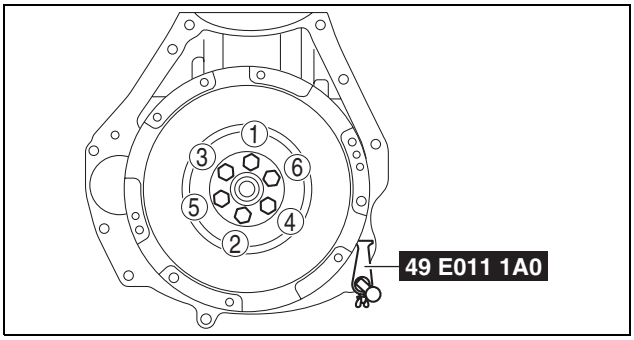
am3uuw0000826

CLUTCH [C66M-R, C66MX-R]

Flywheel Installation Note

1. Clean the crankshaft thread holes.
2. Install the flywheel and the plate to the crankshaft, and temporarily tighten a new lock bolts.
3. Hold the flywheel using the **SST**.
4. Tighten the lock bolts completely in the order shown in the figure in the following 3 steps.

Tightening torque
Step 1: 46—54 N·m {4.7—5.5 kgf·m, 34—39 ft·lbf}
Step 2: 76—84 N·m {7.8—8.5 kgf·m, 57—61 ft·lbf}
Step 3: 108—116 N·m {11.1—11.8 kgf·m, 80—85 ft·lbf}

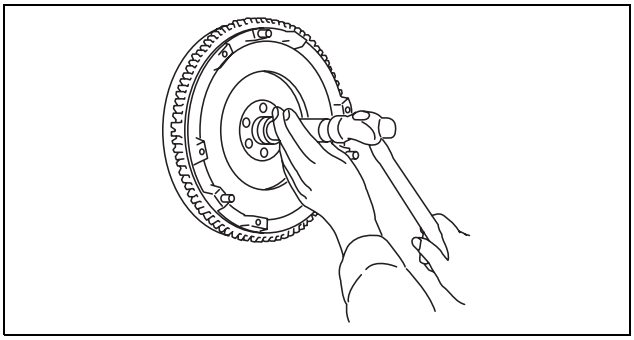


am3uuw0000826

Pilot Bearing Installation Note

1. Install new pilot bearing to the specified position using the following tools.

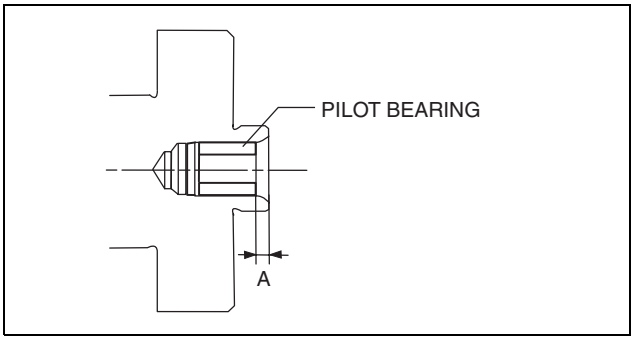
Tool
Snap-on brand millimeter size bushing driver set (A160M) adapter A160M7 (20—22 mm)
- **Use the adapter with the 20 mm side of the A160M7 (20—22 mm) facing the pilot bearing side.**



am3uuw0000208

Substitution tool
Outer diameter: 21 mm {0.83 in}
Inner diameter: 19 mm {0.75 in}

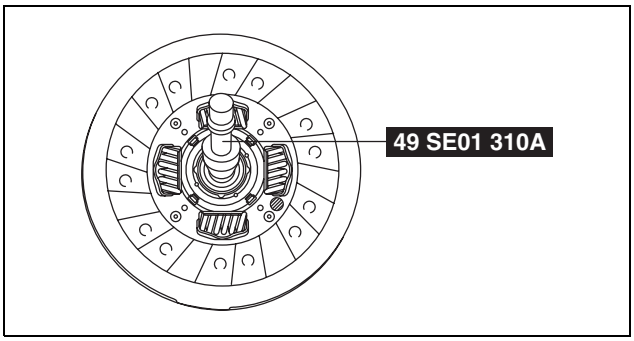
Standard position
Distance A of pilot bearing from crankshaft end: 1.5—2.5 mm {0.060—0.098 in}



am3uuw0000826

Clutch Disc and Cover Installation Note

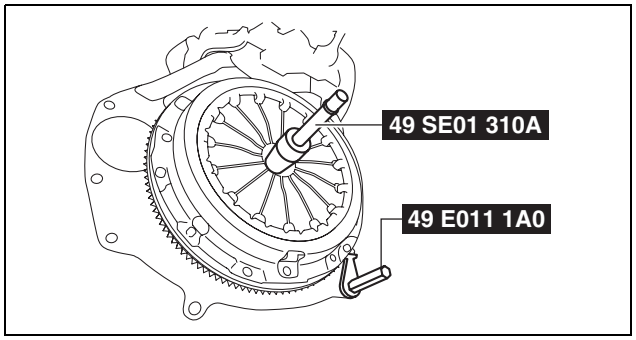
1. Hold the clutch disc position using the **SST**.



am3uuw0000208

CLUTCH [C66M-R, C66MX-R]

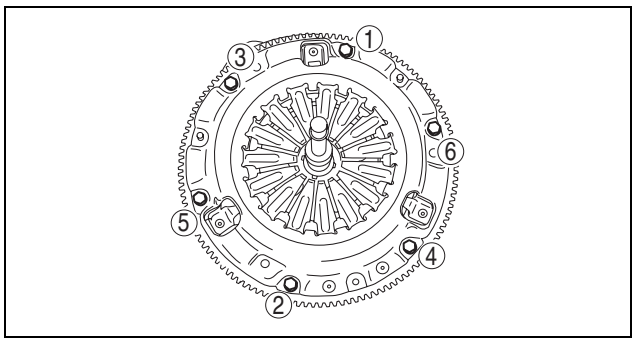
2. Hold the clutch unit using the **SST**.
3. Tighten the bolts in Min. 2 stages.



am3uuw0000826

(1) Temporarily tighten the bolts in the order shown in the figure.
(2) Tighten the bolts completely in the order shown in the figure and install the clutch disc and cover.

Tightening torque
25—33 N·m {2.6—3.3 kgf·m, 19—24 ft·lbf}



am3uuw0000826

4. Remove the **SST**s.

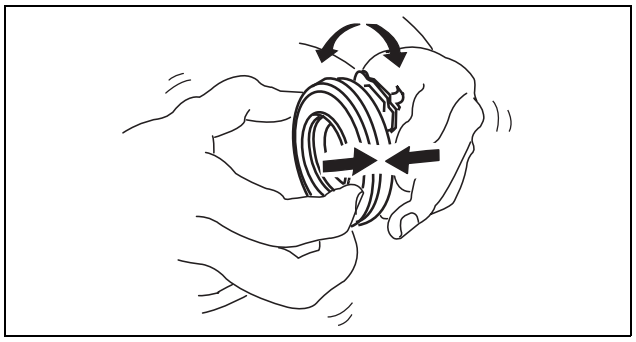
CLUTCH RELEASE COLLAR INSPECTION [C66M-R, C66MX-R]

id0510mc157300

Caution
- **Do not clean the clutch release collar with cleaning fluids or a steam cleaner because it is filled with grease.**

Operation Inspection

1. Turn the collar while applying force in the axial direction, and inspect for sticking, excessive resistance, and an abnormal noise.
   - If there is any malfunction, replace the clutch release collar. (See 05-10A-25 CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R, C66MX-R].)



am3uuw0000209

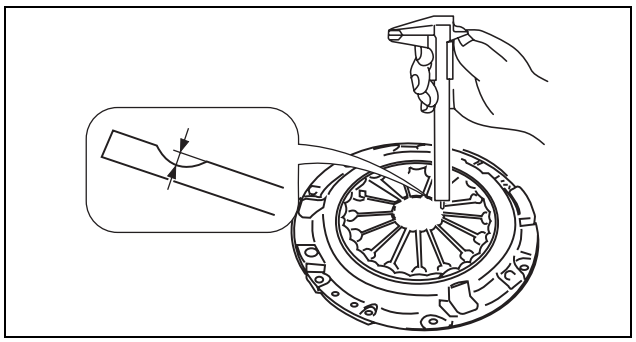
CLUTCH COVER INSPECTION [C66M-R, C66MX-R]

id0510mc157400

1. Remove the clutch cover. (See 05-10A-25 CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
2. Perform the following procedures to inspect the clutch cover.
   - If it exceeds the maximum specification, replace the clutch cover. (See 05-10A-25 CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R, C66MX-R].)

(1) Measure the wear of the diaphragm spring fingers.

Clutch cover diaphragm spring fingers maximum depth
0.6 mm {0.02 in}

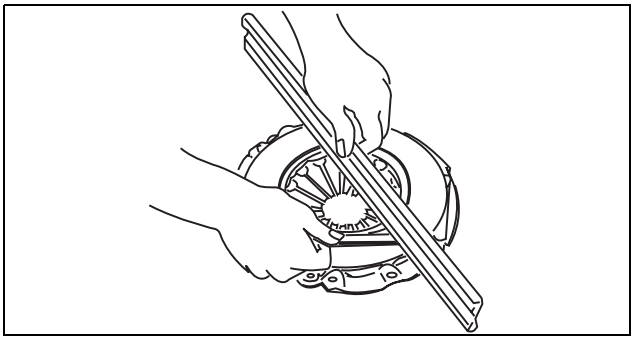


am5uuw0000364

CLUTCH [C66M-R, C66MX-R]

(2) Measure the flatness of the pressure plate with a straight edge and a feeler gauge.

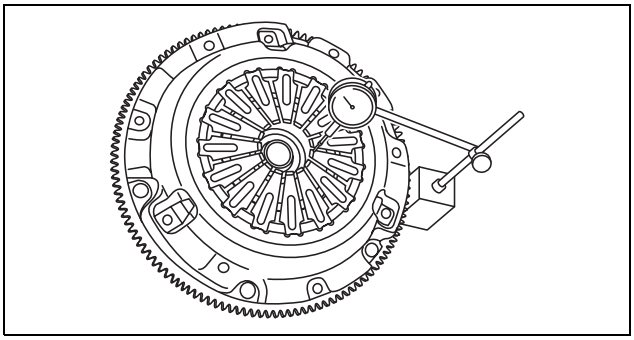
Maximum clearance of flatness of the pressure plate
0.3 mm {0.01 in}



am3uuw0000209

(3) Inspect the diaphragm spring fingers for the degree of uniformity in their height.
1) Install the clutch cover. (See 05-10A-25 CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
2) When checking the diaphragm spring fingers, mount a dial gauge on the cylinder block.
3) Rotate the flywheel and check for misaligned diaphragm spring fingers.

Clutch cover diaphragm spring fingers maximum height difference
1.0 mm {0.039 in}



am3uuw0000209

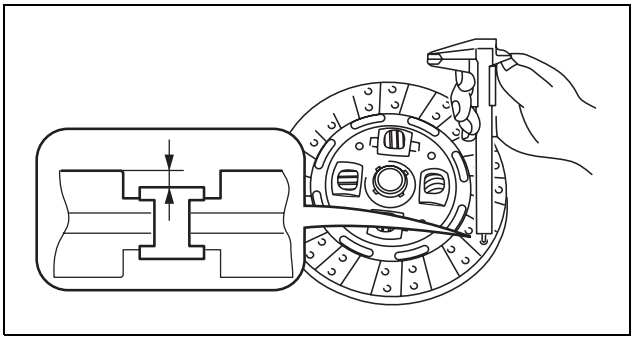
CLUTCH DISC INSPECTION [C66M-R, C66MX-R]

id0510mc157500

1. Inspect the lining surface for discoloration and grease adhesion.
2. Inspect the torsion spring for weakness and the rivets for looseness.
3. Using a vernier caliper, measure the depth between the lining surface and the rivet head.

Minimum clutch disc thickness
0.3 mm {0.01 in}

- If it is less than the minimum specification, replace the clutch disc. (See 05-10A-25 CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R, C66MX-R].)

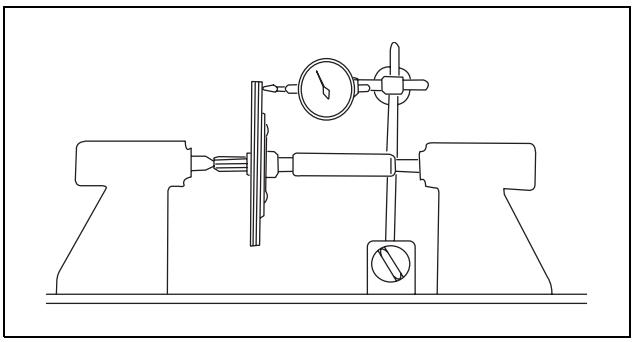


am5uuw0000364

4. Measure the clutch disc runout using a dial gauge.

Maximum clutch disc runout
0.7 mm {0.03 in}

- If it exceeds the maximum specification, replace the clutch disc. (See 05-10A-25 CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R, C66MX-R].)



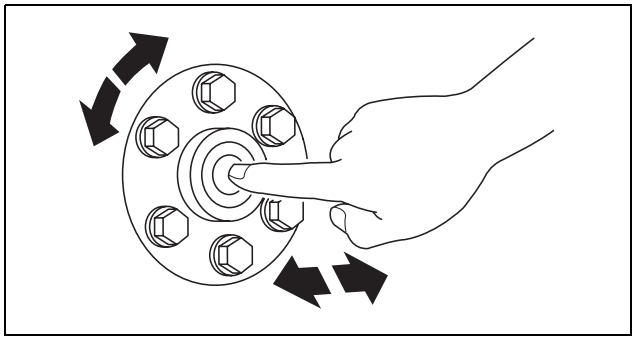
am3uuw0000209

CLUTCH [C66M-R, C66MX-R]

PILOT BEARING INSPECTION [C66M-R, C66MX-R]

id0510mc157600

1. Without removing the pilot bearing, turn the bearing while applying force in the axial direction.
   - If there is any malfunction, replace the pilot bearing. (See 05-10A-25 CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R, C66MX-R].)



am3uuw0000207

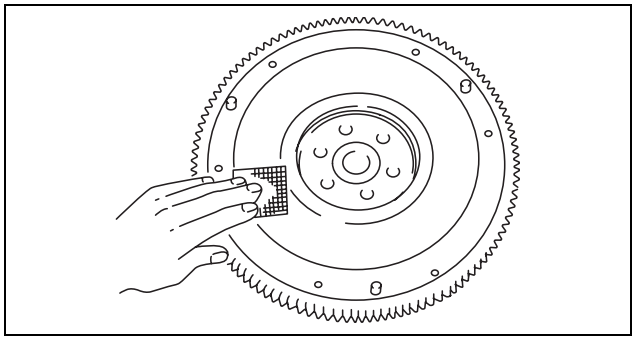
FLYWHEEL INSPECTION [C66M-R, C66MX-R]

id0510mc157700

1. Remove the flywheel. (See 05-10A-25 CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
2. Perform the following procedures to inspect the flywheel.
   - If there is any malfunction or it exceeds the maximum specification, replace the flywheel. (See 05-10A-25 CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R, C66MX-R].)

   (1) Inspect the surface that contacts the clutch disc for scratches, nicks, and discoloration.
      - Correct slight scratches and discoloration using sandpaper.

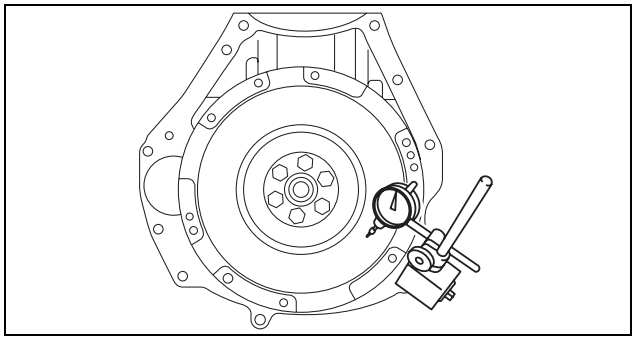
   (2) Inspect the ring gear teeth for damage and wear.



am3uuw0000207

   (3) Inspect the runout of the surface that contacts the clutch disc.
      1) Install the flywheel. (See 05-10A-25 CLUTCH UNIT REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
      2) Measure the runout of the surface that contacts the clutch disc using a dial gauge.

Flywheel maximum runout
0.1 mm {0.004 in}



am3uuw0000826

CLUTCH FLUID INSPECTION [D66M-R, D66MX-R]

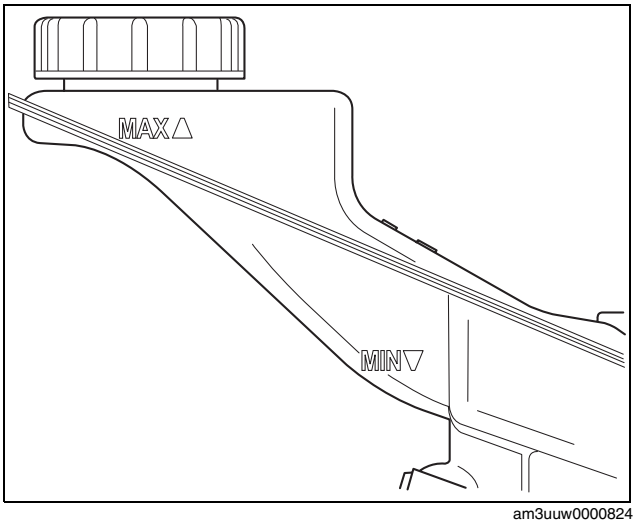
id0510mf156400

05

Note
- A common reserve tank is used for the clutch system and brake system.

1. Verify that the clutch fluid is between the MIN mark and the MAX mark.
   - If fluid level is lower than MIN mark, perform the following procedure:
     1. Verify that there is no fluid leakage. (See 05-10B-4 CLUTCH FLUID LEAKAGE INSPECTION [D66M-R, D66MX-R].)
     2. Add fluid to the level between MIN mark and the MAX mark.

Clutch fluid
SAE J1703 or FMVSS116 DOT-3 or DOT-4



am3uuw0000824

CLUTCH [D66M-R, D66MX-R]

CLUTCH FLUID LEAKAGE INSPECTION [D66M-R, D66MX-R]

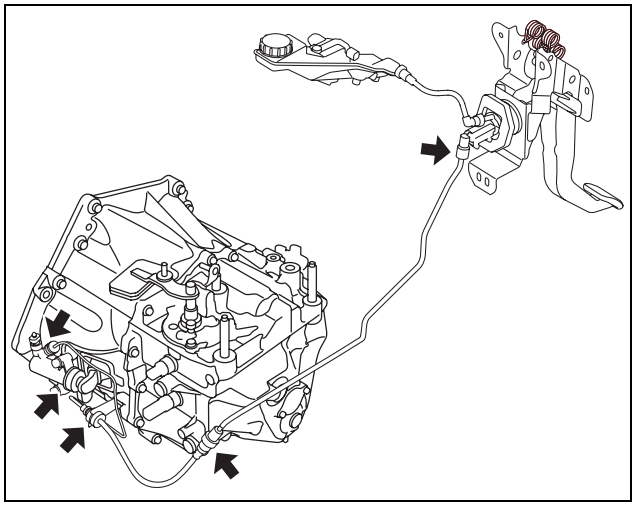
id0510mf158400

Caution

- **Do not allow clutch fluid to get on a painted surface. Clutch fluid contains properties which can dissolve the paint. If clutch fluid gets on a painted surface, wash it off with water immediately and wipe the area off completely.**

1. Verify reserve tank cap is on tight.
2. Pump the clutch pedal a few times.
3. Inspect for the clutch fluid leakage at the points indicated in the figure.

L.H.D.



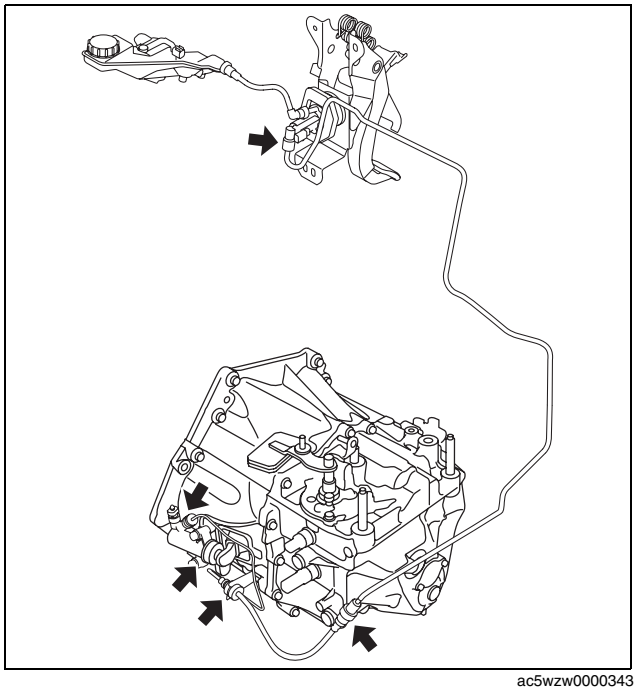
ac5wzw0000342

R.H.D.

Note

- If there is clutch fluid leakage from the piston in the clutch release cylinder, there is clutch fluid in the boot of clutch release cylinder.

- If there is clutch fluid leakage, repair or replace the malfunctioning location.



ac5wzw0000343

CLUTCH [D66M-R, D66MX-R]

CLUTCH FLUID REPLACEMENT/AIR BLEEDING [D66M-R, D66MX-R]

id0510mf166800

Caution
- **Do not allow clutch fluid to get on a painted surface. Clutch fluid contains properties which can dissolve the paint. If clutch fluid gets on a painted surface, wash it off with water immediately and wipe the area off completely.**
- **Do not mix different types of clutch fluid, otherwise the clutch may not operate normally.**
- **Do not reuse old clutch fluid, otherwise the clutch may not operate normally.**

Note
- A common reserve tank is used for the clutch system and brake system.

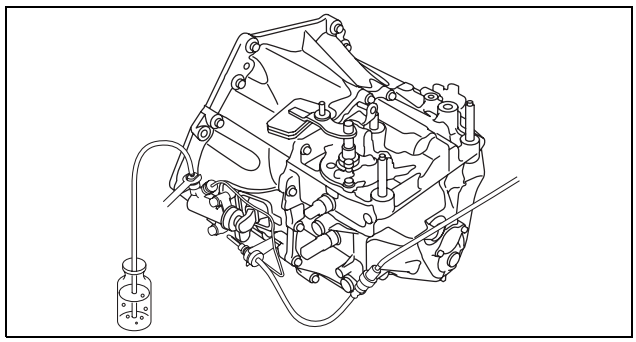
1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Remove the reserve tank cap.
3. Drain the clutch fluid from bleeder screw.
4. Add new clutch fluid to the MAX mark of the reserve tank.

Clutch fluid
SAE J1703 or FMVSS116 DOT-3 or DOT-4

5. Bleed the air from the clutch system.

Caution
- **Keep the clutch fluid level in the reserve tank at 3/4 full or more during air bleeding.**

(1) Connect a vinyl tube to the bleeder screw.
(2) Place the other end of the vinyl tube in a clear container, and fill clutch fluid in the container during air bleeding.
(3) Working with two people, one loosens the bleeder screw.
(4) The other person depresses the clutch pedal to full stroke taking approx. 3 s or more, and then holding the pedal depressed.
(5) After waiting approx. 5 s or more, tighten the bleeder screw.
(6) Return the clutch pedal slowly taking 3 s or more while suppressing the spring force.
(7) Wait approx. 5 s or more.
(8) Continue to perform air bleeding (Steps (3) - (7)) until no air comes from the vinyl tube.
(9) Fill the reserve tank to MAX mark with the clutch fluid.



ac5wzw0000343

Clutch fluid
SAE J1703 or FMVSS116 DOT-3 or DOT-4

6. Install the reserve tank cap.
7. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)

CLUTCH [D66M-R, D66MX-R]

CLUTCH PEDAL INSPECTION [D66M-R, D66MX-R]

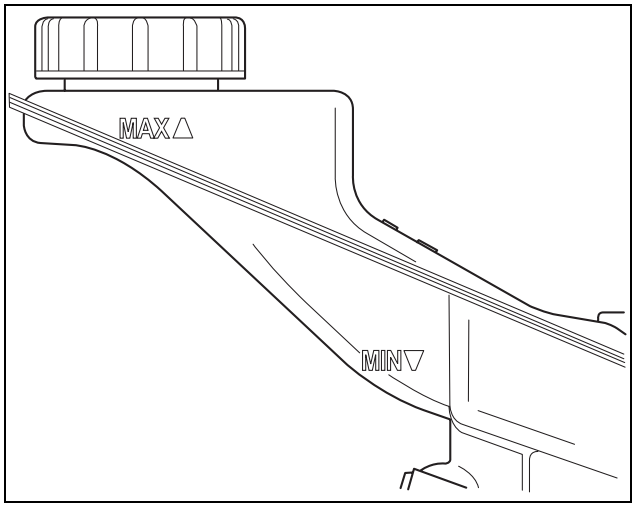
id0510mf156600

Note

- For the clutch pedal inspection, note the following and measure each inspection location.
  - — Measure the center of the upper surface of the pedal pad for each inspection.
  - — If the distance from the pedal pad to the floor covering is measured, measure the shortest distance from the center of the upper surface of the pedal pad to the floor covering.

Pedal Inspection Preparation

1. Verify that the clutch fluid is between the MIN mark and the MAX mark.
2. Verify that there is no clutch fluid leakage. (See 05-10B-4 CLUTCH FLUID LEAKAGE INSPECTION [D66M-R, D66MX-R].)



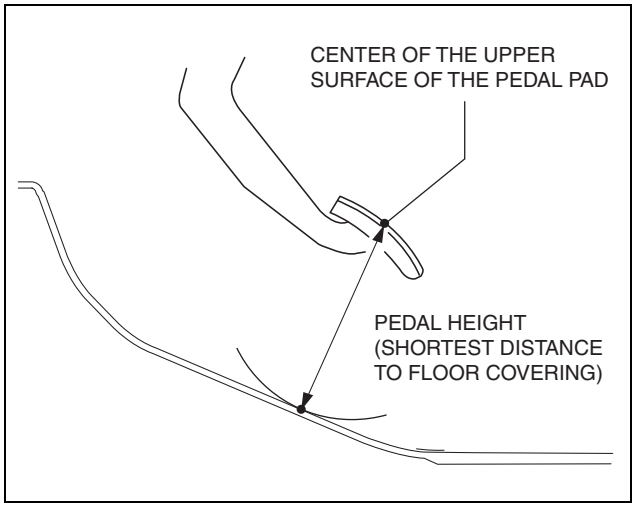
am3uuw0000824

Pedal Height Inspection

1. Perform “Pedal Inspection Preparation”. (See 05-10B-6 Pedal Inspection Preparation.)
2. Measure the pedal height with the clutch pedal released as shown in the figure.

   Pedal height (reference value)
   153.8 mm {6.055 in}

   - If it is not the specification, replace the clutch pedal. (See 05-10B-8 CLUTCH PEDAL REMOVAL/INSTALLATION [D66M-R, D66MX-R].)



ac5uuw00000697

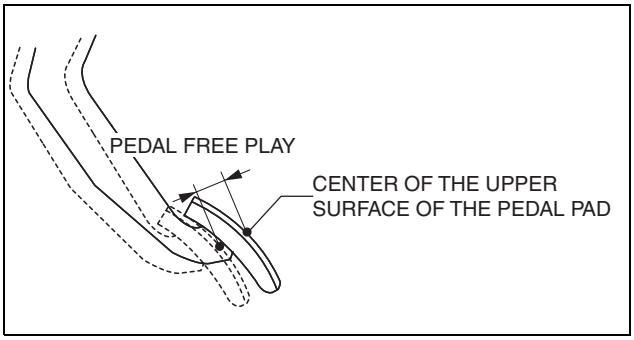
CLUTCH [D66M-R, D66MX-R]

Pedal Free Play Inspection

1. Perform “Pedal Inspection Preparation”. (See 05-10B-6 Pedal Inspection Preparation.)
2. Depress the clutch pedal by hand until clutch resistance is felt, and measure the pedal free play as shown in the figure.

   Pedal free play (reference value)
   10 mm {0.39 in} or less

   - If it exceeds the specification, replace the clutch pedal. (See 05-10B-8 CLUTCH PEDAL REMOVAL/INSTALLATION [D66M-R, D66MX-R].)



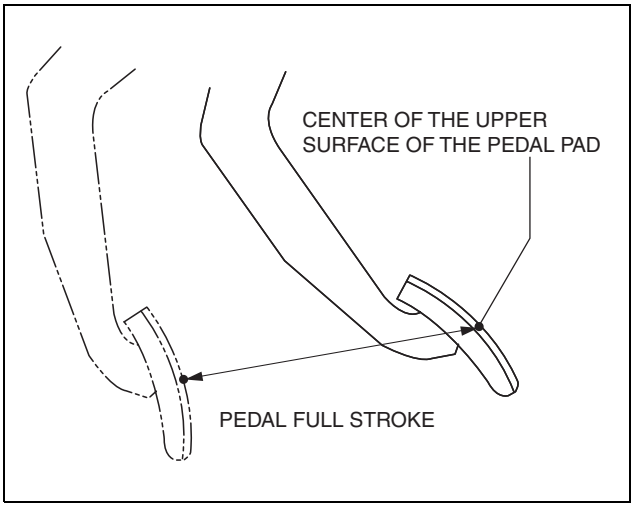
am5uuw0000369

Pedal Full Stroke Inspection

1. Perform “Pedal Inspection Preparation”. (See 05-10B-6 Pedal Inspection Preparation.)
2. Depress the clutch pedal from the released condition to the full depression position, and measure the pedal full stroke as shown in the figure.

   Pedal full stroke (reference value)
   150.3 mm {5.917 in}

   - If it is not the specification, replace the clutch pedal. (See 05-10B-8 CLUTCH PEDAL REMOVAL/INSTALLATION [D66M-R, D66MX-R].)



ac5uuw00000698

CLUTCH [D66M-R, D66MX-R]

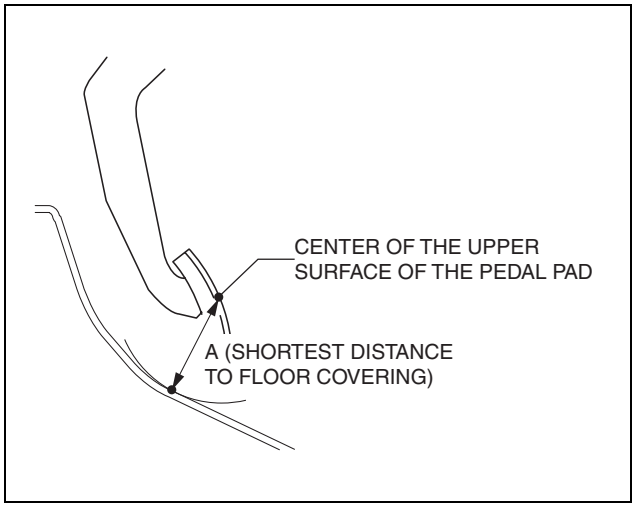
Clutch Disengagement Point Inspection

Warning
- **When performing the following procedure, make sure that the area around the vehicle is free of people or objects as the vehicle might move suddenly.**

1. Perform “Pedal Inspection Preparation”. (See 05-10B-6 Pedal Inspection Preparation.)
2. Verify that the pedal height is normal. (See 05-10B-6 Pedal Height Inspection.)
3. Verify that the pedal free play is normal. (See 05-10B-7 Pedal Free Play Inspection.)
4. Verify that the pedal full stroke is normal. (See 05-10B-7 Pedal Full Stroke Inspection.)
5. Apply the parking brake and fix the front and rear wheels with wheel chocks.
6. Start the engine.
7. With the clutch pedal depressed, move the shift lever to the position just before engaging the reverse gear. (Do not shift completely to reverse position)
8. Gradually release the clutch pedal and then hold it at the point where the sound of gear-grinding begins (clutch disengagement point).
9. Measure distance A as shown in the figure when the clutch pedal is at the clutch disengagement point.

   Distance A (reference value)
   82 mm {3.2 in} or more

   - If it is less than the specification, bleed the air from the clutch system. (See 05-10B-5 CLUTCH FLUID REPLACEMENT/AIR BLEEDING [D66M-R, D66MX-R].)



ac5uuw00000699

CLUTCH PEDAL REMOVAL/INSTALLATION [D66M-R, D66MX-R]

id0510mf156700

Caution
- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**
- **Do not allow clutch fluid to get on a painted surface. Clutch fluid contains properties which can dissolve the paint. If clutch fluid gets on a painted surface, wash it off with water immediately and wipe the area off completely.**

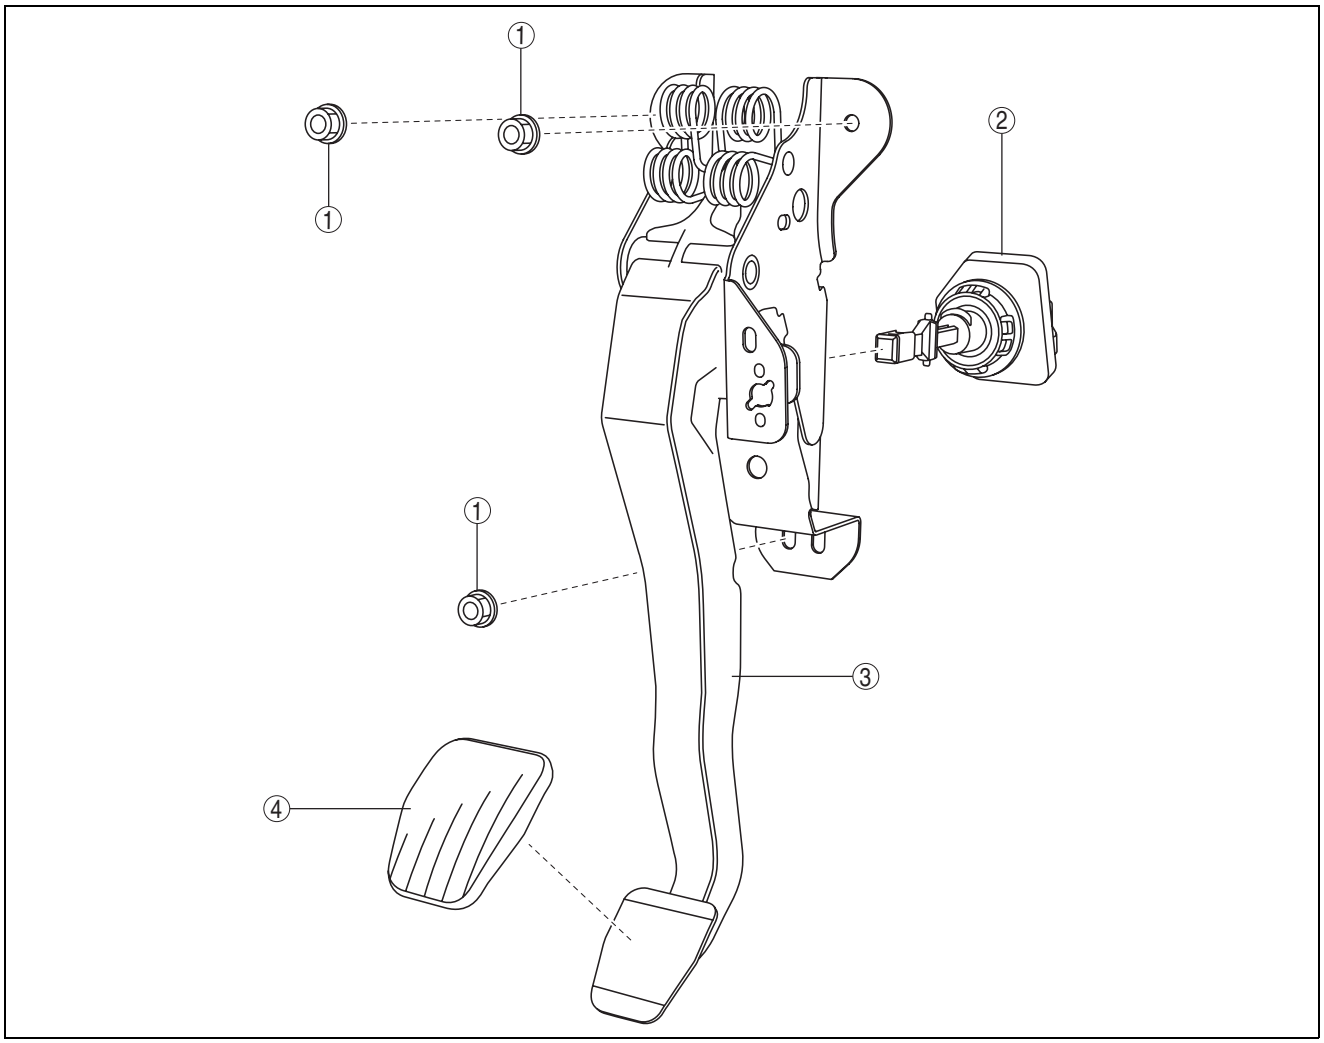
Removal

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the air cleaner component. (ex: air cleaner, air hose) (L.H.D.) (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the battery component. (ex: battery, battery tray) (L.H.D.) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the bracket from the steering shaft. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
5. Remove the clutch pedal position switch. (See 05-10B-13 CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
6. Remove the starter interlock switch. (See 05-10B-14 STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
7. Remove the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
8. Disconnect the steering shaft from steering gear. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
9. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)

CLUTCH [D66M-R, D66MX-R]

10. Remove the insulator. (R.H.D.) (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
11. Disconnect the clutch pipe and hose No.1 from clutch master cylinder, and plug it to avoid clutch fluid leakage. (See 05-10B-21 CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
12. Disconnect the clutch reserve hose from clutch master cylinder, and plug it to avoid clutch fluid leakage. (See 05-10B-21 CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
13. Remove in the order indicated in the table.

