

Front deck
upper outer frame

The image shows two technical line drawings of automotive components. On the left is a 'Front deck upper outer frame', which is a complex, angular metal part with several circular mounting holes and a central oval-shaped cutout. On the right is a 'Front pillar reinforcement lower', which is a long, vertical, C-shaped metal reinforcement piece with multiple circular holes along its length. Both parts are shown in a perspective view, highlighting their three-dimensional structure.
