

Tailgate hinge

This technical drawing illustrates a tailgate hinge assembly. The main component is a metal bracket with a circular mounting hole at the top. A long, thin rod is attached to the bracket and extends upwards and to the right. A bolt is shown passing through the bracket and a horizontal plate. A label 'Tailgate hinge' with a leader line points to the bracket. Another leader line points from a separate pin to a slot in the horizontal plate. The pin is a small, dark, cylindrical component.