R.H.D.



ac5wzw0000129

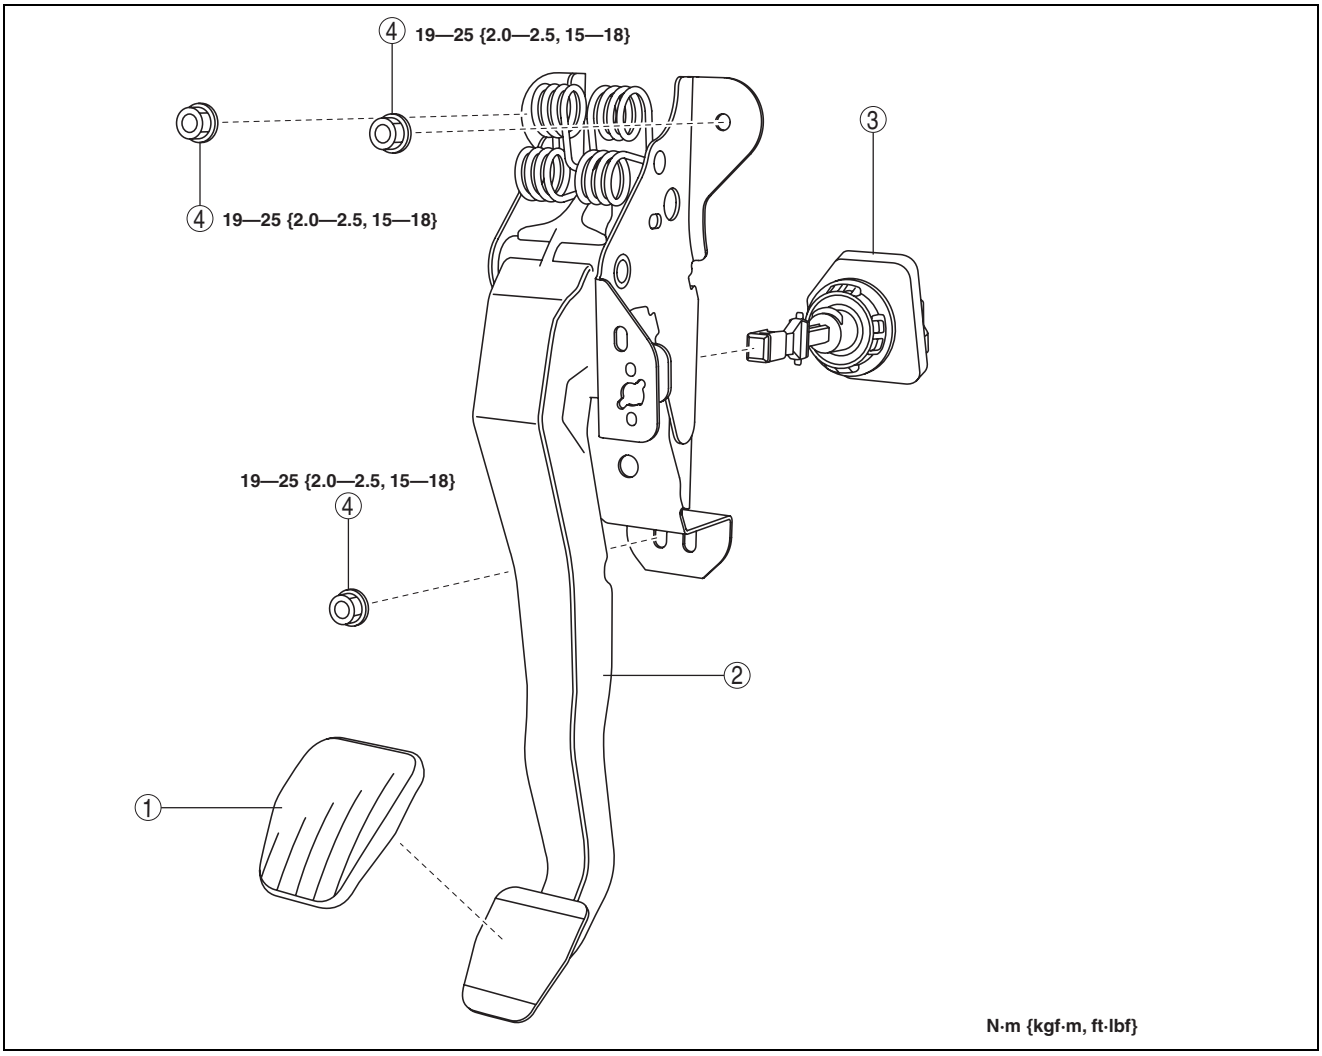
1	Nut
2	Clutch master cylinder (See 05-10B-17 CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
3	Clutch pedal
4	Pedal pad

Installation

1. Install in the order indicated in the table.

CLUTCH [D66M-R, D66MX-R]

R.H.D.



ac5wzw0000129

1	Pedal pad
2	Clutch pedal

3	Clutch master cylinder (See 05-10B-17 CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
4	Nut

2. Connect the clutch reserve hose to clutch master cylinder. (See 05-10B-21 CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
3. Connect the clutch pipe and hose No.1 to clutch master cylinder. (See 05-10B-21 CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
4. Connect the steering shaft. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
5. Install the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
6. Bleed the air from the clutch system. (See 05-10B-5 CLUTCH FLUID REPLACEMENT/AIR BLEEDING [D66M-R, D66MX-R].)
7. Inspect the clutch pedal. (See 05-10B-6 CLUTCH PEDAL INSPECTION [D66M-R, D66MX-R].)
8. Install a new starter interlock switch. (See 05-10B-14 STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
9. Install a new clutch pedal position switch. (See 05-10B-13 CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
10. Install the insulator. (R.H.D.) (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
11. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
12. Install the bracket to the steering shaft. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
13. Install the battery component. (ex: battery, battery tray) (L.H.D.) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)

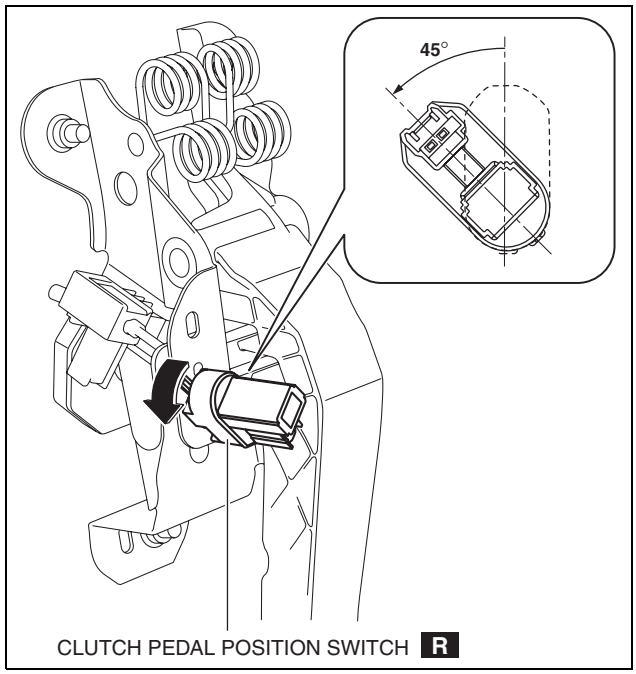
CLUTCH [D66M-R, D66MX-R]

14. Install the air cleaner component. (ex: air cleaner, air hose) (L.H.D.) (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
15. Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
16. Fully depress the clutch pedal, and verify that the engine starts.

CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R]

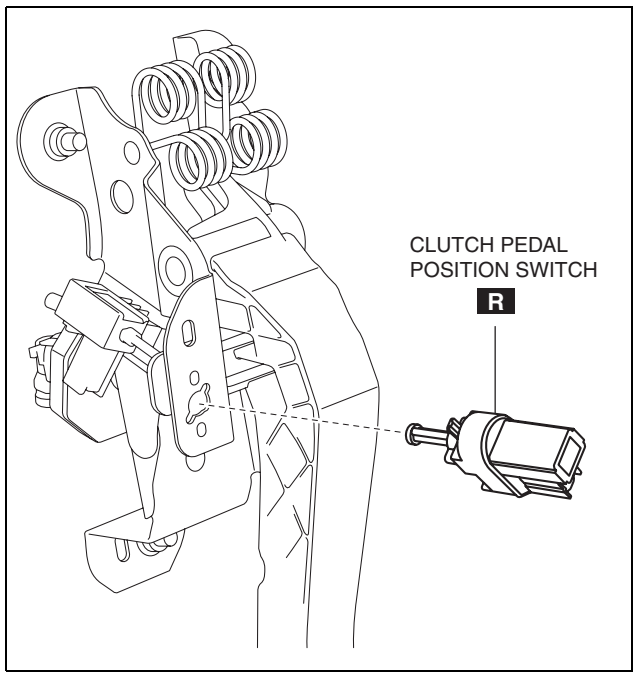
id0510mf160000

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Disconnect the clutch pedal position switch connector.
3. Rotate the clutch pedal position switch 45° counterclockwise.



ac5wzw0000515

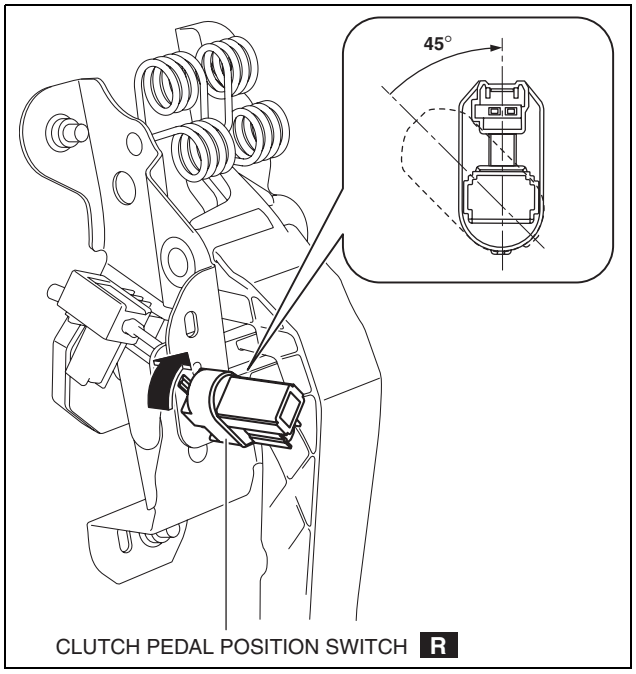
4. Remove the clutch pedal position switch from the clutch pedal.
5. Insert a new clutch pedal position switch into the clutch pedal hole until the switch stops.



ac5uuw00000723

CLUTCH [D66M-R, D66MX-R]

6. Rotate the clutch pedal position switch 45° clockwise.
7. Verify that the clutch pedal position switch is locked securely.
8. Install in the reverse order of removal.

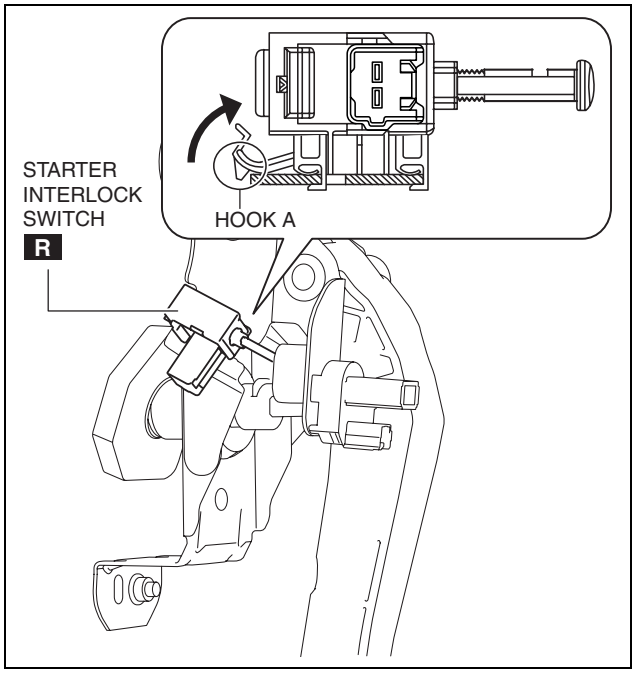


ac5wzw0000515

STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R]

id0510mf160100

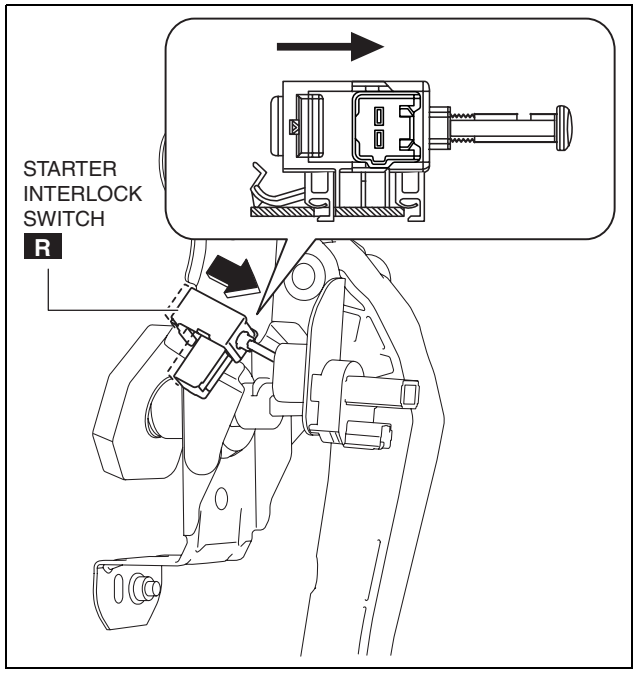
1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Disconnect the starter interlock switch connector.
3. Remove the starter interlock switch using the following procedure:
   (1) Detach hook A in the direction of the arrow shown in the figure.



ac5uuw00000725

CLUTCH [D66M-R, D66MX-R]

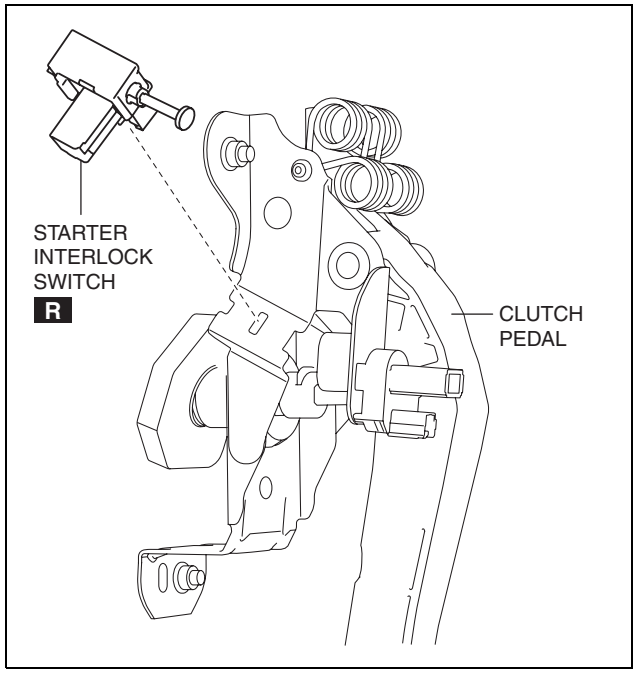
(2) Slide the starter interlock switch in the direction of the arrow shown in the figure.



ac5uuw00000726

(3) Remove the starter interlock switch from the clutch pedal.

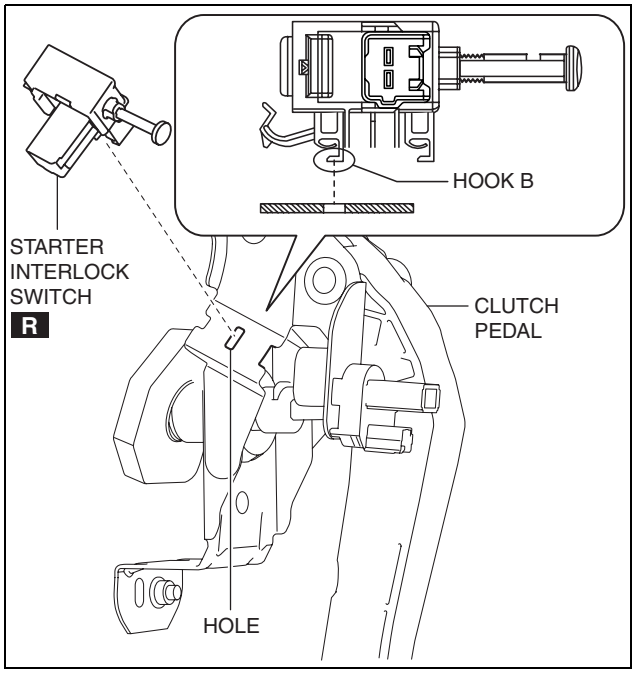
4. Install the starter interlock switch using the following procedure:



ac5wzw0000533

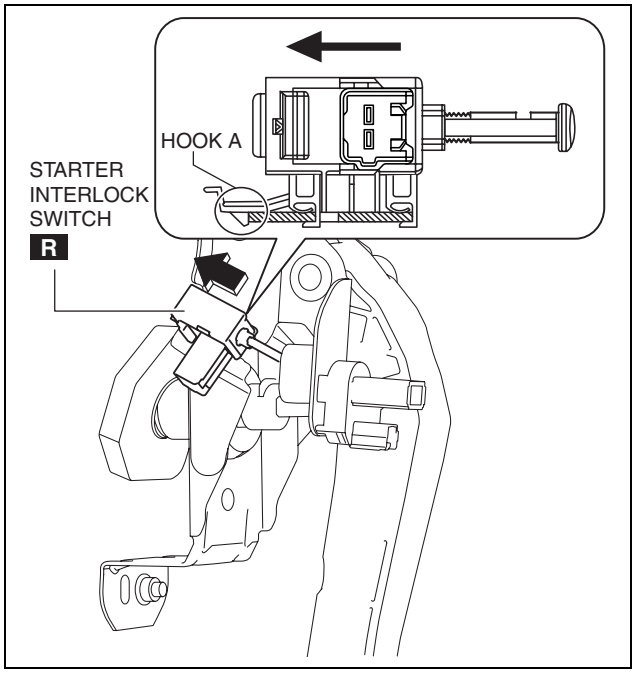
CLUTCH [D66M-R, D66MX-R]

(1) Insert hook B of a new starter interlock switch into the clutch pedal hole.



ac5uuw00000728

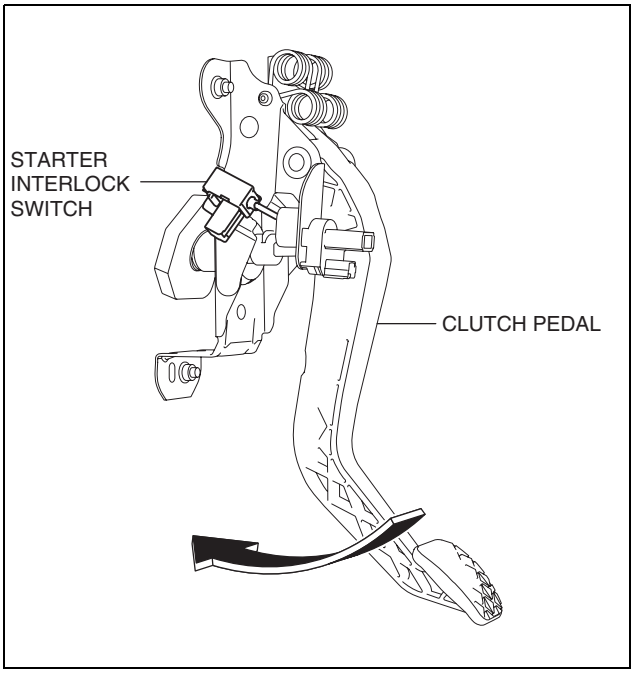
(2) While pressing the starter interlock switch against the clutch pedal, slide the starter interlock switch until hook A is locked in the direction of the arrow shown in the figure.



ac5uuw00000729

CLUTCH [D66M-R, D66MX-R]

5. Fully depress the clutch pedal in the direction of arrow, and verify that a click sound from the starter interlock switch is heard.
6. Install in the reverse order of removal.
7. Fully depress the clutch pedal, and verify that the engine starts.



ac5uuw00000730

CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION [D66M-R, D66MX-R]

id0510mf156800

05

Caution

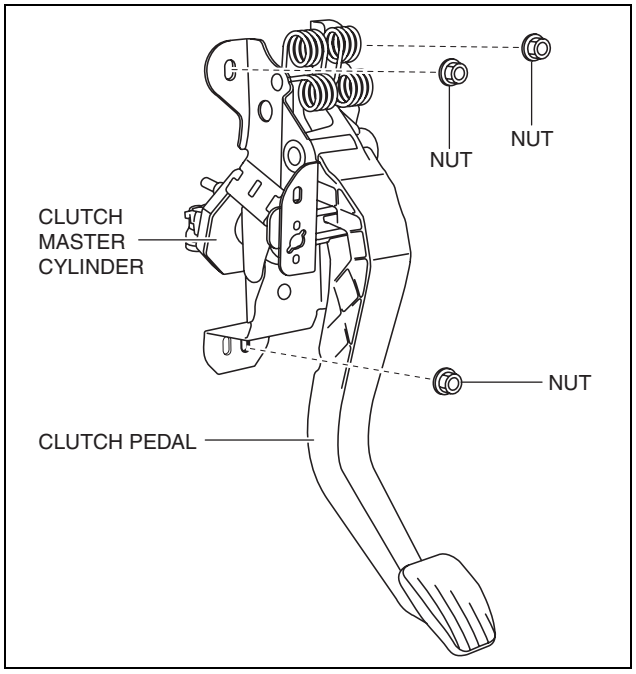
- **Secure the steering wheel using tape or a cable to prevent the steering shaft from rotating after disconnecting the steering shaft. If the steering wheel rotates after the steering shaft and the steering gear and linkage are disconnected, the internal parts of the clock spring could be damaged.**
- **Do not allow clutch fluid to get on a painted surface. Clutch fluid contains properties which can dissolve the paint. If clutch fluid gets on a painted surface, wash it off with water immediately and wipe the area off completely.**

Removal

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the air cleaner component. (ex: air cleaner, air hose) (L.H.D.) (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the battery component. (ex: battery, battery tray) (L.H.D.) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the bracket from the steering shaft. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
5. Remove the clutch pedal position switch. (See 05-10B-13 CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
6. Remove the starter interlock switch. (See 05-10B-14 STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
7. Remove the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
8. Disconnect the steering shaft from steering gear. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
9. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
10. Remove the insulator. (R.H.D.) (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
11. Disconnect the clutch pipe and hose No.1 from clutch master cylinder, and plug it to avoid clutch fluid leakage. (See 05-10B-21 CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
12. Disconnect the clutch reserve hose from clutch master cylinder, and plug it to avoid clutch fluid leakage. (See 05-10B-21 CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [D66M-R, D66MX-R].)

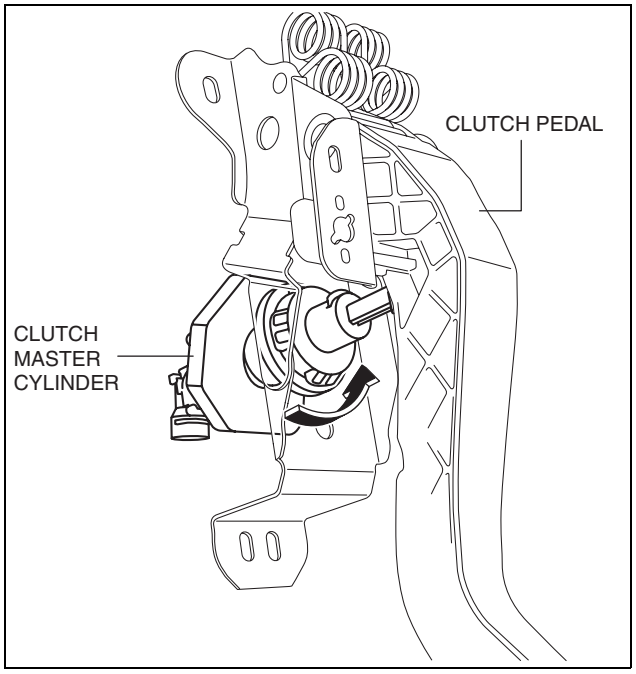
CLUTCH [D66M-R, D66MX-R]

13. Remove the clutch master cylinder using the following procedure:
    (1) Remove the clutch pedal and the clutch master cylinder as a single unit.



ac5uuw00000703

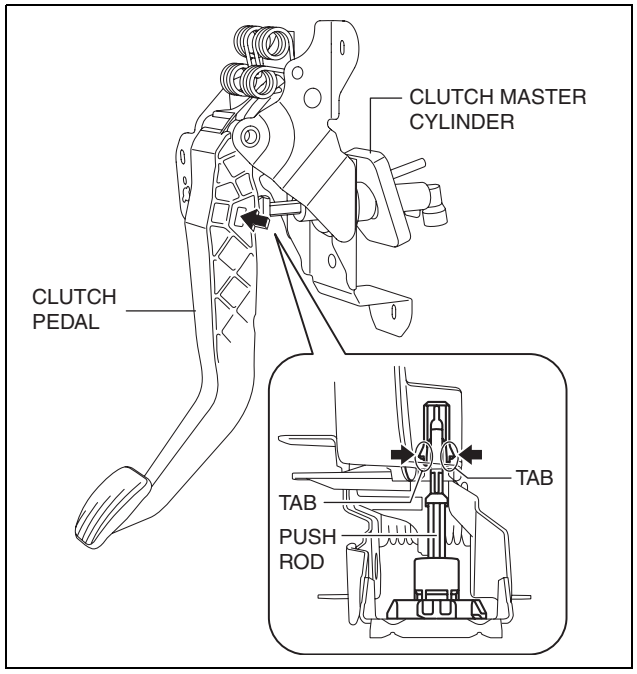
    (2) Rotate the clutch master cylinder in the direction of the arrow shown in the figure to disconnect the clutch master cylinder (body) and clutch pedal.



ac5uuw00000704

CLUTCH [D66M-R, D66MX-R]

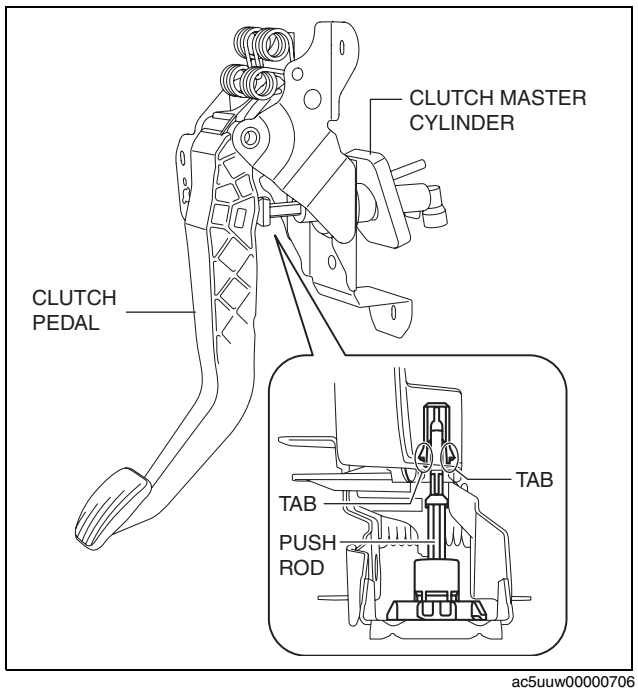
(3) Disengage the tabs of the push rod and remove the master cylinder.



ac5uuw00000705

Installation

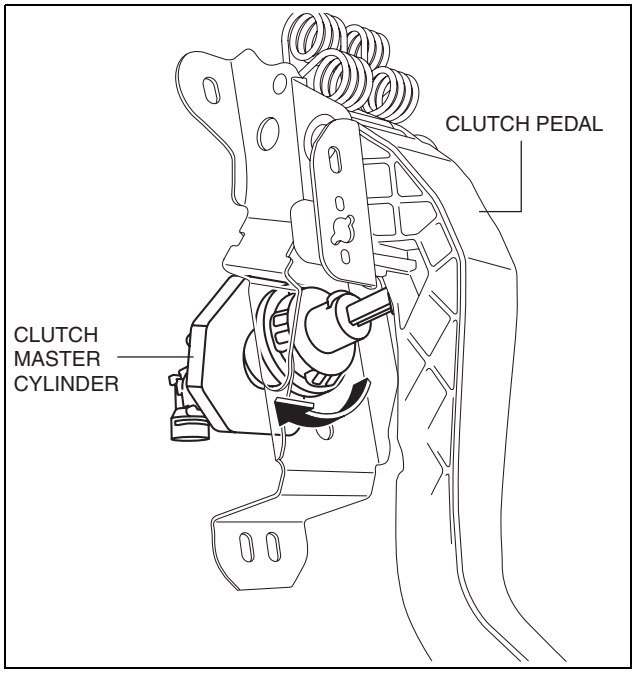
1. Install the clutch master cylinder using the following procedure:
   (1) Engage the tabs of the push rod with the clutch pedal as shown in the figure.



ac5uuw00000706

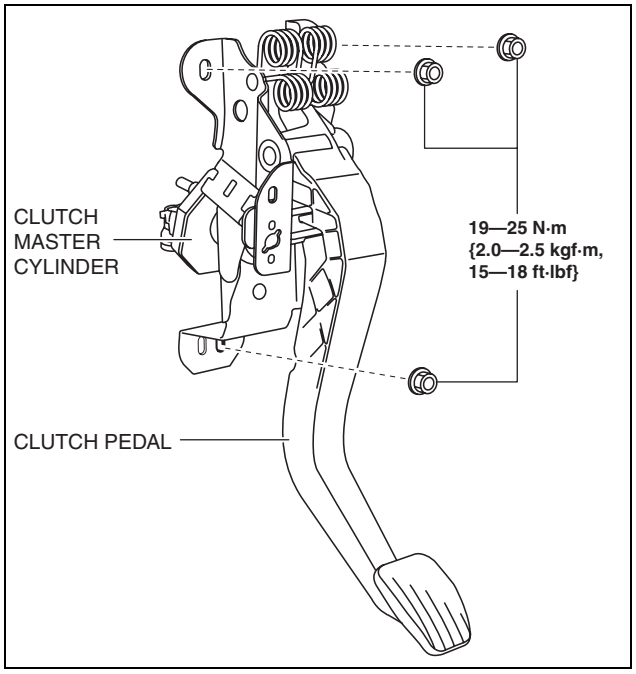
CLUTCH [D66M-R, D66MX-R]

(2) Rotate the clutch master cylinder in the direction shown until it stops.



ac5uuw00000707

(3) Install the clutch pedal and the clutch master cylinder as a single unit.



ac5wzw0000462

2. Connect the clutch reserve hose to clutch master cylinder. (See 05-10B-21 CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
3. Connect the clutch pipe and hose No.1 to clutch master cylinder. (See 05-10B-21 CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
4. Connect the steering shaft. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
5. Install the joint cover. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
6. Bleed the air from the clutch system. (See 05-10B-5 CLUTCH FLUID REPLACEMENT/AIR BLEEDING [D66M-R, D66MX-R].)
7. Inspect the clutch pedal. (See 05-10B-6 CLUTCH PEDAL INSPECTION [D66M-R, D66MX-R].)
8. Install a new starter interlock switch. (See 05-10B-14 STARTER INTERLOCK SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
9. Install a new clutch pedal position switch. (See 05-10B-13 CLUTCH PEDAL POSITION SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
10. Install the insulator. (R.H.D.) (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
11. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
12. Install the bracket to the steering shaft. (See 06-13-4 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
13. Install the battery component. (ex: battery, battery tray) (L.H.D.) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
14. Install the air cleaner component. (ex: air cleaner, air hose) (L.H.D.) (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
15. Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
16. Fully depress the clutch pedal, and verify that the engine starts.

CLUTCH [D66M-R, D66MX-R]

CLUTCH STROKE SENSOR REMOVAL/INSTALLATION [D66M-R, D66MX-R]

id0510mf156900

Note
- The clutch stroke sensor is equipped only on vehicles with i-stop.
- The clutch stroke sensor is built into the clutch master cylinder.

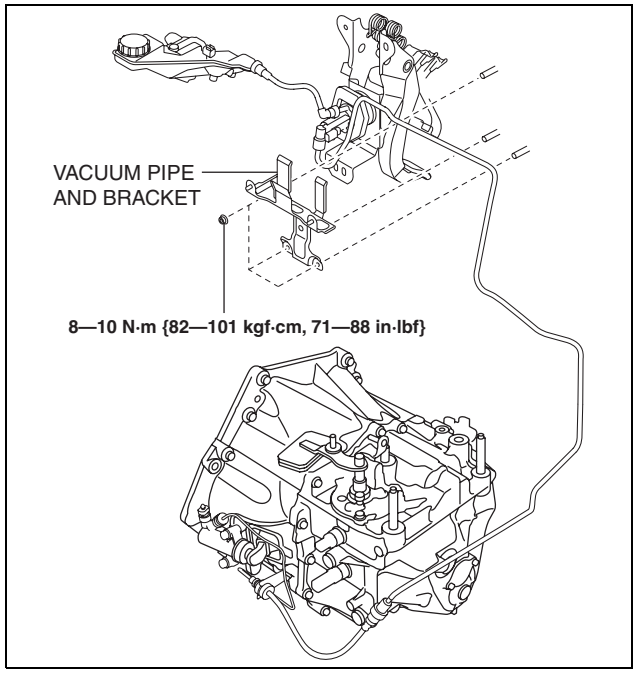
1. Replace the clutch master cylinder. (See 05-10B-17 CLUTCH MASTER CYLINDER REMOVAL/INSTALLATION [D66M-R, D66MX-R].)

CLUTCH PIPE AND HOSE REMOVAL/INSTALLATION [D66M-R, D66MX-R]

id0510mf157000

Caution
- **Do not allow clutch fluid to get on a painted surface. Clutch fluid contains properties which can dissolve the paint. If clutch fluid gets on a painted surface, wash it off with water immediately and wipe the area off completely.**

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the air cleaner component. (ex: air cleaner, air hose) (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the battery component. (ex: battery, battery tray) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
4. Remove the insulator. (R.H.D.) (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
5. Disconnect the vacuum pipe and bracket.(R.H.D.)

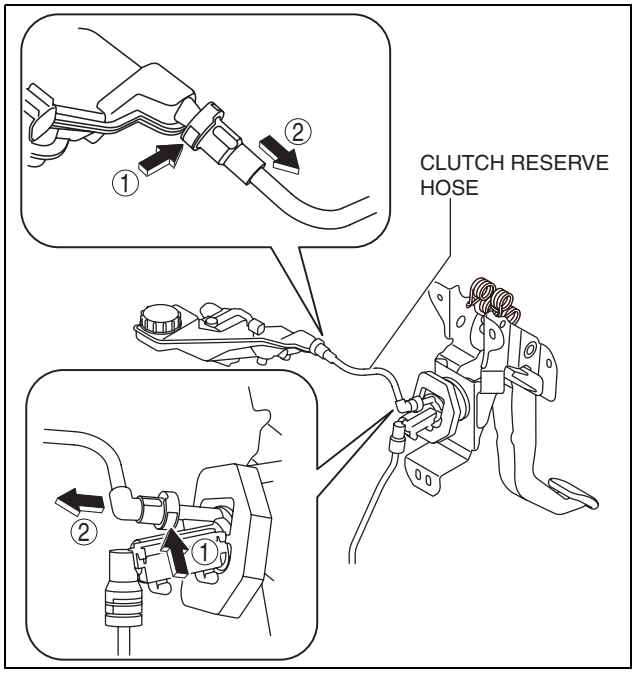


ac5wzw0000342

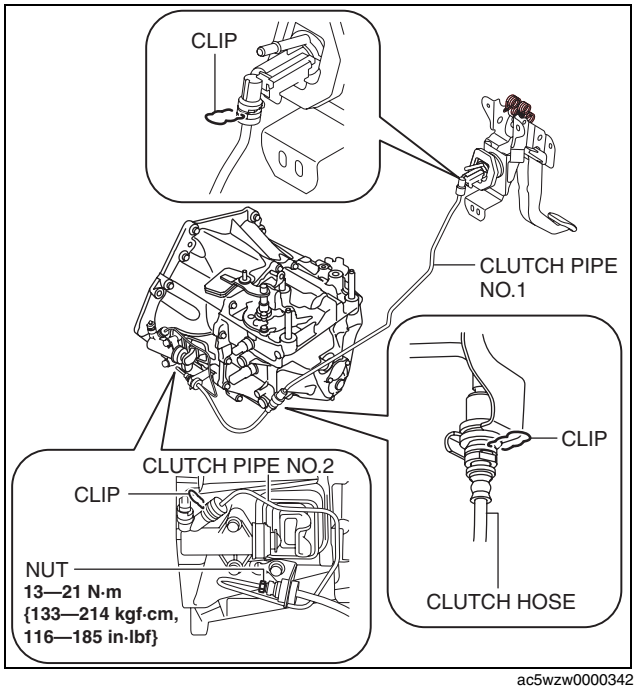
CLUTCH [D66M-R, D66MX-R]

6. Remove the clutch reserve hose while pressing the point indicated by the arrow in the figure.
7. Remove the clutch pipe and hose (No.1 and No.2) using the following procedure:

L.H.D.



ac5uuw00000709

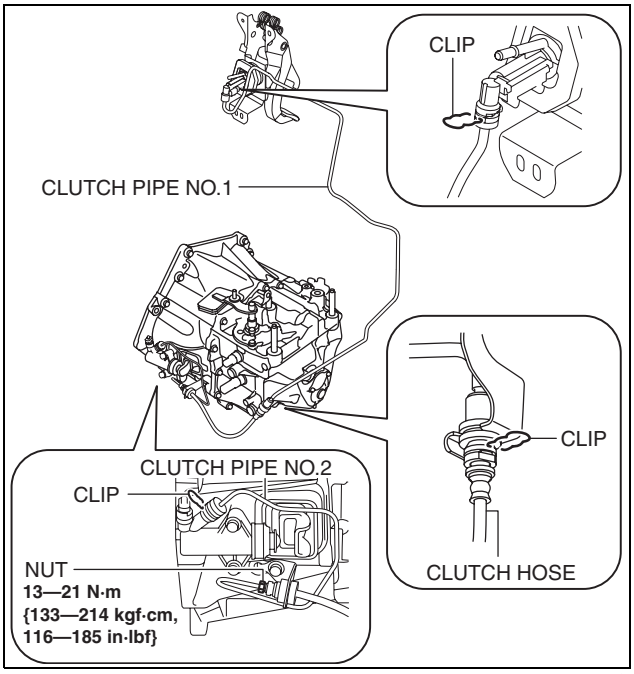


ac5wzw0000342

CLUTCH [D66M-R, D66MX-R]

R.H.D.

