7) Increase the CVTF temperature to 60 — 80°C (140 — 176°F) by idling the engine with the select lever shifted to “N” or “P” range.
8) Shift the select lever to “D” range.
9) Depress the accelerator pedal to the full while fully depressing the foot brake pedal with your left foot.
10) When the engine speed stabilizes, quickly record the engine speed and release accelerator pedal. Shift the select lever to “N” range. Let the engine idle for one minute or more to cool it down.
11) Shift to “R” range and perform the same stall test.

NOTE:
- Do not perform a stall test for over 5 seconds at a time. (From closed throttle, fully open throttle to stall speed reading.) Failure to follow this instruction will cause the engine oil and CVTF to deteriorate and the clutch and brake to be adversely affected.
- Be sure to cool down the engine for at least one minute after each stall test with the select lever set in the “P” or “N” range and with the idle speed of 1,200 r/min or less.
- If the stall speed is higher than the specified range, attempt to finish the stall test in as short a time as possible, in order to prevent the CVT from sustaining damage.

Stall speed standard:
2,050 — 2,590 r/min (D range)
2,130 — 2,680 r/min (R range)

Stall test judgment

Range	Range	Probable cause
Lower than standard value	D, R	• Throttle valve is not fully open. • Insufficient engine output • Torque converter malfunction
Higher than standard value	D	• Forward clutch slippage • Secondary pressure (line pressure) is low. • Variator chain malfunction • Input clutch slippage
	R	• Reverse brake slippage • Secondary pressure (line pressure) is low. • Variator chain malfunction • Input clutch slippage
	D, R	• Torque converter malfunction • Control valve body malfunction • TCM malfunction • Damaged harness and harness connector

7. Time Lag Test

A: INSPECTION

NOTE:
When the select lever is shifted while the engine is idling, there will be a certain time elapse or lag before shock is felt. This symptom helps to check the condition of forward clutch and reverse brake.
- Perform the test at normal operation CVTF temperature of 60 — 80°C (140 — 176°F).
- Be sure to allow one minute or more interval between tests.
- Make three measurements and take the average value.

1) Apply the parking brake.
2) Start the engine. Check the idle speed. (A/C OFF)
3) Shift the select lever from “N” to “D” range. Using a stop watch, measure the time elapsed from shifting the lever until the shock is felt.

Time lag standard:
1.2 seconds or less

If “N” → “D” time lag is longer than specified:
- Secondary pressure (line pressure) is too low.
- Forward clutch worn
- Piston malfunction
- Control valve body malfunction
- Learning incomplete

4) In the same manner, measure the time lag when shifting from “N” range to “R” range.

Time lag standard:
1.5 seconds or less

If “N” → “R” time lag is longer than specified:
- Secondary pressure (line pressure) is too low.
- Reverse brake worn
- Piston malfunction
- Control valve body malfunction
- Learning incomplete

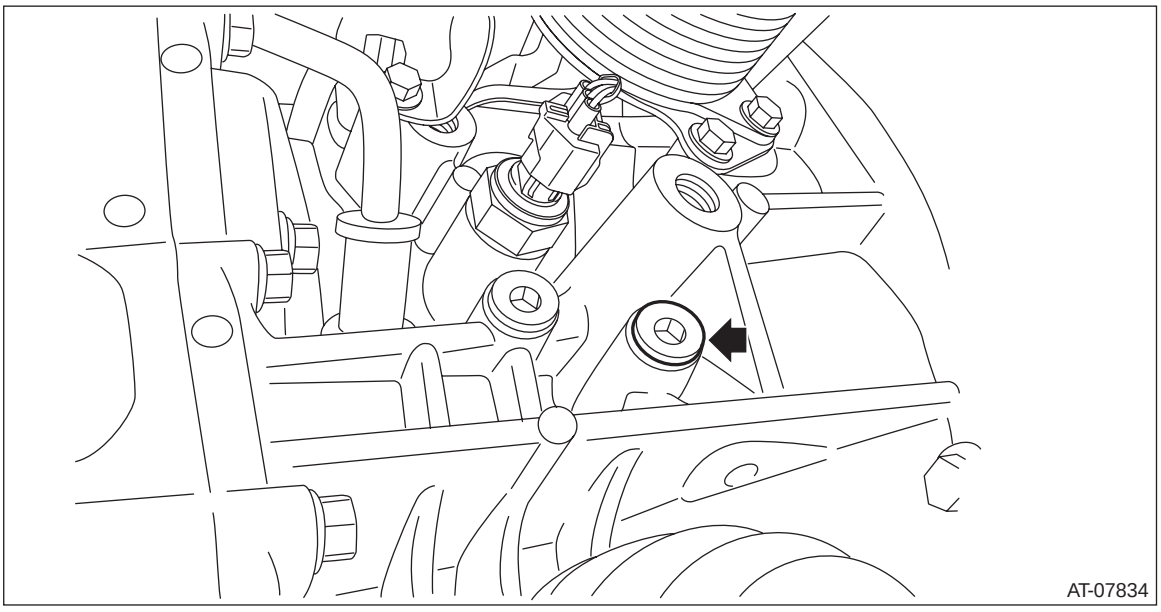
8. Secondary Pressure (Line Pressure) Test

A: INSPECTION

CAUTION:
Make sure no other person is around the vehicle during secondary pressure (line pressure) test measurement.

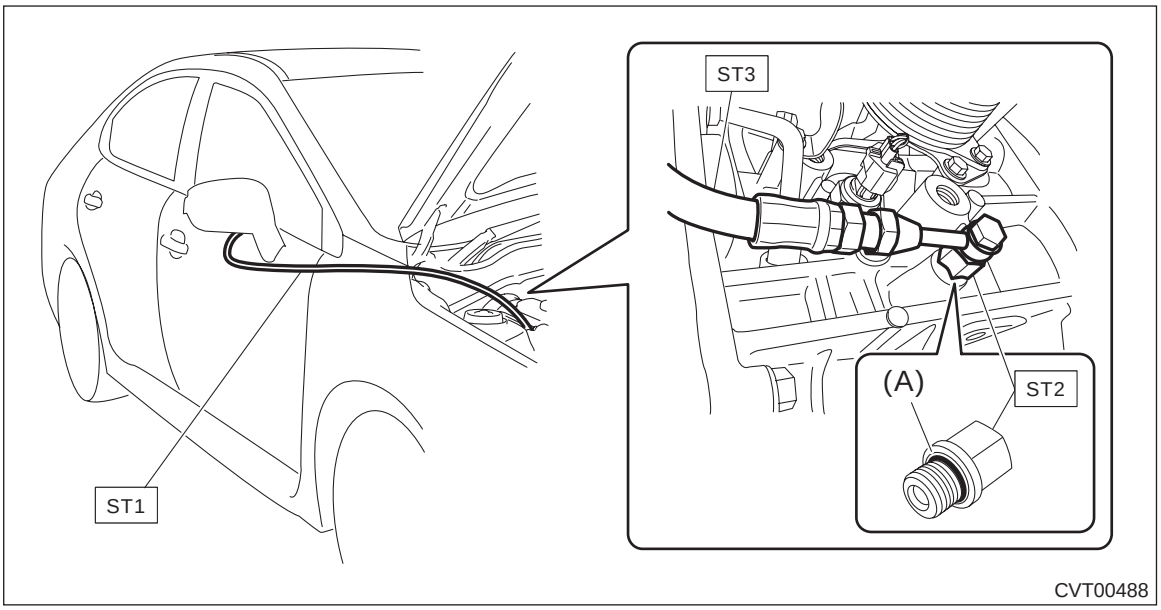
NOTE:
• If the pulley and variator chain, clutch or brake show signs of slipping or shift feel is not correct, check the secondary pressure (line pressure).
• Connect Subaru Select Monitor to vehicle so as to measure the engine speed and actual secondary pressure (secondary pressure (line pressure)).
• In many cases, slippage or inability to operate the vehicle may be due to insufficient oil pressure for the operation of clutch, brake or control valve.

1) Remove the front wheel RH. <Ref. to WT-5, REMOVAL, Tire and Wheel.>
2) Lift up the vehicle.
3) Remove the test plug for secondary pressure (line pressure).



4) Attach ST1, ST2 and ST3 to transmission.
ST1 18801AA000 OIL PRESSURE GAUGE ASSY
ST2 18681AA000 PRESSURE GAUGE ADAPTER
ST3 498897700 OIL PRESSURE ADAPTER SET

NOTE:
Use ST2 PRESSURE GAUGE ADAPTER with genuine O-ring (part No. 806911080) attached.



(A) O-ring (genuine part)

5) Set the gauge so that it can be seen from the driver's seat.
6) Install the front wheel RH. <Ref. to WT-5, INSTALLATION, Tire and Wheel.>
7) Using the Subaru Select Monitor, check if the throttle valve operates when you depress the accelerator pedal. <Ref. to EN(w/o STI)(diag)-37, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>
8) Check the engine oil level. <Ref. to LU(w/o STI)-2, General Description.>
9) Check the coolant level. <Ref. to CO(w/o STI)-13, Engine Coolant.>
10) Adjust the CVTF level. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
11) Increase the CVTF temperature to 60 — 80°C (140 — 176°F) by idling the engine with the select lever shifted to "N" or "P" range.
12) Shift the select lever to "D" range.
13) Depress the accelerator pedal to the full while fully depressing the foot brake pedal with your left foot.

14) Immediately after the engine speed becomes steady, record the reading of the secondary pressure (line pressure), engine speed and actual secondary pressure on Subaru Select Monitor. And then release the accelerator pedal. Shift the select lever to “N” range. Let the engine idle for one minute or more to cool it down.

NOTE:
• Do not continue the stall test for 5 seconds or more at a time (from fully closed throttle, fully open throttle to secondary pressure (line pressure) reading). Failure to follow this instruction will cause the engine oil and CVTF to deteriorate and the clutch and brake to be adversely affected.
• After performing the secondary pressure (line pressure) test, be sure to cool down the engine for at least one minute with the select lever set in “P” or “N” range and with the idle speed at 1,200 r/min or less.
• Under each condition, check that the measured pressure matches almost totally with actual secondary pressure.
• When both measured pressure and actual secondary pressure are out of specification, judge as control valve malfunction.
• The value at stall is for reference because the pressure changes under different conditions or circumstances.
• The value at idling is steady because it is not affected by any condition or circumstance.

Secondary pressure (line pressure) standard				
	Range	Throttle	Brake	Secondary pressure (line pressure) (MPa (kgf/cm^2, psi))
Stall	D, R	Full open	ON	4.5 — 6 (45.9 — 61.2, 652 — 870)
Idling	P, N	Full closed	OFF	0.5 — 1.5 (5.1 — 15.3, 72 — 218)

15) Remove the ST and install the plug after measurement.

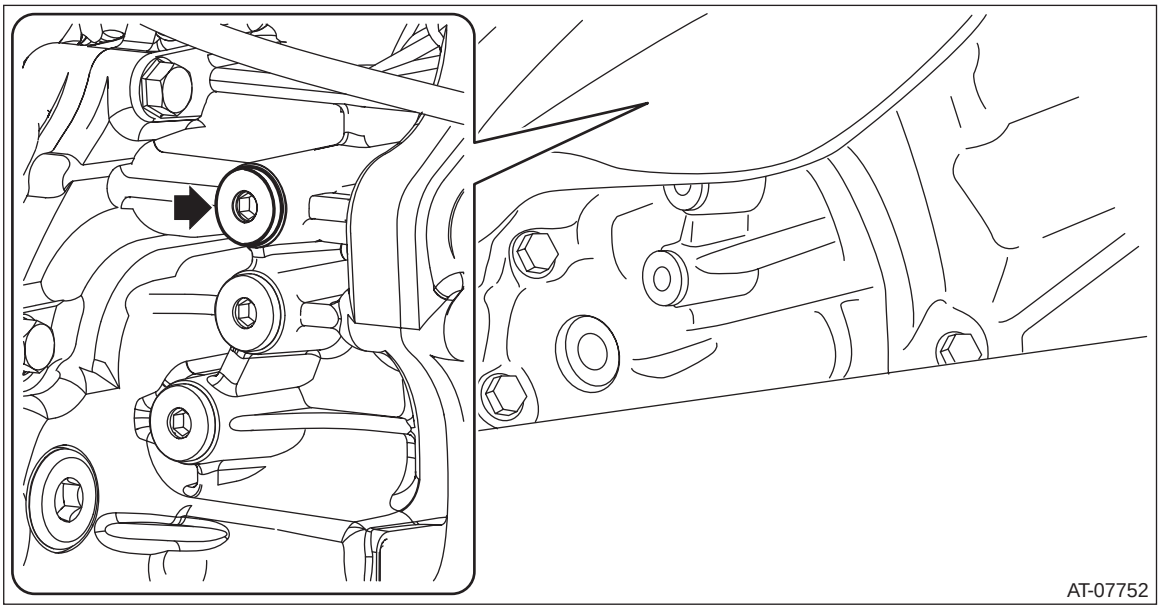
NOTE:
Use new O-rings.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

9. Transfer Clutch Pressure Test

A: INSPECTION

1) Lift up the vehicle.
2) Remove the test plug.

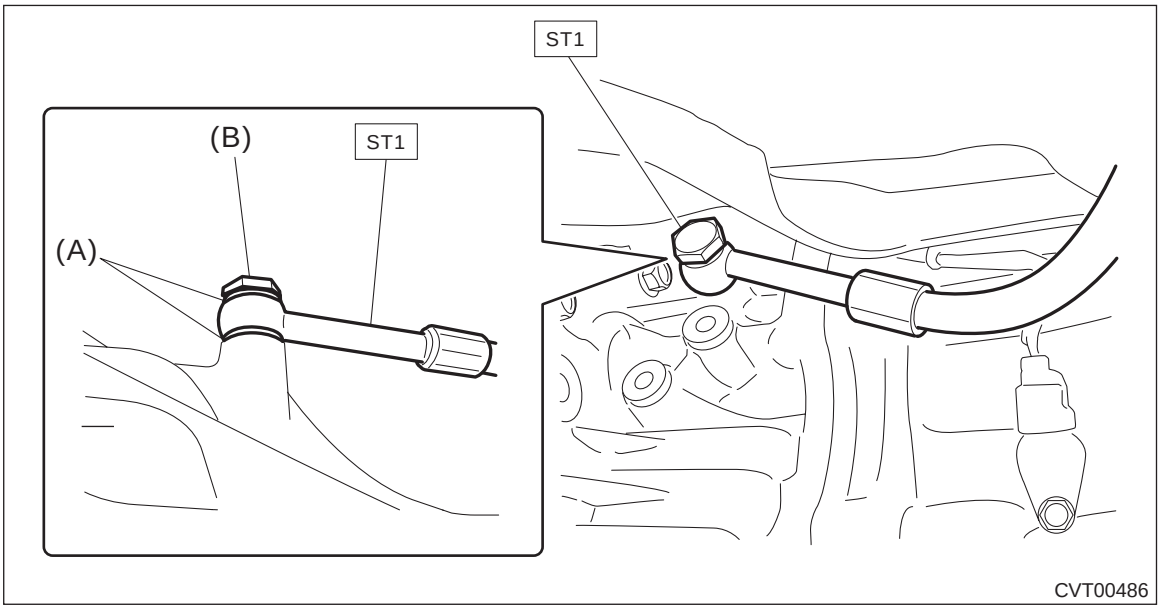


3) Set the ST1, ST2, ST3 and ST4 to the transmission.

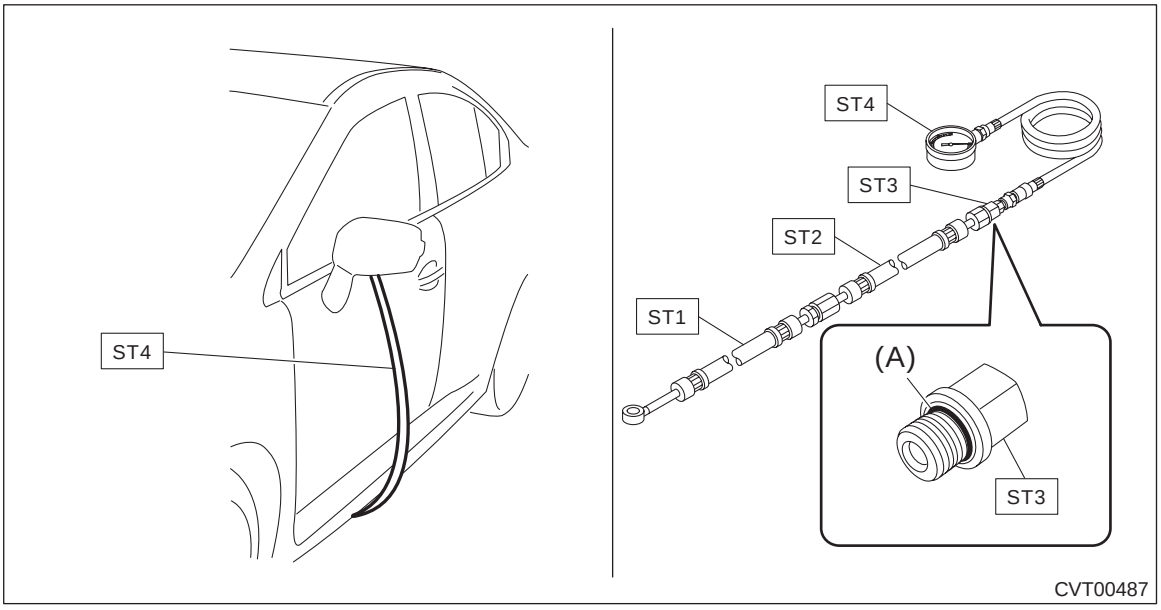
CAUTION:
Be careful when setting tools so that the hoses do not touch the exhaust pipes.

NOTE:
• Use ST1 ADAPTER HOSE B with genuine union screw (part No. 801914010) and gasket (part No. 803914060) attached.
• Use ST3 PRESSURE GAUGE ADAPTER with genuine O-ring (part No. 806911080) attached.

ST1 34099AC020 ADAPTER HOSE B
ST2 34099AC010 ADAPTER HOSE A
ST3 18681AA000 PRESSURE GAUGE ADAPTER
ST4 498575400 OIL PRESSURE GAUGE ASSY



(A) Gasket (genuine part)
(B) Union screw (genuine part)



(A) O-ring (genuine part)

4) Lower the vehicle.
5) Connect the Subaru Select Monitor to the data link connector and read the current data.
6) Check the transfer clutch pressure as in secondary pressure (line pressure) test. <Ref. to CVT(TR690)-49, Secondary Pressure (Line Pressure) Test.>

NOTE:
If oil pressure is not produced or it does not change, the control valve body may be malfunctioning.

Range position	ON Duty ratio (%)	Accelerator pedal opening angle (%)	Standard transfer clutch pressure kPa (kgf/cm^2, psi)
D	95 — 100	Fully opened (100)	1,000 — 1,200 (10.2 — 12.2, 145 — 174)
	60	Adjust ON Duty ratio to 60%.	400 — 700 (4.1 — 7.1, 58 — 102)
	0	Fully closed (0)	—
N or P	0	Fully closed (0)	0

7) Lift up the vehicle.
8) Remove the ST.

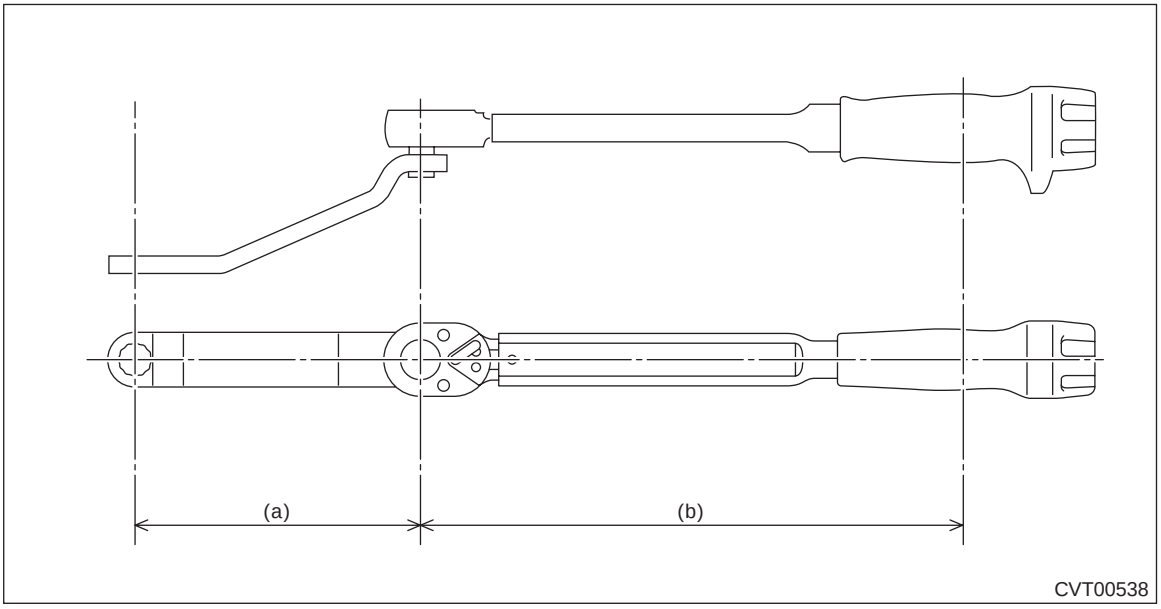
9) Install the test plug using ST1 and ST2.

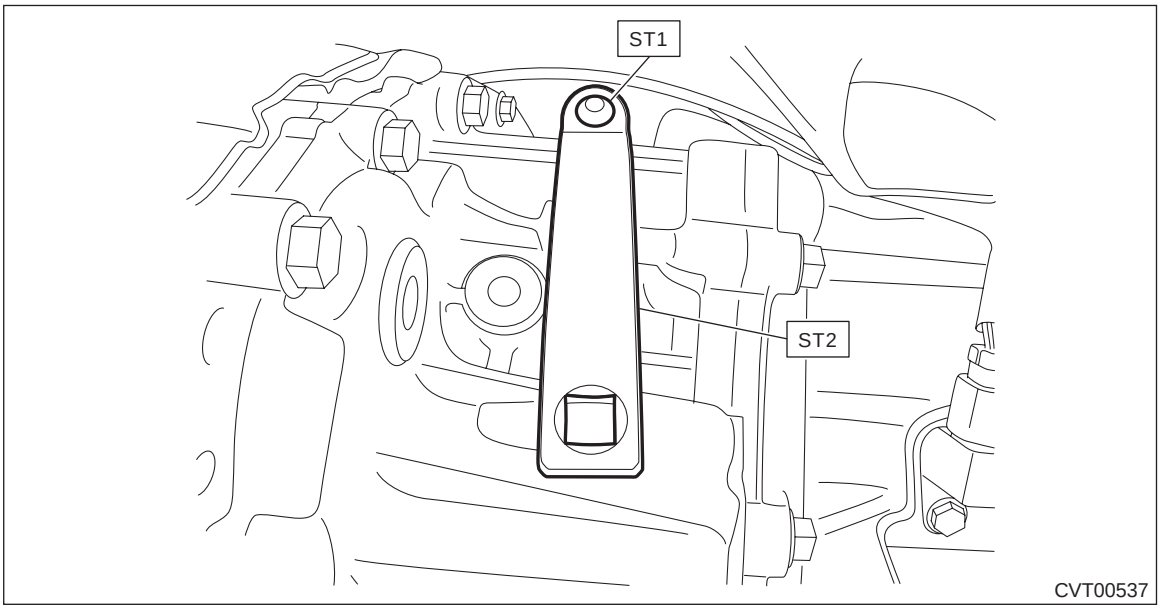
NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.
- Tighten the test plug while directly aligning ST2 and torque wrench.

ST1 18270AA040 SOCKET
ST2 73099SG000 SPECIAL TOOL CONDENSER
Using the following formula, calculate the tightening torque for a torque wrench.
T2 = L2/(L1 + L2) × T1
T1: 25 N·m (2.5 kgf-m, 18.4 ft-lb)
L1: ST2 length 0.1 m (3.94 in) (a)
L2: Torque wrench length (b) m (in)

[Required torque setting]

T2: Tightening torque: N·m (kgf-m, ft-lb)



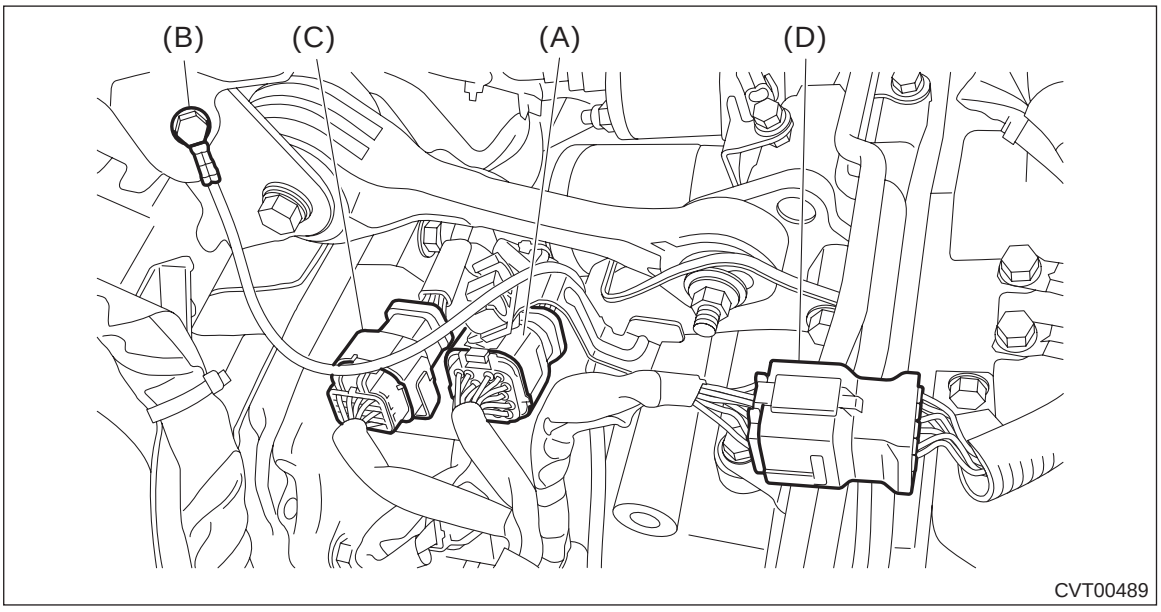


10) Lower the vehicle.

10.Automatic Transmission Assembly

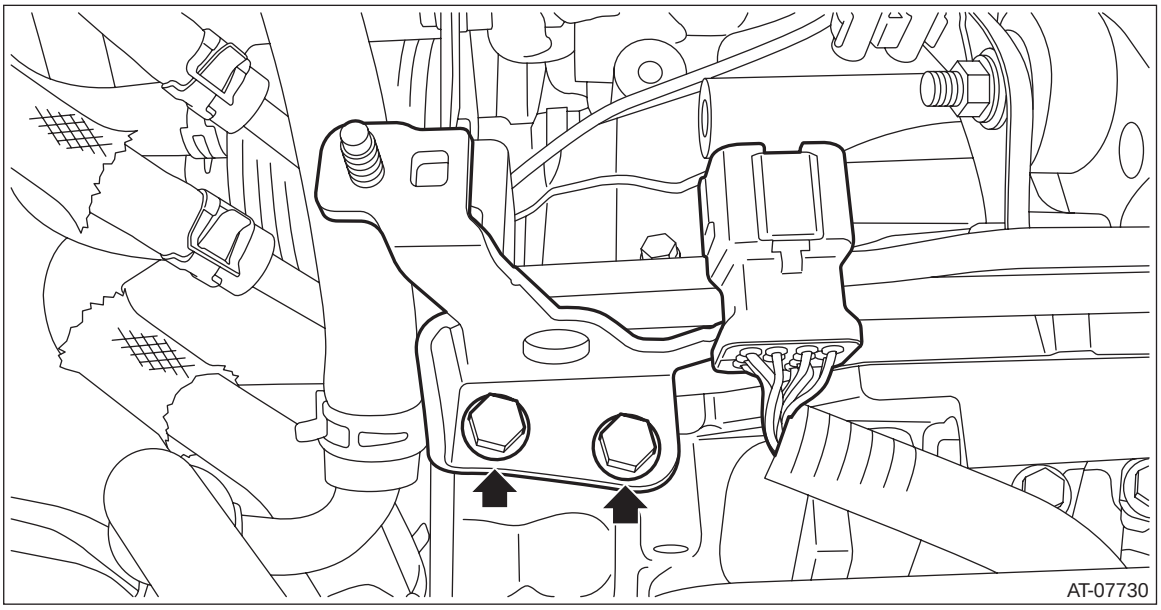
A: REMOVAL

1) Remove the front wheels.
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>
3) Remove the air intake duct. <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
4) Remove the intercooler and the intercooler stay. <Ref. to IN(w/o STI)-41, REMOVAL, Intercooler.>
5) Remove the air breather hose. <Ref. to CVT(TR690)-136, REMOVAL, Air Breather Hose.>
6) Disconnect the following connectors.
- Transmission harness connectors
- Transmission radio ground terminal
- Inhibitor harness connector
- Engine harness connectors

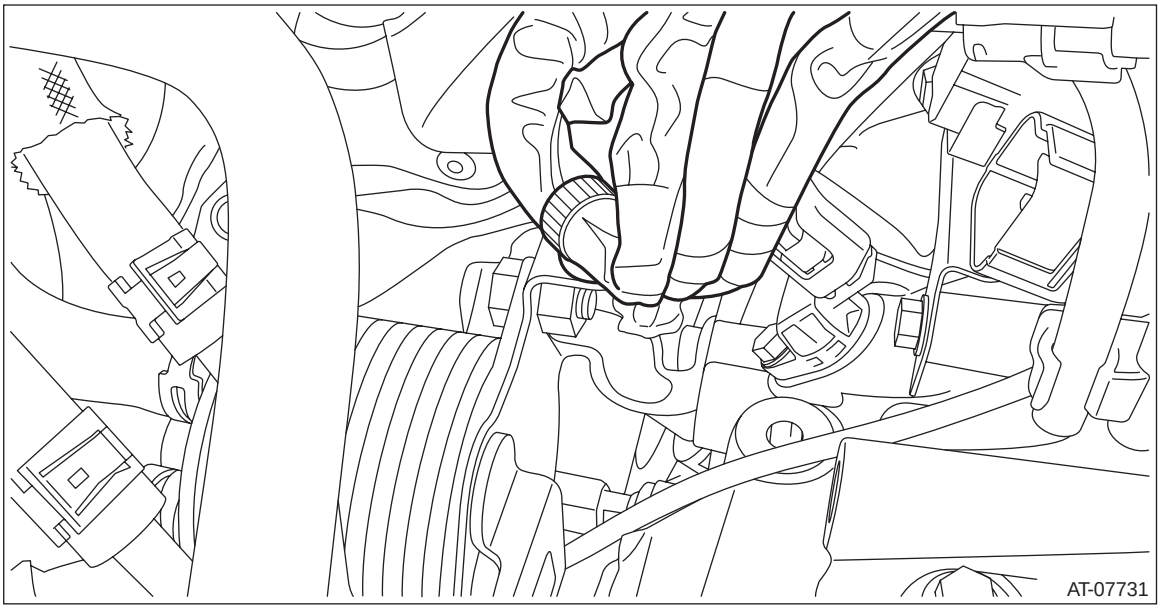


(A) Transmission harness connectors
(B) Transmission radio ground terminal
(C) Inhibitor harness connector
(D) Engine harness connectors

7) Remove the engine hanger rear.

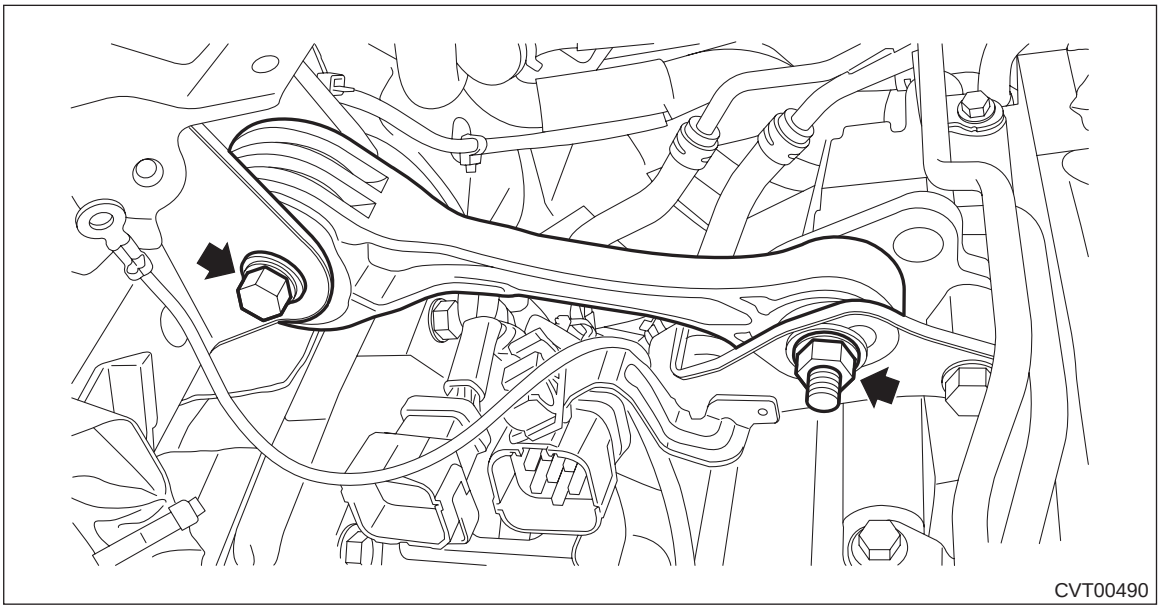


8) Remove the harness clip from the CVTF cooler bracket.

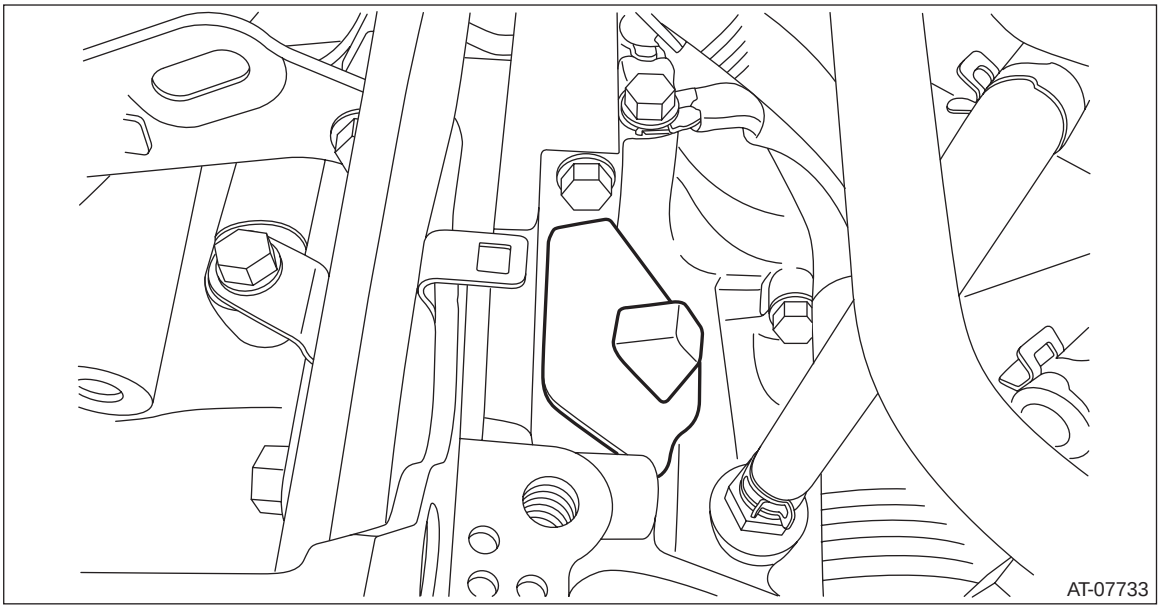


9) Remove the starter. <Ref. to SC(w/o STI)-2, General Description.>

10) Remove the pitching stopper.

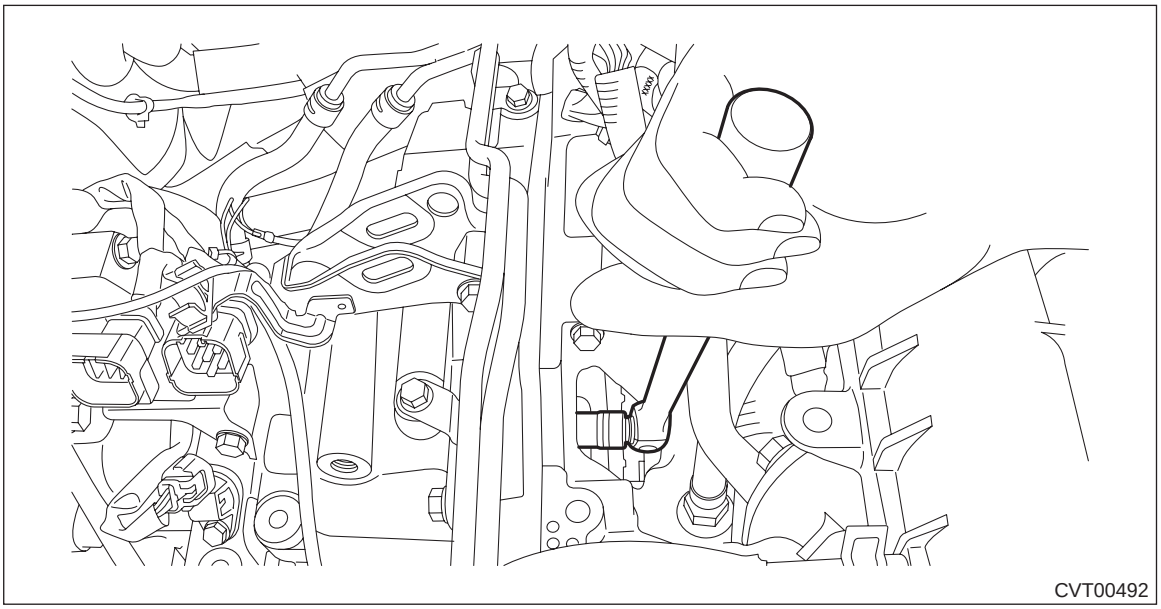


11) Remove the service hole plug.

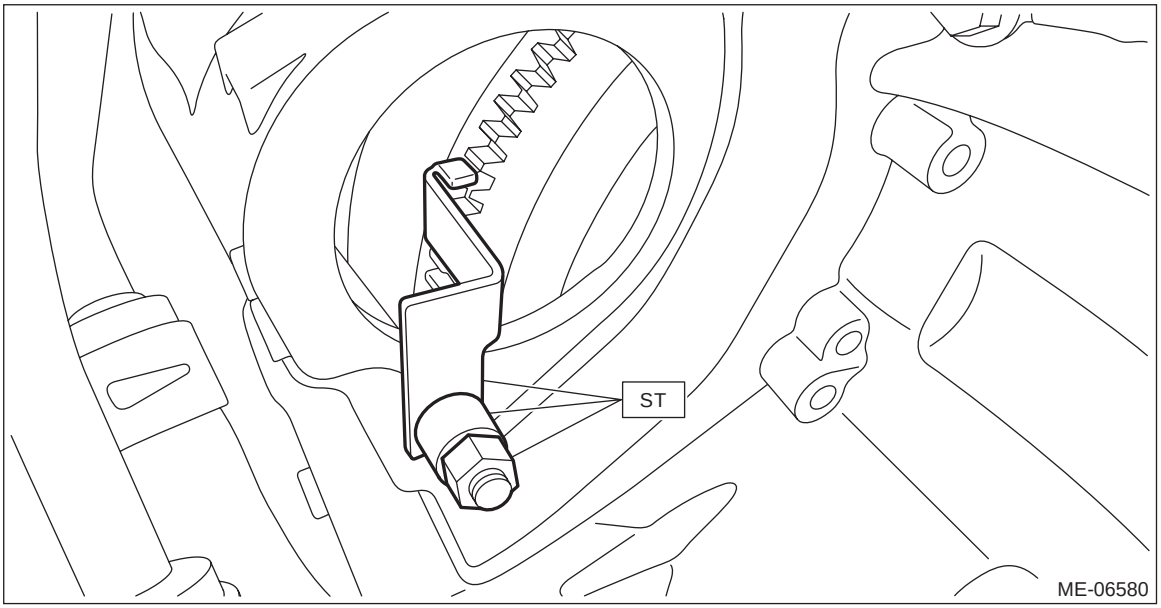


12) Remove the four bolts combining the torque converter and drive plate while rotating the crank pulley a little at a time in the same direction as engine revolution.

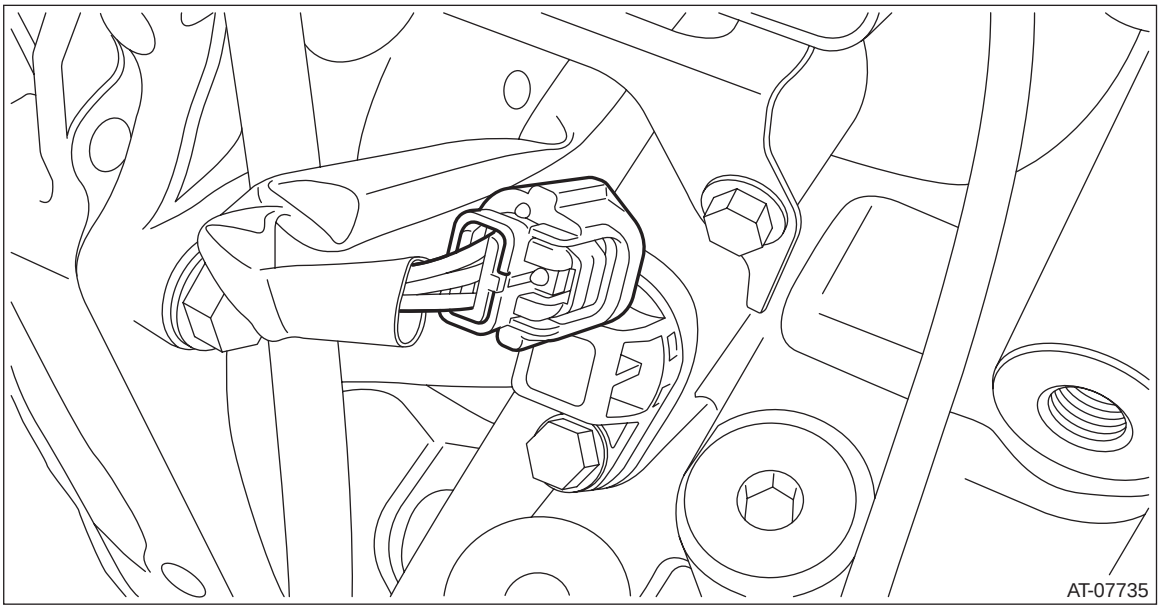
CAUTION:
- **Be careful not to drop bolts into the converter housing.**
- **Be careful not to damage the mounting bolts.**



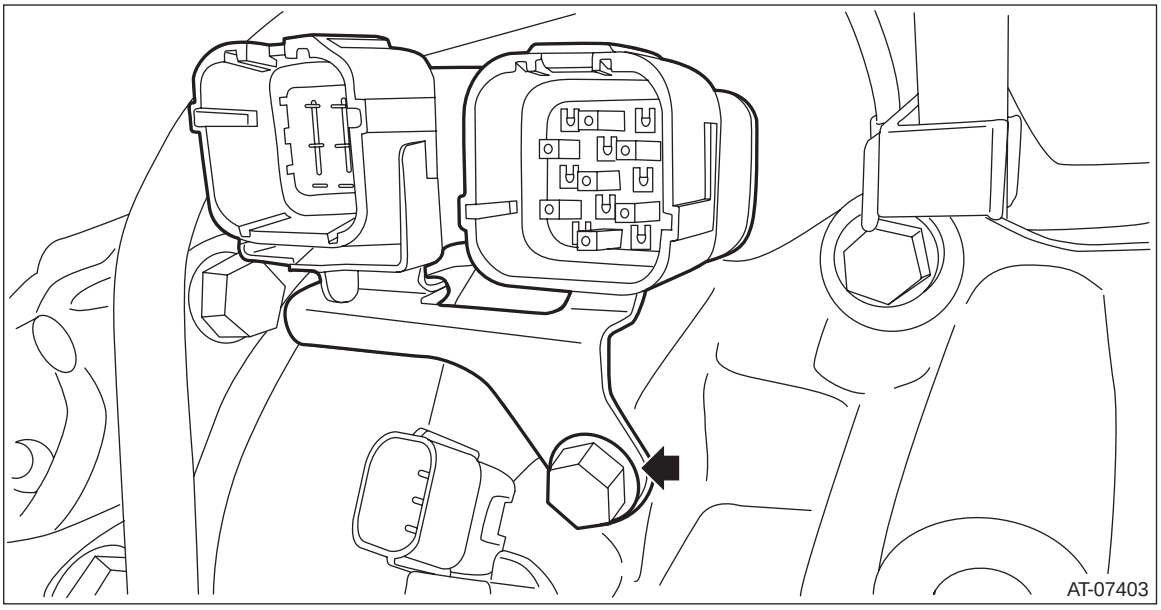
13) Make sure the torque converter moves freely by rotating with finger through the starter installation hole.
14) Attach the ST to the converter case.
ST 498277200 STOPPER SET



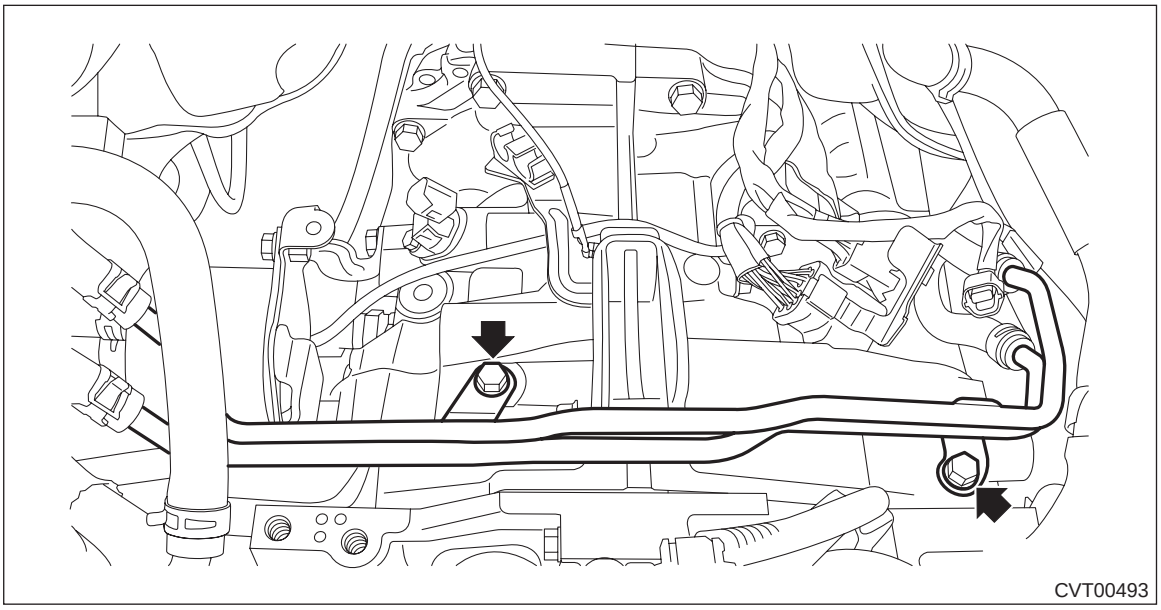
15) Remove the primary speed sensor harness connector.



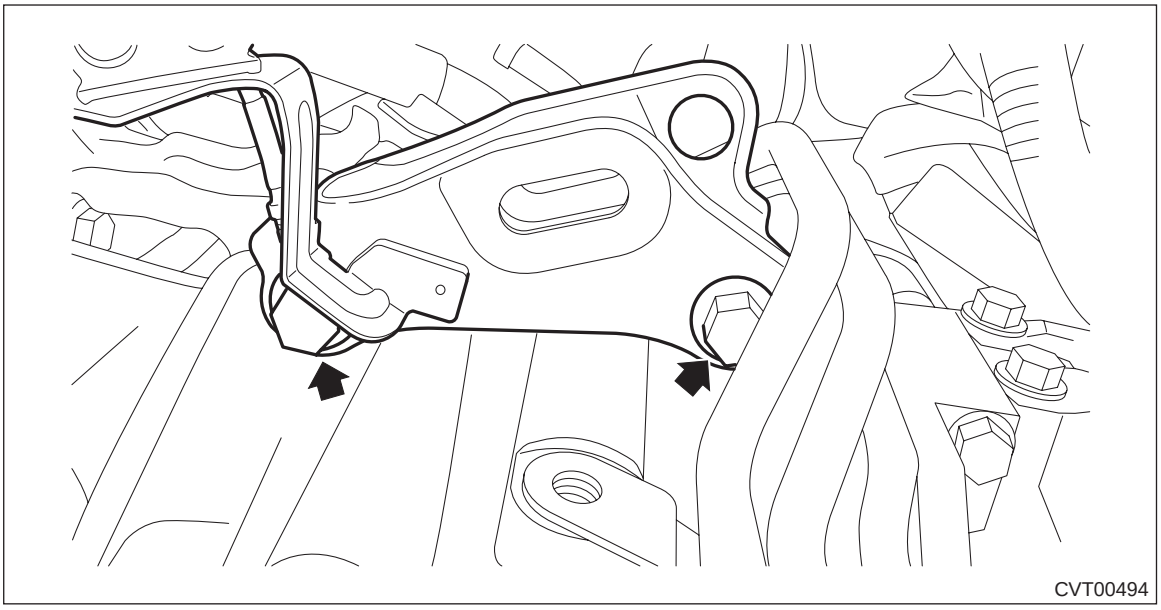
16) Remove the transmission harness stay.



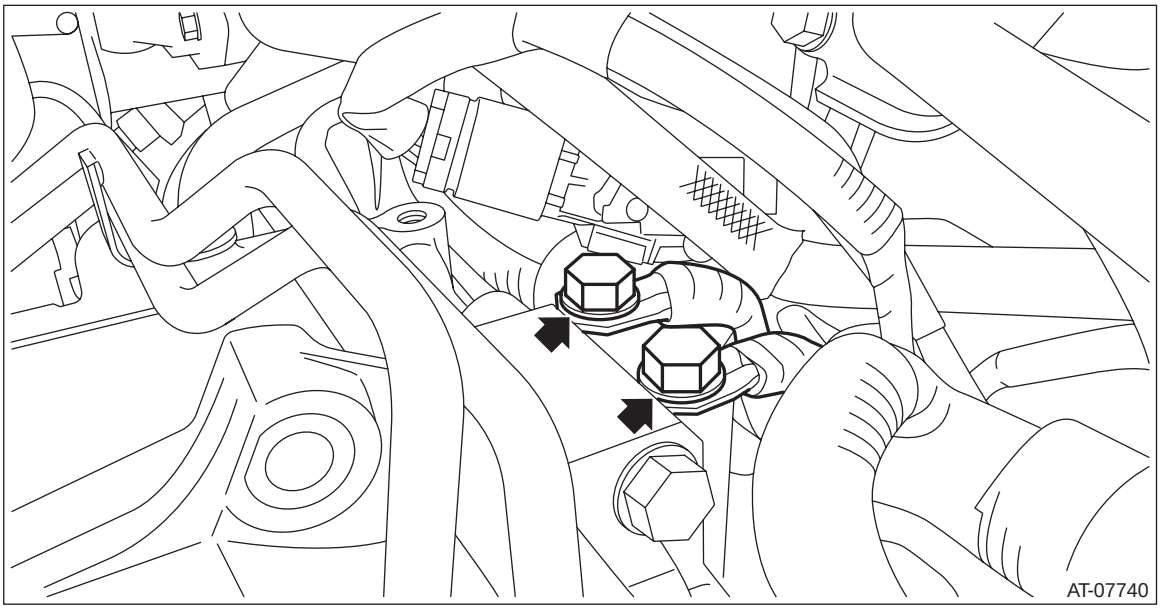
17) Remove the CVTF cooler pipe COMPL mounting bolt.



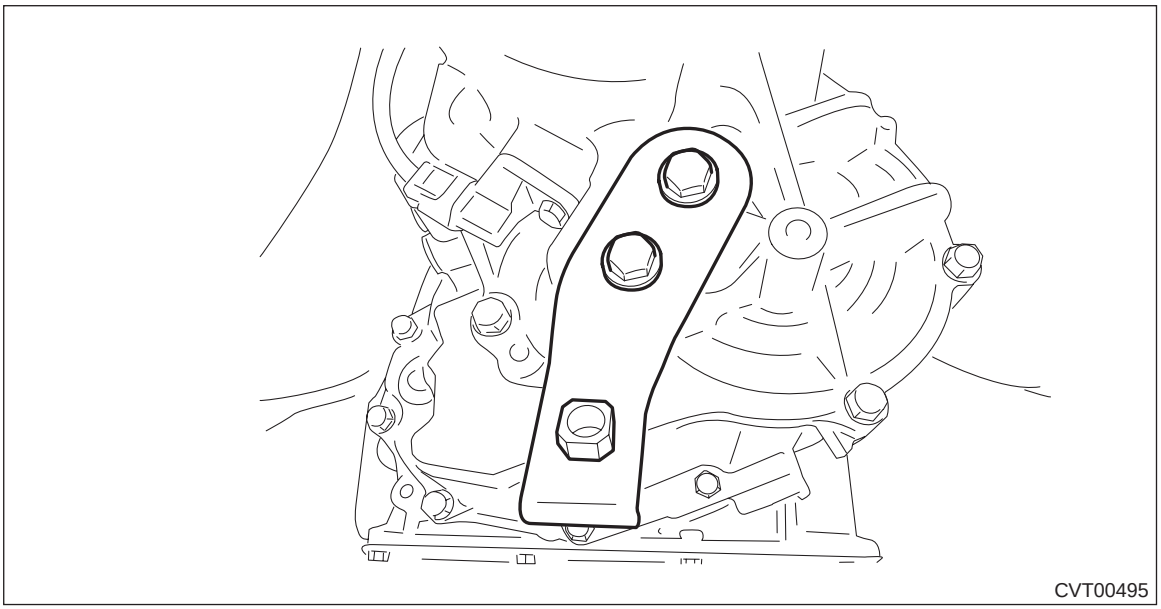
18) Remove the pitching stopper bracket and transmission radio ground cord.



19) Remove the engine ground terminal.

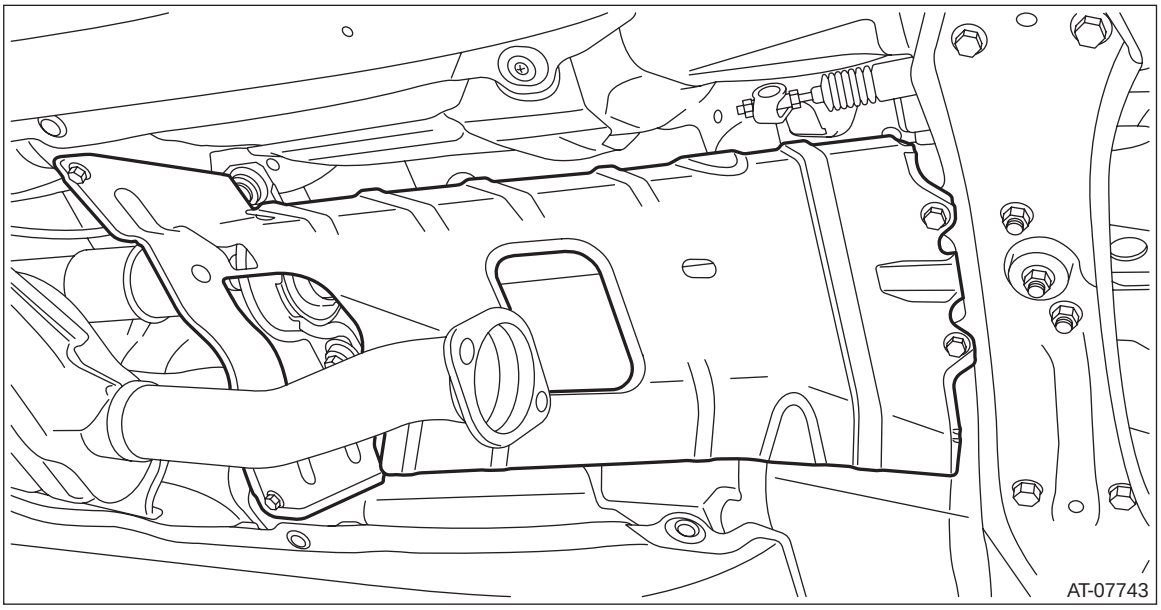


20) Lift up the vehicle.
21) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
22) Remove the exhaust hanger bracket.

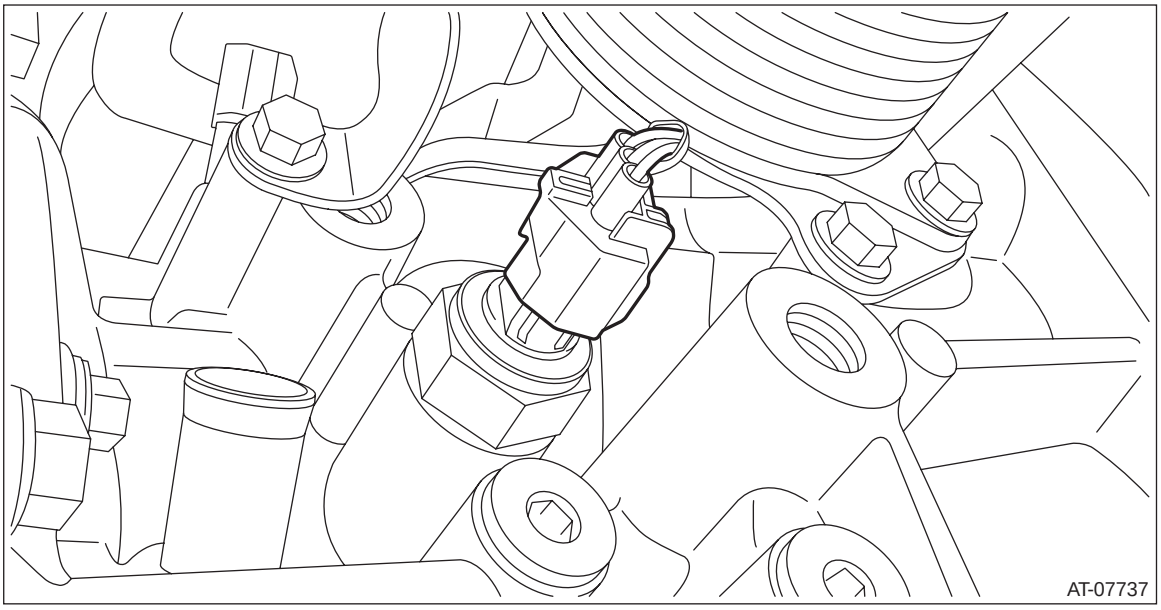


23) Remove the CVTF drain plug to drain CVTF. <Ref. to CVT(TR690)-38, REPLACEMENT, CVTF.>

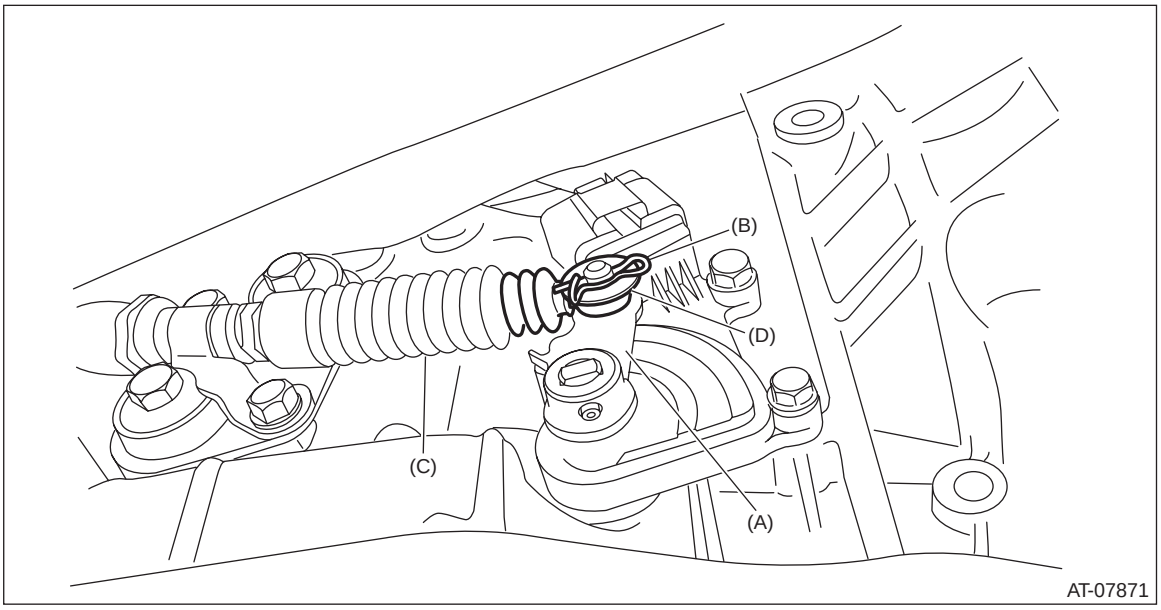
24) Remove the center exhaust cover.



25) Remove the secondary pressure sensor harness connector.

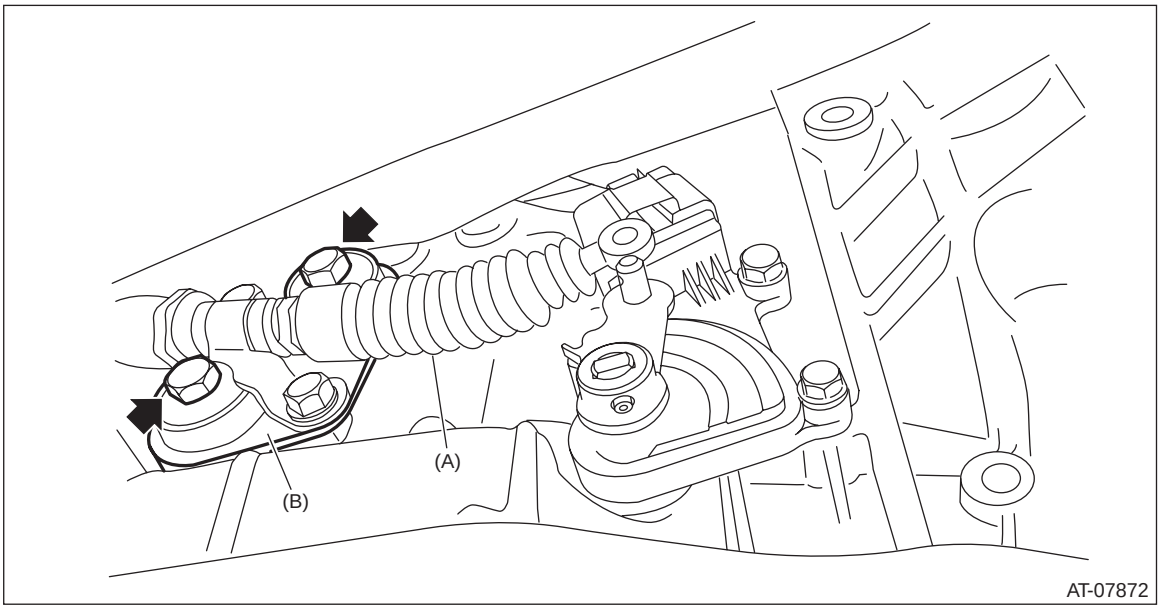


26) Remove the snap pin and washer from shifter arm and remove the select cable.



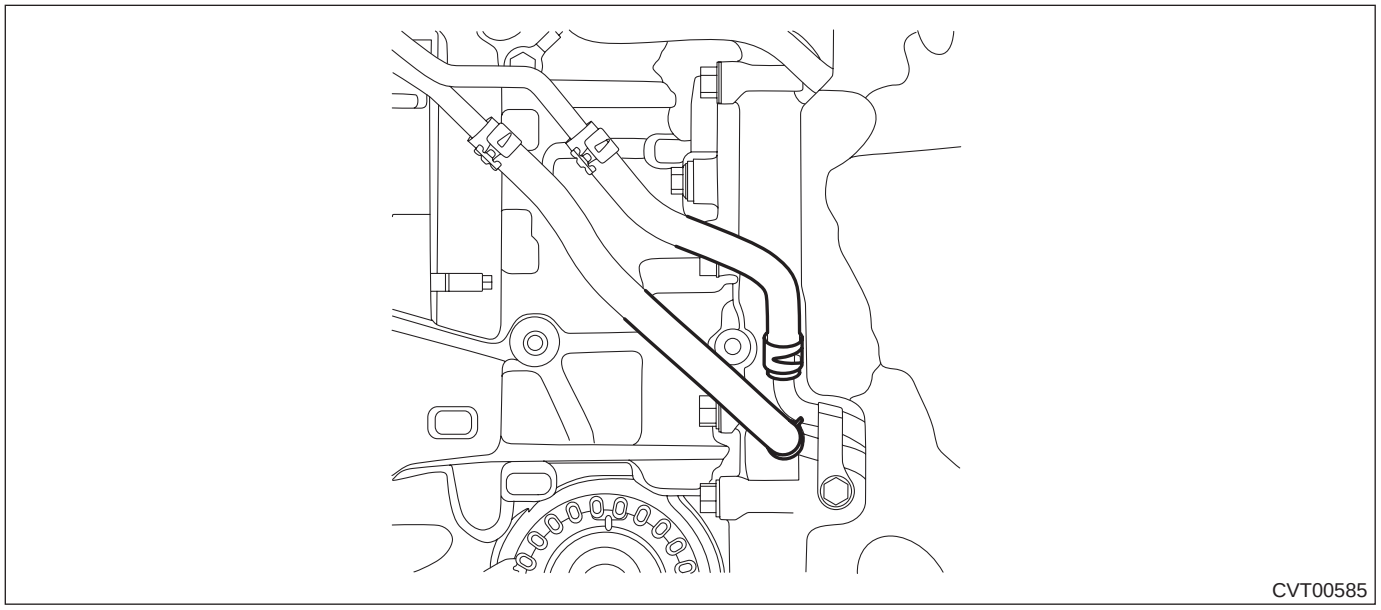
(A) Shifter arm
(B) Snap pin
(C) Select cable
(D) Washer

27) Remove the plate assembly.

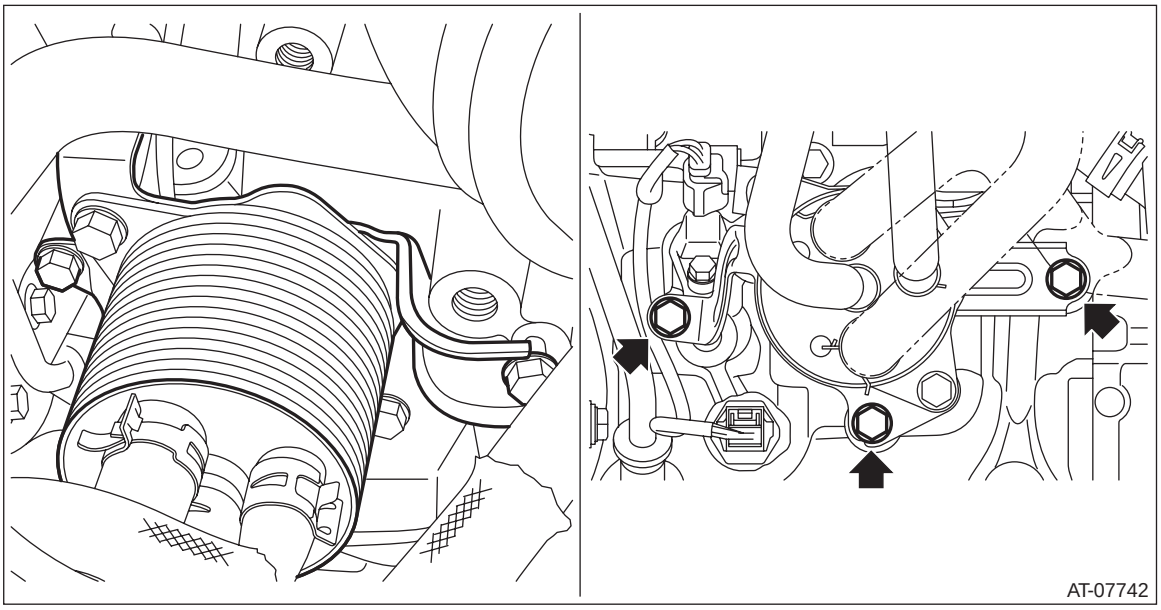


(A) Select cable
(B) Plate ASSY

28) Drain differential gear oil. <Ref. to CVT(TR690)-42, REPLACEMENT, Differential Gear Oil.>
29) Remove the CVTF inlet hose and outlet hose.

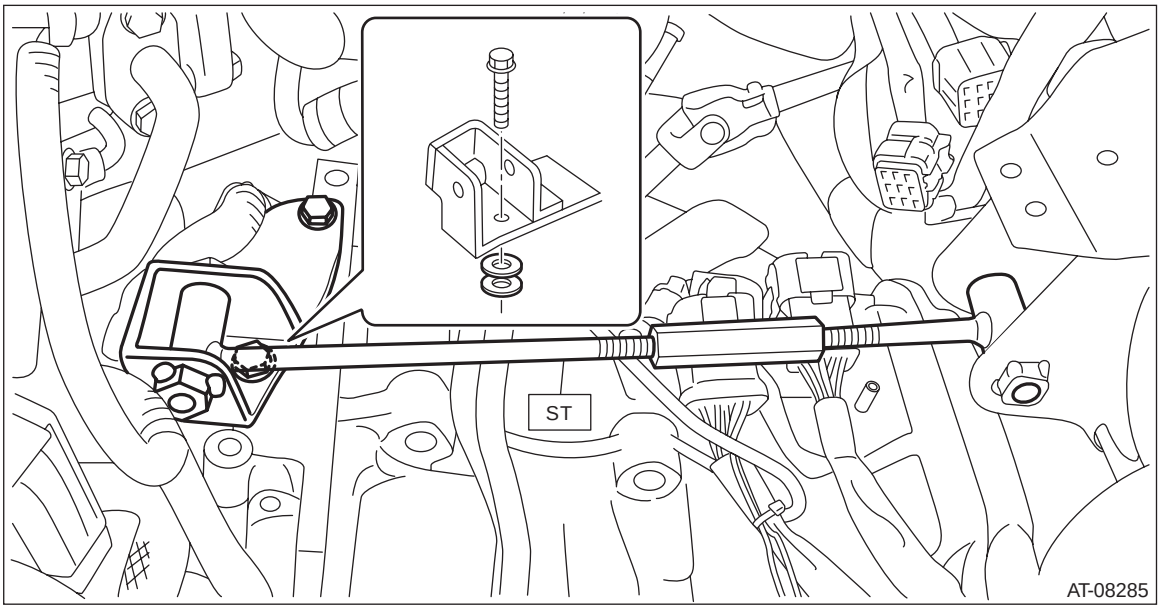


30) Remove the CVTF cooler (with warmer feature), and using a piece of wire, affix to a location of the body where it will not interfere with the removal/installation of the transmission.

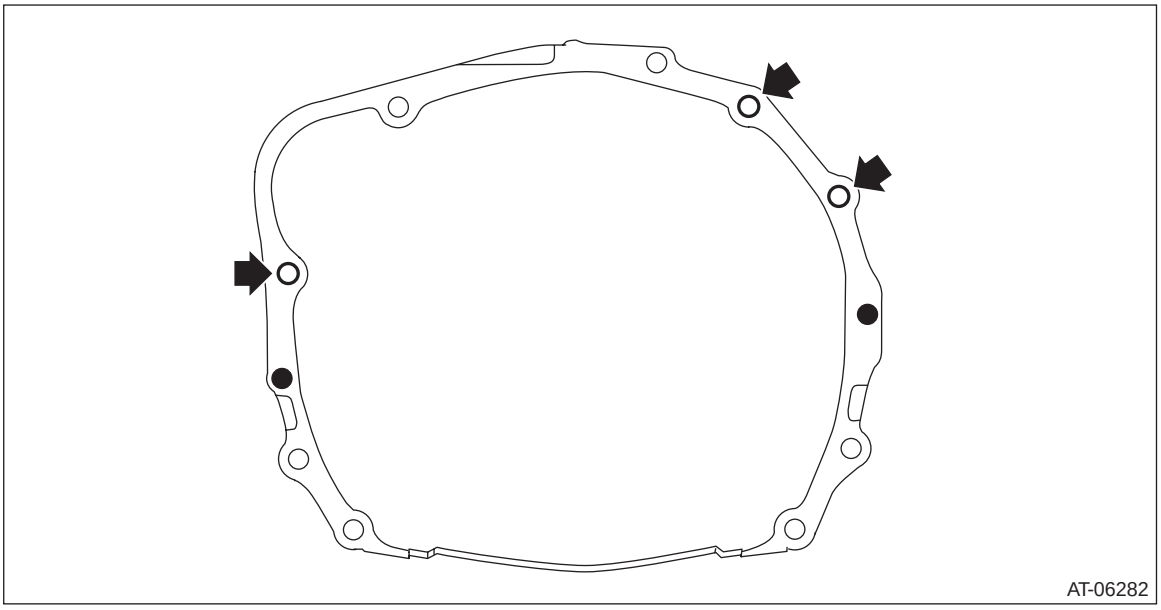


31) Set the ST.
ST 41099AC000 ENGINE SUPPORT ASSY

NOTE:
Place a washer with 4 mm (0.16 in) thickness into the gap between the engine block and ST.



32) Remove the three transmission connecting bolts.



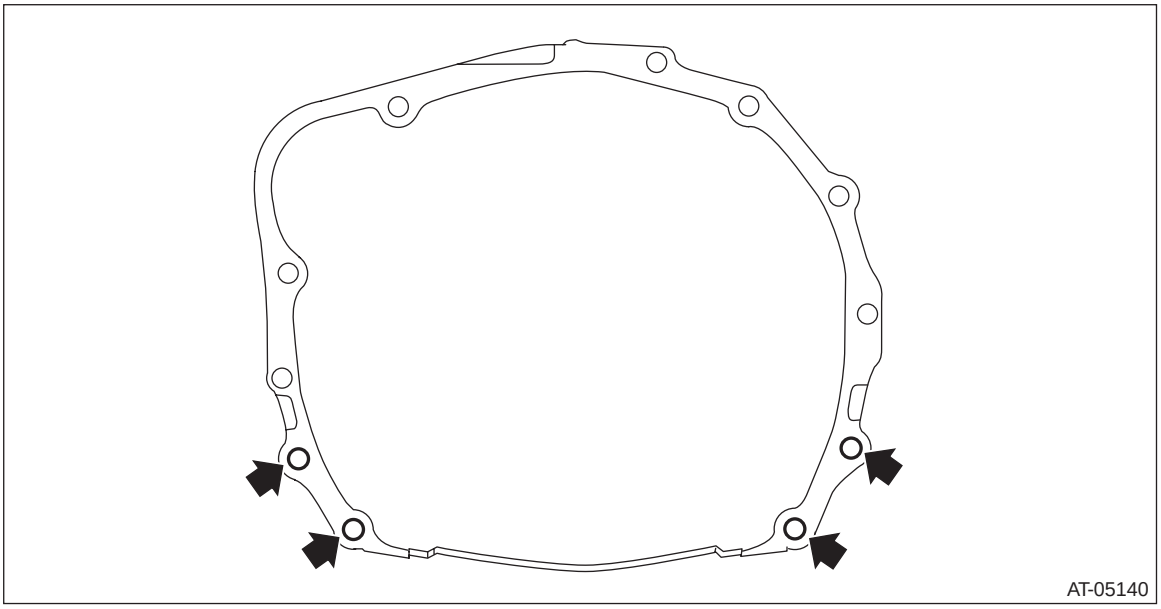
33) Lift up the vehicle.
34) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
35) Remove the stabilizer link. <Ref. to FS-31, REMOVAL, Front Stabilizer.>
36) Disconnect the lower arm ball joint and housing.
37) Pull out the front drive shaft from transmission using a crowbar.

NOTE:
Place cloth between the tire lever or bar and the transmission in order to avoid damaging the transmission side retainer.

38) Holding the joint of front drive shaft from transmission side, pull out the drive shaft from transmission with care not to stretch the boot.

NOTE:
- Before pulling RH front drive shaft from transmission, turn the steering wheel to left hand full lock.
- Before pulling LH front drive shaft from transmission, turn the steering wheel to right hand full lock.

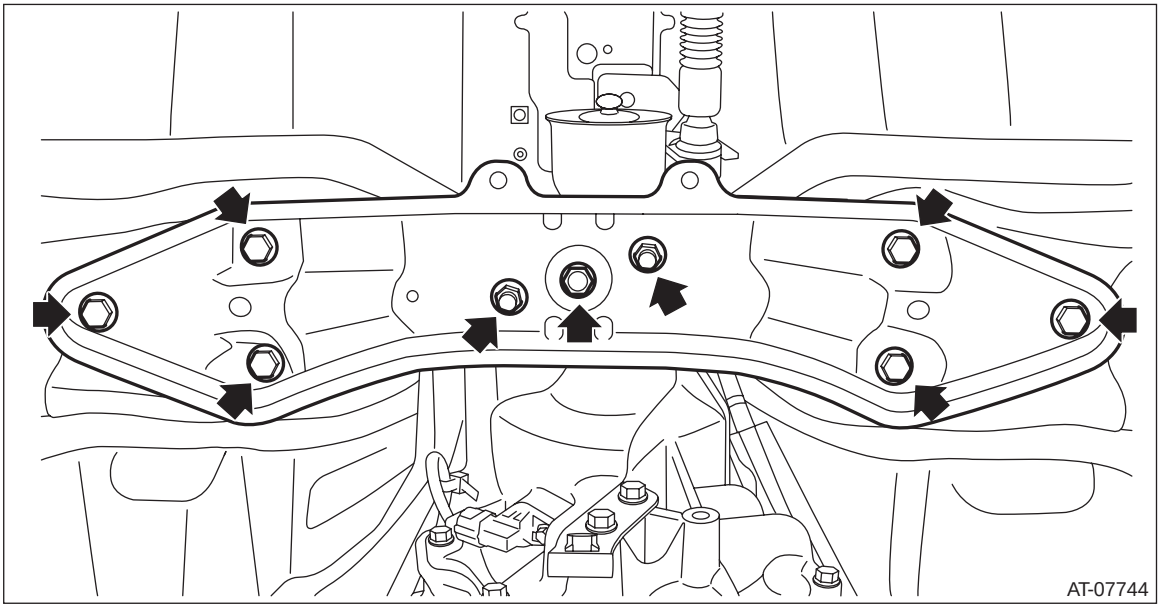
39) Remove the two transmission connecting bolts and two nuts (lower side).



40) Set the transmission jack under the transmission.

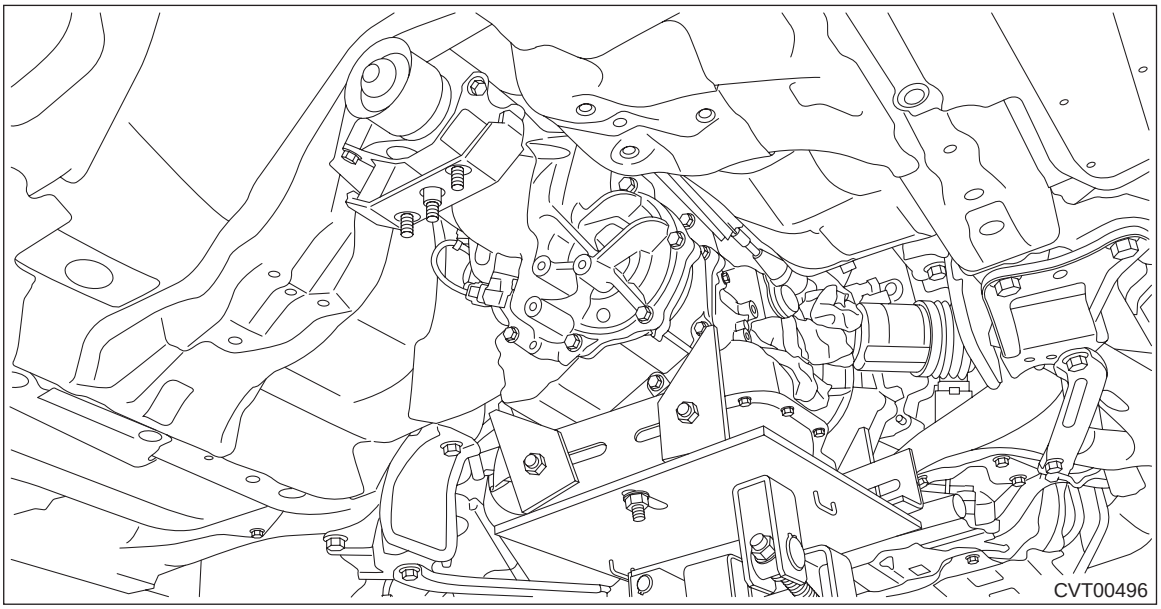
NOTE:
Make sure that the support plates of transmission jack do not touch the oil pan.

41) Remove the transmission rear crossmember.

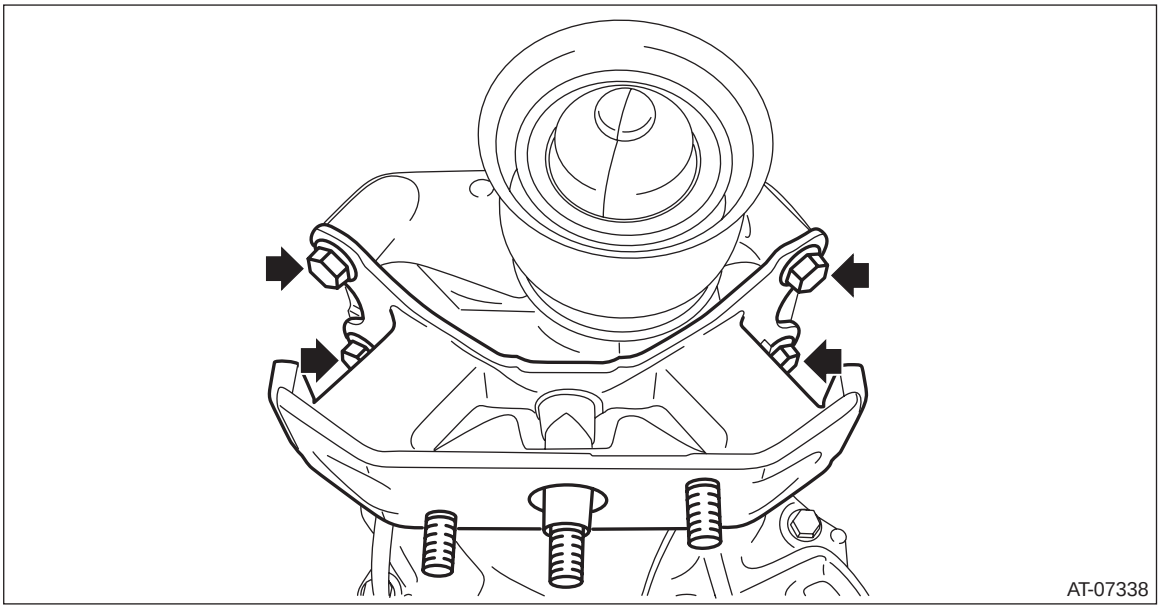


42) While lowering the transmission jack gradually, fully retract the engine support, and then tilt the engine rearward.
43) Remove the transmission assembly.

NOTE:
Remove it while moving the transmission jack up and down so that the engine and transmission remain directly aligned.

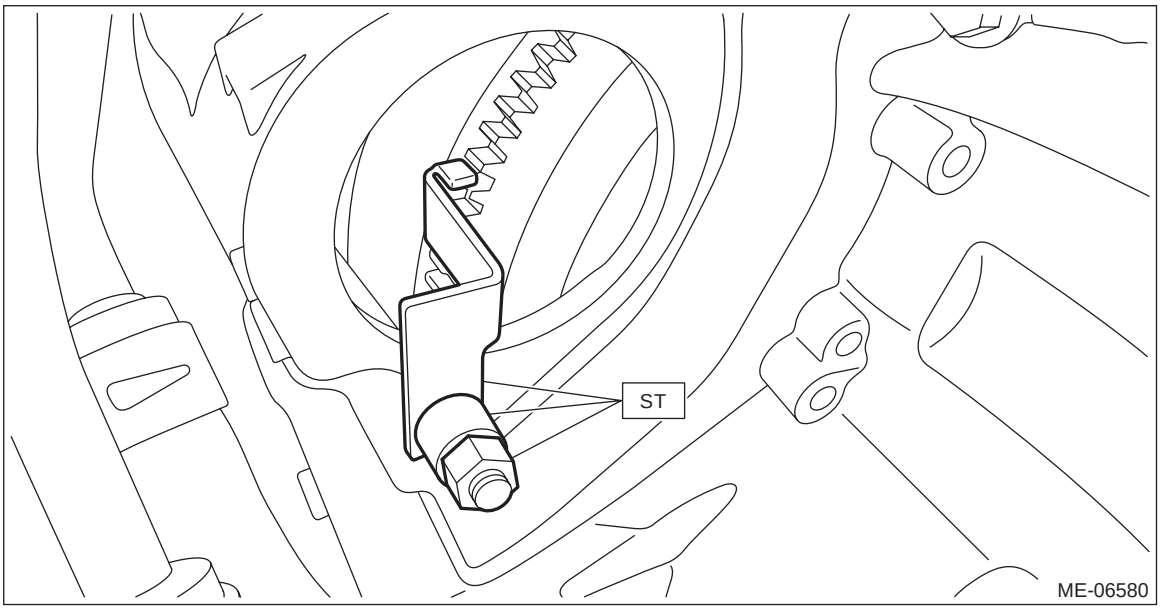


44) Remove the cushion rubber.



B: INSTALLATION

1) Attach the ST to converter case.
ST 498277200 STOPPER SET

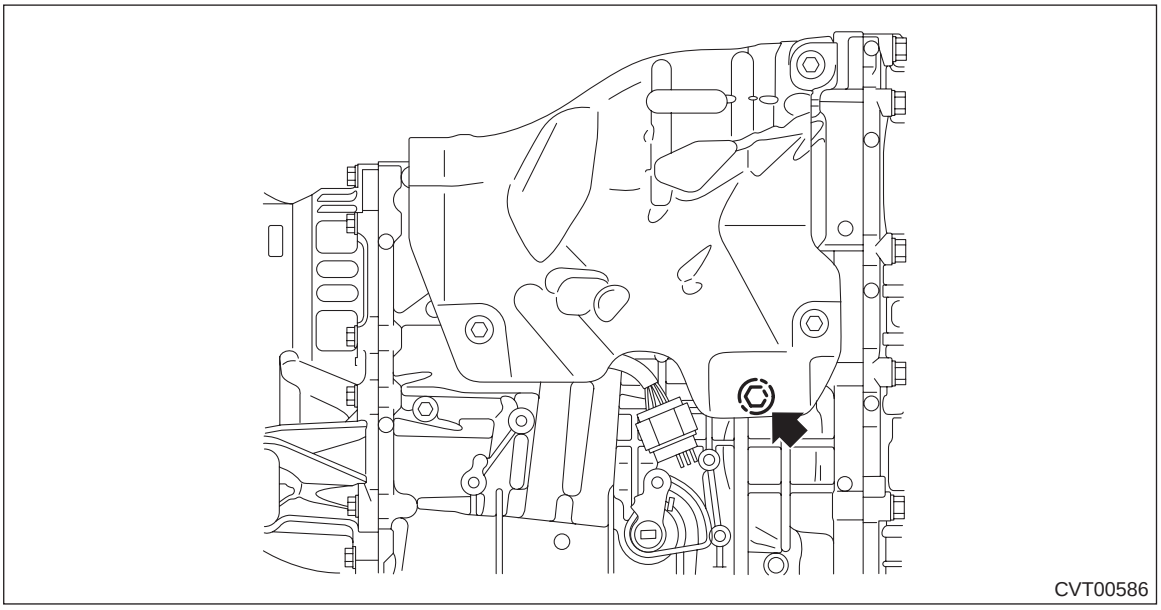


2) When completely overhauling the transmission, refill approx. 10 L (2.6 US qt, 8.8 Imp qt) of CVTF through the transmission right side plug, and install the plug.

CAUTION:
Always use specified CVTF. Using other fluid will cause malfunction. <Ref. to CVT(TR690)-4, HYDRAULIC CONTROL AND LUBRICATION, SPECIFICATION, General Description.>

NOTE:
Use a new gasket.

Tightening torque:
35 N·m (3.6 kgf-m, 25.8 ft-lb)

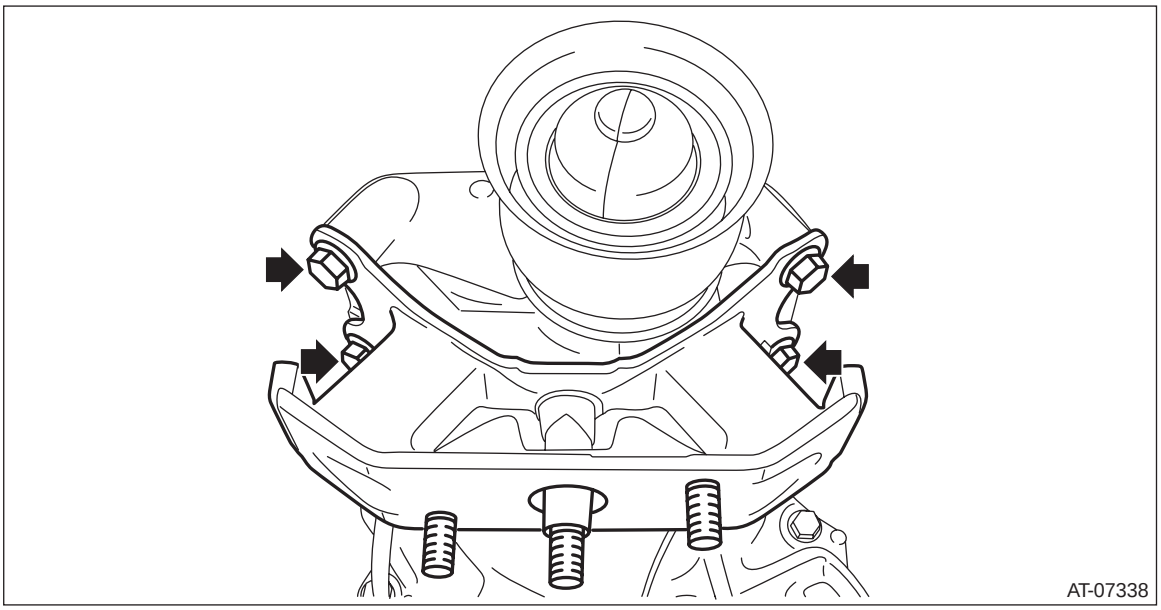


3) Replace the front differential side retainer oil seal. <Ref. to CVT(TR690)-89, REPLACEMENT, Differential Side Retainer Oil Seal.>

NOTE:
• Be sure to replace the differential side retainer oil seal with a new part whenever the front drive shaft is removed from the transmission.
• When a new differential side retainer oil seal has been installed, replacement is not required.

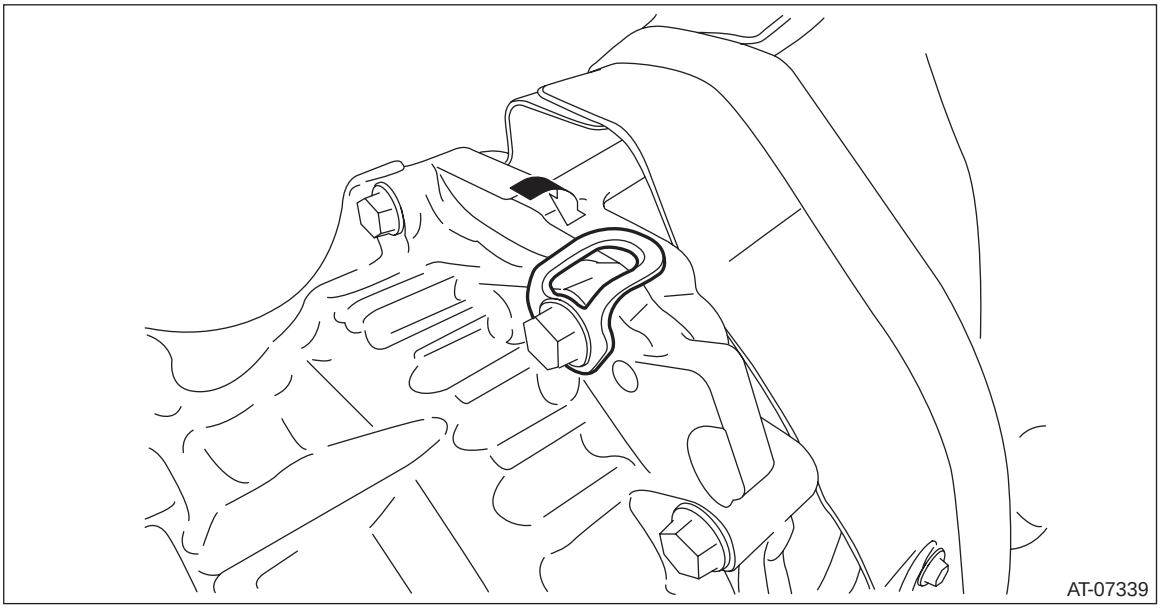
4) Install the cushion rubber.

Tightening torque:
40 N·m (4.1 kgf-m, 29.5 ft-lb)



5) Mount the transmission onto the transmission jack.
6) Strike and bend the transmission hanger of transmission rear with a rubber hammer etc. so that it gets in contact with the transmission case.

CAUTION:
Do not apply extra overload or impact to the transmission case.

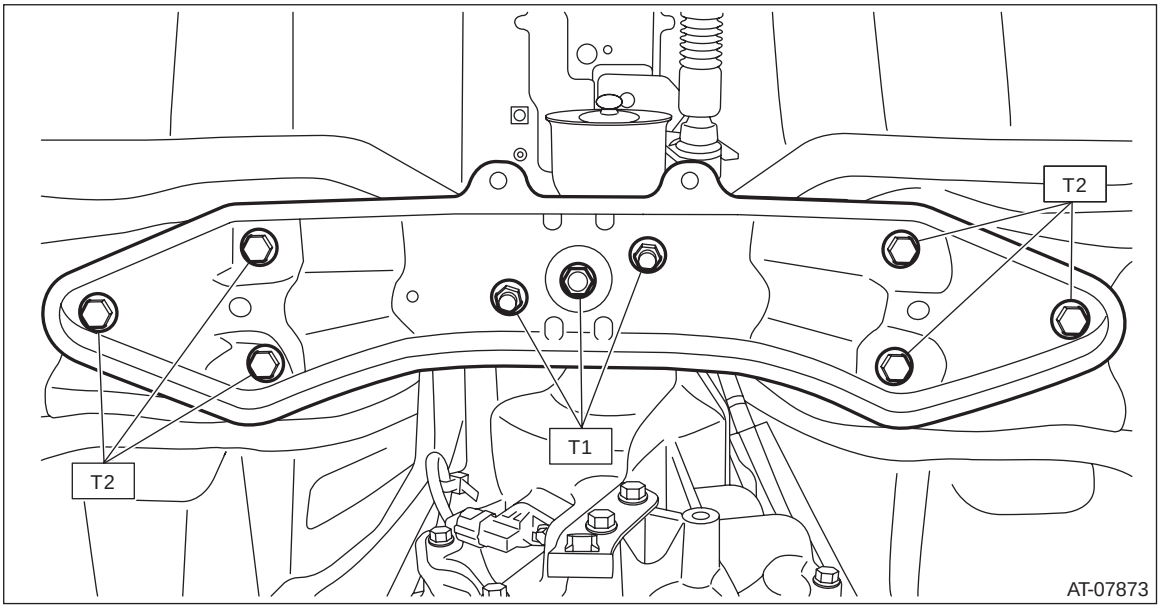


7) Remove the pitching stopper bracket, if mounted.
8) Install the transmission onto the engine.

NOTE:
- While raising the transmission jack gradually, turn the screw of engine support, then tilt the engine forward.
- Temporarily attach the two engine connecting bolts and two nuts (lower side).

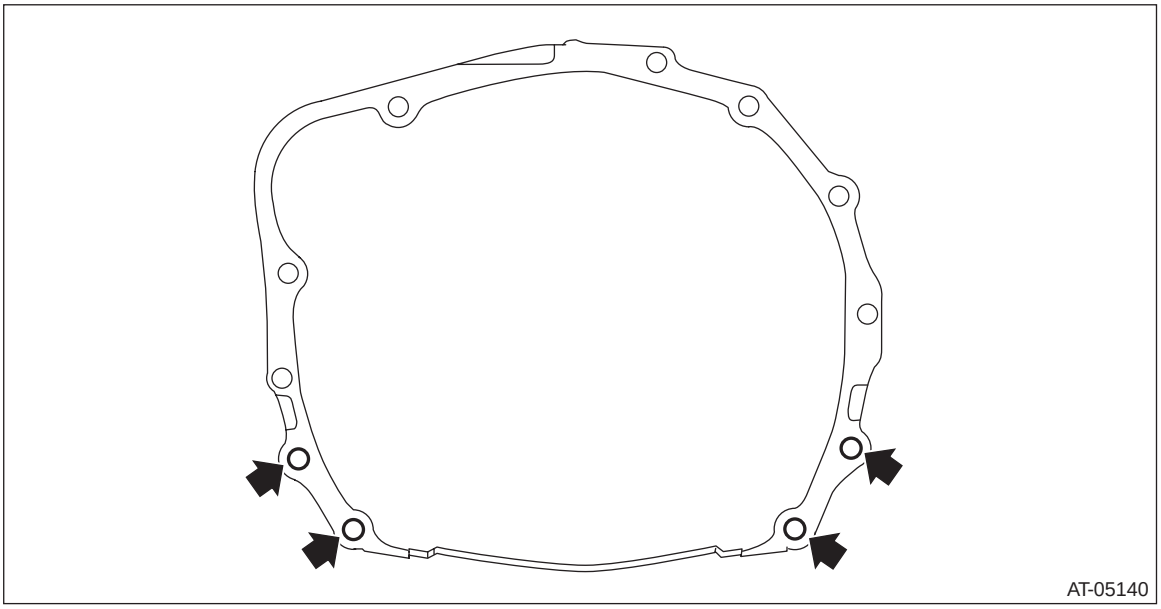
9) Install the transmission rear crossmember.

Tightening torque:
T1: 35 N·m (3.6 kgf-m, 25.8 ft-lb)
T2: 70 N·m (7.1 kgf-m, 51.6 ft-lb)



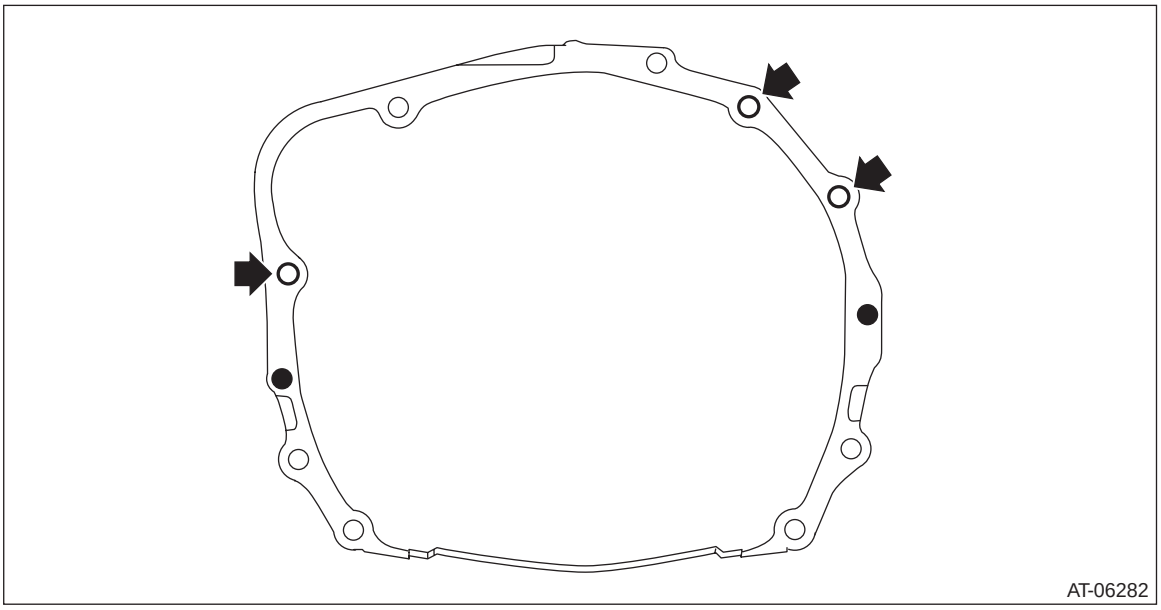
10) Tighten the two engine connecting bolts and two nuts (lower side).

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

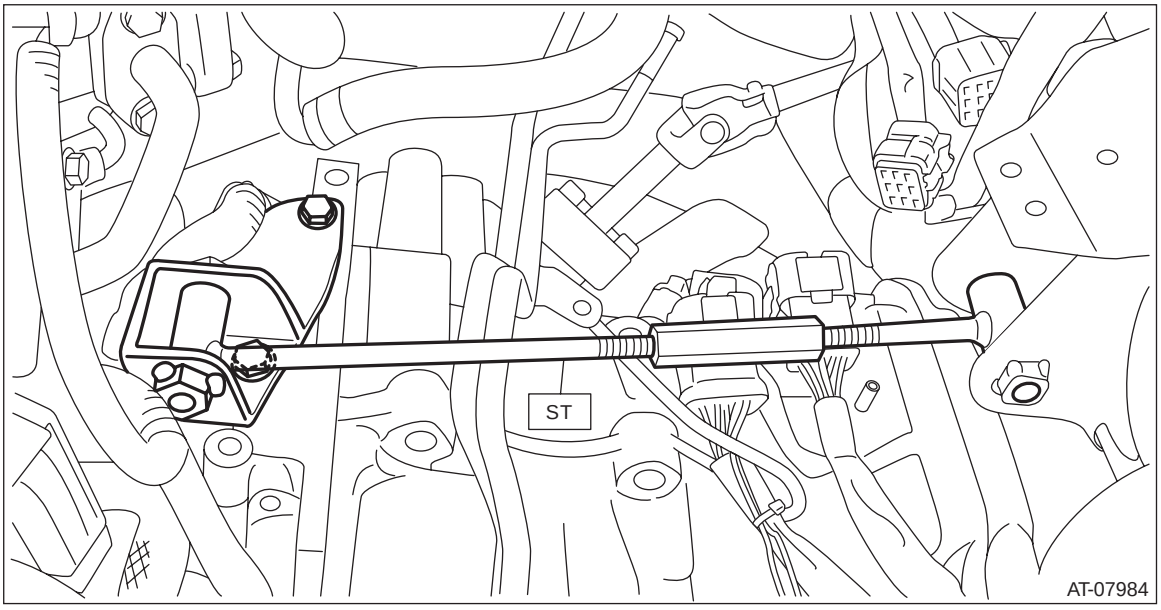


11) Remove the transmission jack.
12) Lower the vehicle.
13) Install the three engine mounting bolts (upper side).

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)



14) Remove the ST (STOPPER SET) from converter case.
15) Remove the ST (ENGINE SUPPORT ASSY).
ST 41099AC000 ENGINE SUPPORT ASSY



16) Match the torque converter screw hole with drive plate hole to install the bolt.

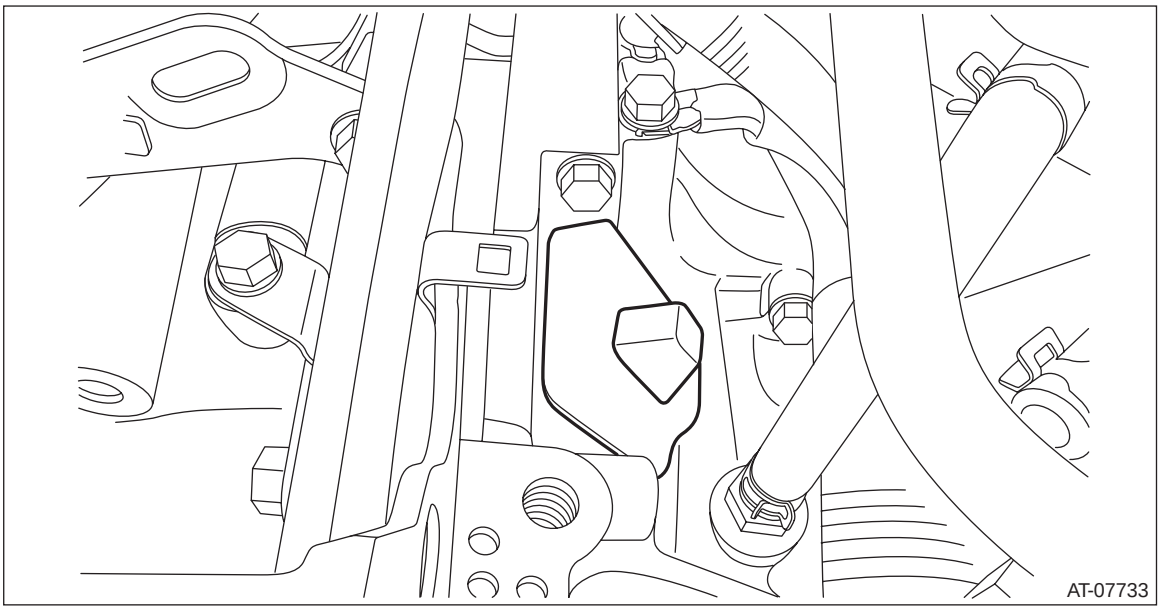
CAUTION:
- **Do not drop the mounting bolt in the converter housing.**
- **Do not damage the mounting bolt.**

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

17) Install the remaining three bolts by rotating the crank pulley a little at a time in the same direction as engine revolution.

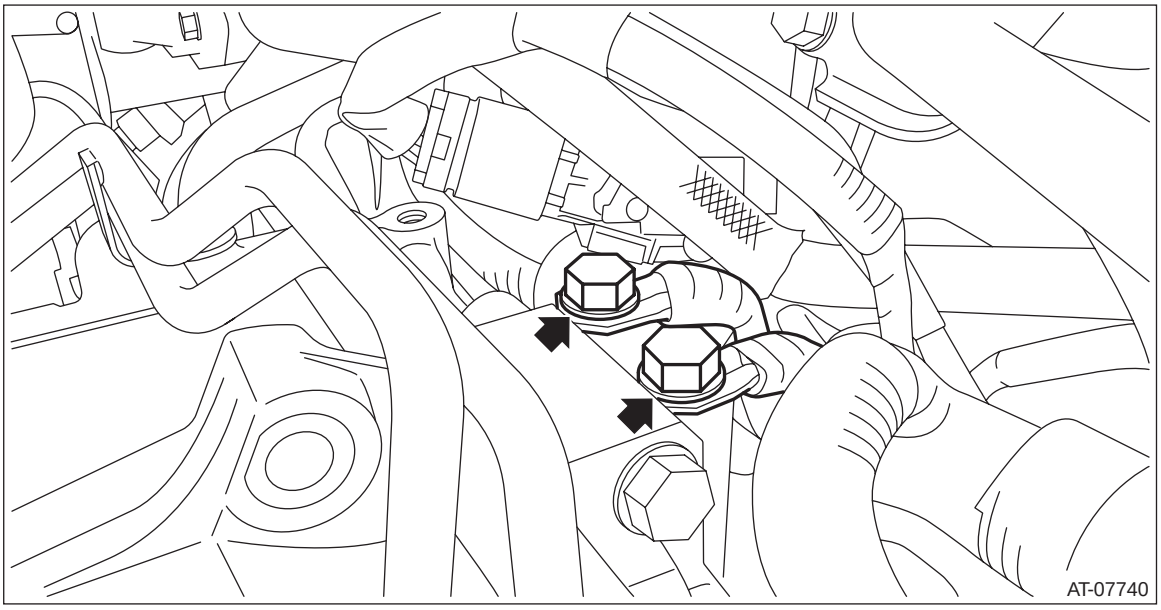
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

18) Install the service hole plug.



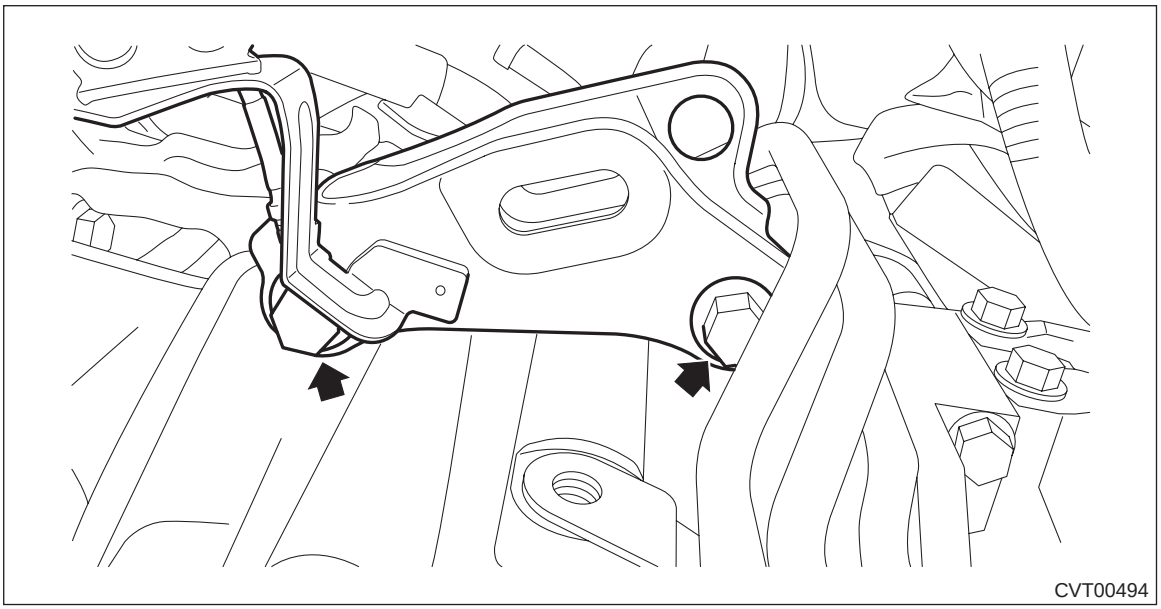
19) Install the engine ground terminals.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



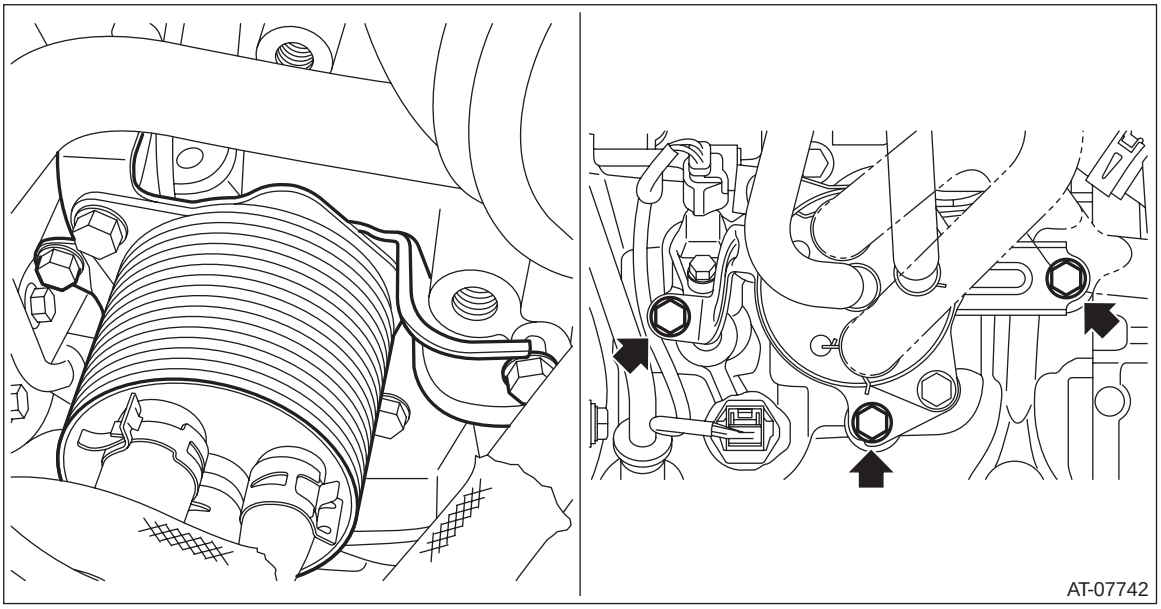
20) Install the pitching stopper bracket and transmission radio ground cord.

Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)



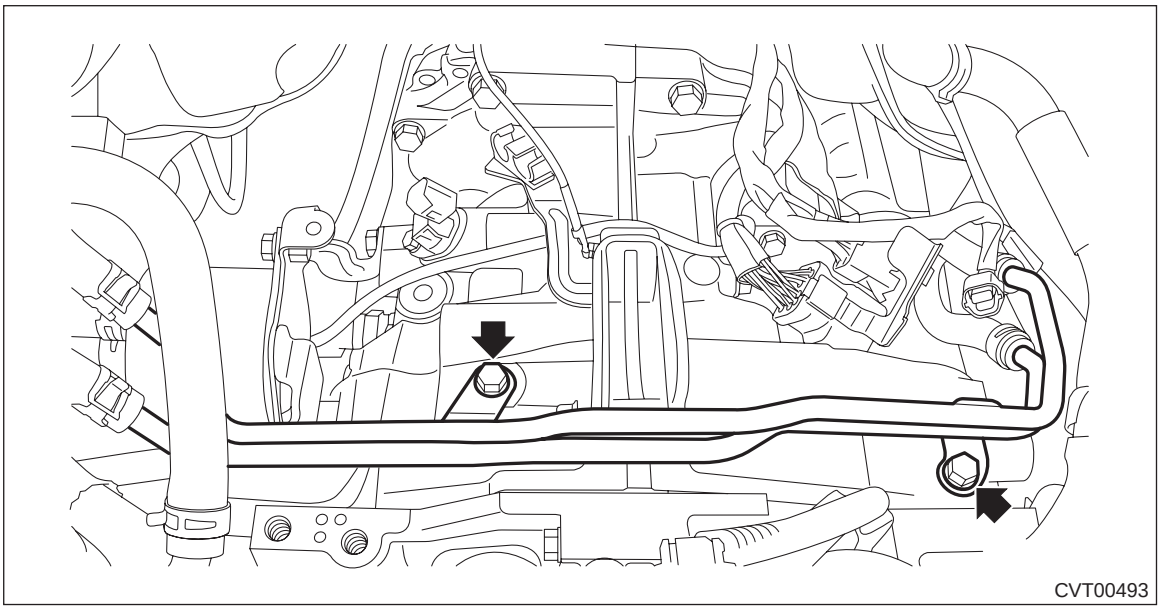
21) Install the CVTF cooler (with warmer feature).

Tightening torque:
23 N·m (2.3 kgf-m, 17.0 ft-lb)



22) Install the CVTF cooler pipe COMPL.

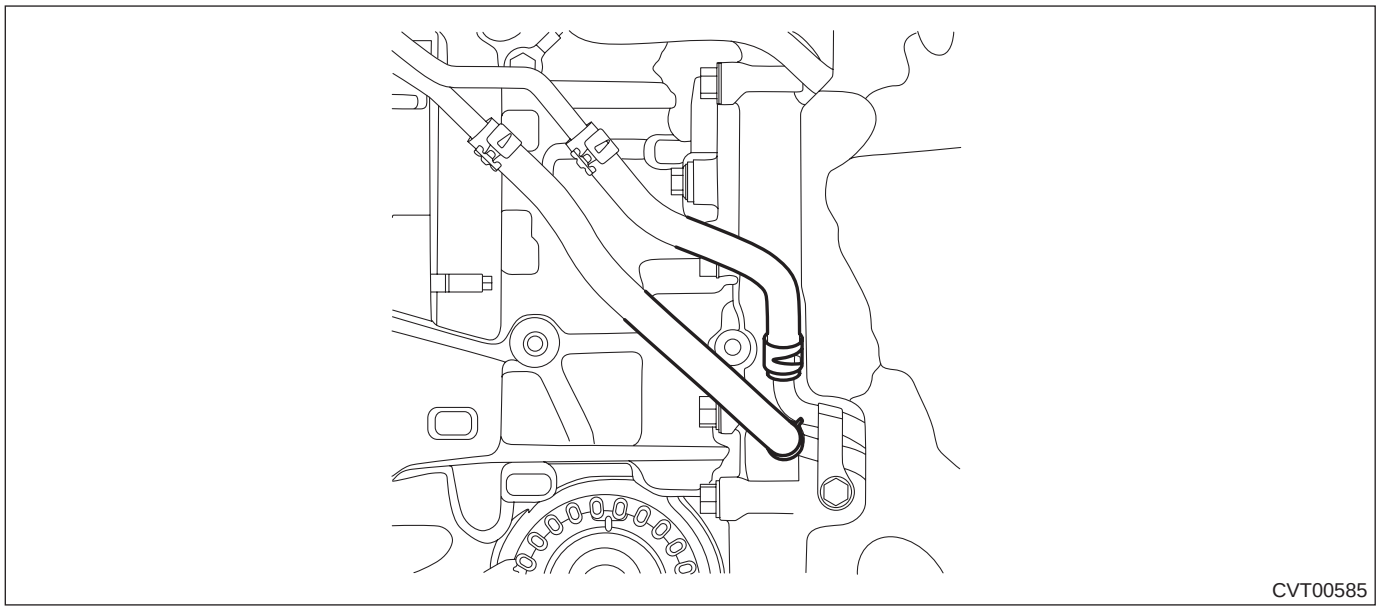
Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



CVT00493

23) Install the CVTF inlet hose and outlet hose.

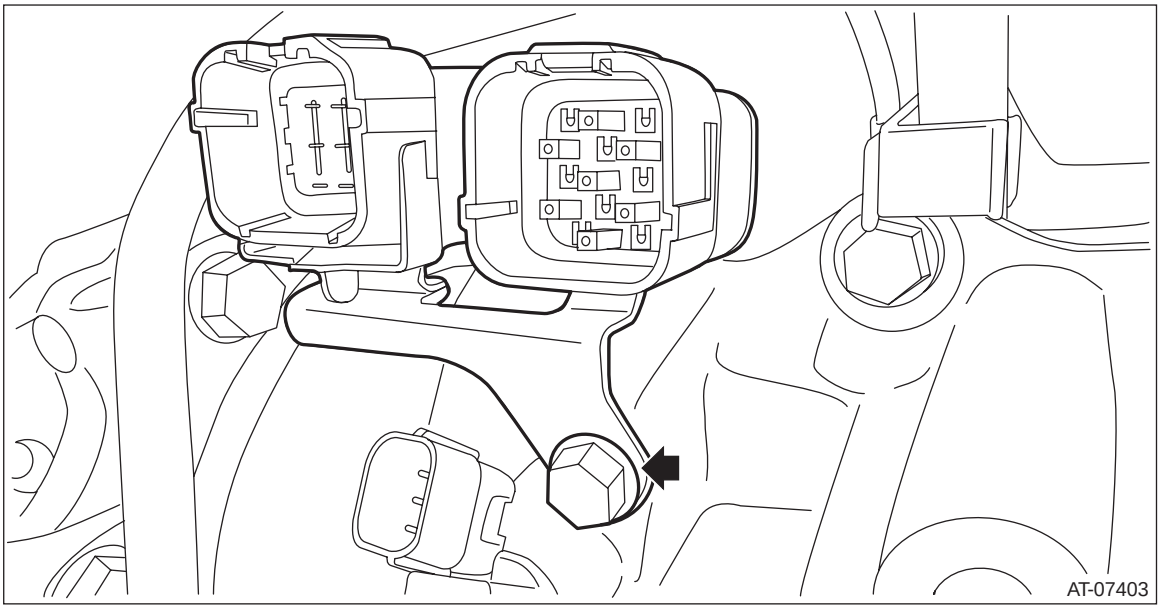
NOTE:
- Use new CVTF hoses.
- Install the CVTF hose with the painted position facing the rear side of transmission.



CVT00585

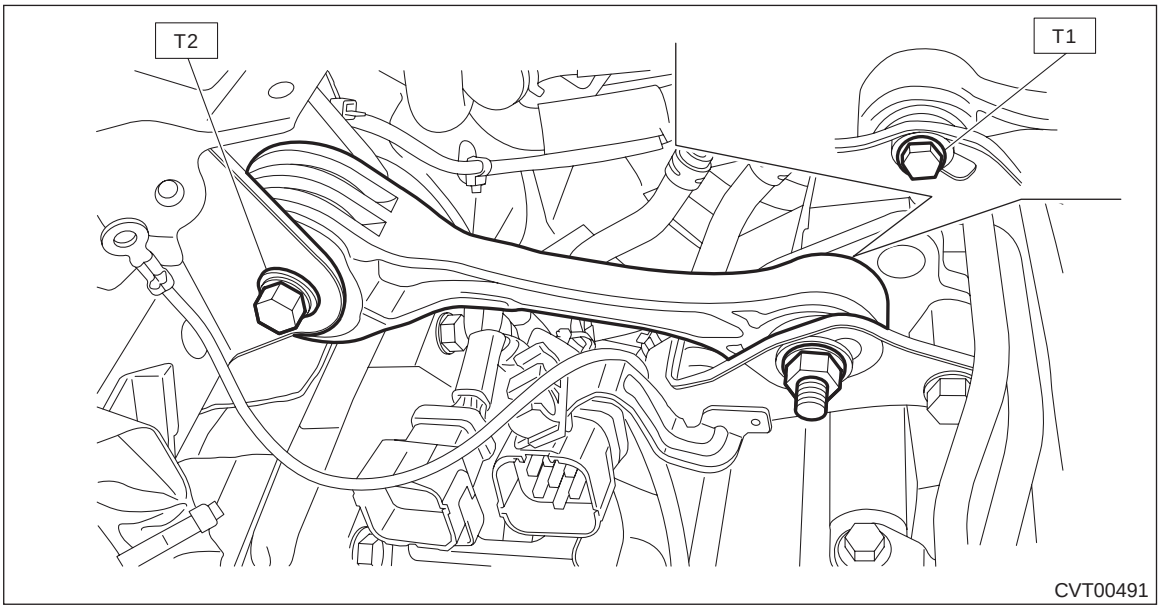
24) Install the starter. <Ref. to SC(w/o STI)-2, General Description.>
25) Install the transmission harness stay.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

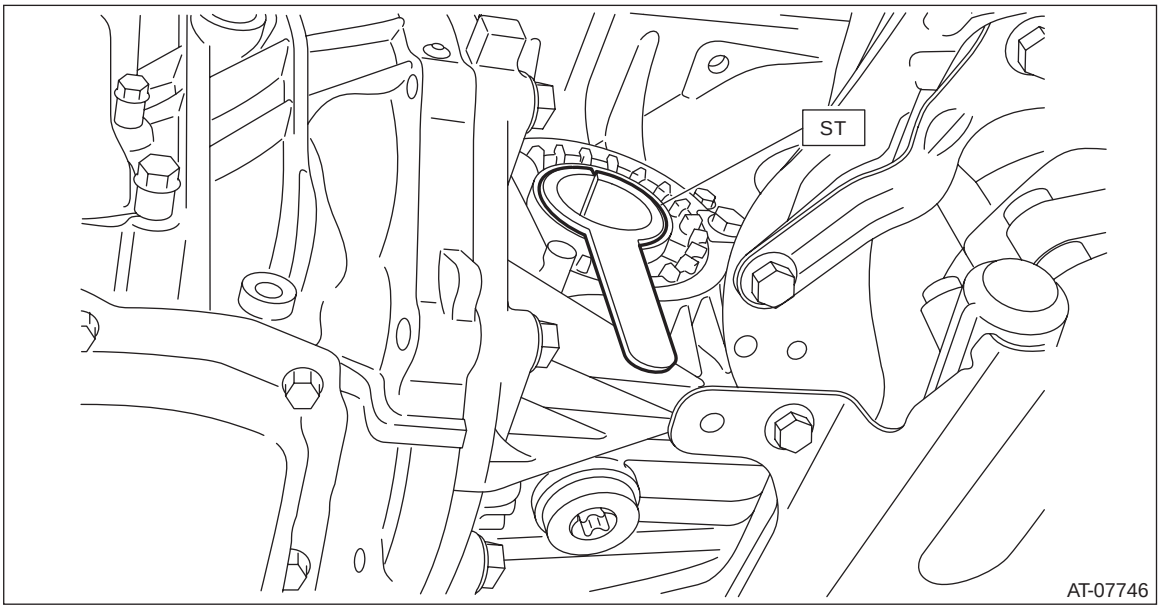


26) Install the pitching stopper.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)



27) Lift up the vehicle.
28) Apply grease to the side retainer oil seal lip.
29) Set the ST to side retainer.
ST 28399SA010 OIL SEAL PROTECTOR



30) Replace the circlip of the drive shaft with a new part.
31) Insert the front drive shaft spline section into transmission and remove the ST (OIL SEAL PROTECTOR).

NOTE:
- Before inserting RH front drive shaft into transmission, turn the steering wheel to left hand full lock.
- Before inserting LH front drive shaft into transmission, turn the steering wheel to right hand full lock.

32) Insert the drive shaft into the transmission securely by pressing the housing from outside of the vehicle.
33) Insert the ball joint into housing and secure with bolt.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

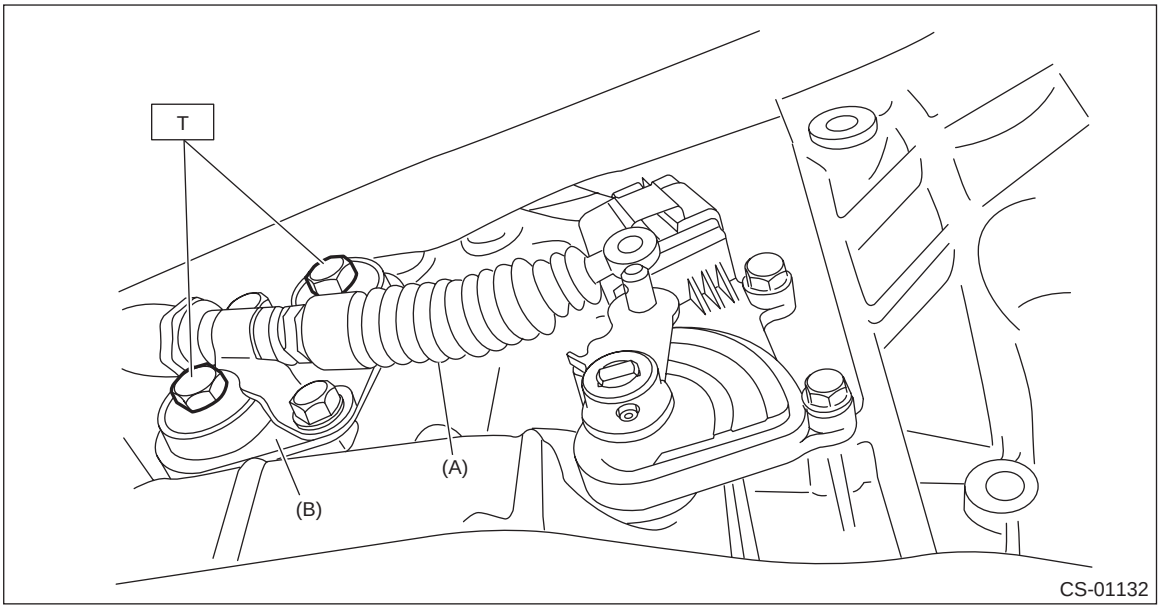
CAUTION:
- **Do not apply grease to the tapered portion of ball stud.**
- **Before tightening, make sure the lower side of housing and stepped section of ball joint are in contact.**

34) Install the stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

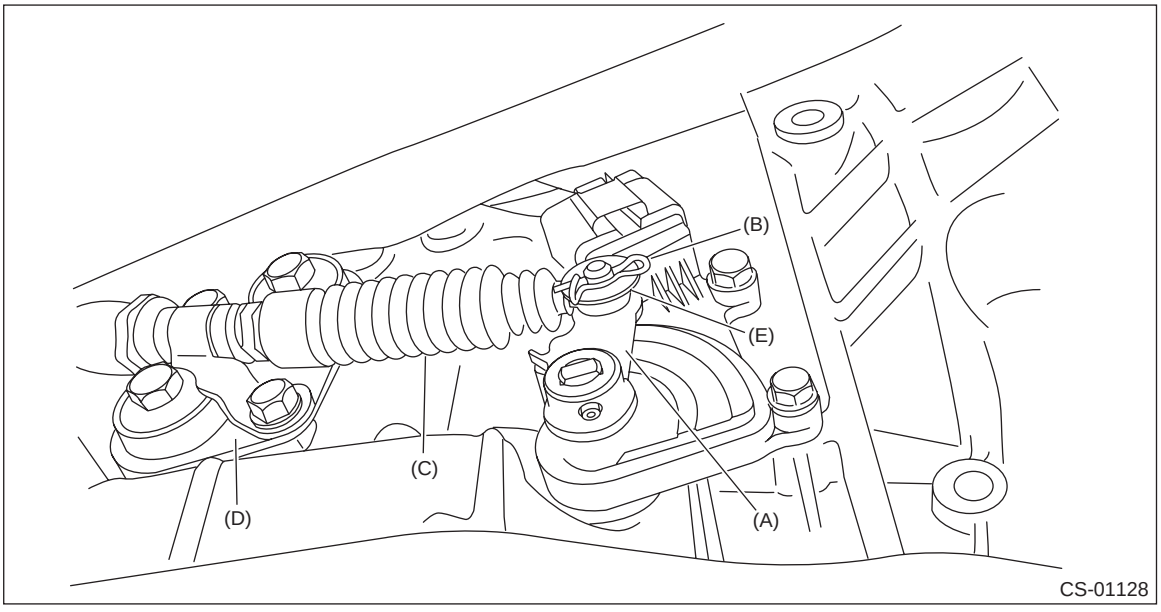
35) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
36) Install the plate assembly to transmission.

Tightening torque:
T: 25 N·m (2.5 kgf-m, 18.4 ft-lb)



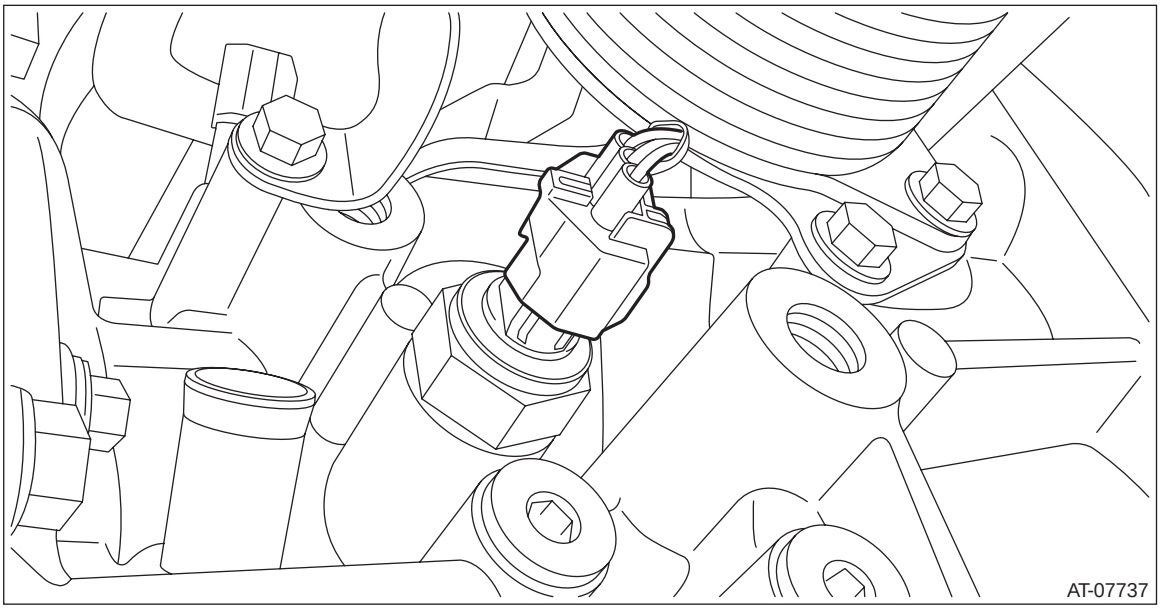
(A) Select cable
(B) Plate ASSY

37) Install the washer and snap pin to the shifter arm.



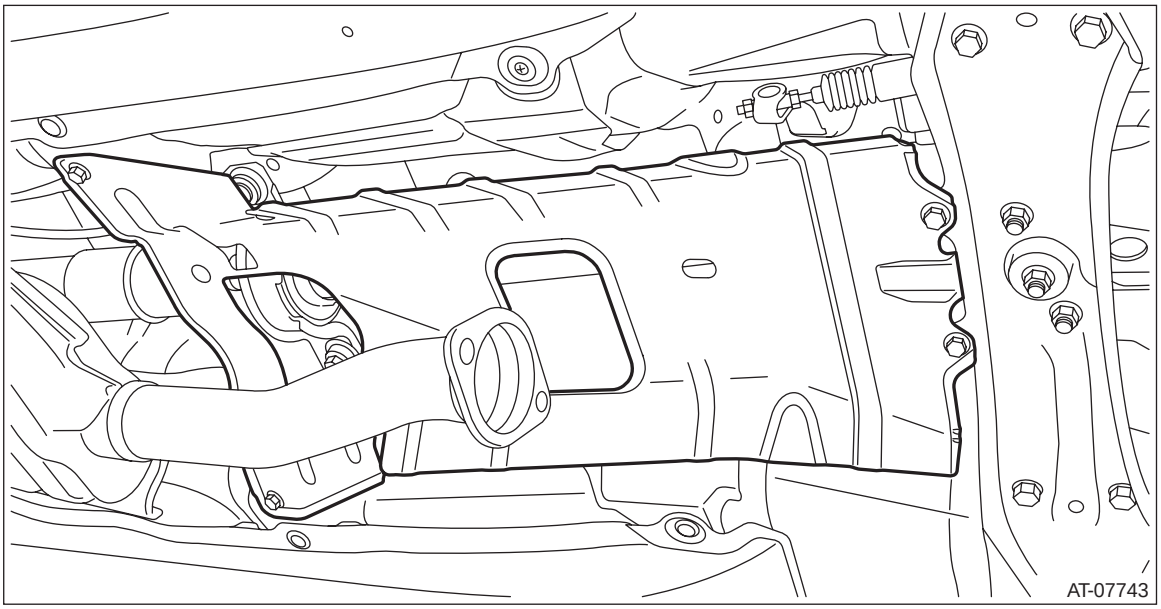
(A) Shifter arm
(B) Snap pin
(C) Select cable
(D) Plate ASSY
(E) Washer

38) Connect the secondary pressure sensor harness connector.



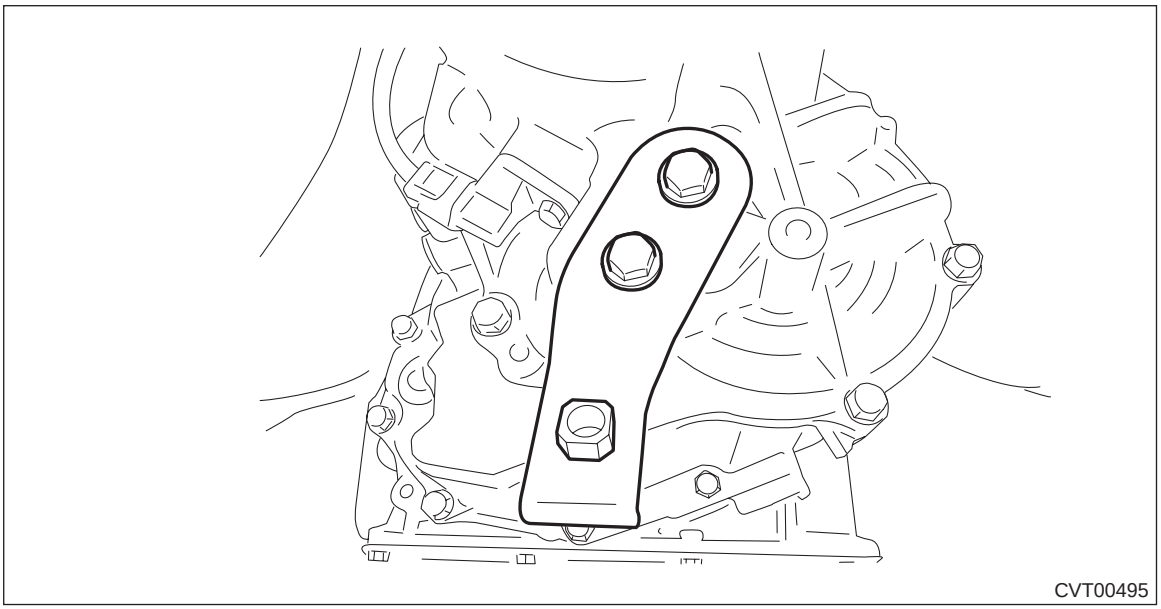
39) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

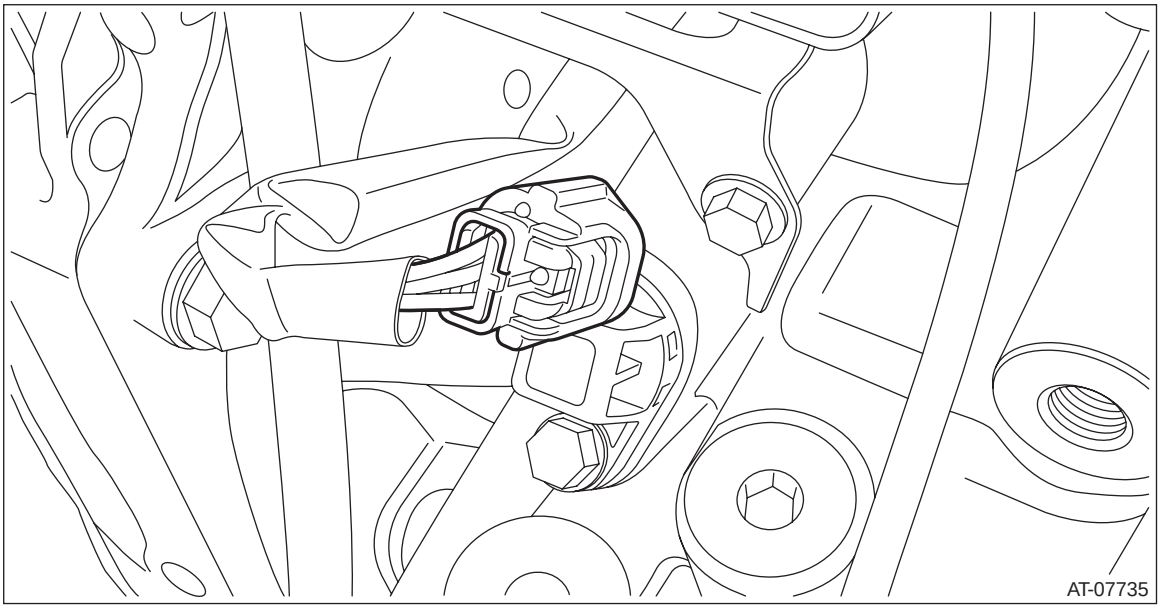


40) Install the exhaust hanger bracket.

Tightening torque:
23 N·m (2.3 kgf-m, 17.0 ft-lb)

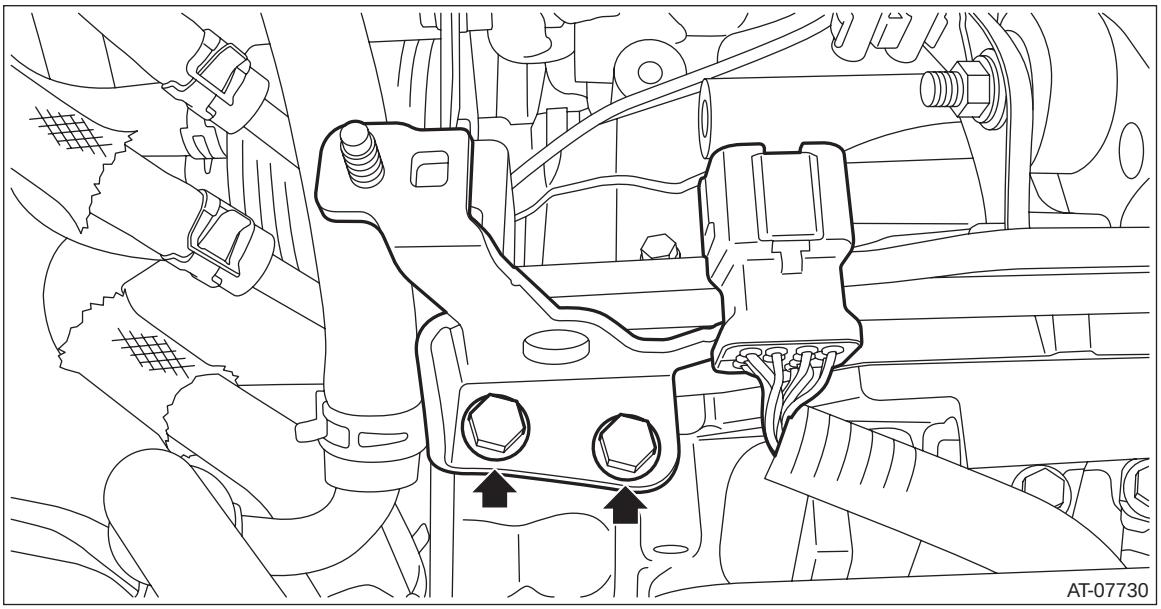


41) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
42) Connect the primary pressure sensor harness connector.

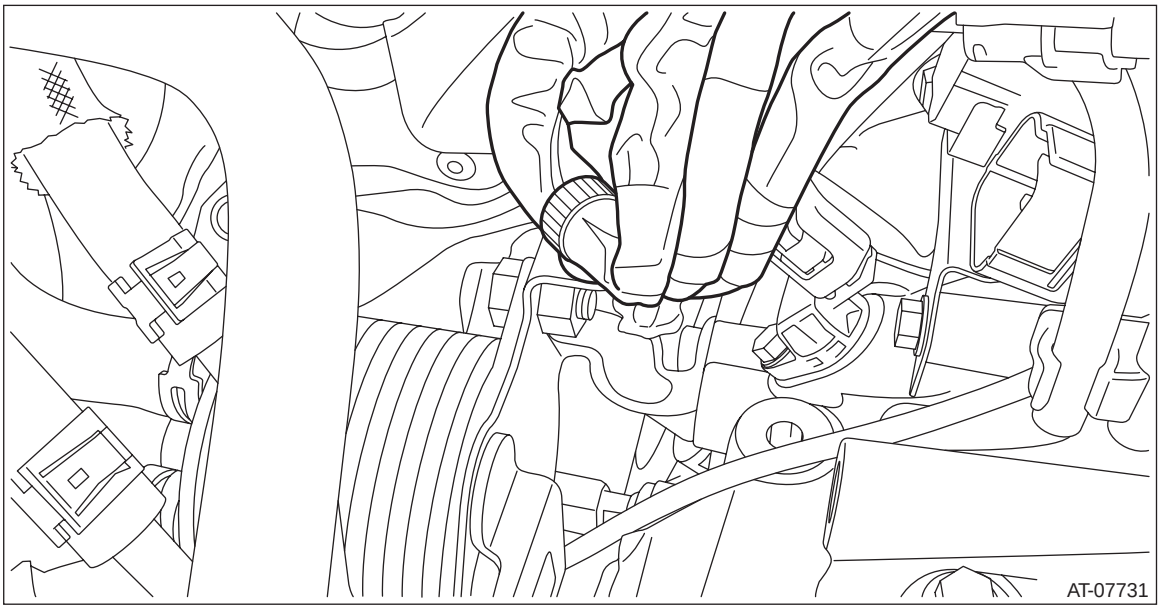


43) Install the engine hanger rear.

Tightening torque:
21 N·m (2.1 kgf-m, 15.5 ft-lb)

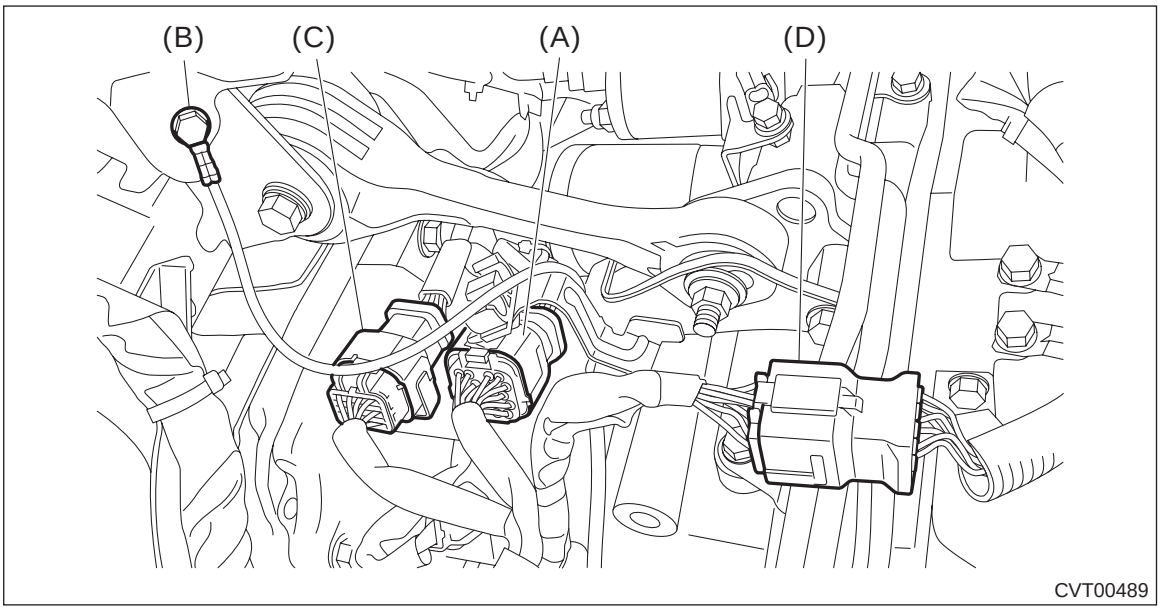


44) Install the harness clip to the CVTF cooler bracket.



45) Connect the following harness connectors.
- Transmission harness connectors
- Transmission radio ground terminal
- Inhibitor harness connector
- Engine harness connectors

Tightening torque:
13 N·m (1.3 kgf-m, 9.6 ft-lb)



(A) Transmission harness connectors
(B) Transmission radio ground terminal
(C) Inhibitor harness connector
(D) Engine harness connectors

46) Install the air breather hose. <Ref. to CVT(TR690)-136, INSTALLATION, Air Breather Hose.>
47) Install the intercooler and the intercooler stay. <Ref. to IN(w/o STI)-43, INSTALLATION, Intercooler.>
48) Install the air intake duct. <Ref. to IN(w/o STI)-26, INSTALLATION, Air Intake Duct.>
49) Install the front tires.
50) Connect the ground terminal to battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>
51) Refill differential gear oil to adjust the differential gear oil amount. <Ref. to CVT(TR690)-41, Differential Gear Oil.>
52) Refill CVTF to adjust the CVTF amount. <Ref. to CVT(TR690)-36, CVTF.>
53) Perform the variator chain break-in.

CAUTION:
Always execute the variator chain break-in after the replacement of the following.
- **Variator chain replacement**
- **Primary pulley and secondary pulley replacement**

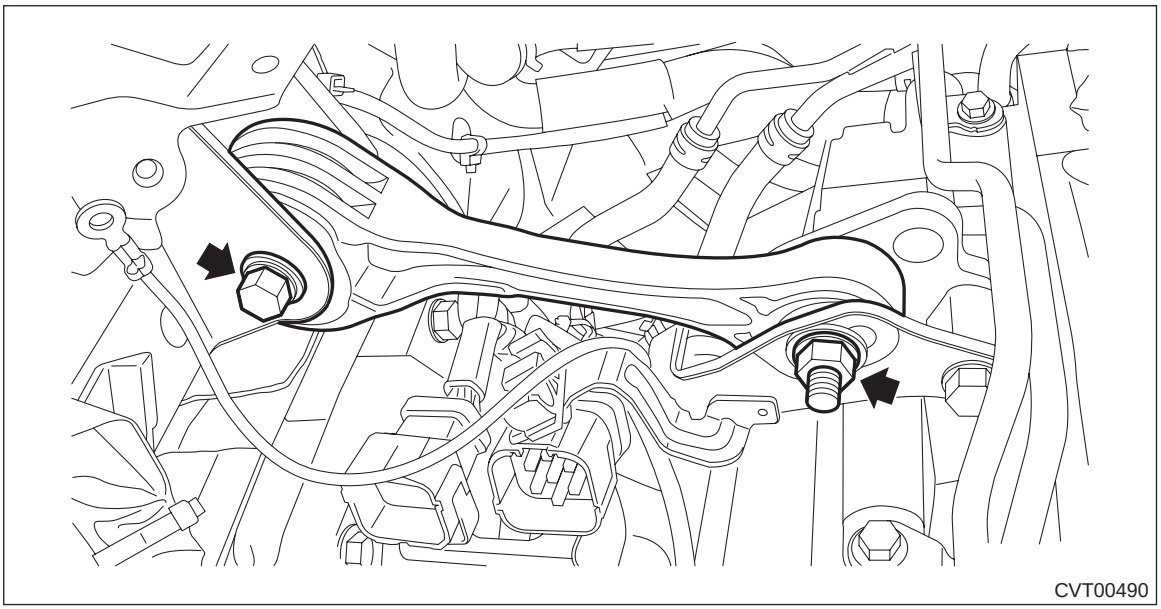
54) Perform the operation for clearing AT learning value. <Ref. to CVT(diag)-17, OPERATION, Clear Memory Mode.>
55) Perform the operation of AT learning mode. <Ref. to CVT(diag)-23, Learning Control.>
56) Perform the road test to make sure there is no fault. <Ref. to CVT(TR690)-45, INSPECTION, Road Test.>

11.Transmission Mounting System

A: REMOVAL

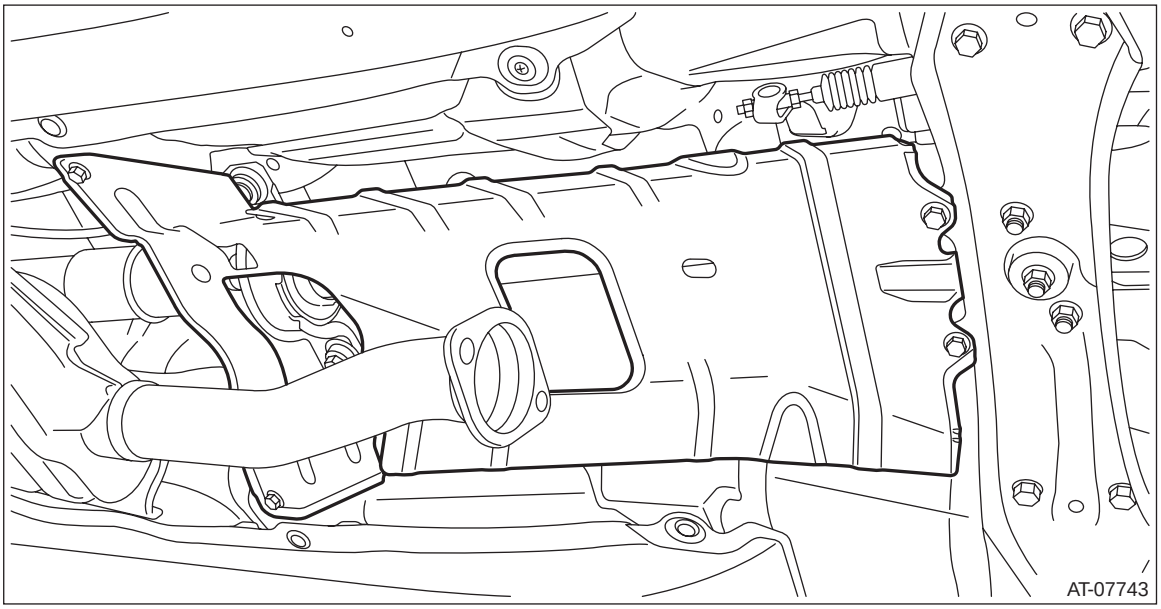
1. PITCHING STOPPER

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>
2) Remove the intercooler. <Ref. to IN(w/o STI)-41, REMOVAL, Intercooler.>
3) Remove the pitching stopper.

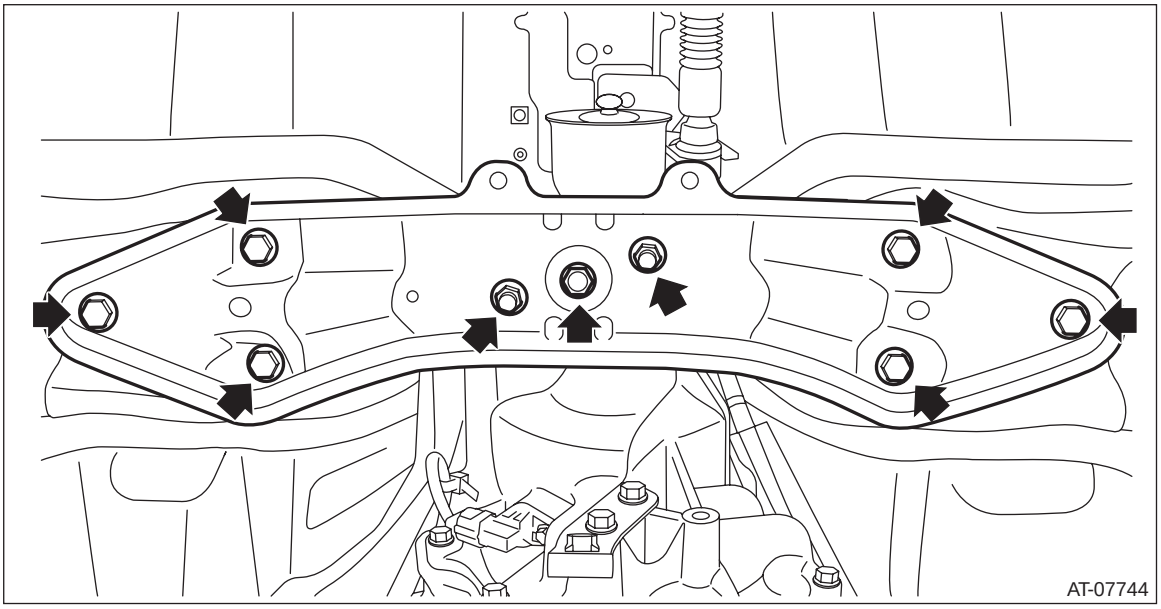


2. TRANSMISSION REAR CROSSMEMBER AND REAR CUSHION RUBBER

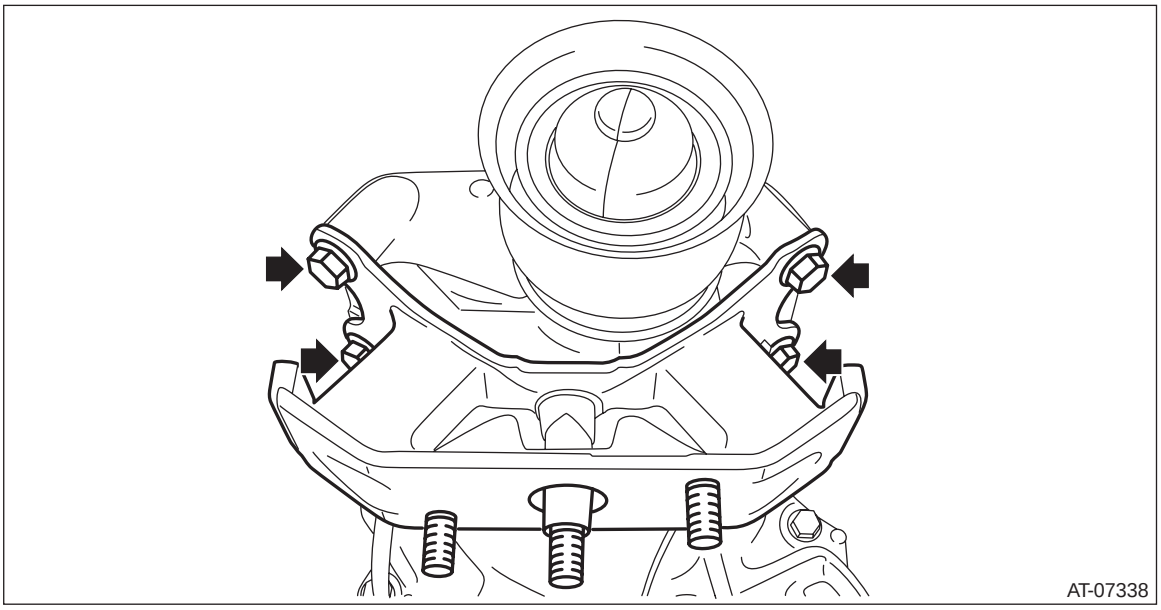
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>
2) Lift up the vehicle.
3) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
4) Remove the center exhaust cover.



5) Set the transmission jack under the transmission. Make sure that the support plate of transmission jack does not touch the oil pan.
6) Remove the transmission rear crossmember.



7) Remove the rear cushion rubber.

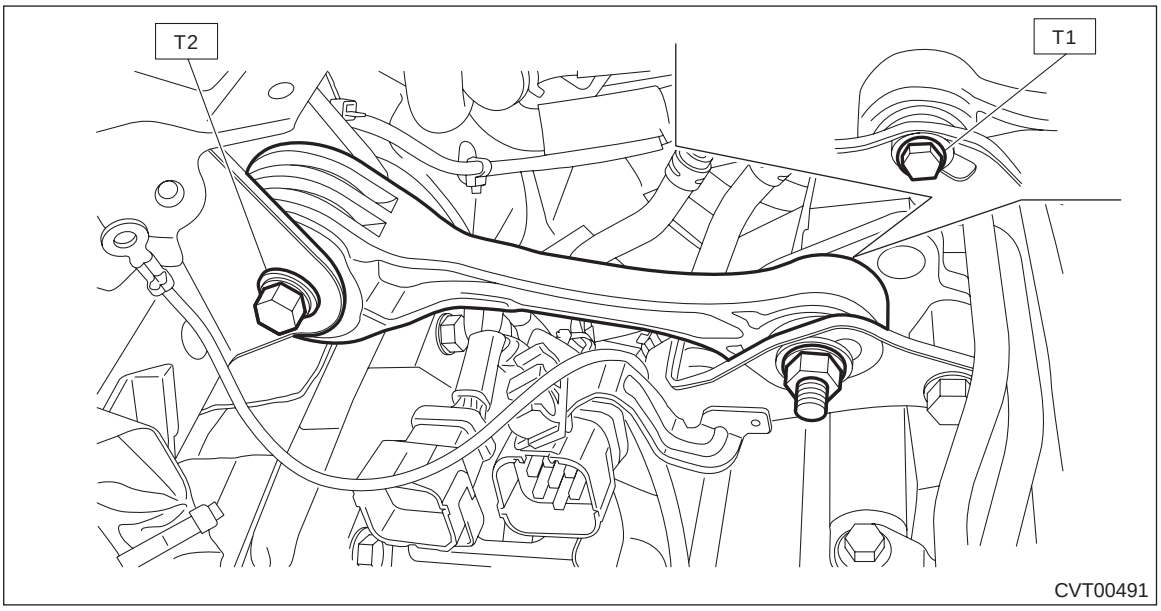


B: INSTALLATION

1. PITCHING STOPPER

1) Install the pitching stopper.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)

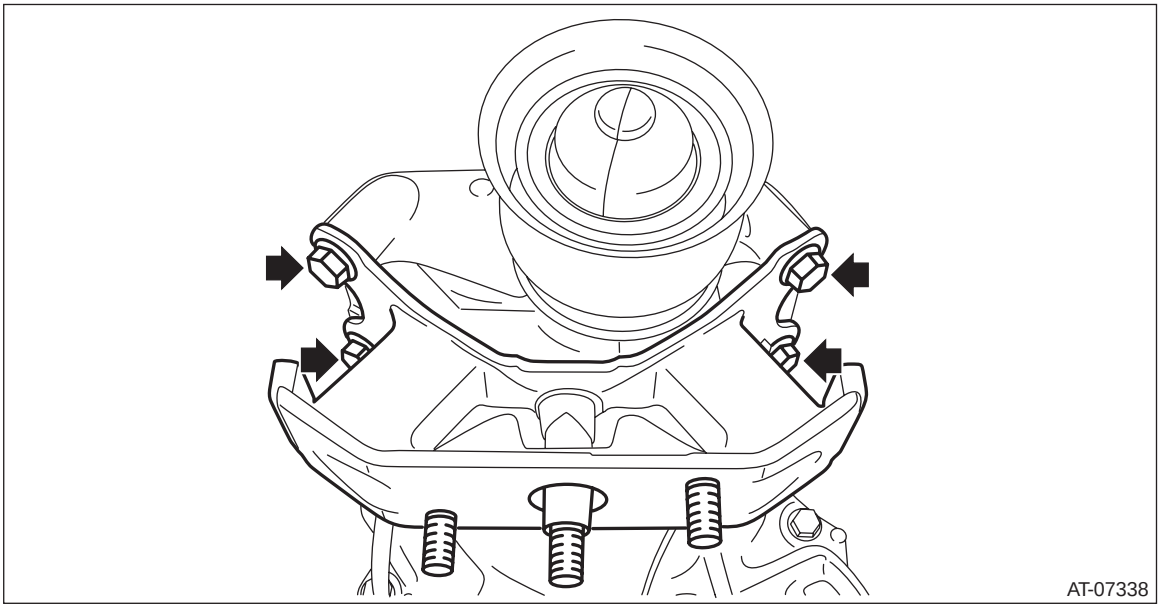


2) Install the intercooler. <Ref. to IN(w/o STI)-43, INSTALLATION, Intercooler.>
3) Connect the ground terminal to battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>

2. TRANSMISSION REAR CROSSMEMBER AND REAR CUSHION RUBBER

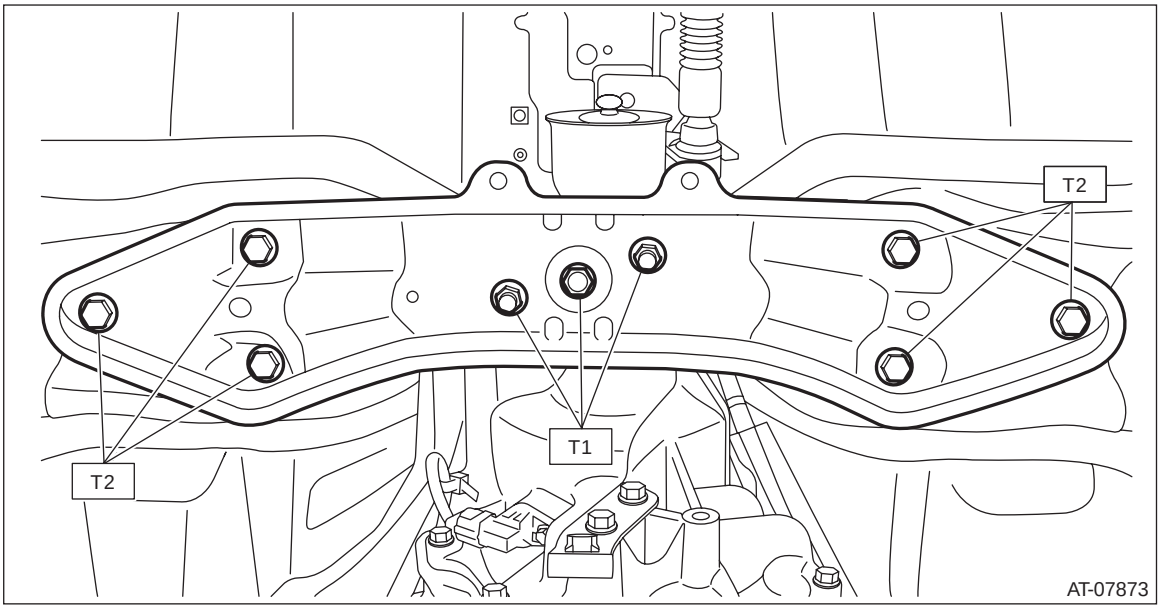
1) Install the rear cushion rubber.

Tightening torque:
40 N·m (4.1 kgf-m, 29.5 ft-lb)



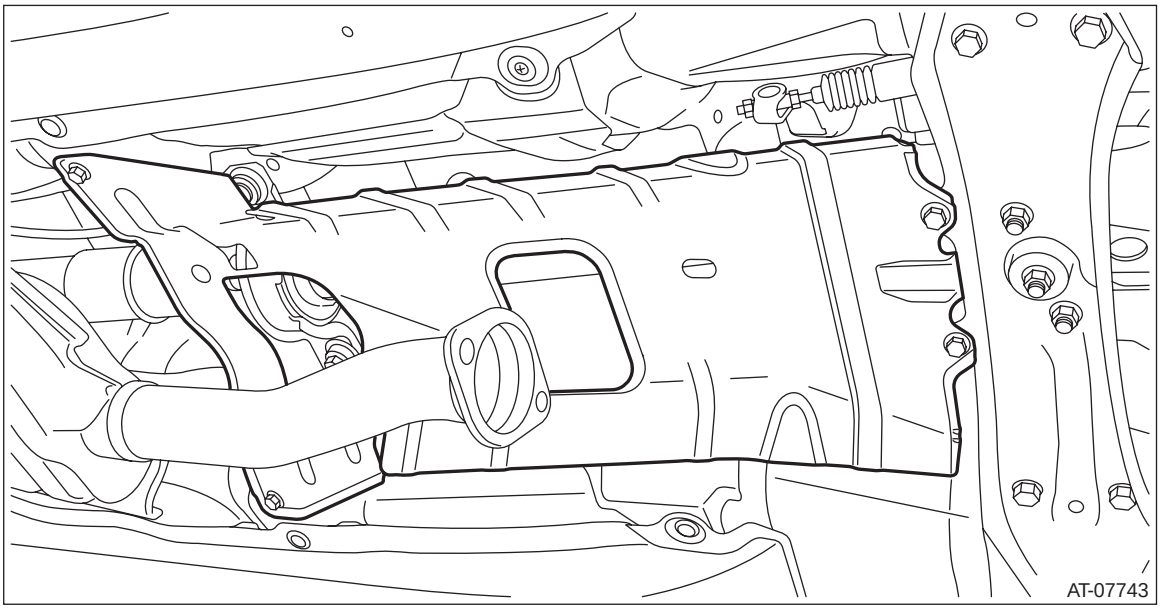
2) Install the transmission rear crossmember.

Tightening torque:
T1: 35 N·m (3.6 kgf-m, 25.8 ft-lb)
T2: 70 N·m (7.1 kgf-m, 51.6 ft-lb)



3) Remove the transmission jack.
4) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



5) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
6) Connect the ground terminal to battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>

C: INSPECTION

- Check the crossmember for bends or damage.
- Check that the cushion rubber is not stiff, cracked or otherwise damaged.

12.Extension Case Oil Seal

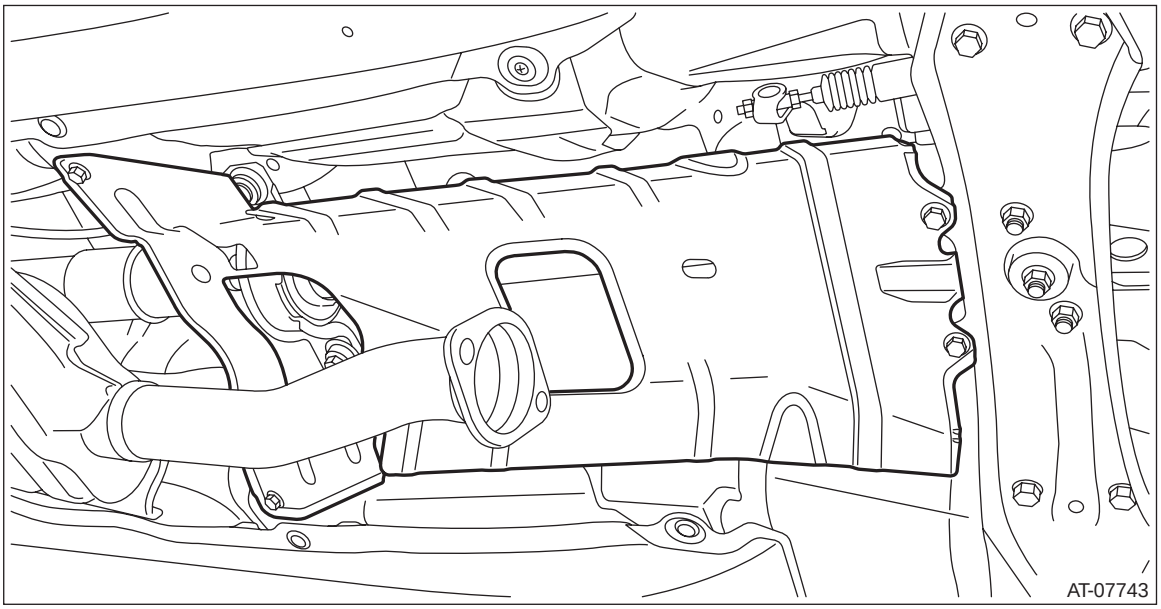
A: INSPECTION

Check for leakage of CVTF from the joint section of transmission and propeller shaft. If a leak is found, inspect the propeller shaft and replace the oil seal.

B: REPLACEMENT

CAUTION:
Immediately after the vehicle has been running or after idling for a long time, the differential gear oil will be hot. Be careful not to burn yourself.

1) Lift up the vehicle.
2) Clean the transmission exterior.
3) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
4) Remove the center exhaust cover.

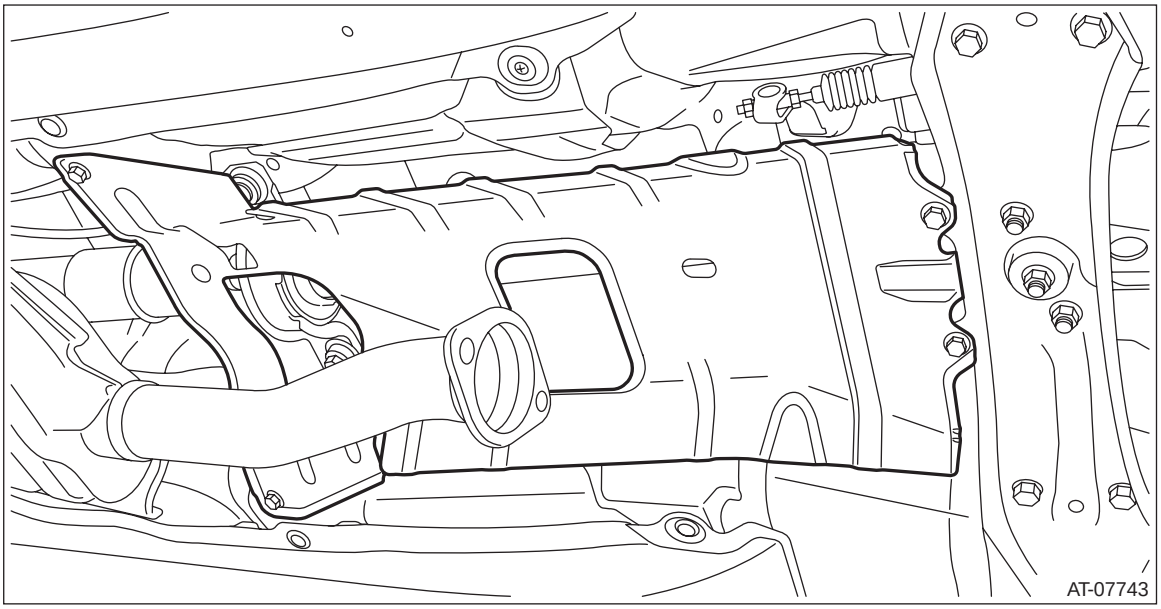


5) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
6) Using a screwdriver or ST, remove the oil seal trying not to damage the extension case.
ST 398527700 PULLER ASSY
7) Using the ST, install the oil seal.

NOTE:
Use a new oil seal.
ST 498057300 OIL SEAL DRIFT

8) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
9) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



10) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
11) Adjust the CVTF level and check there is no leakage. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>

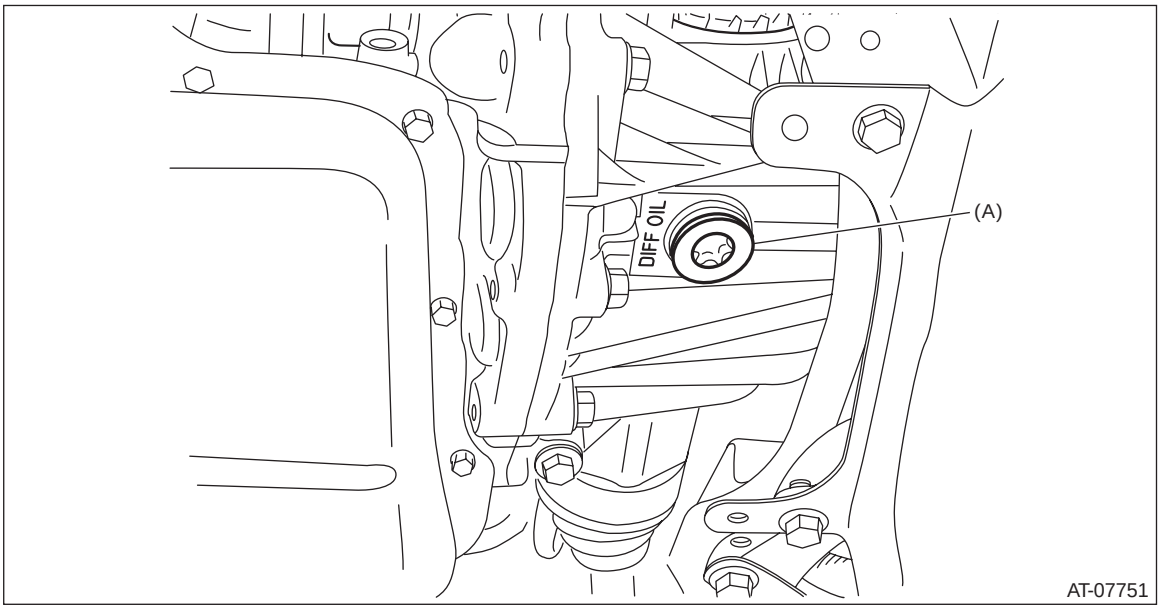
13.Differential Side Retainer Oil Seal

A: INSPECTION

Check for leakage of gear oil from differential side retainer oil seal part. If there is an oil leak, inspect the front drive shaft and replace the oil seal.

B: REPLACEMENT

CAUTION:
• Immediately after the vehicle has been running or after idling for a long time, the differential gear oil will be hot. Be careful not to burn yourself.
• Be careful not to spill the differential gear oil on exhaust pipe to prevent it from emitting smoke or fire. If differential gear oil is spilled on the exhaust pipe, wipe it off completely.
1) Remove the front wheels.
2) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
3) Remove the differential gear oil drain plug using TORX® bit T70, and then drain differential gear oil.



(A) Differential gear oil drain plug

4) Tighten the differential gear oil drain plug.

NOTE:
Use a new gasket.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)
5) Remove the stabilizer link. <Ref. to FS-31, REMOVAL, Front Stabilizer.>
6) Disconnect the lower arm ball joint and housing.
7) Pull out the front drive shaft from transmission using a crowbar.

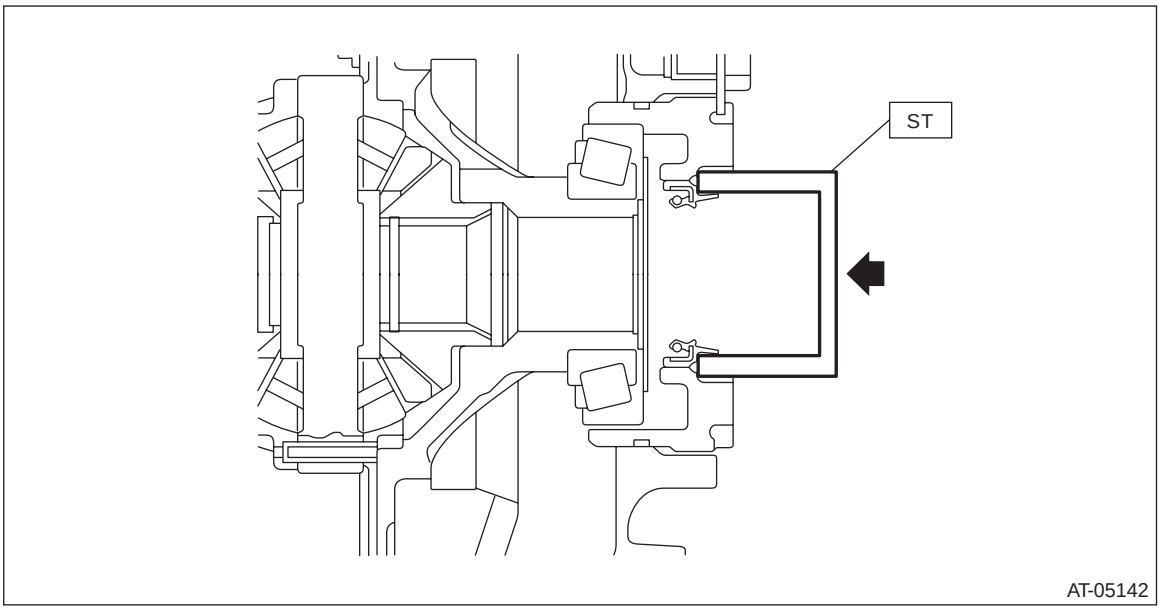
NOTE:
Place cloth between the tire lever or bar and the transmission in order to avoid damaging the transmission side retainer.
8) Holding the joint of front drive shaft from transmission side, pull out the drive shaft from transmission with care not to stretch the boot.

NOTE:
- Before pulling RH front drive shaft from transmission, turn the steering wheel to left hand full lock.
- Before pulling LH front drive shaft from transmission, turn the steering wheel to right hand full lock.

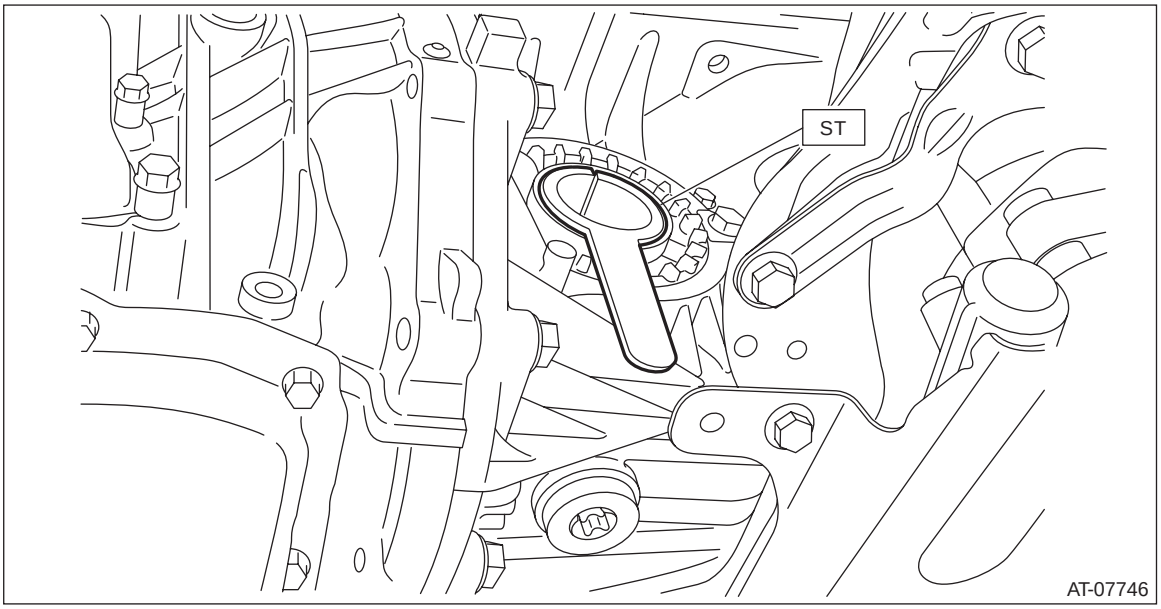
9) Remove the differential side retainer oil seal using driver wrapped with vinyl tape etc.

10) Using the ST, install the differential side retainer oil seal by lightly tapping with a hammer.
ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

NOTE:
- Apply differential gear oil to the lip surface, so that the oil seal lip is not deformed.
- Apply differential gear oil to the press-fitting surface of oil seal and the differential side retainer.
- Oil seal has an identification mark (R, L). When installing oil seals, do not confuse the left and right.



11) Set the ST to side retainer.
ST 28399SA010 OIL SEAL PROTECTOR



12) Replace the circlip of the drive shaft with a new part.
13) Insert the front drive shaft spline section into transmission and remove the ST (OIL SEAL PROTECTOR).
14) Insert the drive shaft into the transmission securely by pressing the housing from outside of the vehicle.
15) Insert the ball joint into housing and secure with bolt.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

CAUTION:
• Do not apply grease to the tapered portion of ball stud.
• Before tightening, make sure the lower side of housing and stepped section of ball joint are in contact.
16) Install the stabilizer link.

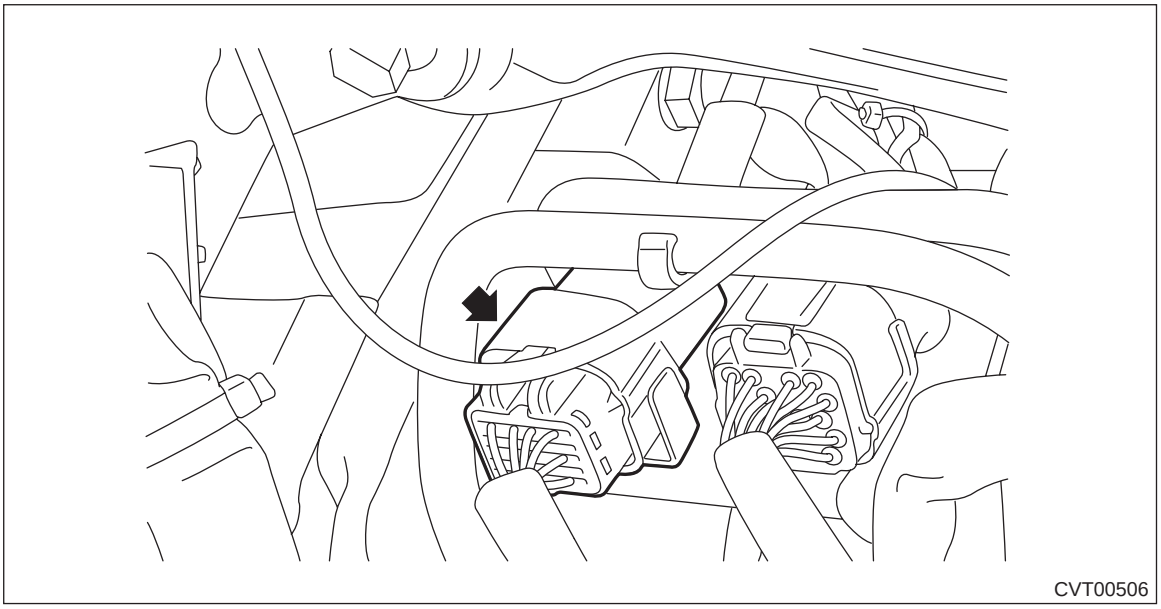
Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)
17) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
18) Lower the vehicle.
19) Refill differential gear oil from the charge pipe. <Ref. to CVT(TR690)-41, Differential Gear Oil.>
20) Adjust the differential gear oil level, and check for leakage. <Ref. to CVT(TR690)-41, ADJUSTMENT, Differential Gear Oil.>
21) Install the front tires.

14.Inhibitor Switch

A: INSPECTION

When the driving condition or starter motor operation is improper, first check the shift linkage for improper operation. If the shift linkage is functioning properly, check the inhibitor switch.

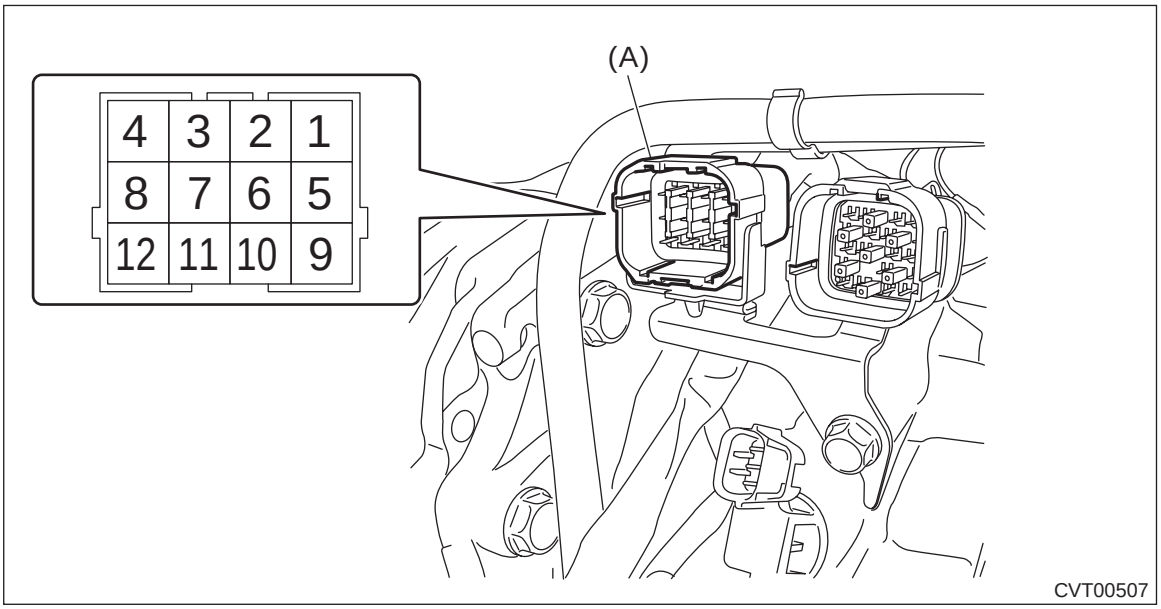
1) Remove the intercooler. <Ref. to IN(w/o STI)-41, REMOVAL, Intercooler.>
2) Disconnect the inhibitor harness connector.



3) Check for continuity in inhibitor switch circuit by shifting the select lever in “P”, “R”, “N” and “D” respectively.

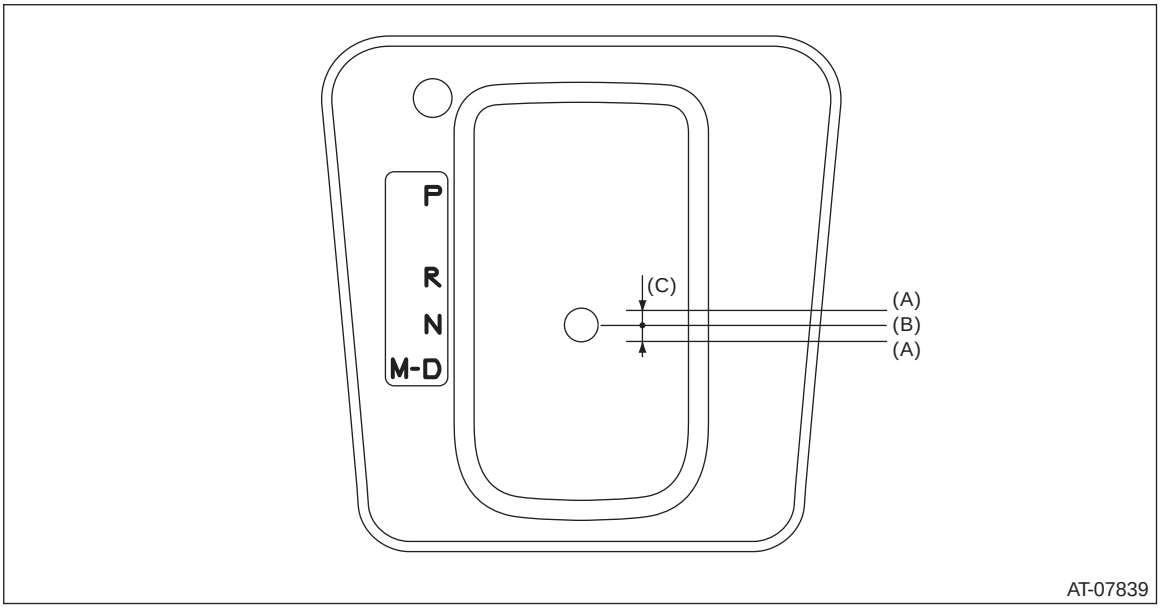
NOTE:
- Check that there is no continuity in the starter circuit when the select lever is in the “R” and “D” ranges.
- When inhibitor switch is normal, check there is no poor contact in vehicle side connector and no open circuit in harness.

	Range	Terminal No.
Signal sent to TCM	P	4 — 3
	R	4 — 2
	N	4 — 1
	D	4 — 8
Starter circuit	P/N	12 — 11
Back-up light circuit	R	10 — 9



(A) Inhibitor harness connector

4) Check that there is continuity at equal points when the select lever is moved 1.5° in both directions from the “N” range.
If there is continuity in only one direction or in other points, adjust the inhibitor switch. <Ref. to CVT(TR690)-94, ADJUSTMENT, Inhibitor Switch.>

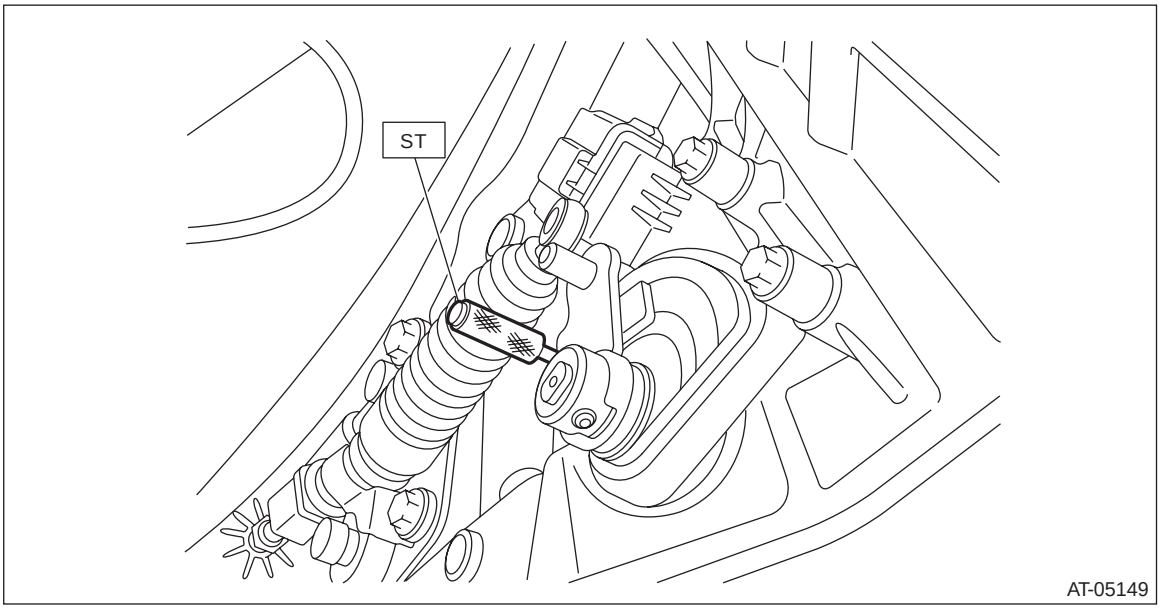


(A) Continuity does not exist.
(B) Continuity exists.
(C) 1.5°

5) Repeat the above inspection in other gear ranges. If there is fault, adjust the inhibitor switch and select cable. <Ref. to CVT(TR690)-94, ADJUSTMENT, Inhibitor Switch.> <Ref. to CS-47, ADJUSTMENT, Select Cable.>

B: ADJUSTMENT

1) Shift the select lever to “N” range.
2) Loosen the two bolts holding the inhibitor switch.
3) Insert the ST vertically into the holes of the shifter arm and switch body.
ST 499267300 STOPPER PIN



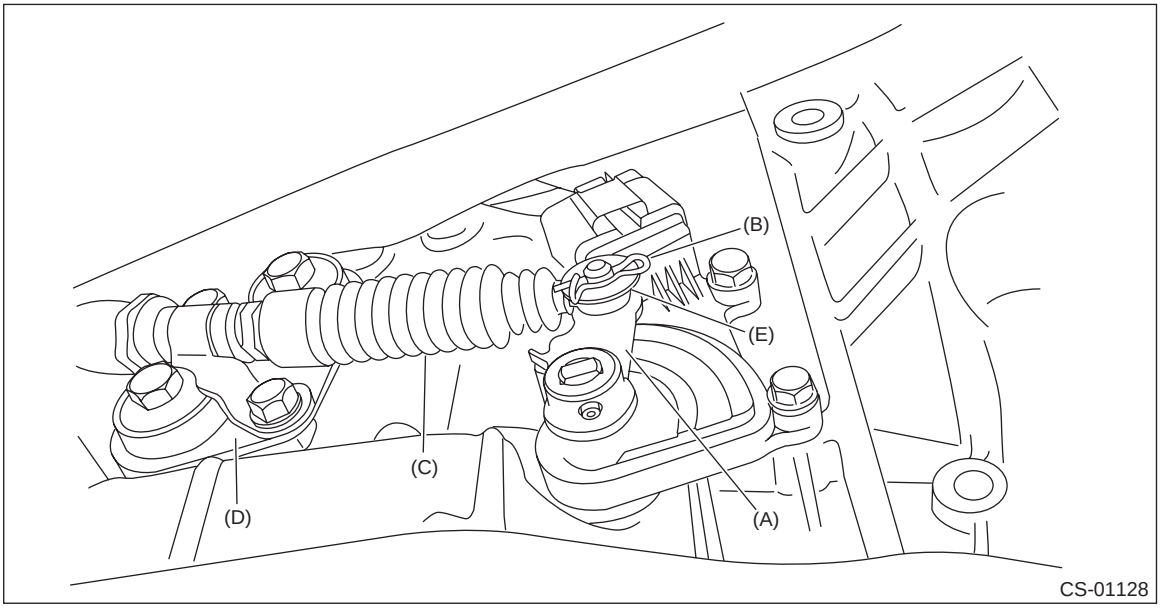
4) Tighten the two bolts holding the inhibitor switch.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

5) Repeat the inspection of the inhibitor switch. If the inhibitor switch is determined to be “faulty”, replace it.

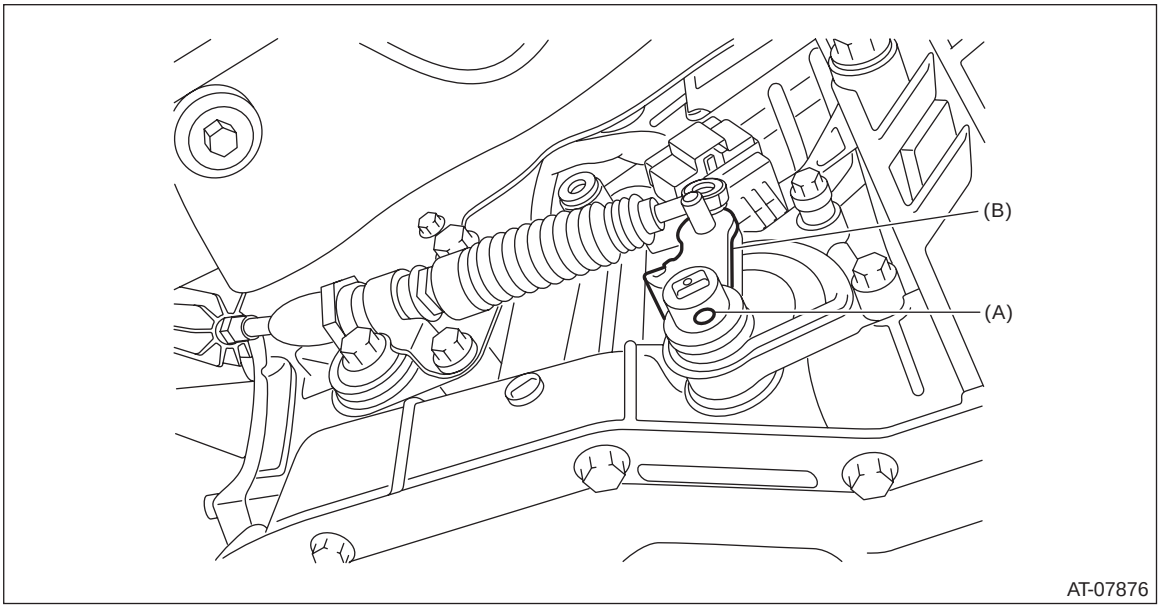
C: REMOVAL

1) Shift the select lever to “N” range.
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>
3) Lift up the vehicle.
4) Remove the snap pin and washer from the shifter arm.



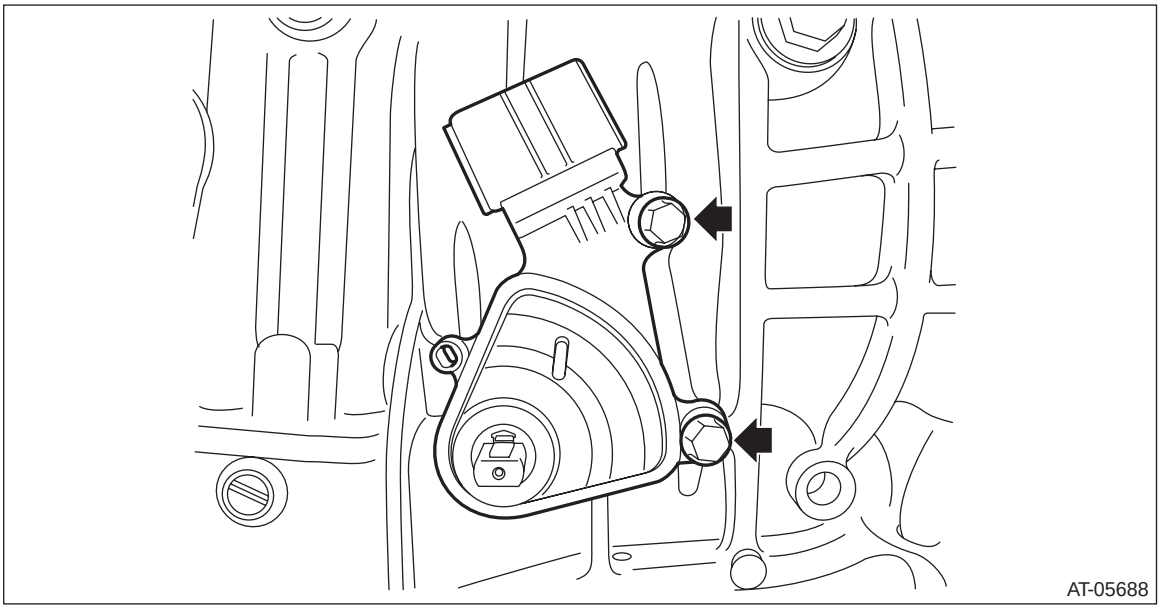
(A) Shifter arm
(B) Snap pin
(C) Select cable
(D) Plate ASSY
(E) Washer

5) Using the ST, remove the spring pin and shifter arm.
ST 398791600 REMOVER



(A) Spring pin
(B) Shifter arm

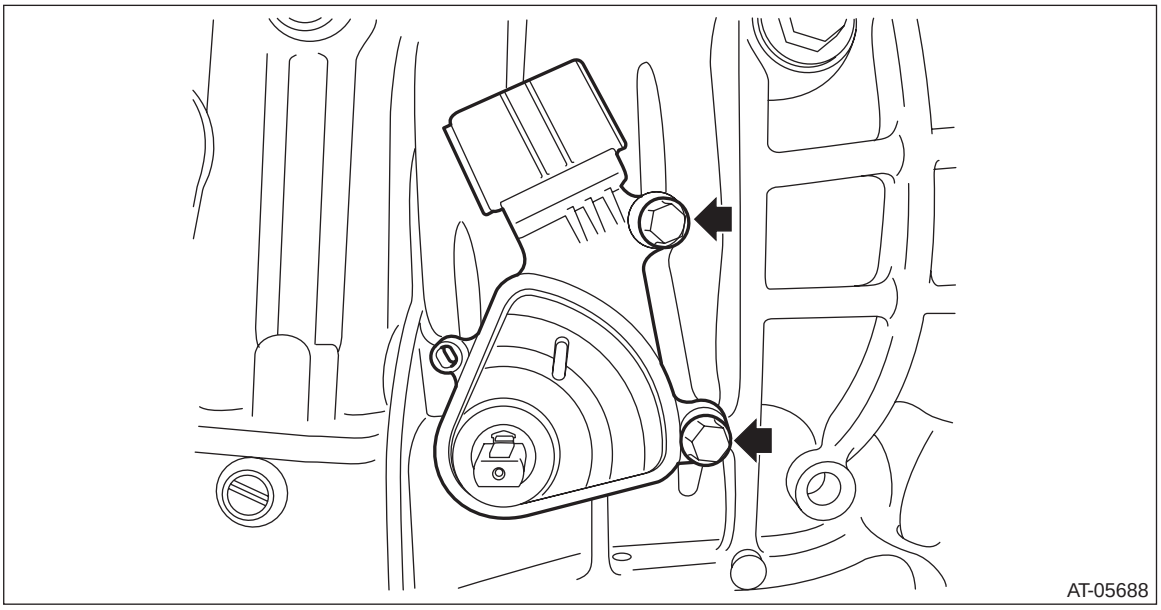
6) Remove the inhibitor harness connector from inhibitor switch.
7) Remove the two inhibitor switch securing bolts.



8) Remove the inhibitor switch.

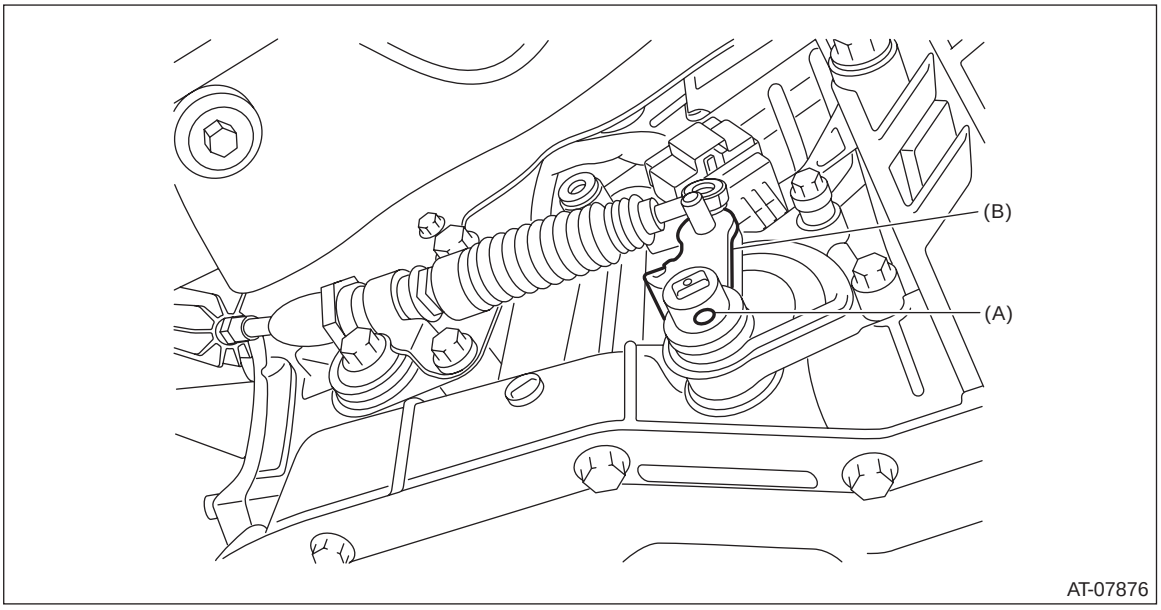
D: INSTALLATION

1) Temporarily install the inhibitor switch.



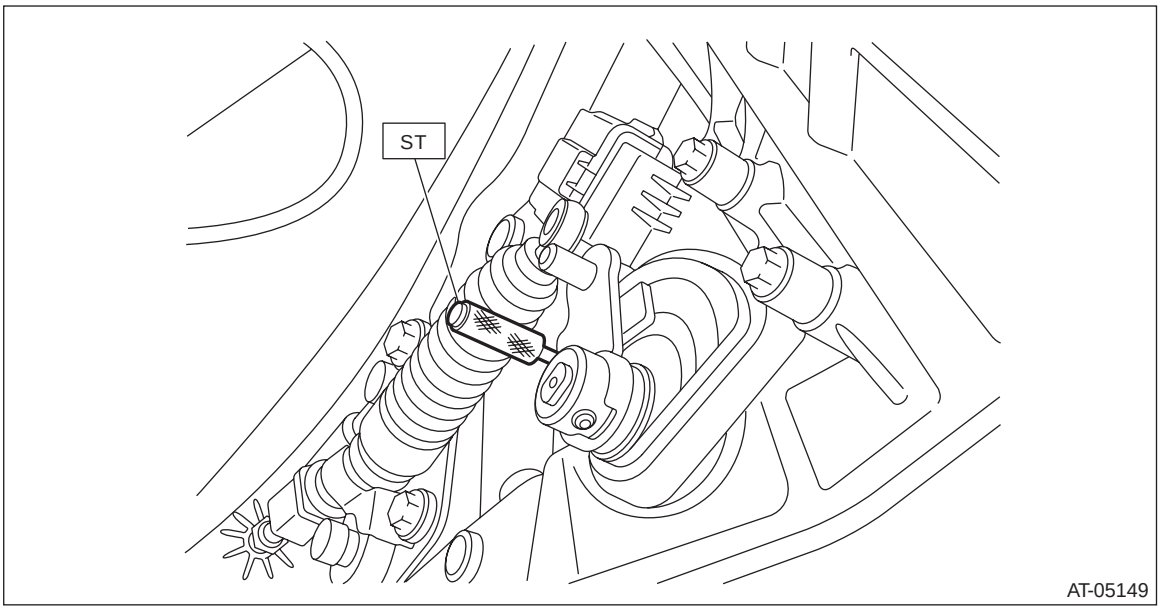
2) Connect the inhibitor harness connector to the inhibitor switch.
3) Install the shifter arm and fix with the spring pin.

NOTE:
Use new spring pin.



(A) Spring pin
(B) Shifter arm

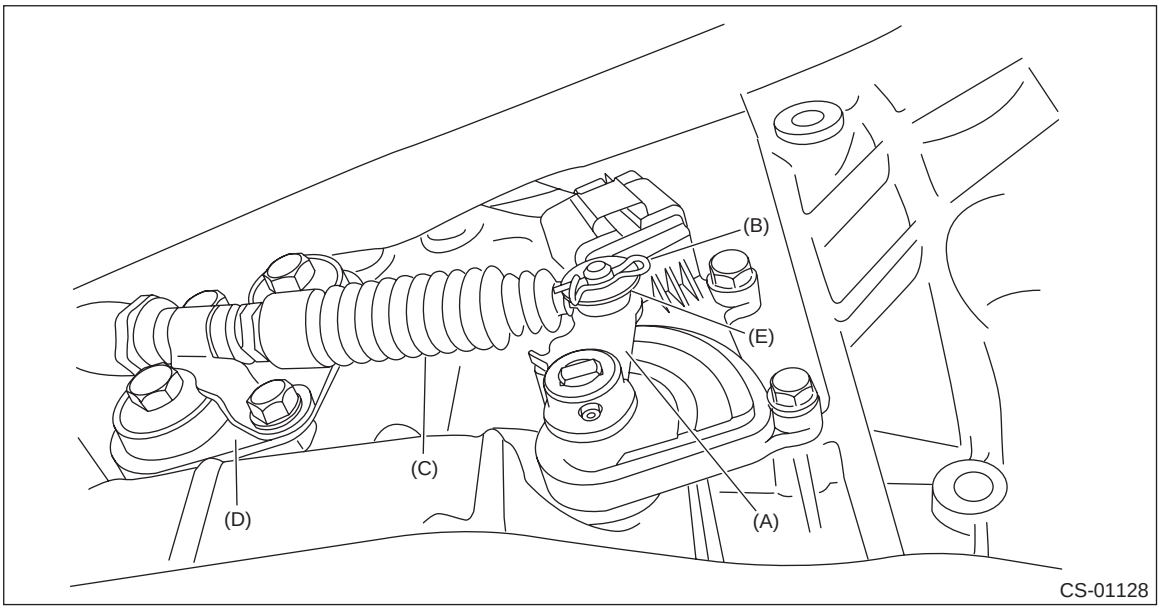
4) Shift the shifter arm to “N” range.
5) Install the ST vertically in the cutout of shifter arm and the hole of switch body.
ST 499267300 STOPPER PIN



6) Tighten the two bolts holding the inhibitor switch.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

7) Install the select cable to the shifter arm.
8) Install the washer and snap pin to the shifter arm.



(A) Shifter arm
(B) Snap pin
(C) Select cable
(D) Plate ASSY
(E) Washer

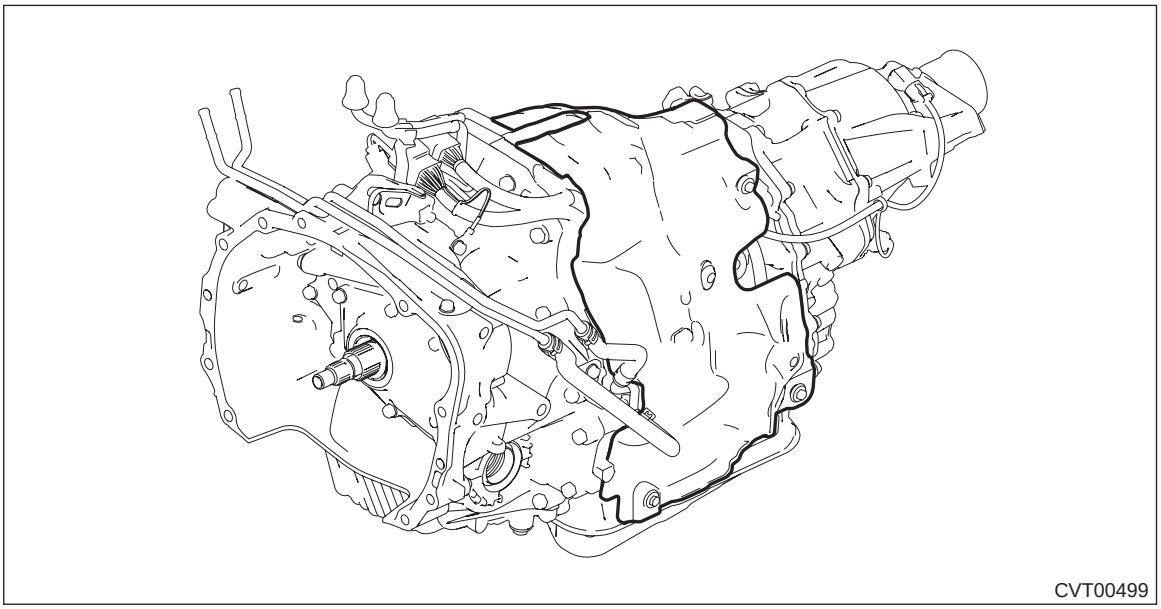
9) Lower the vehicle.
10) Connect the ground terminal to battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>
11) Check the inhibitor switch. <Ref. to CVT(TR690)-92, INSPECTION, Inhibitor Switch.>

15.Secondary Speed Sensor

A: REMOVAL

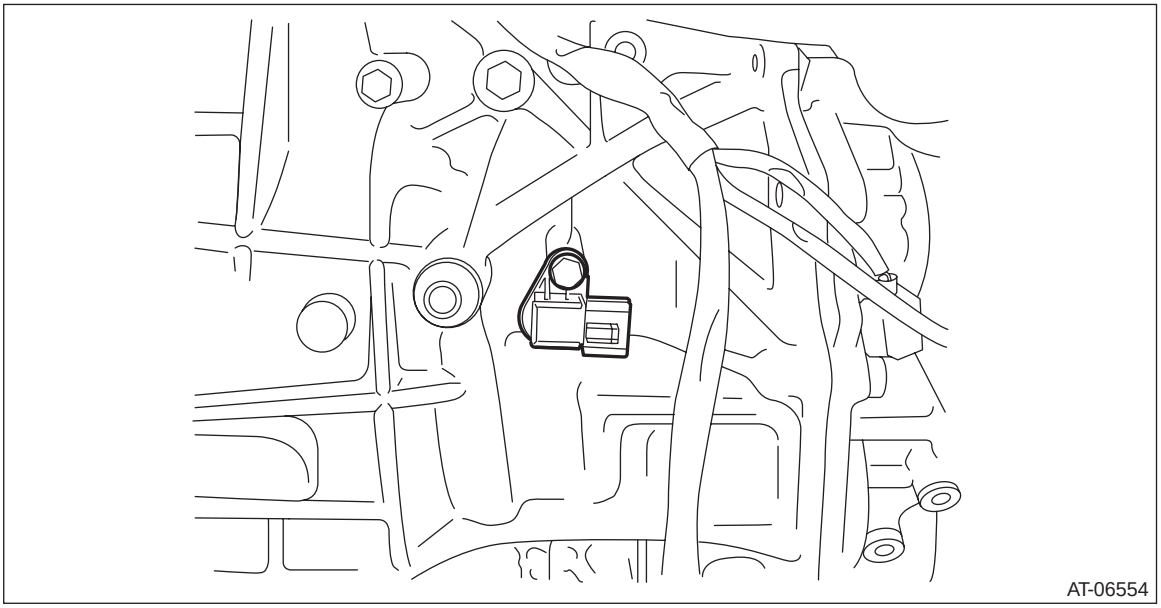
CAUTION:
Be sure to prevent water or oil from contacting the connector terminal of secondary speed sensor. If adhesion occurs, replace with a new part.

1) Remove the transmission from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the transmission cover on the transmission upper side.



CVT00499

3) Remove the secondary speed sensor harness connector.
4) Remove the secondary speed sensor.



AT-06554

B: INSTALLATION

CAUTION:
Be sure to prevent water or oil from contacting the connector terminal of secondary speed sensor. If adhesion occurs, replace with a new part.
Install in the reverse order of removal.

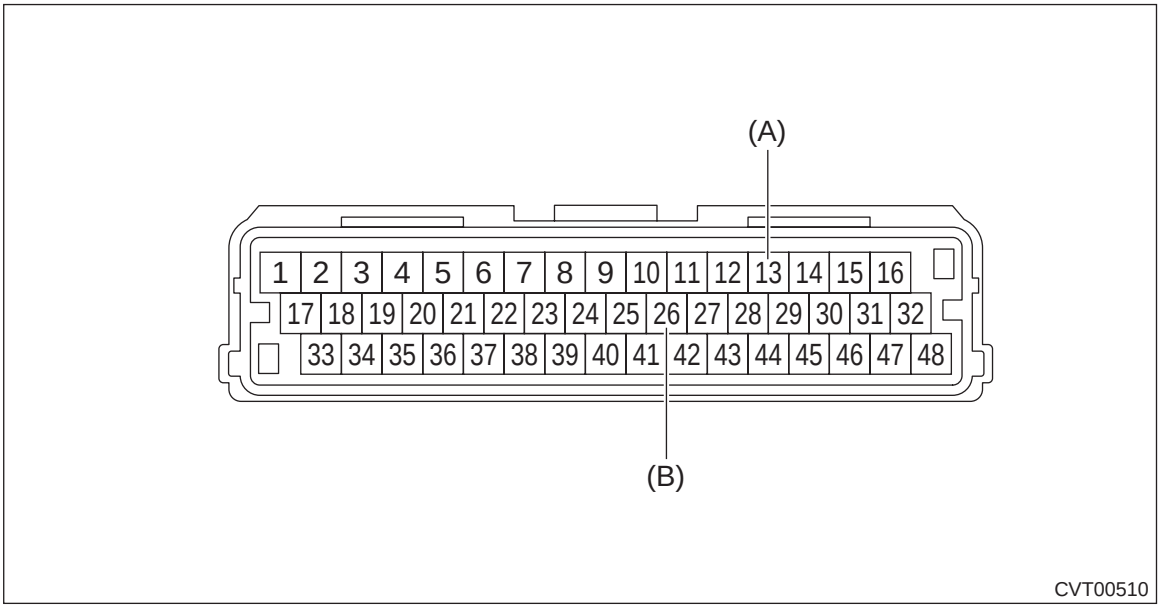
NOTE:
- Use new O-rings.
- Apply CVTF to the O-ring.

Tightening torque:
Secondary speed sensor
5 N·m (0.5 kgf-m, 3.7 ft-lb)
Transmission cover
8 N·m (0.8 kgf-m, 5.9 ft-lb)

C: INSPECTION

1) Remove the bulkhead harness connector from TCM. <Ref. to CVT(TR690)-126, REMOVAL, Transmission Control Module (TCM).>
2) Set the ST between the TCM and bulkhead harness.
ST 18460AA040 CHECK BOARD
3) Set the probe of oscilloscope to the check board connector.

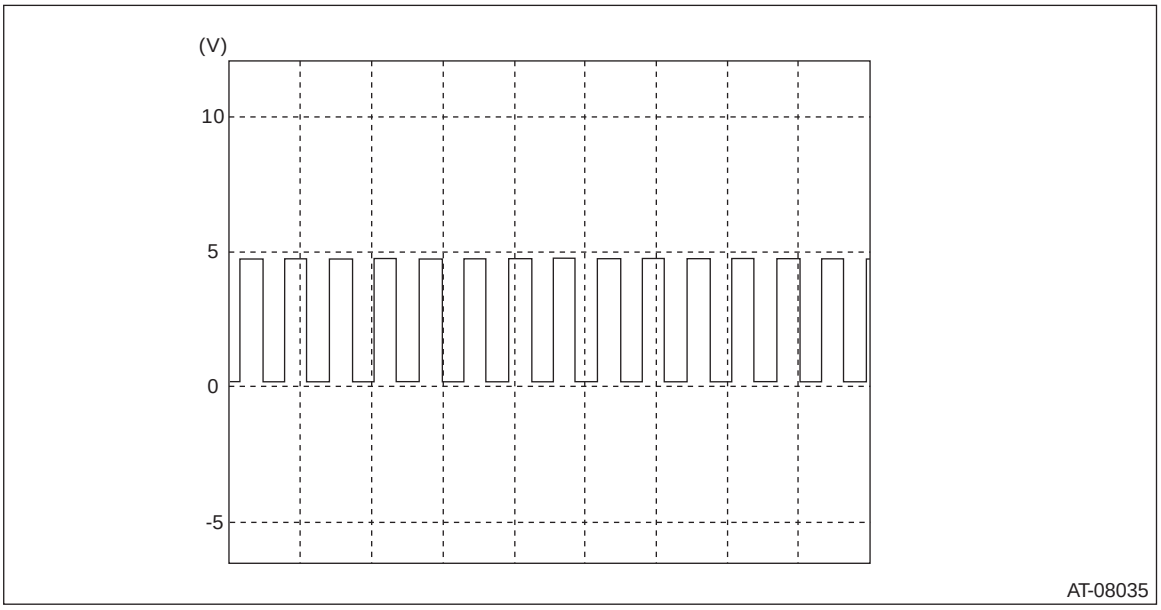
Terminals:
No. 13 (+) — No. 26 (–)



(A) + probe
(B) – probe

4) Start and warm up the engine.
5) Check the waveform of secondary speed sensor with engine idling.

NOTE:
The waveform cycle changes as the speed changes.

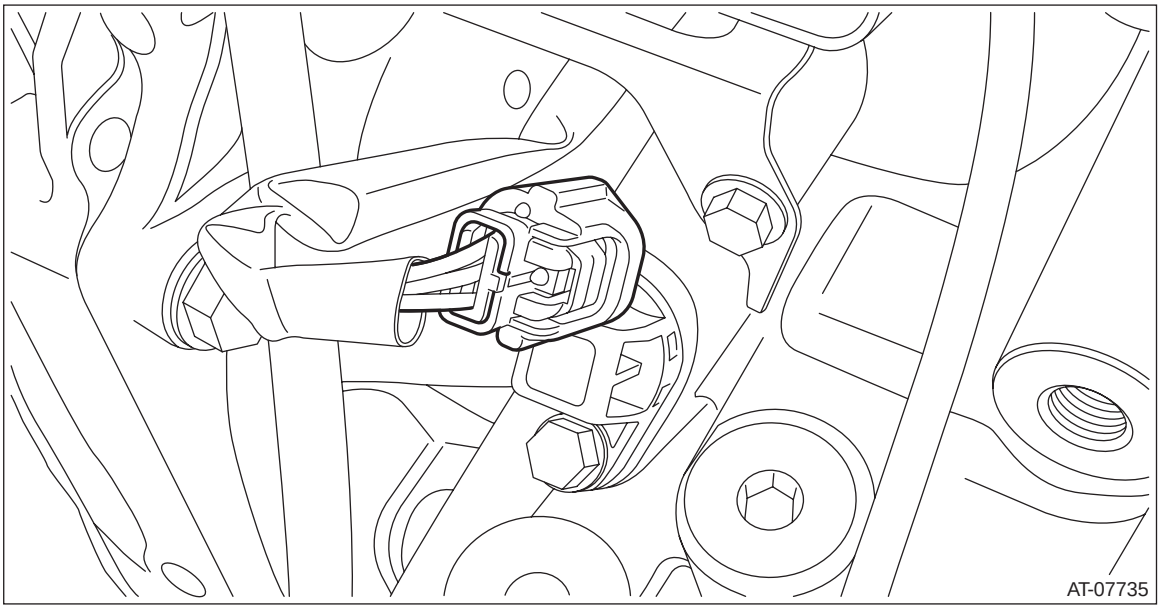


16.Primary Speed Sensor

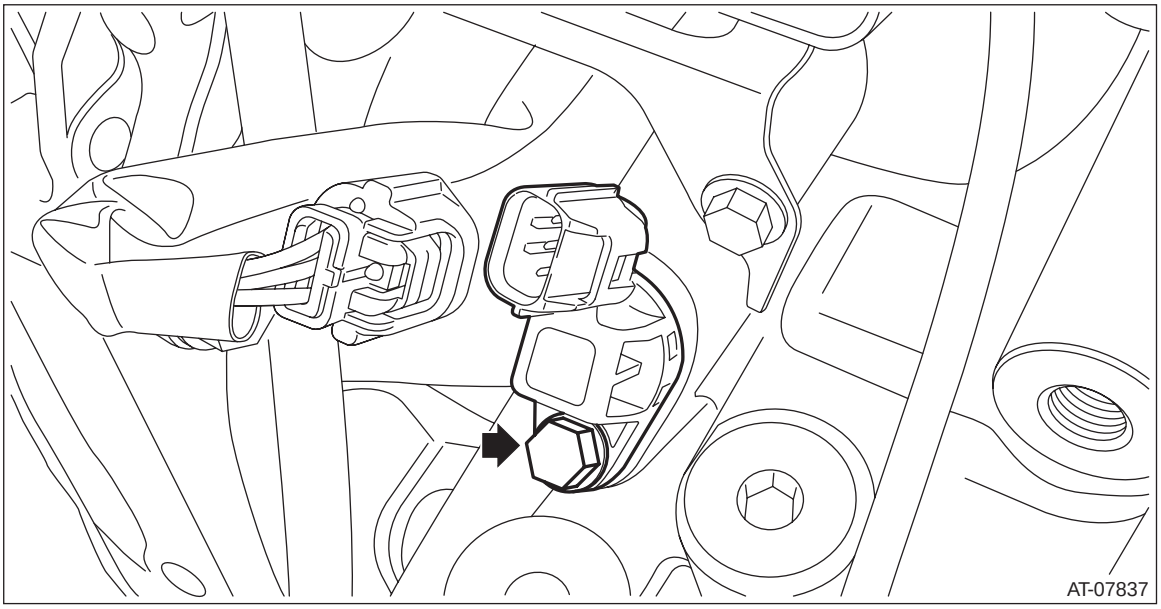
A: REMOVAL

CAUTION:
Be sure to prevent water or oil from contacting the connector terminal of primary speed sensor. If adhesion occurs, replace with a new part.

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>
2) Remove the intercooler. <Ref. to IN(w/o STI)-41, REMOVAL, Intercooler.>
3) Clean the transmission exterior.
4) Remove the primary speed sensor harness connector.



5) Remove the primary speed sensor and the spacer.



B: INSTALLATION

CAUTION:
Be sure to prevent water or oil from contacting the connector terminal of primary speed sensor. If adhesion occurs, replace with a new part.
Install in the reverse order of removal.

CAUTION:
Do not forget to install the spacer.

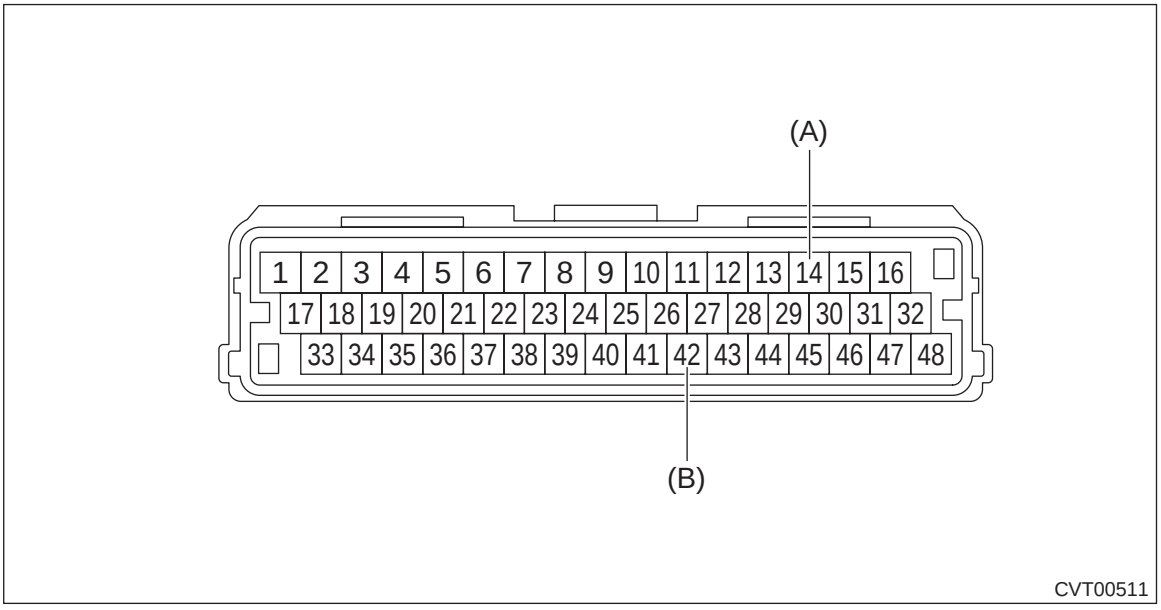
NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

Tightening torque:
Primary speed sensor
5 N·m (0.5 kgf-m, 3.7 ft-lb)

C: INSPECTION

1) Remove the bulkhead harness connector from TCM. <Ref. to CVT(TR690)-126, REMOVAL, Transmission Control Module (TCM).>
2) Set the ST between the TCM and bulkhead harness.
ST 18460AA040 CHECK BOARD
3) Set the probe of oscilloscope to the check board connector.

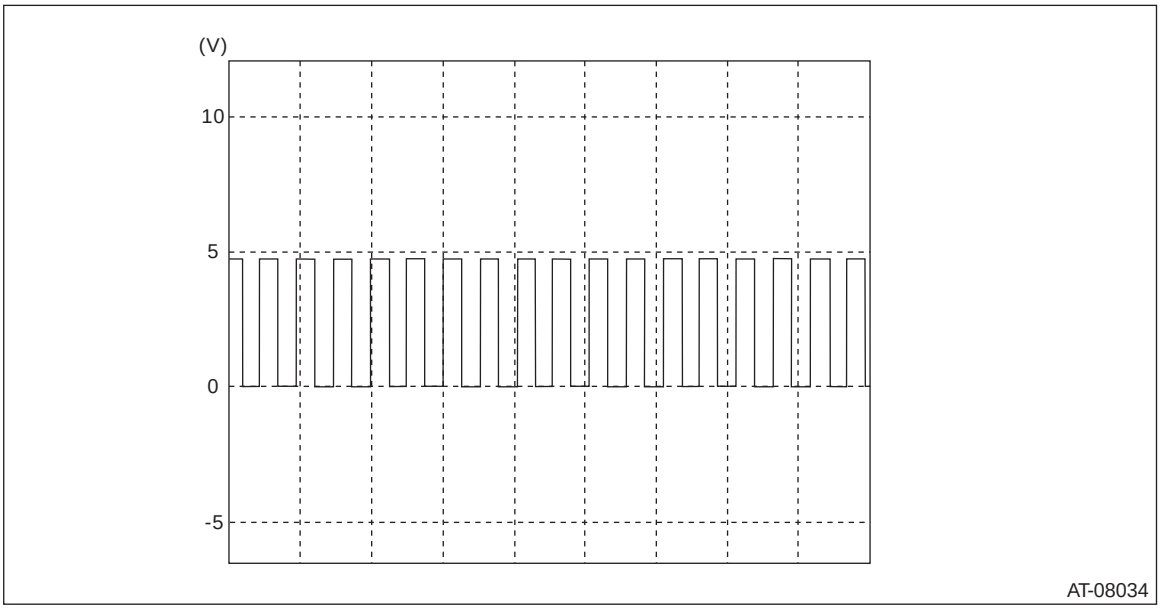
Terminals:
No. 14 (+) — No. 42 (–)



(A) + probe
(B) – probe

4) Start and warm up the engine.
5) Check the waveform of primary speed sensor with engine idling.

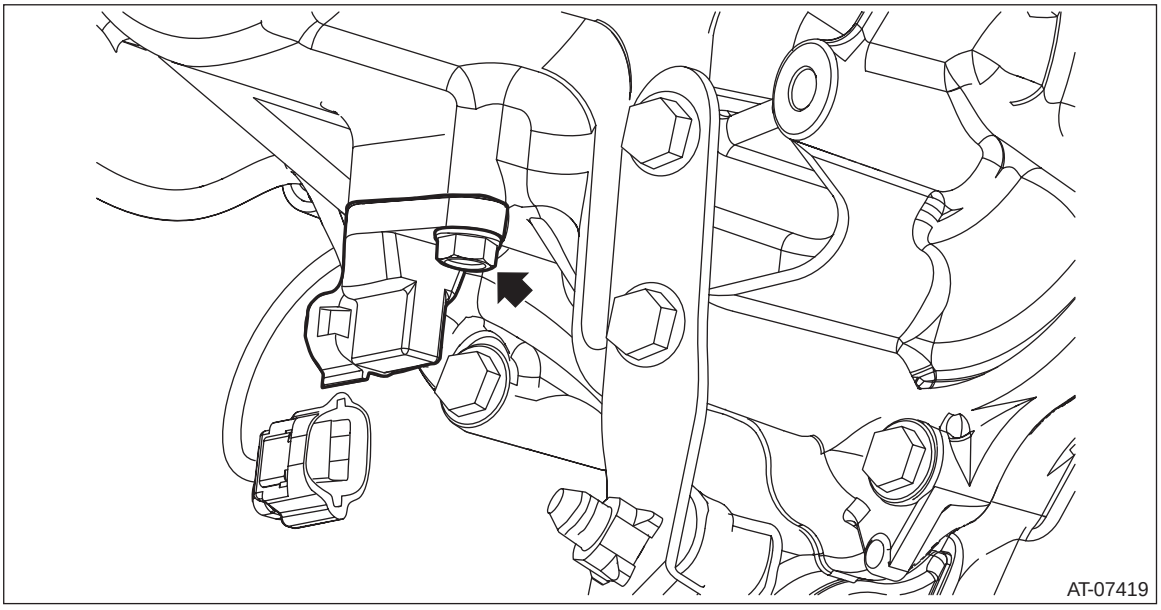
NOTE:
The waveform cycle changes as the speed changes.



17.Front Wheel Speed Sensor

A: REMOVAL

CAUTION:
• Be sure to prevent water or oil from contacting the connector terminal of front wheel speed sensor. If adhesion occurs, replace with a new part.
• When removing front wheel speed sensor, CVTF may let out. If CVTF has leaked, adjust the CVTF level after installing the front wheel speed sensor.
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>
2) Lift up the vehicle.
3) Clean the transmission exterior.
4) Remove the front wheel speed sensor harness connector.
5) Remove the front wheel speed sensor.



B: INSTALLATION

CAUTION:
• Be sure to prevent water or oil from contacting the connector terminal of front wheel speed sensor. If adhesion occurs, replace with a new part.
• After installing the front wheel speed sensor, adjust the CVTF level.
Install in the reverse order of removal.

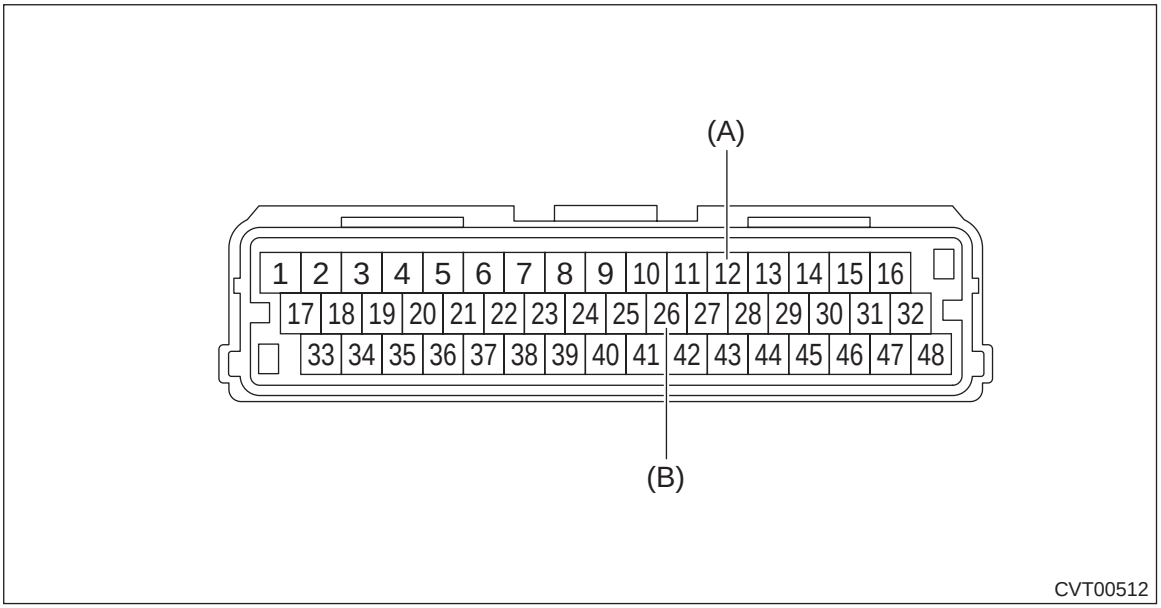
NOTE:
• Use new O-rings.
• Apply CVTF to the O-ring.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

C: INSPECTION

1) Remove the bulkhead harness connector from TCM. <Ref. to CVT(TR690)-126, REMOVAL, Transmission Control Module (TCM).>
2) Set the ST between the TCM and bulkhead harness.
ST 18460AA040 CHECK BOARD
3) Set the probe of oscilloscope to the check board connector.

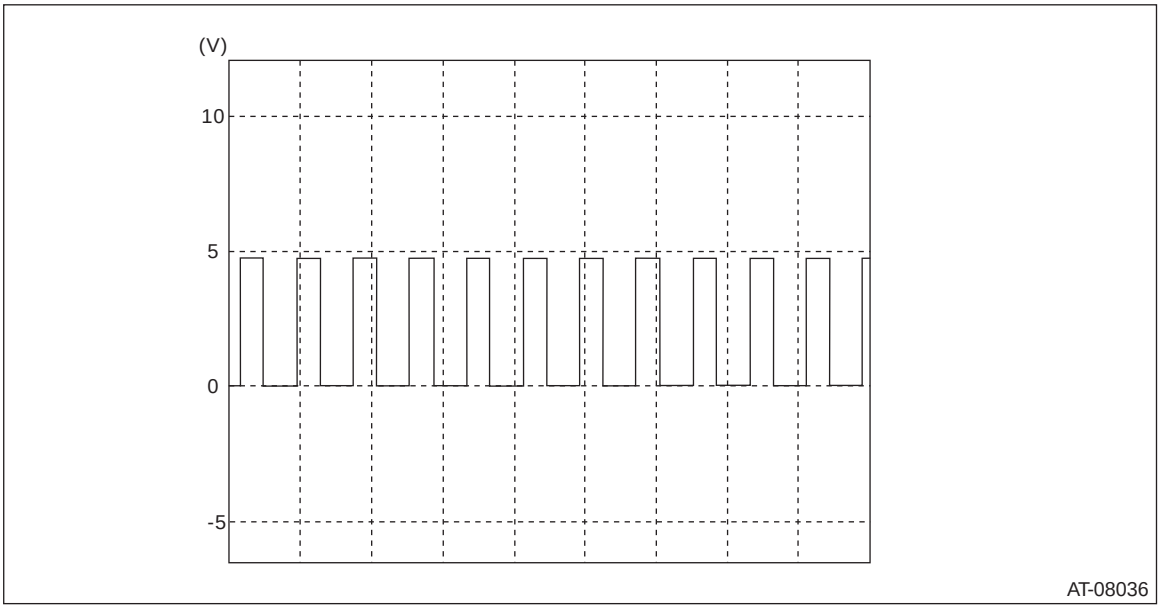
Terminals:
No. 12 (+) — No. 26 (–)



(A) + probe
(B) – probe

4) Lift up the vehicle and raise the vehicle speed up to 20 km/h (12 MPH).
5) Check the waveform of front wheel speed sensor when vehicle speed is at 20 km/h (12 MPH).

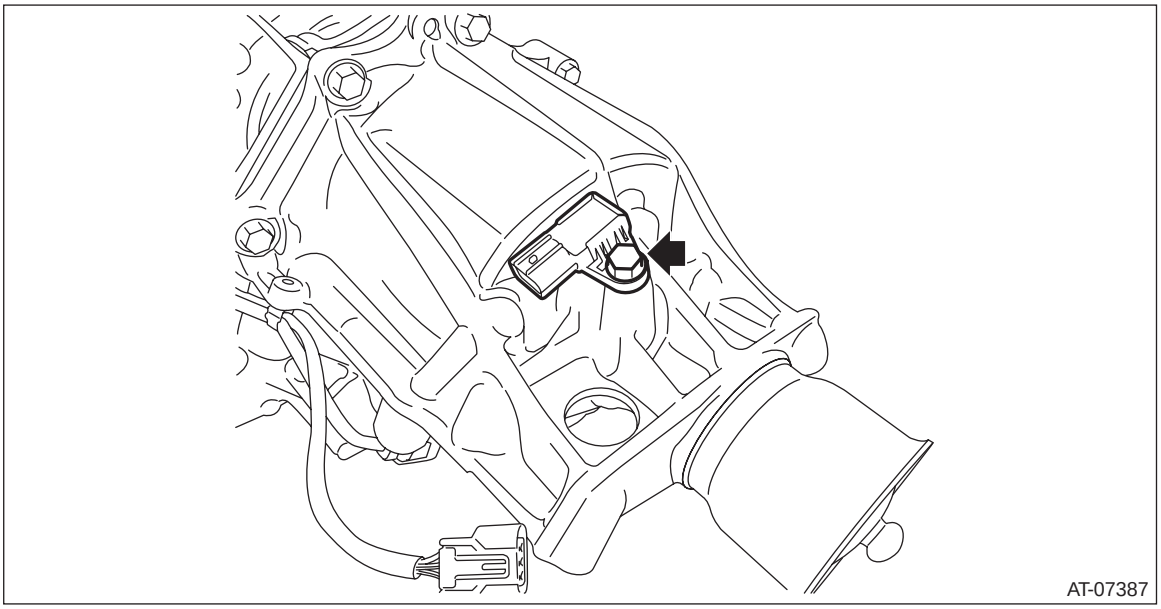
NOTE:
The waveform cycle changes as the speed changes.



18.Rear Wheel Speed Sensor

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>
2) Lift up the vehicle.
3) Clean the transmission exterior.
4) Remove the bolts which connect the center exhaust pipe (rear) and rear exhaust pipe.
5) Remove the bolts holding the center exhaust cover, and move the center exhaust cover to the rear.
6) Disconnect the rear wheel speed sensor connector.
7) Remove the rear wheel speed sensor.

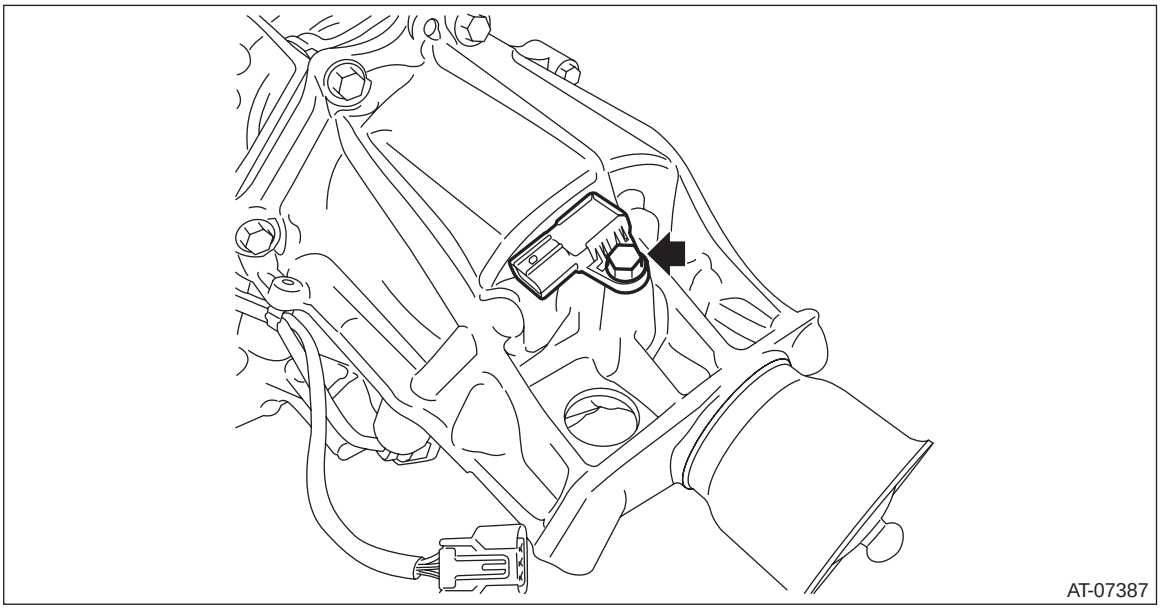


B: INSTALLATION

1) Install the rear wheel speed sensor.

NOTE:
Use new O-rings.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)



2) Connect the rear wheel speed sensor connector.
3) Install the heat shield cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

4) Tighten the bolts which connect the center exhaust pipe (rear) and rear exhaust pipe.

NOTE:
Use a new gasket.

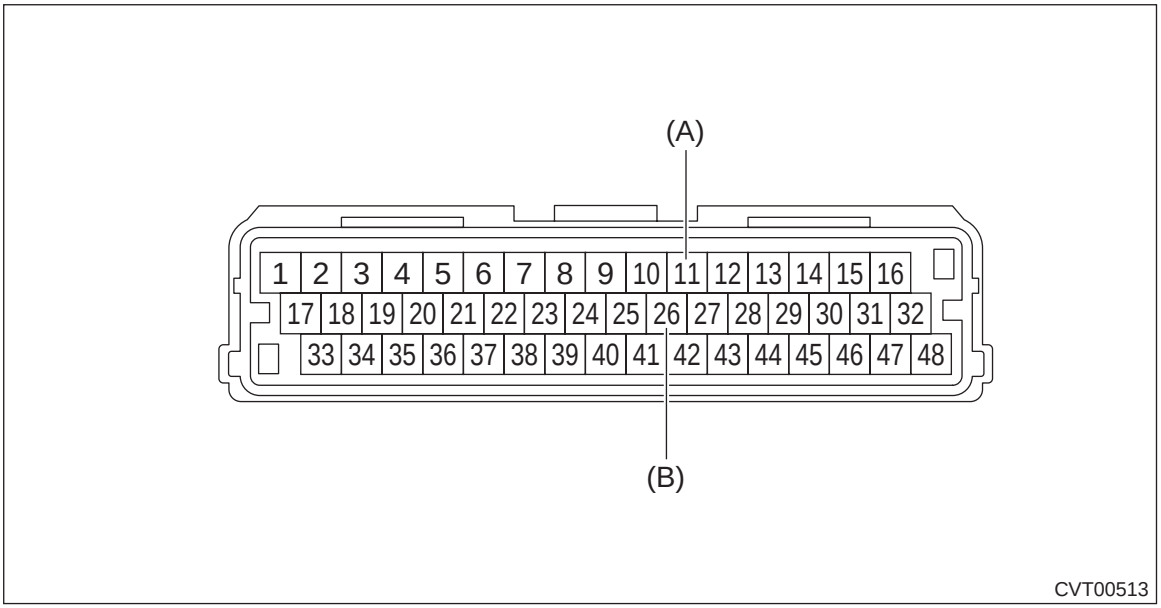
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

5) Lower the vehicle.
6) Connect the ground terminal to battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>

C: INSPECTION

1) Remove the bulkhead harness connector from TCM. <Ref. to CVT(TR690)-126, REMOVAL, Transmission Control Module (TCM).>
2) Set the ST between the TCM and bulkhead harness.
ST 18460AA040 CHECK BOARD
3) Set the probe of oscilloscope to the check board connector.

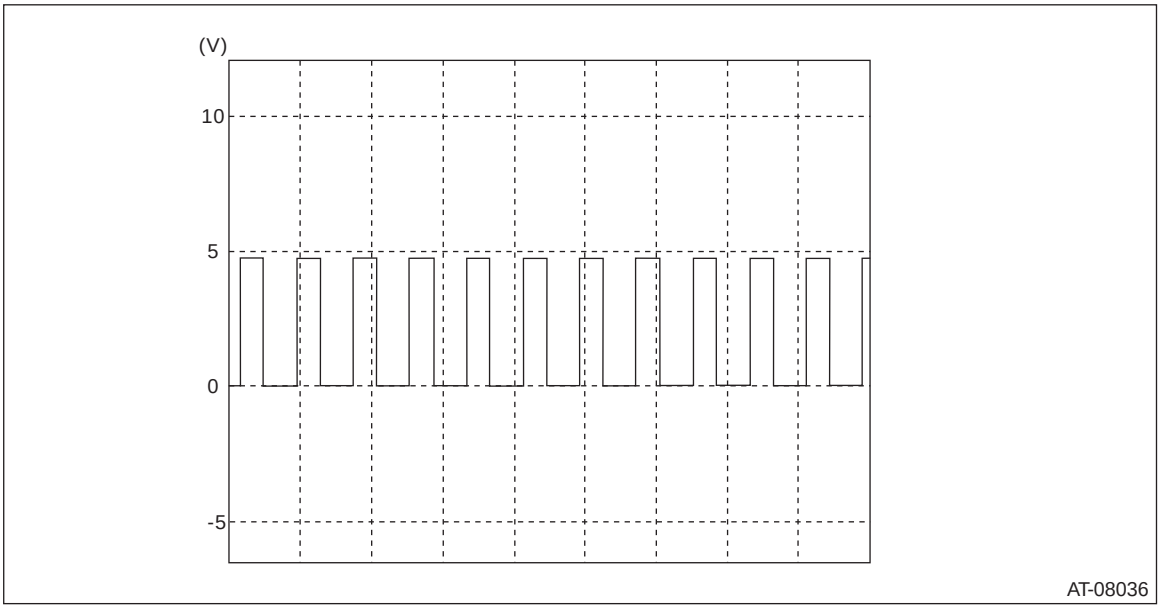
Terminals:
No. 11 (+) — No. 26 (–)



(A) + probe
(B) – probe

4) Lift up the vehicle and raise the vehicle speed up to 20 km/h (12 MPH).
5) Check the waveform of rear wheel speed sensor when vehicle speed is at 20 km/h (12 MPH).

NOTE:
The waveform cycle changes as the speed changes.

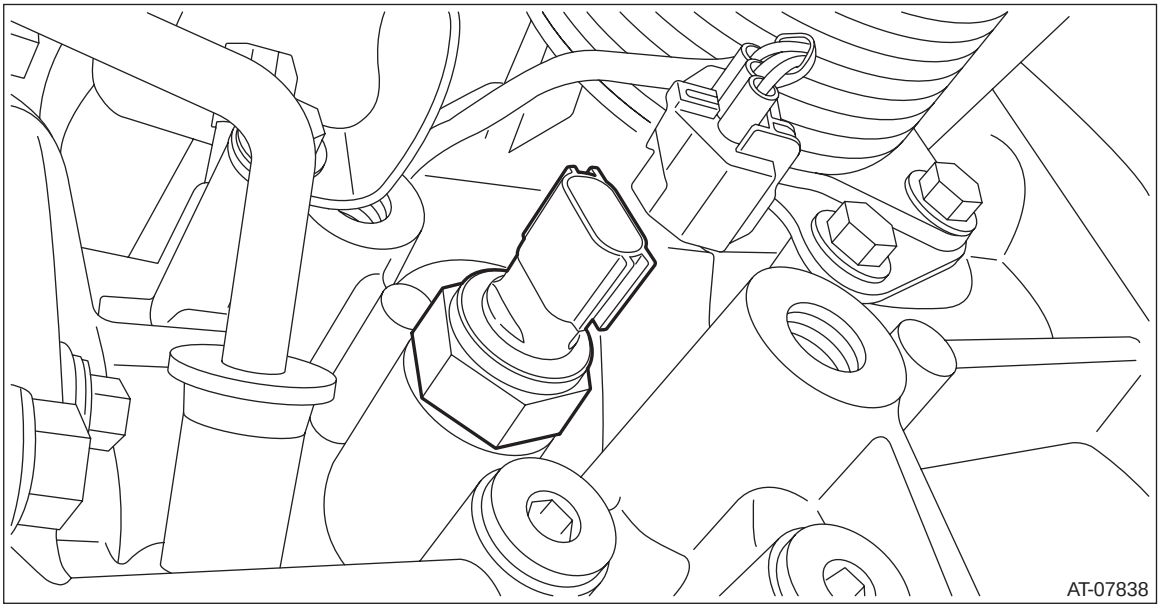


19.Secondary Pressure Sensor

A: REMOVAL

CAUTION:
• Be sure to prevent water or oil from contacting the connector terminal of secondary pressure sensor. If adhesion occurs, replace with a new part.
• When removing secondary pressure sensor, CVTF may let out. If CVTF has leaked, adjust the CVTF level after installing the secondary pressure sensor.
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>
2) Lift up the vehicle.
3) Clean the transmission exterior.
4) Remove the secondary pressure sensor harness connector.
5) Remove the secondary pressure sensor.

NOTE:
Use Ko-ken 3/8 12-point 27 mm (manufacturer product No. 3305M-27) deep socket.



B: INSTALLATION

CAUTION:
• Be sure to prevent water or oil from contacting the connector terminal of secondary pressure sensor. If adhesion occurs, replace with a new part.
• After installing the secondary pressure sensor, adjust the CVTF level.
Install in the reverse order of removal.

NOTE:
Use new O-rings.

Tightening torque:
39 N·m (4.0 kgf-m, 28.8 ft-lb)

C: INSPECTION

1) Start and warm up the engine.
2) Shift the select lever to “P” or “N” range.
3) Depress the brake pedal and hold it.
4) Check “secondary pressure sensor voltage” by using Subaru Select Monitor while the engine is idling. <Ref. to CVT(diag)-14, OPERATION, Subaru Select Monitor.>

Specification:
Approx. 0.8 V

5) Check “secondary pressure sensor voltage” by using Subaru Select Monitor while the engine is stopped and the ignition switch is turned on. <Ref. to CVT(diag)-14, OPERATION, Subaru Select Monitor.>

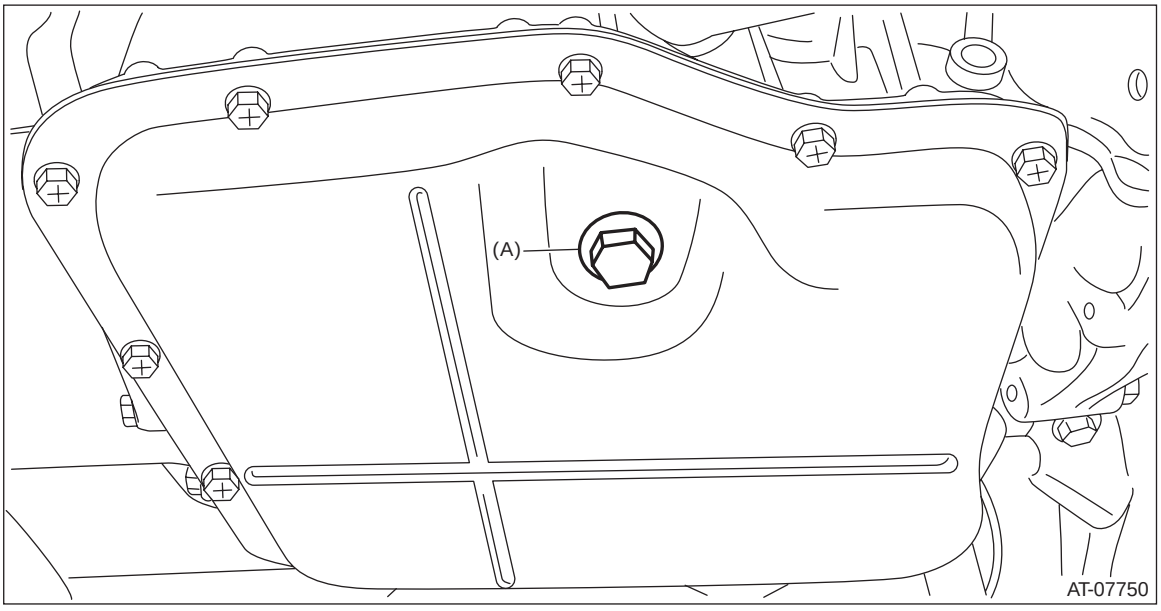
Specification:
Approx. 0.5 V

20.Control Valve Body

A: REMOVAL

CAUTION:
• Directly after the vehicle has been running or the engine has been idling for a long time, the CVTF is hot. Be careful not to burn yourself.
• Be careful not to spill CVTF on the exhaust pipe to prevent it from emitting smoke or causing a fire. If the CVTF adheres, wipe it off completely.

NOTE:
The control valve body is replaced as an assembly only, because it is a non-disassembly part.
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>
2) Lift up the vehicle.
3) Clean the transmission exterior.
4) Remove the CVTF drain plug to drain CVTF.



(A) CVTF drain plug

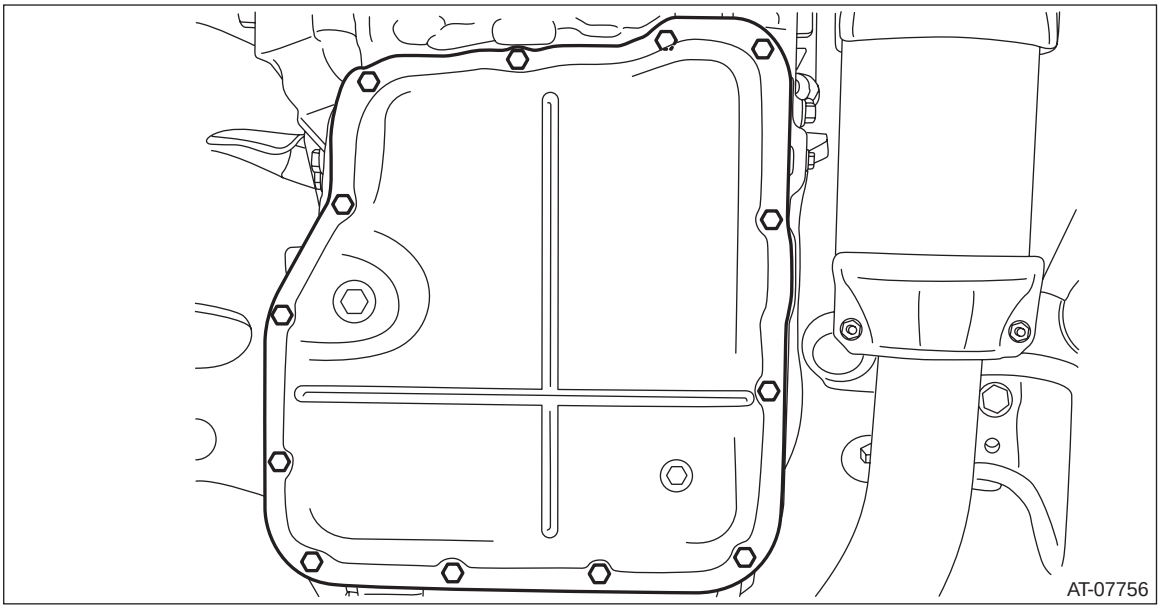
5) Install the CVTF drain plug.

NOTE:
Use a new gasket.

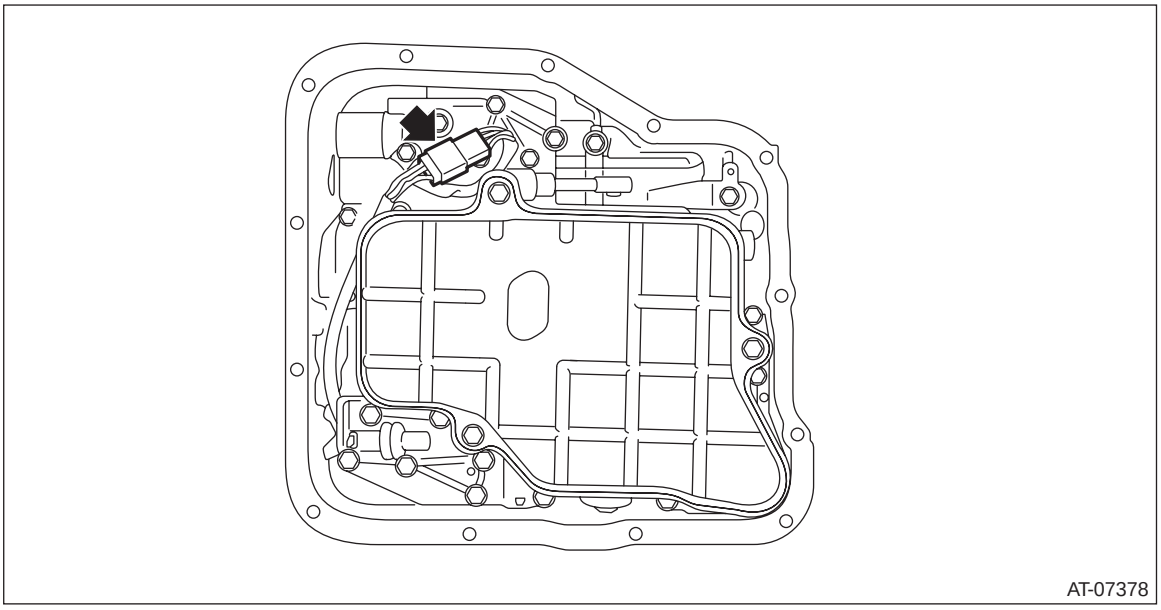
Tightening torque:
39.2 N·m (4.0 kgf-m, 28.9 ft-lb)

6) Remove the oil pan.

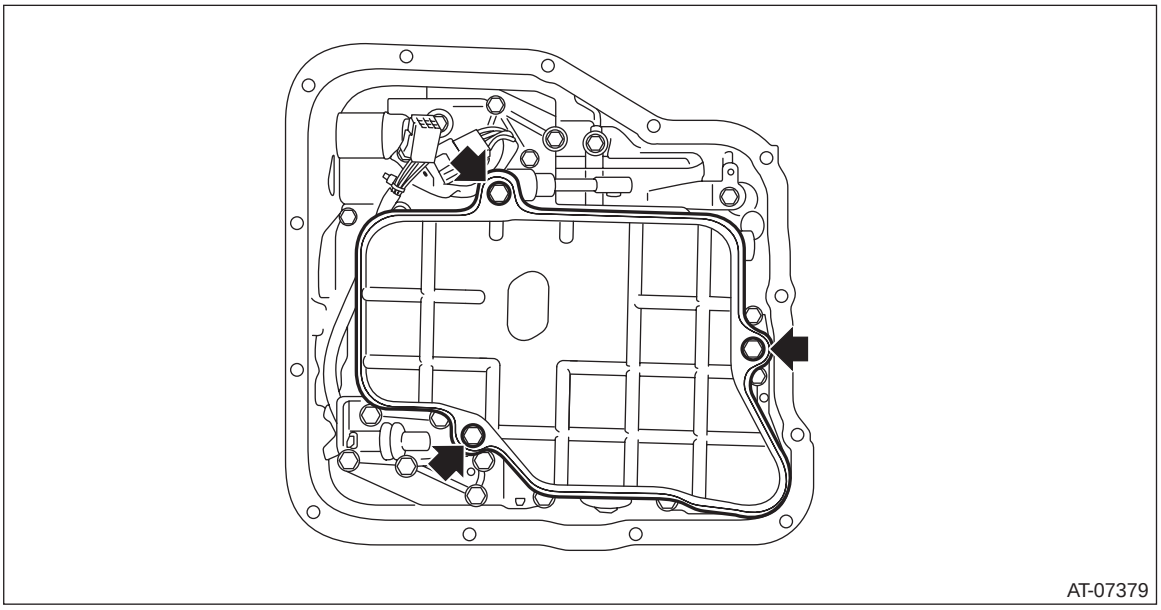
CAUTION:
Be careful not to allow foreign matter such as dust or dirt to enter the oil pan.



7) Remove the magnet.
8) Disconnect the control valve harness connector.

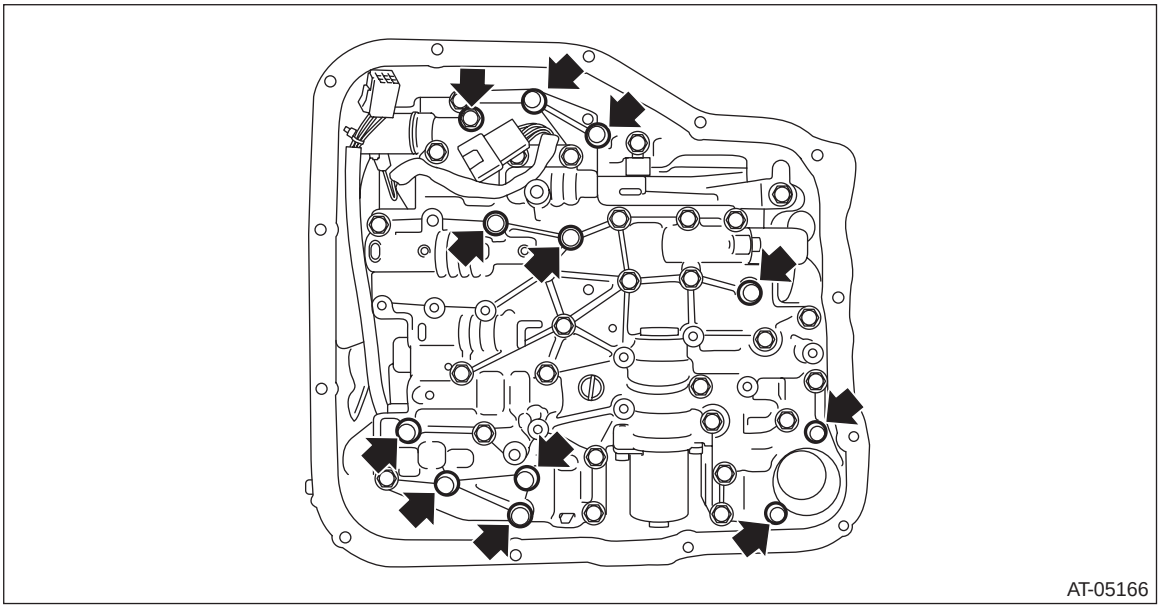


9) Remove the oil strainer.



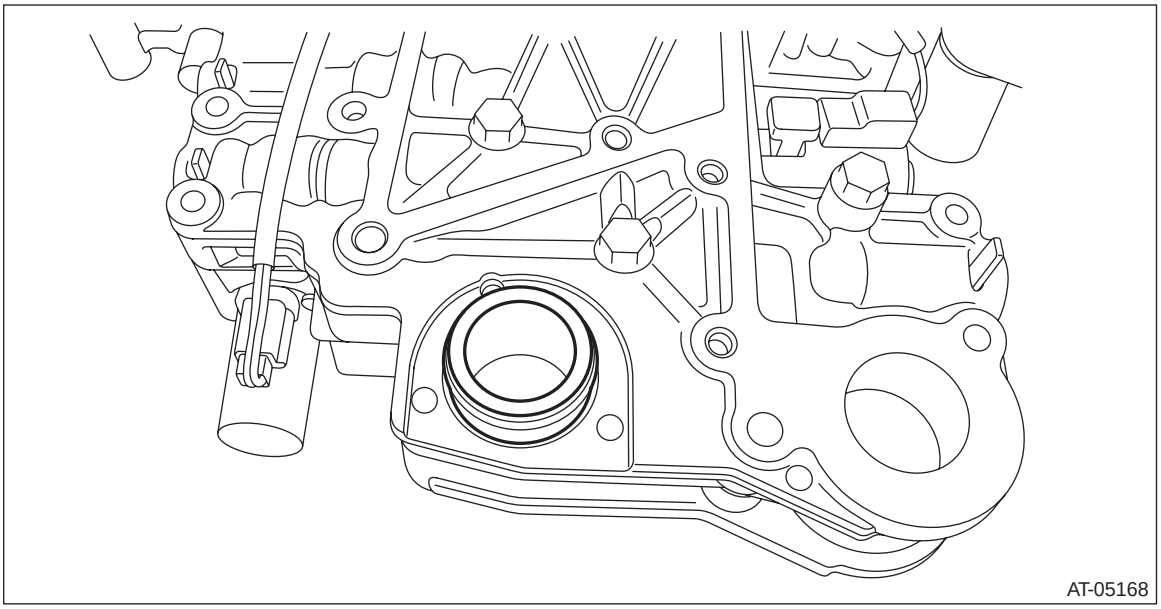
10) Remove the control valve body.

CAUTION:
Do not let the manual valve drop off.

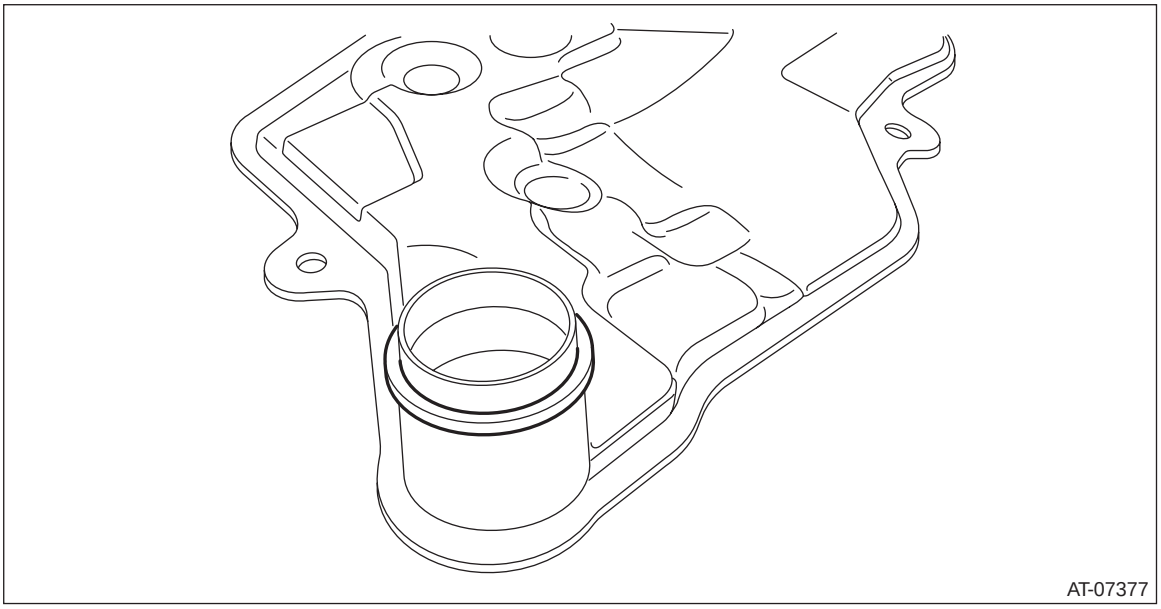


11) Remove the pressure pipe.

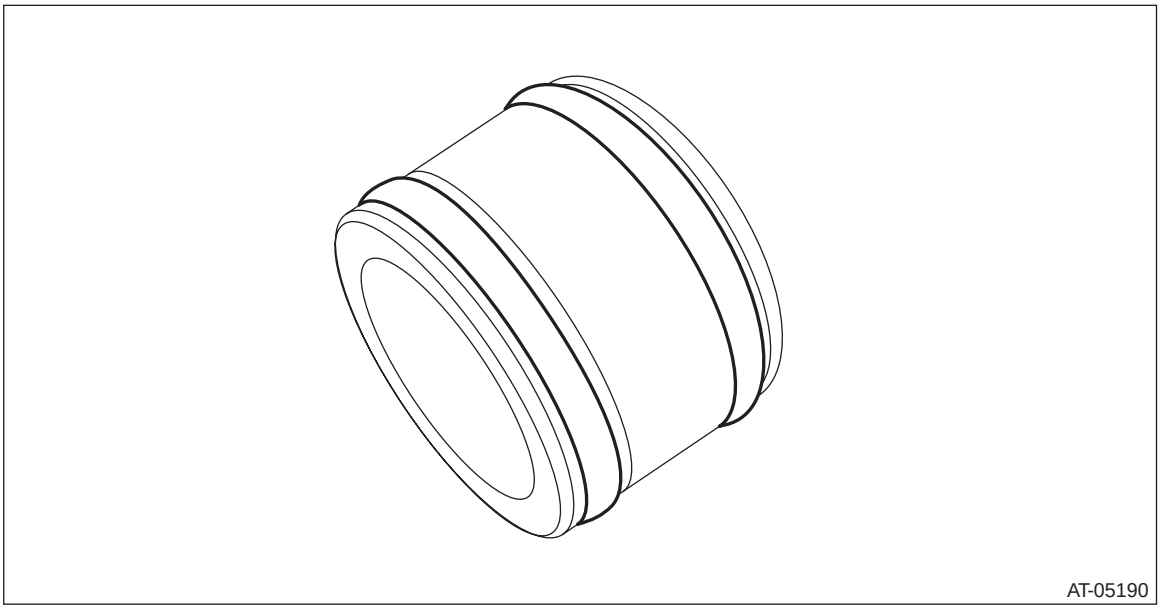
NOTE:
It may be located in transmission case side.



12) Remove the O-ring from oil strainer.



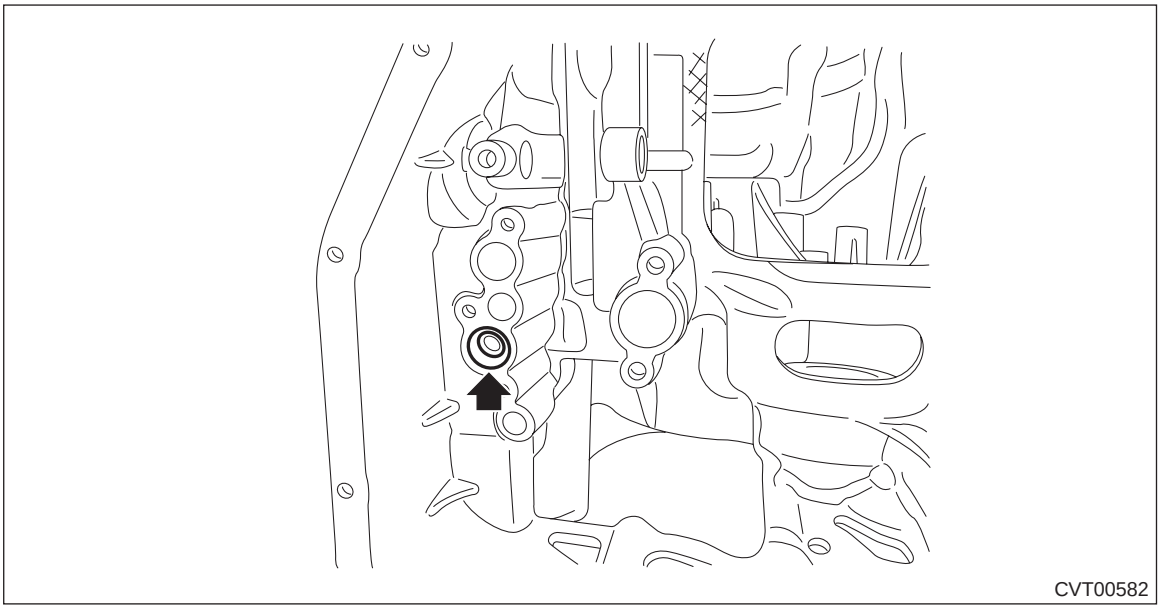
13) Remove the O-ring from pressure pipe.



B: INSTALLATION

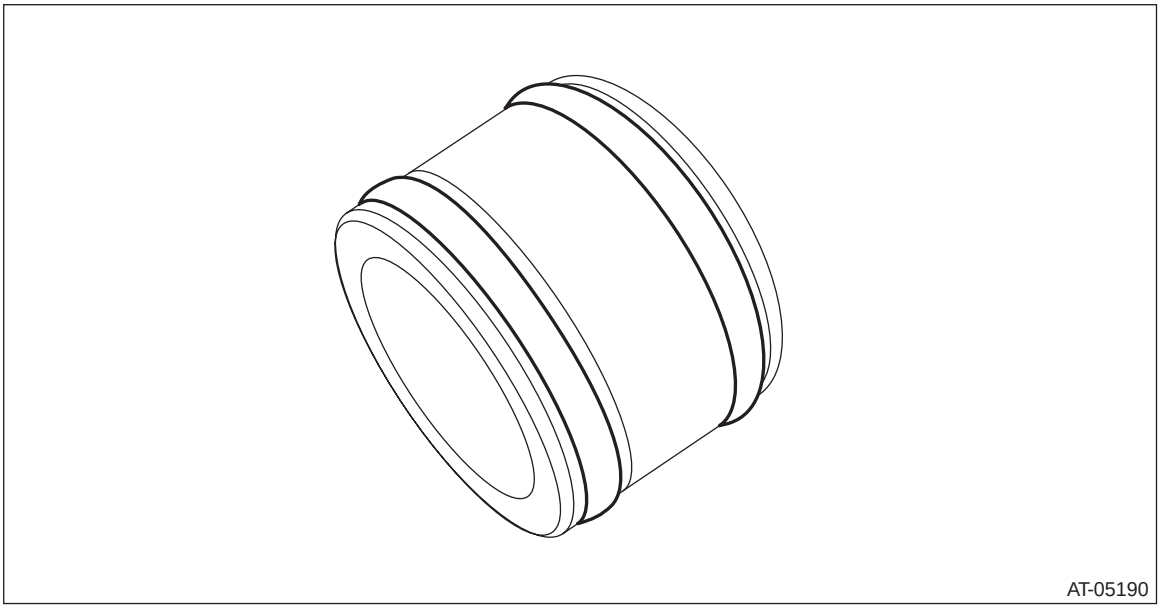
1) Clean the mating surface of oil pan and transmission case.
2) Make sure that the CVTF filter is installed to the transmission case.

NOTE:
Make sure that the CVTF filter does not protrude from the transmission case.

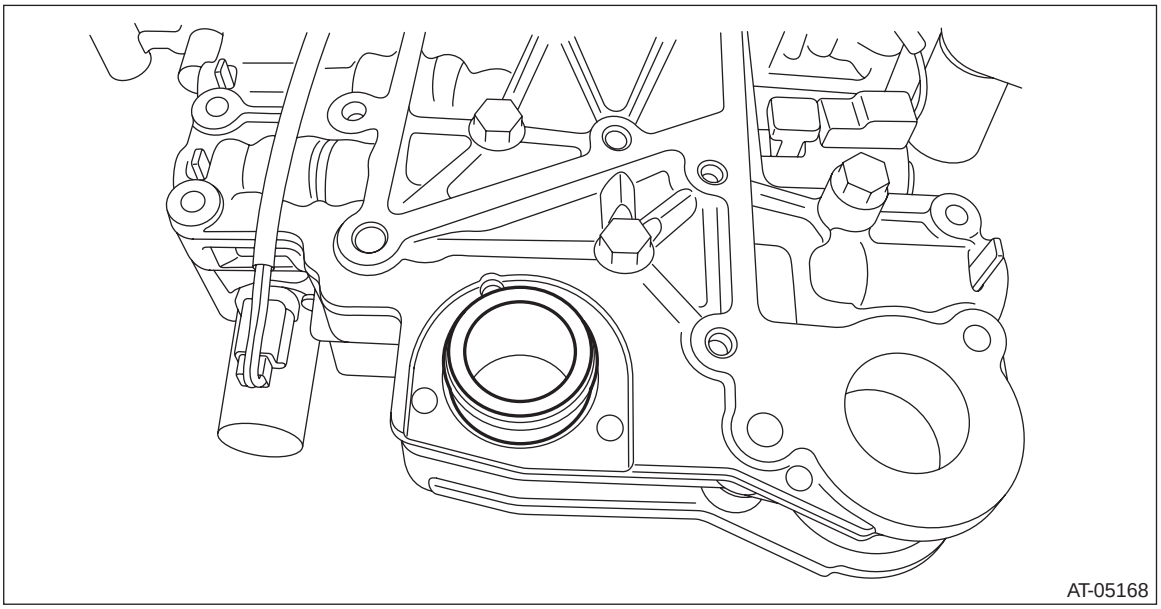


3) Check the control valve body for dust and other foreign matter.
4) Install the O-ring to the pressure pipe.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.



5) Install the pressure pipe.

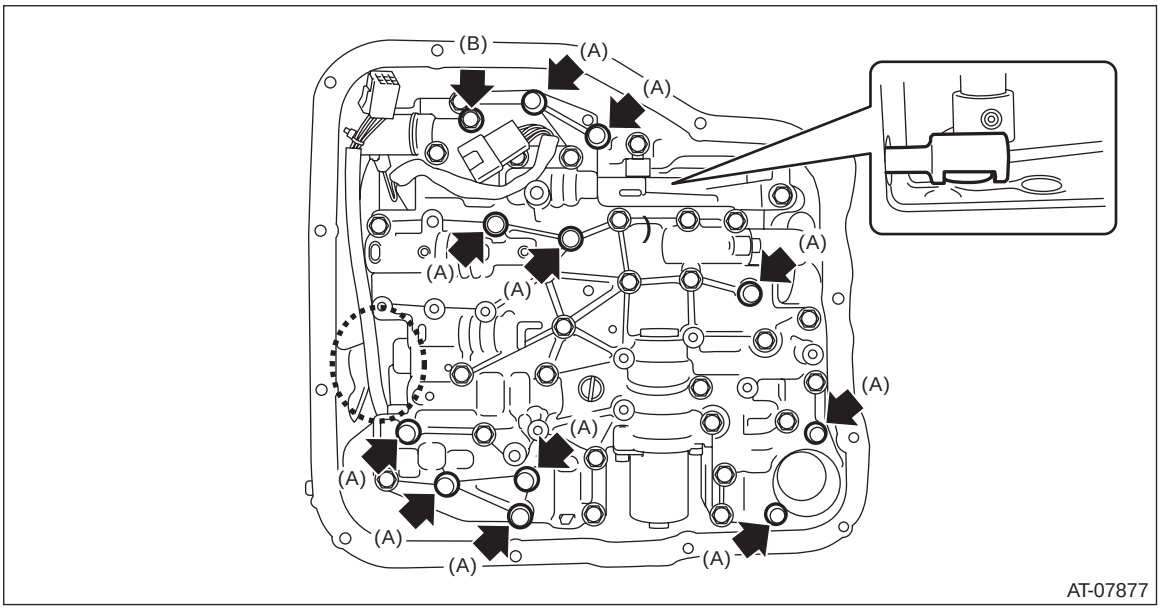


6) Install the control valve body to the transmission.

CAUTION:
- **Beware of the transmission harness getting caught in between.**
- **Do not impact or bend the transmission harness because it has the oil temperature sensor inside.**

NOTE:
- Engage the manual valve to the manual plate.
- Lead the transmission harness through from the point indicated by dashed line in the figure.

Tightening torque:
9 N·m (0.9 kgf-m, 6.6 ft-lb)

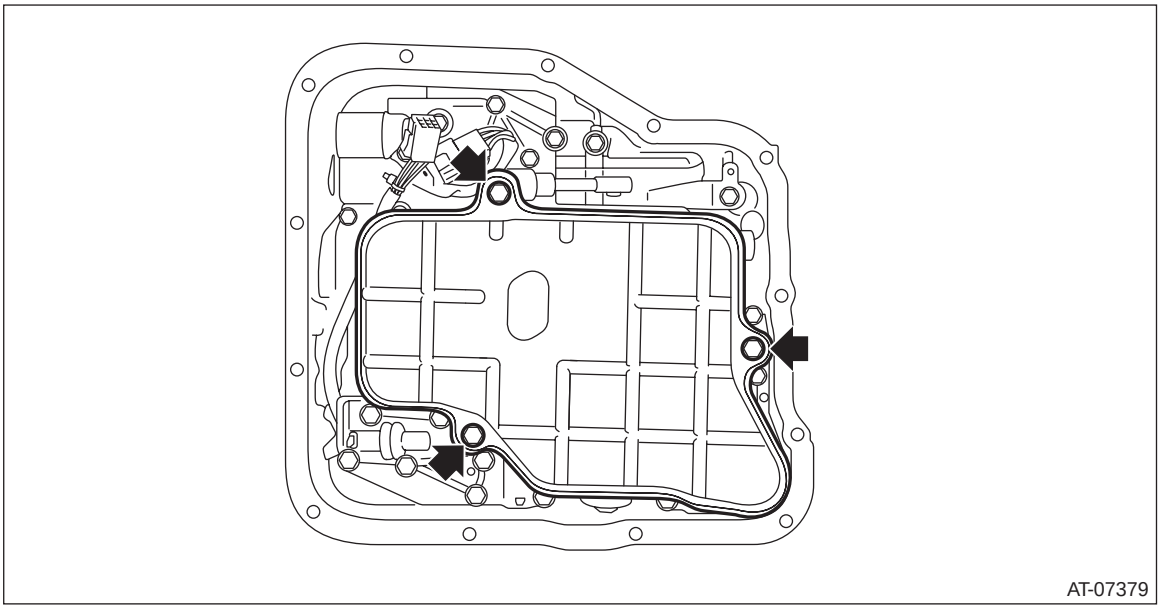


(A) Short bolt (11 pcs)
(B) Long bolt (1 pc)

7) Install the O-ring to oil strainer and install the oil strainer.

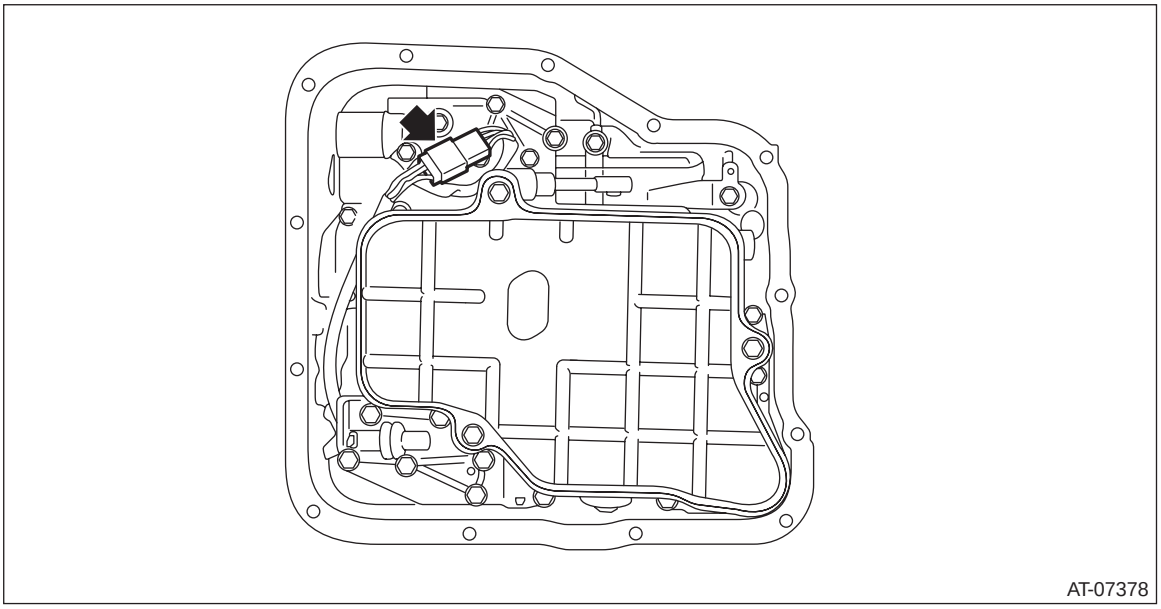
NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.
- Let the transmission harness run between control valve body and oil strainer.

Tightening torque:
9 N·m (0.9 kgf-m, 6.6 ft-lb)



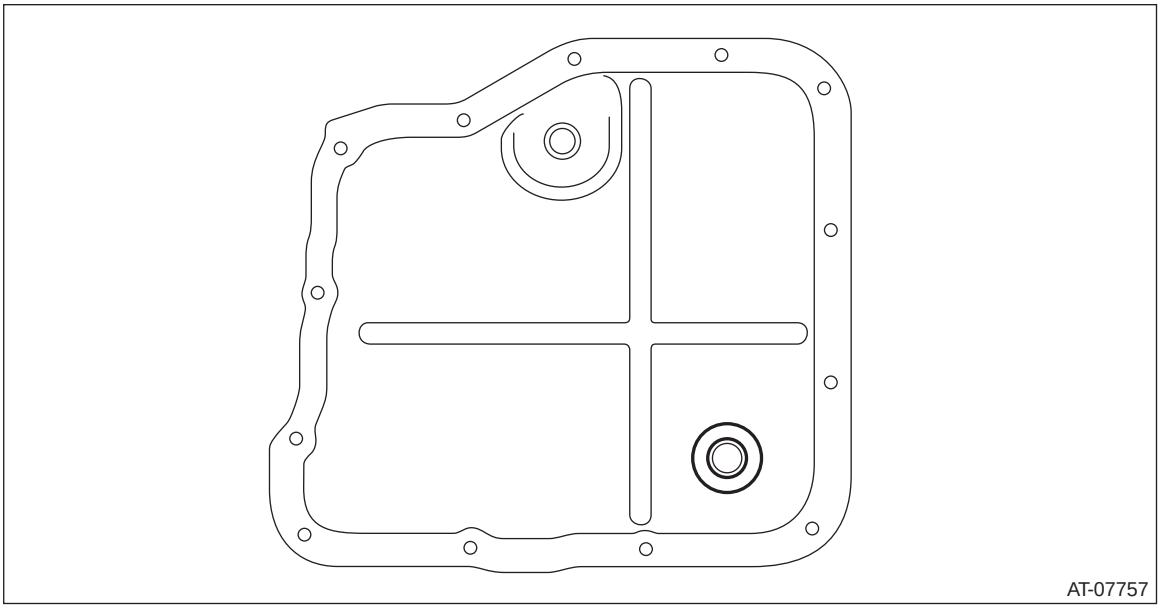
AT-07379

8) Connect the control valve harness connector.



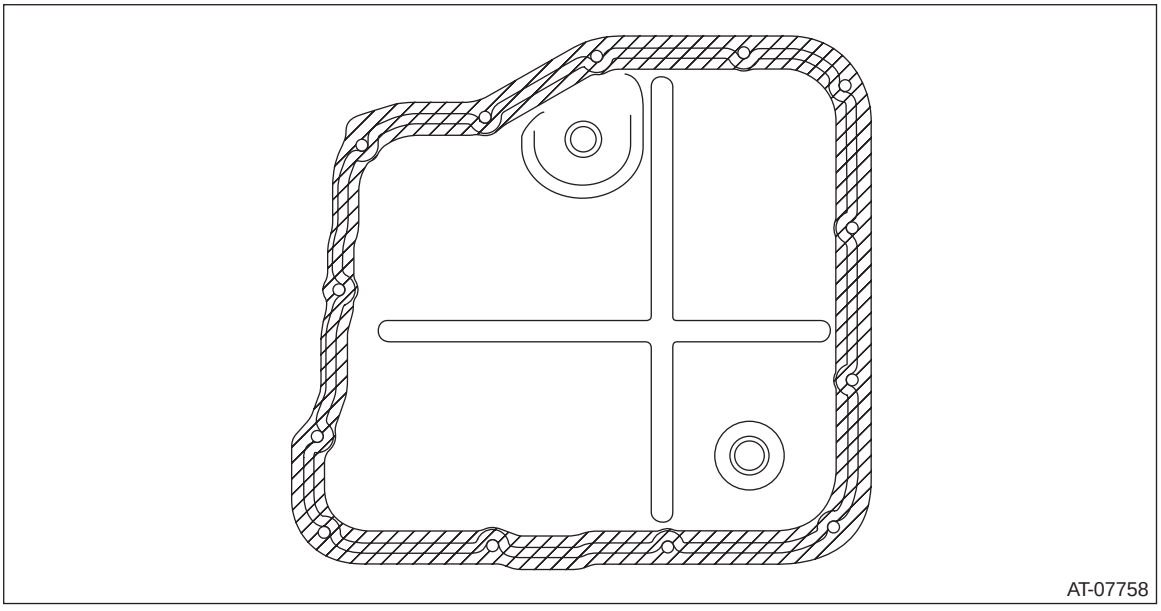
AT-07378

9) Clean the magnet.
10) Attach the magnet at the specified position of the oil pan.



11) Apply liquid gasket all around the oil pan mating surface seamlessly.

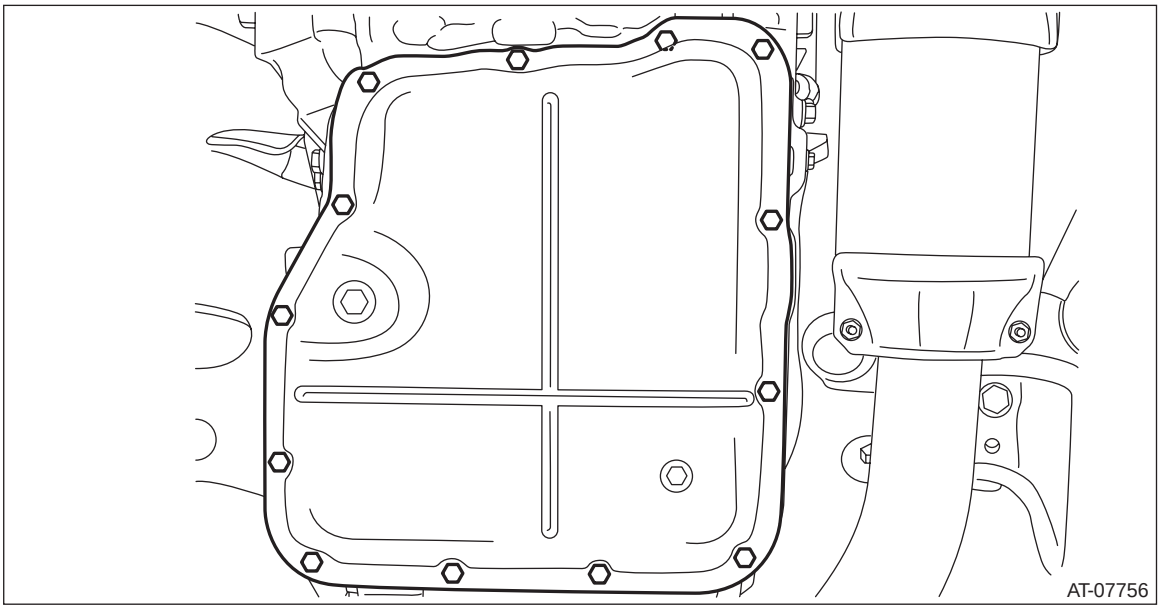
Liquid gasket:
THREE BOND 1217B (Part No. K0877YA020) or equivalent



12) Install the oil pan by equally tightening the bolts.

CAUTION:
Beware of the transmission harness getting caught in between.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

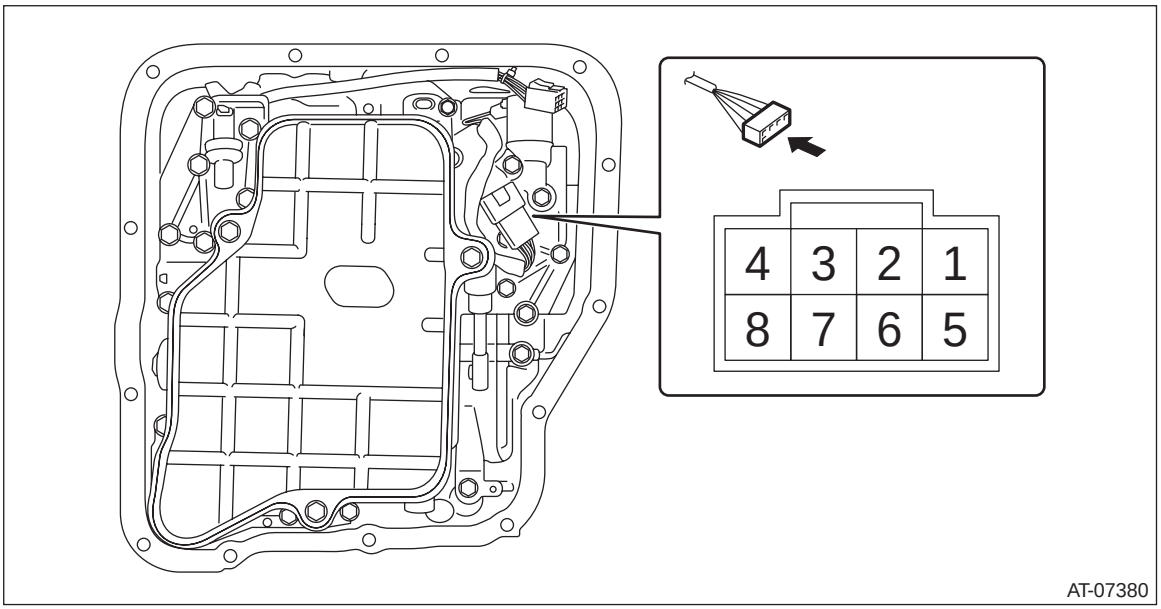


13) Connect the ground terminal to battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>
14) Fill with CVTF. <Ref. to CVT(TR690)-38, REPLACEMENT, CVTF.>
15) Adjust the CVTF level. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
16) Perform the operation of AT learning mode. <Ref. to CVT(diag)-23, Learning Control.>

C: INSPECTION

- Check each part for damage or dust.
- Check oil strainer for clogging.
- Measure the resistance of each solenoid.

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

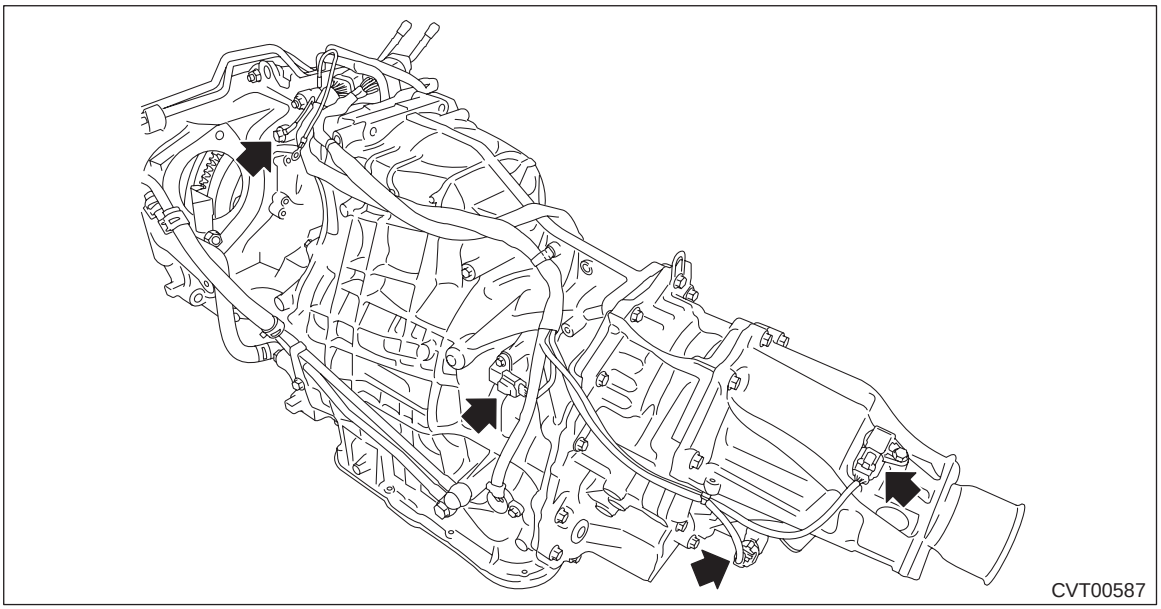


Solenoid	Terminal No.	Standard (Ω)
Secondary solenoid	No. 1 — control valve body	Approx. 6.6 Ω
Lock-up duty solenoid	No. 2 — control valve body	Approx. 12 Ω
F&R solenoid	No. 3 — control valve body	Approx. 5.3 Ω
Lock-up ON/OFF solenoid	No. 5 — control valve body	Approx. 16 Ω
Primary DOWN solenoid	No. 6 — control valve body	Approx. 12 Ω
Primary UP solenoid	No. 7 — control valve body	Approx. 12 Ω
AWD solenoid	No. 8 — control valve body	Approx. 3.2 Ω

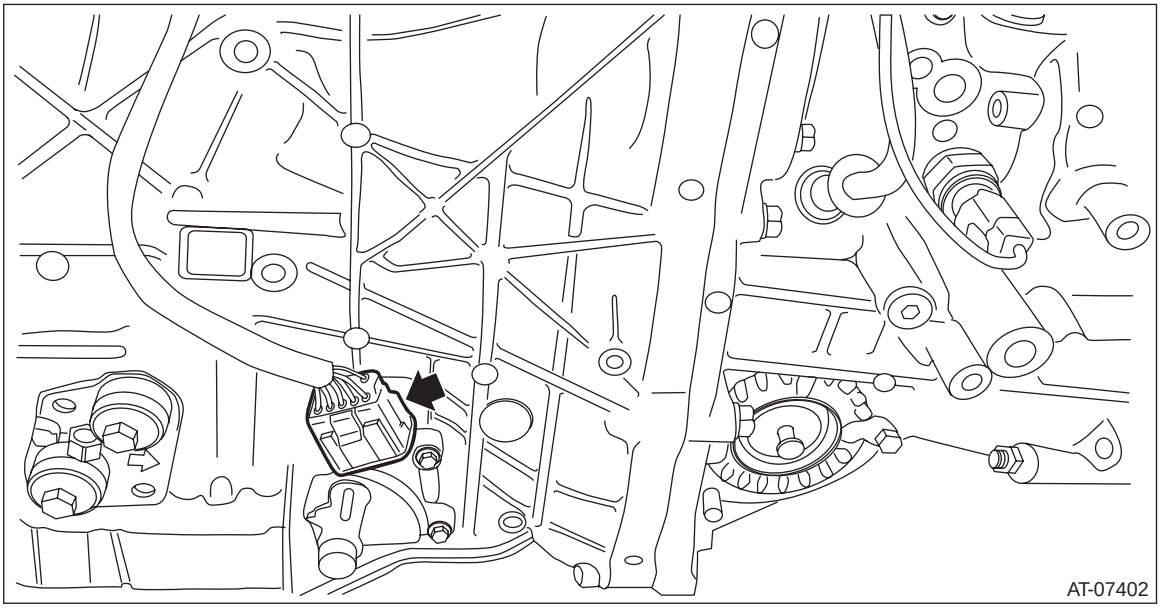
21.Transmission Harness

A: REMOVAL

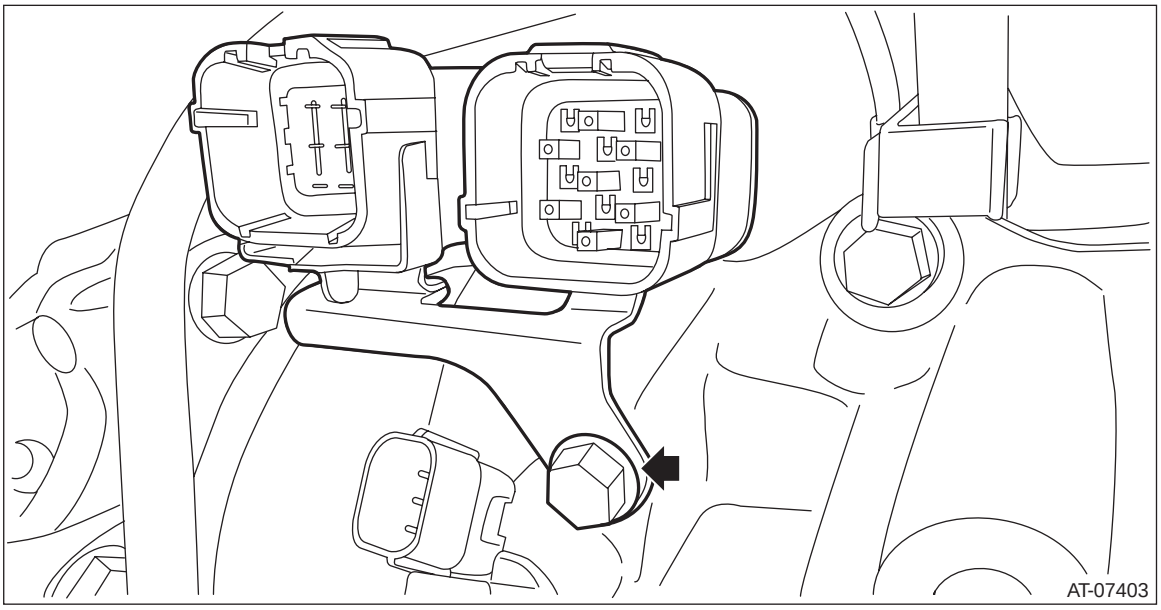
1) Remove the transmission from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Prepare for overhaul. <Ref. to CVT(TR690)-139, Preparation for Overhaul.>
3) Remove the transmission harness ground terminal and remove the harness connectors from front wheel speed sensor, rear wheel speed sensor and secondary speed sensor.



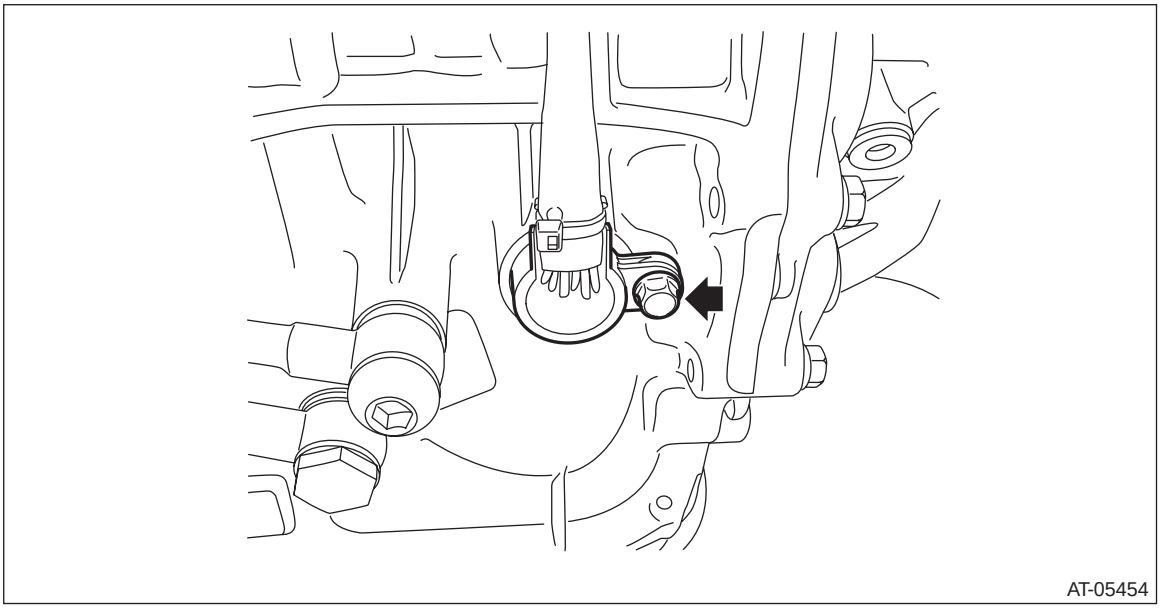
4) Remove the harness connectors from inhibitor switch, primary speed sensor and secondary pressure sensor.



5) Remove the transmission harness stay.



6) Remove transmission harness connector and inhibitor harness connector from harness stay.
7) Remove the control valve body. <Ref. to CVT(TR690)-112, REMOVAL, Control Valve Body.>
8) Remove the mounting bolt to pull out the bushing of transmission harness from transmission case round hole.



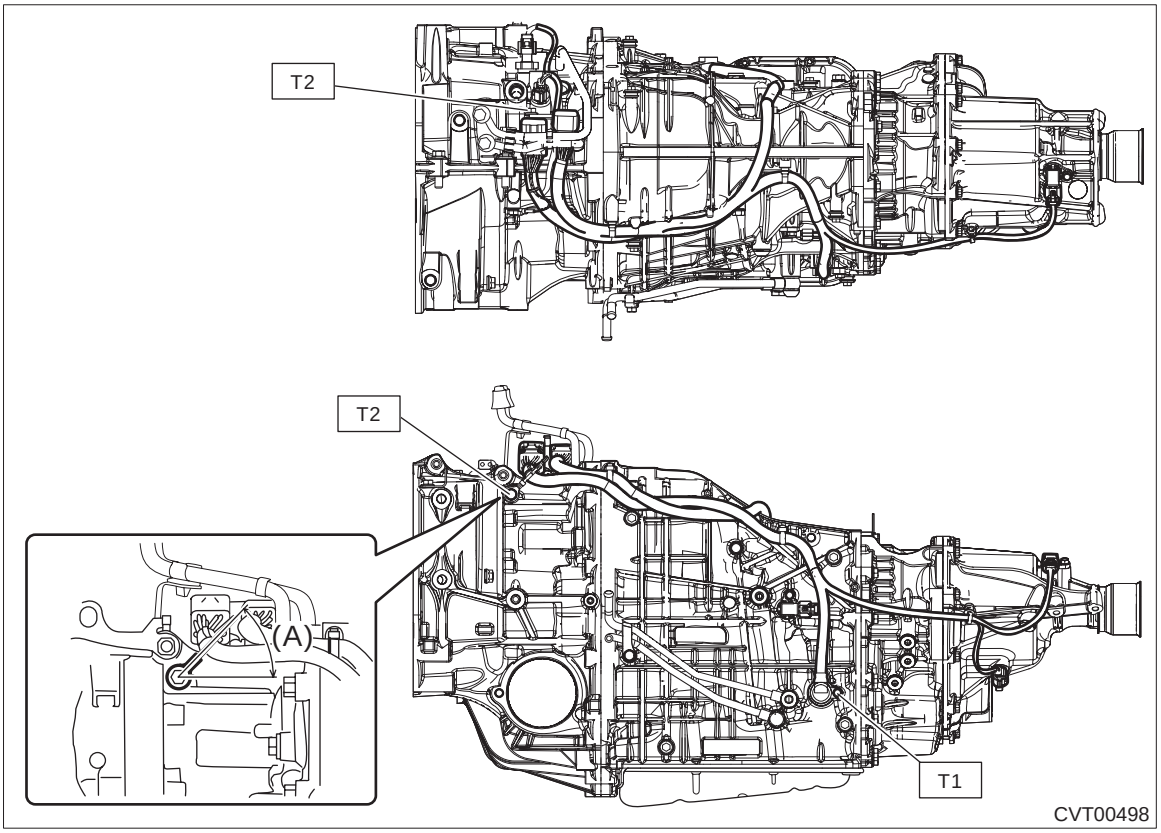
9) Remove the harness clip from transmission assembly.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
- Use new O-rings.
- Do not impact or bend the transmission harness because it has the oil temperature sensor inside.
- Install the transmission ground terminal at an approximately 45° angle (A).

Tightening torque:
T1: 5 N·m (0.5 kgf-m, 3.7 ft-lb)
T2: 16 N·m (1.6 kgf-m, 11.8 ft-lb)



C: INSPECTION

1) Visually check the harness and connector for damage or crack.
2) Check the harness terminal for rust, disconnection or poor contact.
3) Check the continuity between harness terminals and oil temperature sensor.

NOTE:
Refer to WIRING SECTION for transmission harness terminal and oil temperature sensor terminal. <Ref. to WI-152, WIRING DIAGRAM, CVT Control System.>

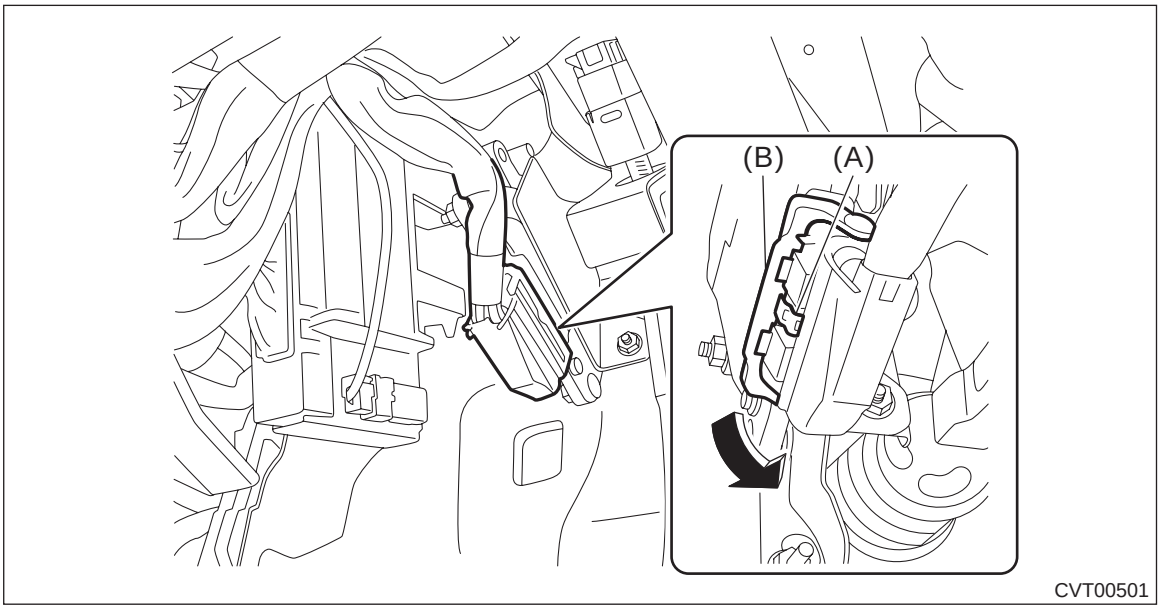
Harness continuity standard
Less than 1 Ω

Oil temperature sensor standard
Approx. 2.6 kΩ (at 20°C)

22.Transmission Control Module (TCM)

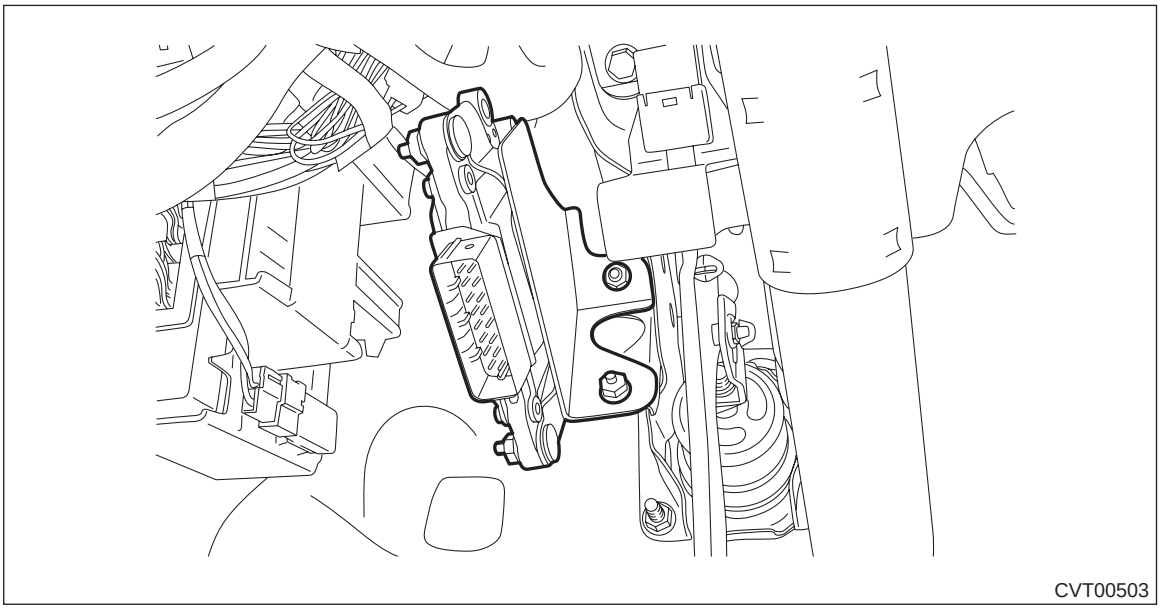
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>
2) Move the lock lever in the arrow direction while pressing the lock button, and disconnect the connector.



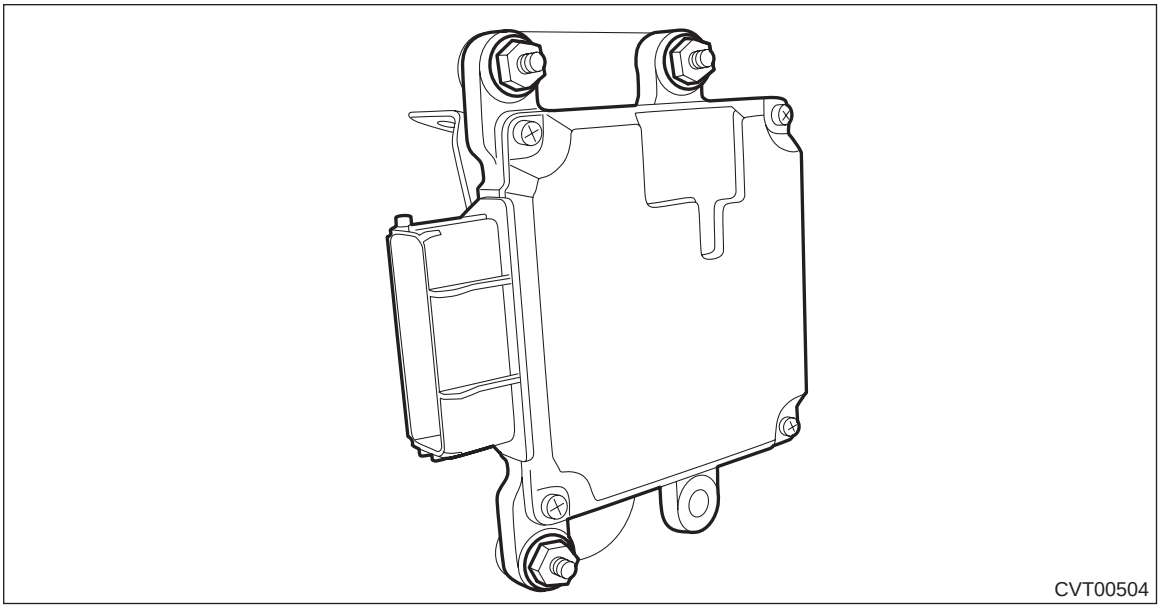
(A) Lock button
(B) Lock lever

3) Remove the TCM.

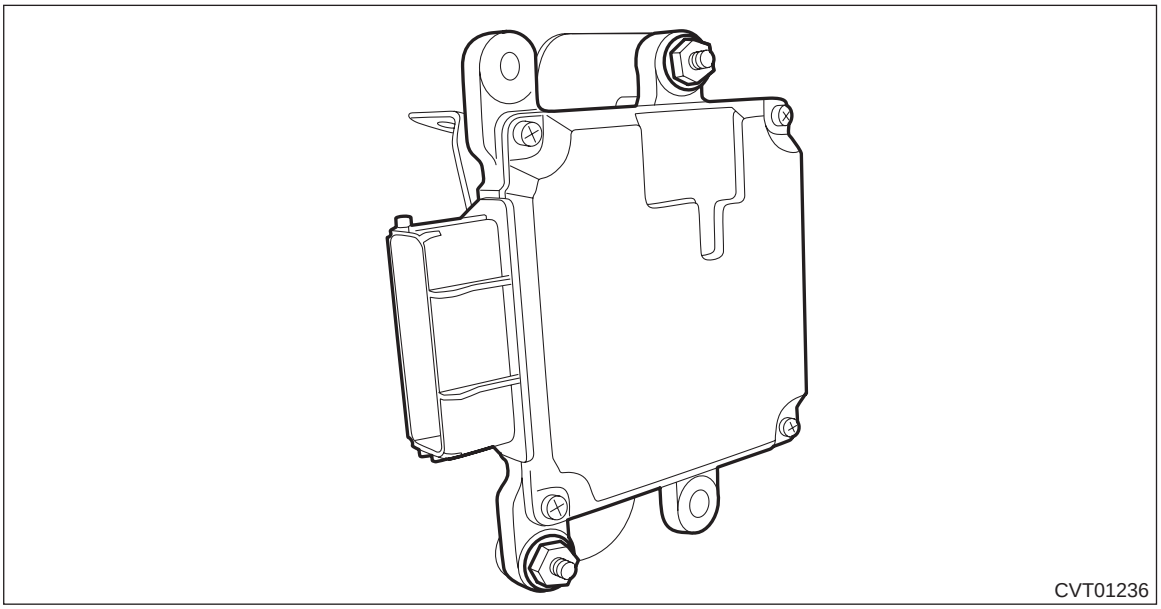


4) Remove the TCM from the bracket.

- Type A



- Type B



B: INSTALLATION

1) Install the TCM to the bracket.

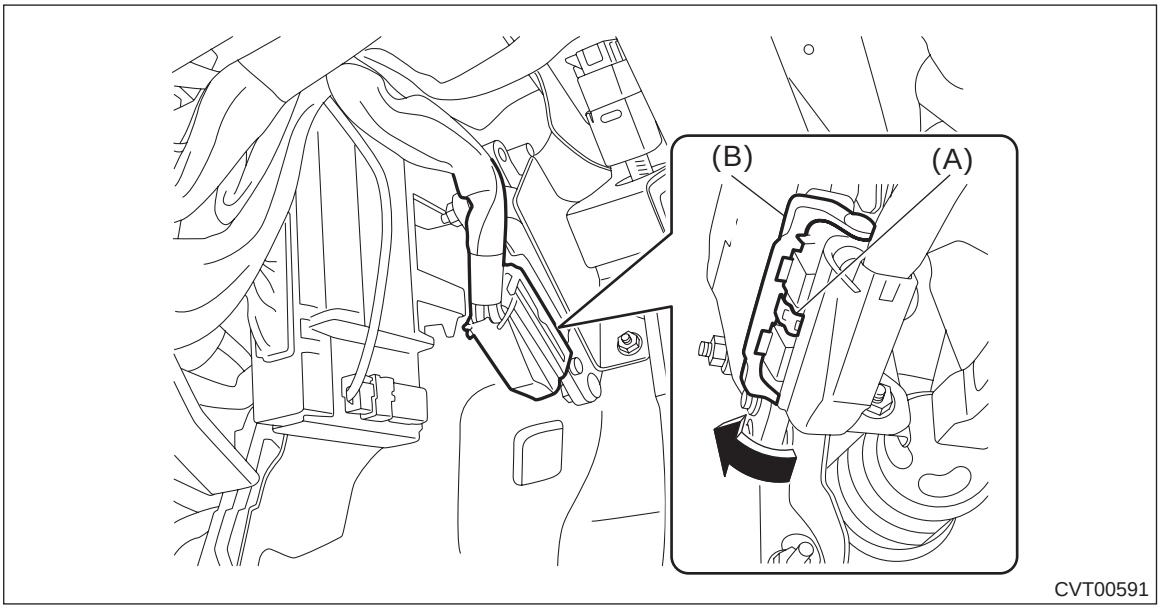
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the TCM.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the harness connector to TCM.

NOTE:
- Install the connector in the reverse order of removal.
- Move the lock lever in the arrow direction, and confirm that a clicking sound is heard.



(A) Lock button
(B) Lock lever

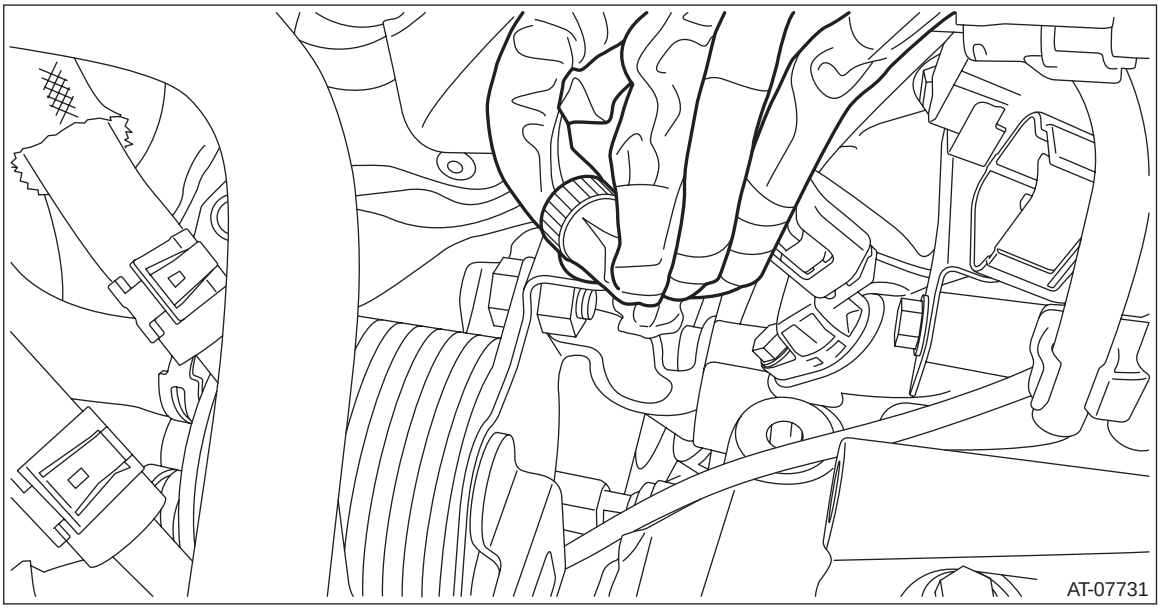
4) Connect the ground terminal to battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>
5) Perform the operation of AT learning mode. <Ref. to CVT(diag)-23, Learning Control.>

23.CVTF Cooler (With Warmer Function)

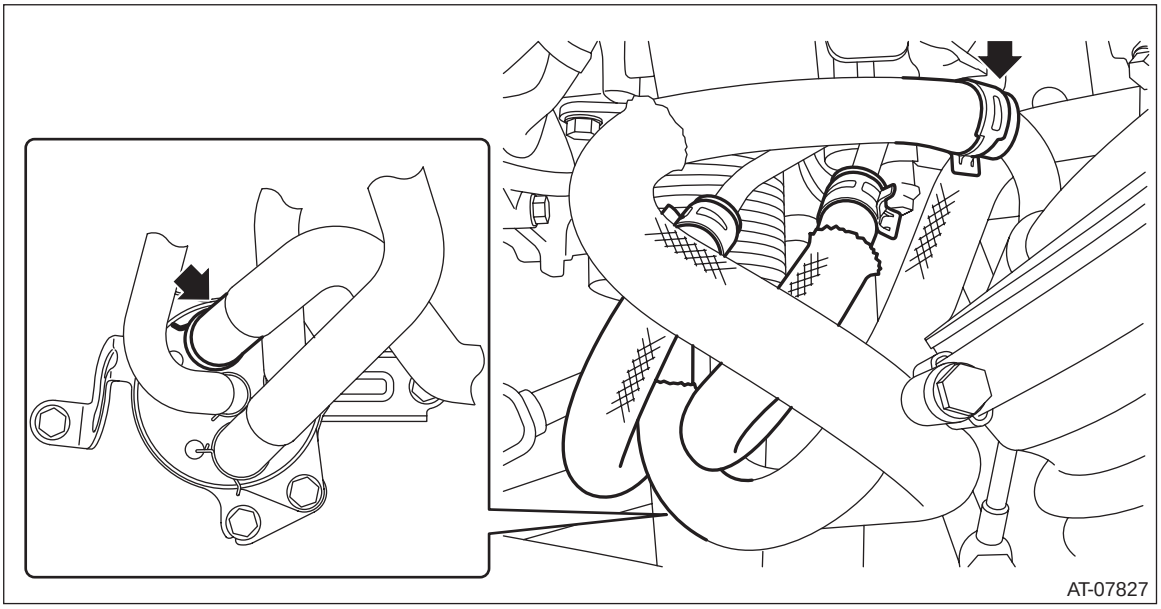
A: REMOVAL

CAUTION:
If the CVTF and engine coolant is spilt over exhaust pipe, wipe it off with cloth to avoid emitting smoke or causing a fire.

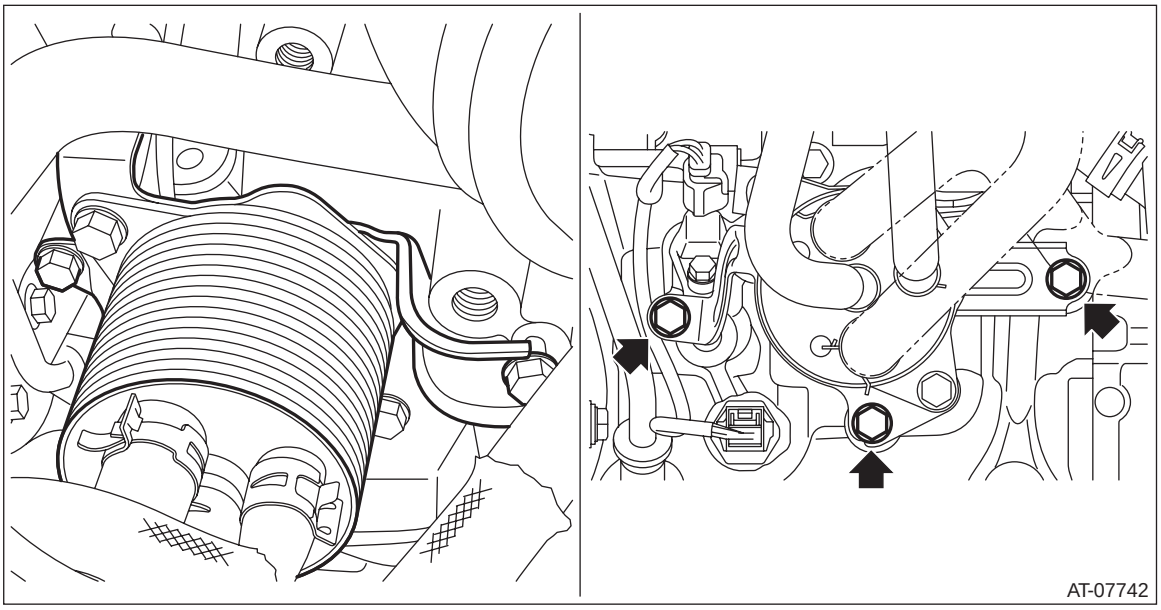
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>
2) Drain engine coolant. <Ref. to CO(w/o STI)-13, REPLACEMENT, Engine Coolant.>
3) Remove the intercooler. <Ref. to IN(w/o STI)-41, REMOVAL, Intercooler.>
4) Remove the harness clip from the CVTF cooler bracket.



5) Remove the engine coolant outlet hose, engine coolant inlet hose, CVTF inlet hose and CVTF outlet hose.

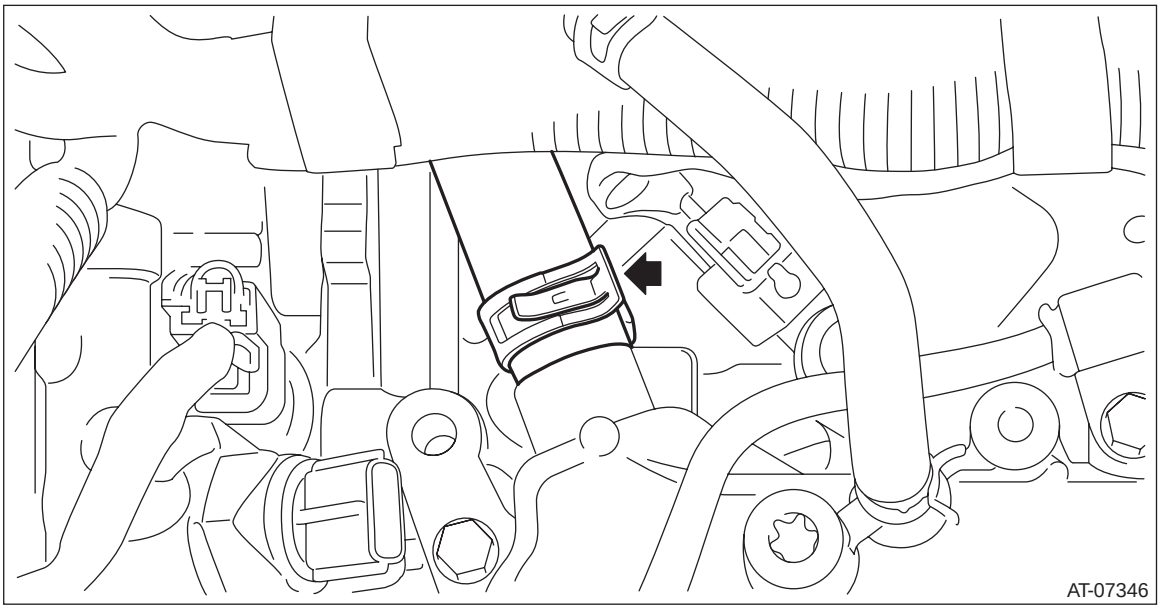


6) Remove the CVTF cooler (with warmer feature) from the transmission.



7) Remove the intake manifold, EGR valve, and the insulator. <Ref. to FU(w/o STI)-18, REMOVAL, Intake Manifold.> <Ref. to EC(w/o STI)-34, REMOVAL, EGR Control Valve.>

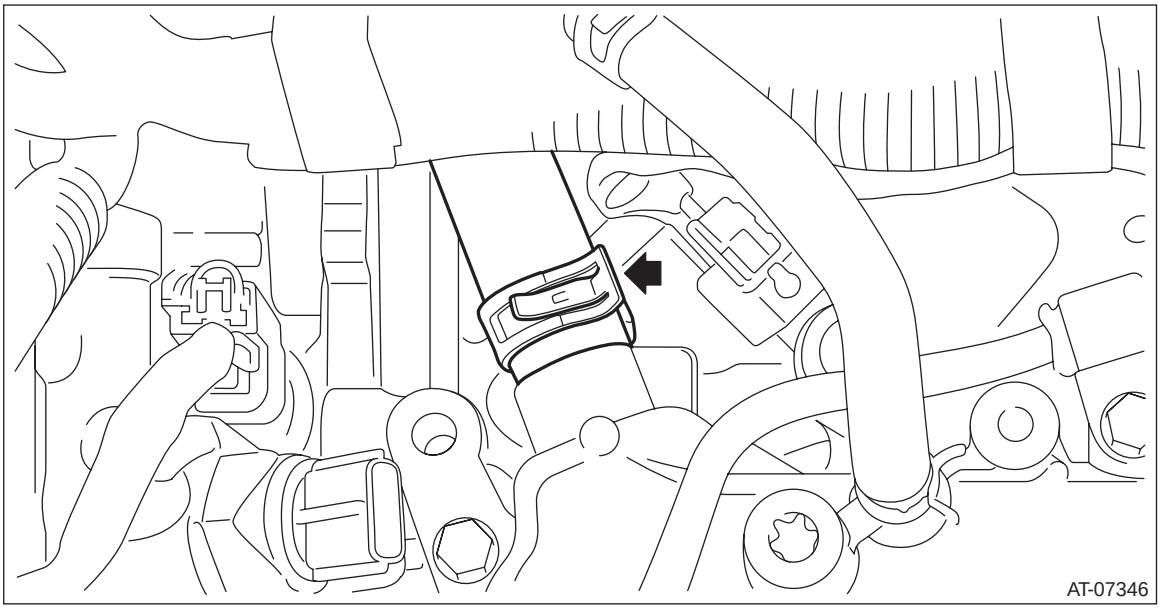
8) Disconnect the engine coolant inlet hose.



B: INSTALLATION

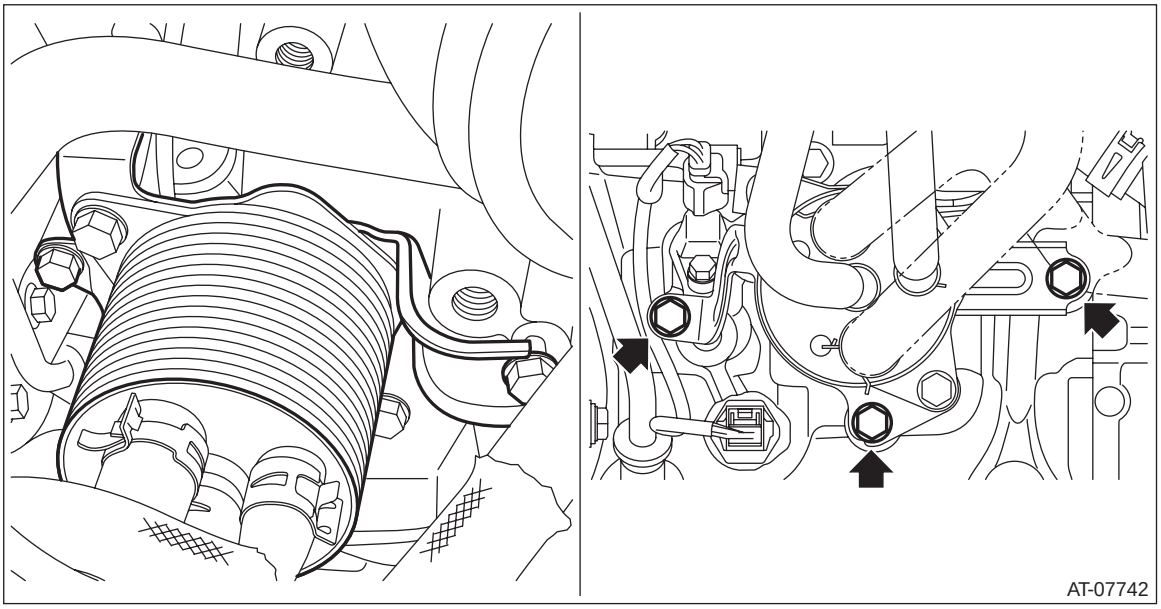
1) Connect the engine coolant inlet hose.

NOTE:
When installing the engine coolant inlet hose, the triangle marking should face upward.



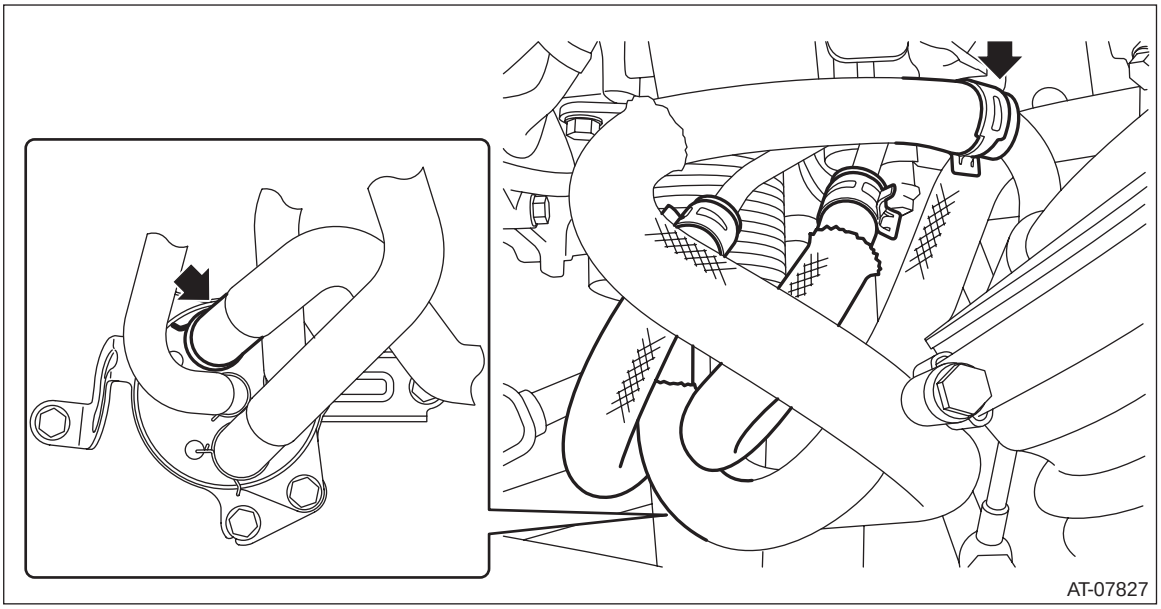
2) Install the insulator, EGR valve, and the intake manifold. <Ref. to FU(w/o STI)-28, INSTALLATION, Intake Manifold.> <Ref. to EC(w/o STI)-35, INSTALLATION, EGR Control Valve.>
3) Replace the CVTF inlet hose and the outlet hose.
4) Install the CVTF cooler (with warmer feature) to the transmission.

Tightening torque:
23 N·m (2.3 kgf-m, 17.0 ft-lb)



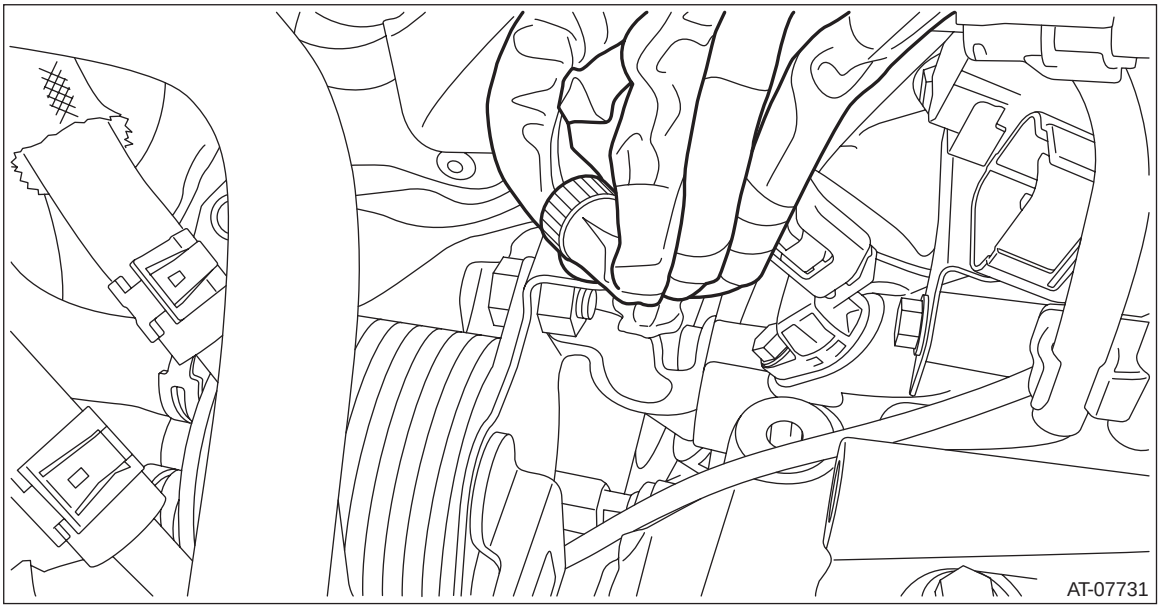
5) Install the engine coolant outlet hose, engine coolant inlet hose, CVTF inlet hose and CVTF outlet hose.

NOTE:
Use new CVTF hoses.



6) Check installation condition of hoses.
- Make sure the hoses do not interfere with each other or with other components.
- Check each hose for bent, excess curve, and twisting conditions.

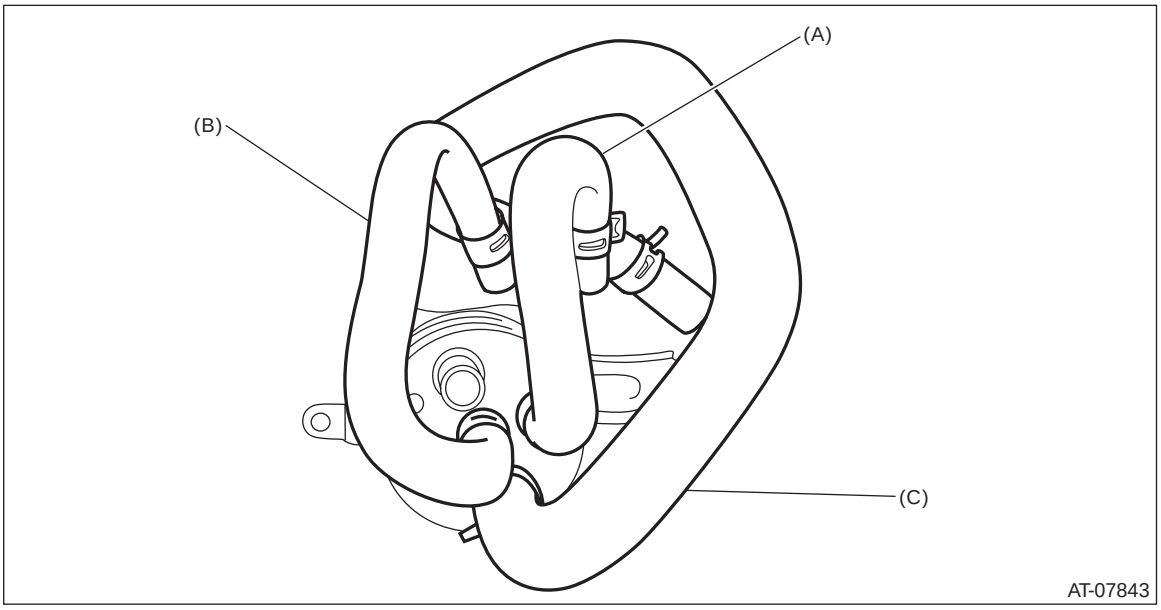
7) Install the harness clip to the CVTF cooler bracket.



8) Install the intercooler. <Ref. to IN(w/o STI)-43, INSTALLATION, Intercooler.>
9) Connect the ground terminal to battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>
10) Fill engine coolant. <Ref. to CO(w/o STI)-13, REPLACEMENT, Engine Coolant.>
11) Adjust the CVTF level. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>

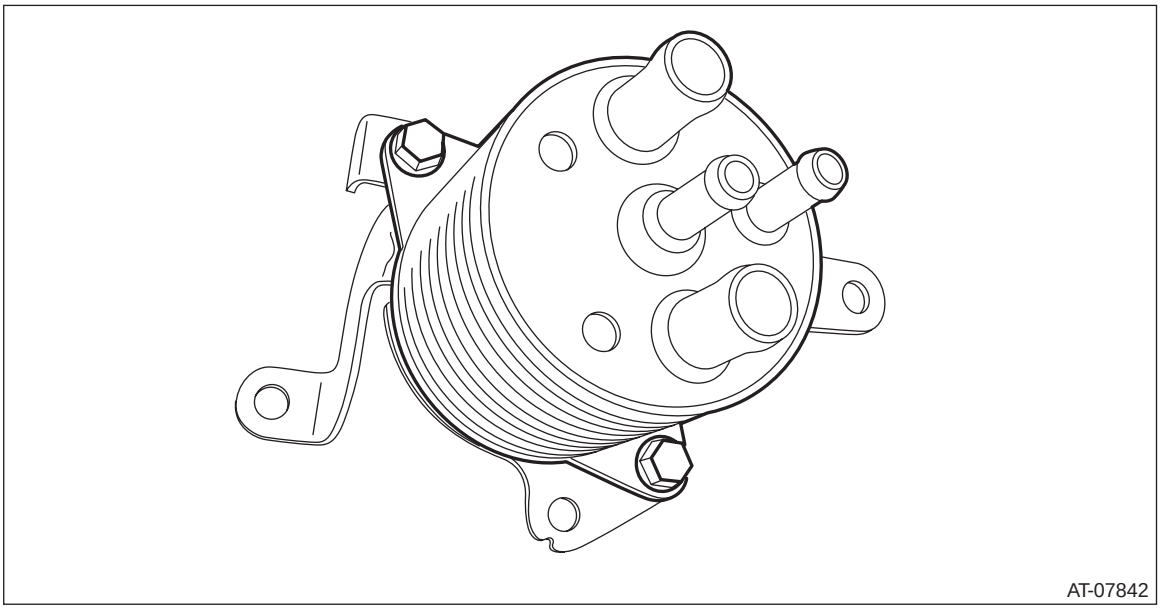
C: DISASSEMBLY

1) Remove the hoses from the CVTF cooler (with warmer feature).



(A) CVTF cooler outlet hose
(B) CVTF cooler inlet hose
(C) Engine coolant outlet hose

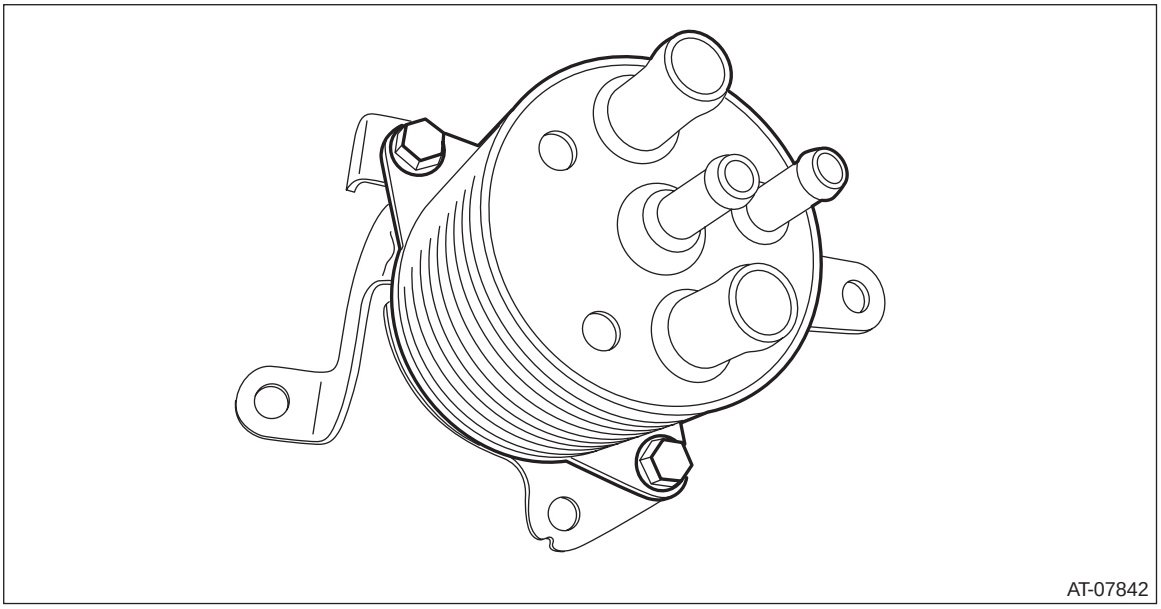
2) Remove the bracket from the CVTF cooler (with warmer feature).



D: ASSEMBLY

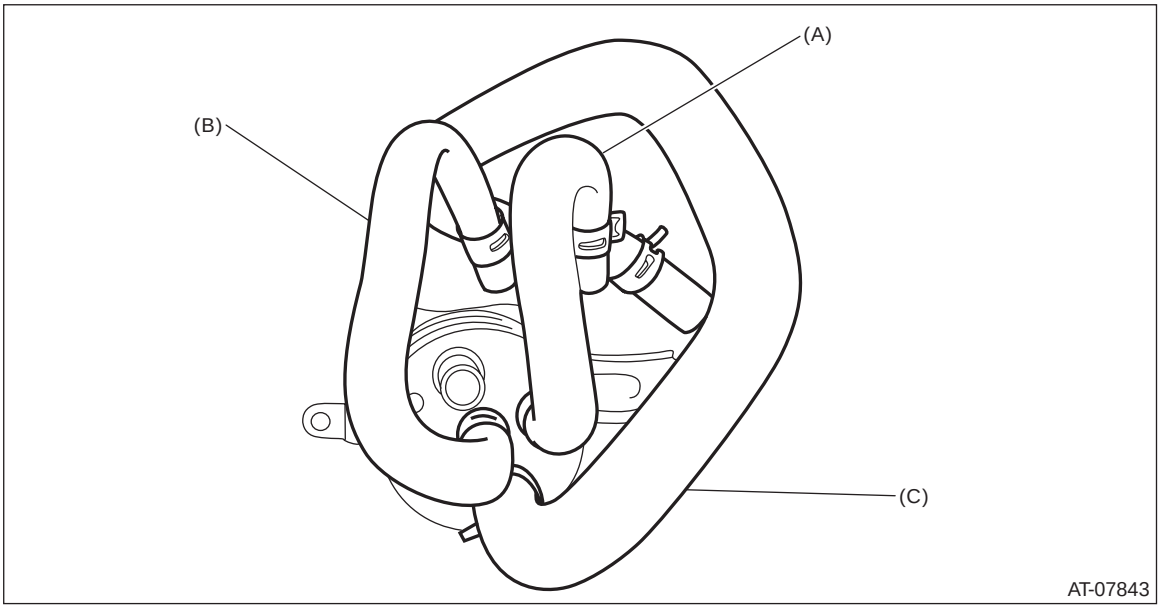
1) Attach the bracket.

Tightening torque:
23 N·m (2.3 kgf-m, 17.0 ft-lb)



2) Attach hoses to the CVTF cooler (with warmer feature).

NOTE:
- Use a new CVTF cooler hose.
- Install so that the CVTF cooler hose is not folded over, excessively bent or twisted.
- Insert the CVTF cooler hose to the specified position in the proper direction.



(A) CVTF cooler outlet hose
(B) CVTF cooler inlet hose
(C) Engine coolant outlet hose

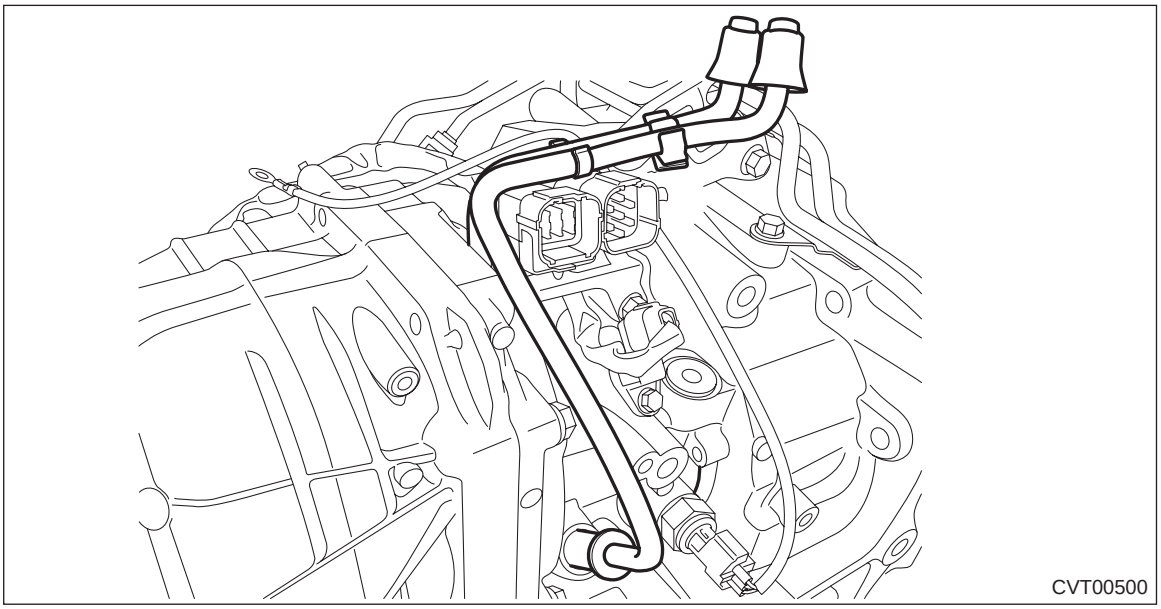
E: INSPECTION

Replace any faulty CVTF cooler hoses, CVTF cooler pipes and clamps found in the inspection below.
1) Check that there are no CVTF or engine coolant leaks from the connections.
2) Check the clamp for deformation.
3) Lightly bend the CVTF cooler hose and check for cracks in the surface or other damages.
4) Pinch the CVTF cooler hose with your fingers and check for poor elasticity. Also check for poor elasticity in the parts where the clamp was installed by pressing with your fingernail.
5) Check for peeling, cracks, and deformation at the tip of the hose.
6) Check the CVTF cooler (with warmer feature) for any damage.

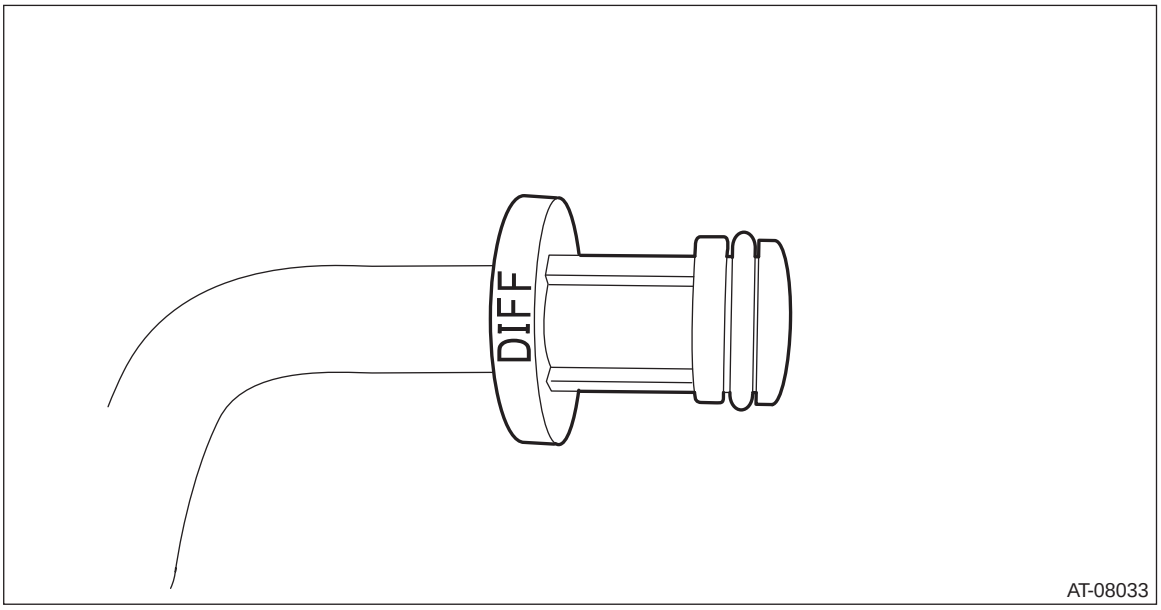
24.Air Breather Hose

A: REMOVAL

1) Remove the intercooler. <Ref. to IN(w/o STI)-41, REMOVAL, Intercooler.>
2) Remove the two air breather hoses.



3) Remove the air breather cap.
4) Remove the oil cap.



B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Use new O-rings.

C: INSPECTION

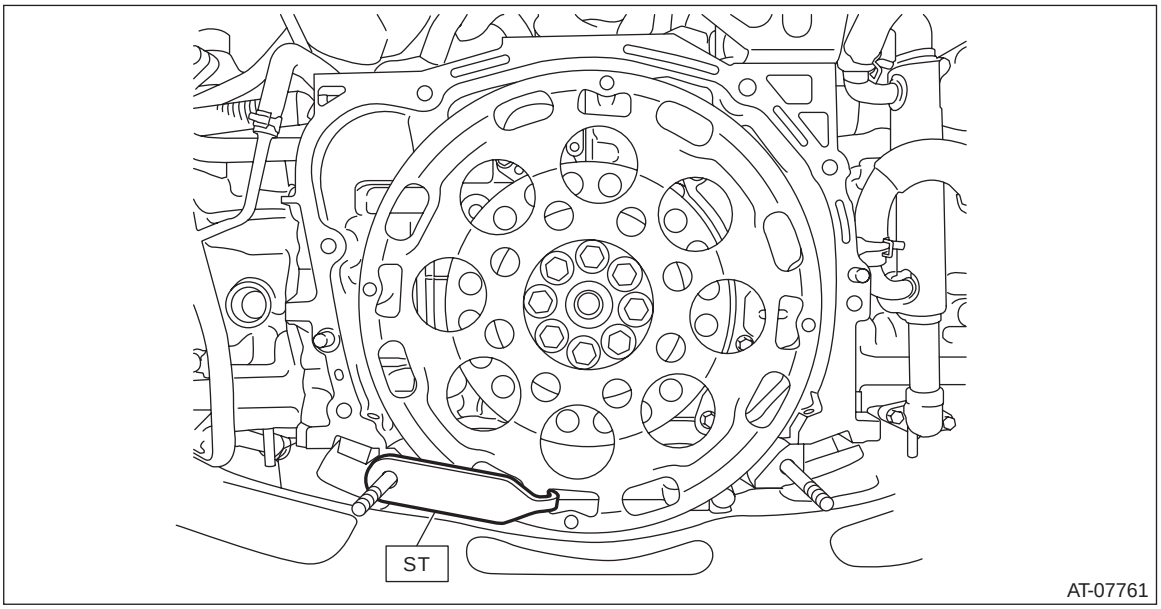
- Check the hose for peeling, crack or clogging.
- Check the oil cap is not cracked or clogged.
- Check O-ring of oil cap is not damaged.

25.Drive Plate

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Set the ST.

NOTE:
Set the ST to the drive plate referring to the illustration.
ST 498497300 CRANKSHAFT STOPPER

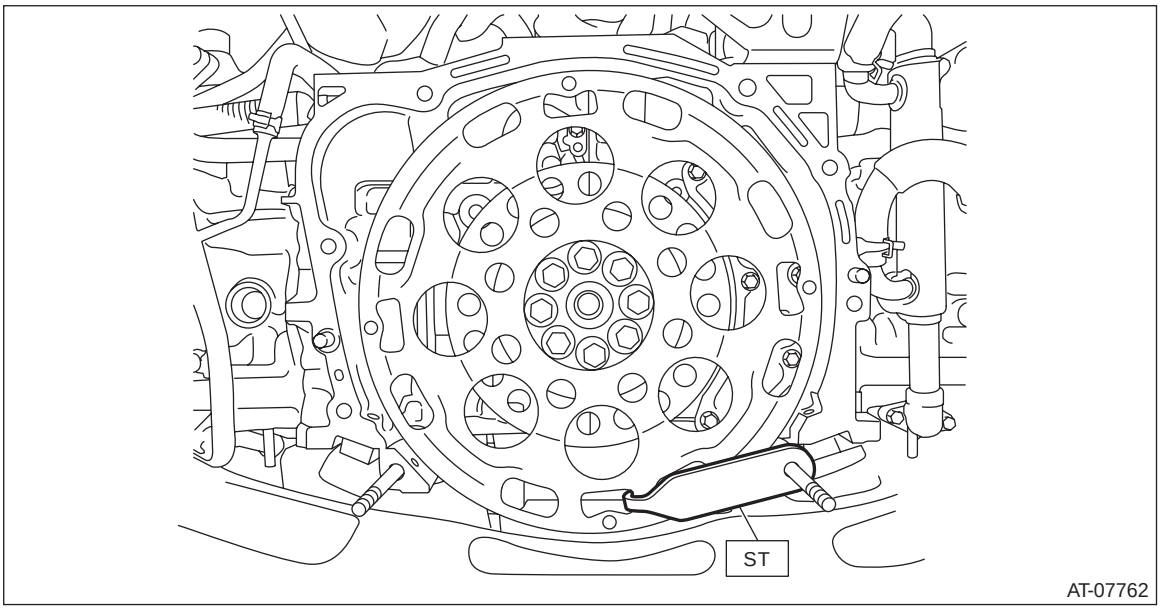


3) Remove the drive plate and reinforcement drive plate.

B: INSTALLATION

1) Temporarily install the drive plate and reinforcement drive plate.
2) Set the ST.

NOTE:
Set the ST to the drive plate referring to the illustration.
ST 498497300 CRANKSHAFT STOPPER



3) Tighten the drive plate mounting bolt in two stages.

NOTE:
Fix the engine unit.
(1) Tighten the drive plate mounting bolt.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)
(2) While checking the tightening angle with the angle gauge, tighten the drive plate mounting bolts to the specified angle.

Tightening angle:
30° — 35°
4) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

Check the drive cable for damage.

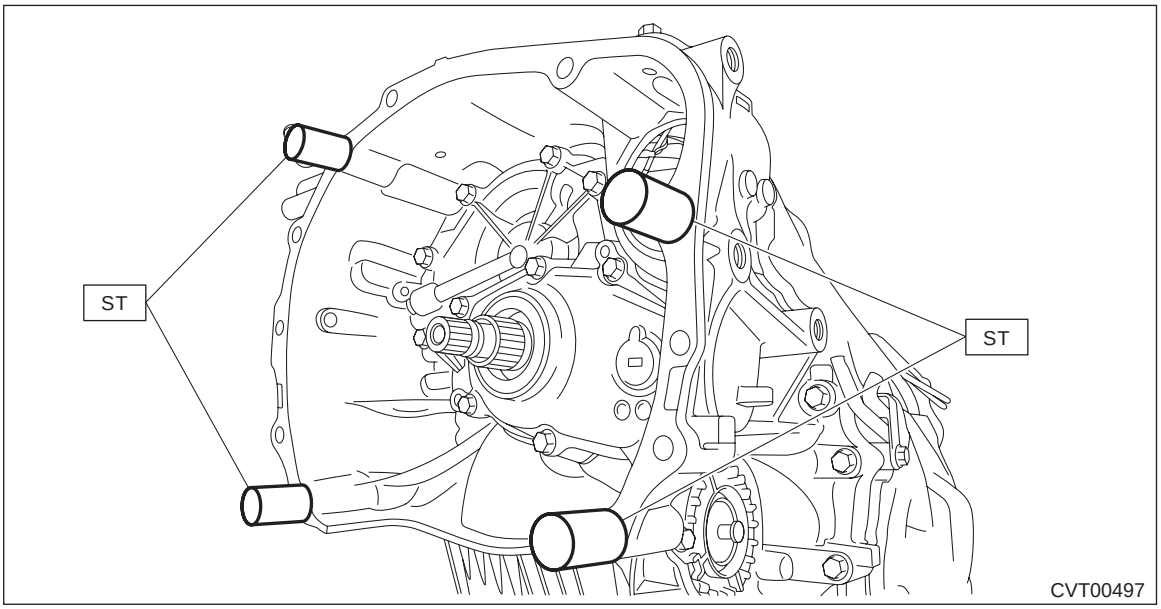
26.Preparation for Overhaul

A: GENERAL DESCRIPTION

Before disassembling and assembling the transmission, follow the following procedures to prepare.

B: PROCEDURE

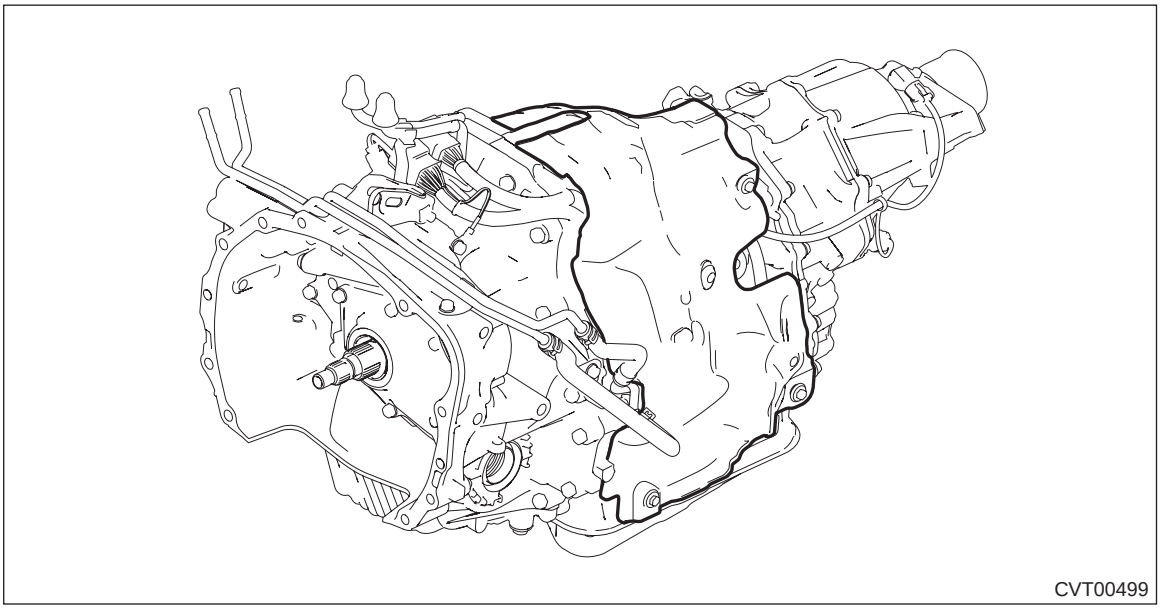
1) Clean the transmission exterior.
2) Remove the torque converter assembly. <Ref. to CVT(TR690)-140, REMOVAL, Torque Converter Assembly.>
3) Attach the ST on the transmission.
ST 18632AA000 STAND ASSY



4) Remove the transmission cover on the transmission upper side.

NOTE:
Install using the following tightening torque.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)



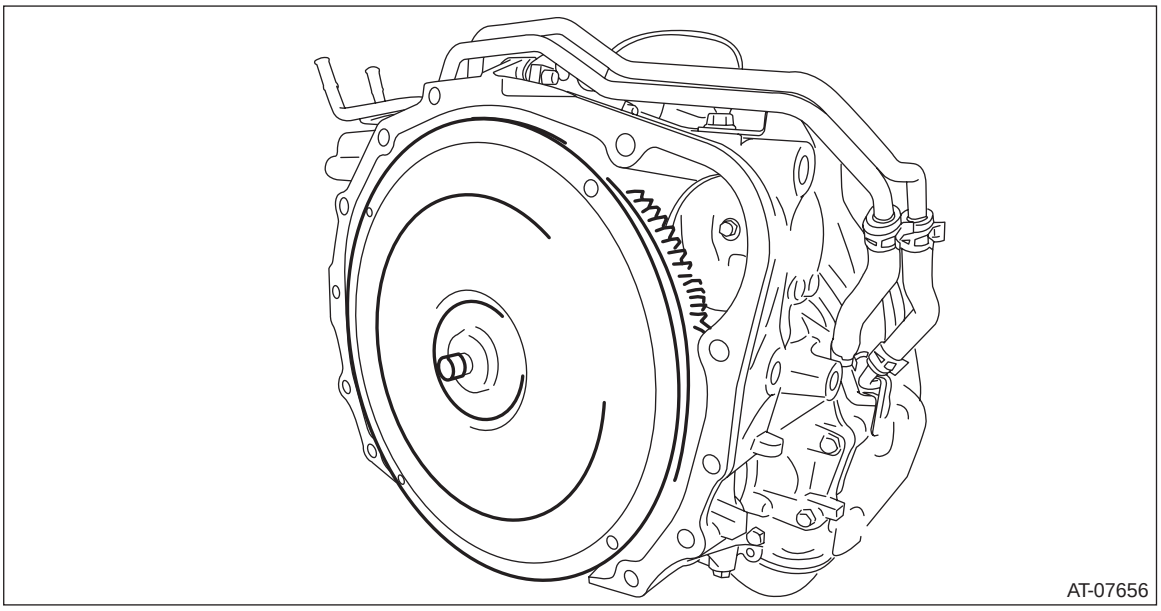
5) Place the transmission assembly on end.

