

## 6. Front Bumper

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the bumper face - front.
  - (1) Remove the screws and clips, and turn over the mud guard - front, and then disconnect the connectors of the fog light assembly - front on the LH and RH sides. (Model with fog light)

- (2) Remove the clips at the upper side of the bumper face - front.
- (3) Remove the clips from the fender.
- (4) Remove the clips at the lower side of the bumper face - front.

- (5) Apply protective tape (A) to the light assembly - head.

## Front Bumper

### EXTERIOR/INTERIOR TRIM

(6) Release the clips, and while pushing up the lower side (a) of the bumper face - front, remove in the order from (b) to (e).

#### CAUTION:

Do not pull forcibly. It may damage the flange sections of the bumper face - front.

#### NOTE:

Detach the opposite side in the same manner.

3) Remove the bolts, and remove the bumper beam COMPL - front.

4) Remove the clip, and remove the bracket - grille.

**CAUTION:**

To prevent damage to the bracket - grille, make sure to remove all clips.

**NOTE:**

The bracket - grille can be removed without removing the bumper face - front.

5) Remove the bracket - front center LWR.

(1) Remove the bolts and clips, and turn over the under cover - front.

## Front Bumper

### EXTERIOR/INTERIOR TRIM

(2) Remove the bolts, and remove the bracket - front center LWR.

6) Remove the bolts and clips, and remove the bracket - front bumper corner.

## 7) Remove the bracket - front bumper side.

- (1) Remove the bolts and clips, and remove the light assembly - head and the bracket - front bumper corner.

- (2) Remove the screws.

- (3) Remove the claws from behind the fender COMPL - front, and remove the bracket - front bumper side.

## Front Bumper

### EXTERIOR/INTERIOR TRIM

8) Remove the bolt and pin, and remove the fog light assembly - front.

## B: INSTALLATION

- 1) Install each part in the reverse order of removal.
- 2) Secure the flange section of the bumper face - front to the bracket - front bumper side.

### CAUTION:

Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a).

### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to EI-3, FRONT BUMPER, COMPONENT, General Description.>

- 3) Install each part in the reverse order of removal.
- 4) Adjust the headlight beam and fog light beam.
  - Adjust the headlight beam. <Ref. to LI-35, HEADLIGHT BEAM ADJUSTMENT, ADJUSTMENT, Headlight Assembly.>
  - Adjust the fog light beam. (model with fog light) <Ref. to LI-55, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

## C: REPAIR

### 1. COATING METHOD FOR PP BUMPER

| Process No. | Process name        | Job contents                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                     |

## EXTERIOR/INTERIOR TRIM

NOTE:

Repair methods are outlined below, based on a classification of the extent of damage.

1) Minor damage causing only a change in the luster of the bumper due to a light touch  
Almost restorable.

2) Deep damage caused by scratching with fences etc.

A dent cannot be repaired but a whitened or swelled part can be removed.

**EI-38**

# Front Bumper

EXTERIOR/INTERIOR TRIM

3) Deep damage such as a break or hole that requires filling

Much of the peripheral grained surface must be sacrificed for repair. The degree of restoration is not really worth the expense. (The surface, however, will become almost flush with adjacent areas.)