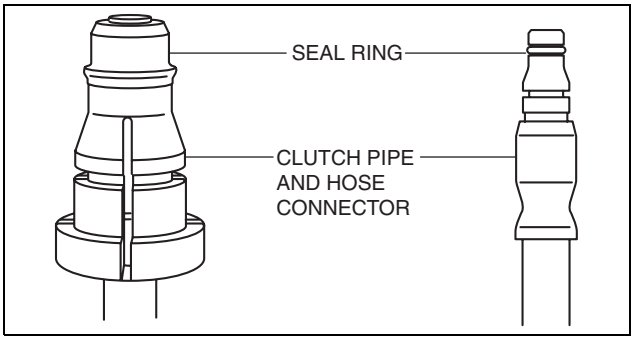
(1) Lift the connector clip.
(2) Pull out the clutch pipe and hose (No.1 and No.2) connector straight to detach it.
(3) Remove the clutch pipe and hose (No.1 and No.2).



ac5wzw0000342

8. Verify that the seal ring is installed to the clutch pipe and hose connector.

Caution
- **When removing the clutch pipe and hose, the seal ring for the clutch pipe and hose could remain on the receiving area of the connector. If the clutch pipe and hose is assembled under this condition, it could cause clutch fluid leakage from the connector.**



am5ezw0000544

9. Install the clutch pipe and hose (No.1 and No.2).
   (1) Press in the connector clip.
   (2) Insert the clutch pipe and hose (No.1 and No.2) connector straight.

Note
- When the connector is engaged, a click sound is heard.

   (3) Install the clutch pipe and hose (No.1 and No.2).
10. Insert the clutch reserve hose connector straight.

Note
- When the connector is engaged, a click sound is heard.

11. Pull each engagement of the clutch reserve hose and clutch pipe and hose No.1 and 2, verify that they are engaged, and then press all of them again.
12. Install in the reverse order of removal.
13. Bleed the air from the clutch system. (See 05-10B-5 CLUTCH FLUID REPLACEMENT/AIR BLEEDING [D66M-R, D66MX-R].)

CLUTCH [D66M-R, D66MX-R]

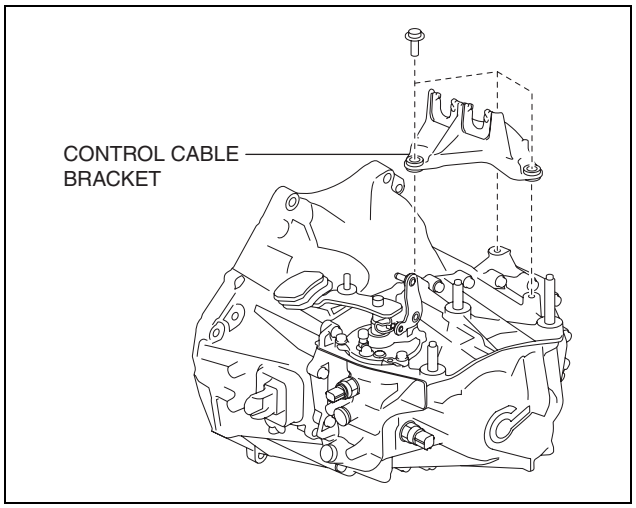
MANUAL TRANSAXLE REMOVAL/INSTALLATION [C66M-R]

id0515ma1600m8

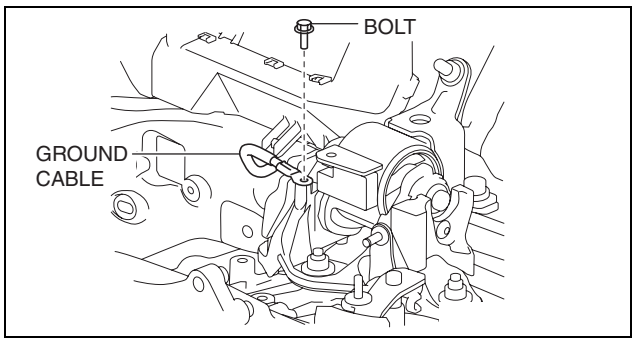
Removal

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
4. Remove the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
5. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
6. Drain the manual transaxle oil. (See 05-15A-2 MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R, C66MX-R].)
7. Disconnect and/or remove the following parts in the engine compartment.
   (1) Remove the air cleaner component. (ex: air cleaner, air hose) (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (2) Remove the battery component. (ex: battery, battery tray and PCM component) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (3) Disconnect the control cable from MTX. (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
   (4) Remove the control cable bracket from MTX.



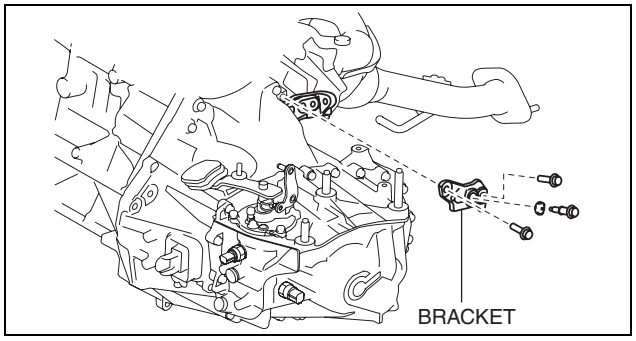
ac5wzw0000283

   (5) Remove the bolt shown in the figure, and set the ground cable aside.



ac5uuw00000732

   (6) Remove the bracket from the MTX and the exhaust manifold.
   (7) Disconnect the neutral switch connector from MTX. (See 05-15A-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
   (8) Disconnect the back-up light switch connector from MTX. (See 05-15A-3 BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)

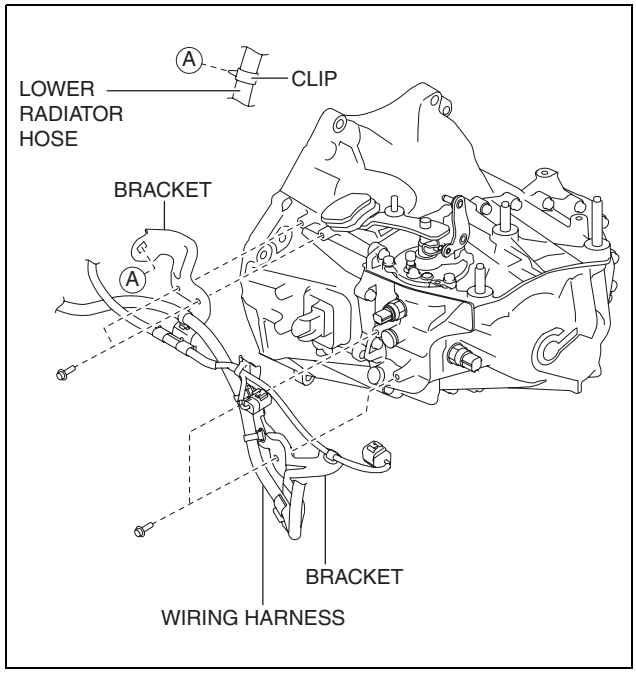


ac5wzw0000284

MANUAL TRANSAXLE [C66M-R, C66MX-R]

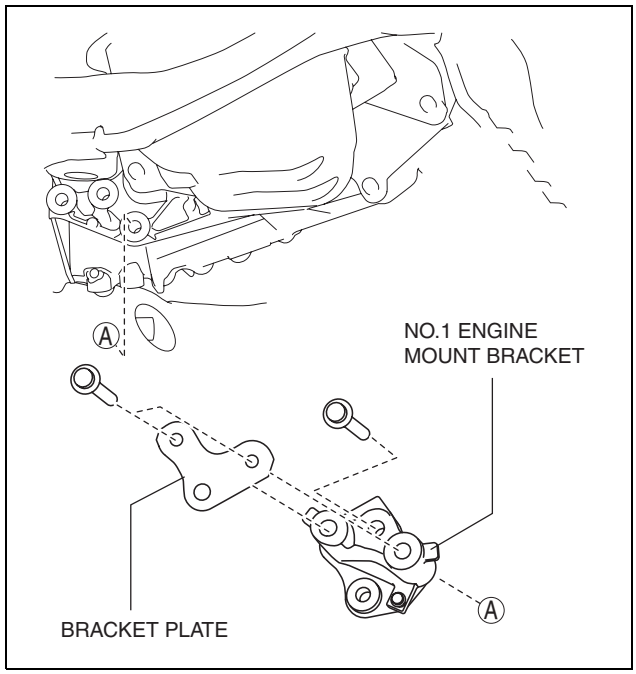
(9) Disconnect the lower radiator hose clip and the brackets from the MTX, and set the wiring harness aside.

8. Disconnect and/or remove the following parts related to the suspension and axle.
   (1) Remove the front tires. (See 03-10-1 GENERAL PROCEDURES (FRONT AND REAR AXLES).)
   (2) Disconnect the clip securing the brake hose from the shock absorber. (See 04-11-30 BRAKE HOSE (FRONT) REMOVAL/INSTALLATION.)
   (3) Disconnect the ABS wheel-speed sensors from the steering knuckles. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
   (4) Disconnect the tie-rod end ball joints from the steering knuckles. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
   (5) Disconnect the stabilizer control links from the stabilizer. (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)
   (6) Disconnect the front lower arms from the steering knuckles. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)



ac5wzw0000284

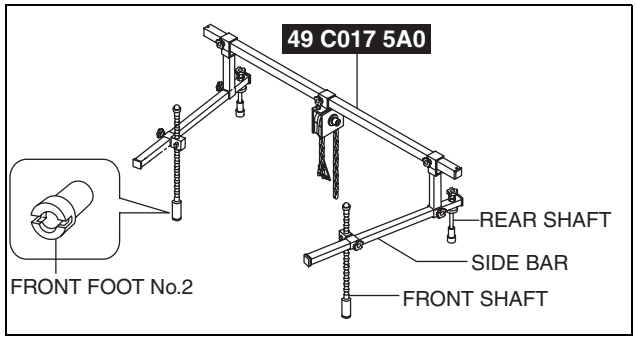
   (7) Disconnect the drive shaft (LH) from the MTX. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
   (8) Disconnect the drive shaft (RH) from the MTX. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
9. Disconnect and/or remove the following parts from the underside of the vehicle.
   (1) Remove the clutch release cylinder with the clutch pipe still connected and set it out of the way. (See 05-10A-24 CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
   (2) Remove the starter. (See 01-19A-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (3) Remove the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
   (4) Remove the bracket plate and No.1 engine mount bracket from the MTX.
10. Install the **SST** using the following procedure.



ac5uuw00000735

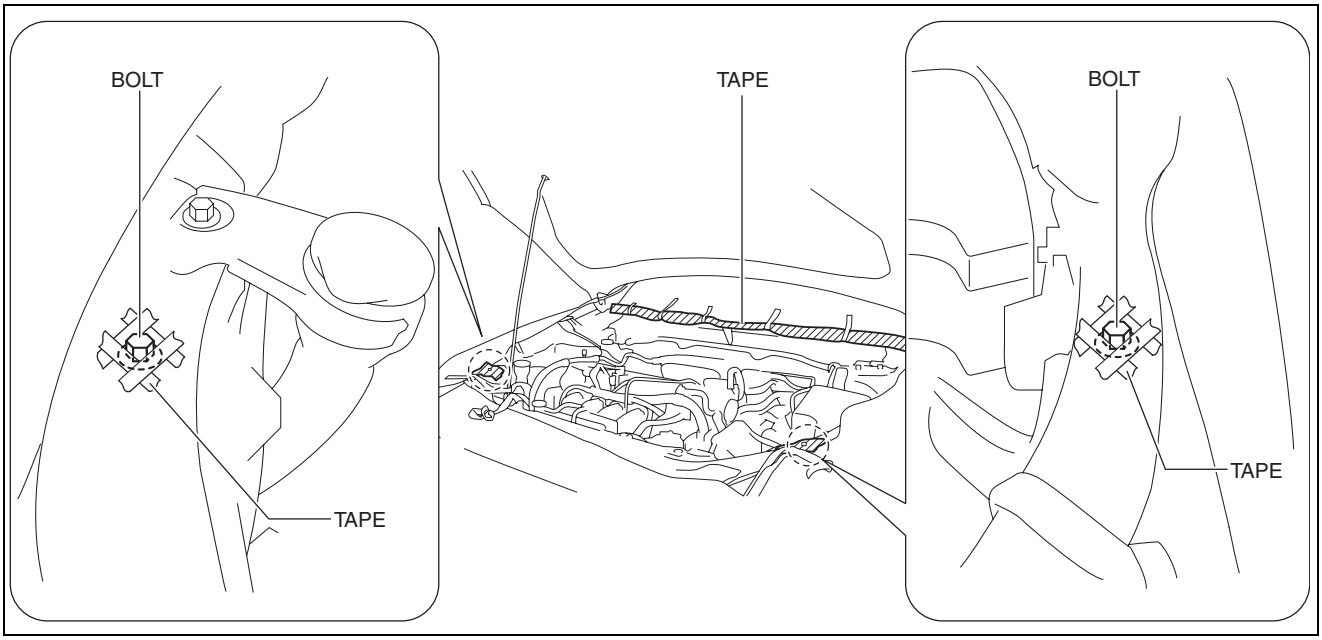
MANUAL TRANSAXLE [C66M-R, C66MX-R]

Caution
- **Refer to the SST instruction manual for the basic handing procedure.**



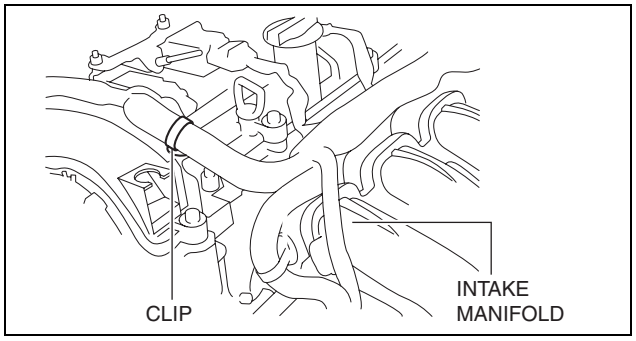
am3uuw0000884

(1) Install one front foot No.2 to each of the left and right front shafts of the **SST**.
(2) Remove the windshield wiper arm and blade. (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
(3) Remove the cowl grille. (See 09-16-3 COWL GRILLE REMOVAL/INSTALLATION.)
(4) Remove the cowl panel. (See 09-10-41 COWL PANEL REMOVAL/INSTALLATION.)
(5) Protect the positions shown in the figure using tape.



ac5wzw0000284

(6) To enable to install the **SST**, disconnect the clip shown in the figure and set the wiring harness aside.
(7) Install the **SST** using **part number 99794 1025** or an **M10 × 1.25**, length **25 mm {0.98 in}** bolt as shown in the figure.

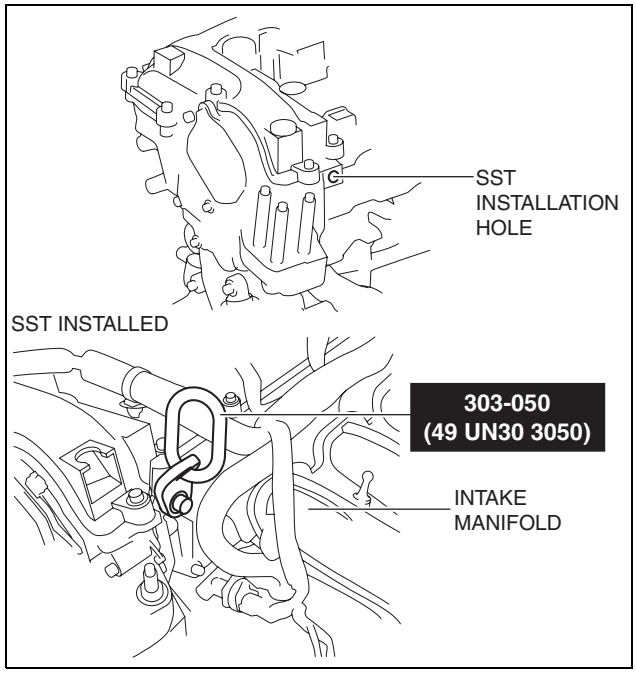


am3uuw0000822

MANUAL TRANSAXLE [C66M-R, C66MX-R]

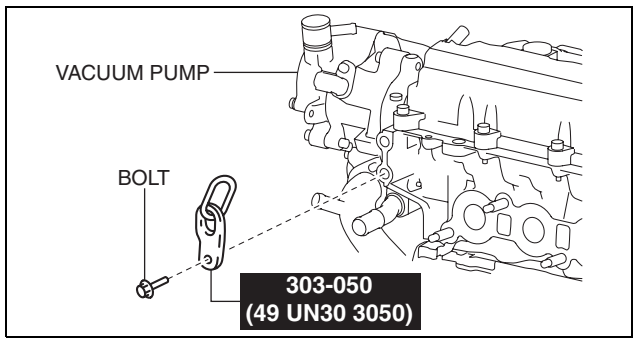
Engine front side

Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}



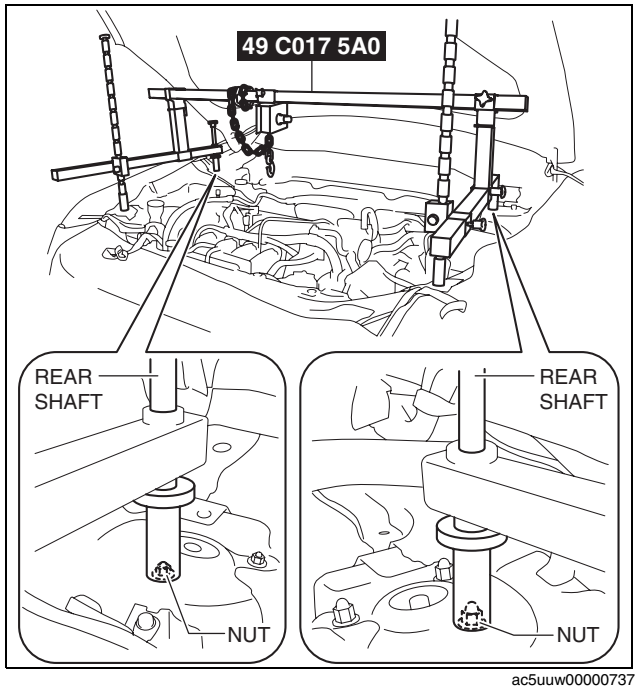
Engine rear side

Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}



am3uuw0000822

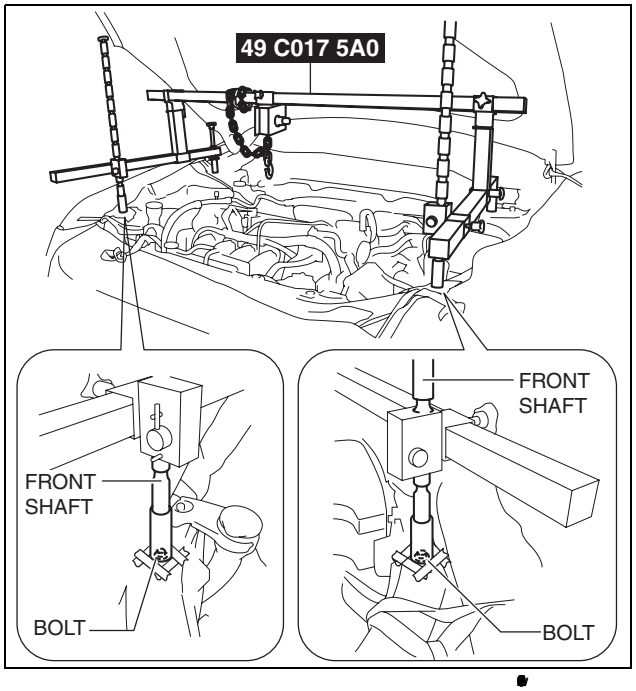
(8) As shown in the figure, set the rear shafts of the **SST** to the left and right shock absorber nuts.



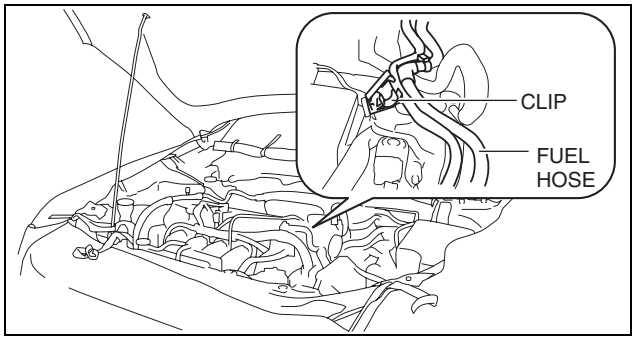
ac5uuw00000737

MANUAL TRANSAXLE [C66M-R, C66MX-R]

(9) As shown in the figure, set the front shafts of the **SST** to the left and right bolts.

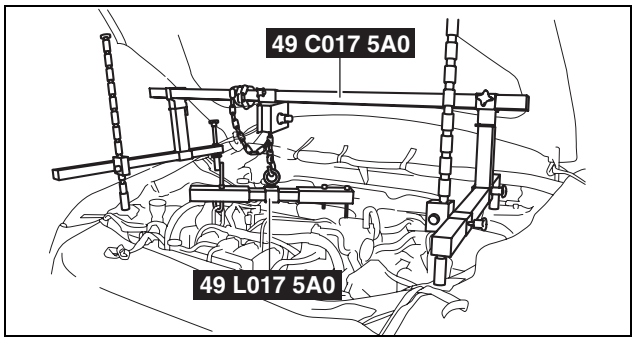


(10) When assembling the **SST (49 L017 5A0)**, disconnect the fuel hose from the clip shown in the figure to prevent interference between the fuel hose and **SST**.



ac5uuw00000739

(11) Install the **SST (49 L017 5A0)** to the **SST (49 C017 5A0)** as shown in the figure.

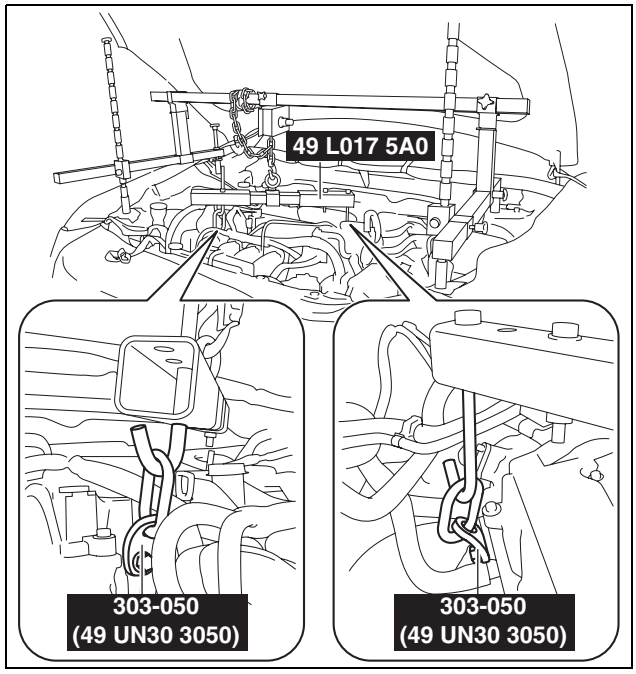


ac5uuw00000740

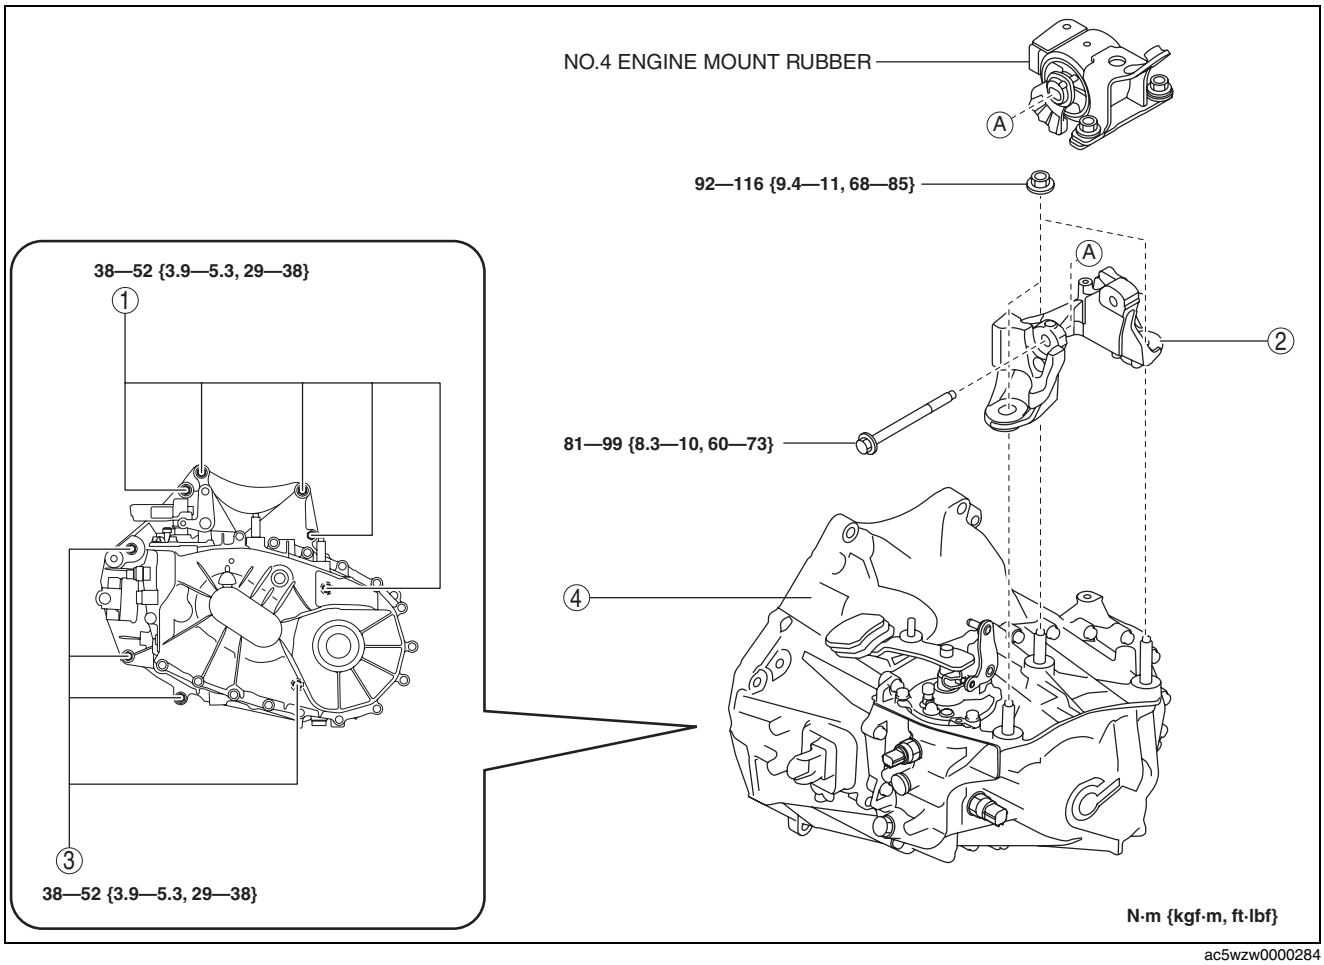
MANUAL TRANSAXLE [C66M-R, C66MX-R]

(12)Install the **SST (49 L017 5A0)** to the **SST (49 UN30 3050)** with the hook of the **SST (49 L017 5A0)** facing outward.
(13)Adjust the height of the left and right side bars so that they are leveled, then tighten each part of the **SST**.
(14)Apply tension to the chain to secure the engine.

11. Remove in the order indicated in the table.



ac5uuw00000741



ac5wzw0000284

1	Transaxle mounting bolt (upper side)
2	No.4 engine mount bracket (See 05-15A-10 No.4 Engine mount bracket removal note.)

3	Transaxle mounting bolt (lower side) (See 05-15A-10 Transaxle mounting bolt removal note.)
4	MTX

MANUAL TRANSAXLE [C66M-R, C66MX-R]

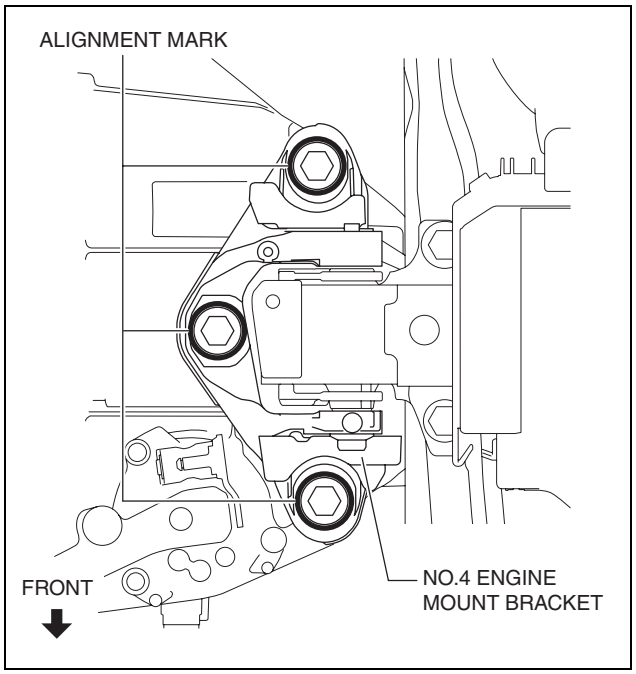
No.4 Engine mount bracket removal note

Caution
- **A slot has been adopted for the No.4 engine mount bracket installation hole. If the No.4 engine mount bracket is deviated from the original position when installing the No.4 engine mount, engine noise or vibration could increase. When removing the No.4 engine mount, place alignment marks on the No.4 engine mount bracket so that they can be assembled to the same positions as before removal.**

1. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

   Note
   - Paint so that the outline of the nut is framed on the bracket side.

2. Remove the No.4 engine mount bracket.

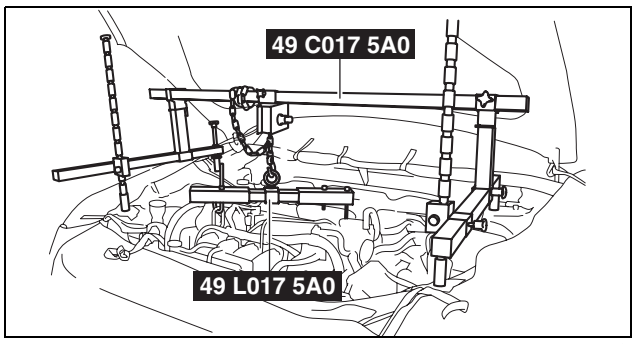


ac5uuw00000743

Transaxle mounting bolt removal note

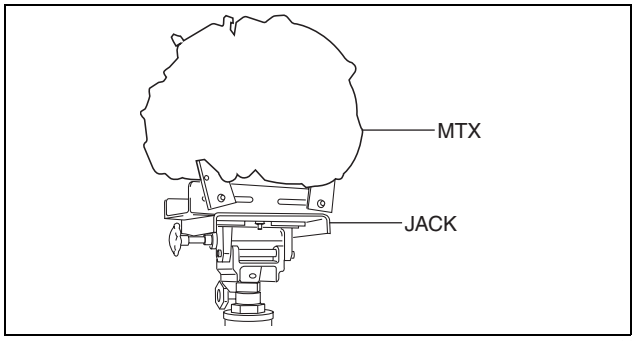
Warning
- **Remove the MTX carefully, holding it steady. If the MTX falls it could be damaged or cause injury.**

1. Adjust the **SST** and lean the engine toward the MTX.



ac5uuw00000740

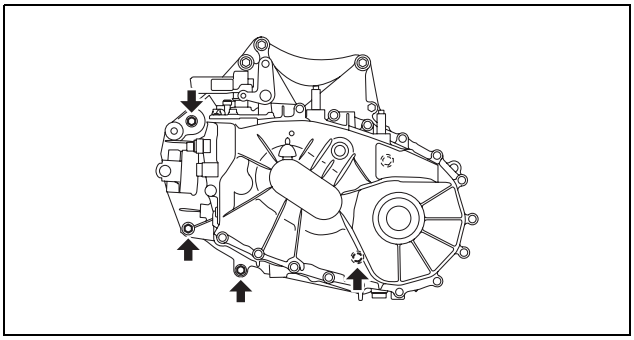
2. Support the MTX on a jack.



ac5uuw00000744

MANUAL TRANSAXLE [C66M-R, C66MX-R]

3. Remove the transaxle mounting bolts (lower side).
4. Remove the MTX.

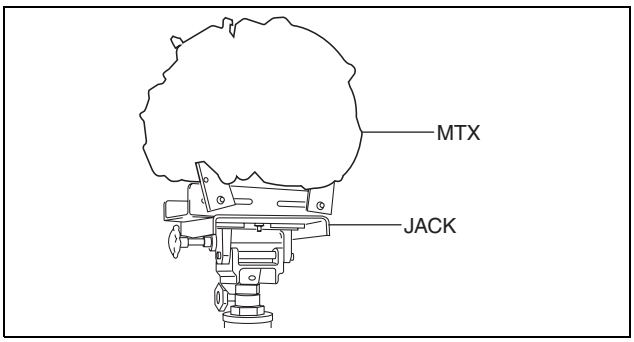


ac5uuw00000745

Installation

Warning
- **Install the MTX carefully, holding it steady. If the MTX falls it could be damaged or cause injury.**

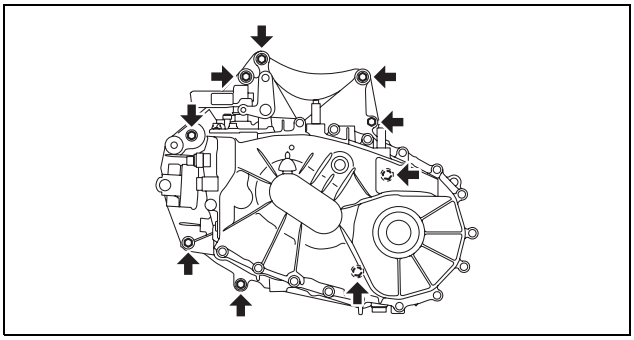
1. Set the MTX on a jack and lift into place.



ac5uuw00000744

2. Install the MTX to the engine, and tighten the Transaxle mounting bolts.

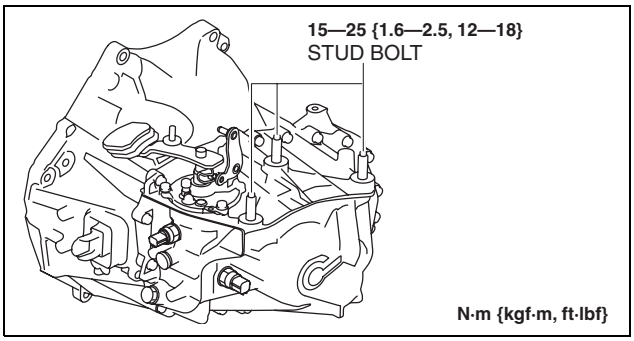
Tightening torque
38—52 N·m {3.9—5.3 kgf·m, 29—38 ft·lbf}



am3uuw0000822

3. Tighten the stud bolts for the MTX.

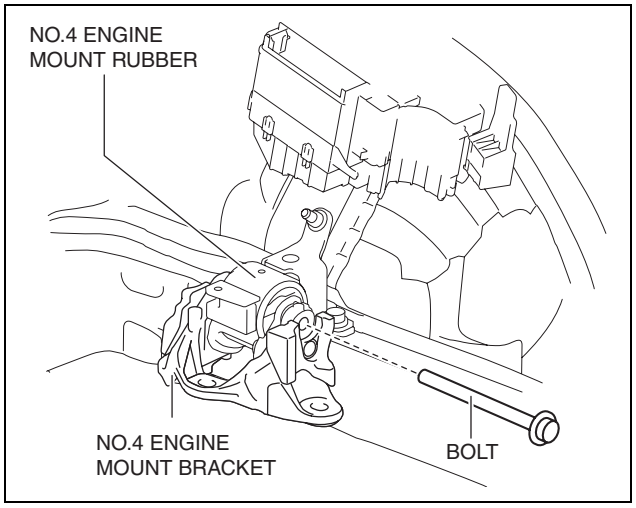
Note
- If the No.4 engine mount bracket nut is loosened, tighten the stud bolts for the MTX because they may be loosened.



ac5wzw0000284

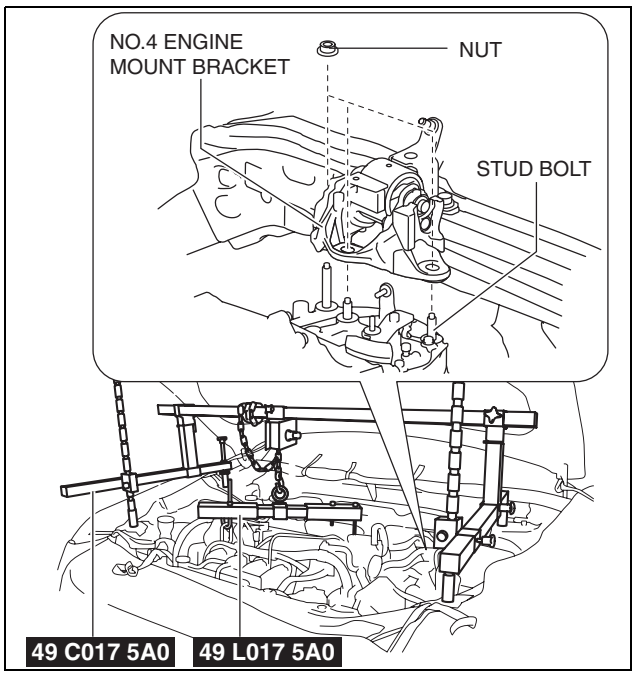
MANUAL TRANSAXLE [C66M-R, C66MX-R]

4. Install the No.4 engine mount bracket to No.4 engine mount rubber, and temporarily tighten the installation bolt.



ac5uuw00000747

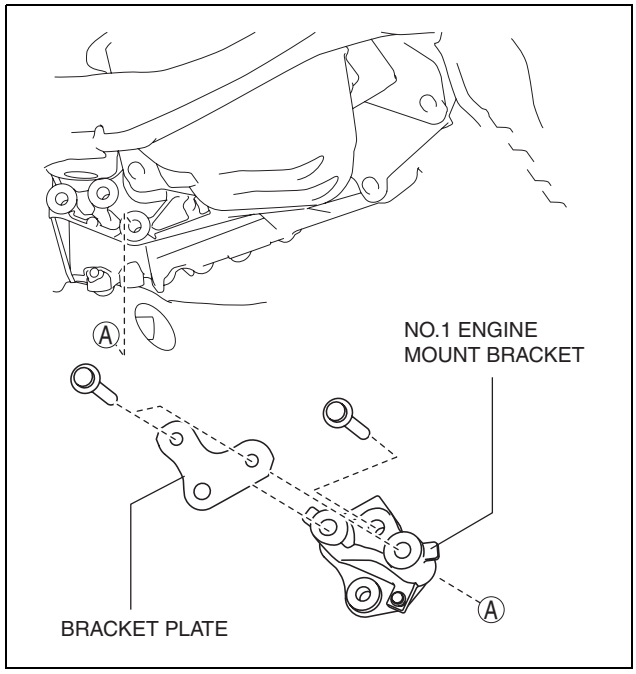
5. Pull up the MTX using the **SST**s, pass the MTX stud bolts through the No.4 engine mount bracket, and temporarily tighten the No.4 engine mount installation nuts.