27.Torque Converter Assembly

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Pull out the torque converter assembly horizontally.

CAUTION:
Do not scratch the inside of engaging parts.



3) Remove the O-ring from the front reduction drive gear.

B: INSTALLATION

1) Install the O-ring to front reduction drive gear.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-ring.

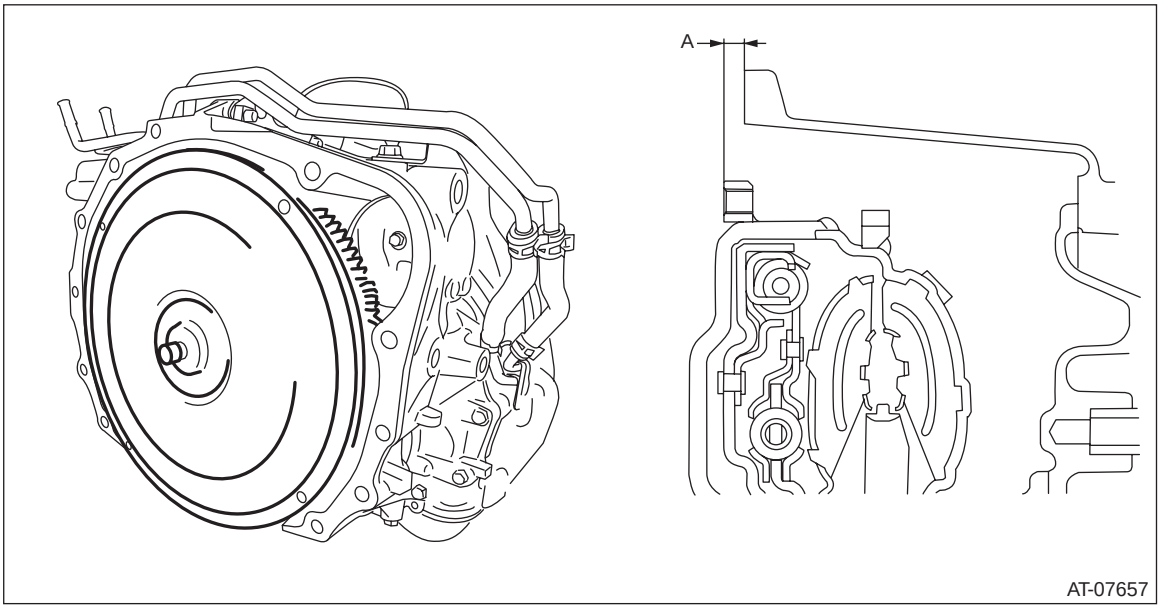
2) While holding the torque converter assembly by hand, carefully install it into the torque converter case.

NOTE:
- Apply CVTF to the oil seal lip.
- Do not damage the oil seal and O-ring.

3) Engage the splines while gently rotating the torque converter assembly by hand, and securely insert the assembly.

4) Measure depth “A”, from converter case end surface to drive plate contacting surface.

Standard (reference):
6.8 mm (0.268 in) or less



5) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

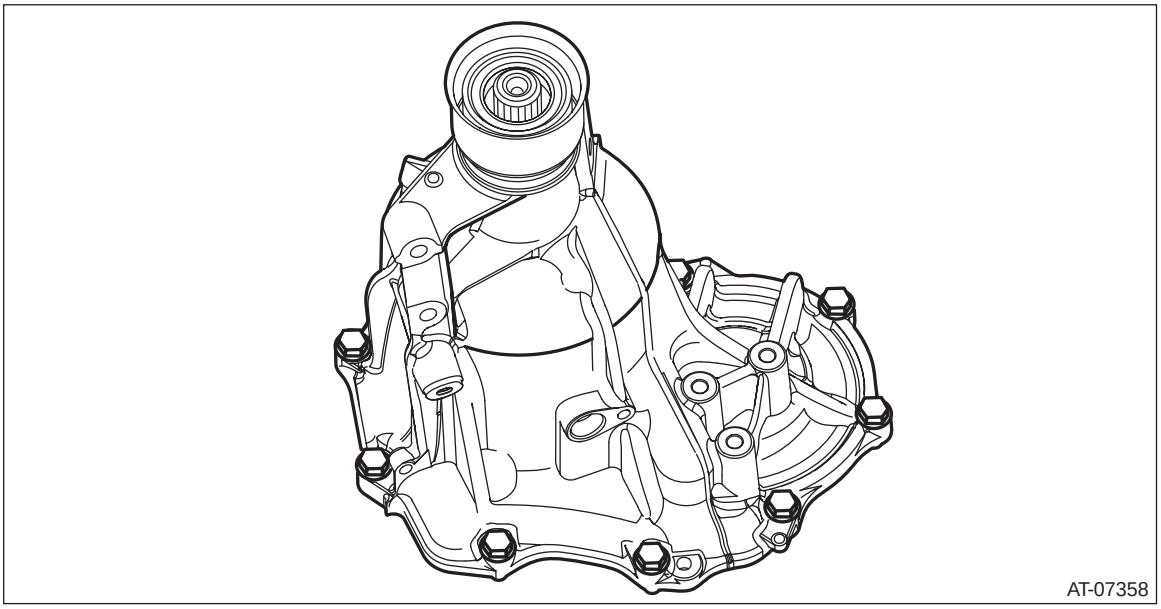
- Check the protrusion of torque converter center (front boss) is not deformed or damaged.
- Check the ring gear and exterior for break or damage.

28.Extension Case

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the front wheel speed sensor. <Ref. to CVT(TR690)-105, REMOVAL, Front Wheel Speed Sensor.>
3) Remove the rear wheel speed sensor. <Ref. to CVT(TR690)-107, REMOVAL, Rear Wheel Speed Sensor.>
4) Remove the harness clip, and remove the extension case.

NOTE:
The total number of extension case mounting bolts is 10.

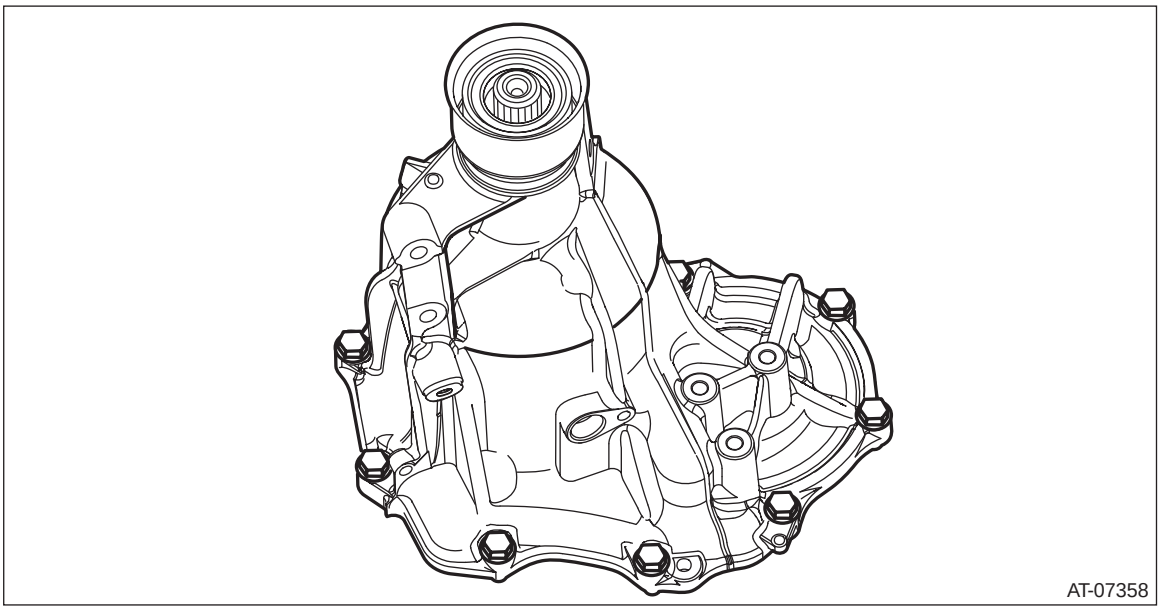


B: INSTALLATION

1) Clean the mating surface of the extension case and intermediate case.
2) Select the rear drive shaft shim. <Ref. to CVT(TR690)-149, ADJUSTMENT, Rear Drive Shaft.>
3) Select the shim for transfer reduction driven gear. <Ref. to CVT(TR690)-161, ADJUSTMENT, Transfer Reduction Driven Gear.>
4) Install the selected rear drive shaft shims to the rear drive shaft.
5) Attach the selected shim to transfer reduction driven gear assembly.
6) Install the gasket and the extension case.

NOTE:
Use a new gasket.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

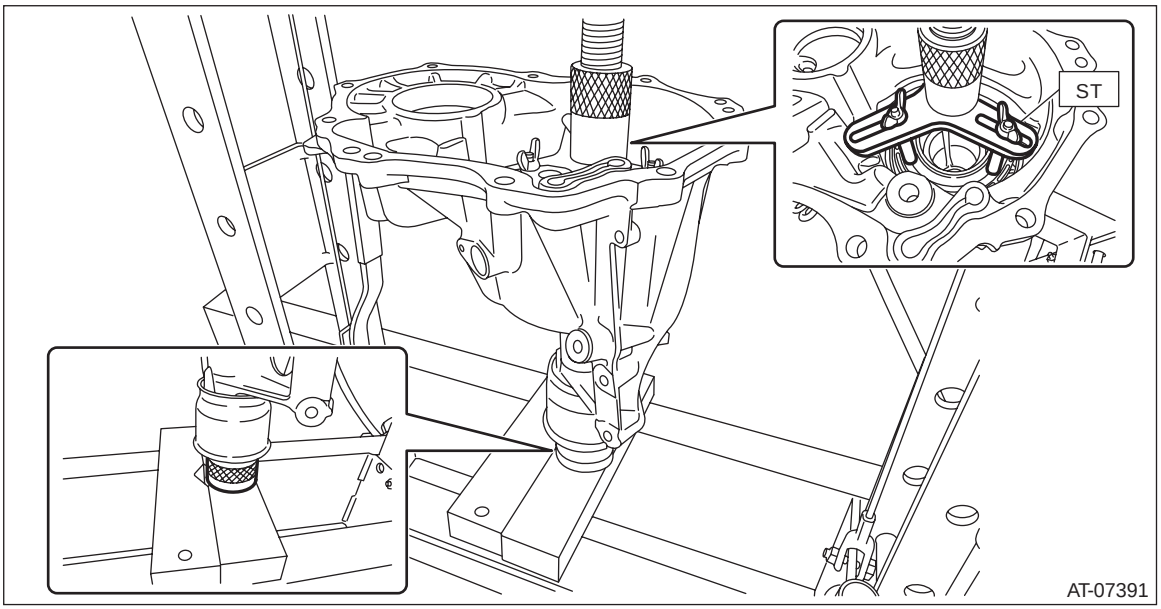


7) Install the rear wheel speed sensor. <Ref. to CVT(TR690)-108, INSTALLATION, Rear Wheel Speed Sensor.>
8) Install the front wheel speed sensor. <Ref. to CVT(TR690)-105, INSTALLATION, Front Wheel Speed Sensor.>
9) Install the transmission assembly. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

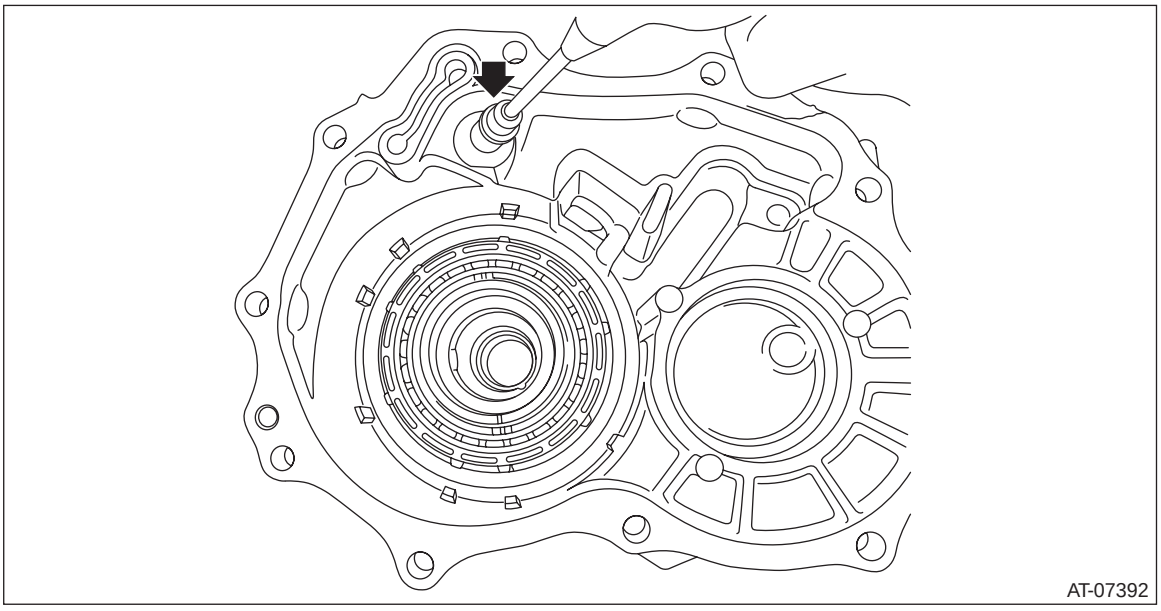
C: DISASSEMBLY

1) Remove the dust cover from extension case.
2) Remove the snap ring using the ST and press.

CAUTION:
If the operation is performed with the dust cover installed, place a table between the extension case and the press table.
ST 18762AA001 COMPRESSOR SPECIAL TOOL



3) Supply compressed air to remove the transfer clutch piston.



4) Remove the D-ring and O-ring from the transfer clutch piston.
5) Remove the extension case oil seal from the extension case.
6) Remove the plug from the extension case.

D: ASSEMBLY

1) Install the O-ring and plug.

NOTE:
Use new O-rings.

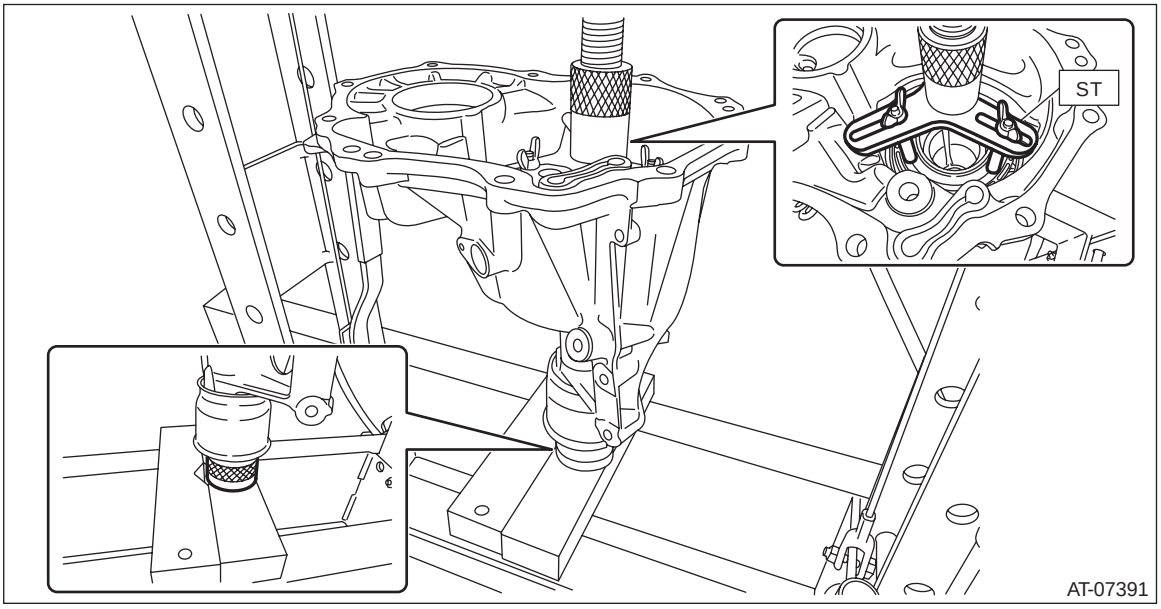
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Install the D-ring and O-ring to the transfer clutch piston.

NOTE:
- Use new D-rings and O-rings.
- Apply CVTF to the D-rings and O-rings of the transfer clutch piston assembly.

3) Insert the transfer clutch piston, spring retainer, return spring and clutch spring retainer.
4) Using the ST and a press, install the snap ring.

CAUTION:
If the operation is performed with the dust cover installed, place a table between the extension case and the press table.
ST 18762AA001 COMPRESSOR SPECIAL TOOL



5) Press-fit the dust cover into extension case.
6) Install the extension case oil seal to extension case.
ST 498057300 INSTALLER

E: INSPECTION

- Use compressed air to make sure the extension case routes are not clogged or leaking.
- Check the D-rings and O-rings for damage.
- Make sure the snap ring is not worn and the return spring has no permanent distortion, damage, or deformation.
- Check the ball bearing for smooth rotation.
- Check the ball bearing for excessive looseness.
- Check there is no leak of CVTF from the joint between extension case and intermediate case.
- Check there is no damage or cracks on the extension case.

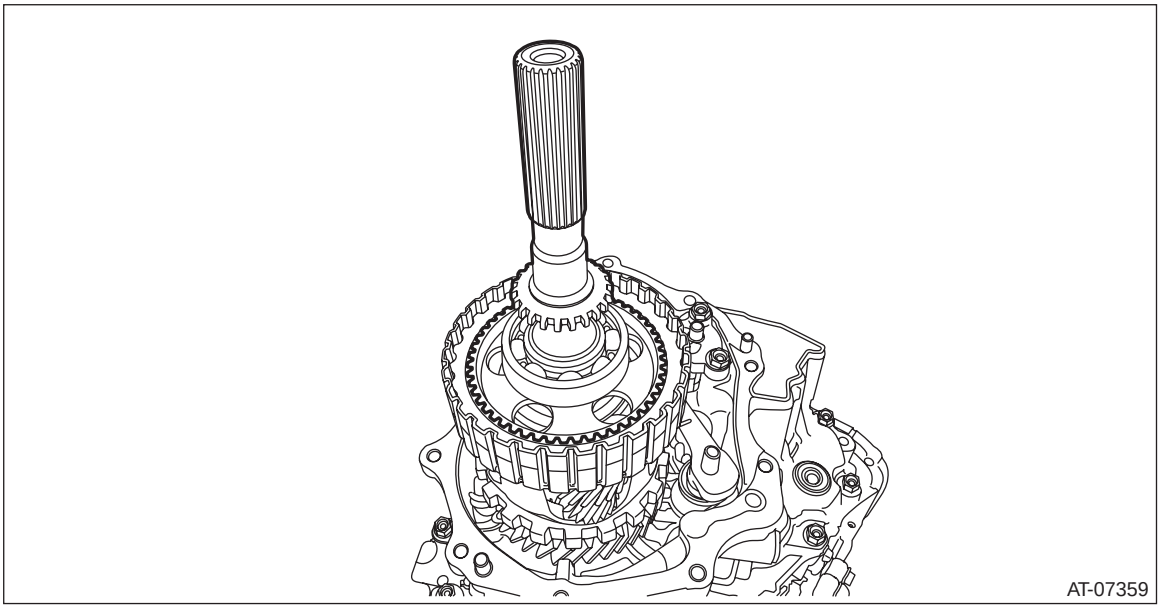
F: ADJUSTMENT

NOTE:
When replacing the extension case, select the rear drive shaft shim and transfer reduction driven gear shim. <Ref. to CVT(TR690)-149, ADJUSTMENT, Rear Drive Shaft.> <Ref. to CVT(TR690)-161, ADJUSTMENT, Transfer Reduction Driven Gear.>

29.Rear Drive Shaft

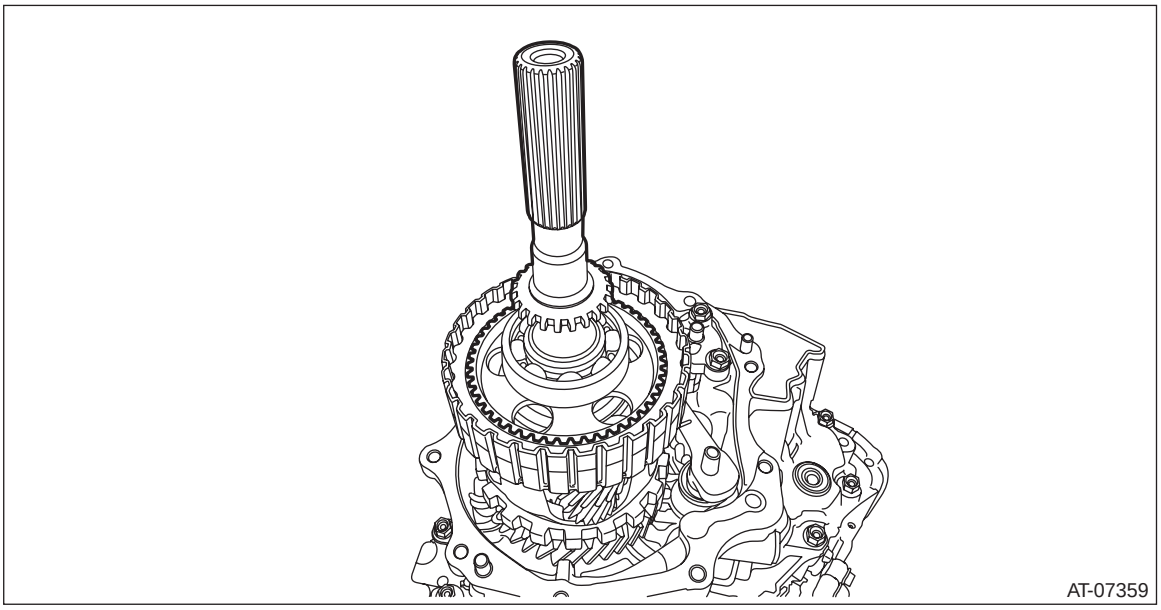
A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-142, REMOVAL, Extension Case.>
3) Remove the rear drive shaft.



B: INSTALLATION

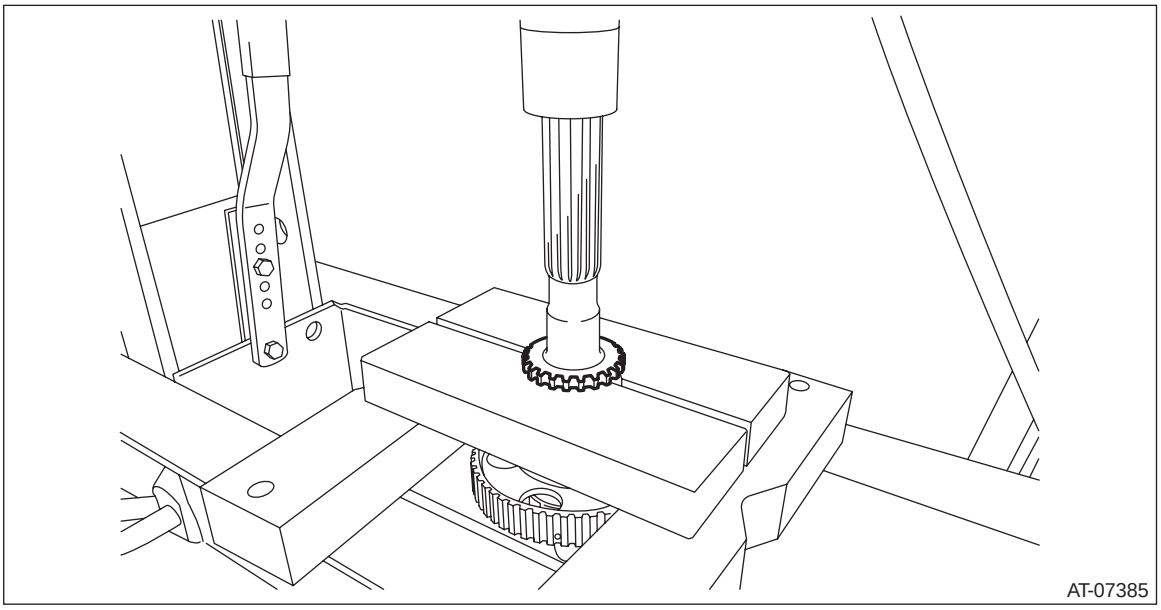
1) Install the rear drive shaft.



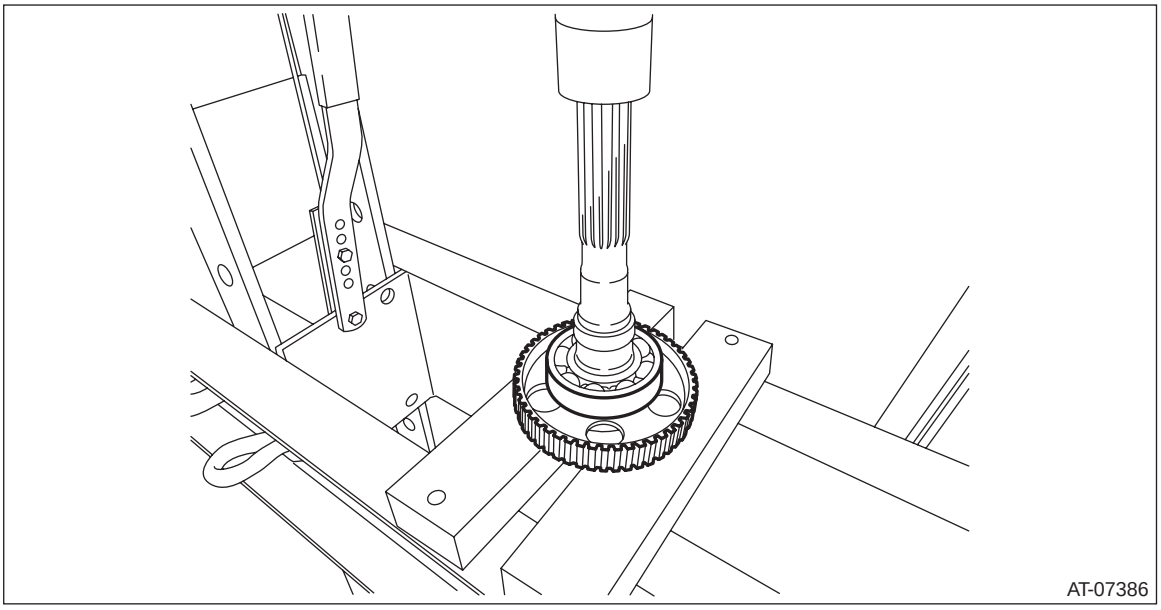
2) Select the rear drive shaft shim. <Ref. to CVT(TR690)-149, ADJUSTMENT, Rear Drive Shaft.>
3) Install the selected rear drive shaft shims to the rear drive shaft.
4) Install the extension case. <Ref. to CVT(TR690)-143, INSTALLATION, Extension Case.>
5) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Using a press, remove the revolution gear.



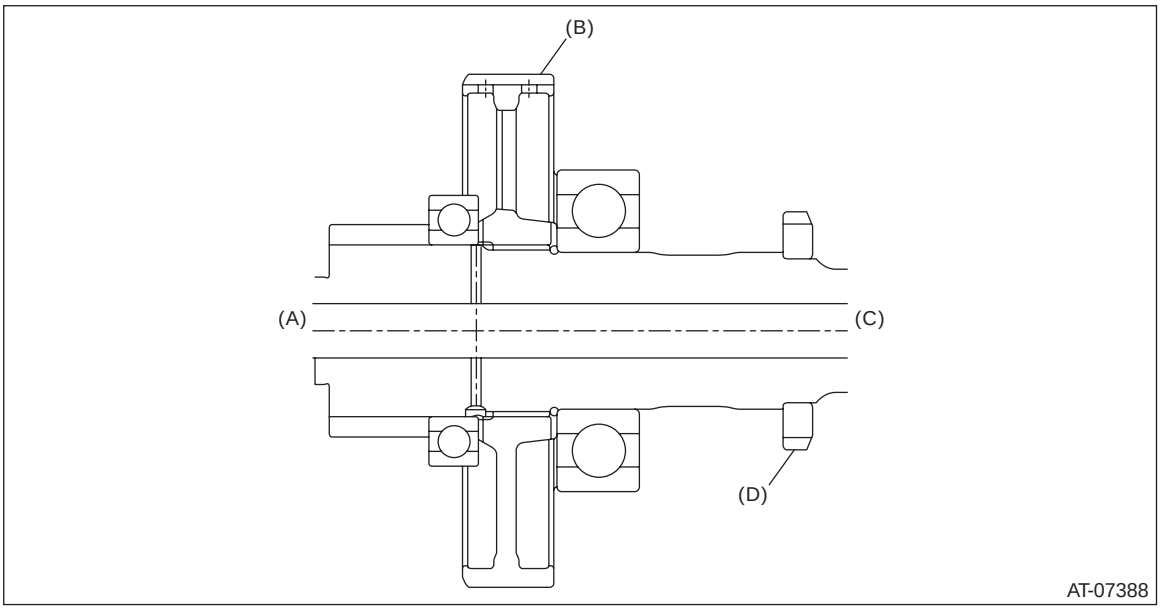
2) Using a press, remove the front and rear ball bearings and clutch hub.



D: ASSEMBLY

Assemble in the reverse order of disassembly.

NOTE:
- Use new ball bearings and revolution gear.
- Apply CVTF to press-fitting surface of ball bearing.
- Make sure of the direction of clutch hub.



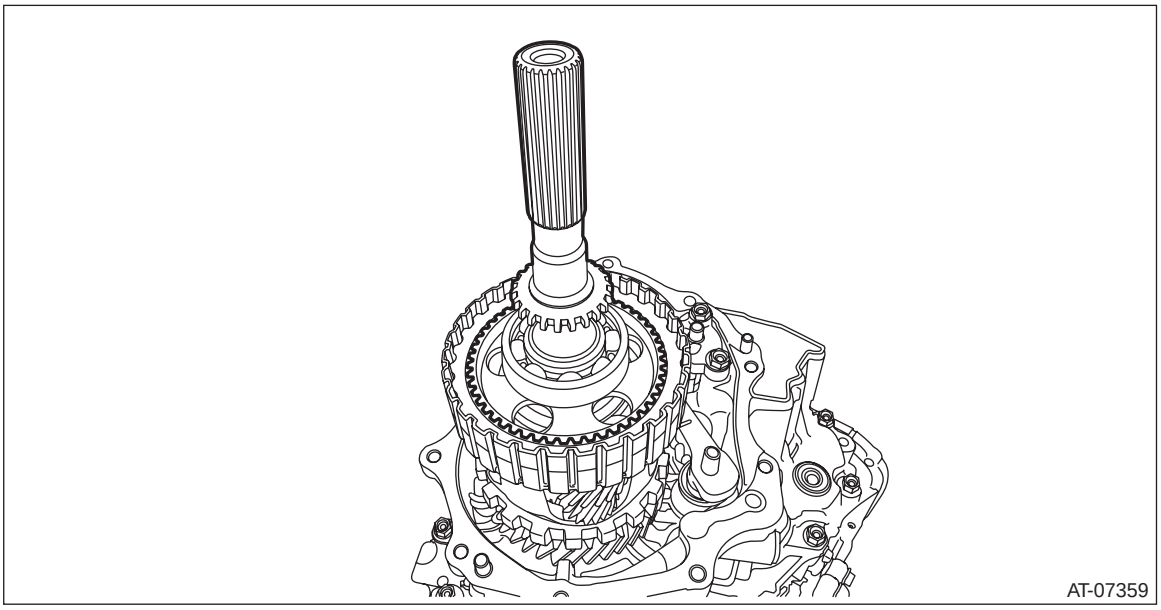
(A) Front side
(B) Clutch hub
(C) Rear side
(D) Revolution gear

E: INSPECTION

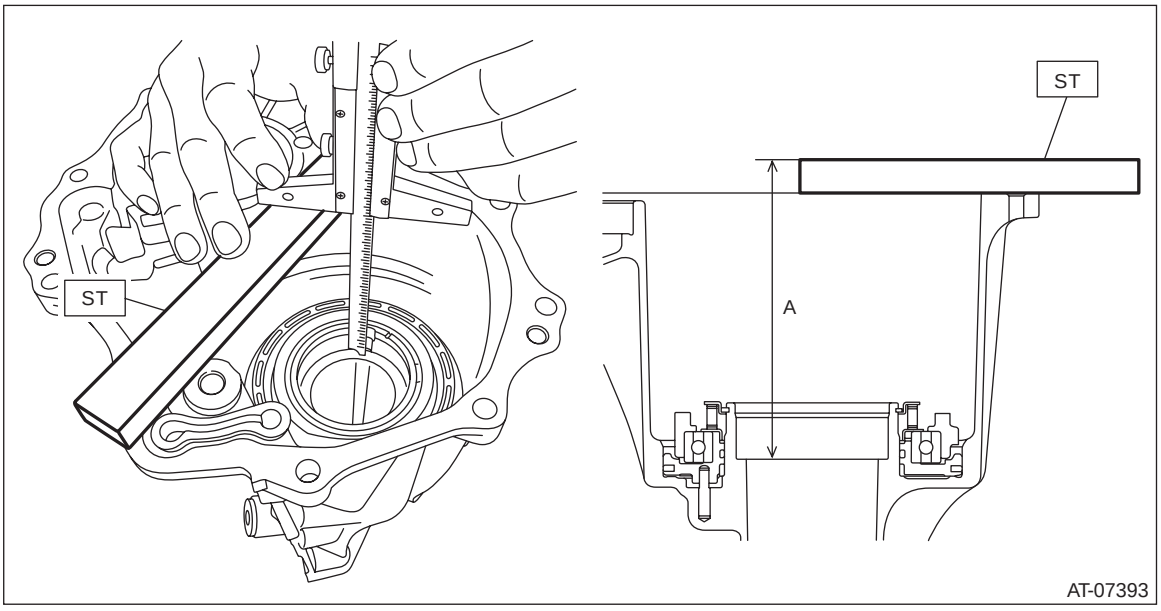
- Check each part for crack, damage or dust.
- Check the ball bearing for smooth rotation.
- Check the ball bearing for excessive looseness.
- Inspect axial play of the rear drive shaft.

F: ADJUSTMENT

NOTE:
When replacing the rear drive shaft or bearing, select the rear drive shaft shim.
1) Install the rear drive shaft.

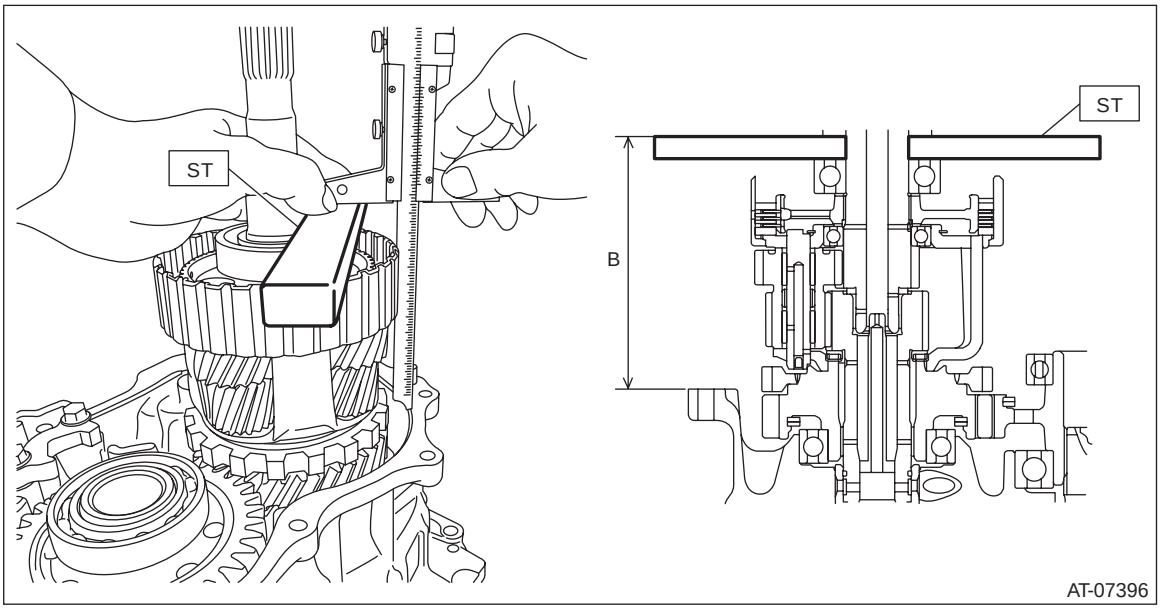


2) Using the ST, measure the depth “A” from the end surface of ST to the contact surface of ball bearing.
ST 499575400 GAUGE



3) Using the ST, measure the height “B” from the mating surface of intermediate case to the end surface of ST.

NOTE:
Set the ST so that it does not ride on the bearing inner race.
ST 499575400 GAUGE



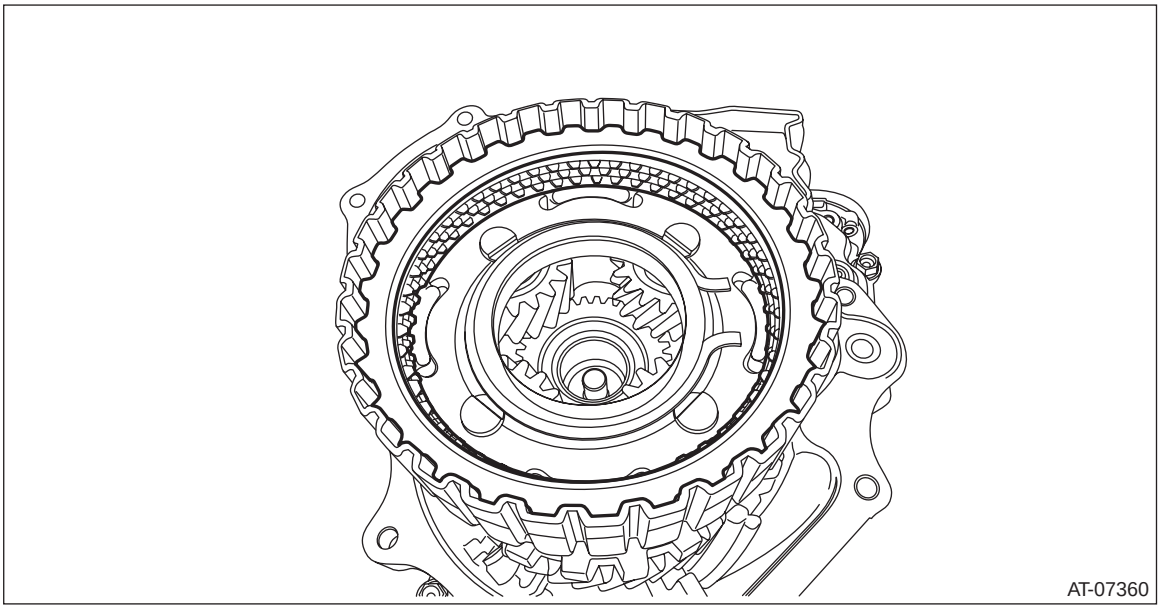
4) Obtain the thickness of rear drive shaft shim using the following formula to select none to four rear drive shaft shims.
T (mm) = A – B + 0.38 – (0.05 — 0.25)
[T (in) = A – B + 0.0149 – (0.002 — 0.01)]
T: Rear drive shaft shim thickness
A: Depth from the ST end surface to the ball bearing contact surface
B: Height from the mating surface of the intermediate case to the ST end face
0.38 mm (0.0149 in): Thickness of gasket
15 mm (0.591 in): Thickness of ST
0.05 — 0.25 mm (0.002 — 0.01 in): Clearance

Rear drive shaft shim	
Part No.	Thickness mm (in)
33281AA040	0.2 (0.008)
33281AA050	0.5 (0.020)
33281AA060	0.3 (0.012)

30.Transfer Clutch

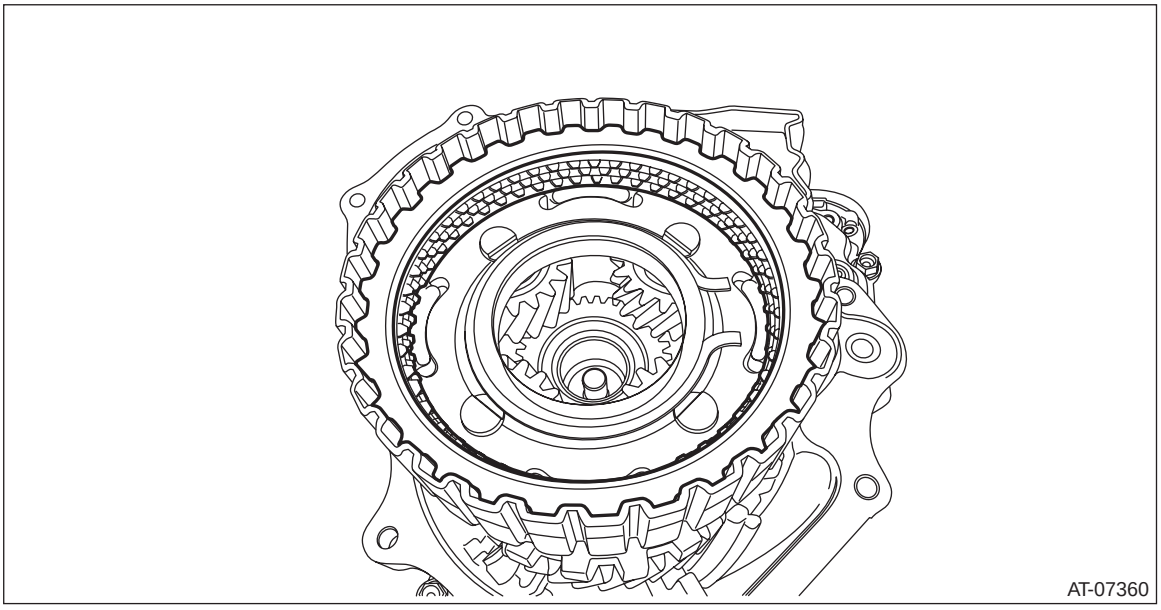
A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-142, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to CVT(TR690)-146, REMOVAL, Rear Drive Shaft.>
4) Remove the transfer clutch assembly.



B: INSTALLATION

1) Install the transfer clutch assembly.



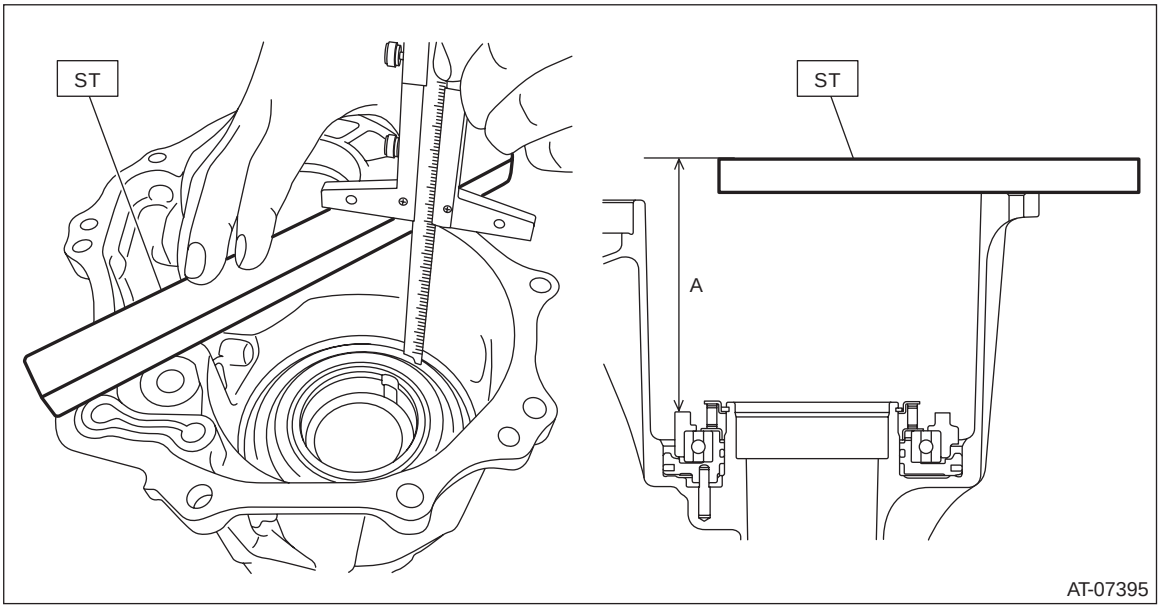
2) Select driven plate No. 3. <Ref. to CVT(TR690)-149, ADJUSTMENT, Rear Drive Shaft.>
3) Attach the selected driven plate No. 3 to the center differential assembly.
4) Install the rear drive shaft. <Ref. to CVT(TR690)-146, INSTALLATION, Rear Drive Shaft.>
5) Install the extension case. <Ref. to CVT(TR690)-143, INSTALLATION, Extension Case.>
6) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

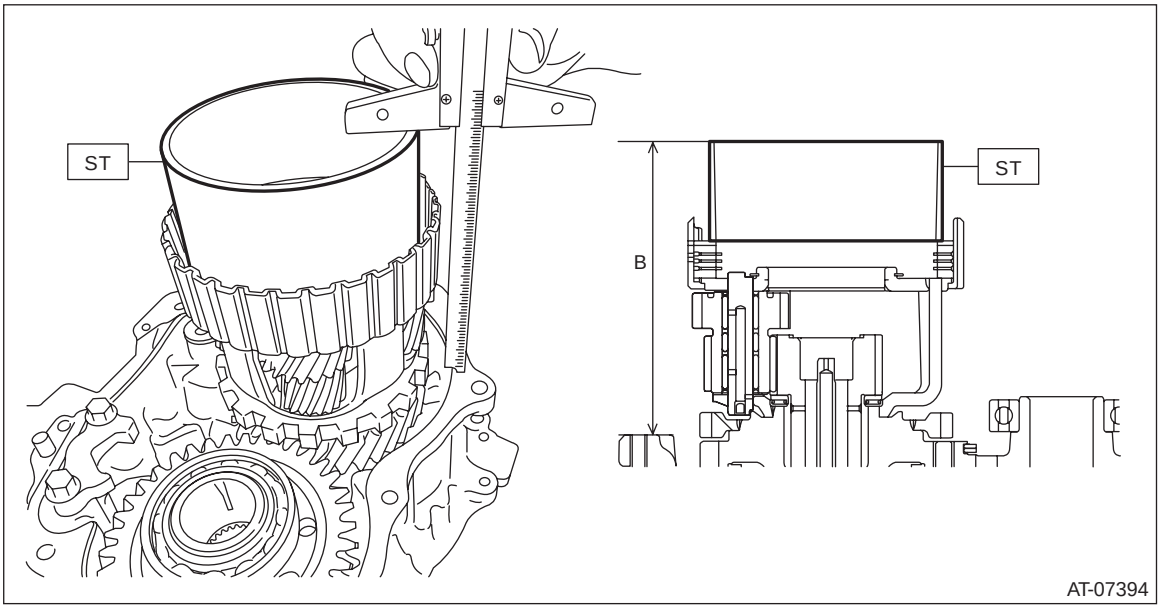
- Inspect the drive plate facing for wear and damage.
- Driven plate for discoloration (burned color)
- Make sure the snap ring is not worn and the return spring has no permanent distortion, damage, or deformation.
- Check the lip seal for damage.
- Inspect the extension end play, and adjust it to within the standard value. <Ref. to CVT(TR690)-152, ADJUSTMENT, Transfer Clutch.>

D: ADJUSTMENT

1) Install the drive plate and driven plate to the center differential carrier.
2) Using the ST, measure depth “A” from the end surface of ST to the transfer clutch piston.
ST 499575400 GAUGE



3) Using the ST, measure the height “B” from the mating surface of intermediate case to the end surface of ST.
ST 398744300 PISTON GUIDE



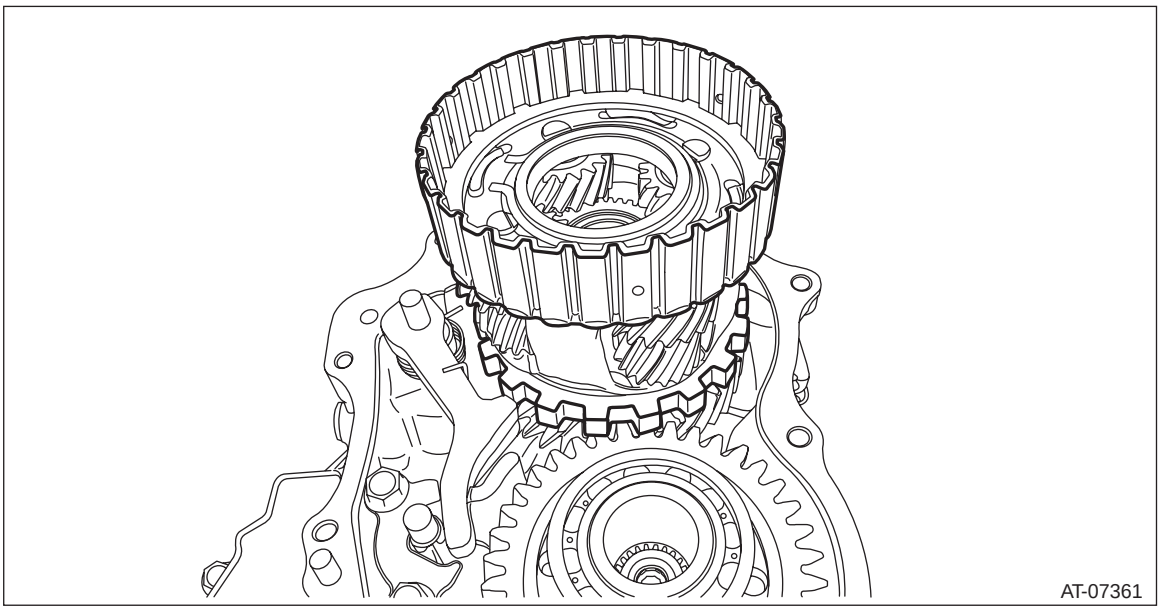
4) Obtain the thickness of driven plate No. 3 using the following formula to select one driven plate No. 3.
T mm = (A – 15) – (B – 50) + 0.38 – (0.05 — 0.25)
[T in = (A – 0.591) – (B – 1.97) + 0.0149 – (0.002 — 0.01)]
T: Rear drive shaft shim thickness
A: Depth from the ST end surface to the transfer clutch piston
B: Height from the mating surface of the intermediate case to the ST end face
0.38 mm (0.0149 in): Thickness of gasket
15 mm (0.591 in): Thickness of ST
50 mm (1.97 in): Thickness of ST
0.05 — 0.25 mm (0.002 — 0.01 in): Clearance

Driven plate No. 3	
Part No.	Thickness mm (in)
31589AA150	1.6 (0.063)
31589AA160	2.0 (0.079)
31589AA170	2.4 (0.094)
31589AA180	2.8 (0.110)

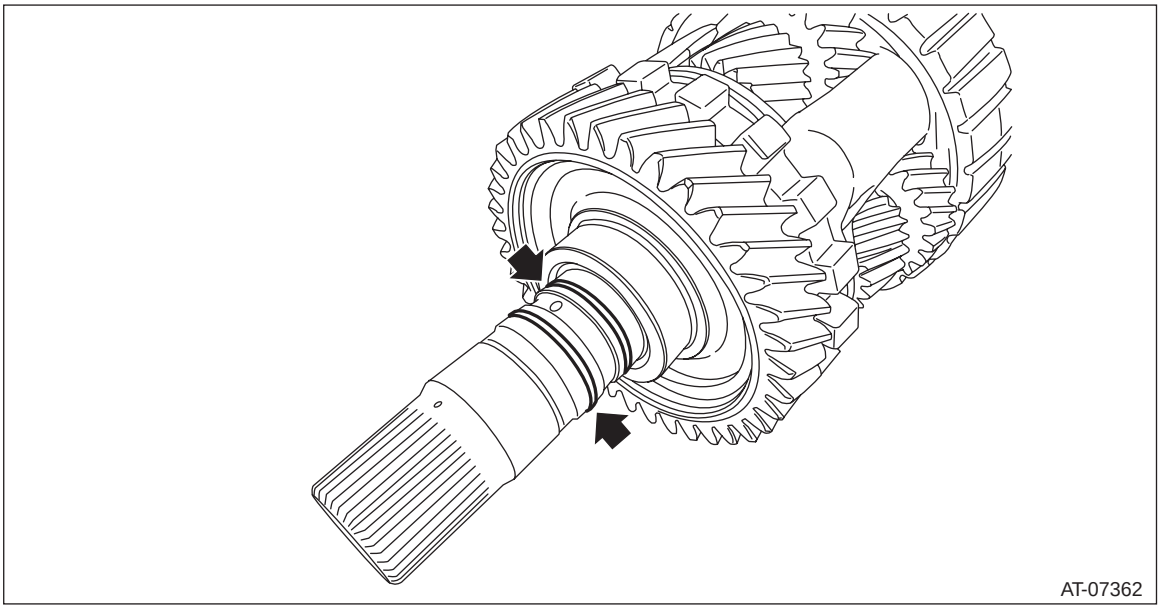
31.Center Differential Carrier

A: REMOVAL

1) Remove the transmission assembly from the vehicle.
2) Remove the extension case. <Ref. to CVT(TR690)-142, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to CVT(TR690)-146, REMOVAL, Rear Drive Shaft.>
4) Remove the transfer clutch. <Ref. to CVT(TR690)-151, REMOVAL, Transfer Clutch.>
5) Remove the center differential carrier assembly.



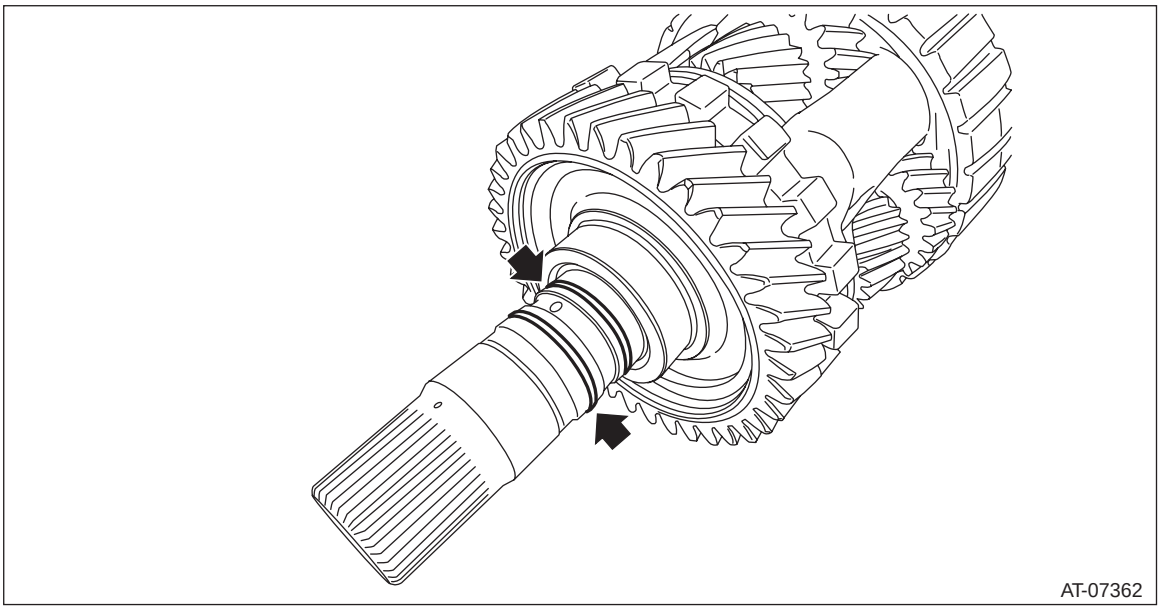
6) Remove the seal rings.



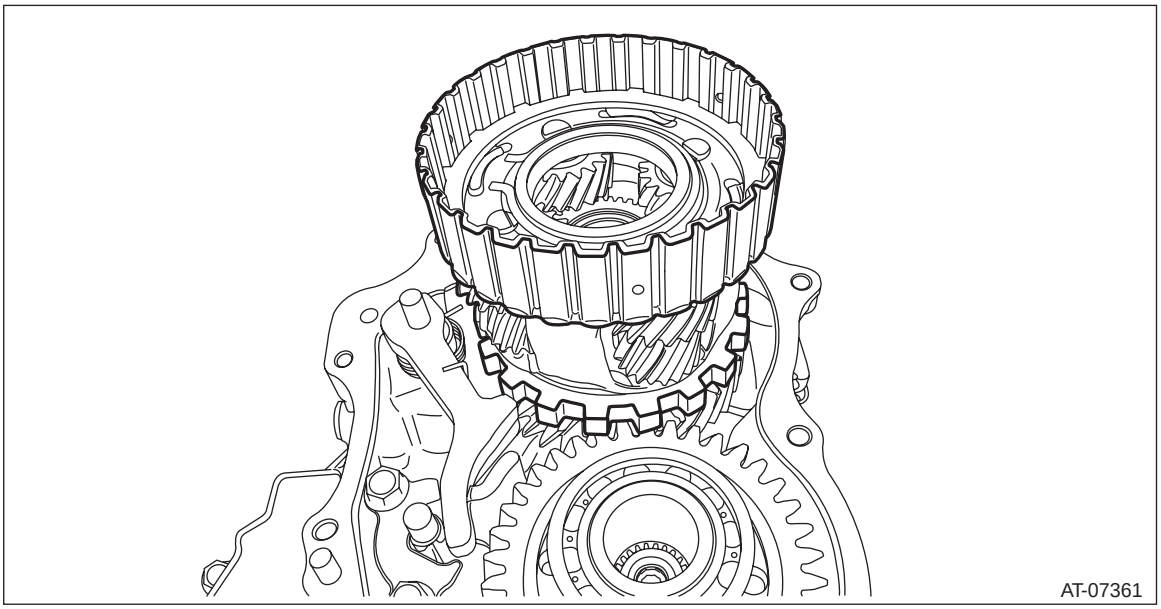
B: INSTALLATION

1) Install the seal rings.

NOTE:
- Use new seal rings.
- Do not stretch the seal ring excessively.
- Apply CVTF after installation.



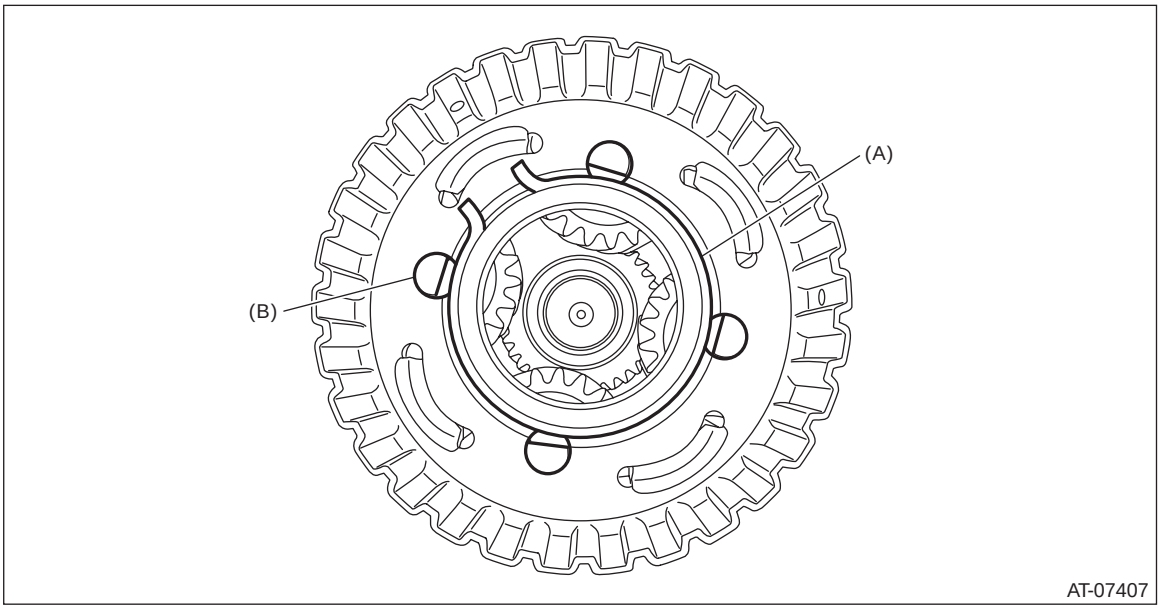
2) Install the center differential assembly.



3) Install the transfer clutch. <Ref. to CVT(TR690)-151, INSTALLATION, Transfer Clutch.>
4) Select driven plate No. 3 to replace. <Ref. to CVT(TR690)-152, ADJUSTMENT, Transfer Clutch.>
5) Install the rear drive shaft. <Ref. to CVT(TR690)-146, INSTALLATION, Rear Drive Shaft.>
6) Select the rear drive shaft shim. <Ref. to CVT(TR690)-149, ADJUSTMENT, Rear Drive Shaft.>
7) Install the extension case. <Ref. to CVT(TR690)-143, INSTALLATION, Extension Case.>
8) Install the transmission assembly to the vehicle.

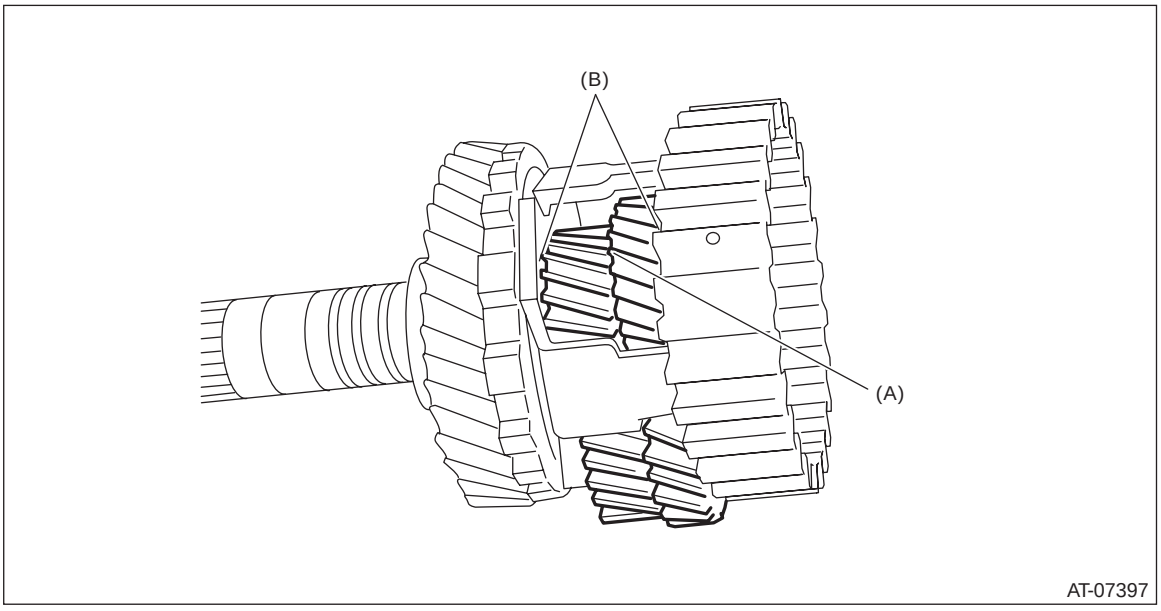
C: DISASSEMBLY

1) Remove the snap ring, and pull out the pinion shaft from center differential assembly.



(A) Snap ring
(B) Pinion shaft

2) Remove the pinion gear and washers from center differential assembly.



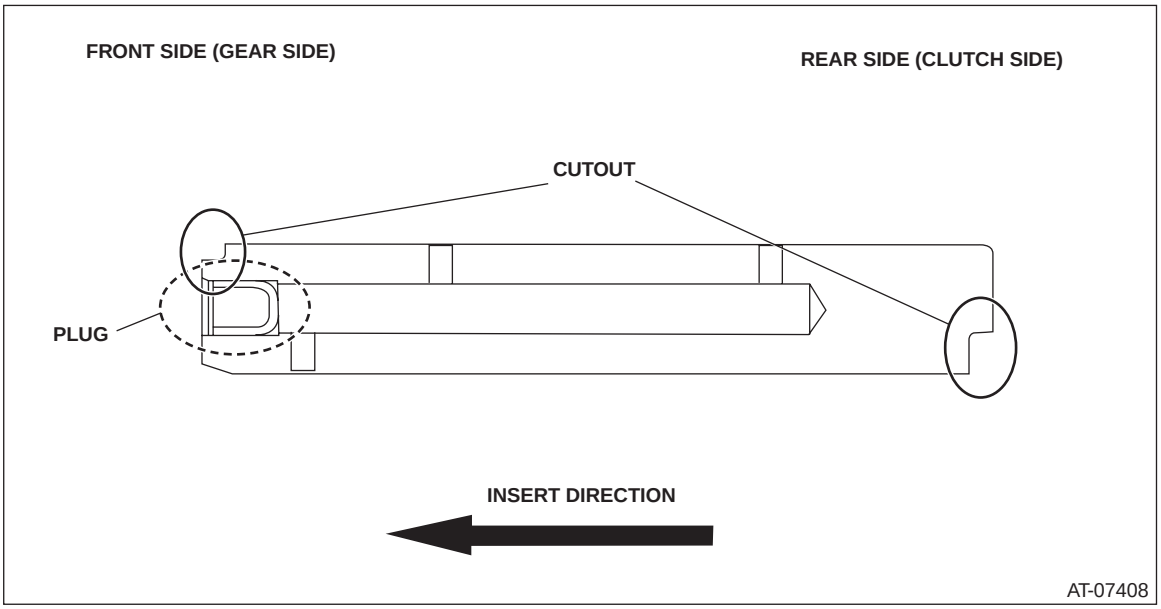
(A) Pinion gear
(B) Washer

3) Remove the intermediate shaft and thrust bearing.

D: ASSEMBLY

1) Install the thrust bearing onto intermediate shaft.
2) Insert the intermediate shaft into the center differential assembly.
3) Install the pinion gears and washers.
4) Insert the pinion shaft into the center differential assembly.

NOTE:
- Insert the pinion shaft with the side with the plug side facing the front side (gear side).
- After inserting the pinion shaft, adjust its position so that the cutout portion on the front side is on the inner side.



5) Install the snap ring.

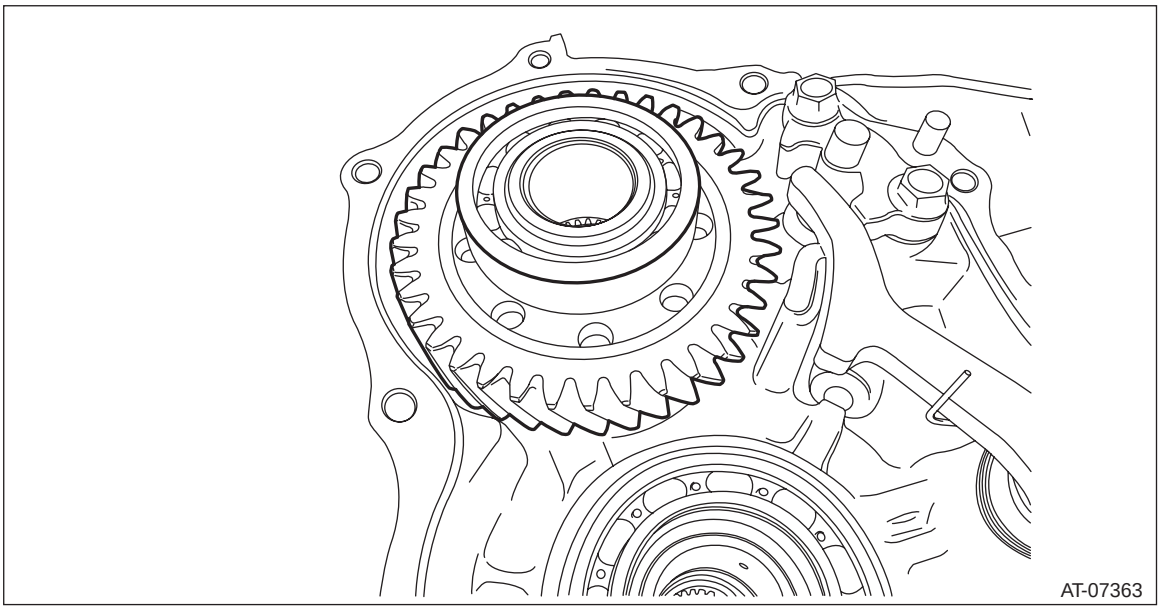
E: INSPECTION

- Check each part for crack, damage, wear or dust.
- Inspect the extension end play, and adjust it to within the standard value. <Ref. to CVT(TR690)-152, ADJUSTMENT, Transfer Clutch.>

32.Transfer Reduction Driven Gear

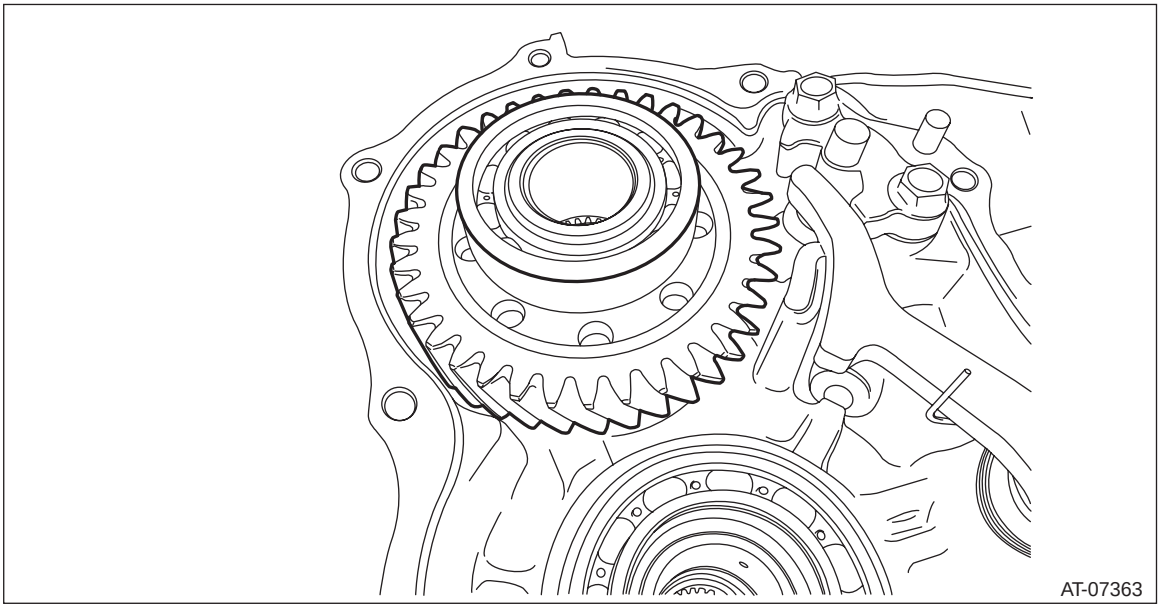
A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-142, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to CVT(TR690)-146, REMOVAL, Rear Drive Shaft.>
4) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-151, REMOVAL, Transfer Clutch.>
5) Remove the center differential carrier. <Ref. to CVT(TR690)-154, REMOVAL, Center Differential Carrier.>
6) Remove the transfer reduction driven gear assembly.



B: INSTALLATION

1) Install the reduction driven gear assembly.

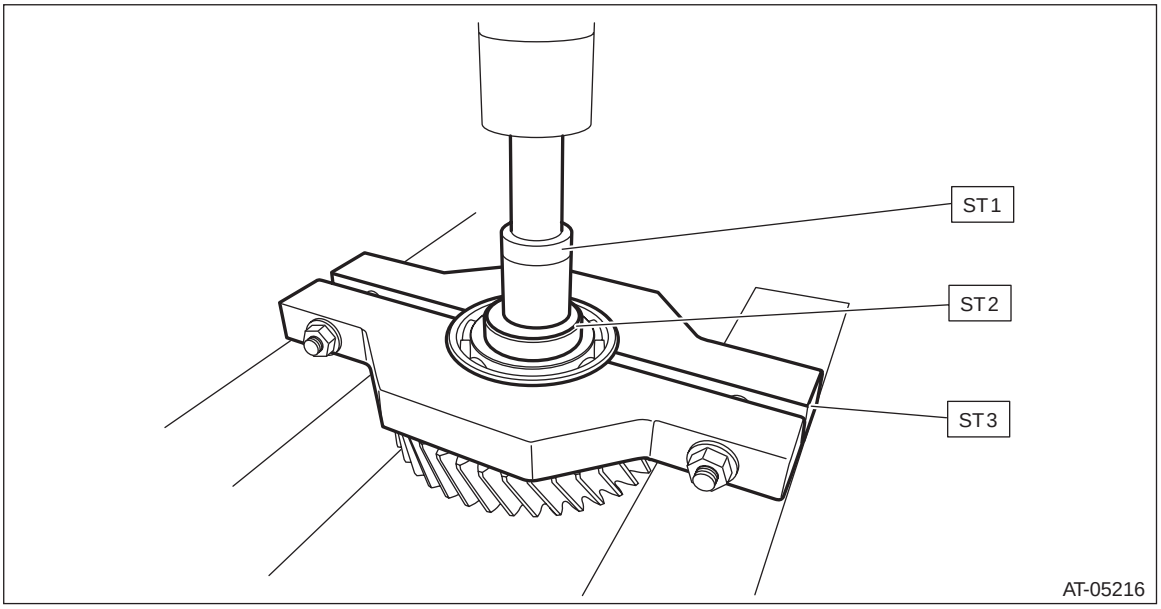


2) Select shims. <Ref. to CVT(TR690)-161, ADJUSTMENT, Transfer Reduction Driven Gear.>
3) Install the center differential carrier. <Ref. to CVT(TR690)-155, INSTALLATION, Center Differential Carrier.>
4) Install the transfer clutch assembly. <Ref. to CVT(TR690)-151, INSTALLATION, Transfer Clutch.>
5) Install the rear drive shaft. <Ref. to CVT(TR690)-146, INSTALLATION, Rear Drive Shaft.>

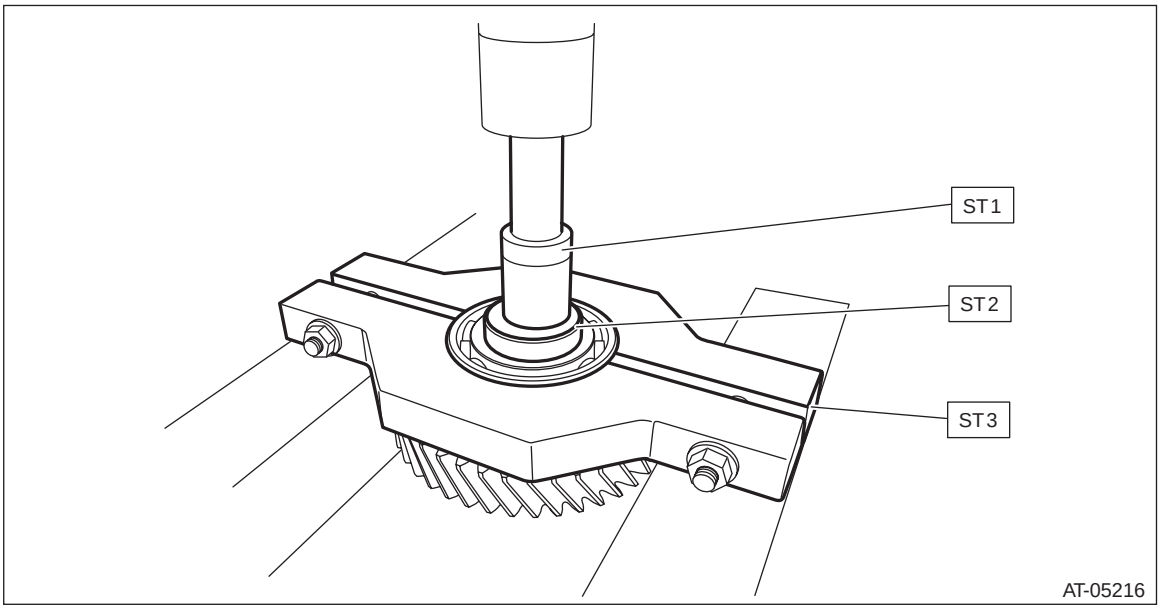
6) Mount the selected shim onto ball bearing.
7) Install the extension case. <Ref. to CVT(TR690)-143, INSTALLATION, Extension Case.>
8) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the snap ring from transfer reduction driven gear.
2) Using the ST, remove the ball bearing (large) from transfer reduction driven gear.
ST1 899864100 REMOVER
ST2 398497701 SEAT
ST3 498077600 REMOVER



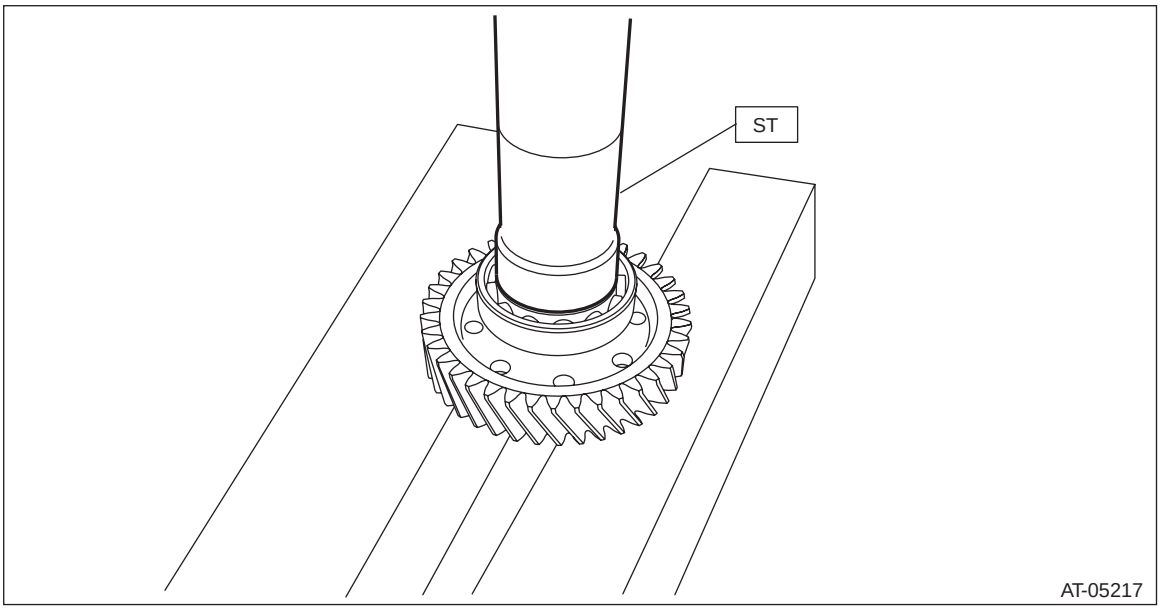
3) Using the ST, remove the ball bearing (small) from transfer reduction driven gear.
ST1 899864100 REMOVER
ST2 398497701 SEAT
ST3 18720AA000 REMOVER



D: ASSEMBLY

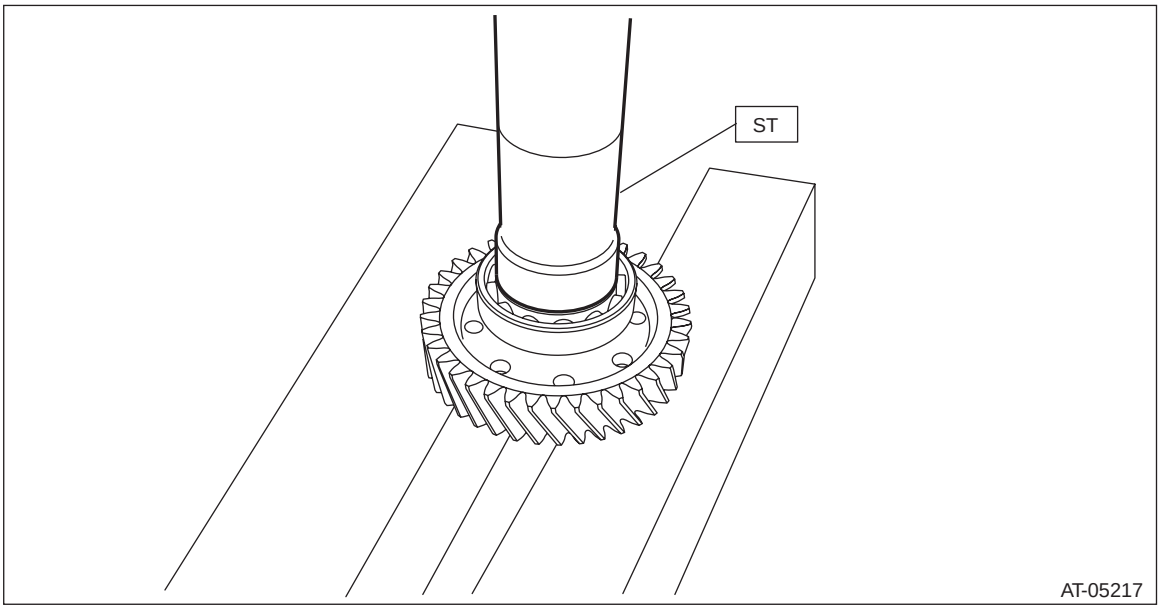
1) Install the new ball bearing (large) to reduction driven gear using the ST.
ST 499277100 BUSHING 1-2 INSTALLER

NOTE:
- Use a new ball bearing.
- Install to the splines inside transfer reduction driven gear shaft.



2) Install the new ball bearing (small) to reduction driven gear.

NOTE:
Use a new ball bearing.
ST 499277100 BUSHING 1-2 INSTALLER



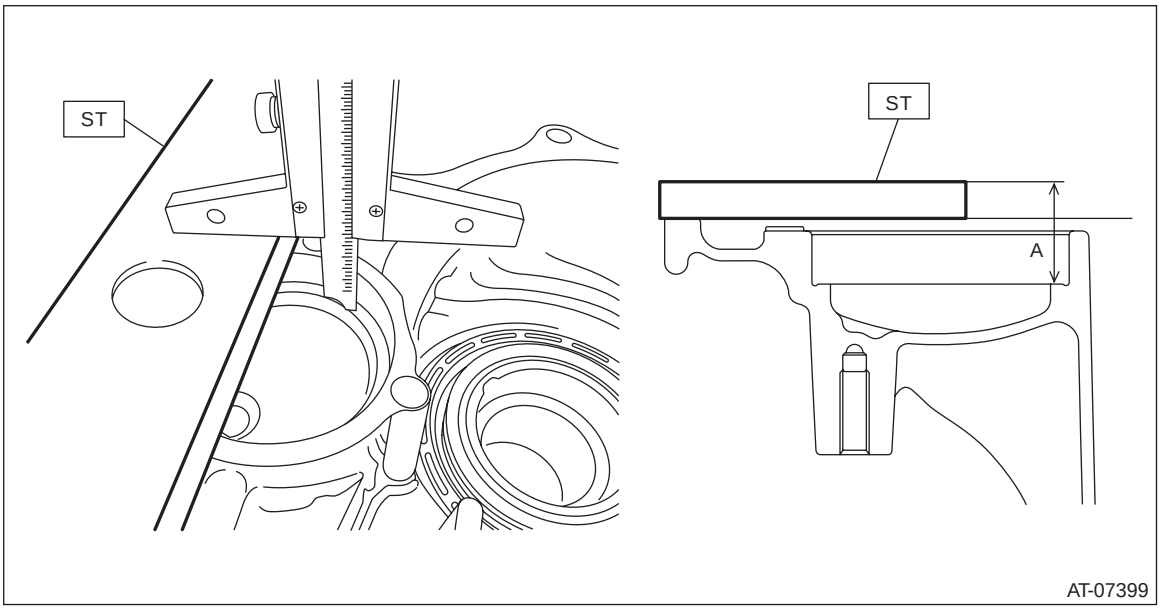
3) Install the snap ring to transfer reduction driven gear.

E: INSPECTION

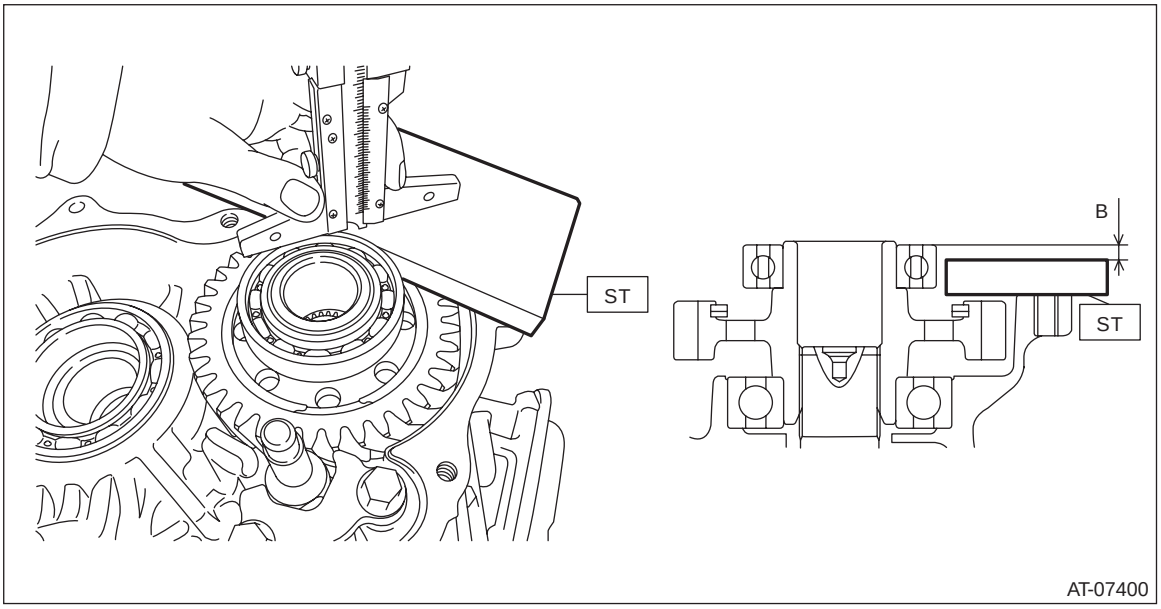
- Check the ball bearing for smooth rotation.
- Check the ball bearing for excessive looseness.
- Make sure the gear is not broken or damaged.

F: ADJUSTMENT

1) Measure depth “A” from the ST upper face to the ball bearing catch surface.
ST 398643600 GAUGE



2) Measure height “B” from the ST to the end of the ball bearing outer ring.
ST 398643600 GAUGE



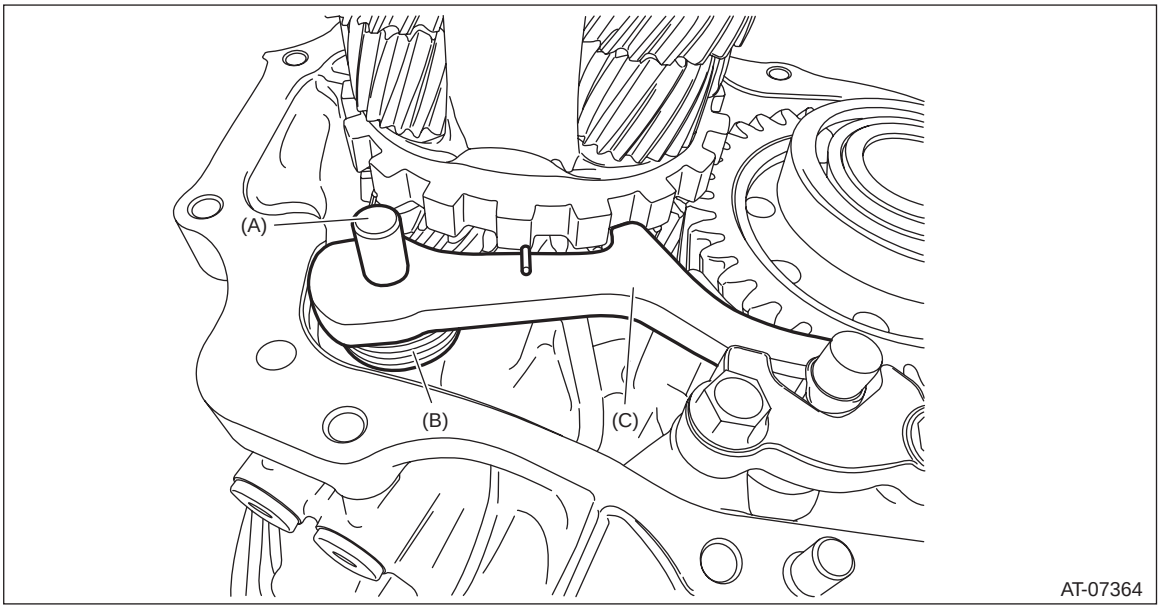
3) Obtain the thickness of shim using the following formula to select one to three shims.
T mm = (A – 15) – (B + 15) + 0.38 – (0.05 — 0.25)
[T in = (A – 0.591) – (B + 0.591) + 0.0149 – (0.002 — 0.01)]
T: Shim thickness
A: Depth from the ST upper face to the ball bearing catch surface
B: Height from the ST to the end of the ball bearing outer ring
0.38 mm (0.0149 in): Thickness of gasket
15 mm (0.591 in): Thickness of ST
0.05 — 0.25 mm (0.002 — 0.01 in): Clearance

Shim	
Part No.	Thickness mm (in)
31288AA190	0.2 (0.008)
31288AA200	0.3 (0.012)
31288AA210	0.5 (0.02)

33.Parking Pawl

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Shift the range select lever to “N” range.
3) Remove the extension case. <Ref. to CVT(TR690)-142, REMOVAL, Extension Case.>
4) Remove the parking pawl shaft, return spring and parking pawl.

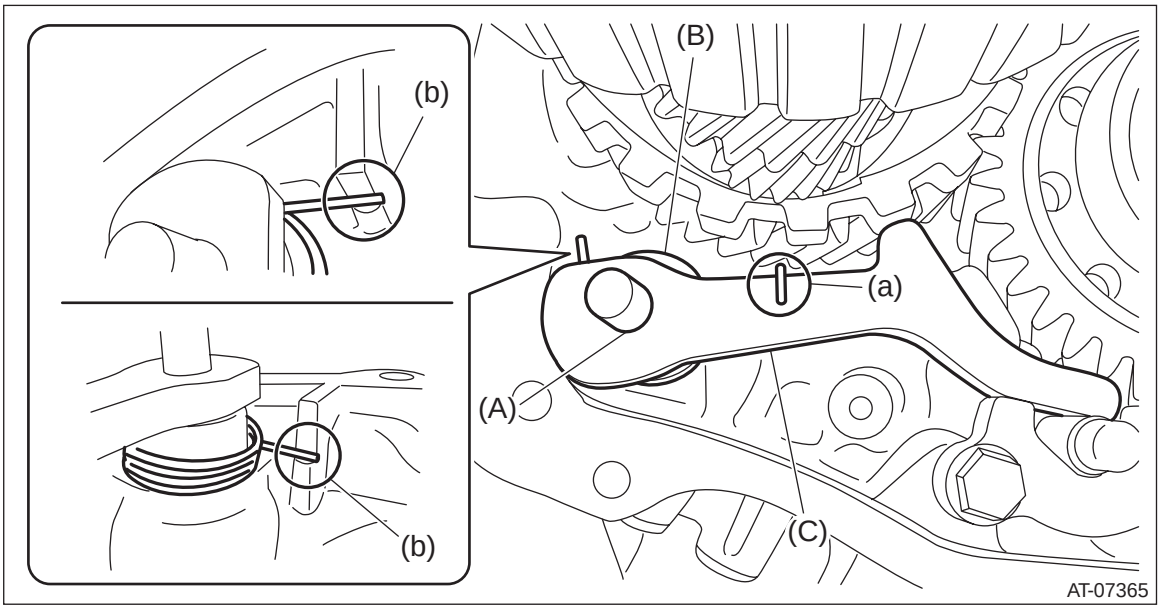


(A) Parking pawl shaft
(B) Return spring
(C) Parking pawl

B: INSTALLATION

1) Set the range select lever to the “N” range.
2) Install the parking pawl shaft, return spring and parking pawl.

NOTE:
Make sure that the end of return spring sticks out of parking pawl as shown in (a). Make sure that the other end contacts the rib of intermediate case as shown in (b).



(A) Parking pawl shaft
(B) Return spring
(C) Parking pawl

3) Install the extension case. <Ref. to CVT(TR690)-143, INSTALLATION, Extension Case.>
4) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

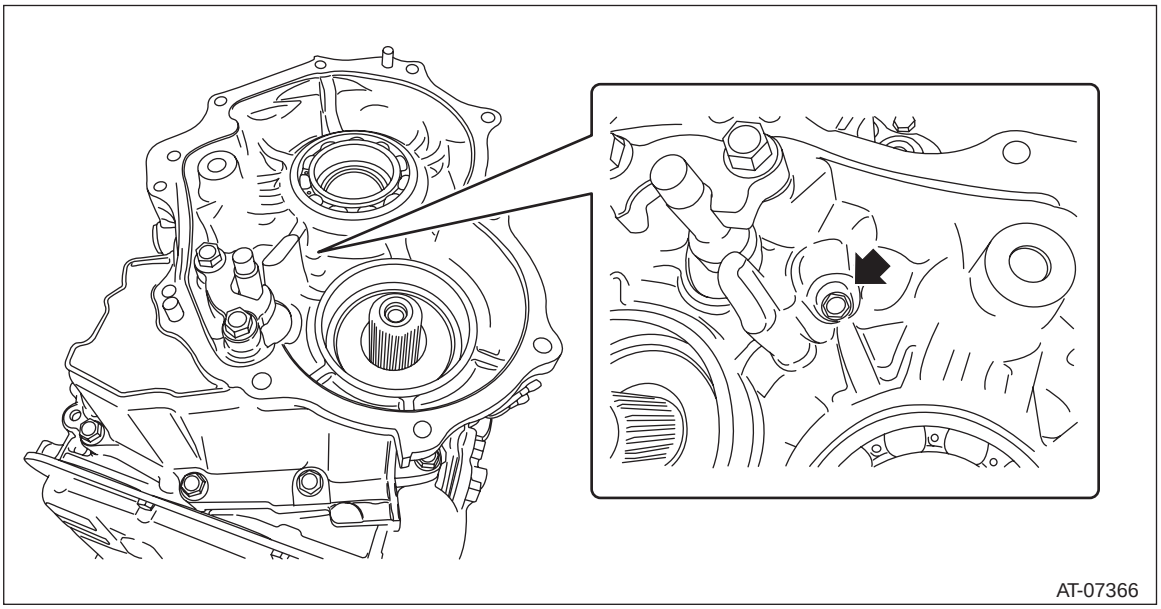
- Check the parking pawl for breakage or damage.
- Check the return spring for fatigue.

34.Intermediate Case

A: REMOVAL

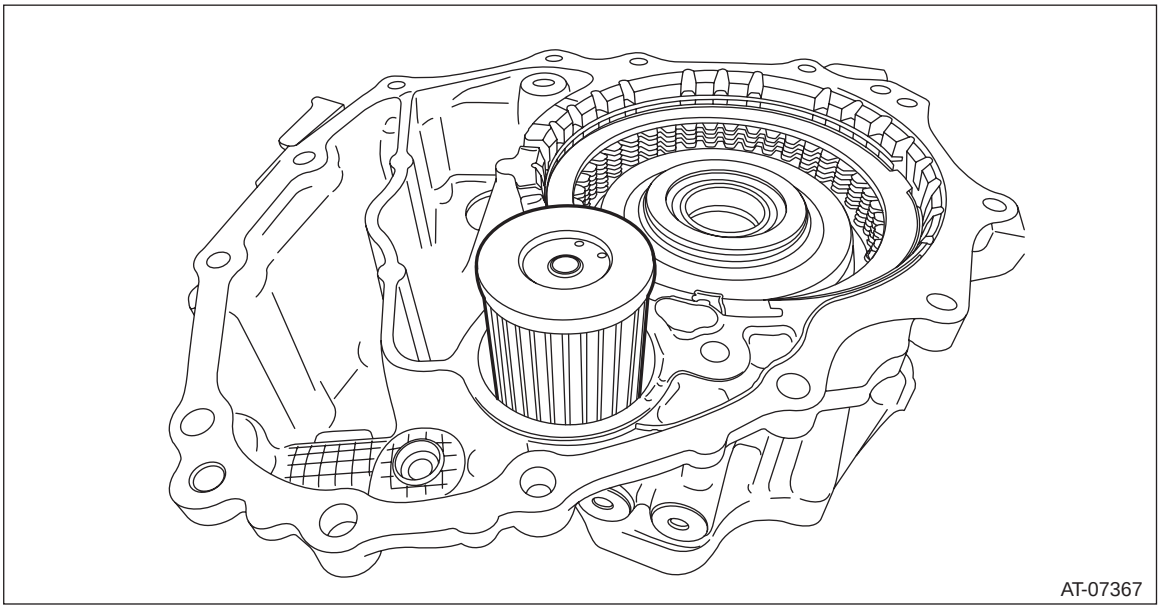
1) Remove the transmission assembly from vehicle body. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-142, REMOVAL, Extension Case.>
3) Remove the parking pawl. <Ref. to CVT(TR690)-163, REMOVAL, Parking Pawl.>
4) Remove the rear drive shaft. <Ref. to CVT(TR690)-146, REMOVAL, Rear Drive Shaft.>
5) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-151, REMOVAL, Transfer Clutch.>
6) Remove the center differential carrier. <Ref. to CVT(TR690)-154, REMOVAL, Center Differential Carrier.>
7) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-158, REMOVAL, Transfer Reduction Driven Gear.>
8) Remove the intermediate case.

NOTE:
- The total number of intermediate case mounting bolts is 14.
- Inside the transmission is a single bolt (arrowed).



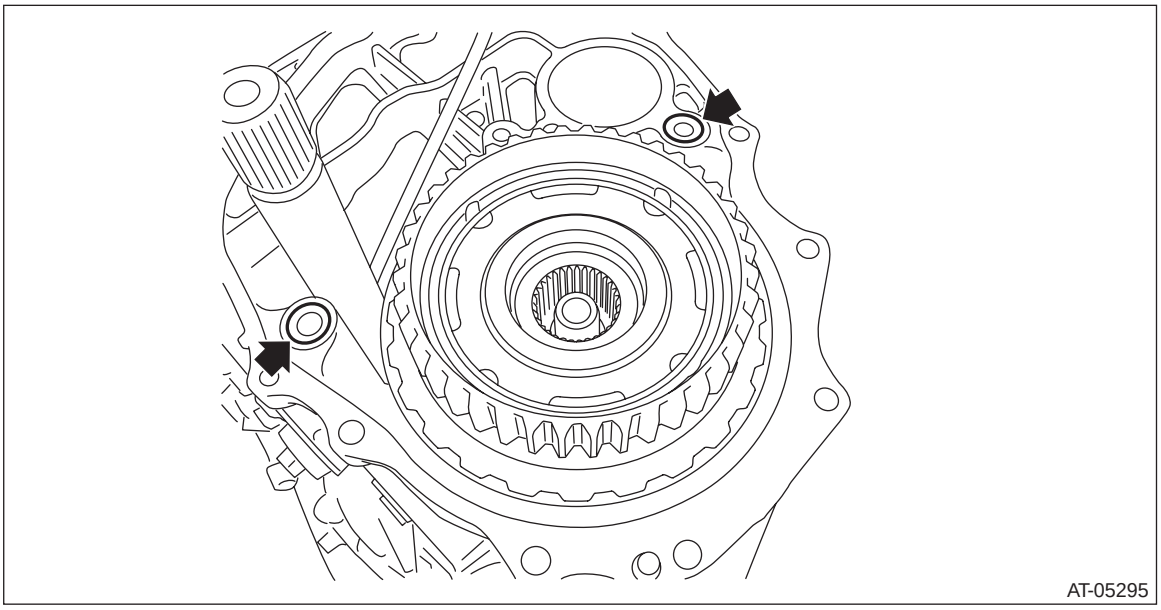
AT-07366

9) Remove the CVTF filter.



AT-07367

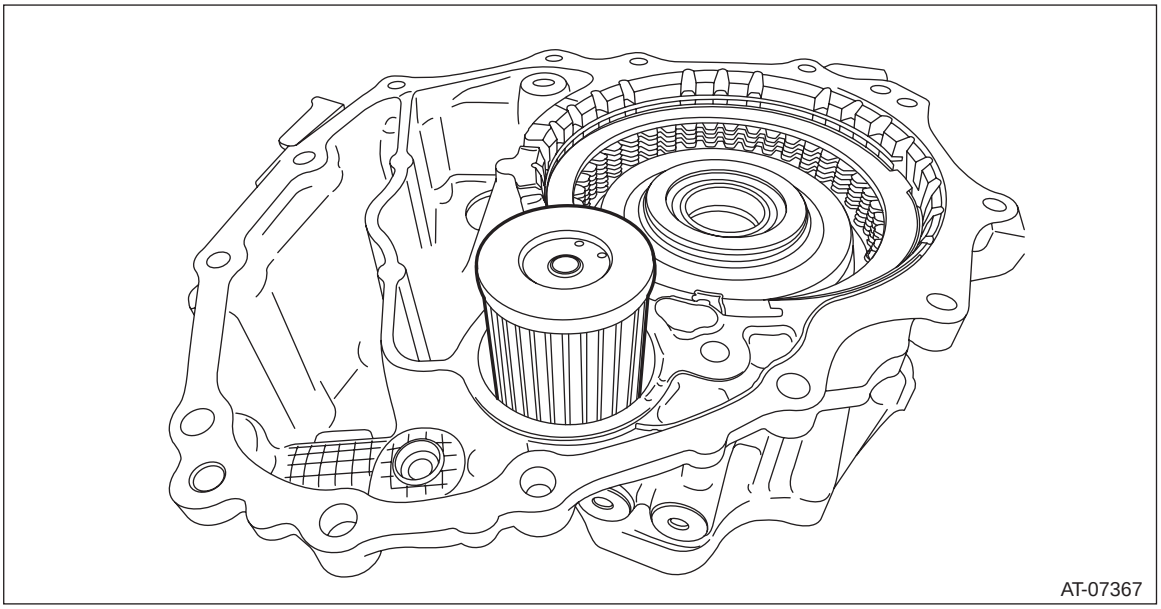
10) Remove the O-ring from the transmission case.



B: INSTALLATION

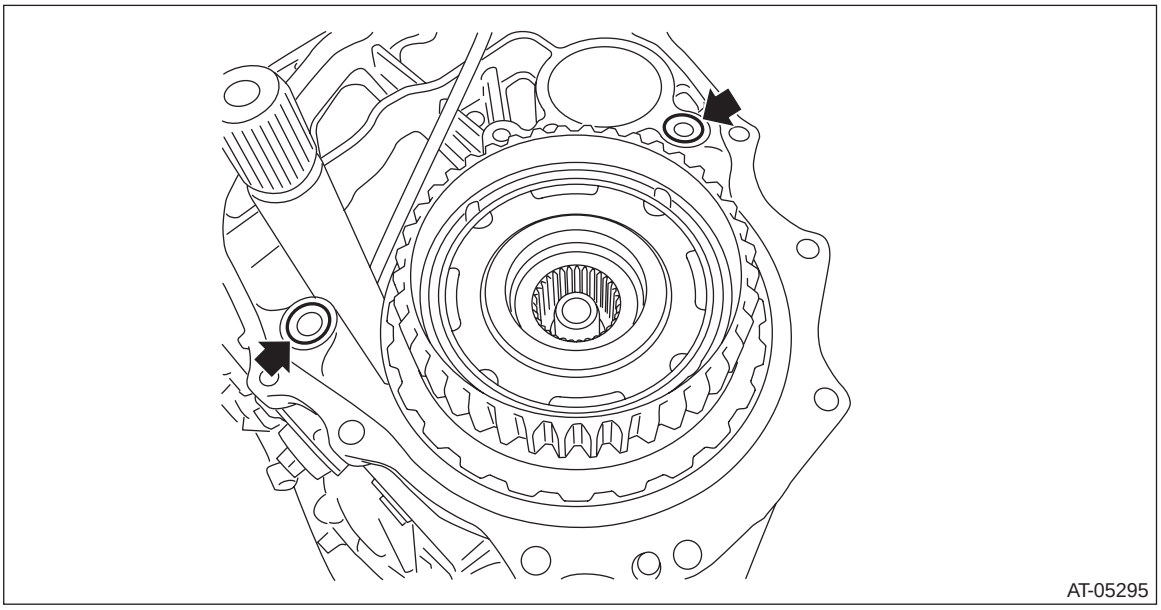
1) Clean the mating surface of intermediate case and transmission case.
2) Face the O-ring side of the CVTF filter to the intermediate case side, and install the CVTF filter.

NOTE:
Apply CVTF to the O-rings.



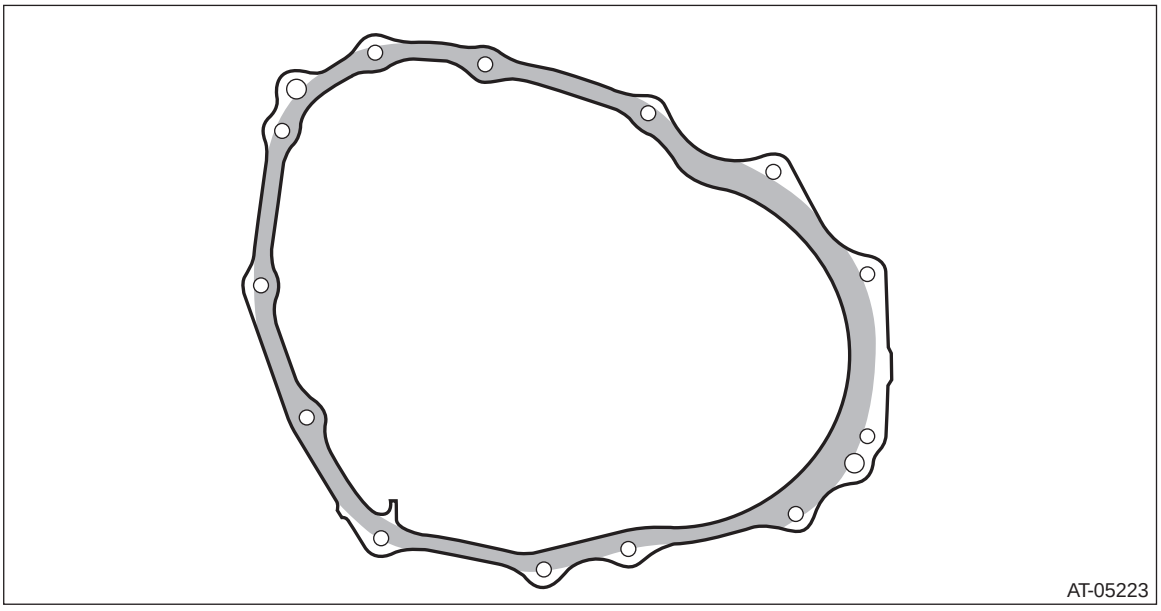
3) Install the O-ring to the transmission case.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.



4) Apply liquid gasket to intermediate case seamlessly.

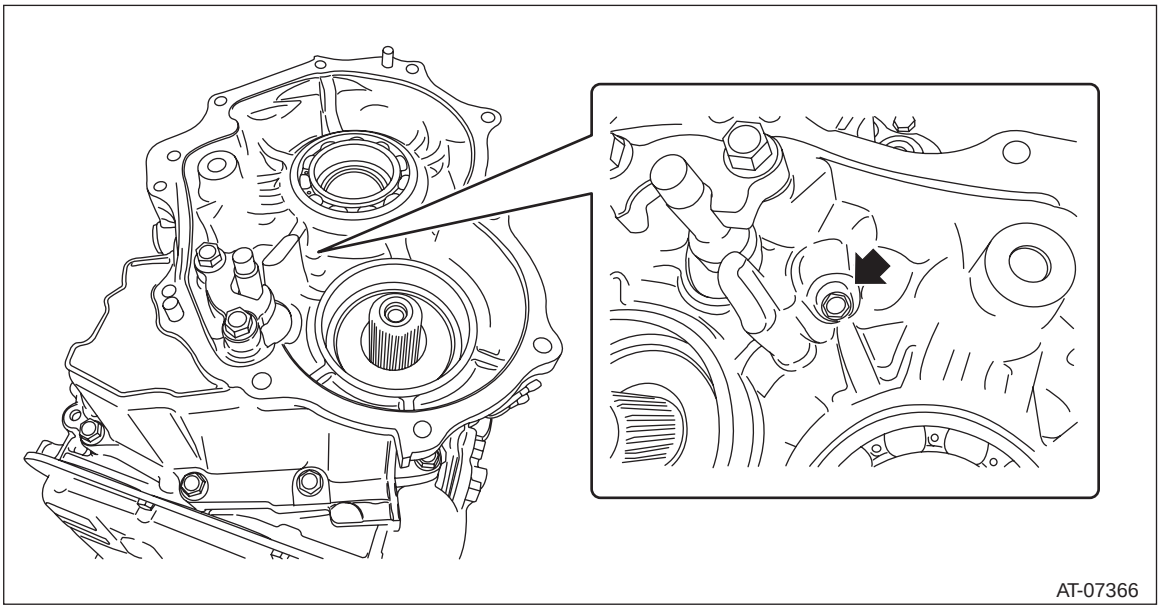
Liquid gasket:
THREE BOND 1215B or equivalent



5) Install the intermediate case and the transmission hanger to the transmission case.

NOTE:
Make sure to install the arrowed bolt.

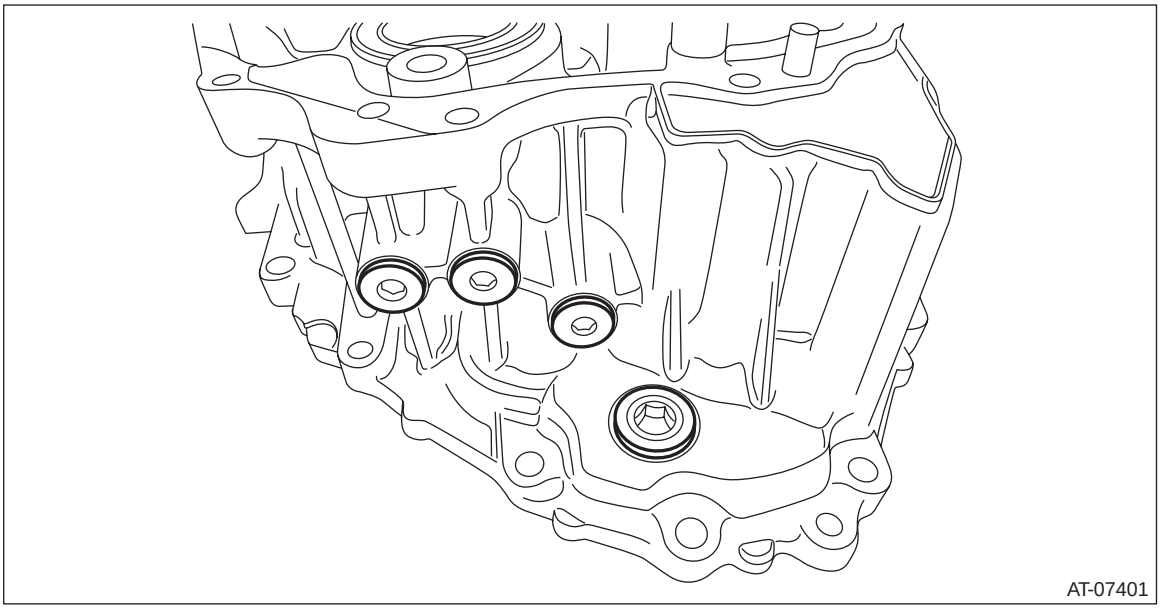
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



6) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-158, INSTALLATION, Transfer Reduction Driven Gear.>
7) Install the center differential carrier. <Ref. to CVT(TR690)-155, INSTALLATION, Center Differential Carrier.>
8) Install the transfer clutch assembly. <Ref. to CVT(TR690)-151, INSTALLATION, Transfer Clutch.>
9) Install the rear drive shaft. <Ref. to CVT(TR690)-146, INSTALLATION, Rear Drive Shaft.>
10) Install the parking pawl. <Ref. to CVT(TR690)-164, INSTALLATION, Parking Pawl.>
11) Install the extension case. <Ref. to CVT(TR690)-143, INSTALLATION, Extension Case.>
12) Install the transmission to vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the parking support.
2) Remove the CVTF filler plug.
3) Remove all plugs from intermediate case.



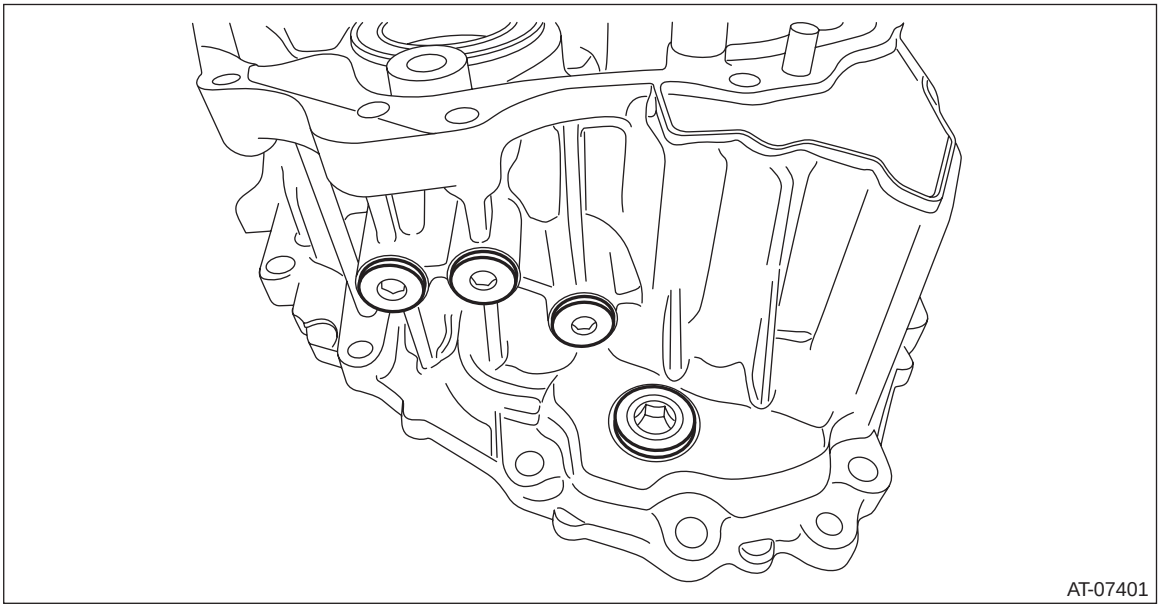
4) Remove the reverse brake assembly. <Ref. to CVT(TR690)-172, DISASSEMBLY, Reverse Brake Assembly.>

D: ASSEMBLY

1) Install the reverse brake. <Ref. to CVT(TR690)-175, ASSEMBLY, Reverse Brake Assembly.>
2) Install all plugs to intermediate case.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

NOTE:
Use new O-rings.



3) Install the parking support.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

4) Install the CVTF filler plug.

NOTE:
Replace the gasket of CVTF filler plug with a new part after installing the transmission assembly to vehicle and adjusting CVTF fluid.

E: INSPECTION

- Check the intermediate case for fissures, cracks or damage.
- Check for leakage of CVTF from the connections between intermediate case and transmission case, and between intermediate case and extension case.

35.CVTF Filter

A: REMOVAL

NOTE:
• Although CVTF filter is a maintenance-free part, replace it if a large quantity of wear debris and metal particles are found in CVTF and CVTF filter.
• For removal of CVTF filter, refer to “Intermediate Case”. <Ref. to CVT(TR690)-165, REMOVAL, Intermediate Case.>

B: INSTALLATION

NOTE:
For installation of CVTF filter, refer to “Intermediate Case”. <Ref. to CVT(TR690)-166, INSTALLATION, Intermediate Case.>

C: INSPECTION

- Check if a large quantity of wear debris or metal particles are in CVTF and CVTF filter.
- Check for broken part or damaged O-ring.

36.Reverse Brake Assembly

A: REMOVAL

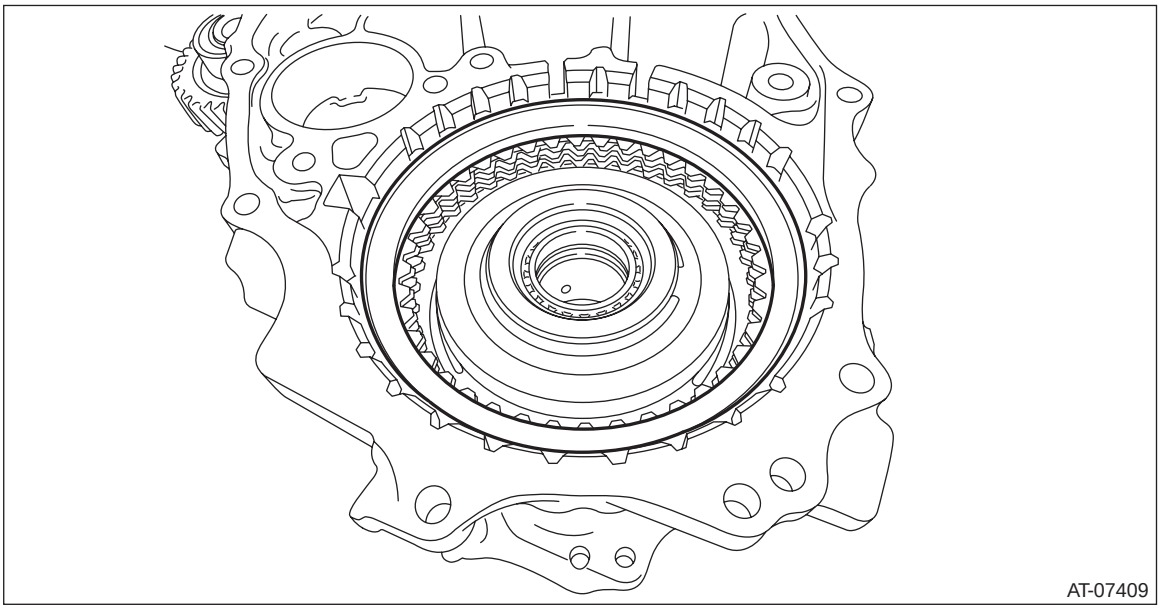
NOTE:
For removal of reverse brake assembly, refer to “Intermediate Case”. <Ref. to CVT(TR690)-165, REMOVAL, Intermediate Case.>

B: INSTALLATION

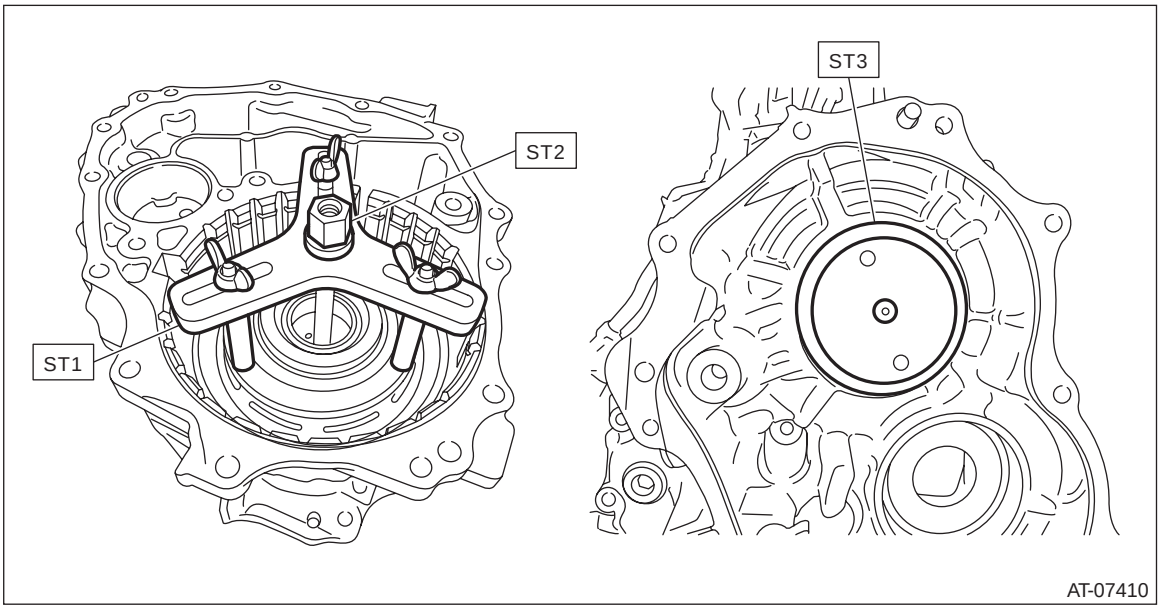
NOTE:
For installation of reverse brake assembly, refer to “Intermediate Case”. <Ref. to CVT(TR690)-166, INSTALLATION, Intermediate Case.>

C: DISASSEMBLY

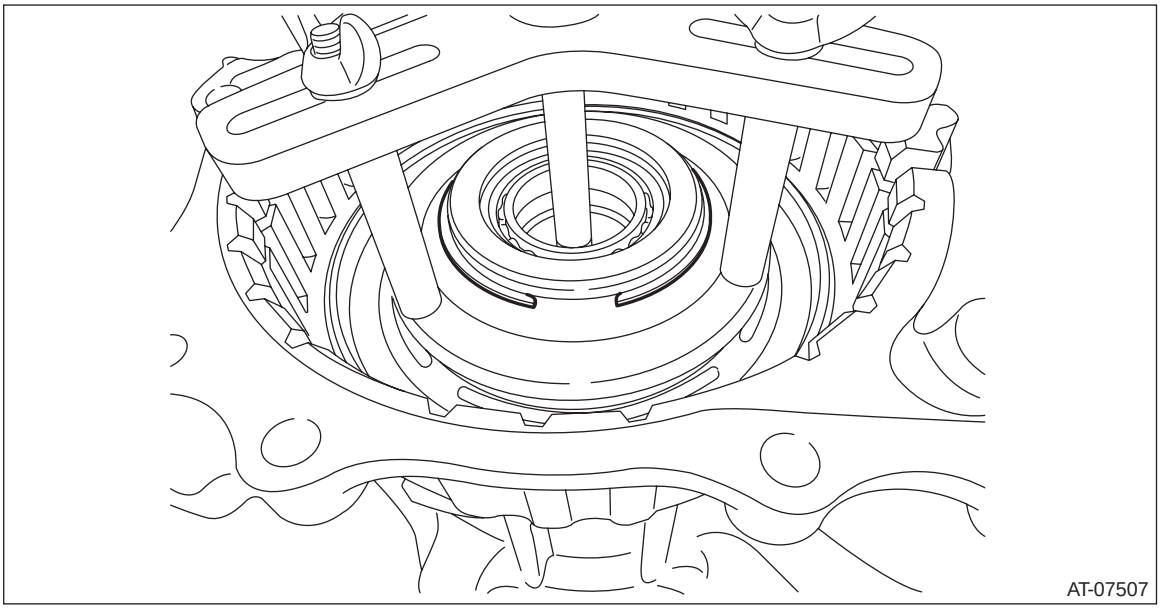
1) Remove the snap ring.
2) Remove the retaining plate, drive plate, driven plate and dish plate.



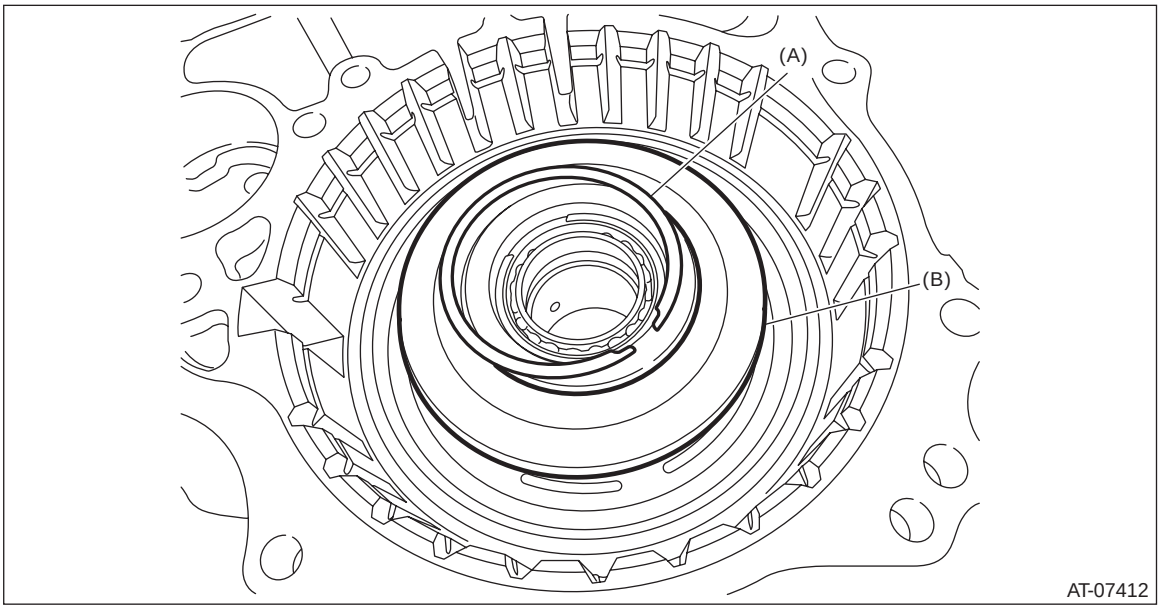
3) Set the ST1, ST2 and ST3 to intermediate case.
ST1 18762AA001 COMPRESSOR SPECIAL TOOL
ST2 18763AA000 COMPRESSOR SHAFT
ST3 18765AA000 COMPRESSOR SUPPORT



4) Compress the return spring using the set ST to remove the snap ring.

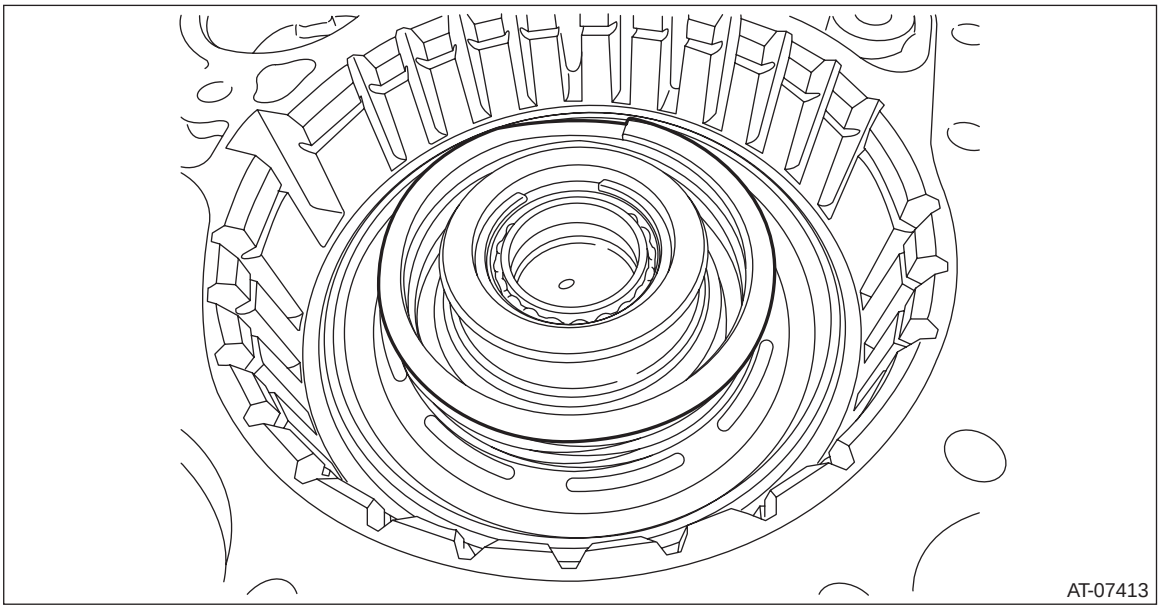


5) Using the ST, remove the snap ring and spring retainer.

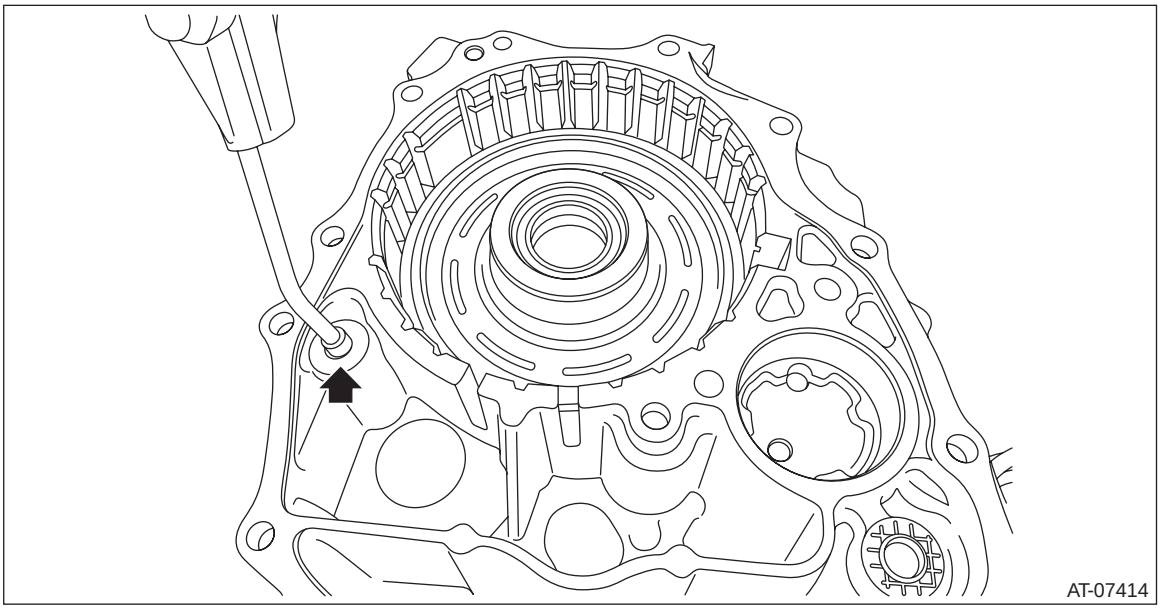


(A) Snap ring
(B) Spring retainer

6) Remove the return spring.

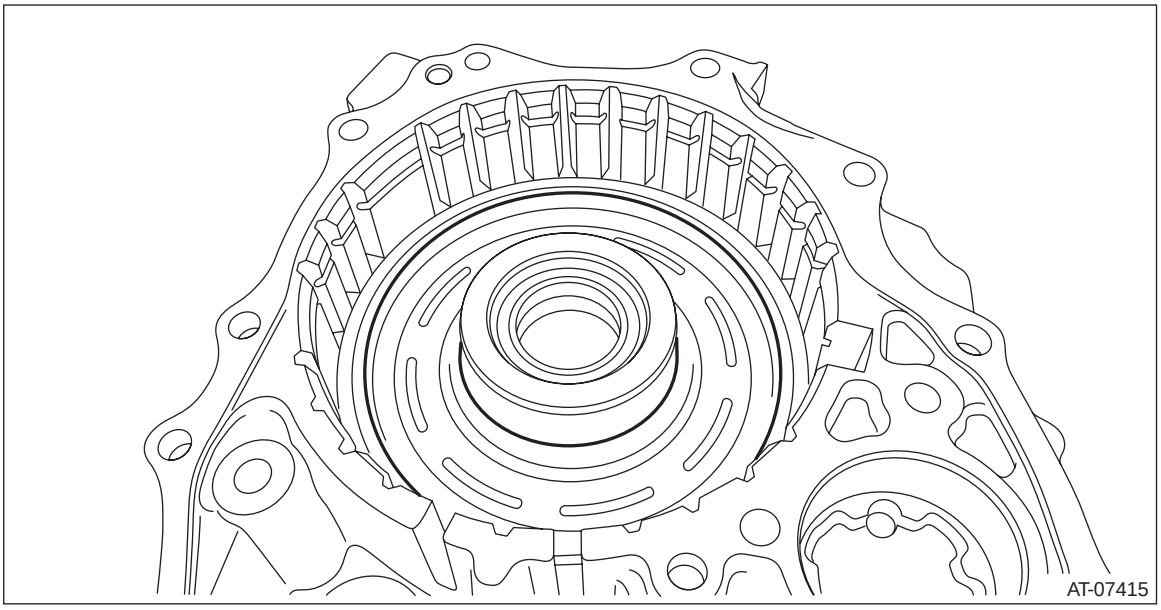


7) Remove the reverse brake piston by blowing compressed air intermittently from intermediate case hole.

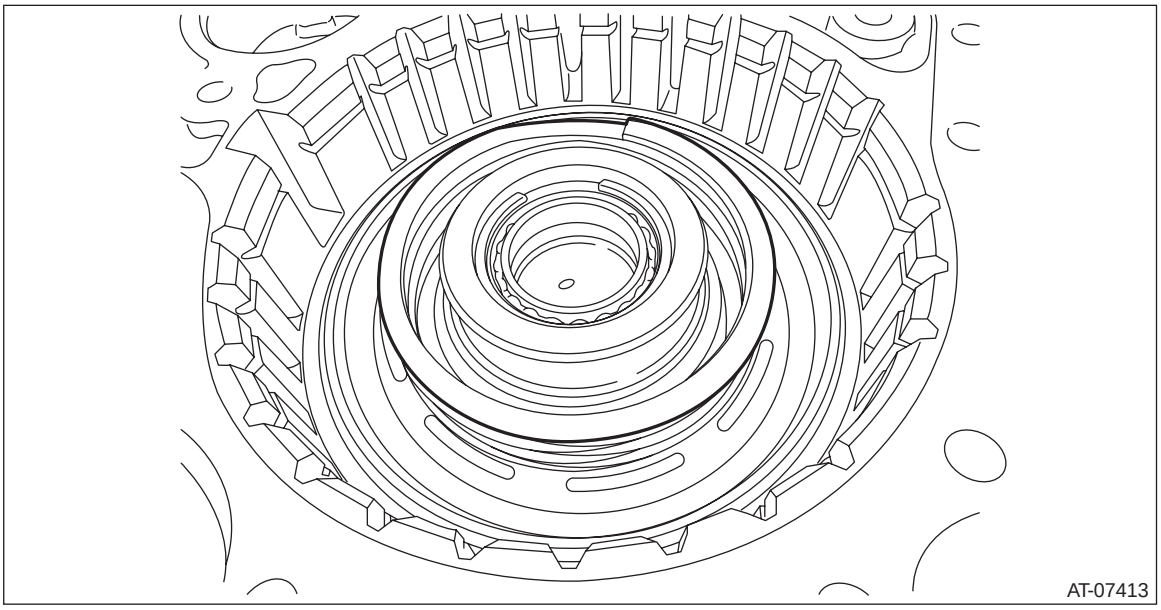


D: ASSEMBLY

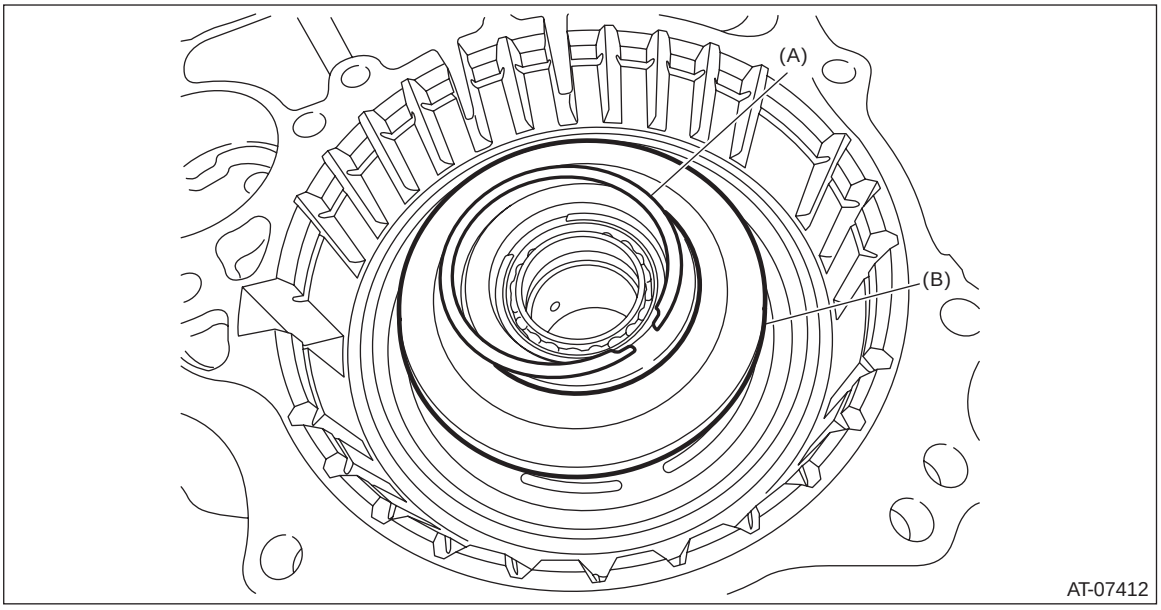
1) Apply CVTF to the seal of reverse brake piston and install it to intermediate case.



2) Install the return spring.

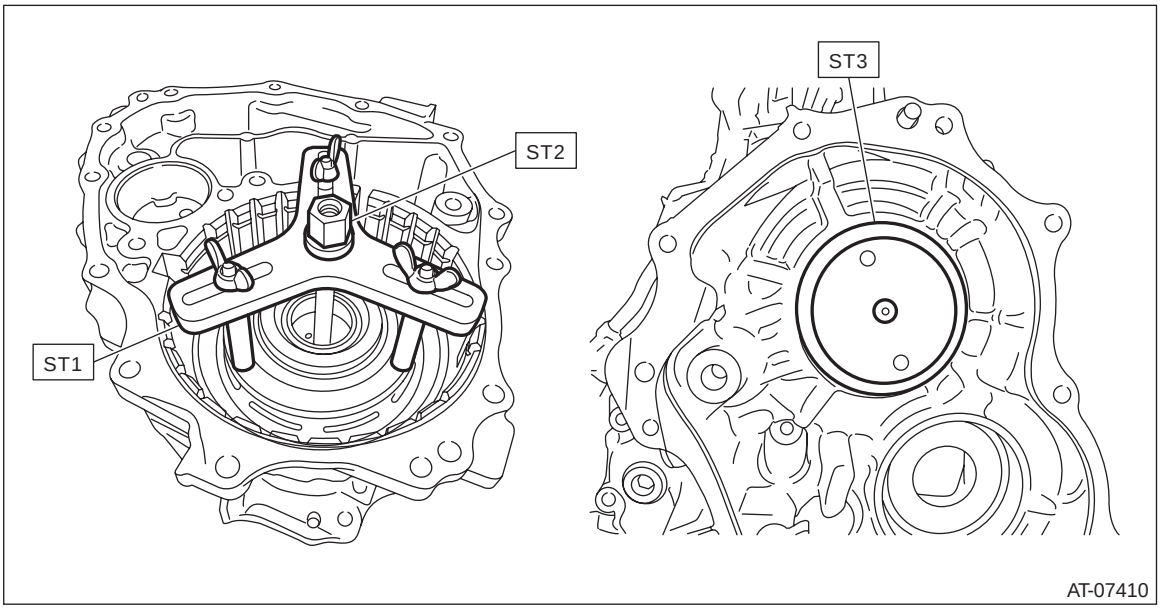


3) Set the spring retainer and snap ring.

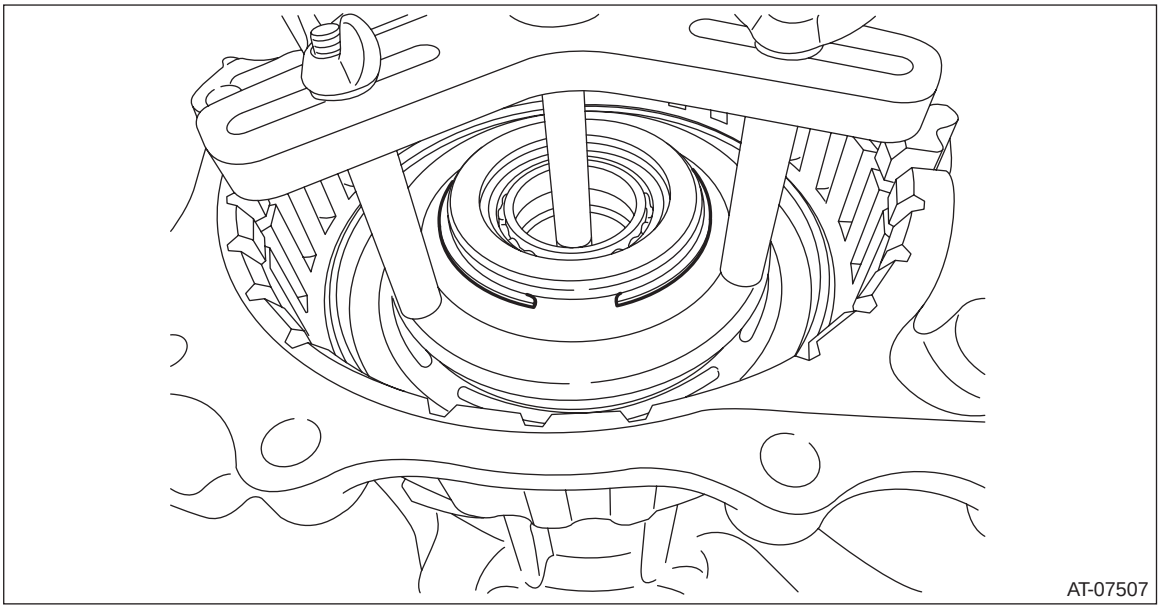


(A) Snap ring
(B) Spring retainer

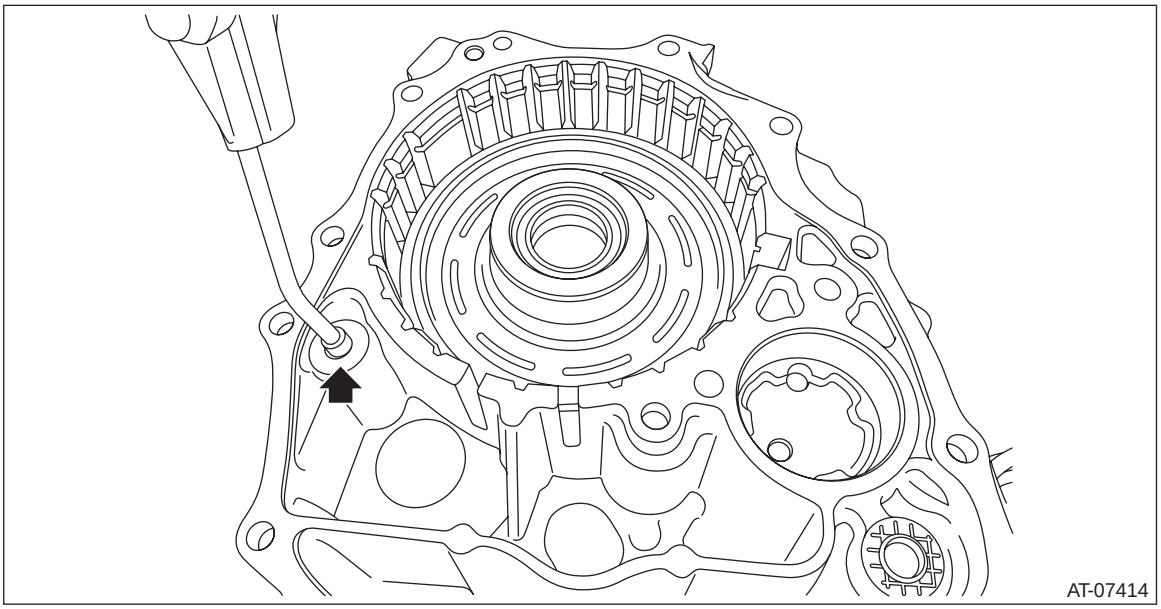
4) Set the ST1, ST2 and ST3 to intermediate case.
ST1 18762AA001 COMPRESSOR SPECIAL TOOL
ST2 18763AA000 COMPRESSOR SHAFT
ST3 18765AA000 COMPRESSOR SUPPORT



5) Compress the return spring using the ST attached, and install the snap ring.



6) Check the operation of reverse brake piston by blowing compressed air intermittently from intermediate case hole.

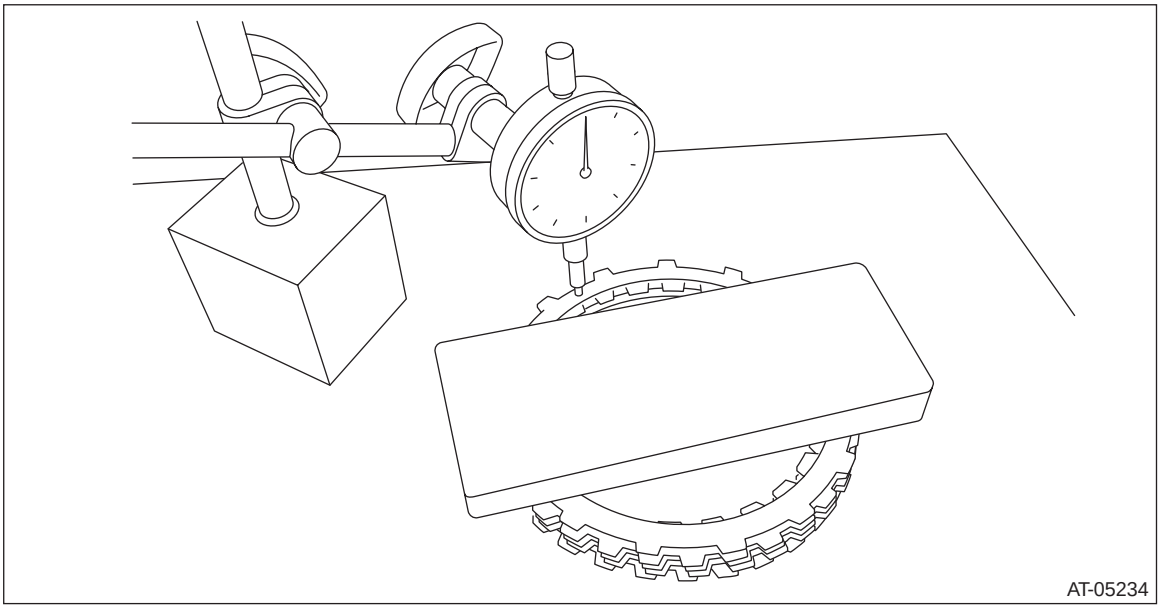


7) Place the dish plate, driven plate, drive plate and retaining plate neatly in this order on surface table.
8) Set the dial gauge to retaining plate, and read its scale.

NOTE:
The value, which is read in the gauge at this time, is zero point.
9) Scale and record the weight “Z” of a flat board which will be put on retaining plate.

NOTE:
- Use a stiff board which does not bend against load as a flat board to be put on retaining plate.
- Use a flat board weighing less than 84 N (8.6 kgf, 18.9 lb).

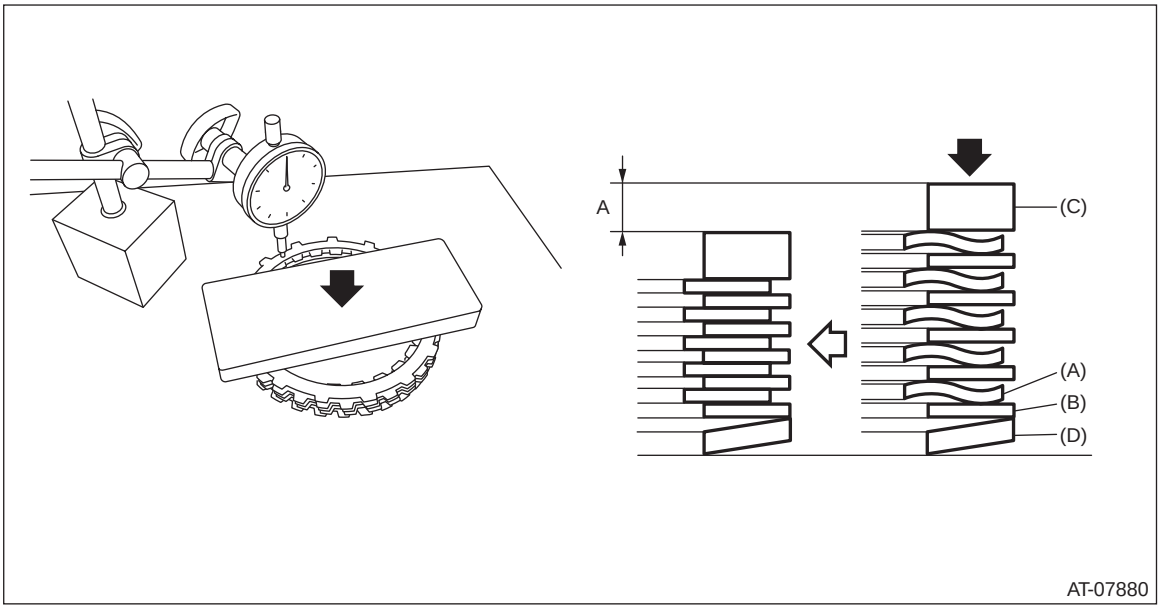
10) Put the flat board on retaining plate.



11) Using the following formula, read the push/pull gauge, and calculate “N”.
N = 84 N (8.6 kgf, 18.9 lb) – Z
84 N (8.6 kgf, 18.9 lb) : Load applied to clutch plate
Z: Flat board weight

12) Press the center of retaining plate by applying a force of “N” or more using push/pull gauge, and then measure and record the compression amount “A”.

NOTE:
Measure at four points with a 90° interval and calculate the average.

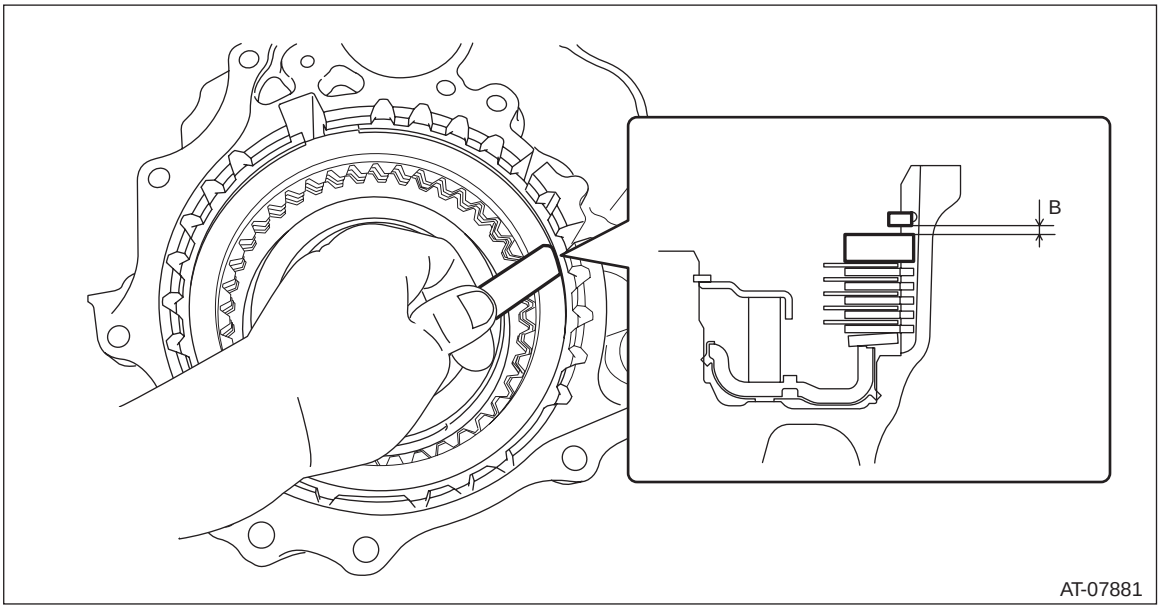


(A) Drive plate
(B) Driven plate
(C) Retaining plate
(D) Dish plate

13) Install the dish plate, drive plate, driven plate, retaining plate and snap ring to intermediate case.

NOTE:
Install the dish plate in the correct direction.

14) Measure and record the clearance “B” between the retaining plate and snap ring.



15) Piston stroke calculation
Calculate with A and B dimensions recorded before. If it exceeds the limit, replace with a new drive plate and adjust within the initial standard value.
S mm (in) = A + B
S: Piston stroke
A: Compression amount of drive plate and dish plate
B: Clearance between retaining plate and snap ring

Initial standard:
2.88 — 3.18 mm (0.113 — 0.125 in)

Limit thickness:
3.38 mm (0.133 in)

Retaining plate	
Part No.	Thickness mm (in)
31567AB680	5.6 (0.220)
31567AB690	5.8 (0.228)
31567AB700	6.0 (0.236)
31579AB710	6.2 (0.244)

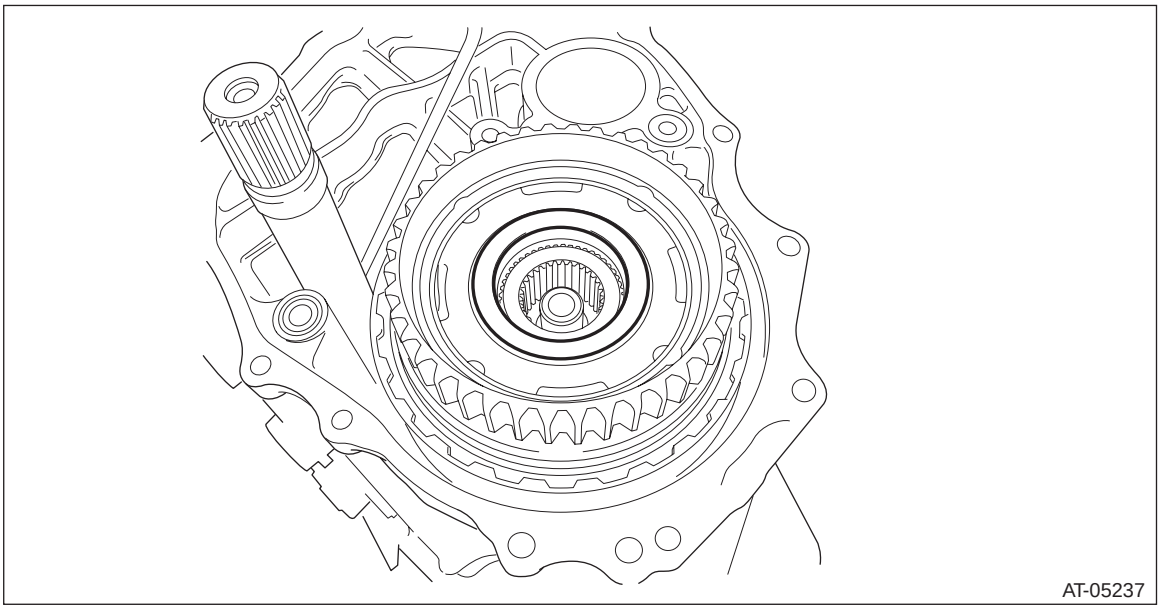
E: INSPECTION

- Inspect the drive plate facing for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed spring retainer.
- Make sure the clearance between retaining plate and snap ring of reverse brake is within the limit. If it exceeds the limit, replace with a new drive plate and select and adjust the retaining plate within the initial standard value. <Ref. to CVT(TR690)-175, ASSEMBLY, Reverse Brake Assembly.>

37.Forward Clutch Assembly

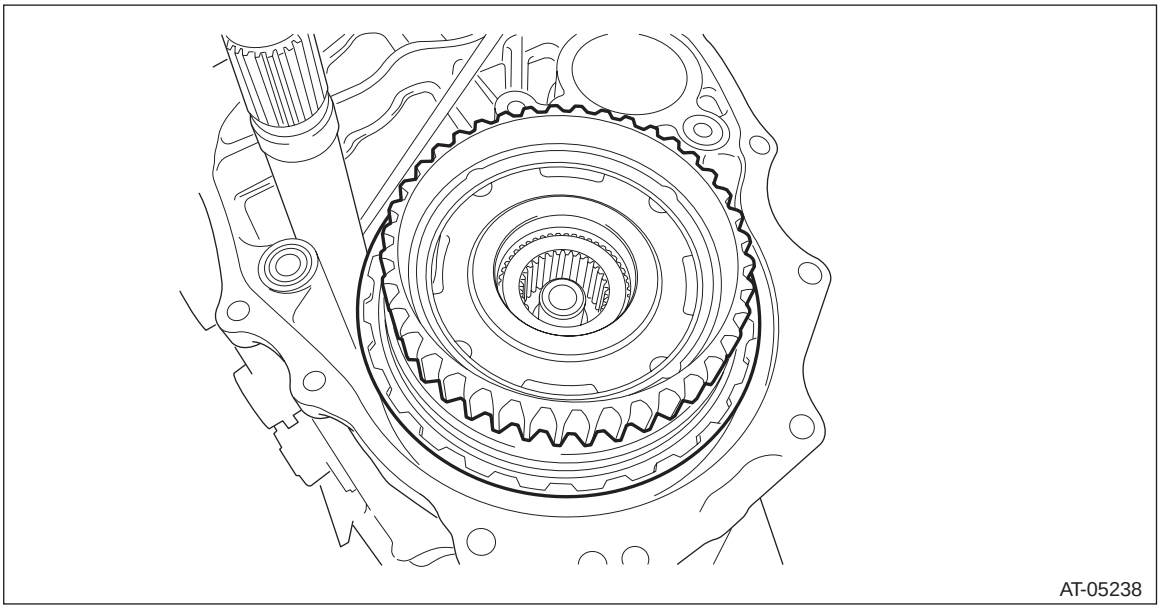
A: REMOVAL

1) Remove the transmission from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-142, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to CVT(TR690)-146, REMOVAL, Rear Drive Shaft.>
4) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-151, REMOVAL, Transfer Clutch.>
5) Remove the center differential carrier. <Ref. to CVT(TR690)-154, REMOVAL, Center Differential Carrier.>
6) Remove the transfer reduction driven gear. <Ref. to CVT(TR690)-158, REMOVAL, Transfer Reduction Driven Gear.>
7) Remove the intermediate case. <Ref. to CVT(TR690)-165, REMOVAL, Intermediate Case.>
8) Remove the thrust needle bearing.



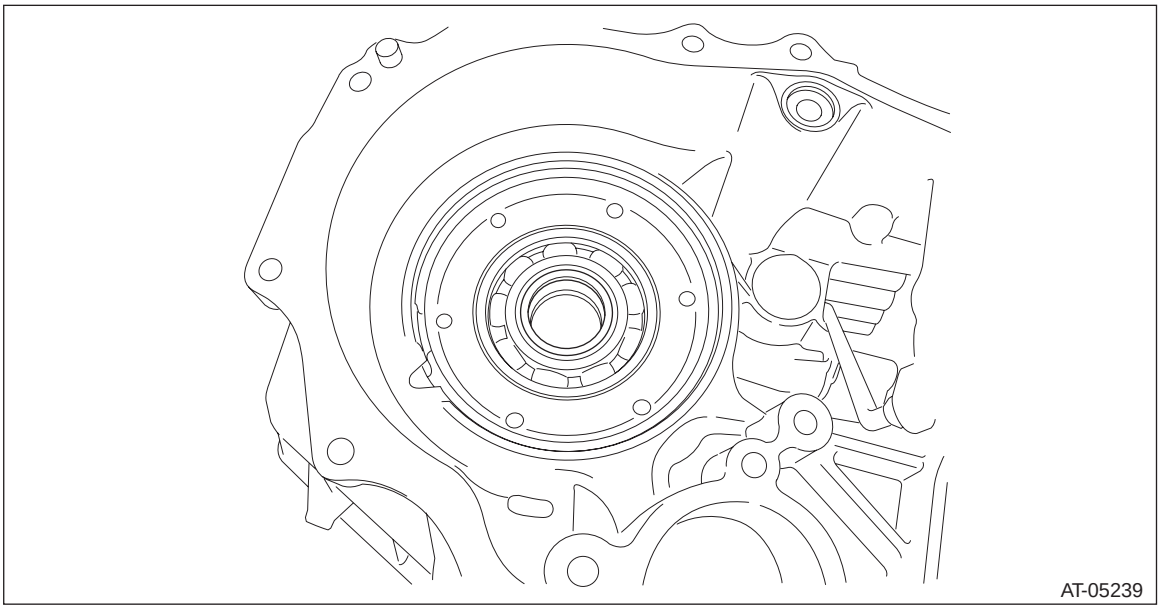
AT-05237

9) Remove the forward clutch assembly.



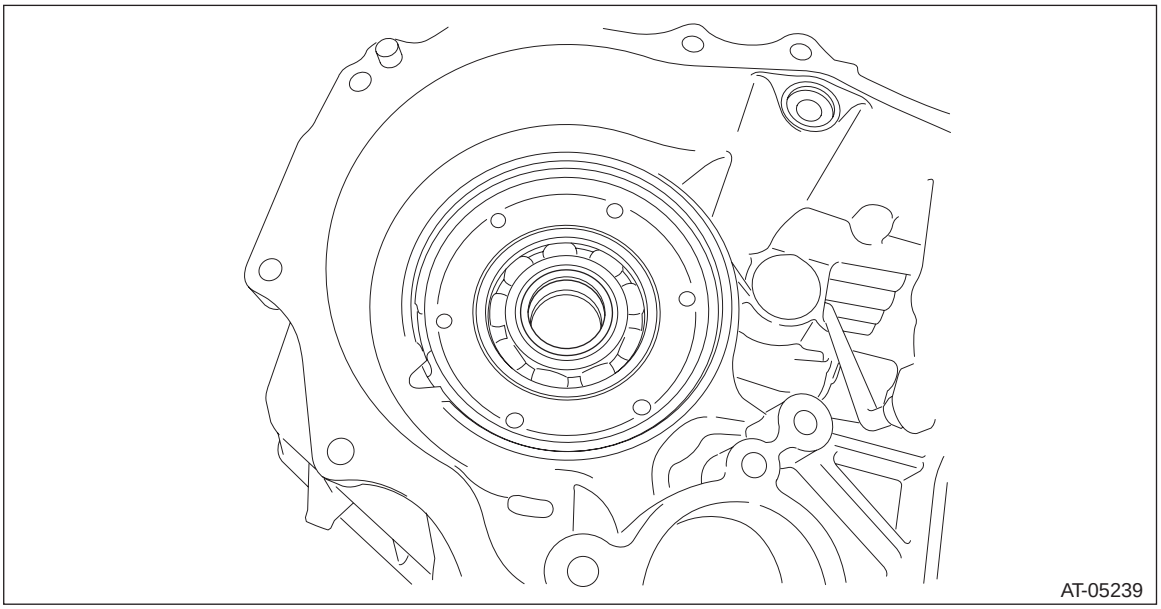
AT-05238

10) Remove the washer.

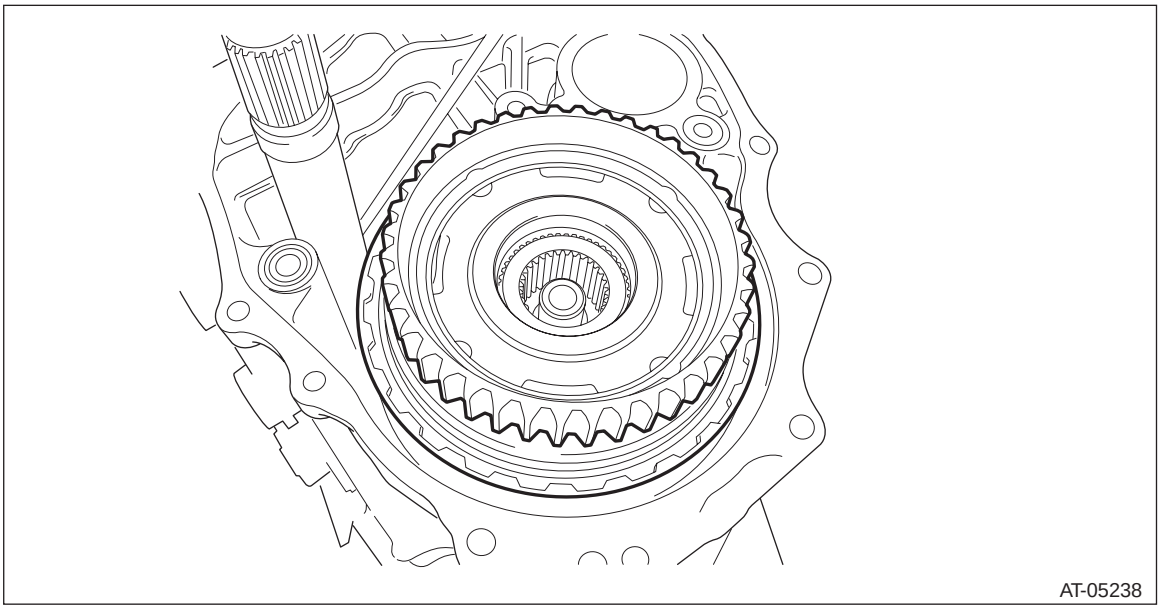


B: INSTALLATION

1) Select a washer. <Ref. to CVT(TR690)-199, ADJUSTMENT, Forward Clutch Assembly.>
2) Install the selected washer.

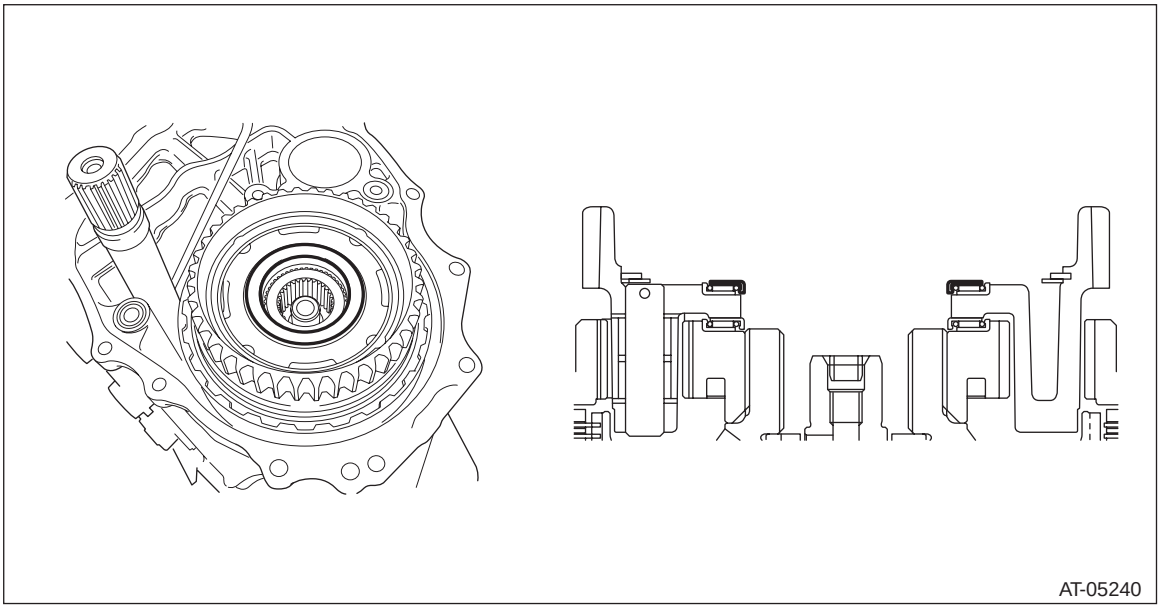


3) Install the forward clutch assembly.



4) Install the thrust needle bearing.

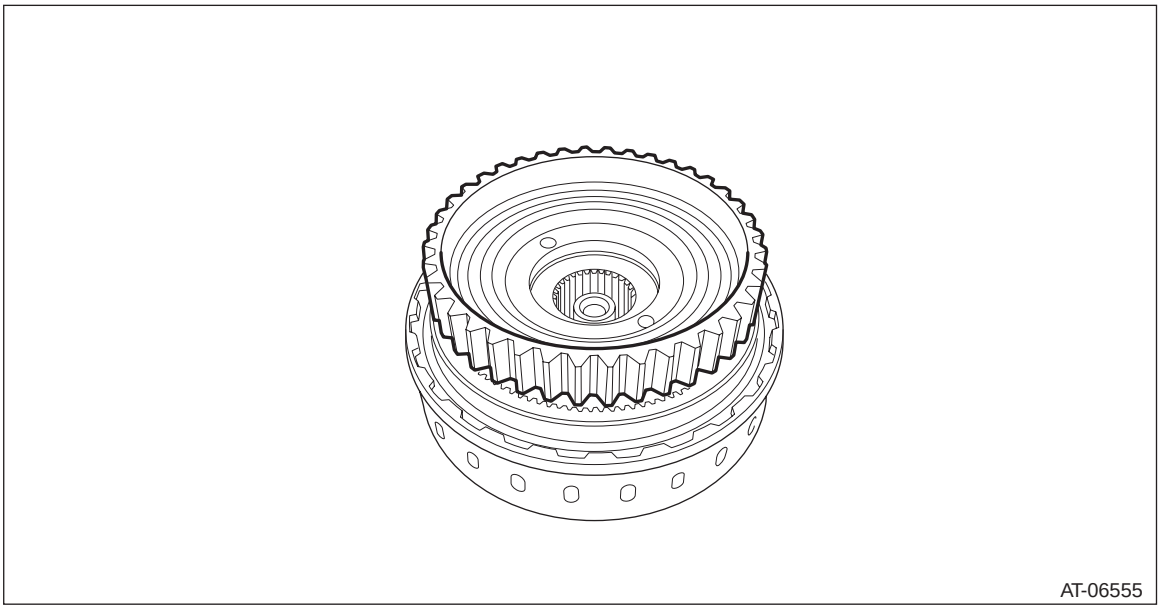
NOTE:
Install the thrust needle bearing in the correct direction.



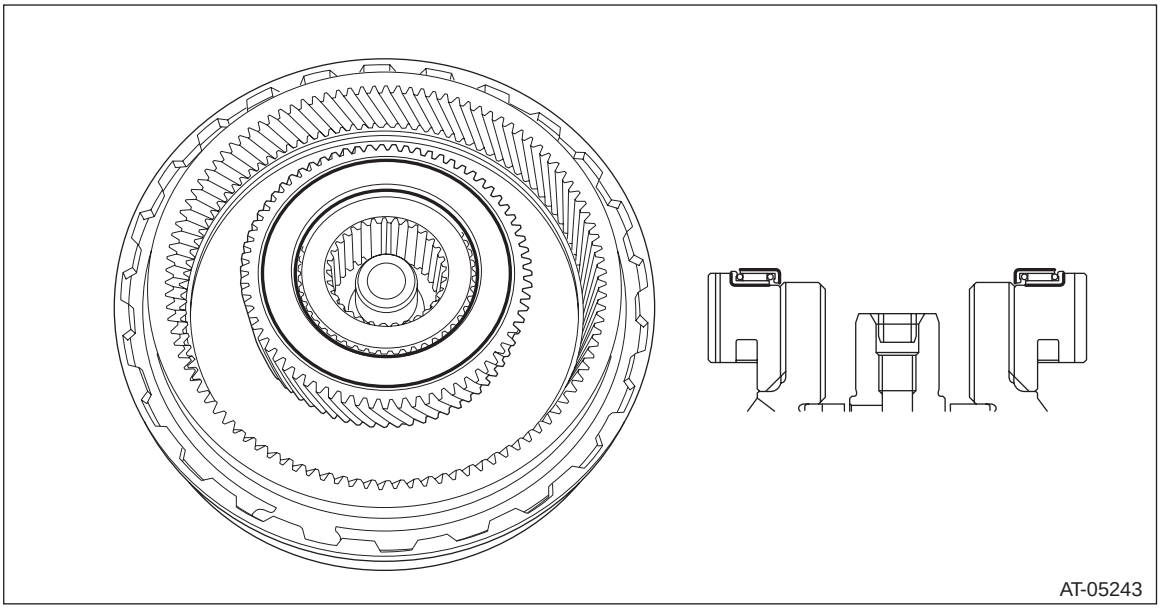
5) Install the intermediate case. <Ref. to CVT(TR690)-166, INSTALLATION, Intermediate Case.>
6) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-158, INSTALLATION, Transfer Reduction Driven Gear.>
7) Install the center differential carrier. <Ref. to CVT(TR690)-155, INSTALLATION, Center Differential Carrier.>
8) Install the transfer clutch assembly. <Ref. to CVT(TR690)-151, INSTALLATION, Transfer Clutch.>
9) Install the rear drive shaft. <Ref. to CVT(TR690)-146, INSTALLATION, Rear Drive Shaft.>
10) Install the extension case. <Ref. to CVT(TR690)-143, INSTALLATION, Extension Case.>
11) Install the transmission to vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the planetary carrier assembly.

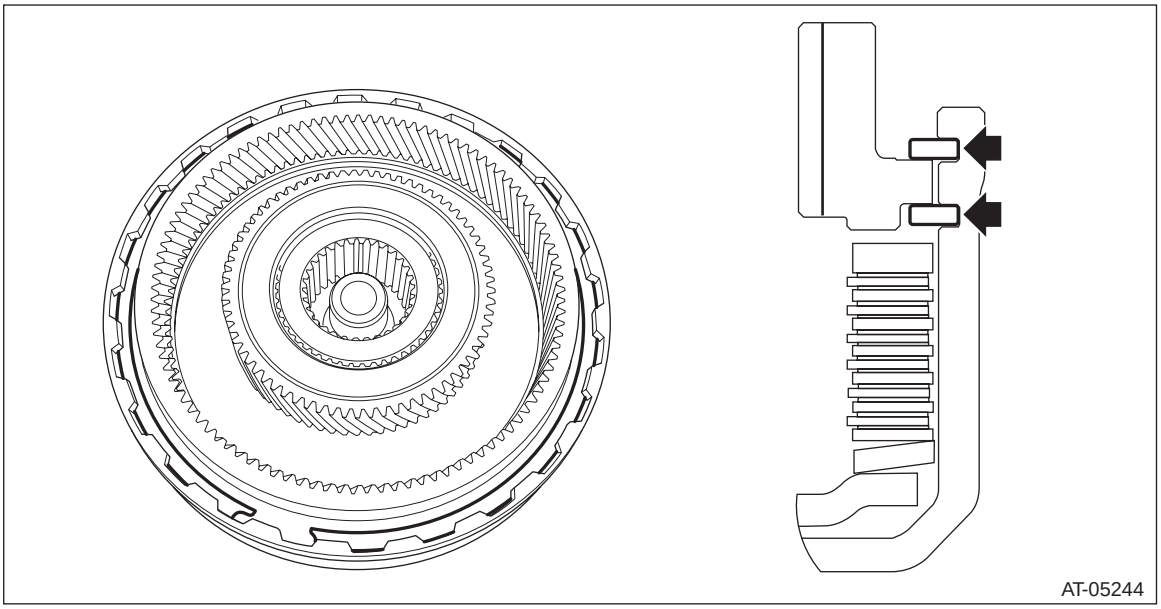


2) Remove the thrust needle bearing.



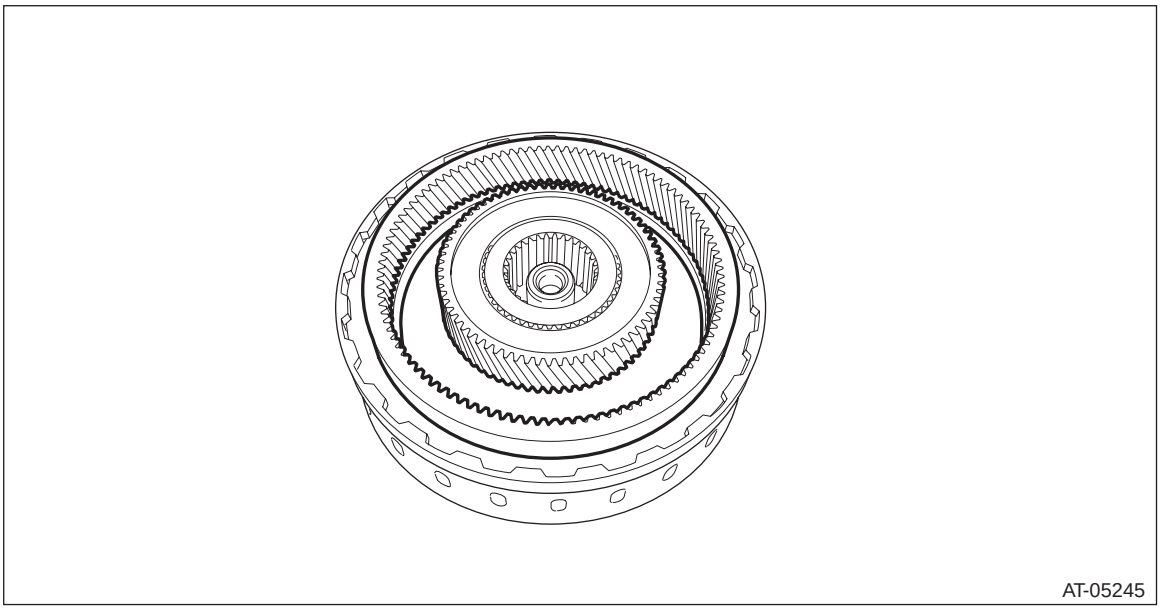
3) Remove the snap ring.

NOTE:
Use marking or labeling to the upper snap ring for measurement of the snap ring thickness when selecting the retaining plate.



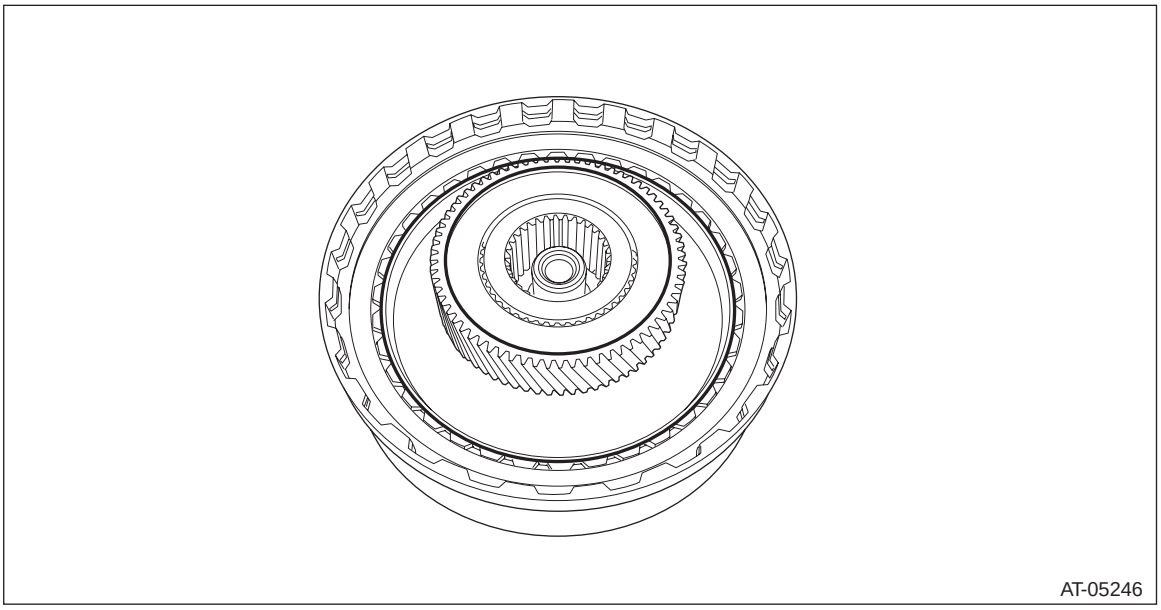
AT-05244

4) Remove the internal gear.

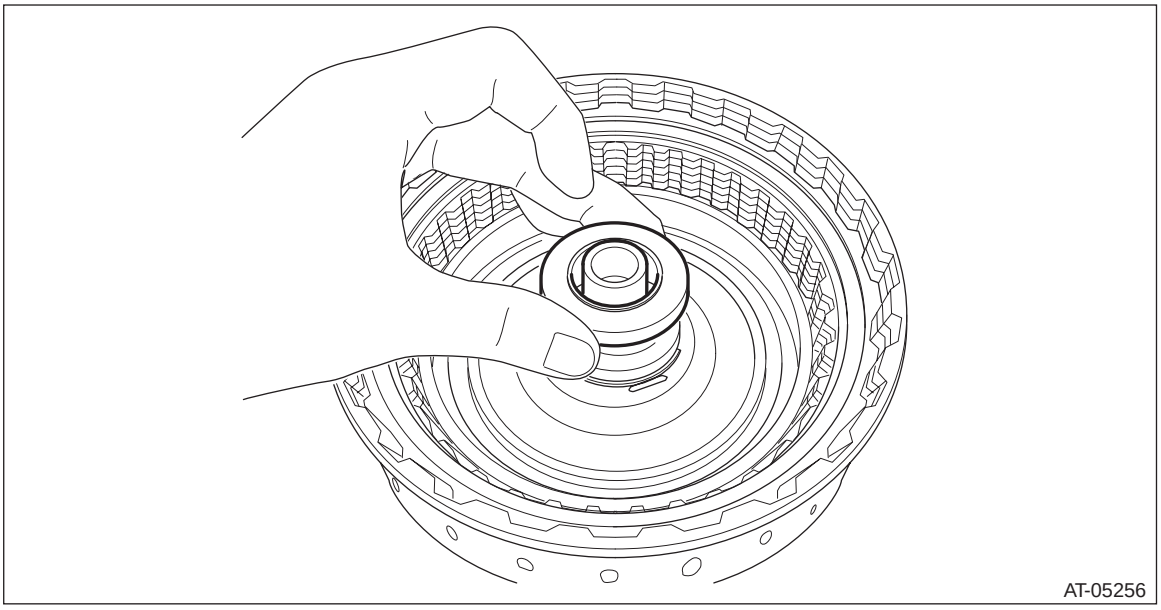


AT-05245

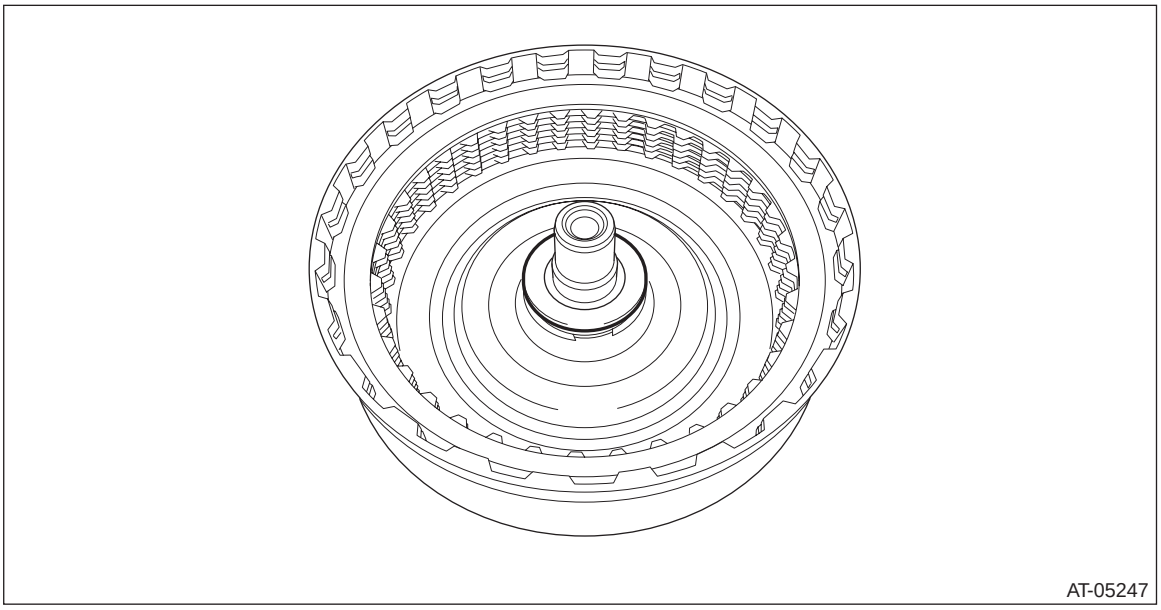
5) Remove the sun gear.



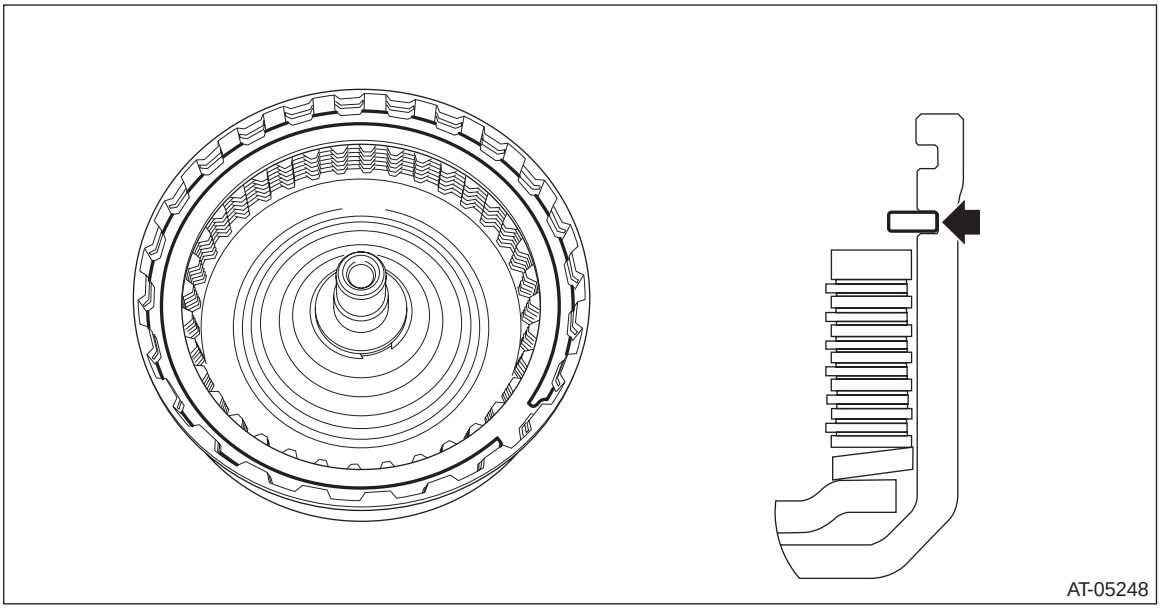
6) Remove the washer.



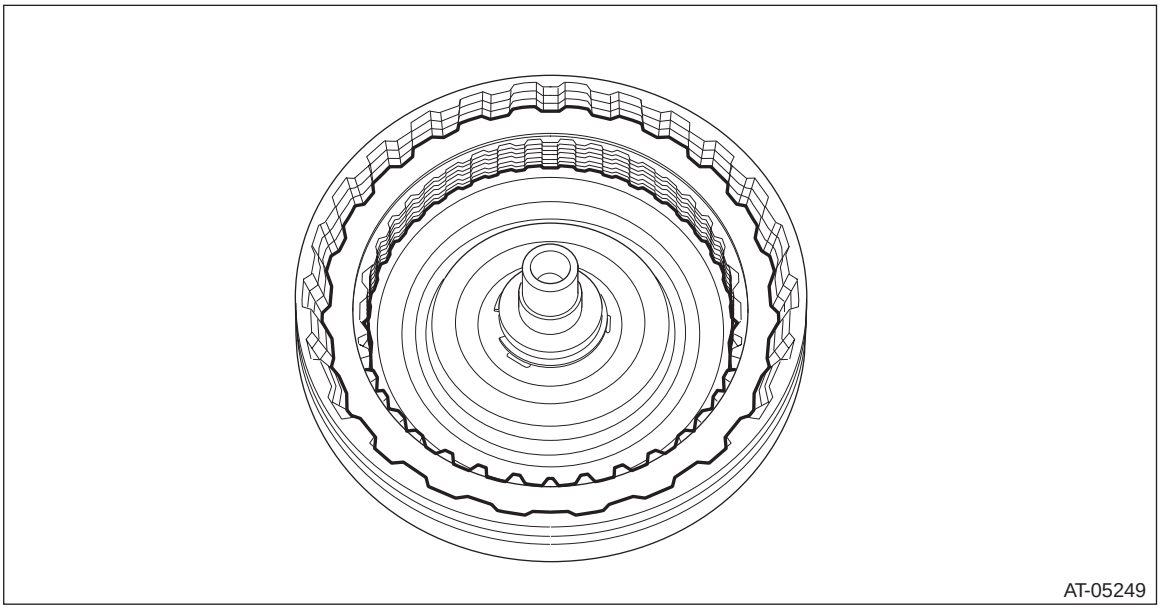
7) Remove the thrust needle bearing.



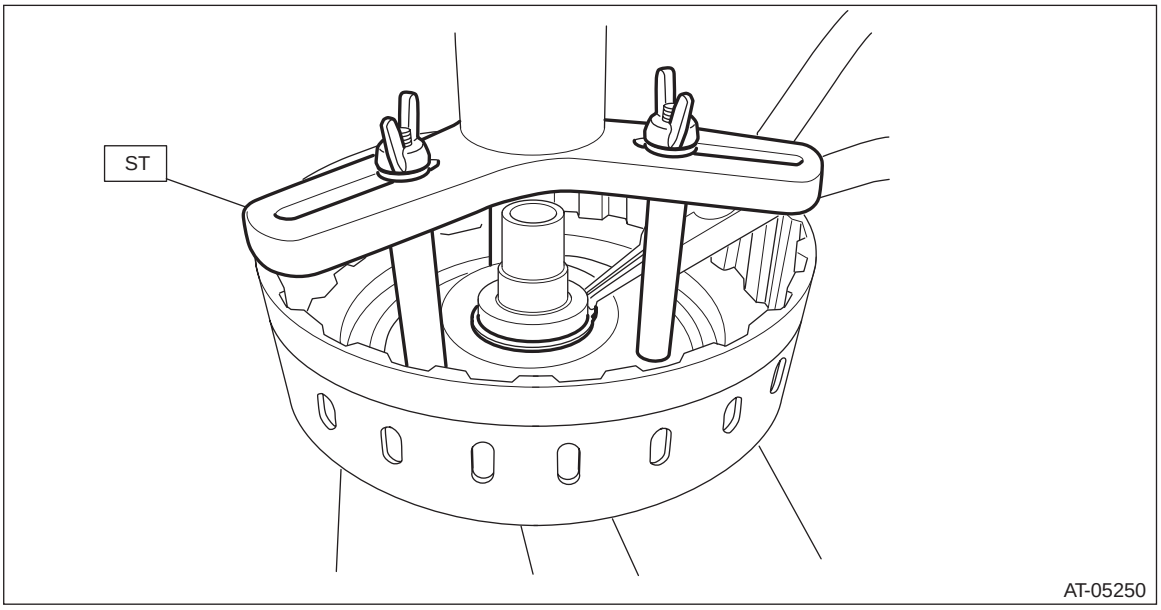
8) Remove the snap ring.



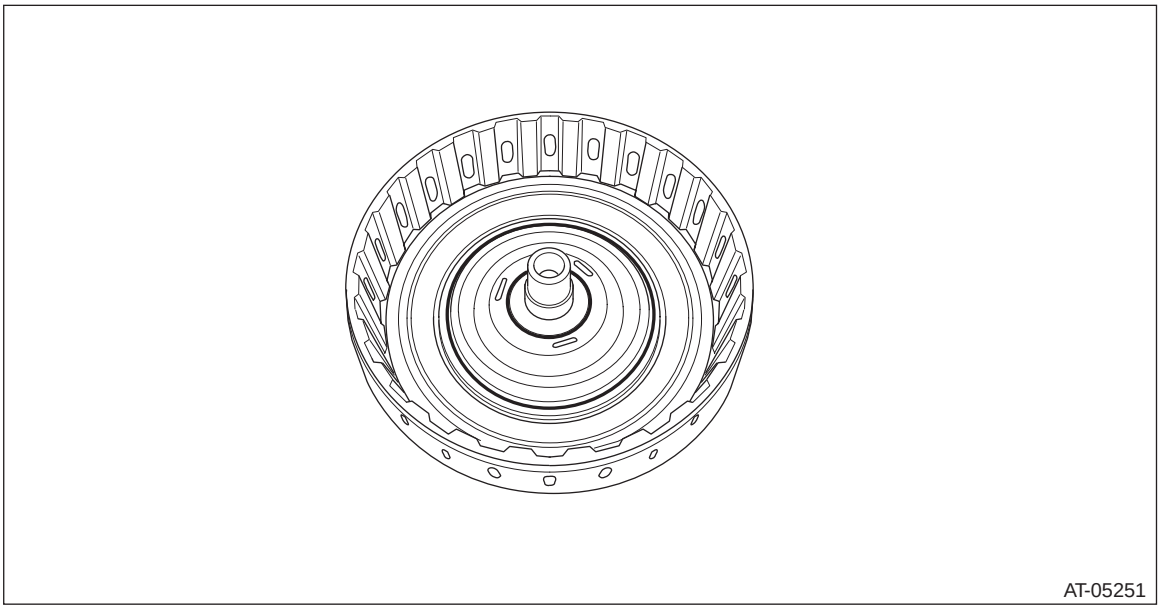
9) Remove the retaining plate, drive plate, driven plate and dish plate.



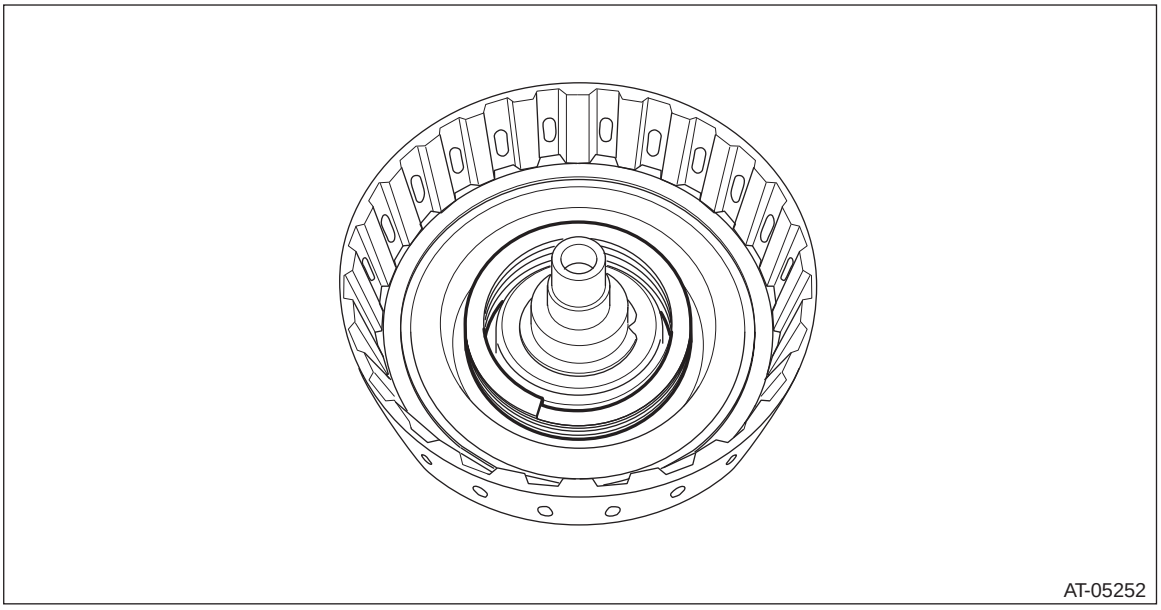
10) Using the ST, remove the snap ring.
ST 18762AA001 COMPRESSOR SPECIAL TOOL



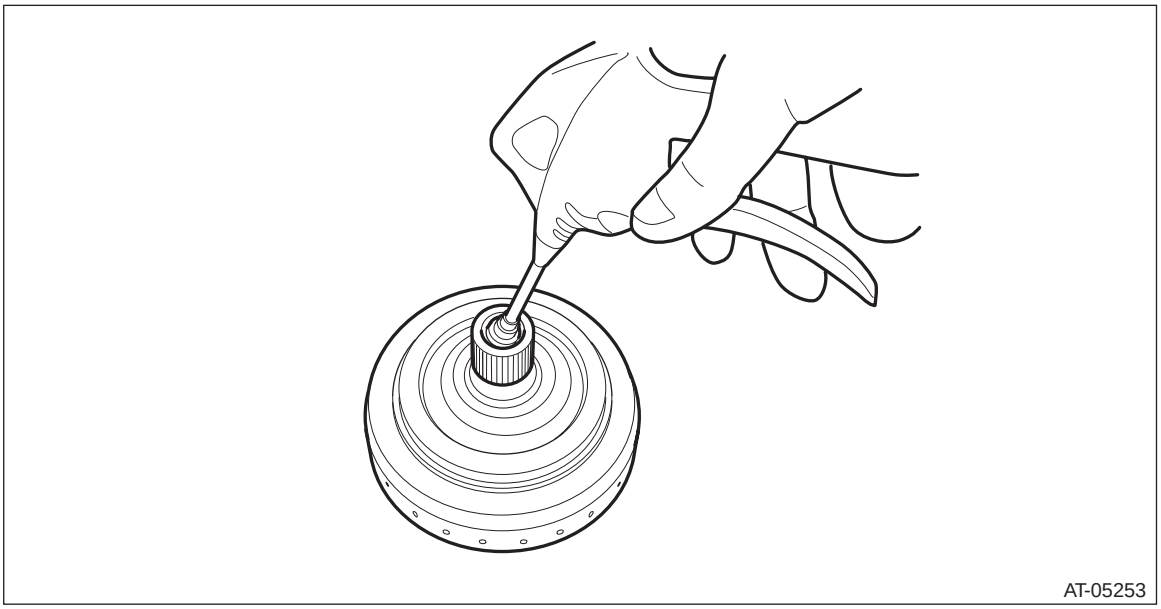
11) Remove the forward clutch piston retainer.



12) Remove the return spring.



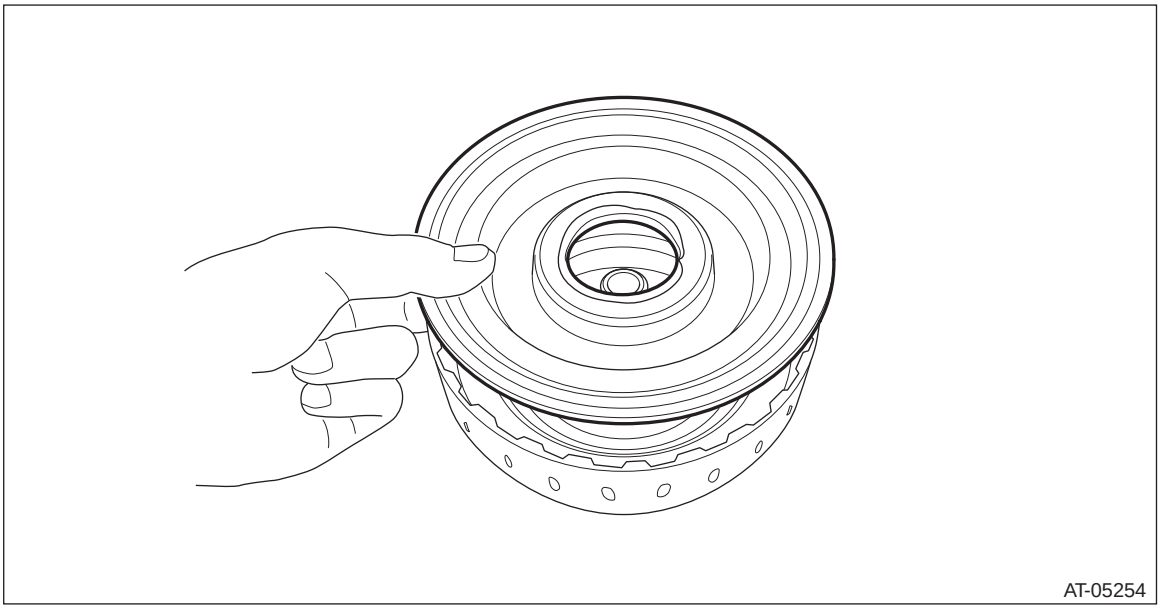
13) Remove the forward clutch piston by blowing compressed air intermittently from end of forward clutch drum.



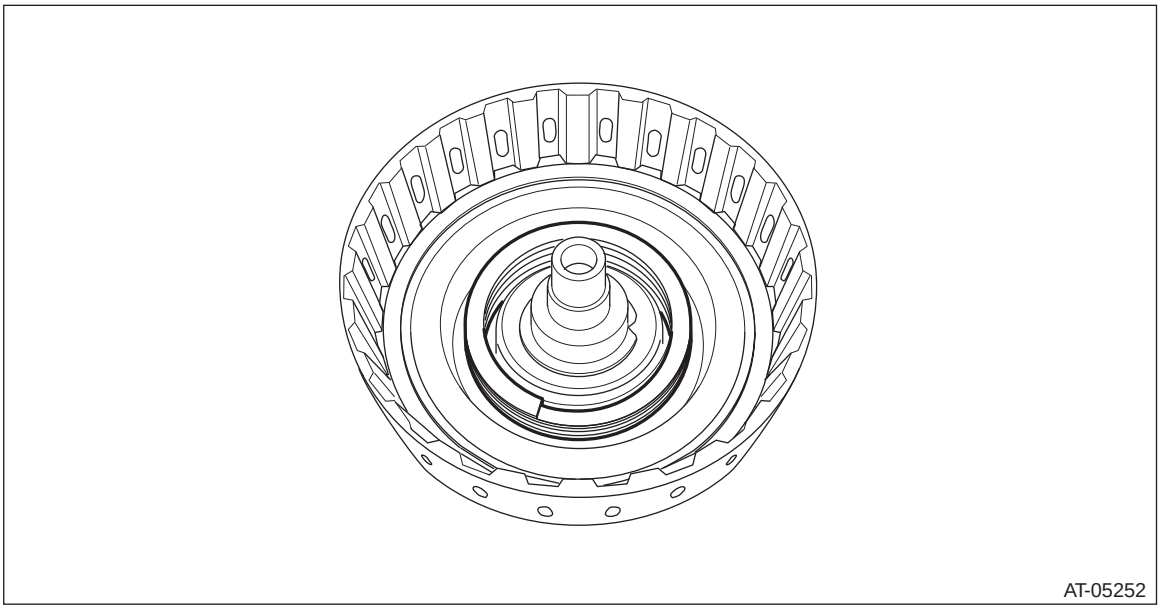
D: ASSEMBLY

1) Install the forward clutch piston to forward clutch drum.

NOTE:
- Apply CVTF to the seal of forward clutch piston.
- Insert it all the way to the end.

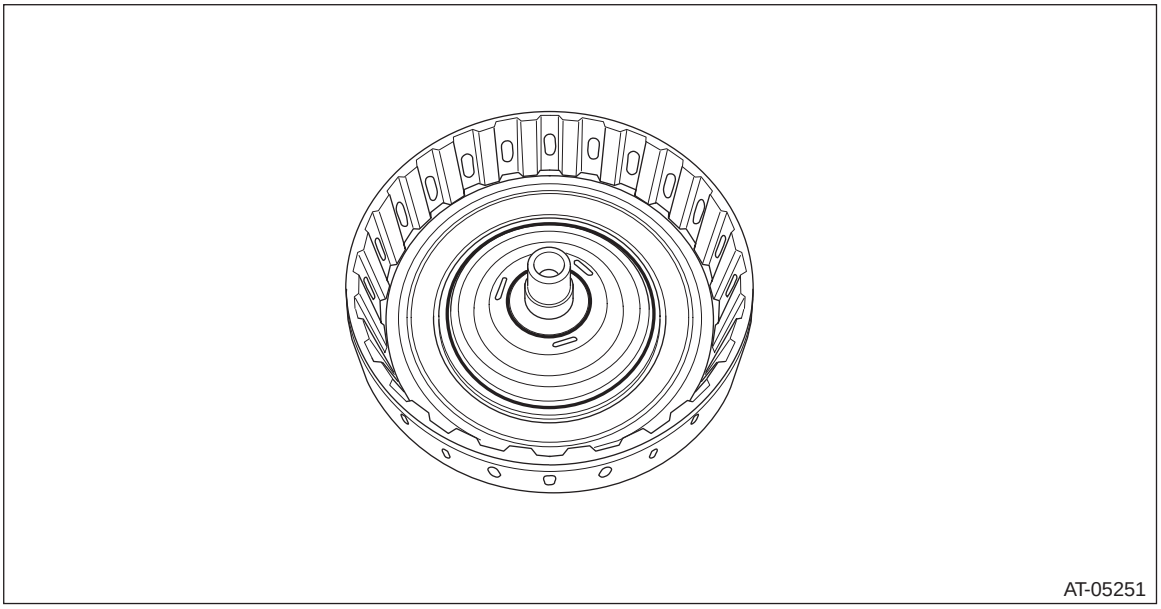


2) Install the return spring.

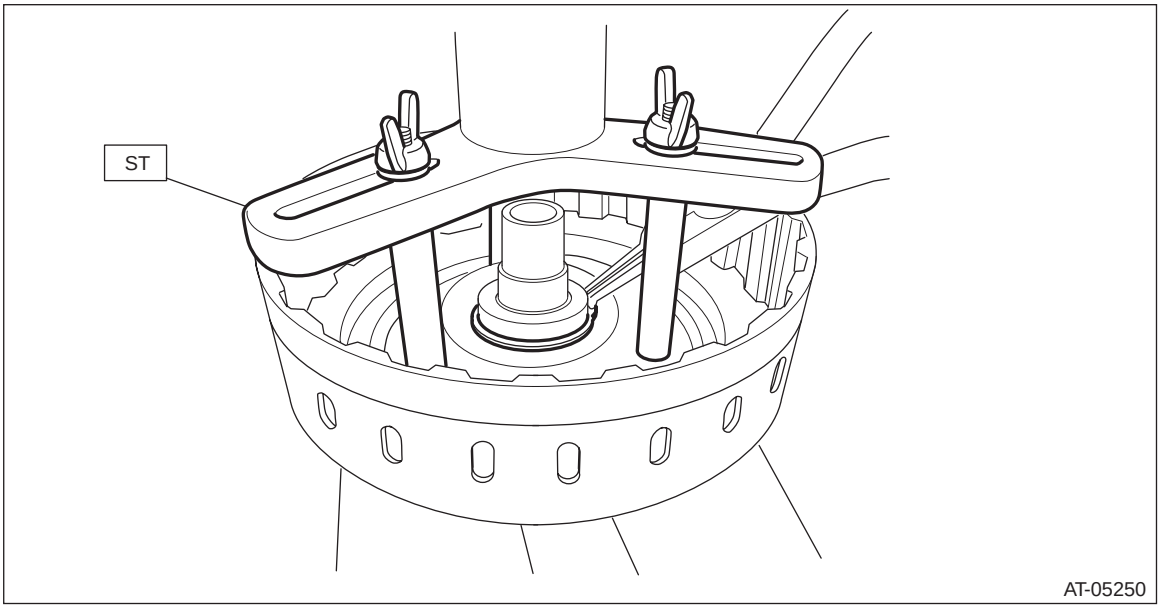


3) Install the forward clutch piston retainer.

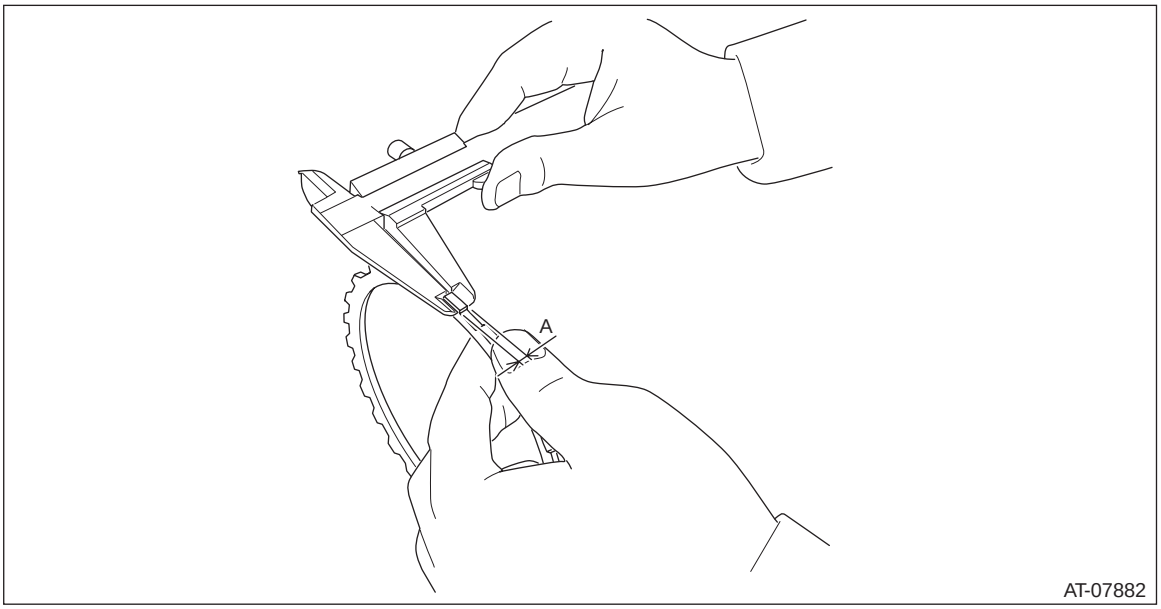
NOTE:
Apply CVTF to the sealing area of forward clutch piston retainer.



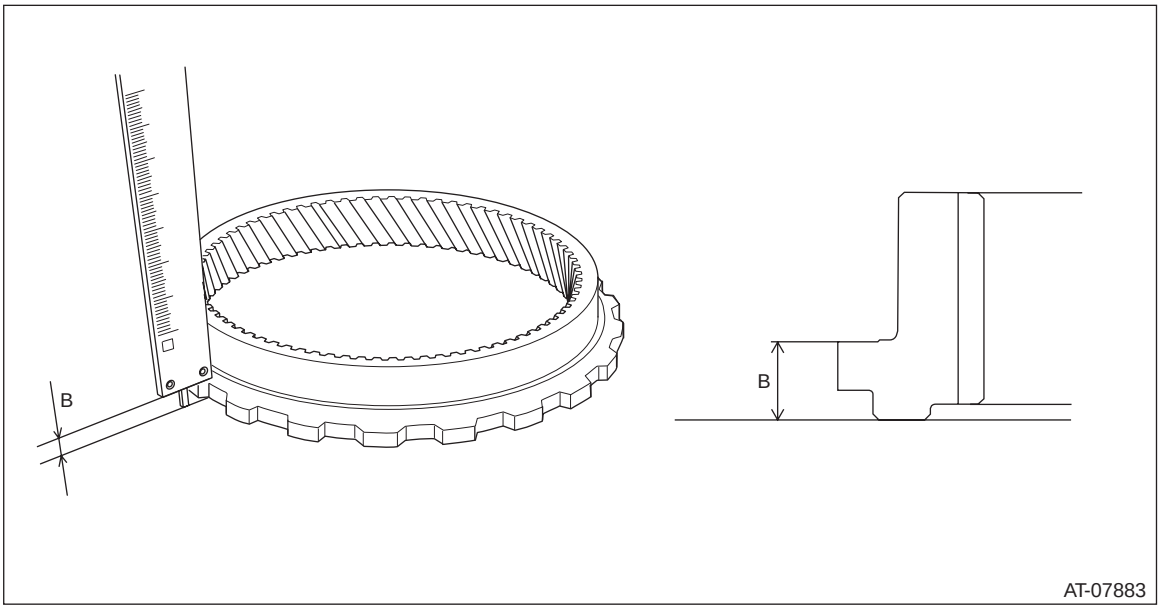
4) Compress the return spring using the ST to install the snap ring.
ST 18762AA001 COMPRESSOR SPECIAL TOOL



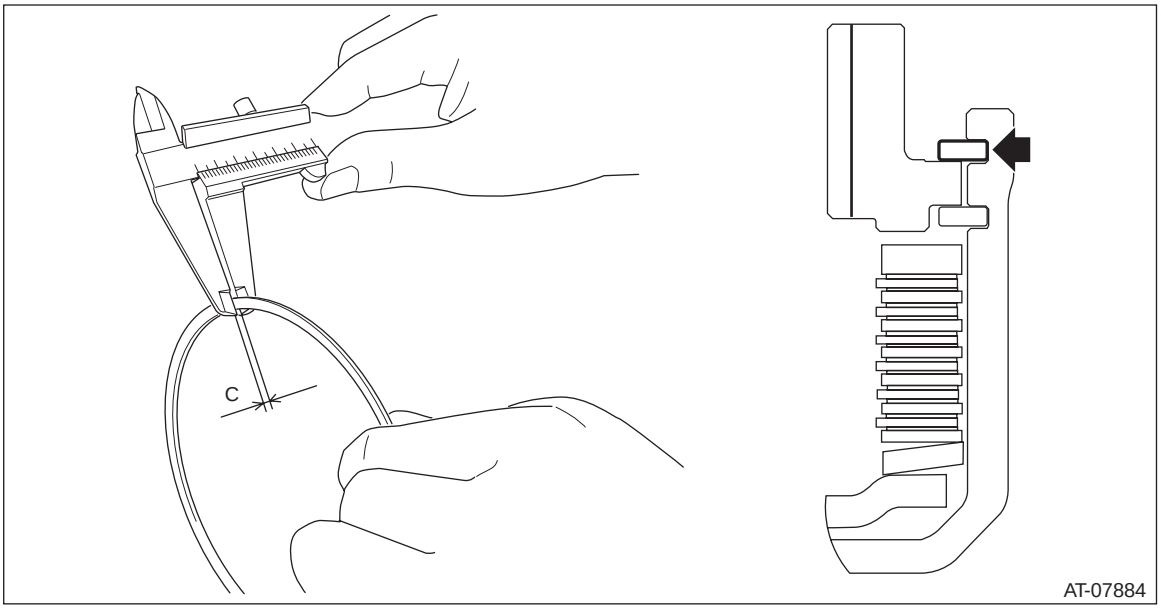
5) Measure thickness “A” of the retaining plate installed.



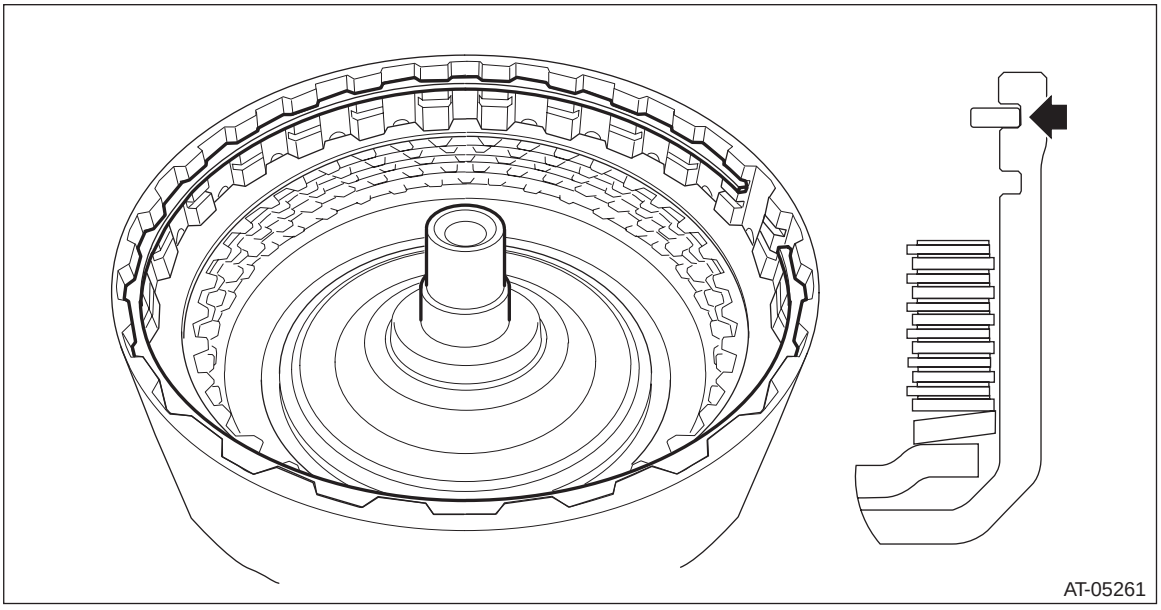
6) Measure thickness “B” of the internal gear on a surface plate.



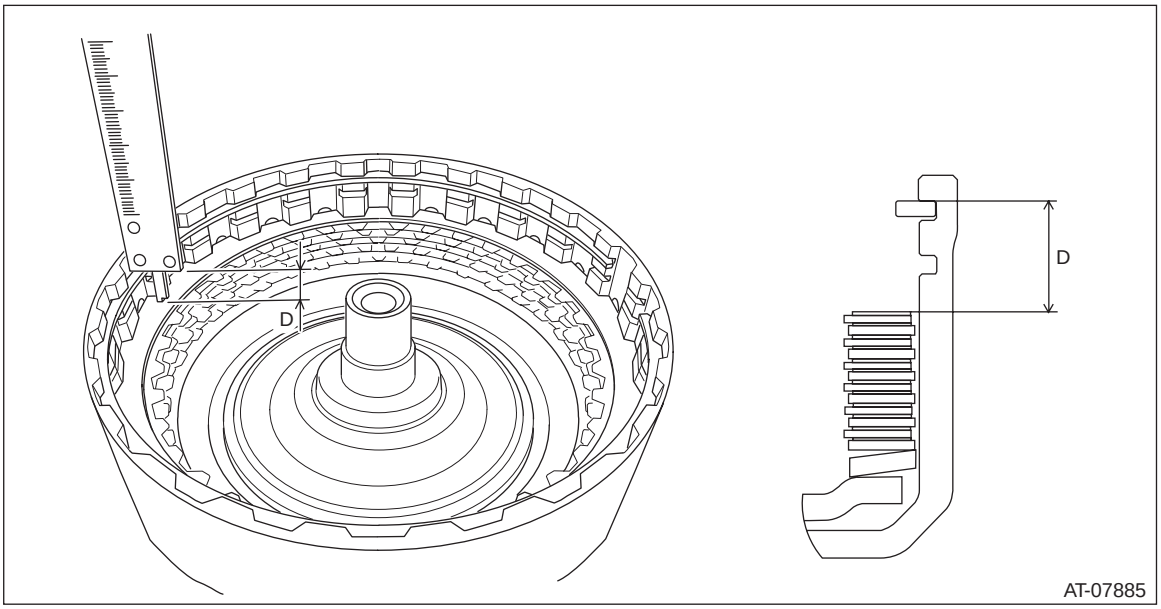
7) Measure thickness “C” of labelled or marked snap ring.



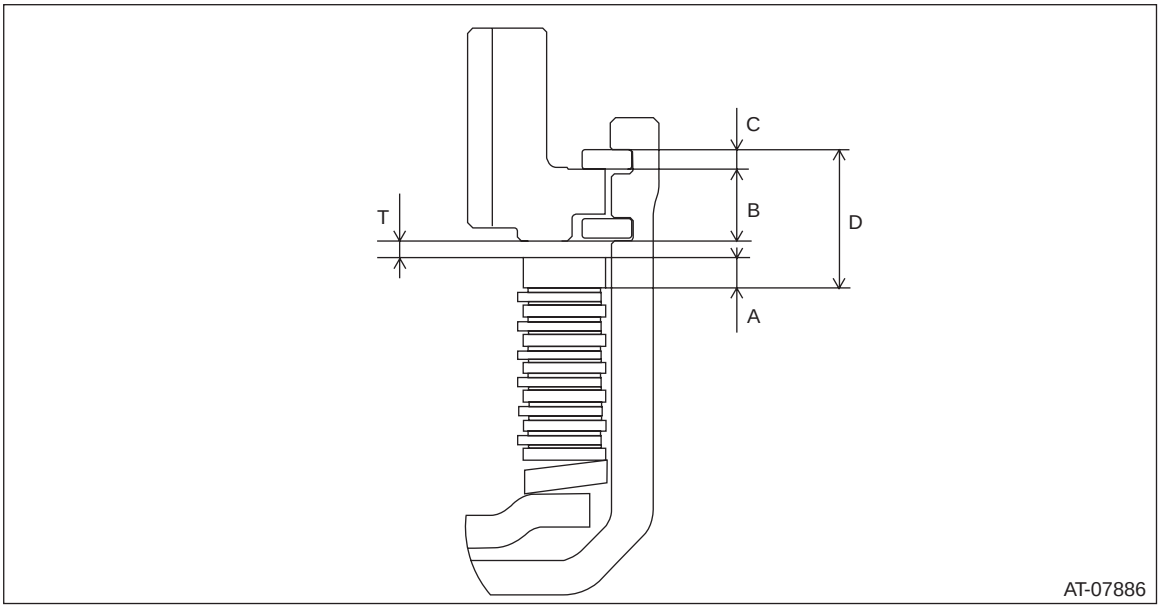
8) Install the dish plate, drive plate and driven plate.
9) Install the snap ring at the location (upper groove) indicated in the figure.



10) Measure depth “D” of snap ring and driven plate while lifting the snap ring.



11) Calculate clearance “T” from internal gear to retaining plate with the obtained value from step 5) through step 10).
Formula: T mm (in) = D – A – B – C



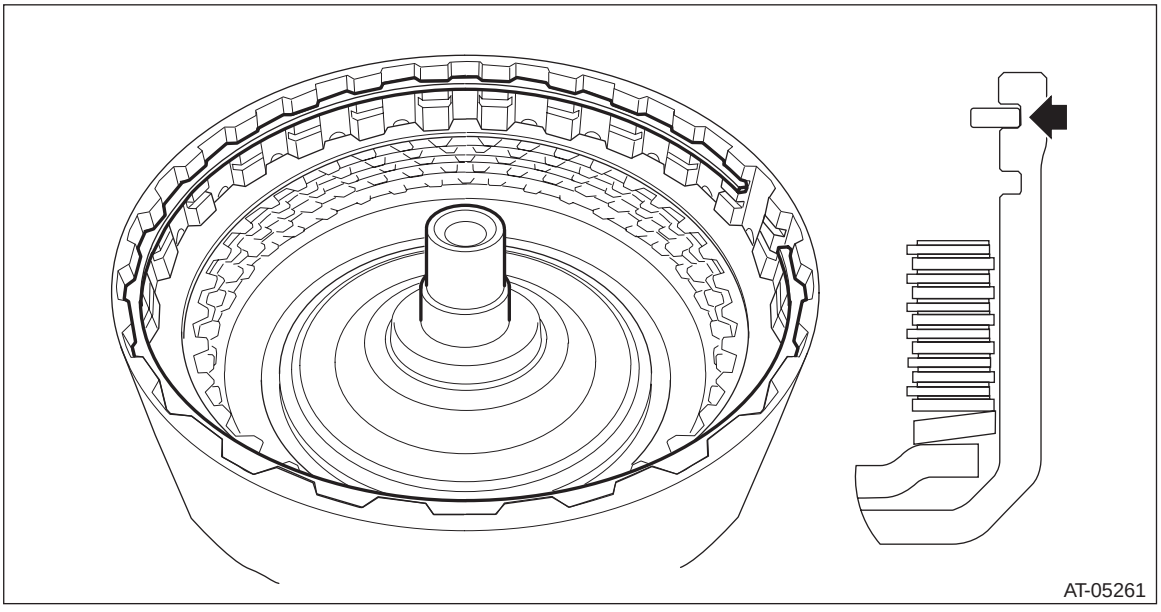
12) If the value “T” obtained from step 11) exceeds the limit for use, replace the drive plate and driven plate with new parts and select the retaining plate within the initial standard value.

Initial standard:
1.2 — 1.6 mm (0.047 — 0.063 in)

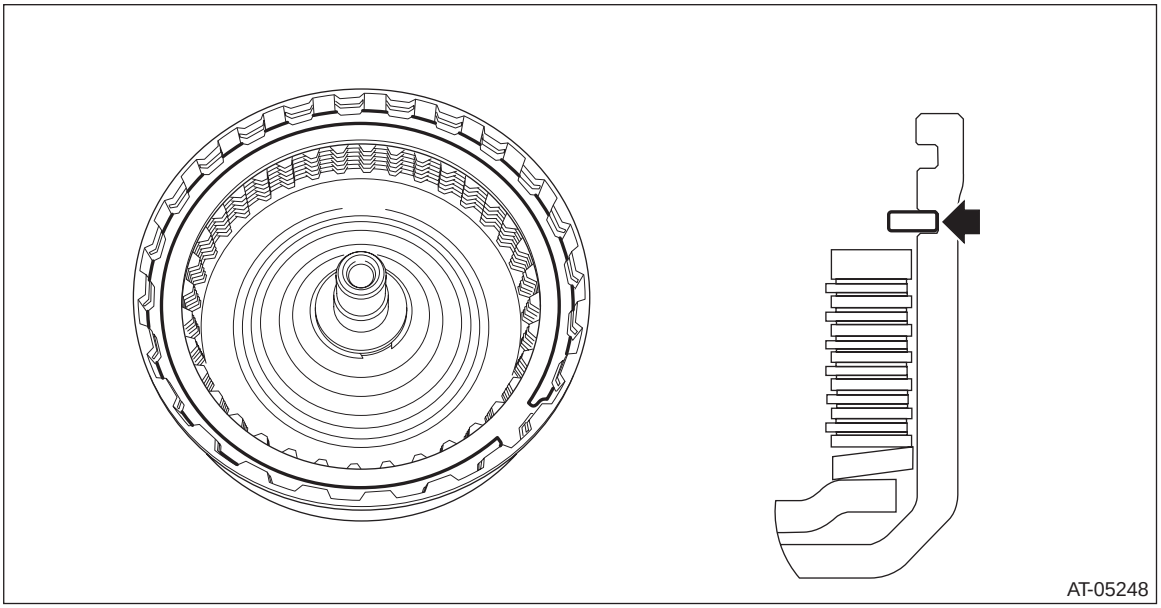
Limit thickness:
2.4 mm (0.09 in)

Retaining plate	
Item number	Thickness mm (in)
31567AB670	3.2 (0.126)
31567AB660	3.0 (0.118)
31567AB650	2.8 (0.110)
31567AB640	2.6 (0.102)

13) Remove the snap ring.

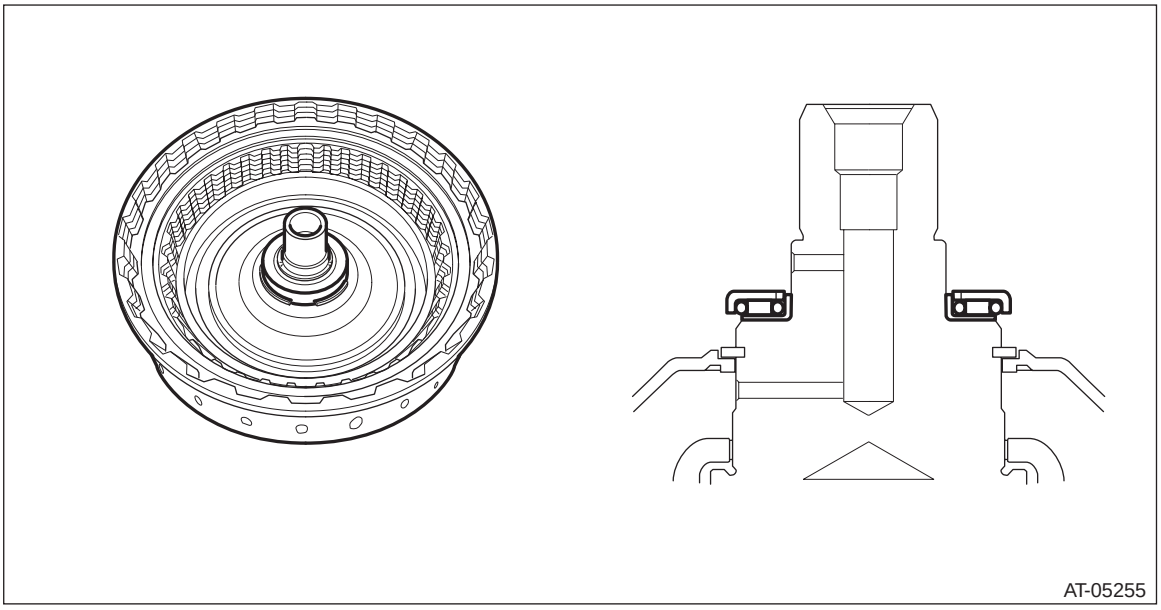


14) Replace with the selected retaining plate to install.
15) Install the snap ring to the lower groove.

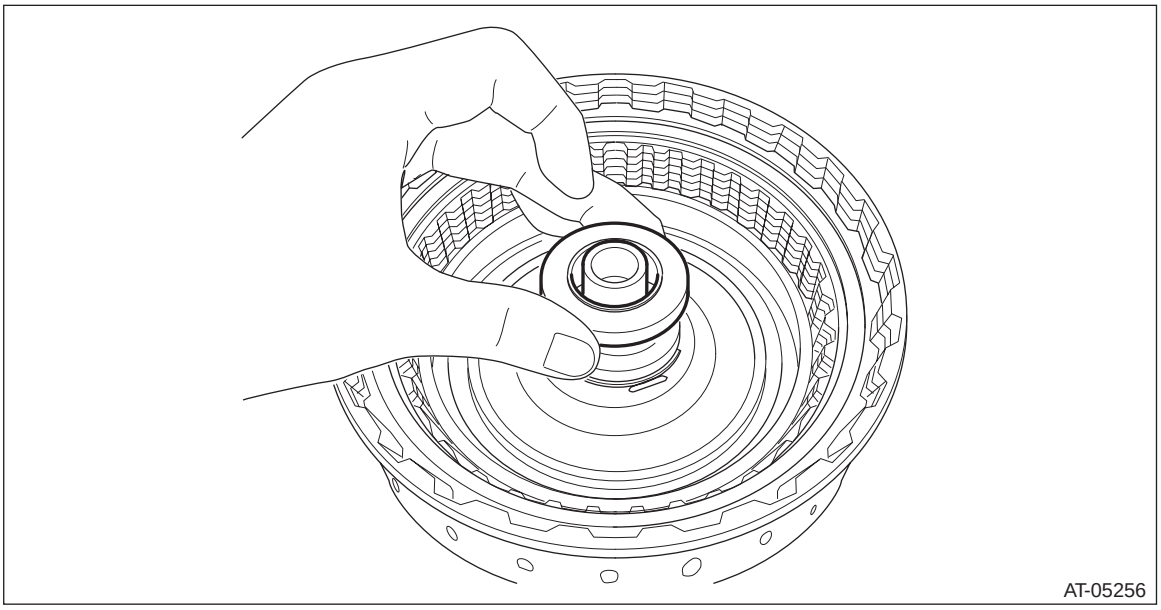


16) Install the thrust needle bearing.

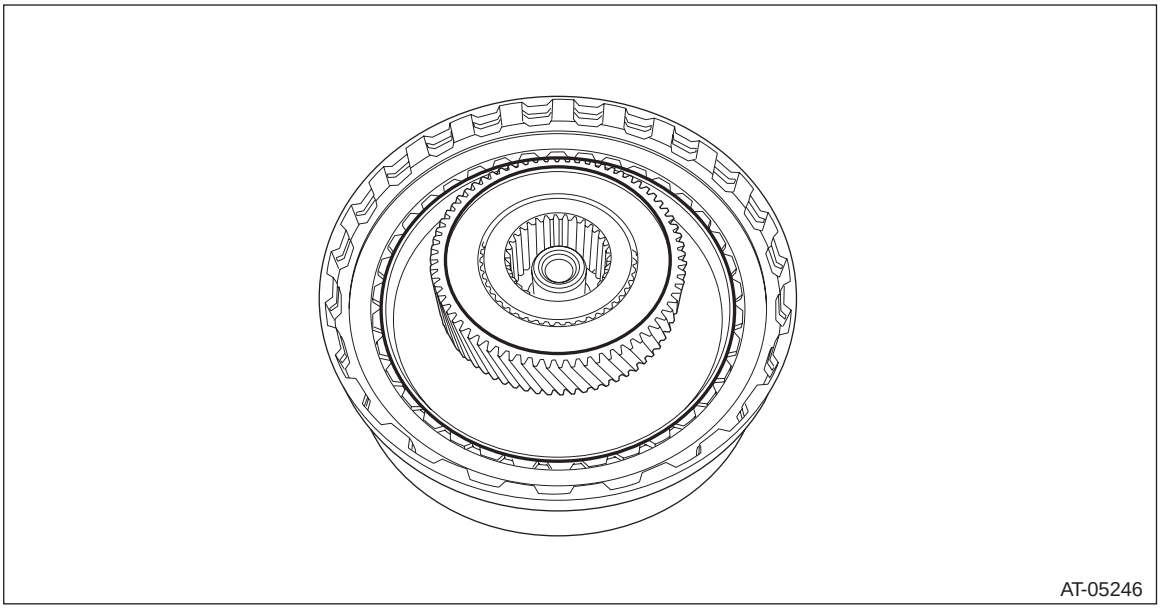
NOTE:
Install the thrust needle bearing in the correct direction.



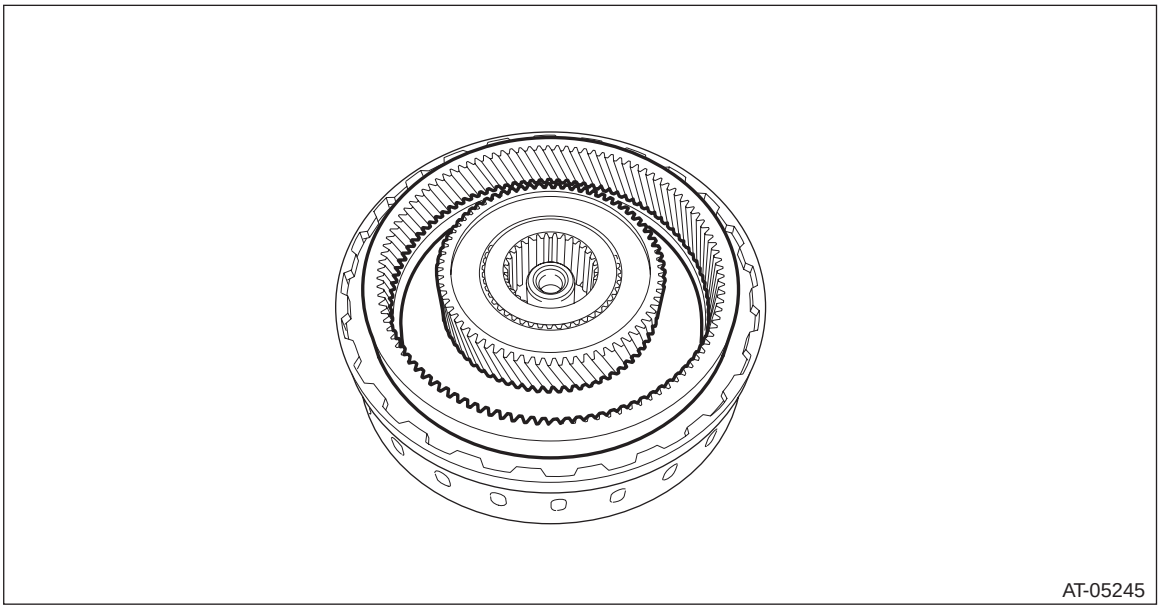
17) Install the washer.



18) Install the sun gear.

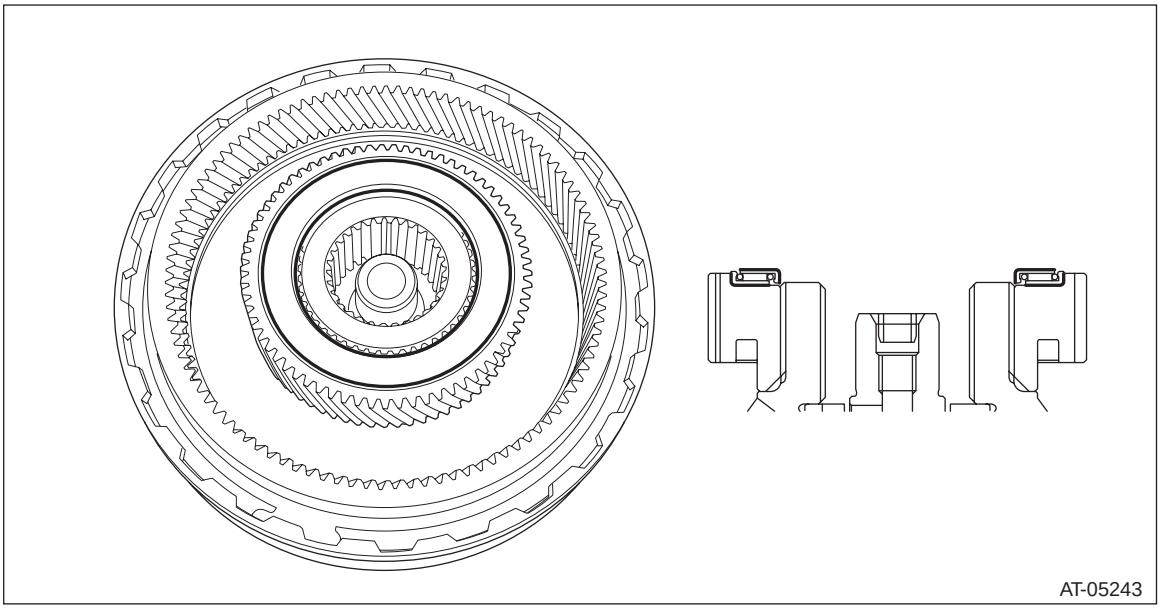


19) Install the internal gear.

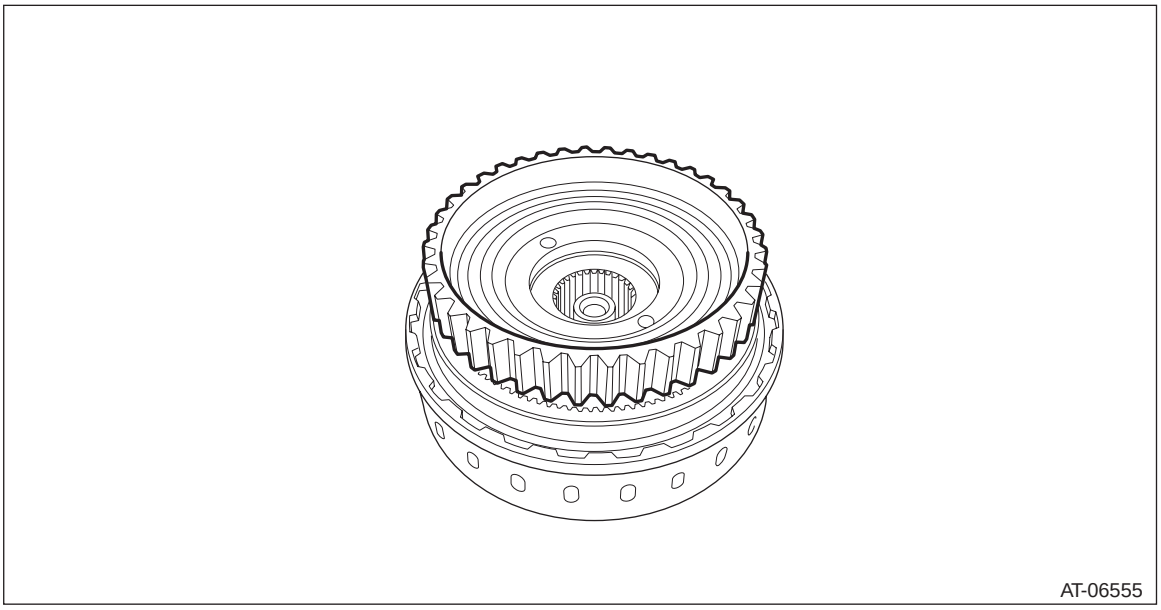


20) Install the snap ring.
21) Install the thrust needle bearing.

NOTE:
Make sure to install in the right direction.



22) Install the planetary carrier assembly.

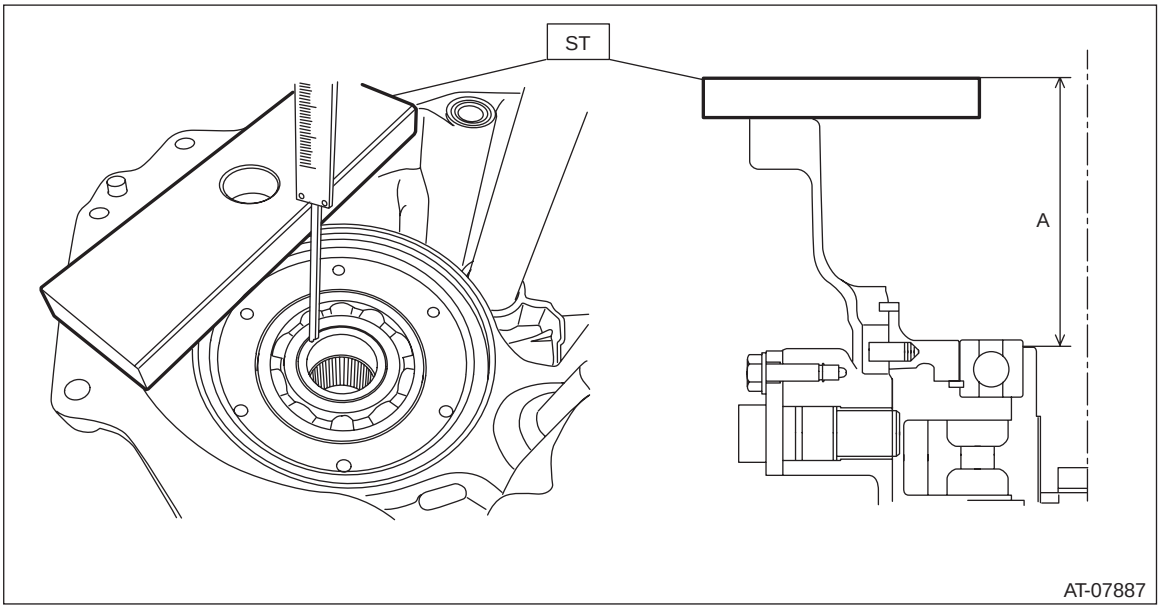


E: INSPECTION

- Check the forward clutch drum, internal gear, sun gear and forward clutch piston lip for wear or damage.
- Inspect the drive plate facing for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed spring retainer.
- Make sure the clearance between retaining plate and internal gear of forward clutch is within the limit. If it exceeds the standard, replace the forward clutch assembly. <Ref. to CVT(TR690)-190, ASSEMBLY, Forward Clutch Assembly.>

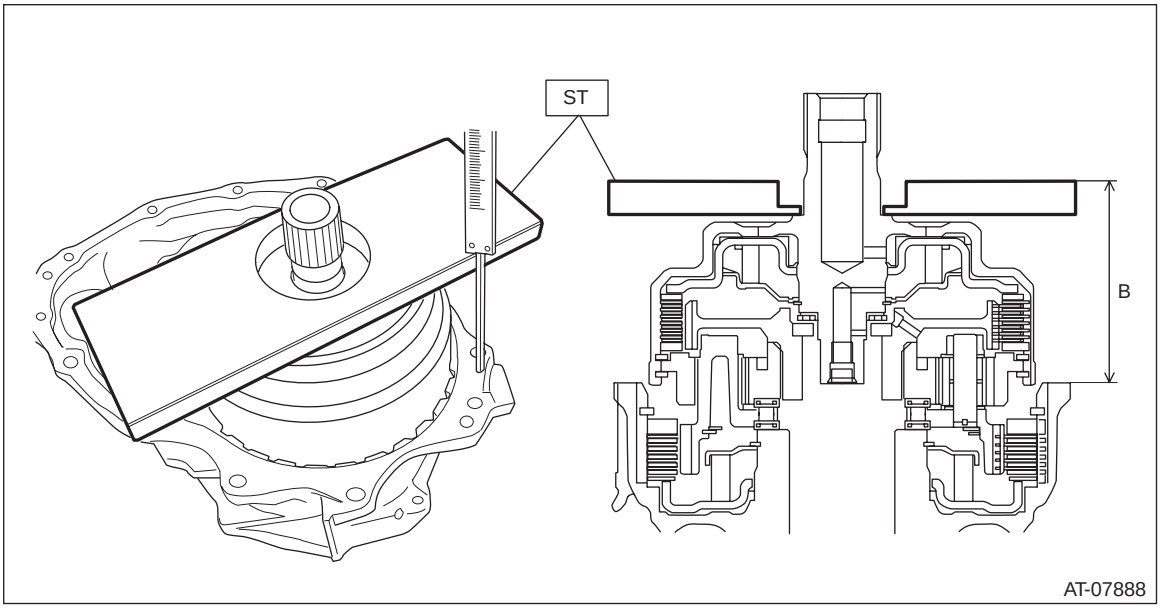
F: ADJUSTMENT

1) Measure depth “A” from the ST upper face to the washer catch surface.
ST 398643600 GAUGE



2) Install the forward clutch assembly to intermediate case.

3) Setting the ST, measure height “B” from the ST upper side to the intermediate case mating surface.
ST 499575600 GAUGE



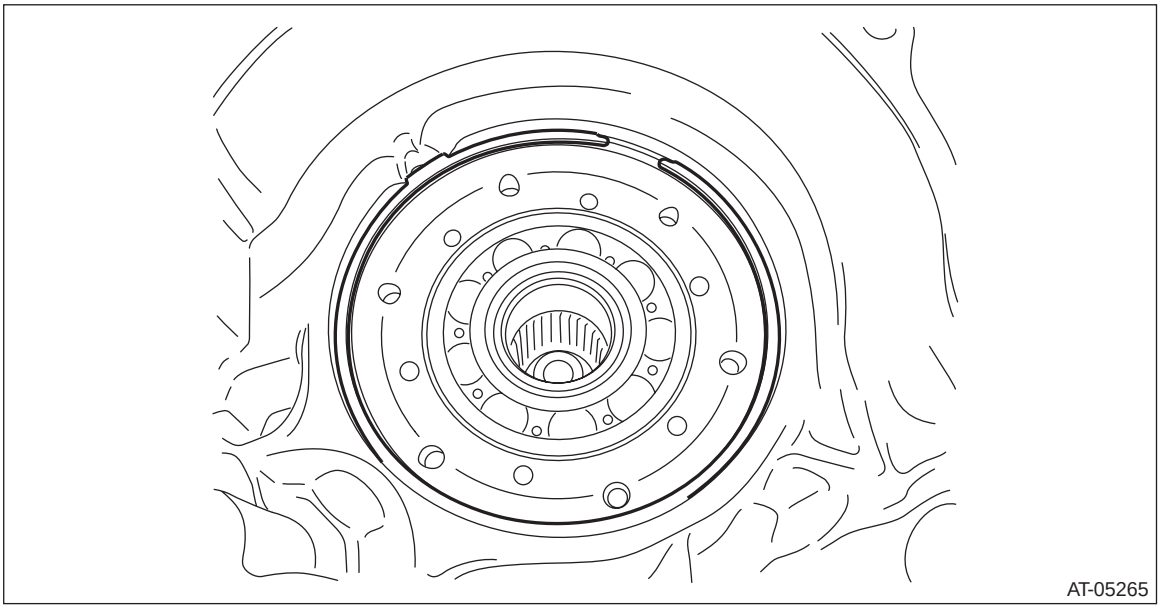
4) Obtain the thickness of washer using the following formula.
Calculation formula:
T (mm) = (A – 15) – (B – 15) – (0.35 — 0.70)
[T (in) = (A – 0.591) – (B – 0.591) – (0.014 — 0.028)]
T: Washer thickness
A: Depth from the ST upper face to the washer catch surface
B: Height from the upper surface of the ST to the mating surface of the intermediate case
15 mm (0.591 in): Thickness of ST
0.35 — 0.70 mm (0.014 — 0.028 in): Clearance
5) Select the washer to meet the value “T” obtained from step 4).

Washer	
Part No.	Washer thickness mm (in)
803034040	1.0 (0.039)
803034041	1.2 (0.047)
803034042	1.4 (0.055)
803034043	1.6 (0.063)

38.Reduction Driven Gear

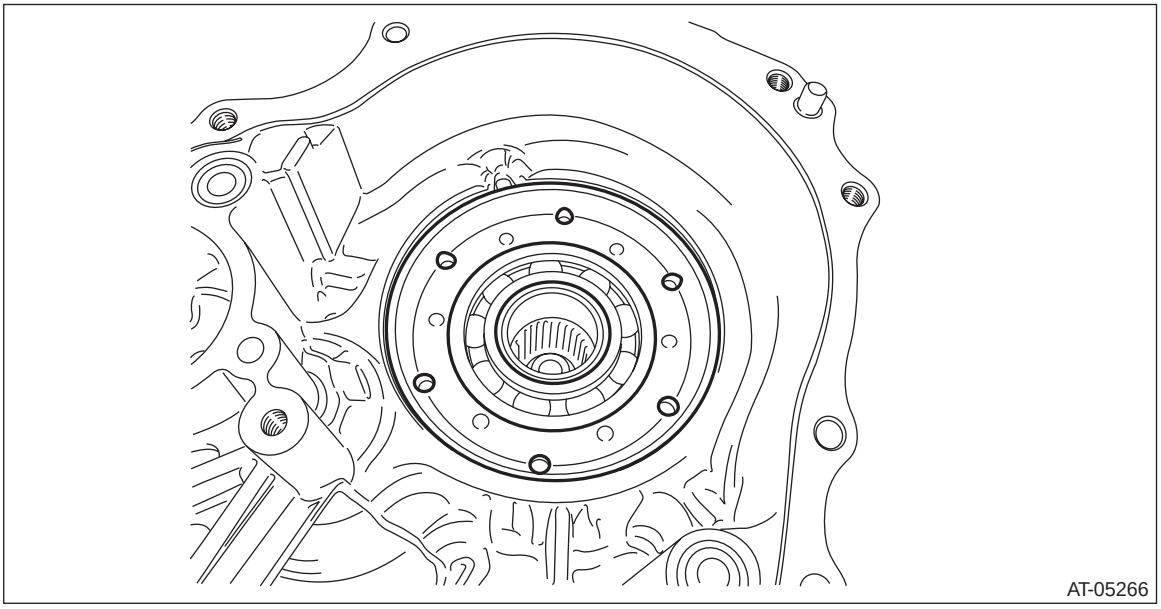
A: REMOVAL

1) Remove the transmission from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-142, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to CVT(TR690)-146, REMOVAL, Rear Drive Shaft.>
4) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-151, REMOVAL, Transfer Clutch.>
5) Remove the center differential carrier. <Ref. to CVT(TR690)-154, REMOVAL, Center Differential Carrier.>
6) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-158, REMOVAL, Transfer Reduction Driven Gear.>
7) Remove the intermediate case. <Ref. to CVT(TR690)-165, REMOVAL, Intermediate Case.>
8) Remove the forward clutch assembly. <Ref. to CVT(TR690)-181, REMOVAL, Forward Clutch Assembly.>
9) Remove the snap ring.



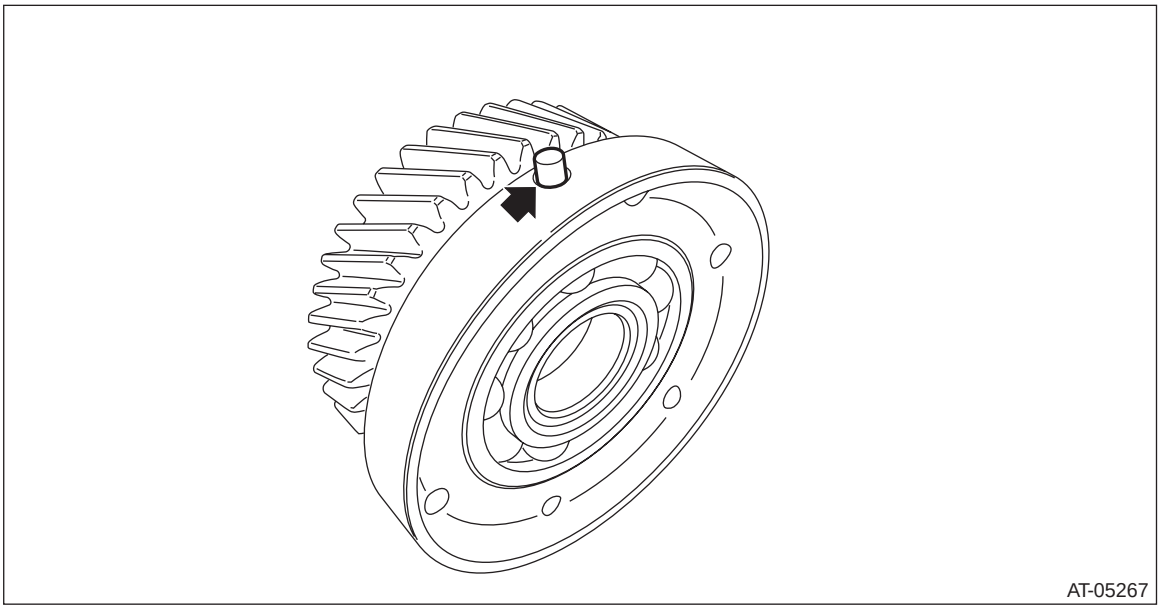
AT-05265

10) Remove the reduction driven gear assembly.



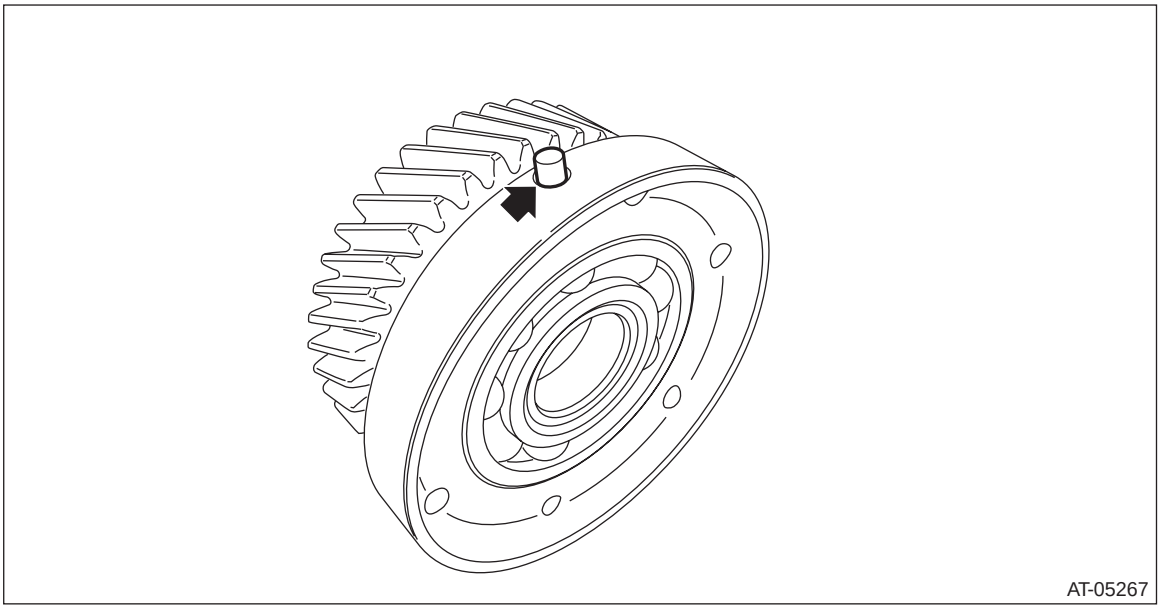
AT-05266

11) Remove the straight pin.

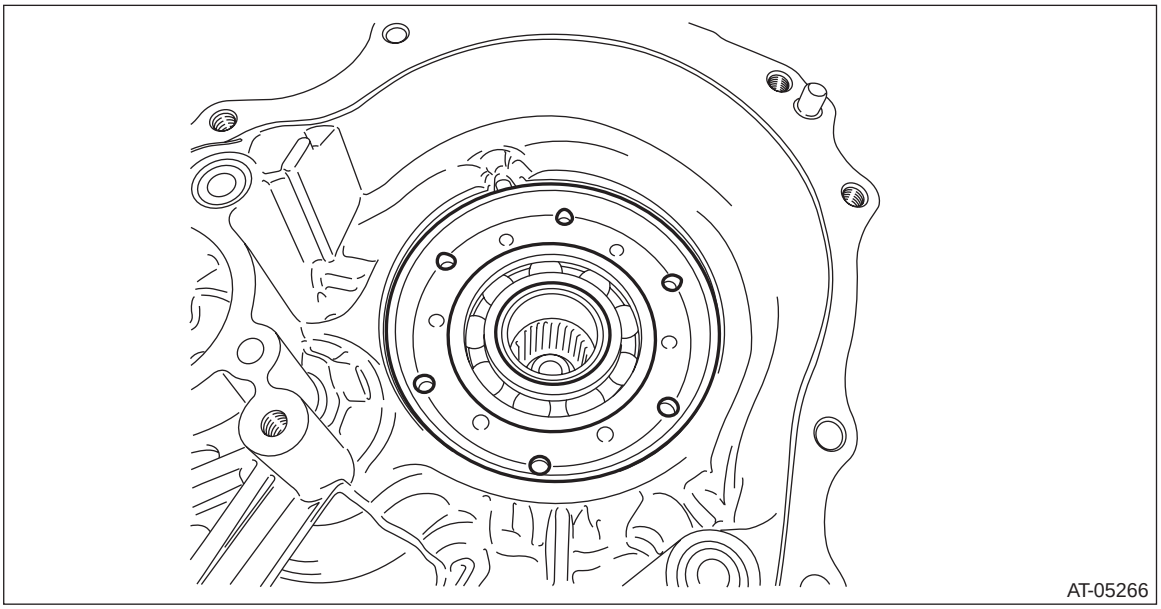


B: INSTALLATION

1) Install the straight pin to reduction driven gear assembly.



2) Fit the straight pin portion to the recess portion of transmission case and install the reduction driven gear and install the snap ring.

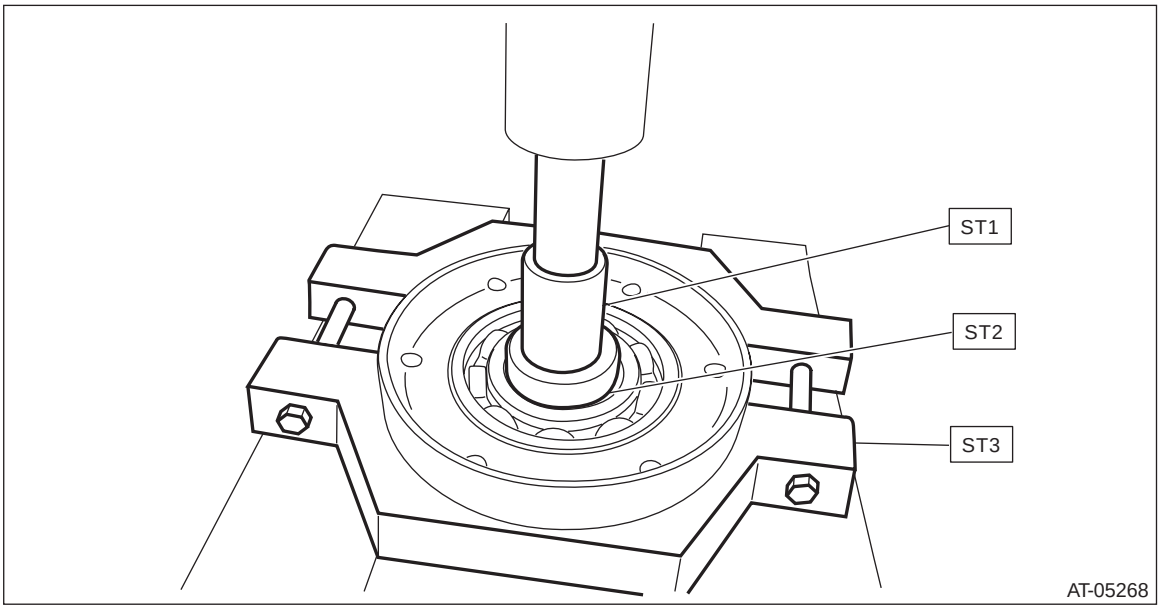


3) Select the snap ring. <Ref. to CVT(TR690)-207, ADJUSTMENT, Reduction Driven Gear.>
4) Replace with the selected snap ring.

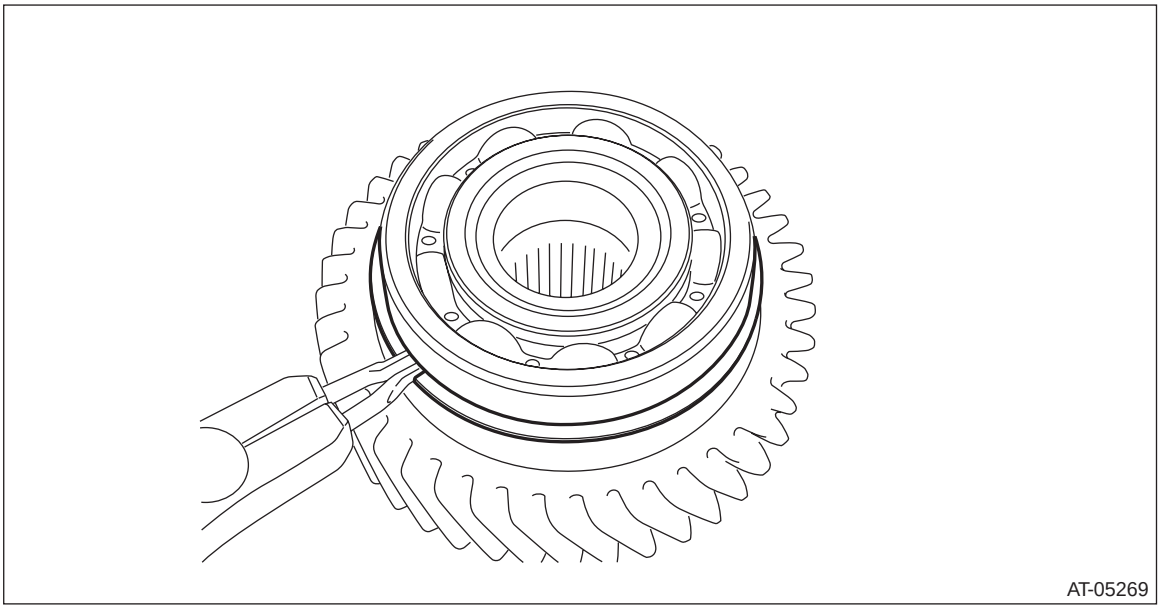
NOTE:
If the clearance measured in step 3) is within standard, the snap ring replacement is not necessary.
5) Install the forward clutch assembly. <Ref. to CVT(TR690)-182, INSTALLATION, Forward Clutch Assembly.>
6) Install the intermediate case. <Ref. to CVT(TR690)-166, INSTALLATION, Intermediate Case.>
7) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-158, INSTALLATION, Transfer Reduction Driven Gear.>
8) Install the center differential carrier. <Ref. to CVT(TR690)-155, INSTALLATION, Center Differential Carrier.>
9) Install the transfer clutch assembly. <Ref. to CVT(TR690)-151, INSTALLATION, Transfer Clutch.>
10) Install the rear drive shaft. <Ref. to CVT(TR690)-146, INSTALLATION, Rear Drive Shaft.>
11) Install the extension case. <Ref. to CVT(TR690)-143, INSTALLATION, Extension Case.>
12) Install the transmission to vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

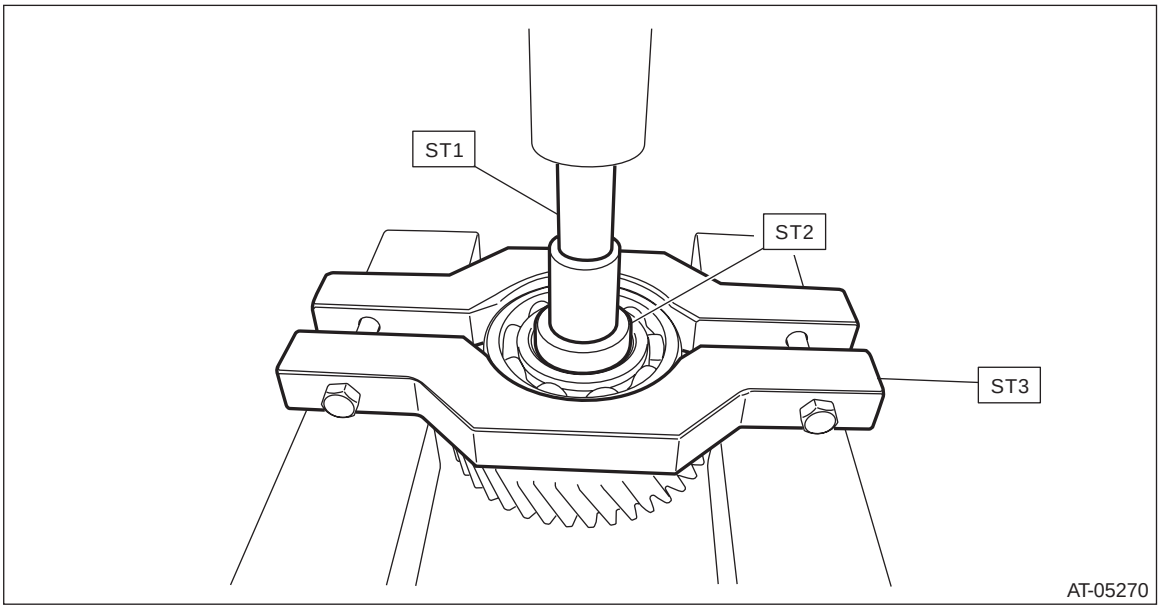
1) Remove the bearing retainer using ST1, ST2 and ST3.
ST1 899864100 REMOVER
ST2 398497701 SEAT
ST3 18767AA000 BEARING REMOVER



2) Remove the snap ring.



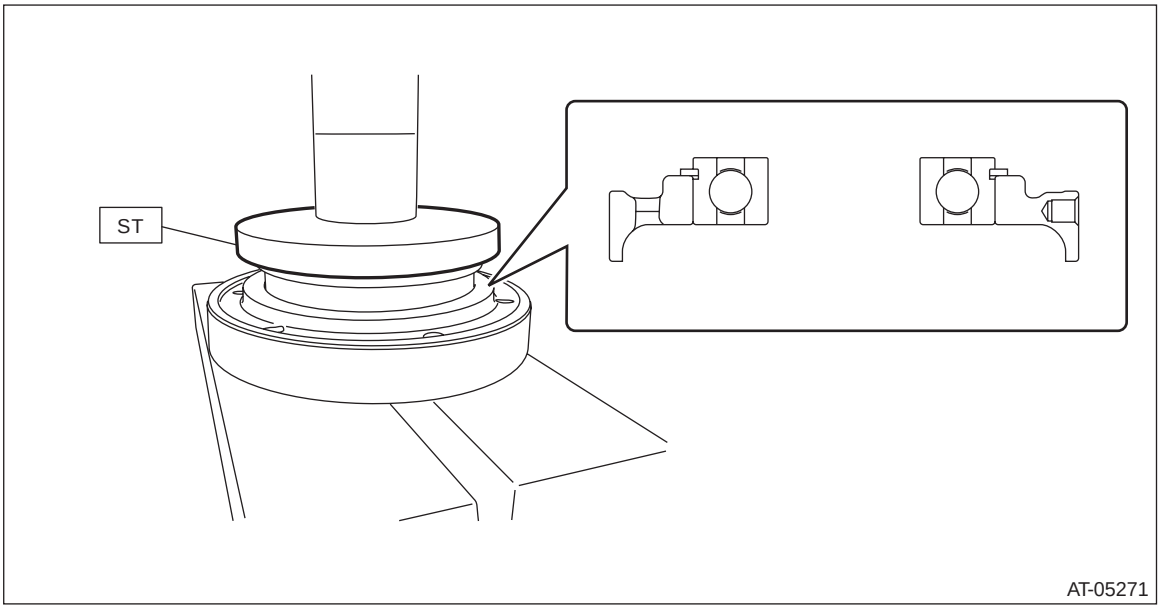
3) Remove the ball bearing using ST1, ST2 and ST3.
ST1 899864100 REMOVER
ST2 398497701 SEAT
ST3 498077600 REMOVER



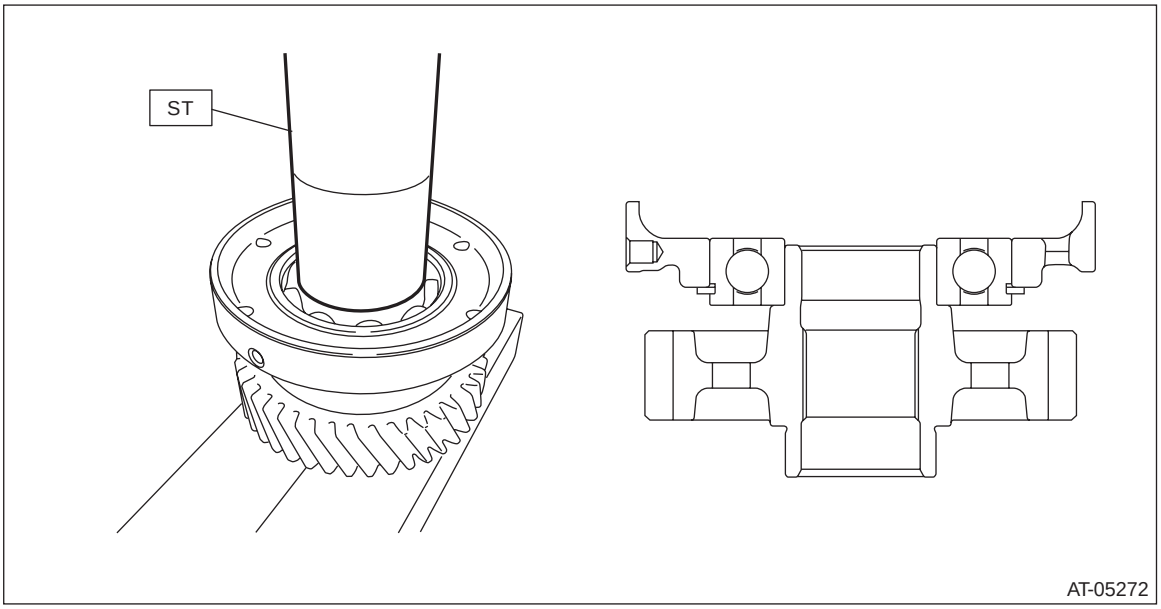
D: ASSEMBLY

1) Using the ST, install the ball bearing to bearing retainer.
ST 398177700 INSTALLER

NOTE:
- Use a new ball bearing.
- Make sure to install the ball bearing in the right direction.
- Apply CVTF to the press-fitting area.



2) Using the ST, install the reduction driven gear.
ST 499277200 INSTALLER



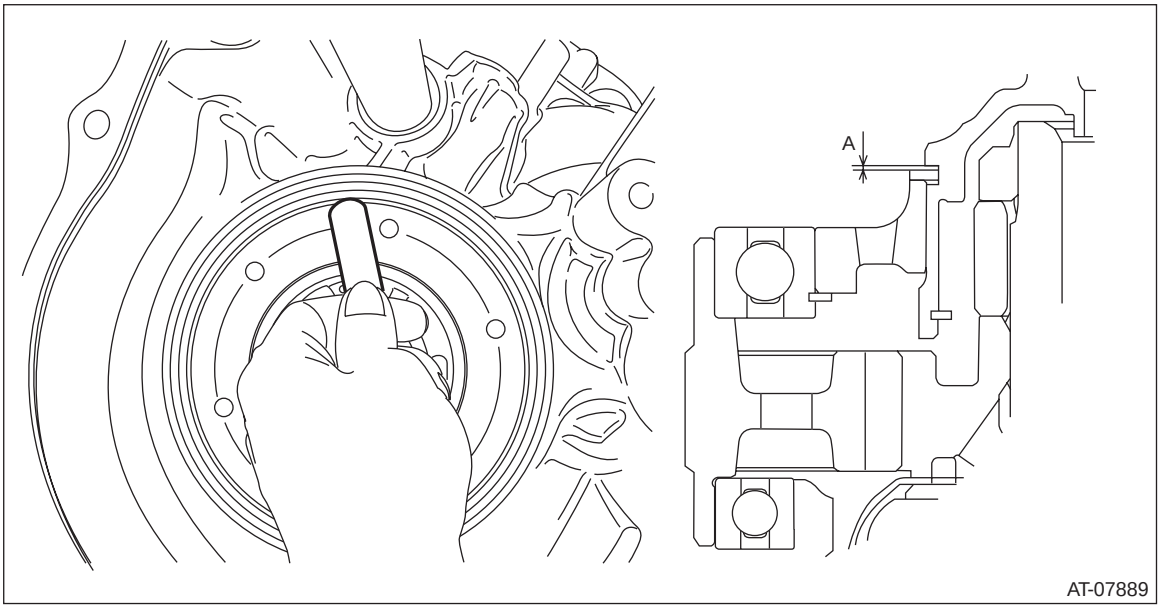
E: INSPECTION

- Check the ball bearing for smooth rotation.
- Check the ball bearing for excessive looseness.
- Check the reduction driven gear for breakage or damage.
- Check the clearance between snap ring and transmission case and replace the snap ring as necessary.

F: ADJUSTMENT

1) Measure clearance “A” between snap ring and transmission case.

Specification:
0.05 — 0.25 mm (0.002 — 0.01 in)



2) If clearance “A” is out of standard, select the snap ring within standard.

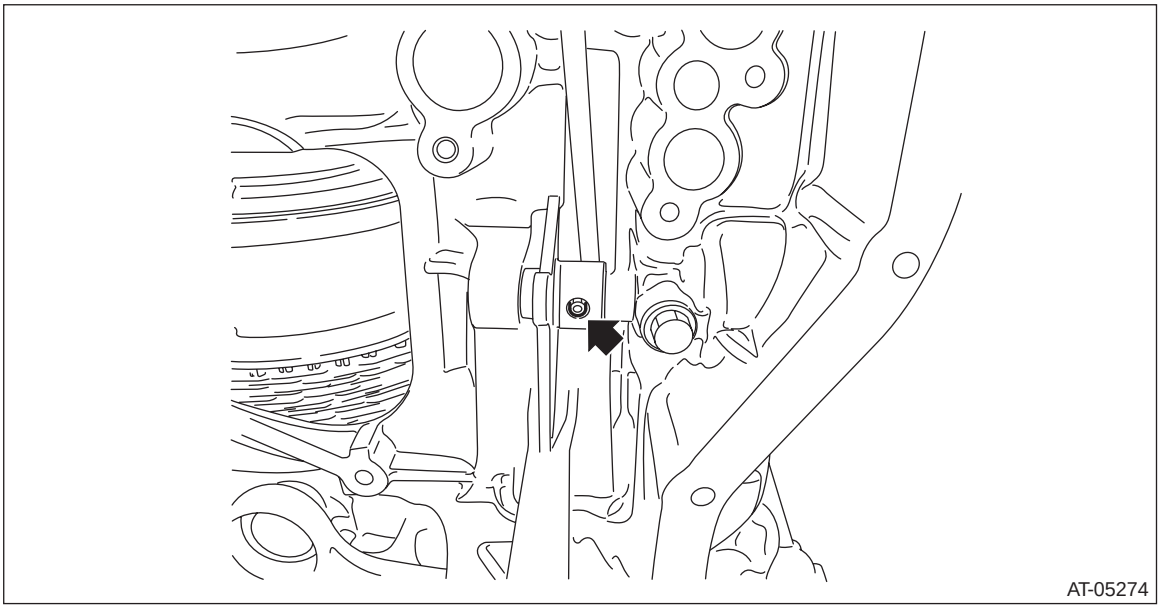
Snap ring	
Part No.	Thickness mm (in)
805100460	2.0 (0.079)
805100461	2.1 (0.083)
805100462	2.2 (0.087)
805100463	2.3 (0.091)
805100464	2.4 (0.094)

39.Transmission Control Device

A: REMOVAL

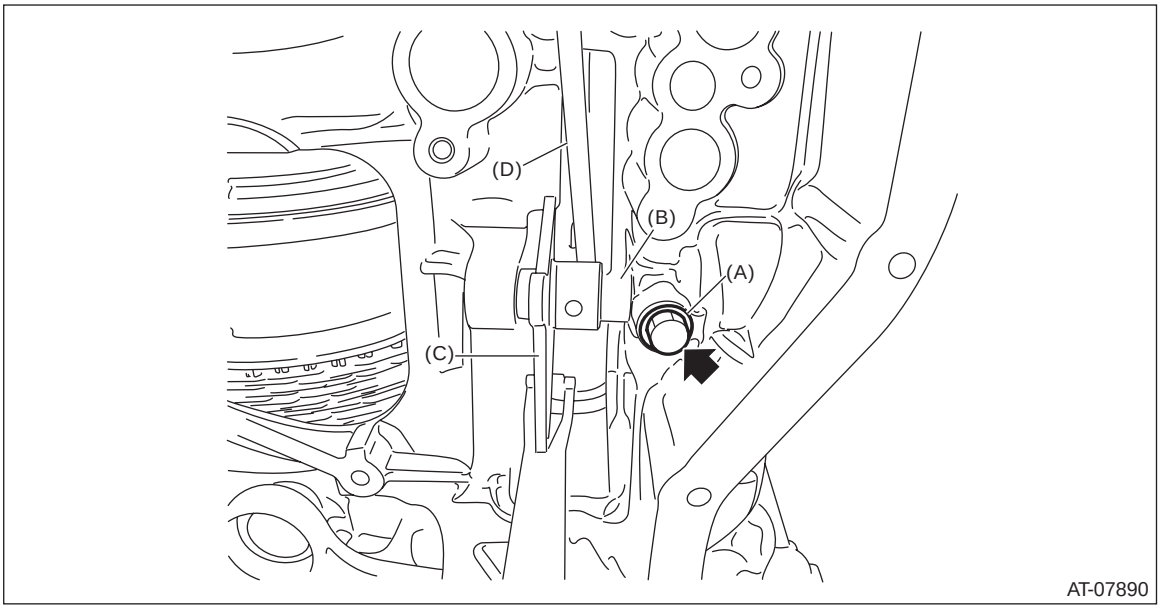
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-112, REMOVAL, Control Valve Body.>
3) Remove the inhibitor switch. <Ref. to CVT(TR690)-95, REMOVAL, Inhibitor Switch.>
4) Remove the spring pin.

NOTE:
Prevent the spring pin from dropping in the transmission using paper towel etc.



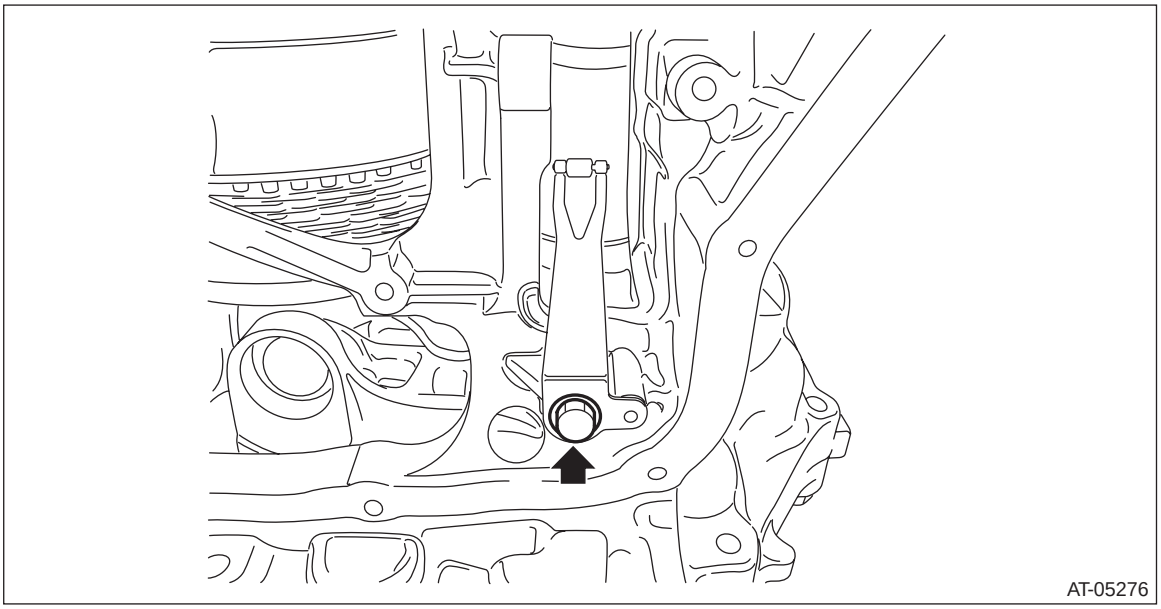
5) Remove the bolt and remove the range select lever, manual plate and parking rod.

NOTE:
Do not damage the lip of oil seal press-fitted in the case.



(A) Bolt
(B) Range select lever
(C) Manual plate
(D) Parking rod

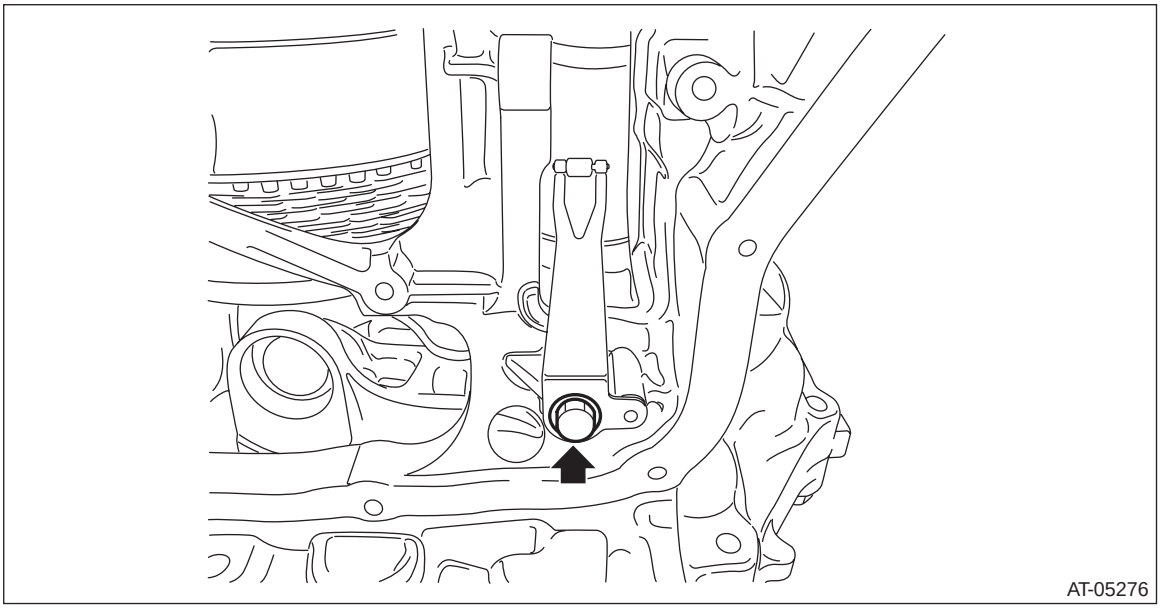
6) Remove the detent spring.



B: INSTALLATION

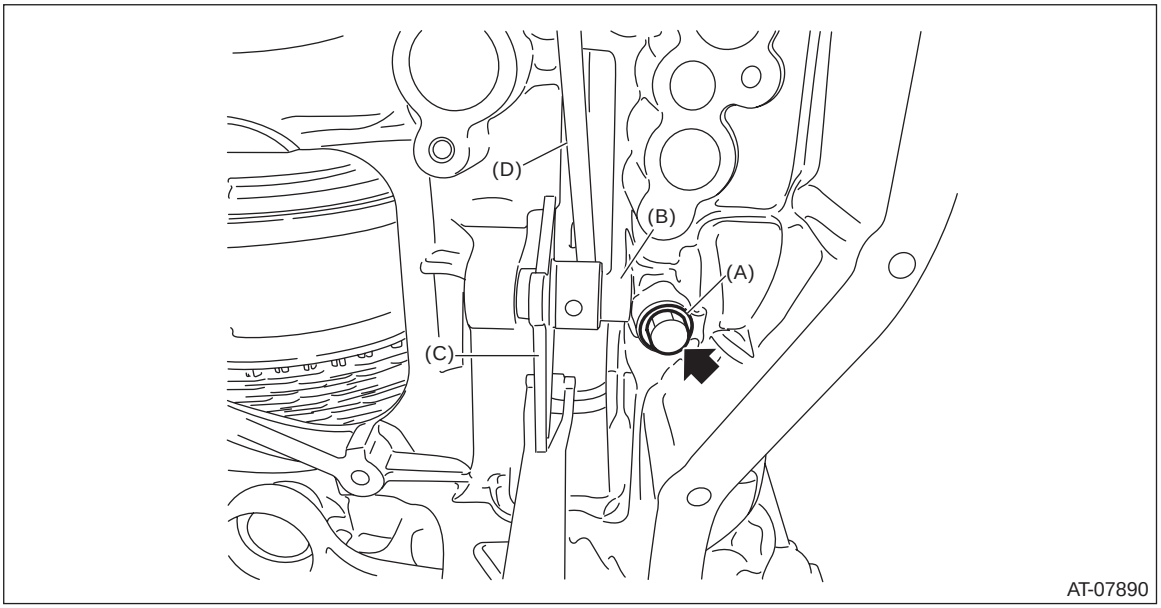
1) Install the detent spring to the transmission case.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)



2) Install the manual plate, parking rod, range select lever and bolt.

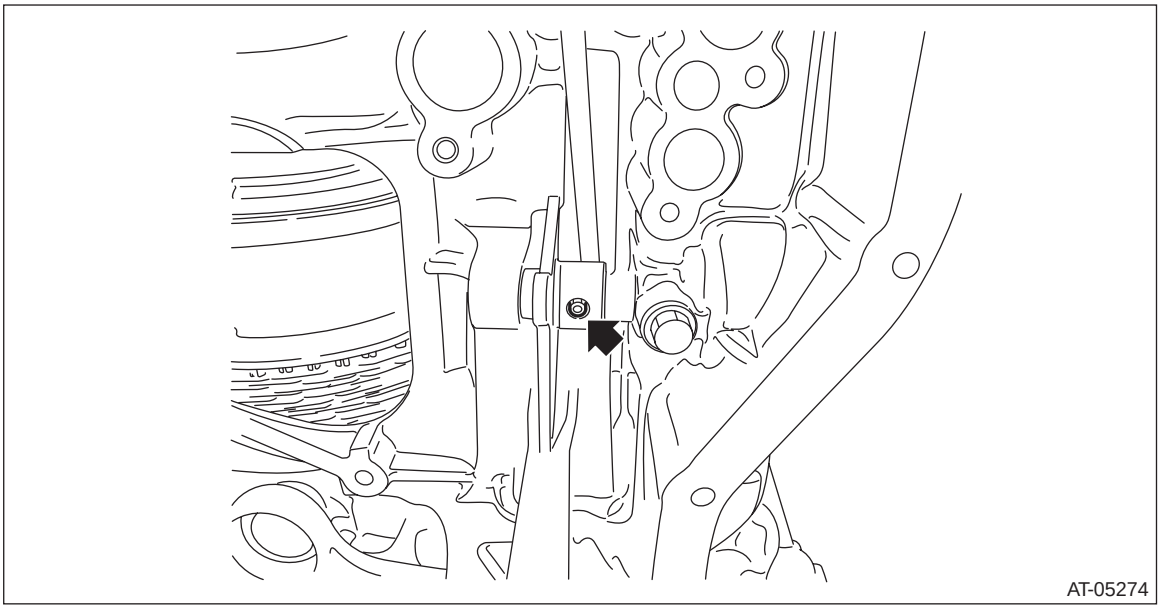
Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)



(A) Bolt
(B) Range select lever
(C) Manual plate
(D) Parking rod

3) Install the spring pin.

NOTE:
Use new spring pin.



4) Install the inhibitor switch. <Ref. to CVT(TR690)-92, Inhibitor Switch.>
5) Adjust the inhibitor switch. <Ref. to CVT(TR690)-92, Inhibitor Switch.>
6) Install the control valve body and oil pan. <Ref. to CVT(TR690)-116, INSTALLATION, Control Valve Body.>
7) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

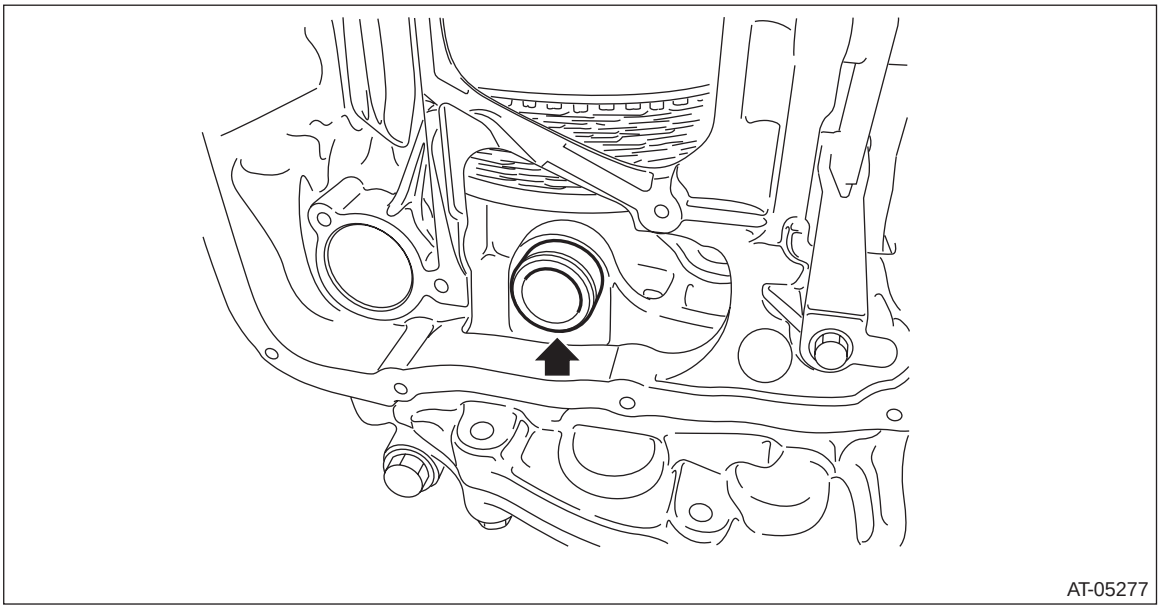
Make sure that the manual lever and detent spring are not worn or otherwise damaged.

40.Transmission Case

A: REMOVAL

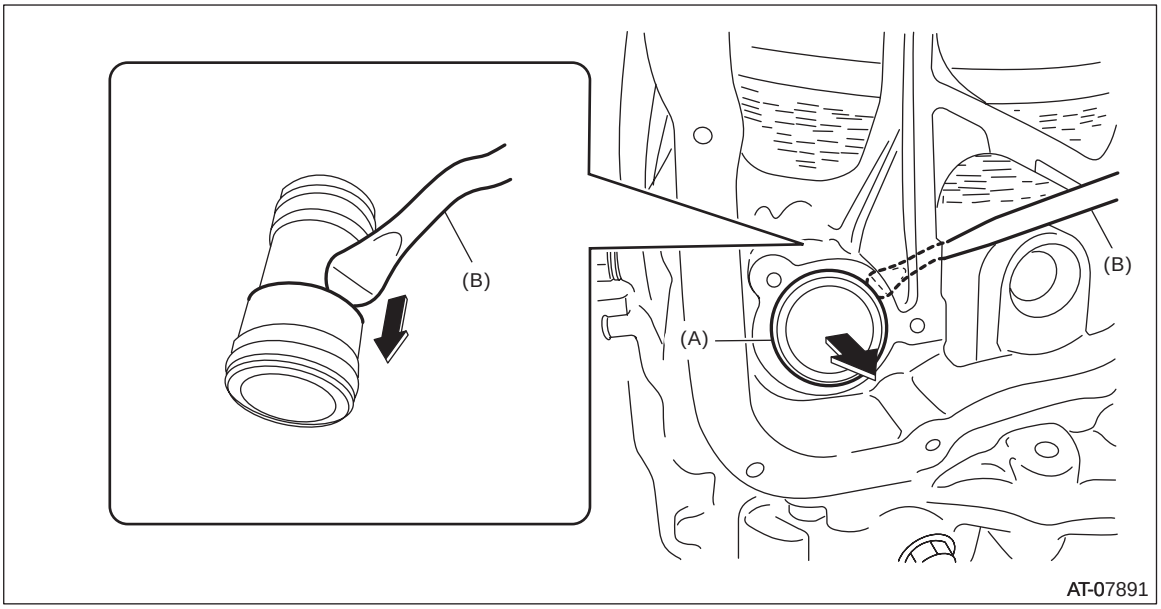
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-136, REMOVAL, Air Breather Hose.>
3) Remove the transmission harness. <Ref. to CVT(TR690)-123, REMOVAL, Transmission Harness.>
4) Remove the secondary speed sensor. <Ref. to CVT(TR690)-99, REMOVAL, Secondary Speed Sensor.>
5) Remove the inhibitor switch. <Ref. to CVT(TR690)-95, REMOVAL, Inhibitor Switch.>
6) Remove the extension case. <Ref. to CVT(TR690)-142, REMOVAL, Extension Case.>
7) Remove the rear drive shaft. <Ref. to CVT(TR690)-146, REMOVAL, Rear Drive Shaft.>
8) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-151, REMOVAL, Transfer Clutch.>
9) Remove the center differential carrier. <Ref. to CVT(TR690)-154, REMOVAL, Center Differential Carrier.>
10) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-158, REMOVAL, Transfer Reduction Driven Gear.>
11) Remove the intermediate case. <Ref. to CVT(TR690)-165, REMOVAL, Intermediate Case.>
12) Remove the forward clutch assembly. <Ref. to CVT(TR690)-181, REMOVAL, Forward Clutch Assembly.>
13) Remove the reduction driven gear. <Ref. to CVT(TR690)-201, REMOVAL, Reduction Driven Gear.>
14) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-112, REMOVAL, Control Valve Body.>

NOTE:
When removing the control valve body, also remove the pressure pipe if it is attached on the case.



15) Remove the CVTF pipe using a tire lever etc.

NOTE:
Remove by hooking the stepped portion of CVTF pipe with a tire lever etc.

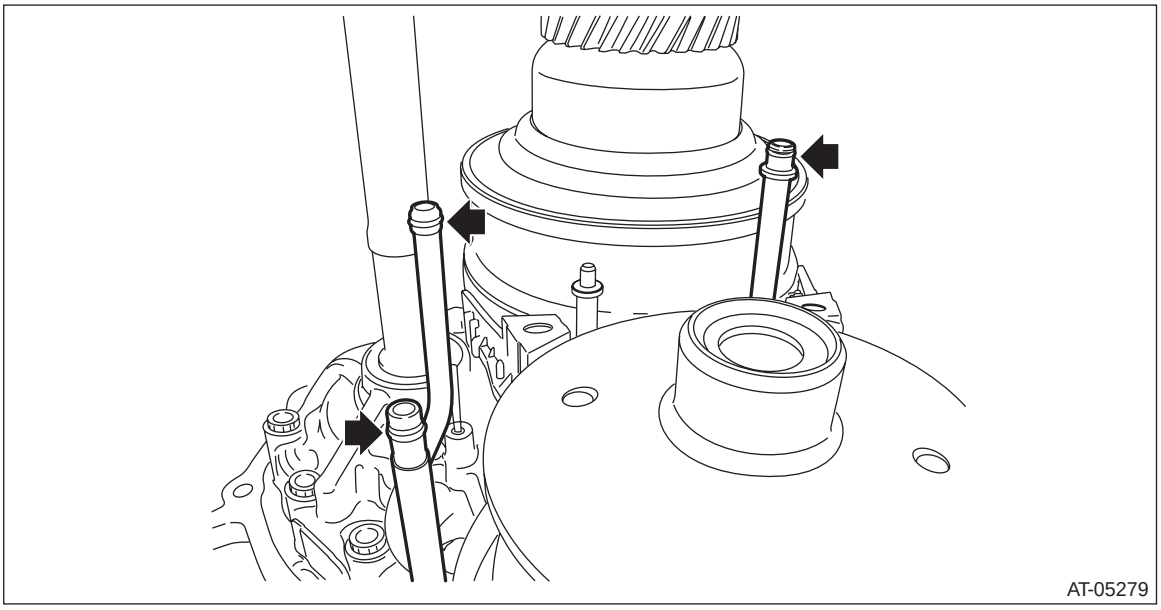


(A) CVTF pipe
(B) Tire lever

16) Remove the transmission case.

NOTE:
The total number of transmission case mounting bolts is 15.

17) Remove the O-ring of lubrication pipe.

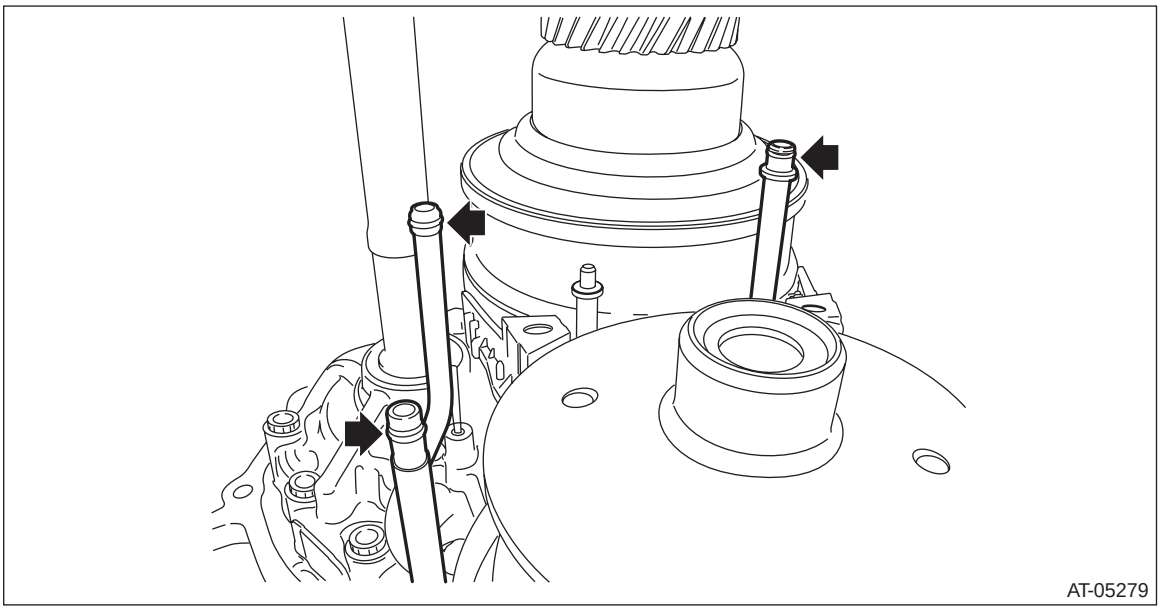


18) Remove the control device system. <Ref. to CVT(TR690)-208, REMOVAL, Transmission Control Device.>

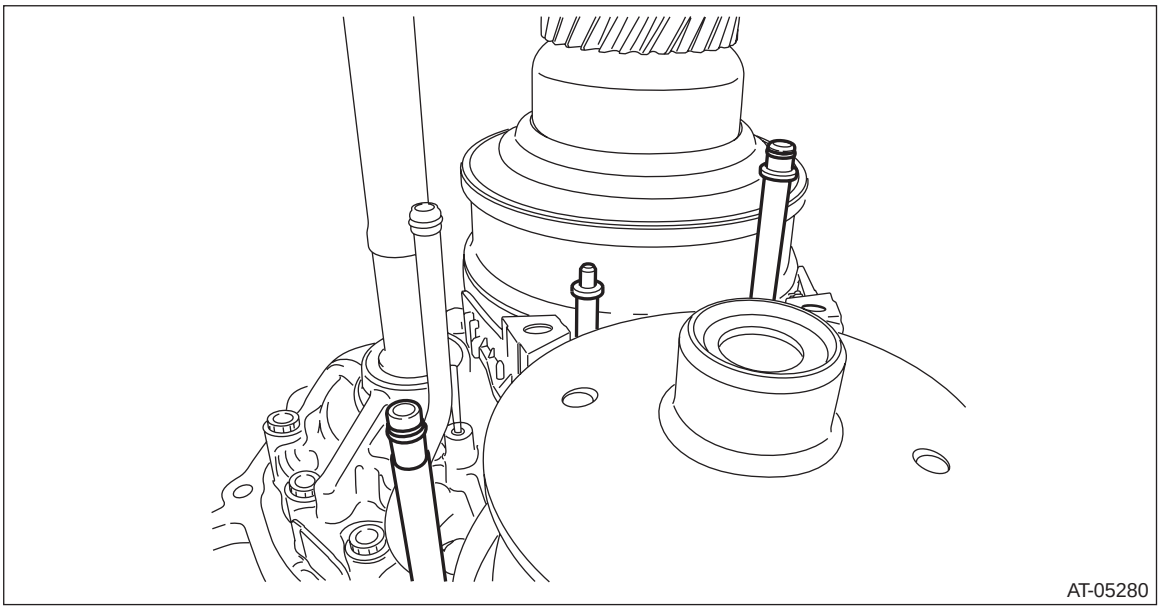
B: INSTALLATION

1) Clean the mating surface of transmission case and converter case.
2) Install the control device system. <Ref. to CVT(TR690)-210, INSTALLATION, Transmission Control Device.>
3) Install the O-ring to the lubrication pipe.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

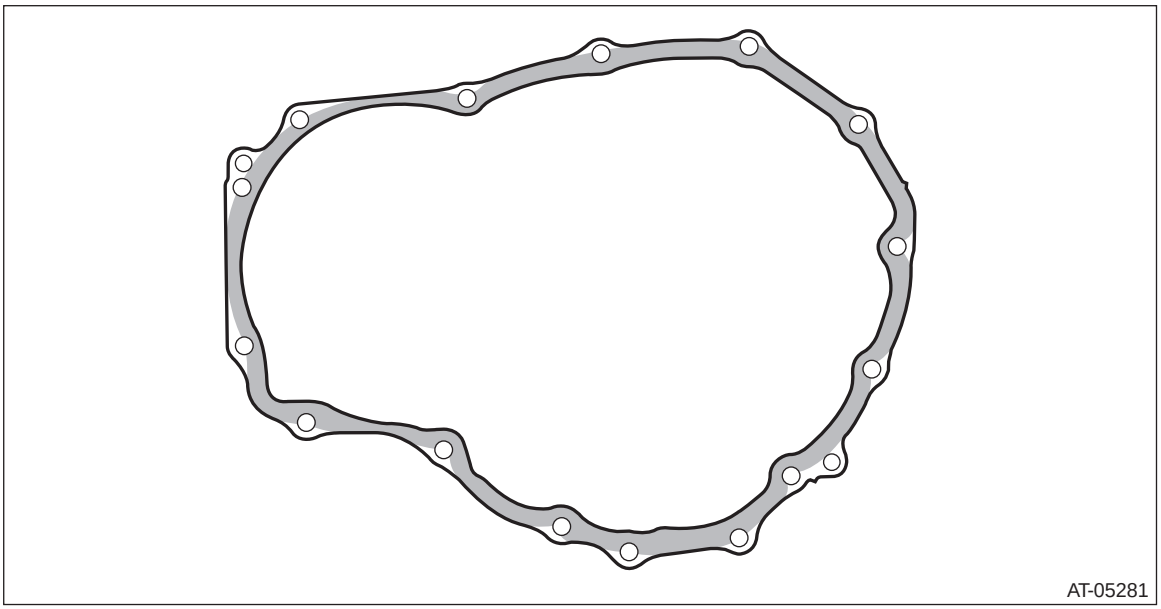


4) Make sure the lubrication pipe and support rod are in vertical position.



5) Apply liquid gasket seamlessly to the mating surface of transmission case.

Liquid gasket:
THREE BOND 1215B or equivalent



6) Install the transmission case.

CAUTION:
If the transmission case gets in contact with the lubrication pipe and support rod, do not install the transmission case forcibly.

NOTE:
• Install while checking the lubrication pipe and support rod is being inserted properly into transmission case.
• If installing the transmission is difficult, check if the lubrication pipe and support rod are bent.
• The total number of transmission case mounting bolts is 15.

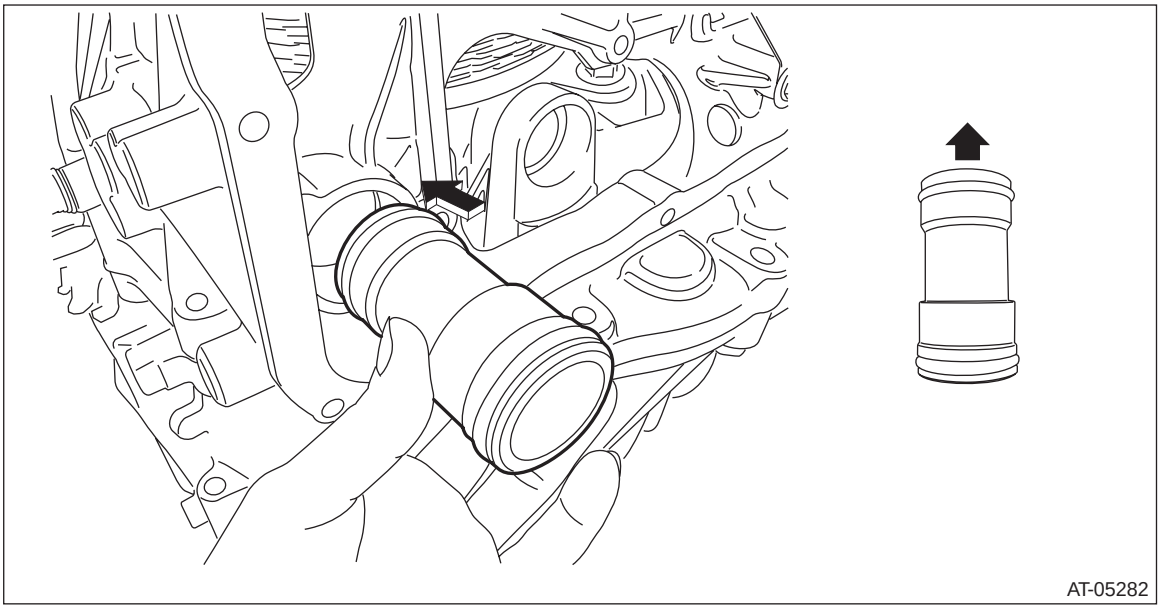
Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)

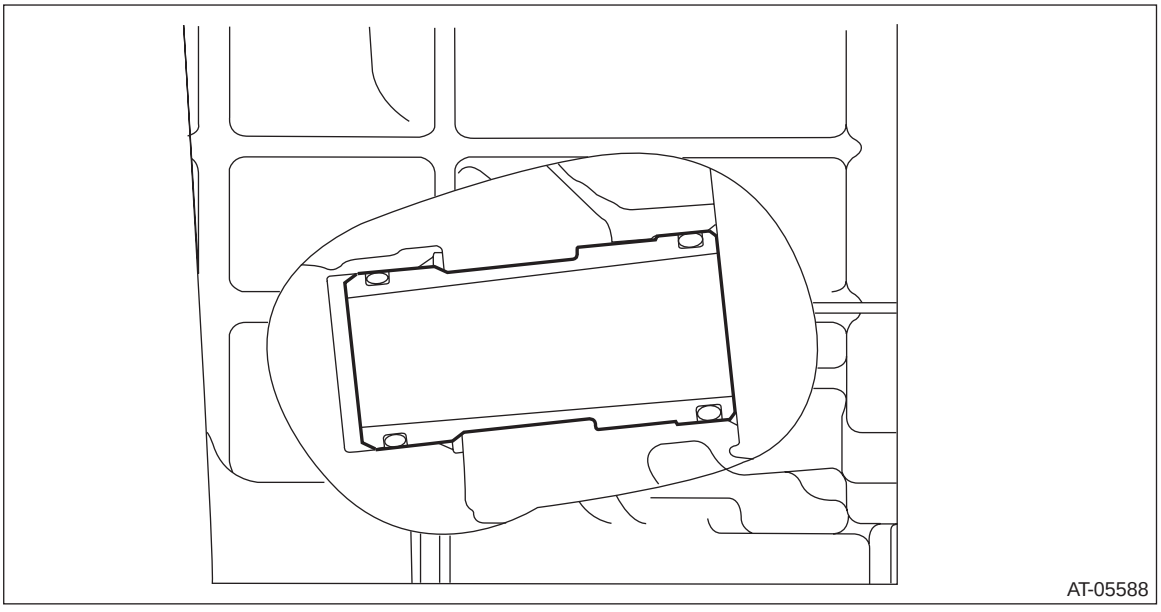
7) Install the O-ring to CVTF pipe.

NOTE:
Use new O-rings.

8) The smaller opening of CVTF pipe should be inserted to transmission.

NOTE:
After installing, make sure the CVTF pipe does not stick out of transmission case.



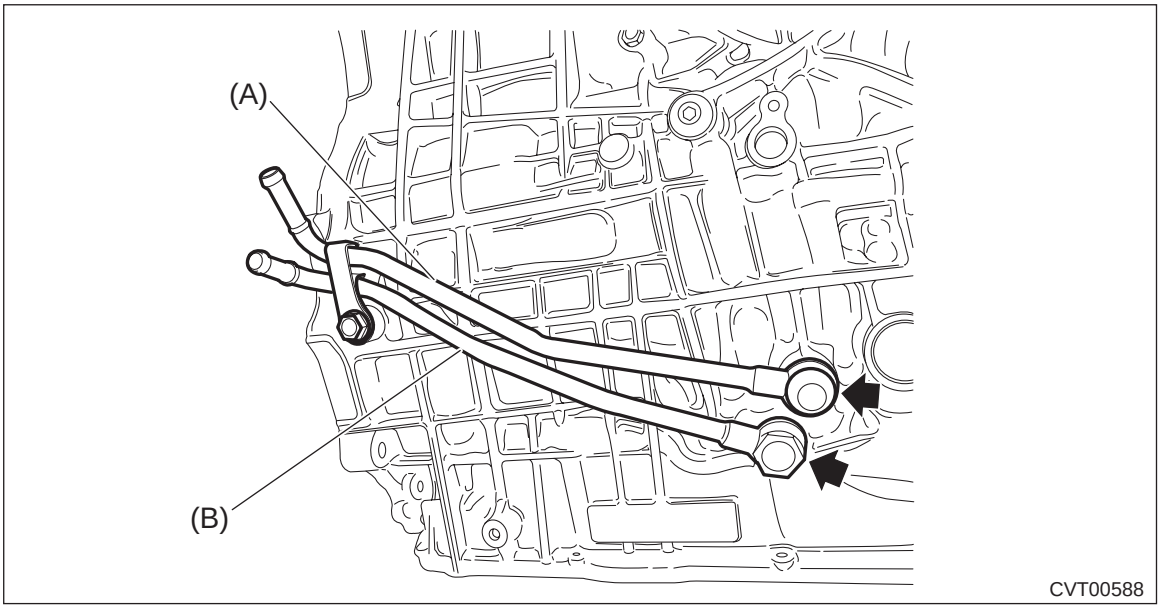


9) Install the reduction driven gear. <Ref. to CVT(TR690)-202, INSTALLATION, Reduction Driven Gear.>
10) Install the forward clutch assembly. <Ref. to CVT(TR690)-182, INSTALLATION, Forward Clutch Assembly.>
11) Install the intermediate case. <Ref. to CVT(TR690)-166, INSTALLATION, Intermediate Case.>
12) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-158, INSTALLATION, Transfer Reduction Driven Gear.>
13) Install the center differential carrier. <Ref. to CVT(TR690)-155, INSTALLATION, Center Differential Carrier.>
14) Install the transfer clutch assembly. <Ref. to CVT(TR690)-151, INSTALLATION, Transfer Clutch.>
15) Install the rear drive shaft. <Ref. to CVT(TR690)-146, INSTALLATION, Rear Drive Shaft.>

16) Install the extension case. <Ref. to CVT(TR690)-143, INSTALLATION, Extension Case.>
17) Install the inhibitor switch. <Ref. to CVT(TR690)-97, INSTALLATION, Inhibitor Switch.>
18) Install the secondary speed sensor. <Ref. to CVT(TR690)-100, INSTALLATION, Secondary Speed Sensor.>
19) Install the transmission harness. <Ref. to CVT(TR690)-125, INSTALLATION, Transmission Harness.>
20) Install the control valve body and oil pan. <Ref. to CVT(TR690)-116, INSTALLATION, Control Valve Body.>
21) Install the air breather hose. <Ref. to CVT(TR690)-136, INSTALLATION, Air Breather Hose.>
22) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

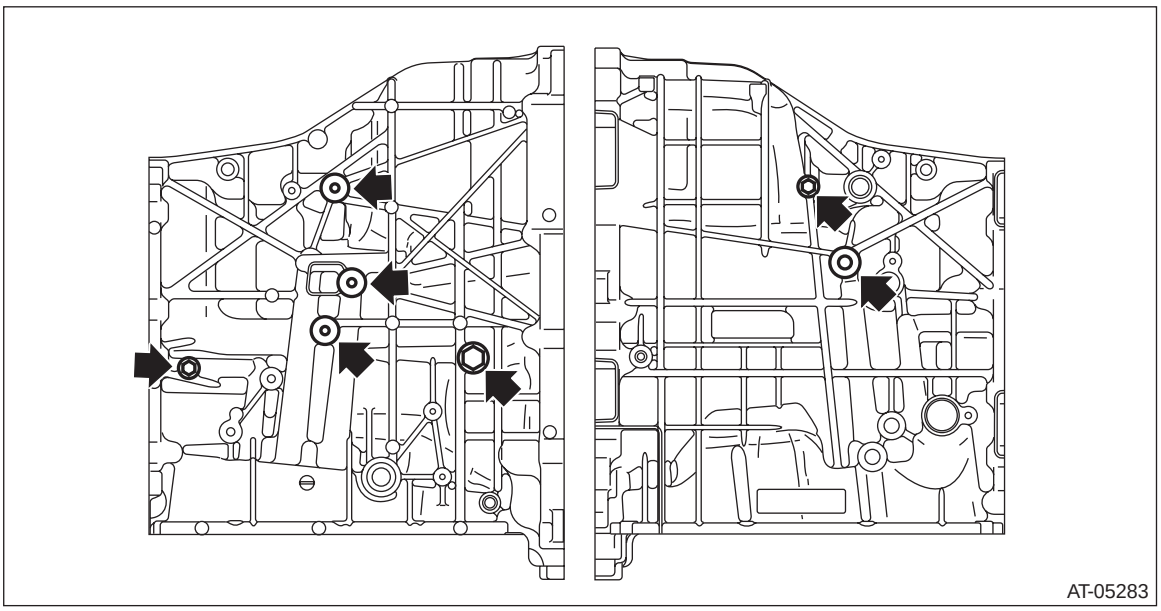
C: DISASSEMBLY

1) Remove the CVTF inlet pipe and CVTF outlet pipe.

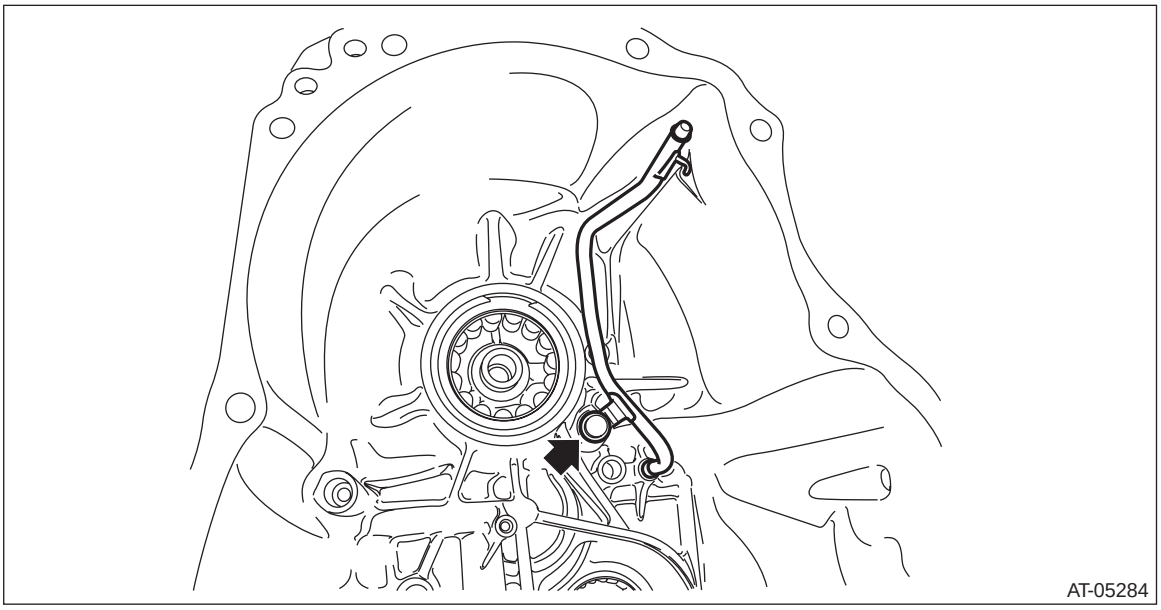


(A) CVTF outlet pipe
(B) CVTF inlet pipe

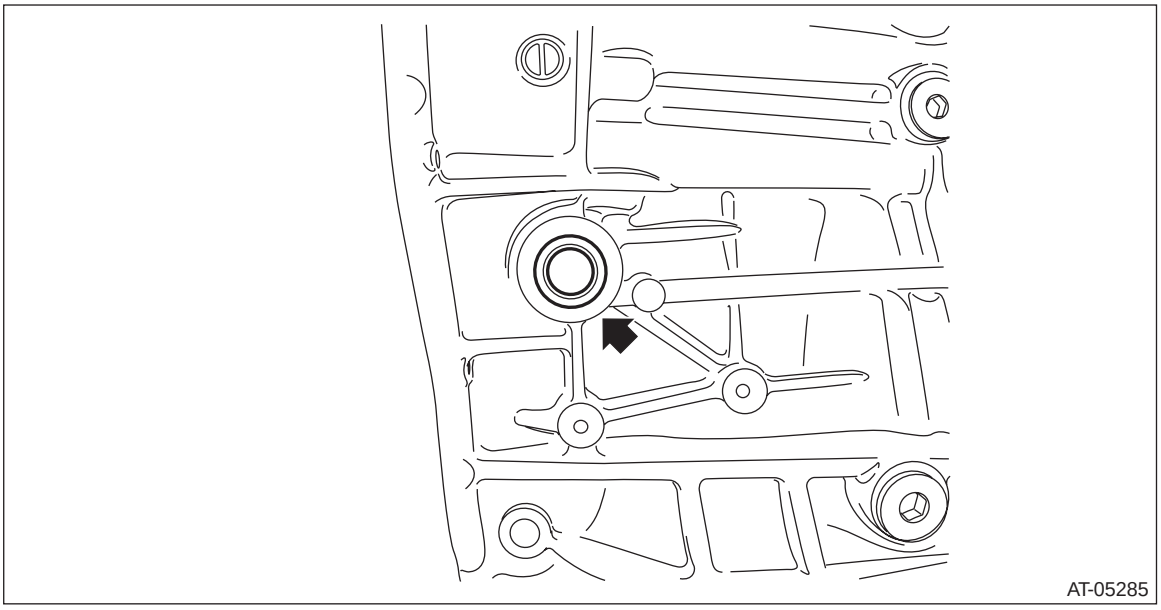
2) Remove all plugs from the transmission case.



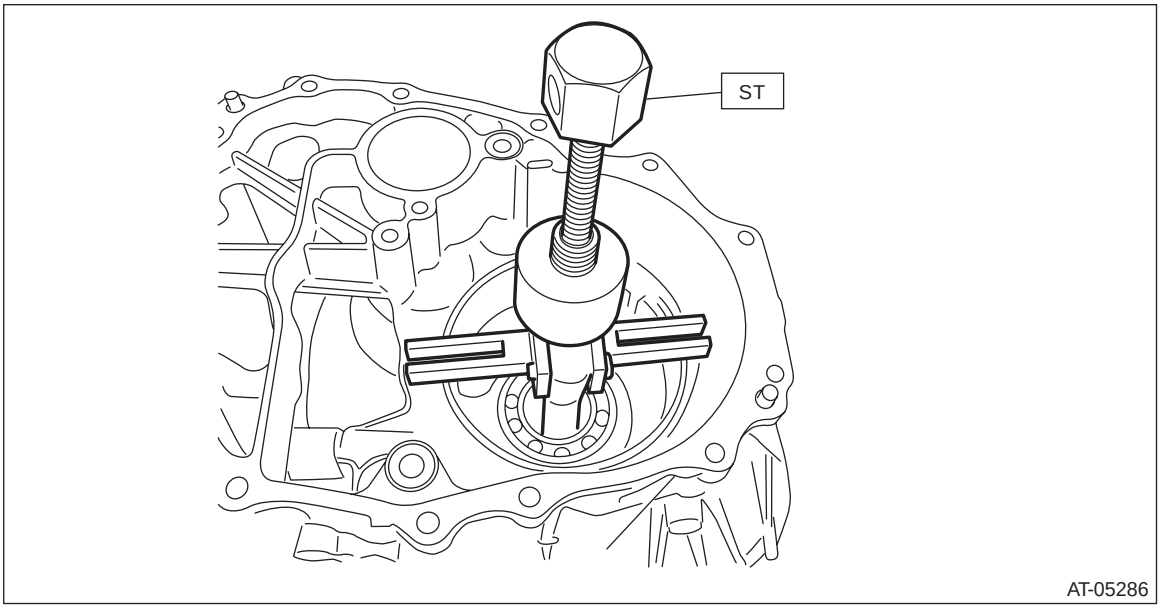
3) Remove the lubrication pipe.



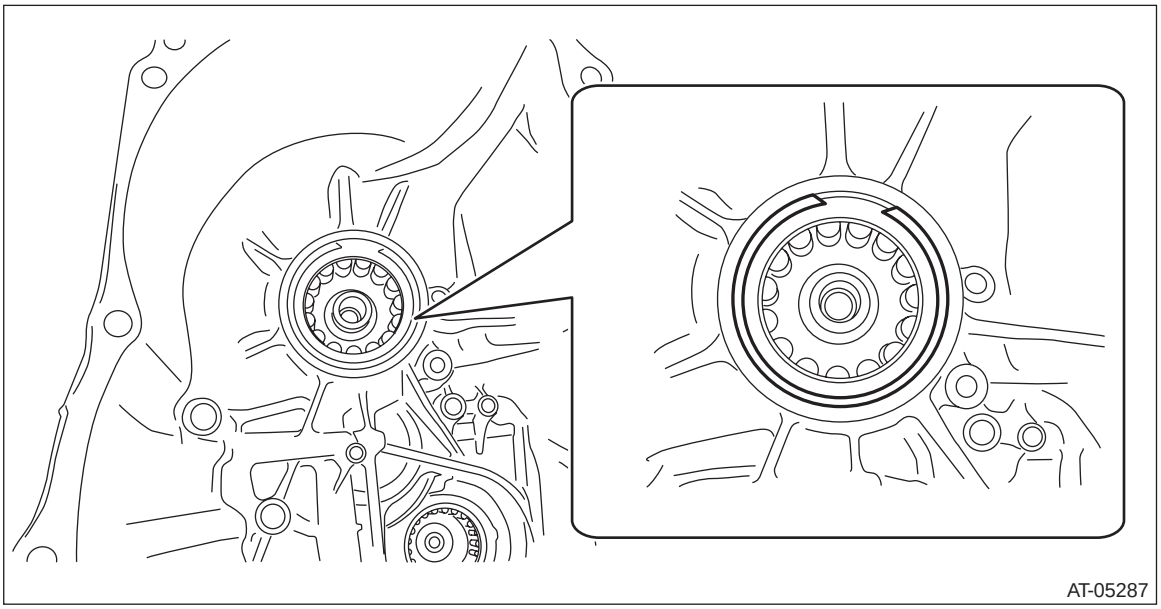
4) Remove the oil seal using a screwdriver wrapped with cloth etc.



5) Remove the ball bearing from reduction driven gear using ST.
ST 398527700 PULLER ASSY

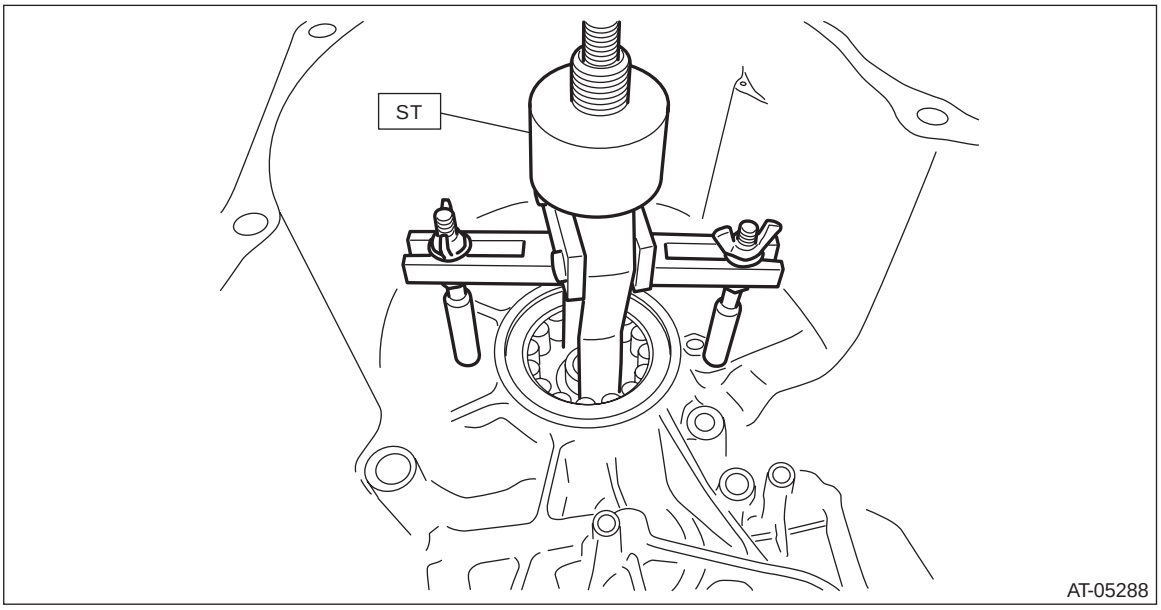


6) Remove the snap ring on primary pulley side.

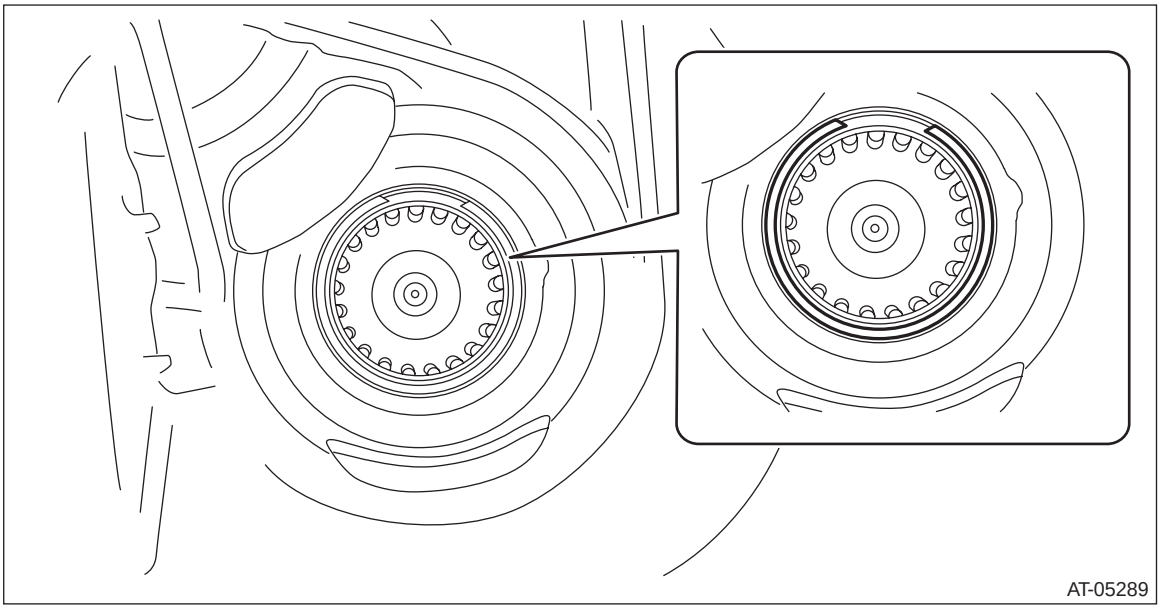


7) Using the ST, remove the roller bearing on primary pulley side.

NOTE:
Warm up the bearing area of transmission case using a drier or heat gun.
ST 398527700 PULLER ASSY

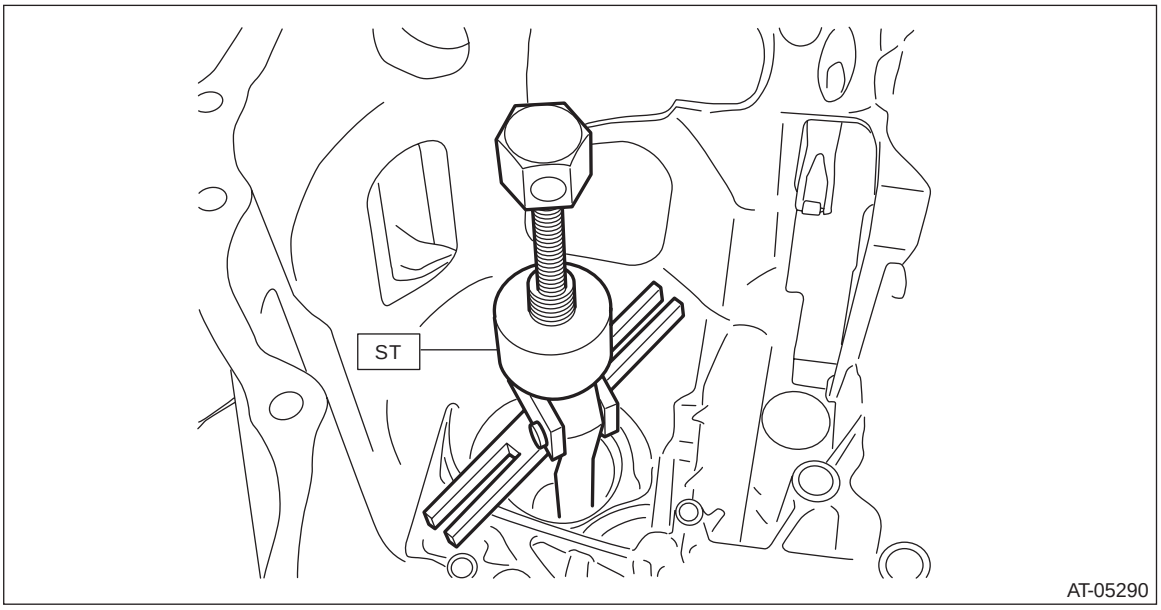


8) Remove the snap ring on secondary pulley side.



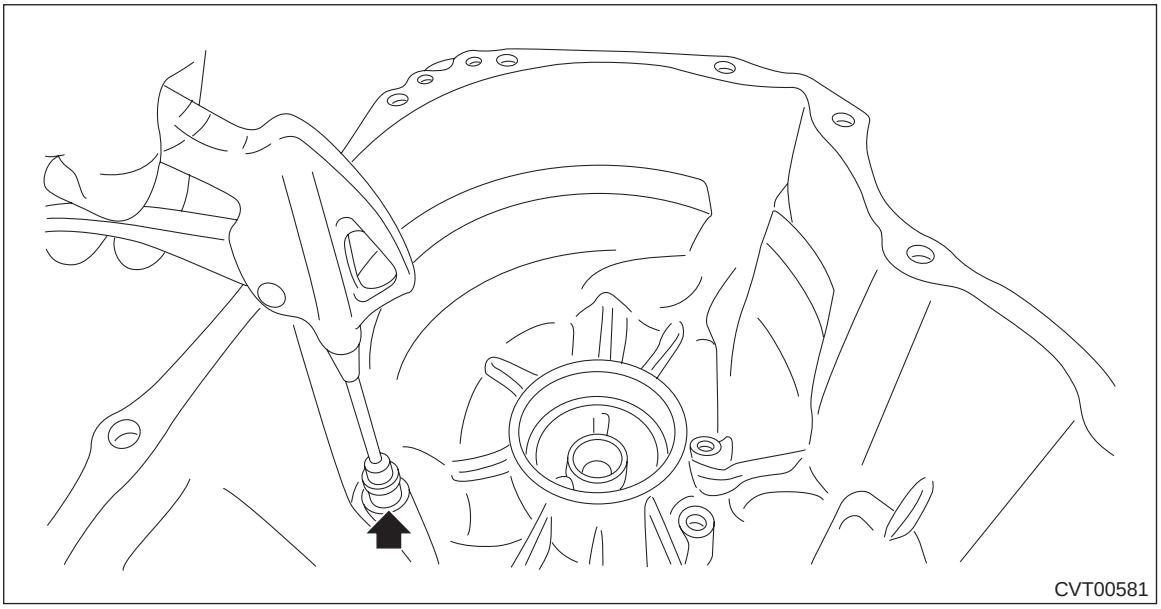
9) Using the ST, remove the roller bearing on secondary pulley side.

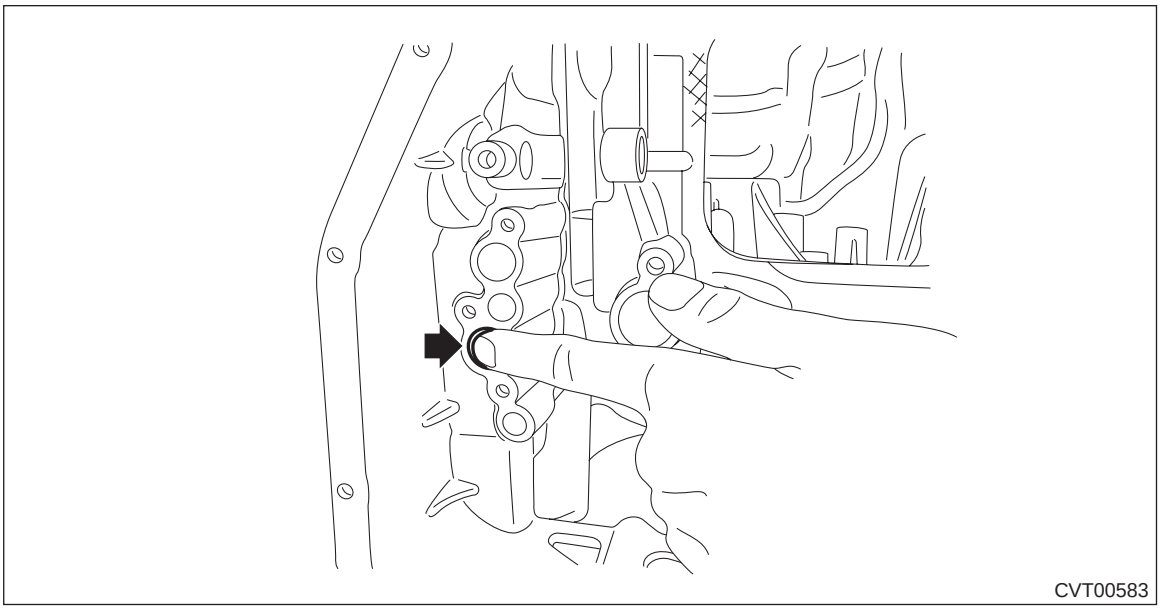
NOTE:
Warm up the bearing area of transmission case using a drier or heat gun.
ST 398527700 PULLER ASSY



10) Remove the CVTF filter by blowing compressed air through the transmission case hole.

NOTE:
Hold the CVTF filter with a finger to prevent compressed air from leaking.



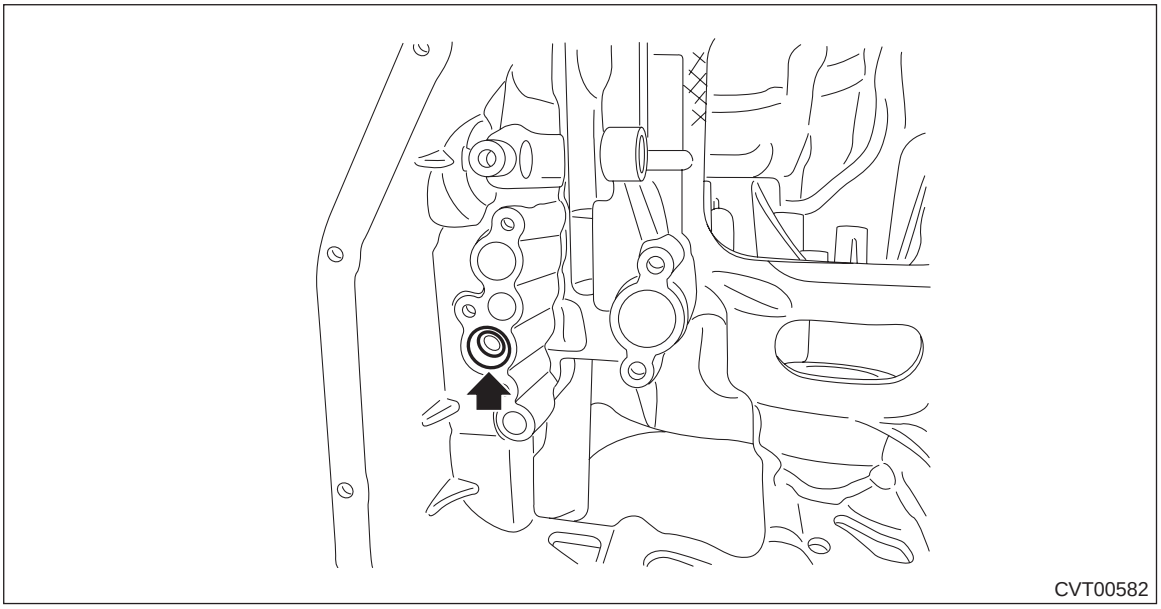


CVT00583

D: ASSEMBLY

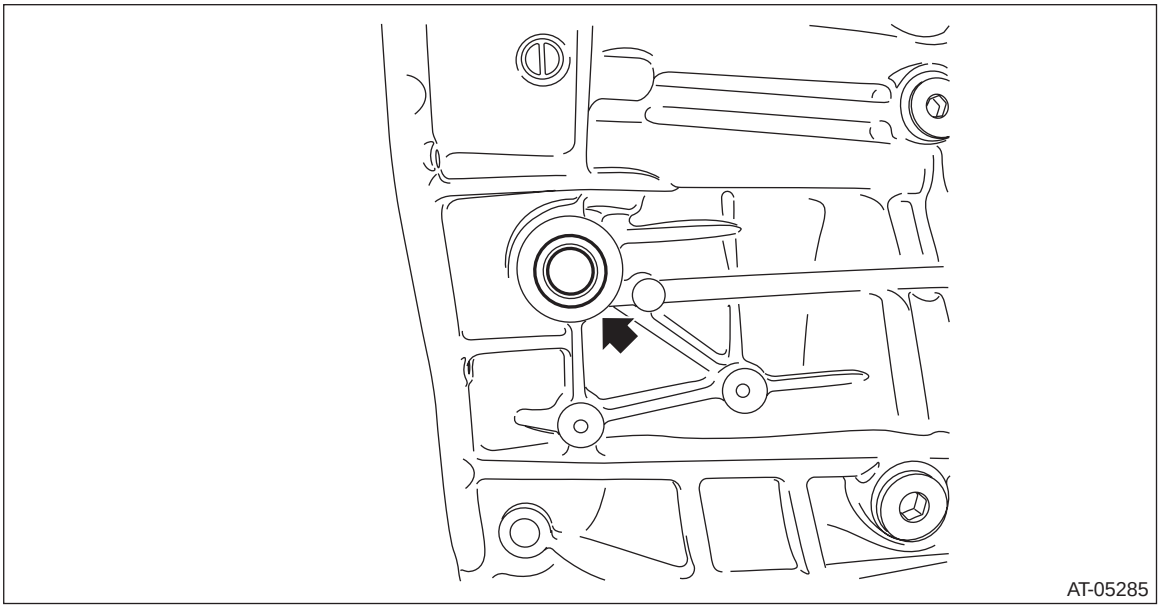
1) Install the CVTF filter.

NOTE:
- Use a new CVTF filter.
- Apply CVTF to the CVTF filter.
- Make sure that the CVTF filter does not protrude from the transmission case.



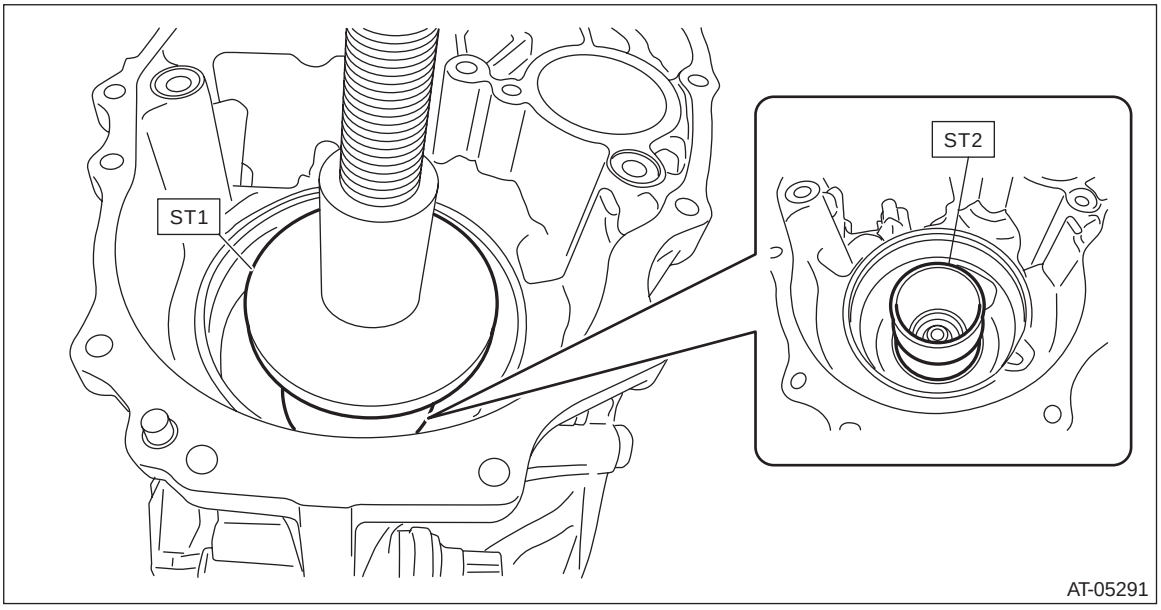
CVT00582

2) Using the ST, install the oil seal.
ST 18657AA000 INSTALLER



3) Using ST1 and ST2, install the ball bearing on the reduction gear side.

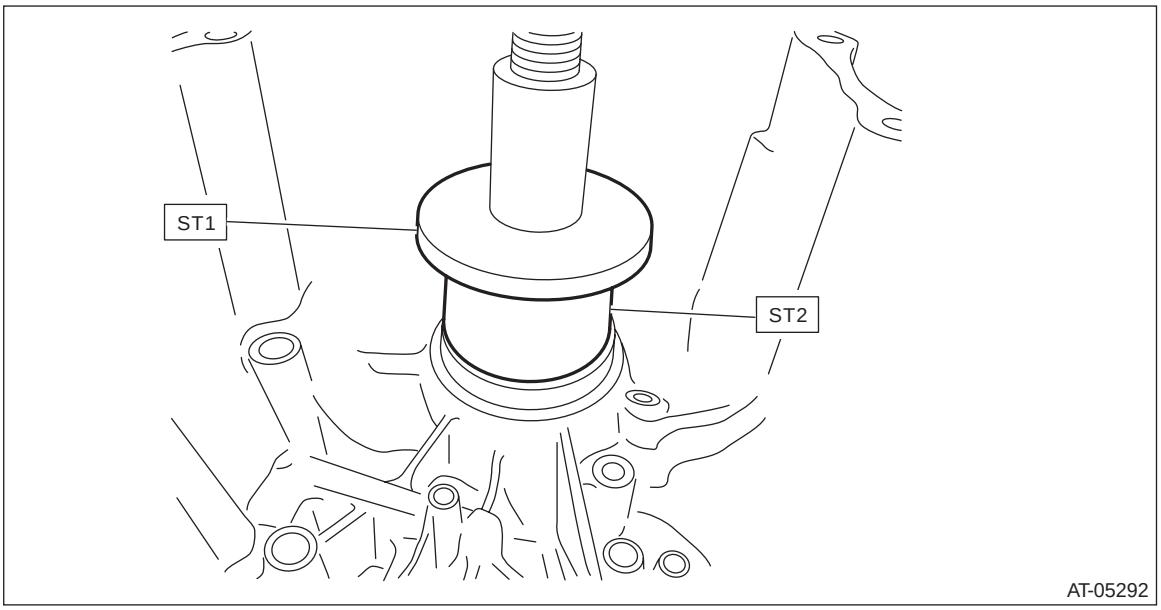
NOTE:
Use a new ball bearing.
ST1 398177700 INSTALLER
ST2 499755602 PRESS SNAP RING



4) Using ST1 and ST2, install the roller bearing on primary pulley side.

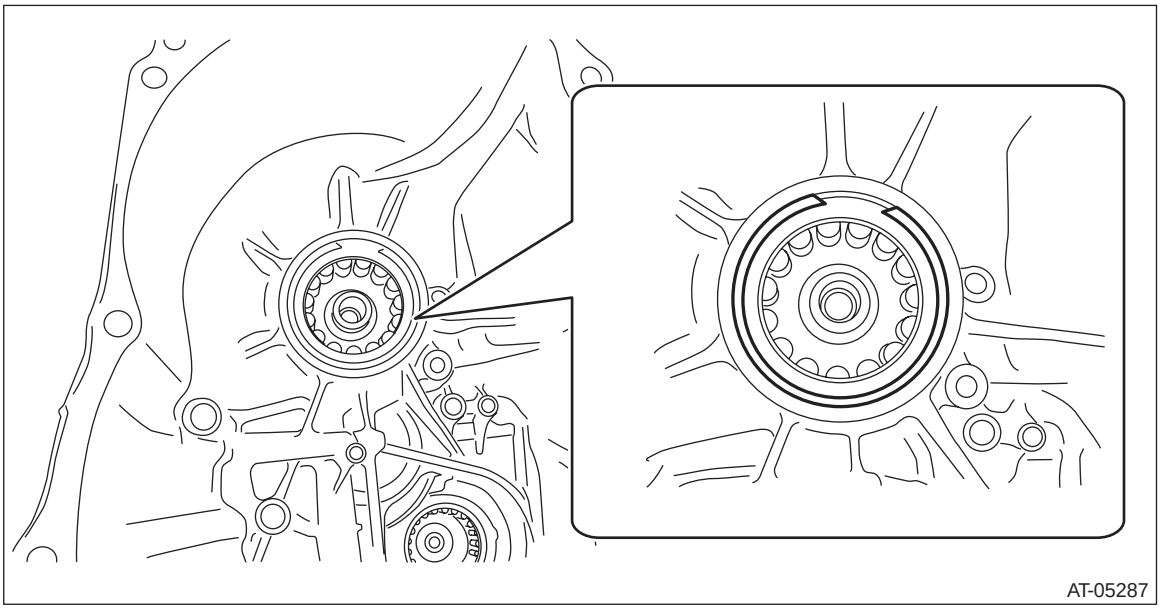
NOTE:
- Use a new roller bearing.
- Make adjustment so that the press gets in contact with the center of ST2.

ST1 398177700 INSTALLER
ST2 20299AG010 PRESS SNAP RING



5) Install the snap ring on primary pulley side.

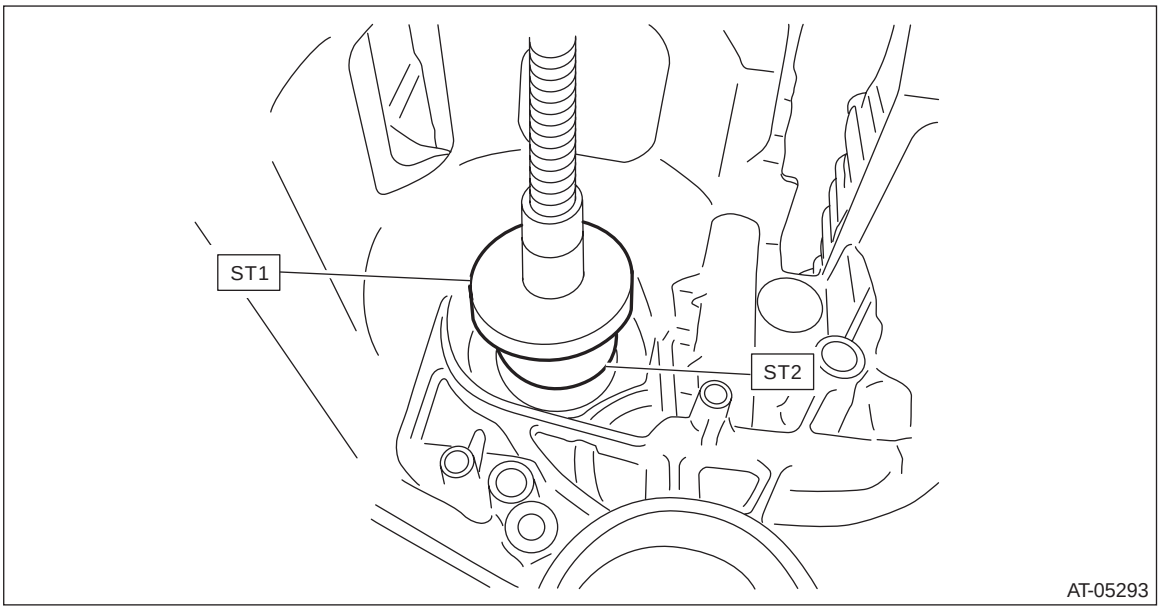
NOTE:
Use new snap rings.



6) Using ST1 and ST2, install the roller bearing on secondary pulley side.

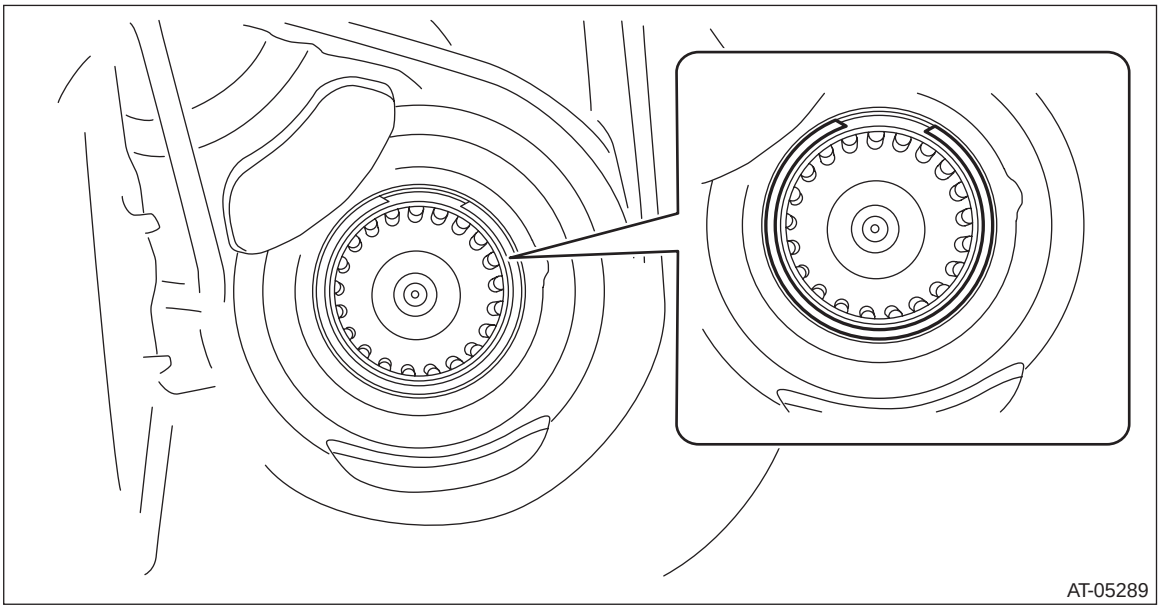
NOTE:
- Use a new roller bearing.
- Make adjustment so that the press gets in contact with the center of ST2.

ST1 398177700 INSTALLER
ST2 499755602 PRESS SNAP RING



7) Install the snap ring on secondary pulley side.

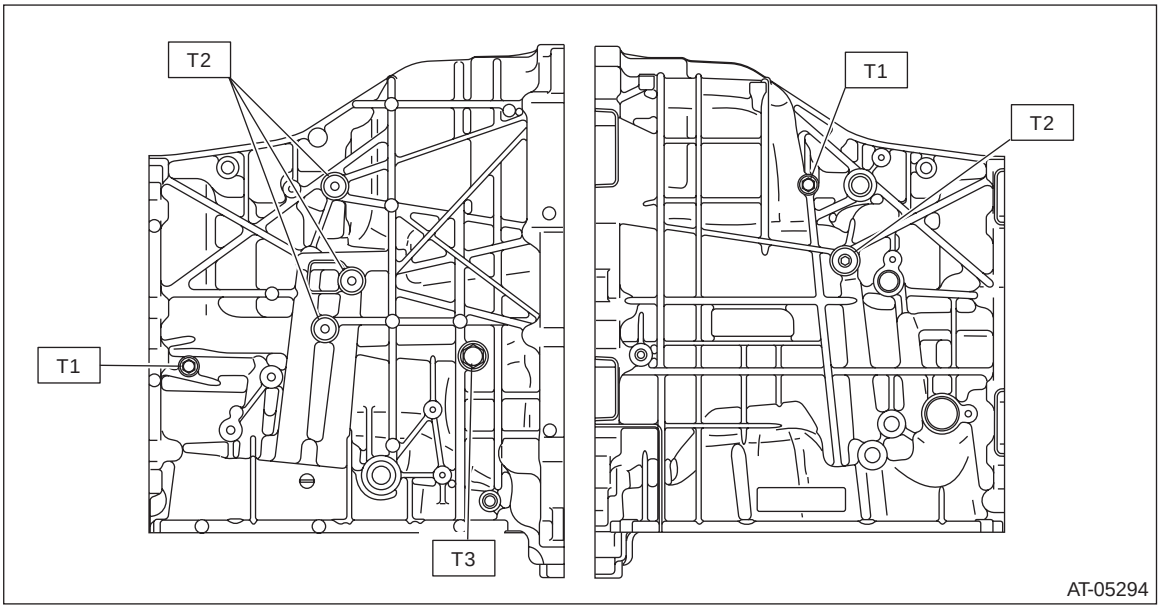
NOTE:
Use new snap rings.



8) Install all plugs.

NOTE:
Use new gaskets and O-rings.

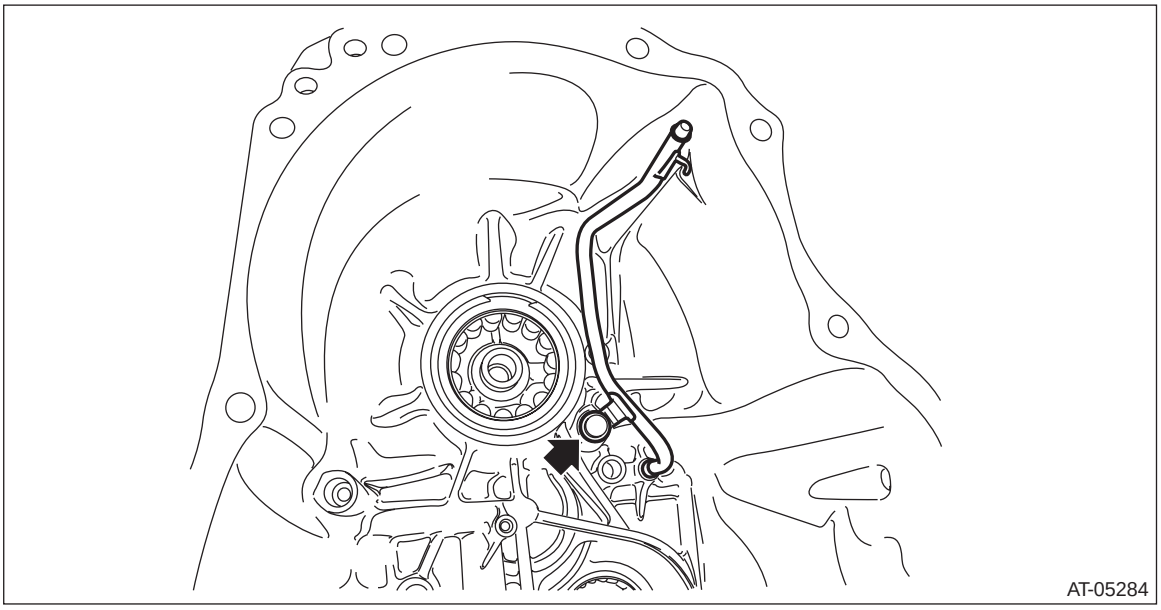
Tightening torque:
T1: 13 N·m (1.3 kgf-m, 9.6 ft-lb)
T2: 25 N·m (2.5 kgf-m, 18.4 ft-lb)
T3: 35 N·m (3.5 kgf-m, 25.8 ft-lb)



9) Install the lubrication pipe and O-ring.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

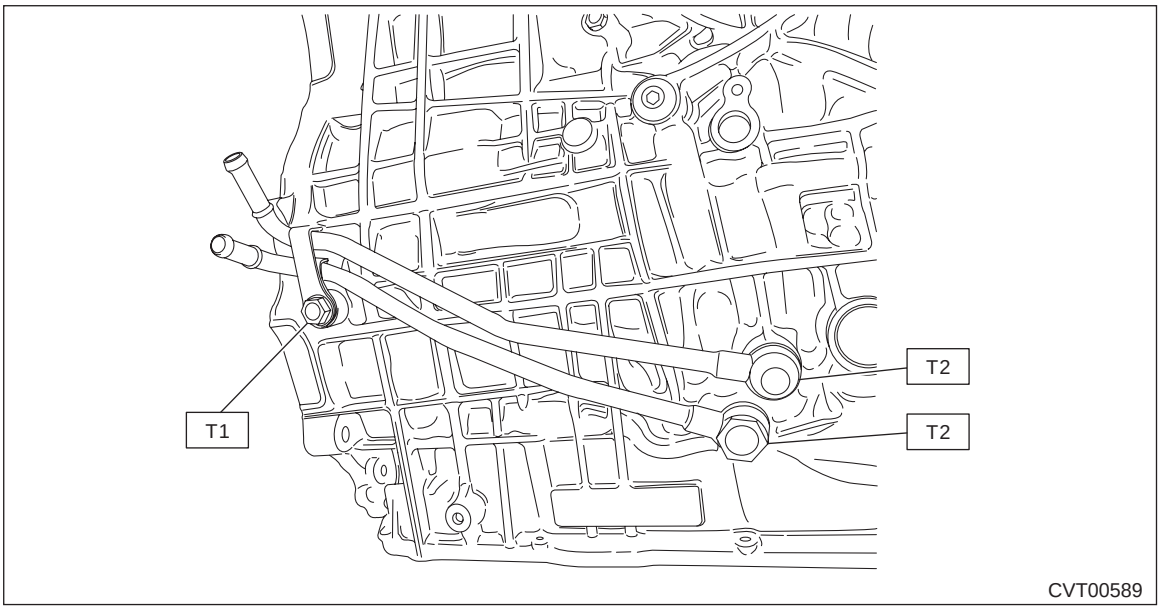
Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



10) Install the CVTF inlet pipe and CVTF outlet pipe.

NOTE:
Use a new gasket.

Tightening torque:
T1: 16 N·m (1.6 kgf-m, 11.8 ft-lb)
T2: 40 N·m (4.1 kgf-m, 29.5 ft-lb)



E: INSPECTION

- Check the transmission case for damage.
- Check for leakage of CVTF from the connection between converter case and transmission case.
- Check for leakage of CVTF from the connection between intermediate case and transmission case.
- Check the lubrication pipe for bend or damage.
- Check the bearing for smooth operation.
- Check the bearing for seizure or wear.

F: ADJUSTMENT

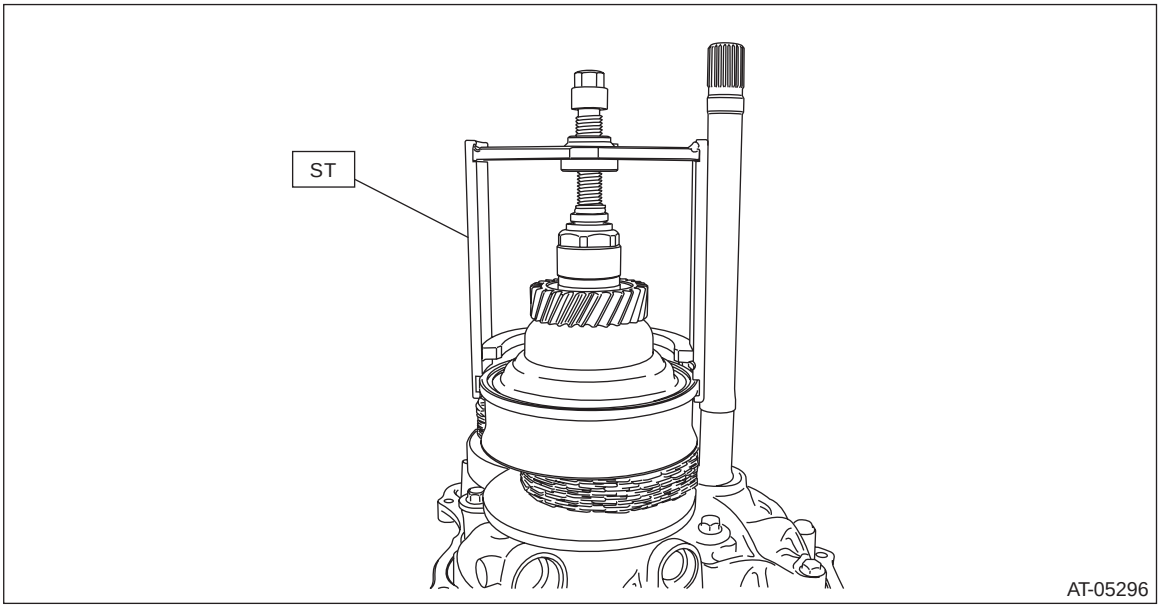
NOTE:
When replacing the transmission case with a new part, perform the following check and adjustment for the selection.

- Select the thrust bearing for the forward clutch assembly. <Ref. to CVT(TR690)-199, ADJUSTMENT, Forward Clutch Assembly.>
- Select the snap ring for the reduction gear. <Ref. to CVT(TR690)-207, ADJUSTMENT, Reduction Driven Gear.>

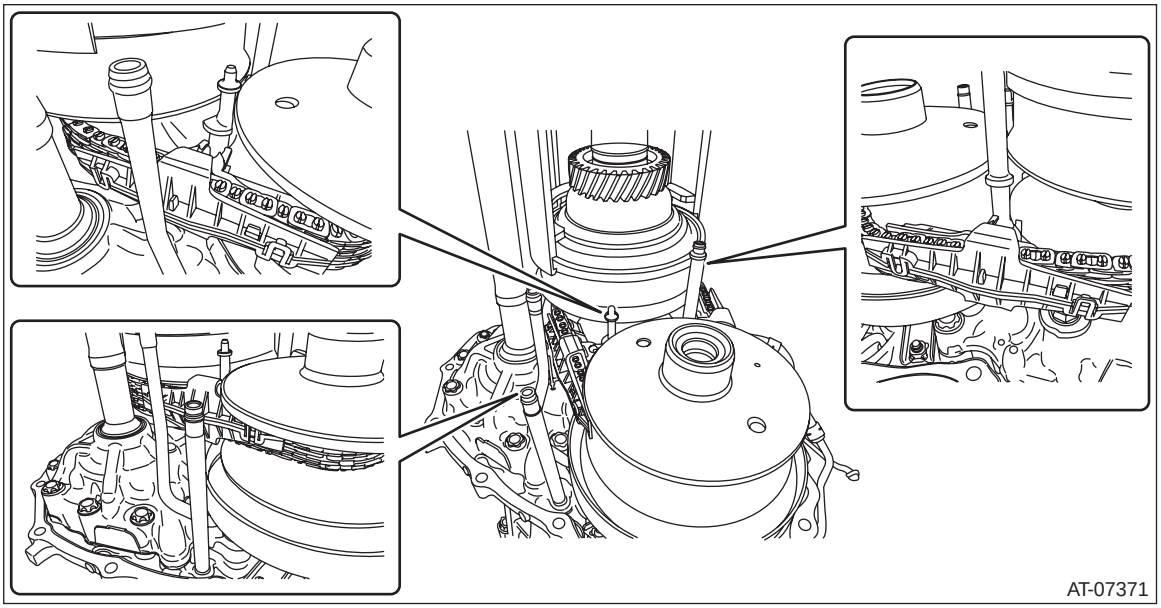
41.Primary Pulley and Secondary Pulley

A: REMOVAL

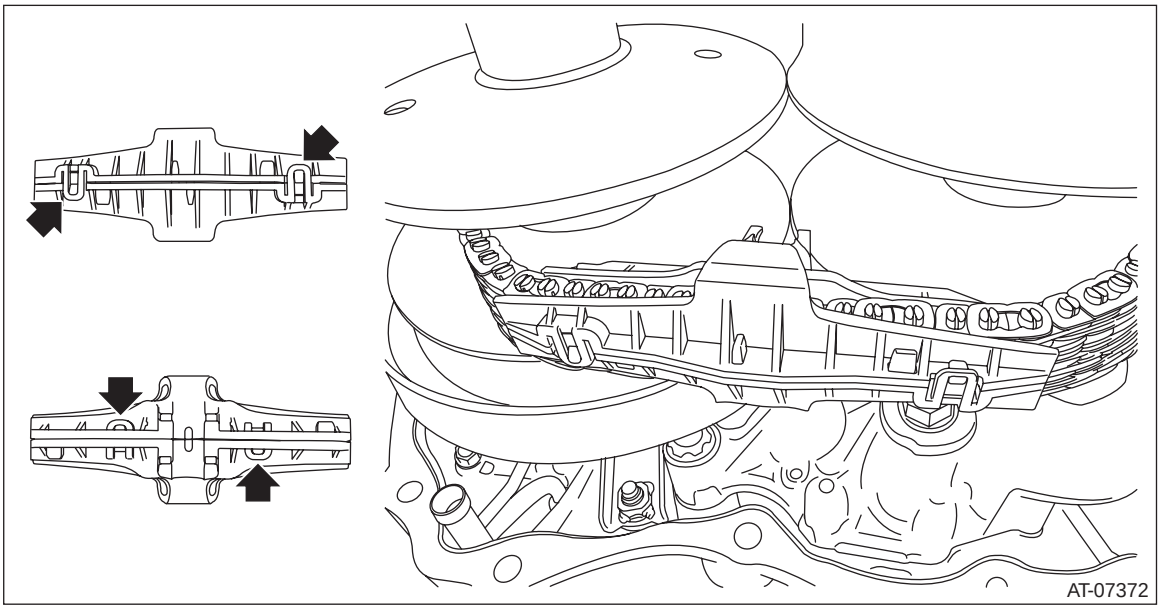
NOTE:
Always replace primary pulley and secondary pulley as an assembly because they are non-disassembled parts.
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-136, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-112, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-123, REMOVAL, Transmission Harness.>
5) Remove the extension case. <Ref. to CVT(TR690)-142, REMOVAL, Extension Case.>
6) Remove the rear drive shaft. <Ref. to CVT(TR690)-146, REMOVAL, Rear Drive Shaft.>
7) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-151, REMOVAL, Transfer Clutch.>
8) Remove the center differential carrier. <Ref. to CVT(TR690)-154, REMOVAL, Center Differential Carrier.>
9) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-158, REMOVAL, Transfer Reduction Driven Gear.>
10) Remove the intermediate case. <Ref. to CVT(TR690)-165, REMOVAL, Intermediate Case.>
11) Remove the forward clutch assembly. <Ref. to CVT(TR690)-181, REMOVAL, Forward Clutch Assembly.>
12) Remove the transmission case. <Ref. to CVT(TR690)-212, REMOVAL, Transmission Case.>
13) Set the ST to the secondary pulley, and expand the V groove of pulley until the variator chain gets completely loose.
ST 18769AA000 EXPANDER PULLEY



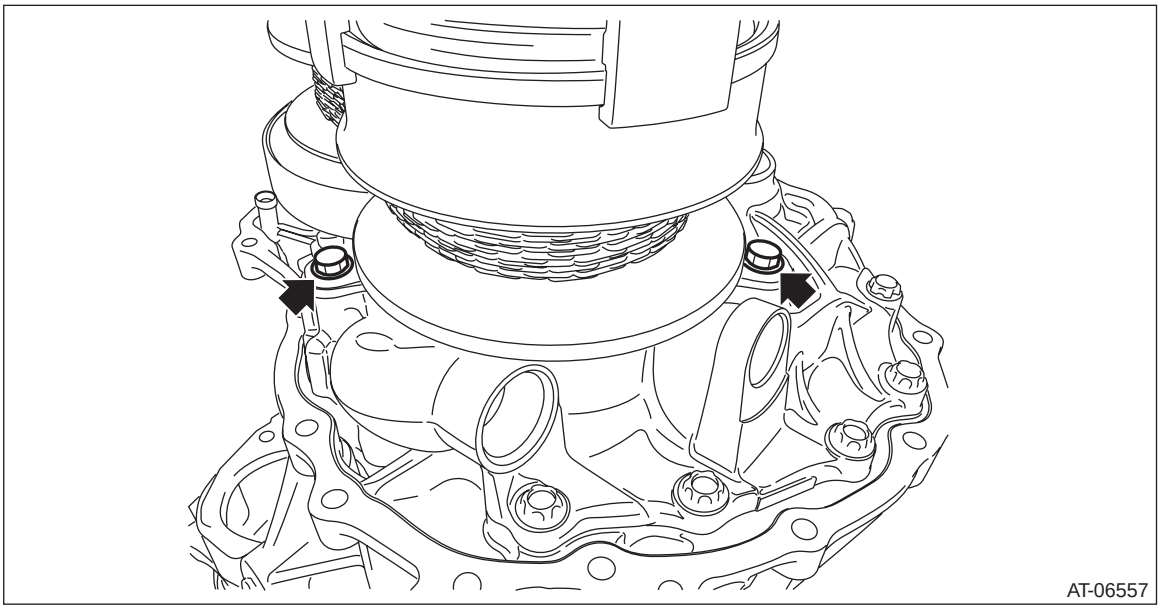
14) Remove the chain guide from lubrication pipe and support rod.
15) Remove the lubrication pipe and support rod.



