PRECAUTIONS

PFP:00001

Description

BAS00019

Observe the following precautions to ensure safe and proper servicing. These precautions are not described in each individual section.

Precautions for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

BAS0001A

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

Precautions for NATS (NISSAN ANTI-THEFT SYSTEM)

BAS0001B

NATS will immobilize the engine if someone tries to start it without the registered key of NATS.

Both of the originally supplied ignition key IDs have been NATS registered.

The security indicator is located on the instrument panel. The indicator blinks when the immobilizer system is functioning.

Therefore, NATS warns outsiders that the vehicle is equipped with the anti-theft system.

- When NATS detects trouble, the security indicator lamp lights up while ignition switch is in "ON" position. This lighting up indicates that the anti-theft is not functioning, so prompt service is required.
- When servicing NATS (trouble diagnoses, system initialization and additional registration of other NATS ignition key IDs), CONSULT-II hardware and CONSULT-II NATS software is necessary. Regarding the procedures of NATS initialization and NATS ignition key ID registration, refer to CONSULT-II operation manual, NATS.

Therefore, CONSULT-II NATS software (program card and operation manual) must be kept strictly confidential to maintain the integrity of the anti-theft function.

- When servicing NATS (trouble diagnoses, system initialization and additional registration of other NATS ignition key IDs), it may be necessary to re-register original key identification. Therefore, be sure to receive all keys from vehicle owner. A maximum of four or five key IDs can be registered into NATS.
- When failing to start the engine first time using the key of NATS, start as follows.
 1. Leave the ignition key in "ON" position for approximately 5 seconds.
 2. Turn ignition key to "OFF" or "LOCK" position and wait approximately 5 seconds.
 3. Repeat step 1 and 2 again.
 4. Restart the engine while keeping the key separate from any others on key-chain.

PRECAUTIONS

General Precautions

BAS0001C

- Do not operate the engine for an extended period of time without proper exhaust ventilation.
Keep the work area well ventilated and free of any inflammable materials. Special care should be taken when handling any inflammable or poisonous materials, such as gasoline, refrigerant gas, etc. When working in a pit or other enclosed area, be sure to properly ventilate the area before working with hazardous materials.
Do not smoke while working on the vehicle.

- Before jacking up the vehicle, apply wheel chocks or other tire blocks to the wheels to prevent the vehicle from moving. After jacking up the vehicle, support the vehicle weight with safety stands at the points designated for proper lifting before working on the vehicle.
These operations should be done on a level surface.
- When removing a heavy component such as the engine or transaxle/transmission, be careful not to lose your balance and drop them. Also, do not allow them to strike adjacent parts, especially the brake tubes and master cylinder.

- Before starting repairs which do not require battery power:
Turn off ignition switch.
Disconnect the negative battery terminal.
- If the battery terminals are disconnected, recorded memory of radio and each control unit is erased.

- To prevent serious burns:
Avoid contact with hot metal parts.
Do not remove the radiator cap when the engine is hot.
- Dispose of drained oil or the solvent used for cleaning parts in an appropriate manner.
- Do not attempt to top off the fuel tank after the fuel pump nozzle shuts off automatically.
Continued refueling may cause fuel overflow, resulting in fuel spray and possibly a fire.
- Clean all disassembled parts in the designated liquid or solvent prior to inspection or assembly.
- Replace oil seals, gaskets, packings, O-rings, locking washers, cotter pins, self-locking nuts, etc. with new ones.
- Replace inner and outer races of tapered roller bearings and needle bearings as a set.
- Arrange the disassembled parts in accordance with their assembled locations and sequence.
- Do not touch the terminals of electrical components which use microcomputers (such as ECM).
Static electricity may damage internal electronic components.
- After disconnecting vacuum or air hoses, attach a tag to indicate the proper connection.
- Use only the fluids and lubricants specified in this manual.

PRECAUTIONS

- Use approved bonding agent, sealants or their equivalents when required.
- Use tools and recommended special tools where specified for safe and efficient service repairs.
- When repairing the fuel, oil, water, vacuum or exhaust systems, check all affected lines for leaks.
- Before servicing the vehicle:
 - Protect fenders, upholstery and carpeting with appropriate covers.
 - Take caution that keys, buckles or buttons do not scratch paint.

WARNING:

To prevent ECM from storing the diagnostic trouble codes, do not carelessly disconnect the harness connectors which are related to the engine control system and TCM (transmission control module) system. The connectors should be disconnected only when working according to the WORK FLOW of TROUBLE DIAGNOSES in EC and AT sections.

Precautions for All Mode 4 × 4 System

BAS0001D

Even if the 2WD mode is selected, the All mode 4 × 4 system occasionally changes from 2WD to 4WD automatically depending on the driving conditions.

When spinning the front wheels by running the engine with the front wheels jacked up or mounted on the free rollers / or a chassis dynamometer, be careful because the vehicle may suddenly move due to the driving force from the rear wheels.

To avoid personal injury and vehicle damage, use one of the following methods when working with the front wheels drive force and spinning freely.

- Remove the propeller shaft.
- Use free rollers / chassis dynamometer designed for 4WD vehicles.

Precautions for Three Way Catalyst

BAS0001E

If a large amount of unburned fuel flows into the catalyst, the catalyst temperature will be excessively high. To prevent this, follow the instructions.

- Use unleaded gasoline only. Leaded gasoline will seriously damage the three way catalyst.
- When checking for ignition spark or measuring engine compression, make tests quickly and only when necessary.
- Do not run engine when the fuel tank level is low, otherwise the engine may misfire, causing damage to the catalyst.

Do not place the vehicle on flammable material. Keep flammable material off the exhaust pipe and the three way catalyst.

Precautions for Fuel GASOLINE ENGINE

BAS0001F

Use unleaded gasoline with an octane rating of at least 95 (RON).

CAUTION:

Do not use leaded gasoline. Using leaded gasoline will damage the three way catalyst. Using a fuel other than that specified could adversely affect the emission control devices and systems, and could also affect the warranty coverage validity.

DIESEL ENGINE

Diesel fuel of at least 50 cetane.

If two types of diesel fuel are available, use summer or winter fuel properly according to the following temperature conditions.

- Above -7°C (20°F) ... Summer type diesel fuel.
- Below -7°C (20°F) ... Winter type diesel fuel.

PRECAUTIONS

CAUTION:

- Do not use home heating oil, gasoline or other alternate fuels in your diesel engine. The use of those can cause engine damage.
- Do not use summer fuel at temperatures below -7°C (20°F). The cold temperatures will cause wax to form in the fuel. As a result, it may prevent the engine from running smoothly.
- Do not add gasoline or other alternate fuels to diesel fuel.

Precautions for Multiport Fuel Injection System or Engine Control System

BAS0001G

- Before connecting or disconnecting any harness connector for the multiport fuel injection system or ECM:
Turn ignition switch to "OFF" position.
Disconnect negative battery terminal.
Otherwise, there may be damage to ECM.
- Before disconnecting pressurized fuel line from fuel pump to injectors, be sure to release fuel pressure.
- Be careful not to jar components such as ECM and mass air flow sensor.

Precautions for Turbocharger (If Equipped)

BAS0001H

The turbocharger turbine revolves at extremely high speeds and becomes very hot. Therefore, it is essential to maintain a clean supply of oil flowing through the turbocharger and to follow all required maintenance instructions and operating procedures.

- Always use the recommended oil. Follow the instructions for proper time to change the oil and proper oil level.
- Avoid accelerating engine to a high rpm immediately after starting.
- If engine had been operating at high rpm for an extended period of time, let it idle for a few minutes prior to shutting it off.

Precautions for Hoses

HOSE REMOVAL AND INSTALLATION

BAS0001I

- To prevent damage to rubber hose, do not pry off rubber hose with tapered tool or screwdriver.

- To reinstall the rubber hose securely, make sure that hose insertion length and orientation is correct. (If tube is equipped with hose stopper, insert rubber hose into tube until it butts up against hose stopper.)

PRECAUTIONS

HOSE CLAMPING

- If old rubber hose is re-used, install hose clamp in its original position (at the indentation where the old clamp was). If there is a trace of tube bulging left on the old rubber hose, align rubber hose at that position.
- Discard old clamps; replace with new ones.

- After installing plate clamps, apply force to them in the direction of the arrow, tightening rubber hose equally all around.

Precautions for Engine Oils

BAS0001J

Prolonged and repeated contact with used engine oil may cause skin cancer. Try to avoid direct skin contact with used oil.

If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.

HEALTH PROTECTION PRECAUTIONS

- Avoid prolonged and repeated contact with oils, particularly used engine oils.
- Wear protective clothing, including impervious gloves where practicable.
- Do not put oily rags in pockets.
- Avoid contaminating clothes, particularly underpants, with oil.
- Heavily soiled clothing and oil-impregnated footwear should not be worn. Overalls must be cleaned regularly.
- First aid treatment should be obtained immediately for open cuts and wounds.
- Use barrier creams, applying them before each work period, to help the removal of oil from the skin.
- Wash with soap and water to ensure all oil is removed (skin cleansers and nail brushes will help). Preparations containing lanolin replace the natural skin oils which have been removed.
- Do not use gasoline, kerosene, diesel fuel, gas oil, thinners or solvents for cleaning skin.
- If skin disorders develop, obtain medical advice without delay.
- Where practical, degrease components prior to handling.
- Where there is a risk of eye contact, eye protection should be worn, for example, chemical goggles or face shields; in addition an eye wash facility should be provided.