ac5uuw00000748

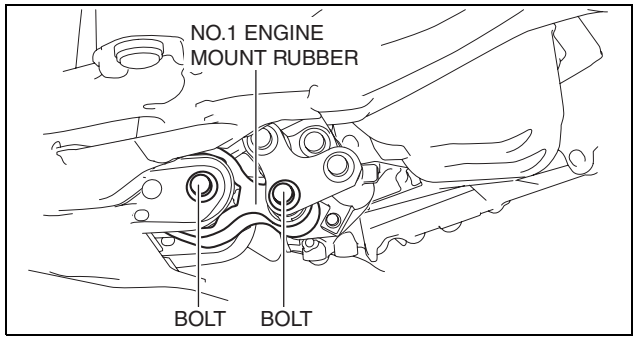
MANUAL TRANSAXLE [C66M-R, C66MX-R]

6. Install the No.1 engine mount bracket and bracket plate to the MTX, and temporarily tighten the installation bolts.
7. Install the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)



ac5uuw00000735

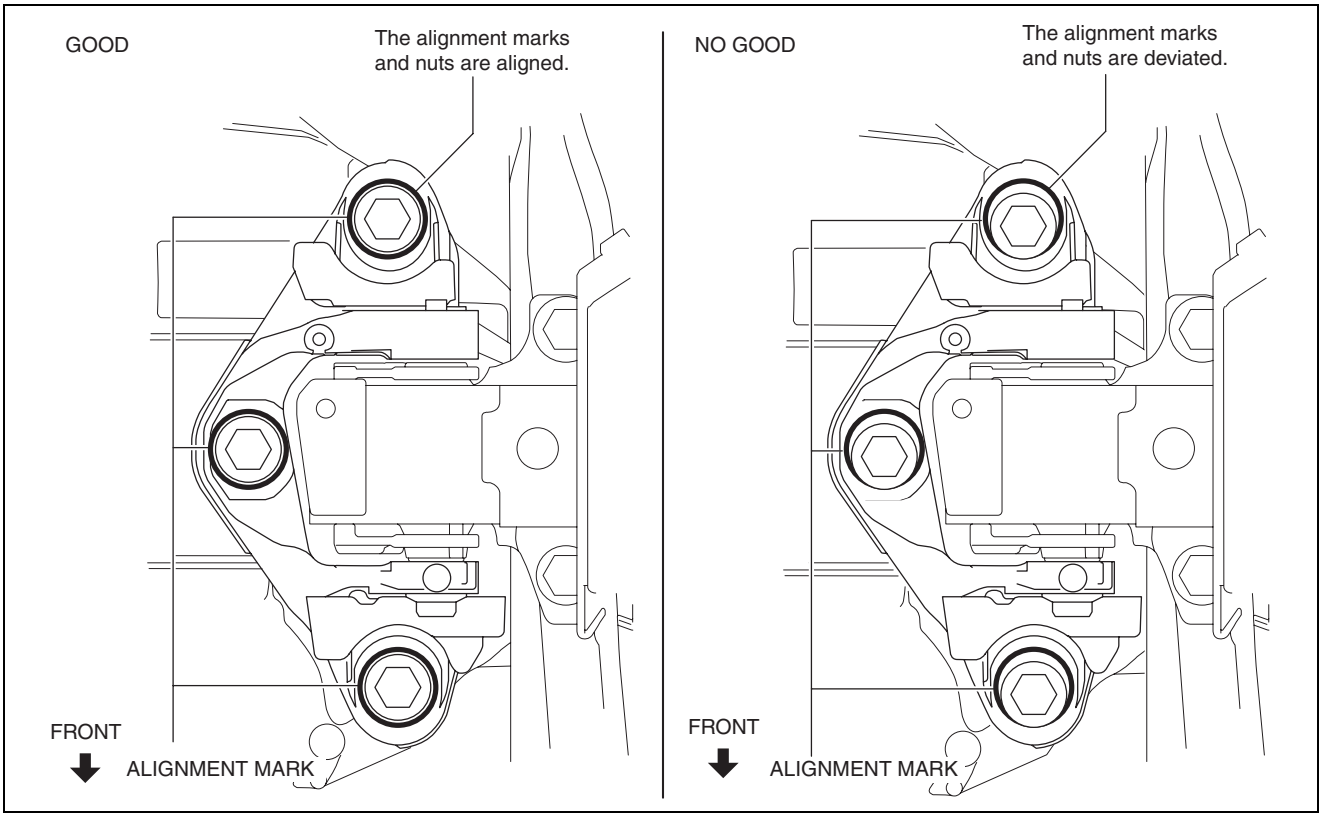
8. Temporarily tighten the No.1 engine mount rubber installation bolts.



ac5uuw00000749

MANUAL TRANSAXLE [C66M-R, C66MX-R]

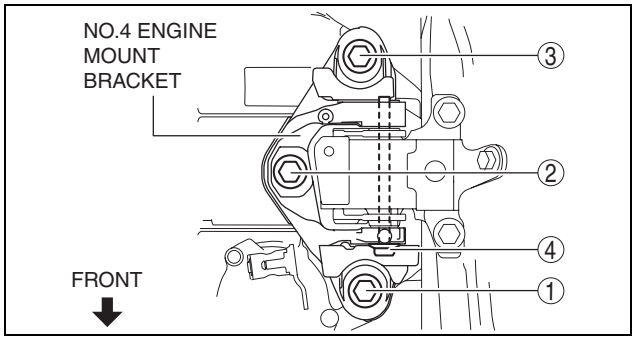
9. Align the alignment marks on the No.4 engine mount bracket and nuts, and temporarily tighten the nuts shown in the figure.



ac5uuw00000750

10. Tighten the No.4 engine mount bracket installation nuts and bolt in the order shown in the figure.

No.	Tightening torque
1, 2, 3	92—116 N·m {9.4—11 kgf·m, 68—85 ft·lbf}
4	81—99 N·m {8.3—10 kgf·m, 60—73 ft·lbf}

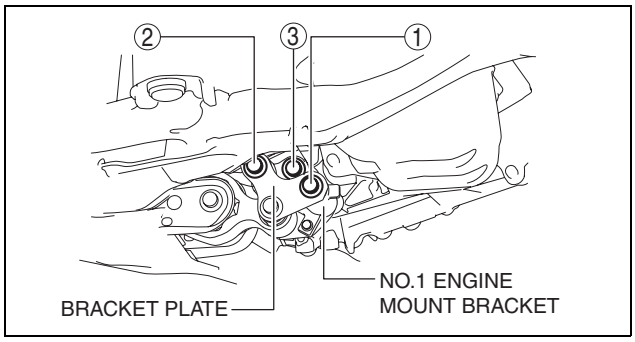


ac5uuw00000751

11. Tighten the No.1 engine mount bracket and bracket plate installation bolts in the order shown in the figure.

Tightening torque
84—98 N·m {8.6—9.9 kgf·m, 62—72 ft·lbf}

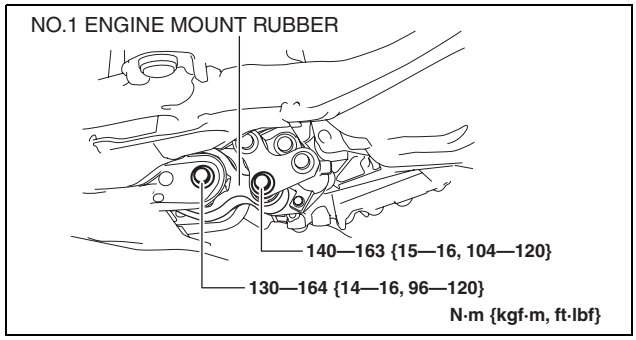
12. Remove the **SST (49 C017 5A0)**.



ac5uuw00000752

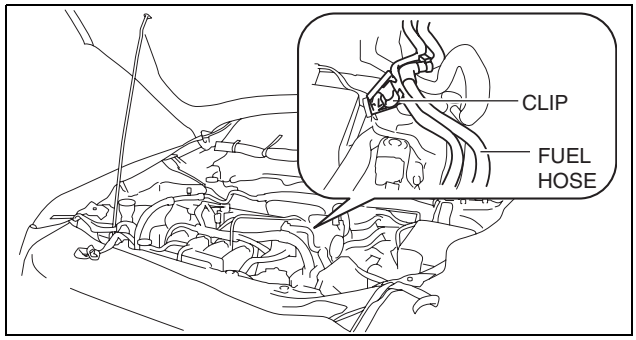
MANUAL TRANSAXLE [C66M-R, C66MX-R]

13. Tighten the No.1 engine mount rubber installation bolts.



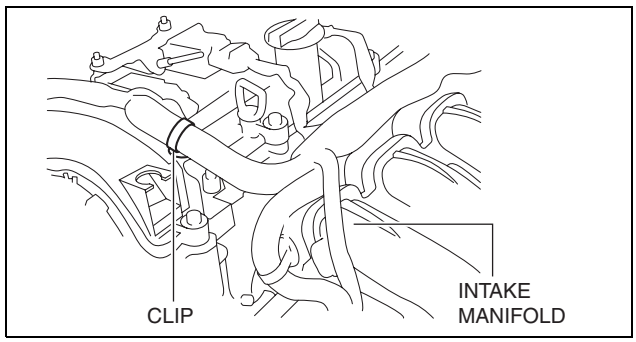
ac5uuw00000753

14. Connect and/or Install the following parts to the underside of the vehicle.
    (1) Install the starter. (See 01-19A-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
    (2) Install the clutch release cylinder to the MTX. (See 05-10A-24 CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
15. Connect and/or Install the following parts related to the suspension and axle.
    (1) Connect the drive shaft (RH) to the MTX. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
    (2) Connect the drive shaft (LH) to the MTX. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
    (3) Connect the front lower arms to the steering knuckles. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
    (4) Connect the stabilizer control links to the stabilizer. (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)
    (5) Connect the tie-rod end ball joints to the steering knuckles. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
    (6) Connect the ABS wheel-speed sensors to the steering knuckles. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
    (7) Connect the clip securing the brake hose to the shock absorber. (See 04-11-30 BRAKE HOSE (FRONT) REMOVAL/INSTALLATION.)
    (8) Install the front tires. (See 03-10-1 GENERAL PROCEDURES (FRONT AND REAR AXLES).)
16. Connect and/or install the following parts in the engine compartment.
    (1) Install the fuel hose to the clip shown in the figure.



ac5uuw00000739

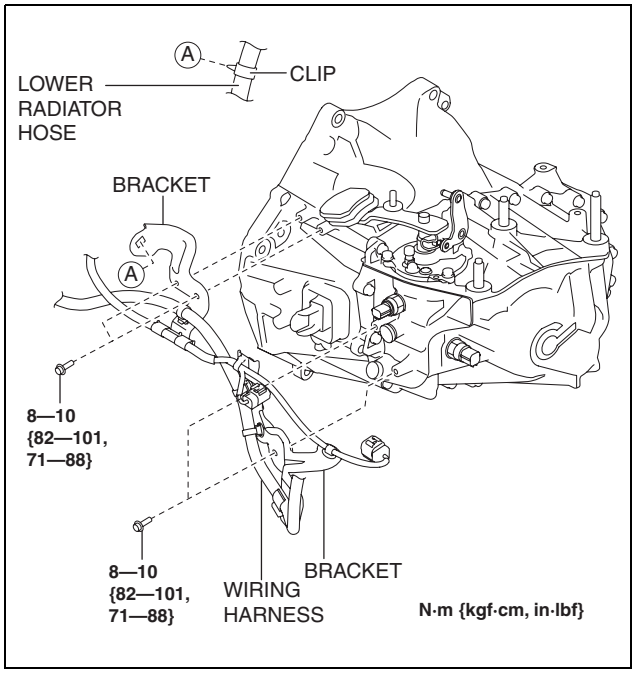
    (2) Connect the clip shown in the figure.
    (3) Install the cowl panel. (See 09-10-41 COWL PANEL REMOVAL/INSTALLATION.)
    (4) Install the cowl grille. (See 09-16-3 COWL GRILLE REMOVAL/INSTALLATION.)
    (5) Install the windshield wiper arm and blade. (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)



am3uuw0000822

MANUAL TRANSAXLE [C66M-R, C66MX-R]

(6) Install the lower radiator hose clip and bracket to the MTX.
(7) Connect the back-up light switch connector.(See 05-15A-3 BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
(8) Connect the neutral switch connector. (See 05-15A-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)



ac5wzw0000284

(9) Install the bracket to the MTX and the exhaust manifold using the following procedure:
1) Tighten the bolt A.

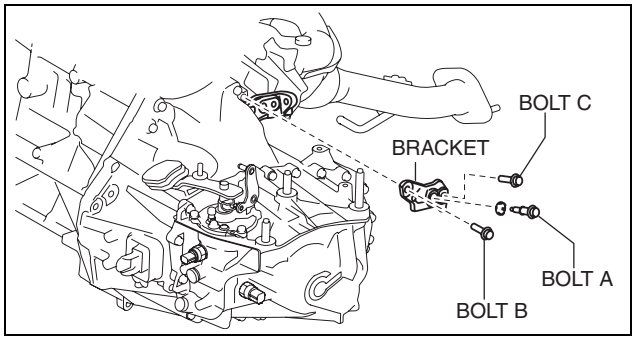
Tightening torque
19—25 N·m {2.0—2.5 kgf·m, 15—18 ft·lbf}

2) Temporarily tighten the bolt B and C.
3) Tighten the bolt B.

Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

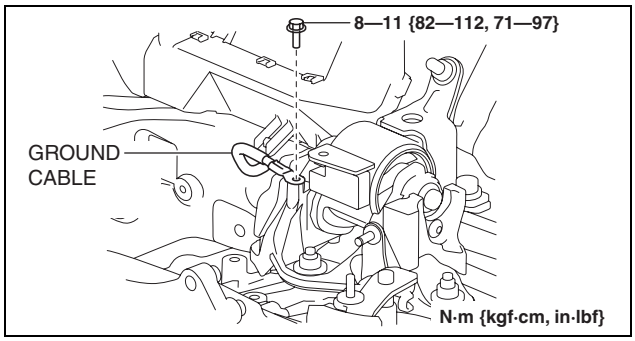
4) Tighten the bolt C.

Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}



ac5wzw0000245

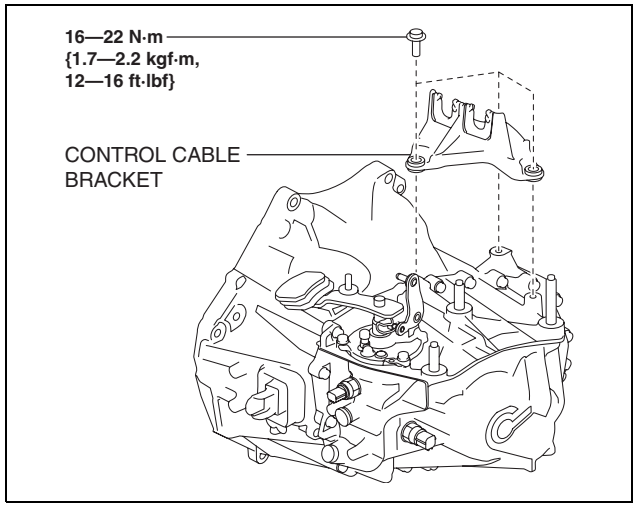
(10) Connect the ground cable to the No.4 engine mount bracket.



ac5uuw00000756

MANUAL TRANSAXLE [C66M-R, C66MX-R]

(11)Install the control cable bracket to the MTX.
(12)Connect the control cable to the MTX. (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
(13)Install the battery component. (ex: battery, battery tray and PCM component) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
(14)Install the air cleaner component. (ex: air cleaner, air hose) (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



ac5wzw0000284

17. Install the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
18. Install the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
19. Add the specified amount of specified transaxle oil. (See 05-15A-2 MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R, C66MX-R].)
20. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
21. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
22. Install the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
23. If the MTX is overhauled, perform the “INSPECTION AFTER MANUAL TRANSAXLE OVERHAUL”. (See 05-15A-31 INSPECTION AFTER MANUAL TRANSAXLE OVERHAUL [C66M-R, C66MX-R].)

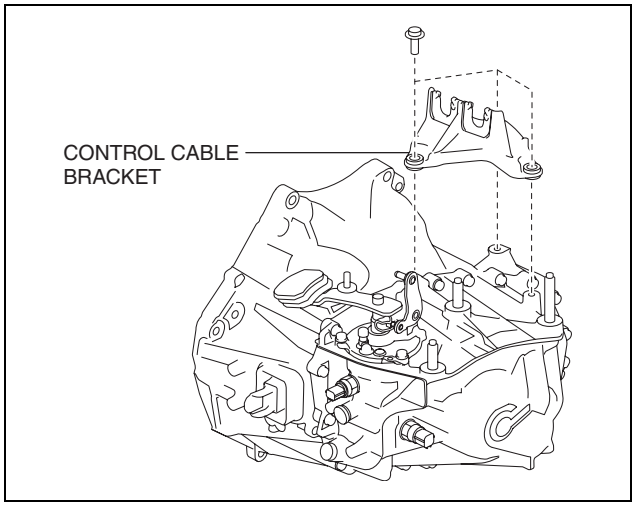
MANUAL TRANSAXLE [C66M-R, C66MX-R]

MANUAL TRANSAXLE REMOVAL/INSTALLATION [C66MX-R]

id0515ma1600m9

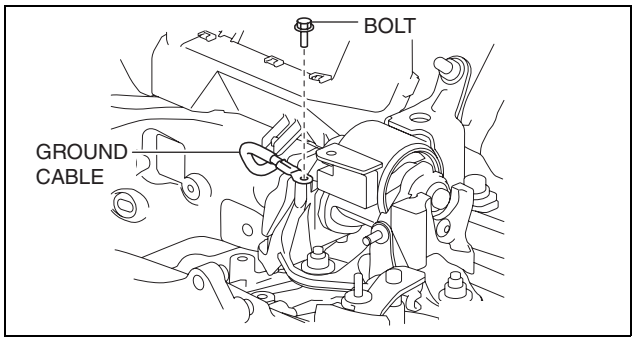
Removal

1. Disconnect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
2. Remove the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
4. Remove the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
5. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
6. Drain the manual transaxle oil. (See MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R].)
7. Disconnect and/or remove the following parts in the engine compartment.
   (1) Remove the air cleaner component. (ex: air cleaner, air hose) (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (2) Remove the battery component. (ex: battery, battery tray and PCM component) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (3) Disconnect the control cable from MTX. (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
   (4) Remove the control cable bracket from MTX.



ac5wzw0000284

   (5) Remove the bolt shown in the figure, and set the ground cable aside.
   (6) Remove the insulator. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (7) Disconnect the neutral switch connector from MTX. (See 05-15A-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
   (8) Disconnect the back-up light switch connector from MTX. (See 05-15A-3 BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)



ac5uuw00000732

MANUAL TRANSAXLE [C66M-R, C66MX-R]

(9) Disconnect the lower radiator hose clip and the brackets from the MTX, and set the wiring harness aside.

8. Disconnect and/or remove the following parts related to the suspension and axle.
   (1) Remove the front tires. (See 03-10-1 GENERAL PROCEDURES (FRONT AND REAR AXLES).)
   (2) Disconnect the clip securing the brake hose from the shock absorber. (See 04-11-30 BRAKE HOSE (FRONT) REMOVAL/INSTALLATION.)
   (3) Disconnect the ABS wheel-speed sensors from the steering knuckles. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
   (4) Disconnect the tie-rod end ball joints from the steering knuckles. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
   (5) Disconnect the stabilizer control links from the stabilizer. (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)
   (6) Disconnect the front lower arms from the steering knuckles. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
   (7) Disconnect the drive shaft (LH) from the MTX. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
   (8) Remove the drive shaft (RH). (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
9. Disconnect and/or remove the following parts from the underside of the vehicle.
   (1) Remove the clutch release cylinder with the clutch pipe still connected and set it out of the way. (See 05-10A-24 CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
   (2) Remove the starter. (See 01-19A-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (3) Remove the brace bar. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (4) Remove the tunnel member. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].).
   (5) Remove the propeller shaft. (See 03-15-2 PROPELLER SHAFT REMOVAL/INSTALLATION.)
   (6) Remove the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
   (7) Remove the exhaust manifold. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
   (8) Remove the bracket from the MTX.
   (9) Remove the transfer. (See 03-16A-4 TRANSFER REMOVAL/INSTALLATION [C66MX-R].)

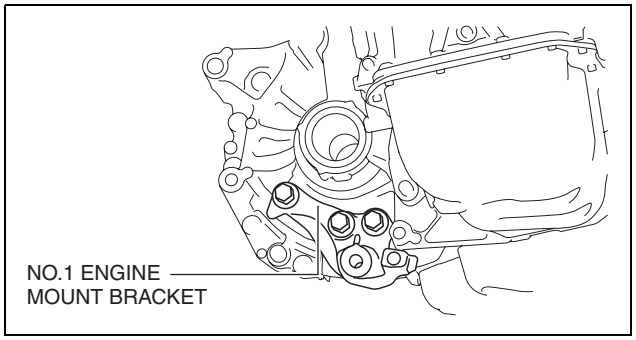
ac5wzw0000154

05

MANUAL TRANSAXLE [C66M-R, C66MX-R]

(10)Remove the No.1 engine mount bracket from the MTX.

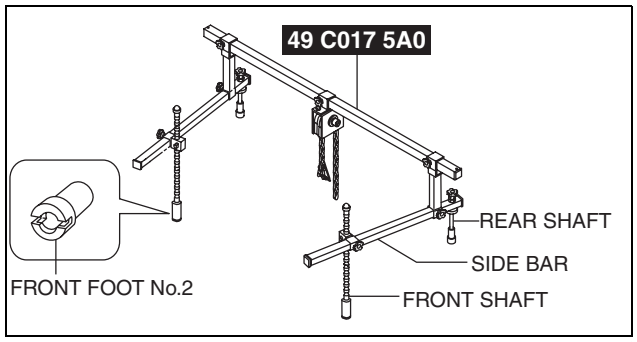
10. Install the **SST** using the following procedure:



ac5wzw0000130

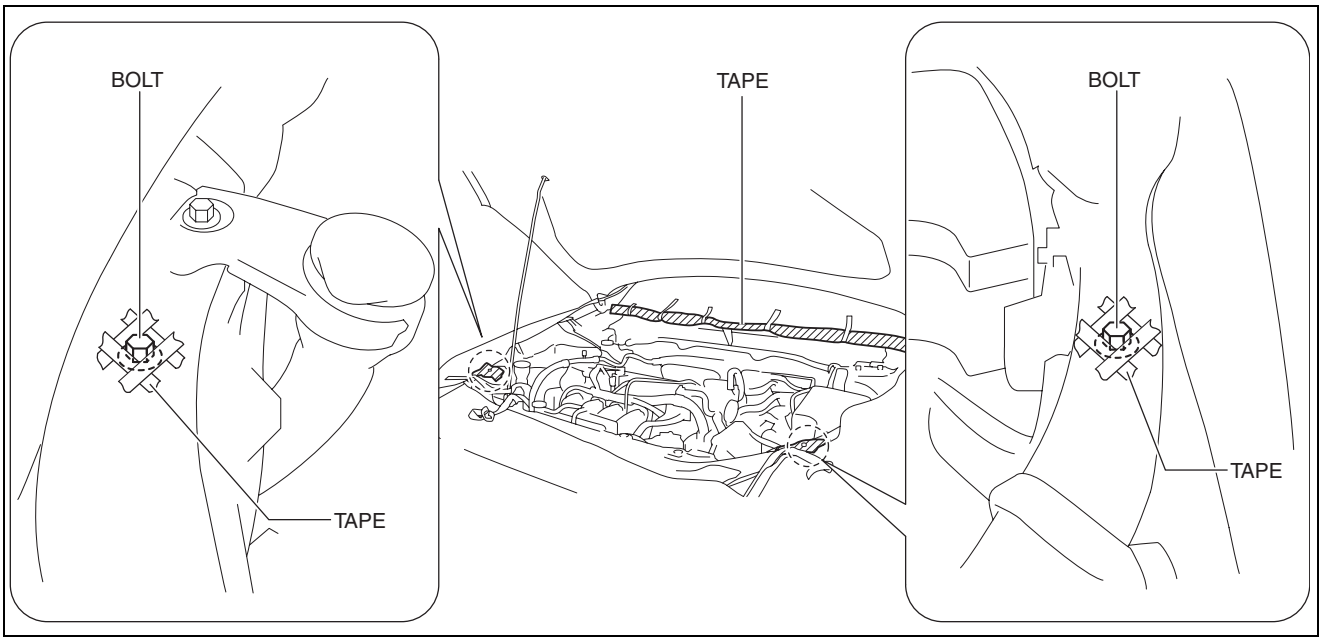
Caution

- **Refer to the SST instruction manual for the basic handing procedure.**



am3uuw0000884

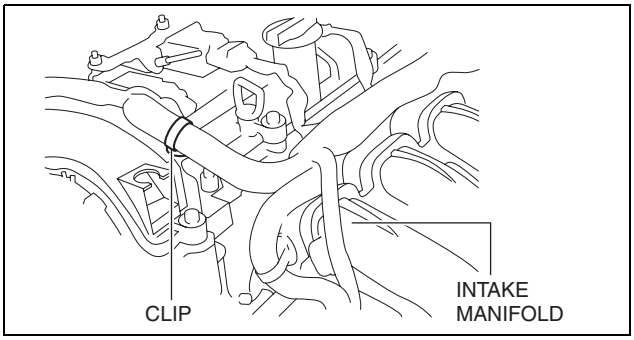
(1) Install one front foot No.2 to each of the left and right front shafts of the **SST**.
(2) Remove the windshield wiper arm and blade. (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
(3) Remove the cowl grille. (See 09-16-3 COWL GRILLE REMOVAL/INSTALLATION.)
(4) Remove the cowl panel. (See 09-10-41 COWL PANEL REMOVAL/INSTALLATION.)
(5) Protect the positions shown in the figure using tape.



ac5wzw0000285

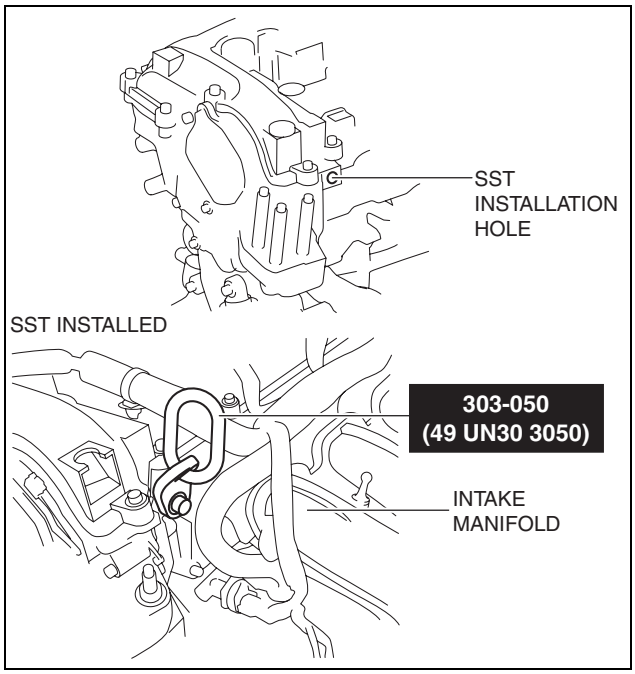
MANUAL TRANSAXLE [C66M-R, C66MX-R]

(6) To enable to install the **SST**, disconnect the clip shown in the figure and set the wiring harness aside.
(7) Install the **SST** using **part number 99794 1025** or an **M10** × **1.25**, length **25 mm {0.98 in}** bolt as shown in the figure.



am3uuw0000822

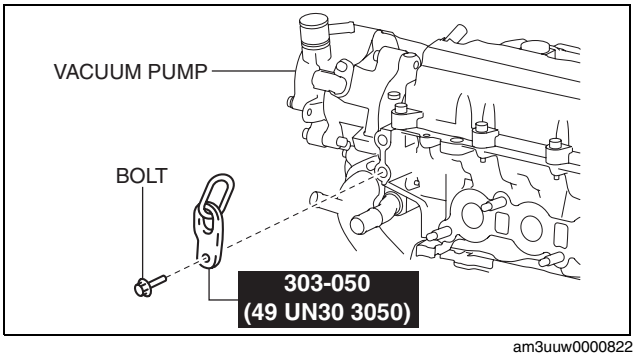
Engine front side



Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

Engine rear side

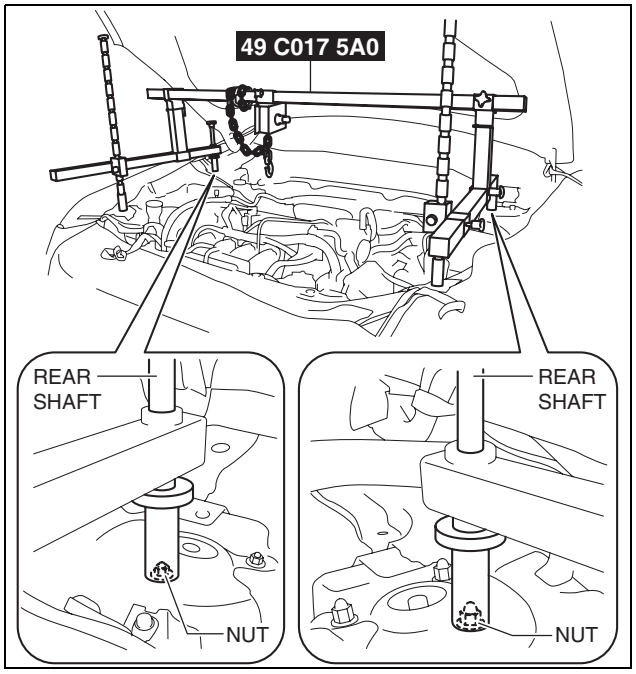
Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}



am3uuw0000822

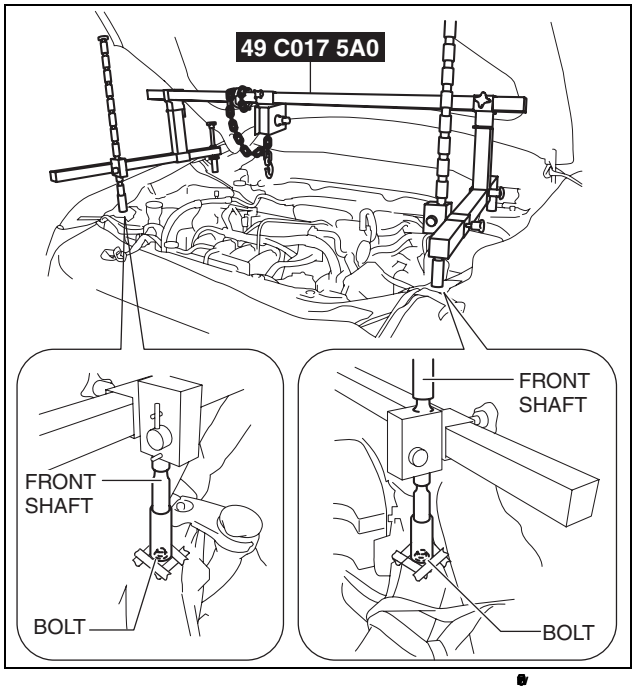
MANUAL TRANSAXLE [C66M-R, C66MX-R]

(8) As shown in the figure, set the rear shafts of the **SST** to the left and right shock absorber nuts.

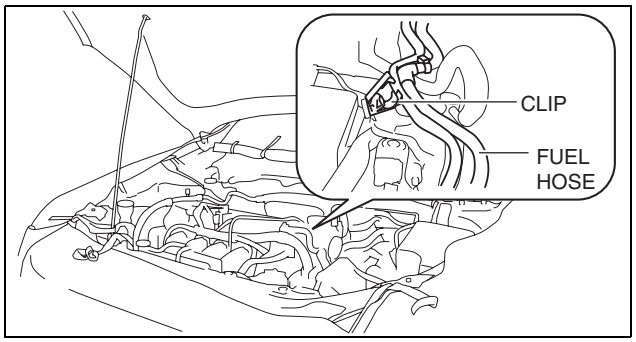


ac5uuw00000737

(9) As shown in the figure, set the front shafts of the **SST** to the left and right bolts.



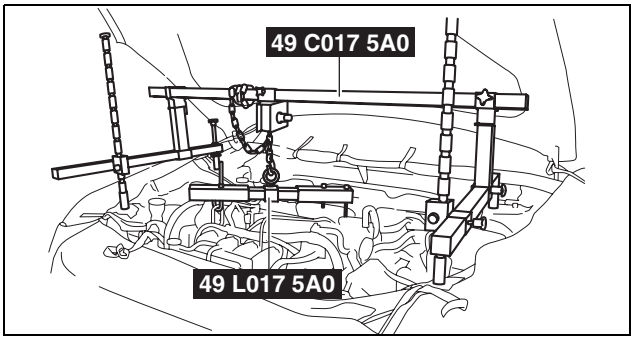
(10) When assembling the **SST (49 L017 5A0)**, disconnect the fuel hose from the clip shown in the figure to prevent interference between the fuel hose and **SST**.



ac5uuw00000739

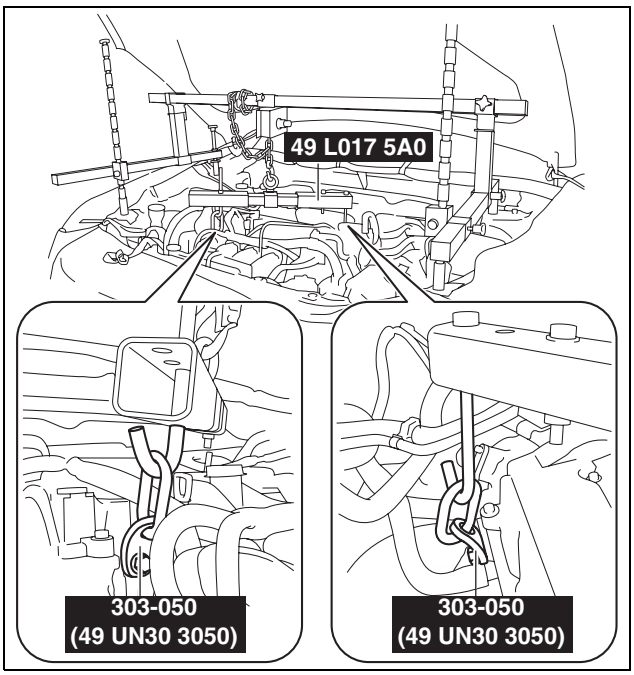
MANUAL TRANSAXLE [C66M-R, C66MX-R]

(11)Install the **SST (49 L017 5A0)** to the **SST (49 C017 5A0)** as shown in the figure.



ac5uuw00000740

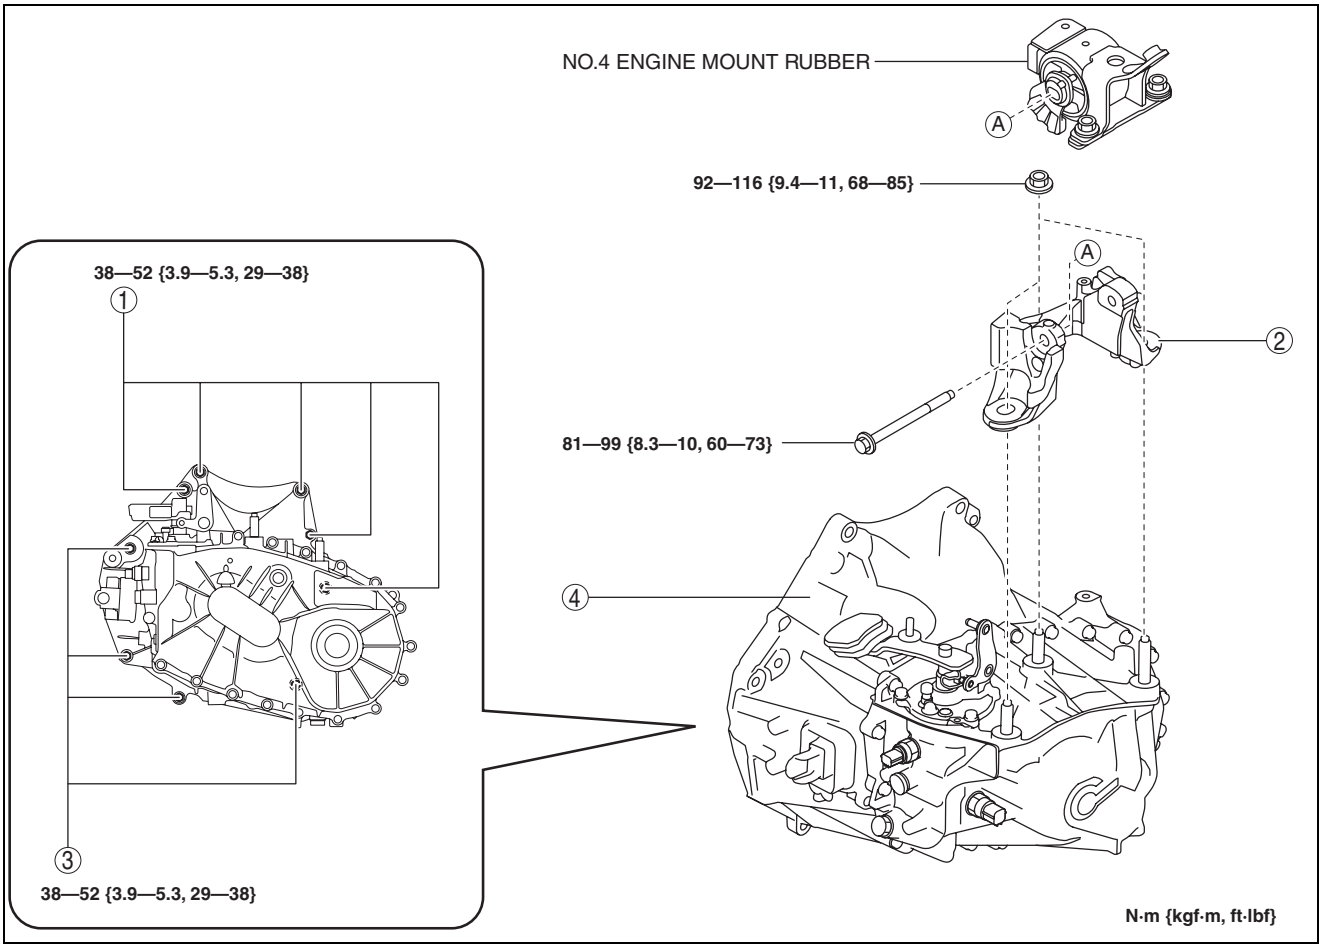
(12)Install the **SST (49 L017 5A0)** to the **SST (49 UN30 3050)** with the hook of the **SST (49 L017 5A0)** facing outward.
(13)Adjust the height of the left and right side bars so that they are leveled, then tighten each part of the **SST**.
(14)Apply tension to the chain to secure the engine.



ac5uuw00000741

MANUAL TRANSAXLE [C66M-R, C66MX-R]

11. Remove in the order indicated in the table.



ac5wzw0000285

1	Transaxle mounting bolt (upper side)
2	No.4 engine mount bracket (See 05-15A-25 No.4 Engine mount bracket removal note.)
3	Transaxle mounting bolt (lower side) (See 05-15A-25 Transaxle mounting bolt removal note.)
4	MTX

MANUAL TRANSAXLE [C66M-R, C66MX-R]

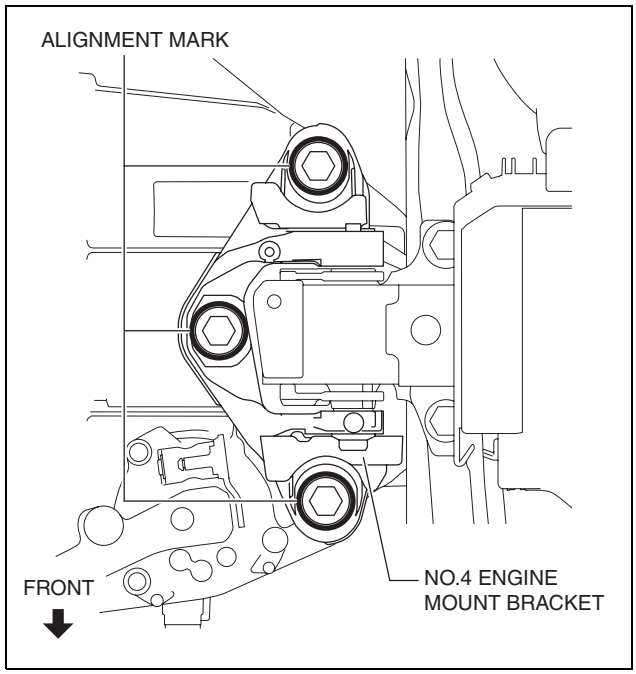
No.4 Engine mount bracket removal note

Caution
- **A slot has been adopted for the No.4 engine mount bracket installation hole. If the No.4 engine mount bracket is deviated from the original position when installing the No.4 engine mount, engine noise or vibration could increase. When removing the No.4 engine mount, place alignment marks on the No.4 engine mount bracket so that they can be assembled to the same positions as before removal.**

1. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

   Note
   - Paint so that the outline of the nut is framed on the bracket side.