16) Detach the four claws to remove the two chain guides.

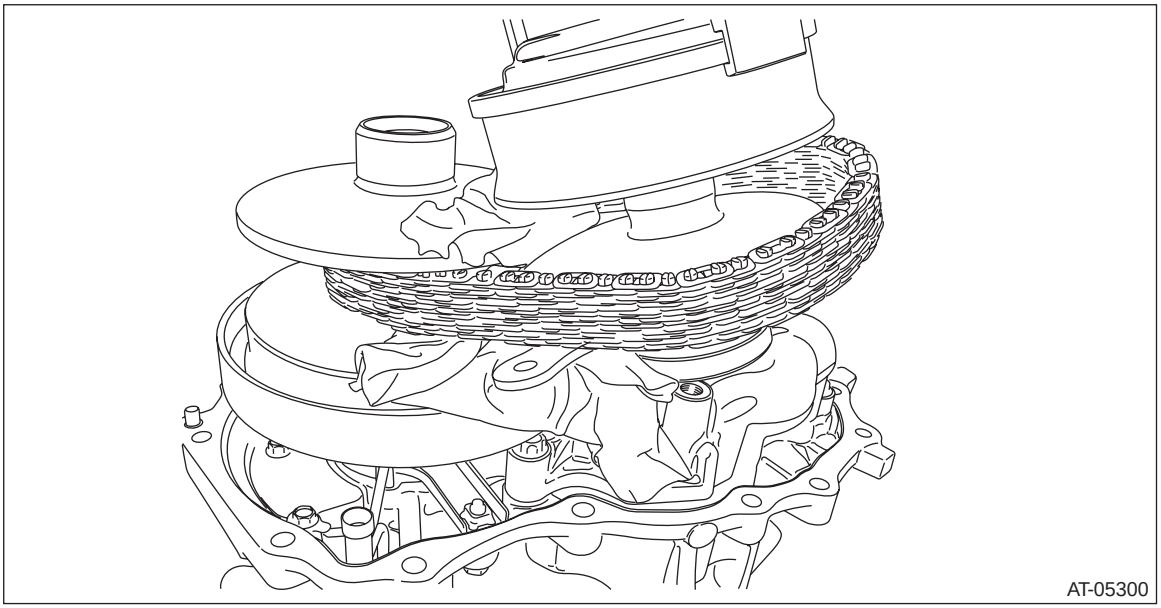


17) Remove the secondary pulley mounting bolt.

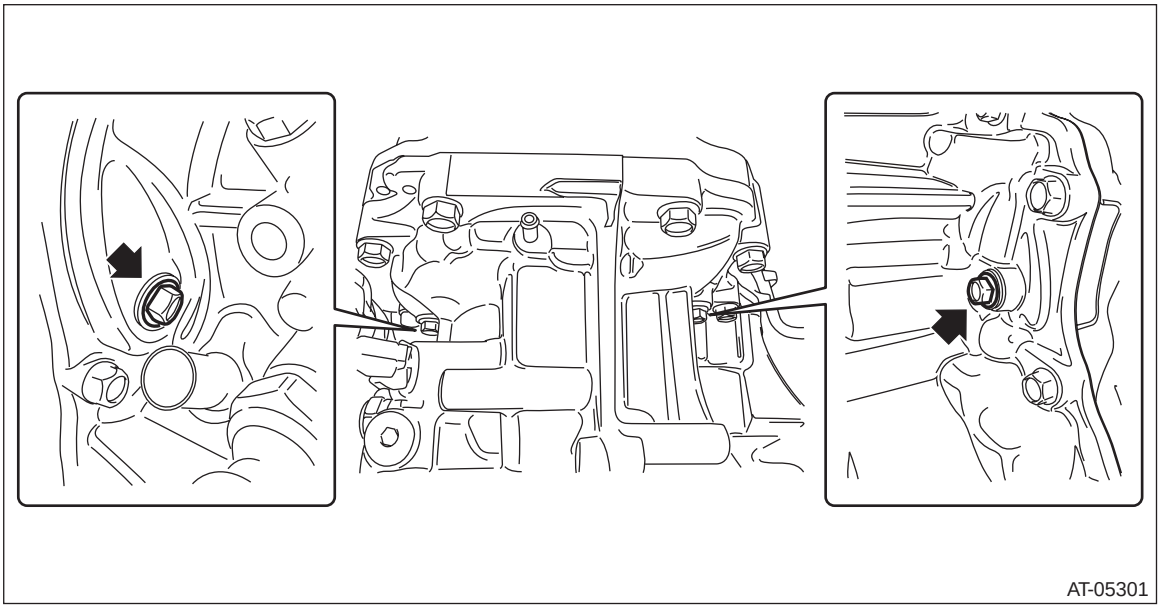


18) Remove the secondary pulley from drive pinion retainer and intersect the V groove of secondary pulley and V groove of primary pulley. Remove the variator chain from secondary pulley and remove the secondary pulley.

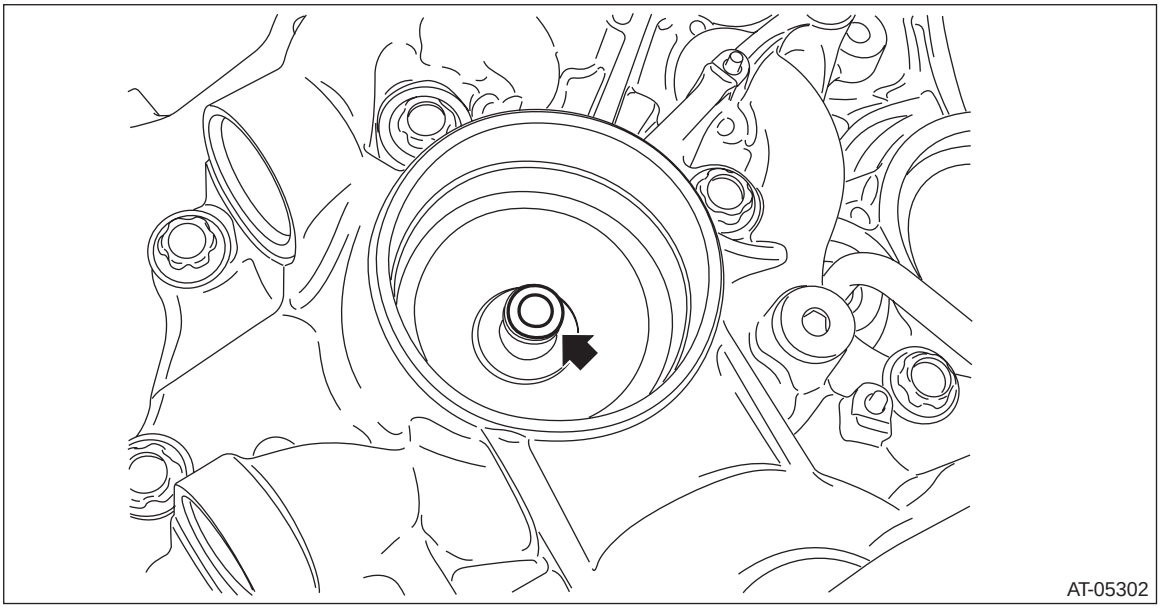
CAUTION:
Cover the V grooves of secondary pulley and primary pulley with cloth to protect the both pulleys and variator chain from scratching.



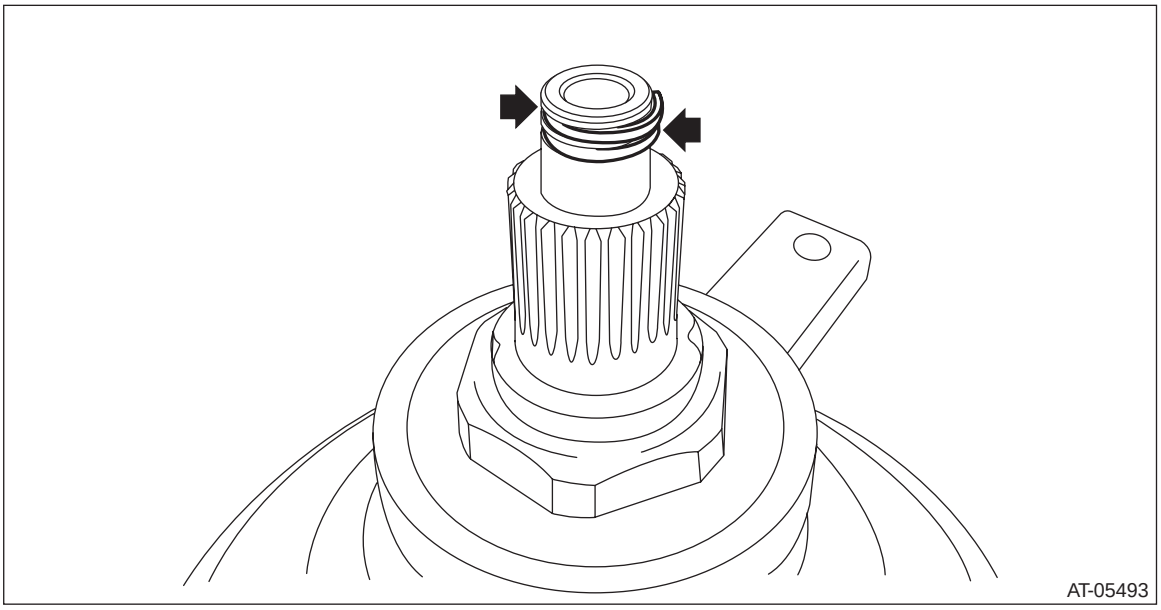
19) Remove the variator chain from primary pulley.
20) Remove the primary pulley mounting bolt.



21) Remove the primary pulley.
22) Remove the two seal rings from drive pinion retainer.



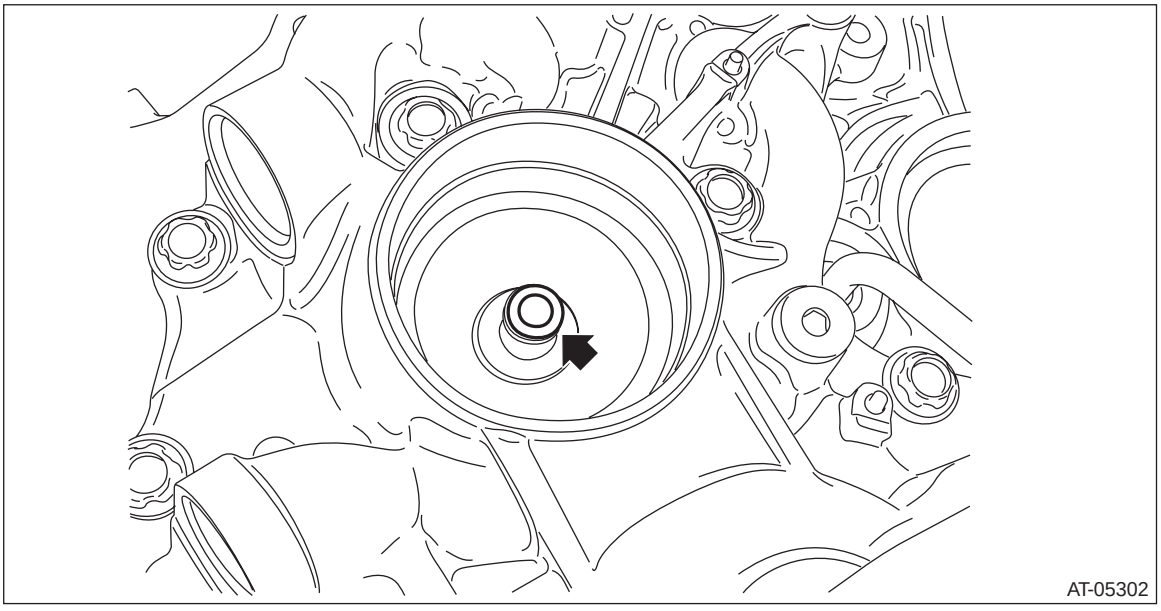
23) Remove the two seal rings from primary pulley.



B: INSTALLATION

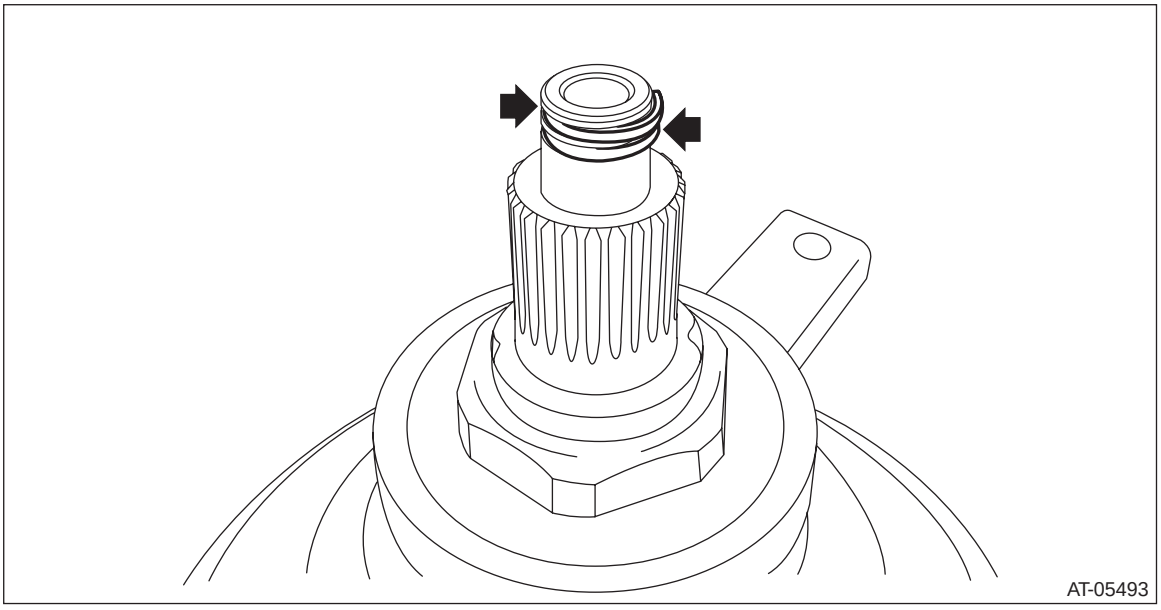
1) Select shims for pulley alignment. <Ref. to CVT(TR690)-238, ADJUSTMENT, Primary Pulley and Secondary Pulley.>
2) Install the two seal rings to drive pinion retainer.

NOTE:
- Use new seal rings.
- Apply CVTF to the seal rings.
- When installing the seal rings, do not expand the seal rings too much.



3) Install the selected shims to the primary pulley bearing catch surface.
4) Install the two seal rings to primary pulley.

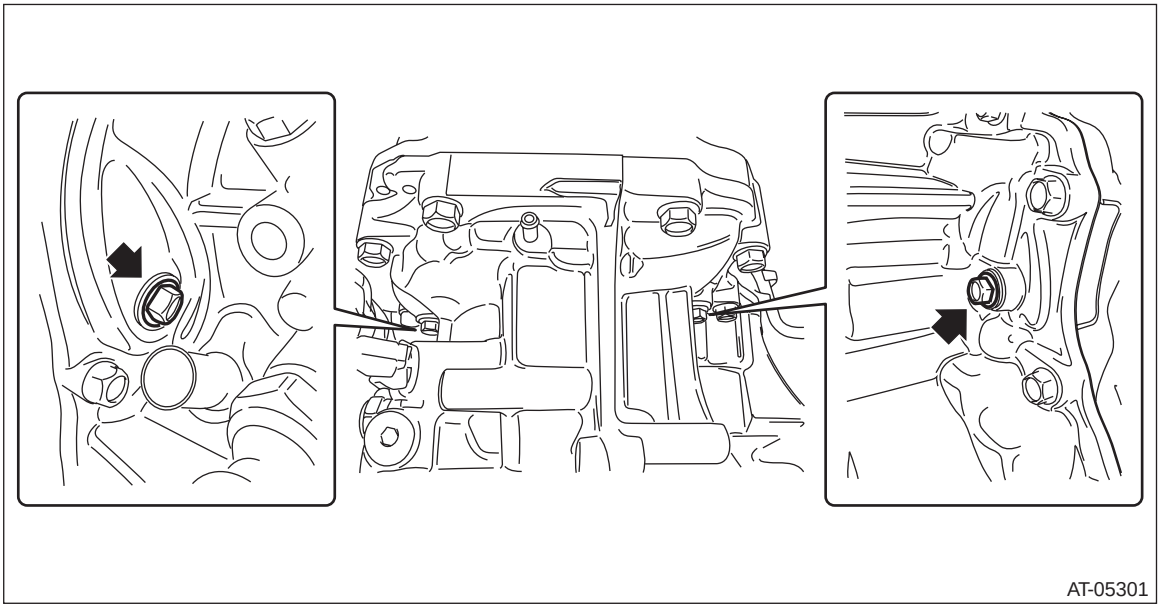
NOTE:
- Use new seal rings.
- Apply CVTF to the seal rings.



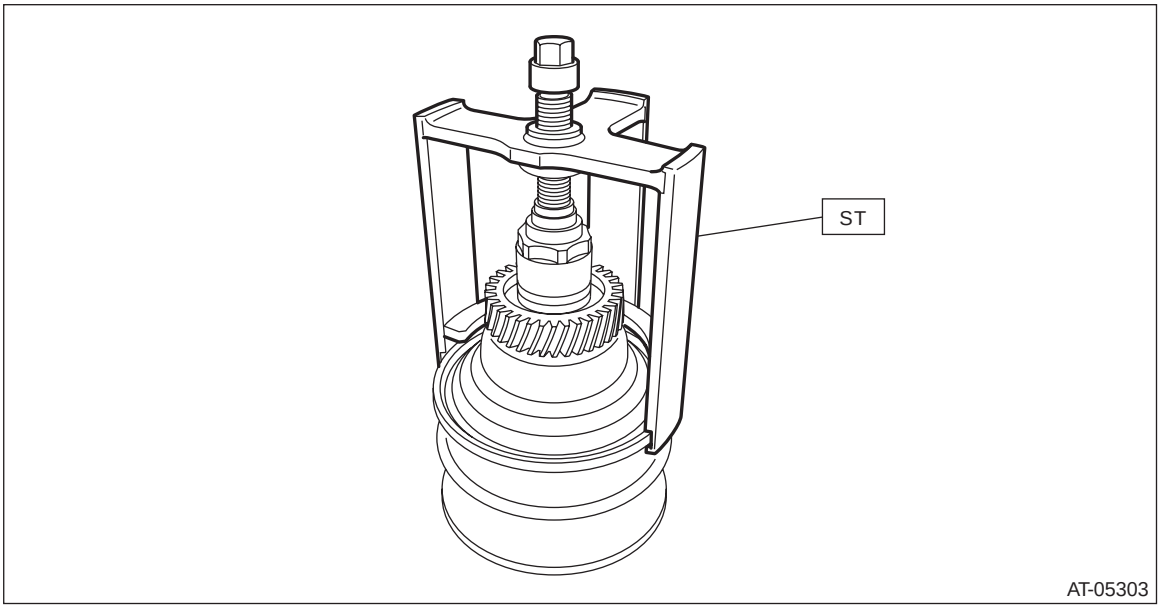
5) Install the primary pulley and adjust the position of bolt holes of primary bearing retainer and converter case to tighten the primary pulley bolt.

NOTE:
Use a new seal washer.

Tightening torque:
21 N·m (2.1 kgf-m, 15.5 ft-lb)



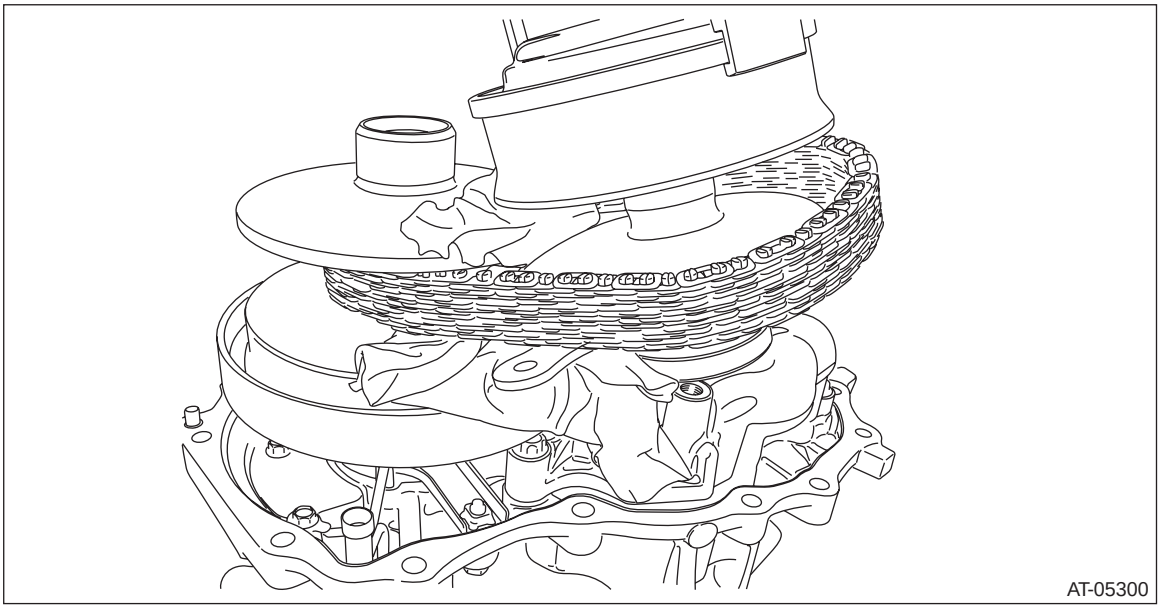
6) Set the ST to secondary pulley and expand the V groove of pulley.
ST 18769AA000 EXPANDER PULLEY



7) Place the variator chain on the primary pulley groove and attach the secondary pulley and variator chain together to the drive pinion retainer.

CAUTION:
Cover the V grooves of primary pulley and secondary pulley with cloth to protect the both pulleys and variator chain from scratching.

(1) Place the variator chain on primary pulley.
(2) Intersect the V groove of primary pulley and the V groove of secondary pulley and install the secondary pulley while placing the variator chain on secondary pulley.

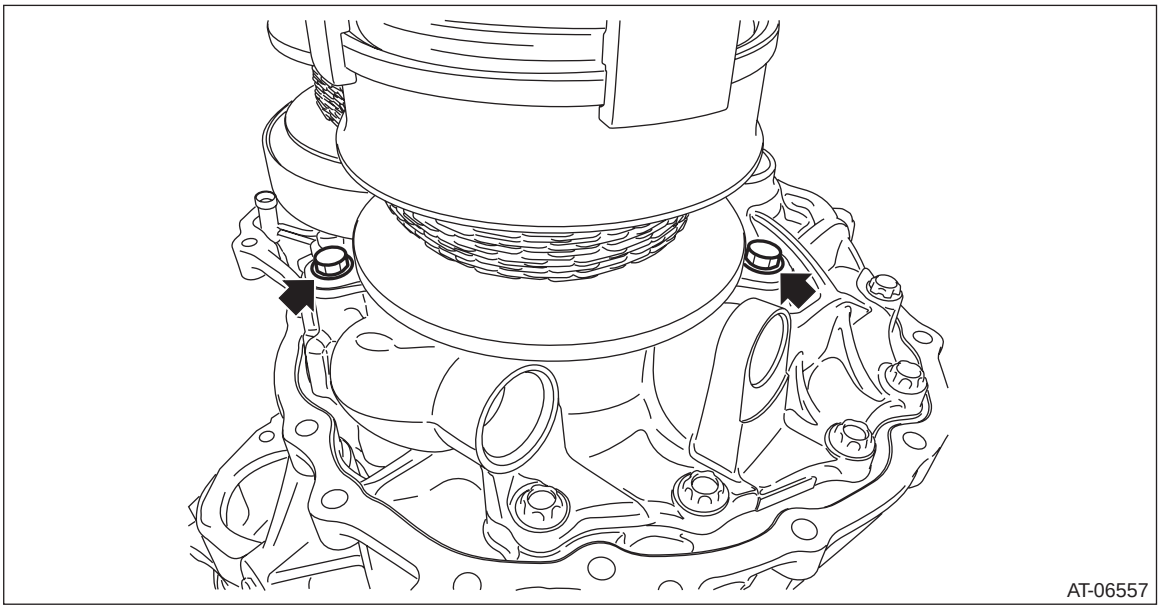


(3) While aligning the bolt hole of secondary bearing retainer and the bolt hole of driving pinion retainer, install the secondary pulley to drive pinion retainer.

8) Install the secondary pulley bolt.

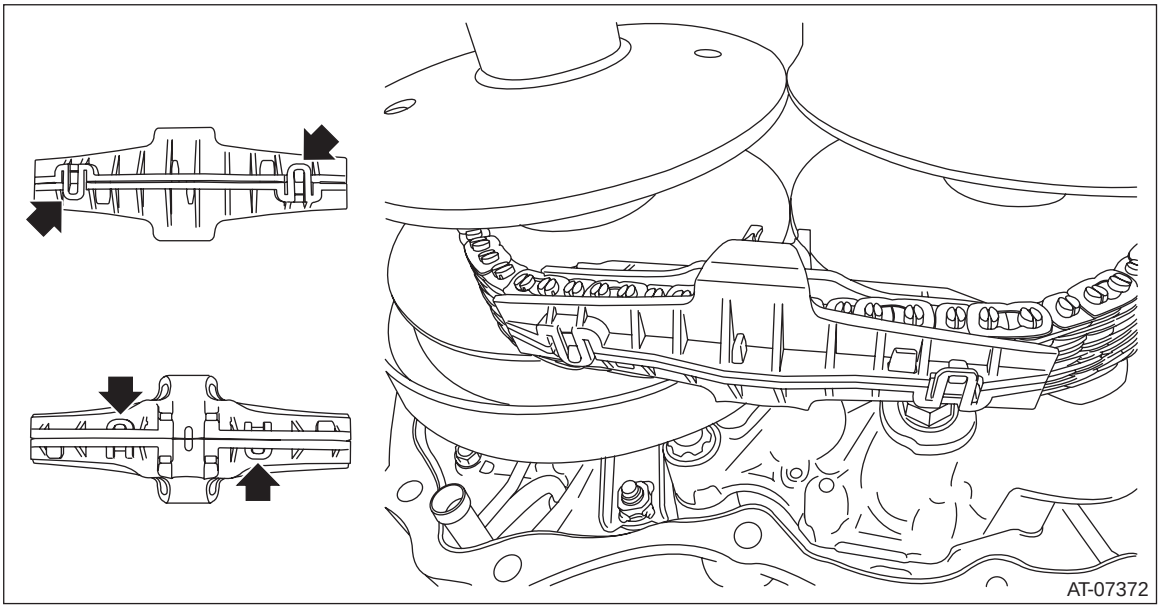
NOTE:
Apply CVTF to the bolt.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

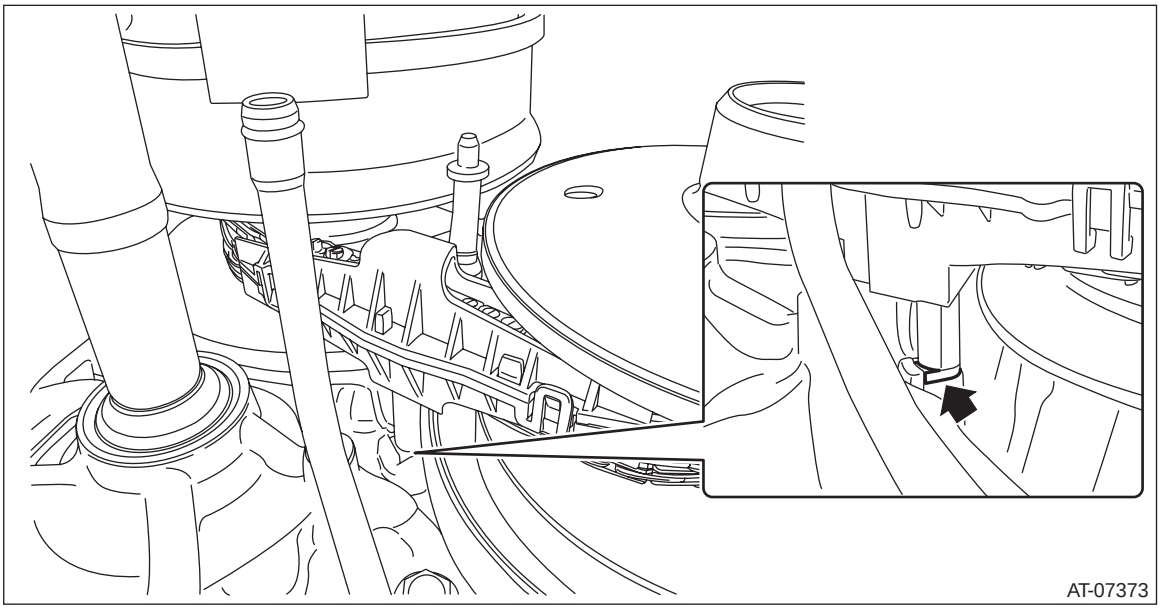


9) Install the chain guide.

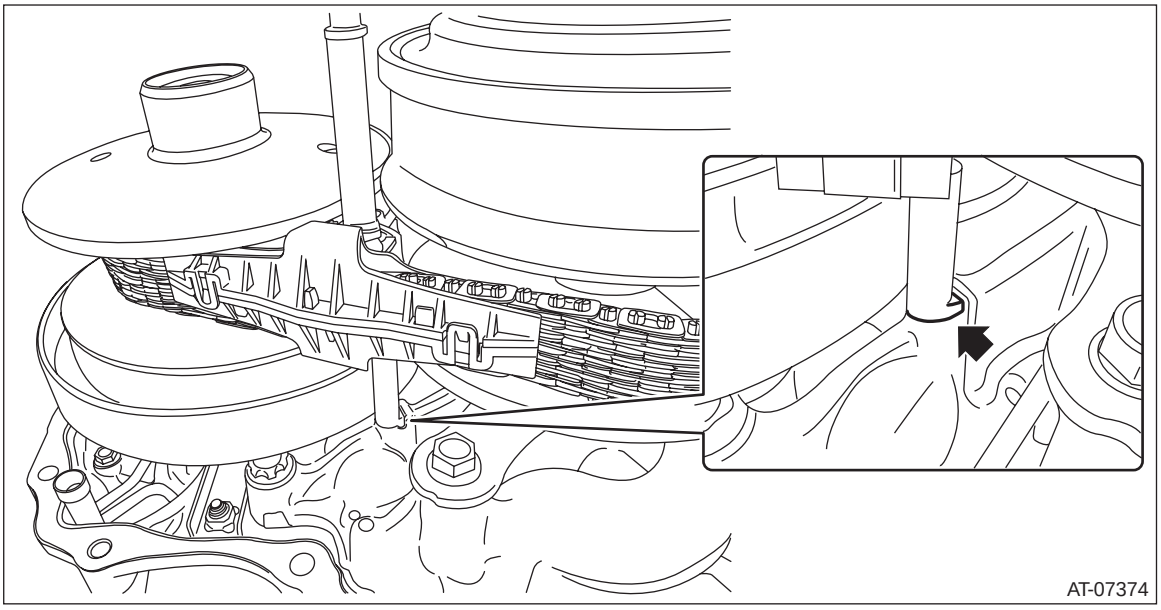
NOTE:
Install it with two claws facing outward and with two claws facing inward.



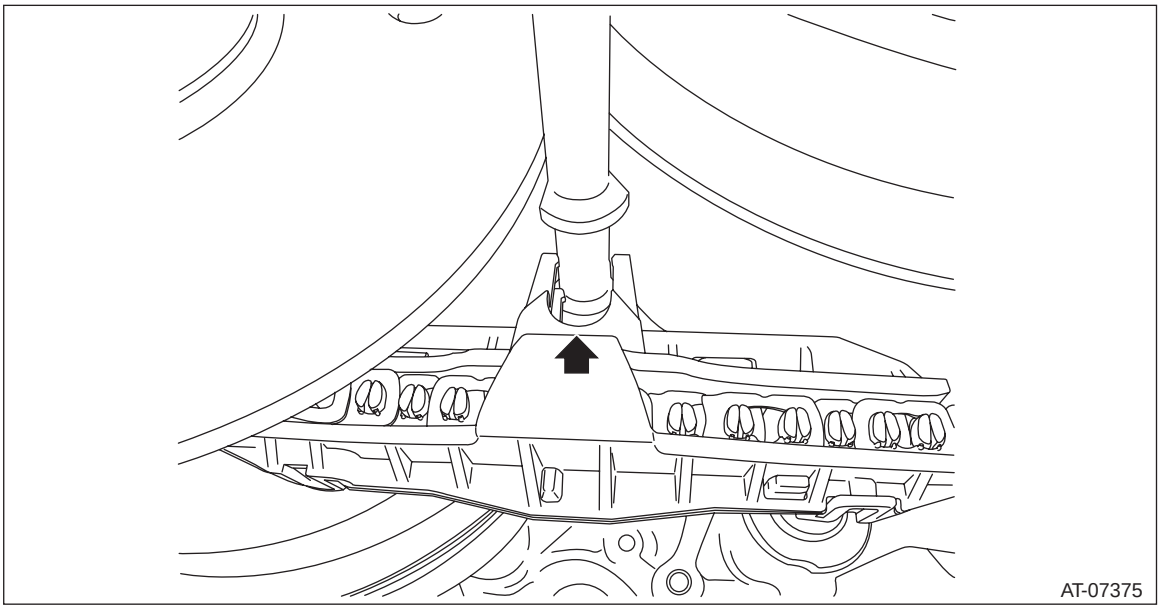
10) Engage the cutout portions of support rod and drive pinion retainer and install the support rod.



11) Engage the cutout portions of lubrication pipe and drive pinion retainer and install the lubrication pipe.



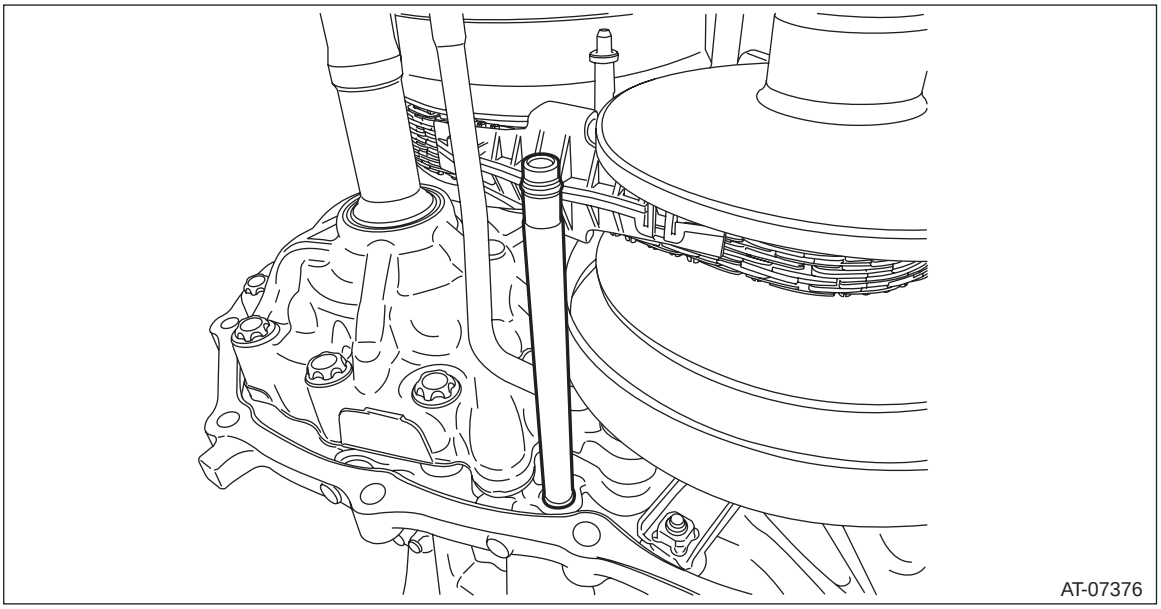
12) Install the chain guide so that the lubrication pipe and support rod run through between the protrusions of each chain guide. Then remove the ST (EXPANDER PULLEY).



13) Install the O-ring to the lubrication pipe.

NOTE:
Use new O-rings.

14) Install the lubrication pipe.



15) Install the transmission case. <Ref. to CVT(TR690)-214, INSTALLATION, Transmission Case.>
16) Install the forward clutch assembly. <Ref. to CVT(TR690)-182, INSTALLATION, Forward Clutch Assembly.>
17) Install the intermediate case. <Ref. to CVT(TR690)-166, INSTALLATION, Intermediate Case.>
18) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-158, INSTALLATION, Transfer Reduction Driven Gear.>
19) Install the center differential carrier. <Ref. to CVT(TR690)-155, INSTALLATION, Center Differential Carrier.>
20) Install the transfer clutch assembly. <Ref. to CVT(TR690)-151, INSTALLATION, Transfer Clutch.>
21) Install the rear drive shaft. <Ref. to CVT(TR690)-146, INSTALLATION, Rear Drive Shaft.>
22) Install the extension case. <Ref. to CVT(TR690)-143, INSTALLATION, Extension Case.>
23) Install the transmission harness. <Ref. to CVT(TR690)-125, INSTALLATION, Transmission Harness.>
24) Install the control valve body and oil pan. <Ref. to CVT(TR690)-116, INSTALLATION, Control Valve Body.>
25) Install the air breather hose. <Ref. to CVT(TR690)-136, INSTALLATION, Air Breather Hose.>
26) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

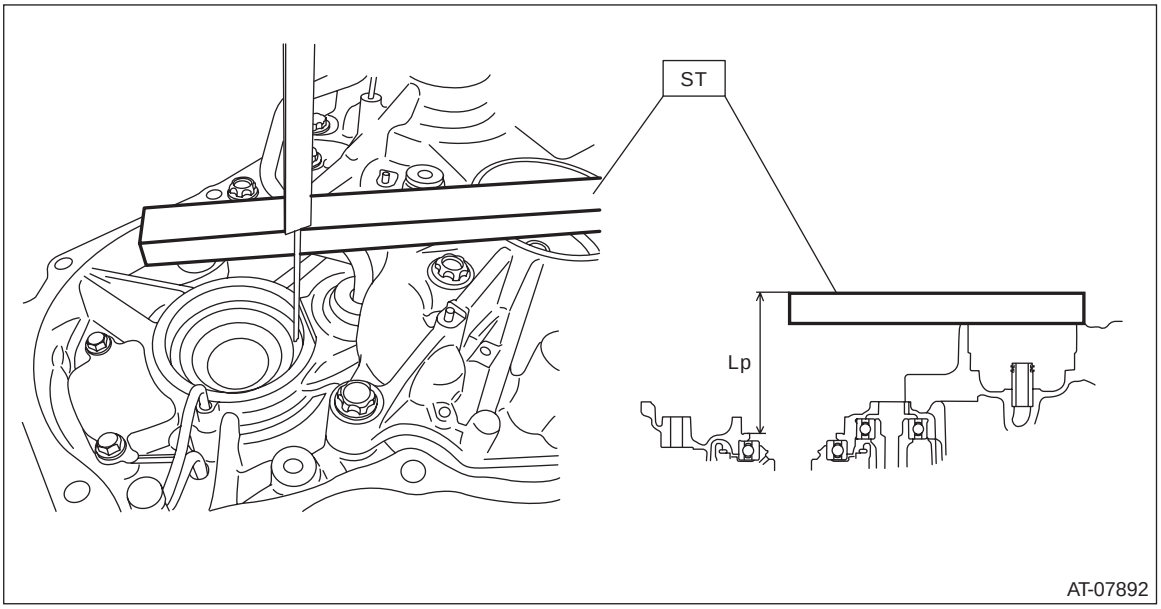
C: INSPECTION

- Check the surface of primary and secondary pulley cones for damage or wear.
- Check the primary and secondary pulley for damage.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.

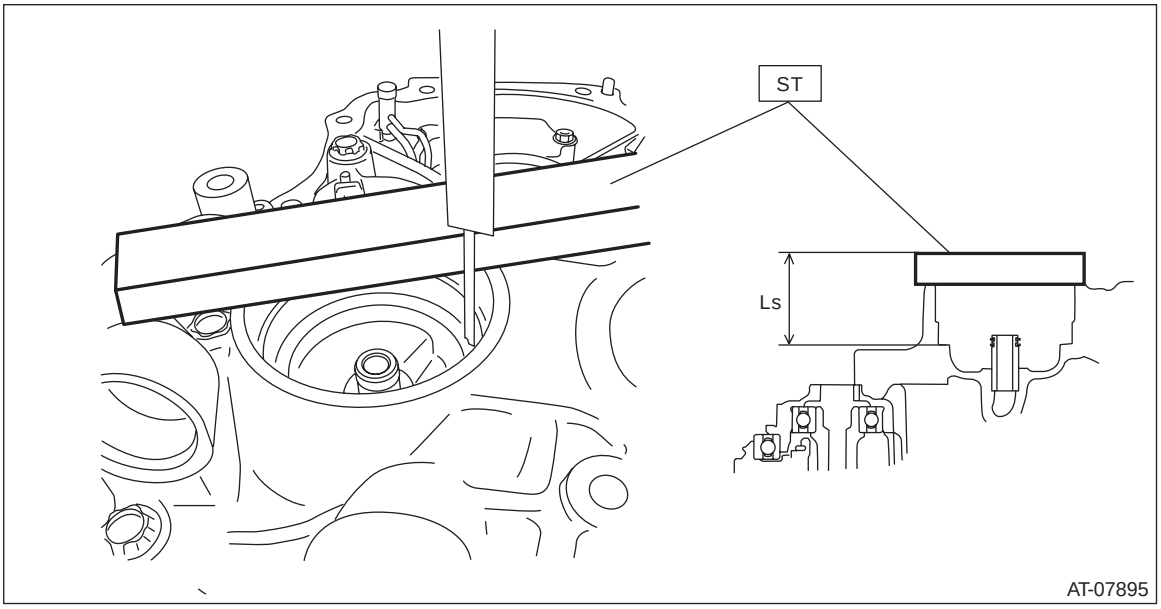
D: ADJUSTMENT

1. PROCEDURE IN REPLACEMENT OF PRIMARY AND SECONDARY PULLEY, OR IN REPLACEMENT OF PRIMARY PULLEY, SECONDARY PULLEY AND VARIATOR CHAIN

1) Measure depth “Lp” from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE



2) Measure height “Ls” from the drive pinion retainer upper face to the secondary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE



3) Calculate the following formula.
Calculation formula:
T (mm) = B + (Lp – Ls) + 31.601 – A
[T (in) = B + (Lp – Ls) + 1.224 – A]
T: Pulley alignment
A: Specified primary pulley dimension
B: Specified secondary pulley dimension
Lp: Depth from the ST upper face to the primary pulley bearing catch surface
Ls: Depth from the ST upper face to the secondary pulley bearing catch surface
31.601 mm (1.224 in): Constant

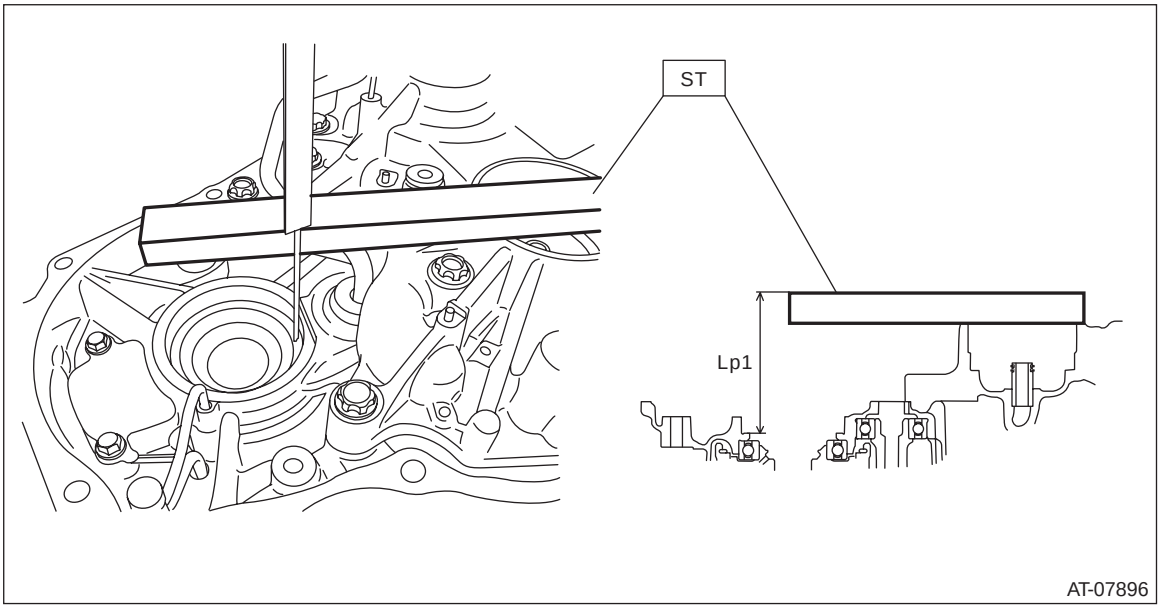
Pulley alignment T mm (in)	Shim thickness mm (in)
0.050 — 0.150 (0.002 — 0.006)	0.1 (0.004)
0.151 — 0.250 (0.006 — 0.01)	0.2 (0.008)
0.251 — 0.350 (0.01 — 0.014)	0.3 (0.012)
0.351 — 0.450 (0.014 — 0.018)	0.4 (0.016)
0.451 — 0.550 (0.018 — 0.022)	0.5 (0.020)
0.551 — 0.650 (0.022 — 0.026)	0.6 (0.024)
0.651 — 0.750 (0.026 — 0.030)	0.7 (0.028)
0.751 — 0.850 (0.030 — 0.033)	0.8 (0.031)
0.851 — 0.950 (0.033 — 0.037)	0.9 (0.035)

4) Select one to two shims so that the total thickness meets the value obtained from step 3).

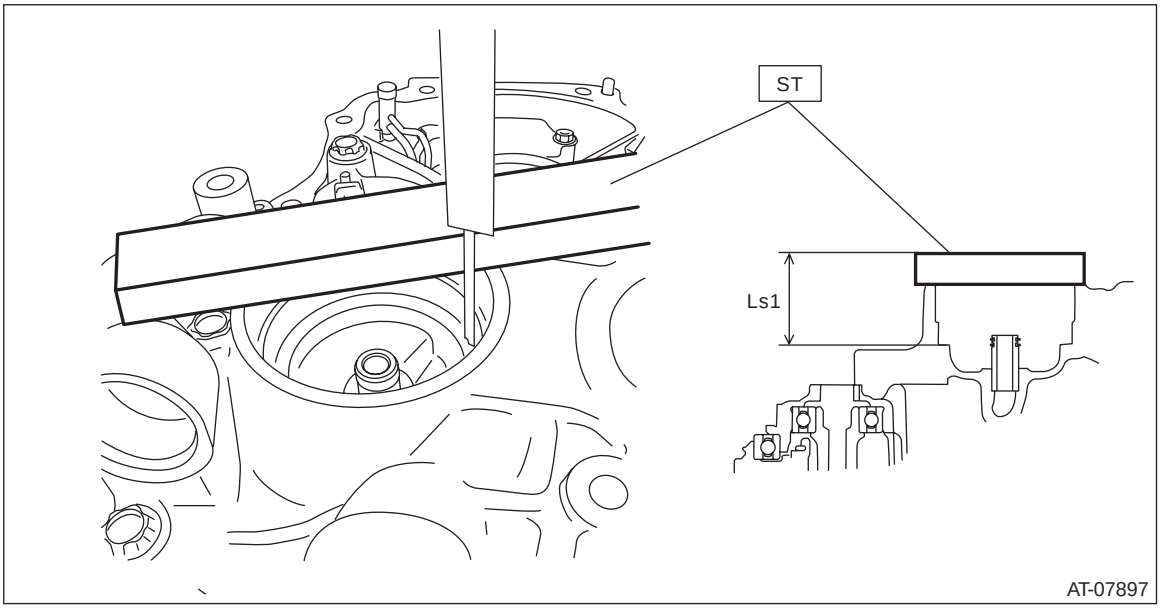
Part No.	Shim thickness mm (in)
32451AA000	0.1 (0.004)
32451AA010	0.2 (0.008)
32451AA020	0.3 (0.012)
32451AA030	0.4 (0.016)
32451AA040	0.5 (0.020)

2. PROCEDURE WHEN REPLACING ONLY DRIVE PINION RETAINER OR CONVERTER CASE

1) Clean the mating surface of current drive pinion retainer and converter case.
2) Measure and record the shim thickness that is attached on the current converter case.
3) Using the current drive pinion retainer, measure depth “Lp1” from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE

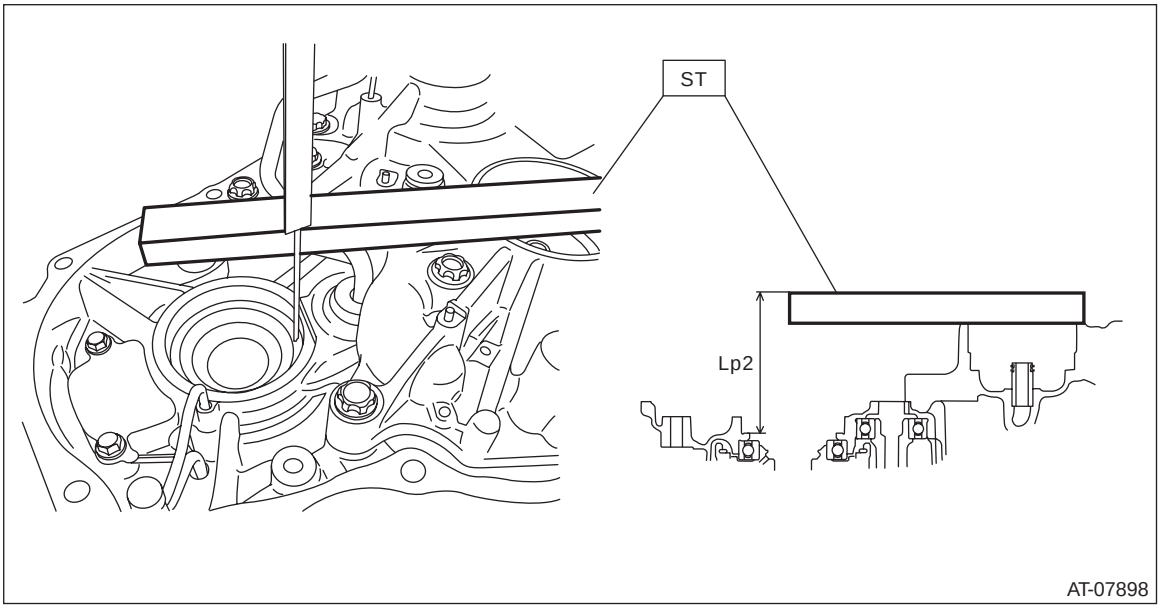


4) Using the current drive pinion retainer or current converter case, measure depth “Ls1” from the ST upper face to the secondary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE

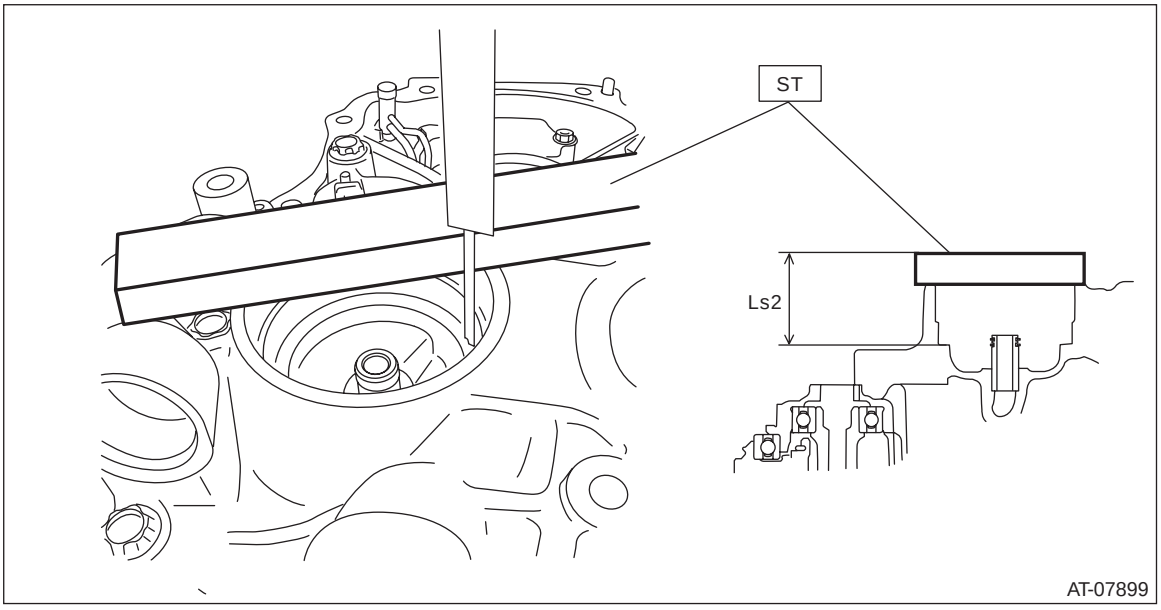


5) Calculate the “LD1” using the following formula and record it.
Calculation formula:
LD1 mm (in) = Lp1 – Ls1
LD1: Height from the primary pulley bearing catch surface to the secondary pulley bearing catch surface
Lp1: Depth from the ST upper face to the primary pulley bearing catch surface
Ls1: Depth from the ST upper face to the secondary pulley bearing catch surface

6) Using the new drive pinion retainer or new converter case, measure depth “Lp2” from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE



7) Using the new drive pinion retainer or new converter case, measure depth “Ls2” from the ST upper face to the secondary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE



8) Calculate the “LD2” using the following formula and record it.
Calculation formula:
LD2 mm (in) = Lp2 – Ls2
LD2: Height from the primary pulley bearing catch surface to the secondary pulley bearing catch surface
Lp2: Depth from the ST upper face to the primary pulley bearing catch surface
Ls2: Depth from the ST upper face to the secondary pulley bearing catch surface

9) Calculate the recorded values of “LD1” and “LD2” to obtain the positive number to select the shims.
Calculation formula: T1 mm (in) = LD1 – LD2 or T2 mm (in) = LD2 – LD1
T1, T2: Difference between new drive pinion retainer or new converter case and current drive pinion retainer or current converter case
LD1: Calculated value of current drive pinion retainer or current converter case
LD2: Calculated value of new drive pinion retainer or new converter case

Difference of the case (T1) mm (in)	Shim selection procedure
0 — 0.020 (0 — 0.00078)	Select new shim of same thickness with the shim that is used on primary pulley side of the current converter case.
0.021 — 0.070 (0.000827 — 0.00275)	Select new shim of same thickness with the shim that is used on primary pulley side of the current converter case.
0.071 — 0.125 (0.00279 — 0.00492)	Select the shim 0.1 mm thinner than the shim that is used on primary pulley side of the current converter case.
0.126 — 0.170 (0.00496 — 0.00669)	Select the shim 0.1 mm thinner than the shim that is used on primary pulley side of the current converter case.
0.171 — 0.230 (0.00673 — 0.00905)	Select the shim 0.2 mm thinner than the shim that is used on primary pulley side of the current converter case.
0.231 — 0.250 (0.00909 — 0.00984)	Select the shim 0.3 mm thinner than the shim that is used on primary pulley side of the current converter case.
0.251 — 0.300 (0.00988 — 0.01181)	Select the shim 0.3 mm thinner than the shim that is used on primary pulley side of the current converter case.

Difference of the case (T2) mm (in)	Shim selection procedure
0 — 0.020 (0 — 0.00078)	Select new shim of same thickness with the shim that is used on primary pulley side of the current converter case.
0.021 — 0.080 (0.000827 — 0.00315)	Select new shim of same thickness with the shim that is used on primary pulley side of the current converter case.
0.081 — 0.100 (0.00318 — 0.00393)	Select the shim 0.1 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.101 — 0.120 (0.00397 — 0.00472)	Select the shim 0.1 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.121 — 0.180 (0.00476 — 0.00708)	Select the shim 0.1 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.181 — 0.220 (0.00712 — 0.00866)	Select the shim 0.2 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.221 — 0.280 (0.00870 — 0.01102)	Select the shim 0.2 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.281 — 0.300 (0.01106 — 0.01181)	Select the shim 0.3 mm thicker than the shim that is used on primary pulley side of the current converter case.

Part No.	Shim thickness mm (in)
32451AA000	0.1 (0.004)
32451AA010	0.2 (0.008)
32451AA020	0.3 (0.012)
32451AA030	0.4 (0.016)
32451AA040	0.5 (0.020)

42.Variator Chain

A: REMOVAL

For removal of variator chain, refer to “Primary Pulley and Secondary Pulley”. <Ref. to CVT(TR690)-228, REMOVAL, Primary Pulley and Secondary Pulley.>

B: INSTALLATION

For installation of variator chain, refer to “Primary Pulley and Secondary Pulley”. <Ref. to CVT(TR690)-232, INSTALLATION, Primary Pulley and Secondary Pulley.>

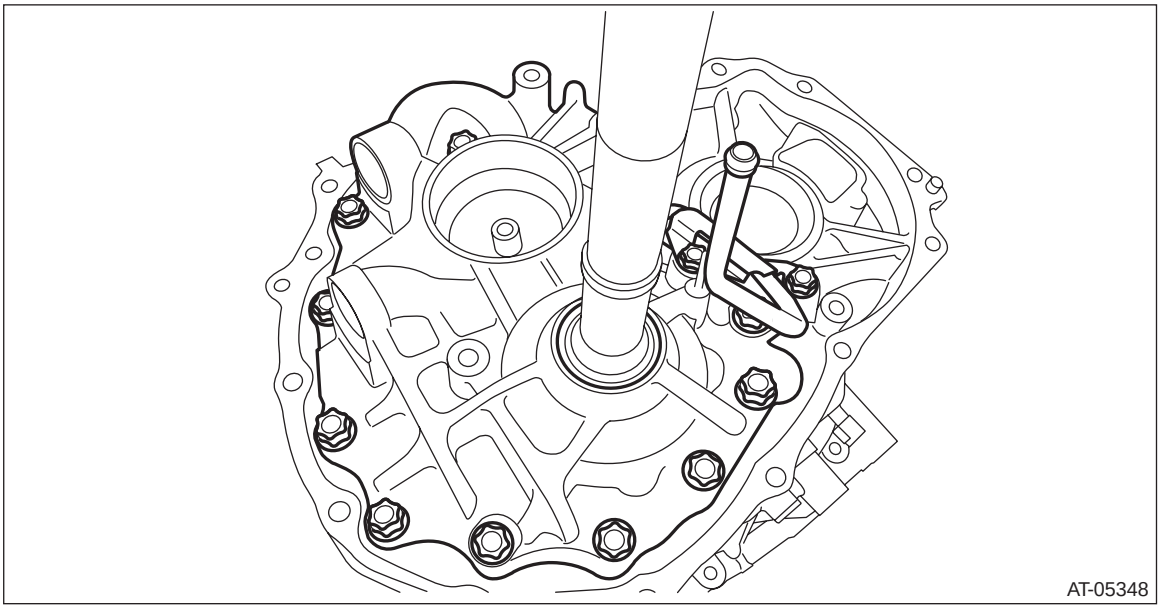
C: INSPECTION

Check the variator chain for damage and wear.

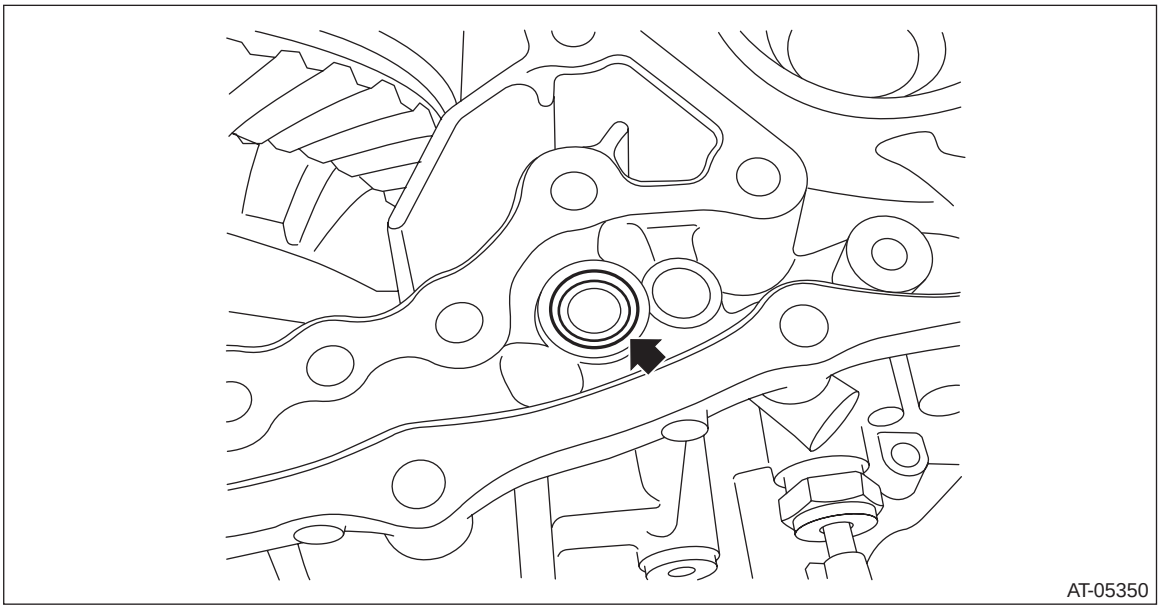
43.Drive Pinion Shaft Assembly

A: REMOVAL

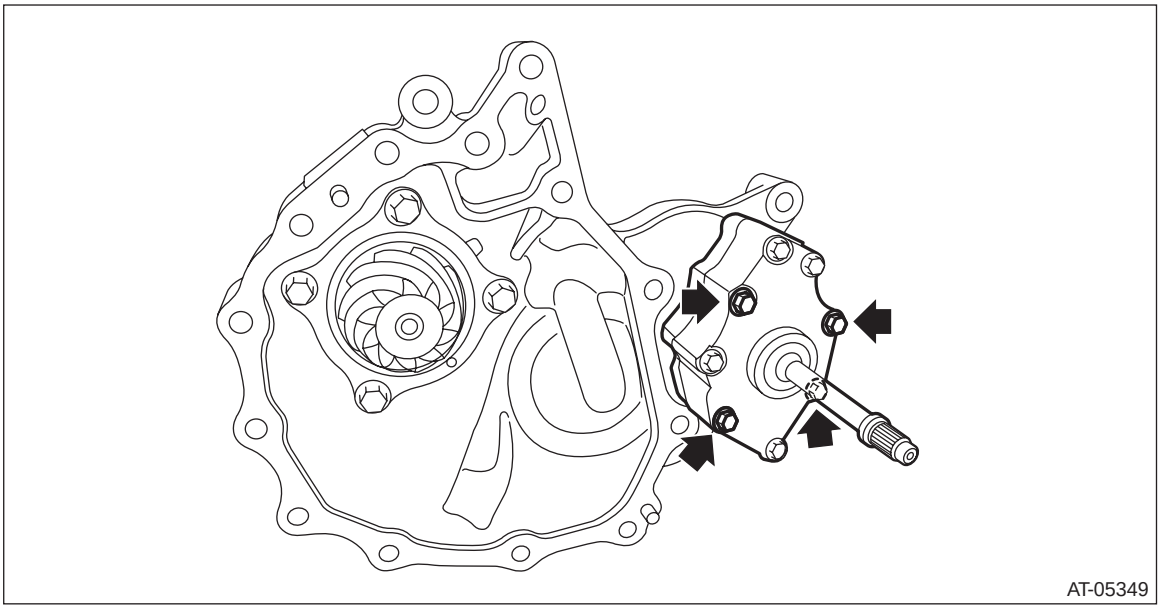
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-136, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-112, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-123, REMOVAL, Transmission Harness.>
5) Remove the extension case. <Ref. to CVT(TR690)-142, REMOVAL, Extension Case.>
6) Remove the rear drive shaft. <Ref. to CVT(TR690)-146, REMOVAL, Rear Drive Shaft.>
7) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-151, REMOVAL, Transfer Clutch.>
8) Remove the center differential carrier. <Ref. to CVT(TR690)-154, REMOVAL, Center Differential Carrier.>
9) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-158, REMOVAL, Transfer Reduction Driven Gear.>
10) Remove the intermediate case. <Ref. to CVT(TR690)-165, REMOVAL, Intermediate Case.>
11) Remove the forward clutch assembly. <Ref. to CVT(TR690)-181, REMOVAL, Forward Clutch Assembly.>
12) Remove the transmission case. <Ref. to CVT(TR690)-212, REMOVAL, Transmission Case.>
13) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-228, REMOVAL, Primary Pulley and Secondary Pulley.>
14) Using the ST, remove the drive pinion retainer and lubrication pipe.
ST 18270KA020 SOCKET (E20)



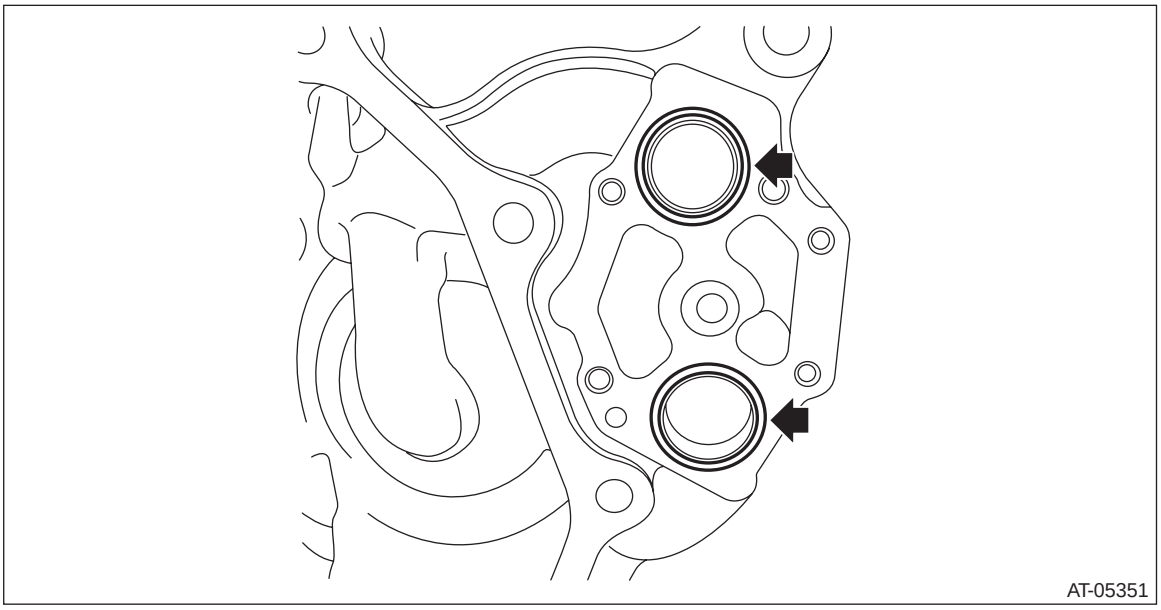
15) Remove the O-rings.



16) Remove the oil pump and the plate.



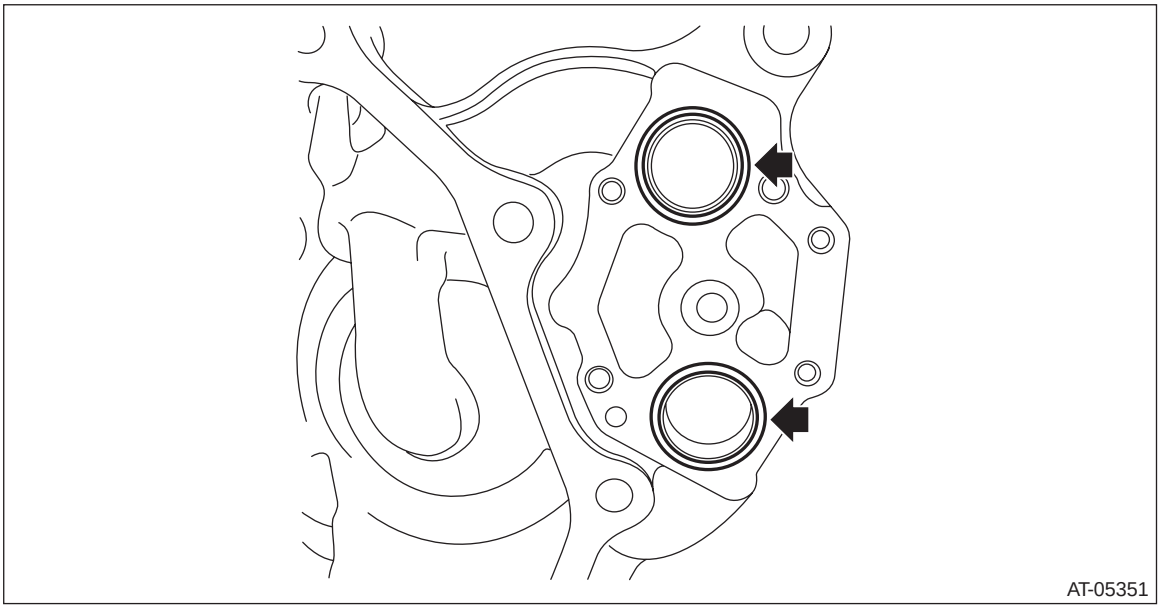
17) Remove the O-rings.



B: INSTALLATION

1) Clean the mating surface of drive pinion retainer and converter case.
2) Adjust the backlash and tooth contact between drive pinion shaft assembly and the front differential side gear. <Ref. to CVT(TR690)-258, ADJUSTMENT, Drive Pinion Shaft Assembly.>
3) Install the O-ring for oil pump to drive pinion retainer.

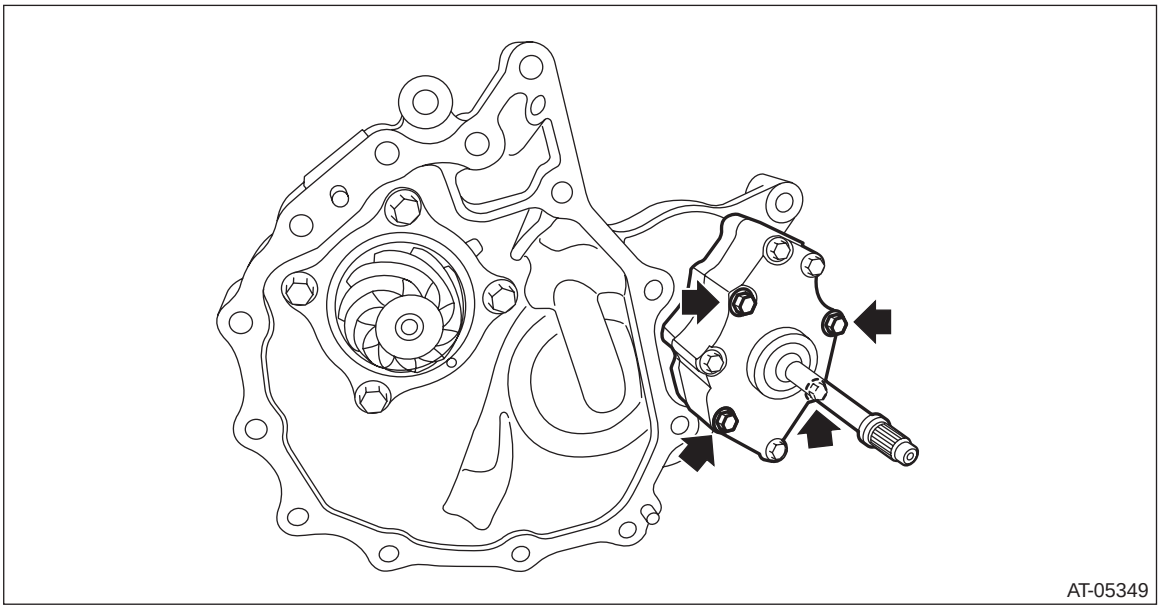
NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.



4) Install the plate and the oil pump.

NOTE:
Apply CVTF to the bolt.

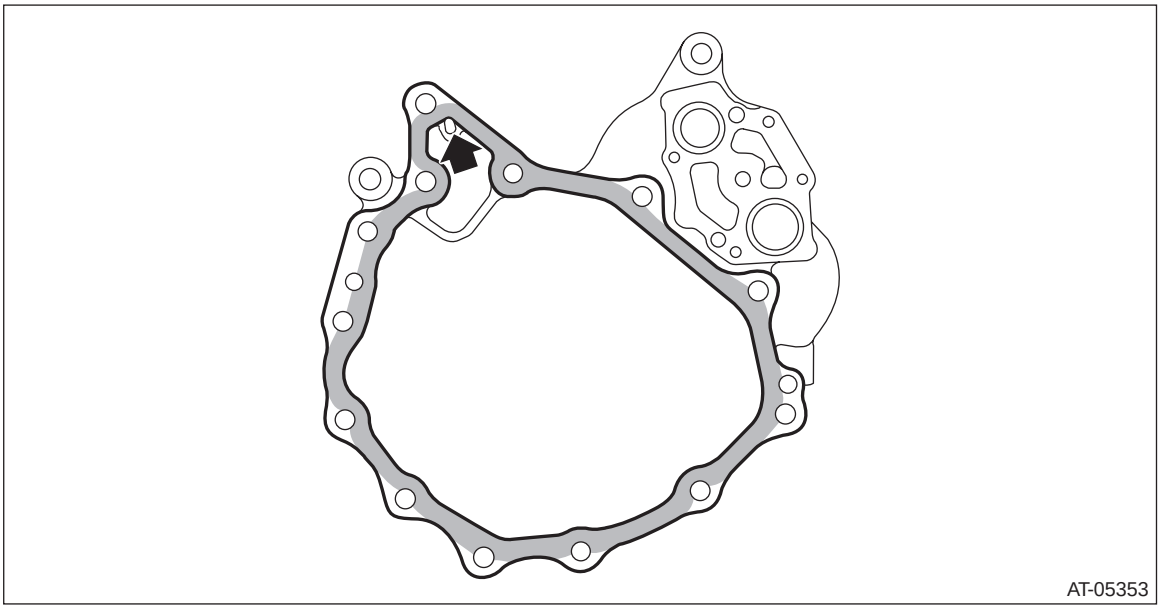
Tightening torque:
8.5 N·m (0.9 kgf-m, 6.3 ft-lb)



5) Apply liquid gasket seamlessly to the mating surface of drive pinion retainer.

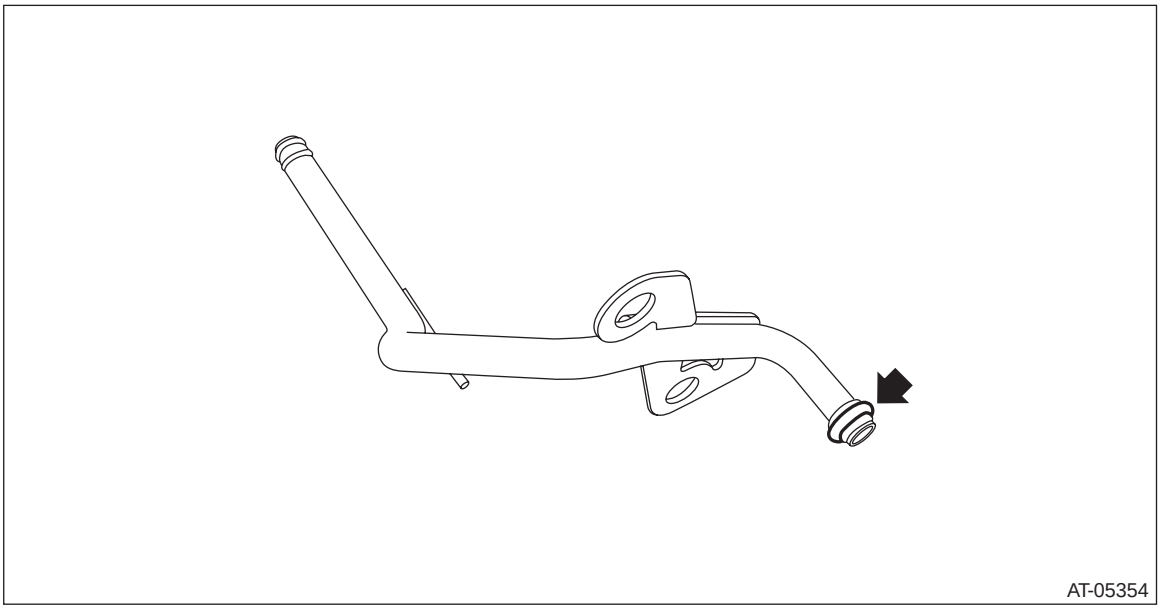
NOTE:
Be careful not to block the arrowed hole when applying liquid gasket.

Liquid gasket:
THREE BOND 1215B or equivalent



6) Install the O-ring to the lubrication pipe.

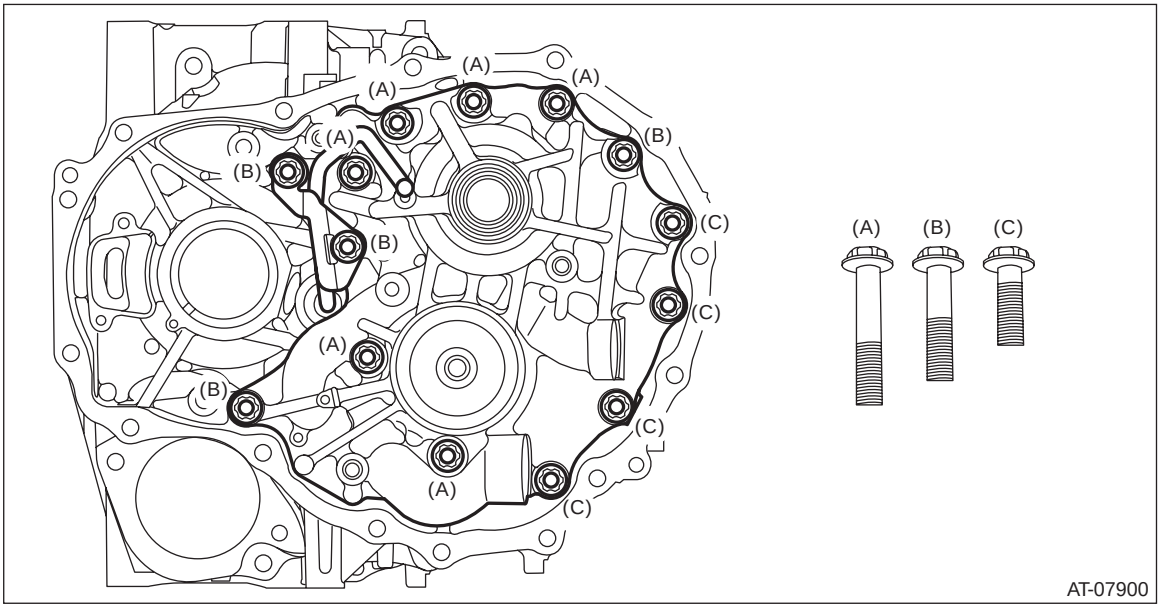
NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.



7) Install the drive pinion retainer and lubrication pipe to converter case and tighten the bolt using the ST.
ST 18270KA020 SOCKET (E20)

NOTE:
Do not confuse the three different-length bolts when installing.

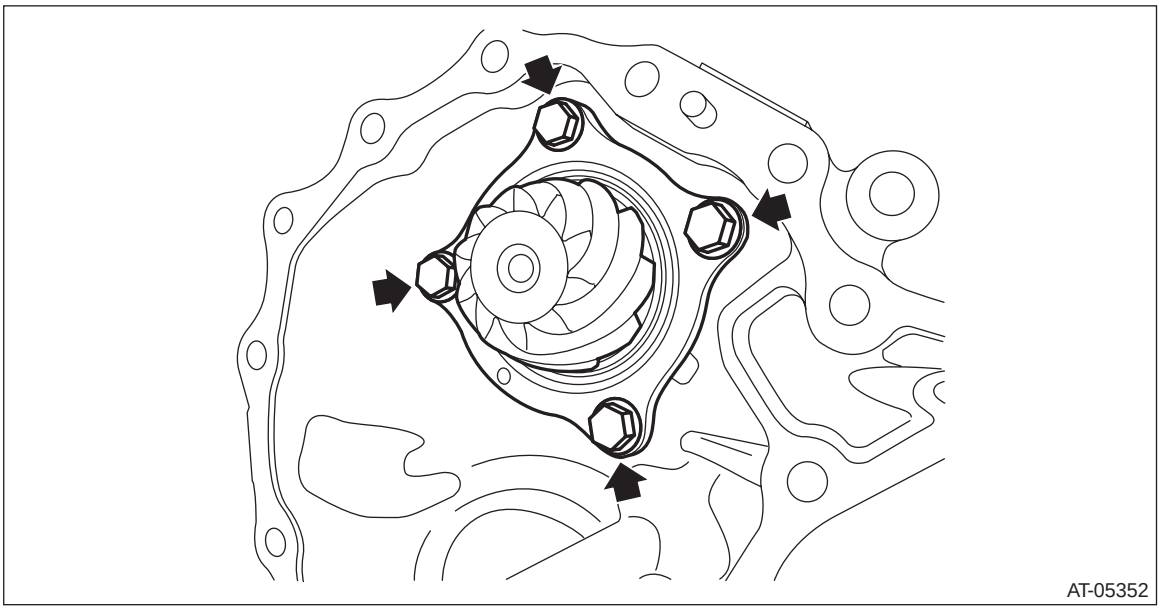
Tightening torque:
43 N·m (4.4 kgf-m, 31.7 ft-lb)



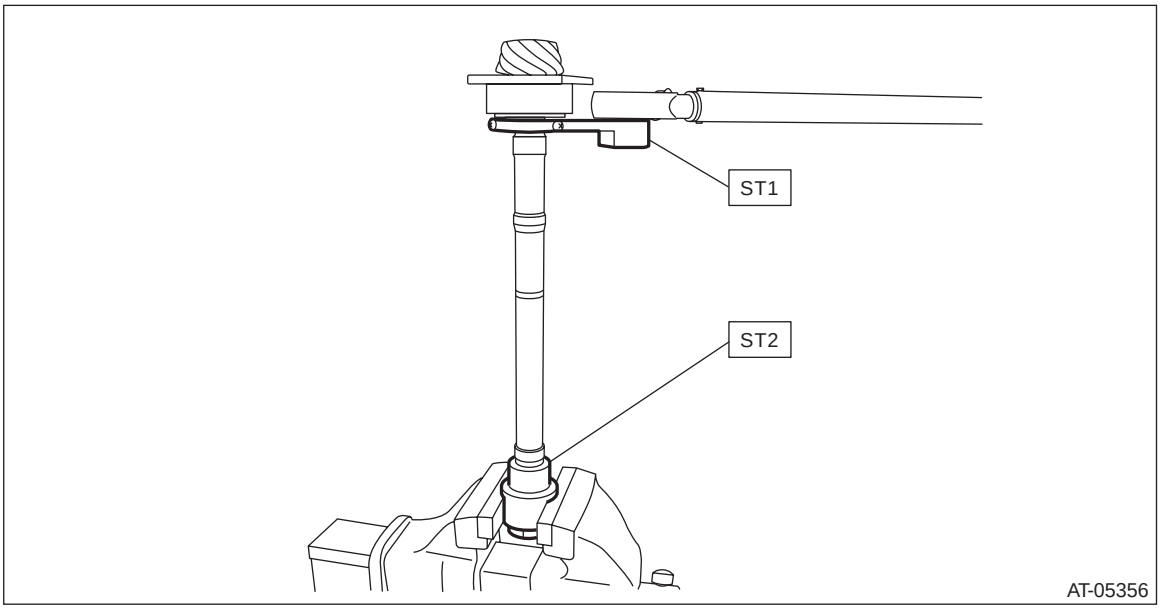
8) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-232, INSTALLATION, Primary Pulley and Secondary Pulley.>
9) Install the transmission case. <Ref. to CVT(TR690)-214, INSTALLATION, Transmission Case.>
10) Install the forward clutch assembly. <Ref. to CVT(TR690)-182, INSTALLATION, Forward Clutch Assembly.>
11) Install the intermediate case. <Ref. to CVT(TR690)-166, INSTALLATION, Intermediate Case.>
12) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-158, INSTALLATION, Transfer Reduction Driven Gear.>
13) Install the center differential carrier. <Ref. to CVT(TR690)-155, INSTALLATION, Center Differential Carrier.>
14) Install the transfer clutch assembly. <Ref. to CVT(TR690)-151, INSTALLATION, Transfer Clutch.>
15) Install the rear drive shaft. <Ref. to CVT(TR690)-146, INSTALLATION, Rear Drive Shaft.>
16) Install the extension case. <Ref. to CVT(TR690)-143, INSTALLATION, Extension Case.>
17) Install the transmission harness. <Ref. to CVT(TR690)-125, INSTALLATION, Transmission Harness.>
18) Install the oil pan and control valve body. <Ref. to CVT(TR690)-116, INSTALLATION, Control Valve Body.>
19) Install the air breather hose. <Ref. to CVT(TR690)-136, INSTALLATION, Air Breather Hose.>
20) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

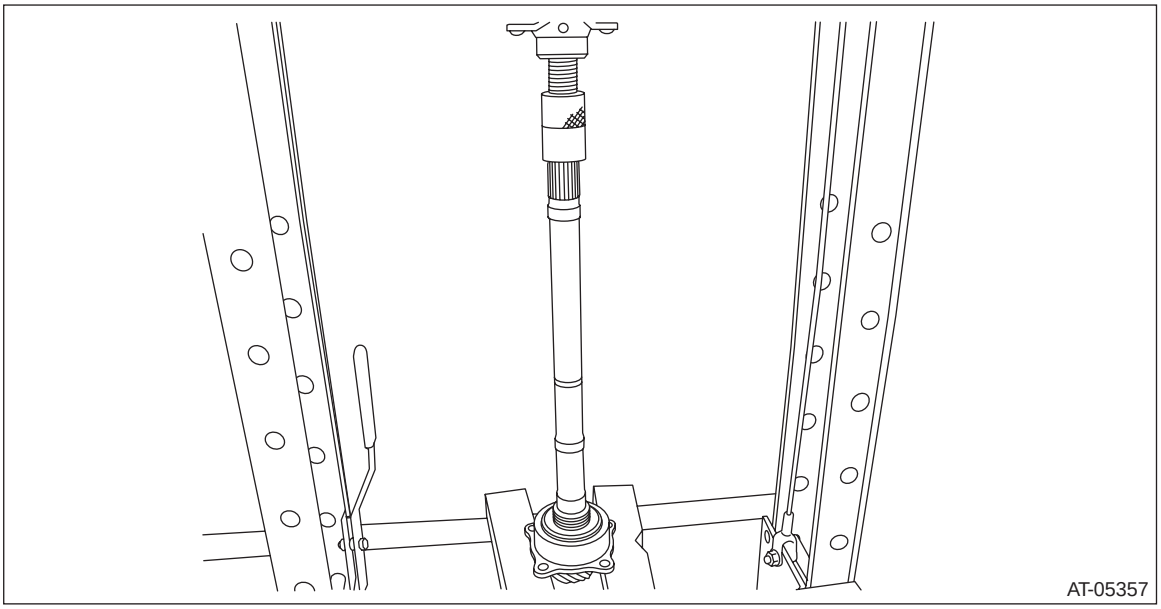
1) Remove the drive pinion assembly.



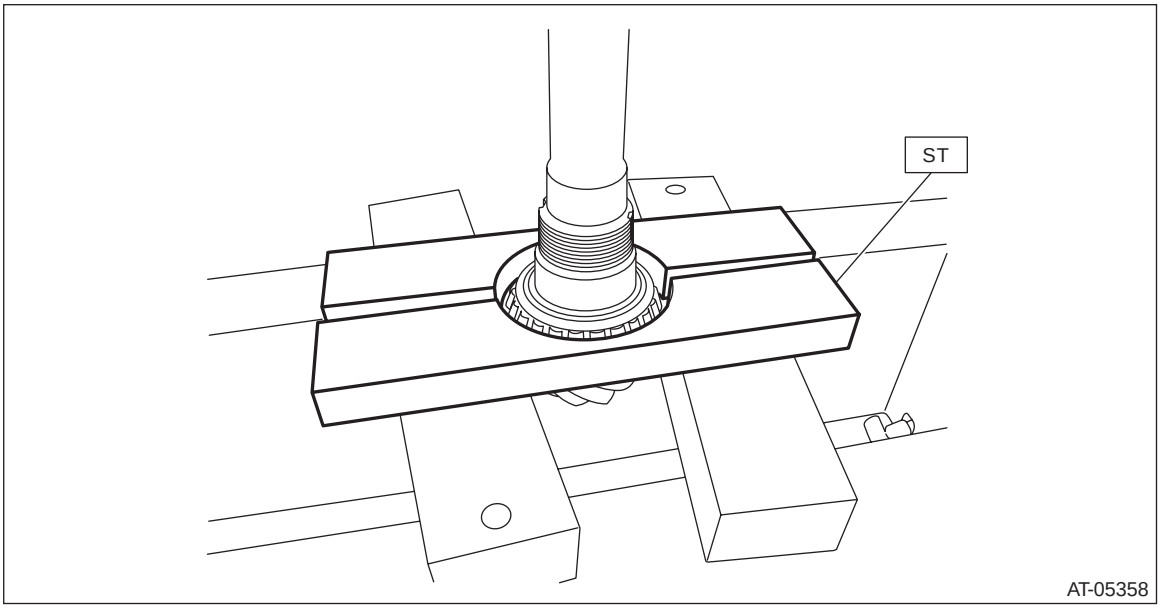
2) Flatten the tab of the lock nut.
3) Using ST1 and ST2, fix at the spline portion of drive pinion shaft to remove the lock nut.
ST1 18621AA000 WRENCH
ST2 18667AA010 HOLDER



4) Remove the taper roller bearing and outer race from drive pinion shaft.

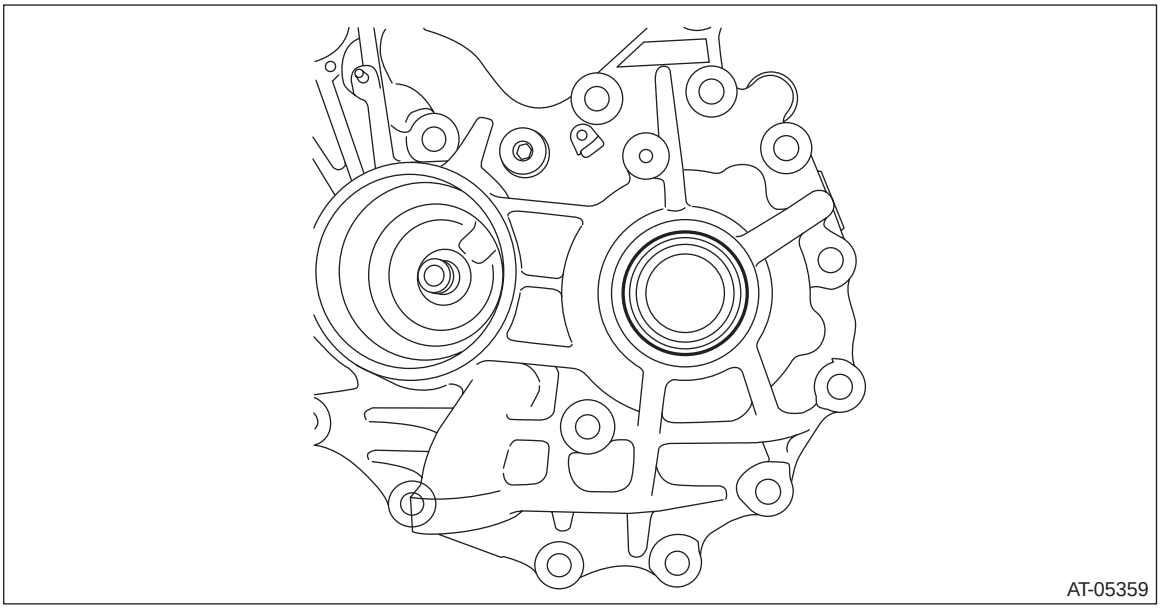


5) Remove the inner bearing inner race from the drive pinion shaft using ST.
ST 498077000 REMOVER



6) Remove the two oil seals using a screwdriver wrapped with cloth etc.

CAUTION:
Do not damage the fitting surface of drive pinion bearing.



7) Remove the plug from drive pinion retainer.

D: ASSEMBLY

1) Install the O-ring to plug and install the plug to drive pinion retainer.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-ring.

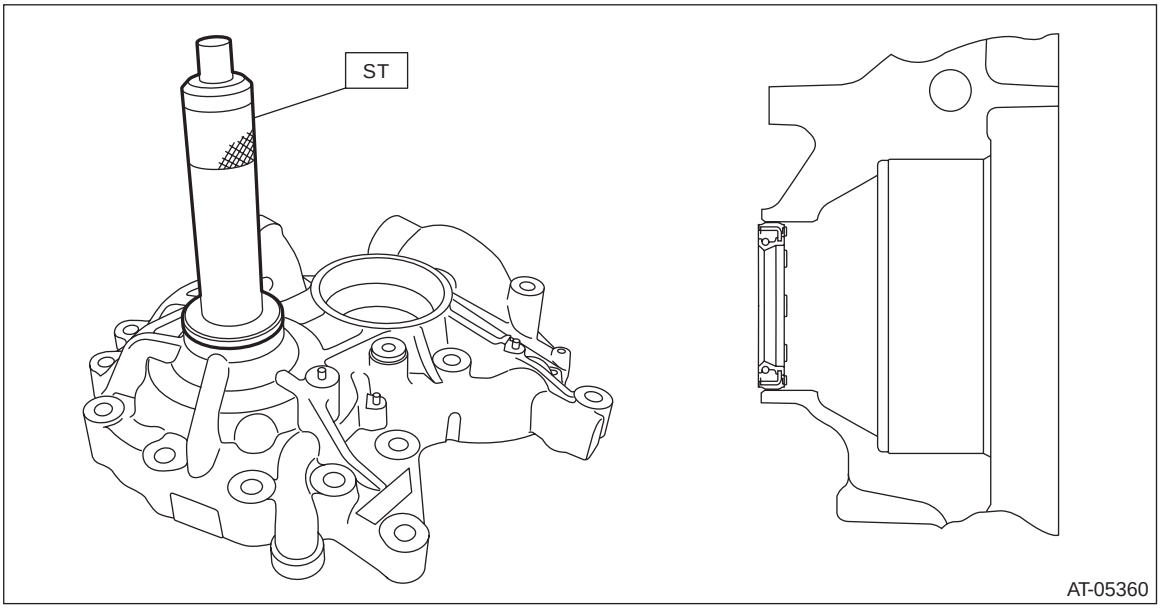
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Using the ST, install the oil seal to drive pinion retainer.

NOTE:
- Apply CVTF to the oil seal press-fitting surface and lip.
- Install the oil seal in the correct direction.

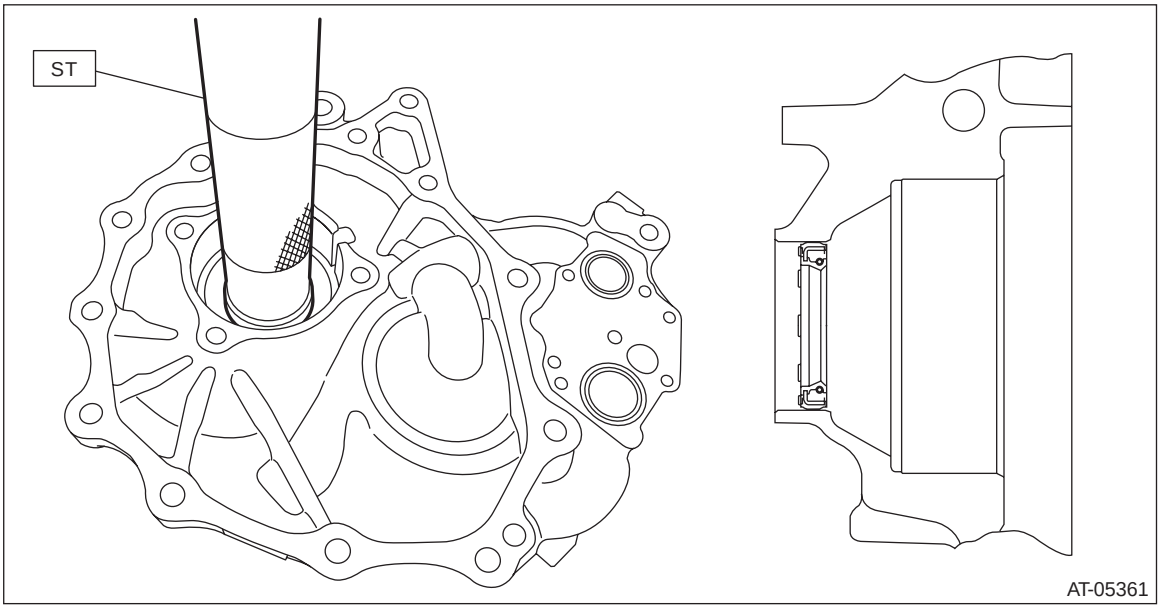
Pulley side

ST 18657AA020 OIL SEAL INSTALLER

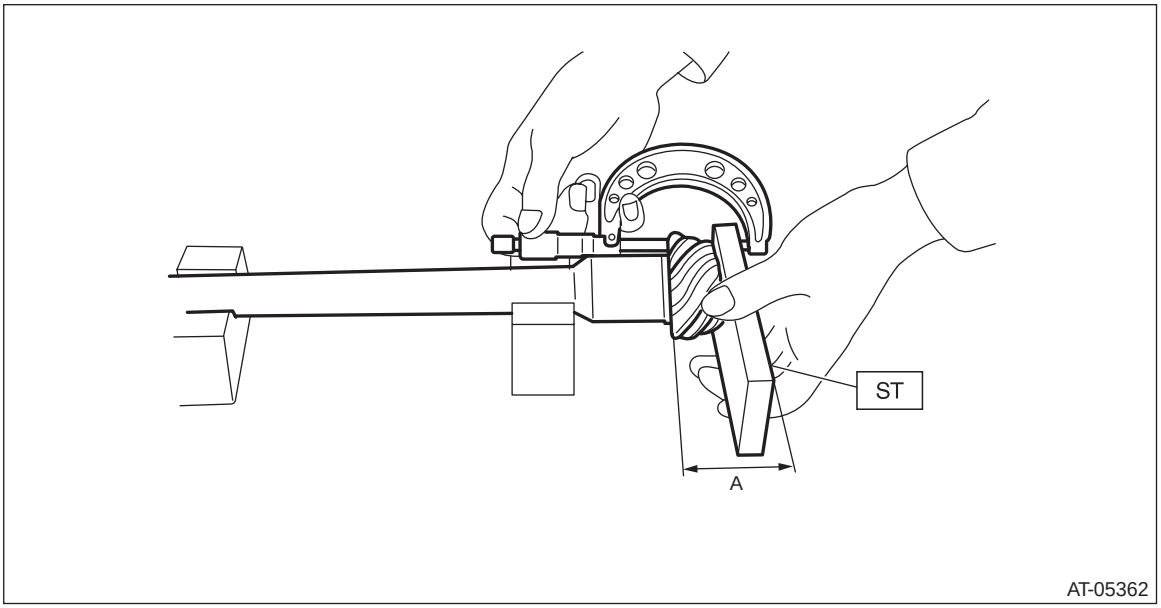


Front differential side

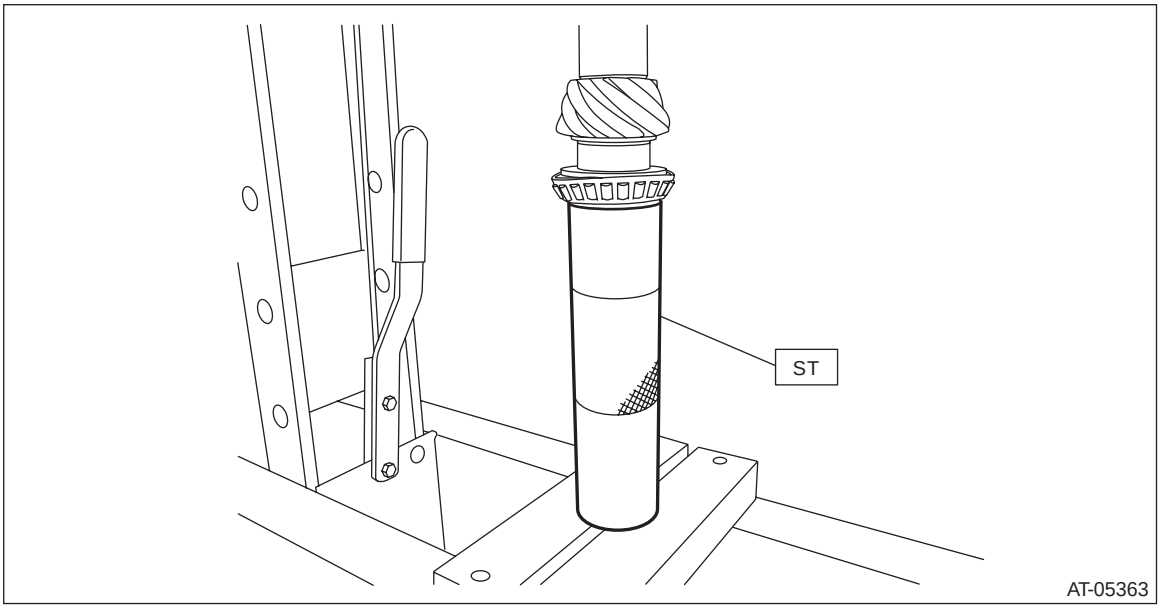
ST 499277100 INSTALLER



3) Measure the dimension “A” of drive pinion shaft.
ST 398643600 GAUGE



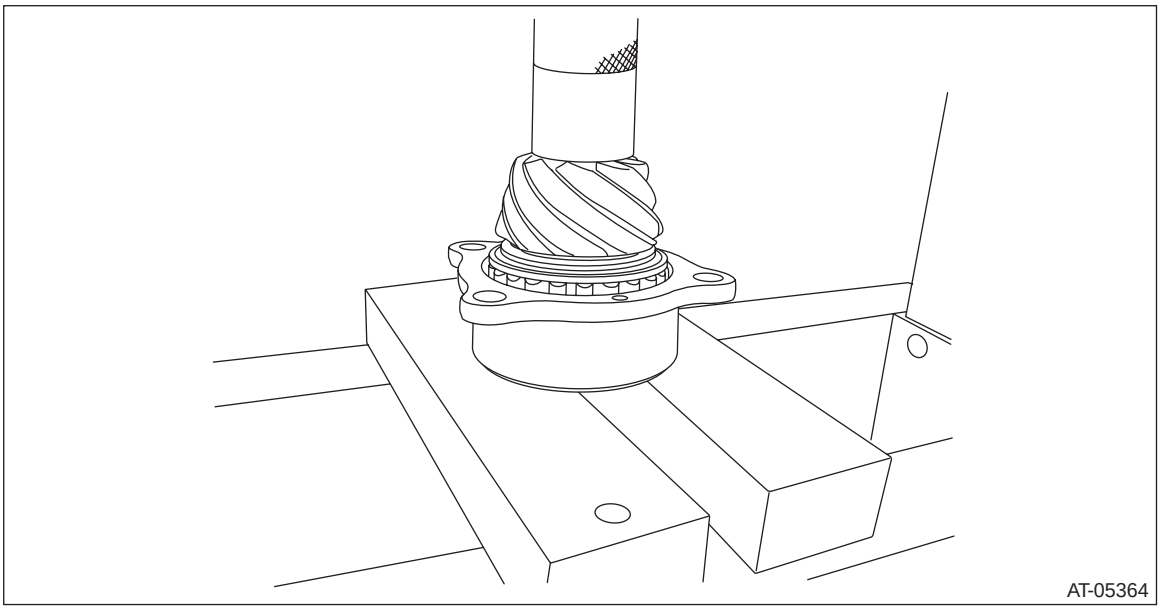
4) Press-fit the new taper roller bearing front side inner race using the ST.
ST 499277200 INSTALLER



5) Press-fit the new taper roller bearing rear side inner race and outer race together.

CAUTION:
Damage may result if too much force is applied to the roller bearing.

NOTE:
Press in to a position where the bearing rotates smoothly without play.

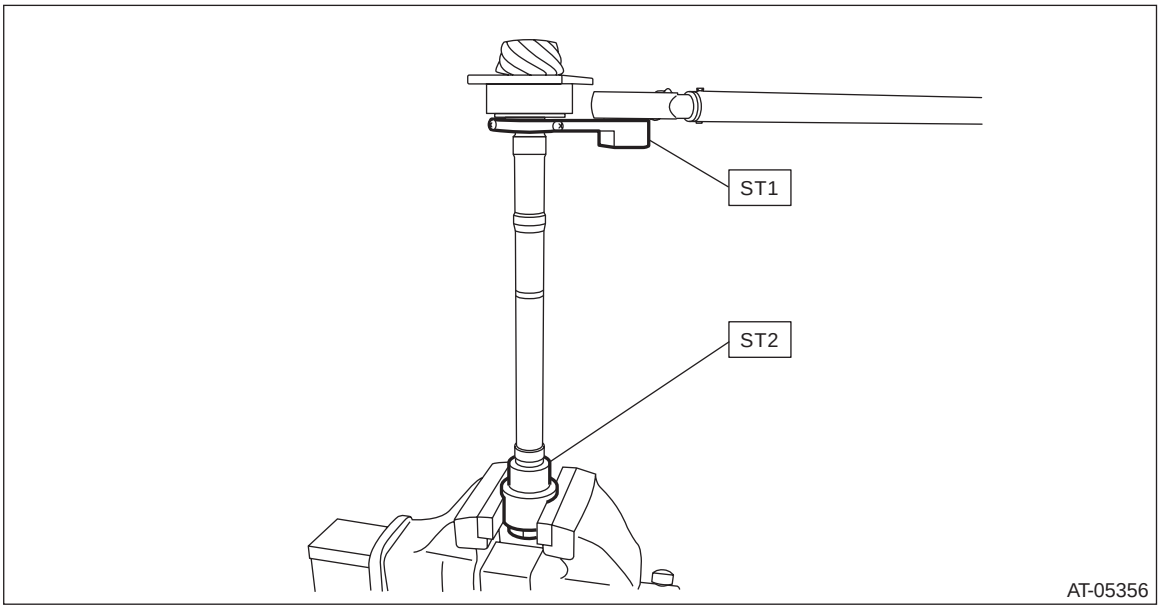


6) Tighten a new lock nut using the ST.
Using the following formula, calculate the torque for a torque wrench.
T2 = L2/(L1 + L2) × T1
T1: 130 N·m (13.3 kgf-m, 95.9 ft-lb)
[Required torque setting]
T2: Tightening torque
L1: ST1 length 0.1 m (3.94 in)
L2: Torque wrench length
Example:

Torque wrench length m (in)	Tightening torque N·m (kgf-m, ft-lb)
0.4 (15.75)	104 (10.6, 76.7)
0.45 (17.72)	106 (10.8, 78.2)
0.5 (19.69)	108 (11.0, 79.7)
0.55 (21.65)	110 (11.2, 81.1)

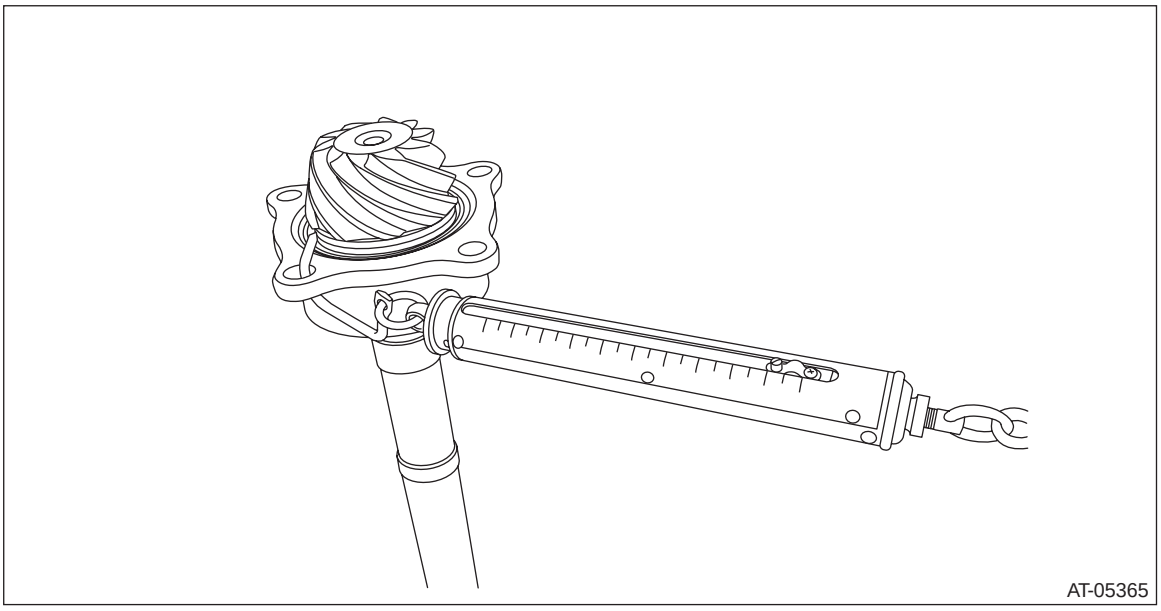
ST1 18621AA000 WRENCH
ST2 18667AA010 HOLDER

NOTE:
Tighten the lock nut while directly aligning ST1 and torque wrench.

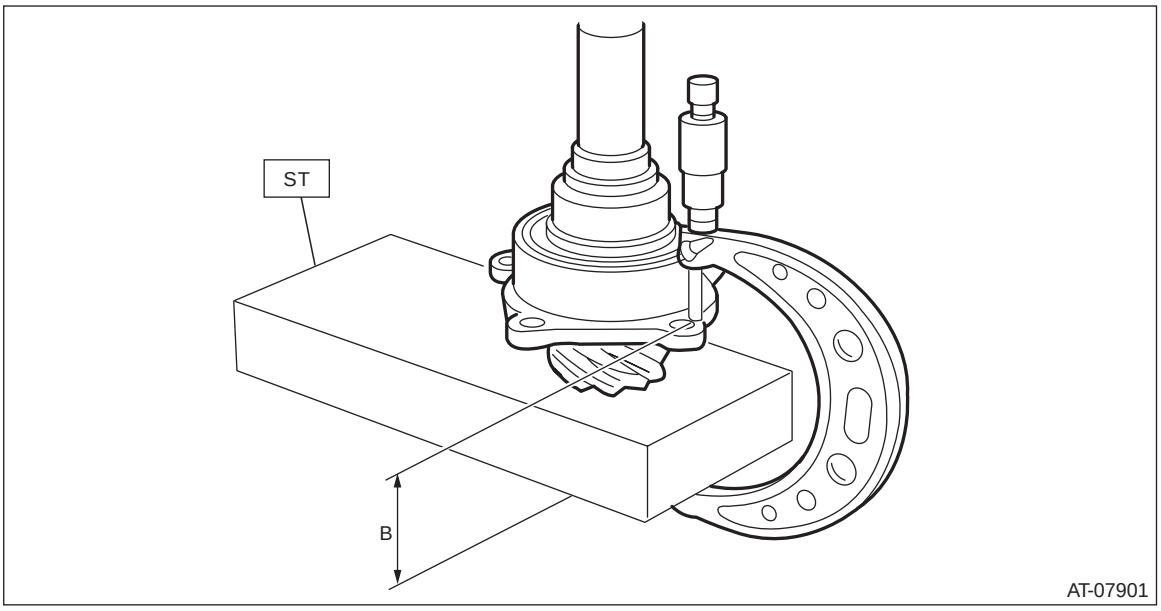


7) Apply differential gear oil to roller of bearing and rotate the bearing several times.
8) Measure the starting torque of the bearing. Make sure the starting torque is within the specified range. If the torque is not within specified range, replace the roller bearing.

Starting torque:
16.3 — 42.7 N (1.7 — 4.4 kgf, 4.4 — 9.6 lbf)



9) Crimp the lock nut in 2 locations.
10) Measure the dimension “B” of the drive pinion shaft.
ST 398643600 GAUGE



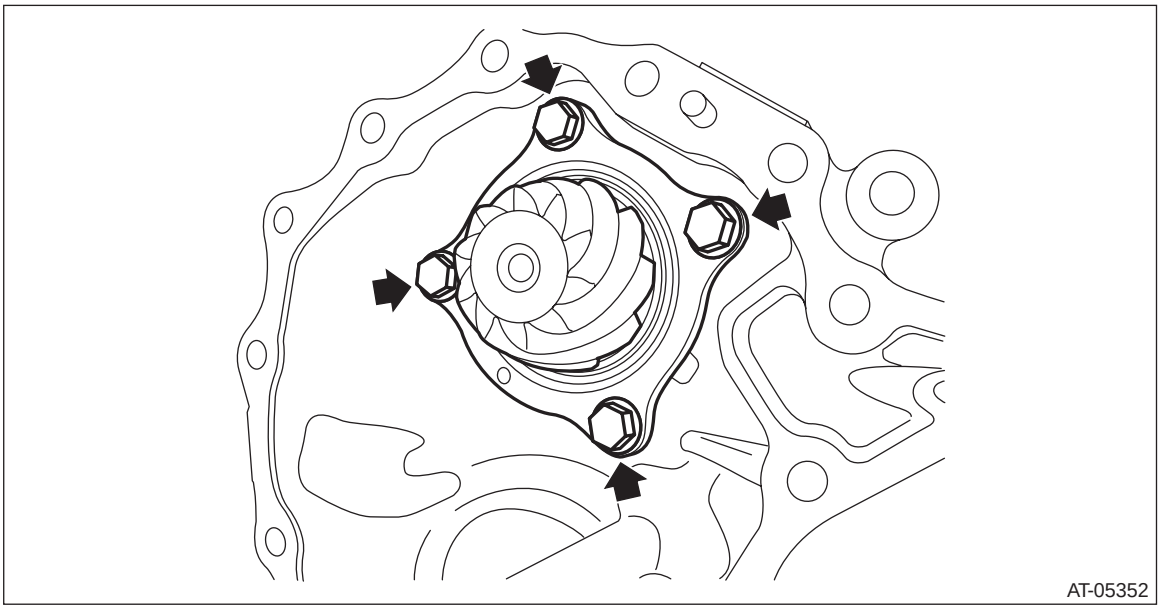
11) Obtain thickness “t” mm (in) of the drive pinion shim.
t = 6.55±0.1225 – (B – A)
12) Select three or less shims from following table.

Drive pinion shim	
Part No.	Thickness mm (in)
31451AA050	0.150 (0.0059)
31451AA060	0.175 (0.0069)
31451AA070	0.200 (0.0079)
31451AA080	0.225 (0.0089)
31451AA090	0.250 (0.0098)
31451AA100	0.275 (0.0108)
31451AA240	0.300 (0.0118)

13) Install the shims selected for drive pinion retainer and drive pinion shaft assembly.

NOTE:
Be careful not to bend the shim.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)

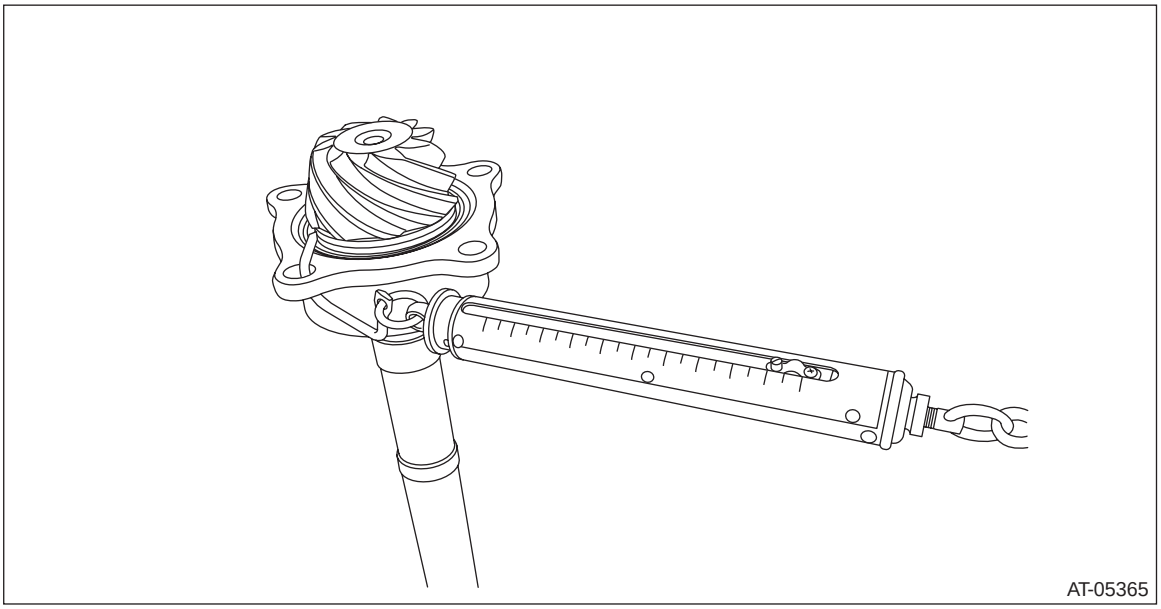


E: INSPECTION

- Make sure that all component parts are free of scratches, holes and other faults.
- Check the tooth contact. <Ref. to CVT(TR690)-258, ADJUSTMENT, Drive Pinion Shaft Assembly.>
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.
- Check the bearing preload of drive pinion shaft.

CAUTION:
Before measuring, apply differential gear oil to roller of bearing and rotate the bearing several times.

Starting torque:
16.3 — 42.7 N (1.7 — 4.4 kgf, 4.4 — 9.6 lbf)

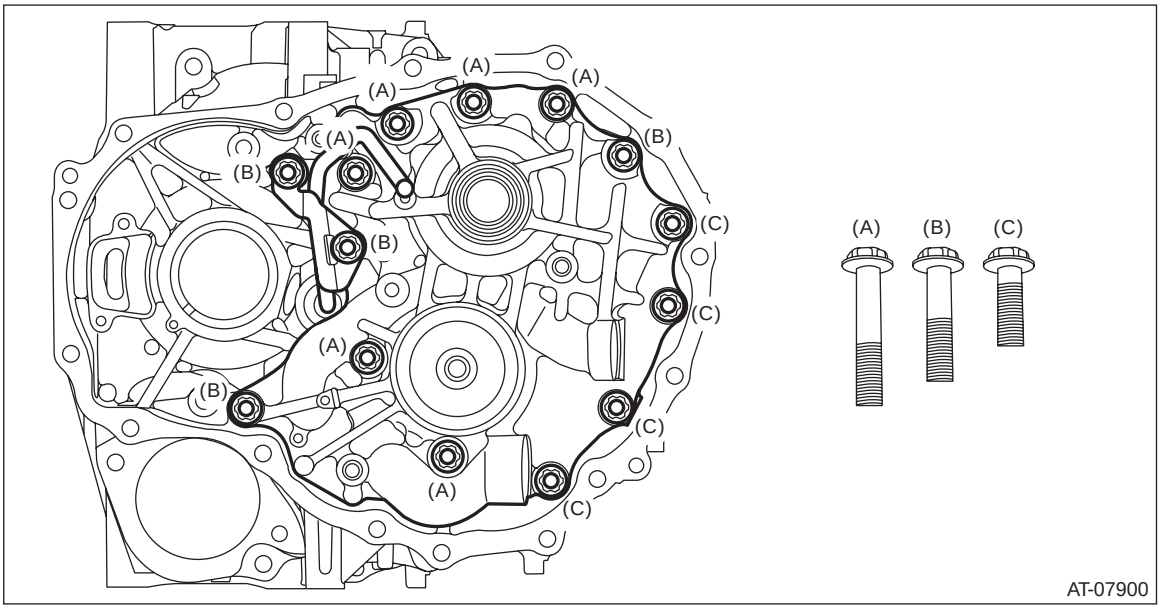


F: ADJUSTMENT

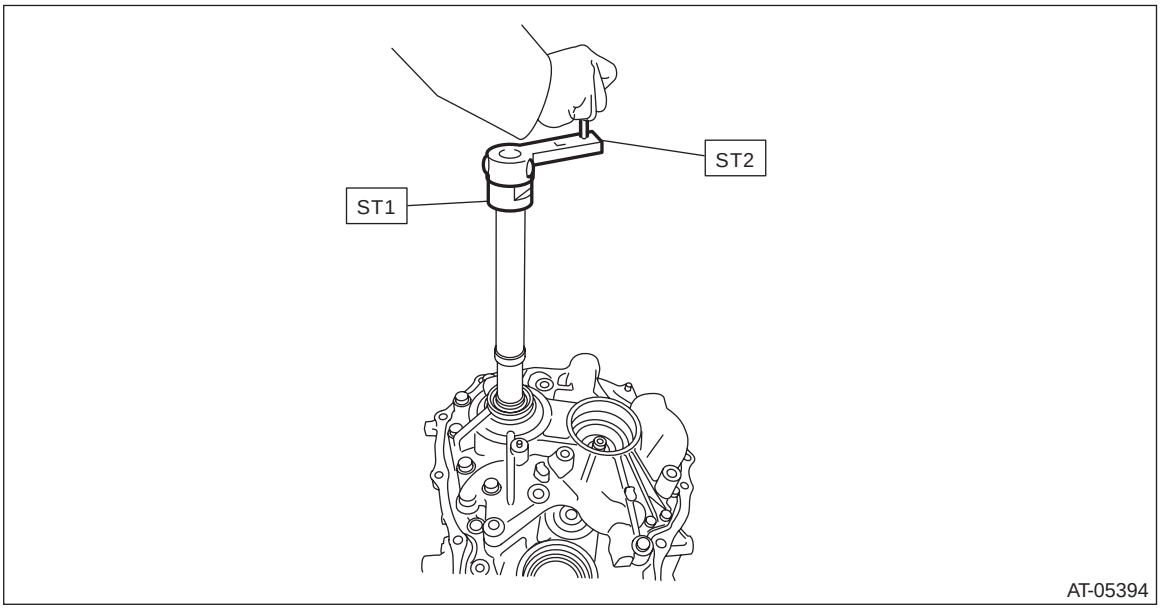
1) Remove the liquid gasket from the mating surface completely.
2) Using the ST, install the drive pinion retainer to converter case.
ST 18270KA020 SOCKET (E20)

NOTE:
Do not confuse the three different-length bolts when installing.

Tightening torque:
43 N·m (4.4 kgf-m, 31.7 ft-lb)



3) Rotate the drive pinion several times using ST1 and ST2.
ST1 18667AA010 HOLDER
ST2 499787700 WRENCH

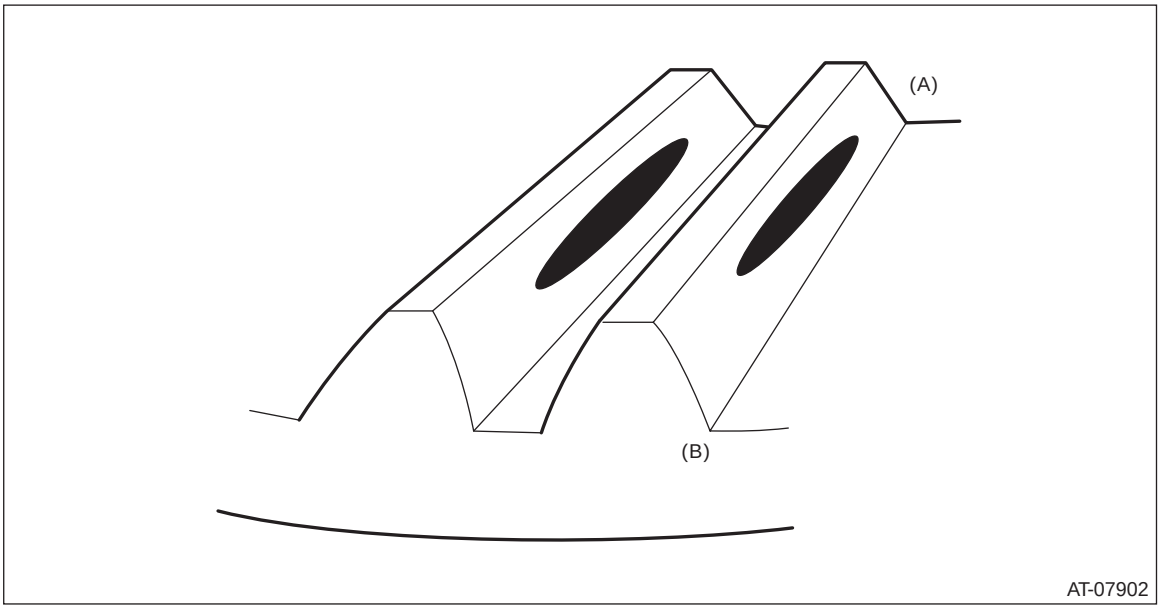


4) Adjust the drive pinion and hypoid driven gear backlash. <Ref. to CVT(TR690)-280, ADJUSTMENT, Front Differential Assembly.>
5) Using the ST, remove the drive pinion retainer from converter case.
ST 18270KA020 SOCKET (E20)
6) Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Then install the drive pinion retainer and rotate the drive pinion in both directions several times. Remove the drive pinion retainer and check the tooth contact pattern.
If the teeth contact is inappropriate, adjust the backlash or thickness of the shim. <Ref. to CVT(TR690)-280, ADJUSTMENT, Front Differential Assembly.>

NOTE:
After correction, wipe off the lead-free red dye.

- Correct tooth contact

Check item: Tooth contact surface is slightly shifted toward the toe side under a no-load condition. (When driving, it moves towards the heel side.)

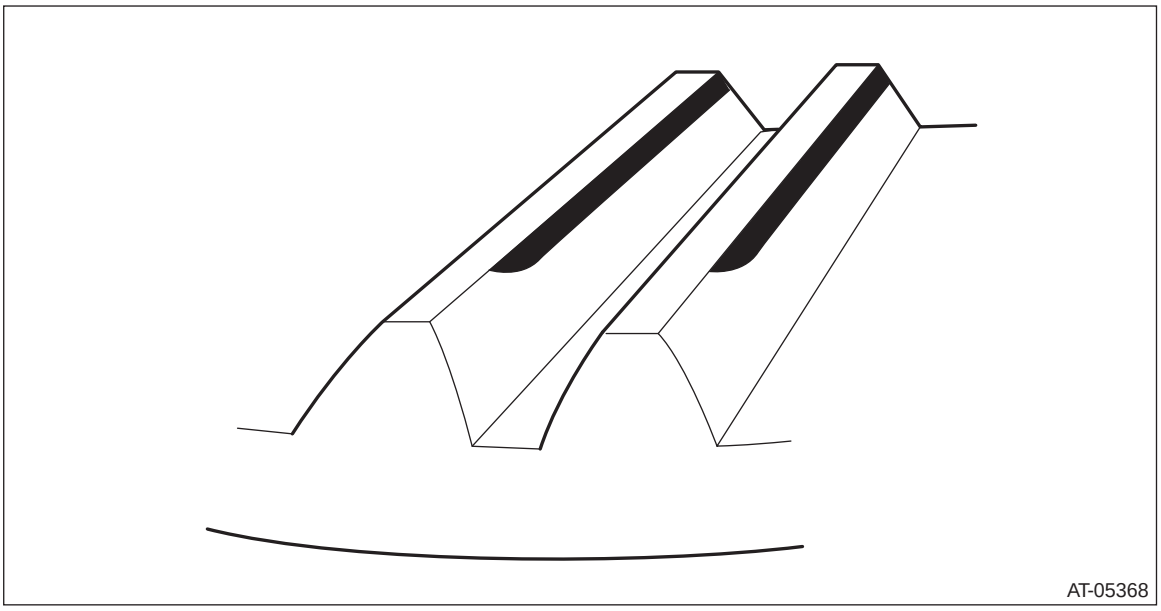


(A) Toe side
(B) Heel side

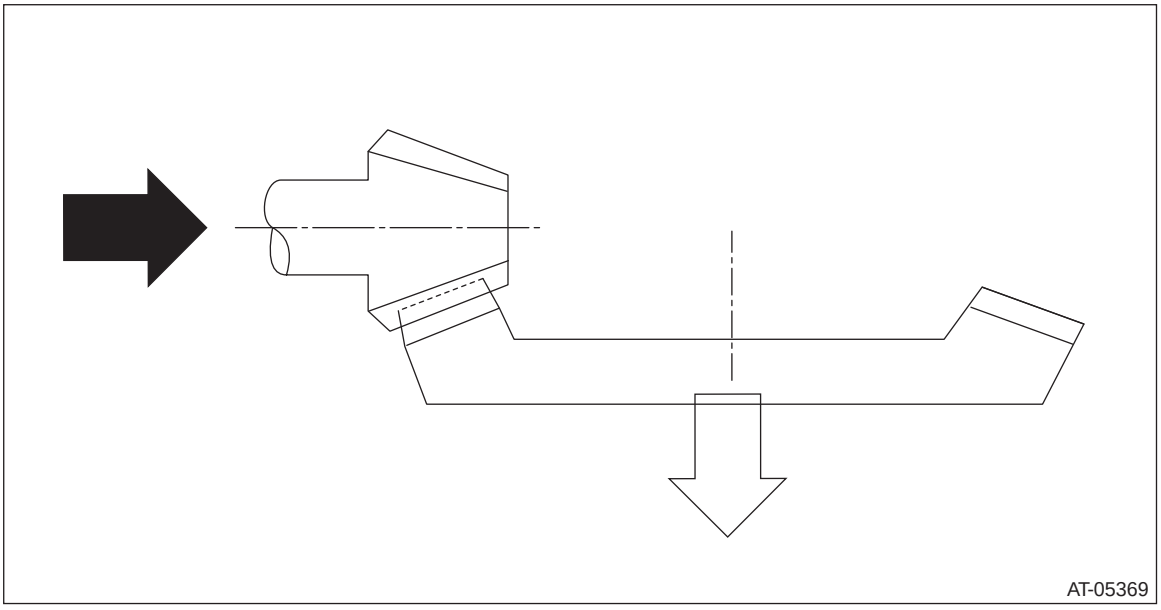
- Face contact

Check item: Backlash is too large.

Contact pattern



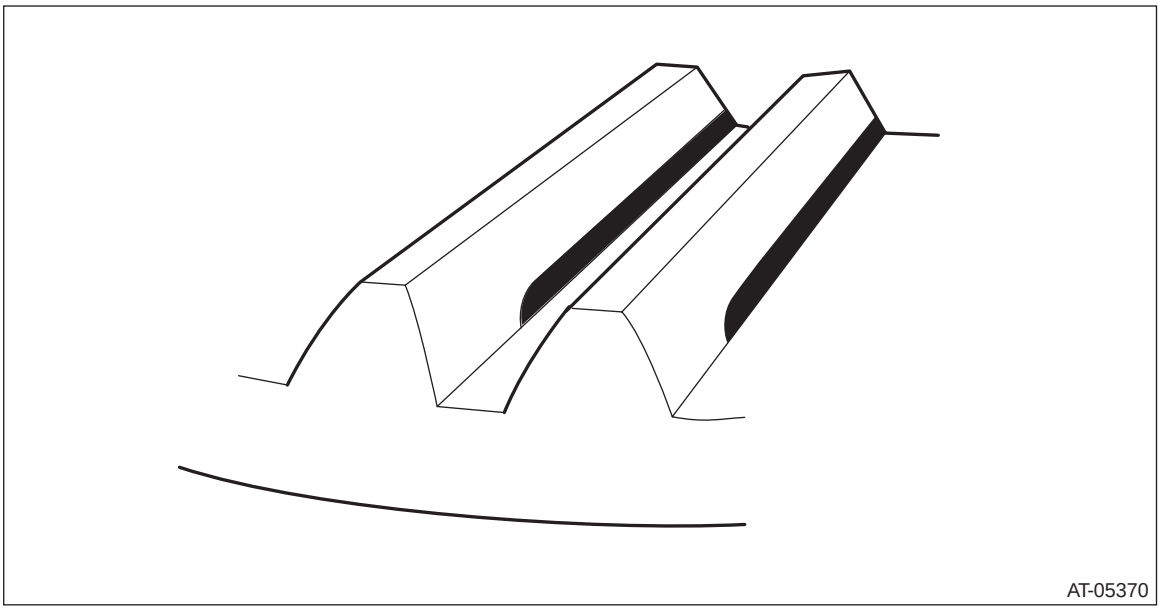
Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.



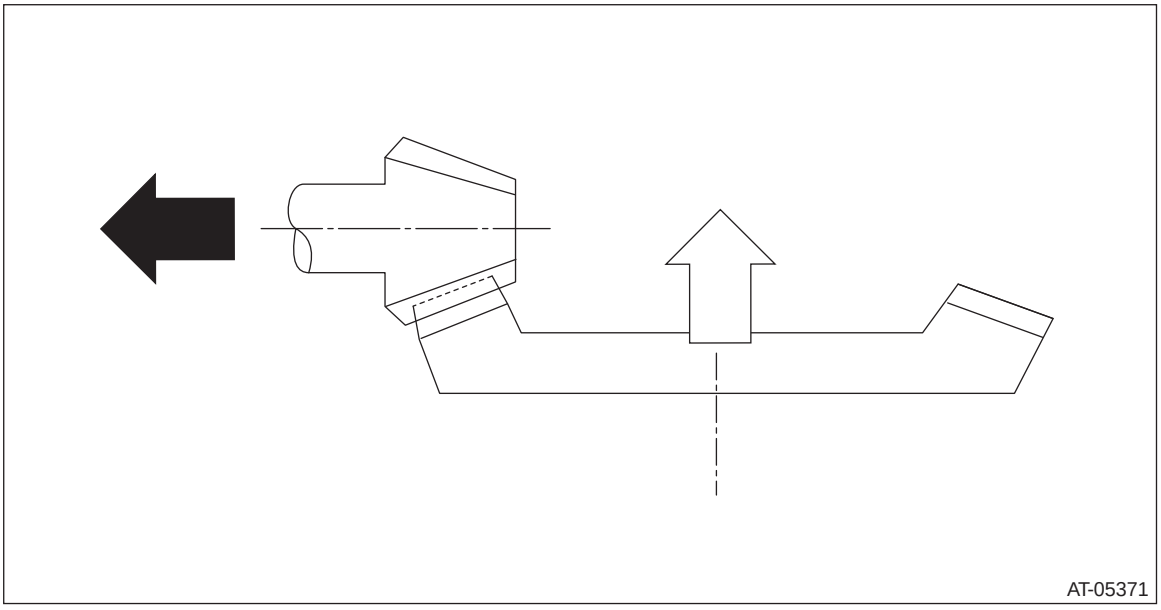
- Flank contact

Check item: Backlash is too small.

Contact pattern



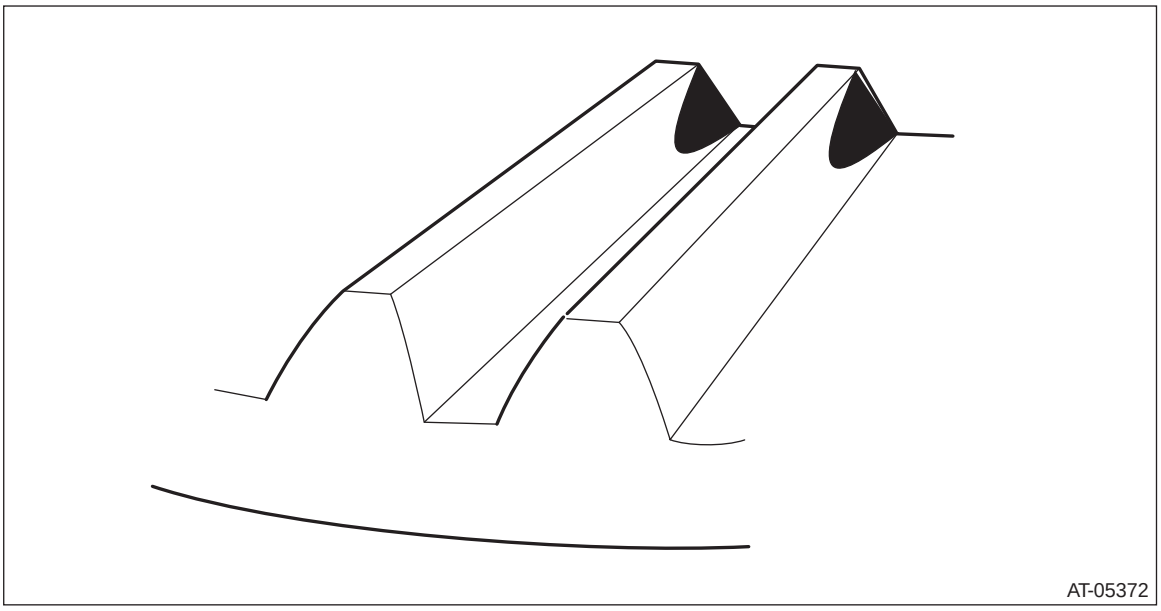
Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.



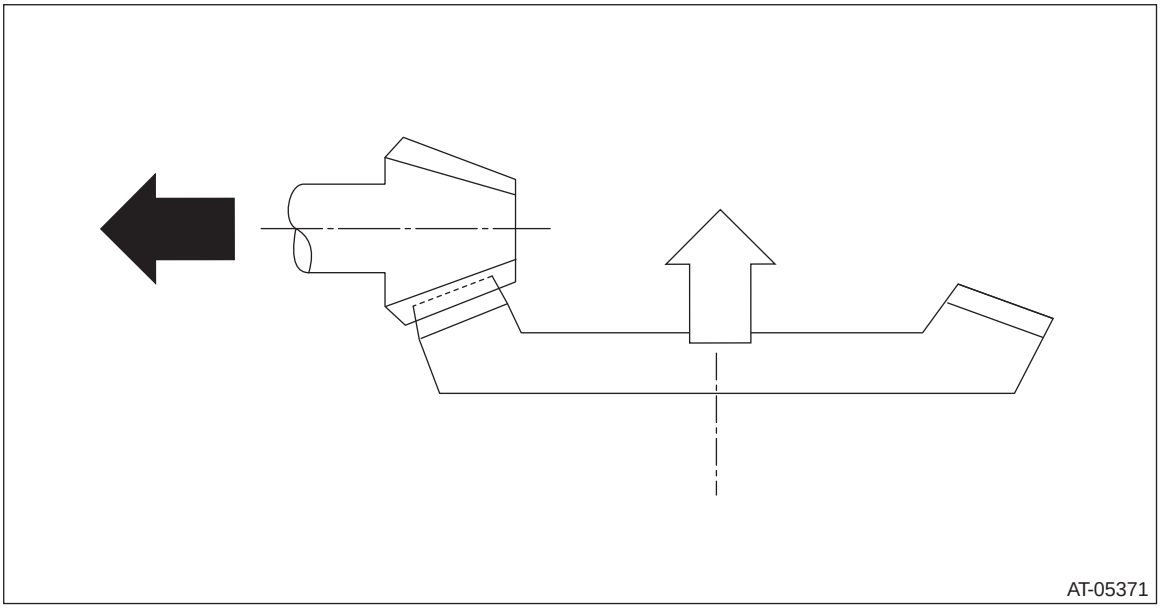
- Toe contact (inside contact)

Check item: Teeth contact area is too small.

Contact pattern



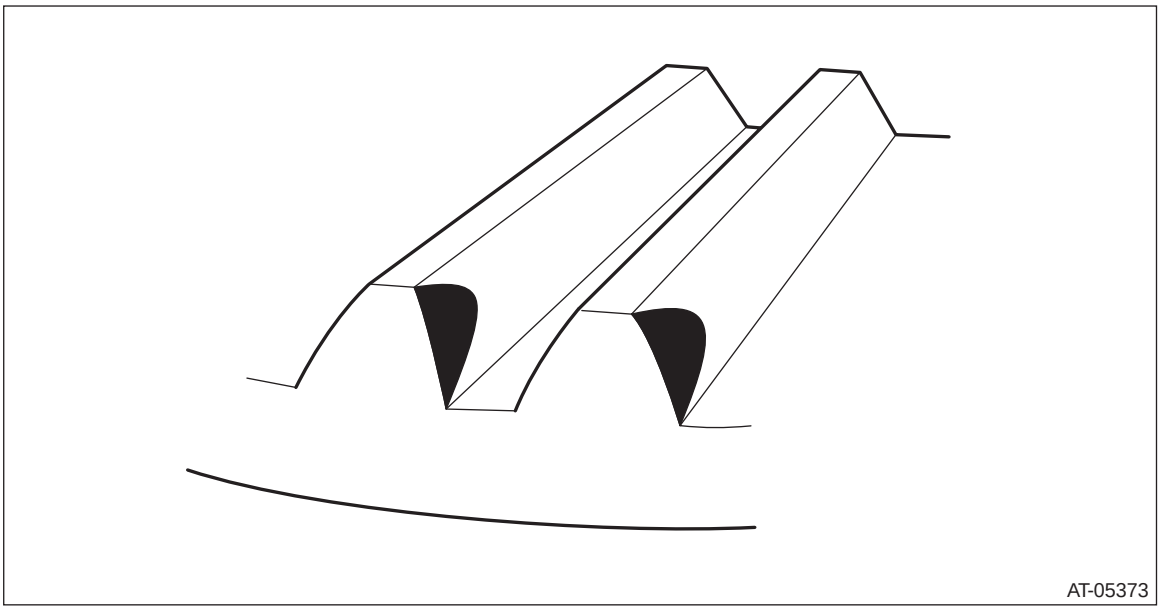
Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear side.



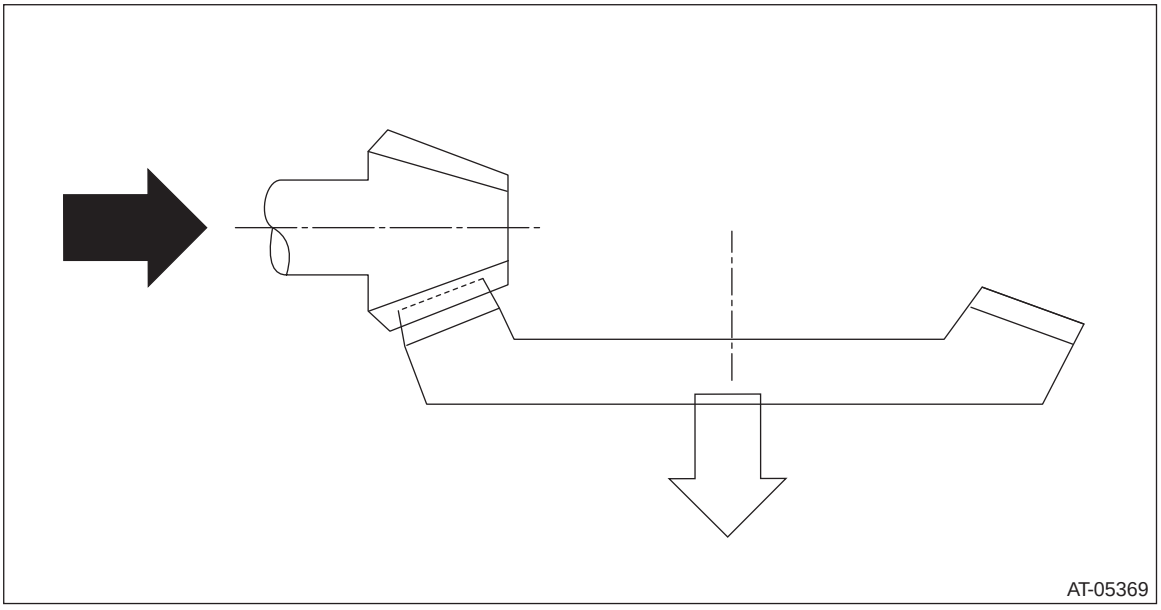
- Heel contact (outside end contact)

Check item: Teeth contact area is too small.

Contact pattern

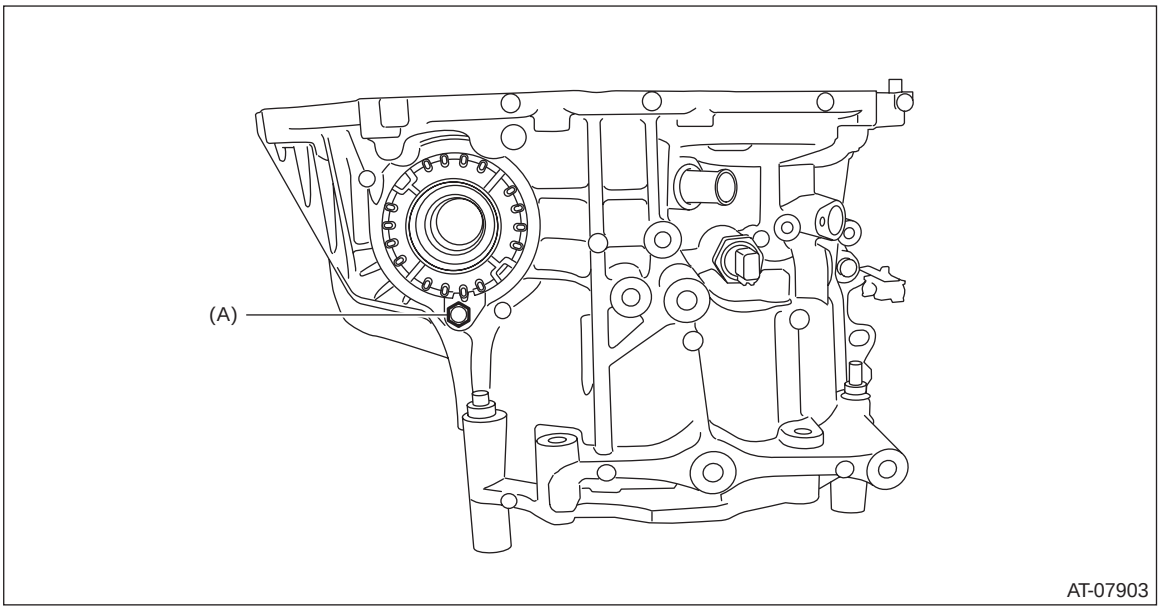


Corrective action: Increase the thickness of the pinion height adjusting washer according to the procedures for moving the drive pinion closer to the hypoid driven gear.



7) If tooth contact is correct, mark the differential side retainer position and loosen. After fitting a new O-ring and oil seal, screw in the differential side retainer to the marked position.
8) Tighten the lock plate with specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

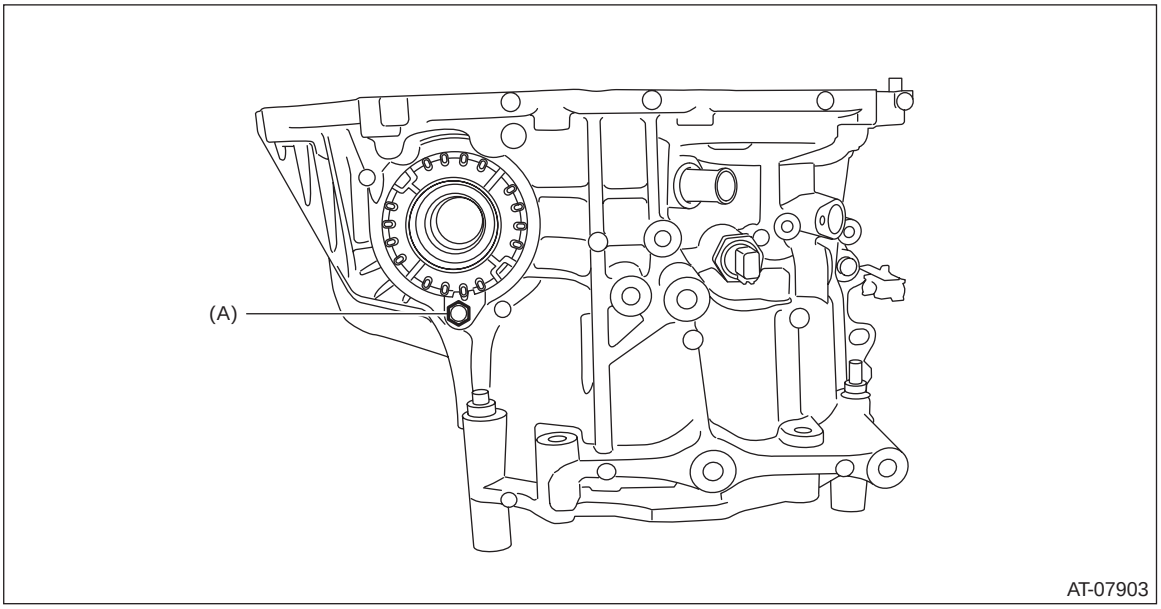


(A) Lock plate

44.Front Differential Assembly

A: REMOVAL

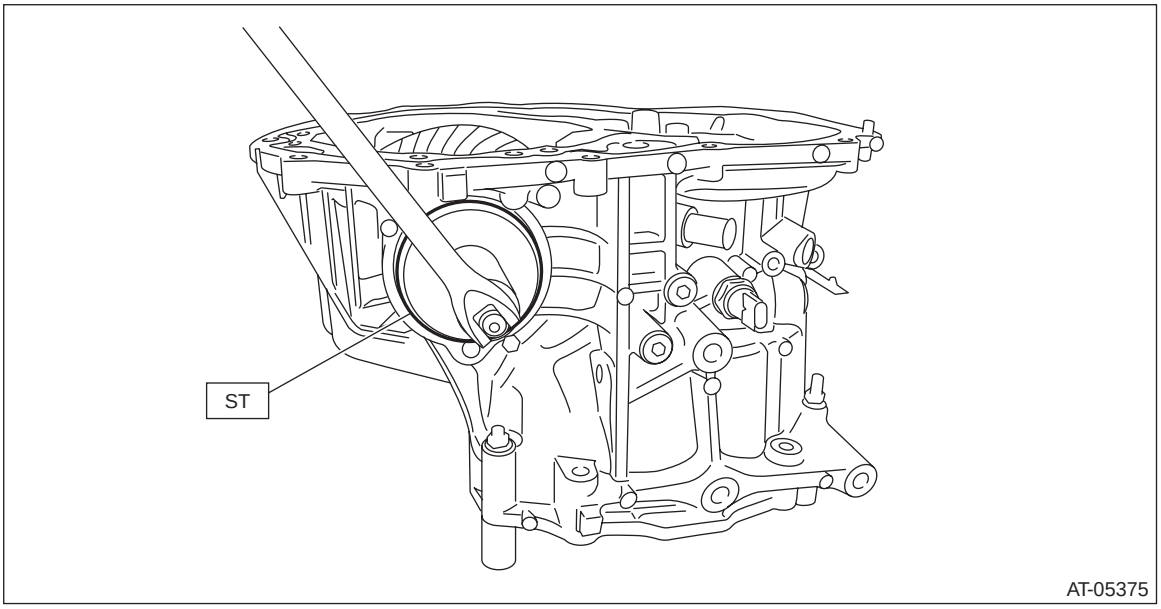
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-136, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-112, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-123, REMOVAL, Transmission Harness.>
5) Remove the extension case. <Ref. to CVT(TR690)-142, REMOVAL, Extension Case.>
6) Remove the rear drive shaft. <Ref. to CVT(TR690)-146, REMOVAL, Rear Drive Shaft.>
7) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-151, REMOVAL, Transfer Clutch.>
8) Remove the center differential carrier. <Ref. to CVT(TR690)-154, REMOVAL, Center Differential Carrier.>
9) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-158, REMOVAL, Transfer Reduction Driven Gear.>
10) Remove the intermediate case. <Ref. to CVT(TR690)-165, REMOVAL, Intermediate Case.>
11) Remove the forward clutch assembly. <Ref. to CVT(TR690)-181, REMOVAL, Forward Clutch Assembly.>
12) Remove the transmission case. <Ref. to CVT(TR690)-212, REMOVAL, Transmission Case.>
13) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-228, REMOVAL, Primary Pulley and Secondary Pulley.>
14) Remove the drive pinion shaft assembly. <Ref. to CVT(TR690)-244, REMOVAL, Drive Pinion Shaft Assembly.>
15) Remove the lock plates on both sides.



(A) Lock plate

16) Remove the differential side retainers using ST.
ST 18658AA020 WRENCH COMPL RETAINER

NOTE:
• Support the differential case assembly by hand to avoid damaging the retainer mounting hole of the converter case.
• When keeping the retainers aside, use labels etc. to avoid confusing the left and right.

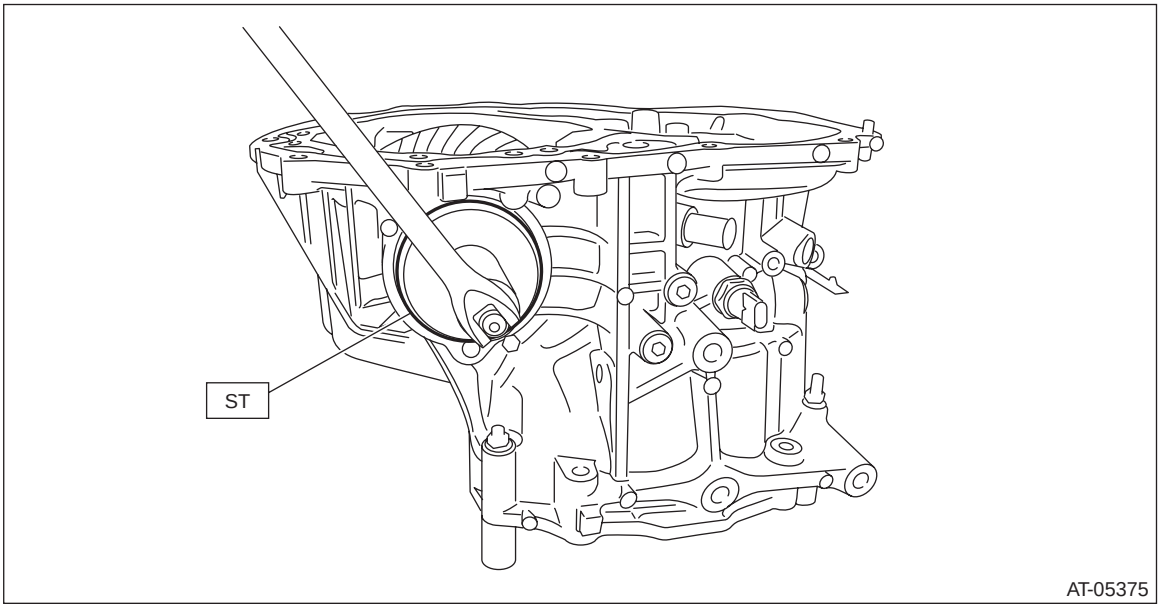


17) Remove the front differential assembly while being careful not to damage the attachment part of the retainer.
18) Remove the oil seals and O-rings from both differential side retainers. <Ref. to CVT(TR690)-271, SIDE RETAINER, DISASSEMBLY, Front Differential Assembly.>

B: INSTALLATION

1) Install the front differential assembly to the converter case.

NOTE:
Be careful not to damage the inside of the case (especially the mating surface of the differential side retainers).
2) Temporarily install the differential side retainers using ST.
ST 18658AA020 WRENCH COMPL RETAINER



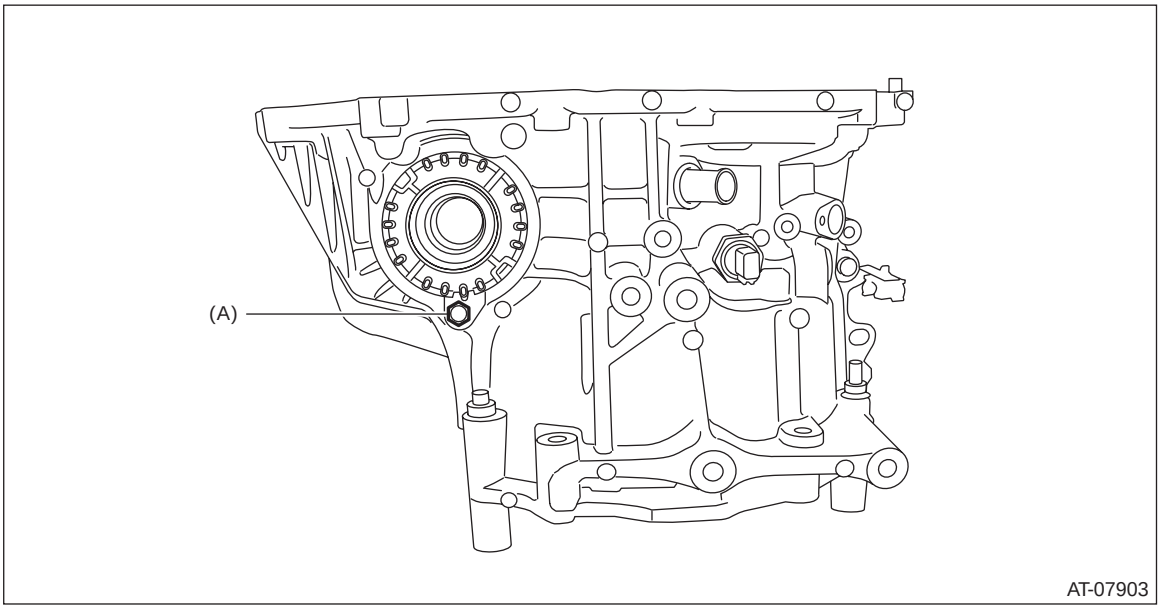
3) Adjust the backlash of the front differential. <Ref. to CVT(TR690)-280, ADJUSTMENT, Front Differential Assembly.>
4) Inspect and adjust the tooth contact. <Ref. to CVT(TR690)-258, ADJUSTMENT, Drive Pinion Shaft Assembly.>
5) Remove the differential side retainers and install the O-rings and oil seals. <Ref. to CVT(TR690)-278, SIDE RETAINER, ASSEMBLY, Front Differential Assembly.>

NOTE:
- Record how many turns were needed to remove.
- Use new O-rings and oil seals.

6) Install the differential side retainers using ST.

NOTE:
When attaching, turn the differential side retainer by the same number of turns it took to remove, and align the marks.
ST 18658AA020 WRENCH COMPL RETAINER
7) Install the lock plate.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



(A) Lock plate

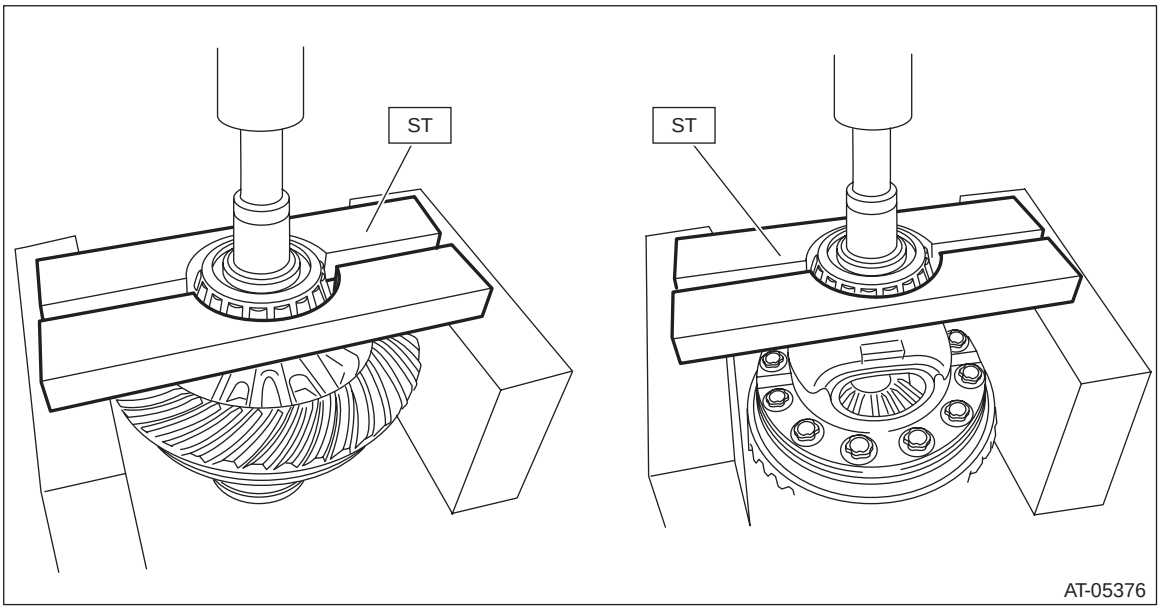
8) Install the drive pinion shaft assembly. <Ref. to CVT(TR690)-246, INSTALLATION, Drive Pinion Shaft Assembly.>
9) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-232, INSTALLATION, Primary Pulley and Secondary Pulley.>
10) Install the transmission case. <Ref. to CVT(TR690)-214, INSTALLATION, Transmission Case.>
11) Install the forward clutch assembly. <Ref. to CVT(TR690)-182, INSTALLATION, Forward Clutch Assembly.>
12) Install the intermediate case. <Ref. to CVT(TR690)-166, INSTALLATION, Intermediate Case.>
13) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-158, INSTALLATION, Transfer Reduction Driven Gear.>
14) Install the center differential carrier. <Ref. to CVT(TR690)-155, INSTALLATION, Center Differential Carrier.>
15) Install the transfer clutch assembly. <Ref. to CVT(TR690)-151, INSTALLATION, Transfer Clutch.>
16) Install the rear drive shaft. <Ref. to CVT(TR690)-146, INSTALLATION, Rear Drive Shaft.>
17) Install the extension case. <Ref. to CVT(TR690)-143, INSTALLATION, Extension Case.>
18) Install the transmission harness. <Ref. to CVT(TR690)-125, INSTALLATION, Transmission Harness.>

19) Install the control valve body and oil pan. <Ref. to CVT(TR690)-116, INSTALLATION, Control Valve Body.>
20) Install the air breather hose. <Ref. to CVT(TR690)-136, INSTALLATION, Air Breather Hose.>
21) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

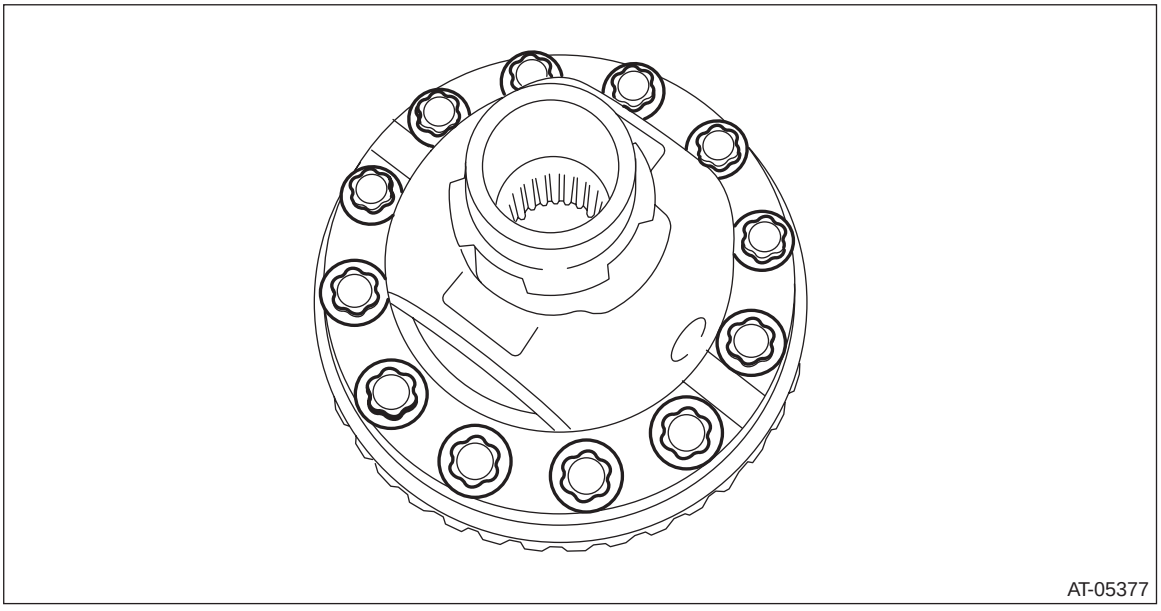
C: DISASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

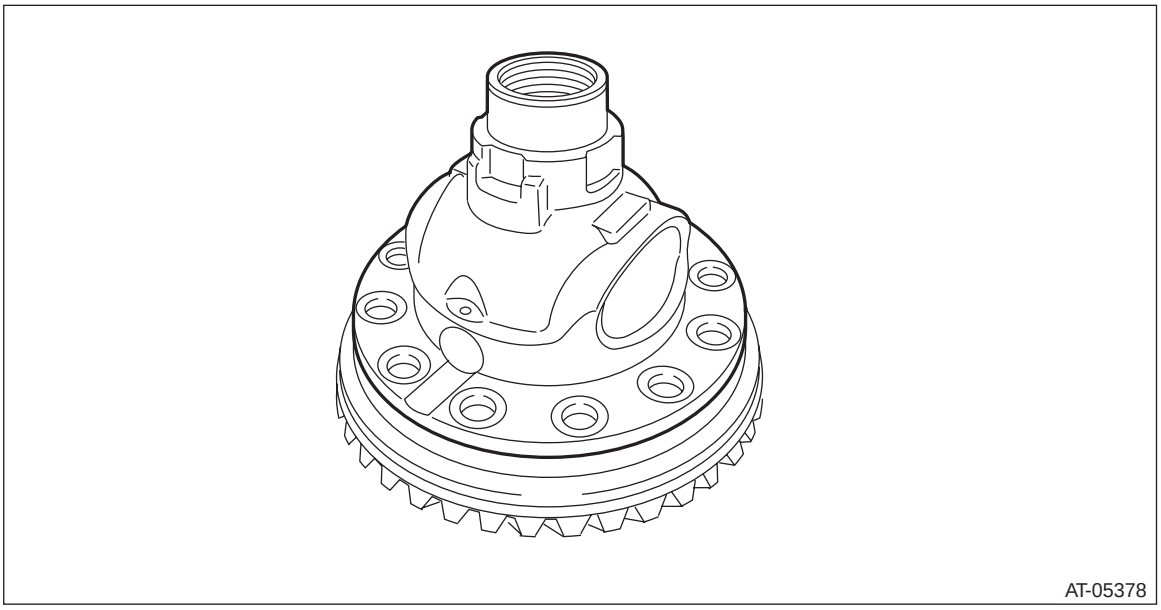
1) Remove the taper roller bearing using the ST.
ST 498077000 REMOVER



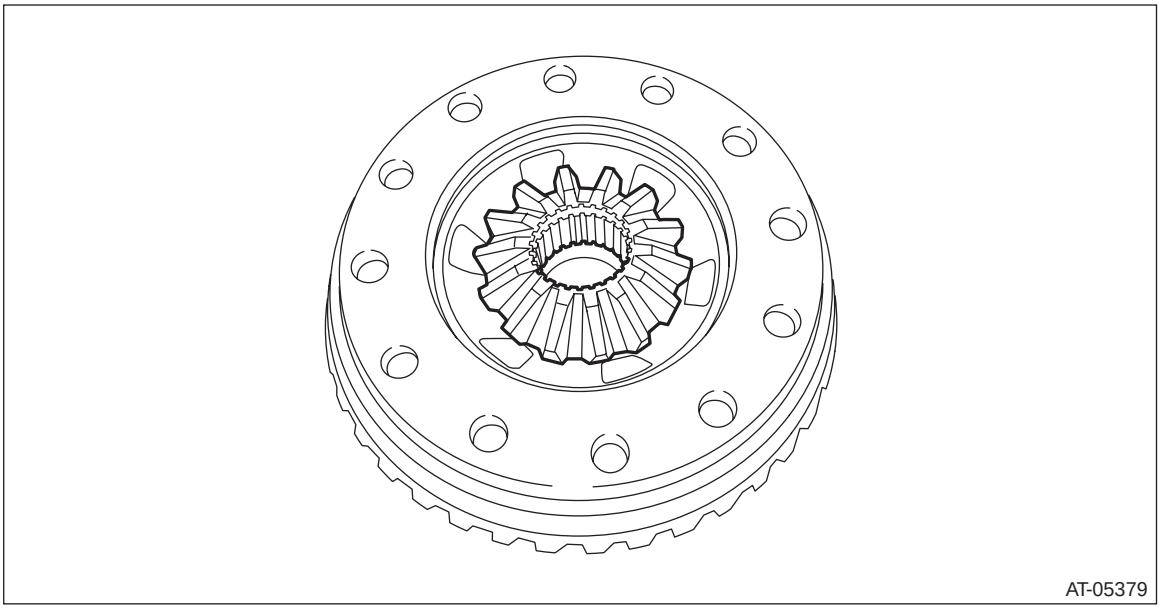
2) Remove the hypoid driven gear mounting bolt using the ST.
ST 18270KA020 SOCKET (E20)



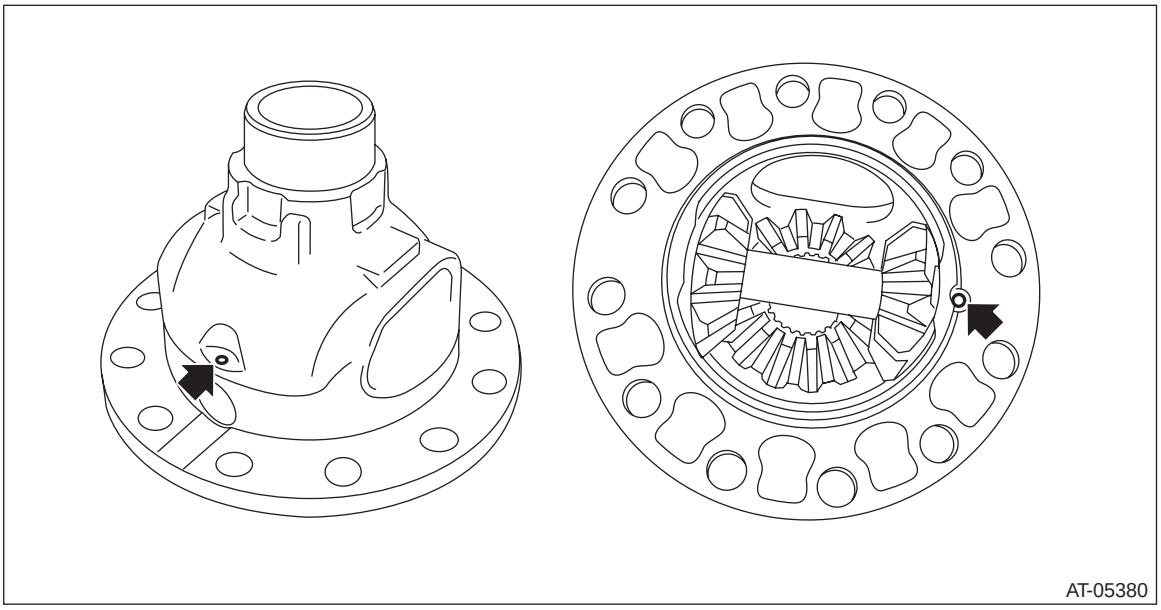
3) Remove the differential case (LH).



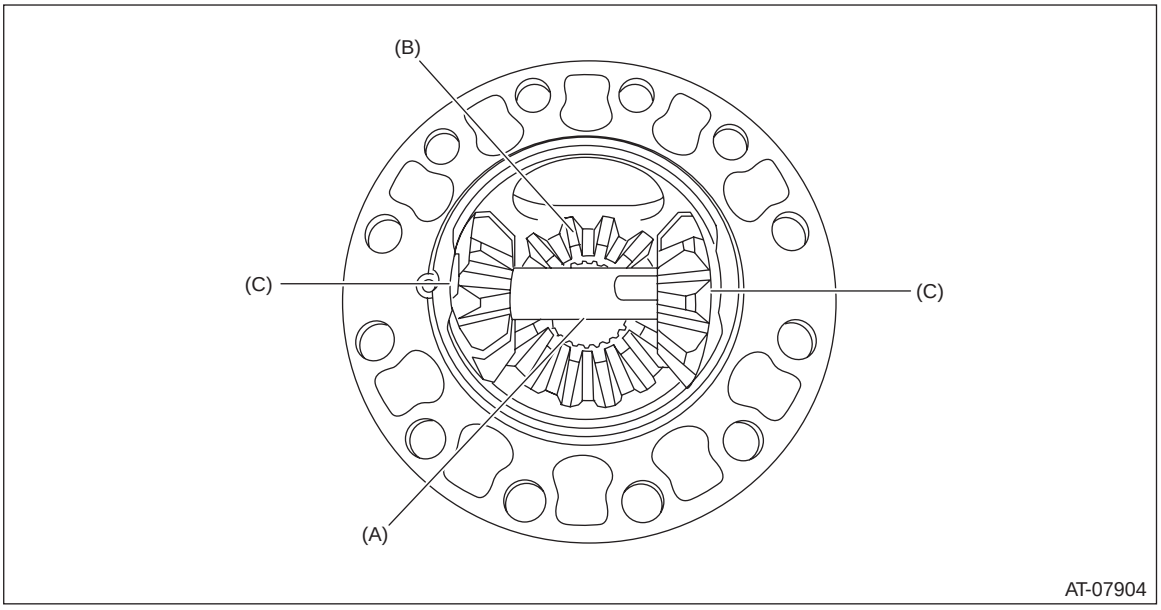
4) Remove the differential bevel gear and washer from differential case.



5) Remove the straight pin.



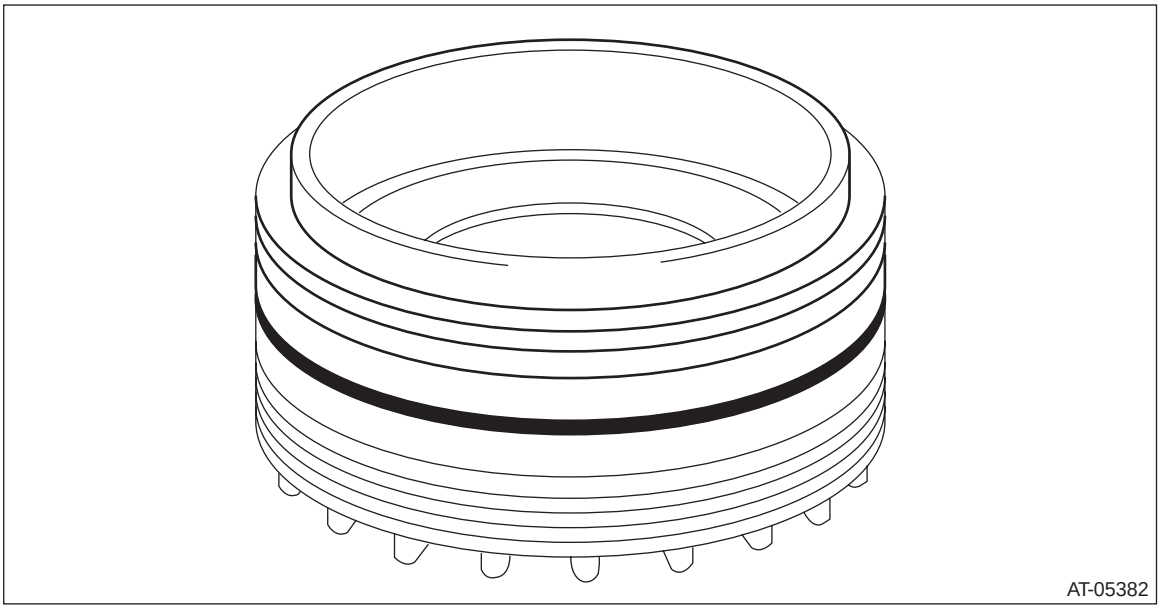
6) Remove the pinion shaft, then remove the differential bevel gear, washer and differential bevel pinion.



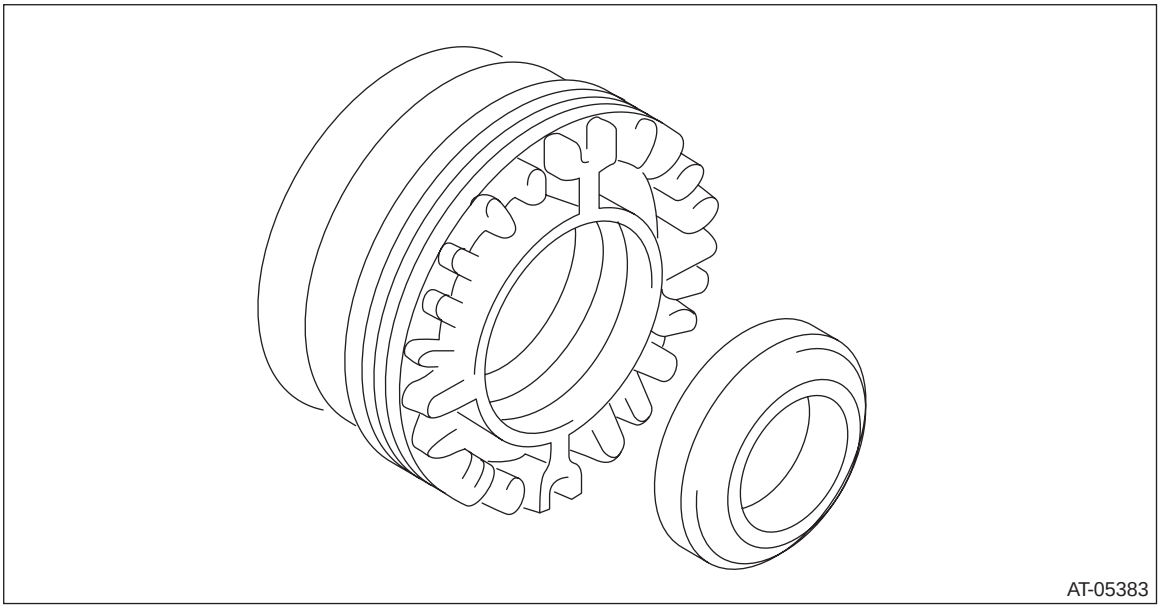
(A) Pinion shaft
(B) Differential bevel gear
(C) Differential bevel pinion

2. SIDE RETAINER

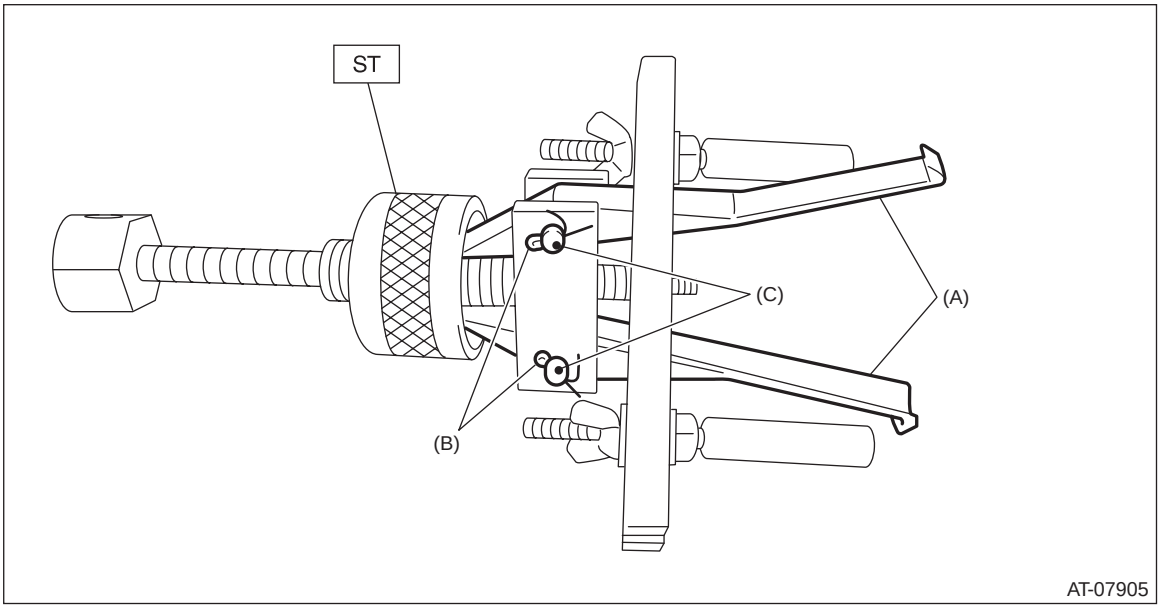
NOTE:
After adjusting the drive pinion backlash and tooth contact, replace the oil seal and O-ring with new parts.
1) Remove the O-ring.



2) Remove the oil seal.

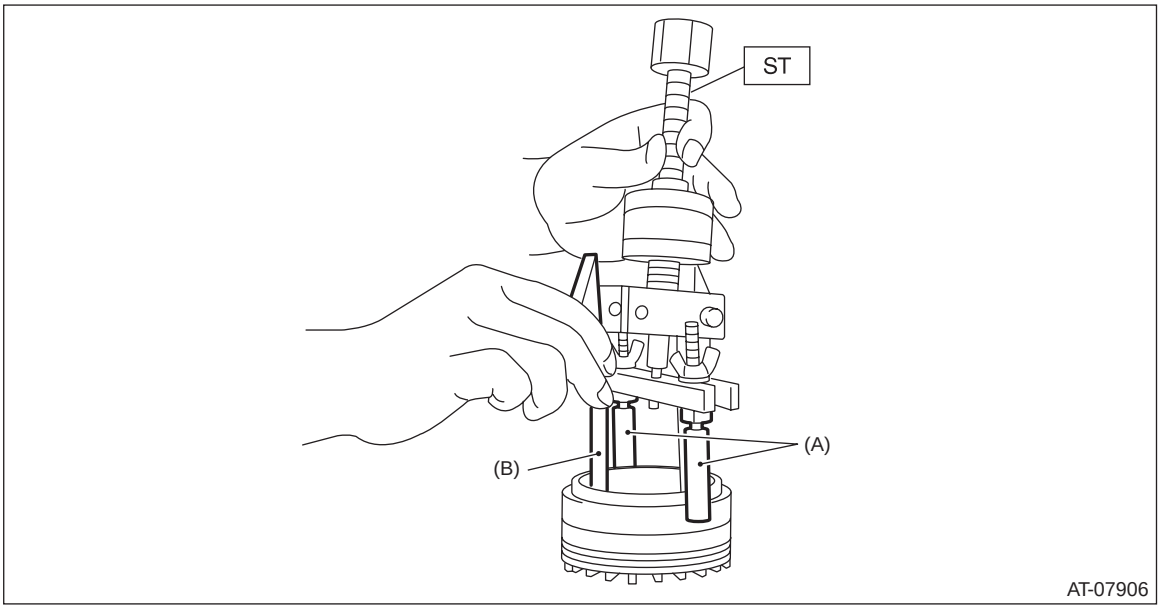


3) Remove the SPLIT PIN (ST), and then remove the claw.
ST 398527700 PULLER ASSY



(A) Claw
(B) Split pin
(C) Pin

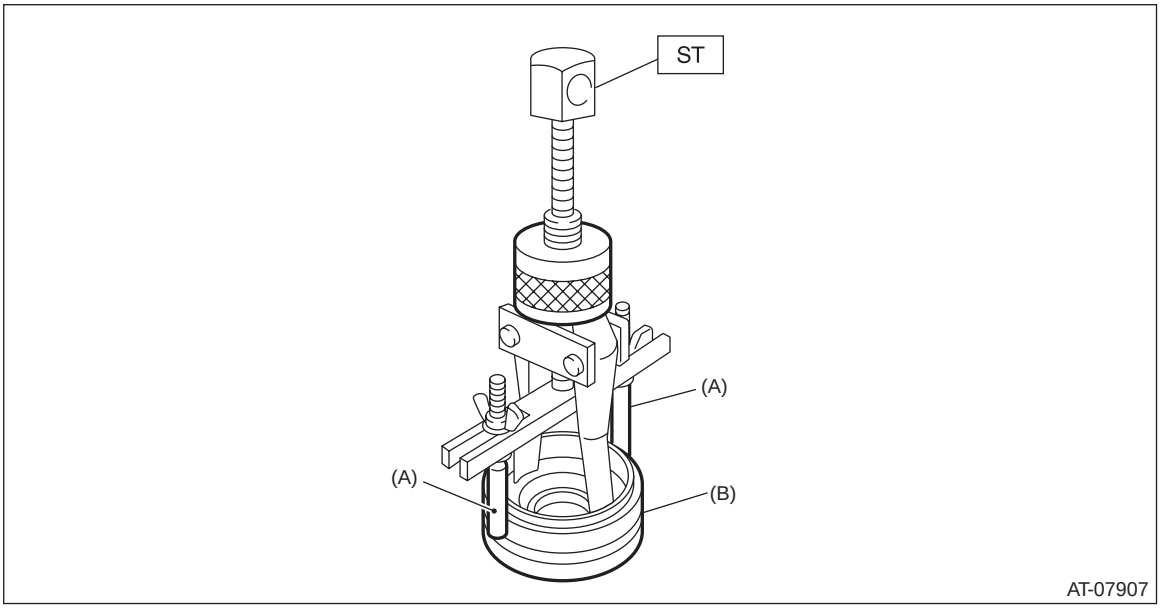
4) Attach two claws to the outer race, and set the ST to side retainer.
ST 398527700 PULLER ASSY



(A) Shaft
(B) Claw

5) Restore the removed claws to original position, and install the pin and split pin.
6) Hold the shaft of ST to avoid removing from side retainer, and then remove the bearing outer race.
ST 398527700 PULLER ASSY

NOTE:
Replace the bearing inner and outer races as a single unit.

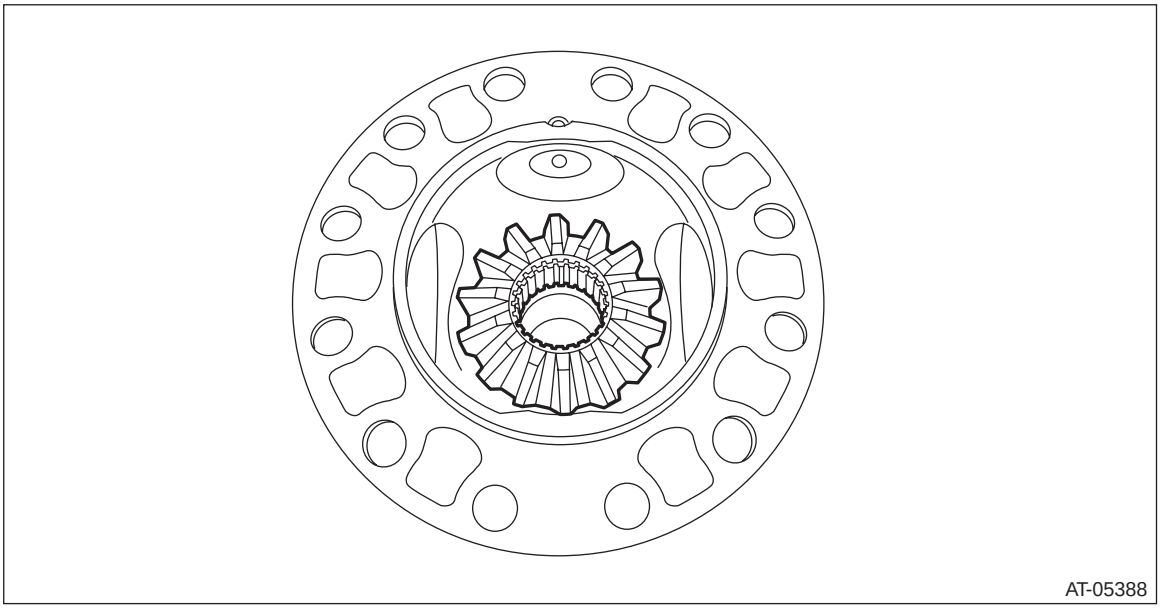


(A) Shaft
(B) Side retainer

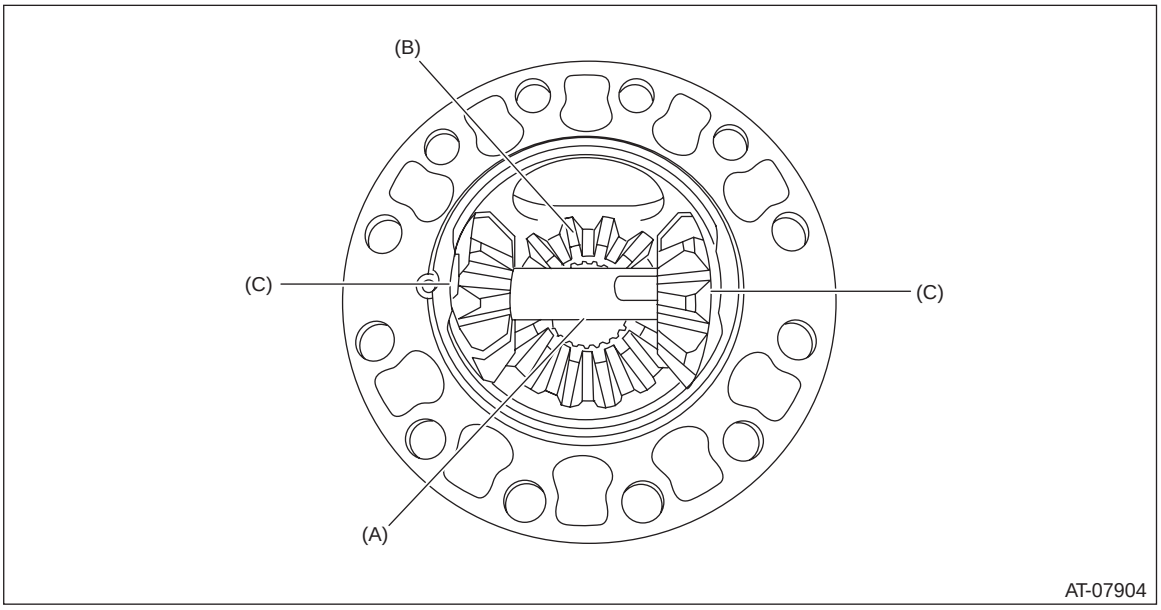
D: ASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

1) Install the washer and differential bevel gear into differential case (LH).

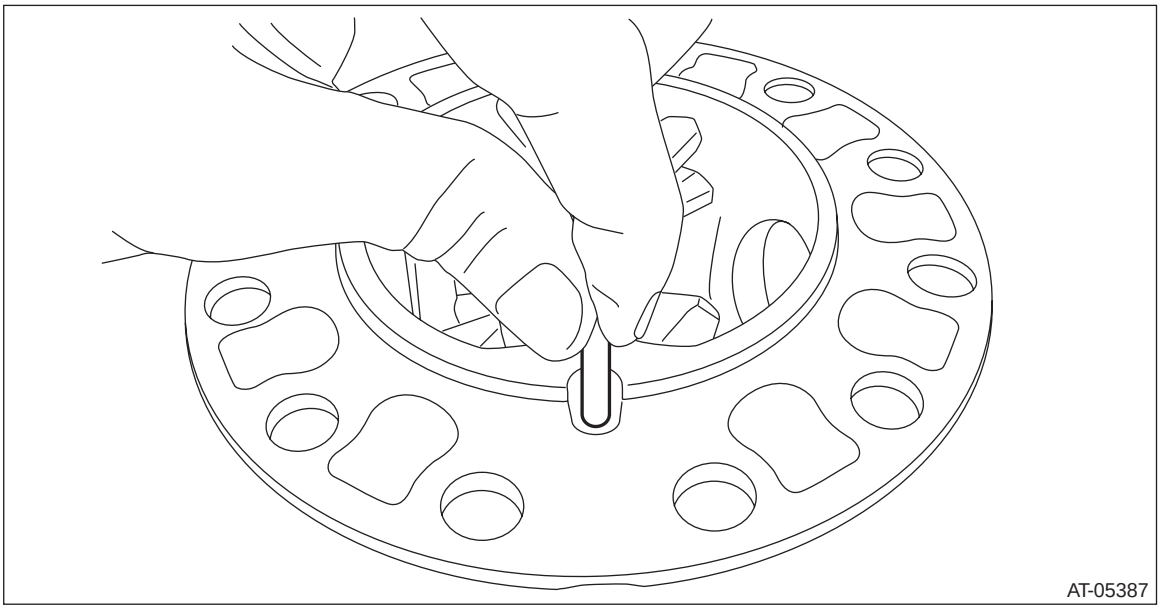


2) Install the differential bevel gear pinions into differential case (LH) and install the pinion shaft.

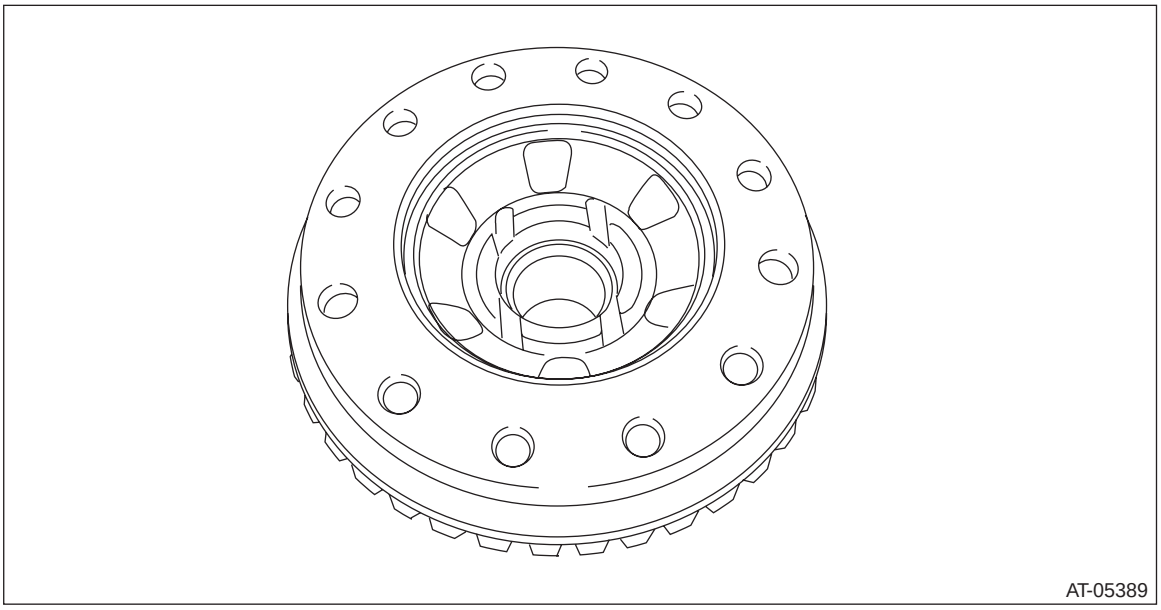


(A) Pinion shaft
(B) Differential bevel gear
(C) Differential bevel pinion

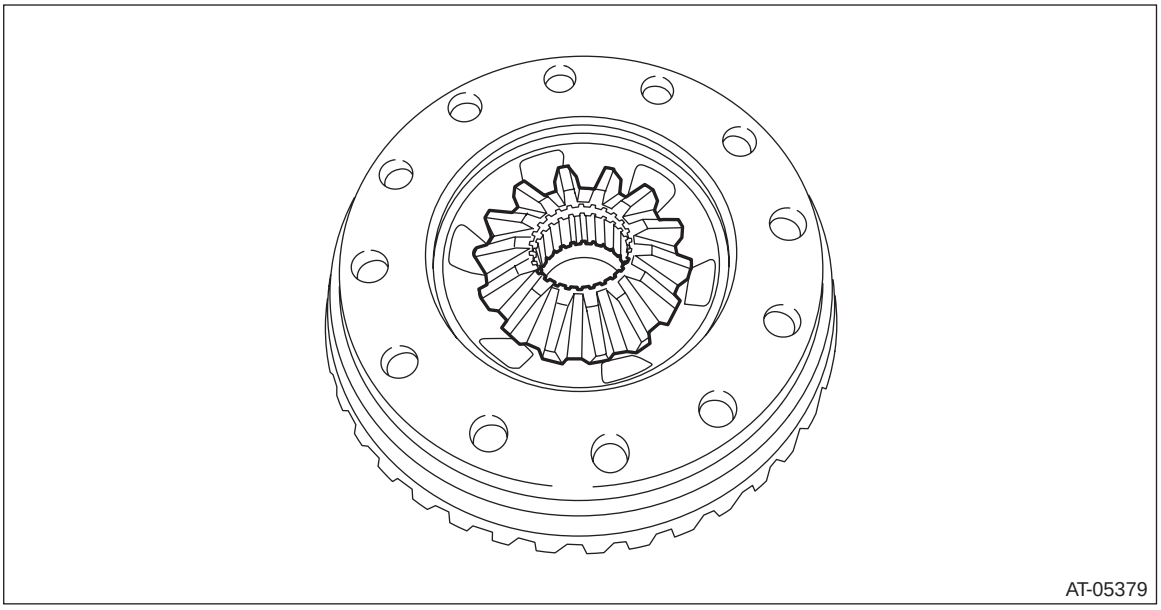
3) Install the straight pin.



4) Install the differential case (RH) to hypoid driven gear and secure with vise.

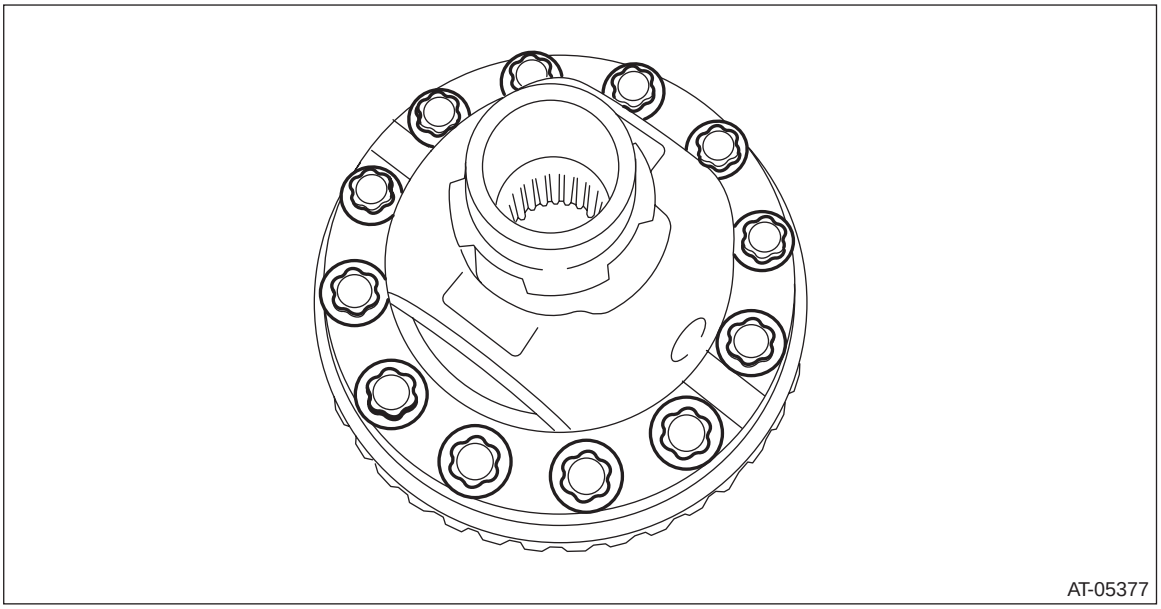


5) Install the washer and differential bevel gear to the differential case (RH).



6) Using the ST, install the hypoid driven gear by tightening the installation bolt.
ST 18270KA020 SOCKET (E20)

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)



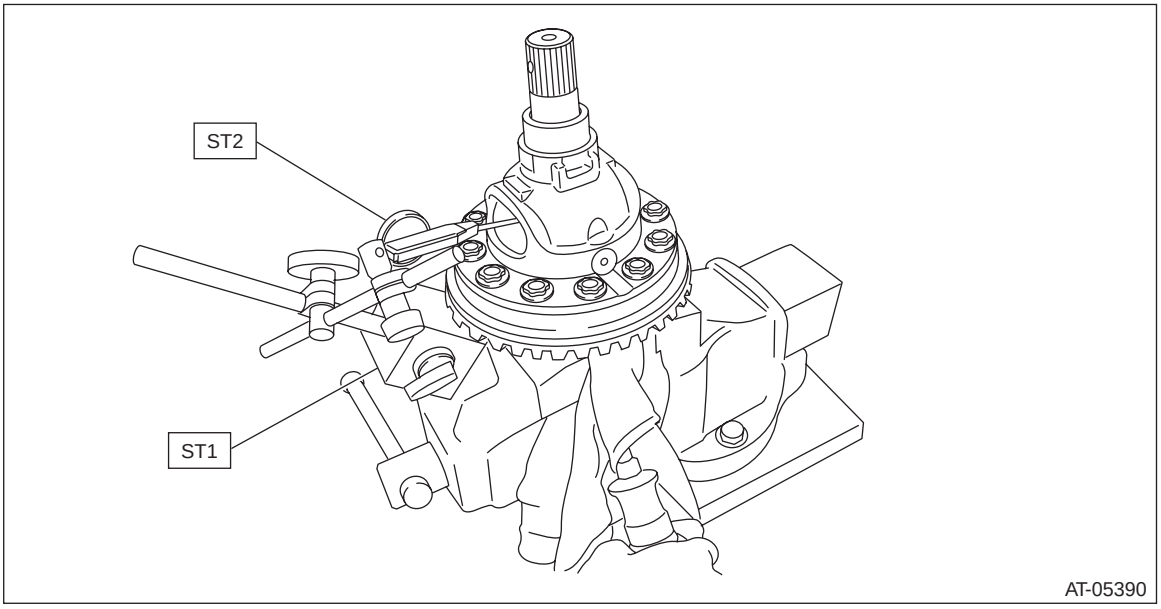
7) While checking the tightening angle with the angle gauge, further tighten the hypoid driven gear mounting bolts.

Tightening angle:
45°±2°

8) Measurement of backlash (selection of washer)
(1) Install the SUBARU genuine axle shaft to differential case.
Part No. 38415AA070 Axle shaft
(2) Measure the gear backlash using ST1 and ST2, and then insert the ST2 through the window of differential case.
ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE

NOTE:
• Measure the backlash by applying a differential bevel pinion tooth between two differential bevel gear teeth.
• When measuring, fix the differential bevel pinion in place with a screwdriver covered with cloth, or a similar tool.

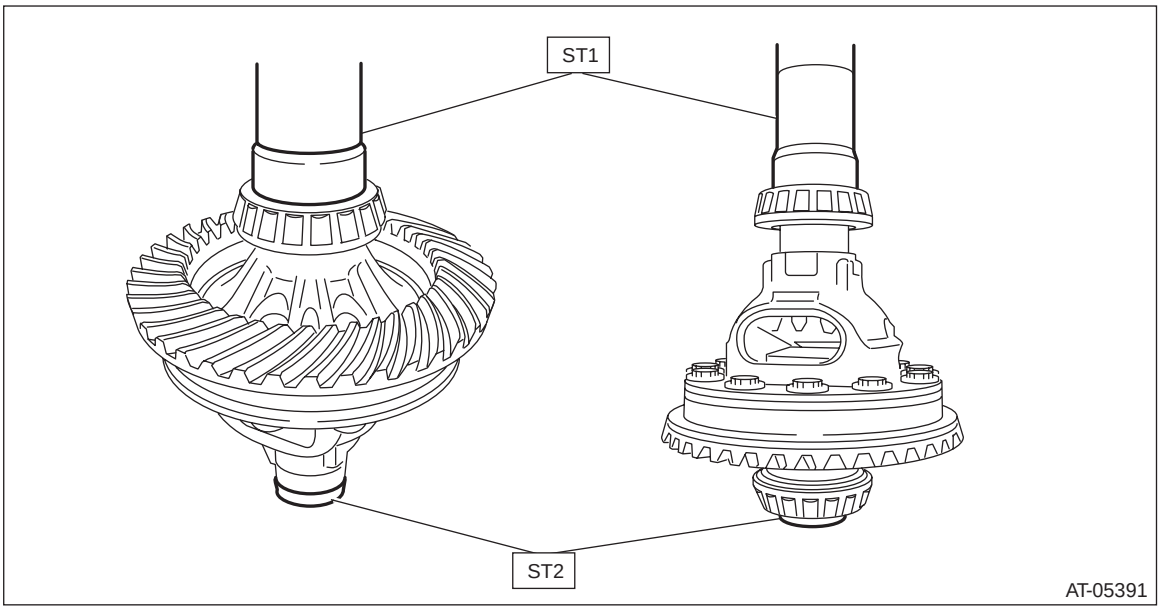
Specification:
0.13 — 0.18 mm (0.0051 — 0.0071 in)



(3) If the backlash is not within specification, select a washer from the table below and replace.

Washer	
Part No.	Thickness mm (in)
803038021	0.95 (0.037)
803038022	1.00 (0.039)
803038023	1.05 (0.041)

9) Using the ST, install the left and right taper roller bearings.
ST1 499277100 BUSHING 1-2 INSTALLER
ST2 398497701 SEAT

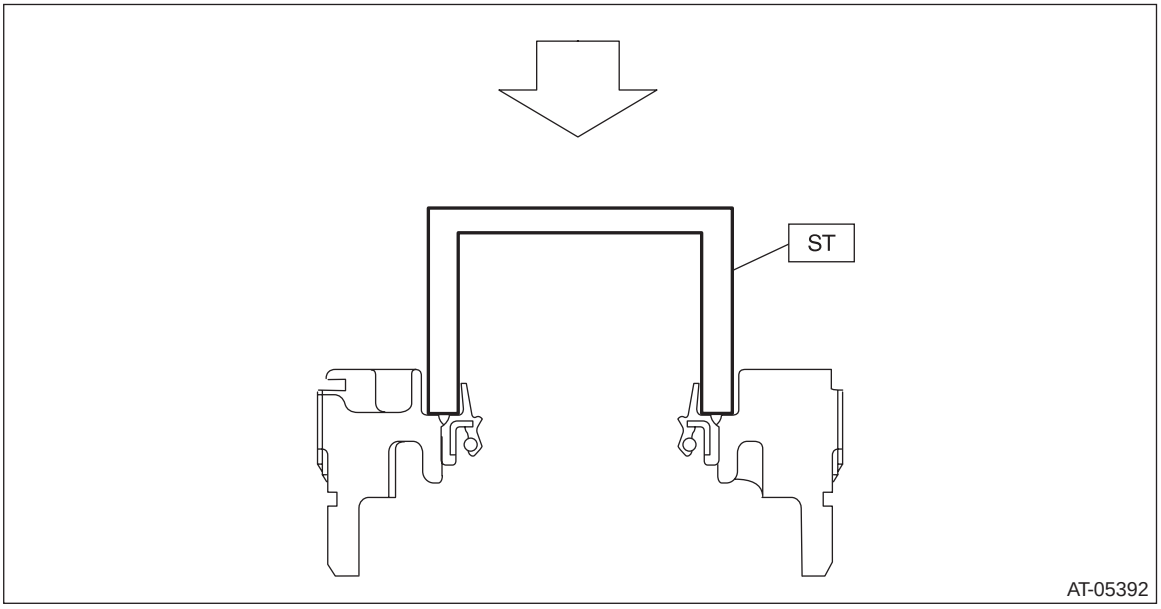


2. SIDE RETAINER

NOTE:
After adjusting the backlash and tooth contact, replace the oil seal and O-ring of side retainer with new parts.
1) Press-fit the bearing outer race to side retainer.
2) Using the ST, install the oil seal.

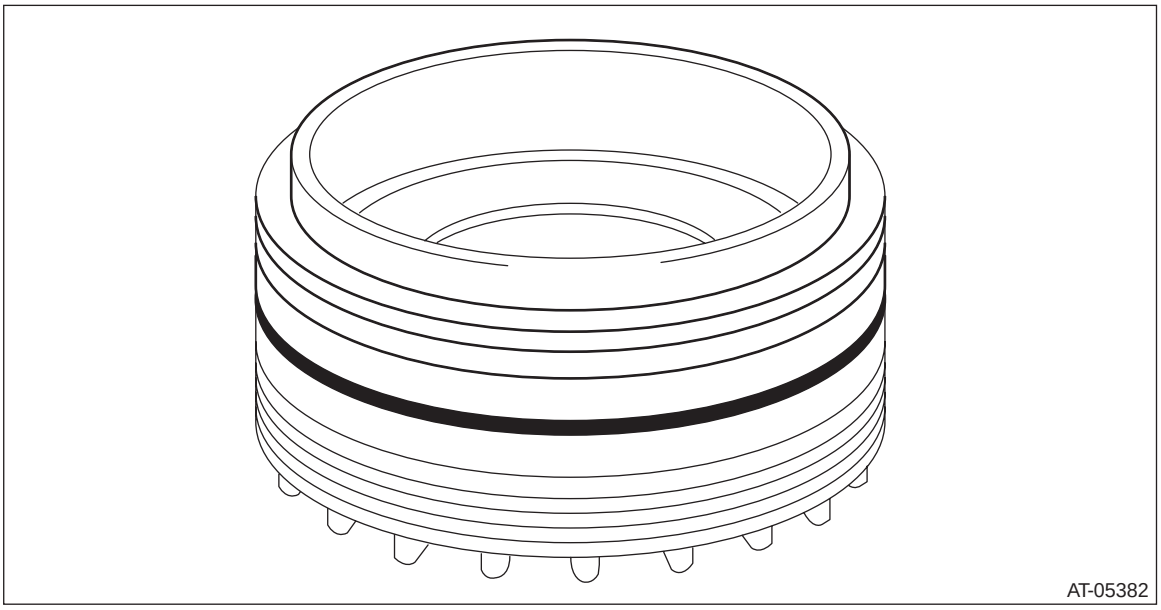
NOTE:
- Use a new oil seal.
- Apply differential oil to the oil seal lip.
- Oil seal has an identification mark (R, L). When installing oil seals, do not confuse the left and right.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER



3) Install the O-ring.

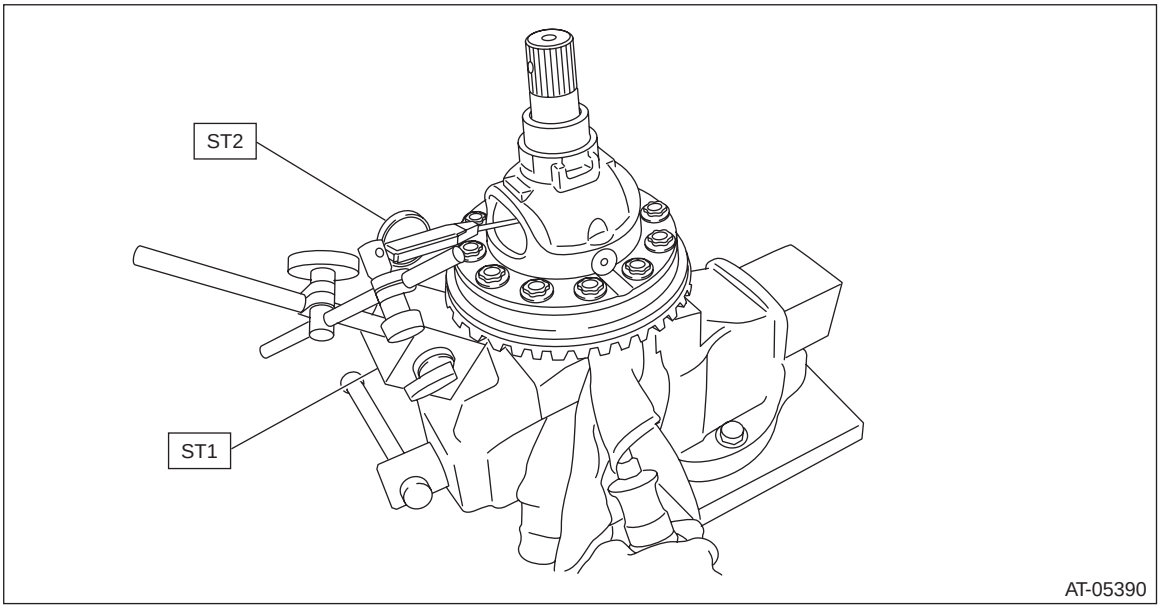
NOTE:
- Use new O-rings.
- Apply gear oil to O-ring.



E: INSPECTION

- Check each component for scratches, damage or other faults.
- Inspect the backlash of the pinion gear.

Specification:
0.13 — 0.18 mm (0.0051 — 0.0071 in)

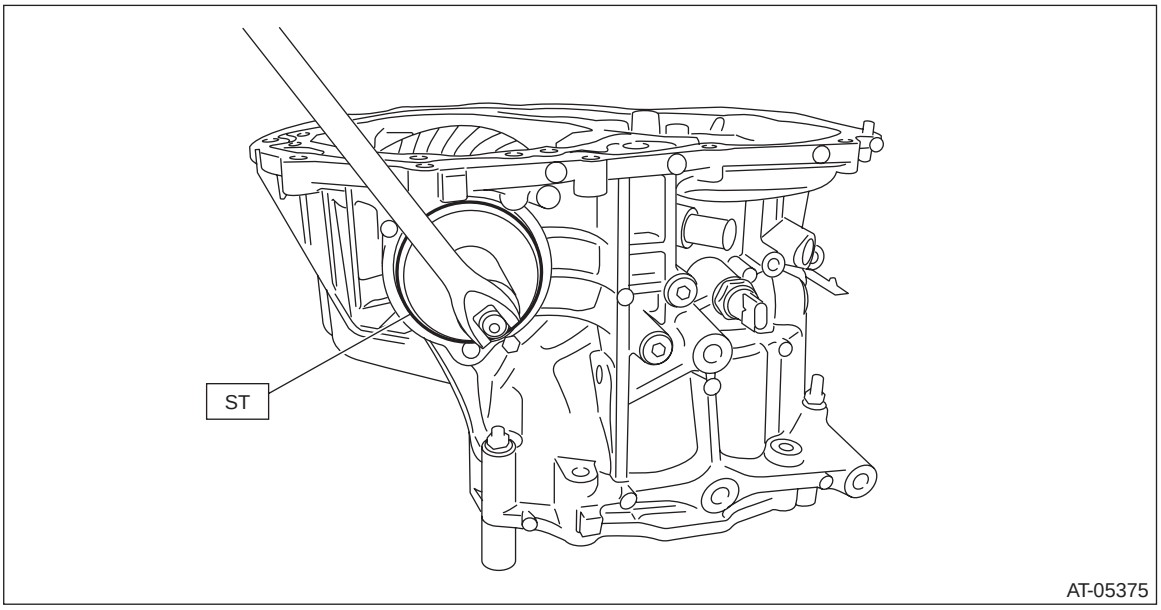


- Measure the hypoid gear backlash, and then adjust it to be within specification. <Ref. to CVT(TR690)-280, ADJUSTMENT, Front Differential Assembly.>

F: ADJUSTMENT

1) Using the ST, screw-in the retainer until resistance is felt.

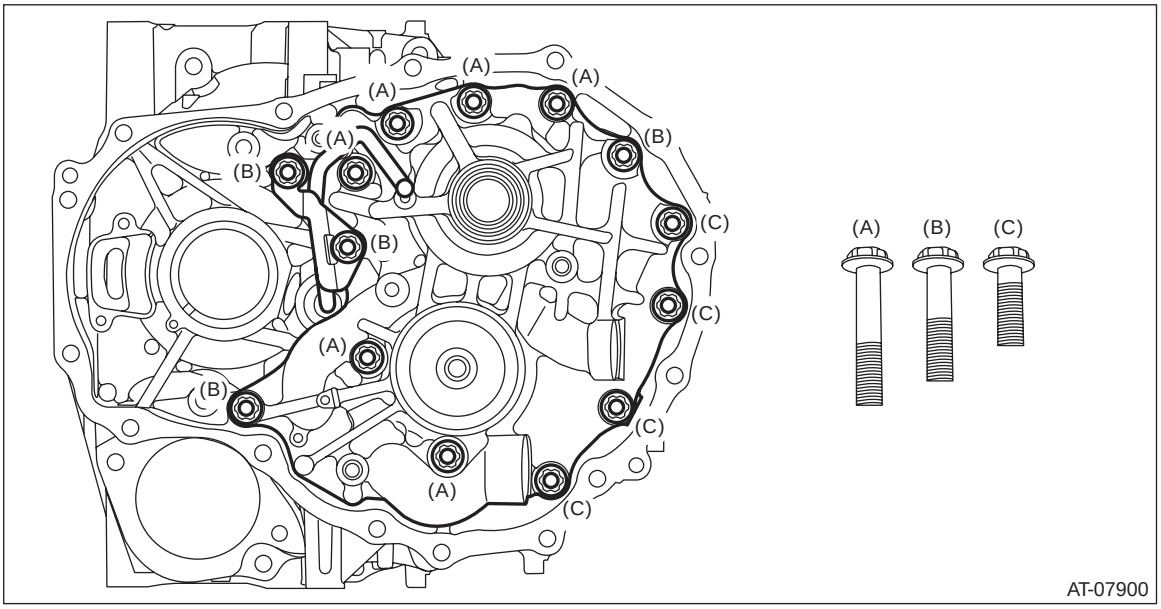
NOTE:
RH side should be screwed-in more than LH side.
ST 18658AA020 WRENCH COMPL RETAINER



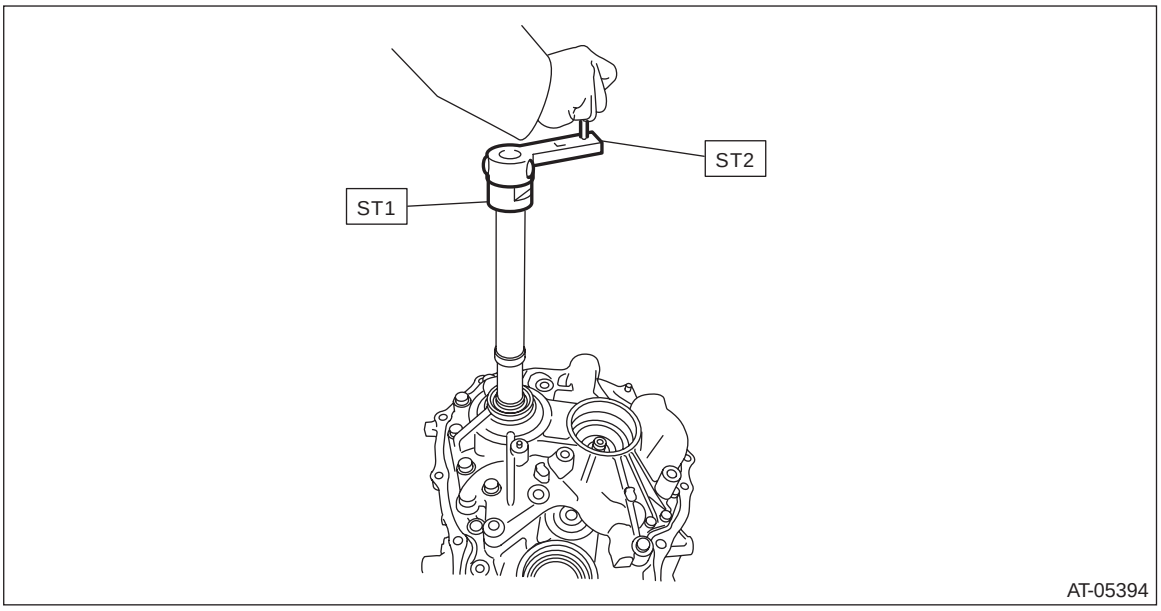
2) Remove the remaining liquid gasket from the mating surface completely.
3) Using the ST, install the drive pinion assembly to converter case.
ST 18270KA020 SOCKET (E20)

NOTE:
Do not confuse the three different-length bolts when installing.

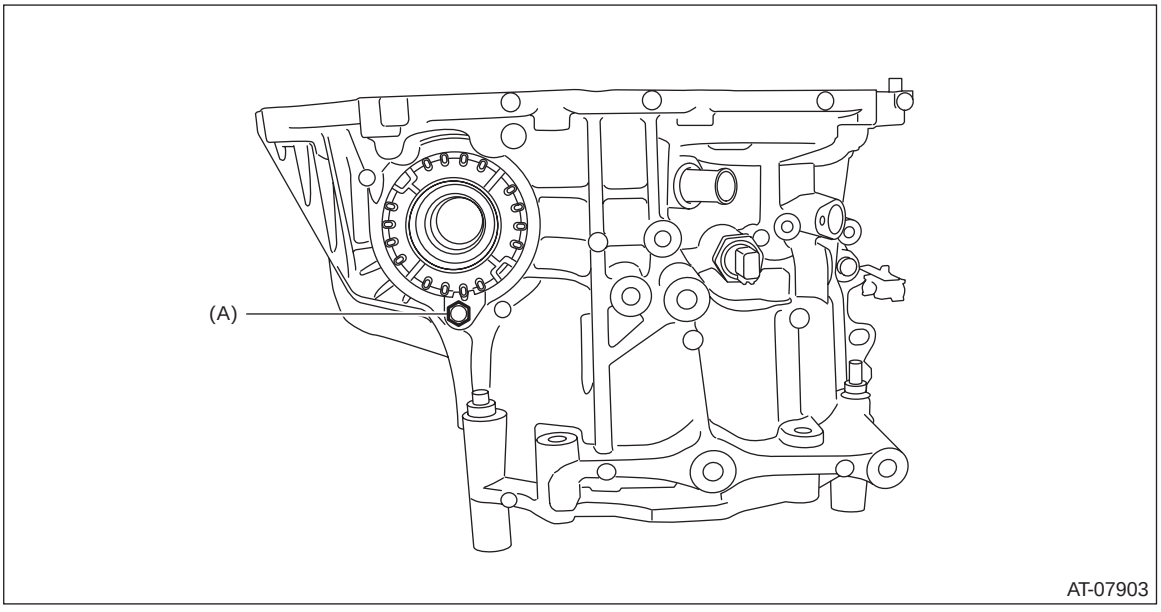
Tightening torque:
43 N·m (4.4 kgf-m, 31.7 ft-lb)



4) Rotate the drive pinion shaft ten times or more using ST1 and ST2.
ST1 18667AA010 HOLDER
ST2 499787700 WRENCH

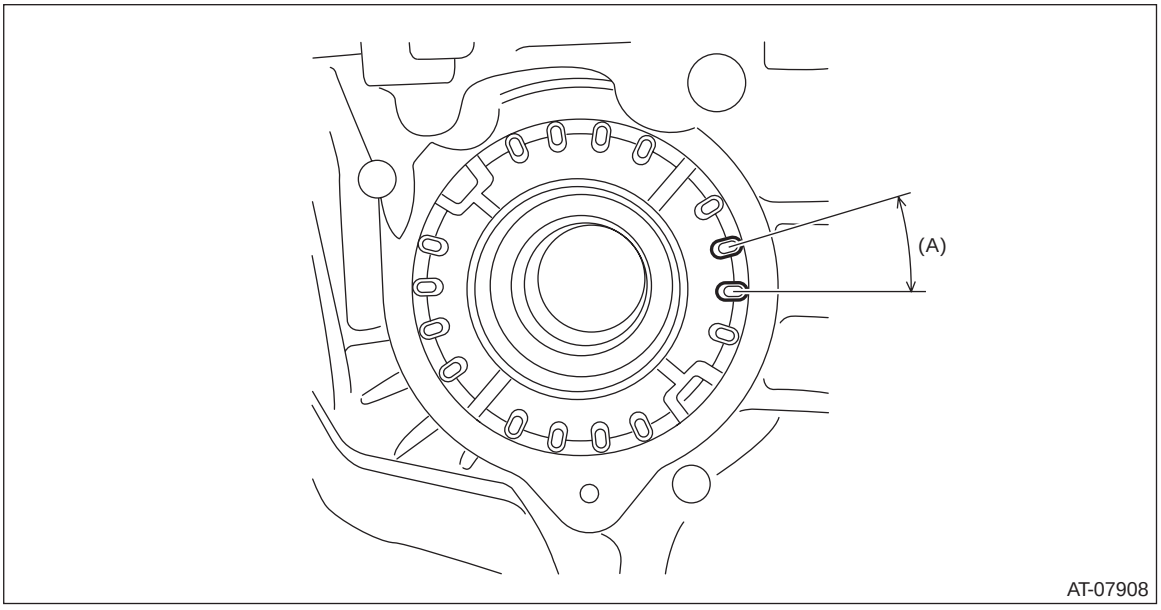


5) While rotating the pinion shaft, tighten the retainer LH and loosen the retainer RH until the shaft can't be turned anymore. The backlash is “zero” when the pinion shaft comes to the point where it doesn't rotate.
6) After the “zero” state is established, loosen the retainer LH by 3 notches and secure it with the lock plate. Loosen the retainer RH and retighten until it stops. Rotate the drive pinion 2 or 3 times. Tighten the retainer RH further 1-3/4 notches. This sets the preload. Finally, secure the retainer with its lock plate.



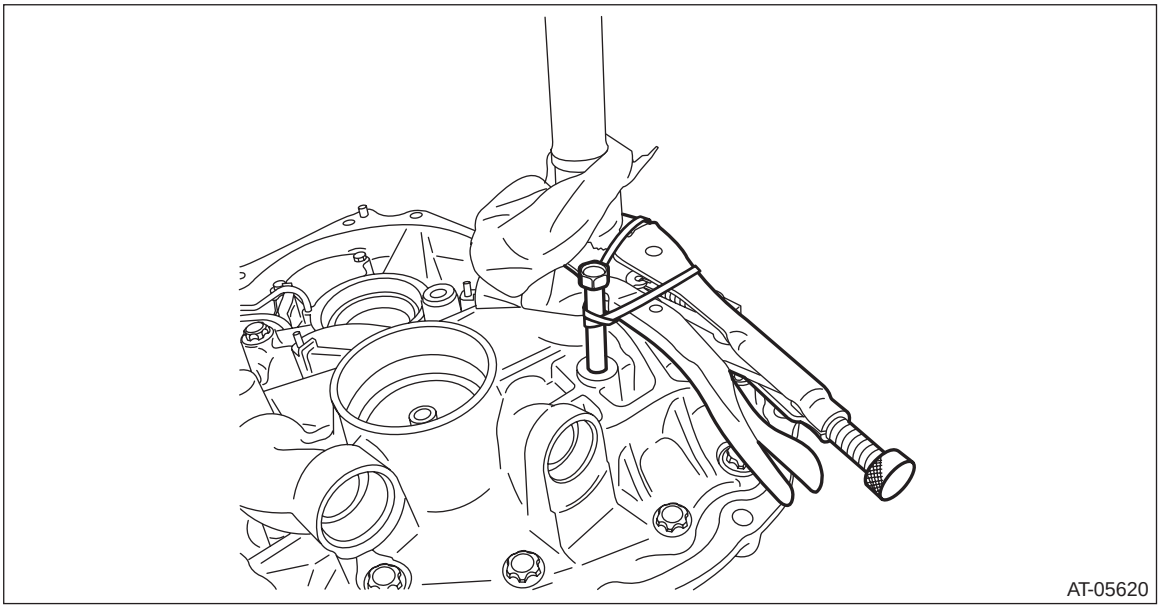
(A) Lock plate

NOTE:
Turning the retainer by every one tooth changes the backlash approx. 0.05 mm (0.0020 in).



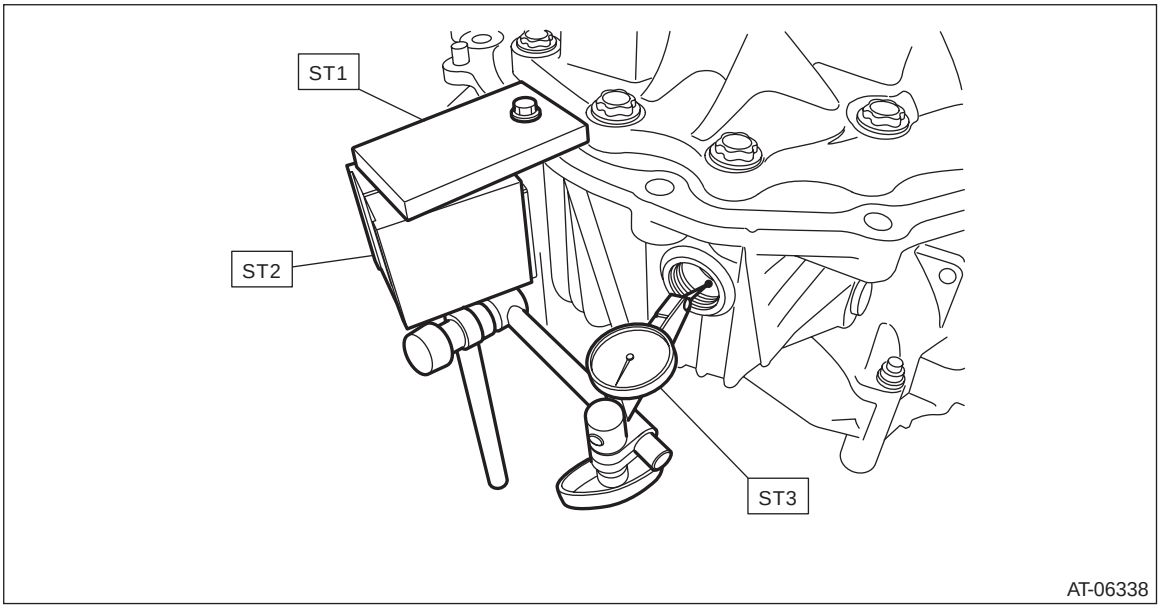
(A) 1 tooth

7) Insert the two SUBARU genuine axle shafts into differential case.
Part No. 38415AA070 Axle shaft
8) Wrap the drive shaft pinion shaft with cloth and pinch with vise pliers. Install the installation bolt into the bolt hole of secondary pulley and secure the bolt and vise pliers using a band or wire.
Make sure the drive pinion shaft does not move.



9) Check the backlash is within specification using ST1, ST2 and ST3.
ST1 498255400 PLATE
ST2 498247001 MAGNET BASE
ST3 498247100 DIAL GAUGE

Backlash:
0.13 — 0.18 mm (0.005 — 0.007 in)



10) Adjust the teeth contact of the front differential and drive shaft. <Ref. to CVT(TR690)-258, ADJUSTMENT, Drive Pinion Shaft Assembly.>

45.Oil Pump

A: REMOVAL

NOTE:
Refer to “Drive Pinion Shaft” for removal procedures. <Ref. to CVT(TR690)-244, REMOVAL, Drive Pinion Shaft Assembly.>

B: INSTALLATION

NOTE:
Refer to “Drive Pinion Shaft” for installation procedures. <Ref. to CVT(TR690)-246, INSTALLATION, Drive Pinion Shaft Assembly.>

C: INSPECTION

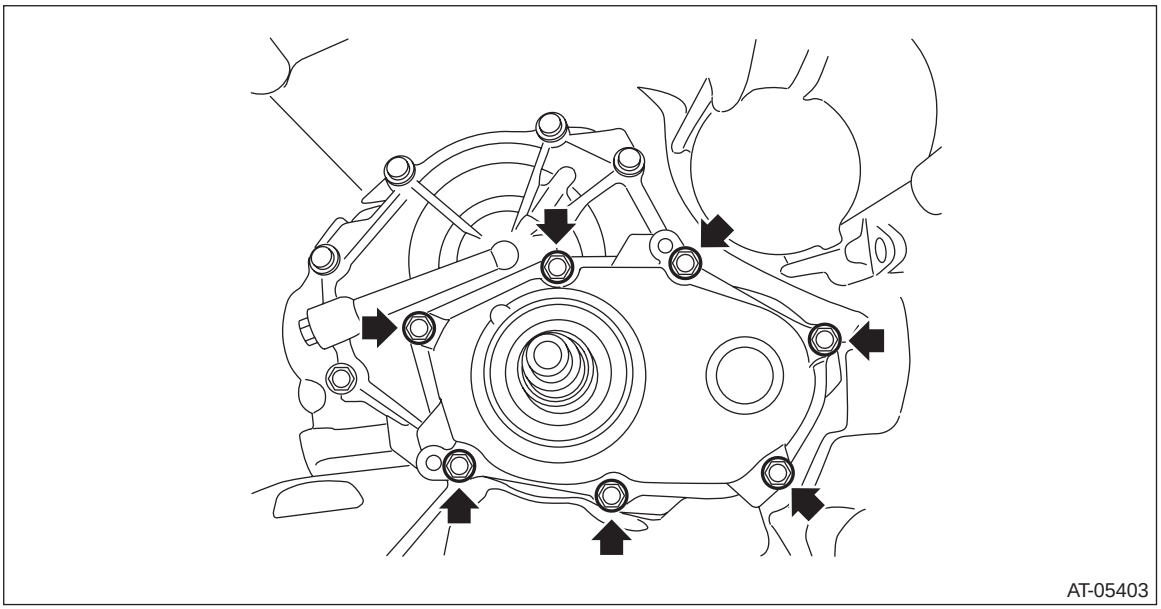
Check the following items.
- Check the oil pump for damage and wear.
- Rotate the oil pump by hand, and check that it rotates smoothly.

1) Measure the secondary pressure. <Ref. to CVT(TR690)-49, INSPECTION, Secondary Pressure (Line Pressure) Test.>
2) Remove the oil pan and oil strainer. <Ref. to CVT(TR690)-112, REMOVAL, Control Valve Body.>
3) Check oil strainer for clogging.
When oil strainer has no clogging, replace the oil pump.

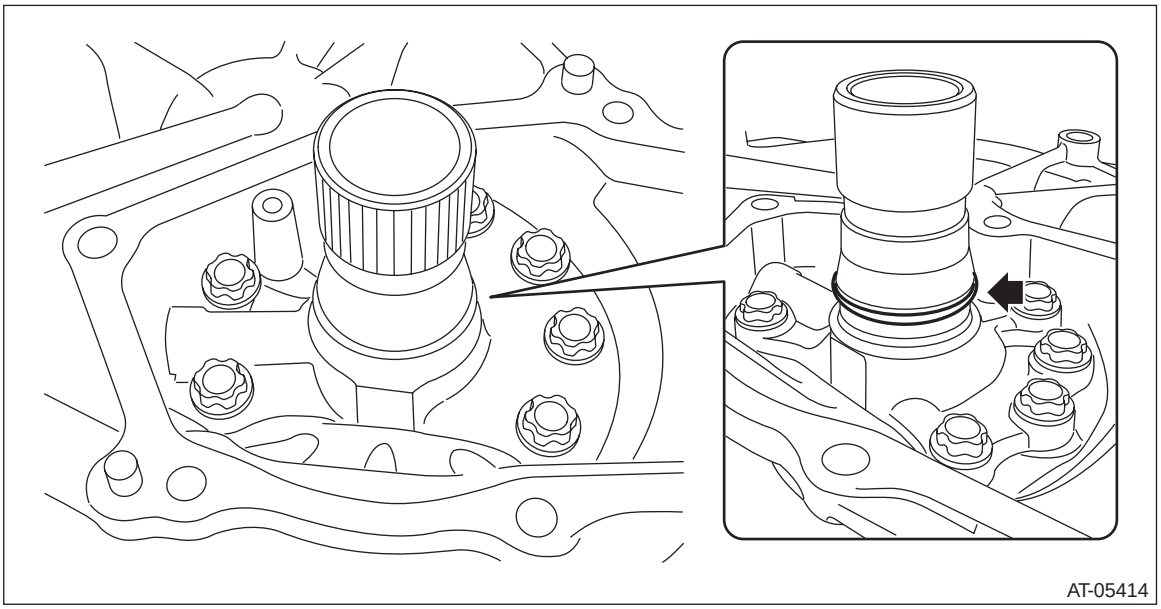
46.Oil Pump Chain

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the torque converter assembly. <Ref. to CVT(TR690)-140, REMOVAL, Torque Converter Assembly.>
3) Remove the oil pump chain cover.

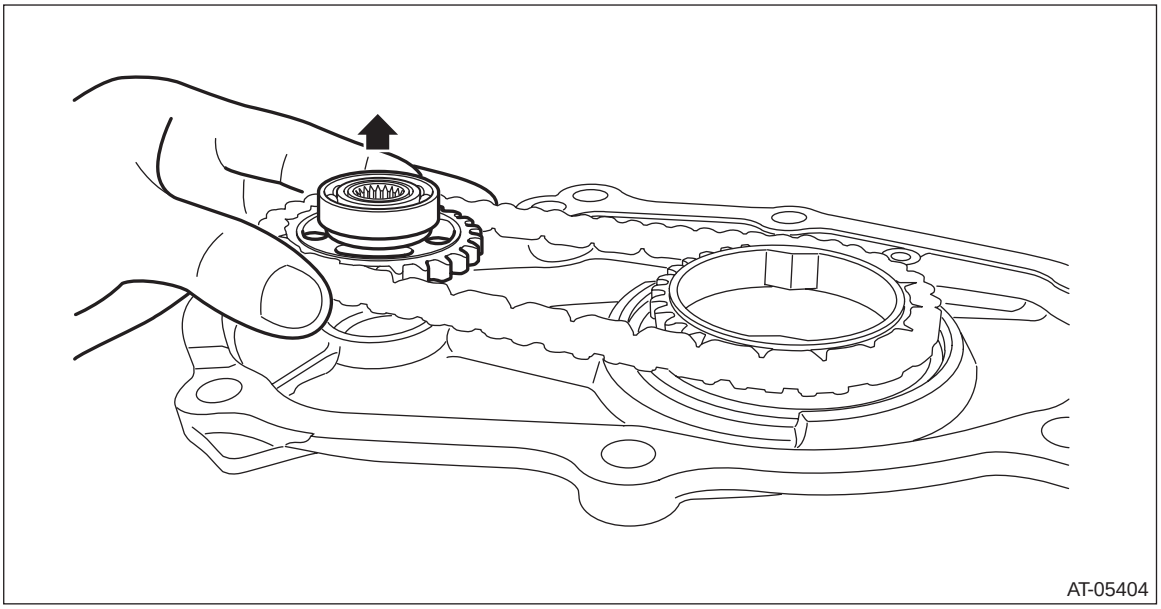


4) Remove the seal ring from center support COMPL.

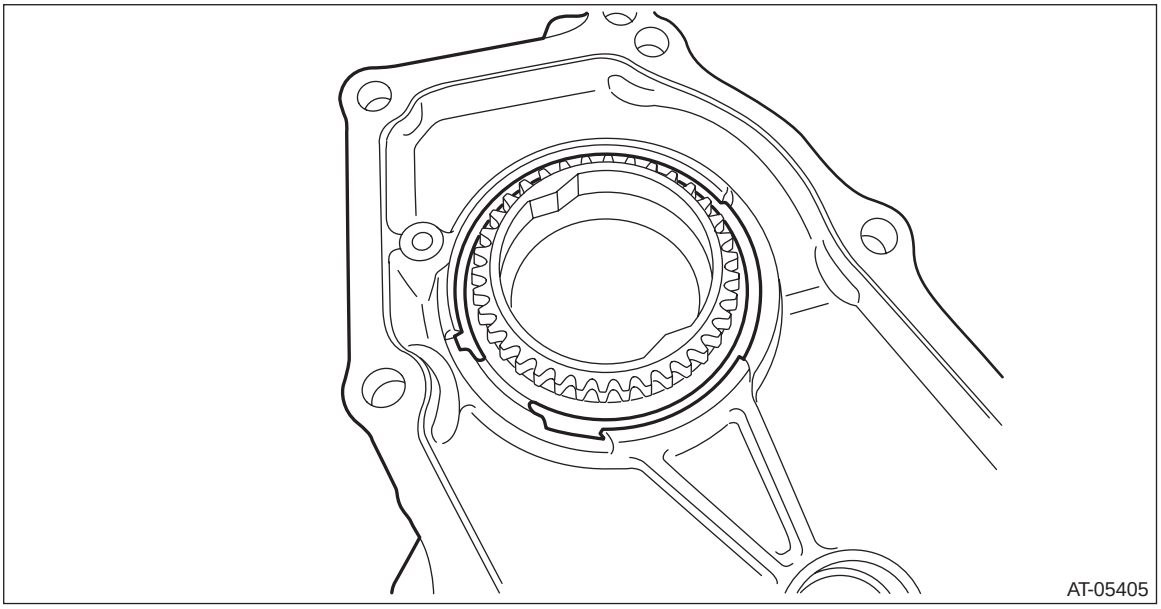


5) Remove the driven sprocket from oil pump chain cover to remove the oil pump chain.

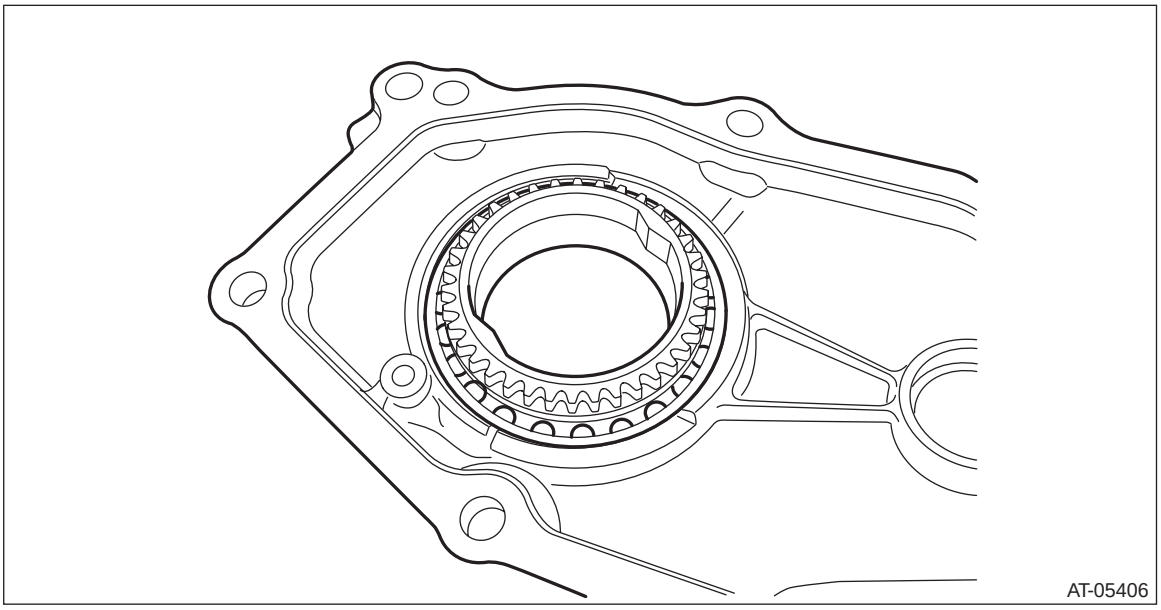
NOTE:
The driven sprocket is replaced as an assembly only, because it is a non-disassembly part.



6) Remove the snap ring.



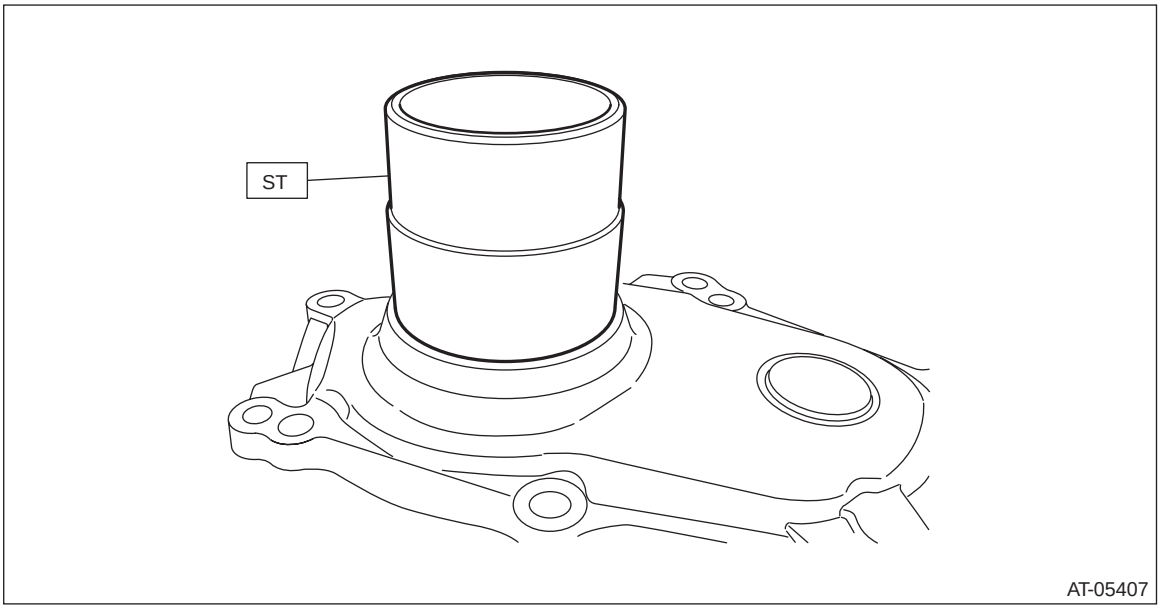
7) Remove the drive sprocket.



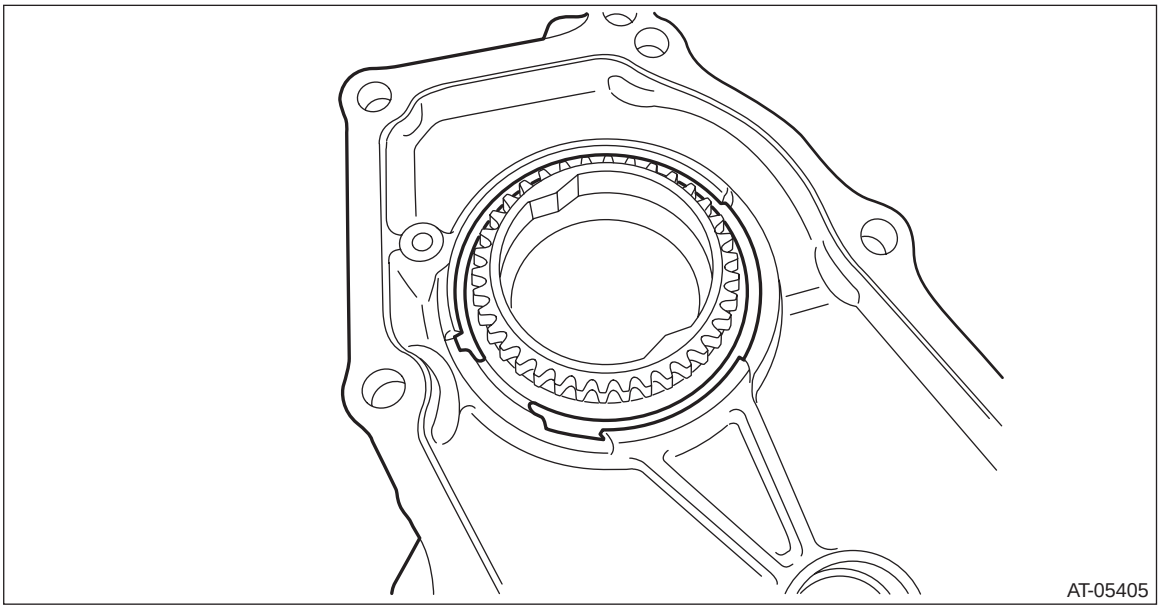
8) Remove the oil seal from the oil pump chain cover.

B: INSTALLATION

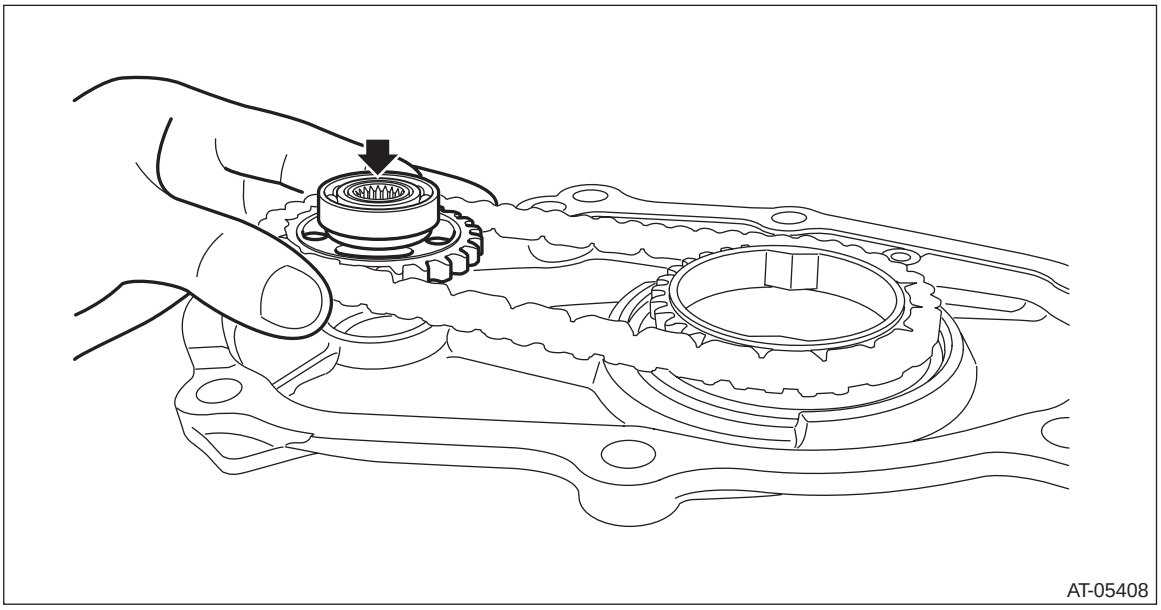
1) Clean the mating surface of oil pump chain cover and converter case cover.
2) Using the ST, install the oil seal.
ST 499755602 PRESS SNAP RING



3) Install the drive sprocket and install the snap ring.

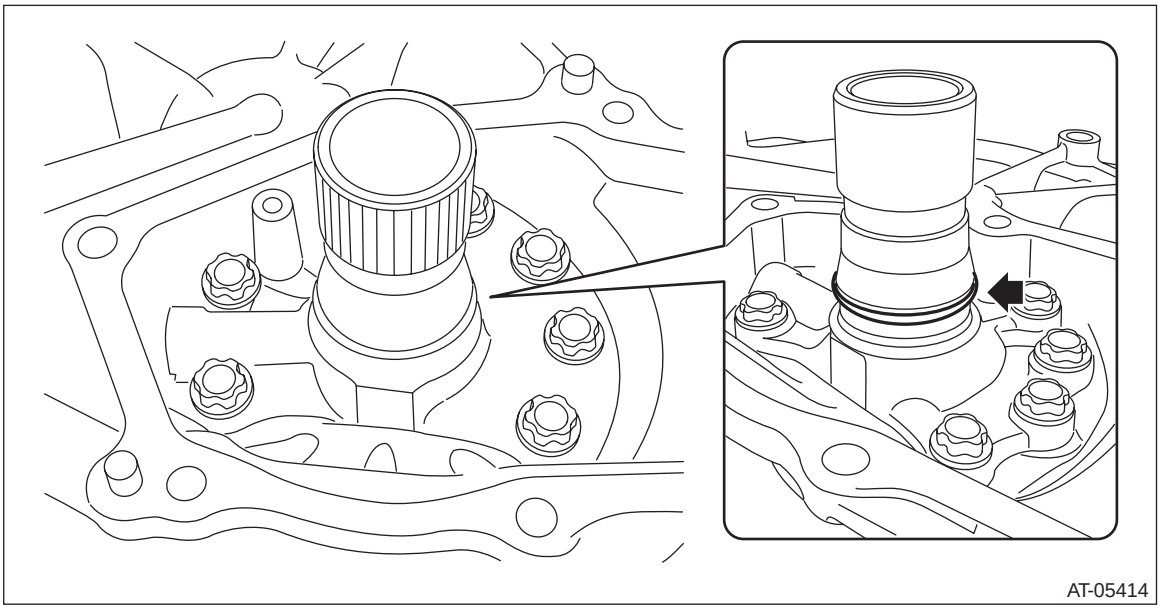


4) Place the oil pump chain on drive sprocket.
5) Place the oil pump chain on driven sprocket and install the driven sprocket to oil pump chain cover.



6) Install the seal ring to center support COMPL.

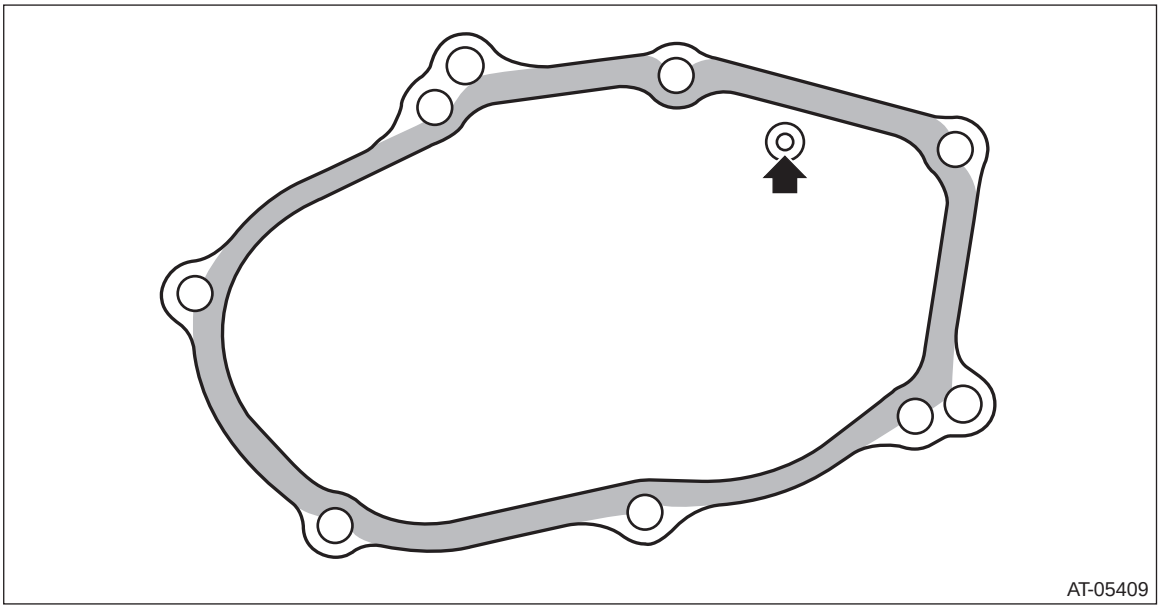
NOTE:
- Use new seal rings.
- Apply CVTF to the seal rings.



7) Apply liquid gasket seamlessly to the mating surface of oil pump chain cover.

CAUTION:
Do not apply liquid gasket at the arrowed hole.

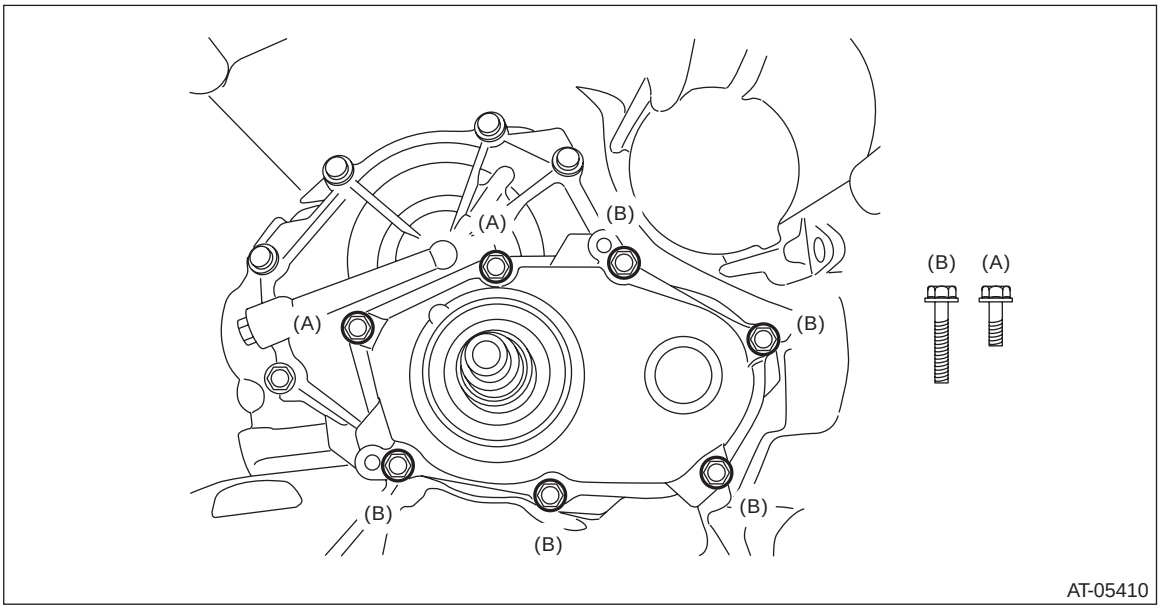
Liquid gasket:
THREE BOND 1215B or equivalent



8) Install the oil pump chain cover.

NOTE:
There are two types of bolt.

Tightening torque:
24 N·m (2.4 kgf-m, 17.7 ft-lb)

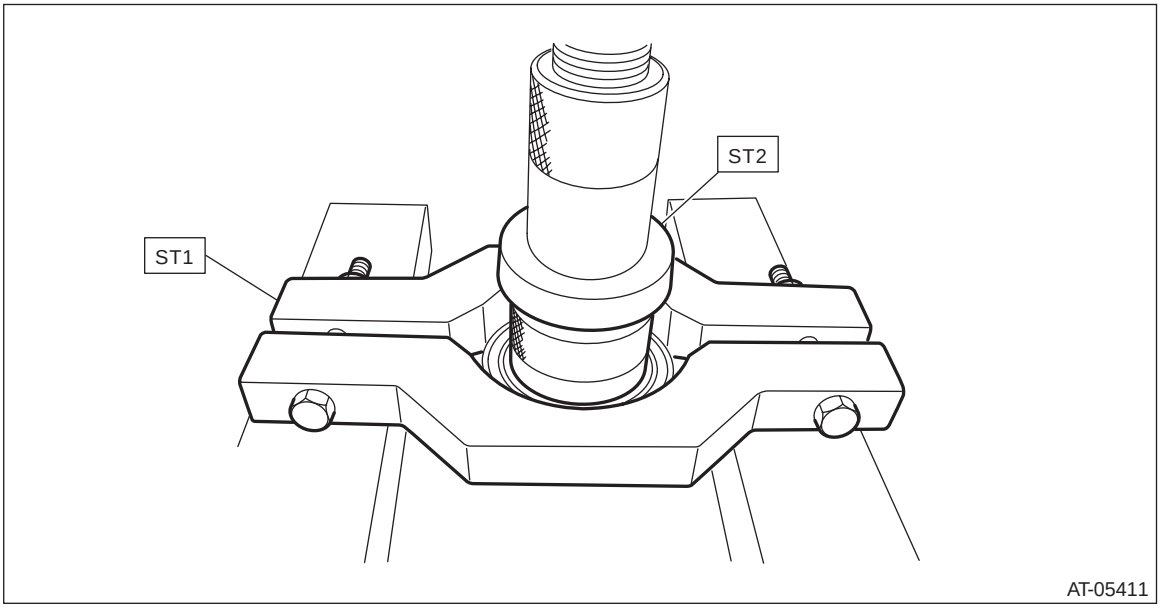


9) Install the torque converter assembly. <Ref. to CVT(TR690)-141, INSTALLATION, Torque Converter Assembly.>
10) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1. DRIVE SPROCKET

1) Remove the ball bearing using ST.
ST1 498077600 REMOVER
ST2 399513600 INSTALLER

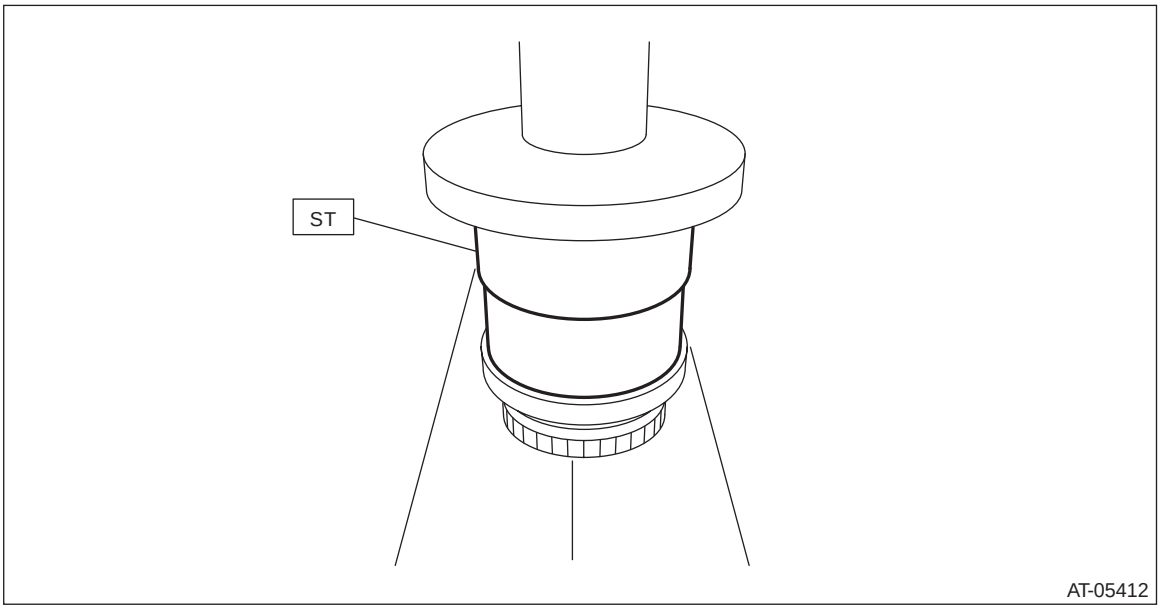


D: ASSEMBLY

1. DRIVE SPROCKET

1) Using the ST, install the ball bearing.

NOTE:
Use a new ball bearing.
ST 499755602 PRESS SNAP RING



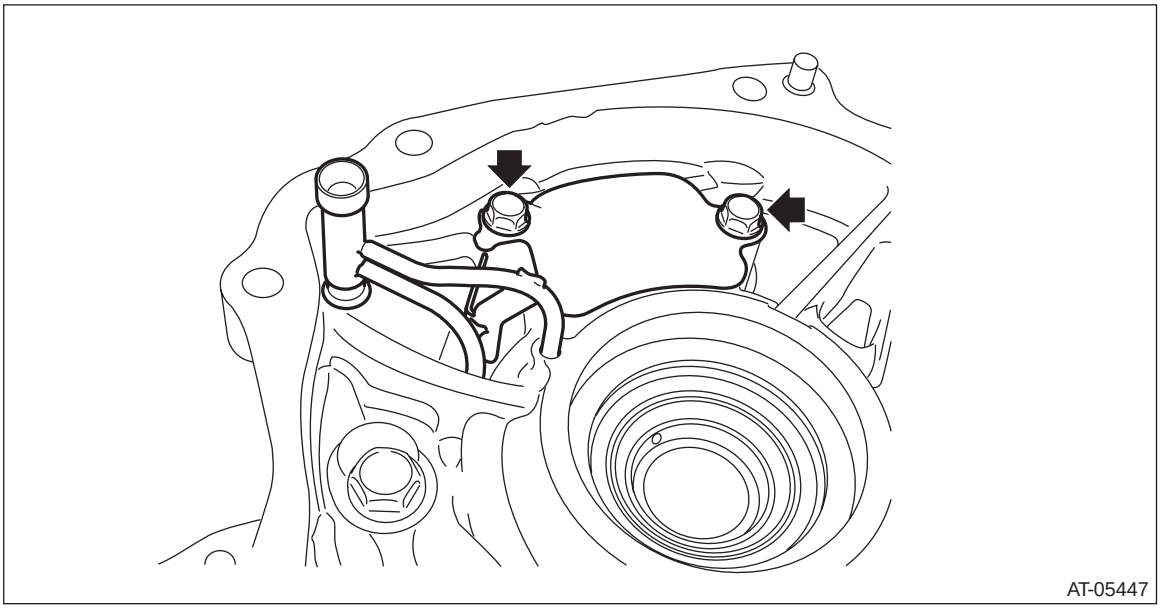
E: INSPECTION

- Check the oil pump chain for damage.
- Replace if gear teeth are broken, damaged, sharpen or excessively worn.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.
- Check the oil pump chain cover for damage.
- Check for leakage of CVTF from the mating surface of oil pump chain cover.
- Check the oil seal for damage.

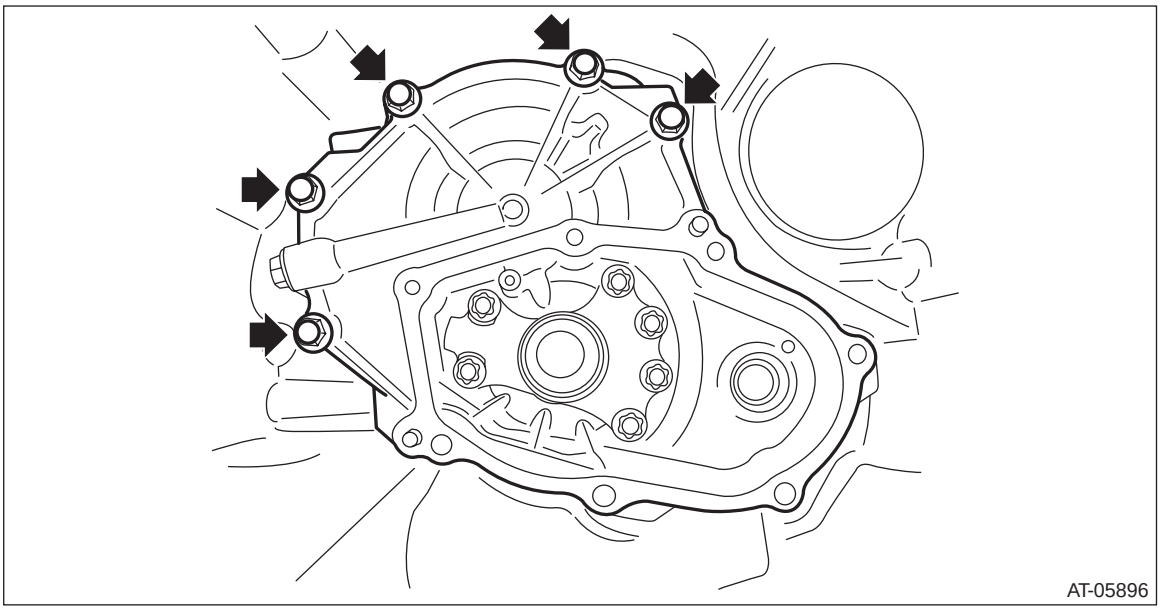
47.Converter Case Cover

A: REMOVAL

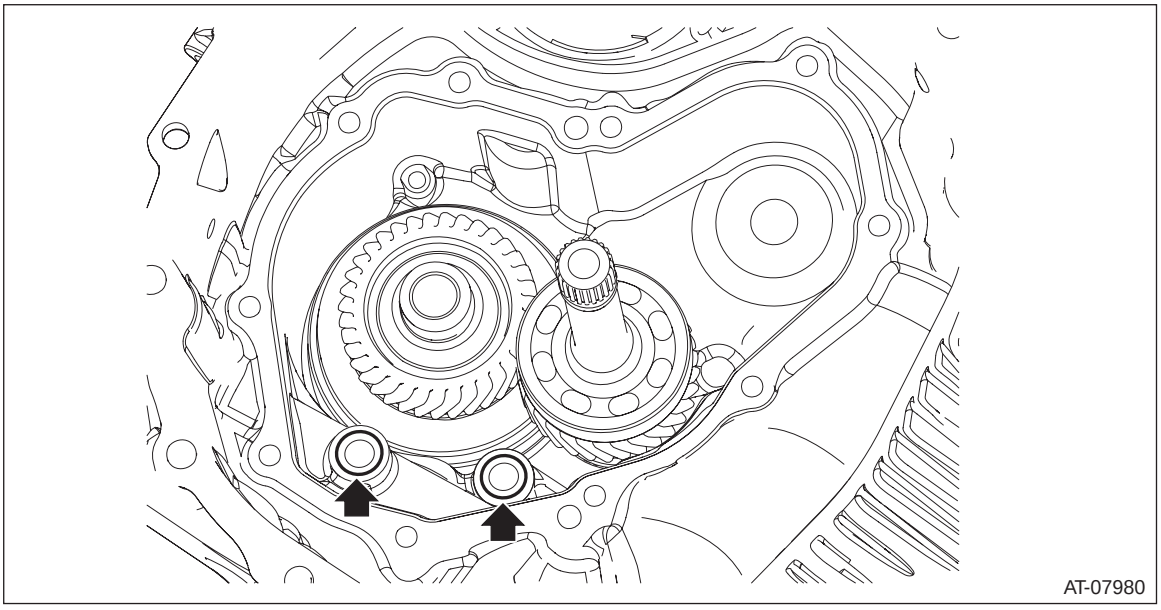
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-136, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-112, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-123, REMOVAL, Transmission Harness.>
5) Remove the extension case. <Ref. to CVT(TR690)-142, REMOVAL, Extension Case.>
6) Remove the rear drive shaft. <Ref. to CVT(TR690)-146, REMOVAL, Rear Drive Shaft.>
7) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-151, REMOVAL, Transfer Clutch.>
8) Remove the center differential carrier. <Ref. to CVT(TR690)-154, REMOVAL, Center Differential Carrier.>
9) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-158, REMOVAL, Transfer Reduction Driven Gear.>
10) Remove the intermediate case. <Ref. to CVT(TR690)-165, REMOVAL, Intermediate Case.>
11) Remove the forward clutch assembly. <Ref. to CVT(TR690)-181, REMOVAL, Forward Clutch Assembly.>
12) Remove the transmission case. <Ref. to CVT(TR690)-212, REMOVAL, Transmission Case.>
13) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-228, REMOVAL, Primary Pulley and Secondary Pulley.>
14) Remove the drive pinion shaft assembly. <Ref. to CVT(TR690)-244, REMOVAL, Drive Pinion Shaft Assembly.>
15) Remove the oil stopper plate and lubrication pipe.



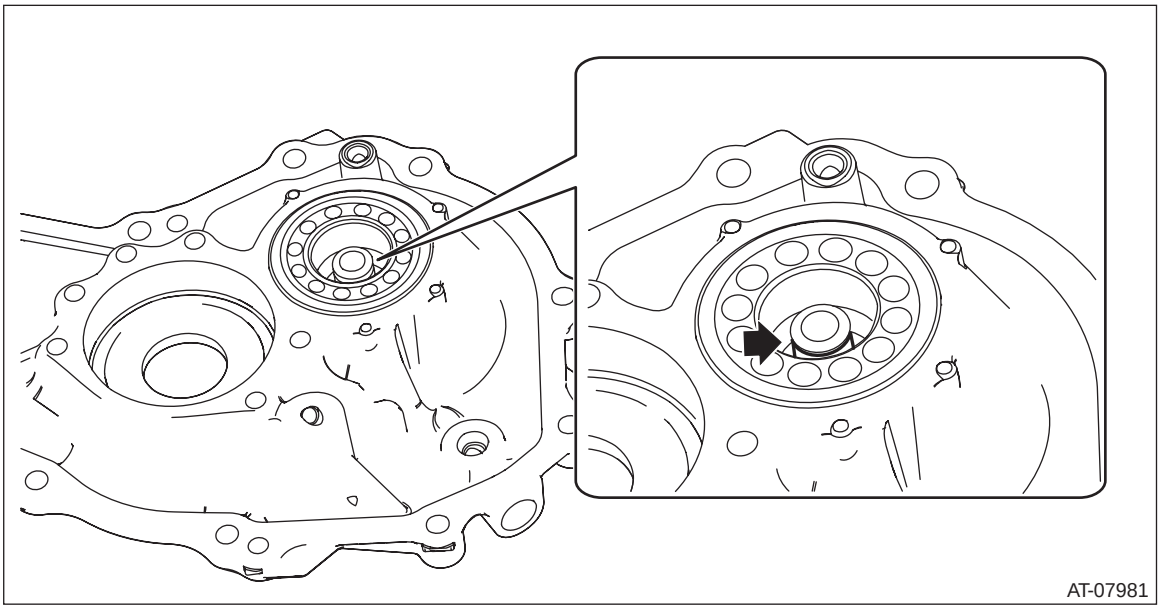
16) Flip over the converter case.
17) Remove the oil pump chain cover and the oil pump chain. <Ref. to CVT(TR690)-285, REMOVAL, Oil Pump Chain.>
18) Remove the converter case cover.



19) Remove the O-rings.

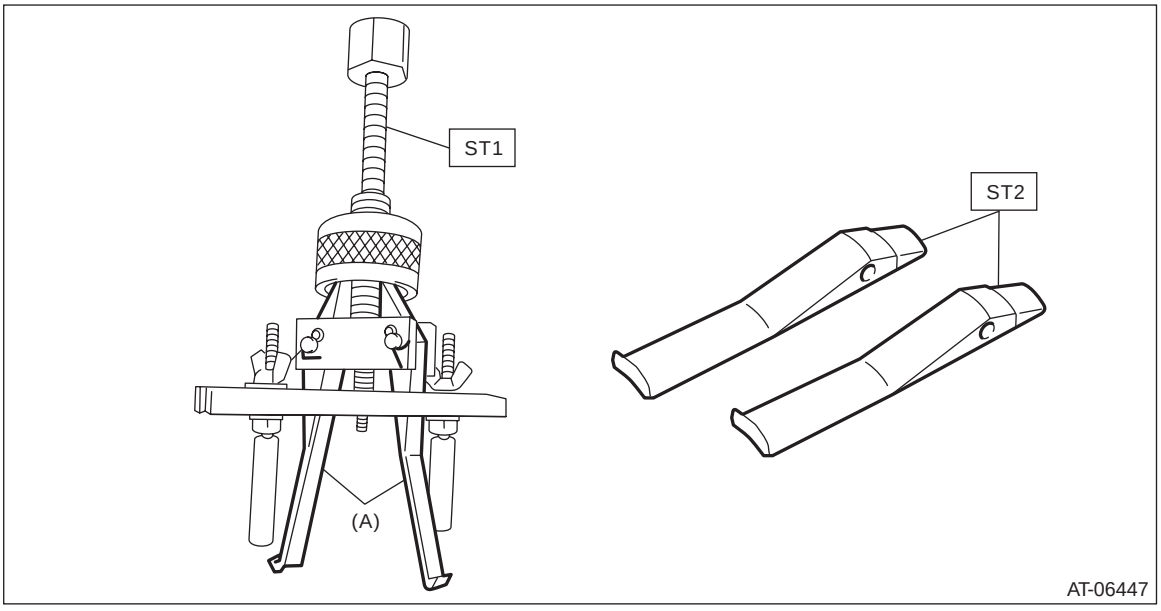


20) Remove the seal ring from converter case cover.



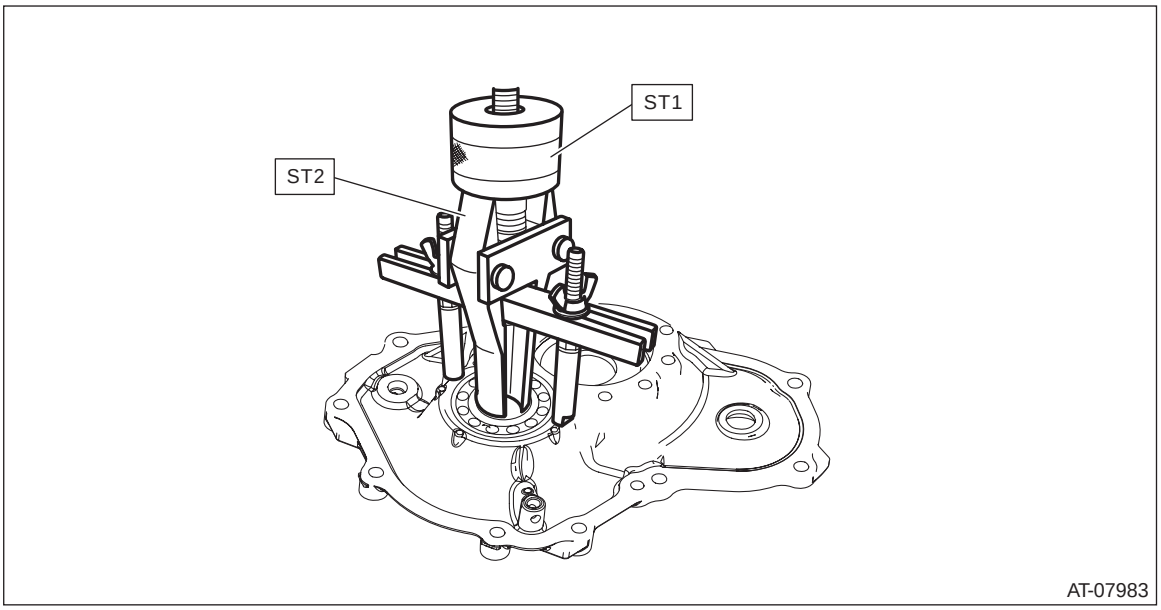
21) Using the ST, remove the ball bearing from the converter case cover.
(1) Remove the claw of ST1, and attach the claw of ST2.

ST1 398527700 PULLER ASSY
ST2 18760AA000 CLAW



(A) Claw

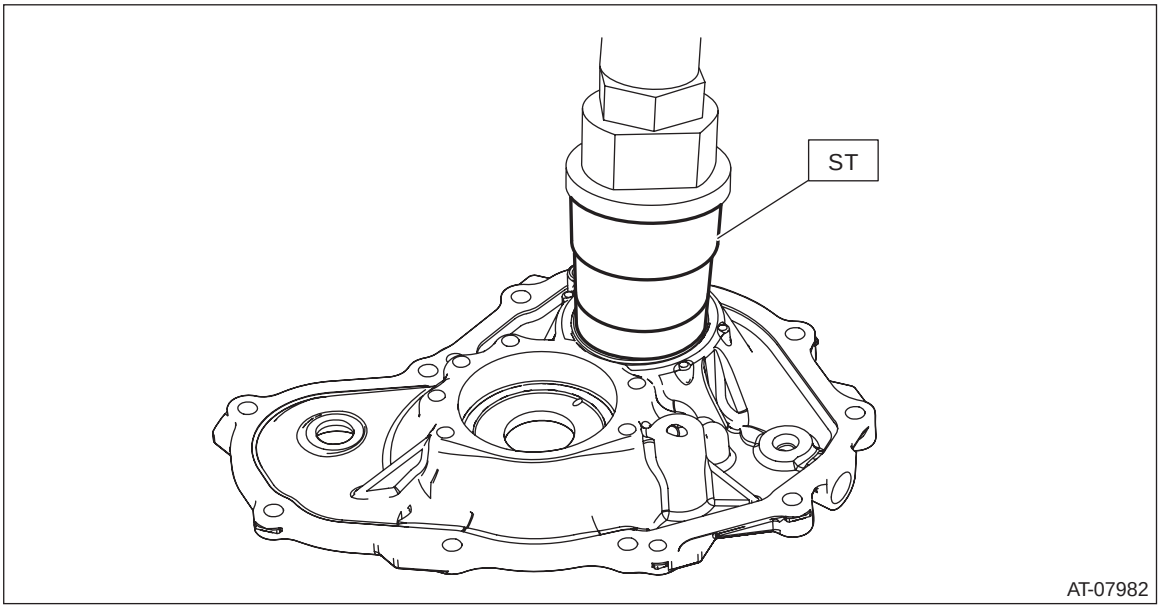
(2) Using the ST, remove the ball bearing from the converter case cover.
ST1 398527700 PULLER ASSY
ST2 18760AA000 CLAW



B: INSTALLATION

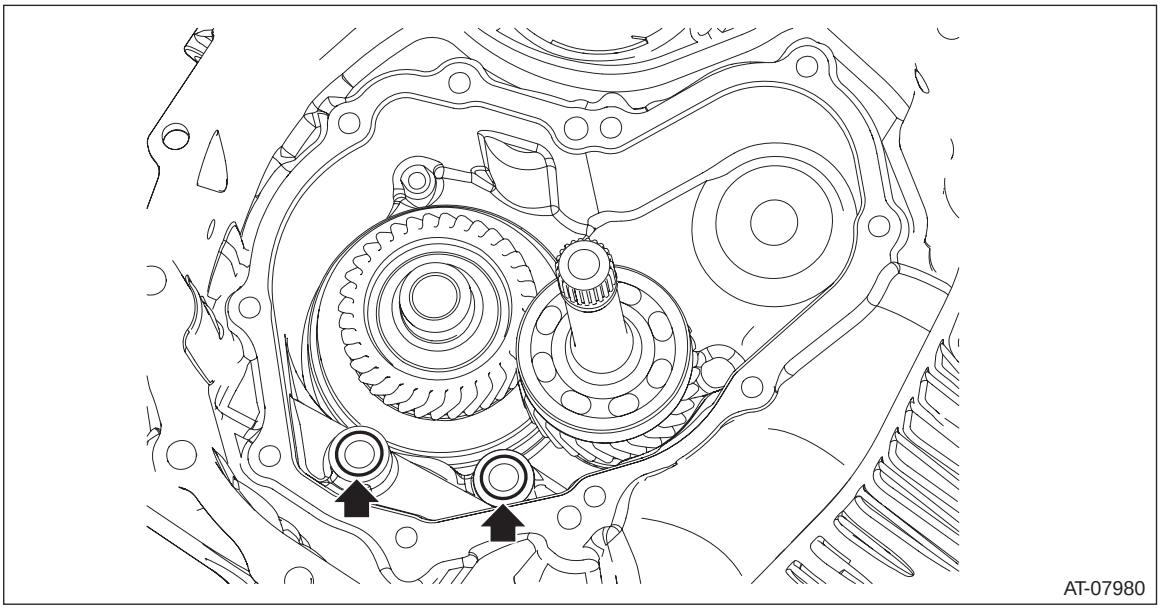
1) Clean the mating surface of converter case cover and converter case.
2) Adjust the shims of front reduction drive gear and front reduction driven gear. <Ref. to CVT(TR690)-308, ADJUSTMENT, Front Reduction Drive Gear.> <Ref. to CVT(TR690)-316, ADJUSTMENT, Front Reduction Driven Gear.>
3) Apply CVTF to the selected shims and install on the bearing catch surface of the front reduction driven gear.
4) Using the ST, install the ball bearing to the converter case cover.

NOTE:
Use a new ball bearing.
ST 499755602 PRESS SNAP RING



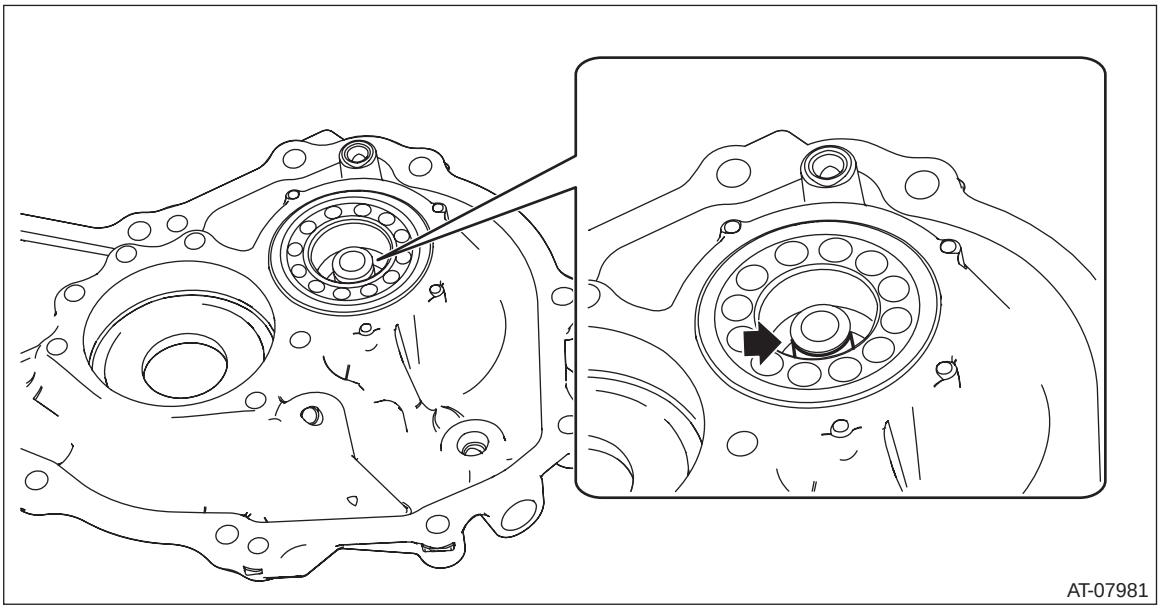
5) Install the O-rings.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.



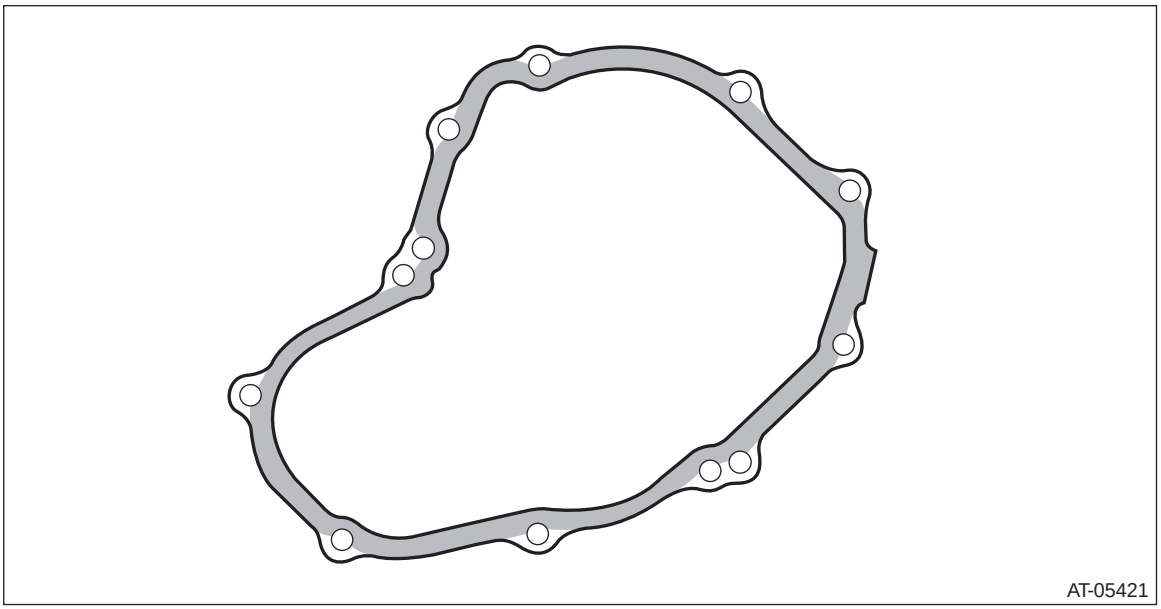
6) Apply CVTF to the selected shims and install on the bearing catch surface of the front reduction drive gear.
7) Install the seal ring to converter case cover.

NOTE:
- Use new seal rings.
- When installing the seal rings, do not expand the seal rings too much.



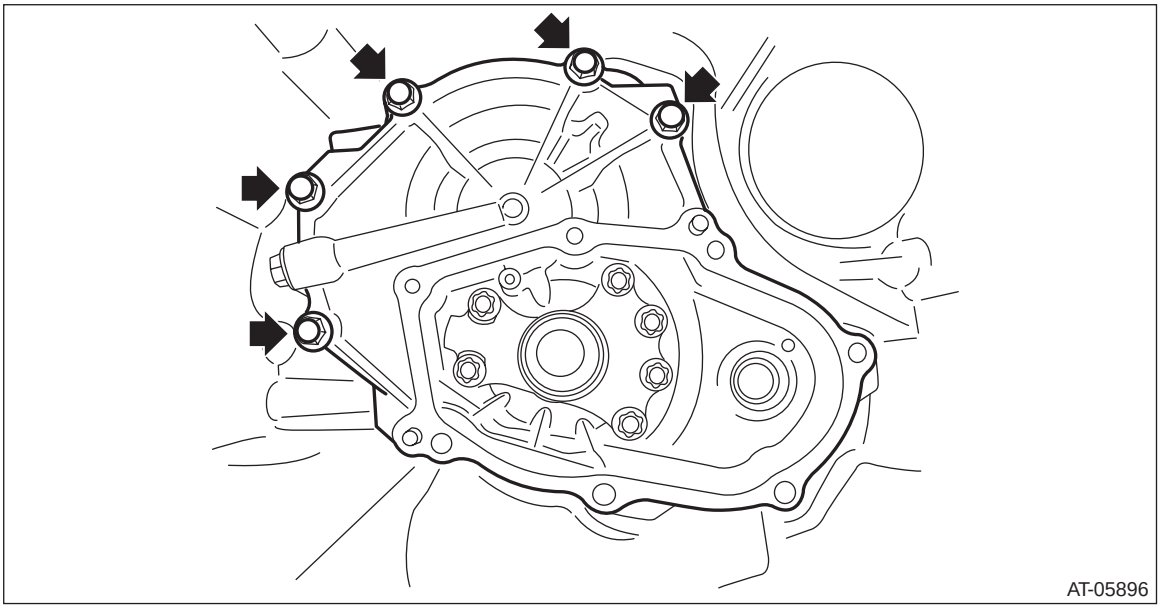
8) Apply liquid gasket seamlessly to the mating surface of converter case cover.

Liquid gasket:
THREE BOND 1215B or equivalent



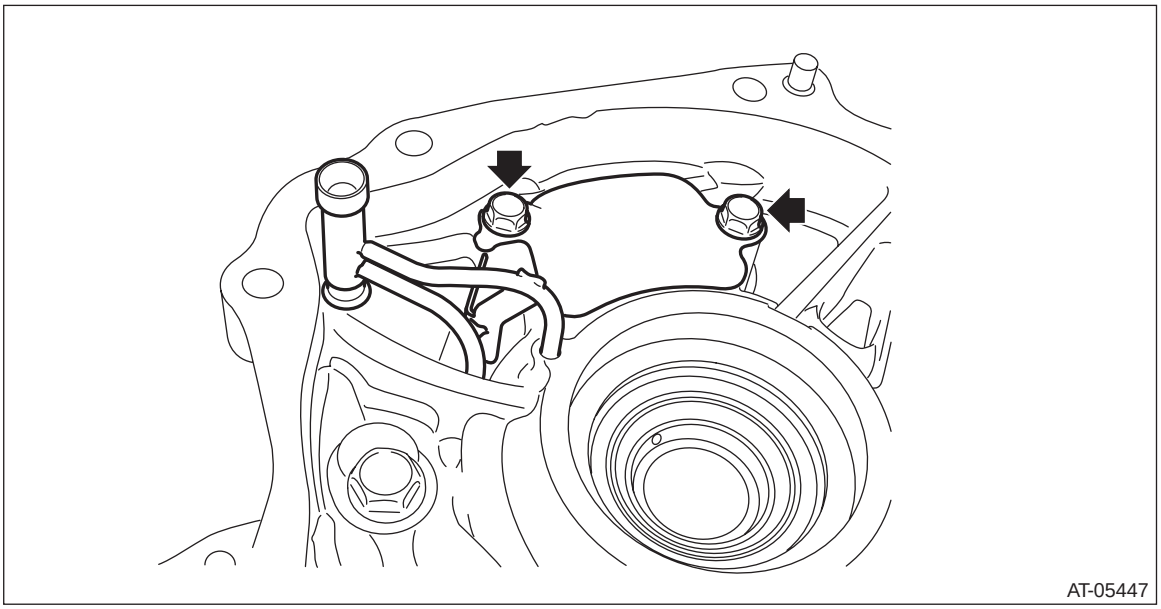
9) Install the converter case cover.

Tightening torque:
24 N·m (2.4 kgf-m, 17.7 ft-lb)



10) Install the oil pump chain cover and the oil pump chain. <Ref. to CVT(TR690)-287, INSTALLATION, Oil Pump Chain.>
11) Flip over the converter case cover.
12) Install the oil stopper plate and lubrication pipe.

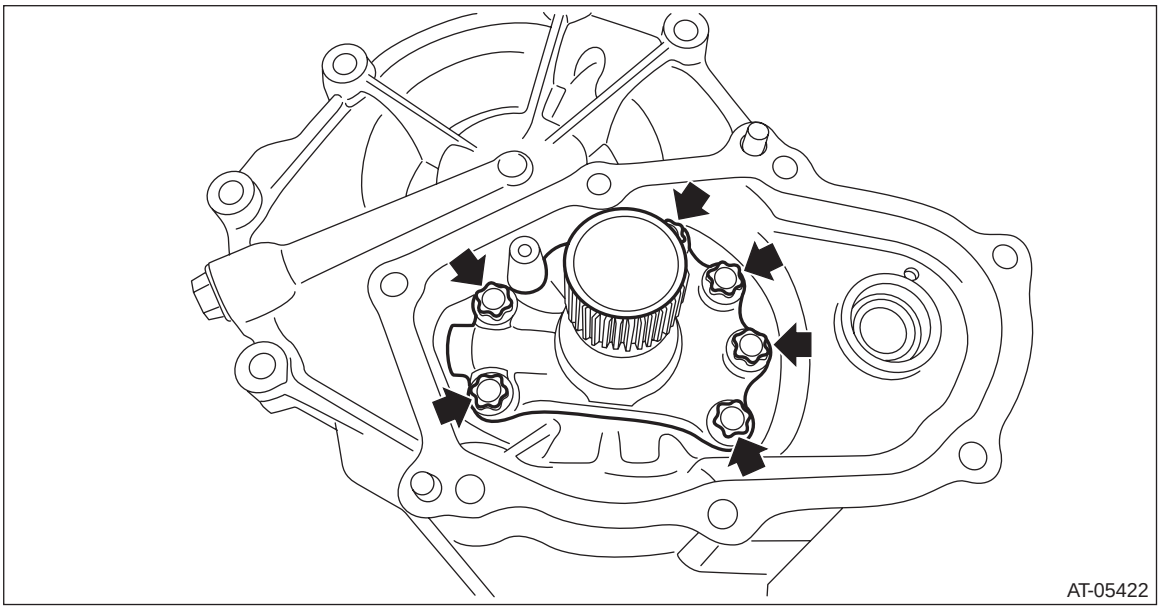
Tightening torque:
9 N·m (0.9 kgf-m, 6.6 ft-lb)



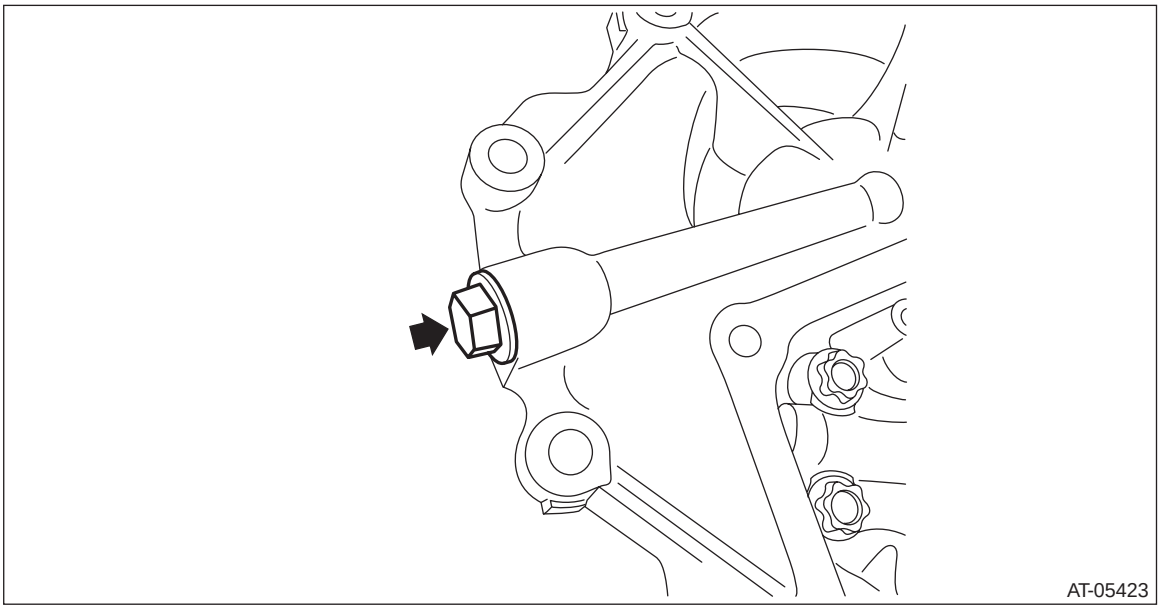
13) Install the drive pinion shaft assembly. <Ref. to CVT(TR690)-246, INSTALLATION, Drive Pinion Shaft Assembly.>
14) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-232, INSTALLATION, Primary Pulley and Secondary Pulley.>
15) Install the transmission case. <Ref. to CVT(TR690)-214, INSTALLATION, Transmission Case.>
16) Install the forward clutch assembly. <Ref. to CVT(TR690)-182, INSTALLATION, Forward Clutch Assembly.>
17) Install the intermediate case. <Ref. to CVT(TR690)-166, INSTALLATION, Intermediate Case.>
18) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-158, INSTALLATION, Transfer Reduction Driven Gear.>
19) Install the center differential carrier. <Ref. to CVT(TR690)-155, INSTALLATION, Center Differential Carrier.>
20) Install the transfer clutch assembly. <Ref. to CVT(TR690)-151, INSTALLATION, Transfer Clutch.>
21) Install the rear drive shaft. <Ref. to CVT(TR690)-146, INSTALLATION, Rear Drive Shaft.>
22) Install the extension case. <Ref. to CVT(TR690)-143, INSTALLATION, Extension Case.>
23) Install the transmission harness. <Ref. to CVT(TR690)-125, INSTALLATION, Transmission Harness.>
24) Install the control valve body and oil pan. <Ref. to CVT(TR690)-116, INSTALLATION, Control Valve Body.>
25) Install the air breather hose. <Ref. to CVT(TR690)-136, INSTALLATION, Air Breather Hose.>
26) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Using ST, remove the center support COMPL.
ST 18270KA010 SOCKET (E16)



2) Remove the plug and O-ring.

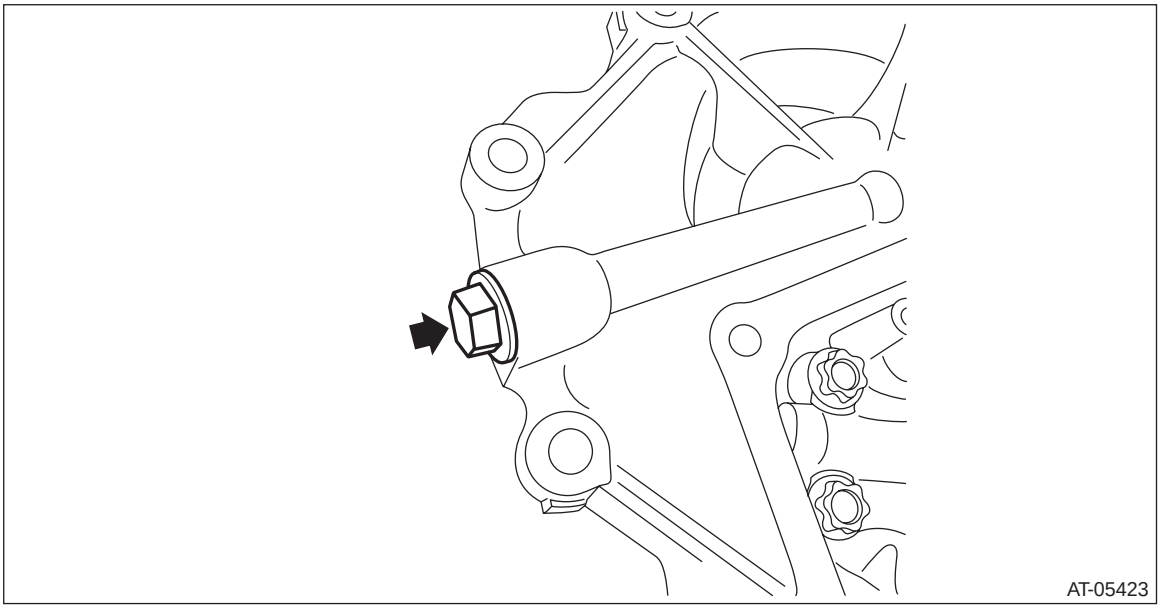


D: ASSEMBLY

1) Install the plugs.

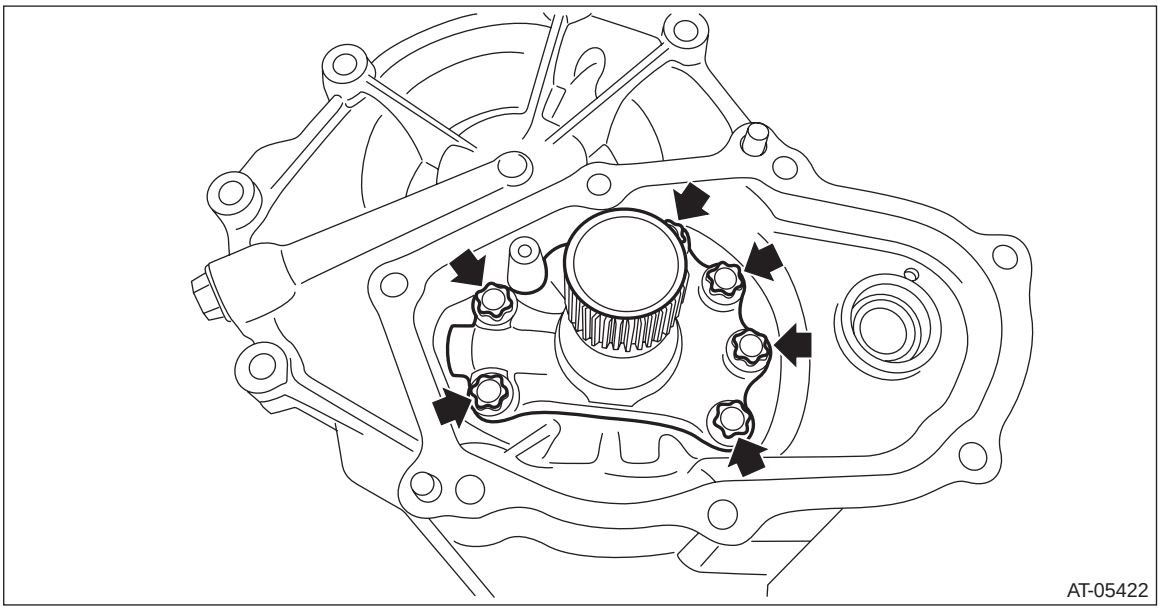
NOTE:
- Use new O-rings.
- Apply CVTF to the O-ring.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



2) Using ST, install the center support COMPL.
ST 18270KA010 SOCKET (E16)

Tightening torque:
21.5 N·m (2.2 kgf-m, 15.9 ft-lb)



E: INSPECTION

- Check for leakage of CVTF from the connection between converter case and converter case cover.
- Check there is no damage or cracks on the converter case cover.

F: ADJUSTMENT

When replacing the converter case cover, select the following shims.

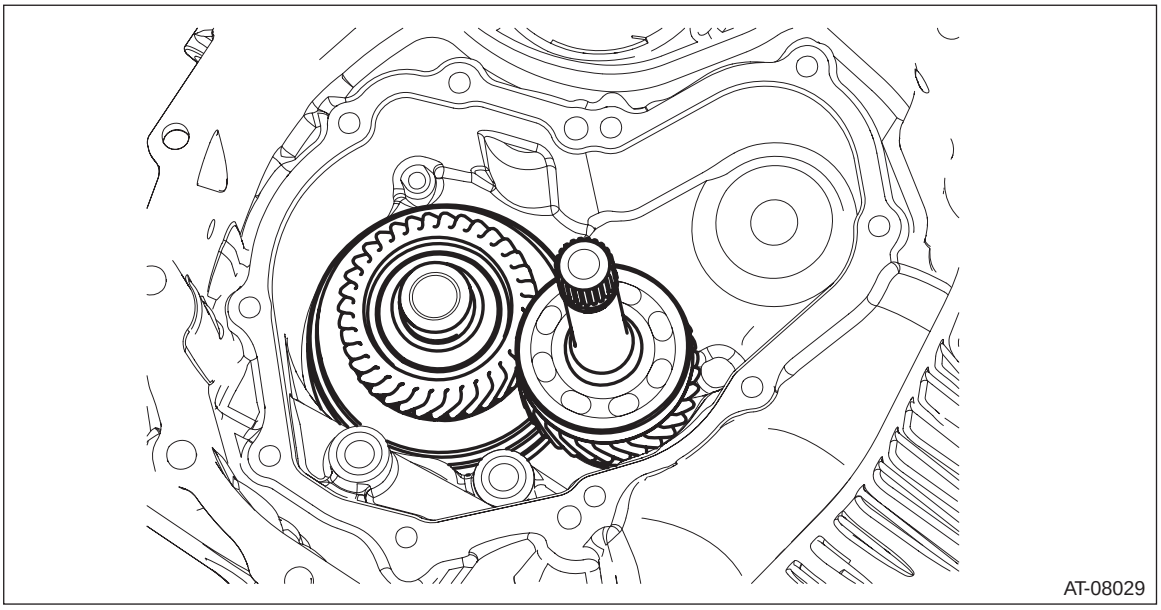
- Select the shim for front reduction drive gear. <Ref. to CVT(TR690)-308, ADJUSTMENT, Front Reduction Drive Gear.>
- Select the shim for front reduction driven gear. <Ref. to CVT(TR690)-316, ADJUSTMENT, Front Reduction Driven Gear.>

48.Front Reduction Drive Gear

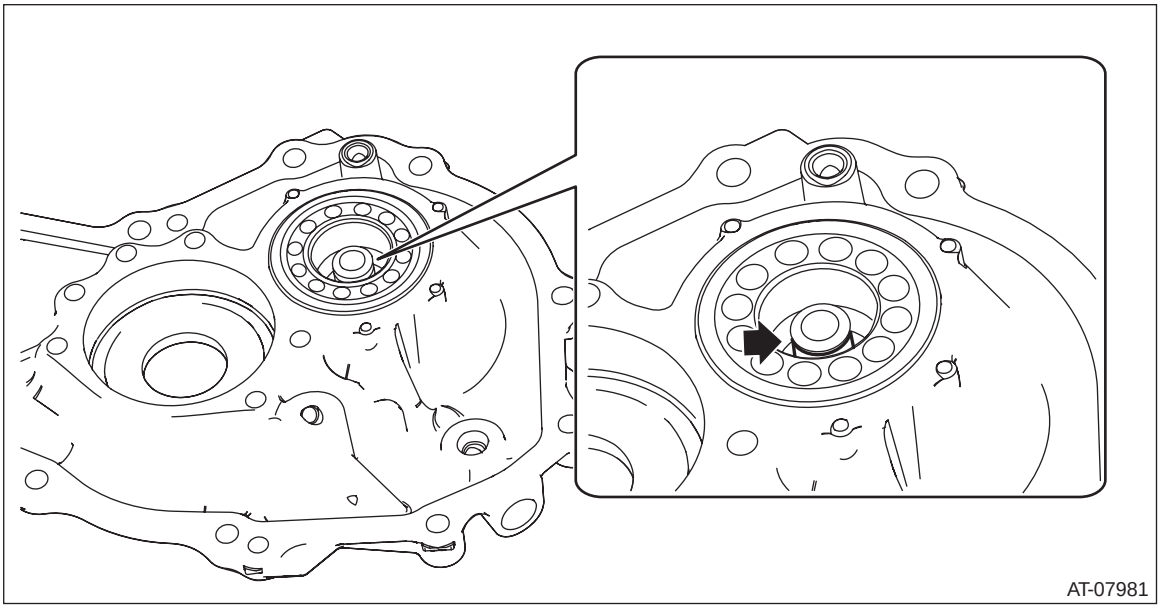
A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-136, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-112, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-123, REMOVAL, Transmission Harness.>
5) Remove the primary speed sensor. <Ref. to CVT(TR690)-102, REMOVAL, Primary Speed Sensor.>
6) Remove the extension case. <Ref. to CVT(TR690)-142, REMOVAL, Extension Case.>
7) Remove the rear drive shaft. <Ref. to CVT(TR690)-146, REMOVAL, Rear Drive Shaft.>
8) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-151, REMOVAL, Transfer Clutch.>
9) Remove the center differential carrier. <Ref. to CVT(TR690)-154, REMOVAL, Center Differential Carrier.>
10) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-158, REMOVAL, Transfer Reduction Driven Gear.>
11) Remove the intermediate case. <Ref. to CVT(TR690)-165, REMOVAL, Intermediate Case.>
12) Remove the forward clutch assembly. <Ref. to CVT(TR690)-181, REMOVAL, Forward Clutch Assembly.>
13) Remove the transmission case. <Ref. to CVT(TR690)-212, REMOVAL, Transmission Case.>
14) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-228, REMOVAL, Primary Pulley and Secondary Pulley.>
15) Remove the drive pinion shaft assembly. <Ref. to CVT(TR690)-244, REMOVAL, Drive Pinion Shaft Assembly.>
16) Remove the converter case cover. <Ref. to CVT(TR690)-292, REMOVAL, Converter Case Cover.>
17) Remove the front reduction drive gear and front reduction driven gear together.

NOTE:
Remove the front reduction driven shaft while holding it.



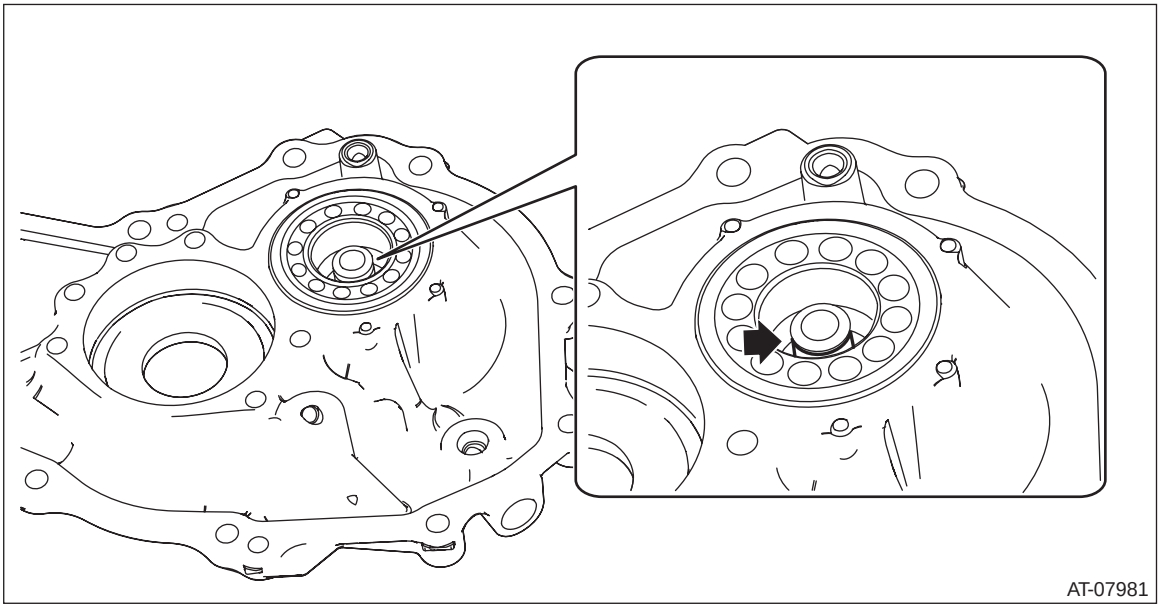
18) Remove the shims of the front reduction driven gear from the converter case.
19) Remove the seal rings.



B: INSTALLATION

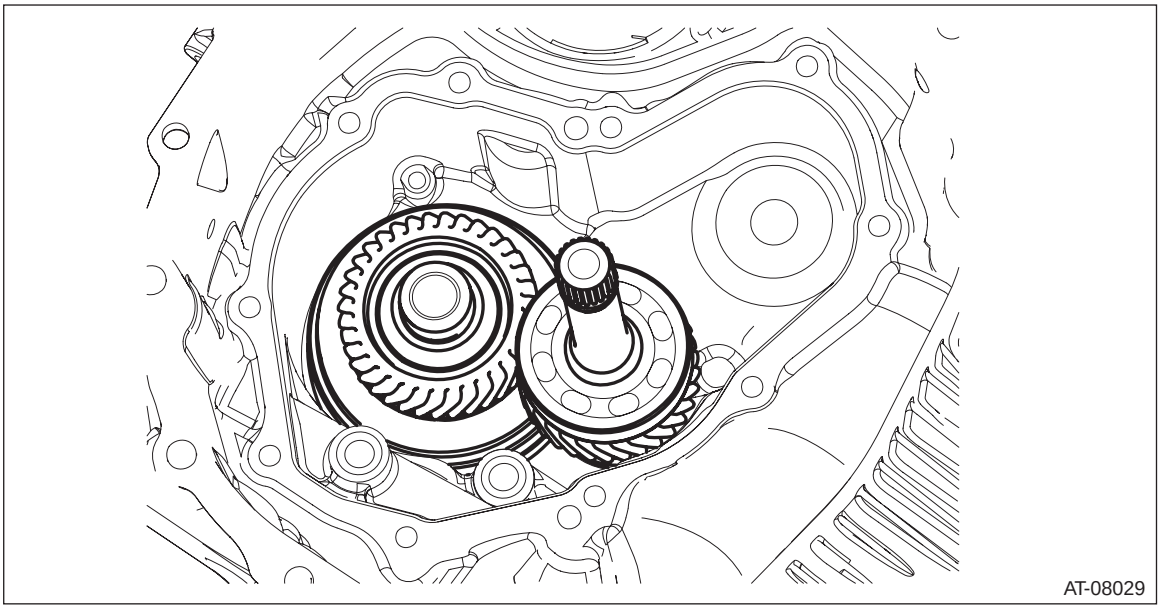
1) Clean the mating surface of converter case cover and converter case.
2) Select the shim for front reduction drive gear. <Ref. to CVT(TR690)-308, ADJUSTMENT, Front Reduction Drive Gear.>
3) Apply CVTF to the shims and install on the bearing catch surface of the front reduction driven gear.
4) Install the seal ring to converter case cover.

NOTE:
- Use new seal rings.
- When installing the seal rings, do not expand the seal rings too much.



5) Install the front reduction drive gear and front reduction driven gear together.

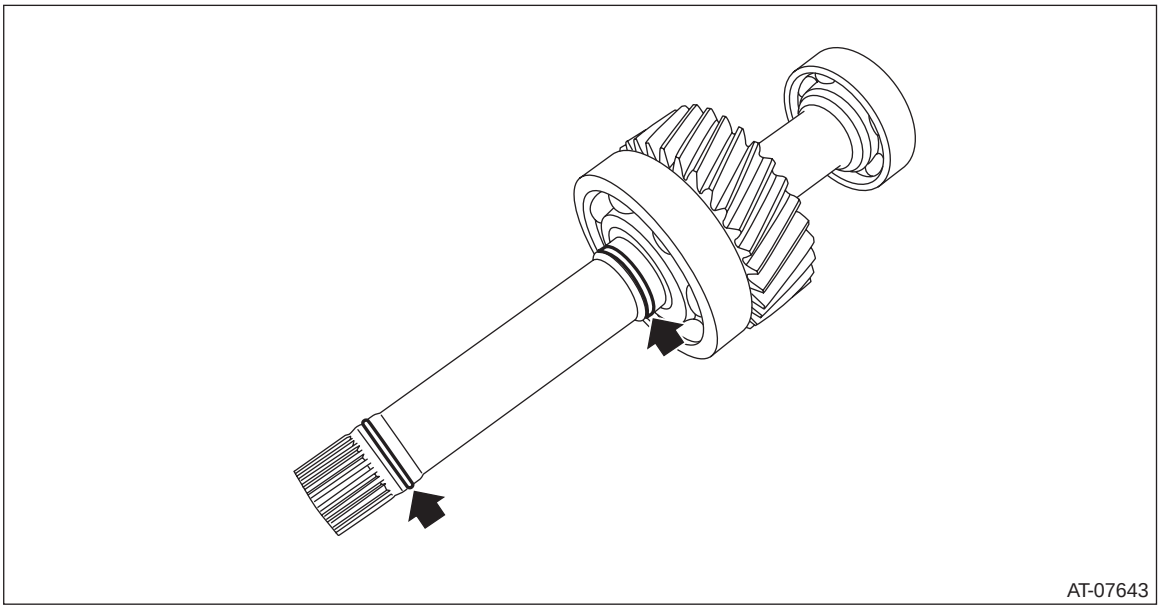
CAUTION:
Be careful not to detach the spline of input clutch and the spline of front reduction driven shaft.



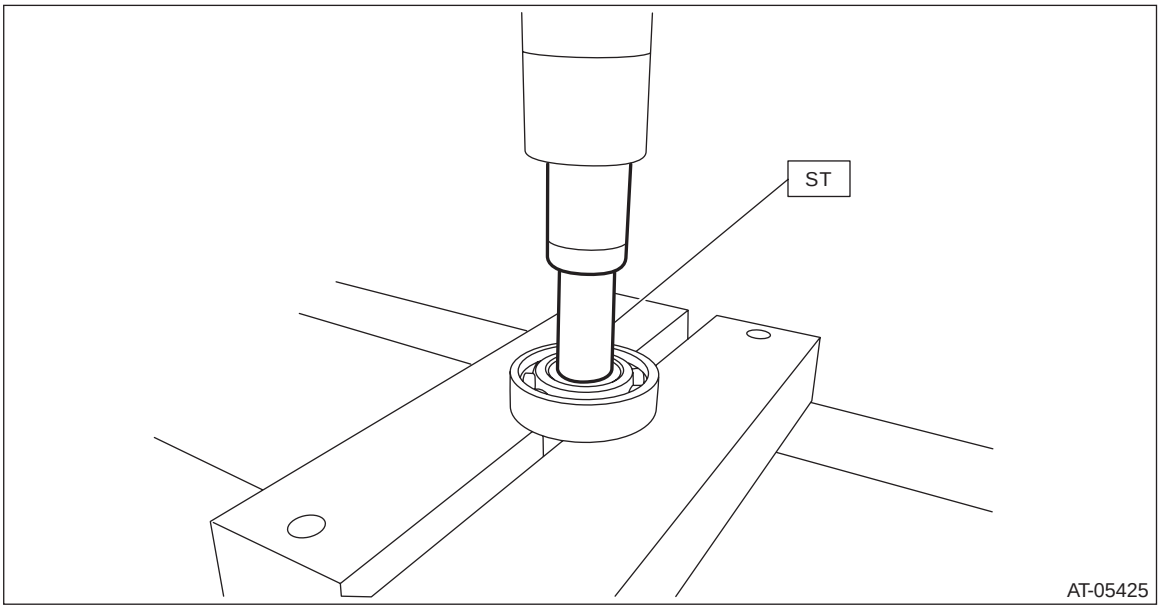
6) Install the converter case cover. <Ref. to CVT(TR690)-295, INSTALLATION, Converter Case Cover.>
7) Install the drive pinion shaft assembly. <Ref. to CVT(TR690)-246, INSTALLATION, Drive Pinion Shaft Assembly.>
8) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-232, INSTALLATION, Primary Pulley and Secondary Pulley.>
9) Install the transmission case. <Ref. to CVT(TR690)-214, INSTALLATION, Transmission Case.>
10) Install the forward clutch assembly. <Ref. to CVT(TR690)-182, INSTALLATION, Forward Clutch Assembly.>
11) Install the intermediate case. <Ref. to CVT(TR690)-166, INSTALLATION, Intermediate Case.>
12) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-158, INSTALLATION, Transfer Reduction Driven Gear.>
13) Install the center differential carrier. <Ref. to CVT(TR690)-155, INSTALLATION, Center Differential Carrier.>
14) Install the transfer clutch assembly. <Ref. to CVT(TR690)-151, INSTALLATION, Transfer Clutch.>
15) Install the rear drive shaft. <Ref. to CVT(TR690)-146, INSTALLATION, Rear Drive Shaft.>
16) Install the extension case. <Ref. to CVT(TR690)-143, INSTALLATION, Extension Case.>
17) Install the primary speed sensor. <Ref. to CVT(TR690)-103, INSTALLATION, Primary Speed Sensor.>
18) Install the transmission harness. <Ref. to CVT(TR690)-125, INSTALLATION, Transmission Harness.>
19) Install the control valve body and oil pan. <Ref. to CVT(TR690)-116, INSTALLATION, Control Valve Body.>
20) Install the air breather hose. <Ref. to CVT(TR690)-136, INSTALLATION, Air Breather Hose.>
21) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

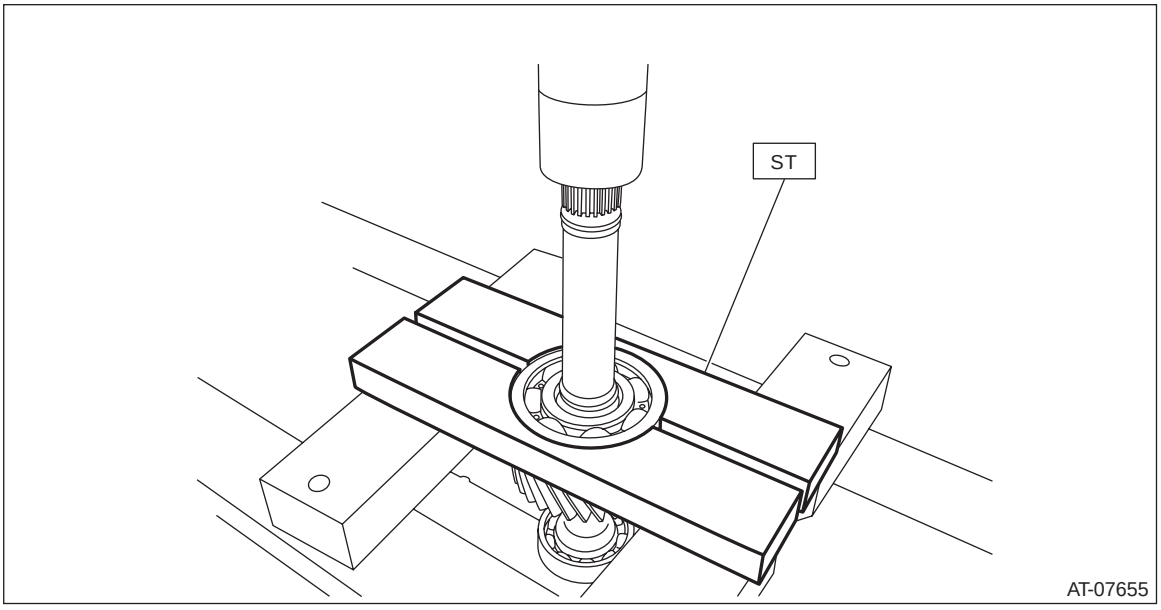
1) Remove the seal ring and O-ring.



2) Using the ST, remove the ball bearing from front reduction drive gear.
ST 899864100 REMOVER



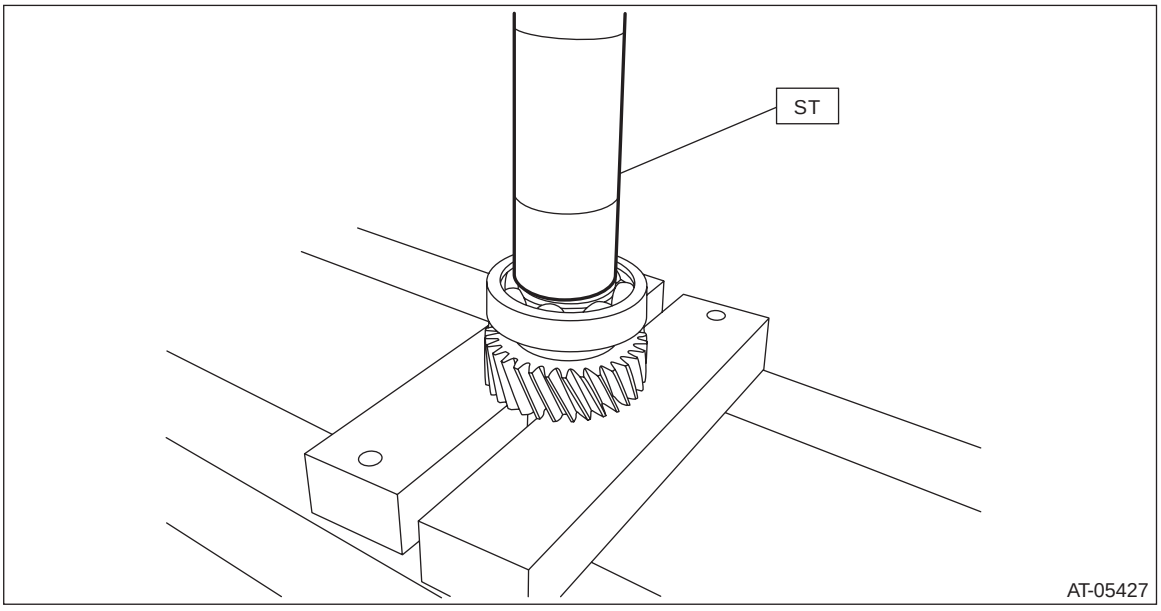
3) Using the ST, remove the ball bearing from front reduction drive gear.
ST 498077000 REMOVER



D: ASSEMBLY

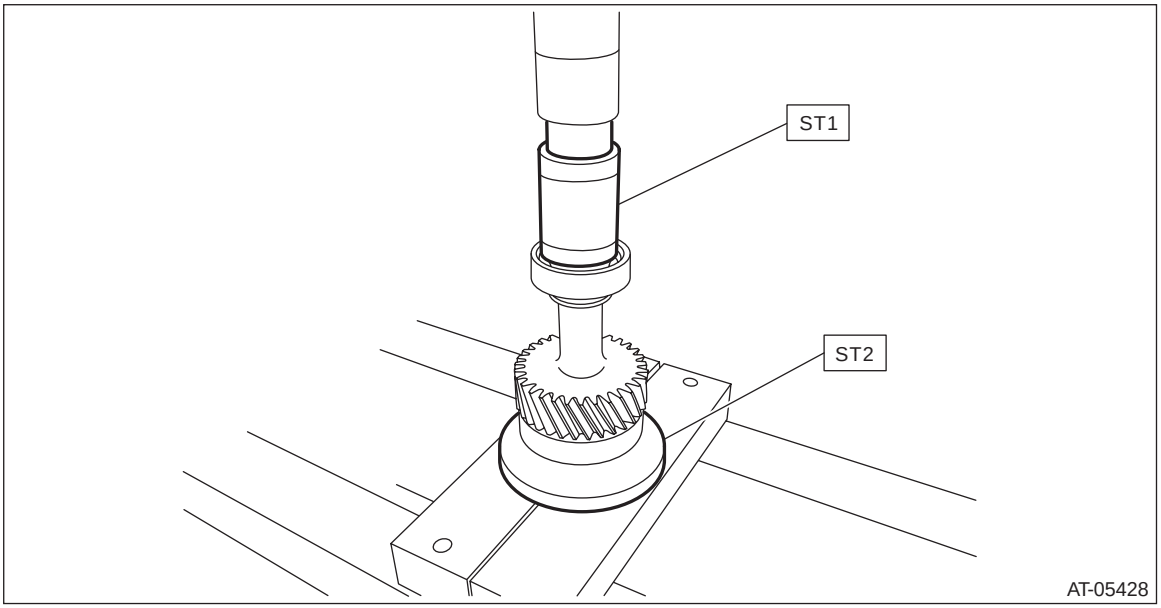
1) Using the ST, install the ball bearing to front reduction drive gear.

NOTE:
Use a new ball bearing.
ST 18651AA000 INSTALLER



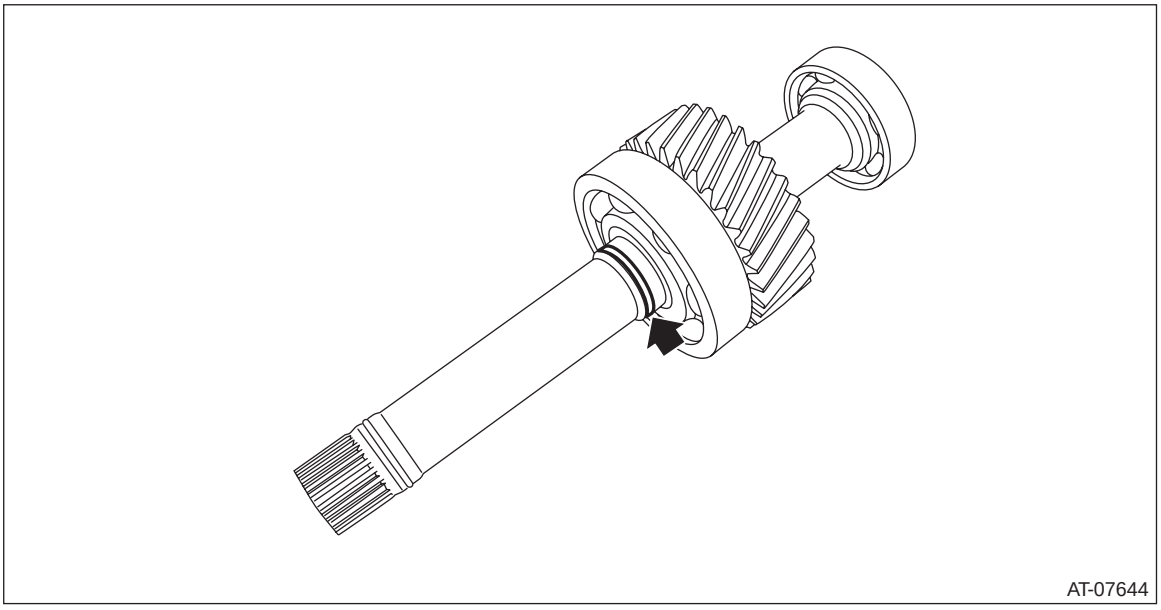
2) Using ST1 and ST2, install the ball bearing to front reduction drive gear.

NOTE:
Use a new ball bearing.
ST1 499757002 PRESS SNAP RING
ST2 398177700 INSTALLER



3) Install the seal ring.

NOTE:
- Use a new seal ring.
- When installing the seal ring, do not expand the seal ring too much.
- Install the O-ring when installing the torque converter assembly.

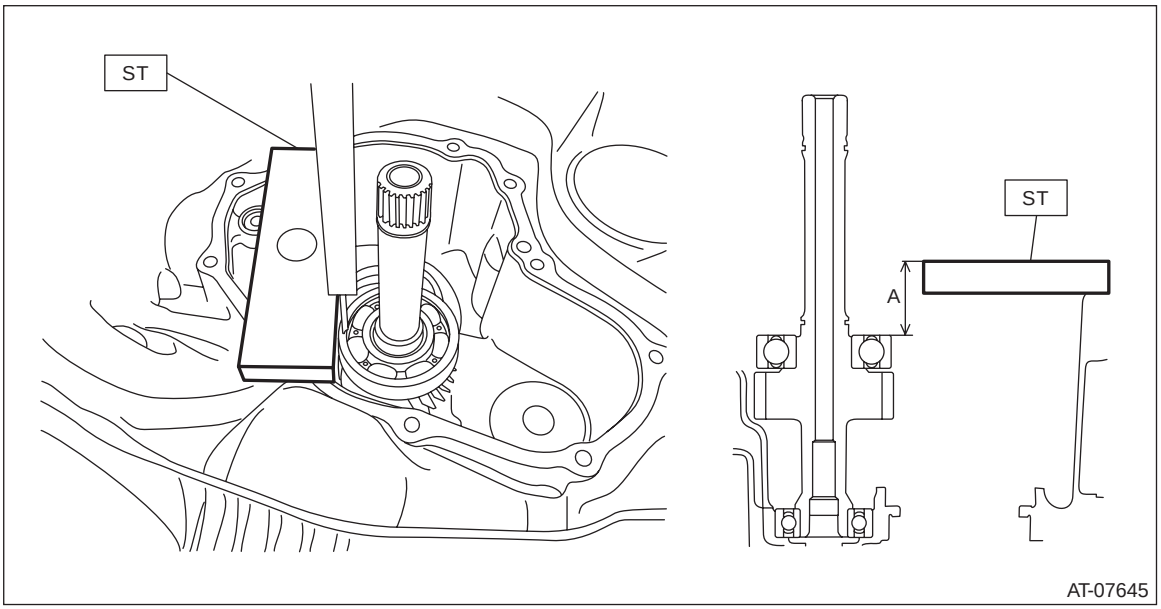


E: INSPECTION

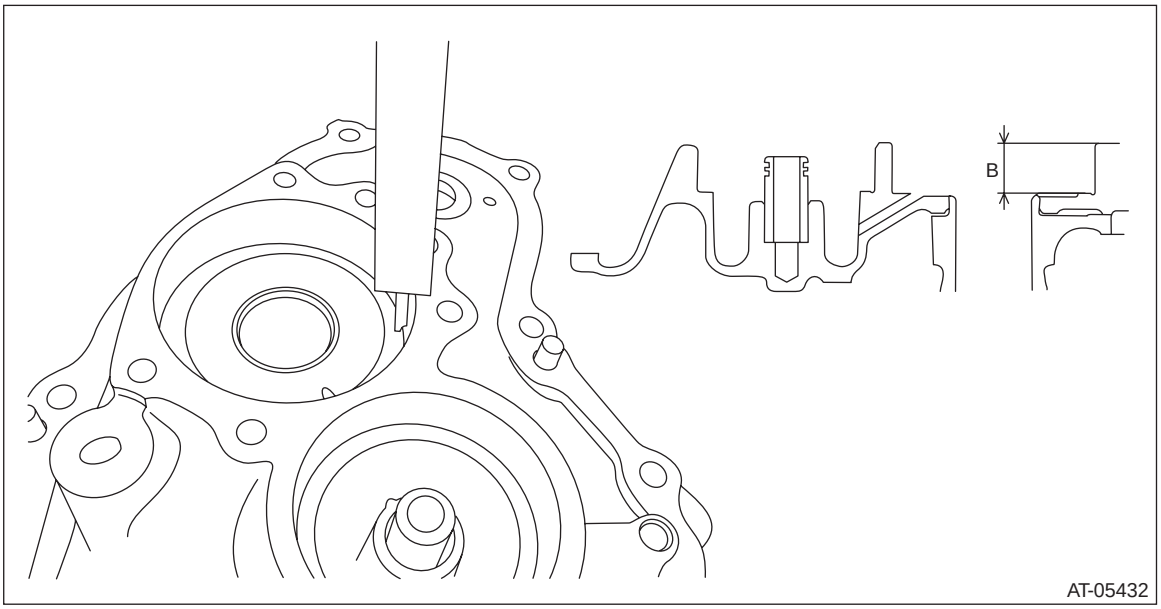
- Replace if its tooth surfaces are broken, damaged or excessively worn.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.

F: ADJUSTMENT

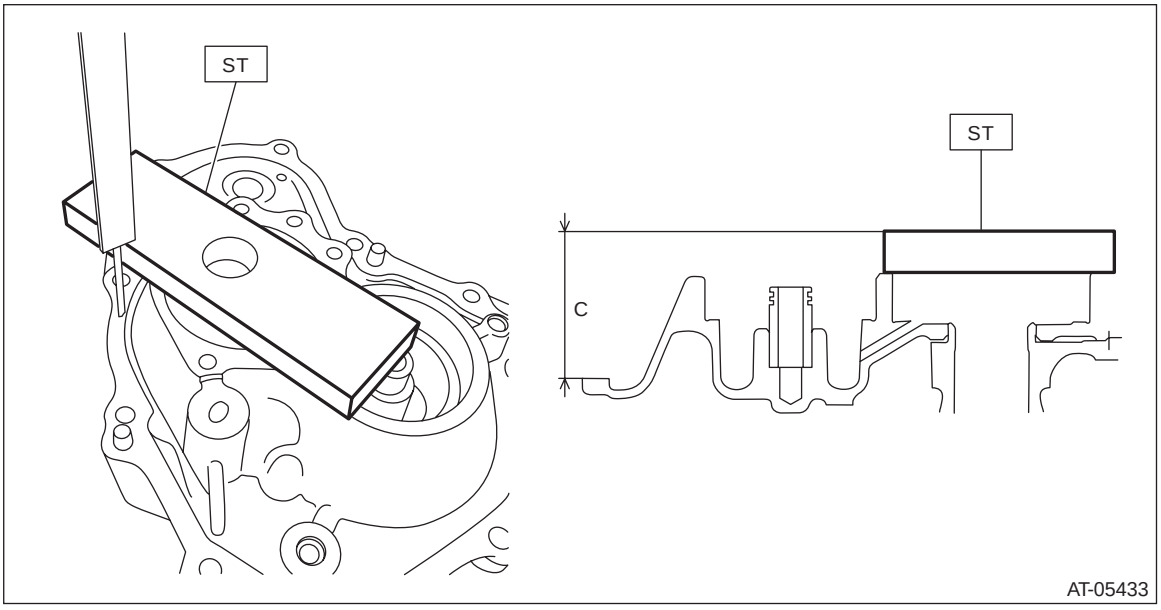
1) Measure height “A” from the ST upper face to the bearing end face using the ST.
ST 398643600 GAUGE



2) Measure depth “B” from the converter case cover upper face to the bearing catch surface.



3) Using the ST, measure height “C” from the ST upper face to the converter case cover mating surface.
ST 398643600 GAUGE



4) Using the following formula, calculate clearance “T” to select shims.
Calculation formula:
T mm = (A – 15) – ((C – 15) – B)
[T in = (A – 0.591) – ((C – 0.591) – B)]
T: Clearance
A: Depth from the ST upper face to the bearing end surface
B: Depth from the converter case cover upper face to the bearing catch surface
C: Height from the ST upper face to the converter case cover mating surface
15 mm (0.591 in): Thickness of ST

Clearance “T” mm (in)	Thickness of shim mm (in)	Part No.
1.070 — 1.174 (0.042 — 0.045)	1.0 (0.039)	31288AA160
1.175 — 1.274 (0.046 — 0.049)	1.1 (0.043)	31288AA170
1.275 — 1.374 (0.050 — 0.053)	1.2 (0.047)	31288AA180
1.375 — 1.474 (0.054 — 0.057)	1.3 (0.051)	31288AA220
1.475 — 1.580 (0.058 — 0.062)	1.4 (0.055)	31288AA230

49.Front Reduction Driven Gear

A: REMOVAL

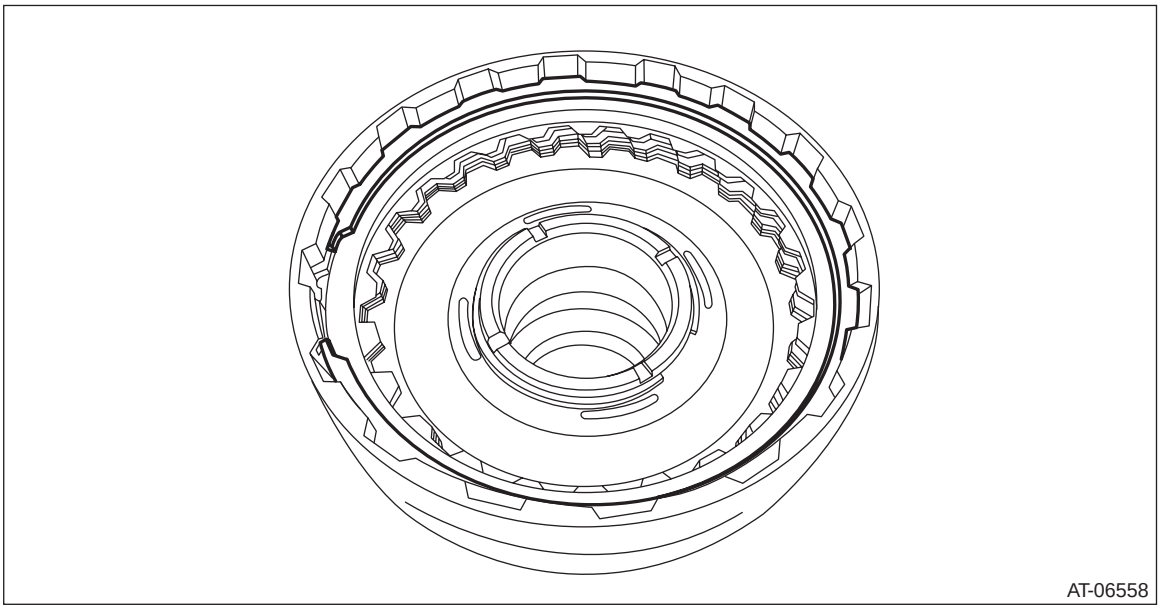
NOTE:
For removal of front reduction driven gear, refer to the “Front Reduction Drive Gear”. <Ref. to CVT(TR690)-302, REMOVAL, Front Reduction Drive Gear.>

B: INSTALLATION

NOTE:
For installation of front reduction driven gear, refer to the “Front Reduction Drive Gear”. <Ref. to CVT(TR690)-303, INSTALLATION, Front Reduction Drive Gear.>

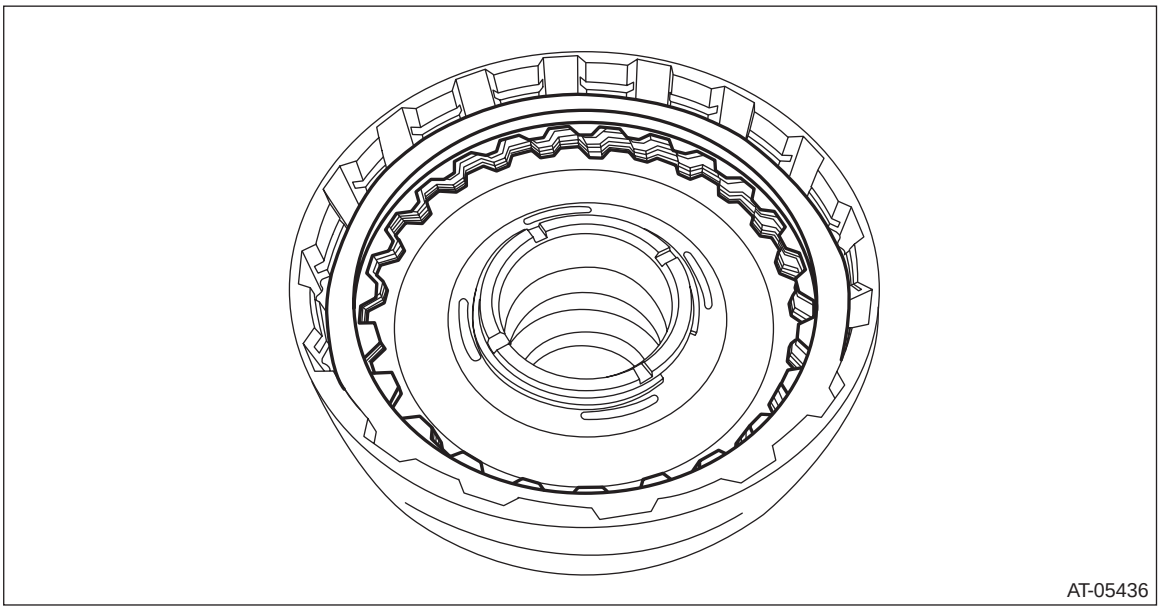
C: DISASSEMBLY

1) Remove the front reduction driven shaft from the front reduction driven gear.
2) Remove the snap ring.



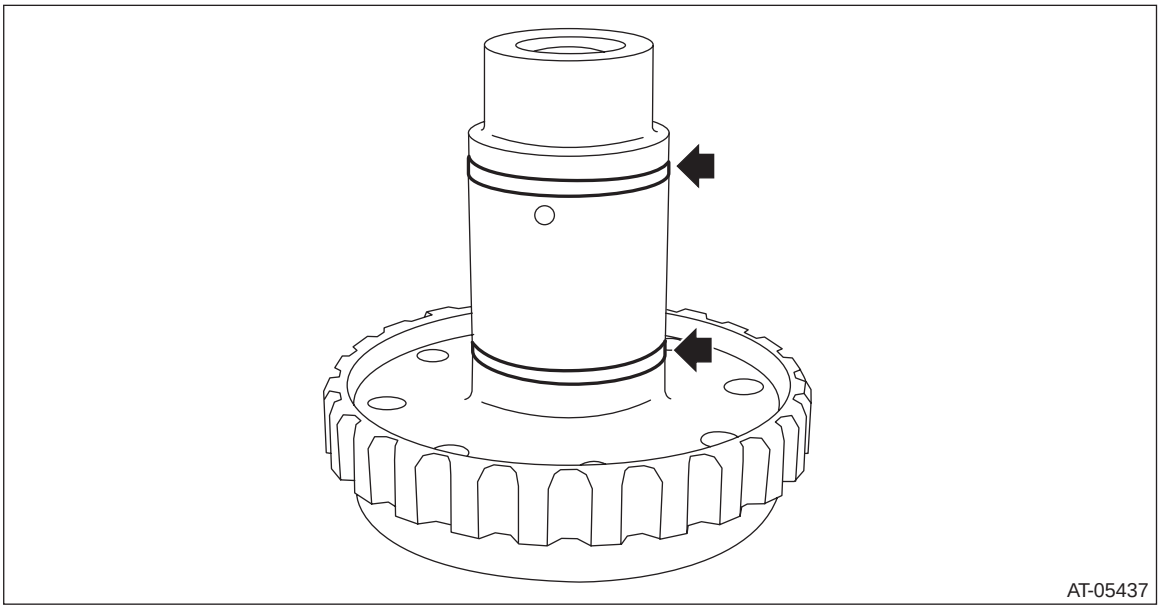
AT-06558

3) Remove the retaining plate, drive plate, driven plate and dish plate.

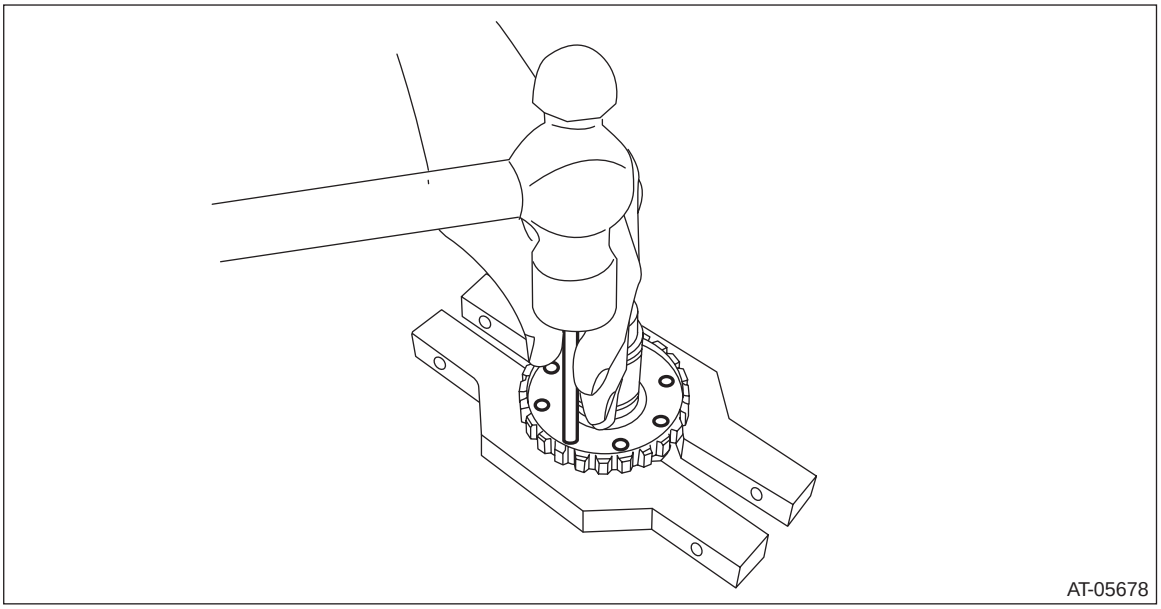


AT-05436

4) Remove the seal ring from front reduction driven shaft.



5) Remove the ball bearing, while tapping the entire circumference around the ball bearing outer race a little at a time through the front reduction driven shaft hole using the round bar with diameter of 7 mm (0.28 in).



D: ASSEMBLY

1) Place the dish plate, driven plate, drive plate and retaining plate neatly in this order on surface table.

NOTE:
Make sure of the direction of dish plate.

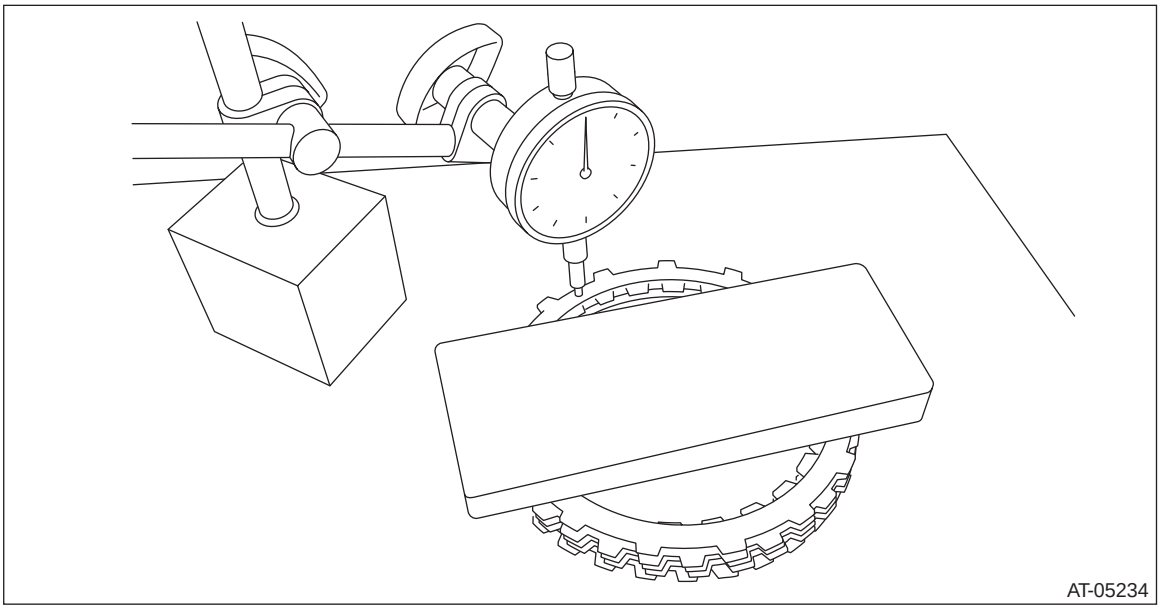
2) Set the dial gauge to retaining plate, and read its scale.

NOTE:
The value, which is read in the gauge at this time, is zero point.

3) Scale and record the weight “Z” of a flat board which will be put on retaining plate.

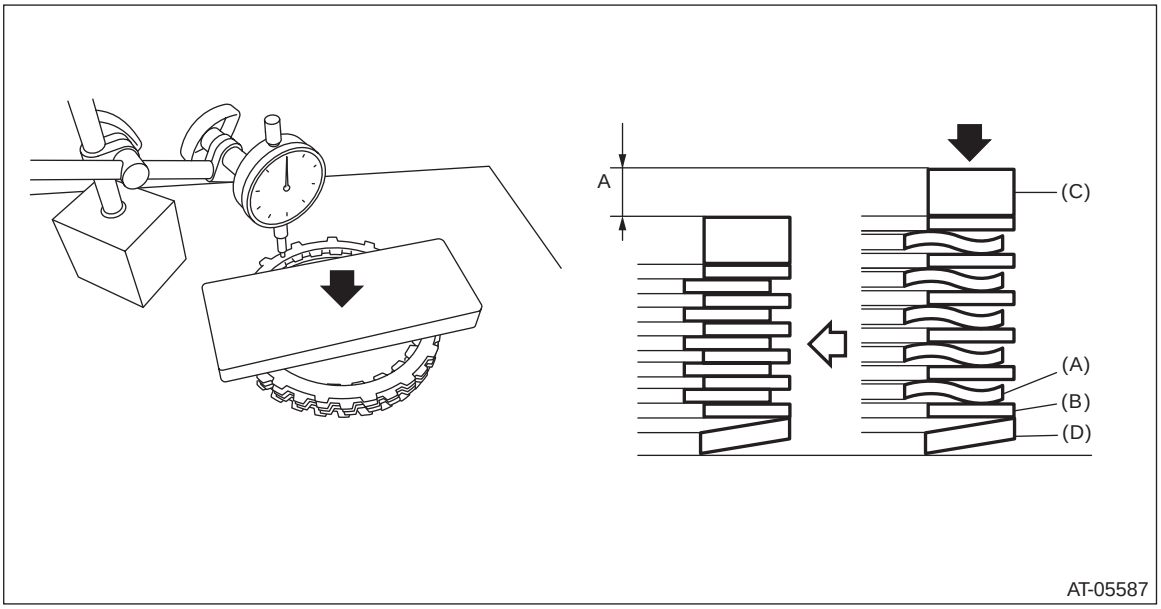
NOTE:
- Use a stiff board which does not bend against load as a flat board to be put on retaining plate.
- Use a flat board weighing less than 130 N (13.3 kgf, 29.2 lb).

4) Put the flat board on retaining plate.



5) Using the following formula, calculate load “N”, a force of pressing with push/pull gauge.
N = 130N (13.3 kgf, 29.2 kg) – Z
130 N (13.3 kgf, 29.2 lb) : Load applied to clutch plate
Z: Flat board weight
6) Press the center of retaining plate by applying a force of “N” using push/pull gauge, and then measure and record the compression amount “A”.

NOTE:
Measure at four points with a 90° interval and calculate the average.



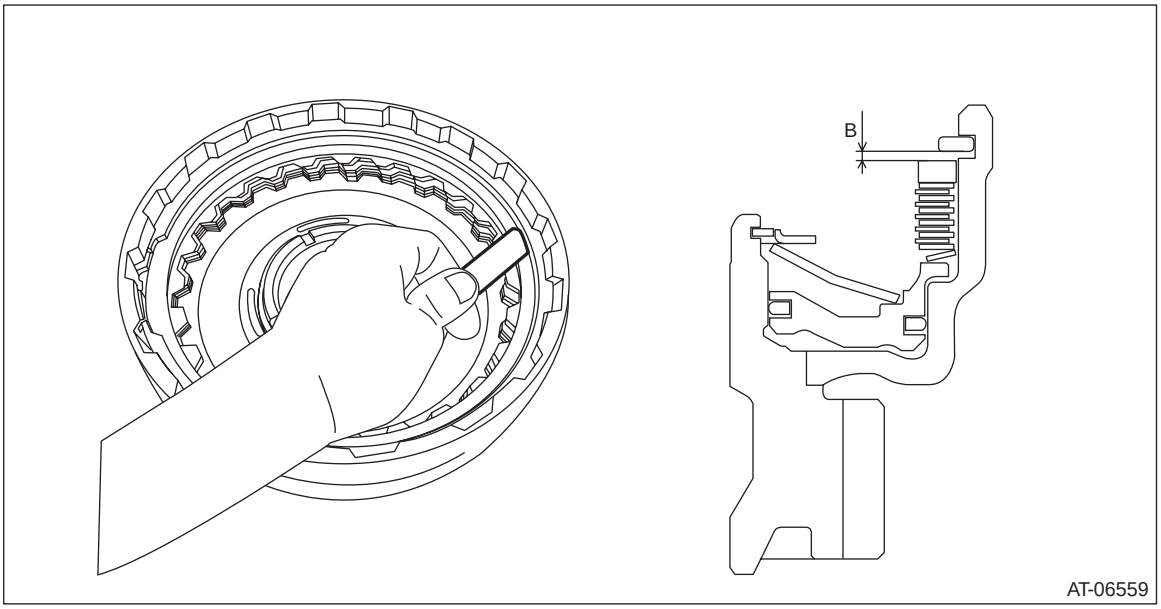
(A) Drive plate
(B) Driven plate
(C) Retaining plate
(D) Dish plate

7) Install the dish plate, driven plate, drive plate, retaining plate and snap ring.

NOTE:
Make sure of the direction of dish plate.

8) Measure and record the clearance “B” between the retaining plate and snap ring.

NOTE:
Before measuring, press down the whole circumference of retaining plate using your finger.



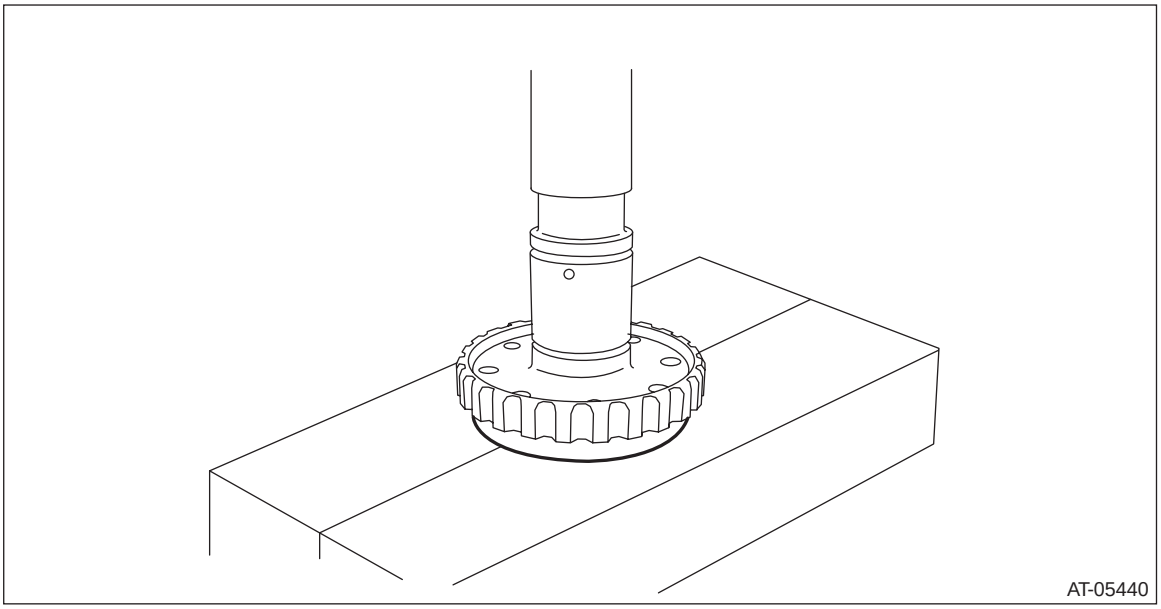
9) Piston stroke calculation
Calculate with A and B dimensions recorded before.
If out of standard, replace with a new drive plate and adjust it within standard.
S mm (in) = A + B
S: Piston stroke
A: Compression amount of drive plate and dish plate
B: Clearance between retaining plate and snap ring

Specification:
2.4 — 2.8 mm (0.094 — 0.11 in)

Retaining plate	
Part No.	Thickness mm (in)
31667AB430	3.1 (0.122)
31667AB440	3.3 (0.130)
31667AB450	3.5 (0.138)

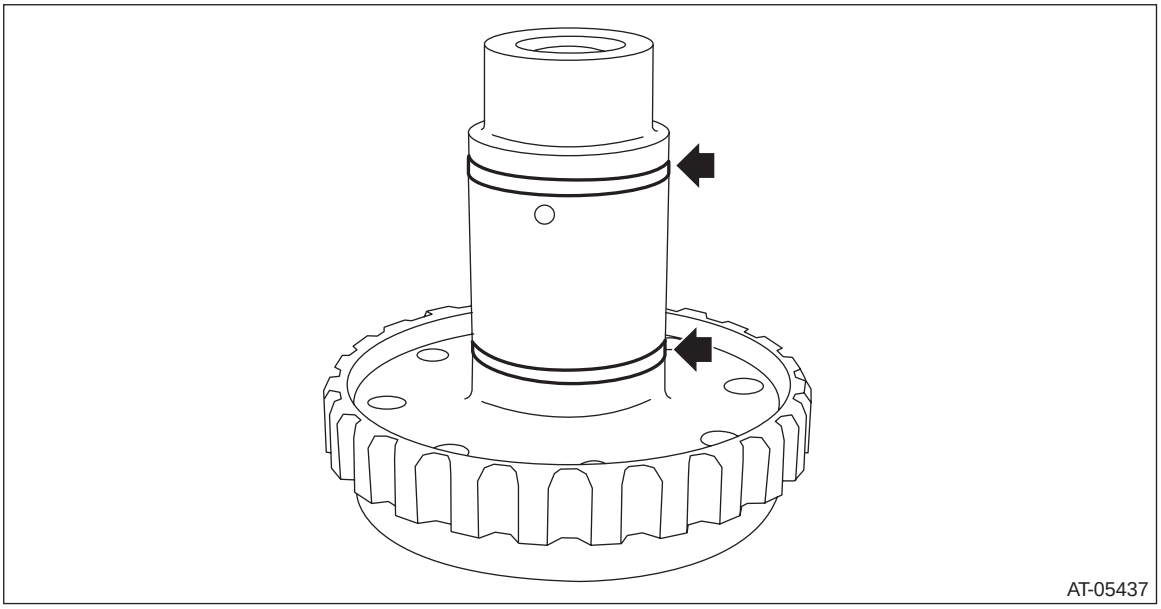
10) Press-fit the ball bearing into front driven shaft.

NOTE:
Use a new ball bearing.

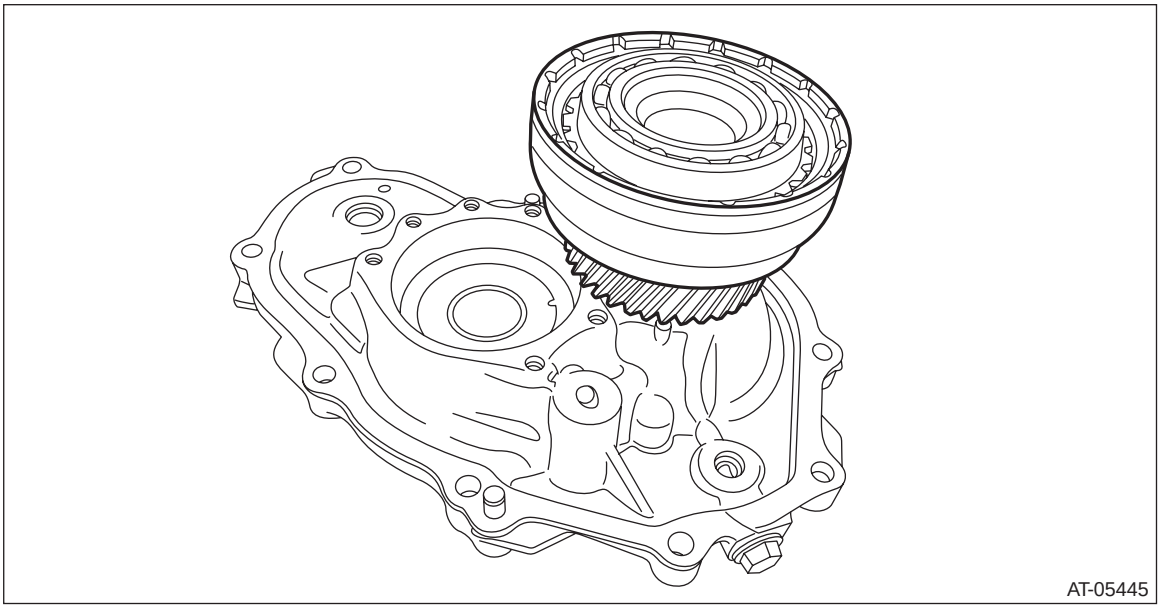


11) Install the seal ring to the front driven shaft.

NOTE:
- Install a new seal ring.
- Apply CVTF to the seal rings.

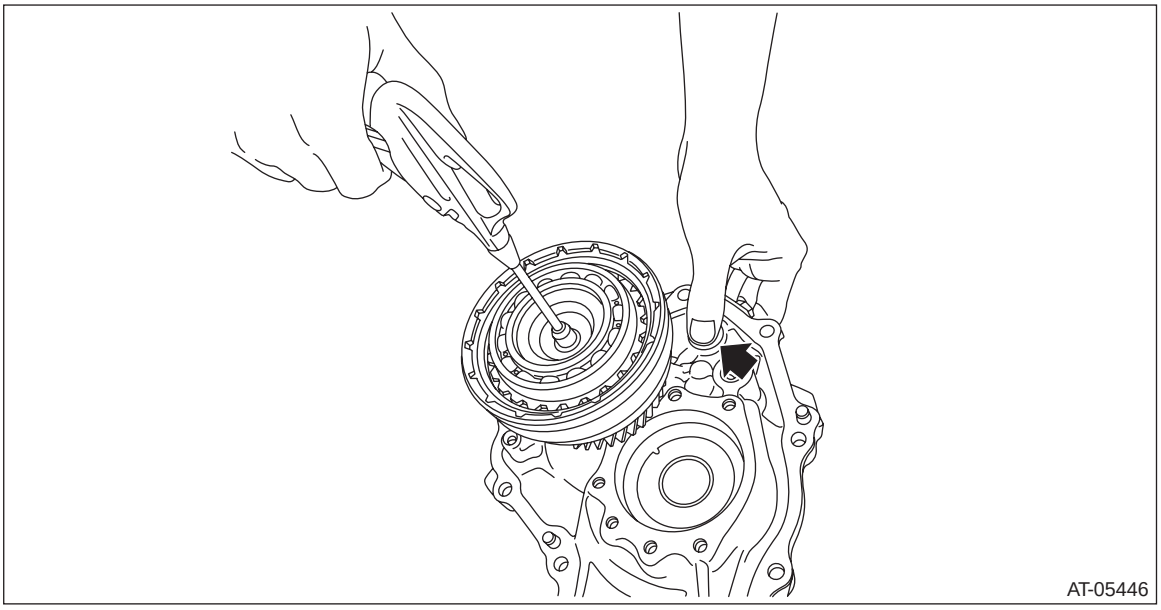


12) Install the front reduction driven shaft to the front reduction driven gear.
13) Install the front reduction driven gear assembly to converter case cover.



14) Apply compressed air intermittently to check the piston operation.

NOTE:
Hold the arrowed area with a finger.