ENVIRONMENTAL PROTECTION PRECAUTIONS

Dispose of used oil and used oil filters through authorized waste disposal contractors to licensed waste disposal sites, or to the waste oil reclamation trade. If in doubt, contact the local authority for advice on disposal facilities.

It is illegal to pour used oil on to the ground, down sewers or drains, or into water sources.

The regulations concerning pollution vary between regions.

Precautions for Air Conditioning

BAS0001K

Use an approved refrigerant recovery unit any time the air conditioning system must be discharged. Refer to ATC/MTC section "HFC-134a (R-134a) Service Procedure", "REFRIGERANT LINES" for specific instructions.

HOW TO USE THIS MANUAL

HOW TO USE THIS MANUAL

PFP:00008

Description

BAS0001L

This volume explains "Removal, Disassembly, Installation, Inspection and Adjustment" and "Trouble Diagnoses".

Terms

BAS0001M

- The captions **WARNING** and **CAUTION** warn you of steps that must be followed to prevent personal injury and/or damage to some part of the vehicle.
WARNING indicates the possibility of personal injury if instructions are not followed.
CAUTION indicates the possibility of component damage if instructions are not followed.
BOLD TYPED STATEMENTS except **WARNING** and **CAUTION** give you helpful information.
Standard value:Tolerance at inspection and adjustment.
Limit value:The maximum or minimum limit value that should not be exceeded at inspection and adjustment.

Units

BAS0001N

- The **UNITS** given in this manual are primarily expressed as the SI UNIT (International System of Unit), and alternatively expressed in the metric system and in the yard/pound system.
Also with regard to tightening torque of bolts and nuts, there are descriptions both about range and about the standard tightening torque.

"Example"

Range

Outer Socket Lock Nut : 59 - 78 N·m (6.0 - 8.0 kg-m, 43 - 58 ft-lb)

Standard

Drive Shaft Installation Bolt : 44.3 N·m (4.5 kg-m, 33 ft-lb)

Contents

BAS0001O

- **ALPHABETICAL INDEX** is provided at the end of this manual so that you can rapidly find the item and page you are searching for.
- **A QUICK REFERENCE INDEX**, a black tab (e.g. **BR**) is provided on the first page. You can quickly find the first page of each section by matching it to the section's black tab.
- **THE CONTENTS** are listed on the first page of each section.
- **THE TITLE** is indicated on the upper portion of each page and shows the part or system.
- **THE PAGE NUMBER** of each section consists of two or three letters which designate the particular section and a number (e.g. "BR-5").
- **THE SMALL ILLUSTRATIONS** show the important steps such as inspection, use of special tools, knacks of work and hidden or tricky steps which are not shown in the previous large illustrations.
Assembly, inspection and adjustment procedures for the complicated units such as the automatic transaxle or transmission, etc. are presented in a step-by-step format where necessary.

HOW TO USE THIS MANUAL

Components

BAS0001P

- **THE LARGE ILLUSTRATIONS** are exploded views (see the following) and contain tightening torques, lubrication points, section number of the **PARTS CATALOG** (e.g. SEC. 440) and other information necessary to perform repairs.

The illustrations should be used in reference to service matters only. When ordering parts, refer to the appropriate **PARTS CATALOG**.

Components shown in an illustration may be identified by a circled number. When this style of illustration is used, the text description of the components will follow the illustration.

- | | | |
|-------------------|----------------------|---------------------------------|
| 1. Union bolt | 2. Copper washer | 3. Brake hose |
| 4. Cap | 5. Bleed valve | 6. Sliding pin bolt |
| 7. Piston seal | 8. Piston | 9. Piston boot |
| 10. Cylinder body | 11. Sliding pin | 12. Torque member mounting bolt |
| 13. Washer | 14. Sliding pin boot | 15. Bushing |
| 16. Torque member | 17. Inner shim cover | 18. Inner shim |

HOW TO USE THIS MANUAL

BAS0001Q

How to Follow Trouble Diagnoses

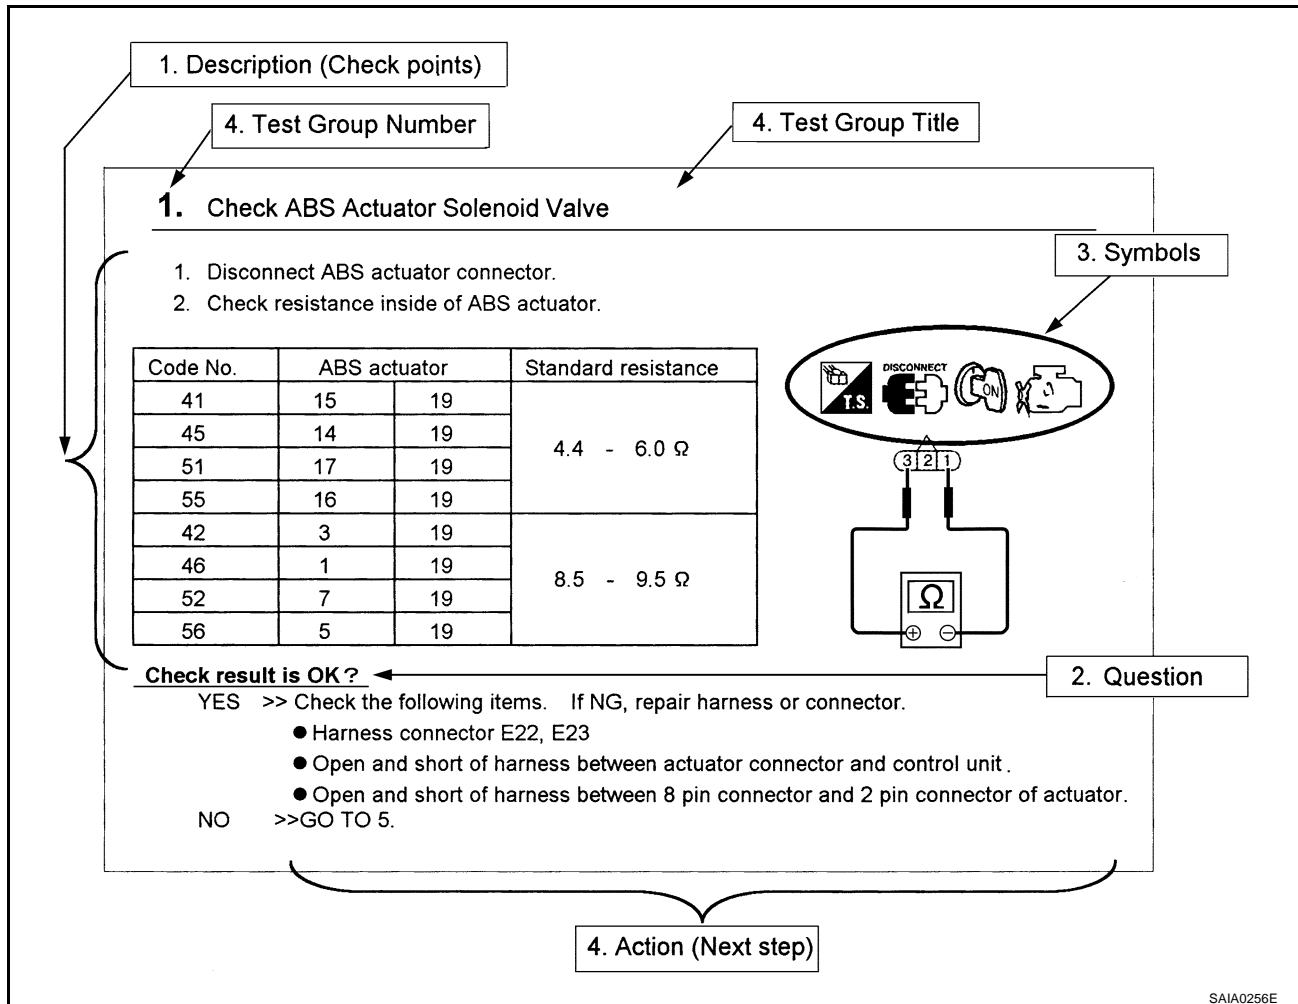

DESCRIPTION

NOTICE:

Trouble diagnoses indicate work procedures required to diagnose problems effectively. Observe the following instructions before diagnosing.

1. **Before performing trouble diagnoses, read the “Preliminary Check”, the “Symptom Chart” or the “Work Flow”.**
2. **After repairs, re-check that the problem has been completely eliminated.**
3. **Refer to Component Parts and Harness Connector Location for the Systems described in each section for identification/location of components and harness connectors.**
4. **Refer to the Circuit Diagram for quick pinpoint check.**
If you need to check circuit continuity between harness connectors in more detail, such as when a sub-harness is used, refer to Wiring Diagram in each individual section and Harness Layout in PG section for identification of harness connectors.
5. **When checking circuit continuity, ignition switch should be OFF.**
6. **Before checking voltage at connectors, check battery voltage.**
7. **After accomplishing the Diagnostic Procedures and Electrical Components Inspection, make sure that all harness connectors are reconnected as they were.**

HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES

SAIA0256E

1. **Work and diagnostic procedure**
Start to diagnose a problem using procedures indicated in enclosed test groups.
2. **Questions and required results**
Questions and required results are indicated in bold type in test group.
The meaning of are as follows:

HOW TO USE THIS MANUAL

a. Battery voltage → 11 - 14V or approximately 12V

b. Voltage : Approximately 0V → Less than 1V

3. Symbol used in illustration

Symbols included in illustrations refer to measurements or procedures. Before diagnosing a problem, familiarize yourself with each symbol. Refer to "Connector Symbols" in GI Section and "KEY TO SYMBOLS SIGNIFYING MEASUREMENTS OR PROCEDURES" below.