2. Remove the No.4 engine mount bracket.

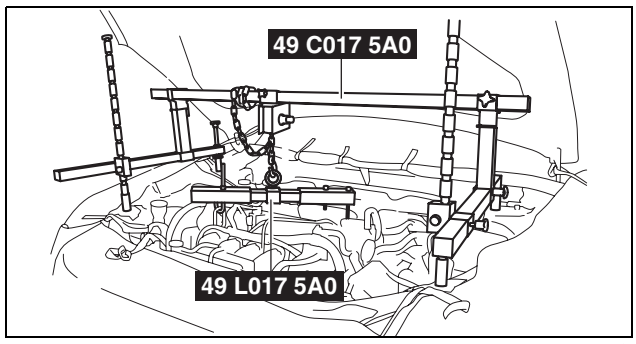


ac5uuw00000743

Transaxle mounting bolt removal note

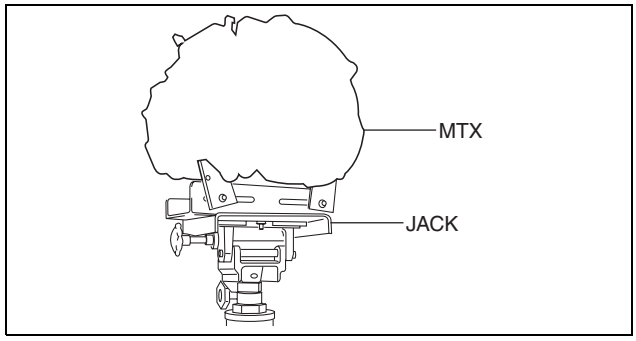
Warning
- **Remove the MTX carefully, holding it steady. If the MTX falls it could be damaged or cause injury.**

1. Adjust the **SST** and lean the engine toward the MTX.



ac5uuw00000740

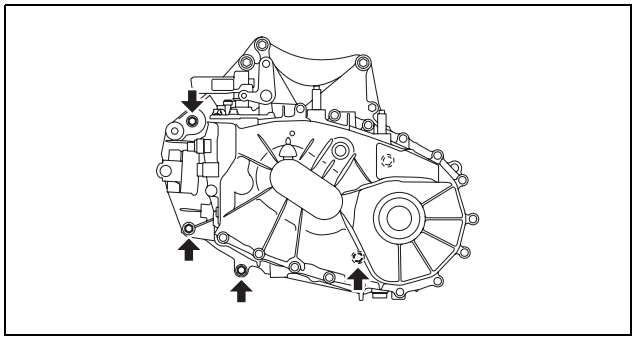
2. Support the MTX on a jack.



ac5uuw00000744

MANUAL TRANSAXLE [C66M-R, C66MX-R]

3. Remove the transaxle mounting bolts (lower side).
4. Remove the MTX.

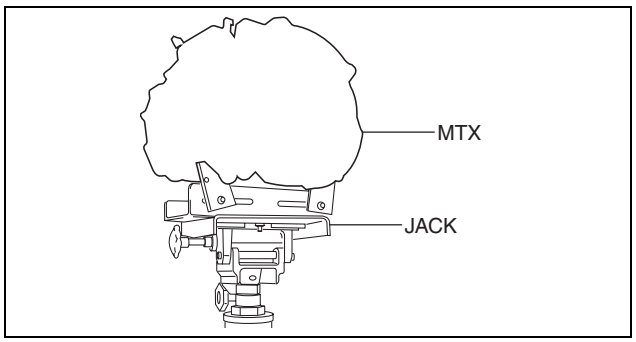


ac5uuw00000745

Installation

Warning
- **Install the MTX carefully, holding it steady. If the MTX falls it could be damaged or cause injury.**

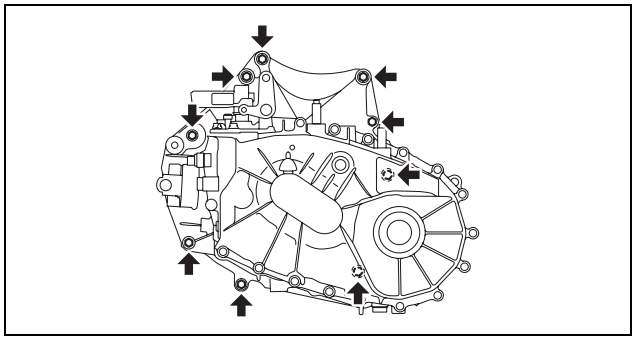
1. Set the MTX on a jack and lift into place.



ac5uuw00000744

2. Install the MTX to the engine, and tighten the Transaxle mounting bolts.

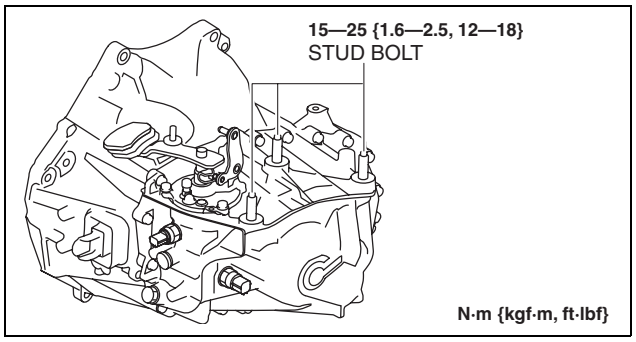
Tightening torque
38—52 N·m {3.9—5.3 kgf·m, 29—38 ft·lbf}



am3uuw0000822

3. Tighten the stud bolts for the MTX.

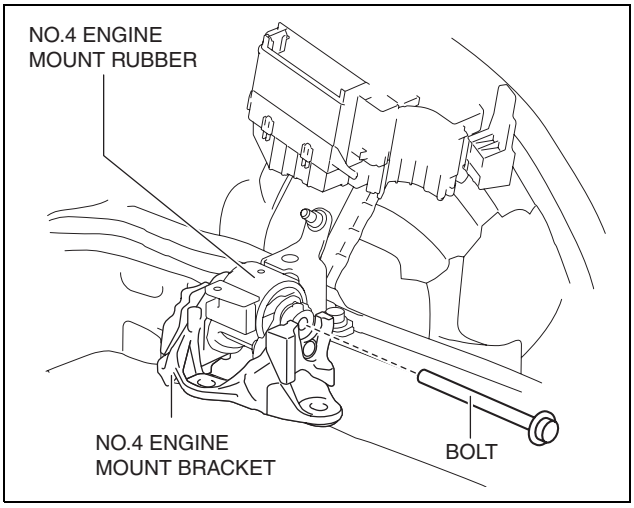
Note
- If the No.4 engine mount bracket nut is loosened, tighten the stud bolts for the MTX because they may be loosened.



ac5wzw0000285

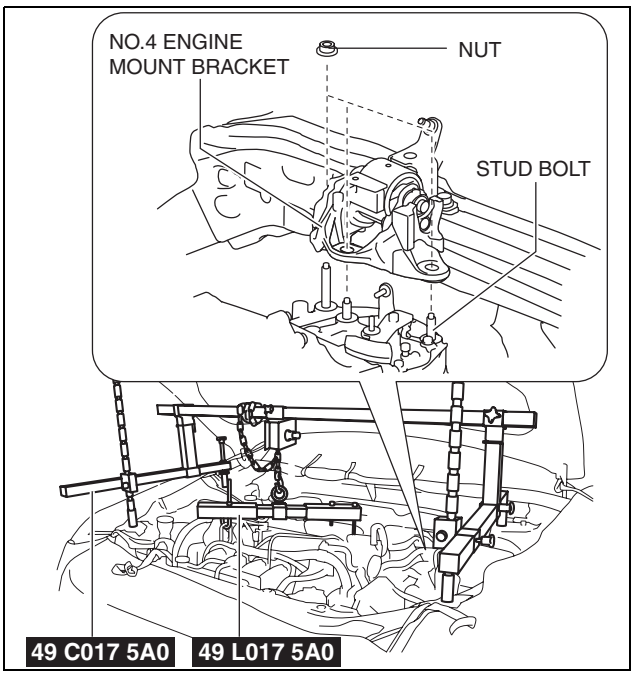
MANUAL TRANSAXLE [C66M-R, C66MX-R]

4. Install the No.4 engine mount bracket to No.4 engine mount rubber, and temporarily tighten the installation bolt.



ac5uuw00000747

5. Pull up the MTX using the **SST**s, pass the MTX stud bolts through the No.4 engine mount bracket, and temporarily tighten the No.4 engine mount installation nuts.

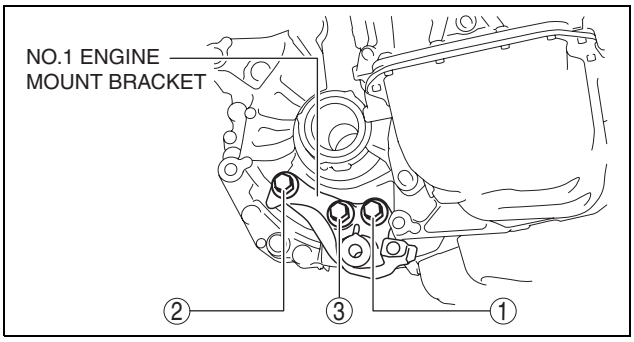


ac5uuw00000748

6. Install the No.1 engine mount bracket and tighten the bolts in the order shown in the figure.

   Tightening torque
   131—153 N·m {14—15 kgf·m, 97—112 ft·lbf}

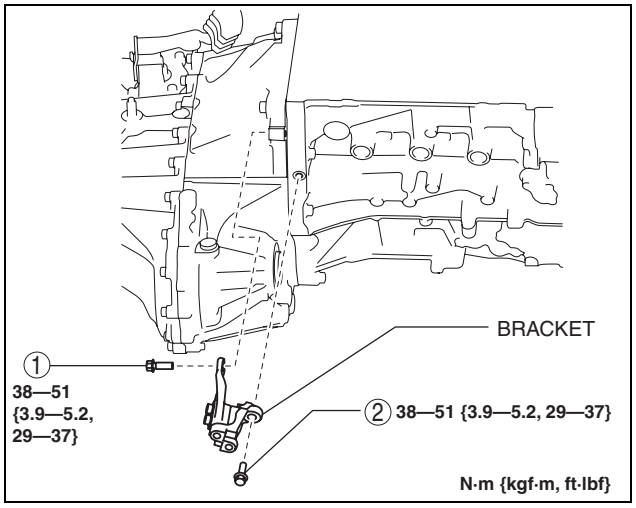
7. Install the transfer. (See 03-16A-4 TRANSFER REMOVAL/INSTALLATION [C66MX-R].)



ac5wzw0000130

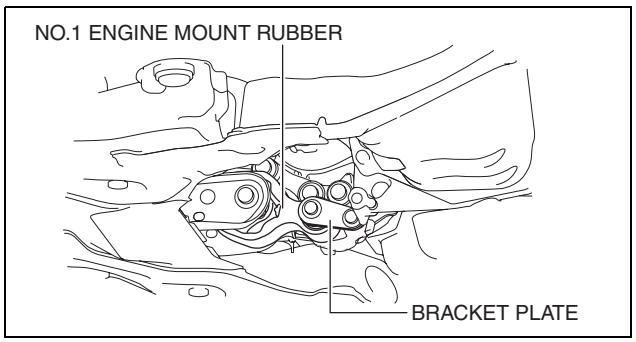
MANUAL TRANSAXLE [C66M-R, C66MX-R]

8. Install the bracket to the MTX and tighten the bolts in the order shown in the figure.
9. Install the exhaust manifold. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
10. Install the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)

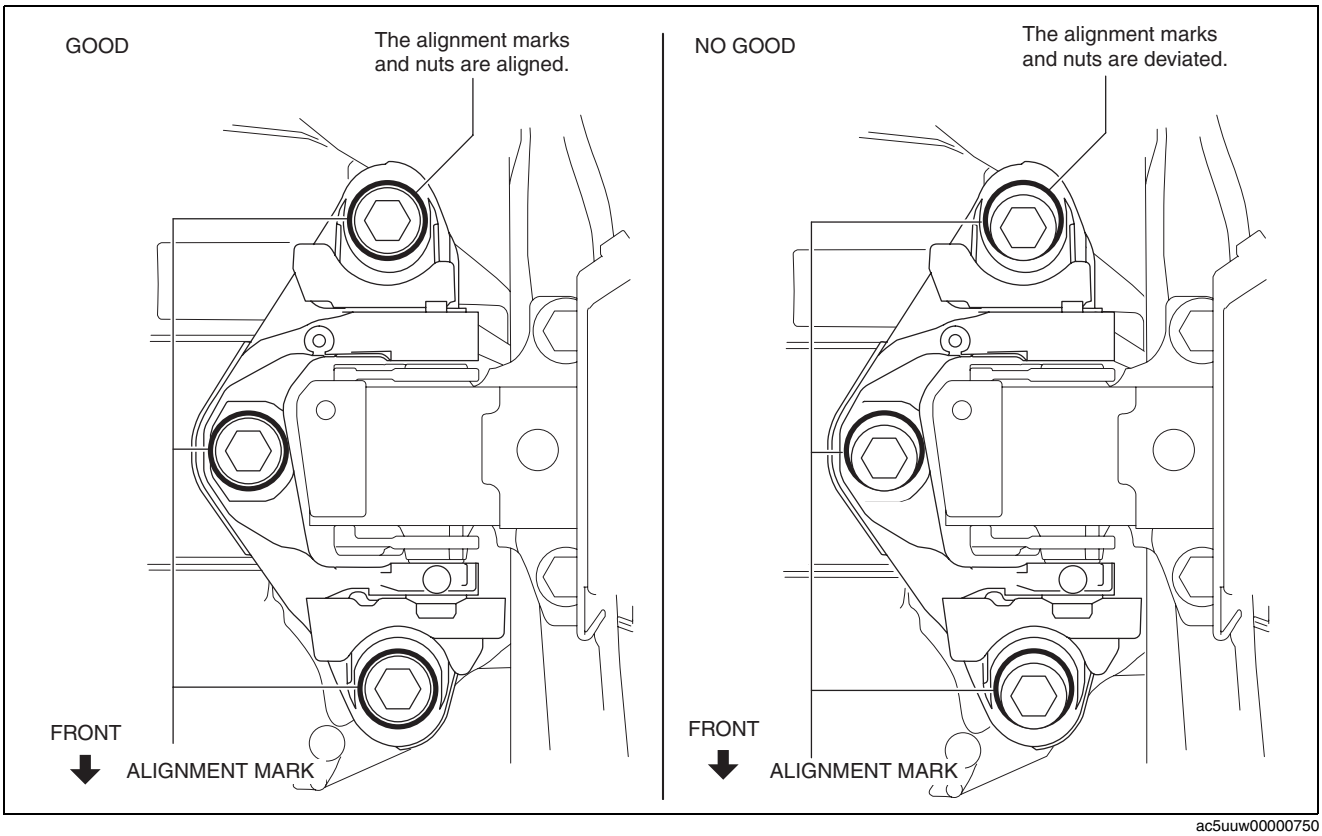


ac5wzw0000463

11. Install the bracket plate, and temporarily tighten the No.1 engine mount rubber installation bolts.
12. Align the alignment marks on the No.4 engine mount bracket and nuts, and temporarily tighten the nuts shown in the figure.



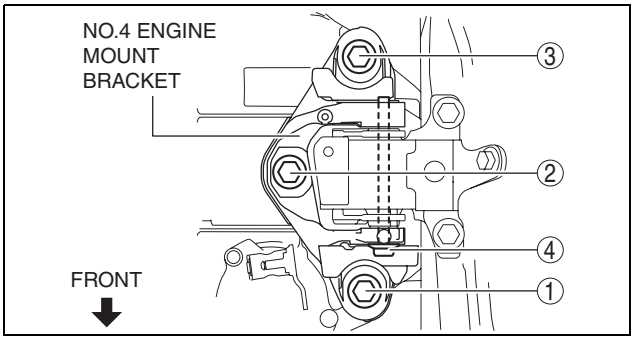
ac5wzw0000130



ac5uuw00000750

MANUAL TRANSAXLE [C66M-R, C66MX-R]

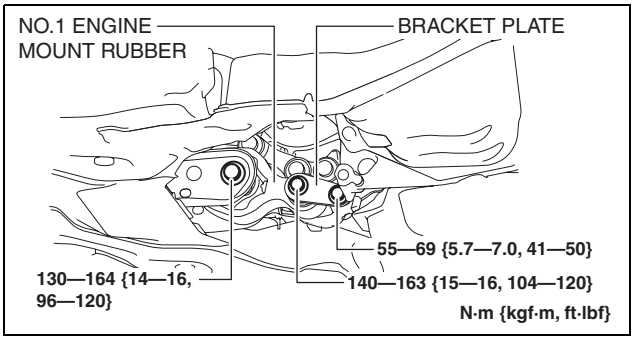
13. Tighten the No.4 engine mount bracket installation nuts and bolt in the order shown in the figure.



ac5wzw0000130

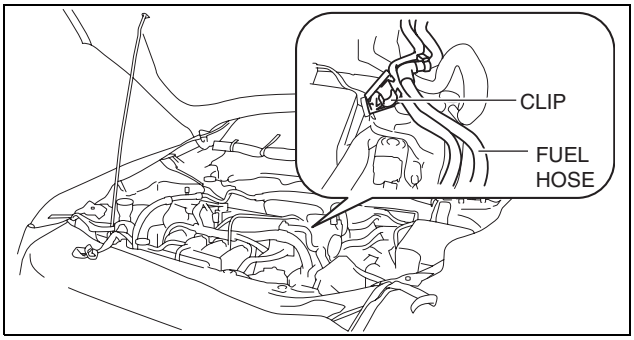
No.	Tightening torque
1, 2, 3	92—116 N·m {9.4—11 kgf·m, 68—85 ft·lbf}
4	81—99 N·m {8.3—10 kgf·m, 60—73 ft·lbf}

14. Remove the **SST (49 C017 5A0)**.
15. Install the propeller shaft. (See 03-15-2 PROPELLER SHAFT REMOVAL/INSTALLATION.)
16. Tighten the No.1 engine mount rubber installation bolts.
17. Connect and/or Install the following parts to the underside of the vehicle.
    (1) Install the tunnel member. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].).
    (2) Install the brace bar. (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
    (3) Install the starter. (See 01-19A-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
    (4) Install the clutch release cylinder to the MTX. (See 05-10A-24 CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [C66M-R, C66MX-R].)



ac5wzw0000131

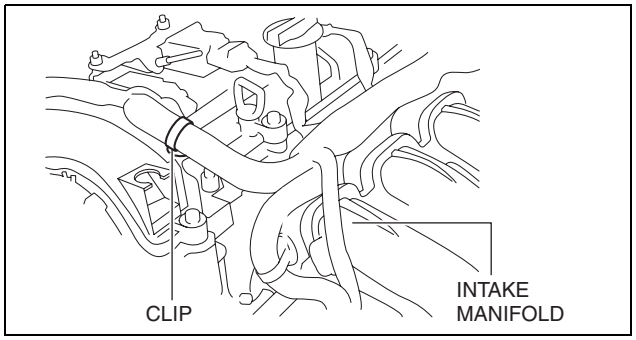
18. Connect and/or Install the following parts related to the suspension and axle.
    (1) Install the drive shaft (RH). (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
    (2) Connect the drive shaft (LH) to the MTX. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
    (3) Connect the front lower arms to the steering knuckles. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
    (4) Connect the stabilizer control links to the stabilizer. (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)
    (5) Connect the tie-rod end ball joints to the steering knuckles. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
    (6) Connect the ABS wheel-speed sensors to the steering knuckles. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
    (7) Connect the clip securing the brake hose to the shock absorber. (See 04-11-30 BRAKE HOSE (FRONT) REMOVAL/INSTALLATION.)
    (8) Install the front tires. (See 03-10-1 GENERAL PROCEDURES (FRONT AND REAR AXLES).)
19. Connect and/or install the following parts in the engine compartment.
    (1) Install the fuel hose to the clip shown in the figure.



ac5uuw00000739

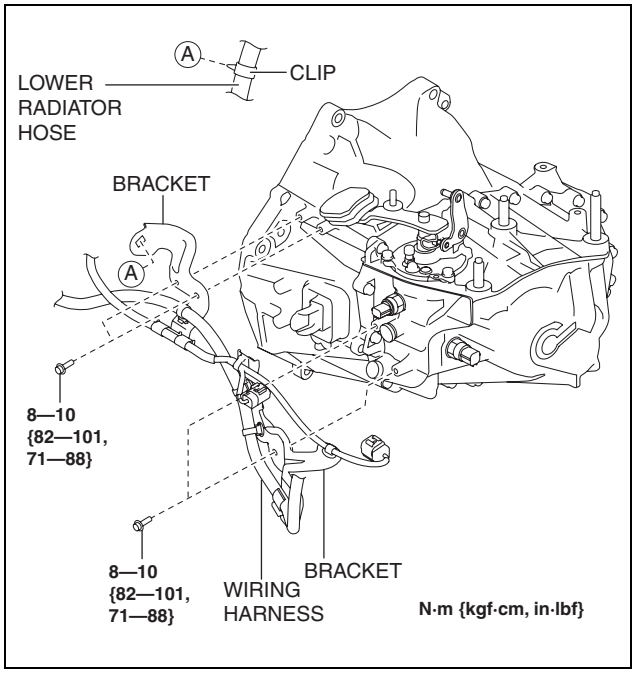
MANUAL TRANSAXLE [C66M-R, C66MX-R]

(2) Connect the clip shown in the figure.
(3) Install the cowl panel. (See 09-10-41 COWL PANEL REMOVAL/INSTALLATION.)
(4) Install the cowl grille. (See 09-16-3 COWL GRILLE REMOVAL/INSTALLATION.)
(5) Install the windshield wiper arm and blade. (See 09-19-3 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)



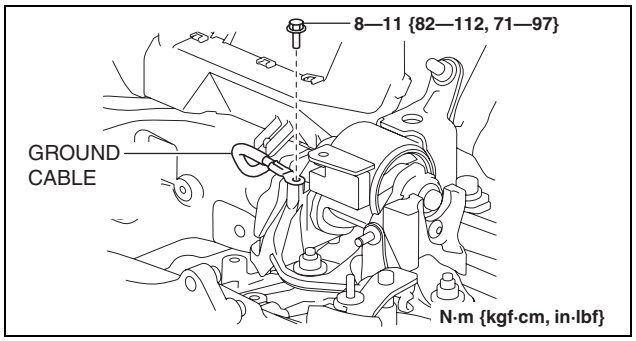
am3uuw0000822

(6) Install the lower radiator hose clip and bracket to the MTX.
(7) Connect the back-up light switch connector. (See 05-15A-3 BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
(8) Connect the neutral switch connector. (See 05-15A-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [C66M-R, C66MX-R].)



ac5wzw0000285

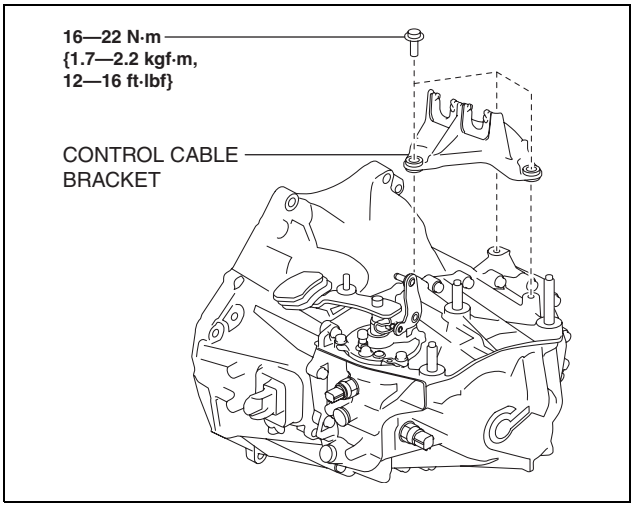
(9) Connect the ground cable to the No.4 engine mount bracket.



ac5uuw00000756

MANUAL TRANSAXLE [C66M-R, C66MX-R]

(10)Install the control cable bracket to the MTX.
(11)Connect the control cable to the MTX. (See 05-16A-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [C66M-R, C66MX-R].)
(12)Install the battery component. (ex: battery, battery tray and PCM component) (See 01-17A-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
(13)Install the air cleaner component. (ex: air cleaner, air hose) (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



ac5wzw0000285

20. Install the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
21. Install the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
22. Add the specified amount of specified transaxle oil. (See MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R].)
23. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
24. Connect the negative battery cable. (See 01-17A-11 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0].) (See 01-17A-13 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-G 2.0 (WITHOUT i-stop)].)
25. Install the plug hole plate. (See 01-10A-6 PLUG HOLE PLATE REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
26. If the MTX is overhauled, perform the “INSPECTION AFTER MANUAL TRANSAXLE OVERHAUL”. (See 05-15A-31 INSPECTION AFTER MANUAL TRANSAXLE OVERHAUL [C66M-R, C66MX-R].)

05

INSPECTION AFTER MANUAL TRANSAXLE OVERHAUL [C66M-R, C66MX-R]

id0515ma159500

1. After warming up the engine, drive the vehicle and inspect the following items:
   (1) No abnormal noise in each shift position.
   (2) Smooth shift operation when shifting gears.
   (3) No gear slipout after shifting gears.
   (4) Back-up light switch operates correctly.

MANUAL TRANSAXLE [C66M-R, C66MX-R]

OIL SEAL (DIFFERENTIAL) REPLACEMENT [C66M-R, C66MX-R]

id0515ma160100

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Drain the manual transaxle oil. (See MANUAL TRANSAXLE OIL REPLACEMENT [C66M-R].)
3. Disconnect the drive shaft (LH) from the MTX. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
4. Disconnect the drive shaft (RH) from the MTX. (2WD) (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
5. Remove the drive shaft (RH). (4WD) (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
6. Remove the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
7. Remove the exhaust manifold. (4WD) (See 01-15A-2 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
8. Remove the transfer. (4WD) (See 03-16A-4 TRANSFER REMOVAL/INSTALLATION [C66MX-R].)
9. Remove the oil seal (LH).
10. Remove the oil seal (RH).

2WD

MANUAL TRANSAXLE [D66M-R, D66MX-R]

MANUAL TRANSAXLE OIL INSPECTION [D66M-R, D66MX-R]

id0515md159600

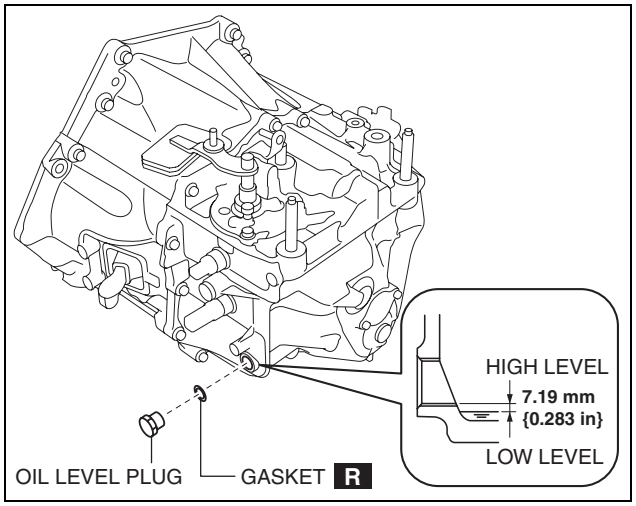
1. Park the vehicle on level ground.
2. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
3. Remove the oil level plug and gasket.
4. Verify that the manual transaxle oil is near the brim of the plug port.
   - When the manual transaxle oil level is lower than the lower limit, add manual transaxle oil.

   Manual transaxle oil grade
   API service GL-4
   Manual transaxle oil viscosity
   SAE 75W-80

5. Install a new gasket and the oil level plug.

   Tightening torque
   39—59 N·m {4.0—6.0 kgf·m, 29—43 ft·lbf}

6. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)



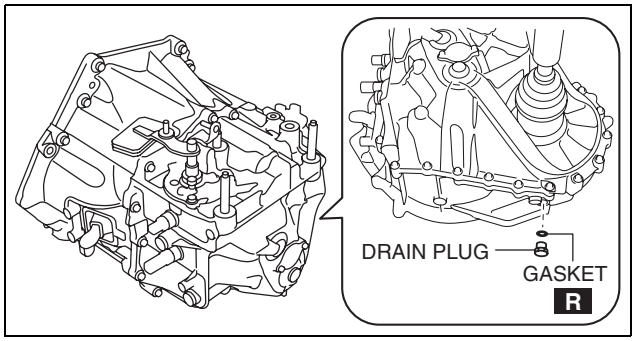
ac5wzw0000343

MANUAL TRANSAXLE OIL REPLACEMENT [D66M-R, D66MX-R]

id0515md159700

1. Park the vehicle on level ground.
2. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
3. Remove the drain plug and gasket, and drain the manual transaxle oil.
4. Install a new gasket and the drain plug.

   Tightening torque
   39—59 N·m {4.0—6.0 kgf·m, 29—43 ft·lbf}



ac5wzw0000343

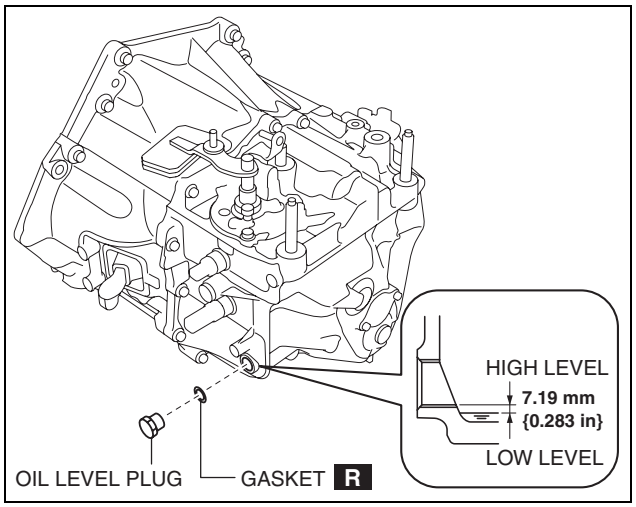
5. Remove the oil level plug and gasket.
6. Add the specified manual transaxle oil through the oil level plug port.

   Manual transaxle oil grade
   API service GL-4
   Manual transaxle oil viscosity
   SAE 75W-80
   Manual transaxle oil capacity (approx. quantity)
   2.40 L {2.54 US qt, 2.11 Imp qt}

7. Install a new gasket and the oil level plug.

   Tightening torque
   39—59 N·m {4.0—6.0 kgf·m, 29—43 ft·lbf}

8. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)



ac5wzw0000343

NEUTRAL SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R]

id0515md159800

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/

MANUAL TRANSAXLE [D66M-R, D66MX-R]

CONNECTION [SKYACTIV-D 2.2].)
2. Remove the air cleaner component. (ex: air cleaner, air hose) (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove in the order indicated in the table.
4. Install in the reverse order of removal.

1	Neutral switch connector
2	Neutral switch
3	Gasket

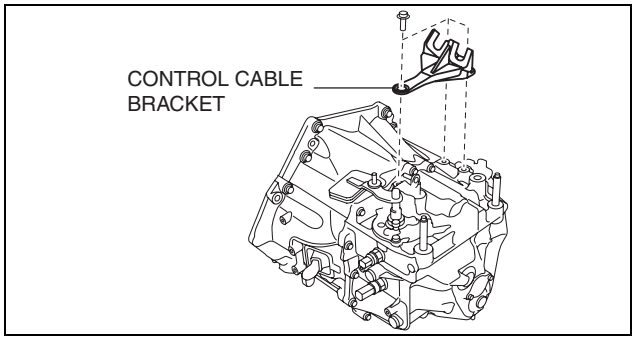
MANUAL TRANSAXLE [D66M-R, D66MX-R]

MANUAL TRANSAXLE REMOVAL/INSTALLATION [D66M-R]

id0515md1600mb

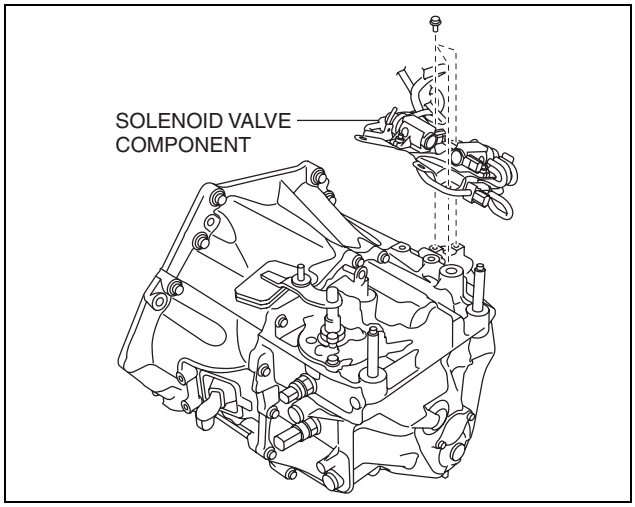
Removal

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
4. Remove the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
5. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
6. Drain the manual transaxle oil. (See 05-15B-2 MANUAL TRANSAXLE OIL REPLACEMENT [D66M-R, D66MX-R].)
7. Disconnect and/or remove the following parts in the engine compartment.
   (1) Remove the air cleaner component. (ex: air cleaner, air hose) (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (2) Remove the battery component. (ex: battery, battery tray) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (3) Disconnect the control cable from the MTX. (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
   (4) Remove the control cable bracket from the MTX.



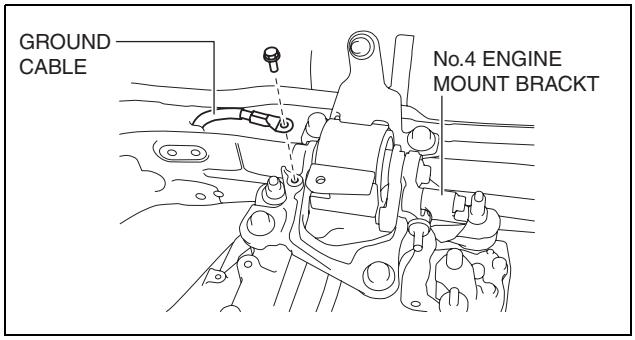
ac5wzw0000343

   (5) Remove the solenoid valve component from the MTX with the hose still connected, and set it out of the way.



ac5wzw0000347

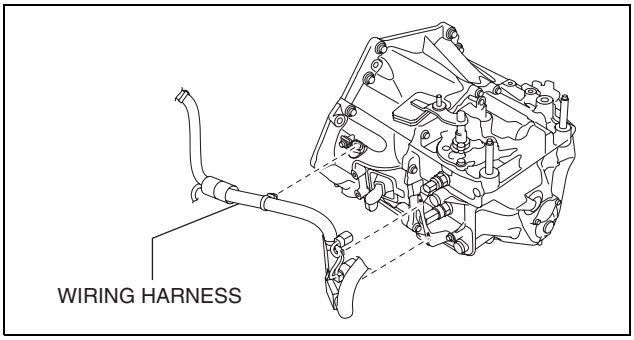
   (6) Remove the bolt shown in the figure, and set the ground cable aside.
   (7) Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
   (8) Remove the EGR cooler. (See 01-16B-12 EGR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (9) Disconnect the neutral switch connector from the MTX. (See 05-15B-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)



ac5wzw0000344

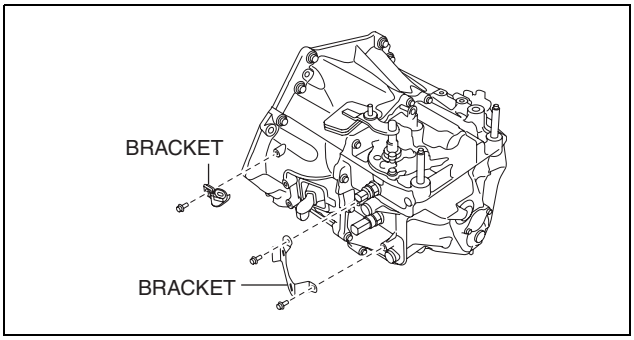
MANUAL TRANSAXLE [D66M-R, D66MX-R]

(10)Disconnect the back-up light switch connector from the MTX. (See 05-15B-3 BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
(11)Disconnect the wiring harness from the MTX, and set the wiring harness aside.