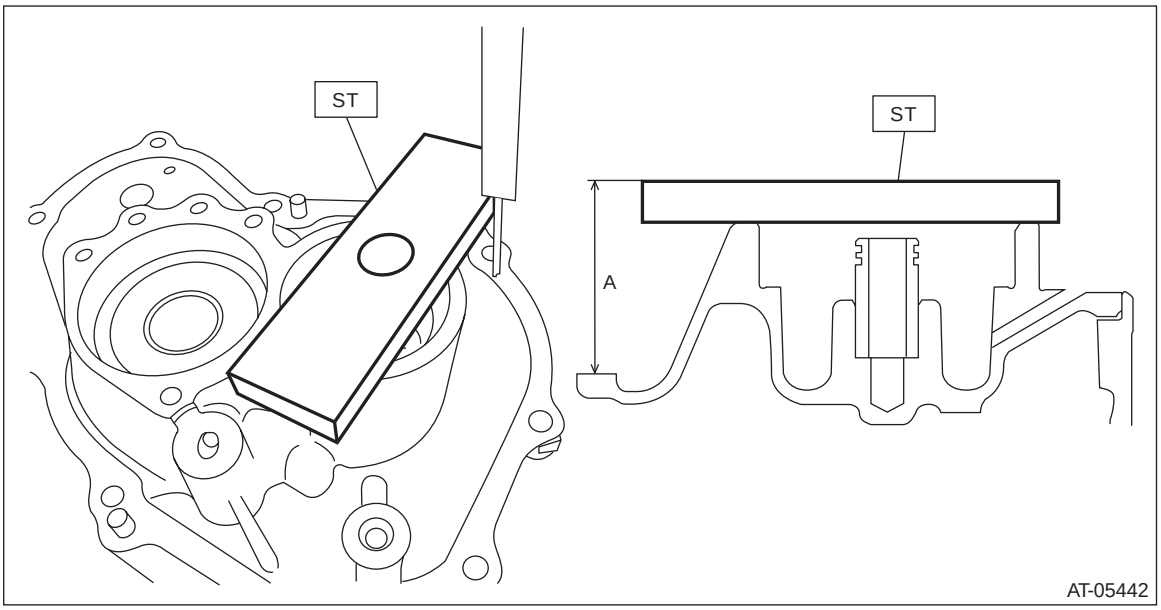


E: INSPECTION

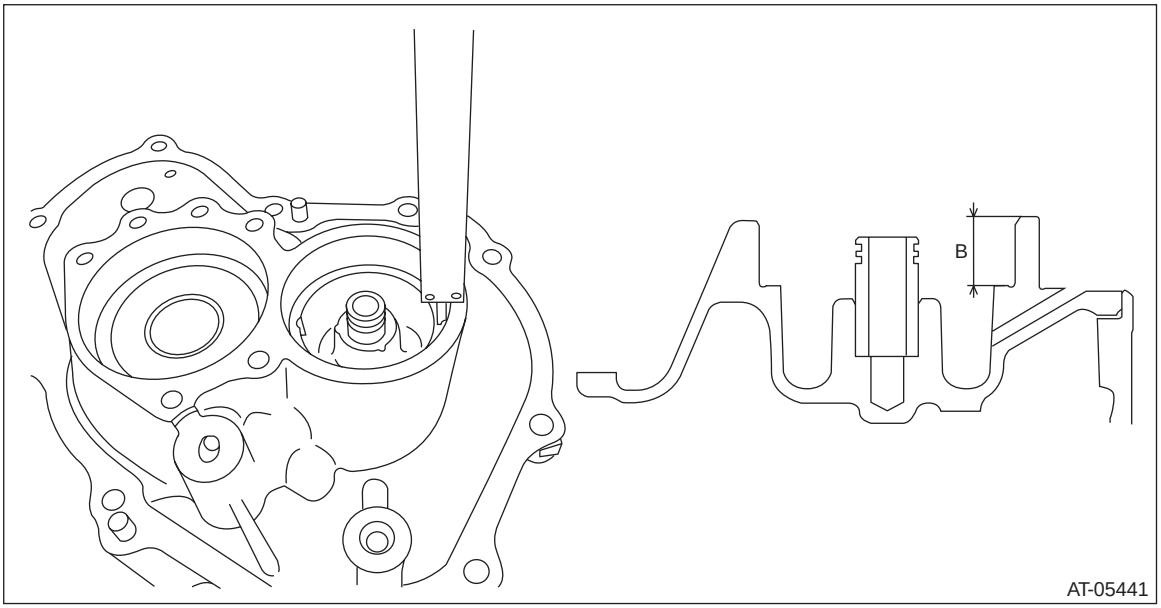
- Check the drive plate for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed piston retainer.
- Replace if its tooth surfaces are broken, damaged or excessively worn.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.

F: ADJUSTMENT

1) If the ball bearing is attached, remove the bearing and shims. <Ref. to CVT(TR690)-292, REMOVAL, Converter Case Cover.>
2) Using the ST, measure height “A” from the ST upper face to the mating surface of the case.
ST 398643600 GAUGE



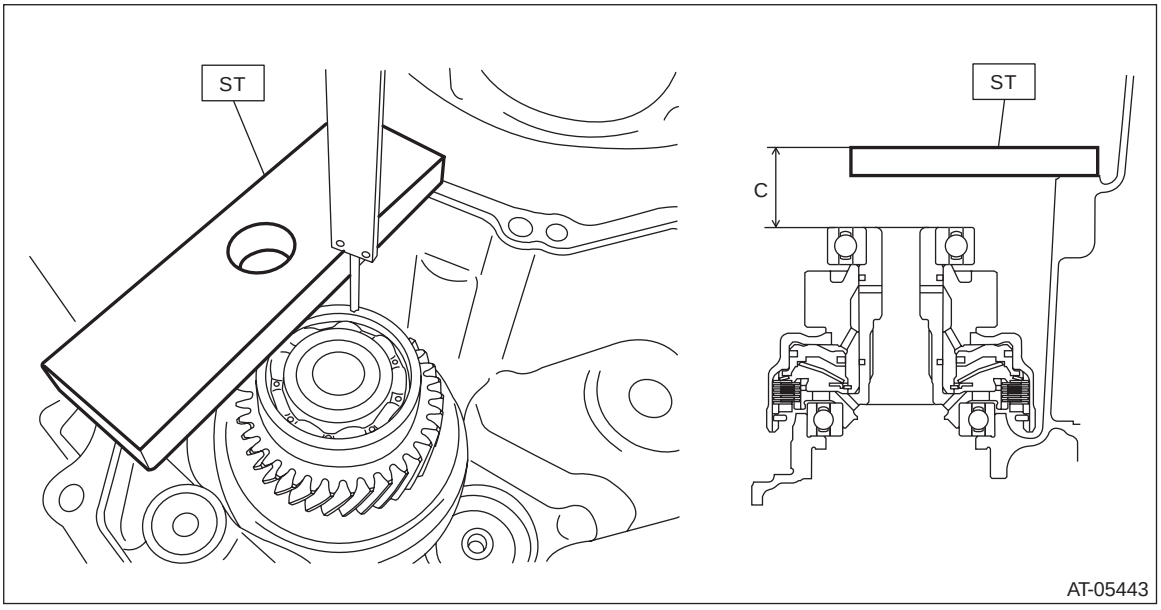
3) Measure depth “B” from the converter case cover upper face to the bearing catch surface.



4) Install the ball bearing to the reduction driven gear.

NOTE:
Use a new ball bearing.

5) Measure depth “C” from the ST upper face to the bearing end face using the ST.
ST 398643600 GAUGE



6) Calculate clearance “T” using the following formula.
Formula: T mm = (C – 15) – ((A – 15) – B)
[T in = (C – 0.591) – ((A – 0.591) – B)]
T: Clearance
A: Height from the ST upper face to the converter case mating surface
B: Depth from the converter case cover upper face to the bearing catch surface
C: Depth from the ST upper face to the bearing end face
15 mm (0.591 in): Thickness of ST

Clearance “T” mm (in)	Thickness of shim mm (in)
0.470 — 0.569 (0.019 — 0.021)	0.4 (0.016)
0.570 — 0.669 (0.022 — 0.025)	0.5 (0.020)
0.670 — 0.769 (0.026 — 0.029)	0.6 (0.024)
0.770 — 0.869 (0.030 — 0.033)	0.7 (0.028)
0.870 — 0.980 (0.034 — 0.039)	0.8 (0.031)

7) Select one to two shims so that the total thickness meets the value obtained from above.

Part No.	Thickness of shim mm (in)
31288AA130	0.2 (0.008)
31288AA140	0.3 (0.012)
31288AA150	0.5 (0.020)

50.Converter Case

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-136, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-112, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-123, REMOVAL, Transmission Harness.>
5) Remove the secondary pressure sensor. <Ref. to CVT(TR690)-110, REMOVAL, Secondary Pressure Sensor.>
6) Remove the primary speed sensor. <Ref. to CVT(TR690)-102, REMOVAL, Primary Speed Sensor.>
7) Remove the extension case. <Ref. to CVT(TR690)-142, REMOVAL, Extension Case.>
8) Remove the rear drive shaft. <Ref. to CVT(TR690)-146, REMOVAL, Rear Drive Shaft.>
9) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-151, REMOVAL, Transfer Clutch.>
10) Remove the center differential carrier. <Ref. to CVT(TR690)-154, REMOVAL, Center Differential Carrier.>
11) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-158, REMOVAL, Transfer Reduction Driven Gear.>
12) Remove the intermediate case. <Ref. to CVT(TR690)-165, REMOVAL, Intermediate Case.>
13) Remove the forward clutch assembly. <Ref. to CVT(TR690)-181, REMOVAL, Forward Clutch Assembly.>
14) Remove the transmission case. <Ref. to CVT(TR690)-212, REMOVAL, Transmission Case.>
15) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-228, REMOVAL, Primary Pulley and Secondary Pulley.>
16) Remove the drive pinion shaft assembly. <Ref. to CVT(TR690)-244, REMOVAL, Drive Pinion Shaft Assembly.>
17) Remove the front differential assembly. <Ref. to CVT(TR690)-265, REMOVAL, Front Differential Assembly.>
18) Remove the converter case cover. <Ref. to CVT(TR690)-292, REMOVAL, Converter Case Cover.>
19) Remove the front reduction drive gear and front reduction driven gear. <Ref. to CVT(TR690)-302, REMOVAL, Front Reduction Drive Gear.>

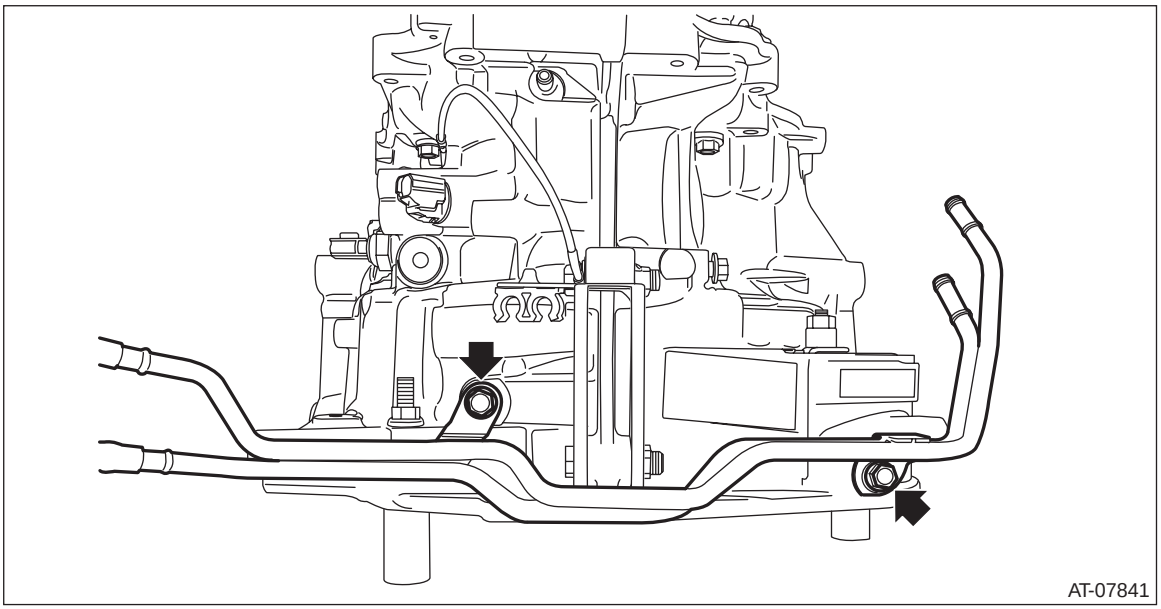
B: INSTALLATION

1) Install the front reduction drive gear and front reduction driven gear. <Ref. to CVT(TR690)-303, INSTALLATION, Front Reduction Drive Gear.>
2) Install the converter case cover. <Ref. to CVT(TR690)-295, INSTALLATION, Converter Case Cover.>
3) Install the front differential assembly. <Ref. to CVT(TR690)-266, INSTALLATION, Front Differential Assembly.>
4) Install the drive pinion shaft assembly. <Ref. to CVT(TR690)-246, INSTALLATION, Drive Pinion Shaft Assembly.>
5) Install the primary pulley, secondary pulley and steel chain. <Ref. to CVT(TR690)-232, INSTALLATION, Primary Pulley and Secondary Pulley.>
6) Install the transmission case. <Ref. to CVT(TR690)-212, REMOVAL, Transmission Case.>
7) Install the forward clutch assembly. <Ref. to CVT(TR690)-182, INSTALLATION, Forward Clutch Assembly.>
8) Install the intermediate case. <Ref. to CVT(TR690)-166, INSTALLATION, Intermediate Case.>
9) Install the transfer reduction driven gear. <Ref. to CVT(TR690)-158, INSTALLATION, Transfer Reduction Driven Gear.>
10) Install the center differential carrier. <Ref. to CVT(TR690)-155, INSTALLATION, Center Differential Carrier.>
11) Install the transfer clutch assembly. <Ref. to CVT(TR690)-151, INSTALLATION, Transfer Clutch.>
12) Install the rear drive shaft. <Ref. to CVT(TR690)-146, INSTALLATION, Rear Drive Shaft.>
13) Install the extension case. <Ref. to CVT(TR690)-143, INSTALLATION, Extension Case.>
14) Install the primary speed sensor. <Ref. to CVT(TR690)-103, INSTALLATION, Primary Speed Sensor.>
15) Install the secondary pressure sensor. <Ref. to CVT(TR690)-110, INSTALLATION, Secondary Pressure Sensor.>

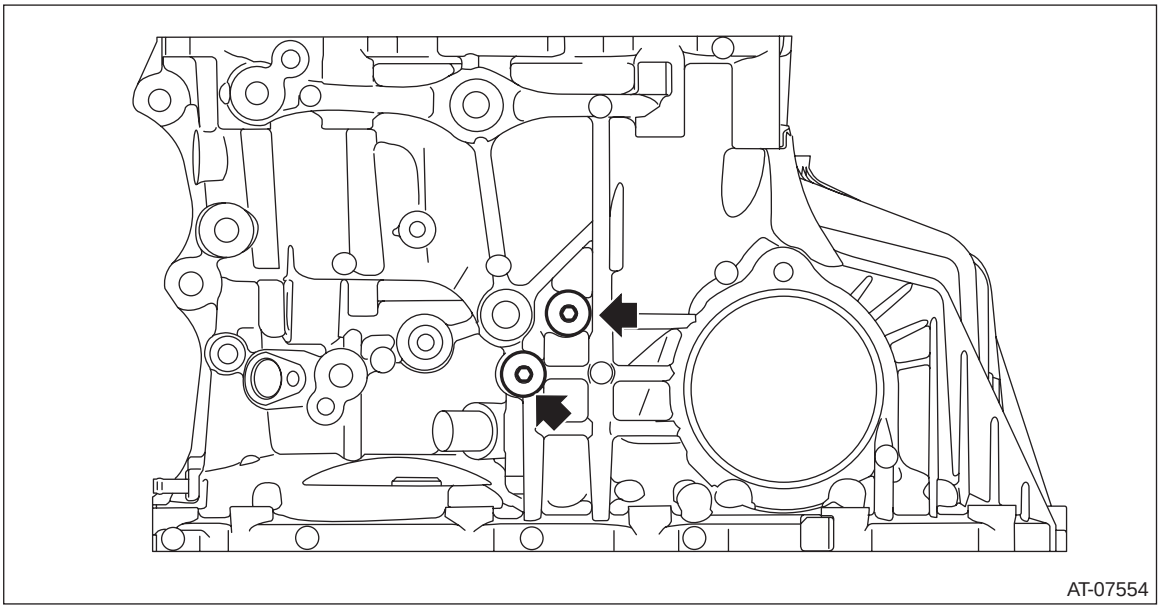
16) Install the transmission harness. <Ref. to CVT(TR690)-125, INSTALLATION, Transmission Harness.>
17) Install the control valve body and oil pan. <Ref. to CVT(TR690)-116, INSTALLATION, Control Valve Body.>
18) Install the air breather hose. <Ref. to CVT(TR690)-136, INSTALLATION, Air Breather Hose.>
19) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the CVTF cooler pipe COMPL.



2) Remove the pitching stopper bracket and transmission radio ground cord, if mounted.
3) Remove the oil drain plug and overflow drain plug. <Ref. to CVT(TR690)-42, REPLACEMENT, Differential Gear Oil.>
4) Remove all plugs.



D: ASSEMBLY

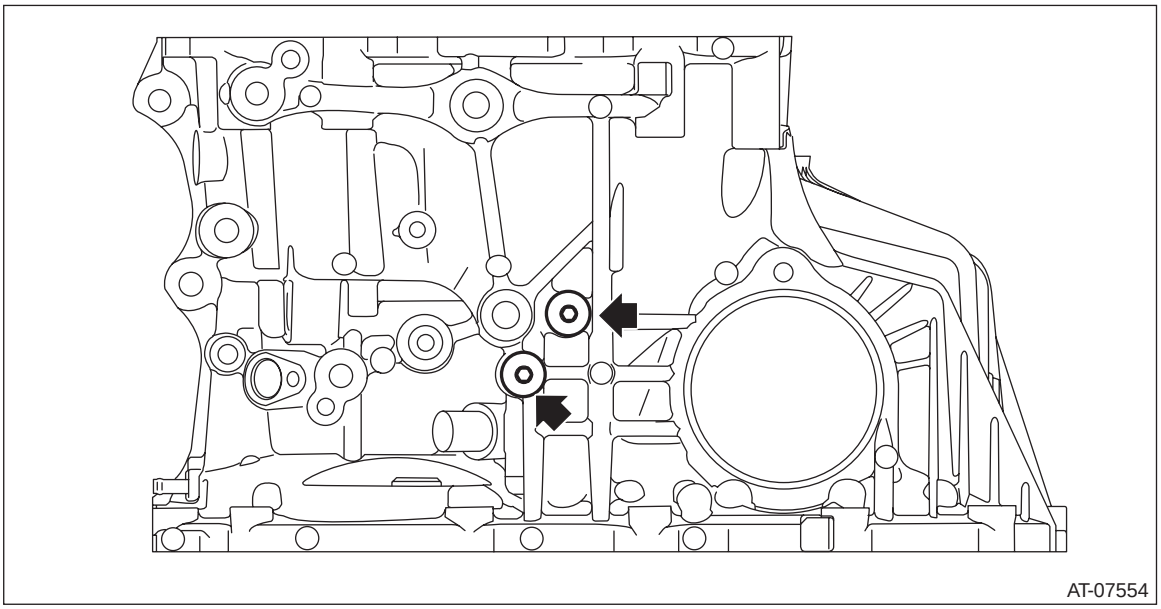
1) Install the oil drain plug and overflow drain plug.

NOTE:
Overflow plug of differential gear oil is temporarily attached.

2) Install all plugs.

NOTE:
Use new O-rings.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

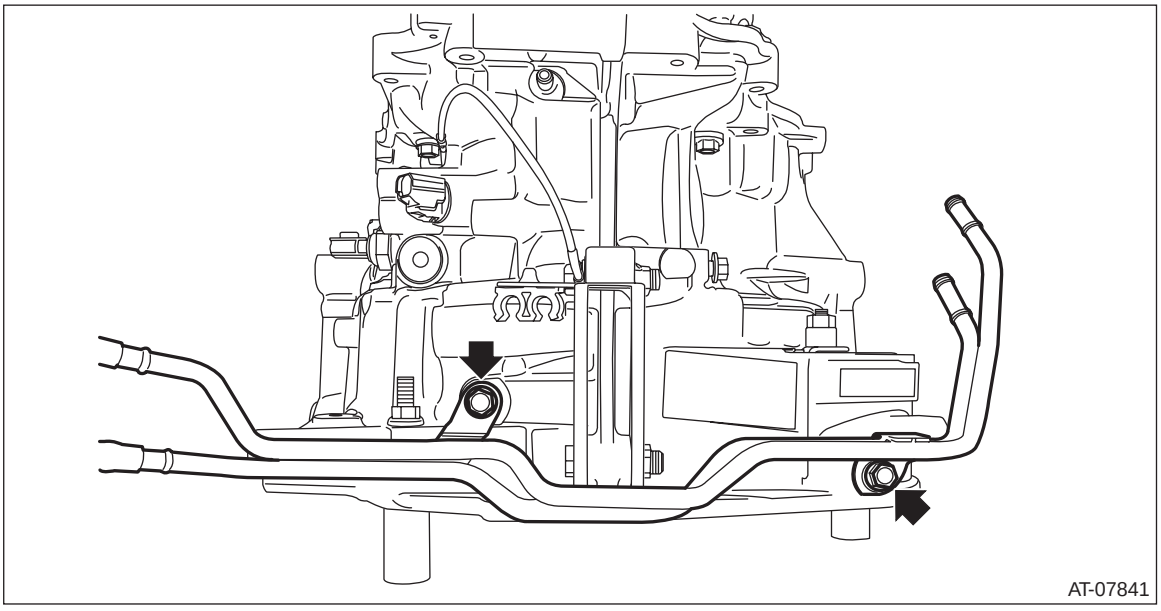


3) Install the pitching stopper bracket and transmission radio ground cord.

Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)

4) Install the CVTF cooler pipe COMPL.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



E: INSPECTION

- Check for leakage of CVTF from the connection between converter case and transmission case.
- Check there is no damage or cracks on the converter case.

F: ADJUSTMENT

When replacing the converter case cover, select the following shims.

- Select the shim for front reduction drive gear. <Ref. to CVT(TR690)-308, ADJUSTMENT, Front Reduction Drive Gear.>
- Select the shim for front reduction driven gear. <Ref. to CVT(TR690)-316, ADJUSTMENT, Front Reduction Driven Gear.>
- Select shims for primary pulley. <Ref. to CVT(TR690)-238, ADJUSTMENT, Primary Pulley and Secondary Pulley.>

51.Diagnostics with Phenomenon

A: INSPECTION

Symptoms	Faulty parts
Stall speed is low after warming-up, with select lever in “D” or “R” range.	Engine control system
Vehicle does not move despite engine speed rising up, with select lever in “D” or “R” range.	• Engine control system • Select cable • CVTF • Secondary pressure circuit • Pulley, gear and variator chain • Forward/reverse changeover section • TCM • Control valve body • Inhibitor switch
Vehicle does not move by engine stall, with select lever in “D” or “R” range.	• Parking mechanism • Select cable • Bearing • Forward/reverse changeover section
Excessive shock occurs at starting, with select lever in “D” or “R” range.	• Secondary pressure circuit • Pulley, gear and variator chain
Acceleration speed from standstill is insufficient, with select lever in “D” or “R” range.	• Control valve body • Forward/reverse changeover section
Engine speed suddenly rises up during driving, with select lever in “D” or “R” range.	• Control valve body • Secondary pressure circuit • Primary pressure circuit
Vibration occurs during driving, with select lever in “D” or “R” range.	• Secondary pressure circuit • Primary pressure circuit • Forward/reverse changeover section • Pulley and variator chain • Torque converter assembly • Hydraulic pressure circuit to torque converter • Control valve body
Sudden braking occurs during driving, with select lever in “D” or “R” range.	• Secondary pressure circuit • Primary pressure circuit • Control valve body
During deceleration, lockup clutch does not disengage until just before halting, with select lever in “D” or “R” range.	• Control valve body • Torque converter assembly
Engine stalls with vehicle at a standstill, with select lever in “D” or “R” range.	• Engine control system • Control valve body
Excessive lockup shock occurs during driving, with select lever in “D” range.	Control valve body
Slipping occurs at lockup, or lockup does not occur during driving, with select lever in “D” range.	• Control valve body • Lockup hydraulic line • Torque converter assembly
Excessive shift shock occurs when shifting the select lever from “N” range to “D” range, or from “N” range to “R” range.	• Inhibitor switch • Control valve body • Forward/reverse changeover section
Vehicle does not keep at standstill with select lever in “P” range, or parking cannot be released when shifting from “P” range to another range.	• Select cable • Parking mechanism
Select lever does not shift smoothly.	• Select cable • Inhibitor switch • Detent spring • Manual plate

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to CVT(diag)-4, Check List for Interview.> 2) Before performing diagnostics, check the following items which might affect CVT problems. • General inspection <Ref. to CVT(diag)-5, INSPECTION, General Description.> • Disconnection of harness connector • Visual check for harness damage • Oil leakage • Stall speed test <Ref. to CVT(TR690)-47, Stall Test.> • Secondary pressure test <Ref. to CVT(TR690)-49, Secondary Pressure (Line Pressure) Test.> • Transfer clutch pressure test <Ref. to CVT(TR690)-52, Transfer Clutch Pressure Test.> • Time lag test <Ref. to CVT(TR690)-48, Time Lag Test.> • Road test <Ref. to CVT(TR690)-45, Road Test.> • Inhibitor switch <Ref. to CVT(TR690)-92, Inhibitor Switch.>	Is the item that is thought to influence the CVT problem working properly?	Go to step **2**.	Repair the items which may be affecting the CVT trouble.
2	**CHECK AT OIL TEMP LIGHT.** Turn the ignition switch to ON and wait for at least 2 seconds.	Does the AT OIL TEMP light illuminate?	Go to step **3**.	Check the AT OIL TEMP light.
3	**CHECK AT OIL TEMP LIGHT.** Start the engine and wait for 2 seconds or more.	Does the AT OIL TEMP light blink?	Go to step **4**.	Go to step **5**.
4	**CHECK DTC DISPLAY.** Read the DTC. NOTE: If the communication function of Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to CVT(diag)-30, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Diagnostic Procedure for Subaru Select Monitor Communication.>	Is DTC displayed on Subaru Select Monitor?	Record the DTC, time stamp and freeze frame data. Go to step **6**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Go to step **5**.

	Step	Check	Yes	No
5	**PERFORM GENERAL DIAGNOSTICS.** 1) Inspect using “Diagnostic Procedure without Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-131, Diagnostic Procedure without Diagnostic Trouble Code (DTC).> 2) Inspect using “Diagnostics with Phenomenon”. <Ref. to CVT(diag)-132, Diagnostics with Phenomenon.> 3) Perform the Inspection Mode. <Ref. to CVT(diag)-18, Inspection Mode.> 4) Read the DTC.	Is DTC displayed on Subaru Select Monitor?	Go to step **6**.	Finish the diagnosis.
6	**PERFORM DIAGNOSIS.** 1) Inspect by referring to “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-36, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> NOTE: For the DTC table, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-32, List of Diagnostic Trouble Code (DTC).> 2) Repair the trouble cause. 3) Perform the Clear Memory Mode. 4) Perform the Inspection Mode. <Ref. to CVT(diag)-18, Inspection Mode.> 5) Read the DTC.	Is DTC displayed on Subaru Select Monitor?	Inspect by referring to “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-36, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Check the following items when a problem has occurred.

NOTE:
Use copies of this page for interviewing customers.

Customer's name			
Date of purchase			
Date of repair			
Transmission model	Transmission	V.I.N.	
Odometer reading	km (miles)		
Frequency	❑ Continuous ❑ Intermittent (times/day)		
Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Other ( )		
Place	❑ Highland ❑ Suburbs ❑ Inner city ❑ Uphill ❑ Downhill ❑ Rough road ❑ Other ( )		
Ambient air temperature	❑ Hot ❑ Warm ❑ Cool ❑ Cold		
Vehicle speed	km/h (MPH)		
AT OIL TEMP light	❑ Blinks continuously	❑ Does not blink	
Select lever position	❑ P ❑ R ❑ N ❑ D ❑ Manual mode		
Driving condition	❑ Not affected ❑ At racing ❑ While decelerating	❑ At starting ❑ While accelerating ❑ While turning (❑ RH/❑ LH)	❑ While idling ❑ When cruising (Vehicle speed km/h) ❑ Immediately after starting the engine
Manual mode	❑ ON ❑ OFF		
Symptoms	❑ Vehicle does not move (❑ Any position ❑ Particular position)		
	❑ Vehicle does not move (no load racing condition as in N range)		
	❑ Vehicle does not move (engine speed does not increase, felt as stall condition)		
	❑ Noise or vibration (Describe concretely:)		
	❑ Shock felt at N → D selection (seconds after shifting, when engine cold or after warm-up)		
	❑ Shock felt at N → R selection (seconds after shifting, when engine cold or after warm-up)		
	❑ Shifting is wrong (Describe concretely:)		
	❑ Shock or judder during driving		
	❑ Fails to accelerate.		
	❑ Engine speed increases abruptly during driving		
	❑ Shock or judder during standing start		
	❑ Select lever does not move		
	❑ Other ( )		

3. General Description

A: CAUTION

1) The airbag system wiring harness is routed near the TCM.

CAUTION:
• All the airbag system wiring harnesses and connectors are colored yellow. Do not use an electric test equipment to check these circuits.
• Be careful not to damage the airbag system wiring harness when performing diagnostics or servicing the TCM.

2) When measuring the voltage or resistance of individual sensor or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal. Never insert the tapered pin into the terminal because it deforms inside which may lead to malfunction.

CAUTION:
If a pin (or similar) was inserted in TCM connector, replace the TCM connector.

3) The TCM connector is waterproof. When measuring the TCM connector terminal voltage, or the resistance between the terminals, use the ST.
ST 18460AA040 CHECK BOARD

B: INSPECTION

1. BATTERY

Measure the battery voltage and specific gravity of the electrolyte.

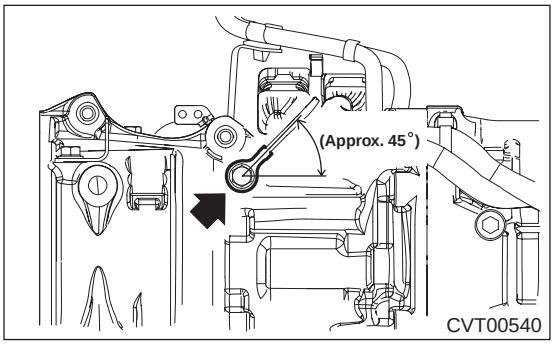
Standard voltage: 12 V or more

Specific gravity: 1.260 or more

2. TRANSMISSION GROUND

Make sure that the ground terminal bolt is tightened securely.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



3. OPERATION OF SHIFT SELECT LEVER

Make sure there is no noise, dragging or contact pattern in each select lever range.

WARNING:
Stop the engine while checking operation of the select lever.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.
 ST18460AA040	18460AA040 (Newly adopted tool)	CHECK BOARD	Used for measuring the TCM terminal voltage.

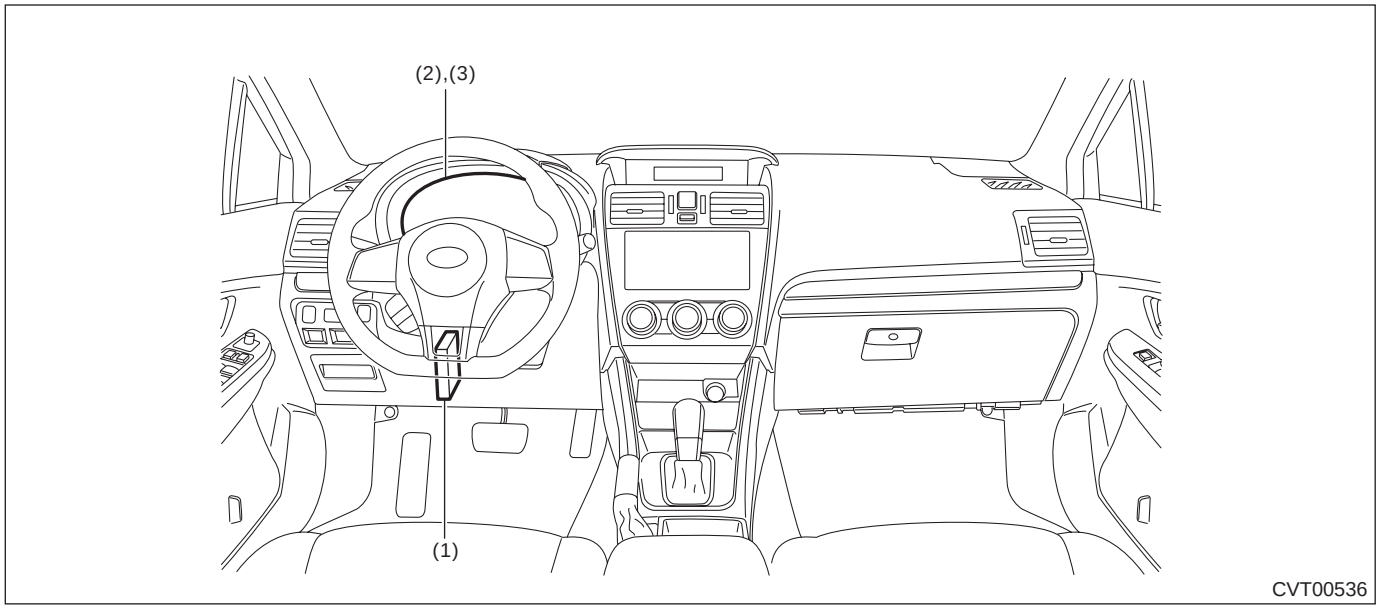
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.

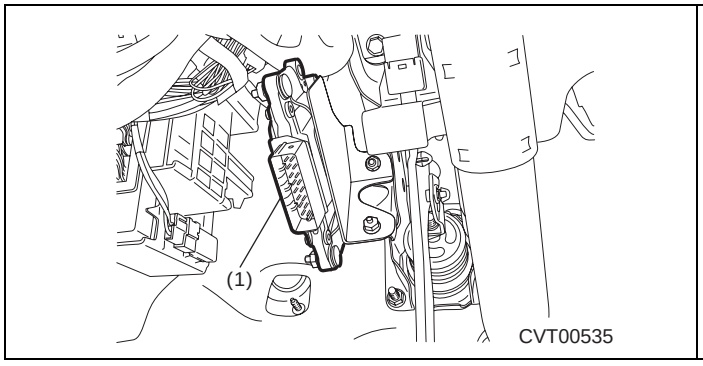
4. Electrical Component Location

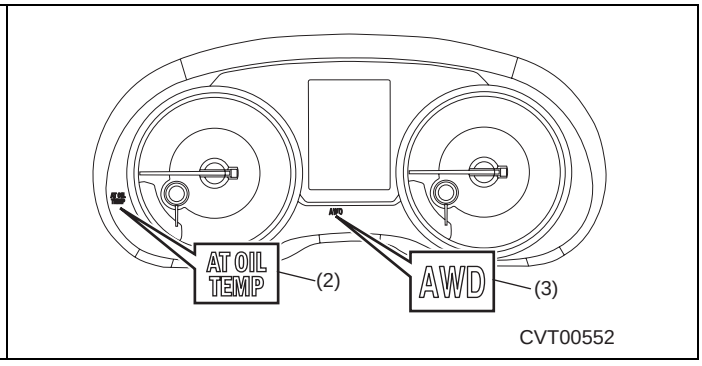
A: LOCATION

1. CONTROL MODULE

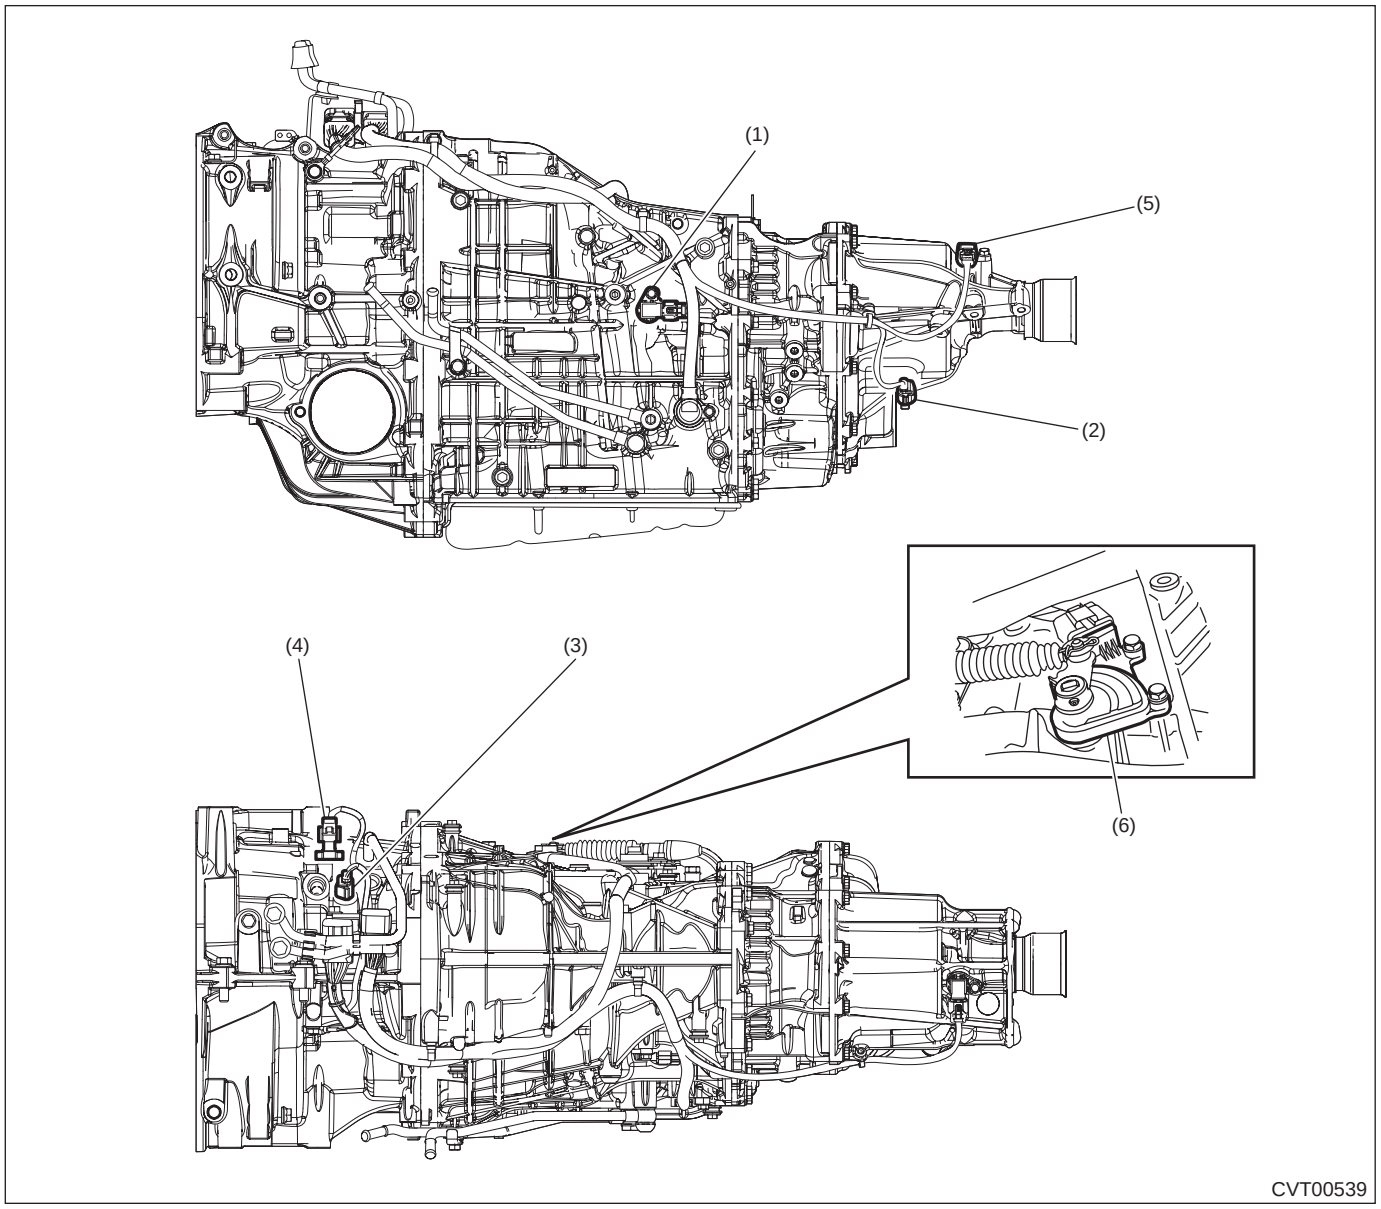


(1) Transmission control module (TCM)
(2) AWD light
(3) AT OIL TEMP light



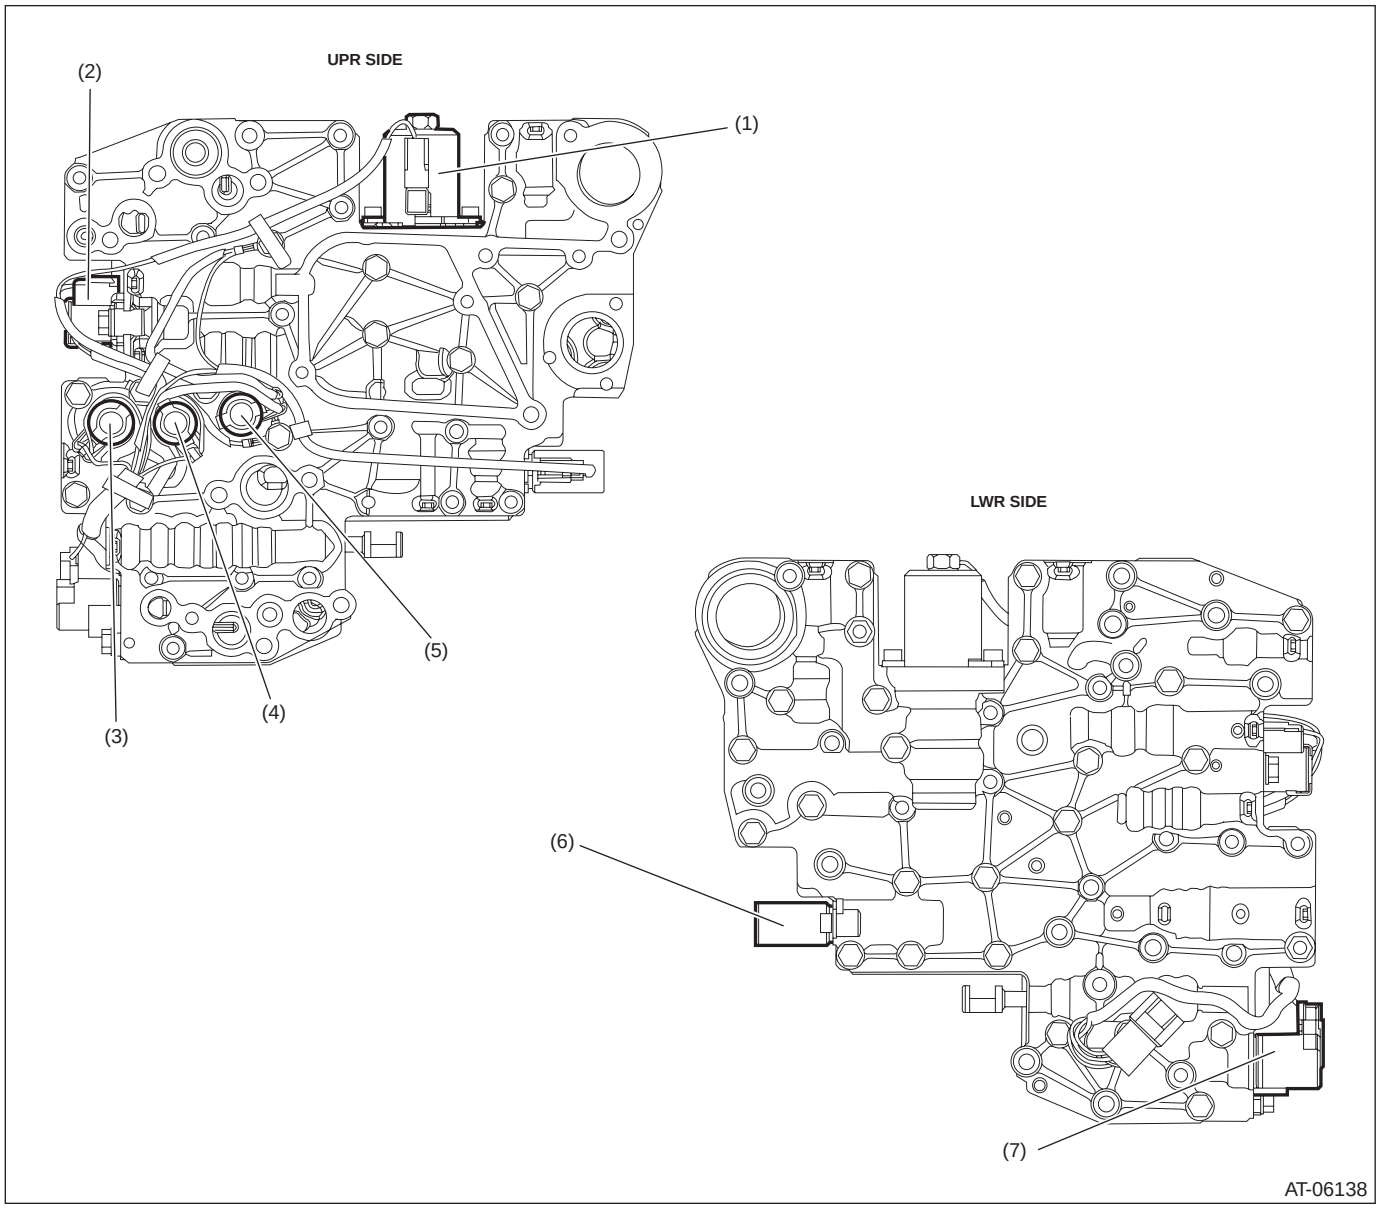


2. SENSOR



(1) Secondary speed sensor
(2) Front wheel speed sensor
(3) Primary speed sensor
(4) Secondary pressure sensor
(5) Rear wheel speed sensor
(6) Inhibitor switch

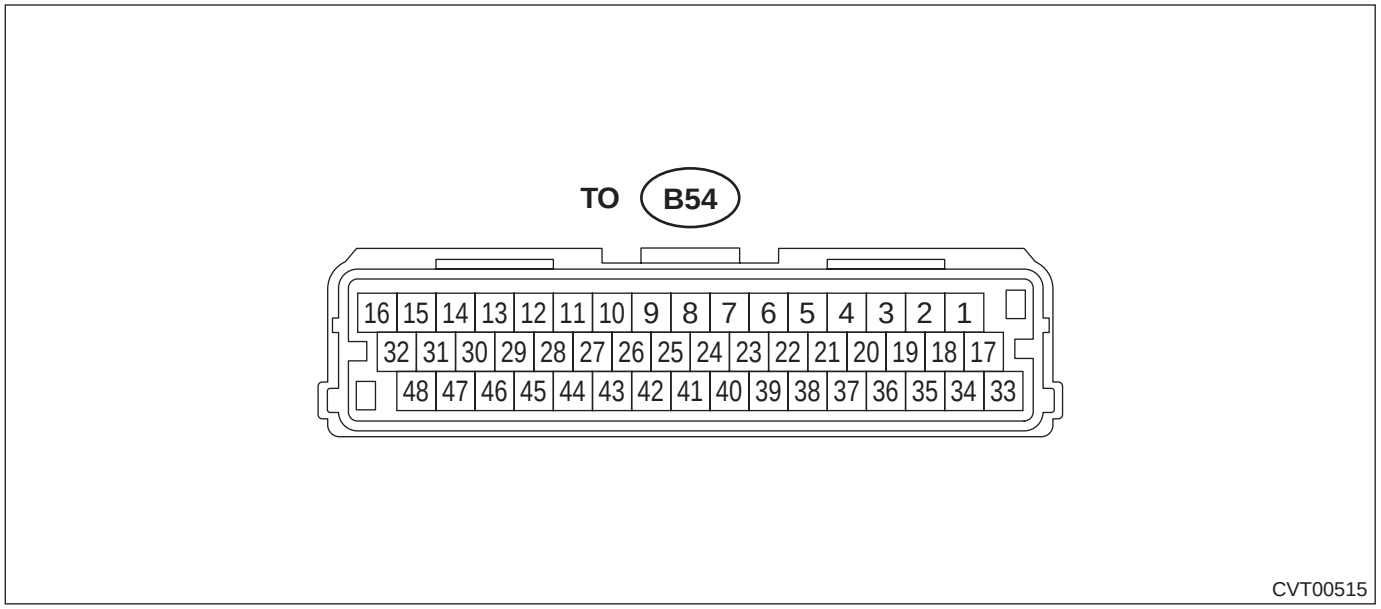
3. SOLENOID



(1) Secondary solenoid
(2) AWD solenoid
(3) Lock-up duty solenoid
(4) Primary DOWN solenoid
(5) Primary UP solenoid
(6) F&R solenoid
(7) Lock-up ON/OFF solenoid

5. Transmission Control Module (TCM) I/O Signal

A: ELECTRICAL SPECIFICATION



NOTE:
Measure after warming up.

Item	Terminal No.	Measuring condition	Measurement value	Resistance between terminal and chassis ground	Remarks
Backup power supply	34	—	10 — 13 V	—	
Ignition power supply	41	—	10 — 13 V	—	
Main power supply	8	—	10 — 13 V	—	
Main power supply	24	—	10 — 13 V	—	
Main power supply	40	—	10 — 13 V	—	
Manual mode switch	20	Manual mode switch ON	Less than 1 V	—	
		Manual mode switch OFF	8 V or more	—	
Manual mode UP switch	19	Manual mode UP switch ON	Less than 1 V	—	
		Manual mode UP switch OFF	8 V or more	—	
Manual mode DOWN switch	18	Manual mode DOWN switch ON	Less than 1 V	—	
		Manual mode DOWN switch OFF	8 V or more	—	
Stop light switch	29	Stop light switch ON	8 V or more	—	
		Stop light switch OFF	Less than 1 V	—	
P range switch	38	P range	Less than 1 V	—	
		Except for P range	8 V or more	—	
R range switch	37	R range	Less than 1 V	—	
		Except for R range	8 V or more	—	
N range switch	36	N range	Less than 1 V	—	
		Except for N range	8 V or more	—	
D range switch	35	D range	Less than 1 V	—	
		Except for D range	8 V or more	—	

Item	Terminal No.	Measuring condition	Measurement value	Resistance between terminal and chassis ground	Remarks
ATF temperature sensor	6	ATF temperature at 20°C (68°F)	Approx. 2.6 V	Approx. 2.6 kΩ	
		ATF temperature at 80°C (176°F)	Approx. 0.7 V	Approx. 370 Ω	
ATF temperature sensor GND	1	Always	Approx. 0 V	—	
Secondary pressure sensor power supply output	33	Ignition switch ON	5 V	—	
Secondary pressure sensor	5	Ignition switch ON, engine OFF	Approx. 0.5 V (0 MPa)	—	Value increases with increase of engine load. (0.5 — 4.5 V)
		Ignition switch ON, engine ON	Approx. 1.0 V (1.0 MPa)	—	
Secondary pressure sensor GND	2	Always	Approx. 0 V	—	
Primary speed sensor	14	While driving	0 or 5 V	—	Refer to the waveform (sensor)
Secondary speed sensor	13	While driving	0 or 5 V	—	Refer to the waveform (sensor)
Front wheel speed sensor	12	Engine ON, “P” or “N” range	0 or 5 V	—	Refer to the waveform (sensor)
Rear wheel speed sensor	11	Engine ON, “P” or “N” range	0 or 5 V	—	Refer to the waveform (sensor)
Self shut output	25	For three seconds after ignition switch ON and OFF	Less than 1 V	—	
		Ignition switch OFF	8 V or more		
F&R solenoid	16	Engine ON	Refer to the waveform (solenoid (1))	Approx. 4 — 6 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Secondary solenoid	32	Engine ON	Refer to the waveform (solenoid (2))	Approx. 5 — 7 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Primary UP solenoid	47	Engine ON, while UP shifting	Refer to the waveform (solenoid (3))	Approx. 10 — 13.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Primary DOWN solenoid	30	Engine ON, while DOWN shifting	Refer to the waveform (solenoid (4))	Approx. 10 — 13.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Lock-up duty solenoid	15	Lock-up ON	Refer to the waveform (solenoid (5))	Approx. 10 — 13.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
AWD solenoid	48	Engine ON, “P” or “N” range	Refer to the waveform (solenoid (6))	Approx. 2 — 4.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
		Engine ON, “D” range, brake ON	Refer to the waveform (solenoid (7))		
Lock-up ON/OFF solenoid	31	With lock-up OFF	Less than 1 V	Approx. 13 — 18.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
		With lock-up ON and in “R” range	Battery voltage or higher		

Item	Terminal No.	Measuring condition	Measurement value	Resistance between terminal and chassis ground	Remarks
CAN communication line (+)	43	—	—	—	
CAN communication line (–)	44	—	—	—	
GND	26	Always	Approx. 0 V	—	
GND	42	Always	Approx. 0 V	—

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

• For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.
• For details concerning DTC, refer to List of Diagnostic Trouble Code (DTC). <Ref. to CVT(diag)-32, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

For details concerning the work procedure, refer to the “PC application help for Subaru Select Monitor”.

CAUTION:
• If the AT learning value is cleared, learned control memory is cleared.
• If the AT learning value is cleared, perform learning. <Ref. to CVT(diag)-23, Learning Control.>

9. Inspection Mode

A: PROCEDURE

<Ref. to CVT(TR690)-45, Road Test.>

10.Drive Cycle

A: PROCEDURE

It is possible to complete diagnosis of the DTC by performing the indicated drive cycle. After the repair for the DTC, perform a necessary drive cycle and make sure the function recovers and the DTC is recorded.

1. PREPARATION FOR DRIVE CYCLE

1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) After performing the diagnostics and Clear Memory Mode, check that no DTC remains. <Ref. to CVT(diag)-17, Clear Memory Mode.>

NOTE:
Perform the drive cycle after warming up the engine except when the ATF temperature at engine start is specified.

2. DRIVE CYCLE A

DTC	Item	Condition
P0601	Internal Control Module Memory Checksum Error	Perform the drive cycle A twice.
P0604	Internal Control Module Random Access Memory (RAM) Error	Perform the drive cycle A twice.
P062F	Internal Control Module EEPROM Error	Perform the drive cycle A twice.
P0712	Transmission Fluid Temperature Sensor Circuit Low Input	—
P0842	Secondary Oil Pressure Sensor Circuit (Low)	—
P0843	Secondary Oil Pressure Sensor Circuit (High)	—
P0890	AT Self-Shut Relay Diagnosis (Low)	—
P0962	Secondary Solenoid Circuit (Low)	—
P0963	Secondary Solenoid Circuit (High)	—
P0966	Forward & Reverse Solenoid Circuit (Low)	—
P0967	Forward & Reverse Linear Solenoid Circuit (High)	—
P160A	Random Access Memory (RAM) Error	Perform the drive cycle A twice.
P2530	Ignition Switch Run Position Circuit	—
P2763	Lock-Up Duty Solenoid Circuit (High)	Perform the drive cycle A, then perform the drive cycle C.

Diagnostic procedure:
1) Start the engine.
2) Depress the brake pedal and move the select lever to each range at an interval of five seconds.

NOTE:
Move the select lever in the following order: “P” → “R” → “N” → “D” → “N” → “R” → “P”.

3. DRIVE CYCLE B

DTC	Item	Condition
P0711	ATF Temp. Sensor Circuit Range/Performance	—

Diagnostic procedure:
1) Start the engine under condition that ATF temperature is at 20°C (68°F) or below.
2) Drive in any driving pattern for 20 minutes. (Include driving at a constant legal speed (for 20 seconds) at least once.)

NOTE:
Repeat two or more driving cycles in this driving pattern.

4. DRIVE CYCLE C

DTC	Item	Condition
P0500	Vehicle Speed Sensor “A”	—
P0720	Output Speed Sensor Circuit	—
P0721	Output Shaft Speed Sensor Circuit Range/Performance	—
P0970	Transfer Solenoid Circuit (Low)	—
P0971	Transfer Solenoid Circuit (High)	—
P0973	Primary Solenoid System A Circuit (Low)	—
P0974	Primary Solenoid System A Circuit (High)	—
P0976	Primary Solenoid System B Circuit (Low)	—
P0977	Primary Solenoid System B Circuit (High)	—
P1706	AT Vehicle Speed Sensor Circuit Malfunction (Rear Wheel)	—
P170B	Output Speed Sensor Circuit Range/Performance Rear	—
P2746	Primary Pulley Revolution Speed Sensor Circuit	—
P2747	Intermediate Shaft Speed Sensor "B" Circuit No Signal	—
P2750	Sec. Pulley Revolution Speed Sensor Circuit	—
P2751	Intermediate Shaft Speed Sensor "C" Circuit No Signal	—
P2763	Lock-Up Duty Solenoid Circuit (High)	Perform the drive cycle A, then perform the drive cycle C.
P2764	Lock-Up Duty Solenoid Circuit (Low)	—
P2769	Lock-Up On/Off Solenoid Circuit (Low)	—
P2770	Lock-Up On/Off Solenoid Circuit (High)	—

Diagnostic procedure:
1) Start the engine.
2) Accelerate slowly to a legal speed, and then decelerate slowly to a stop.

5. DRIVE CYCLE D

DTC	Item	Condition
P0713	Transmission Fluid Temperature Sensor Circuit High Input	—
P0730	Gearshift Control Performance Abnormal	—
P0746	Pressure Control Solenoid "A" Performance/Stuck Off	Perform the drive cycle D twice.
P0747	Pressure Control Solenoid "A" Stuck On	Perform the drive cycle D twice.
P0751	Shift Solenoid "A" Performance/Stuck Off	Perform the drive cycle D twice.
P0752	Shift Solenoid "A" Stuck On	Perform the drive cycle D twice.
P0756	Shift Solenoid "B" Performance/Stuck Off	Perform the drive cycle D twice.
P0757	Shift Solenoid "B" Stuck On	Perform the drive cycle D twice.
P0776	Pressure Control Solenoid "B" Performance/Stuck Off	Perform the drive cycle D twice.
P0841	Secondary Oil Pressure Sensor Performance	—
P0961	Pressure Control Solenoid "A" Control Circuit Range/Performance	—
P0965	Forward & Reverse Solenoid Function	—
P2757	Torque Converter Clutch Pressure Control Solenoid Control Circuit Performance/Stuck Off	Perform the drive cycle D twice.
P2758	Torque Converter Clutch Pressure Control Solenoid Control Circuit Stuck On	Perform the drive cycle D twice.

Diagnostic procedure:
1) Start the engine.
2) Drive in any driving pattern for 20 minutes. (Include driving at a constant legal speed (for 20 seconds) at least once.)

6. DRIVE CYCLE E

DTC	Item	Condition
P0801	Reverse Inhibit Control Circuit	—
U0073	Control Module Communication Bus Off	—
U0100	Lost Communication With ECM/PCM “A”	—
U0122	Lost Communication With Vehicle Dynamics Control Module	—
U0140	Lost Communication With Body Control Module	—
U0155	Lost Communication With Instrument Panel Cluster (IPC) Control Module	—
U0164	Lost Communication With HVAC Control Module	—
U0401	Invalid Data Received From ECM/PCM “A”	—
U0416	Invalid Data Received From Vehicle Dynamics Control Module	—
U0422	Invalid Data Received From Body Control Module	—
U0423	Invalid Data Received From Instrument Panel Cluster Control Module	—
U0424	Invalid Data Received From HVAC Control Module	—

Diagnostic procedure:
1) Start the engine.

7. DRIVE CYCLE F

DTC	Item	Condition
P0705	Transmission Range Sensor Circuit (PRNDL Input)	—

Diagnostic procedure:
1) Start the engine.
2) Depress the brake pedal and move the select lever to each range at an interval of five seconds.

NOTE:
Move the select lever in the following order: “P” → “R” → “N” → “D”.
3) Maintain the engine speed to 2,000 rpm for five seconds or more.

8. DRIVE CYCLE G

DTC	Item	Condition
P0708	AT Range Switch Not Inputted	—

Diagnostic procedure:
1) Start the engine.
2) Drive for three seconds at 16 km/h (10 MPH).

NOTE:
Drive in “D” range and “R” range.

9. DRIVE CYCLE H

DTC	Item	Condition
P0719	Brake Switch Circuit Low	—
P0724	Brake Switch Circuit High	—
P0951	Manual Switch	—

Diagnostic procedure:
1) Start the engine.
2) Operate the stop light switch or the manual mode switch.

NOTE:
Drive in “D” range and “R” range.
3) Read the data of the stop light switch or the manual mode switch using the Subaru Select Monitor. Or measure the terminal voltage.

11.System Operation Check Mode

A: OPERATION

CAUTION:
- **Make sure that the system operation check mode is performed when the engine is not running.**
- **After executing the system operation check mode, execute the Clear Memory Mode.**

1) On «Main Menu» display, select {Each System Check}.
2) On «System Selection Menu» display, select {Transmission Control System}.
3) Select {Work Support} in the «Transmission Control System» display.
4) On «Work Support» display, select {System Operation Check Mode}.

NOTE:
For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

Item	SSM display
Actuator ON/OFF Operation	F&R Clutch Solenoid
	Secondary Solenoid
	Primary Down Solenoid
	Primary Up Solenoid
	AWD Solenoid
	Lock-Up Duty Solenoid
	Lock-up ON/OFF Solenoid

12.Learning Control

A: GENERAL DESCRIPTION

- Follow the messages displayed on the Subaru Select Monitor when working.
- When the following work is performed, perform learning work for the transmission.

Replacement of TCM/Replacement or disassembly of transmission assembly/Replacement of control valve body/Clearing AT leaning value is executed.

B: PROCEDURE

1. PREPARATION FOR LEARNING

1) Warm up or cool down until the ATF temperature displayed on the Subaru Select Monitor is 40 — 65°C (104 — 149°F).
2) After stopping the vehicle, shift the select lever to “P” range.
3) Fully apply the parking brake.
4) Lift up the vehicle.

CAUTION:
While working, be sure to keep the lower edge of the tires 30 cm or more above the ground as vehicle will vibrate.
5) Connect the Subaru Select Monitor to data link connector.
6) Turn the ignition switch to ON.
7) Turn off all switches causing an electrical load, such as headlights, A/C, seat heater and rear defogger, etc.

2. SIMPLE LEARNING

NOTE:
Simple learning is performed with the vehicle lifted, without actually running the vehicle.

CAUTION:
Do not turn the power of the Subaru Select Monitor OFF during work, and do not disconnect the data link connector.
1) Select {Work Support} in the «Transmission Diagnosis» display screen of the Subaru Select Monitor.
2) Select {Compulsory learning mode} in the «Work Support» display screen of the Subaru Select Monitor.
3) Follow the messages displayed on the Subaru Select Monitor screen when working.

NOTE:
During AT learning in progress, AT OIL TEMP light in the combination meter starts flashing at 2 Hz and the learning operation starts. The following message is displayed on the screen when the AT OIL TEMP light which was flashing at 2 Hz turns off.

4) When «AT learning normally ended.» is displayed, simple AT learning is completed.

NOTE:
• If communication error occurs during learning, retry the “AT learning mode” from the beginning.
• If the message «Execute AT learning again after fixing troubles of the vehicle» appears during learning, select [OK] and display the DTC list. After repairing the locations indicated by the DTC, start the “AT learning mode” over from the beginning.
• When communication error occurs during learning, select lever does not shift occasionally. If select lever does not shift, turn the ignition switch to OFF before operating the select lever.
• If the message «AT learning ended abnormally.» is displayed, start the “AT learning mode” over from the beginning.

Display	Main causes for abnormal termination
AT learning ended abnormally.	• Fault is detected during AT learning. • The accelerator pedal is depressed during AT learning. • An unspecified operation was performed during AT learning • ATF temperature becomes out of specification during AT learning. • Battery voltage is low. • Malfunction indicator light illuminates. • Parking brake not applied strongly enough. • Brake pedal is not fully depressed. • Abnormal idle speed increase, etc.

• For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

13.AT OIL TEMP Warning Light Display

A: OPERATION

The AT OIL TEMP light illuminates or blinks, when the ATF temperature is high and malfunction occurs in CVT.

- At normal condition

After turning the ignition switch to ON, illuminates for 2 seconds then goes off.

- When ATF temperature is high

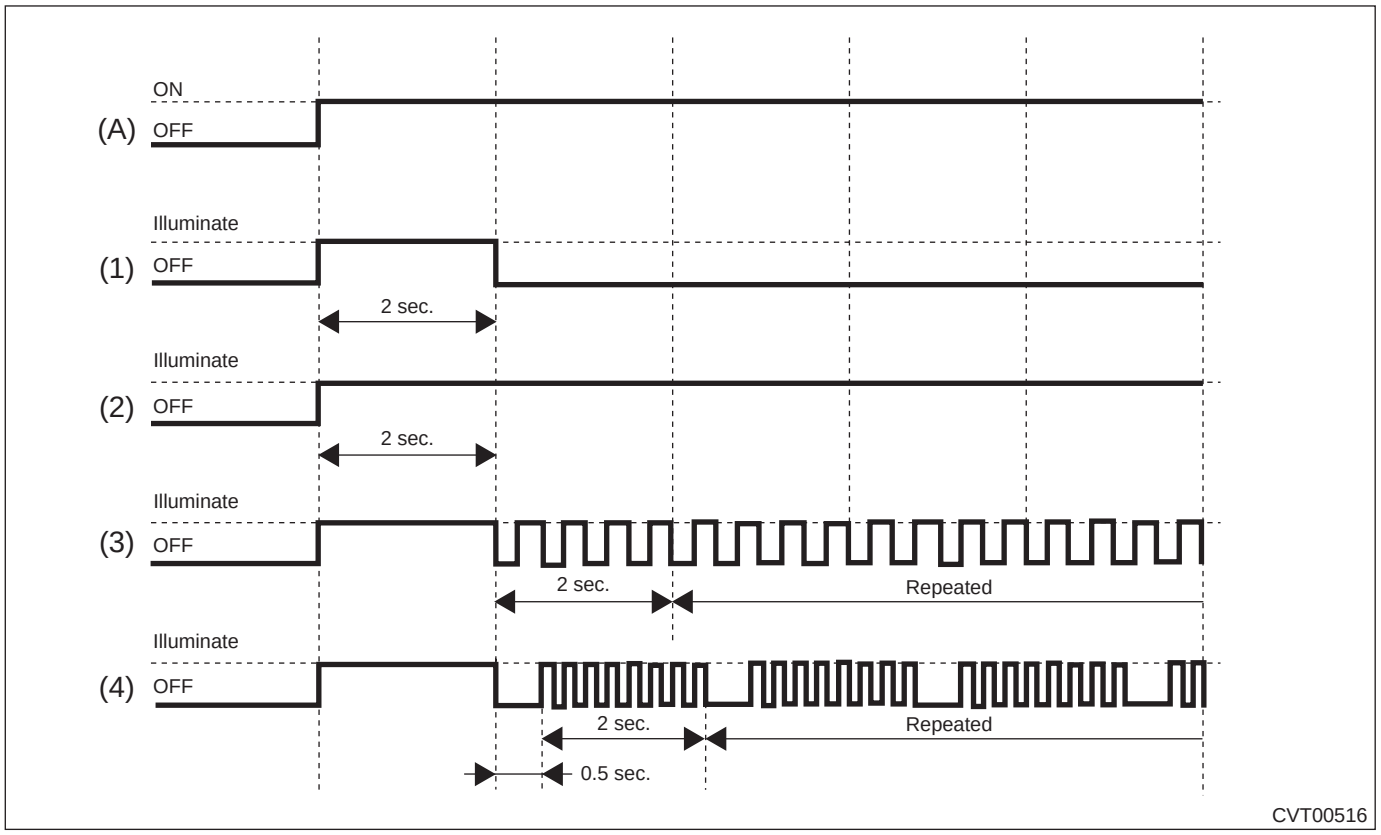
AT OIL TEMP light illuminates when the ATF temperature is abnormally high with the ignition switch ON.

- When malfunction is detected

AT OIL TEMP light blinks at 2 Hz when the TCM detects the malfunction of CVT with the ignition switch ON. In this case, inspect using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-36, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

- When AT learning is not finished

AT OIL TEMP light repeats “Blinking at 4 Hz → Turning OFF” every two seconds, when the AT learning is not completed with the ignition switch ON. In this case, perform the “Learning”. (During AT learning, the light blinks at 2 Hz or illuminates.) <Ref. to CVT(diag)-23, Learning Control.>



(A) Ignition switch condition

(1) At normal condition
(2) When ATF temperature is high
(3) When malfunction is detected
(4) When AT learning is not finished

If the AT OIL TEMP light does not illuminate, or illumination patterns are not as above, check the AT OIL TEMP light circuit. <Ref. to CVT(diag)-26, INSPECTION, AT OIL TEMP Warning Light Display.>

B: INSPECTION

DIAGNOSIS:

- CAN communication is lost with the combination meter.
- Combination meter malfunction
- TCM is in special control mode.
- AT learning is not finished.

TROUBLE SYMPTOM:

- When the ignition switch is turned to ON, the AT OIL TEMP light does not illuminate.
- AT OIL TEMP light remains lit after engine start.

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC U0155 or U0423 displayed?	Perform the self-diagnosis of combination meter.	Go to step **2**.
2	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Are DTCs other than U0155 and U0423 displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK COMBINATION METER.** Read DTC of combination meter.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK AT OIL TEMP LIGHT.** Turn the ignition switch to ON.	Does AT OIL TEMP light illuminate and then go off in 2 seconds?	Go to step **5**.	Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
5	**CHECK AT OIL TEMP LIGHT.** Start the engine.	Does the AT OIL TEMP light go off?	Current condition is normal. Go back to Basic Diagnostic Procedure. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>	Go to step **6**.
6	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **7**.
7	**CHECK TCM.** Read the data of «ATF Temperature Lamp» using the Subaru Select Monitor.	Is “ON” displayed?	Go to step **8**.	Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
8	**CHECK TCM.** Read the data of «ATF Temp.» using the Subaru Select Monitor.	Is the display 125°C or more?	Go to step **9**.	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>

Step		Check	Yes	No
9	**CHECK ATF TEMPERATURE.** Check the real fluid temperature from the transmission case surface temperature.	Does it clearly differ from the «ATF Temp.» displayed on Subaru Select Monitor?	Perform the diagnosis according to DTC P0712. If there is no problem, perform the diagnosis according to DTC P0713.	When ATF temperature can be judged as actually high, perform the diagnosis again after the ATF temperature lowers.

14.AWD Warning Light Display

A: OPERATION

AWD light blinks when a fault occurs in AWD.

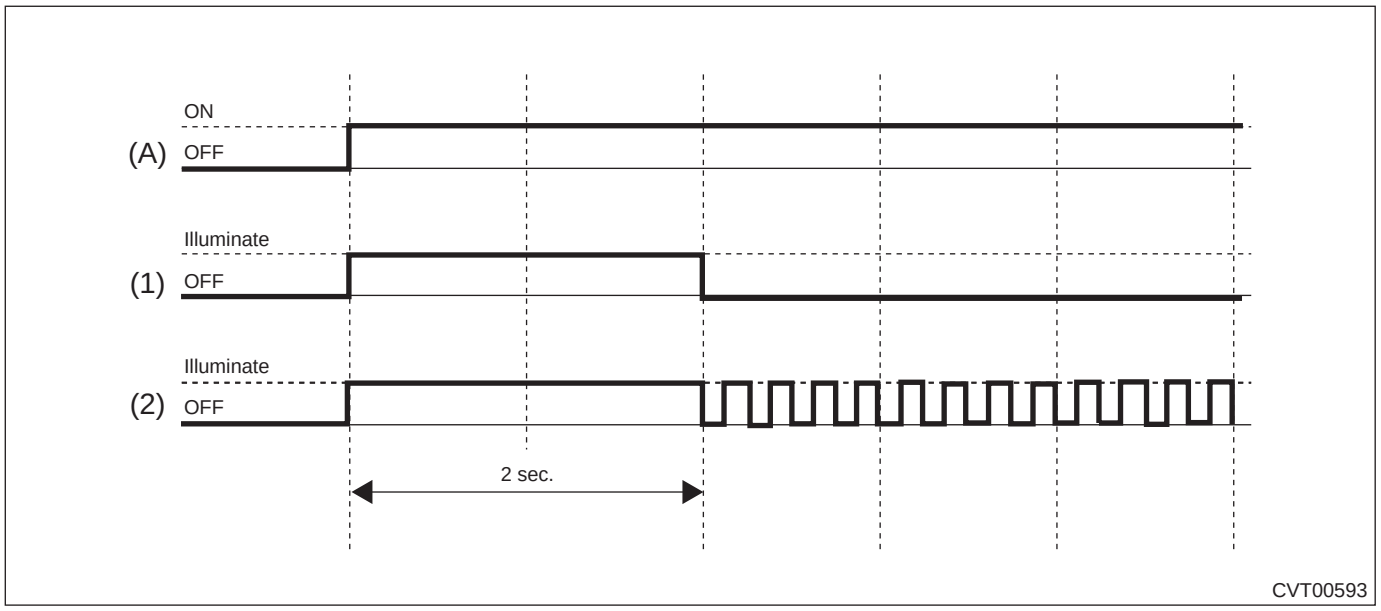
- At normal condition

After turning the ignition switch to ON, illuminates for 2 seconds then goes off.

- When malfunction is detected

AWD light blinks at 2 Hz when any of the following malfunctions are detected with the ignition switch ON.

1. When tire with different diameter is installed.
2. When air pressure of any of four tires is excessively low.



(A) Ignition switch condition

(1) At normal condition (2) When malfunction is detected

If the AWD light does not illuminate, or illumination patterns are not as above, check the AWD light circuit. <Ref. to CVT(diag)-29, INSPECTION, AWD Warning Light Display.>

B: INSPECTION

DIAGNOSIS:

- CAN communication is lost with the combination meter.
- Combination meter malfunction

TROUBLE SYMPTOM:

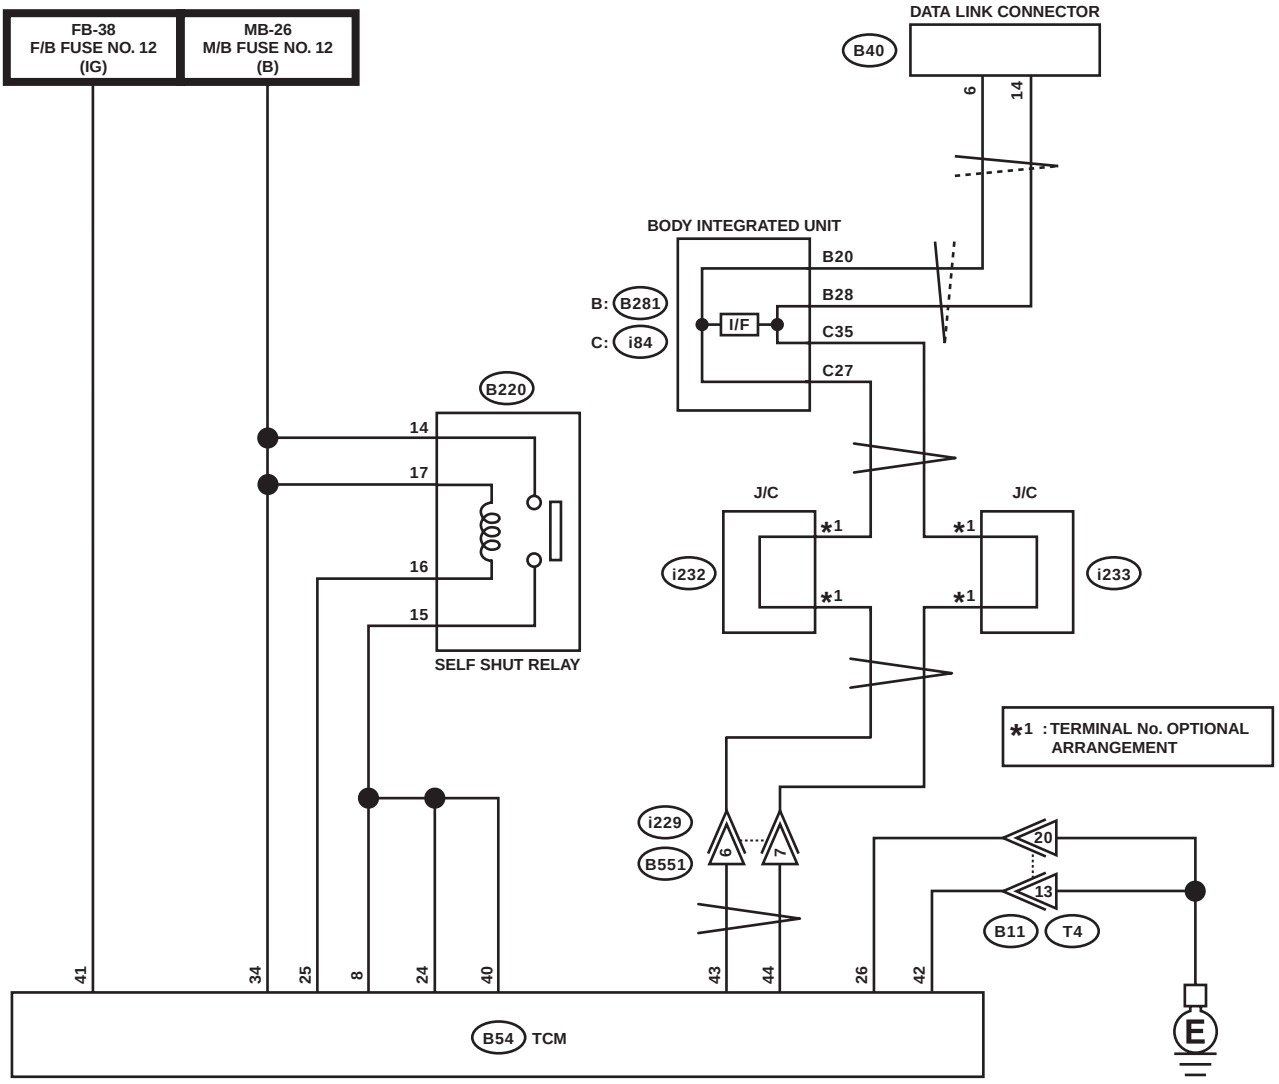
- When the ignition switch is turned to ON, the AWD light does not illuminate.
- AWD light remains lit after engine start.
- AWD light is blinking immediately after engine start.

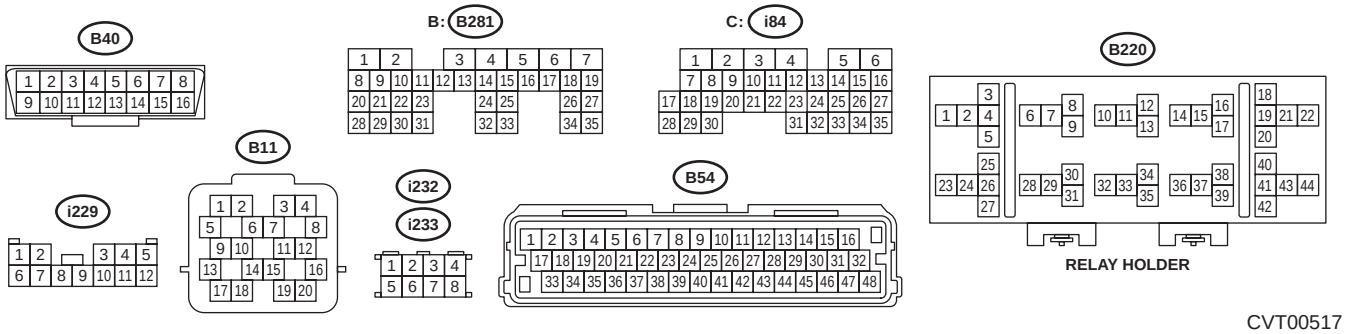
	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC U0155 or U0423 displayed?	Perform the self-diagnosis of combination meter.	Go to step **2**.
2	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Are DTCs other than U0155 and U0423 displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK COMBINATION METER.** Read DTC of combination meter.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK AWD LIGHT.** Turn the ignition switch to ON.	Does AWD light illuminate and then go off in 2 seconds?	Go to step **5**.	Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
5	**CHECK AWD LIGHT.** Start the engine.	Does the AWD light go off?	Current condition is normal. Go back to Basic Diagnostic Procedure. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>	Go to step **6**.
6	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **7**.
7	**CHECK COMBINATION METER.** Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is there any trouble with the combination meter?	Repair the combination meter.	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>

15.Diagnostic Procedure for Subaru Select Monitor Communication

A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DIAGNOSIS:
Defective harness connector
TROUBLE SYMPTOM:
Subaru Select Monitor communication failure
WIRING DIAGRAM:
CVT control system <Ref. to WI-152, CVT Control System.>





CVT00517

	Step	Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select the transmission mode using the Subaru Select Monitor.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step **4**.
4	**CHECK INSTALLATION OF TCM CONNECTOR.** Turn the ignition switch to OFF.	Is the TCM connector inserted into the TCM until the clamp locks?	Go to step **5**.	Insert the TCM connector to TCM.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-70, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Check whether communication to transmission system can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Check DTC of TCM. <Ref. to CVT(diag)-16, Read Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. (engine OFF) 2) Measure the ignition power supply voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 8 (+) — Chassis ground (–):*** ***(B54) No. 24 (+) — Chassis ground (–):*** ***(B54) No. 34 (+) — Chassis ground (–):*** ***(B54) No. 40 (+) — Chassis ground (–):*** ***(B54) No. 41 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **8**.	Repair the open circuit of harness between TCM and battery.
8	**CHECK HARNESS CONNECTOR BETWEEN TCM AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from TCM. 3) Measure the resistance of harness between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 26 — Chassis ground:*** ***(B54) No. 42 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **9**.	Repair the open circuit of the TCM ground circuit and poor contact of connector.
9	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>

16.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Reference
P0500	Vehicle Speed Sensor “A”	Wheel speed data from VDC CM&H/U is abnormal.	<Ref. to CVT(diag)-36, DTC P0500 VEHICLE SPEED SENSOR “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0601	Internal Control Module Memory Checksum Error	TCM ROM is faulty.	<Ref. to CVT(diag)-36, DTC P0601 INTERNAL CONTROL MODULE MEMORY CHECKSUM ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0604	Internal Control Module Random Access Memory (RAM) Error	TCM RAM is faulty.	<Ref. to CVT(diag)-37, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P062F	Internal Control Module EEPROM Error	TCM EEPROM is faulty.	<Ref. to CVT(diag)-37, DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0705	Transmission Range Sensor Circuit (PRNDL Input)	Inhibitor switch malfunction or short circuit	<Ref. to CVT(diag)-38, DTC P0705 TRANSMISSION RANGE SENSOR CIRCUIT (PRNDL INPUT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0708	AT Range Switch Not Inputted	Inhibitor switch malfunction or open circuit	<Ref. to CVT(diag)-40, DTC P0708 AT RANGE SWITCH NOT INPUTTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0711	ATF Temp. Sensor Circuit Range/Performance	ATF temperature sensor is faulty or input signal circuit is faulty.	<Ref. to CVT(diag)-41, DTC P0711 ATF TEMP. SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0712	Transmission Fluid Temperature Sensor Circuit Low Input	ATF temperature sensor is faulty or input signal circuit is shorted.	<Ref. to CVT(diag)-42, DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0713	Transmission Fluid Temperature Sensor Circuit High Input	ATF temperature sensor is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-44, DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0719	Brake Switch Circuit Low	Brake switch is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-46, DTC P0719 BRAKE SWITCH CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0720	Output Speed Sensor Circuit	Front wheel speed sensor is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-48, DTC P0720 OUTPUT SPEED SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0721	Output Shaft Speed Sensor Circuit Range/Performance	Front wheel speed sensor characteristics is abnormal.	<Ref. to CVT(diag)-51, DTC P0721 OUTPUT SHAFT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0724	Brake Switch Circuit High	Brake switch is faulty or input signal circuit is shorted.	<Ref. to CVT(diag)-52, DTC P0724 BRAKE SWITCH CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0730	Gearshift Control Performance Abnormal	Primary speed sensor, secondary speed sensor, control valve, or chain is faulty.	<Ref. to CVT(diag)-53, DTC P0730 GEARSHIFT CONTROL PERFORMANCE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0746	Pressure Control Solenoid "A" Performance/ Stuck Off	Secondary solenoid is faulty, hydraulic circuit is stuck in low pressure side.	<Ref. to CVT(diag)-55, DTC P0746 PRESSURE CONTROL SOLENOID "A" PERFORMANCE/STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference
P0747	Pressure Control Solenoid "A" Stuck On	Secondary solenoid is faulty, hydraulic circuit is stuck in high pressure side.	<Ref. to CVT(diag)-57, DTC P0747 PRESSURE CONTROL SOLENOID "A" STUCK ON, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0751	Shift Solenoid "A" Performance/Stuck Off	Primary UP solenoid is faulty, hydraulic circuit is stuck in low pressure side.	<Ref. to CVT(diag)-59, DTC P0751 SHIFT SOLENOID "A" PERFORMANCE/STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0752	Shift Solenoid "A" Stuck On	Primary UP solenoid is faulty, hydraulic circuit is stuck in high pressure side.	<Ref. to CVT(diag)-61, DTC P0752 SHIFT SOLENOID "A" STUCK ON, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0756	Shift Solenoid "B" Performance/Stuck Off	Primary DOWN solenoid is faulty, hydraulic circuit is stuck in low pressure side.	<Ref. to CVT(diag)-63, DTC P0756 SHIFT SOLENOID "B" PERFORMANCE/STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0757	Shift Solenoid "B" Stuck On	Primary DOWN solenoid is faulty, hydraulic circuit is stuck in high pressure side.	<Ref. to CVT(diag)-65, DTC P0757 SHIFT SOLENOID "B" STUCK ON, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0776	Pressure Control Solenoid "B" Performance/ Stuck Off	F&R solenoid is faulty, hydraulic circuit is stuck in low pressure side.	<Ref. to CVT(diag)-67, DTC P0776 PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0801	Reverse Inhibit Control Circuit	Shift lock solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-68, DTC P0801 REVERSE INHIBIT CONTROL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0841	Secondary Oil Pressure Sensor Performance	Secondary pressure sensor or control valve is faulty	<Ref. to CVT(diag)-69, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0842	Secondary Oil Pressure Sensor Circuit (Low)	Secondary pressure sensor is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-73, DTC P0842 SECONDARY OIL PRESSURE SENSOR CIRCUIT (LOW), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0843	Secondary Oil Pressure Sensor Circuit (High)	Secondary pressure sensor is faulty or input signal circuit is shorted.	<Ref. to CVT(diag)-75, DTC P0843 SECONDARY OIL PRESSURE SENSOR CIRCUIT (HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0890	AT Self-Shut Relay Diagnosis (Low)	Self-shut relay is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-77, DTC P0890 AT SELF-SHUT RELAY DIAGNOSIS (LOW), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0951	Manual Switch	Manual mode switch is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-79, DTC P0951 MANUAL SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0961	Pressure Control Solenoid "A" Control Circuit Range/Performance	Characteristics of secondary solenoid is abnormal.	<Ref. to CVT(diag)-81, DTC P0961 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0962	Secondary Solenoid Circuit (Low)	Secondary solenoid is faulty or output signal circuit is shorted.	<Ref. to CVT(diag)-82, DTC P0962 SECONDARY SOLENOID CIRCUIT (LOW), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0963	Secondary Solenoid Circuit (High)	Secondary solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-84, DTC P0963 SECONDARY SOLENOID CIRCUIT (HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0965	Forward & Reverse Solenoid Function	F&R solenoid, forward clutch or control valve is faulty.	<Ref. to CVT(diag)-86, DTC P0965 FORWARD & REVERSE SOLENOID FUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0966	Forward & Reverse Solenoid Circuit (Low)	F&R solenoid is faulty or output signal circuit is shorted.	<Ref. to CVT(diag)-87, DTC P0966 FORWARD & REVERSE SOLENOID CIRCUIT (LOW), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference
P0967	Forward & Reverse Linear Solenoid Circuit (High)	F&R solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-89, DTC P0967 FORWARD & REVERSE LINEAR SOLENOID CIRCUIT (HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0970	Transfer Solenoid Circuit (Low)	AWD solenoid is faulty or output signal circuit is shorted.	<Ref. to CVT(diag)-91, DTC P0970 TRANSFER SOLENOID CIRCUIT (LOW), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0971	Transfer Solenoid Circuit (High)	AWD solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-93, DTC P0971 TRANSFER SOLENOID CIRCUIT (HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0973	Primary Solenoid System A Circuit (Low)	Primary UP solenoid is faulty or output signal circuit is shorted.	<Ref. to CVT(diag)-95, DTC P0973 PRIMARY SOLENOID SYSTEM A CIRCUIT (LOW), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0974	Primary Solenoid System A Circuit (High)	Primary UP solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-97, DTC P0974 PRIMARY SOLENOID SYSTEM A CIRCUIT (HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0976	Primary Solenoid System B Circuit (Low)	Primary DOWN solenoid is faulty or output signal circuit is shorted.	<Ref. to CVT(diag)-99, DTC P0976 PRIMARY SOLENOID SYSTEM B CIRCUIT (LOW), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0977	Primary Solenoid System B Circuit (High)	Primary DOWN solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-101, DTC P0977 PRIMARY SOLENOID SYSTEM B CIRCUIT (HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P160A	Random Access Memory (RAM) Error	TCM RAM is faulty.	<Ref. to CVT(diag)-103, DTC P160A RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1706	AT Vehicle Speed Sensor Circuit Malfunction (Rear Wheel)	Rear wheel speed sensor is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-104, DTC P1706 AT VEHICLE SPEED SENSOR CIRCUIT MALFUNCTION (REAR WHEEL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P170B	Output Speed Sensor Circuit Range/Performance Rear	Rear wheel speed sensor characteristics is abnormal.	<Ref. to CVT(diag)-107, DTC P170B OUTPUT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE REAR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P2770	Lock-Up On/Off Solenoid Circuit (High)	Lock-up ON/OFF solenoid is faulty or output signal circuit is open or shorted.	<Ref. to CVT(diag)-128, DTC P2770 LOCK-UP ON/OFF SOLENOID CIRCUIT (HIGH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0073	Control Module Communication Bus Off	CAN bus is shorted or communication error.	<Ref. to CVT(diag)-129, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	Lost Communication With ECM/PCM “A”	Detected that the engine data has not yet arrived.	<Ref. to CVT(diag)-129, DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	Lost Communication With Vehicle Dynamics Control Module	Detected that the VDC data has not yet arrived.	<Ref. to CVT(diag)-129, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	Lost Communication With Body Control Module	Detected that the body integrated unit data has not yet arrived.	<Ref. to CVT(diag)-129, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	Lost Communication With Instrument Panel Cluster (IPC) Control Module	Detected that the meter data has not yet arrived.	<Ref. to CVT(diag)-129, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0164	Lost Communication With HVAC Control Module	Detected that the air conditioner data has not yet arrived.	<Ref. to CVT(diag)-129, DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	Invalid Data Received From ECM/PCM “A”	Detected abnormality of the engine data.	<Ref. to CVT(diag)-129, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	Invalid Data Received From Vehicle Dynamics Control Module	Detected abnormality of the VDC data.	<Ref. to CVT(diag)-129, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	Invalid Data Received From Body Control Module	Detected abnormality of the body integrated unit data.	<Ref. to CVT(diag)-130, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0423	Invalid Data Received From Instrument Panel Cluster Control Module	Detected abnormality of the meter data.	<Ref. to CVT(diag)-130, DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0424	Invalid Data Received From HVAC Control Module	Detected abnormality of the air conditioner data.	<Ref. to CVT(diag)-130, DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

17.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P0500 VEHICLE SPEED SENSOR “A”

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-5, DTC P0500 VEHICLE SPEED SENSOR “A”, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

VDC does not operate.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of VDC system using the Subaru Select Monitor.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Repair the poor contact of connector and harness between VDCCM&H/U and wheel speed sensor.

B: DTC P0601 INTERNAL CONTROL MODULE MEMORY CHECKSUM ERROR

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-6, DTC P0601 INTERNAL CONTROL MODULE MEMORY CHECKSUM ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

TCM ROM malfunction

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-17, Clear Memory Mode.> 2) Read the DTC.	Is DTC P0601 displayed?	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

C: DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-7, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

TCM RAM malfunction

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-17, Clear Memory Mode.> 2) Read the DTC.	Is DTC P0604 displayed?	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

D: DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-8, DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

TCM EEPROM malfunction

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-17, Clear Memory Mode.> 2) Read the DTC.	Is DTC P062F displayed?	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

E: DTC P0705 TRANSMISSION RANGE SENSOR CIRCUIT (PRNDL INPUT)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-9, DTC P0705 TRANSMISSION RANGE SENSOR CIRCUIT (PRNDL INPUT), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Shift characteristics are erroneous.
- The range position of the select lever and the position of shift indicator display do not match.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to ON. 2) Move the select lever to each range, and read the data of «P range», «R Range Signal», «N range» and «D Range Signal» using the Subaru Select Monitor.	Is display “OFF” for the range other than corresponding range?	Go to step **5**.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 38 — Chassis ground:*** ***(B54) No. 37 — Chassis ground:*** ***(B54) No. 36 — Chassis ground:*** ***(B54) No. 35 — Chassis ground:***	Is each resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of body harness.
3	**CHECK HARNESS.** 1) Disconnect the inhibitor switch connector. 2) Measure the resistance between transmission connector and chassis ground. ***Connector & terminal*** ***(T3) No. 3 — Chassis ground:*** ***(T3) No. 2 — Chassis ground:*** ***(T3) No. 1 — Chassis ground:*** ***(T3) No. 8 — Chassis ground:***	Is each resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of transmission harness.

	Step	Check	Yes	No
4	**CHECK INHIBITOR SWITCH.** Move the select lever to each range, and measure the resistance between inhibitor switch connector terminals. ***Connector & terminal*** ***(T7) No. 2 — (T7) No. 1:*** ***(T7) No. 5 — (T7) No. 1:*** ***(T7) No. 3 — (T7) No. 1:*** ***(T7) No. 4 — (T7) No. 1:***	Is the resistance other than corresponding range 1 MΩ or more?	Go to step **5**.	Replace the inhibitor switch. <Ref. to CVT(TR690)-92, Inhibitor Switch.>
5	**CHECK FOR POOR CONTACT.**	Is there poor contact between TCM, inhibitor switch, transmission ground?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>

F: DTC P0708 AT RANGE SWITCH NOT INPUTTED

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-10, DTC P0708 AT RANGE SWITCH NOT INPUTTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Shift characteristics are erroneous.
- The range position of the select lever and the position of shift indicator display do not match.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to ON. 2) Move the select lever to each range, and read the data of «P range», «R Range Signal», «N range» and «D Range Signal» using the Subaru Select Monitor.	Is the display of the corresponding range “ON”?	Go to step **7**.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance of harness between TCM connector and transmission connector. ***Connector & terminal*** ***(B54) No. 38 — (B12) No. 3:*** ***(B54) No. 37 — (B12) No. 2:*** ***(B54) No. 36 — (B12) No. 1:*** ***(B54) No. 35 — (B12) No. 8:***	Is each resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of body harness.
3	**CHECK HARNESS.** Measure the resistance of harness between inhibitor switch connector and transmission ground. ***Connector & terminal*** ***(T7) No. 1 — Transmission ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS.** 1) Disconnect the inhibitor switch connector. 2) Measure the resistance between transmission connector and inhibitor switch connector. ***Connector & terminal*** ***(T3) No. 3 — (T7) No. 2:*** ***(T3) No. 2 — (T7) No. 5:*** ***(T3) No. 1 — (T7) No. 3:*** ***(T3) No. 8 — (T7) No. 4:***	Is each resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of transmission harness.
5	**CHECK INHIBITOR SWITCH.** Move the select lever to each range, and measure the resistance between inhibitor switch connector terminals. ***Connector & terminal*** ***(T7) No. 2 — (T7) No. 1:*** ***(T7) No. 5 — (T7) No. 1:*** ***(T7) No. 3 — (T7) No. 1:*** ***(T7) No. 4 — (T7) No. 1:***	Is the resistance of the corresponding range less than 1 MΩ?	Go to step **6**.	Replace the inhibitor switch. <Ref. to CVT(TR690)-92, Inhibitor Switch.>
6	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between each connector and chassis ground. ***Connector & terminal*** ***Transmission connector (B12 side)*** ***(B12) No. 3 (+) — Chassis ground (–):*** ***(B12) No. 2 (+) — Chassis ground (–):*** ***(B12) No. 1 (+) — Chassis ground (–):*** ***(B12) No. 8 (+) — Chassis ground (–):*** ***Transmission connector (T7 side)*** ***(T7) No. 2 (+) — Chassis ground (–):*** ***(T7) No. 5 (+) — Chassis ground (–):*** ***(T7) No. 3 (+) — Chassis ground (–):*** ***(T7) No. 4 (+) — Chassis ground (–):***	Is each voltage less than 1 V?	Go to step **7**.	Repair the harness which outputs 1 V or more.
7	**CHECK FOR POOR CONTACT.**	Is there poor contact between TCM, inhibitor switch, transmission ground?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>

G: DTC P0711 ATF TEMP. SENSOR CIRCUIT RANGE/PERFORMANCE

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-11, DTC P0711 ATF TEMP. SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Excessive shift shock
- Shift characteristics malfunction

NOTE:
For the diagnostic procedure, perform the diagnosis according to DTC P0712 and P0713. <Ref. to CVT(diag)-42, DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CVT(diag)-44, DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

H: DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT LOW INPUT

DTC DETECTING CONDITION:

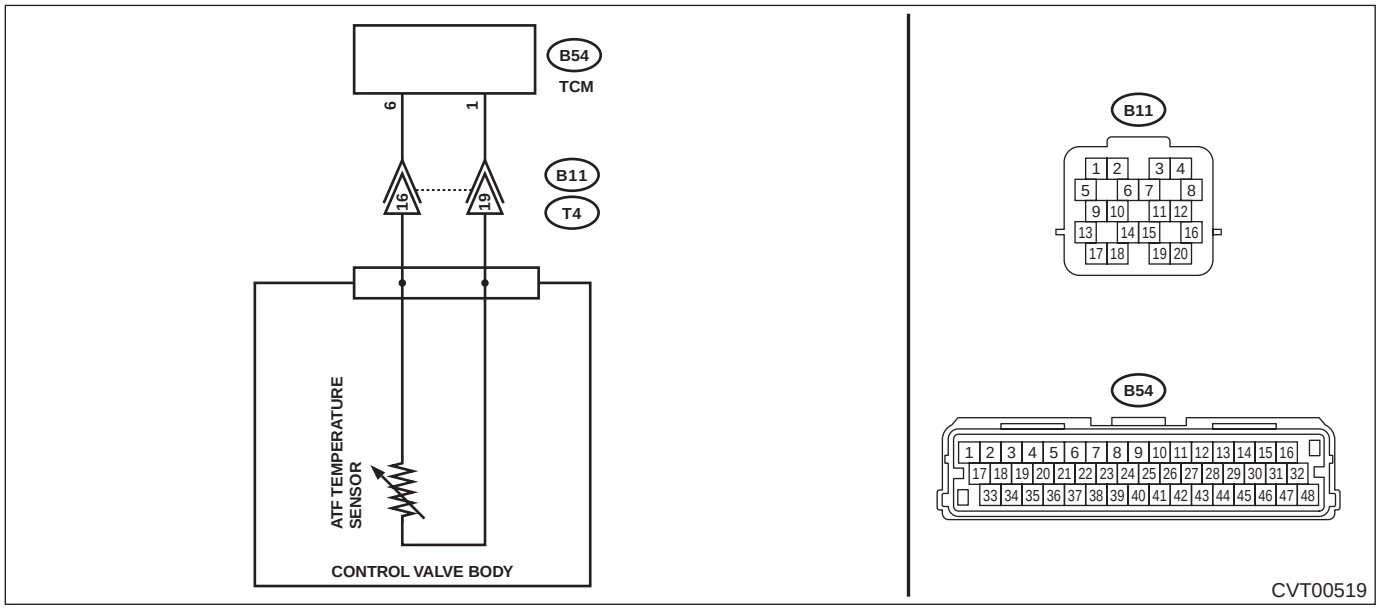
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-12, DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Excessive shift shock
- Shift characteristics malfunction

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance of harness between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 1 — Chassis ground:*** ***(B54) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Go to step **2**.
2	**CHECK HARNESS.** 1) Disconnect the transmission connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 16 — Transmission body:*** ***(T4) No. 19 — Transmission body:***	Is the resistance 1 MΩ or more?	Repair the short circuit of body harness.	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

Step		Check	Yes	No
4	**CHECK ATF TEMPERATURE SENSOR.** Measure the resistance between transmission connector terminals. ***Connector & terminal*** ***(T4) No. 16 — No. 19:***	Is resistance as follows? Fluid temperature 0°C → Approx. 6.2 kΩ Fluid temperature 20°C → Approx. 2.6 kΩ Fluid temperature 80°C → Approx. 370 Ω	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>

I: DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT HIGH INPUT

DTC DETECTING CONDITION:

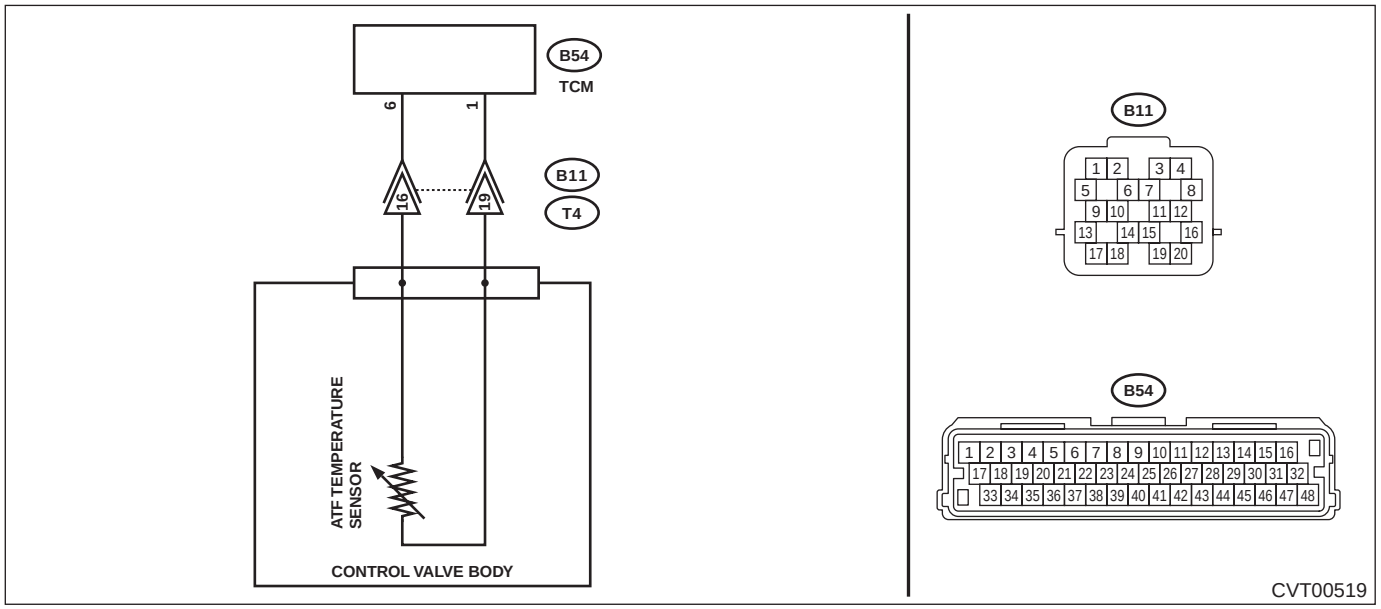
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-13, DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Excessive shift shock
- Shift characteristics malfunction

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connectors. ***Connector & terminal*** ***(B54) No. 6 (+) — (B54) No. 1 (–):***	Is the voltage 5 V or more?	Repair the short circuit of harness.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 6 — (B11) No. 16:*** ***(B54) No. 1 — (B11) No. 19:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of body harness.
3	**CHECK ATF TEMPERATURE SENSOR.** Measure the resistance between transmission connector terminals. ***Connector & terminal*** ***(T4) No. 16 — No. 19:***	Is the resistance 1 MΩ or more?	Repair the open circuit of transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK ATF TEMPERATURE SENSOR.** 1) Connect the connectors to TCM and transmission. 2) Start the engine. 3) Warm up until the ATF temperature exceeds 50°C (122°F). 4) Turn the ignition switch to OFF. 5) Disconnect the transmission connector. 6) Measure the resistance between transmission connector terminals. ***Connector & terminal*** ***(T4) No. 16 — No. 19:***	Is the resistance 730 — 1120 Ω?	Go to step **5**.	Go to step **7**.
5	**CHECK ATF TEMPERATURE SENSOR.** Measure the resistance between transmission connector terminals. ***Connector & terminal*** ***(T4) No. 16 — No. 19:***	Does the resistance value increase gradually while the ATF temperature decreases?	Go to step **6**.	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>
6	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the connector to transmission. 2) Turn the ignition switch to ON. (Do not start engine.) 3) Read the data of «ATF Temp.» using the Subaru Select Monitor.	Does the ATF temperature gradually decrease?	Check for poor contact of the ATF temperature sensor and transmission connector harness, and repair the defective part.	Go to step **7**.
7	**CHECK FOR POOR CONTACT.**	Is there poor contact of ATF temperature sensor circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>

J: DTC P0719 BRAKE SWITCH CIRCUIT LOW

DTC DETECTING CONDITION:

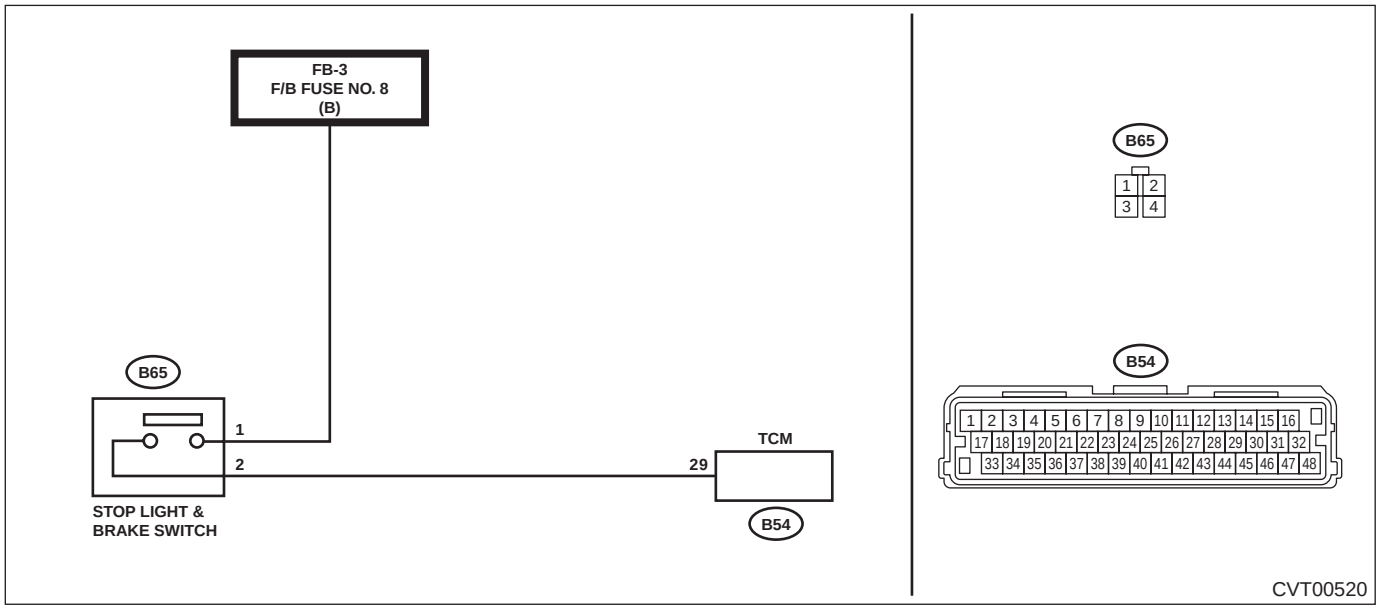
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-14, DTC P0719 BRAKE SWITCH CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Gear is not shifted down when climbing a hill or driving down a hill.

WIRING DIAGRAM:

Stop light system <Ref. to WI-401, Stop Light System.>



Step		Check	Yes	No
1	**CHECK FUSE (NO. 8).** 1) Turn the ignition switch to OFF. 2) Remove the fuse (No. 8).	Is the fuse (No. 8) blown out?	Replace the fuse (No. 8). If the new fuse (No. 8) has blown out easily, repair the short circuit of harness between fuse (No. 8) and stop light switch.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and stop light switch connector. 3) Measure the resistance between TCM connector and stop light switch connector. ***Connector & terminal*** ***(B54) No. 29 — (B65) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** Measure the resistance between TCM connector and fuse (No. 8). ***Connector & terminal*** ***(B65) No. 1 — fuse (No. 8):***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK INPUT SIGNAL FOR TCM.** 1) Install the fuse (No. 8). 2) Connect the TCM and stop light switch connector. 3) Depress the brake pedal. 4) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 29 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Replace the stop light switch. <Ref. to BR-77, Stop Light Switch.>
5	**CHECK INPUT SIGNAL FOR TCM.** With brake pedal depressed, read the data of «Stop Light Switch» using Subaru Select Monitor.	Is “ON” displayed?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step **6**.
6	**CHECK FOR POOR CONTACT.**	Is there poor contact of input signal of stop light switch?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>

K: DTC P0720 OUTPUT SPEED SENSOR CIRCUIT

DTC DETECTING CONDITION:

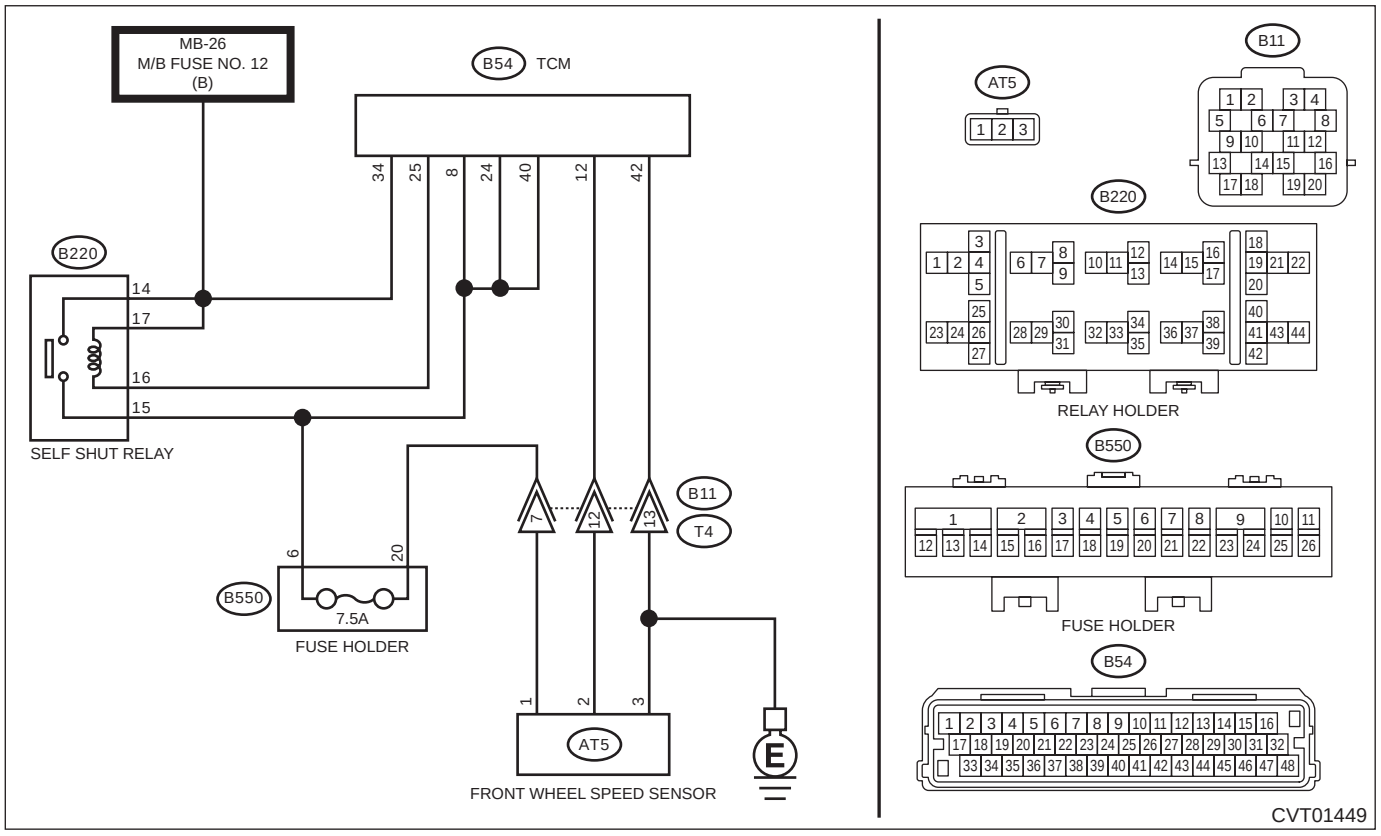
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-15, DTC P0720 OUTPUT SPEED SENSOR CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Shock occurs when selecting shift position.
- Shift control malfunction

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuse (7.5 A) from the fuse holder.	Is the fuse OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK HARNESS.** 1) Disconnect the TCM and self shut relay connectors. 2) Measure the resistance between TCM connector and self shut relay connector. ***Connector & terminal*** ***(B54) No. 25 — (B220) No. 16:*** ***(B54) No. 8 — (B220) No. 15:*** ***(B54) No. 24 — (B220) No. 15:*** ***(B54) No. 40 — (B220) No. 15:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 25 — Chassis ground:*** ***(B54) No. 8 — Chassis ground:*** ***(B54) No. 24 — Chassis ground:*** ***(B54) No. 40 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.
4	**CHECK RELAY POWER SUPPLY.** Measure the voltage between self shut relay connector and chassis ground. ***Connector & terminal*** ***(B220) No. 14 (+) — Chassis ground (–):*** ***(B220) No. 17 (+) — Chassis ground (–):***	Is the voltage 11 — 13 V or more?	Go to step **5**.	Repair the open or short circuit of harness.
5	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Terminals*** ***No. 16 — No. 17:***	Is the resistance 110 — 140 Ω?	Go to step **6**.	Replace the self shut relay.
6	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Replace the self shut relay.
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the connectors of TCM and self shut relay. 2) Read the data of «Control module voltage» using Subaru Select Monitor.	Is the «Control module voltage» 10 V or more?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step **8**.
8	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 12 — (B11) No. 12:*** ***(B54) No. 42 — (B11) No. 13:*** ***(B550) No. 20 — (B11) No. 7:***	Is the resistance less than 1 Ω?	Go to step **9**.	Repair the open circuit of harness.
9	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 12 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **10**.	Repair the short circuit of harness.
10	**CHECK HARNESS.** Measure the resistance between self shut relay connector and fuse holder. ***Connector & terminal*** ***(B220) No. 15 — (B550) No. 6:***	Is the resistance less than 1 Ω?	Go to step **11**.	Repair the open circuit of harness.
11	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B11) No. 7 (+) — Chassis ground (–):***	Is the voltage approx. 10 — 13 V?	Go to step **12**.	Repair the poor contact of harness or connector.

Step		Check	Yes	No
12	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect the transmission connector. 3) Lift up the vehicle. 4) Start the engine. 5) Slowly increase the speed to 30 km/h (19 MPH). 6) Read the data of «Front Wheel Speed» using Subaru Select Monitor.	Does the value of «Front Wheel Speed» change according to the engine speed?	Current condition is normal. Repair the poor contacts of harnesses of front wheel speed sensor and transmission connector.	Go to step **13**.
13	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the front wheel speed sensor connector. 4) Measure the resistance between transmission connector and front wheel speed sensor connector. ***Connector & terminal*** ***(T4) No. 7 — (AT5) No. 1:*** ***(T4) No. 12 — (AT5) No. 2:*** ***(T4) No. 13 — (AT5) No. 3:***	Is the resistance less than 1 Ω?	Go to step **14**.	Replace the transmission harness.
14	**CHECK FRONT WHEEL SPEED SENSOR HARNESS.** Measure the resistance between transmission connector and chassis ground. ***Connector & terminal*** ***(T4) No. 7 — Chassis ground:*** ***(T4) No. 12 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **15**.	Repair the short circuit of harness.
15	**CHECK FRONT WHEEL SPEED SENSOR.** 1) Turn the ignition switch to OFF. 2) Replace the front wheel speed sensor. <Ref. to CVT(TR690)-105, Front Wheel Speed Sensor.> 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-17, Clear Memory Mode.> 4) Read the DTC.	Is DTC P0720 displayed?	Go to step **16**.	The original front wheel speed sensor is defective.
16	**CHECK SELF SHUT RELAY.** 1) Turn the ignition switch to OFF. 2) Replace the self shut relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-17, Clear Memory Mode.> 4) Read the DTC.	Is DTC P0720 displayed?	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	The original self shut relay is defective.

L: DTC P0721 OUTPUT SHAFT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-16, DTC P0721 OUTPUT SHAFT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Acceleration is poor during standing start.
- No lock-up occurs.
- The engine stalls when the vehicle is stopped.
- Shift control malfunction

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0721, is DTC P1706 or P0500 displayed?	Perform the diagnosis according to DTCs other than P0721.	Perform the diagnosis according to DTC P0720. <Ref. to CVT(diag)-48, DTC P0720 OUTPUT SPEED SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

M: DTC P0724 BRAKE SWITCH CIRCUIT HIGH

DTC DETECTING CONDITION:

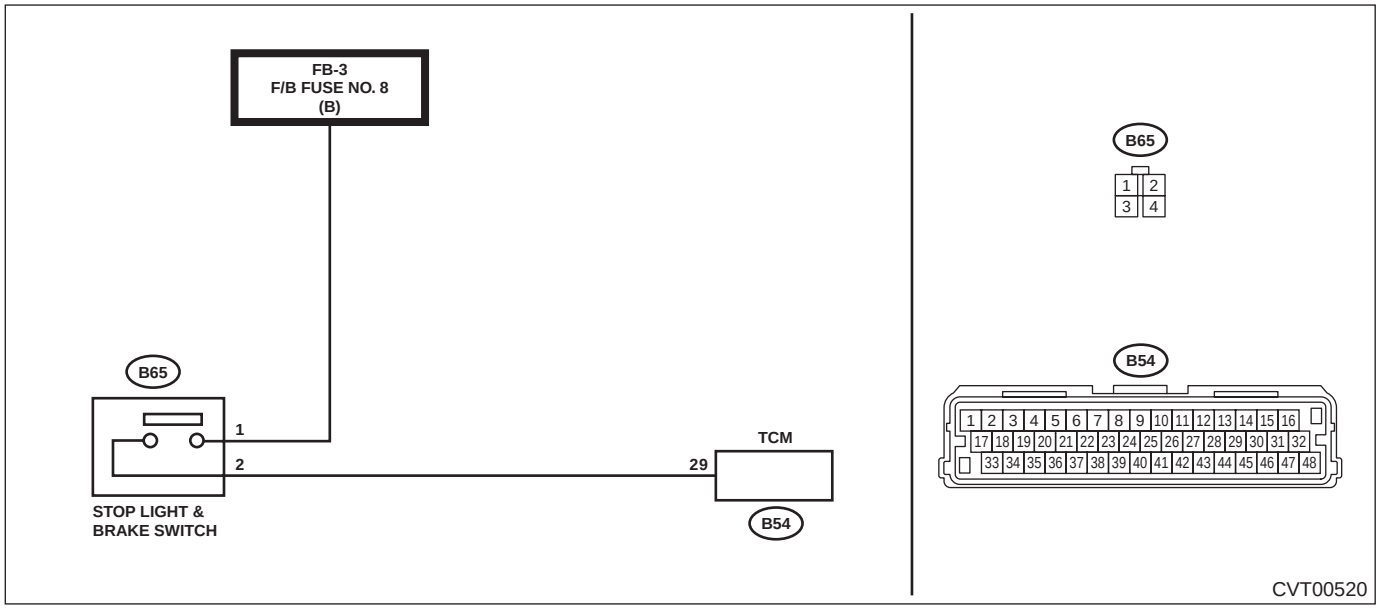
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-17, DTC P0724 BRAKE SWITCH CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Gear is not shifted down when climbing a hill or driving down a hill.

WIRING DIAGRAM:

Stop light system <Ref. to WI-401, Stop Light System.>



Step		Check	Yes	No
1	**CHECK STOP LIGHT SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Measure the resistance between stop light switch connectors. ***Connector & terminal*** ***(B65) No. 1 — No. 2:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Replace the stop light switch. <Ref. to BR-77, Stop Light Switch.>
2	**CHECK HARNESS.** 1) Disconnect the TCM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 29 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit of harness.	Go to step **3**.
3	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the TCM and stop light switch connector. 2) Turn the ignition switch to ON. 3) Read the data of «Stop Light Switch» using Subaru Select Monitor.	Is “OFF” displayed?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step **4**.
4	**CHECK FOR POOR CONTACT.**	Is there poor contact of input signal of stop light switch?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>

N: DTC P0730 GEARSHIFT CONTROL PERFORMANCE ABNORMAL

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-18, DTC P0730 GEARSHIFT CONTROL PERFORMANCE ABNORMAL, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Acceleration is poor during standing start.
- Shift control malfunction
- Engine speed increases abruptly.

	Step	Check	Yes	No
1	**CHECK TRANSMISSION FLUID.** Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **2**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
2	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **3**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>
3	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **4**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-69, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
4	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **5**.	Go to step **6**.
5	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **6**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>

Step		Check	Yes	No
6	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-18, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0730 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>	If there is shift problems, abrupt increase of engine speed, standing start problems, replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.> If it is normal, temporary poor contact occurs.

O: DTC P0746 PRESSURE CONTROL SOLENOID "A" PERFORMANCE/STUCK OFF

DTC DETECTING CONDITION:

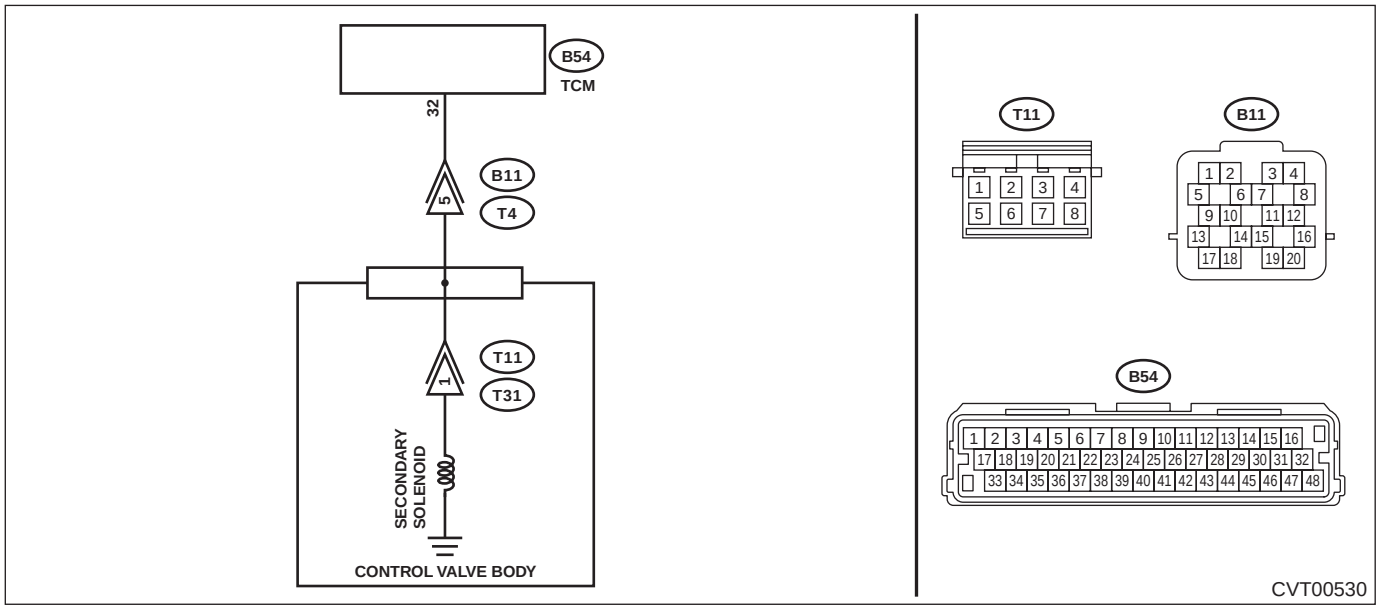
- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-19, DTC P0746 PRESSURE CONTROL SOLENOID "A" PERFORMANCE/STUCK OFF, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Shift control malfunction
- CVT chain slippage

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0746, is any of the DTCs P0842, P0843, P0962 and P0963 displayed?	Perform the diagnosis according to DTCs other than P0746.	Go to step **2**.
2	**CHECK SECONDARY SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-22, System Operation Check Mode.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step **5**.	Go to step **3**.
3	**CHECK SECONDARY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the continuity of transmission harness.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Keep the engine speed at 3,000 rpm. 2) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» higher than step 7 value? Does the value change according to the engine speed, within the range of 1.5 — 2.5 MPa?	Go to step **9**.	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>
9	**CHECK TCM INPUT SIGNAL (STALL TEST).** 1) Apply the parking brake. 2) Set the select lever to “D” range. 3) Depress the brake pedal firmly. 4) Slowly open the accelerator fully, and stabilize the engine speed. 5) Read the data of «Actual secondary pressure» using Subaru Select Monitor. **CAUTION:** **Do not perform a stall test for over 5 seconds at a time.**	Is the «Actual secondary pressure» higher than step 8 value? Does the value change according to the engine speed, within the range of 4.5 — 6.0 MPa?	Go to step **10**.	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-18, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0746 displayed?	Perform the secondary pressure test. <Ref. to CVT(TR690)-49, Secondary Pressure (Line Pressure) Test.>	If there is shift problems, abrupt increase of engine speed, standing start problems, replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.> If it is normal, temporary poor contact occurs.

P: DTC P0747 PRESSURE CONTROL SOLENOID "A" STUCK ON

DTC DETECTING CONDITION:

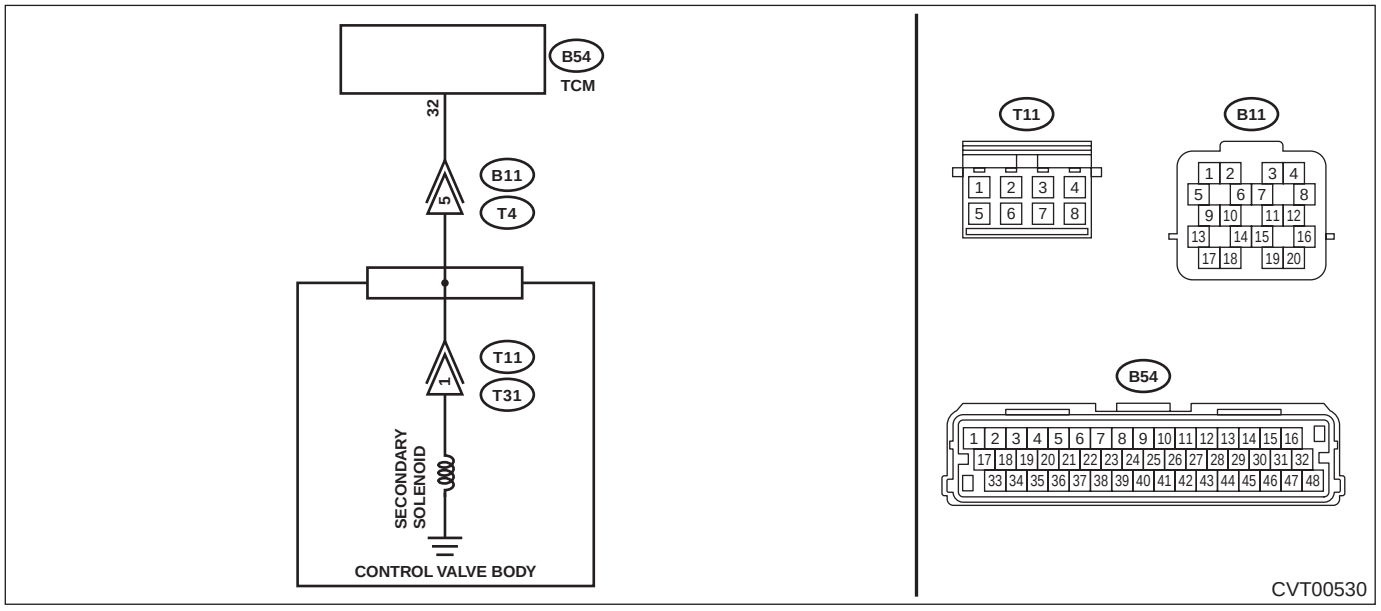
- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-22, DTC P0747 PRESSURE CONTROL SOLENOID "A" STUCK ON, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Acceleration is poor during standing start.
- Shift control malfunction

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0747, is any of the DTCs P0842, P0843, P0962 and P0963 displayed?	Perform the diagnosis according to DTCs other than P0747.	Go to step **2**.
2	**CHECK SECONDARY SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-22, System Operation Check Mode.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step **5**.	Go to step **3**.
3	**CHECK SECONDARY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the continuity of transmission harness.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Keep the engine speed at 3,000 rpm. 2) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» higher than step 7 value? Does the value change according to the engine speed, within the range of 1.5 — 2.5 MPa?	Go to step **9**.	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>
9	**CHECK TCM INPUT SIGNAL (STALL TEST).** 1) Apply the parking brake. 2) Set the select lever to “D” range. 3) Depress the brake pedal firmly. 4) Slowly open the accelerator fully, and stabilize the engine speed. 5) Read the data of «Actual secondary pressure» using Subaru Select Monitor. **CAUTION:** **Do not perform a stall test for over 5 seconds at a time.**	Is the «Actual secondary pressure» higher than step 8 value? Does the value change according to the engine speed, within the range of 4.5 — 6.0 MPa?	Go to step **10**.	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-18, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0747 displayed?	Perform the secondary pressure test. <Ref. to CVT(TR690)-49, Secondary Pressure (Line Pressure) Test.>	If there is shift problems, abrupt increase of engine speed, standing start problems, replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.> If it is normal, temporary poor contact occurs.

Q: DTC P0751 SHIFT SOLENOID "A" PERFORMANCE/STUCK OFF

DTC DETECTING CONDITION:

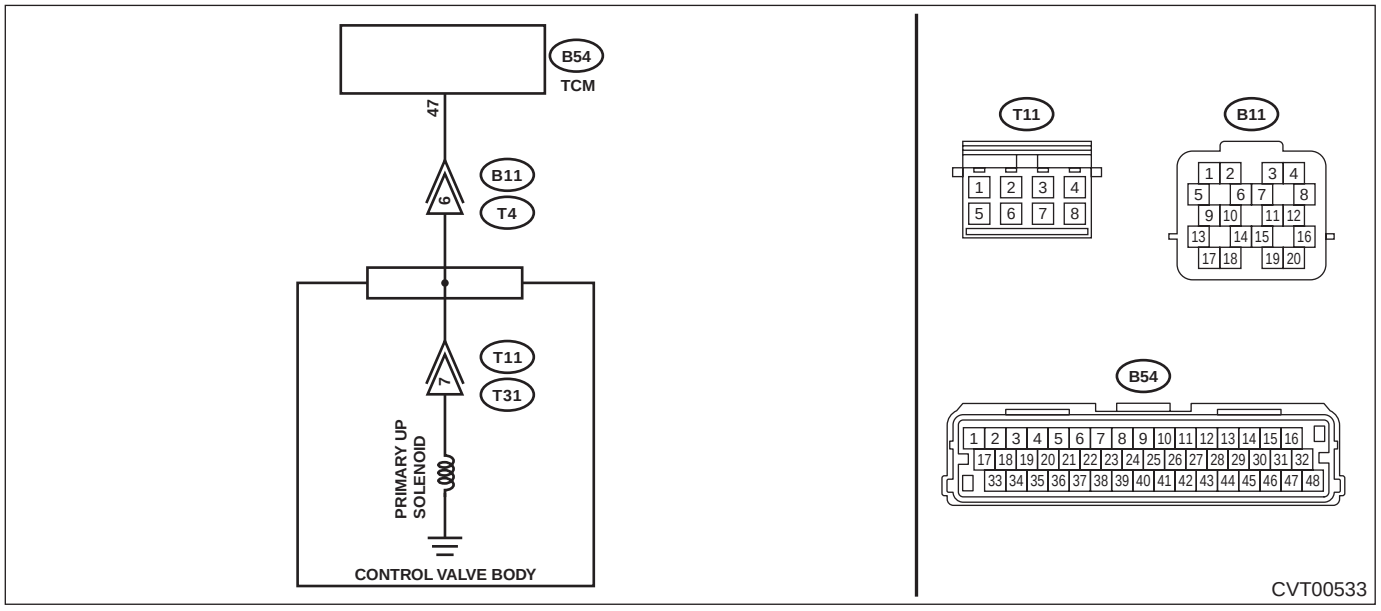
- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-25, DTC P0751 SHIFT SOLENOID "A" PERFORMANCE/ STUCK OFF, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Shift control malfunction
- Engine speed increases abruptly.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0751, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0751.	Go to step **2**.
2	**CHECK PRIMARY UP SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary UP solenoid. <Ref. to CVT(diag)-22, System Operation Check Mode.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY UP SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the continuity of transmission harness.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor. NOTE: Before operation, set SI-DRIVE to I mode.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor. NOTE: Before operation, set SI-DRIVE to I mode.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-18, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0751 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>	If there is shift problems, abrupt increase of engine speed, standing start problems, replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.> If it is normal, temporary poor contact occurs.

R: DTC P0752 SHIFT SOLENOID "A" STUCK ON

DTC DETECTING CONDITION:

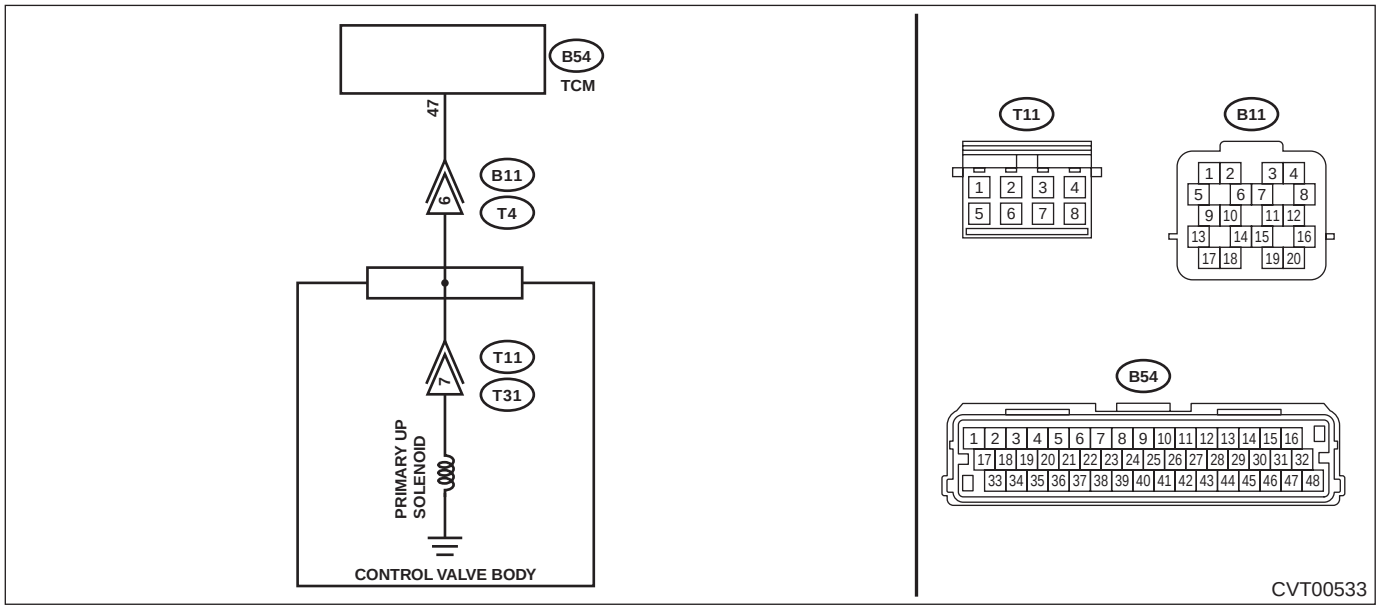
- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-26, DTC P0752 SHIFT SOLENOID "A" STUCK ON, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Acceleration is poor during standing start.
- Shift control malfunction

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0752, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0752.	Go to step **2**.
2	**CHECK PRIMARY UP SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary UP solenoid. <Ref. to CVT(diag)-22, System Operation Check Mode.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY UP SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the continuity of transmission harness.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor. NOTE: Before operation, set SI-DRIVE to I mode.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor. NOTE: Before operation, set SI-DRIVE to I mode.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-18, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0752 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>	If there is shift problems, abrupt increase of engine speed, standing start problems, replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.> If it is normal, temporary poor contact occurs.

S: DTC P0756 SHIFT SOLENOID "B" PERFORMANCE/STUCK OFF

DTC DETECTING CONDITION:

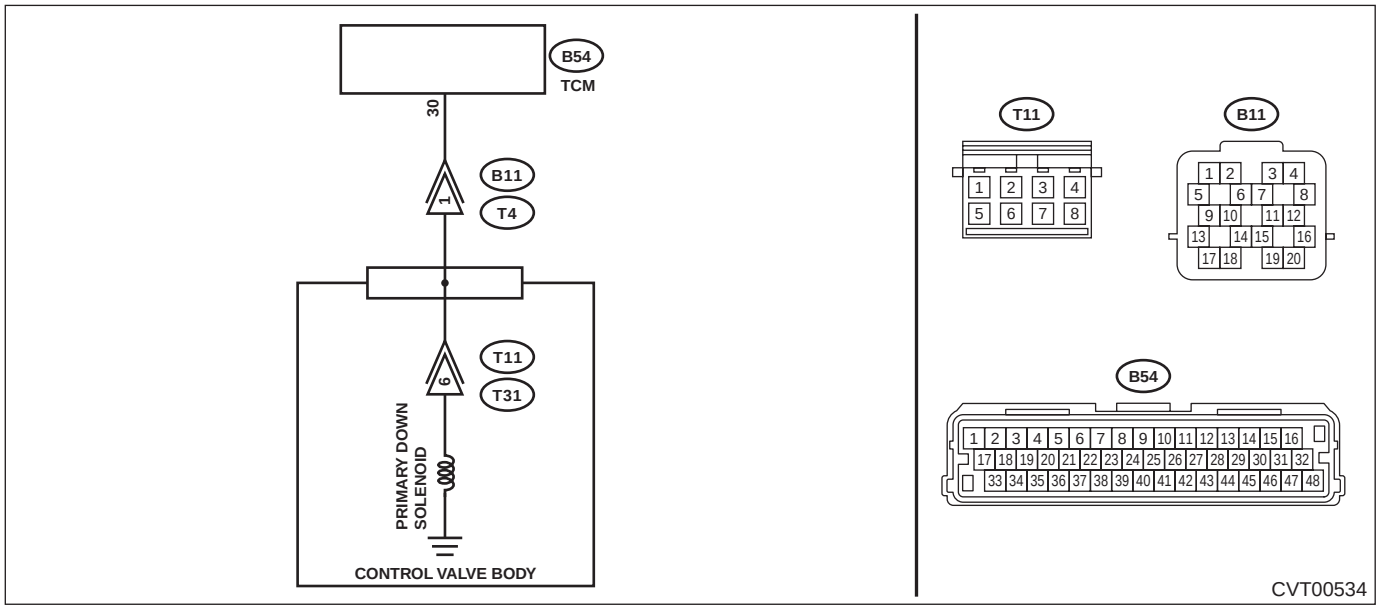
- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-27, DTC P0756 SHIFT SOLENOID "B" PERFORMANCE/ STUCK OFF, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Acceleration is poor during standing start.
- Shift control malfunction

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0756, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0756.	Go to step **2**.
2	**CHECK PRIMARY DOWN SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary DOWN solenoid. <Ref. to CVT(diag)-22, System Operation Check Mode.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY DOWN SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the continuity of transmission harness.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor. NOTE: Before operation, set SI-DRIVE to I mode.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor. NOTE: Before operation, set SI-DRIVE to I mode.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-18, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0756 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>	If there is shift problems, abrupt increase of engine speed, standing start problems, replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.> If it is normal, temporary poor contact occurs.

T: DTC P0757 SHIFT SOLENOID "B" STUCK ON

DTC DETECTING CONDITION:

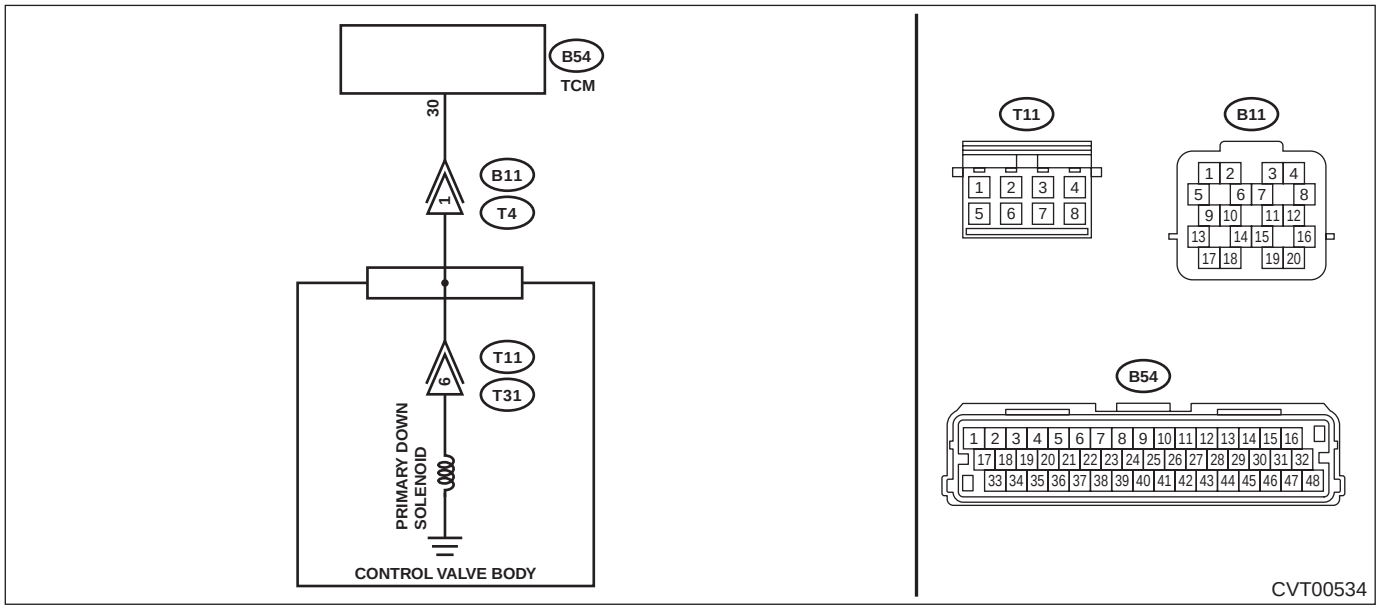
- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-28, DTC P0757 SHIFT SOLENOID "B" STUCK ON, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Vibration occurs at shift change.
- Shift control malfunction

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0757, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0757.	Go to step **2**.
2	**CHECK PRIMARY DOWN SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary DOWN solenoid. <Ref. to CVT(diag)-22, System Operation Check Mode.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY DOWN SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the continuity of transmission harness.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor. NOTE: Before operation, set SI-DRIVE to I mode.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor. NOTE: Before operation, set SI-DRIVE to I mode.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-18, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0757 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>	If there is shift problems, abrupt increase of engine speed, standing start problems, replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.> If it is normal, temporary poor contact occurs.

U: DTC P0776 PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF

DTC DETECTING CONDITION:

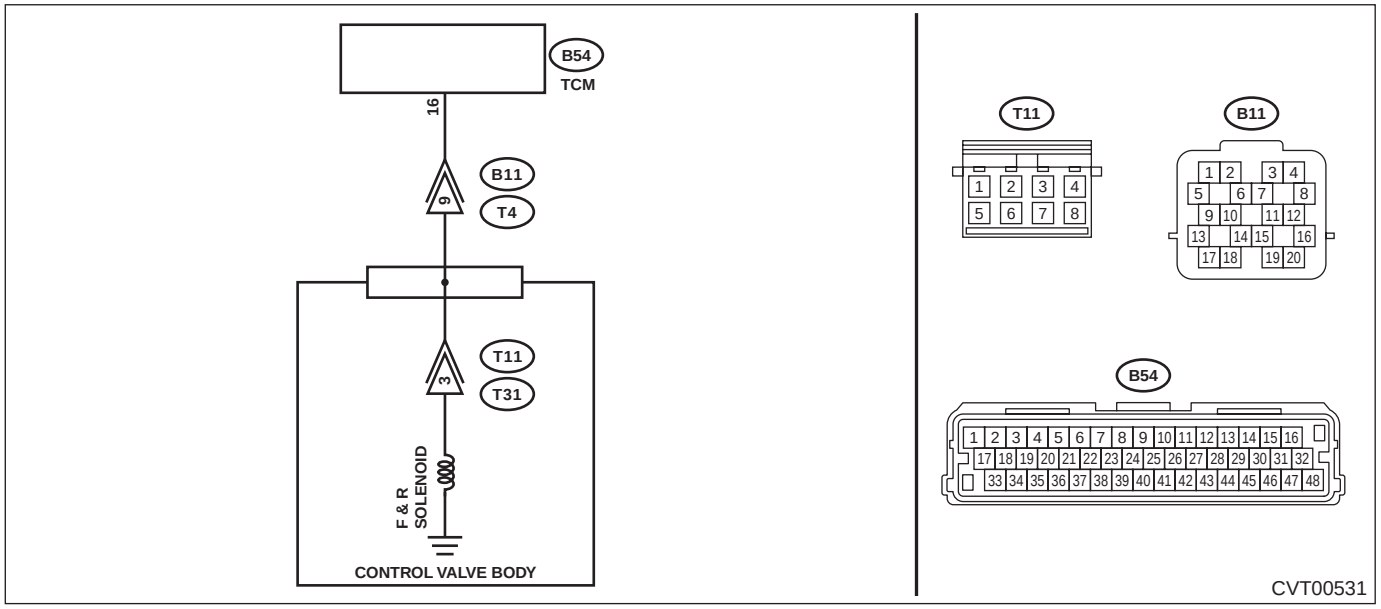
- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-29, DTC P0776 PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Engine speed increases abruptly, and can not accelerate.
- Excessive slippage is felt.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0776, is any of the DTCs P0720, P0966, P0967, P1706 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0776.	Go to step **2**.
2	**CHECK F&R SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the F&R solenoid. <Ref. to CVT(diag)-22, System Operation Check Mode.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step **5**.	Go to step **3**.
3	**CHECK F&R SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the continuity of transmission harness.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Start the engine. 2) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 3) Shift the select lever to "P" range. 4) Stabilize the engine speed at idle. 5) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-69, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
8	**STALL TEST.** Perform the stall test. <Ref. to CVT(TR690)-47, Stall Test.>	Is the stall test normal?	Go to step **9**.	If the engine speed increases abruptly, replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
9	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-18, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0776 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>	If there is abrupt increase of engine speed, standing start problems, replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.> If it is normal, temporary poor contact occurs.

V: DTC P0801 REVERSE INHIBIT CONTROL CIRCUIT

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-30, DTC P0801 REVERSE INHIBIT CONTROL CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

NOTE:
For diagnostic procedures, refer to "BODY CONTROL SYSTEM (DIAGNOSTICS)". <Ref. to BC(diag)-39, DTC B1016 SHIFT LOCK CIRCUIT FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

W: DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-31, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

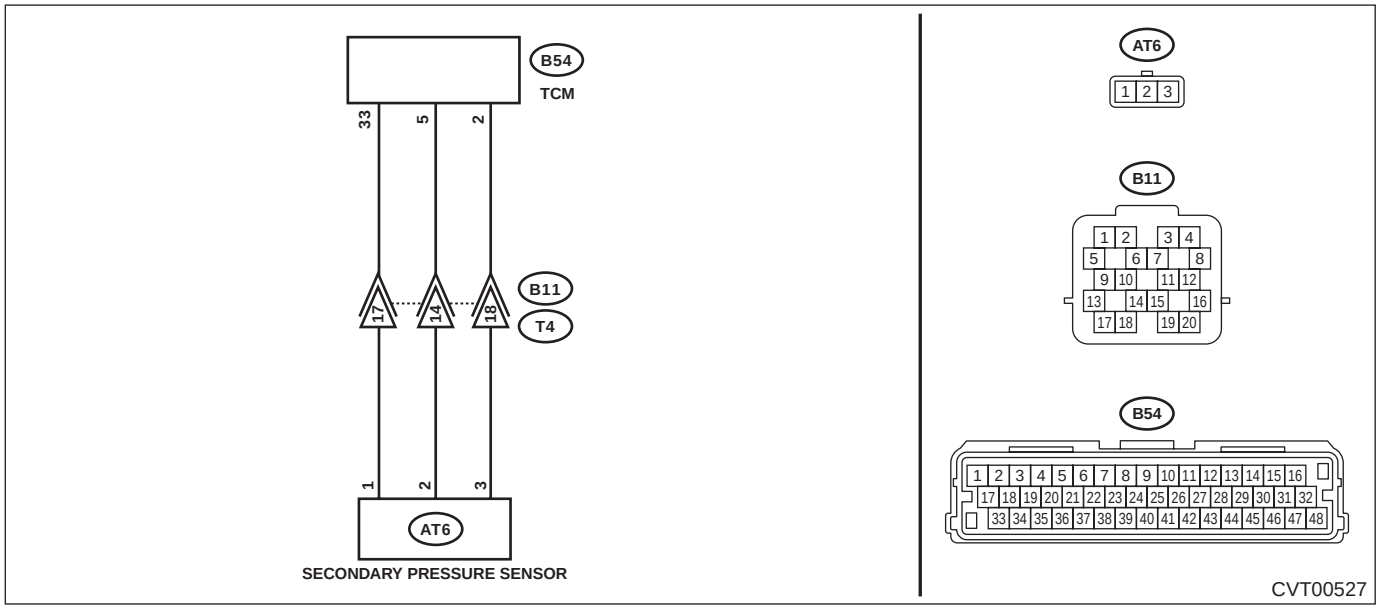
- Acceleration is poor during standing start.
- Shift control malfunction
- Engine speed increases abruptly.

CAUTION:

- **Before performing diagnosis, record the freeze frame data.**
- **Use the check board when measuring the TCM terminal voltage and resistance.**

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



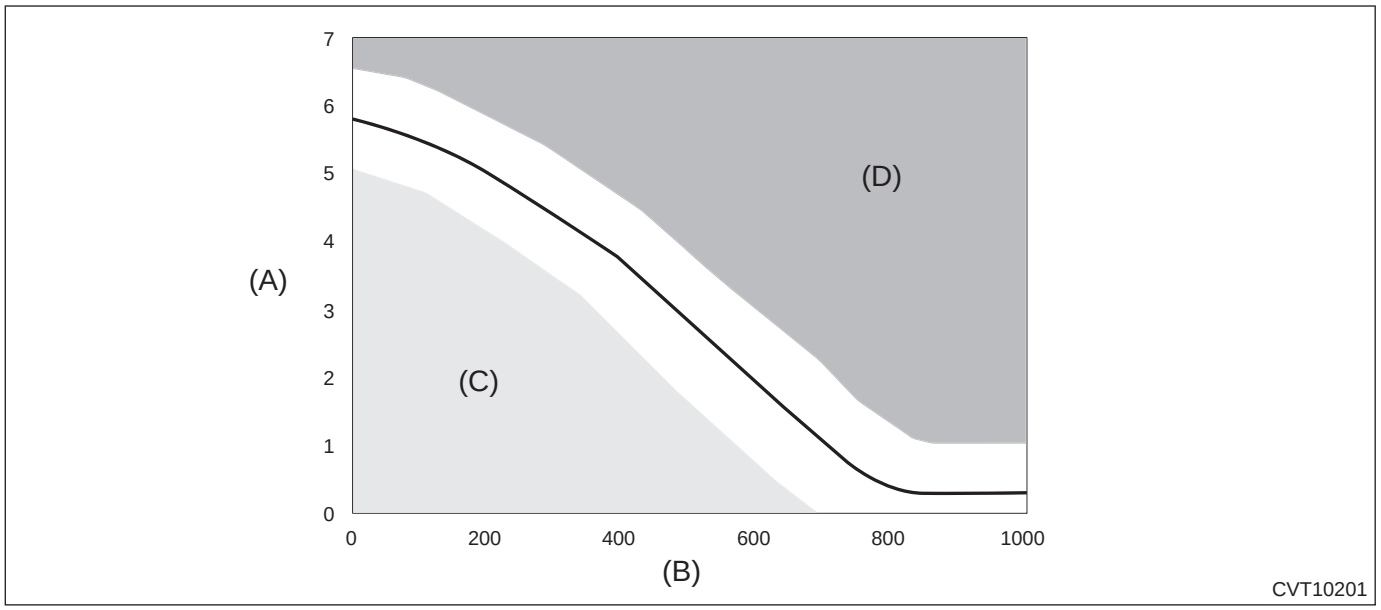
Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Are DTCs other than P0841 displayed?	Perform the diagnosis according to DTC. After the diagnosis, start the engine, and drive for 20 minutes in any driving pattern. (Include driving at a constant legal speed (for 20 seconds) at least once.) Read the DTC, and if P0841 alone is detected, Go to step **2**.	Go to step **2**.
2	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to ON. 2) Read the data of «secondary pressure sensor voltage» using Subaru Select Monitor. (While shaking the secondary pressure sensor harness)	Is the value of «secondary pressure sensor voltage» 0.39 — 0.61 V?	Go to step **10**.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of TCM and secondary pressure sensor. 3) Measure the resistance between TCM connector and secondary pressure sensor connector. ***Connector & terminal*** ***(B54) No. 2 — (AT6) No. 3:*** ***(B54) No. 5 — (AT6) No. 2:*** ***(B54) No. 33 — (AT6) No. 1:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness.
4	**CHECK HARNESS.** Measure the resistance between TCM connectors. ***Connector & terminal*** ***(B54) No. 2 — (B54) No. 33:*** ***(B54) No. 5 — (B54) No. 2:*** ***(B54) No. 33 — (B54) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit of harness.
5	**CHECK HARNESS.** Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(B54) No. 2 — Transmission body:*** ***(B54) No. 5 — Transmission body:*** ***(B54) No. 33 — Transmission body:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness.
6	**CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connectors. ***Connector & terminal*** ***(B54) No. 33 (+) — (B54) No. 2 (–):***	Is the voltage 4.6 — 5.4 V?	Go to step **7**.	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>
7	**CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.** 1) Turn the ignition switch to OFF. 2) Connect the secondary pressure sensor connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between TCM connectors. ***Connector & terminal*** ***(B54) No. 33 (+) — (B54) No. 2 (–):***	Is the voltage 4.6 — 5.4 V?	Go to step **8**.	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-110, Secondary Pressure Sensor.>
8	**CHECK SECONDARY PRESSURE SENSOR OUTPUT.** Measure the voltage between TCM connectors. ***Connector & terminal*** ***(B54) No. 5 (+) — (B54) No. 2 (–):***	Is the voltage 0.39 — 0.61 V?	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Go to step **9**.
9	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of TCM and secondary pressure sensor. 3) Check the TCM connector (B54) and the secondary pressure sensor connector (AT6).	Is there any fault in the TCM connector or the secondary pressure connector?	Repair the connector, or replace harness.	Go to step **10**.

	Step	Check	Yes	No
10	**CHECK TRANSMISSION FLUID.** 1) Connect all connectors. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **11**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.> Go to step **11**.
11	**CHECK INPUT SIGNAL FOR TCM.** 1) Perform the Clear Memory Mode. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal and move the select lever to each range at an interval of five seconds. NOTE: Move the select lever in the following order: “P” → “R” → “N” → “D” → “N” → “R” → “P”. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **12**.	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-110, Secondary Pressure Sensor.>
12	**CHECK INPUT SIGNAL FOR TCM.** 1) Shift the select lever to “P” range. 2) Keep the engine speed at 3,000 rpm. 3) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 1.5 — 2.5 MPa? And is the difference of the actual oil pressure 0.2 MPa or more compared with the value measured in step 11?	Go to step **13**.	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-110, Secondary Pressure Sensor.>
13	**CHECK FREEZE FRAME DATA.** 1) Turn the ignition switch to OFF. 2) Check the recorded freeze frame data.	Was the detected symptom low-voltage malfunction? <Ref. to CVT(diag)-72, CLASSIFICATION OF SYMPTOM USING FREEZE FRAME DATA, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>	Go to step **14**.
14	**CHECK TCM INPUT SIGNAL (STALL TEST).** 1) Lift up the vehicle. 2) Start the engine. 3) Apply the parking brake. 4) Set the select lever to “D” range. 5) Depress the brake pedal firmly. 6) Slowly open the accelerator fully, and stabilize the engine speed. 7) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 4.5 — 6.0 MPa?	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>	Go to step **15**.
15	**CHECK TCM INPUT SIGNAL (STALL TEST).** Check the «Actual Secondary Pressure» in step 14.	Is the «Actual secondary pressure» 4.5 MPa or less?	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>

1. CLASSIFICATION OF SYMPTOM USING FREEZE FRAME DATA

Apply the values of «Actual Secondary Pressure» and «Secondary Actual Current» recorded in the freeze frame data onto the graph shown in the following figure, and judge if either low-voltage malfunction or high-voltage malfunction occurs.



(A) Actual secondary pressure (MPa)
(B) Secondary actual current (mA)
(C) Low-voltage malfunction
(D) High-voltage malfunction

NOTE:
Symptom that the DTC P0841 illuminates can be classified into 2 patterns.
- Low-voltage malfunction: detected due to insufficient oil pressure
- High-voltage malfunction: detected due to excessive oil pressure

X: DTC P0842 SECONDARY OIL PRESSURE SENSOR CIRCUIT (LOW)

DTC DETECTING CONDITION:

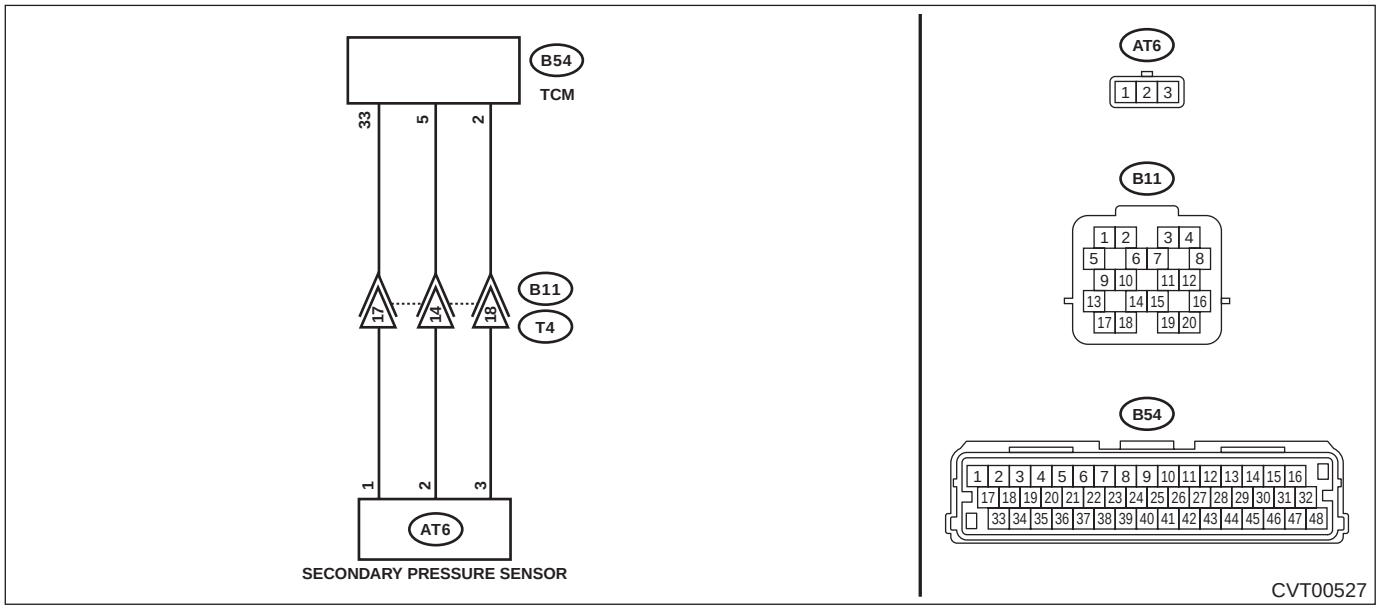
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-32, DTC P0842 SECONDARY OIL PRESSURE SENSOR CIRCUIT (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Shift characteristics malfunction

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Start the engine. 2) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 3) Shift the select lever to “P” range. 4) Stabilize the engine speed at idle. 5) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 2 — (B11) No. 18:*** ***(B54) No. 5 — (B11) No. 14:*** ***(B54) No. 33 — (B11) No. 17:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 5 — Chassis ground:*** ***(B54) No. 33 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.

	Step	Check	Yes	No
4	**CHECK TRANSMISSION HARNESS.** 1) Disconnect the secondary pressure sensor connector. 2) Measure the resistance between transmission connector and secondary pressure sensor connector. ***Connector & terminal*** ***(T4) No. 14 — (AT6) No. 2:*** ***(T4) No. 17 — (AT6) No. 1:*** ***(T4) No. 18 — (AT6) No. 3:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness.
5	**CHECK TRANSMISSION HARNESS.** Measure the resistance between transmission connector and chassis ground. ***Connector & terminal*** ***(T4) No. 14 — Chassis ground:*** ***(T4) No. 17 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness.
6	**CHECK SENSOR POWER SUPPLY.** 1) Connect the connectors of TCM and transmission. 2) Turn the ignition switch to ON. 3) Measure the voltage between secondary pressure sensor connector terminals. ***Connector & terminal*** ***(AT6) No. 1 (+) — (AT6) No. 3 (–):***	Is the voltage 4.5 V or more?	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-110, Secondary Pressure Sensor.>	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>

Y: DTC P0843 SECONDARY OIL PRESSURE SENSOR CIRCUIT (HIGH)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-33, DTC P0843 SECONDARY OIL PRESSURE SENSOR CIRCUIT (HIGH), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Shift characteristics malfunction

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Start the engine. 2) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 3) Shift the select lever to “P” range. 4) Stabilize the engine speed at idle. 5) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Turn the ignition switch to ON. 4) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 5 (+) — Chassis ground (–):*** ***(B54) No. 33 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between TCM connector terminals. ***Connector & terminal*** ***(B54) No. 5 — (B54) No. 33:***	Is the resistance less than 1 Ω?	Repair the short circuit of harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK TRANSMISSION HARNESS.** 1) Disconnect the secondary pressure sensor connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and chassis ground. ***Connector & terminal*** ***(T4) No. 14 (+) — Chassis ground (–):*** ***(T4) No. 17 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **5**.	Repair the short circuit of harness.
5	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between transmission connector terminals. ***Connector & terminal*** ***(T4) No. 14 — (T4) No. 17:***	Is the resistance less than 1 Ω?	Repair the short circuit of harness.	Go to step **6**.
6	**CHECK SENSOR POWER SUPPLY.** 1) Connect the connectors of TCM and transmission. 2) Turn the ignition switch to ON. 3) Measure the voltage between secondary pressure sensor connector terminals. ***Connector & terminal*** ***(AT6) No. 1 (+) — (AT6) No. 3 (–):***	Is the voltage 4.5 V or more?	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-110, Secondary Pressure Sensor.>	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>

Z: DTC P0890 AT SELF-SHUT RELAY DIAGNOSIS (LOW)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-34, DTC P0890 AT SELF-SHUT RELAY DIAGNOSIS (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

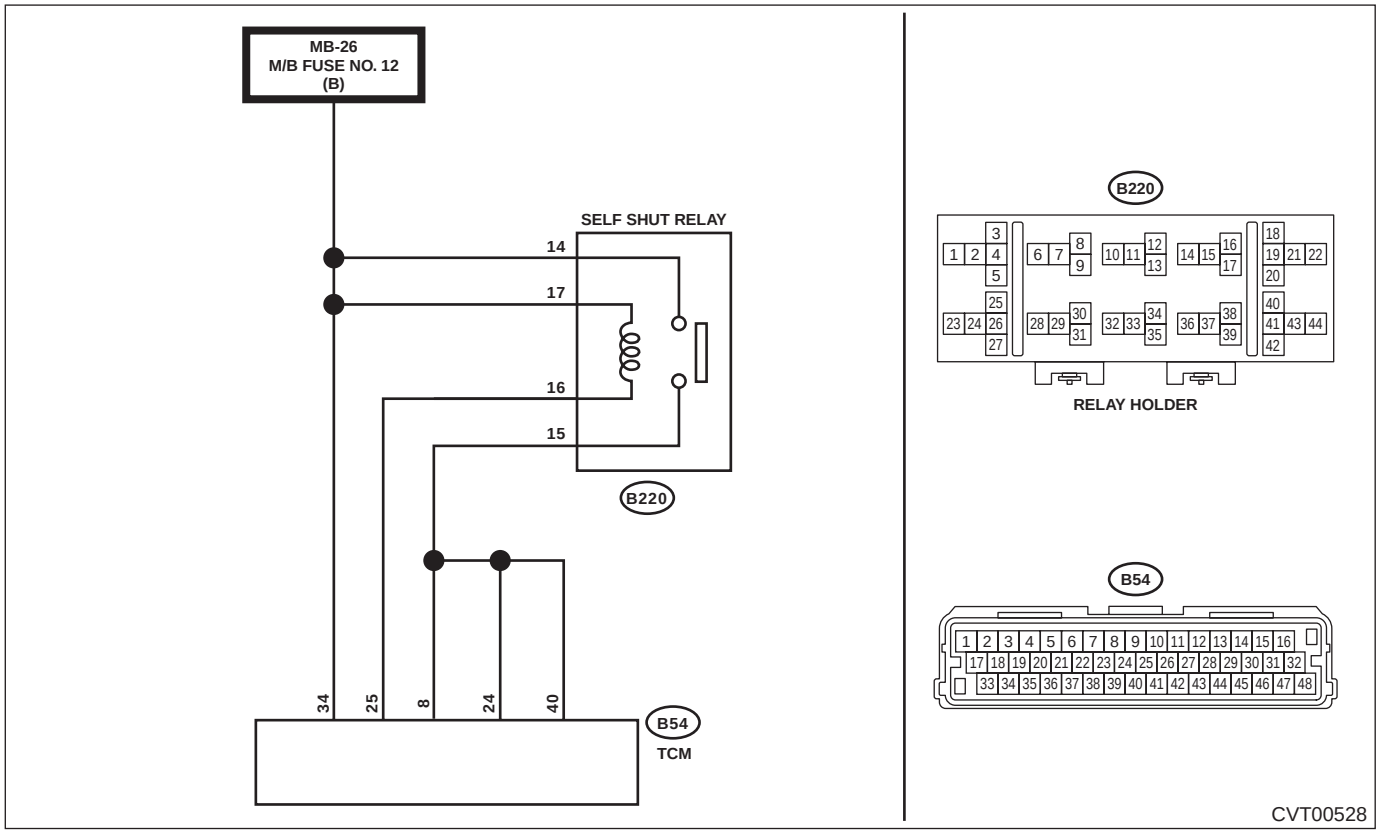
Gear is not changed.

CAUTION:

After diagnosis, perform Clear Memory Mode for ECM. <Ref. to EN(w/o STI)(diag)-61, Clear Memory Mode.>

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Disconnect the TCM and self shut relay connectors. 2) Measure the resistance between TCM connector and self shut relay connector. ***Connector & terminal*** ***(B54) No. 25 — (B220) No. 16:*** ***(B54) No. 8 — (B220) No. 15:*** ***(B54) No. 24 — (B220) No. 15:*** ***(B54) No. 40 — (B220) No. 15:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.

	Step	Check	Yes	No
2	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 25 — Chassis ground:*** ***(B54) No. 8 — Chassis ground:*** ***(B54) No. 24 — Chassis ground:*** ***(B54) No. 40 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK RELAY POWER SUPPLY.** Measure the voltage between self shut relay connector and chassis ground. ***Connector & terminal*** ***(B220) No. 14 (+) — Chassis ground (–):*** ***(B220) No. 17 (+) — Chassis ground (–):***	Is the voltage 11 — 13 V or more?	Go to step **4**.	Repair the open or short circuit of harness.
4	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Connector & terminal*** ***(B220) No. 16 — (B220) No. 17:***	Is the resistance 110 — 140 Ω?	Go to step **5**.	Replace the self shut relay.
5	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Connector & terminal*** ***(B220) No. 14 — (B220) No. 15:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the self shut relay.
6	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the connectors of TCM and self shut relay. 2) Read the data of «Control module voltage» using Subaru Select Monitor.	Is the «Control module voltage» 10 V or more?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step **7**.
7	**CHECK FOR POOR CONTACT.**	Is there poor contact of the self shut relay circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>

AA:DTC P0951 MANUAL SWITCH

DTC DETECTING CONDITION:

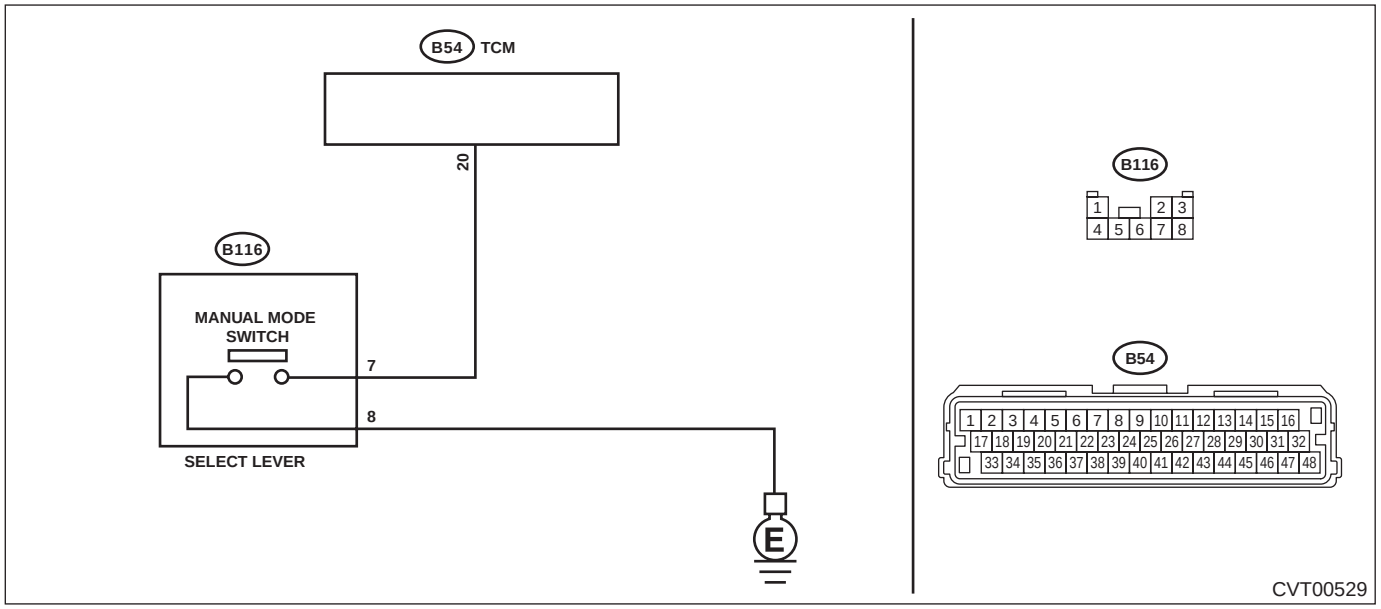
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-35, DTC P0951 MANUAL SWITCH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Manual mode can not be set.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the manual mode switch connector. 3) Measure the resistance between manual mode switch connector and chassis ground. ***Connector & terminal*** ***(B116) No. 8 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK MANUAL MODE SWITCH.** Measure the resistance between manual mode switch terminals. ***Connector & terminal*** ***(B116) No. 7 — No. 8:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the select lever assembly. <Ref. to CS-24, Select Lever.>
3	**CHECK MANUAL MODE SWITCH.** 1) Shift the select lever to manual mode. 2) Measure the resistance between manual mode switch terminals. ***Connector & terminal*** ***(B116) No. 7 — No. 8:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the select lever assembly. <Ref. to CS-24, Select Lever.>
4	**CHECK HARNESS.** 1) Disconnect the TCM connector. 2) Measure the resistance between TCM connector and manual mode switch connector. ***Connector & terminal*** ***(B54) No. 20 — (B116) No. 7:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness or poor contact of connector.

Step		Check	Yes	No
5	**CHECK HARNESS.** Measure the resistance between manual mode switch connector and chassis ground. ***Connector & terminal*** ***(B116) No. 7 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness.
6	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the TCM and manual mode switch connector. 2) Turn the ignition switch to ON. 3) Set the select lever to “D” range. 4) Read the data of «Tiptronic Mode Switch» using Subaru Select Monitor.	Does the value of «Tiptronic Mode Switch» change to “ON” with select lever in manual mode, and “OFF” with select lever in other than manual mode?	Current condition is normal.	Go to step **7**.
7	**CHECK FOR POOR CONTACT.**	Is there poor contact of the manual mode switch circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>

AB:DTC P0961 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT RANGE/PERFORMANCE

DTC DETECTING CONDITION:

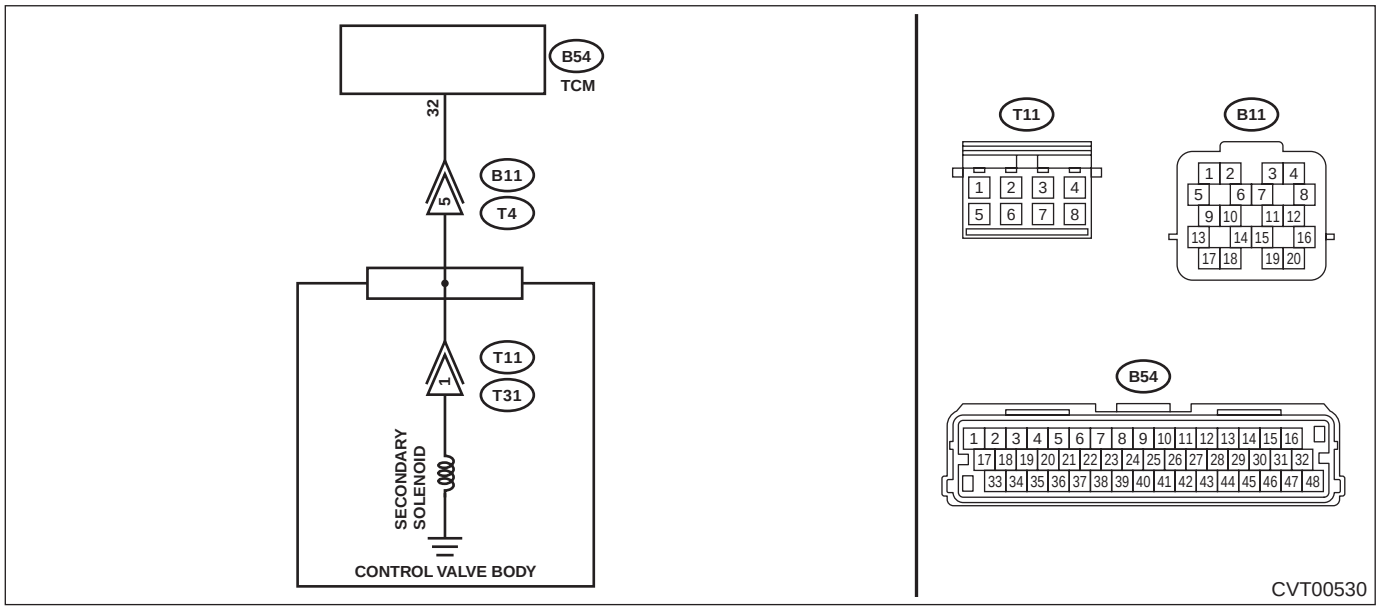
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-36, DTC P0961 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Acceleration is poor during standing start.
- Shift control malfunction
- Engine speed increases abruptly.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0961, is DTC P0962 or P0963 displayed?	Perform the diagnosis according to DTCs other than P0961.	Go to step **2**.
2	**CHECK SECONDARY SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-22, System Operation Check Mode.>	Does the indication change as 300 → 500 → 700 mA during forced operation, and does «Sec. Sol. Actual Current» synchronize with «Sec. Sol. Set Current»?	Go to step **3**.	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>
3	**CHECK FOR POOR CONTACT.** Check for poor contact of harness and connector between TCM and secondary solenoid.	Is there poor contact?	Repair the poor contact of harness and connector.	Go to step **4**.
4	**CHECK SECONDARY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Recheck the poor contact of harness and connector. Replace the TCM if no fault is found. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>

AC:DTC P0962 SECONDARY SOLENOID CIRCUIT (LOW)

DTC DETECTING CONDITION:

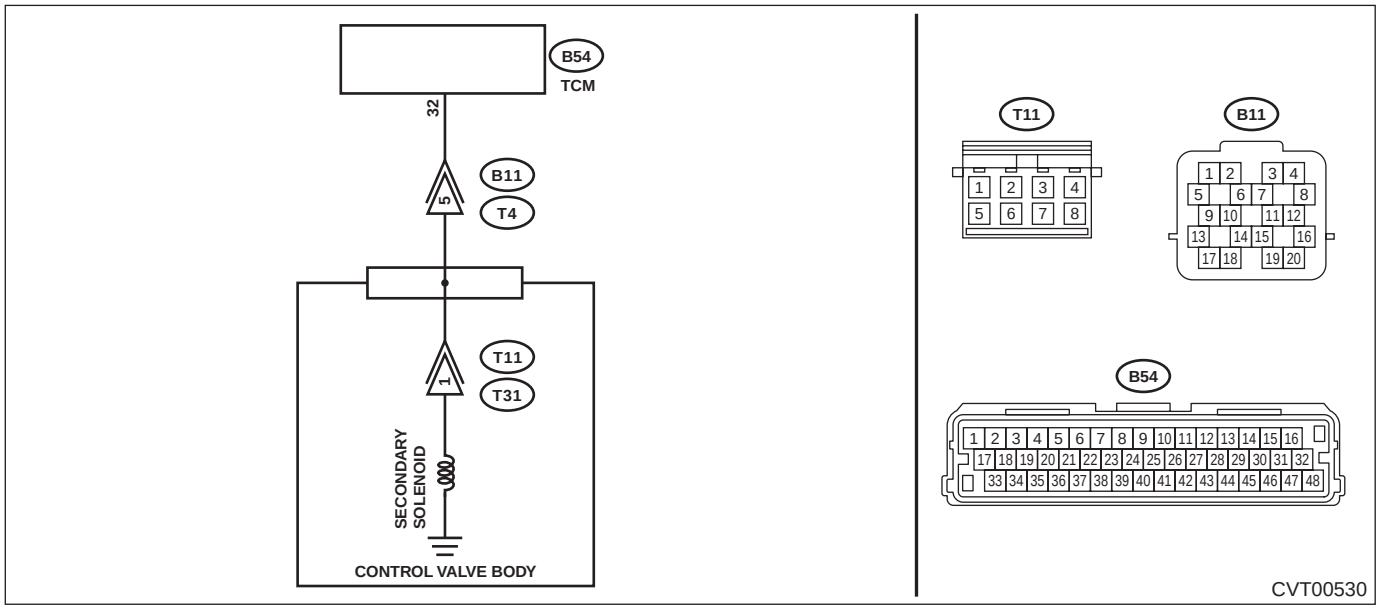
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-37, DTC P0962 SECONDARY SOLENOID CIRCUIT (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Engine speed increases abruptly, and can not start.
- Engine speed increases abruptly during driving.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "N" range. 2) Read the data of «Sec. Sol. Set Current» and «Sec. Sol. Actual Current» using Subaru Select Monitor.	Does the value of «Sec. Sol. Set Current» and «Sec. Sol. Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 32 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK SECONDARY SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>	Replace the transmission harness.

AD:DTC P0963 SECONDARY SOLENOID CIRCUIT (HIGH)

DTC DETECTING CONDITION:

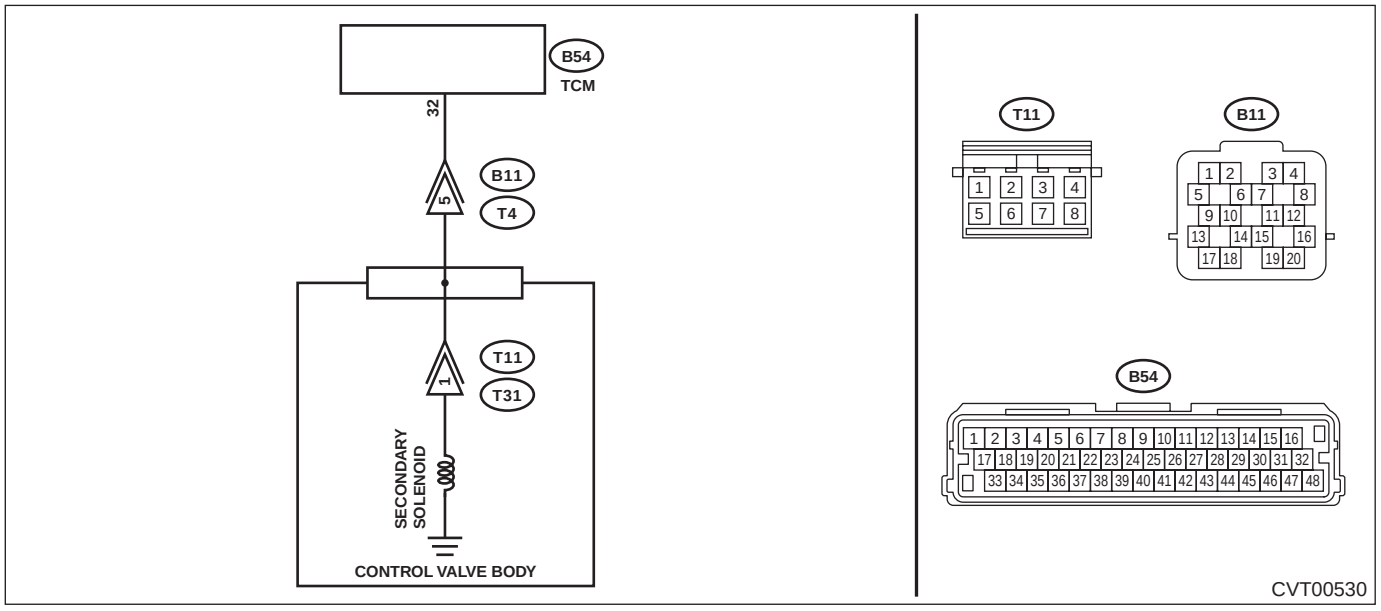
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-38, DTC P0963 SECONDARY SOLENOID CIRCUIT (HIGH), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Engine speed increases abruptly, and can not start.
- Engine speed increases abruptly during driving.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "N" range. 2) Read the data of «Sec. Sol. Set Current» and «Sec. Sol. Actual Current» using Subaru Select Monitor.	Does the value of «Sec. Sol. Set Current» and «Sec. Sol. Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 32 — (B11) No. 5:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 32 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **4**.	Repair the short circuit of harness.

	Step	Check	Yes	No
4	**CHECK SECONDARY SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **6**.
6	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>	Replace the transmission harness.

AE:DTC P0965 FORWARD & REVERSE SOLENOID FUNCTION

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-39, DTC P0965 FORWARD & REVERSE SOLENOID FUNCTION, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Engine speed increases abruptly, and can not accelerate.
- Excessive slippage is felt.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0965, is any of the DTCs P0720, P0966, P0967, P1706 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0965.	Go to step **2**.
2	**CHECK F&R SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the F&R solenoid. <Ref. to CVT(diag)-22, System Operation Check Mode.>	Does the indication change as 300 → 500 → 700 mA during forced operation, and does «F&R Linear Solenoid Actual Current» synchronize with «F&R Linear Solenoid Set Current»?	Go to step **3**.	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>
3	**CHECK FOR POOR CONTACT.** Check for poor contact of harness and connector between TCM and F&R solenoid.	Is there poor contact?	Repair the poor contact of harness and connector.	Go to step **4**.
4	**CHECK F&R SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Recheck the poor contact of harness and connector. Replace the TCM if no fault is found. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>

AF:DTC P0966 FORWARD & REVERSE SOLENOID CIRCUIT (LOW)

DTC DETECTING CONDITION:

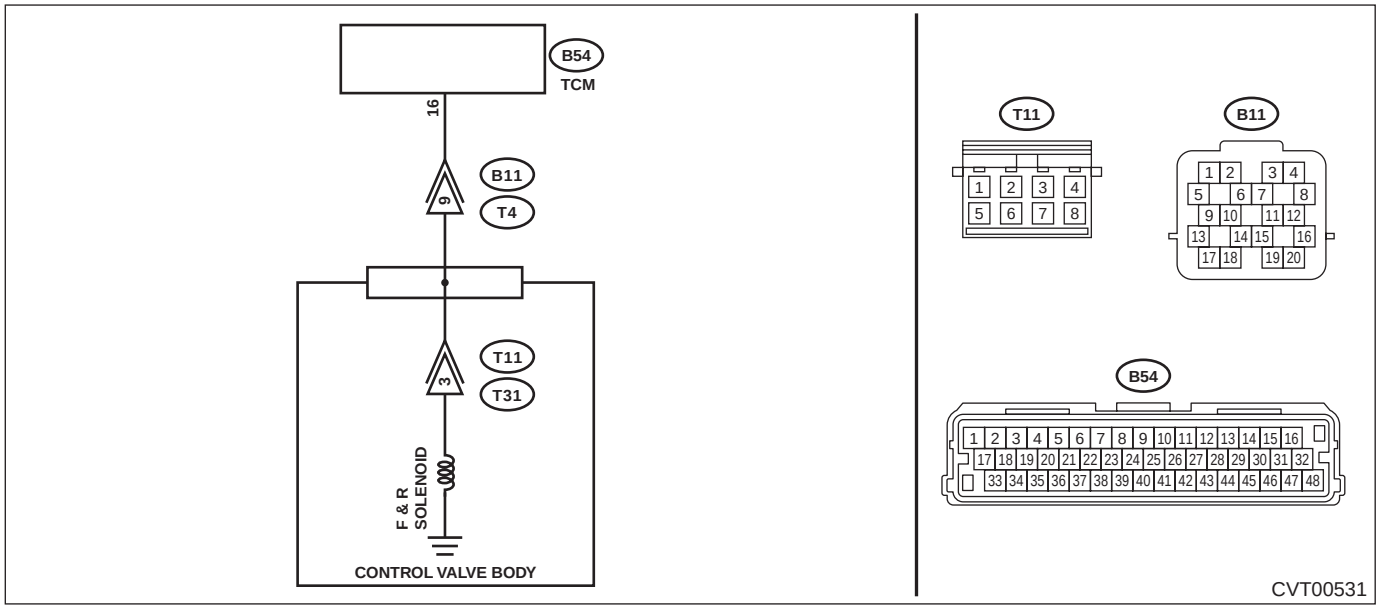
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-40, DTC P0966 FORWARD & REVERSE SOLENOID CIRCUIT (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Excessive shift shock

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "D" range. 2) Read the data of «F&R Linear Solenoid Set Current» and «F&R Linear Solenoid Actual Current» using Subaru Select Monitor.	Does the value of «F&R Linear Solenoid Set Current» and «F&R Linear Solenoid Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 16 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK F&R SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>	Replace the transmission harness.

AG:DTC P0967 FORWARD & REVERSE LINEAR SOLENOID CIRCUIT (HIGH)

DTC DETECTING CONDITION:

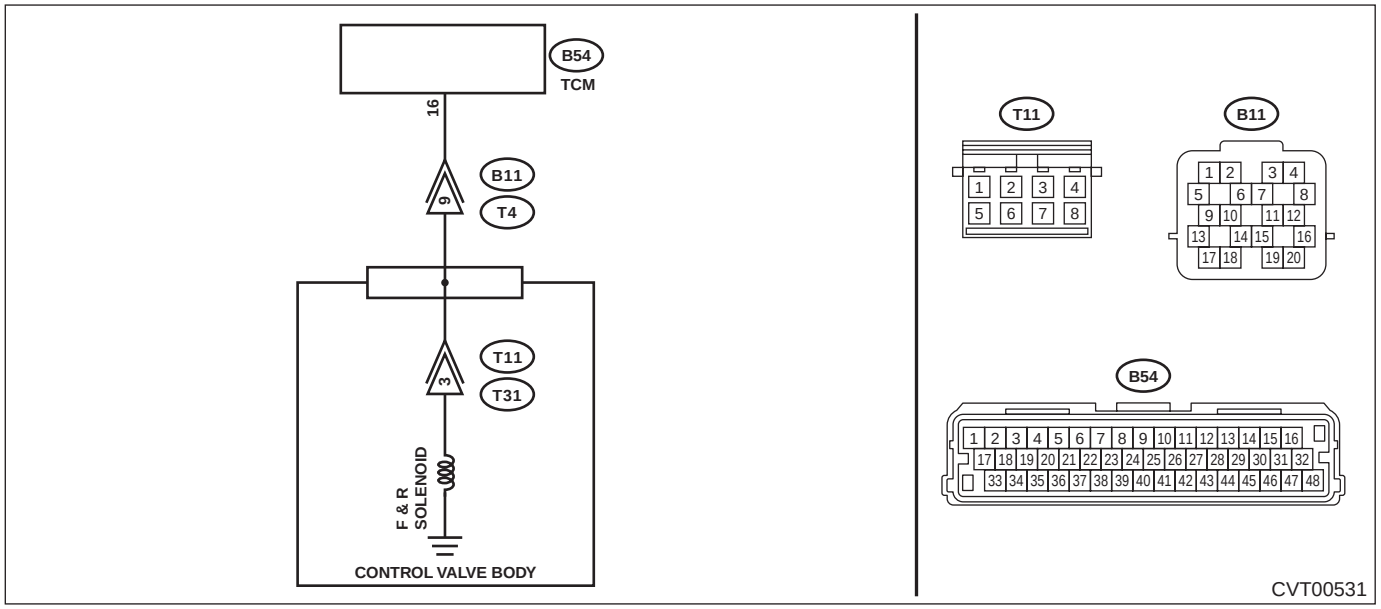
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-41, DTC P0967 FORWARD & REVERSE LINEAR SOLENOID CIRCUIT (HIGH), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Engine speed increases abruptly, and can not start.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "D" range. 2) Read the data of «F&R Linear Solenoid Set Current» and «F&R Linear Solenoid Actual Current» using Subaru Select Monitor.	Does the value of «F&R Linear Solenoid Set Current» and «F&R Linear Solenoid Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 16 — (B11) No. 9:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 16 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **4**.	Repair the short circuit of harness.

	Step	Check	Yes	No
4	**CHECK F&R SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **6**.
6	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>	Replace the transmission harness.

AH:DTC P0970 TRANSFER SOLENOID CIRCUIT (LOW)

DTC DETECTING CONDITION:

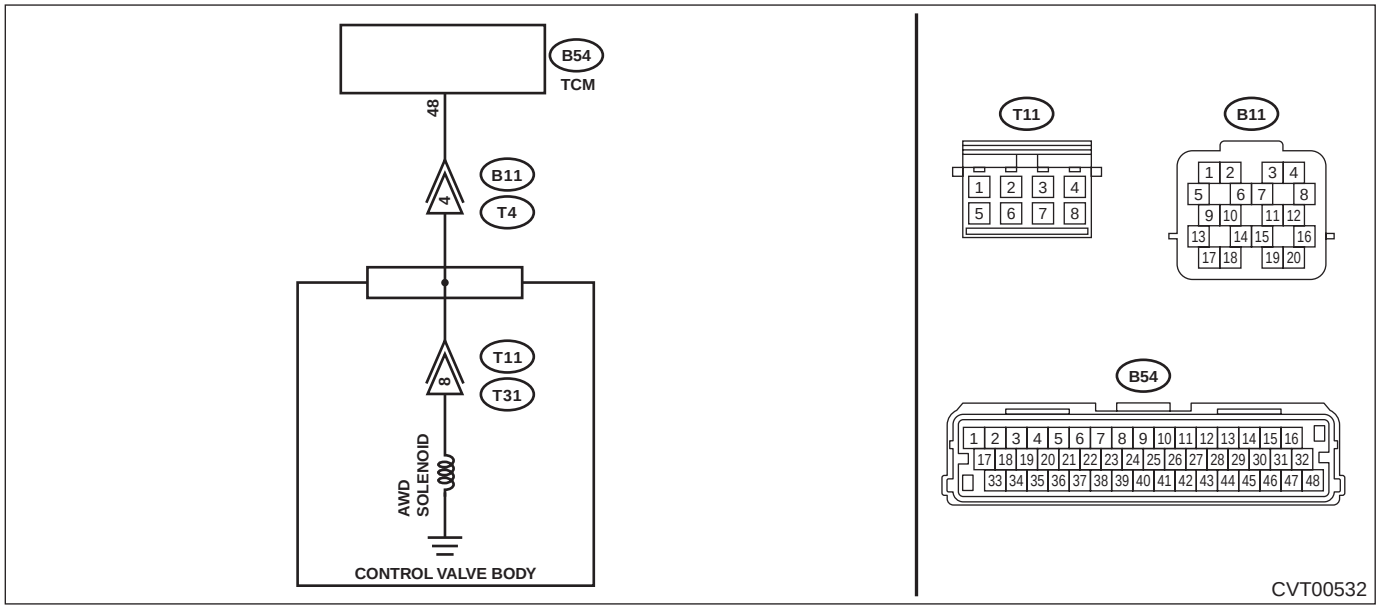
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-42, DTC P0970 TRANSFER SOLENOID CIRCUIT (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Drivability getting worse.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 48 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK AWD SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 4 — Transmission body:***	Is the resistance approx. 2 — 4.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 4 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>	Replace the transmission harness.

AI: DTC P0971 TRANSFER SOLENOID CIRCUIT (HIGH)

DTC DETECTING CONDITION:

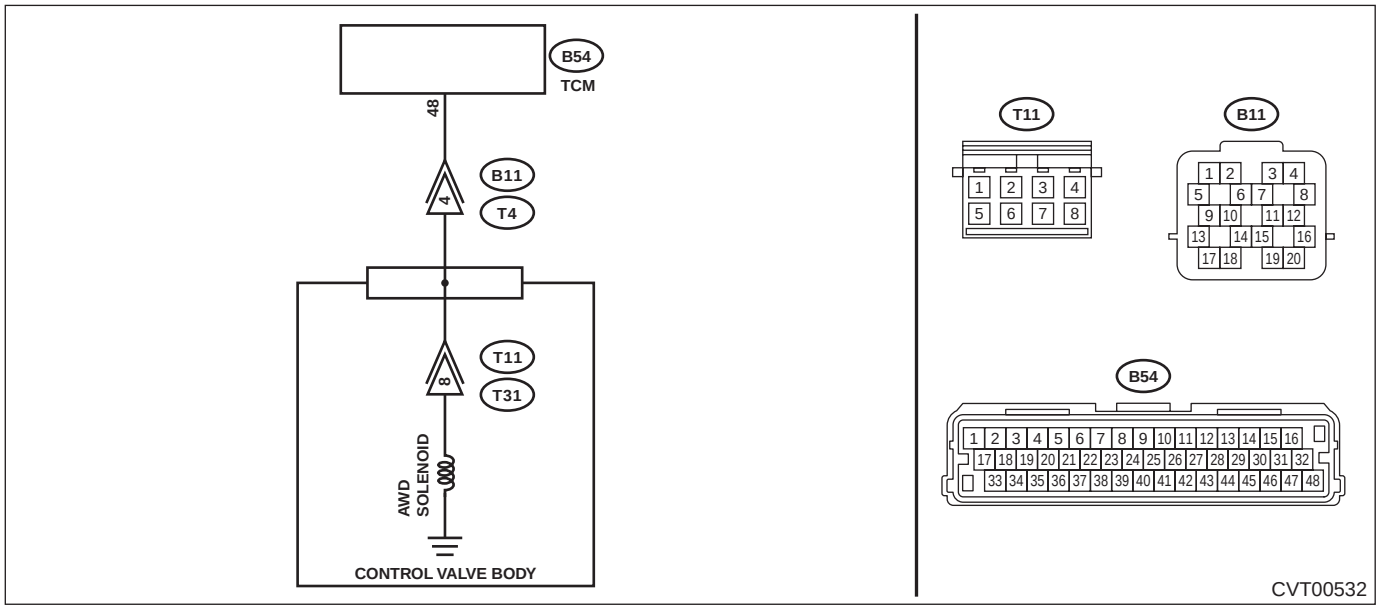
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-43, DTC P0971 TRANSFER SOLENOID CIRCUIT (HIGH), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Tight corner braking phenomenon occurs.
- Drivability getting worse.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 48 — (B11) No. 4:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 48 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK AWD SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 4 — Transmission body:***	Is the resistance approx. 2 — 4.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 4 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>	Replace the transmission harness.

AJ:DTC P0973 PRIMARY SOLENOID SYSTEM A CIRCUIT (LOW)

DTC DETECTING CONDITION:

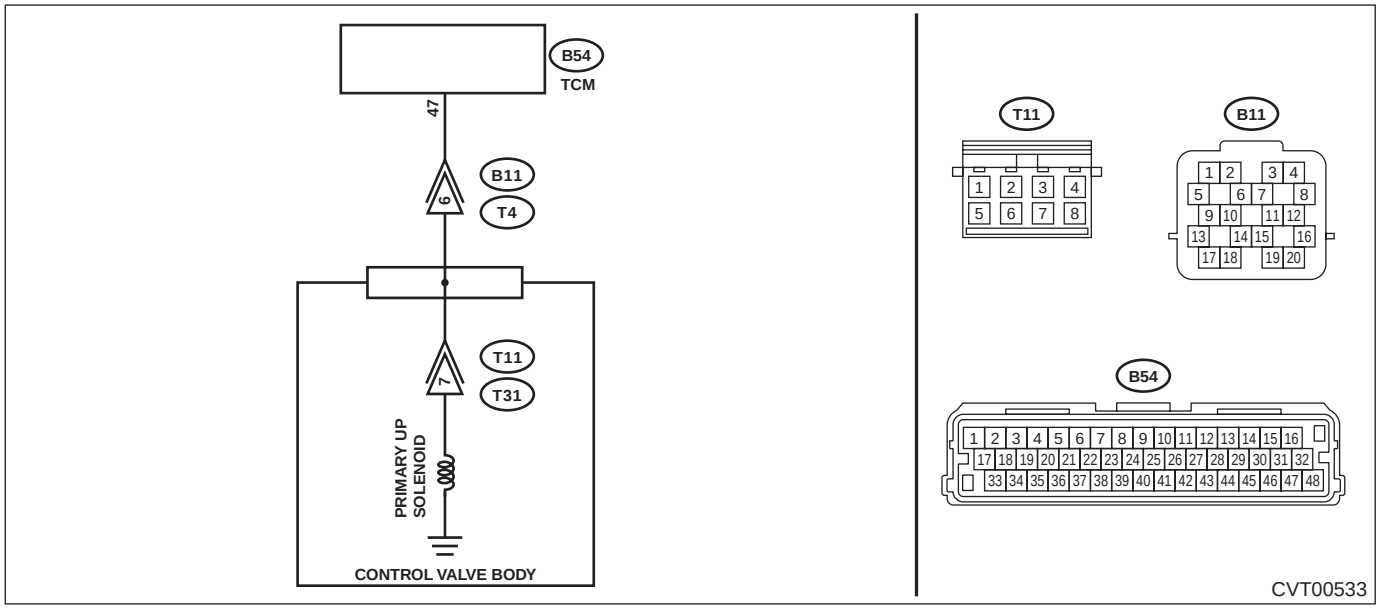
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-44, DTC P0973 PRIMARY SOLENOID SYSTEM A CIRCUIT (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Gear is not changed. (No up-shift)

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 47 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK PRIMARY UP SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>	Replace the transmission harness.

AK:DTC P0974 PRIMARY SOLENOID SYSTEM A CIRCUIT (HIGH)

DTC DETECTING CONDITION:

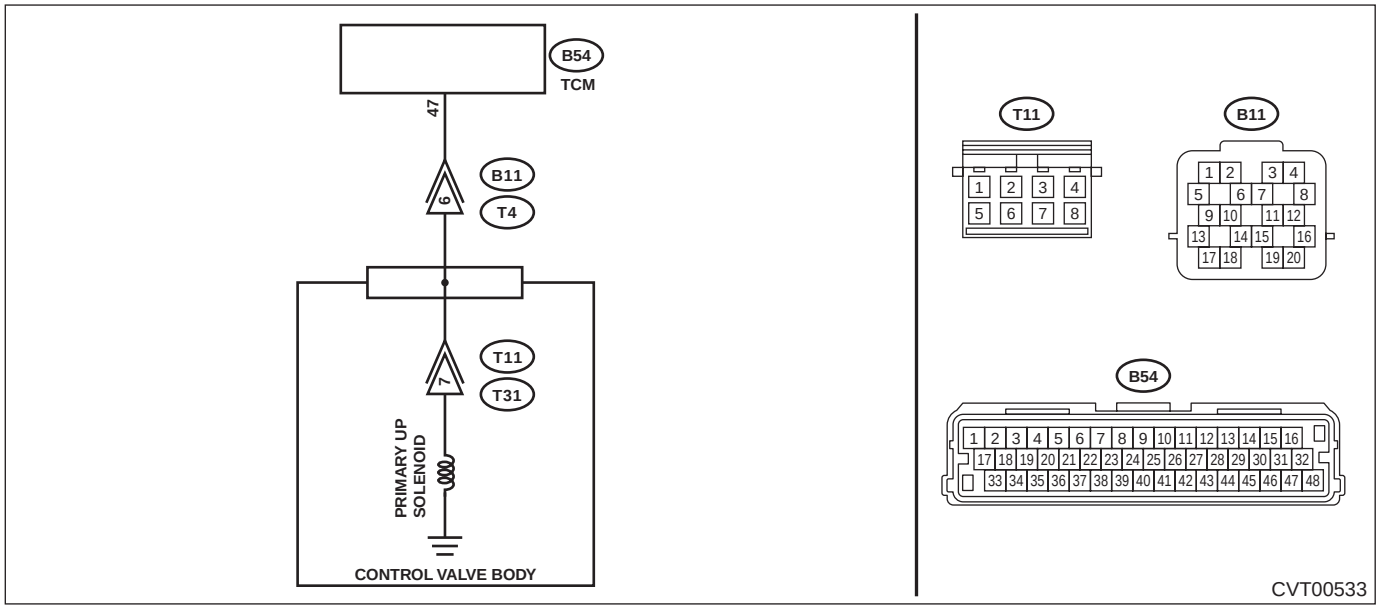
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-45, DTC P0974 PRIMARY SOLENOID SYSTEM A CIRCUIT (HIGH), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Gear is not changed. (No up-shift)

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 47 — (B11) No. 6:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 47 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK PRIMARY UP SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.

Step		Check	Yes	No
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>	Replace the transmission harness.

AL:DTC P0976 PRIMARY SOLENOID SYSTEM B CIRCUIT (LOW)

DTC DETECTING CONDITION:

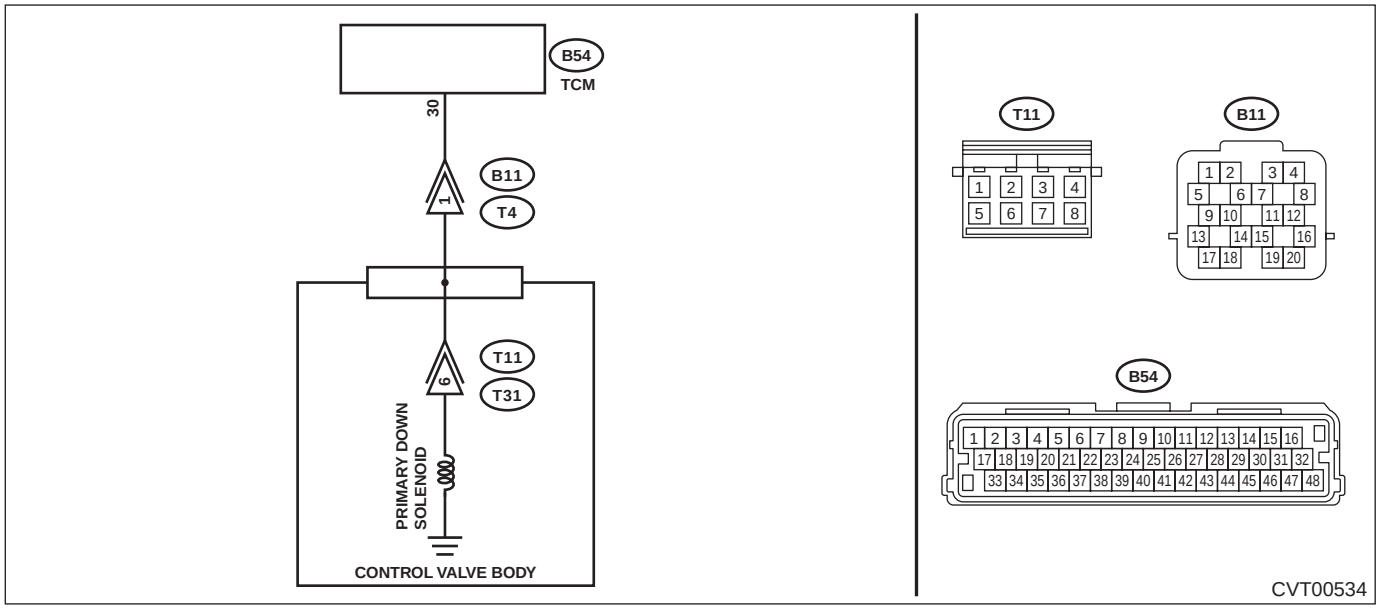
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-46, DTC P0976 PRIMARY SOLENOID SYSTEM B CIRCUIT (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Gear is not changed. (No down-shift)

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 30 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK PRIMARY DOWN SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>	Replace the transmission harness.

AM:DTC P0977 PRIMARY SOLENOID SYSTEM B CIRCUIT (HIGH)

DTC DETECTING CONDITION:

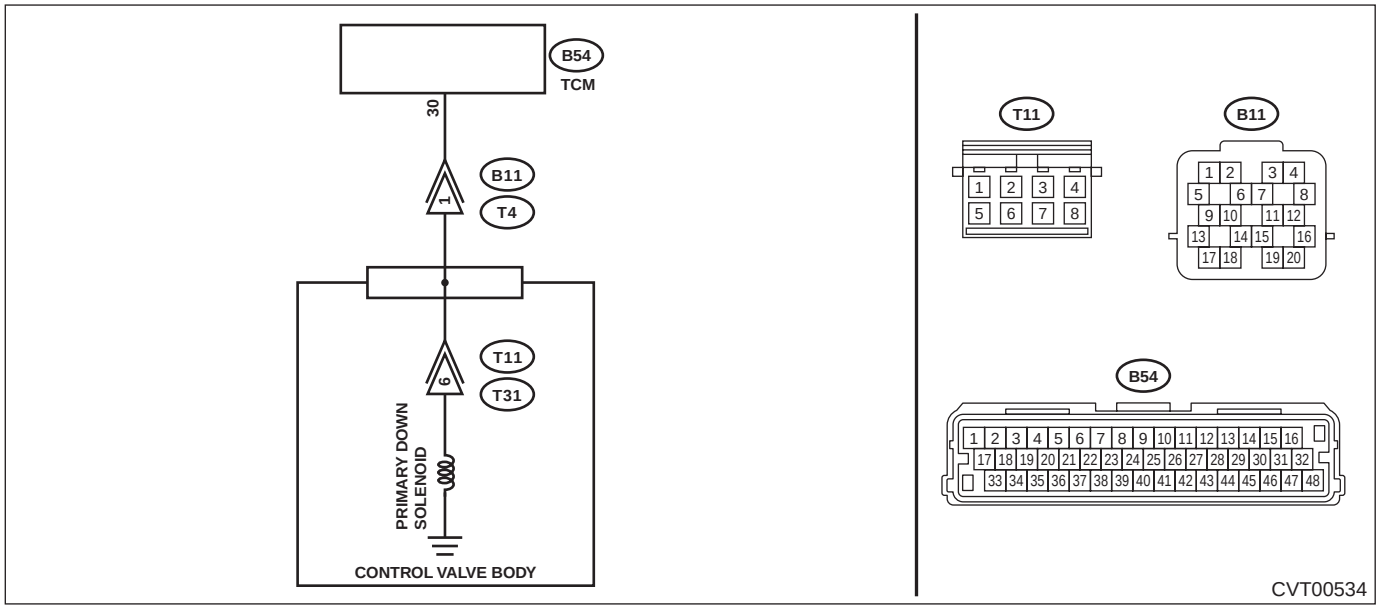
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-47, DTC P0977 PRIMARY SOLENOID SYSTEM B CIRCUIT (HIGH), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Gear is not changed. (No down-shift)

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 30 — (B11) No. 1:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 30 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK PRIMARY DOWN SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.

Step		Check	Yes	No
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>	Replace the transmission harness.

AN:DTC P160A RANDOM ACCESS MEMORY (RAM) ERROR

DTC DETECTING CONDITION:

- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-48, DTC P160A RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

TCM RAM malfunction

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-17, Clear Memory Mode.> 2) Read the DTC.	Is DTC P160A displayed?	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

AO:DTC P1706 AT VEHICLE SPEED SENSOR CIRCUIT MALFUNCTION (REAR WHEEL)

DTC DETECTING CONDITION:

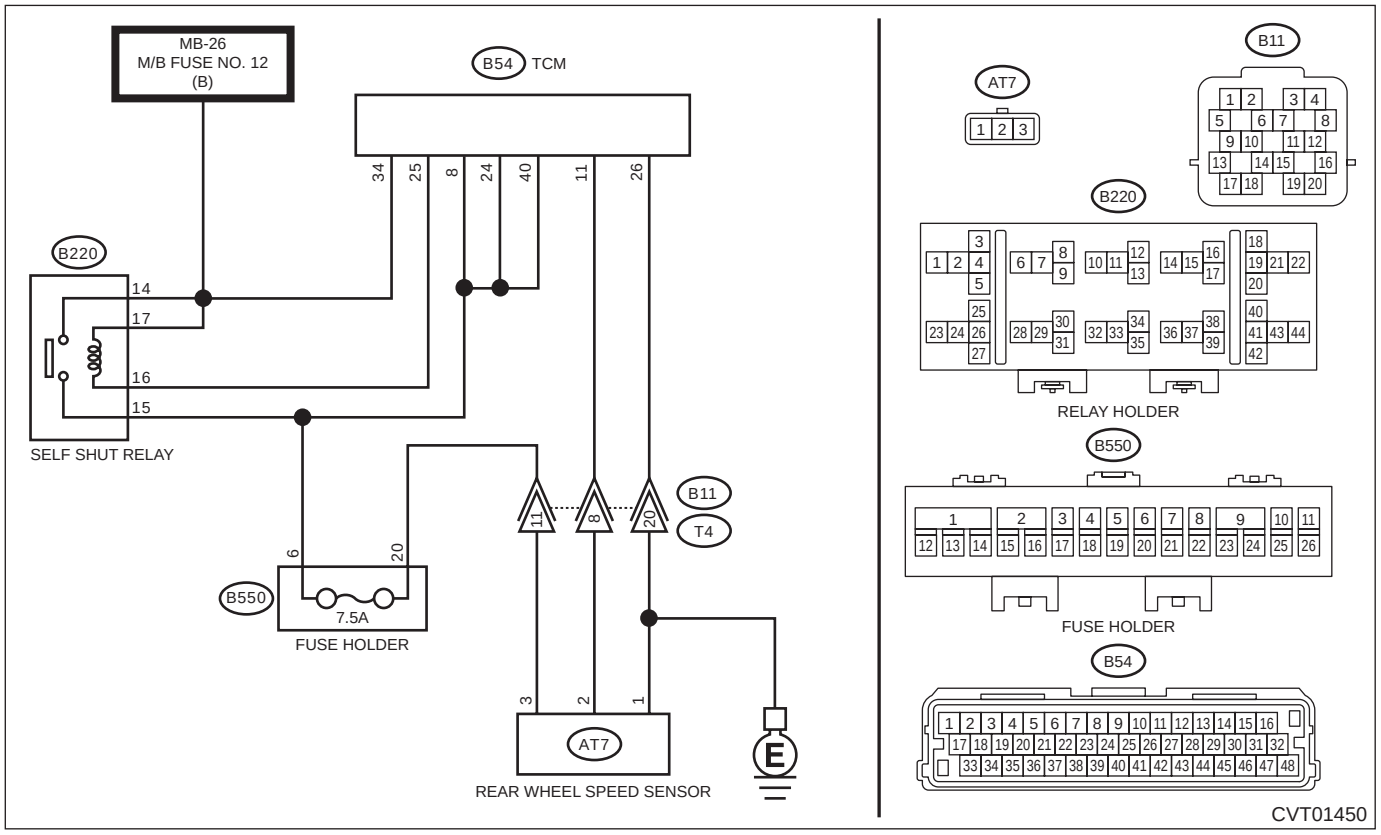
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-49, DTC P1706 AT VEHICLE SPEED SENSOR CIRCUIT MALFUNCTION (REAR WHEEL), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

AWD does not function.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuse (7.5 A) from the fuse holder.	Is the fuse OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK HARNESS.** 1) Disconnect the TCM and self shut relay connectors. 2) Measure the resistance between TCM connector and self shut relay connector. ***Connector & terminal*** ***(B54) No. 25 — (B220) No. 16:*** ***(B54) No. 8 — (B220) No. 15:*** ***(B54) No. 24 — (B220) No. 15:*** ***(B54) No. 40 — (B220) No. 15:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 25 — Chassis ground:*** ***(B54) No. 8 — Chassis ground:*** ***(B54) No. 24 — Chassis ground:*** ***(B54) No. 40 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.
4	**CHECK RELAY POWER SUPPLY.** Measure the voltage between self shut relay connector and chassis ground. ***Connector & terminal*** ***(B220) No. 14 (+) — Chassis ground (–):*** ***(B220) No. 17 (+) — Chassis ground (–):***	Is the voltage 11 — 13 V or more?	Go to step **5**.	Repair the open or short circuit of harness.
5	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Terminals*** ***No. 16 — No. 17:***	Is the resistance 110 — 140 Ω?	Go to step **6**.	Replace the self shut relay.
6	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Replace the self shut relay.
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the connectors of TCM and self shut relay. 2) Read the data of «Control module voltage» using Subaru Select Monitor.	Is the «Control module voltage» 10 V or more?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step **8**.
8	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 11 — (B11) No. 8:*** ***(B54) No. 26 — (B11) No. 20:*** ***(B550) No. 20 — (B11) No. 11:***	Is the resistance less than 1 Ω?	Go to step **9**.	Repair the open circuit of harness.
9	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 11 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **10**.	Repair the short circuit of harness.
10	**CHECK HARNESS.** Measure the resistance between self shut relay connector and fuse holder. ***Connector & terminal*** ***(B220) No. 15 — (B550) No. 6:***	Is the resistance less than 1 Ω?	Go to step **11**.	Repair the open circuit of harness.
11	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B11) No. 11 (+) — Chassis ground (–):***	Is the voltage approx. 10 — 13 V?	Go to step **12**.	Repair the poor contact of harness or connector.

	Step	Check	Yes	No
12	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect the transmission connector. 3) Lift up the vehicle. 4) Start the engine. 5) Slowly increase the speed to 30 km/h (19 MPH). 6) Read the data of «Rear Wheel Speed» using Subaru Select Monitor.	Does the value of «Rear Wheel Speed» change according to the engine speed?	Current condition is normal. Repair the poor contacts of harnesses of rear wheel speed sensor and transmission connector.	Go to step **13**.
13	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the rear wheel speed sensor connector. 4) Measure the resistance between transmission connector and rear wheel speed sensor connector. ***Connector & terminal*** ***(T4) No. 20 — (AT7) No. 1:*** ***(T4) No. 8 — (AT7) No. 2:*** ***(T4) No. 11 — (AT7) No. 3:***	Is the resistance less than 1 Ω?	Go to step **14**.	Replace the transmission harness.
14	**CHECK REAR WHEEL SPEED SENSOR HARNESS.** Measure the resistance between transmission connector and chassis ground. ***Connector & terminal*** ***(T4) No. 8 — Chassis ground:*** ***(T4) No. 11 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **15**.	Repair the short circuit of harness.
15	**CHECK REAR WHEEL SPEED SENSOR.** 1) Turn the ignition switch to OFF. 2) Replace the rear wheel speed sensor. <Ref. to CVT(TR690)-107, Rear Wheel Speed Sensor.> 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-17, Clear Memory Mode.> 4) Read the DTC.	Is DTC P1706 displayed?	Go to step **16**.	The original rear wheel speed sensor is defective.
16	**CHECK SELF SHUT RELAY.** 1) Turn the ignition switch to OFF. 2) Replace the self shut relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-17, Clear Memory Mode.> 4) Read the DTC.	Is DTC P1706 displayed?	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	The original self shut relay is defective.

AP:DTC P170B OUTPUT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE REAR

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-50, DTC P170B OUTPUT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE REAR, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Acceleration is poor during standing start.
- No lock-up occurs.
- The engine stalls when the vehicle is stopped.
- Shift control malfunction

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P170B, is any of the DTCs P0720, P1706 and P0500 displayed?	Perform the diagnosis according to DTCs other than P170B.	Perform the diagnosis according to DTC P1706. <Ref. to CVT(diag)-104, DTC P1706 AT VEHICLE SPEED SENSOR CIRCUIT MALFUNCTION (REAR WHEEL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AQ:DTC P2530 IGNITION SWITCH RUN POSITION CIRCUIT

DTC DETECTING CONDITION:

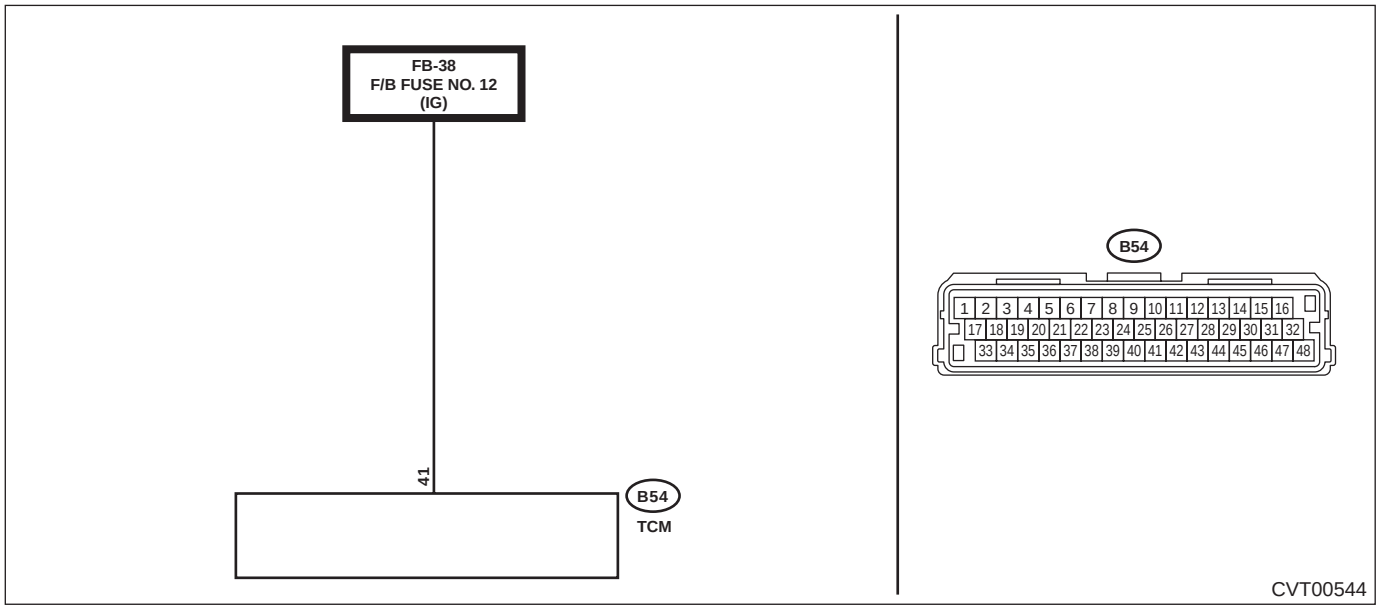
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-51, DTC P2530 IGNITION SWITCH RUN POSITION CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

Faulty TCM operation

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** Check the installing condition of TCM connector.	Is the TCM connector installed properly?	Go to step **2**.	Install the TCM connector.

Step		Check	Yes	No
2	**CHECK INPUT VOLTAGE OF TCM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. (While wiggling the harness) ***Connector & terminal*** ***(B54) No. 41 (+) — Chassis ground (–):***	Is the voltage 8 V or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, the following items may be the cause of fault. • Open circuit or short circuit to ground of harness between TCM connector and ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch (IG relay 1 for model with push button start)	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit or short circuit to ground of harness between TCM connector and ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch (IG relay 1 for model with push button start)

AR:DTC P2746 PRIMARY PULLEY REVOLUTION SPEED SENSOR CIRCUIT

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-52, DTC P2746 PRIMARY PULLEY REVOLUTION SPEED SENSOR CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Standing start problems
- Shock occurs when engaging the lockup clutch.
- Shock occurs when selecting shift position.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P2746, is any of the DTCs P2747, U0100 and U0401 displayed?	Perform the diagnosis according to DTCs other than P2746.	Perform the diagnosis according to DTC P2747. <Ref. to CVT(diag)-111, DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AS:DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL

DTC DETECTING CONDITION:

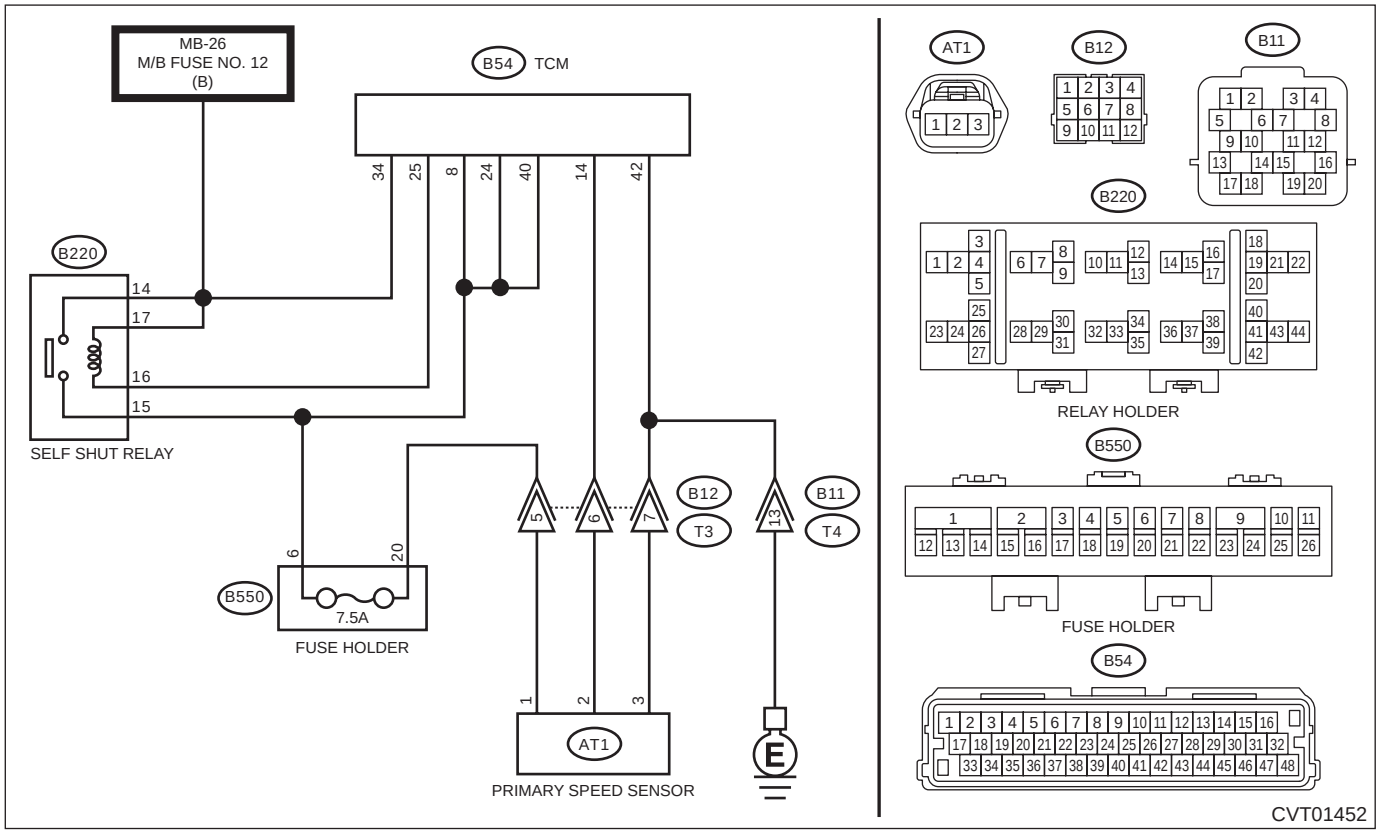
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-53, DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Standing start problems
- Shock occurs when engaging the lockup clutch.
- Shock occurs when selecting shift position.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuse (7.5 A) from the fuse holder.	Is the fuse OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK HARNESS.** 1) Disconnect the TCM and self shut relay connectors. 2) Measure the resistance between TCM connector and self shut relay connector. ***Connector & terminal*** ***(B54) No. 25 — (B220) No. 16:*** ***(B54) No. 8 — (B220) No. 15:*** ***(B54) No. 24 — (B220) No. 15:*** ***(B54) No. 40 — (B220) No. 15:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.

Step		Check	Yes	No
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 25 — Chassis ground:*** ***(B54) No. 8 — Chassis ground:*** ***(B54) No. 24 — Chassis ground:*** ***(B54) No. 40 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.
4	**CHECK RELAY POWER SUPPLY.** Measure the voltage between self shut relay connector and chassis ground. ***Connector & terminal*** ***(B220) No. 14 (+) — Chassis ground (–):*** ***(B220) No. 17 (+) — Chassis ground (–):***	Is the voltage 11 — 13 V or more?	Go to step **5**.	Repair the open or short circuit of harness.
5	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Terminals*** ***No. 16 — No. 17:***	Is the resistance 110 — 140 Ω?	Go to step **6**.	Replace the self shut relay.
6	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Replace the self shut relay.
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the connectors of TCM and self shut relay. 2) Read the data of «Control module voltage» using Subaru Select Monitor.	Is the «Control module voltage» 10 V or more?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step **8**.
8	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 42 — (B11) No. 13:*** ***(B54) No. 14 — (B12) No. 6:*** ***(B54) No. 42 — (B12) No. 7:*** ***(B550) No. 20 — (B12) No. 5:***	Is the resistance less than 1 Ω?	Go to step **9**.	Repair the open circuit of harness.
9	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 14 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **10**.	Repair the short circuit of harness.
10	**CHECK HARNESS.** Measure the resistance between self shut relay connector and fuse holder. ***Connector & terminal*** ***(B220) No. 15 — (B550) No. 6:***	Is the resistance less than 1 Ω?	Go to step **11**.	Repair the open circuit of harness.
11	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B12) No. 5 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **12**.	Repair the open circuit of harness or poor contact of connector.

	Step	Check	Yes	No
12	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect the transmission connector. 3) Lift up the vehicle. 4) Start the engine. 5) Set the select lever to “D” range. 6) Read the data of «Primary Pulley Speed» using Subaru Select Monitor.	Does the value of «Primary Pulley Speed» change according to those of «Turbine Revolution Speed»?	Current condition is normal. Repair the poor contacts of harnesses of primary speed sensor and transmission connector.	Go to step **13**.
13	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the primary speed sensor connector. 4) Measure the resistance between transmission connector and primary speed sensor connector. ***Connector & terminal*** ***(T3) No. 5 — (AT1) No. 1:*** ***(T3) No. 6 — (AT1) No. 2:*** ***(T3) No. 7 — (AT1) No. 3:***	Is the resistance less than 1 Ω?	Go to step **14**.	Replace the transmission harness.
14	**CHECK PRIMARY SPEED SENSOR HARNESS.** Measure the resistance between transmission connector and chassis ground. ***Connector & terminal*** ***(T3) No. 5 — Chassis ground:*** ***(T3) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **15**.	Repair the short circuit of harness.
15	**CHECK PRIMARY SPEED SENSOR.** 1) Turn the ignition switch to OFF. 2) Replace the primary speed sensor. <Ref. to CVT(TR690)-102, Primary Speed Sensor.> 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-17, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2747 displayed?	Go to step **16**.	The original primary speed sensor is defective.
16	**CHECK SELF SHUT RELAY.** 1) Turn the ignition switch to OFF. 2) Replace the self shut relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-17, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2747 displayed?	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	The original self shut relay is defective.

AT:DTC P2750 SEC. PULLEY REVOLUTION SPEED SENSOR CIRCUIT

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-54, DTC P2750 SEC. PULLEY REVOLUTION SPEED SENSOR CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Shifting shock is felt.
- Acceleration is poor during standing start.
- Shift control malfunction

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P2750, is DTC P2747 or P2751 displayed?	Perform the diagnosis according to DTCs other than P2750.	Perform the diagnosis according to DTC P2751. <Ref. to CVT(diag)-115, DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AU:DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL

DTC DETECTING CONDITION:

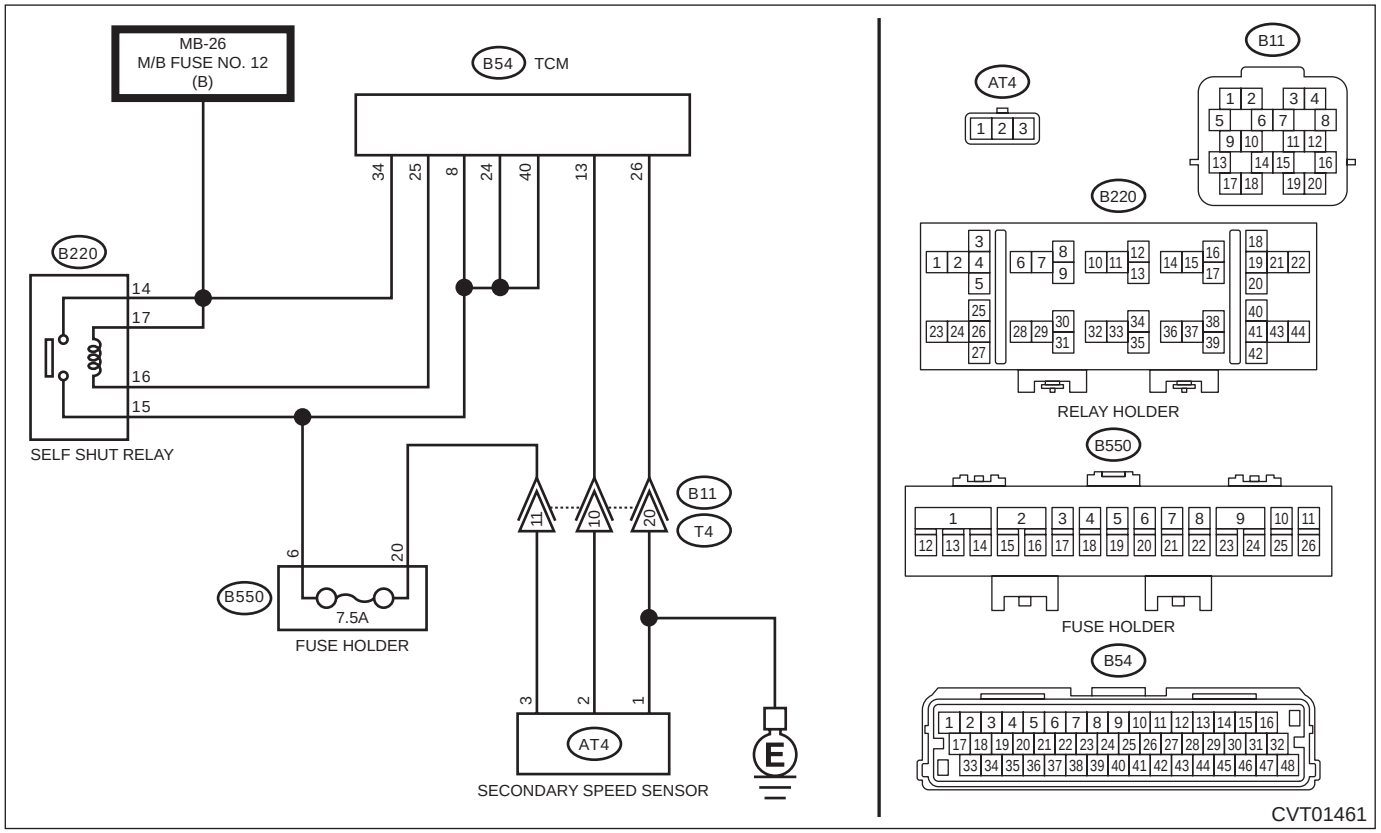
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-55, DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- Shifting shock is felt.
- Acceleration is poor during standing start.
- Shift control malfunction

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuse (7.5 A) from the fuse holder.	Is the fuse OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK HARNESS.** 1) Disconnect the TCM and self shut relay connectors. 2) Measure the resistance between TCM connector and self shut relay connector. ***Connector & terminal*** ***(B54) No. 25 — (B220) No. 16:*** ***(B54) No. 8 — (B220) No. 15:*** ***(B54) No. 24 — (B220) No. 15:*** ***(B54) No. 40 — (B220) No. 15:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 25 — Chassis ground:*** ***(B54) No. 8 — Chassis ground:*** ***(B54) No. 24 — Chassis ground:*** ***(B54) No. 40 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.
4	**CHECK RELAY POWER SUPPLY.** Measure the voltage between self shut relay connector and chassis ground. ***Connector & terminal*** ***(B220) No. 14 (+) — Chassis ground (–):*** ***(B220) No. 17 (+) — Chassis ground (–):***	Is the voltage 11 — 13 V or more?	Go to step **5**.	Repair the open or short circuit of harness.
5	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Terminals*** ***No. 16 — No. 17:***	Is the resistance 110 — 140 Ω?	Go to step **6**.	Replace the self shut relay.
6	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Replace the self shut relay.
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the connectors of TCM and self shut relay. 2) Read the data of «Control module voltage» using Subaru Select Monitor.	Is the «Control module voltage» 10 V or more?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step **8**.
8	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 13 — (B11) No. 10:*** ***(B54) No. 26 — (B11) No. 20:*** ***(B550) No. 20 — (B11) No. 11:***	Is the resistance less than 1 Ω?	Go to step **9**.	Repair the open circuit of harness.
9	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **10**.	Repair the short circuit of harness.
10	**CHECK HARNESS.** Measure the resistance between self shut relay connector and fuse holder. ***Connector & terminal*** ***(B220) No. 15 — (B550) No. 6:***	Is the resistance less than 1 Ω?	Go to step **11**.	Repair the open circuit of harness.
11	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B11) No. 11 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **12**.	Repair the open circuit of harness or poor contact of connector.

	Step	Check	Yes	No
12	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect the transmission connector. 3) Lift up the vehicle. 4) Start the engine. 5) Set the select lever to “D” range. 6) Read the data of «Secondary Pulley Speed» using Subaru Select Monitor.	Does the value of «Secondary Pulley Speed» change according to those of «Front Wheel Speed»?	Current condition is normal. Repair the poor contacts of harnesses of secondary speed sensor and transmission connector.	Go to step **13**.
13	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the secondary speed sensor connector. 4) Measure the resistance between transmission connector and secondary speed sensor connector. ***Connector & terminal*** ***(T4) No. 10 — (AT4) No. 2:*** ***(T4) No. 11 — (AT4) No. 3:*** ***(T4) No. 20 — (AT4) No. 1:***	Is the resistance less than 1 Ω?	Go to step **14**.	Replace the transmission harness.
14	**CHECK SECONDARY SPEED SENSOR HARNESS.** Measure the resistance between transmission connector and chassis ground. ***Connector & terminal*** ***(T4) No. 10 — Chassis ground:*** ***(T4) No. 11 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **15**.	Repair the short circuit of harness.
15	**CHECK SECONDARY SPEED SENSOR.** 1) Turn the ignition switch to OFF. 2) Replace the secondary speed sensor. <Ref. to CVT(TR690)-99, Secondary Speed Sensor.> 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-17, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2751 displayed?	Go to step **16**.	The original secondary speed sensor is defective.
16	**CHECK SELF SHUT RELAY.** 1) Turn the ignition switch to OFF. 2) Replace the self shut relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-17, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2751 displayed?	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	The original self shut relay is defective.

AV:DTC P2757 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT PERFORMANCE/STUCK OFF

DTC DETECTING CONDITION:

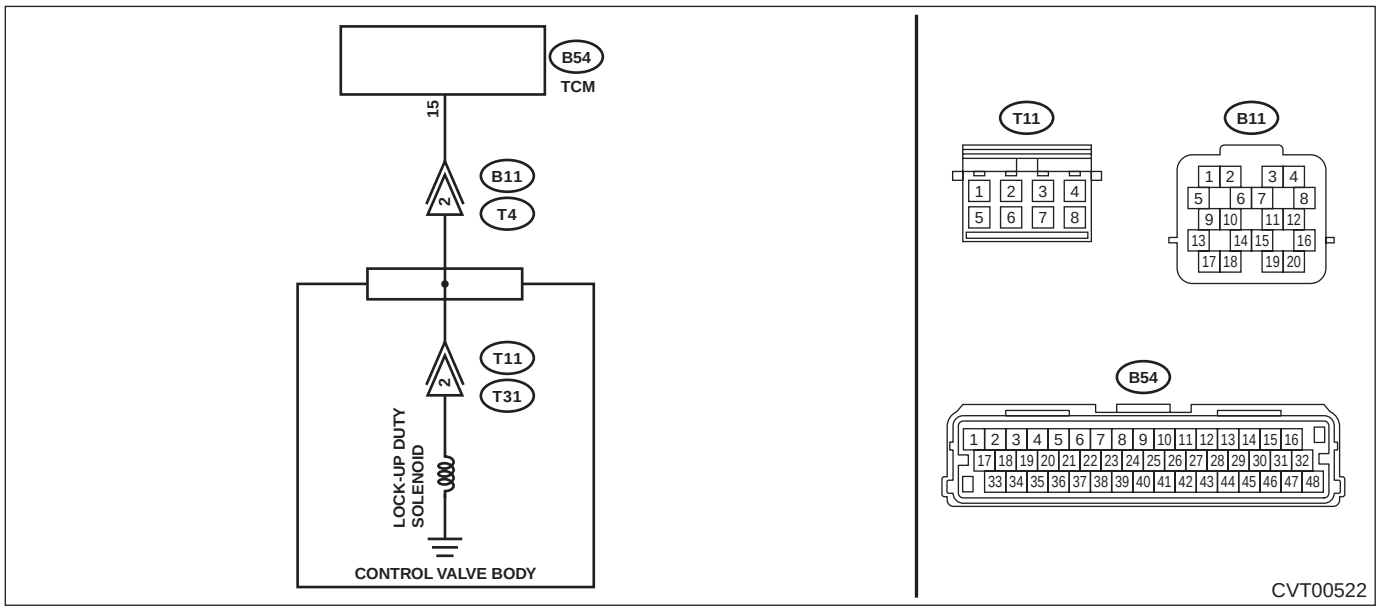
- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-56, DTC P2757 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT PERFORMANCE/STUCK OFF, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

No lock-up occurs.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P2757, is any of the DTCs P2747, P2763, P2764, U0100 and U0401 displayed?	Perform the diagnosis according to DTCs other than P2757.	Go to step **2**.
2	**CHECK LOCK-UP DUTY SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the lock-up duty solenoid. <Ref. to CVT(diag)-22, System Operation Check Mode.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK LOCK-UP DUTY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the continuity of transmission harness.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-69, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
8	**DRIVING CHECK FOR LOCK-UP CONDITION.** 1) Perform the “Clear Memory Mode”. <Ref. to CVT(diag)-17, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Start the engine. 4) Warm up until the ATF temperature exceeds 50°C. 5) Drive the vehicle for one minute or more while keeping such constant speed that «Lock Up Duty Ratio» is 70% or more, and «Front Wheel Speed» is 40 km/h (25 MPH) or more, which are displayed on the Subaru Select Monitor. 6) Turn the ignition switch to OFF. 7) Start the engine. 8) Perform the procedure in step 5) again. 9) Read the DTC using Subaru Select Monitor.	Does the AT OIL TEMP light blink and is DTC P2757 displayed?	Perform the secondary pressure test. <Ref. to CVT(TR690)-49, Secondary Pressure (Line Pressure) Test.> When DTC other than P2757 is displayed, perform the diagnosis corresponding to the DTC.	Current condition is normal. Temporary oil pressure malfunction.

AW:DTC P2758 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT STUCK ON

DTC DETECTING CONDITION:

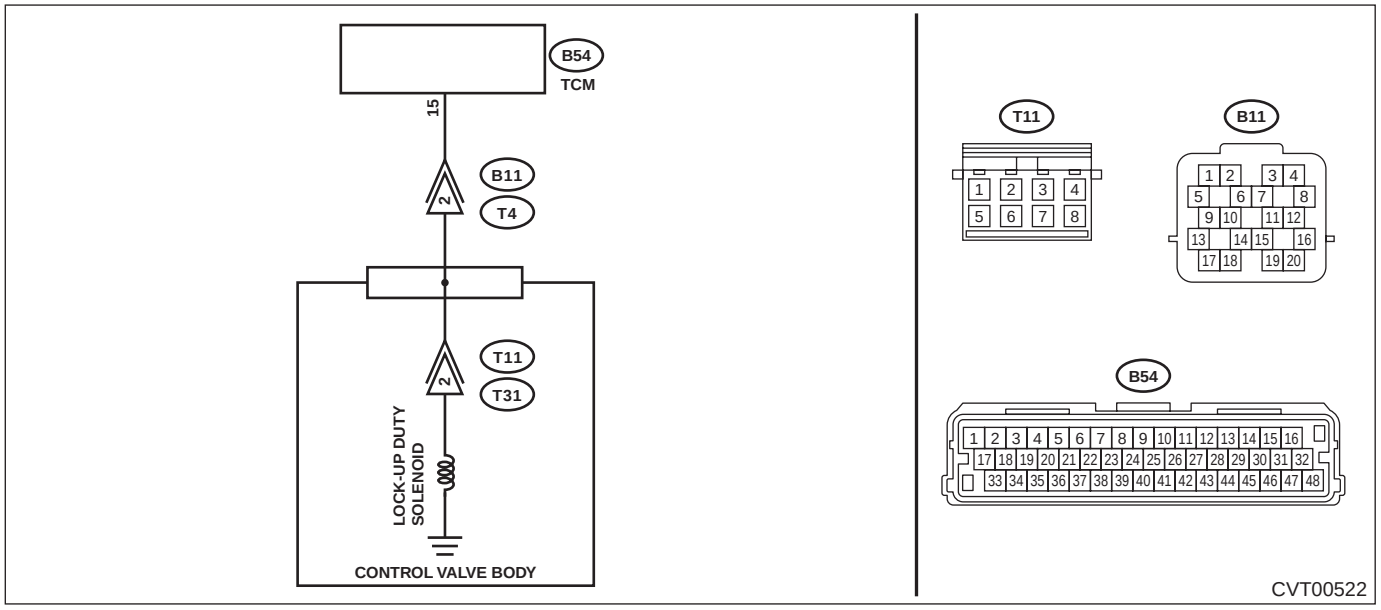
- Detected when two consecutive driving cycles with fault occur.
- GENERAL DESCRIPTION <Ref. to GD(CVT)-57, DTC P2758 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT STUCK ON, Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

The engine stalls when the vehicle is stopped.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P2758, is any of the DTCs P2747, P2763, P2764, U0100 and U0401 displayed?	Perform the diagnosis according to DTCs other than P2758.	Go to step **2**.
2	**CHECK LOCK-UP DUTY SOLENOID (SYSTEM OPERATION CHECK MODE).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the lock-up duty solenoid. <Ref. to CVT(diag)-22, System Operation Check Mode.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK LOCK-UP DUTY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the continuity of transmission harness.	Is the harness normal? (Is it free from defects such as open circuit, power supply-output short or GND-output short circuit, or poor contact?)	Go to step **7**.	Repair the harness.

	Step	Check	Yes	No
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>	Is the ATF OK?	Go to step **7**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-40, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual secondary pressure» using Subaru Select Monitor.	Is the «Actual secondary pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-69, DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
8	**DRIVING CHECK FOR LOCK-UP CONDITION.** 1) Perform the “Clear Memory Mode”. <Ref. to CVT(diag)-17, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Start the engine. 4) Warm up until the ATF temperature exceeds 50°C. 5) Drive the vehicle for one minute or more while keeping such constant speed that «Lock Up Duty Ratio» is 0%, and «Front Wheel Speed» is 5 km/h (3 MPH) or less, which are displayed on the Subaru Select Monitor. 6) Turn the ignition switch to OFF. 7) Start the engine. 8) Perform the procedure in step 5) again. 9) Read the DTC using Subaru Select Monitor.	Does the AT OIL TEMP light blink and is DTC P2758 displayed? Or does the engine stall?	Perform the secondary pressure test. <Ref. to CVT(TR690)-49, Secondary Pressure (Line Pressure) Test.> When DTC other than P2758 is displayed, perform the diagnosis according to the DTC.	Current condition is normal. Temporary oil pressure malfunction.

AX:DTC P2763 LOCK-UP DUTY SOLENOID CIRCUIT (HIGH)

DTC DETECTING CONDITION:

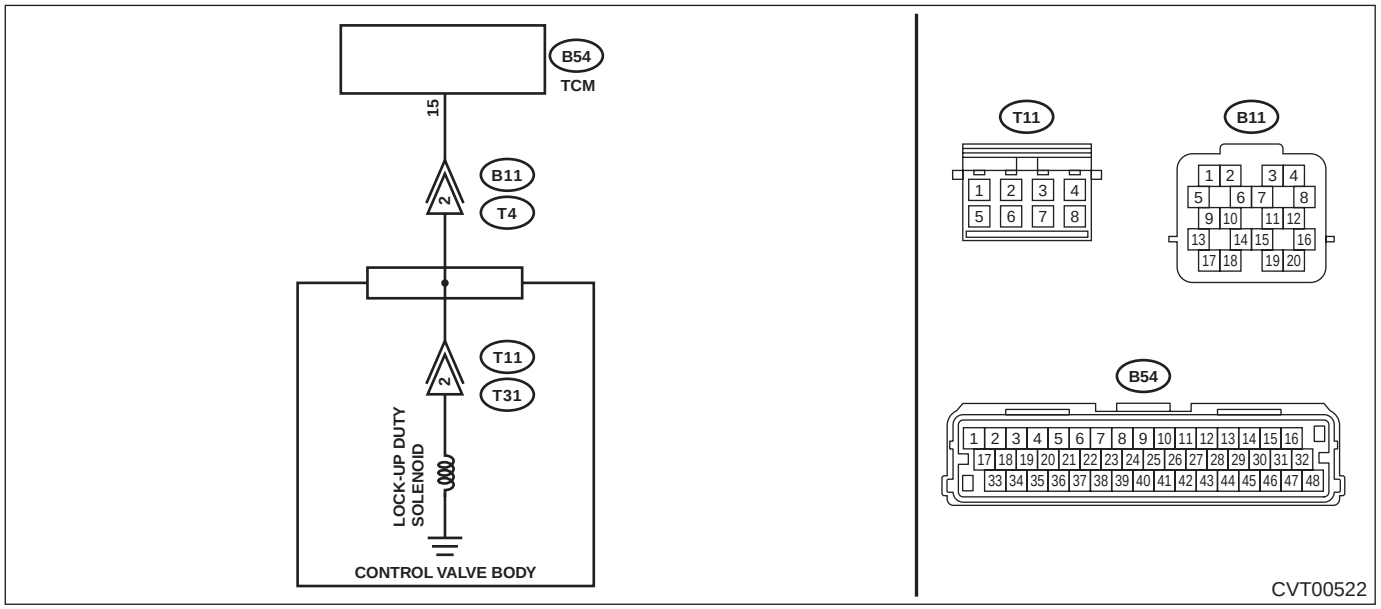
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-58, DTC P2763 LOCK-UP DUTY SOLENOID CIRCUIT (HIGH), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

- No lock-up occurs.
- Engine stalls.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 15 — (B11) No. 2:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 15 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK LOCK-UP DUTY SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>	Replace the transmission harness.

AY:DTC P2764 LOCK-UP DUTY SOLENOID CIRCUIT (LOW)

DTC DETECTING CONDITION:

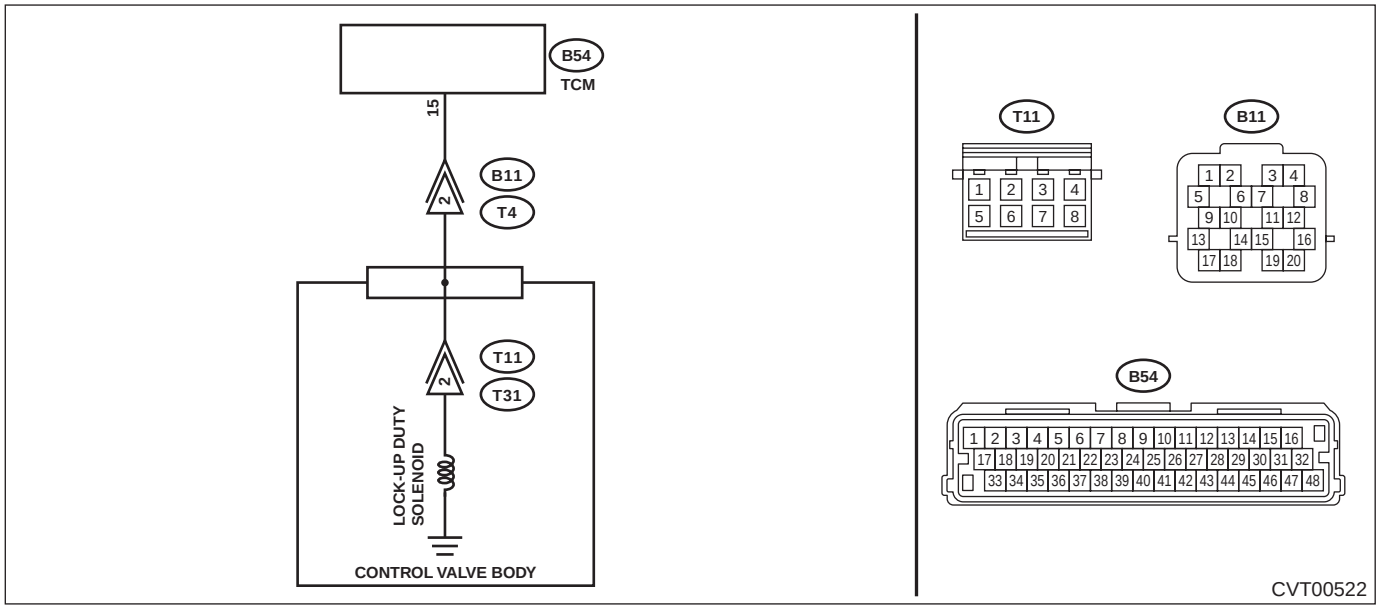
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-59, DTC P2764 LOCK-UP DUTY SOLENOID CIRCUIT (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

No lock-up occurs.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 15 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK LOCK-UP DUTY SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>	Replace the transmission harness.

AZ:DTC P2769 LOCK-UP ON/OFF SOLENOID CIRCUIT (LOW)

DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-60, DTC P2769 LOCK-UP ON/OFF SOLENOID CIRCUIT (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

No lock-up occurs.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 31 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK LOCK UP ON/OFF SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 3 — Transmission body:***	Is the resistance approx. 13 — 18.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 3 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>	Replace the transmission harness.

BA:DTC P2770 LOCK-UP ON/OFF SOLENOID CIRCUIT (HIGH)

DTC DETECTING CONDITION:

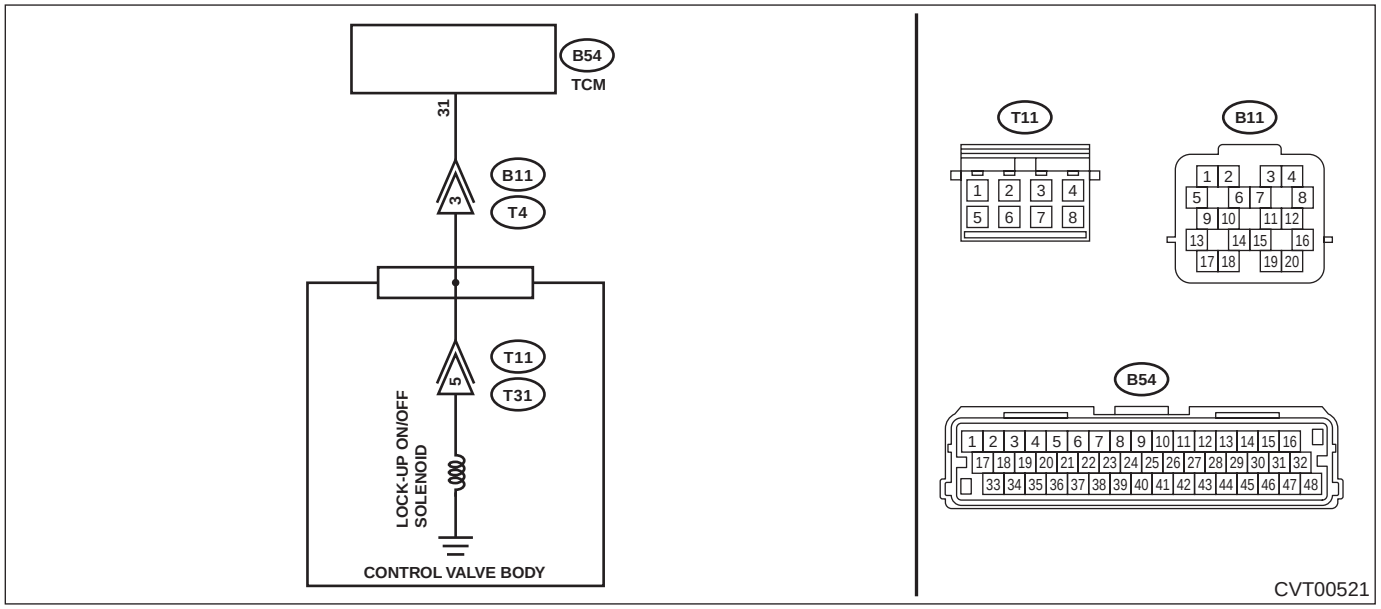
- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(CVT)-61, DTC P2770 LOCK-UP ON/OFF SOLENOID CIRCUIT (HIGH), Diagnostic Trouble Code (DTC) Detecting Criteria.>

TROUBLE SYMPTOM:

No lock-up occurs.

WIRING DIAGRAM:

CVT control system <Ref. to WI-152, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM and transmission connectors. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 31 — (B11) No. 3:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 31 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK LOCK UP ON/OFF SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 3 — Transmission body:***	Is the resistance approx. 13 — 18.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 3 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-112, Control Valve Body.>	Replace the transmission harness.

18.Diagnostic Procedure without Diagnostic Trouble Code (DTC)

A: CHECK SHIFT INDICATOR

DIAGNOSIS:

- CAN communication is abnormal with the combination meter.
- Combination meter malfunction

TROUBLE SYMPTOM:

- Shift indicator does not display or remains displayed.
- Shift indicator display does not change.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC U0155 or U0423 displayed?	Perform the self-diagnosis of combination meter.	Go to step **2**.
2	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Are DTCs other than U0155 and U0423 displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK COMBINATION METER.** Read DTC of combination meter.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK TCM.** 1) Operate the + side of the paddle shift switch. 2) Read the data of «Up Switch» using the Subaru Select Monitor.	Does it change between ON and OFF according to the operation?	Go to step **5**.	Check for poor contact between TCM and paddle shift UP switch, and repair the defective part.
5	**CHECK TCM.** 1) Operate the – side of the paddle shift switch. 2) Read the data of «Down Switch» using the Subaru Select Monitor.	Does it change between ON and OFF according to the operation?	Go to step **6**.	Check for poor contact between TCM and paddle shift down switch, and repair the defective part.
6	**CHECK TCM.** 1) Turn the ignition switch OFF, then turn it ON again. 2) Shift the select lever to manual mode. 3) Read the data of «Shift step in Manu. mode» using the Subaru Select Monitor.	Is “1” displayed?	Go to step **7**.	Perform the diagnosis according to DTC P0951. <Ref. to CVT(diag)-79, DTC P0951 MANUAL SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
7	**CHECK TCM.** 1) Shift up the select lever. 2) Read the data of «Shift step in Manu. mode» using the Subaru Select Monitor.	Is “2” displayed?	Currently, shift indicator is normal.	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>

19.Diagnostics with Phenomenon

A: INSPECTION

Symptoms	Faulty parts
Engine stalls when driving in “D” or “R” range, or selecting “N” → “D”, “N” → “R”.	• Control valve • Engine control system
While driving in “D” range, vibration occurs immediately before the stop or engine stalls.	• Control valve • Torque converter
Vehicle cannot shift while driving in “D” range.	• Control valve • TCM • Shift mechanism • Power supply system
Excessive shock when selecting “N” → “D”, and “N” → “R”.	• Control valve • TCM • F&R clutch pack • ATF deterioration or lack
Excessive shock at standing start in “D” range.	• Control valve • TCM • F&R clutch pack • ATF deterioration or lack
Engine speed increases abruptly during driving in “D” or “R” range.	• Control valve • Secondary pressure sensor • F&R clutch pack • ATF deterioration or lack
Vehicle can not start when depressing the accelerator pedal in “D” or “R” range, or acceleration is very poor. (without abrupt engine increase)	• Control valve • F&R clutch pack • Shift mechanism • Parking mechanism • Engine control system • Power supply system
Shift indicator in combination meter displays the position which differs from select lever position.	• Inhibitor switch • Select cable related • Combination meter
Manual mode enters even though the select lever and paddle shift switch is not operated.	• Manual mode switch • Paddle shift switch • Select lever • TCM
Engine speed increases abruptly in “D” or “R” range, vehicle can not start.	• F&R clutch pack • Select cable related
Manual mode can not be set	• Select lever • TCM

P2764	Lock-Up Duty Solenoid Circuit (Low)	<Ref. to GD(CVT)-59, DTC P2764 LOCK-UP DUTY SOLENOID CIRCUIT (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>
P2769	Lock-Up On/Off Solenoid Circuit (Low)	<Ref. to GD(CVT)-60, DTC P2769 LOCK-UP ON/OFF SOLENOID CIRCUIT (LOW), Diagnostic Trouble Code (DTC) Detecting Criteria.>
P2770	Lock-Up On/Off Solenoid Circuit (High)	<Ref. to GD(CVT)-61, DTC P2770 LOCK-UP ON/OFF SOLENOID CIRCUIT (HIGH), Diagnostic Trouble Code (DTC) Detecting Criteria.>
U0073	Control Module Communication Bus Off	<Ref. to GD(CVT)-62, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Trouble Code (DTC) Detecting Criteria.>
U0100	Lost Communication With ECM/PCM “A”	<Ref. to GD(CVT)-63, DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”, Diagnostic Trouble Code (DTC) Detecting Criteria.>
U0122	Lost Communication With Vehicle Dynamics Control Module	<Ref. to GD(CVT)-64, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Trouble Code (DTC) Detecting Criteria.>
U0140	Lost Communication With Body Control Module	<Ref. to GD(CVT)-65, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Trouble Code (DTC) Detecting Criteria.>
U0155	Lost Communication With Instrument Panel Cluster (IPC) Control Module	<Ref. to GD(CVT)-66, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Trouble Code (DTC) Detecting Criteria.>
U0164	Lost Communication With HVAC Control Module	<Ref. to GD(CVT)-67, DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE, Diagnostic Trouble Code (DTC) Detecting Criteria.>
U0401	Invalid Data Received From ECM/PCM “A”	<Ref. to GD(CVT)-68, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”, Diagnostic Trouble Code (DTC) Detecting Criteria.>
U0416	Invalid Data Received From Vehicle Dynamics Control Module	<Ref. to GD(CVT)-69, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Trouble Code (DTC) Detecting Criteria.>
U0422	Invalid Data Received From Body Control Module	<Ref. to GD(CVT)-70, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Trouble Code (DTC) Detecting Criteria.>
U0423	Invalid Data Received From Instrument Panel Cluster Control Module	<Ref. to GD(CVT)-71, DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE, Diagnostic Trouble Code (DTC) Detecting Criteria.>
U0424	Invalid Data Received From HVAC Control Module	<Ref. to GD(CVT)-72, DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

2. Diagnostic Trouble Code (DTC) Detecting Criteria

A: DTC P0500 VEHICLE SPEED SENSOR “A”

1. OUTLINE OF DIAGNOSIS

- Judge the malfunction of VDC wheel speed sensor.
- Judge as NG when the wheel speed sensor normal status signal from VDC is cleared.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10.9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from Vehicle Dynamics Control Module NOTE: The VDC controller detects malfunction if one of the speed sensors does not output a signal and the other vehicle speed sensor output signal is above 7.46 MPH.	ON

Time Needed for Diagnosis: 2.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

B: DTC P0601 INTERNAL CONTROL MODULE MEMORY CHECKSUM ERROR

1. OUTLINE OF DIAGNOSIS

- Judge the malfunction in ROM area of the TCM.
- Judge as NG when the consistency in the ROM area is lost.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Checksum (ROM)	Error

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

C: DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR

1. OUTLINE OF DIAGNOSIS

- Judge the malfunction in RAM area of the TCM.
- Judge as NG if an attempt to write to RAM area failed.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Writing-check (RAM) NOTE: This check is carried out about the RAM only used for CAN communication.	Error

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

D: DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Judge the malfunction in EEPROM area of the TCM.
- Judge as NG if an attempt to write to EEPROM area failed.

Diagnosis 2
- Judge the malfunction in EEPROM area of the TCM.
- Judge as malfunction when the consistency in the EEPROM area is lost.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
12 V battery system voltage	≥ 9 V
Diagnosis 2	
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Writing-check (EEPROM)	Error
Diagnosis 2	
Checksum (EEPROM)	Error

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

E: DTC P0705 TRANSMISSION RANGE SENSOR CIRCUIT (PRNDL INPUT)

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of the Range Switch.
- Judge as NG when multiple Range Switch inputs are detected.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1500 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Two or more transmission range switches ON NOTE: “Transmission range switch ON” is defined as transmission range switch input voltage < 2.9 V.	True

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

F: DTC P0708 AT RANGE SWITCH NOT INPUTTED

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of the Range Switch.
- Judge as NG when no Range Switch inputs are detected.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Vehicle speed (calculated from actual output shaft speed)	≥ 6 MPH

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
All transmission range switches OFF NOTE: “Transmission range switch OFF” is defined as transmission range switch input voltage ≥ 4.1 V.	True

Time Needed for Diagnosis: 3 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

G: DTC P0711 ATF TEMP. SENSOR CIRCUIT RANGE/PERFORMANCE

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Judge the malfunction of oil temperature sensor characteristics (stuck to low temperature side).
- Judge as NG if the amount of oil temperature change since ignition ON is equal to or below the predetermined value.

Diagnosis 2
- Judge the malfunction of oil temperature sensor characteristics (stuck to high temperature side).
- Judge as NG when the difference of engine coolant temperature and CVT oil temperature exceeds the predetermined value both when starting engine and when driving.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
12 V battery system voltage	≥ 10 V
Engine speed (The timer is held when the following conditions are not satisfied.)	> 600 rpm
Transmission range	Drive
Vehicle speed (calculated from actual output shaft speed)	≥ 21.9 MPH
Diagnosis 2	
12 V battery system voltage	≥ 10 V
ECT at the end of the previous drive cycle – ECT at engine start	≥ 40 degC

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Absolute change of measured Transmission fluid temperature sensor input voltage	≤ 0.049 V
Transmission fluid temperature	< 20 degC
Diagnosis 2	
Transmission fluid temperature – ECT at engine start	> 46 degC

Time Needed for Diagnosis:
- **Diagnosis 1:** 600 s
- **Diagnosis 2:** 300 s

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

H: DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT LOW INPUT

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short circuit of ATF temperature sensor.
- Judge as NG if the ATF temperature sensor detected voltage is lower than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Transmission fluid temperature sensor input voltage (Transmission fluid temperature)	< 0.132 V (> 150 degC)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

I: DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT HIGH INPUT

1. OUTLINE OF DIAGNOSIS

- Detect power supply-output short circuit or open circuit of the ATF temperature sensor 5 V system.
- Judge as NG if the ATF temperature sensor detected voltage is higher than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Vehicle speed (calculated from output shaft speed)	≥ 6.3 MPH
Above condition satisfied for	≥ 50 s

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured Transmission fluid temperature sensor input voltage (Transmission fluid temperature)	> 4.502 V (< – 53 degC)

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

J: DTC P0719 BRAKE SWITCH CIRCUIT LOW

1. OUTLINE OF DIAGNOSIS

- Detect no input from the brake signal.
- Judge as NG if a predetermined number of deceleration occurs while the cruise control is set to OFF and the brake is OFF.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Cruise control	OFF
Malfunctions listed on the right column are not detected:	P0720, P1706

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Number of times that vehicle speed changes from 30 km/h to 1 km/h while the brake SW is OFF	> 10 count

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

K: DTC P0720 OUTPUT SPEED SENSOR CIRCUIT

1. OUTLINE OF DIAGNOSIS

- Detect the no input signal from the front wheel speed sensor.
- Judge as NG if there is no output from the front wheel speed sensor while the forward/reverse clutch is engaged and the wheel speed from VDC is equal to or higher than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Vehicle speed (from vehicle dynamics control module)	≥ 3 MPH
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured front front output shaft speed	0 rpm

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

L: DTC P0721 OUTPUT SHAFT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of front wheel speed sensor characteristics.
• Judge as NG when the deviation between vehicle speed from VDC and front wheel speed sensor becomes equal to or larger than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Vehicle speed (from vehicle dynamics control module)	≥ 12 MPH

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Vehicle speed (calculated from front output shaft speed) – Vehicle speed (from vehicle dynamics control module)	> 10 MPH

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

M: DTC P0724 BRAKE SWITCH CIRCUIT HIGH

1. OUTLINE OF DIAGNOSIS

- Detect the brake signal stuck to ON.
- Judge as NG if a predetermined number of acceleration occurs while the cruise control is set to OFF and the brake is ON.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Cruise control	OFF
Malfunctions listed on the right column are not detected:	P0720, P1706

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Number of times that vehicle speed changes from 1 km/h to 30 km/h while the brake SW is ON	> 10 count

Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

N: DTC P0730 GEARSHIFT CONTROL PERFORMANCE ABNORMAL

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission gear ration control function.
- Judge as NG when the difference between the transmission Gear Ratio Target, which is an internal data, and Actual Gear Ratio is larger than the specified value. (Compare the “Gear Ratio Target × Secondary pulley speed ≈ Target primary speed equivalent value” and primary pulley sensor value.)

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 500 rpm
Transmission range	Drive

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Target primary pulley shaft speed – Measured primary pulley shaft speed	≥ 600 rpm
(Duty of shift up pressure control solenoid valve	≥ 90%
or	
Duty of shift down pressure control solenoid valve)	≥ 90%

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

O: DTC P0746 PRESSURE CONTROL SOLENOID "A" PERFORMANCE/STUCK OFF

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of transmission line pressure solenoid and hydraulic circuit (stuck to low pressure side).
• Judge as NG when the actual line pressure drops to or below the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Measured line pressure control solenoid valve current	≤ 0.78 A
Torque converter clutch circuit control solenoid output command	ON
Diagnosis 2	
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Measured line pressure control solenoid valve current	≤ 0.78 A
Torque converter clutch circuit control solenoid output command	OFF

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Measured line pressure	< Map 1 kPa
Diagnosis 2	
Measured line pressure	< Map 2 kPa

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

P: DTC P0747 PRESSURE CONTROL SOLENOID "A" STUCK ON

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of transmission line pressure solenoid and hydraulic circuit (stuck to high pressure side).
• Judge as NG when the actual line pressure rises to or above the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Measured line pressure control solenoid valve current	≥ 0.5 A
Torque converter clutch circuit control solenoid output command	ON
Diagnosis 2	
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Measured line pressure control solenoid valve current	≥ 0.5 A
Torque converter clutch circuit control solenoid output command	OFF

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Measured line pressure	> Map 1 kPa
Diagnosis 2	
Measured line pressure	> Map 2 kPa

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Q: DTC P0751 SHIFT SOLENOID "A" PERFORMANCE/STUCK OFF

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of shift-up fluid pressure control solenoid and hydraulic circuit characteristics (stuck to low pressure side).
• Judge as NG if the amount of gear rate change per second is equal to or larger than the predetermined value, even though the up-shift command is issued.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Commanded duty of shift down pressure control solenoid	0%
Engine speed	≥ 1000 rpm
Actual pulley ratio *	> 1.5 and < 2.348

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio * change for 1 second	> – 0.08
Commanded duty of shift up pressure control solenoid	≥ 90%

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

R: DTC P0752 SHIFT SOLENOID "A" STUCK ON

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of shift-up fluid pressure control solenoid and hydraulic circuit characteristics (stuck to high pressure side).
• Judge as NG if the amount of gear rate change per second is within the predetermined value, even though the down-shift command is issued.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Commanded duty of shift up pressure control solenoid	0%
Engine speed	≥ 1000 rpm
Actual pulley ratio *	< 0.5

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio * change for 1 second	> – 0.08 and < 0.08
Commanded duty of shift down pressure control solenoid	> 80%

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

Time Needed for Diagnosis: 1 second

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

S: DTC P0756 SHIFT SOLENOID "B" PERFORMANCE/STUCK OFF

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of shift-down fluid pressure control solenoid and hydraulic circuit characteristics (stuck to low pressure side).
• Judge as NG if the amount of gear rate change per second is within the predetermined value, even though the down-shift command is issued.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift up pressure control solenoid	0%
Actual pulley ratio	≥ 0.363 and ≤ 2.348

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio * change for 1 second	> – 0.08 and < 0.08
Commanded duty of shift down pressure control solenoid	> 80%

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed
Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

T: DTC P0757 SHIFT SOLENOID "B" STUCK ON

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of shift-down fluid pressure control solenoid and hydraulic circuit characteristics (stuck to high pressure side).
• Judge as NG if the amount of gear rate change per second is equal to or larger than the predetermined value, even though the up-shift command is issued.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift down pressure control solenoid	0%
Actual pulley ratio	≥ 0.363 and ≤ 2.348

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual pulley ratio * change for 1 second	> 0.04
Commanded duty of shift up pressure control solenoid	> 50%

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

Time Needed for Diagnosis: 10 seconds

Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

U: DTC P0776 PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of transmission forward/reverse clutch pressure solenoid and hydraulic circuit characteristics (stuck to low pressure side).
• Judge as NG if the value calculated by “output speed – secondary pulley speed” becomes equal to or larger than the predetermined value, even though the forward/reverse clutch is engaged.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
12 V battery system voltage	≥ 10 V
Transmission range	Drive
Measured secondary pulley shaft speed	≥ 100 rpm
Actual output shaft speed	≥ 100 rpm
Vehicle speed (from vehicle dynamics control module)	≥ 6 MPH
Commanded forward & reverse clutch pressure control solenoid current	< 0.9 A
Engine speed	≥ 500 rpm
Diagnosis 2	
12 V battery system voltage	≥ 10 V
Transmission range	Drive
Measured secondary pulley shaft speed	> 600 rpm
Actual output shaft speed	< 100 rpm
Vehicle speed (from vehicle dynamics control module)	< 6 MPH
Commanded forward & reverse clutch pressure control solenoid current	< 0.9 A
Accelerator pedal position (from ECM)	> 6%
Engine speed	≥ 500 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Actual output shaft speed * – Measured secondary pulley shaft speed /1.322	Table 1 rpm

* Actual output shaft speed: Measured rear output shaft speed × 0.543 ** + Measured front output shaft speed × (1 – 0.543)
** 0.543:0.543 Center differential gear ratio

Table 1

Vehicle speed (MPH)	0	13	25	38	50	63	75
Actual output shaft speed – Measured primary pulley shaft speed (rpm)	150	100	100	100	100	100	100

Vehicle speed (MPH)	88	100	113	125	138	150	159
Actual output shaft speed – Measured primary pulley shaft speed (rpm)	100	100	100	100	100	100	100

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

V: DTC P0801 REVERSE INHIBIT CONTROL CIRCUIT

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of shift lock solenoid or circuit.
- Judge as NG if abnormal signal from the integrated unit is received, when bus off is not detected and there is no trouble in CAN between the integrated unit.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Malfunctions listed on the right column are not detected:	U0073 U0140, U0422

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Shift lock solenoid system circuit abnormal (received from BIU)	ON

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

W: DTC P0841 SECONDARY OIL PRESSURE SENSOR PERFORMANCE

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission fluid pressure control function.
- Judge as NG when a divergence obtained by comparing the target secondary pressure (an internal data) with the secondary pressure sensor detected value becomes equal to or larger than the specified value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ Table 1 rpm

Table 1

Target line pressure (kPa)	0	500	1000	1500	2000	3000	4000	5000	6000
Engine speed (rpm)	400	600	965	1180	1370	1670	1930	2150	2340

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Target line pressure – Measured line pressure	≥ 500 kPa

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

X: DTC P0842 SECONDARY OIL PRESSURE SENSOR CIRCUIT (LOW)

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short circuit of the secondary pressure sensor.
- Judge as NG if the secondary pressure sensor detected voltage is lower than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured line pressure sensor input voltage (Line pressure)	< 0.195 V (< – 574 kPa)

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Y: DTC P0843 SECONDARY OIL PRESSURE SENSOR CIRCUIT (HIGH)

1. OUTLINE OF DIAGNOSIS

- Detect power supply-output short circuit or open circuit of the secondary pressure sensor 5 V system.
- Judge as NG if the secondary pressure sensor detected voltage is higher than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured line pressure sensor input voltage (Line pressure)	> 4.883 V (> 8200 kPa)

Time Needed for Diagnosis: 1.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

Z: DTC P0890 AT SELF-SHUT RELAY DIAGNOSIS (LOW)

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission fluid pressure solenoid drive power supply relay circuit.
- Judge as NG if the transmission fluid pressure solenoid drive power supply voltage is lower than the pre-determined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
TCM Power Relay output command	ON
Ignition state	Run or Crank

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured TCM input voltage which is supplied from 12 V battery system through the TCM Power Relay	< 2 V

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AA:DTC P0951 MANUAL SWITCH

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short (ground-fault) in manual SW circuit.
- Judge as NG if the manual SW is ON in P, R or N range.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Malfunctions listed on the right column are not detected:	P0705, P0708

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Manual SW status in other than D range	ON

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AB:DTC P0961 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT RANGE/PERFORMANCE

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission line pressure solenoid drive circuit.
- Judge as NG when the deviation between target current and actual current of the transmission line pressure solenoid becomes equal to or larger than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
| Target line pressure control solenoid valve current – Measured line pressure control solenoid valve current |	> 0.2 A

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AC:DTC P0962 SECONDARY SOLENOID CIRCUIT (LOW)

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Detect the GND-output short in secondary solenoid drive circuit.
- Judge as NG if the secondary solenoid drive current is higher than the predetermined value.

Diagnosis 2
- Detect the GND-output short in secondary solenoid drive circuit.
- Judge as NG when the number of overcurrent detection in the secondary solenoid drive circuit exceeds 10 times.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
12 V battery system voltage	≥ 9 V
Commanded line pressure control solenoid valve current	≥ 0.1 A
Diagnosis 2	
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Measured line pressure control solenoid valve current	≥ 1.1 A
Diagnosis 2	
Signal of malfunction from solenoid driver IC	ON
As defined by:	
Measured line pressure control solenoid valve current	≥ 1.2 A

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AD:DTC P0963 SECONDARY SOLENOID CIRCUIT (HIGH)

1. OUTLINE OF DIAGNOSIS

- Detect open circuit or power supply-output short circuit of the secondary solenoid drive circuit.
- Judge as NG if the secondary solenoid drive current is lower than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Commanded line pressure control solenoid valve current	≥ 0.2 A

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured line pressure control solenoid valve current	< 0.1 A

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AE:DTC P0965 FORWARD & REVERSE SOLENOID FUNCTION

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
• Detect the malfunction of transmission forward/reverse clutch pressure solenoid drive circuit characteristics.
• Judge as NG when the deviation between set current and actual current of the transmission forward/reverse clutch pressure solenoid drive circuit becomes equal to or larger than the predetermined value.
Diagnosis 2
• Detect the malfunction of transmission forward/reverse clutch pressure solenoid drive circuit characteristics.
• Judge as NG when the transmission forward/reverse clutch pressure solenoid drive current is within the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
12 V battery system voltage	≥ 10 V
Diagnosis 2	
12 V battery system voltage	≥ 10 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
| Target forward & reverse clutch pressure control solenoid current – Measured forward & reverse clutch pressure control control solenoid current |	> 0.2 A
Diagnosis 2	
Measured forward & reverse clutch pressure control solenoid current	> 1.08 A and ≤ 1.9 A

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AF:DTC P0966 FORWARD & REVERSE SOLENOID CIRCUIT (LOW)

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short in transmission forward/reverse clutch pressure solenoid circuit.
- Judge as NG when the number of overcurrent detection in the transmission forward/reverse clutch pressure solenoid drive circuit exceeds 10 times.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC	ON
As defined by:	
Measured forward & reverse clutch pressure control solenoid current	≥ 1.9 A

Time Needed for Diagnosis: 0.02 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AG:DTC P0967 FORWARD & REVERSE LINEAR SOLENOID CIRCUIT (HIGH)

1. OUTLINE OF DIAGNOSIS

• Detect open circuit or power supply-output short circuit in the transmission forward/reverse clutch pressure solenoid circuit.
• Judge as NG if the transmission forward/reverse clutch pressure solenoid drive current is lower than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Target forward & reverse clutch pressure control solenoid current	≥ 0.3 A

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC	ON
As defined by:	
Measured forward & reverse clutch pressure control solenoid current	< 0.15 A

Time Needed for Diagnosis: 1 second
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AH:DTC P0970 TRANSFER SOLENOID CIRCUIT (LOW)

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short in transfer solenoid circuit.
- Judge as NG when the number of GND-output short detection counted by a detecting circuit in the transfer solenoid drive circuit exceeds 10 times.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Target duty cycle	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Malfunction signal from solenoid driver IC	≥ 10 count

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AI: DTC P0971 TRANSFER SOLENOID CIRCUIT (HIGH)

1. OUTLINE OF DIAGNOSIS

- Detect open circuit or power supply-output short circuit in the transfer solenoid circuit.
- Judge as NG when the number of open circuit or power supply-output short circuit detection counted by a detecting circuit in the transfer solenoid drive circuit exceeds 10 times.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Target duty cycle	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Malfunction signal from solenoid driver IC	≥ 10 count

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AJ:DTC P0973 PRIMARY SOLENOID SYSTEM A CIRCUIT (LOW)

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short of the primary UP solenoid drive circuit.
- Judge as NG when the number of GND short detection of primary UP solenoid drive circuit is more than 10 times.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Commanded duty of shift up pressure control solenoid	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC	ON
As defined by:	
Measured shift up pressure control solenoid voltage	≤ 0.8 V

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AK:DTC P0974 PRIMARY SOLENOID SYSTEM A CIRCUIT (HIGH)

1. OUTLINE OF DIAGNOSIS

- Detect the open circuit and power supply-output short of the primary UP solenoid drive circuit.
- Judge as NG when the number of open or power supply short detection of primary UP solenoid drive circuit is more than 10 times.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Commanded duty of shift up pressure control solenoid	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC	ON
As defined by:	
Measured shift up pressure control solenoid voltage	≥ 2.5 V

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AL:DTC P0976 PRIMARY SOLENOID SYSTEM B CIRCUIT (LOW)

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short of the primary DOWN solenoid drive circuit.
- Judge as NG when the number of GND short detection of primary DOWN solenoid drive circuit is more than 10 times.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Commanded duty of shift down pressure control solenoid	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC	ON
As defined by:	
Measured shift down pressure control solenoid voltage	≤ 0.8 V

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AM:DTC P0977 PRIMARY SOLENOID SYSTEM B CIRCUIT (HIGH)

1. OUTLINE OF DIAGNOSIS

- Detect the open circuit and power supply-output short of the primary DOWN solenoid drive circuit.
- Judge as NG when the number of open or power supply short detection of primary DOWN solenoid drive circuit is more than 10 times.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Commanded duty of shift down pressure control solenoid	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC	ON
As defined by:	
Measured shift down pressure control solenoid voltage	≥ 2.5 V

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AN:DTC P160A RANDOM ACCESS MEMORY (RAM) ERROR

1. OUTLINE OF DIAGNOSIS

- Judge the malfunction in RAM area of the TCM.
- Judge as NG if an attempt to write to RAM area failed.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Writing-check (RAM) NOTE: This check is carried out about the RAM used except for CAN communication.	Error

Time Needed for Diagnosis: Immediately
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AO:DTC P1706 AT VEHICLE SPEED SENSOR CIRCUIT MALFUNCTION (REAR WHEEL)

1. OUTLINE OF DIAGNOSIS

- Detect the no input signal from the rear wheel speed sensor.
- Judge as NG if there is no output from the rear wheel speed sensor while the forward/reverse clutch is engaged and the wheel speed from VDC is equal to or higher than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Vehicle speed (from vehicle dynamics control module)	≥ 3 MPH
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured rear front output shaft speed	0 rpm

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AP:DTC P170B OUTPUT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE REAR

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of rear wheel speed sensor characteristics.
- Judge as NG when the deviation between vehicle speed from VDC and rear wheel speed sensor becomes equal to or larger than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Vehicle speed (from vehicle dynamics control module)	≥ 12 MPH
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
| Vehicle speed (calculated from rear output shaft speed) – Vehicle speed (from vehicle dynamics control module) |	> 10 MPH

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AQ:DTC P2530 IGNITION SWITCH RUN POSITION CIRCUIT

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of ignition SW circuit.
- Ignition SW signal is lost 5 times or more even though the engine is ON.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10.9 V
Engine speed	≥ 500 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Count of temporarily discontinuous input of ignition switch	≥ 5 count

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AR:DTC P2746 PRIMARY PULLEY REVOLUTION SPEED SENSOR CIRCUIT

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of primary speed sensor signal characteristics.
- Judge as NG if the value calculated by “engine speed – primary pulley speed” becomes equal to or larger than the predetermined value.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	≥ 50 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Engine speed – Measured primary pulley shaft speed × 1.129 *	> Table 1 rpm

* 1.129:Primary reduction gear ratio

Table 1

Measured primary pulley shaft speed × 1.129 (rpm)	0	500	1000	1500	2000	2500	3000	3500
Engine speed – Measured primary pulley shaft speed × 1.129 (rpm)	3700	3227	2755	2282	1856	1519	1213	956

Measured primary pulley shaft speed × 1.129 (rpm)	4000	4500	5000	5500	6000	6500	7000
Engine speed – Measured primary pulley shaft speed × 1.129 (rpm)	786	713	651	601	569	544	520

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AS:DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL

1. OUTLINE OF DIAGNOSIS

- Detect the no input signal from the primary speed sensor.
- Judge as NG if there is no input signal from the primary pulley speed sensor, while the secondary pulley speed sensor interlocked with it by chain has the input signal.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 400 rpm
Measured secondary pulley shaft speed	≥ 500 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured primary pulley shaft speed	0 rpm

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AT:DTC P2750 SEC. PULLEY REVOLUTION SPEED SENSOR CIRCUIT

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Detect the malfunction of secondary speed sensor signal characteristics.
- Judge as NG when the secondary pulley speed against the primary pulley speed goes outside the possible range considering the hardware capabilities.

Diagnosis 2
- Detect the malfunction of secondary speed sensor signal characteristics.
- Judge as NG when the secondary pulley speed exceeds 13500 rpm.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
Diagnosis 1	
12 V battery system voltage	≥ 9 V
Transmission range	Drive or Reverse
Measured primary pulley shaft speed /Measured front output shaft speed	≥ 0.36 and ≤ 2.34
Diagnosis 2	
12 V battery system voltage	≥ 9 V
Transmission range	Drive or Reverse
Measured primary pulley shaft speed /Measured front output shaft speed	≥ 0.36 and ≤ 2.34

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Measured primary pulley shaft speed / Measured secondary pulley shaft speed	< 0.33 or > 2.58
Diagnosis 2	
Measured secondary pulley shaft speed	> 13500 rpm

Time Needed for Diagnosis: 5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AU:DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL

1. OUTLINE OF DIAGNOSIS

- Detect the no input signal from the secondary speed sensor.
- Judge as NG if there is no input signal from the secondary pulley speed sensor, while the primary pulley speed sensor interlocked with it by chain has the input signal.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Transmission range	Drive or Reverse
Measured primary pulley shaft speed	≥ 1000 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Measured secondary pulley shaft speed	0 rpm

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AV:DTC P2757 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT PERFORMANCE/STUCK OFF

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of lock-up fluid pressure control solenoid, and hydraulic circuit, or drive circuit characteristics (stuck to low pressure side).
• Judge as NG if the deviation between engine speed and primary pulley speed becomes equal to or larger than the predetermined value, even though the lock-up command is issued.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Transmission range	Drive
Commanded duty of torque converter clutch pressure control solenoid	≥ 95%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Engine speed – Measured primary pulley shaft speed × 1.129 *	> Table 1 rpm

* 1.129:Primary reduction gear ratio

Table 1

Measured primary pulley shaft speed × 1.129 (rpm)	0	500	1000	1500	2000	2500	3000	3500
Engine speed – Measured primary pulley shaft speed × 1.129 (rpm)	200	200	200	200	200	200	200	200

Measured primary pulley shaft speed × 1.129 (rpm)	4000	4500	5000	5500	6000	6500	7000
Engine speed – Measured primary pulley shaft speed × 1.129 (rpm)	200	200	200	200	200	200	200

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AW:DTC P2758 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT STUCK ON

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of lock-up fluid pressure control solenoid, and hydraulic circuit, or drive circuit characteristics (stuck to high pressure side).
• Judge as NG if the gear ratio is 1.5 or larger and the amount of gear rate change per second is –0.08 or larger, even though the lock-up command is issued.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Transmission range	Drive
Engine torque	> Table 1 N·m
Commanded duty of torque converter clutch pressure control solenoid	≤ 0%

Table 1

Engine coolant temperature (degC)	– 40	– 20	0	20	40	60	80	100
Engine torque (N·m)	80	80	80	80	80	50	50	50

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Engine speed – Measured primary pulley shaft speed × 1.129 *	< Table 2 rpm

* 1.129:Primary reduction gear ratio

Table 2

Measured primary pulley shaft speed × 1.129 (rpm)	0	500	1000	1500	2000	2500	3000	3500
Engine speed – Measured primary pulley shaft speed × 1.129 (rpm)	0	0	50	50	50	50	50	50

Measured primary pulley shaft speed × 1.129 (rpm)	4000	4500	5000	5500	6000	6500	7000
Engine speed – Measured primary pulley shaft speed × 1.129 (rpm)	50	50	50	50	50	50	50

Time Needed for Diagnosis: 10 seconds
Malfunction Indicator Light Illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AX:DTC P2763 LOCK-UP DUTY SOLENOID CIRCUIT (HIGH)

1. OUTLINE OF DIAGNOSIS

- Detect the open circuit and power supply-output short of the lock-up duty solenoid drive circuit.
- Judge as NG when the number of open or power supply short detection of lock-up duty solenoid drive circuit is more than 10 times.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Commanded duty of torque converter clutch pressure control solenoid	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC	ON
As defined by:	
Measured torque converter clutch pressure control solenoid voltage	≥ 2.5 V

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AY:DTC P2764 LOCK-UP DUTY SOLENOID CIRCUIT (LOW)

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short of the lock-up duty solenoid drive circuit.
- Judge as NG when the number of GND short detection of lock-up duty solenoid drive circuit is more than 10 times.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Commanded duty of torque converter clutch pressure control solenoid	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC	ON
As defined by:	
Measured torque converter clutch pressure control solenoid voltage	≤ 0.8 V

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

AZ:DTC P2769 LOCK-UP ON/OFF SOLENOID CIRCUIT (LOW)

1. OUTLINE OF DIAGNOSIS

- Detect the GND-output short of the lock-up ON/OFF solenoid drive circuit.
- Judge as NG when the number of GND short detection of lock-up ON/OFF solenoid drive circuit exceeds 10 times.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Torque converter clutch circuit control solenoid output command	ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC	ON
As defined by:	
Measured torque converter clutch circuit control solenoid voltage	≤ 0.8 V

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BA:DTC P2770 LOCK-UP ON/OFF SOLENOID CIRCUIT (HIGH)

1. OUTLINE OF DIAGNOSIS

- Detect open circuit or power supply-output short circuit in the lock-up ON/OFF solenoid drive circuit.
- Judge as NG when the number of open circuit or power supply-output short circuit detection of lock-up ON/OFF solenoid drive circuit exceeds 10 times.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 9 V
Torque converter clutch circuit control solenoid output command	OFF

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC	ON
As defined by:	
Measured torque converter clutch circuit control solenoid voltage	≥ 2.5 V

Time Needed for Diagnosis: 0.2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BB:DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure has occurred.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BC:DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication with ECM is not possible.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BD:DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication with VDC CM is not possible.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from Vehicle Dynamics Control Module	Lost

Time Needed for Diagnosis: 0.5 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BE:DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the body integrated unit.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from BIU	Lost

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BF:DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the combination meter.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from meter	Lost

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BG:DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the A/C control panel.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from A/C control panel	Lost

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BH:DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from ECM is not normal.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from ECM	Did not change

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BI: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from VDC CM is not normal.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from Vehicle Dynamics Control Module	Did not change

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BJ:DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from the body integrated unit is not normal.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from BIU	Freeze

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BK:DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from the combination meter is not normal.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from meter	Freeze

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

BL:DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from the A/C control panel is not normal.

2. ENABLE CONDITIONS

Secondary Parameters	Enable Conditions
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment Value

Malfunction Criteria	Threshold Value
CAN data from A/C control panel	Freeze

Time Needed for Diagnosis: 2 seconds
Malfunction Indicator Light Illumination: Illuminates as soon as a malfunction occurs.

1. General Description

A: SPECIFICATION

1. MANUAL TRANSMISSION AND DIFFERENTIAL

Type			6-forward speeds and 1-reverse (all stage with synchromesh)
Transmission gear ratio		1st	3.454
		2nd	1.947
		3rd	1.296
		4th	0.972
		5th	0.780
		6th	0.666
		Rev.	3.636
Front reduction gear	Final	Type of gear	Hypoid
		Gear ratio	4.111
Rear reduction gear	Transfer	Type of gear	Helical
		Gear ratio	1.000
	Final	Type of gear	Hypoid
		Gear ratio	4.111
Front differential	Type and number of gear		Straight bevel gear (bevel pinion: 2, bevel gear: 2)
Center differential	Type and number of gear		Straight bevel gear (bevel pinion: 2, bevel gear: 2, viscous coupling)
Transmission gear oil capacity			3.3 L (3.5 US qt, 2.9 Imp qt)

2. TRANSMISSION GEAR OIL

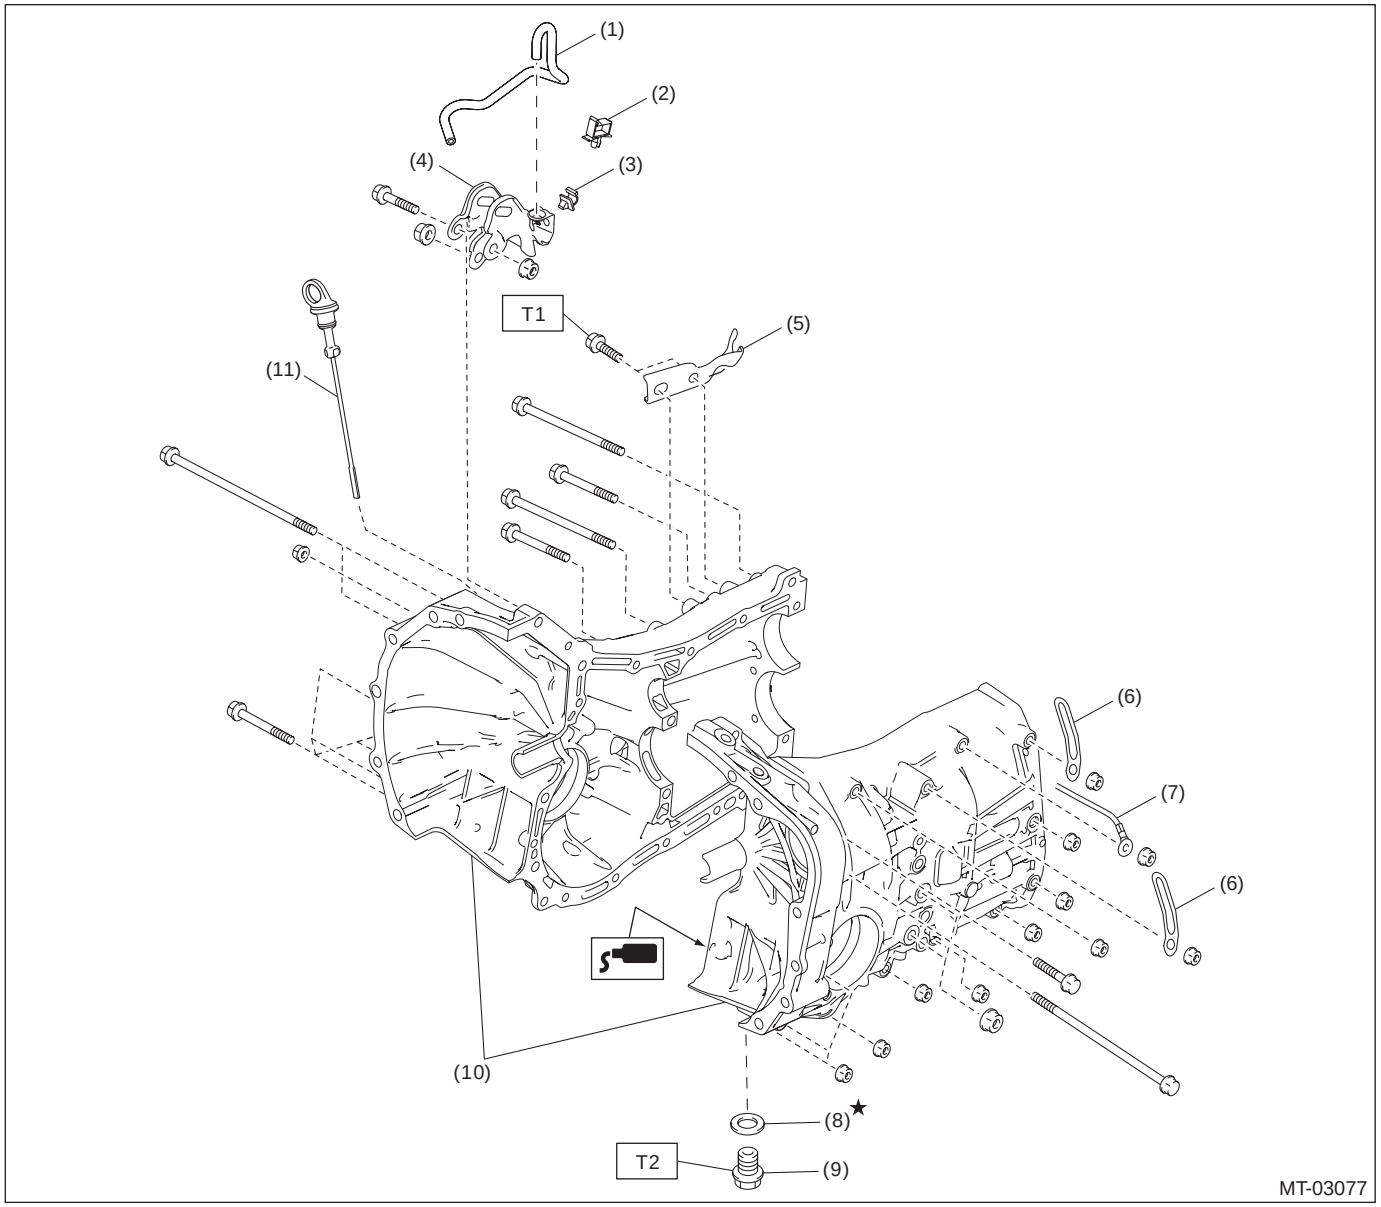
CAUTION:
If an alternative transmission gear oil is used, you may not have expected functionality and performance.

Recommended oil:
SUBARU GEAR OIL EXTRA MT

Alternative:
GL-5 (75W-90)

B: COMPONENT

1. TRANSMISSION CASE



(1)	Air breather hose	(7)	Transmission radio ground cord
(2)	Clamp	(8)	Gasket
(3)	Hose clamp	(9)	Drain plug
(4)	Pitching stopper bracket	(10)	Transmission case ASSY
(5)	Select bracket	(11)	Oil level gauge
(6)	Harness clip		

Tightening torque: N·m (kgf-m, ft-lb)

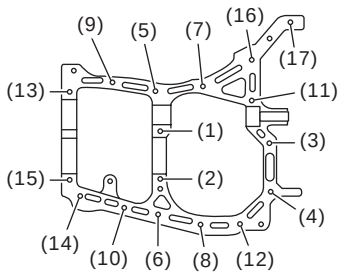
T1: 18 (1.8, 13.3)

T2: 44 (4.5, 32.5) (aluminum gasket, silver)

70 (7.1, 51.6) (copper gasket, brown)

70 (7.1, 51.6) (metal gasket, black)

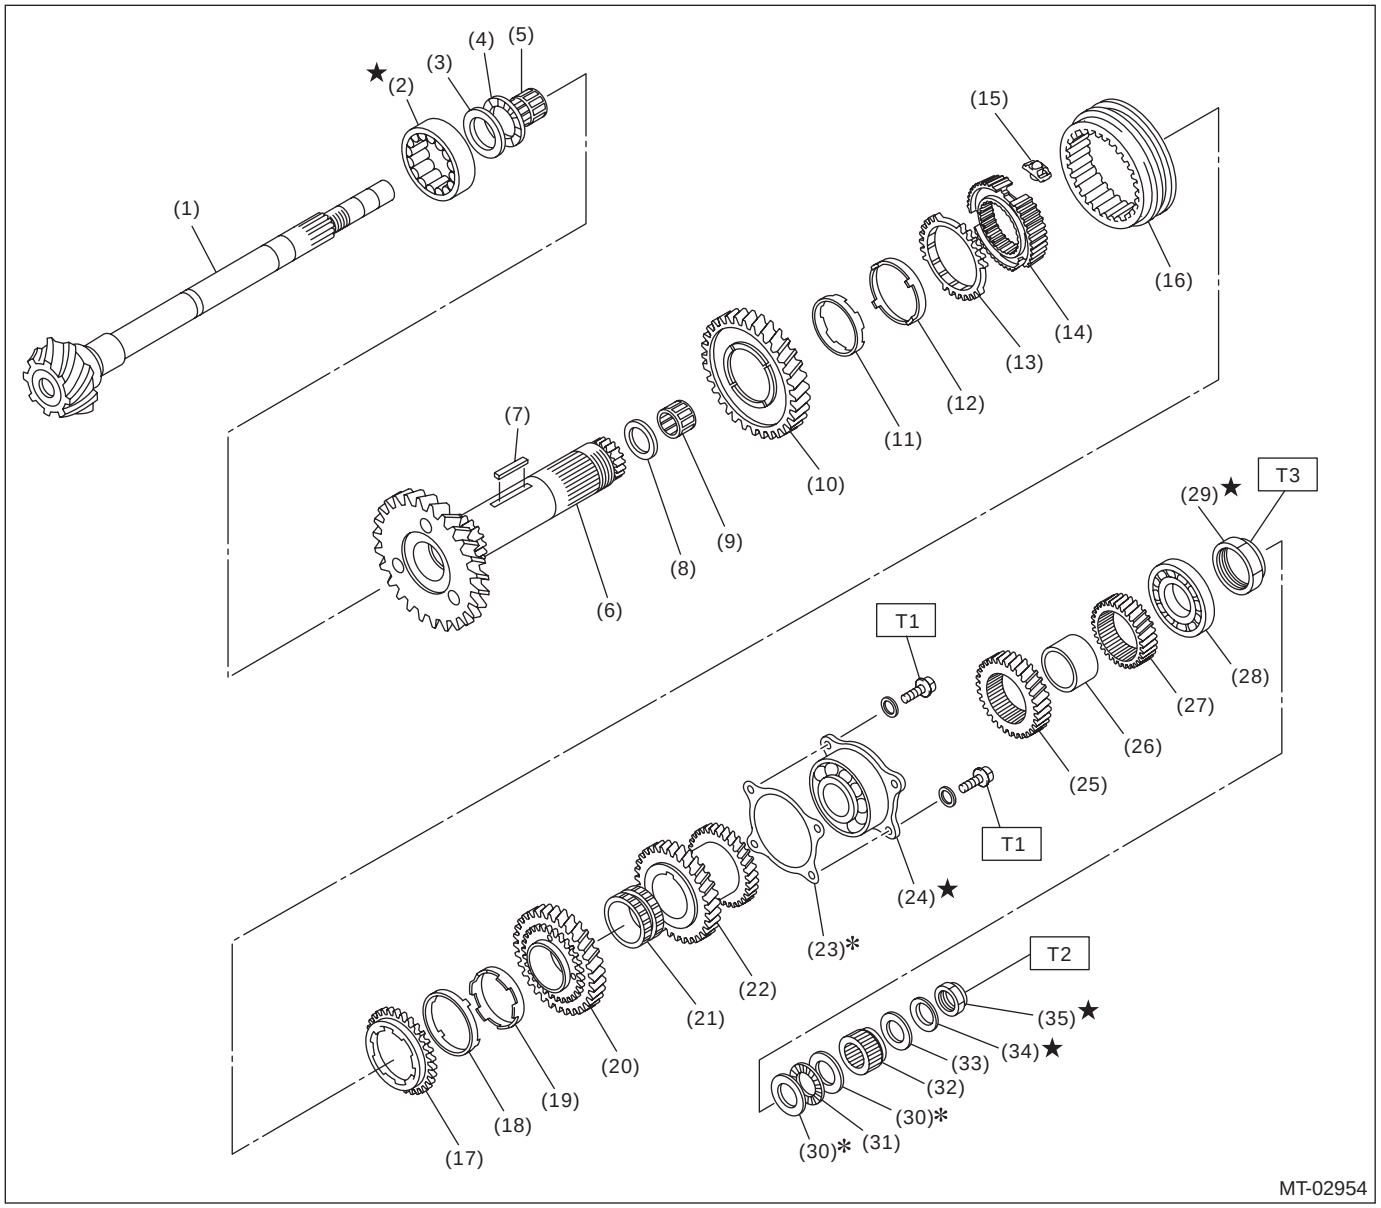
Transmission case tightening torque



MT-00003

Bolt No.	Bolt size mm	Tightening torque: N·m (kgf-m, ft-lb)
(5) — (15)	8	25 (2.5, 18.4)
(1) — (4) (16), (17)	10	40 (4.1, 29.5)

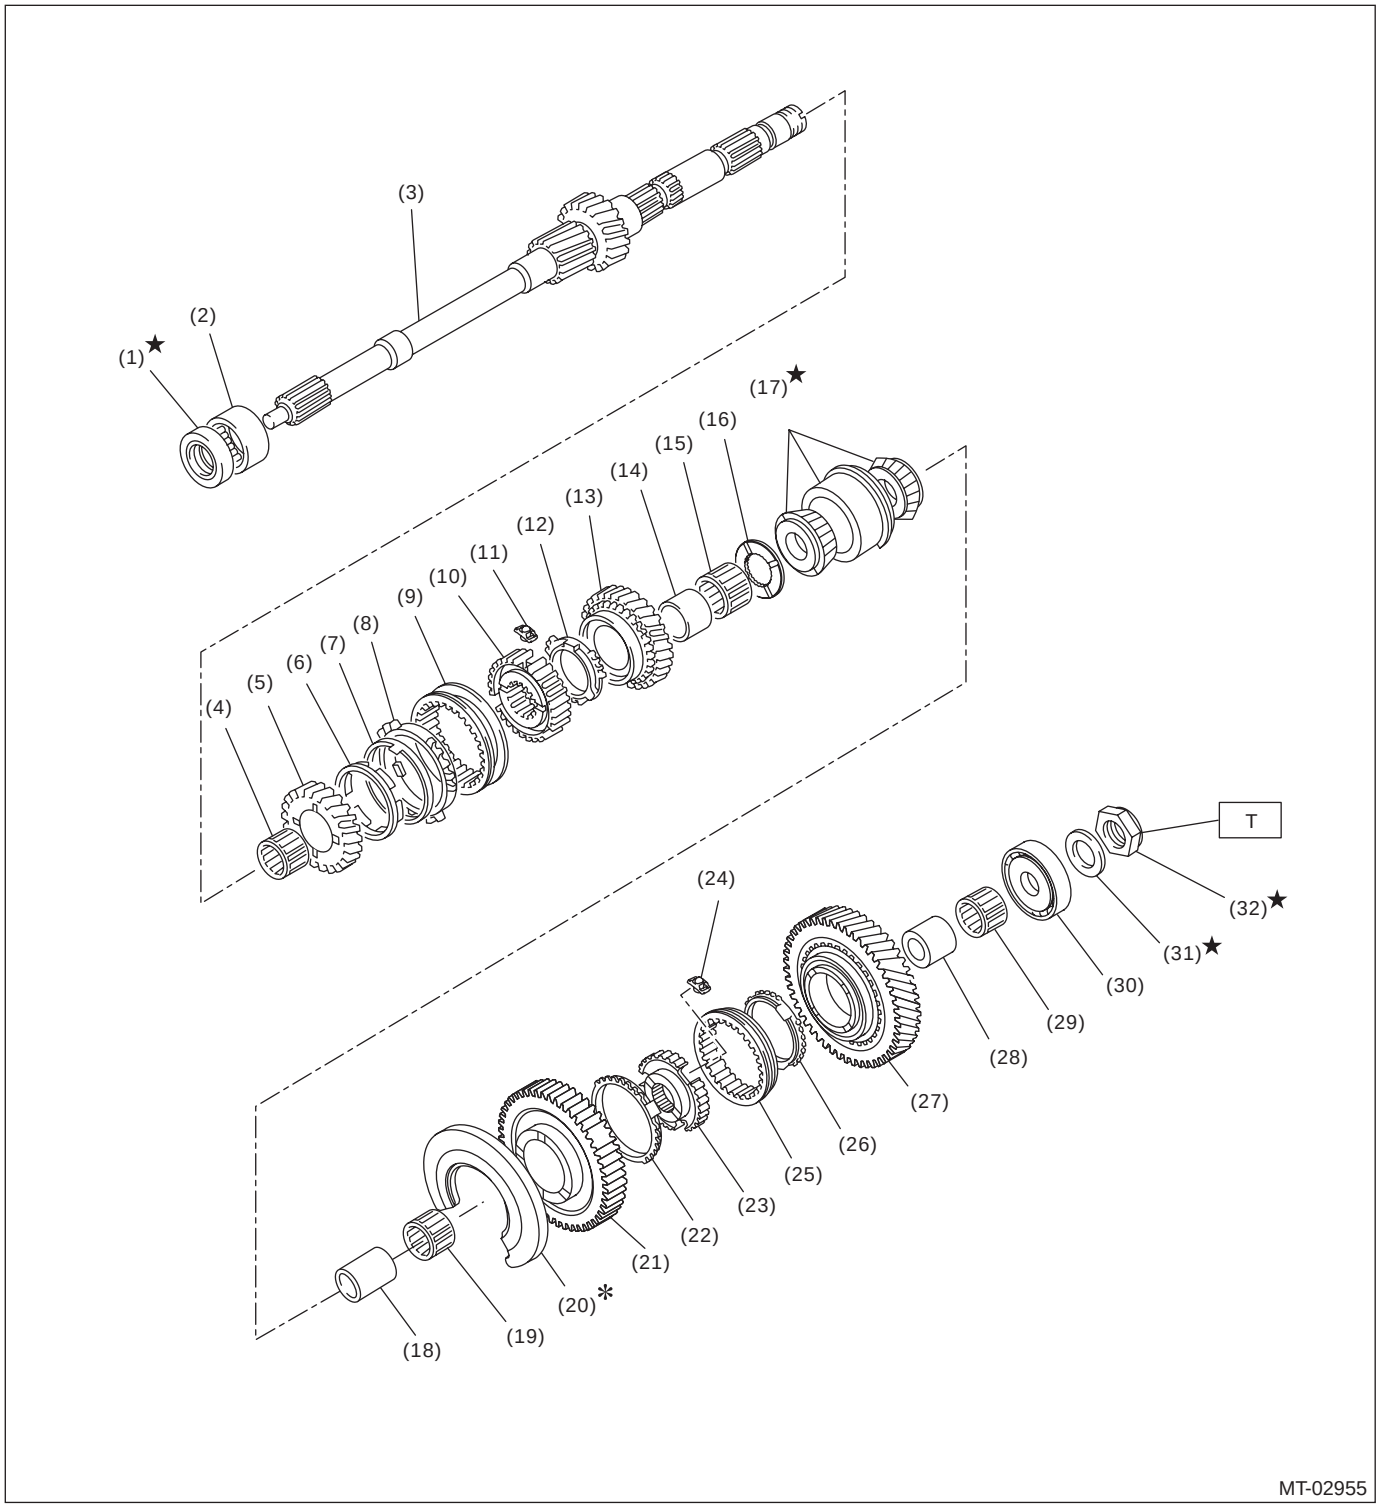
2. DRIVE PINION ASSEMBLY



(1) Drive pinion shaft
(2) Roller bearing
(3) Washer
(4) Thrust bearing
(5) Needle bearing
(6) Driven shaft
(7) Key
(8) Drive pinion collar
(9) Needle bearing
(10) 1st driven gear
(11) 1st inner baulk ring
(12) 1st synchro cone
(13) 1st outer baulk ring
(14) 1st-2nd synchronizer hub
(15) 1st-2nd shifting insert
(16) 1st-2nd coupling sleeve
(17) 2nd outer baulk ring
(18) 2nd synchro cone
(19) 2nd inner baulk ring
(20) 2nd driven gear
(21) 2nd driven gear bushing
(22) 3rd-4th driven gear
(23) Drive pinion shim
(24) Double ball bearing
(25) 5th driven gear
(26) Drive pinion spacer
(27) 6th driven gear
(28) Ball bearing
(29) Lock nut
(30) Adjusting washer
(31) Thrust bearing
(32) Differential bevel gear sleeve
(33) Washer
(34) Lock washer
(35) Lock nut

Tightening torque: N·m (kgf-m, ft-lb)
T1: 30 (3.1, 22.1)
T2: 126 (12.8, 92.9)
T3: 440 (44.9, 324.5)

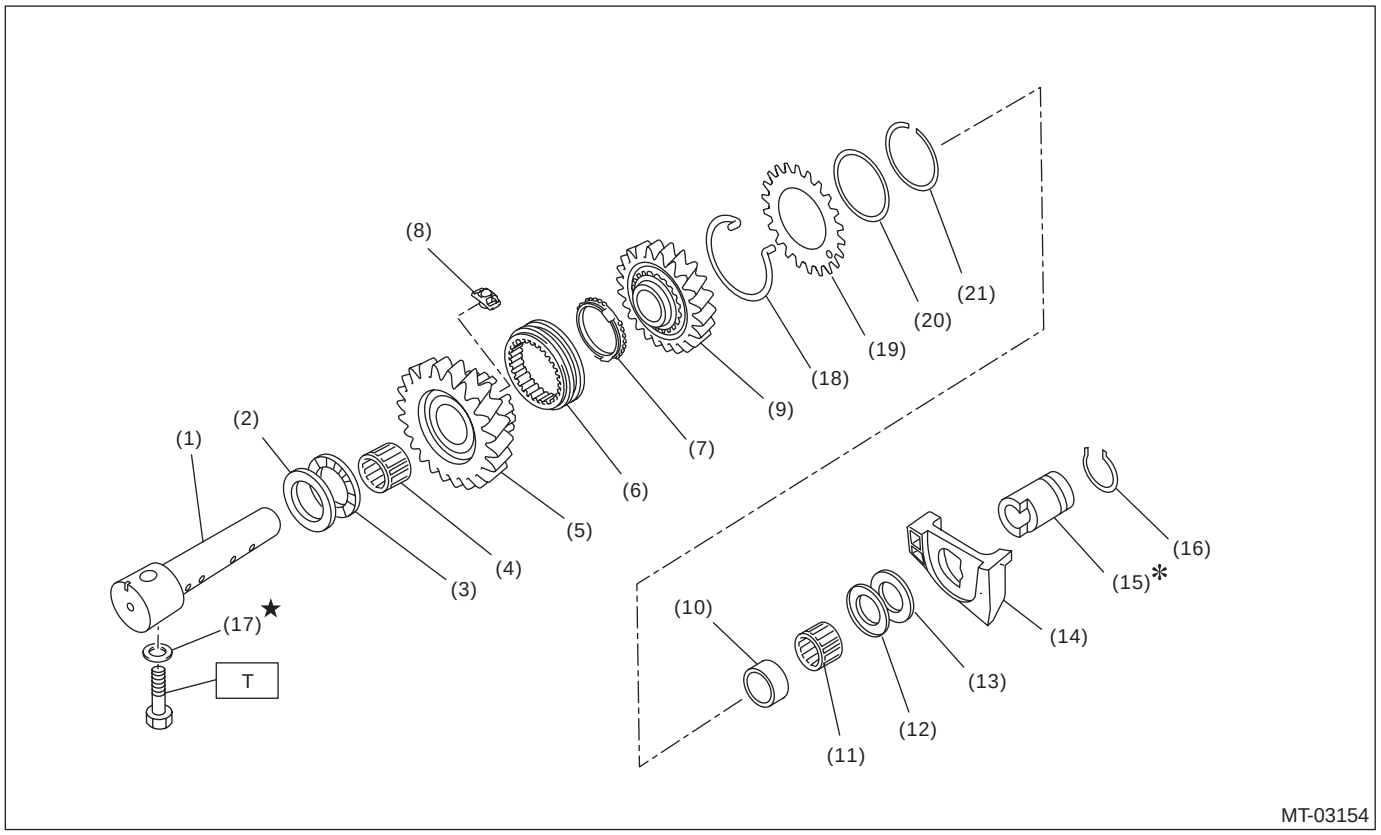
3. MAIN SHAFT ASSY



(1) Oil seal
(2) Needle bearing
(3) Main shaft
(4) Needle bearing
(5) 3rd drive gear
(6) 3rd inner baulk ring
(7) 3rd synchro cone
(8) 3rd outer baulk ring
(9) 3rd-4th coupling sleeve
(10) 3rd-4th synchronizer hub
(11) 3rd-4th shifting insert
(12) 4th baulk ring
(13) 4th drive gear
(14) 4th needle bearing race
(15) Needle bearing
(16) 4th gear thrust washer
(17) Double taper roller bearing
(18) 5th needle bearing race
(19) Needle bearing
(20) Main shaft rear plate
(21) 5th drive gear
(22) 5th baulk ring
(23) 5th-6th synchronizer hub
(24) 5th-6th shifting insert
(25) 5th-6th coupling sleeve
(26) 6th baulk ring
(27) 6th drive gear
(28) 6th needle bearing race
(29) Needle bearing
(30) Ball bearing
(31) Lock washer
(32) Lock nut

Tightening torque: N·m (kgf-m, ft-lb)
T: 160 (16.3, 118.0)

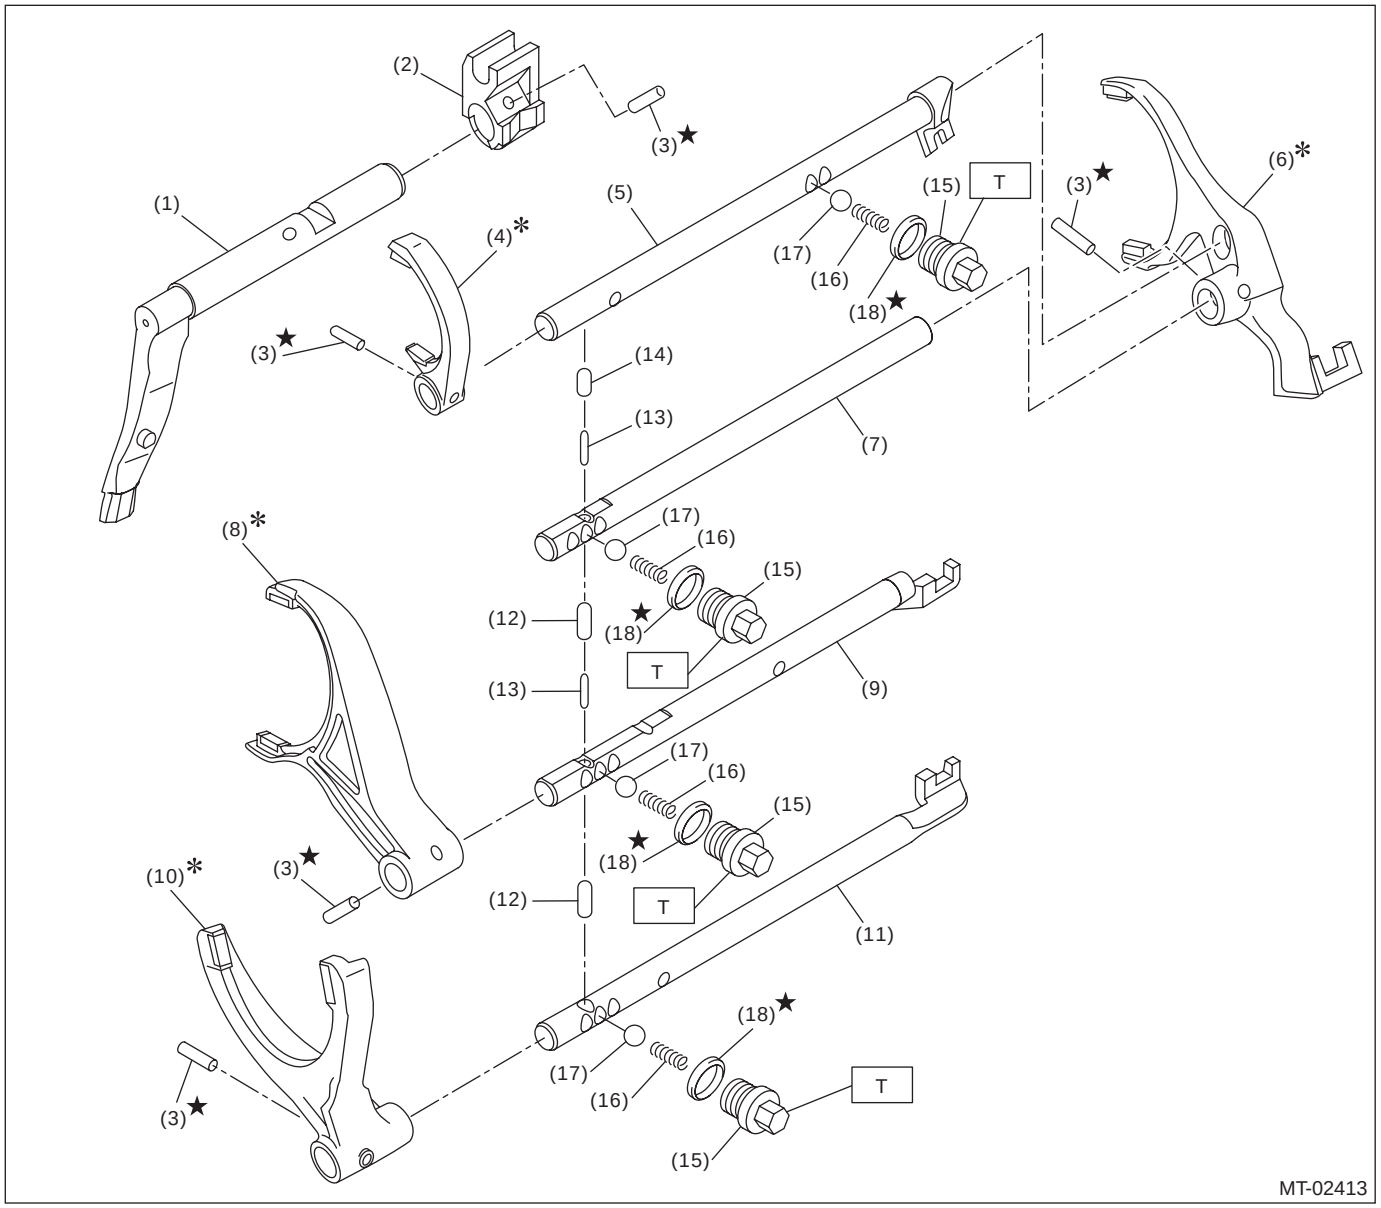
4. REVERSE IDLER GEAR ASSY



(1) Reverse idler gear shaft
(2) Reverse idler gear washer
(3) Thrust bearing
(4) Needle bearing
(5) Reverse idler gear No. 2
(6) Reverse coupling sleeve
(7) Reverse baulk ring
(8) Reverse shifting insert
(9) Reverse idler gear
(10) Reverse idler gear collar
(11) Needle bearing
(12) Thrust bearing
(13) Reverse idler gear washer
(14) Oil case guide
(15) Reverse idler gear bushing
(16) Snap ring
(17) Gasket
(18) Spring
(19) Reverse idler sub gear
(20) Friction plate
(21) Snap ring

Tightening torque: N·m (kgf-m, ft-lb)
T: 25 (2.5, 18.4)

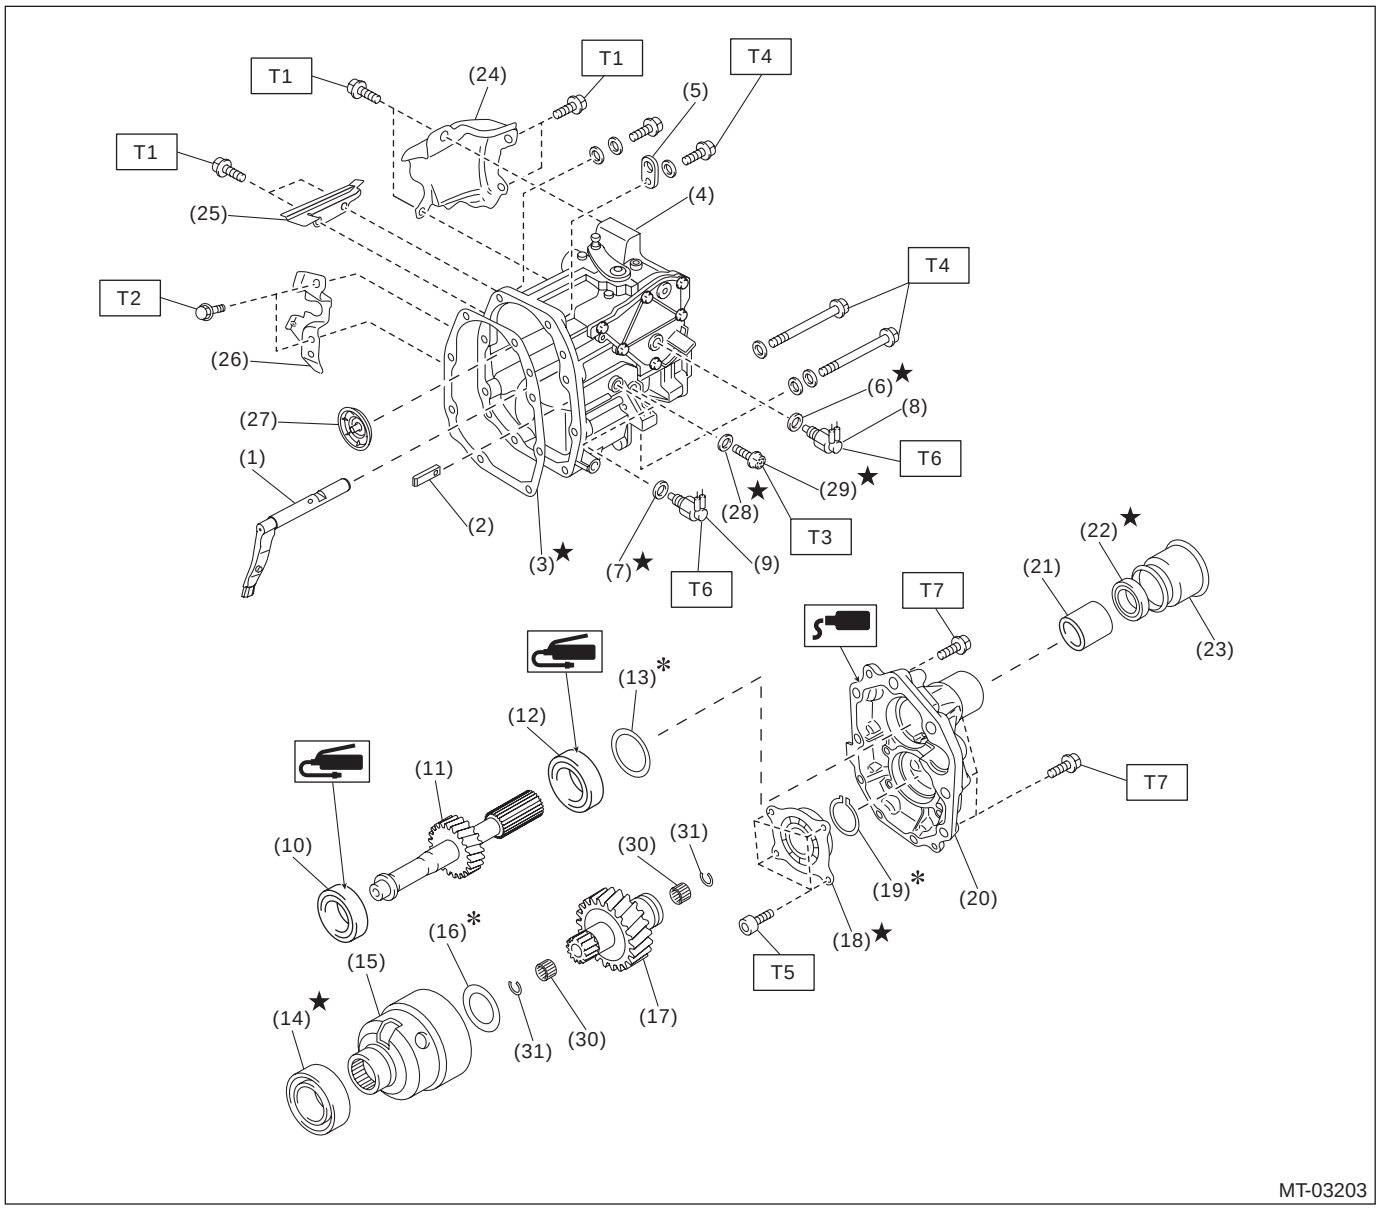
5. SHIFTER FORK AND SHIFTER ROD



(1) Shifter arm
(2) Selector arm
(3) Straight pin
(4) Reverse shifter fork
(5) Reverse fork rod
(6) 5th-6th shifter fork
(7) 5th-6th fork rod
(8) 3rd-4th shifter fork
(9) 3rd-4th fork rod
(10) 1st-2nd shifter fork
(11) 1st-2nd fork rod
(12) Interlock plunger
(13) Interlock plunger
(14) Interlock plunger
(15) Checking ball plug
(16) Checking ball spring
(17) Check ball
(18) Gasket

Tightening torque: N·m (kgf-m, ft-lb)
T: 20 (2.0, 14.8)

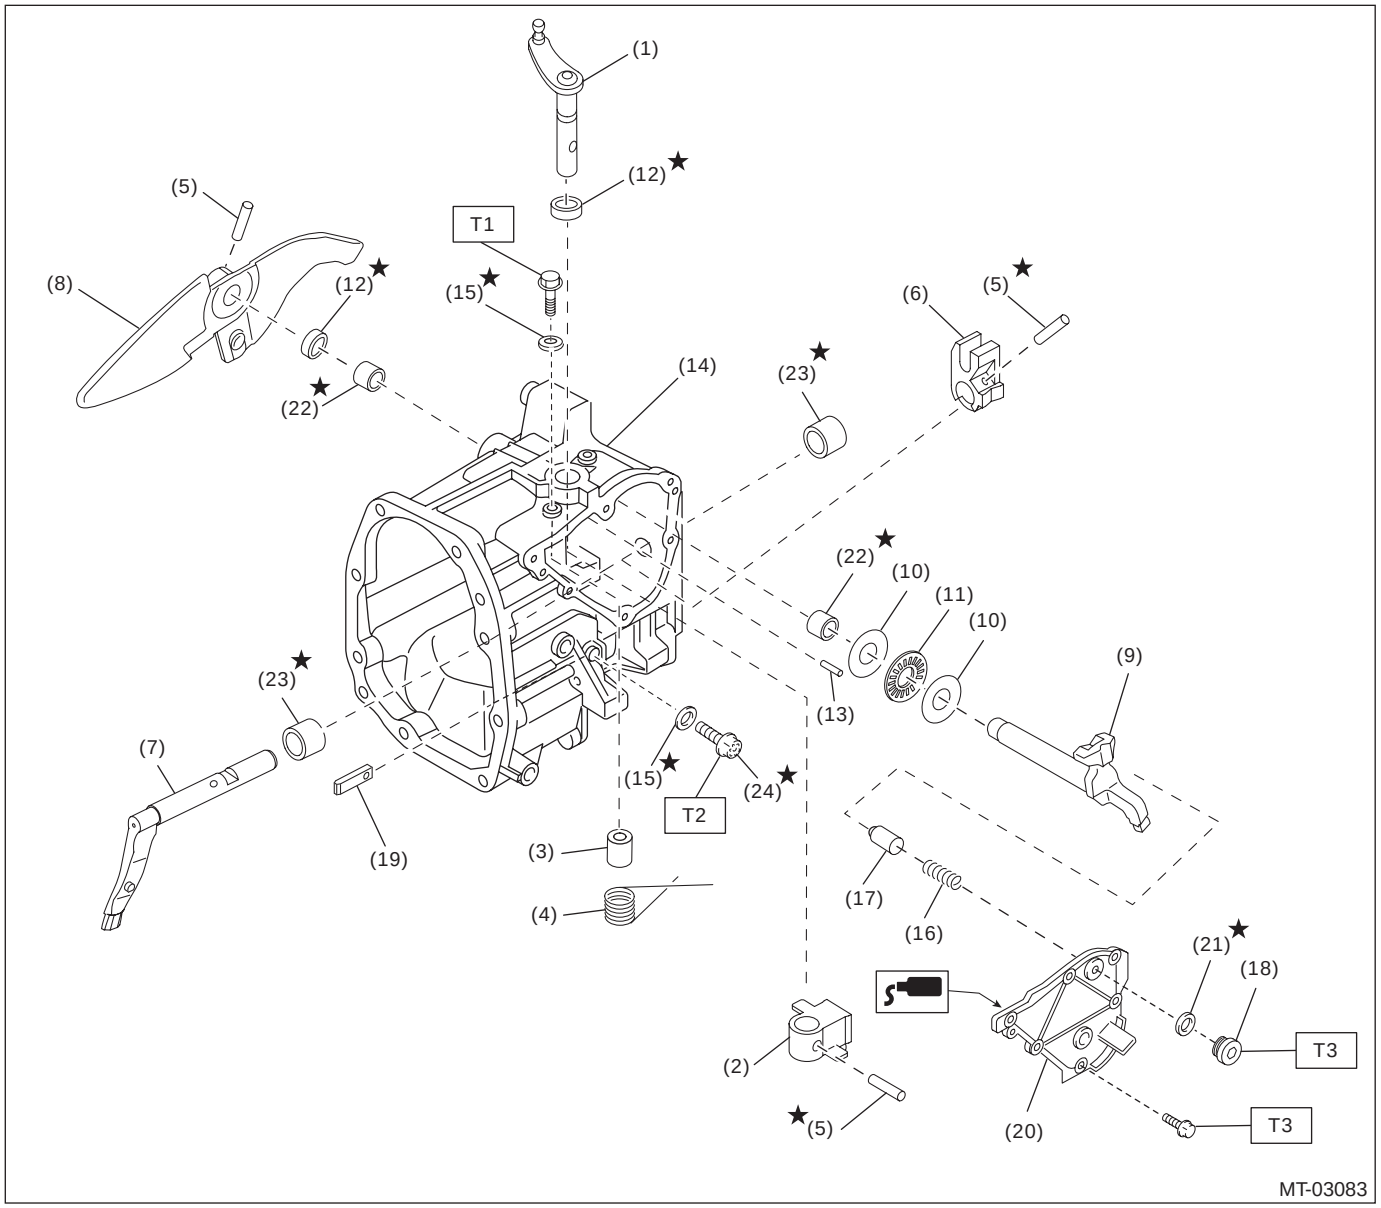
6. TRANSFER CASE AND EXTENSION



(1) Shifter arm
(2) Interlock plate
(3) Gasket
(4) Transfer case
(5) Transmission hanger
(6) Gasket
(7) Gasket
(8) Neutral position switch
(9) Back-up light switch
(10) Taper roller bearing (transfer case side)
(11) Transfer driven gear
(12) Taper roller bearing (extension case side)
(13) Adjusting washer
(14) Ball bearing
(15) Center differential
(16) Adjusting washer
(17) Transfer drive gear
(18) Ball bearing
(19) Snap ring
(20) Extension case
(21) Bushing
(22) Oil seal
(23) Dust cover
(24) Transfer cover
(25) Dust cover
(26) Shift bracket
(27) Oil guide
(28) Gasket
(29) Precoat bolt
(30) Needle bearing
(31) Snap ring

Tightening torque: N·m (kgf-m, ft-lb)
T1: 15 (1.5, 11.1)
T2: 18 (1.8, 13.3)
T3: 20 (2.0, 14.8)
T4: 24.5 (2.5, 18.1)
T5: 26 (2.7, 19.2)
T6: 32.3 (3.3, 23.8)
T7: 40 (4.1, 29.5)

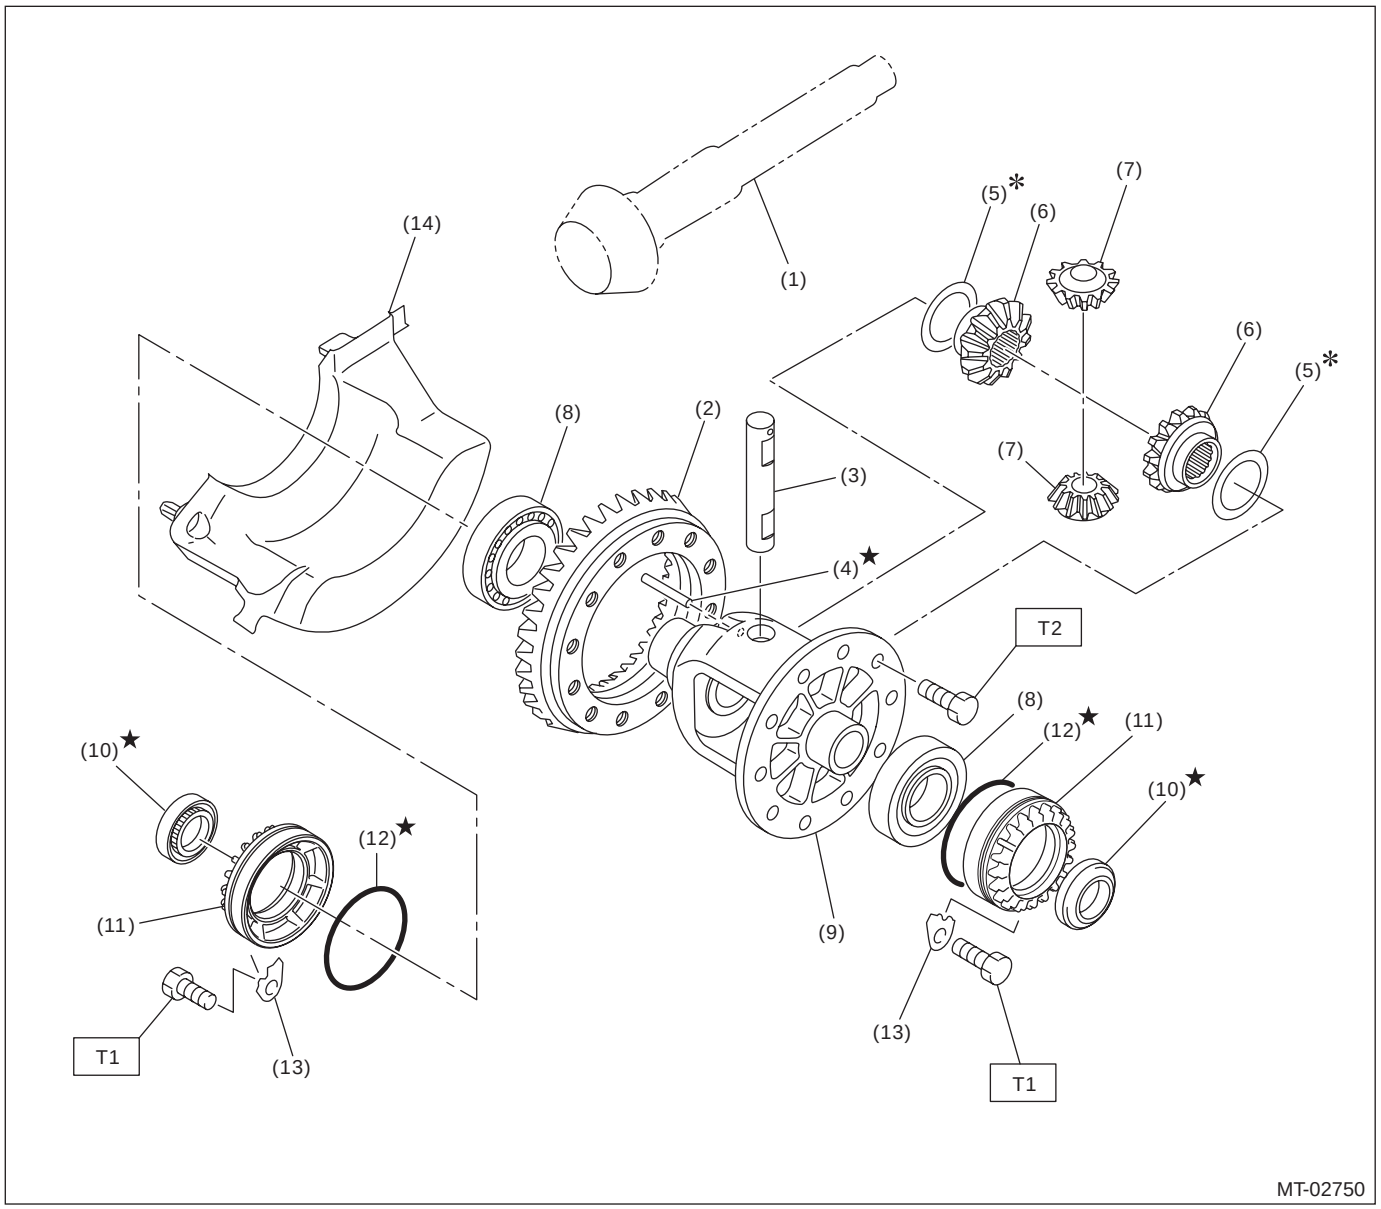
7. SHIFT LINK ASSEMBLY



(1) Selector lever COMPL
(2) Selector arm No. 2
(3) Shifter arm collar
(4) Neutral set spring
(5) Straight pin
(6) Selector arm
(7) Shifter arm
(8) Shift lever COMPL
(9) Shifter arm No. 2
(10) Washer
(11) Thrust bearing
(12) Oil seal
(13) Straight pin
(14) Transfer case
(15) Gasket
(16) Checking ball spring
(17) Plunger
(18) Seal bolt
(19) Interlock plate
(20) Transmission cover
(21) Seal ring
(22) Needle bearing
(23) Roller bearing
(24) Precoat bolt

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.4 (0.7, 4.7)
T2: 20 (2.0, 14.8)
T3: 25 (2.5, 18.4)

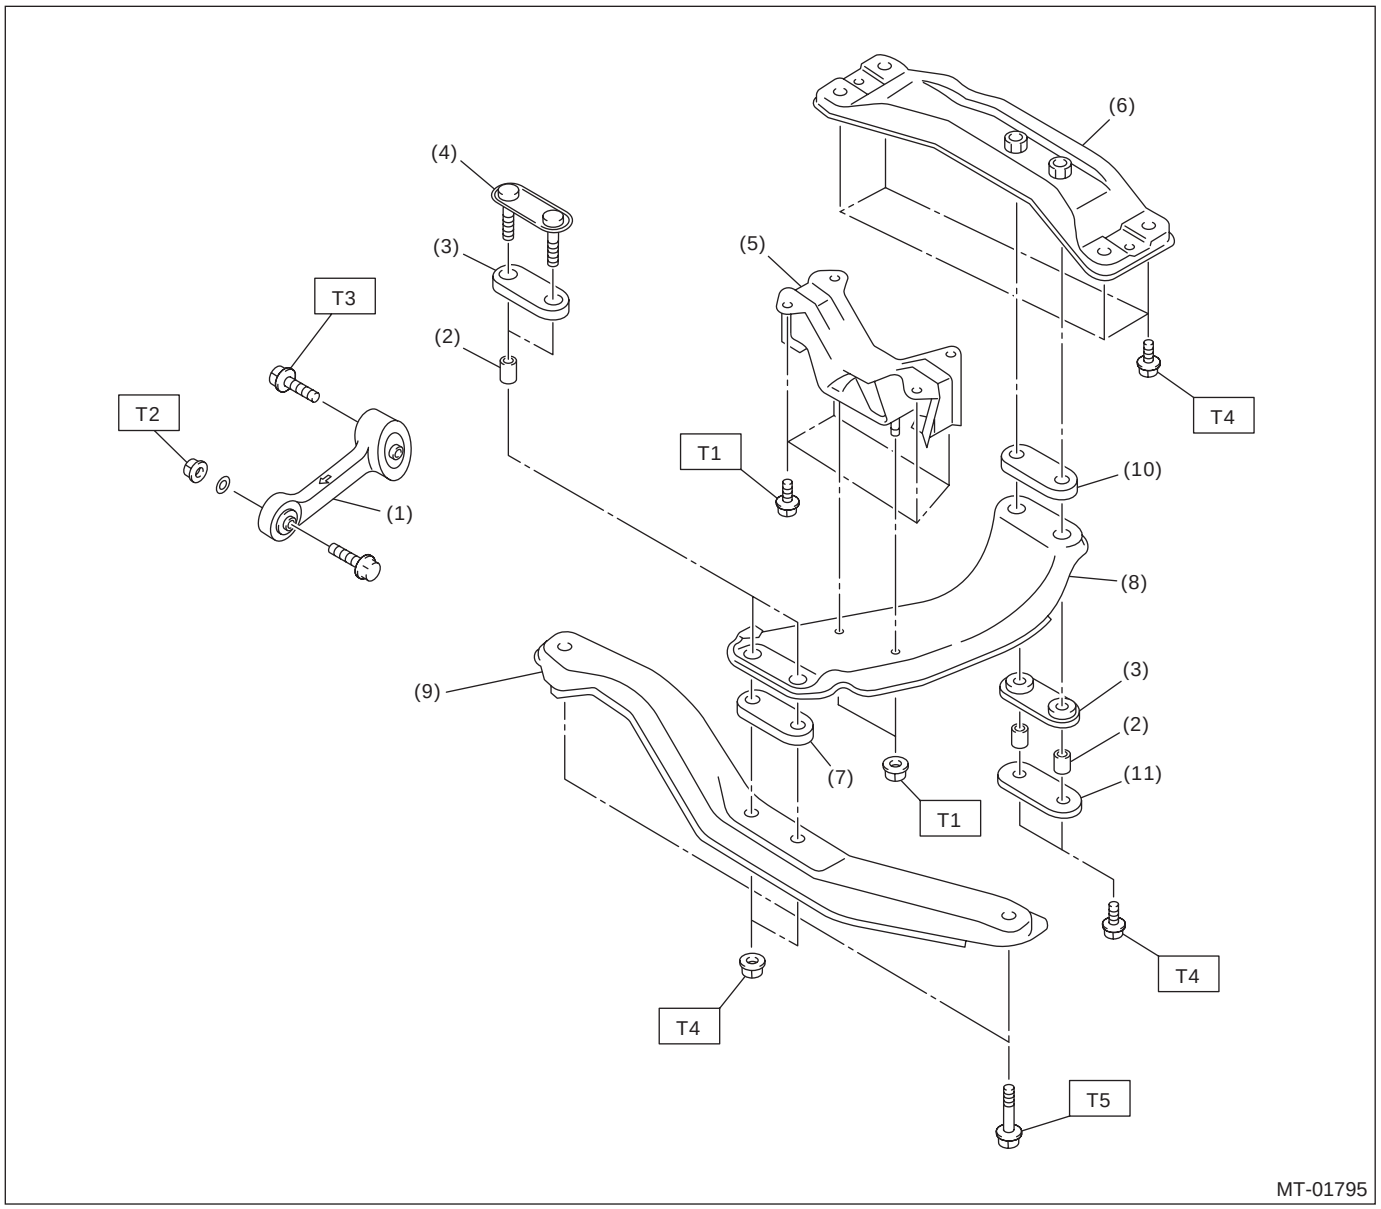
8. FRONT DIFFERENTIAL



(1) Drive pinion shaft
(2) Hypoid driven gear
(3) Pinion shaft
(4) Straight pin
(5) Adjusting washer
(6) Differential bevel gear
(7) Differential bevel pinion
(8) Taper roller bearing
(9) Differential case
(10) Oil seal
(11) Differential side retainer
(12) O-ring
(13) Retainer lock plate
(14) Front oil guide

Tightening torque: N·m (kgf-m, ft-lb)
T1: 25 (2.5, 18.4)
T2: 62 (6.3, 45.7)

9. TRANSMISSION MOUNTING



(1)	Pitching stopper	(7)	Upper cushion rubber
(2)	Spacer	(8)	Center crossmember
(3)	Lower cushion rubber	(9)	Front crossmember
(4)	Front plate	(10)	Rear cushion rubber
(5)	Transmission cushion rubber	(11)	Rear plate
(6)	Rear crossmember		

Tightening torque: N·m (kgf-m, ft-lb)
T1: 35 (3.6, 25.8)
T2: 50 (5.1, 36.9)
T3: 58 (5.9, 42.8)
T4: 70 (7.1, 51.6)
T5: 140 (14.3, 103.3)

C: CAUTION

- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- When disassembling the case and other light alloy parts, disassemble by using a plastic hammer. Do not pry apart with screwdrivers or other tools.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine gear oil, grease or equivalent. Do not mix gear oil, grease, etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply gear oil onto sliding or revolving surfaces before installation.
- Replace deformed or damaged snap rings with new parts.
- Before installing O-rings or oil seals, apply sufficient amount of gear oil to avoid damage and deformation.
- Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vise.
- Avoid damaging the mating surface of the case.
- Before applying liquid gasket, completely remove and clean the old liquid gasket.
- Be careful of handling the oil seal, O-ring and gasket. If the contact surface of them is damaged, oil leakage may occur.
- When pressing-in the oil seal, make sure that the oil seal lip portion and outer surface are not damaged or tilted.
- When replacing the taper roller bearing, replace the outer race and inner race as a set.
- When replacing the hypoid gear, replace the hypoid driven gear and drive pinion shaft as a set.
- Replace the bolts if the seating surface or the thread surface is excessively rusted.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-899524100	899524100	PULLER SET	Used for removing the front differential taper roller bearing inner race. (1) Puller (2) Cap
 ST-399780104	399780104	WEIGHT	Used for adjusting preload on the front differential taper roller bearing.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498077000	498077000	REMOVER	• Used for removing the roller bearing and washer of the drive pinion shaft. • Used for removing the transfer driven gear taper roller bearing.
 ST-498077600	498077600	CENTER DIFFERENTIAL BEARING REMOVER	Used for removing the center differential ball bearing.
 ST-498247001	498247001	MAGNET BASE	• Used for measuring the backlash of differential bevel pinion gear and hypoid driven gear. • Used together with DIAL GAUGE (498247100).
 ST-498247100	498247100	DIAL GAUGE	• Used for measuring the backlash of differential bevel pinion gear and hypoid driven gear. • Used together with MAGNET BASE (498247001).
 ST18667AA020	18667AA020	HOLDER	• Used for removing and installing the drive pinion shaft lock nut. • Used for measuring the backlash of hypoid driven gear. • Used for adjusting preload on the front differential taper roller bearing.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498937000	498937000	TRANSMISSION HOLDER	Used for removing and installing the main shaft lock nut.
 ST-499277100	499277100	BUSHING 1-2 INSTALLER	• Used for installing the drive pinion shaft washer. • Used for installing the front differential taper roller bearing outer race.
 ST-499277200	499277200	INSTALLER	• Used for installing the 3rd-4th driven gear, 5th driven gear, ball bearing and 6th driven gear onto the driven shaft. • Used for installing the drive pinion shaft washer.
 ST-927640000	927640000	INSTALLER	Used for installing the taper roller bearing (transfer case side) of transfer driven gear.
 ST18630AA010	18630AA010	WRENCH COMPL RETAINER	• Used for removing and installing the differential side retainer. • Used for adjusting preload on the front differential taper roller bearing. • WRENCH COMPL RETAINER (499787000) can also be used.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
ST18722AA010	18722AA010	REMOVER	Used for removing the 5th drive gear and 6th drive gear.
 ST-499877000	499877000	RACE 4-5 INSTALLER	• Used for installing the 4th, 5th and 6th drive gear needle bearing races and the main shaft double taper roller bearings. • Used together with REMOVER (899714110).
 ST-499917500	499917500	DRIVE PINION GAUGE ASSY	Used for adjusting the drive pinion shaft shim.
 ST-499927100	499927100	HANDLE	Used for backlash measurement of the hypoid driven gear and preload adjustment of the front differential taper roller bearing.
 ST-499937100	499937100	TRANSMISSION STAND	Used for disassembling and assembling the transmission.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499987003	499987003	SOCKET WRENCH (35)	Used for removing and installing the main shaft lock nut.
 ST-499987300	499987300	SOCKET WRENCH (50)	Used for removing and installing the driven shaft lock nut.
 ST-899714110	899714110	REMOVER	Used for removing and installing the parts of main shaft and driven shaft.
 ST-899864100	899864100	REMOVER	• Used for removing the parts of the main shaft. • Used for removing the transfer driven gear taper roller bearing (transfer case side) and for installing it (extension case side). • Used for removing the transfer drive gear ball bearing. • Used for installing the transfer case roller bearing.
 ST18680AA020	18680AA020	HOLDER	• Used for removing and installing the drive pinion shaft lock nut. • Used for removing and installing the driven shaft lock nut.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-899904100	899904100	STRAIGHT PIN REMOVER	Used for removing and installing the straight pin.
 ST-398497701	398497701	ADAPTER	• Used for installing the front differential taper roller bearing. • Used together with BUSHING 1-2 INSTALLER (499277100).
 ST-498057300	498057300	INSTALLER	Used for installing the extension case oil seal.
 ST-498255400	498255400	PLATE	Used for measuring the hypoid driven gear backlash.
 ST41099AC000	41099AC000	ENGINE SUPPORT ASSY	Used for removing and installing transmission.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398527700	398527700	PULLER ASSY	• Used for removing the extension case oil seal. • Used for removing the front differential taper roller bearing outer race. • Used for removing the front differential side retainer oil seal.
 ST-398643600	398643600	GAUGE	Used for adjusting the extension end play.
 ST-398177700	398177700	INSTALLER	• Used for installing the transfer drive gear ball bearing. • Used for installing the 4th drive gear needle bearing race.
 ST-498175500	498175500	INSTALLER	Used for installing the taper roller bearing of transfer driven gear (extension case side).
 ST28399SA010	28399SA010	OIL SEAL PROTECTOR	Used for protecting the oil seal from damage when inserting the front drive shaft.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18675AA000	18675AA000	DIFFERENTIAL SIDE OIL SEAL INSTALLER	Used for installing the front differential side retainer oil seal.
 ST-398791700	398791700	SPRING PIN REMOVER 2	Used for removing and installing the straight pin.
 ST18662AA010	18662AA010	SOCKET (27)	• Used for removing and installing the drive pinion shaft lock nut. • Used for measuring the starting torque of the drive pinion shaft.
 ST-899754112	899754112	PRESS	• Used for removing driven shaft parts. • Used to install the main shaft ball bearing.
 ST18631AA000	18631AA000	HANDLE	Used for installing transfer case assembly and extension case assembly.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18762AA001	18762AA001	COMPRESSOR SPECIAL TOOL	• Used for removing the 1st driven gear. • COMPRESSOR SPECIAL TOOL (18762AA000) can also be used.
 ST18654AA000	18654AA000	INSTALLER	Used for installing the 2nd driven gear bushing.
 ST18657AA000	18657AA000	INSTALLER	Used for installing the transfer case oil seal.
 ST-498267200	498267200	CYLINDER HEAD TABLE	Used for removing and installing the roller bearing of the transfer case.
 ST-498267300	498267300	CYLINDER HEAD TABLE	Used for removing and installing the roller bearing of the transfer case.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18763AA000	18763AA000	COMPRESSOR SHAFT	Used for removing and installing the needle bearing of the transfer case.
 ST-498277200	498277200	STOPPER SET	• Used for installing the needle bearing of the transfer case. • Use only the spacer.

2. GENERAL TOOL

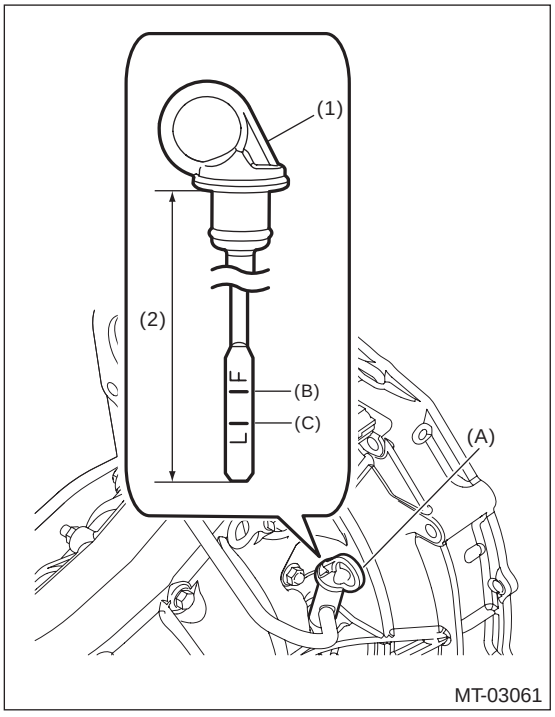
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance.
TORX® bit T70	Used for removing and installing differential gear oil drain plug.
Spring pin remover	Used for removing and installing the spring pin. (3 — 3.3 mm)
Socket driver (TORX® 45 size, tamper resistant type)	Used for removing and installing interlock plate.

2. Transmission Gear Oil

A: INSPECTION

1) Park the vehicle on a level surface.
2) Turn the ignition switch to OFF, and wait until the engine cools.
3) Remove the oil level gauge and wipe it clean.
4) Reinsert the oil level gauge all the way. Be sure that the oil level gauge is correctly inserted in the proper direction.
5) Pull out the oil level gauge again, and check the oil level. If it is below the lower level, check for oil leakage and add oil through the oil level gauge hole to bring the level up to the upper level.

CAUTION:
The length of the oil level gauge varies depending on models and destinations. Make sure to use the appropriate oil level gauge.



(A) Oil level gauge
(B) Upper level
(C) Lower level

(1) Gray
(2) 195.9 mm (7.71 in)

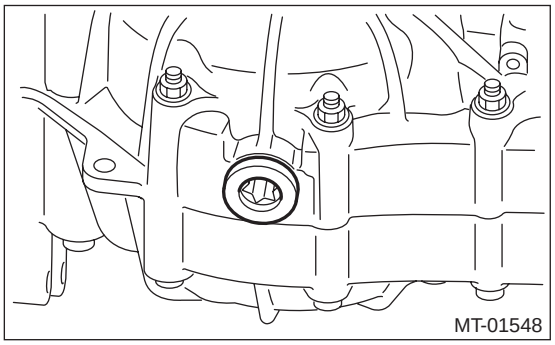
B: REPLACEMENT

1) Pull out the oil level gauge.
2) Lift up the vehicle.
3) Using the TORX® bit T70, remove the drain plug, and drain the transmission gear oil completely.

CAUTION:
• Immediately after the vehicle has been running or after idling for a long time, the transmission gear oil will be hot. Be careful not to receive burns.
• Be careful not to spill the transmission gear oil on the exhaust pipe, to prevent emission of smoke or causing a fire. If gear oil is spilt, wipe it off completely.
4) Attach the drain plug using TORX® bit T70.

NOTE:
- Install the drain plug after draining transmission gear oil.
- Use a new gasket.

Tightening torque:
44 N·m (4.5 kgf-m, 32.5 ft-lb) (aluminum gasket, silver)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (copper gasket, brown)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (metal gasket, black)



5) Lower the vehicle.
6) Pour gear oil through the oil level gauge hole.

CAUTION:
If an alternative transmission gear oil is used, you may not have expected functionality and performance.

Recommended gear oil:
SUBARU GEAR OIL EXTRA MT

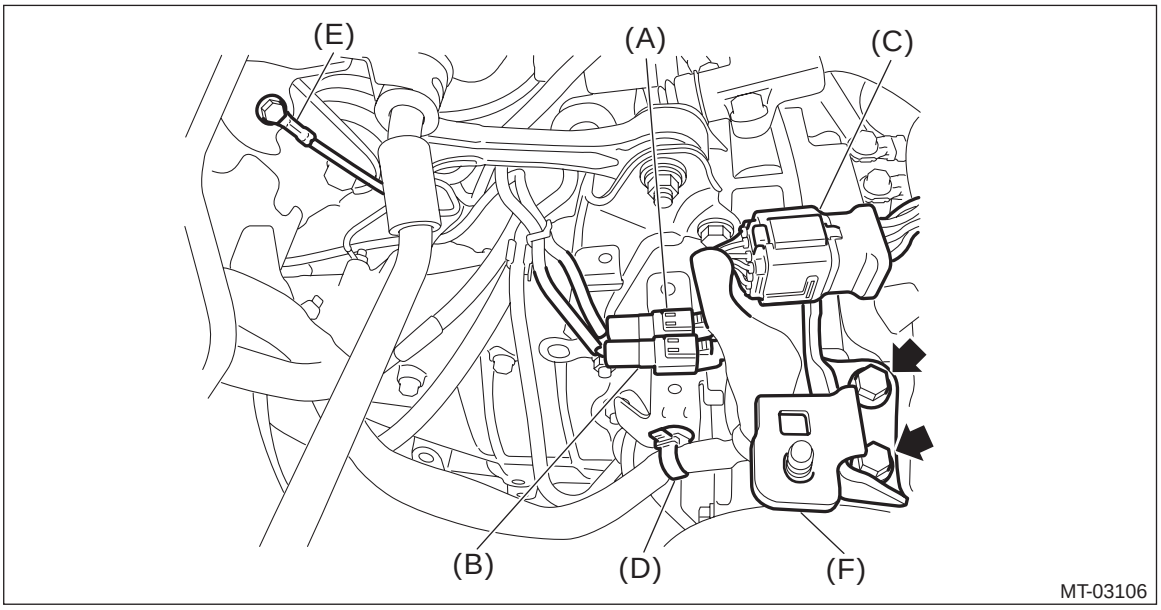
Alternative:
GL-5 (75W-90)

Gear oil capacity:
3.3 L (3.5 US qt, 2.9 Imp qt)
7) Check the transmission gear oil amount, and confirm that it is within the specification.

3. Manual Transmission Assembly

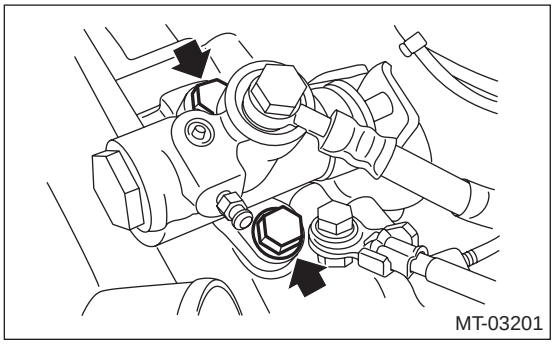
A: REMOVAL

1) Open the front hood completely.
2) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>
3) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
4) Remove the intercooler and the intercooler stay. <Ref. to IN(w/o STI)-41, REMOVAL, Intercooler.>
5) Disconnect the clips and the following connectors, then remove the transmission radio ground cord terminal and the engine rear hanger.



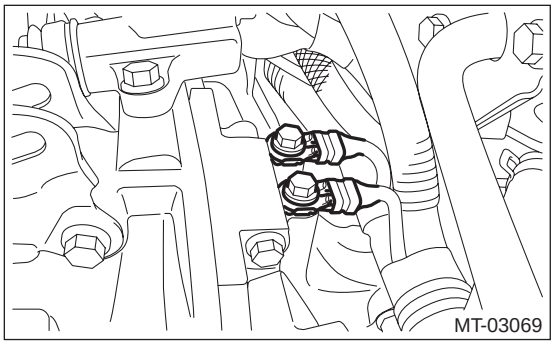
(A)	Neutral position switch connector (brown)	(B)	Back-up light switch connector (gray)	(C)	Engine harness connector (brown)
(D)	Clip	(E)	Transmission radio ground cord terminal	(F)	Engine rear hanger

6) Remove the operating cylinder and suspend on a wire.



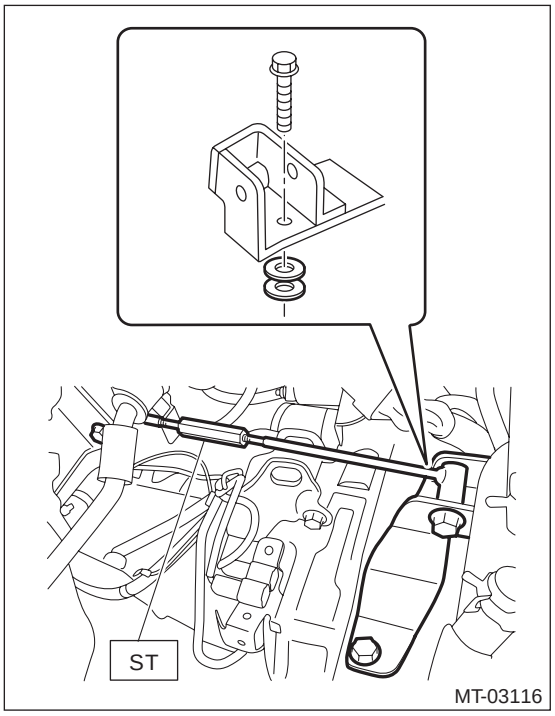
7) Remove the pitching stopper. <Ref. to 6MT(TY75)-36, PITCHING STOPPER, REMOVAL, Transmission Mounting System.>

8) Disconnect the engine ground terminal.

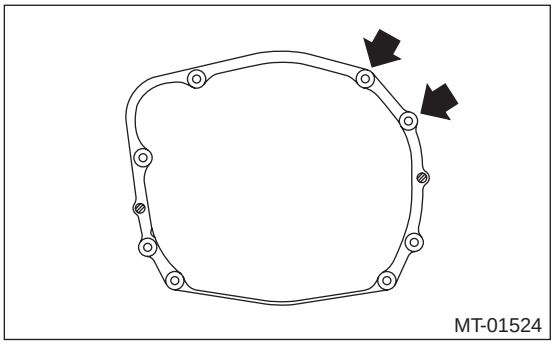


9) Set the ST.

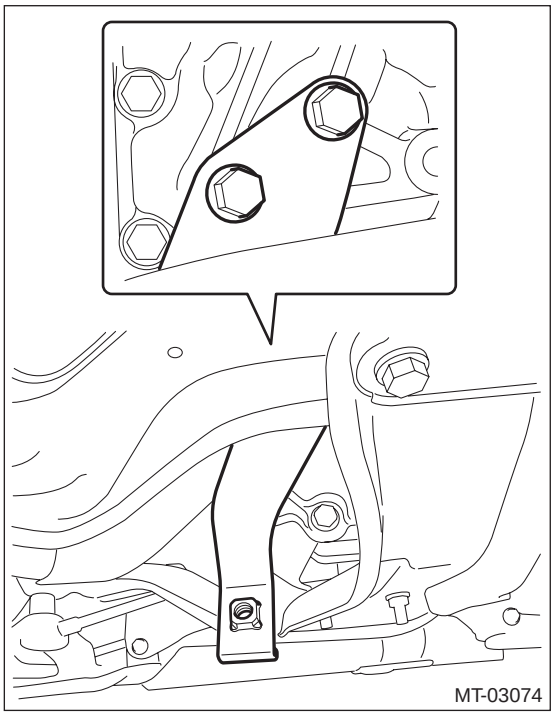
NOTE:
Place a washer with 4 mm (0.16 in) thickness into the gap between the engine block and ST.
ST 41099AC000 ENGINE SUPPORT ASSY



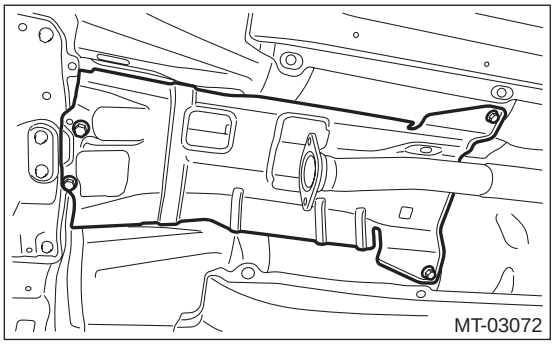
10) Remove the starter. <Ref. to SC(w/o STI)-7, REMOVAL, Starter.>
11) Remove the bolts which hold upper side of transmission to engine.



12) Remove the front wheels.
13) Lift up the vehicle.
14) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
15) Drain transmission gear oil completely. <Ref. to 6MT(TY75)-24, REPLACEMENT, Transmission Gear Oil.>
16) Remove the hanger bracket.



17) Remove the center exhaust cover.

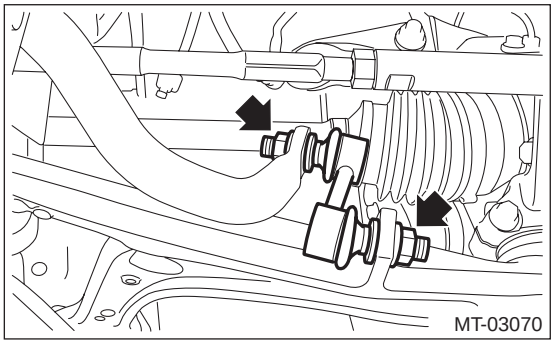


18) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>

19) Remove the MT gear shift cable and MT gear select cable from MT gear shift lever. <Ref. to CS-58, EXCEPT FOR STI MODEL, REMOVAL, MT Gear Shift Lever.>

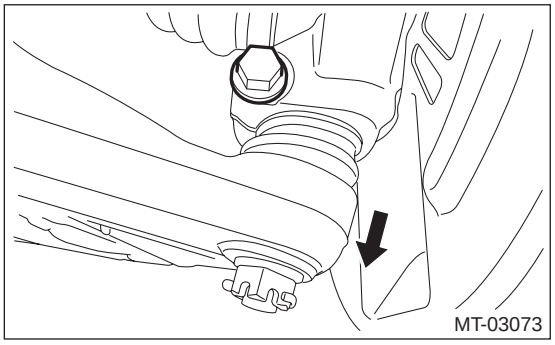
CAUTION:
- **Do not bend MT gear shift cable and MT gear select cable at a sharp angle.**
- **If the MT gear select cable is removed from the selector lever COMPL on the transmission side, replace with new MT gear select cable.**

20) Remove the stabilizer link.