4. Action items

Next action for each test group is indicated based on result of each question. Test group number is shown in the left upper portion of each test group.

HARNESS WIRE COLOR AND CONNECTOR NUMBER INDICATION

There are two types of harness wire color and connector number indication.

TYPE 1: Harness Wire Color and Connector Number are Shown in Illustration

- Letter designations next to test meter probe indicate harness wire color.
- Connector numbers in a single circle (e.g. M33) indicate harness connectors.
- Connector numbers in a double circle (e.g. F211) indicate component connectors.

HOW TO USE THIS MANUAL

TYPE 2: Harness Wire Color and Connector Number are Shown in Text

Example 1:

2 CHECK INTAKE SENSOR CIRCUIT BETWEEN INTAKE SENSOR AND AUTO AMP. (LCU)

1. Disconnect auto amp. (LCU) harness connector.
2. Check circuit continuity between intake sensor harness connector M59 terminal No. 2 (GW) and auto amp. (LCU) harness connector M56 terminal No. 11 (GW).

Example 2:

POWER SUPPLY AND GROUND CIRCUIT CHECK

Power Supply Circuit Check

~NCELD00-16S07
NCELD00-16S0701

| Terminals | | | Ignition switch position | | |
|-----------|--------------------------|--------|--------------------------|--------------------|--------------------|

KEY TO SYMBOLS SIGNIFYING MEASUREMENTS OR PROCEDURES

| SYMBOL | DESCRIPTION | SYMBOL | DESCRIPTION |
|--------|---|--------|---|
| | Check after disconnecting the connector to be measured. | | Procedure with Generic Scan Tool. (GST, OBD-II scan tool) |
| | Check after connecting the connector to be measured. | | Procedure without CONSULT, CONSULT-II or GST |
| | Insert key into ignition switch. | | A/C switch is "OFF". |
| | Remove key from ignition switch. | | A/C switch is "ON". |
| | Insert and remove key repeatedly. | | REC switch is "ON". |
| | Turn ignition switch to "OFF" position. | | REC switch is "OFF". |
| | Turn ignition switch to "ACC" position. | | Fan switch is "ON". (At any position except for "OFF" position) |
| | Turn ignition switch to "ON" position. | | Fan switch is "OFF". |
| | Turn ignition switch to "START" position. | | Apply fuse. |
| | Turn ignition switch from "OFF" to "ACC" position. | | Apply positive voltage from battery with fuse directly to components. |
| | Turn ignition switch from "ACC" to "ON" position. | | |
| | Turn ignition switch from "ACC" to "OFF" position. | | |

SAIA0750E

HOW TO USE THIS MANUAL

| SYMBOL | DESCRIPTION | SYMBOL | DESCRIPTION |
|---|---|--|--|
|  | Turn ignition switch from "OFF" to "ON" position. |  | Drive vehicle. |
|  | Turn ignition switch from "ON" to "OFF" position. | | |
|  | Do not start engine, or check with engine stopped. |  | Disconnect battery negative cable. |
|  | Start engine, or check with engine running. |  | Depress brake pedal. |
|  | Apply parking brake. |  | Release brake pedal. |
|  | Release parking brake. |  | Depress accelerator pedal. |
|  | Check after engine is warmed up sufficiently. |  | Release accelerator pedal. |
|  | Voltage should be measured with a voltmeter. |    | Pin terminal check for SMJ type ECM or TCM connectors. For details regarding the terminal arrangement, refer to the "ELECTRICAL UNITS" electrical reference page at the end of the manual. |
|  | Circuit resistance should be measured with an ohmmeter. | | |
|  | | | |
|  | Current should be measured with an ammeter. | | |
|  | Pulse signal should be checked with an oscilloscope. | | |

BAS0001R

How to Read Wiring Diagrams CONNECTOR SYMBOLS

Most of connector symbols in wiring diagrams are shown from the terminal side.

- Connector symbols shown from the terminal side are enclosed by a single line and followed by the direction mark.
- Connector symbols shown from the harness side are enclosed by a double line and followed by the direction mark.
- Certain systems and components, especially those related to OBD, may use a new style slide-locking type harness connector. For description and how to disconnect, refer to PG section, "Description", "HARNESS CONNECTOR".