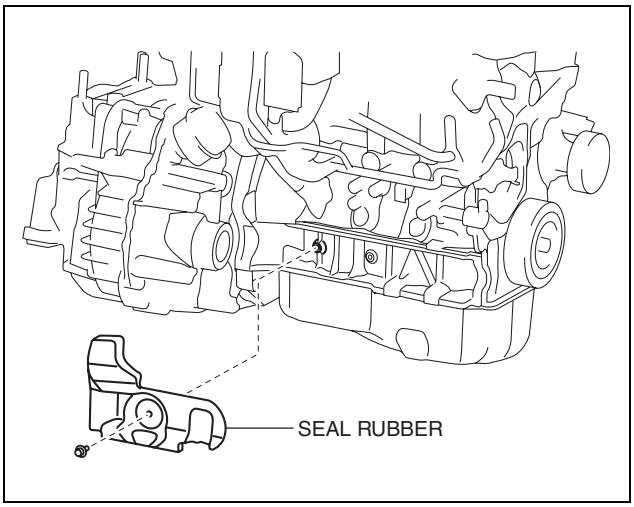
ac5wzw0000344

(12)Remove the brackets from the MTX.



ac5wzw0000344

8. Disconnect and/or remove the following parts related to the suspension and axle.
   (1) Remove the front tires. (See 03-10-1 GENERAL PROCEDURES (FRONT AND REAR AXLES).)
   (2) Disconnect the clip securing the brake hose from the shock absorber. (See 04-11-30 BRAKE HOSE (FRONT) REMOVAL/INSTALLATION.)
   (3) Disconnect the ABS wheel-speed sensors from the steering knuckles. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
   (4) Disconnect the tie-rod end ball joints from the steering knuckles. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
   (5) Disconnect the stabilizer control links from the stabilizer. (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)
   (6) Disconnect the front lower arms from the steering knuckles. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
   (7) Disconnect the drive shaft (LH) from the MTX. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
   (8) Disconnect the drive shaft (RH) from the MTX. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
   (9) Remove the seal rubber.
9. Disconnect and/or remove the following parts from the underside of the vehicle.
   (1) Remove the clutch release cylinder with the clutch pipe still connected and set it out of the way. (See 05-10B-24 CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
   (2) Remove the starter. (See 01-19B-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (3) Remove the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)

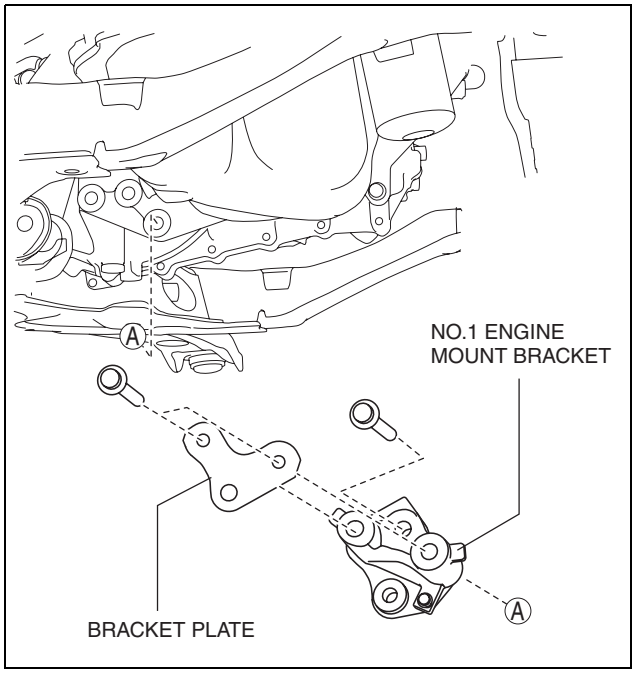


ac5wzw0000344

MANUAL TRANSAXLE [D66M-R, D66MX-R]

(4) Remove the bracket plate and No.1 engine mount bracket from the MTX.

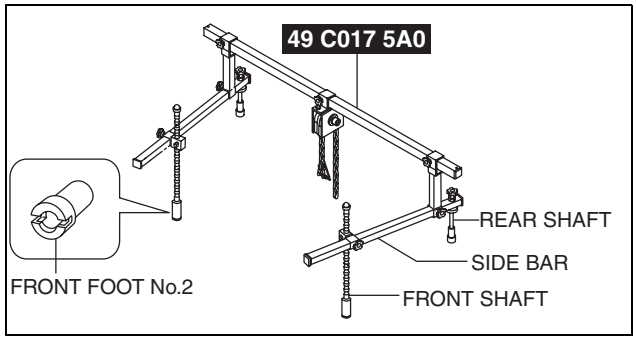
10. Install the **SST** using the following procedure.



ac5wzw0000344

Caution

- **Refer to the SST instruction manual for the basic handing procedure.**

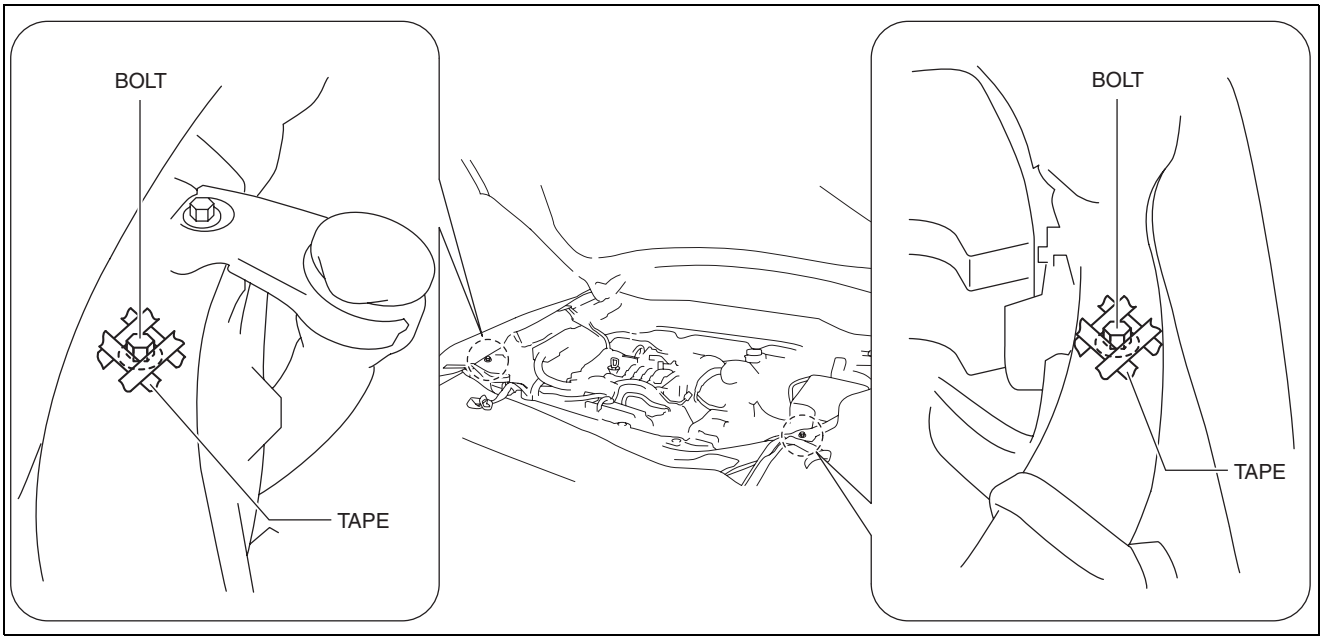


am3uuw0000884

(1) Install one front foot No.2 to each of the left and right front shafts of the **SST**.

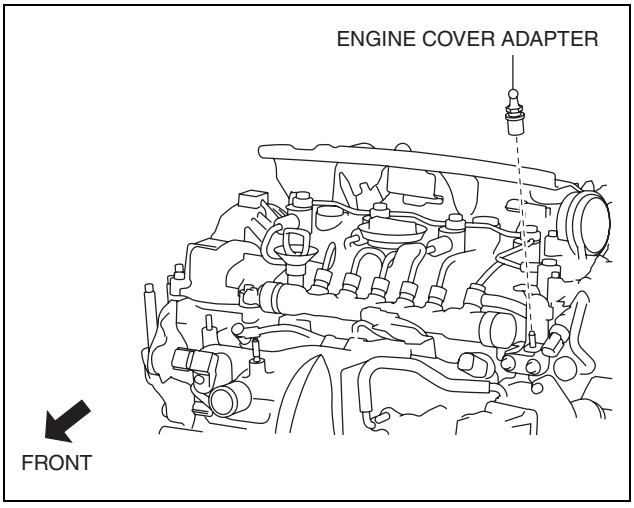
MANUAL TRANSAXLE [D66M-R, D66MX-R]

(2) Protect the positions shown in the figure using tape.



ac5wzw0000459

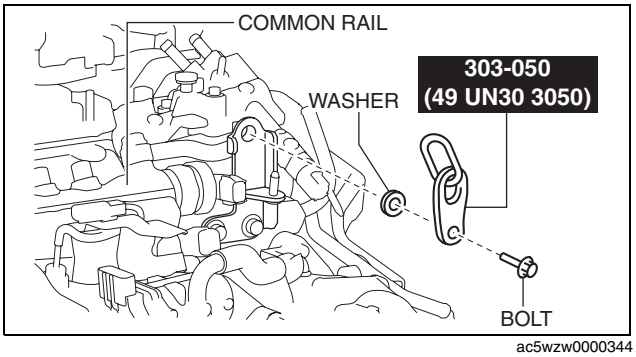
(3) Remove the engine cover adapter.



ac5wzw0000344

(4) Install the **SST** to the position shown in the figure using the following bolt and washer.

Bolt: part number 99794 1025 or an M10 × 1.25, length 25 mm {0.98 in}
Washer: approx. 3 mm {0.1 in} thickness
Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}

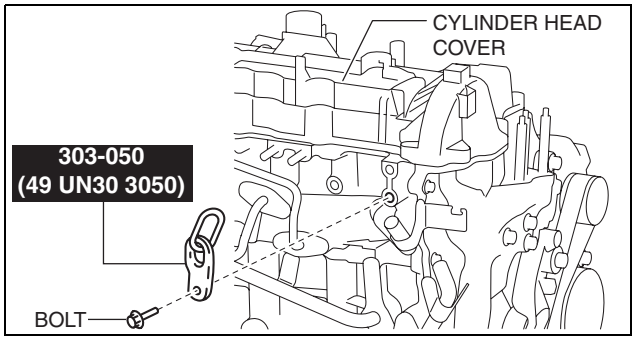


ac5wzw0000344

MANUAL TRANSAXLE [D66M-R, D66MX-R]

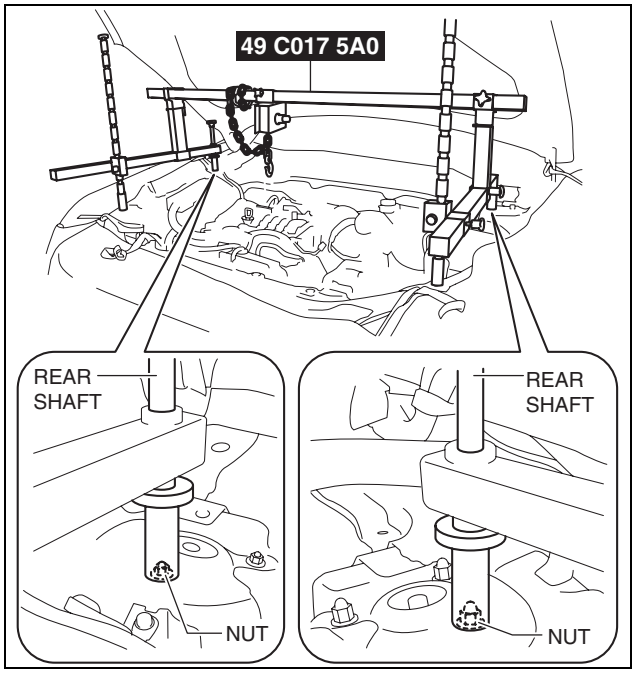
(5) Install the **SST** to the position shown in the figure using the following bolt.

Bolt: part number 99794 1025 or an M10 × 1.25, length 25 mm {0.98 in}
Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}



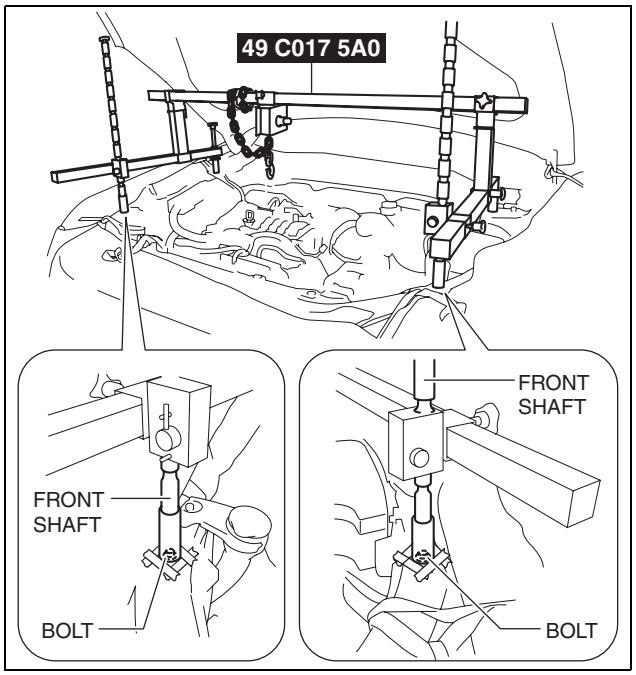
ac5wzw0000344

(6) As shown in the figure, set the rear shafts of the **SST** to the left and right shock absorber nuts.



ac5wzw0000344

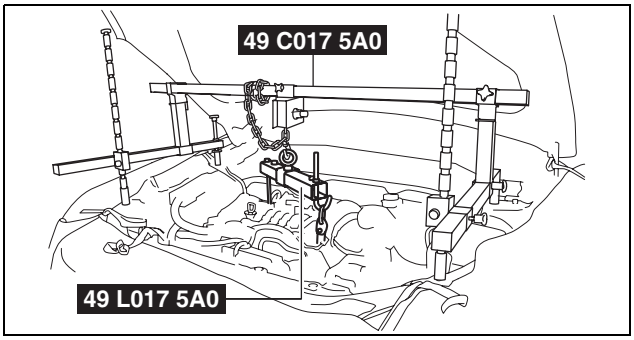
(7) As shown in the figure, set the front shafts of the **SST** to the left and right bolts.



ac5wzw0000345

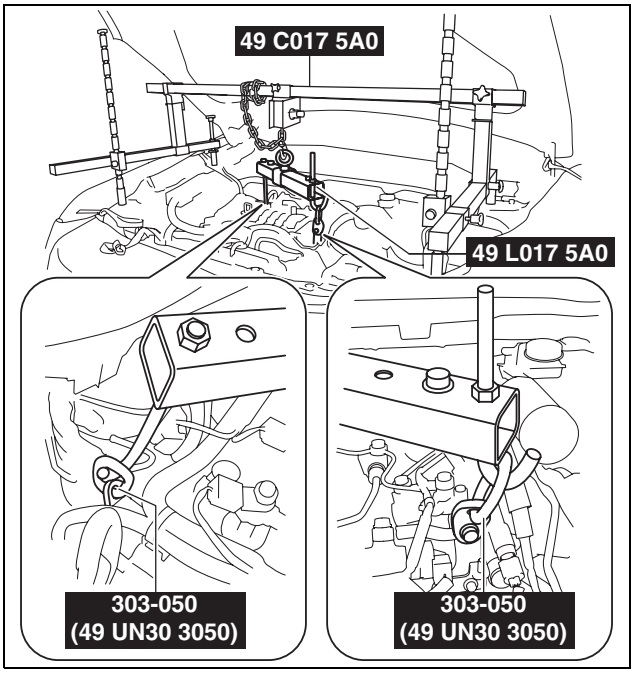
MANUAL TRANSAXLE [D66M-R, D66MX-R]

(8) Install the **SST (49 L017 5A0)** to the **SST (49 C017 5A0)** as shown in the figure.



ac5wzw0000345

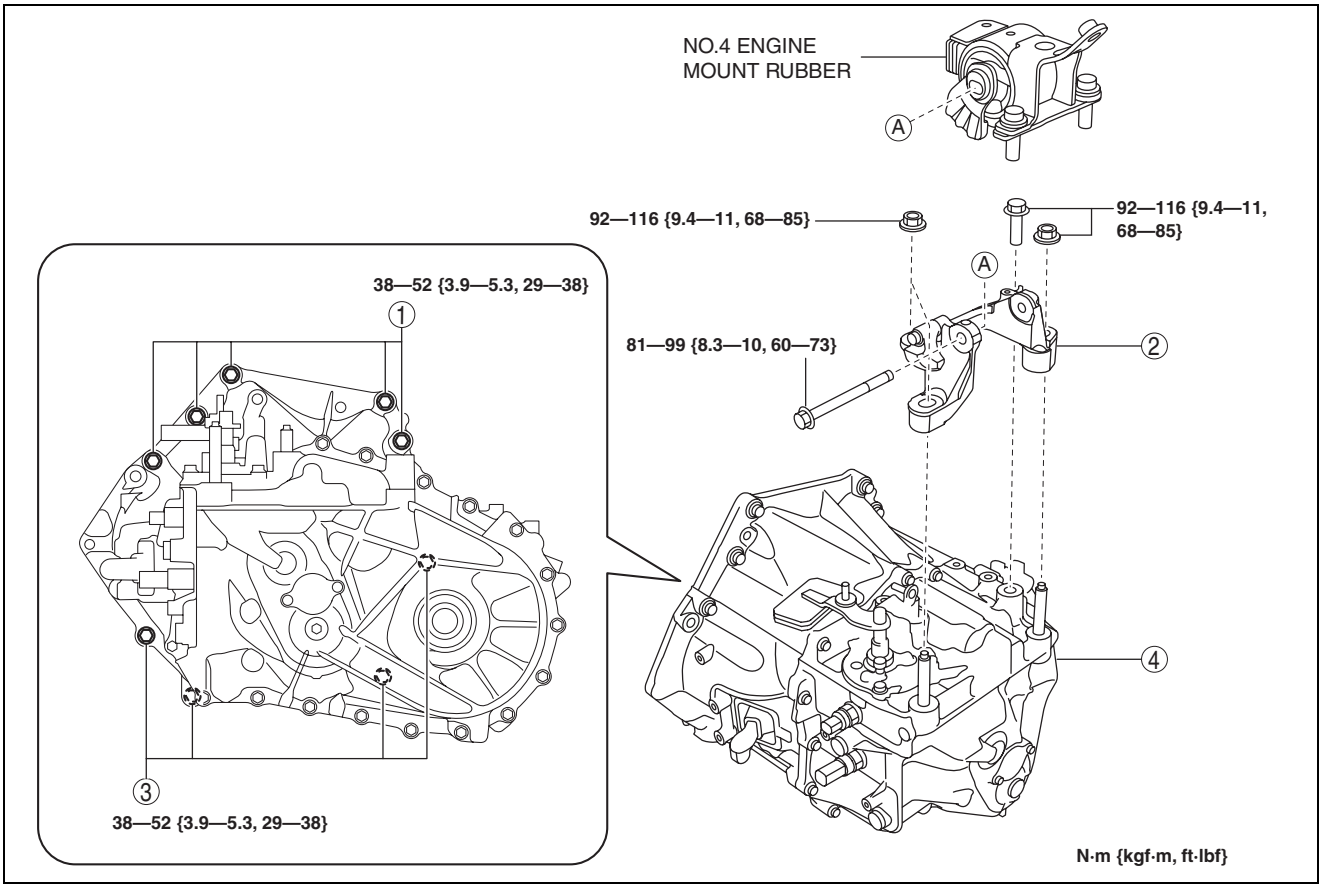
(9) Install the **SST (49 L017 5A0)** to the **SST (49 UN30 3050)** with the hook of the **SST (49 L017 5A0)** facing outward.
(10) Adjust the height of the left and right side bars so that they are leveled, then tighten each part of the **SST**.
(11) Apply tension to the chain to secure the engine.



ac5wzw0000345

MANUAL TRANSAXLE [D66M-R, D66MX-R]

11. Remove in the order indicated in the table.



ac5wzw0000345

1	Transaxle mounting bolt (upper side)
2	No.4 engine mount bracket (See 05-15B-11 No.4 Engine mount bracket removal note.)
3	Transaxle mounting bolt (lower side) (See 05-15B-11 Transaxle mounting bolt removal note.)
4	MTX

MANUAL TRANSAXLE [D66M-R, D66MX-R]

No.4 Engine mount bracket removal note

Caution

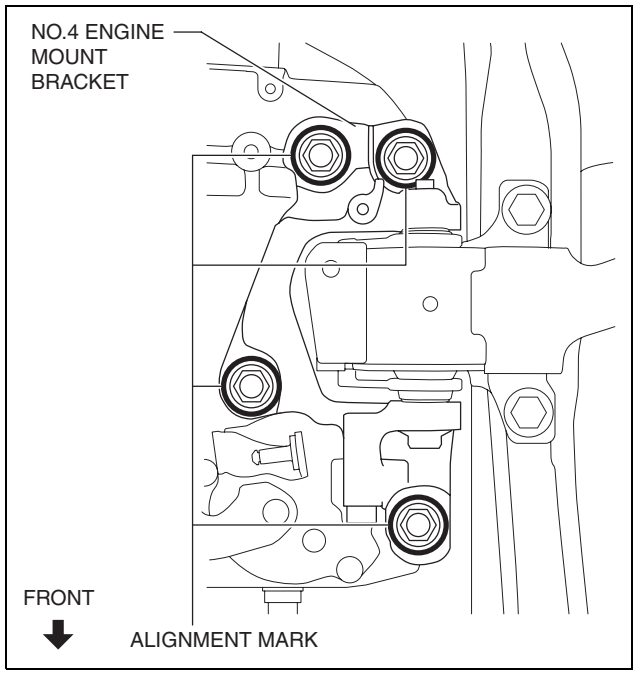
- **A slot has been adopted for the No.4 engine mount bracket installation hole. If the No.4 engine mount bracket is deviated from the original position when installing the No.4 engine mount, engine noise or vibration could increase. When removing the No.4 engine mount, place alignment marks on the No.4 engine mount bracket so that they can be assembled to the same positions as before removal.**

1. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

   Note

   - Paint so that the outline of the nut is framed on the bracket side.

2. Remove the No.4 engine mount bracket.



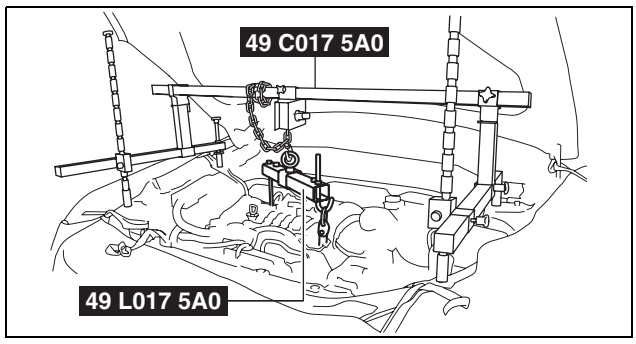
ac5wzw0000345

Transaxle mounting bolt removal note

Warning

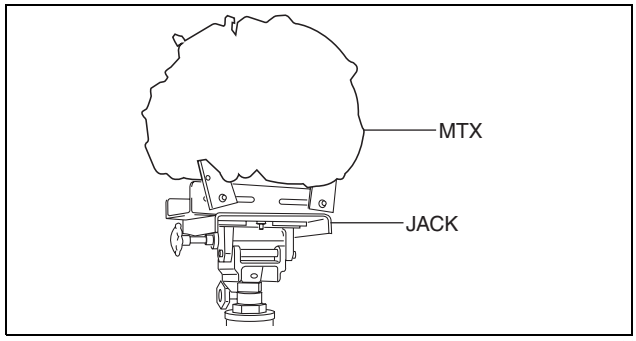
- **Remove the MTX carefully, holding it steady. If the MTX falls it could be damaged or cause injury.**

1. Adjust the **SST** and lean the engine toward the MTX.



ac5wzw0000345

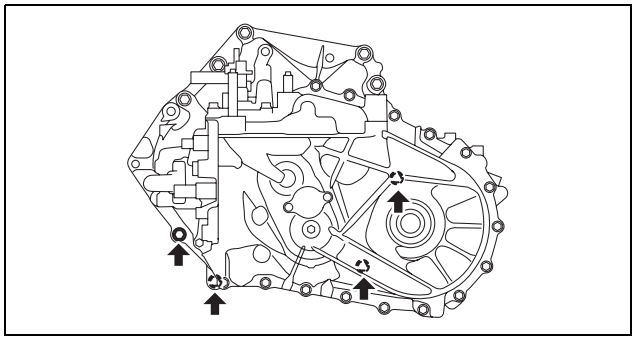
2. Support the MTX on a jack.



ac5uuw00000744

MANUAL TRANSAXLE [D66M-R, D66MX-R]

3. Remove the transaxle mounting bolts (lower side).
4. Remove the MTX.

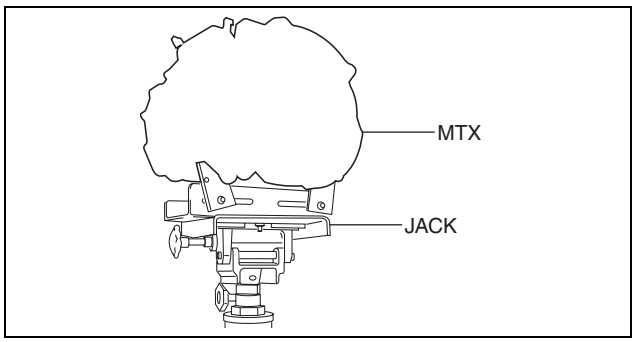


ac5wzw0000345

Installation

Warning
- **Install the MTX carefully, holding it steady. If the MTX falls it could be damaged or cause injury.**

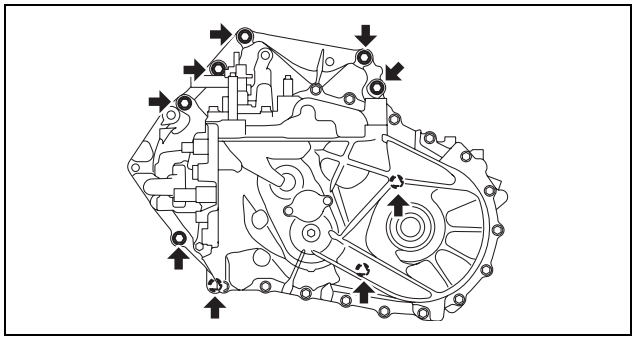
1. Set the MTX on a jack and lift into place.



ac5uuw00000744

2. Install the MTX to the engine, and tighten the transaxle mounting bolts.

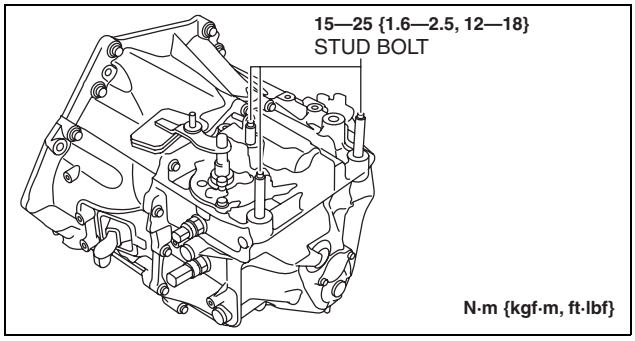
Tightening torque
38—52 N·m {3.9—5.3 kgf·m, 29—38 ft·lbf}



ac5wzw0000345

3. Tighten the stud bolts for the MTX.

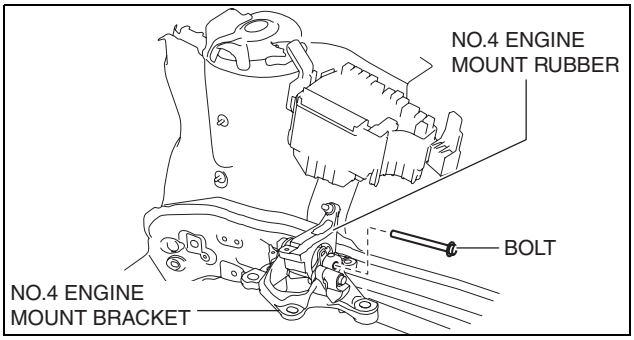
Note
- If the No.4 engine mount bracket nut is loosened, tighten the stud bolts for the MTX because they may be loosened.



ac5wzw0000345

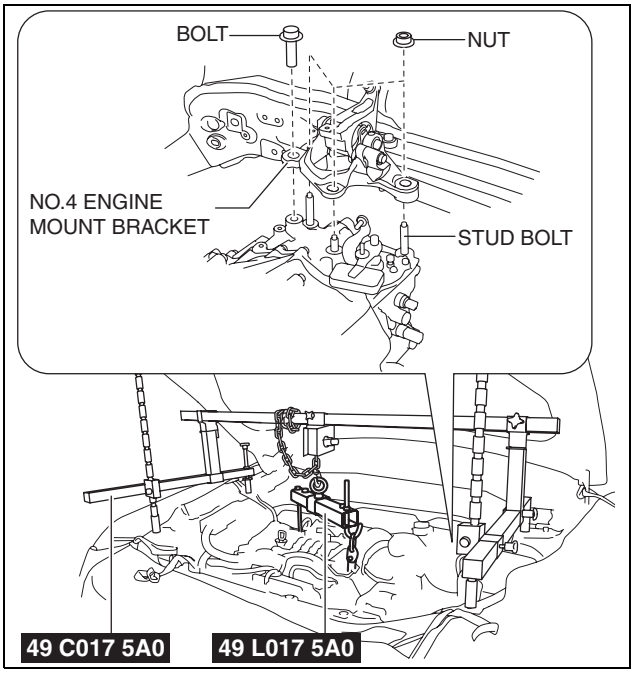
MANUAL TRANSAXLE [D66M-R, D66MX-R]

4. Install the No.4 engine mount bracket to No.4 engine mount rubber, and temporarily tighten the installation bolt.



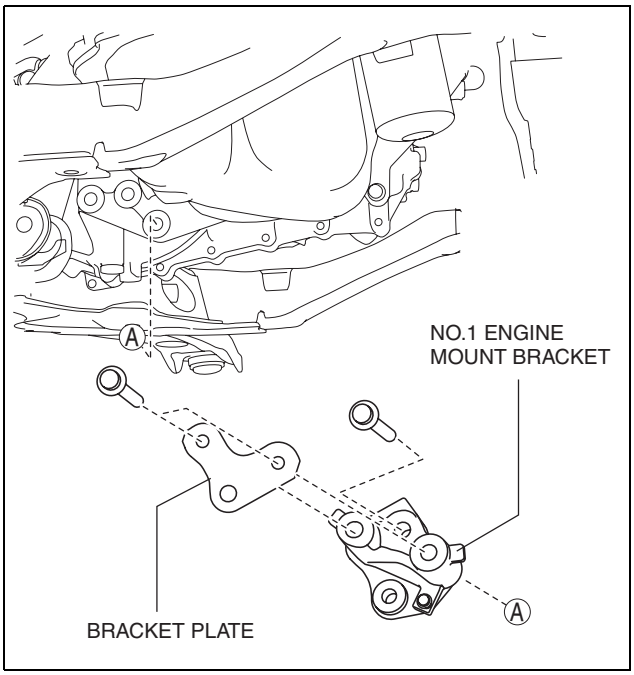
ac5wzw0000345

5. Pull up the MTX using the **SST**s, pass the MTX stud bolts through the No.4 engine mount bracket, and temporarily tighten the No.4 engine mount installation nuts and bolt.



ac5wzw0000345

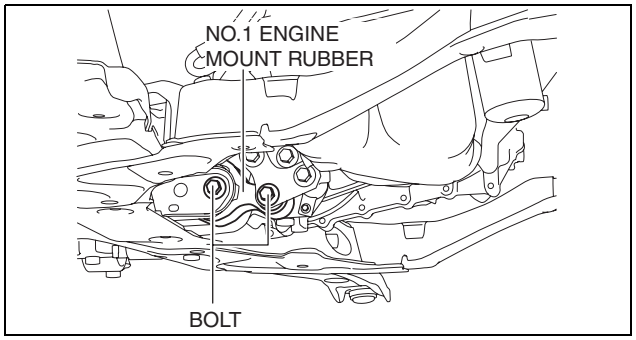
6. Install the No.1 engine mount bracket and bracket plate to the MTX, and temporarily tighten the installation bolts.
7. Install the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/ INSTALLATION.)



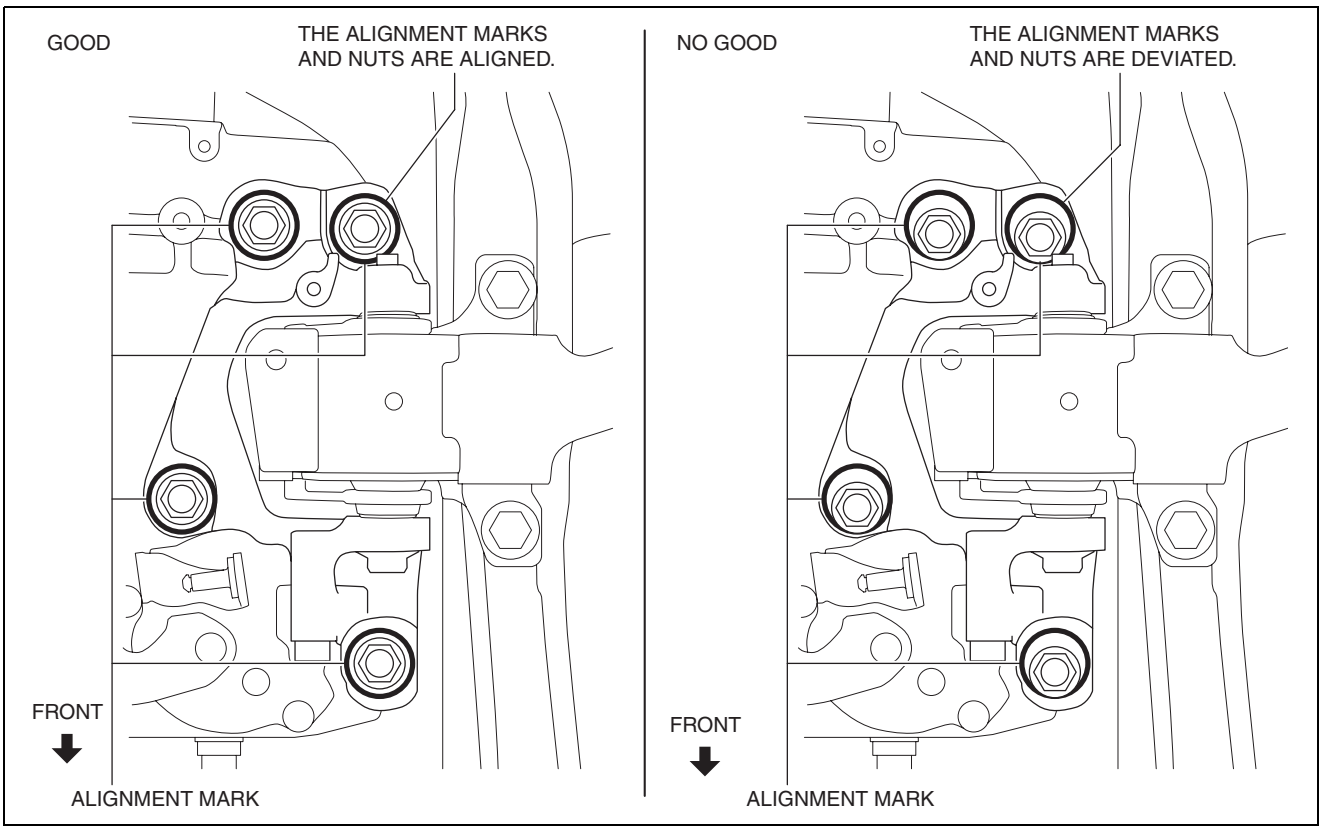
ac5wzw0000344

MANUAL TRANSAXLE [D66M-R, D66MX-R]

8. Temporarily tighten the No.1 engine mount rubber installation bolts.
9. Align the alignment marks on the No.4 engine mount bracket and nuts, and temporarily tighten the nuts shown in the figure.



ac5wzw0000346

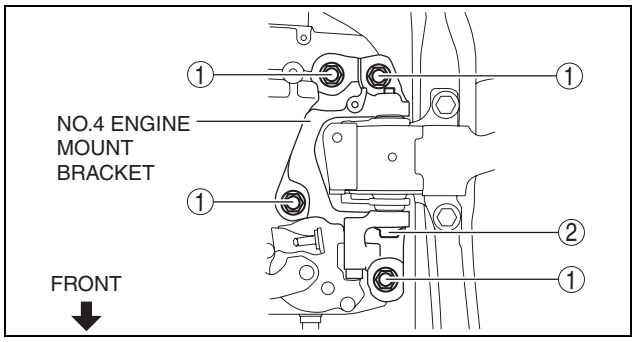


ac5wzw0000346

10. Tighten the No.4 engine mount bracket installation nuts and bolt in the order shown in the figure.

No.	Tightening torque
1	92—116 N·m {9.4—11 kgf·m, 68—85 ft·lbf}
2	81—99 N·m {8.3—10 kgf·m, 60—73 ft·lbf}

11. Remove the **SST (49 C017 5A0)**.

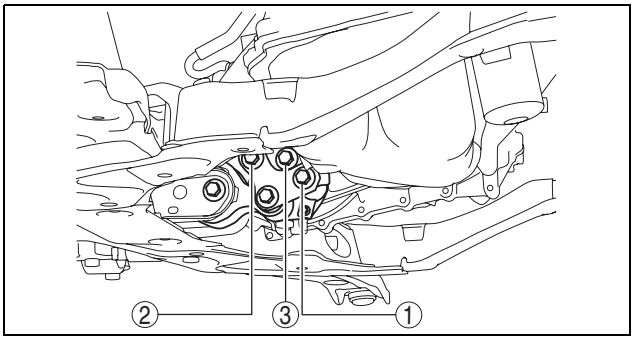


ac5wzw0000346

MANUAL TRANSAXLE [D66M-R, D66MX-R]

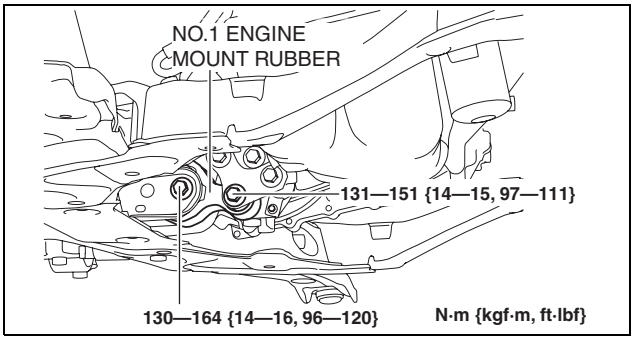
12. Tighten the No.1 engine mount bracket and bracket plate installation bolts in the order shown in the figure.