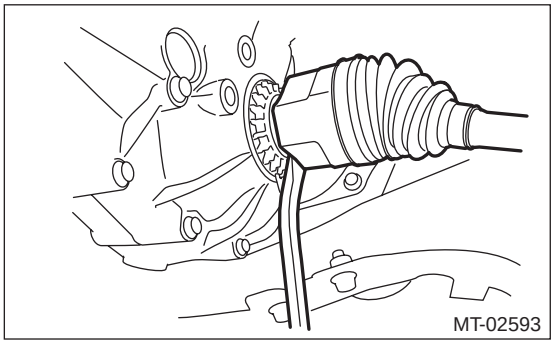
MT-03070

21) Remove the bolt securing the ball joint of the front arm to the housing, then separate the front arms and the housing.



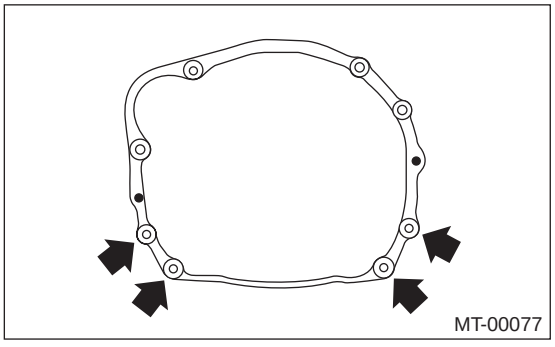
MT-03073

22) Using a crowbar, separate the left and right front drive shafts.



MT-02593

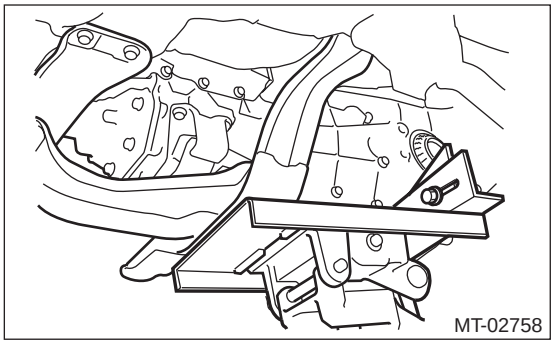
23) Remove the bolts and nuts which hold lower side of transmission to engine.



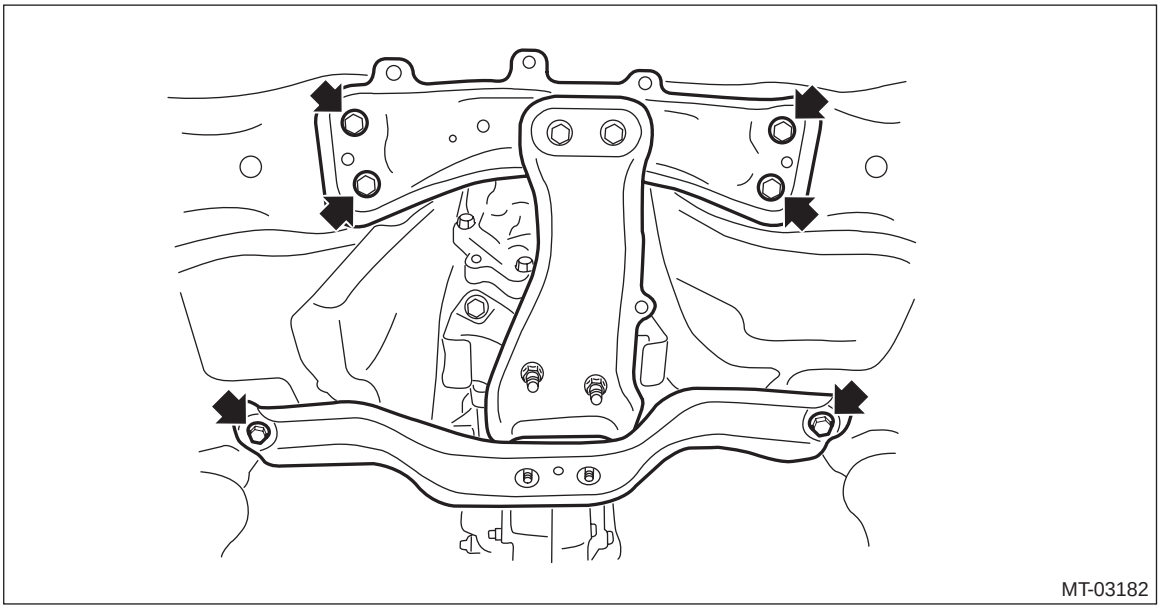
MT-00077

24) Place the transmission jack under the transmission.

CAUTION:
Always support the transmission case with a transmission jack.



25) Remove the front crossmember and the rear crossmember.



26) While lowering the transmission jack, tighten the turnbuckle of the ST, and incline the engine unit rearward.
27) Remove the transmission.

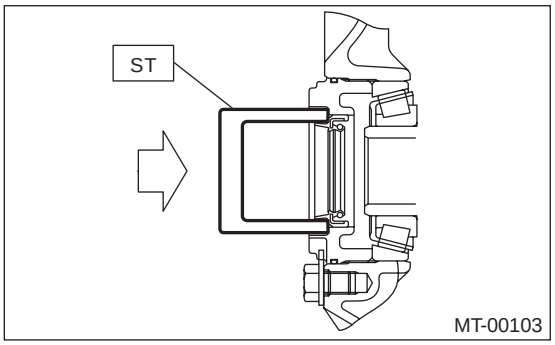
NOTE:
Move the transmission jack towards the rear until the main shaft is withdrawn from the clutch disc.
28) Remove the transmission cushion rubber from the transmission assembly.

B: INSTALLATION

1) Replace the differential side retainer oil seal. <Ref. to 6MT(TY75)-42, REPLACEMENT, Differential Side Retainer Oil Seal.>

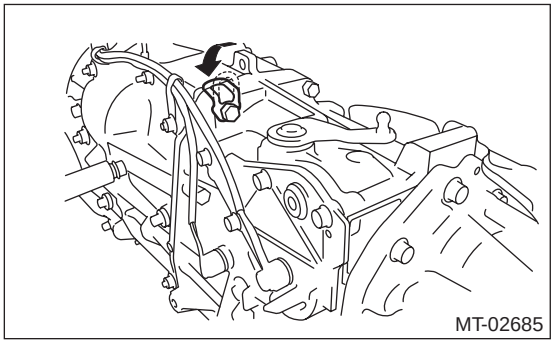
NOTE:
- Be sure to replace the differential side retainer oil seal after removing the front drive shaft.
- When a new oil seal has been installed, replacement is not required.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER



2) Tap the transmission hanger in the rear side of transmission with a rubber hammer to bend it until full contact is obtained.

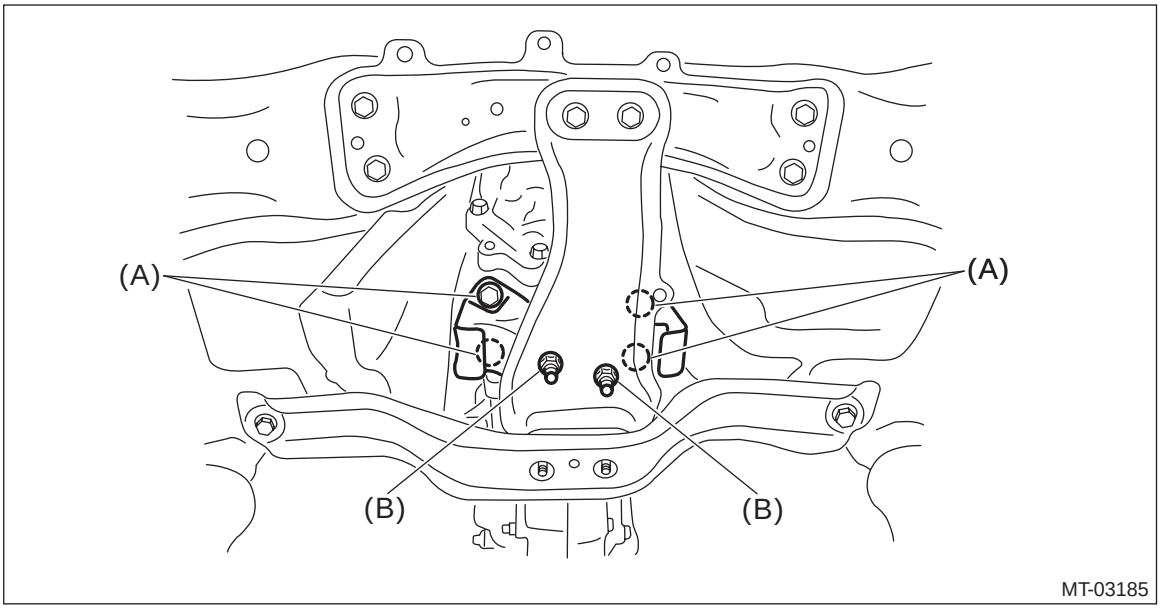
CAUTION:
Do not apply excessive load or impact to the transmission case.



3) Install the transmission cushion rubber to the transmission, and tighten the bolt (A).

4) Install the transmission cushion rubber to the center crossmember, and temporarily tighten the nut (B).

Tightening torque:
Bolt (A)
35 N·m (3.6 kgf-m, 25.8 ft-lb)

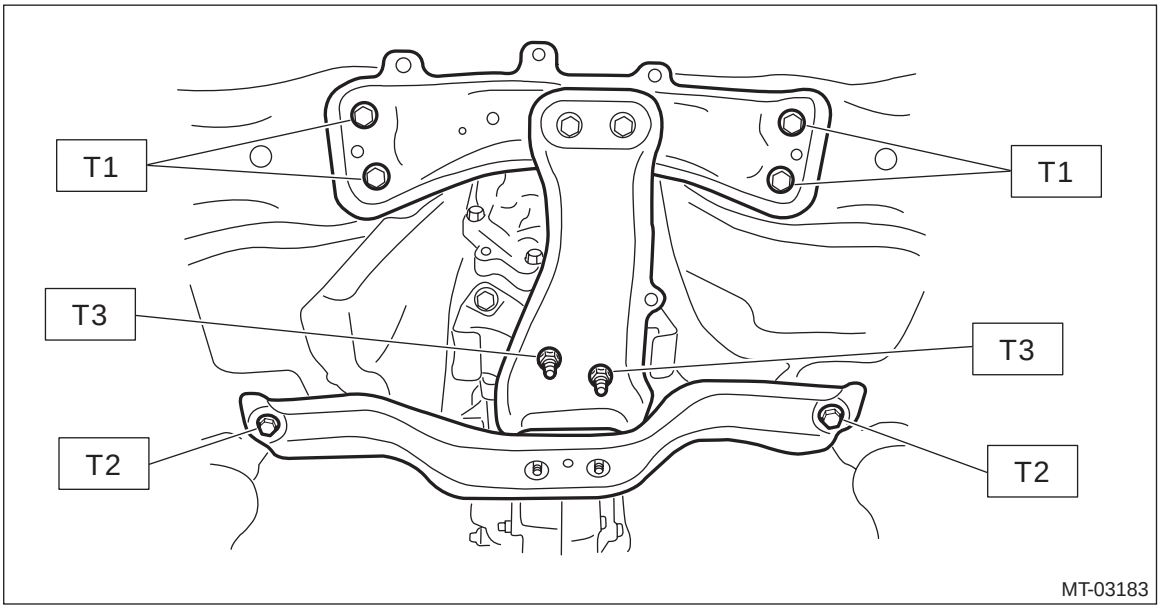


5) Install the transmission onto the engine.
(1) Lift up the transmission gradually using a transmission jack.
(2) Engage at the spline section.

NOTE:
Be careful not to hit the main shaft against the clutch cover.

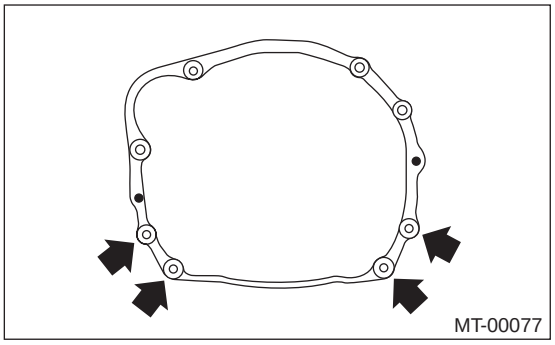
6) While raising the transmission jack, loosen the turnbuckle of the ST, and set the engine unit to the original position.
7) Tighten the mounting bolts for front crossmember and rear crossmember.
8) Tighten the transmission cushion rubber mounting nut.

Tightening torque:
T1: 70 N·m (7.1 kgf-m, 51.6 ft-lb)
T2: 140 N·m (14.3 kgf-m, 103.3 ft-lb)
T3: 35 N·m (3.6 kgf-m, 25.8 ft-lb)

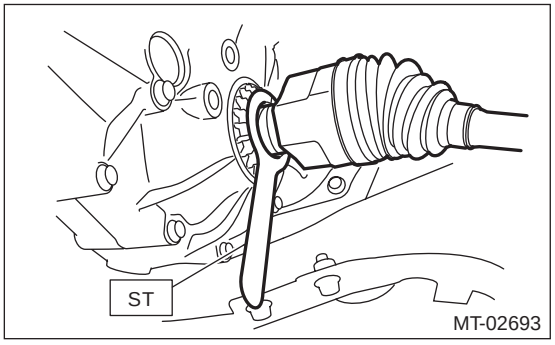


9) Take out the transmission jack.
10) Tighten the bolts and nuts which hold the lower side of transmission to the engine.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

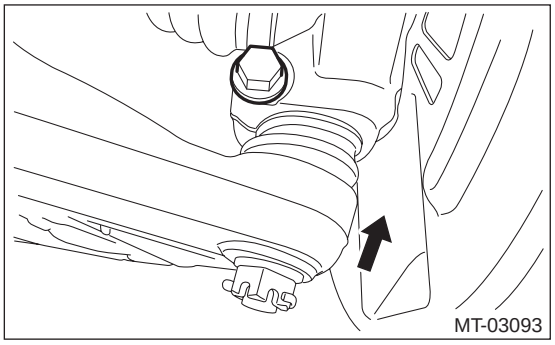


11) Install the ST to the transmission, and then install the front drive shaft.
ST 28399SA010 OIL SEAL PROTECTOR



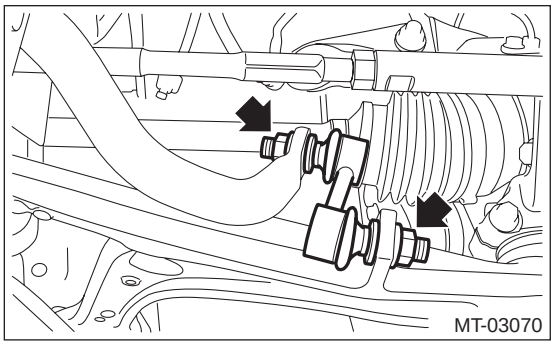
12) Insert the front arm ball joint and tighten the mounting bolt.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)



13) Install the stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

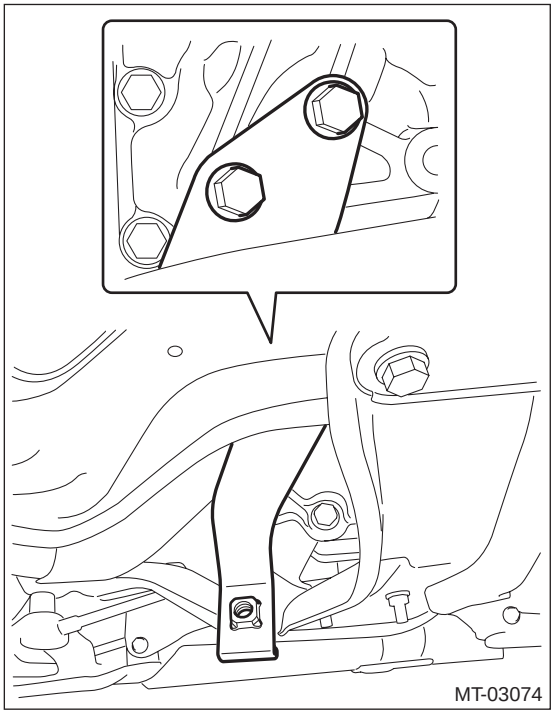


14) Install the MT gear shift cable and MT gear select cable to MT gear shift lever. <Ref. to CS-64, EXCEPT FOR STI MODEL, INSTALLATION, MT Gear Shift Lever.>

CAUTION:
- **Do not bend MT gear shift cable and MT gear select cable at a sharp angle.**
- **If the MT gear select cable is removed from the selector lever COMPL on the transmission side, replace with new MT gear select cable.**

15) Install the hanger bracket.

Tightening torque:
23 N·m (2.3 kgf-m, 17.0 ft-lb)

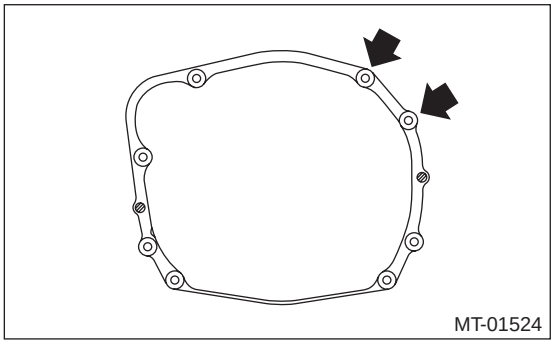


16) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
17) Install the center exhaust cover.

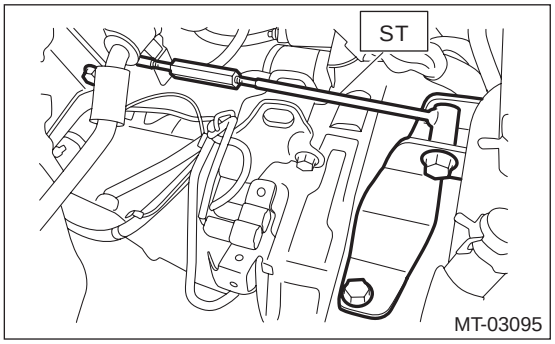
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

18) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
19) Lower the vehicle.
20) Install the starter. <Ref. to SC(w/o STI)-8, INSTALLATION, Starter.>
21) Tighten the bolts which hold the upper side of the transmission to the engine.

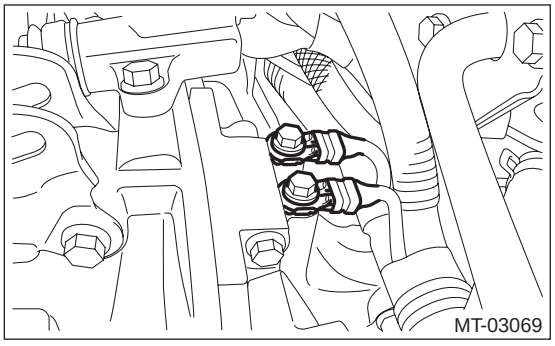
Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)



22) Remove the ST.

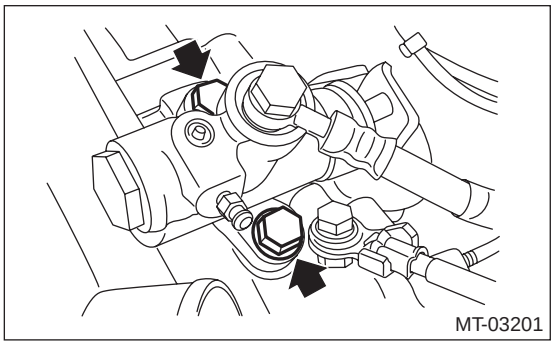


23) Install the pitching stopper. <Ref. to 6MT(TY75)-37, PITCHING STOPPER, INSTALLATION, Transmission Mounting System.>
24) Install the engine ground terminals.
Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



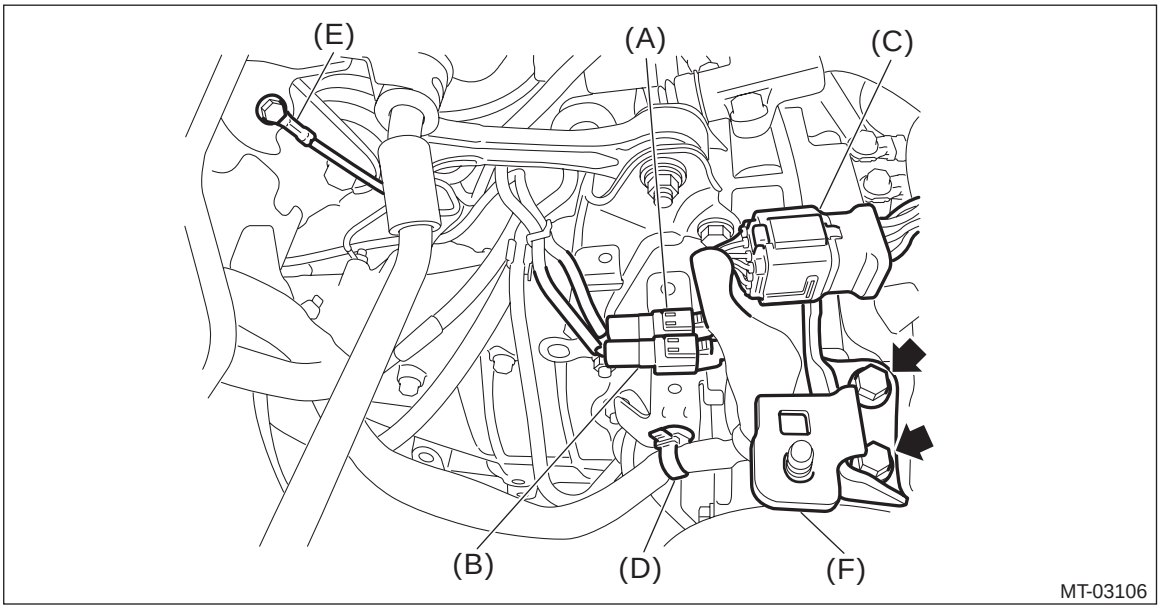
25) Install the operating cylinder.

Tightening torque:
37 N·m (3.8 kgf-m, 27.3 ft-lb)



26) Install the transmission radio ground cord terminal and the engine rear hanger, connect the following connectors, and then secure the clip on the bracket.

Tightening torque:
Transmission radio ground cord terminal
13 N·m (1.3 kgf-m, 9.6 ft-lb)
Engine rear hanger
21 N·m (2.1 kgf-m, 15.5 ft-lb)



(A)	Neutral position switch connector (brown)	(B)	Back-up light switch connector (gray)	(C)	Engine harness connector (brown)
(D)	Clip	(E)	Transmission radio ground cord terminal	(F)	Engine rear hanger

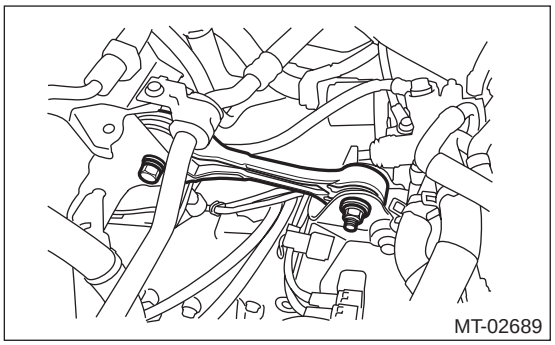
27) Pour in transmission gear oil and check the oil level. <Ref. to 6MT(TY75)-23, Transmission Gear Oil.>
28) Install the intercooler stay and the intercooler. <Ref. to IN(w/o STI)-43, INSTALLATION, Intercooler.>
29) Install the collector cover. <Ref. to IN(w/o STI)-10, INSTALLATION, Collector Cover.>
30) Install the front tires.
31) Adjust the detent of the MT gear shift lever. <Ref. to CS-82, ADJUSTMENT, MT Gear Shift Lever.>
32) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

4. Transmission Mounting System

A: REMOVAL

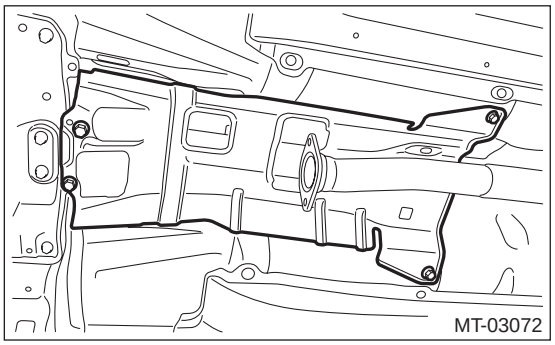
1. PITCHING STOPPER

1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>
2) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
3) Remove the intercooler. <Ref. to IN(w/o STI)-41, REMOVAL, Intercooler.>
4) Remove the pitching stopper.



2. CROSSMEMBER AND CUSHION RUBBER

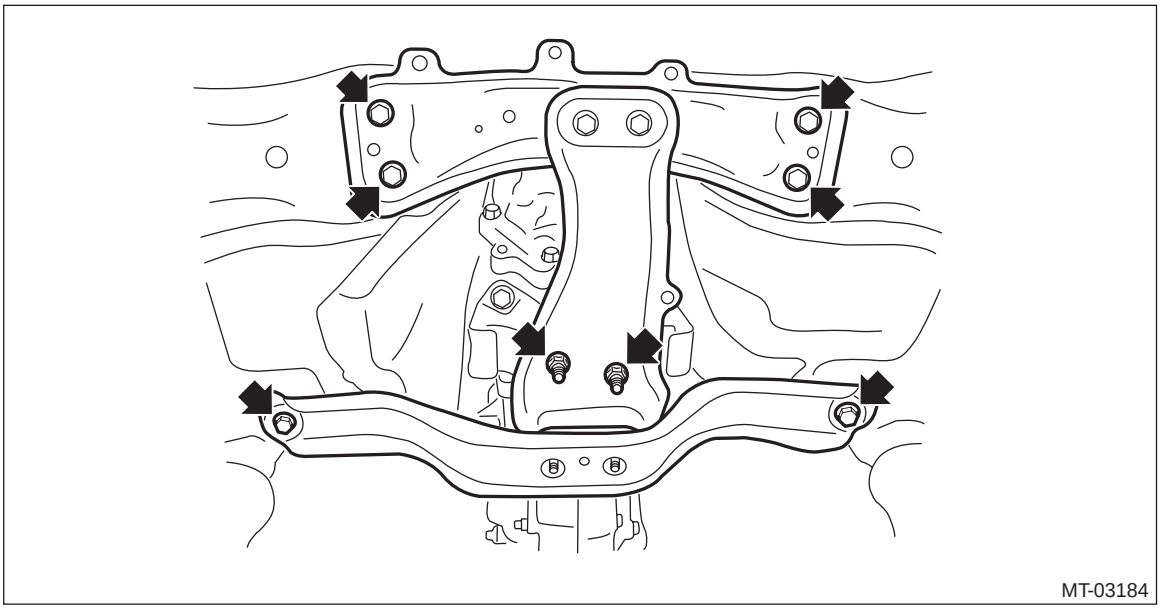
1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>
2) Lift up the vehicle.
3) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
4) Remove the center exhaust cover.



5) Set the transmission jack under the transmission case.

CAUTION:
Always support the transmission case with a transmission jack.

6) Remove the front crossmember and the rear crossmember.



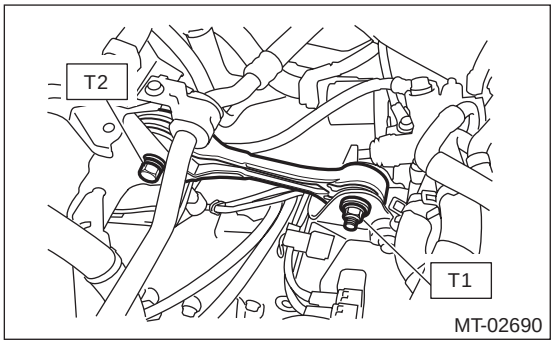
7) Remove the transmission cushion rubber.

B: INSTALLATION

1. PITCHING STOPPER

1) Install the pitching stopper.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)

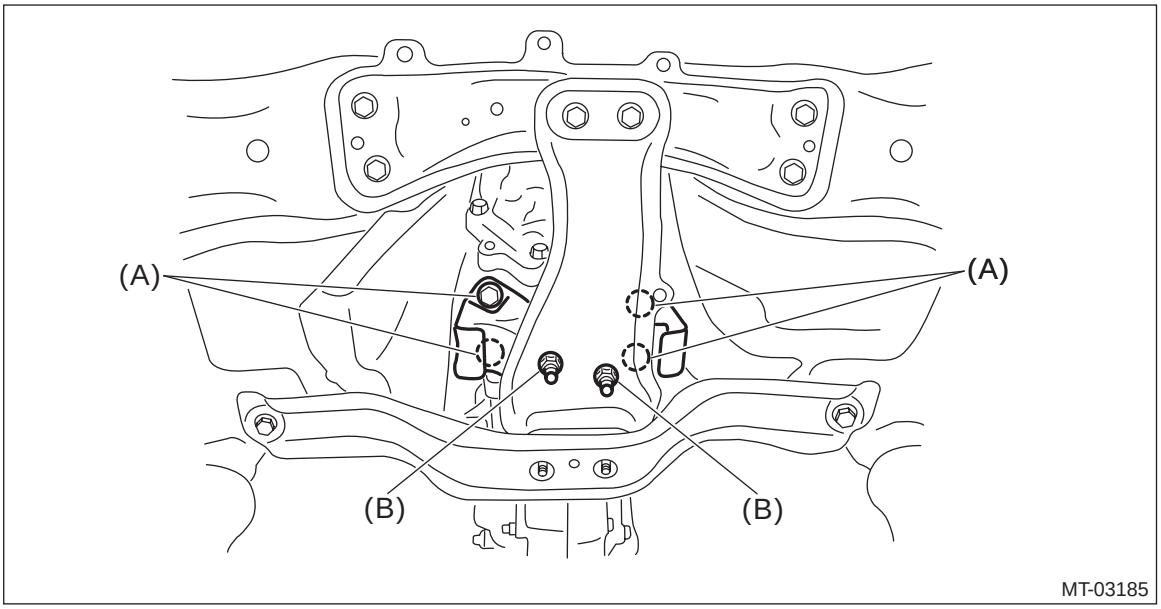


2) Install the intercooler. <Ref. to IN(w/o STI)-43, INSTALLATION, Intercooler.>
3) Install the collector cover. <Ref. to IN(w/o STI)-10, INSTALLATION, Collector Cover.>
4) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

2. CROSSMEMBER AND CUSHION RUBBER

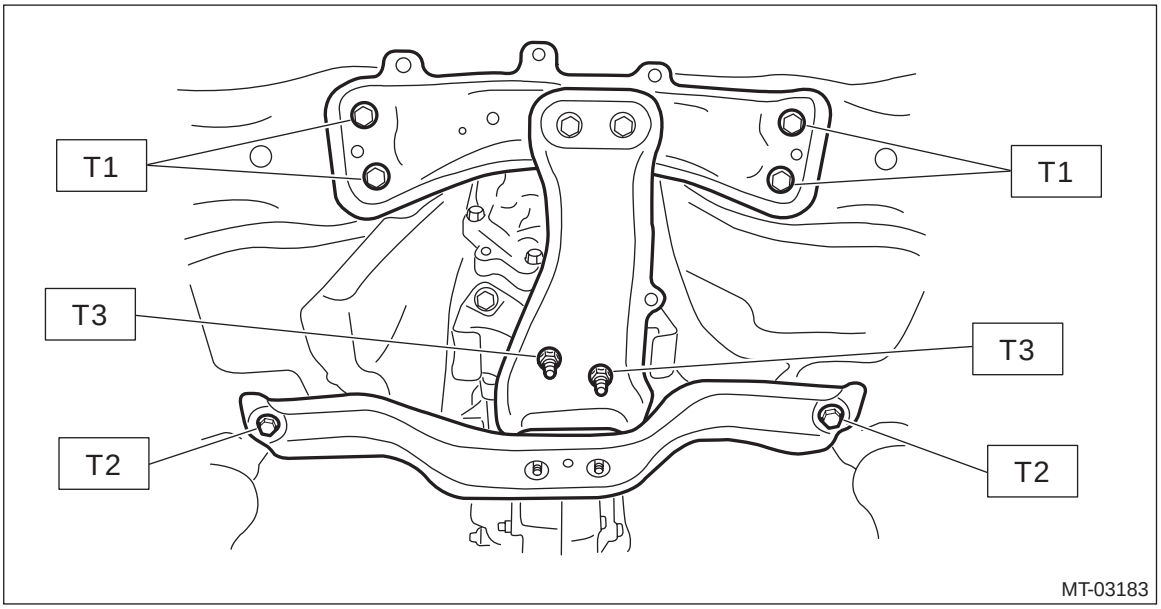
1) Install the transmission cushion rubber to the transmission, and tighten the bolt (A).
2) Install the transmission cushion rubber to the center crossmember, and temporarily tighten the nut (B).

Tightening torque:
Bolt (A)
35 N·m (3.6 kgf-m, 25.8 ft-lb)



3) Tighten the mounting bolts for front crossmember and rear crossmember.
4) Tighten the transmission cushion rubber mounting nut.

Tightening torque:
T1: 70 N·m (7.1 kgf-m, 51.6 ft-lb)
T2: 140 N·m (14.3 kgf-m, 103.3 ft-lb)
T3: 35 N·m (3.6 kgf-m, 25.8 ft-lb)



5) Remove the transmission jack.
6) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

7) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
8) Lower the vehicle.
9) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

C: INSPECTION

Check the following; repair or replace the faulty parts.

1. PITCHING STOPPER

Check the pitching stopper for bends or damage. Check that the rubber is not stiff, cracked or otherwise damaged.

2. CROSSMEMBER AND CUSHION RUBBER

Check the crossmember for bends or damage. Check that the cushion rubber is not stiff, cracked or otherwise damaged.

5. Oil Seal

A: INSPECTION

Check for leakage of transmission gear oil from the oil seal. If there is oil leakage, replace the oil seal with the new part and check the propeller shaft.

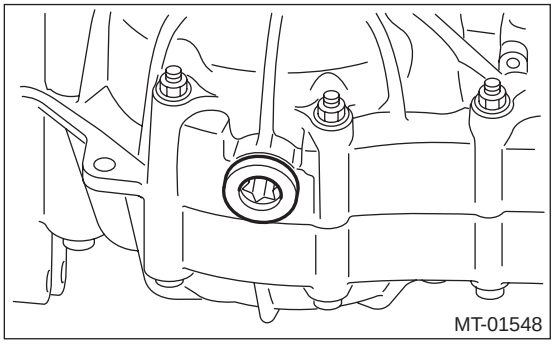
B: REPLACEMENT

1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>
2) Lift up the vehicle.
3) Clean the transmission exterior.
4) Using the TORX® bit T70, remove the drain plug, and drain the transmission gear oil completely.

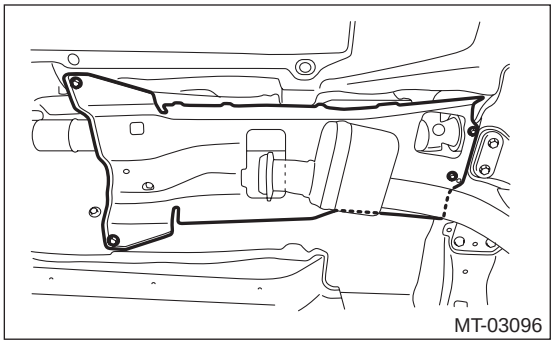
CAUTION:
• Immediately after the vehicle has been running or after idling for a long time, the transmission gear oil will be hot. Be careful not to receive burns.
• Be careful not to spill the transmission gear oil on the exhaust pipe, to prevent emission of smoke or causing a fire. If gear oil is spilled, wipe it off completely.
5) Tighten the drain plug using TORX® bit T70.

NOTE:
Use a new gasket.

Tightening torque:
44 N·m (4.5 kgf-m, 32.5 ft-lb) (aluminum gasket, silver)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (copper gasket, brown)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (metal gasket, black)

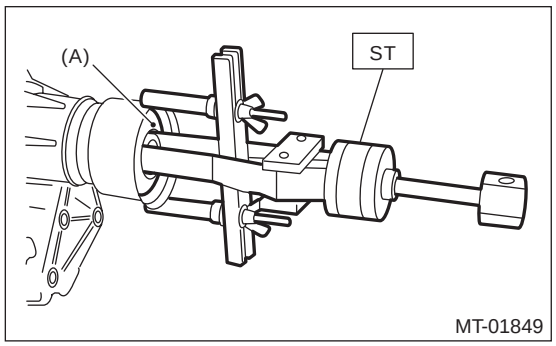


6) Remove the rear exhaust pipe. <Ref. to EX(w/o STI)-48, REMOVAL, Rear Exhaust Pipe.>
7) Remove the center exhaust cover.



8) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>

9) Using the ST, remove the oil seal.
ST 398527700 PULLER ASSY

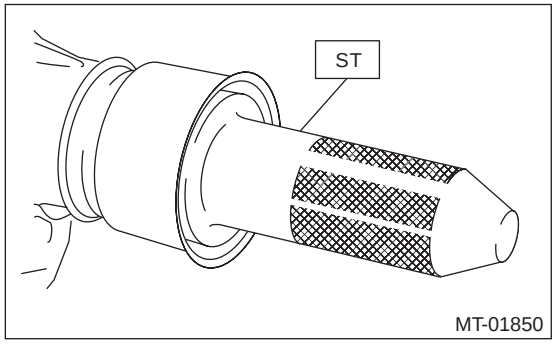


(A) Oil seal

10) Using the ST, install the oil seal.

NOTE:
- When grease is not applied to the oil seal lips, apply the transmission gear oil to the oil seal lips.
- Use a new oil seal.

ST 498057300 INSTALLER



11) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
12) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

13) Install the rear exhaust pipe. <Ref. to EX(w/o STI)-49, INSTALLATION, Rear Exhaust Pipe.>
14) Lower the vehicle.
15) Pour in transmission gear oil and check the oil level. <Ref. to 6MT(TY75)-23, Transmission Gear Oil.>
16) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

6. Differential Side Retainer Oil Seal

A: INSPECTION

Check for transmission gear oil leaks at differential side retainer oil seal. If there is oil leakage, replace the oil seal with the new part and check the drive shaft.

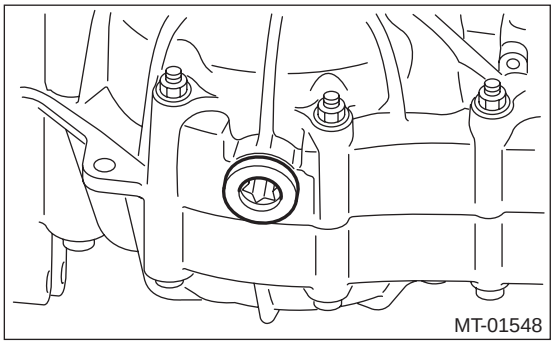
B: REPLACEMENT

1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>
2) Lift up the vehicle.
3) Using the TORX® bit T70, remove the drain plug, and drain the transmission gear oil completely.

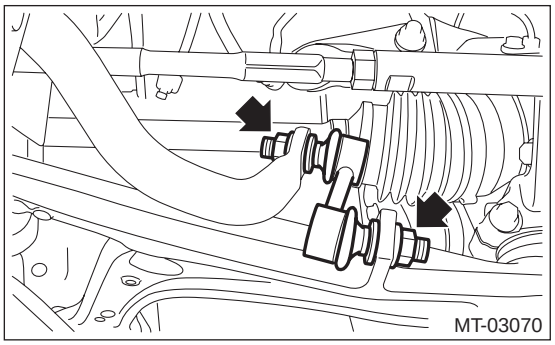
CAUTION:
• Immediately after the vehicle has been running or after idling for a long time, the transmission gear oil will be hot. Be careful not to receive burns.
• Be careful not to spill the transmission gear oil on the exhaust pipe, to prevent emission of smoke or causing a fire. If gear oil is spilled, wipe it off completely.
4) Tighten the drain plug using TORX® bit T70.

NOTE:
Use a new gasket.

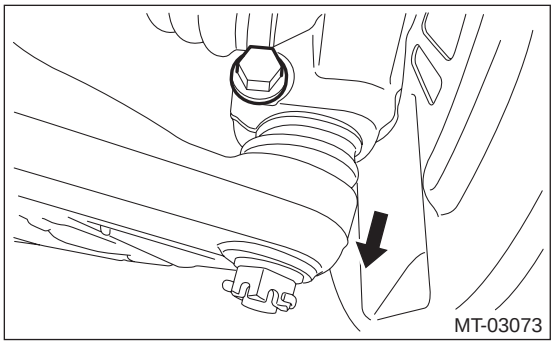
Tightening torque:
44 N·m (4.5 kgf-m, 32.5 ft-lb) (aluminum gasket, silver)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (copper gasket, brown)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (metal gasket, black)



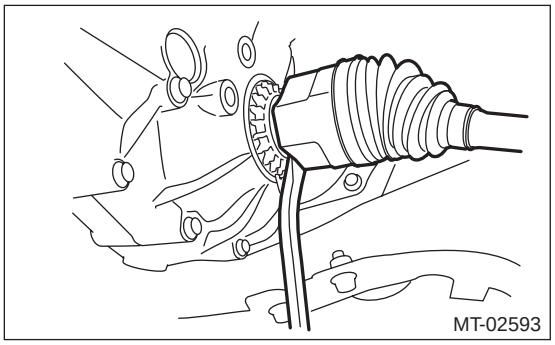
5) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
6) Remove the stabilizer link.



7) Remove the bolt securing the ball joint of the front arm to the housing, then separate the front arms and the housing.



8) Using a crowbar, separate the left and right front drive shafts.



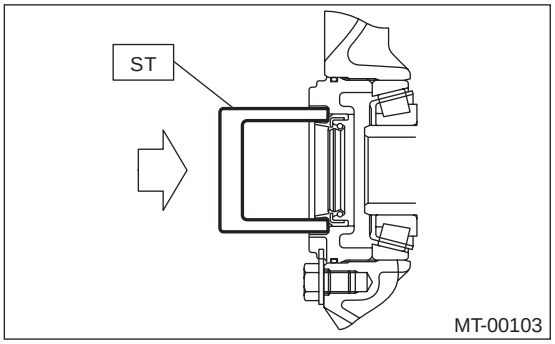
9) Remove the differential side retainer oil seal.

NOTE:
• Be sure to replace the differential side retainer oil seal whenever the front drive shaft is removed from the transmission.
• Use the ST 398527700 PULLER ASSY to remove the oil seal. If removing the oil seal with a flat tip screwdriver, be careful not to scratch the differential side retainer.

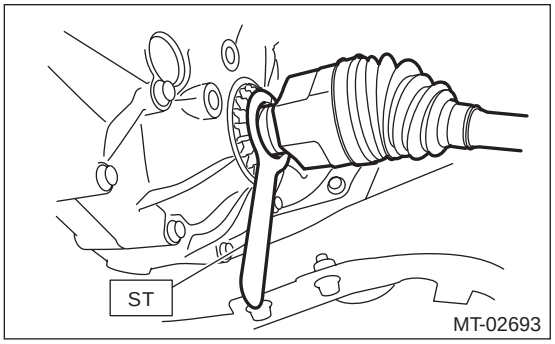
10) Using the ST, install the differential side retainer oil seal by lightly tapping with a plastic hammer.

CAUTION:
• Apply transmission gear oil to the oil seal lips, and install the oil seal while being careful not to deform the lip.
• Check the identification marks (L, R) during installation not to mix up the oil seals RH and LH.

NOTE:
Use a new oil seal.
ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

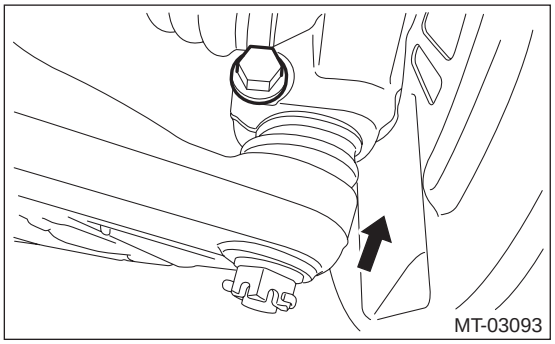


11) Install the ST to the transmission, and then install the front drive shaft.
ST 28399SA010 OIL SEAL PROTECTOR



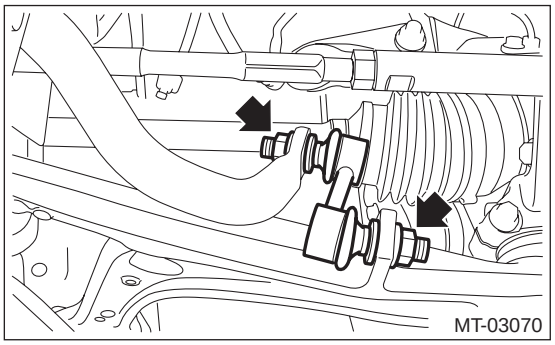
12) Insert the front arm ball joint and tighten the mounting bolt.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)



13) Install the stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)



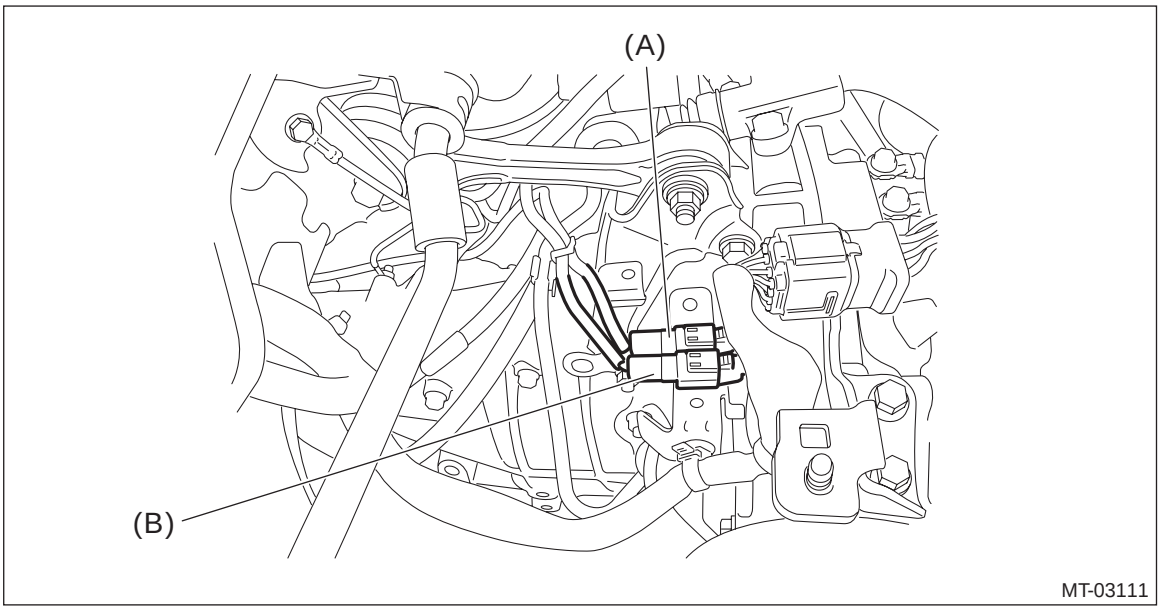
14) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
15) Lower the vehicle.
16) Pour in transmission gear oil and check the oil level. <Ref. to 6MT(TY75)-23, Transmission Gear Oil.>
17) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

7. Switches and Harness

A: REMOVAL

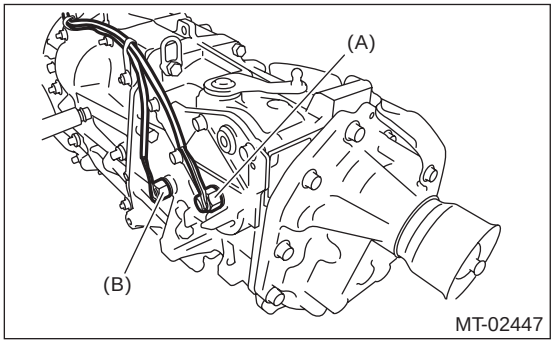
1. BACK-UP LIGHT AND NEUTRAL POSITION SWITCH

1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>
2) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
3) Remove the intercooler. <Ref. to IN(w/o STI)-41, REMOVAL, Intercooler.>
4) Disconnect the connector back-up light switch & neutral position switch.



(A) Neutral position switch connector (brown)
(B) Back-up light switch connector (gray)

5) Remove the harness connector from bracket.
6) Lift up the vehicle.
7) Remove the harness from each clip.
8) Remove the back-up light switch & neutral position switch with the harness.



(A) Neutral position switch
(B) Back-up light switch

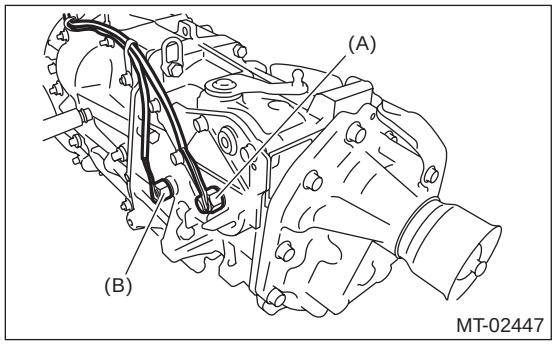
B: INSTALLATION

1. BACK-UP LIGHT AND NEUTRAL POSITION SWITCH

1) Install the back-up light switch & neutral position switch with the harness.

NOTE:
Use a new gasket.

Tightening torque:
32.3 N·m (3.3 kgf-m, 23.8 ft-lb)



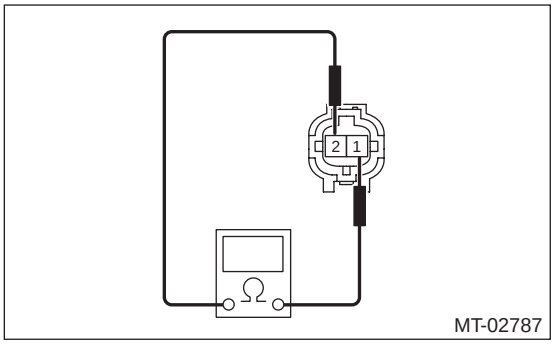
(A) Neutral position switch
(B) Back-up light switch

2) Secure the harness on each clip.
3) Lower the vehicle.
4) Install the harness connector to the bracket.
5) Connect the connectors of back-up light switch & neutral position switch.
6) Install the intercooler. <Ref. to IN(w/o STI)-43, INSTALLATION, Intercooler.>
7) Install the collector cover. <Ref. to IN(w/o STI)-10, INSTALLATION, Collector Cover.>
8) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

C: INSPECTION

1. BACK-UP LIGHT SWITCH

1) Turn the ignition switch to OFF.
2) Disconnect the back light switch connector.
3) Measure the resistance between the back-up light switch terminals.

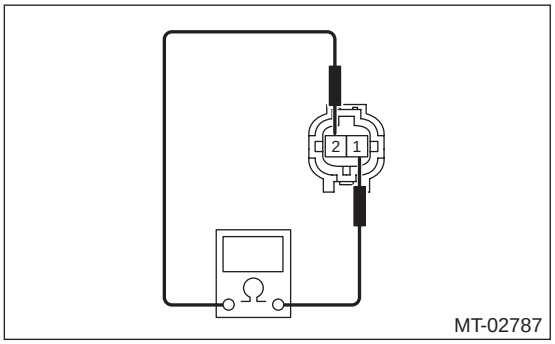


Gear shift position	Terminal No.	Specified resistance
Reverse position	1 and 2	Less than 1 Ω
Other positions		1 MΩ or more

4) Replace faulty parts.

2. NEUTRAL POSITION SWITCH

1) Turn the ignition switch to OFF.
2) Disconnect the connector of neutral position switch.
3) Measure the resistance between neutral position switch terminals.



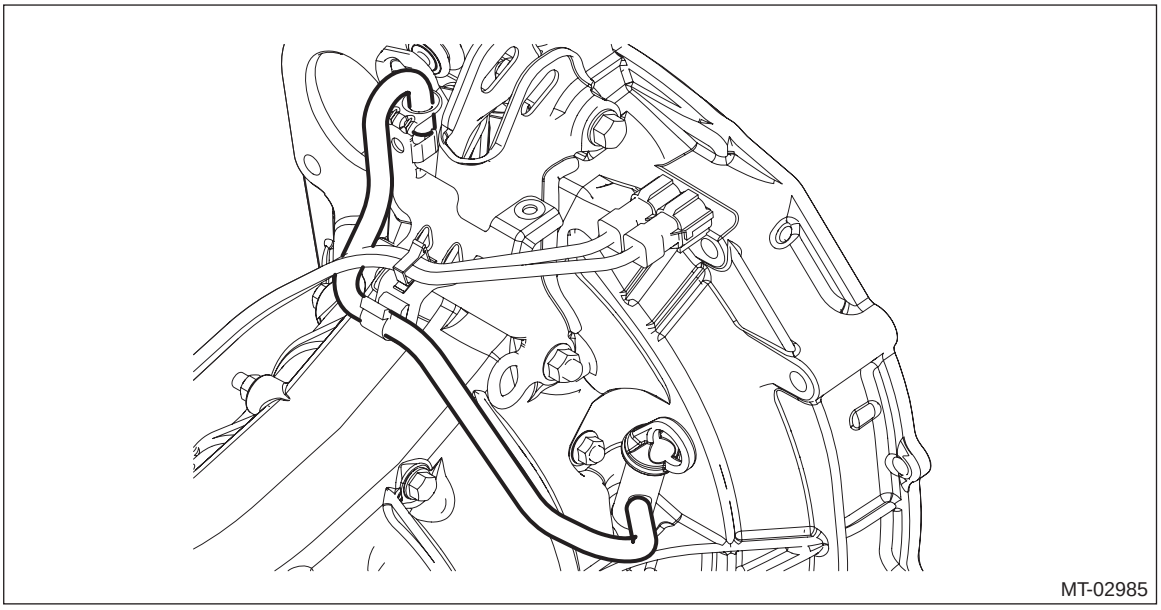
Gear shift position	Terminal No.	Specified resistance
Neutral position	1 and 2	Less than 1 Ω
Other positions		1 MΩ or more

4) Replace faulty parts.

8. Air Breather Hose

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>
2) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
3) Remove the intercooler. <Ref. to IN(w/o STI)-41, REMOVAL, Intercooler.>
4) Remove the air breather hose.

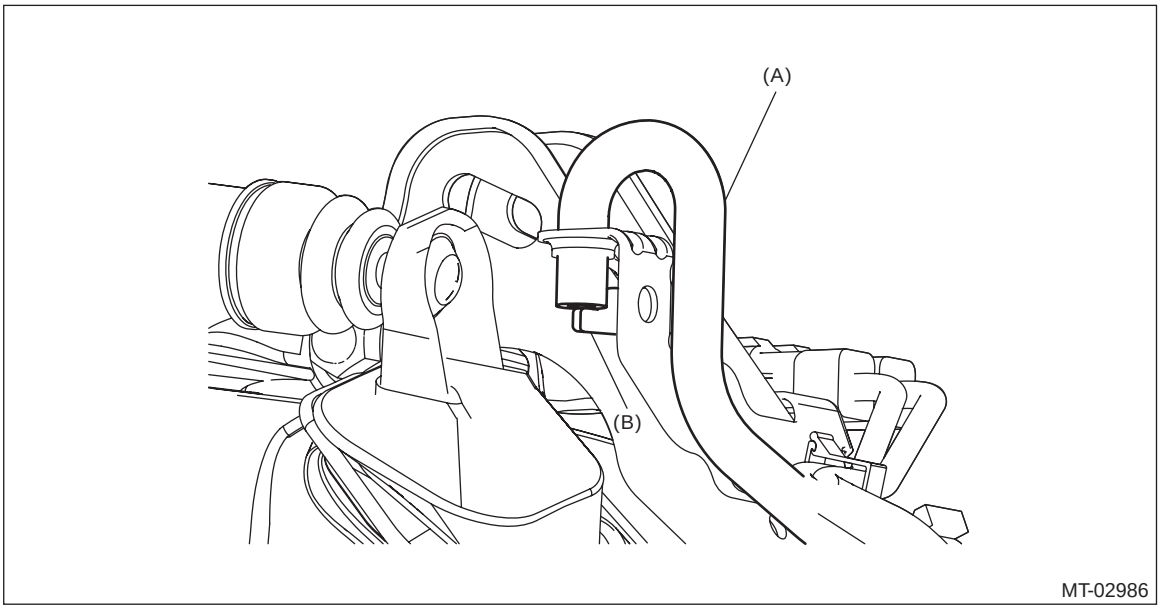


B: INSTALLATION

Install in the reverse order of removal.

NOTE:

- When installing the air breather hose, pay attention to the positions of the two markings on the hose and make sure the markings come to the same position as when removed.
- Securely insert the air breather hose until the hose end contacts the catch of the pitching stopper bracket.



(A) Air breather hose (B) Catch

C: INSPECTION

Check the hose for peeling, crack or clogging.

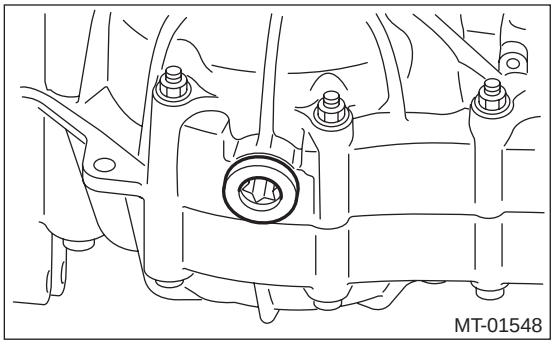
9. Preparation for Overhaul

A: PROCEDURE

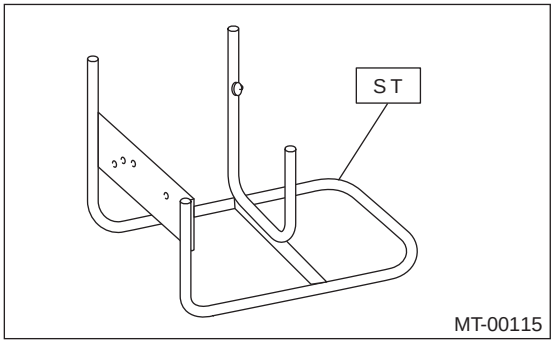
1) Clean oil, grease, dirt and dust from the transmission.
2) Using the TORX® bit T70, remove the drain plug, and drain the transmission gear oil completely.
3) Tighten the drain plug using TORX® bit T70.

NOTE:
Use a new gasket.

Tightening torque:
44 N·m (4.5 kgf-m, 32.5 ft-lb) (aluminum gasket, silver)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (copper gasket, brown)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (metal gasket, black)



4) Attach the transmission to the ST.
ST 499937100 TRANSMISSION STAND

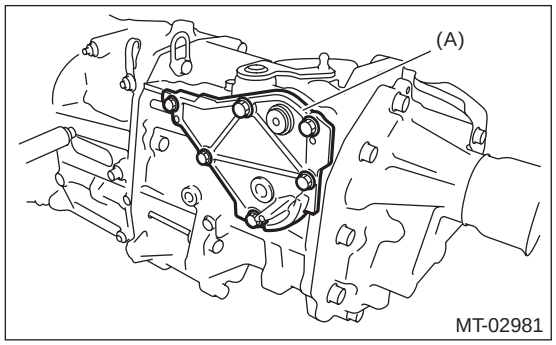


5) Apply oil to rotating parts before assembly.
6) All disassembled parts, if to be reused, should be reinstalled in the original positions and directions.
7) Gaskets, lock washers and lock nuts must be replaced with new ones.
8) Apply liquid gasket to the specified areas to prevent leakage.

10.Transfer Case and Extension Case Assembly

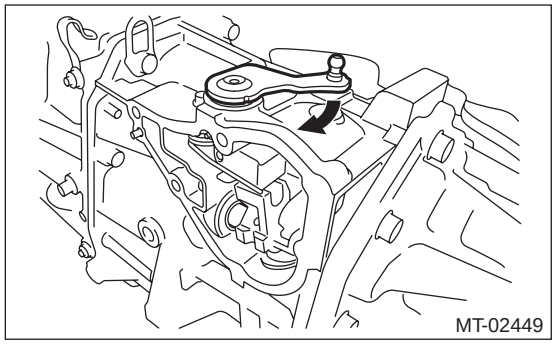
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-25, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-45, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly.
(1) Remove the transmission cover.

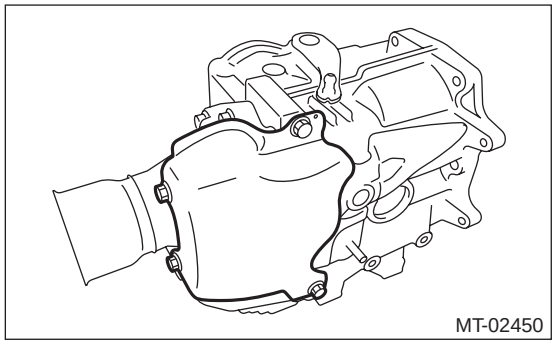


(A) Transmission cover

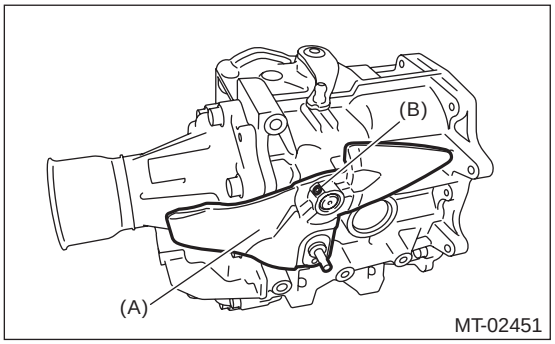
(2) Set and hold the selector lever COMPL to the 1st-2nd side, and remove the transfer case and extension case assembly as a unit.



4) Remove the transfer cover.

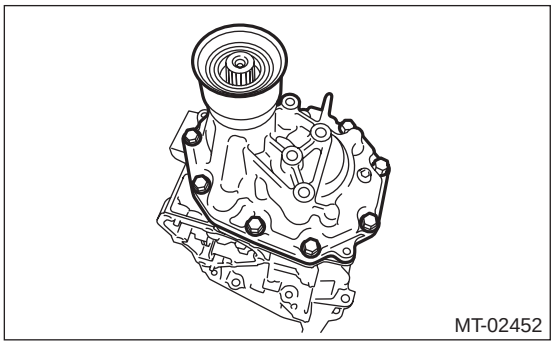


5) Use the ST to push out the spring pin, and remove the shift lever COMPL.
ST 398791700 SPRING PIN REMOVER 2

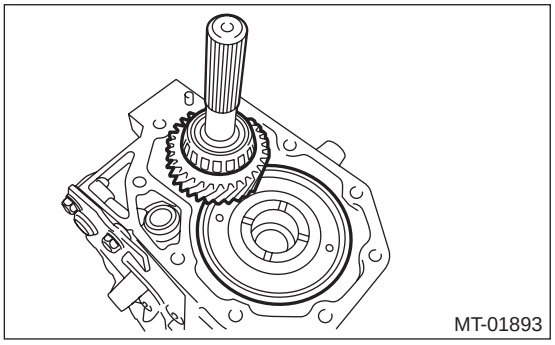


(A) Shift lever COMPL
(B) Straight pin

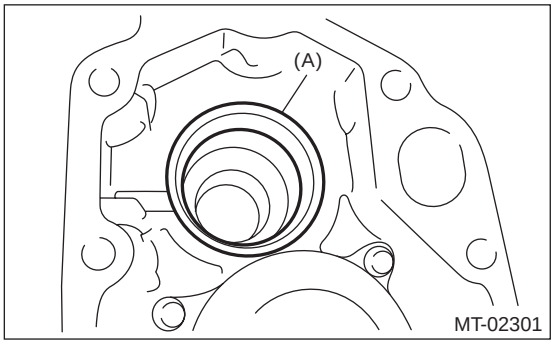
6) Remove the extension case assembly.



7) Remove the transfer driven gear and center differential as a unit.



8) Remove the taper roller bearing (extension case side) outer race and the adjusting washer.



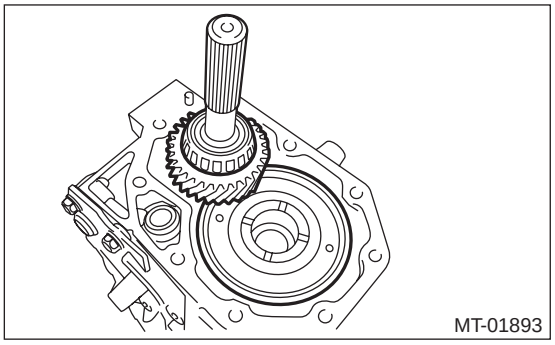
(A) Taper roller bearing (extension case side) outer race

B: INSTALLATION

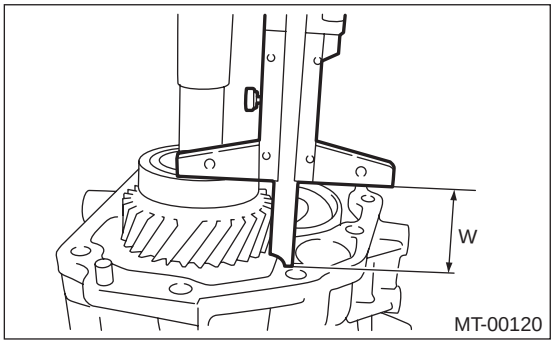
1) Clean the mating surfaces of the transmission case, transfer case and extension case.
2) Apply a coat of grease to the taper roller bearing (transfer case side) of transfer driven gear and the roller rolling surface of the taper roller bearing (extension case side).

Grease:
NICHIMOLY N-130 or equivalent

3) Install the center differential and the transfer driven gear.

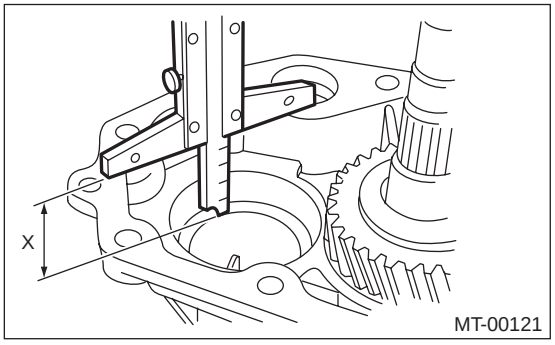


4) Install the taper roller bearing (extension case side) outer race to the transfer driven gear.
5) While pressing the taper roller bearing (extension case side) outer race horizontally, rotate the transfer driven gear for ten turns.
6) Measure the height “W” between transfer case and taper roller bearing (transfer case side) on the transfer driven gear.



7) Measure the depth “X” of taper roller bearing insertion part of the extension case.

NOTE:
Measure while the taper roller bearing (extension case side) outer race and the adjusting washer are removed.



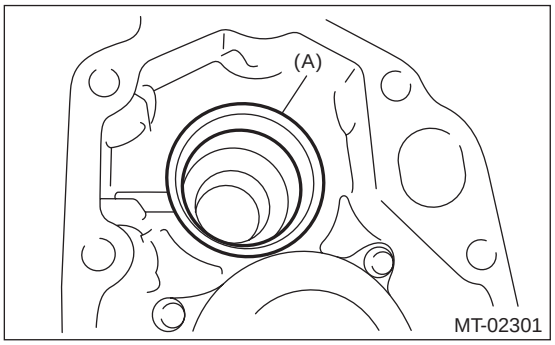
8) Calculate the adjusting washer thickness “t” using the following calculation.
t = X – W + (0.15 — 0.2 mm (0.006 — 0.008 in))
X: Depth of taper roller bearing insertion part of extension case
W: Height between transfer case and taper roller bearing (transfer case side) on transfer driven gear
0.15 — 0.20 mm (0.006 — 0.008 in): Amount of standard protrusion
9) Select the adjusting washer with the nearest value in the following table.

NOTE:
Be sure that it is always within the preload.

Preload of taper roller bearing (extension case side) (amount of standard protrusion): 0.15 — 0.20 mm (0.006 — 0.008 in)

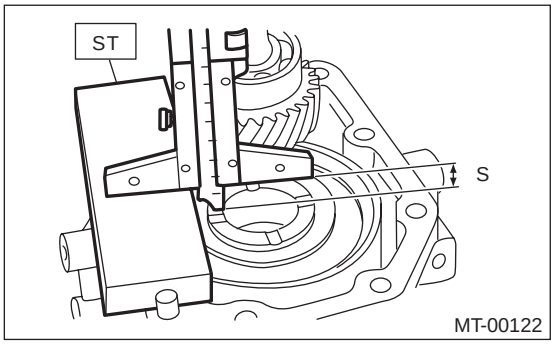
Adjusting washer (50 × 61 × t)	
Part No.	Thickness mm (in)
803050060	0.50 (0.0197)
803050061	0.55 (0.0217)
803050062	0.60 (0.0236)
803050063	0.65 (0.0256)
803050064	0.70 (0.0276)
803050065	0.75 (0.0295)
803050066	0.80 (0.0315)
803050067	0.85 (0.0335)
803050068	0.90 (0.0354)
803050069	0.95 (0.0374)
803050070	1.00 (0.0394)
803050071	1.05 (0.0413)
803050072	1.10 (0.0433)
803050073	1.15 (0.0453)
803050074	1.20 (0.0472)
803050075	1.25 (0.0492)
803050076	1.30 (0.0512)
803050077	1.35 (0.0531)
803050078	1.40 (0.0551)
803050079	1.45 (0.0571)

10) Install the selected adjusting washer and taper roller bearing (extension case side) outer race.

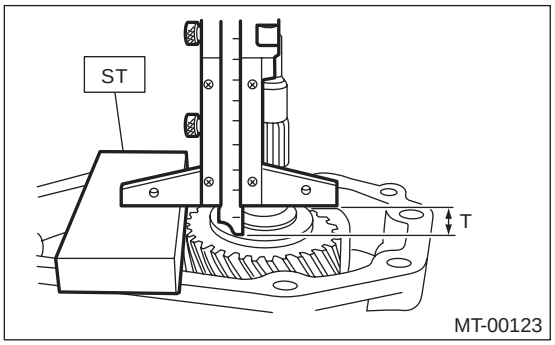


(A) Taper roller bearing (extension case side) outer race

11) Measure the depth “S” between the transfer case + ST and the center differential.
ST 398643600 GAUGE



12) Measure the height “T” between the extension case + ST and the transfer drive gear.
ST 398643600 GAUGE



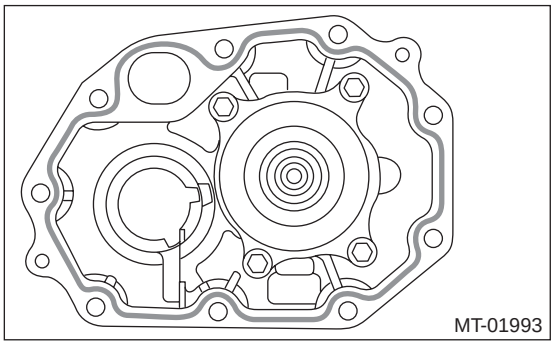
13) Calculate the adjusting washer thickness “U” using the following calculation.
U = S + T – 30 mm (1.18 in) – (0.15 — 0.35 mm (0.0059 — 0.0138 in))
S: Depth between the transfer case + ST and the center differential
T: Height between the extension case + ST and the transfer drive gear
30 mm (1.18 in): Thickness of ST 15 mm (0.59 in) × 2
0.15 — 0.35 mm (0.0059 — 0.0138 in): Clearance
14) Select a suitable adjusting washer in the following table.

Clearance:
0.15 — 0.35 mm (0.0059 — 0.0138 in)

Adjusting washer	
Part No.	Thickness mm (in)
803036050	0.9 (0.035)
803036054	1.0 (0.039)
803036051	1.1 (0.043)
803036055	1.2 (0.047)
803036052	1.3 (0.051)
803036056	1.4 (0.055)
803036053	1.5 (0.059)
803036057	1.6 (0.063)
803036058	1.7 (0.067)
803036080	1.8 (0.071)
803036081	1.9 (0.075)

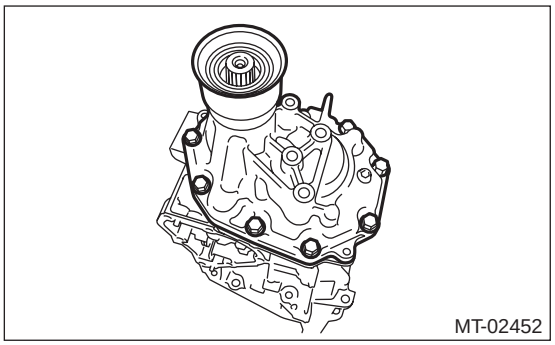
15) Install the adjusting washer to center differential.
16) Apply liquid gasket seamlessly.

Liquid gasket:
THREE BOND 1215B or equivalent



17) Install the extension case assembly.

Tightening torque:
40 N·m (4.1 kgf-m, 29.5 ft-lb)

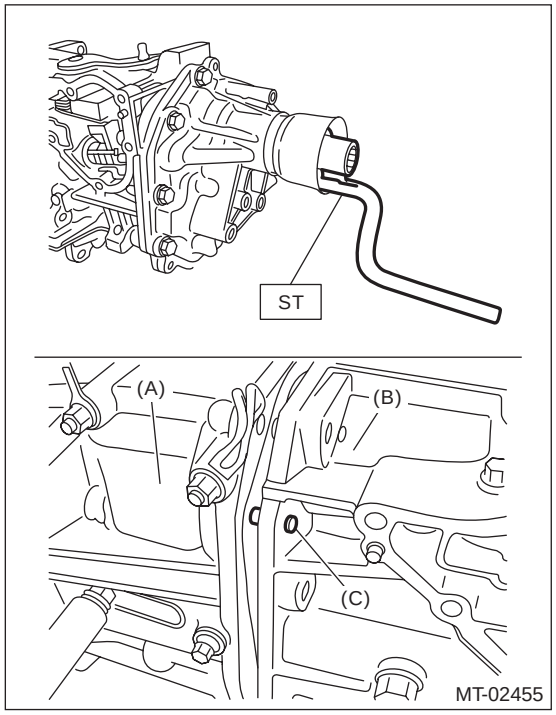


18) Temporarily install the gasket to the transmission case side.

NOTE:
Use a new gasket.

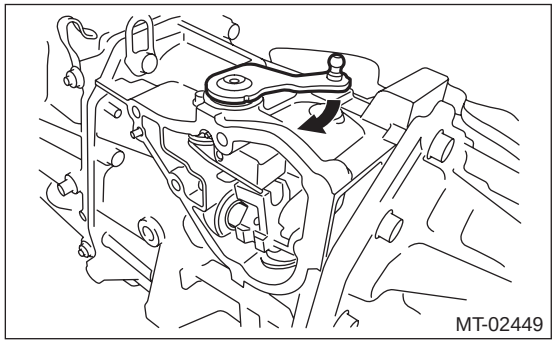
19) Install the transfer case together with the extension case assembly.
(1) While moving the HANDLE to align the spline position, press in the transfer case assembly until the knock pin comes slightly out of transfer case.

ST 18631AA000 HANDLE



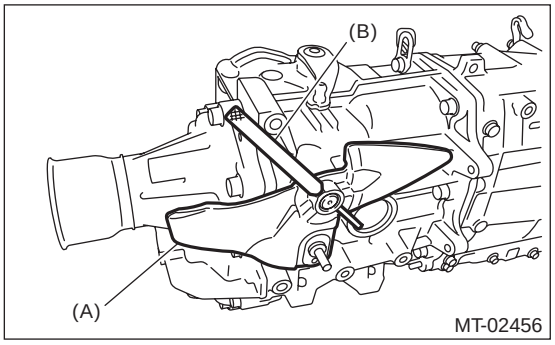
(A) Transmission case
(B) Transfer case
(C) Knock pin

(2) Set and hold the selector lever COMPL to the 1st-2nd side, and install the transfer case assembly so that the shifter arm edge and fork rod does not contact.



20) Temporarily install the transfer case assembly.

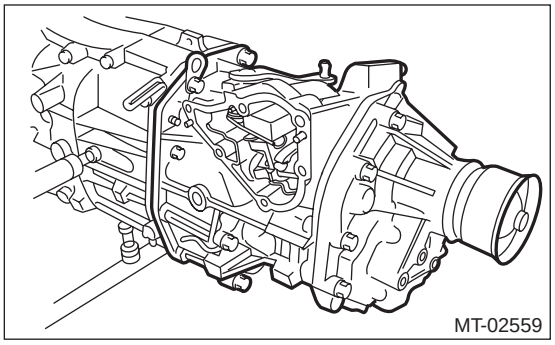
21) Install the shift lever COMPL, then insert the remover or similar tool instead of straight pin.



(A) Shift lever COMPL
(B) Remover

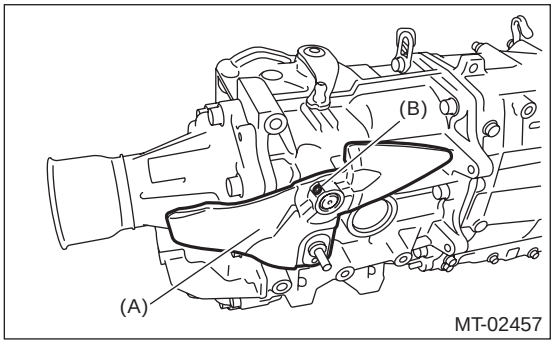
22) Operate the selector arm and remover to confirm the correct shifting into each gear is possible.
23) Install the transfer case assembly.

Tightening torque:
24.5 N·m (2.5 kgf-m, 18.1 ft-lb)



24) Secure the shift lever COMPL using a straight pin.

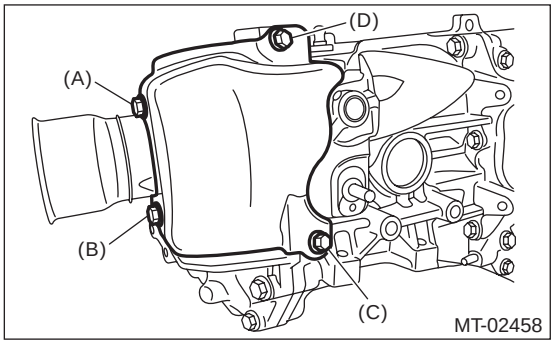
NOTE:
Use a new straight pin.



(A) Shift lever COMPL
(B) Straight pin

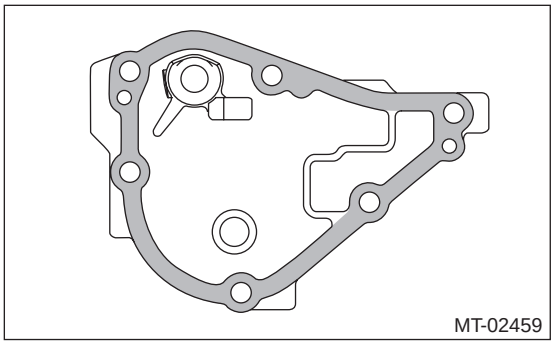
25) Install the transfer cover.
(1) Temporarily install the transfer cover mounting bolts.
(2) Tighten bolts in order of (B), (A), (C), (D).

Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)



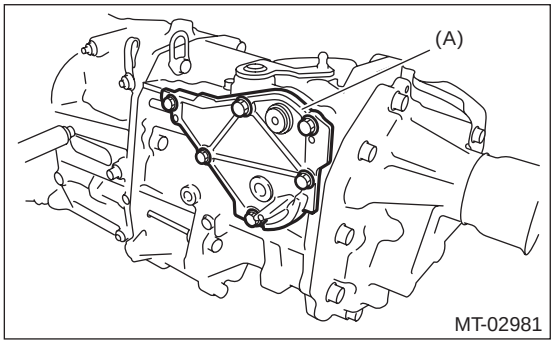
26) Apply liquid gasket seamlessly.

Liquid gasket:
THREE BOND 1215B or equivalent



27) Install the transmission cover.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



(A) Transmission cover

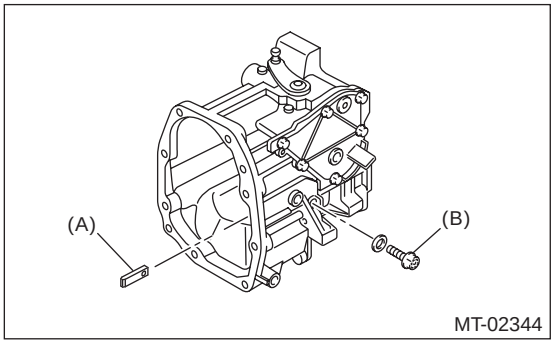
28) Install the back-up light switch and the neutral switch. <Ref. to 6MT(TY75)-46, BACK-UP LIGHT AND NEUTRAL POSITION SWITCH, INSTALLATION, Switches and Harness.>
29) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-30, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

1. TRANSFER CASE

1) Remove the interlock plate.

NOTE:
Do not remove the precoat bolt (B) if the parts are assembled as a transmission assembly.



(A) Interlock plate
(B) Precoat bolt

2) Remove the shift link assembly. <Ref. to 6MT(TY75)-71, REMOVAL, Shift Link Assembly.>

2. EXTENSION CASE

1) Remove the transfer drive gear assembly. <Ref. to 6MT(TY75)-62, REMOVAL, Transfer Drive Gear.>
2) Remove the oil seal from the extension case. <Ref. to 6MT(TY75)-40, REPLACEMENT, Oil Seal.>
3) Remove the dust cover.

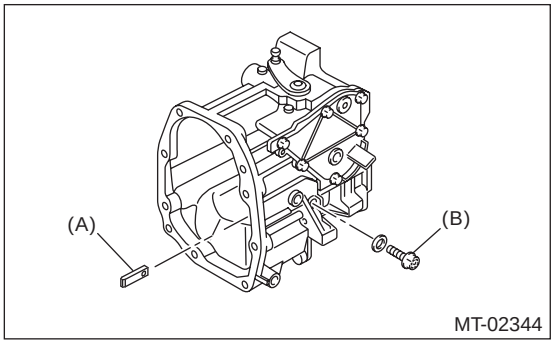
D: ASSEMBLY

1. TRANSFER CASE

1) Install the shift link assembly to the transfer case. <Ref. to 6MT(TY75)-74, INSTALLATION, Shift Link Assembly.>
2) Install the interlock plate.

NOTE:
- Use a new bolt and gasket.
- Clean the bolt threads before installing the interlock plate.

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)



(A) Interlock plate
(B) Precoat bolt

2. EXTENSION CASE

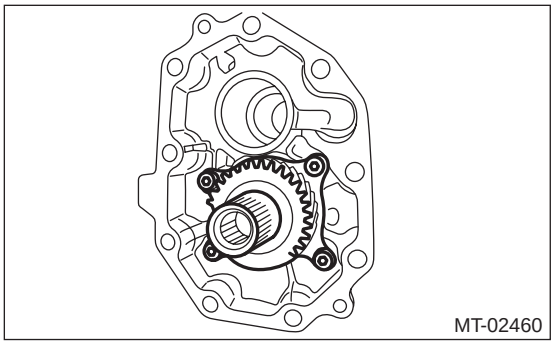
1) Using the ST, install the oil seal to the extension case. <Ref. to 6MT(TY75)-40, REPLACEMENT, Oil Seal.>

NOTE:
Use a new oil seal.
2) Install the dust cover.
3) Install the transfer drive gear to the extension case. <Ref. to 6MT(TY75)-62, INSTALLATION, Transfer Drive Gear.>

11.Transfer Drive Gear

A: REMOVAL

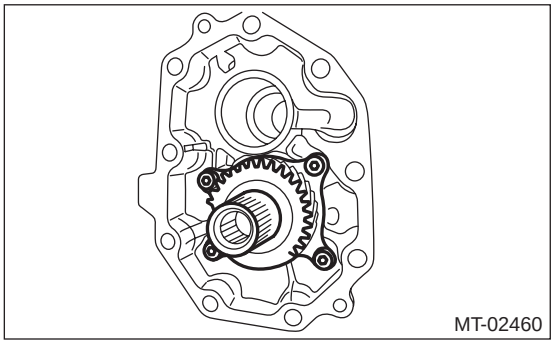
1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-25, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-45, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-51, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the extension case assembly.
5) Remove the transfer driven gear. <Ref. to 6MT(TY75)-65, REMOVAL, Transfer Driven Gear.>
6) Remove the transfer drive gear.



B: INSTALLATION

1) Install the transfer drive gear.

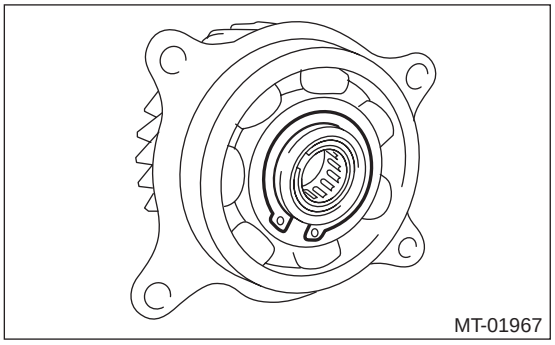
Tightening torque:
26 N·m (2.7 kgf-m, 19.2 ft-lb)



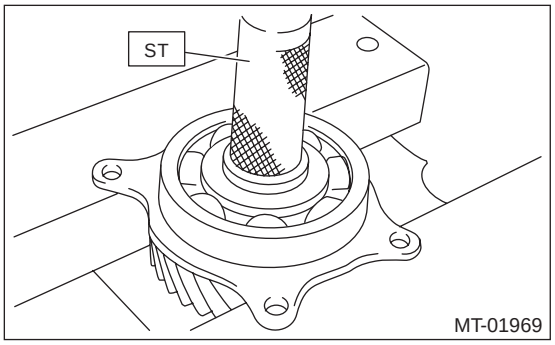
2) Install the transfer driven gear. <Ref. to 6MT(TY75)-66, INSTALLATION, Transfer Driven Gear.>
3) Select the adjusting washer. <Ref. to 6MT(TY75)-53, INSTALLATION, Transfer Case and Extension Case Assembly.>
4) Install the extension case assembly. <Ref. to 6MT(TY75)-53, INSTALLATION, Transfer Case and Extension Case Assembly.>
5) Install the transfer case and the extension case assembly. <Ref. to 6MT(TY75)-53, INSTALLATION, Transfer Case and Extension Case Assembly.>
6) Install the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-46, INSTALLATION, Switches and Harness.>
7) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-30, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

1) Remove the snap ring.



2) Remove the ball bearing.
ST 899864110 REMOVER



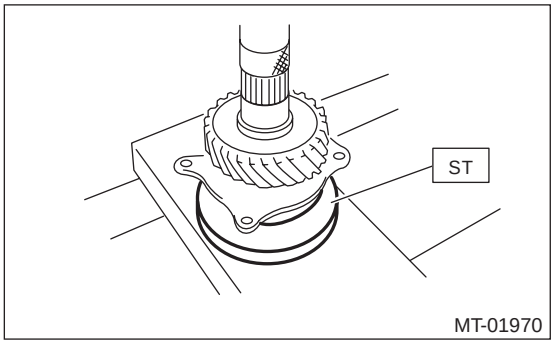
3) Remove the snap ring from transfer drive gear, and remove the needle bearing.

D: ASSEMBLY

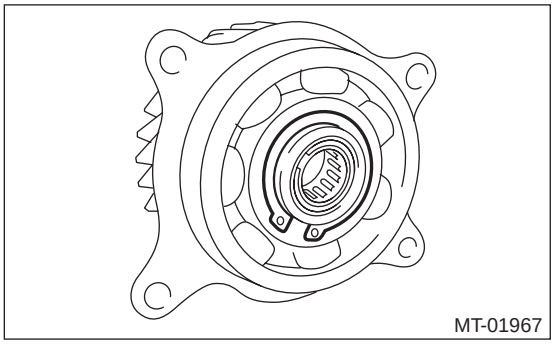
1) Install the needle bearing and snap ring to the transfer drive gear.
2) Set the ST to the ball bearing inner race, then install the transfer drive gear.

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
Use a new ball bearing.
ST 398177700 INSTALLER



3) Install the snap ring.



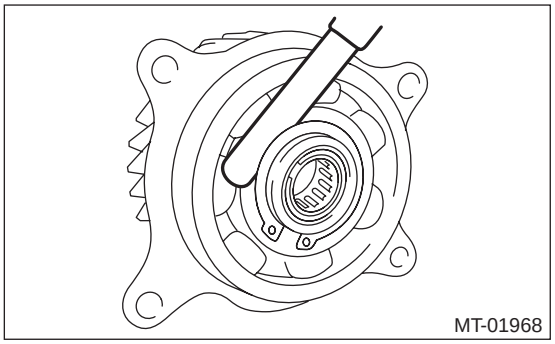
4) Inspect the clearance between the snap ring and the ball bearing. <Ref. to 6MT(TY75)-64, INSPECTION, Transfer Drive Gear.>

E: INSPECTION

1) Ball bearing
Replace the ball bearing in following cases.
- In case of broken or rusty ball bearings
- In case of worn or damaged ball bearings
- When the ball bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.

2) Transfer drive gear
If the tooth face of transfer drive gear and the shaft are excessively broken or damaged, replace the transfer drive gear.
3) Measure the clearance between snap ring and inner race of ball bearing with a thickness gauge.

Clearance:
0.01 — 0.15 mm (0.0004 — 0.0059 in)



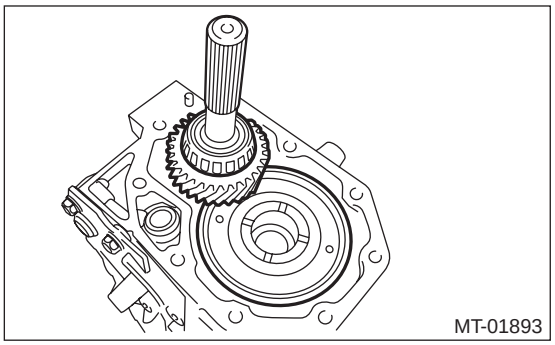
If the measurement is not within specification, select a suitable snap ring and replace it.

Snap ring (outer-30)	
Part No.	Thickness mm (in)
805030041	1.53 (0.0602)
805030042	1.65 (0.0650)
805030043	1.77 (0.0697)

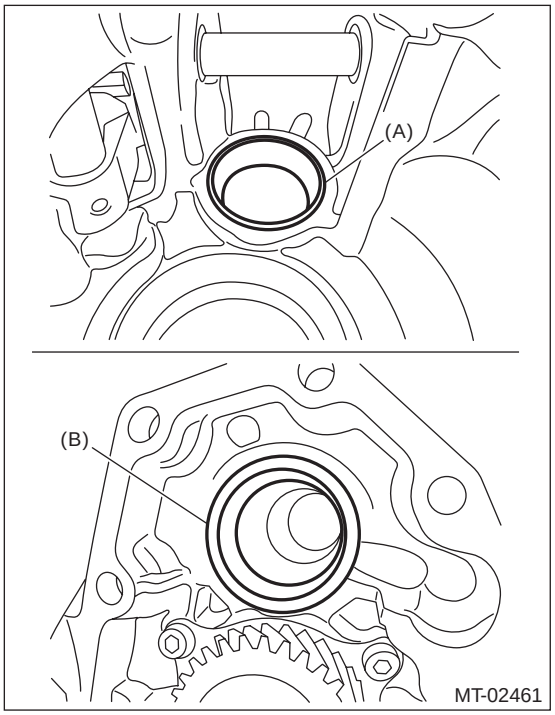
12.Transfer Driven Gear

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-25, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-45, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-51, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the extension case assembly. <Ref. to 6MT(TY75)-51, REMOVAL, Transfer Case and Extension Case Assembly.>
5) Remove the transfer driven gear and center differential as a unit.



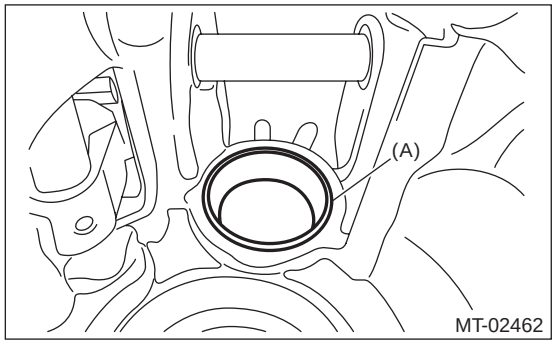
6) Remove the taper roller bearing outer race.



(A) Taper roller bearing (transfer case side) outer race
(B) Taper roller bearing (extension case side) outer race

B: INSTALLATION

1) Install the taper roller bearing (transfer case side) outer race.

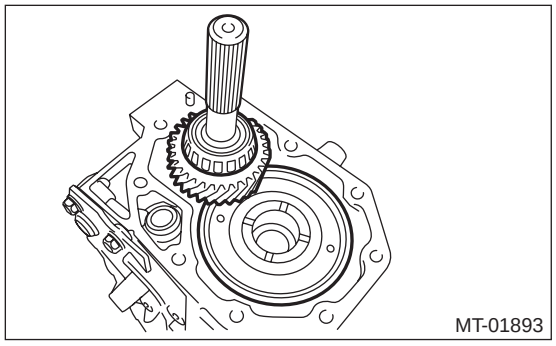


(A) Taper roller bearing (transfer case side) outer race

2) Apply a coat of grease to the taper roller bearing (transfer case side) of transfer driven gear and the roller rolling surface of the taper roller bearing (extension case side).

Grease:
NICHIMOLY N-130 or equivalent

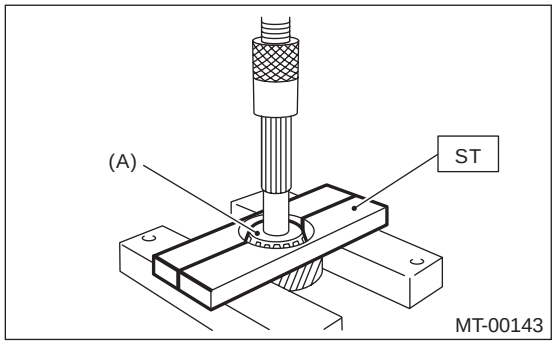
3) Install the transfer driven gear and center differential as a unit.



4) Select the adjusting washer. <Ref. to 6MT(TY75)-53, INSTALLATION, Transfer Case and Extension Case Assembly.>
5) Install the selected adjusting washer and taper roller bearing (extension case side) outer race to the extension case.
6) Install the transfer case and the extension case assembly. <Ref. to 6MT(TY75)-53, INSTALLATION, Transfer Case and Extension Case Assembly.>
7) Install the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-46, INSTALLATION, Switches and Harness.>
8) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-30, INSTALLATION, Manual Transmission Assembly.>

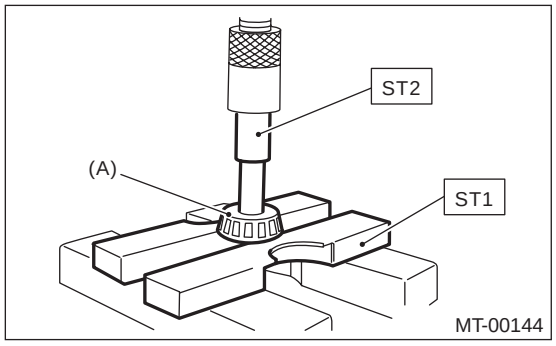
C: DISASSEMBLY

1) Using the ST, remove the taper roller bearing (extension case side).
ST 498077000 REMOVER



(A) Taper roller bearing (extension case side)

2) Using ST1 and ST2, remove the taper roller bearing (transfer case side).
ST1 498077000 REMOVER
ST2 899864100 REMOVER



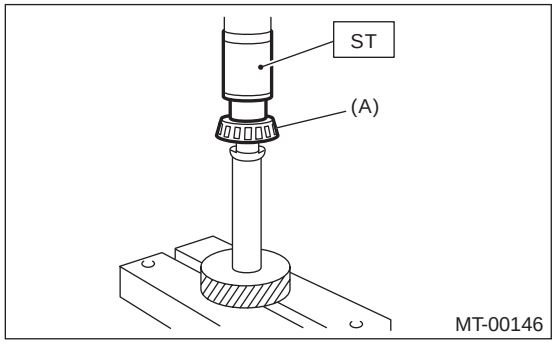
(A) Taper roller bearing (transfer case side)

D: ASSEMBLY

1) Using the ST, install the taper roller bearing (transfer case side).

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
Be careful when handling because the taper roller bearing and the outer race are used as a set.
ST 927640000 INSTALLER

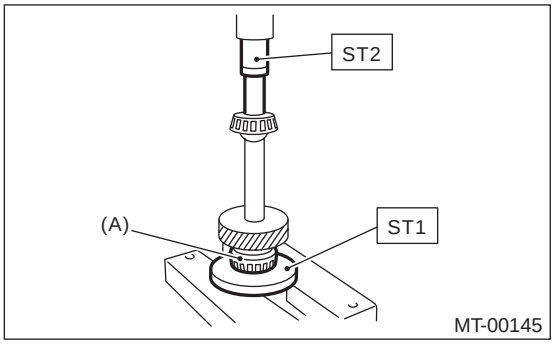


(A) Taper roller bearing (transfer case side)

2) Using the ST, install the taper roller bearing (extension case side).

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
Be careful when handling because the taper roller bearing and the outer race are used as a set.
ST1 498175500 INSTALLER
ST2 899864100 REMOVER



(A) Taper roller bearing (extension case side)

E: INSPECTION

1) Taper roller bearing
Replace the taper roller bearing in the following cases.
- In case of broken or rusty taper roller bearings
- In case of worn or damaged taper roller bearings
- When the taper roller bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.

2) Transfer driven gear
If the tooth face of transfer driven gear and the shaft are excessively broken or damaged, replace the transfer driven gear.

13.Center Differential

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-25, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-45, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-51, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the extension case assembly. <Ref. to 6MT(TY75)-51, REMOVAL, Transfer Case and Extension Case Assembly.>
5) Remove the center differential and transfer driven gear as a unit. <Ref. to 6MT(TY75)-65, REMOVAL, Transfer Driven Gear.>

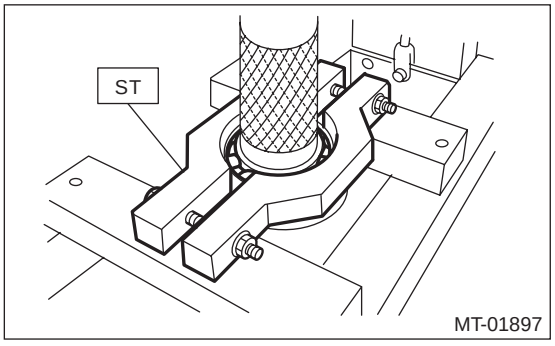
B: INSTALLATION

1) Install the center differential and transfer driven gear into the transfer case as a unit. <Ref. to 6MT(TY75)-66, INSTALLATION, Transfer Driven Gear.>
2) Select the adjusting washer. <Ref. to 6MT(TY75)-53, INSTALLATION, Transfer Case and Extension Case Assembly.>
3) Install the transfer driven gear. <Ref. to 6MT(TY75)-66, INSTALLATION, Transfer Driven Gear.>
4) Install the extension case assembly. <Ref. to 6MT(TY75)-53, INSTALLATION, Transfer Case and Extension Case Assembly.>
5) Install the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-53, INSTALLATION, Transfer Case and Extension Case Assembly.>
6) Install the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-46, INSTALLATION, Switches and Harness.>
7) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-30, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

Remove the ball bearing using ST.

NOTE:
Center differential is a non-disassembled part which should not be disassembled.
ST 498077600 CENTER DIFFERENTIAL BEARING REMOVER

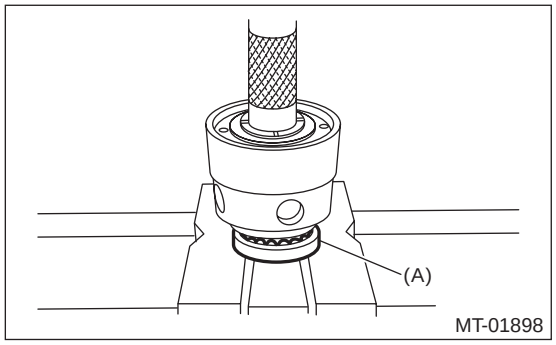


D: ASSEMBLY

Install the ball bearings.

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
Use a new ball bearing.



(A) Ball bearing

E: INSPECTION

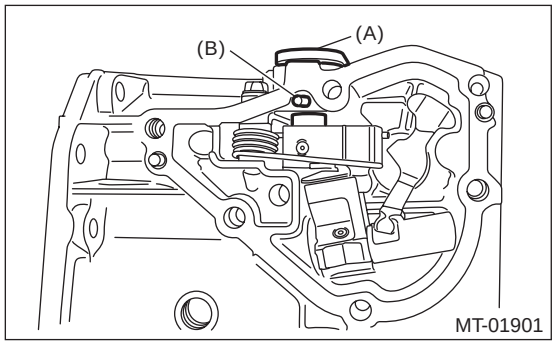
1) Ball bearing
Replace the ball bearing in following cases.
- In case of broken or rusty ball bearings
- In case of worn or damaged ball bearings
- When the ball bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.
- When the ball bearing has other defects.

2) Center differential
If there is wear or damage, replace the center differential assembly.

14.Shift Link Assembly

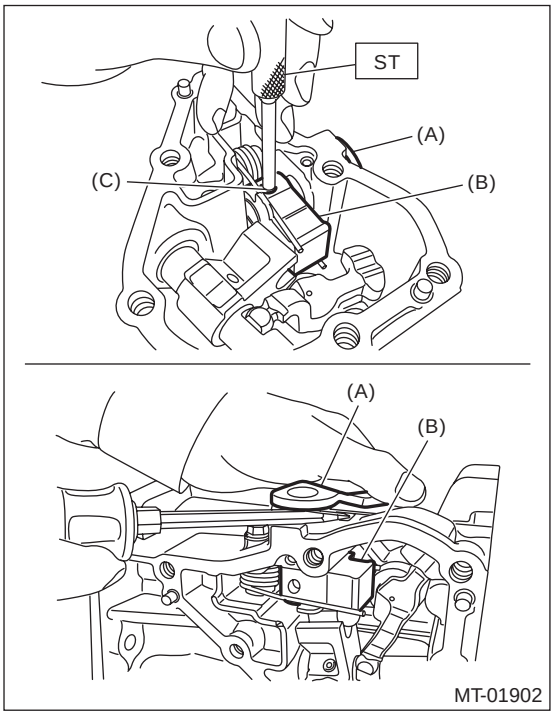
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-25, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-45, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-51, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the extension case assembly. <Ref. to 6MT(TY75)-51, REMOVAL, Transfer Case and Extension Case Assembly.>
5) Remove the center differential and transfer driven gear as a unit. <Ref. to 6MT(TY75)-65, REMOVAL, Transfer Driven Gear.>
6) Pull out the straight pin.



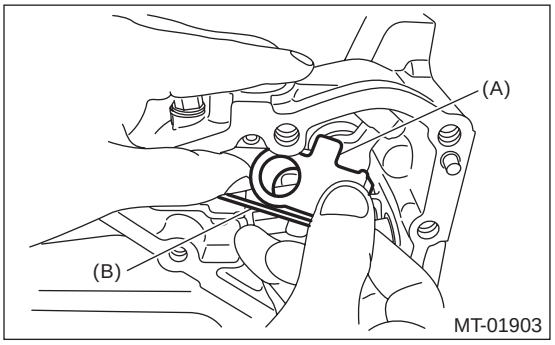
(A) Selector lever COMPL
(B) Straight pin

7) Use the ST to remove the straight pin, and remove the selector lever COMPL.
ST 398791700 SPRING PIN REMOVER 2



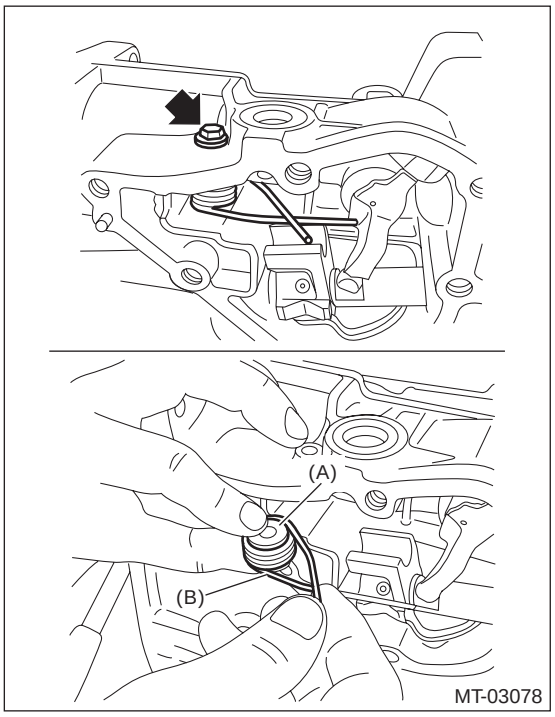
(A) Selector lever COMPL
(B) Selector arm No. 2
(C) Straight pin

8) Remove the selector arm No. 2.



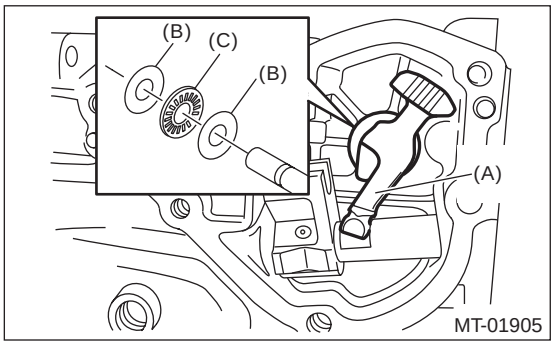
(A) Selector arm No. 2
(B) Neutral set spring

9) Remove the bolts and remove the shifter arm collar and neutral set spring.



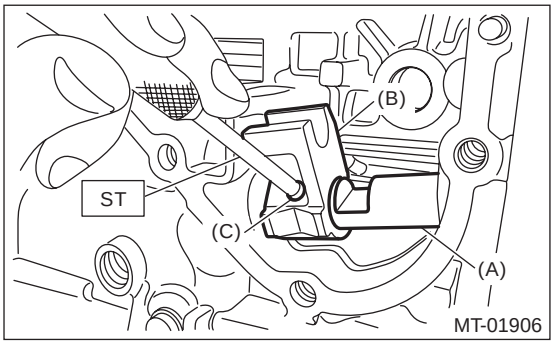
(A) Shifter arm collar
(B) Neutral set spring

10) Remove the shifter arm No. 2, washers and thrust bearing.



(A) Shifter arm No. 2
(B) Washer
(C) Thrust bearing

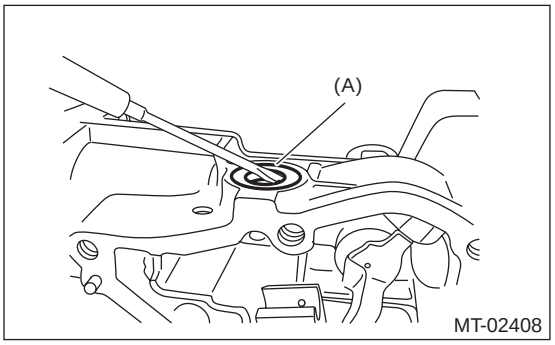
11) Use the ST to remove the straight pin, and remove the shifter arm and selector arm.
ST 398791700 SPRING PIN REMOVER 2



(A) Shifter arm
(B) Selector arm
(C) Straight pin

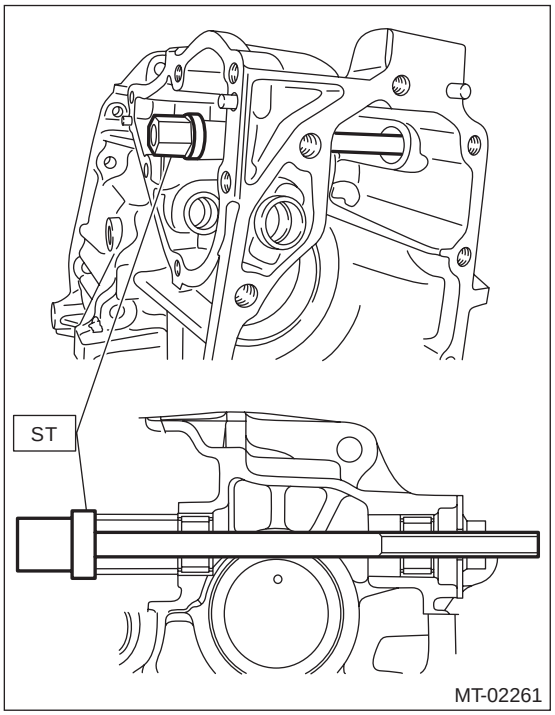
12) Remove the oil seal using a screwdriver wrapped with tape, etc.

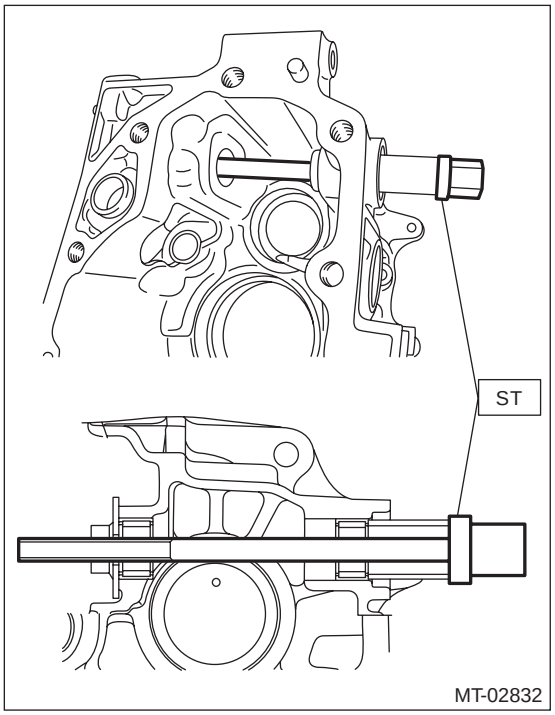
NOTE:
The illustration shows the oil seal of selector lever COMPL. Perform the same procedures for removing the shifter arm No. 2.



(A) Oil seal

13) Remove the needle bearing by using a tube with the diameter of 20 mm (0.79 in) or 21 mm (0.83 in) and the ST.
ST 18763AA000 COMPRESSOR SHAFT

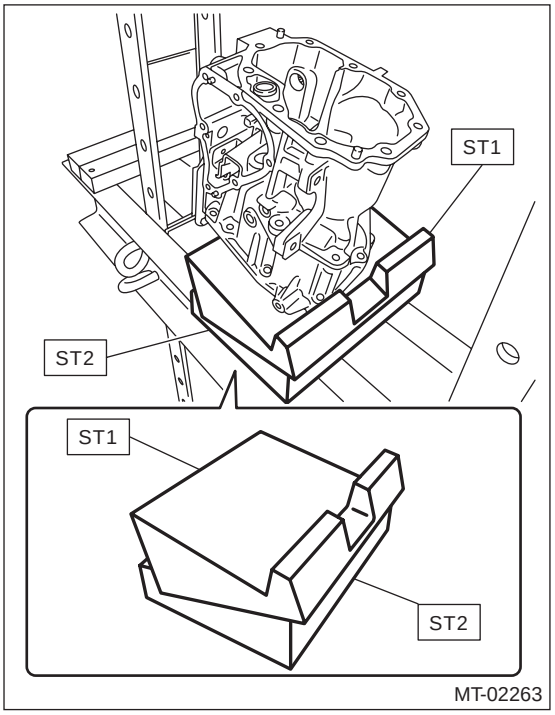




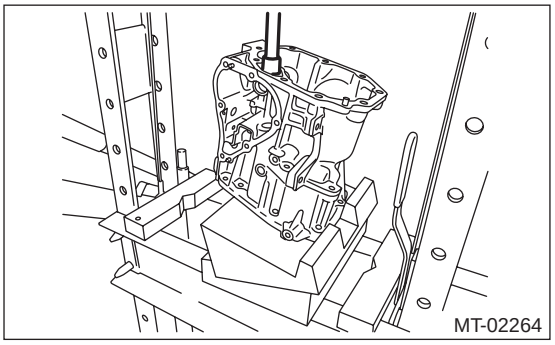
14) Set ST1, ST2 and transfer case to a press.

NOTE:
- Set the ST2 under ST1.
- Set the transfer case so that the hole for shifter arm is positioned vertically.

ST1 498267300 CYLINDER HEAD TABLE
ST2 498267200 CYLINDER HEAD TABLE



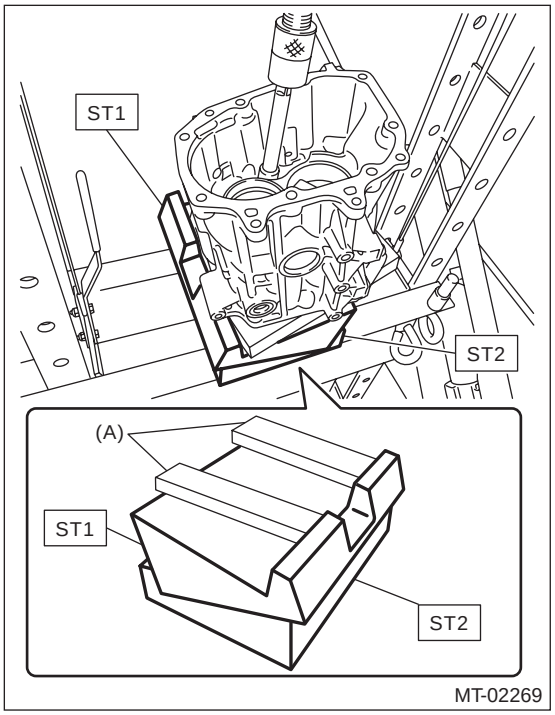
15) Remove the roller bearing by using a round bar with the diameter of 22 mm (0.87 in) or 23 mm (0.91 in).



16) Flip over the transfer case, and set an iron plate between transfer case and ST.

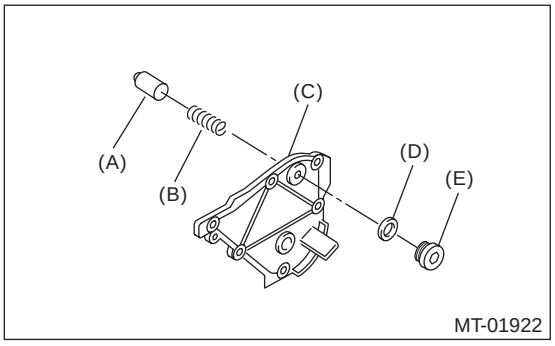
NOTE:
- Insert the iron plate which is thicker than the exposed length of the transfer case knock pin between the ST and transfer case.
- Set the iron plate so that the transfer case knock pin does not ride on the iron plate.

17) Remove the roller bearing by using a tube with the diameter of 22 mm (0.87 in) or 23 mm (0.91 in).



(A) Iron plate

18) Remove the plunger and the check ball spring.



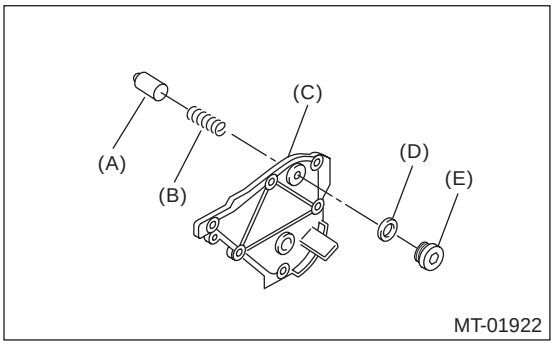
(A) Plunger
(B) Checking ball spring
(C) Transmission cover
(D) Seal ring
(E) Seal bolt

B: INSTALLATION

1) Clean the mating surface of the transmission cover and transfer case.
2) Install the plunger and the check ball spring.

NOTE:
Use new seal rings.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



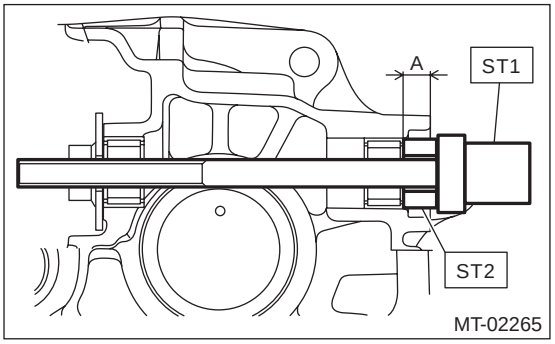
(A) Plunger
(B) Checking ball spring
(C) Transmission cover
(D) Seal ring
(E) Seal bolt

3) Using the ST, install the needle bearing.

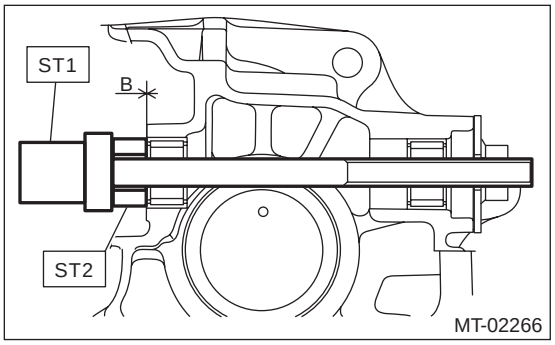
NOTE:
- Use a new needle bearing.
- If the press-fit depth exceeds the service limit, replace with a new needle bearing.

ST1 18763AA000 COMPRESSOR SHAFT
ST2 498277200 STOPPER SET

Press-fit depth of needle bearing:
A: 8.5±0.2 mm (0.33±0.01 in) from the end of transfer case

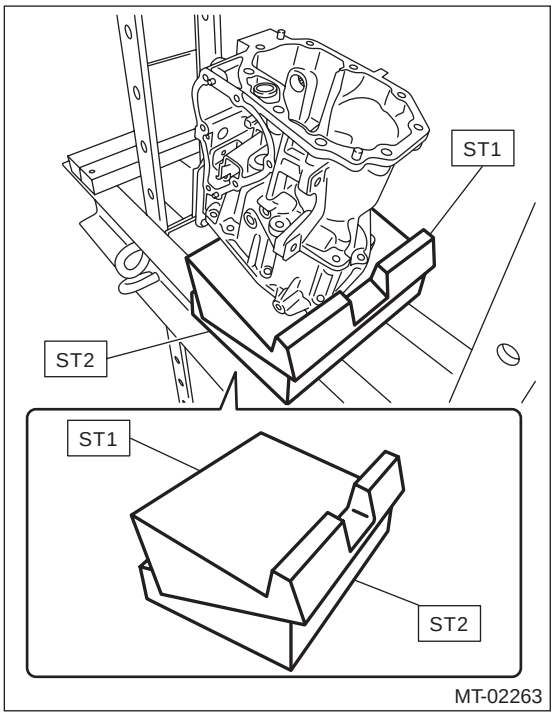


B: 0.2±0.2 mm (0.01±0.01 in) from the end of transfer case



4) Set ST1, ST2 and transfer case to a press.

NOTE:
• Set the ST2 under ST1.
• Set the transfer case so that the hole for shifter arm is positioned vertically.
ST1 498267300 CYLINDER HEAD TABLE
ST2 498267200 CYLINDER HEAD TABLE

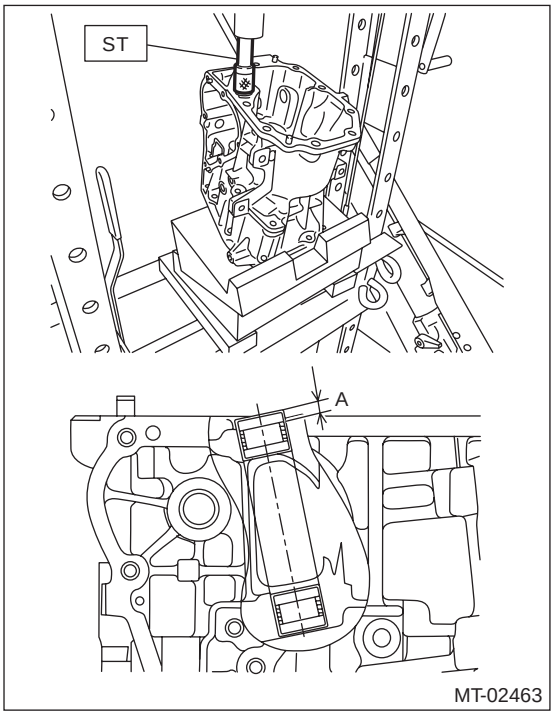


5) Using the ST, install the roller bearing.

NOTE:
• Use a new roller bearing.
• Gradually perform the press-fit operation while measuring the press-fit depth.
• If the press-fit depth exceeds the service limit, replace with a new bearing.
ST 899864100 REMOVER

Press-fit depth of roller bearing:

A: 5.1±0.2 mm (0.20±0.01 in) from the finished surface of transfer case



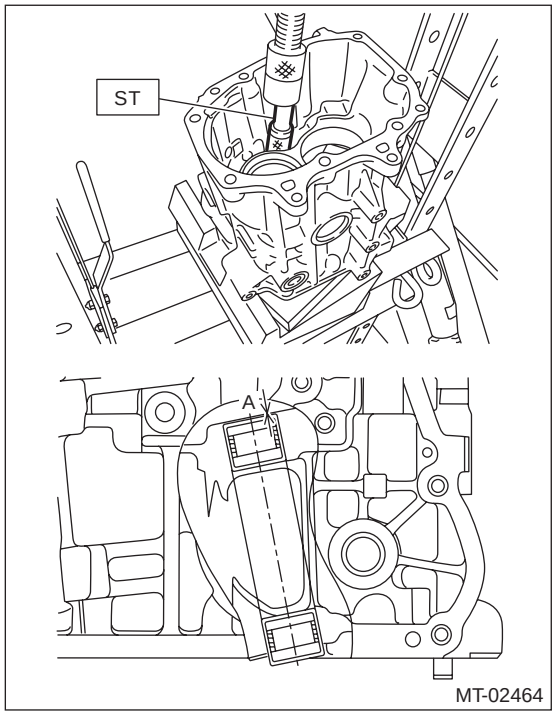
6) Flip over the transfer case, and set an iron plate between transfer case and ST.

NOTE:
• Insert the iron plate which is thicker than the exposed length of the transfer case knock pin between the ST and transfer case.
• Set the parts while taking care that the transfer case knock pin and the roller bearing do not ride over the iron plate.

7) Using the ST, install the roller bearing.

NOTE:
• Use a new roller bearing.
• Gradually perform the press-fit operation while measuring the press-fit depth.
• If the press-fit depth exceeds the service limit, replace with a new bearing.
ST 899864100 REMOVER

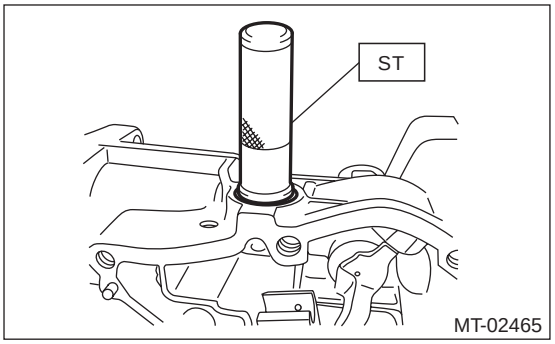
Press-fit depth of roller bearing:
A: 0±0.2 mm (0±0.01 in) from the end of transfer case



8) Using the ST, install the oil seal.

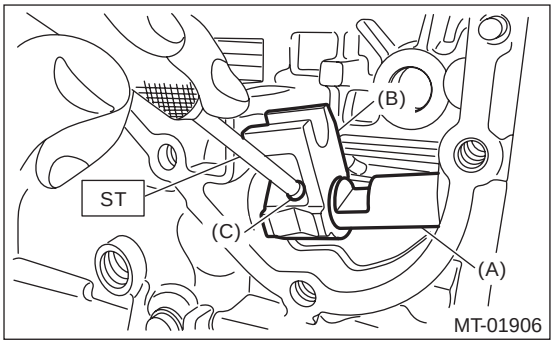
NOTE:
• Use a new oil seal.
• The illustration shows the oil seal of selector lever COMPL. Perform the same procedures for installing the oil seal of shifter arm No. 2.
• Apply transmission gear oil to the oil seal lips.
ST 18657AA000 INSTALLER

Press-fit depth of oil seal:
1±0.2 mm (0.04±0.01 in) from the end of transfer case



9) Insert the shifter arm and fix with a straight pin.

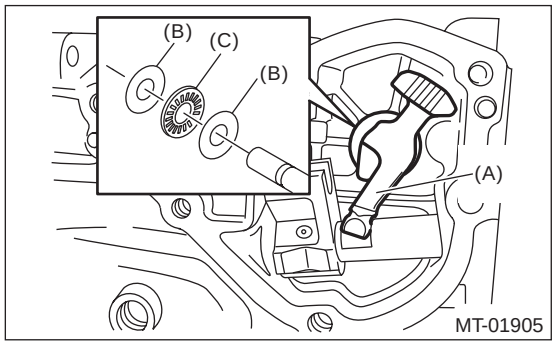
NOTE:
Use a new straight pin.
ST 398791700 SPRING PIN REMOVER 2



(A) Shifter arm
(B) Selector arm
(C) Straight pin

10) Install the shifter arm No. 2, washers and thrust bearing.

CAUTION:
Be careful not to damage the oil seal.

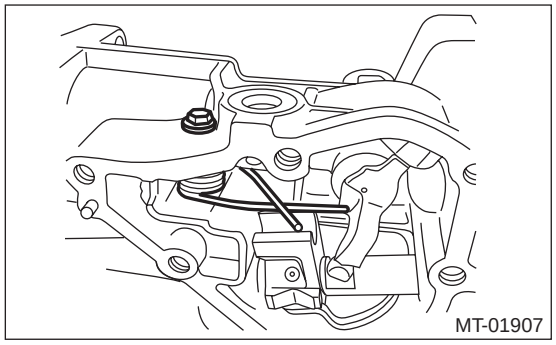


(A) Shifter arm No. 2
(B) Washer
(C) Thrust bearing

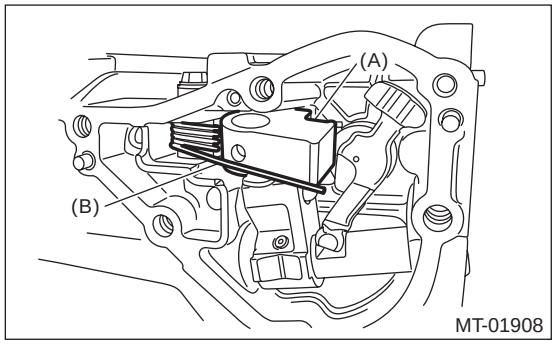
11) Install the shifter arm collar and neutral set spring.

NOTE:
Use a new gasket.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



12) Install the selector arm No. 2.



(A) Selector arm No. 2
(B) Neutral set spring

13) Insert the selector lever COMPL and fix with a straight pin.

CAUTION:
Be careful not to damage the oil seal.

NOTE:
Use a new straight pin.

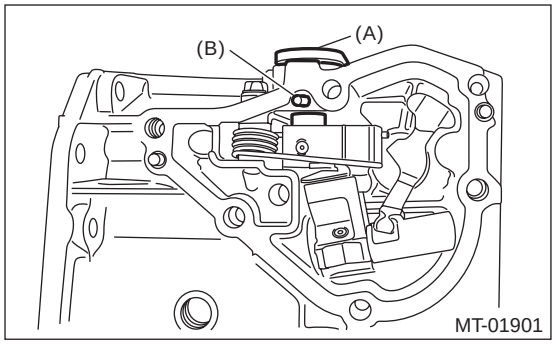
(A) Selector lever COMPL
(B) Selector arm No. 2
(C) Straight pin

14) Insert a new straight pin.

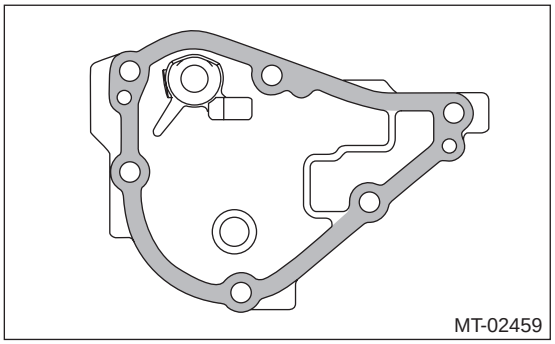


(A) Selector lever COMPL
(B) Straight pin

15) Install the center differential and transfer driven gear as a unit.
16) Install the extension case assembly to the transfer case. <Ref. to 6MT(TY75)-53, INSTALLATION, Transfer Case and Extension Case Assembly.>
17) Install the transfer case and the extension case assembly. <Ref. to 6MT(TY75)-53, INSTALLATION, Transfer Case and Extension Case Assembly.>

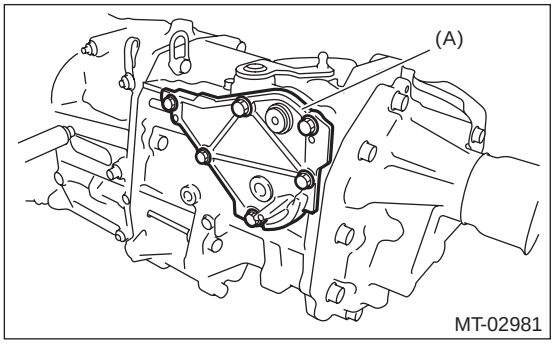
18) Apply liquid gasket seamlessly.

Liquid gasket:
THREE BOND 1215B or equivalent



19) Install the transmission cover.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



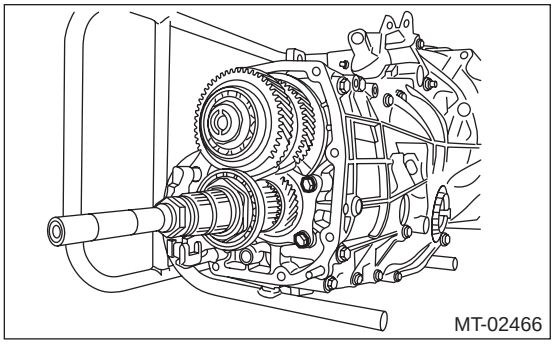
(A) Transmission cover

20) Install the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-46, INSTALLATION, Switches and Harness.>
21) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-30, INSTALLATION, Manual Transmission Assembly.>

15.Transmission Case

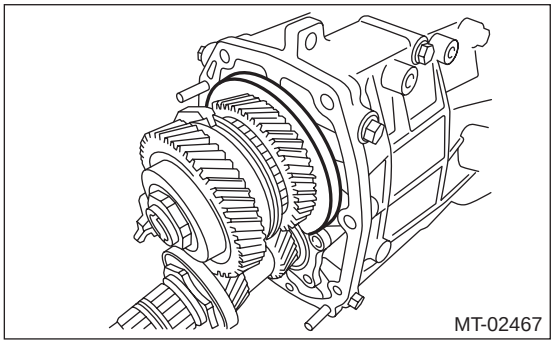
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-25, REMOVAL, Manual Transmission Assembly.>
2) Remove the clutch release lever and the release bearing. <Ref. to CL-17, REMOVAL, Release Bearing and Lever.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-51, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the bearing mounting bolt.



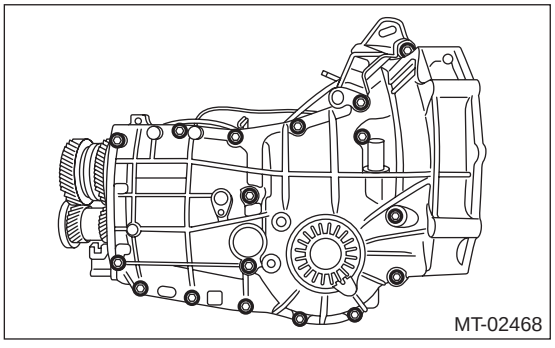
MT-02466

5) Remove the main shaft rear plate.



MT-02467

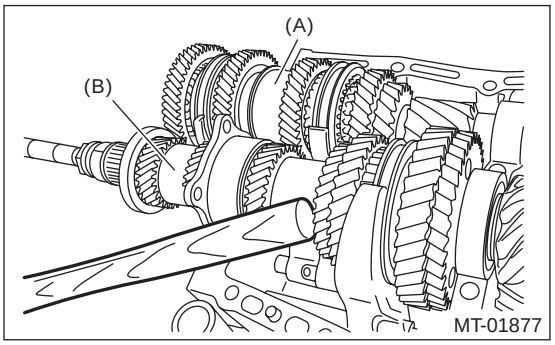
6) Remove the bolts and nuts, and separate the transmission case into the right and left cases.



MT-02468

7) Remove the drive pinion shaft assembly.

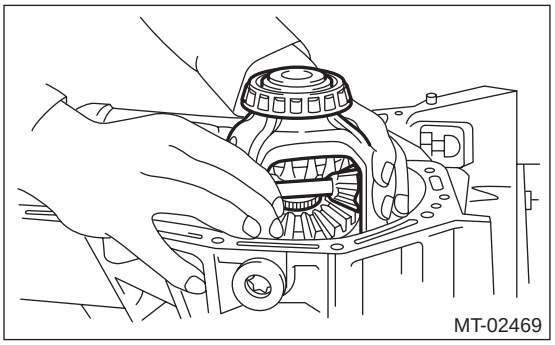
NOTE:
Use a hammer handle, etc. to remove if too tight.



MT-01877

(A) Main shaft ASSY
(B) Drive pinion shaft ASSY

8) Remove the main shaft assembly.
9) Remove the front differential assembly.

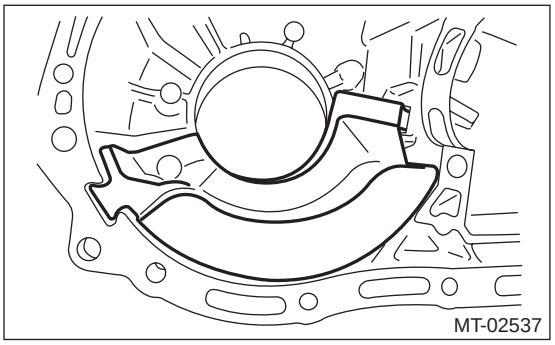


MT-02469

10) Remove the differential side retainers and taper roller bearing outer races on the left and right sides. <Ref. to 6MT(TY75)-111, REMOVAL, Front Differential Assembly.>

NOTE:
Do not confuse the right and left taper roller bearing outer races.

11) Remove the reverse idler gear. <Ref. to 6MT(TY75)-123, REMOVAL, Reverse Idler Gear.>
12) Remove the shifter fork and rod. <Ref. to 6MT(TY75)-135, REMOVAL, Shifter Fork and Rod.>
13) Remove the front oil guide.



MT-02537

B: INSTALLATION

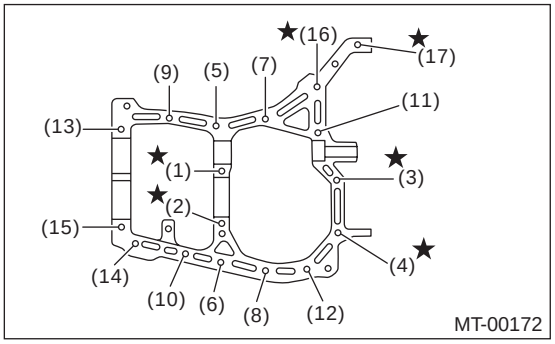
1) Wipe off grease, oil and dust on the mating surfaces of transmission cases with cleaning solvent.
2) Install the shifter fork and rod. <Ref. to 6MT(TY75)-137, INSTALLATION, Shifter Fork and Rod.>
3) Install the reverse idler gear. <Ref. to 6MT(TY75)-125, INSTALLATION, Reverse Idler Gear.>
4) Select the drive pinion shim. <Ref. to 6MT(TY75)-92, INSTALLATION, Drive Pinion Shaft Assembly.>
5) Install the taper roller bearing outer race to the transmission case LH side, and install the differential side retainer with the O-ring removed.
6) Install the front differential assembly.
7) Install the main shaft assembly.

NOTE:
Align to install the needle bearing knock pin hole to the transmission case knock pin.
8) Install the selected drive pinion shims and drive pinion shaft assembly.

NOTE:
Align the roller bearing knock pin hole to the transmission case knock pin.
9) Align the left and right side of the transmission case, and tighten it with 17 mounting bolts.

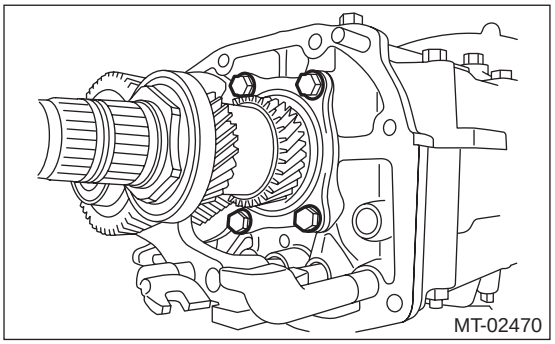
NOTE:
• Insert bolts (11) and (16) from the LH side of the transmission case.
• Match the cases together so that the drive pinion shims are not caught between the cases.

Tightening torque:
8 mm bolt
25 N·m (2.5 kgf-m, 18.4 ft-lb)
★ ***10 mm bolt***
40 N·m (4.1 kgf-m, 29.5 ft-lb)

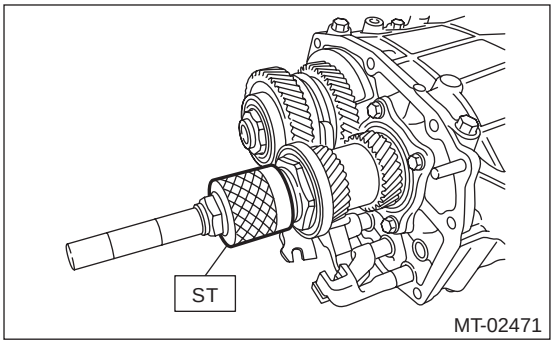


10) Install the taper roller bearing outer race to the RH side of the transmission case.
11) Tighten the bearing mounting bolts.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)



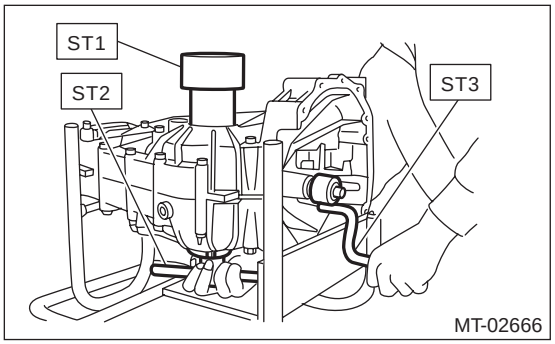
12) Perform backlash adjustment of the hypoid driven gear and preload adjustment of the taper roller bearing.
(1) Attach the ST on drive pinion assembly.
ST 18667AA020 HOLDER



(2) Place the transmission case with the LH side facing downward, and put ST1 on the taper roller bearing outer race.

(3) Screw the differential side retainer from the bottom into LH side case using ST2. Fit the ST3 on the main shaft. Shift the gear into 4th or 5th, and turn the shaft several times. Screw in the differential side retainer while rotating the ST3 until a slight resistance is felt on ST2.
This is the contact point of the hypoid driven gear and the drive pinion shaft. Repeat the above sequence several times to ensure the contact point.

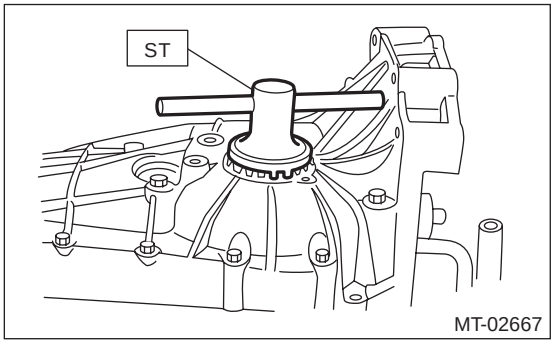
ST1 399780104 WEIGHT
ST2 18630AA010 WRENCH COMPL RETAINER
ST3 499927100 HANDLE



(4) Remove the WEIGHT, and screw in the differential side retainer without the O-ring into the RH side of the transmission case, and stop at the point where a slight resistance is felt.

NOTE:
In this condition, the backlash between hypoid driven gear and drive pinion shaft is zero.

ST 18630AA010 WRENCH COMPL RETAINER



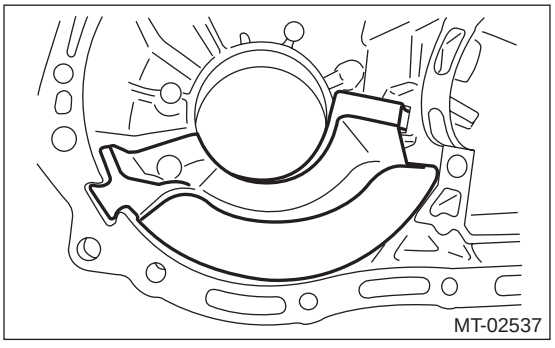
(5) Loosen the differential side retainer on the LH side of the transmission case by 3 notches, and turn the differential side retainer on the RH side of the transmission case by 3 notches in order to apply backlash.
(6) Screw in the differential side retainer of the RH side of the transmission case additionally by 1 notch in order to apply preload on taper roller bearing.
(7) Tighten temporarily both the retainer lock plates LH and RH, and put marks on both the differential side retainer and retainer lock plate for later readjustment.

NOTE:
When it is difficult to attach the retainer lock plate, turn over the retainer lock plate and attach.

(8) Turn the transmission main shaft several times while tapping around the differential side retainer lightly with plastic hammer.

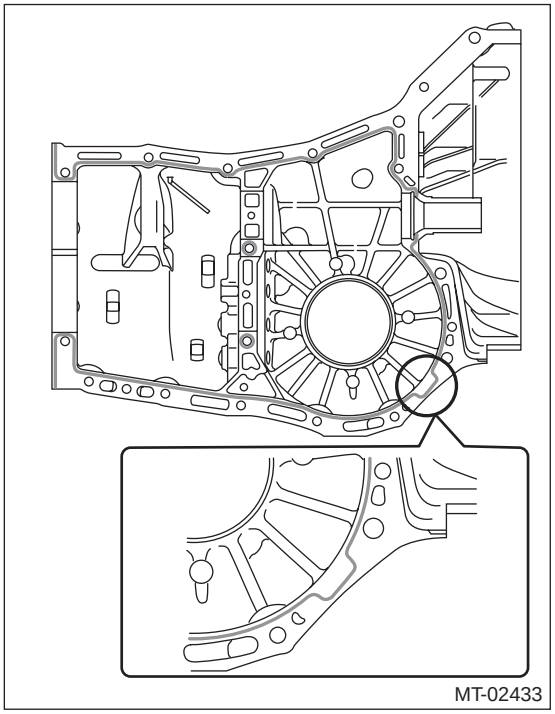
13) Inspect and adjust backlash and tooth contact of the hypoid driven gear. <Ref. to 6MT(TY75)-117, INSPECTION, Front Differential Assembly.>
14) Separate the transmission case into left and right parts. <Ref. to 6MT(TY75)-79, REMOVAL, Transmission Case.>
15) Check each shifter fork. <Ref. to 6MT(TY75)-140, INSPECTION, Shifter Fork and Rod.>
16) Select a main shaft rear plate. <Ref. to 6MT(TY75)-91, ADJUSTMENT, Main Shaft Assembly for Single-Range.>
17) Install the front oil guide.

NOTE:
Fit in all the way.



18) Apply liquid gasket, then join the right side and left side of the case together.

Liquid gasket:
THREE BOND 1215B or equivalent

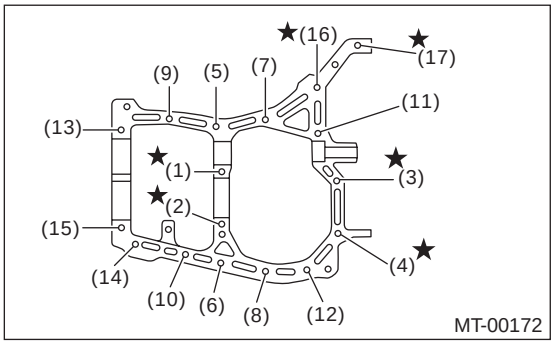


MT-02433

19) Tighten 17 bolts with brackets and clips as shown in the figure.

NOTE:
• Insert bolts (11) and (16) from the LH side of the transmission case.
• Match the cases together so that the drive pinion shims are not caught between the cases.

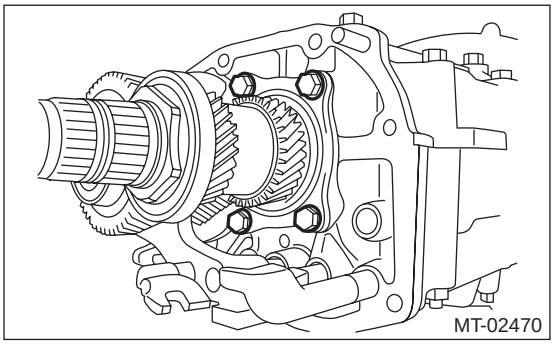
Tightening torque:
8 mm bolt
25 N·m (2.5 kgf-m, 18.4 ft-lb)
★ 10 mm bolt
40 N·m (4.1 kgf-m, 29.5 ft-lb)



MT-00172

20) Tighten the bearing mounting bolts.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)



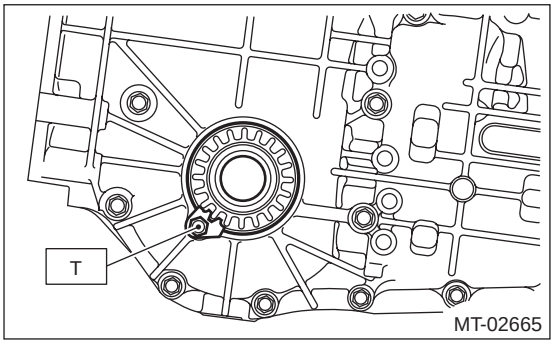
MT-02470

21) Remove the retainer lock plate, and loosen the differential side retainer until the groove of the O-ring appears. Fit the O-ring into the groove and tighten the differential side retainer into the position where it was not loosened.

NOTE:
• When loosening the differential side retainer, record the number of the turns made.
• Perform this for both left and right differential side retainers.
• Use new O-rings.
• Apply gear oil to O-ring.

22) Install the retainer lock plate.

Tightening torque:
T: 25 N·m (2.5 kgf-m, 18.4 ft-lb)



MT-02665

23) Install the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-53, INSTALLATION, Transfer Case and Extension Case Assembly.>
24) Install the clutch release lever and release bearing. <Ref. to CL-17, INSTALLATION, Release Bearing and Lever.>
25) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-30, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

Check the transmission case for cracks, damage, or oil leaks.

16.Main Shaft Assembly for Single-Range

A: REMOVAL

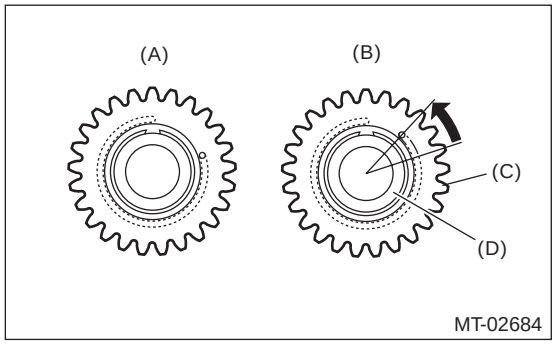
1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-25, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-51, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. <Ref. to 6MT(TY75)-79, REMOVAL, Transmission Case.>
4) Remove the drive pinion shaft assembly. <Ref. to 6MT(TY75)-92, REMOVAL, Drive Pinion Shaft Assembly.>
5) Remove the main shaft assembly.

B: INSTALLATION

1) Attach the needle bearing and oil seal to the front of the main shaft assembly.

NOTE:
• Wrap the clutch splined section with vinyl tape to prevent damage to the oil seal.
• Apply NICHIMOLY N-130 or the equivalent to the sealing lip of the oil seal.
• Use a new oil seal.

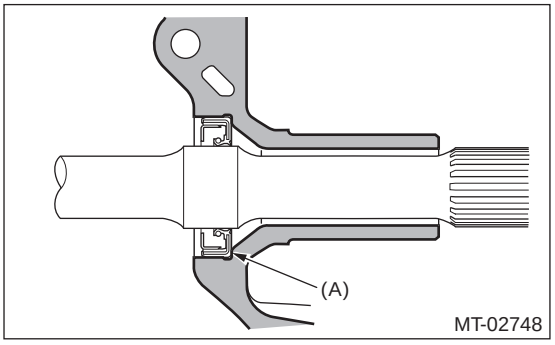
2) Rotate the reverse idler sub gear by two teeth from free status in the direction of the arrow to make it engage with the reverse gear of the main shaft and install the main shaft assembly.
(1) When the reverse idler sub gear is at free status, put alignment marks on reverse idler sub gear and reverse idler gear.
(2) Rotate the alignment mark on the reverse idler sub gear side in the arrow direction by two teeth, and secure it with a wire.



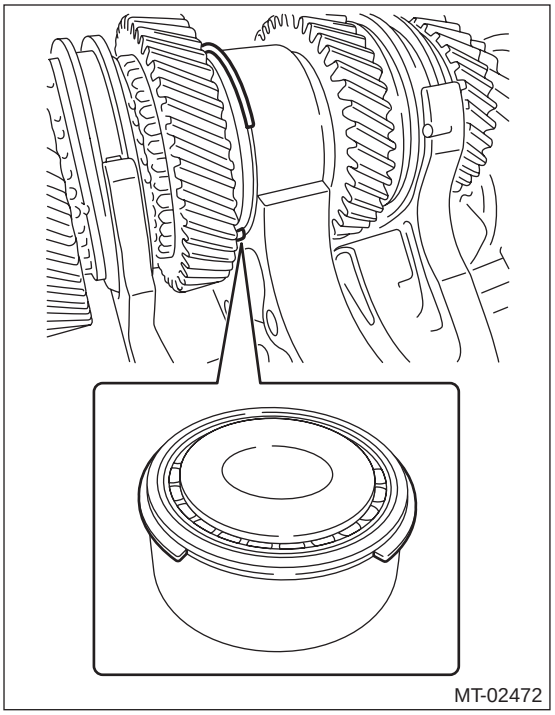
(A) Free status
(B) Set status
(C) Reverse idler sub gear
(D) Reverse idler gear

3) Fit the transmission case knock pin to the knock pin hole of the needle bearing outer race and install the main shaft assembly.

NOTE:
• Align the end face of the seal with surface (A) when installing the oil seal.



• Face the cutout portion of the snap ring for the double taper roller bearing to the drive pinion shaft assembly.

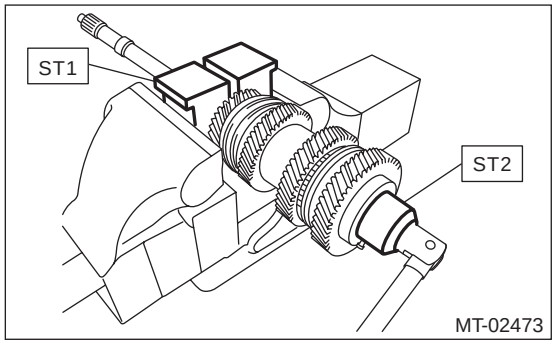


4) After installing the main shaft, check that the reverse idler gear and reverse idler sub gear are misaligned by two teeth and remove the wire.
5) Install the drive pinion shaft assembly. <Ref. to 6MT(TY75)-92, INSTALLATION, Drive Pinion Shaft Assembly.>
6) Check each shifter fork. <Ref. to 6MT(TY75)-140, INSPECTION, Shifter Fork and Rod.>
7) Select a main shaft rear plate. <Ref. to 6MT(TY75)-91, ADJUSTMENT, Main Shaft Assembly for Single-Range.>
8) Install the transmission case. <Ref. to 6MT(TY75)-80, INSTALLATION, Transmission Case.>

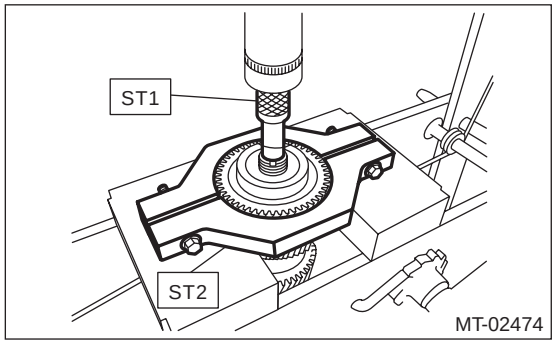
9) Install the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-53, INSTALLATION, Transfer Case and Extension Case Assembly.>
10) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-30, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

NOTE:
When replacing the coupling sleeve and synchronizer hub, replace them as a set. Because these must engage at the specified point, avoid disassembly as much as possible. If it is necessary to disassemble, mark the engaging points on the splines beforehand.
1) Put vinyl tape around the main shaft spline and pull out the oil seal and needle bearing by hand to prevent the oil seal from being damaged.
2) Flatten the tab of the lock nut.
3) Remove the lock nut and lock washer using ST1 and ST2.
ST1 498937000 TRANSMISSION HOLDER
ST2 499987003 SOCKET WRENCH (35)



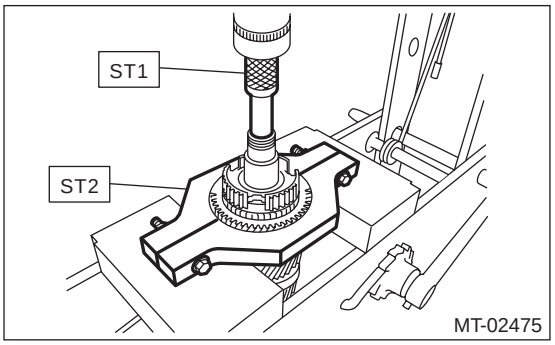
4) Remove the 6th drive gear and ball bearing using the ST1, ST2 and a press.
ST1 899864100 REMOVER
ST2 18722AA010 REMOVER



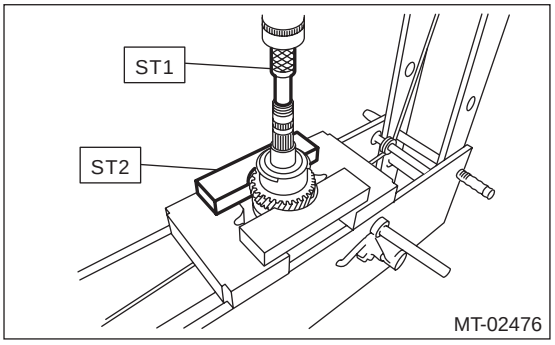
5) Remove the needle bearing, 6th baulk ring, 5th-6th shifting insert and 5th-6th coupling sleeve.

CAUTION:
When removing the 5th-6th coupling sleeve, be careful not to lose the 5th-6th shifting insert.

6) Remove the 5th drive gear, 6th needle bearing race, 5th baulk ring, 5th-6th synchronizer hub and needle bearing using the ST1, ST2 and a press.
ST1 899864100 REMOVER
ST2 18722AA010 REMOVER



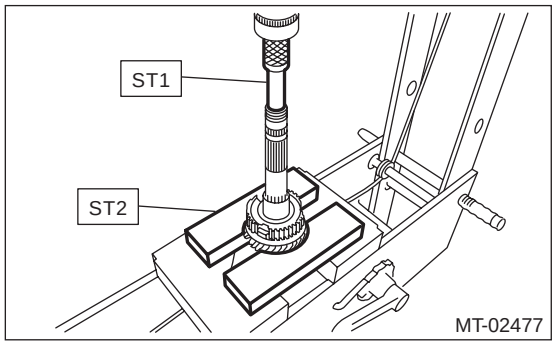
7) Shift the 3rd-4th coupling sleeve to the 3rd side.
8) Remove the 4th drive gear, 4th gear adjusting washer, double taper roller bearing and 5th needle bearing race using the ST1, ST2 and a press.
ST1 899864100 REMOVER
ST2 899714110 REMOVER



9) Remove the 4th baulk ring, needle bearing, 3rd-4th shifting insert and 3rd-4th coupling sleeve.

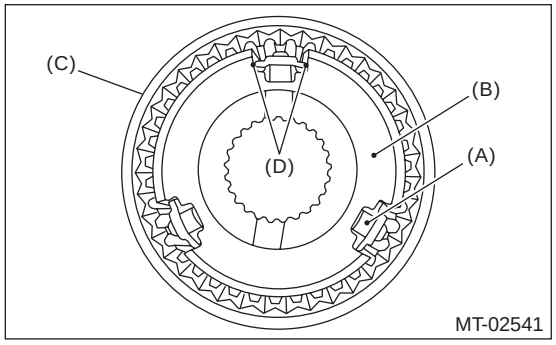
CAUTION:
When removing the 3rd-4th coupling sleeve, be careful not to lose the 3rd-4th shifting insert.

10) Remove the 3rd drive gear, 4th needle bearing race, 3rd-4th synchronizer hub, 3rd inner baulk ring, 3rd synchro cone, 3rd outer baulk ring and needle bearing using the ST1, ST2 and a press.
ST1 899864100 REMOVER
ST2 899714110 REMOVER



D: ASSEMBLY

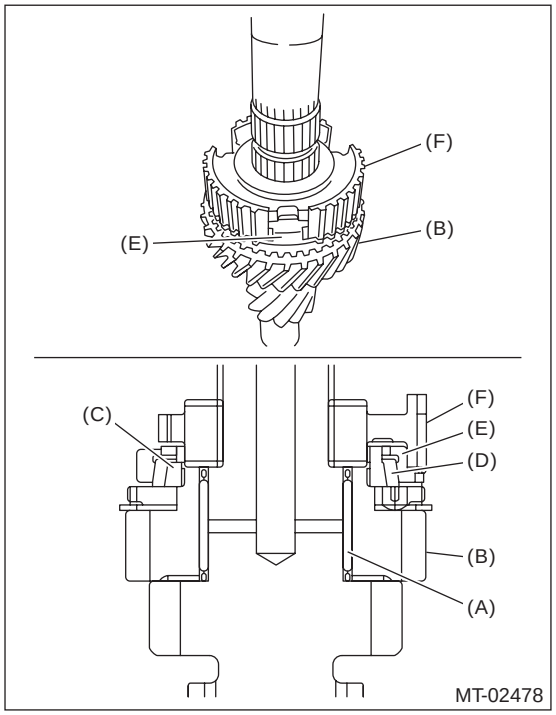
NOTE:
• Match the alignment marks, and install the coupling sleeve and then install the shifting insert.
• Make sure that there is no large clearance at both sides of the shifting insert after assembly.



(A) Shifting insert
(B) Synchronizer hub
(C) Coupling sleeve
(D) There is no large clearance at this part.

1) Install the needle bearing, 3rd drive gear, 3rd outer baulk ring, 3rd synchro cone, 3rd inner baulk ring and 3rd-4th synchronizer hub.

NOTE:
• Install the 3rd-4th synchronizer hub in the correct direction.
• Align the protrusion of the outer baulk ring into the groove of the 3rd-4th synchronizer hub.

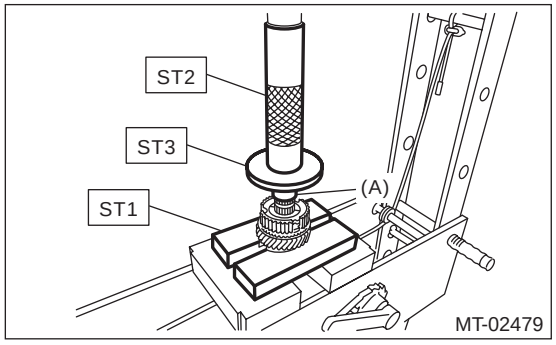


(A) 3rd needle bearing
(B) 3rd drive gear
(C) 3rd inner baulk ring
(D) 3rd synchro cone
(E) 3rd outer baulk ring
(F) 3rd-4th synchronizer hub

2) Install the 4th needle bearing race using ST1, ST2, ST3 and a press.

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

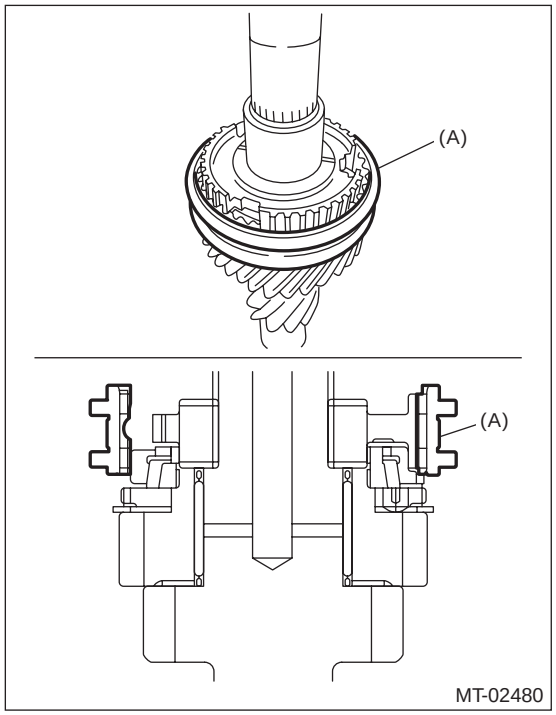
ST1 899714110 REMOVER
ST2 499877000 RACE 4-5 INSTALLER
ST3 398177700 INSTALLER



(A) 4th needle bearing race

3) Install the 3rd-4th coupling sleeve.

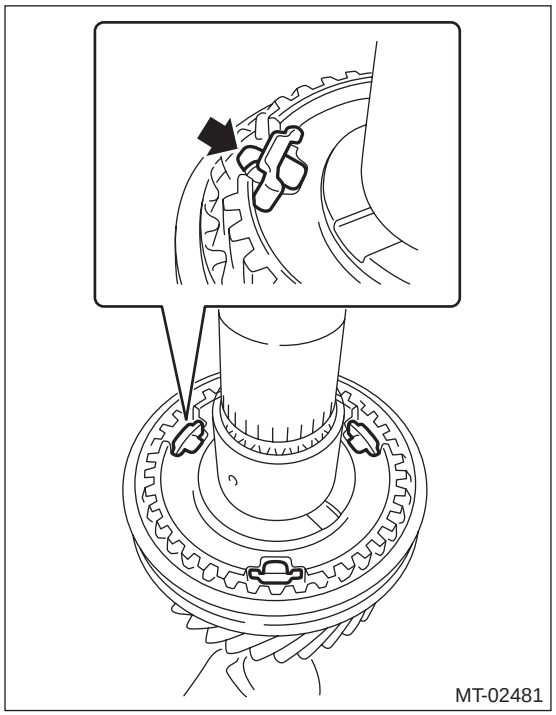
NOTE:
• Install the 3rd-4th coupling sleeve in the correct direction.
• Align the alignment marks of 3rd-4th coupling sleeve and the 3rd-4th synchronizer hub.



(A) 3rd-4th coupling sleeve

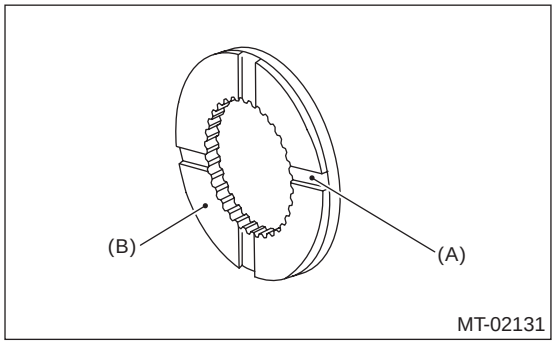
4) Install the 3rd-4th shifting insert.

NOTE:
Press in the ball part to install.

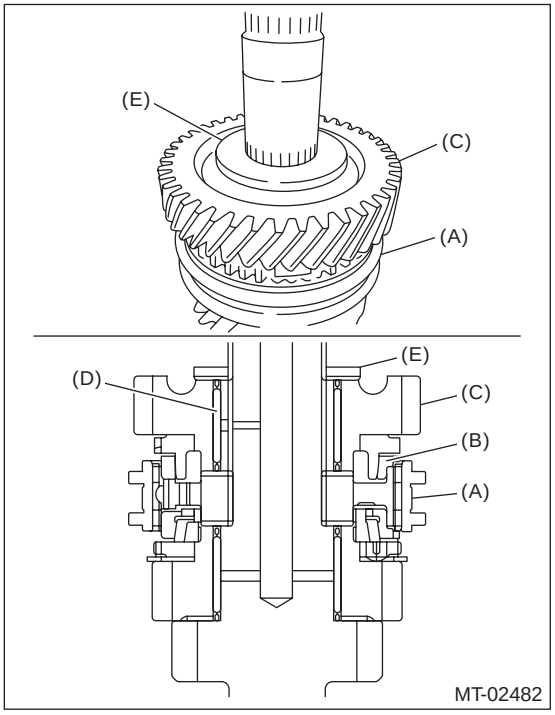


5) Install the 4th baulk ring, needle bearing, 4th drive gear and 4th gear adjusting washer.

NOTE:
• Align the protrusion of the 4th baulk ring into the groove of the 3rd-4th synchronizer hub.
• Install the 4th gear adjusting washer with the groove side facing the 4th drive gear.



(A) Groove
(B) Face this surface to the 4th gear side.

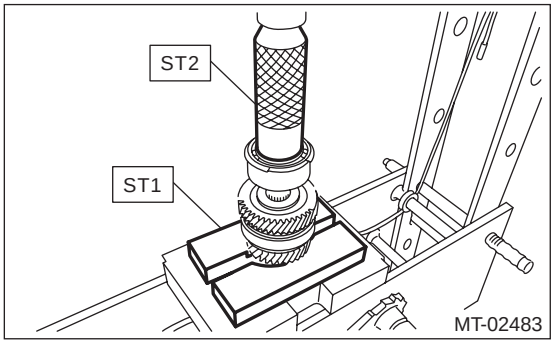


(A) 3rd-4th coupling sleeve
(B) 4th baulk ring
(C) 4th drive gear
(D) Needle bearing
(E) 4th gear adjusting washer

6) Install the double taper roller bearing using ST1, ST2 and a press.

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

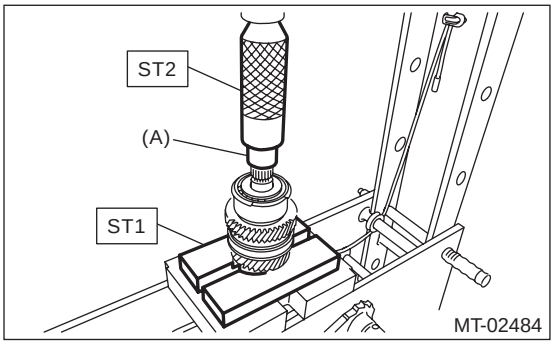
NOTE:
• Use a new double taper roller bearing.
• Install the double taper roller bearing with snap ring side facing the 5th drive gear side.
ST1 899714110 REMOVER
ST2 499877000 RACE 4-5 INSTALLER



7) Make sure that the double taper roller bearing turns smoothly.

8) Install the 5th needle bearing race using ST1, ST2 and press.

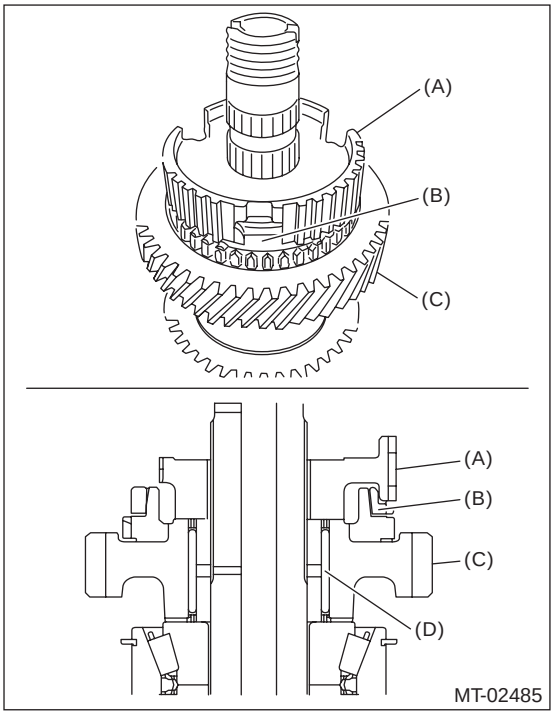
CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
ST1 899714110 REMOVER
ST2 499877000 RACE 4-5 INSTALLER



(A) 5th needle bearing race

9) Install the needle bearing, 5th drive gear, 5th baulk ring, and 5th-6th synchronizer hub.

NOTE:
• Align the protrusion part of the 5th baulk ring with the groove of the 5th-6th synchronizer hub.
• Install the 5th-6th synchronizer hub in the correct direction.



(A) 5th-6th synchronizer hub
(B) 5th baulk ring
(C) 5th drive gear
(D) 5th needle bearing (cage: black)

10) Install the 6th needle bearing race using ST1, ST2 and press.

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

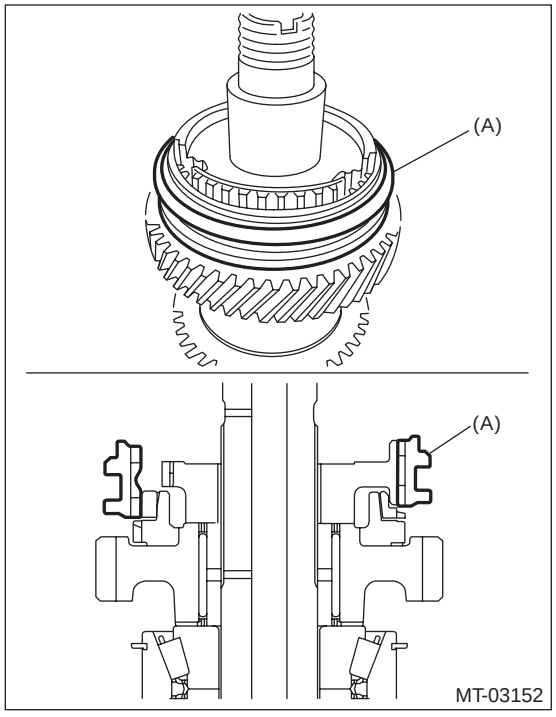
(A) 6th needle bearing race

11) Install the 5th-6th coupling sleeve.

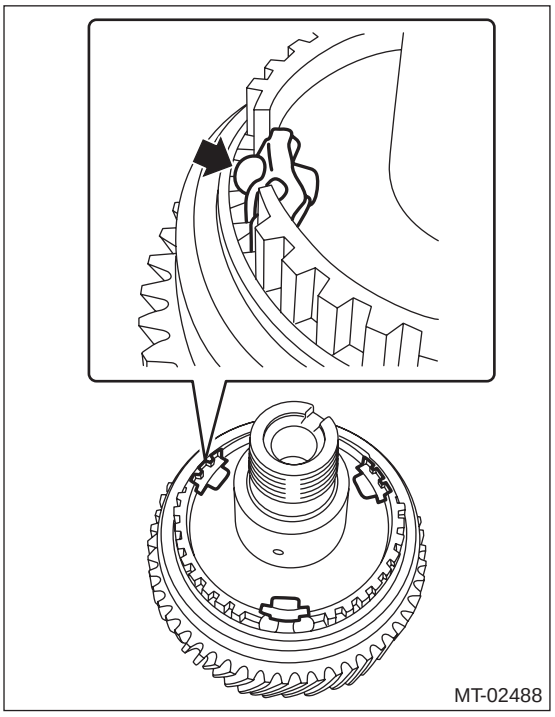
NOTE:
• Install the 5th-6th coupling sleeve in the correct direction.
• Align the alignment marks of 5th-6th coupling sleeve and the 5th-6th synchronizer hub.



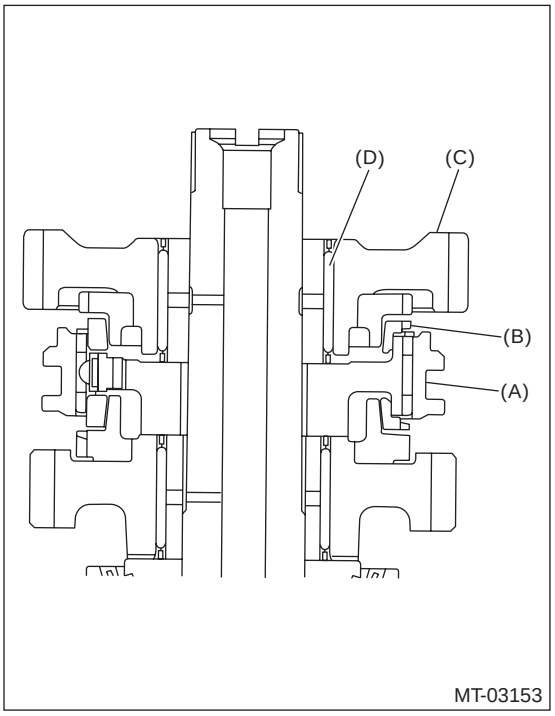
(A) 5th-6th coupling sleeve

12) Install the 5th-6th shifting insert.

NOTE:
Press in the ball part to install.



13) Install the 6th baulk ring, 6th drive gear and needle bearing.

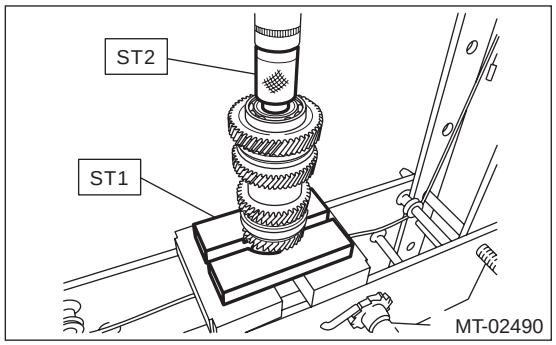


(A) 5th-6th coupling sleeve
(B) 6th baulk ring
(C) 6th drive gear
(D) 6th needle bearing (cage: silver)

14) Install the ball bearing using ST2 and a press.

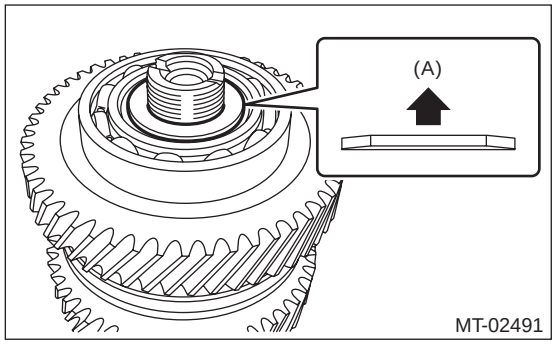
CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
Install the ball bearing with the side which does not have lock nut mounting dent facing 6th drive gear.
ST1 899714110 REMOVER
ST2 899754112 PRESS



15) Install the lock washer.

NOTE:
- Use a new lock washer.
- Install the lock washer in the correct direction.

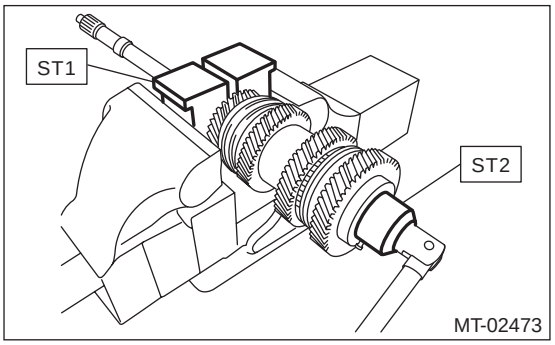


(A) Lock nut side

16) Install the lock nut using ST1 and ST2.

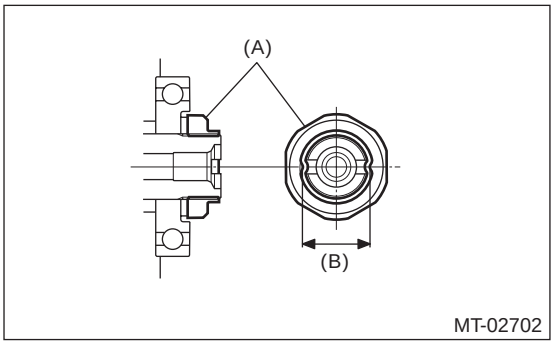
NOTE:
Use a new lock nut.

Tightening torque:
160 N·m (16.3 kgf-m, 118.0 ft-lb)
ST1 498937000 TRANSMISSION HOLDER
ST2 499987003 SOCKET WRENCH (35)



17) Crimp the lock nut at two locations so that the dimension (B) becomes 23.3 mm (0.92 in) or less.

CAUTION:
When crimping the lock nut, be careful not to crack it.



(A) Lock nut
(B) Outer dimension after crimping

E: INSPECTION

Disassembled parts should be washed with cleaning solvent first, then inspected.

1) Bearing

Replace the bearings in the following cases.

• When the bearing balls, outer races and inner races are broken or rusty.
• When the bearing is worn.
• When the bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.
• When bearing has other defects.

2) Bushing (each gear)

Replace the bushing in following cases.

• When the sliding surface is damaged or abnormally worn.
• When the inner wall is abnormally worn.

3) Gear

Replace gears in the following cases.

• Replace the gear with new part if its tooth surfaces are broken, damaged or excessively worn.
• Correct or replace if the cone that contacts the baulk ring is rough or damaged.
• Repair or replace if the inner surface or end face is damaged.

4) Baulk ring, synchro cone

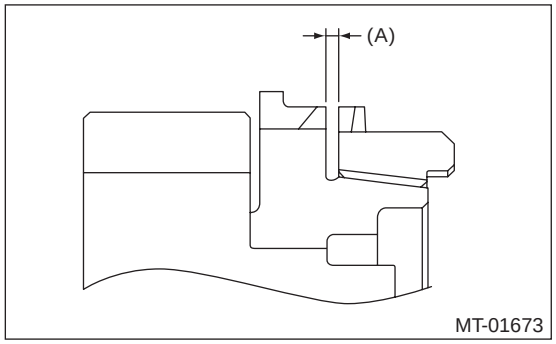
Replace the baulk ring and synchro cone in the following cases.

• When the inner surface or end face is damaged.
• When the baulk ring inner surface is abnormally or partially worn down.
• When the contact surface of the baulk ring insert section is cracked or abnormally worn.
• If the gap between the end faces of the baulk ring and the gear splined part is excessively small, check the clearance (A) while pressing the ring against the cone.

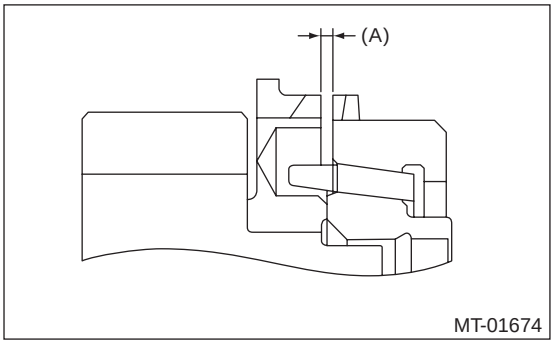
Clearance (A):

0.5 mm (0.020 in) or more

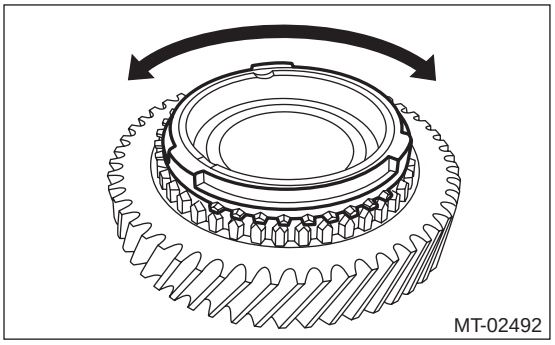
• Single cone



• Double cone



• Apply gear oil to the cone of the gear and while press-fitting the baulk ring, check there is no rotation in the circumferential direction.

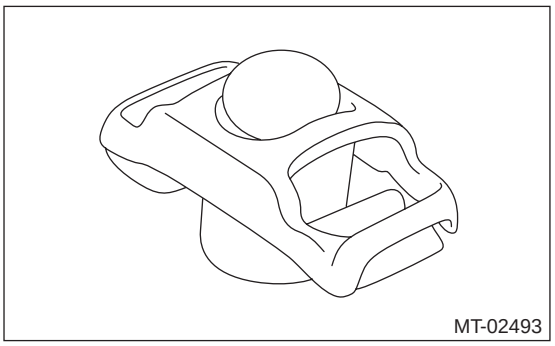


5) Coupling sleeve and synchronizer hub

• Check the slipping condition of the coupling sleeve.
• Check the splines on the coupling sleeve and synchronizer hub for wear.

6) Shifting insert

Replace the shifting insert if there is deformation, excessive wear on the ball section or any defectiveness.



7) Oil seal

Replace the oil seal if the lip is deformed, hardened, worn or defective in any way.

8) Gearshift mechanism

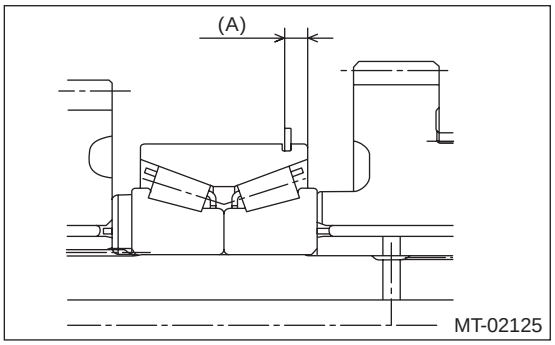
Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.

F: ADJUSTMENT

Selection of main shaft rear plate:
Measure the protrusion amount (A) of bearing from transmission main case surface, and select a suitable plate in the following table.

NOTE:
Before measuring, tap the end of main shaft with a plastic hammer lightly in order to make the clearance zero between the main case surface and moving flange of bearing.

Dimension (A) mm (in)	Part No.	Mark
4.00 — 4.13 (0.1575 — 0.1626)	32294AA041	1
3.87 — 4.00 (0.1524 — 0.1575)	32294AA051	2

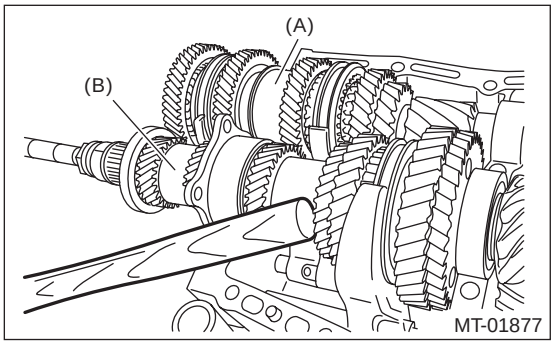


17.Drive Pinion Shaft Assembly

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-25, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-51, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. <Ref. to 6MT(TY75)-79, REMOVAL, Transmission Case.>
4) Remove the drive pinion shaft assembly.

NOTE:
Use a hammer handle, etc. to remove if too tight.

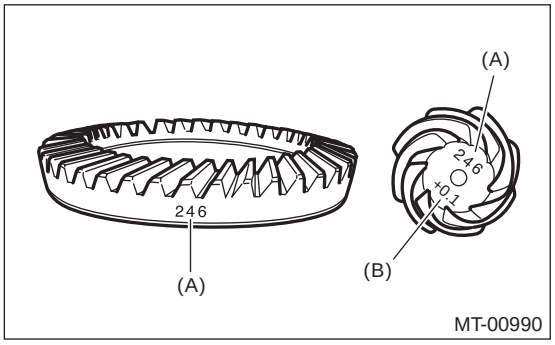


(A) Main shaft ASSY
(B) Drive pinion shaft ASSY

5) Remove the main shaft assembly.

B: INSTALLATION

1) Remove the front differential assembly.
2) Hypoid gear set match mark/No.: The number (A) on top of the drive pinion, and the number on the hypoid driven gear are set numbers for the two gears. Use a pair having the same numbers.
The figure (B) below shows a number for shim adjustment. If no number is shown, the value is zero.

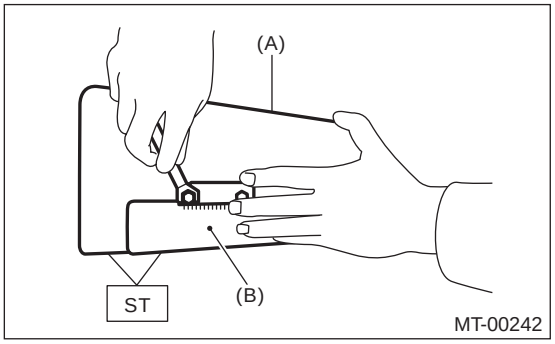


(A) Set number
(B) Number for shim adjustment

3) Place the drive pinion shaft assembly on transmission main case RH without shim and tighten the bearing mounting bolts.

4) Perform the adjustment of ST.
(1) Loosen the two bolts and adjust so that the scale indicates 0.5 correctly when the plate end and the scale end are on the same level.

ST 499917500 DRIVE PINION GAUGE ASSY



(A) Plate
(B) Scale

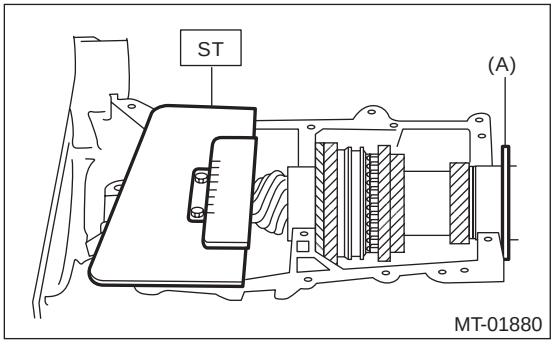
(2) Tighten the two bolts.

5) Position the ST by inserting the knock pin of ST into the knock hole of transmission case.

ST 499917500 DRIVE PINION GAUGE ASSY

6) Slide the drive pinion gauge scale with finger tip and read the value at the point where it matches with the end face of drive pinion.

ST 499917500 DRIVE PINION GAUGE ASSY



(A) Adjust the clearance to zero without shim.

7) The thickness of shim shall be determined by adding the value indicated on drive pinion to the value indicated on the ST. (Add if the number on drive pinion is prefixed by +, and subtract if the number is prefixed by –.)

8) Select one to three shims in the following table for the value determined as described above, and take the shim(s) whose thickness is closest to the said value.

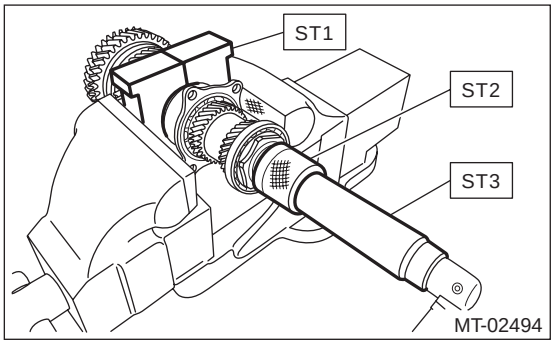
NOTE:
Install the shim with it's cut in facing the shifter fork & rod side.

Drive pinion shim	
Part No.	Thickness mm (in)
32295AA031	0.150 (0.0059)
32295AA041	0.175 (0.0069)
32295AA051	0.200 (0.0079)
32295AA061	0.225 (0.0089)
32295AA071	0.250 (0.0098)
32295AA081	0.275 (0.0108)
32295AA091	0.300 (0.0118)
32295AA101	0.500 (0.0197)

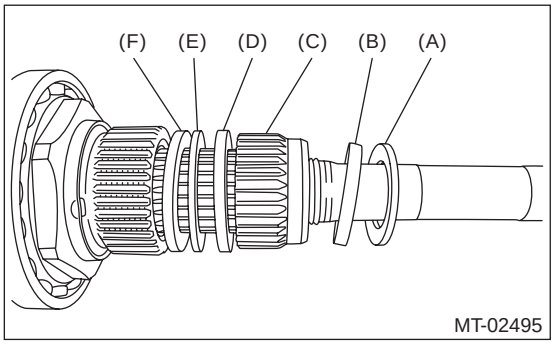
9) Install the front differential assembly. <Ref. to 6MT(TY75)-112, INSTALLATION, Front Differential Assembly.>
10) Fit the transmission case knock pin to the knock pin hole of the roller bearing and install the drive pinion shaft assembly.
11) Install the main shaft assembly. <Ref. to 6MT(TY75)-83, INSTALLATION, Main Shaft Assembly for Single-Range.>
12) Check each shifter fork. <Ref. to 6MT(TY75)-140, INSPECTION, Shifter Fork and Rod.>
13) Install the transmission case. <Ref. to 6MT(TY75)-80, INSTALLATION, Transmission Case.>
14) Install the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-53, INSTALLATION, Transfer Case and Extension Case Assembly.>
15) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-30, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

NOTE:
• Attach a cloth to the end of driven shaft (on the frictional side of the thrust needle bearing) to prevent damage during disassembly or reassembly.
• When replacing the coupling sleeve and synchronizer hub, replace them as a set. Because these must engage at the specified point, avoid disassembly as much as possible. If it is necessary to disassemble, mark the engaging points on the splines beforehand.
1) Flatten the tab of the lock nut.
2) Remove the lock nut using ST1, ST2 and ST3.
ST1 18680AA020 HOLDER
ST2 18667AA020 HOLDER
ST3 18662AA010 SOCKET WRENCH (27)

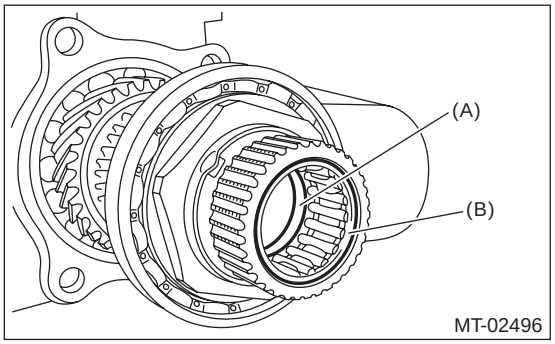


3) Remove the lock washer, washer, differential bevel gear sleeve, adjusting washer No. 1, thrust bearing and adjusting washer No. 2.



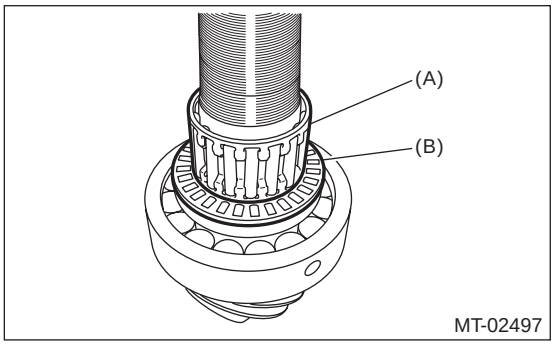
(A) Lock washer
(B) Washer
(C) Differential bevel gear sleeve
(D) Adjusting washer No. 1 (25 × 36 × t)
(E) Thrust bearing (25 × 36 × 2)
(F) Adjusting washer No. 2 (25 × 36 × t)

4) Draw out the drive pinion shaft from driven shaft.
5) Remove the needle bearing and drive pinion collar.



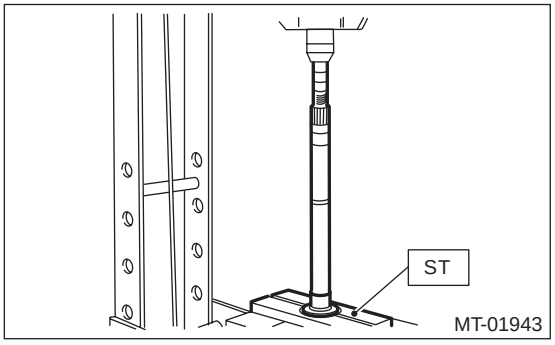
(A) Drive pinion collar
(B) Needle bearing (25 × 30 × 20)

6) Remove the needle bearing and thrust bearing.



(A) Needle bearing (30 × 37 × 23)
(B) Thrust bearing (33 × 50 × 3)

7) Remove the roller bearing and washer using ST and a press.
ST 498077000 REMOVER



8) Flatten the tab of the lock nut.

9) Remove the lock nut using ST1 and ST2.

ST1 899754112 PRESS
ST2 899714110 REMOVER

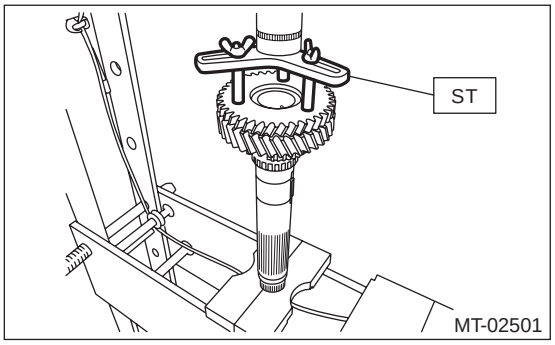
12) Remove the key.
13) Remove the 2nd driven gear, 2nd inner baulk ring, 2nd synchro cone, 2nd outer baulk ring, 1st-2nd shifting insert and 1st-2nd coupling sleeve.

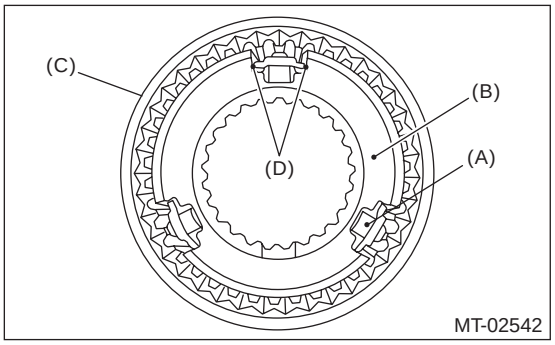
CAUTION:
When removing 1st-2nd coupling sleeve, be careful not to lose the 1st-2nd shifting insert.

14) Remove the 1st driven gear, 1st inner baulk ring, 1st synchro cone, 1st outer baulk ring, 2nd driven gear bushing and 1st-2nd synchronizer hub using ST and a press.
ST 18762AA001 COMPRESSOR SPECIAL TOOL



D: ASSEMBLY

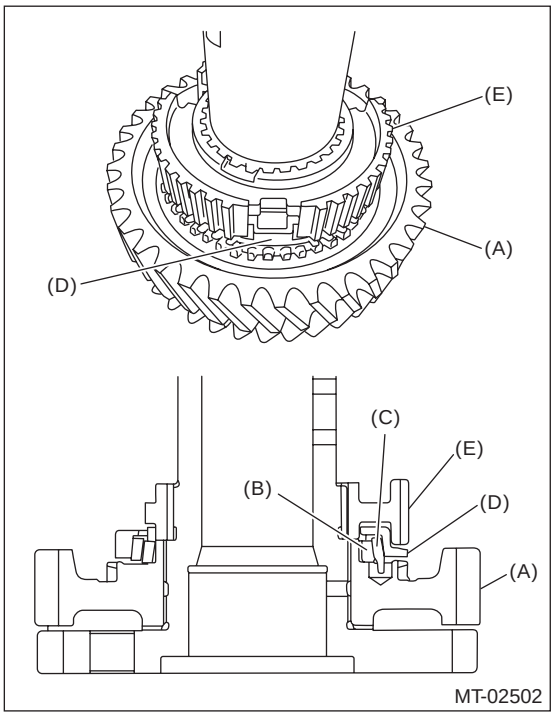
NOTE:
• Match the alignment marks, and install the coupling sleeve to the synchronizer hub and then install the shifting insert.
• Make sure that there is no large clearance at both sides of the shifting insert after assembly.



(A) Shifting insert
(B) Synchronizer hub
(C) Coupling sleeve
(D) There is no large clearance at this part.

1) Install the 1st driven gear, 1st inner baulk ring, 1st synchro cone, 1st outer baulk ring and 1st-2nd synchronizer hub.

NOTE:
- Install the 1st-2nd synchronizer hub in proper direction.
- Align the protrusion of the outer baulk ring into the groove of the 1st-2nd synchronizer hub.



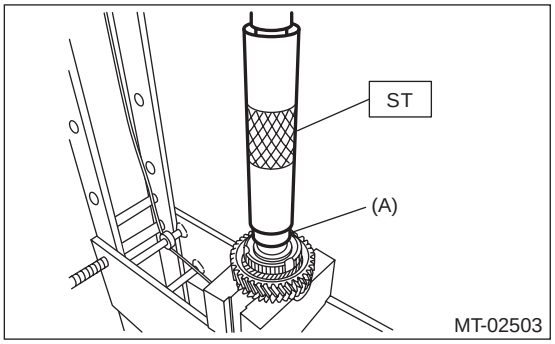
(A) 1st driven gear
(B) 1st inner baulk ring
(C) 1st synchro cone
(D) 1st outer baulk ring
(E) 1st-2nd synchronizer hub

2) Install the 2nd driven gear bushing using ST and a press.

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
- Attach a cloth to the end of the driven shaft to prevent damage.
- When press fitting, align the oil holes of the driven shaft and 2nd driven gear bushing.

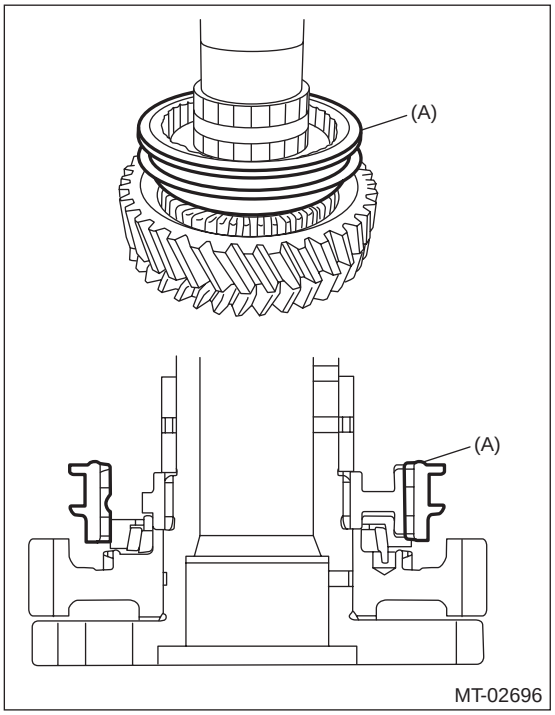
ST 18654AA000 INSTALLER



(A) 2nd driven gear bushing

3) Install the 1st-2nd coupling sleeve.

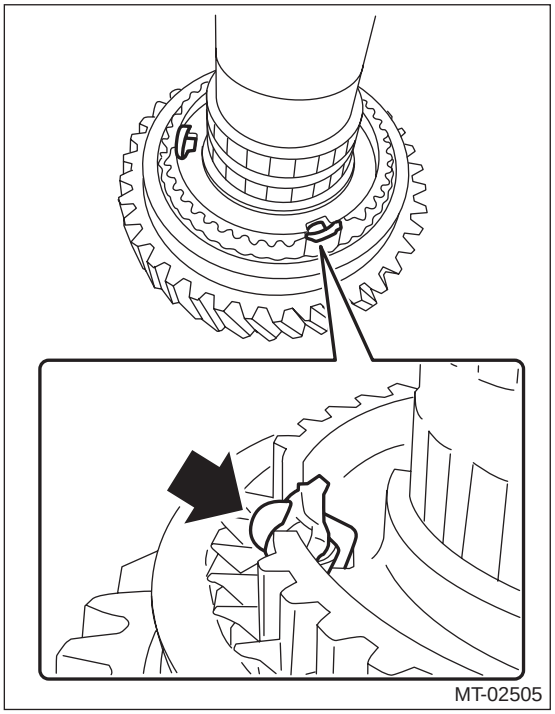
NOTE:
- Install the 1st-2nd coupling sleeve in proper direction.
- Align the alignment marks of 1st-2nd coupling sleeve and the 1st-2nd synchronizer hub.



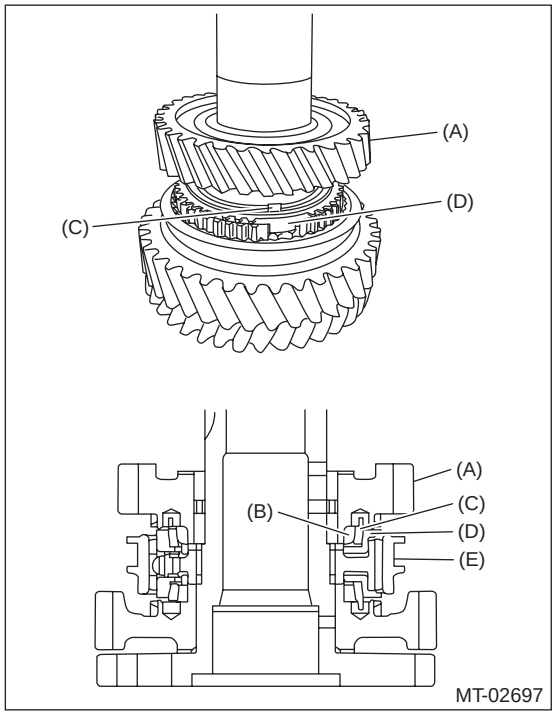
(A) 1st-2nd coupling sleeve

4) Install the 1st-2nd shifting insert.

NOTE:
Press in the ball part to install.



5) Install the 2nd outer baulk ring, 2nd synchro cone, 2nd inner baulk ring and 2nd driven gear.



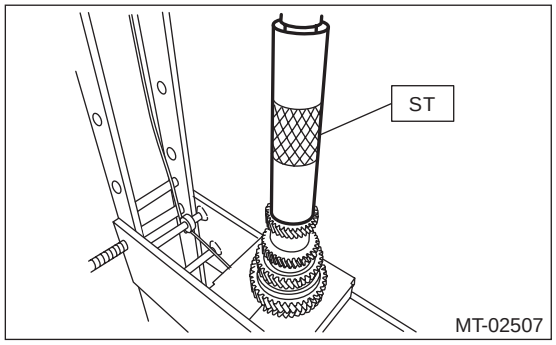
(A) 2nd driven gear
(B) 2nd inner baulk ring
(C) 2nd synchro cone
(D) 2nd outer baulk ring
(E) 1st-2nd coupling sleeve

6) Install the key to the driven shaft.
7) Using the ST and a press, install the 3rd-4th driven gear.

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
- Match the groove on the 3rd-4th driven gear to the key.
- Install the 3rd-4th driven gear in the proper direction.

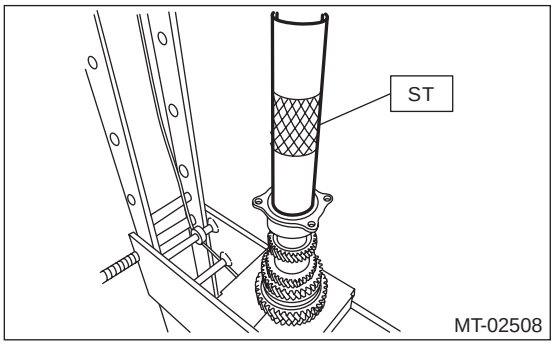
ST 499277200 INSTALLER



8) Using the ST and a press, install the double ball bearing.

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

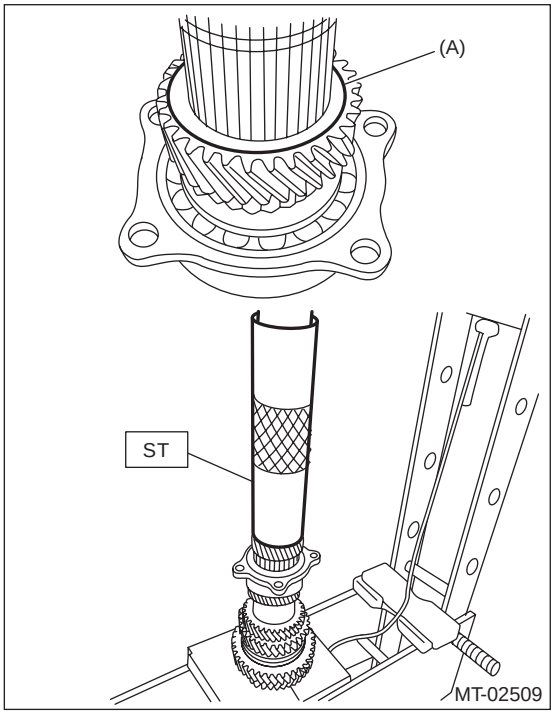
NOTE:
Use a new double ball bearing.
ST 499277200 INSTALLER



9) Install the 5th driven gear using ST and press.

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
Install the 5th driven gear with the groove side facing the 6th driven gear.
ST 499277200 INSTALLER



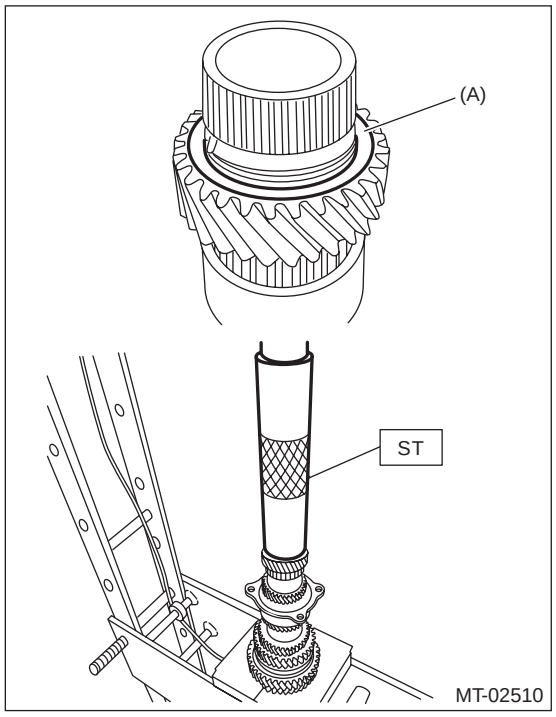
(A) Install with the groove side facing the 6th driven gear.

10) Install the drive pinion spacer to the driven shaft.

11) Install the 6th driven gear using ST and press.

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

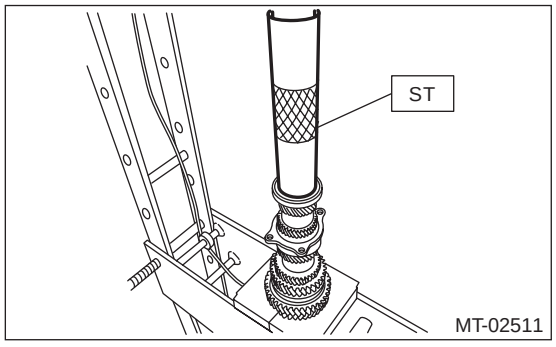
NOTE:
Install with the stepped side on the end surface of the 6th driven gear facing the rear ball bearing side.
ST 499277200 INSTALLER



(A) Install with the stepped side facing the rear ball bearing.

12) Using the ST and a press, install the ball bearing.

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
ST 499277200 INSTALLER



13) Install the lock nut using ST1 and ST2.

NOTE:
Use a new lock nut.

Tightening torque:
440 N·m (44.9 kgf-m, 324.5 ft-lb)

ST1 499987300 SOCKET WRENCH (50)

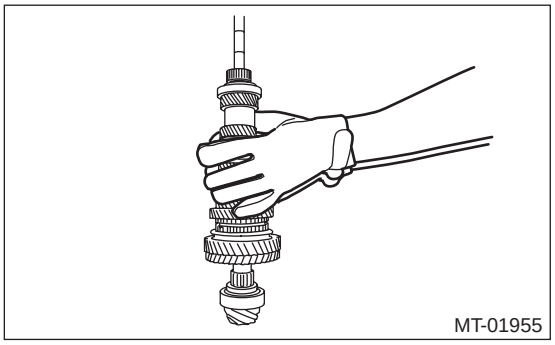
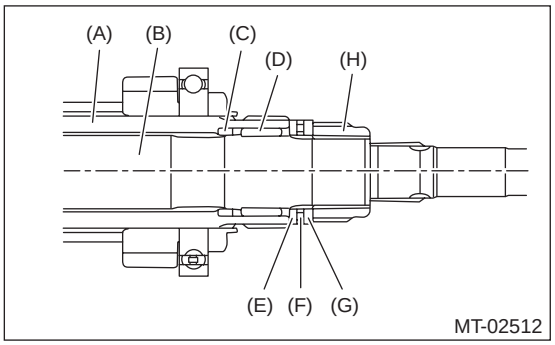
(A) Washer

18) Install the thrust bearing and needle bearing and install the driven shaft assembly.



19) Install the drive pinion collar, needle bearing, adjusting washer No. 2, thrust bearing, adjusting washer No. 1 and differential bevel gear sleeve in this order.

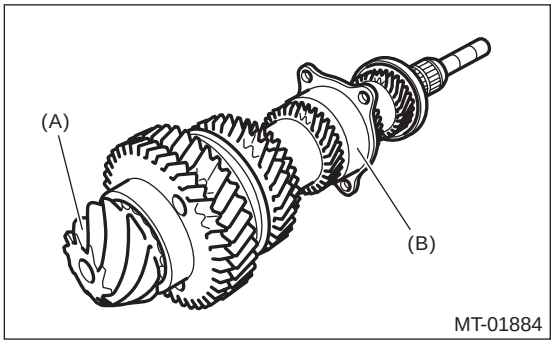


(A) Driven shaft
(B) Drive pinion shaft
(C) Drive pinion collar
(D) Needle bearing (25 × 30 × 20)
(E) Adjusting washer No. 2 (25 × 36 × t)
(F) Thrust bearing (25 × 36 × 2)
(G) Adjusting washer No. 1 (25 × 36 × t)
(H) Differential bevel gear sleeve

20) Adjust the thrust bearing preload. <Ref. to 6MT(TY75)-107, THRUST BEARING PRELOAD, ADJUSTMENT, Drive Pinion Shaft Assembly.>

E: INSPECTION

Disassembled parts should be washed with cleaning solvent first, then inspected.
1) Bearing
Replace the bearings in the following cases.
- When the bearing balls, outer races and inner races are broken or rusty.
- When the bearing is worn.
- When the bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.
- The double ball bearing of the drive pinion shaft should be checked for smooth rotation before the drive pinion shaft assembly is disassembled. In this case, because a preload is working on the bearing, its rotation feels like it is slightly dragging unlike other bearings.



(A) Drive pinion shaft
(B) Double ball bearing

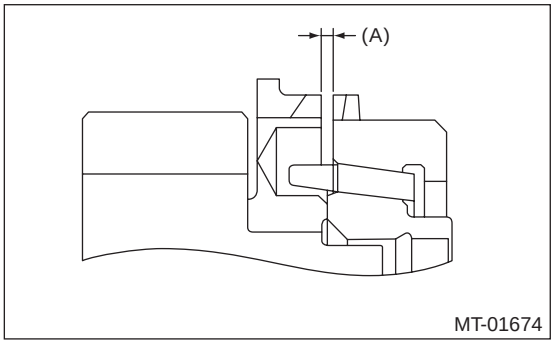
- When bearing has other defects.

2) Bushing (each gear)
Replace the bushing in following cases.
- When the sliding surface is damaged or abnormally worn.
- When the inner wall is abnormally worn.

3) Gear
Replace gears in the following cases.
- Replace the gear with new part if its tooth surfaces are broken, damaged or excessively worn.
- Correct or replace if the cone that contacts the baulk ring is rough or damaged.
- Correct or replace if the inner surface or end face is damaged.

4) Baulk ring, synchro cone
Replace the baulk ring and synchro cone in the following cases.
- When the inner surface and end face are damaged.
- When the baulk ring inner surface is abnormally or partially worn down.
- If the gap between the end faces of the baulk ring and the gear splined part is excessively small, check the clearance (A) while pressing the ring against the cone.

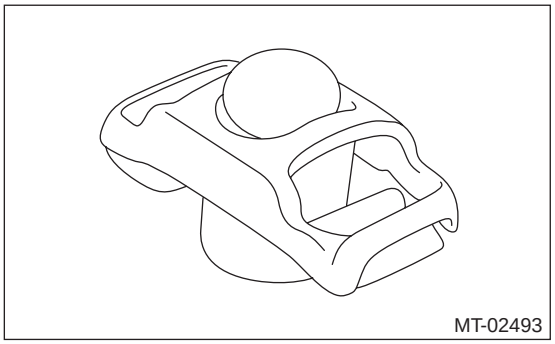
Clearance (A):
0.5 mm (0.020 in) or more



- When the contact surface of the baulk ring insert section is damaged or abnormally worn.
- Apply gear oil to the cone of the gear and while press-fitting the baulk ring, check there is no rotation in the circumferential direction.

5) Coupling sleeve and synchronizer hub
- Check the slipping condition of the coupling sleeve.
- Check the splines on the coupling sleeve and synchronizer hub for wear.

6) Shifting insert
Replace the shifting insert if there is deformation, excessive wear on the ball section or any defectiveness.

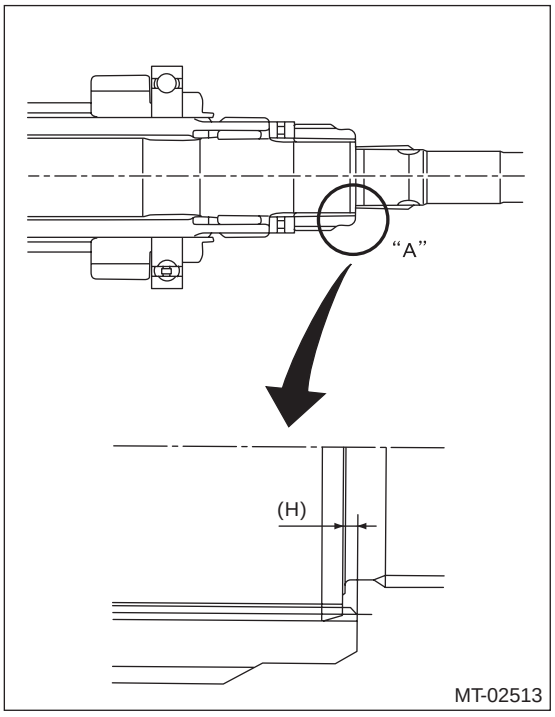


MT-02493

F: ADJUSTMENT

1. THRUST BEARING PRELOAD

1) Select a suitable adjusting washer No. 1 so that dimension (H) will be zero in a visual check. Position the washer (20 × 31 × 4) and lock washer (20 × 31 × 2.3) and attach the lock nut (20 × 11).



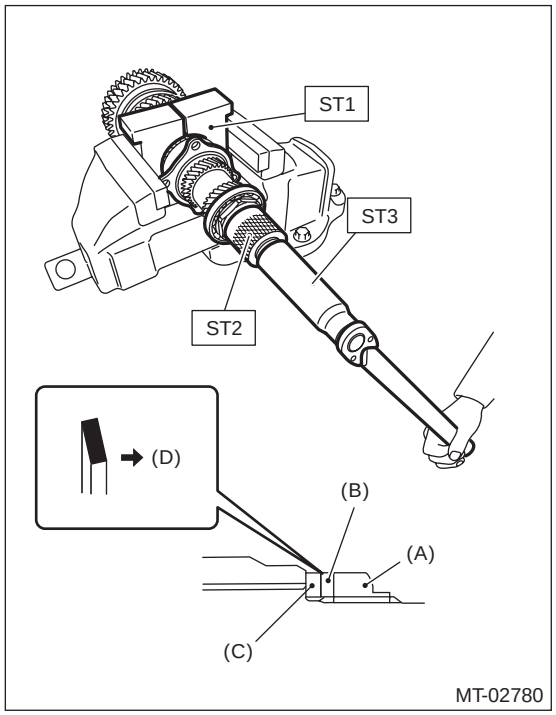
MT-02513

2) Install the lock nut with ST1, ST2 and ST3.

NOTE:
- Use new lock nuts and lock washers.
- Install the lock washer in the correct direction.

Tightening torque:
126 N·m (12.8 kgf-m, 92.9 ft-lb)

ST1 18680AA020 HOLDER
ST2 18667AA020 HOLDER
ST3 18662AA010 SOCKET (27)

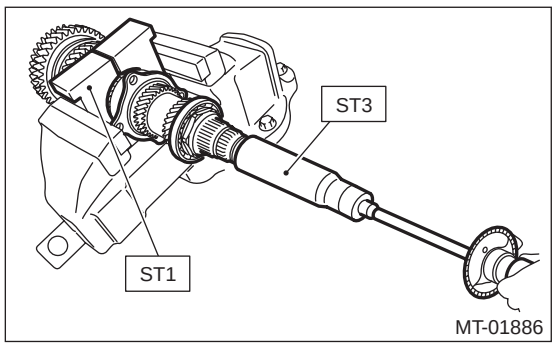


(A) Lock nut
(B) Lock washer
(C) Washer
(D) Lock nut side

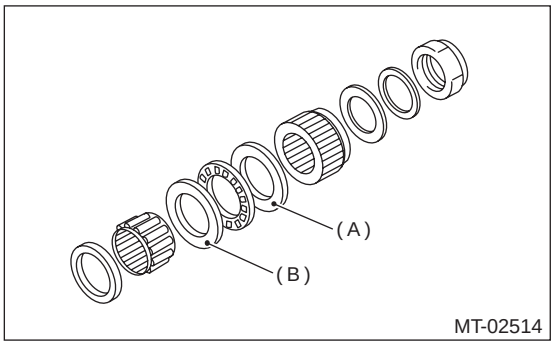
3) After removing the ST2 used in step 2), measure the starting torque using torque driver.

Starting torque:
0.3 — 0.8 N·m (0.03 — 0.08 kgf-m, 0.2 — 0.6 ft-lb)

ST1 18680AA020 HOLDER
ST3 18662AA010 SOCKET (27)



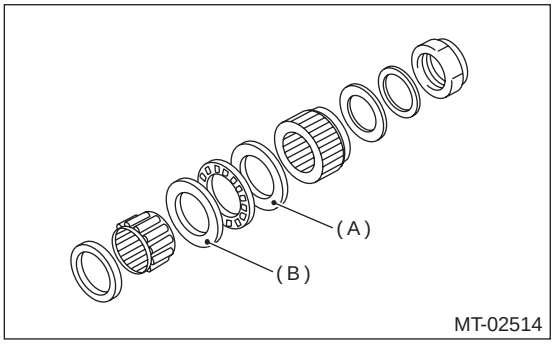
4) If the starting torque is not within the specified limit, select new adjusting washer No. 1 and recheck starting torque.



(A) Adjusting washer No. 1
(B) Adjusting washer No. 2

Adjusting washer No. 1	
Part No.	Thickness mm (in)
803025071	2.925 (0.1152)
803025072	2.950 (0.1161)
803025073	2.975 (0.1171)
803025074	3.000 (0.1181)
803025075	3.025 (0.1191)
803025076	3.050 (0.1201)
803025077	3.075 (0.1211)

5) If the specified starting torque cannot be obtained by the selection of adjusting washer No. 1, select adjusting washer No. 2 from the list below. Repeat steps 1) through 4) to adjust starting torque.



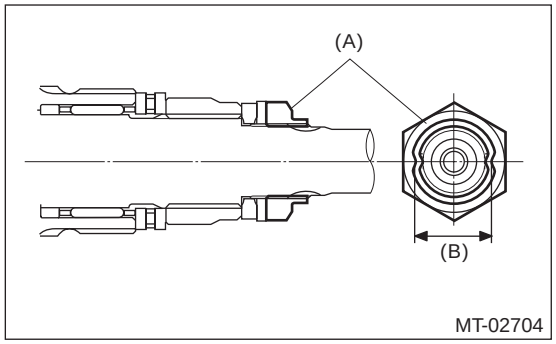
(A) Adjusting washer No. 1
(B) Adjusting washer No. 2

Starting torque	Dimension H	Adjusting washer No. 2
Low	Small	Select thicker one.
High	Large	Select thinner one.

Adjusting washer No. 2	
Part No.	Thickness mm (in)
803025070	2.850 (0.1122)
803025074	3.000 (0.1181)
803025078	3.150 (0.1240)

6) Recheck that the starting torque is within the specified range, and crimp the lock nut at two locations so that the dimension (B) becomes 20.1 mm (0.79 in) or less.

CAUTION:
When crimping the lock nut, be careful not to crack it.



(A) Lock nut
(B) Outer dimension after crimping

18.Front Differential Assembly

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-25, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-51, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. <Ref. to 6MT(TY75)-79, REMOVAL, Transmission Case.>
4) Remove the drive pinion shaft assembly. <Ref. to 6MT(TY75)-92, REMOVAL, Drive Pinion Shaft Assembly.>
5) Remove the main shaft assembly. <Ref. to 6MT(TY75)-83, REMOVAL, Main Shaft Assembly for Single-Range.>
6) Remove the front differential assembly.

NOTE:
- Do not confuse the right and left taper roller bearing outer races.
- Be careful not to damage the oil seal of differential side retainer.

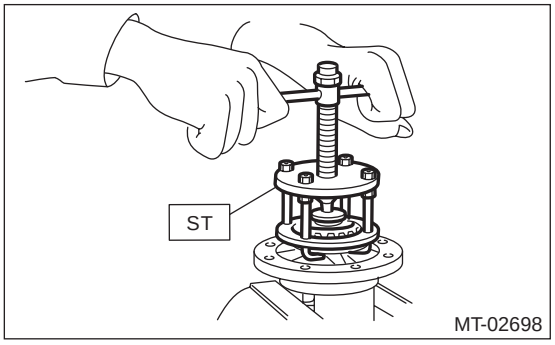
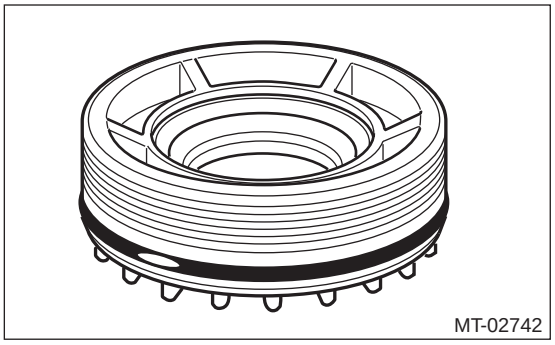
4) Using the ST, remove the taper roller bearing inner race.
ST 899524100 PULLER SET



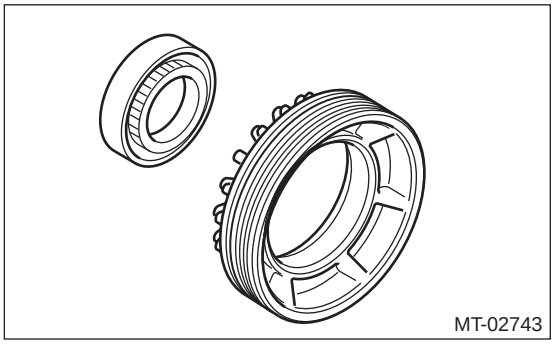
2. SIDE RETAINER

1) Remove the O-rings.



2) Remove the oil seal.

NOTE:
Remove using the flat tip screwdriver.

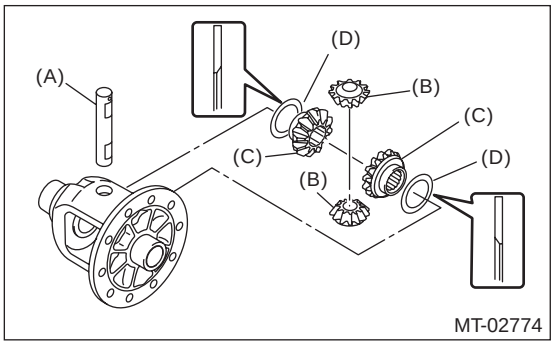


D: ASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

1) Install the differential bevel gear and differential bevel pinion together with adjusting washer, and insert the pinion shaft.

NOTE:
Face the chamfered side of adjusting washer toward differential bevel gear.

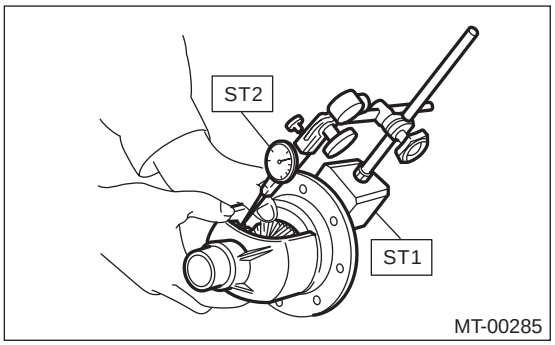


(A) Pinion shaft
(B) Differential bevel pinion
(C) Differential bevel gear
(D) Adjusting washer

2) Measure the backlash between the differential bevel gear and differential bevel pinion. Adjust the backlash if not within specified limit. <Ref. to 6MT(TY75)-118, DIFFERENTIAL BEVEL PINION GEAR BACKLASH, INSPECTION, Front Differential Assembly.>

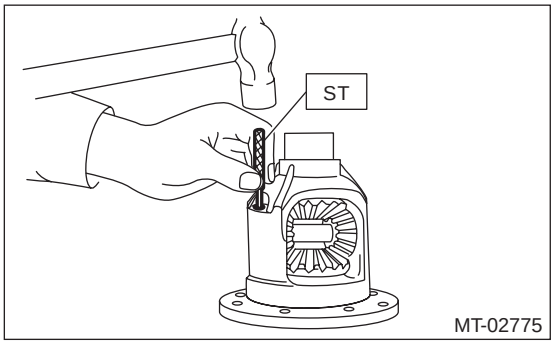
NOTE:
Be sure the differential bevel pinion gear teeth contact adjacent gear teeth during measurement.

Standard backlash
0.13 — 0.18 mm (0.0051 — 0.0071 in)
ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE



3) Align the pinion shaft pin hole with the differential case pin hole, and drive the straight pin into the holes from the hypoid driven gear side using the ST.

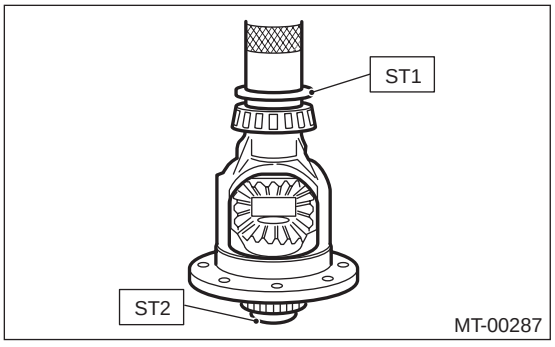
NOTE:
Use a new straight pin. After driving the straight pin, crimp the area around the hole in order to prevent the straight pin from coming out.
ST 899904100 STRAIGHT PIN REMOVER



4) Attach the taper roller bearing inner race.

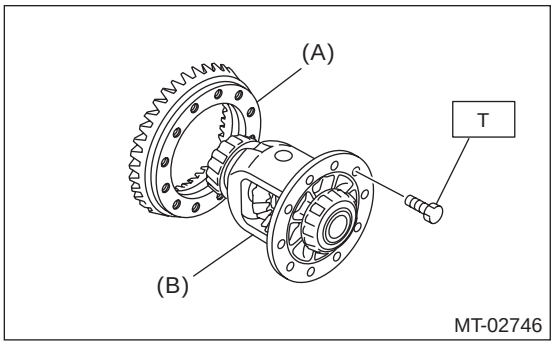
CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
Be careful when handling because the taper roller bearing and the outer race are used as a set.
ST1 499277100 BUSHING 1-2 INSTALLER
ST2 398497701 ADAPTER



5) Install the hypoid driven gear using twelve bolts.

Tightening torque:
T: 62 N·m (6.3 kgf-m, 45.7 ft-lb)



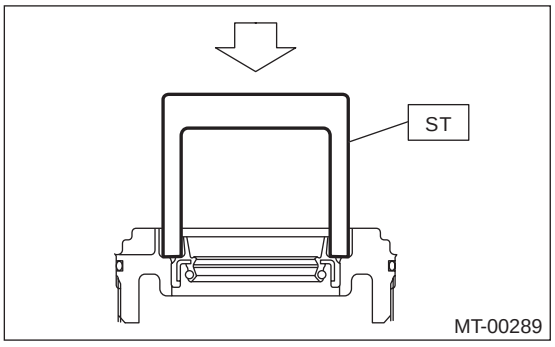
(A) Hypoid driven gear
(B) Differential case

2. DIFFERENTIAL SIDE RETAINER

1) Using the ST, install the oil seal by lightly tapping with a plastic hammer.

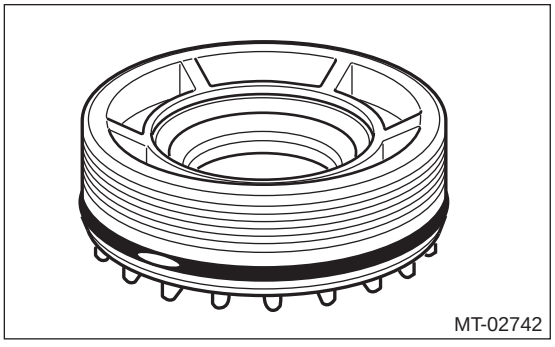
NOTE:
- Use a new oil seal.
- Apply transmission gear oil to the oil seal lips, and install the oil seal while being careful not to deform the lip.
- Check the identification marks (L, R), and attach the oil seals RH and LH.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER



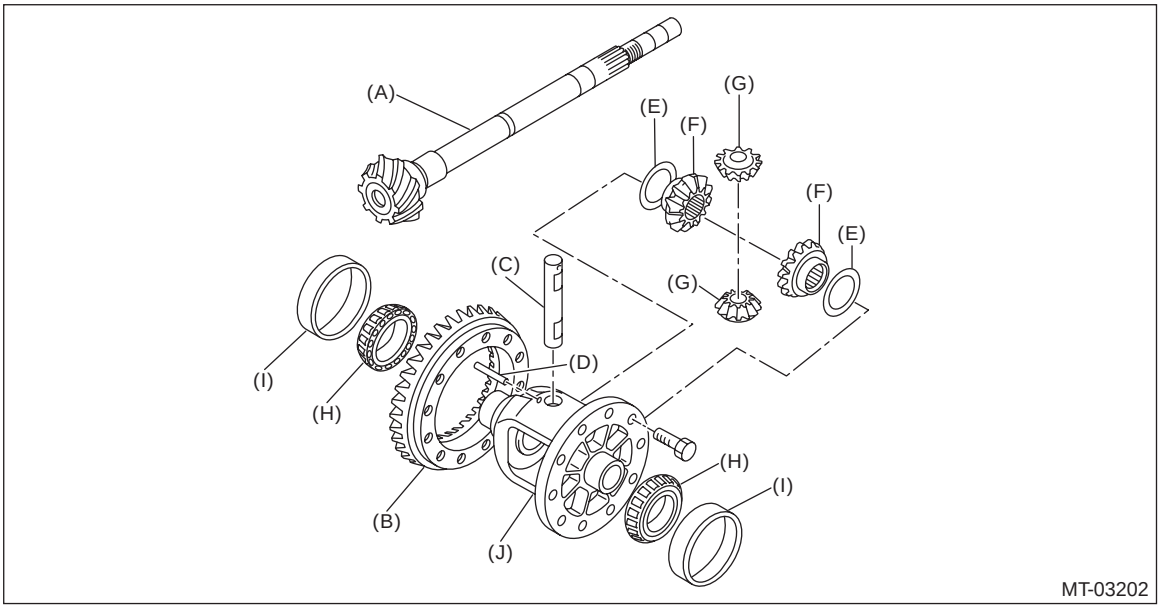
2) Install the O-rings.

NOTE:
- Use new O-rings.
- Apply gear oil to O-ring.
- Do not stretch or damage the O-ring.
- Install the O-ring after hypoid driven gear backlash adjustment and completion of tooth contact inspection.



E: INSPECTION

Repair or replace the differential gear in the following cases:
• When the hypoid driven gear and drive pinion shaft tooth surfaces are damaged, excessively worn, or seized.
• When the roller bearing on the drive pinion shaft has a worn or damaged roller path.
• When there is damage, wear or seizure of the differential bevel pinion, differential bevel gear, adjusting washer, pinion shaft or straight pin.
• When the differential case sliding surfaces are worn or damaged.



(A) Drive pinion shaft
(B) Hypoid driven gear
(C) Pinion shaft
(D) Straight pin
(E) Adjusting washer
(F) Differential bevel gear
(G) Differential bevel pinion
(H) Taper roller bearing inner race
(I) Taper roller bearing outer race
(J) Differential case

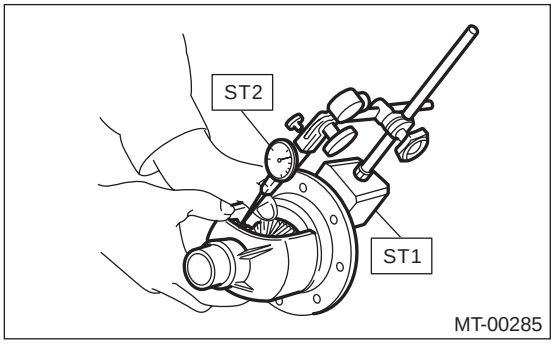
1. DIFFERENTIAL BEVEL PINION GEAR BACKLASH

Measure the backlash between the differential bevel gear and differential bevel pinion. Adjust the backlash if not within specified limit. <Ref. to 6MT(TY75)-119, ADJUSTMENT, Front Differential Assembly.>

Standard backlash

0.13 — 0.18 mm (0.0051 — 0.0071 in)

ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE



2. HYPOID DRIVEN GEAR BACKLASH

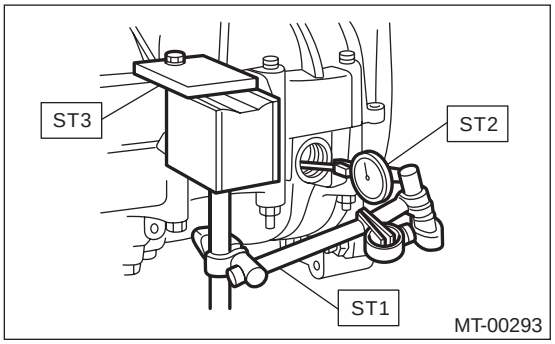
1) Set the ST1, ST2 and ST3. Insert the dial gauge probe through drain plug hole so that the probe comes in contact with the tooth surface on the right corner, and check the backlash.
ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE
ST3 498255400 PLATE
2) Install SUBARU genuine axle shafts to both sides, rotate in the inversion direction so that the gauge contacts the tooth surface, and read the dial gauge.

NOTE:
If the backlash is outside the specified range, adjust it by turning the differential side retainers on the left and right side.

Backlash

0.13 — 0.18 mm (0.0051 — 0.0071 in)

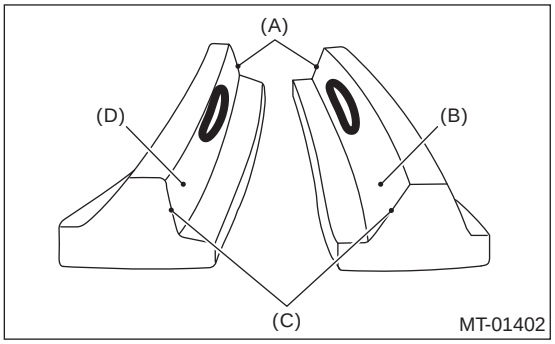
Part No. 38415AA100 Axle shaft



3. TOOTH CONTACT OF HYPOID DRIVEN GEAR

Check tooth contact of hypoid driven gear as follows: Apply a thin uniform coat of red lead on both teeth surfaces on 3 or 4 teeth of the hypoid gear. Move the hypoid driven gear back and forth by turning the transmission main shaft until a definite contact pattern is developed on the hypoid driven gear, and judge whether face contact is correct. When the contact pattern is not correct, adjust. <Ref. to 6MT(TY75)-119, ADJUSTMENT, Front Differential Assembly.>

- Tooth contact is correct.



(A) Toe
(B) Coast side
(C) Heel
(D) Drive side

F: ADJUSTMENT

1. DIFFERENTIAL BEVEL PINION GEAR BACKLASH

1) Disassemble the front differential assembly. <Ref. to 6MT(TY75)-112, DISASSEMBLY, Front Differential Assembly.>
2) Select the adjusting washer from the table and install.

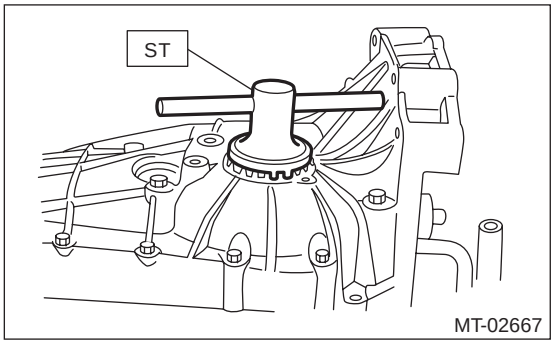
Adjusting washer	
Part No.	Thickness mm (in)
803038021	0.925 — 0.950 (0.0364 — 0.0374)
803038022	0.975 — 1.000 (0.0384 — 0.0394)
803038023	1.025 — 1.050 (0.0404 — 0.0413)

3) Adjust until the standard value is obtained.

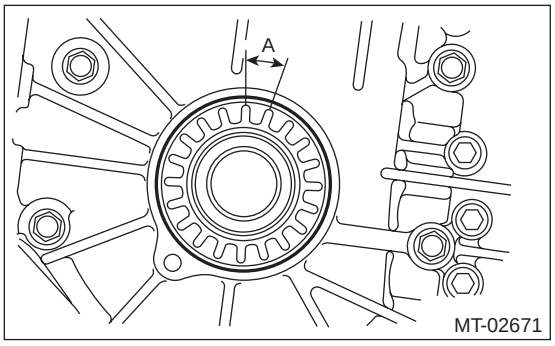
Backlash:
Standard
0.13 — 0.18 mm (0.0051 — 0.0071 in)

2. HYPOID DRIVEN GEAR BACKLASH

Adjust the backlash by turning the differential side retainers on the left and right side.
ST 18630AA010 WRENCH COMPL RETAINER



NOTE:
Each time the differential side retainer rotates by one notch (A), the backlash changes by 0.05 mm (0.0020 in).

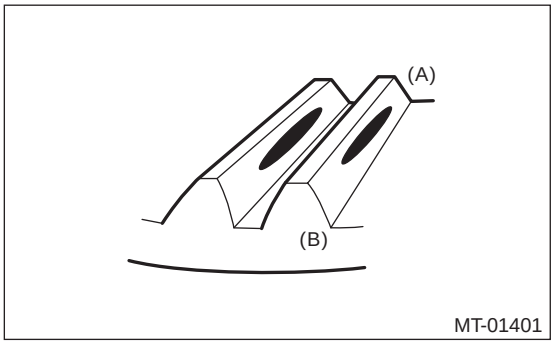


3. TOOTH CONTACT OF HYPOID DRIVEN GEAR

1) Adjust until correct teeth contact is obtained.
2) Check tooth contact, and perform the adjustment as follows.

- Correct tooth contact

Check item: Tooth contact surface is slightly shifted toward the toe side under a no-load condition. (When driving, it moves towards the heel side.)

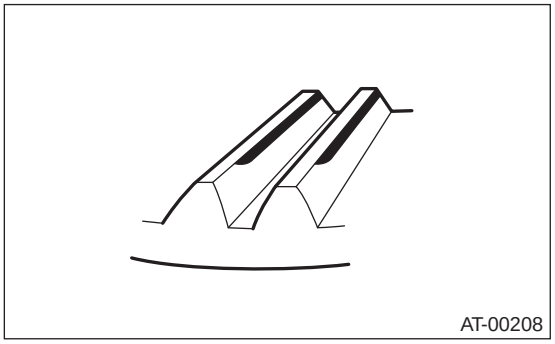


(A) Toe side
(B) Heel side

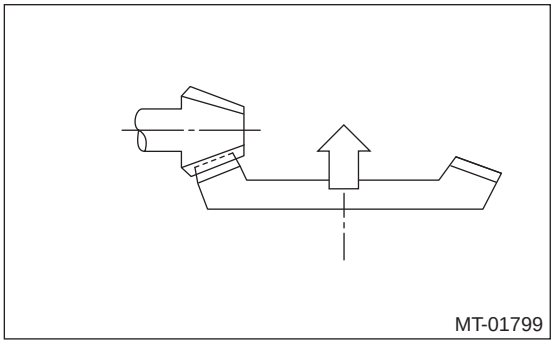
- Face contact

Check item: Backlash is too large.

Contact pattern



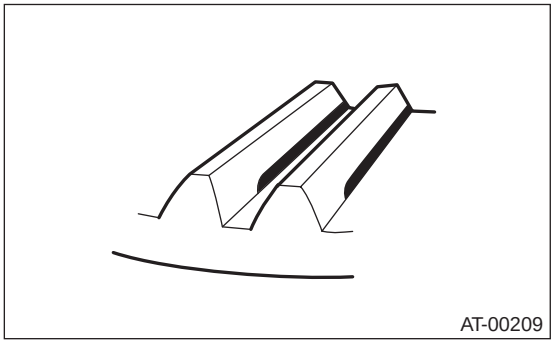
Corrective action: Tighten the differential side retainer to move the hypoid driven gear closer to the drive pinion shaft.



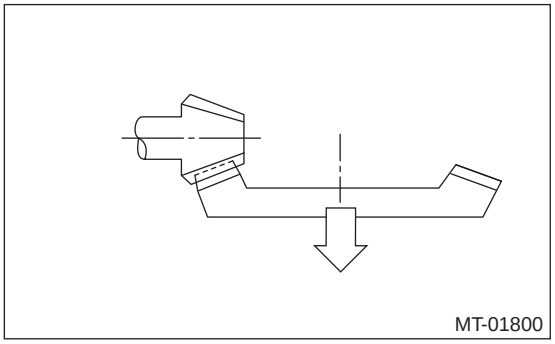
- Flank contact

Check item: Backlash is too small.

Contact pattern



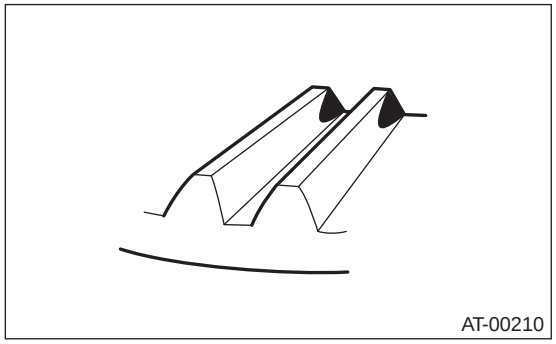
Corrective action: Loosen the differential side retainer to move the hypoid driven gear away from the drive pinion shaft.



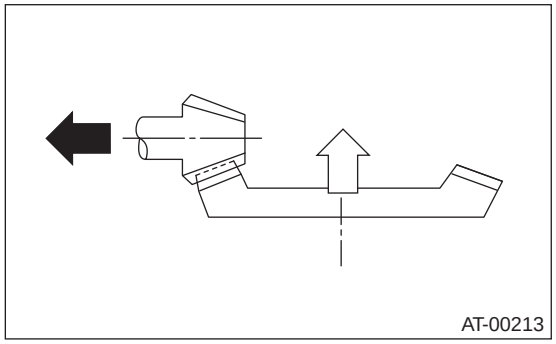
- Toe contact (inside contact)

Check item: Teeth contact area is too small.

Contact pattern



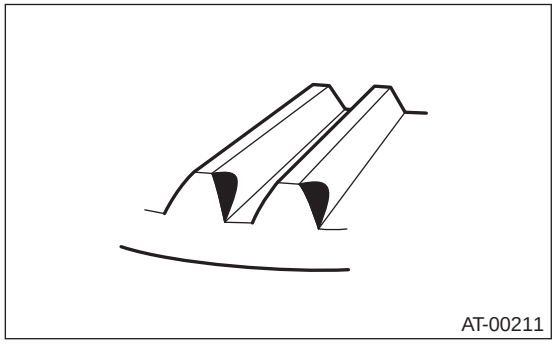
Corrective action: Increase the thickness of drive pinion shim and tighten the differential side retainer to move the hypoid driven gear closer to the drive pinion shaft according to the procedure for bringing drive pinion shaft away from hypoid driven gear.



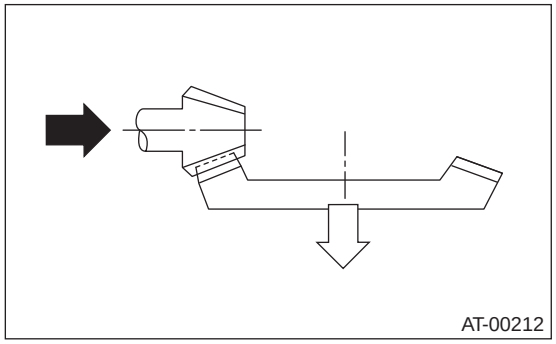
- Heel contact (outside end contact)

Check item: Teeth contact area is too small.

Contact pattern



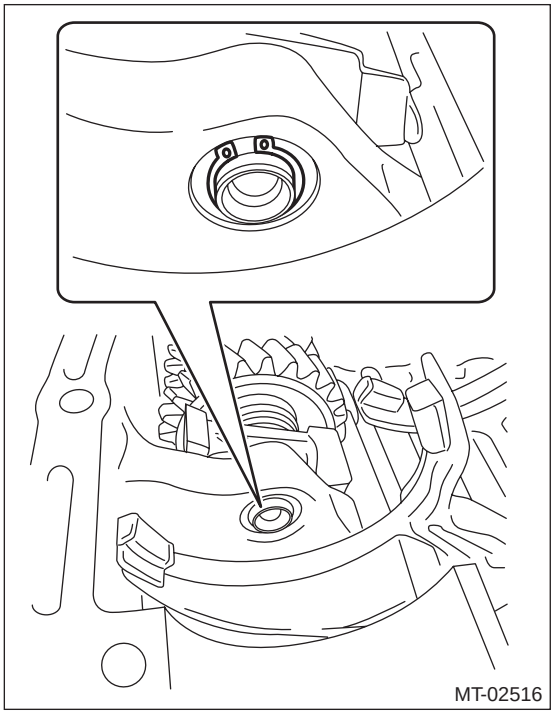
Corrective action: Reduce thickness of the drive pinion shim according to the procedures for moving the drive pinion shaft closer to hypoid driven gear. Also loosen the differential side retainer to move the hypoid driven gear away from the drive pinion shaft.



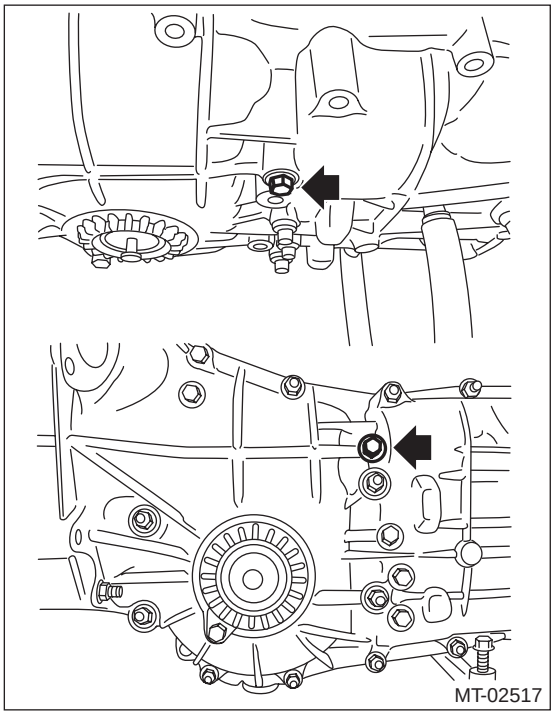
19.Reverse Idler Gear

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-25, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-45, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-51, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the transmission case. <Ref. to 6MT(TY75)-79, REMOVAL, Transmission Case.>
5) Remove the drive pinion shaft assembly. <Ref. to 6MT(TY75)-92, REMOVAL, Drive Pinion Shaft Assembly.>
6) Remove the main shaft assembly. <Ref. to 6MT(TY75)-83, REMOVAL, Main Shaft Assembly for Single-Range.>
7) Remove the front differential assembly. <Ref. to 6MT(TY75)-111, REMOVAL, Front Differential Assembly.>
8) Shift into 4th.
9) Remove the snap ring.

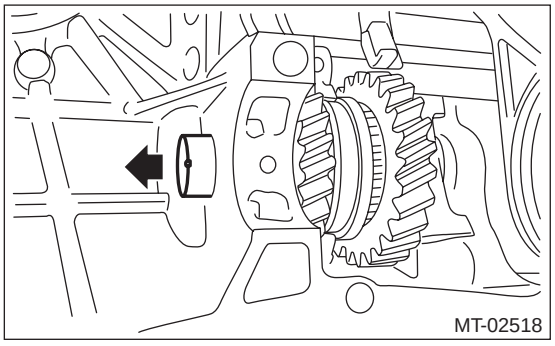


10) Remove the reverse idler gear shaft securing bolt.

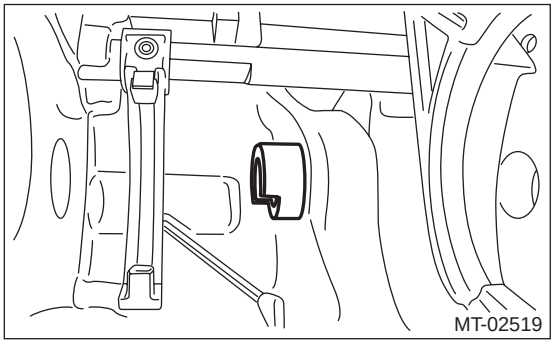


11) Remove the reverse idler gear shaft by pushing it out.

NOTE:
Support the reverse idler gear assembly with hands to avoid collapsing.

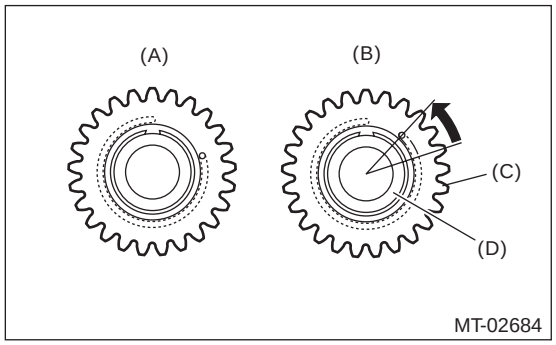


12) Remove the reverse idler gear.
13) Remove the reverse idler gear bushing.



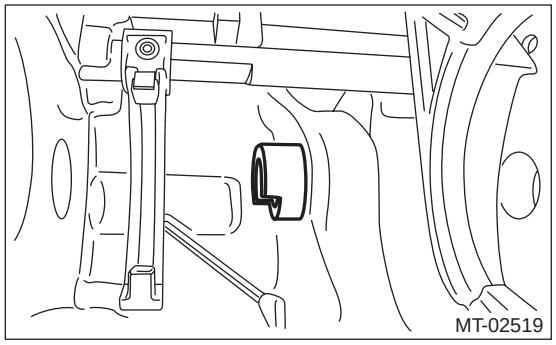
B: INSTALLATION

NOTE:
Rotate the reverse idler sub gear by two teeth from free status in the direction of the arrow to make it engage with the reverse gear of the main shaft and install the main shaft assembly.



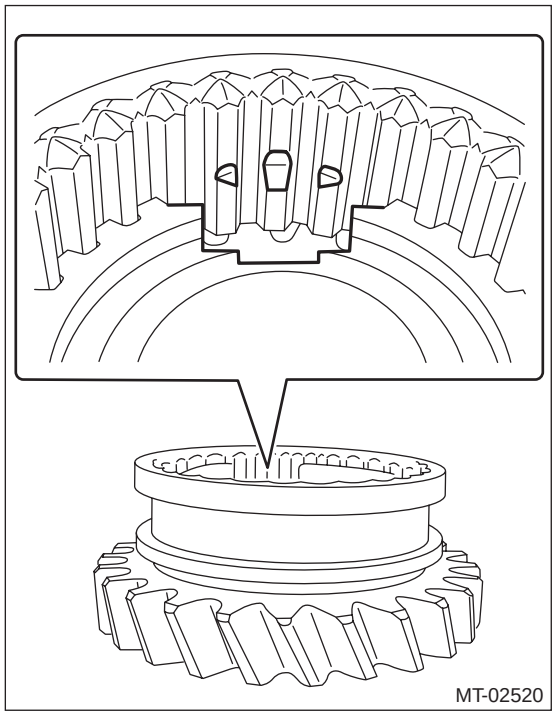
(A) Free status
(B) Set status
(C) Reverse idler sub gear
(D) Reverse idler gear

1) Install the reverse idler gear bushing with the cutout portion of the reverse idler gear bushing facing the front of the transmission.



2) Assembling reverse idler gear assembly
(1) Install the reverse coupling sleeve to the reverse idler gear No. 2.

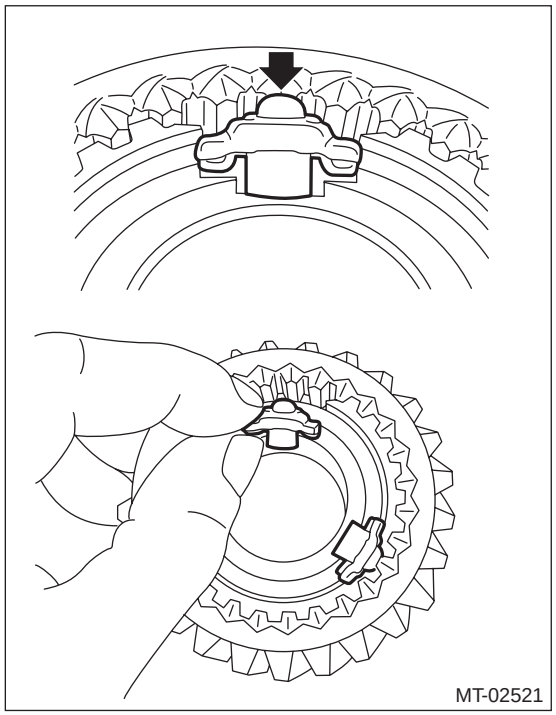
NOTE:
- Install the reverse coupling sleeve in the correct direction.
- Make sure that the oval-shaped cutout portion inside the reverse coupling sleeve matches the center of the reverse idler gear No. 2 groove.



MT-02520

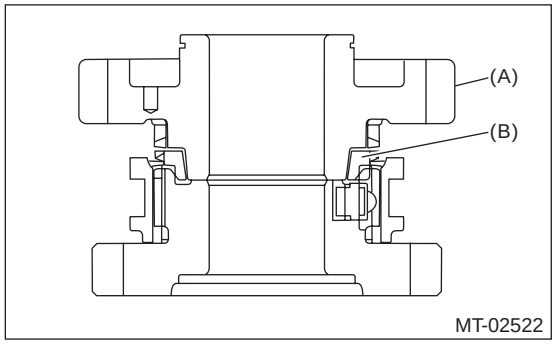
(2) Install the reverse shifting insert.

NOTE:
Press in the ball part to install.



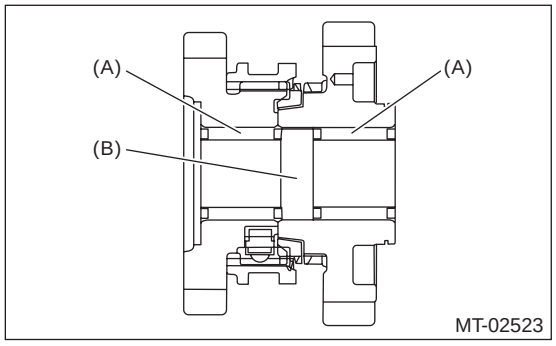
MT-02521

(3) Install the reverse baulk ring and reverse idler gear.



(A) Reverse idler gear
(B) Reverse baulk ring

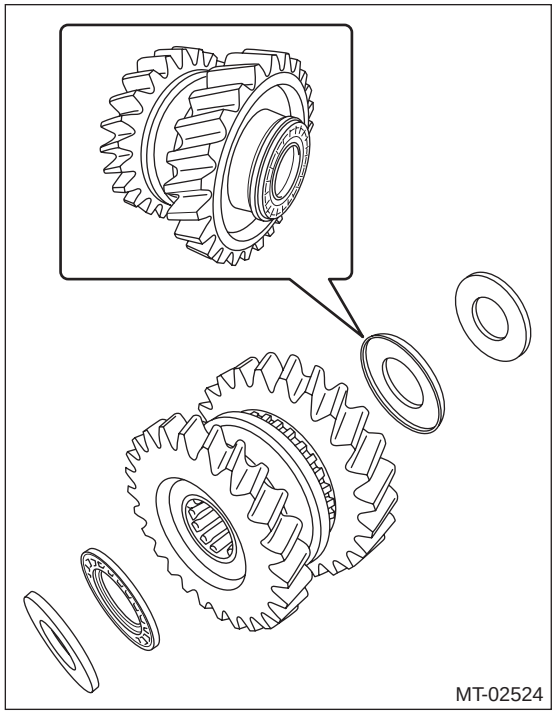
(4) Install the needle bearing and reverse idler gear collar.



(A) Needle bearing
(B) Reverse idler gear collar

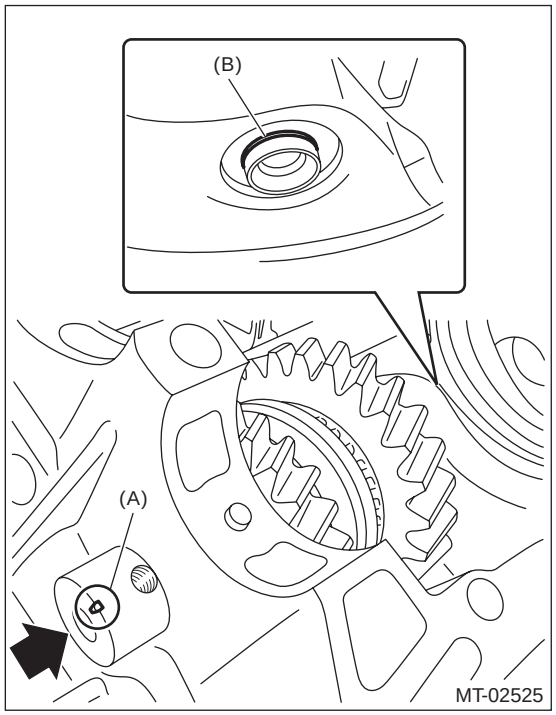
(5) Install the thrust bearing and reverse idler gear washer.

NOTE:
Install the thrust bearing in the correct direction.



3) Install the assembled reverse idler gear assembly to the transmission case and hold it with hands.
4) Install the reverse idler gear shaft.

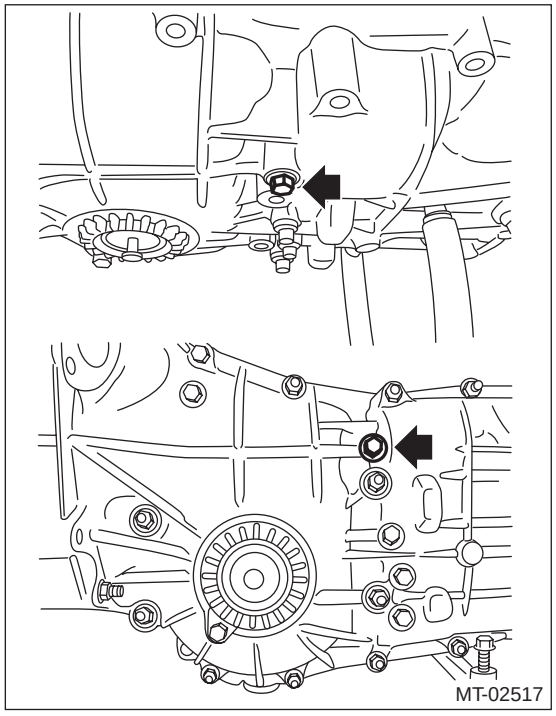
NOTE:
- Install with the cutout portion of the reverse idler gear shaft facing the RH side of the transmission case.
- Make sure that the groove of the reverse idler gear shaft comes out of the reverse idler gear bushing.



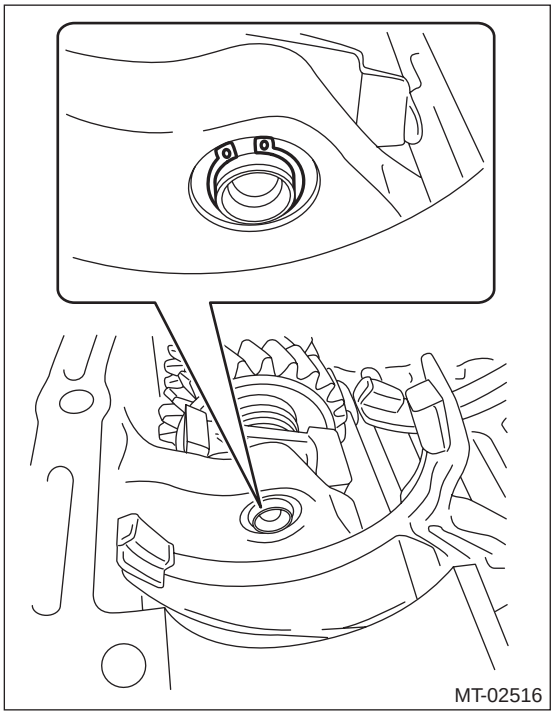
(A) Cutout portion of the reverse idler gear shaft
(B) Snap ring installation groove

5) Install the reverse idler gear shaft securing bolt.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

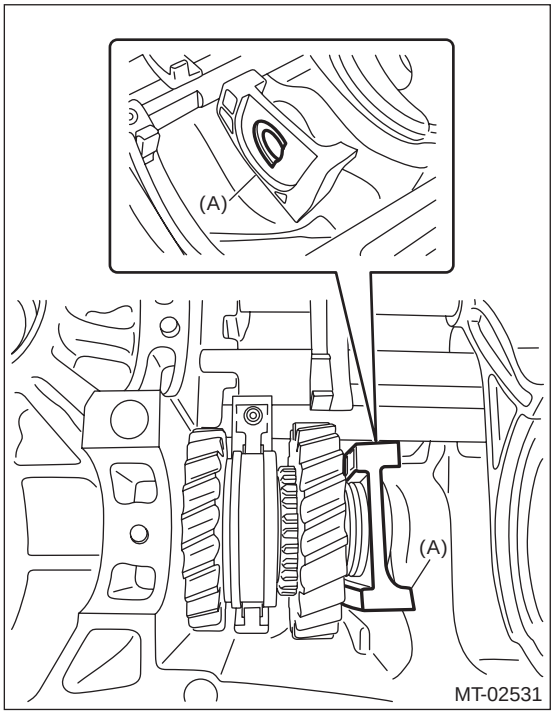


6) Install the snap ring.



7) Select the reverse idler gear bushing. <Ref. to 6MT(TY75)-134, ADJUSTMENT, Reverse Idler Gear.>
8) Remove the reverse idler gear assembly and replace with the selected bushing. <Ref. to 6MT(TY75)-123, REMOVAL, Reverse Idler Gear.>
9) Install the reverse idler gear assembly, oil case guide and reverse idler gear shaft.

NOTE:
- Install with the cutout portion of the reverse idler gear shaft facing the RH side of the transmission case.
- Make sure that the groove of the reverse idler gear shaft comes out of the reverse idler gear bushing.
- Insert the cutout portion of the reverse idler gear bushing into the oil case guide.

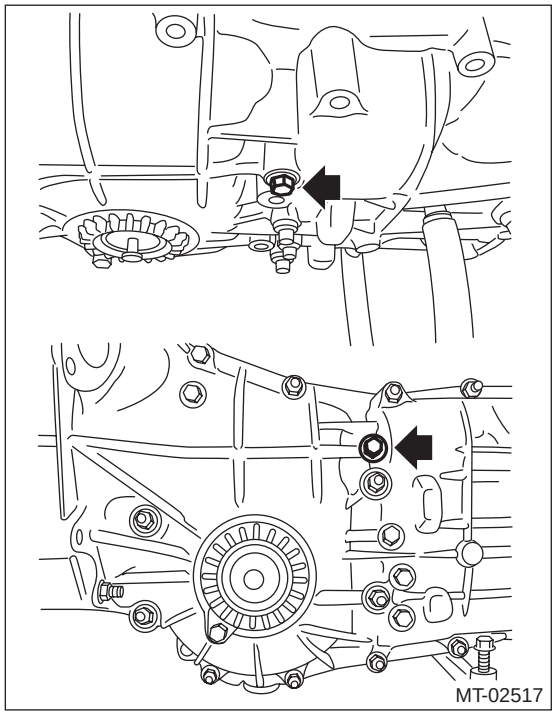


(A) Oil case guide

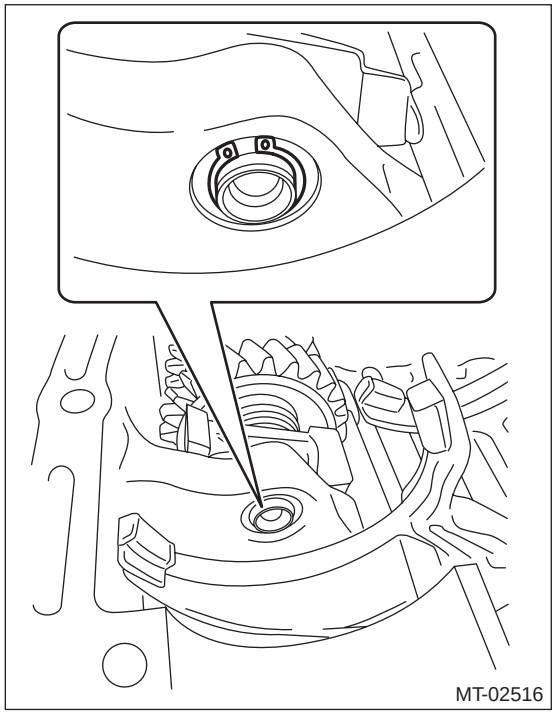
10) Install the reverse idler gear shaft securing bolt.

NOTE:
Use a new gasket.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



11) Install the snap ring.

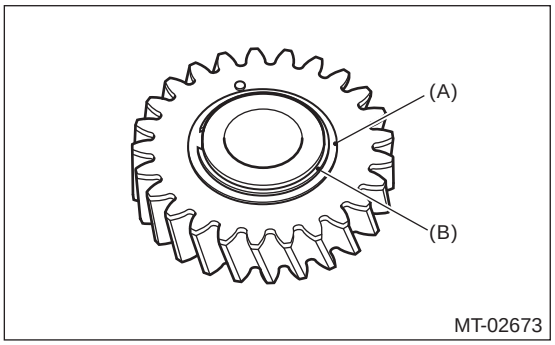


12) Check the reverse shifter fork. <Ref. to 6MT(TY75)-140, INSPECTION, Shifter Fork and Rod.>
13) Install the front differential assembly. <Ref. to 6MT(TY75)-112, INSTALLATION, Front Differential Assembly.>
14) Install the main shaft assembly. <Ref. to 6MT(TY75)-83, INSTALLATION, Main Shaft Assembly for Single-Range.>
15) Install the drive pinion shaft assembly. <Ref. to 6MT(TY75)-92, INSTALLATION, Drive Pinion Shaft Assembly.>
16) Install the transmission case. <Ref. to 6MT(TY75)-80, INSTALLATION, Transmission Case.>
17) Install the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-53, INSTALLATION, Transfer Case and Extension Case Assembly.>
18) Install the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-46, INSTALLATION, Switches and Harness.>
19) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-30, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

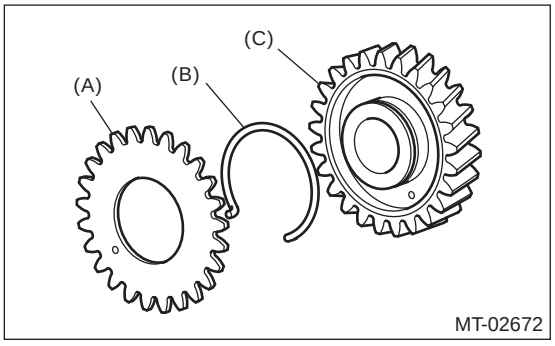
1. REVERSE IDLER GEAR ASSY

1) Remove the snap ring and friction plate.



(A) Friction plate
(B) Snap ring

2) Remove the reverse idler sub gear and reverse idler spring.



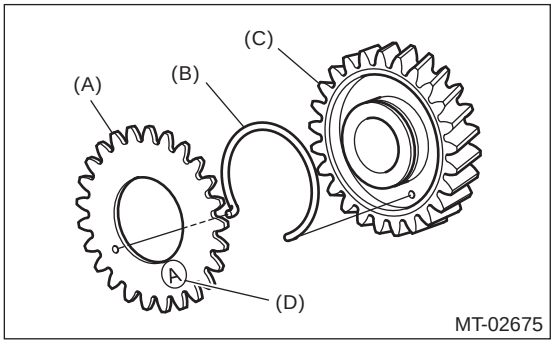
(A) Reverse idler sub gear
(B) Reverse idler spring
(C) Reverse idler gear

D: ASSEMBLY

1. REVERSE IDLER GEAR ASSY

1) Attach the reverse idler sub gear and reverse idler spring.

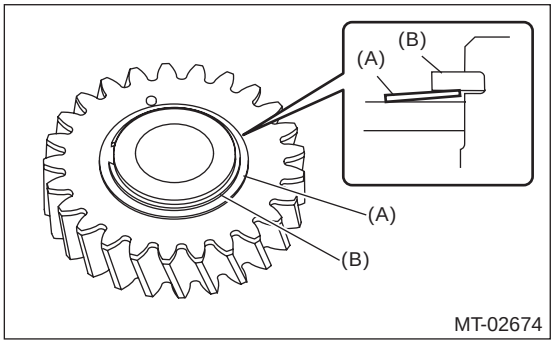
NOTE:
Point the stamp (marking A) towards the outside, and install the reverse idler sub gear.



(A) Reverse idler sub gear
(B) Reverse idler spring
(C) Reverse idler gear
(D) Stamp (marking A)

2) Install the friction plate and snap ring.

NOTE:
Make sure the friction plate is installed in the proper direction.

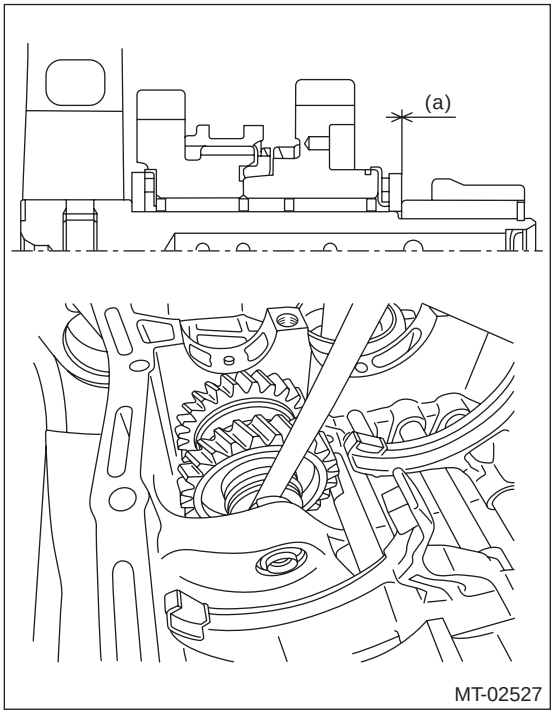


(A) Friction plate
(B) Snap ring

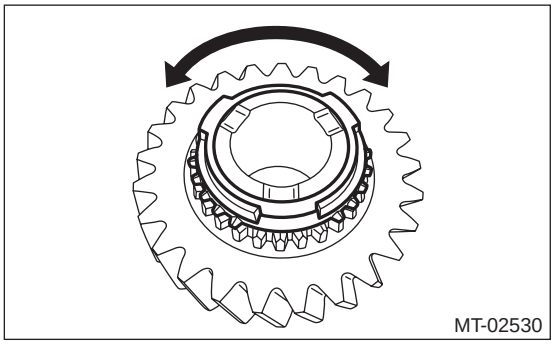
E: INSPECTION

1) Check the clearance between the reverse idler gear bushing and reverse idler gear washer. If the value is out of specification, select the appropriate reverse idler gear bushing and adjust.

Clearance (a):
0.1 — 0.3 mm (0.004 — 0.012 in)

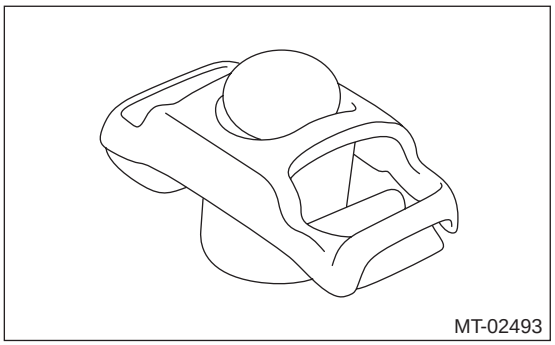


2) Check the reverse idler gear and reverse idler gear shaft for damage. Replace if it is damaged.
3) Apply gear oil to the cone of the reverse idler gear and while press-fitting the reverse baulk ring, check there is no rotation in the circumferential direction.



4) Reverse coupling sleeve
- Check the sliding condition of the reverse coupling sleeve.
- Check the splines on the reverse coupling sleeve and reverse idler gear for wear.

5) Reverse shifting insert
Replace the reverse shifting insert if there is deformation, excessive wear on the ball section or any defectiveness.

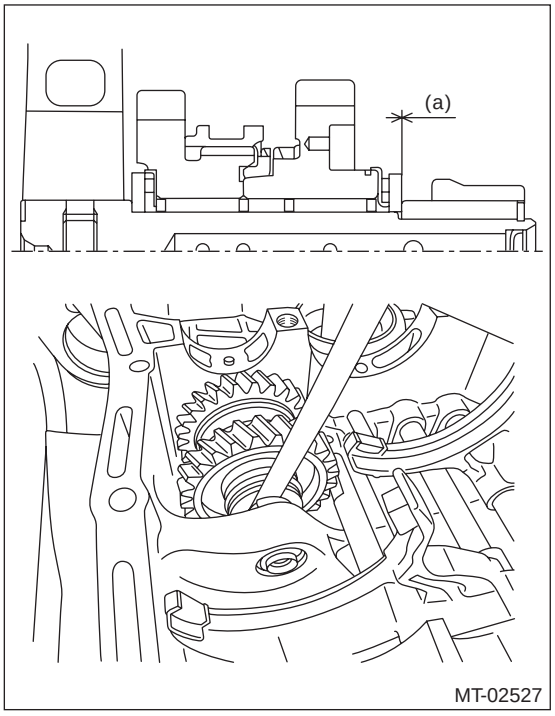


MT-02493

F: ADJUSTMENT

1) Select the appropriate reverse idler gear bushing from the table below, and adjust until the clearance between the reverse idler gear and reverse idler gear washer is within specification.

Clearance (a):
0.1 — 0.3 mm (0.004 — 0.012 in)



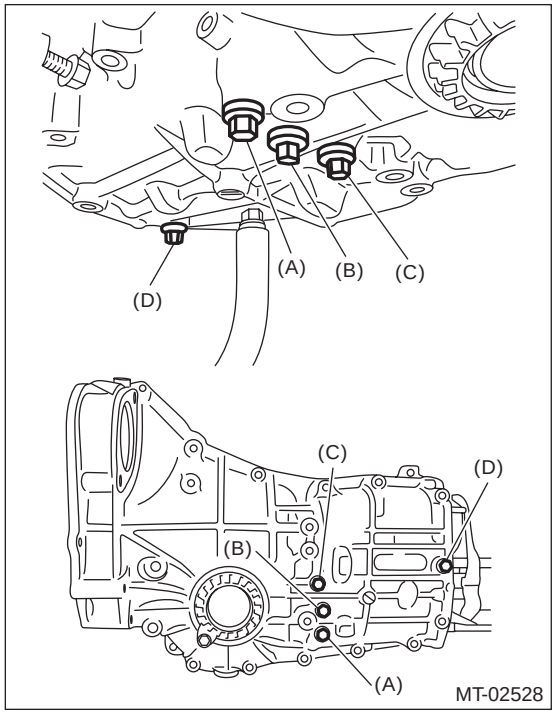
MT-02527

Reverse idler gear bushing		
Part No.	Length mm (in)	Groove for identification
32289AA080	27.75 (1.093)	None
32289AA090	27.90 (1.098)	1
32289AA100	28.05 (1.104)	2
32289AA110	28.20 (1.110)	3
32289AA120	28.35 (1.116)	4

20.Shifter Fork and Rod

A: REMOVAL

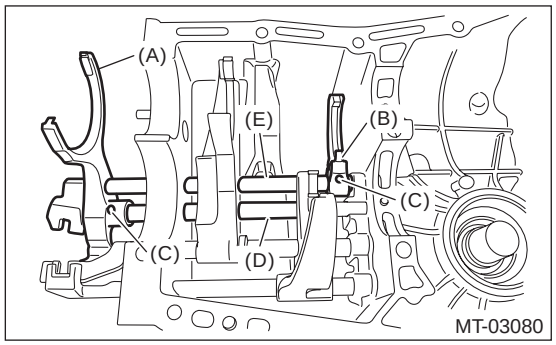
1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-25, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-45, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-51, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the transmission case. <Ref. to 6MT(TY75)-79, REMOVAL, Transmission Case.>
5) Remove the drive pinion shaft assembly. <Ref. to 6MT(TY75)-92, REMOVAL, Drive Pinion Shaft Assembly.>
6) Remove the main shaft assembly. <Ref. to 6MT(TY75)-83, REMOVAL, Main Shaft Assembly for Single-Range.>
7) Remove the front differential assembly. <Ref. to 6MT(TY75)-111, REMOVAL, Front Differential Assembly.>
8) Remove the reverse idler gear assembly. <Ref. to 6MT(TY75)-123, REMOVAL, Reverse Idler Gear.>
9) Remove the check ball plugs, check ball springs and check balls.



(A) 1st-2nd
(B) 3rd-4th
(C) 5th-6th
(D) Rev.

10) Use the ST to push out the straight pin of 5th-6th shifter fork and reverse shifter fork, and remove the 5th-6th shifter fork, reverse shifter fork, 5th-6th fork rod and reverse fork rod.

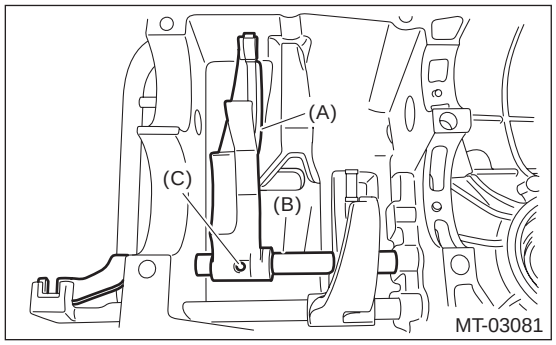
NOTE:
Tap out the reverse shifter fork straight pin, after setting the gear into reverse position. In the neutral position, removing is impossible because the clearance between transmission case is narrow.
ST 398791700 SPRING PIN REMOVER 2



(A) 5th-6th shifter fork
(B) Reverse shifter fork
(C) Straight pin
(D) 5th-6th fork rod
(E) Reverse fork rod

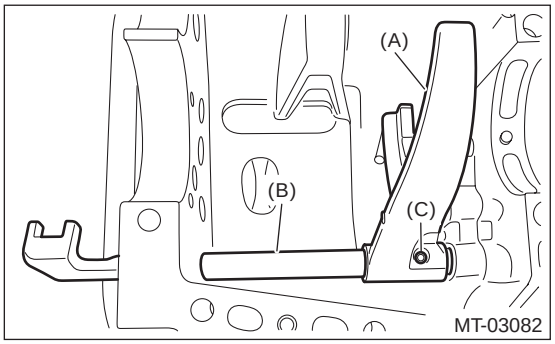
11) Drive out the straight pin by tapping with the ST, and remove the 3rd-4th shifter fork and 3rd-4th fork rod.

NOTE:
When removing the 3rd-4th fork rod, keep other fork rods in neutral.
ST 398791700 SPRING PIN REMOVER 2



(A) 3rd-4th shifter fork
(B) 3rd-4th fork rod
(C) Straight pin

12) Drive out the straight pin by tapping with the ST, and remove the 1st-2nd shifter fork and 1st-2nd fork rod.
ST 398791700 SPRING PIN REMOVER 2

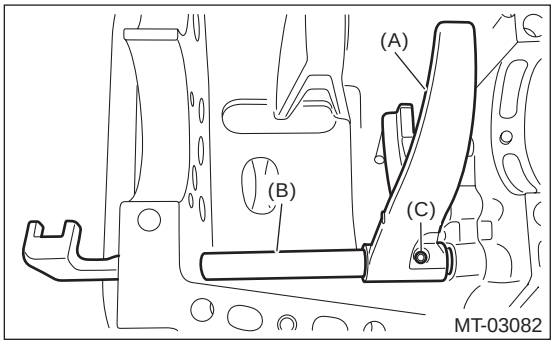


(A) 1st-2nd shifter fork
(B) 1st-2nd fork rod
(C) Straight pin

B: INSTALLATION

1) Install the 1st-2nd fork rod to the 1st-2nd shifter fork through the hole on the rear of the transmission case.
2) Align the holes on the 1st-2nd fork rod and 1st-2nd shifter fork, and drive the straight pin into these holes using the ST to fix.

NOTE:
Use a new straight pin.
ST 398791700 SPRING PIN REMOVER 2



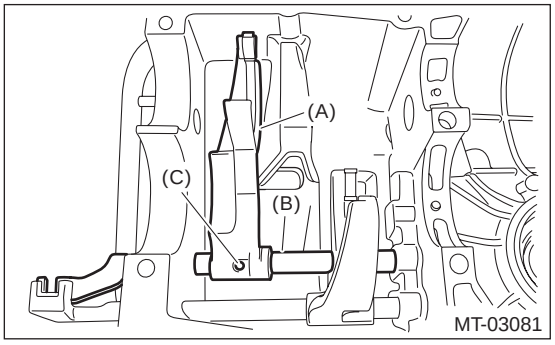
(A) 1st-2nd shifter fork
(B) 1st-2nd fork rod
(C) Straight pin

3) Install the 3rd-4th fork rod to the 3rd-4th shifter fork through the hole on the rear of the transmission case.

4) Align the holes on the 3rd-4th fork rod and 3rd-4th shifter fork, and drive the straight pin into these holes using the ST to fix.

NOTE:
- Use a new straight pin.
- Set other fork rods to neutral.
- Check that the positions of interlock plunger is correct.

ST 398791700 SPRING PIN REMOVER 2

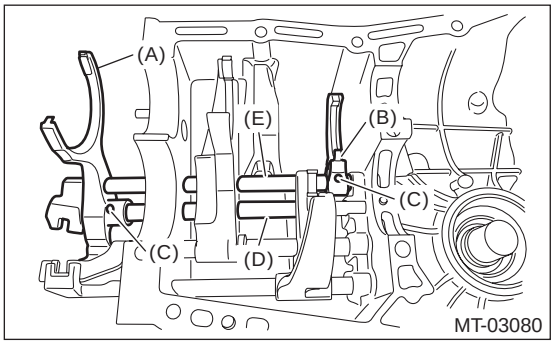


(A) 3rd-4th shifter fork
(B) 3rd-4th fork rod
(C) Straight pin

5) Install the 5th-6th fork rod into 5th-6th shifter fork, then insert through the hole on the rear of transmission case. Align the hole of the 5th-6th shifter fork with the hole on the transmission case, then insert the reverse fork rod to install the reverse shifter fork.
6) Align the holes on the 5th-6th fork rod and 5th-6th shifter fork and the holes on the reverse fork rod and reverse shifter fork, and drive the straight pin into these holes using the ST to fix.

NOTE:
- Use a new straight pin.
- Set other fork rods to neutral.
- Check that the positions of interlock plunger is correct.

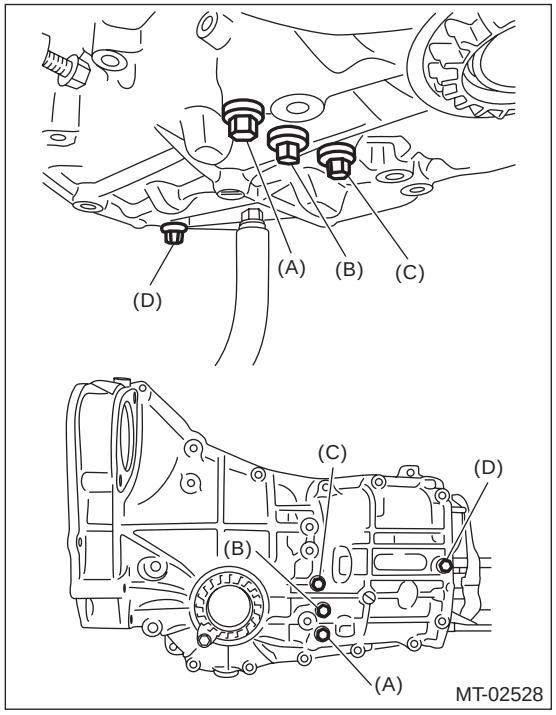
ST 398791700 SPRING PIN REMOVER 2



(A) 5th-6th shifter fork
(B) Reverse shifter fork
(C) Straight pin
(D) 5th-6th fork rod
(E) Reverse fork rod

7) Install the check ball plugs, check ball springs and check balls.

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)



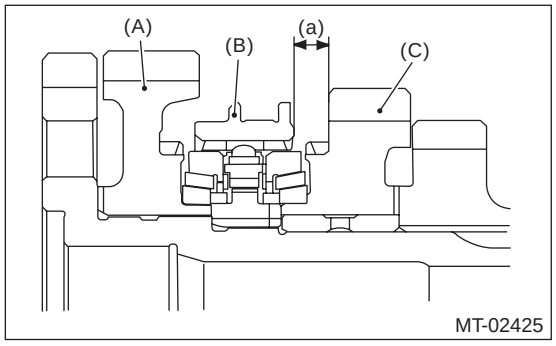
(A) 1st-2nd
(B) 3rd-4th
(C) 5th-6th
(D) Rev.

8) Install the reverse idler gear assembly. <Ref. to 6MT(TY75)-125, INSTALLATION, Reverse Idler Gear.>
9) Install the front differential assembly. <Ref. to 6MT(TY75)-112, INSTALLATION, Front Differential Assembly.>
10) Install the main shaft assembly. <Ref. to 6MT(TY75)-83, INSTALLATION, Main Shaft Assembly for Single-Range.>
11) Install the drive pinion shaft assembly. <Ref. to 6MT(TY75)-92, INSTALLATION, Drive Pinion Shaft Assembly.>
12) Install the transmission case. <Ref. to 6MT(TY75)-80, INSTALLATION, Transmission Case.>
13) Install the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-53, INSTALLATION, Transfer Case and Extension Case Assembly.>
14) Install the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-46, INSTALLATION, Switches and Harness.>
15) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-30, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

1) Check the fork and rod for damage. Replace if it is damaged.
2) Gearshift mechanism
Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.
3) Inspect the clearance between 2nd driven gear and coupling sleeve. If any clearance is not within specifications, replace the shifter fork as required.

Clearance (a):
7.4 — 7.8 mm (0.291 — 0.307 in)

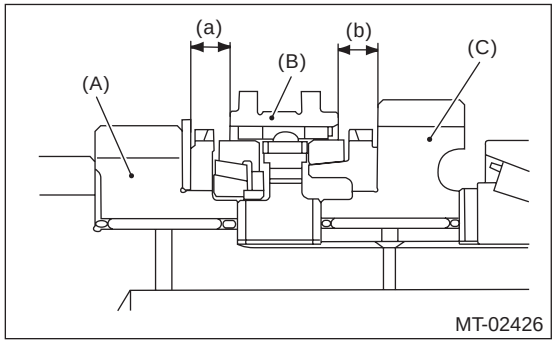


(A) 1st driven gear
(B) Coupling sleeve
(C) 2nd driven gear

1st-2nd shifter fork		
Part No.	Mark	Remarks
32804AA120	1	Approaches 2nd gear by 0.2 mm (0.008 in).
32804AA130	No mark	Standard
32804AA140	2	Approaches 1st gear by 0.2 mm (0.008 in).

4) Inspect the clearance between the 3rd, 4th drive gear and the coupling sleeve. If any clearance is not within specifications, replace the shifter fork as required.

Clearance (a), (b):
7.5 mm (0.295 in)

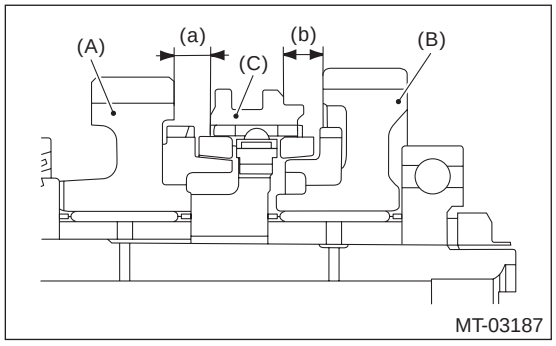


(A) 3rd drive gear
(B) Coupling sleeve
(C) 4th drive gear

3rd-4th shifter fork		
Part No.	Mark	Remarks
32810AA061	1	Approaches 4th gear by 0.2 mm (0.008 in).
32810AA071	No mark	Standard
32810AA101	3	Approaches 3rd gear by 0.2 mm (0.008 in).

5) Inspect the clearance between 5th, 6th drive gear and coupling sleeve. If any clearance is not within specifications, replace the shifter fork as required.

Clearance (a), (b):
7.5 mm (0.295 in)

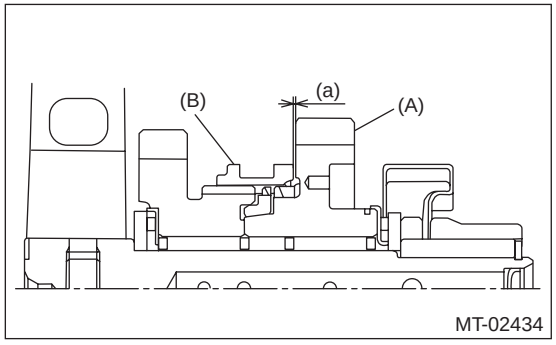


(A) 5th drive gear
(B) 6th drive gear
(C) Coupling sleeve

5th-6th shifter fork		
Part No.	Mark	Remarks
32940AA050	1	Approaches 5th gear by 0.2 mm (0.008 in).
32940AA060	No mark	Standard
32940AA070	2	Approaches 6th gear by 0.2 mm (0.008 in).

6) Check the clearance between the reverse idler gear and reverse coupling sleeve. If any clearance is not within specifications, replace the shifter fork as required.

Clearance (a):
0.50 mm (0.020 in) or less



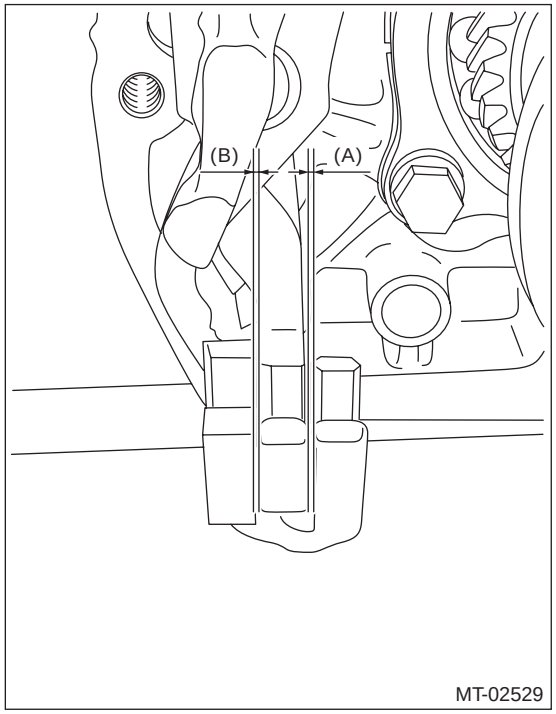
(A) Reverse idler gear
(B) Reverse coupling sleeve

Reverse shifter fork		
Part No.	Mark	Remarks
32941AA070	2	Approaches reverse idler gear by 0.3 mm (0.012 in).
32941AA060	No mark	Standard
32941AA050	1	Approaches reverse idler gear No. 2 by 0.3 mm (0.012 in).

7) Inspect the rod end clearances (A) and (B). If any clearance is not within specifications, replace the rod or fork as required.

Clearance (A):
1st-2nd — 3rd-4th
0.1 — 0.9 mm (0.004 — 0.035 in)

Clearance (B):
3rd-4th — 5th-6th
0.2 — 1.0 mm (0.008 — 0.039 in)



21.General Diagnostic Table

A: INSPECTION

1. MANUAL TRANSMISSION

Symptoms	Possible cause	Corrective action
1. Gears are difficult to intermesh. NOTE: The cause for difficulty in shifting gears can be classified into two types: One is a defective gear shift system and the other is defective transmission. However, if the operation is heavy and engagement of the gears is difficult, a defective clutch disengagement may also be responsible. Check whether the clutch is correctly functioning, before checking the gear shift system and transmission.	(a) Worn, damaged or burred chamfer at internal spline of the sleeve	Replace.
	(b) Worn, damaged or burred chamfer of gear spline	Replace.
	(c) Worn or scratched bushings	Replace.
	(d) Incorrect contact or wear between baulk ring and gear cone	Repair or replace.
2. Gear slip-out • Gear slips out when coasting on rough road. • Gear slips out during acceleration.	(a) Defective pitching stopper adjustment	Replace.
	(b) Loose engine mounting bolts	Tighten or replace.
	(c) Worn shifter fork or broken check ball spring	Replace.
	(d) Worn or damaged ball bearing	Replace.
	(e) Excessive clearance between splines of synchronizer hub and synchronizer sleeve	Replace.
	(f) Synchronizer hub tooth step wear	Replace.
	(g) Worn 1st driven gear and driven shaft	Replace.
	(h) Worn 2nd driven gear and bushing	Replace.
	(i) Worn 3rd drive gear and needle bearing	Replace.
	(j) Worn 4th drive gear and needle bearing	Replace.
	(k) Worn 5th drive gear and needle bearing	Replace.
	(l) Worn 6th drive gear and needle bearing	Replace.
	(m) Worn reverse idler gear and needle bearing	Replace.
3. Noise emitted from transmission NOTE: If a noise is heard when the vehicle is parked with its engine idling and if a noise ceases when the clutch is disengaged, it may be considered that the noise is coming from the transmission.	(a) Insufficient or improper lubrication	Lubricate with specified oil or replace.
	(b) Worn or damaged gears and bearings NOTE: If the trouble is only wear of the gear teeth surfaces, only a high whirring noise will occur at high speeds, but if any part is broken, rhythmical clicking sounds will be heard even at low speeds.	Replace.

2. DIFFERENTIAL

Symptoms	Possible cause	Corrective action
1. Broken differential (case, gear, bearing, etc.) NOTE: Noise will occur, and eventually the differential will not be able to operate due to broken pieces obstructing the gear revolution.	(a) Insufficient or improper oil	Disassemble the differential and replace the broken component parts. At the same time, check other component parts for any trouble, and replace if necessary.
	(b) Use of vehicle under severe conditions such as excessive load or improper use of the clutch	Readjust the preload and backlash of the bearing, and the contact surface of gear.
	(c) Improper adjustment of taper roller bearing	Adjust.
	(d) Improper adjustment of the drive pinion and the hypoid driven gear	Adjust.
	(e) Excessive backlash of a vehicle under severe operating conditions due to worn differential side gear, adjusting washer or differential pinion	Add recommended oil to the specified level. Do not use vehicle under severe operating conditions.
	(f) Loose hypoid driven gear clamping bolts	Tighten.
2. Differential and hypoid gear noises Troubles of the differential and hypoid gear always appear as noise problems. Therefore noise is the first indication of trouble. However, noises from the engine, muffler, tire, exhaust gas, bearing, body, etc. are easily mistaken for the differential noise. Pay special attention to the hypoid gear noise because it is easily confused with other gear noises. There are the following four kinds of noises. • Gear noise when driving: If noise increases as the vehicle speed increases, it may be due to insufficient gear oil, incorrect gear engagement, damaged gears, etc. • Gear noise when coasting: Damaged gears due to misadjusted bearings and incorrect shim adjustment • Bearing noise when driving or coasting: Cracked, broken or damaged bearings • Noise mainly when turning: Noise from differential side gear, differential pinion or differential pinion shaft, etc.	(a) Insufficient oil	Replenish or replace with the specified amount of recommended oil.
	(b) Improper adjustment of hypoid driven gear and drive pinion	Check the tooth contact.
	(c) Worn teeth of hypoid driven gear and drive pinion	Replace as a set. Readjust the bearing preload.
	(d) Loose roller bearing	Readjust the backlash of the hypoid driven gear to drive pinion, and check the tooth contact.
	(e) Distorted hypoid driven gear or differential case	Replace.
	(f) Worn adjusting washer and differential pinion shaft	Replace.

1. General Description

A: SPECIFICATION

1. MANUAL TRANSMISSION AND FRONT DIFFERENTIAL

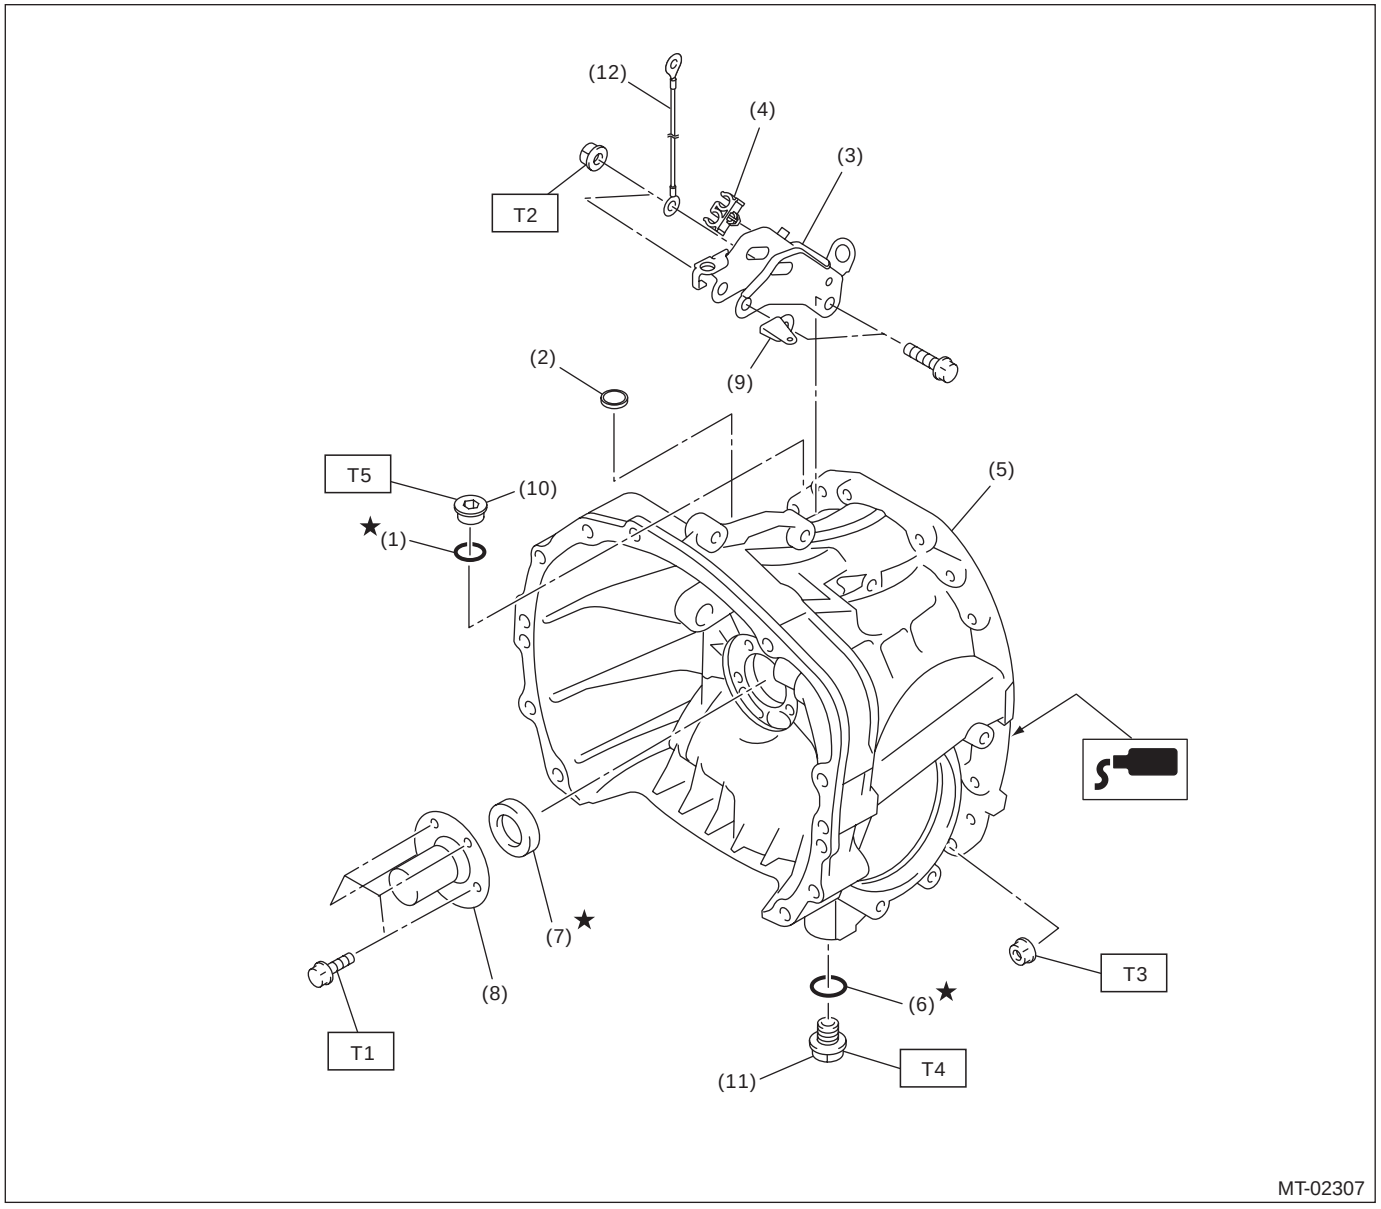
Type			6-forward speeds and 1-reverse (all stage with synchromesh)
TRANSMISSION GEAR RATIO		1st	3.636
		2nd	2.235
		3rd	1.521
		4th	1.137
		5th	0.971
		6th	0.756
		Rev.	3.545
Front reduction gear	Final	Type of gear	Hypoid
		Gear ratio	3.900
Rear reduction gear	Transfer	Type of gear	Helical
		Gear ratio	1.103
	Final	Type of gear	Hypoid
		Gear ratio	3.545
Front differential	Type and number of gear		Planetary gear (pinion gear: 8, gear: 2)
	LSD type		Helical
Center differential	Type and number of gear		Planetary gear (Internal gear: 1, pinion gear: 6, sun gear: 1, and solenoid compression variable control multiplate clutch)
Transmission gear oil capacity			4.1 L (4.3 US qt, 3.6 Imp qt)

2. TRANSMISSION GEAR OIL

Recommended oil:
GL-5 (75W-90) or equivalent

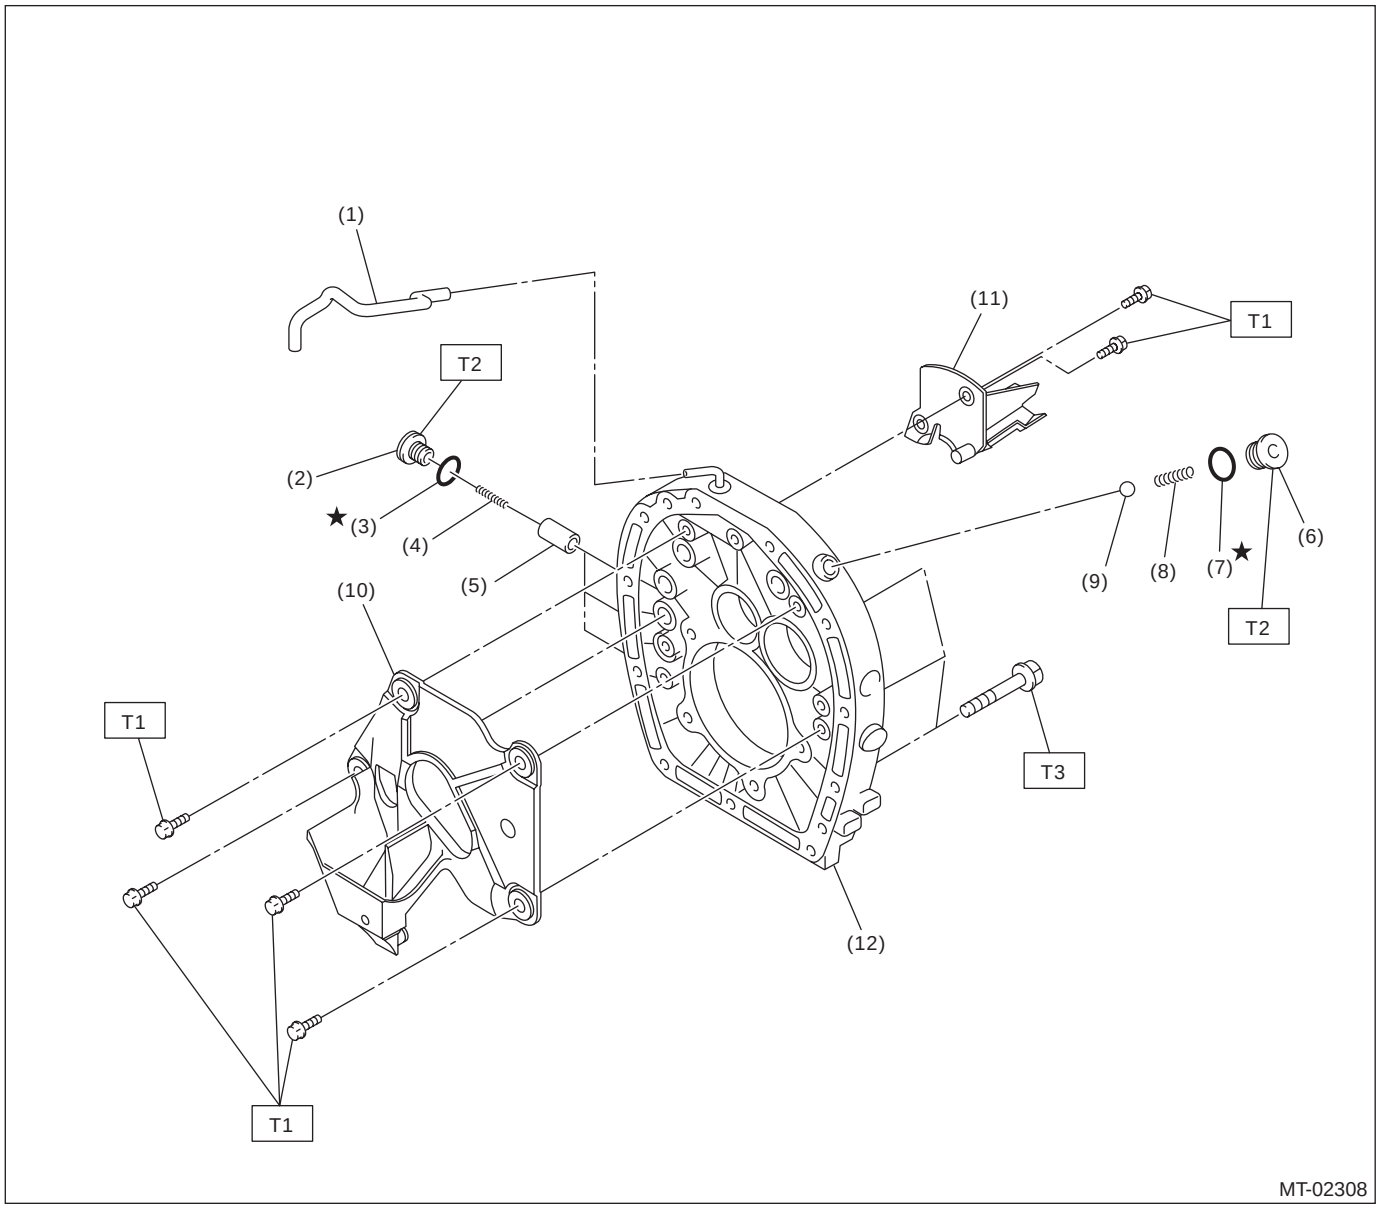
B: COMPONENT

1. CLUTCH HOUSING



(1)	Gasket	(7)	Oil seal	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Plug	(8)	Clutch release bearing guide	***T1: 6.4 (0.7, 4.7)***
(3)	Pitching stopper bracket	(9)	Return spring bracket	***T2: 41 (4.2, 30.2)***
(4)	Clip	(10)	Plug	***T3: 50 (5.1, 36.9)***
(5)	Clutch housing	(11)	Drain plug	***T4: 70 (7.1, 51.6)***
(6)	Gasket	(12)	Transmission radio ground cord	***T5: 46 (4.7, 33.9)***

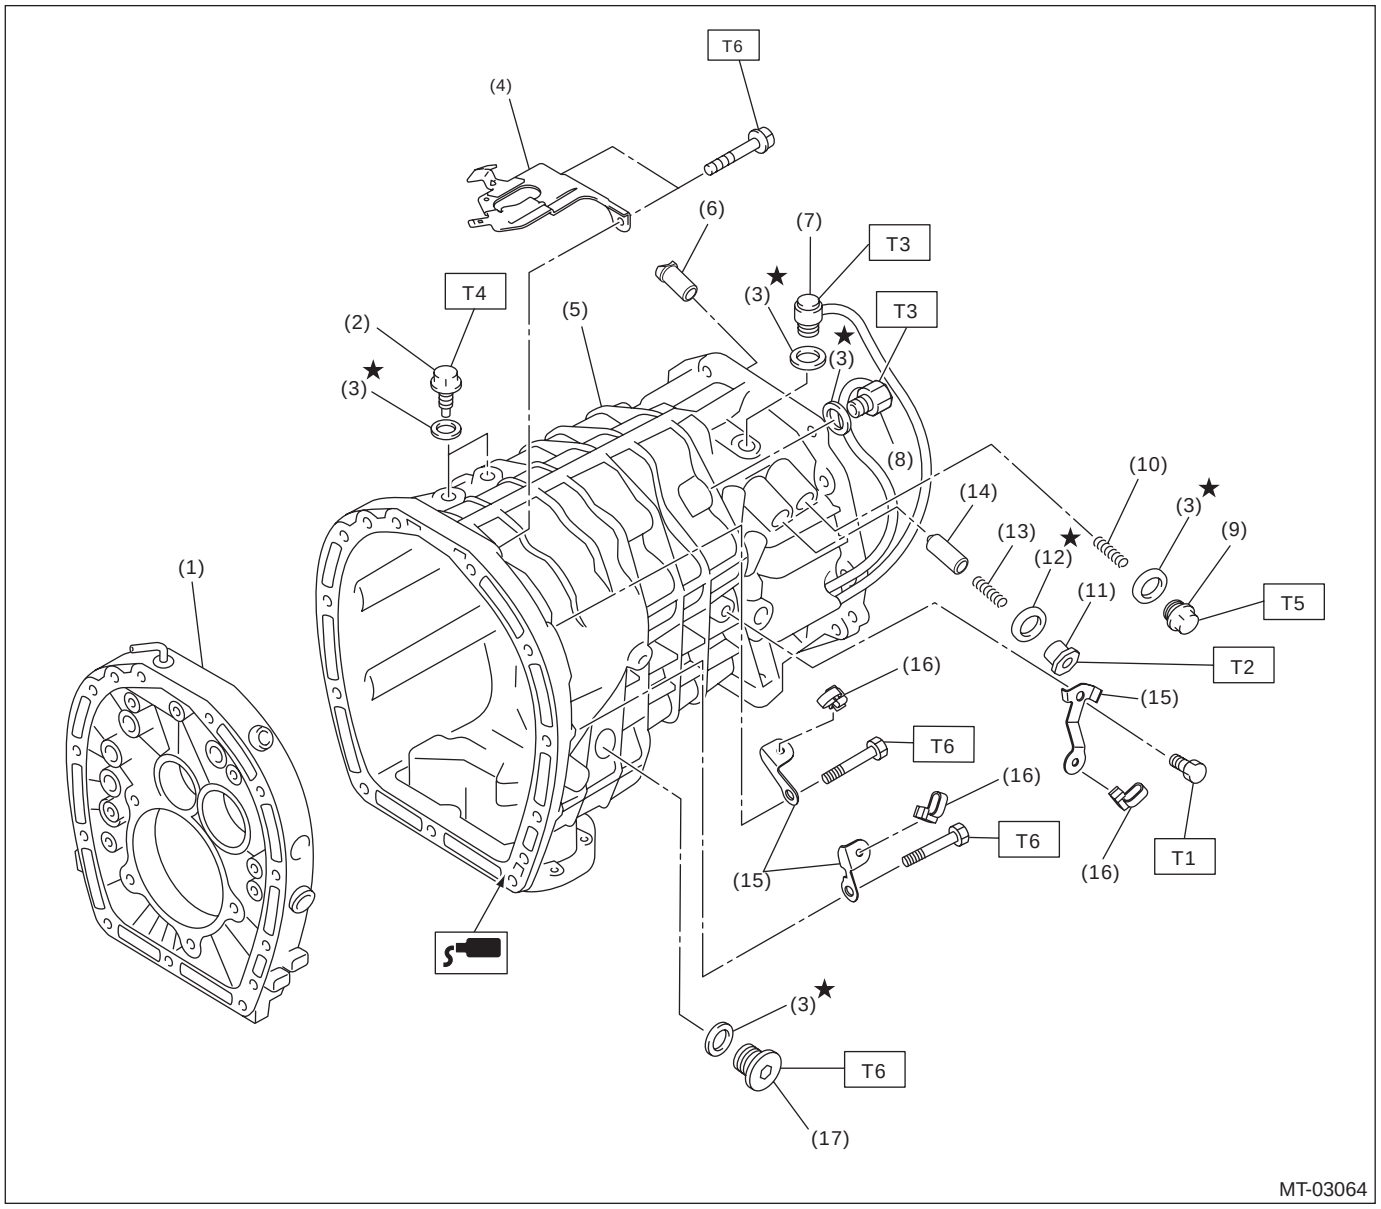
2. ADAPTER PLATE



(1) Air breather hose
(2) Check plug
(3) O-ring
(4) Checking spring
(5) Plunger
(6) Check plug
(7) O-ring
(8) Checking spring
(9) Check ball
(10) Oil guide A
(11) Oil guide B
(12) Adapter plate

Tightening torque: N·m (kgf-m, ft-lb)
T1: 18 (1.8, 13.3)
T2: 25 (2.5, 18.4)
T3: 50 (5.1, 36.9)

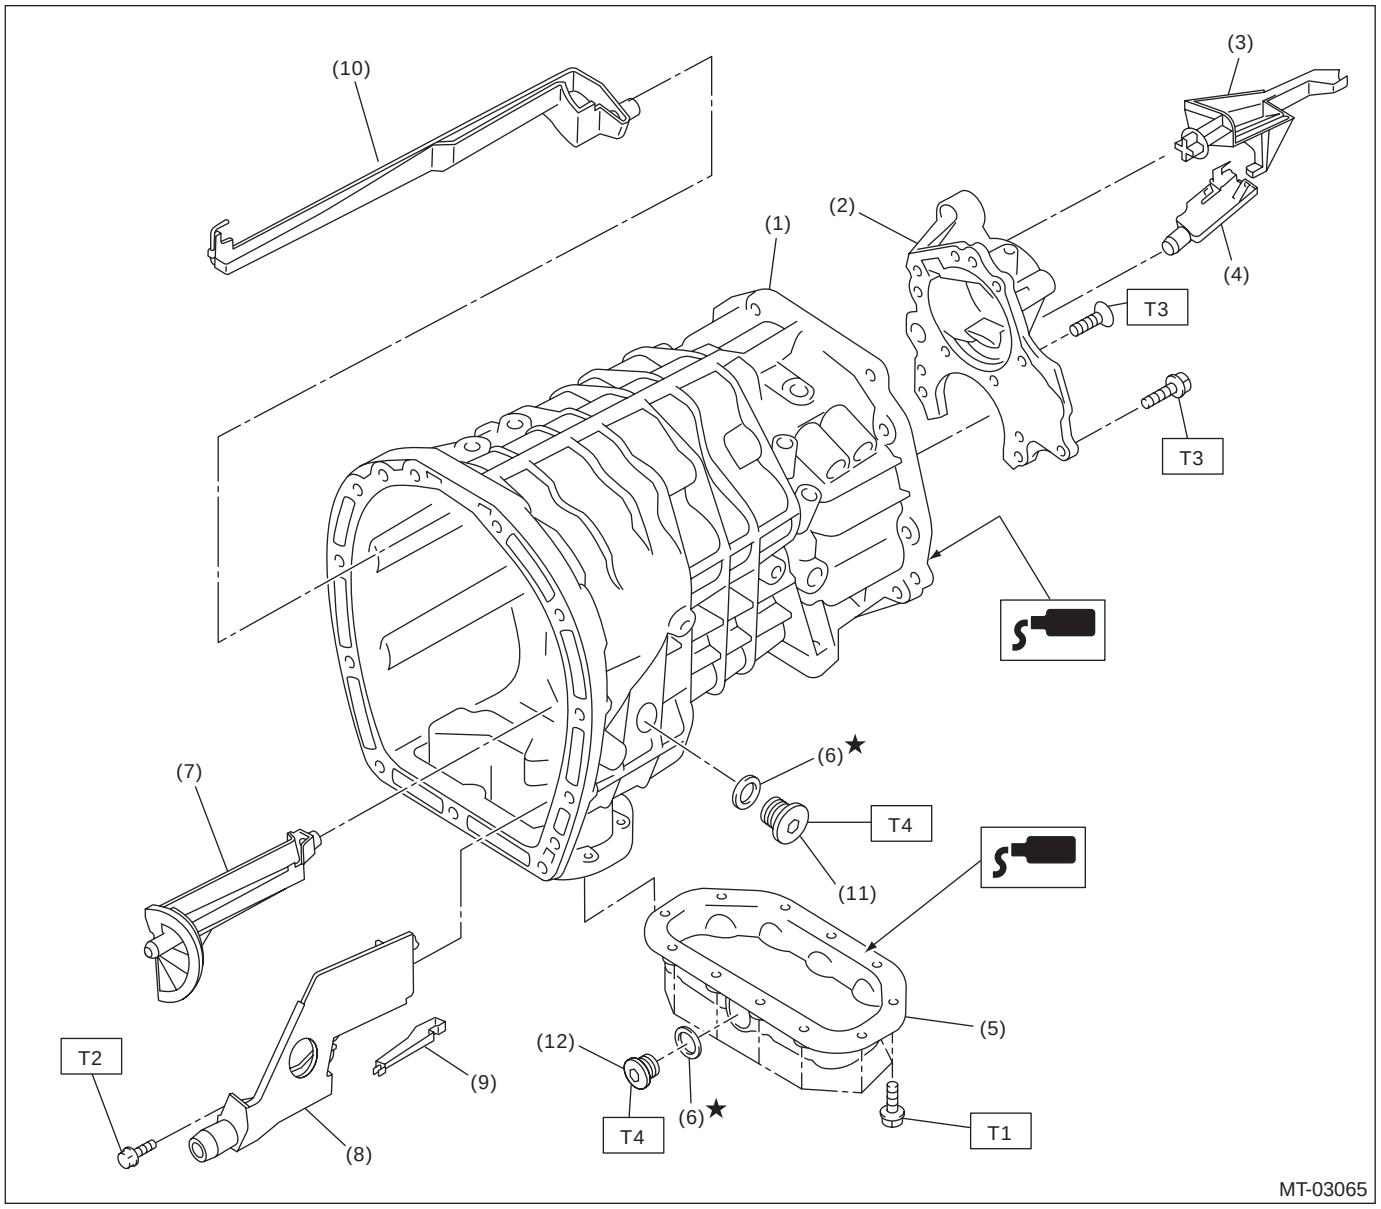
3. TRANSMISSION CASE



(1)	Adapter plate	(10)	Spring
(2)	Pilot bolt	(11)	Plug
(3)	Gasket	(12)	O-ring
(4)	Transmission harness stay	(13)	Spring
(5)	Transmission case	(14)	Shift accent plunger
(6)	Selector plunger	(15)	Harness bracket
(7)	Neutral switch	(16)	Band clip
(8)	Back-up light switch	(17)	Filler plug
(9)	Plug		

Tightening torque: N·m (kgf-m, ft-lb)	
T1:	*16 (1.6, 11.8)*
T2:	*25 (2.5, 18.4)*
T3:	*32 (3.3, 23.6)*
T4:	*34 (3.5, 25.1)*
T5:	*41 (4.2, 30.2)*
T6:	*50 (5.1, 36.9)*

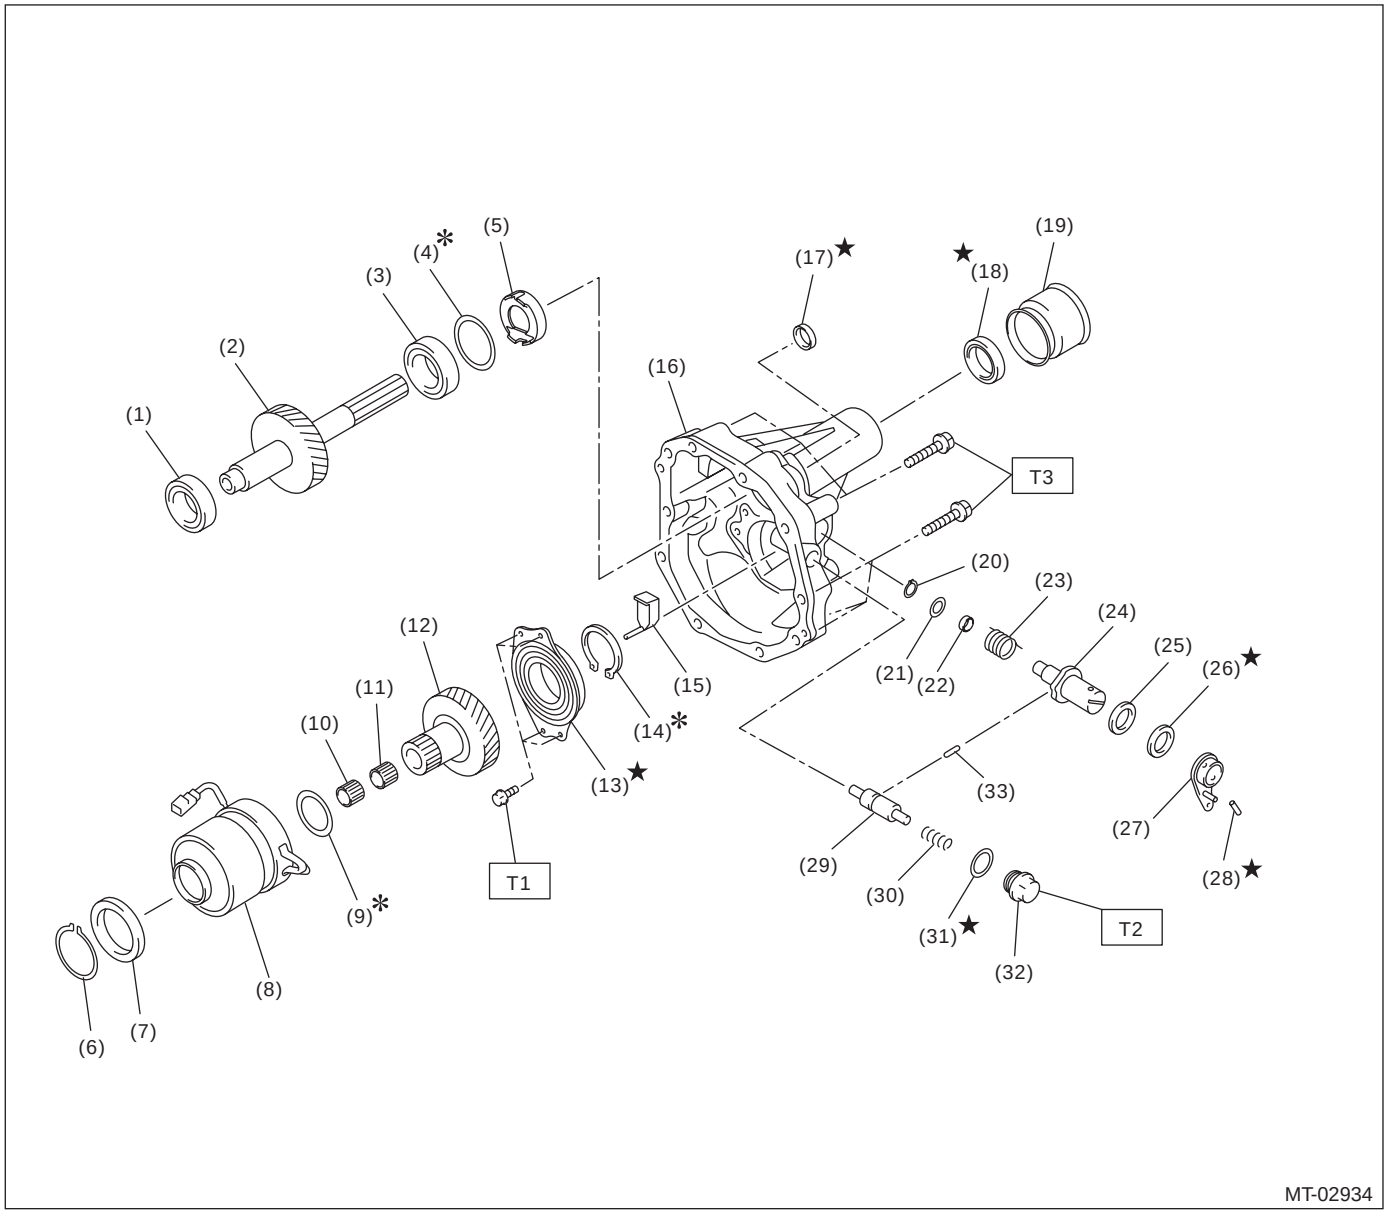
4. OIL PAN & OIL GUIDE



(1)	Transmission case	(7)	Oil guide F
(2)	Transfer bearing holder	(8)	Oil guide D
(3)	Oil guide G	(9)	Oil guide E
(4)	Oil guide H	(10)	Oil guide C
(5)	Oil pan	(11)	Filler plug
(6)	Gasket	(12)	Drain plug

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.4 (0.7, 4.7)
T2: 18 (1.8, 13.3)
T3: 25 (2.5, 18.4)
T4: 50 (5.1, 36.9)

5. EXTENSION CASE AND CENTER DIFFERENTIAL

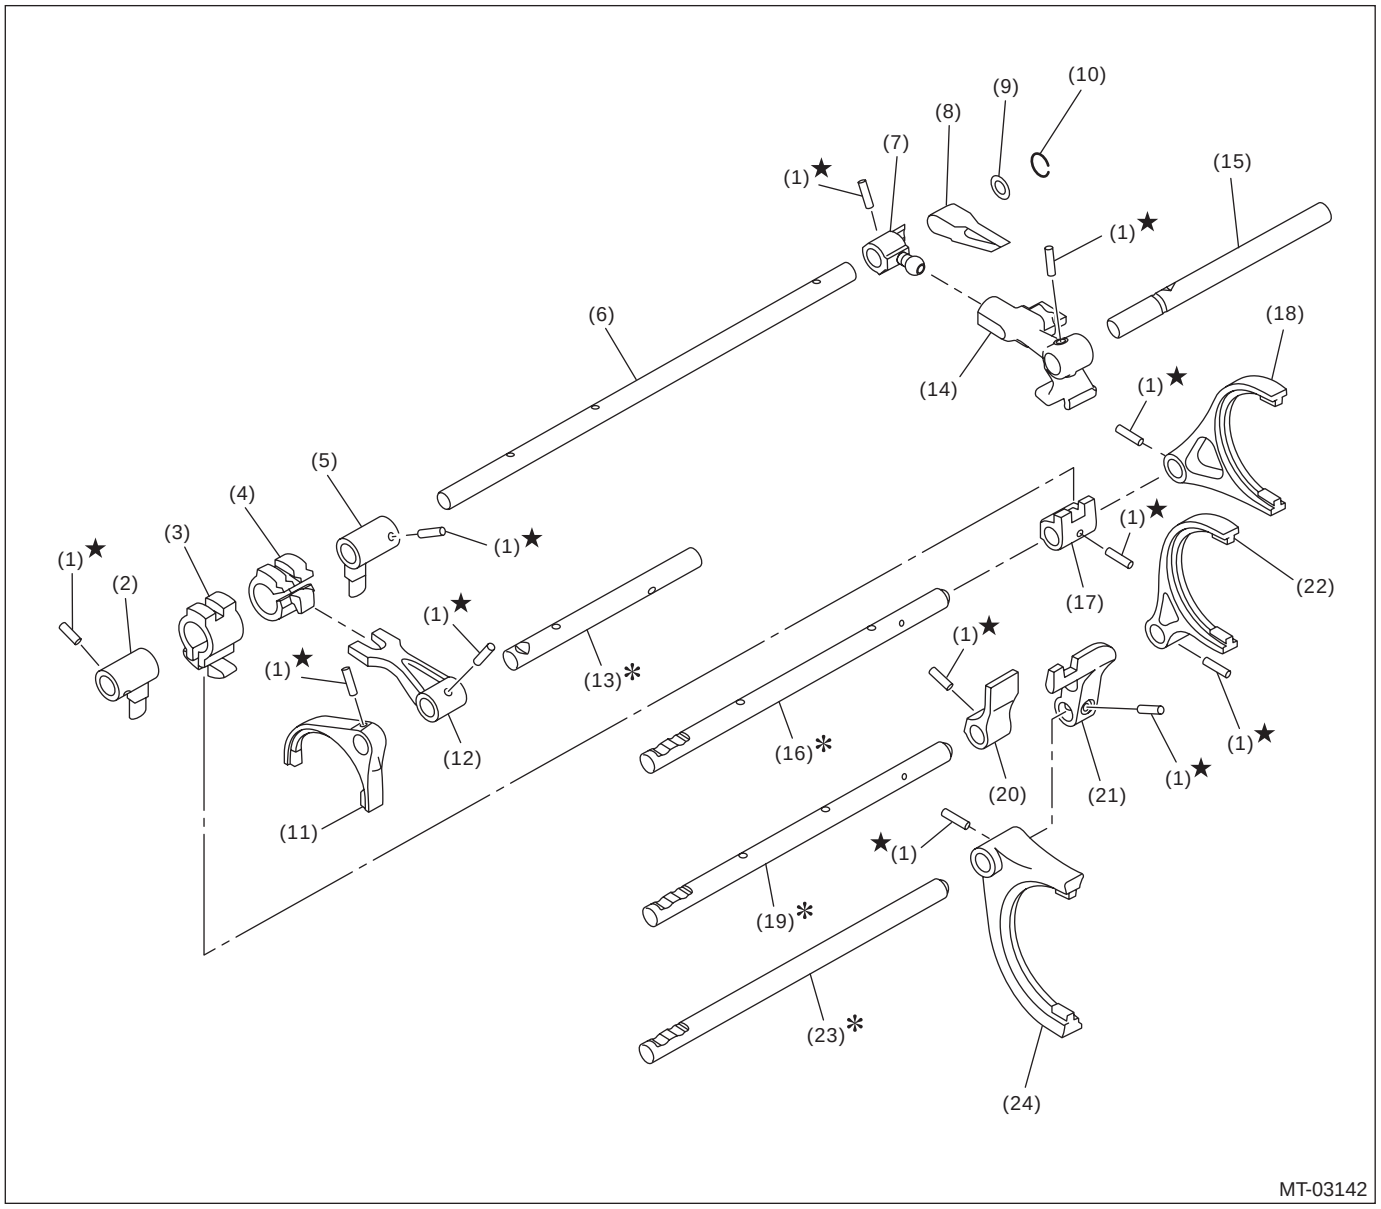


(1)	Taper roller bearing (transmission case side)	(14)	Snap ring	(27)	Reverse check lever
(2)	Transfer driven gear	(15)	Oil guide	(28)	Straight pin
(3)	Taper roller bearing (extension case side)	(16)	Extension case	(29)	Reverse check plunger
(4)	Adjusting washer	(17)	Oil seal	(30)	Spring
(5)	Oil plate	(18)	Oil seal	(31)	Gasket
(6)	Snap ring	(19)	Dust cover	(32)	Plug
(7)	Collar	(20)	Snap ring	(33)	Reverse lock plunger
(8)	Center differential	(21)	Washer		
(9)	Adjusting washer	(22)	Bushing		
(10)	Needle bearing	(23)	Spring		
(11)	Needle bearing	(24)	Reverse check shaft		
(12)	Transfer drive gear	(25)	Ball bearing		
(13)	Ball bearing (with flange)	(26)	Oil seal		

Tightening torque: N·m (kgf-m, ft-lb)

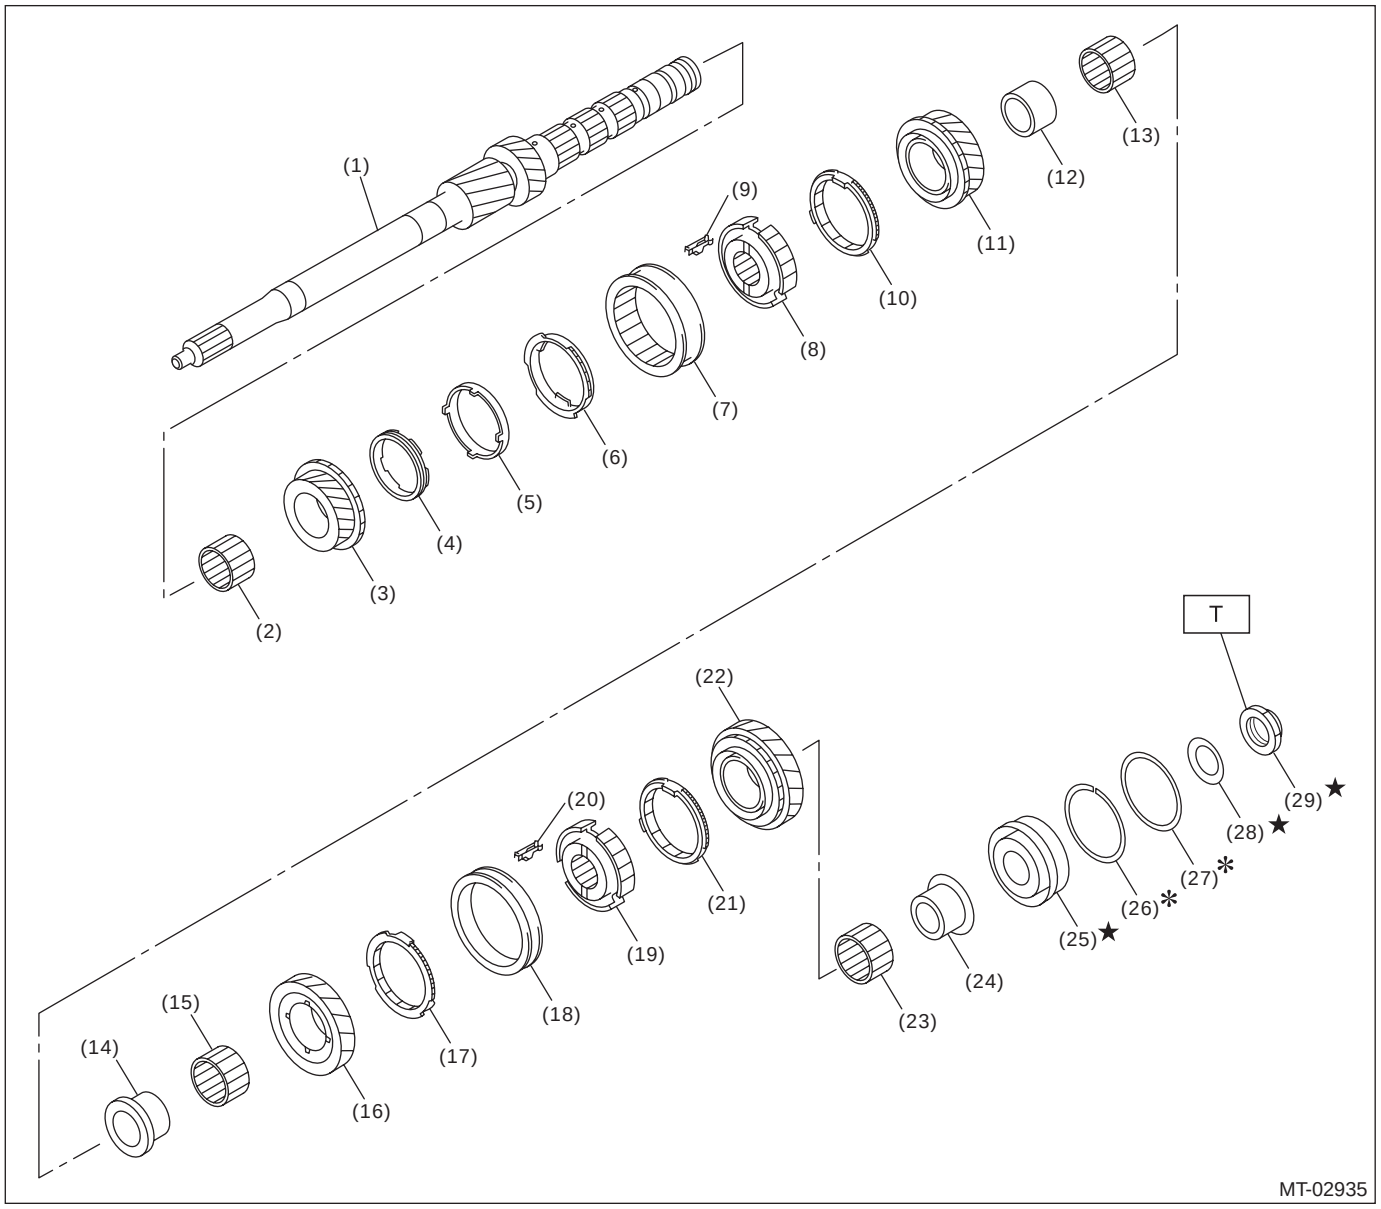
T1: 25 (2.5, 18.4)
T2: 41 (4.2, 30.2)
T3: 48 (4.9, 35.4)

6. SHIFTER FORK AND FORK ROD



(1)	Straight pin	(9)	Washer	(17)	5th-6th shifter arm
(2)	Interlock arm	(10)	Snap ring	(18)	5th-6th shifter fork
(3)	Interlock block	(11)	Reverse shifter fork	(19)	3rd-4th fork rod
(4)	Reverse interlock block	(12)	Reverse shifter arm	(20)	3rd-4th shifter arm
(5)	Interlock arm	(13)	Reverse fork rod	(21)	1st-2nd shifter arm
(6)	Striking rod	(14)	Selector arm	(22)	3rd-4th shifter fork
(7)	Selector arm No. 2	(15)	Shifter arm shaft	(23)	1st-2nd fork rod
(8)	Neutral set spring	(16)	5th-6th fork rod	(24)	1st-2nd shifter fork

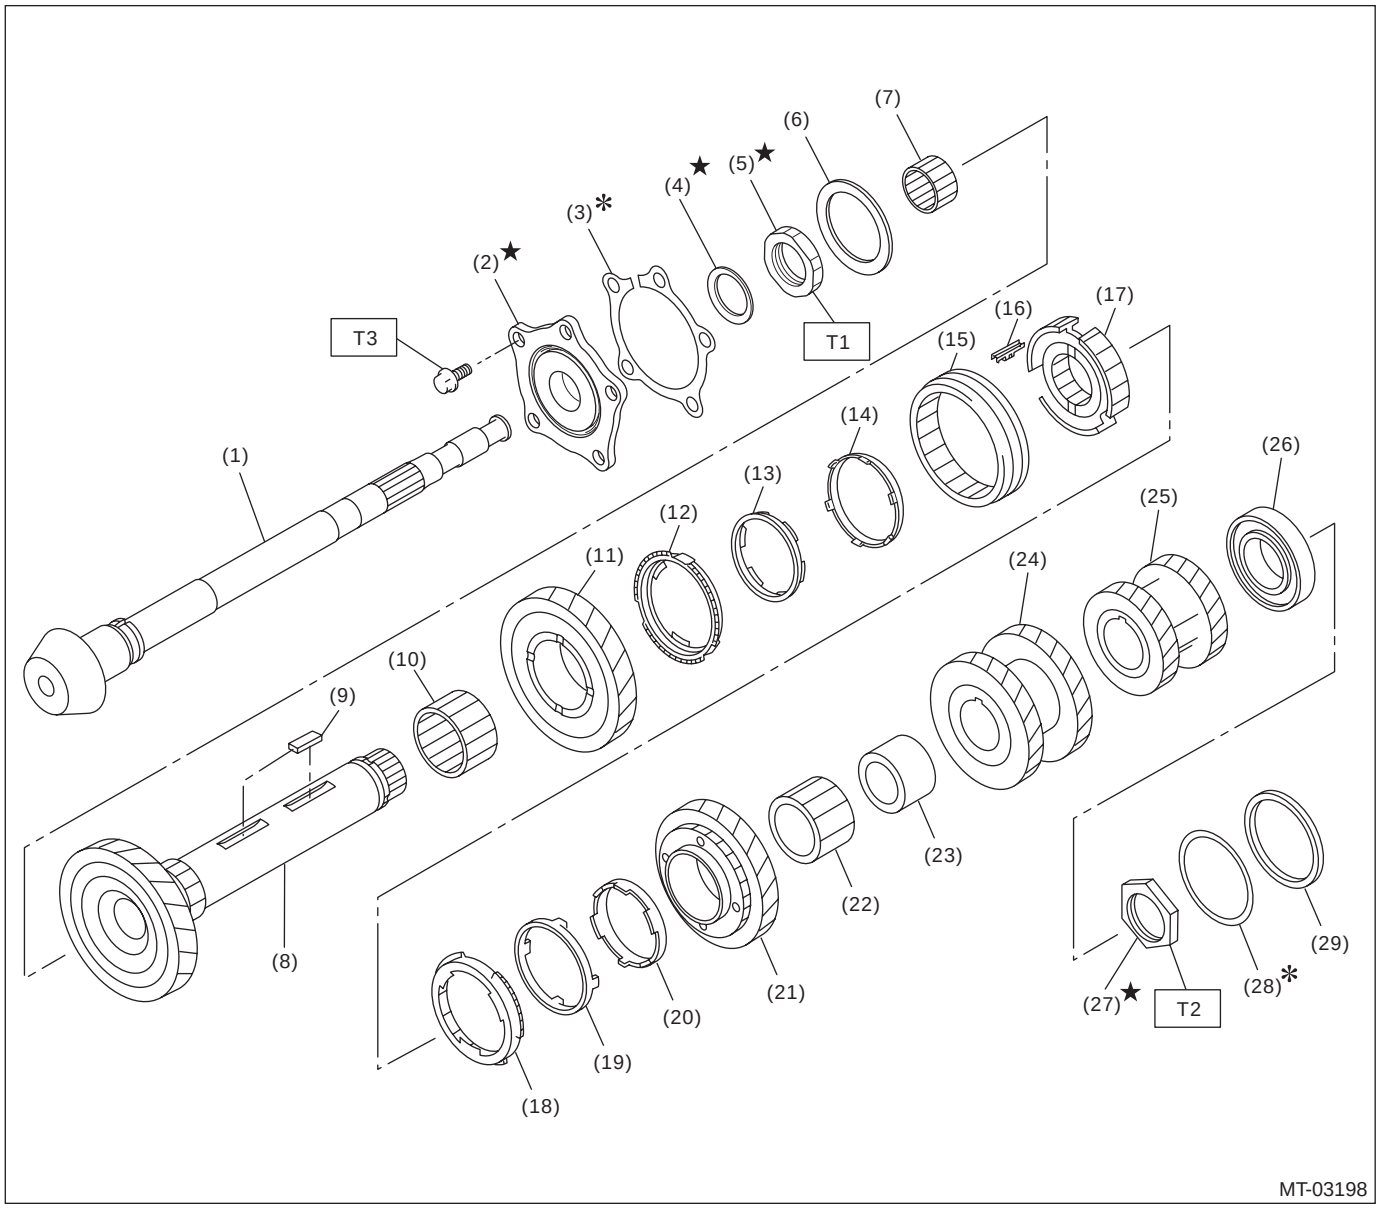
7. MAIN SHAFT ASSY



(1) Main shaft
(2) Needle bearing
(3) 3rd drive gear
(4) 3rd inner baulk ring
(5) 3rd synchro cone
(6) 3rd outer baulk ring
(7) 3rd-4th coupling sleeve
(8) 3rd-4th synchronizer hub
(9) 3rd-4th shifting insert
(10) 4th baulk ring
(11) 4th drive gear
(12) 4th needle bearing race
(13) Needle bearing
(14) 5th drive gear bushing
(15) Needle bearing
(16) 5th drive gear
(17) 5th baulk ring
(18) 5th-6th coupling sleeve
(19) 5th-6th synchronizer hub
(20) 5th-6th shifting insert
(21) 6th baulk ring
(22) 6th drive gear
(23) Needle bearing
(24) 6th drive gear bushing
(25) Double taper roller bearing
(26) Snap ring
(27) Adjusting washer
(28) Lock washer
(29) Lock nut

Tightening torque: N·m (kgf-m, ft-lb)
T: 392 (40.0, 289.1)

8. DRIVE PINION SHAFT ASSY & DRIVEN GEAR ASSY

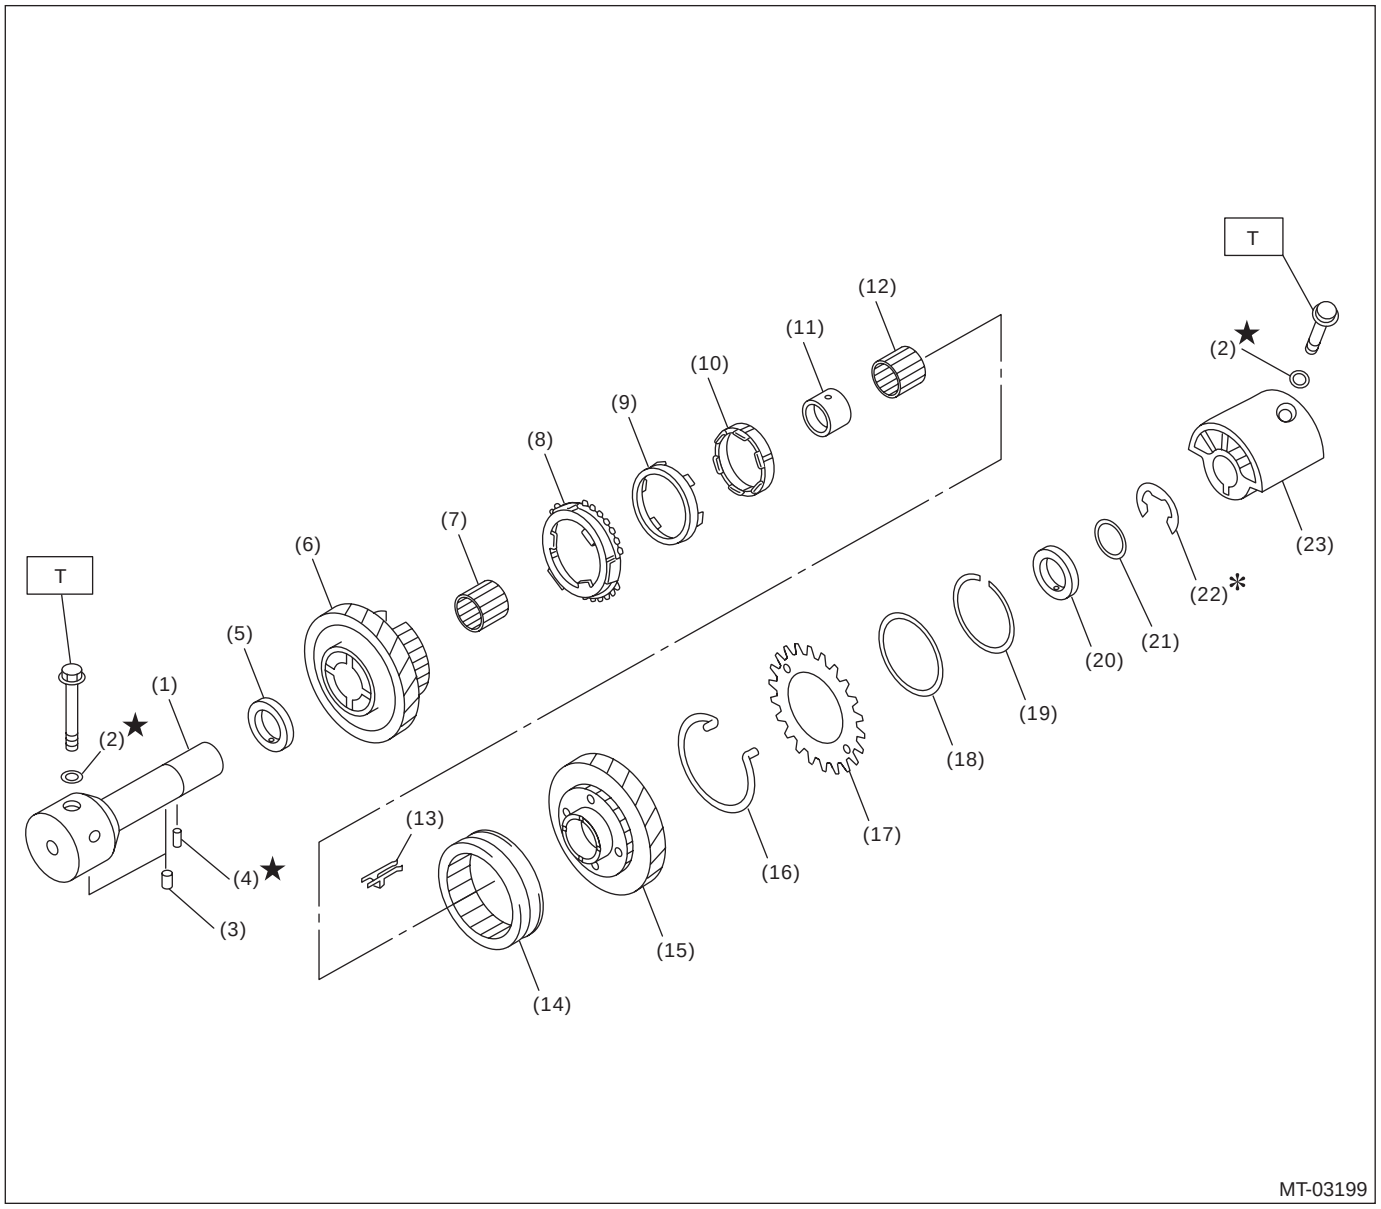


(1) Drive pinion shaft
(2) Double taper roller bearing
(3) Drive pinion shim
(4) Lock washer
(5) Lock nut
(6) Thrust bearing
(7) Needle bearing
(8) Driven shaft
(9) Key
(10) Needle bearing
(11) 1st driven gear
(12) 1st outer baulk ring
(13) 1st synchro cone
(14) 1st inner baulk ring
(15) 1st-2nd coupling sleeve
(16) 1st-2nd shifting insert
(17) 1st-2nd synchronizer hub
(18) 2nd outer baulk ring
(19) 2nd synchro cone
(20) 2nd inner baulk ring
(21) 2nd driven gear
(22) Needle bearing
(23) 2nd driven gear bushing
(24) 3rd-4th driven gear
(25) 5th-6th driven gear
(26) Ball bearing
(27) Lock nut
(28) Adjusting washer
(29) Collar

Tightening torque: N·m (kgf-m, ft-lb)
T1: 285 (29.1, 210.2)
265 (27.0, 195.4)*
T2: 570 (58.1, 420.4)
530 (54.0, 390.9)*
T3: 54 (5.5, 39.8)

* Tightening torque when using the ST

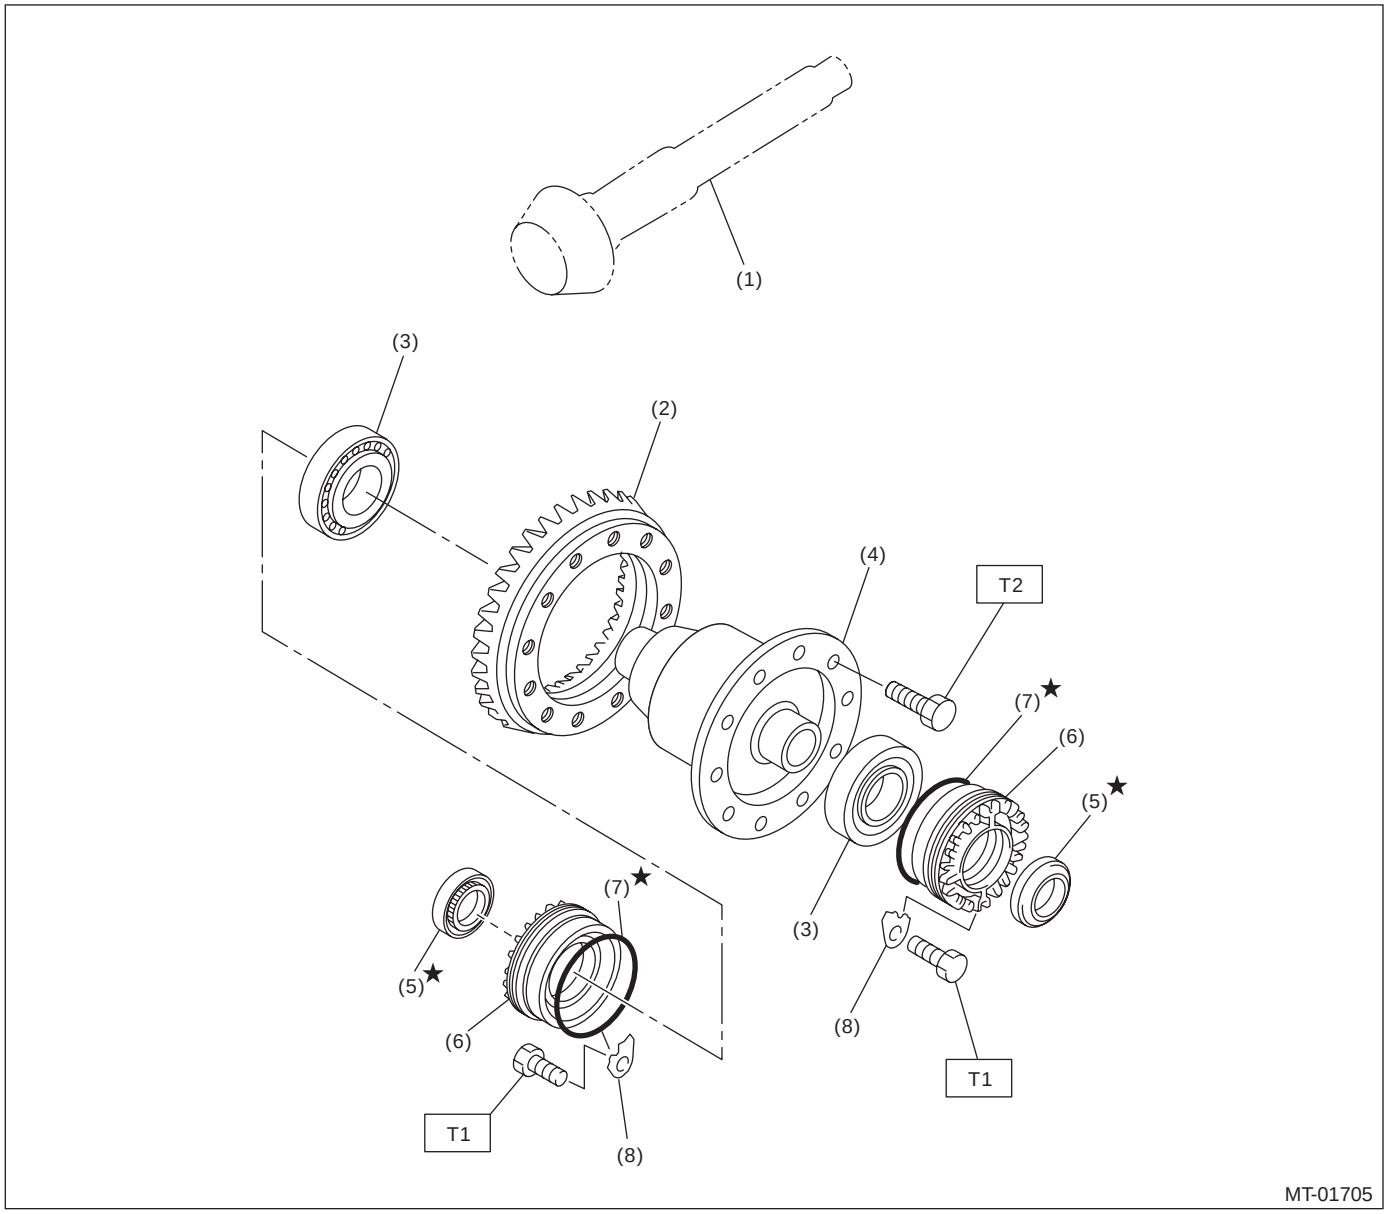
9. REVERSE IDLER GEAR ASSY



(1) Reverse idler gear shaft
(2) Gasket
(3) Knock pin
(4) Straight pin
(5) Counter high and low washer
(6) Reverse idler gear No. 2
(7) Needle bearing
(8) Reverse outer baulk ring
(9) Reverse synchro cone
(10) Reverse inner baulk ring
(11) Reverse idler gear bushing
(12) Needle bearing
(13) Shifting insert
(14) Reverse coupling sleeve
(15) Reverse idler gear
(16) Spring
(17) Reverse idler sub gear
(18) Friction plate
(19) Snap ring
(20) Counter high and low washer
(21) Washer
(22) Snap ring
(23) Reverse idler holder

Tightening torque: N·m (kgf-m, ft-lb)
T: 25 (2.5, 18.4)

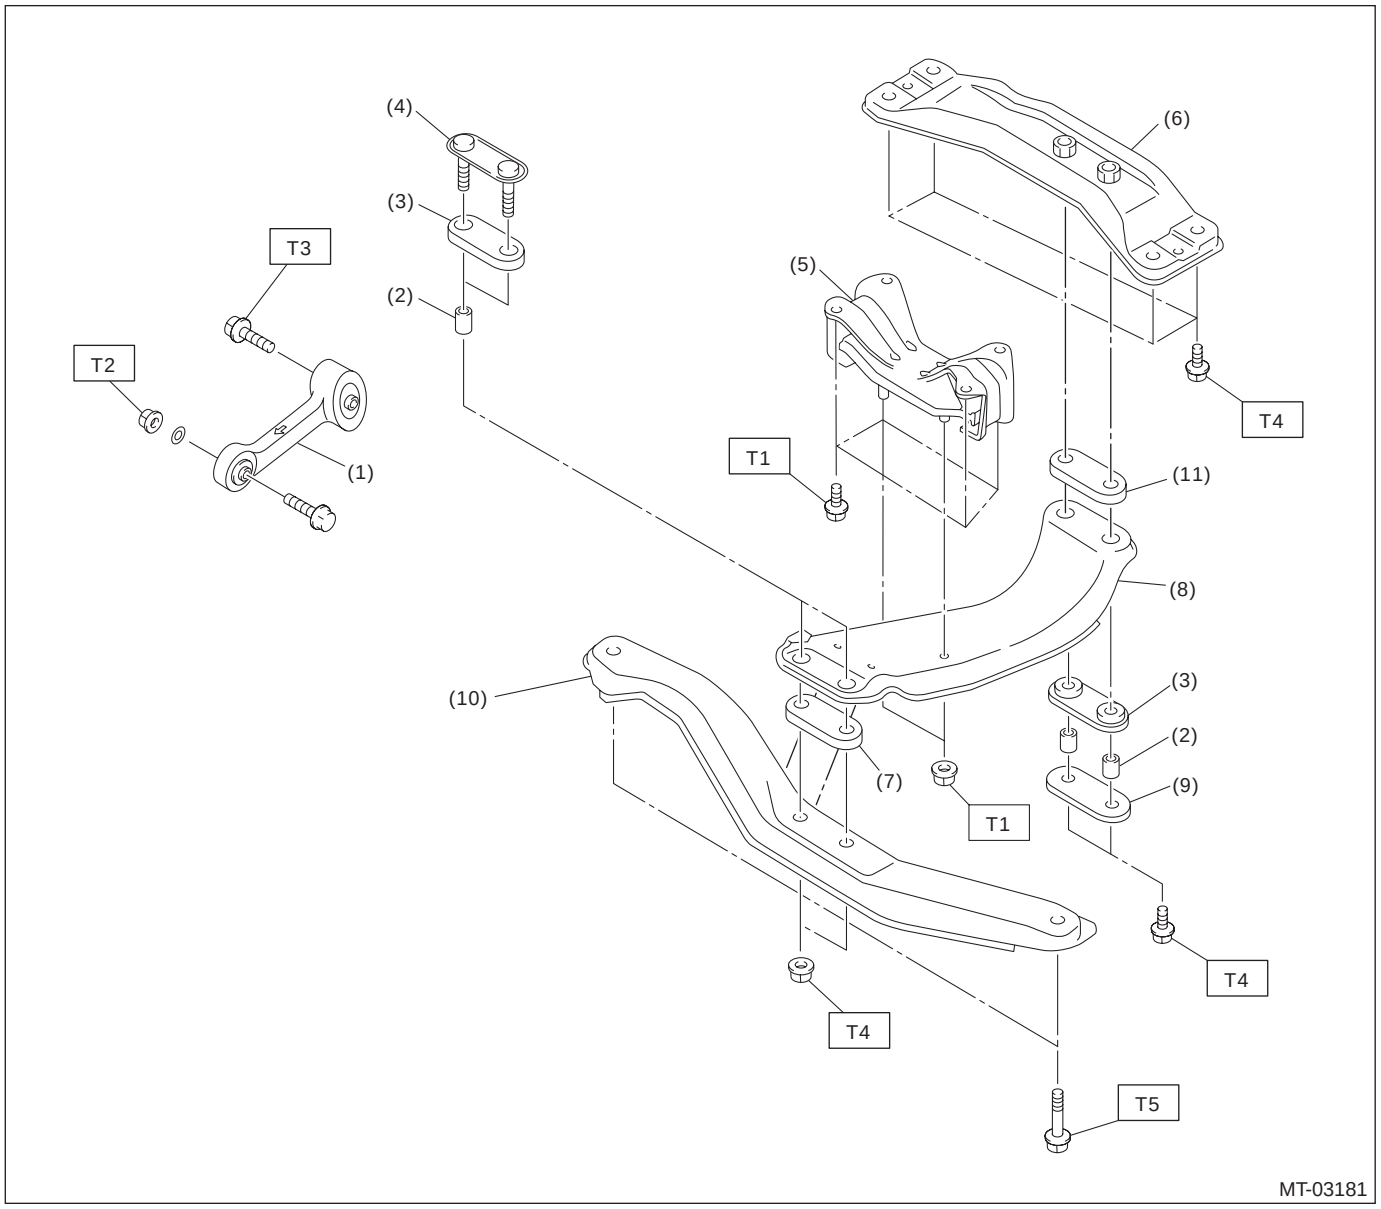
10.FRONT DIFFERENTIAL ASSY



(1) Drive pinion shaft
(2) Hypoid driven gear
(3) Taper roller bearing
(4) Differential ASSY
(5) Oil seal
(6) Differential side retainer
(7) O-ring
(8) Retainer lock plate

Tightening torque: N·m (kgf-m, ft-lb)
T1: 25 (2.5, 18.4)
T2: 69 (7.0, 50.9)

11.TRANSMISSION MOUNTING



(1)	Pitching stopper	(7)	Upper cushion rubber
(2)	Spacer	(8)	Center crossmember
(3)	Lower cushion rubber	(9)	Rear plate
(4)	Front plate	(10)	Front crossmember
(5)	Transmission cushion rubber	(11)	Rear cushion rubber
(6)	Rear crossmember		

Tightening torque: N·m (kgf-m, ft-lb)
T1: 35 (3.6, 25.8)
T2: 50 (5.1, 36.9)
T3: 58 (5.9, 42.8)
T4: 70 (7.1, 51.6)
T5: 140 (14.3, 103.3)

C: CAUTION

- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- When disassembling the case and other light alloy parts, disassemble by using a plastic hammer. Do not pry apart with screwdrivers or other tools.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine transmission gear oil, grease or equivalent. Do not mix transmission gear oil, grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply transmission gear oil onto sliding or revolving surfaces before installation.
- Always replace deformed or damaged snap rings.
- Before installing O-rings or oil seals, apply sufficient amount of transmission gear oil to avoid damage and deformation.
- Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
- Before securing a part on a vise, place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.
- Avoid damaging the mating surface of the case.
- Before applying liquid gasket, completely remove and clean the old liquid gasket.
- Be careful of handling the oil seal, O-ring and gasket. If the contact surface of them is damaged, oil leakage may occur.
- When pressing-in the oil seal, make sure that the oil seal lip portion and outer surface are not damaged or tilted.
- When replacing the taper roller bearing, replace the outer race and inner race as a set.
- When replacing the hypoid gear, replace the ring gear and pinion gear as a set.
- Replace the bolts if the seating surface or the thread surface is excessively rusted.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398791700	398791700	REMOVER	Used for removing and installing the straight pin (6 mm).
 ST-399527700	399527700	PULLER SET	Used for removing and installing the roller bearing (differential). (1) BOLT (899521412) (2) PULLER (399527702) (3) HOLDER (399527703) (4) ADAPTER (398497701) (5) BOLT (899520107) (6) NUT (021008000)

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498515700	498515700	REMOVER	Used for removing the roller bearing of the transfer driven gear.
 ST-498247001	498247001	MAGNET BASE	• Used for measuring the backlash between hypoid gears. • Used with DIAL GAUGE (498247100).
 ST-498247100	498247100	DIAL GAUGE	• Used for measuring the backlash between hypoid gears. • Used with MAGNET BASE (498247001).
 ST-498077000	498077000	REMOVER	Used for removing the differential taper roller bearing.
 ST-899858600	899858600	REMOVER	Used for removing the roller bearing.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499757002	499757002	INSTALLER	Used for installing the bearing cone of transfer driven gear (transmission case side).
 ST18630AA010	18630AA010	WRENCH COMPL RETAINER	• Used for removing and installing the differential side retainer RH. • WRENCH ASSY (499787000) can also be used.
 ST-499877000	499877000	RACE 4-5 INSTALLER	Used for disassembling the driven shaft and transfer driven gear.
 ST-899864100	899864100	REMOVER	Used for removing the transmission main shaft and drive pinion parts.
 ST-498057300	498057300	INSTALLER	Used for installing the extension oil seal.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498255400	498255400	PLATE	Used for measuring backlash.
 ST41099AA011	41099AA011	ENGINE SUPPORT BRACKET	• Used for supporting engine. • ENGINE SUPPORT BRACKET (41099AA010) can also be used.
 ST41099AA020	41099AA020	ENGINE SUPPORT	Used for supporting engine.
 ST-398527700	398527700	PULLER ASSY	• Used for removing the extension case oil seal. • Used for removing the front differential side bearing outer race. (Used together with18760AA000 (CLAW).)
 ST-398643600	398643600	GAUGE	Used for adjusting total end play, extension end play and drive pinion shim.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398177700	398177700	INSTALLER	• Used for assembling the main shaft. • Used for installing the roller bearing of transfer driven gear (extension case side).
 ST-399893600	399893600	PLIER	• Used for removing and installing the neutral set spring. • Used together with CLAW (18756AA000).
 ST18756AA000	18756AA000	CLAW	• Used for removing and installing the neutral set spring. • Used together with PLIER (399893600).
 ST-499247400	499247400	INSTALLER	Used for installing the ball bearing of the transfer drive gear.
 ST-398497701	398497701	SEAT	• Used for installing the ball bearing of the transfer drive gear. • Used for installing the front differential side bearing.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398437700	398437700	INSTALLER	Used for installing the front differential side bearing.
 ST18632AA000	18632AA000	STAND ASSY	Used for disassembling and assembling the transmission.
ST18671AA000	18671AA000	OIL SEAL GUIDE	• Used for installing the reverse check shaft oil seal. • Used for installing the shifter arm oil seal. • Used together with INSTALLER (18657AA010).
 ST18657AA010	18657AA010	INSTALLER	• Used for installing the reverse check shaft oil seal. • Used together with OIL SEAL GUIDE (18671AA000).
 ST18657AA000	18657AA000	INSTALLER	• Used for installing the shifter arm oil seal. • Used together with OIL SEAL GUIDE (18671AA000).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18758AA000	18758AA000	PULLER	Used for removing the transfer driven gear rear bearing outer race.
 ST18831AA000	18831AA000	GAUGE	Used for selecting the transfer driven gear bearing adjusting washer.
 ST18631AA000	18631AA000	HANDLE	Used for measuring the front differential backlash.
 ST18754AA000	18754AA000	REMOVER	Used to remove parts of the driven gear.
 ST18665AA000	18665AA000	HOLDER	• Used for removing and installing the main shaft lock nut. • Used together with BASE (18664AA000).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18666AA000	18666AA000	HOLDER	• Used for removing and installing the driven shaft lock nut. • Used together with BASE (18664AA000).
 ST18667AA000	18667AA000	HOLDER	• Used for removing and installing the drive pinion shaft lock nut. • Used together with BASE (18664AA000).
 ST18664AA000	18664AA000	BASE	• Used for removing and installing the main shaft lock nut. • Used for removing and installing the drive pinion shaft lock nut. • Used for removing and installing the driven shaft lock nut.
ST18722AA010	18722AA010	REMOVER	Used for disassembling the main shaft.
 ST18651AA000	18651AA000	INSTALLER	Used for assembling the main shaft.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18852AA000	18852AA000	TORQUE WRENCH	• Used to tighten the main shaft lock nut. • Used to tighten the drive pinion shaft lock nut. • Used to tighten the driven shaft lock nut.
ST18668AA000	18668AA000	PUNCH	Used to crimp the main shaft lock nut.
ST18669AA000	18669AA000	PUNCH	Used to crimp the driven shaft lock nut.
ST18670AA000	18670AA000	PUNCH	Used to crimp the drive pinion shaft lock nut.
 ST18620AA000	18620AA000	ADAPTER WRENCH	Used for removing and installing the driven gear shaft lock nut.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18621AA000	18621AA000	ADAPTER WRENCH	Used for removing and installing the drive pinion shaft lock nut.
 ST18723AA000	18723AA000	REMOVER	Used for disassembling the driven shaft.
 ST18630AA000	18630AA000	WRENCH ASSY	Used for removing and installing the differential side retainer LH.
 ST18672AA000	18672AA000	GUIDE CLIP	Used for installing the reverse idler snap ring.
 ST18720AA000	18720AA000	REMOVER	Used for disassembling the main shaft.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18654AA000	18654AA000	INSTALLER	Used for assembling the driven shaft.
 ST18663AA000	18663AA000	SOCKET	Used for removing and installing the transfer bearing holder.
 ST18853AA000	18853AA000	HEIGHT GAUGE	• Used for selecting the shift rod. • Used for selecting the snap ring and washer of the main shaft.
 ST18760AA000	18760AA000	CLAW	• Used for removing the front differential side bearing outer race. • Used together with PULLER ASSY (398527700).
 ST18675AA000	18675AA000	DIFFERENTIAL SIDE OIL SEAL INSTALLER	Used for installing the differential side retainer oil seal.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST28399SA010	28399SA010	OIL SEAL PROTECTOR	Used for protecting oil seal when installing front drive shaft.
 ST18657AA020	18657AA020	OIL SEAL INSTALLER	Used for installing the oil seal.
 ST18270KA020	18270KA020	SOCKET (E20)	Used for removing and installing the hypoid driven gear.