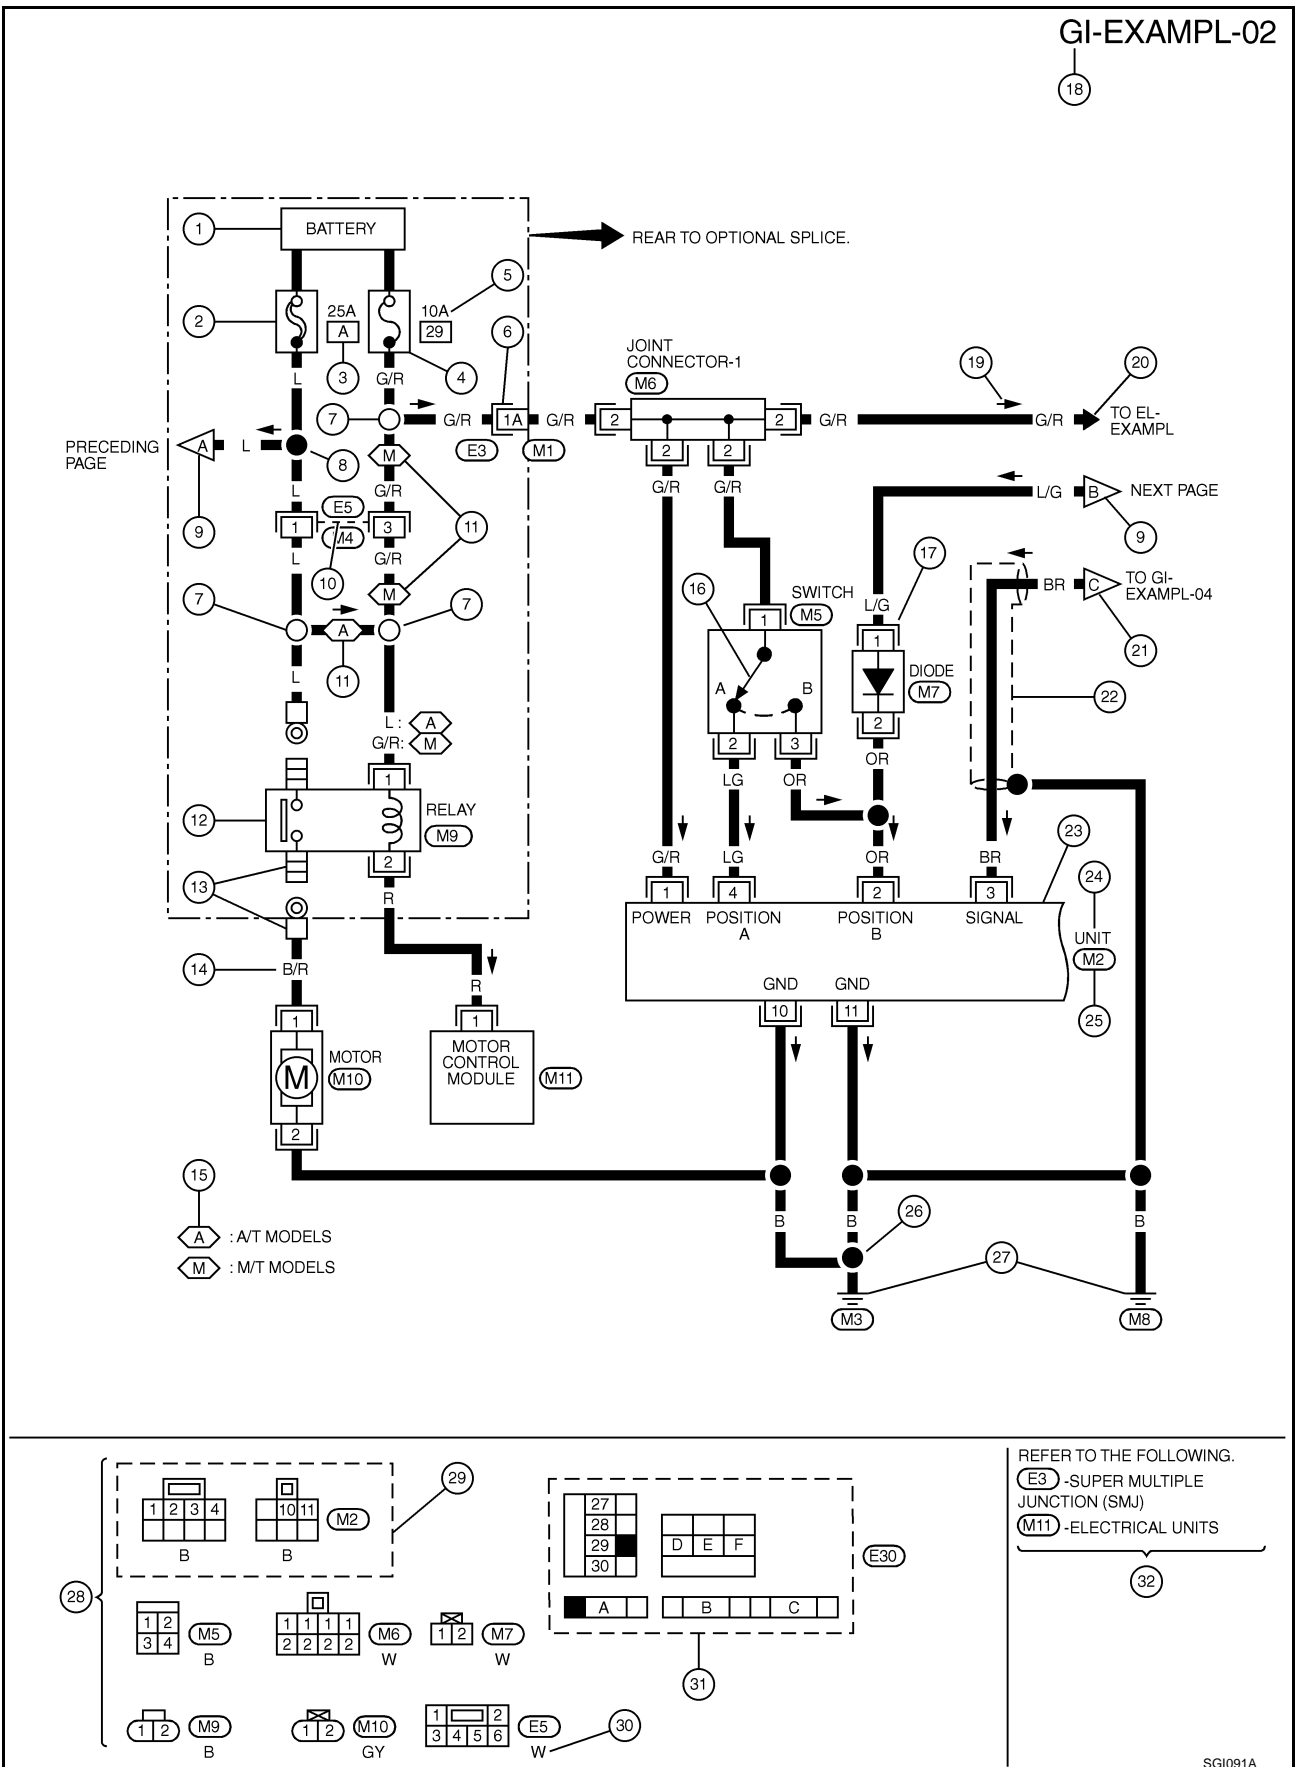

- Male and female terminals
Connector guides for male terminals are shown in black and female terminals in white in wiring diagrams.

HOW TO USE THIS MANUAL

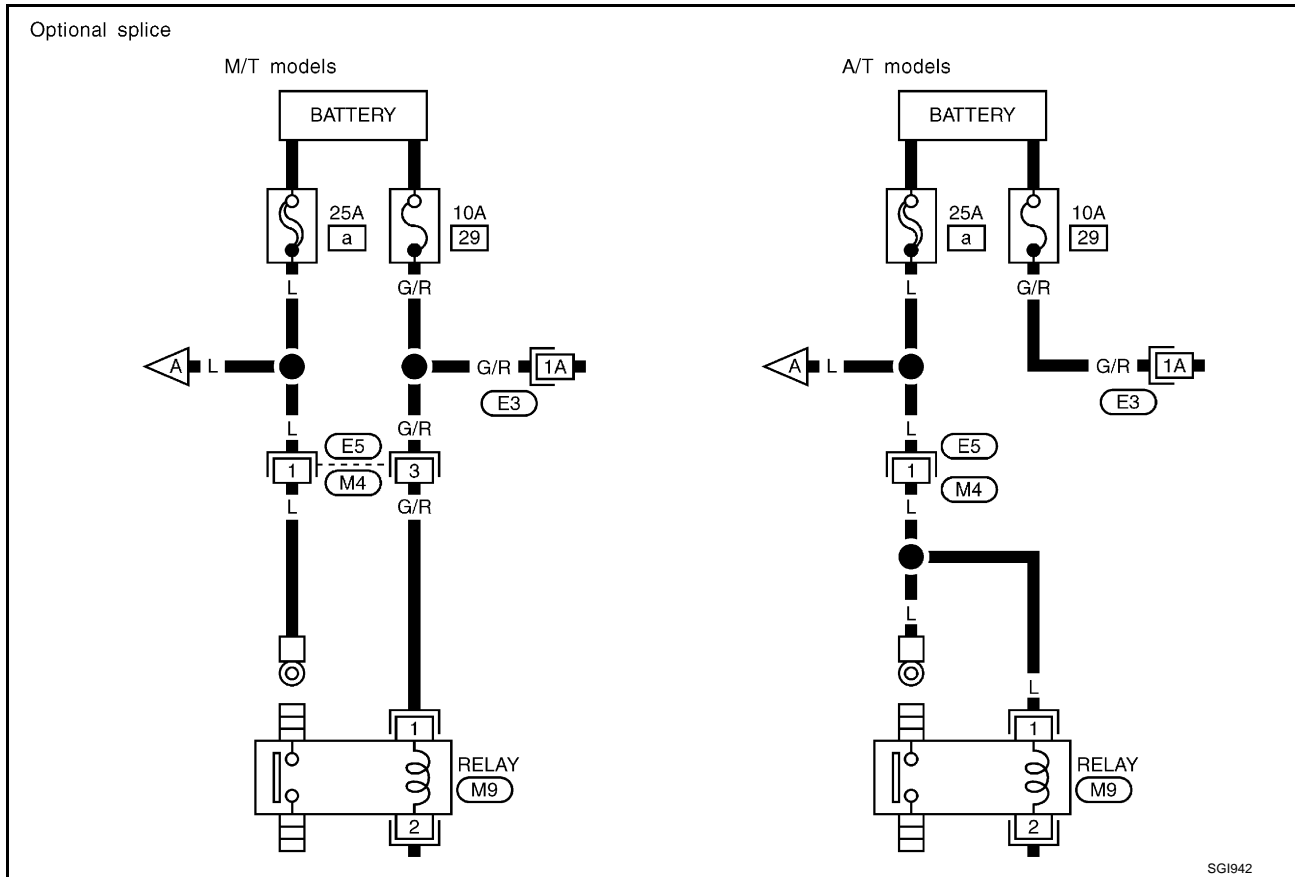

SAMPLE/WIRING DIAGRAM - EXAMPL -

- For detail, refer to following "DESCRIPTION".

HOW TO USE THIS MANUAL

Optional Splice

DESCRIPTION

| Number | Item | Description |
|--------|----------------------------|--|
| 1 | Power condition | <ul style="list-style-type: none"> This shows the condition when the system receives battery positive voltage (can be operated). |
| 2 | Fusible link | <ul style="list-style-type: none"> The double line shows that this is a fusible link. The open circle shows current flow in, and the shaded circle shows current flow out. |
| 3 | Fusible link/fuse location | <ul style="list-style-type: none"> This shows the location of the fusible link or fuse in the fusible link or fuse box. For arrangement, refer to PG section, POWER SUPPLY ROUTING. |
| 4 | Fuse | <ul style="list-style-type: none"> The single line shows that this is a fuse. The open circle shows current flow in, and the shaded circle shows current flow out. |
| 5 | Current rating | <ul style="list-style-type: none"> This shows the current rating of the fusible link or fuse. |
| 6 | Connectors | <ul style="list-style-type: none"> This shows that connector E3 is female and connector M1 is male. The G/R wire is located in the 1A terminal of both connectors. Terminal number with an alphabet (1A, 5B, etc.) indicates that the connector is SMJ connector. Refer to PG section, SMJ (SUPER MULTIPLE JUNCTION). |
| 7 | Optional splice | <ul style="list-style-type: none"> The open circle shows that the splice is optional depending on vehicle application. |
| 8 | Splice | <ul style="list-style-type: none"> The shaded circle shows that the splice is always on the vehicle. |
| 9 | Page crossing | <ul style="list-style-type: none"> This arrow shows that the circuit continues to an adjacent page. The A will match with the A on the preceding or next page. |
| 10 | Common connector | <ul style="list-style-type: none"> The dotted lines between terminals show that these terminals are part of the same connector. |
| 11 | Option abbreviation | <ul style="list-style-type: none"> This shows that the circuit is optional depending on vehicle application. |
| 12 | Relay | <ul style="list-style-type: none"> This shows an internal representation of the relay. For details, refer to PG section, STANDARDIZED RELAY. |
| 13 | Connectors | <ul style="list-style-type: none"> This shows that the connector is connected to the body or a terminal with bolt or nut. |

HOW TO USE THIS MANUAL

| Number | Item | Description | | | | | | | | | | | | | | | | |
|--|----------------------------|--|------------|------------|-----------|------------------|---------|----------|-----------|---------------------------|----------|-----------------|------------|---------------|------------------|-----------------|--|-----------------|
| 14 | Wire color | <ul style="list-style-type: none">This shows a code for the color of the wire. | | | | | | | | | | | | | | | | |
| | | <table><tr><td>B = Black</td><td>BR = Brown</td></tr><tr><td>W = White</td><td>OR or O = Orange</td></tr><tr><td>R = Red</td><td>P = Pink</td></tr><tr><td>G = Green</td><td>PU or V (Violet) = Purple</td></tr><tr><td>L = Blue</td><td>GY or GR = Gray</td></tr><tr><td>Y = Yellow</td><td>SB = Sky Blue</td></tr><tr><td>LG = Light Green</td><td>CH = Dark Brown</td></tr><tr><td></td><td>DG = Dark Green</td></tr></table> | B = Black | BR = Brown | W = White | OR or O = Orange | R = Red | P = Pink | G = Green | PU or V (Violet) = Purple | L = Blue | GY or GR = Gray | Y = Yellow | SB = Sky Blue | LG = Light Green | CH = Dark Brown | | DG = Dark Green |

HOW TO USE THIS MANUAL

Harness Indication

- Letter designations next to test meter probe indicate harness (connector) wire color.
- Connector numbers in a single circle M33 indicate harness connectors.