    Tightening torque
    131—153 N·m {14—15 kgf·m, 97—112 ft·lbf}

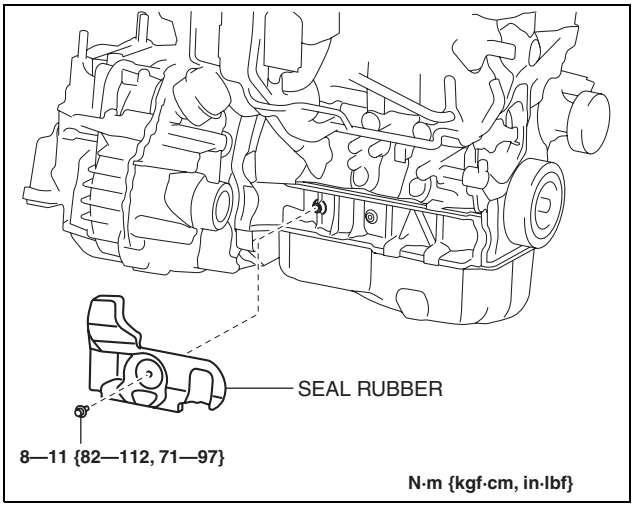


ac5wzw0000346

13. Tighten the No.1 engine mount rubber installation bolts.
14. Connect and/or Install the following parts to the underside of the vehicle.
    (1) Install the starter. (See 01-19B-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
    (2) Install the clutch release cylinder to the MTX. (See 05-10B-24 CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
15. Connect and/or Install the following parts related to the suspension and axle.
    (1) Install the seal rubber.
    (2) Connect the drive shaft (RH) to the MTX. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
    (3) Connect the drive shaft (LH) to the MTX. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
    (4) Connect the front lower arms to the steering knuckles. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
    (5) Connect the stabilizer control links to the stabilizer. (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)
    (6) Connect the tie-rod end ball joints to the steering knuckles. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
    (7) Connect the ABS wheel-speed sensors to the steering knuckles. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
    (8) Connect the clip securing the brake hose to the shock absorber. (See 04-11-30 BRAKE HOSE (FRONT) REMOVAL/INSTALLATION.)
    (9) Install the front tires. (See 03-10-1 GENERAL PROCEDURES (FRONT AND REAR AXLES).)
16. Connect and/or install the following parts in the engine compartment.



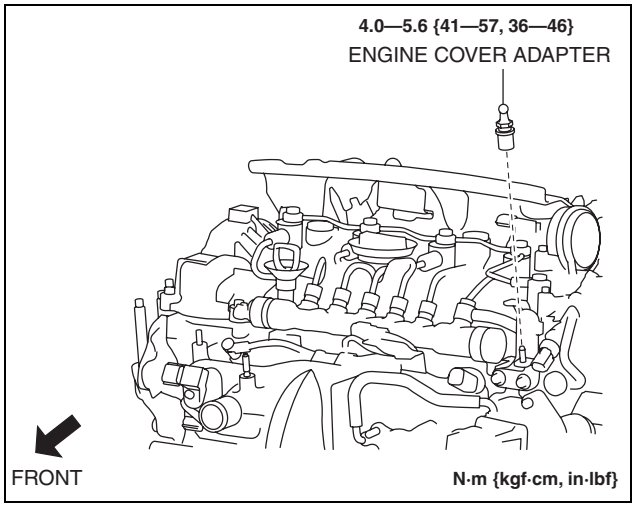
ac5wzw0000346



ac5wzw0000346

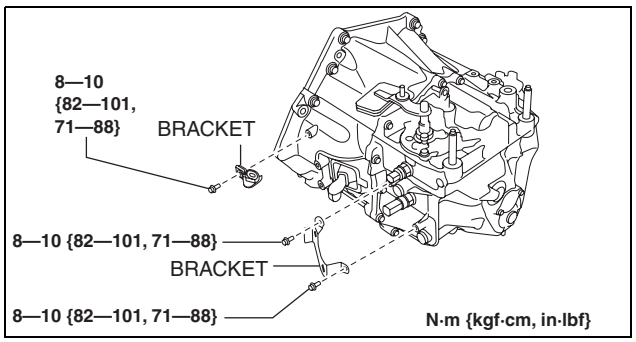
MANUAL TRANSAXLE [D66M-R, D66MX-R]

(1) Install the engine cover adapter.



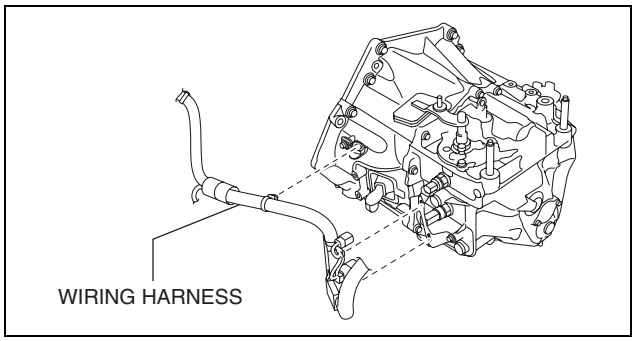
ac5wzw0000346

(2) Install the brackets to the MTX.



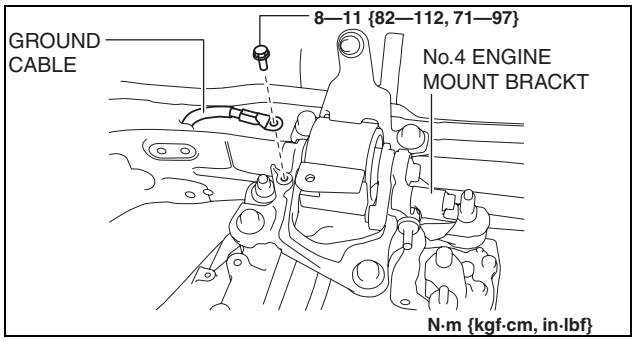
ac5wzw0000346

(3) Connect the wiring harness to the MTX.
(4) Connect the back-up light switch connector.(See 05-15B-3 BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
(5) Connect the neutral switch connector. (See 05-15B-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
(6) Install the EGR cooler. (See 01-16B-12 EGR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000344

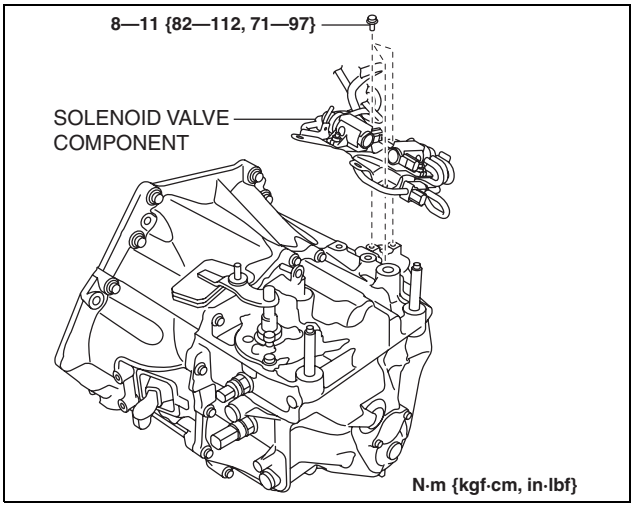
(7) Connect the ground cable to the No.4 engine mount bracket.



ac5wzw0000346

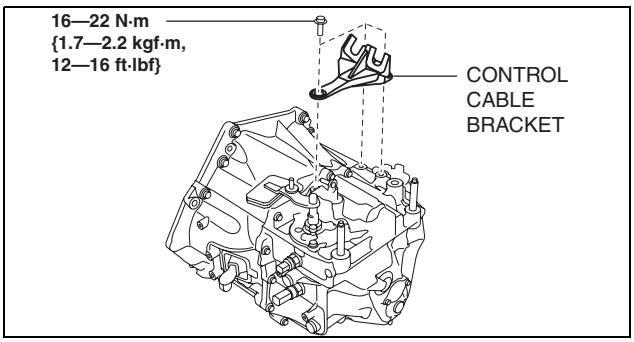
MANUAL TRANSAXLE [D66M-R, D66MX-R]

(8) Install the solenoid valve component to the MTX.



ac5wzw0000514

(9) Install the control cable bracket to the MTX.
(10) Connect the control cable to the MTX. (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
(11) Install the battery component. (ex: battery, battery tray) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
(12) Install the air cleaner component. (ex: air cleaner, air hose) (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000346

17. Install the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
18. Install the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
19. Refill the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
20. Add the specified amount of specified transaxle oil. (See 05-15B-2 MANUAL TRANSAXLE OIL REPLACEMENT [D66M-R, D66MX-R].)
21. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
22. Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
23. Install the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
24. If the MTX is overhauled, perform the “INSPECTION AFTER MANUAL TRANSAXLE OVERHAUL”. (See 05-15B-29 INSPECTION AFTER MANUAL TRANSAXLE OVERHAUL [D66M-R, D66MX-R].)

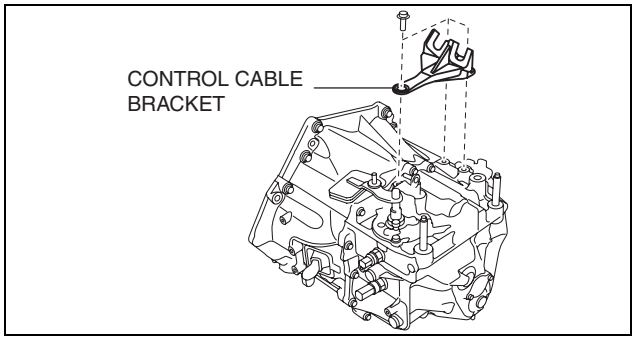
MANUAL TRANSAXLE [D66M-R, D66MX-R]

MANUAL TRANSAXLE REMOVAL/INSTALLATION [D66MX-R]

id0515md1600mc

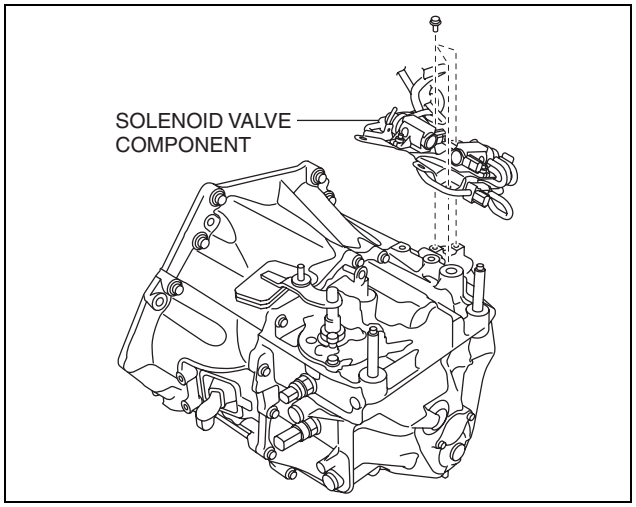
Removal

1. Disconnect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
2. Remove the engine cover. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
3. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
4. Remove the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
5. Remove the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
6. Drain the manual transaxle oil. (See 05-15B-2 MANUAL TRANSAXLE OIL REPLACEMENT [D66M-R, D66MX-R].)
7. Disconnect and/or remove the following parts in the engine compartment.
   (1) Remove the air cleaner component. (ex: air cleaner, air hose) (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (2) Remove the battery component. (ex: battery, battery tray) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (3) Disconnect the control cable from the MTX. (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
   (4) Remove the control cable bracket from the MTX.



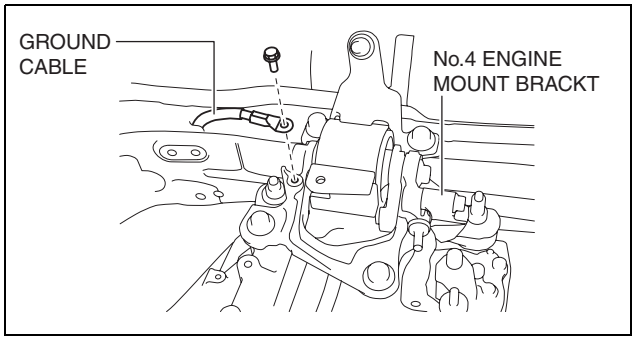
ac5wzw0000347

   (5) Remove the solenoid valve component from the MTX with the hose still connected, and set it out of the way.



ac5wzw0000347

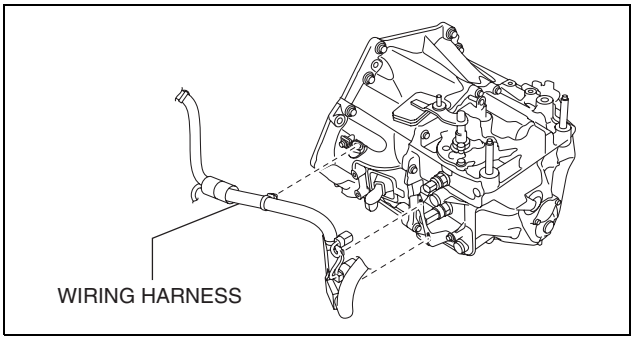
   (6) Remove the bolt shown in the figure, and set the ground cable aside.
   (7) Drain the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
   (8) Remove the EGR cooler. (See 01-16B-12 EGR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (9) Disconnect the neutral switch connector from the MTX. (See 05-15B-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)



ac5wzw0000347

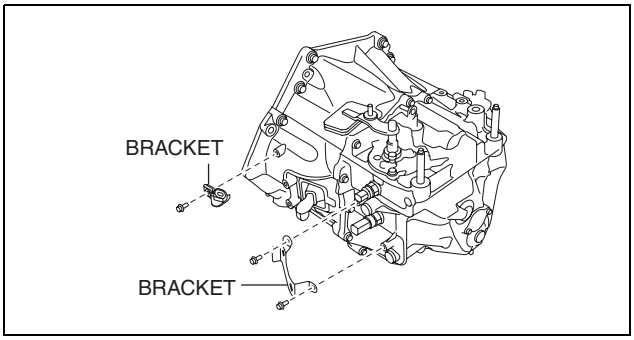
MANUAL TRANSAXLE [D66M-R, D66MX-R]

(10)Disconnect the back-up light switch connector from the MTX. (See 05-15B-3 BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
(11)Disconnect the wiring harness from the MTX, and set the wiring harness aside.



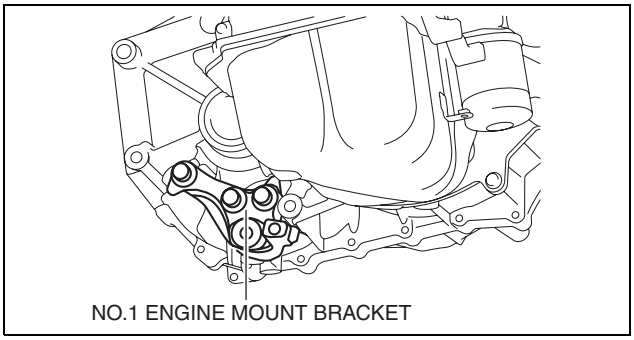
ac5wzw0000347

(12)Remove the brackets from the MTX.



ac5wzw0000347

8. Disconnect and/or remove the following parts related to the suspension and axle.
   (1) Remove the front tires. (See 03-10-1 GENERAL PROCEDURES (FRONT AND REAR AXLES).)
   (2) Disconnect the clip securing the brake hose from the shock absorber. (See 04-11-30 BRAKE HOSE (FRONT) REMOVAL/INSTALLATION.)
   (3) Disconnect the ABS wheel-speed sensors from the steering knuckles. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
   (4) Disconnect the tie-rod end ball joints from the steering knuckles. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
   (5) Disconnect the stabilizer control links from the stabilizer. (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)
   (6) Disconnect the front lower arms from the steering knuckles. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
   (7) Disconnect the drive shaft (LH) from the MTX. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
   (8) Remove the drive shaft (RH) from the MTX. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
9. Disconnect and/or remove the following parts from the underside of the vehicle.
   (1) Remove the clutch release cylinder with the clutch pipe still connected and set it out of the way. (See 05-10B-24 CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
   (2) Remove the starter. (See 01-19B-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (3) Remove the brace bar. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
   (4) Remove the tunnel member. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].).
   (5) Remove the propeller shaft. (See 03-15-2 PROPELLER SHAFT REMOVAL/INSTALLATION.)
   (6) Remove the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
   (7) Remove the transfer. (See 03-16A-6 TRANSFER REMOVAL/INSTALLATION [D66MX-R].)
   (8) Remove the No.1 engine mount bracket from the MTX.
10. Install the **SST** using the following procedure:

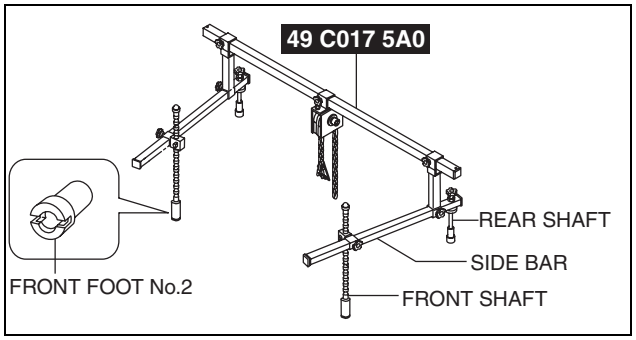


ac5wzw0000347

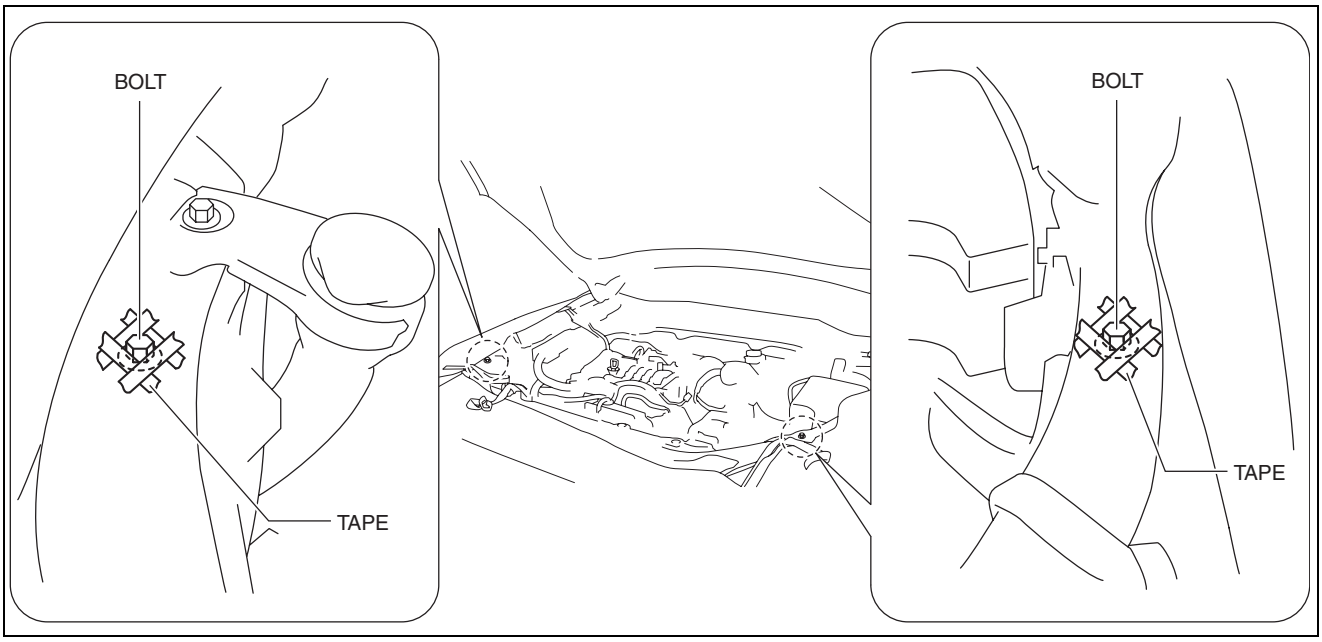
MANUAL TRANSAXLE [D66M-R, D66MX-R]

Caution
- **Refer to the SST instruction manual for the basic handing procedure.**

(1) Install one front foot No.2 to each of the left and right front shafts of the **SST**.
(2) Protect the positions shown in the figure using tape.

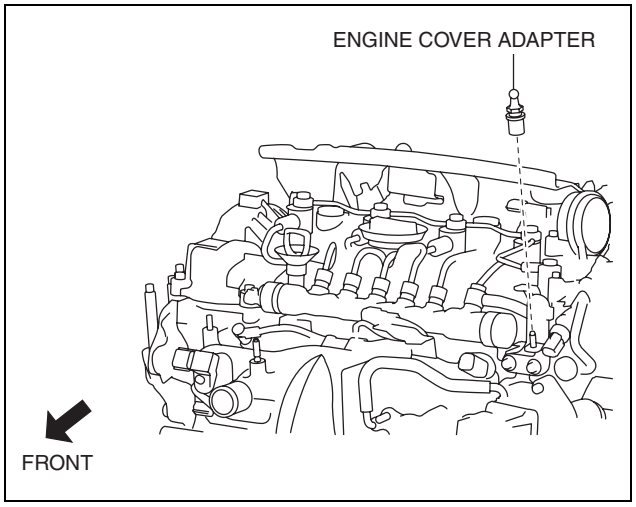


am3uuw0000884



ac5wzw0000459

(3) Remove the engine cover adapter.

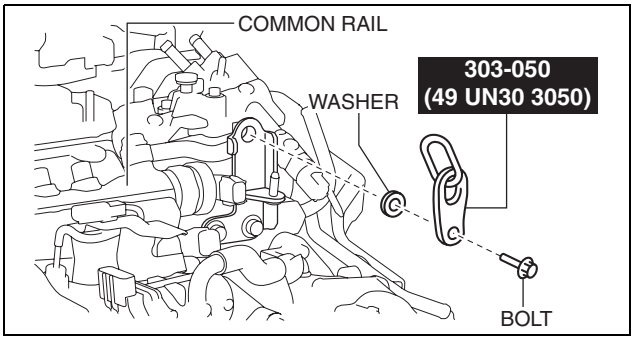


ac5wzw0000347

MANUAL TRANSAXLE [D66M-R, D66MX-R]

(4) Install the **SST** to the position shown in the figure using the following bolt and washer.

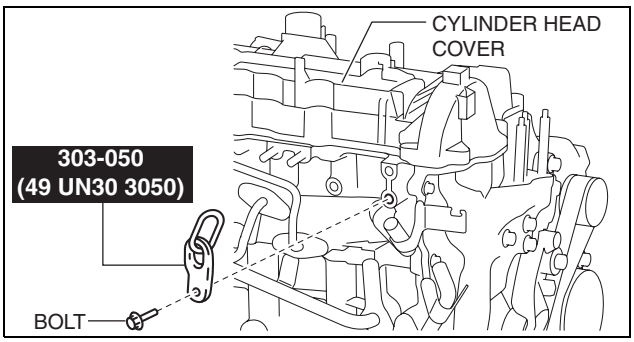
Bolt: part number 99794 1025 or an M10 × 1.25, length 25 mm {0.98 in}
Washer: approx. 3 mm {0.1 in} thickness
Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}



ac5wzw0000344

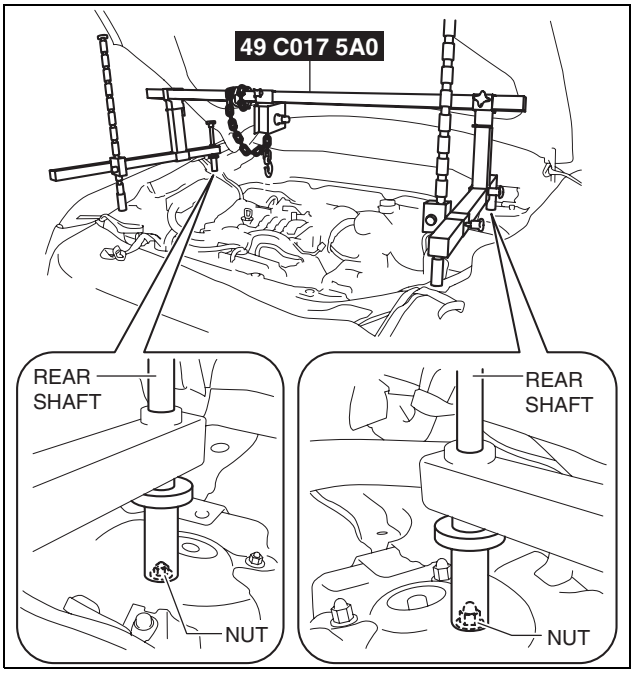
(5) Install the **SST** to the position shown in the figure using the following bolt.

Bolt: part number 99794 1025 or an M10 × 1.25, length 25 mm {0.98 in}
Tightening torque
38—51 N·m {3.9—5.2 kgf·m, 29—37 ft·lbf}



ac5wzw0000347

(6) As shown in the figure, set the rear shafts of the **SST** to the left and right shock absorber nuts.

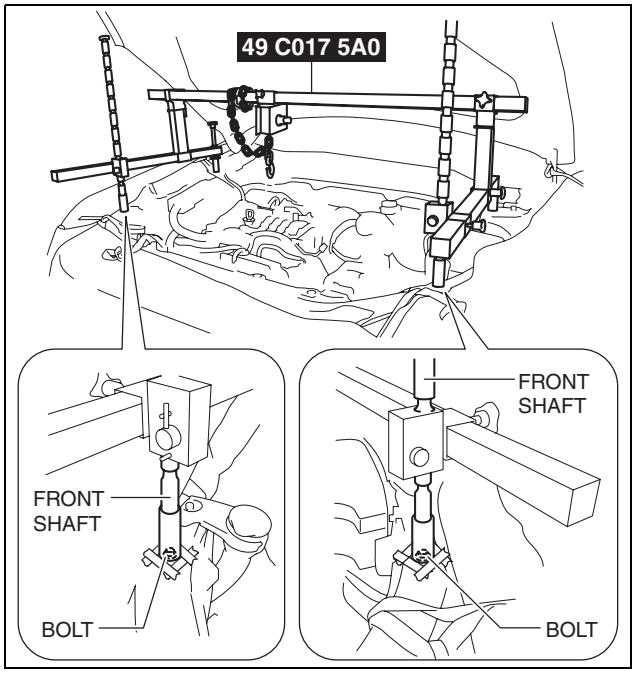


ac5wzw0000348

05

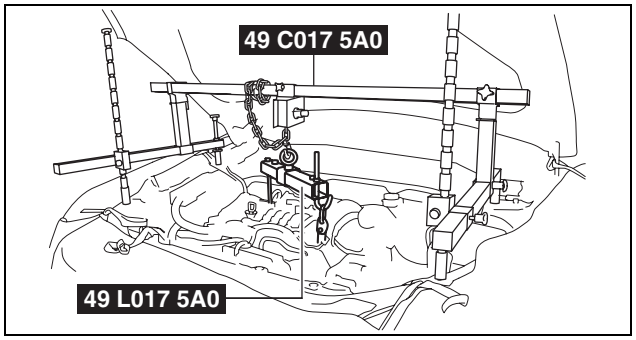
MANUAL TRANSAXLE [D66M-R, D66MX-R]

(7) As shown in the figure, set the front shafts of the **SST** to the left and right bolts.



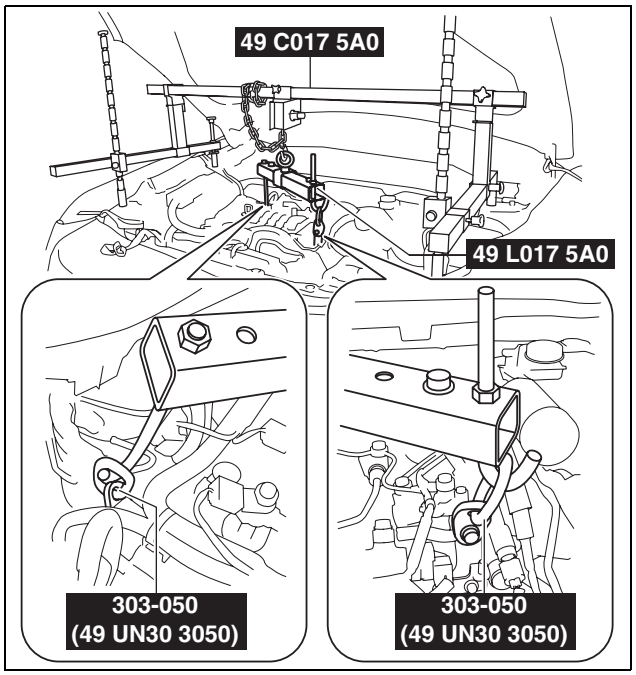
ac5wzw0000348

(8) Install the **SST (49 L017 5A0)** to the **SST (49 C017 5A0)** as shown in the figure.



ac5wzw0000348

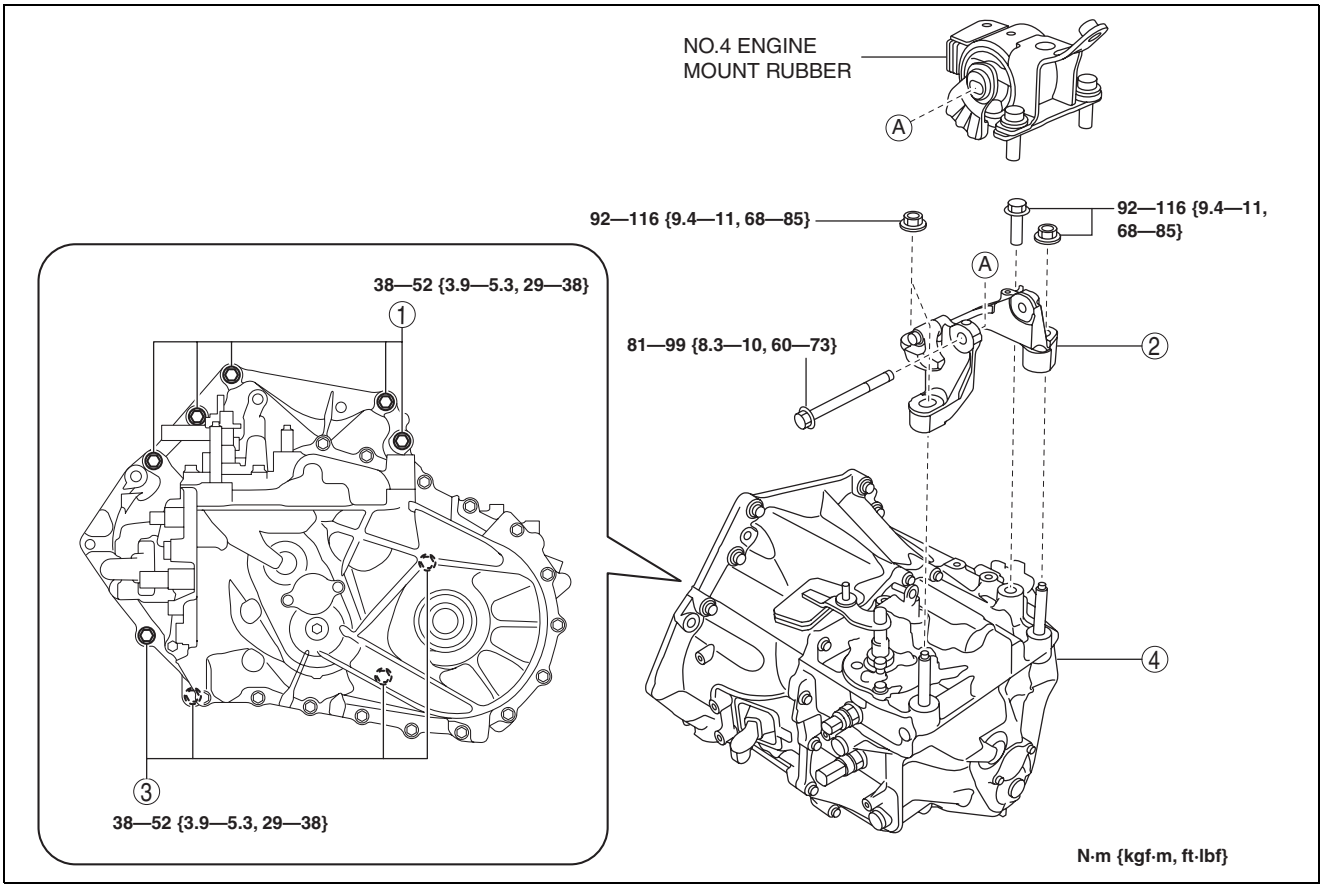
(9) Install the **SST (49 L017 5A0)** to the **SST (49 UN30 3050)** with the hook of the **SST (49 L017 5A0)** facing outward.
(10) Adjust the height of the left and right side bars so that they are leveled, then tighten each part of the **SST**.
(11) Apply tension to the chain to secure the engine.



ac5wzw0000348

MANUAL TRANSAXLE [D66M-R, D66MX-R]

11. Remove in the order indicated in the table.



ac5wzw0000348

1	Transaxle mounting bolt (upper side)
2	No.4 engine mount bracket (See 05-15B-24 No.4 Engine mount bracket removal note.)
3	Transaxle mounting bolt (lower side) (See 05-15B-24 Transaxle mounting bolt removal note.)
4	MTX

MANUAL TRANSAXLE [D66M-R, D66MX-R]

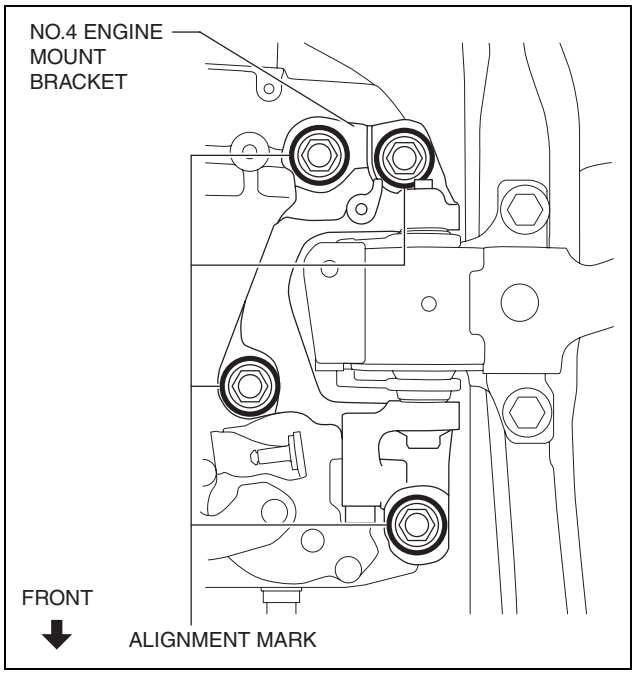
No.4 Engine mount bracket removal note

Caution
- **A slot has been adopted for the No.4 engine mount bracket installation hole. If the No.4 engine mount bracket is deviated from the original position when installing the No.4 engine mount, engine noise or vibration could increase. When removing the No.4 engine mount, place alignment marks on the No.4 engine mount bracket so that they can be assembled to the same positions as before removal.**

1. Place alignment marks on the locations shown in the figure so that they can be assembled to the same positions as before removal.

   Note
   - Paint so that the outline of the nut is framed on the bracket side.