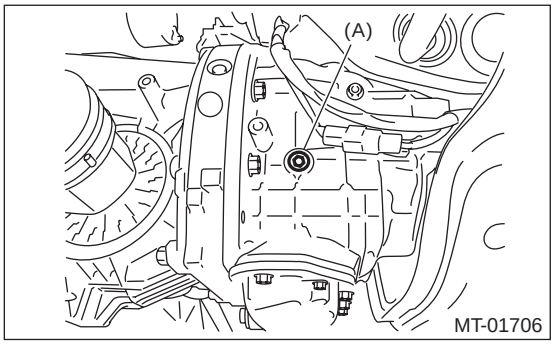
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
TORX® bit T70	Used for removing and installing transmission gear oil drain plug.
Depth gauge	Used for measuring the transmission end play.

2. Transmission Gear Oil

A: INSPECTION

1) Lift up the vehicle.
2) Remove the transmission under cover.
3) Remove the filler plug.



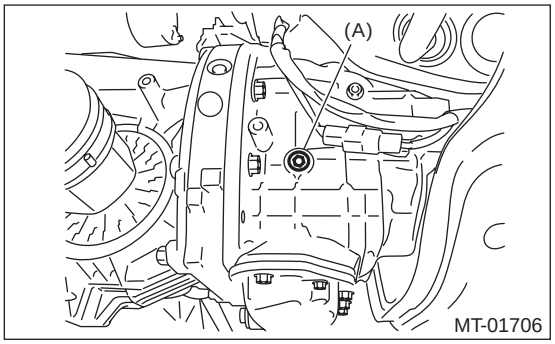
(A) Filler plug

4) Check that the transmission gear oil level is up to the bottom of the filler plug. If the transmission gear oil level is low, confirm that there is no oil leakage and refill up to the bottom of filler plug.
5) Using a new gasket, and tighten the filler plug.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

B: REPLACEMENT

1) Lift up the vehicle.
2) Remove the filler plug.



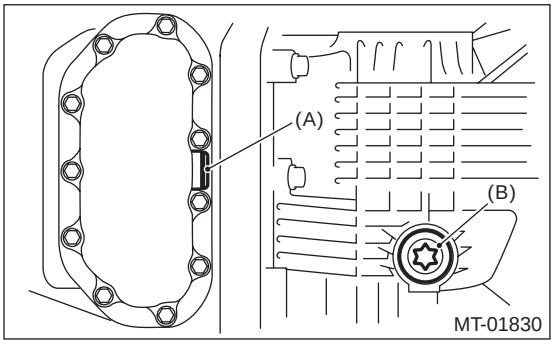
(A) Filler plug

3) Remove the two drain plugs (oil pan side, clutch housing side), and then drain the transmission gear oil completely.

CAUTION:
• Immediately after running the vehicle or after idling for a long time, the transmission gear oil will be hot. Be careful not to receive burns.
• Be careful not to spill the transmission gear oil on exhaust pipe to prevent it from emitting smoke or causing fires. If transmission gear oil is spilled on the exhaust pipe, wipe it off completely.

NOTE:
• Tighten the drain plug of the transmission gear oil after draining the transmission gear oil.
• Always use a new gasket.
• Use TORX® bit T70 to remove and install the drain plug on clutch housing side.

Tightening torque:
Oil pan side
50 N·m (5.1 kgf-m, 36.9 ft-lb)
Clutch housing side
70 N·m (7.1 kgf-m, 51.6 ft-lb)



(A) Drain plug (oil pan side)
(B) Drain plug (clutch housing side)

4) Pour transmission gear oil to the bottom end of filler plug.

NOTE:
Carefully refill transmission gear oil while checking the level. Excessive or insufficient oil must be avoided.

Recommended oil:
GL-5 (75W-90) or equivalent

Transmission gear oil capacity
4.1 L (4.3 US qt, 3.6 Imp qt)
5) Check the level of the transmission gear oil.
6) Using a new gasket, and tighten the filler plug.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

3. Oil Seal

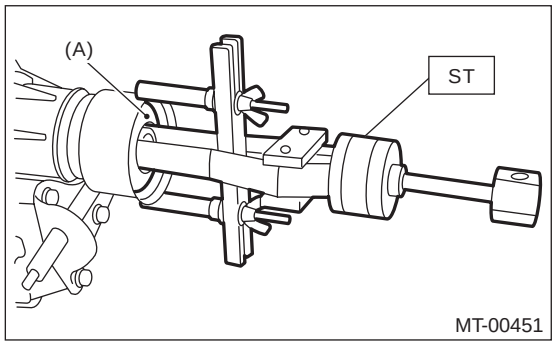
A: INSPECTION

Check that there is no oil leaking from the oil seal. If there is any deformation, hardening, wear or other malfunctions of the oil seal, perform the following:

- Replace the oil seal.
- Inspect the propeller shaft.

B: REPLACEMENT

1) Clean the transmission exterior.
2) Drain transmission gear oil completely. <Ref. to 6MT(TY85)-26, REPLACEMENT, Transmission Gear Oil.>
3) Remove the rear exhaust pipe and muffler. <Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(STI)-14, REMOVAL, Muffler.>
4) Remove the heat shield cover.
5) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
6) Using the ST, remove the oil seal.
ST 398527700 PULLER ASSY

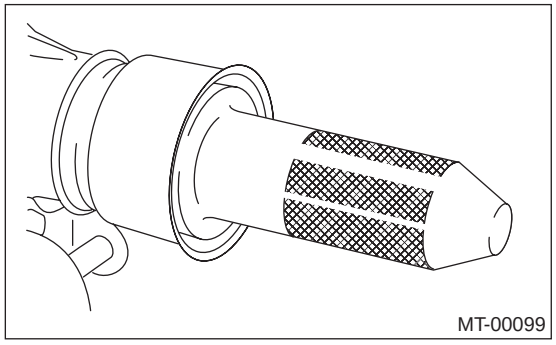


(A) Oil seal

7) Using the ST, install the oil seal.

NOTE:
- When grease is not applied to the oil seal lips, apply the transmission gear oil to the oil seal lips.
- Use a new oil seal.

ST 498057300 INSTALLER



8) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
9) Install the heat shield cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

10) Install the rear exhaust pipe and muffler. <Ref. to EX(STI)-12, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(STI)-15, INSTALLATION, Muffler.>
11) Pour in transmission gear oil and check the oil level. <Ref. to 6MT(TY85)-26, REPLACEMENT, Transmission Gear Oil.>

4. Differential Side Retainer Oil Seal

A: INSPECTION

Check that there is no oil leaking from the differential side retainer oil seal. If there is oil leakage, perform the following procedures.
- Replace the oil seal.
- Check the front drive shaft.

B: REPLACEMENT

1) Lift up the vehicle.
2) Remove the front exhaust pipe and center exhaust pipe. <Ref. to EX(STI)-5, REMOVAL, Front Exhaust Pipe.>
3) Drain transmission gear oil completely. <Ref. to 6MT(TY85)-26, REPLACEMENT, Transmission Gear Oil.>
4) Separate the front drive shaft from the transmission. <Ref. to DS-48, REMOVAL, Front Drive Shaft.>
5) Remove the differential side retainer oil seal by using a flat tip screwdriver or similar tools.
6) Using the ST, install the differential side retainer oil seal by lightly tapping with a hammer.
ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER
7) Apply transmission gear oil to the oil seal lips.
8) Set the ST to the side retainer.
ST 28399SA010 OIL SEAL PROTECTOR
9) Install the front drive shaft into the transmission.

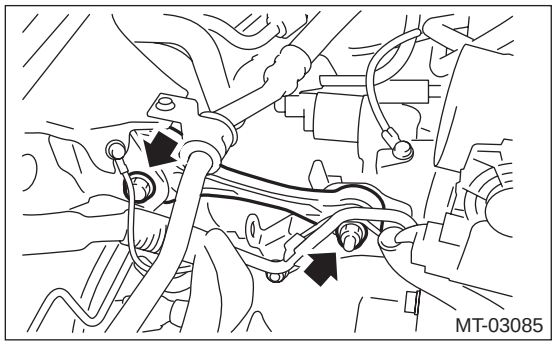
NOTE:
Replace the circlip of drive shaft with a new part.
10) Install the front drive shaft into transmission, remove the ST and insert the drive shaft securely.
ST 28399SA010 OIL SEAL PROTECTOR
11) Install the front exhaust pipe and the center exhaust pipe. <Ref. to EX(STI)-5, INSTALLATION, Front Exhaust Pipe.>
12) Pour transmission gear oil to the bottom end of filler plug. <Ref. to 6MT(TY85)-26, REPLACEMENT, Transmission Gear Oil.>
13) Lower the vehicle.

5. Transmission Mounting System

A: REMOVAL

1. PITCHING STOPPER

1) Disconnect the ground cable from battery.
2) Remove the intercooler. <Ref. to IN(STI)-13, REMOVAL, Intercooler.>
3) Remove the pitching stopper.

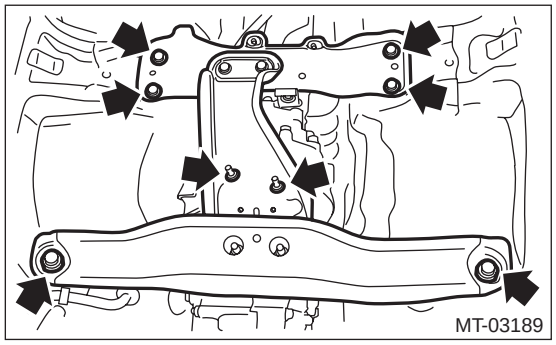


2. CROSSMEMBER AND CUSHION RUBBER

1) Disconnect the ground cable from battery.
2) Lift up the vehicle.
3) Remove the transmission under cover.
4) Remove the center exhaust pipe. <Ref. to EX(STI)-7, REMOVAL, Center Exhaust Pipe.>
5) Remove the rear exhaust pipe and muffler. <Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(STI)-14, REMOVAL, Muffler.>
6) Remove the heat shield cover.
7) Set the transmission jack under the transmission case.

CAUTION:
Always support the transmission case with a transmission jack.

8) Remove the front crossmember and the rear crossmember.



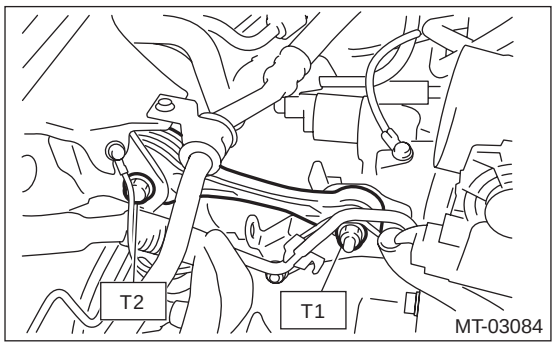
9) Remove the transmission cushion rubber.

B: INSTALLATION

1. PITCHING STOPPER

1) Install the pitching stopper.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)

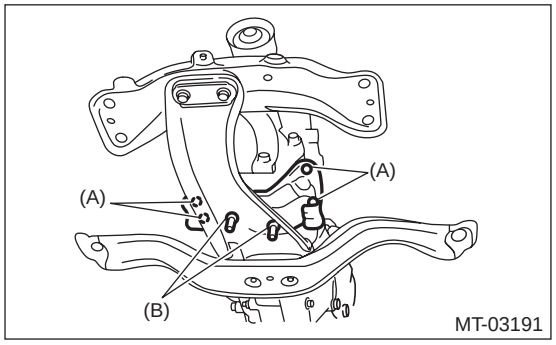


2) Install the intercooler. <Ref. to IN(STI)-14, INSTALLATION, Intercooler.>
3) Connect the battery ground terminal.

2. CROSSMEMBER AND CUSHION RUBBER

1) Install the transmission cushion rubber to the transmission, and tighten the bolt (A).
2) Install the transmission cushion rubber to the center crossmember, and temporarily tighten the nut (B).

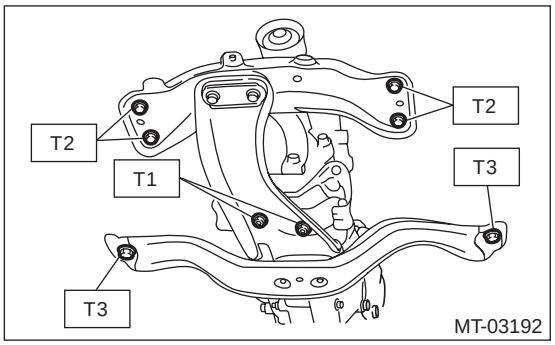
Tightening torque:
Bolt (A)
35 N·m (3.6 kgf-m, 25.8 ft-lb)



3) Tighten the mounting bolts for front crossmember and rear crossmember.

4) Tighten the transmission cushion rubber mounting nut.

Tightening torque:
T1: 35 N·m (3.6 kgf-m, 25.8 ft-lb)
T2: 70 N·m (7.1 kgf-m, 51.6 ft-lb)
T3: 140 N·m (14.3 kgf-m, 103 ft-lb)



5) Remove the transmission jack.
6) Install the heat shield cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

7) Install the rear exhaust pipe and muffler. <Ref. to EX(STI)-12, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(STI)-15, INSTALLATION, Muffler.>
8) Install the center exhaust pipe. <Ref. to EX(STI)-8, INSTALLATION, Center Exhaust Pipe.>

C: INSPECTION

Perform the following inspection procedures and repair or replace faulty parts.

1. PITCHING STOPPER

Check the pitching stopper for bends or damage. Check that the rubber is not stiff, cracked or otherwise damaged.

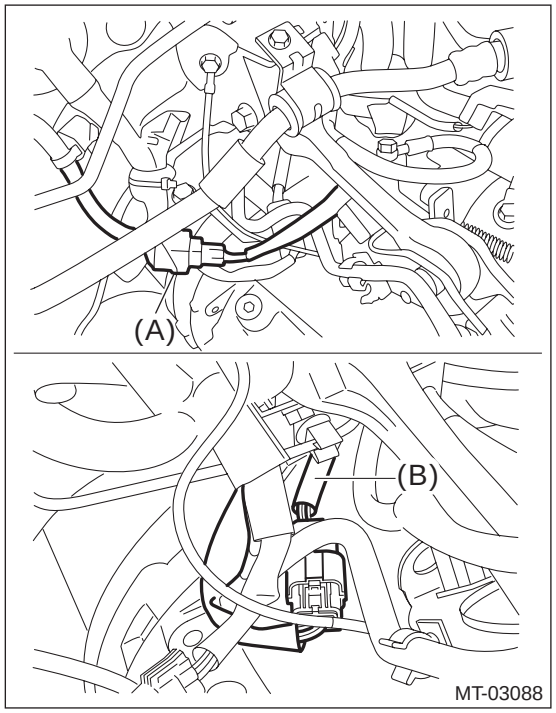
2. CROSSMEMBER AND CUSHION RUBBER

Check the crossmember for bending or damage. Check that the cushion rubber is not stiff, cracked, or otherwise damaged.

6. Manual Transmission Assembly

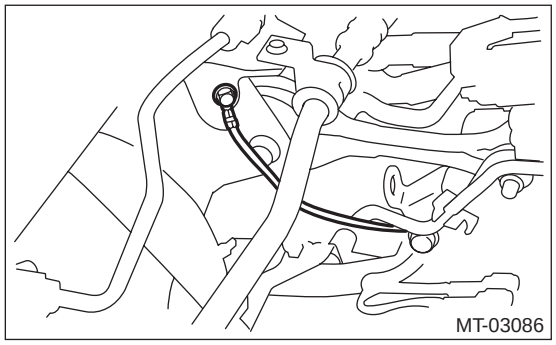
A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the intercooler. <Ref. to IN(STI)-13, REMOVAL, Intercooler.>
3) Disconnect the following harness connectors, and then remove the engine hanger rear.



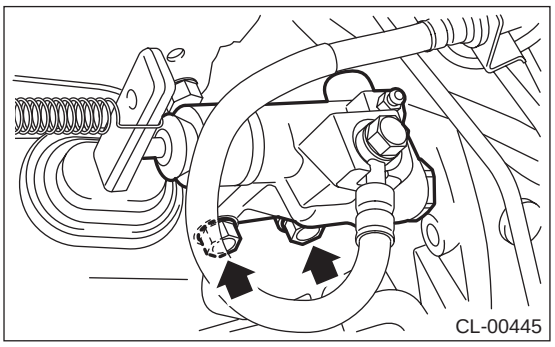
(A) Rear oxygen sensor connector
(B) Neutral position switch backup light switch connector

4) Remove the secondary air combination valve. <Ref. to EC(STI)-54, SECONDARY AIR COMBINATION VALVE LH, REMOVAL, Secondary Air Combination Valve.>
5) Disconnect the transmission radio ground cord terminal.

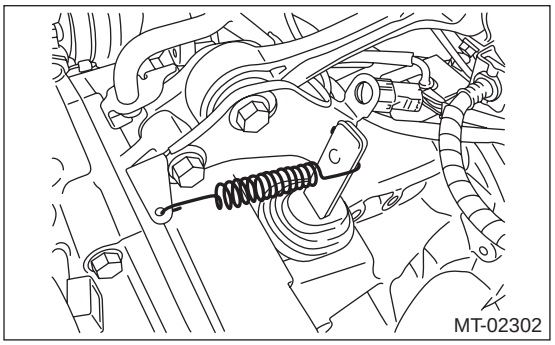


6) Remove the starter assembly. <Ref. to SC(STI)-7, REMOVAL, Starter.>
7) Remove the operating cylinder from the transmission.

NOTE:
Hang the removed operating cylinder with a piece of wire.

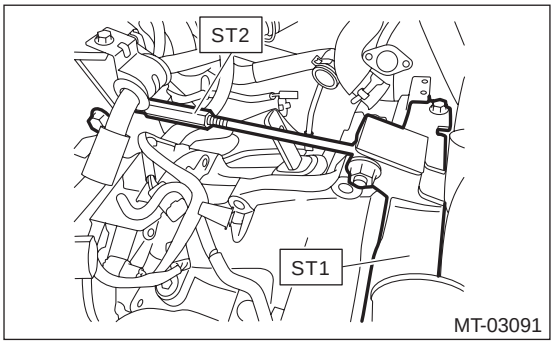


8) Remove the return spring from the release fork.

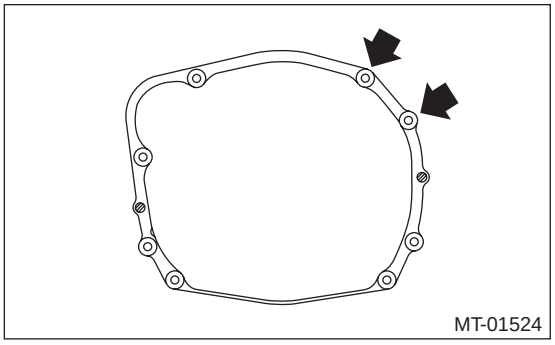


9) Remove the pitching stopper. <Ref. to 6MT(TY85)-29, PITCHING STOPPER, REMOVAL, Transmission Mounting System.>
10) Remove the pitching stopper bracket, return spring bracket, and transmission radio ground cable.
11) Set the ST.

ST1	41099AA011	ENGINE SUPPORT BRACKET
ST2	41099AA020	ENGINE SUPPORT

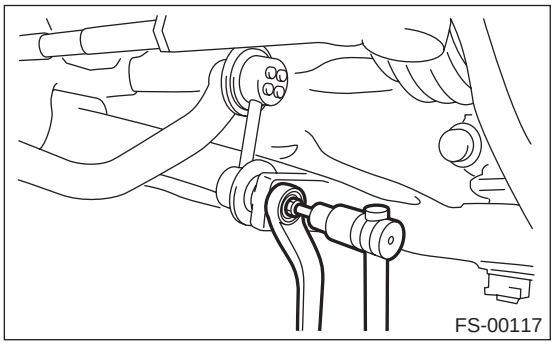


12) Remove the clutch release shaft.
(1) Remove the plug using a hexagon wrench.
(2) Attach a 6 mm (0.24 in) bolt to the release shaft, and pull out the release shaft.
(3) Lift the release fork, and remove from the claw of the release bearing. Pull the release fork to the engine side, and make it so that it moves freely.
13) Remove the center exhaust pipe. <Ref. to EX(STI)-7, REMOVAL, Center Exhaust Pipe.>
14) Remove the bolts which hold upper side of transmission to engine.



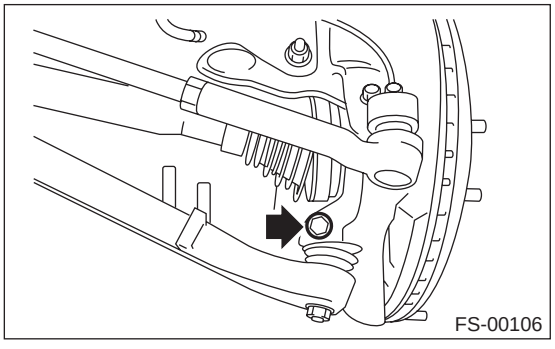
MT-01524

15) Remove the front wheels.
16) Lift up the vehicle, and remove the transmission under cover.
17) Drain transmission gear oil completely. <Ref. to 6MT(TY85)-26, REPLACEMENT, Transmission Gear Oil.>
18) Remove the heat shield cover.
19) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
20) Remove the front stabilizer link.



FS-00117

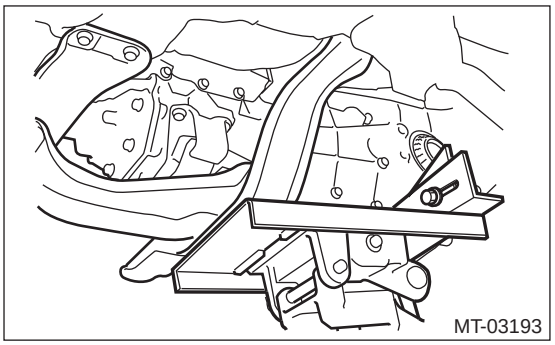
21) Remove the ball joint of front arm from the housing.



FS-00106

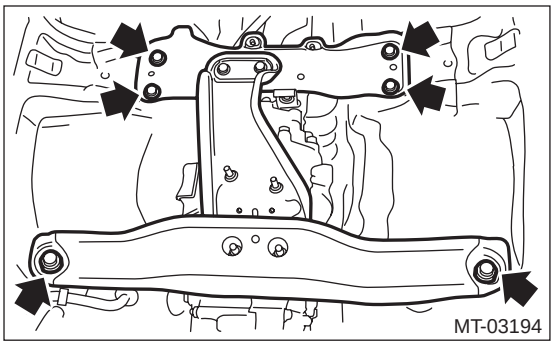
22) Remove the front drive shaft. <Ref. to DS-48, REMOVAL, Front Drive Shaft.>
23) Place the transmission jack under the transmission.

CAUTION:
Always support the transmission case with a transmission jack.



MT-03193

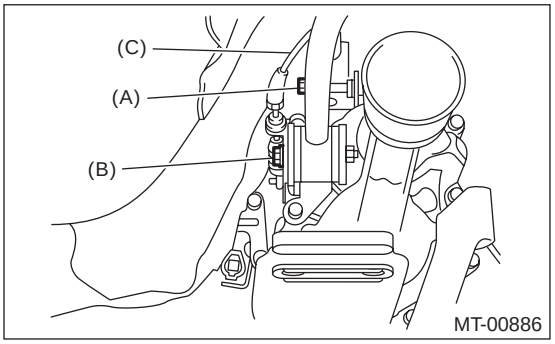
24) Remove the front crossmember and rear crossmember from the vehicle.



MT-03194

25) Move the transmission to the right side of the vehicle, and remove the joint COMPL, stay bolts and reverse check cable.

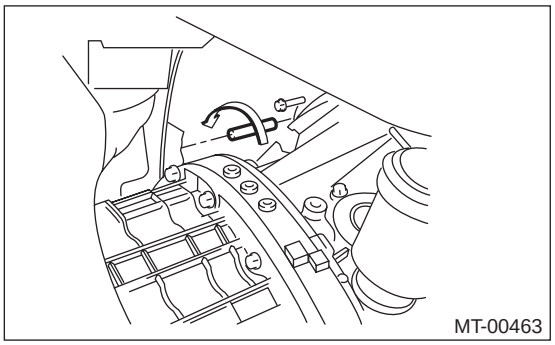
NOTE:
If the transmission is not moved aside, the joint COMPL and stay bolts may contact the body and cause damage.



MT-00886

(A) Joint COMPL bolt
(B) Stay bolt
(C) Reverse check cable

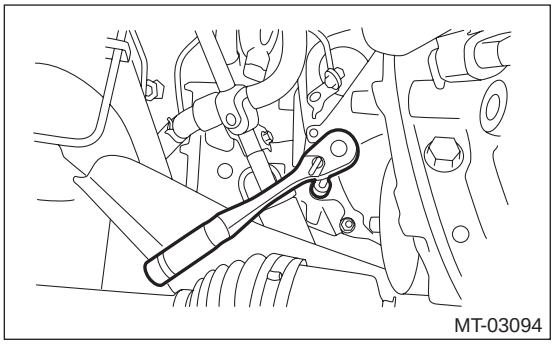
26) Tighten the turnbuckle of the ST to tilt the engine assembly towards the back.



MT-00463

27) Remove the bolts and nuts holding the bottom of transmission to the engine, and remove the transmission from the vehicle.

NOTE:
• During removal, be careful not to hit the transmission against the body when pulling towards the rear.
• The clutch pipe and breather pipe may interfere with each other. Remove carefully.



MT-03094

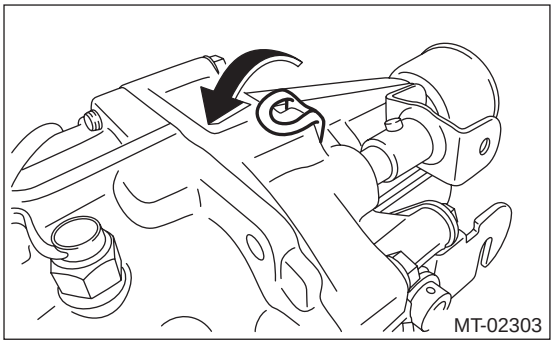
28) Remove the transmission cushion rubber from the transmission assembly.

B: INSTALLATION

1) Set the release fork, release bearing and release shaft to the transmission. <Ref. to CL-17, INSTALLATION, Release Bearing and Lever.>
2) Replace the front differential side retainer oil seal. <Ref. to 6MT(TY85)-28, REPLACEMENT, Differential Side Retainer Oil Seal.>

NOTE:
Be sure to replace the differential side oil seal after the procedure of removing front drive shaft from transmission.
3) Strike and bend the transmission hanger of transmission rear with a rubber hammer etc. so that it gets in contact with the transmission case.

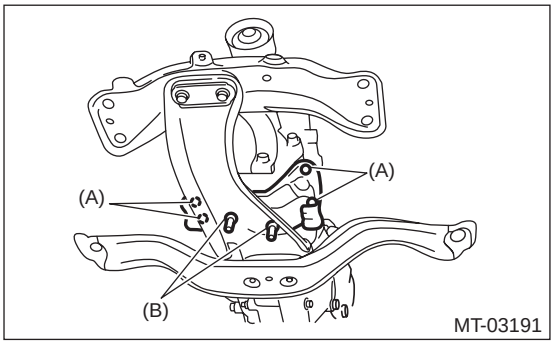
CAUTION:
Do not apply extra overload or impact to the transmission case.



MT-02303

4) Install the transmission cushion rubber to the transmission, and tighten the bolt (A).
5) Install the transmission cushion rubber to the center crossmember, and temporarily tighten the nut (B).

Tightening torque:
Bolt (A)
35 N·m (3.6 kgf-m, 25.8 ft-lb)



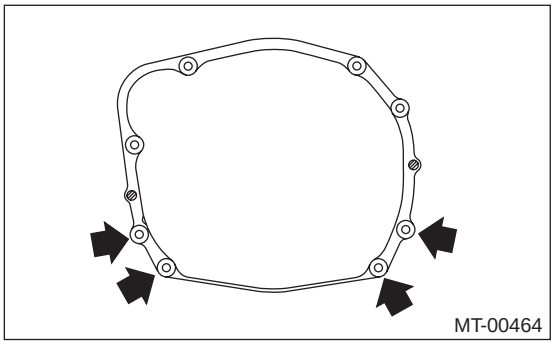
MT-03191

6) Install the transmission onto the engine.

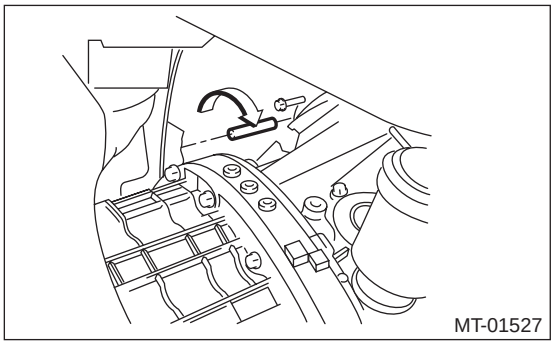
7) Tighten the bolts and nuts which hold the lower side of transmission to the engine.

NOTE:
• Make sure that the main shaft spline is completely inserted.
• Make sure that the rear end of the engine is set low.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

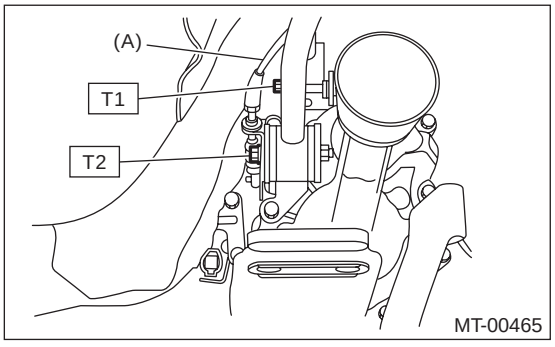


8) Loosen the turnbuckle of ST to return the engine to its original position.



9) Move the transmission to the right side of the vehicle, and attach the joint COMPL, stay bolts and reverse check cable.

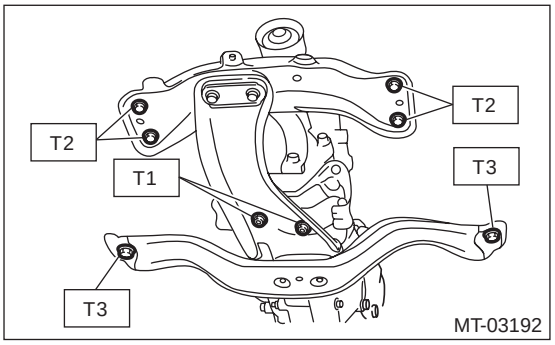
Tightening torque:
T1: 12 N·m (1.2 kgf-m, 8.9 ft-lb)
T2: 32 N·m (3.3 kgf-m, 23.6 ft-lb)



(A) Reverse check cable

10) Tighten the mounting bolts for front crossmember and rear crossmember.
11) Tighten the transmission cushion rubber mounting nut.

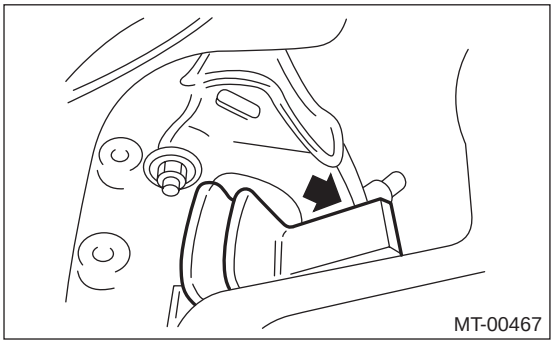
Tightening torque:
T1: 35 N·m (3.6 kgf-m, 25.8 ft-lb)
T2: 70 N·m (7.1 kgf-m, 51.6 ft-lb)
T3: 140 N·m (14.3 kgf-m, 103 ft-lb)



12) Lower the vehicle.
13) Install the starter. <Ref. to SC(STI)-7, INSTALLATION, Starter.>
14) Tighten the bolts which hold the upper side of the transmission to the engine.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)
15) Make sure that the release bearing is completely inserted.

NOTE:
• Push the release fork towards the operating cylinder side until a clicking sound is heard. Pull the release fork towards the engine side. If the release fork is not in contact with the case, the setting is complete.
• Confirm that the boot cover is set securely.



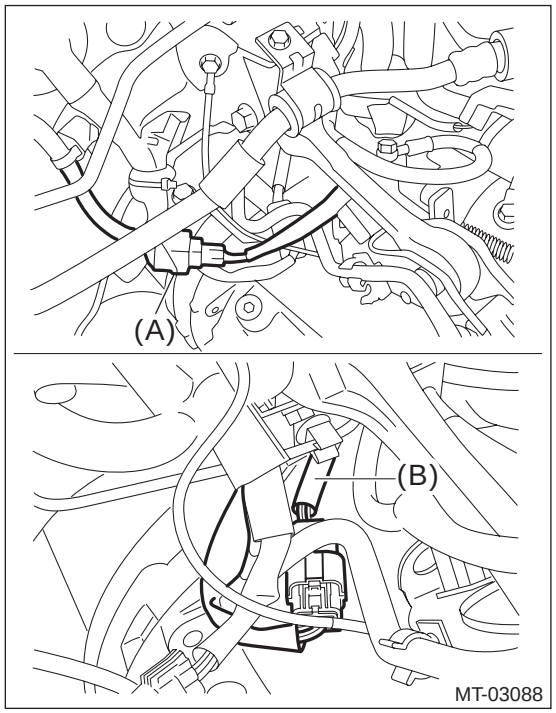
16) Install the pitching stopper bracket, return spring bracket, and transmission radio ground cable.

Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)

17) Install the pitching stopper. <Ref. to 6MT(TY85)-29, INSTALLATION, Transmission Mounting System.>
18) Install the return spring.
19) Install the clutch operating cylinder.

Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)

NOTE:
Check that the clutch hose is routed properly.
20) Install the starter assembly. <Ref. to SC(STI)-7, INSTALLATION, Starter.>
21) Install the transmission radio ground terminal.
22) Install the secondary air combination valve. <Ref. to EC(STI)-54, SECONDARY AIR COMBINATION VALVE LH, INSTALLATION, Secondary Air Combination Valve.>
23) Connect the following harness connectors, then attach the engine hanger rear.



(A) Rear oxygen sensor connector
(B) Neutral position switch backup light switch connector

24) Lift up the vehicle.
25) Set the ST to side retainer.
ST 28399SA010 OIL SEAL PROTECTOR
26) Install the front drive shaft into the transmission.

NOTE:
Replace the circlip of drive shaft with a new part.

27) Install the front drive shaft into transmission, remove the ST and insert the drive shaft securely.
ST 28399SA010 OIL SEAL PROTECTOR
28) Install the ball joint of the front arm.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)
29) Install the front stabilizer link.

Tightening torque:
45 N·m (4.6 kgf-m, 33.2 ft-lb)

NOTE:
Use a new self-locking nut.
30) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
31) Install the heat shield cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
32) Install the center exhaust pipe. <Ref. to EX(STI)-8, INSTALLATION, Center Exhaust Pipe.>
33) Fill the transmission gear oil. <Ref. to 6MT(TY85)-26, REPLACEMENT, Transmission Gear Oil.>
34) Install the transmission under cover.
35) Install the intercooler. <Ref. to IN(STI)-14, INSTALLATION, Intercooler.>
36) Connect the battery ground terminal.

7. Driver's Control Center Differential Control Module

A: REMOVAL

For removal of driver's control center differential control module, refer to the "FU(STI)" section. <Ref. to FU(STI)-56, REMOVAL, Engine Control Module (ECM).>

B: INSTALLATION

For installation of driver's control center differential control module, refer to the "FU(STI)" section. <Ref. to FU(STI)-56, INSTALLATION, Engine Control Module (ECM).>

8. DCCD Multi Select Switch

A: REMOVAL

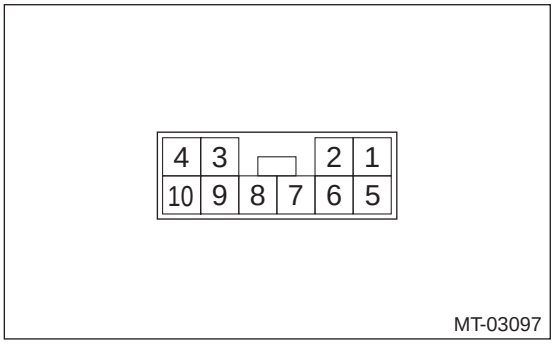
1) For removal of DCCD multi select switch, refer to the “FU(STI)” section. <Ref. to FU(STI)-55, REMOVAL, SI-DRIVE (SUBARU Intelligent Drive) Selector.>

B: INSTALLATION

1) For installation of DCCD multi select switch, refer to the “FU(STI)” section. <Ref. to FU(STI)-55, INSTALLATION, SI-DRIVE (SUBARU Intelligent Drive) Selector.>

C: INSPECTION

1) Check that the DCCD multi select switch does not have deformation, cracks, or other damages.
2) Measure the resistance between DCCD multi select switch selector terminals.

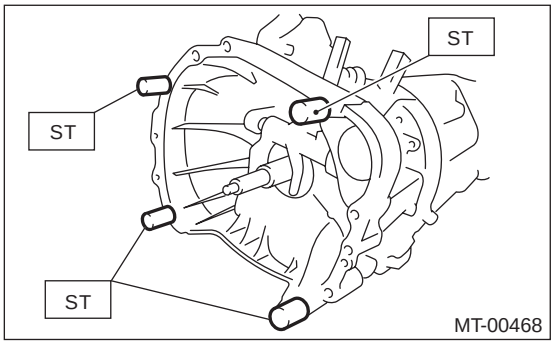


Switch position	Terminal No.	Standard
AUTO / MANU (when the AUTO / MANU switch is pushed in)	1 and 9	Less than 1 Ω
C.DIFF + (when the C.DIFF switch knob is pressed in the C.DIFF + direction)	2 and 9	Less than 1 Ω
C.DIFF – (when the C.DIFF switch knob is pressed in the C.DIFF – direction)	3 and 9	Less than 1 Ω

9. Preparation for Overhaul

A: PROCEDURE

1) Clean oil, grease, dirt and dust from the transmission.
2) Attach the ST on the transmission.
ST 18632AA000 STAND ASSY

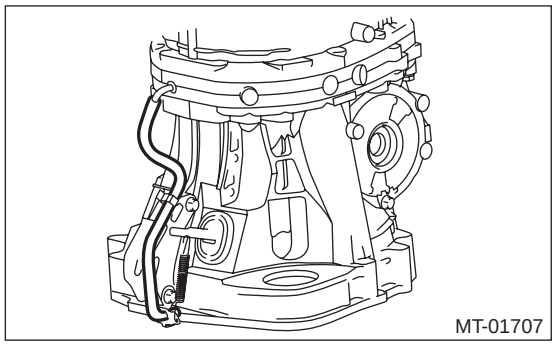


3) Apply oil to rotating parts before assembly.
4) When reusing disassembled parts, reinstall in the original positions and directions.
5) Gaskets, lock washers and lock nuts must be replaced with new parts.
6) Apply liquid gasket to the specified areas to prevent leakage.

10.Air Breather Hose

A: REMOVAL

1) Remove the intercooler. <Ref. to IN(STI)-13, REMOVAL, Intercooler.>
2) Remove the air breather hose.



B: INSTALLATION

1) Install the air breather hose.
2) Install the intercooler. <Ref. to IN(STI)-14, INSTALLATION, Intercooler.>

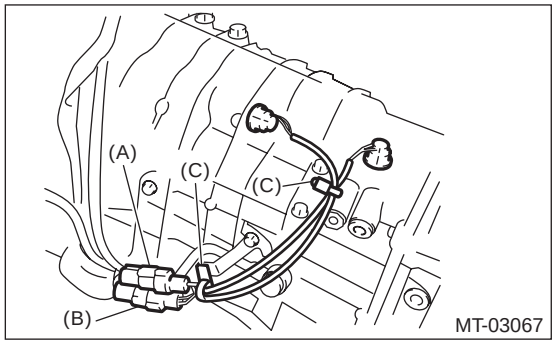
C: INSPECTION

Make sure the hose is not cracked or clogged.

11.Back-up Light Switch

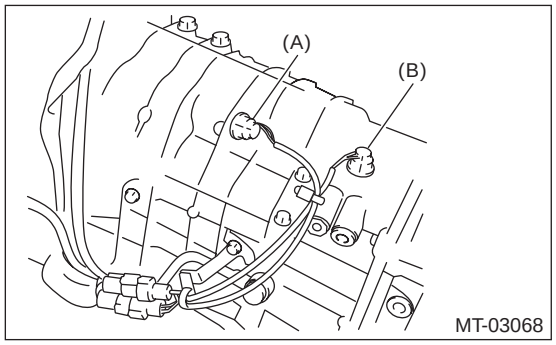
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-31, REMOVAL, Manual Transmission Assembly.>
2) Disconnect the back-up light switch connector.



(A) Back-up light switch connector (gray)
(B) Neutral position switch connector (brown)
(C) Clip

3) Disconnect the back-up light switch.



(A) Back-up light switch
(B) Neutral position switch

B: INSTALLATION

1) Install the back-up light switch.

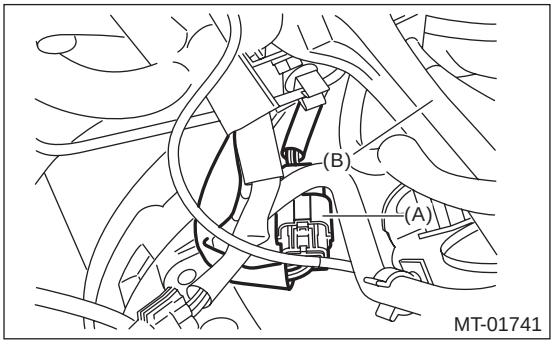
NOTE:
Use a new gasket.

Tightening torque:
32 N·m (3.3 kgf-m, 23.6 ft-lb)

2) Connect the back-up light switch connector.
3) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-33, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

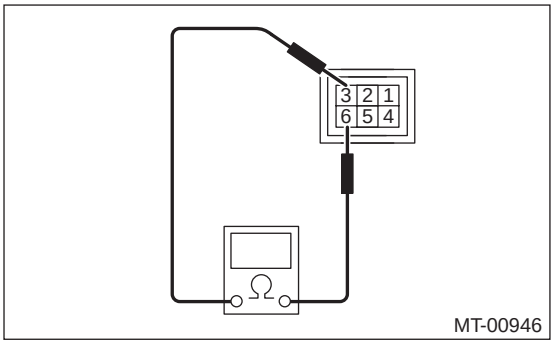
1) Disconnect the ground cable from battery.
2) Remove the intercooler. <Ref. to IN(STI)-13, REMOVAL, Intercooler.>
3) Disconnect the transmission harness and chassis harness.



(A) Transmission harness connectors
(B) Pitching stopper

4) Measure the resistance between the back-up light switch terminals. If it is not within the specification, replace the back-up light switch.

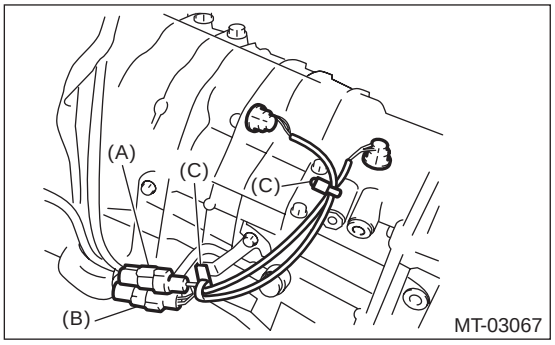
Gear shift position	Terminal No.	Standard
Back position	3 and 6	Less than 1 Ω
Other positions		1 MΩ or more



12.Neutral Position Switch

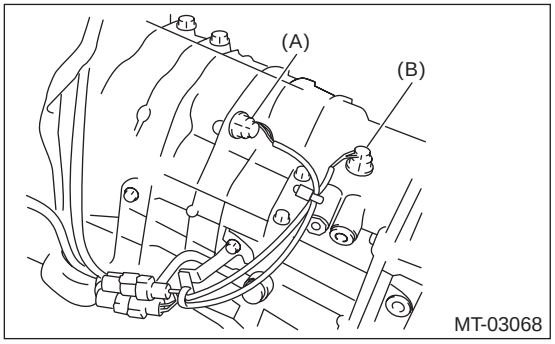
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-31, REMOVAL, Manual Transmission Assembly.>
2) Disconnect the connector and clip of the neutral position switch.



(A) Back-up light switch connector (gray)
(B) Neutral position switch connector (brown)
(C) Clip

3) Remove the neutral position switch.



(A) Back-up light switch
(B) Neutral position switch

B: INSTALLATION

1) Install the neutral position switch.

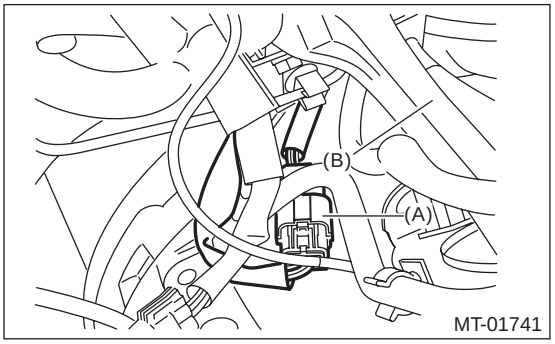
NOTE:
Use a new gasket.

Tightening torque:
32 N·m (3.3 kgf-m, 23.6 ft-lb)

2) Connect the connector and clip of the neutral position switch.
3) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-33, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

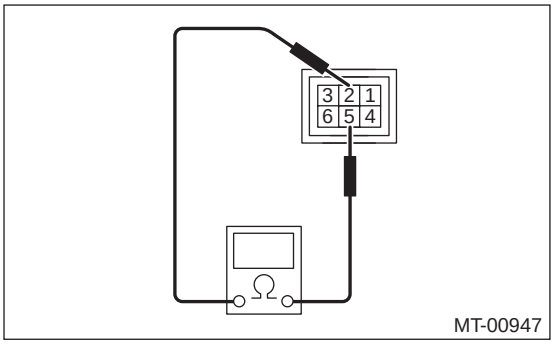
1) Disconnect the ground cable from battery.
2) Remove the intercooler. <Ref. to IN(STI)-13, REMOVAL, Intercooler.>
3) Disconnect the transmission harness and chassis harness.



(A) Transmission harness connectors
(B) Pitching stopper

4) Measure the resistance between neutral position switch terminals. If not within the standard values, replace the neutral position switch.

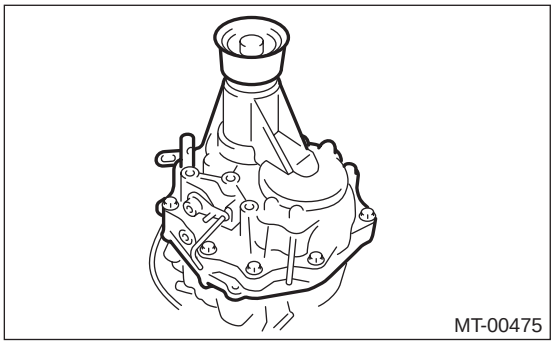
Gear shift position	Terminal No.	Standard
Neutral position	2 and 5	Less than 1 Ω
Other positions		1 MΩ or more



13.Extension Case

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-31, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-38, Preparation for Overhaul.>
3) Remove the extension case.



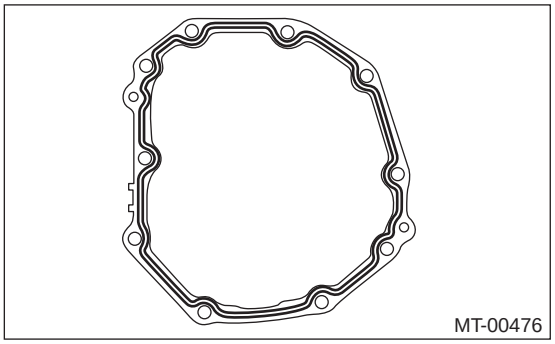
4) Remove any remaining liquid gasket from the extension case and transmission case.

B: INSTALLATION

1) Select the adjusting washer of the transfer driven gear, and attach it to the extension case. <Ref. to 6MT(TY85)-44, ADJUSTMENT, Extension Case.>
2) Install the taper roller bearing (extension case side) outer race to the extension case.

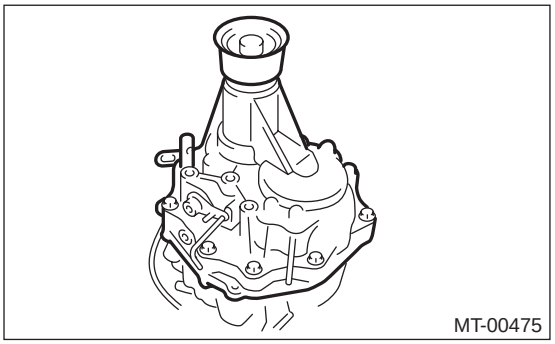
CAUTION:
Apply transmission gear oil onto sliding or revolving surfaces before installation.
3) Select the adjusting washer of the transfer drive gear, and attach it to the center differential.
4) Apply liquid gasket to the transmission case.

Liquid gasket:
THREE BOND 1215B or equivalent

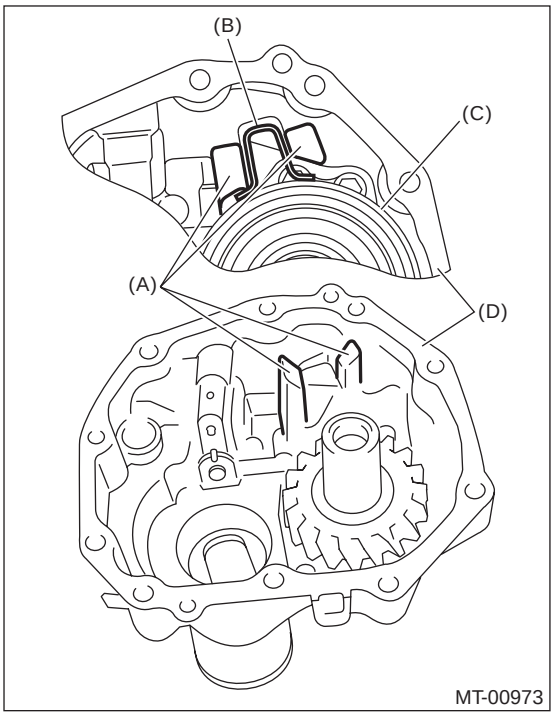


5) Install the extension case.

Tightening torque:
48 N·m (4.9 kgf-m, 35.4 ft-lb)



NOTE:
Insert the stopper section of the center differential between the oil guide.

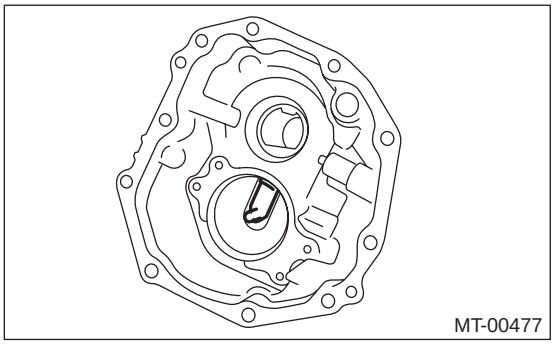


(A) Oil guide
(B) Stopper
(C) Center differential
(D) Extension case

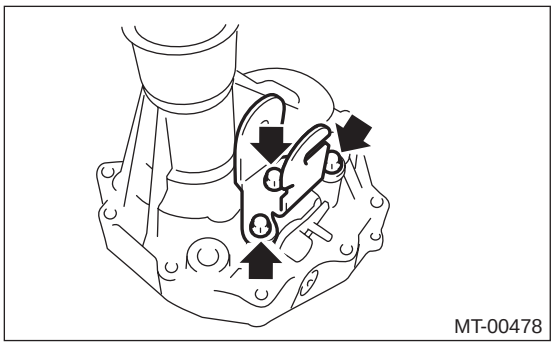
6) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-33, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

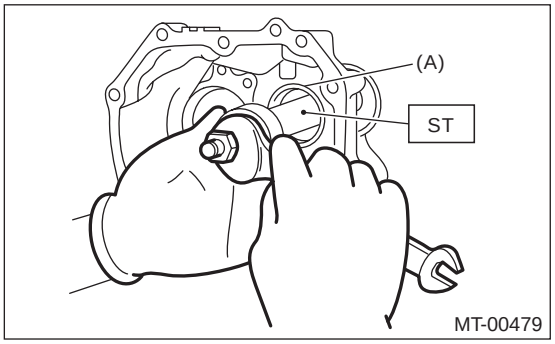
1) Remove the transfer drive gear. <Ref. to 6MT(TY85)-52, REMOVAL, Transfer Drive Gear.>
2) Remove the oil guide.



3) Remove the shift bracket.

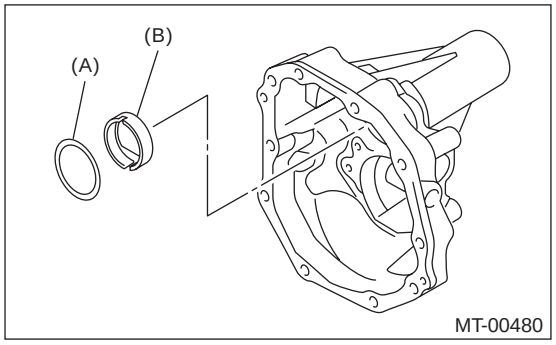


4) Using the ST, remove the taper roller bearing (extension case side) outer race.
ST 18758AA000 PULLER



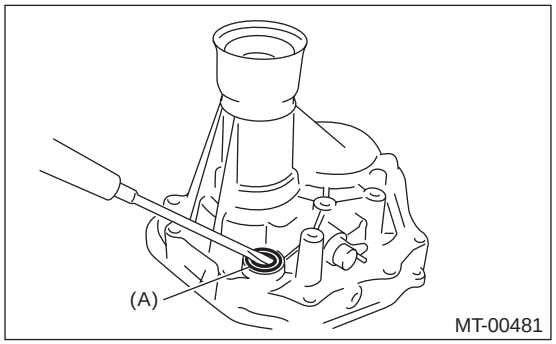
(A) Taper roller bearing (extension case side) outer race

5) Remove the adjusting washer and oil plate.



(A) Adjusting washer
(B) Oil plate

6) Remove the shifter arm oil seal.

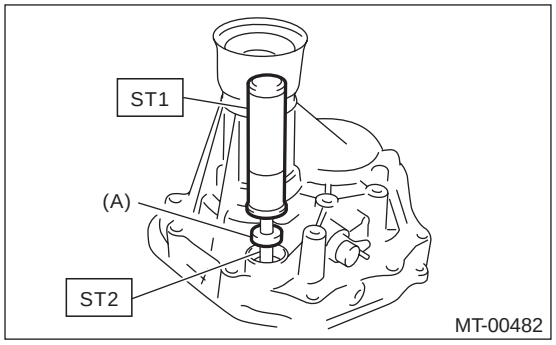


(A) Oil seal

7) Remove the reverse check system. <Ref. to 6MT(TY85)-49, REMOVAL, Reverse Check System.>
8) Remove the extension oil seal. <Ref. to 6MT(TY85)-27, REPLACEMENT, Oil Seal.>

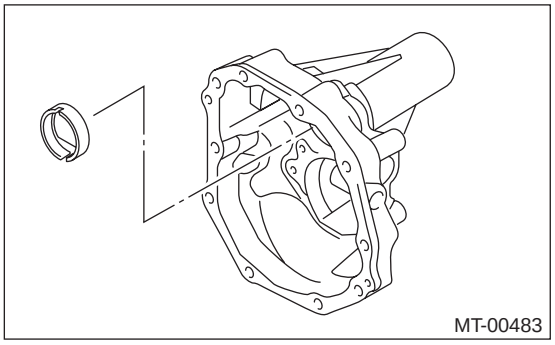
D: ASSEMBLY

1) Install the reverse check system. <Ref. to 6MT(TY85)-50, INSTALLATION, Reverse Check System.>
2) Install the extension case oil seal. <Ref. to 6MT(TY85)-27, REPLACEMENT, Oil Seal.>
3) Using the ST, install the shifter arm shaft oil seal.
ST1 18657AA000 INSTALLER
ST2 18671AA000 OIL SEAL GUIDE



(A) Oil seal

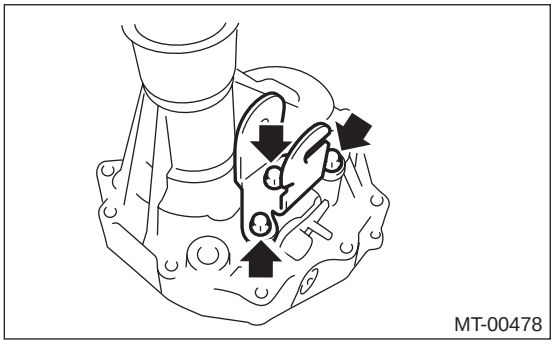
4) Install the oil plate.



5) Select the adjusting washer of the bearing, and attach it to the extension case. <Ref. to 6MT(TY85)-44, ADJUSTMENT, Extension Case.>
6) Install the taper roller bearing (extension case side) outer race to the extension case.

CAUTION:
Apply transmission gear oil onto sliding or revolving surfaces before installation.
7) Install the shift bracket.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



8) Attach the oil guide and the transfer driven gear. <Ref. to 6MT(TY85)-52, INSTALLATION, Transfer Drive Gear.>

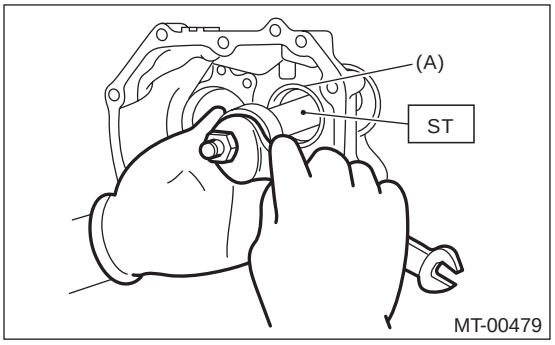
E: INSPECTION

1) Check to make sure there is no damage or cracks on the extension case. If damage or cracking is found, replace the extension case.
2) Inspect for oil leaks at the extension case and transmission case oil seals and mating surfaces. If there are oil leaks, replace the oil seal and liquid gasket.

F: ADJUSTMENT

1. TRANSFER DRIVEN GEAR BEARING ADJUSTING WASHER ADJUSTMENT

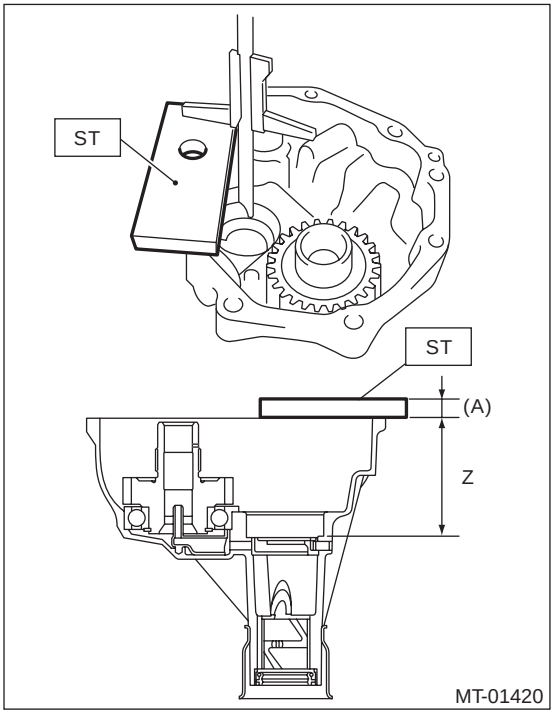
1) Using the ST, remove the taper roller bearing (extension case side) outer race from the extension case.
ST 18758AA000 PULLER



(A) Taper roller bearing (extension case side) outer race

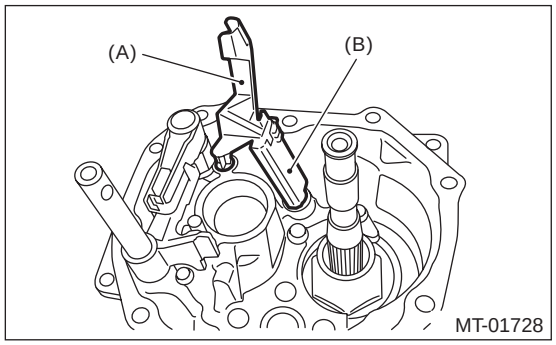
2) Remove the adjusting washer.
3) Measure depth “Z” between the extension case end area and the taper roller bearing (extension case side) contact area.
ST 398643600 GAUGE

NOTE:
When measuring depth “Z”, subtract the thickness of the ST [15 mm (0.59 in)] from the measured value.



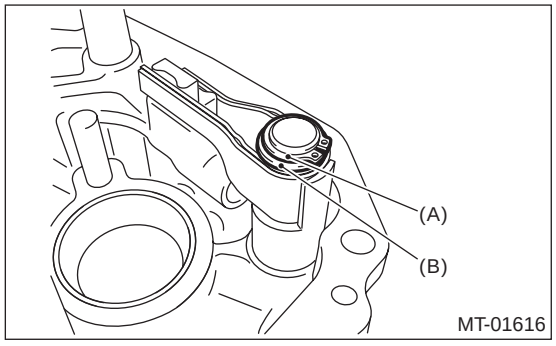
(A) 15 mm (0.59 in)

4) Remove the transfer driven gear. <Ref. to 6MT(TY85)-54, REMOVAL, Transfer Driven Gear.>
5) Remove the center differential. <Ref. to 6MT(TY85)-56, REMOVAL, Center Differential.>
6) Remove the oil guides G and H.



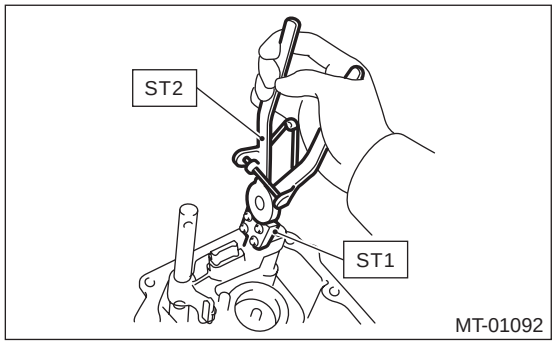
(A) Oil guide G
(B) Oil guide H

7) Remove the snap ring and flat washer from the selector arm area.

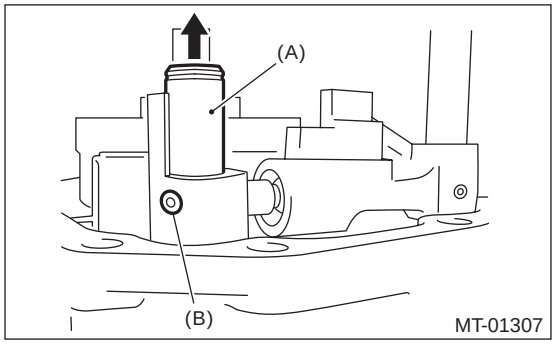


(A) Snap ring
(B) Flat washer

8) Using an ST, remove the neutral set spring and support.
ST1 18756AA000 CLAW
ST2 399893600 PLIER

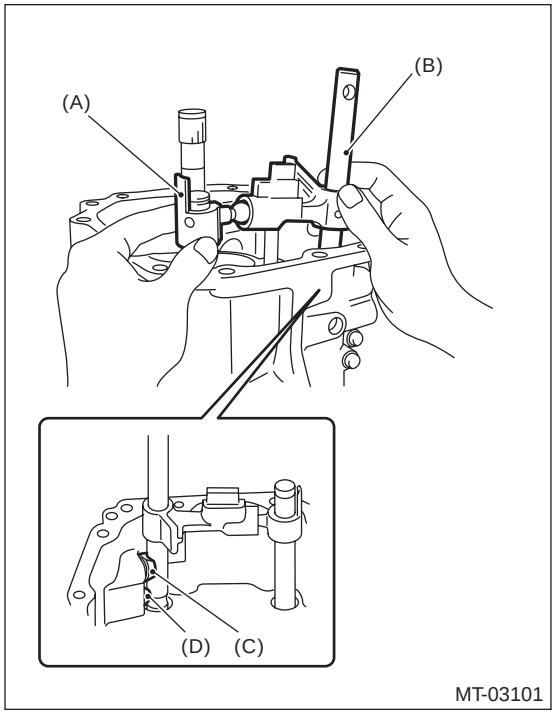


9) Lift the striking rod, and remove the straight pin.



(A) Striking rod
(B) Straight pin

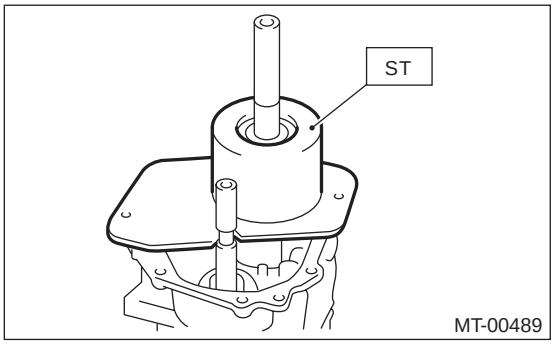
10) Remove the selector arm No. 2, shifter arm shaft, selector plunger, shift accent plunger and spring.



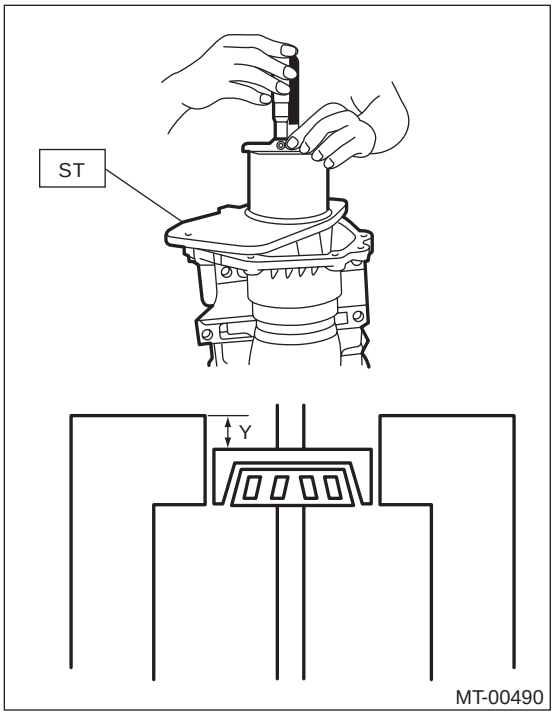
(A) Selector arm No. 2
(B) Shifter arm shaft
(C) Selector plunger
(D) Shift accent plunger

11) Attach the taper roller bearing (extension case side) to the transfer driven gear.

12) Set the ST.
ST 18831AA000 GAUGE



13) Turn the transfer driven gear 10 or more times to seat the bearing properly.
14) Measure depth “Y” between the end of the ST and the taper roller bearing (extension case side).
ST 18831AA000 GAUGE



15) Using the following calculation, calculate the transfer driven gear bearing adjusting washer value “t”.
t = Z – (100 – Y) – {0.02 — 0.11 mm (0.0008 — 0.0043 in)}

t mm (in)	Transfer driven gear bearing adjusting washer thickness
Y mm (in)	Depth between the end of the ST and the taper roller bearing (extension case side)
Z mm (in)	Depth between the end of the extension case and the taper roller bearing (extension case side) contact area
0.02 — 0.11 mm (0.0008 — 0.0043 in)	Standard clearance between the adjusting washer and the taper roller bearing (extension case side)
100 mm (3.94 in)	Height of ST

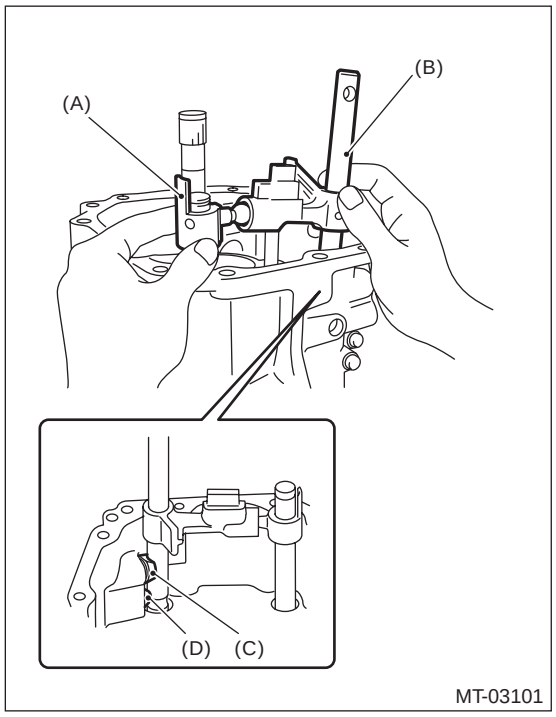
16) Refer to the calculated value “t” to select the closest adjusting washer from the following table.

Standard clearance between the adjusting washer and the taper roller bearing (extension case side)
0.02 — 0.11 mm (0.0008 — 0.0043 in)

NOTE:
Match to be within the standard clearance range.

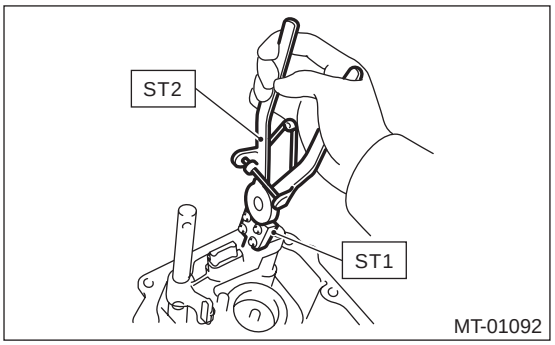
Adjusting washer (50 × 61 × t)	
Part No.	Thickness t mm (in)
803050060	0.50 (0.0197)
803050061	0.55 (0.0217)
803050062	0.60 (0.0236)
803050063	0.65 (0.0256)
803050064	0.70 (0.0276)
803050065	0.75 (0.0295)
803050066	0.80 (0.0315)
803050067	0.85 (0.0335)
803050068	0.90 (0.0354)
803050069	0.95 (0.0374)
803050070	1.00 (0.0394)
803050071	1.05 (0.0413)
803050072	1.10 (0.0433)
803050073	1.15 (0.0453)
803050074	1.20 (0.0472)
803050075	1.25 (0.0492)
803050076	1.30 (0.0512)
803050077	1.35 (0.0531)
803050078	1.40 (0.0551)
803050079	1.45 (0.0570)

17) Install the selector arm No. 2, shifter arm shaft, selector plunger, shift accent plunger and spring.

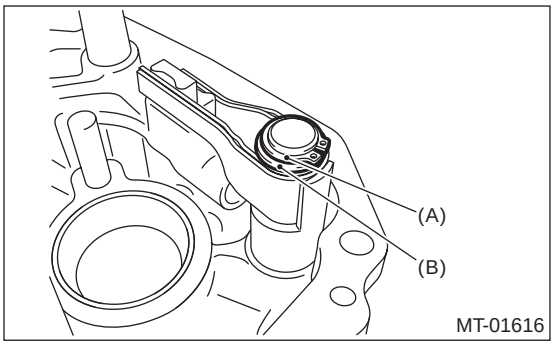


(A) Selector arm No. 2
(B) Shifter arm shaft
(C) Selector plunger
(D) Shift accent plunger

18) Install a new straight pin.
19) Using the ST, install the neutral set spring and support.
ST1 18756AA000 CLAW
ST2 399893600 PLIER



20) Install the flat washer and snap ring to the selector arm area.

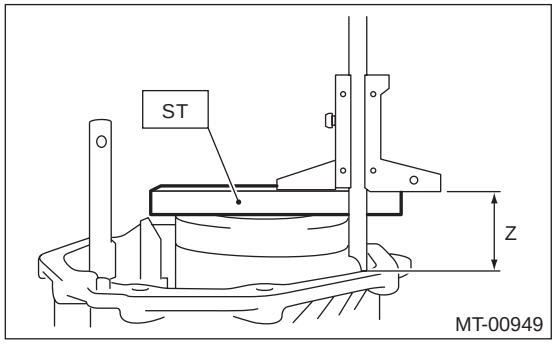


(A) Snap ring
(B) Flat washer

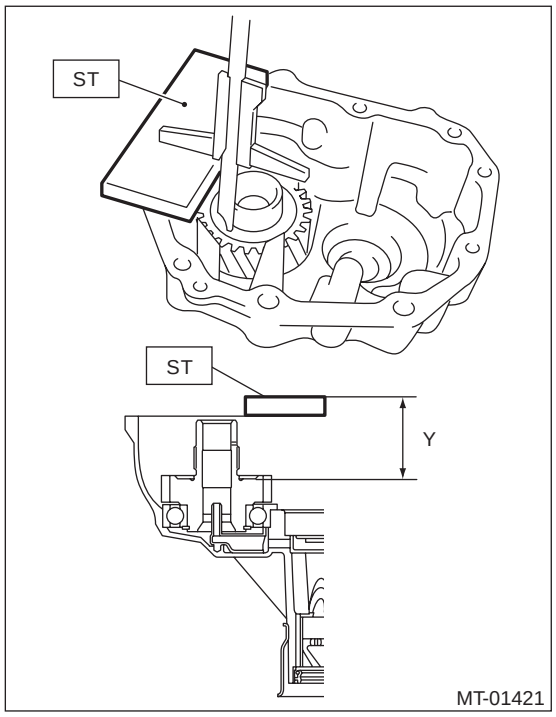
21) Install the center differential. <Ref. to 6MT(TY85)-56, INSTALLATION, Center Differential.>

2. TRANSFER DRIVE GEAR ADJUSTING WASHER SELECTION

1) Measure height “Z” between the transmission case end area and ST.
ST 398643600 GAUGE



2) Measure depth “Y” between the end of the ST and the transfer drive gear.
ST 398643600 GAUGE



3) Using the following calculation, calculate the transfer drive gear adjusting washer value “t”.
t = {Y – 15 mm (0.59 in)} – {Z – 15 mm (0.59 in)} – 0.75 — 0.95 mm (0.030 — 0.037 in)

t mm (in)	Transfer drive gear adjusting washer thickness
Y mm (in)	Depth between the end of the ST and the transfer drive gear
Z mm (in)	Height from the end of the transmission case to the end of the ST.
0.75 — 0.95 mm (0.030 — 0.037 in)	Standard clearance between the adjusting washer and transfer drive gear
15 mm (0.591 in)	Thickness of ST

4) Refer to the calculated value “t” to select the closest adjusting washer from the following table.

Standard clearance between the adjusting washer and transfer drive gear
0.75 — 0.95 mm (0.030 — 0.037 in)

NOTE:
Match to be within the standard clearance range.

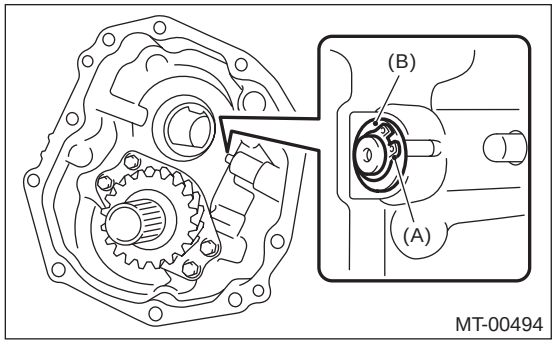
Adjusting washer (36.3 × 52 × t)	
Part No.	Thickness mm (in)
803036070	0.80 (0.0315)
803036071	0.95 (0.0374)
803036072	1.10 (0.0433)
803036073	1.25 (0.0492)
803036074	1.40 (0.0551)
803036075	0.65 (0.0256)

5) Install the selected adjusting washer.

14.Reverse Check System

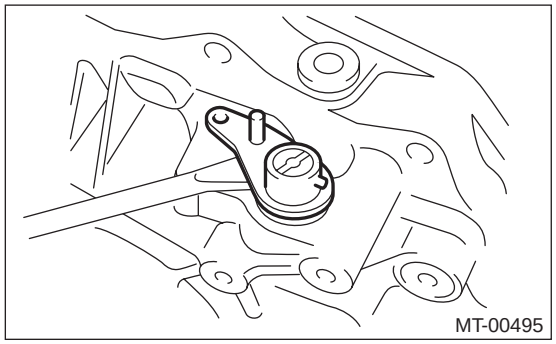
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-31, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-38, Preparation for Overhaul.>
3) Remove the extension case. <Ref. to 6MT(TY85)-42, REMOVAL, Extension Case.>
4) Remove the snap ring and washer from the reverse check shaft.

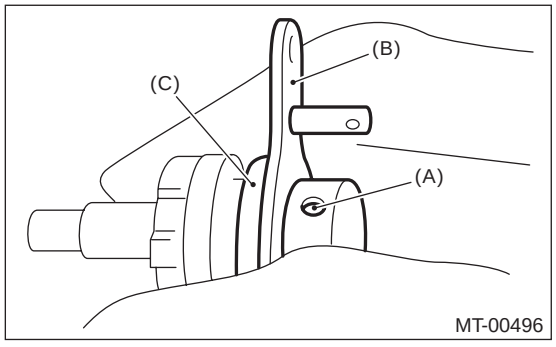


(A) Snap ring
(B) Washer

5) Remove the reverse check shaft and spring from the extension case.

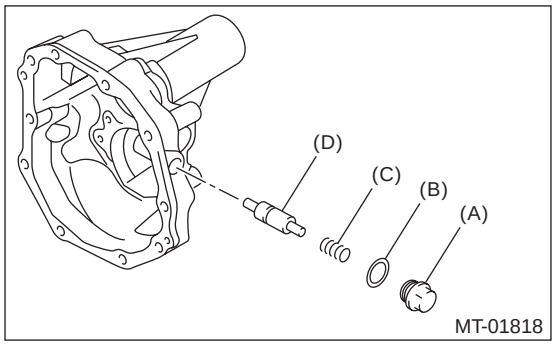


6) Remove the straight pin, and remove the reverse check lever and oil seal from the reverse check shaft.



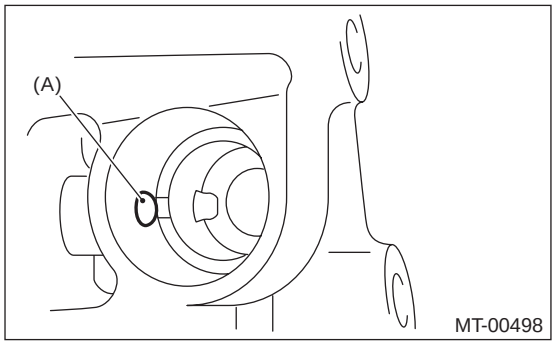
(A) Straight pin
(B) Reverse check lever
(C) Oil seal

7) Remove the plug from the extension case, and remove the gasket, spring and reverse check plunger.



(A) Plug
(B) Gasket
(C) Spring
(D) Reverse check plunger

8) Remove the reverse lock plunger.



(A) Reverse lock plunger

B: INSTALLATION

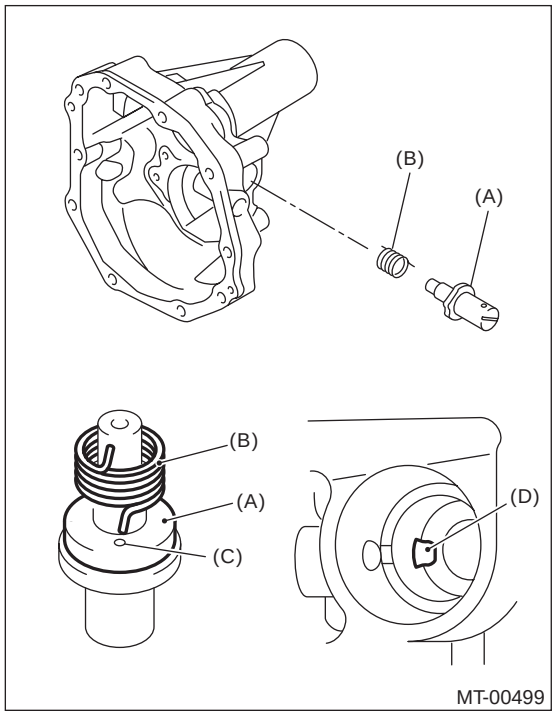
1) Insert the reverse lock plunger.
2) Install the reverse check plunger, spring, gasket and plug in order.

NOTE:
Use a new gasket.

Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)

3) Install the spring and reverse check shaft to the extension case.

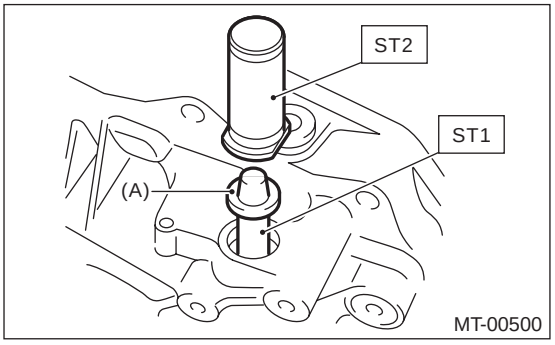
NOTE:
Confirm that the end of the spring matches the hole of the reverse check shaft and the cut out of the extension case.



(A) Reverse check shaft
(B) Spring
(C) Hole
(D) Cut out

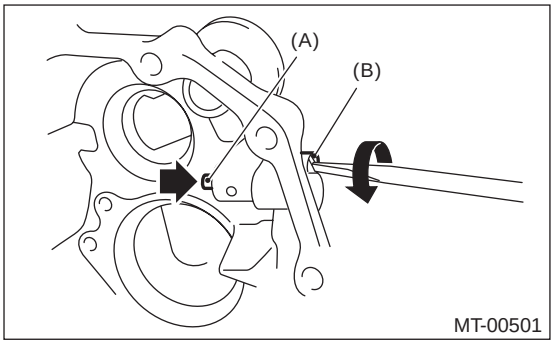
4) Install the washer and snap ring.

5) Attach ST1 to the reverse check shaft. Install the new oil seal, and push it in using ST2.
ST1 18671AA000 OIL SEAL GUIDE
ST2 18657AA010 INSTALLER



(A) Oil seal

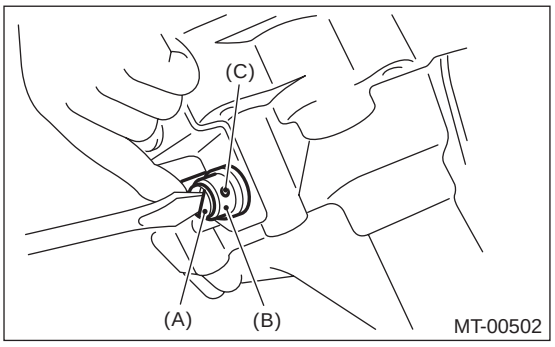
6) Insert the reverse check lever, and turn the reverse check shaft until the plunger is first pushed in.



(A) Plunger
(B) Reverse check shaft

7) Match the hole of the reverse check lever and the reverse check shaft, and attach the straight pin.

NOTE:
Use a new straight pin.



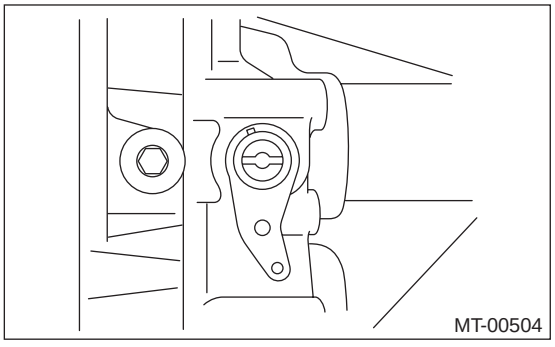
(A) Reverse check shaft
(B) Reverse check lever
(C) Hole

8) Check that the reverse check is operating correctly. <Ref. to 6MT(TY85)-51, INSPECTION, Reverse Check System.>
9) Install the extension case. <Ref. to 6MT(TY85)-42, INSTALLATION, Extension Case.>
10) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-33, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

1) Check that there is no damage on any parts.
2) Check that the reverse check lever is operating smoothly.
3) Inspect that there is no oil leak at the oil seal section of the reverse check shaft. If there is oil leakage, replace the oil seal.
4) Check the operation of the reverse check.
   (1) When the reverse check lever is in the following position, the plunger is pressed, or the gear can shift into reverse.

   (2) When the reverse check lever is in the following position, the plunger is not pressed, or the gear cannot shift into reverse.

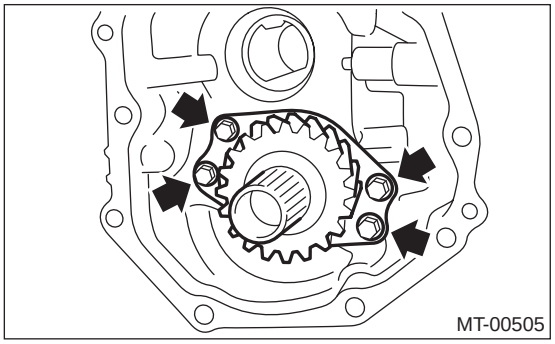


5) If it is not as specified, reassemble the reverse check system.

15.Transfer Drive Gear

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-31, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-38, Preparation for Overhaul.>
3) Remove the extension case. <Ref. to 6MT(TY85)-42, REMOVAL, Extension Case.>
4) Remove the transfer drive gear.



MT-00505

B: INSTALLATION

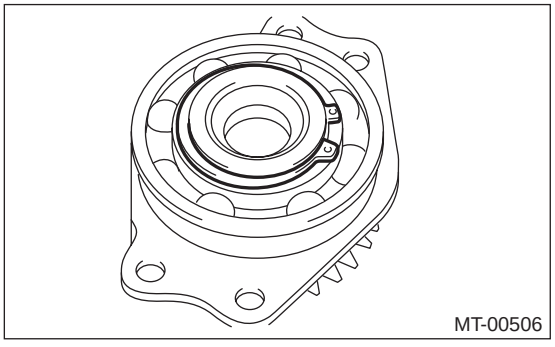
1) Install the transfer drive gear.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) When the ball bearing, transfer drive gear or snap ring are replaced, select an appropriate adjusting washer for the transfer drive gear. <Ref. to 6MT(TY85)-43, ASSEMBLY, Extension Case.>
3) Install the extension case. <Ref. to 6MT(TY85)-42, INSTALLATION, Extension Case.>
4) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-33, INSTALLATION, Manual Transmission Assembly.>

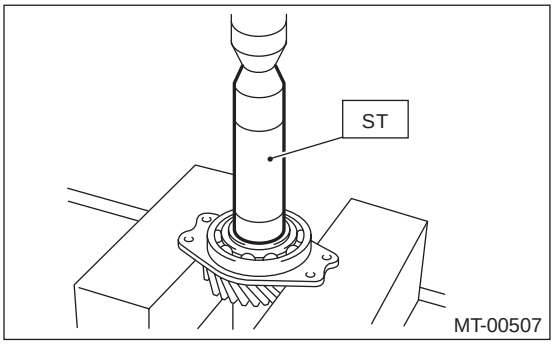
C: DISASSEMBLY

1) Remove the snap ring.



MT-00506

2) Remove the bearing using the ST.
ST 499877000 RACE 4-5 INSTALLER

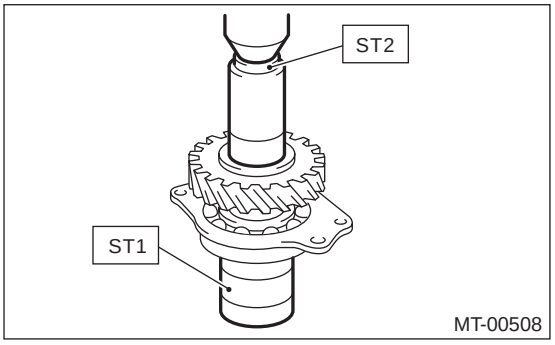


MT-00507

D: ASSEMBLY

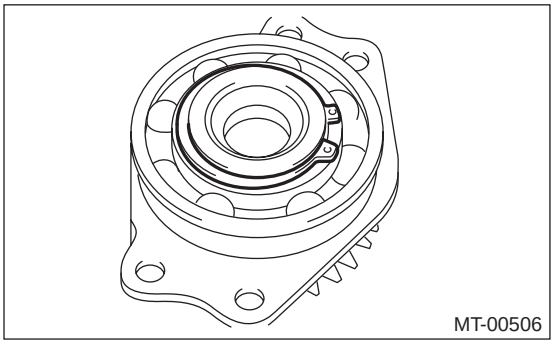
1) Using the ST, install the ball bearing.

NOTE:
Use a new ball bearing.
ST1 499247400 INSTALLER
ST2 398497701 SEAT



MT-00508

2) Install the snap ring.



MT-00506

3) Inspect the clearance between the snap ring and the ball bearing. <Ref. to 6MT(TY85)-53, INSPECTION, Transfer Drive Gear.>

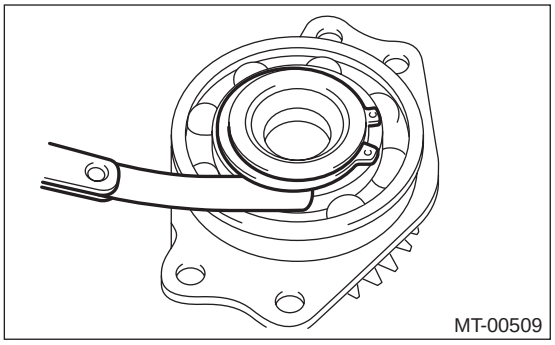
E: INSPECTION

1) Bearing
Replace the bearings in the following cases.
- Damage or rust on the bearings
- Wear, or damage
- The bearing does not rotate smoothly or an abnormal noise is emitted.

2) Drive gear
Replace the drive gear in following case:
- If the drive gear tooth surface and shaft are excessively damaged or broken.

3) Measure the clearance between the snap ring and ball bearing inner race with a thickness gauge.

Standard clearance between the snap ring and inner race:
0 — 0.15 mm (0 — 0.0059 in)



4) If the measurement is out of specifications, reselect an appropriate snap ring.

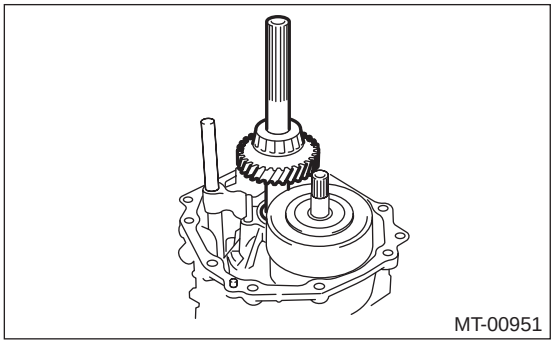
Snap ring	
Part No.	Thickness mm (in)
805045050	1.76 (0.069)
805045060	1.88 (0.074)
805045070	2.00 (0.079)

After replacing the snap ring, reinspect the clearance.

16.Transfer Driven Gear

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-31, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-38, Preparation for Overhaul.>
3) Remove the extension case. <Ref. to 6MT(TY85)-42, REMOVAL, Extension Case.>
4) Remove the transfer driven gear.



B: INSTALLATION

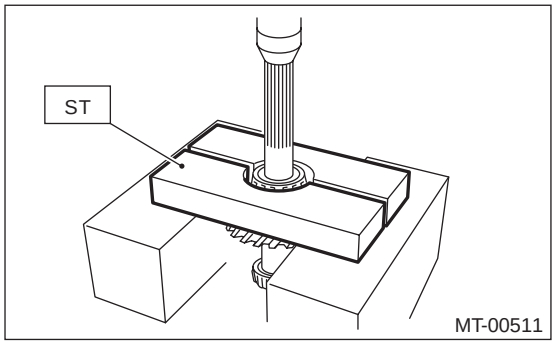
1) Install the transfer driven gear.

CAUTION:
Apply transmission gear oil onto sliding or revolving surfaces before installation.

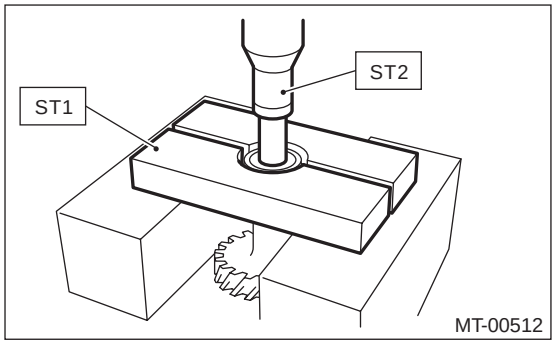
2) When the bearing or the transfer driven gear is replaced, select an appropriate adjusting washer for the transfer driven gear. <Ref. to 6MT(TY85)-44, ADJUSTMENT, Extension Case.>
3) Install the extension case. <Ref. to 6MT(TY85)-42, INSTALLATION, Extension Case.>
4) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-33, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

1) Using the ST, remove the taper roller bearing (extension case side).
ST 498515700 REMOVER



2) Using the ST, remove the taper roller bearing (transmission case side).
ST1 899858600 REMOVER
ST2 899864100 REMOVER

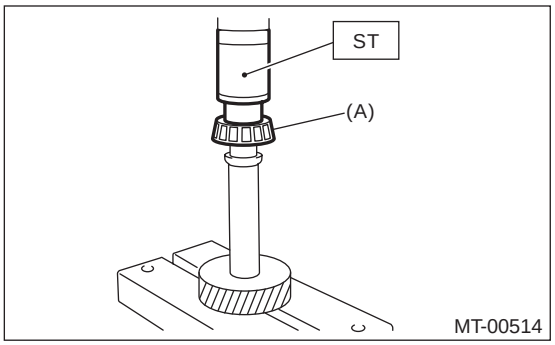


D: ASSEMBLY

1) Using the ST, install the taper roller bearing (transmission case side).
ST 499757002 INSTALLER

CAUTION:
• Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
• Apply transmission gear oil onto sliding or revolving surfaces before installation.

NOTE:
Be careful when handling because the taper roller bearing and the outer race are used as a set.

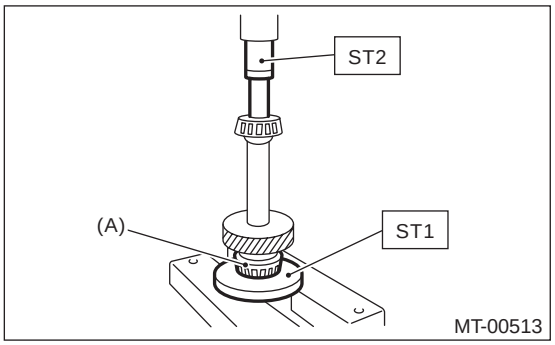


(A) Taper roller bearing (transmission case side)

2) Using the ST, install the taper roller bearing (extension case side).
ST1 398177700 INSTALLER
ST2 899864100 REMOVER

CAUTION:
• Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
• Apply transmission gear oil onto sliding or revolving surfaces before installation.

NOTE:
Be careful when handling because the taper roller bearing and the outer race are used as a set.



(A) Taper roller bearing (extension case side)

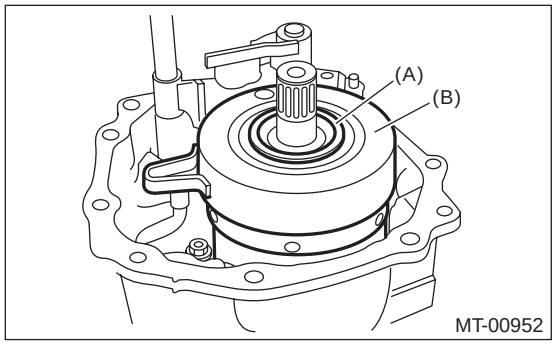
E: INSPECTION

1) Bearing
Replace the bearings in the following cases.
• Damage or rust on the bearings
• Wear or damage
• After applying transmission gear oil, bearing does not rotate smoothly or an abnormal noise is emitted.
2) Driven gear
Replace the driven gear in the following cases.
• If the driven gear tooth surface and shaft are excessively damaged or broken.

17.Center Differential

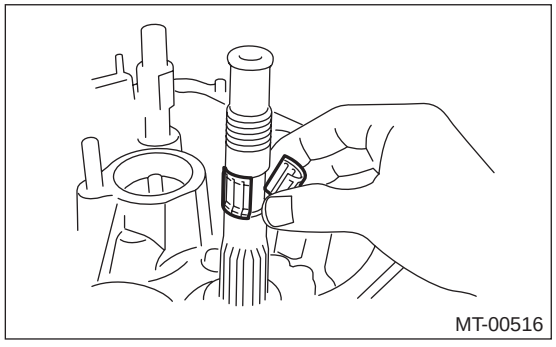
A: REMOVAL

1) Remove the manual transmission case from the vehicle. <Ref. to 6MT(TY85)-31, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-38, Preparation for Overhaul.>
3) Remove the extension case. <Ref. to 6MT(TY85)-42, REMOVAL, Extension Case.>
4) Remove the transfer driven gear. <Ref. to 6MT(TY85)-54, REMOVAL, Transfer Driven Gear.>
5) Disconnect the center differential connector.
6) Remove the adjusting washer and center differential.



(A) Adjusting washer
(B) Center differential

7) Remove the needle bearing.



B: INSTALLATION

1) Install the needle bearing.

CAUTION:
Apply transmission gear oil onto sliding or revolving surfaces before installation.
2) Install the adjusting washer and center differential.
3) When replacing the center differential, select and install the appropriate transfer drive gear and adjusting washer. <Ref. to 6MT(TY85)-44, ADJUSTMENT, Extension Case.>
4) Connect the center differential connector, and affix to the oil guide.
5) Install the transfer driven gear. <Ref. to 6MT(TY85)-54, INSTALLATION, Transfer Driven Gear.>
6) Install the extension case. <Ref. to 6MT(TY85)-42, INSTALLATION, Extension Case.>
7) Install the manual transmission case assembly to the vehicle. <Ref. to 6MT(TY85)-33, INSTALLATION, Manual Transmission Assembly.>

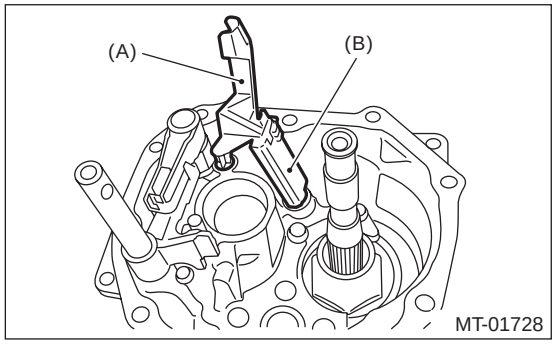
C: INSPECTION

Check that there is no damage on the center differential. Replace if damaged.

18.Transmission Case

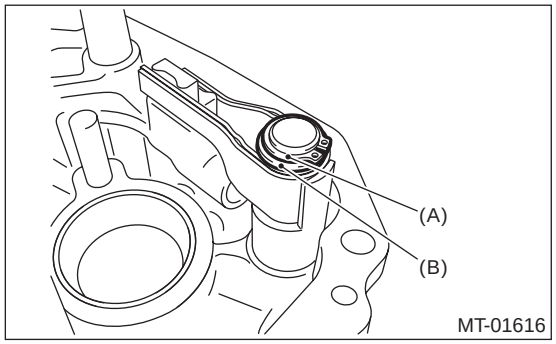
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-31, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-38, Preparation for Overhaul.>
3) Remove the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-41, REMOVAL, Neutral Position Switch.> <Ref. to 6MT(TY85)-40, REMOVAL, Back-up Light Switch.>
4) Remove the extension case. <Ref. to 6MT(TY85)-42, REMOVAL, Extension Case.>
5) Remove the transfer driven gear. <Ref. to 6MT(TY85)-54, REMOVAL, Transfer Driven Gear.>
6) Remove the center differential. <Ref. to 6MT(TY85)-56, REMOVAL, Center Differential.>
7) Remove the oil guides G and H.



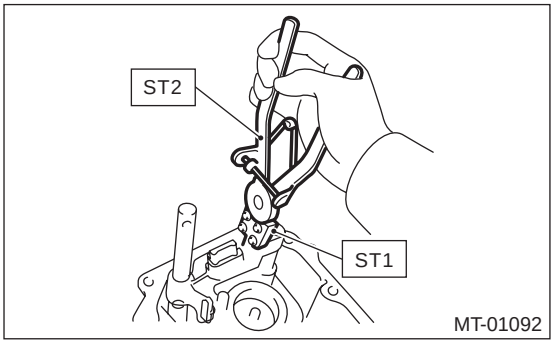
(A) Oil guide G
(B) Oil guide H

8) Remove the snap ring and flat washer from the selector arm area.

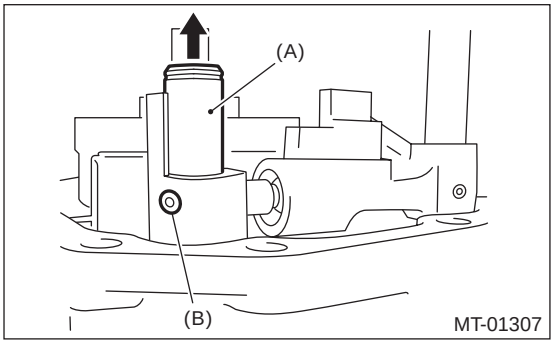


(A) Snap ring
(B) Flat washer

9) Using an ST, remove the neutral set spring and support.
ST1 18756AA000 CLAW
ST2 399893600 PLIER

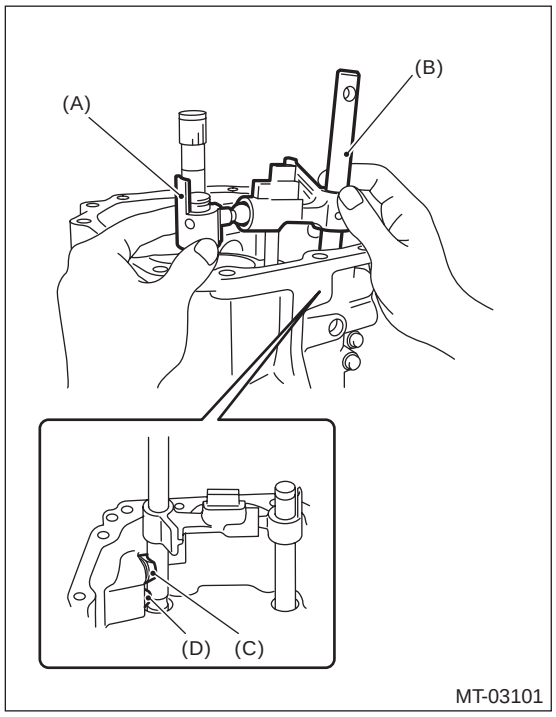


10) Lift the striking rod, and remove the straight pin.



(A) Striking rod
(B) Straight pin

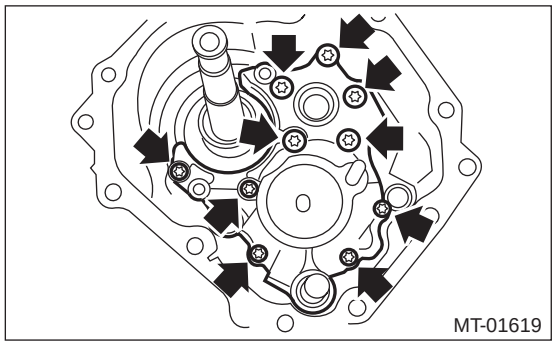
11) Remove the selector arm No. 2, shifter arm shaft, selector plunger, shift accent plunger and spring.



(A) Selector arm No. 2
(B) Shifter arm shaft
(C) Selector plunger
(D) Shift accent plunger

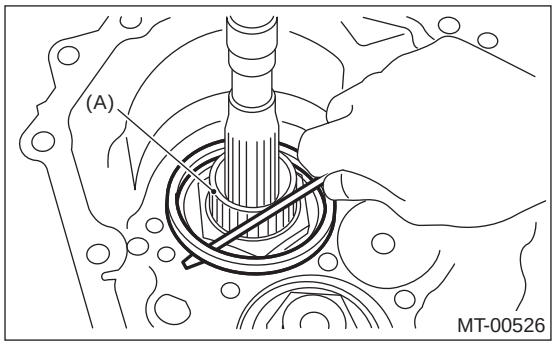
12) Remove the transfer bearing holder.

NOTE:
Using a general tool may cause damage. Remove the bolt using the ST.
ST 18663AA000 SOCKET



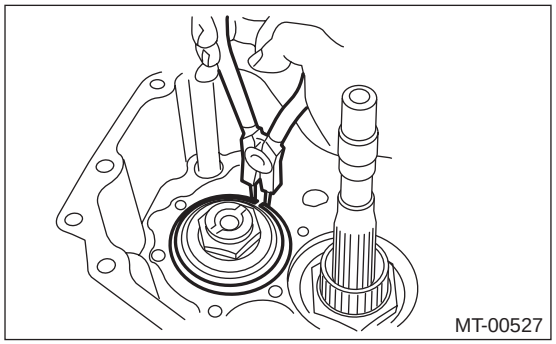
13) Remove the washer on the main shaft section.

14) Remove the driven gear assembly shim and spacer.

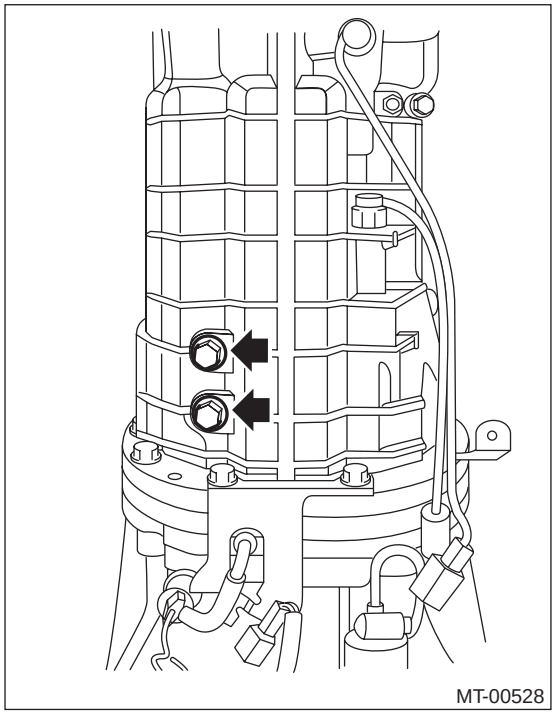


(A) Driven gear ASSY

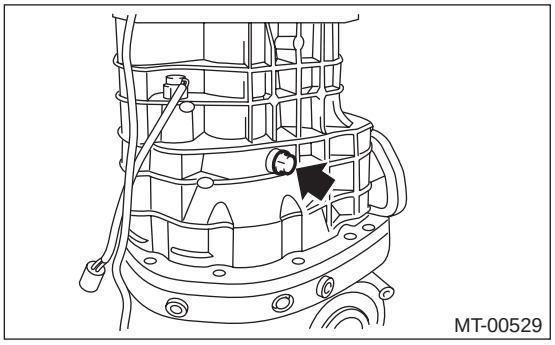
15) Remove the snap ring.



16) Remove the pilot bolt.

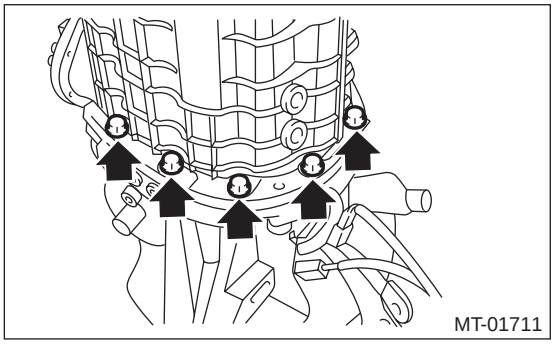


17) Remove the holder reverse bolt.



18) Remove the transmission case.

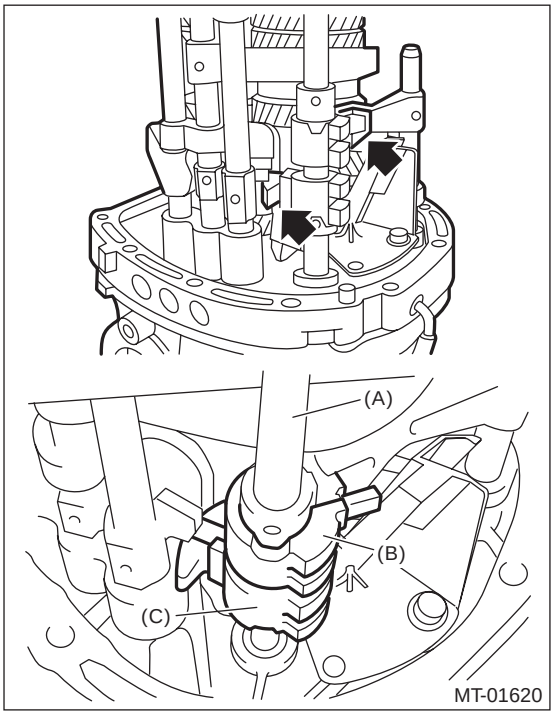
NOTE:
If the oil guide is caught between the shift fork, it may be difficult to remove the transmission case. Move the oil guide, then remove. Do not pull on the transmission case with excessive force.



19) Remove any remaining liquid gasket from the transmission case and adapter plate.

B: INSTALLATION

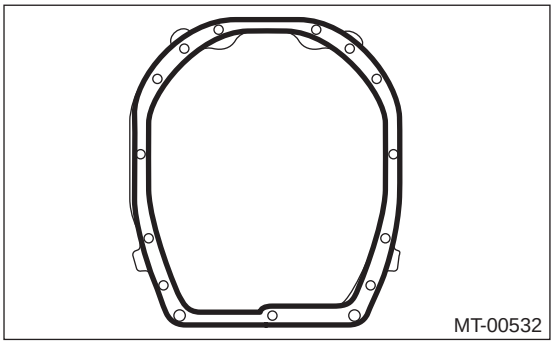
1) Check that the shifter fork and the interlock block are both shifted into the neutral position. If they are not, shift into the neutral position.



(A) Striking rod
(B) Reverse interlock block
(C) Interlock block

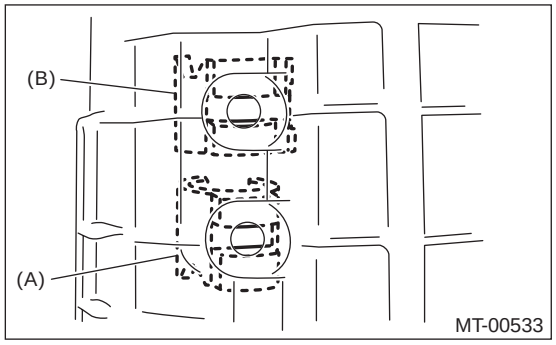
2) Apply liquid gasket to the adapter plate.

Liquid gasket:
THREE BOND 1215B or equivalent



3) Install the transmission case.

4) By inspecting from the pilot bolt attachment hole, check that the interlock block and the reverse interlock block are aligned to the neutral position. If not aligned, remove the transmission case, and shift the shifter fork and interlock block to the neutral position.



(A) Interlock block
(B) Reverse interlock block

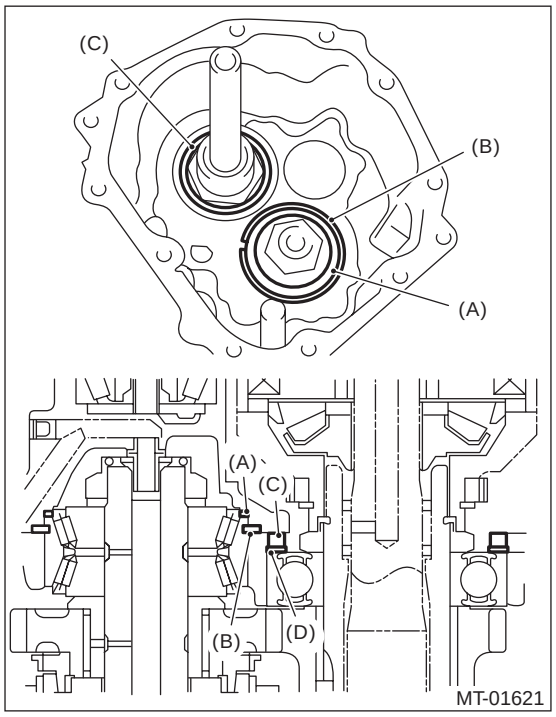
5) Use a new gasket to temporarily attach the pilot bolt.
6) Affix the transmission case with the bolts and nuts.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)
7) Tighten the pilot bolt.

Tightening torque:
34 N·m (3.5 kgf-m, 25.1 ft-lb)
8) Tighten the holder reverse bolt.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

9) Install the snap ring and washer for the main shaft assembly, and washer and collar for the driven gear assembly.



(A) Washer
(B) Snap ring
(C) Collar
(D) Washer

10) Install the transfer bearing holder.

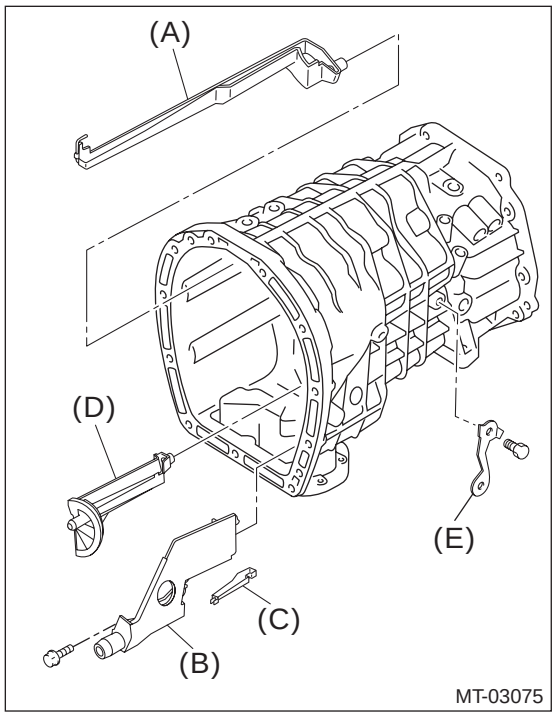
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
ST 18663AA000 SOCKET
11) When replacing the transfer bearing holder, select the appropriate transfer driven gear and adjusting washer, and install to the extension case. <Ref. to 6MT(TY85)-44, ADJUSTMENT, Extension Case.>
12) Install the selector arm No. 2, shifter arm shaft, selector plunger, shift accent plunger and spring.
13) Install a new straight pin.
14) Using the ST, install the neutral set spring.
ST1 18756AA000 CLAW
ST2 399893600 PLIER
15) Install the snap ring and flat washer to the selector arm area.
16) Install the oil guides G and H.
17) Install the center differential. <Ref. to 6MT(TY85)-56, INSTALLATION, Center Differential.>
18) Install the transfer driven gear. <Ref. to 6MT(TY85)-54, INSTALLATION, Transfer Driven Gear.>

19) Install the extension case. <Ref. to 6MT(TY85)-42, INSTALLATION, Extension Case.>
20) Install the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-41, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT(TY85)-40, INSTALLATION, Back-up Light Switch.>
21) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-33, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

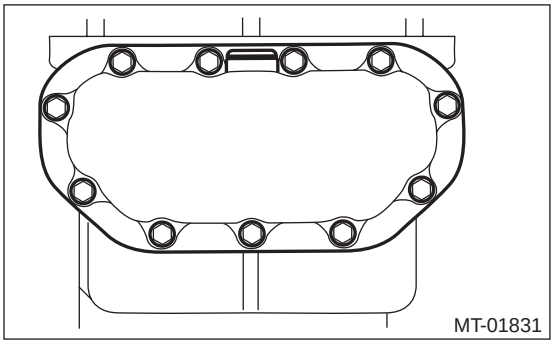
1) Remove the transmission harness from the transmission case.

NOTE:
Remove the connector by disengaging the connector claw from the inside of the transmission.
2) Remove the oil guides C, D, E, F and harness bracket.



(A) Oil guide C
(B) Oil guide D
(C) Oil guide E
(D) Oil guide F
(E) Harness bracket

3) Remove the oil pan.

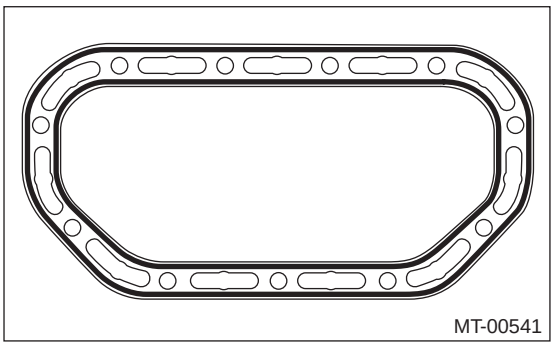


4) Remove any remaining liquid gasket from the transmission case and oil pan.

D: ASSEMBLY

1) Apply liquid gasket to the oil pan.

Liquid gasket:
THREE BOND 1215B or equivalent

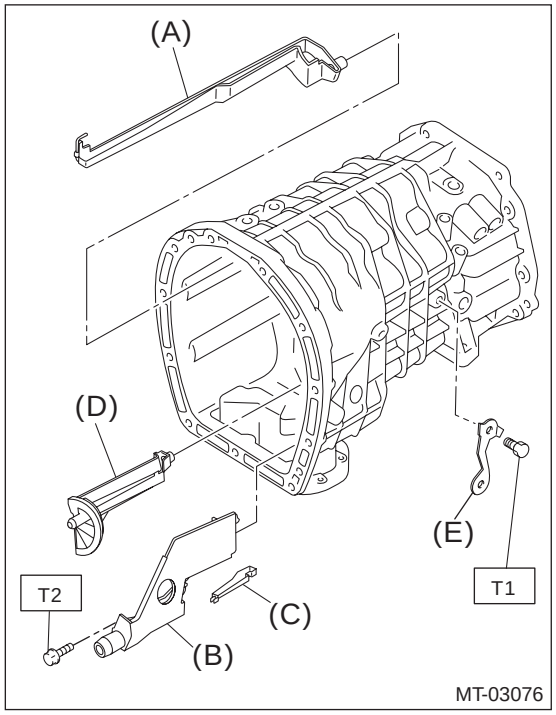


2) Install the oil pan.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

3) Install the oil guides C, D, E, F and harness bracket.

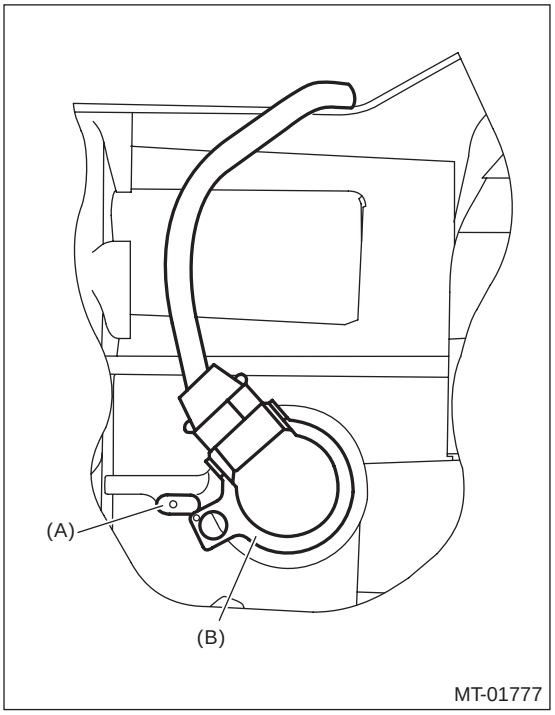
Tightening torque:
T1: 16 N·m (1.6 kgf-m, 11.8 ft-lb)
T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)



(A) Oil guide C
(B) Oil guide D
(C) Oil guide E
(D) Oil guide F
(E) Harness bracket

4) Install the transmission harness to the transmission.

NOTE:
Install the transmission harness connector by aligning the protrusions of the transmission and transmission harness connector.



(A) Protrusion
(B) Transmission harness connectors

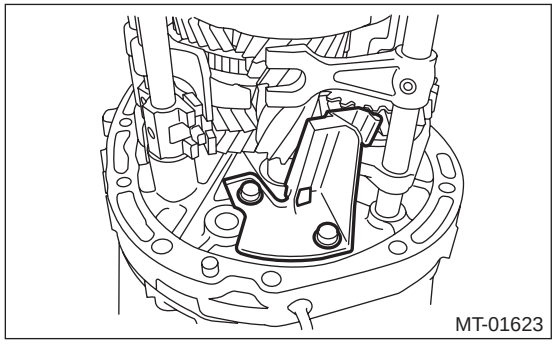
E: INSPECTION

1) If the sludge is accumulated in the oil pan, use a waste cloth to wipe it off completely.
2) Check that there is no damage on any parts. Replace damaged parts with new parts.

19.Main Shaft Assembly

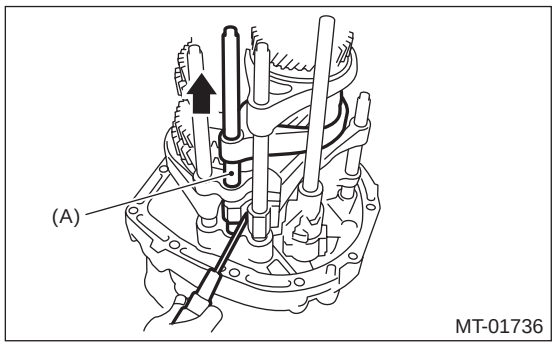
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-31, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-38, Preparation for Overhaul.>
3) Remove the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-41, REMOVAL, Neutral Position Switch.> <Ref. to 6MT(TY85)-40, REMOVAL, Back-up Light Switch.>
4) Remove the extension case. <Ref. to 6MT(TY85)-42, REMOVAL, Extension Case.>
5) Remove the transfer driven gear. <Ref. to 6MT(TY85)-54, REMOVAL, Transfer Driven Gear.>
6) Remove the center differential. <Ref. to 6MT(TY85)-56, REMOVAL, Center Differential.>
7) Remove the transmission case. <Ref. to 6MT(TY85)-57, REMOVAL, Transmission Case.>
8) Remove the striking rod.
9) Remove the oil guide B.



MT-01623

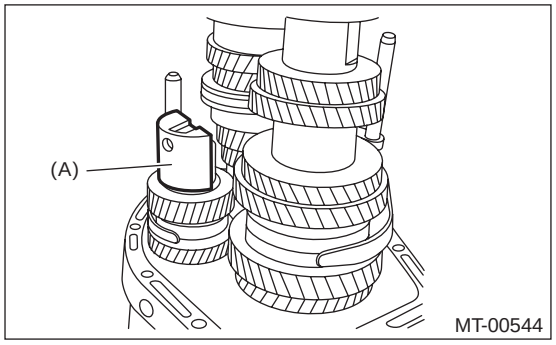
10) Use a screwdriver to shift to the 4th gear position.



MT-01736

(A) 3rd-4th fork rod

11) Remove the reverse idler holder.

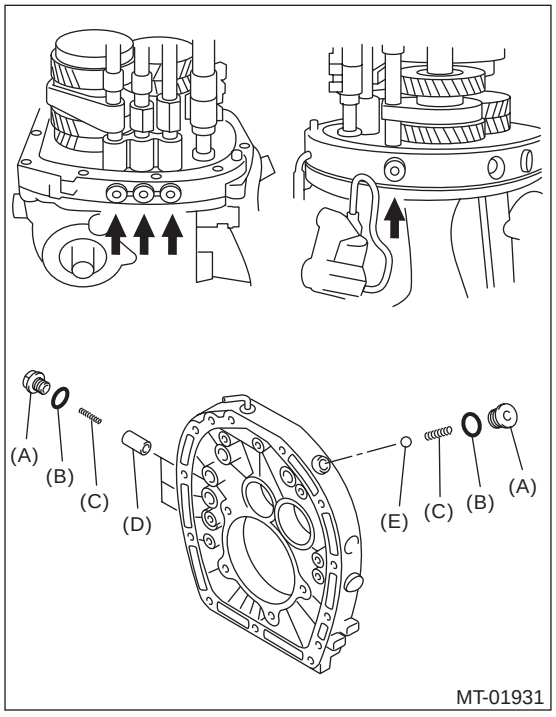


MT-00544

(A) Reverse idler holder

12) Remove the check plug, O-ring, check spring, plunger and check ball from the adapter plate.

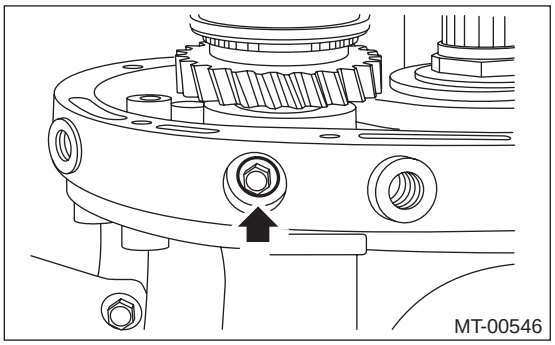
NOTE:
Do not reuse the O-ring.



MT-01931

(A) Check plug
(B) O-ring
(C) Checking spring
(D) Plunger
(E) Check ball

13) Remove the bolt and gasket holding the reverse idler gear shaft.

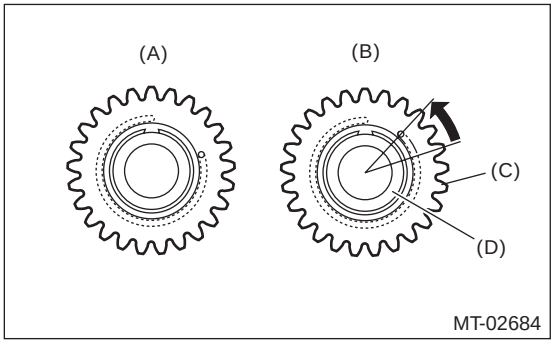


14) Push the main shaft assembly, driven gear assembly, reverse idler gear and shifter forks to remove from the adapter plate all at once.

NOTE:
A helper is required to perform this work.

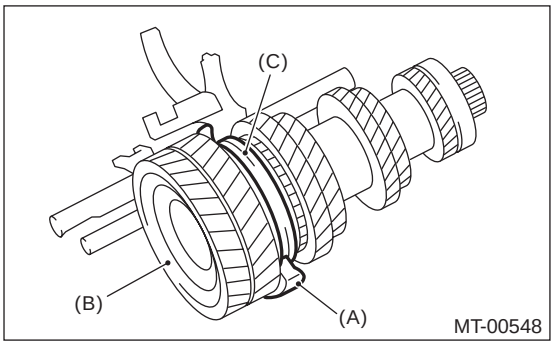
B: INSTALLATION

1) Adjust the 3rd-4th and 5th-6th fork rods. <Ref. to 6MT(TY85)-110, ADJUSTMENT, Shifter Fork and Rod.>
2) Rotate the reverse idler sub gear in the arrow direction by two teeth, and secure it with a wire.



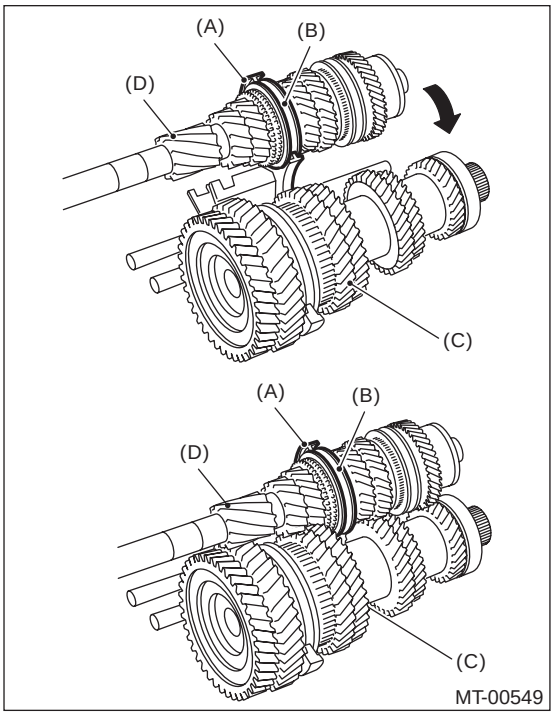
(A) Free status
(B) Set status
(C) Reverse idler sub gear
(D) Reverse idler gear

3) Attach the driven gear assembly to the 1st-2nd shifter fork assembly.



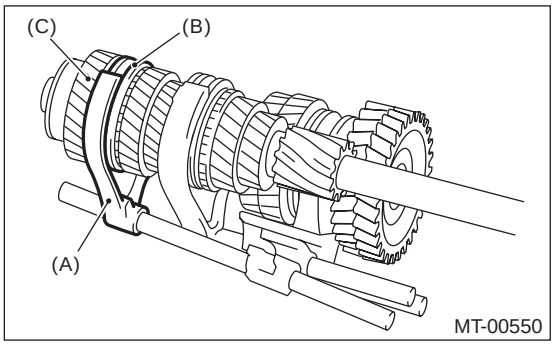
(A) 1st-2nd shifter fork
(B) Driven gear ASSY
(C) 1st-2nd coupling sleeve

4) Attach the main shaft assembly to the 3rd-4th shifter fork, and assemble to the driven gear assembly.



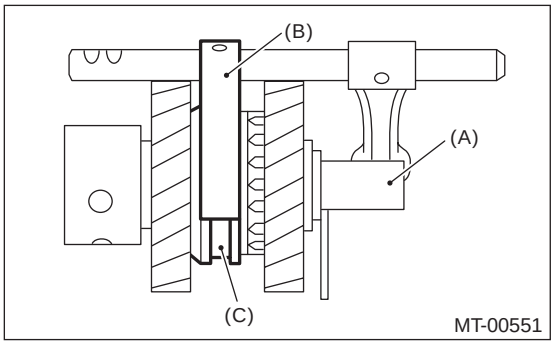
(A) 3rd-4th shifter fork
(B) 3rd-4th coupling sleeve
(C) Driven gear ASSY
(D) Main shaft ASSY

5) Attach the 5th-6th shifter fork assembly to the main shaft assembly.



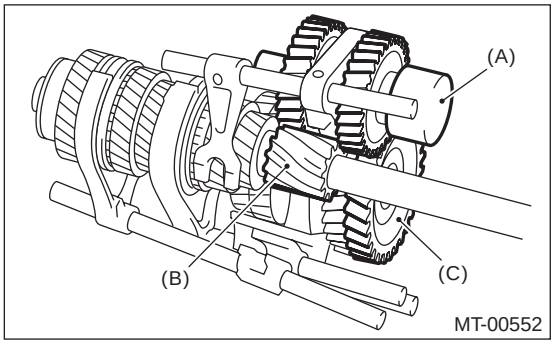
(A) 5th-6th shifter fork
(B) 5th-6th coupling sleeve
(C) Main shaft ASSY

6) Attach the reverse shifter fork assembly to the reverse idler gear assembly.



(A) Reverse idler gear ASSY
(B) Reverse shifter fork
(C) Reverse sleeve

7) Install the reverse idler gear assembly.



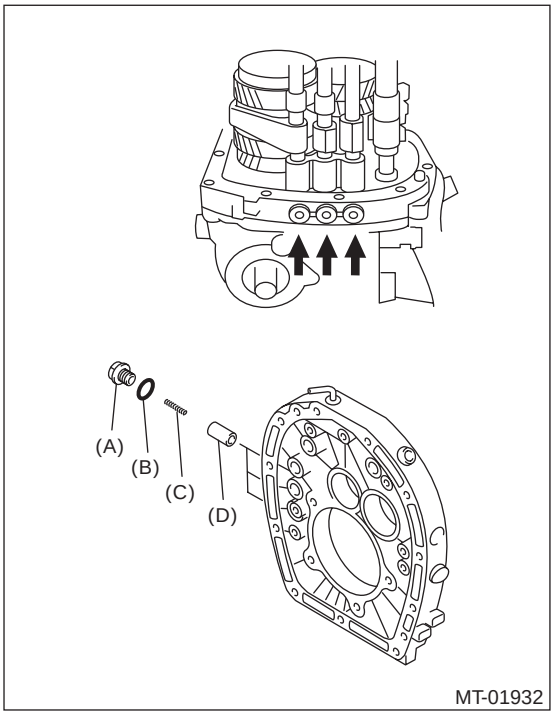
(A) Reverse idler gear ASSY
(B) 1st drive gear
(C) Reverse gear (driven shaft)

8) Install the thrust bearing of the driven gear assembly.
9) Push on the shifter forks, main shaft assembly, driven gear assembly and reverse idler gear assemblies, to attach to the adapter plate all at once.

NOTE:
A helper is required to perform this work.

10) As necessary, remove the wire used to secure from the reverse idler gear.
11) Install the plunger, check spring, new O-ring and check plugs.

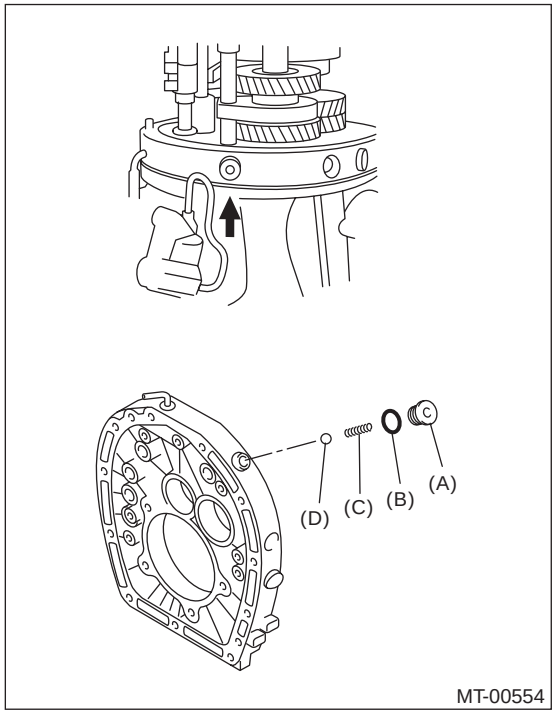
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



(A) Check plug
(B) O-ring
(C) Checking spring
(D) Plunger

12) Install the check ball, check spring, new O-ring and check plugs.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



(A) Check plug
(B) O-ring
(C) Checking spring
(D) Check ball

13) Install the bolt and a new gasket holding the reverse idler shaft.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

14) Use a screwdriver to shift to the 4th gear position.
15) Install the reverse idler holder.
16) Install the oil guide B.

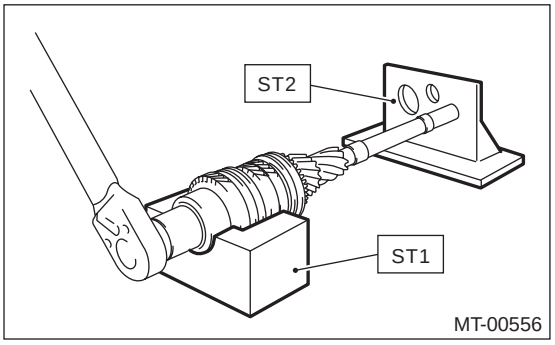
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

17) Install the striking rod.
18) Install the transmission case. <Ref. to 6MT(TY85)-59, INSTALLATION, Transmission Case.>
19) Install the selected main shaft snap ring and washers.
20) Install the center differential. <Ref. to 6MT(TY85)-56, INSTALLATION, Center Differential.>
21) Install the transfer driven gear. <Ref. to 6MT(TY85)-54, INSTALLATION, Transfer Driven Gear.>
22) Install the extension case. <Ref. to 6MT(TY85)-42, INSTALLATION, Extension Case.>
23) Install the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-41, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT(TY85)-40, INSTALLATION, Back-up Light Switch.>
24) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-33, INSTALLATION, Manual Transmission Assembly.>

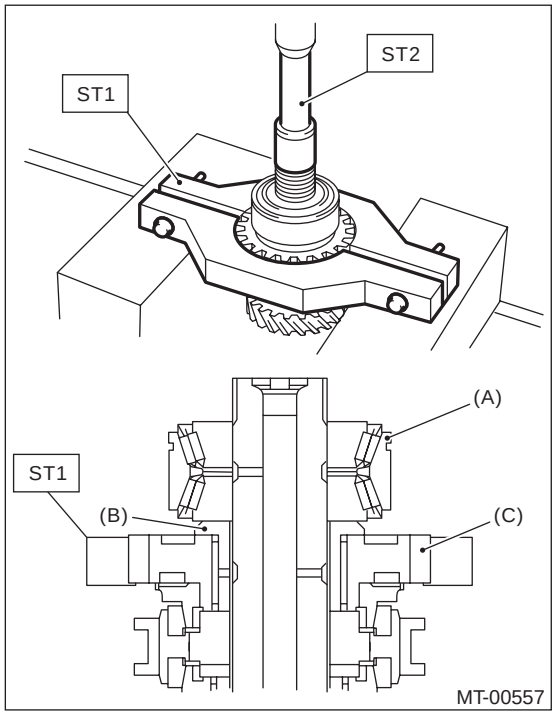
C: DISASSEMBLY

NOTE:
Individual coupling sleeves and synchronizer hubs meet at a specified position. Before disassembly, mark the meeting position of the coupling sleeve and synchronizer hub.
1) Affix the ST to the work table.
ST 18664AA000 BASE
2) Flatten the tab of the lock nut.
3) Set the main shaft assembly to the ST, and remove the lock nut and lock washer.
ST1 18665AA000 HOLDER
ST2 18664AA000 BASE

NOTE:
Use a 38 mm socket wrench.

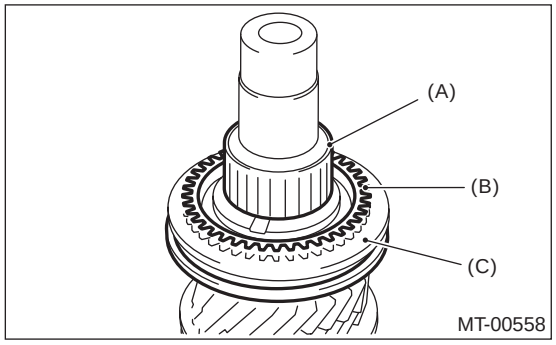


4) Remove the main shaft assembly from the ST.
5) Set the ST1 to the 6th drive gear, and use a press to remove the double taper roller bearing and outer race, 6th drive gear bushing and 6th drive gear.
ST1 18722AA010 REMOVER
ST2 899864100 REMOVER



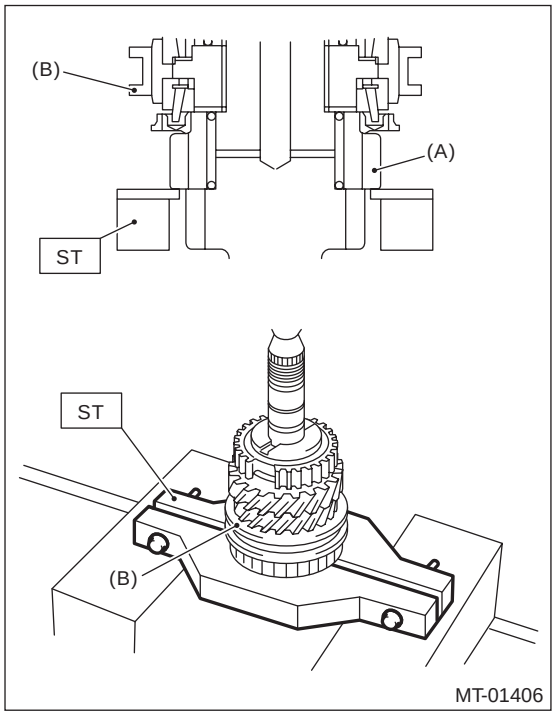
(A) Double taper roller bearing
(B) 6th drive gear bushing
(C) 6th drive gear

6) Remove the 5th-6th coupling sleeve, needle bearing and 6th baulk ring.



(A) Needle bearing
(B) 6th baulk ring
(C) 5th-6th coupling sleeve

7) Set the ST to the 3rd drive gear, and use a press to remove individual parts.
ST 18720AA000 REMOVER

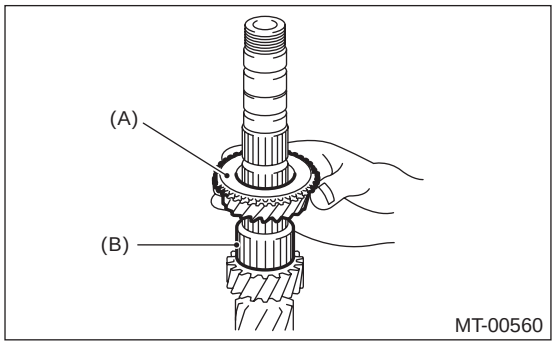


(A) 3rd drive gear
(B) 3rd-4th coupling sleeve

D: ASSEMBLY

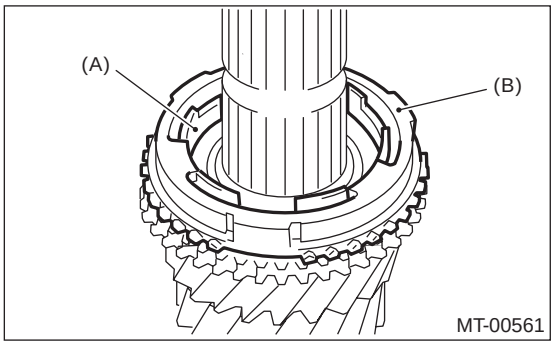
NOTE:
When replacing the following parts, replace as a set.
- Coupling sleeve and synchronizer hub
- 3rd outer baulk ring, 3rd synchro cone and 3rd inner baulk ring
- Double taper roller bearing

1) Apply adequate transmission gear oil to the main shaft, needle bearing and 3rd drive gear inner surface.
2) Install the needle bearing and 3rd drive gear to the main shaft.



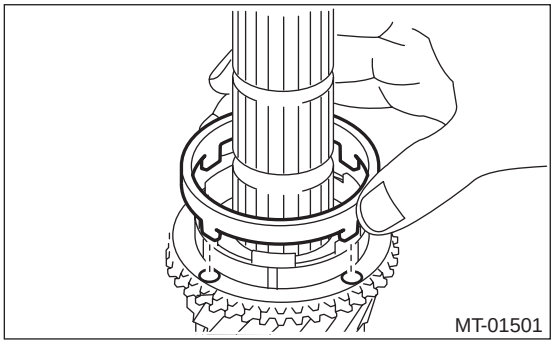
(A) 3rd drive gear
(B) Needle bearing

3) Install the 3rd inner baulk ring, 3rd synchro cone and 3rd outer baulk ring.



(A) 3rd inner baulk ring
(B) 3rd outer baulk ring

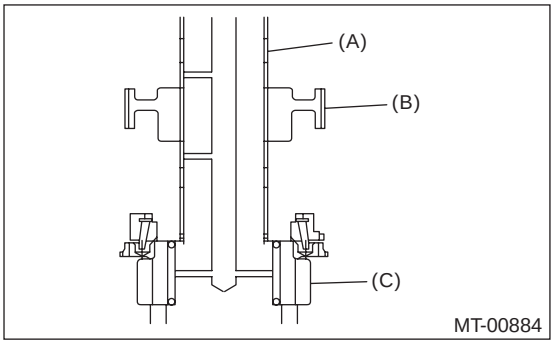
NOTE:
Install the 3rd synchro cone by aligning the protrusion of the 3rd synchro cone with the hole on the 3rd drive gear.



4) Install the 3rd-4th synchronizer hub and 4th needle bearing race.

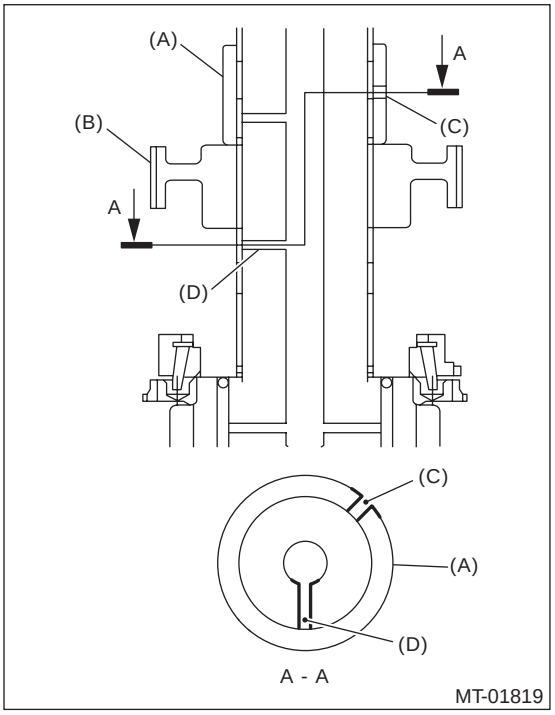
CAUTION:
Apply transmission gear oil onto sliding or revolving surfaces before installation.

(1) Being careful of the install direction of the 3rd-4th synchronizer hub, set to the main shaft.



(A) Main shaft
(B) 3rd-4th synchronizer hub
(C) 3rd drive gear

(2) With the main shaft oil hole and 4th needle bearing race oil hole out of alignment, attach to the main shaft.



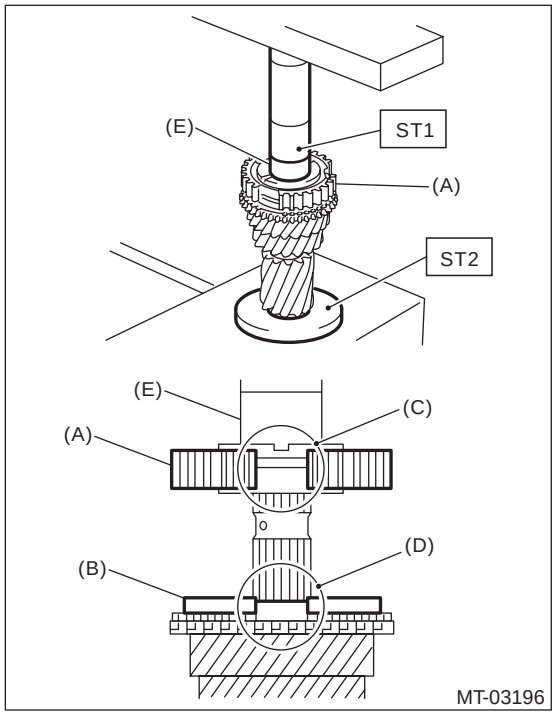
(A) 4th needle bearing race
(B) 3rd-4th synchronizer hub
(C) 4th needle bearing race oil hole
(D) Main shaft oil hole

(3) Using the ST, push in to the 3rd-4th synchronizer hub and 4th needle bearing race all at once.

ST1 18651AA000 INSTALLER
ST2 398177700 INSTALLER

CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).

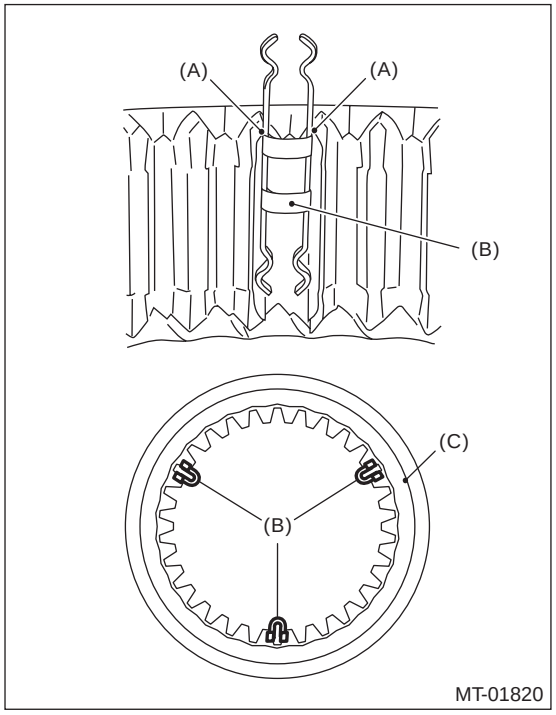
NOTE:
When pushing into the 3rd-4th synchronizer hub and 4th needle bearing race, move the 3rd outer baulk ring to match the protrusion of the 3rd outer baulk ring and the cut out of the 3rd-4th synchronizer hub.



(A) 3rd-4th synchronizer hub
(B) 3rd outer baulk ring
(C) Cut out of the 3rd-4th synchronizer hub
(D) Protrusion of the 3rd outer baulk ring
(E) 4th needle bearing race

5) Make sure that the 3rd drive gear can be turned smoothly by hand. If it does not turn smoothly, reassemble.
6) Attach the 3rd-4th shifting insert at the appropriate position of the 3rd-4th coupling sleeve.

NOTE:
- The location angle of each shifting insert is 120°.
- Refer to the following figure to install the shifting insert.

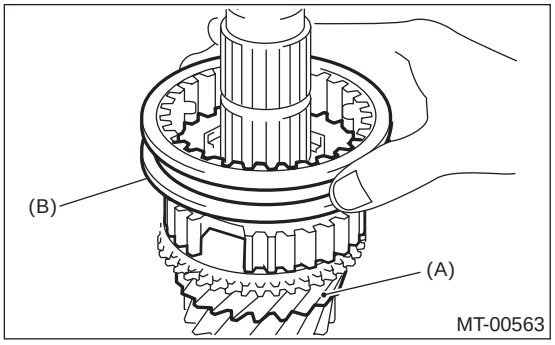


(A) Attach the straight part of the shifting insert to the sleeve convex portion.
(B) 3rd-4th shifting insert
(C) 3rd-4th coupling sleeve

7) Attach the 3rd-4th coupling sleeve to the 3rd-4th synchronizer hub.

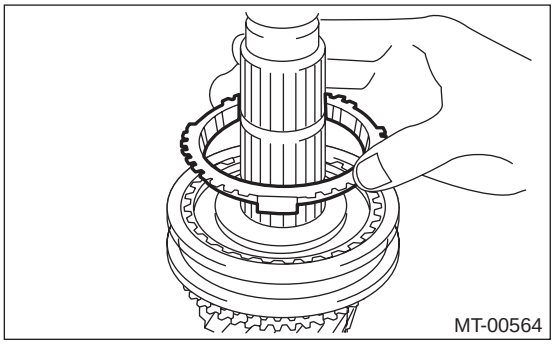
CAUTION:
Apply transmission gear oil onto sliding or revolving surfaces before installation.

NOTE:
• There is an identification groove on the 3rd-4th coupling sleeve.
• Place the groove towards the 3rd drive gear, and attach the 3rd-4th coupling sleeve.

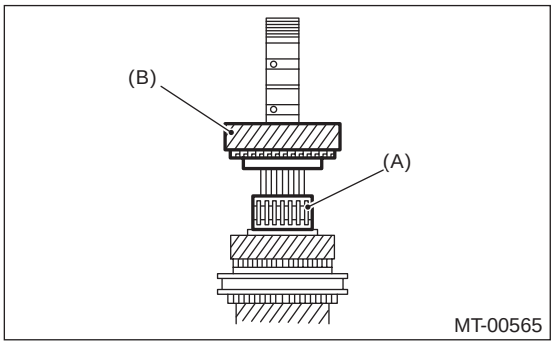


(A) 3rd drive gear
(B) 3rd-4th sleeve identification groove (1)

8) Install the 4th baulk ring.

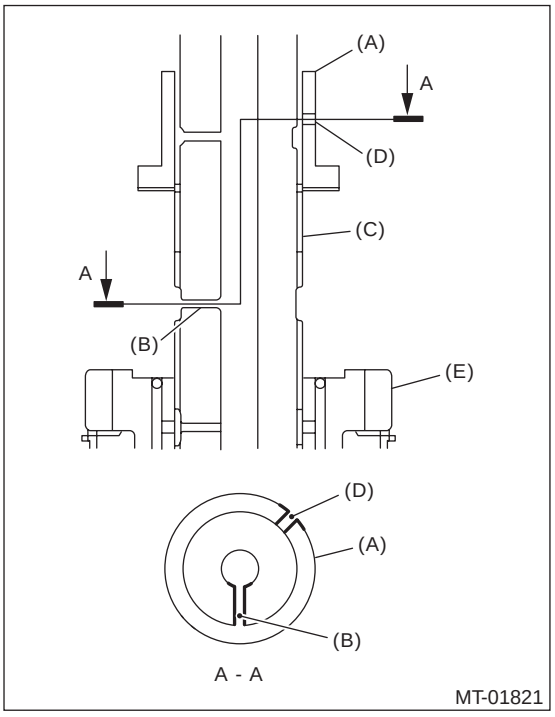


9) Apply adequate transmission gear oil to the main shaft, needle bearing and 4th drive gear inner surface.
10) Install the needle bearing and 4th drive gear.



(A) Needle bearing
(B) 4th drive gear

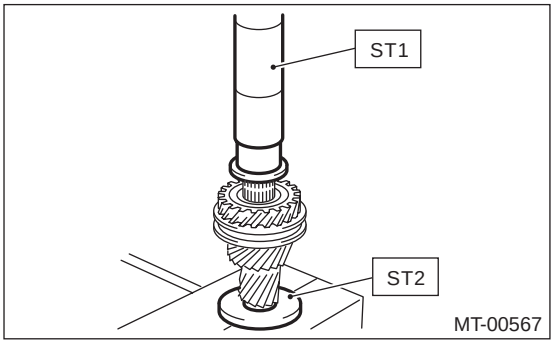
11) Install the 5th drive gear bushing.
(1) With the main shaft oil hole and 5th drive gear bushing oil hole out of alignment, attach to the main shaft.



(A) 5th drive gear bushing
(B) Main shaft oil hole
(C) Main shaft
(D) 5th drive gear bushing oil hole
(E) 4th drive gear

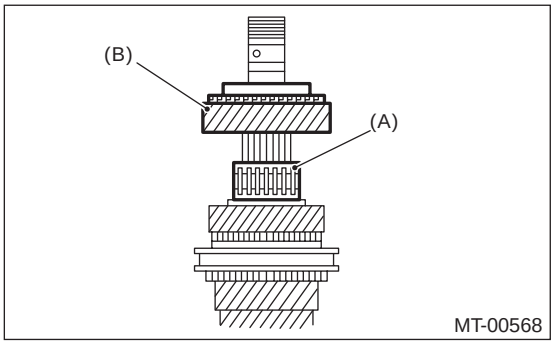
(2) Using the ST, push into the 5th drive gear bushing.
ST1 18651AA000 INSTALLER
ST2 398177700 INSTALLER

CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).



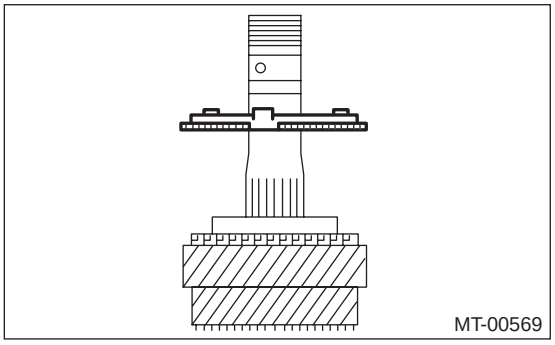
12) Make sure that the 4th drive gear can be turned smoothly by hand. If it does not turn smoothly, reassemble.

13) Apply adequate transmission gear oil to the main shaft, needle bearing and 5th drive gear inner surface.
14) Install the needle bearing and 5th drive gear.



(A) Needle bearing
(B) 5th drive gear

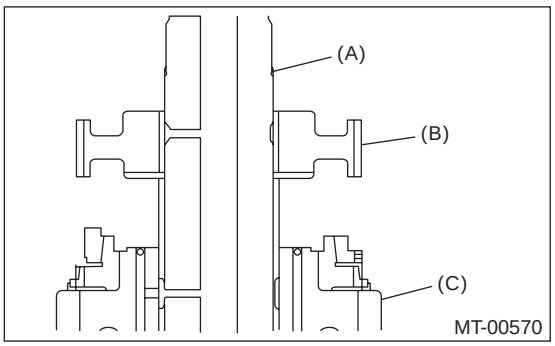
15) Install the 5th baulk ring.



16) Install the 5th-6th synchronizer hub.

CAUTION:
Apply transmission gear oil onto sliding or revolving surfaces before installation.

(1) Being careful of the install direction of the 5th-6th synchronizer hub, set to the main shaft.



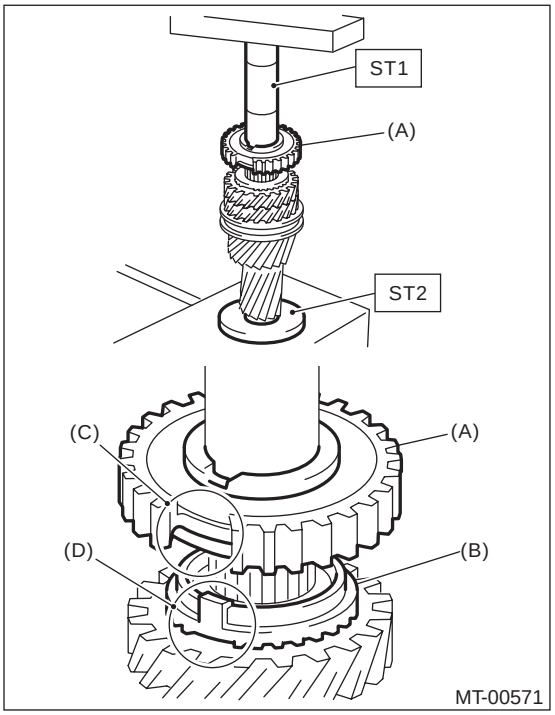
(A) Main shaft
(B) 5th-6th synchronizer hub
(C) 5th drive gear

(2) Using the ST, push into the 5th-6th synchronizer hub.

ST1 18651AA000 INSTALLER
ST2 398177700 INSTALLER

CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).

NOTE:
When pushing into the 5th-6th synchronizer hub, move the 5th outer baulk ring to match the protrusion of the 5th outer baulk ring and the cut out of the 5th-6th drive gear bushing.

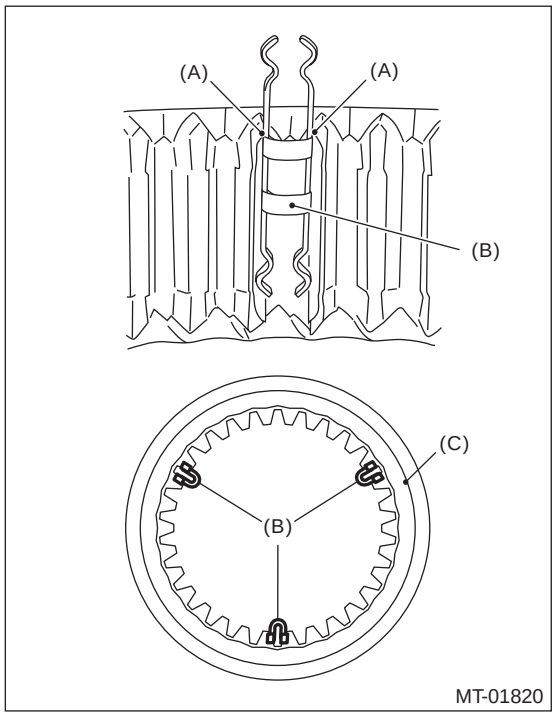


(A) 5th-6th synchronizer hub
(B) 5th outer baulk ring
(C) Cut out of the 5th-6th synchronizer hub
(D) Protrusion of the 5th outer baulk ring

17) Make sure that the 5th drive gear can be turned smoothly by hand. If it does not turn smoothly, reassemble.

18) Attach the 5th-6th shifting insert at the appropriate position of the 5th-6th coupling sleeve.

NOTE:
- The location angle of each shifting insert is 120°.
- Refer to the following figure to install the shifting insert key.

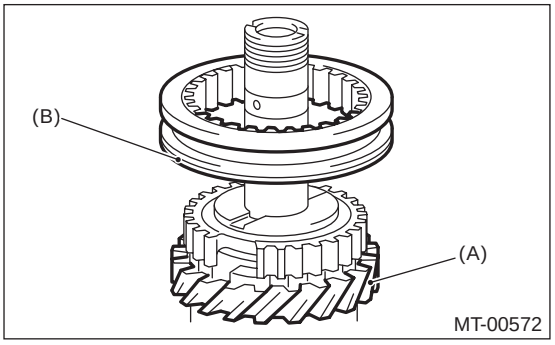


(A) Attach the straight part of the shifting insert to the sleeve convex portion.
(B) 5th-6th shifting insert
(C) 5th-6th sleeve

19) Attach the 5th-6th coupling sleeve to the 5th-6th synchronizer hub.

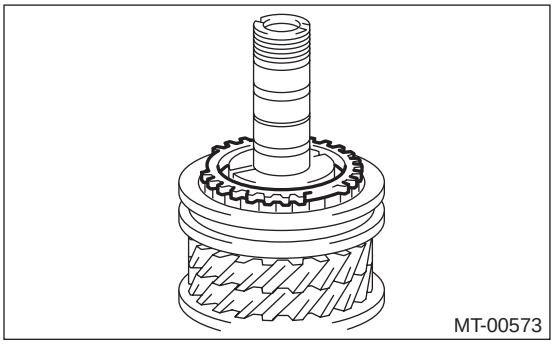
CAUTION:
Apply transmission gear oil onto sliding or revolving surfaces before installation.

NOTE:
- There are two identification grooves on the 5th-6th sleeve.
- Place the grooves towards the 5th drive gear, and attach the 5th-6th coupling sleeve.

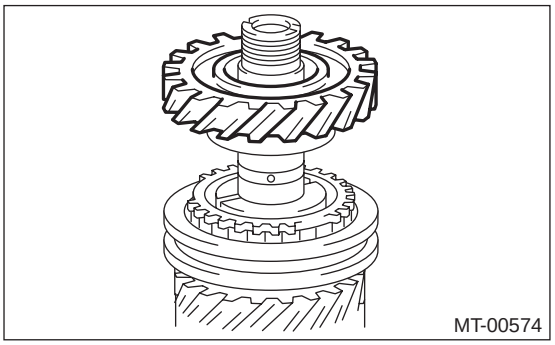


(A) 5th drive gear
(B) 5th-6th coupling sleeve identification groove (2)

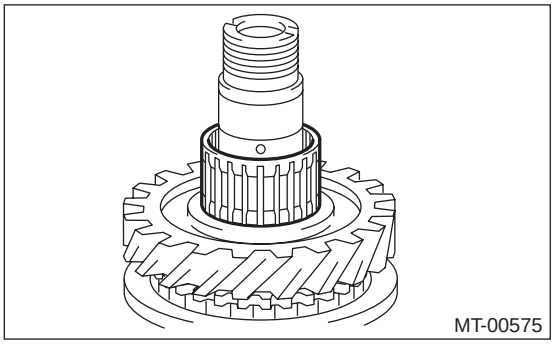
20) Install the 6th baulk ring.



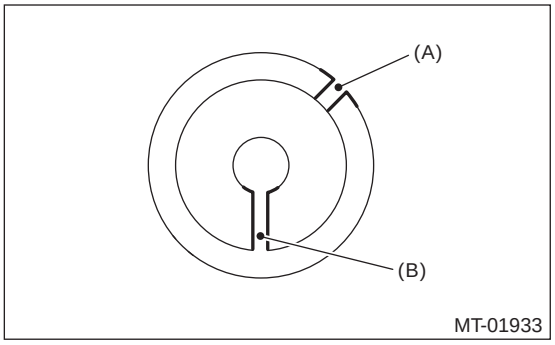
21) Apply adequate transmission gear oil to the main shaft, 6th needle bearing and 6th drive gear inner surface.
22) Install the 6th drive gear.



23) Install the 6th needle bearing.



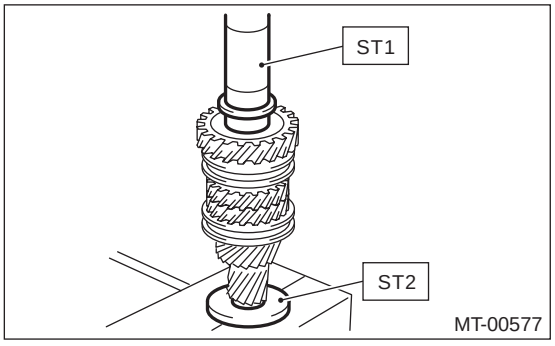
24) With 6th drive gear bushing oil hole and the main shaft oil hole out of alignment, attach to the main shaft.



(A) 6th drive gear bushing oil hole
(B) Main shaft oil hole

25) Using the ST, install the 6th drive gear bushing.
ST1 18651AA000 INSTALLER
ST2 398177700 INSTALLER

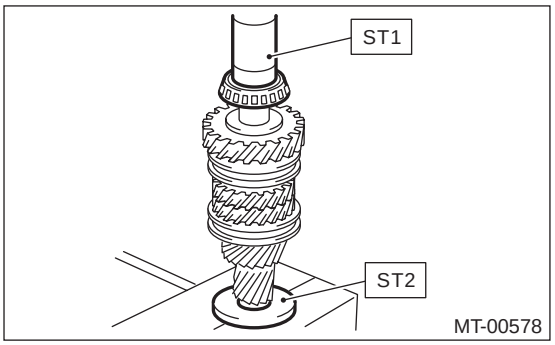
CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).



26) Make sure that the 6th drive gear can be turned smoothly by hand. If it does not turn smoothly, reassemble.
27) Using the ST, install the double taper roller bearing inner race (front side).
ST1 18651AA000 INSTALLER
ST2 398177700 INSTALLER

CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).

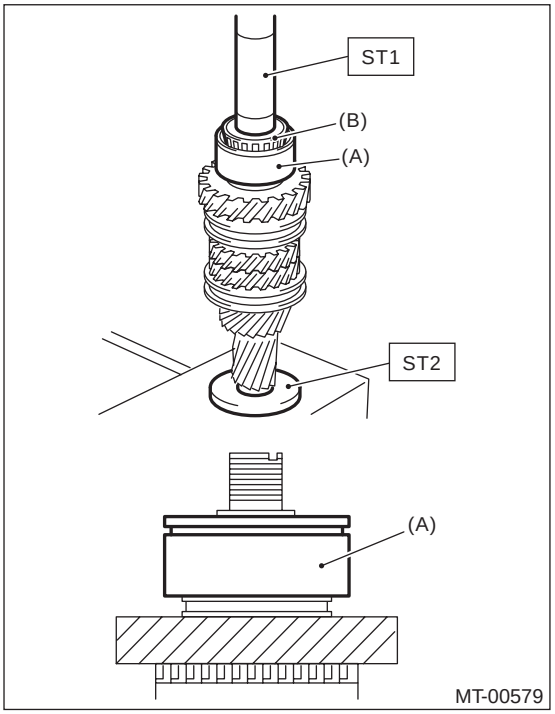
NOTE:
Use a new double taper roller bearing.



28) Using the ST, install the outer race and inner race (rear side) of the double taper roller bearing.
ST1 18651AA000 INSTALLER
ST2 398177700 INSTALLER

CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).

NOTE:
• Confirm that the outer race and inner race are installed in the proper direction.
• Push in until there is no backlash on the double taper roller bearing outer race and the bearing turns smoothly by hand.



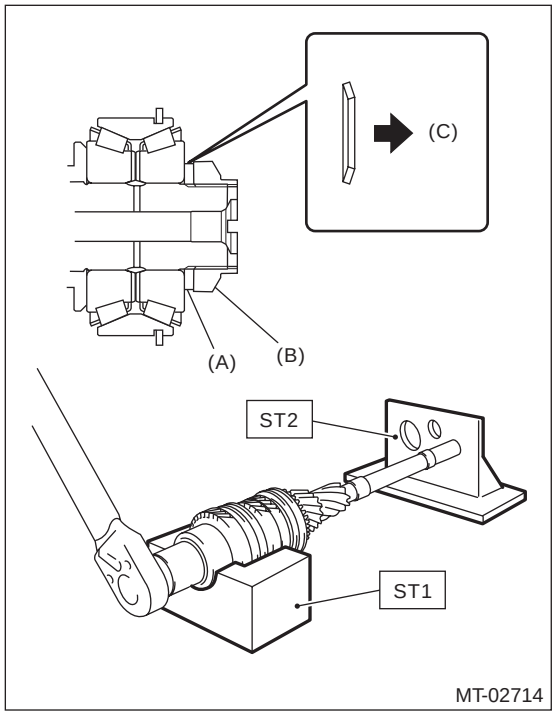
(A) Double taper roller bearing outer race
(B) Double taper roller bearing inner race (rear side)

29) Make sure that the double taper roller bearing turns smoothly by hand. If it does not turn smoothly, replace the double taper roller bearing as a set, and reassemble.
30) Attach a new lock washer and a new lock nut.

CAUTION:
Apply transmission gear oil to the lock washer and lock nut before installation.
31) Set the main shaft assembly to the ST, and tighten the lock nut.
ST1 18665AA000 HOLDER
ST2 18664AA000 BASE

NOTE:
Make sure the lock washer is installed in the proper direction.

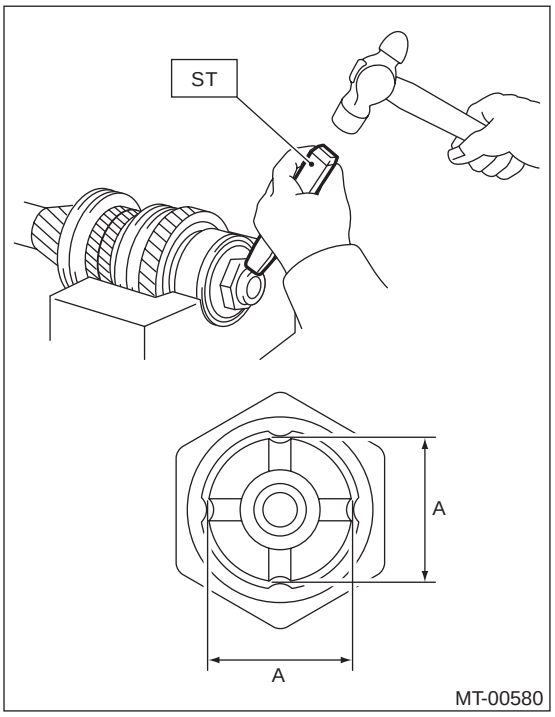
Tightening torque:
392 N·m (40.0 kgf-m, 289.1 ft-lb)



(A) Lock washer
(B) Lock nut
(C) Nut side

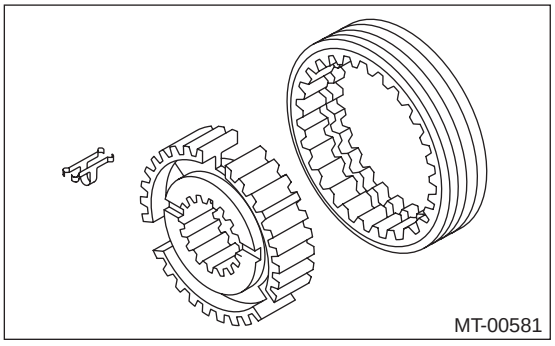
32) Using the ST, crimp the lock nut in 4 locations, with dimensions within A 27±0.3 mm (1.06±0.01 in).
ST 18668AA000 PUNCH

NOTE:
Do not damage the crimp area of the lock nut.



E: INSPECTION

Disassembled parts should be washed with cleaning solvent first, then inspected carefully.
1) Bearing
Replace the bearings in the following cases.
• Wear, rusting or damage of the bearings
• The bearing does not rotate smoothly or an abnormal noise is emitted when turning.
• The bearing has other defects.
2) Bushing (each gear)
Replace the bushing in following cases.
• The sliding surface is damaged or abnormally worn.
3) Gear
Replace gears in the following cases.
• The gear teeth surface is damaged or excessively worn.
• The contact area of the baulk ring is damaged.
• The inner face of the gear is worn.
4) Baulk ring, synchro cone
Replace the baulk ring and synchro cone in the following cases.
• Wear, rusting or damage of the baulk ring
5) Shifting insert
Replace the shifting insert if deformed, excessively worn or defective in any way.



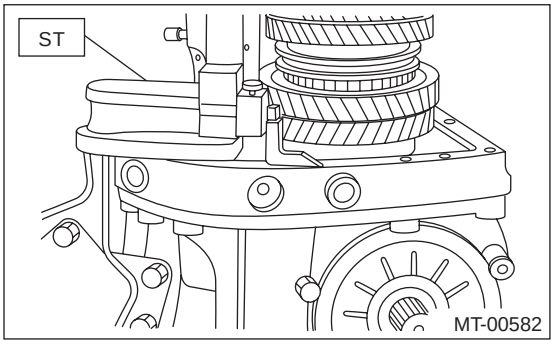
MT-00581

F: ADJUSTMENT

1. MAIN SHAFT SNAP RING & ADJUSTING WASHER SELECTION

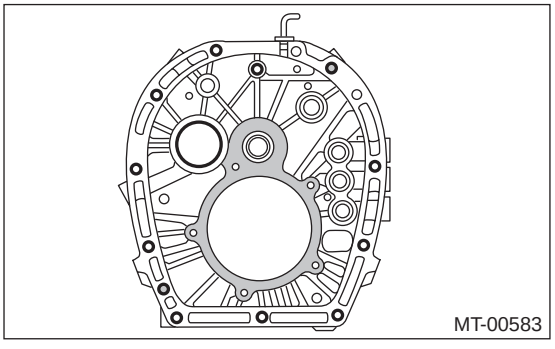
NOTE:
In the following conditions, perform the procedures below.
• 1st to 6th driven gear replacement
• 1st and 2nd synchro ring assembly replacement
• Ball bearing replacement
• Adapter plate replacement
• Driven shaft replacement
1) Insert the drive pinion assembly into the adapter plate.

NOTE:
Confirm that the thrust bearing outer race has not been removed and the drive pinion is not lifted.
2) Set the height gauge to the adapter plate. Lower the height gauge indicator to the mating surface of the adapter plate and case, and set to zero points.
ST 18853AA000 HEIGHT GAUGE



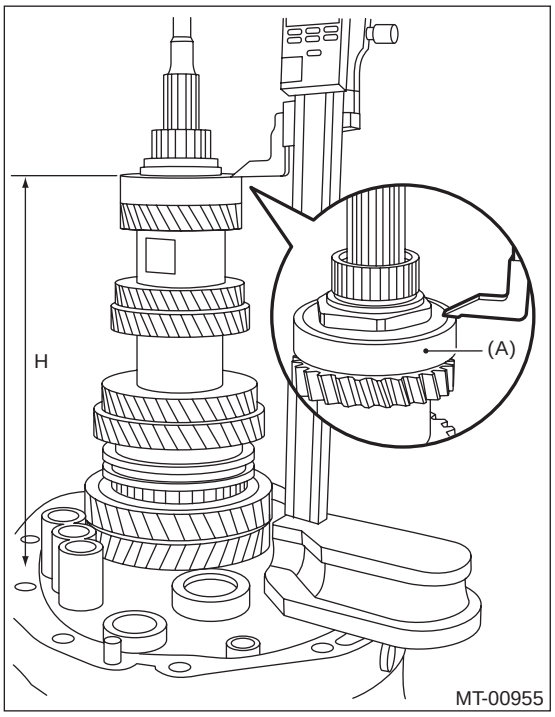
MT-00582

NOTE:
• The adapter plate will be the base point for the measurement. Use a scraper to remove any gasket material remaining on the end face.
• During measurement, do not place the height gauge in the shaded area shown in the figure.



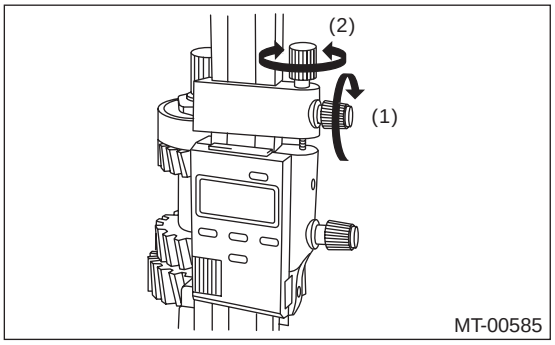
MT-00583

3) Measure the height to the ball bearing end face (height H).



(A) Ball bearing

NOTE:
Set the height gauge indicator near the measurement target, and lock dial (1) as shown in the figure. Turn dial (2), and set the indicator to the end face of the bearing.



Turn approximately 120° at a time, and measure the ball bearing in 5 locations. Round down the 2 highest and 2 lowest measurement values. The remaining center value is used as the measurement value.

4) According to the measurement value, select the snap ring and adjusting washer from the following table.

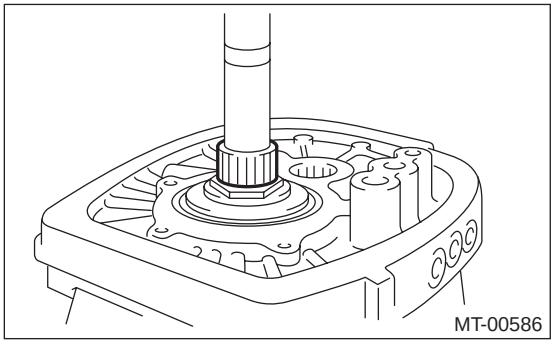
Snap ring		
H: mm (in)	Part No.	Thickness: mm (in)
270.83 — 271.40 (10.66 — 10.69)	805072010	1.65 (0.065)
271.41 — 271.98 (10.69 — 10.71)	805072011	1.95 (0.077)
271.99 — 272.56 (10.71 — 10.73)	805072012	2.25 (0.089)

Adjusting washer		
H: mm (in)	Part No.	Thickness: mm (in)
270.83 — 271.40 (10.66 — 10.69)	803067012	1.6 (0.063)
271.41 — 271.98 (10.69 — 10.71)	803067011	1.3 (0.051)
271.99 — 272.56 (10.71 — 10.73)	803067010	1.0 (0.039)

20.Driven Gear Assembly

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-31, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-38, Preparation for Overhaul.>
3) Remove the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-41, REMOVAL, Neutral Position Switch.> <Ref. to 6MT(TY85)-40, REMOVAL, Back-up Light Switch.>
4) Remove the extension case. <Ref. to 6MT(TY85)-42, REMOVAL, Extension Case.>
5) Remove the transfer driven gear. <Ref. to 6MT(TY85)-54, REMOVAL, Transfer Driven Gear.>
6) Remove the center differential. <Ref. to 6MT(TY85)-56, REMOVAL, Center Differential.>
7) Remove the transmission case. <Ref. to 6MT(TY85)-57, REMOVAL, Transmission Case.>
8) Remove the driven gear assembly. <Ref. to 6MT(TY85)-63, REMOVAL, Main Shaft Assembly.>
9) Remove the 1st needle bearing.



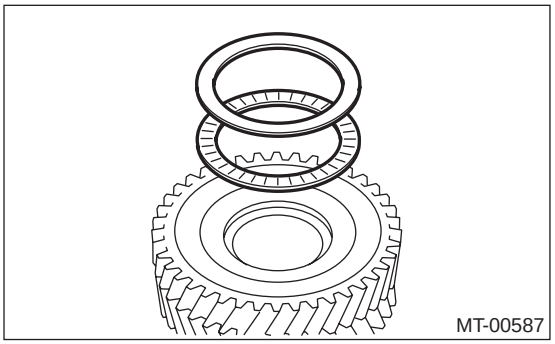
MT-00586

10) Remove the thrust needle bearing.

B: INSTALLATION

1) Adjust the main shaft snap ring. <Ref. to 6MT(TY85)-75, ADJUSTMENT, Main Shaft Assembly.>
2) Adjust the 1st-2nd shifter rod. <Ref. to 6MT(TY85)-110, ADJUSTMENT, Shifter Fork and Rod.>
3) Install the thrust needle bearing.

NOTE:
Confirm that the thrust needle bearing is installed in the proper direction.



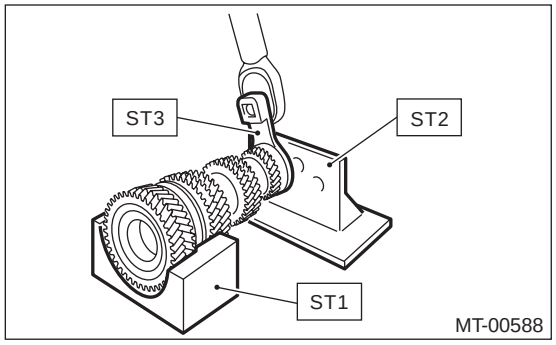
MT-00587

4) Install the needle bearing.
5) Install the driven gear assembly. <Ref. to 6MT(TY85)-64, INSTALLATION, Main Shaft Assembly.>
6) Install the transmission case. <Ref. to 6MT(TY85)-59, INSTALLATION, Transmission Case.>
7) Adjust the backlash of the driven gear assembly in the axial direction. <Ref. to 6MT(TY85)-86, ADJUSTMENT, Driven Gear Assembly.>
8) Install the center differential. <Ref. to 6MT(TY85)-56, INSTALLATION, Center Differential.>
9) Install the transfer driven gear. <Ref. to 6MT(TY85)-54, INSTALLATION, Transfer Driven Gear.>
10) Install the extension case. <Ref. to 6MT(TY85)-42, INSTALLATION, Extension Case.>
11) Install the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-41, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT(TY85)-40, INSTALLATION, Back-up Light Switch.>
12) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-33, INSTALLATION, Manual Transmission Assembly.>

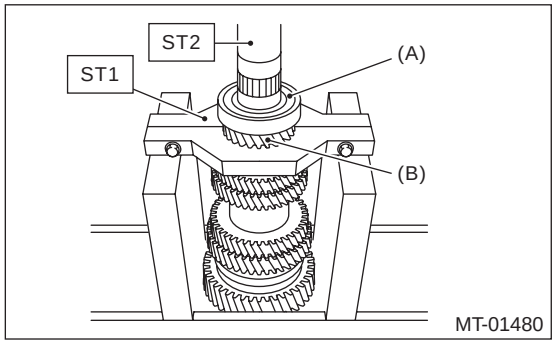
C: DISASSEMBLY

NOTE:
Individual coupling sleeves and synchronizer hubs meet at a specified position. Before disassembly, mark the meeting position of the coupling sleeve and synchronizer hub.

1) Affix the ST to the work table.
ST 18664AA000 BASE
2) Flatten the tab of the lock nut.
3) Attach ST3 to the lock nut, set the driven gear assembly to the ST, and remove the lock nut.
ST1 18666AA000 HOLDER
ST2 18664AA000 BASE
ST3 18620AA000 ADAPTER WRENCH

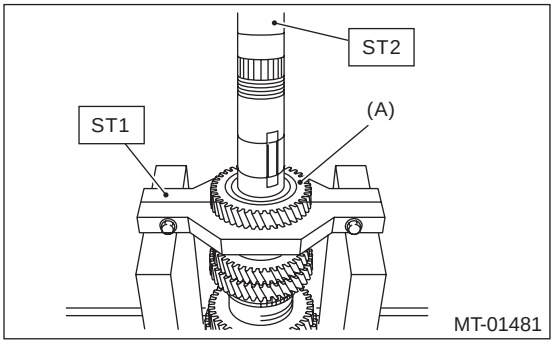


4) Attach ST1 to the 6th driven gear, then remove the ball bearing and 5th-6th driven gear.
ST1 18723AA000 REMOVER
ST2 499877000 RACE 4-5 INSTALLER



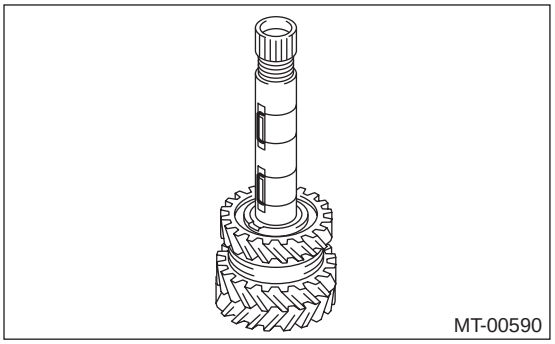
(A) Ball bearing
(B) 5th-6th driven gear

5) Attach ST1 to the 4th driven gear, then remove the 3rd-4th driven gear.
ST1 18723AA000 REMOVER
ST2 499877000 RACE 4-5 INSTALLER

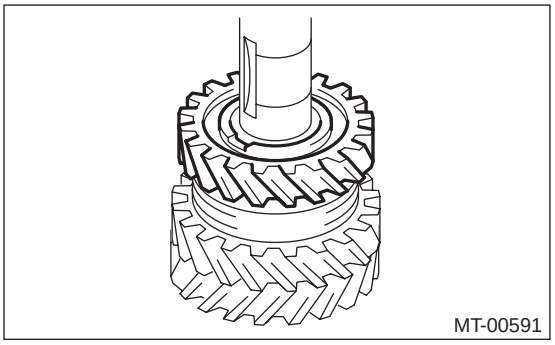


(A) 3rd-4th driven gear

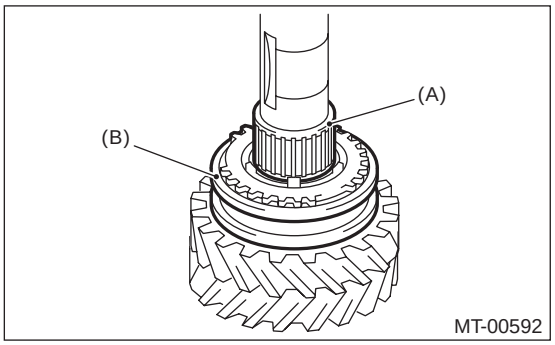
6) Remove the key.



7) Remove the 2nd driven gear.

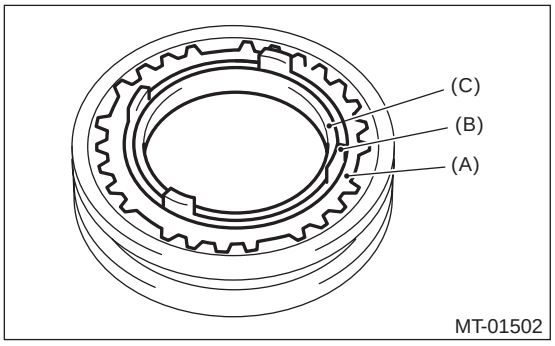


8) Remove the needle bearing and 1st-2nd coupling sleeve.



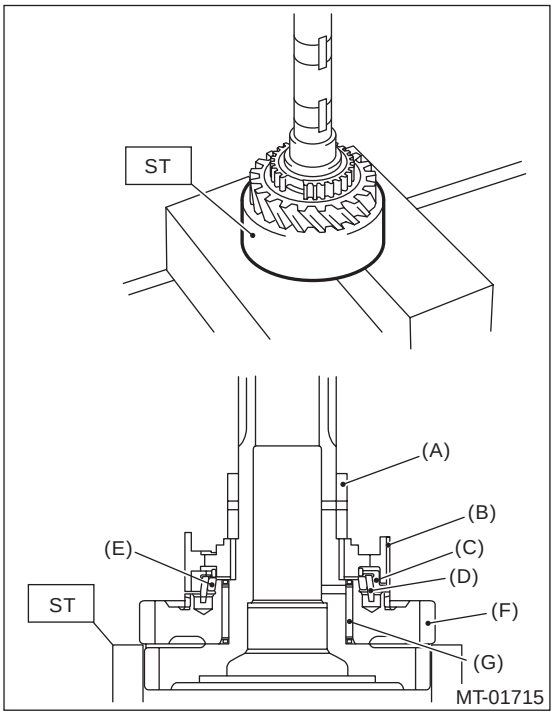
(A) Needle bearing
(B) 1st-2nd coupling sleeve

9) Remove the 2nd outer baulk ring, 2nd synchro cone and 2nd inner baulk ring.



(A) 2nd outer baulk ring
(B) 2nd synchro cone
(C) 2nd inner baulk ring

10) Using the ST, remove individual parts.
ST 18754AA000 REMOVER

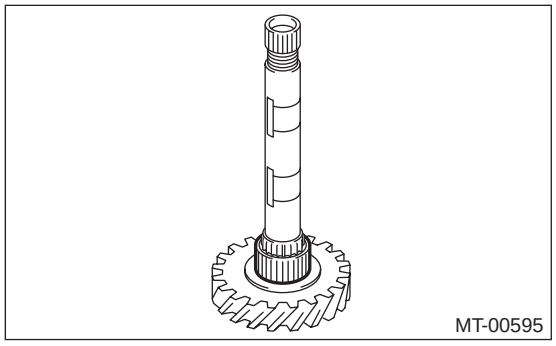


(A) 2nd drive gear bushing
(B) 1st-2nd synchronizer hub
(C) 1st outer baulk ring
(D) 1st synchro cone
(E) 1st inner baulk ring
(F) 1st driven gear
(G) Needle bearing

D: ASSEMBLY

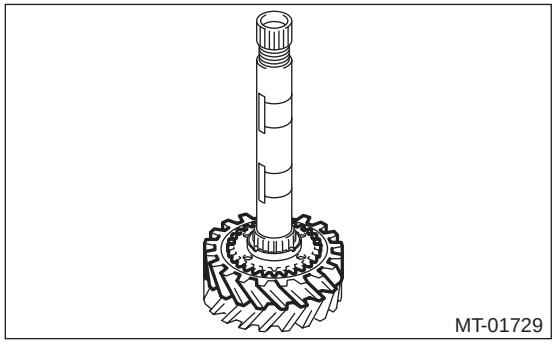
NOTE:
When replacing the following parts, replace as a set.
- Coupling sleeve and synchronizer hub
- 1st outer baulk ring, 1st synchro cone and 1st inner baulk ring
- 2nd outer baulk ring, 2nd synchro cone and 2nd inner baulk ring.

1) Apply adequate transmission gear oil to the main shaft, needle bearing and 1st driven gear inner surface.
2) Install the needle bearing.



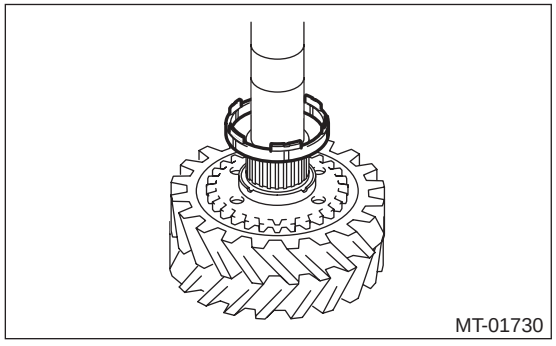
MT-00595

3) Attach the 1st driven gear to the driven shaft.



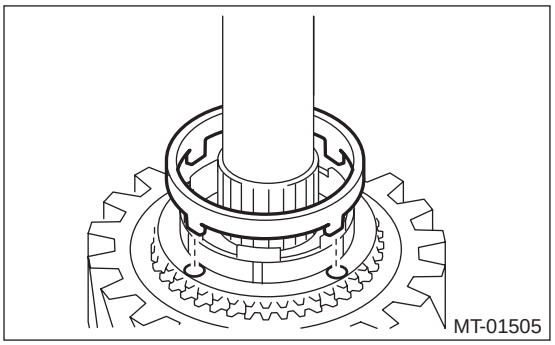
MT-01729

4) Install the 1st inner baulk ring.



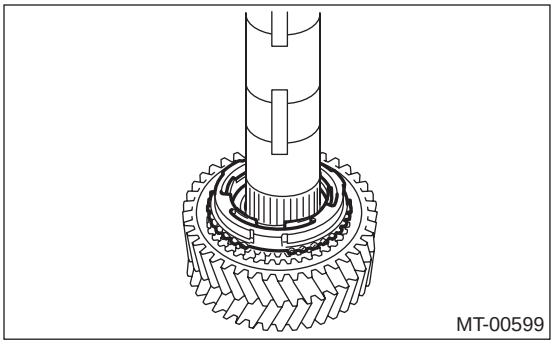
MT-01730

5) Match the protrusion of the 1st synchro cone to the hole of the 1st driven gear, then install.



MT-01505

6) Install the 1st outer baulk ring.

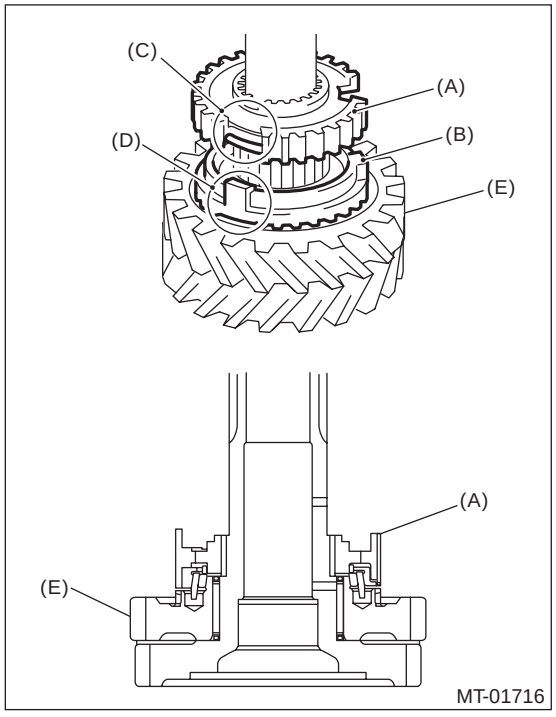


MT-00599

7) Install the 1st-2nd synchronizer hub.

CAUTION:
Apply transmission gear oil onto sliding or revolving surfaces before installation.

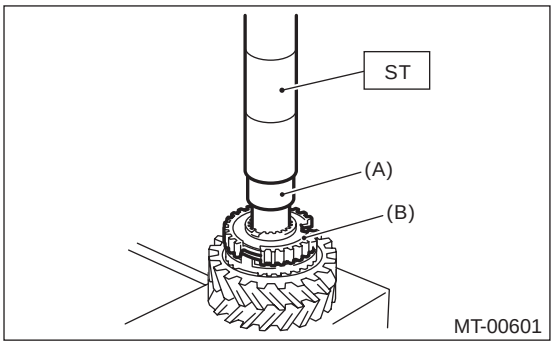
NOTE:
• Match the cut out of the 1st-2nd synchronizer hub with the protrusion on the outer baulk ring, then install.
• Make sure that the 1st-2nd synchronizer hub is installed in the correct direction.



(A) 1st-2nd synchronizer hub
(B) 1st outer baulk ring
(C) Cut out of the 1st-2nd synchronizer hub
(D) Protrusion of the 1st outer baulk ring
(E) 1st driven gear

8) Using the ST, install the 1st-2nd synchronizer hub and 2nd driven gear bushing.
ST 18654AA000 INSTALLER

CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).

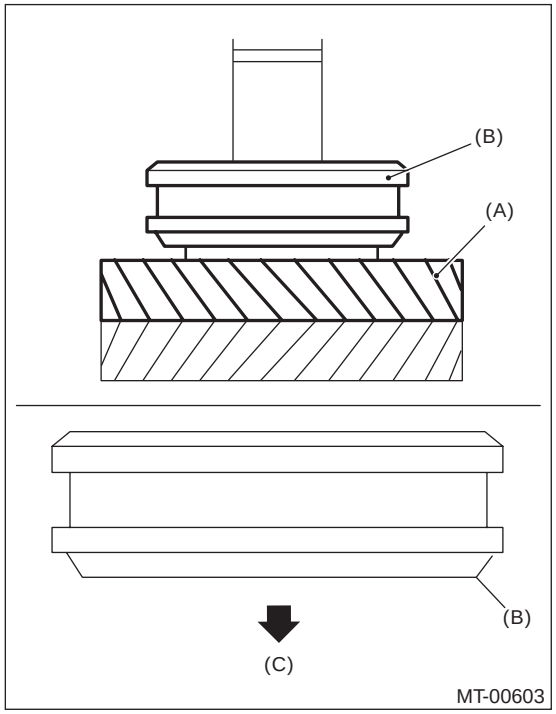


(A) 2nd driven gear bushing
(B) 1st-2nd synchronizer hub

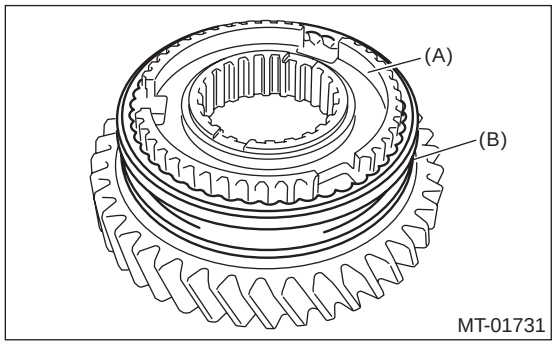
9) Make sure that the 1st driven gear can be turned smoothly by hand. If it does not turn smoothly, reassemble.

10) Attach the 1st-2nd coupling sleeve to the 1st-2nd synchronizer hub.

NOTE:
• Make sure that the 1st-2nd coupling sleeve is installed in the correct direction.
• Align the 1st-2nd synchronizer hub cut out section (three places) and the key grooves (three places) of shifting insert that are located inside the 1st-2nd coupling sleeve.
• Set the 1st-2nd coupling sleeve and 1st driven gear so that they contact each other.



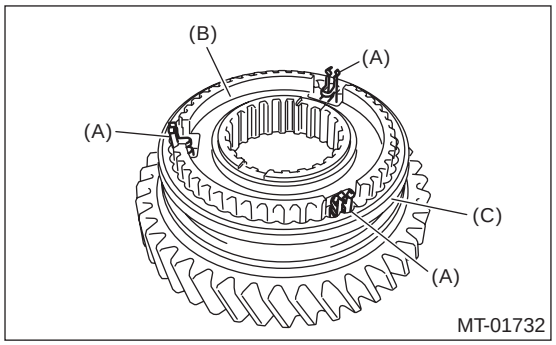
(A) 1st driven gear
(B) 1st-2nd coupling sleeve
(C) 1st driven gear side



(A) 1st-2nd synchronizer hub
(B) 1st-2nd coupling sleeve

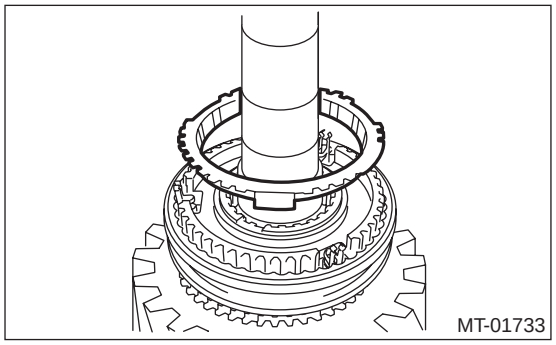
11) Attach the shifting insert to the appropriate position of the 1st-2nd coupling sleeve.

NOTE:
• The location angle of each shifting insert is 120°.
• Install the shifting insert to the key grooves (three places) of shifting insert that are located inside the 1st-2nd coupling sleeve.

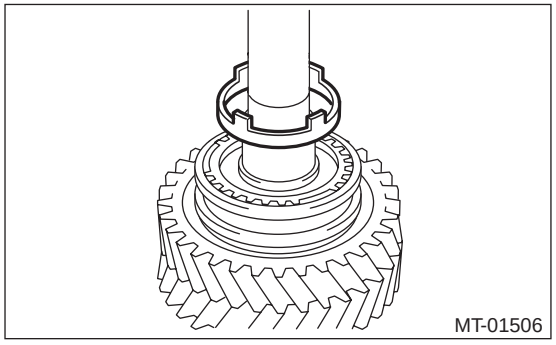


(A) Shifting insert
(B) 1st-2nd synchronizer hub
(C) 1st-2nd coupling sleeve

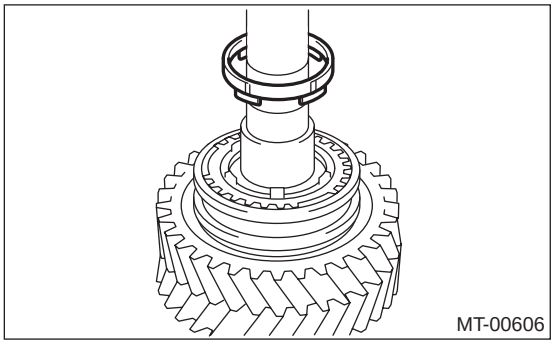
12) Install the 2nd outer baulk ring.



13) Install the 2nd synchro cone.

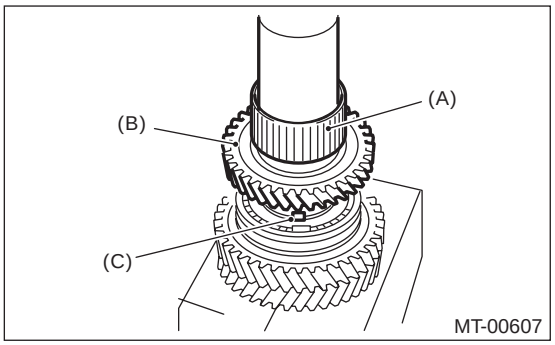


14) Install the 2nd inner baulk ring.



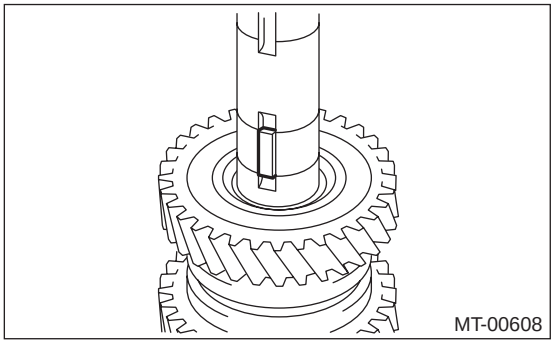
15) Apply adequate transmission gear oil to the 2nd driven gear bushing, needle bearing and 2nd driven gear inner surface.
16) Install the needle bearing and 2nd driven gear.

NOTE:
Match the protrusion of the 2nd synchro cone to the hole of the 2nd driven gear, then install.



(A) Needle bearing
(B) 2nd driven gear
(C) Protrusion of the 2nd synchro cone

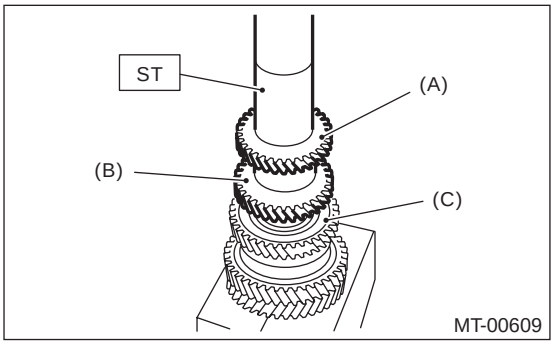
17) Attach the key.



18) Using the ST, install the 3rd-4th driven gear.
ST 18654AA000 INSTALLER

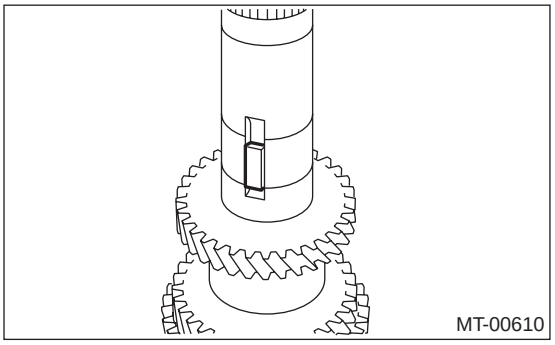
CAUTION:
• Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).
• Apply transmission gear oil onto sliding or revolving surfaces before installation.

NOTE:
• Make sure that the 3rd-4th driven gear is installed in the correct direction.
• Match the groove on the 3rd-4th driven gear to the key.



(A) 4th gear
(B) 3rd gear
(C) 2nd gear

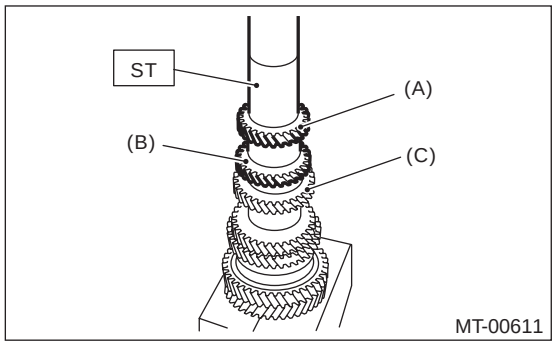
19) Make sure that the 2nd driven gear can be turned smoothly by hand. If it does not turn smoothly, reassemble.
20) Attach the key.



21) Using the ST, install the 5th-6th driven gear.
ST 18654AA000 INSTALLER

CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).

NOTE:
• Make sure that the 5th-6th driven gear is installed in the correct direction.
• Match the groove on the 5th-6th driven gear to the key.

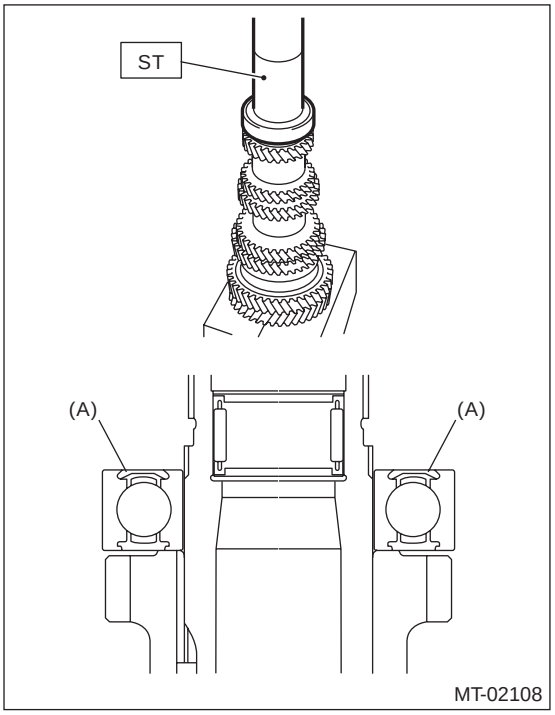


(A) 6th gear
(B) 5th gear
(C) 4th gear

22) Using the ST, install the ball bearing.
ST 18654AA000 INSTALLER

CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).

NOTE:
Face the sealing section of the ball bearing to the lock nut side, and install the ball bearing.

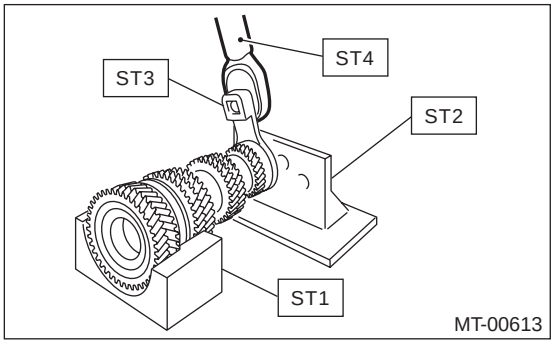


(A) Sealing

23) Make sure that the ball bearing turns smoothly by hand. If it does not turn smoothly, reassemble.
24) Install a new lock nut.

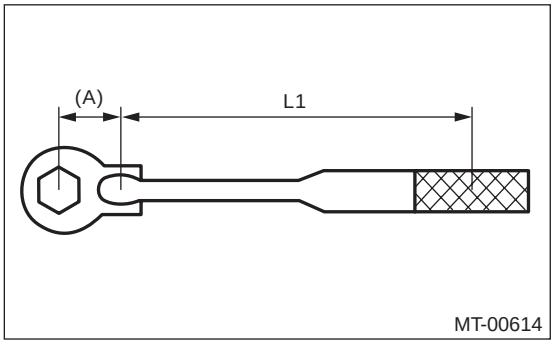
25) Attach ST3 to the lock nut, attach ST to the driven gear assembly, and tighten the lock nut.
ST1 18666AA000 HOLDER
ST2 18664AA000 BASE
ST3 18620AA000 ADAPTER WRENCH
ST4 18852AA000 TORQUE WRENCH

Tightening torque:
530 N·m (54.0 kgf-m, 390.9 ft-lb)



NOTE:
When using a torque wrench other than ST4, use the calculation below to calculate and tighten the lock nut.
T = L1/(0.1 + L1) × 570

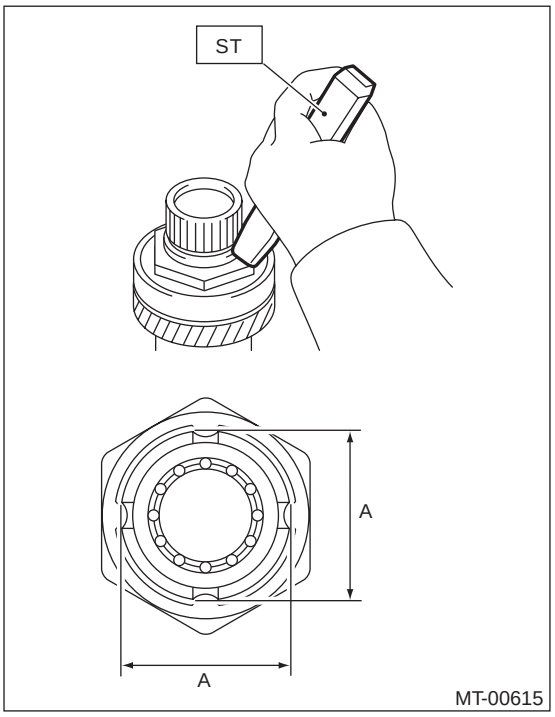
T N·m (kgf-m, ft-lb)	Torque wrench setting
L1 m (in)	Torque wrench length
0.1 m (3.94 in)	Length of ST
570 N·m (58.1 kgf-m, 420 ft-lb)	Tightening torque (lock nut)



(A) 0.1 m (3.94 in)

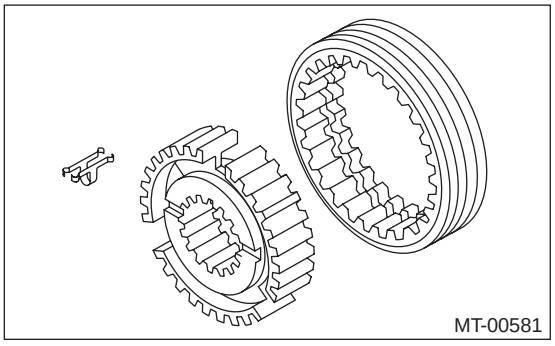
26) Using the ST, crimp the lock nut in 4 locations, with dimensions within A 44±0.5 mm (1.73±0.02 in).
ST 18669AA000 PUNCH DRIVEN SHAFT

NOTE:
Do not damage the crimp area of the lock nut.



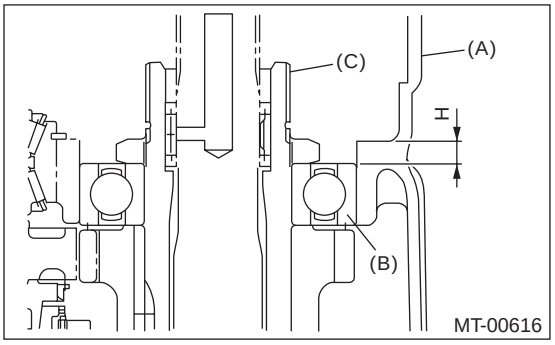
E: INSPECTION

Disassembled parts should be washed with cleaning solvent first, then inspected carefully.
1) Bearing
Replace the bearings in the following cases.
• Wear, rusting or damage of the bearings
• The bearing does not rotate smoothly or an abnormal noise is emitted when turning.
• The bearing has other defects.
2) Bushing (each gear)
Replace the bushing in following cases.
• The sliding surface is damaged or abnormally worn.
3) Gear
Replace gears in the following cases.
• The gear teeth surface is damaged or excessively worn.
• The contact area of the baulk ring is damaged.
• The inner face of the gear is worn.
4) Baulk ring, synchro cone
Replace the baulk ring and synchro cone in the following cases.
• Wear, rusting or damage of the baulk ring
5) Shifting insert
Replace the shifting insert key if deformed, excessively worn or defective in any way.



F: ADJUSTMENT

1) Measure the length “H” from the transmission case and transfer bearing holder mating surface, to the end face of the ball bearing.



(A) Transmission case
(B) Ball bearing
(C) Driven gear ASSY

2) Using the following calculation, calculate the thickness of the driven gear assembly adjusting washer.
T = H – {5.8±0.05 mm (0.23±0.002 in)} – {0.1 — 0.3 mm (0.0039 — 0.0118 in)}

T	Adjusting washer thickness
H	Length from the transmission case and transfer bearing holder mating surface to the end face of the ball bearing
5.8±0.05 mm (0.23±0.002 in)	Collar thickness
0.1 — 0.3 mm (0.0039 — 0.0118 in)	Driven gear assembly axial direction backlash standard

3) Select 0 to 3 adjusting washers from the following table, and adjust to the backlash that is closest to the standard value.

Driven gear assembly axial direction backlash standard:
0.1 — 0.3 mm (0.0039 — 0.0118 in)

Adjusting washer	
Part No.	Thickness T mm (in)
803072030	0.15 (0.0059)
803072031	0.30 (0.0118)
803072032	0.45 (0.0177)
803072033	0.60 (0.0236)

21.Reverse Idler Gear Assembly

A: REMOVAL

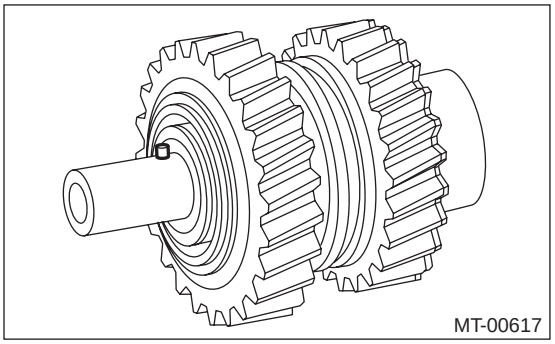
1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-31, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-38, Preparation for Overhaul.>
3) Remove the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-41, REMOVAL, Neutral Position Switch.> <Ref. to 6MT(TY85)-40, REMOVAL, Back-up Light Switch.>
4) Remove the extension case. <Ref. to 6MT(TY85)-42, REMOVAL, Extension Case.>
5) Remove the transfer driven gear. <Ref. to 6MT(TY85)-54, REMOVAL, Transfer Driven Gear.>
6) Remove the center differential. <Ref. to 6MT(TY85)-56, REMOVAL, Center Differential.>
7) Remove the transmission case. <Ref. to 6MT(TY85)-57, REMOVAL, Transmission Case.>
8) Remove the reverse idler gear assembly. <Ref. to 6MT(TY85)-63, REMOVAL, Main Shaft Assembly.>

B: INSTALLATION

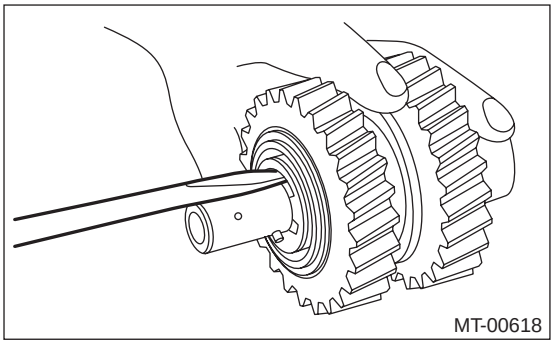
1) Select the reverse fork rod. <Ref. to 6MT(TY85)-110, ADJUSTMENT, Shifter Fork and Rod.>
2) Install the reverse idler gear assembly. <Ref. to 6MT(TY85)-64, INSTALLATION, Main Shaft Assembly.>
3) Install the transmission case. <Ref. to 6MT(TY85)-59, INSTALLATION, Transmission Case.>
4) Install the center differential. <Ref. to 6MT(TY85)-56, INSTALLATION, Center Differential.>
5) Install the transfer driven gear. <Ref. to 6MT(TY85)-54, INSTALLATION, Transfer Driven Gear.>
6) Install the extension case. <Ref. to 6MT(TY85)-42, INSTALLATION, Extension Case.>
7) Install the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-41, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT(TY85)-40, INSTALLATION, Back-up Light Switch.>
8) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-33, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

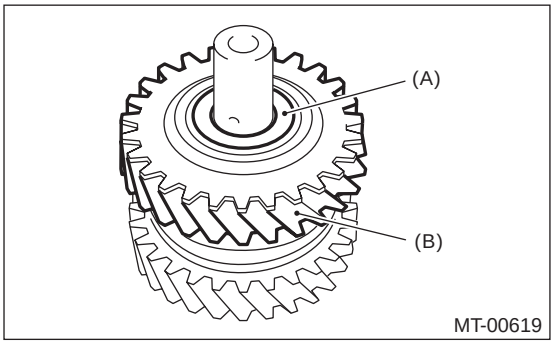
NOTE:
Sleeves and reverse gears meet at a specified position. Before disassembly, mark the meeting position of the sleeve and hub.
1) Remove the straight pin.



2) Remove the snap ring and washer.

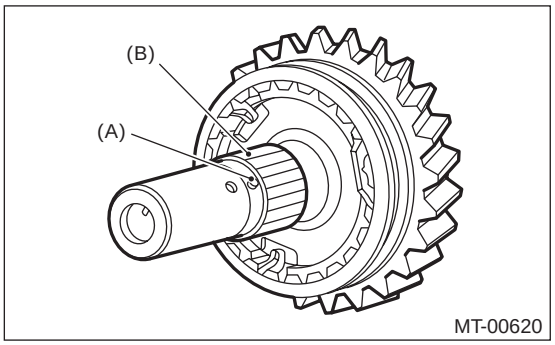


3) Remove the counter high & low washer and reverse idler gear.



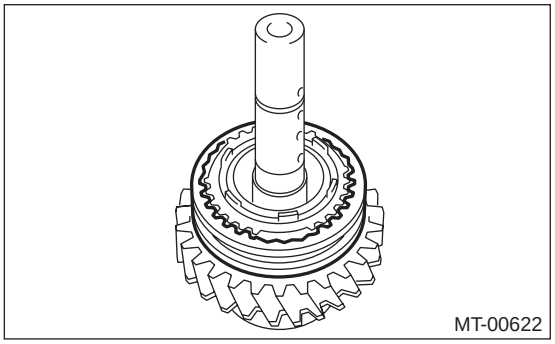
(A) Counter high and low washer
(B) Reverse idler gear

4) Remove the knock pin and reverse idler gear needle bearing.

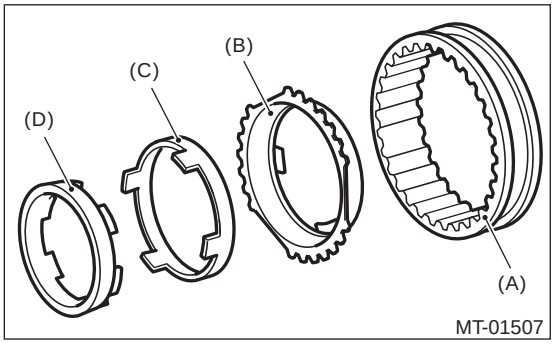


(A) Knock pin
(B) Reverse idler gear needle bearing

5) Remove the collar.
6) Remove the reverse sleeve.

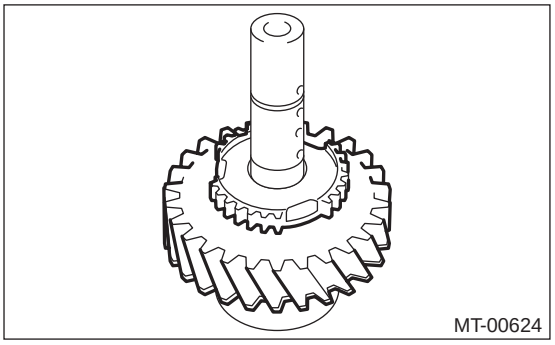


7) Remove the outer baulk ring, reverse synchro cone and inner baulk ring from the reverse sleeve.

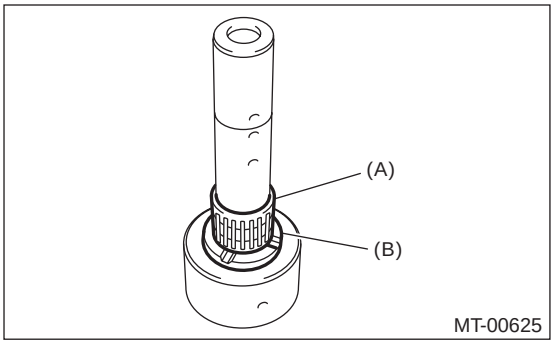


(A) Reverse sleeve
(B) Outer baulk ring
(C) Reverse synchro cone
(D) Inner baulk ring

8) Remove reverse idler gear No. 2.

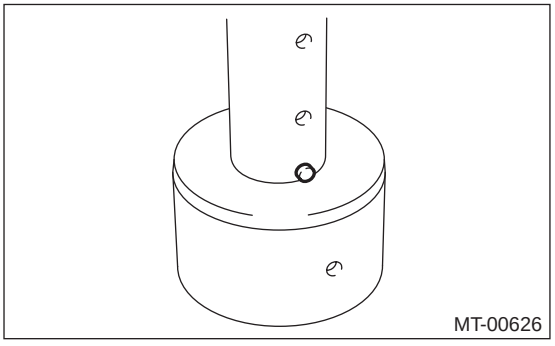


9) Remove the counter high & low washer and needle bearing.

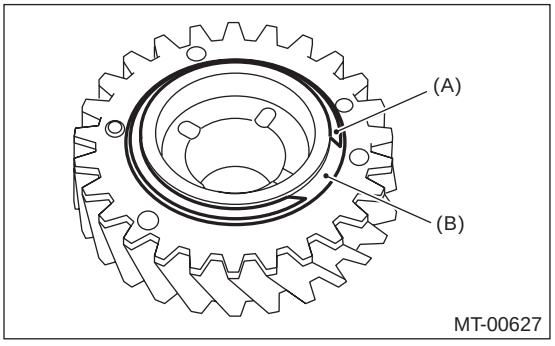


(A) Needle bearing
(B) Counter high and low washer

10) Remove the knock pin.

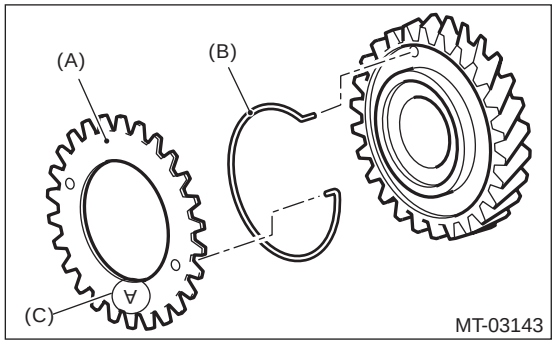


11) Remove the snap ring and friction plate from reverse gear.



(A) Snap ring
(B) Friction plate

12) Remove the reverse idler sub gear and spring.

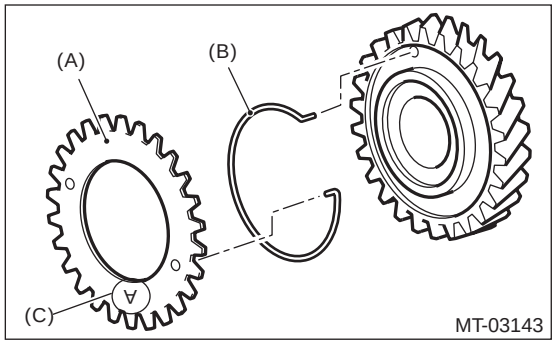


(A) Reverse idler sub gear
(B) Spring
(C) Stamp (marking A)

D: ASSEMBLY

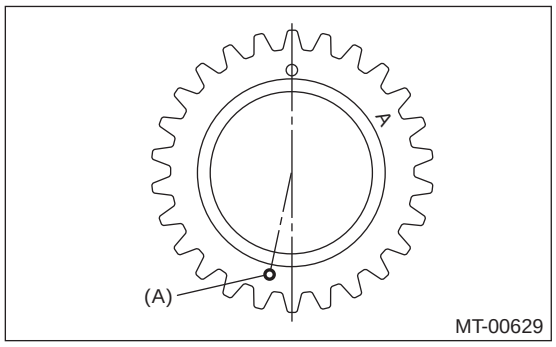
1) Attach the reverse idler sub gear and spring.

NOTE:
• Point the stamp (marking A) towards the outside, and install the reverse idler sub gear.



(A) Reverse idler sub gear
(B) Spring
(C) Stamp (marking A)

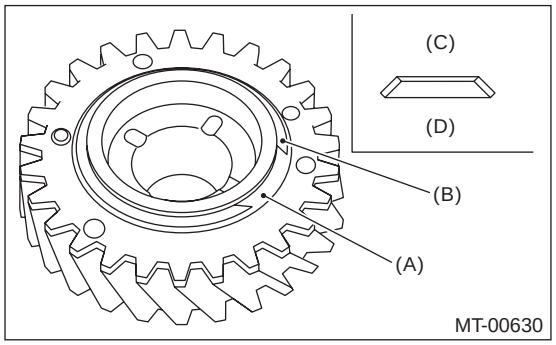
• While paying attention to the direction of the reverse idler sub gear attachment hole, attach the spring and reverse idler sub gear.



(A) Attachment hole

2) Install the friction plate and snap ring.

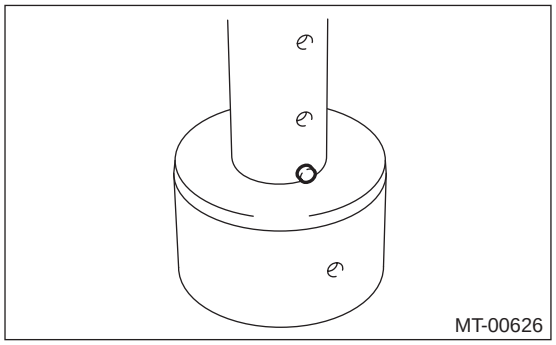
NOTE:
Confirm that the friction plate is installed in the proper direction.



(A) Friction plate
(B) Snap ring
(C) Snap ring side
(D) Reverse idler sub gear side

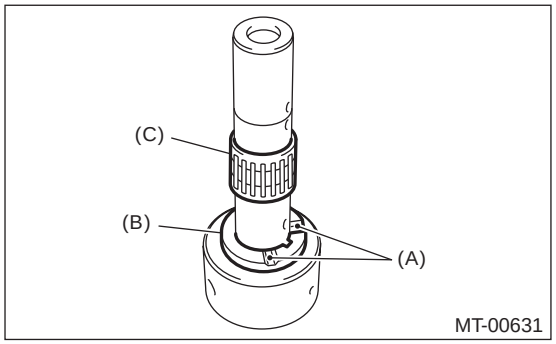
3) Apply adequate transmission gear oil to the shaft, needle bearing and reverse drive gear inner surface.

4) Install the knock pin.



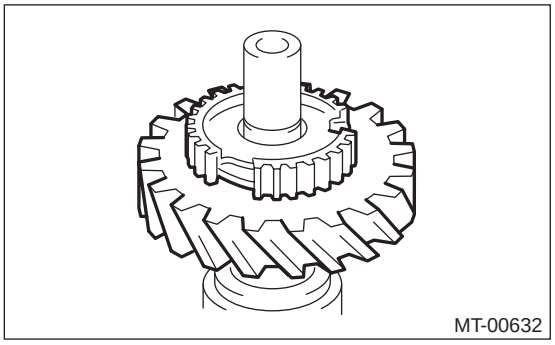
5) Install the counter high & low washer and needle bearing.

NOTE:
Point the groove towards the reverse idler gear, and attach the washer.



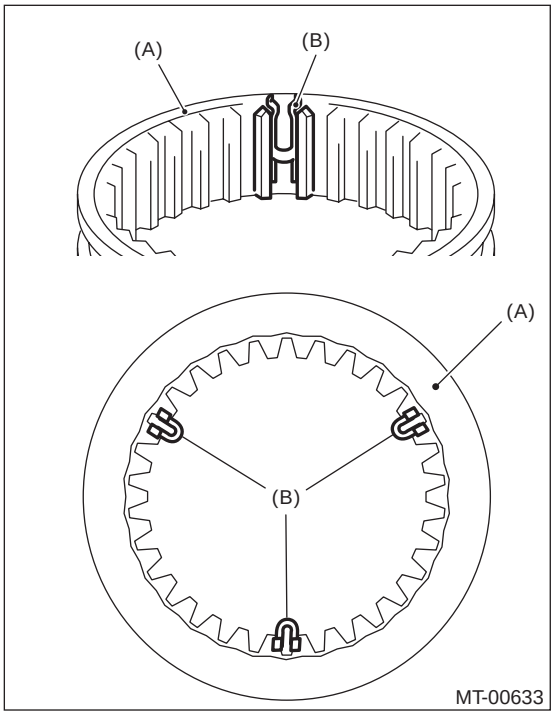
(A) Groove
(B) Counter high and low washer
(C) Needle bearing

6) Install the reverse idler gear No. 2.



7) Attach the shifting insert to the appropriate location of the reverse sleeve.

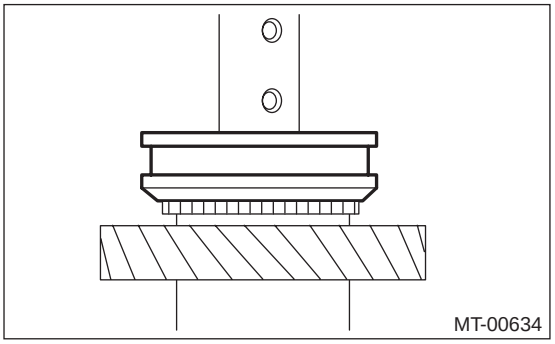
NOTE:
- The location angle of each shifting insert is 120°.
- Refer to the following figure to install the shifting insert.



(A) Reverse sleeve
(B) Shifting insert

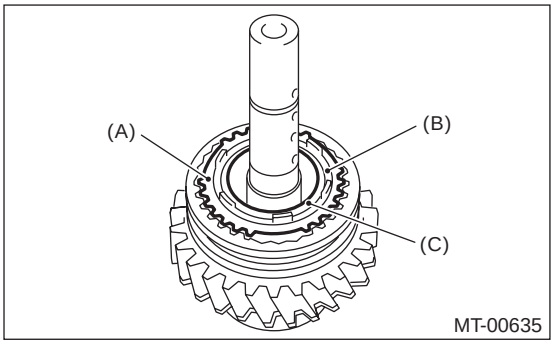
8) Install the reverse coupling sleeve to the reverse idler gear No. 2.

NOTE:
Confirm that the reverse coupling sleeve is installed in the proper direction.



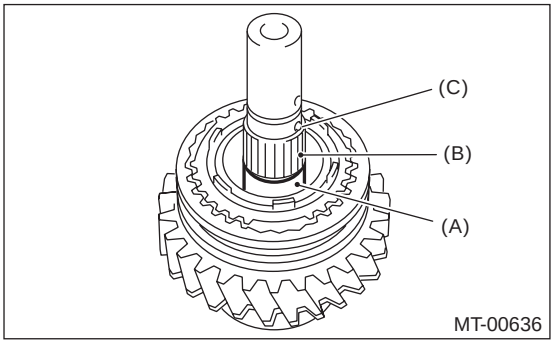
9) Apply adequate transmission gear oil to the collar, needle bearing and reverse drive gear inner surface.

10) Install the reverse outer baulk ring, reverse synchro cone and reverse inner baulk ring.



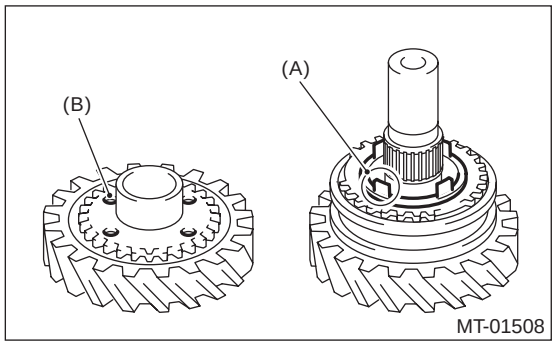
(A) Reverse outer baulk ring
(B) Reverse synchro cone
(C) Reverse inner baulk ring

11) Install the collar and needle bearing, then the knock pin.



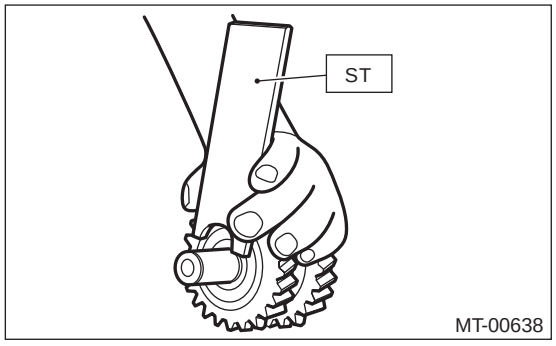
(A) Collar
(B) Needle bearing
(C) Knock pin

12) Match the protrusion of the reverse synchro cone to the hole on the reverse idler gear, and install the reverse idler gear.



(A) Protrusion on the reverse synchro cone
(B) Hole of the reverse idler gear

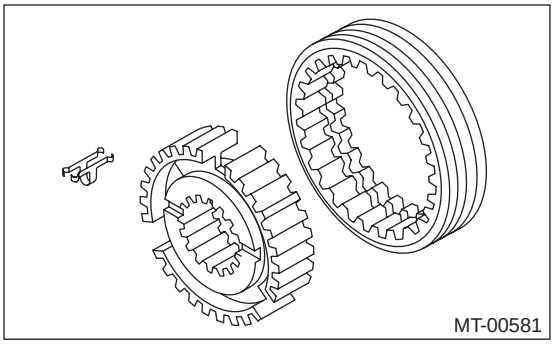
13) Point the groove towards the reverse idler gear, and attach the counter high & low washer and the washer.
14) Using the ST, install the snap ring.
ST 18672AA000 GUIDE CLIP



15) Inspect and adjust the clearance between the snap ring and the washer. <Ref. to 6MT(TY85)-91, INSPECTION, Reverse Idler Gear Assembly.>
16) Install a new straight pin.

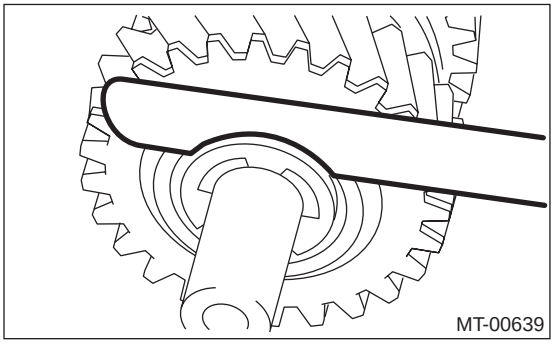
E: INSPECTION

Disassembled parts should be washed with cleaning solvent first, then inspected carefully.
1) Bearing
Replace the bearings in the following cases.
• Wear, rusting or damage of the bearings
• The bearing does not rotate smoothly or an abnormal noise is emitted when turning.
• The bearing has other defects.
2) Bushing (each gear)
Replace the bushing in following cases.
• The sliding surface is damaged or abnormally worn.
3) Gear
Replace gears in the following cases.
• The gear teeth surface is damaged or excessively worn.
• The contact area of the baulk ring is damaged.
• The inner face of the gear is worn.
4) Baulk ring, synchro cone
Replace the baulk ring and synchro cone in the following cases.
• Wear, rusting or damage of the baulk ring
5) Shifting insert
Replace the shifting insert if deformed, excessively worn or defective in any way.



6) Check clearance between the snap ring and washer.

Clearance specification:
0.1 — 0.3 mm (0.0039 — 0.0118 in)



If the clearance is out of the specification, select a snap ring from the following table and replace it.

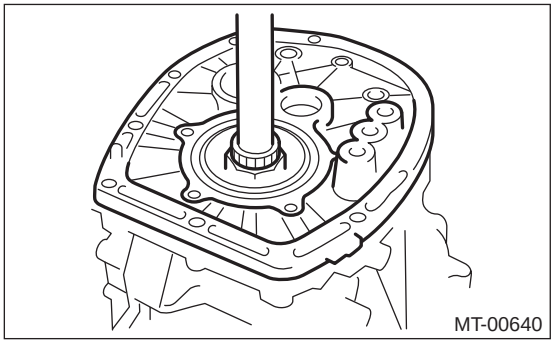
Snap ring	
Part No.	Thickness mm (in)
031319000	1.50 (0.059)
805019030	1.60 (0.062)
805019010	1.72 (0.068)

After replacing the snap ring, inspect the clearance.

22.Drive Pinion Shaft Assembly

A: REMOVAL

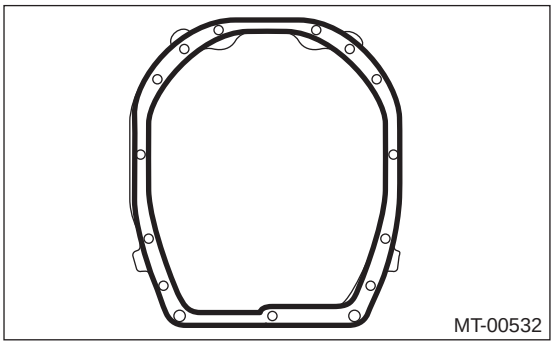
1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-31, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-38, Preparation for Overhaul.>
3) Remove the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-41, REMOVAL, Neutral Position Switch.> <Ref. to 6MT(TY85)-40, REMOVAL, Back-up Light Switch.>
4) Remove the extension case. <Ref. to 6MT(TY85)-42, REMOVAL, Extension Case.>
5) Remove the transfer driven gear. <Ref. to 6MT(TY85)-54, REMOVAL, Transfer Driven Gear.>
6) Remove the center differential. <Ref. to 6MT(TY85)-56, REMOVAL, Center Differential.>
7) Remove the transmission case. <Ref. to 6MT(TY85)-57, REMOVAL, Transmission Case.>
8) Remove the individual gear assemblies. <Ref. to 6MT(TY85)-63, REMOVAL, Main Shaft Assembly.>
9) Remove the drive pinion shaft assembly.



B: INSTALLATION

1) Remove any remaining gasket material from the drive plate and clutch housing.
2) Apply liquid gasket to the clutch housing.

Liquid gasket:
THREE BOND 1215B or equivalent

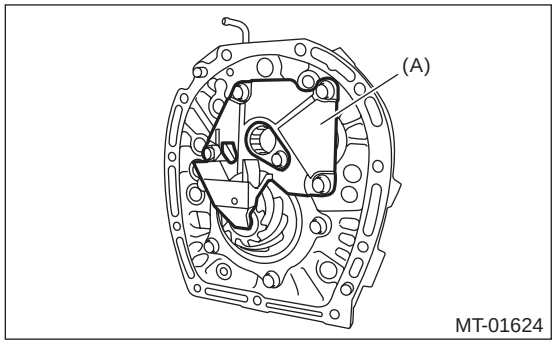


3) Install the individual gear assemblies. <Ref. to 6MT(TY85)-64, INSTALLATION, Main Shaft Assembly.>
4) Install the transmission case. <Ref. to 6MT(TY85)-59, INSTALLATION, Transmission Case.>
5) Install the center differential. <Ref. to 6MT(TY85)-56, INSTALLATION, Center Differential.>
6) Install the transfer driven gear. <Ref. to 6MT(TY85)-54, INSTALLATION, Transfer Driven Gear.>
7) Install the extension case. <Ref. to 6MT(TY85)-42, INSTALLATION, Extension Case.>
8) Install the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-41, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT(TY85)-40, INSTALLATION, Back-up Light Switch.>
9) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-33, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

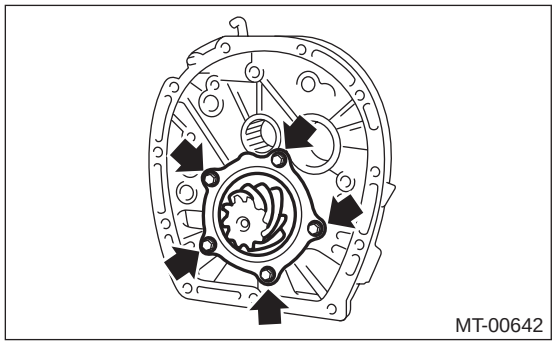
NOTE:
Replace the drive pinion shaft and hypoid driven gear as a set.

1) Remove the oil guide A.

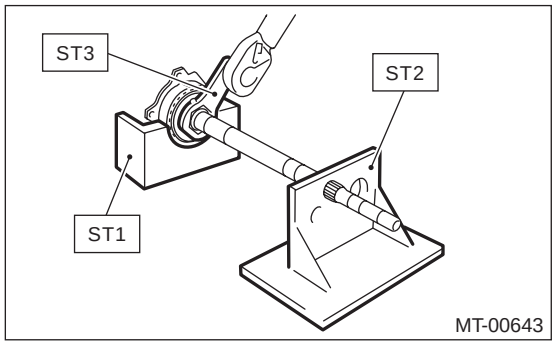


(A) Oil guide A

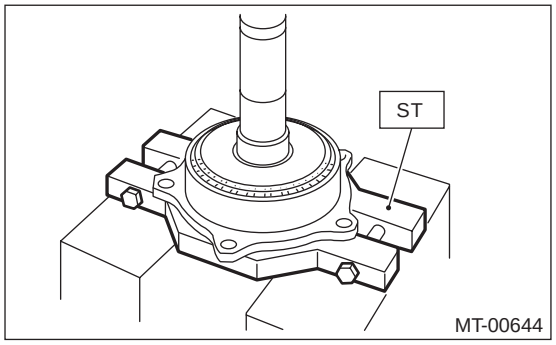
2) Remove the drive pinion shaft and shim from the adapter plate.



3) Affix the ST to the work table.
ST 18664AA000 BASE
4) Flatten the tab of the lock nut.
5) Attach ST3 to the lock nut, and set the drive pinion shaft to ST. Remove the lock nut and lock washer.
ST1 18667AA000 HOLDER
ST2 18664AA000 BASE
ST3 18621AA000 ADAPTER WRENCH



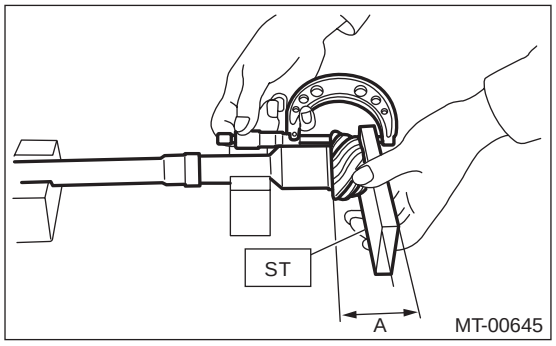
6) Using the ST, remove the double taper roller bearing assembly.
ST 18723AA000 REMOVER



D: ASSEMBLY

1) Using the ST, measure drive pinion measurement A.

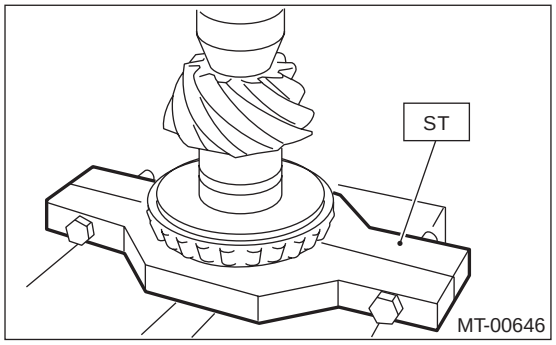
NOTE:
When selecting the drive pinion shim, refer to measurement A.
ST 398643600 GAUGE



2) Using the ST and a press, attach the double taper roller bearing inner race (front side) to the drive pinion shaft.
ST 18723AA000 REMOVER

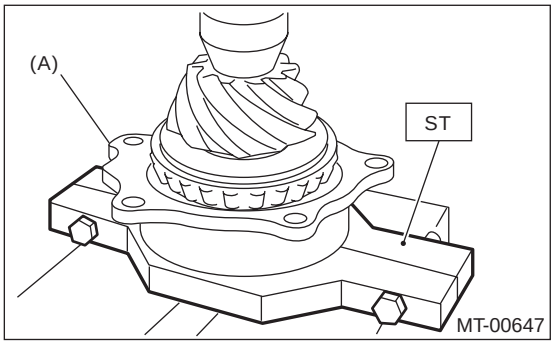
CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).

NOTE:
Use a new double taper roller bearing.



3) Using the ST and a press, attach the double taper bearing outer race and the double taper roller bearing to the drive pinion shaft.
ST 18723AA000 REMOVER

NOTE:
• Use a new double taper roller bearing.
• Push in to a position where the bearing rotates smoothly.



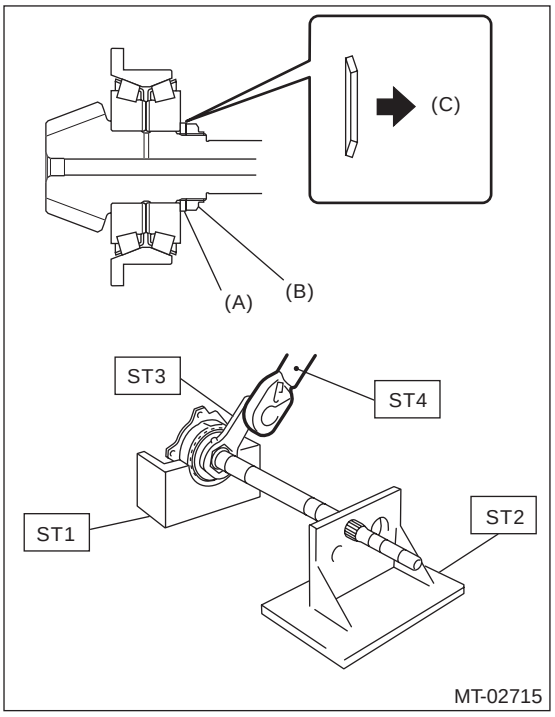
(A) Double taper roller bearing outer race

4) Attach a new lock washer and a new lock nut.

5) Set the ST to the drive pinion, and tighten the lock nut.
ST1 18667AA000 HOLDER
ST2 18664AA000 BASE
ST3 18621AA000 ADAPTER WRENCH
ST4 18852AA000 TORQUE WRENCH

NOTE:
• Tighten using the ST and the straight line torque wrench.
• Make sure the lock washer is installed in the proper direction.

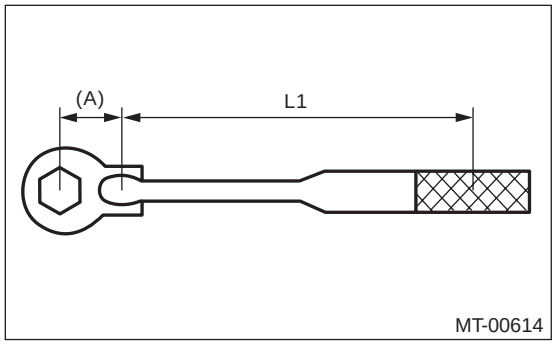
Tightening torque:
265 N·m (27.0 kgf-m, 195.4 ft-lb)



(A) Lock washer
(B) Lock nut
(C) Nut side

NOTE:
When using a torque wrench other than ST4, use the calculation below to calculate and tighten the lock nut.
Tighten using the ST and the straight line torque wrench.
T = L1/(0.1 + L1) × 285

T N·m (kgf-m, ft-lb)	Torque wrench setting
L1 m (in)	Torque wrench length
0.1 m (3.94 in)	Length of ST
285 N·m (29.0 kgf-m, 210 ft-lb)	Tightening torque (lock nut)

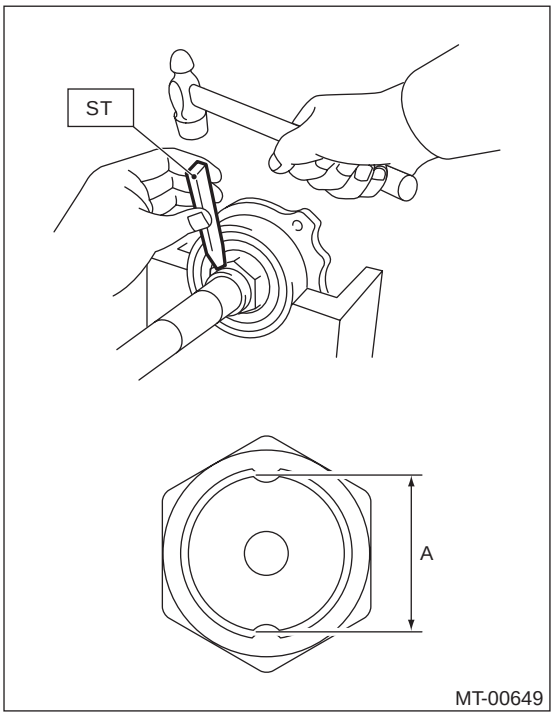


(A) 0.1 m (3.94 in)

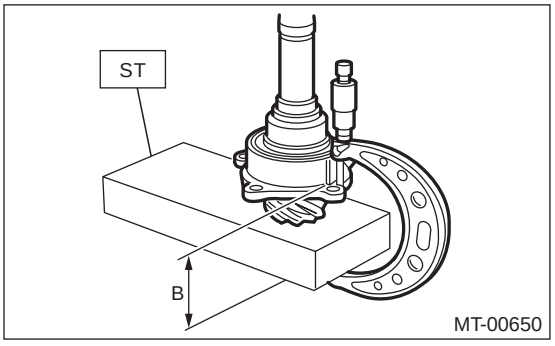
6) Measure the starting torque. <Ref. to 6MT(TY85)-96, INSPECTION, Drive Pinion Shaft Assembly.>

7) Using the ST, crimp the lock nut in 2 locations, with dimensions within A 37±0.5 mm (1.46±0.02 in).
ST 18670AA000 PUNCH

NOTE:
Do not damage the crimp area of the lock nut.



8) Using the ST, measure drive pinion measurement B.
ST 398643600 GAUGE



9) Calculate from the calculation below to select 1 or 2 drive pinion shims from the following table.
6.5±0.0625 mm – (B – A) [0.26±0.0025 in – (B – A)]

NOTE:
A: Measurement value in step 1)
B: Measurement value in step 8)

Drive pinion shim	
Part No.	Thickness mm (in)
32295AA270	0.15 (0.0059)
32295AA280	0.175 (0.0069)
32295AA290	0.20 (0.0079)
32295AA300	0.225 (0.0089)
32295AA310	0.25 (0.0098)
32295AA320	0.275 (0.0108)

10) Apply transmission gear oil to the side face of the double taper roller bearing, and attach the drive pinion shaft and the selected shims to the adapter plate.

Tightening torque:
54 N·m (5.5 kgf-m, 39.8 ft-lb)

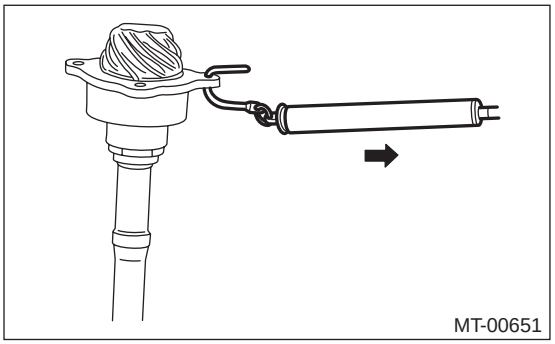
11) Install the oil guide A.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

E: INSPECTION

1) Using a spring scale, measure the starting torque. If the starting torque is outside the specification range, replace the double taper roller bearing.

Starting torque:
0 — 0.95 N (0 — 0.097 kgf, 0 — 0.21 lbf)



2) Gear
Replace gears in the following cases.
• The gear teeth surface is damaged or excessively worn.

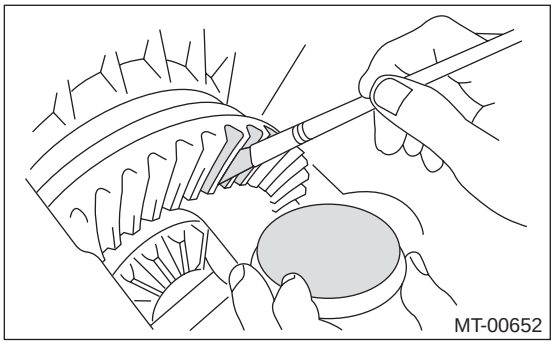
3) Bearing
Replace the bearings in the following cases.
• Wear, rusting or damage of the bearings
• The bearing does not rotate smoothly or an abnormal noise is emitted when turning.

4) Adapter plate
Replace the adapter plate in the following cases:
• Wear, rusting or damage of the bearings
• Damage of the adapter plate

5) Check that the pipes and pipe chambers are not damaged or clogged. Repair or replace if damaged or clogged.

F: ADJUSTMENT

1) Inspect and adjust the hypoid driven gear-to-drive pinion backlash. <Ref. to 6MT(TY85)-103, HYPOID GEAR BACKLASH, ADJUSTMENT, Front Differential Assembly.>
2) Apply a thin uniform coat of lead-free red dye on the surfaces of 3 or 4 hypoid driven gear teeth.



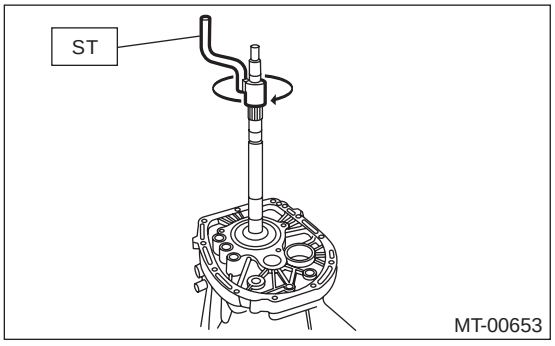
MT-00652

3) Install the drive pinion shaft assembly to the clutch housing, and tighten at least 4 bolts.

NOTE:
Install with the remaining liquid gasket, so that the clutch housing and the adapter plate will not be damaged.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

4) Turn a few times using the ST.
ST 18631AA000 HANDLE

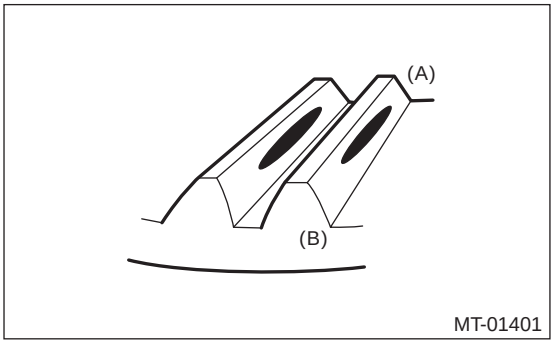


MT-00653

5) Remove the drive pinion shaft assembly, and inspect the mating condition of the teeth. If the tooth contact is not correct, adjust the backlash or shim thickness.

- Correct tooth contact

Check item: Tooth contact surface is slightly shifted toward the toe side under a no-load condition. (When driving, it moves towards the heel side.)

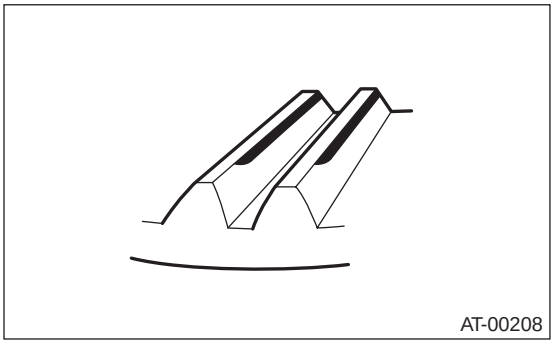


MT-01401

(A) Toe side
(B) Heel side

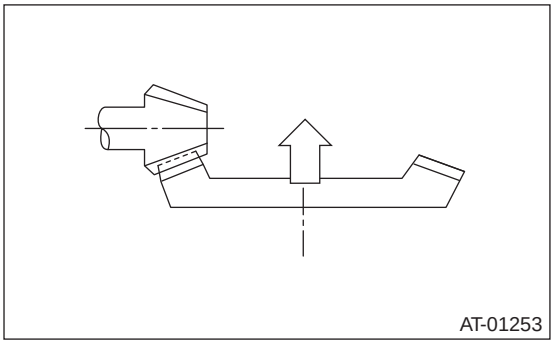
- Face contact

Check item: Backlash is too large.
Contact pattern



AT-00208

Corrective action: Tighten the side retainer to move the driven gear closer to the drive pinion shaft.

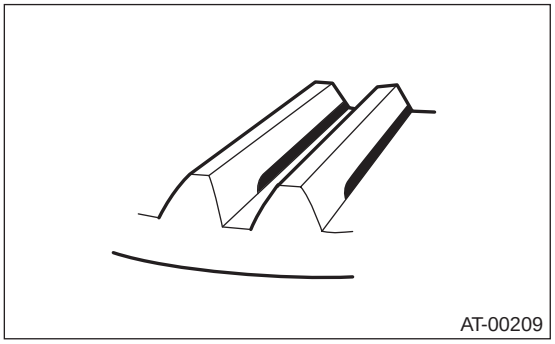


AT-01253

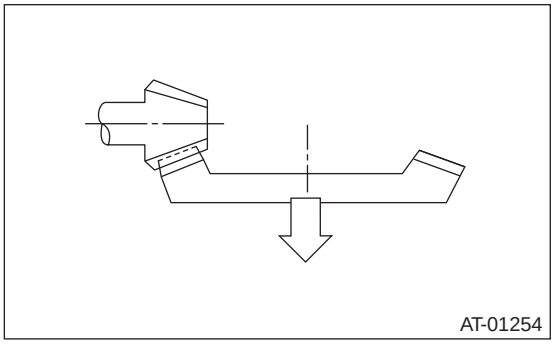
• Flank contact

Check item: Backlash is too small.

Contact pattern



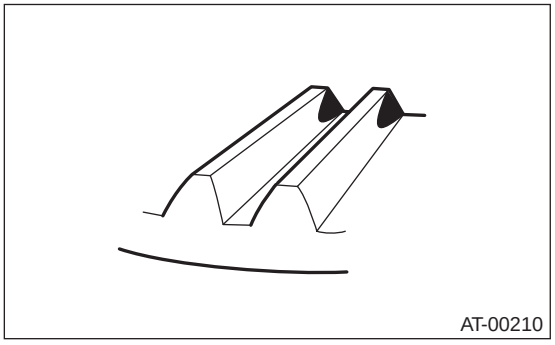
Corrective action: Loosen the side retainer to move the driven gear away from the drive pinion shaft.



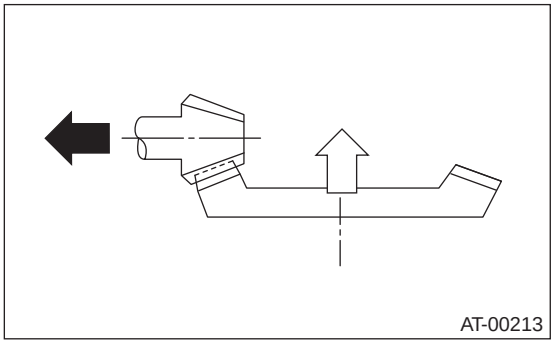
• Toe contact (inside contact)

Check item: Teeth contact area is too small.

Contact pattern



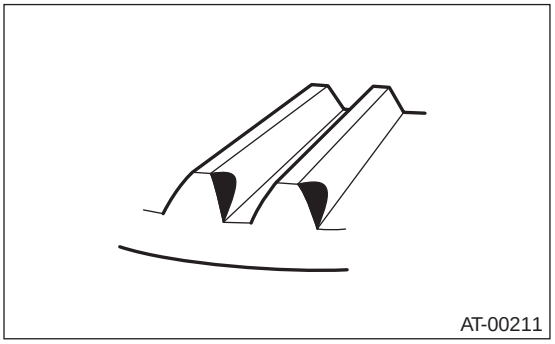
Adjustment: Reduce the thickness of the drive pinion shim according to the procedure for moving the drive pinion away from the driven gear.



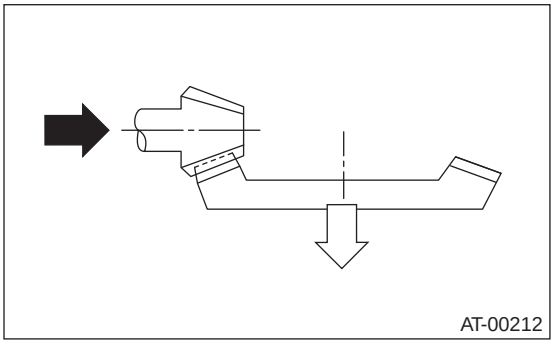
• Heel contact (outside end contact)

Check item: Teeth contact area is too small.

Contact pattern



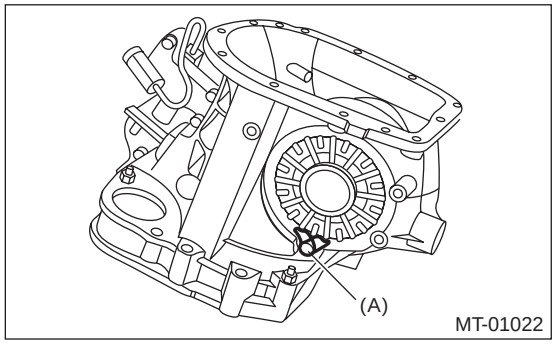
Adjustment: Increase thickness of the drive pinion shim according to the procedures for moving the drive pinion closer to the driven gear.



23.Front Differential Assembly

A: REMOVAL

1) Remove the manual transmission assembly. <Ref. to 6MT(TY85)-31, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-38, Preparation for Overhaul.>
3) Remove the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-41, REMOVAL, Neutral Position Switch.> <Ref. to 6MT(TY85)-40, REMOVAL, Back-up Light Switch.>
4) Remove the extension case. <Ref. to 6MT(TY85)-42, REMOVAL, Extension Case.>
5) Remove the transfer driven gear. <Ref. to 6MT(TY85)-54, REMOVAL, Transfer Driven Gear.>
6) Remove the center differential. <Ref. to 6MT(TY85)-56, REMOVAL, Center Differential.>
7) Remove the transmission case. <Ref. to 6MT(TY85)-57, REMOVAL, Transmission Case.>
8) Remove the individual gear assemblies. <Ref. to 6MT(TY85)-63, REMOVAL, Main Shaft Assembly.>
9) Remove the drive pinion shaft assembly. <Ref. to 6MT(TY85)-92, REMOVAL, Drive Pinion Shaft Assembly.>
10) Remove the retainer lock plates on both sides.

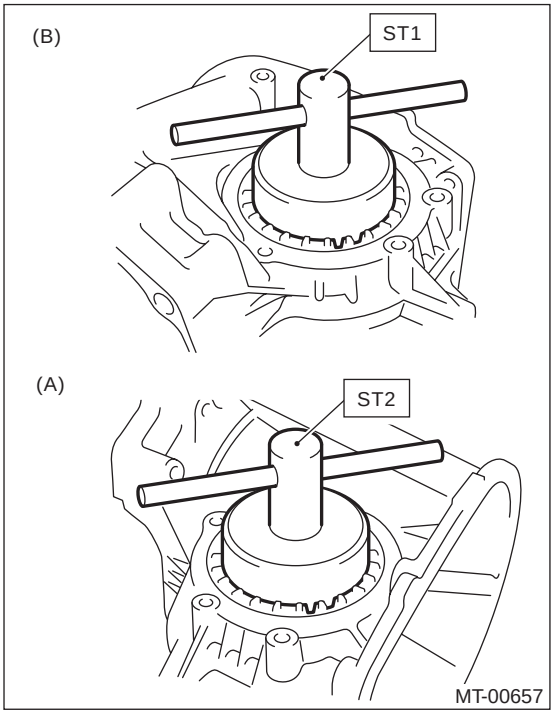


(A) Retainer lock plate

11) Remove the differential side retainers on both sides using the ST.

ST1	18630AA010	WRENCH COMPL RETAINER (RH SIDE)
ST2	18630AA000	WRENCH ASSY (LH SIDE)

NOTE:
Be careful not to damage the section where the clutch case retainer will be attached.



(A) LH side
(B) RH side

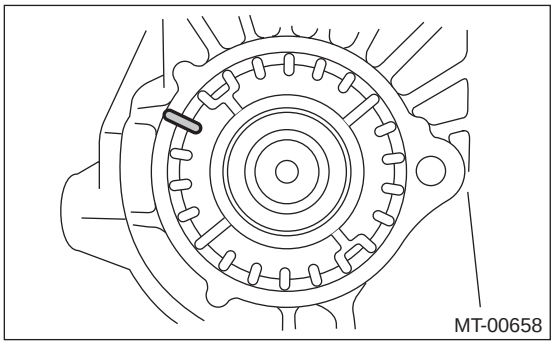
12) Remove the front differential.

B: INSTALLATION

1) Install the differential assembly to the clutch housing.
2) Apply oil to the screw threads of the side retainer.
3) Remove the O-rings on both sides of the side retainer.
4) Install the differential side retainers to both sides, using the ST.

ST1 18630AA010 WRENCH COMPL RETAINER (RH SIDE)
ST2 18630AA000 WRENCH ASSY (LH SIDE)

NOTE:
Be careful not to damage the oil seal.
5) Inspect and adjust the hypoid gear backlash. <Ref. to 6MT(TY85)-103, HYPOID GEAR BACKLASH, INSPECTION, Front Differential Assembly.>
6) Inspect and adjust the tooth contact. <Ref. to 6MT(TY85)-97, ADJUSTMENT, Drive Pinion Shaft Assembly.>
7) Mark the mating positions of the left and right side retainers and the clutch housing.



MT-00658

8) Remove the differential side retainers from both sides.

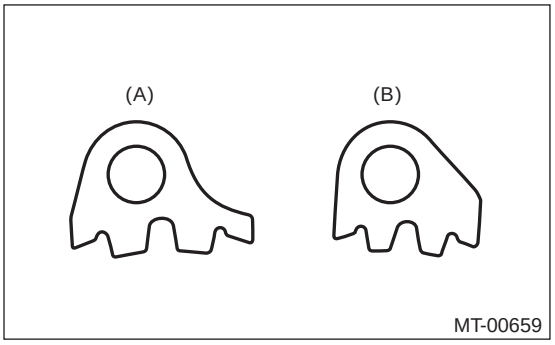
NOTE:
When removing the side retainer, record how many times it was turned to remove.
9) Install new O-rings to the side retainers on both sides.
10) Attach the differential side retainers to both sides.

NOTE:
When attaching, turn the side retainer the same number of turns it took to remove, and align the marks.

11) Install the retainer lock plate.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

NOTE:
Be careful not to confuse the left and right side retainer lock plates.

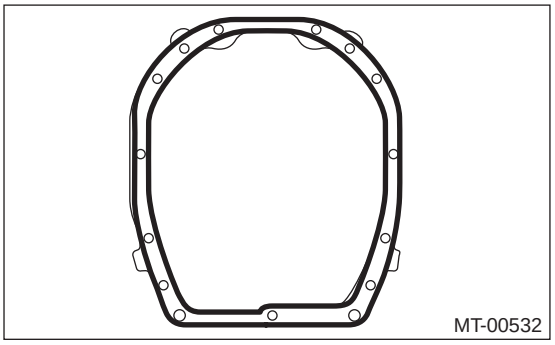


MT-00659

(A) LH
(B) RH

12) Remove any remaining liquid gasket from the clutch housing and adapter plate.
13) Apply liquid gasket to the clutch housing.

Liquid gasket:
THREE BOND 1215B or equivalent



MT-00532

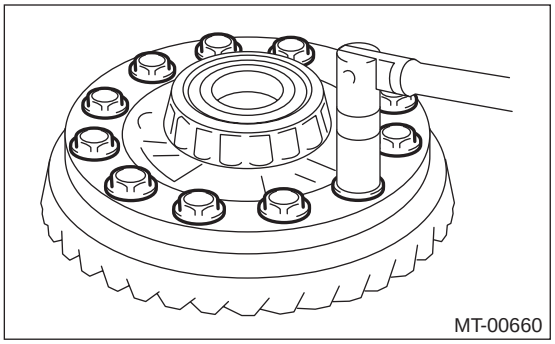
14) Install the drive pinion shaft assembly. <Ref. to 6MT(TY85)-92, INSTALLATION, Drive Pinion Shaft Assembly.>
15) Install the individual gear assemblies all at once. <Ref. to 6MT(TY85)-64, INSTALLATION, Main Shaft Assembly.>
16) Install the transmission case. <Ref. to 6MT(TY85)-59, INSTALLATION, Transmission Case.>
17) Install the center differential. <Ref. to 6MT(TY85)-56, INSTALLATION, Center Differential.>
18) Install the transfer driven gear. <Ref. to 6MT(TY85)-54, INSTALLATION, Transfer Driven Gear.>
19) Install the extension case. <Ref. to 6MT(TY85)-42, INSTALLATION, Extension Case.>

20) Install the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-41, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT(TY85)-40, INSTALLATION, Back-up Light Switch.>
21) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-33, INSTALLATION, Manual Transmission Assembly.>

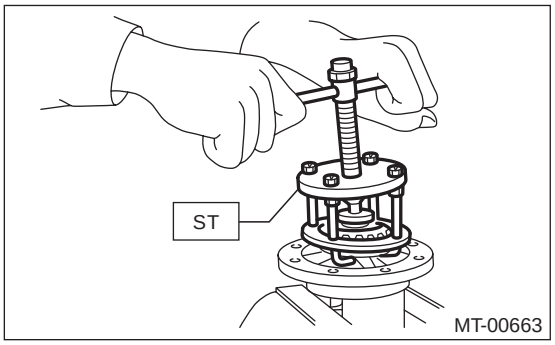
C: DISASSEMBLY

1. DIFFERENTIAL CASE

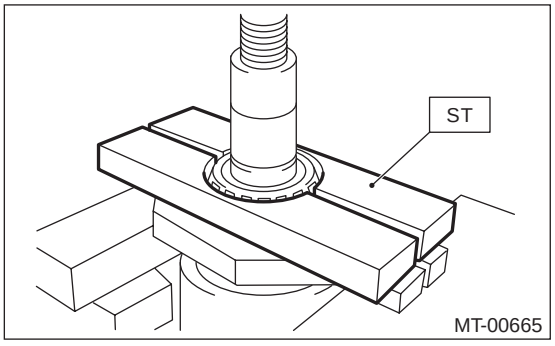
1) Fix the differential assembly on a vice, and remove the hypoid driven gear.
ST 18270KA020 SOCKET (E20)



2) Remove the side bearing of the hypoid driven gear using the ST.
ST 399527700 PULLER SET

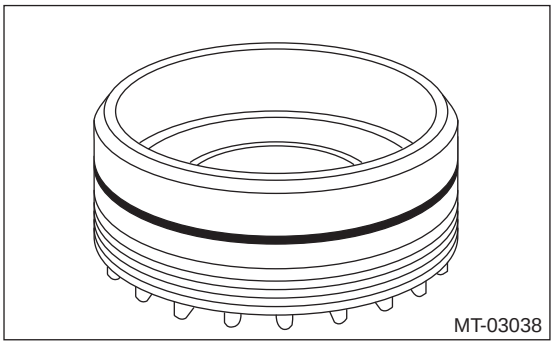


3) Using the ST, remove the taper roller bearing.
ST 498077000 REMOVER

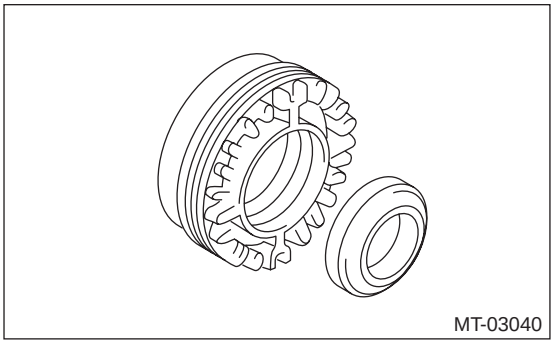


2. SIDE RETAINER

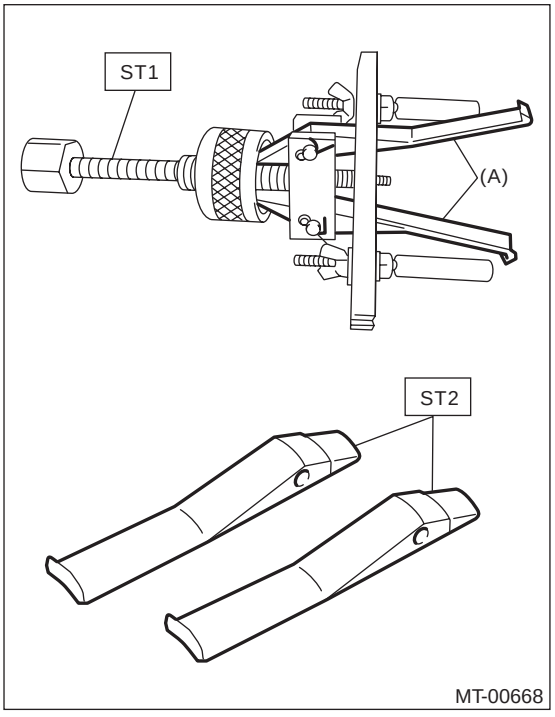
1) Remove the O-rings.



2) Remove the oil seal.

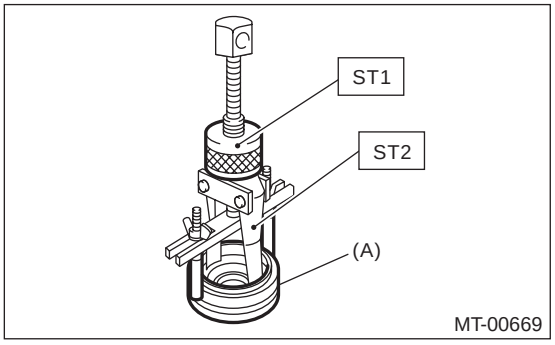


3) Remove the claw of ST1, and attach the claw of ST2.
ST1 398527700 PULLER ASSY
ST2 18760AA000 CLAW



(A) Claw

4) Using the ST, remove the taper roller bearing outer race from the side retainer.
ST1 398527700 PULLER ASSY
ST2 18760AA000 CLAW



(A) Side retainer

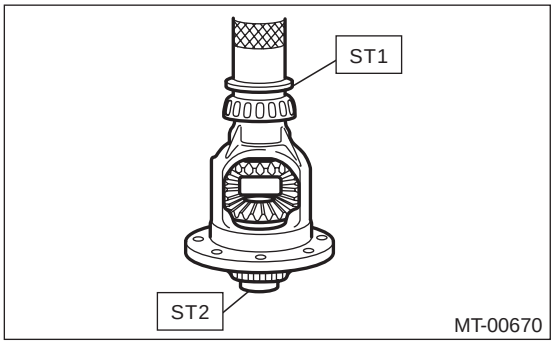
D: ASSEMBLY

1. DIFFERENTIAL CASE

1) Using the ST, attach the RH and LH taper roller bearing inner races to the differential case.
ST1 398437700 INSTALLER
ST2 398497701 SEAT

CAUTION:
Do not apply pressure in excess of 20 kN (2.0 ton, 2.2 US ton, 2.0 Imp ton).

NOTE:
Always replace the taper roller bearing inner race and outer race as a set.



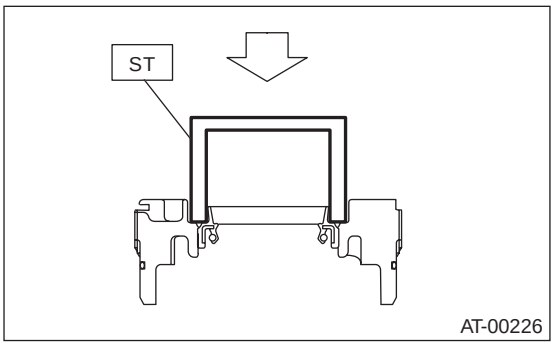
2) Install the hypoid driven gear to differential case.
ST 18270KA020 SOCKET (E20)

Tightening torque:
69 N·m (7.0 kgf-m, 50.9 ft-lb)

2. SIDE RETAINER

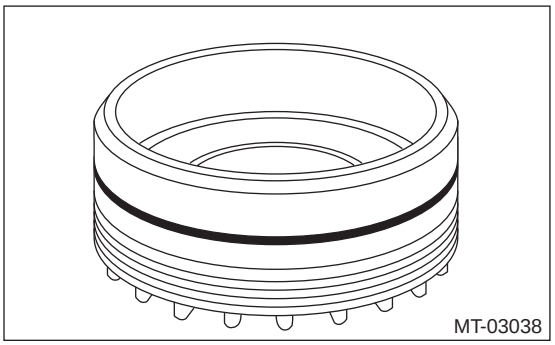
NOTE:
Install the oil seal and O-ring of side retainer after the adjustment of backlash and tooth contact.
1) Attach the taper roller bearing outer race to the side retainer.
2) Using the ST, install the oil seal.
ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

NOTE:
- Use a new oil seal.
- Apply oil to the oil seal lips.



3) Install the O-rings.

NOTE:
Use new O-rings.



E: INSPECTION

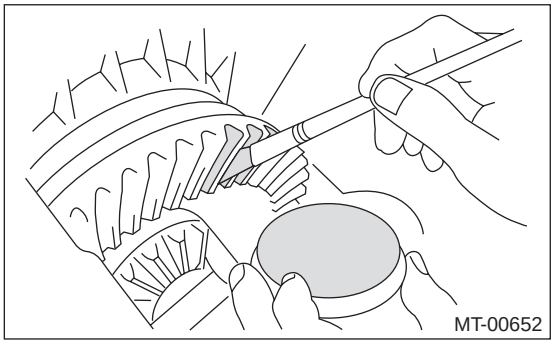
Repair or replace the differential in the following cases:
- If gears are damaged, seized, or are excessively worn.
- If differential case sliding surfaces are damaged, seized, or are excessively worn.
- If there is damage, rust or wear in the bearings or bearing locations.
- If the bearing does not rotate smoothly or an abnormal noise is emitted when turning.

1. HYPOID GEAR BACKLASH

Inspect the hypoid gear backlash. Adjust if out of standard. <Ref. to 6MT(TY85)-103, HYPOID GEAR BACKLASH, ADJUSTMENT, Front Differential Assembly.>

2. TOOTH CONTACT OF HYPOID GEAR

1) Check that the hypoid gear backlash is within the standard value. Adjust if out of standard. <Ref. to 6MT(TY85)-103, HYPOID GEAR BACKLASH, ADJUSTMENT, Front Differential Assembly.>
2) Apply a thin uniform coat of lead-free red dye on the surfaces of 3 or 4 hypoid driven gear teeth.



MT-00652

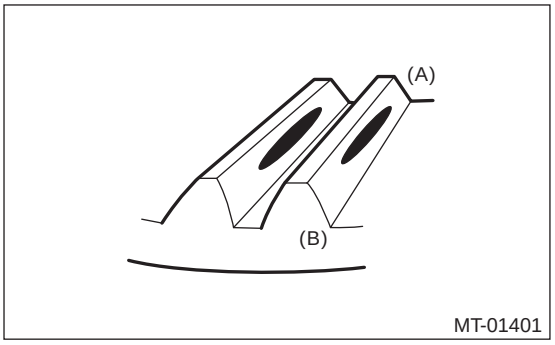
3) Attach the drive pinion shaft assembly, and affix with at least 4 bolts.

NOTE:
Use old gaskets and washers to prevent the mating surfaces of the housing from becoming damaged.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

4) Turn the drive pinion shaft to the left and right for several turns.
5) Remove the drive pinion shaft assembly, and inspect the mating condition of the teeth. If tooth contact is not correct, perform adjustment. <Ref. to 6MT(TY85)-97, ADJUSTMENT, Drive Pinion Shaft Assembly.>
- Correct tooth contact

NOTE:
In a no load condition, the tooth contact from the center to the toe side is 50-60% (While driving, the tooth contact will shift towards the heel side).



(A) Toe side
(B) Heel side

F: ADJUSTMENT

1. HYPOID GEAR BACKLASH

1) Attach the RH and LH side retainers.

ST1	18630AA010	WRENCH COMPL RETAINER (RH SIDE)
ST2	18630AA000	WRENCH ASSY (LH SIDE)

NOTE:
- Twist in the side retainer on the RH side a little further than that of the LH side.
- WRENCH ASSY (499787000) can also be used.

2) Attach the drive pinion shaft assembly, and affix with 5 bolts.

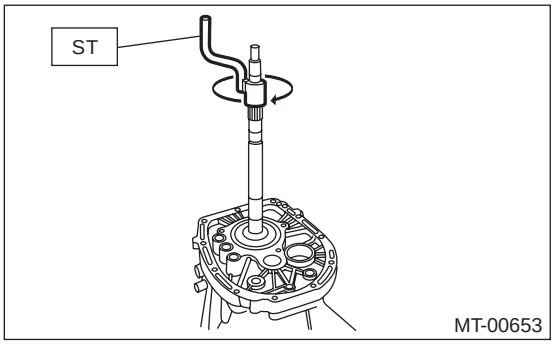
NOTE:
Use old gaskets and washers to prevent the mating surfaces of the housing from becoming damaged.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

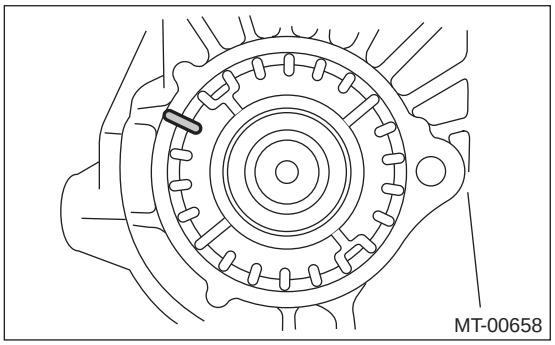
3) Using the ST, loosen the differential side retainer RH, and twist in the differential side retainer LH until the hypoid driven gear just contacts the drive pinion.

ST1	18630AA010	WRENCH COMPL RETAINER (RH SIDE)
ST2	18630AA000	WRENCH ASSY (LH SIDE)

4) Use the ST to turn the drive pinion shaft a few times.
ST 18631AA000 HANDLE



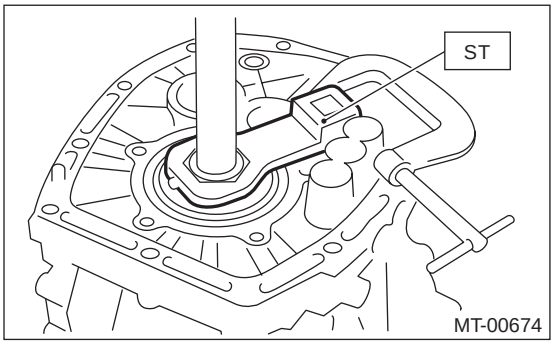
5) Repeat steps 3) and 4) until differential side retainer LH does not turn anymore. For differential side retainer RH, screw in until the inner race and outer race just comes into contact. This is the “zero” backlash state.
6) Mark the mating positions of the left and right side retainers and the clutch housing.



7) Turn the back differential side retainer LH by 3 notches, and screw in the differential side retainer RH by 3 notches.
8) Temporarily attach the LH side retainer lock plate.
9) Turn the differential side retainer RH by 1.25 notches.
10) Temporarily attach the RH side retainer lock plate.

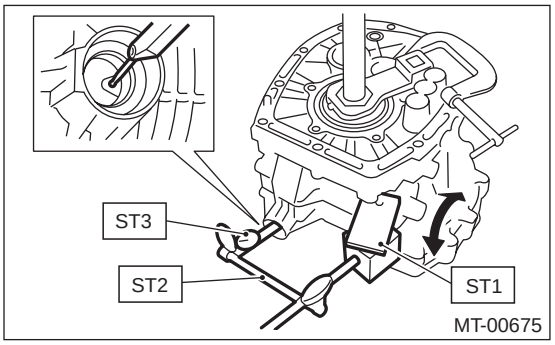
NOTE:
• If the lock plate cannot be aligned, adjust the position toward the tightened side.
• The notch on the lock plate moves by 0.5 notch if the lock plate is turned upside down when installed.

11) Use the ST to fix the drive pinion shaft in place.
ST 18621AA000 ADAPTER WRENCH



12) Install the SUBARU genuine axle shaft to the front differential left and right sides.
Part No. 38415AA000 Axle shaft
13) Move the axle shaft, and measure the hypoid gear backlash.
ST1 498255400 PLATE
ST2 498247001 MAGNET BASE
ST3 498247100 DIAL GAUGE

Hypoid gear backlash:
0.13 — 0.18 mm (0.0051 — 0.0071 in)



14) If the backlash is out of specified range, remove the left and right retainer lock plates and loosen RH side differential side retainer. Then, adjust the LH side differential side retainer by turning it, and attach the LH side retainer lock plate.
15) Screw in the RH side differential side retainer until the inner race and outer race just come into contact.

2. TOOTH CONTACT OF HYPOID GEAR

Regarding teeth contact conditions, refer to the drive pinion section. <Ref. to 6MT(TY85)-103, TOOTH CONTACT OF HYPOID GEAR, INSPECTION, Front Differential Assembly.>

24.Shifter Fork and Rod

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-31, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-38, Preparation for Overhaul.>
3) Remove the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-41, REMOVAL, Neutral Position Switch.> <Ref. to 6MT(TY85)-40, REMOVAL, Back-up Light Switch.>
4) Remove the extension case. <Ref. to 6MT(TY85)-42, REMOVAL, Extension Case.>
5) Remove the transfer driven gear. <Ref. to 6MT(TY85)-54, REMOVAL, Transfer Driven Gear.>
6) Remove the center differential. <Ref. to 6MT(TY85)-56, REMOVAL, Center Differential.>
7) Remove the transmission case. <Ref. to 6MT(TY85)-57, REMOVAL, Transmission Case.>
8) Remove the individual gear assemblies. <Ref. to 6MT(TY85)-63, REMOVAL, Main Shaft Assembly.>

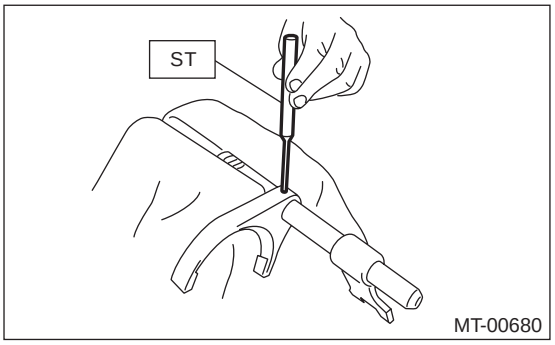
B: INSTALLATION

1) Install the individual gear assemblies all at once. <Ref. to 6MT(TY85)-64, INSTALLATION, Main Shaft Assembly.>
2) Install the transmission case. <Ref. to 6MT(TY85)-59, INSTALLATION, Transmission Case.>
3) Install the center differential. <Ref. to 6MT(TY85)-56, INSTALLATION, Center Differential.>
4) Install the transfer driven gear. <Ref. to 6MT(TY85)-54, INSTALLATION, Transfer Driven Gear.>
5) Install the extension case. <Ref. to 6MT(TY85)-42, INSTALLATION, Extension Case.>
6) Install the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-41, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT(TY85)-40, INSTALLATION, Back-up Light Switch.>
7) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-33, INSTALLATION, Manual Transmission Assembly.>

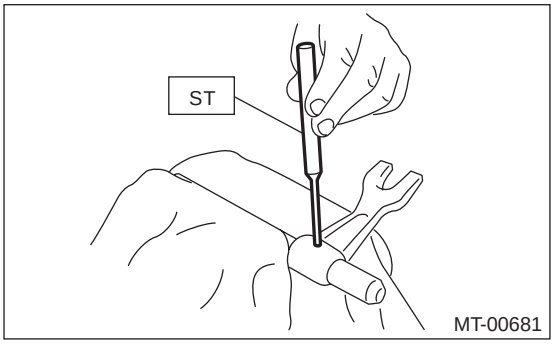
C: DISASSEMBLY

1. REVERSE SHIFTER FORK

1) Remove the reverse fork using the ST.
ST 398791700 REMOVER

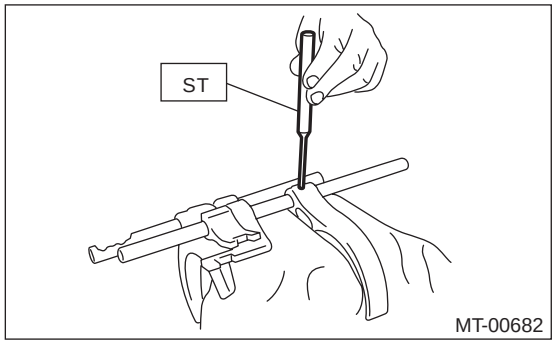


2) Remove the reverse shifter arm using the ST.
ST 398791700 REMOVER

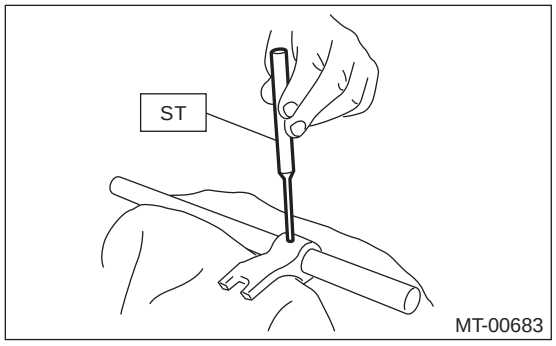


2. 1ST-2ND, 3RD-4TH SHIFTER FORK

1) Using the ST, remove the 3rd-4th shifter fork.
ST 398791700 REMOVER



2) Using the ST, remove the 3rd-4th shifter arm.
ST 398791700 REMOVER



3) Using the ST, remove the 1st-2nd shifter arm and 1st-2nd shifter fork.
ST 398791700 REMOVER

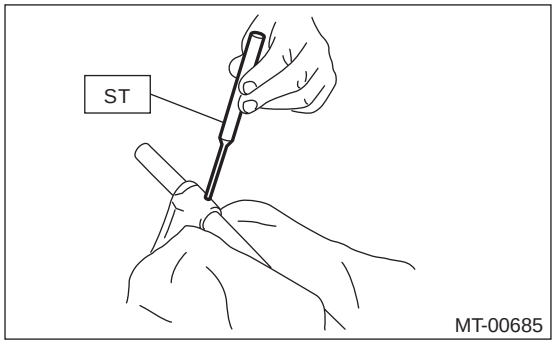
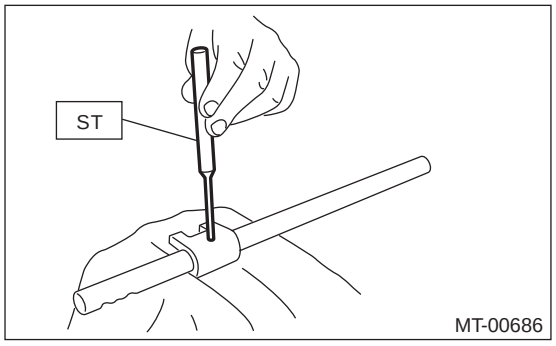
1) Using the ST, remove the 5th-6th shifter fork.
ST 398791700 REMOVER

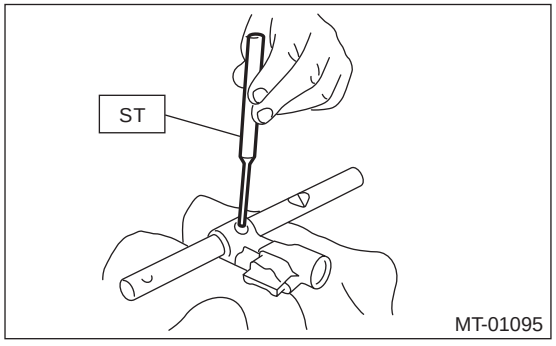


2) Using the ST, remove the 5th-6th shifter arm.
ST 398791700 REMOVER



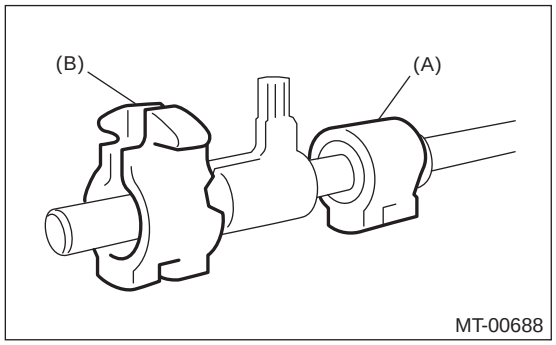
4. SHIFTER ARM SHAFT

Remove the selector arm using the ST.
ST 398791700 REMOVER



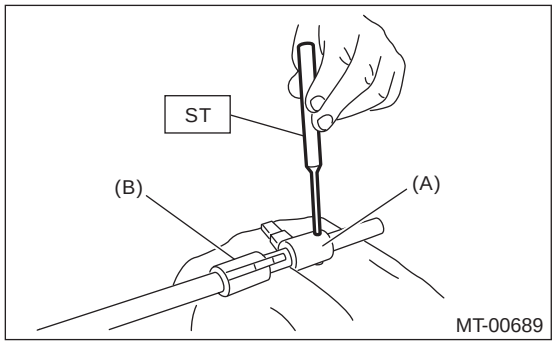
5. STRIKING ROD

1) Remove the reverse interlock block and the interlock block from the striking rod.



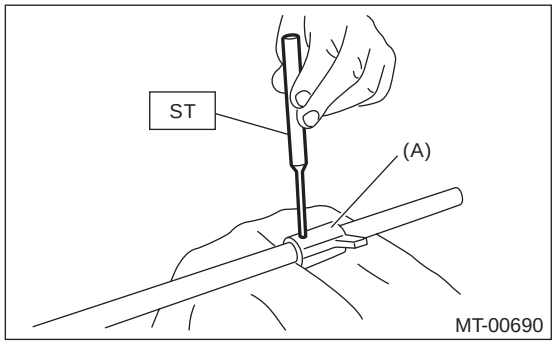
(A) Reverse interlock block
(B) Interlock block

2) Remove the reverse interlock arm using the ST.
ST 398791700 REMOVER



(A) Reverse interlock arm
(B) Interlock arm

3) Remove the interlock arm using the ST.
ST 398791700 REMOVER



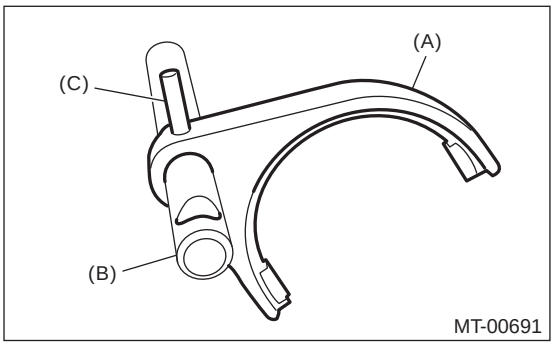
(A) Interlock arm

D: ASSEMBLY

1. REVERSE SHIFTER FORK

1) Using the ST, install the reverse fork.
ST 398791700 REMOVER

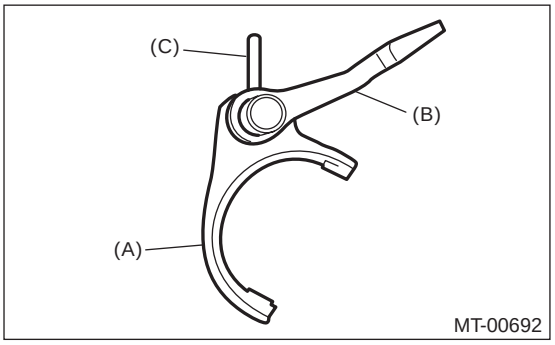
NOTE:
• Confirm that the reverse shifter fork and rod are installed in the proper direction.
• Use a new straight pin.



(A) Reverse shifter fork
(B) Reverse fork rod
(C) Straight pin

2) Using the ST, install the reverse shifter arm.
ST 398791700 REMOVER

NOTE:
• Confirm that the reverse shifter arm and rod are installed in the proper direction.
• Use a new straight pin.

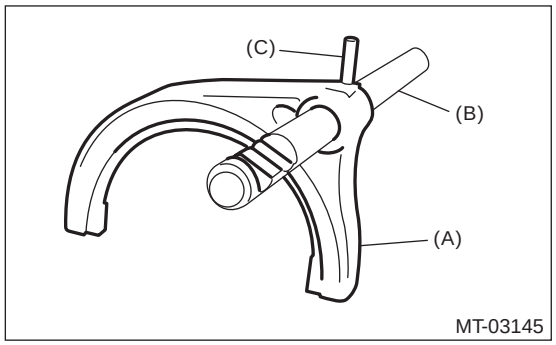


(A) Reverse shifter fork
(B) Reverse shifter arm
(C) Straight pin

2. 1ST-2ND, 3RD-4TH SHIFTER FORK

1) Using the ST, install the 1st-2nd shifter fork.
ST 398791700 REMOVER

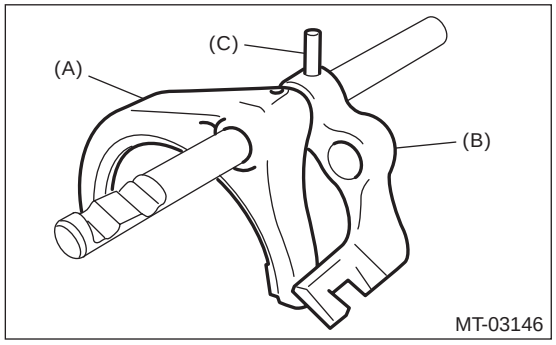
NOTE:
• Make sure that the 1st-2nd shifter fork and rod are installed in the correct direction.
• Use a new straight pin.



(A) 1st-2nd shifter fork
(B) 1st-2nd fork rod
(C) Straight pin

2) Using the ST, install the 1st-2nd shifter arm.
ST 398791700 REMOVER

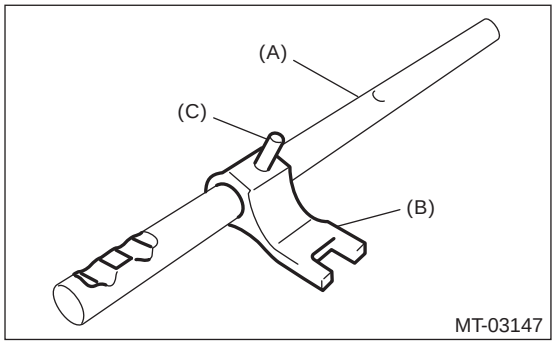
NOTE:
• Make sure that the 1st-2nd shifter arm and fork are installed in the correct direction.
• Use a new straight pin.



(A) 1st-2nd shifter fork
(B) 1st-2nd shifter arm
(C) Straight pin

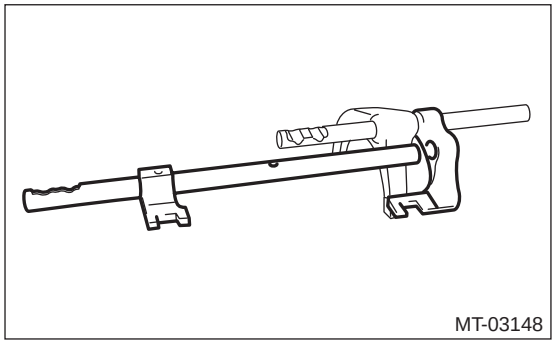
3) Using the ST, install the 3rd-4th shifter arm.
ST 398791700 REMOVER

NOTE:
• Make sure that the 3rd-4th shifter arm and rod are installed in the correct direction.
• Use a new straight pin.



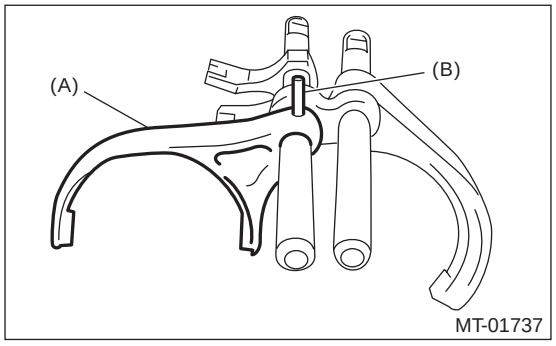
(A) 3rd-4th shifter rod
(B) 3rd-4th shifter arm
(C) Straight pin

4) Attach the 3rd-4th fork rod to the 1st-2nd shifter arm.



5) Using the ST, install the 3rd-4th shifter fork.
ST 398791700 REMOVER

NOTE:
• Make sure that the 3rd-4th shifter fork is installed in the correct direction.
• Use a new straight pin.

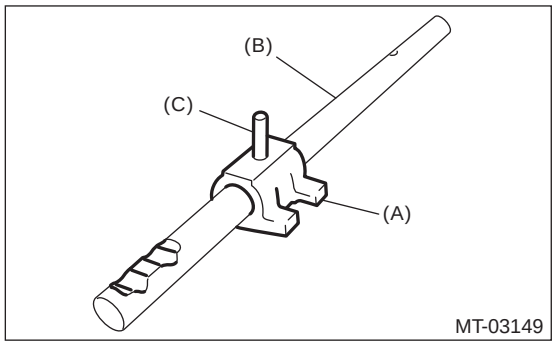


(A) 3rd-4th shifter fork
(B) Straight pin

3. 5TH-6TH SHIFTER FORK

1) Using the ST, install the 5th-6th shifter arm.
ST 398791700 REMOVER

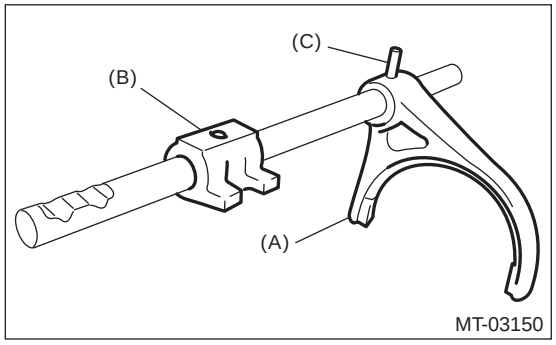
NOTE:
• Make sure that the 5th-6th shifter arm and rod are installed in the correct direction.
• Use a new straight pin.



(A) 5th-6th shifter arm
(B) 5th-6th fork rod
(C) Straight pin

2) Using the ST, install the 5th-6th shifter fork.
ST 398791700 REMOVER

NOTE:
• Make sure that the 5th-6th shifter fork and arm are installed in the correct direction.
• Use a new straight pin.

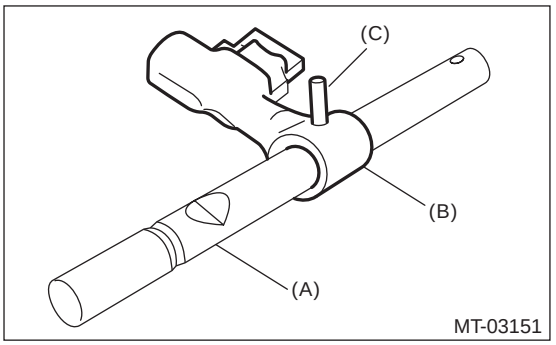


(A) 5th-6th shifter fork
(B) 5th-6th shifter arm
(C) Straight pin

4. SHIFTER ARM SHAFT

Using the ST, install the selector arm.
ST 398791700 REMOVER

NOTE:
• Confirm that the selector arm and shaft are installed in the proper direction.
• Use a new straight pin.

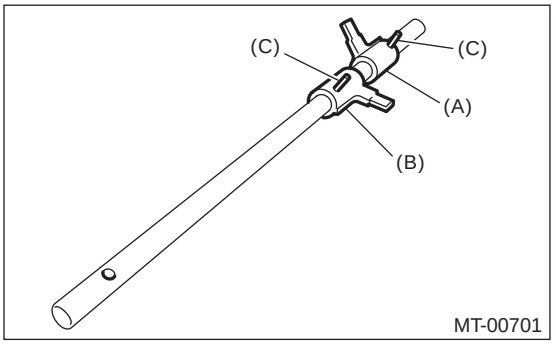


(A) Shifter arm shaft
(B) Selector arm
(C) Straight pin

5. STRIKING ROD

1) Using the ST, install the reverse interlock arm and interlock arm.
ST 398791700 REMOVER

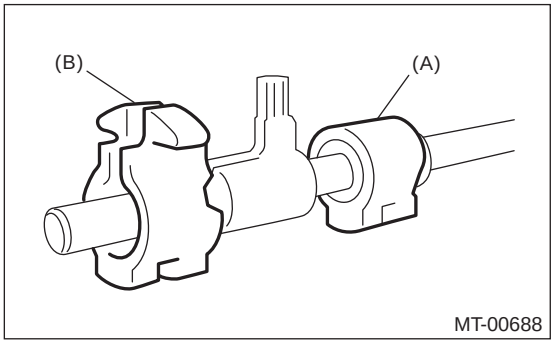
NOTE:
• Confirm that the reverse interlock arm and rod are installed in the proper direction.
• Confirm that the interlock arm and rod are installed in the proper direction.
• Use a new straight pin.



(A) Reverse interlock arm
(B) Interlock arm
(C) Straight pin

2) Attach the reverse interlock block and interlock block to the striking rod.

NOTE:
Confirm that the reverse interlock block and interlock block are installed in the proper direction.



(A) Reverse interlock block
(B) Interlock block

E: INSPECTION

1) Check the shift shaft and shift rod for damage. Replace if damaged.
2) Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.

F: ADJUSTMENT

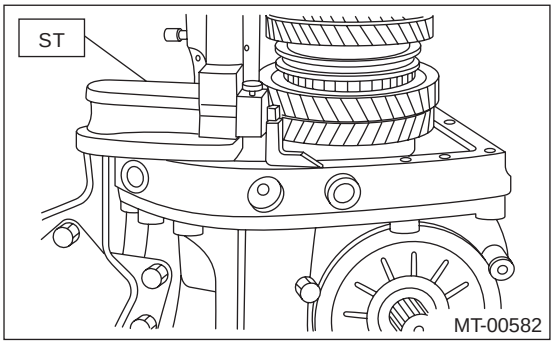
1. 1ST-2ND FORK ROD SELECTION

NOTE:
In the following conditions, perform the procedures below.
- Replacement of the 1st and 2nd driven gear
- 1st and 2nd synchro ring assembly replacement
- Adapter plate replacement
- Driven shaft replacement
- 1st-2nd synchronizer hub and coupling sleeve assembly replacement.

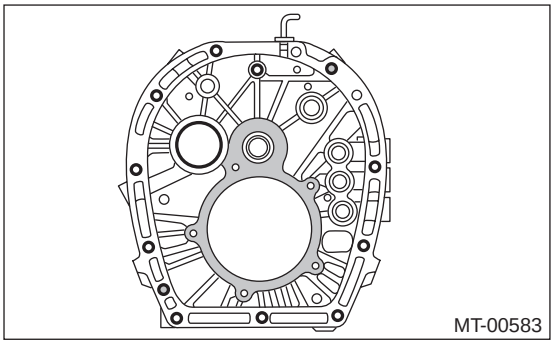
1) Insert the drive pinion assembly into the adapter plate.

NOTE:
Confirm that the thrust bearing outer race has not been removed and the drive pinion is not lifted.

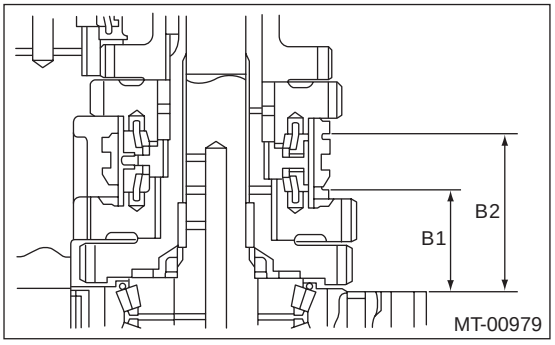
2) Set the height gauge to the adapter plate. Lower the height gauge indicator to the mating surface of the adapter plate and case, and set to zero points.
ST 18853AA000 HEIGHT GAUGE



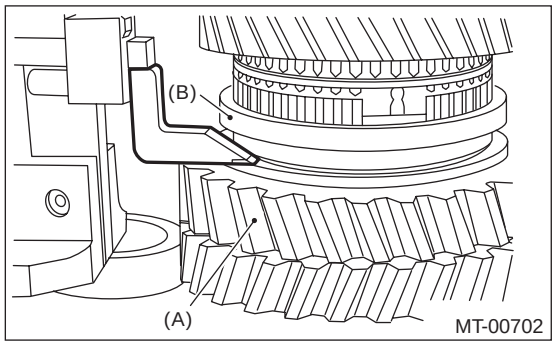
NOTE:
- The adapter plate will be the base point for the measurement. Use a scraper to remove any gasket material remaining on the end face.
- During measurement, do not place the height gauge in the shaded area shown in the figure.



3) Select the main shaft snap ring. <Ref. to 6MT(TY85)-75, ADJUSTMENT, Main Shaft Assembly.>
4) Measure “B1” and “B2” as shown in the figure.

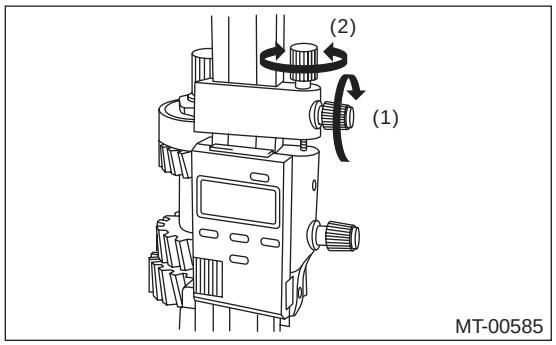


5) Shift down the 1st-2nd coupling sleeve all the way to the 1st driven gear side, and measure “B1”.

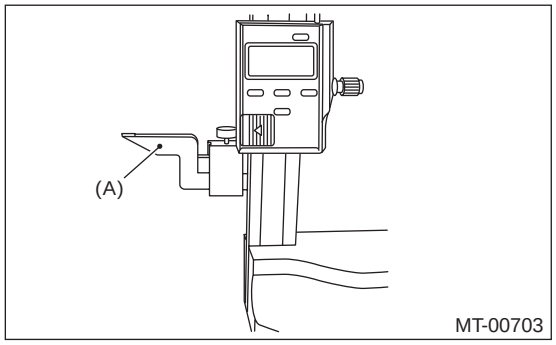


(A) 1st driven gear
(B) 1st-2nd coupling sleeve

NOTE:
• Set the height gauge indicator near the measurement target, and lock dial (1) as shown in the figure. Turn dial (2), and set the indicator to the 1st side end surface of the coupling sleeve.
• Turn approximately 72° at a time, and measure the coupling sleeve in 5 locations. Round down the 2 highest and 2 lowest measurement values. The remaining center value is used as the measurement value.

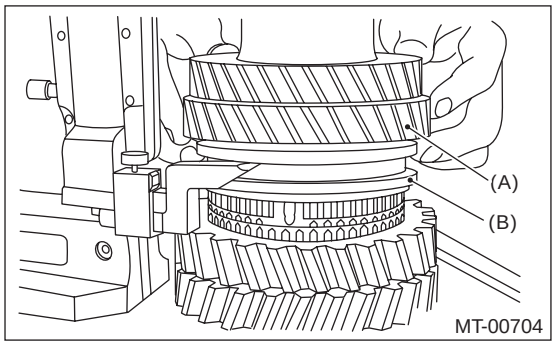


6) Set the height gauge indicator upside down.



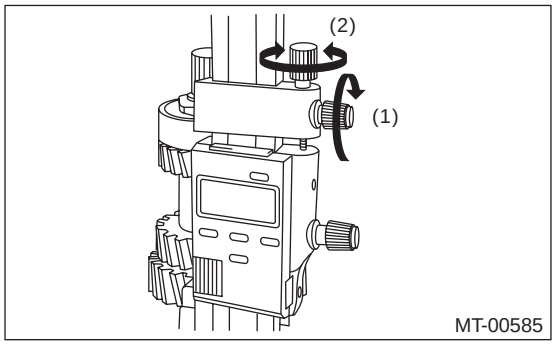
(A) Indicator

7) Shift up the 1st-2nd coupling sleeve all the way to the 2nd driven gear side, and measure “B2”.



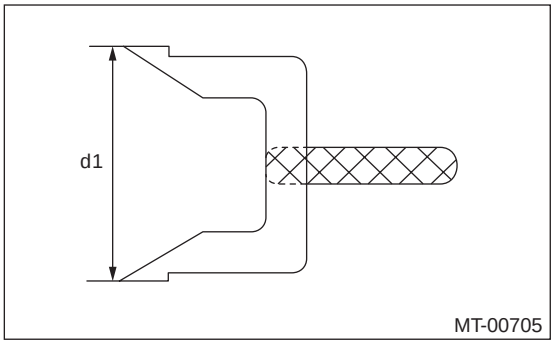
(A) 2nd driven gear
(B) 1st-2nd coupling sleeve

NOTE:
• Set the height gauge indicator near the measurement target, and lock dial (1) as shown in the figure. Turn dial (2), and set the indicator to the 2nd side end surface of the sleeve.
• The measurement is to be performed with two persons, while holding the coupling sleeve straight.
• Turn approximately 72° at a time, and measure the coupling sleeve in 5 locations. Round down the 2 highest and 2 lowest measurement values. The remaining center value is used as the measurement value.



8) According to both of the measurements, calculate the neutral position of the 1st-2nd coupling sleeve. From the following calculation, select a fork rod which matches the calculated value.
Calculation: T = (B1 + B2) / 2
T: 1st-2nd coupling sleeve center position
B1: Height from the adapter plate end to the coupling sleeve end, when shifted to 1st gear
B2: Measured height from the adapter plate end to the sleeve end, when shifted to 2nd gear: +55 mm (2.17 in)

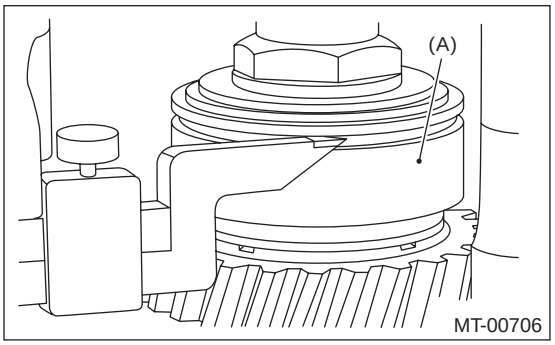
NOTE:
Attach the indicator upside down in comparison to the setting procedures for the zero point. Add “d1” [Value: 55 mm (2.17 in)] from the figure below to “B2”, and measure “B2”.



T mm (in)	Lot No. (marking)
62.58 — 62.78 (2.4638 — 2.4717)	32801AA370 (5)
62.78 — 62.98 (2.4717 — 2.4795)	32801AA380 (4)
62.98 — 63.18 (2.4795 — 2.4874)	32801AA390 (2)
63.18 — 63.38 (2.4874 — 2.4953)	32801AA400 (1)
63.38 — 63.58 (2.4953 — 2.5031)	32801AA410 (3)

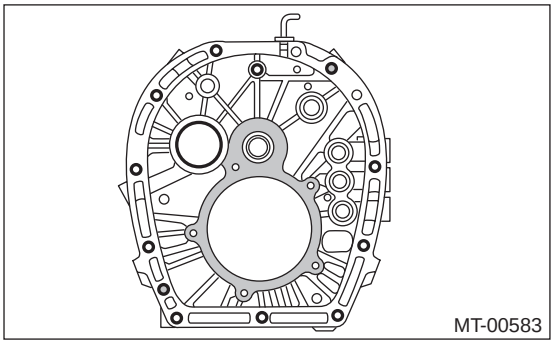
2. 3RD-4TH FORK ROD SELECTION

NOTE:
In the following conditions, perform the procedures below.
• Main shaft replacement
• 3rd, and 3rd to 6th drive gear and bushing replacement
• 3rd, and 3rd to 6th synchro assembly replacement
• 3rd-4th synchronizer hub and coupling sleeve assembly replacement
1) Insert the main shaft assembly into the adapter plate.
2) Set the height gauge to the adapter plate. Lower the height gauge indicator to the top surface of the snap ring groove, and set to the zero point on the upper side of the main rear bearing.
ST 18853AA000 HEIGHT GAUGE

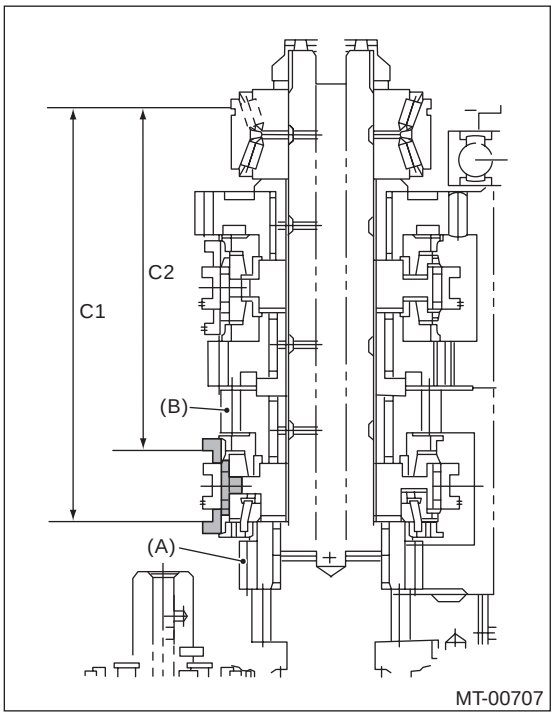


(A) Ball bearing

NOTE:
• The height gauge will be set on the adapter plate during the measurement. Use a scraper to remove any gasket material remaining on the end face.
• During measurement, do not place the height gauge in the shaded area shown in the figure.

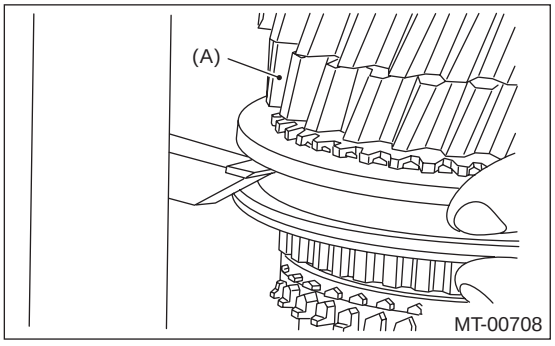


3) Use a height gauge to measure “C1” and “C2” as shown in the figure.



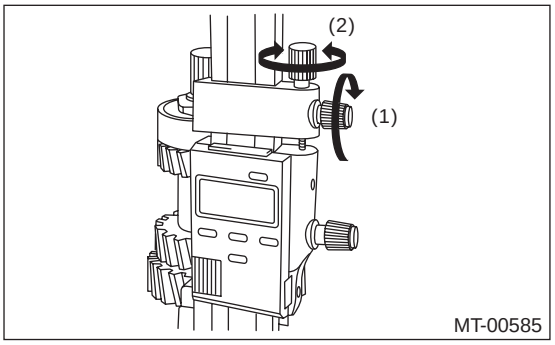
(A) 3rd drive gear
(B) 4th drive gear

(1) Shift up the 3rd-4th coupling sleeve all the way to the 4th drive gear side, and measure “C2”.

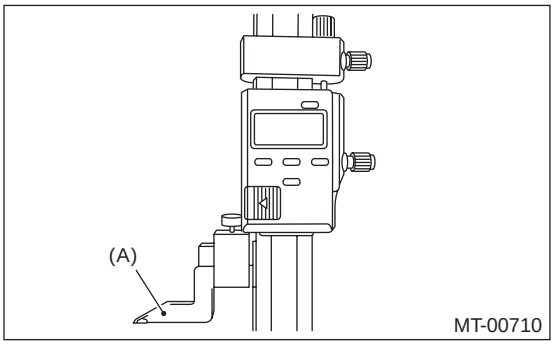


(A) 4th drive gear

NOTE:
• Set the height gauge indicator near the measurement target, and lock dial (1) as shown in the figure.
• Turn dial (2), and set the indicator to the 4th side end surface of the coupling sleeve.
• The measurement is to be performed with two persons, while holding the coupling sleeve straight.
• Turn approximately 72° at a time, and measure the coupling sleeve in 5 locations. Round down the 2 highest and 2 lowest measurement values. The remaining center value is used as the measurement value.

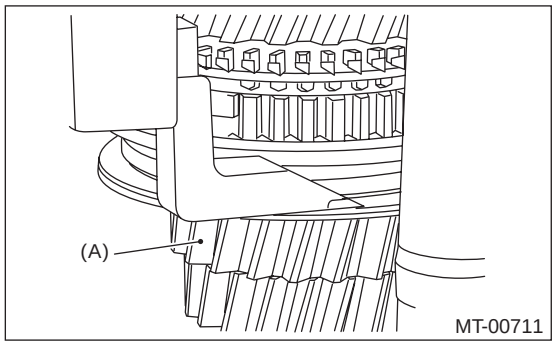


(2) Set the height gauge indicator upside down.



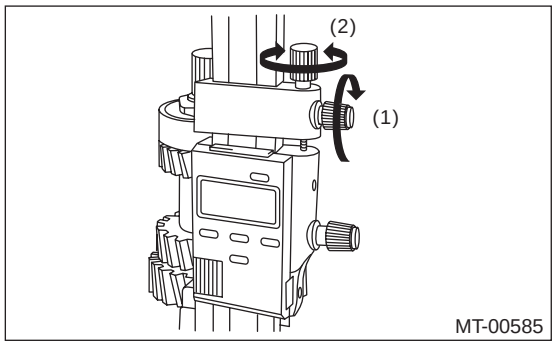
(A) Indicator

(3) Shift down the 3rd-4th coupling sleeve all the way to the 3rd drive gear side, and measure “C1”.



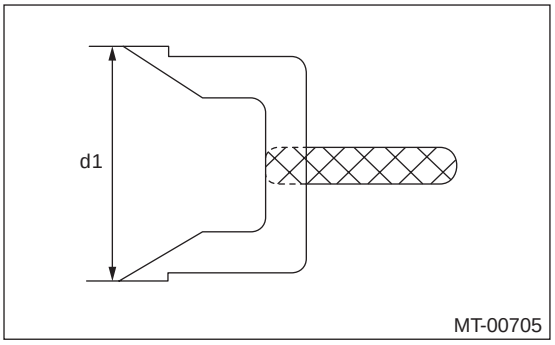
(A) 3rd drive gear

NOTE:
• Set the height gauge indicator near the measurement target, and lock dial (1) as shown in the figure. Turn dial (2), and set the indicator to the 3rd side end surface of the sleeve.
• Turn approximately 72° at a time, and measure the sleeve in 5 locations. Round down the 2 highest and 2 lowest measurement values. The remaining center value is used as the measurement value.



4) According to both of the measurements, calculate the neutral position of the 3rd-4th sleeve. From the following calculation, select a fork rod which matches the calculated value.
Calculation: T = (C1 + C2) / 2
T: 3rd-4th sleeve center position
C1: Measured depth from the main shaft rear bearing snap ring groove to the sleeve end, when shifted to 3rd gear: +55 mm (2.17 in)
C2: Measured depth from the main shaft rear bearing snap ring groove to the sleeve end, when shifted to 4th gear

NOTE:
Attach the indicator upside down in comparison to the setting procedures for the zero point. Add “d1” [Value: 55 mm (2.17 in)] from the figure below to “C1”, and measure “C1”.

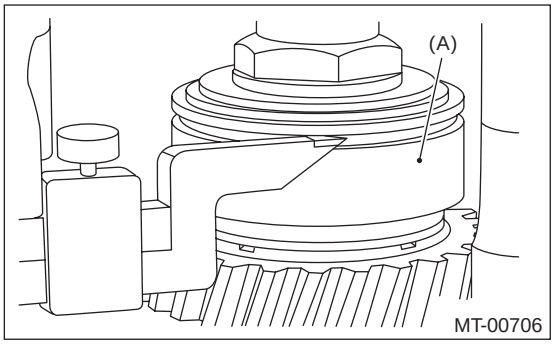


T mm (in)	Lot No. (marking)		
	M.SFT Snap ring 805072010 [t = 1.65 mm (0.065 in)]	M.SFT Snap ring 805072011 [t = 1.95 mm (0.077 in)]	M.SFT Snap ring 805072012 [t = 2.25 mm (0.089 in)]
137.22 — 137.52 (5.4024 — 5.4142)	32809AA240 (none)	32809AA250 (2)	32809AA260 (4)
137.52 — 137.82 (5.4142 — 5.4260)	32809AA230 (1)	32809AA240 (none)	32809AA250 (2)
137.82 — 138.12 (5.4260 — 5.4379)	32809AA220 (3)	32809AA230 (1)	32809AA240 (none)
T = Thickness			

3. 5TH-6TH FORK ROD SELECTION

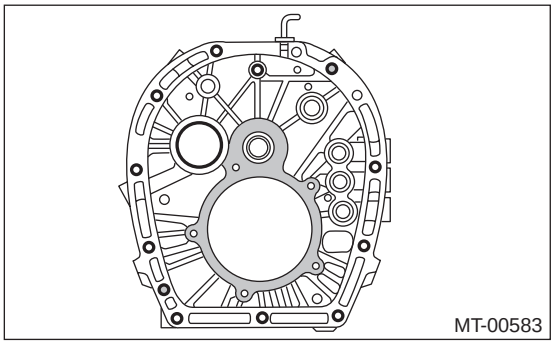
NOTE:
In the following conditions, perform the procedures below.
- Main shaft replacement
- 3rd to 6th drive gear and bushing replacement
- 3rd to 6th synchro ring assembly replacement
- 3rd-4th synchronizer hub and coupling sleeve assembly replacement
- 5th-6th synchronizer hub and coupling sleeve assembly replacement

1) Insert the main shaft assembly into the adapter plate.
2) Set the height gauge to the adapter plate. Lower the height gauge indicator to the upper face of the snap ring groove or the upper side of the main rear bearing. Set to zero point.
ST 18853AA000 HEIGHT GAUGE

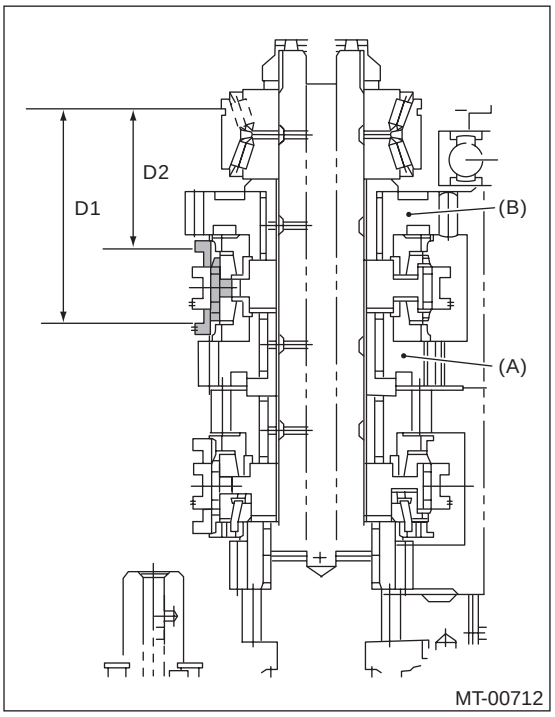


(A) Ball bearing

NOTE:
- The height gauge will be set on the adapter plate during the measurement. Use a scraper to remove any gasket material remaining on the end face.
- During measurement, do not place the height gauge in the shaded area shown in the figure.

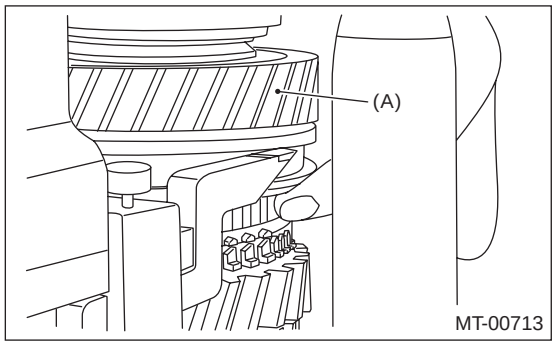


3) Use a height gauge to measure “D1” and “D2” as shown in the figure.



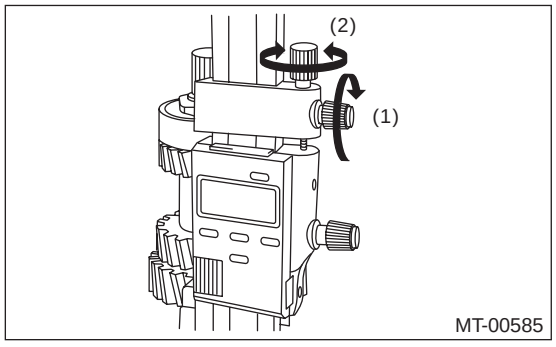
(A) 5th drive gear
(B) 6th drive gear

(1) Shift up the 5th-6th coupling sleeve all the way to the 6th drive gear side, and measure “D2”.

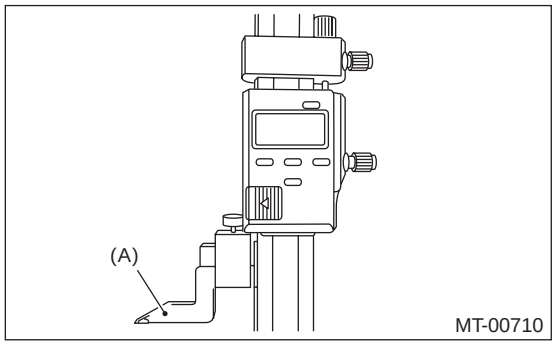


(A) 6th drive gear

NOTE:
• Set the height gauge indicator near the measurement target, and lock dial (1) as shown in the figure. Turn dial (2), and set the indicator to the 6th side end surface of the coupling sleeve.
• The measurement is to be performed with two persons, while holding the coupling sleeve straight.
• Turn approximately 72° at a time, and measure the coupling sleeve in 5 locations. Round down the 2 highest and 2 lowest measurement values. The remaining center value is used as the measurement value.

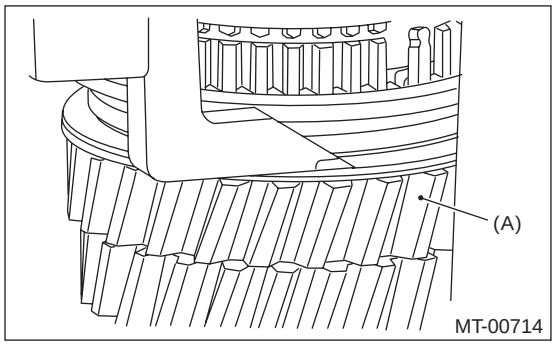


(2) Set the height gauge indicator upside down.



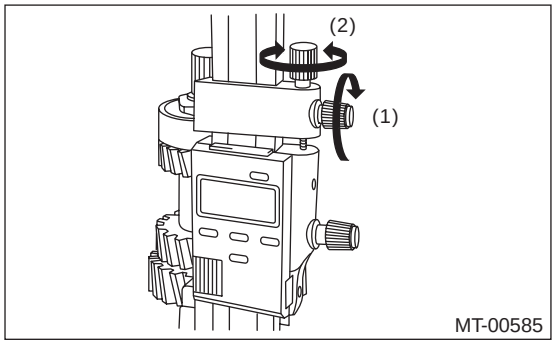
(A) Indicator

(3) Shift down the 5th-6th coupling sleeve all the way to the 5th drive gear side, and measure “D1”.



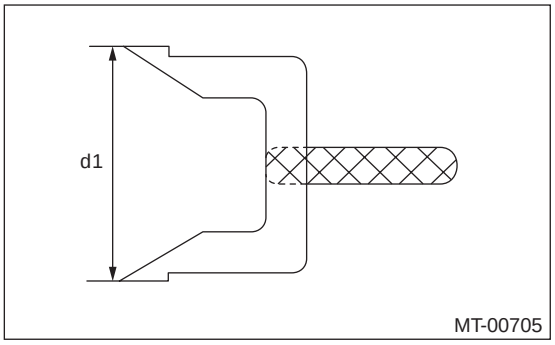
(A) 5th drive gear

NOTE:
• Set the height gauge indicator near the measurement target, and lock dial (1) as shown in the figure. Turn dial (2), and set the indicator to the 5th side end surface of the coupling sleeve.
• Turn approximately 72° at a time, and measure the coupling sleeve in 5 locations. Round down the 2 highest and 2 lowest measurement values. The remaining center value is used as the measurement value.



4) According to both of the measurements, calculate the neutral position of the 5th-6th coupling sleeve. From the following calculation, select a fork rod which matches the calculated value.
Calculation: T = (D1 + D2) / 2
T: 5th-6th coupling sleeve center position
D1: Measured length from the shaft rear bearing snap ring groove to the coupling sleeve groove end, when shifted to 5th gear [Value: +55 mm (2.17 in)]
D2: Measured length from the main shaft rear bearing snap ring groove to the coupling sleeve groove end, when shifted to 6th gear

NOTE:
Attach the indicator upside down in comparison to the setting procedures for the zero point. Add “d1” [Value: 55 mm (2.17 in)] from the figure below to “D1”, and measure “D1”.



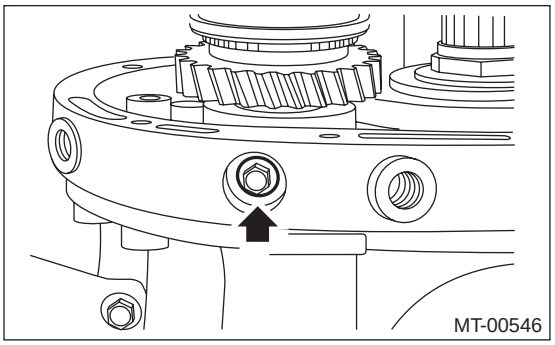
T mm (in)	Lot No. (marking)		
	M.SFT Snap ring 805072010 [t = 1.65 mm (0.065 in)]	M.SFT Snap ring 805072011 [t = 1.95 mm (0.077 in)]	M.SFT Snap ring 805072012 [t = 2.25 mm (0.089 in)]
64.12 — 64.42 (2.5244 — 2.5362)	32945AA110 (none)	32945AA120 (2)	32945AA130 (4)
64.42 — 64.72 (2.5362 — 2.5480)	32945AA100 (1)	32945AA110 (none)	32945AA120 (2)
64.72 — 65.02 (2.5480 — 2.5598)	32945AA090 (3)	32945AA100 (1)	32945AA110 (none)
T = Thickness			

4. REVERSE FORK ROD SELECTION

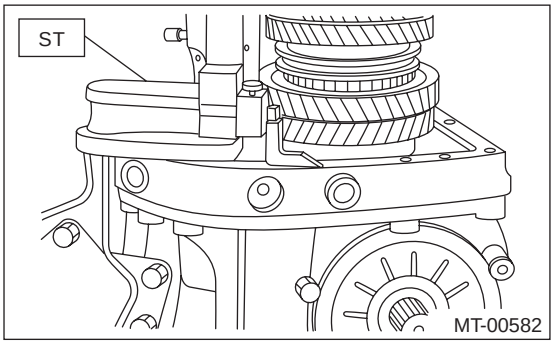
NOTE:
In the following conditions, perform the procedures below.
- Reverse idler gear replacement.
- Reverse idler gear No. 2 replacement.
- Adapter plate replacement.
- Base replacement.

1) Insert the reverse idler gear assembly into the adapter plate.
2) Tighten the reverse idler gear shaft attachment bolts.

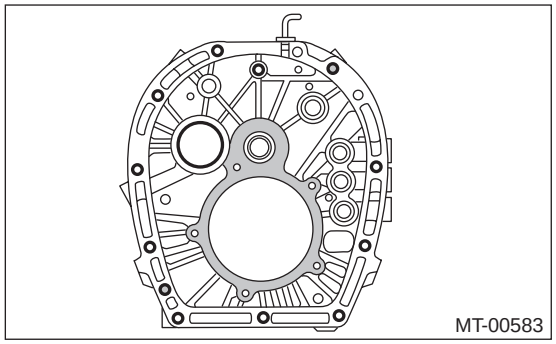
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



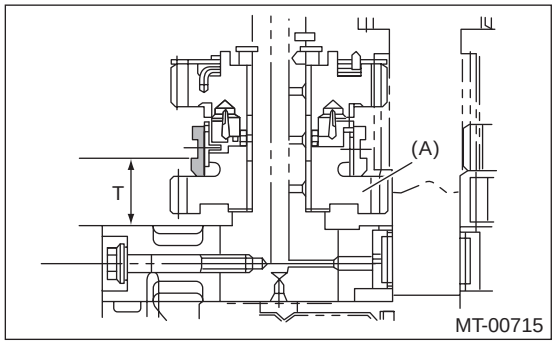
3) Set the height gauge to the adapter plate. Lower the height gauge indicator to the mating surface of the adapter plate and case, and set to zero points.
ST 18853AA000 HEIGHT GAUGE



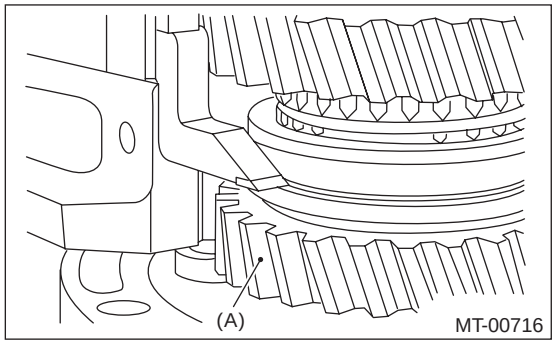
NOTE:
• The adapter plate will be the base point for the measurement. Use a scraper to remove any gasket material remaining on the end face.
• During measurement, do not place the height gauge in the shaded area shown in the figure.



4) Shift the reverse coupling sleeve to the reverse idler gear No. 2, and measure “T”.

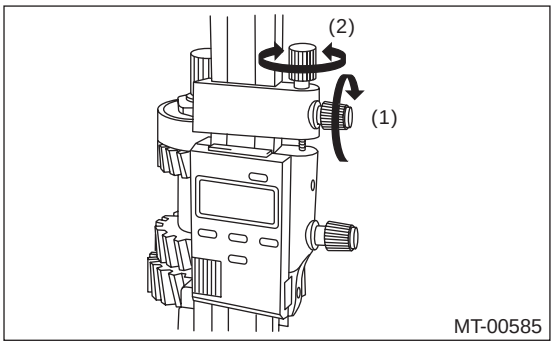


(A) Reverse idler gear No. 2



(A) Reverse idler gear No. 2

NOTE:
• Set the height gauge indicator near the measurement target, and lock dial (1) as shown in the figure. Turn dial (2), and set the indicator to the end face of the reverse coupling sleeve side.
• Turn approximately 72° at a time, and measure the coupling sleeve in 5 locations. Round down the 2 highest and 2 lowest measurement values. The remaining center value is used as the measurement value.



5) Calculate the neutral position of the reverse coupling sleeve according to the measurement. From the following calculation, select a fork rod which matches the calculated value.
Calculation: T + 4.8 mm (0.189 in)

T + 4.8 mm (0.189 in) mm (in)	Lot No. (marking)
33.50 — 33.80 (1.3189 — 1.3307)	32816AA190 (1)
33.80 — 34.10 (1.3307 — 1.3425)	32816AA200 (none)
34.10 — 34.40 (1.3425 — 1.3543)	32816AA210 (2)
T = Thickness	

25.Clutch Housing

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-31, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-38, Preparation for Overhaul.>
3) Remove the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-41, REMOVAL, Neutral Position Switch.> <Ref. to 6MT(TY85)-40, REMOVAL, Back-up Light Switch.>
4) Remove the extension case. <Ref. to 6MT(TY85)-42, REMOVAL, Extension Case.>
5) Remove the transfer driven gear. <Ref. to 6MT(TY85)-54, REMOVAL, Transfer Driven Gear.>
6) Remove the center differential. <Ref. to 6MT(TY85)-56, REMOVAL, Center Differential.>
7) Remove the transmission case. <Ref. to 6MT(TY85)-57, REMOVAL, Transmission Case.>
8) Remove the individual gear assemblies. <Ref. to 6MT(TY85)-63, REMOVAL, Main Shaft Assembly.>
9) Remove the drive pinion shaft assembly. <Ref. to 6MT(TY85)-92, REMOVAL, Drive Pinion Shaft Assembly.>
10) Remove the front differential assembly. <Ref. to 6MT(TY85)-99, REMOVAL, Front Differential Assembly.>

B: INSTALLATION

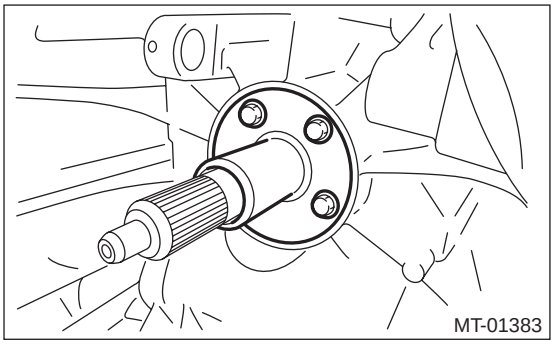
1) Install the pitching stopper bracket.

Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)

2) Install the front differential assembly. <Ref. to 6MT(TY85)-100, INSTALLATION, Front Differential Assembly.>
3) Install the drive pinion shaft assembly. <Ref. to 6MT(TY85)-92, INSTALLATION, Drive Pinion Shaft Assembly.>
4) Install the individual gear assemblies all at once. <Ref. to 6MT(TY85)-64, INSTALLATION, Main Shaft Assembly.>
5) Install the transmission case. <Ref. to 6MT(TY85)-59, INSTALLATION, Transmission Case.>
6) Install the center differential. <Ref. to 6MT(TY85)-56, INSTALLATION, Center Differential.>
7) Install the transfer driven gear. <Ref. to 6MT(TY85)-54, INSTALLATION, Transfer Driven Gear.>
8) Install the extension case. <Ref. to 6MT(TY85)-42, INSTALLATION, Extension Case.>
9) Install the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-41, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT(TY85)-40, INSTALLATION, Back-up Light Switch.>
10) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-33, INSTALLATION, Manual Transmission Assembly.>

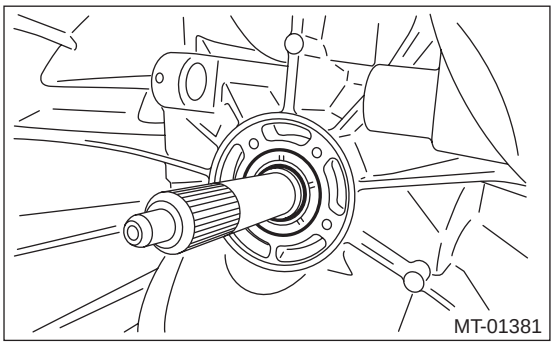
C: DISASSEMBLY

1) Remove the clutch release bearing guide.



MT-01383

2) Remove the oil seal.

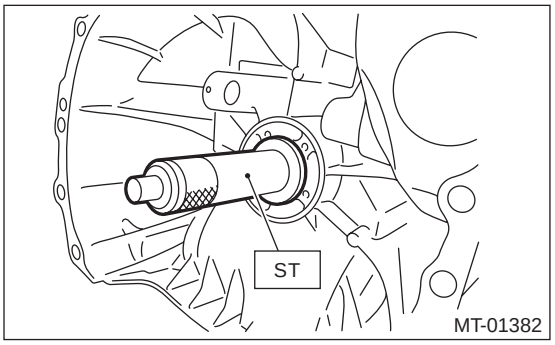


MT-01381

D: ASSEMBLY

1) Attach the oil seal to the clutch housing, being careful not to damage the seal.

NOTE:
Use a new oil seal.
ST 18657AA020 OIL SEAL INSTALLER



MT-01382

2) Install the clutch release bearing guide.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

E: INSPECTION

1) Check to make sure there is no damage or cracks on the clutch housing. If there is excessive damage, replace the clutch housing.
2) Inspect the clutch housing for transmission gear oil leakage. If any oil leaks are found, repair or replace the applicable part.

26.General Diagnostic Table

A: INSPECTION

1. MANUAL TRANSMISSION

Symptoms	Possible cause	Corrective action
1. Gears are difficult to engage. NOTE: If it is difficult to shift, there are two possible causes. One is a defective gear shift system and the other is defective transmission. However, if the operation is heavy and engagement of the gears is difficult, a defective clutch function may also be responsible. Check whether the clutch is correctly functioning, before checking the gear shift system and transmission.	(a) Worn, damaged or burred chamfer at internal spline of the coupling sleeve	Replace.
	(b) Gear spline wear, damage, dents	Replace.
	(c) Worn or scratched bushings	Replace.
	(d) Incorrect contact or wear between synchronizer ring and gear cone	Repair or replace.
2. Gear slip-out • Gear slips out when coasting on rough road. • Gear slips out during acceleration.	(a) Defective pitching stopper adjustment	Adjust.
	(b) Loose engine mounting bolts	Tighten or replace.
	(c) Worn shifter fork, broken shifter fork rail spring	Replace.
	(d) Worn or damaged ball bearing	Replace.
	(e) Excessive clearance between splines of synchronizer hub and synchronizer sleeve	Replace.
	(f) Worn in the synchronizer hub chamfer angle	Replace.
	(g) Worn 1st driven gear, needle bearing and race	Replace.
	(h) Worn 2nd driven gear, needle bearing and race	Replace.
	(i) Worn 3rd drive gear and bushing	Replace.
	(j) Worn 4th drive gear and bushing	Replace.
	(k) Worn 5th drive gear and bushing	Replace.
	(l) Worn 6th drive gear and bushing	Replace.
	(m) Worn reverse idler gear and bushing	Replace.
3. Noise emitted from transmission NOTE: If a noise is heard when the vehicle is parked with its engine idling and ceases when the clutch is disengaged, it may be considered that the noise is coming from the transmission.	(a) Insufficient or improper lubrication	Replenish or replace with the specified amount of recommended oil.
	(b) Worn or damaged gears and bearings NOTE: If the trouble is only wear of the gear teeth surfaces, only a high whirring noise will occur at high speeds, but if any part is broken, rhythmical clicking sounds will be heard even at low speeds.	Replace.

2. DIFFERENTIAL

Symptoms	Possible cause	Corrective action
1. Broken differential (case, gear, bearing, etc.) NOTE: Noise will occur, and eventually the differential will not be able to operate due to broken pieces obstructing the gear revolution.	(a) Insufficient or improper oil	Disassemble the differential and replace broken components. At the same time check other components for any trouble, and replace if necessary.
	(b) Use of vehicle under severe conditions such as excessive load and improper use of the clutch	Readjust the preload and backlash of the bearing, and the contact surface of gear.
	(c) Improper adjustment of taper roller bearing	Adjust.
	(d) Improper adjustment of the drive pinion and the hypoid driven gear	Adjust.
	(e) Loose hypoid driven gear clamping bolts	Tighten.
2. Differential and hypoid gear noise Troubles of the differential and hypoid gear always appear as noise problems. Therefore noise is the first indication of trouble. However, noise from the engine, muffler, tire, exhaust gas, bearing, body, etc. are easily mistaken for noise from the differential. Pay special attention to the hypoid gear noise because it is easily confused with other gear noises. There are the following four kinds of noises. • Gear noise when driving: If noise increases as the vehicle speed increases, it may be due to insufficient gear oil, incorrect gear engagement, damaged gears, etc. • Gear noise during coasting: Damaged gears due to misadjusted bearings and incorrect shim adjustment. • Bearing noise when driving or coasting: Cracked, broken or damaged bearings.	(a) Insufficient oil	Replenish or replace with the specified amount of recommended oil.
	(b) Improper adjustment of hypoid driven gear and drive pinion	Check the tooth contact.
	(c) Worn teeth of hypoid driven gear and drive pinion	Replace as a set. Readjust the bearing preload.
	(d) Loose roller bearing	Readjust the backlash of the hypoid driven gear to drive pinion, and check the tooth contact.
	(e) Distorted hypoid driven gear or differential case	Replace.

1. Basic Diagnostic Procedure

A: PROCEDURE

Step		Check	Yes	No
1	**START INSPECTIONS.** 1) Use the Check List for Interview to confirm the condition of the problem from the user. <Ref. to 6MT(diag)-3, Check List for Interview.> 2) Check the items related to DCCD. • General inspection <Ref. to 6MT(diag)-4, INSPECTION, General Description.> • Disconnection of harness connector • Visual check for harness connector damage • Oil leakage	Are items related DCCD OK?	Go to step **2**.	Repair the defective items.
2	**CHECK DTC.** Read the DTC. <Ref. to 6MT(diag)-7, Subaru Select Monitor.> NOTE: • Refer to "List of Diagnostic Trouble Code (DTC)" for DTC. <Ref. to 6MT(diag)-18, List of Diagnostic Trouble Code (DTC).> • If the communication function of Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to 6MT(diag)-7, Subaru Select Monitor.>	Are DTC, time stamp and freeze frame data displayed?	Record the DTC, time stamp and freeze frame data. Go to step **3**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Inspect based on the general diagnosis table. <Ref. to 6MT(diag)-33, Diagnostics with Phenomenon.>
3	**PERFORM DIAGNOSIS.** 1) Inspect and repair all DTC using the "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". <Ref. to 6MT(diag)-19, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> NOTE: Refer to "List of Diagnostic Trouble Code (DTC)" for DTC. <Ref. to 6MT(diag)-18, List of Diagnostic Trouble Code (DTC).> 2) Start the engine. 3) Read the DTC using Subaru Select Monitor. <Ref. to 6MT(diag)-7, Subaru Select Monitor.>	Is DTC displayed?	Record all DTC using the "Diagnostic Procedure with Diagnostic Trouble Code (DTC)" for the inspection. <Ref. to 6MT(diag)-19, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Repeat execute diagnosis until DTC no longer appears.	Inspect based on the general diagnosis table. <Ref. to 6MT(diag)-33, Diagnostics with Phenomenon.>

2. Check List for Interview

A: CHECK

Check the following items when a problem has occurred.

NOTE:
Use copies of this page for interviewing customers.

Customer's name			
Date of purchase			
Date of repair			
Transmission model	Transmission	V.I.N.	
Odometer distance	km or miles		
Frequency	❑ Continuous ❑ Intermittent (times a day)		
Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Other ( )		
Place	❑ Highland ❑ Suburbs ❑ Inner city ❑ Uphill ❑ Rough road ❑ Other ( )		
Ambient air temperature	❑ Hot ❑ Warm ❑ Cool ❑ Cold		
Vehicle speed	km/h (MPH)		
DCCD mode indicator	❑ Flashing	❑ Light OFF	❑ Blinking, other than light off
Driving condition	❑ Not affected ❑ While decelerating	❑ At starting ❑ While accelerating	❑ While turning (❑ RH/❑ LH) ❑ When cruising
Symptoms	❑ Will not change to AUTO or MANUAL		
	❑ The forward/rear torque distribution does not change		
	❑ Will not become differential free		
	❑ Will not become differential lock		
	❑ A tight corner braking symptom occurs in AUTO mode or in MANUAL mode with differential free		
	❑ Noise or vibration		
	❑ Other ( )		

3. General Description

A: CAUTION

The airbag system wiring harness is routed near the DCCD control module.

CAUTION:
• Airbag system wiring harnesses and connectors are yellow. Do not use an electric test equipment to check these circuits.
• Be careful not to damage the airbag system wiring harness when performing diagnostics or repair of the DCCD control module.
• When measuring the voltage and resistance of each control module or each sensor, use a tapered pin with a diameter of less than 0.64 mm (0.025 in) in order to avoid poor contact. Also, do not insert the pin more than 5 mm (0.2 in) into the part.

B: INSPECTION

1. POWER SUPPLY

1) Measure the battery voltage and specific gravity of the electrolyte.

Standard voltage: 12 V or more

Specific gravity: 1.260 or more
2) Check the fuse condition.
3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

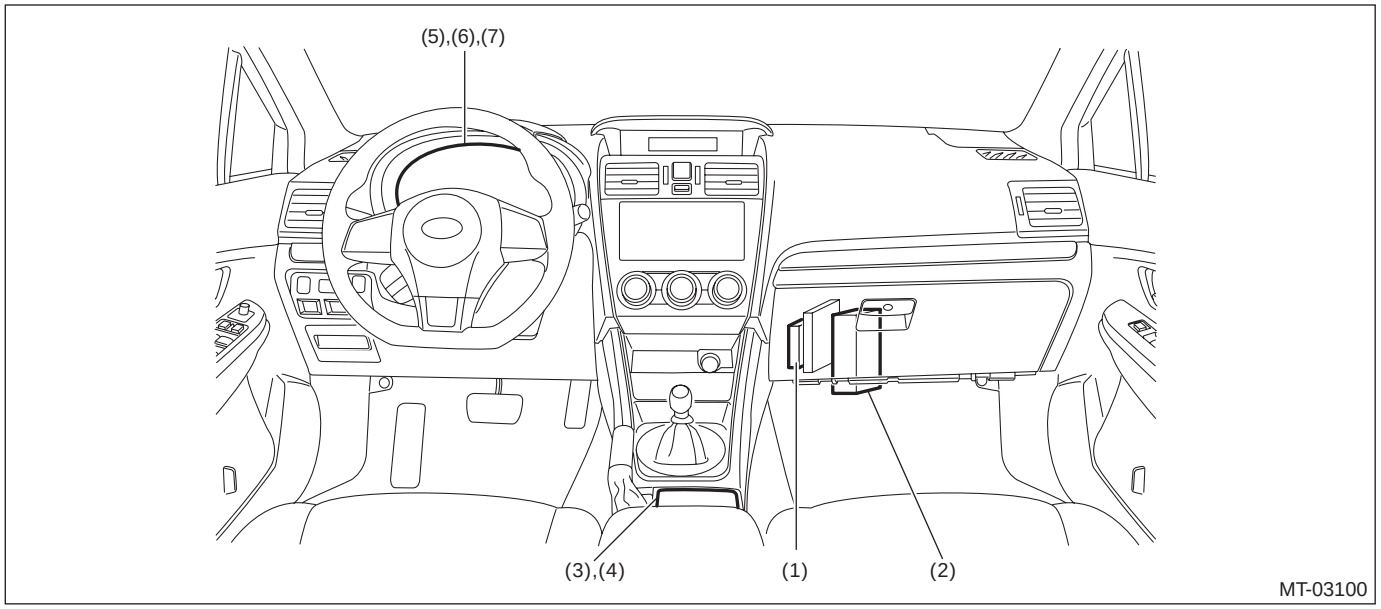
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Troubleshooting for electrical system

2. GENERAL TOOL

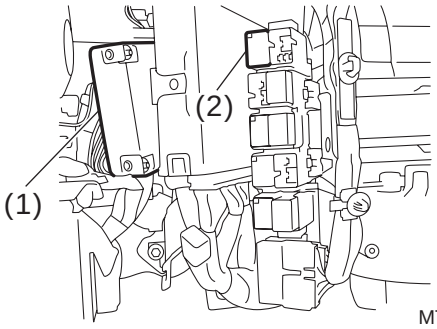
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.

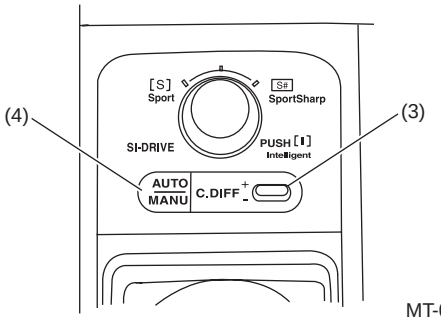
4. Electrical Component Location

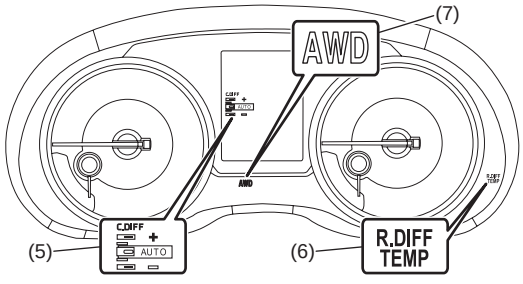
A: LOCATION



(1) DCCD control module
(2) DCCD relay
(3) C.DIFF +/– switch
(4) Mode change switch
(5) DCCD mode indicator
(6) Rear differential oil temperature warning light
(7) AWD light

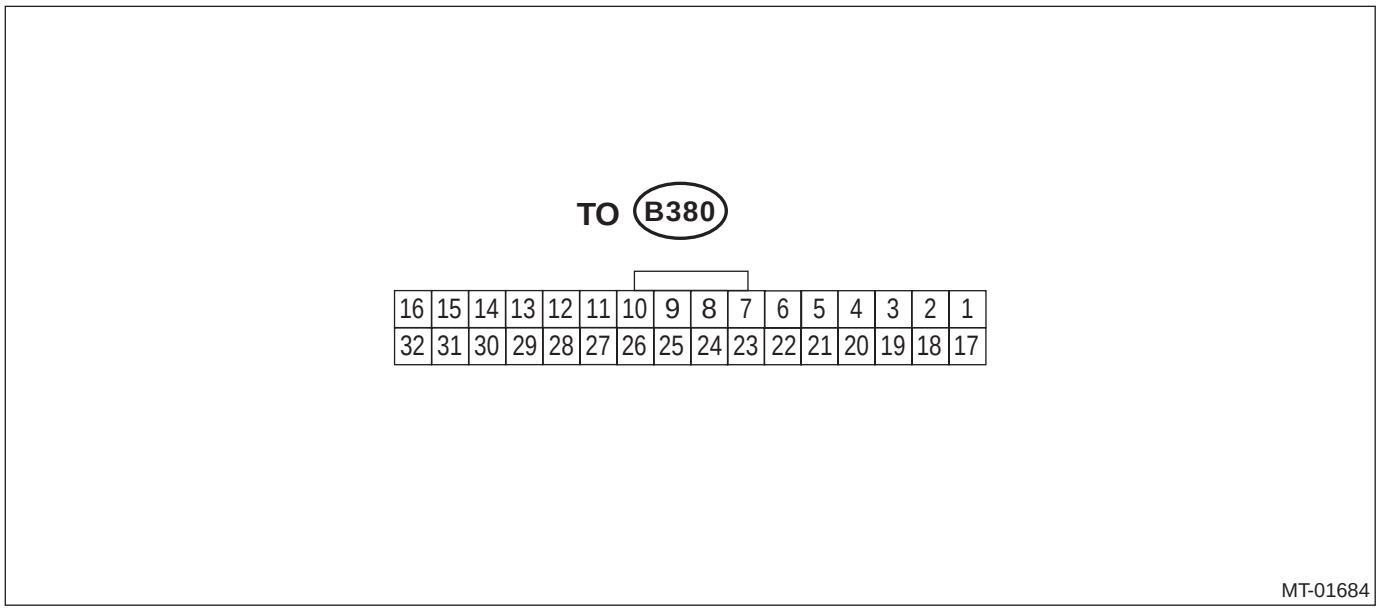






5. Driver's Control Center Differential (DCCD) Control Module I/O Signal

A: ELECTRICAL SPECIFICATION



Check with ignition switch ON.					
Item	Measured terminal (Connector & Terminal No.)		Measuring condition	Voltage (V)	Resistance (Ω)
	Positive terminal	Ground terminal			
DCCD output	(B380) No. 15	(B380) No. 32	When differential is locked (when DCCD manual mode display is locked)	5.5 — 8.0	1.2 — 2.5
			When differential is free (When the parking brake is pulled)	Less than 0.5

1 (Free), 2, 3, 4, 5, 6 (LOCK) in manual mode

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

• For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
• For details concerning DTCs, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to 6MT(diag)-18, List of Diagnostic Trouble Code (DTC).>

8. Drive Cycle

A: PROCEDURE

It is possible to complete diagnosis of the DTC by performing the indicated drive cycle. After the repair for the DTC, perform a necessary drive cycle and make sure the function recovers and the DTC is recorded.

1. PREPARATION FOR DRIVE CYCLE

1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) After performing the diagnostics and Clear Memory Mode, check that no DTC remains. <Ref. to 6MT(diag)-10, Clear Memory Mode.>

NOTE:
Perform the drive cycle after warming up the engine except when the ATF temperature at engine start is specified.

2. DRIVE CYCLE A

DTC	Item	Condition
P1875	Circuit of Center Diff	—

Diagnostic procedure:
1) Turn the ignition switch to OFF.
2) Apply the parking brake.
3) Start the engine.
4) Make sure that the rear differential oil temperature warning light is off.
5) Set DCCD to manual mode.
6) Set torque level of DCCD to “LOCK”.
7) Stop the vehicle and idle for 10 seconds or more.
8) Read the current malfunction code using Subaru Select Monitor.

NOTE:
In step 7), do not depress the brake pedal.

3. DRIVE CYCLE B

DTC	Item	Condition
P1521	Brake Switch Circuit Range/Performance Problem (High Input)	—

Diagnostic procedure:
1) Repeat acceleration/deceleration between 0 km/h (0 MPH) and 40 km/h (25 MPH) 10 times or more.
2) Read the current malfunction code using Subaru Select Monitor.

NOTE:
Always use the brake pedal during deceleration.

9. Clear Memory Mode

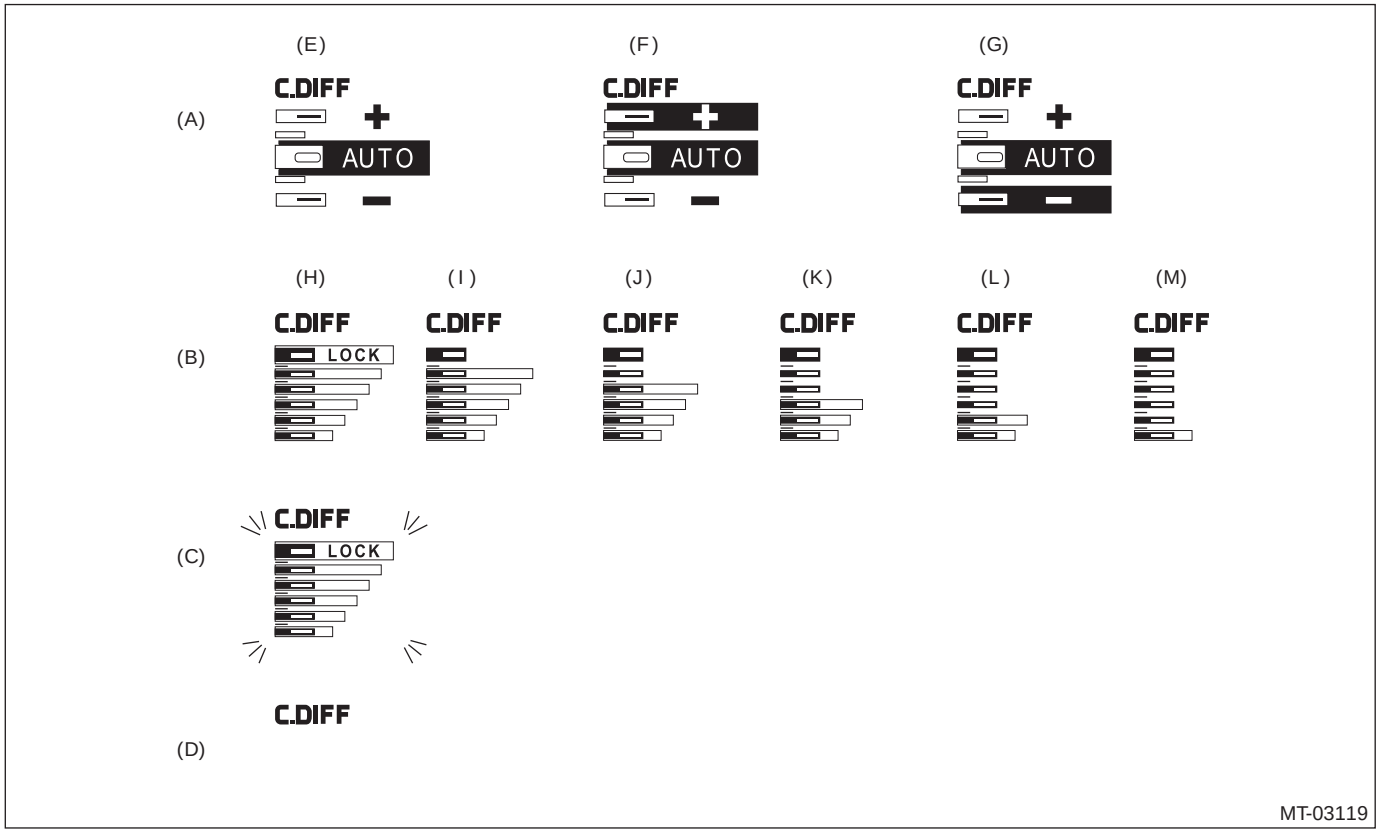
A: OPERATION

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

10.Drivers Control Center Differential (DCCD) Mode Display

A: OPERATION

When there is a problem with a part or module, DCCD manual mode display blinks. (DCCD manual mode display blinks even in AUTO mode condition.) The blinking starts when the problem is detected, and continues until the ignition switch is turned OFF. The faulty parts can be recognized by reading DTC with the Subaru Select Monitor.
DCCD mode display is as shown in the figure.



(A)	AUTO mode display	(F)	AUTO +	(J)	4
(B)	Manual mode display	(G)	AUTO –	(K)	3
(C)	If faulty (blinks at 1 Hz cycle)	(H)	6 (LOCK)	(L)	2
(D)	At protection control (light off)	(I)	5	(M)	1 (FREE)
(E)	AUTO				

B: INSPECTION

DIAGNOSIS:

- Defective CAN communication
- DCCD control module malfunction
- Combination meter malfunction

TROUBLE SYMPTOM:

DCCD mode display does not change even when the C.DIFF +/– switch is operated.

	Step	Check	Yes	No
1	**CHECK COMBINATION METER.** Perform the self-diagnosis of combination meter. <Ref. to IDI-9, INSPECTION, Combination Meter System.>	Is the self-diagnosis of combination meter OK?	Go to step **2**.	Repair it according to combination meter diagnostics.
2	**CHECK IGNITION POWER SUPPLY CIRCUIT OF DCCD CONTROL MODULE.** 1) Connect the Subaru Select Monitor to the vehicle. 2) Turn the ignition switch to ON. 3) Read the data of «Battery voltage» using Subaru Select Monitor.	Is the voltage 10 V or more?	Go to step **3**.	Repair the open circuit of harness between fuse (F/B No. 12) and DCCD control module, or between fuse (F/B No. 12) and battery.
3	**CHECK DTC.**	Is DTC P0606 or U code displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK MODE CHANGE SWITCH.** Read the data of «AUTO/MANUAL Mode Switch» using the Subaru Select Monitor.	Does the display change to ON/OFF according to the mode change switch operation?	Go to step **5**.	Check the mode change switch.
5	**CHECK C.DIFF +/– SWITCH (UP/DOWN).** Read the data of «Up Switch» and «Down Switch» using the Subaru Select Monitor.	Does the display change to ON/OFF according to the C.DIFF +/– switch operation?	Go to step **6**.	Check the C.DIFF +/– switch.
6	**CHECK REAR DIFFERENTIAL OIL TEMPERATURE WARNING LIGHT.**	Is the rear differential oil temperature warning light blinking?	Check the rear differential oil temperature sensor.	Go to step **7**.
7	**CHECK REAR DIFFERENTIAL OIL TEMPERATURE WARNING LIGHT.**	Does the rear differential oil temperature warning light illuminate?	Protection control is ON due to high rear differential oil temperature. Perform the inspection again after rear differential oil temperature lowers.	Go to step **8**.
8	**CHECK AWD LIGHT.**	Is the AWD light off?	Go to step **9**.	Perform the diagnosis according to AWD light display.
9	**CHECK DCCD AUTO MODE DISPLAY.** Set to AUTO mode by pressing the mode change switch.	Does the DCCD AUTO mode display illuminate?	Go to step **10**.	Replace the DCCD control module. <Ref. to 6MT(TY85)-36, Driver's Control Center Differential Control Module.>
10	**CHECK DCCD AUTO MODE DISPLAY.** Read the data of «DCCD Mode» using Subaru Select Monitor.	Does the DCCD AUTO mode display change according to the C.DIFF +/– switch operation?	Go to step **11**.	Replace the DCCD control module. <Ref. to 6MT(TY85)-36, Driver's Control Center Differential Control Module.>

	Step	Check	Yes	No
11	**CHECK INDICATION OF DCCD MANUAL MODE DISPLAY.** Press the mode change switch to enter the manual mode.	Does the DCCD manual mode display illuminate?	Go to step **12**.	Replace the DCCD control module. <Ref. to 6MT(TY85)-36, Driver's Control Center Differential Control Module.>
12	**CHECK INDICATION OF DCCD MANUAL MODE DISPLAY.** Read the data of «DCCD Torque Allocation» using the Subaru Select Monitor.	Does the DCCD manual mode display change according to the C.DIFF +/– switch operation?	Go to step **13**.	Replace the DCCD control module. <Ref. to 6MT(TY85)-36, Driver's Control Center Differential Control Module.>
13	**CHECK OTHER DTC.**	Is any other DTC displayed?	Perform the diagnosis according to DTC.	DCCD mode display is normal.