Component Indication

Connector numbers in a double circle F211 indicate component connectors.

Switch Positions

Switches are shown in wiring diagrams as if the vehicle is in the “normal” condition.
A vehicle is in the “normal” condition when:

- ignition switch is “OFF”,
- doors, hood and trunk lid/back door are closed,
- pedals are not depressed, and
- parking brake is released.

HOW TO USE THIS MANUAL

Detectable Lines and Non-Detectable Lines

In some wiring diagrams, two kinds of lines, representing wires, with different weight are used.

- A line with regular weight (wider line) represents a “detectable line for DTC (Diagnostic Trouble Code)”. A “detectable line for DTC” is a circuit in which ECM can detect its malfunctions with the on board diagnostic system.
- A line with less weight (thinner line) represents a “non-detectable line for DTC”. A “non-detectable line for DTC” is a circuit in which ECM cannot detect its malfunctions with the on board diagnostic system.

HOW TO USE THIS MANUAL

Multiple Switch

The continuity of multiple switch is described in two ways as shown below.

- The switch chart is used in schematic diagrams.
- The switch diagram is used in wiring diagrams.

Example

Continuity circuit of wiper switch

| SWITCH POSITION | CONTINUITY CIRCUIT |
|-----------------|--------------------|
| OFF | 3 - 4 |
| INT | 3 - 4, 5 - 6 |
| LO | 3 - 6 |
| HI | 2 - 6 |
| WASH | 1 - 6 |

How to Perform Efficient Diagnosis for an Electrical Incident WORK FLOW

BAS00017

| STEP | DESCRIPTION | |
|--------|--|--|
| STEP 1 | Get detailed information about the conditions and the environment when the incident occurred. The following are key pieces of information required to make a good analysis: | |
| | WHAT | Vehicle Model, Engine, Transmission/Transaxle and the System (i.e. Radio). |
| | WHEN | Date, Time of Day, Weather Conditions, Frequency. |
| | WHERE | Road Conditions, Altitude and Traffic Situation. |
| STEP 2 | HOW | System Symptoms, Operating Conditions (Other Components Interaction). Service History and if any After Market Accessories have been installed. |
| | Operate the system, road test if necessary. Verify the parameter of the incident. If the problem cannot be duplicated, refer to "Incident Simulation Tests". | |
| STEP 3 | Get the proper diagnosis materials together including: | |
| | <ul style="list-style-type: none">● Power Supply Routing● System Operation Descriptions● Applicable Service Manual Sections● Check for any Service Bulletins Identify where to begin diagnosis based upon your knowledge of the system operation and the customer comments. | |
| STEP 4 | Inspect the system for mechanical binding, loose connectors or wiring damage. Determine which circuits and components are involved and diagnose using the Power Supply Routing and Harness Layouts. | |
| STEP 5 | Repair or replace the incident circuit or component. | |
| STEP 6 | Operate the system in all modes. Verify the system works properly under all conditions. Make sure you have not inadvertently created a new incident during your diagnosis or repair steps. | |

INCIDENT SIMULATION TESTS

Introduction

Sometimes the symptom is not present when the vehicle is brought in for service. If possible, re-create the conditions present at the time of the incident. Doing so may help avoid a No Trouble Found Diagnosis. The following section illustrates ways to simulate the conditions/environment under which the owner experiences an electrical incident.

The section is broken into the six following topics:

- Vehicle vibration

SERVICE INFORMATION FOR ELECTRICAL INCIDENT

- Heat sensitive
- Freezing
- Water intrusion
- Electrical load
- Cold or hot start up

Get a thorough description of the incident from the customer. It is important for simulating the conditions of the problem.

Vehicle Vibration

The problem may occur or become worse while driving on a rough road or when engine is vibrating (idle with A/C on). In such a case, you will want to check for a vibration related condition. Refer to the following illustration.

CONNECTORS & HARNESS

Determine which connectors and wiring harness would affect the electrical system you are inspecting. Gently shake each connector and harness while monitoring the system for the incident you are trying to duplicate. This test may indicate a loose or poor electrical connection.

HINT

Connectors can be exposed to moisture. It is possible to get a thin film of corrosion on the connector terminals. A visual inspection may not reveal this without disconnecting the connector. If the problem occurs intermittently, perhaps the problem is caused by corrosion. It is a good idea to disconnect, inspect and clean the terminals on related connectors in the system.

SENSORS & RELAYS

Gently apply a slight vibration to sensors and relays in the system you are inspecting. This test may indicate a loose or poorly mounted sensor or relay.

ENGINE COMPARTMENT

There are several reasons a vehicle or engine vibration could cause an electrical complaint. Some of the things to check for are:

- Connectors not fully seated.
- Wiring harness not long enough and is being stressed due to engine vibrations or rocking.
- Wires laying across brackets or moving components.
- Loose, dirty or corroded ground wires.
- Wires routed too close to hot components.

To inspect components under the hood, start by verifying the integrity of ground connections. (Refer to Ground Inspection described later.) First check that the system is properly grounded. Then check for loose connection by gently shaking the wiring or components as previously explained. Using the wiring diagrams inspect the wiring for continuity.

BEHIND THE INSTRUMENT PANEL

An improperly routed or improperly clamped harness can become pinched during accessory installation. Vehicle vibration can aggravate a harness which is routed along a bracket or near a screw.

SERVICE INFORMATION FOR ELECTRICAL INCIDENT

UNDER SEATING AREAS

An unclamped or loose harness can cause wiring to be pinched by seat components (such as slide guides) during vehicle vibration. If the wiring runs under seating areas, inspect wire routing for possible damage or pinching.

Heat Sensitive

The customer's concern may occur during hot weather or after car has sat for a short time. In such cases you will want to check for a heat sensitive condition.

To determine if an electrical component is heat sensitive, heat the component with a heat gun or equivalent.

Do not heat components above 60°C (140°F). If incident occurs while heating the unit, either replace or properly insulate the component.

Freezing

The customer may indicate the incident goes away after the car warms up (winter time). The cause could be related to water freezing somewhere in the wiring/electrical system.

There are two methods to check for this. The first is to arrange for the owner to leave his car overnight. Make sure it will get cold enough to demonstrate his complaint. Leave the car parked outside overnight. In the morning, do a quick and thorough diagnosis of those electrical components which could be affected.

The second method is to put the suspect component into a freezer long enough for any water to freeze. Reinstall the part into the car and check for the reoccurrence of the incident. If it occurs, repair or replace the component.

Water Intrusion

The incident may occur only during high humidity or in rainy/snowy weather. In such cases the incident could be caused by water intrusion on an electrical part. This can be simulated by soaking the car or running it through a car wash.

Do not spray water directly on any electrical components.

Electrical Load

The incident may be electrical load sensitive. Perform diagnosis with all accessories (including A/C, rear window defogger, radio, fog lamps) turned on.

SERVICE INFORMATION FOR ELECTRICAL INCIDENT

Cold or Hot Start Up

On some occasions an electrical incident may occur only when the car is started cold, or it may occur when the car is restarted hot shortly after being turned off. In these cases you may have to keep the car overnight to make a proper diagnosis.

CIRCUIT INSPECTION

Introduction

In general, testing electrical circuits is an easy task if it is approached in a logical and organized method. Before beginning it is important to have all available information on the system to be tested. Also, get a thorough understanding of system operation. Then you will be able to use the appropriate equipment and follow the correct test procedure.

You may have to simulate vehicle vibrations while testing electrical components. Gently shake the wiring harness or electrical component to do this.

| | | |
|-------|---|---|
| OPEN | A circuit is open when there is no continuity through a section of the circuit. | |
| SHORT | There are two types of shorts. | |
| | ● SHORT CIRCUIT | When a circuit contacts another circuit and causes the normal resistance to change. |
| | ● SHORT TO GROUND | When a circuit contacts a ground source and grounds the circuit. |

NOTE:

Refer to "How to Check Terminal" to probe or check terminal.

Testing for "Opens" in the Circuit

Before you begin to diagnose and test the system, you should rough sketch a schematic of the system. This will help you to logically walk through the diagnosis process. Drawing the sketch will also reinforce your working knowledge of the system.

CONTINUITY CHECK METHOD

The continuity check is used to find an open in the circuit. The digital multimeter (DMM) set on the resistance function will indicate an open circuit as over limit (no beep tone or no ohms symbol). Make sure to always start with the DMM at the highest resistance level.