2. Remove the No.4 engine mount bracket.

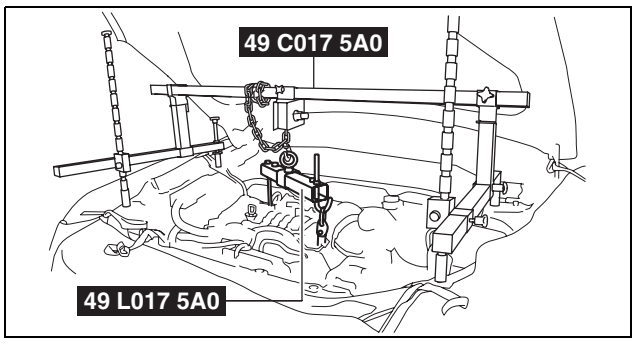


ac5wzw0000348

Transaxle mounting bolt removal note

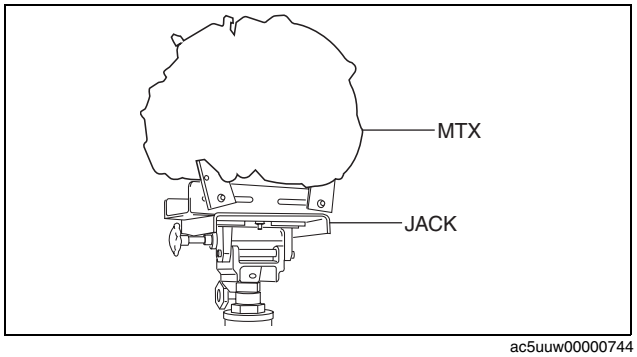
Warning
- **Remove the MTX carefully, holding it steady. If the MTX falls it could be damaged or cause injury.**

1. Adjust the **SST** and lean the engine toward the MTX.



ac5wzw0000348

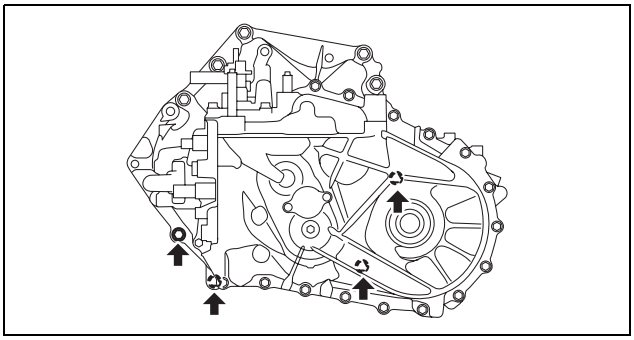
2. Support the MTX on a jack.



ac5uuw00000744

MANUAL TRANSAXLE [D66M-R, D66MX-R]

3. Remove the transaxle mounting bolts (lower side).
4. Remove the MTX.

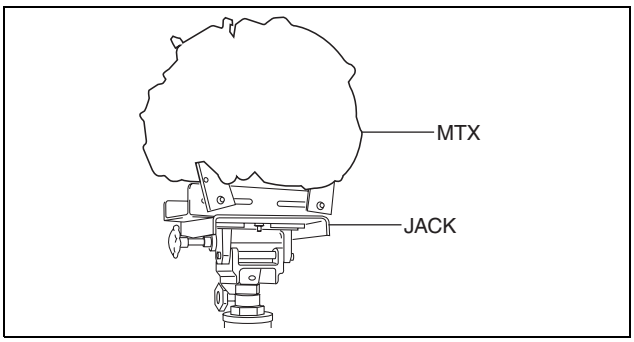


ac5wzw0000348

Installation

Warning
- **Install the MTX carefully, holding it steady. If the MTX falls it could be damaged or cause injury.**

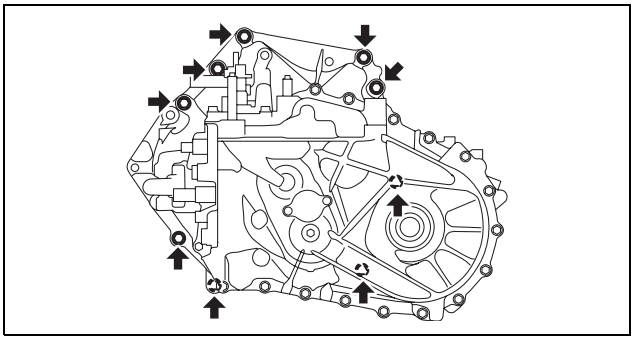
1. Set the MTX on a jack and lift into place.



ac5uuw00000744

2. Install the MTX to the engine, and tighten the transaxle mounting bolts.

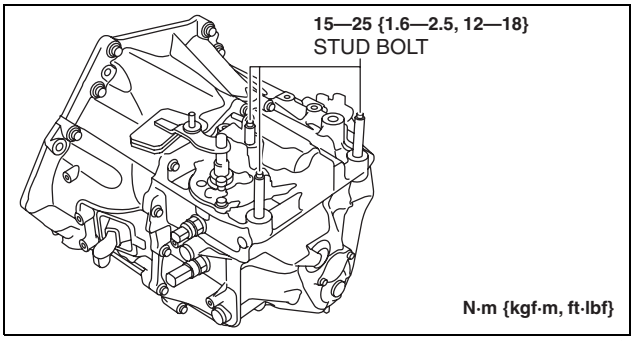
Tightening torque
38—52 N·m {3.9—5.3 kgf·m, 29—38 ft·lbf}



ac5wzw0000348

3. Tighten the stud bolts for the MTX.

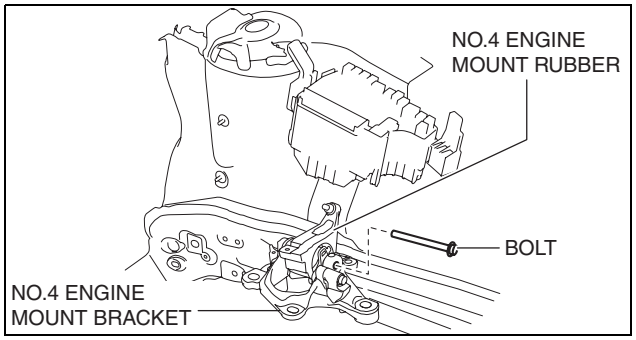
Note
- If the No.4 engine mount bracket nut is loosened, tighten the stud bolts for the MTX because they may be loosened.



ac5wzw0000348

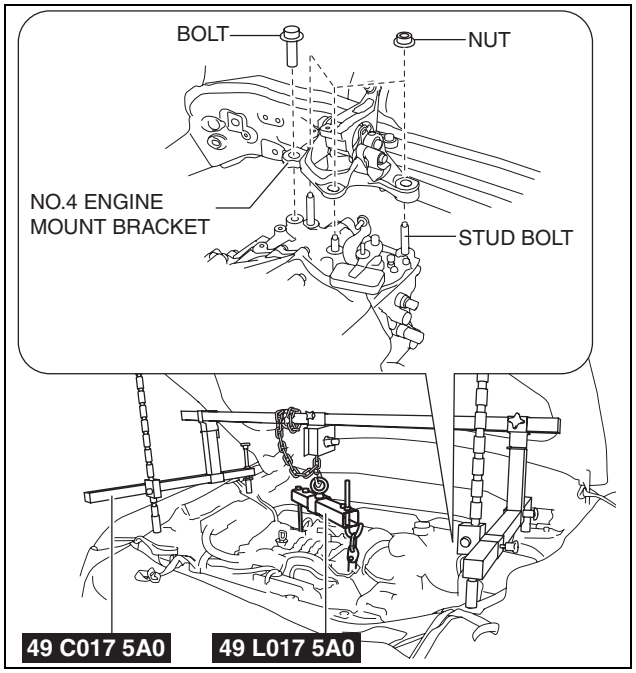
MANUAL TRANSAXLE [D66M-R, D66MX-R]

4. Install the No.4 engine mount bracket to No.4 engine mount rubber, and temporarily tighten the installation bolt.



ac5wzw0000348

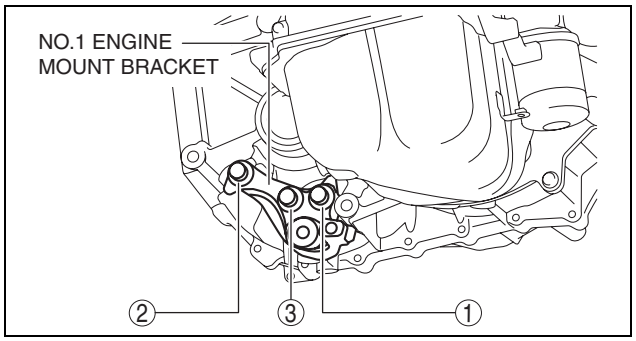
5. Pull up the MTX using the **SST**s, pass the MTX stud bolts through the No.4 engine mount bracket, and temporarily tighten the No.4 engine mount installation nuts.



ac5wzw0000349

6. Install the No.1 engine mount bracket and tighten the bolts in the order shown in the figure.

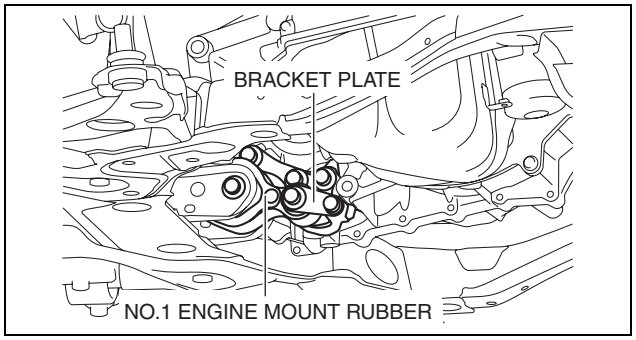
   Tightening torque
   131—153 N·m {14—15 kgf·m, 97—112 ft·lbf}



ac5wzw0000349

7. Install the transfer. (See 03-16A-6 TRANSFER REMOVAL/INSTALLATION [D66MX-R].)
8. Install the front crossmember component and No.1 engine mount rubber as a single unit. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)

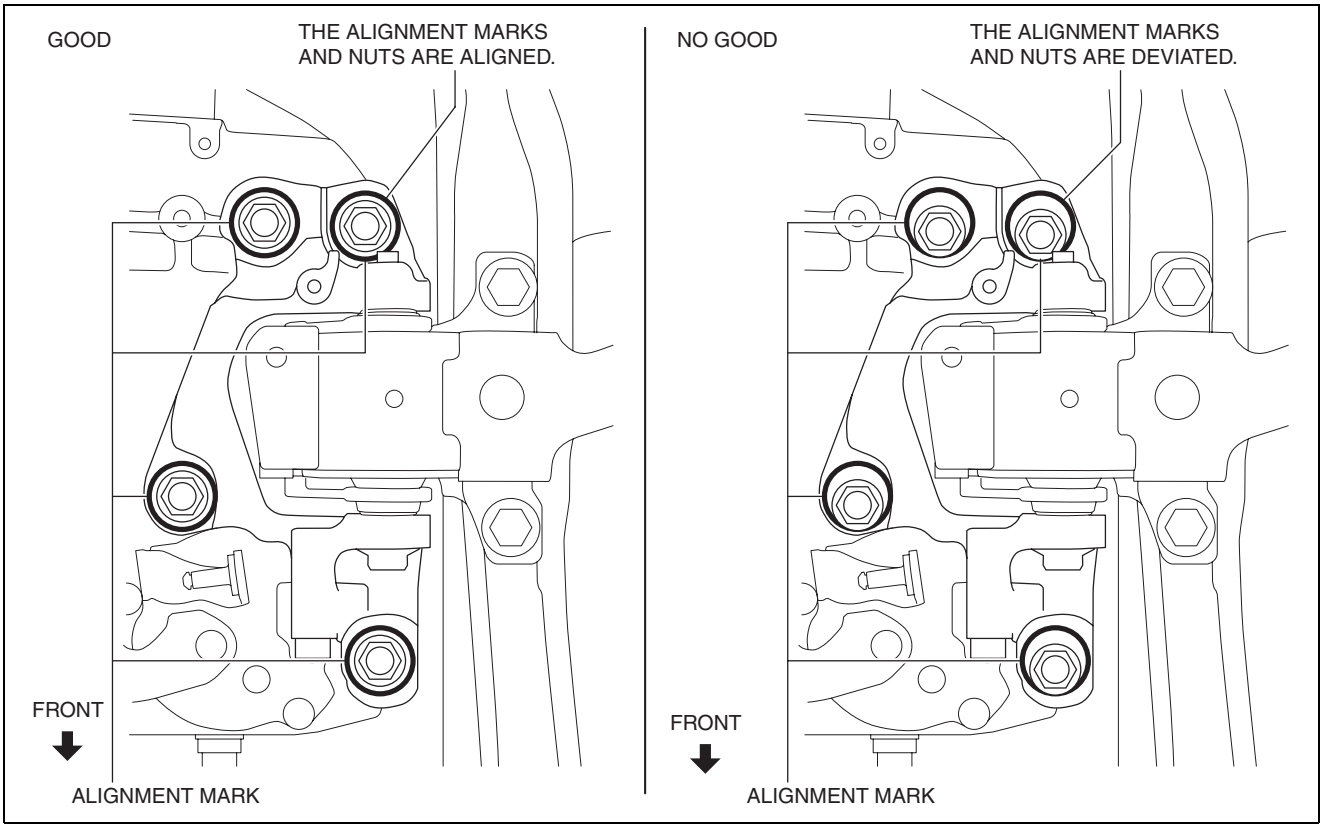
9. Install the bracket plate, and temporarily tighten the No.1 engine mount rubber installation bolts.



ac5wzw0000349

MANUAL TRANSAXLE [D66M-R, D66MX-R]

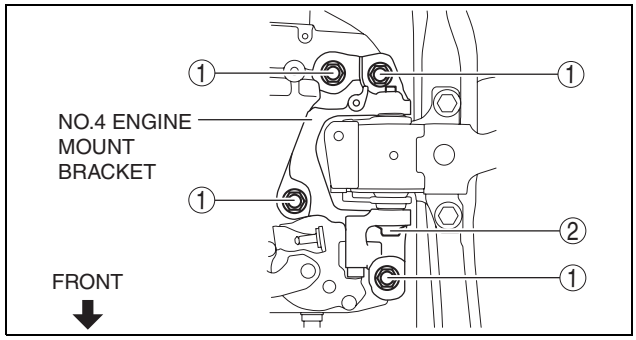
10. Align the alignment marks on the No.4 engine mount bracket and nuts, and temporarily tighten the nuts shown in the figure.



ac5wzw0000349

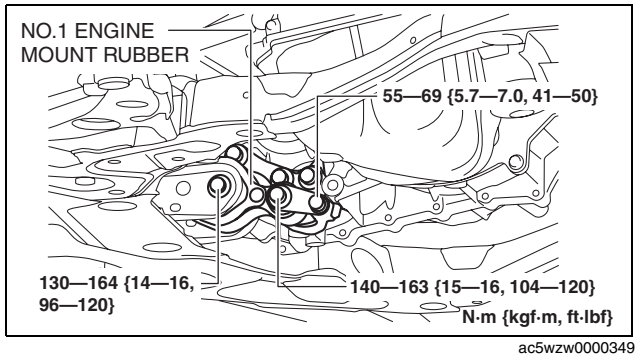
11. Tighten the No.4 engine mount bracket installation nuts and bolt in the order shown in the figure.

No.	Tightening torque
1	92—116 N·m {9.4—11 kgf·m, 68—85 ft·lbf}
2	81—99 N·m {8.3—10 kgf·m, 60—73 ft·lbf}



ac5wzw0000349

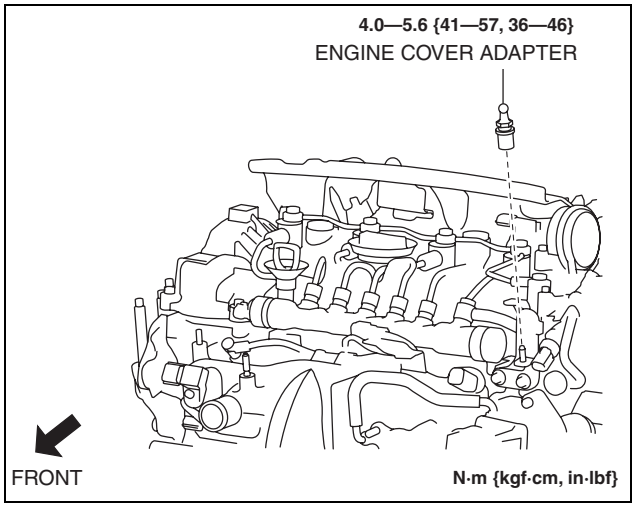
12. Remove the **SST (49 C017 5A0)**.
13. Install the propeller shaft. (See 03-15-2 PROPELLER SHAFT REMOVAL/INSTALLATION.)
14. Tighten the No.1 engine mount rubber installation bolts.
15. Connect and/or Install the following parts to the underside of the vehicle.
    (1) Install the tunnel member. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].).
    (2) Install the brace bar. (See 01-15B-1 EXHAUST SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
    (3) Install the starter. (See 01-19B-2 STARTER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
    (4) Install the clutch release cylinder to the MTX. (See 05-10B-24 CLUTCH RELEASE CYLINDER REMOVAL/INSTALLATION [D66M-R, D66MX-R].)



ac5wzw0000349

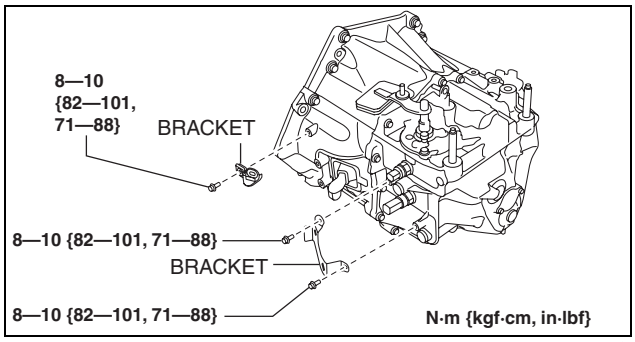
MANUAL TRANSAXLE [D66M-R, D66MX-R]

16. Connect and/or Install the following parts related to the suspension and axle.
    (1) Install the drive shaft (RH) to the MTX. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
    (2) Connect the drive shaft (LH) to the MTX. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
    (3) Connect the front lower arms to the steering knuckles. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
    (4) Connect the stabilizer control links to the stabilizer. (See 02-13-10 FRONT STABILIZER REMOVAL/INSTALLATION.)
    (5) Connect the tie-rod end ball joints to the steering knuckles. (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
    (6) Connect the ABS wheel-speed sensors to the steering knuckles. (See 04-15-9 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
    (7) Connect the clip securing the brake hose to the shock absorber. (See 04-11-30 BRAKE HOSE (FRONT) REMOVAL/INSTALLATION.)
    (8) Install the front tires. (See 03-10-1 GENERAL PROCEDURES (FRONT AND REAR AXLES).)
17. Connect and/or install the following parts in the engine compartment.
    (1) Install the engine cover adapter.



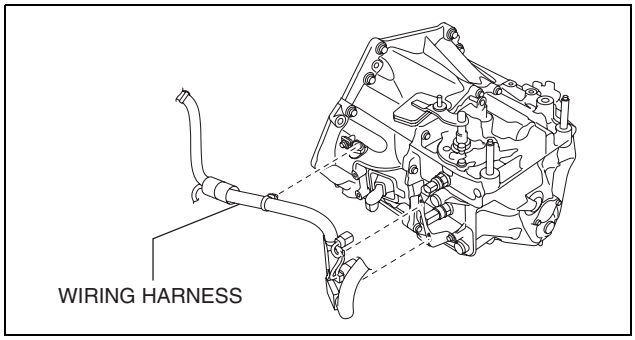
ac5wzw0000349

    (2) Install the brackets to the MTX.



ac5wzw0000349

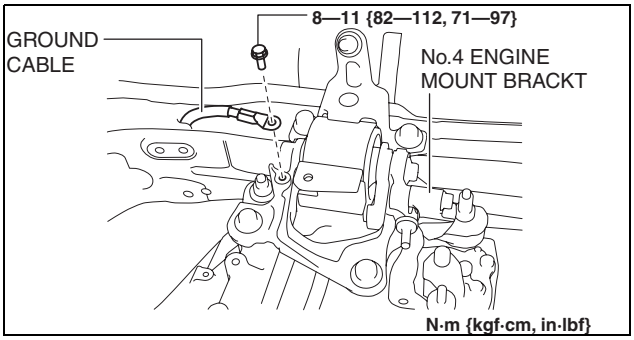
    (3) Connect the wiring harness to the MTX.
    (4) Connect the back-up light switch connector. (See 05-15B-3 BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
    (5) Connect the neutral switch connector. (See 05-15B-2 NEUTRAL SWITCH REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
    (6) Install the EGR cooler. (See 01-16B-12 EGR COOLER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000347

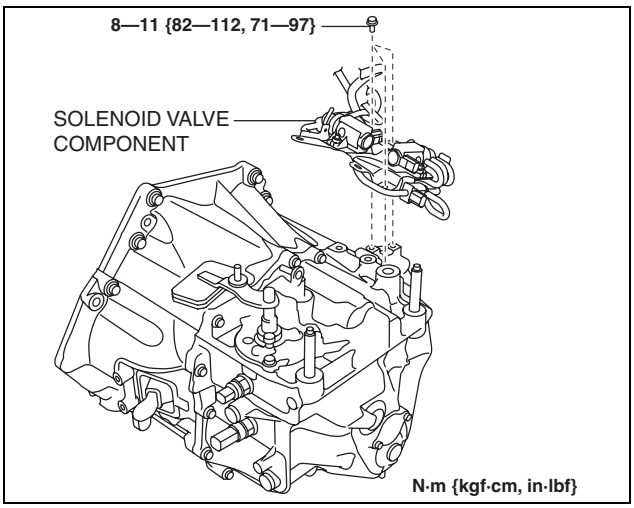
MANUAL TRANSAXLE [D66M-R, D66MX-R]

(7) Connect the ground cable to the No.4 engine mount bracket.



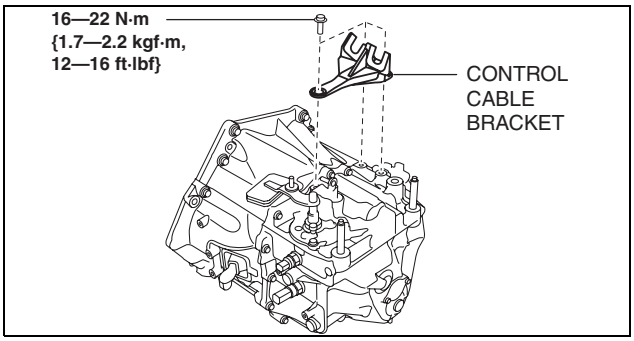
ac5wzw0000349

(8) Install the solenoid valve component to the MTX.



ac5wzw0000343

(9) Install the control cable bracket to the MTX.
(10) Connect the control cable to the MTX. (See 05-16B-1 MANUAL TRANSAXLE SHIFT MECHANISM REMOVAL/INSTALLATION [D66M-R, D66MX-R].)
(11) Install the battery component. (ex: battery, battery tray) (See 01-17B-3 BATTERY REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
(12) Install the air cleaner component. (ex: air cleaner, air hose) (See 01-13B-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)



ac5wzw0000349

18. Install the splash shield. (See 09-16-49 SPLASH SHIELD REMOVAL/INSTALLATION.)
19. Install the front under cover No.1. (See 09-16-40 FRONT UNDER COVER No.1 REMOVAL/INSTALLATION.)
20. Refill the engine coolant. (See 01-12B-4 ENGINE COOLANT REPLACEMENT [SKYACTIV-D 2.2].)
21. Add the specified amount of specified transaxle oil. (See 05-15B-2 MANUAL TRANSAXLE OIL REPLACEMENT [D66M-R, D66MX-R].)
22. Install the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
23. Connect the negative battery cable. (See 01-17B-9 NEGATIVE BATTERY CABLE DISCONNECTION/CONNECTION [SKYACTIV-D 2.2].)
24. Install the plug hole plate. (See 01-10B-4 ENGINE COVER REMOVAL/INSTALLATION [SKYACTIV-D 2.2].)
25. If the MTX is overhauled, perform the “INSPECTION AFTER MANUAL TRANSAXLE OVERHAUL”. (See 05-15B-29 INSPECTION AFTER MANUAL TRANSAXLE OVERHAUL [D66M-R, D66MX-R].)

INSPECTION AFTER MANUAL TRANSAXLE OVERHAUL [D66M-R, D66MX-R]

id0515md159500

1. After warming up the engine, drive the vehicle and inspect the following items:
   (1) No abnormal noise in each shift position.
   (2) Smooth shift operation when shifting gears.
   (3) No gear slipout after shifting gears.
   (4) Back-up light switch operates correctly.

MANUAL TRANSAXLE [D66M-R, D66MX-R]

OIL SEAL (DIFFERENTIAL) REPLACEMENT [D66M-R, D66MX-R]

id0515md160100

1. Remove the front under cover No.2. (See 09-16-41 FRONT UNDER COVER No.2 REMOVAL/INSTALLATION.)
2. Drain the manual transaxle oil. (See 05-15B-2 MANUAL TRANSAXLE OIL REPLACEMENT [D66M-R, D66MX-R].)
3. Disconnect the drive shaft (LH) from the MTX. (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
4. Disconnect the drive shaft (RH) from the MTX. (2WD) (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
5. Remove the drive shaft (RH). (4WD) (See 03-13-3 FRONT DRIVE SHAFT REMOVAL/INSTALLATION.)
6. Remove the front crossmember component and No.1 engine mount rubber as a single unit. (4WD) (See 02-13-15 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
7. Remove the transfer. (4WD) (See 03-16A-6 TRANSFER REMOVAL/INSTALLATION [D66MX-R].)
8. Remove the oil seal (LH).
9. Remove the oil seal (RH).

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

1	Drive plate (See 05-17A-59 DRIVE PLATE REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
2	Automatic transaxle (See 05-17A-4 MECHANICAL SYSTEM TEST [FW6A-EL, FW6AX-EL].) (See 05-17A-9 ROAD TEST [FW6A-EL, FW6AX-EL].) (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].) (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FW6A-EL, FW6AX-EL].) (See 05-17A-12 AUTOMATIC TRANSAXLE FLUID (ATF) ADJUSTMENT [FW6A-EL, FW6AX-EL].) (See 05-17A-74 INITIAL LEARNING [FW6A-EL, FW6AX-EL].) (See 05-17A-28 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6A-EL].) (See 05-17A-43 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FW6AX-EL] .)
3	Oil seal (differential) (See 05-17A-60 OIL SEAL (DIFFERENTIAL) REPLACEMENT [FW6A-EL, FW6AX-EL].)
4	Electric AT oil pump (if equipped) (See 05-17A-27 ELECTRIC AT OIL PUMP REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
5	Oil seal (control valve body) (See 05-17A-63 OIL SEAL (CONTROL VALVE BODY) REPLACEMENT [FW6A-EL, FW6AX-EL].)
6	Control valve body (See 05-17A-67 CONTROL VALVE BODY REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].) (See 05-17A-79 TCM CONFIGURATION [FW6A-EL, FW6AX-EL].)
7	Oil cooler (See 05-17A-66 OIL COOLER REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
8	ON/OFF solenoid (See 05-17A-25 ON/OFF SOLENOID REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
9	Coupler component (See 05-17A-16 COUPLER COMPONENT REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
10	Oil pressure switch (See 05-17A-20 OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
11	Down switch (See 05-17A-15 DOWN SWITCH INSPECTION [FW6A-EL, FW6AX-EL].) (See 05-17A-15 DOWN SWITCH REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
12	M position switch (See 05-17A-13 M POSITION SWITCH INSPECTION [FW6A-EL, FW6AX-EL].) (See 05-17A-14 M POSITION SWITCH REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)
13	Up switch (See 05-17A-14 UP SWITCH INSPECTION [FW6A-EL, FW6AX-EL].) (See 05-17A-14 UP SWITCH REMOVAL/INSTALLATION [FW6A-EL, FW6AX-EL].)

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

MECHANICAL SYSTEM TEST [FW6A-EL, FW6AX-EL]

id0517h2118300

Mechanical system test preparation

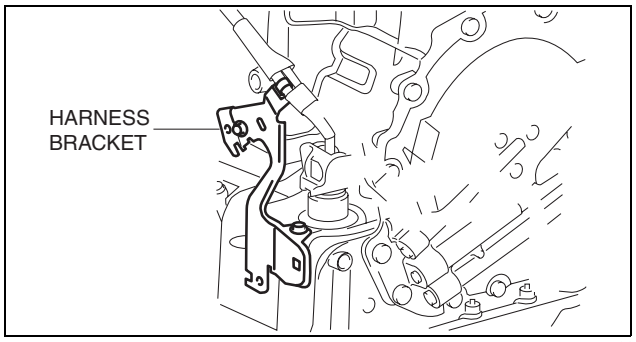
1. Apply the parking brake firmly, and set the wheel blocks for both the front and rear wheels.
2. Inspect the engine coolant level. (See 01-12A-3 ENGINE COOLANT LEVEL INSPECTION [SKYACTIV-G 2.0].)
3. Inspect the engine oil level. (See 01-11A-3 ENGINE OIL LEVEL INSPECTION [SKYACTIV-G 2.0].)
4. Inspect the ATF level. (See 05-17A-11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FW6A-EL, FW6AX-EL].)
5. Inspect the ignition timing. (See 01-10A-4 ENGINE TUNE-UP [SKYACTIV-G 2.0].)
6. Inspect the idle speed. (See 01-10A-4 ENGINE TUNE-UP [SKYACTIV-G 2.0].)
7. Verify that no DTCs are stored.

Line pressure test

1. Perform the mechanical system test preparation. (See 05-17A-4 Mechanical system test preparation.)
2. Remove the air cleaner component. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
3. Remove the harness bracket.
4. Remove the pressure detection square head plug.

Warning

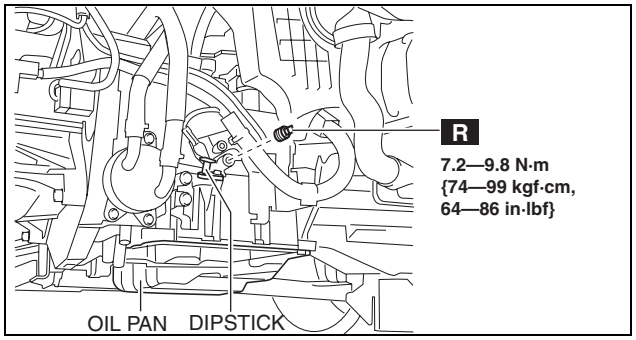
- **Do not remove the square head plug when the ATF temperature is high. Otherwise, ATF could overflow and cause severe burns or serious injury. Remove the square head plug when the transaxle and ATF temperatures are low.**



ac5uuw00000211

Note

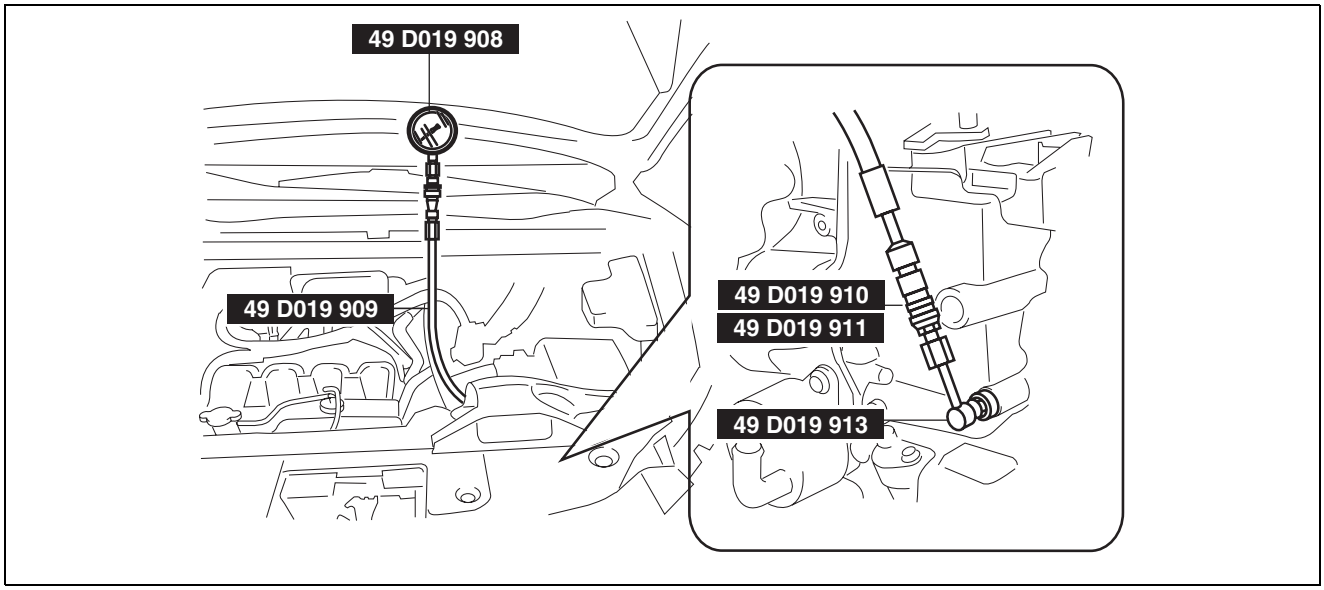
- Use a suitable oil pressure gauge that corresponds to the line pressure because the maximum scale value differs depending on the oil pressure gauge.



ac5wzw0000459

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

5. Install **SSTs (49 D019 908, 49 D019 909, 49 D019 910,** 49 D019 911, 49 D019 913) to the line pressure detection port as shown in the figure.



ac5wzw0000242

6. Install the air cleaner component. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
7. Start the engine.
8. Warm up the engine until the ATF temperature is **60—70 °C {140—158 °F}**.
9. Shift the selector lever to the D position.
10. Measure the line pressure while idling in D position.
11. Measure the line pressures while idling in the M (1st gear) and R positions using the same procedure.
12. Stop the engine.
13. Change the low-pressure gauge (49 D019 908) to the high-pressure gauge (49 D019 907).
14. Start the engine.
15. Measure the line pressure while stalling in D position.
    (1) Strongly depress the brake pedal with the left foot.
    (2) Shift the selector lever to the D position.

Caution
- **To prevent damage to the transaxle, measure the line pressure while stalling (Step (3)—(4)) within 5 s.**

    (3) Slowly depress the accelerator pedal fully with the right foot all the way down.
    (4) Read the line pressure quickly while stalling, and remove the right foot from the accelerator pedal.
    (5) Shift the selector lever to the N position and idle for **1 min or more**.

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

16. Measure the line pressure while stalling for positions other than D in the same procedure.
    - If there is any malfunction, one of the following causes may have occurred:

Condition		Possible cause
Lower than specification	Lower in R, D, and M (1GR) position	• Oil pump wear • ATF leakage from oil pump, control valve body, and transaxle case • Pressure regulator valve sticking • Pressure control solenoid malfunction • Solenoid reducing valve sticking
	Lower in D and M (1GR) position	• ATF leakage from low clutch hydraulic circuit
	Lower in R and M (1GR) position	• ATF leakage from low and reverse brake hydraulic circuit
	Lower in R position	• ATF leakage from R-3-5 brake hydraulic circuit
Higher than specification	Higher in R, D, and M (1GR) position	• Pressure regulator valve sticking • Pressure control solenoid malfunction

Line pressure

Measurement conditions		Specification (kPa {kgf/cm^2, psi})
Idling	R position	**500—700 {5.10—7.13, 72.6—101.0}**
	D and M (1GR) position	**330—470 {3.37—4.79, 47.9—68.1}**
Stalling	R position	**1,790—2,100 {18.26—21.41, 259.7—304.5}**
	D and M (1GR) position	**970—1,170 {9.90—11.93, 141.0—169.6}**

17. Stop the engine.
18. Remove the air cleaner component. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)
19. Remove the **SSTs**.

Warning
- **If the SST is removed when the ATF temperature is high, ATF could overflow and cause severe burns or serious injury. Remove the SST when the transaxle and ATF temperatures are low.**

20. Install a new square head plug.

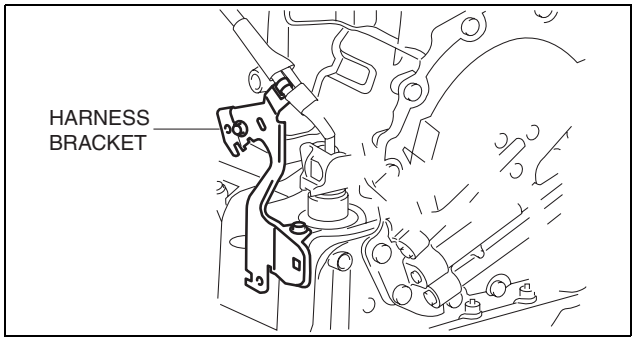
Note
- Do not reuse the square head plug because a sealant coating has been applied.

Tightening torque
7.2—9.8 N·m {74—99 kgf·cm, 64—86 in·lbf}

21. Install the harness bracket.

Tightening torque
8—10 N·m {82—101 kgf·cm, 71—88 in·lbf}

22. Install the air cleaner component. (See 01-13A-6 INTAKE-AIR SYSTEM REMOVAL/INSTALLATION [SKYACTIV-G 2.0].)



ac5uuw00000211

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

Stall test

1. Perform the mechanical system test preparation. (See 05-17A-4 Mechanical system test preparation.)
2. Apply the parking brake firmly, and set the wheel blocks for both the front and rear wheels.
3. Start the engine.
4. Measure the stall speed in the D position.
   (1) Strongly depress the brake pedal with the left foot.
   (2) Shift the selector lever to the D position.

   Caution
   - **To prevent damage to the transaxle, measure the stall speed (Step (3)—(4)) within 5 s.**

   (3) Slowly depress the accelerator pedal fully with the right foot all the way down.
   (4) Read the engine speed quickly when the speed is stabilized, and remove the right foot from the accelerator pedal.
   (5) Shift the selector lever to the N position and idle for **1 min or more**.
5. Measure the stall speed in the M (1st gear) and R positions using the same procedure.
   - If there is any malfunction, one of the following causes may have occurred:

Condition		Possible cause	
Higher than specification	Higher in R, D, and M (1GR) position	Line pressure is low	• Oil pump wear • ATF leakage from oil pump, control valve body, and transaxle case • Pressure regulator valve sticking • TR control valve sticking • Pressure control solenoid operation malfunction
		• Low and reverse brake slippage, and damage of one-way clutch	
	Higher in D and M (1GR) position	• Low clutch slippage • One-way clutch damage	
	Higher in R position	Perform road test to determine whether problem is in R-3-5 brake or low and reverse brake • Engine brake operates in M (1GR) position — R-3-5 brake slippage • Engine braking does not operate in M (1GR) position — Low and reverse brake slippage	
Lower than specification	Lower in R, D, and M (1GR) position	• Engine malfunction • One-way clutch slippage in torque converter	

Stall speed

Measurement conditions	Standard value (rpm)
R position	1,700—2,200
D position	1,900—2,600
M position	

AUTOMATIC TRANSAXLE [FW6A-EL, FW6AX-EL]

Time lag test

1. Perform the mechanical system test preparation. (See 05-17A-4 Mechanical system test preparation.)
2. Apply the parking brake firmly, and set the wheel blocks for both the front and rear wheels.
3. Start the engine.
4. Measure the time lag from the N position to the D position.
   (1) Shift the selector lever from the N position to the D position with the brake pedal depressed.
   (2) Measure the time until the shift shock is felt firmly after shifting.
5. Measure the time lag from the N position to the R position using the same procedure.
   - If there is any malfunction, one of the following causes may have occurred:

Condition		Possible cause
N to D selected	Longer than specification	• Line pressure is low • Low clutch slippage • ATF leakage from low clutch hydraulic circuit • ATF leakage from low and reverse brake hydraulic circuit • Shift solenoid No.1 operation malfunction • Shift solenoid No.4 operation malfunction
	Shorter than specification	• Line pressure is high • N-D accumulator operation malfunction • Shift solenoid No.1 operation malfunction • Shift solenoid No.4 operation malfunction