11.AWD Warning Light Display

A: OPERATION

AWD light blinks when a fault occurs in AWD.

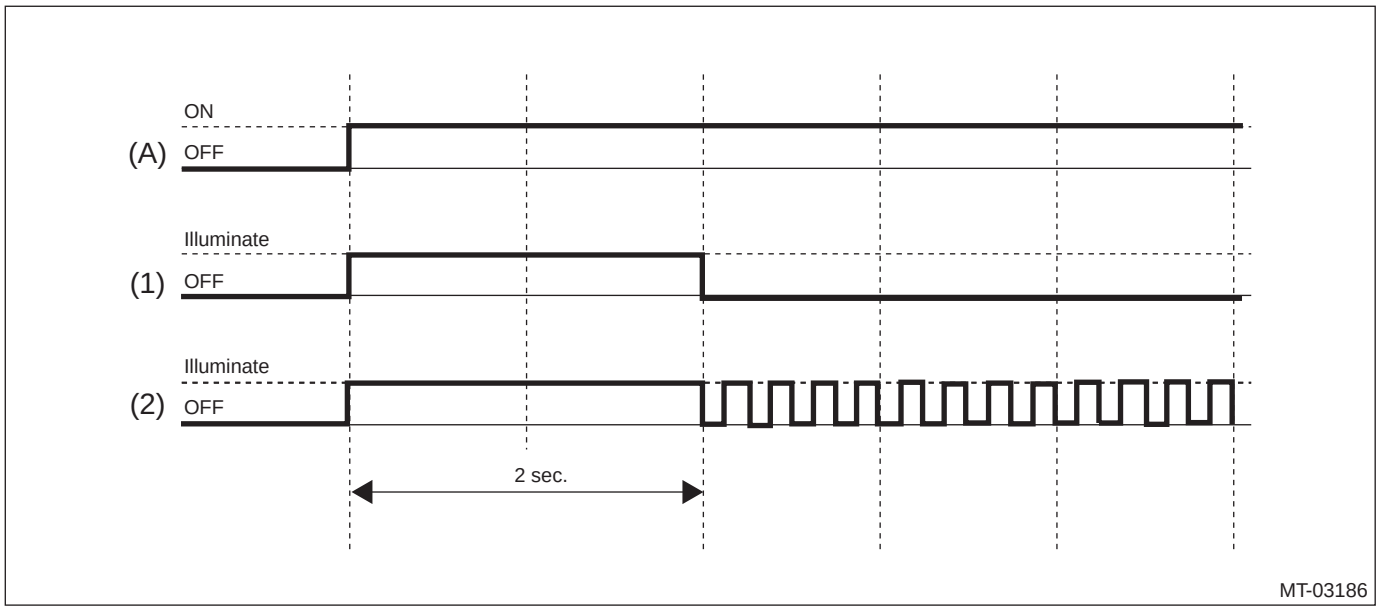
- At normal condition

After the ignition switch is turned to ON, AWD light illuminates for 2 seconds.

- When malfunction is detected

AWD light blinks at 2 Hz when any of the following malfunctions are detected with the ignition switch ON.

1. When tire with different diameter is installed.
2. When air pressure of any of four tires is excessively low.



(A) Ignition switch condition

(1) At normal condition (2) When malfunction is detected

If the AWD light does not illuminate, or illumination patterns are not as above, check the AWD light circuit. <Ref. to 6MT(diag)-15, INSPECTION, AWD Warning Light Display.>

B: INSPECTION

DIAGNOSIS:
- Defective CAN communication
- DCCD control module malfunction
- Combination meter malfunction

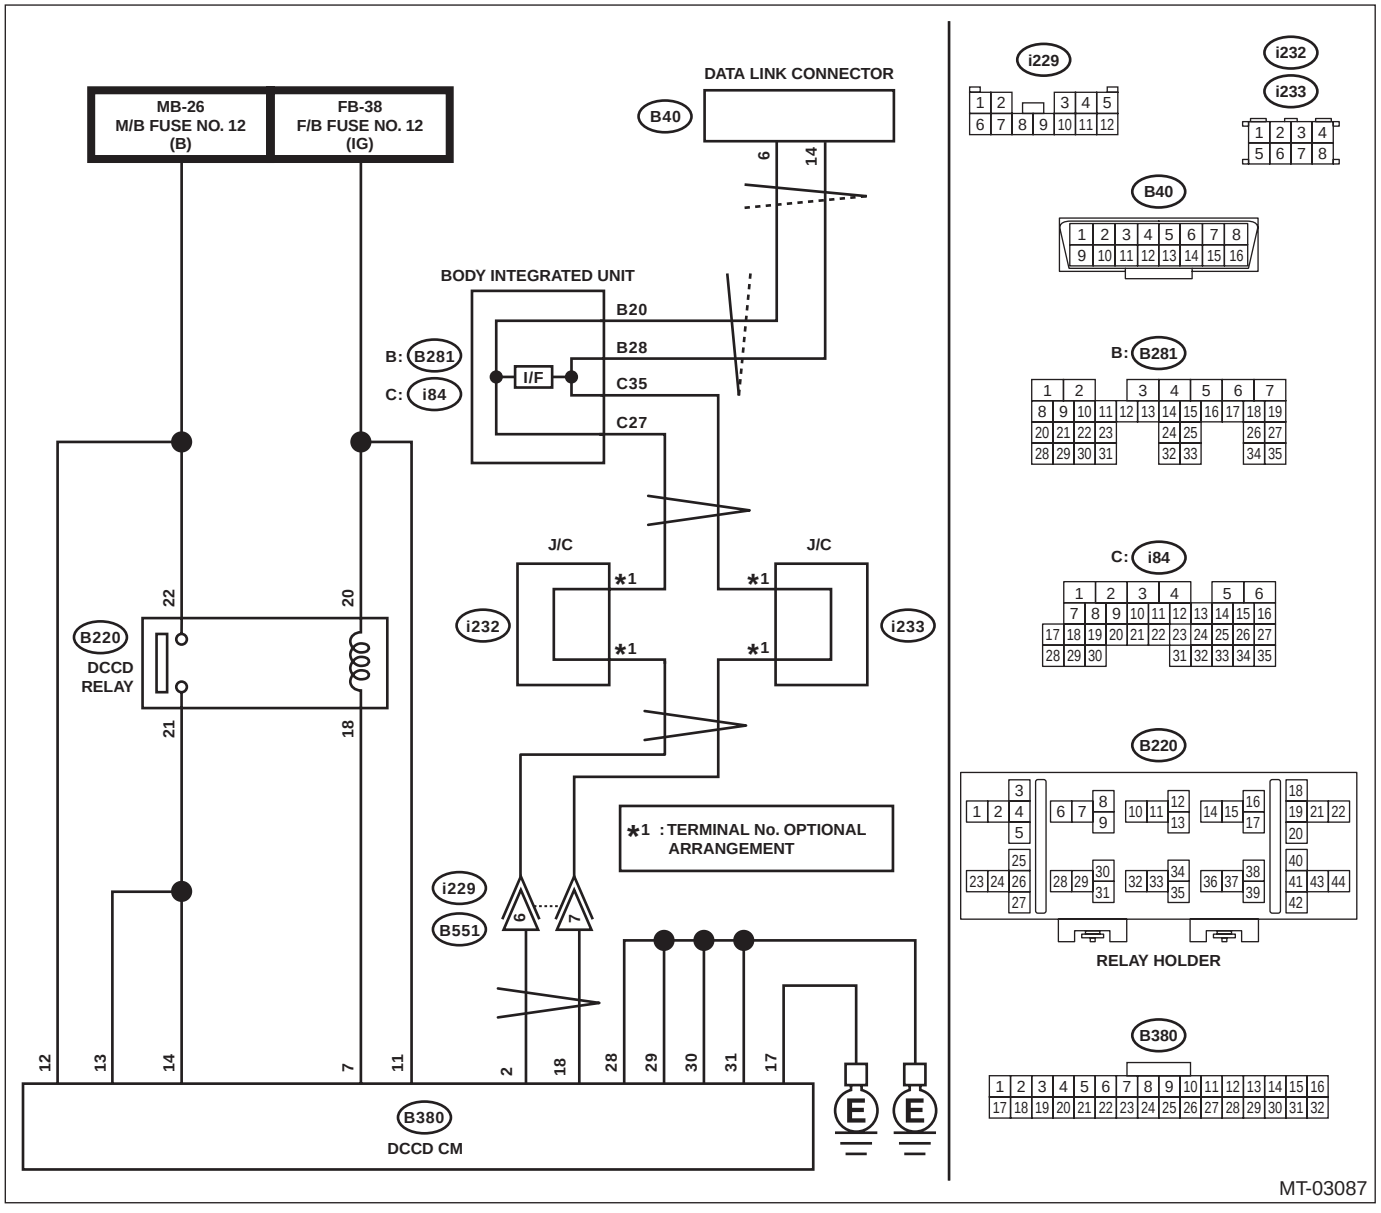
TROUBLE SYMPTOM:
- When the ignition switch is turned to ON, the AWD light does not illuminate.
- AWD light illuminates after 2 seconds have elapsed after turning the ignition switch to ON.
- AWD light starts blinking right after 2 seconds have elapsed after turning the ignition switch to ON.

	Step	Check	Yes	No
1	**CHECK AWD LIGHT.** Turn the ignition switch to ON.	Does AWD light illuminate for 2 seconds after turning the ignition switch to ON?	Go to step **2**.	Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
2	**CHECK AWD LIGHT.** 1) Turn the ignition switch to OFF. 2) Turn the ignition switch to ON.	Does AWD light go off after two seconds have elapsed after turning the ignition switch to ON?	Current condition is normal. Go back to Basic Diagnostic Procedure. <Ref. to 6MT(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK DTC.** Read the DTC of DCCD using the Subaru Select Monitor.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK COMBINATION METER.** Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is there any trouble with the combination meter?	Repair the combination meter.	Replace the DCCD control module. <Ref. to 6MT(TY85)-36, Driver's Control Center Differential Control Module.>

12.Diagnostic Procedure for Subaru Select Monitor Communication

A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DIAGNOSIS:
Defective harness connector
TROUBLE SYMPTOM:
Subaru Select Monitor communication failure
WIRING DIAGRAM:
Drivers control center differential control system <Ref. to WI-160, Driver's Control Center Differential Control System.>



Step	Check	Yes	No
1 **CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select the transmission mode using the Subaru Select Monitor.

	Step	Check	Yes	No
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step **4**.
4	**CHECK INSTALLATION OF DCCD CONTROL MODULE CONNECTOR.** Turn the ignition switch to OFF.	Is the DCCD control module connector inserted into the DCCD control module until locked by the clamp?	Go to step **5**.	Insert the DCCD control module connector into DCCD control module.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-70, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Check whether communication to transmission system can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Check DTC of the DCCD control module. <Ref. to 6MT(diag)-8, Read Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. (engine OFF) 2) Measure the ignition power supply voltage between the DCCD control module connector and chassis ground. ***Connector & terminal*** ***(B380) No. 11 (+) — Chassis ground (–):*** ***(B380) No. 12 (+) — Chassis ground (–):*** ***(B380) No. 13 (+) — Chassis ground (–):*** ***(B380) No. 14 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **8**.	Repair the open circuit in the harness between the DCCD control module and the battery.
8	**CHECK HARNESS CONNECTOR BETWEEN DCCD CONTROL MODULE AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from DCCD control module. 3) Measure the resistance of harness between DCCD control module connector and chassis ground. ***Connector & terminal*** ***(B380) No. 17 — Chassis ground:*** ***(B380) No. 28 — Chassis ground:*** ***(B380) No. 29 — Chassis ground:*** ***(B380) No. 30 — Chassis ground:*** ***(B380) No. 31 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **9**.	Repair the open circuit of the DCCD control module ground circuit and the poor contact of connector.
9	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of DCCD control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the DCCD control module. <Ref. to 6MT(TY85)-36, Driver's Control Center Differential Control Module.>

13.List of Diagnostic Trouble Code (DTC)

A: LIST

1. SUBARU SELECT MONITOR DISPLAY

DTC	Item	Content of diagnosis	Reference
P0606	Micro-Computer (CPU Failure)	Driver's control center differential control module is faulty.	<Ref. to 6MT(diag)-19, DTC P0606 MICRO-COMPUTER (CPU FAILURE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1521	Brake Switch Circuit Range/Performance Problem (High Input)	Stop light switch circuit is open or shorted.	<Ref. to 6MT(diag)-21, DTC P1521 BRAKE SWITCH CIRCUIT RANGE/PERFORMANCE PROBLEM (HIGH INPUT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P176A	Vehicle Dynamics Control System Error	VDC system failure	<Ref. to 6MT(diag)-22, DTC P176A VEHICLE DYNAMICS CONTROL SYSTEM ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1875	Circuit of Center Diff	Open or short in the driver's control center differential circuit	<Ref. to 6MT(diag)-23, DTC P1875 CIRCUIT OF CENTER DIFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0073	Control Module Communication Bus Off	Defective CAN communication	<Ref. to 6MT(diag)-28, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	Lost Communication With ECM/PCM "A"	Defective CAN communication	<Ref. to 6MT(diag)-28, DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	Lost Communication With Vehicle Dynamics Control Module	Defective CAN communication	<Ref. to 6MT(diag)-28, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	Lost Communication With Body Control Module	Defective CAN communication	<Ref. to 6MT(diag)-28, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	Lost Communication With Instrument Panel Cluster (IPC) Control Module	Defective CAN communication	<Ref. to 6MT(diag)-28, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	Invalid Data Received From ECM/PCM "A"	Defective CAN communication	<Ref. to 6MT(diag)-28, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	Invalid Data Received From Vehicle Dynamics Control Module	Defective CAN communication	<Ref. to 6MT(diag)-28, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	Invalid Data Received From Body Control Module	Defective CAN communication	<Ref. to 6MT(diag)-28, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0423	Invalid Data Received From Instrument Panel Cluster Control Module	Defective CAN communication	<Ref. to 6MT(diag)-28, DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1201	CAN-HS Counter Abnormal	Defective CAN communication	<Ref. to 6MT(diag)-28, DTC U1201 CAN-HS COUNTER ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

14.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P0606 MICRO-COMPUTER (CPU FAILURE)

DIAGNOSIS START CONDITION:
At DCCD control module initialization (when power is turned to ON)
Malfunction judgment criteria:
When CAN function of microcomputer is abnormal (when CAN register read/write is abnormal)
TROUBLE SYMPTOM:
- Center differential does not operate.
- An oversteer tendency will become apparent.

WIRING DIAGRAM:
Drivers control center differential control system <Ref. to WI-160, Driver's Control Center Differential Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT VOLTAGE OF DCCD CONTROL MODULE.** 1) Turn the ignition switch to ON. 2) Measure the voltage between DCCD control module and chassis ground. ***Connector & terminal*** ***(B380) No. 11 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **2**.	Repair the open or ground short circuit of power supply circuit.
2	**CHECK INPUT VOLTAGE OF DCCD CONTROL MODULE.** 1) Start the engine. 2) Measure the voltage between DCCD control module and chassis ground. ***Connector & terminal*** ***(B380) No. 11 (+) — Chassis ground (–):***	Is the voltage 13 — 15 V?	Go to step **3**.	Repair the open or ground short circuit of power supply circuit.
3	**CHECK DCCD CONTROL MODULE GROUND HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between DCCD control module and chassis ground. ***Connector & terminal*** ***(B380) No. 28 (+) — Chassis ground (–):*** ***(B380) No. 29 (+) — Chassis ground (–):*** ***(B380) No. 30 (+) — Chassis ground (–):*** ***(B380) No. 31 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Check for poor contact of connector, if a fault is not found, replace the DCCD control module. <Ref. to 6MT(TY85)-36, Driver's Control Center Differential Control Module.>	Repair the harness and connector.

B: DTC P1521 BRAKE SWITCH CIRCUIT RANGE/PERFORMANCE PROBLEM (HIGH INPUT)

DIAGNOSIS START CONDITION:
DTC P0606 and U code are not recorded.
Malfunction judgment criteria:
When any of the following conditions is established
- Detect deceleration of 30 km/h (19 MPH) → 0 km/h (0 MPH) 10 consecutive times with stop light SW OFF
- Detect acceleration of 0 km/h (0 MPH) → 30 km/h (19 MPH) 10 consecutive times with stop light SW ON

DIAGNOSIS:
Stop light switch circuit is open or shorted.
TROUBLE SYMPTOM:
- Center differential does not operate.
- An oversteer tendency will become apparent.

	Step	Check	Yes	No
1	**CHECK DTC.**	Does the DTC related to stop light SW appear in the VDC diagnostics test mode?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK IGNITION POWER SUPPLY CIRCUIT OF DCCD CONTROL MODULE.** 1) Connect the Subaru Select Monitor to the vehicle. 2) Turn the ignition switch to ON. 3) Read the data of «Battery voltage» using Subaru Select Monitor.	Is the voltage 10 V or more?	Go to step **3**.	Repair the open circuit of harness between fuse (F/B No. 12) and DCCD control module, or between fuse (F/B No. 12) and battery.
3	**CHECK DTC.**	Is DTC P0606 or U code displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DCCD CONTROL MODULE.** 1) Turn the ignition switch to ON. 2) Read the data of «Stop Light Switch» using Subaru Select Monitor.	Does the «Stop Light Switch» change to ON/OFF according to the depressing/releasing operation of the brake?	Go to step **5**.	Replace the DCCD control module. <Ref. to 6MT(TY85)-36, Driver's Control Center Differential Control Module.>
5	**CHECK OTHER DTC.**	Is a DTC other than DTC P1521 displayed?	Perform the diagnosis according to DTC.	The stop light switch is currently normal.

C: DTC P176A VEHICLE DYNAMICS CONTROL SYSTEM ERROR

DIAGNOSIS START CONDITION:
When all the following conditions are established
- DTC P0606 and U code are not recorded.
- Engine speed is 400 rpm or more

Malfunction judgment criteria:
When any of the following conditions is established
- Continuous time of VDC sensor failure status is 0.1 second or more
- Continuous time of VDC wheel speed sensor failure status is 0.1 second or more

TROUBLE SYMPTOM:
- Center differential does not operate.
- An oversteer tendency will become apparent.

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of VDC system using the Subaru Select Monitor.	Is DTC of VDC system displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	System is currently normal.

D: DTC P1875 CIRCUIT OF CENTER DIFF

DIAGNOSIS START CONDITION:

- Overcurrent detection (short circuit, etc.)
  Always
- Zero current stuck detection (open circuit, defective power supply, etc.)
  Center differential indicator current ≥ 0.48 A

DIAGNOSIS:

Center differential output signal circuit is open or shorted.

TROUBLE SYMPTOM:

- Center differential does not operate.
- The lock ratio of the center differential does not change, or malfunction occurs.
- A tight corner braking symptom occurs.
- An oversteer tendency will become apparent.
- A tendency to understeer occurs during high speed cornering.

WIRING DIAGRAM:

Drivers control center differential control system <Ref. to WI-160, Driver's Control Center Differential Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.**	Is a DTC other than DTC P1875 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK HARNESS BETWEEN DCCD CONTROL MODULE AND TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the DCCD control module connector. 3) Disconnect the transmission harness connector and the bulk harness connector. 4) Measure the resistance of harness between DCCD control module connector and transmission harness connector. ***Connector & terminal*** ***(B380) No. 15 — (B128) No. 1:*** ***(B380) No. 32 — (B128) No. 4:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the bulk harness open circuit between DCCD control module and transmission harness.
3	**CHECK HARNESS BETWEEN DCCD CONTROL MODULE AND TRANSMISSION HARNESS.** Measure the resistance between DCCD control module connector and chassis ground. ***Connector & terminal*** ***(B380) No. 15 — Chassis ground:*** ***(B380) No. 32 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the bulk harness short circuit between DCCD control module and transmission harness.
4	**CHECK CENTER DIFFERENTIAL.** Measure the resistance between transmission harness connector terminals. ***Connector & terminal*** ***(T9) No. 1 — No. 4:***	Is the resistance 1.2 — 2.5 Ω?	Go to step **5**.	Replace the center differential. <Ref. to 6MT(TY85)-56, Center Differential.>
5	**CHECK OUTPUT SIGNAL OF DCCD CONTROL MODULE.** 1) Connect all harness connectors. 2) Turn the ignition switch to ON. 3) Release the parking brake. 4) Press the mode change switch to enter the manual mode. 5) Press the C.DIFF +/– switch to enter the lock position. 6) Measure the voltage between DCCD control module connectors. ***Connector & terminal*** ***(B380) No. 15 (+) — No. 32 (–):***	Is the voltage 5.5 — 8.0 V?	Go to step **6**.	Go to step **7**.
6	**CHECK OUTPUT SIGNAL OF DCCD CONTROL MODULE.** 1) Move the C.DIFF +/– switch from the differential lock position to the differential free position. 2) Read the voltage between DCCD control module connectors. ***Connector & terminal*** ***(B380) No. 15 (+) — No. 32 (–):***	Does the voltage drop in stages according to the DCCD manual mode display?	Circuit is currently operating properly.	Go to step **7**.

	Step	Check	Yes	No
7	**CHECK FUSE (M/B NO. 12).** 1) Turn the ignition switch to OFF. 2) Remove the fuse (M/B No. 12).	Is the fuse (M/B No. 12) blown out?	Replace the fuse (M/B No. 12). If the new fuse (M/B No. 12) has blown out easily, check for the short circuit to chassis ground of harness between fuse (M/B No. 12) and DCCD control module, or between fuse (M/B No. 12) and relay.	Go to step **8**.
8	**CHECK POWER SUPPLY CIRCUIT OF DCCD RELAY.** 1) Install the fuse. 2) Turn the ignition switch to ON. 3) Measure the voltage between DCCD control module connector and chassis ground. ***Connector & terminal*** ***(B380) No. 13 (+) — Chassis ground (–):*** ***(B380) No. 14 (+) — Chassis ground (–):***	Is the voltage 8 V or more?	Go to step **17**.	Go to step **9**.
9	**CHECK POWER SUPPLY CIRCUIT OF DCCD RELAY.** 1) Turn the ignition switch to OFF. 2) Disconnect the DCCD relay harness connector. 3) Measure the voltage between DCCD relay harness connector and chassis ground. ***Connector & terminal*** ***(B220) No. 22 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **10**.	Repair the open or short circuit between fuse (M/B No. 12), DCCD relay, and battery.
10	**CHECK IGNITION POWER SUPPLY CIRCUIT OF DCCD RELAY.** 1) Turn the ignition switch to ON. 2) Measure the voltage between DCCD relay and chassis ground. ***Connector & terminal*** ***(B220) No. 20 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **11**.	Repair the open circuit between fuse (F/B No. 12), DCCD relay, and battery.
11	**CHECK HARNESS BETWEEN DCCD CONTROL MODULE AND DCCD RELAY.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from DCCD control module. 3) Measure resistance of the harness between DCCD control module connector and DCCD relay connector. ***Connector & terminal*** ***(B380) No. 7 — (B220) No. 18:*** ***(B380) No. 13 — (B220) No. 21:*** ***(B380) No. 14 — (B220) No. 21:***	Is the resistance less than 1 Ω?	Go to step **12**.	Repair the open circuit of harness between DCCD control module connector and DCCD relay connector.
12	**CHECK HARNESS BETWEEN DCCD CONTROL MODULE AND DCCD RELAY.** Measure the resistance of harness between DCCD control module connector and chassis ground. ***Connector & terminal*** ***(B380) No. 7 — Chassis ground:*** ***(B380) No. 13 — Chassis ground:*** ***(B380) No. 14 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **13**.	Repair the short circuit of harness between DCCD control module connector and DCCD relay connector.

	Step	Check	Yes	No
13	**CHECK DCCD RELAY.** Measure the resistance between DCCD relay terminals. ***Connector & terminal*** ***(B220) No. 21 — No. 22:***	Is the resistance 1 MΩ or more?	Go to step **14**.	Replace the DCCD relay.
14	**CHECK DCCD RELAY.** 1) Connect the battery positive lead to terminal No. 20. 2) Connect the battery negative lead to terminal No. 18. 3) Measure the resistance between DCCD relay terminals. ***Connector & terminal*** ***(B220) No. 21 — No. 22:***	Is the resistance less than 1 Ω?	Go to step **15**.	Replace the DCCD relay.
15	**CHECK DCCD CONTROL MODULE RELAY DRIVE CIRCUIT.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Measure the voltage between DCCD control module and chassis ground. ***Connector & terminal*** ***(B380) No. 7 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **16**.	Go to step **19**.
16	**CHECK IGNITION POWER SUPPLY CIRCUIT OF DCCD CONTROL MODULE.** Measure the voltage between DCCD control module and chassis ground. ***Connector & terminal*** ***(B380) No. 13 (+) — Chassis ground (–):*** ***(B380) No. 14 (+) — Chassis ground (–):***	Is the voltage 8 V or more?	Go to step **17**.	Go to step **19**.
17	**CHECK CENTER DIFFERENTIAL.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON. 4) Run the Subaru Select Monitor. 5) Press the mode change switch to enter the manual mode. 6) Release the parking brake. 7) Press the C.DIFF +/– switch to enter the lock position. 8) Using the Subaru Select Monitor, read the data of «C-Diff. Indicate Current» and «C-Diff. Real Current».	Are «C-Diff. Indicate Current» and «C-Diff. Real Current» both approximately 3.6 — 4.0 A?	Go to step **18**.	Go to step **19**.
18	**CHECK CENTER DIFFERENTIAL.** 1) Operate the C.DIFF +/– switch so that the reading of «C-Diff. Indicate Current» becomes 1.6 A using the Subaru Select Monitor. 2) Read the data of the «C-Diff. Real Current» using the Subaru Select Monitor.	Is «C-Diff. Real Current» about the same as «C-Diff. Indicate Current»?	Go to step **20**.	Go to step **19**.
19	**CHECK POOR CONTACT OF HARNESS CONNECTORS.**	Is there poor contact of the harness connector?	Repair the poor contact.	Replace the DCCD control module. <Ref. to 6MT(TY85)-36, Driver's Control Center Differential Control Module.>

Step		Check	Yes	No
20	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to 6MT(diag)-10, Clear Memory Mode.> 2) Read the DTC using the Select Monitor. <Ref. to 6MT(diag)-8, Read Diagnostic Trouble Code (DTC).>	Is P1875 displayed?	Replace the DCCD control module. <Ref. to 6MT(TY85)-36, Driver's Control Center Differential Control Module.>	Go to step **21**.
21	**CHECK DTC.**	Are DTCs other than P1875 displayed?	Perform the diagnosis according to DTC.	The center differential circuit is currently operating properly.

Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

L: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

M: DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

N: DTC U1201 CAN-HS COUNTER ABNORMAL

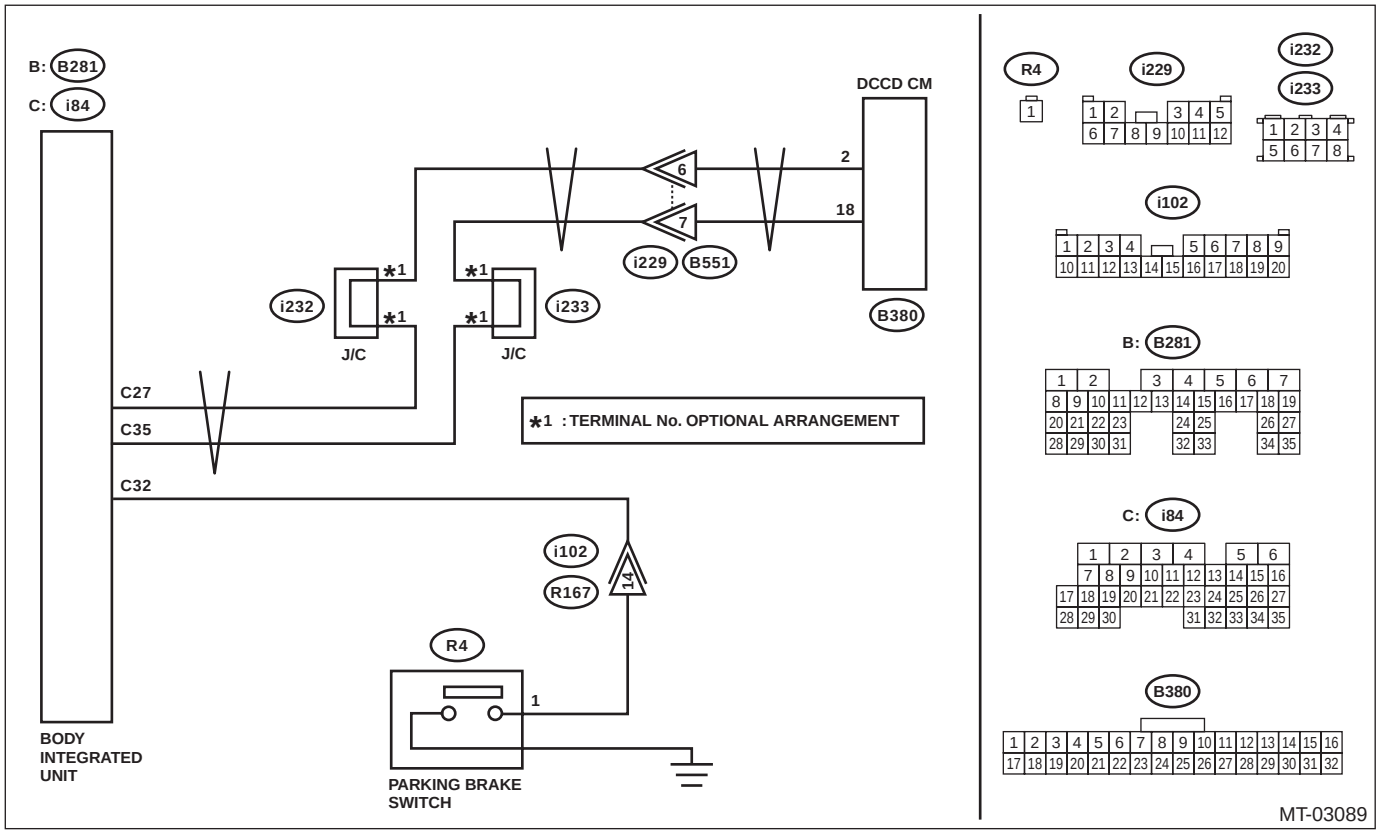
NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

15.Diagnostic Procedure without Diagnostic Trouble Code (DTC)

A: CHECK PARKING BRAKE SWITCH

DIAGNOSIS:
Input signal circuit of parking brake switch is open or shorted.
TROUBLE SYMPTOM:
- It does not show a differential free tendency even when the parking brake switch is applied.
- Remains differential free even when the parking brake switch is released.

WIRING DIAGRAM:
Drivers control center differential control system <Ref. to WI-160, Driver's Control Center Differential Control System.>



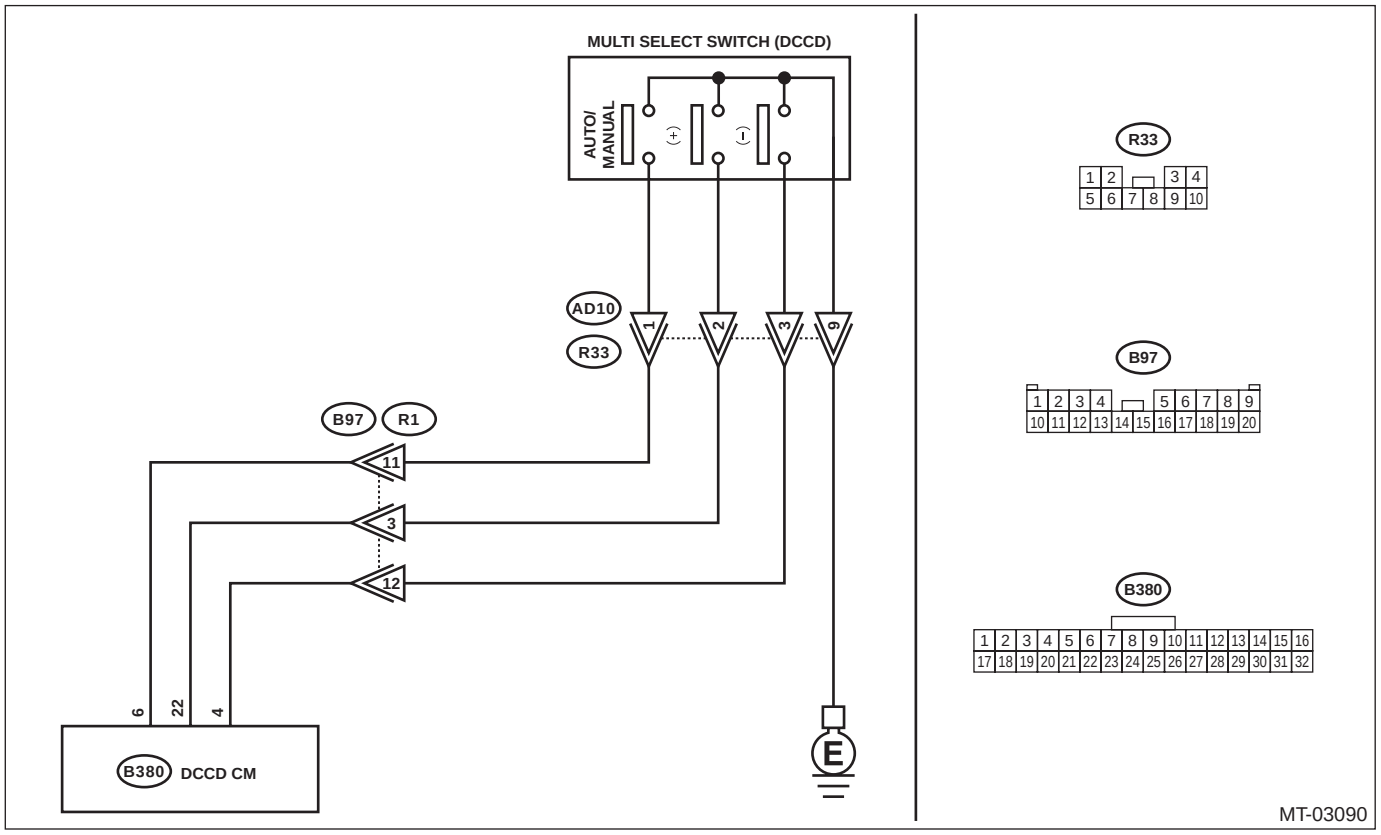
Step		Check	Yes	No
1	**CHECK IGNITION CIRCUIT OF DCCD CONTROL MODULE.** 1) Connect the Subaru Select Monitor to the vehicle. 2) Turn the ignition switch to ON. 3) Read the data of «Battery voltage» using Subaru Select Monitor.	Is the voltage 10 V or more?	Go to step **2**.	Repair the open circuit of harness between fuse (F/B No. 12) and DCCD control module, or between fuse (F/B No. 12) and battery.
2	**CHECK DTC.**	Is DTC P0606 or U code displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DCCD CONTROL MODULE.** 1) Operate the parking brake lever. 2) Read the data of «Parking Position Switch» using Subaru Select Monitor.	Is the ON/OFF normally detected?	The parking brake switch circuit is currently operating properly.	Go to step **4**.
4	**CHECK BODY INTEGRATED UNIT.** 1) Operate the parking brake lever. 2) Read the data of «Parking Position Switch» using Subaru Select Monitor.	Is the ON/OFF normally detected?	Go to step **7**.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND PARKING BRAKE SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit. 3) Check for open circuit, short circuit to battery and short circuit to ground between the body integrated unit connector and parking brake switch connector. ***Connector & terminal*** ***(i84) No. 32 — (R4) No. 1:***	Is there any fault in the harness?	Repair or replace the harness.	Go to step **6**.
6	**CHECK PARKING BRAKE SWITCH.** Measure the resistance between parking brake switch terminals.	Is the resistance less than 10 Ω when the parking brake lever is pulled? Is the resistance 1 MΩ or more when the parking brake lever is lowered?	Replace the body integrated unit.	Replace the parking brake switch.
7	**CHECK DTC.** Read the DTC of the LAN system using the Subaru Select Monitor.	Is DTC of CAN communication displayed?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-70, List of Diagnostic Trouble Code (DTC).>	Replace the DCCD control module. <Ref. to 6MT(TY85)-36, Driver's Control Center Differential Control Module.>

B: CHECK DCCD MULTI SELECT SWITCH

DIAGNOSIS:
Input signal of DCCD multi select switch is open or shorted.
TROUBLE SYMPTOM:
- Does not enter the manual mode or auto mode when the mode change switch is pressed.
- Mode does not change in AUTO mode.
- Initial torque can not be changed in manual mode.

NOTE:
Other switch input can not be received if either mode change switch or C.DIFF +/– switch is stuck ON.
WIRING DIAGRAM:
Drivers control center differential control system <Ref. to WI-160, Driver's Control Center Differential Control System.>



Step		Check	Yes	No
1	**CHECK DCCD CONTROL MODULE.** 1) Display the current data «AUTO/MANUAL Mode Switch» of DCCD control module, using Subaru Select Monitor. 2) Press the manual mode change switch.	Does the data change from OFF/ON?	Go to step **2**.	Go to step **4**.
2	**CHECK DCCD CONTROL MODULE.** 1) Display the current data «Up Switch» of DCCD control module, using Subaru Select Monitor. 2) Push the multi select switch toward plus.	Does the data change from OFF/ON?	Go to step **3**.	Go to step **5**.
3	**CHECK DCCD CONTROL MODULE.** 1) Display the current data «Down Switch» of DCCD control module, using Subaru Select Monitor. 2) Push the multi select switch toward minus.	Does the data change from OFF/ON?	The switch circuit is normal.	Go to step **6**.

	Step	Check	Yes	No
4	**CHECK MODE CHANGE SWITCH.** 1) Disconnect the multi select switch connector. 2) Press the mode change switch. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(AD10) No. 1 — No. 9:***	Is the resistance less than 1 Ω?	Go to step **7**.	Replace the multi select switch. <Ref. to FU(STI)-55, SI-DRIVE (SUBARU Intelligent Drive) Selector.>
5	**CHECK MULTI SELECT SWITCH.** 1) Push the multi select switch toward plus. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(AD10) No. 2 — No. 9:***	Is the resistance less than 1 Ω?	Go to step **7**.	Replace the multi select switch. <Ref. to FU(STI)-55, SI-DRIVE (SUBARU Intelligent Drive) Selector.>
6	**CHECK MULTI SELECT SWITCH.** 1) Push the multi select switch toward minus. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(AD10) No. 3 — No. 9:***	Is the resistance less than 1 Ω?	Go to step **7**.	Replace the multi select switch. <Ref. to FU(STI)-55, SI-DRIVE (SUBARU Intelligent Drive) Selector.>
7	**CHECK HARNESS.** Use a tester to measure the resistance between the multi select switch harness connector and chassis ground. ***Connector & terminal*** ***(R33) No. 9 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair or replace the ground circuit.
8	**CHECK HARNESS.** 1) Disconnect the connector from DCCD control module. 2) Use a tester to measure the resistance between the DCCD control module and the multi select switch. ***Connector & terminal*** ***(R33) No. 1 — (B380) No. 6:*** ***(R33) No. 2 — (B380) No. 22:*** ***(R33) No. 3 — (B380) No. 4:***	Is the resistance less than 1 Ω?	Go to step **9**.	Repair or replace the open circuit of the harness.
9	**CHECK HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R33) No. 1 — (R33) No. 2:*** ***(R33) No. 1 — (R33) No. 3:*** ***(R33) No. 2 — (R33) No. 3:***	Is the resistance 1 MΩ or more?	Go to step **10**.	Repair or replace the short of harness.
10	**CHECK HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R33) No. 1 — Chassis ground:*** ***(R33) No. 2 — Chassis ground:*** ***(R33) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the DCCD control module. <Ref. to 6MT(TY85)-36, Driver's Control Center Differential Control Module.>	Repair or replace the short of harness.

16.Diagnostics with Phenomenon

A: INSPECTION

Symptoms	Faulty parts
A tight corner braking symptom occurs.	• VDCCM&H/U • ABS wheel speed sensor • Yaw rate & G sensor • Steering angle sensor • CAN communication signal • Center differential • C.DIFF +/– switch • Mode change switch • Tire/Wheel • DCCD control module • ECM • Body integrated unit
An oversteer tendency will become apparent.	• Throttle position sensor • ECM • C.DIFF +/– switch • Mode change switch • Tire/Wheel • DCCD control module • Center differential • DCCD relay • Rear differential oil temperature sensor • Neutral position switch • Steering angle sensor • VDCCM&H/U • CAN communication signal • Body integrated unit • Yaw rate & G sensor
A tendency to understeer occurs during high speed cornering.	• VDCCM&H/U • ABS wheel speed sensor • CAN communication signal • Throttle position sensor • Yaw rate & G sensor • Center differential • ECM • Engine speed signal • Neutral position switch • Steering angle sensor • Body integrated unit
Torque characteristics of the center differential do not change.	• C.DIFF +/– switch • DCCD relay • Center differential • DCCD control module
DCCD indicator does not operate. (is not displayed)	• Combination meter • DCCD control module
DCCD indicator does not operate even when the C.DIFF +/– switch is operated. (Displayed but does not change. or, the display blinks.)	• C.DIFF +/– switch • Combination meter • DCCD control module
DCCD AUTO mode does not operate even when the C.DIFF +/– switch is operated. (Displayed but does not change.)	• Mode change switch • Combination meter • DCCD control module • Body integrated unit • CAN communication signal

Symptoms	Faulty parts
DCCD AUTO mode display does not illuminate.	• Mode change switch • Combination meter • DCCD control module • Body integrated unit • CAN communication signal
Will not become differential free or remains differential free.	• Parking brake switch • Center differential • Mode change switch • C.DIFF +/– switch • Rear differential • Tire/Wheel • DCCD relay • Rear differential oil temperature sensor • DCCD control module • ECM • Body integrated unit • VDCCM&H/U • Yaw rate & G sensor • CAN communication signal
ABS does not operate.	• VDCCM&H/U • CAN communication signal • Stop light switch • DCCD control module • ECM • Body integrated unit • Yaw rate & G sensor
Will not lock the differential or the differential is continually locked.	• VDCCM&H/U • ABS wheel speed sensor • CAN communication signal • Center differential • C.DIFF +/– switch • Mode change switch • Tire/Wheel • DCCD control module • DCCD relay • ECM • Body integrated unit • Yaw rate & G sensor

1. General Description

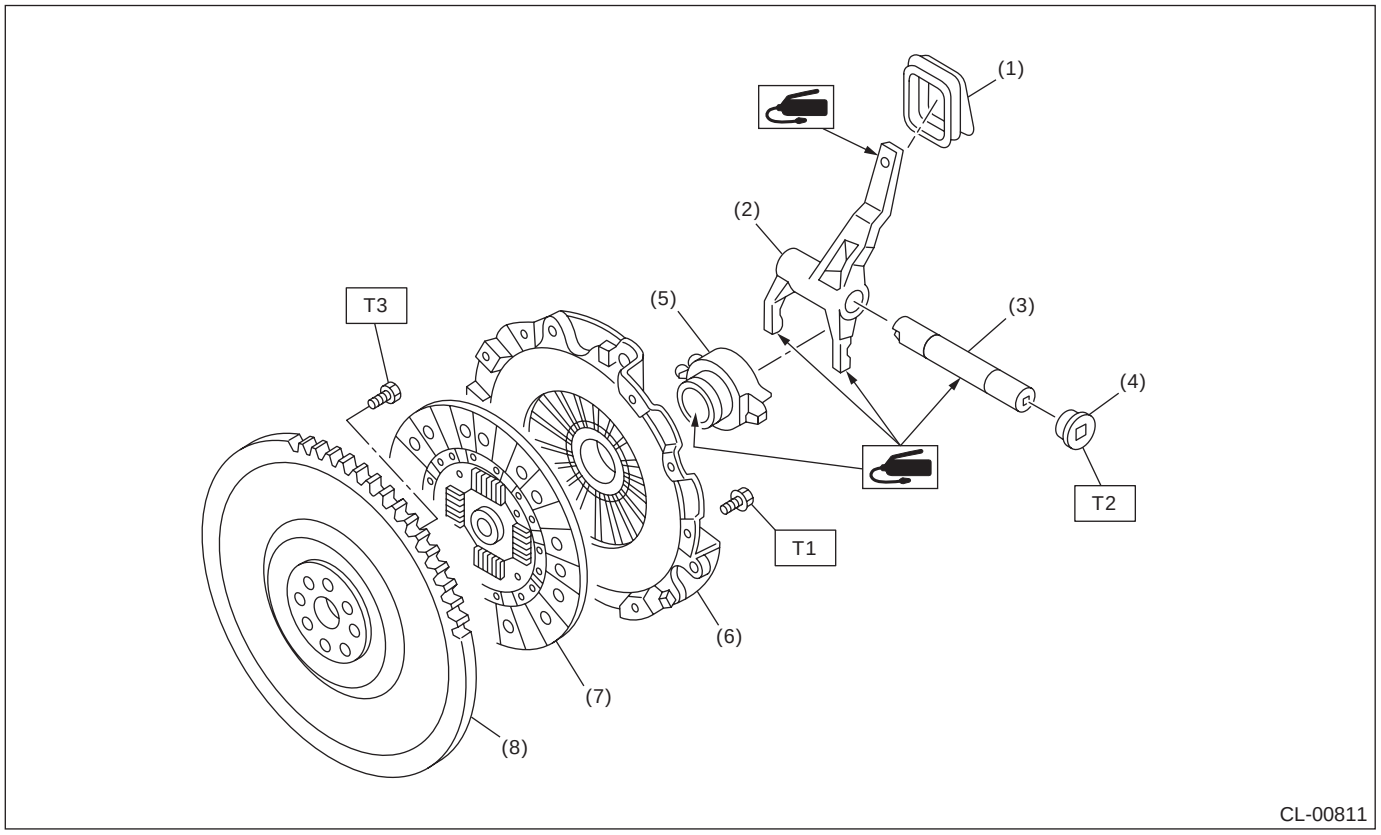
A: SPECIFICATION

Model			STI	Except for STI
Transmission type			6MT	6MT
Clutch cover	Type		Pull type	Push type
	Diaphragm set load N (kgf, lbf)		9,120 (930, 2051)	7,450 (760, 1,675)
Clutch disc	Facing material		Woven (non-asbestos)	
	O.D. × I.D. × Thickness mm (in)	Clutch cover side	240 × 160 × 3.5 (9.45 × 6.30 × 0.138)	230 × 155 × 3.5 (9.06 × 6.10 × 0.138)
		Flywheel side	240 × 160 × 3.2 (9.45 × 6.30 × 0.126)	230 × 155 × 3.2 (9.06 × 6.10 × 0.126)
	Spline outer diameter mm (in)		25.2 (0.992), (number of teeth: 24)	
	Depth of rivet head mm (in)	Clutch cover side	1.65 — 2.25 (0.065 — 0.089)	
		Flywheel side	1.35 — 1.95 (0.053 — 0.077)	
		Limit of sinking	0.8 (0.031)	
	Deflection limit mm (in)		0.7 (0.028) at R = 115 (4.53)	0.7 (0.028) at R = 110 (4.33)
Release bearing			Grease-packed self-aligning	
Clutch pedal	Full stroke mm (in)		130 — 135 (5.12 — 5.31)	135 — 140 (5.31 — 5.51)
	Free play mm (in)		5 — 11 (0.20 — 0.43)	
Flywheel	Type		Conventional	Flexible

B: COMPONENT

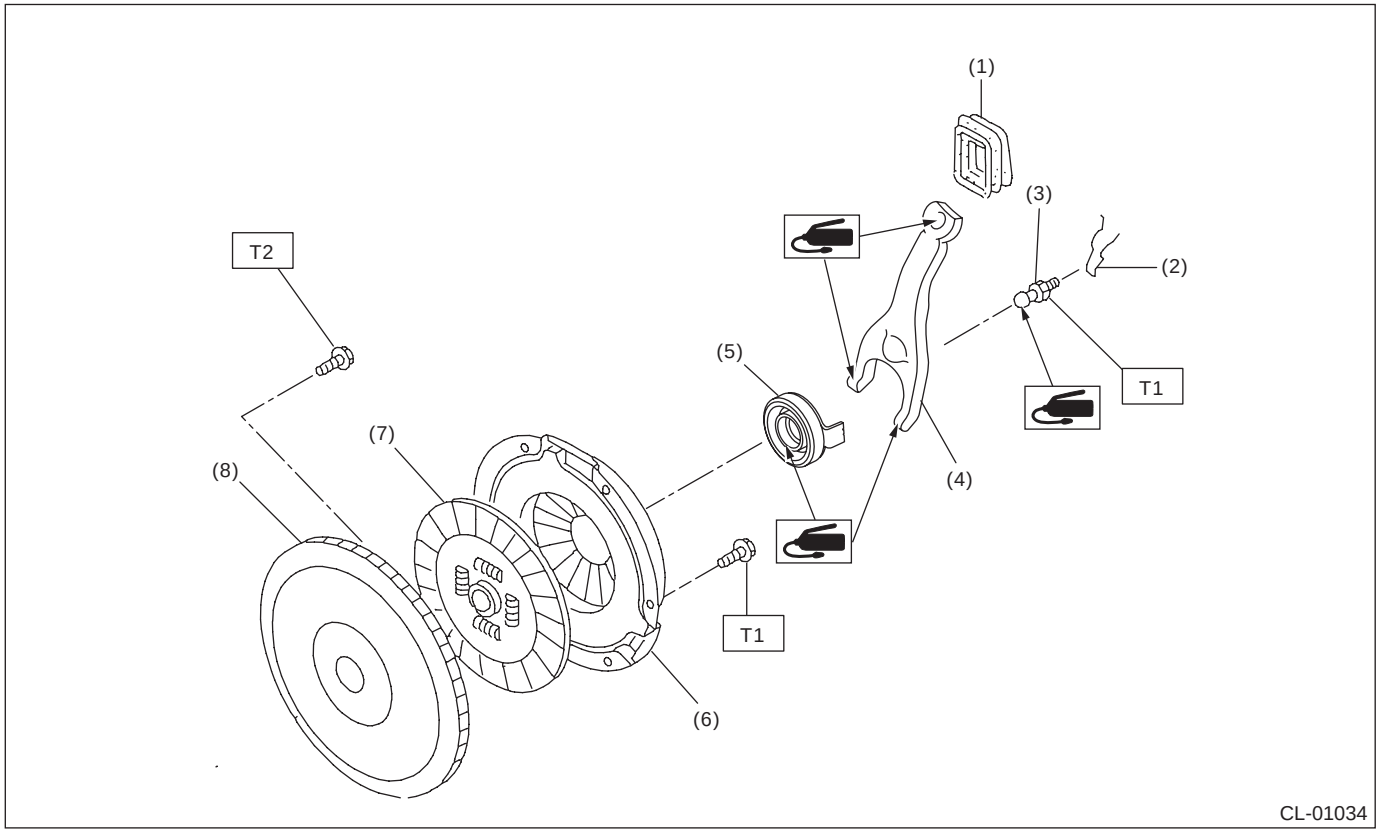
1. CLUTCH ASSEMBLY

- STI model



(1)	Dust cover	(5)	Release bearing	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Release lever	(6)	Clutch cover	***T1: 16 (1.6, 11.8)***
(3)	Clutch release lever shaft	(7)	Clutch disc	***T2: 48 (4.9, 35.4)***
(4)	Plug	(8)	Conventional flywheel	***T3: 75 (7.6, 55.3)***

- Except for STI model



(1)	Dust cover	(5)	Release bearing
(2)	Lever spring	(6)	Clutch cover
(3)	Pivot	(7)	Clutch disc
(4)	Release lever	(8)	Flywheel

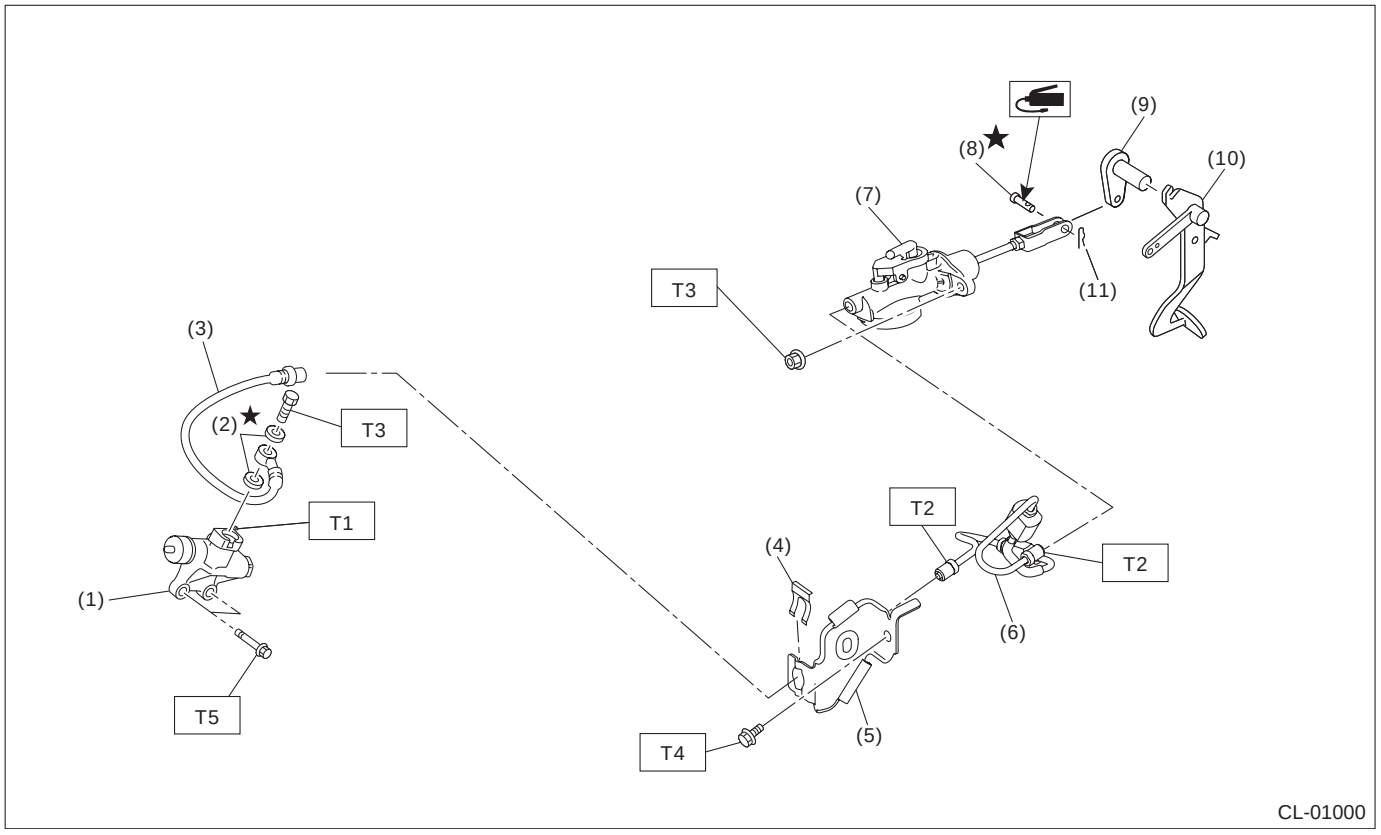
Tightening torque: N·m (kgf-m, ft-lb)

T1: 16 (1.6, 11.8)

T2: <Ref. to CL-16, EXCEPT FOR STI MODEL, INSTALLATION, Flywheel.>

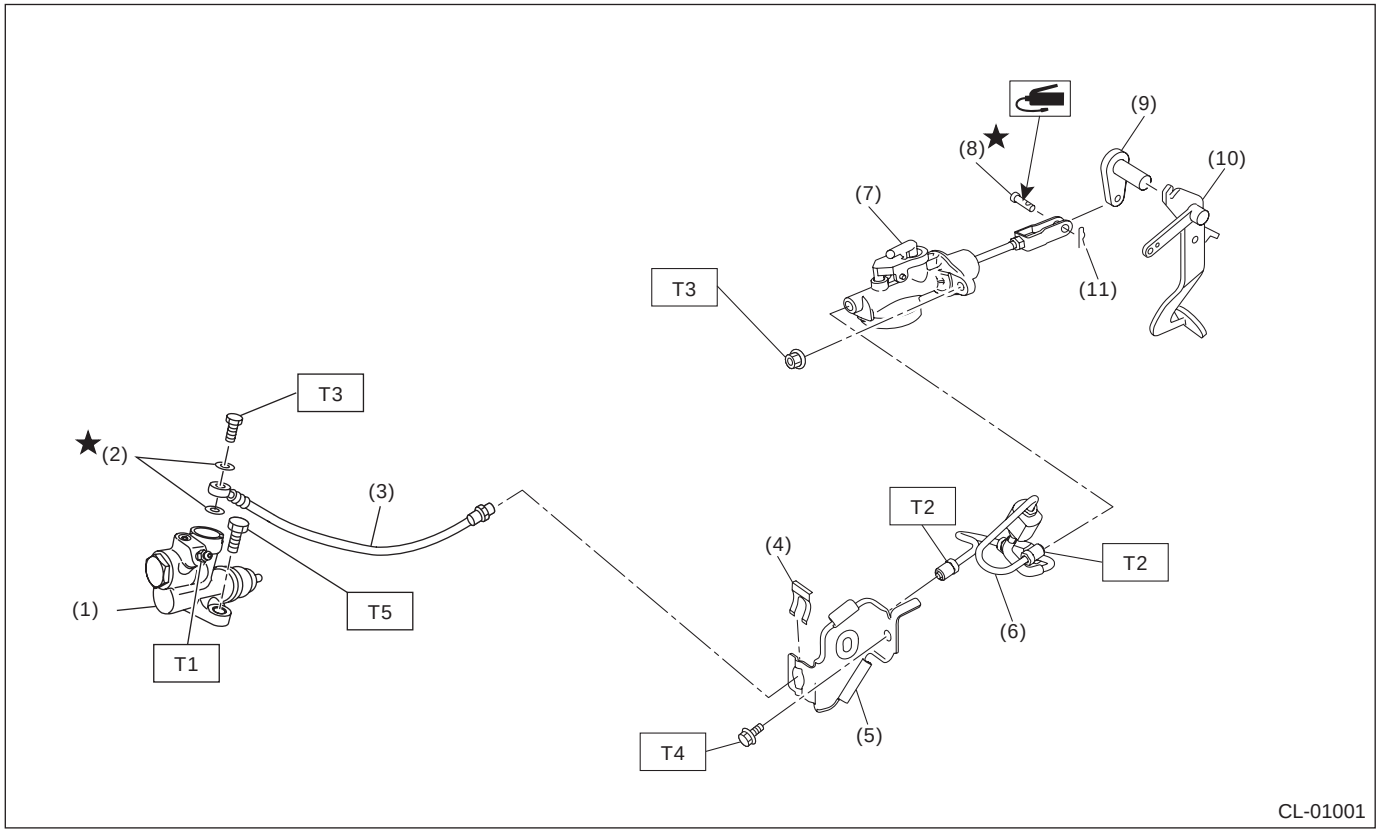
2. CLUTCH PIPE AND HOSE

- STI model



(1)	Operating cylinder	(7)	Master cylinder ASSY	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Washer	(8)	Clevis pin	***T1: 7.8 (0.8, 5.8)***
(3)	Clutch hose	(9)	Lever	***T2: 15 (1.5, 11.1)***
(4)	Clip	(10)	Pedal	***T3: 18 (1.8, 13.3)***
(5)	Clutch bracket	(11)	Snap pin	***T4: 25 (2.5, 18.4)***
(6)	Clutch pipe			***T5: 41 (4.2, 30.2)***

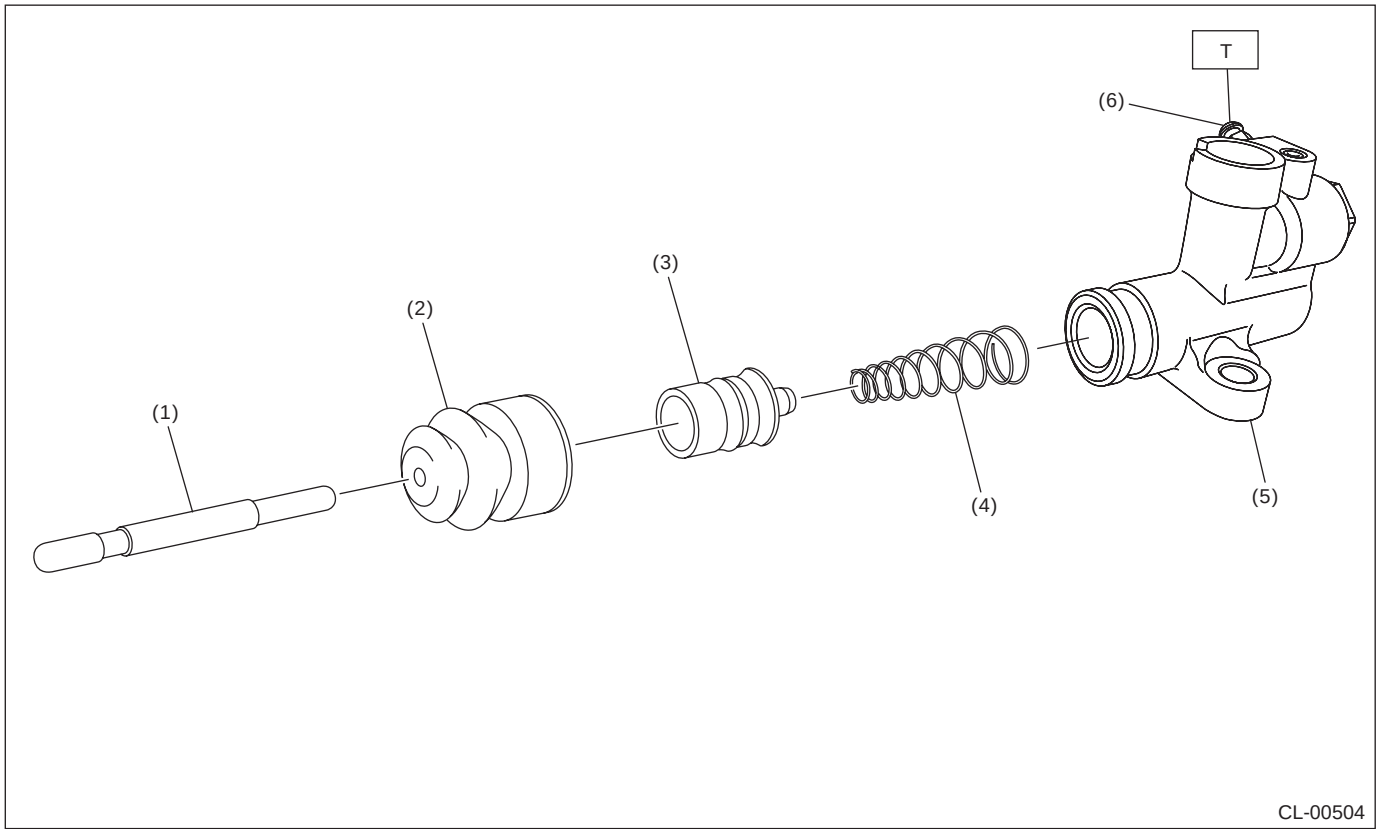
- Except for STI model



(1)	Operating cylinder	(7)	Master cylinder ASSY	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Washer	(8)	Clevis pin	***T1: 7.8 (0.8, 5.8)***
(3)	Clutch hose	(9)	Lever	***T2: 15 (1.5, 11.1)***
(4)	Clip	(10)	Pedal	***T3: 18 (1.8, 13.3)***
(5)	Clutch bracket	(11)	Snap pin	***T4: 25 (2.5, 18.4)***
(6)	Clutch pipe			***T5: 37 (3.8, 27.3)***

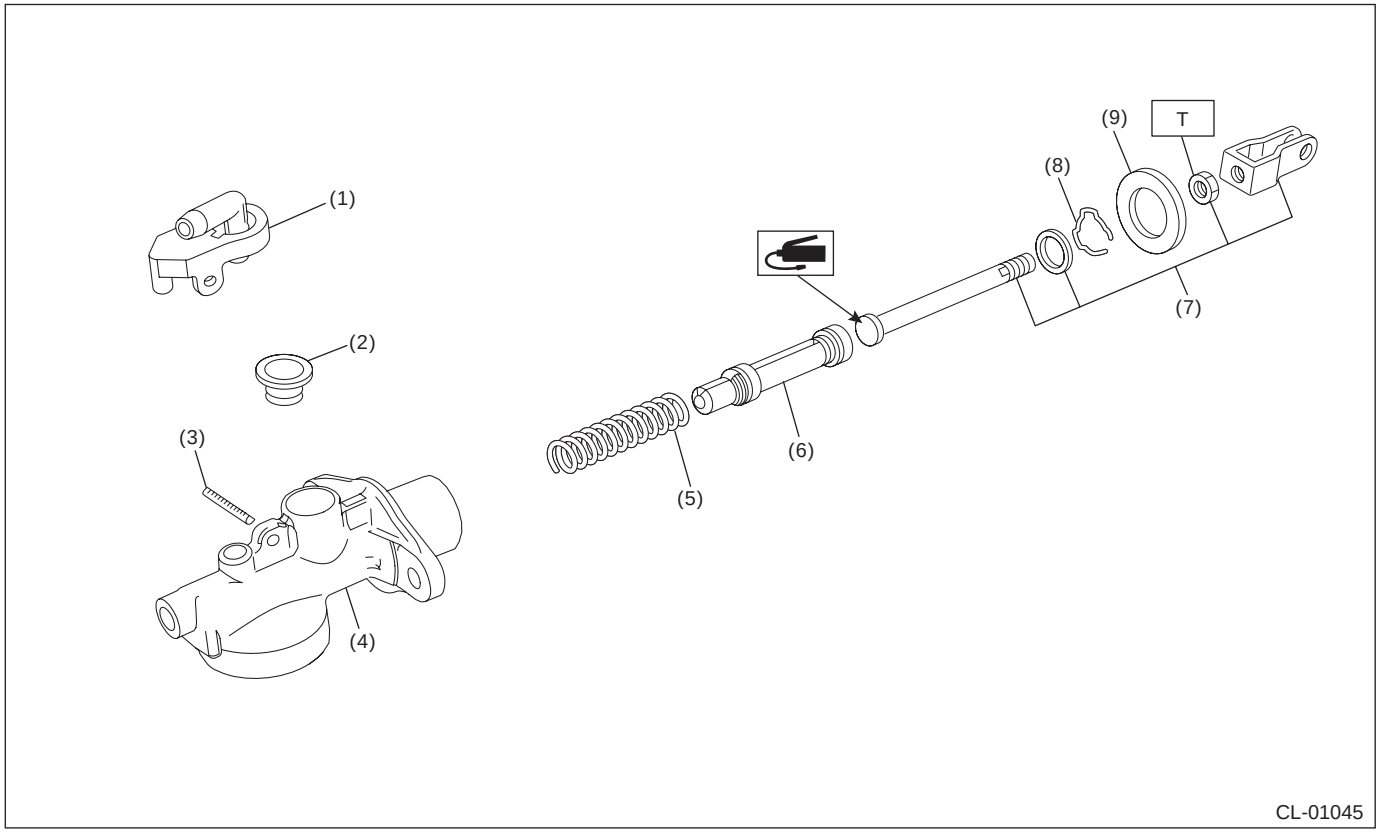
3. OPERATING CYLINDER

- Except for STI model



(1)	Push rod	(4)	Piston spring	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Boot	(5)	Operating cylinder	***T: 7.8 (0.8, 5.8)***
(3)	Piston	(6)	Breather screw	

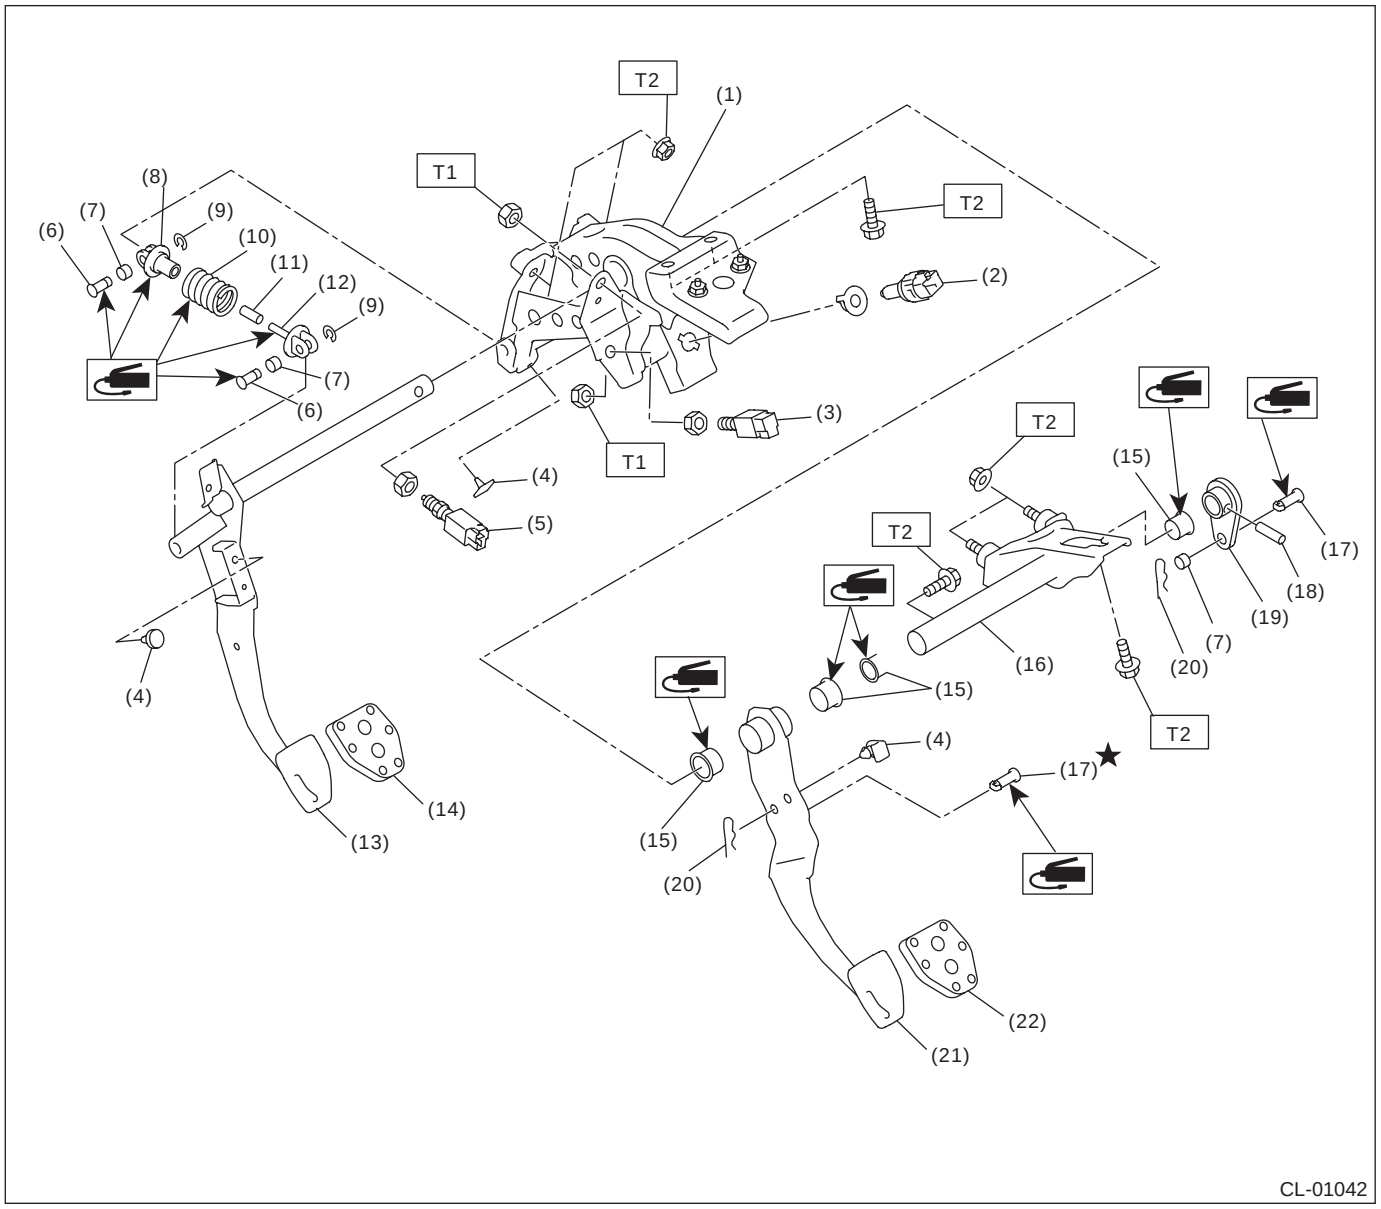
4. MASTER CYLINDER



(1) Nipple
(2) Oil seal
(3) Straight pin
(4) Master cylinder
(5) Return spring
(6) Piston
(7) Push rod ASSY
(8) Piston stop ring
(9) Seat

Tightening torque: N·m (kgf-m, ft-lb)
T: 10 (1.0, 7.4)

5. CLUTCH PEDAL



(1) Pedal bracket
(2) Stop light switch
(3) Clutch switch
(4) Stopper
(5) Clutch start switch
(6) Clutch clevis pin
(7) Bushing C
(8) Assist rod B
(9) Clip
(10) Assist spring
(11) Assist bushing
(12) Assist rod A
(13) Clutch pedal
(14) Clutch pedal pad (sport type)
(15) Bushing
(16) Clutch master cylinder bracket
(17) Clevis pin
(18) Spring pin
(19) Lever
(20) Snap pin
(21) Brake pedal
(22) Brake pedal pad (sport type)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.9)
T2: 18 (1.8, 13.3)

C: CAUTION

- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine fluid, grease etc. or equivalent. Do not mix fluid, grease, etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Apply grease onto sliding or revolving surfaces before installation.
- Before installing O-rings or snap rings, apply sufficient amount of fluid to avoid damage and deformation.
- Before securing a part in a vise, place cushioning material such as wood blocks, aluminum plate or cloth between the part and the vise.
- Keep fluid away from the vehicle body. If any fluid contacts the vehicle body, immediately flush the area with water.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498497100	498497100	CRANKSHAFT STOPPER	Used for stopping rotation of the flywheel.
 ST-499747100	499747100	CLUTCH DISC GUIDE	Used for installing the clutch disc to the flywheel.
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for installing and adjusting the clutch start switch.

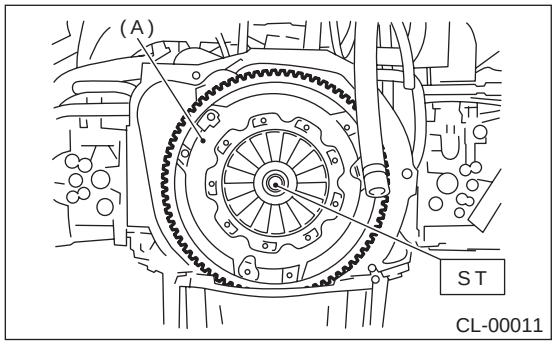
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Dial gauge	Used for measuring clutch disc run-out.
Depth gauge	Used for measuring clutch disc wear.
Angle gauge	Used for installing the flywheel.

2. Clutch Disc and Cover

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to 6MT(TY75)-25, REMOVAL, Manual Transmission Assembly.> <Ref. to 6MT(TY85)-31, REMOVAL, Manual Transmission Assembly.>
2) Attach the ST on the flywheel.
ST 499747100 CLUTCH DISC GUIDE



(A) Clutch cover

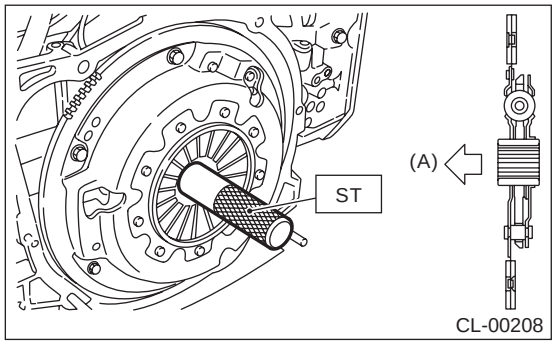
3) Remove the clutch cover and clutch disc.

NOTE:
• Take care not to allow oil to touch the clutch disc face.
• Do not disassemble the clutch cover or clutch disc.

B: INSTALLATION

1) Insert the ST into the clutch disc and attach to the flywheel by inserting the ST end into pilot bearing.

NOTE:
When installing the clutch disc, be careful to attach in the correct direction.
ST 499747100 CLUTCH DISC GUIDE

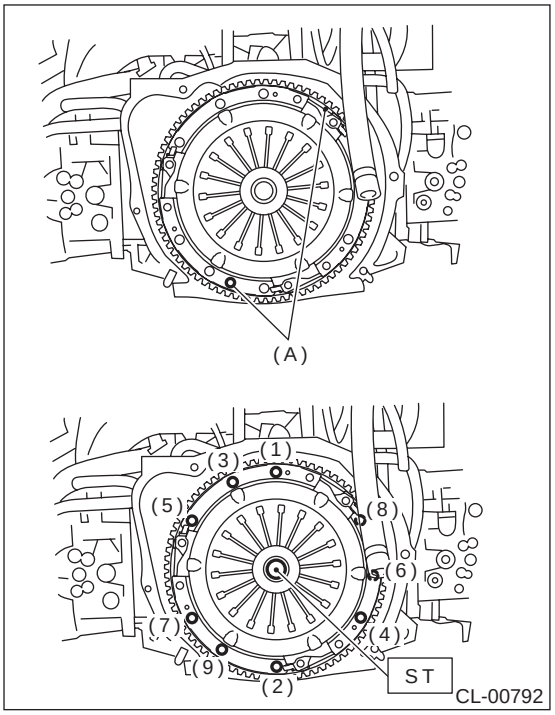


(A) Flywheel side

2) Install the clutch cover to the flywheel and tighten the bolts to the specified torque.

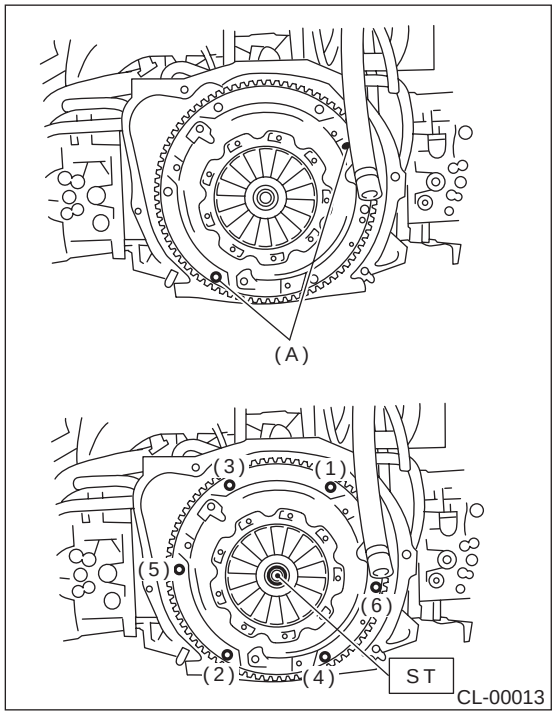
NOTE:
• When installing a clutch cover to the flywheel, position the clutch cover so that the spacing between the unbalance marks (paint mark) on the flywheel and clutch cover is 120° or more apart. (The unbalance mark indicates the direction of residual unbalance.)
• Temporarily tighten the bolts by hand. Each bolt should be tightened to the specified torque in a crisscross order.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)
• STI model



(A) Unbalance mark (paint)

- Except for STI model



(A) Unbalance mark (paint)

3) Remove the ST.
ST 499747100 CLUTCH DISC GUIDE
4) Install the transmission assembly. <Ref. to 6MT(TY75)-30, INSTALLATION, Manual Transmission Assembly.> <Ref. to 6MT(TY85)-33, INSTALLATION, Manual Transmission Assembly.>

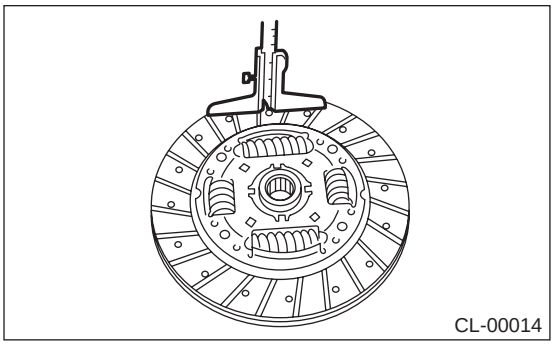
C: INSPECTION

1. CLUTCH DISC

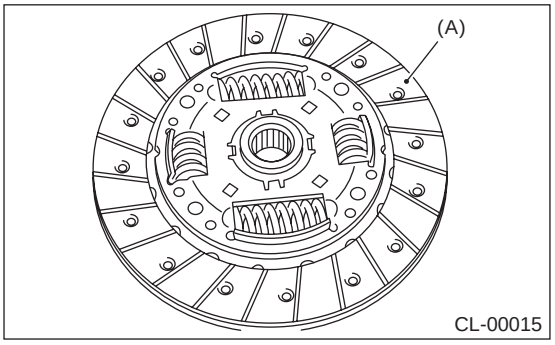
1) Facing wear
Measure the depth from the facing surface to the rivet head. Replace if the face is worn locally or worn down to less than the specified value.

Depth to rivet head:
Limit of sinking
0.8 mm (0.031 in)

NOTE:
Do not wash the clutch disc with any type of cleaning fluid.



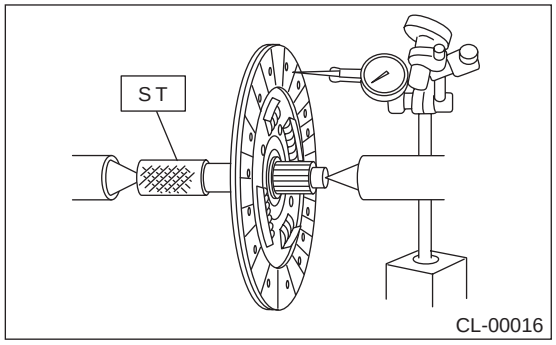
2) Hardened facing
Replace the clutch disc.
3) Oil soakage on facing
Replace the clutch disc and inspect the transmission front oil seal, transmission case mating surface, engine rear oil seal and other locations for oil leakage.



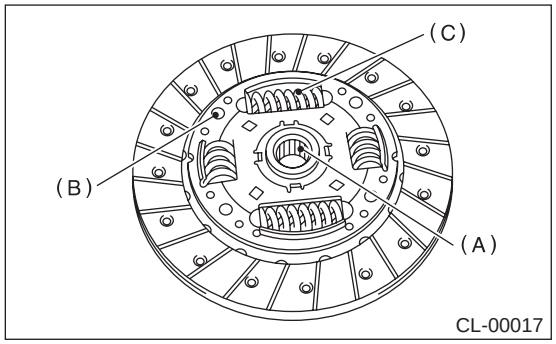
(A) Clutch facing

4) Deflection on facing
If deflection exceeds the specified value at the outer circumference of the facing, replace the clutch disc.
ST 499747100 CLUTCH DISC GUIDE

Limit for deflection:
STI model
0.7 mm (0.028 in) at R = 115 mm (4.53 in)
Except for STI model
0.7 mm (0.028 in) at R = 110 mm (4.33 in)



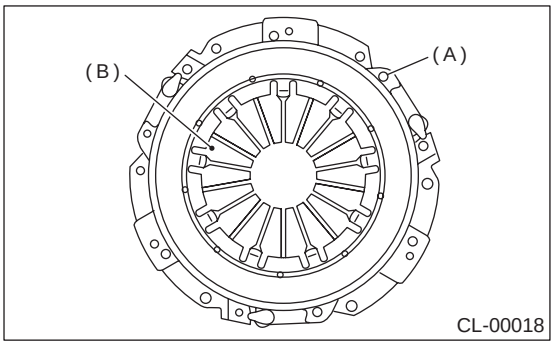
5) If there is spline wear, loose rivets, failed damper springs, etc., replace the clutch disc.



(A) Spline
(B) Rivet
(C) Damper spring

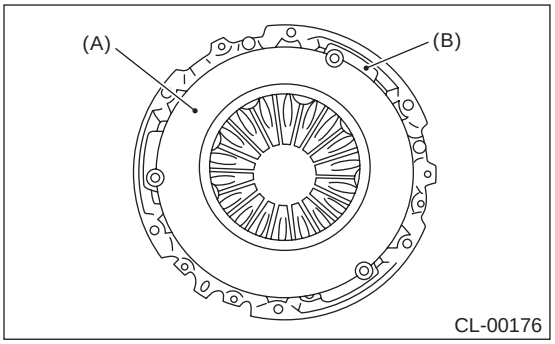
2. CLUTCH COVER

NOTE:
Visually check the following items without disassembling, and replace or repair if defective.
1) Loose thrust rivet
2) Damaged or worn bearing contact area at the center of diaphragm spring



(A) Thrust rivet
(B) Diaphragm spring

3) Damaged or worn disc contact surface of the pressure plate
4) Loose strap plate installation area
5) Worn diaphragm sliding area

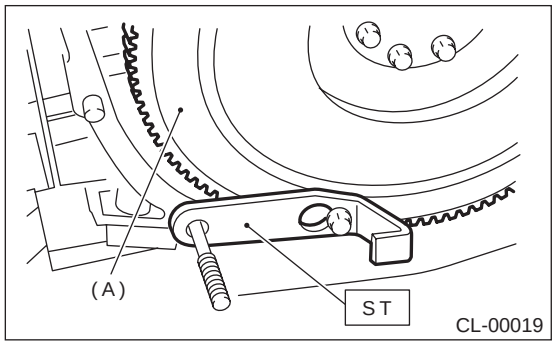


(A) Pressure plate
(B) Strap plate

3. Flywheel

A: REMOVAL

1) Remove the transmission assembly. <Ref. to 6MT(TY75)-25, REMOVAL, Manual Transmission Assembly.> <Ref. to 6MT(TY85)-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the clutch cover and clutch disc. <Ref. to CL-12, REMOVAL, Clutch Disc and Cover.>
3) Using the ST, remove the flywheel.
ST 498497100 CRANKSHAFT STOPPER

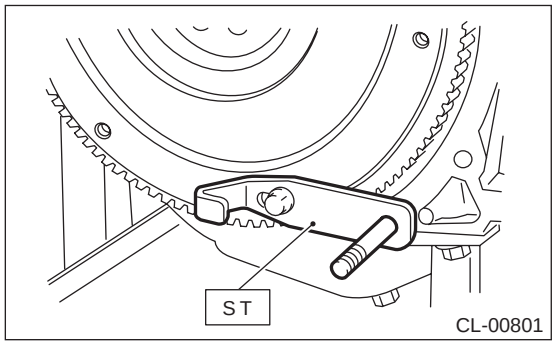


(A) Flywheel

B: INSTALLATION

1. STI MODEL

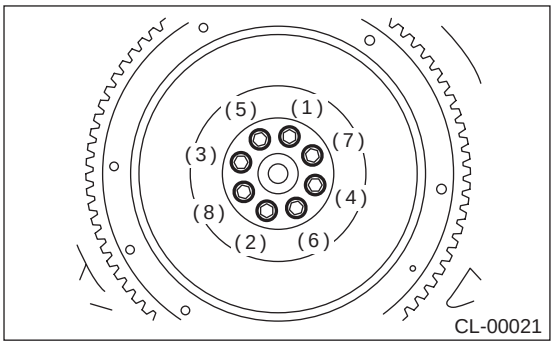
1) Install the flywheel and ST.
ST 498497100 CRANKSHAFT STOPPER



2) Tighten the flywheel mounting bolts to the specified torque.

NOTE:
Tighten the flywheel attachment bolts gradually. Each bolt should be tightened to the specified torque in crisscross order.

Tightening torque:
75 N·m (7.6 kgf-m, 55.3 ft-lb)



3) Install the clutch disc and cover. <Ref. to CL-12, INSTALLATION, Clutch Disc and Cover.>
4) Install the transmission assembly. <Ref. to 6MT(TY75)-30, INSTALLATION, Manual Transmission Assembly.> <Ref. to 6MT(TY85)-33, INSTALLATION, Manual Transmission Assembly.>

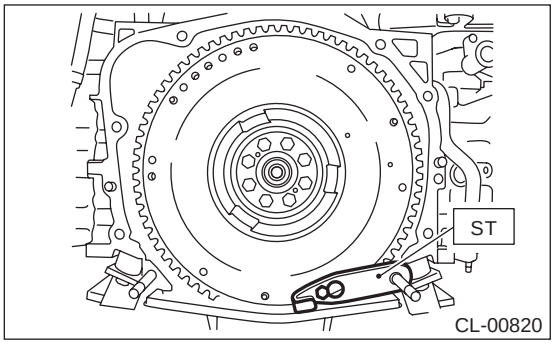
2. EXCEPT FOR STI MODEL

1) Temporarily install the crankshaft position sensor plate and flywheel.

NOTE:
Align the knock pin hole of the crankshaft position sensor plate to the knock pin of the crankshaft to secure the knock pin.

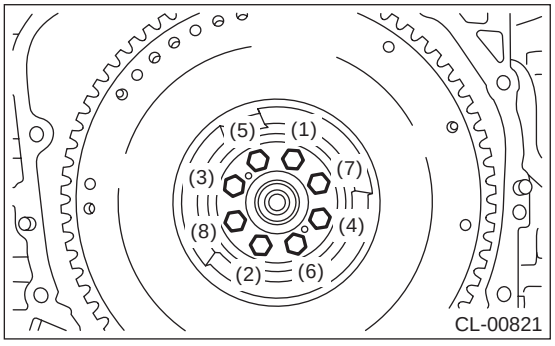
2) Attach the ST.

ST 498497100 CRANKSHAFT STOPPER



3) Tighten the flywheel mounting bolts in two stages.
(1) Tighten the flywheel attachment bolts.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)



(2) While checking the tightening angle with the angle gauge, further tighten the flywheel mounting bolts.

Tightening angle:
30° — 35°

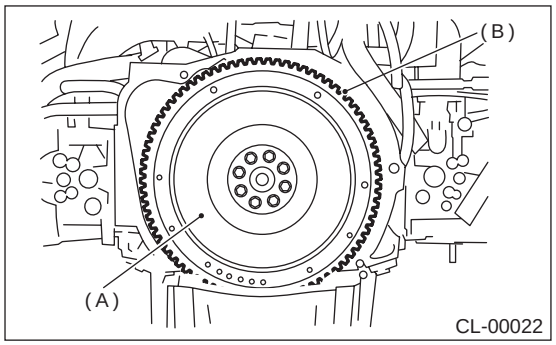
4) Install the clutch disc and cover. <Ref. to CL-12, INSTALLATION, Clutch Disc and Cover.>

5) Install the transmission assembly. <Ref. to 6MT(TY75)-30, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

CAUTION:
Because the center bearing is grease-sealed and is a non-lubrication type, do not wash with gasoline or solvents.

1) If there is damage or defectiveness in the facing sliding surface or ring gear, replace the flywheel.



(A) Flywheel
(B) Ring gear

2) Smoothness of rotation
Rotate the ball bearing while applying pressure in the thrust direction.

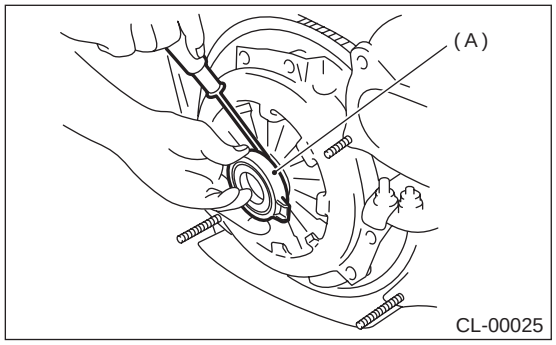
3) If noise or excessive play is noted, replace the flywheel.

4. Release Bearing and Lever

A: REMOVAL

1. STI MODEL

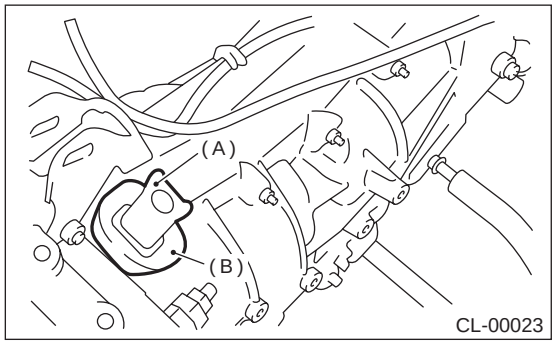
1) Remove the transmission assembly from the vehicle. <Ref. to 6MT(TY85)-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the release lever from the transmission.
3) Using a flat tip screwdriver, remove the release bearing from the clutch cover.



(A) Release bearing

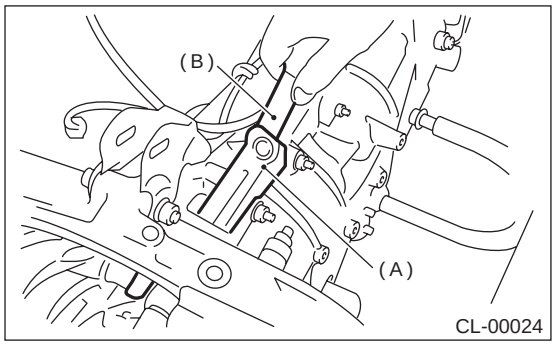
2. EXCEPT FOR STI MODEL

1) Remove the transmission assembly from the vehicle. <Ref. to 6MT(TY75)-25, REMOVAL, Manual Transmission Assembly.>
2) Remove the dust cover.



(A) Release lever
(B) Dust cover

3) Remove the lever spring from the pivot with a screwdriver by accessing it through the clutch housing release lever hole. Then remove the release lever and release bearing as a unit.



(A) Release lever
(B) Screwdriver

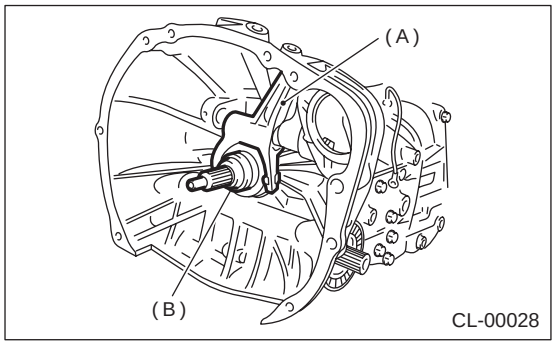
B: INSTALLATION

1. STI MODEL

NOTE:
Apply the specified grease to lubricate to the following points before installation.
- Release lever shaft
- Contact surface of release lever and bearing
- Transmission main shaft spline
- Contact surface of release bearing and clutch release bearing guide

Grease:
NICHIMOLY N-130 or equivalent

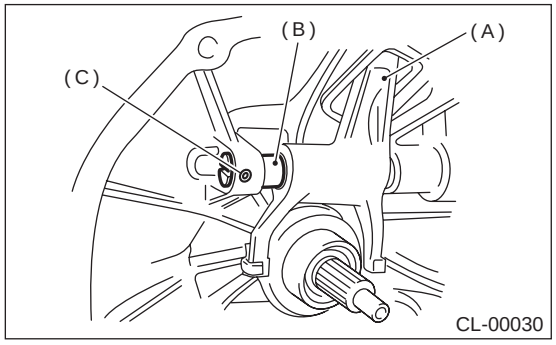
1) Attach the release bearing to the transmission.
2) Insert the release lever into the release bearing tab.



(A) Release lever
(B) Release bearing

3) Insert the release lever shaft into the release lever.

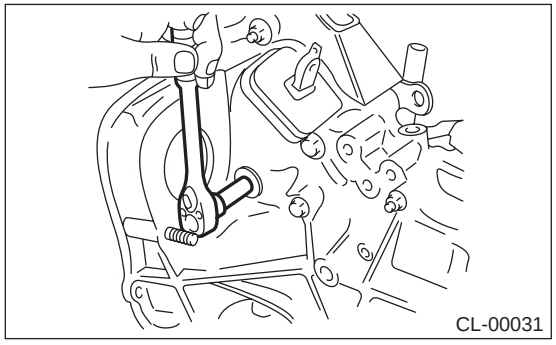
NOTE:
Make sure the cut portion of the release lever shaft comes into contact with the spring pin.



(A) Release lever
(B) Release lever shaft
(C) Spring pin

4) Tighten the plugs.

Tightening torque:
48 N·m (4.9 kgf-m, 35.4 ft-lb)

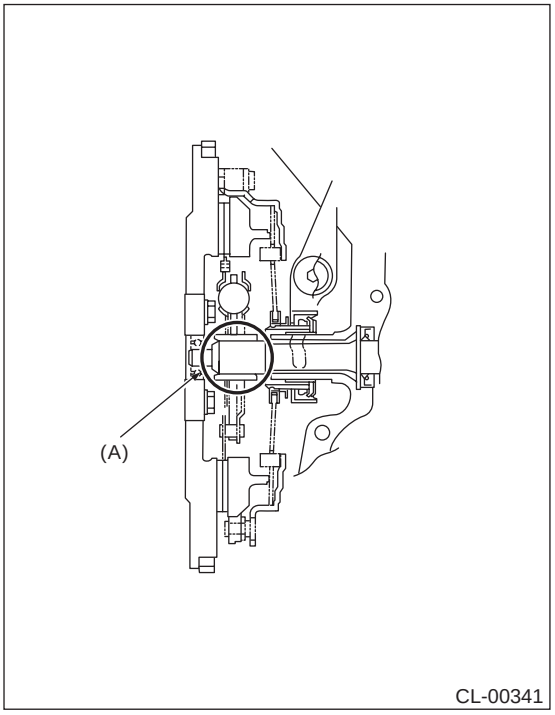


5) Check the bearing for smooth movement by operating the release lever.
6) Apply grease to the contact surface of the release lever and operating cylinder.

Grease:
NICHIMOLY N-130 or equivalent

7) Apply grease to splines.

Grease:
NICHIMOLY N-130 or equivalent



(A) Spline

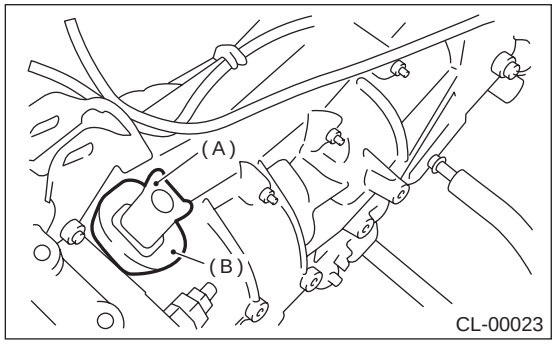
8) Install the transmission assembly. <Ref. to 6MT(TY85)-33, INSTALLATION, Manual Transmission Assembly.>

2. EXCEPT FOR STI MODEL

NOTE:
Apply the specified grease to lubricate to the following points before installation.
- Contact surface of lever and pivot
- Contact surface of lever and bearing
- Transmission main shaft spline
- Contact surface of release bearing and transmission case

Grease:
NICHIMOLY N-130 or equivalent

1) Install the release bearing by inserting the release lever into the clutch housing release lever hole. Then, fit the lever spring onto the raised portion of the pivot by pushing the release lever to the pivot and twisting it to both sides.
2) Install the dust cover.



(A) Release lever
(B) Dust cover

3) Check the bearing for smooth movement by operating the release lever.
4) Apply grease to the contact surface of the release lever and operating cylinder.

Grease:
NICHIMOLY N-130 or equivalent

5) Install the transmission assembly. <Ref. to 6MT(TY75)-30, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

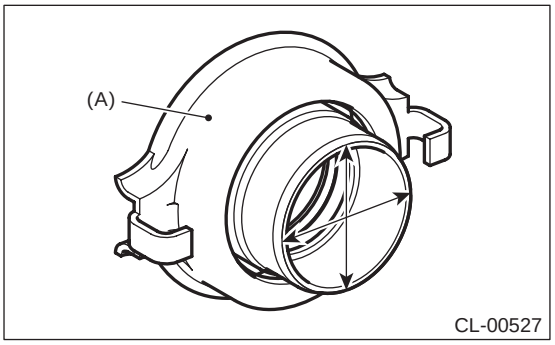
1. RELEASE BEARING

CAUTION:
Since this bearing is grease-sealed and is a non-lubrication type, do not wash with gasoline or any other solvent when servicing the clutch.

1) Check the bearing for smooth movement by applying force to the bearing in the radial direction.

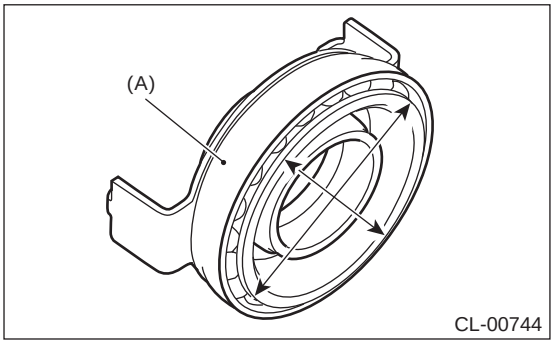
Radial direction stroke:
1.6 mm (0.063 in)

- ***STI model***



(A) Bearing case

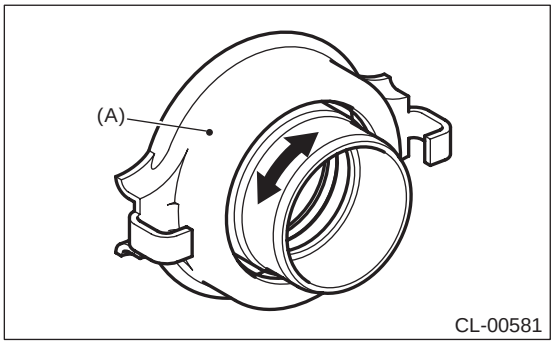
- ***Except for STI model***



(A) Bearing case

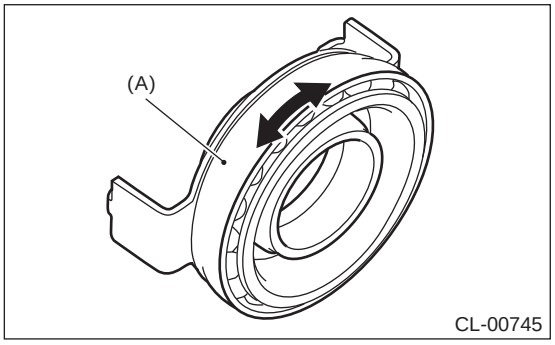
2) While applying force to the bearing in the rotational direction, check the bearing for smooth rotation.

- **STI model**



(A) Bearing case

- **Except for STI model**



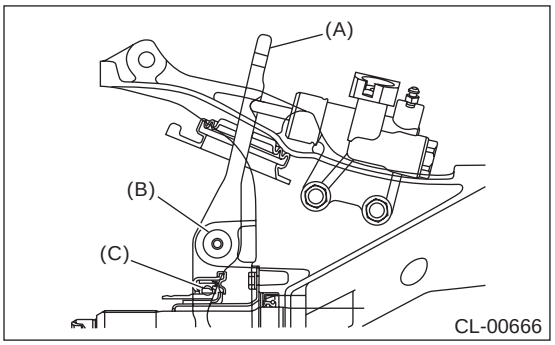
(A) Bearing case

3) Check for wear and damage at the bearing case surface in contact with the lever.

2. RELEASE LEVER

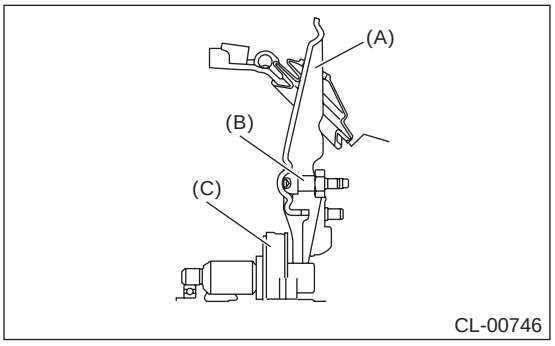
Check for wear in release shaft contact area and release bearing case contact area of the lever.

- **STI model**



(A) Release lever
(B) Release shaft
(C) Release bearing

- **Except for STI model**



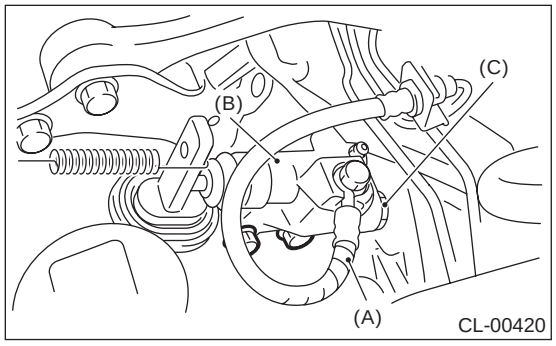
(A) Release lever
(B) Pivot
(C) Release bearing

5. Operating Cylinder

A: REMOVAL

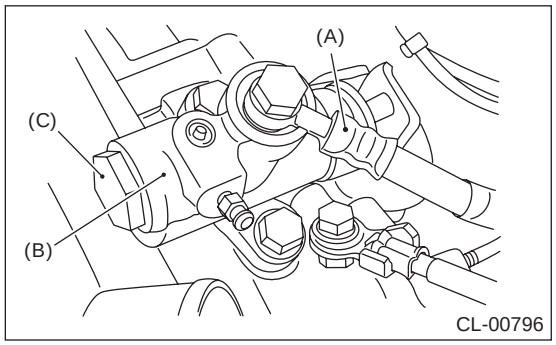
1) Remove the intercooler. <Ref. to IN(STI)-13, REMOVAL, Intercooler.> <Ref. to IN(w/o STI)-41, REMOVAL, Intercooler.>
2) Disconnect the clutch hose from the operating cylinder.

CAUTION:
• Cover the hose joint to prevent the clutch fluid from flowing out.
• Do not loosen or remove the cap bolts.
• STI model



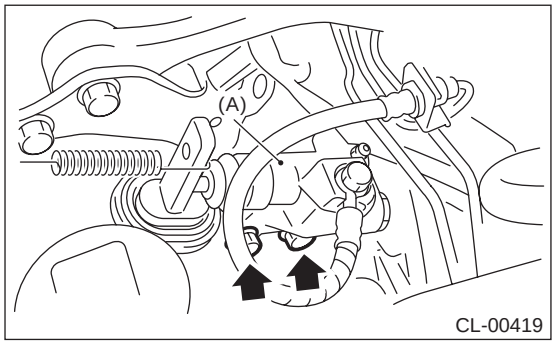
(A) Clutch hose
(B) Operating cylinder
(C) Cap bolt

• Except for STI model



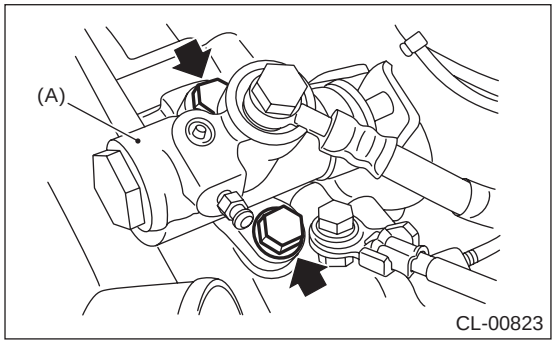
(A) Clutch hose
(B) Operating cylinder
(C) Cap bolt

3) Remove the operating cylinder from the transmission.
• STI model



(A) Operating cylinder

• Except for STI model



(A) Operating cylinder

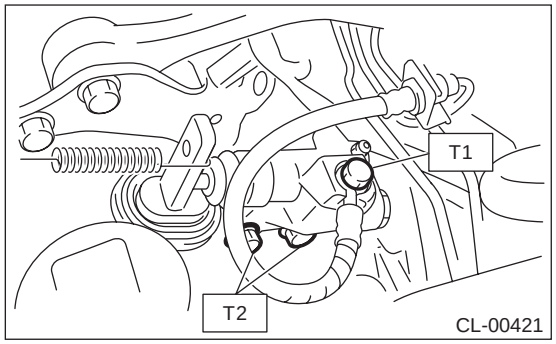
B: INSTALLATION

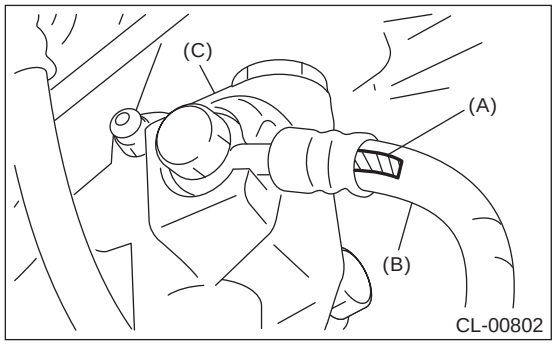
1) Install in the reverse order of removal.

NOTE:
- Use a new washer.
- Before installing the operating cylinder, apply grease to the contact point of the release lever and operating cylinder.

Grease
NICHIMOLY N-130 or equivalent
- Be sure to install the clutch hose with the mark side facing upward.
- Be careful not to twist the clutch hose during installation.
- STI model

Tightening torque:
T1: 18 N·m (1.8 kgf-m, 13.3 ft-lb)
T2: 41 N·m (4.2 kgf-m, 30.2 ft-lb)

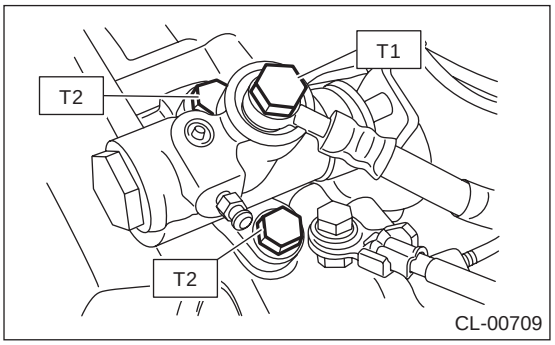


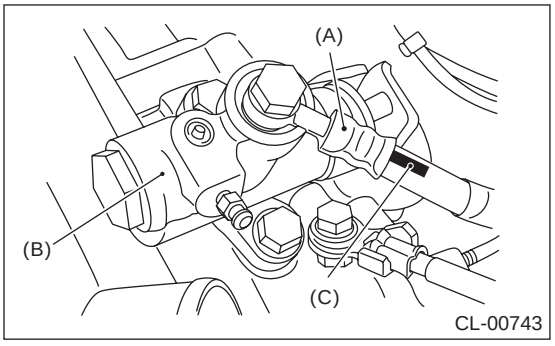


(A) Mark
(B) Clutch hose
(C) Operating cylinder

- Except for STI model

Tightening torque:
T1: 18 N·m (1.8 kgf-m, 13.3 ft-lb)
T2: 37 N·m (3.8 kgf-m, 27.3 ft-lb)





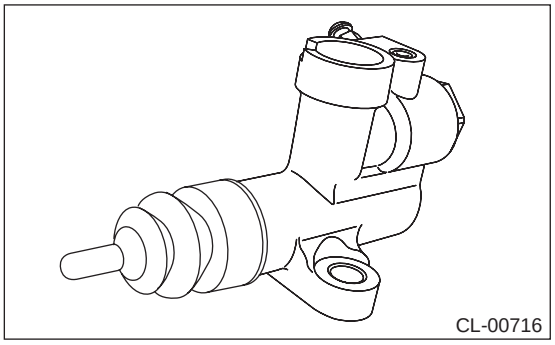
(A) Clutch hose
(B) Operating cylinder
(C) Mark

2) After bleeding air from the operating cylinder, ensure that the clutch operates properly.
<Ref. to CL-29, Clutch Fluid Air Bleeding.>

C: DISASSEMBLY

CAUTION:
Do not disassemble the STI model.

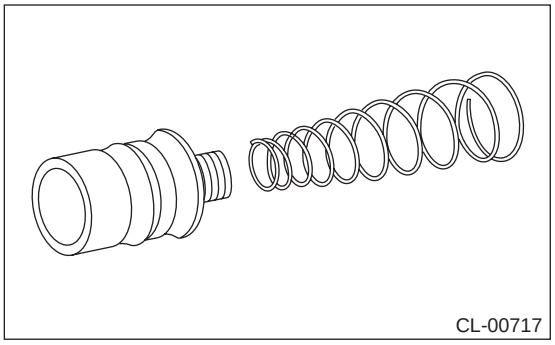
1) Remove the boot and push rod.



2) Apply compressed air through clutch hose attachment hole.

NOTE:
Face the piston hole down and place a piece of wood underneath to prevent the piston from popping out.

3) Separate the piston and piston spring.



D: ASSEMBLY

NOTE:
During assembly, apply hydraulic oil to all parts.

Recommended clutch fluid:
New FMVSS No. 116 DOT3 or DOT4

1) Install the piston spring onto the piston.
2) Insert piston into the operating cylinder.
3) Install push rod to the boot.
4) Install boot and push rod to the operating cylinder.

E: INSPECTION

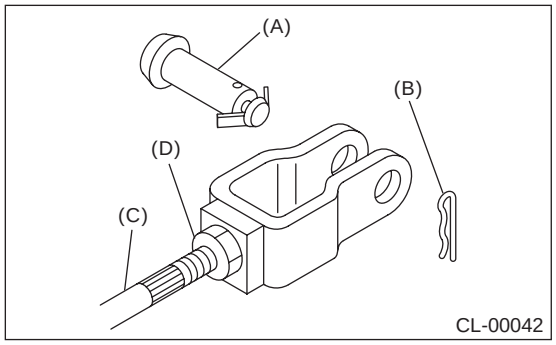
1) Check that the operating cylinder is not damaged. If operating cylinder is damaged, replace it.
2) Check the operating cylinder for fluid leakage or damage on the boot. Replace the operating cylinder if leaks or damages are noted.

6. Master Cylinder

A: REMOVAL

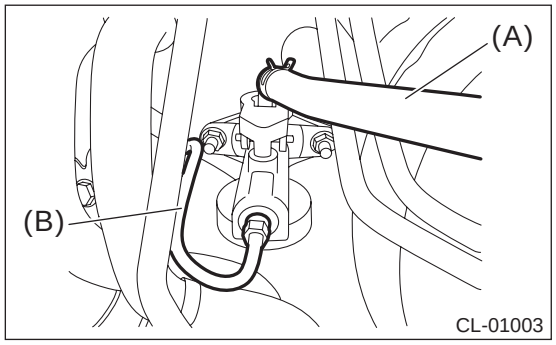
1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Thoroughly drain the clutch fluid from the reservoir tank.
3) Remove the instrument panel lower cover. <Ref. to EI-61, REMOVAL, Instrument Panel Lower Cover.>
4) Remove the snap pin and clevis pin, and then separate the push rod of the master cylinder from clutch pedal.



(A) Clevis pin
(B) Snap pin
(C) Push rod
(D) Lock nut

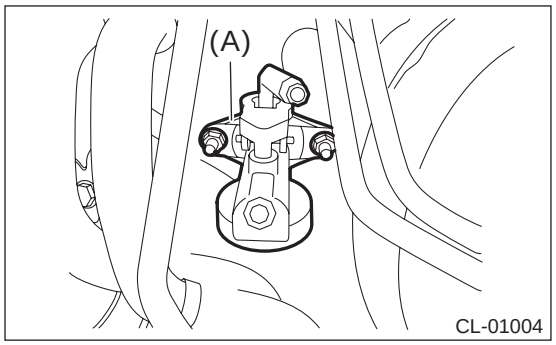
5) Remove the intercooler. <Ref. to IN(STI)-13, REMOVAL, Intercooler.> <Ref. to IN(w/o STI)-41, REMOVAL, Intercooler.>
6) Disconnect the clutch pipe and reservoir hose from the master cylinder.



(A) Reservoir hose
(B) Clutch pipe

7) Remove the clutch bracket from the bulkhead.
8) Remove the master cylinder.

CAUTION:
Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.



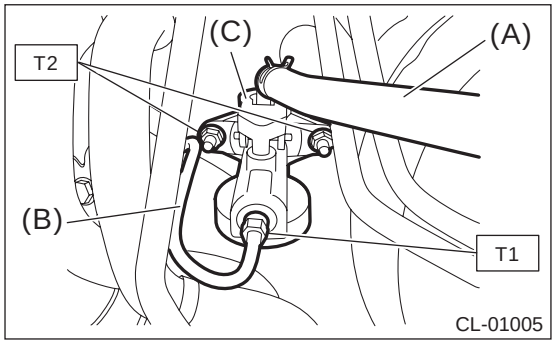
(A) Master cylinder

B: INSTALLATION

1) Attach the clutch bracket to the bulkhead.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
2) Install the master cylinder to the vehicle body, and connect the clutch pipe and reservoir hose to the master cylinder.

Tightening torque:
T1: 15 N·m (1.5 kgf-m, 11.1 ft-lb)
T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

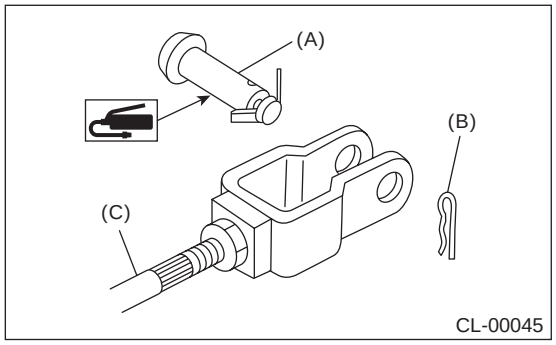


(A) Reservoir hose
(B) Clutch pipe
(C) Master cylinder

3) Connect the push rod of the master cylinder to the clutch pedal, and install the clevis pin and snap pin.

CAUTION:
Always use a new clevis pin.

NOTE:
Apply grease to the clevis pin.



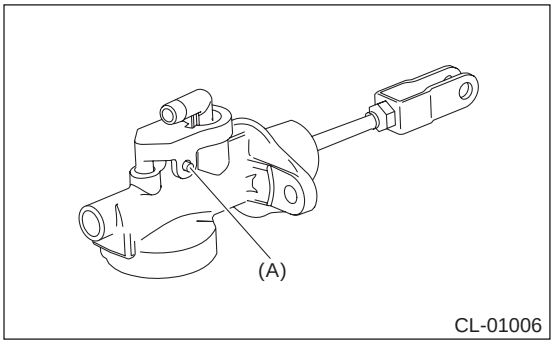
(A) Clevis pin
(B) Snap pin
(C) Push rod

4) Refill the reservoir tank with recommended clutch fluid.
5) After bleeding air from the clutch system, ensure that the clutch operates properly.
<Ref. to CL-29, Clutch Fluid Air Bleeding.>
6) Install the intercooler. <Ref. to IN(STI)-14, INSTALLATION, Intercooler.> <Ref. to IN(w/o STI)-43, INSTALLATION, Intercooler.>
7) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

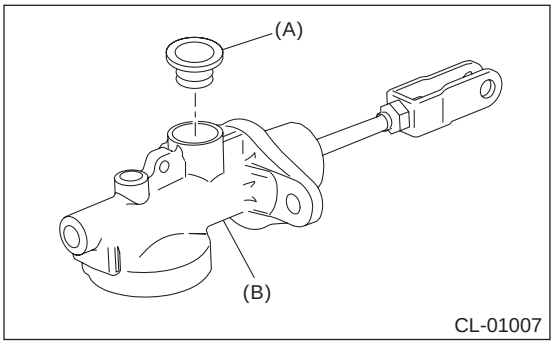
C: DISASSEMBLY

1) Remove the straight pin and nipple.



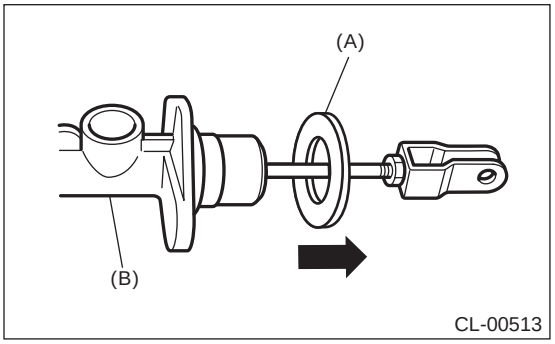
(A) Straight pin

2) Remove the oil seal.



(A) Oil seal
(B) Master cylinder

3) Move the seat towards the rear.



(A) Seat
(B) Master cylinder

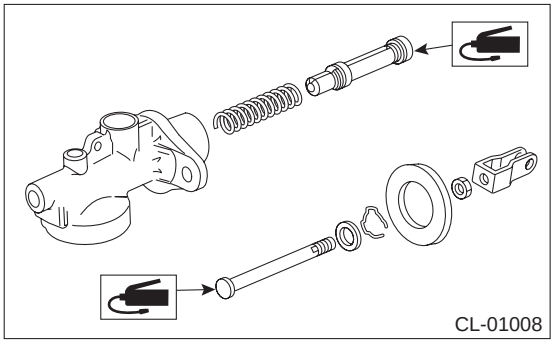
4) Remove the piston stop ring.

CAUTION:
When removing the piston stop ring, be careful to prevent the rod, washer, piston and return spring from popping out.

D: ASSEMBLY

1) Apply a coat of grease to the contact surfaces of the push rod and piston before installation.

Grease:
SILICONE GREASE G-40M or equivalent

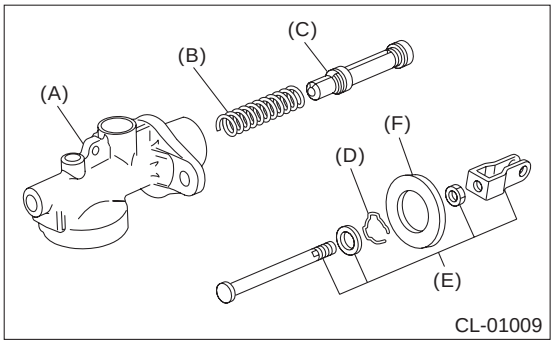


2) Assemble in the reverse order of disassembly.

Tightening torque:
10 N·m (1.0 kgf-m, 7.4 ft-lb)

E: INSPECTION

If any damage, deformation, wear, swelling, rust or other faults are found on the cylinder, piston, push rod, reservoir tank, return spring, breather screw, seat or hose, replace the faulty part.



(A) Master cylinder body
(B) Return spring
(C) Piston
(D) Piston stop ring
(E) Push rod ASSY
(F) Seat

7. Clutch Pipe and Hose

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

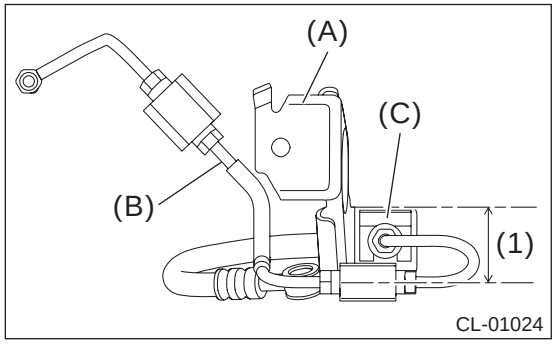
NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Remove the intercooler. <Ref. to IN(STI)-13, REMOVAL, Intercooler.> <Ref. to IN(w/o STI)-41, REMOVAL, Intercooler.>
3) Drain the clutch fluid. <Ref. to CL-28, Clutch Fluid.>
4) Remove the clutch pipe from the master cylinder.
5) Disconnect the hose from operating cylinder.
6) Remove the clutch bracket from the bulkhead.
7) Remove the clutch pipe from the clutch hose.
8) Remove the clutch pipe and clip from the clutch bracket.

B: INSTALLATION

1) Install the clutch hose and clip to the clutch bracket.

NOTE:
Be sure to install the clutch hose with the mark side facing towards vehicle top.
2) Connect the clutch pipe to the clutch hose.

Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)

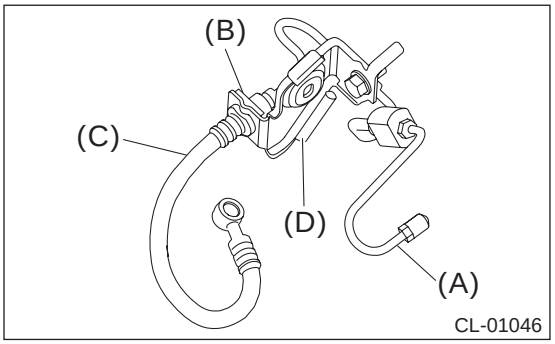


(A) Clutch bracket
(B) Clutch pipe
(C) Clip

(1) Attach the clutch pipe in parallel to the clutch bracket as shown in the figure.

3) Attach the clutch bracket to the bulkhead.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



(A) Clutch pipe
(B) Clip
(C) Clutch hose
(D) Clutch bracket

4) Connect the clutch hose to the operating cylinder.

NOTE:
• Use a new gasket.
• Be sure to install the clutch hose with the mark side facing upward.
• Be careful not to twist the clutch hose during installation.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
5) Connect the clutch pipes to the master cylinder.

Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)
6) Bleed air from the clutch fluid. <Ref. to CL-29, Clutch Fluid Air Bleeding.>
7) Install the intercooler. <Ref. to IN(STI)-13, REMOVAL, Intercooler.> <Ref. to IN(w/o STI)-41, REMOVAL, Intercooler.>

C: INSPECTION

Check the pipes and hoses for breaks and damage. Check joints for fluid leakage. If crack, breakage or damage is found, repair or replace the faulty pipe or hose.

8. Clutch Fluid

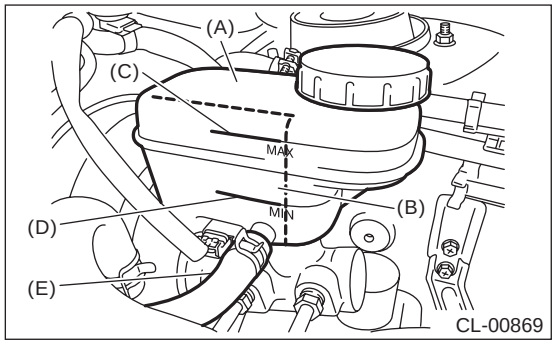
A: INSPECTION

CAUTION:
Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.

1) Park the vehicle on a level surface.
2) Inspect the fluid level using the scale on the outside of the reservoir tank. If the level is below “MIN”, add fluid to bring it up to “MAX”, and also inspect for leakage.

CAUTION:
This reservoir tank has the brake fluid chamber and the clutch fluid chamber. When checking the fluid level, always check the fluid from the clutch fluid chamber side where the tank hose is connected.

Recommended brake fluid:
New FMVSS No. 116 DOT3 or DOT4



(A) Reservoir tank
(B) Clutch fluid chamber
(C) MAX. level
(D) MIN. level
(E) Tank hose

B: REPLACEMENT

CAUTION:
• Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.
• Use new FMVSS No. 116 DOT3 or DOT4.
• Cover the air breather with cloth to prevent brake fluid from being splashed on surrounding parts when loosening the breather.
• Avoid mixing brake fluid of different brands to prevent fluid performance from degrading.
• Be careful not to allow dirt or dust to enter the reservoir tank.

NOTE:
• During the bleeding operation, keep the reservoir tank filled with brake fluid to prevent entry of air.
• Clutch pedal must be operated very slowly.
• Bleed air from the oil line with help of a co-worker.
• The required amount of brake fluid is approximately 150 mL (5.1 US fl oz, 5.3 Imp fl oz) for total clutch system.

1) Remove the intercooler. <Ref. to IN(STI)-13, REMOVAL, Intercooler.> <Ref. to IN(w/o STI)-41, REMOVAL, Intercooler.>
2) Drain the brake fluid from the air breather of the operating cylinder.
3) Refill the reservoir tank with recommended brake fluid.

Recommended brake fluid:
New FMVSS No. 116 DOT3 or DOT4

4) If necessary, bleed air from the clutch fluid. <Ref. to CL-29, Clutch Fluid Air Bleeding.>
5) Remove the intercooler. <Ref. to IN(STI)-14, INSTALLATION, Intercooler.> <Ref. to IN(w/o STI)-43, INSTALLATION, Intercooler.>

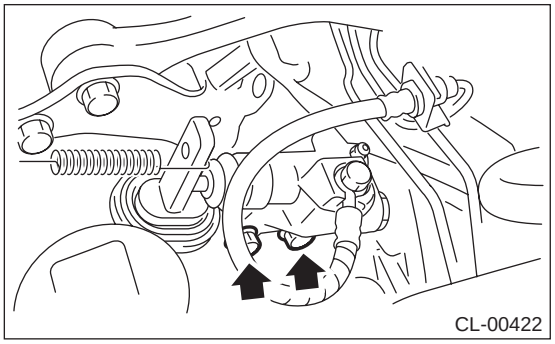
9. Clutch Fluid Air Bleeding

A: PROCEDURE

1. STI MODEL

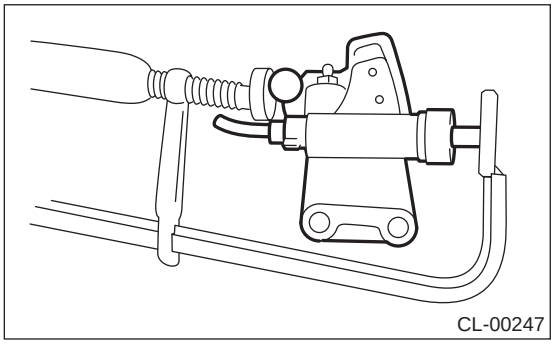
NOTE:
Bleed air from the oil line with help of a co-worker.
1) Remove the intercooler. <Ref. to IN(STI)-13, REMOVAL, Intercooler.>
2) Remove the operating cylinder.

NOTE:
Do not remove the clutch hose.



CL-00422

3) Hold the piston with a clamp to prevent piston from popping out.

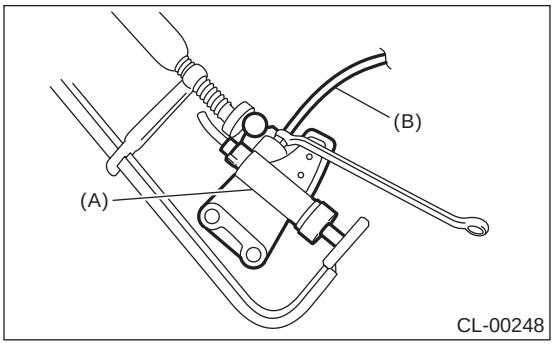


CL-00247

4) Fit one end of a vinyl tube into the air breather of the operating cylinder, and put the other end into a clutch fluid container.

5) Slowly depress the clutch pedal and keep it depressed. Open the air breather to discharge air together with the clutch fluid. Release the air breather for 1 or 2 seconds. Next, close the air breather, and slowly release the clutch pedal.

NOTE:
When performing this procedure, place the screw portion of the air breather higher than the end of operating cylinder.



CL-00248

(A) Operating cylinder
(B) Vinyl tube

6) Repeat procedure 5), until there are no more air bubbles appearing from the air breather.

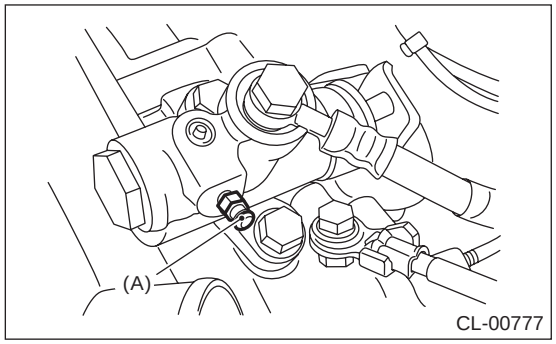
CAUTION:
Cover the air breather with cloth to prevent clutch fluid from being splashed on surrounding parts when loosening the breather.
7) Tighten the air breather.

Tightening torque:
7.8 N·m (0.8 kgf-m, 5.8 ft-lb)
8) Install the operating cylinder.

Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)
9) After stepping on the clutch pedal, make sure that there are no leaks evident in the entire clutch system.
10) After bleeding the air from clutch system, ensure that the clutch operates properly.
11) Install the intercooler. <Ref. to IN(STI)-14, INSTALLATION, Intercooler.>

2. EXCEPT FOR STI MODEL

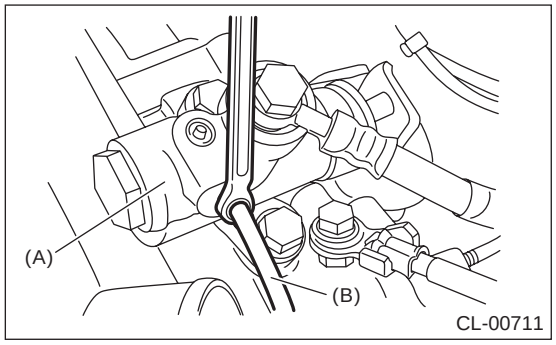
NOTE:
Bleed air from the oil line with help of a co-worker.
1) Remove the intercooler. <Ref. to IN(w/o STI)-41, REMOVAL, Intercooler.>
2) Fit one end of a vinyl tube into the air breather of the operating cylinder, and put the other end into a clutch fluid container.



(A) Air breather

3) Slowly depress the clutch pedal several times and keep it depressed. Open the air breather to discharge air together with the clutch fluid. Release the air breather for 1 or 2 seconds. Next, close the air breather, and slowly release the clutch pedal.

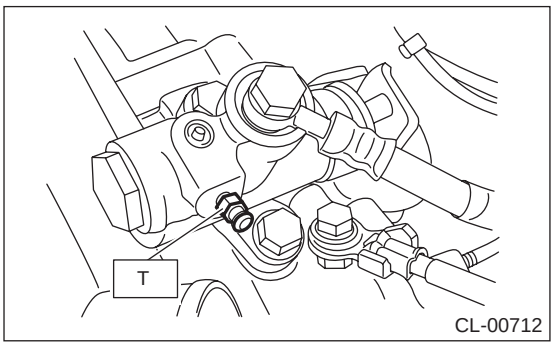
CAUTION:
Cover the air breather with cloth to prevent clutch fluid from being splashed on surrounding parts when loosening the breather.



(A) Operating cylinder
(B) Vinyl tube

4) Repeat procedure 3), until there are no more air bubbles appearing from the air breather.
5) Tighten the air breather.

Tightening torque:
T: 7.8 N·m (0.8 kgf-m, 5.8 ft-lb)



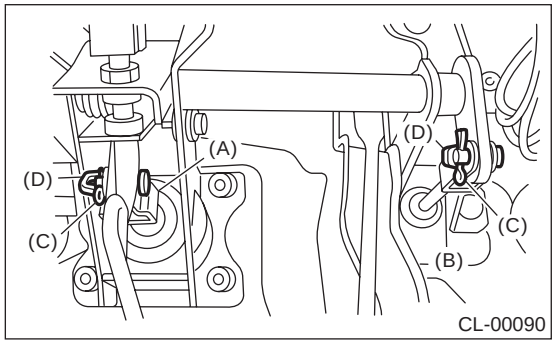
6) After stepping on the clutch pedal, make sure that there are no leaks evident in the entire clutch system.
7) After bleeding the air from clutch system, ensure that the clutch operates properly.
8) Install the intercooler. <Ref. to IN(w/o STI)-43, INSTALLATION, Intercooler.>

10.Clutch Pedal

A: REMOVAL

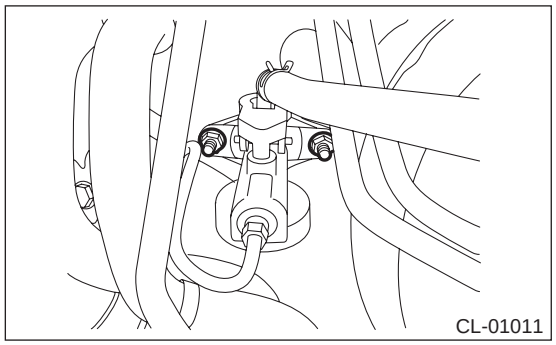
1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Remove the steering column. <Ref. to PS-25, REMOVAL, Steering Column.>
3) Disconnect the connector from the stop light switch and clutch switch.
4) Remove the snap pins from clevis pins which secure the lever to the push rod and operating rod.
5) Pull out the clevis pins which secures the lever to the push rod and operating rod.



(A) Operating rod
(B) Push rod
(C) Snap pin
(D) Clevis pin

6) Remove the intercooler.
<Ref. to IN(STI)-13, REMOVAL, Intercooler.> <Ref. to IN(w/o STI)-41, REMOVAL, Intercooler.>
7) Remove the nut which secures the clutch master cylinder.



8) Remove the bolts and nuts which secure the brake pedal and clutch pedal, and remove the pedal assembly.

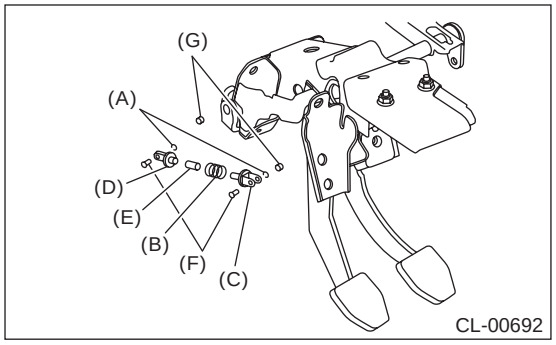
B: INSTALLATION

1) Install in the reverse order of removal.

CAUTION:
Always use a new clevis pin.
2) Adjust the clutch pedal after installation. <Ref. to CL-33, ADJUSTMENT, Clutch Pedal.>
3) Adjust the clutch start switch. <Ref. to CL-37, ADJUSTMENT, Clutch Switch.>

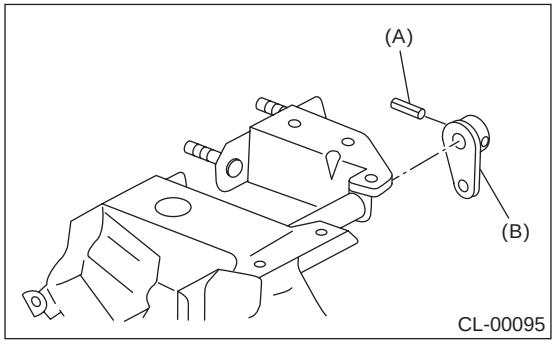
C: DISASSEMBLY

1) Remove the clutch switches.
2) Remove the clip, assist spring, rod and bushing.



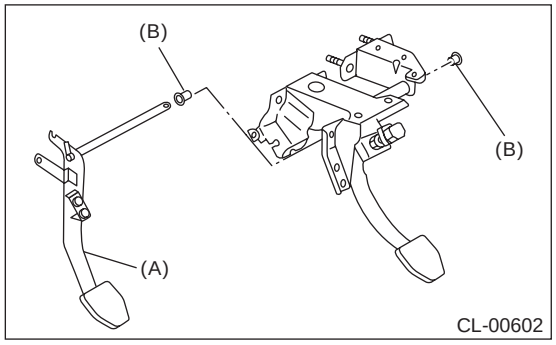
(A) Clip
(B) Assist spring
(C) Assist rod A
(D) Assist rod B
(E) Assist bushing
(F) Clutch clevis pin
(G) Bushing

3) Remove the spring pin and lever.



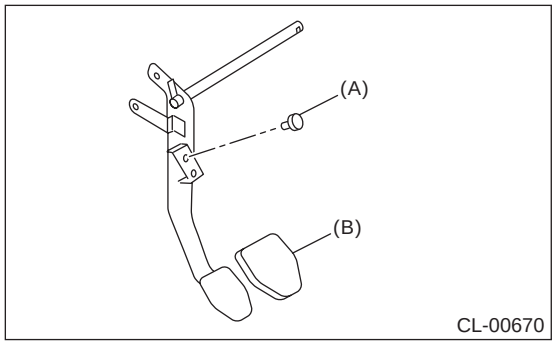
(A) Spring pin
(B) Lever

4) Remove the clutch pedal and bushings.



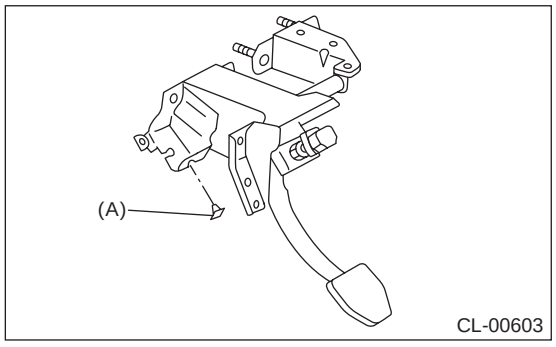
(A) Clutch pedal
(B) Bushing

5) Remove the stopper and clutch pedal pad from the clutch pedal.



(A) Stopper
(B) Clutch pedal pad

6) Remove the stopper from the clutch pedal bracket.



(A) Stopper

D: ASSEMBLY

1) Attach the stopper and clutch pedal pad to the clutch pedal.
2) Install the clutch switch to the pedal bracket.
3) Clean the pedal bushing holes of the clutch pedal and the brake pedal, apply grease, and install the pedal bushings.
4) Install the clutch pedal, brake pedal and lever to the pedal bracket, and fix with a spring pin.
5) Install the assist rod A, assist rod B, assist bushing and assist spring to the clutch pedal and pedal bracket.

E: INSPECTION

1) Check the free play of the clutch pedal.

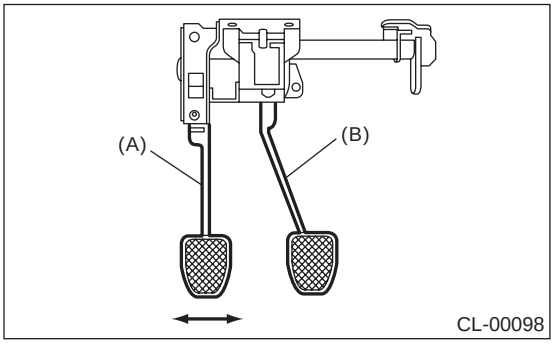
NOTE:
Check by pressing the pedal.

Clutch pedal free play:
5 — 11 mm (0.2 — 0.43 in)

2) Move the clutch pedal pads in the lateral direction with a force of approximately 10 N (1 kgf, 2 lbf) to check that the clutch pedal deflection is within the service limit.

CAUTION:
If the play exceeds the service limit, replace the bushing with a new part.

Deflection of the clutch pedal:
Service limit
4.0 mm (0.157 in) or less



(A) Clutch pedal
(B) Brake pedal

F: ADJUSTMENT

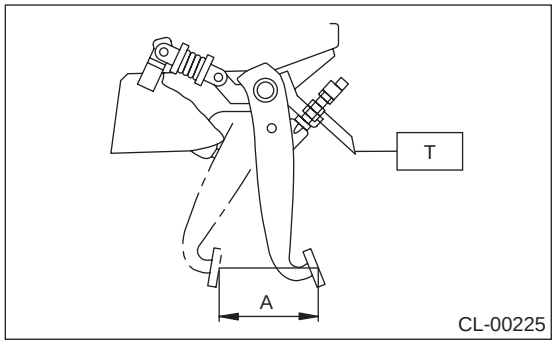
1) Turn the lock nut until the full stroke of clutch pedal becomes within the specification.

CAUTION:
When adjusting the full stroke of clutch pedal, do not turn the clutch switch.

NOTE:
If the lock nut cannot adjust the full stroke of clutch pedal to the specified value, adjust it by turning the master cylinder push rod.

Clutch pedal full stroke A:
STI model
130 — 135 mm (5.12 — 5.31 in)
Except for STI model
135 — 140 mm (5.31 — 5.51 in)

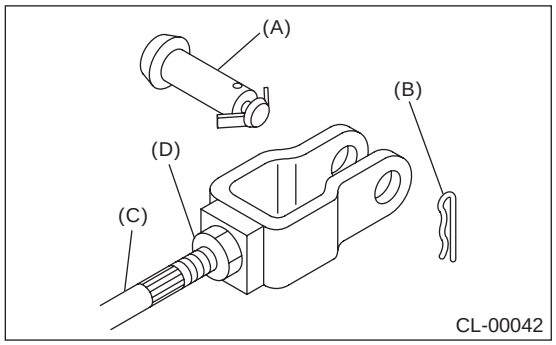
Tightening torque (clutch switch lock nut):
T: 8 N·m (0.8 kgf-m, 5.9 ft-lb)



2) If the full stroke is not within the specified value, loosen the clutch switch lock nut to adjust.

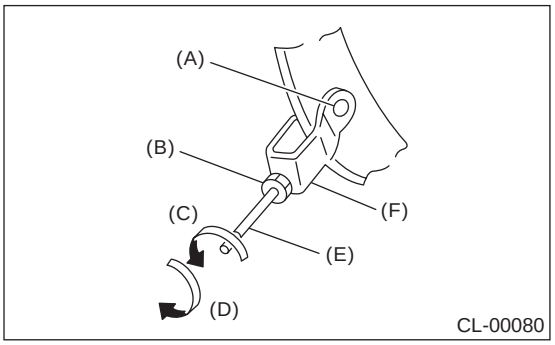
Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

3) Loosen the push rod lock nuts.



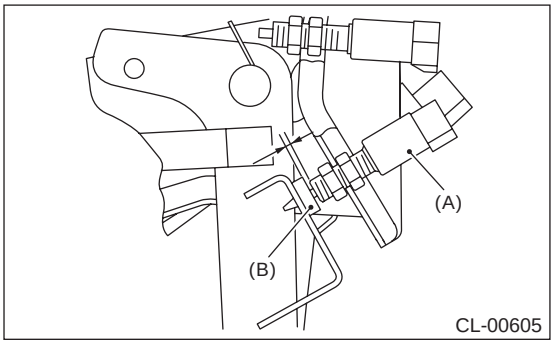
(A) Clevis pin
(B) Snap pin
(C) Push rod
(D) Push rod lock nut

4) Rotate the push rod to adjust.
(1) Make sure that the clutch pedal contacts the clutch switch side when the pedal is released.
(2) Make sure that the clutch pedal contacts the clutch pedal bracket stopper when the clutch pedal is at the maximum stroke position.



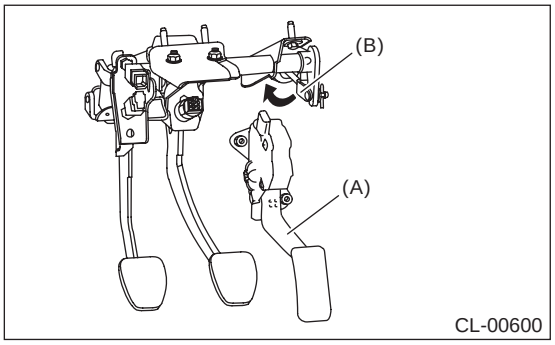
(A) Clevis hole
(B) Push rod lock nut
(C) In the shorter direction
(D) In the longer direction
(E) Push rod
(F) Clevis

5) Turn the push rod to shorten until a clearance is gained on the clutch switch side.



(A) Clutch switch
(B) Stopper

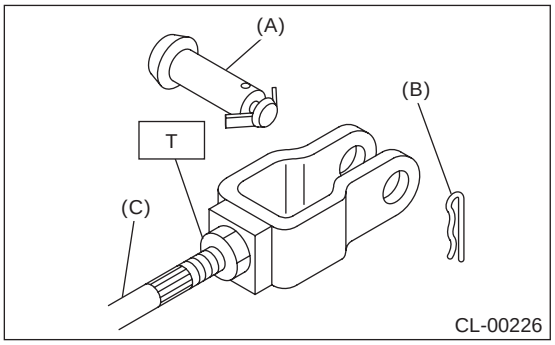
6) Turn the push rod to lengthen until clutch pedal contacts the clutch switch.
7) Turn further in the direction that will shorten the push rod (arrow direction shown in figure) by 270°.



(A) Accelerator pedal
(B) Clevis

8) Check that the clevis pin moves smoothly by moving it in the left and right directions.
9) Tighten the push rod lock nut.

Tightening torque (push rod lock nut):
T: 10 N·m (1.0 kgf-m, 7.4 ft-lb)

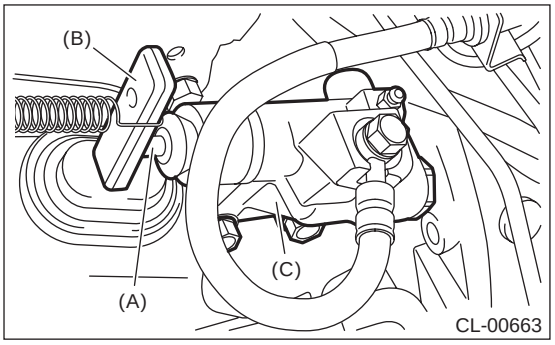


(A) Clevis pin
(B) Snap pin
(C) Push rod

10) Depress and release the clutch pedal two or three times to ensure that the clutch pedal and release lever operate smoothly. If the clutch pedal and release lever do not operate smoothly, bleed air from the clutch hydraulic system. <Ref. to CL-29, Clutch Fluid Air Bleeding.>
11) Measure the clutch pedal full stroke length again to ensure that it is within specifications. If it is not within specifications, repeat adjustment procedures again from the beginning.

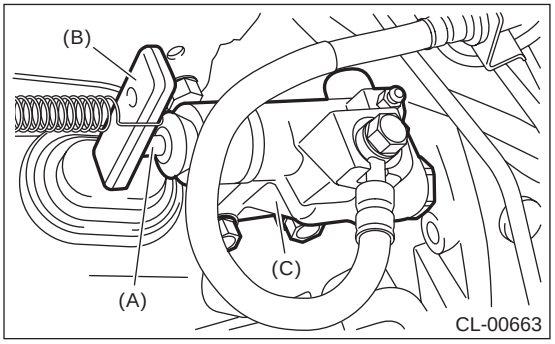
Clutch pedal full stroke:
STI model
130 — 135 mm (5.12 — 5.31 in)
Except for STI model
135 — 140 mm (5.31 — 5.51 in)

12) Push the release lever until the operating cylinder push rod retracts. Make sure that the clutch fluid level in the reservoir tank increases. If the clutch fluid level increases, the hydraulic clutch is properly adjusted. If the fluid level does not increase or the push rod does not retract, replace the master cylinder with a new part. <Ref. to CL-24, Master Cylinder.>



(A) Push rod
(B) Release lever
(C) Operating cylinder

13) Push the release lever until the operating cylinder push rod retracts. Check that the clutch fluid level in the reservoir tank increases.



(A) Push rod
(B) Release lever
(C) Operating cylinder

14) If the clutch fluid level increases, hydraulic clutch play is correct.
15) If the clutch fluid level does not increase or push rod does not retract, readjust the clutch pedal.
16) Check the fluid level using the scale on the outside of the reservoir tank. <Ref. to CL-28, INSPECTION, Clutch Fluid.>

11.Clutch Switch

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Remove the instrument panel lower cover.
3) Disconnect the connector from the clutch switch.
4) Remove the clutch switches.

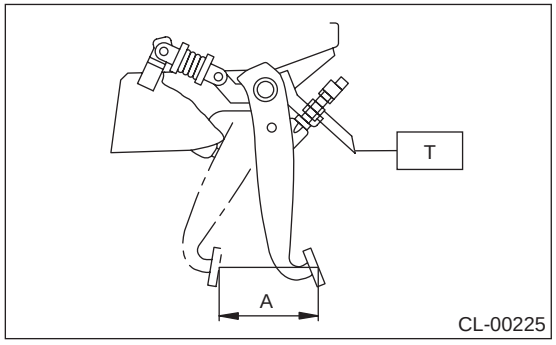
B: INSTALLATION

1. CLUTCH SWITCH (CRUISE CONTROL)

1) Move the clevis pin of push rod to left and right, retain it at the position where it moves smoothly, and measure the clutch pedal stroke.

Clutch pedal full stroke A:
STI model
130 — 135 mm (5.12 — 5.31 in)
Except for STI model
135 — 140 mm (5.31 — 5.51 in)

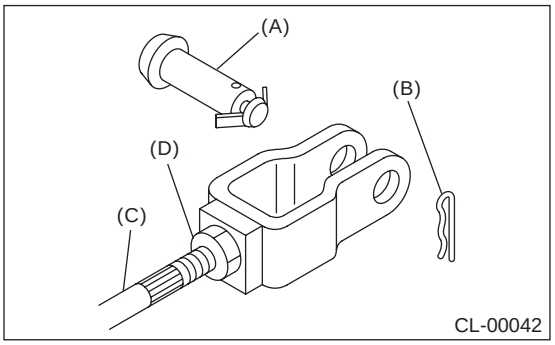
Tightening torque:
T: 8 N·m (0.8 kgf-m, 5.9 ft-lb)



2) If the clutch pedal stroke is out of specification, adjust the stroke. <Ref. to CL-33, ADJUSTMENT, Clutch Pedal.>
3) Connect the clutch switch connector.

2. CLUTCH START SWITCH

1) Remove the snap pin and clevis pin connecting the clutch pedal and operating rod.

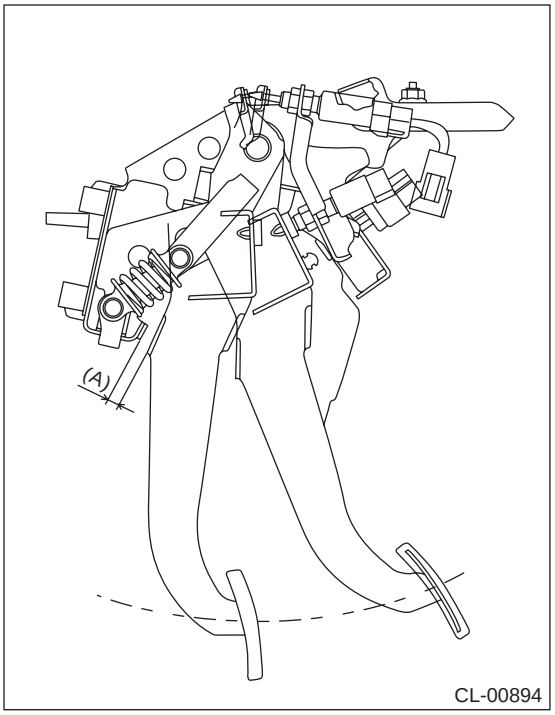


(A) Clevis pin
(B) Snap pin
(C) Push rod
(D) Lock nut

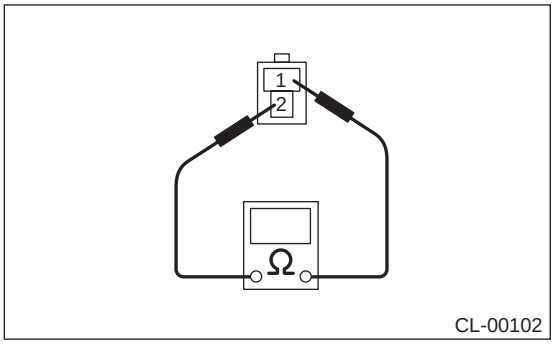
2) Install the clutch start switch so that the clutch switch turns on when the clearance between clutch pedal stopper and clutch pedal is within the specification described below.

Clearance A:
6.3 — 8.6 mm (0.25 — 0.34 in)

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

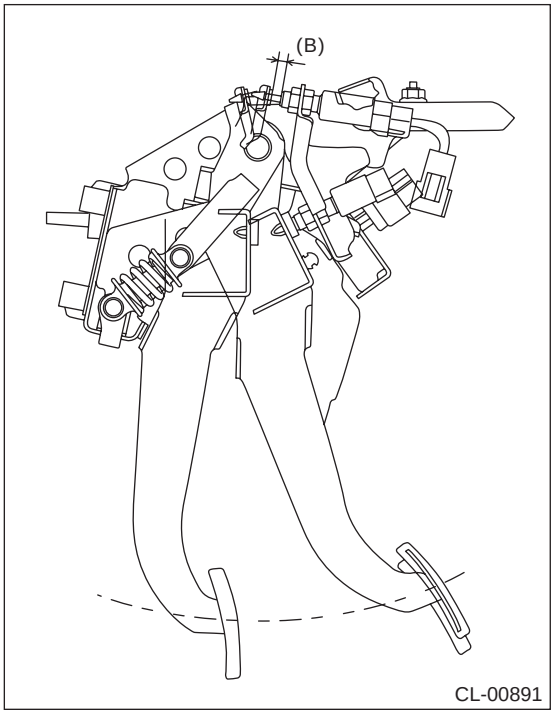


NOTE:
• Using a plate of the same thickness for the clearance facilitates the adjustment operation.
• Using the Subaru Select Monitor or a tester, check the position where the switch turns on.
Check the following figure for the terminal layout of the harness connector.



• When performing adjustment by the clearance between clutch start switch and clutch pedal plate, perform installation according to the following gap.

Clearance B:
8.6 — 9.0 mm (0.34 — 0.35 in)



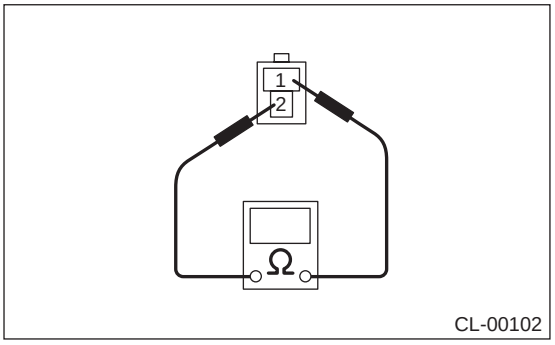
3) Connect the clutch start switch connector.
4) Make sure that engine does not start with clutch pedal not depressed.
5) Make sure that engine starts with clutch pedal depressed.

C: INSPECTION

1. CLUTCH START SWITCH

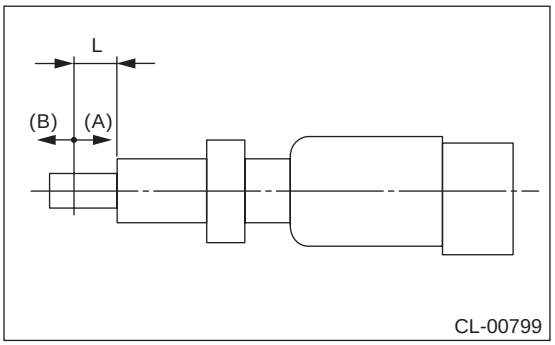
1) Perform the following inspections. If the clutch start switch does not operate normally, adjust the switch, and check it again. <Ref. to CL-37, ADJUSTMENT, Clutch Switch.>
• Make sure that engine does not start with clutch pedal not depressed.
• Make sure that engine starts with clutch pedal fully depressed.
2) When the clutch start switch does not operate normally even if it is adjusted, check the clutch start switch for continuity.
(1) Remove the clutch start switch. <Ref. to CL-35, REMOVAL, Clutch Switch.>
(2) Measure the resistance between terminal 1 and 2 of the switch. If the resistance is not at the standard value, replace the switch.

Condition	Terminal No.	Specified resistance
ON	No. 1 — No. 2	Less than 1 Ω
OFF	No. 1 — No. 2	1 MΩ or more



(3) Check that the switch is turned on and off in dimension L.

Dimension L:
9 — 10 mm (0.35 — 0.39 in)

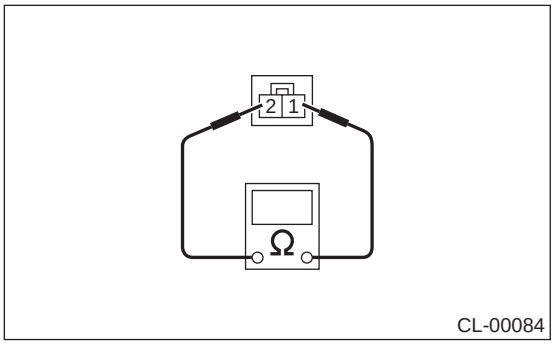


(A) ON
(B) OFF

2. CLUTCH SWITCH

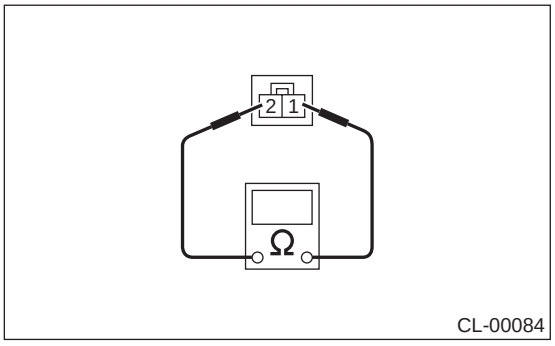
1) Check the clutch switch for continuity.
(1) Disconnect the connector of clutch switch.
(2) Measure the resistance between terminal 1 and 2 of the switch. If the resistance is not within the specification, check the clutch stroke and installation condition, and check the clutch switch again.

Condition	Terminal No.	Specified resistance
When clutch pedal is depressed	No. 1 — No. 2	1 MΩ or more
When the clutch pedal is not depressed	No. 1 — No. 2	Less than 1 Ω



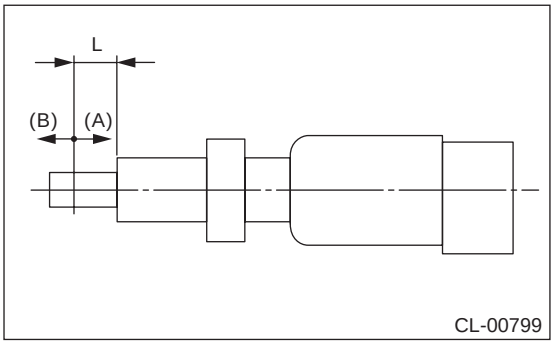
2) When the clutch switch does not operate normally even if the clutch stroke and installation condition are normal, check the clutch switch for continuity.
(1) Remove the clutch switches. <Ref. to CL-35, REMOVAL, Clutch Switch.>
(2) Measure the resistance between terminal 1 and 2 of the switch. If the resistance is not at the standard value, replace the switch.

Condition	Terminal No.	Specified resistance
ON	No. 1 — No. 2	Less than 1 Ω
OFF	No. 1 — No. 2	1 MΩ or more



(3) Check that the switch is turned on and off in Dimension L.

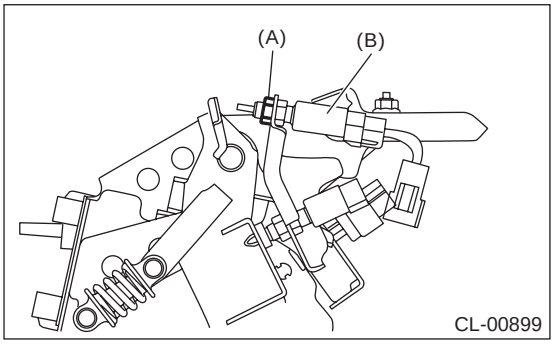
Dimension L:
5 — 6.5 mm (0.2 — 0.26 in)



(A) ON
(B) OFF

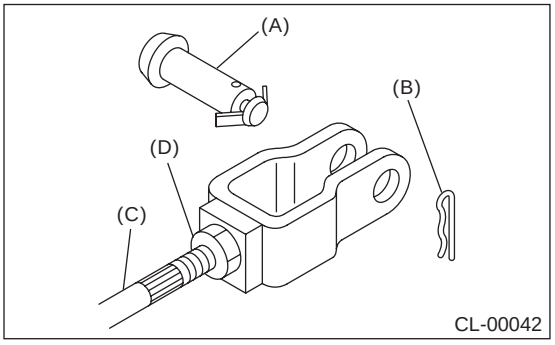
D: ADJUSTMENT

1) Loosen the lock nut of the clutch start switch.



(A) Lock nut
(B) Clutch start switch

2) Disconnect the harness connector of the clutch start switch.
3) Remove the snap pin and clevis pin connecting the clutch pedal and operating rod.

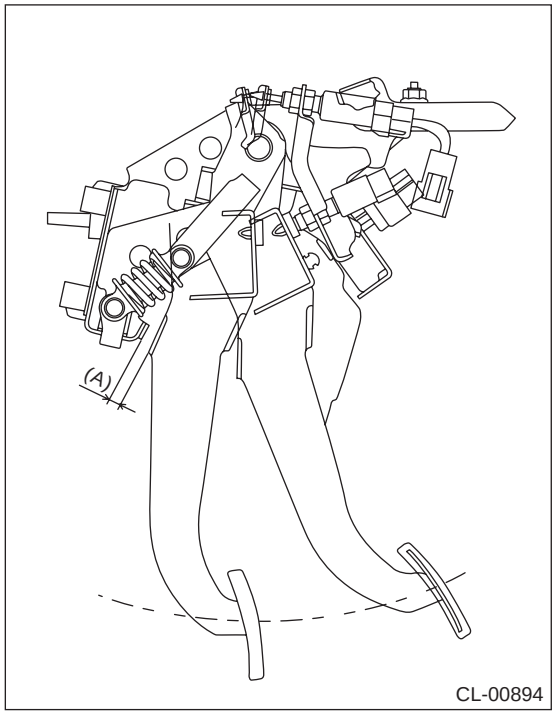


(A) Clevis pin
(B) Snap pin
(C) Push rod
(D) Lock nut

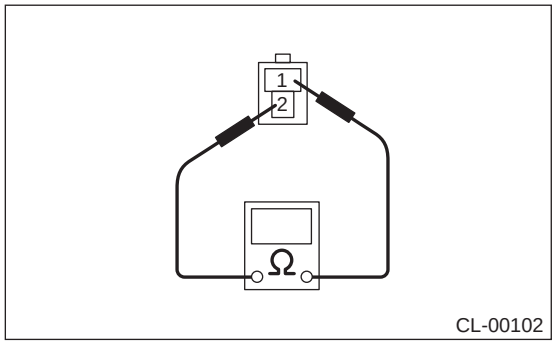
4) Adjust the clutch start switch so that the switch turns on when the clearance between clutch pedal stopper and clutch pedal is within the specification described below, and then tighten the lock nut.

Clearance A:
6.3 — 8.6 mm (0.25 — 0.34 in)

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

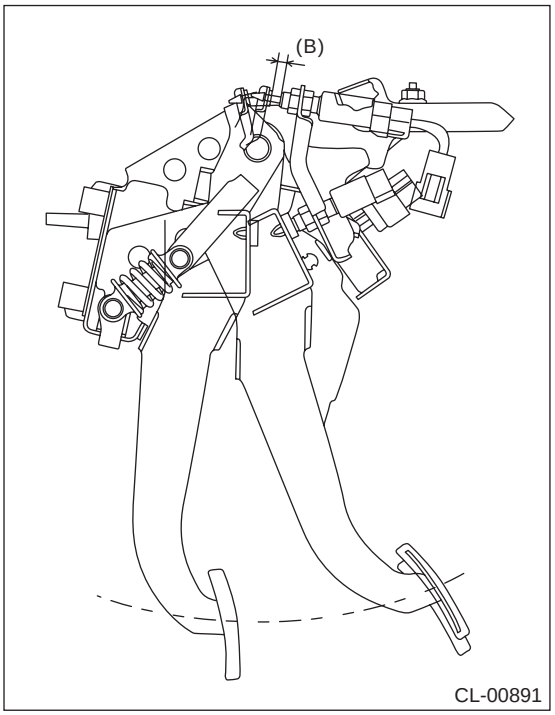


NOTE:
• Using a plate of the same thickness for the clearance facilitates the adjustment operation.
• Using the Subaru Select Monitor or a tester, check the position where the switch turns on.
Check the following figure for the terminal layout of the harness connector.



• When performing adjustment by the clearance between clutch start switch and clutch pedal plate, perform installation according to the following gap.

Clearance B:
8.6 — 9.0 mm (0.34 — 0.35 in)



5) Connect the clutch start switch connector.

12.General Diagnostic Table

A: INSPECTION

1. CLUTCH

Symptoms	Possible cause	Corrective action
1. Clutch slippage. It is hard to perceive clutch slippage in the early stage, but pay attention to the following symptoms. • Engine speeds up when shifting. • High-speed driving is not possible; especially rapid acceleration is not possible and vehicle speed does not increase in proportion to the increase in engine speed. • Power drops particularly when ascending a slope, and there is a burning smell of the clutch plate. • Method of testing: Park the vehicle and fully apply the parking brake. Disengage the clutch and shift the transmission gear into the 1st. Gradually increase the engine speed while gradually allowing the clutch to engage. The clutch function is satisfactory if the engine stalls. However, the clutch is slipping if the vehicle does not move forward and the engine does not stall.	(a) Oil on the clutch face	Replace.
	(b) Worn clutch face	Replace.
	(c) Deteriorated diaphragm spring	Replace.
	(d) Warped pressure plate or flywheel	Repair or replace.
	(e) Defective release bearing holder	Repair or replace.
2. Clutch drags. As a symptom of this trouble, a harsh scratching noise occurs and control becomes difficult when shifting gears. The symptom becomes more apparent when shifting into the 1st gear. However, because most trouble of this sort is due to a defective synchronization mechanism, perform the following tests. • Method of testing: <Ref. to CL-40, DIAGNOSTIC DIAGRAM OF CLUTCH DRAG, INSPECTION, General Diagnostic Table.> The problem is caused by insufficient disengagement of the clutch if an abnormal noise occurs during this test.	(a) Worn or rusty clutch disc hub spline	Replace the clutch disc.
	(b) Excessive deflection of clutch disc face	Repair or replace.
	(c) Crankshaft pilot needle bearing sticking	Replace.
	(d) Cracked clutch disc face	Replace.
	(e) Stuck clutch disc (smeared by oil or water)	Replace.
3. Clutch chatters. Clutch chattering is an unpleasant vibration to the whole vehicle when the vehicle is just started with clutch partially engaged.	(a) Adhesion of oil on the clutch face	Replace the clutch disc.
	(b) Weak or broken damper spring	Replace the clutch disc.
	(c) Poor contact of the disc surface or excessively worn disc	Replace the faulty clutch disc.
	(d) Warped pressure plate or flywheel	Repair or replace.
	(e) Loose disc rivets	Replace the clutch disc.
	(f) Loose engine mounting	Retighten or replace mounting.
	(g) Loose pitching stopper	Retighten or replace the pitching stopper.

Symptoms	Possible cause	Corrective action
4. Noisy clutch Examine whether the noise is generated when the clutch is disengaged, engaged, or partially engaged.	(a) Broken, worn or insufficiently lubricated release bearing	Replace the release bearing.
	(b) Insufficient lubrication of the pilot bearing	Replace the pilot bearing.
	(c) Loose clutch disc hub	Replace the clutch disc.
	(d) Loose damper spring retainer	Replace the clutch disc.
	(e) Deteriorated or broken damper spring	Replace the clutch disc.
5. Clutch grabs suddenly. When starting the vehicle with the clutch partially engaged, the clutch engages suddenly and the vehicle jumps instead of making a smooth start.	(a) Grease or oil on facing	Replace the clutch disc.
	(b) Deteriorated cushioning spring	Replace the clutch disc.
	(c) Worn or rusted spline of clutch disc or main shaft	Take off rust, apply grease or replace clutch disc or main shaft.
	(d) Deteriorated or broken damper spring	Replace the clutch disc.
	(e) Loose engine mounting	Retighten or replace mounting.
	(f) Deteriorated diaphragm spring	Replace.

2. CLUTCH PEDAL

Symptoms	Corrective action
Insufficient pedal play	Adjust the free play of the pedal.
Insufficient clutch pedal free play	Adjust the free play of the pedal.
Excessively worn and damaged pedal shaft and/or bushing	Replace the bushing or shaft with a new part.

3. DIAGNOSTIC DIAGRAM OF CLUTCH DRAG

	Step	Check	Yes	No
1	**CHECK GEAR NOISE.** 1) Start the engine. 2) While idling the engine, step on the clutch pedal and quickly shift from neutral to reverse.	Is there any abnormal noise from the transmission gear?	Go to step **2**.	Clutch is normal.
2	**CHECK GEAR NOISE.** Depress the clutch pedal at idle and shift from neutral to reverse within 0.5 — 1.0 second.	Is there any abnormal noise from the transmission gear?	Go to step **3**.	Defective transmission or excessive clutch drag torque. Inspect pilot bearing, clutch disc, transmission and clutch disc hub spline.
3	**CHECK GEAR NOISE.** 1) Depress the clutch pedal at idle and shift from neutral to reverse within 0.5 — 1.0 second. 2) While stepping on the clutch pedal, shift from neutral to reverse, reverse to neutral several times.	Is there any abnormal noise from the transmission gear?	Inadequate clutch disengage. Inspect the clutch disc, clutch cover, clutch release, and clutch pedal free play.	Clutch and flywheel seizure. Inspect the clutch disc and the spline of the clutch disc hub.

CHASSIS SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

FRONT SUSPENSION	FS

1. General Description

A: SPECIFICATION

1. FRONT

- WRX model

Tire size		235/45R17
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	375 (14.76)
Camber (tolerance: ±0°30′ Differences between RH and LH: 30′ or less)		–0°45′
Caster (referential value)		6°30′
Steering angle (tolerance: ±1.5°)	Inner wheel	37.5°
	Outer wheel	32.9°
Toe-in	mm (in)	0±3 (0±0.12) Toe angle (sum of both wheels): 0°±0°16′
Kingpin angle (referential value)		15°14′

- STI model

Tire size		245/40R18
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	370 (14.57)
Camber (tolerance: ±0°30′ Differences between RH and LH: 30′ or less)		–0°45′
Caster (referential value)		6°33′
Steering angle (tolerance: ±1.5°)	Inner wheel	36.3°
	Outer wheel	32.0°
Toe-in	mm (in)	0±3 (0±0.12) Toe angle (sum of both wheels): 0°±0°16′
Kingpin angle (referential value)		15°22′

2. REAR

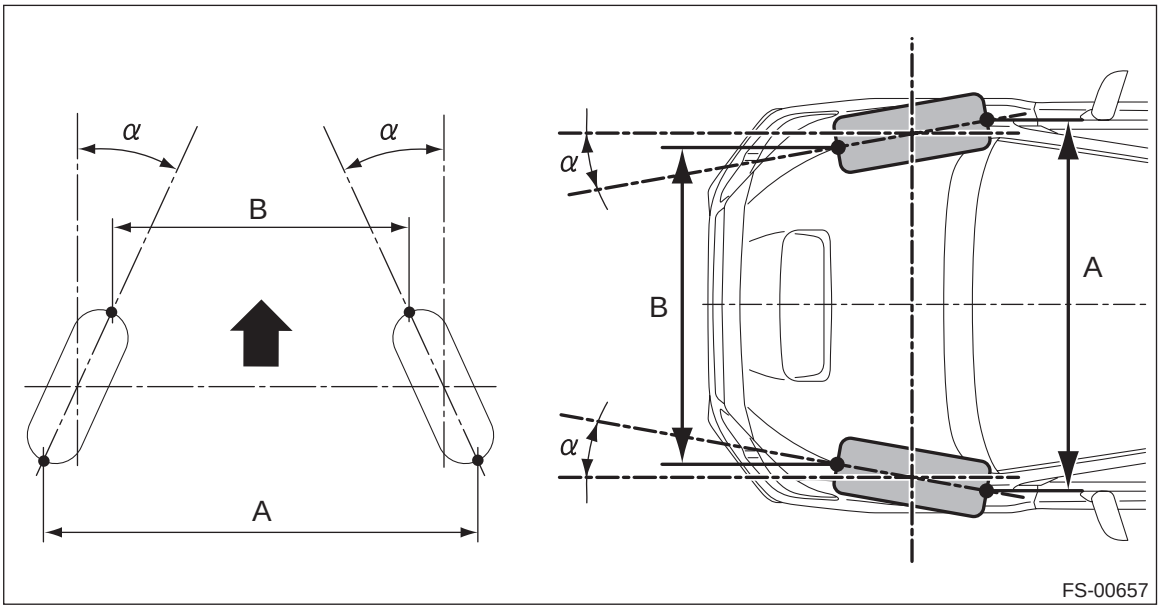
- WRX model

Tire size		235/45R17
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	367 (14.45)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		–1°30′
Toe-in	mm (in)	IN3±3 (IN0.12±0.12)
		Toe angle (sum of both wheels): IN0°16′±16′
Thrust angle (tolerance: 0°00′±30′)		0°00′

- STI model

Tire size		245/40R18
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	362 (14.25)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		–1°40′
Toe-in	mm (in)	IN3±3 (IN0.12±0.12)
		Toe angle (sum of both wheels): IN0°16′±16′
Thrust angle (tolerance: 0°00′±30′)		0°00′

NOTE:
• Front toe-in, rear toe-in and front camber can be adjusted. Adjust if the value of toe-in or camber exceeds the tolerance range of the specification chart.
• Other items except for front toe-in, rear toe-in and front camber that are described in the specification chart cannot be adjusted.
• If other items exceed the tolerance range of the specification chart, check the suspension parts and connections for deformation. If defective, replace with new parts.



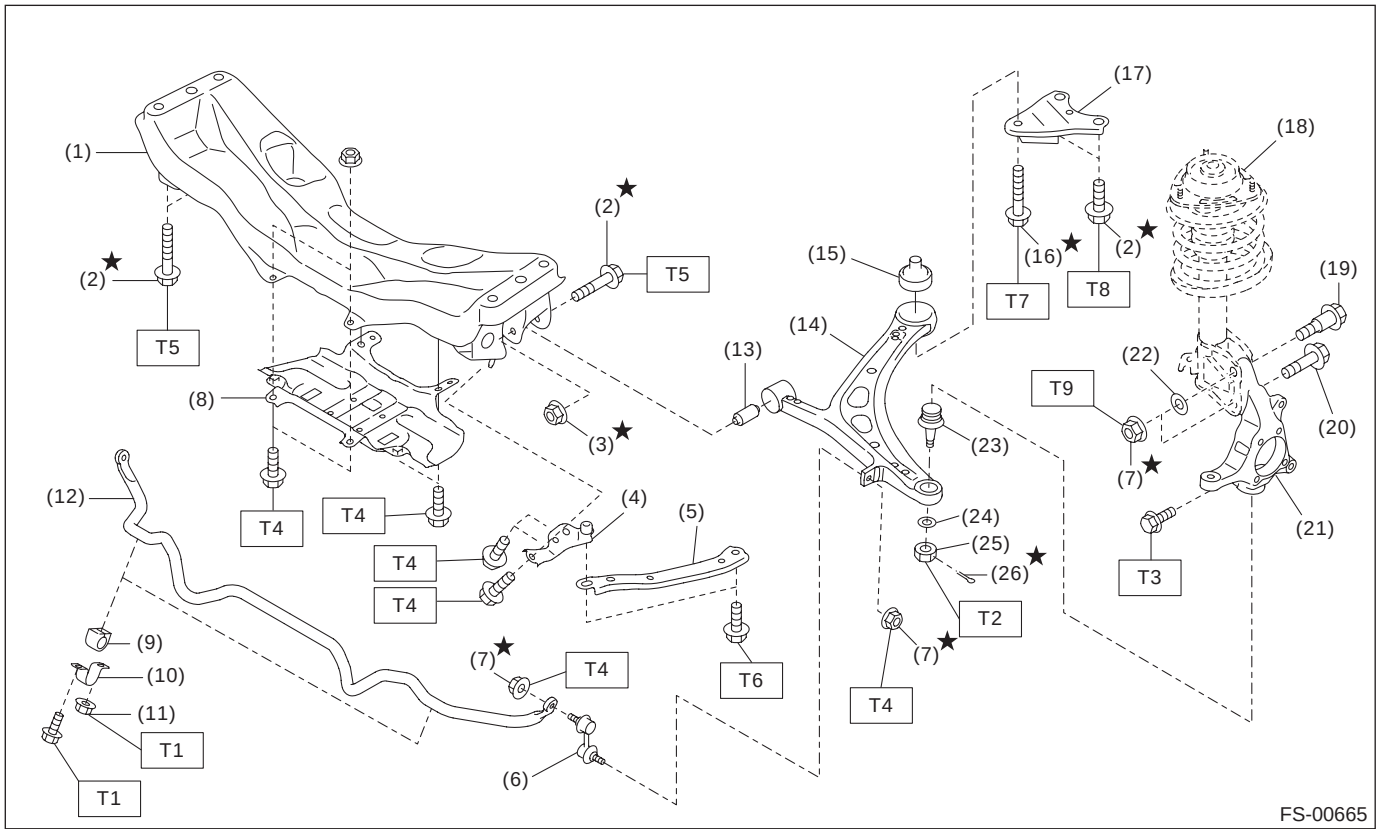
A – B = Positive: Toe-in, Negative: Toe-out

α = Individual toe angles

B: COMPONENT

1. FRONT SUSPENSION

- Electric power steering model

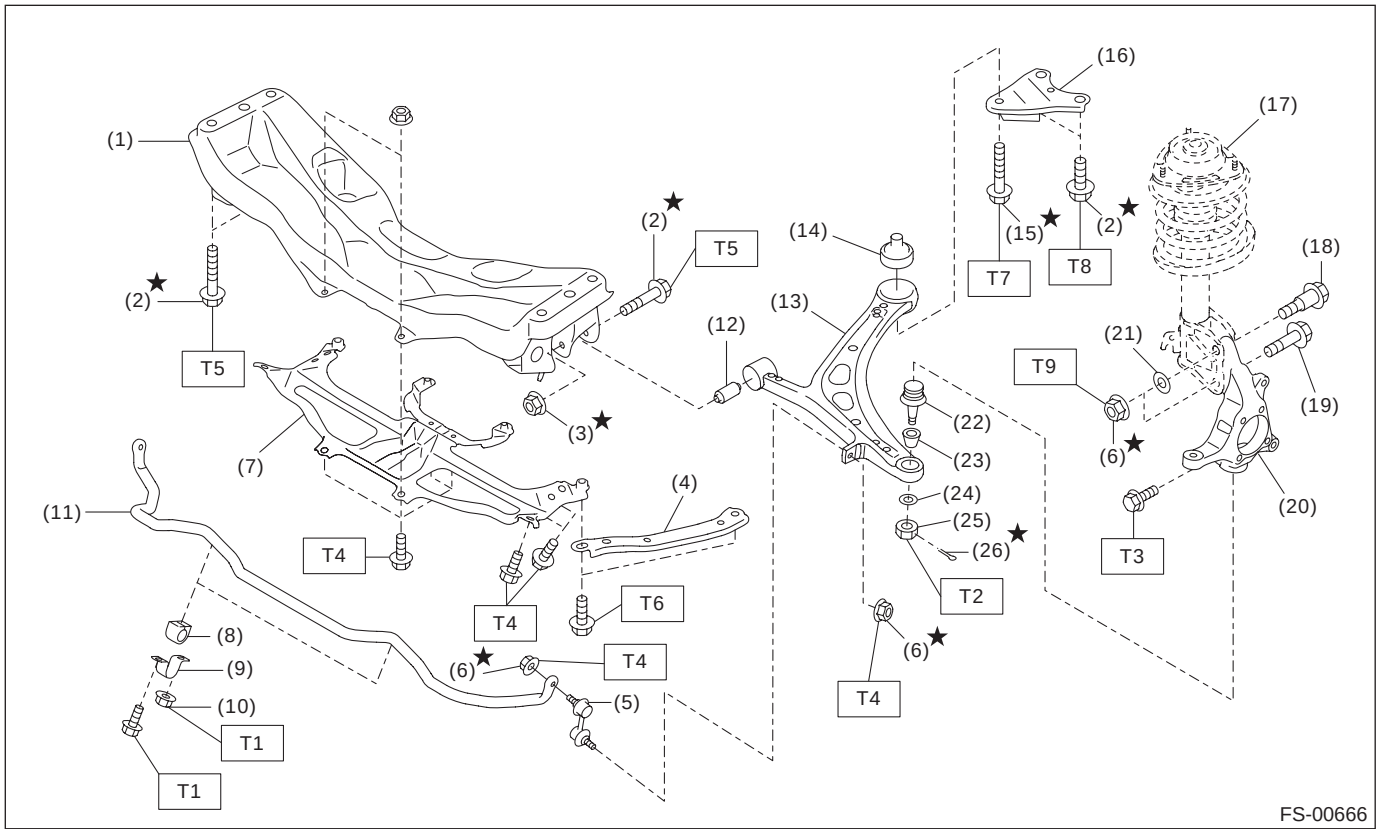


(1)	Front crossmember COMPL	(14)	Front arm ASSY
(2)	Flange bolt	(15)	Pillow ball bushing
(3)	Self-locking nut	(16)	Flange bolt
(4)	Support plate - front crossmember	(17)	Front arm rear plate
(5)	Front support	(18)	Front strut ASSY
(6)	Stabilizer link ASSY	(19)	Adjusting bolt
(7)	Flange nut	(20)	Flange bolt
(8)	Front crossmember support	(21)	Housing ASSY - front axle
(9)	Bushing - stabilizer	(22)	Adjusting washer
(10)	Clamp - stabilizer bushing	(23)	Ball joint ASSY
(11)	Flange nut	(24)	Washer
(12)	Front stabilizer	(25)	Castle nut
(13)	Bushing front - front arm	(26)	Cotter pin

Tightening torque: N·m (kgf-m, ft-lb)

T1: 25 (2.5, 18.4)
T2: 39 (4.0, 28.8)
T3: 50 (5.1, 36.9)
T4: 60 (6.1, 44.3)
T5: 95 (9.7, 70.1)
T6: 100 (10.2, 73.8)
T7: 140 (14.3, 103.3)
T8: 150 (15.3, 110.6)
T9: 155 (15.8, 114.3)

- Hydraulic power steering model

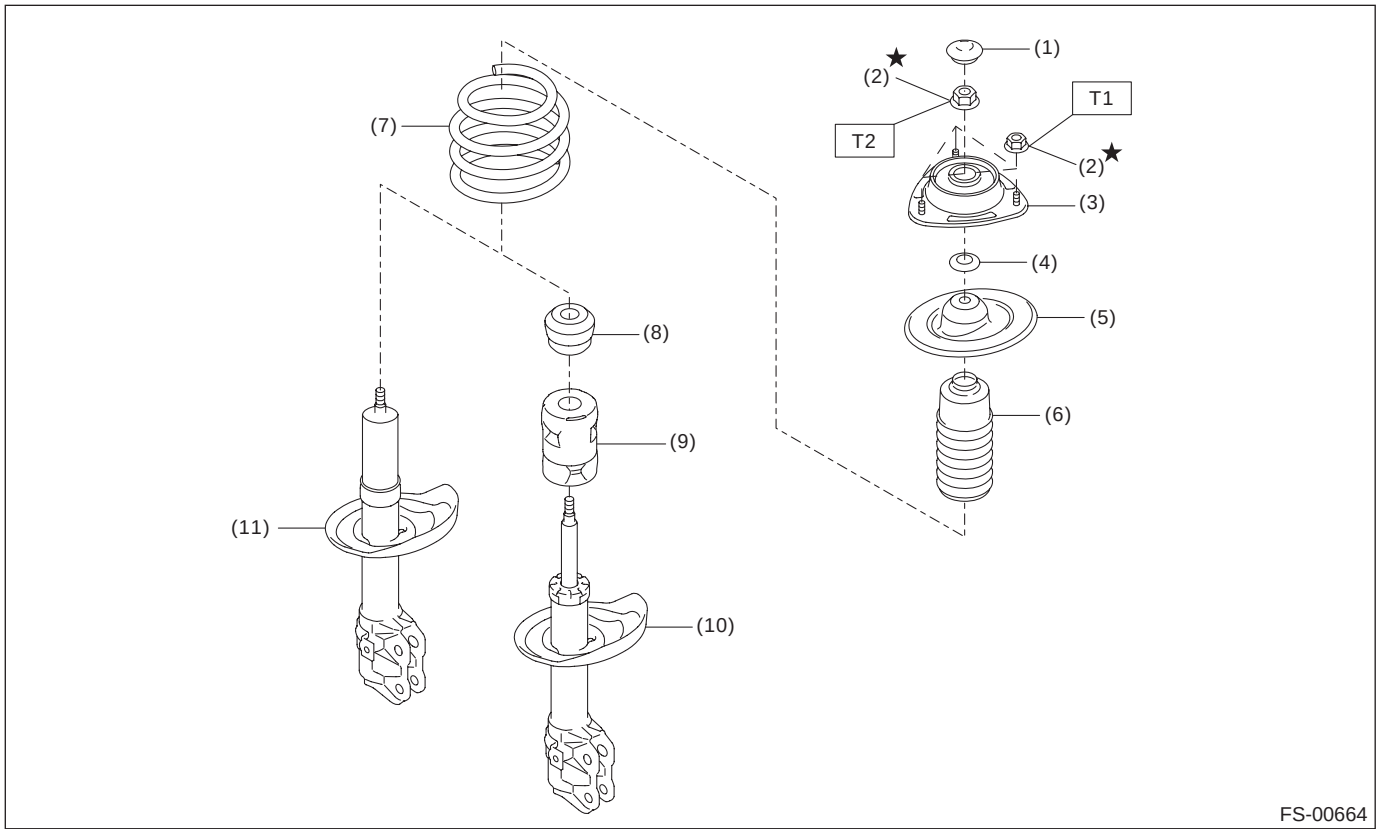


(1)	Front crossmember COMPL	(14)	Pillow ball bushing
(2)	Flange bolt	(15)	Flange bolt
(3)	Self-locking nut	(16)	Front arm rear plate
(4)	Front support	(17)	Front strut ASSY
(5)	Stabilizer link ASSY	(18)	Adjusting bolt
(6)	Flange nut	(19)	Flange bolt
(7)	Front crossmember support	(20)	Housing ASSY - front axle
(8)	Bushing - stabilizer	(21)	Adjusting washer
(9)	Clamp - stabilizer bushing	(22)	Ball joint ASSY
(10)	Flange nut	(23)	Boss - transverse link
(11)	Front stabilizer	(24)	Washer
(12)	Bushing front - front arm	(25)	Castle nut
(13)	Front arm ASSY	(26)	Cotter pin

Tightening torque: N·m (kgf-m, ft-lb)

T1: 25 (2.5, 18.4)
T2: 39 (4.0, 28.8)
T3: 50 (5.1, 36.9)
T4: 60 (6.1, 44.3)
T5: 95 (9.7, 70.1)
T6: 100 (10.2, 73.8)
T7: 140 (14.3, 103.3)
T8: 150 (15.3, 110.6)
T9: 155 (15.8, 114.3)

2. FRONT STRUT



(1)	Dust seal - front strut	(7)	Coil spring - front
(2)	Self-locking nut	(8)	Helper - front strut (standard damper)
(3)	Strut mount - front	(9)	Dust cover inner (standard damper)
(4)	Spacer - front strut	(10)	Strut COMPL - front (standard damper)
(5)	Spring seat - front strut UPR	(11)	Strut COMPL - front (inverted damper)
(6)	Dust cover - front strut		

Tightening torque: N·m (kgf-m, ft-lb)

T1: 20 (2.0, 14.8)

T2: 55 (5.6, 40.6)

C: CAUTION

• When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
• When disposing of strut COMPL - front, be sure to bleed the oil or gas out completely. Also, do not expose to flames or fire.
• When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
• Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
• Do not secure a part in a vise directly. Place cushioning materials such as wood pieces, blocks, aluminum plates, or waste cloth between the part and the vise.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
• When the suspension-related components have been removed/installed or replaced, perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• For parts which are not reusable, always use new parts. Other parts should be replaced with new parts as required.
• When handling oil or fuel, adhere to the following to prevent unexpected accident.
  – Be careful with fire.
  – Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
  – Follow all government and local regulations concerning disposal of refuse when disposing.
• Be sure that the surface of brake disc or brake pad is free from grease or oil.
• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
• Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-927680000	927680000	INSTALLER & REMOVER SET	Used for replacing the bushing front - front arm of front arm assembly.
 ST20099AE020	20099AE020	INSTALLER & REMOVER	Used for replacing pillow ball bushing of aluminum front arm.
 ST28099PA010	28099PA010	HOUSING STAND	• Used for removing pillow ball bushing of aluminum front arm. • Used together with INSTALLER & REMOVER (20099AE020).
 ST18723AA000	18723AA000	REMOVER	• Used for assembling pillow ball bushing of aluminum front arm. • Used together with INSTALLER & REMOVER (20099AE020).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST20299AG020	20299AG020	STUD BOLT SOCKET	Used for removing and installing the stud bolt for front arm assembly installing portion.
 ST20399AG000	20399AG000	STRUT MOUNT SOCKET	• Used for disassembling and assembling strut assembly and shock absorber assembly. • Used for checking center nut torque of strut assembly and shock absorber assembly.

2. GENERAL TOOL

TOOL NAME	REMARKS
Alignment gauge	Used for measuring wheel alignment.
Alignment gauge adapter	Used for measuring wheel alignment.
Turning radius gauge	Used for measuring wheel alignment.
Toe-in gauge	Used for toe-in measurement.
Tie-rod ball joint puller	Used for disconnecting tie-rod end.
Dial gauge	Used for damper strut measurement.
Coil spring compressor	Used for disassembling and assembling strut assembly and shock absorber assembly.
Shackle	• Two units used for hanging power unit. • Attached to both end of chain sling and connected to engine hook. • Load capacity: 250 kg (551 lb) or more
Sling belt	• Used for removing and installing crossmembers. • Width: 35 — 40 mm (1.38 — 1.57 in) • Length: 2 m (6.6 ft) • Load capacity: 1 t (2205 lb) or more

2. Wheel Alignment

A: INSPECTION

Check the following items before performing the wheel alignment measurement.
- Tire inflation pressure
- Uneven wear of RH and LH tires, or difference of sizes
- Tire runout
- Excessive play and wear of ball joint
- Excessive play and wear of tie-rod end
- Excessive play of wheel bearing
- Right and left wheel base imbalance
- Deformation and excessive play of steering link
- Deformation and excessive play of suspension parts

Check, adjust and measure the wheel alignment in accordance with the following procedures.

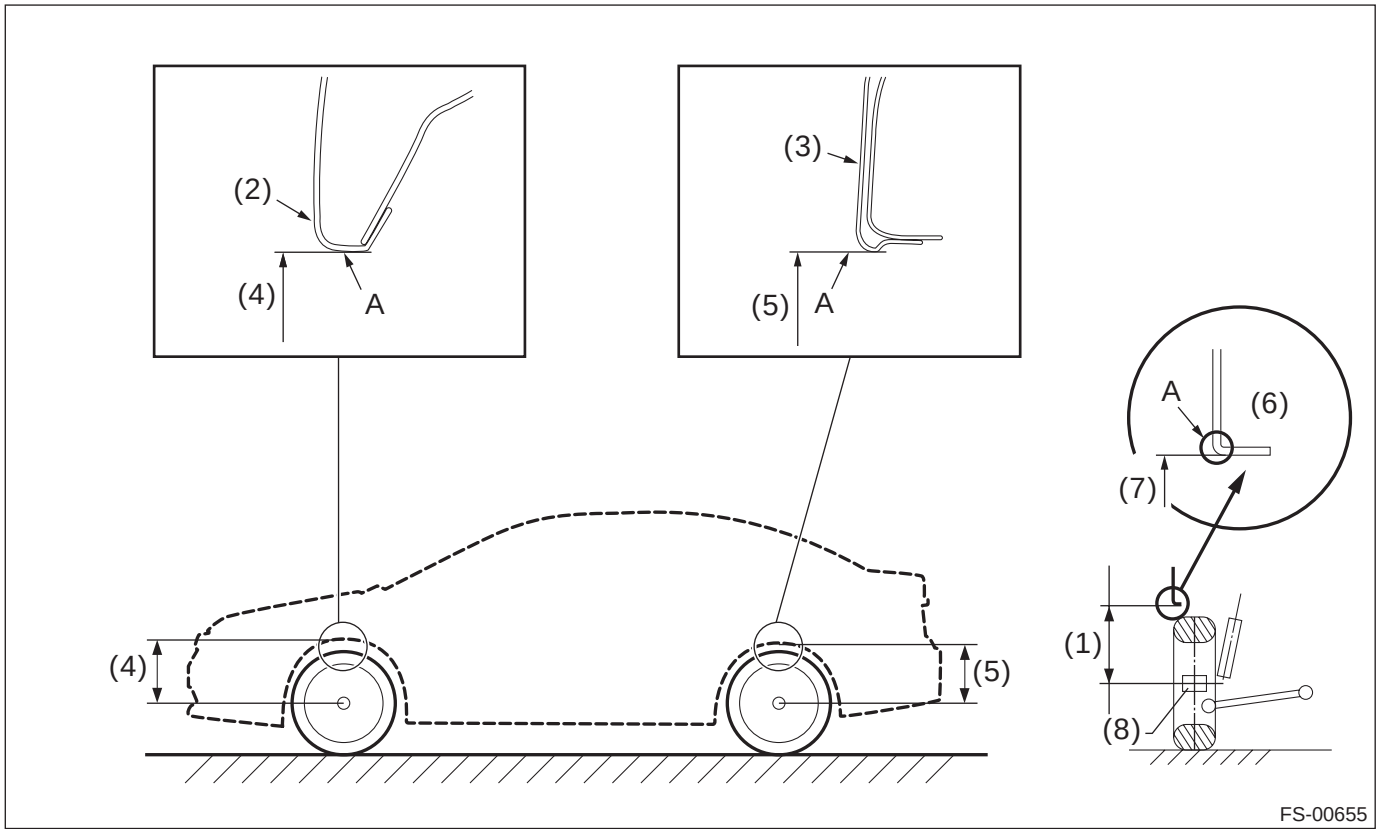
1	Wheel arch height (front and rear wheels)	Inspection: <Ref. to FS-11, WHEEL ARCH HEIGHT, INSPECTION, Wheel Alignment.>
	↓	
2	Camber (front and rear wheels)	Inspection: <Ref. to FS-12, CAMBER, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-15, FRONT CAMBER, ADJUSTMENT, Wheel Alignment.>
	↓	
3	Caster (front wheel)	Inspection: <Ref. to FS-12, CASTER, INSPECTION, Wheel Alignment.>
	↓	
4	Steering angle	Inspection: <Ref. to FS-13, STEERING ANGLE, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-17, STEERING ANGLE, ADJUSTMENT, Wheel Alignment.>
	↓	
5	Front wheel toe-in	Inspection: <Ref. to FS-13, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-17, FRONT WHEEL TOE-IN, ADJUSTMENT, Wheel Alignment.>
	↓	
6	Rear wheel toe-in	Inspection: <Ref. to FS-11, WHEEL ARCH HEIGHT, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-18, REAR WHEEL TOE-IN, ADJUSTMENT, Wheel Alignment.>
	↓	
7	Thrust angle	Inspection: <Ref. to FS-14, THRUST ANGLE, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-20, THRUST ANGLE, ADJUSTMENT, Wheel Alignment.>

1. WHEEL ARCH HEIGHT

1) Park the vehicle on a level surface.
2) Empty the vehicle so that it is at “curb weight”.

NOTE:
Empty the trunk or luggage room, load the spare tire, jack and service tools, and fill up the fuel tank.

3) Set the steering wheel in a straight-ahead position, and stabilize the suspension by moving the vehicle in a straight line for 5 m (16 ft) or more.
4) Suspend a thread from the wheel arch (point “A” in the figure below) and affix at a position directly above the center of wheel.
5) Measure the distance between the point “A” and the center of wheel.



(1) Wheel arch height
(2) Front fender
(3) Rear quarter
(4) Front wheel arch height
(5) Rear wheel arch height
(6) Flange bend line
(7) Point of measurement
(8) End of spindle

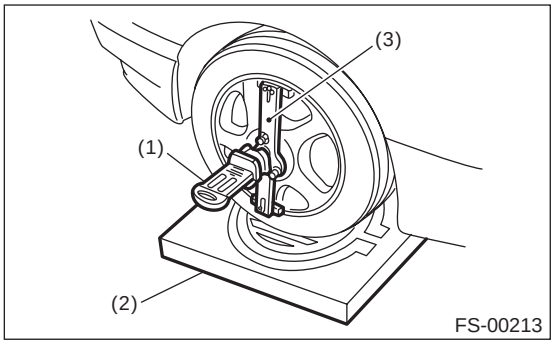
Model	Tire size	Wheel arch height specification mm (in) (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	
		Front	Rear
WRX model	235/45R17	375 (14.76)	367 (14.45)
STI model	245/40R18	370 (14.57)	362 (14.25)

2. CAMBER

1) Place the front wheel on the turning radius gauge.

NOTE:
Make sure the ground contact surfaces of the front and rear wheels are at the same height.

2) Set the adapter into the center of wheel, and then set the wheel alignment gauge.



(1) Alignment gauge
(2) Turning radius gauge
(3) Adapter

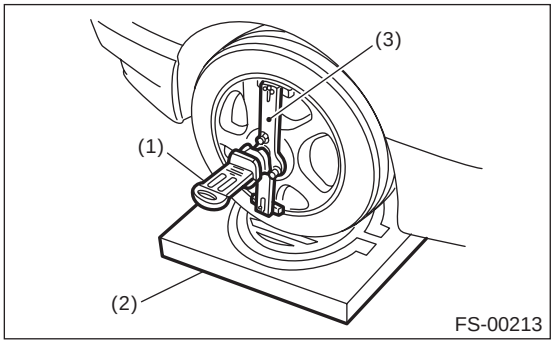
3) Measure the camber angle in accordance with the operation manual for wheel alignment gauge.

Tire size		Camber (difference between RH and LH 35′ or less)
WRX model	235/45R17	–0°45′±0°30′
STI model	245/40R18	

3. CASTER

1) Place the front wheel on the turning radius gauge. Make sure the ground contact surfaces of the front and rear wheels are at the same height.

2) Set the adapter into the center of wheel, and then set the wheel alignment gauge.



(1) Alignment gauge
(2) Turning radius gauge
(3) Adapter

3) Measure the caster angle in accordance with the operation manual for wheel alignment gauge.

Tire size		Caster
WRX model	235/45R17	6°30′
STI model	245/40R18	6°33′

4. STEERING ANGLE

1) Place the vehicle on turning radius gauge.
2) While depressing the brake pedal, turn the steering wheel fully to the left and right.
3) With the steering wheel held at each fully turned position, measure both the inner and outer wheel steering angles.

Tire size		Inner wheel	Outer wheel
WRX model	235/45R17	37.5°±1.5°	32.9°±1.5°
STI model	245/40R18	36.3°±1.5°	32.0°±1.5°

5. FRONT WHEEL TOE-IN

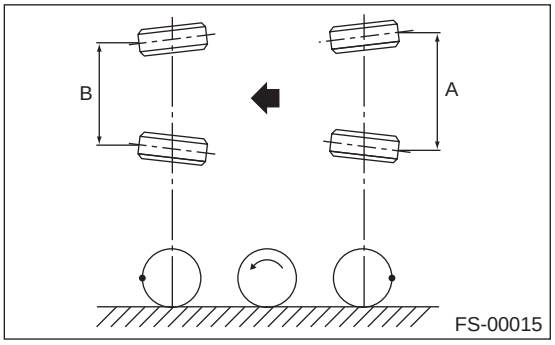
Toe-in: Inspection value
0±3 mm (0±0.12 in)

1) Set the toe-in gauge in the position at wheel axis center height behind the right and left front tires.
2) Place a mark at the center of both left and right tires, and measure distance “A” between the marks.
3) Move the vehicle forward to rotate the tires 180°.

NOTE:
Be sure to rotate the tires in the forward direction.

4) Measure the distance “B” between the left and right marks. Find toe-in using the following calculation:

A – B = Toe-in



6. REAR WHEEL TOE-IN

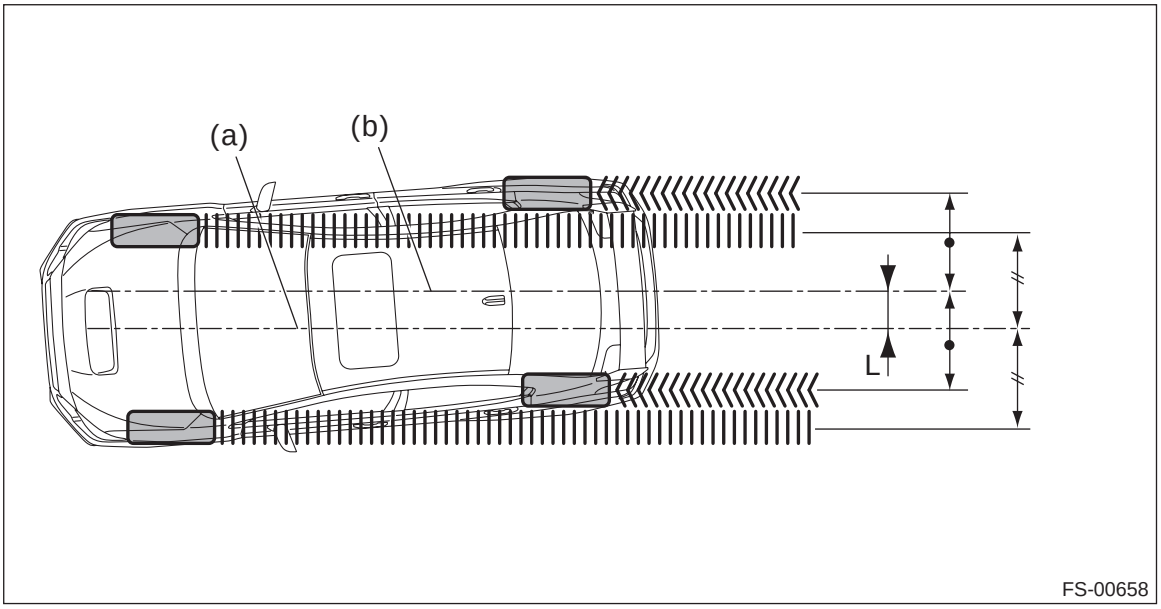
Refer to the FRONT WHEEL TOE-IN for rear toe-in inspection procedures. <Ref. to FS-13, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.>

Toe-in: Inspection value
3±3 mm (0.12±0.12 in)

7. THRUST ANGLE

1) Park the vehicle on a level surface.
2) Move the vehicle 3 — 4 meters (10 — 13 feet) straight forward.
3) Draw the center of loci for both the front and rear axles.
4) Measure distance “L” between the center lines of the axle loci.

Thrust angle: Inspection value
0°±30′
Less than 30′ when “L” is 23 mm (0.9 in) or less



(a) Center line of loci (front axle) (b) Center line of loci (rear axle)

B: ADJUSTMENT

CAUTION:
When the wheel alignment has been adjusted, perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

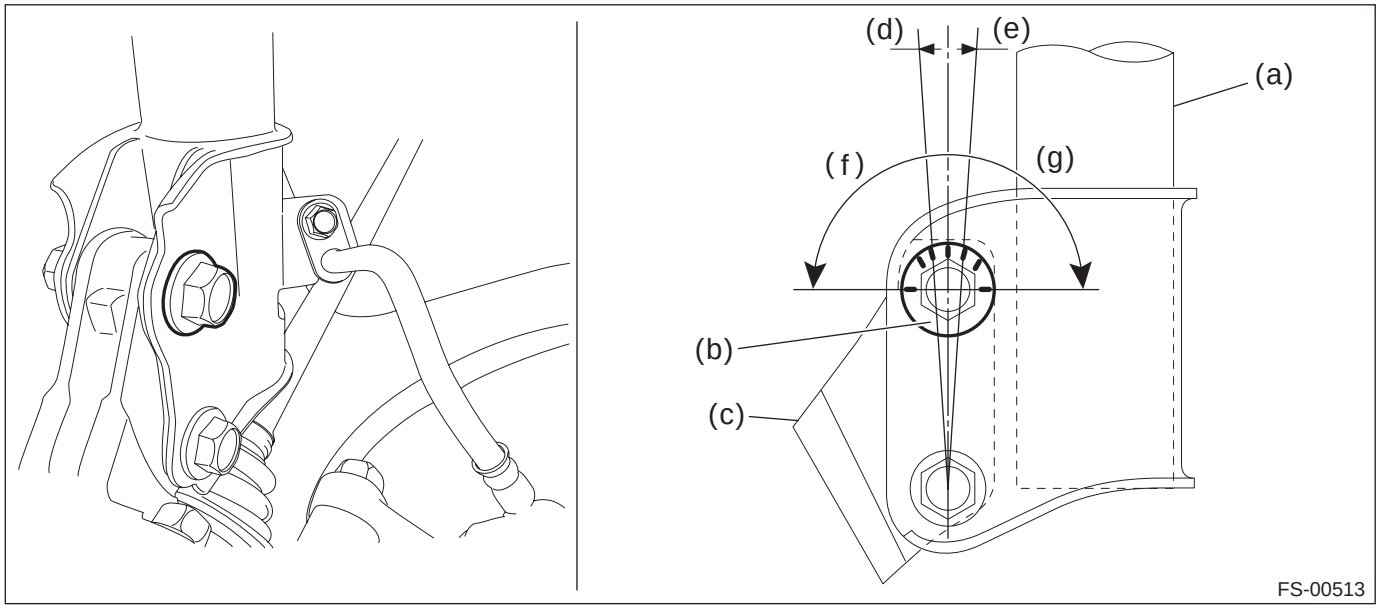
1. FRONT CAMBER

1) Adjust the camber angle to the following value.

Tire size		Camber (difference between RH and LH 35′ or less)
WRX model	235/45R17	–0°45′±0°30′
STI model	245/40R18	

2) Loosen the two flange nuts while holding the strut bolts.
3) Turn the camber adjusting bolt so that the camber is set at specification.

NOTE:
Moving the adjusting bolt by one scale changes the camber by approximately 0°15′.



(a) Strut ASSY
(b) Adjusting bolt
(c) Housing ASSY - front axle
(d) Outer direction
(e) Inner direction
(f) Camber is increased.
(g) Camber is decreased.

To increase camber.	
Rotate the left side counterclockwise.	Rotate the right side clockwise.
 FS-00352	 FS-00353

To decrease camber.	
Rotate the left side clockwise.	Rotate the right side counterclockwise.
 FS-00353	 FS-00352

4) Tighten two new flange nuts.

Tightening torque:
155 N·m (15.8 kgf-m, 114.3 ft-lb)

NOTE:
While holding the adjusting bolt side, tighten the nut side.

2. STEERING ANGLE

1) Adjust the steering angle of both inner and outer wheels.
   (1) Loosen the steering tie-rod lock nut (a), and rotate the tie-rod.

   (2) Turn the tie-rod to adjust the steering angle of both inner and outer wheels.
   (3) Tighten the steering tie-rod lock nut (a).

Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)

NOTE:
Check and correct the tie-rod boot if twisted.
2) Check the toe-in. <Ref. to FS-13, STEERING ANGLE, INSPECTION, Wheel Alignment.>

3. FRONT WHEEL TOE-IN

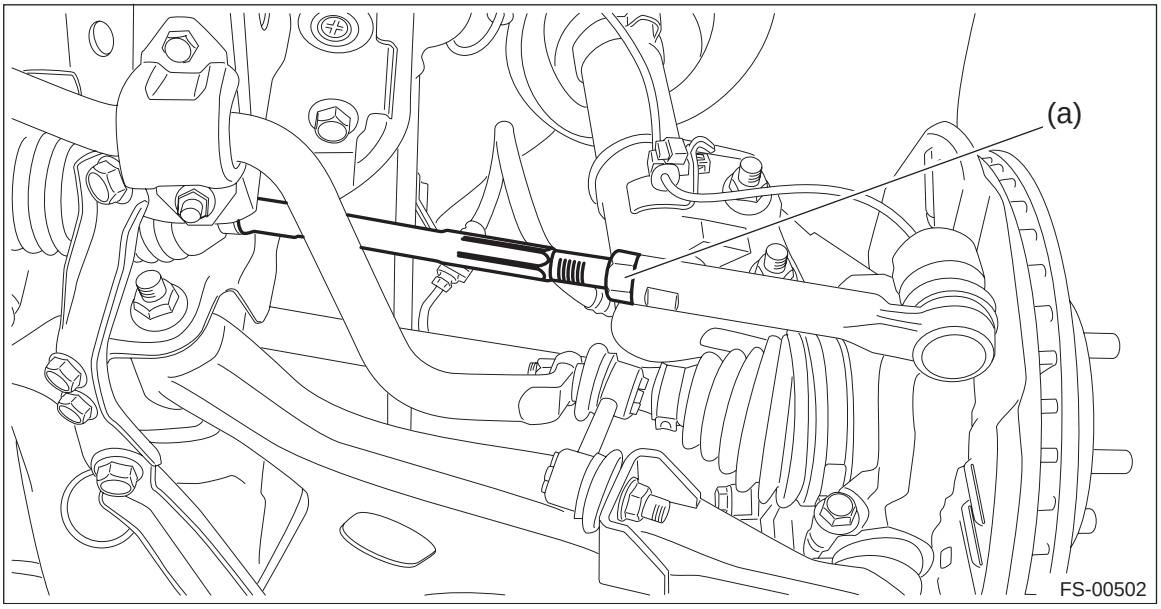
When adjusting the toe-in, adjust it to the following value.

Toe-in: Adjustment value
0±2 mm (0±0.08 in)

1) Check that the left and right wheel steering angles are within specification.
2) Loosen the left and right side steering tie-rod lock nuts (a).
3) Turn the left and right tie-rods by equal amounts until the toe-in is at the specification.

NOTE:
Both the left and right tie-rods are right-hand threaded. To increase toe-in, turn both tie-rods clockwise by equal amount (viewing from the inside of vehicle).

4) Tighten the tie-rod lock nut (a).



Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)

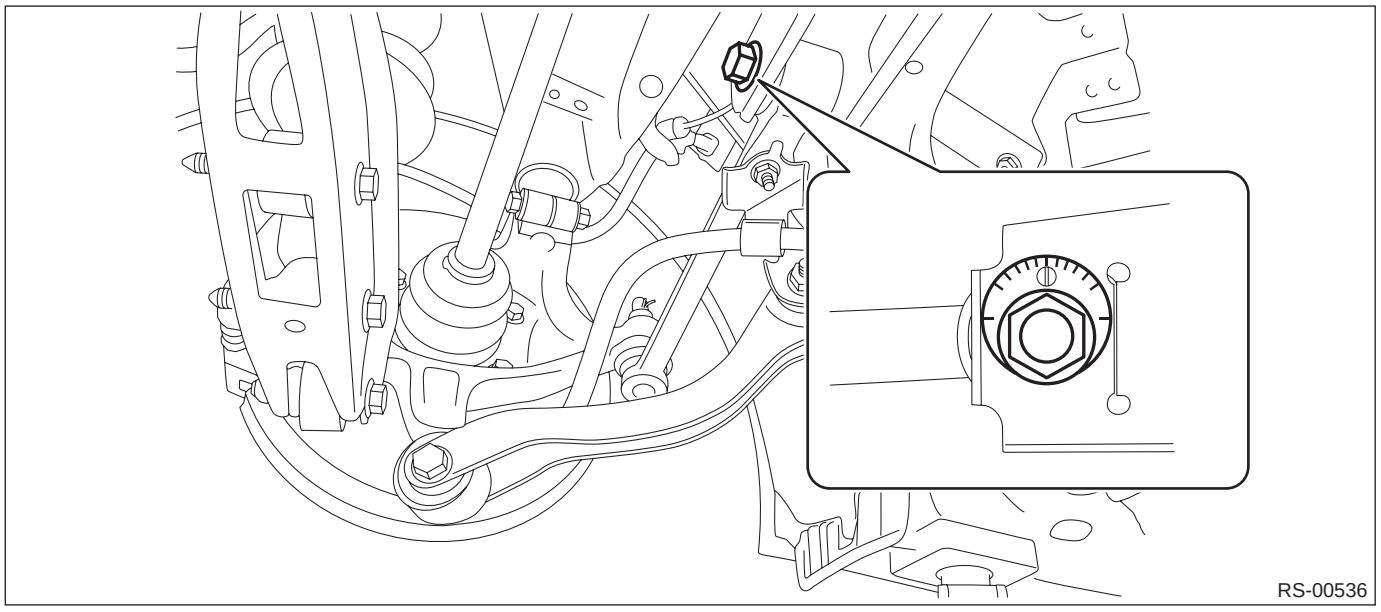
5) Check and correct the tie-rod boot if twisted.

4. REAR WHEEL TOE-IN

When adjusting, adjust it to the following value.

Toe-in: Adjustment value
3±2 mm (0.12±0.08 in)

1) Loosen the self-locking nut after holding the bolt head section of lateral link assembly - front.



2) Turn the adjusting bolt until toe-in is within the specification.

NOTE:
When the left and right wheels are adjusted for toe-in at the same time, the movement of one scale graduation changes toe-in by approx. 6.0 mm (0.24 in).

To increase toe-in.	
Rotate the left side clockwise.	Rotate the right side counterclockwise.
 FS-00018	 FS-00019

To decrease toe-in.	
Rotate the left side counterclockwise.	Rotate the right side clockwise.
 FS-00019	 FS-00018

3) Attach and tighten a new self-locking nut.

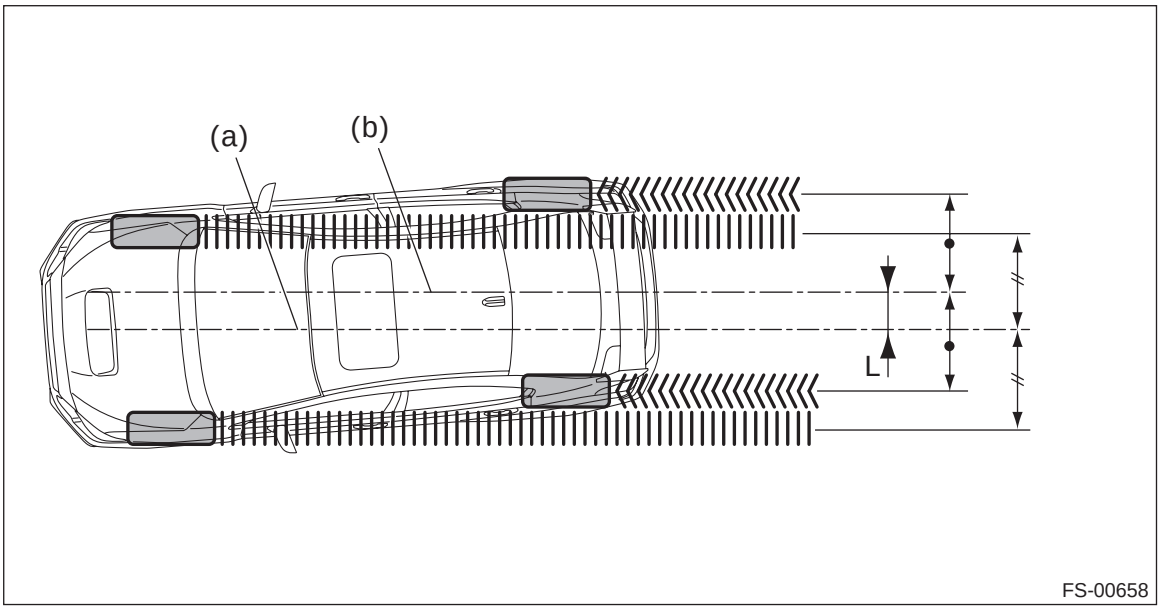
Tightening torque:
100 N·m (10.2 kgf-m, 73.8 ft-lb)

NOTE:
While holding the adjusting bolt side, tighten the nut side.

5. THRUST ANGLE

When adjusting, adjust it to the following value.

Thrust angle: Adjustment value
0°±20′
Less than 20′ when "L" is 15 mm (0.6 in) or less

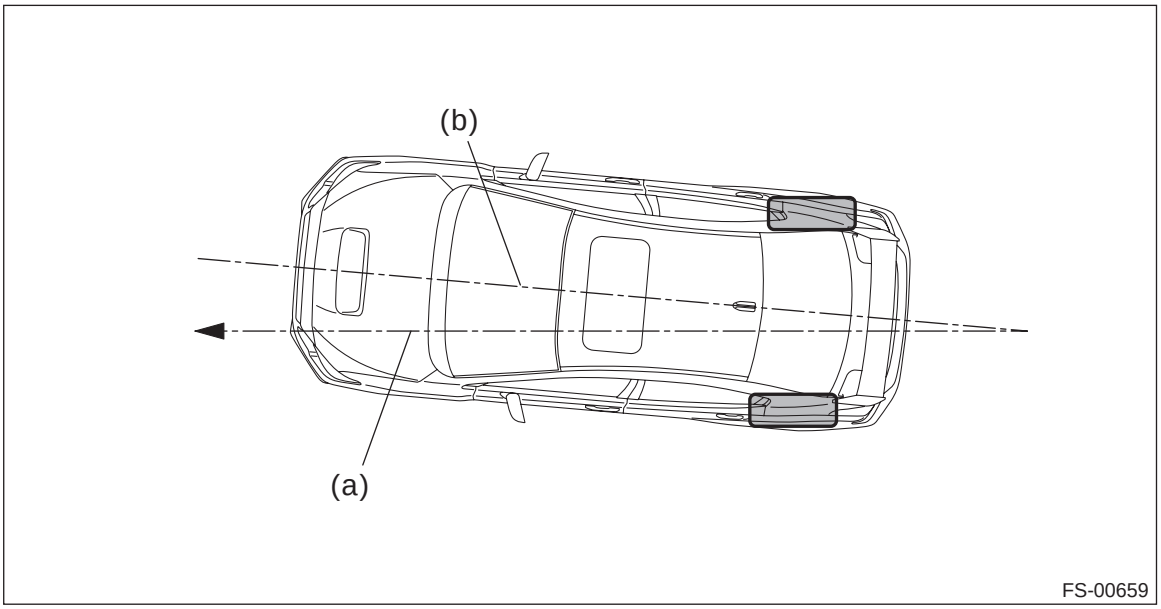


(a) Center line of loci (front axle) (b) Center line of loci (rear axle)

1) Make thrust angle adjustments by turning the toe-in adjusting bolts of the rear suspension equally in the same direction.
2) When one rear wheel is adjusted in a toe-in direction, adjust the other rear wheel equally in toe-out direction, in order to make the thrust angle adjustment.

3) When the left and right adjusting bolts are turned by one graduation, the thrust angle will change approx. 15′. (“L” is approx. 11 mm (0.43 in).)

NOTE:
Thrust angle is a mean value of left and right wheel toe angles in relation to the vehicle body center line. Vehicle is driven straight in the thrust angle direction while slanting in the oblique direction depending on the degree of the mean thrust angle.

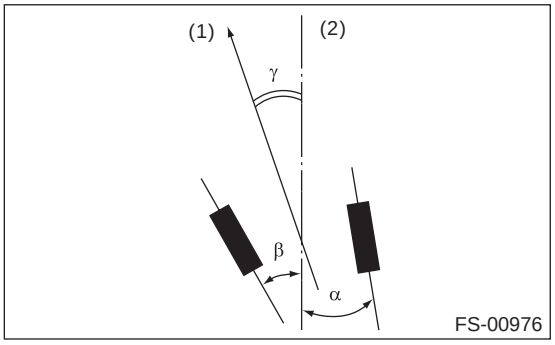


(a) Thrust angle (b) Body center line

Thrust angle:

$\gamma = (\alpha - \beta)/2$

α: Rear RH wheel toe-in angle
β: Rear LH wheel toe-in angle
Substitute only the positive toe-in values from each wheel into α and β in the calculation.



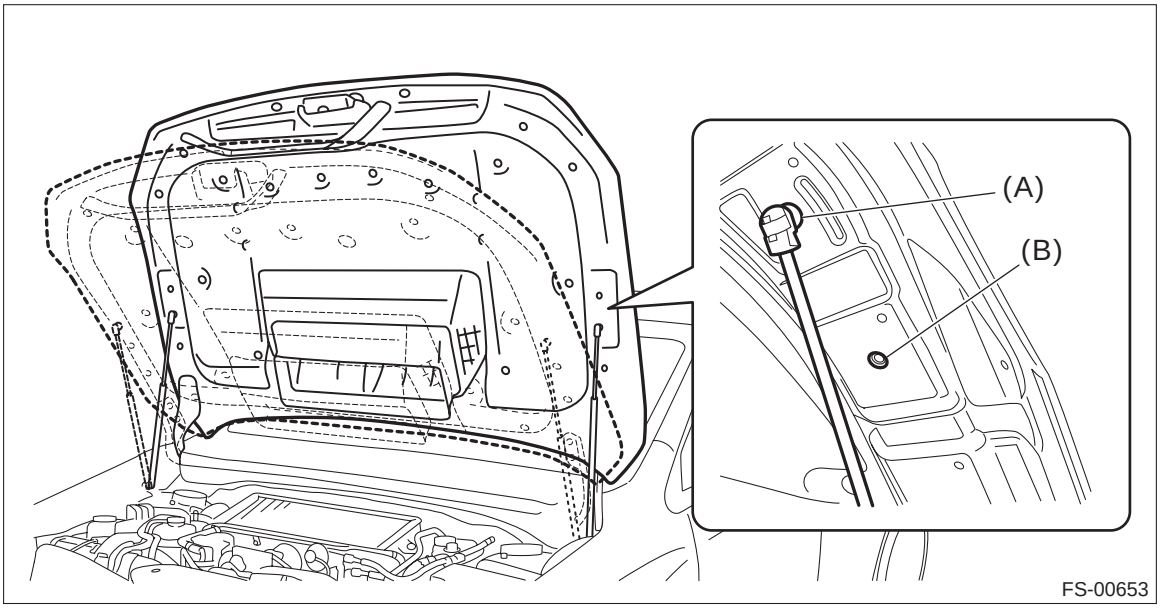
(1) Front
(2) Body center line

3. Front Crossmember

A: REMOVAL

CAUTION:
For electric power steering model, be careful of the following items.
• The power steering control module continues to operate after the engine stops and calculates the temperature in the control module. Therefore, before starting service of the power steering system which requires disconnection of the connector, stop the engine and allow approx. 30 minutes until the control module becomes cold.
• Be careful not to let any foreign matter (dust, water, oil, etc.) enter into the power steering control module connector when removing or installing. If a foreign matter enters, completely remove it.
1) Lift up the vehicle, and then remove the front wheels.
2) Remove the under cover - front. <Ref. to EI-21, REMOVAL, Front Under Cover.>
3) Remove the universal joint assembly - steering. <Ref. to PS-21, REMOVAL, Universal Joint.>
4) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

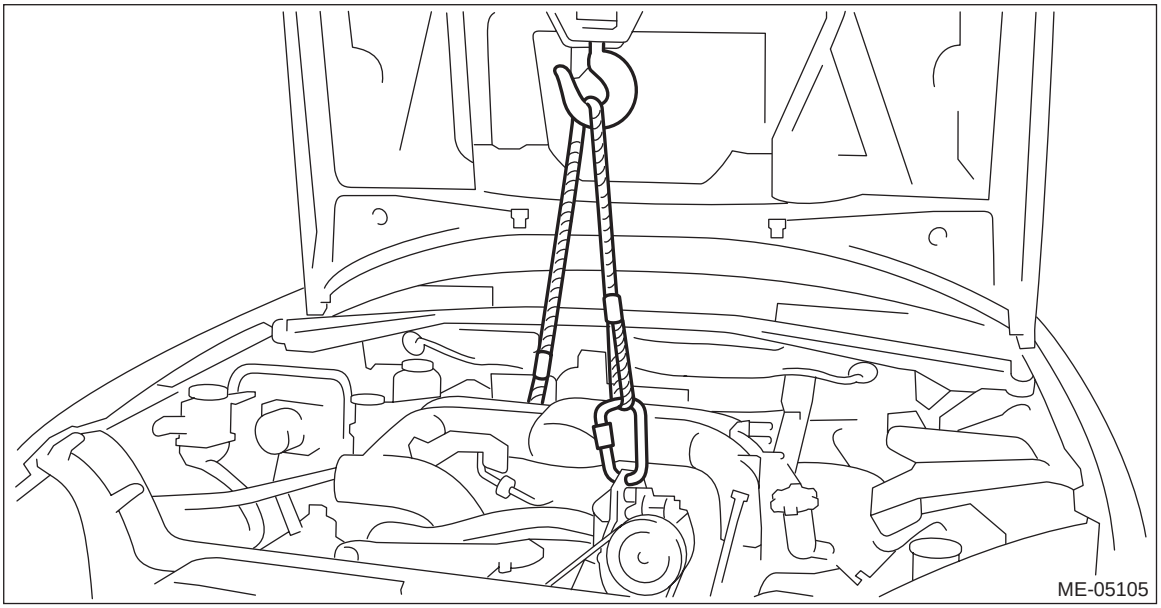
NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
5) Change the hood stay location from (A) to (B) to open the front hood completely.



6) Remove the V-belt cover. (STI model)
7) Remove the collector cover. (Except for STI model) <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
8) Disconnect the connector and harness clamp from power steering control module. (Electric power steering model)
9) Disconnect the power steering hose from the steering gearbox. (Hydraulic power steering model)

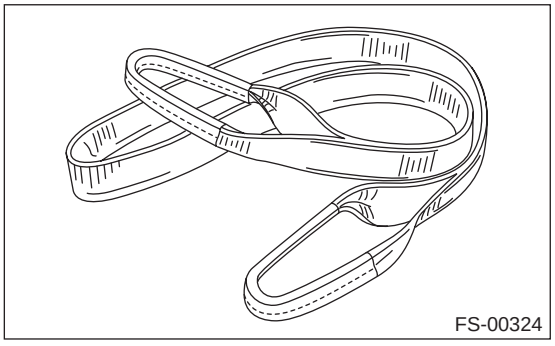
10) Remove the engine mounting and the crossmember assembly.
(1) Support the engine with a lifting device and wire ropes.
(2) While lifting up the vehicle, also raise up the lifting device simultaneously.

CAUTION:
Be careful not to damage the vehicle with a lifting device or wire ropes.

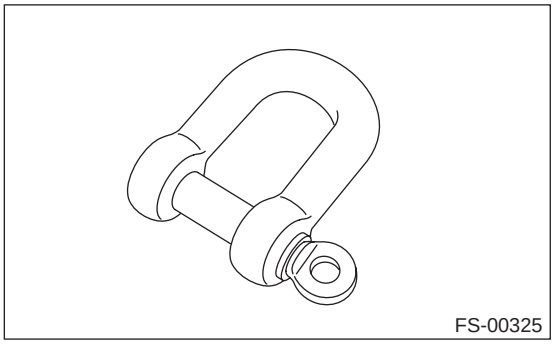


(3) Raise up the lifting device, and lift the engine body by approx. 10 mm (0.39 in).
(4) Attach the sling belt so that it wraps around the both frames using the shackle.

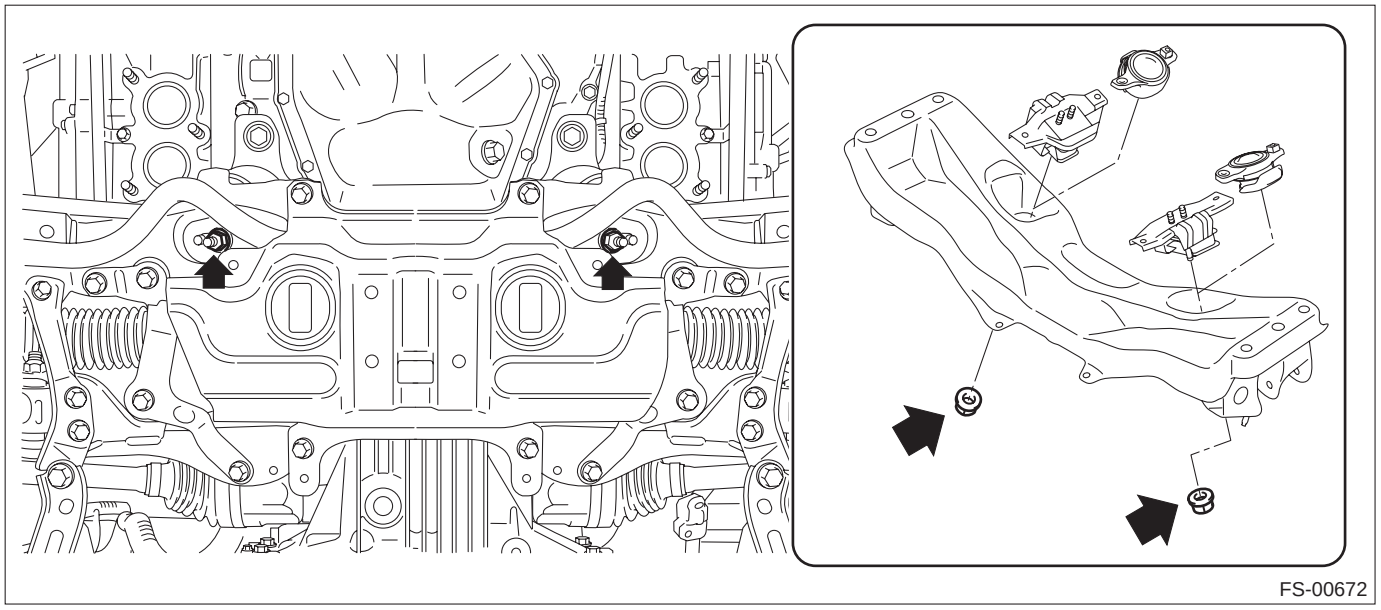
CAUTION:
- **Be sure to attach the sling belt to ensure safety in operation.**
- **Use a sling belt with the length of 2 m (6.6 ft), the width of 35 — 40 mm (1.38 — 1.57 in) and the load capacity of 1 t (2205 lb) or more.**



- **Use a shackle with the load capacity of 0.5 t (1103 lb) or more.**



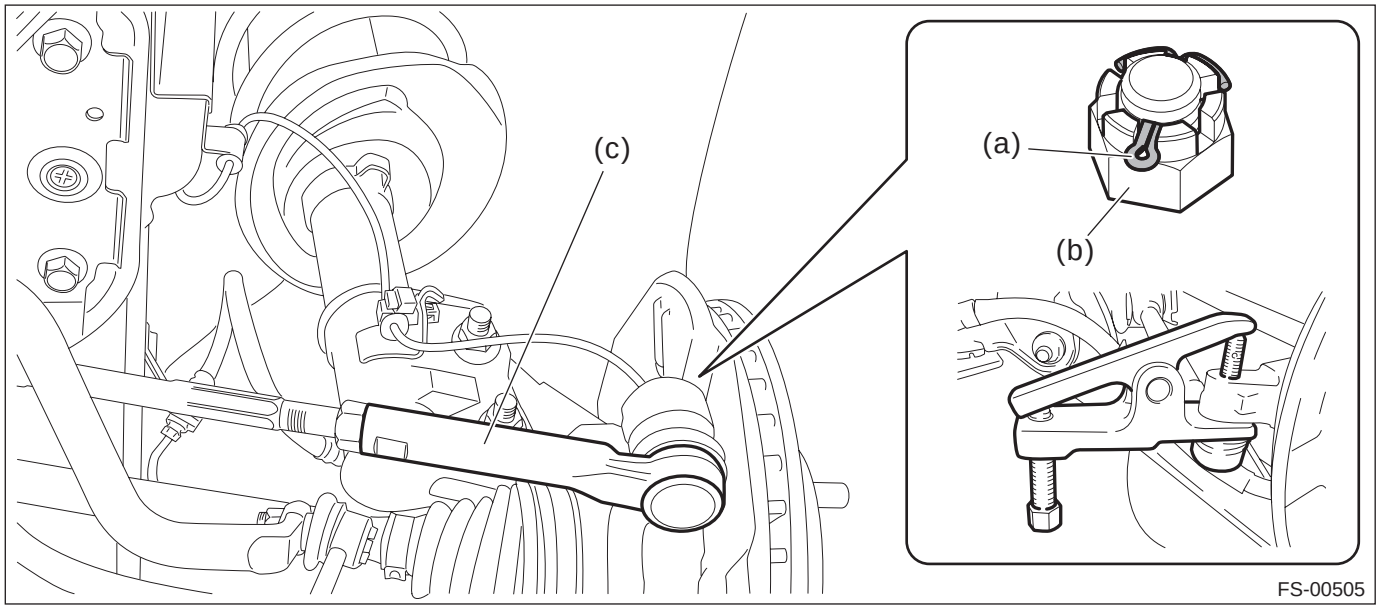
(5) Remove the nuts which secure the engine mounting to the front crossmember assembly.



11) Remove the front crossmember support and the support plate - front crossmember. <Ref. to FS-29, REMOVAL, Front Crossmember Support Plate.>
12) Remove the front exhaust pipe.
- STI model: <Ref. to EX(STI)-5, REMOVAL, Front Exhaust Pipe.>
- Except for STI model: <Ref. to EX(w/o STI)-9, REMOVAL, Front Exhaust Pipe.>

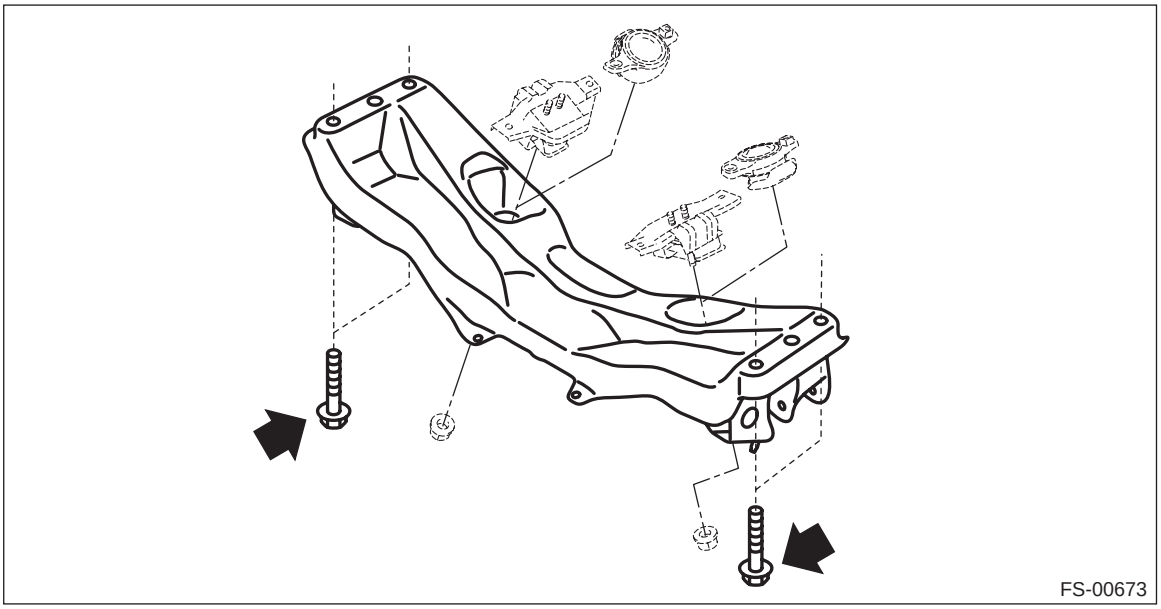
13) Remove the front stabilizer. <Ref. to FS-31, REMOVAL, Front Stabilizer.>
14) Disconnect the tie-rod end.
   (1) Pull out the cotter pin (a).
   (2) Remove the castle nut (b).
   (3) Using a tie-rod ball joint puller, remove the tie-rod end (c).

Preparation tool:
Tie-rod ball joint puller



15) Remove the front arm assembly. <Ref. to FS-37, REMOVAL, Front Arm.>
16) Remove the front crossmember assembly.

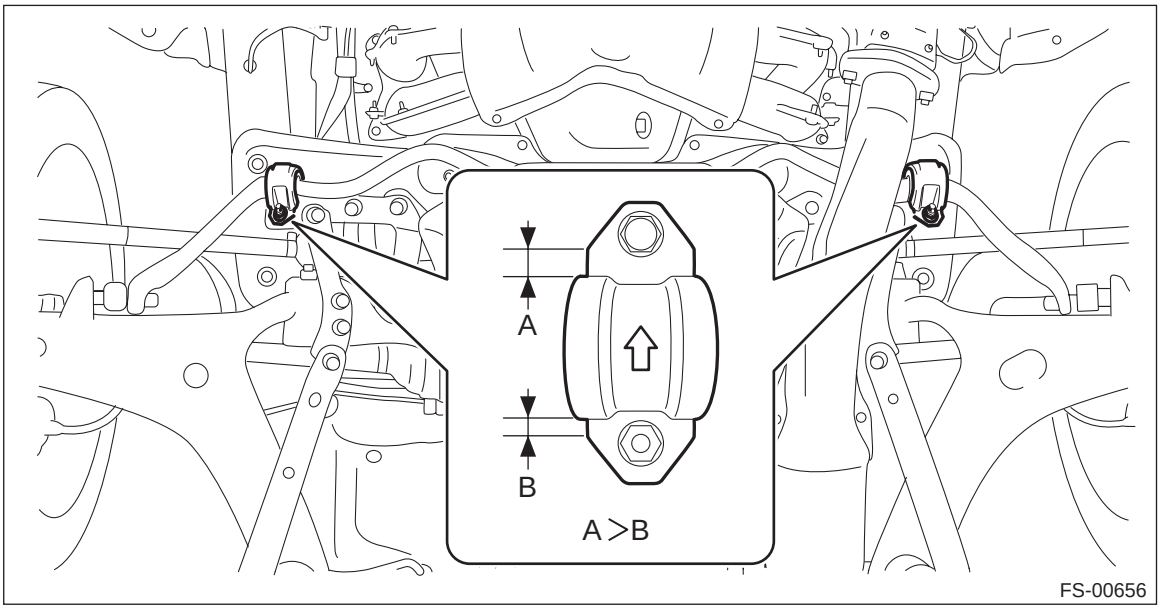
CAUTION:
• When lowering the transmission jack, make sure that the tie-rod end and the drive shaft boot do not interfere. The drive shaft boot may be damaged.
• The front crossmember assembly is heavy. Make sure that it is firmly supported so that it is level.
(1) Support the front crossmember assembly from the bottom side using a transmission jack.
(2) Remove the bolts which secure the front crossmember assembly to the body.
(3) Lower the transmission jack slowly, and then lower the front crossmember assembly together with the steering gearbox assembly.
(4) Remove the steering gearbox assembly from the front crossmember assembly.



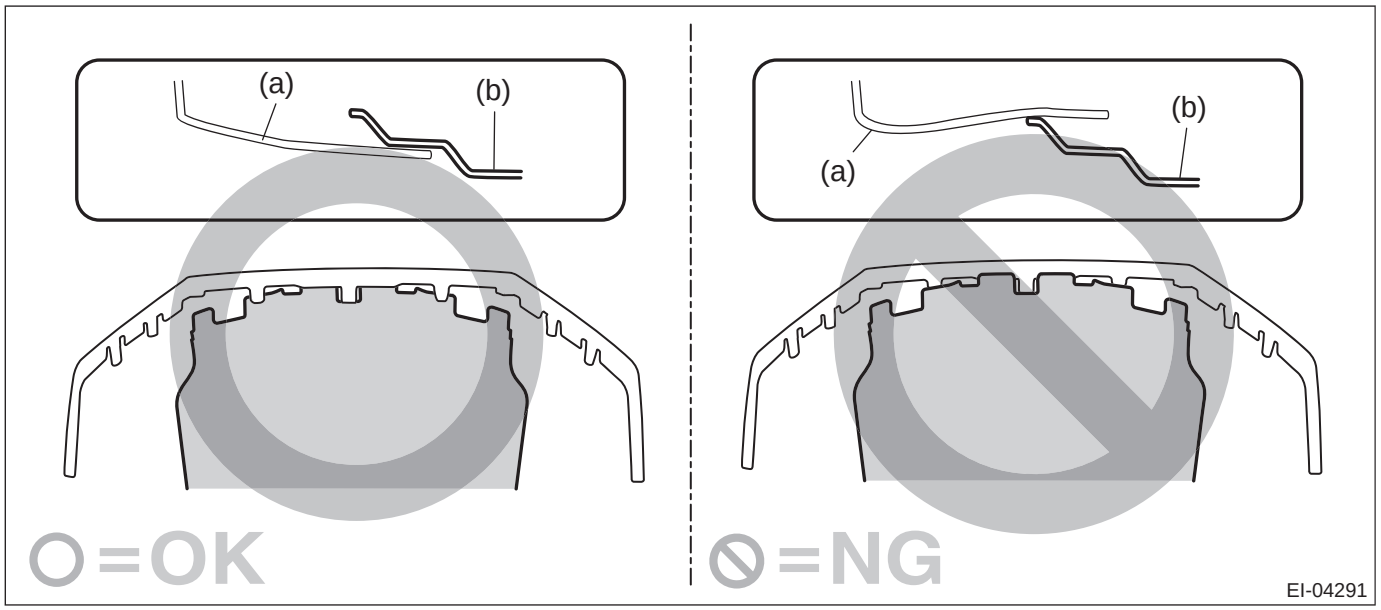
FS-00673

B: INSTALLATION

CAUTION:
- **When raising the transmission jack, make sure that the tie-rod end and the drive shaft boot do not interfere. The drive shaft boot may be damaged.**
- **The front crossmember assembly is heavy. Make sure that it is firmly supported so that it is level.**
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**
- **Install the clamp - stabilizer bushing with the arrow mark facing the front of the vehicle.**



- **Install the under cover - front so that the front end of the under cover (b) comes inside the bumper face - front (a).**



1) Install the front crossmember assembly.

NOTE:
Check the crossmember for damage or cracks, and correct or replace if defective.
(1) Install the steering gearbox assembly to the front crossmember assembly.
(2) Install the bolts which secure the front crossmember assembly to the body.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to FS-4, FRONT SUSPENSION, COMPONENT, General Description.>

2) Install the front arm assembly.

NOTE:
When tightening the castle nut, tighten the castle nut to the specified torque first, then tighten it further but within 60° until the hole in the ball stud is aligned with a slot in castle nut.

Tightening torque:
39 N·m (4.0 kgf-m, 28.8 ft-lb)

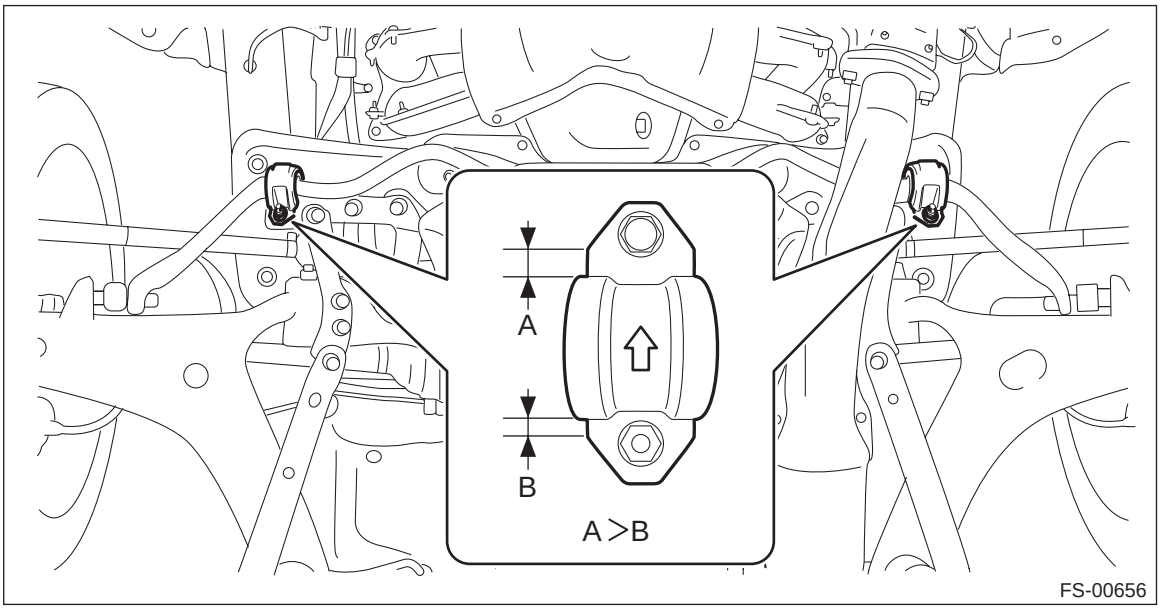
3) Insert a new cotter pin and secure the castle nut.
4) Install the tie-rod end.

NOTE:
When tightening the castle nut, tighten the castle nut to the specified torque first, then tighten it further but within 60° until the hole in the ball stud is aligned with a slot in castle nut.

Tightening torque:
27 N·m (2.7 kgf-m, 19.9 ft-lb)

5) Insert a new cotter pin and secure the castle nut.
6) Install the front stabilizer.

CAUTION:
Install the clamp - stabilizer bushing with the arrow mark facing the front of the vehicle.



Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to FS-4, FRONT SUSPENSION, COMPONENT, General Description.>

7) Install the front exhaust pipe.
- STI model: <Ref. to EX(STI)-5, INSTALLATION, Front Exhaust Pipe.>
- Except for STI model: <Ref. to EX(w/o STI)-17, INSTALLATION, Front Exhaust Pipe.>

8) Install the front crossmember support and the support plate - front crossmember.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to FS-4, FRONT SUSPENSION, COMPONENT, General Description.>
9) Install the engine mounting and the crossmember assembly with new nuts.

CAUTION:
Be careful not to damage the vehicle with a lifting device or wire ropes.

Tightening torque:
Engine mounting — front crossmember assembly: 60 N·m (6.1 kgf-m, 44.3 ft-lb)
10) Install the power steering hose to the steering gearbox. (Hydraulic power steering model) <Ref. to PS-72, INSTALLATION, Pipe Assembly.>
11) Install the connector and harness clamp to the power steering control module. (Electric power steering model) <Ref. to PS-84, INSTALLATION, Power Steering Control Module.>
12) Install the V-belt cover. (STI model)

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
13) Install the collector cover. (Except for STI model) <Ref. to IN(w/o STI)-10, INSTALLATION, Collector Cover.>
14) Change the hood stay location to support the front hood at ordinary position.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
15) Install the universal joint assembly - steering. <Ref. to PS-22, INSTALLATION, Universal Joint.>
16) Install the under cover - front. <Ref. to EI-22, INSTALLATION, Front Under Cover.>
17) Install the front wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
18) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.
19) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>

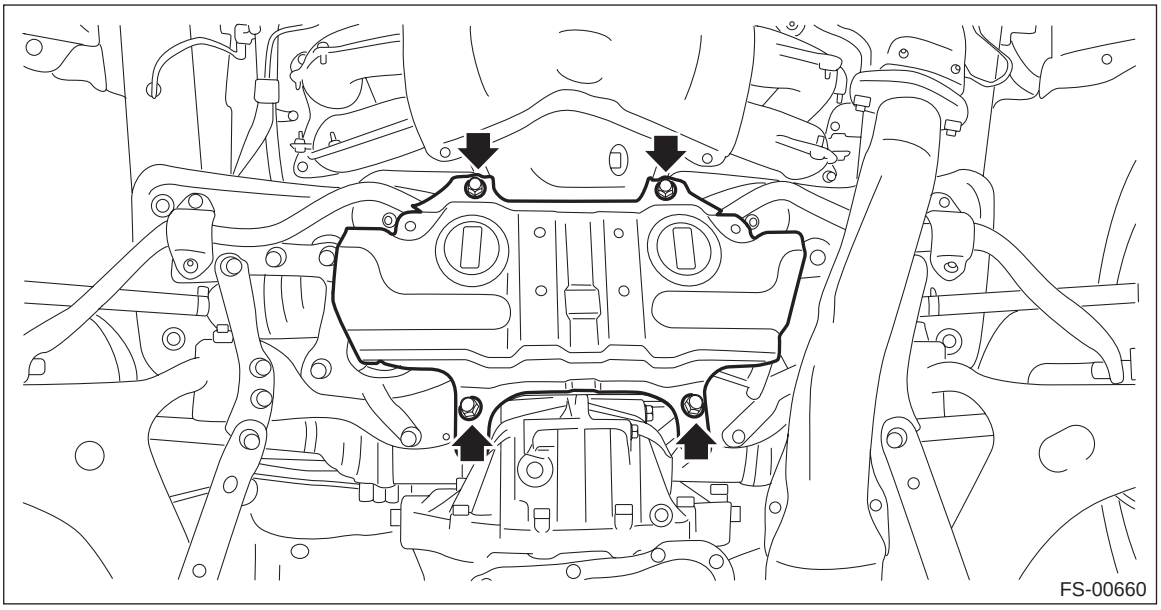
CAUTION:
When the wheel alignment has been adjusted, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
20) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-17, PROCEDURE, Auto Headlight Beam Leveler System.>

4. Front Crossmember Support Plate

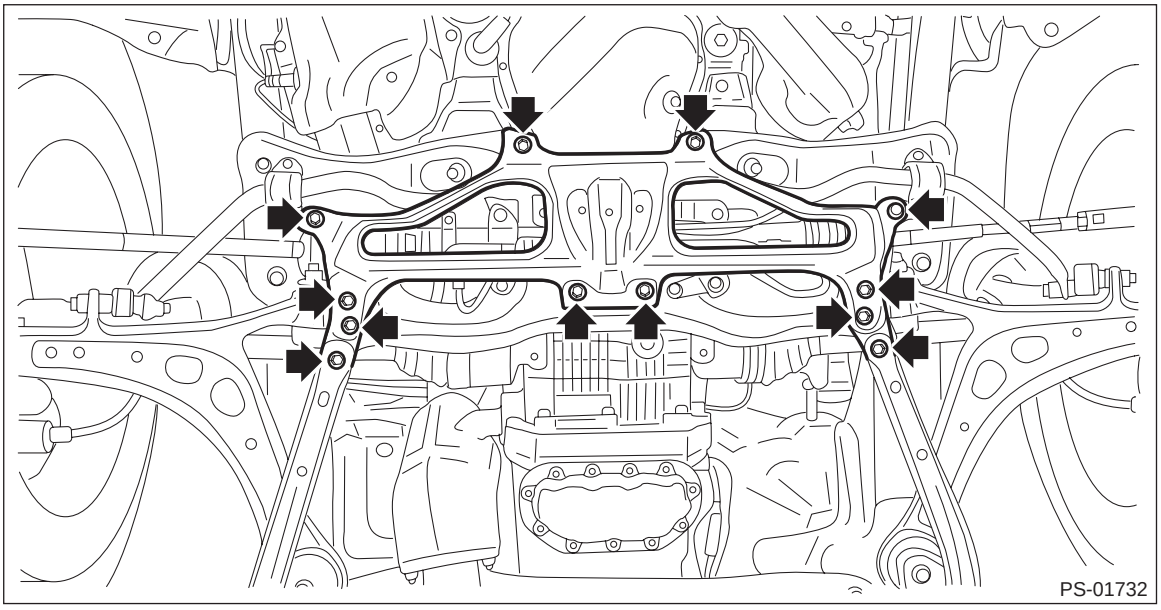
A: REMOVAL

1) Lift up the vehicle.
2) Remove the under cover - front. <Ref. to EI-21, REMOVAL, Front Under Cover.>
3) Remove the bolt, and remove the front crossmember support.

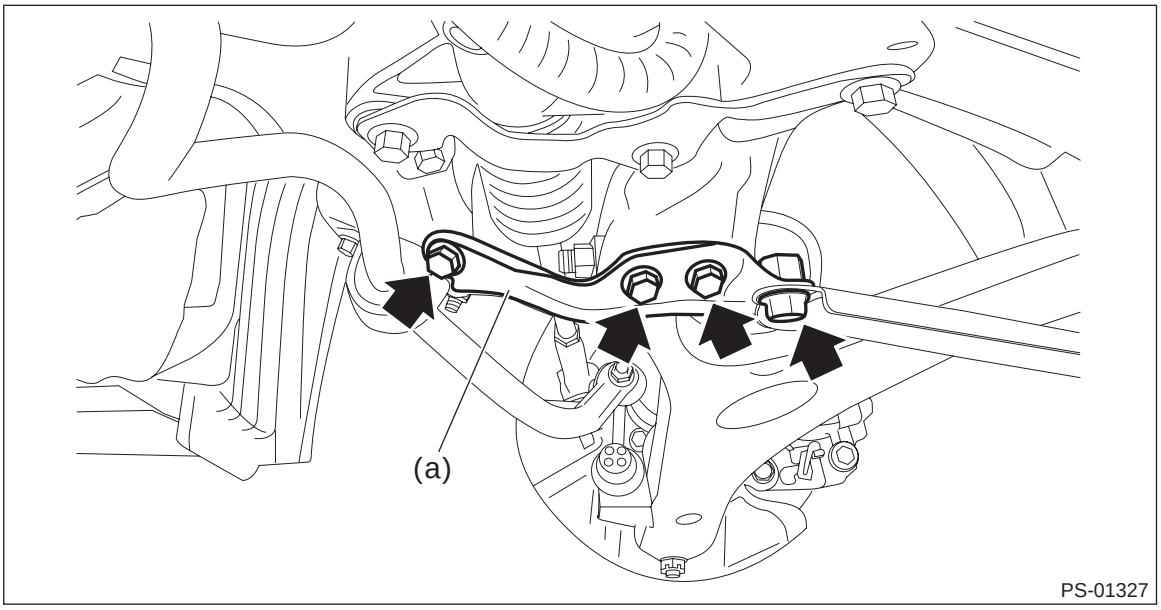
- Electric power steering model



- Hydraulic power steering model

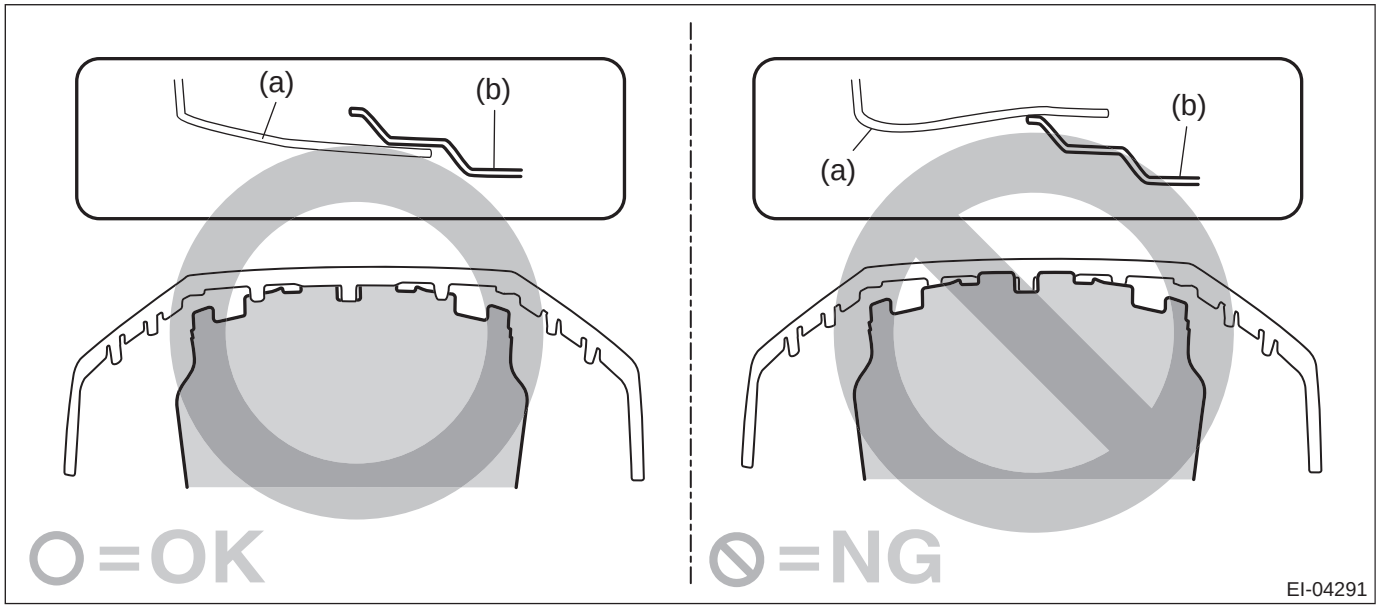


4) Remove the bolt, and remove the support plate - front crossmember (a).



B: INSTALLATION

CAUTION:
Install the under cover - front so that the front end of the under cover (b) comes inside the bumper face - front (a).



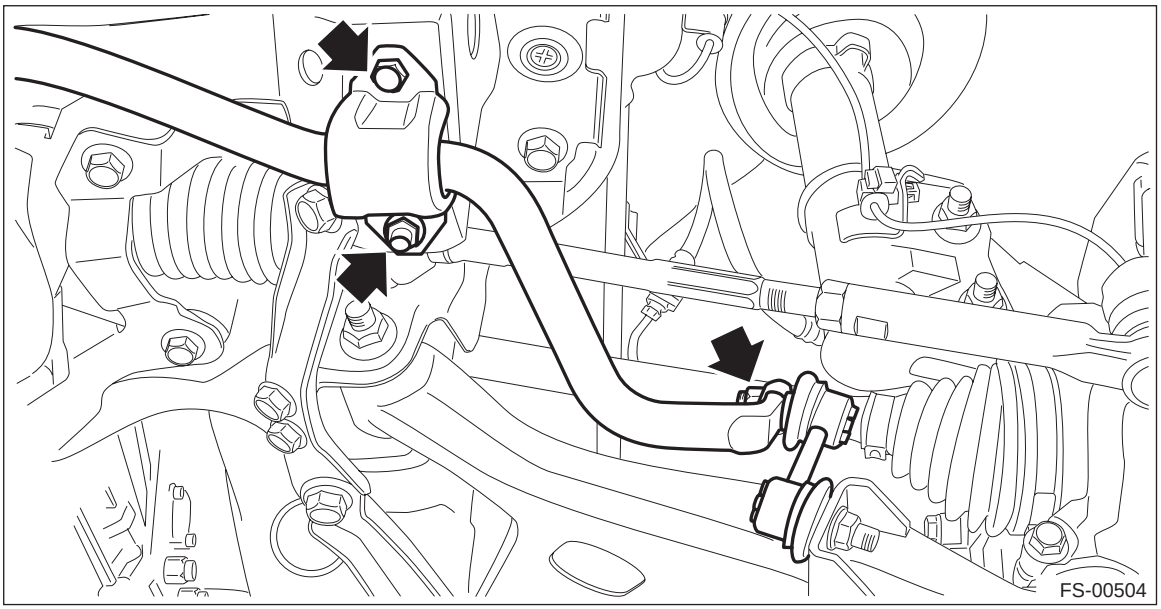
1) Install the front crossmember support and the support plate - front crossmember.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to FS-4, COMPONENT, General Description.>
2) Install the under cover - front. <Ref. to EI-22, INSTALLATION, Front Under Cover.>
3) Lower the vehicle.

5. Front Stabilizer

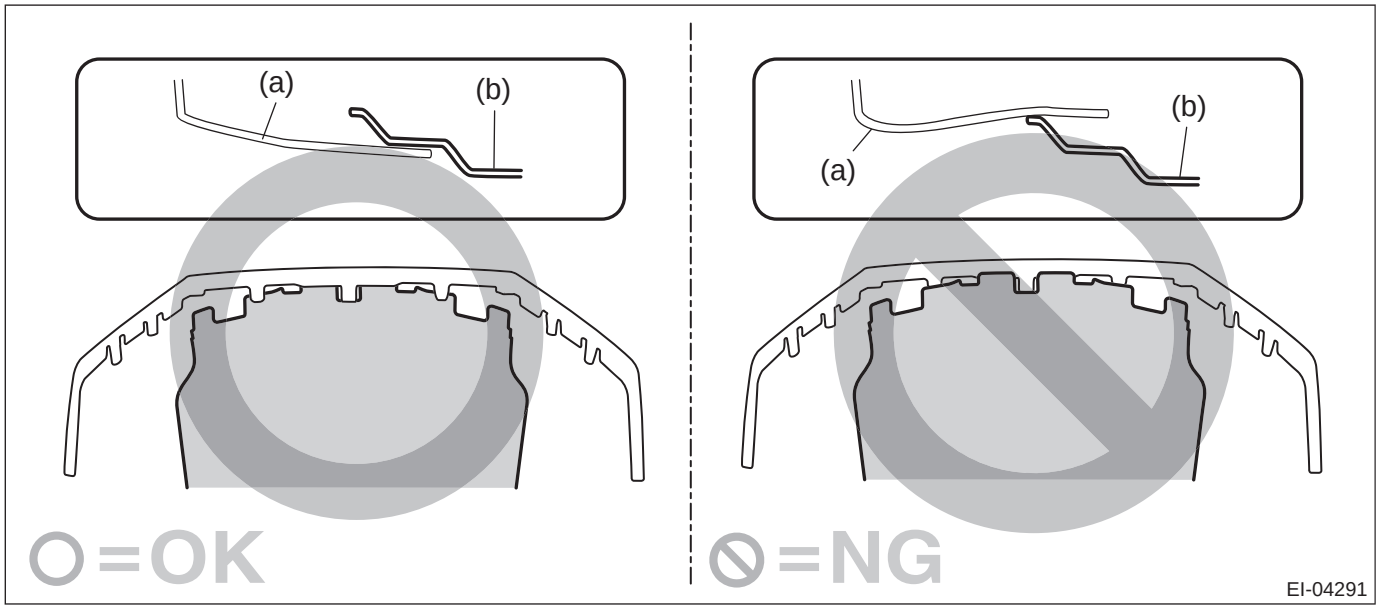
A: REMOVAL

1) Lift up the vehicle, and then remove the left and right front wheels.
2) Remove the under cover - front. <Ref. to EI-21, REMOVAL, Front Under Cover.>
3) Remove the front crossmember support. <Ref. to FS-29, REMOVAL, Front Crossmember Support Plate.>
4) Remove the front stabilizer.
   (1) Remove the left and right stabilizer links.
   (2) Remove the clamp - stabilizer bushing on the left and right sides.



B: INSTALLATION

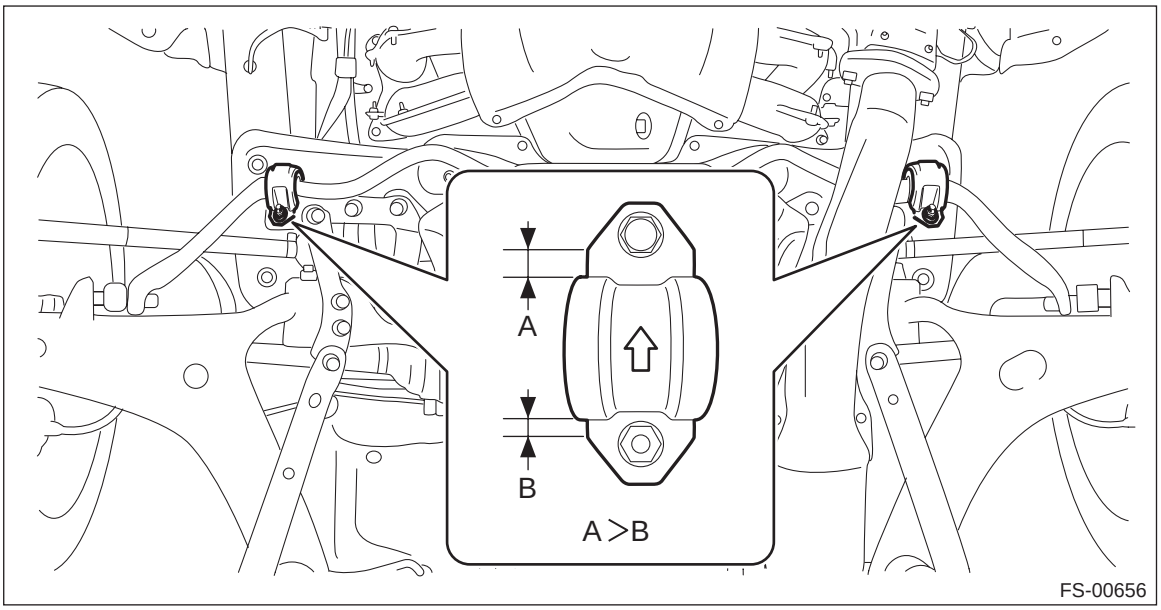
CAUTION:
Install the under cover - front so that the front end of the under cover (b) comes inside the bumper face - front (a).



1) Before installation, inspect the following items and replace any faulty part with a new one.
- Check the bushing - stabilizer for abnormal cracks, fatigue or damage.
- Check the stabilizer link assembly for damage.

2) Install the front stabilizer.

CAUTION:
Install the clamp - stabilizer bushing with the arrow mark facing the front of the vehicle.



Tightening torque:
Stabilizer link assembly: 60 N·m (6.1 kgf-m, 44.3 ft-lb)
Clamp - stabilizer: 25 N·m (2.5 kgf-m, 18.4 ft-lb)

3) Install the front crossmember support.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to FS-4, FRONT SUSPENSION, COMPONENT, General Description.>

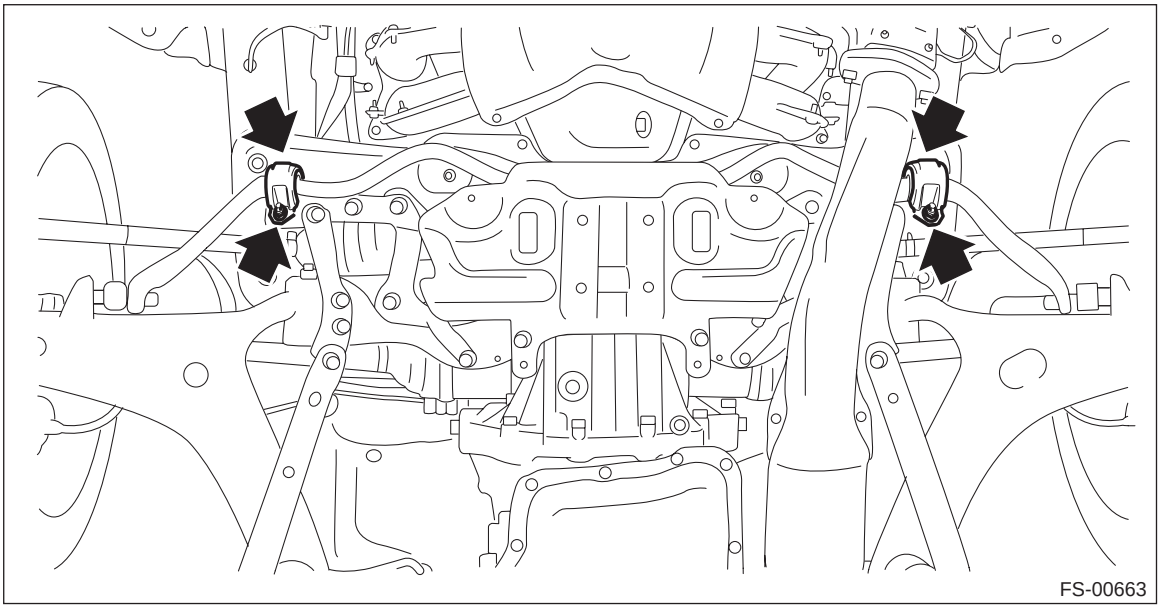
4) Install the under cover - front. <Ref. to EI-22, INSTALLATION, Front Under Cover.>
5) Lower the vehicle, and install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

6. Front Ball Joint

A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the under cover - front. <Ref. to EI-21, REMOVAL, Front Under Cover.>
3) Remove the clamp - stabilizer bushing on the left and right sides.

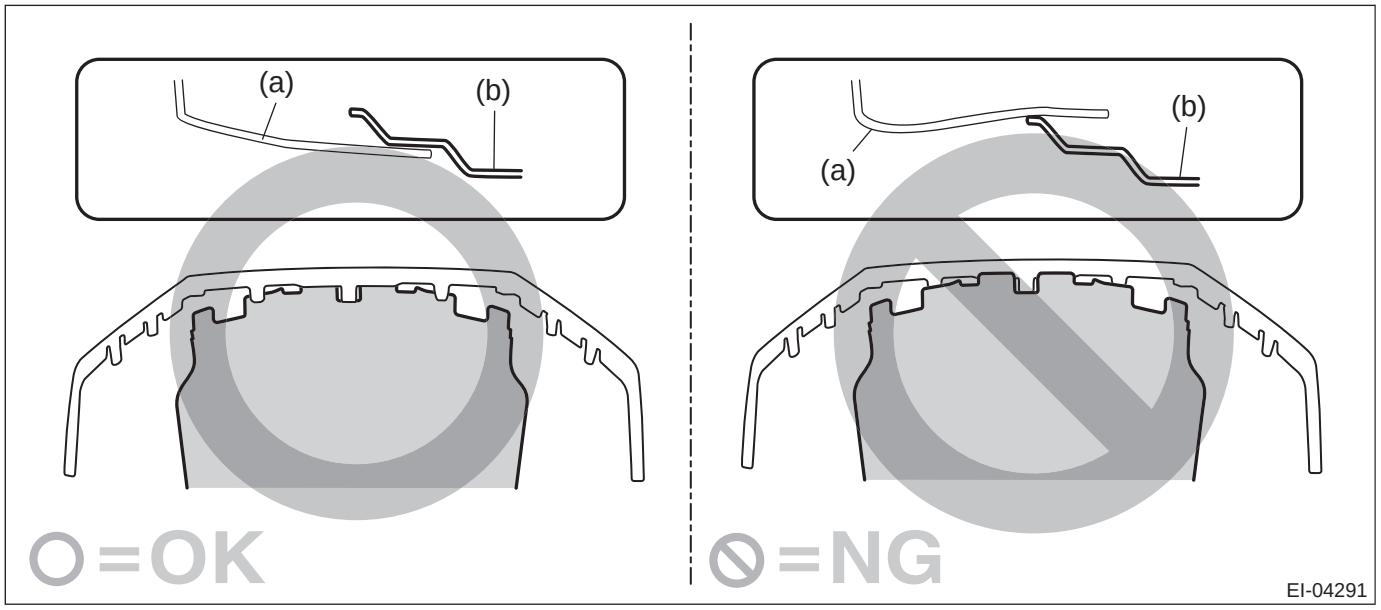


4) Remove the ball joint assembly.
   (1) Pull out the cotter pin (a), and remove the castle nut (b).
   (2) Pull down the front arm assembly, and remove the ball stud.
   (3) Remove the bolt from the housing assembly - front axle.

   (4) Pull out the ball joint assembly.

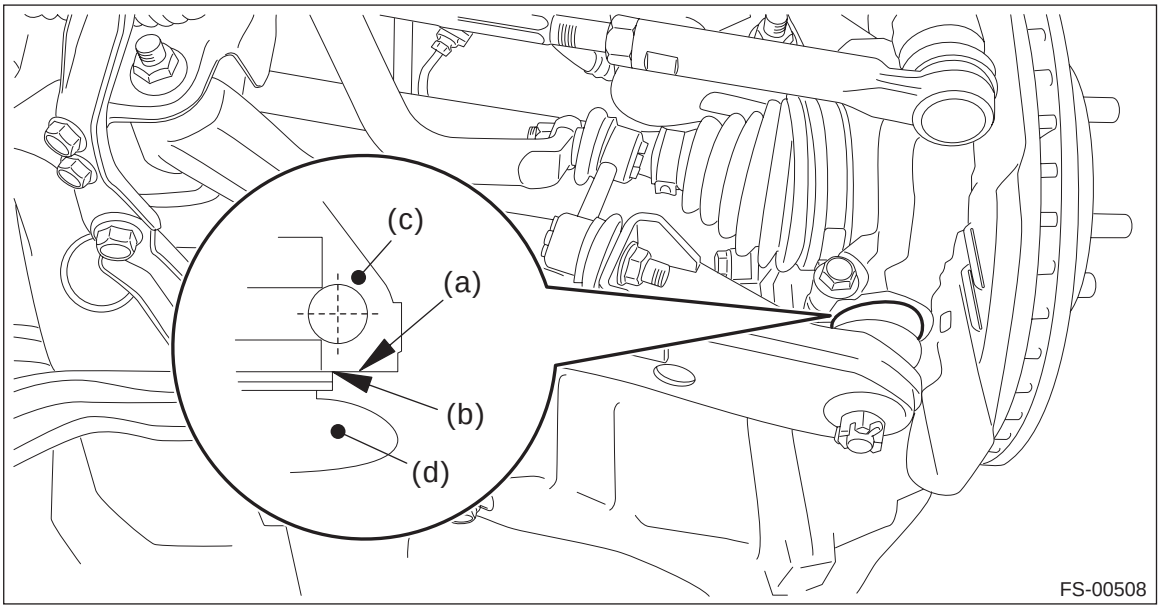
B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Do not apply grease to the tapered portion of ball stud.**
- **Install the under cover - front so that the front end of the under cover (b) comes inside the bumper face - front (a).**



1) Install the ball joint assembly.

CAUTION:
Before tightening, make sure the bottom surface of the housing assembly - front axle and the stepped section of ball joint are in contact.



(a) Bottom surface of housing ASSY - front axle
(b) Raised section of ball joint
(c) Housing ASSY - front axle
(d) Ball joint ASSY

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

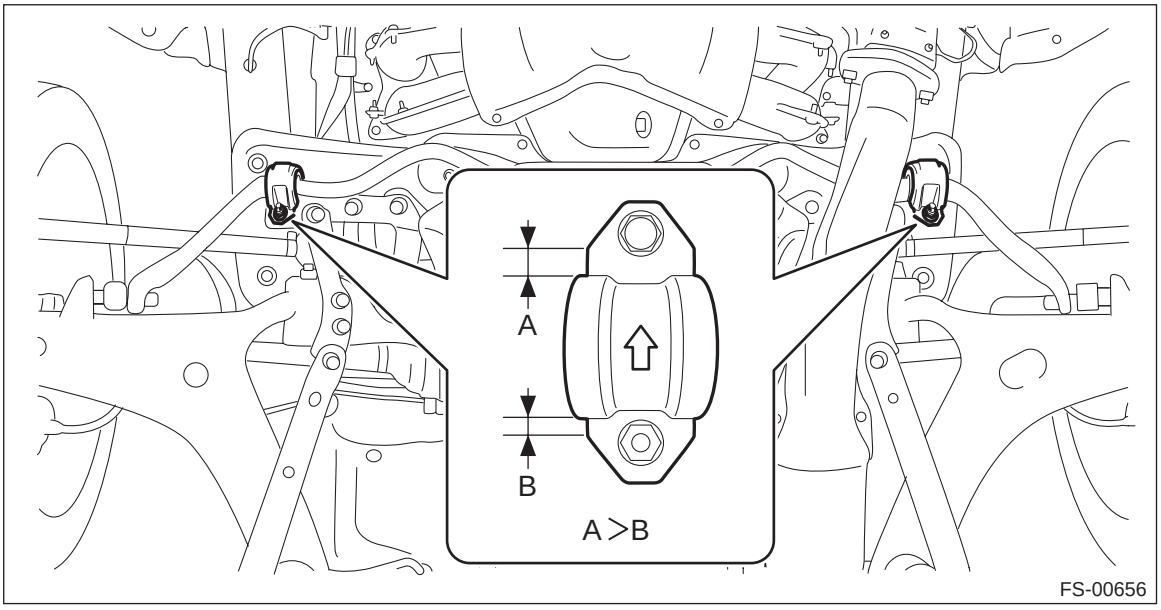
2) Connect the ball joint assembly to the front arm assembly.

NOTE:
When tightening the castle nut, tighten the castle nut to the specified torque first, then tighten it further but within 60° until the hole in the ball stud is aligned with a slot in castle nut.

Tightening torque:
39 N·m (4.0 kgf-m, 28.8 ft-lb)

3) Insert a new cotter pin and secure the castle nut.
4) Install the clamp - stabilizer bushing.

CAUTION:
Install the clamp - stabilizer bushing with the arrow mark facing the front of the vehicle.



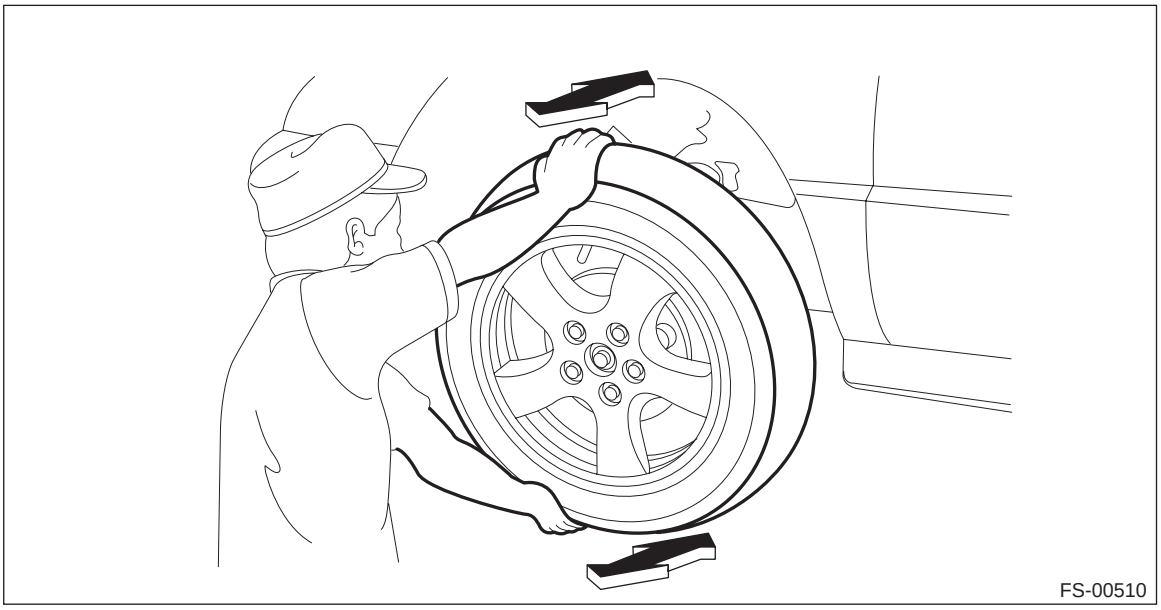
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

5) Install the under cover - front. <Ref. to EI-22, INSTALLATION, Front Under Cover.>
6) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: INSPECTION

1) Check that there is no play by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.



- **Play exists.** → Replace the ball joint assembly. <Ref. to FS-33, REMOVAL, Front Ball Joint.>

2) Check that there is no play by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.

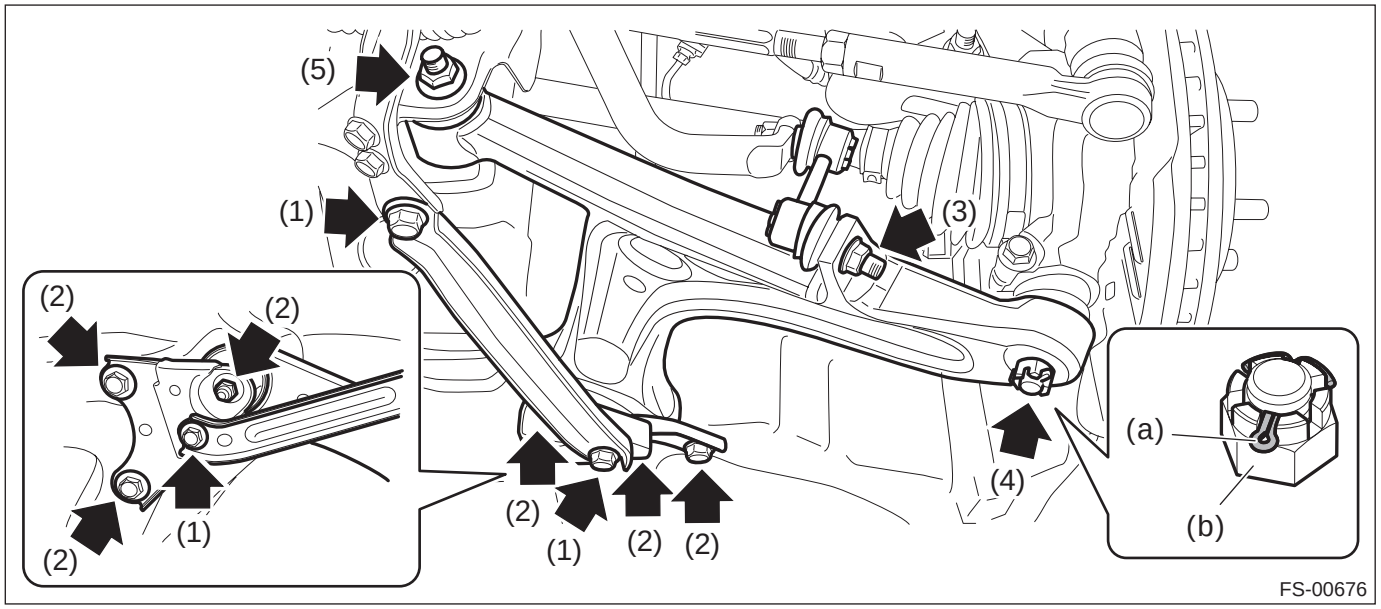
- **Play exists.** → Check the hub unit COMPL - front axle. <Ref. to DS-31, INSPECTION, Front Hub Unit Bearing.>

3) Replace the ball joint assembly if the dust cover is damaged when visually inspecting the dust cover.

7. Front Arm

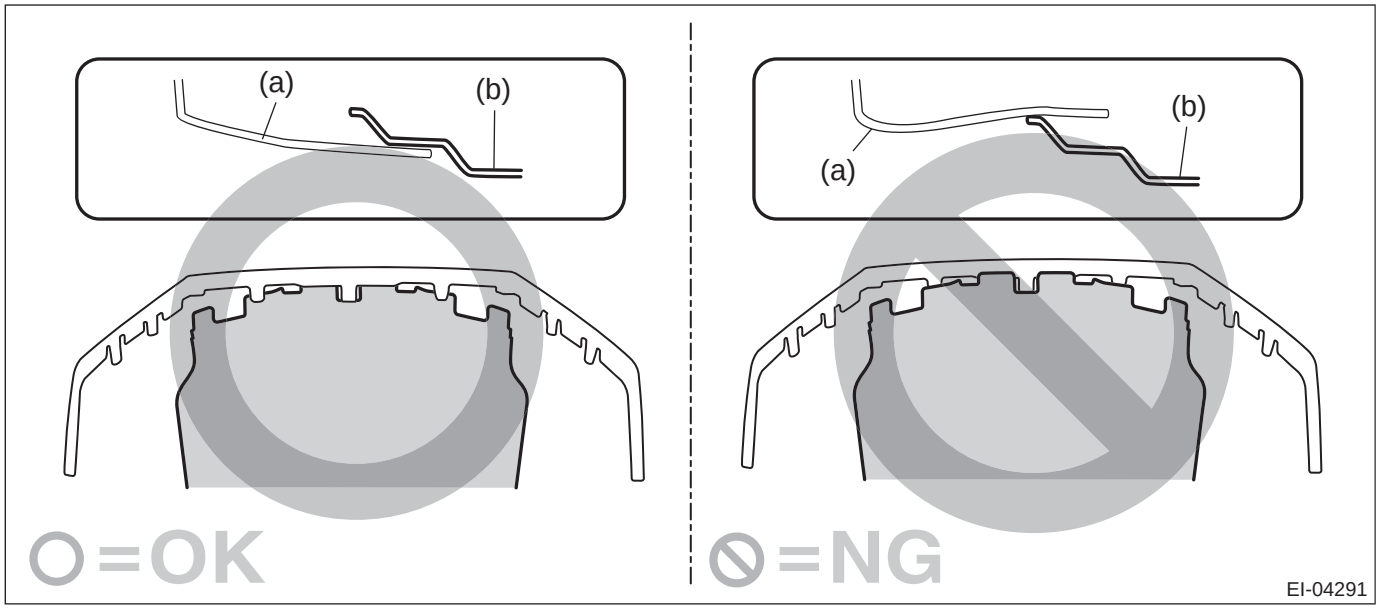
A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the under cover - front. <Ref. to EI-21, REMOVAL, Front Under Cover.>
3) Remove the front arm assembly.
   (1) Remove the bolt, and then detach the front support.
   (2) Remove the bolts and nuts, and then remove the front arm rear plate.
   (3) Remove the nut and disconnect the stabilizer link assembly.
   (4) Pull out the cotter pin (a), remove the castle nut (b), and remove the ball joint assembly from front arm assembly.
   (5) Remove the nuts, pull out the flange bolt, and remove the front arm assembly.



B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Install the under cover - front so that the front end of the under cover (b) comes inside the bumper face - front (a).**

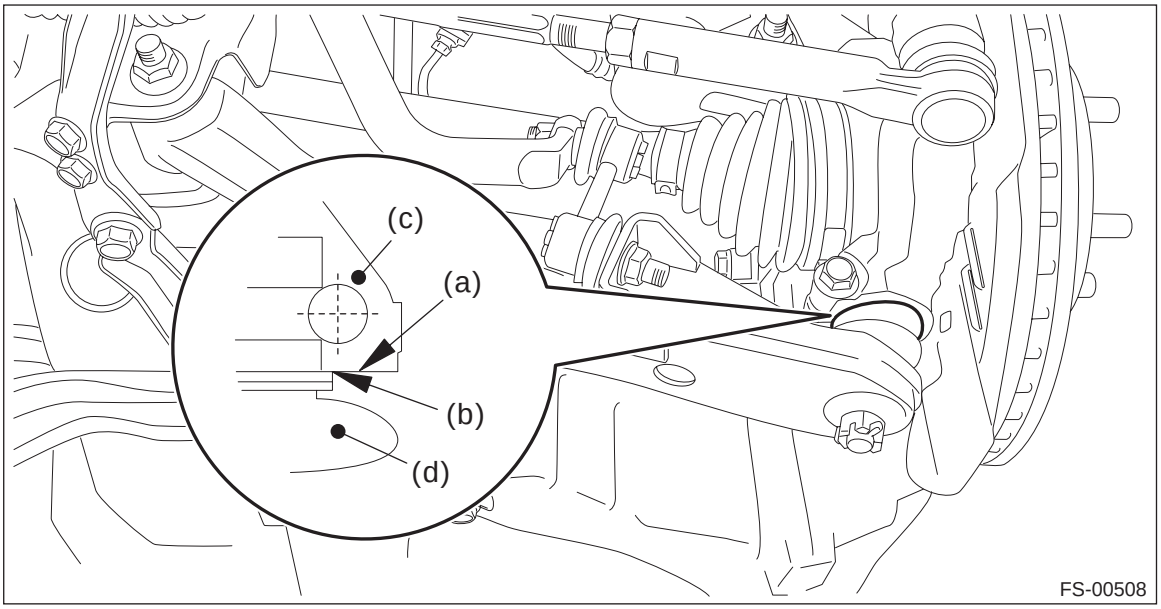


1) Before installation, inspect the following items and replace any faulty part with a new one.
- Check the front arm assembly for damage or cracks, and replace if defective.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint assembly for damage.

2) Using new self-locking nuts and flange bolts, temporarily tighten the front arm assembly to the front cross-member assembly.

3) Connect the front arm assembly to the ball joint assembly.

CAUTION:
Before tightening, make sure the bottom surface of the housing assembly - front axle and the stepped section of ball joint are in contact.



(a) Bottom surface of housing ASSY - front axle
(b) Raised section of ball joint
(c) Housing ASSY - front axle
(d) Ball joint ASSY

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)
4) Install the stabilizer link assembly.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)
5) Install the under cover - front. <Ref. to EI-22, INSTALLATION, Front Under Cover.>
6) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
7) Unload the vehicle from the lift, and tighten the bolt which secures the front arm assembly to the front crossmember assembly while the wheels are in full contact with the ground and the vehicle is at curb weight.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to FS-4, FRONT SUSPENSION, COMPONENT, General Description.>
8) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>

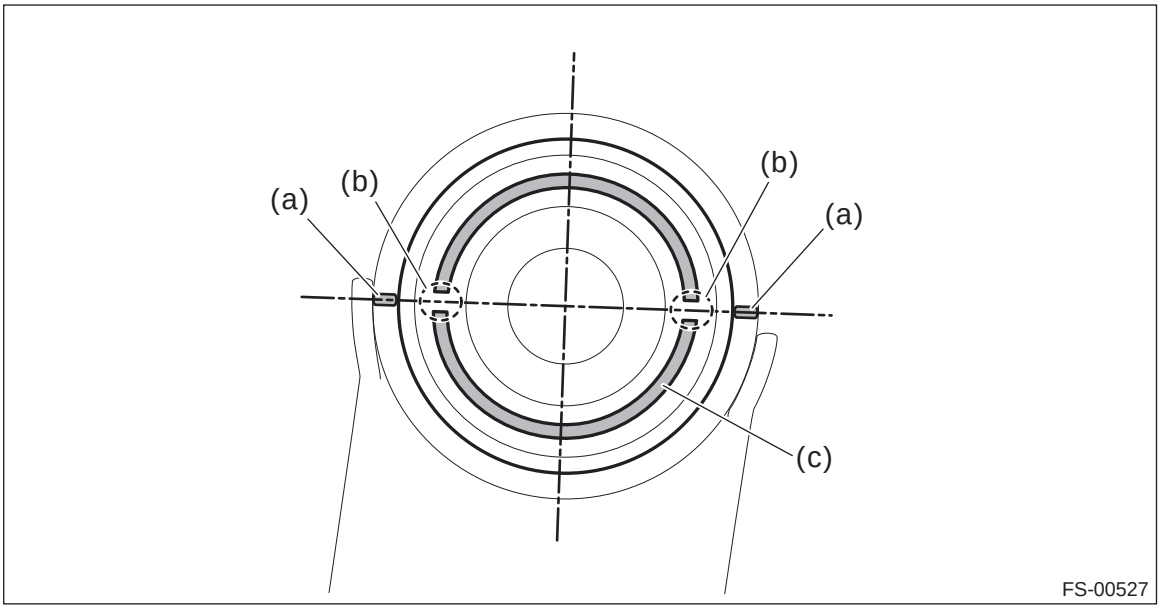
CAUTION:
When the wheel alignment has been adjusted, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
9) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-17, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

1. BUSHING FRONT - FRONT ARM

1) Put an alignment mark on the front arm assembly based on the split portion of the bushing intermediate plate of the busing front - front arm.

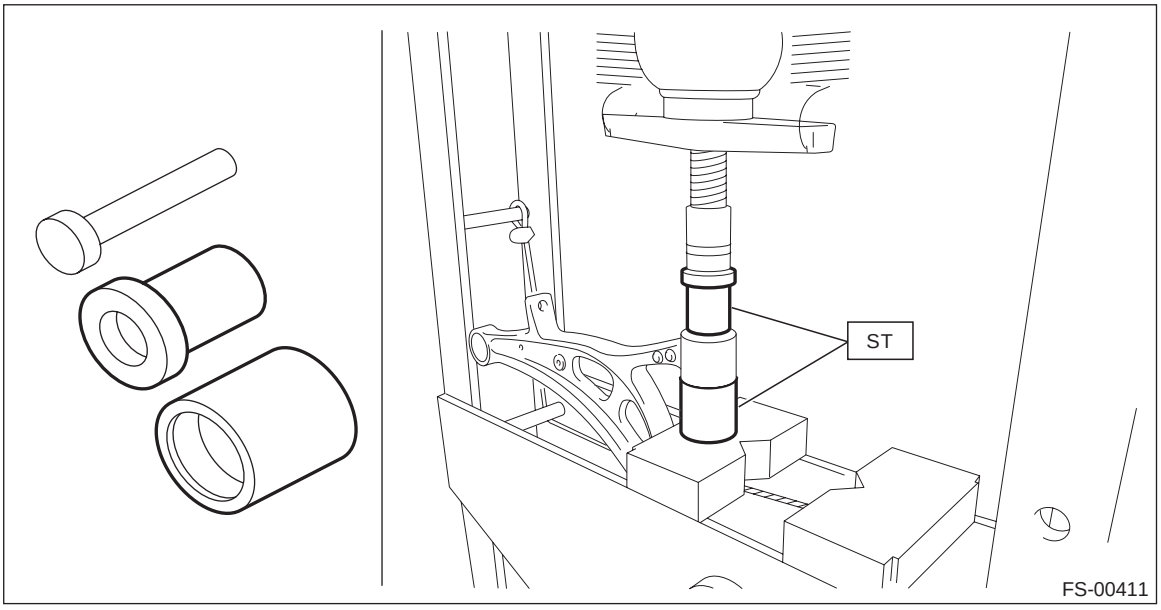
CAUTION:
Always put an alignment mark for aligning the position on bushing installation.



(a) Put an alignment mark.
(b) Split portion of bushing intermediate plate
(c) Bushing intermediate plate

2) Using the ST and a press, remove the busing front - front arm.

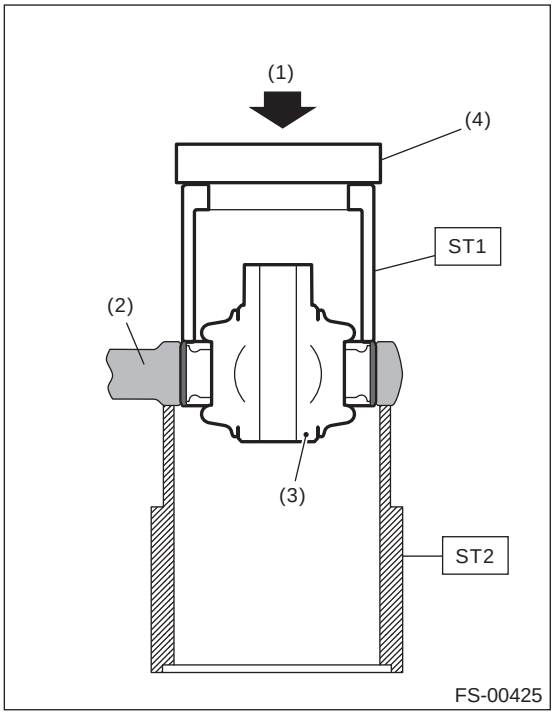
Preparation tool:
ST: INSTALLER & REMOVER SET (927680000)



2. BUSHING REAR - FRONT ARM

1) Put an alignment mark on the front arm assembly based on the center of recess portion of the busing rear - front arm.
2) Using the ST and a press, remove the busing rear - front arm.

Preparation tool:
ST1: INSTALLER & REMOVER (20099AE020)
ST2: HOUSING STAND (28099PA010)



(1) Press
(2) Front arm ASSY
(3) Bushing rear - front arm
(4) Plate

NOTE:
Place a metal plate on the ST1 to use the press.

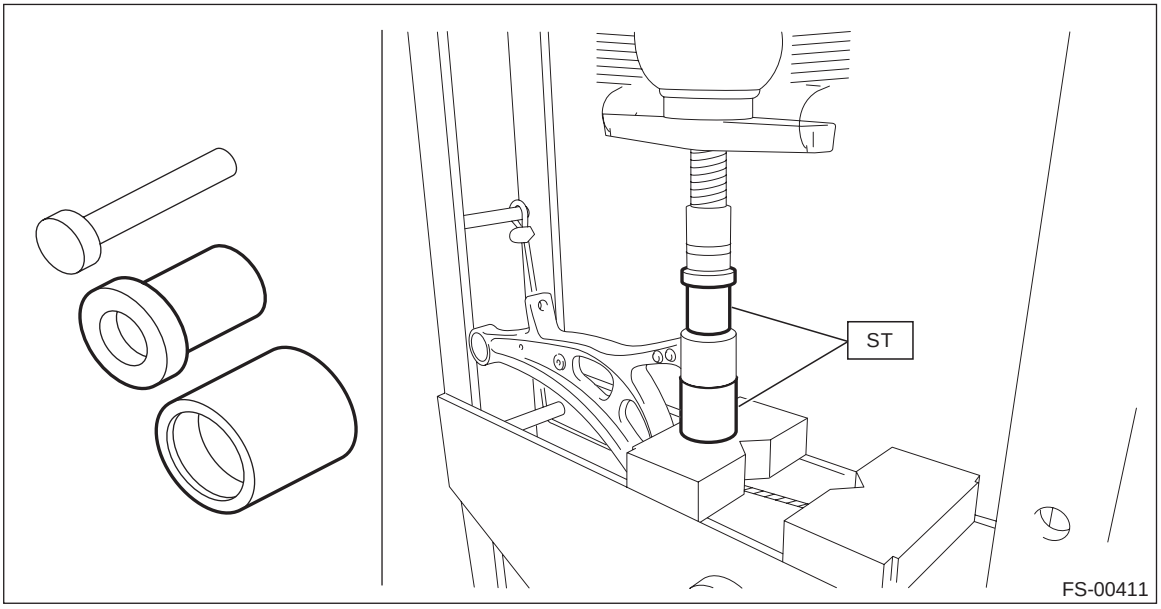
D: ASSEMBLY

1. BUSHING FRONT - FRONT ARM

1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Check the front arm assembly for damage or cracks, and replace if defective.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint assembly for damage.

2) Align the alignment mark on the front arm assembly to the split portion of the bushing intermediate plate of the busing front - front arm.
3) Using the ST and a press, assemble the busing front - front arm.

Preparation tool:
ST: INSTALLER & REMOVER SET (927680000)

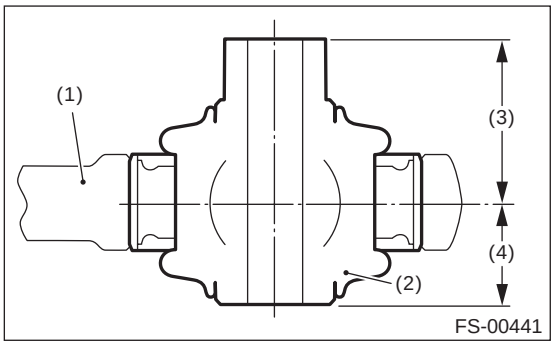


2. BUSHING REAR - FRONT ARM

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Check the front arm assembly for damage or cracks, and replace if defective.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint assembly for damage.

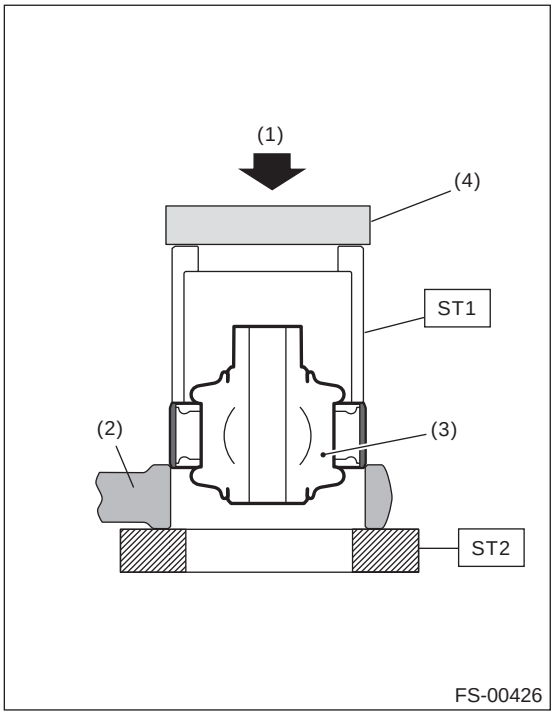
2) Using the ST and a press, install the busing rear - front arm.

CAUTION:
Install with the longer inner cylinder of the pillow ball bushing facing upward and the shorter facing downward.



(1) Front arm
(2) Bushing inner cylinder
(3) Longer
(4) Shorter

Preparation tool:
ST1: INSTALLER & REMOVER (20099AE020)
ST2: HOUSING STAND (28099PA010)



(1) Press
(2) Front arm ASSY
(3) Bushing rear - front arm
(4) Plate

8. Front Strut

A: REMOVAL

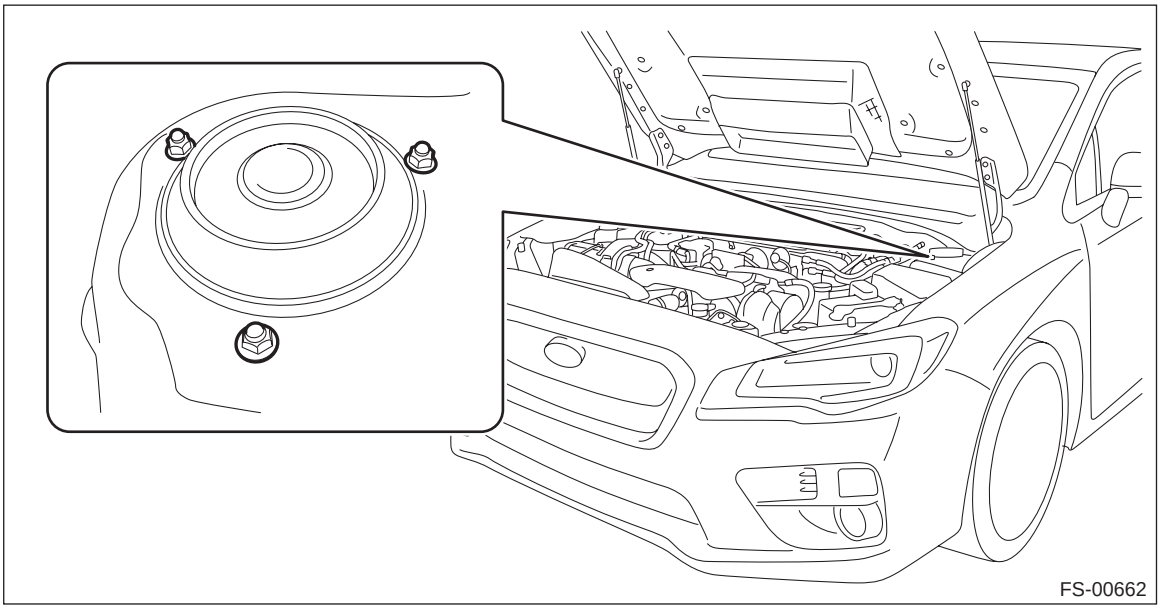
1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.

2) Lift up the vehicle, and then remove the front wheels.
3) Remove the strut assembly.
   (1) Place an alignment mark (a) on the adjusting bolt and the strut.
   (2) Remove the brake hose bracket.
   (3) Remove the clamp of ABS wheel speed sensor harness.
   (4) Remove the adjusting bolts and flange bolts for the strut assembly.

CAUTION:
While holding the adjusting bolt side, tighten the nut side.

   (5) Remove the three nuts securing strut mount to body.



B: INSTALLATION

CAUTION:
For parts which are not reusable, always use new parts.
1) Install the strut mount - front at the upper side of the strut to the vehicle body.

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)
2) Align alignment marks on the camber adjusting bolt and the strut, and install the strut to the housing assembly - front axle.

NOTE:
While holding the bolt head of adjusting bolt, tighten the nut.

Tightening torque:
155 N·m (15.8 kgf-m, 114.3 ft-lb)
3) Secure the ABS wheel speed sensor harness bracket to the strut.

CAUTION:
During the installation, make sure that the marking of ABS wheel speed sensor harness does not twist.
4) Install the brake hose bracket.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)
5) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
6) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

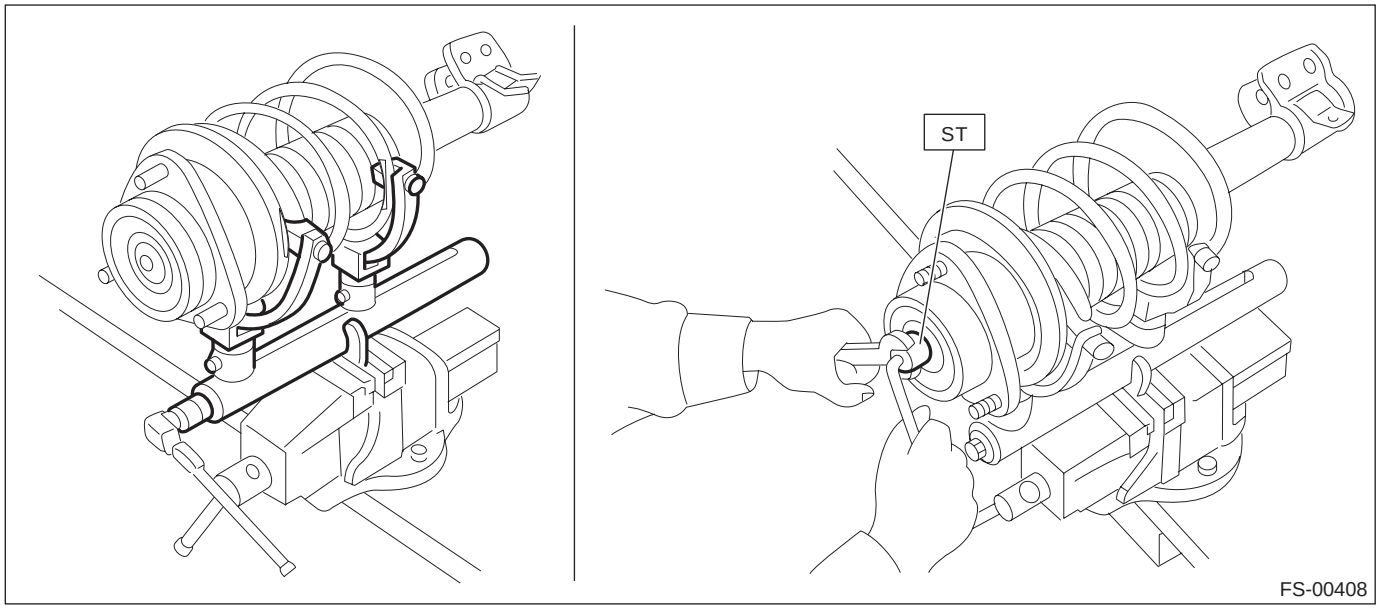
NOTE:
For models other than STI model, connect the ground terminal to battery sensor.
7) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
8) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-17, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

1) Using a coil spring compressor, compress the coil spring.
2) Using a hexagon wrench to prevent strut rod from turning, remove the self-locking nut with ST.

Preparation tool:
ST: STRUT MOUNT SOCKET (20399AG000)

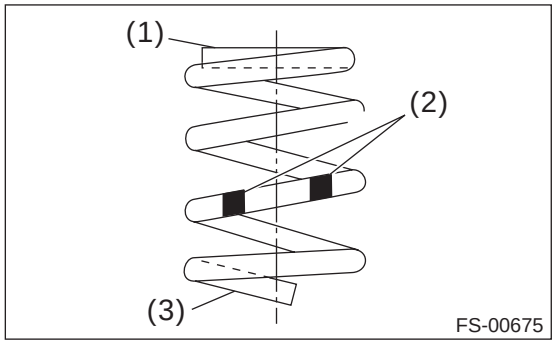


3) Remove the strut mount - front, spacer - front strut, dust cover - front strut and spring seat - front strut UPR from the strut COMPL.
4) Gradually decrease the compression force of compressor, and remove the coil spring.
5) Remove the dust cover - inner and the helper - front strut.

D: ASSEMBLY

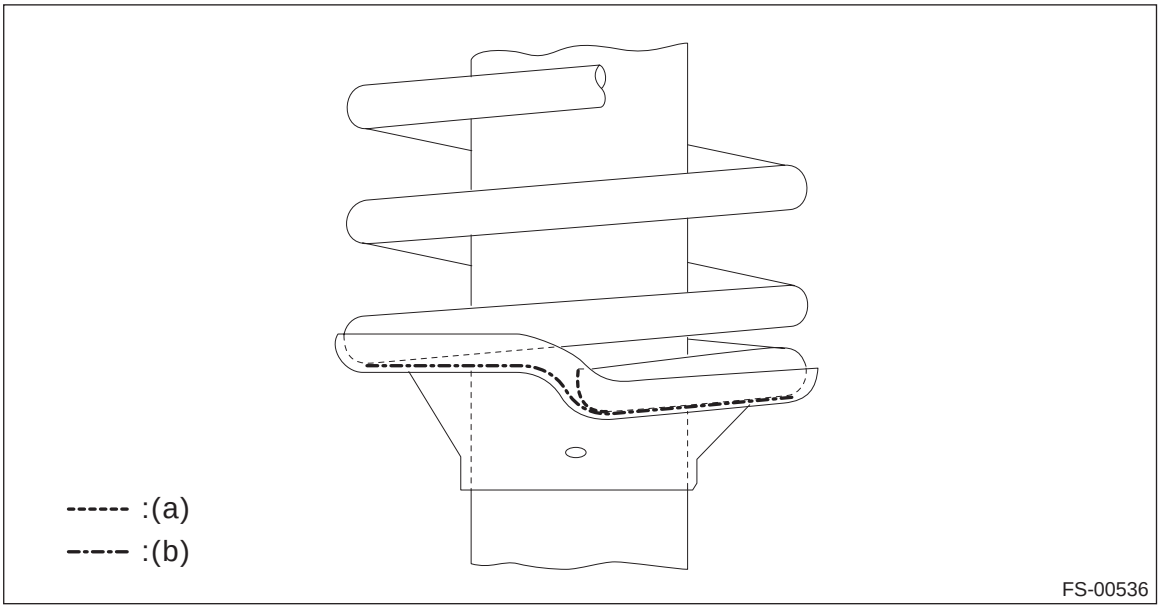
1) Before assembly, check each part. <Ref. to FS-49, INSPECTION, Front Strut.>
2) Using a coil spring compressor, compress the coil spring.

NOTE:
Make sure that the vertical install direction of the coil spring is as shown in the figure.



(1) Diameter is small (upper part)
(2) Identification paint
(3) Diameter is large (bottom part)

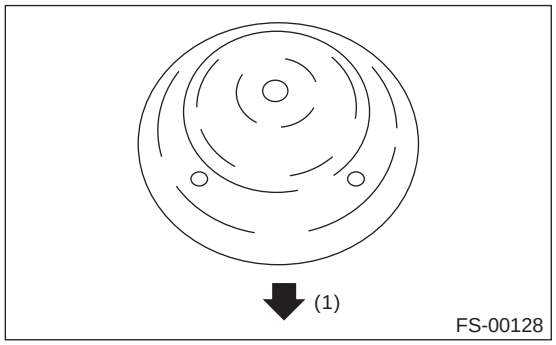
3) Set the coil spring correctly so that its end face (a) contacts the vertical surface (b) of the spring seat - front strut LWR as shown in the figure.



4) Install the dust cover - inner and the helper - front strut to the piston rod.

5) Pull the piston rod fully upward, and install the spring seat and the dust cover - front strut.

NOTE:
Position the spring seat - front strut UPR as shown in the figure.

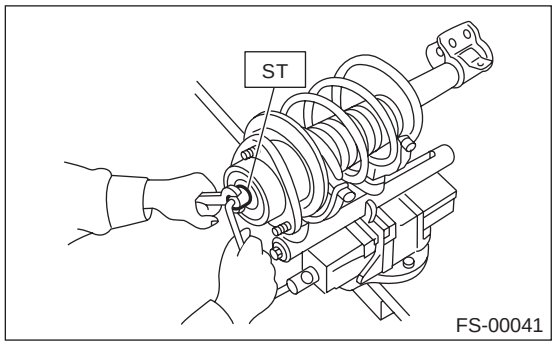


(1) Outside of body

6) Install the spacer - front strut and the strut mount - front to the piston rod, and temporarily tighten a new self-locking nut.
7) Using a hexagon wrench to prevent strut rod from turning, tighten the new self-locking nut with ST.

CAUTION:
Make sure that the strut mount - front turns smoothly after tightening.

Preparation tool:
ST: STRUT MOUNT SOCKET (20399AG000)



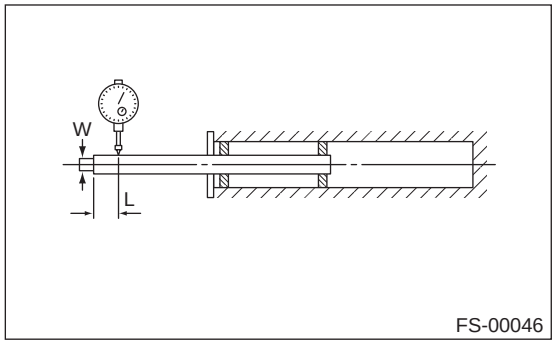
Tightening torque:
55 N·m (5.6 kgf-m, 40.6 ft-lb)
8) Loosen the coil spring compressor carefully.

E: INSPECTION

Check the removed part for wear, damage and cracks, and then repair or replace it if defective.

1. STRUT

1) Check for oil leaks.
2) Move the piston rod up and down to check that it operates smoothly without any hitch.
3) Check the piston rod for play.
   (1) Fix the outer shell in place and fully extend the rod.
   (2) Set the dial gauge on the end of the rod L [10 mm (0.39 in)].
   (3) While applying a force of W [20 N (2 kgf, 4 lbf)] to the threaded part, read the dial gauge indication P_1.
   (4) Apply a force of 20 N (2 kgf, 4 lbf) from the opposite direction of “W”, and then read the dial gauge indication P_2.



Play limit ($P_1 + P_2$): 0.8 mm (0.031 in)

4) Replace the strut if faulty is found in the inspection or limit value is exceeded.

2. STRUT MOUNT - FRONT

Check the rubber part for deformation, cracks or deterioration, and then replace it with a new part if defective.

3. DUST COVER - INNER

If cracks or damage are found, replace it with a new part.

4. COIL SPRING - FRONT

If cracks, damage or deformation are found, replace it with a new part.

5. HELPER - FRONT STRUT

If major cracks or damage are found, replace it with a new part.

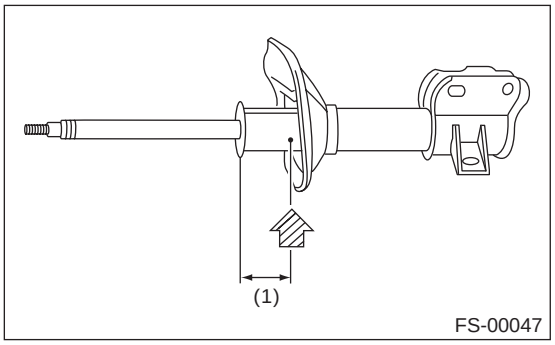
6. DUST COVER - FRONT

If major cracks or damage are found, replace it with a new part.

F: DISPOSAL

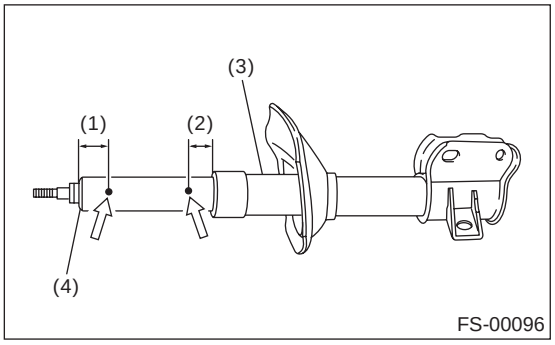
CAUTION:
- **Before handling struts, be sure to wear goggles to protect eyes from gas, oil and cutting powder.**
- **Do not disassemble the strut damper or throw into flames.**
- **When discarding gas filled struts, drill holes in them to purge the gas.**

1) Place the strut on a level surface with the piston rod fully expanded.
2) Using a 2 — 3 mm (0.08 — 0.12 in) dia. drill, make holes in areas shown in the figure. (standard damper model)



(1) 40 mm (1.57 in)

3) Using a 2 — 3 mm (0.08 — 0.12 in) dia. drill, make a hole into the position (1) first, and then (2). (inverted damper model)



(1) 20 mm (0.78 in)
(2) 10 mm (0.39 in)
(3) Strut
(4) Damping tube

9. General Diagnostic Table

A: INSPECTION

1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

Possible cause	Corrective action
(1) Deformation or damage of suspension parts	Replace.
(2) Defective strut COMPL or shock absorber COMPL	Replace.
(3) Improper installation of strut assembly or shock absorber assembly	Replace with appropriate parts.
(4) Installation of the wrong coil spring	Replace with appropriate parts.

2. POOR RIDE COMFORT

1) Large rebound shock
2) Rocking of the vehicle continues too long after running over bump and hump.
3) Excessive shock in bumping

Possible cause	Corrective action
(1) Damaged coil spring	Replace.
(2) Overinflation of tires	Adjust.
(3) Improper wheel arch height	Replace the coil springs with new parts.
(4) Fault in operation of strut or shock absorber	Replace.
(5) Damage or deformation of strut mount or shock absorber mount	Replace.
(6) Unsuitable length (maximum or minimum) of strut or shock absorber	Replace with appropriate parts.
(7) Abnormal deformation or loss of bushing	Replace.
(8) Deformation or damage of helper in strut assembly or shock absorber	Replace.
(9) Oil leakage from the strut or shock absorber	Replace.

3. NOISE

Possible cause	Corrective action
(1) Wear or damage of strut or shock absorber component parts	Replace.
(2) Loosening of the suspension link installing bolt	Tighten to the specified torque.
(3) Abnormal deformation or loss of bushing	Replace.
(4) Unsuitable length (maximum or minimum) of strut or shock absorber	Replace with appropriate parts.
(5) Damaged coil spring	Replace.
(6) Wear or damage of the ball joint	Replace.
(7) Deformation of the clamp - stabilizer bushing	Replace.

4. Rear Stabilizer 14
5. Rear Trailing Link 16
6. Upper Arm 19
7. Front Lateral Link 21
8. Rear Lateral Link 24
9. Rear Shock Absorber 27
10. General Diagnostic Table 31

1. General Description

A: SPECIFICATION

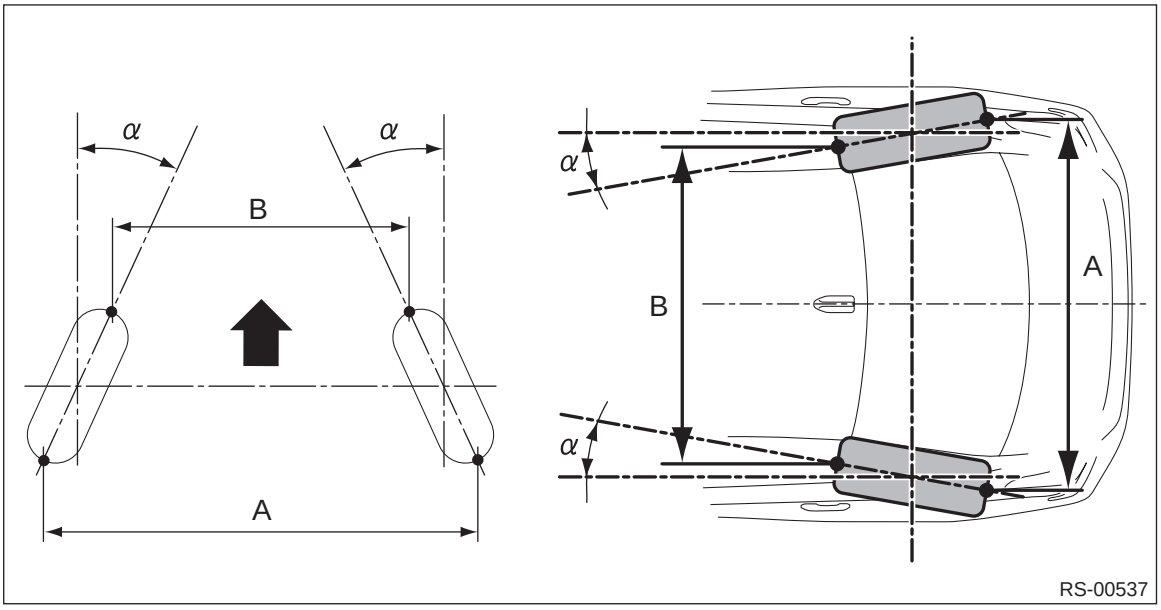
1. WRX MODEL

Tire size		235/45R17
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	367 (14.45)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		–1°30′
Toe-in	mm (in)	IN3±3 (IN0.12±0.12)
		Toe angle (sum of both wheels): IN0°16′±16′
Thrust angle (tolerance: 0°00′±30′)		0°00′

2. STI MODEL

Tire size		245/40R18
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	362 (14.25)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		–1°40′
Toe-in	mm (in)	IN3±3 (IN0.12±0.12)
		Toe angle (sum of both wheels): IN0°16′±16′
Thrust angle (tolerance: 0°00′±30′)		0°00′

NOTE:
• Front toe-in, rear toe-in and front camber can be adjusted. Adjust if the value of toe-in or camber exceeds the tolerance range of the specification chart.
• Other items except for front toe-in, rear toe-in and front camber that are described in the specification chart cannot be adjusted.
• If other items exceed the tolerance range of the specification chart, check the suspension parts and connections for deformation. If defective, replace with new parts.

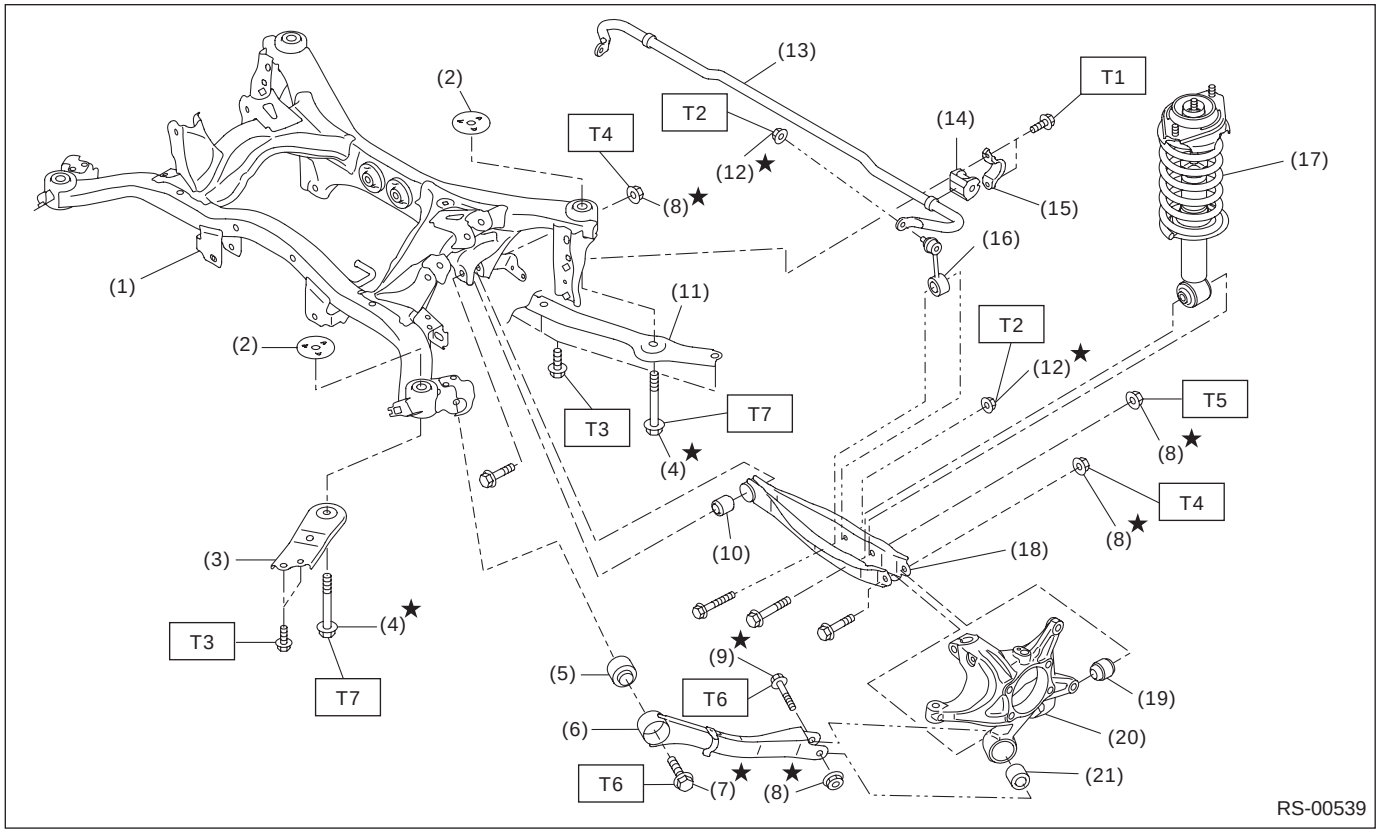


A – B = Positive: Toe-in, Negative: Toe-out

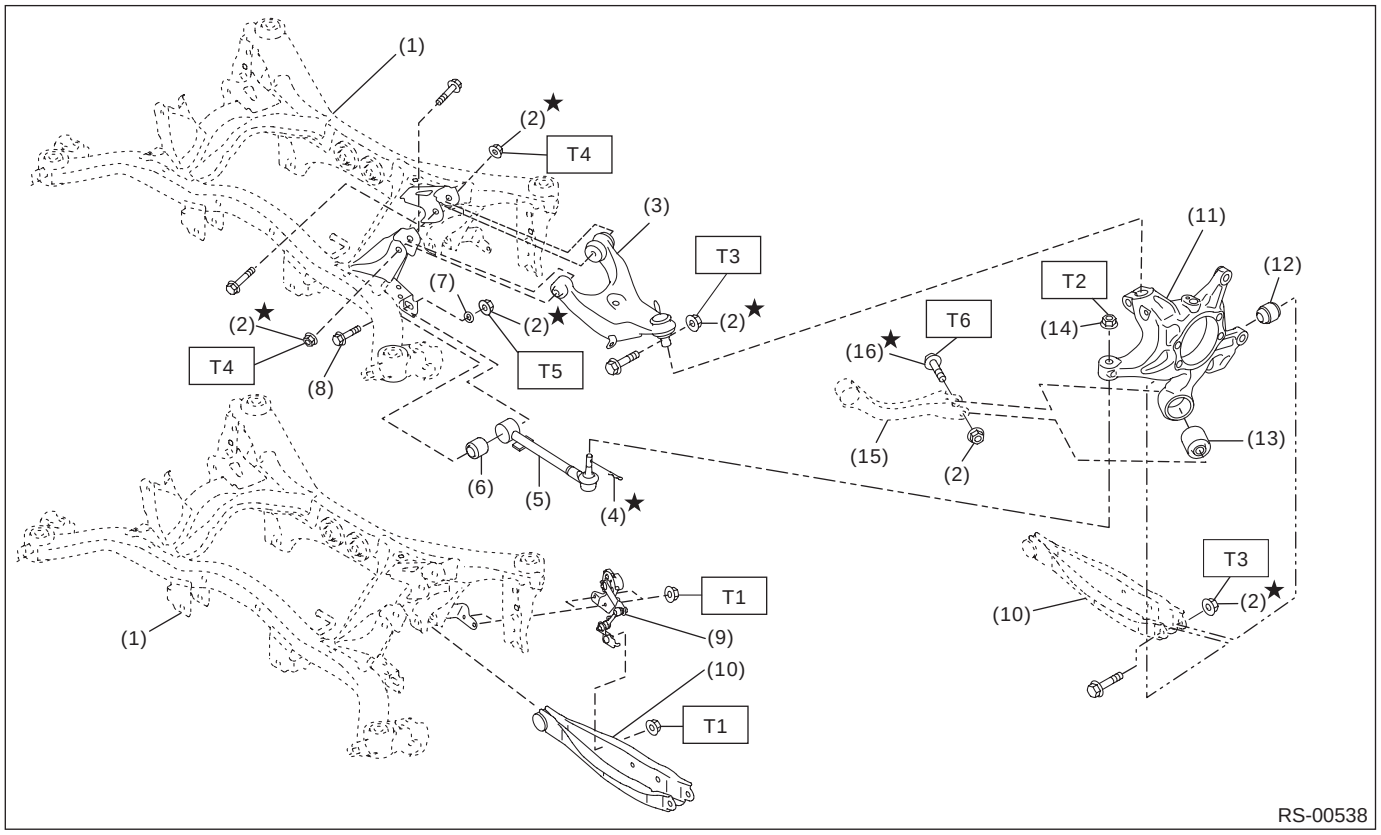
α = Individual toe angles

B: COMPONENT

1. REAR SUSPENSION



(1)	Rear sub frame ASSY	(11)	Rear support sub frame	(21)	Bushing - trailing link
(2)	Stopper UPR	(12)	Flange nut		
(3)	Support - sub frame	(13)	Rear stabilizer	***Tightening torque: N·m (kgf-m, ft-lb)***	
(4)	Flange bolt A	(14)	Bushing - stabilizer	***T1:***	***30 (3.1, 22.1)***
(5)	Bushing A - trailing link	(15)	Clamp - stabilizer bushing	***T2:***	***38 (3.9, 28.0)***
(6)	Trailing link	(16)	Stabilizer link ASSY	***T3:***	***70 (7.1, 51.6)***
(7)	Flange bolt B	(17)	Rear shock absorber ASSY	***T4:***	***80 (8.2, 59.0)***
(8)	Self-locking nut	(18)	Rear lateral link ASSY	***T5:***	***85 (8.7, 62.7)***
(9)	Flange bolt C	(19)	Bushing - rear axle housing	***T6:***	***110 (11.2, 81.1)***
(10)	Bushing C - lateral link rear	(20)	Housing ASSY - rear axle	***T7:***	***145 (14.8, 106.9)***



(1)	Rear sub frame ASSY	(9)	Sensor ASSY - headlight beam leveler (models with auto headlight beam leveler only)	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Self-locking nut	(10)	Lateral link ASSY - rear	***T1: 7.5 (0.8, 5.5)***
(3)	Rear upper arm ASSY	(11)	Housing ASSY - rear axle	***T2: 60 (6.1, 44.3)***
(4)	Snap pin	(12)	Bushing - rear axle housing	***T3: 80 (8.2, 59.0)***
(5)	Lateral link ASSY - front	(13)	Bushing - trailing link	***T4: 90 (9.2, 66.4)***

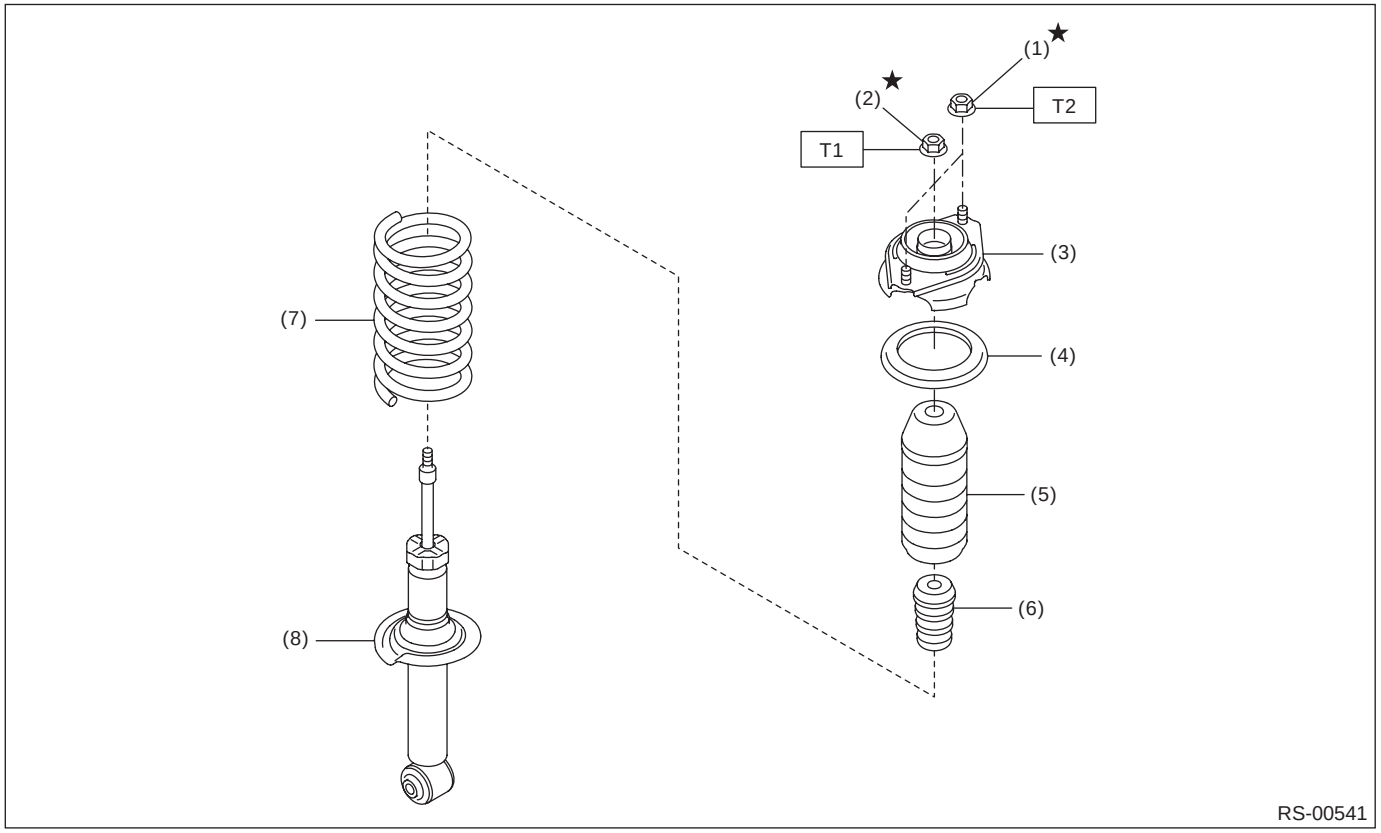
(7)	Adjusting washer	(15)	Trailing link	***T6: 110 (11.2, 81.1)***
(8)	Adjusting bolt	(16)	Flange bolt	

2. REAR SHOCK ABSORBER



(1)	Flange nut	(5)	Dust cover - rear shock
(2)	Self-locking nut	(6)	Helper - rear
(3)	Shock mount - rear	(7)	Coil spring - rear
(4)	Rubber seat - shock UPR	(8)	Shock absorber COMPL - rear

Tightening torque: N·m (kgf-m, ft-lb)
T1: 25 (2.5, 18.4)
T2: 30 (3.1, 22.1)

C: CAUTION

• When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
• When disposing of shock absorbers, be sure to bleed the oil or gas out completely. Also, do not expose to flames or fire.
• When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
• Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
• Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
• When the suspension-related components have been removed/installed or replaced, perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• For parts which are not reusable, always use new parts. Other parts should be replaced with new parts as required.
• When handling oil or fuel, adhere to the following to prevent unexpected accident.
  – Be careful with fire.
  – Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
  – Follow all government and local regulations concerning disposal of refuse when disposing.
• Be sure that the surface of brake disc or brake pad is free from grease or oil.
• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
• Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST20099PA010	20099PA010	INSTALLER & REMOVER	• Used for replacing the bushing A - trailing link of the housing assembly - rear axle. • Used together with BUSHING REMOVER (20099FG000).
 ST20099FG000	20099FG000	BUSHING REMOVER	• Used for replacing the bushing A - trailing link of the housing assembly - rear axle. • Used together with base part of INSTALLER & REMOVER (20099PA000).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST20099AE000	20099AE000	INSTALLER & REMOVER	Used for replacing the bushing B - lateral link.
 ST20099AE010	20099AE010	INSTALLER & REMOVER	Used for replacing the bushing C - lateral link.
 ST20399FG000	20399FG000	STRUT MOUNT SOCKET	• Used for disassembling and assembling strut assembly and shock absorber assembly. • Used for checking center nut torque of strut assembly and shock absorber assembly.

2. GENERAL TOOL

TOOL NAME	REMARKS
Alignment tester	Used for measuring wheel alignment.
Toe-in gauge	Used for toe-in measurement.
Jack	Used for removing and installing suspension.
Bearing puller	Used for removing bushings.
Tie-rod ball joint puller	Used for disconnecting the lateral link assembly - front.
Coil spring compressor	Used for disassembling and assembling strut assembly and shock absorber assembly.

2. Wheel Alignment

A: INSPECTION

NOTE:
For wheel alignment, measure or adjust the front and rear wheels at a time. Refer to “Wheel Alignment” in “FRONT SUSPENSION” section for measurement and adjustment procedures of wheel alignment.

- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>

3. Rear Sub Frame

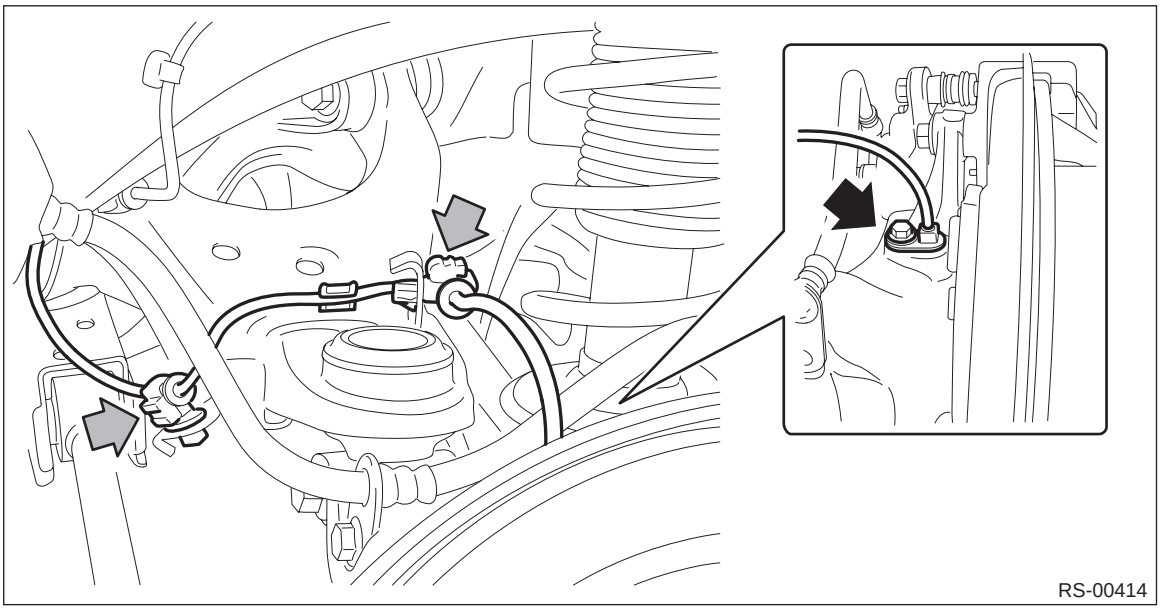
A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the rear exhaust pipe.
- STI model: <Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.>
- Except for STI model: <Ref. to EX(w/o STI)-48, REMOVAL, Rear Exhaust Pipe.>

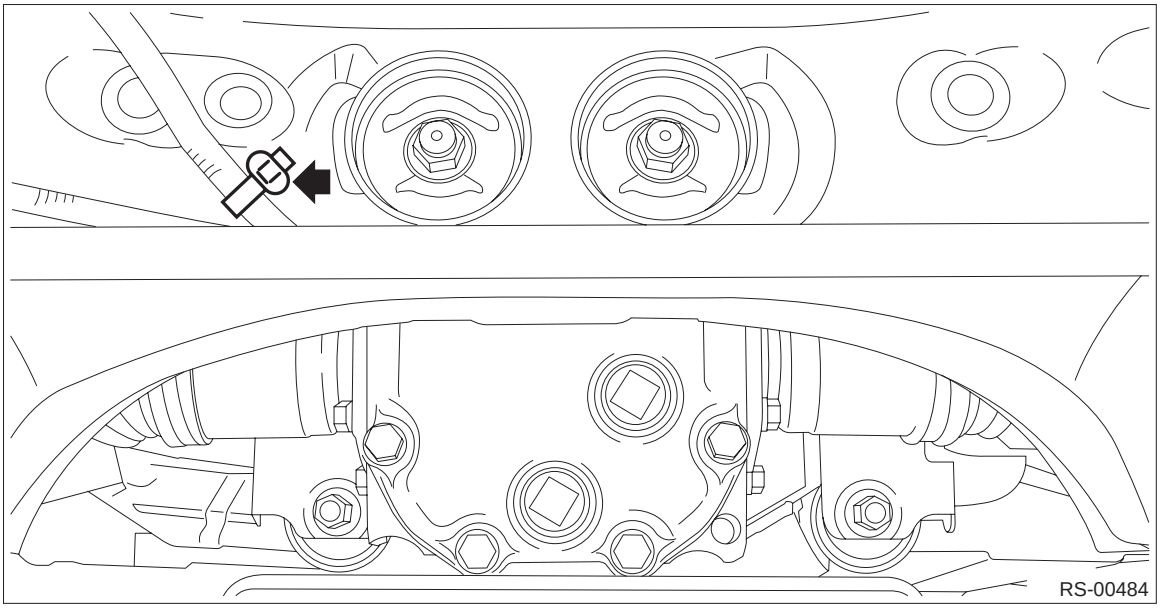
4) Remove the propeller shaft assembly. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
5) Remove the clip and bolt on the harness clamp, and remove the rear ABS wheel speed sensor.

CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**



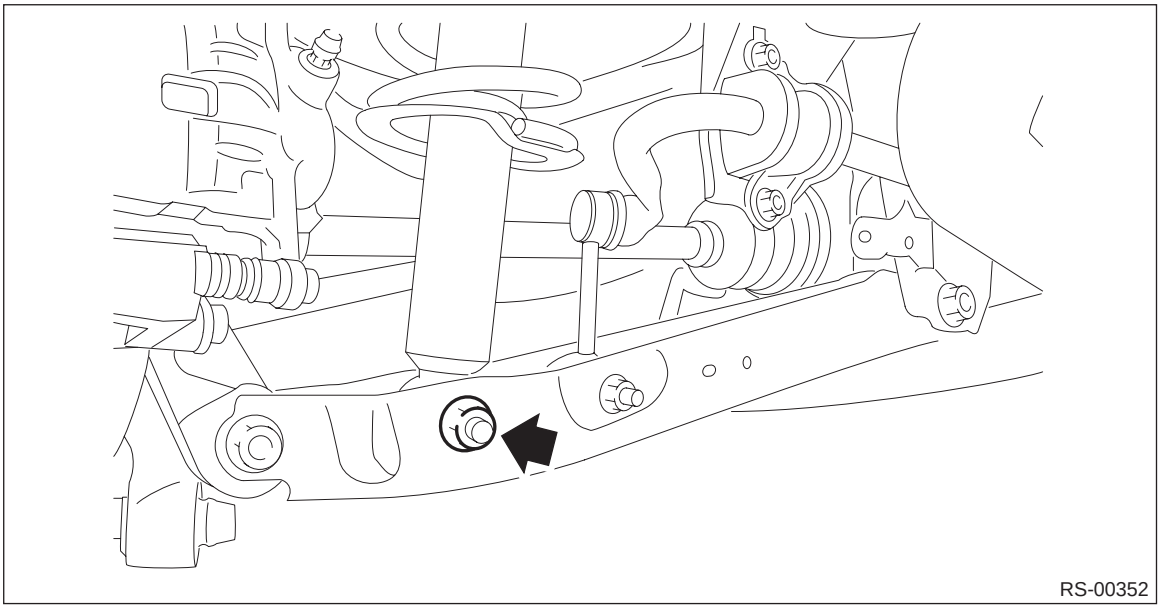
6) Remove the disc brake assembly - rear. <Ref. to BR-43, REMOVAL, Rear Disc Brake Assembly.>
7) Remove the cable assembly - parking brake and the parking brake shoe. <Ref. to PB-12, REMOVAL, Parking Brake Assembly (Rear Disc Brake).>

8) Remove the clamp of the sub rear harness.



9) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) <Ref. to LI-75, REMOVAL, Rear Height Sensor.>
10) Remove the fuel tank protector.
- STI model: <Ref. to FU(STI)-66, REMOVAL, Fuel Tank Protector.>
- Except for STI model: <Ref. to FU(w/o STI)-148, REMOVAL, Fuel Tank Protector.>

11) Remove the rear sub frame assembly.
(1) Remove the bolts and nuts from the lower side of rear shock absorber assembly.

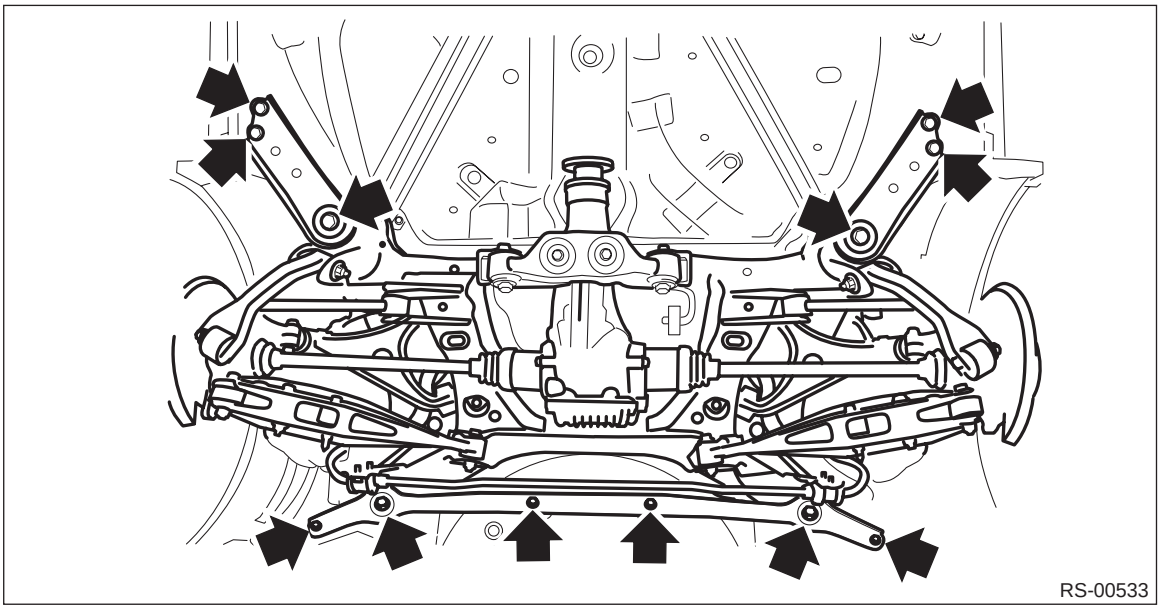


(2) Support the rear sub frame assembly using a transmission jack.

CAUTION:
The rear sub frame assembly is heavy. Make sure that it is horizontally-supported.

(3) Remove the bolt, and remove the left and right sub frame supports and the rear sub frame support.
(4) Remove the rear sub frame assembly.

CAUTION:
While checking there is no dragging of harness and wire, lower it slowly with a transmission jack.



12) As necessary, remove each part from the rear sub frame assembly.

B: INSTALLATION

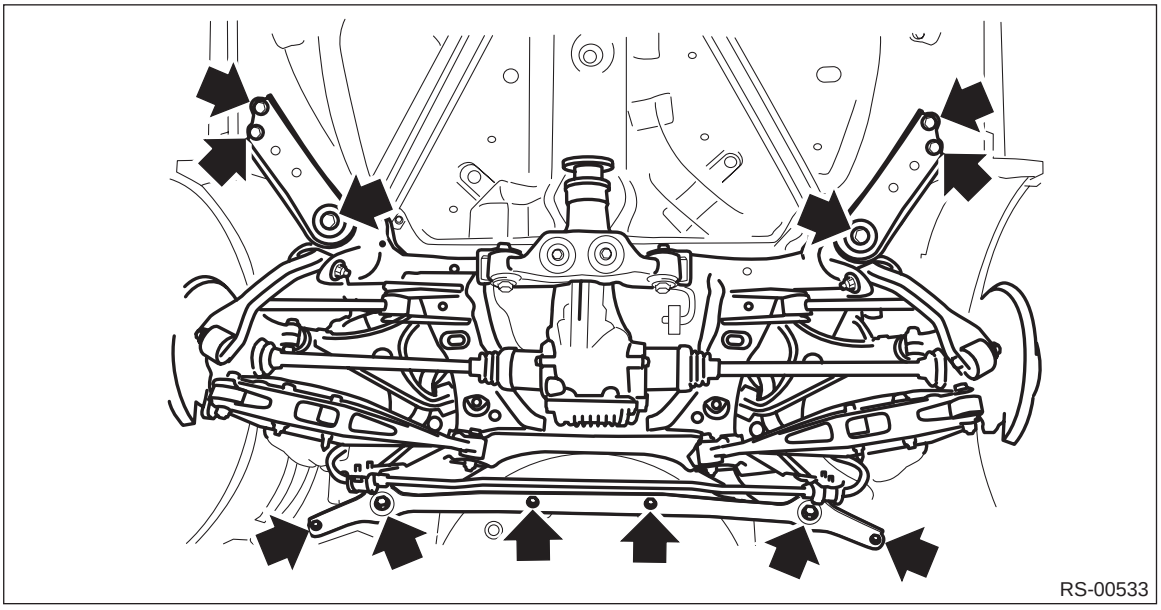
CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**
- **During the installation, make sure that the marking of ABS wheel speed sensor harness does not twist.**

1) Check the removed parts for wear, damage and crack, and repair or replace them if faulty.
2) Install each part to the rear sub frame assembly.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-3, COMPONENT, General Description.>

3) Install the rear sub frame assembly.
   (1) Lift the rear sub frame assembly using a transmission jack.
   (2) Install the right and left sub frame supports and the rear support sub frame, and install the rear sub frame assembly.

CAUTION:
- **The rear sub frame assembly is heavy. Make sure that it is horizontally-supported.**
- **While checking there is no dragging of harness and wire, raise it slowly with a transmission jack.**



Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-3, COMPONENT, General Description.>

4) Install the bolts and nuts on the lower side of rear shock absorber assembly.

Tightening torque:
85 N·m (8.7 kgf-m, 62.6 ft-lb)

5) Install the fuel tank protector.
- STI model: <Ref. to FU(STI)-66, INSTALLATION, Fuel Tank Protector.>
- Except for STI model: <Ref. to FU(w/o STI)-148, INSTALLATION, Fuel Tank Protector.>

6) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7) Install the clamp of the sub rear harness.
8) Install the cable assembly - parking brake. <Ref. to PB-14, INSTALLATION, Parking Brake Assembly (Rear Disc Brake).>
9) Install the brake hose bracket and the disc brake assembly - rear.

Tightening torque:
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
Disc brake assembly - rear (STI model): 65 N·m (6.6 kgf-m, 47.9 ft-lb)
Disc brake assembly - rear (except for STI model): 66 N·m (6.7 kgf-m, 48.7 ft-lb)
10) Install the rear ABS wheel speed sensor.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
11) Install the propeller shaft assembly. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
12) Install the rear exhaust pipe.
- STI model: <Ref. to EX(STI)-12, INSTALLATION, Rear Exhaust Pipe.>
- Except for STI model: <Ref. to EX(w/o STI)-49, INSTALLATION, Rear Exhaust Pipe.>

13) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
14) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
15) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.
16) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-17, PROCEDURE, Auto Headlight Beam Leveler System.>

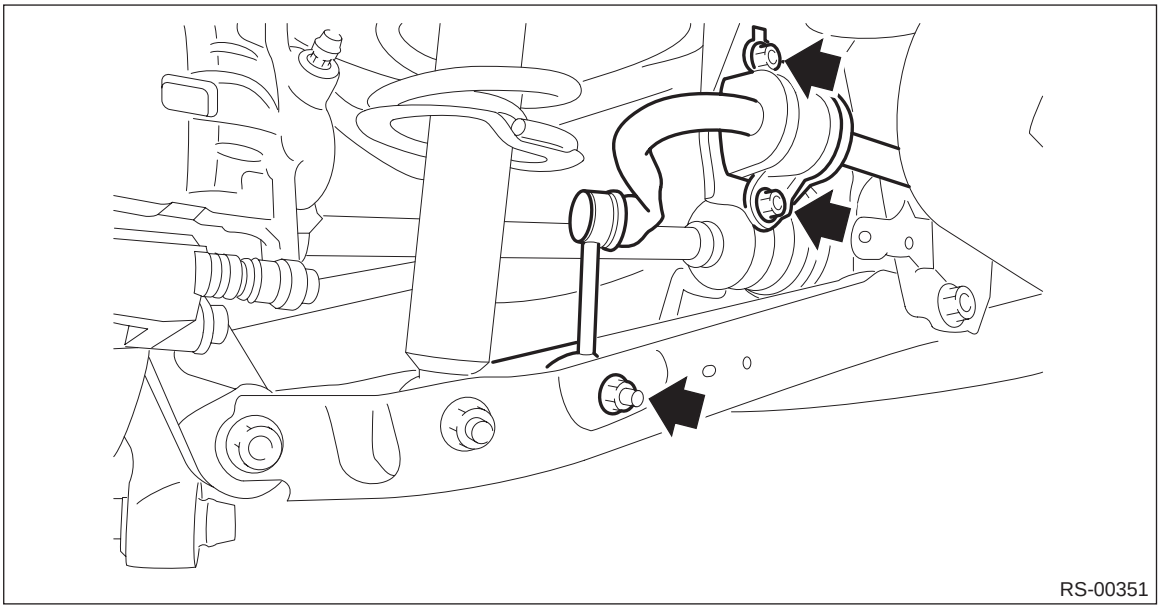
C: INSPECTION

Check the removed parts for wear, damage and crack, and repair or replace them if faulty.

4. Rear Stabilizer

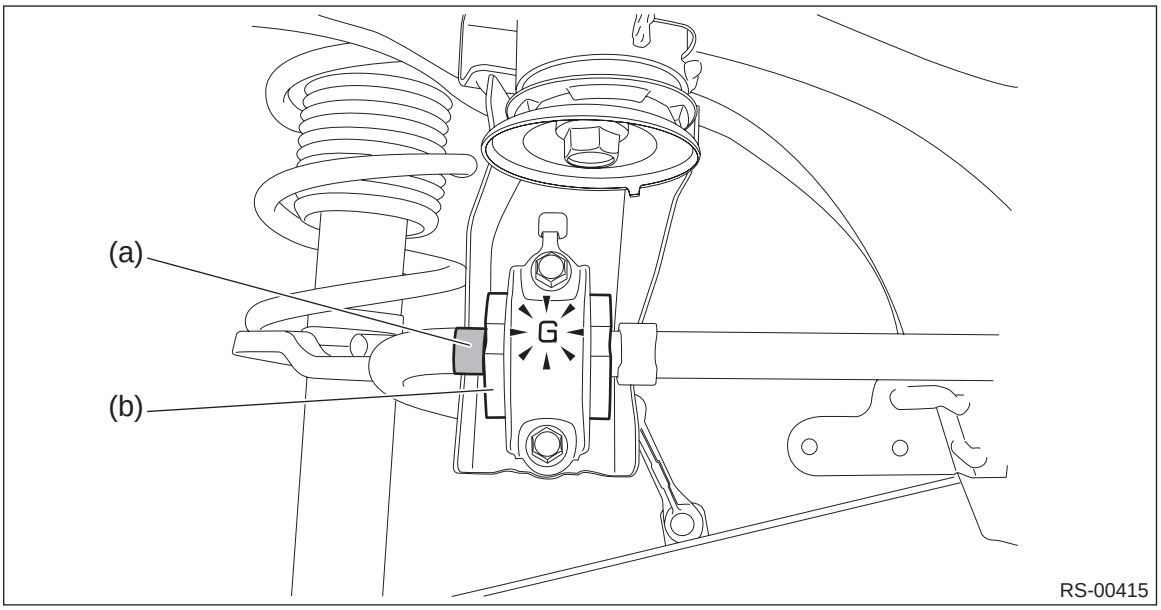
A: REMOVAL

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the rear stabilizer.
   (1) Remove the nut and disconnect the right and left stabilizer link assemblies.
   (2) Detach the right and left clamps - stabilizer bushing and remove the rear stabilizer.



B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**
- **Install the clamp - stabilizer bushing with the “G” character facing upward.**
- **When installing, align the edge of identification paint (a) to the end face of the bushing (b).**



1) Before installation, inspect the following items and replace any faulty part with a new one.
- Check the bushing - stabilizer for abnormal cracks, fatigue or damage.
- Check the stabilizer link assembly for damage.

2) Install the rear stabilizer.

Tightening torque:
Clamp - stabilizer bushing: 30 N·m (3.1 kgf-m, 22.1 ft-lb)
Stabilizer link assembly: 38 N·m (3.9 kgf-m, 28.0 ft-lb)

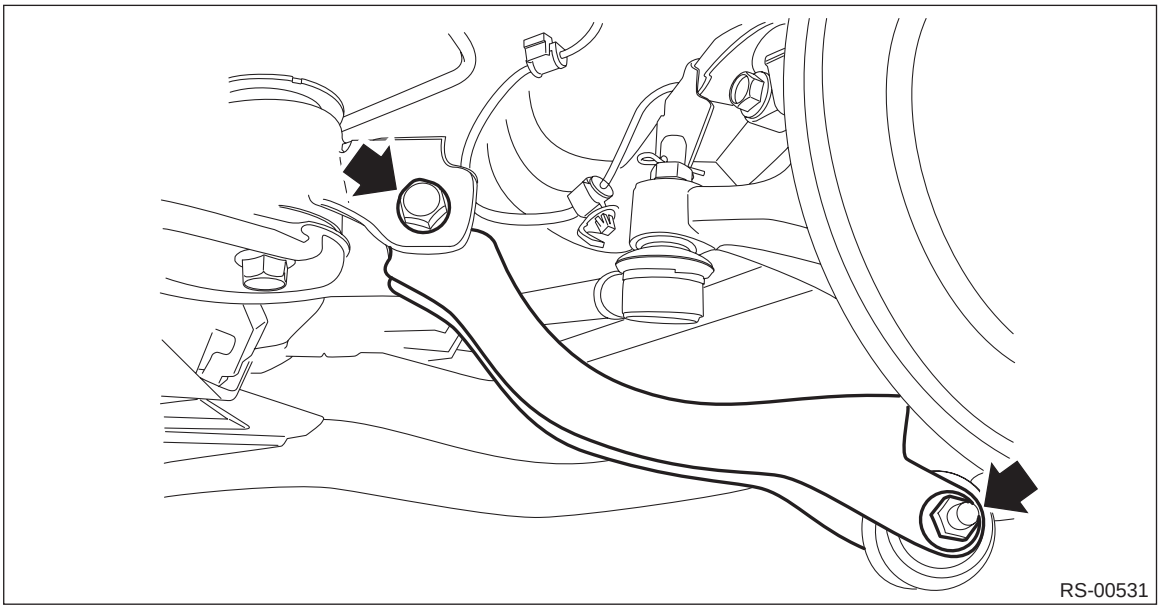
3) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

5. Rear Trailing Link

A: REMOVAL

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the bolts and nuts, and then remove the trailing link.



B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1) Install the trailing link.

Tightening torque:
110 N·m (11.2 kgf-m, 81.1 ft-lb)

2) Install the rear wheels and lower the vehicle.

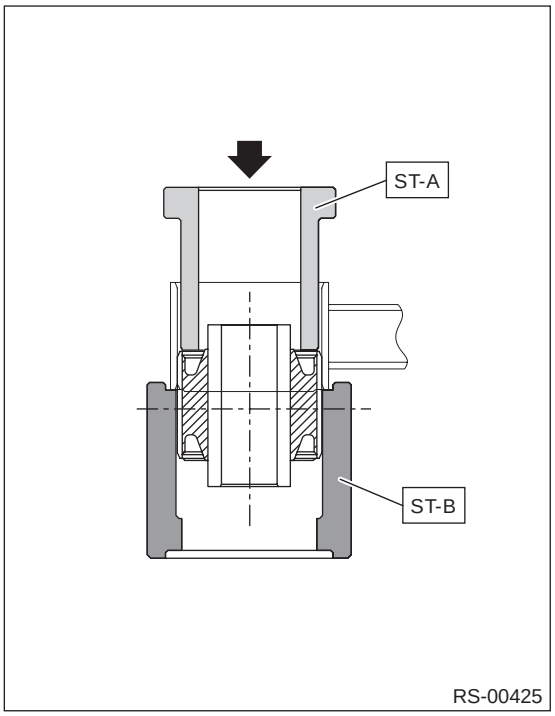
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: DISASSEMBLY

1. BUSHING A - TRAILING LINK

Using the ST, push out the bushing A - trailing link.

Preparation tool:
ST-A: INSTALLER (20099FG000)
ST-B: INSTALLER & REMOVER (BASE) (20099PA010)



2. BUSHING - TRAILING LINK

For the removal procedure of bushing - trailing link, refer to “Rear Axle” in the “DRIVE SHAFT SYSTEM” section. <Ref. to DS-38, BUSHING - TRAILING LINK, DISASSEMBLY, Rear Axle.>

D: ASSEMBLY

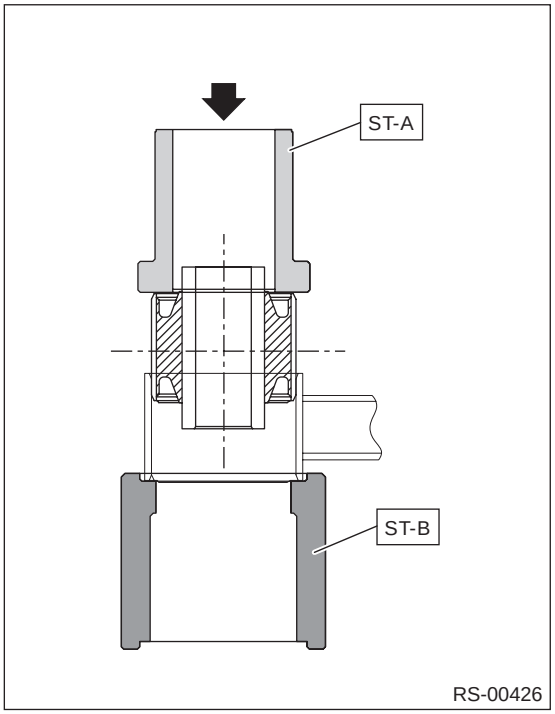
1. BUSHING A - TRAILING LINK

1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Perform visual check for damage or bend on the trailing link.
- Visually check the bushing for abnormal cracks, fatigue or damage.

2) Using the ST-A and ST-B, press-fit the bushing.

CAUTION:
Make sure to press the bushing straight in.

Preparation tool:
ST-A: INSTALLER (20099FG000)
ST-B: INSTALLER & REMOVER (BASE) (20099PA010)



2. BUSHING - TRAILING LINK

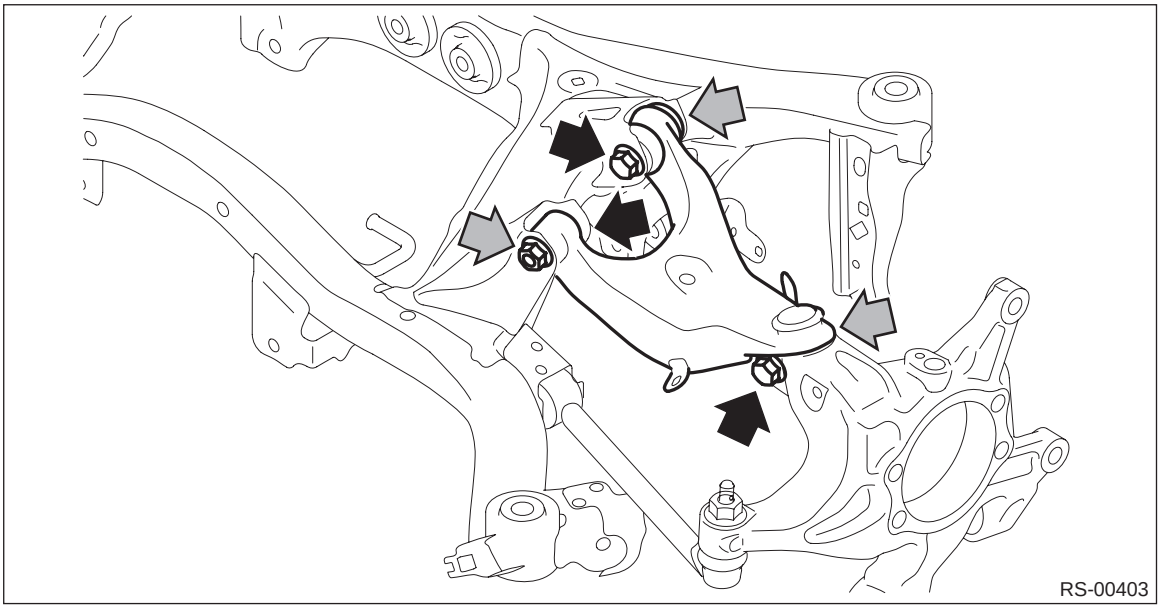
For the installation procedure of bushing - trailing link, refer to “Rear Axle” in the “DRIVE SHAFT SYSTEM” section. <Ref. to DS-38, BUSHING - TRAILING LINK, DISASSEMBLY, Rear Axle.>

6. Upper Arm

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the rear sub frame assembly. <Ref. to RS-9, REMOVAL, Rear Sub Frame.>
4) Remove the bolts and nuts to remove the upper arm assembly.