To help in understanding the diagnosis of open circuits, please refer to the previous schematic.

- Disconnect the battery negative cable.
- Start at one end of the circuit and work your way to the other end. (At the fuse block in this example)
- Connect one probe of the DMM to the fuse block terminal on the load side.
- Connect the other probe to the fuse block (power) side of SW1. Little or no resistance will indicate that portion of the circuit has good continuity. If there were an open in the circuit, the DMM would indicate an over limit or infinite resistance condition. (point A)
- Connect the probes between SW1 and the relay. Little or no resistance will indicate that portion of the circuit has good continuity. If there were an open in the circuit, the DMM would indicate an over limit or infinite resistance condition. (point B)
- Connect the probes between the relay and the solenoid. Little or no resistance will indicate that portion of the circuit has good continuity. If there were an open in the circuit, the DMM would indicate an over limit or infinite resistance condition. (point C)

Any circuit can be diagnosed using the approach in the previous example.

SERVICE INFORMATION FOR ELECTRICAL INCIDENT

VOLTAGE CHECK METHOD

To help in understanding the diagnosis of open circuits please refer to the previous schematic. In any powered circuit, an open can be found by methodically checking the system for the presence of voltage. This is done by switching the DMM to the voltage function.

- Connect one probe of the DMM to a known good ground.
- Begin probing at one end of the circuit and work your way to the other end.
- With SW1 open, probe at SW1 to check for voltage.
voltage; open is further down the circuit than SW1.
no voltage; open is between fuse block and SW1 (point A).
- Close SW1 and probe at relay.
voltage; open is further down the circuit than the relay.
no voltage; open is between SW1 and relay (point B).
- Close the relay and probe at the solenoid.
voltage; open is further down the circuit than the solenoid.
no voltage; open is between relay and solenoid (point C).

Any powered circuit can be diagnosed using the approach in the previous example.

Testing for “Shorts” in the Circuit

To simplify the discussion of shorts in the system, please refer to the following schematic.

RESISTANCE CHECK METHOD

- Disconnect the battery negative cable and remove the blown fuse.
- Disconnect all loads (SW1 open, relay disconnected and solenoid disconnected) powered through the fuse.
- Connect one probe of the DMM to the load side of the fuse terminal. Connect the other probe to a known good ground.
- With SW1 open, check for continuity.
continuity; short is between fuse terminal and SW1 (point A).
no continuity; short is further down the circuit than SW1.
- Close SW1 and disconnect the relay. Put probes at the load side of fuse terminal and a known good ground. Then, check for continuity.
continuity; short is between SW1 and the relay (point B).
no continuity; short is further down the circuit than the relay.
- Close SW1 and jump the relay contacts with jumper wire. Put probes at the load side of fuse terminal and a known good ground. Then, check for continuity.
continuity; short is between relay and solenoid (point C).
no continuity; check solenoid, retrace steps.

VOLTAGE CHECK METHOD

- Remove the blown fuse and disconnect all loads (i.e. SW1 open, relay disconnected and solenoid disconnected) powered through the fuse.
- Turn the ignition key to the ON or START position. Verify battery voltage at the battery + side of the fuse terminal (one lead on the battery + terminal side of the fuse block and one lead on a known good ground).
- With SW1 open and the DMM leads across both fuse terminals, check for voltage.
voltage; short is between fuse block and SW1 (point A).

SERVICE INFORMATION FOR ELECTRICAL INCIDENT

no voltage; short is further down the circuit than SW1.

- With SW1 closed, relay and solenoid disconnected and the DMM leads across both fuse terminals, check for voltage.
voltage; short is between SW1 and the relay (point B).
no voltage; short is further down the circuit than the relay.
- With SW1 closed, relay contacts jumped with fused jumper wire check for voltage.
voltage; short is down the circuit of the relay or between the relay and the disconnected solenoid (point C).
no voltage; retrace steps and check power to fuse block.

Ground Inspection

Ground connections are very important to the proper operation of electrical and electronic circuits. Ground connections are often exposed to moisture, dirt and other corrosive elements. The corrosion (rust) can become an unwanted resistance. This unwanted resistance can change the way a circuit works.

Electronically controlled circuits are very sensitive to proper grounding. A loose or corroded ground can drastically affect an electronically controlled circuit. A poor or corroded ground can easily affect the circuit. Even when the ground connection looks clean, there can be a thin film of rust on the surface.

When inspecting a ground connection follow these rules:

- Remove the ground bolt or screw.
- Inspect all mating surfaces for tarnish, dirt, rust, etc.
- Clean as required to assure good contact.
- Reinstall bolt or screw securely.
- Inspect for “add-on” accessories which may be interfering with the ground circuit.
- If several wires are crimped into one ground eyelet terminal, check for proper crimps. Make sure all of the wires are clean, securely fastened and providing a good ground path. If multiple wires are cased in one eyelet make sure no ground wires have excess wire insulation.

For detailed ground distribution information, refer to “Ground Distribution” in PG section.

Voltage Drop Tests

Voltage drop tests are often used to find components or circuits which have excessive resistance. A voltage drop in a circuit is caused by a resistance when the circuit is in operation.

Check the wire in the illustration. When measuring resistance with DMM, contact by a single strand of wire will give reading of 0 ohms. This would indicate a good circuit. When the circuit operates, this single strand of wire is not able to carry the current. The single strand will have a high resistance to the current. This will be picked up as a slight voltage drop.

Unwanted resistance can be caused by many situations as follows:

- Undersized wiring (single strand example)
- Corrosion on switch contacts
- Loose wire connections or splices.

SERVICE INFORMATION FOR ELECTRICAL INCIDENT

If repairs are needed always use wire that is of the same or larger gauge.

GI

MEASURING VOLTAGE DROP — ACCUMULATED METHOD

- Connect the DMM across the connector or part of the circuit you want to check. The positive lead of the DMM should be closer to power and the negative lead closer to ground.
- Operate the circuit.
- The DMM will indicate how many volts are being used to “push” current through that part of the circuit.

Note in the illustration that there is an excessive 4.1 volt drop between the battery and the bulb.

B

C

D

E

F

G

H

I

MEASURING VOLTAGE DROP — STEP-BY-STEP

The step-by-step method is most useful for isolating excessive drops in low voltage systems (such as those in “Computer Controlled Systems”).

Circuits in the “Computer Controlled System” operate on very low amperage.

The (Computer Controlled) system operations can be adversely affected by any variation in resistance in the system. Such resistance variation may be caused by poor connection, improper installation, improper wire gauge or corrosion.

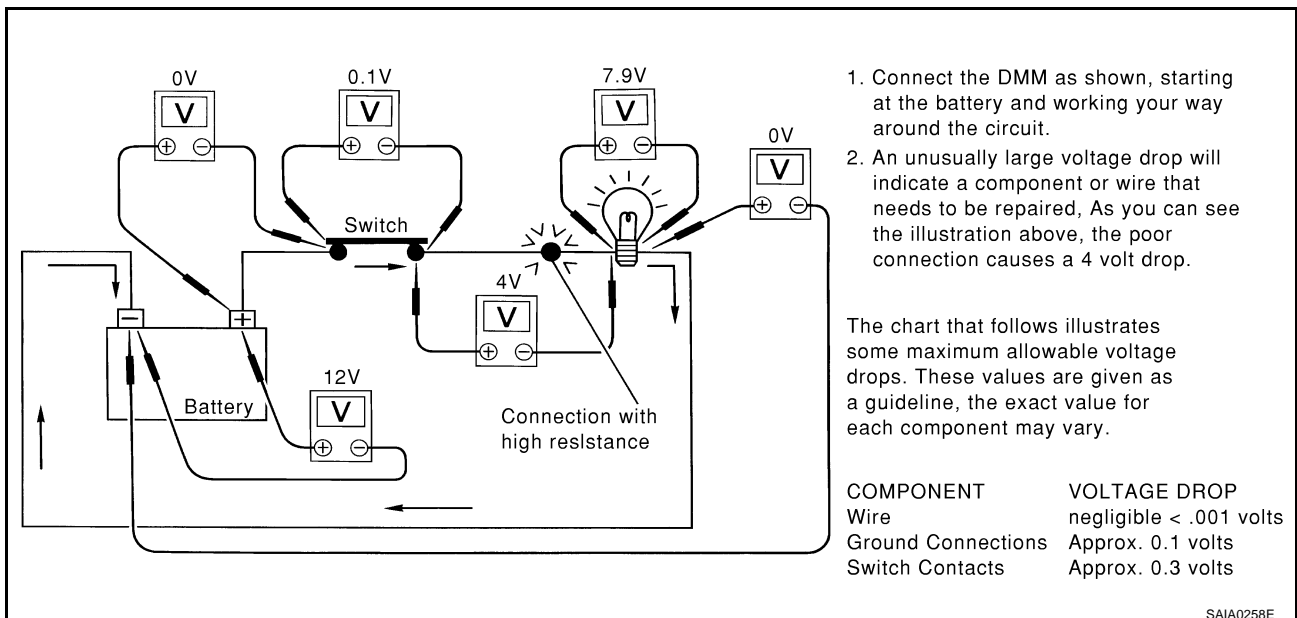

The step by step voltage drop test can identify a component or wire with too much resistance.

