- A line drawing of a hand holding a circular gear assembly. The assembly consists of a large outer gear with a central shaft and a smaller gear inside. The hand is shown from the side, with the thumb and index finger gripping the outer gear. The gear has a central shaft with a smaller gear mounted on it. The outer gear has a series of teeth around its circumference. The inner gear is smaller and has a different tooth profile. The hand is holding the assembly from the side, showing the profile of the gears.

5) Check the operation of forward clutch piston by blowing compressed air intermittently from forward clutch carrier hole.

6) Place the driven plate, drive plate and retaining plate neatly in this order on surface table.

7) Set the dial gauge to retaining plate, and read its scale.

NOTE:

The value, which is read in the gauge at this time, is zero point.

8) Scale and record the weight "Z" of a flat board which will be put on retaining plate.

NOTE:

- The value, which is read in the gauge at this time, is zero point.
- Use a flat board weighing less than 52 N (5.3 kgf, 11.7 lb).

9) Put the flat board on retaining plate.

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

10) Using the following formula, read the push/pull gauge and calculate "N".

$$N = 52 \text{ N (5.3 kgf, 11.7 lb)} - Z$$

52 N (5.3 kgf, 11.7 lb) : Load applied to clutch plate

Z: Flat board weight

11) Press the center of retaining plate by applying a force of "N" using push/pull gauge, and then measure and record the compression amount "A".

NOTE:

Measure at four points with a 90° interval and calculate the average.

- (A) Driven plate
- (B) Drive plate
- (C) Retaining plate

12) Install the dish plate, drive plate, driven plate, retaining plate and snap ring to the forward clutch carrier.

NOTE:

Install the dish plate in the correct direction.

Forward Clutch Assembly

CONTINUOUSLY VARIABLE TRANSMISSION

13) Measure and record the clearance “B” between the retaining plate and snap ring.

14) Piston stroke calculation

Calculate with A and B dimensions recorded before.

If it exceeds the limit, replace with a new drive plate and adjust within the initial standard value.

$S \text{ mm (in)} = A + B$

S: Piston stroke

A: Compression amount of drive plate and dish plate

B: Clearance between retaining plate and snap ring

Initial standard:

1.0 — 1.4 mm (0.040 — 0.055 in)

Limit thickness:

1.6 mm (0.063 in)

Retaining plate	
Item number	Thickness mm (in)

E: INSPECTION

- Check the forward clutch drum, internal gear, sun gear and forward clutch piston lip for wear or damage.
- Inspect the drive plate facing for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed spring retainer.
- Make sure the clearance between retaining plate and internal gear of forward clutch is within the limit. If it exceeds the standard, replace the forward clutch. <Ref. to CVT-258, ASSEMBLY, Forward Clutch Assembly.>

$$T \text{ (mm)} = A - B - (0.35 - 0.70)$$

$$[T \text{ (in)} = A - B - (0.014 - 0.028)]$$

T: Shim thickness

A: Depth from the ST upper face to the washer mounting surface