| Process No. | Process name        | Job contents                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1           | Bumper removal      | Remove the bumper as required.                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2           | Removal of parts    | Remove the parts built into bumper as required.                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 3           | Bumper placement    | Place the bumper on a paint worktable as required.<br>It is recommended to use the paint worktable conforming to internal shape of bumper.                                                                                                       |  <p>El-00234</p> <p>(1) Bumper<br/>(2) Set bumper section</p>                                                                                                                                                                                                                                                                                   |
| 4           | Surface preparation | Remove dust, oil, etc. from areas to be repaired and surrounding areas, using a suitable solvent (white gasoline or alcohol, etc.).                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 5           | Cutting             | If the damage is a crack or a hole, cut a guide slit of 20 to 30 mm (0.79 to 1.18 in) in length along the crack or hole to the depth of the bumper base surface. Next, use a knife or grinder to carve a V-shaped groove in the area for repair. |  <p>El-00235</p> <p>(1) Paint surface<br/>(2) PP base surface<br/>(3) 20 — 30 mm (0.79 — 1.18 in)<br/>(4) 3 mm (0.12 in)</p>                                                                                                                                                                                                                   |
| 6           | Sanding (I)         | Grind beveled surface with sand paper (#40 — #60) to smooth finish.                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 7           | Cleaning            | Clean the sanded surface with the same solvent as used in process No. 4.                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 8           | Temporary welding   | Grind the side just opposite the beveled area with sand paper (#40 — #60) and clean using a solvent.<br>Temporarily spot-weld the side, using PP welding rod and heater gun.                                                                     |  <p>El-00236</p> <p>(1) Welded point (Use heater gun and PP welding rod)<br/>(2) PP base surface<br/>(3) Beveled section</p> <p>NOTE:</p> <ul style="list-style-type: none"> <li>Do not melt welding rod until it flows out. This results in reduced strength.</li> <li>Leave the welded spot unattended until it cools completely.</li> </ul> |

# Front Bumper

## EXTERIOR/INTERIOR TRIM

| Process No. | Process name        | Job contents                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9           | Welding             | Using a heater gun and PP welding rod, weld the beveled spot while melting both the rod and damaged area.                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|             |                     |  <p>(1) Welding rod<br/>(2) Melt hatched area<br/>(3) Section</p> <p>NOTE:</p> <ul style="list-style-type: none"> <li>• Melt the sections indicated by hatched area.</li> <li>• Do not melt the welding rod until it flows out, in order to provide strength.</li> <li>• Always keep the heater gun 1 to 2 cm (0.4 to 0.8 in) away from the welding spot.</li> <li>• Leave the welded spot unattended until it cools completely.</li> </ul> <p>EI-00237</p> |
| 10          | Sanding (II)        | Remove excess part of weld with a putty knife. If a drill or disc wheel is used instead of the knife, operate it at a rate less than 1,500 rpm and grind the excess part little by little. A higher rpm will cause the PP substrate to melt from the heat.                                                                                                                                                                                                                                                                                    |
|             |                     |  <p>EI-00042</p> <p>Sand the welded spot smooth with #240 sand paper.</p>                                                                                                                                                                                                                                                                                                                                                                                 |
| 11          | Masking             | Mask the black substrate section using masking tape.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 12          | Cleaning/degreasing | Completely clean the entire coated area, using solvent similar to that used in process No. 4.                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 13          | Primer coating      | Apply a coat of primer for bumpers to the repaired surface and its surrounding areas. Mask these areas, if necessary.<br>NOTE:<br>Be sure to apply a coat of primer using a spray gun at a pressure of 245 — 343 kPa (2.5 — 3.5 kgf/cm <sup>2</sup> , 36 — 50 psi).                                                                                                                                                                                                                                                                           |
| 14          | Leave unattended    | Leave the repaired area unattended at 20°C (68°F) for 10 to 15 minutes until primer is half-dry.<br>NOTE:<br>If dirt or dust comes in contact with the coated area, wipe it off with a cloth dampened with alcohol. (Do not use thinner since the coated area tends to melt.)                                                                                                                                                                                                                                                                 |
| 15          | Surfacer coating    | Apply a coat of surfacer for PP bumpers to the repaired area two or three times at an interval of 3 — 5 minutes.<br>For surfacer/hardener mixture, viscosity and paint thickness, observe the specifications of the surfacers to be used.                                                                                                                                                                                                                                                                                                     |
| 16          | Drying              | Allow the coated surface to dry for 20 minutes at 20°C (68°F) [or 30 minutes at 60°C (140°F)].                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 17          | Sanding (III)       | Sand the coated surface and its surrounding areas using #400 sand paper and water.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 18          | Cleaning/degreasing | Same as process No. 12.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

# Front Bumper