SERVICE INFORMATION FOR ELECTRICAL INCIDENT

Control Unit Circuit Test

System Description: When the switch is ON, the control unit lights up the lamp.

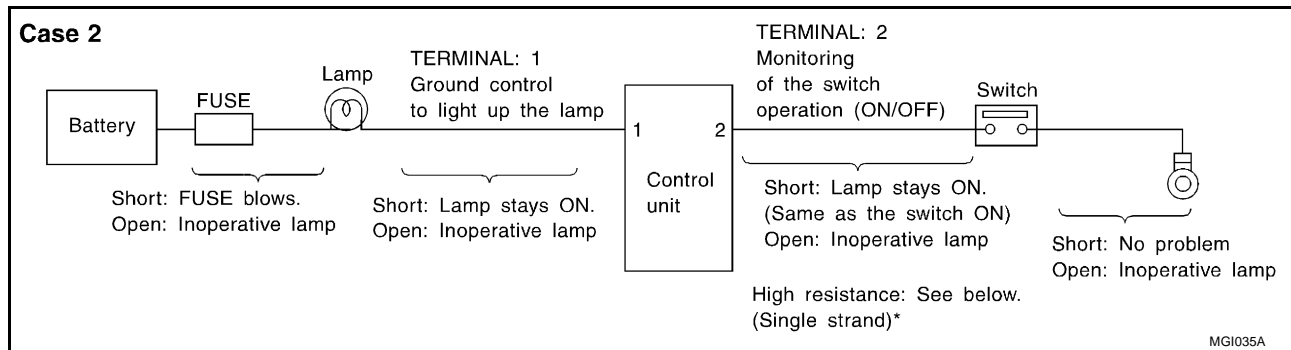

INPUT-OUTPUT VOLTAGE CHART

| Pin No. | Item | Condition | Voltage value [V] | In case of high resistance such as single strand [V] * |
|---------|--------|------------|-------------------|--|
| 1 | Switch | Switch ON | Battery voltage | Lower than battery voltage Approx. 8 (Example) |
| | | Switch OFF | Approx. 0 | Approx. 0 |
| 2 | Lamp | Switch ON | Battery voltage | Approx. 0 (Inoperative lamp) |
| | | Switch OFF | Approx. 0 | Approx. 0 |

The voltage value is based on the body ground.

*:If high resistance exists in the switch side circuit (caused by a single strand), terminal 1 does not detect battery voltage. Control unit does not detect the switch is ON even if the switch does not turn ON. Therefore, the control unit does not supply power to light up the lamp.

INPUT-OUTPUT VOLTAGE CHART

| Pin No. | Item | Condition | Voltage value [V] | In case of high resistance such as single strand [V] * |
|---------|--------|------------|-------------------|--|
| 1 | Lamp | Switch ON | Approx. 0 | Battery voltage (Inoperative lamp) |
| | | Switch OFF | Battery voltage | Battery voltage |
| 2 | Switch | Switch ON | Approx. 0 | Higher than 0 Approx. 4 (Example) |
| | | Switch OFF | Approx. 5 | Approx. 5 |

The voltage value is based on the body ground.

*:If high resistance exists in the switch side circuit (caused by a single strand), terminal 2 does not detect approx. 0V. Control unit does not detect the switch is ON even if the switch does not turn ON. Therefore, the control unit does not control ground to light up the lamp.

Control Units and Electrical Parts PRECAUTIONS

BAS0001U

- Never reverse polarity of battery terminals.
- Install only parts specified for a vehicle.
- Before replacing the control unit, check the input and output and functions of the component parts.
- Do not apply excessive force when disconnecting a connector.

SERVICE INFORMATION FOR ELECTRICAL INCIDENT

- For removal of the lever type connector, pull the lever up to the direction pointed to by the arrow A in the figure, and then remove the connector.

- For installation of the lever type connector, pull down the lever to the direction pointed by the arrow B in the figure, and then push the connector until a clicking noise is heard.

- Do not apply excessive shock to the control unit by dropping or hitting it.
- Be careful to prevent condensation in the control unit due to rapid temperature changes and do not let water or rain get on it. If water is found in the control unit, dry it fully and then install it in the vehicle.
- Be careful not to let oil get on the control unit connector.
- Avoid cleaning the control unit with volatile oil.
- Do not disassemble the control unit, and do not remove the upper and lower covers.

SERVICE INFORMATION FOR ELECTRICAL INCIDENT

- When using a DMM, be careful not to let test probes get close to each other to prevent the power transistor in the control unit from damaging battery voltage because of short circuiting.
- When checking input and output signals of the control unit, use the specified check adapter.

CONSULT-II CHECKING SYSTEM

PFP:00000

GI

Description

BAS0001V

- CONSULT-II is a hand-held type tester. When it is connected with a diagnostic connector equipped on the vehicle side, it will communicate with the control unit equipped in the vehicle and then enable various kinds of diagnostic tests.
- Refer to "CONSULT-II Software Operation Manual" for more information.

Function and System Application

BAS0001W

Nickel Metal Hydride Battery Replacement

BAS0001X

CONSULT-II contains a nickel metal hydride battery. When replacing the battery obey the following:

WARNING:

Replace the nickel metal hydride battery with Genuine CONSULT-II battery only. Use of another battery may present a risk of fire or explosion. The battery may present a fire or chemical burn hazard if mistreated. Do not recharge, disassemble or dispose of in fire.

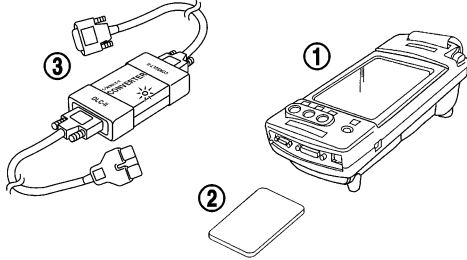

Keep the battery out of reach of children and discard used battery conforming to the local regulations.

CONSULT-II CHECKING SYSTEM

Checking Equipment

BAS0001Y

When ordering the following equipment, contact your NISSAN/INFINITI distributor.

| Tool name | Description |
|---|---|
| NISSAN CONSULT-II 1. CONSULT-II unit (Tester internal soft: Resident version 3.3.0) and accessories 2. Program card AED05C and AEN04A-1 (For NATS) 3. CONSULT-II CONVERTER |  <p>SAIA0362E</p> |

CAUTION:

- Previous CONSULT-II “I” and “Y” DLC-I and DLC-II cables should NOT be used anymore because their DDL connector pins can be damaged during cable swapping.
- If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.
- If CONSULT-II CONVERTER is not connected with CONSULT-II, vehicle occur the "FAIL SAFE MODE" which is "LIGHT UP the HEAD LIGHT" and/or "COOLING FAN ROTATING" when CONSULT-II is started.

NOTE:

- The CONSULT-II must be used in conjunction with a program card.
- CONSULT-II does not require loading (Initialization) procedure.
- Be sure the CONSULT-II is turned off before installing or removing a program card.

CONSULT-II Start Procedure

BAS0001Z

NOTE:

Turning ignition switch off when performing CAN diagnosis could cause CAN memory to be erased.

1. Connect CONSULT-II and CONSULT-II CONVERTER to the data link connector.

2. If necessary, turn on the ignition switch.
3. Touch “START (NISSAN BASED VHCL)” or “System Shortcut key” (eg : ENGINE) on the screen.

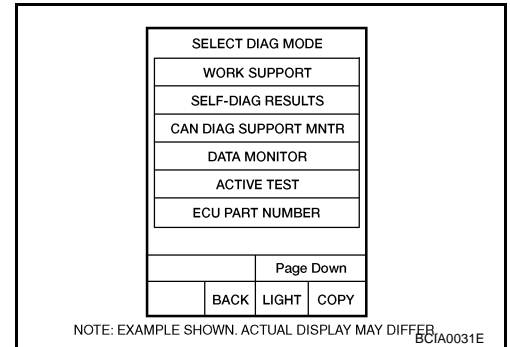

CONSULT-II CHECKING SYSTEM

- Touch necessary system on "SELECT SYSTEM" screen.
If necessary system is not indicated, check power supply and ground of system control unit. If it is normal, refer to [GI-35](#), "CONSULT-II Data Link Connector (DLC) Circuit" .

- Select the desired part to be diagnosed on the "SELECT DIAG MODE" screen.

CONSULT-II Data Link Connector (DLC) Circuit INSPECTION PROCEDURE

BAS00020

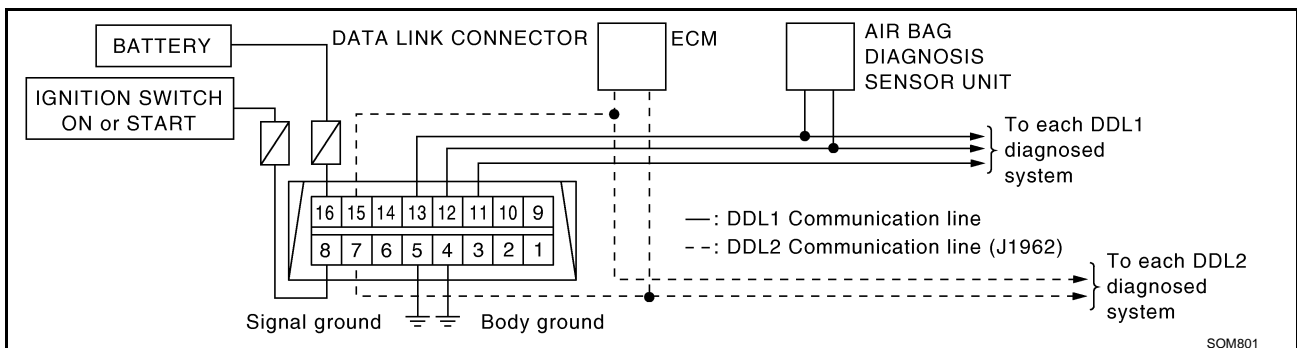

If the CONSULT-II cannot diagnose the system properly, check the following items.

| Symptom | Check item |
|--|---|
| CONSULT-II cannot access any system. | <ul style="list-style-type: none"> CONSULT-II DLC power supply circuit (Terminal 8) and ground circuit (Terminal 4) (For detailed circuit, refer to "MIL & Data Link Connectors Wiring Diagram" in EC section.) CONSULT-II DLC cable and CONSULT-II CONVERTER. |
| CONSULT-II cannot access individual system. (Other systems can be accessed.) | <ul style="list-style-type: none"> CONSULT-II program card (Check the appropriate CONSULT-II program card for the system. Refer to "Checking Equipment".) Power supply and ground circuit for the control unit of the system (For detailed circuit, refer to wiring diagram for each system.) Open or short circuit between the system and CONSULT-II DLC (For detailed circuit, refer to wiring diagram for each system.) |

NOTE:

The DDL1 and DDL2 circuits from DLC pins 12, 13, 14 and 15 may be connected to more than one system. A short in a DDL circuit connected to a control unit in one system may affect CONSULT-II access to other systems.

CIRCUIT DIAGRAM

| Board on lift attachment |  S-NT001 |
| Safety stand attachment |  S-NT002 |

CAUTION:

- Every time the vehicle is lifted up, maintain the complete vehicle curb condition.
- Since the vehicle's center of gravity changes when removing main parts on the front side (engine, transmission, suspension etc.), support a jack up point on the rear side garage jack with a mission jack or equivalent.
- Since the vehicle's center of gravity changes when removing main parts on the rear side (rear axle, suspension, etc.), support a jack up point on the front side garage jack with a mission jack or equivalent.
- Be careful not to smash or do not do anything that would affect piping parts.

Garage Jack and Safety Stand

BAS00022

WARNING:

- Park the vehicle on a level surface when using the jack. Make sure to avoid damaging pipes, tubes, etc. under the vehicle.
- Never get under the vehicle while it is supported only by the jack. Always use safety stands when you have to get under the vehicle.

LIFTING POINT

- Place wheel chocks at both front and back of the wheels on the ground.

2-Pole Lift

BAS00023

WARNING:

When lifting the vehicle, open the lift arms as wide as possible and ensure that the front and rear of the vehicle are well balanced.

When setting the lift arm, do not allow the arm to contact the brake tubes, brake cable, fuel lines and sill spoiler.

LIFTING POINT

Board-On Lift

BAS00024

CAUTION:

Make sure vehicle is empty when lifting.

- The board-on lift attachment set at front end of vehicle should be set on the front of the sill under the front door opening.
- Position attachments at front and rear ends of board-on lift.

TOW TRUCK TOWING

PFP:00000

GI

BAS00025

Tow Truck Towing

CAUTION:

- All applicable local laws regarding the towing operation must be obeyed.
- It is necessary to use proper towing equipment to avoid possible damage to the vehicle during towing operation. Towing is in accordance with Towing Procedure Manual at dealer.
- Always attach safety chains before towing.
- When towing, make sure that the transmission, steering system and power train are in good order. If any unit is damaged, dollies must be used.
- Never tow an automatic transmission model from the rear (that is backward) with four wheels on the ground. This may cause serious and expensive damage to the transmission.

PAIA0276E

2WD MODELS

NISSAN recommends that vehicle be towed with the driving (front) wheels off the ground or that a dolly be used as illustrated.

CAUTION:

- Never tow automatic transmission models with the front wheels on the ground or four wheels on the ground (forward or backward) as this may cause serious and expensive damage to the transmission. If it is necessary to tow the vehicle with the rear wheels raised, always use towing dollies under the front wheels.
- When towing automatic transmission models with the front wheels on towing dollies:
 - Turn the ignition key to the OFF position, and secure the steering wheel in a straight ahead position with a rope or similar device. Never secure the steering wheel by turning the ignition key to the LOCK position. This may damage the steering lock mechanism.
 - Move the selector lever to the N (Neutral) position.

TOW TRUCK TOWING

- When towing two wheel drive automatic transmission model with the rear wheels on the ground (if you do not use towing dollies): Always release the parking brake.

4WD MODELS

NISSAN recommends that a dolly be used as illustrated when towing 4WD models.

CAUTION:

Never tow automatic transmission 4WD models with any of the wheels on the ground as this may cause serious and expensive damage to the drive train.

Vehicle Recovery (Freeing a Stuck Vehicle)

BAS00026

- Use the recovery hooks only, not other parts of the vehicle. Otherwise, the vehicle body will be damaged.
- Use the recovery hook only to free a vehicle stuck in sand, snow, mud, etc. Never tow the vehicle for a long distance using only the recovery hook.
- The recovery hook is under tremendous force when used to free a stuck vehicle. Always pull the cable straight out from the front or rear of the vehicle. Never pull on the hook at an angle.
- Stand clear of a stuck vehicle.

WARNING:

- Do not spin the tires at high speed. This could cause them to explode and result in serious injury. Parts of the vehicle could also overheat and be damaged.

TIGHTENING TORQUE OF STANDARD BOLTS

TIGHTENING TORQUE OF STANDARD BOLTS

PFP:00000

Description

BAS00027

This vehicle has both new standard based on ISO* and previous standard bolts/nuts. There are some differences between these two types of bolts/nuts; shape of the head, grade of strength, hexagonal width across flats and the standard tightening torque.

- For guidance in discriminating, refer to [GI-41, "Tightening Torque Table \(New Standard Included\)"](#).
- The new standard machine screws and tapping screws have a head of ISO standard torx recess.
- If the tightening torque is not described in the description or figure, refer to [GI-41, "Tightening Torque Table \(New Standard Included\)"](#).

*ISO: International Organization for Standardization

Tightening Torque Table (New Standard Included)

BAS00028

CAUTION:

- The special parts are excluded.
- The bolts/nuts in these tables have a strength (discrimination) number/symbol assigned to the head or the like. As to the relation between the strength grade in these tables and the strength (discrimination) number/symbol, refer to "DISCRIMINATION OF BOLTS AND NUTS".

PREVIOUS STANDARD

| Grade (Strength grade) | Bolt size | Bolt diameter mm | Hexagonal width across flats mm | Pitch mm | Tightening torque (Without lubricant) | | | | | | | |

| | | | | 1.25 | 55 | 5.6 | 41 | — | 62 | 6.3 | 46 | — |
| | M12 | 12.0 | 18 | 1.75 | 95 | 9.7 | 70 | — | 105 | 11 | 77 | — |
| | | | | 1.25 | 95 | 9.7 | 70 | — | 105 | 11 | 77 | — |
| 10.9 (With lubricant) | M14 | 14.0 | 21 | 1.5 | 160 | 16 | 118 | — | 180 | 18 | 133 | — |

CAUTION:

1. Use tightening torque with lubricant for the new standard bolts/nuts in principle. Friction coefficient stabilizer is applied to the new standard bolts/nuts.
2. However, use tightening torque without lubricant for the following cases. Friction coefficient stabilizer is not applied to the following bolts/nuts.
 - Grade 4.8, M6 size bolt, Conical spring washer installed
 - Paint removing nut (Size M6 and M8) for fixing with weld bolt

TIGHTENING TORQUE OF STANDARD BOLTS

DISCRIMINATION OF BOLTS AND NUTS

GI

BOLTS

| | Grade (Strength) | Discrimination | |
|----------------------|----------------------------------|---|---|
| Previous standard | 4T (392N/mm ²) |  |  (No number/ symbol) |
| | 7T (686N/mm ²) |  |  |
| | 9T (883N/mm ²) |  |  |
| New Standard | 4.8 (420N/mm ²) |  |  (No number/ symbol) |
| | 8.8 (800N/mm ²) |  |  |
| | 10.9 (1040N/mm ²) |  |  |

NUTS

| | Grade (Proof load stress) | Discrimination | | |
|----------------------|---------------------------------|---|---|---|
| Previous standard | 7N (686N/mm ²) |  (No number/ symbol) | | |
| | 9N (883N/mm ²) |  |  | |
| New Standard | 8 (800N/mm ²) |  |  |  (No number/ symbol) |
| | 10 (1040N/mm ²) |  |  | |

NOTICE:

- A number is assigned on the side of the nuts in some cases.
- A number or symbol is assigned on the upper surface of the flange for the nut with flange.

MACHINE SCREWS AND TAPPING SCREWS

Shape of the head :

Cross recess for the previous standard

Torx recess for the new standard

| Screw size | Screw diameter | Torx size |
|---------------|-------------------|-----------|
| M4 | 4.0 | T20 |
| M5 | 5.0 | T20 |
| M6 | 6.0 | T30 |

NOTICE:

Use torx size T20 (united with M4 screw) for M5 screw although ISO standard specifies T25.