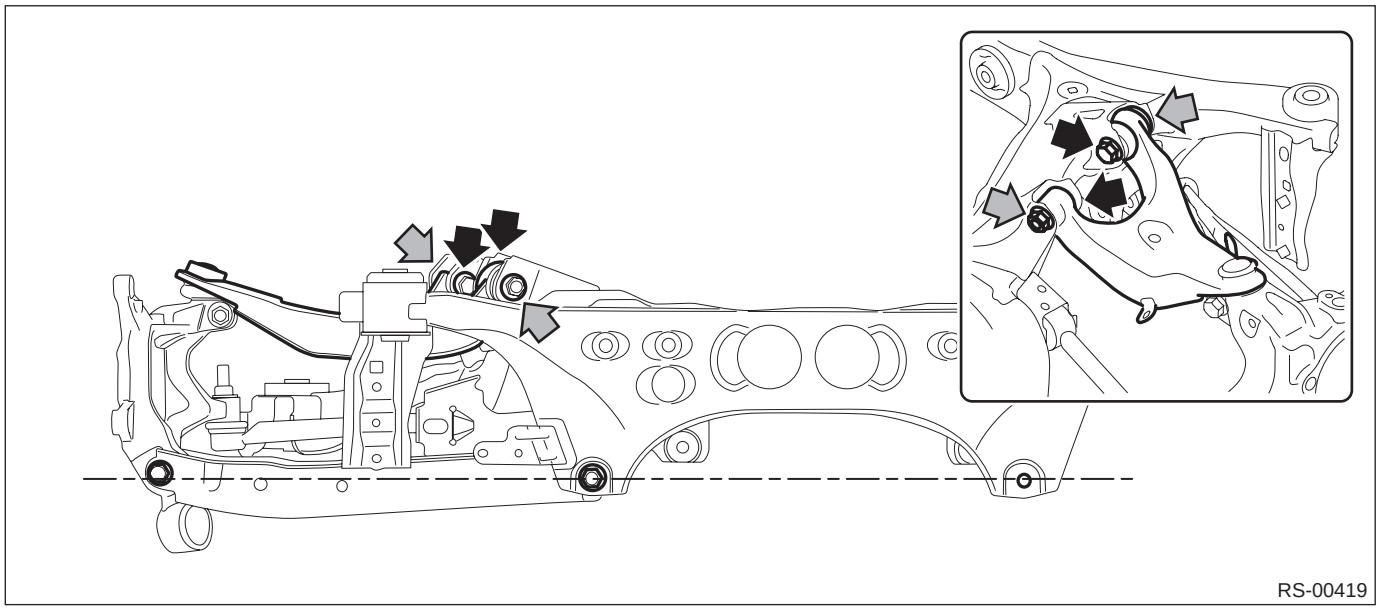


B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing when the arm is positioned in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Visually check the upper arm assembly for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint for abnormal cracks, fatigue or damage.

2) Install the upper arm assembly.
   (1) Make the installation sections of the rear lateral link assembly (the bolt on the housing assembly - rear axle side and the bolt on the rear sub frame assembly side) horizontal.
   (2) Install the upper arm assembly to the rear sub frame assembly.



Tightening torque:
Upper arm assembly — rear sub frame assembly: 90 N·m (9.2 kgf-m, 66.4 ft-lb)

3) Connect the upper arm assembly and the housing assembly - rear axle.

Tightening torque:
Upper arm assembly — housing assembly - rear axle: 80 N·m (8.2 kgf-m, 59.0 ft-lb)

4) Install the rear sub frame assembly. <Ref. to RS-12, INSTALLATION, Rear Sub Frame.>
5) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

6) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

7) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

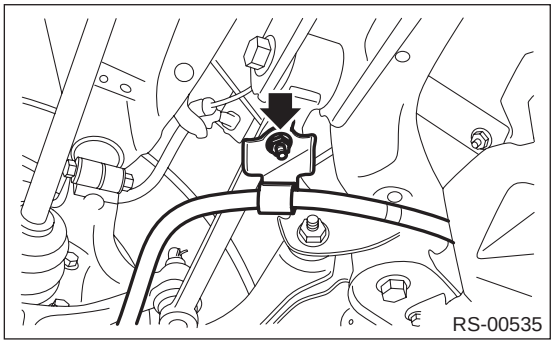
NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

8) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-17, PROCEDURE, Auto Headlight Beam Leveler System.>

7. Front Lateral Link

A: REMOVAL

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the trailing link. <Ref. to RS-16, REMOVAL, Rear Trailing Link.>
3) Remove the nuts, and remove the cable assembly - parking brake.

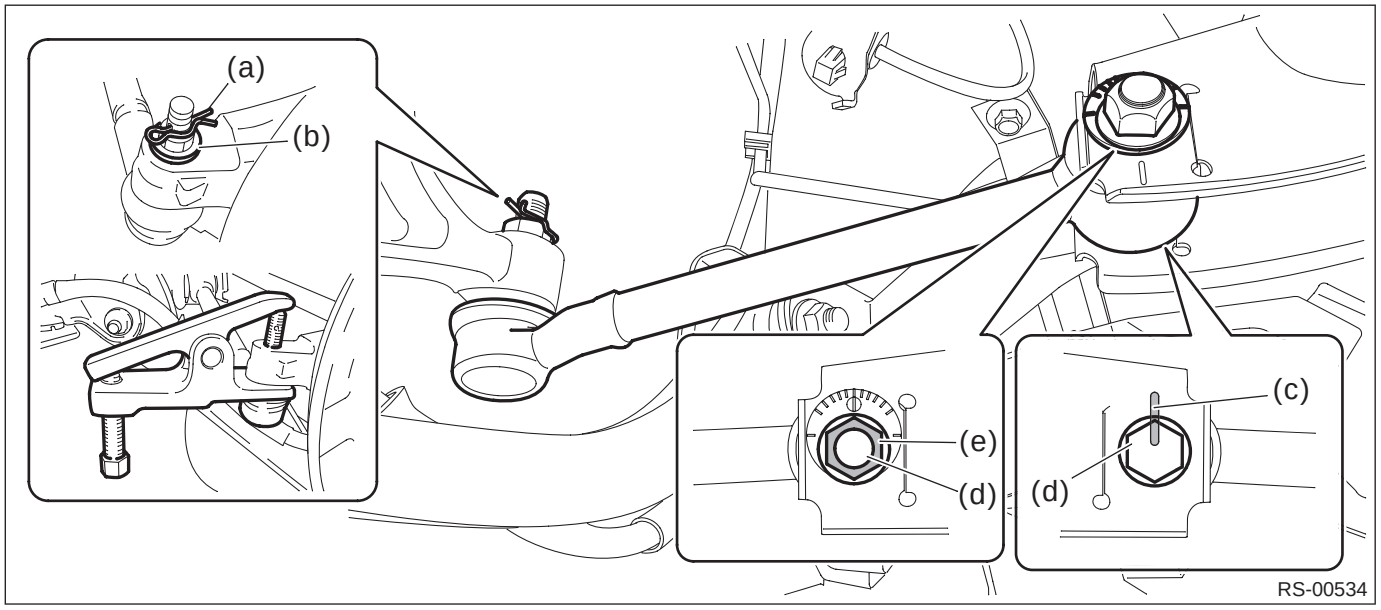


4) Remove the lateral link assembly - front.
   (1) Remove the snap pin (a) and nut (b).
   (2) Remove the ball joint from the housing assembly - rear axle.

Preparation tool:
Tie-rod ball joint puller

   (3) Scribe alignment marks (c) on the adjusting bolt for lateral link assembly - front and on the rear sub frame assembly.
   (4) Remove the adjusting bolt (d), and remove the lateral link assembly - front.

CAUTION:
When removing the adjusting bolt (d), make sure to fix the bolt head in place when loosening the nut (e).



B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Visually check the lateral link assembly - front for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint for abnormal cracks, fatigue or damage.

2) Install the lateral link assembly - front.

CAUTION:
- **When installing the adjusting bolt (d), make sure to fix the bolt head in place and tighten the nut side (e).**
- **Align alignment marks (c) on the adjusting bolt for lateral link assembly - front and on the rear sub frame assembly.**

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-3, COMPONENT, General Description.>

3) Install the nuts, and install the cable assembly - parking brake.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

4) Install the trailing link.

Tightening torque:
110 N·m (11.2 kgf-m, 81.1 ft-lb)

5) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

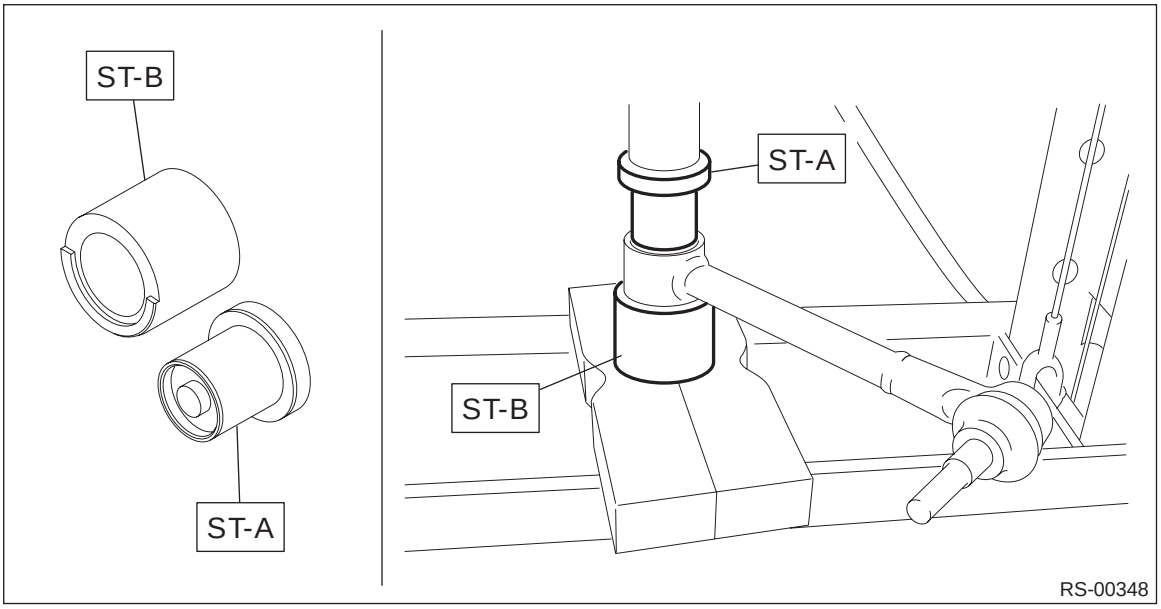
6) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: DISASSEMBLY

Using the ST, push out the bushing B - lateral link.

Preparation tool:
ST-A & ST-B: INSTALLER & REMOVER (20299AE000)



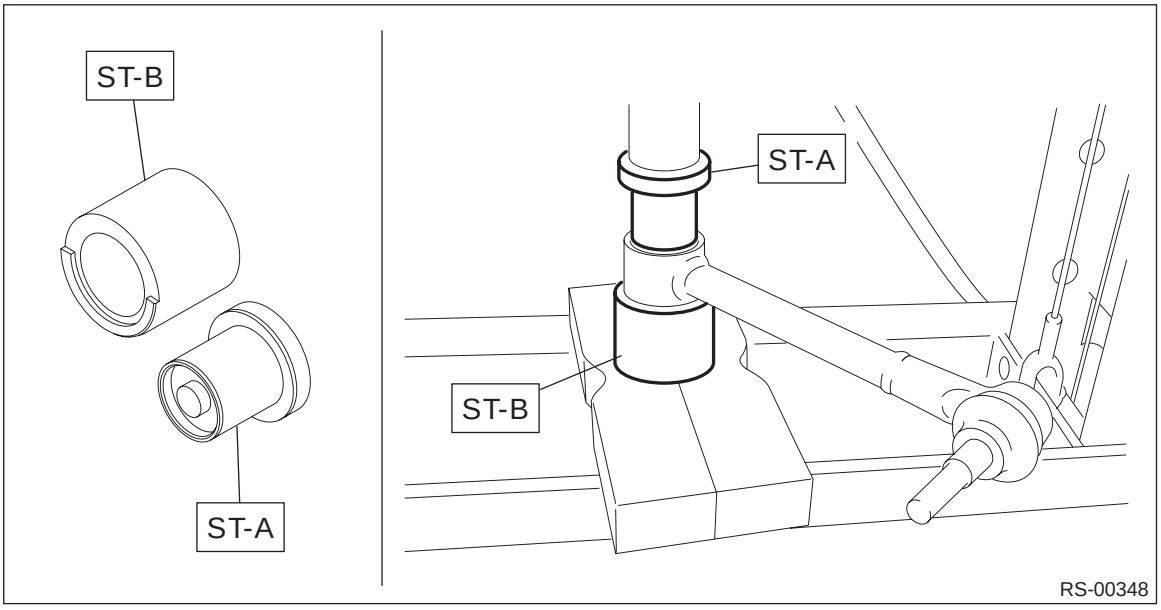
D: ASSEMBLY

1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Visually check the lateral link assembly - front for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the dust cover on the ball joint for damage.

2) Using the ST, press-fit the bushing B - lateral link.

CAUTION:
Make sure to press the bushing straight in.

Preparation tool:
ST-A & ST-B: INSTALLER & REMOVER (20299AE000)



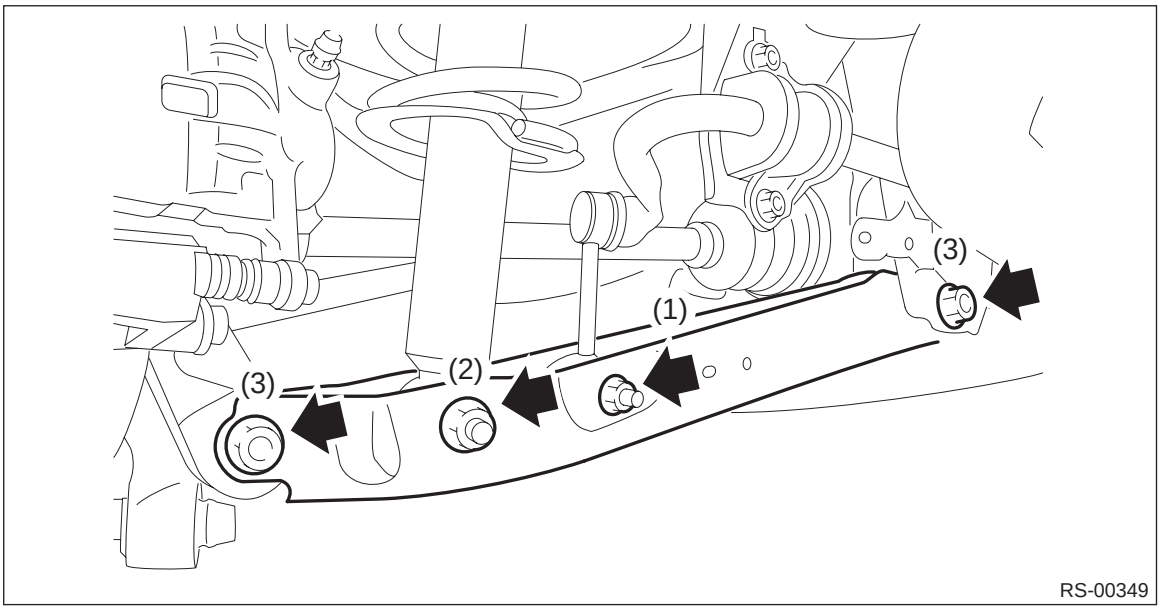
8. Rear Lateral Link

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.

2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) <Ref. to LI-75, REMOVAL, Rear Height Sensor.>
4) Remove the lateral link assembly - rear.
   (1) Remove the nut and disconnect the rear stabilizer link assembly.
   (2) Remove the bolts and nuts, and remove the lower side of rear shock absorber assembly.
   (3) Remove the bolts and nuts, and remove the lateral link assembly - rear.



B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Visually check the lateral link assembly - rear for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.

2) Install the lateral link assembly - rear.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-3, COMPONENT, General Description.>

3) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

5) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

6) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>

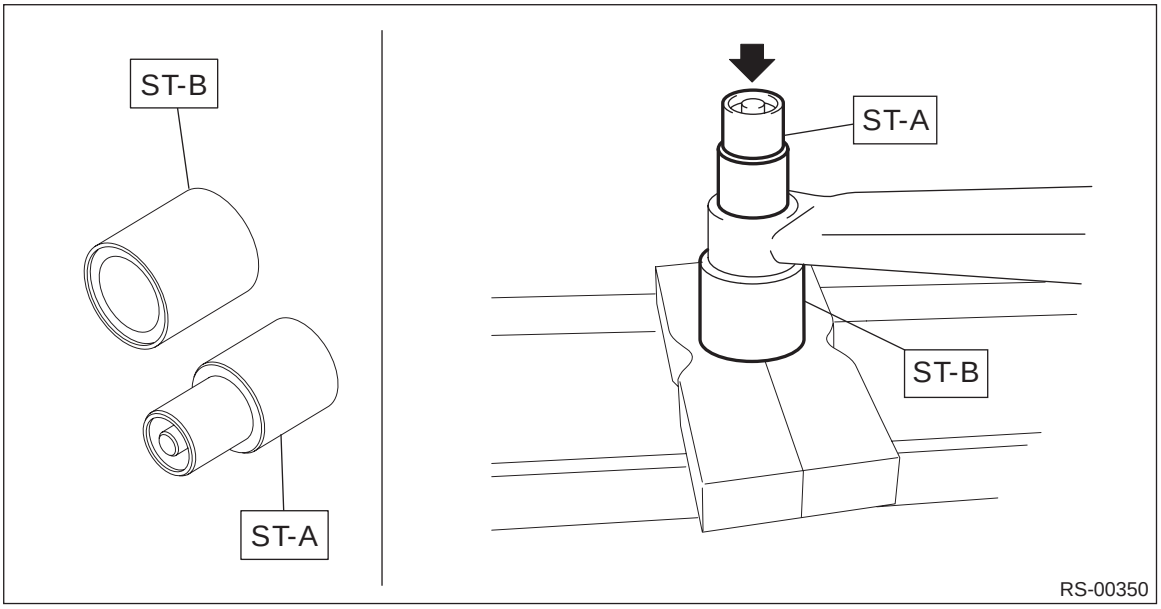
CAUTION:
When the wheel alignment has been adjusted, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

7) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-18, REINITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

Using the ST, push out the bushing.

Preparation tool:
ST-A & ST-B: INSTALLER & REMOVER (20099AE010)

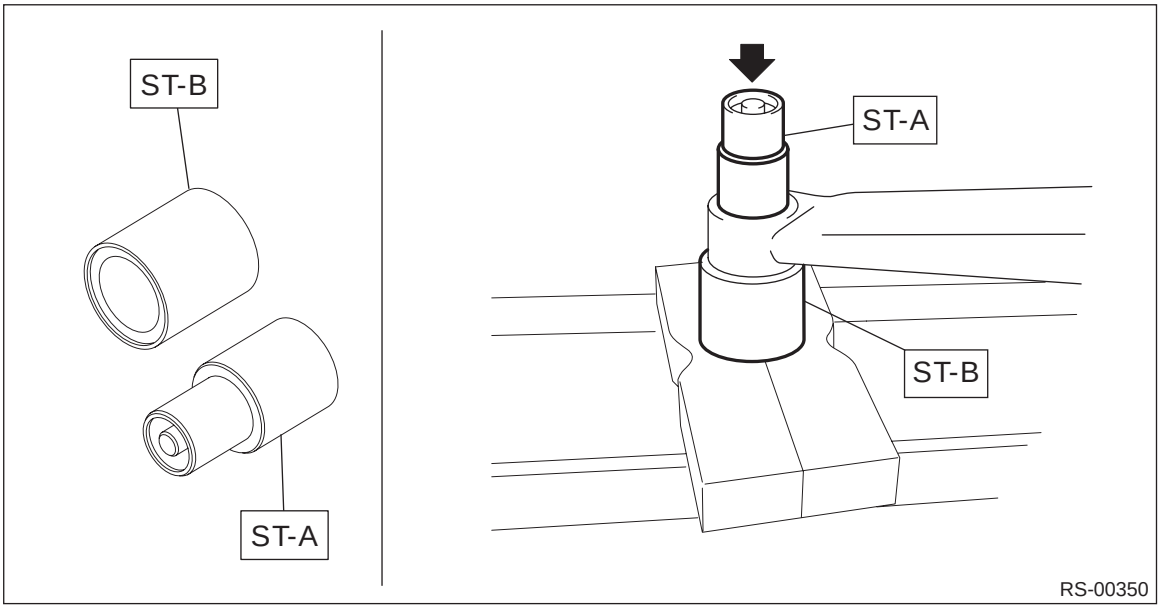


D: ASSEMBLY

1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Visually check the lateral link assembly - rear for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.

2) Using the ST, press the bushing into place.

Preparation tool:
ST-A & ST-B: INSTALLER & REMOVER (20099AE010)



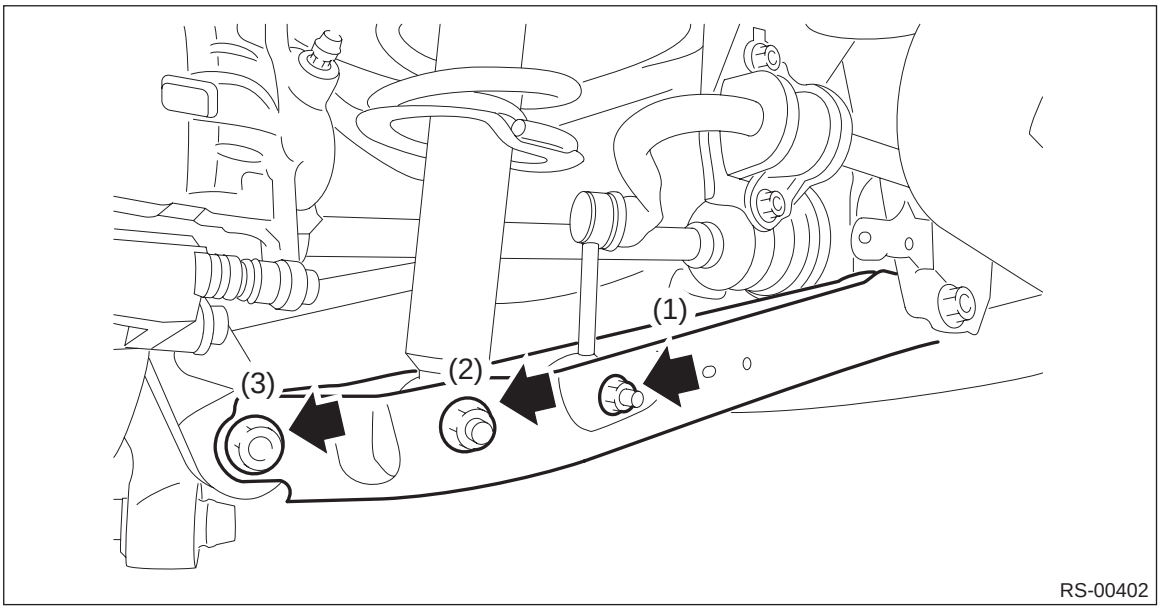
9. Rear Shock Absorber

A: REMOVAL

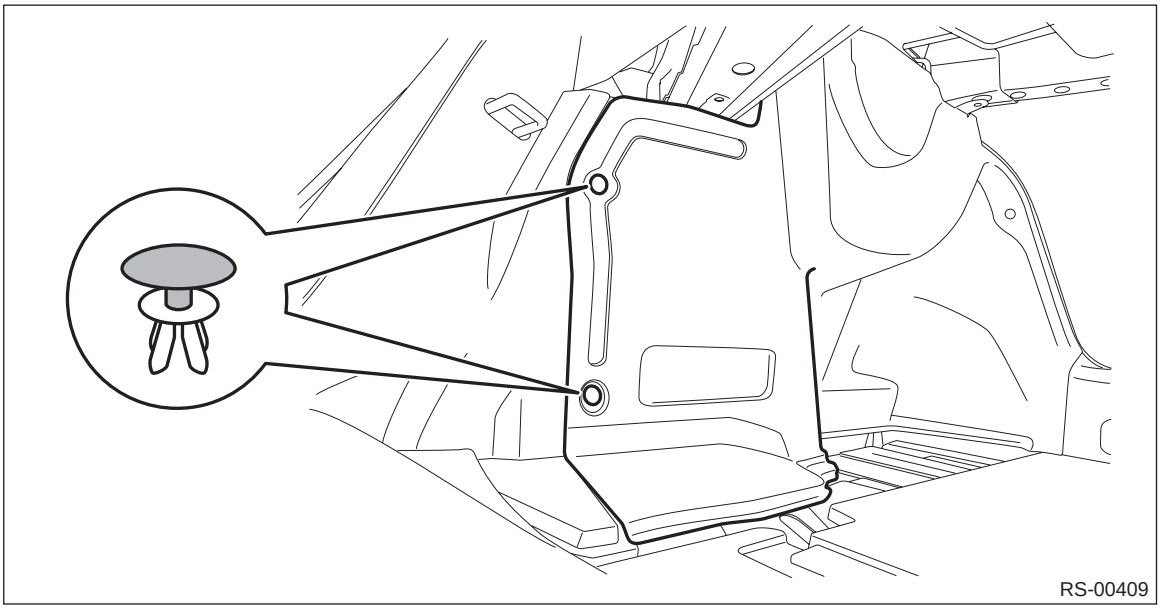
1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.

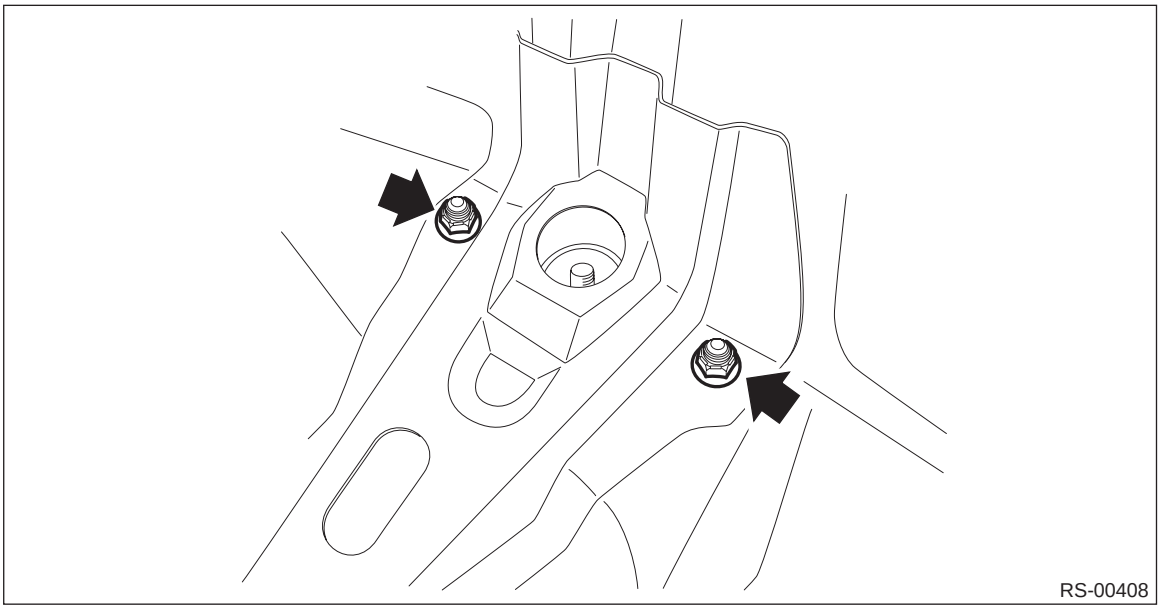
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) <Ref. to LI-75, REMOVAL, Rear Height Sensor.>
4) Remove the bolts and nuts, and lower the lateral link assembly - rear.
   (1) Remove the nut and disconnect the rear stabilizer link assembly.
   (2) Remove the bolts from the lower side of rear shock absorber assembly.
   (3) Disconnect the housing assembly - rear axle from the lateral link assembly - rear.



5) Take out the trunk mat.
6) Tilt the rear seat backrest forward.
7) Remove the clips, and turn over the trim panel - trunk side.



8) Remove the nuts on the upper side of rear shock absorber assembly.



9) Lower the lateral link assembly - rear, and remove the rear shock absorber assembly.

B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1) Install the rear shock absorber assembly.
   (1) Lower the lateral link assembly - rear, and place the rear shock absorber assembly inside.
   (2) Lower the lateral link assembly - rear, and install the upper side of rear shock absorber assembly.

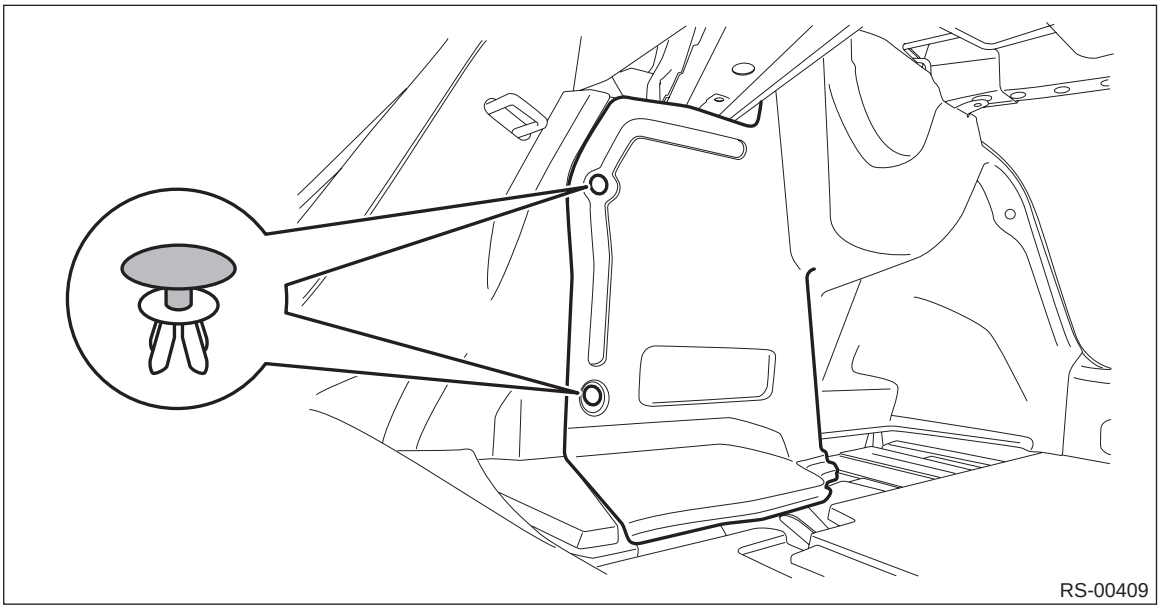
Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)
   (3) Install the bolts on the lower side of rear shock absorber assembly.

Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)
   (4) Install the lateral link assembly - rear and the stabilizer link assembly.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-3, COMPONENT, General Description.>
   (5) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the clips, and install the trim panel - trunk side.



3) Install the trunk mat, and return the rear seat backrest to the lock position.
4) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

5) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

6) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

7) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-18, REINITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

Refer to “Front Strut” in “FRONT SUSPENSION” section for disassembly. <Ref. to FS-46, DISASSEMBLY, Front Strut.>

D: ASSEMBLY

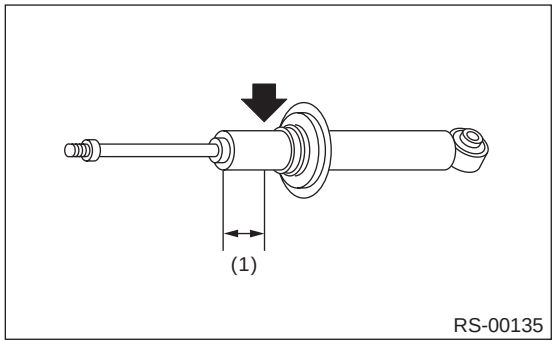
Refer to “Front Strut” in “FRONT SUSPENSION” section for assembly. <Ref. to FS-47, ASSEMBLY, Front Strut.>

E: INSPECTION

Refer to “Front Strut” in “FRONT SUSPENSION” section for inspection procedures. <Ref. to FS-49, INSPECTION, Front Strut.>

F: DISPOSAL

CAUTION:
• Before discarding the strut COMPL and the shock absorber COMPL, be sure to wear goggles to protect eyes from gas, oil and cutting powder.
• Do not disassemble the strut COMPL and the shock absorber COMPL or throw them into flames.
• When discarding the strut COMPL and the shock absorber COMPL filled with gas, drill a hole on them to purge the gas.
1) Place the shock absorber on a level surface with the piston rod fully expanded.
2) Make a hole into the specified position 30 mm (1.18 in) deep using a drill with 2 — 3 mm (0.08 — 0.12 in) diameter.



(1) 40 mm (1.57 in)

10.General Diagnostic Table

A: INSPECTION

1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

Possible cause	Corrective action
(1) Permanent distortion or damaged coil spring	Replace.
(2) Rough operation of shock absorber	Replace.
(3) Installation of the wrong shock absorber	Replace with proper parts.
(4) Installation of the wrong coil spring	Replace with proper parts.

2. POOR RIDE COMFORT

1) Large rebound shock
2) Rocking of the vehicle continues too long after running over bump and hump.
3) Excessive shock in bumping

Possible cause	Corrective action
(1) Damaged coil spring	Replace.
(2) Overinflation of tires	Adjust.
(3) Improper wheel arch height	Replace the coil springs with new parts.
(4) Defective operation of shock absorber	Replace.
(5) Damage or deformation of shock absorber mount	Replace.
(6) Unsuitable length (maximum or minimum) of shock absorber	Replace with appropriate parts.
(7) Deformation or loss of bushing	Replace.
(8) Deformation or damage of helper in shock absorber	Replace.
(9) Oil leakage from the shock absorber	Replace.

3. NOISE

Possible cause	Corrective action
(1) Wear or damage of shock absorber component parts	Replace.
(2) Loosening of the suspension link or arm installing bolt	Tighten to the specified torque.
(3) Deformation or loss of bushing	Replace.
(4) Unsuitable length (maximum or minimum) of shock absorber	Replace with appropriate parts.
(5) Damaged coil spring	Replace.
(6) Wear or damage of the ball joint	Replace.
(7) Deformation of the clamp - stabilizer bushing	Replace.

WHEEL AND TIRE SYSTEM

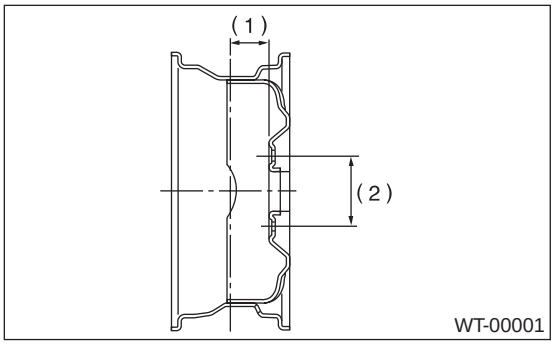
WT

Page

1. General Description 2
2. Tire and Wheel 5
3. “T-type” Tire 8
4. Tire Pressure Monitoring System 9
5. General Diagnostic Table 13

1. General Description

A: SPECIFICATION



(1) Inset
(2) P.C.D.

- STI model

Tire size	Wheel size	Inset mm (in)	P.C.D. mm (in)	Tire inflation pressure kPa (kgf/cm^2, psi)	
				Front wheel	Rear wheel
245/40R18 97W	18 × 8$^1/_2$J	55 (2.17)	114.3 (4.50)	230 (2.3, 33)	220 (2.2, 32)
T145/70D17 106M	17 × 4T	30 (1.18)		420 (4.2, 60)	
205/50R17 89V	17 × 7J	55 (2.17)		—	230 (2.3, 33)

- Except for STI model

Tire size	Wheel size	Inset mm (in)	P.C.D. mm (in)	Tire inflation pressure kPa (kgf/cm^2, psi)	
				Front wheel	Rear wheel
235/45R17 94W	17 × 8J	55 (2.17)	114.3 (4.50)	230 (2.3, 33)	220 (2.2, 32)
T145/70D17 106M	17 × 4T	30 (1.18)		420 (4.2, 60)	
205/50R17 89V	17 × 7J	55 (2.17)		—	230 (2.3, 33)

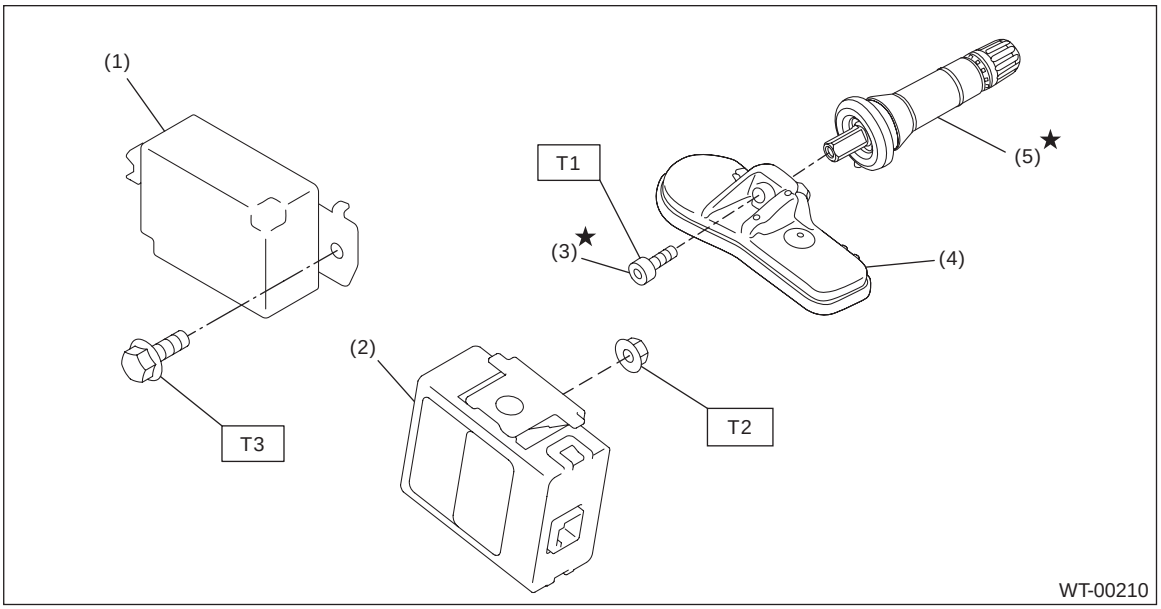
NOTE:
Size and inflation pressure of the standard equipment tire and spare tire for emergency are described on the “Tire inflation pressure” label attached to the body side of the driver’s door.

1. SERVICE DATA

Part	Axial runout	Radial runout
Steel wheel	1.5 mm (0.059 in)	
Aluminum wheel	1.0 mm (0.039 in)	

Wheel balancing	Standard	Service limit
Dynamic unbalance	5 g (0.18 oz) or less	

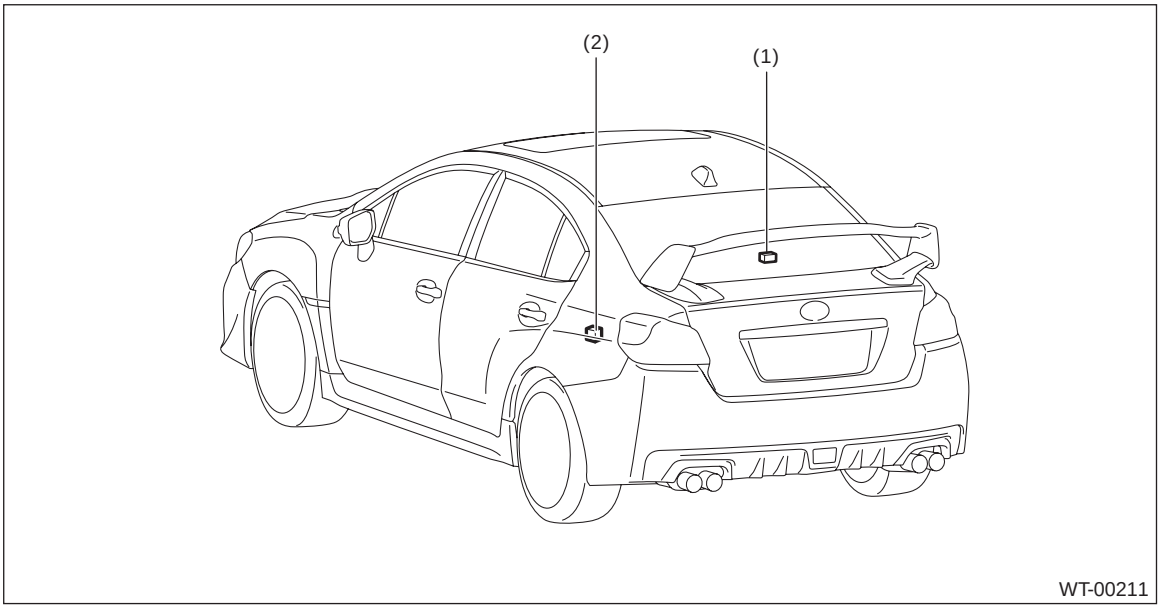
B: COMPONENT



(1) TPMS & keyless entry control module (model with keyless entry)
(2) TPMS CM (model with keyless access)
(3) Screw
(4) Transmitter (snap in type)
(5) Valve

Tightening torque: N·m (kgf-m, ft-lb)

T1: 1.4 (0.1, 1.0)
T2: 7.5 (0.8, 5.5)
T3: 13 (1.3, 9.6)



(1) TPMS & keyless entry control module (model with keyless entry)
(2) TPMS module ASSY (model with keyless access)

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Air pressure gauge	Used for measuring tire air pressure.
Dial gauge	Used for measuring wheel runout.
Wheel balancer	Used for adjusting wheel balance.

2. Tire and Wheel

A: REMOVAL

1) Lift up the vehicle.
2) Remove the wheel nut.
3) Remove the wheels.

CAUTION:
When removing the wheels, be careful not to damage the bolt - hub.

B: INSTALLATION

1) Install the wheels to vehicle.
2) Tighten the wheel nuts to the specified torque.

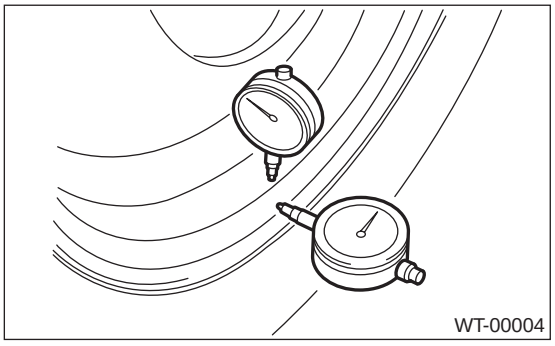
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: INSPECTION

1. TIRE

CAUTION:
When replacing a tire, make sure to use tires of the same size, construction and load range as originally installed.

1) Tire size and tire inflation pressure check <Ref. to WT-2, SPECIFICATION, General Description.>
2) Cracks, damage and wear check
3) Tire runout check
   (1) Lift up the vehicle.
   (2) Slowly rotate the wheel to check rim “runout” using a dial gauge.



- Aluminum wheel

Axial runout limit	Radial runout limit
1.0 mm (0.039 in)	

- Steel wheel

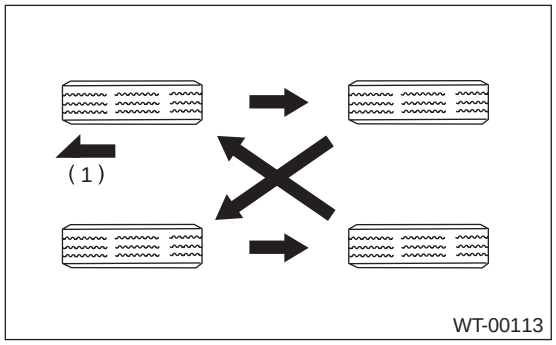
Axial runout limit	Radial runout limit
1.5 mm (0.059 in)	

   (3) If the rim runout exceeds service limit, replace the wheel.

2. TIRE ROTATION

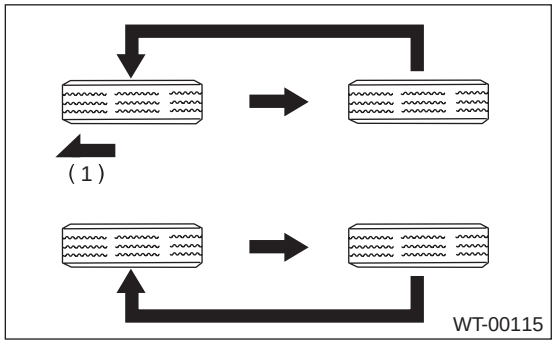
NOTE:
Rotate tires periodically (9,600 km/6,000 miles) in order to prolong life and to prevent uneven wear.
Rotate tires as shown in the figure depending on whether or not the direction of the tire rotation is specified.

- When the direction of tire rotation is not specified



(1) Front side of vehicle

- When the direction of tire rotation is specified

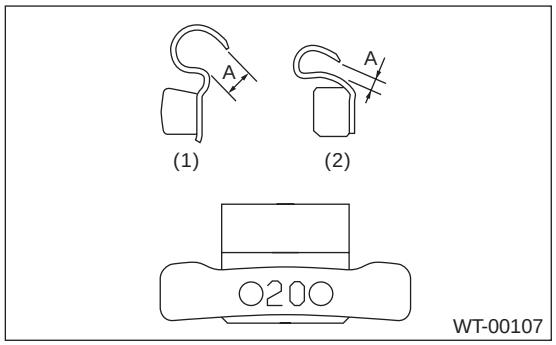


(1) Front side of vehicle

3. WHEEL BALANCING

1) Using the wheel balancer, measure wheel balance.
2) Adjust the wheel balancing.

NOTE:
- Unbalance after adjusting the wheel balancing should be 5 g (0.18 oz) or less.
- When using the adhesive type weight, degrease the surface where the adhesive type weight will be applied securely.
- After applying the adhesive type weight, apply a force to the weight and attain full adhesion.
- Using the knock-on type weight, check the size of the knock-on part.



(1) Knock-on type weight for aluminum wheel
(2) Knock-on type weight for steel wheel

Service limit A:
Knock-on type weight for steel wheel: 2.0 mm (0.079 in)
Knock-on type weight for aluminum wheel: 5.0 mm (0.197 in)

3. “T-type” Tire

A: NOTE

“T-type and temporary spare” tires for temporary use are prepared as a spare tire.

CAUTION:
• “T-type and temporary spare” tires are only for temporary use. Replace with a conventional tire as soon as possible.
• Do not use tire chains for “T-type and temporary spare” tires. Because tire size is small, tire chains can not be installed and will damage the vehicle and tires.
• Do not drive at a speed greater than 80 km/h (50 MPH).
• Drive the vehicle as slowly as possible and avoid bumps on the road.

B: REPLACEMENT

Refer to “Tire and Wheel” for removal and installation of the “T-type and temporary spare” tires. <Ref. to WT-5, Tire and Wheel.>

C: INSPECTION

Refer to “Tire and Wheel” for inspection of the “T-type and temporary spare” tires. <Ref. to WT-5, TIRE, INSPECTION, Tire and Wheel.>

4. Tire Pressure Monitoring System

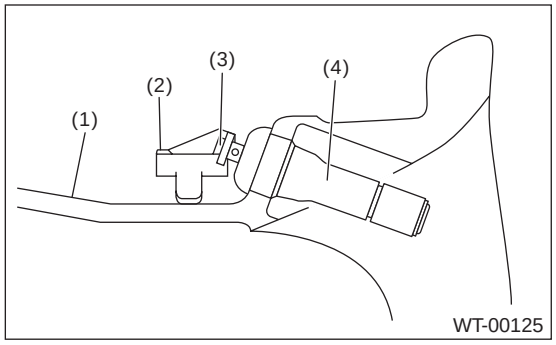
A: REMOVAL

1. TRANSMITTER (TIRE INFLATION PRESSURE SENSOR)

1) Remove the wheels from the vehicle. <Ref. to WT-5, REMOVAL, Tire and Wheel.>
2) Remove the tires from wheels.

CAUTION:
Use a tire changer when removing the tire from the wheel.
3) Loosen the screw to remove the transmitter from the valve stem.

CAUTION:
Do not reuse the valve and screw.
Replace the valve and screw with a new part even when reusing transmitter.



(1) Wheel
(2) Transmitter
(3) Screw
(4) Valve

4) Remove the valve from the wheel.

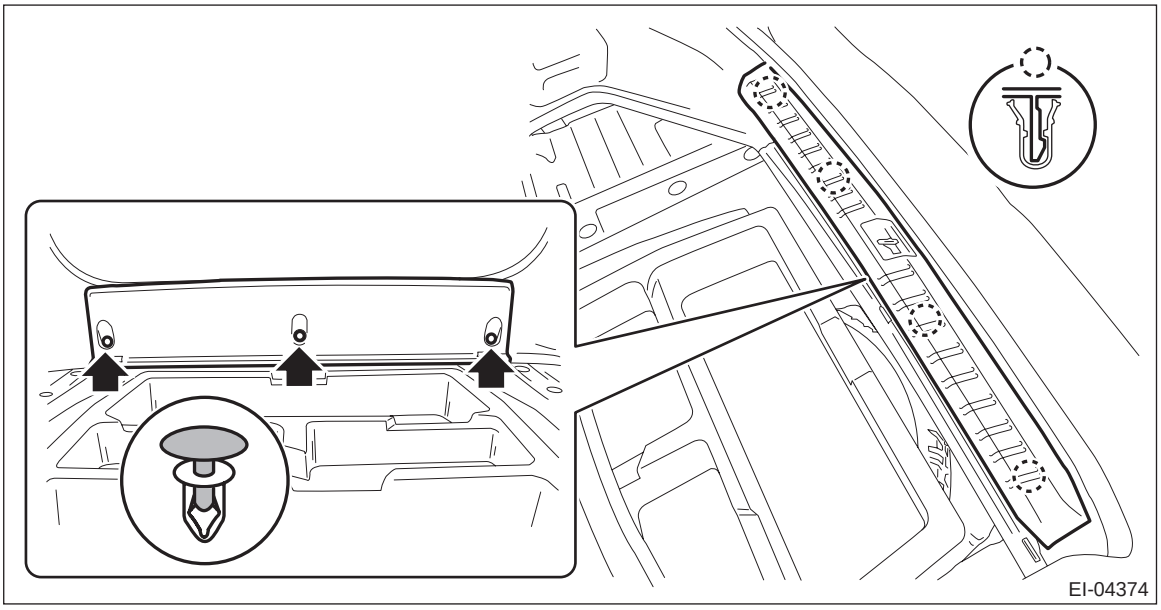
2. TPMS & KEYLESS CONTROL MODULE

NOTE:
TPMS control module for keyless entry model is integrated with the keyless entry control module. For removal procedures, refer to “SECURITY AND LOCKS” section. <Ref. to SL-76, REMOVAL, Keyless Entry Control Module.>

3. TPMS CM

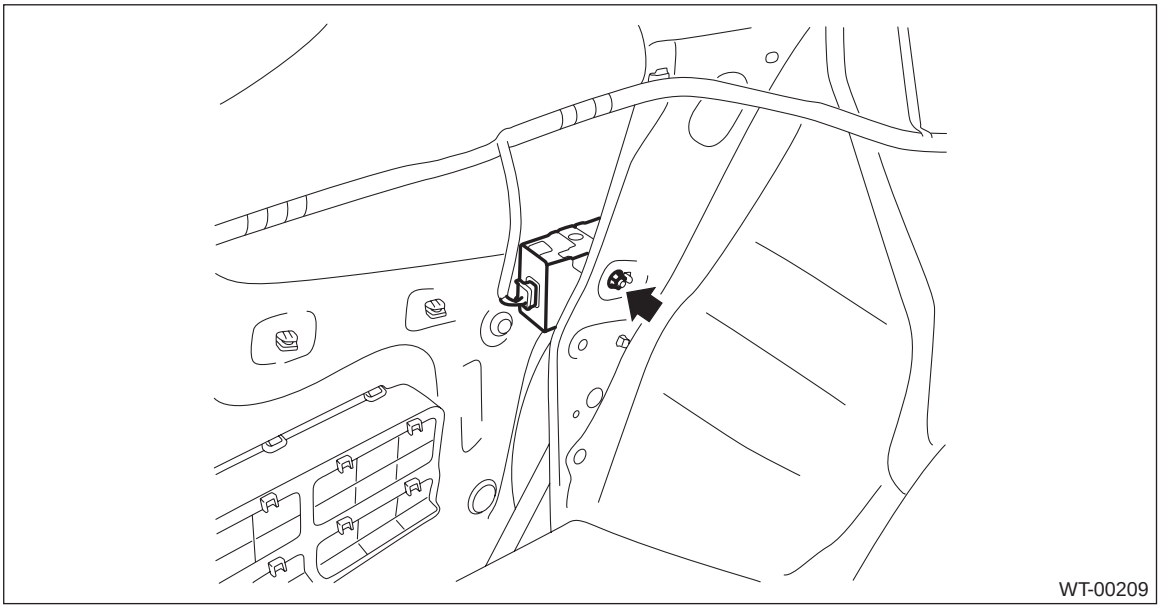
NOTE:
TPMS control module for keyless access model is separated from the keyless access control module.
1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Remove the trunk room mat.
3) Remove the trim panel - trunk rear.
   (1) Remove the clip.
   (2) Release the claws, and remove the trim panel - trunk rear.



EI-04374

4) Remove the trim panel - trunk side LH. <Ref. to EI-95, REMOVAL, Trunk Room Trim.>
5) Remove the TPMS CM.
   (1) Disconnect the connector.
   (2) Remove the nuts to remove the TPMS CM.

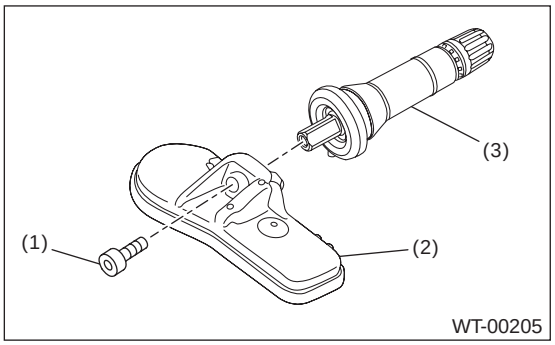


WT-00209

B: INSTALLATION

1. TRANSMITTER (TIRE INFLATION PRESSURE SENSOR)

CAUTION:
Use the new transmitter assembly or replace the new valve and screw, when installing.
1) Replace the valve and screw with a new part when reusing transmitter.

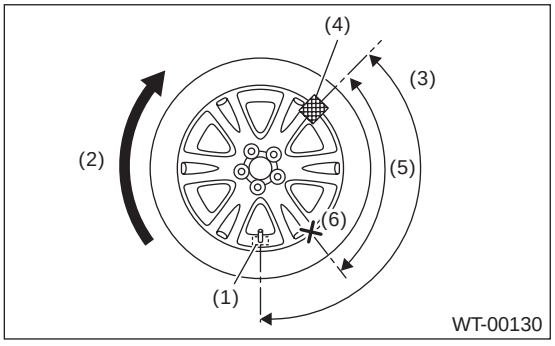


(1) Screw
(2) Transmitter
(3) Valve

Tightening torque:
1.4 N·m (0.1 kgf-m, 1.0 ft-lb)
2) Install the transmitter to the wheel by aligning it with valve hole.

NOTE:
When using the jig that pulls the valve cap by hooking its neck part, use another short-type cap.
3) Install the tires to wheels.

CAUTION:
• Use a tire changer when installing tire to wheel.
• To prevent damaging the transmitter, set the tire changer boom in the position as shown in the figure.



(1) Transmitter
(2) Direction of turn table rotation
(3) 135°
(4) Tire changer boom
(5) 90°
(6) Starting point for fitting the bead to the rim

4) Install the wheels to vehicle. <Ref. to WT-5, INSTALLATION, Tire and Wheel.>
5) Register the transmitter ID to the TPMS & keyless control module. <Ref. to TPM(diag)-14, Register Transmitter (ID).>

2. TPMS & KEYLESS CONTROL MODULE

NOTE:
TPMS control module for keyless entry model is integrated with the keyless entry control module. For installation procedures, refer to “SECURITY AND LOCKS” section. <Ref. to SL-76, INSTALLATION, Keyless Entry Control Module.>

3. TPMS CM

NOTE:
TPMS control module for keyless access model is separated from the keyless access control module.
1) Install the TPMS CM.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the trim panel - trunk side LH.
3) Install the trim panel - trunk rear.
4) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

C: ADJUSTMENT

Re-register the transmitter ID when transmitter has been replaced. <Ref. to TPM(diag)-14, Register Transmitter (ID).>

5. General Diagnostic Table

A: INSPECTION

Symptoms	Possible cause	Corrective action
Wheel is out of balance.	Improperly inflated tire.	Adjust the tire pressure.
	Uneven wear	Check the tire referring to “Abnormal tire wear” in this table, carry out the procedure and replace the tire.
	Front wheel alignment	Check or adjust the front wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>
	Rear wheel alignment	Check or adjust the rear wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>
	Front strut	Check the front strut. <Ref. to FS-49, INSPECTION, Front Strut.>
	Rear shock absorber	Check the rear shock absorber. <Ref. to RS-30, INSPECTION, Rear Shock Absorber.>
	Housing ASSY - front axle	Check the housing assembly - front axle. <Ref. to DS-31, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - front axle	Check the hub unit COMPL - front axle. <Ref. to DS-31, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - rear axle	Check the hub unit COMPL - rear axle. <Ref. to DS-47, INSPECTION, Rear Hub Unit Bearing.>
Vehicle is abnormally out of balance.	Improperly inflated tire.	Adjust the tire pressure.
	Uneven wear	Check the tire referring to “Abnormal tire wear” in this table, carry out the procedure and replace the tire.
	Front stabilizer	Inspect the front stabilizer.
	Front wheel alignment	Check or adjust the front wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>
	Rear wheel alignment	Check or adjust the rear wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>
Abnormal wheel vibration	Improperly inflated tire.	Adjust the tire pressure.
	Uneven wear	Check the tire referring to “Abnormal tire wear” in this table, carry out the procedure and replace the tire.
	Improper wheel balancing	Check the wheel balance. <Ref. to WT-7, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Housing ASSY - front axle	Check the housing assembly - front axle. <Ref. to DS-31, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - front axle	Check the hub unit COMPL - front axle. <Ref. to DS-31, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - rear axle	Check the hub unit COMPL - rear axle. <Ref. to DS-47, INSPECTION, Rear Hub Unit Bearing.>
Abnormal tire wear	Improperly inflated tire.	Adjust the tire pressure.
	Improper wheel balancing	Check the wheel balance. <Ref. to WT-7, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Front wheel alignment	Check or adjust the front wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>
	Rear wheel alignment	Check or adjust the rear wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>

10.	Display Transmitter (ID)	15
11.	Inspection Mode	16
12.	Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern	17
13.	List of Diagnostic Trouble Code (DTC)	21
14.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	23
15.	General Diagnostic Table	34

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
Before removal or installation, be sure to remove any foreign matter (dust, moisture, oil, etc.) from the TPMS & keyless entry CM connector or TPMS CM connector.

NOTE:
To check harness for open or short circuits, shake the suspected trouble spot or connector.

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Check with the user regarding when the warning light lit or started blinking. 2) Before performing diagnostics, check all components which may adversely affect the tire pressure monitor system. <Ref. to TPM(diag)-4, INSPECTION, General Description.>	Is the component that might affect the tire pressure monitor system normal?	Go to step **2**.	Repair or replace each component.
2	**CHECK DIAGNOSTIC TROUBLE CODE (DTC).** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. NOTE: If the communication function of the Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to TPM(diag)-8, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.> 4) Read the DTC. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Go to step **4**.	Go to step **3**.
3	**PERFORM GENERAL DIAGNOSTICS.** 1) Perform the inspection by referring to “General Diagnostic Table”. <Ref. to TPM(diag)-34, General Diagnostic Table.> 2) Perform the Clear Memory Mode. <Ref. to TPM(diag)-12, OPERATION, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to TPM(diag)-16, Inspection Mode.> 4) Read the DTC. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).> Check the DTC is not displayed.	Does the tire pressure warning light illuminates for about 2 seconds and then foes off after turning on the ignition switch, and then go out?	Finish the diagnosis.	Check the tire inflation pressure warning light. <Ref. to TPM(diag)-17, Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern.>

	Step	Check	Yes	No
4	**CHECK FOR REPRODUCTION OF MALFUNCTION.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is the DTC displayed as "Current malfunction"?	Go to step **5**.	When DTC is detected as "Past faults", the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, a temporary communication error due to radio wave environment inside and outside the vehicle may be possible.
5	**PERFORM DIAGNOSIS.** 1) Refer to "List of Diagnostic Trouble Code (DTC)". 2) Correct the cause of trouble. 3) Perform the Clear Memory Mode. <Ref. to TPM(diag)-12, OPERATION, Clear Memory Mode.> 4) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 5) Read the DTC. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Repeat steps 1 to 4 until DTC is not shown.	Finish the diagnosis.

2. General Description

A: CAUTION

1. SUPPLEMENTAL RESTRAINT SYSTEM “AIRBAG”

Airbag system wiring harness is routed near the TPM control module.

CAUTION:
- **Do not use electrical test equipment on any of the airbag system wiring harness circuits.**
- **Be careful not to damage the wiring harness of the airbag system when servicing the TPMS & keyless entry CM or TPMS CM.**

2. TPMS & KEYLESS ENTRY CM OR TPMS CM

- If the transmitter is replaced, ID registration for the transmitter is required. <Ref. to TPM(diag)-14, OPERATION, Register Transmitter (ID).>
- When adjusting tire pressure indoors in winter, there is a big temperature difference between the indoor facilities and outside. Once the car is outside where the temperature is lower, the air pressure in the tires will drop, causing the tire pressure warning light to illuminate, even if the pressure in the tires was adjusted to standard values indoors. To avoid this, it is necessary to adjust the tire pressure to the high side in consideration of the difference in temperature between inside and outside according to the following table.
- 235/45R17, 245/40R18

Temperature °C (°F)	Indoor temperature	15.5 (60)		
	Ambient temperature	–1 (30)	–12 (10)	–23 (–10)
Air pressure kPa (psi)	Front	250 (36)	265 (38)	280 (40)
	Rear	240 (35)	255 (37)	270 (39)

B: INSPECTION

Before performing diagnosis, check the following item which might affect the quality of the tire pressure monitoring system.

1. TIRE

- Inspect that the tire pressure is within the specification while the tire is cool. (Refer to Tire Caution Label.)
- Check the tires for damage or the insertion of foreign matters.

2. BATTERY

Check that the amount of battery fluid, its specific gravity and voltage are within the specifications.

Standard voltage: 12 V or more

Specific gravity: 1.260 or more

C: PREPARATION TOOL

1. SPECIAL TOOL

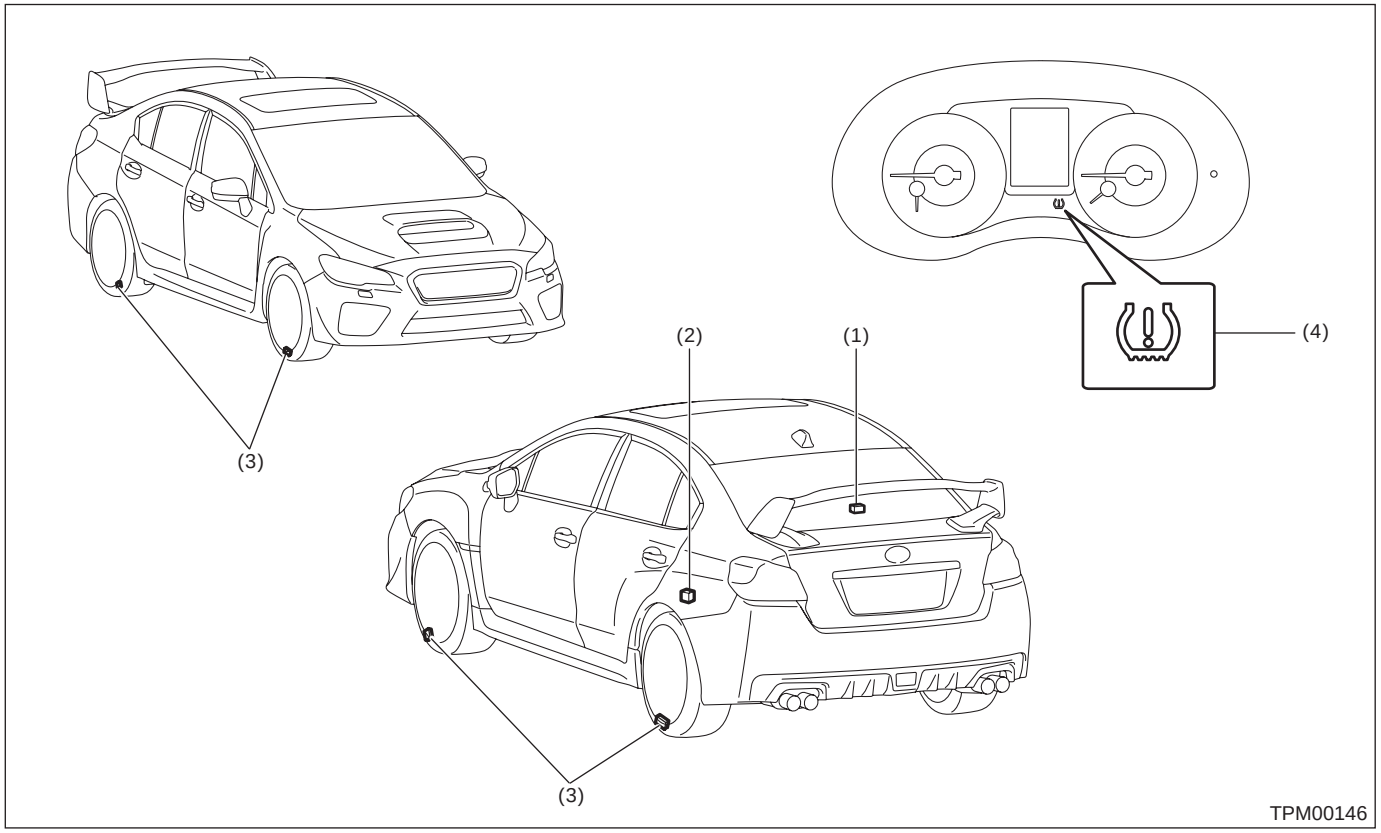
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Transmitter registration tool	Used to register the transmitter ID. Manufacturer: Kent-Moore Item number: J45295

3. Electrical Component Location

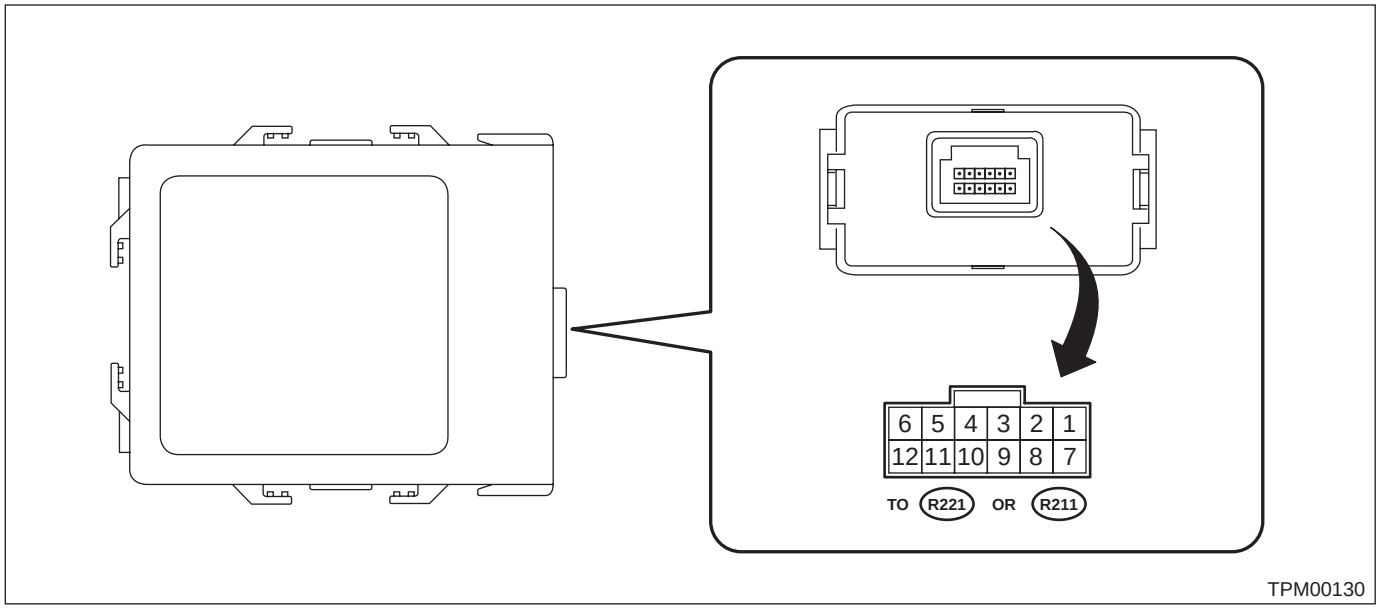
A: LOCATION



(1) TPMS & keyless entry CM (without push button start)
(2) TPMS CM (with push button start)
(3) Snap-in type transmitter
(4) Tire pressure warning light

4. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION



Terminal No.	Content	Measured value and measuring conditions	Remarks
1	—	—	—
2	—	—	—
3	—	—	—
4	Ignition power supply	10 — 13 V (when the ignition switch is ON)	—
5	GND	0 V (always)	—
6	Battery power supply	10 — 13 V (always)	—
7	—	—	—
8	—	—	—
9	—	—	—
10	—	—	—
11	Body integrated unit	—	—
12	—	—	—

B: WIRING DIAGRAM

Refer to “Tire Pressure Monitoring System” in the wiring diagram. <Ref. to WI-407, WIRING DIAGRAM, Tire Pressure Monitoring System.>

5. Subaru Select Monitor

A: OPERATION

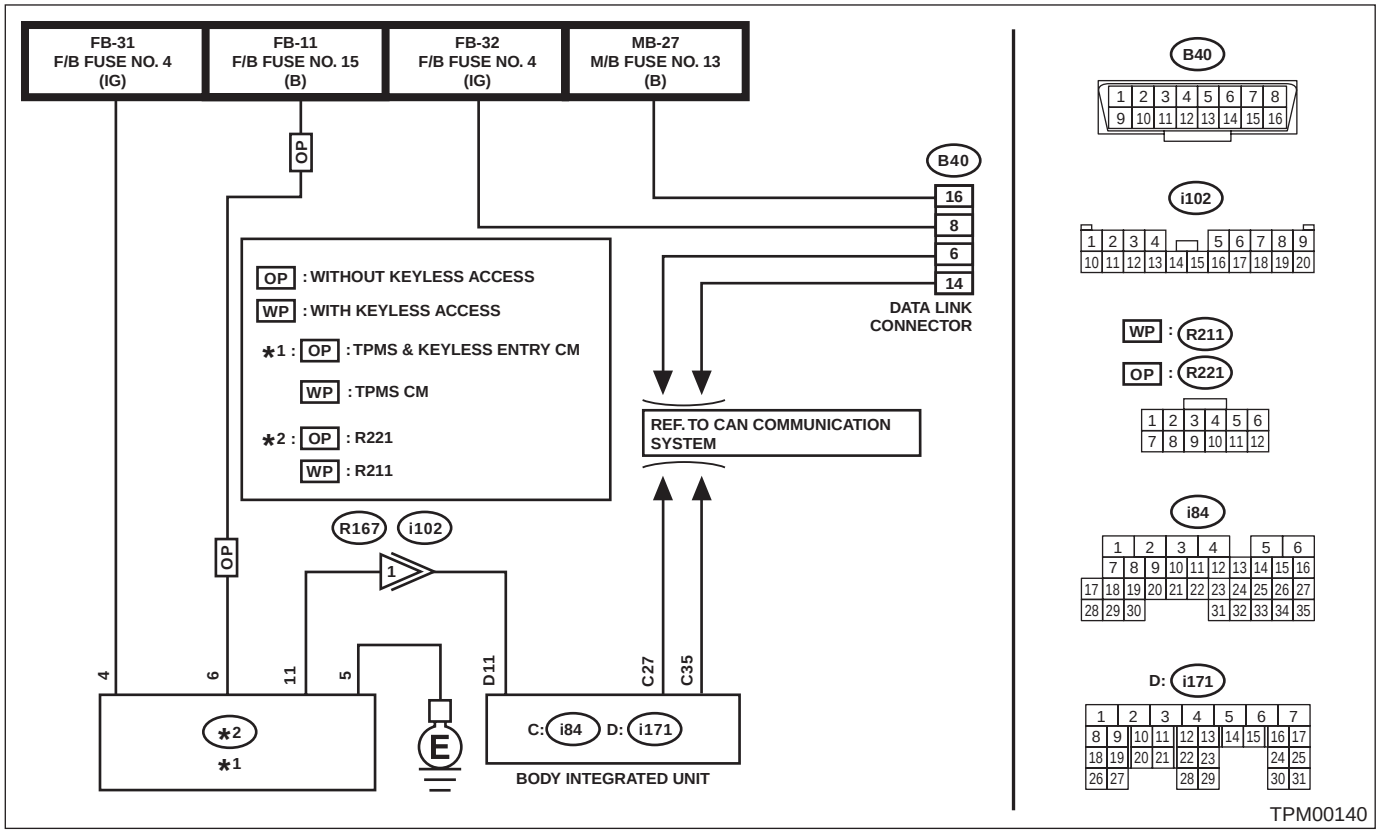
For the operation procedure, refer to the “PC application help for Subaru Select Monitor”.

NOTE:
If TPMS & keyless entry CM or TPMS CM and Subaru Select Monitor cannot communicate, check the communication circuit. <Ref. to TPM(diag)-8, INSPECTION, Subaru Select Monitor.>

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DETECTING CONDITION:
Defective harness connector
TROUBLE SYMPTOM:
Communication is impossible between the TPMS & keyless entry CM or TPMS CM and the Subaru Select Monitor.
WIRING DIAGRAM:
Tire Pressure Monitoring System <Ref. to WI-407, WIRING DIAGRAM, Tire Pressure Monitoring System.>



TPM00140

Step		Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select TPM mode using Subaru Select Monitor.
2	**CHECK BATTERY.** Check the battery voltage.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.** Check the battery terminal.	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Go to step **8**.	Go to step **5**.
5	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to OFF. 2) Disconnect the TPMS & keyless entry CM connector or TPMS CM connector. 3) Turn the ignition switch to ON. 4) Check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-9, Tire Pressure Monitoring System.>	Go to step **6**.
6	**CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND BODY INTEGRATED UNIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of the TPMS & keyless entry CM or TPMS CM. 3) Measure the resistance between the body integrated unit and chassis ground. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the harness and connector between each control module and body integrated unit.
7	**CHECK OUTPUT SIGNAL TO TPMS & KEYLESS ENTRY CM OR TPMS CM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TPMS & keyless entry CM or TPMS CM and chassis ground. ***Connector & terminal*** ***(B40) No. 6 (+) — Chassis ground (–):*** ***(B40) No. 14 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **8**.	Repair the harness and connector between each control module and body integrated unit.
8	**CHECK HARNESS CONNECTOR BETWEEN TPMS & KEYLESS ENTRY CM OR TPMS CM AND BODY INTEGRATED UNIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between TPMS & keyless entry CM connector or TPMS CM connector and body integrated unit. ***Connector & terminal*** ***Without keyless access*** ***(R221) No. 11 — (i171) No. 11:*** ***With keyless access*** ***(R211) No. 11 — (i171) No. 11:***	Is the resistance less than 0.5 Ω?	Go to step **9**.	Repair the harness and connector between TPMS & keyless entry CM or TPMS CM and body integrated unit.
9	**CHECK TPMS & KEYLESS ENTRY CM CONNECTOR OR TPMS CM CONNECTOR.**	Is the connector inserted into the TPMS & keyless entry CM or TPMS CM until it locks?	Go to step **10**.	Insert the connector into the TPMS & keyless entry CM or TPMS CM.
10	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Measure the ignition power supply voltage between TPMS & keyless entry CM connector or TPMS CM connector and chassis ground. ***Connector & terminal*** ***Without keyless access*** ***(R221) No. 4 (+) — Chassis ground (–):*** ***With keyless access*** ***(R211) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **11**.	Repair open circuit of the harness between TPMS & keyless entry CM or TPMS CM and battery.

	Step	Check	Yes	No
11	**CHECK HARNESS CONNECTOR BETWEEN TPMS & KEYLESS ENTRY CM OR TPMS CM AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the TPMS & keyless entry CM or TPMS CM. 3) Measure the resistance of harness between TPMS & keyless entry CM or TPMS CM and chassis ground. ***Connector & terminal*** ***Without keyless access*** ***(R221) No. 5 — Chassis ground:*** ***With keyless access*** ***(R211) No. 5 — Chassis ground:***	Is the resistance less than 0.5 Ω?	Go to step **12**.	Repair open circuit of the harness of TPMS & keyless entry CM or TPMS CM.
12	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact in TPMS & keyless entry CM power supply or TPMS CM power supply, ground line and body integrated unit?	Repair the connector.	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-9, Tire Pressure Monitoring System.>

6. Read Diagnostic Trouble Code (DTC)

A: OPERATION

For operation procedures, refer to the “PC application help for Subaru Select Monitor”.

NOTE:
- For details concerning DTCs, refer to List of Diagnostic Trouble Code (DTC). <Ref. to TPM(diag)-21, List of Diagnostic Trouble Code (DTC).>
- All DTCs detected will be displayed.
- If a particular DTC is not properly stored in memory (due to a voltage drop of the TPMS & keyless entry CM or TPMS CM power supply, etc.) when a problem occurs, a DTC suffixed with a question mark appears on the Subaru Select Monitor display. This shows it may be an unreliable reading.
- When DTC is not displayed, check the indicator circuit and communication circuit. <Ref. to TPM(diag)-17, Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern.>

7. Clear Memory Mode

A: OPERATION

For operation procedures, refer to the “PC application help for Subaru Select Monitor”.

8. Read Current Data

A: OPERATION

For the operation procedure, refer to the “PC application help for Subaru Select Monitor”.

B: LIST

Display	Contents to be displayed	Unit of measure
Tire 1 FN code	LEARN, LOW BAT, OFF, WAKE, RE ME, NORMAL	LEARN: Transmitted transmitter ID using the transmitter registration tool LOW BAT: Transmitter battery voltage running low OFF: Transmitter function stops (no data transmission) RE ME: Tire air changes ±8.4 kPa WAKE: When data transmission is started from a stopped state. NORMAL: Conditions other than above
Tire 2 FN code		
Tire 3 FN code		
Tire 4 FN code		
Tire 1 air pressure	Value converted to tire pressure from data delivered from transmitter is displayed. (The figure may differ from the actual measured values.)	kPa, psig, mmHg, inHg
Tire 2 air pressure		kPa, psig, mmHg, inHg
Tire 3 air pressure		kPa, psig, mmHg, inHg
Tire 4 air pressure		kPa, psig, mmHg, inHg
Vehicle Speed	Vehicle speed signal which is input in control module	km/h, MPH
Pressure warning	Threshold where tire pressure warning light illuminates	kPa, psig, mmHg, inHg
Return pressure	Threshold where tire pressure warning light goes out	kPa, psig, mmHg, inHg

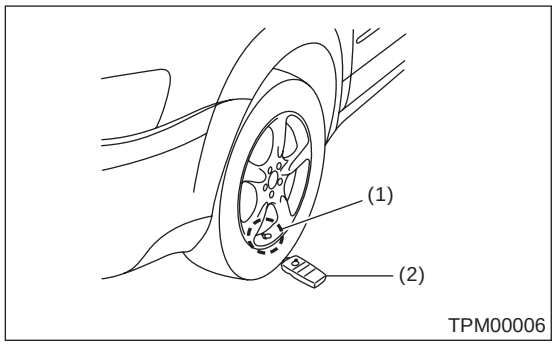
9. Register Transmitter (ID)

A: OPERATION

Perform the registration procedure of the transmitter in the following cases:
- Transmitter was replaced.
- TPMS & keyless entry CM or TPMS CM is replaced.

NOTE:
- If registration of the transmitter ID is not possible after two attempts, replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-9, Tire Pressure Monitoring System.>
- During the registration, turn the ignition switch to OFF and end the Subaru Select Monitor. Or if the registration is not performed for 5 minutes or more, the registration mode is cancelled.
- When rotating tires, there is no affect on the performance or functions of the tire pressure monitoring control module even if the transmitter (ID) is not registered, however, the tire position displayed on the Subaru Select Monitor will be incorrect.

1) Adjust all tire pressures to the specifications.
2) Connect Subaru Select Monitor and select the {Each System Check} on the «Main Menu».
3) On «System Selection Menu» display, select {Tire pressure monitor}.
4) After the {Tire pressure monitor} is displayed, select [OK].
5) On «Tire pressure monitor diagnosis» display, select {Transmitter ID regist confirm}.
6) {ID registration mode When execute Registered ID is deleted Continue?} is displayed, select [OK].
7) Contact the transmitter registration tool to the side wall area near the air valve on the front left tire, and press the switch. The transmitter ID is sent to the TPMS & keyless entry CM or TPMS CM. (At this time, the tire pressure warning light blinks to confirm that the registration has started.)



(1) Air valve (transmitter)
(2) Transmitter registration tool

NOTE:
- The registration order of transmitter ID is not specified.
- The transmitter registration tool is used by touching the side wall area near the transmitter.
- When registration of each tire is completed, {ID registration completed} is displayed on the Select Monitor screen.
- If registration procedure stop in the halfway (turning ignition switch to OFF, wrong registration order, etc), proceed from step 5).

8) When ID registration is completed, the tire pressure warning light remains lit for approximately 2 seconds, to end the registration. Switch to the screen displaying the transmitter ID on the Subaru Select Monitor display. <Ref. to TPM(diag)-15, Display Transmitter (ID).>
9) Check the transmitter ID that was registered, then perform a driving test. <Ref. to TPM(diag)-16, Inspection Mode.>

10.Display Transmitter (ID)

A: OPERATION

For operation procedures, refer to the “PC application help for Subaru Select Monitor”.

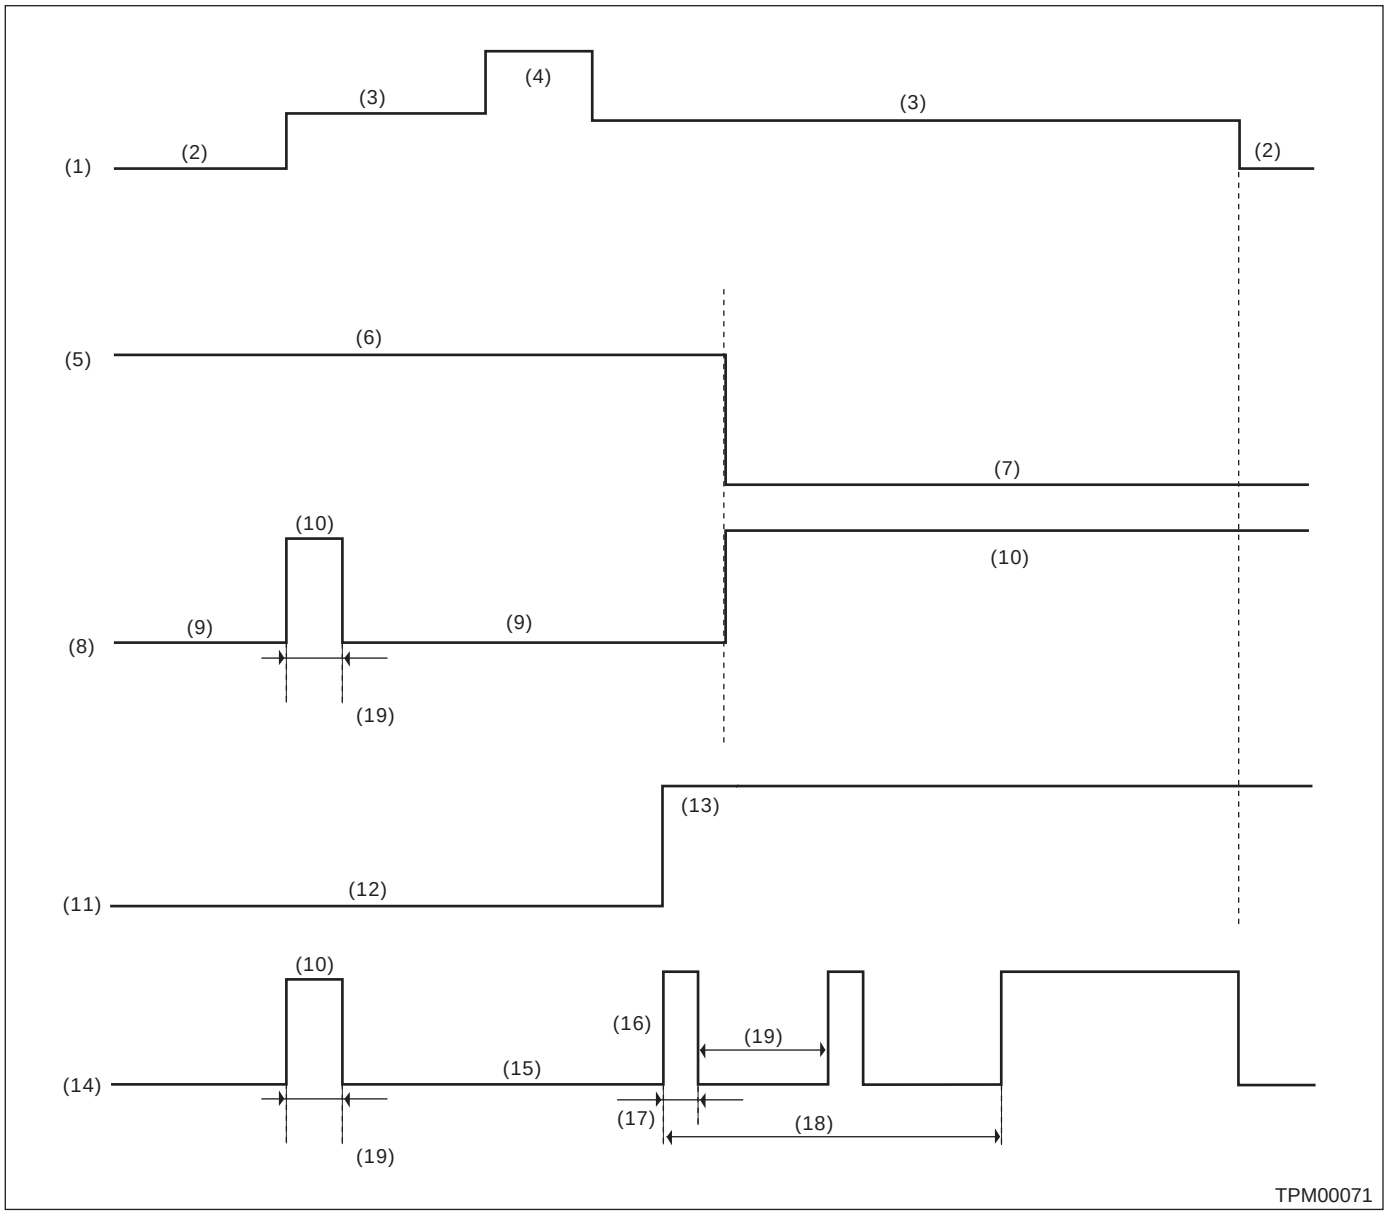
11.Inspection Mode

A: PROCEDURE

Reproduce the malfunction occurrence condition as much as possible. Drive the vehicle at 40 km/h (25 MPH) or faster for at least ten minutes.

12. Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern

A: INSPECTION



(1)	Ignition switch	(8)	Tire inflation pressure warning light (pressure condition)	(15)	Light OFF
(2)	OFF	(9)	Light OFF	(16)	Blink
(3)	ON	(10)	Light ON	(17)	1 second
(4)	Start	(11)	System status	(18)	Blinks 25 times
(5)	Tire inflation pressure condition	(12)	Normal	(19)	2 seconds
(6)	Meet the specification	(13)	Malfunction		
(7)	Less than standard value (For the pressure warning level, refer to “CURRENT DATA”.) <Ref. to TPM(diag)-13, LIST, Read Current Data.>	(14)	Tire inflation pressure warning light (system condition)		

1) When the tire pressure warning light does not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.
2) If the tire pressure warning light does not go off, check the TPMS & keyless entry CM or TPMS CM/warning light circuit and the combination meter circuit. <Ref. to TPM(diag)-18, TIRE PRESSURE WARNING LIGHT DOES NOT COME OFF, Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern.>

NOTE:
If the problem is fixed while driving at approximately 40 km/h (25 MPH) after the tire pressure warning light blinks/lights, the warning light goes out and the tire pressure monitor system operates normally. (If there is a decrease in tire pressure, or a malfunction of the system, the malfunction history is displayed.)

B: TIRE PRESSURE WARNING LIGHT DOES NOT COME ON

DETECTING CONDITION:
Defective combination meter
TROUBLE SYMPTOM:
When the ignition switch is turned to ON, the tire pressure warning light does not turn on (for approx. 2 seconds).

	Step	Check	Yes	No
1	**CHECK DIAGNOSTIC TROUBLE CODE (DTC).** Connect the Subaru Select Monitor, and read the Diagnostic Trouble Code. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is diagnostics code (DTC) displayed?	Perform the diagnosis according to the DTC. <Ref. to TPM(diag)-21, List of Diagnostic Trouble Code (DTC).>	Replace the combination meter. <Ref. to IDI-13, REMOVAL, Combination Meter.>

C: TIRE PRESSURE WARNING LIGHT DOES NOT COME OFF

DETECTING CONDITION:
- Defective combination meter
- Tires pressure drop
- Transmitter ID not registered

TROUBLE SYMPTOM:
Tire pressure warning light remains illuminating after engine starts.

	Step	Check	Yes	No
1	**CHECK DTC.** Connect the Subaru Select Monitor, and read the Diagnostic Trouble Code. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is a DTC displayed?	Perform the diagnosis according to the DTC. <Ref. to TPM(diag)-21, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK TRANSMITTER (ID).** Display the transmitter ID of the tire pressure monitor system.	Is the transmitter ID registered?	Go to step **3**.	Register the transmitter ID. <Ref. to TPM(diag)-14, OPERATION, Register Transmitter (ID).>
3	**CHECK TRANSMITTER DATA OUTPUT.** 1) Select data display of the tire pressure monitoring. 2) Start the engine and check the tire pressure warning light output.	Is the warning light output ON?	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-9, Tire Pressure Monitoring System.>	Replace the combination meter. <Ref. to IDI-13, REMOVAL, Combination Meter.>

D: TIRE PRESSURE WARNING LIGHT IS 25 TIMES BLINKING AND TURN ON

DETECTING CONDITION:

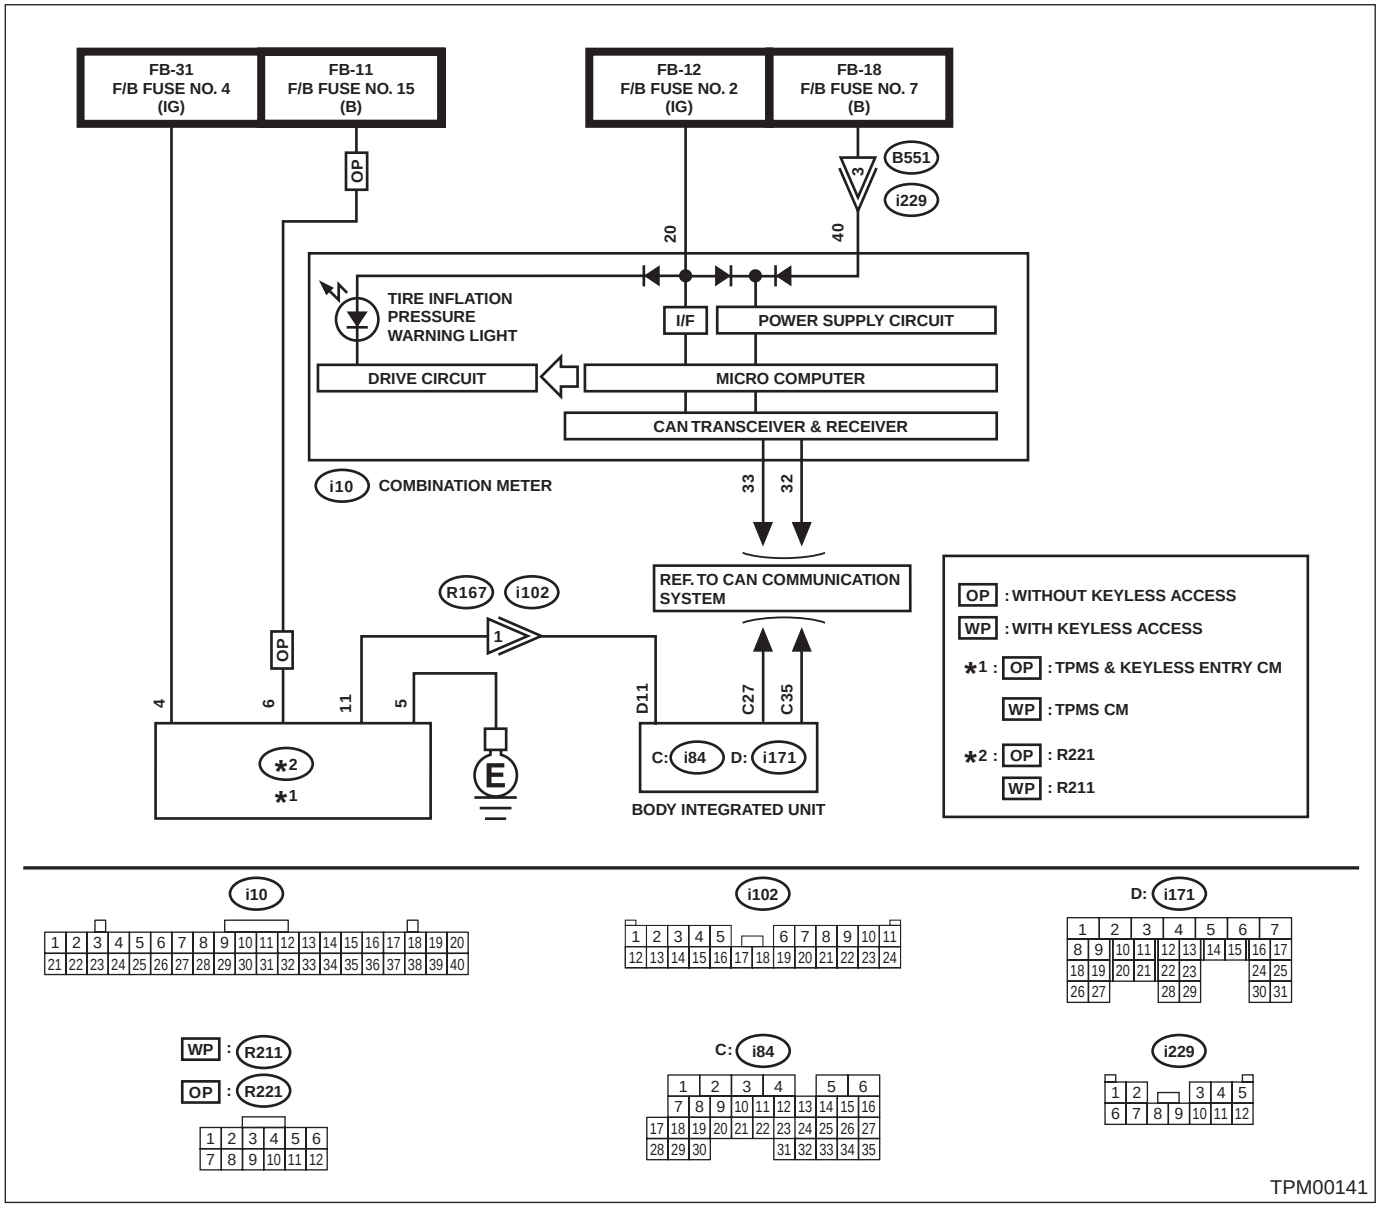
- Defective TPMS & keyless entry CM or TPMS CM
- Defective harness
- Transmitter is faulty.

TROUBLE SYMPTOM:

Every time the engine starts, tire pressure warning light blinks 25 times and then illuminates.

WIRING DIAGRAM:

Tire Pressure Monitoring System <Ref. to WI-407, WIRING DIAGRAM, Tire Pressure Monitoring System.>



Step		Check	Yes	No
1	**CHECK DTC.** Connect the Subaru Select Monitor, and read the Diagnostic Trouble Code. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is diagnostics code (DTC) displayed?	Perform the diagnosis according to the DTC. <Ref. to TPM(diag)-21, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.

Step		Check	Yes	No
2	**CHECK LAN COMMUNICATION.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Repair it according to the diagnosis for LAN system.	Go to step **3**.
3	**CHECK HARNESS.** Measure the resistance between TPMS & keyless entry CM or TPMS CM and body integrated unit. ***Connector & terminal*** ***Without keyless access*** ***(R221) No. 11 — (i171) No. 11:*** ***With keyless access*** ***(R211) No. 11 — (i171) No. 11:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair the harness.
4	**CHECK CONNECTOR.** Check each connector.	Is there poor contact or any other faults?	Repair the connector.	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-9, Tire Pressure Monitoring System.>

13.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Contents of diagnosis	Remarks
C2021	Tire 1 Air Pressure Decrease	Tire pressure of tire 1 is reduced.	<Ref. to TPM(diag)-23, DTC C2021 TIRE 1 AIR PRESSURE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2022	Tire 2 Air Pressure Decrease	Tire pressure of tire 2 is reduced.	<Ref. to TPM(diag)-23, DTC C2022 TIRE 2 AIR PRESSURE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2023	Tire 3 Air Pressure Decrease	Tire pressure of tire 3 is reduced.	<Ref. to TPM(diag)-23, DTC C2023 TIRE 3 AIR PRESSURE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2024	Tire 4 Air Pressure Decrease	Tire pressure of tire 4 is reduced.	<Ref. to TPM(diag)-24, DTC C2024 TIRE 4 AIR PRESSURE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2121	Transmitter 1 No Data	Data cannot be received from transmitter 1.	<Ref. to TPM(diag)-24, DTC C2121 TRANSMITTER 1 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2122	Transmitter 2 No Data	Data cannot be received from transmitter 2.	<Ref. to TPM(diag)-24, DTC C2122 TRANSMITTER 2 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2123	Transmitter 3 No Data	Data cannot be received from transmitter 3.	<Ref. to TPM(diag)-24, DTC C2123 TRANSMITTER 3 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2124	Transmitter 4 No Data	Data cannot be received from transmitter 4.	<Ref. to TPM(diag)-25, DTC C2124 TRANSMITTER 4 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2221	Transmitter 1 Pressure Data Abnormal	Transmitter 1 data contents are abnormal.	<Ref. to TPM(diag)-26, DTC C2221 TRANSMITTER 1 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2222	Transmitter 2 Pressure Data Abnormal	Transmitter 2 data contents are abnormal.	<Ref. to TPM(diag)-26, DTC C2222 TRANSMITTER 2 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2223	Transmitter 3 Pressure Data Abnormal	Transmitter 3 data contents are abnormal.	<Ref. to TPM(diag)-26, DTC C2223 TRANSMITTER 3 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2224	Transmitter 4 Pressure Data Abnormal	Transmitter 4 data contents are abnormal.	<Ref. to TPM(diag)-27, DTC C2224 TRANSMITTER 4 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2321	Transmitter 1 Function Code Abnormal	Function code has error.	<Ref. to TPM(diag)-28, DTC C2321 TRANSMITTER 1 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2322	Transmitter 2 Function Code Abnormal	Function code has error.	<Ref. to TPM(diag)-28, DTC C2322 TRANSMITTER 2 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2323	Transmitter 3 Function Code Abnormal	Function code has error.	<Ref. to TPM(diag)-28, DTC C2323 TRANSMITTER 3 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Contents of diagnosis	Remarks
C2324	Transmitter 4 Function Code Abnormal	Function code has error.	<Ref. to TPM(diag)-29, DTC C2324 TRANSMITTER 4 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2421	Transmitter 1 Battery Voltage Decrease	Transmitter battery voltage is low.	<Ref. to TPM(diag)-30, DTC C2421 TRANSMITTER 1 BATTERY VOLTAGE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2422	Transmitter 2 Battery Voltage Decrease	Transmitter battery voltage is low.	<Ref. to TPM(diag)-30, DTC C2422 TRANSMITTER 2 BATTERY VOLTAGE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2423	Transmitter 3 Battery Voltage Decrease	Transmitter battery voltage is low.	<Ref. to TPM(diag)-30, DTC C2423 TRANSMITTER 3 BATTERY VOLTAGE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2424	Transmitter 4 Battery Voltage Decrease	Transmitter battery voltage is low.	<Ref. to TPM(diag)-31, DTC C2424 TRANSMITTER 4 BATTERY VOLTAGE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2521	Vehicle Speed Is Abnormal	Vehicle speed signal is not input to the control module when the vehicle speed is 6 km/h (3.7 MPH) or more.	<Ref. to TPM(diag)-32, DTC C2521 VEHICLE SPEED IS ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

14.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC C2021 TIRE 1 AIR PRESSURE DECREASE

NOTE:
Refer to DTC C2024 for diagnostic procedure. <Ref. to TPM(diag)-24, DTC C2024 TIRE 4 AIR PRESSURE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

B: DTC C2022 TIRE 2 AIR PRESSURE DECREASE

NOTE:
Refer to DTC C2024 for diagnostic procedure. <Ref. to TPM(diag)-24, DTC C2024 TIRE 4 AIR PRESSURE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC C2023 TIRE 3 AIR PRESSURE DECREASE

NOTE:
Refer to DTC C2024 for diagnostic procedure. <Ref. to TPM(diag)-24, DTC C2024 TIRE 4 AIR PRESSURE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

D: DTC C2024 TIRE 4 AIR PRESSURE DECREASE

DTC DETECTING CONDITION:
Inflation pressure of tires dropped below the specified value.

NOTE:
For the specifications, refer to “CURRENT DATA”. <Ref. to TPM(diag)-13, LIST, Read Current Data.>
TROUBLE SYMPTOM:
Tire pressure warning light illuminates.

	Step	Check	Yes	No
1	**CHECK TIRES.** Lift up the vehicle and check for damage in the tires.	Are there cracks or damage?	Replace the tire.	Go to step **2**.
2	**CHECK TIRES.** Check the tire air pressure.	Is the tire pressure in the specifications?	Go to step **3**.	Adjust the air pressure.
3	**CHECK TRANSMITTER.** Drive the vehicle at 40 km/h (25 MPH) or faster and compare the data from the transmitter on the four wheels.	Is there a transmitter with different data?	Replace the transmitter (tire pressure sensor). <Ref. to WT-9, Tire Pressure Monitoring System.>	Go to step **4**.
4	**PERFORM DRIVING TEST.** 1) Perform the Clear Memory Mode. <Ref. to TPM(diag)-12, OPERATION, Clear Memory Mode.> 2) Perform a driving test. <Ref. to TPM(diag)-16, PROCEDURE, Inspection Mode.> 3) Read the DTC. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Inspect by referring to “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to TPM(diag)-23, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CAUTION:
When driving vehicle to perform driving test, there should be always 2 persons (driver and checker) to check.

E: DTC C2121 TRANSMITTER 1 NO DATA

NOTE:
Refer to DTC C2124 for diagnostic procedure. <Ref. to TPM(diag)-25, DTC C2124 TRANSMITTER 4 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

F: DTC C2122 TRANSMITTER 2 NO DATA

NOTE:
Refer to DTC C2124 for diagnostic procedure. <Ref. to TPM(diag)-25, DTC C2124 TRANSMITTER 4 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

G: DTC C2123 TRANSMITTER 3 NO DATA

NOTE:
Refer to DTC C2124 for diagnostic procedure. <Ref. to TPM(diag)-25, DTC C2124 TRANSMITTER 4 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

H: DTC C2124 TRANSMITTER 4 NO DATA

DTC DETECTING CONDITION:
Data from each transmitter is not received for 8 minutes.
TROUBLE SYMPTOM:
Tire pressure warning light blinks 25 times and then illuminates.

	Step	Check	Yes	No
1	**CHECK FOR REPRODUCTION OF MALFUNCTION.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is the DTC displayed as "Current malfunction"?	Go to step **2**.	When DTC is detected as "Past faults", the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, a temporary communication error due to radio wave environment inside and outside the vehicle may be possible.
2	**START FL TRANSMITTER.** 1) Connect the Subaru Select Monitor and then turn the ignition switch to ON. 2) Select "Transmit ID data monitor". <Ref. to TPM(diag)-15, OPERATION, Display Transmitter (ID).> 3) Use the transmitter registration tool and transmit the ID from the FL transmitter to check "Latest reception ID".	Is "Latest reception ID" updated?	Go to step **3**.	Replace front left transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
3	**CHECK FL TRANSMITTER ID.** Check the ID displayed in the updated ID display and the tire 1 registered ID.	Are the two IDs same?	Go to step **4**.	Record the received ID update as the FL transmitter. Go to step **4**.
4	**START FR TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the FR transmitter to check "Latest reception ID".	Is "Latest reception ID" updated?	Go to step **5**.	Replace the front right transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
5	**CHECK FR TRANSMITTER ID.** Check the ID displayed in the updated ID display and the tire 2 registered ID.	Are the two IDs same?	Go to step **6**.	Record the received ID update as the FR transmitter. Go to step **6**.
6	**START RR TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the RR transmitter to check "Latest reception ID".	Is "Latest reception ID" updated?	Go to step **7**.	Replace the RR transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
7	**CHECK RR TRANSMITTER ID.** Check the ID displayed in the updated ID display and the tire 3 registered ID.	Are the two IDs same?	Go to step **8**.	Record the received ID update as the RR transmitter. Go to step **8**.

	Step	Check	Yes	No
8	**START RL TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the RL transmitter to check "Latest reception ID".	Is "Latest reception ID" updated?	Go to step **9**.	Replace the RL transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
9	**CHECK RL TRANSMITTER ID.** Check the ID displayed in the updated ID display and the tire 4 registered ID.	Are the two IDs same?	Go to step **10**.	Record the received ID update as the RL transmitter. Go to step **10**.
10	**CHECK MALFUNCTION TRANSMITTER.**	Is ID recorded by this procedure?	Go to step **11**.	Go to step **2**.
11	**CHECK MALFUNCTION TRANSMITTER.** Check the registered ID of the transmitter indicated by DTC.	Is there checked ID in the record?	Replace the transmitter of the recorded position. <Ref. to WT-9, Tire Pressure Monitoring System.>	Replace the transmitter showing the latest ID that is not included in the registered IDs. <Ref. to WT-9, Tire Pressure Monitoring System.>

CAUTION:
When driving vehicle to perform driving test, there should be always 2 persons (driver and checker) to check.

I: DTC C2221 TRANSMITTER 1 PRESSURE DATA ABNORMAL

NOTE:
Refer to DTC C2224 for diagnostic procedure. <Ref. to TPM(diag)-27, DTC C2224 TRANSMITTER 4 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

J: DTC C2222 TRANSMITTER 2 PRESSURE DATA ABNORMAL

NOTE:
Refer to DTC C2224 for diagnostic procedure. <Ref. to TPM(diag)-27, DTC C2224 TRANSMITTER 4 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC C2223 TRANSMITTER 3 PRESSURE DATA ABNORMAL

NOTE:
Refer to DTC C2224 for diagnostic procedure. <Ref. to TPM(diag)-27, DTC C2224 TRANSMITTER 4 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

L: DTC C2224 TRANSMITTER 4 PRESSURE DATA ABNORMAL

DTC DETECTING CONDITION:

- When comparing the data from each transmitter to the previous data, the change is large.
- The pressure exceeds what the transmitter can measure. (Excessive pressure)

TROUBLE SYMPTOM:

Tire pressure warning light blinks 25 times and then illuminates.

	Step	Check	Yes	No
1	**CHECK FOR REPRODUCTION OF MALFUNCTION.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is the DTC displayed as "Current malfunction"?	Go to step **2**.	When DTC is detected as "Past faults", the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, a temporary communication error due to radio wave environment inside and outside the vehicle may be possible.
2	**START FL TRANSMITTER.** 1) Connect the Subaru Select Monitor and then turn the ignition switch to ON. 2) Select "Transmit ID data monitor". <Ref. to TPM(diag)-15, OPERATION, Display Transmitter (ID).> 3) Use the transmitter registration tool and transmit the ID from the FL transmitter to check "Latest reception ID".	Is "Latest reception ID" updated?	Go to step **3**.	Replace front left transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
3	**CHECK FL TRANSMITTER ID.** Check the ID displayed in the updated ID display and the tire 1 registered ID.	Are the two IDs same?	Go to step **4**.	Record the received ID update as the FL transmitter. Go to step **4**.
4	**START FR TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the FR transmitter to check "Latest reception ID".	Is "Latest reception ID" updated?	Go to step **5**.	Replace the front right transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
5	**CHECK FR TRANSMITTER ID.** Check the ID displayed in the updated ID display and the tire 2 registered ID.	Are the two IDs same?	Go to step **6**.	Record the received ID update as the FR transmitter. Go to step **6**.
6	**START RR TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the RR transmitter to check "Latest reception ID".	Is "Latest reception ID" updated?	Go to step **7**.	Replace the RR transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
7	**CHECK RR TRANSMITTER ID.** Check the ID displayed in the updated ID display and the tire 3 registered ID.	Are the two IDs same?	Go to step **8**.	Record the received ID update as the RR transmitter. Go to step **8**.

	Step	Check	Yes	No
8	**START RL TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the RL transmitter to check "Latest reception ID".	Is "Latest reception ID" updated?	Go to step **9**.	Replace the RL transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
9	**CHECK RL TRANSMITTER ID.** Check the ID displayed in the updated ID display and the tire 4 registered ID.	Are the two IDs same?	Go to step **10**.	Record the received ID update as the RL transmitter. Go to step **10**.
10	**CHECK MALFUNCTION TRANSMITTER.**	Is ID recorded by this procedure?	Go to step **11**.	Go to step **2**.
11	**CHECK MALFUNCTION TRANSMITTER.** Check the registered ID of the transmitter indicated by DTC.	Is there checked ID in the record?	Replace the transmitter of the recorded position. <Ref. to WT-9, Tire Pressure Monitoring System.>	Replace the transmitter showing the latest ID that is not included in the registered IDs. <Ref. to WT-9, Tire Pressure Monitoring System.>

M: DTC C2321 TRANSMITTER 1 FUNCTION CODE ABNORMAL

NOTE:
Refer to DTC C2324 for diagnostic procedure. <Ref. to TPM(diag)-29, DTC C2324 TRANSMITTER 4 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC C2322 TRANSMITTER 2 FUNCTION CODE ABNORMAL

NOTE:
Refer to DTC C2324 for diagnostic procedure. <Ref. to TPM(diag)-29, DTC C2324 TRANSMITTER 4 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC C2323 TRANSMITTER 3 FUNCTION CODE ABNORMAL

NOTE:
Refer to DTC C2324 for diagnostic procedure. <Ref. to TPM(diag)-29, DTC C2324 TRANSMITTER 4 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P: DTC C2324 TRANSMITTER 4 FUNCTION CODE ABNORMAL

DTC DETECTING CONDITION:
Unexpected function codes received from each transmitter.
TROUBLE SYMPTOM:
Tire pressure warning light blinks 25 times and then illuminates.

	Step	Check	Yes	No
1	**CHECK FOR REPRODUCTION OF MALFUNCTION.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is the DTC displayed as "Current malfunction"?	Go to step **2**.	When DTC is detected as "Past faults", the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, a temporary communication error due to radio wave environment inside and outside the vehicle may be possible.
2	**START FL TRANSMITTER.** 1) Connect the Subaru Select Monitor and then turn the ignition switch to ON. 2) Select "Transmit ID data monitor". <Ref. to TPM(diag)-15, OPERATION, Display Transmitter (ID).> 3) Use the transmitter registration tool and transmit the ID from the FL transmitter to check "Latest reception ID".	Is "Latest reception ID" updated?	Go to step **3**.	Replace front left transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
3	**CHECK FL TRANSMITTER ID.** Check the ID displayed in the updated ID display and the tire 1 registered ID.	Are the two IDs same?	Go to step **4**.	Record the received ID update as the FL transmitter. Go to step **4**.
4	**START FR TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the FR transmitter to check "Latest reception ID".	Is "Latest reception ID" updated?	Go to step **5**.	Replace the front right transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
5	**CHECK FR TRANSMITTER ID.** Check the ID displayed in the updated ID display and the tire 2 registered ID.	Are the two IDs same?	Go to step **6**.	Record the received ID update as the FR transmitter. Go to step **6**.
6	**START RR TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the RR transmitter to check "Latest reception ID".	Is "Latest reception ID" updated?	Go to step **7**.	Replace the RR transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
7	**CHECK RR TRANSMITTER ID.** Check the ID displayed in the updated ID display and the tire 3 registered ID.	Are the two IDs same?	Go to step **8**.	Record the received ID update as the RR transmitter. Go to step **8**.

	Step	Check	Yes	No
8	**START RL TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the RL transmitter to check "Latest reception ID".	Is "Latest reception ID" updated?	Go to step **9**.	Replace the RL transmitter. <Ref. to WT-9, Tire Pressure Monitoring System.>
9	**CHECK RL TRANSMITTER ID.** Check the ID displayed in the updated ID display and the tire 4 registered ID.	Are the two IDs same?	Go to step **10**.	Record the received ID update as the RL transmitter. Go to step **10**.
10	**CHECK MALFUNCTION TRANSMITTER.**	Is ID recorded by this procedure?	Go to step **11**.	Replace the transmitter indicated by diagnostics trouble code (DTC). <Ref. to WT-9, Tire Pressure Monitoring System.>
11	**CHECK MALFUNCTION TRANSMITTER.** Check the registered ID of the transmitter indicated by DTC.	Is there checked ID in the record?	Replace the transmitter of the recorded position. <Ref. to WT-9, Tire Pressure Monitoring System.>	Replace the transmitter indicated by diagnostics trouble code (DTC). <Ref. to WT-9, Tire Pressure Monitoring System.>

Q: DTC C2421 TRANSMITTER 1 BATTERY VOLTAGE DECREASE

NOTE:
Refer to DTC C2424 for diagnostic procedure. <Ref. to TPM(diag)-31, DTC C2424 TRANSMITTER 4 BATTERY VOLTAGE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

R: DTC C2422 TRANSMITTER 2 BATTERY VOLTAGE DECREASE

NOTE:
Refer to DTC C2424 for diagnostic procedure. <Ref. to TPM(diag)-31, DTC C2424 TRANSMITTER 4 BATTERY VOLTAGE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

S: DTC C2423 TRANSMITTER 3 BATTERY VOLTAGE DECREASE

NOTE:
Refer to DTC C2424 for diagnostic procedure. <Ref. to TPM(diag)-31, DTC C2424 TRANSMITTER 4 BATTERY VOLTAGE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

T: DTC C2424 TRANSMITTER 4 BATTERY VOLTAGE DECREASE

DTC DETECTING CONDITION:
Low battery signals received 20 times from each transmitter.
TROUBLE SYMPTOM:
Tire pressure warning light blinks 25 times and then illuminates.

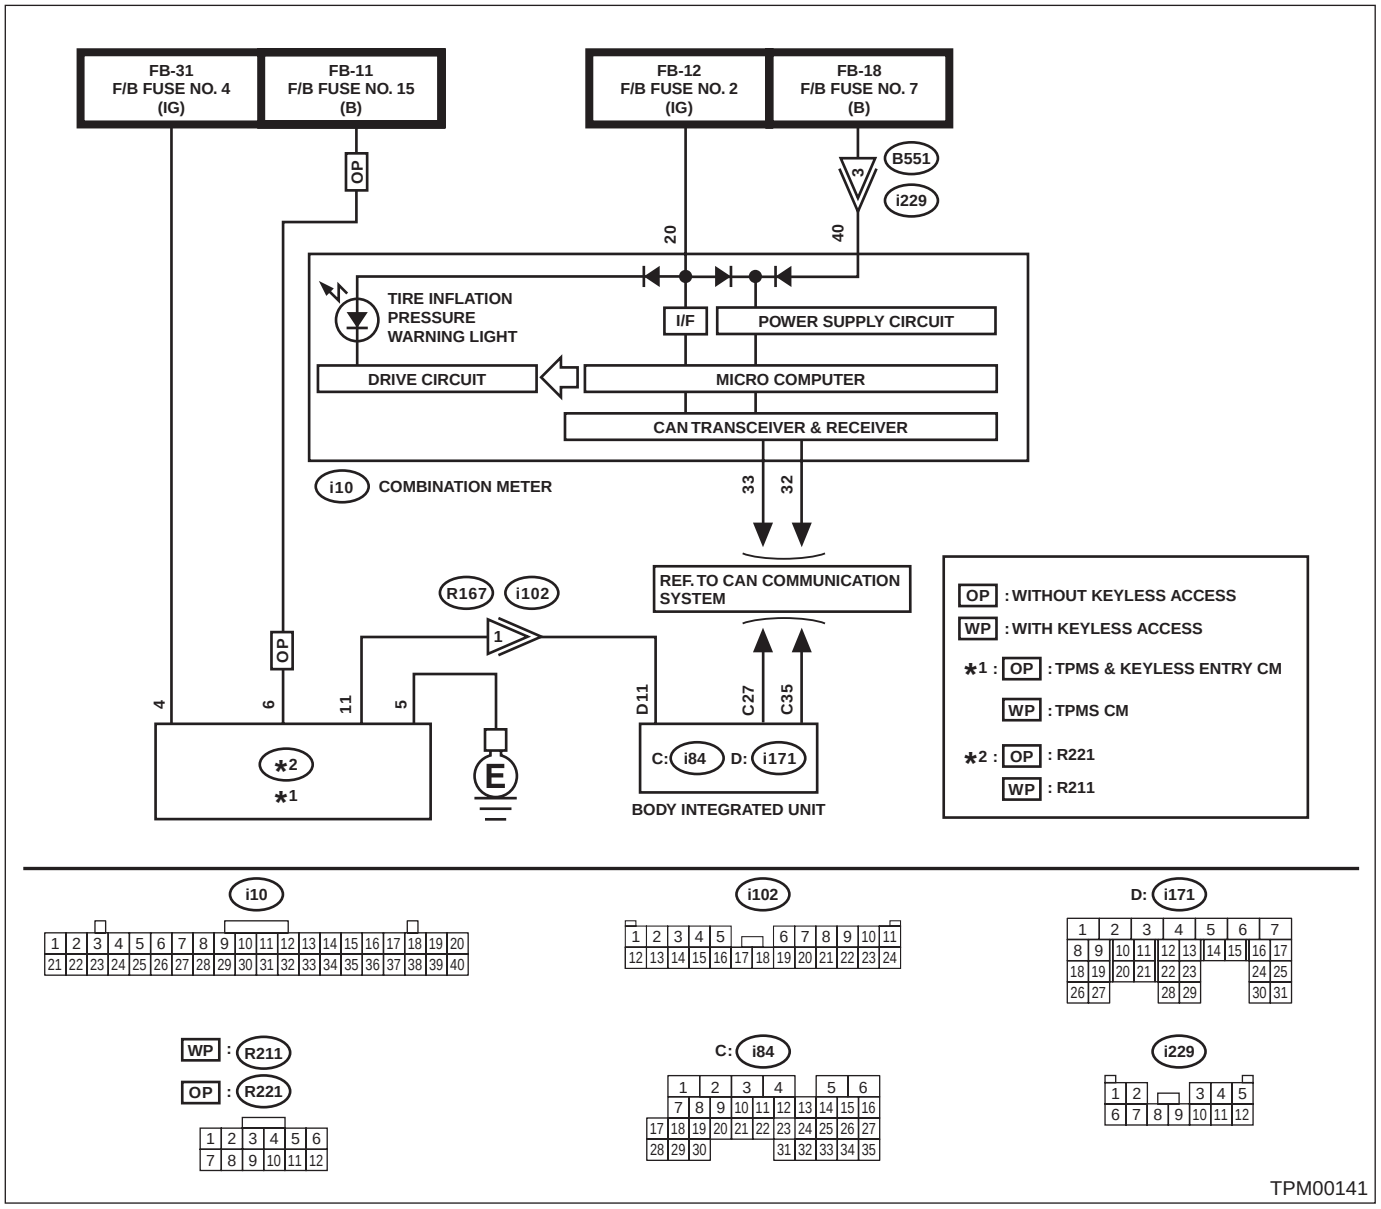
	Step	Check	Yes	No
1	**CHECK FOR REPRODUCTION OF MALFUNCTION.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC. <Ref. to TPM(diag)-11, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is the DTC displayed as "Current malfunction"?	Go to step **2**.	When DTC is detected as "Past faults", the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, a temporary communication error due to radio wave environment inside and outside the vehicle may be possible.
2	**CHECK TRANSMITTER.** 1) Replace all transmitters and register their IDs. <Ref. to TPM(diag)-14, OPERATION, Register Transmitter (ID).> 2) Perform the Clear Memory Mode, and perform driving test.	Is the fault eliminated?	Internal battery of the transmitter had worn out.	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-9, Tire Pressure Monitoring System.>

U: DTC C2521 VEHICLE SPEED IS ABNORMAL

DTC DETECTING CONDITION:
Vehicle speed function codes were received from the transmitter, but the vehicle speed signal was not input to the module.

TROUBLE SYMPTOM:
Tire pressure warning light blinks 25 times and then illuminates.

WIRING DIAGRAM:
Tire Pressure Monitoring System <Ref. to WI-407, WIRING DIAGRAM, Tire Pressure Monitoring System.>



Step		Check	Yes	No
1	**CHECK LAN COMMUNICATION.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Repair it according to the diagnosis for LAN system.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS.** Measure the resistance between TPMS & keyless entry CM or TPMS CM and body integrated unit. ***Connector & terminal*** ***Without keyless access*** ***(R221) No. 11 — (i171) No. 11:*** ***With keyless access*** ***(R211) No. 11 — (i171) No. 11:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the harness.
3	**CHECK CONNECTOR.** Check each connector.	Is there poor contact or any other faults?	Repair the connector.	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-9, Tire Pressure Monitoring System.>

15.General Diagnostic Table

A: INSPECTION

Symptoms		Faulty parts
Tire pressure warning light illuminates.	Tire pressure is reduced.	• Improper tire pressure adjustment • Punctured tire
Tire pressure warning light blinks 25 times and then illuminates.	Tire pressure monitoring system has malfunction.	• Air pressure sensor malfunction • Air pressure sensor is out of battery. • Defective TPMS & keyless entry CM or TPMS CM • Defective vehicle harness • Defective combination meter
Tire pressure is dropping but the warning light does not illuminate.	Tire pressure warning light does not illuminate.	• Air pressure sensor is faulty. • Defective TPMS & keyless entry CM or TPMS CM • Defective combination meter

1. General Description

A: SPECIFICATION

1. REAR DIFFERENTIAL

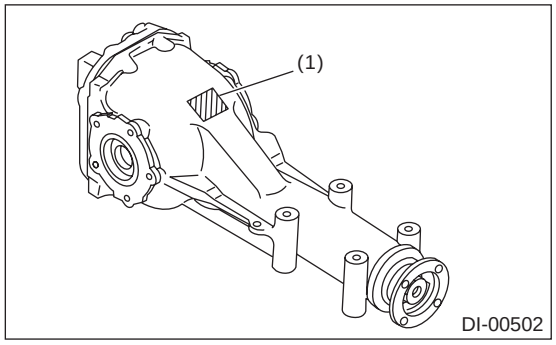
When replacing a rear differential assembly, select the correct one according to the following table.

NOTE:
• Using a different rear differential assembly will cause the drive train and tires to drag or emit abnormal noise.
• For option code, refer to “ID” section. <Ref. to ID-2, IDENTIFICATION, Identification.>

Model	2.5 L high power turbo	2.0 L turbo	
	6MT	6MT	CVT
Rear differential type	T-type		
Identification	H5	B1	B2
LSD type	Torsen	—	
Type of gear	Hypoid gear		
Gear ratio (number of gear teeth)	3.545 (39/11)	4.111 (37/9)	3.900 (39/10)
Oil capacity	1.0 L (1.1 US qt, 0.9 Imp qt)	0.8 L (0.8 US qt, 0.7 Imp qt)	0.8 L (0.8 US qt, 0.7 Imp qt)
Rear differential gear oil	GL-5		

2. IDENTIFICATION

Identification positions are shown in the following figures.



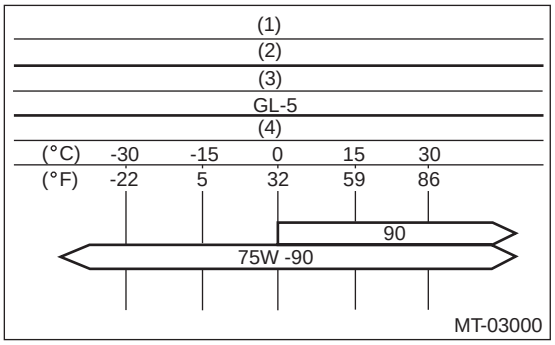
(1) Identification

3. REAR DIFFERENTIAL GEAR OIL

Recommended gear oil:
GL–5 (75W-90)

Alternative:
Equivalent product

CAUTION:
Each oil manufacturer has its base oil and additives. Thus, do not mix two or more brands.



(1) Item
(2) Rear differential gear oil
(3) API classification
(4) SAE viscosity No. and applicable temperature

4. SERVICE DATA

Drive pinion bearing preload (for new bearing)	Measured with spring measurement (measured at companion flange bolt hole) N (kgf, lbf)	T-type (B1, B2)	18.1 — 38.8 (1.8 — 4.0, 4.1 — 8.7)
		T-type (H5)	24.1 — 38.6 (2.5 — 3.9, 5.4 — 8.7)
	Measured with torque wrench N·m (kgf-m, ft-lb)	T-type (B1, B2)	0.69 — 1.47 (0.07 — 0.15, 0.51 — 1.08)
		T-type (H5)	0.98 — 1.57 (0.10 — 0.16, 0.72 — 1.16)
Side gear backlash mm (in)		T-type (B1, B2)	0.10 — 0.20 (0.004 — 0.008)
Side bearing standard width mm (in)			20.00 (0.7874)
Hypoid driven gear to drive pinion backlash mm (in)			0.10 — 0.20 (0.004 — 0.008)
Hypoid driven gear runout on its back surface mm (in)			0.05 (0.002)
Companion flange mating surface runout mm (in)			0.08 (0.003)
Companion flange runout on its inner surface mm (in)			0.08 (0.003)

C: CAUTION

- Wear appropriate work clothing, including a cap, protective goggles and protective shoes when performing any work.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine gear oil, grease or equivalent. Do not mix gear oil, grease, etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply gear oil onto sliding or revolving surfaces before installation.
- Before installing the O-ring or snap ring, apply a sufficient amount of gear oil to avoid damage and deformation.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vise.
- Avoid damaging the mating surface of the case.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398477702	398477702	DRIFT	Used for installing the front bearing race.
 ST-398217700	398217700	ATTACHMENT SET	Stand for rear differential carrier disassembly and assembly.
 ST-498447120	498447120	INSTALLER	Used for installing the front oil seal.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398467700	398467700	DRIFT	Used for removing drive pinion shaft, pilot bearing and front bearing cone.
 ST-399780104	399780104	WEIGHT	• Used for installing the pilot bearing and the companion flange. • Used for installing the front bearing cone. (T-type (B1, B2))
 ST-899580100	899580100	INSTALLER	• Used for installing the pilot bearing. • Used for installing the front bearing cone. (T-type (B1, B2))
 ST-899904100	899904100	STRAIGHT PIN REMOVER	Used for removing and installing the pinion mate shaft lock pin. (T-type (B1, B2))
 ST-498247001	498247001	MAGNET BASE	• Used for measuring backlash between side gear and pinion, and hypoid gear. • Used together with DIAL GAUGE (498247100).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498247100	498247100	DIAL GAUGE	• Used for measuring backlash between side gear and pinion, and hypoid gear. • Used together with MAGNET BASE (498247001).
 ST-398507704	398507704	BLOCK	Used for adjusting pinion height and preload. (T-type (B1, B2))
 ST-398457700	398457700	ATTACHMENT	Used for removing the side retainer.
 ST-398437700	398437700	DRIFT	Used for installing the side oil seal.
 ST-398507703	398507703	DUMMY COLLAR	• Used for adjusting pinion height and preload. • Used for installing the front bearing cone.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398517700	398517700	REPLACER	Used for removing rear bearing cone.
 ST-398487700	398487700	DRIFT	Used for installing side bearing cone.
 ST-398527700	398527700	PULLER ASSY	• Used for removing front oil seal. • Used for removing the side bearing race.
 ST28099PA090	28099PA090	OIL SEAL PROTEC-TOR	Used for installing the rear drive shaft to the rear differential. (For oil seal protection)
 ST28099PA100	28099PA100	DRIVE SHAFT REMOVER	Used for removing the rear drive shaft from rear differential.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-399703600	399703600	PULLER ASSY	Used for removing companion flange.
 ST-899874100	899874100	INSTALLER	Used for installing the companion flange.
 ST18759AA000	18759AA000	PULLER ASSY	Used for removing the side bearing cone.
 ST-398417700	398417700	DRIFT	Used for installing side bearing race.
 ST-498937110	498937110	HOLDER DRIVE PINION	Used for installing the pilot bearing and the companion flange. (T-type (H5))

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18674AA000	18674AA000	INSTALLER	Used for installing the rear bearing cone. (T-type (H5))
 ST-398177700	398177700	INSTALLER	Used for installing the rear bearing cone. (T-type (B1, B2))
 ST-398477701	398477701	HANDLE	Used for installing the front and rear bearing races. (T-type (B1, B2))
 ST-398477703	398477703	DRIFT 2	Used for installing the rear bearing race. (T-type (B1, B2))
 ST-498427200	498427200	FLANGE WRENCH	Used for stopping rotation of companion flange when removing and tightening self-lock nut. (T-type (B1, B2))

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18633AA000	18633AA000	WRENCH COMPL	Used for preventing rotation of companion flange when loosening and tightening self-lock nut. (T-type (H5))
 ST-398507702	398507702	DUMMY SHAFT	Used for adjusting pinion height and preload. (T-type (B1, B2))

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST41399FG010	41399FG010	SPECIAL TOOL A	• Used for removing the rear differential mount bushing. • For combination of tools for removal, refer to “SPECIAL TOOL ASSY (41399FG001)”.
 ST41399FG020	41399FG020	SPECIAL TOOL B	• Used for installing the rear differential mount bushing. • For combination of tools for installation, refer to “SPECIAL TOOL ASSY (41399FG001)”.
 ST41399FG031	41399FG031	SPECIAL TOOL C	• Used for removing the rear differential mount bushing. • For combination of tools for removal, refer to “SPECIAL TOOL ASSY (41399FG001)”.
 ST41399FG041	41399FG041	SPECIAL TOOL D	• Used for installing the rear differential mount bushing. • For combination of tools for installation, refer to “SPECIAL TOOL ASSY (41399FG001)”.
 ST41399FG050	41399FG050	SPECIAL TOOL SLEEVE	• Used for removing and installing the rear differential mount bushing. • For combination of tools for removal and installation, refer to “SPECIAL TOOL ASSY (41399FG001)”.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST41399FG061	41399FG061	SPECIAL TOOL RING	• Used for removing and installing the rear differential mount bushing. • For combination of tools for removal and installation, refer to “SPECIAL TOOL ASSY (41399FG001)”.
 ST41399FG070	41399FG070	SPECIAL TOOL NUT	• Used for removing and installing the rear differential mount bushing. • For combination of tools for removal and installation, refer to “SPECIAL TOOL ASSY (41399FG001)”.
 ST41399FG080	41399FG080	SPECIAL TOOL BEARING	• Used for removing and installing the rear differential mount bushing. • For combination of tools for removal and installation, refer to “SPECIAL TOOL ASSY (41399FG001)”.
 ST41399FG091	41399FG091	SPECIAL TOOL SHAFT	• Used for removing and installing the rear differential mount bushing. • For combination of tools for removal and installation, refer to “SPECIAL TOOL ASSY (41399FG001)”.

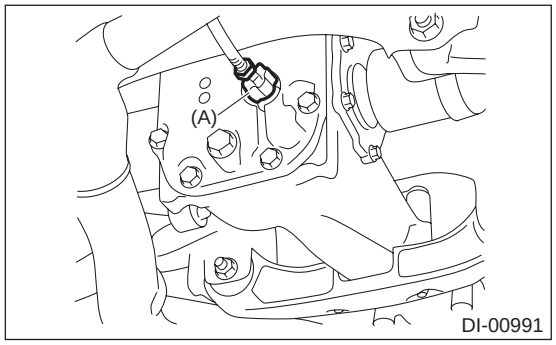
2. GENERAL TOOL

TOOL NAME	REMARKS
Transmission jack	Used for removing and installing the rear differential.
Puller	Used for removing the side bearing retainer.
Thickness gauge	Used for measuring clearance.

2. Differential Gear Oil

A: INSPECTION

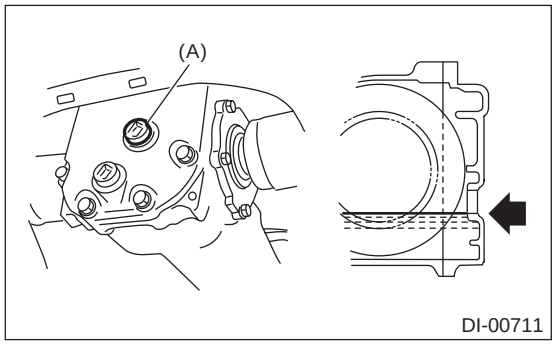
1) Disconnect the ground cable from battery.
2) Lift up the vehicle.
3) Disconnect the oil temperature sensor connector. (T-type (H5))



(A) Oil temperature sensor connector

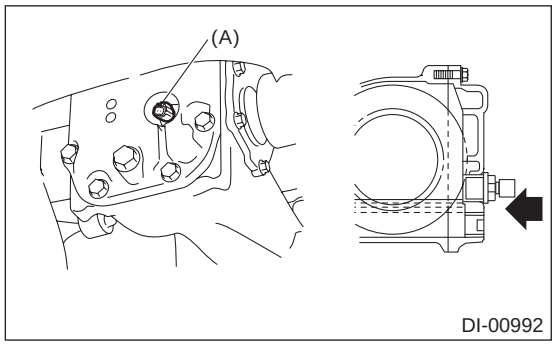
4) Remove the filler plug or the oil temperature sensor, and then check the gear oil. Replace the gear oil if it is contaminated, deteriorated or cloudy. <Ref. to DI-16, REPLACEMENT, Differential Gear Oil.>
5) Check that the gear oil level is within –5 mm (–0.2 in) from the bottom of the filler plug hole. If the level is low, make sure that there is no oil leakage and refill up to the bottom of filler plug hole.

- T-type (B1, B2)



(A) Filler plug

- T-type (H5)



(A) Oil temperature sensor

6) Install the filler plug or the oil temperature sensor.

NOTE:
- Degrease the thread portion of B1 and B2 sufficiently and apply liquid gasket to the filler plug.

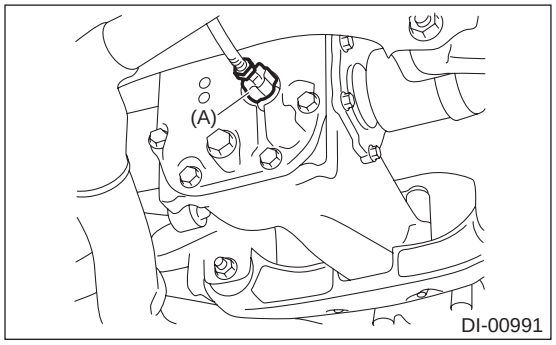
Liquid gasket:
THREE BOND 1105 (Part No. 004403010) or equivalent
- Use a new gasket for H5.

Tightening torque:
B1, B2
49 N·m (5.0 kgf-m, 36.1 ft-lb)
H5
60 N·m (6.1 kgf-m, 44.3 ft-lb)

B: REPLACEMENT

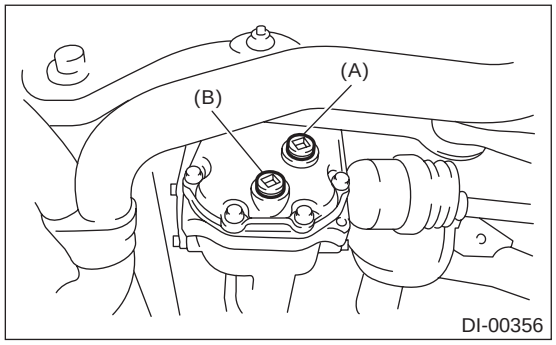
CAUTION:
- **Gear oil is extremely hot just after driving. Be wary of receiving burns.**
- **Be careful not to spill the differential gear oil on exhaust pipe. If gear oil is spilled, wipe it off completely.**

1) Disconnect the ground cable from battery.
2) Lift up the vehicle.
3) Disconnect the oil temperature sensor connector. (T-type (H5))



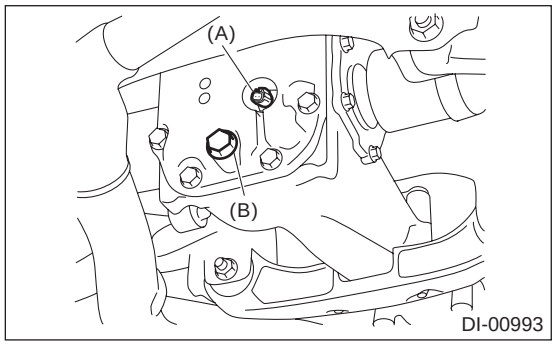
(A) Oil temperature sensor connector

4) Remove the drain plug and filler plug or the oil temperature sensor, and drain the gear oil.
• T-type (B1, B2)



(A) Filler plug
(B) Drain plug

• T-type (H5)



(A) Oil temperature sensor
(B) Drain plug

5) Install the drain plug.

NOTE:
• Degrease the thread portion of B1 and B2 sufficiently and apply liquid gasket to the filler plug.

Liquid gasket:
THREE BOND 1105 (Part No. 004403010) or equivalent
• Use a new gasket for H5.

Tightening torque:
B1, B2
49 N·m (5.0 kgf-m, 36.1 ft-lb)
H5
60 N·m (6.1 kgf-m, 44.3 ft-lb)

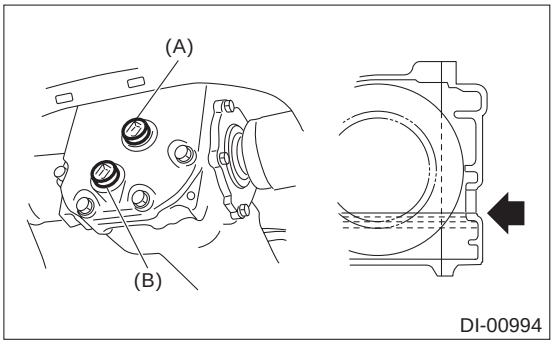
6) Fill the differential carrier with gear oil to the bottom of filler plug hole or the oil temperature sensor hole.

NOTE:
Carefully refill gear oil while watching the level. Excessive or insufficient oil must be avoided.

Recommended gear oil:
<Ref. to DI-2, SPECIFICATION, General Description.>

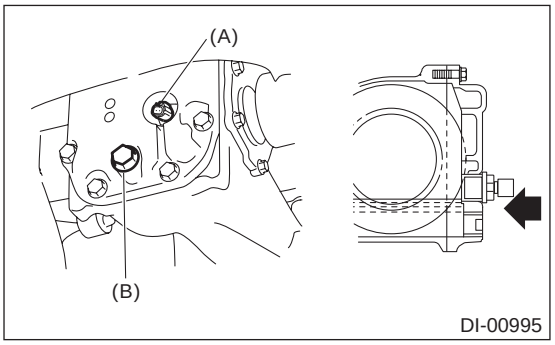
Oil capacity:
B1, B2
0.8 L (0.8 US qt, 0.7 Imp qt)
H5
1.0 L (1.1 US qt, 0.9 Imp qt)

• T-type (B1, B2)



(A) Filler plug
(B) Drain plug

• T-type (H5)



(A) Oil temperature sensor
(B) Drain plug

7) Install the filler plug or the oil temperature sensor.

NOTE:
• Degrease the thread portion of B1 and B2 sufficiently and apply liquid gasket to the filler plug.

Liquid gasket:
THREE BOND 1105 (Part No. 004403010) or equivalent
• Use a new gasket for H5.

Tightening torque:
B1, B2
49 N·m (5.0 kgf-m, 36.1 ft-lb)
H5
60 N·m (6.1 kgf-m, 44.3 ft-lb)

3. Front Differential Assembly

A: NOTE

1. CVT (TR690) MODEL

For front differential for the CVT (TR690) model, refer to the “CVT (TR690)” section. <Ref. to CVT(TR690)-265, Front Differential Assembly.>

2. 6MT (TY75) MODEL

For front differential for the 6MT (TY75) model, refer to the “6MT (TY75)” section. <Ref. to 6MT(TY75)-111, REMOVAL, Front Differential Assembly.>

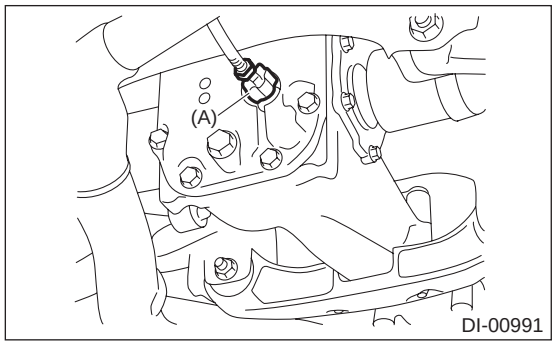
3. 6MT (TY85) MODEL

For front differential for the 6MT (TY85) model, refer to the “6MT (TY85)” section. <Ref. to 6MT(TY85)-99, REMOVAL, Front Differential Assembly.>

4. Rear Differential (T-type)

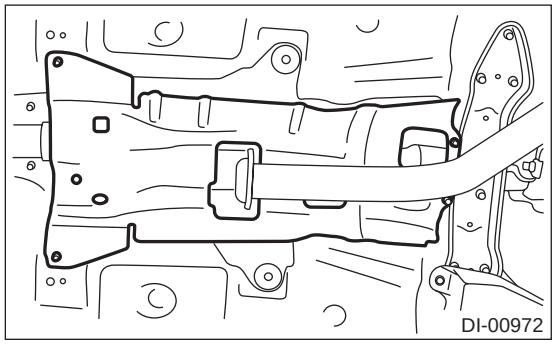
A: REMOVAL

1) Shift the select lever or gear shift lever to neutral.
2) Disconnect the ground cable from battery.
3) Release the parking brake.
4) Loosen the wheel nuts.
5) Lift up the vehicle.
6) Remove the rear wheels.
7) Disconnect the oil temperature sensor connector. (H5)

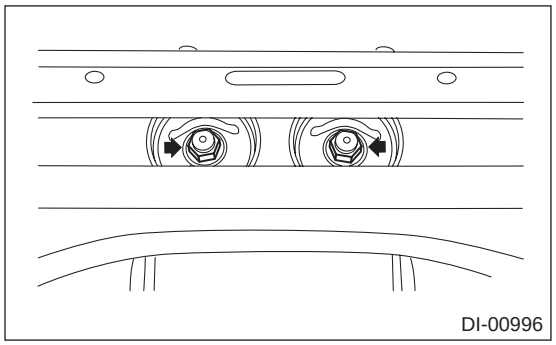


(A) Oil temperature sensor connector

8) Drain differential gear oil. <Ref. to DI-16, REPLACEMENT, Differential Gear Oil.>
9) Remove the rear exhaust pipe.
• Except for STI model
<Ref. to EX(w/o STI)-48, REMOVAL, Rear Exhaust Pipe.>
• STI model
<Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.>
10) Remove the center exhaust cover.

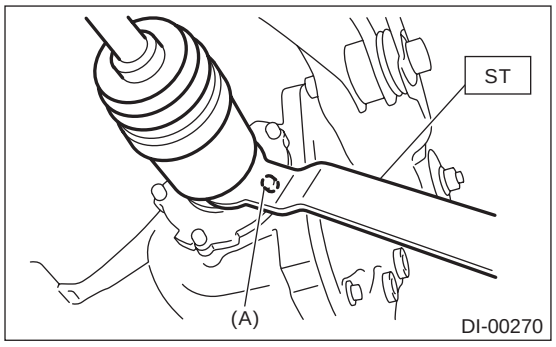


11) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
12) Loosen the self-lock nuts which hold the rear differential to the rear sub frame assembly.



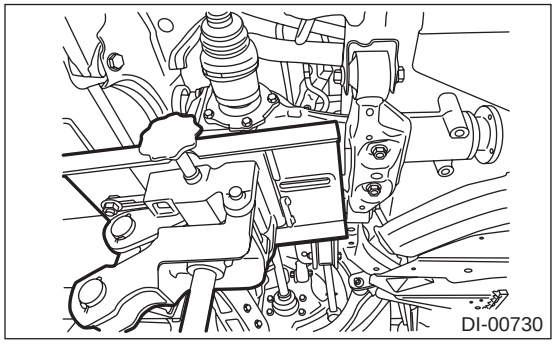
13) Remove the DOJ of rear drive shaft from rear differential using ST.

NOTE:
When removing the DOJ from the rear differential, fit the ST to the bolts as shown in the figure so as not to damage the side retainer.
ST 28099PA100 DRIVE SHAFT REMOVER

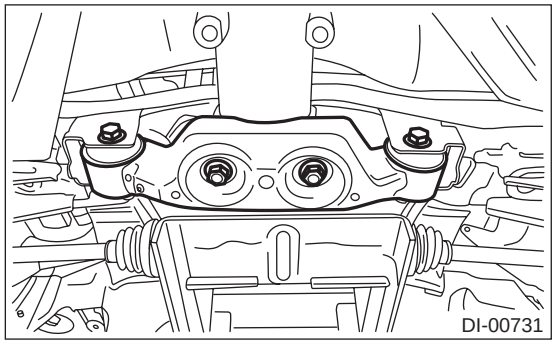


(A) Bolt

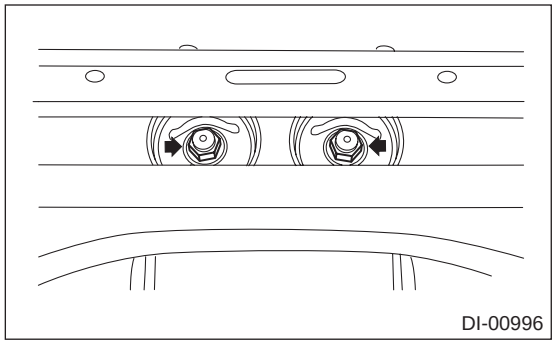
14) Set the rear differential to transmission jack.



15) Remove the rear differential front member.

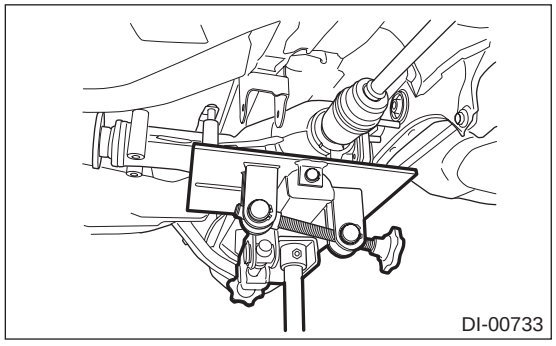


16) Remove the self-lock nuts which hold the rear differential to the rear sub frame assembly.



17) Pull out the rear differential stud bolt from rear differential mount bushing.

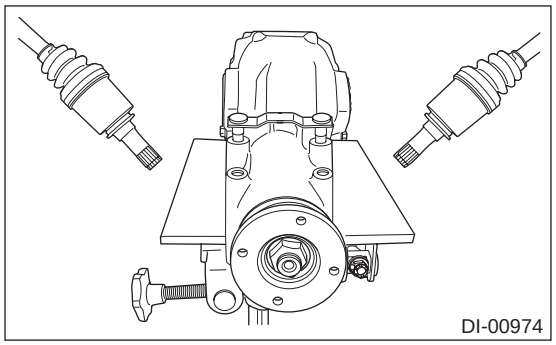
NOTE:
When removing the stud bolt from the rear differential mount bushing, carefully adjust the angle and location of transmission jack and jack stand, if necessary.



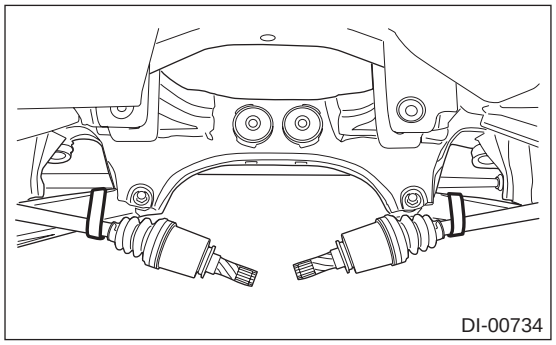
18) Lower the transmission jack.

19) Pull out the rear drive shaft from the rear differential.

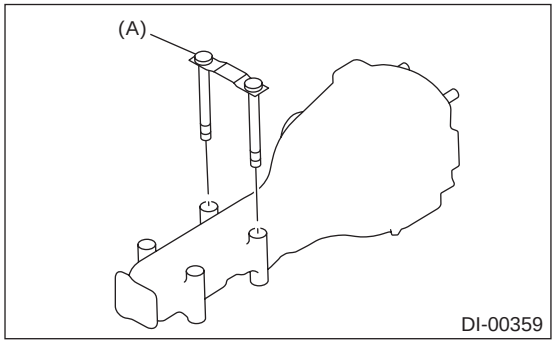
NOTE:
If it is difficult to pull out the rear drive shaft from the rear differential, remove it using a ST.
ST 28099PA100 DRIVE SHAFT REMOVER



20) Lower the transmission jack.
21) Secure the rear drive shaft to rear lateral link using wire.



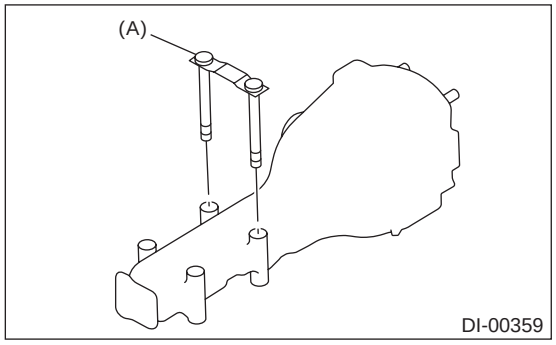
22) Remove the rear differential member plate from rear differential.



(A) Rear differential member plate

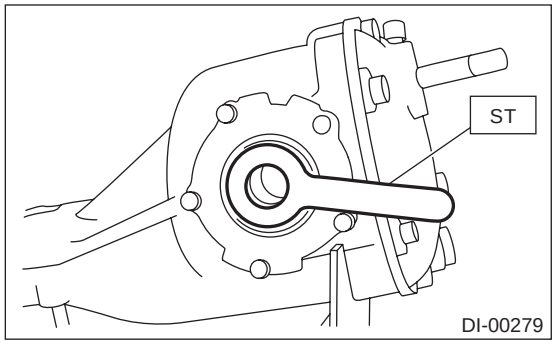
B: INSTALLATION

1) Attach the rear differential member plate to the rear differential.

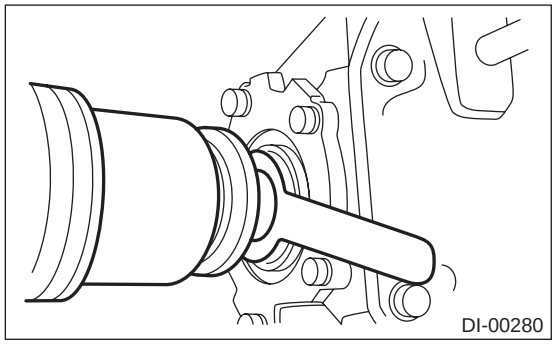


(A) Rear differential member plate

2) Set the rear differential to transmission jack.
3) Set the ST to the rear differential.
ST 28099PA090 OIL SEAL PROTECTOR

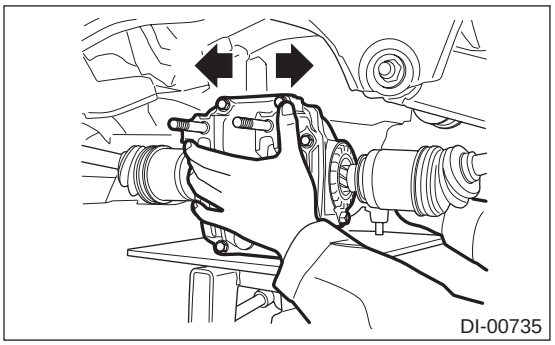


4) Insert the rear drive shaft until the spline portion of the rear drive shaft exceeds the side oil seal.

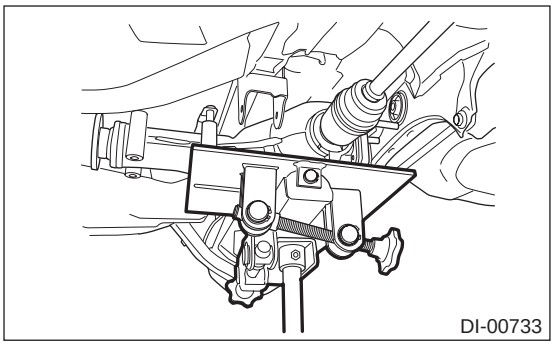


5) Remove ST from rear differential.

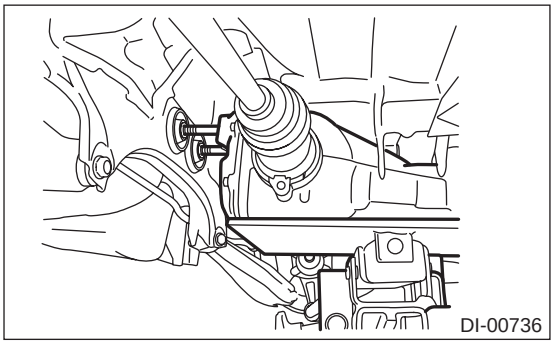
6) Push the rear differential from side to side to insert the DOJ into rear differential completely.



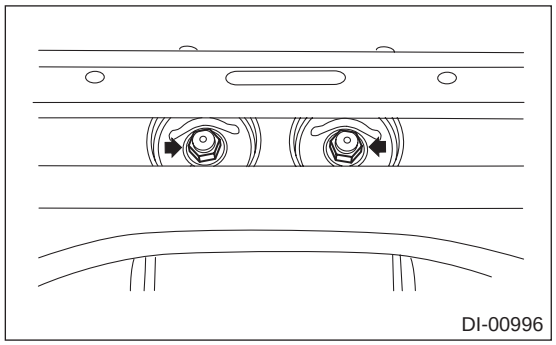
7) Adjust the transmission jack, if necessary, and insert the rear differential stud bolt into the rear differential mount bushing properly.



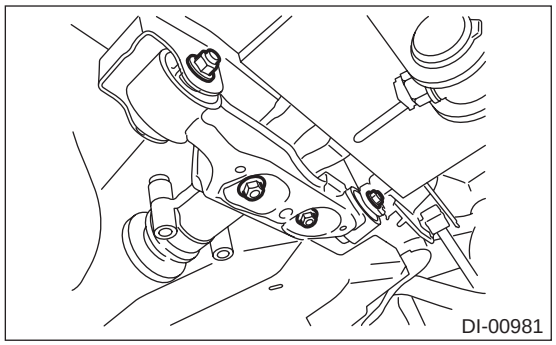
8) After inserting the rear differential stud bolt into the rear differential mount bushing, lift up the transmission jack and align the rear differential to its attachment position.



9) Tighten a new self-locking nut temporarily to the rear differential stud bolt.

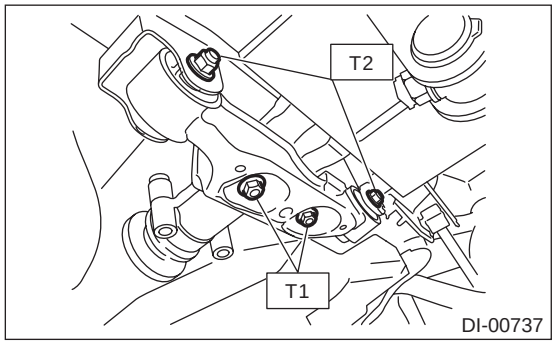


10) Install the rear differential front member, and temporarily attach and tighten a new self-locking nut.



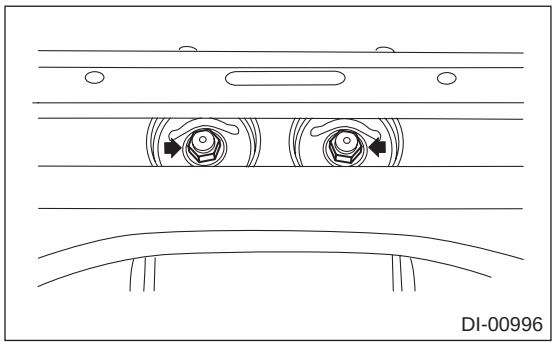
11) Remove the transmission jack.
12) Tighten the self-locking nut.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 110 N·m (11.2 kgf-m, 81.1 ft-lb)



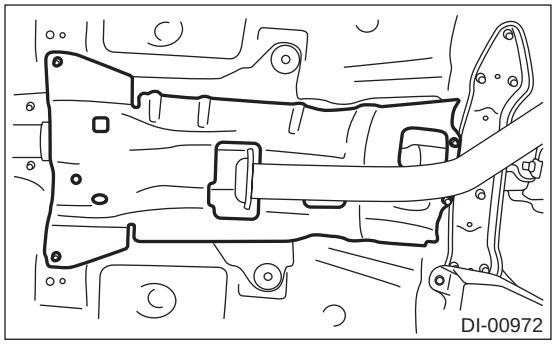
13) Tighten the self-locking nut.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)



14) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
15) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



16) Install the rear exhaust pipe.
- Except for STI model

<Ref. to EX(w/o STI)-49, INSTALLATION, Rear Exhaust Pipe.>
- STI model

<Ref. to EX(STI)-12, INSTALLATION, Rear Exhaust Pipe.>

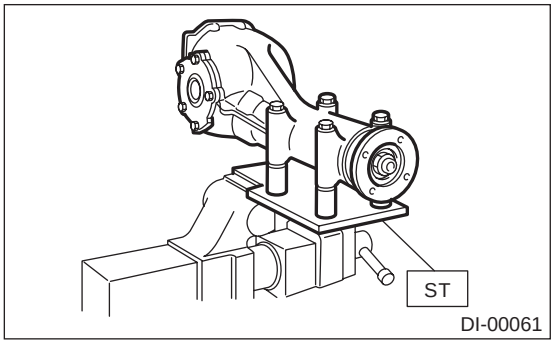
17) Fill differential gear oil. <Ref. to DI-16, REPLACEMENT, Differential Gear Oil.>
18) Installing procedure hereafter is in the reverse order of removal.

C: DISASSEMBLY

1. T-TYPE (B1, B2)

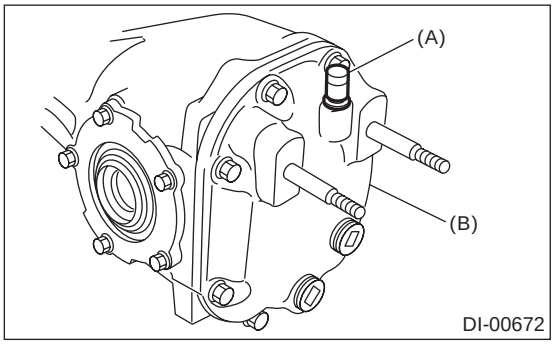
To detect the real cause of trouble, inspect the following items before disassembling.
- Tooth contact and backlash between hypoid driven gear and drive pinion
- Hypoid driven gear runout on its back surface
- Total preload of drive pinion

1) Set the ST on vise and install the differential assembly to ST.
ST 398217700 ATTACHMENT SET



2) Remove the drain plug and filler plug.
3) Remove the air breather cap.

NOTE:
- Do not attempt to remove the air breather cap unless necessary.
- Whenever the air breather cap is removed, replace it with a new part.



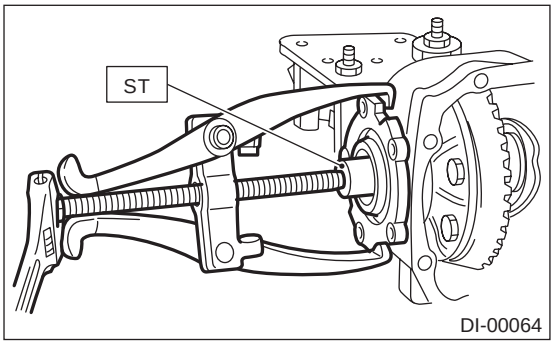
(A) Air breather cap
(B) Rear cover

4) Remove the bolts, and then remove the rear cover.

5) Remove the side retainer attachment bolts, set the ST to differential case, and extract the side retainers RH and LH with a puller.

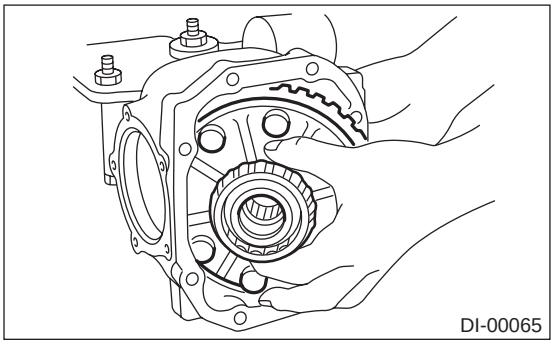
NOTE:
- Side retainer shim of each side should be kept together with its mating retainer.
- Keep the side retainers separate by attaching tags or in similar ways to make it possible to identify RH and LH sides during reassembly.

ST 398457700 ATTACHMENT

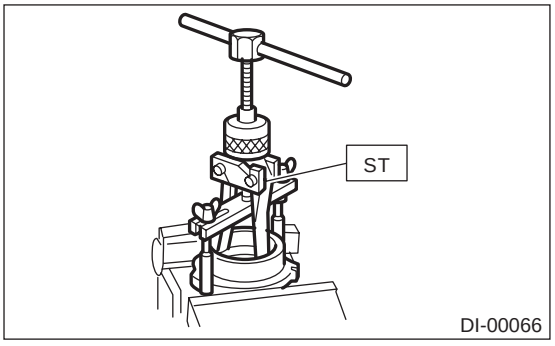


6) Pull out the differential case assembly from the differential carrier.

NOTE:
Be careful not to hit the teeth of hypoid driven gear against the differential carrier.



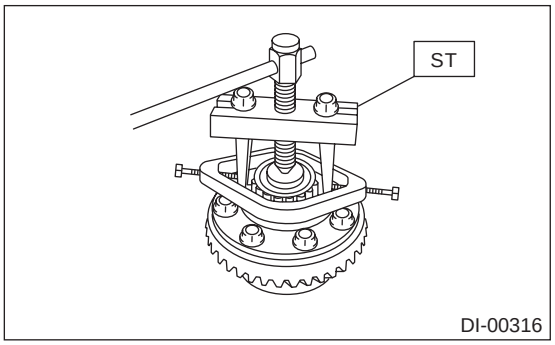
7) Remove the oil seal and O-ring from the side retainer.
8) When replacing the side bearing, remove the bearing race from the side retainer using ST.
ST 398527700 PULLER ASSY



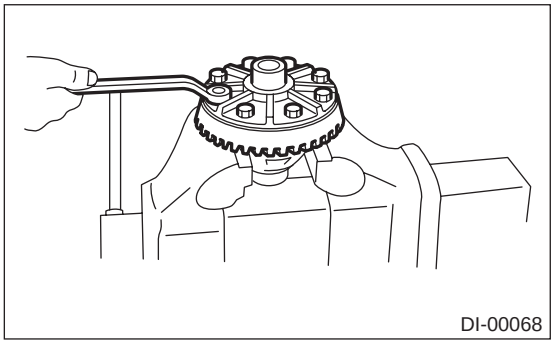
9) Using the ST, remove the bearing cone.

NOTE:
• Do not attempt to disassemble the parts unless necessary.
• Set the ST so that its claws catch the edge of the bearing cone.
• Never mix up the RH and LH bearing races and cones.

ST 18759AA000 PULLER ASSY

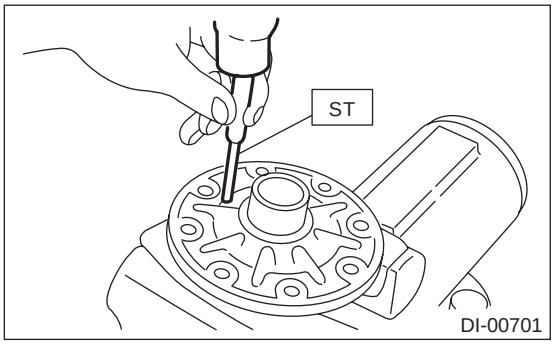


10) Remove the hypoid driven gear by loosening hypoid driven gear bolts.



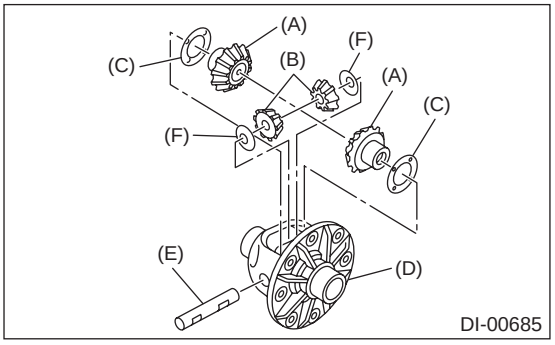
11) Remove the pinion shaft lock pin from hypoid driven gear side using ST.

ST 899904100 STRAIGHT PIN REMOVER



12) Draw out the pinion mate shaft, and remove pinion mate gears, pinion mate gear washers, side gears, and side gear thrust washers.

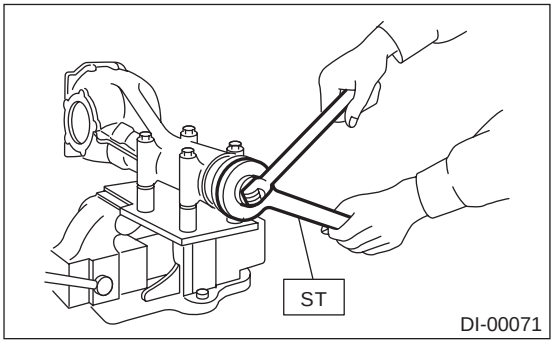
NOTE:
The gears and washers should be marked with RH or LH, front or rear, or kept separately.



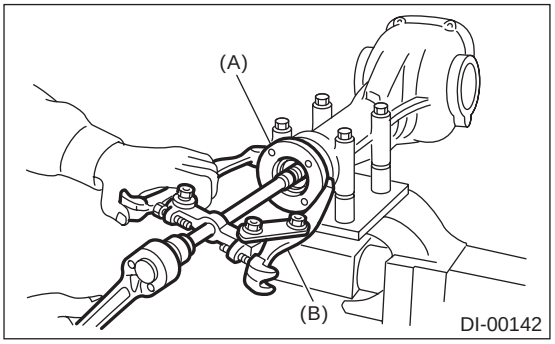
(A) Side gear
(B) Pinion mate gear
(C) Side gear thrust washer
(D) Differential case
(E) Pinion mate shaft
(F) Pinion mate gear washer

13) Remove the self-locking nut while securing the companion flange with ST.

ST 498427200 FLANGE WRENCH



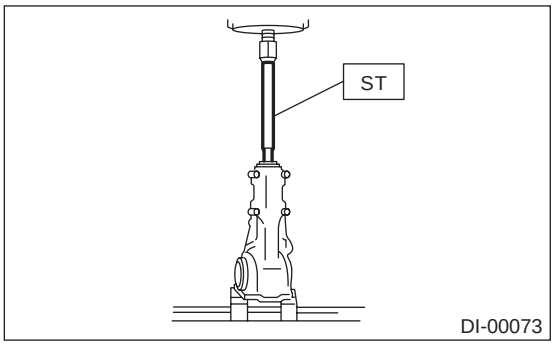
14) Extract the companion flange with a puller.



(A) Companion flange
(B) Puller

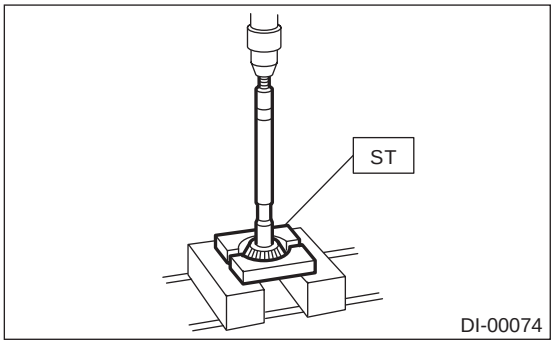
15) Press the end of drive pinion shaft using ST and remove the rear bearing cone, preload adjusting spacer and washer.

NOTE:
Hold the drive pinion so as not to drop it.
ST 398467700 DRIFT

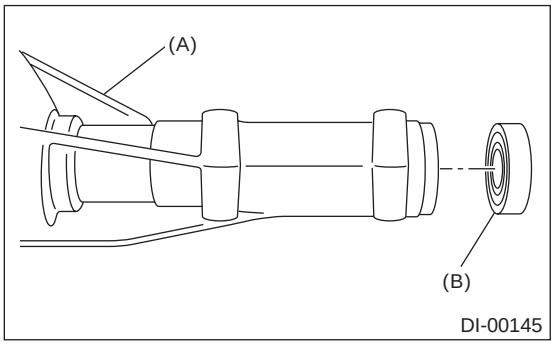


16) Remove the rear bearing cone from drive pinion by supporting the cone with ST.

NOTE:
Place the replacer so that its center-recessed side faces the bearing cone.
ST 398517700 REPLACER

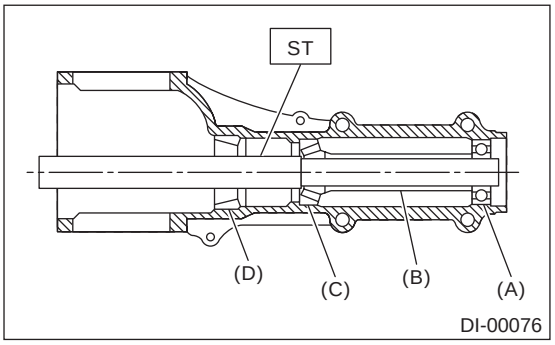


17) Remove the front oil seal from differential carrier using ST.
ST 398527700 PULLER ASSY



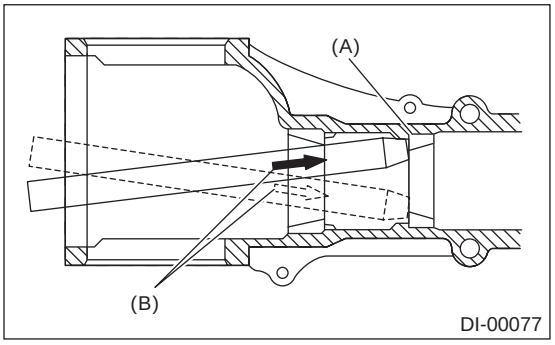
(A) Differential carrier
(B) Front oil seal

18) Remove the pilot bearing together with the front bearing cone and spacer using the ST.
ST 398467700 DRIFT



(A) Pilot bearing
(B) Spacer
(C) Front bearing
(D) Rear bearing race

19) When replacing the bearings, use a brass bar to tap out the front bearing race and rear bearing race in this order to remove them.



(A) 2 cutout portions along diagonal lines
(B) Tap alternately with brass bar.

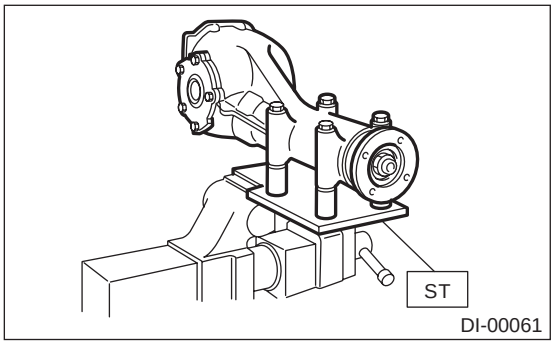
2. T-TYPE (H5)

To detect the real cause of trouble, inspect the following items before disassembling.

- Tooth contact and backlash between hypoid driven gear and drive pinion
- Hypoid driven gear runout on its back surface
- Total preload of drive pinion

1) Set the ST on vise and install the differential assembly to ST.

ST 398217700 ATTACHMENT SET



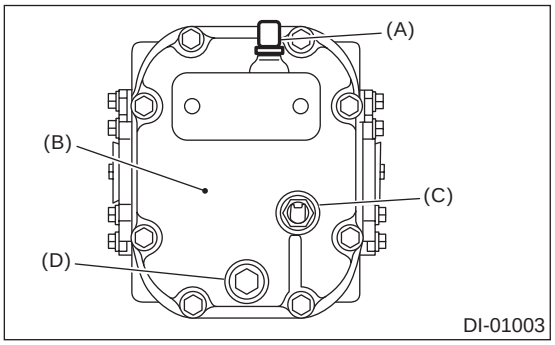
2) Remove the drain plug and the oil temperature sensor, and drain the gear oil.

NOTE:
Remove the oil temperature sensor and the adapter as a unit.

3) Remove the air breather cap.

NOTE:

- Do not attempt to remove the air breather cap unless necessary.
- Whenever the air breather cap is removed, replace it with a new part.



(A) Air breather cap
(B) Rear cover
(C) Oil temperature sensor
(D) Drain plug

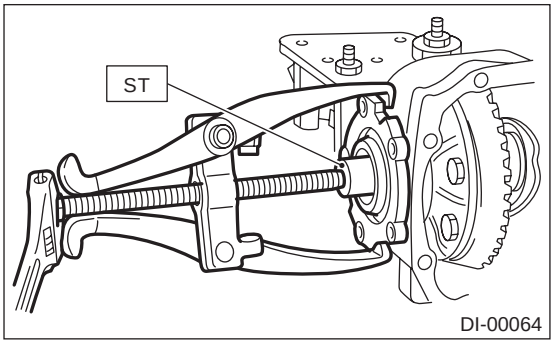
4) Remove the bolts, and then remove the rear cover.

5) Remove the side retainer attachment bolts, set the ST to differential case, and extract the side retainers RH and LH with a puller.

NOTE:

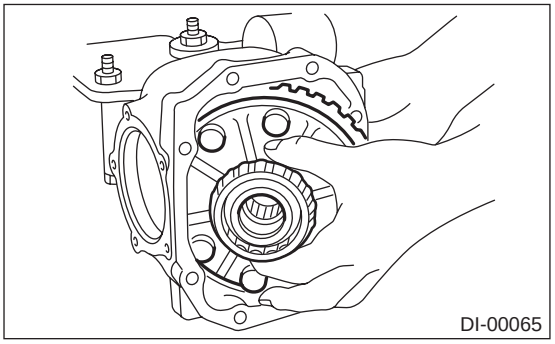
- Side retainer shim of each side should be kept together with its mating retainer.
- Keep the side retainers separate by attaching tags or in similar ways to make it possible to identify RH and LH sides during reassembly.

ST 398457700 ATTACHMENT



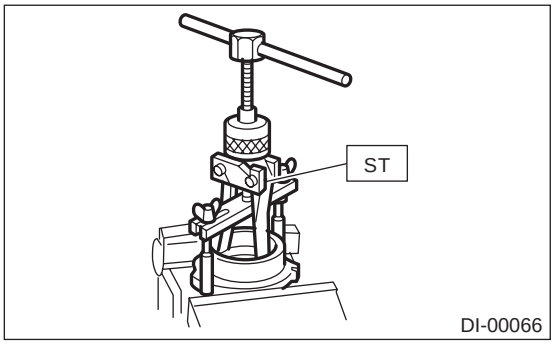
6) Pull out the differential case assembly from the differential carrier.

NOTE:
Be careful not to hit the teeth of hypoid driven gear against the differential carrier.



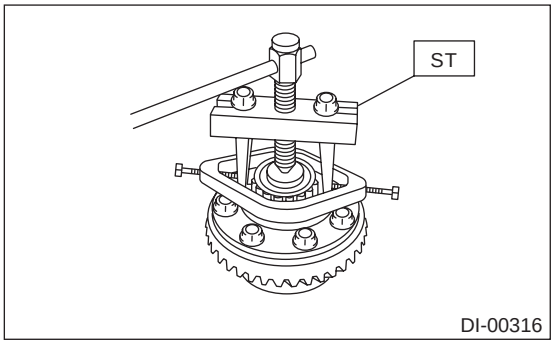
7) Remove the oil seal and O-ring from the side retainer.

8) When replacing the side bearing, remove the bearing race from the side retainer using ST.
ST 398527700 PULLER ASSY



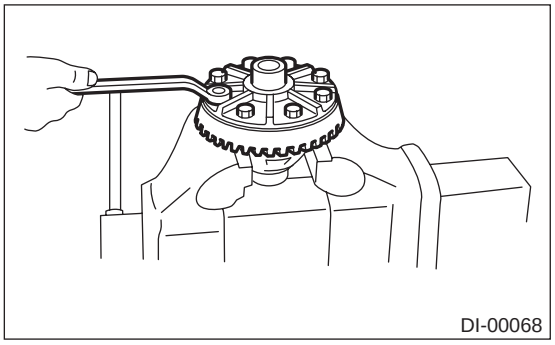
9) Using the ST, remove the bearing cone.

NOTE:
• Do not attempt to disassemble the parts unless necessary.
• Set the puller so that its claws catch the edge of the bearing cone.
• Never mix up the RH and LH bearing races and cones.
ST 18759AA000 PULLER ASSY

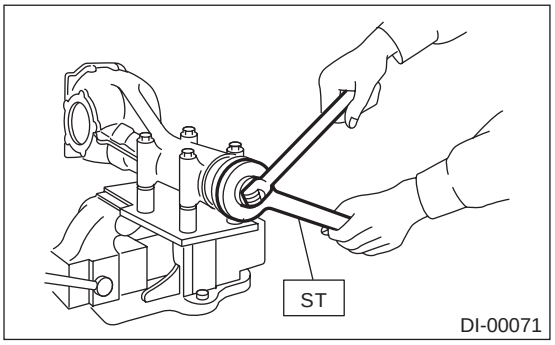


10) Remove the hypoid driven gear by loosening hypoid driven gear bolts.

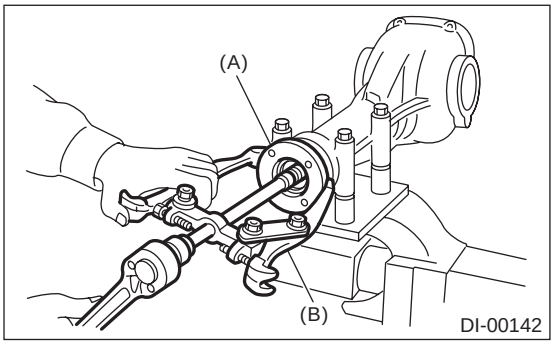
NOTE:
Do not disassemble the differential case assembly.



11) Remove the self-locking nut while securing the companion flange with ST.
ST 18633AA000 WRENCH COMPL



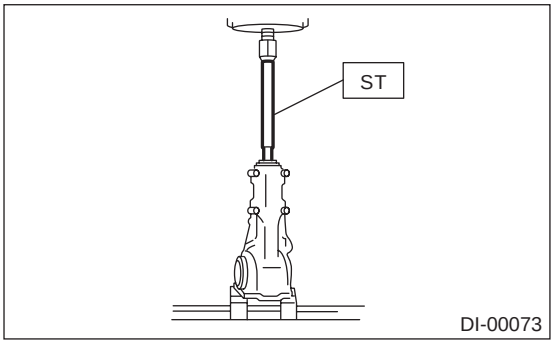
12) Extract the companion flange with a puller.



(A) Companion flange
(B) Puller

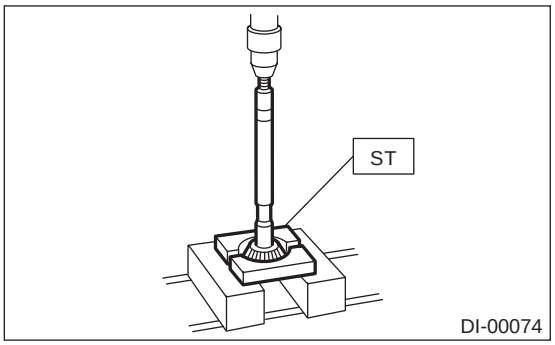
13) Press the end of drive pinion shaft by using the ST, and remove the drive pinion shaft, rear bearing cone, preload adjusting spacer and washer.

NOTE:
Hold the drive pinion so as not to drop it.
ST 398467700 DRIFT

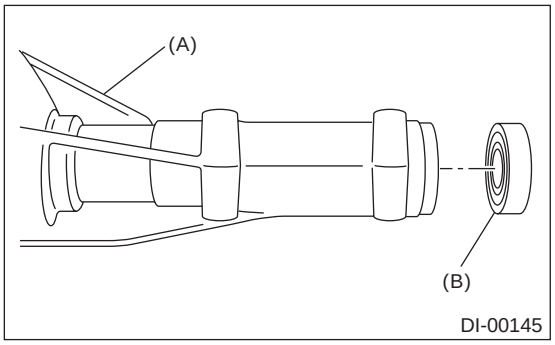


14) Remove the rear bearing cone from drive pinion by supporting the cone with ST.

NOTE:
Place the replacer so that its center-recessed side faces the bearing cone.
ST 398517700 REPLACER

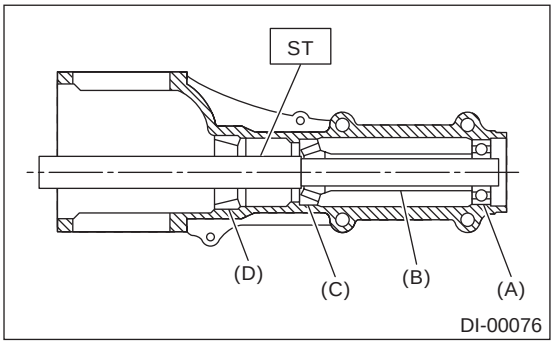


15) Remove the front oil seal from differential carrier using ST.
ST 398527700 PULLER ASSY



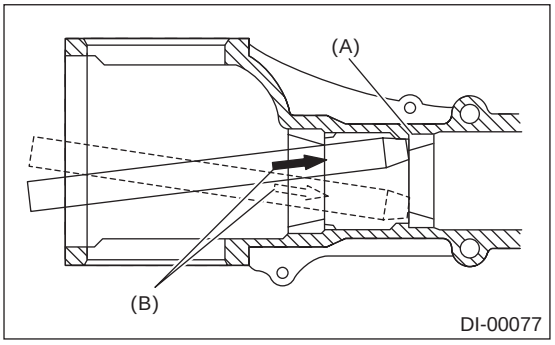
(A) Differential carrier
(B) Front oil seal

16) Remove the pilot bearing together with the front bearing cone and spacer using the ST.
ST 398467700 DRIFT



(A) Pilot bearing
(B) Spacer
(C) Front bearing
(D) Rear bearing race

17) When replacing the bearings, use a brass bar to tap out the front bearing race and rear bearing race in this order to remove them.

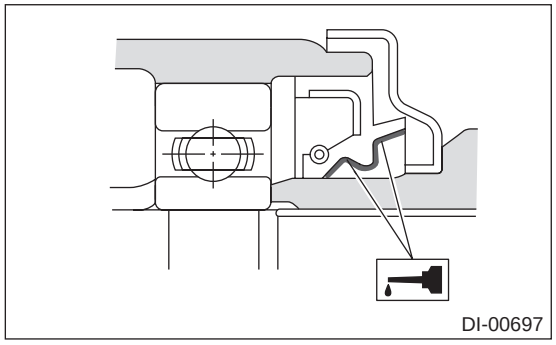


(A) 2 cutout portions along diagonal lines
(B) Tap alternately with brass bar.

D: ASSEMBLY

1. T-TYPE (B1, B2)

NOTE:
- Assemble in the reverse order of disassembly.
- Check and adjust each part during assembly.
- Keep the shims and washers in order, so that they are not improperly installed.
- Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
- Apply gear oil when installing the bearings and thrust washers.
- Be careful not to mix up the RH and LH bearing races.
- Use a new O-ring and gasket.
- Replace the oil seal with a new part at every disassembly.
- Be careful not to mix up the rear differential side oil seal RH and LH.
- Apply differential gear oil to the lips when installing the oil seal.

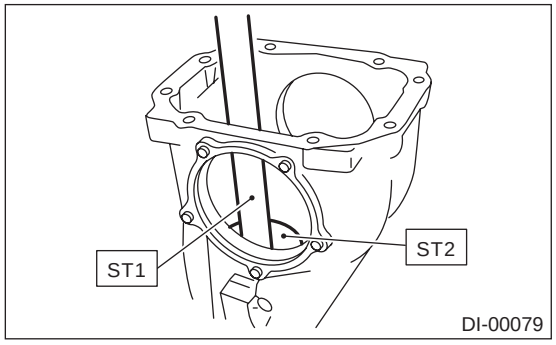


1) Adjusting preload for front and rear bearings

NOTE:
Adjust the bearing preload between front and rear bearings with preload adjusting spacer and washer. Pinion height adjusting washer is not affected by this adjustment. The adjustment must not be carried out with oil seal inserted.

(1) Install the rear bearing race into the differential carrier using ST1 and ST2.

ST1 398477701 HANDLE
ST2 398477703 DRIFT 2



(2) Install the front bearing race to the differential carrier using ST1 and ST2.

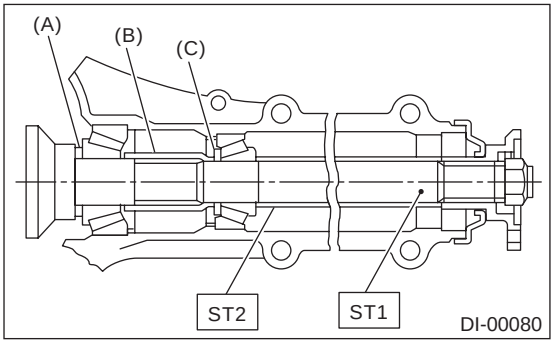
NOTE:
Use a new front bearing race.
ST1 398477701 HANDLE
ST2 398477702 DRIFT

(3) Insert ST1 into the differential carrier with the pinion height adjusting washer and rear bearing cone fitted onto it.

NOTE:
- At this time, install a provisionally selected or previously used pinion height adjusting washer. Measure and record the thickness.
- If tooth contact (drive pinion, hypoid driven gear) is normal in the inspection before disassembling, verify that the washer is not deformed, and then reuse the used washer.

(4) Install the preload adjusting spacer and washer, front bearing cone, ST2, companion flange and self-locking nut.

NOTE:
Use new front bearing cone.
ST1 398507702 DUMMY SHAFT
ST2 398507703 DUMMY COLLAR

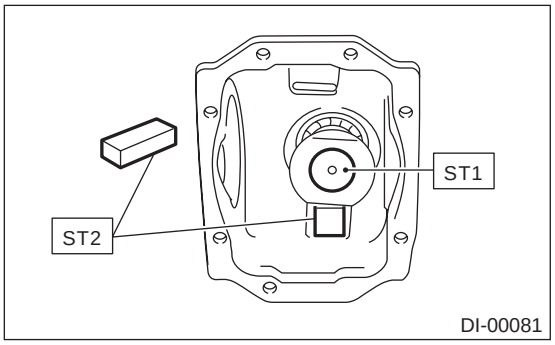


(A) Pinion height adjusting washer
(B) Preload adjusting spacer
(C) Preload adjusting washer

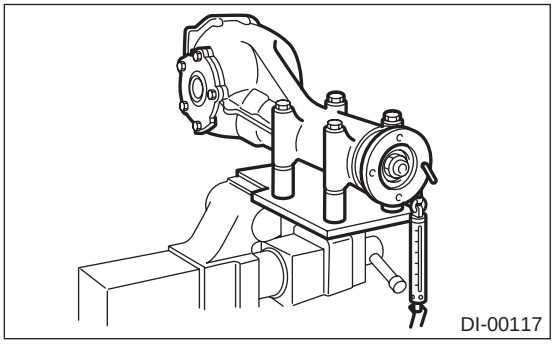
(5) Turn the ST1 by hand to smooth the bearing, and tighten the self-locking nut while measuring the initial load or initial torque with a spring scale or torque wrench. Select the preload adjusting washer and spacer so that the specified preload is obtained when nut is tightened to the specified torque.

NOTE:
• Measure the preload in direction of tangent to the flange.
• Be careful not to give excessive preload.
• When tightening the self-locking nut, lock ST1 with ST2 as shown in the figure.
ST1 398507702 DUMMY SHAFT
ST2 398507704 BLOCK

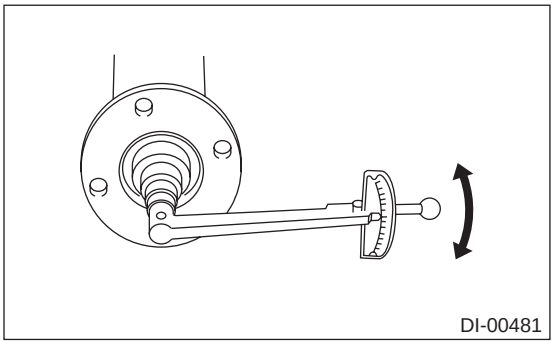
Tightening torque:
181.5 N·m (18.5 kgf-m, 133.9 ft-lb)



Initial load:
18.1 — 38.8 N (1.8 — 4.0 kgf, 4.1 — 8.7 lbf)



Initial torque:
0.69 — 1.47 N·m (0.07 — 0.15 kgf-m, 0.51 — 1.08 ft-lb)



Preload adjusting washer	
Part No.	Thickness mm (in)
383705200	2.59 (0.1020)
383715200	2.57 (0.1012)
383725200	2.55 (0.1004)
383735200	2.53 (0.0996)

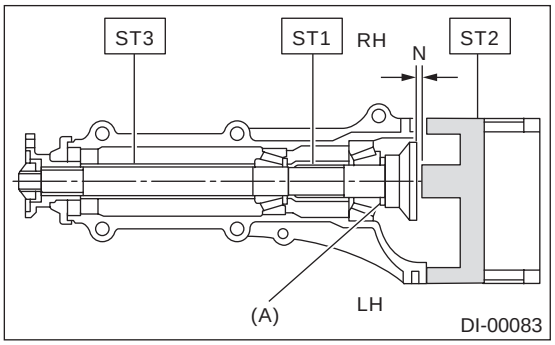
383835200	2.33 (0.0917)
383845200	2.31 (0.0909)

Preload adjusting spacer	
Part No.	Length mm (in)
383695201	56.2 (2.213)
383695202	56.4 (2.220)
383695203	56.6 (2.228)
383695204	56.8 (2.236)
383695205	57.0 (2.244)
383695206	57.2 (2.252)

2) Adjusting drive pinion height:
Adjust the drive pinion height with pinion height adjusting washer installed between the rear bearing cone and the back of pinion gear.

(1) Attach the ST2.

ST1 398507702 DUMMY SHAFT
ST2 398507701 DIFFERENTIAL CARRIER GAUGE
ST3 398507703 DUMMY COLLAR

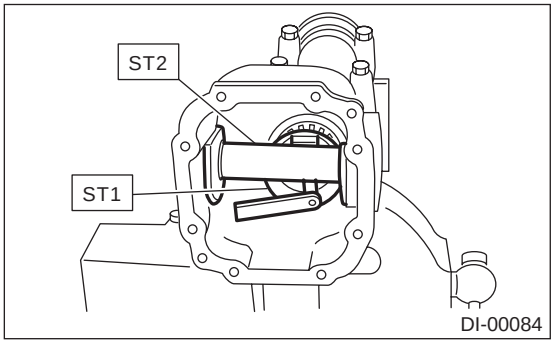


(A) Pinion height adjusting washer

(2) Measure the clearance “N” between the end of ST2 and the end surface of ST1 by using a thickness gauge.

NOTE:
Make sure there is no clearance between the differential carrier and ST2.

ST1 398507702 DUMMY SHAFT
ST2 398507701 DIFFERENTIAL CARRIER GAUGE



(3) Obtain the thickness of pinion height adjusting washer to be inserted from the following formula, and replace the temporarily installed washer with this one.
T = To + N – (H × 0.01) – 0.20 mm (0.0079 in)

T	Thickness of pinion height adjusting washer mm (in)	
To	Thickness of washer temporarily inserted mm (in)	
N	Clearance of thickness gauge mm (in)	
H	Figure marked on drive pinion head	
Memo:		

(Example of calculation)
To = 3.39 mm (0.1335 in)
N = 0.24 mm (0.0094 in)
H = + 1
T = 3.39 mm (0.1335 in) + 0.24 mm (0.0094 in) – 0.01 mm (0.0004 in) – 0.20 mm (0.0079 in) = 3.42 mm (0.1346 in)
Result: Thickness = 3.42 mm (0.1346 in)
Therefore use washer 383605200.

Pinion height adjusting washer	
Part No.	Thickness mm (in)
383495200	3.09 (0.1217)
383505200	3.12 (0.1228)

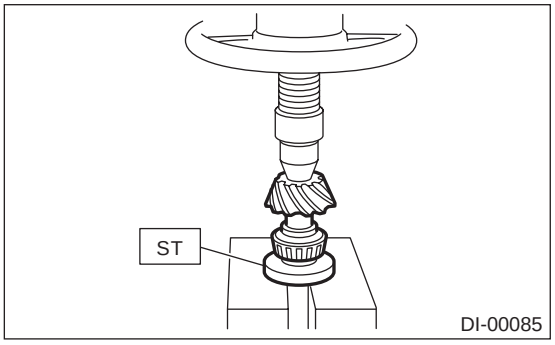
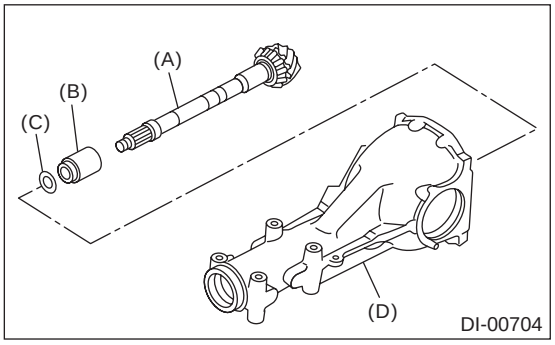
383675200	3.63 (0.1429)
383685200	3.66 (0.1441)

3) Install the selected pinion height adjusting washer on drive pinion, and press the rear bearing cone into position with ST.
ST 398177700 INSTALLER

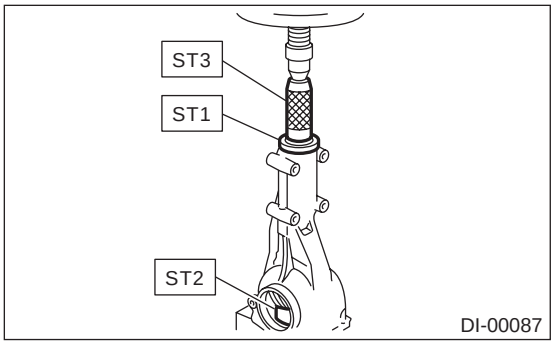


4) Insert the drive pinion into the differential carrier, and install the preselected preload adjusting spacer and washer.



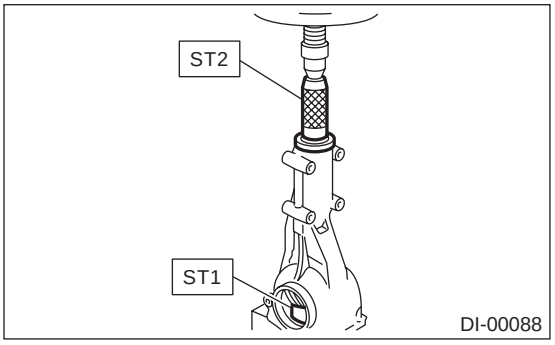
(A) Drive pinion
(B) Preload adjusting spacer
(C) Preload adjusting washer
(D) Differential carrier

5) Press-fit the front bearing cone with ST1, ST2 and ST3.
ST1 398507703 DUMMY COLLAR
ST2 399780104 WEIGHT
ST3 899580100 INSTALLER



6) Insert the spacer, then press-fit the pilot bearing with ST1 and ST2.

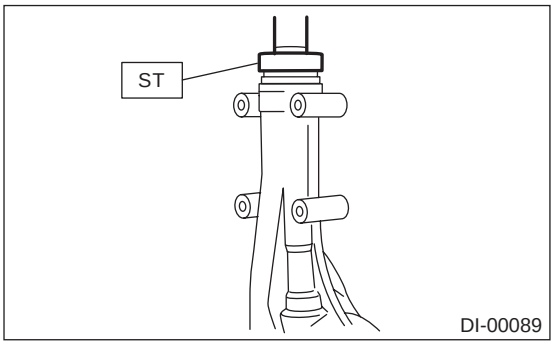
NOTE:
Use a new pilot bearing.
ST1 399780104 WEIGHT
ST2 899580100 INSTALLER



7) Using the ST, install the oil seal.

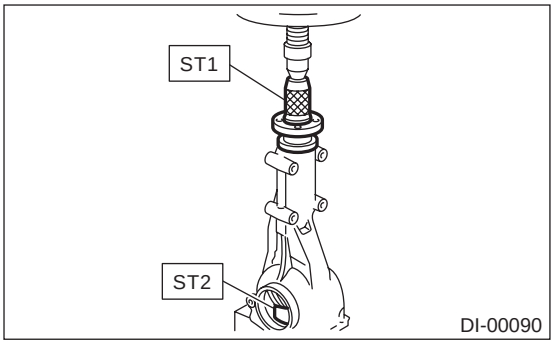
NOTE:
- Use a new oil seal.
- Press-fit until the oil seal end comes 1 mm (0.04 in) inward from end of carrier.
- Apply differential gear oil to the oil seal lips.

ST 498447120 INSTALLER



8) Press-fit the companion flange with ST1 and ST2.

NOTE:
Be careful not to damage the bearing.
ST1 899874100 INSTALLER
ST2 399780104 WEIGHT



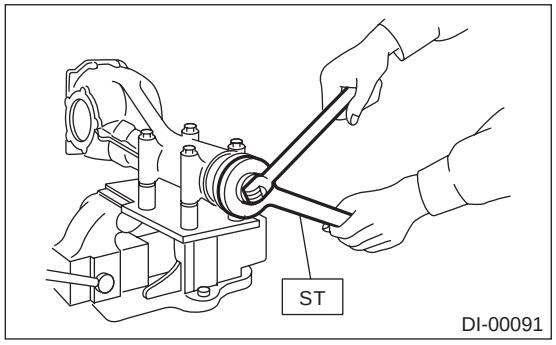
9) Apply seal material on the drive pinion shaft thread and new self-locking nut seat.

Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent

10) Attach the new self-locking nut and use the ST to fix the companion flange in place, then tighten the self-locking nut.

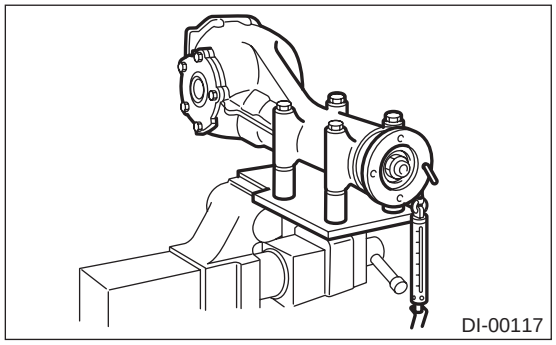
Tightening torque:
181.5 N·m (18.5 kgf-m, 133.9 ft-lb)

ST 498427200 FLANGE WRENCH

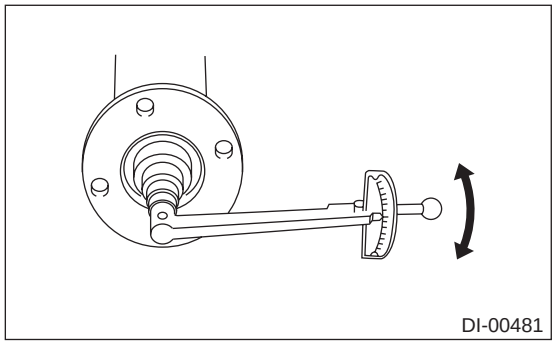


11) Check the initial torque or initial load.

Initial load:
18.1 — 38.8 N (1.8 — 4.0 kgf, 4.1 — 8.7 lbf)



Initial torque:
0.69 — 1.47 N·m (0.07 — 0.15 kgf-m, 0.51 — 1.08 ft-lb)



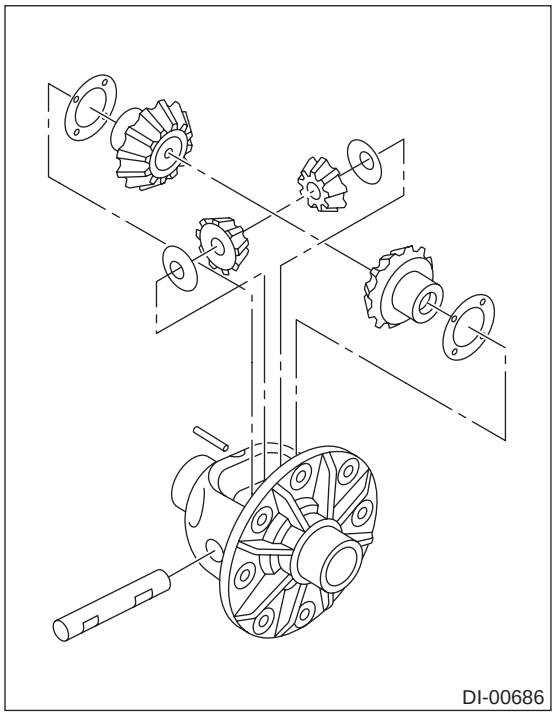
12) Assembling differential case

(1) Install the side gears and pinion mate gears, with their side gear thrust washers, pinion mate gear washer, and pinion mate shaft, into the differential case.

NOTE:

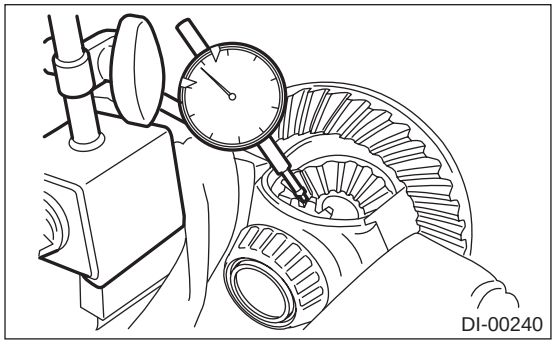
• Apply gear oil on both sides of the washer and on the pinion mate shaft before installing.

• Insert the pinion mate shaft into the differential case by aligning the pin holes.



(2) Measure the side gear backlash.

Side gear backlash:
0.10 — 0.20 mm (0.004 — 0.008 in)



(3) Adjust the backlash as specified by selecting side gear thrust washer.

Side gear thrust washer	
Part No.	Thickness mm (in)
383445201	0.75 — 0.80 (0.0295 — 0.0315)
383445202	0.80 — 0.85 (0.0315 — 0.0335)
383445203	0.85 — 0.90 (0.0335 — 0.0354)

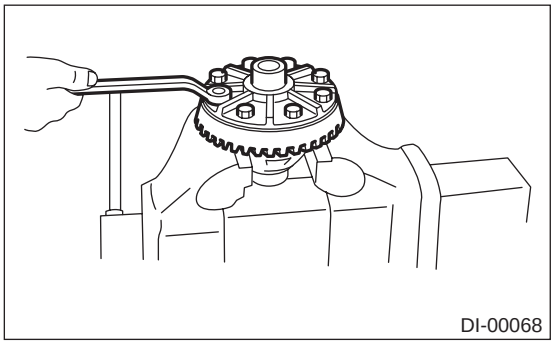
(4) Check the condition of rotation after applying oil to the gear tooth surfaces and washer surfaces.
(5) Drive the pinion shaft lock pin into the differential case.

NOTE:
Use a new pinion shaft lock pin.
ST 899904100 STRAIGHT PIN REMOVER
13) Install the driven gear to the differential case.

NOTE:
• Before installing bolts, apply seal material to bolt threads.

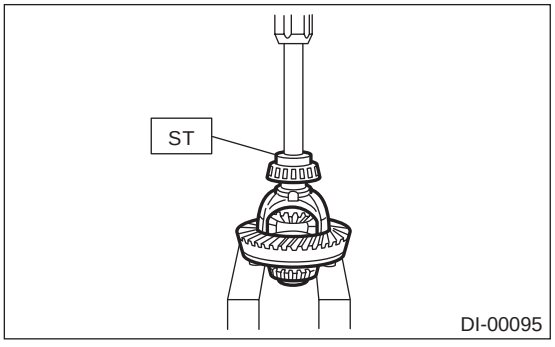
Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent
• Make sure there is no clearance between the differential case and driven gear.
• Tighten opposing bolts in order.

Tightening torque:
103 N·m (10.5 kgf-m, 76.0 ft-lb)



DI-00068

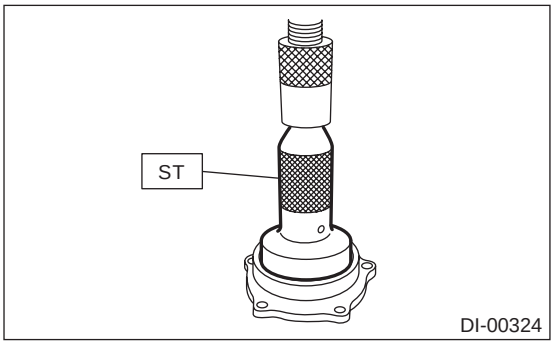
14) Using the ST, press-fit the side bearing to the differential case.
ST 398487700 DRIFT



DI-00095

15) Using the ST, press-fit the side bearing outer race to the side retainer.

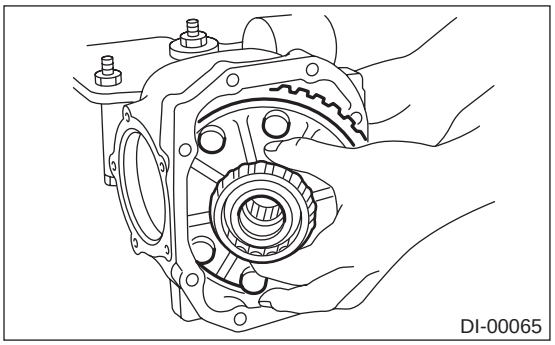
CAUTION:
Make sure that the bearing outer races and cones are properly assembled.
ST 398417700 DRIFT



DI-00324

16) Side retainer shim adjustment
(1) The hypoid driven gear backlash and side bearing preload can be adjusted by the side retainer shim thickness.
(2) Install the differential case assembly into differential carrier in the reverse order of disassembly.

NOTE:
Be careful not to hit the teeth of hypoid driven gear against the differential carrier.



DI-00065

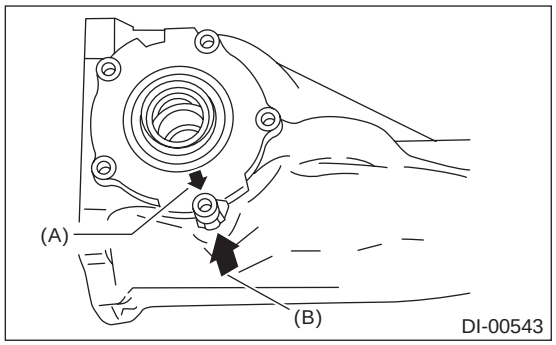
(3) Install the side retainer shim.

NOTE:
• Be careful not to mix up the side retainer shim RH and LH.
• Replace broken or corroded side retainer shims with a new part of the same thickness.

Side retainer shim	
Part No.	Thickness mm (in)
383475201	0.20 (0.0079)
383475202	0.25 (0.0098)
383475203	0.30 (0.0118)
383475204	0.40 (0.0157)
383475205	0.50 (0.0197)

(4) Align the arrow mark on the differential carrier with the arrow mark on the side retainer when installing the side retainer.

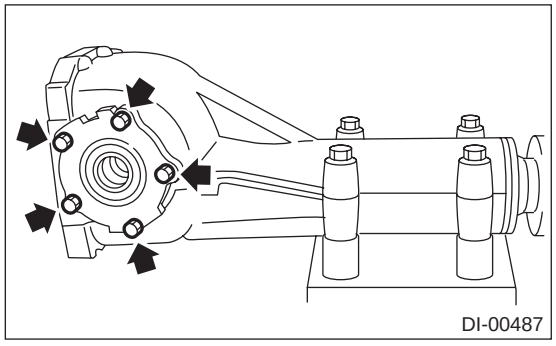
NOTE:
Be careful that the side bearing outer race is not damaged by the bearing roller.



(A) Arrow mark (on the side retainer)
(B) Arrow mark (on the differential carrier)

(5) Tighten the side retainer bolts.

Tightening torque:
10.5 N·m (1.1 kgf-m, 7.7 ft-lb)

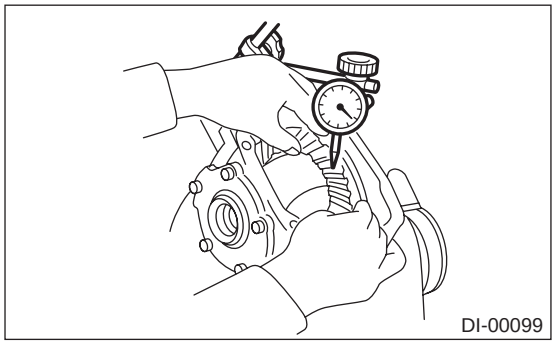


(6) Measure the hypoid driven gear to drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge. If the backlash is outside the standard range, adjust the side retainer shim by the following method.

• When backlash is less than 0.1 mm (0.004 in):
Reduce the thickness of shim on the back side of the hypoid driven gear and increase the thickness of shims on the teeth side of the hypoid driven gear.

• When backlash exceeds 0.2 mm (0.008 in):
Increase the thickness of shim on the back side of the hypoid driven gear and reduce the thickness of shims on the teeth side of the hypoid driven gear.

Backlash:
0.10 — 0.20 mm (0.004 — 0.008 in)

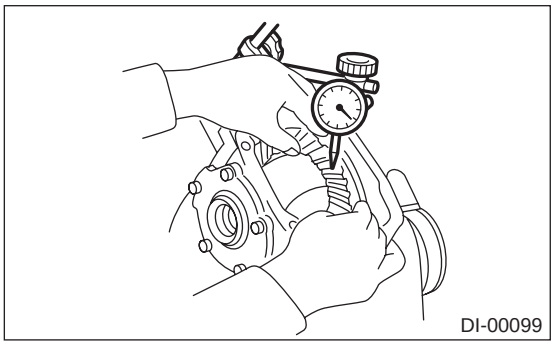


(7) Measure the total preload of the drive pinion. If the total preload is outside the specification range, adjust the thickness of side retainer shims, increasing/reducing both shims by an even amount at a time.

Total preload:
20.7 — 54.4 N (2.1 — 5.5 kgf, 4.7 — 12.2 lbf)

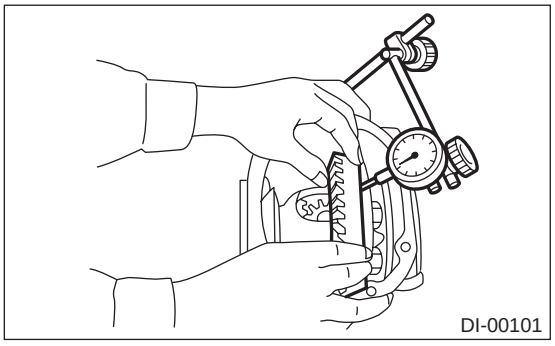
17) Recheck the hypoid driven gear to drive pinion backlash.

Backlash:
0.10 — 0.20 mm (0.004 — 0.008 in)



18) Check pinion and hypoid driven gears rotate smoothly and make sure of the hypoid driven gear runout on its back surface. If the hypoid driven gear runout on its back surface exceeds the specification, check for any foreign objects between the hypoid driven gear and differential case, and for any deformation of the differential case or hypoid driven gear.

Hypoid driven gear back surface runout:
0.05 mm (0.002 in)

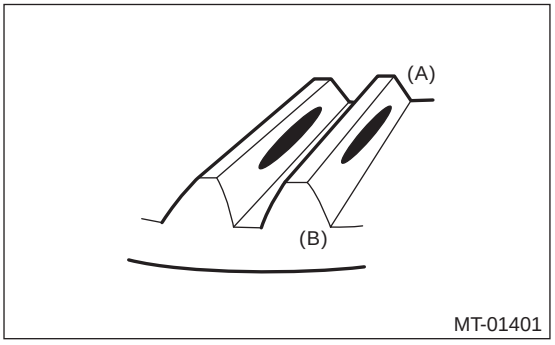


19) Check and adjustment of the tooth contact of hypoid driven gear and drive pinion
(1) Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.
(2) When the contact pattern is not correct, re-adjust.

NOTE:
Be sure to wipe off the lead-free red dye completely after the adjustment is completed.

- Correct tooth contact

Check item: Tooth contact pattern is slightly shifted toward toe side under no-load rotation. (When driving, it moves towards the heel side.)

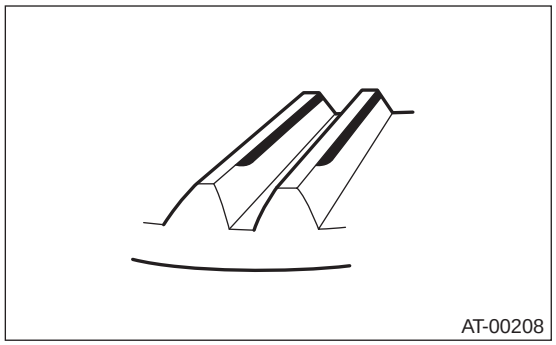


(A) Toe side
(B) Heel side

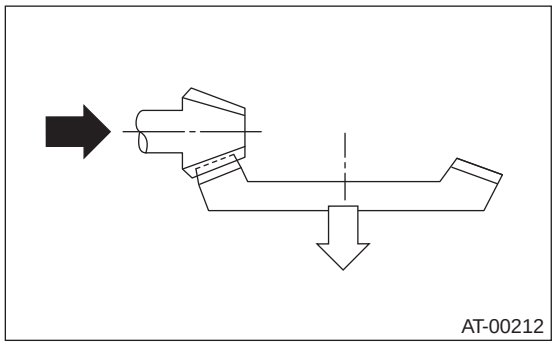
• Face contact

Check item: Backlash is too large.

Contact pattern



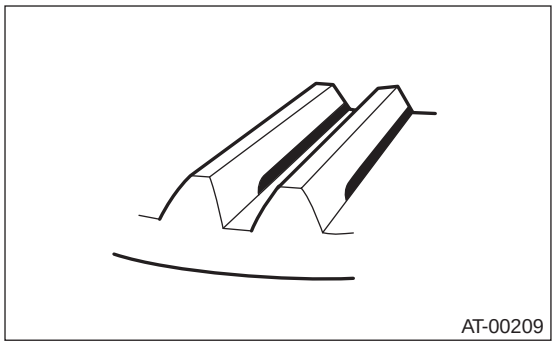
Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.



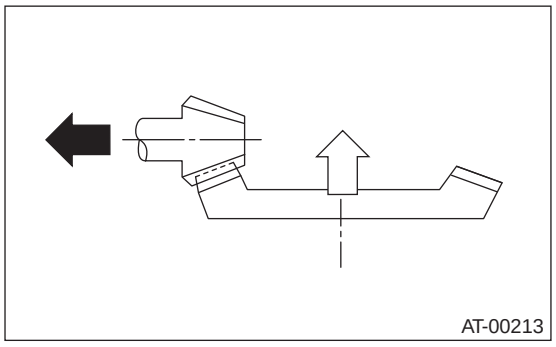
• Flank contact

Check item: Backlash is too small.

Contact pattern

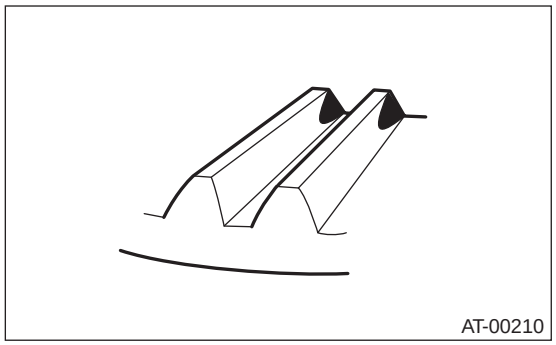


Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.

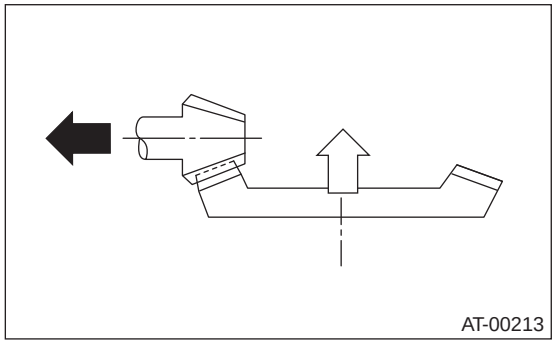


- Toe contact (inside contact)

Check item: Teeth contact area is too small.
Contact pattern

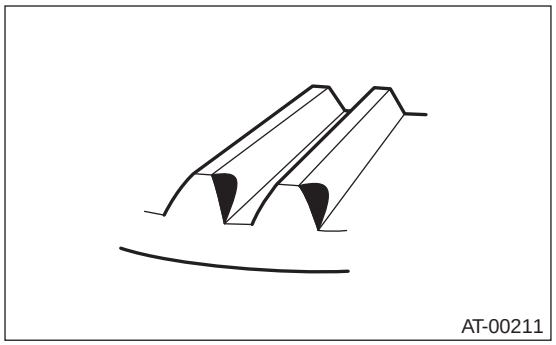


Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.

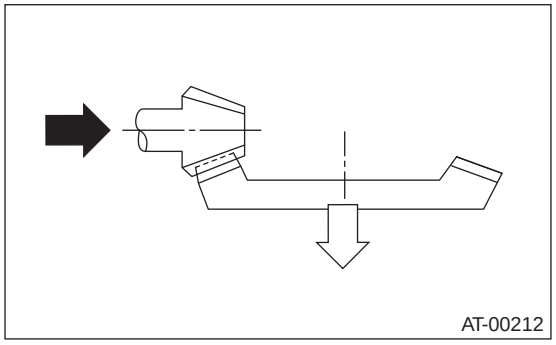


- Heel contact (outside end contact)

Check item: Teeth contact area is too small.
Contact pattern



Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.



20) If proper tooth contact is not obtained, readjust the drive pinion height by changing the RH and LH side retainer shims and the hypoid gear backlash.
(1) Drive pinion height

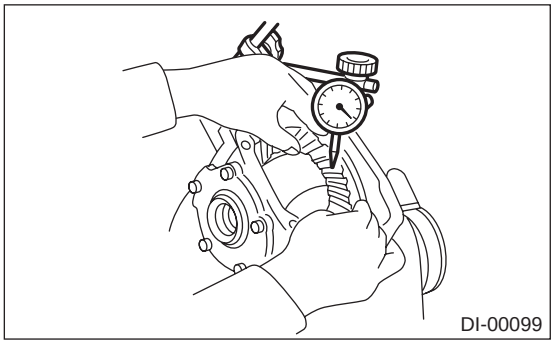
Memo:		

(2) Hypoid gear backlash

Backlash:
0.10 — 0.20 mm (0.004 — 0.008 in)

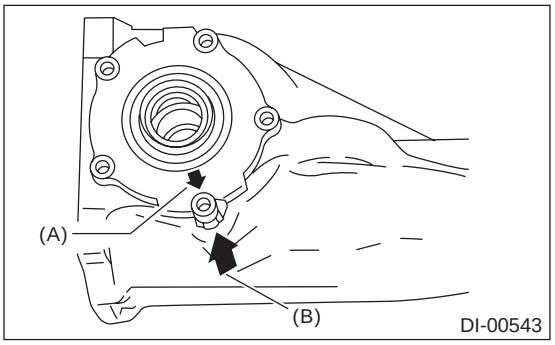


21) Remove the RH and LH side retainers.
22) Install the O-ring to left and right side retainers.

NOTE:
Use new O-rings.

23) Install the oil seal to the side retainers on both sides. <Ref. to DI-55, REPLACEMENT, Rear Differential Side Oil Seal.>

24) Align the arrow mark on the differential carrier with the arrow mark on the side retainer when installing the side retainer.

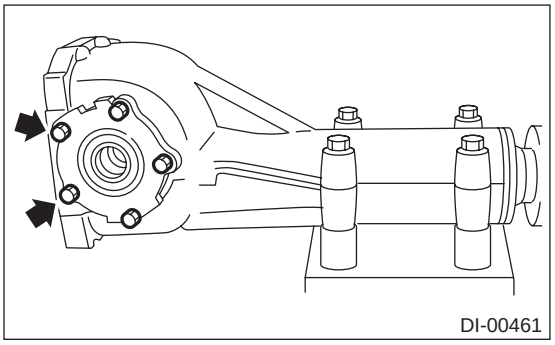


(A) Arrow mark (on the side retainer)
(B) Arrow mark (on the differential carrier)

25) Apply liquid gasket to the bolts indicated by arrows, and tighten the bolts.

Liquid gasket:
THREE BOND 1110F, THREE BOND 1110B or equivalent

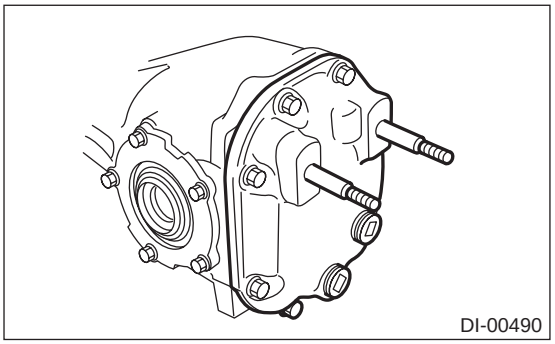
Tightening torque:
10.5 N·m (1.1 kgf-m, 7.7 ft-lb)



26) Install the gasket and rear cover, and tighten the bolts to specified torque.

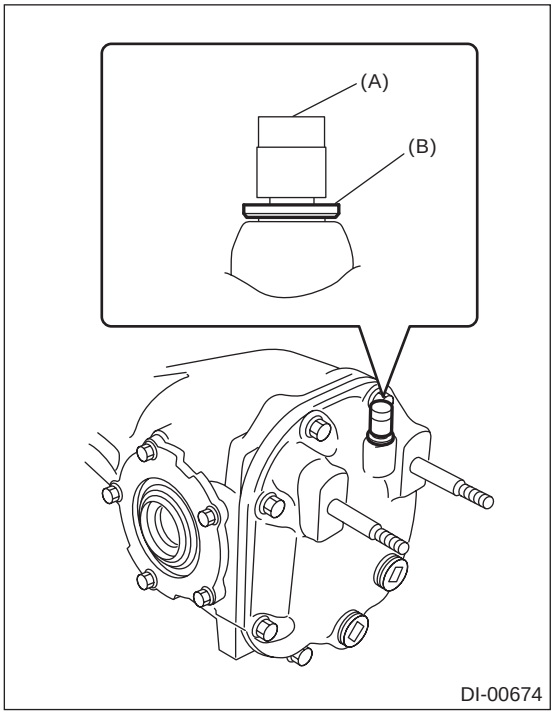
NOTE:
Use a new gasket.

Tightening torque:
29.5 N·m (3.0 kgf-m, 21.8 ft-lb)



27) Install the air breather cap.

NOTE:
When installing the air breather cap, do not tap section (A). Be sure to tap section (B) to install.



28) Install the drain plug.

NOTE:
Apply liquid gasket to the drain plug.

Liquid gasket:
THREE BOND 1105 (Part No. 004403010) or equivalent

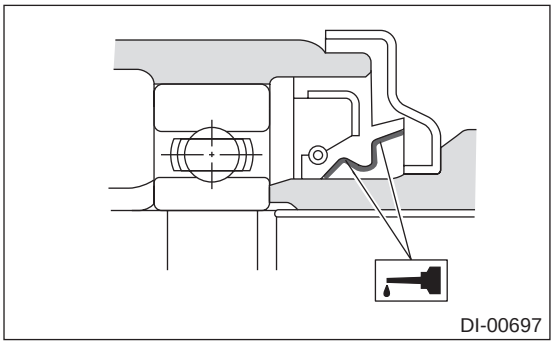
Tightening torque:
49 N·m (5.0 kgf-m, 36.1 ft-lb)

29) Install the filler plug.

NOTE:
After installing the rear differential assembly to the vehicle, fill the gear oil, then apply liquid gasket, and tighten to the specified torque. <Ref. to DI-16, REPLACEMENT, Differential Gear Oil.>

2. T-TYPE (H5)

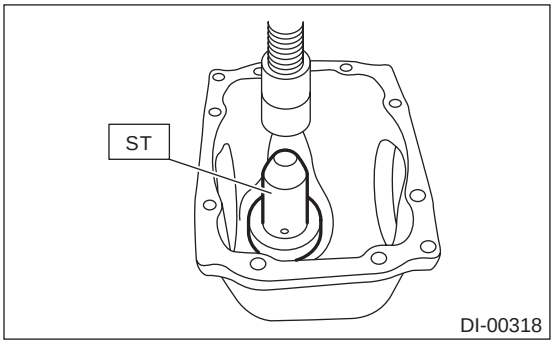
NOTE:
- Assemble in the reverse order of disassembly.
- Check and adjust each part during assembly.
- Keep the shims and washers in order, so that they are not improperly installed.
- Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
- Apply gear oil when installing the bearings and thrust washers.
- Be careful not to mix up the RH and LH bearing races.
- Use a new O-ring and gasket.
- Replace the oil seal with a new part at every disassembly.
- Be careful not to mix up the oil seal RH and LH.
- Apply differential gear oil to the lips when installing the oil seal.



1) Adjusting preload for front and rear bearings

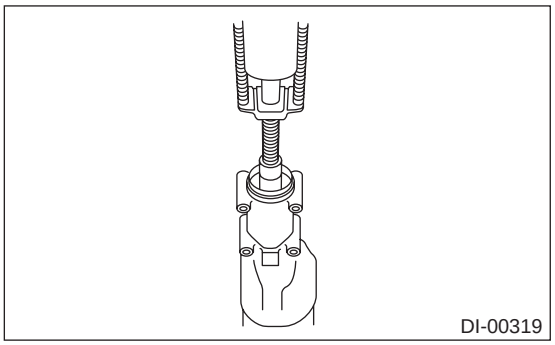
NOTE:
Adjust the bearing preload between front and rear bearings with spacer and washer. Pinion height adjusting washer is not affected by this adjustment. The adjustment must not be carried out with oil seal inserted.

2) Using the ST, press-fit the rear bearing race to the differential carrier.
ST 398417700 DRIFT

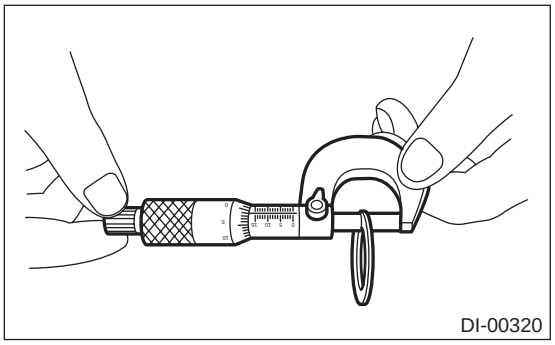


3) Using the ST, press-fit the front bearing race to the differential carrier.

NOTE:
Use a new front bearing race.
ST 398477702 DRIFT

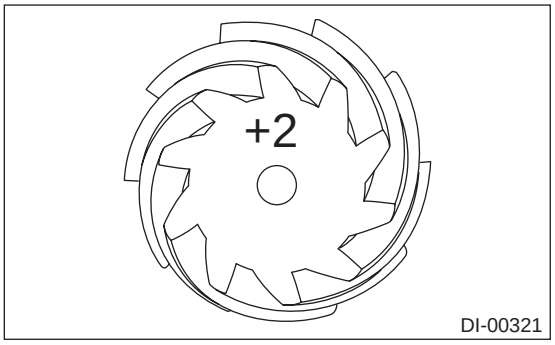


4) Selecting the pinion height adjusting washer
(1) Measure the thickness of the inserted pinion height adjusting washer.



(2) Read the markings on both the current drive pinion gear and the new pinion gear.

NOTE:
No marking means 0 (zero).



(3) Calculate the thickness of pinion height adjusting washer to be inserted from the following formula, and replace the installed washer with a new washer of the calculated thickness.
T = T1 + (T2 × 0.01 – T3 × 0.01)

T	Thickness of selected pinion height adjusting washer mm (in)	
T1	Thickness of inserted pinion height adjusting washer mm (in)	
T2	Number of the installed drive pinion gear marking mm (in)	
T3	Number of new drive pinion gear marking mm (in)	
Memo:		

(Example of calculation)
T1 = 3.30 mm (0.1299 in), T2 = +2, T3 = –1
T = 3.30 mm (0.1299 in) + {(2 × 0.01) – (–1 × 0.01)} = 3.33 mm (0.1311 in)
Result: Thickness = 3.33 mm (0.1311 in)
The washer with part number 38336AA310 is used.

Pinion height adjusting washer	
Part No.	Thickness mm (in)
38336AA230	3.09 (0.1217)
38336AA240	3.12 (0.1228)
38336AA250	3.15 (0.1240)

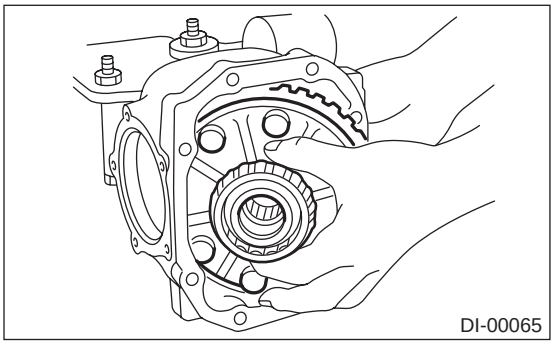
DI-00324

23) Side retainer shim adjustment
(1) The hypoid driven gear backlash and side bearing preload can be adjusted by the side retainer shim thickness.
(2) Install the differential case assembly into differential carrier in the reverse order of disassembly.

NOTE:
Be careful not to hit the teeth of hypoid driven gear against the differential carrier.



DI-00065

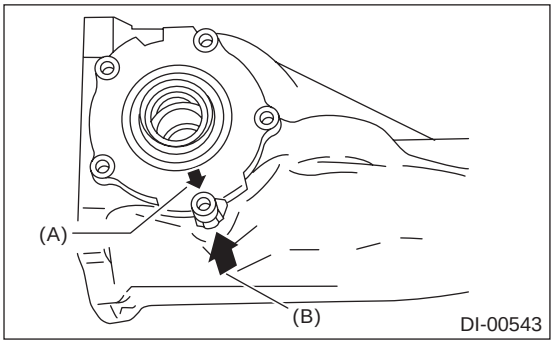
(3) Install the side retainer shim.

NOTE:
• Be careful not to mix up the side retainer shim RH and LH.
• Replace broken or corroded side retainer shims with a new part of the same thickness.

Side retainer shim	
Part No.	Thickness mm (in)
383475201	0.20 (0.0079)
383475202	0.25 (0.0098)
383475203	0.30 (0.0118)
383475204	0.40 (0.0157)
383475205	0.50 (0.0197)

(4) During installation, align the arrow mark on the differential carrier with the arrow mark on the side retainer when installing the side retainer.

NOTE:
Be careful that side bearing outer race is not damaged by the bearing roller.

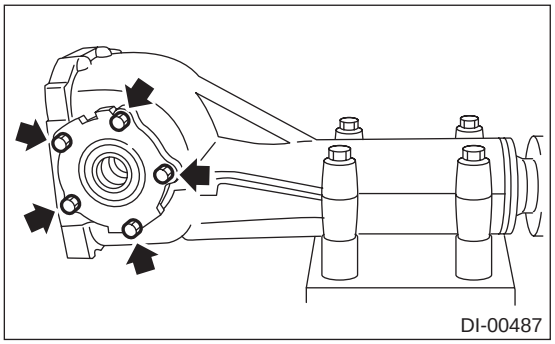


DI-00543

(A) Arrow mark (on the side retainer)
(B) Arrow mark (on the differential carrier)

(5) Tighten the side retainer bolts.

Tightening torque:
10.5 N·m (1.1 kgf-m, 7.7 ft-lb)



(6) Measure the hypoid driven gear to drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge. If the backlash is outside the standard range, adjust the side retainer shim by the following method.

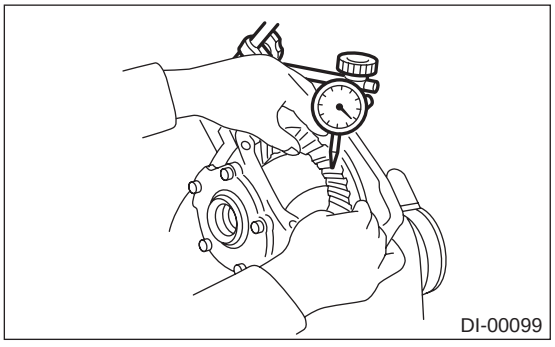
- **When backlash is less than 0.1 mm (0.004 in):**

Reduce the thickness of shim on the back side of the hypoid driven gear and increase the thickness of shims on the teeth side of the hypoid driven gear.

- **When backlash exceeds 0.2 mm (0.008 in):**

Increase the thickness of shim on the back side of the hypoid driven gear and reduce the thickness of shims on the teeth side of the hypoid driven gear.

Backlash:
0.10 — 0.20 mm (0.004 — 0.008 in)

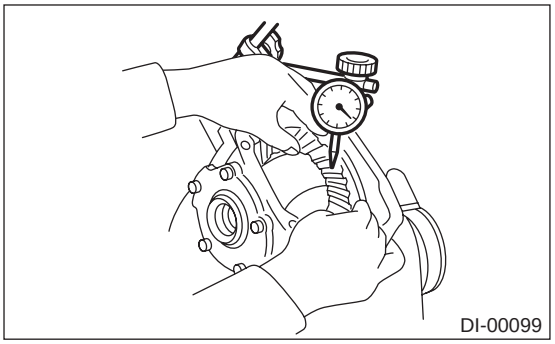


(7) Measure the total preload of the drive pinion. If the total preload is not within specification, adjust the thickness of side retainer shims, increasing/reducing both shims by an even amount on both sides.

Total preload:
26.5 — 53 N (2.7 — 5.4 kgf, 6.0 — 11.9 lbf)

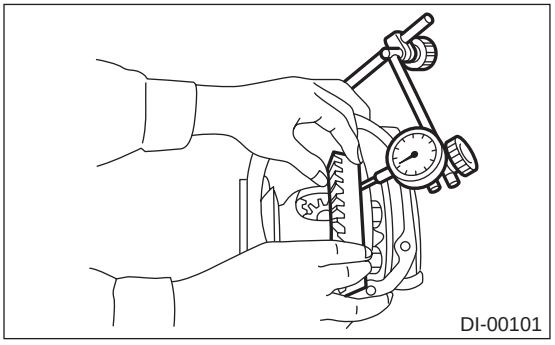
24) Recheck the hypoid driven gear to drive pinion backlash.

Backlash:
0.10 — 0.20 mm (0.004 — 0.008 in)



25) Check drive pinion and hypoid driven gears rotate smoothly and make sure of the hypoid driven gear runout on its back surface. If the runout on the back side of the hypoid driven gear exceeds the specification, check for any foreign material between the hypoid driven gear and differential case, and for any deformation of the case or gear.

Hypoid driven gear back surface runout:
0.05 mm (0.002 in)



26) Checking and adjusting the tooth contact of hypoid driven gear

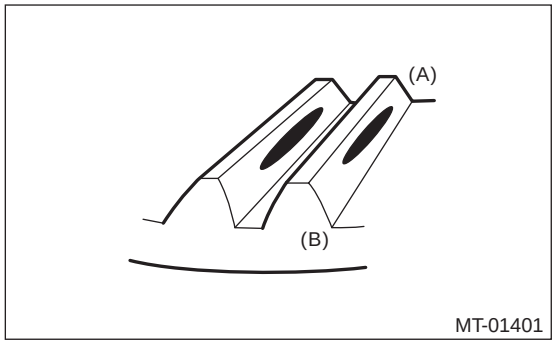
(1) Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.

(2) When the contact pattern is not correct, readjust.

NOTE:
Be sure to wipe off the lead-free red dye completely after the adjustment is completed.

- Correct tooth contact

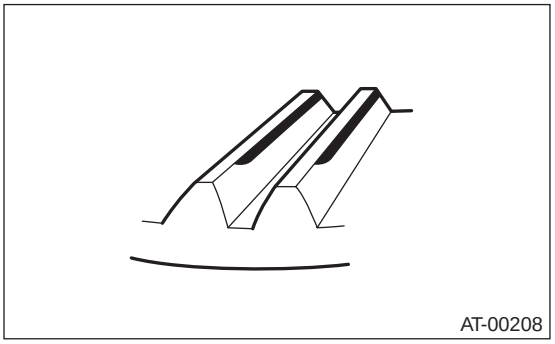
Check item: Tooth contact pattern is slightly shifted toward toe side under no-load rotation. (When driving, it moves towards the heel side.)



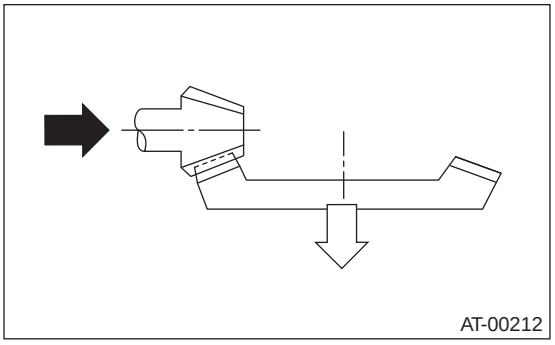
(A) Toe side
(B) Heel side

- Face contact

Check item: Backlash is too large.
Contact pattern



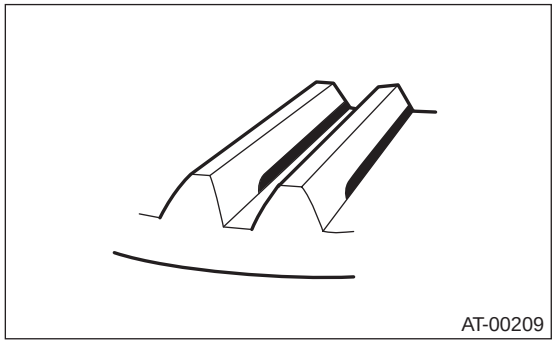
Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.



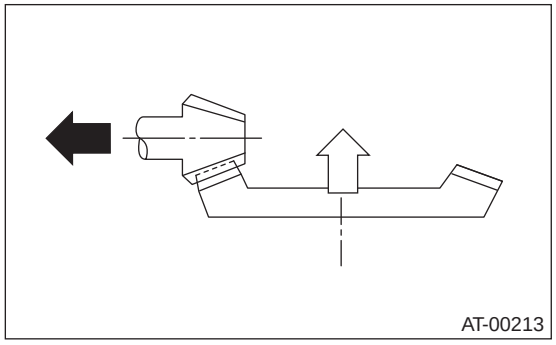
- Flank contact

Check item: Backlash is too small.

Contact pattern



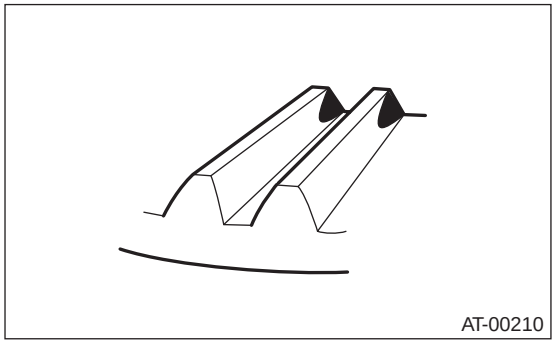
Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.



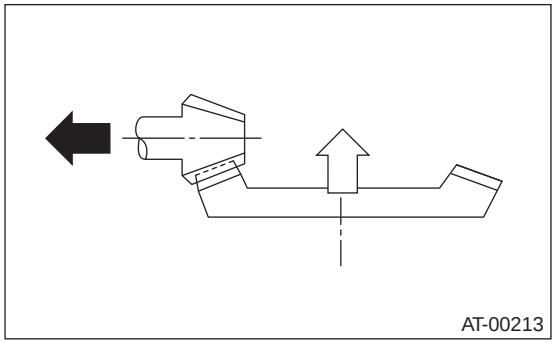
- Toe contact (inside contact)

Check item: Teeth contact area is too small.

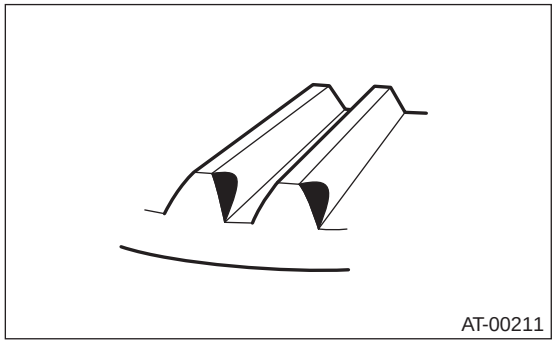
Contact pattern



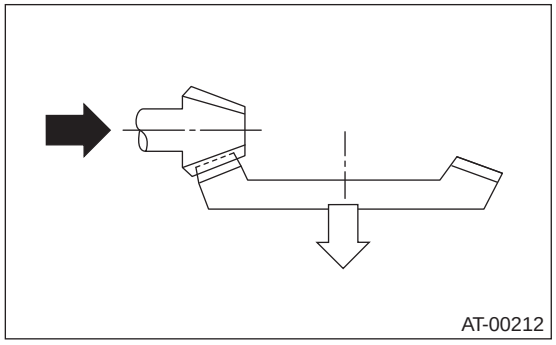
Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.



• Heel contact (outside end contact)
Check item: Teeth contact area is too small.
Contact pattern

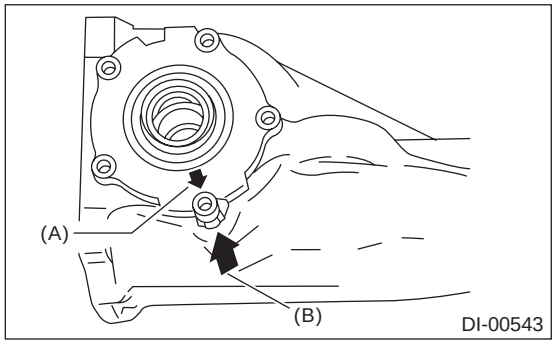


Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.



27) If proper tooth contact is not obtained, readjust the drive pinion height by changing the RH and LH side retainer shims and the hypoid gear backlash.
28) Remove the RH and LH side retainers.
29) Install the O-ring to left and right side retainers.

NOTE:
Use new O-rings.
30) Install the oil seal to the side retainers on both sides. <Ref. to DI-55, REPLACEMENT, Rear Differential Side Oil Seal.>
31) Align the arrow mark on the differential carrier with the arrow mark on the side retainer during installation.

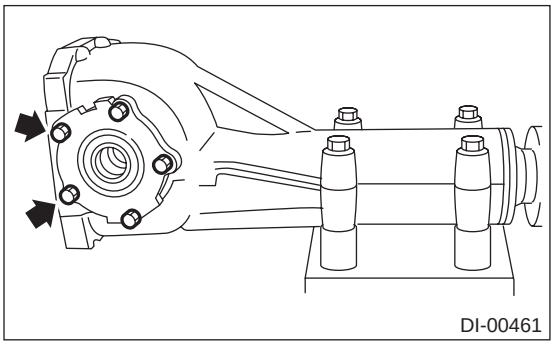


(A) Arrow mark (on the side retainer)
(B) Arrow mark (on the differential carrier)

32) Apply liquid gasket to the bolts indicated by arrows, and tighten the side retainer bolt.

Liquid gasket:
THREE BOND 1110F (Part No. K0879Y0021), THREE BOND 1110B or equivalent

Tightening torque:
10.5 N·m (1.1 kgf-m, 7.7 ft-lb)

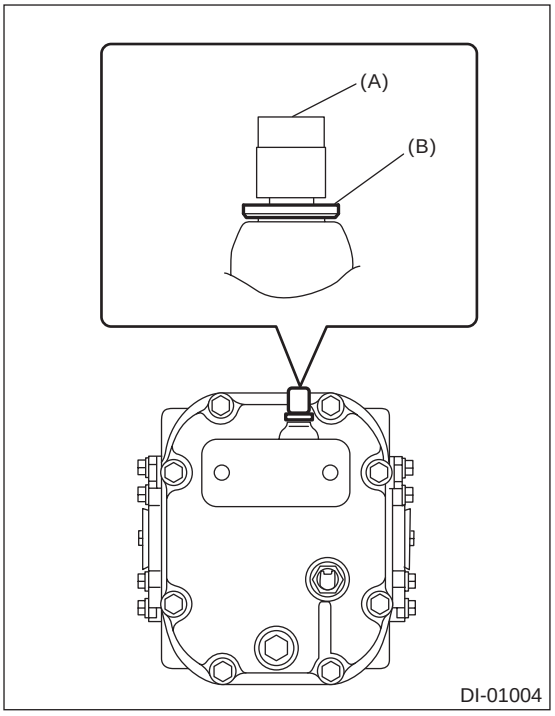


33) Install the gasket and rear cover, and tighten the bolts to specified torque.

NOTE:
Use a new gasket.

Tightening torque:
44 N·m (4.5 kgf-m, 32.5 ft-lb)
34) Install the air breather cap.

NOTE:
When installing the air breather cap, do not tap section (A). Be sure to tap section (B) to install.



35) Install the drain plug.

NOTE:
Use a new gasket.

Tightening torque:
60 N·m (6.1 kg-m, 44.3 ft-lb)

36) Install the oil temperature sensor.

NOTE:
• Install the oil temperature sensor and the adapter as a unit.
• After installing the rear differential assembly to the vehicle, fill the gear oil, then use a new gasket, and tighten to the specified torque. <Ref. to DI-16, REPLACEMENT, Differential Gear Oil.>

E: INSPECTION

Wash all the disassembled parts clean, and examine them for wear, damage and other defects. Repair or replace the defective parts as necessary.

1) Hypoid driven gear and drive pinion
• If there is evidently an abnormal tooth contact, find out the cause and adjust until the teeth contact correctly. Replace the gear if there is an excessive worn or an incapable adjustment.
• If crack, cutout or seizure is found, replace the parts as a set. Slight damage of some teeth can be corrected by oil stone or the like.

2) Side gear and pinion mate gear (T-type (B1, B2))
• Replace if cracks, scoring or other defects are evident on the tooth surface.
• Replace if thrust washer contact surface is worn or scored. Slight damages of the surface can be corrected by oil stones or equivalent.

3) Bearing
Replace if seizure, peeling, wear, rust, dragging during rotation, noise or other defect is evident.

4) Thrust washer of side gear and pinion mate gear (T-type (B1, B2))
Replace if seized, flawed, abnormally worn or having other defects.

5) Oil seal
Replace if deformed or damaged, and at every disassembling.

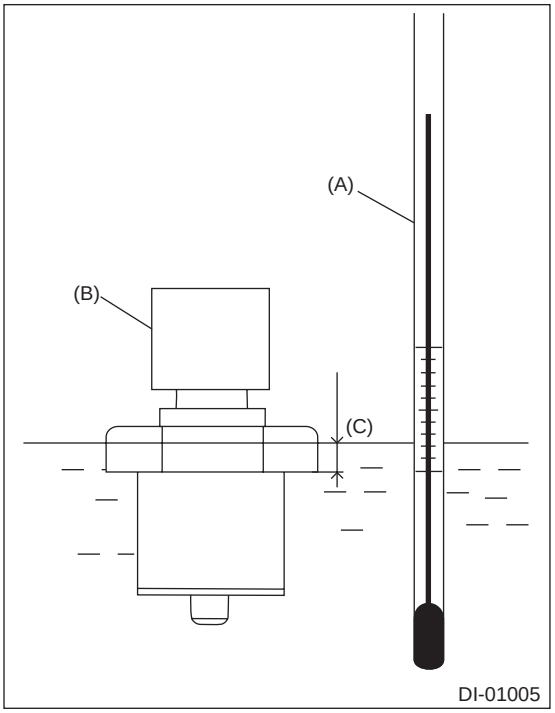
6) Differential carrier
Replace if the bearing bores are worn or damaged.

7) Differential case
Replace if sliding surfaces are abnormally worn, burned, or cracked.

8) Companion flange
Replace if the oil seal lip contact surface shows cracking.

9) Rear differential oil temperature sensor (T-type (H5))
(1) Check that the rear differential oil temperature sensor has no deformation, cracks or other damages.
(2) Immerse the rear differential oil temperature sensor and a thermometer in water.

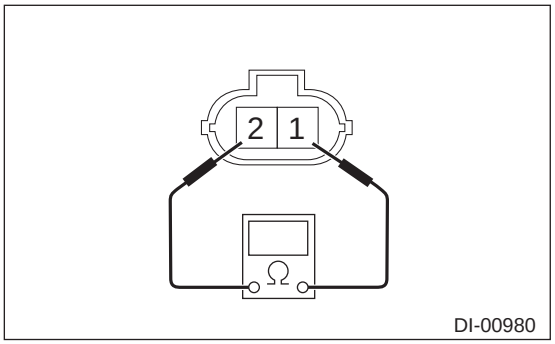
CAUTION:
Take care not to allow water to get into the rear differential oil temperature sensor connector. If water gets into the connector, completely remove any water inside.



(A) Thermometer
(B) Rear differential oil temperature sensor
(C) Hexagonal part height: To approx. $^{2}/_{3}$

(3) Raise water temperature gradually, measure the resistance between the rear differential oil temperature sensor terminals when the temperature is 20°C (68°F) and 80°C (176°F).

NOTE:
• Stir the water to make the temperature of the water as uniform as possible.
• Take the resistance value only after it becomes steady.
• After inspection, wipe off the water completely.



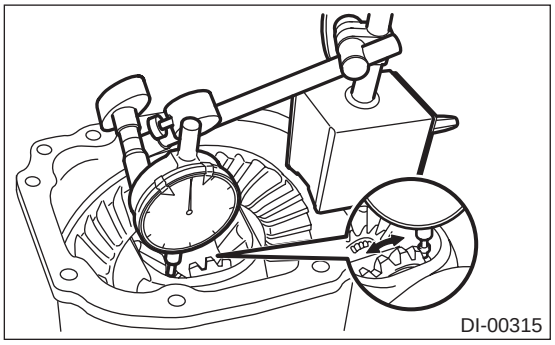
Water temperature	Terminal No.	Standard
20°C (68°F)	1 and 2	2.233 — 2.701 [kΩ]
80°C (176°F)		0.3122 — 0.3385 [kΩ]

1. SIDE GEAR BACKLASH (T-TYPE (B1, B2))

Using a dial gauge, check the backlash of side gear.

Side gear backlash:
0.10 — 0.20 mm (0.004 — 0.008 in)

If the side gear backlash is not within the specification, select the side gear thrust washer and adjust the side gear backlash as specified.

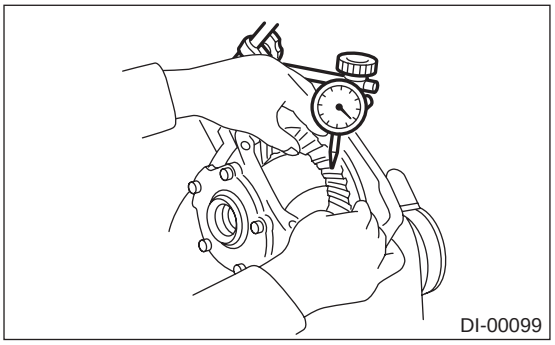


2. HYPOID DRIVEN GEAR BACKLASH

Using a dial gauge, check the backlash of hypoid driven gear.

Hypoid driven gear backlash:
0.10 — 0.20 mm (0.004 — 0.008 in)

If the hypoid driven gear backlash is outside the specification range, adjust the side bearing preload and repair if necessary.

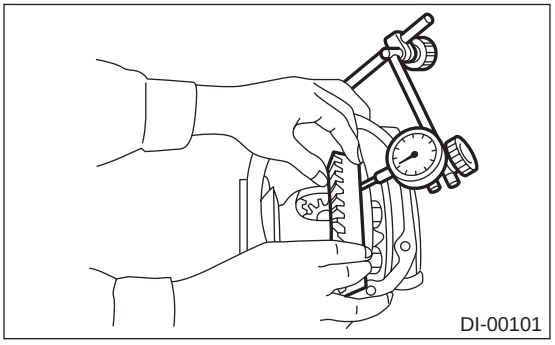


3. HYPOID DRIVEN GEAR RUNOUT ON ITS BACK SURFACE

Using a dial gauge, check the hypoid driven gear back surface runout.

Hypoid driven gear back surface runout:
0.05 mm (0.002 in)

If the hypoid driven gear runout on its back surface exceeds the limit, replace the hypoid driven gear.



4. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

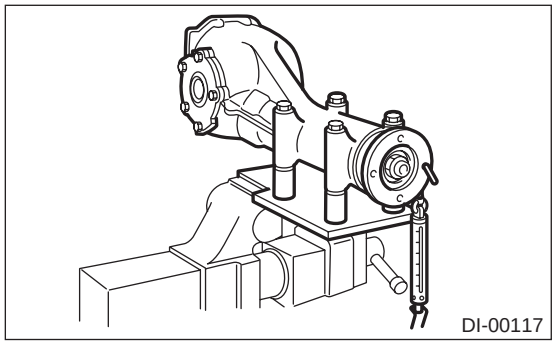
Inspect the tooth contact between the hypoid driven gear and drive pinion. <Ref. to DI-29, ASSEMBLY, Rear Differential (T-type).>

5. TOTAL PRELOAD

Using a spring scale, check the total preload.

Total preload:
T-type (B1, B2):
20.7 — 54.4 N (2.1 — 5.5 kgf, 4.7 — 12.2 lbf)
T-type (H5):
26.5 — 53 N (2.7 — 5.4 kgf, 6.0 — 11.9 lbf)

If the total preload is not within the specification, adjust the side retainer shim.

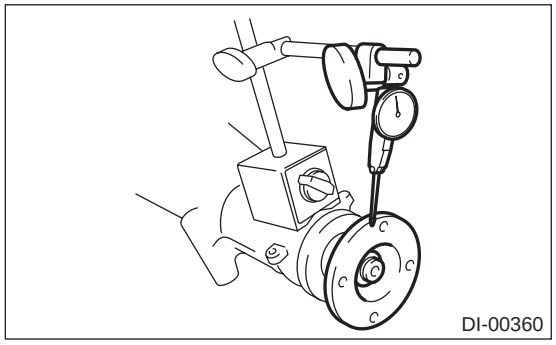


DI-00117

6. COMPANION FLANGE

1) If rust or dirt is attached to the companion flange, remove them.
2) Set a dial gauge at a companion flange surface (mating surface of propeller shaft and companion flange), and then measure the companion flange runout.

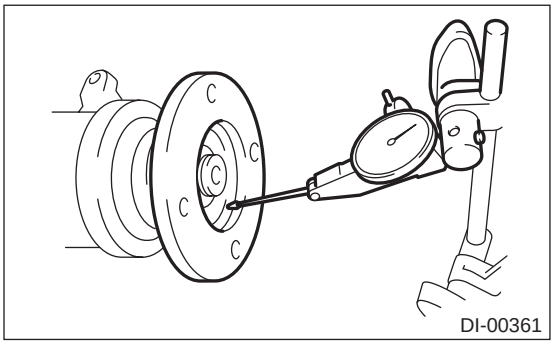
Limit of runout:
0.08 mm (0.003 in)



DI-00360

3) Set the gauge inside of the companion flange, and measure the runout.

Limit of runout:
0.08 mm (0.003 in)



DI-00361

4) If either runout exceeds the limit, move the phase of companion flange and drive pinion 90° each, and find the point where the runout is within the limit.
5) If the runout exceeds the limit after changing the phase, replace the companion flange and recheck the runout.
6) If the runout exceeds the limit after replacing the companion flange, the drive pinion may be assembled incorrectly or bearing is faulty.

F: ADJUSTMENT

1. SIDE GEAR BACKLASH (T-TYPE (B1, B2))

Adjust the side gear backlash. <Ref. to DI-29, ASSEMBLY, Rear Differential (T-type).>

2. HYPOID DRIVEN GEAR BACKLASH

Adjust hypoid driven gear backlash. <Ref. to DI-29, ASSEMBLY, Rear Differential (T-type).>

3. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Adjust the tooth contact between hypoid driven gear and drive pinion gear. <Ref. to DI-29, ASSEMBLY, Rear Differential (T-type).>

4. TOTAL PRELOAD

Adjust the side retainer shim. <Ref. to DI-29, ASSEMBLY, Rear Differential (T-type).>

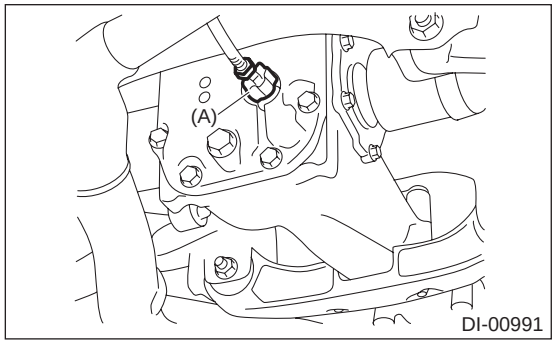
5. Rear Differential Front Oil Seal

A: INSPECTION

Make sure that there is no leakage from front oil seal portion. If there is any leakage replace the oil seal and inspect the propeller shaft.

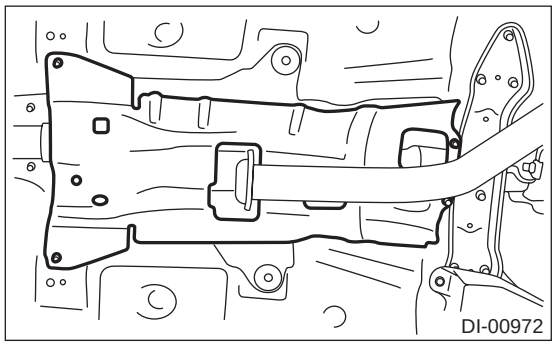
B: REPLACEMENT

1) Shift the select lever or gear shift lever to neutral.
2) Disconnect the ground cable from battery.
3) Release the parking brake.
4) Lift up the vehicle.
5) Disconnect the oil temperature sensor connector. (T-type (H5))

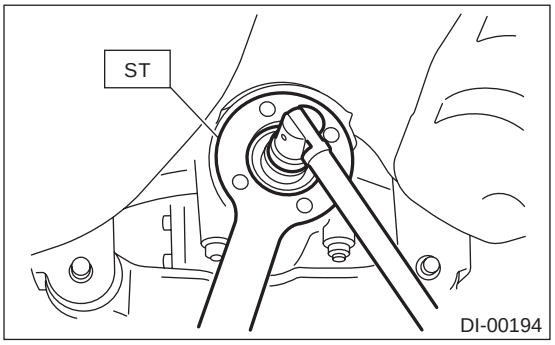


(A) Oil temperature sensor connector

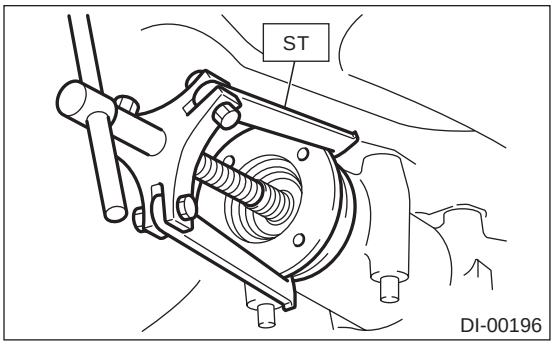
6) Drain differential gear oil. <Ref. to DI-16, REPLACEMENT, Differential Gear Oil.>
7) Remove the rear exhaust pipe.
• Except for STI model
<Ref. to EX(w/o STI)-48, REMOVAL, Rear Exhaust Pipe.>
• STI model
<Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.>
8) Remove the center exhaust cover.



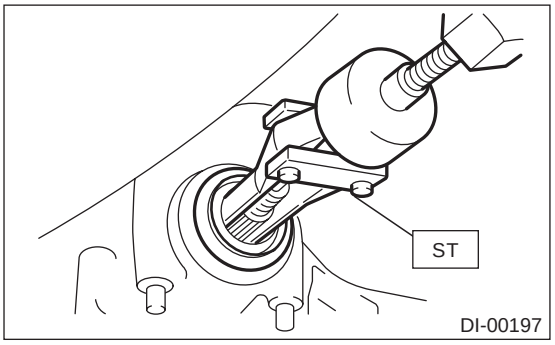
9) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
10) Check the initial torque and write it down.
11) Remove the self-locking nut while holding the companion flange with ST.
ST 498427200 FLANGE WRENCH



12) Extract the companion flange using the ST.
ST 399703600 PULLER ASSY

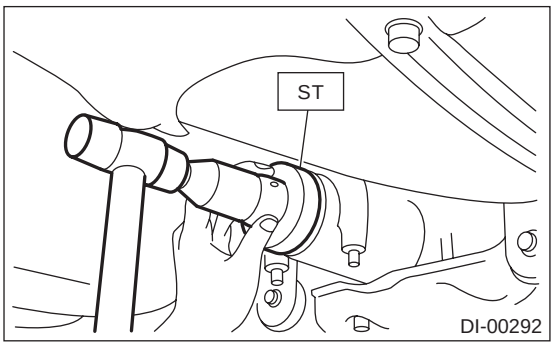


13) Remove the oil seal using ST or screwdriver.
ST 398527700 PULLER ASSY



14) Using the ST, install the oil seal.

NOTE:
• Use a new oil seal.
• Apply differential gear oil to the oil seal lips.
ST 498447120 INSTALLER



15) Install the companion flange.

NOTE:
Use a plastic hammer to install companion flange.

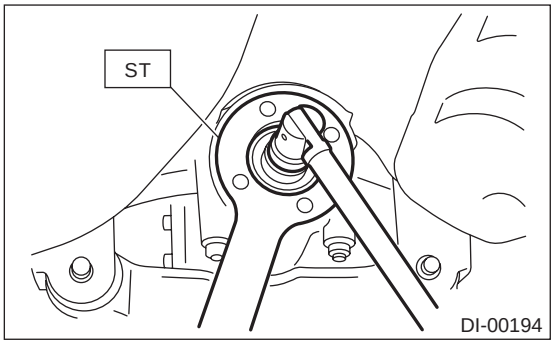
16) Tighten the self-locking nut to the specified torque so that the initial torque of companion flange becomes the same as that of before oil seal replacement.

NOTE:
- Use a new self-locking nut.
- Before installing the self-locking nut, apply the seal material to the threads of the drive pinion shaft and to the seating surface of the self-locking nut.

Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent

Tightening torque:
167 — 196 N·m (17.0 — 20.0 kgf-m, 123.2 — 144.6 ft-lb)

ST 498427200 FLANGE WRENCH



17) Hereafter, perform assembly in the reverse order of disassembly.

18) Fill differential gear oil. <Ref. to DI-16, REPLACEMENT, Differential Gear Oil.>

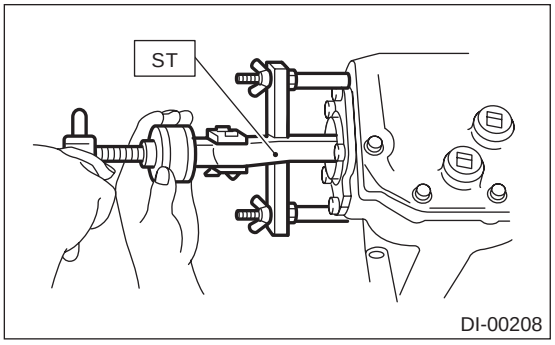
6. Rear Differential Side Oil Seal

A: INSPECTION

Check that there is no oil leakage from the side oil seal. If there is any leakage, replace the oil seal.

B: REPLACEMENT

1) Remove the rear differential. <Ref. to DI-19, REMOVAL, Rear Differential (T-type).>
2) Remove the rear differential side oil seal using a ST or screwdriver wrapped with vinyl tape to prevent the side retainer from scratching.
ST 398527700 PULLER ASSY

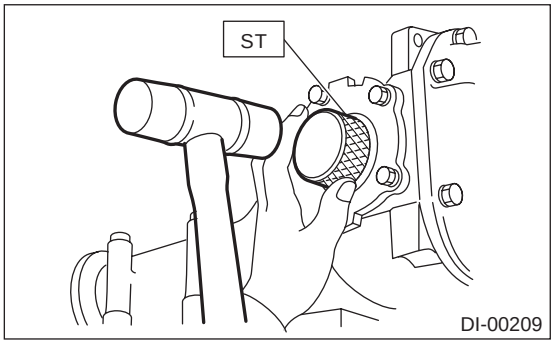


3) Using the ST, install the oil seal.

CAUTION:
Pay attention to the left and right of the oil seal.

NOTE:
- Use a new oil seal.
- Apply differential gear oil to the oil seal lips.

ST 398437700 DRIFT

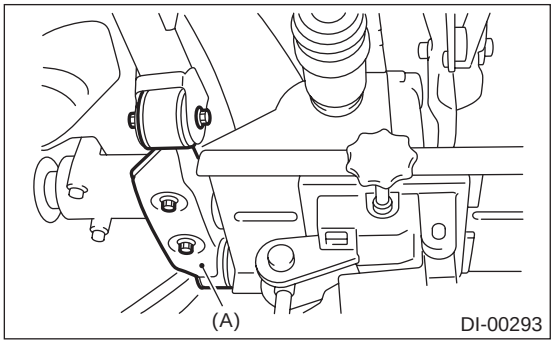


4) Install the rear differential. <Ref. to DI-21, INSTALLATION, Rear Differential (T-type).>

7. Rear Differential Front Member

A: REMOVAL

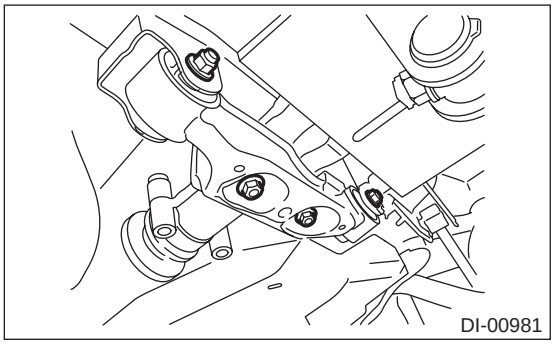
1) Disconnect the ground cable from battery.
2) Lift up the vehicle.
3) Support the rear differential using transmission jack, and then remove the rear differential front member.



(A) Rear differential front member

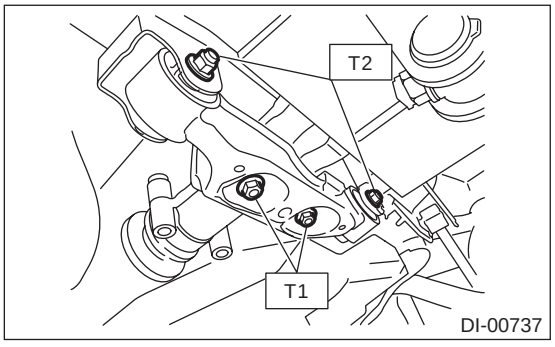
B: INSTALLATION

1) Install the rear differential front member, and temporarily attach and tighten a new self-locking nut.



2) Remove the transmission jack.
3) Tighten the self-locking nut.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 110 N·m (11.2 kgf-m, 81.1 ft-lb)



C: INSPECTION

1) Check the rear differential front member for damage, bend and corrosion.
If damage, bend or corrosion is excessive, replace the rear differential front member.
2) Check the bushings of rear differential front member for cracking, hardening and damage. If cracking, hardening or damage is excessive, replace rear differential front member.

8. Rear Differential Mount Bushing

A: INSPECTION

Check the rear differential mount bushing for cracks, hardening or damage. If cracking, hardening or damage is excessive, replace rear differential mount bushing.

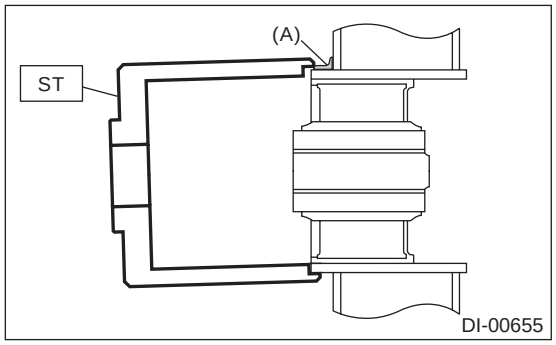
B: REPLACEMENT

CAUTION:
• Apply the molybdenum grease on the square thread of the ST (shaft and nut) before use.
• If there was so much rust in the rear differential mount bushing, remove the rust before starting work.

1) Remove the rear differential. <Ref. to DI-19, REMOVAL, Rear Differential (T-type).>

2) Fit the ST to the periphery of the sub frame cylinder, and make sure that the ST does not contact with welded spots or spatters.

ST 41399FG010 SPECIAL TOOL A



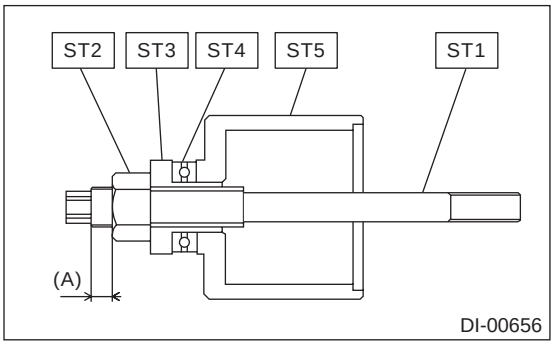
(A) Welded spot

3) If the ST contacts with welded spots or spatters, remove the excessive welds or spatters with sander or the equivalent so that the ST contacts the cylinder peripheral part.

CAUTION:
Performing the operation with the ST contacting with welded spots or spatters may break the ST. Be sure to remove excessive welds or spatters before the operation.

4) Set ST1, ST2, ST3, ST4 and ST5 as shown in the figure.

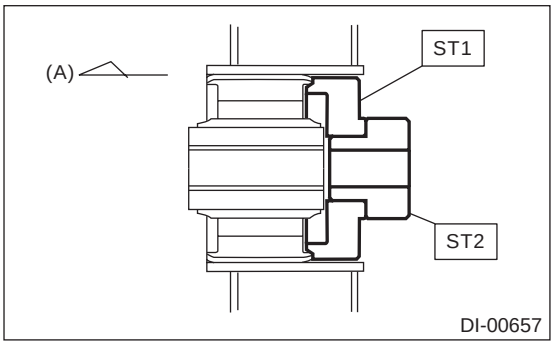
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG070 SPECIAL TOOL NUT
ST3 41399FG050 SPECIAL TOOL SLEEVE
ST4 41399FG080 SPECIAL TOOL BEARING
ST5 41399FG010 SPECIAL TOOL A



(A) 5 mm (0.2 in) or less

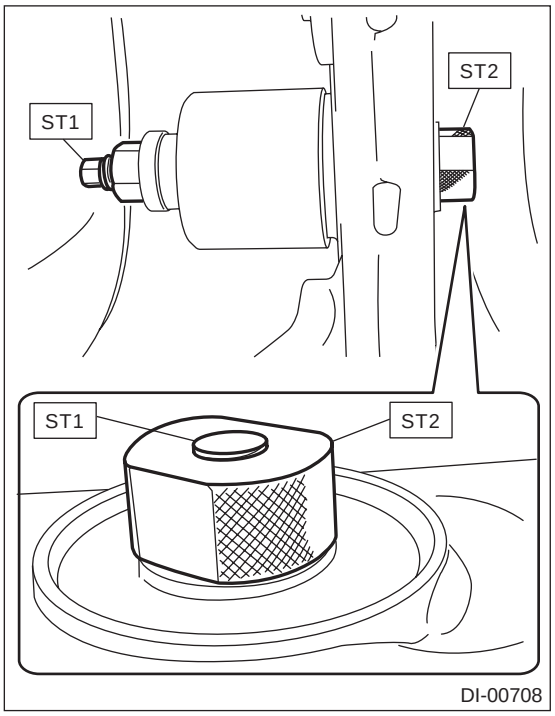
5) Fit and hold the ST1 and ST2 to the rear differential mount bushing from the rear side of vehicle.

ST1 41399FG031 SPECIAL TOOL C
ST2 41399FG061 SPECIAL TOOL RING



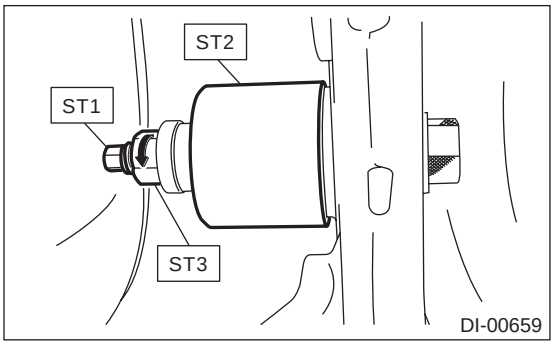
(A) Front side of vehicle

6) Insert the ST set in the step 4) through the rear differential mount bushing hole from the front side of vehicle, and screw in the ST1 by hand till the front end of ST1 comes out slightly from the rear end of ST2.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG061 SPECIAL TOOL RING



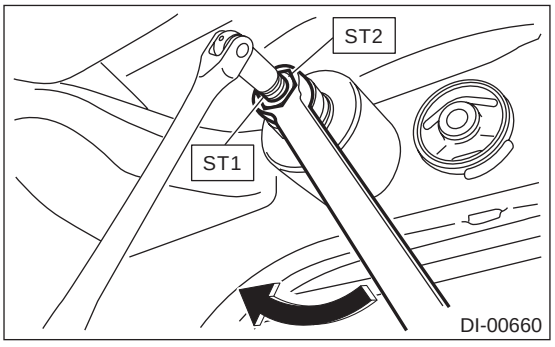
7) Hold the ST1 to prevent it from rotating, and screw in the ST3 by hand till there is no loose fit on the ST2.

CAUTION:
When setting the ST to the vehicle, always make sure that the ST2 fits the periphery of the sub frame cylinder and is not tilted.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG010 SPECIAL TOOL A
ST3 41399FG070 SPECIAL TOOL NUT



8) Hold the ST1 with a tool to prevent it from rotating, and screw in the ST2 to remove the rear differential mount bushing.

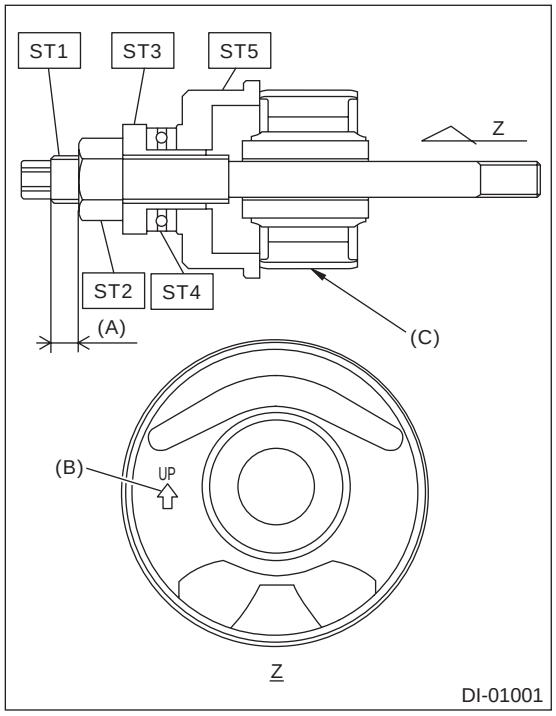
CAUTION:
• Rotation of ST1 will damage the screw at the rear end of rear differential mount bushing. Never rotate the ST1.
• If the ST starts to tilt while removing the rear differential mount bushing, stop the work and set the ST again.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG070 SPECIAL TOOL NUT



9) Set ST1, ST2, ST3, ST4, ST5 and rear differential mount bushing as shown in the figure.

NOTE:
- Set the ST2 nut near to the end of ST1 screw.
- Hold the rear differential mount bushing with the arrow marked side facing toward the rear of the vehicle, and set the rear differential mount bushing to the ST so that the arrow mark faces upward.
- Mark the bottom end of rear differential mount bushing to identify the installing direction.

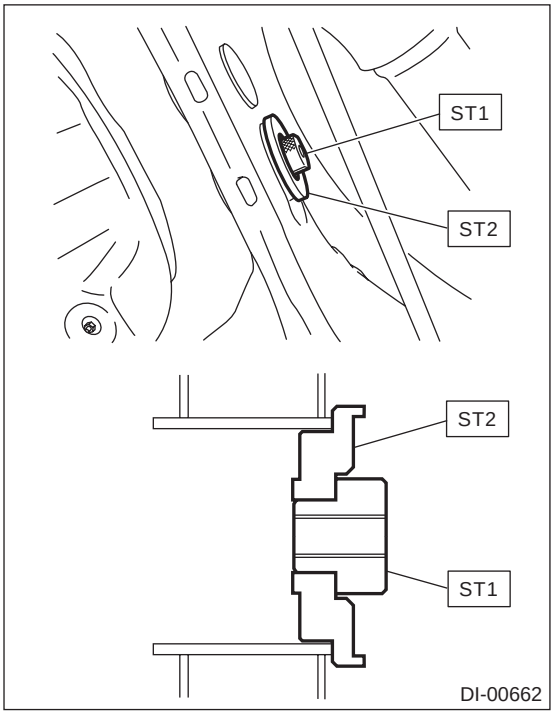
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG070 SPECIAL TOOL NUT
ST3 41399FG050 SPECIAL TOOL SLEEVE
ST4 41399FG080 SPECIAL TOOL BEARING
ST5 41399FG020 SPECIAL TOOL B



(A) 8 mm (0.31 in) or more
(B) Arrow mark
(C) Marked position

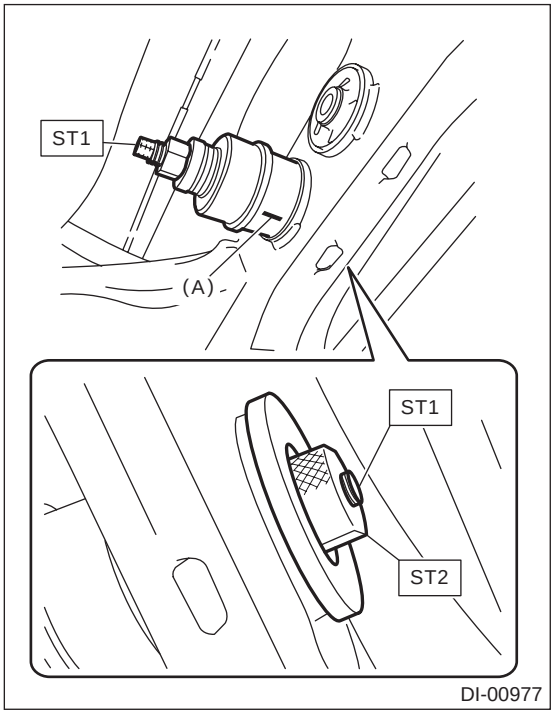
10) Attach ST1 to the ST2, and fit and hold the STs as a unit to the sub frame from the rear side of vehicle.

ST1 41399FG061 SPECIAL TOOL RING
ST2 41399FG041 SPECIAL TOOL D



11) Insert the ST and rear differential mount bushing set in the step 9) through the sub frame from the front side of vehicle, and screw in the ST1 by hand till the front end of ST1 comes out slightly from the rear end of ST2.

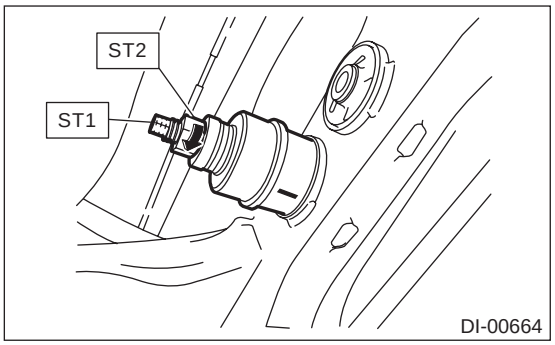
CAUTION:
Set the rear differential mount bushing with its mark facing the bottom end direction.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG061 SPECIAL TOOL RING



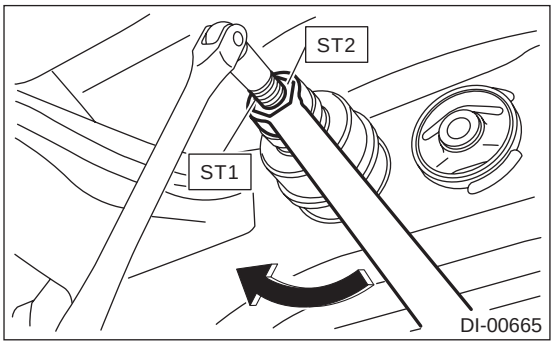
(A) Mark

12) Hold the ST1 to prevent it from rotating, and screw in the ST2 by hand till there is no loose fit on the ST and the rear differential mount bushing.

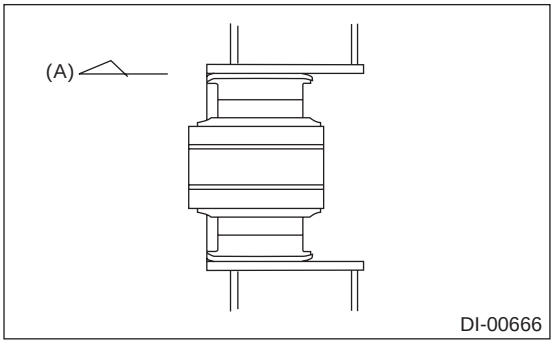
CAUTION:
Make sure that the ST and rear differential mount bushing are not tilted.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG070 SPECIAL TOOL NUT



13) Screw in the ST2 while holding the ST1 with a tool to prevent it from rotating, and press-fit the rear differential mount bushing to the front end of sub frame cylinder.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG070 SPECIAL TOOL NUT



14) Make sure that the rear differential mount bushing is inserted to the front end of sub frame cylinder.



(A) Front side of vehicle

15) Install the rear differential. <Ref. to DI-21, INSTALLATION, Rear Differential (T-type).>

9. General Diagnostic Table

A: INSPECTION

Symptom or trouble	Possible cause	Remedy
1. Oil leakage	(1) Worn, scratched, or incorrectly seated front or side oil seal. Scored, battered or excessively worn sliding surface of companion flange.	Repair or replace.
	(2) Clogged or damaged air breather cap.	Clean, repair or replace.
	(3) Loose bolts on the side retainer, or incorrectly fitted O-ring.	Tighten the bolts to specified torque. Replace the O-ring.
	(4) Loose rear cover attachment bolts or damaged gasket.	Replace the gasket, and tighten the bolts to specified torque.
	(5) Loose filler plug (oil temperature sensor) or drain plug.	• Apply liquid gasket, and tighten to the specified torque. (T-type (B1, B2)) • Replace the gasket, and tighten to the specified torque. (T-type (H5))
	(6) Wear, damage or incorrect fitting of drive shaft, side retainer or oil seal.	Repair or replace.
2. Seizure NOTE: Seized or damaged parts should be replaced, and also other parts should be thoroughly checked for any defect and should be repaired or replaced as required.	(1) Insufficient backlash for hypoid gear.	Readjust or replace.
	(2) Excessive preload for side, rear or front bearing.	Readjust or replace.
	(3) Insufficient or improper oil used.	Add recommended oil to the specified level.
3. Damage NOTE: Damaged parts should be replaced, and also other parts should be thoroughly checked for any defect and should be repaired or replaced as required.	(1) Improper backlash for hypoid gear.	Readjust or replace.
	(2) Insufficient or excessive preload for side, rear or front bearing.	Readjust or replace.
	(3) Excessive backlash for differential gear.	• Replace gear or thrust washer. (T-type (B1, B2)) • Replace the differential case assembly. (T-type (H5))
	(4) Loose bolts and nuts such as hypoid driven gear bolt.	Retighten.
	(5) Damage due to overloading.	Replace.
4. Noises when starting or shifting gears NOTE: Noises may be caused by differential assembly, universal joint, wheel bearing, etc. Find out what is actually making noise before disassembling.	(1) Improper tooth contact of hypoid driven gear and drive pinion.	Readjust. (Drive pinion adjustment and backlash adjustment)
	(2) Excessive backlash for hypoid driven gear.	Replace the gear or the pinion height adjusting washer.
	(3) Excessive backlash for side gear.	• Replace gear or thrust washer. (T-type (B1, B2)) • Replace the differential case assembly. (T-type (H5))
	(4) Insufficient preload for front or rear bearing.	Readjust.
	(5) Loose drive pinion nut.	Tighten to the specified torque.
	(6) Loose bolts and nuts such as side retainer attachment bolt.	Tighten to the specified torque.
5. Noises when cornering	(1) Damaged differential gear.	• Replace. (T-type (B1, B2)) • Replace the differential case assembly. (T-type (H5))
	(2) Excessive wear or damage of thrust washer.	Replace. (T-type (B1, B2))
	(3) Broken pinion mate shaft.	Replace. (T-type (B1, B2))
	(4) Stuck or damaged side bearing.	Replace.

General Diagnostic Table

Symptom or trouble	Possible cause	Remedy
6. Gear Noise NOTE: Since noises from engine, muffler, transmission, propeller shaft, wheel bearings, tires, and body are sometimes mistaken for noises from differential assembly, be careful in checking them. Inspection methods to locate noises include coasting, accelerating, cruising, and lifting-up all four wheels. Perform these inspections according to the condition of trouble. When listening to noises, shift the gear into four-wheel drive and fourth speed position, trying to pick up only differential noise.	(1) Improper tooth contact of hypoid driven gear and drive pinion.	Readjust or replace the hypoid gear set.
	(2) Improper backlash of the hypoid driven gear.	Readjust.
	(3) Scored or chipped teeth of hypoid gear.	Replace hypoid gear set.
	(4) Scuffed hypoid gear.	Replace hypoid gear set.
	(5) Improper preload for front or rear bearings.	Readjust.
	(6) Stuck, scored or chipped teeth of front or rear bearing	Replace.
	(7) Stuck, scored or chipped teeth of side bearing	Replace.
	(8) Vibrating differential gear.	Replace the differential gear.

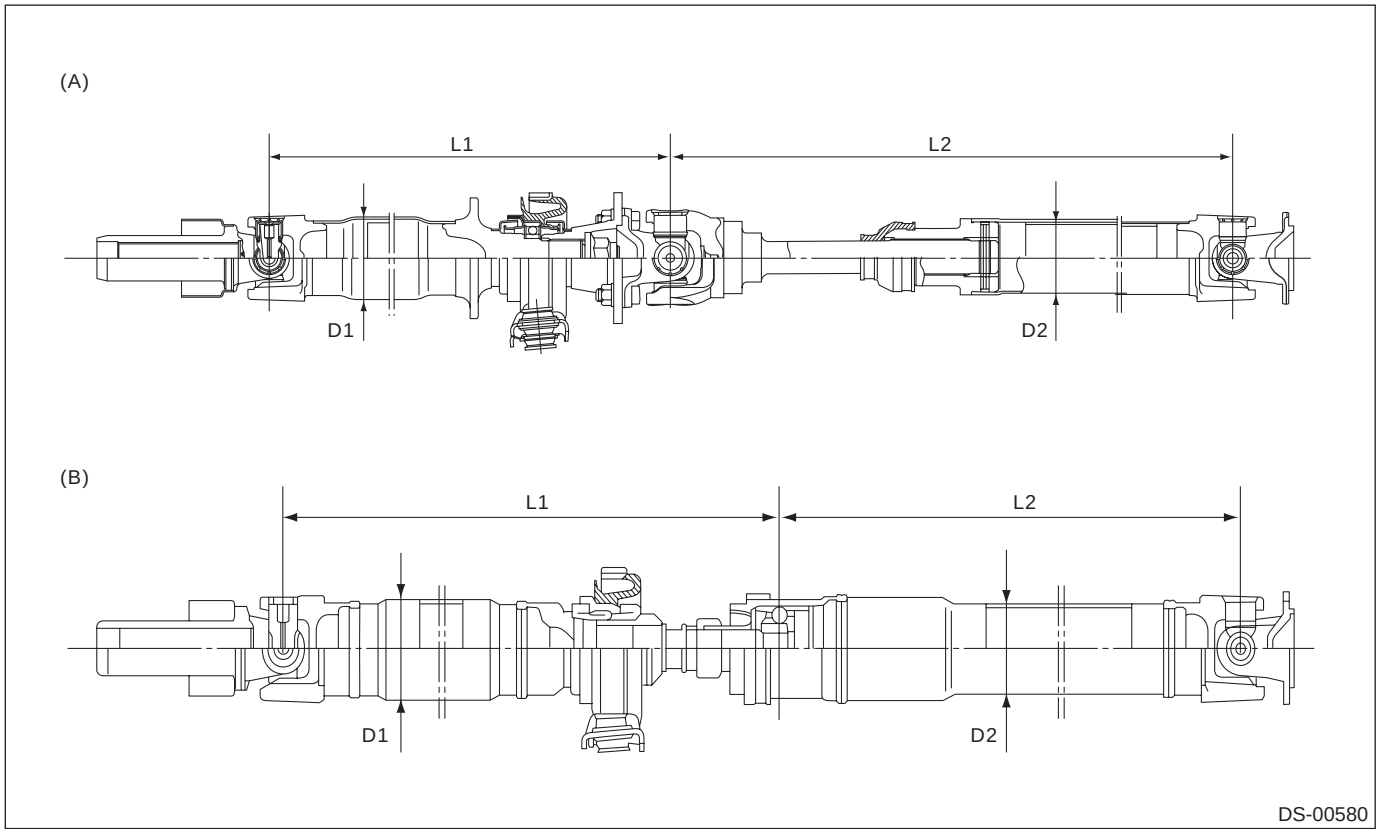
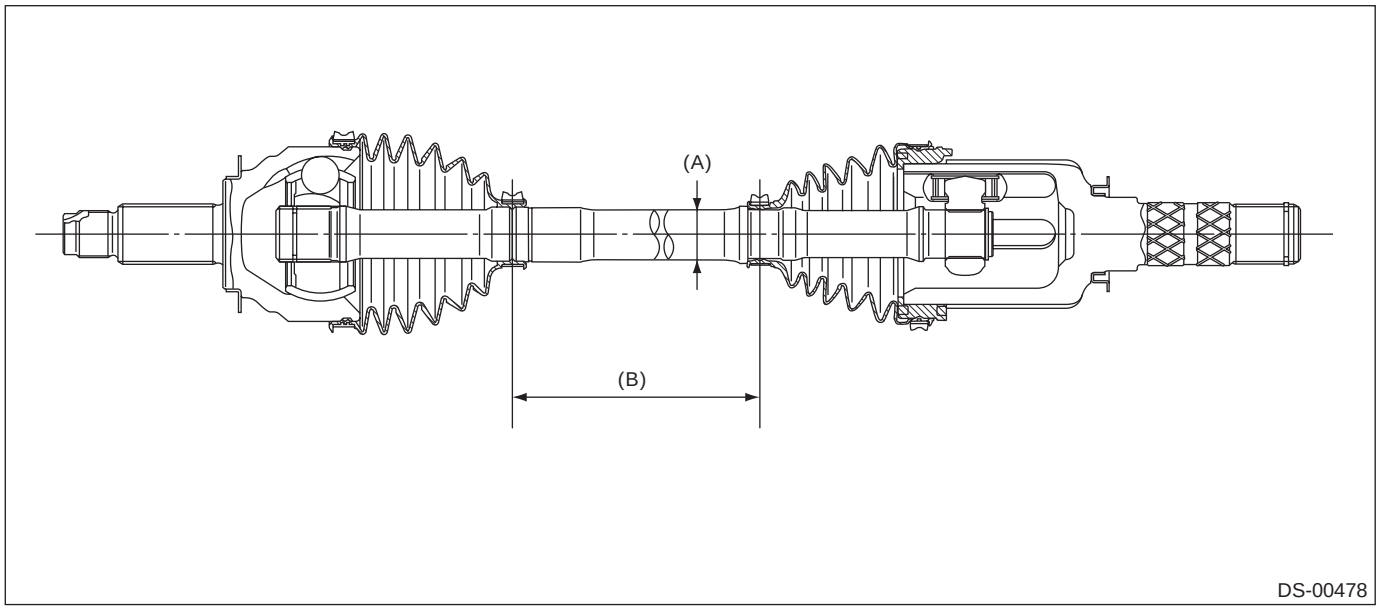
Model		Except for STI model		STI model
		CVT model	MT model	
Propeller shaft type		EDJ		3UJ+CPS
Front propeller shaft joint-to-joint length: L_1		578.0 mm (22.76 in)	735.5 mm (28.96 in)	633.0 mm (24.92 in)
Rear propeller shaft joint-to-joint length: L_2		723 mm (28.46 in)		753.5 mm (29.67 in)
Outer diameter of tube:	D_1	63.5 mm (2.50 in)		70.0 mm (2.76 in)
	D_2	57.5 mm (2.26 in)		57.0 mm (2.24 in)



(A) 3UJ + CPS type (B) EDJ type

2. FRONT DRIVE SHAFT ASSEMBLY

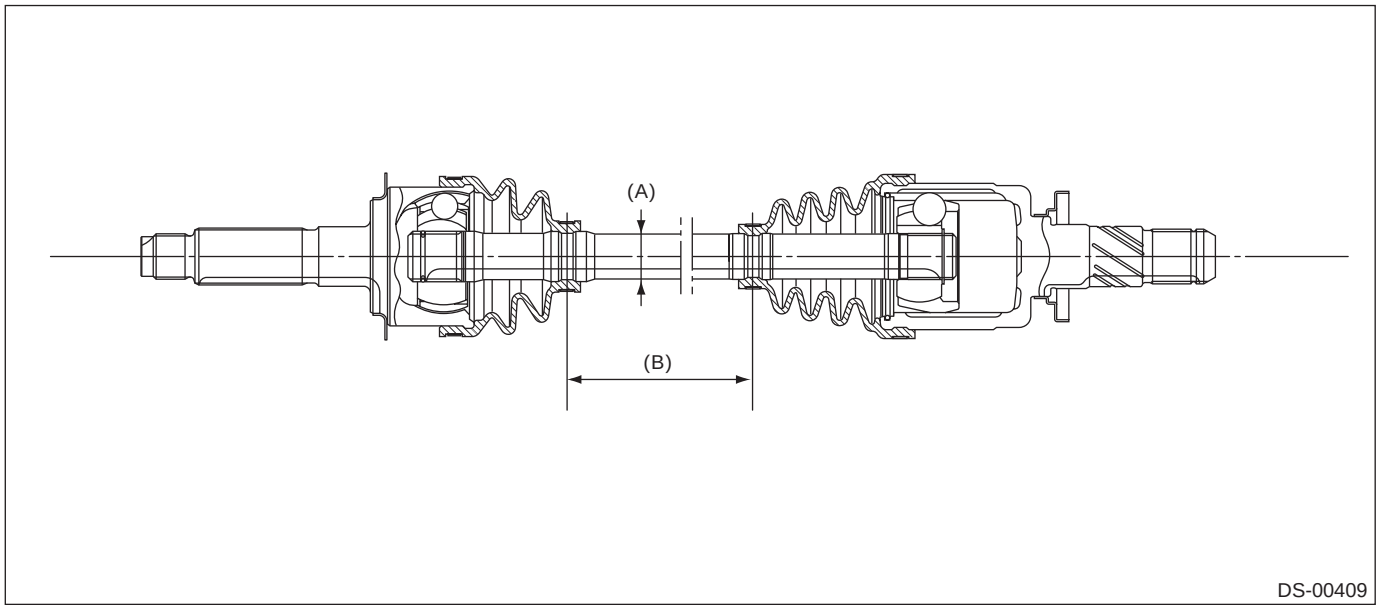
Model	Type of drive shaft	Axle diameter ϕ mm (in)	Axle length mm (in)
Except for STI model	EBJ + PTJ	22 (0.87)	338.4 (13.32)
STI model	AC + AAR	28 (1.10)	343.1 (13.51)



(A) Axle diameter (B) Axle length

3. REAR DRIVE SHAFT ASSEMBLY

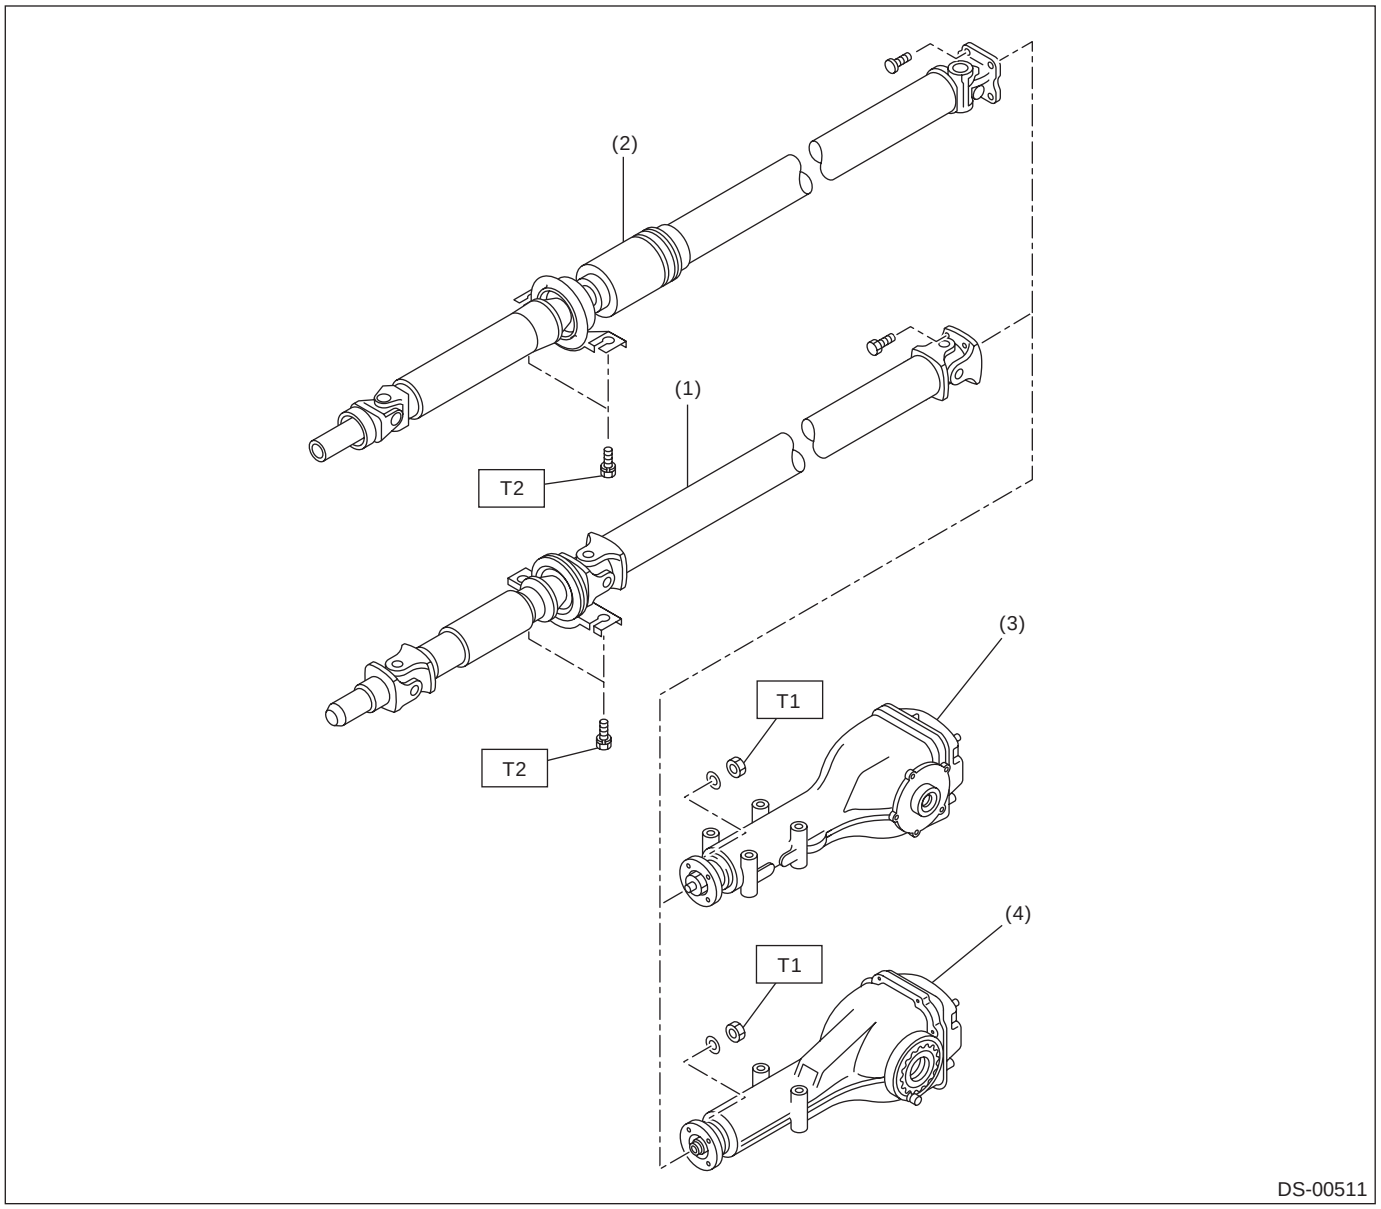
Model	Type of drive shaft	Axle diameter ϕ mm (in)	Axle length mm (in)
Except for STI model	EBJ + DOJ	22 (0.87)	388.5 (15.3)
STI model	EBJ + EDJ	25 (0.98)	339.5 (13.37)



(A) Axle diameter (B) Axle length

B: COMPONENT

1. PROPELLER SHAFT

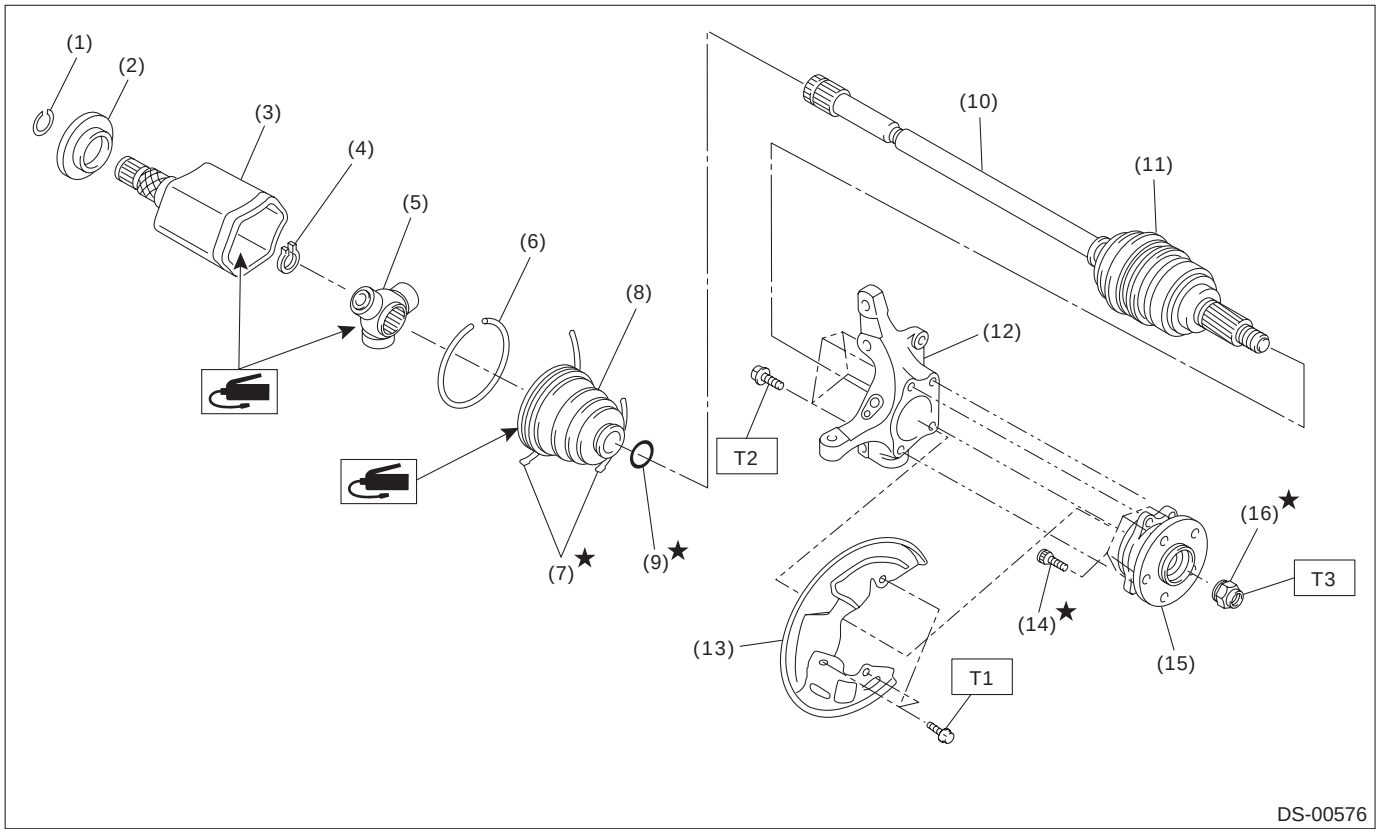


(1) Propeller shaft (3UJ-type)
(2) Propeller shaft (EDJ-type)
(3) Rear differential (T-type)
(4) Rear differential (VA2-type)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 31 (3.2, 22.9)
T2: 52 (5.3, 38.4)

2. FRONT AXLE

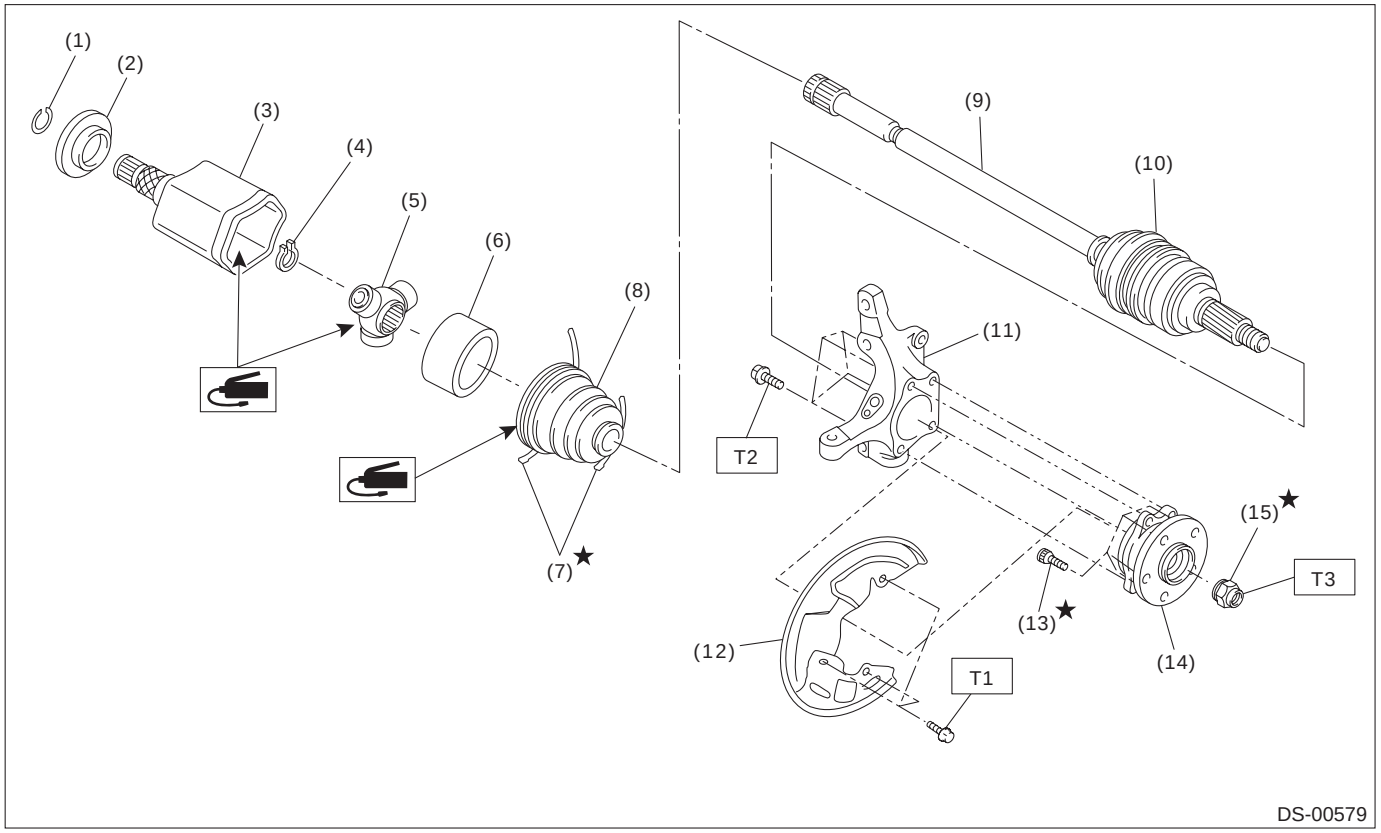
- Except for STI model



(1)	Circlip	(9)	O-ring
(2)	Baffle plate	(10)	EBJ shaft ASSY
(3)	Outer race (PTJ)	(11)	Boot (AC)
(4)	Snap ring	(12)	Housing
(5)	Trunnion	(13)	Back plate - front brake
(6)	Snap ring	(14)	Hub bolt
(7)	Boot band	(15)	Hub unit COMPL - front axle
(8)	Boot (PTJ)	(16)	Axle nut

Tightening torque: N·m (kgf-m, ft-lb)
T1: 18 (1.8, 13.3)
T2: 65 (6.6, 47.9)
T3: 220 (22.4, 162.3)

- STI model

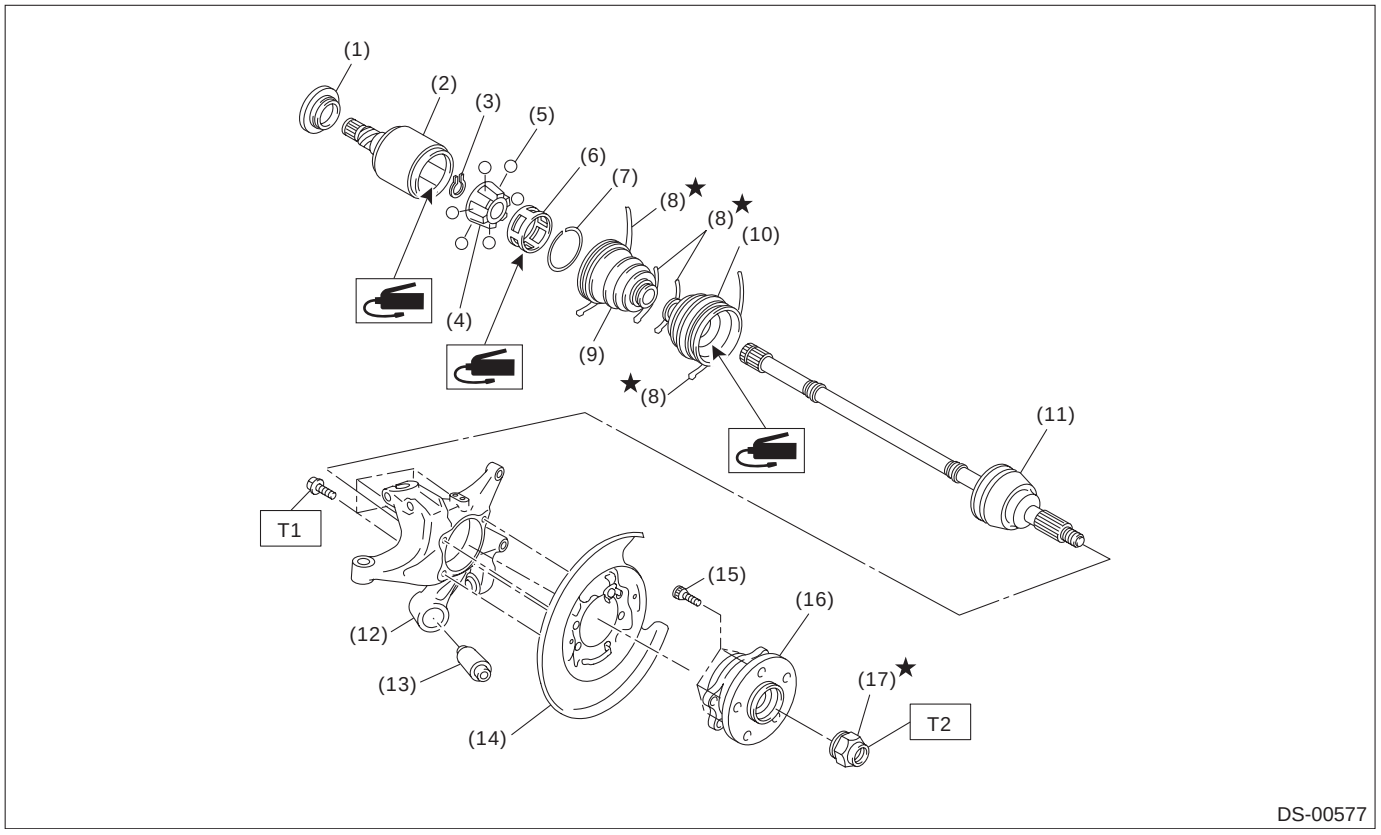


(1) Circlip
(2) Baffle plate
(3) Outer race (AAR)
(4) Snap ring
(5) Trunnion
(6) Grommet
(7) Boot band
(8) Boot (AAR)
(9) AC shaft ASSY
(10) Boot (AC)
(11) Housing
(12) Back plate - front brake
(13) Hub bolt
(14) Hub unit COMPL - front axle
(15) Axle nut

Tightening torque: N·m (kgf-m, ft-lb)
T1: 18 (1.8, 13.3)
T2: 65 (6.6, 47.9)
T3: 220 (22.4, 162.3)

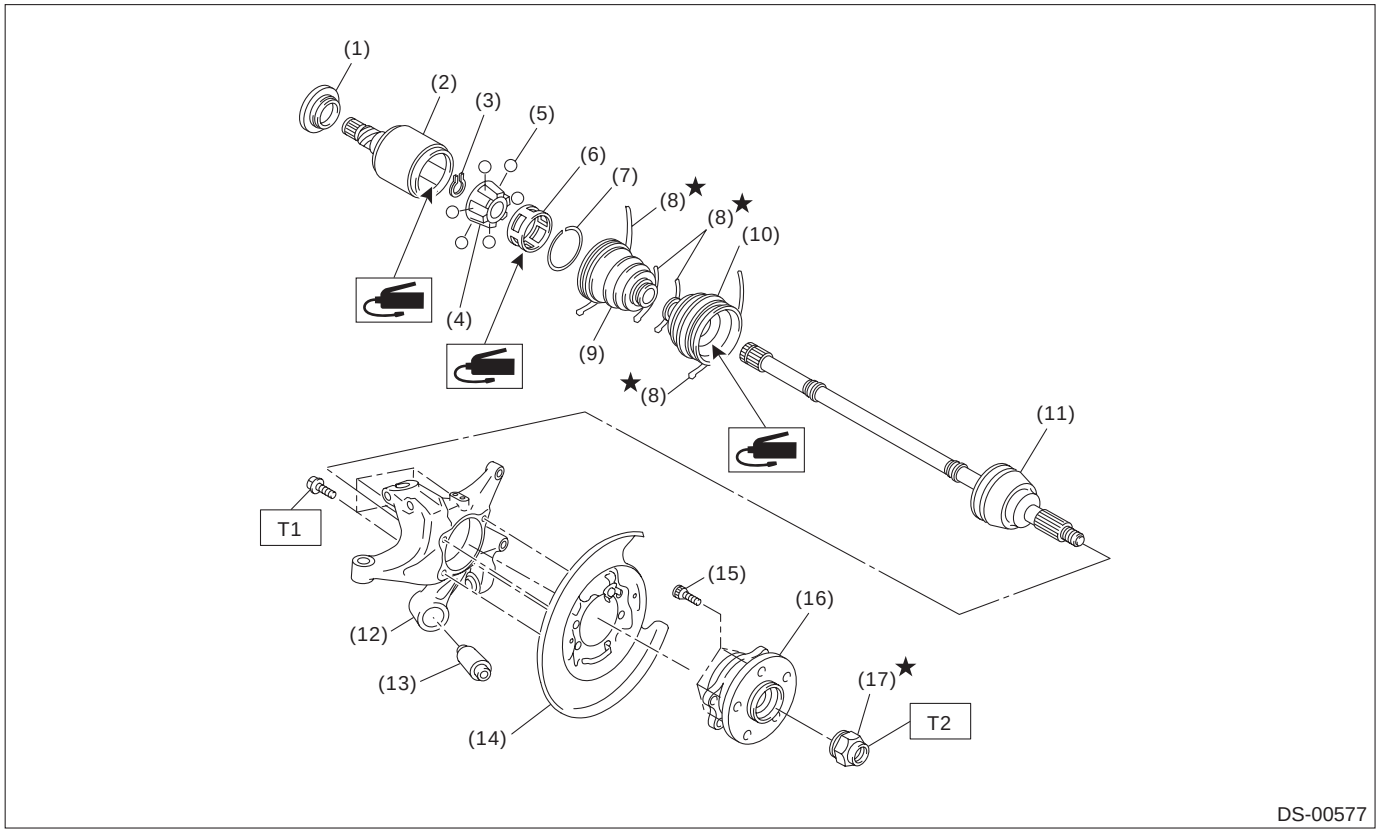
3. REAR AXLE

- Except for STI model



(1)	Baffle plate	(8)	Boot band	(15)	Hub bolt
(2)	Outer race (DOJ)	(9)	Boot (DOJ)	(16)	Hub unit COMPL - rear axle
(3)	Snap ring	(10)	Boot (BJ)	(17)	Axle nut
(4)	Inner race	(11)	EBJ shaft ASSY		
(5)	Ball	(12)	Rear axle housing	***Tightening torque: N·m (kgf-m, ft-lb)***	
(6)	Cage	(13)	Bushing	***T1:***	***65 (6.6, 47.9)***
(7)	Snap ring	(14)	Back plate - rear brake	***T2:***	***190 (19.4, 140.1)***

- STI model



(1)	Baffle plate	(8)	Boot band	(15)	Hub bolt
(2)	Outer race (EDJ)	(9)	Boot (EDJ)	(16)	Hub unit COMPL - rear axle
(3)	Snap ring	(10)	Boot (EBJ)	(17)	Axle nut
(4)	Inner race	(11)	EBJ shaft ASSY		
(5)	Ball	(12)	Rear axle housing	***Tightening torque: N·m (kgf-m, ft-lb)***	
(6)	Cage	(13)	Bushing	***T1:***	***65 (6.6, 47.9)***
(7)	Snap ring	(14)	Back plate - rear brake	***T2:***	***190 (19.4, 140.1)***

C: CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Apply grease onto sliding or revolving surfaces before installation.
- Be sure that the surface of brake disc, brake pad or brake shoe is free from grease or oil.
- Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.
- When the suspension-related components have been removed or replaced, perform “VDC sensor mid-point setting mode” of the VDC. <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	Part No.	DESCRIPTION	REMARKS
 ST20099PA010	20099PA010	INSTALLER & REMOVER	• Used for replacing the bushing - trailing link of the housing assembly - rear axle. • Used together with BUSHING REMOVER (20099FG000).
 ST20099FG000	20099FG000	BUSHING REMOVER	• Used for replacing the bushing - trailing link of the housing assembly - rear axle. • Used together with base part of INSTALLER & REMOVER (20099PA010).
 ST28099AC000	28099AC000	BOOT BAND PLIER	Used for tightening the band - boot. (for front drive shaft)
 ST-925091000	925091000	BAND TIGHTENING TOOL	Used for tightening the band - boot. (A) Jig for the band (B) Ratchet wrench

ILLUSTRATION	Part No.	DESCRIPTION	REMARKS
 ST18675AA000	18675AA000	DIFFERENTIAL SIDE OIL SEAL INSTALLER	Used for installing the differential side retainer oil seal.
 ST-926470000	926470000	AXLE SHAFT PULLER	• Used for removing the drive shaft. • Used together with AXLE SHAFT PULLER PLATE (28099PA110).
 ST28099PA110	28099PA110	AXLE SHAFT PULLER PLATE	• Used for removing the drive shaft. • Exchange with the plate of the AXLE SHAFT PULLER (926470000) to use.
 ST28099PA080	28099PA080	HUB STAND	Used for assembling the bolt - hub of the hub.
 ST28399AG000	28399AG000	HUB STAND	Used for extracting the bolt - hub.

ILLUSTRATION	Part No.	DESCRIPTION	REMARKS
 ST28399SA010	28399SA010	OIL SEAL PROTECTOR	• Used for installing front drive shaft into front differential. • For protecting the oil seal.
 ST28099PA090	28099PA090	OIL SEAL PROTECTOR	• Used for installing the rear drive shaft to the rear differential. • For protecting the oil seal.

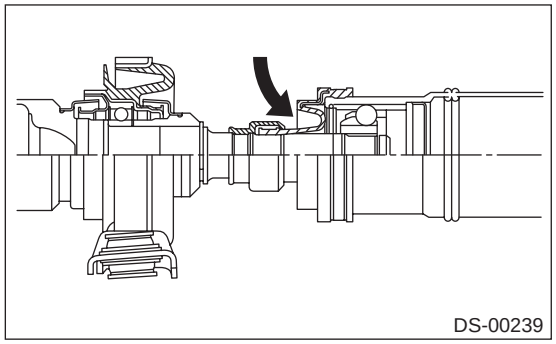
2. GENERAL TOOL

TOOL NAME	REMARKS
Tie-rod ball joint puller	Used for disconnecting joints.
Dial gauge	Used for inspecting the propeller shaft run-out.
Extension cap	Used for preventing leakage of gear oil or ATF.
Crowbar	Used for extracting drive shaft.
Needle nose pliers	Used for tightening the band - boot of the rear drive shaft. • Snap-on 96BCP Or equivalent.

2. Propeller Shaft

A: REMOVAL

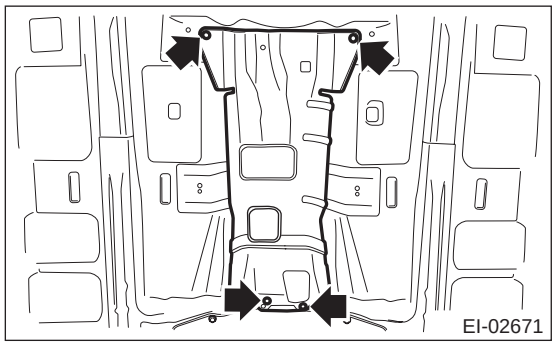
CAUTION:
- **Before removing propeller shaft, wrap metal parts with a cloth or rubber material.**
- **Do not disassemble the center EDJ of the propeller shaft.**
- **Before removing the propeller shaft, wrap the center joint part with a cloth, etc. If the joint is bent during removal, the rubber boot may be damaged due to interference with metal parts.**



1) Shift the select lever or gear shift lever to neutral.
2) Release the parking brake.
3) Lift up the vehicle.
4) Remove the center exhaust pipe.
- STI model: <Ref. to EX(STI)-7, REMOVAL, Center Exhaust Pipe.>
- Except for STI model: <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>

5) Remove the rear exhaust pipe.
- STI model: <Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.>
- Except for STI model: <Ref. to EX(w/o STI)-48, REMOVAL, Rear Exhaust Pipe.>

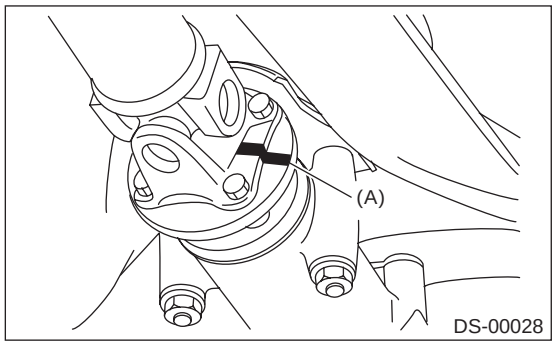
6) Remove the bolts to remove the front heat shield cover.



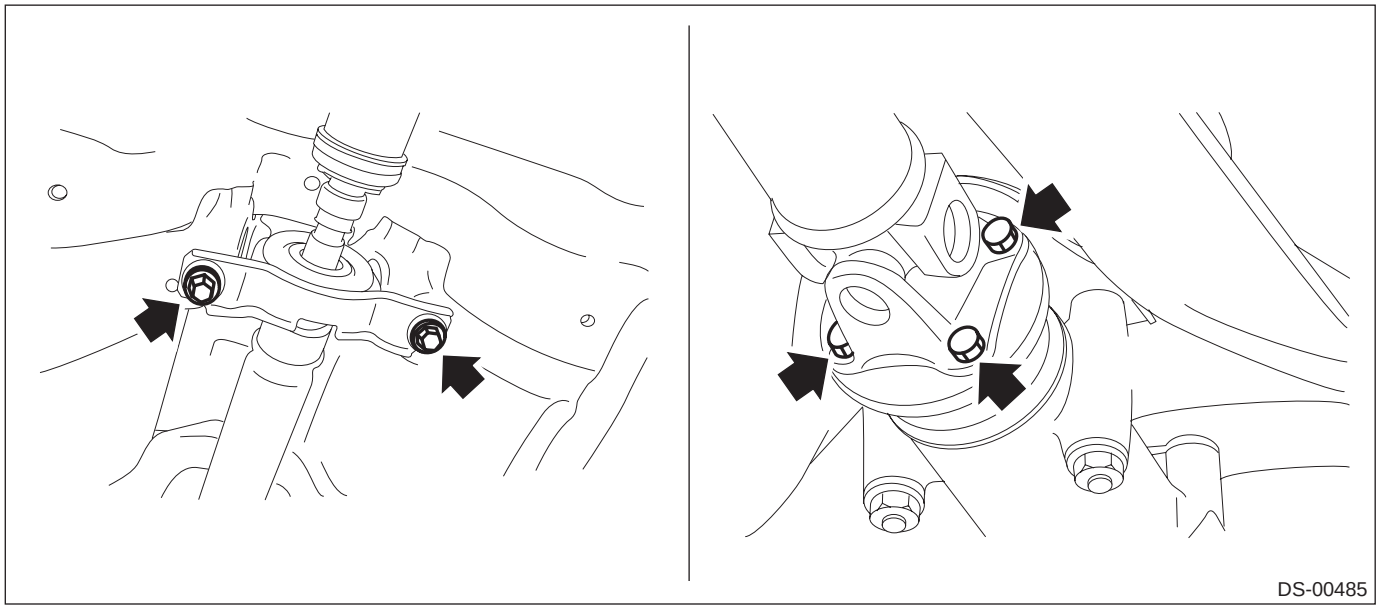
7) Remove the propeller shaft assembly.

CAUTION:
- **Do not disassemble the propeller shaft.**
- **Use a container to catch ATF or oil flowing from propeller shaft.**
- **To prevent ATF from leaking, install extension cap etc. to the transmission.**
- **Be careful not to damage oil seals and contact surface of the sleeve yoke.**

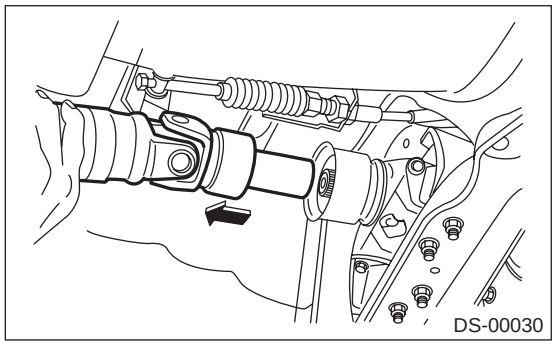
(1) Place alignment marks (A) on the flange yoke and rear differential.



(2) Remove the bolts and remove the propeller shaft from the rear differential.

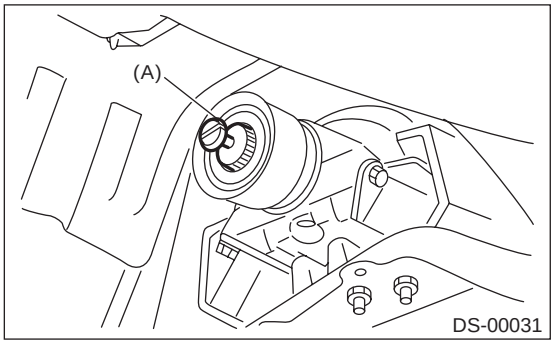


(3) Remove the end of propeller shaft from the transmission.



NOTE:
Use a container to catch oil flowing from propeller shaft.

(4) Install extension cap (A) to the transmission.



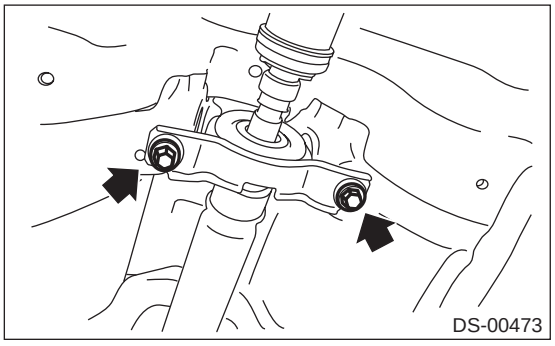
NOTE:
If extension cap (A) is not available, place vinyl bag over opening and fasten with string to prevent gear oil from leaking.

B: INSTALLATION

1) Before installation, check the following items, and replace the propeller shaft assembly as necessary.
- Dents or cracks on the tube surface
- Splines for deformation or abnormal wear
- Unsmooth joint operation or abnormal noise
- Center bearing for free play, noise or non-smooth operation.
- Oil seals for abnormal wear or damage
- Damaged center bearing

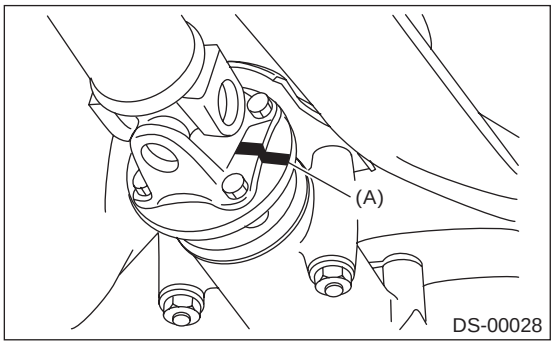
2) Apply fluid or gear oil to the oil seal lip and the propeller shaft.
- CVT model: SUBARU CVT OIL FOR LINEARTRONIC
- MT model: GL-5

3) Insert the sleeve yoke into the transmission and attach center bearing to body.



Tightening torque:
52 N·m (5.3 kgf-m, 38.4 ft-lb)

4) Align the alignment marks (A), and connect the yoke flange and rear differential.



Tightening torque:
31 N·m (3.2 kgf-m, 22.9 ft-lb)

5) Check the propeller shaft with the propeller shaft installed to the vehicle. <Ref. to DS-15, INSPECTION, Propeller Shaft.>
6) Install the heat shield cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

7) Install the rear exhaust pipe.
- STI model: <Ref. to EX(STI)-12, INSTALLATION, Rear Exhaust Pipe.>
- Except for STI model: <Ref. to EX(w/o STI)-49, INSTALLATION, Rear Exhaust Pipe.>

8) Install the center exhaust pipe.
- STI model: <Ref. to EX(STI)-8, INSTALLATION, Center Exhaust Pipe.>
- Except for STI model: <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>

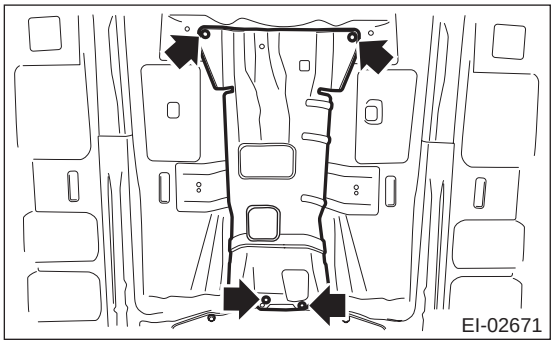
9) Install the under cover - front. <Ref. to EI-22, INSTALLATION, Front Under Cover.>
10) Lower the vehicle.

C: INSPECTION

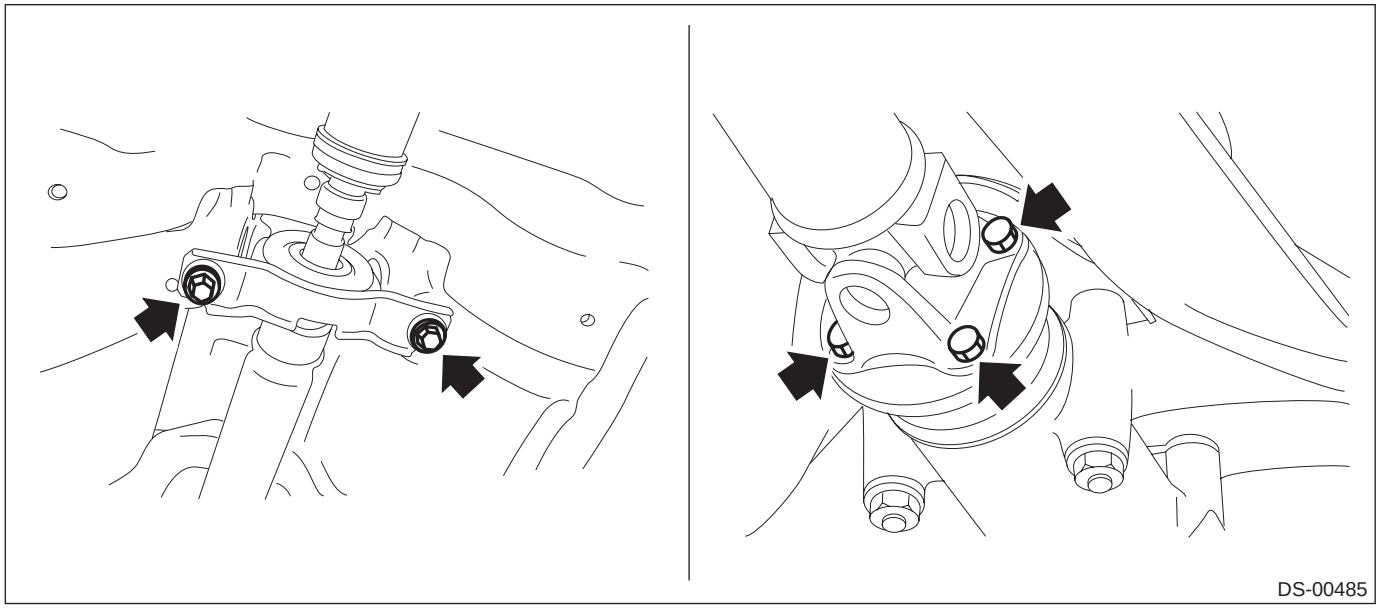
Check the propeller shaft with the propeller shaft installed to the vehicle.
1) Shift the select lever or gear shift lever to neutral.
2) Release the parking brake.
3) Lift up the vehicle.
4) Remove the center exhaust pipe.
- STI model: <Ref. to EX(STI)-7, REMOVAL, Center Exhaust Pipe.>
- Except for STI model: <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>

5) Remove the rear exhaust pipe.
- STI model: <Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.>
- Except for STI model: <Ref. to EX(w/o STI)-48, REMOVAL, Rear Exhaust Pipe.>

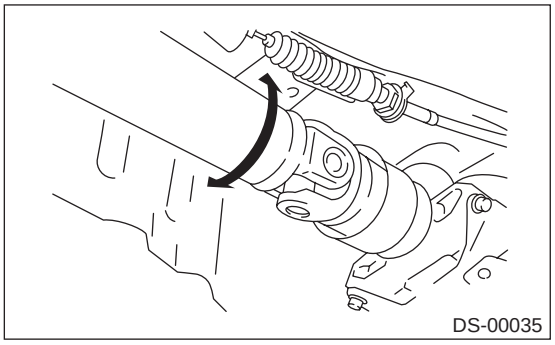
6) Remove the bolts to remove the front heat shield cover.



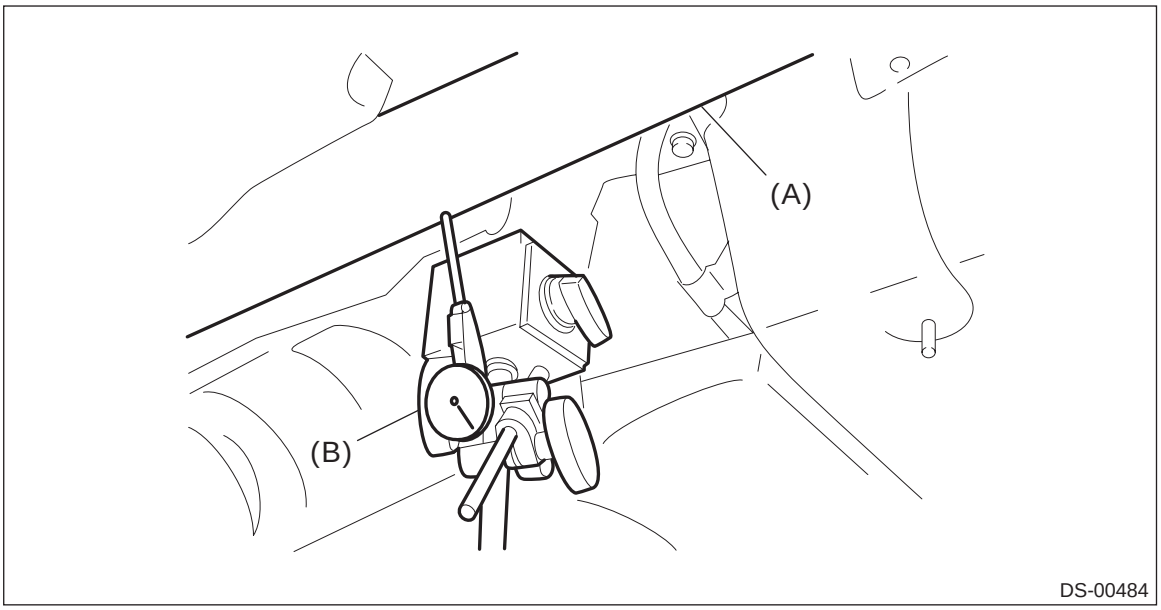
7) Check the propeller shaft mounting bolt for looseness.
(1) Yoke flange mounting bolts which connect to the rear differential
(2) Center bearing bracket mounting bolts



8) Check the spline and bearing for the propeller shaft.
(1) Turn the propeller shaft by hand to check if abnormal free play exists at splines.
(2) Also move yokes to check if abnormal free play exists at spiders and bearings.

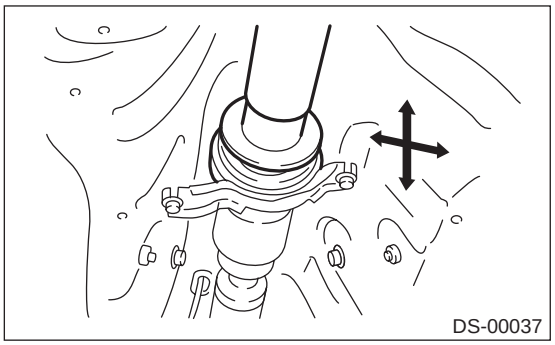


9) Measure the deflection of the propeller shaft.
   (1) Set the dial gauge (B) with its indicator stem at the center of the propeller shaft (A).
   (2) Turn the propeller shaft (A) slowly by hands to check for runout of the propeller shaft.



Runout:
Limit: 0.6 mm (0.024 in)

10) Check the center bearing for free play.
Move the propeller shaft near the center bearing up, down, left, right by hand, to check for any abnormal free play of the bearings.



11) Replace the propeller shaft assembly if faulty is found in the inspection.

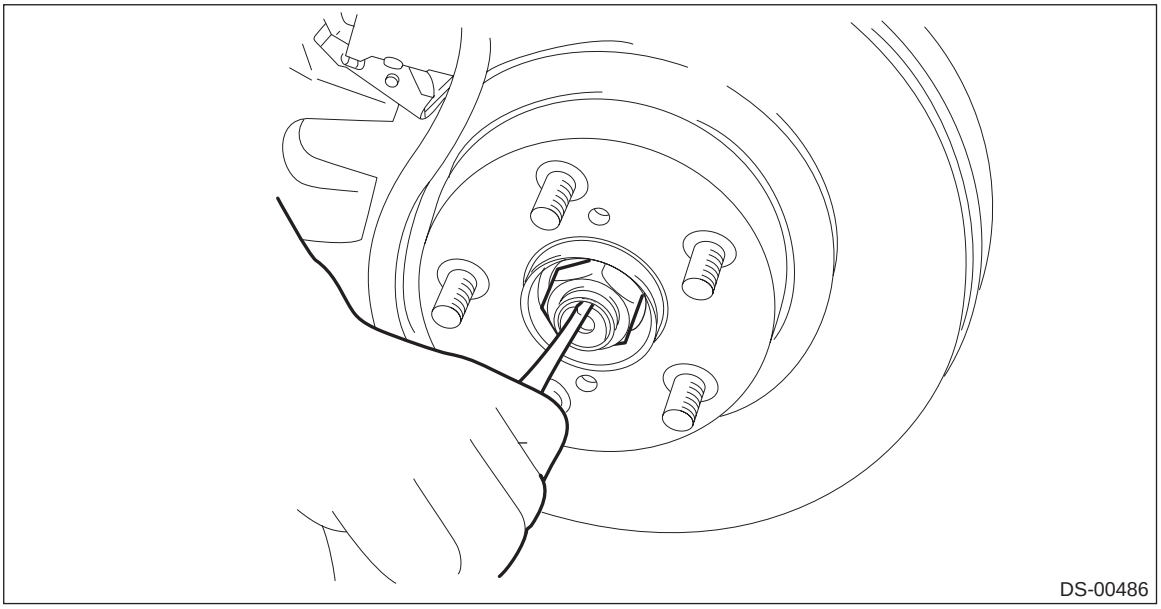
3. Front Axle

A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the nut - axle.

CAUTION:
Do not loosen the nut - axle while the front axle is loaded. Doing so may damage the hub unit COMPL.

(1) Lift the crimped section of the nut - axle.
(2) Remove the nut - axle using a socket wrench while depressing the brake pedal.

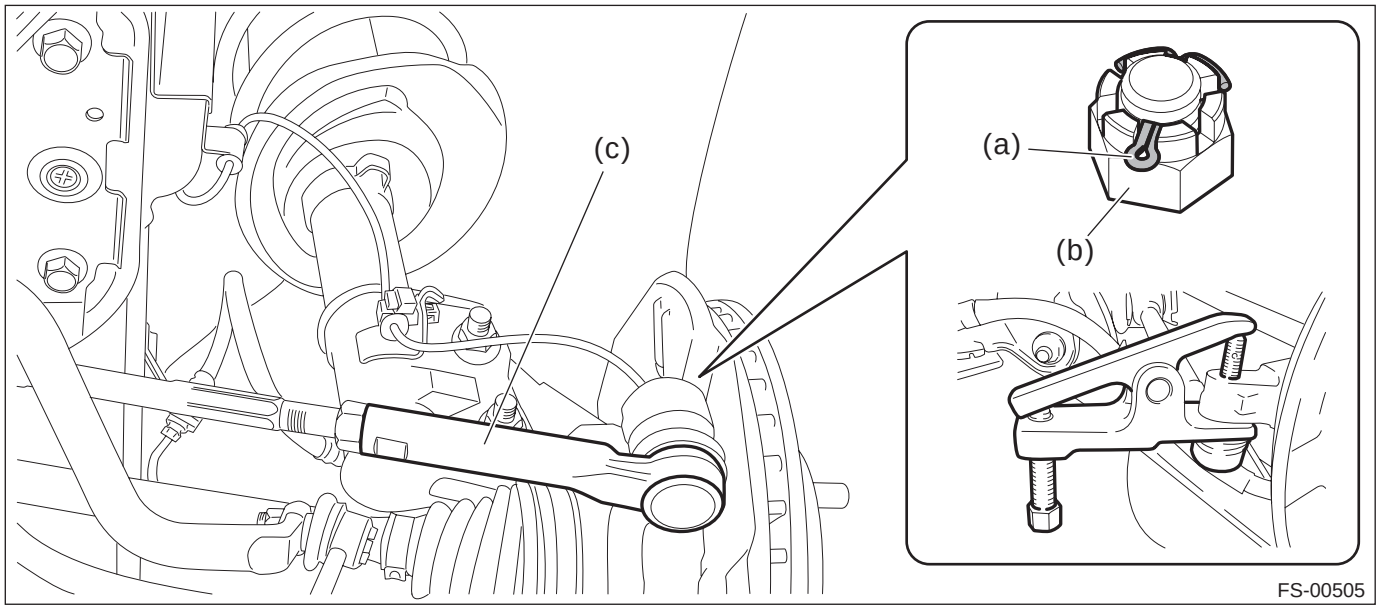


3) Remove the disc brake assembly. <Ref. to BR-25, REMOVAL, Front Disc Brake Assembly.>
4) Remove the disc rotor. <Ref. to BR-22, REMOVAL, Front Disc Rotor.>

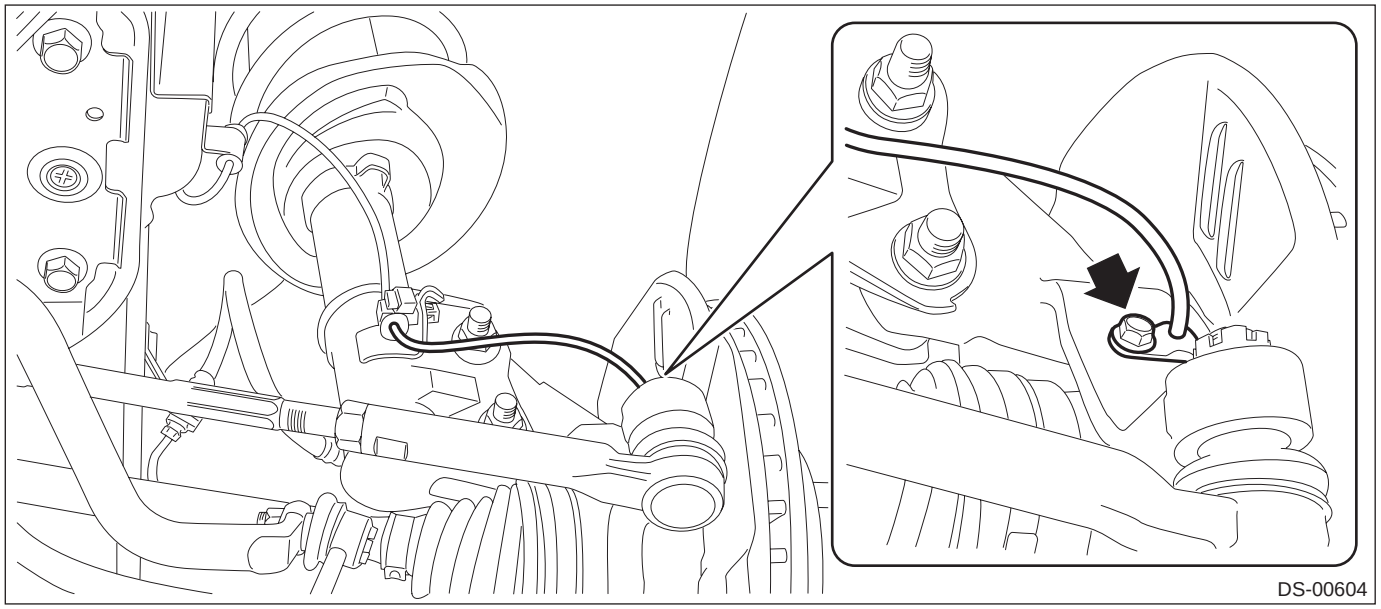
5) Disconnect the tie-rod end.
   (1) Pull out the cotter pin (a).
   (2) Remove the castle nut (b).
   (3) Using a tie-rod ball joint puller, remove the tie-rod end (c).

CAUTION:
Be careful not to damage the boot of the joint.

Preparation tool:
Tie-rod ball joint puller

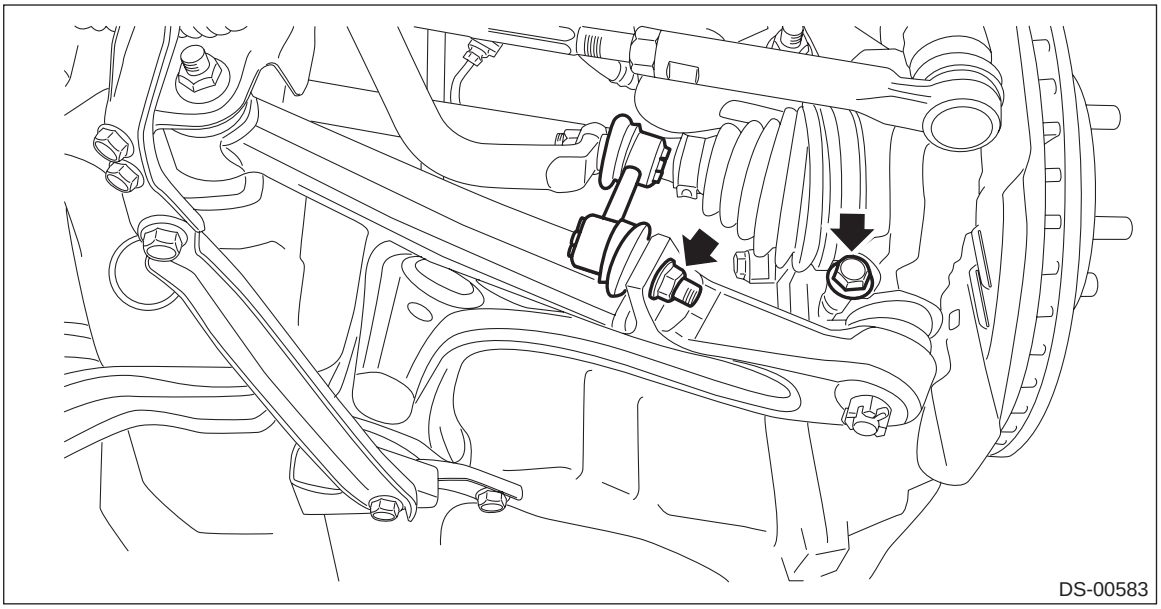


6) Remove the bolts, and remove the front ABS wheel speed sensor.



7) Remove the stabilizer link and ball joint.

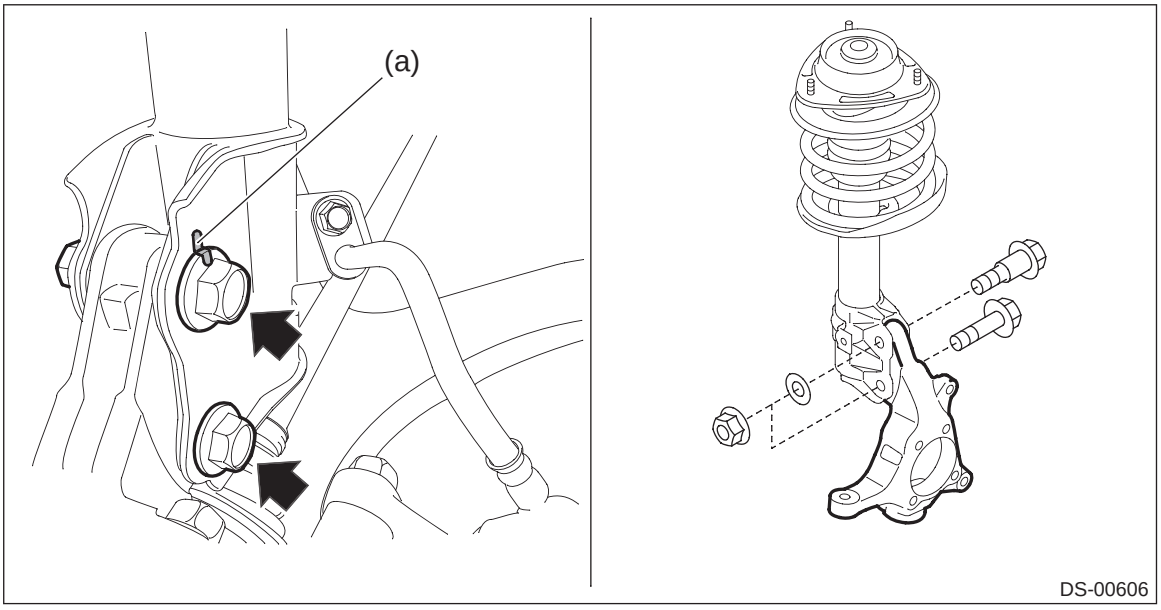
CAUTION:
Be careful not to damage the boot of the joint.



8) Remove the front drive shaft. <Ref. to DS-48, REMOVAL, Front Drive Shaft.>
9) Remove the housing assembly - front axle.

CAUTION:
- **Be careful of the weight of the housing assembly - front axle.**
- **Be careful not to damage the spline portion of the drive shaft.**

(1) Place an alignment mark (a) on the adjusting bolt and the strut assembly.
(2) Remove the adjusting bolts and flange bolts for the strut assembly, and then remove the housing assembly - front axle.



NOTE:
While holding the adjusting bolt side, tighten the nut side.
10) For removal of the hub unit COMPL - front axle, refer to “Front Hub Unit Bearing”. <Ref. to DS-25, REMOVAL, Front Hub Unit Bearing.>

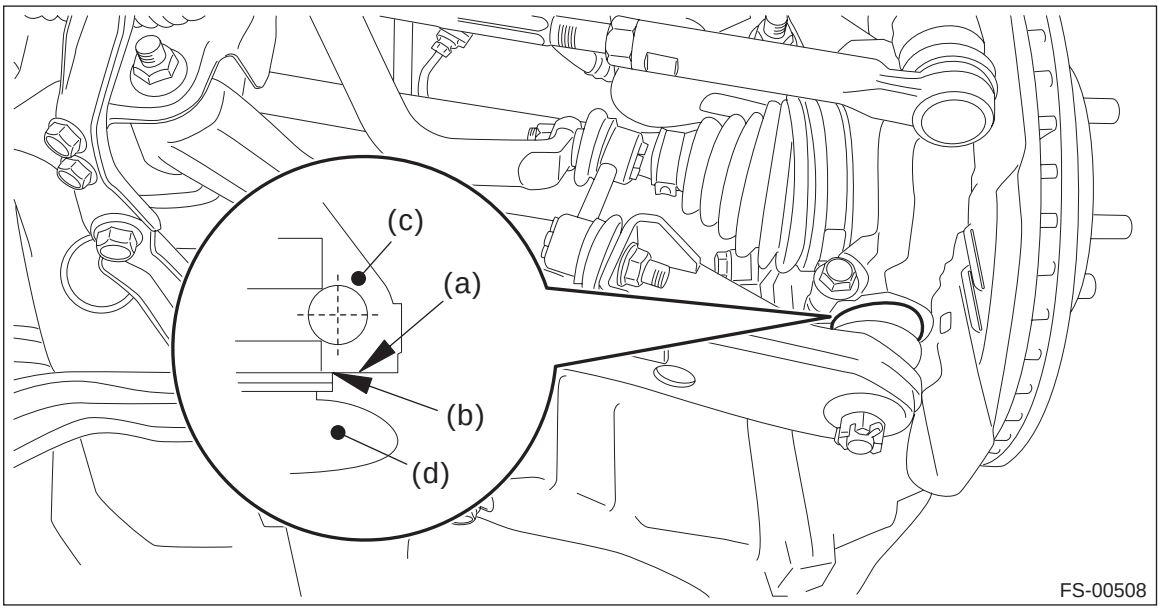
B: INSTALLATION

1) Install the housing assembly - front axle to the strut assembly.
   (1) Align alignment marks on the camber adjusting bolt and strut.
   (2) While holding the bolt head of adjusting bolt, tighten the nut.

Tightening torque:
155 N·m (15.8 kgf-m, 114.3 ft-lb)

2) Install the front drive shaft assembly. <Ref. to DS-49, INSTALLATION, Front Drive Shaft.>
3) Install the ball joint assembly.

CAUTION:
• Before tightening, make sure the bottom surface of the housing assembly - front axle and the stepped section of ball joint are in contact.
• Be careful not to damage the boot of the joint.



(a) Bottom surface of housing ASSY - front axle
(c) Housing ASSY - front axle
(d) Ball joint ASSY
(b) Raised section of ball joint

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

4) Install the front ABS wheel speed sensor.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

5) Install the disc rotor.
6) Install the disc brake assembly.

Tightening torque:
STI model: 155 N·m (15.8 kgf-m, 114.3 ft-lb)
Except for STI model: 80 N·m (8.2 kgf-m, 59.0 ft-lb)

7) Install the brake hose bracket.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

8) Install the stabilizer link assembly.

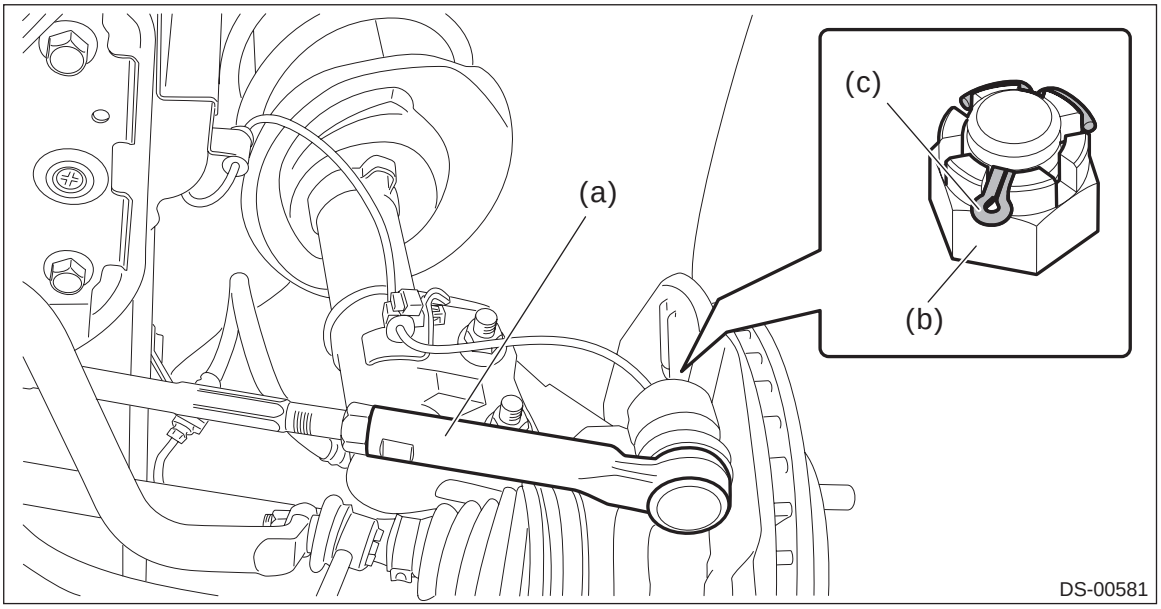
Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

9) Connect the tie-rod ends.
(1) Connect the tie-rod ends to the housing assembly - front axle.
(2) Tighten the castle nuts to the specified torque.

CAUTION:
When connecting the tie-rod, do not hit the cap at bottom of tie-rod end with a hammer.

Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)

(3) Tighten the castle nut within the range of 60° so that the cotter pin hole and cutout portion of the castle nut are aligned.
(4) Insert the cotter pin, and bend the tip of the pin to fix it.



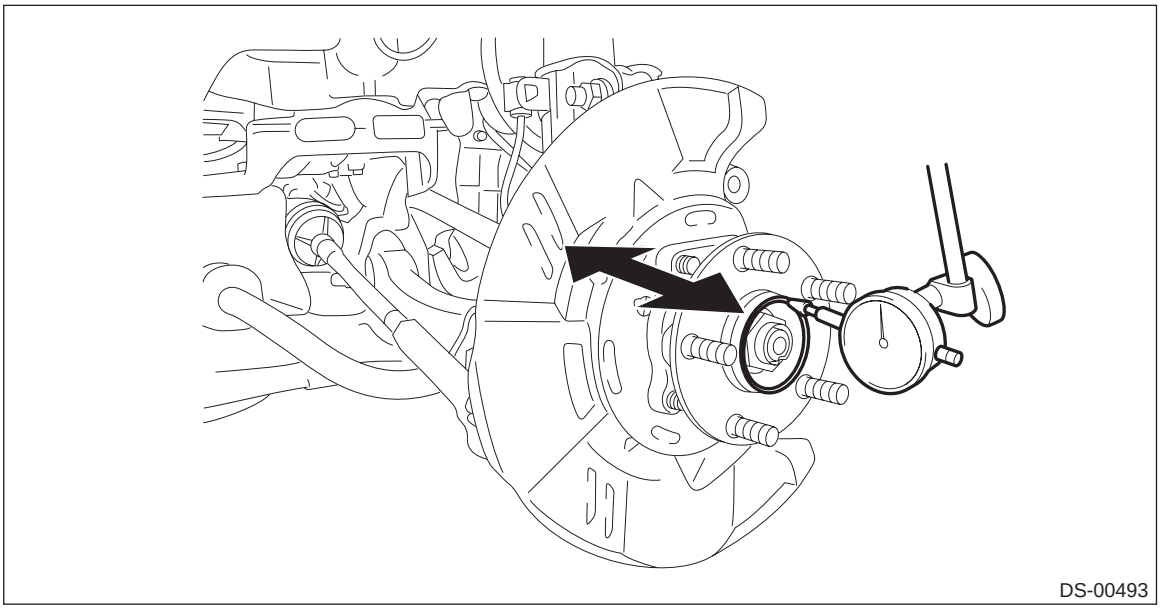
(a) Tie-rod end (b) Castle nut (c) Cotter pin

10) While depressing the brake pedal, tighten the nut - axle to the specified torque.

CAUTION:
Do not load the front axle before tightening the nut - axle. Doing so may damage the hub unit COMPL.

Tightening torque:
220 N·m (22.4 kgf-m, 162.3 ft-lb)

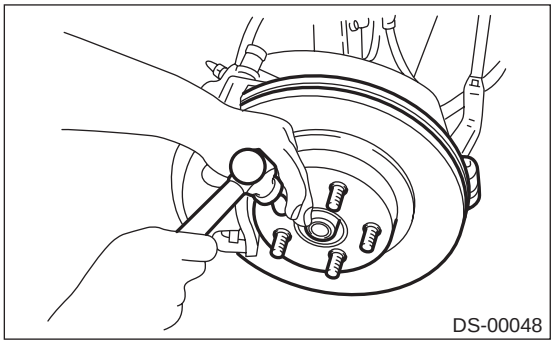
11) Inspect the lean of axis direction using a dial gauge. Replace the hub unit COMPL - front axle if the play exceeds the limit.



Service limit:

Maximum: 0.05 mm (0.0020 in)

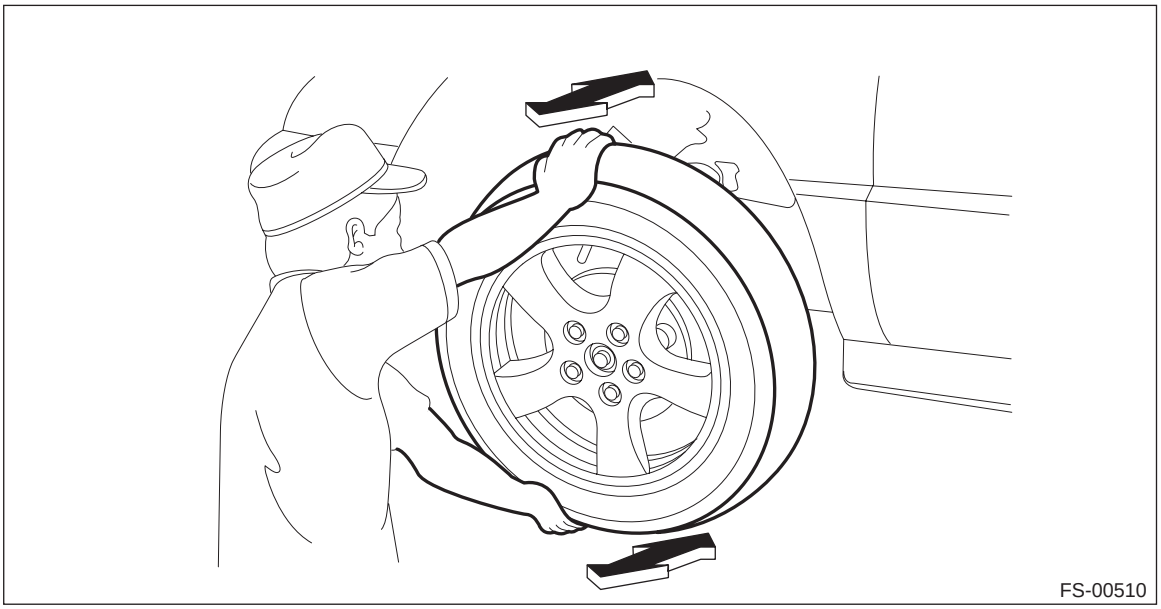
12) After tightening the nut - axle, lock it securely.



13) Install the front wheels, and perform the following inspections.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

1. Check the wheels for smooth rotation.
2. Check that there is no play by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.



- **Play exists** → Check the hub unit COMPL - front axle. <Ref. to DS-31, INSPECTION, Front Hub Unit Bearing.>

3. Check that there is no play by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.
   - **Play exists** → Replace the ball joint assembly. <Ref. to FS-33, REMOVAL, Front Ball Joint.>

14) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform “VDC sensor midpoint setting mode”. <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

15) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-17, PROCEDURE, Auto Headlight Beam Leveler System.>

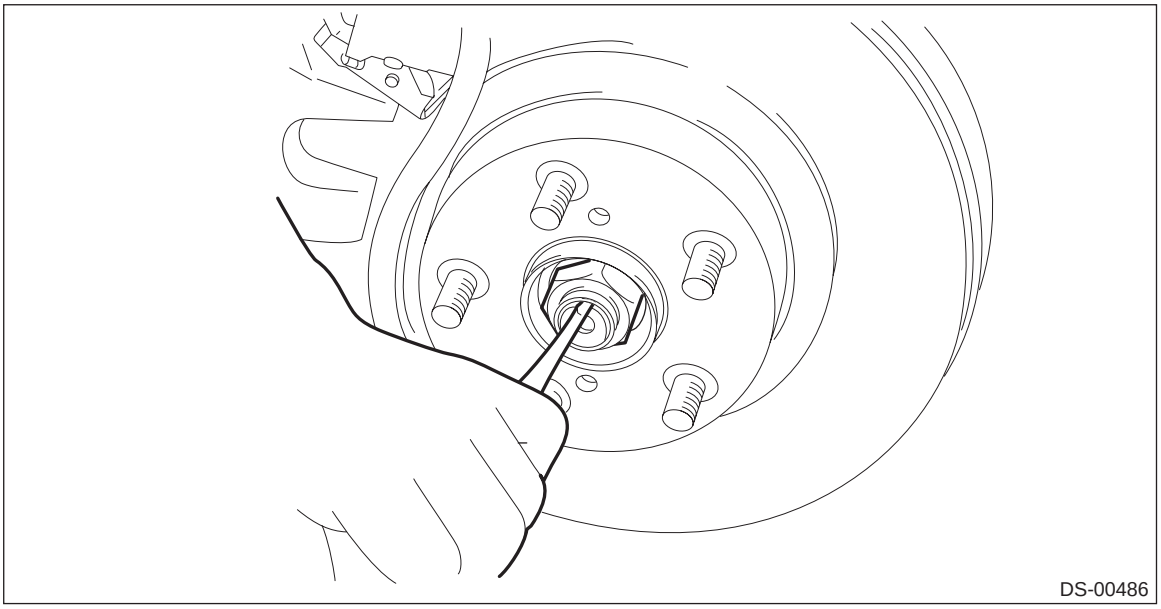
4. Front Hub Unit Bearing

A: REMOVAL

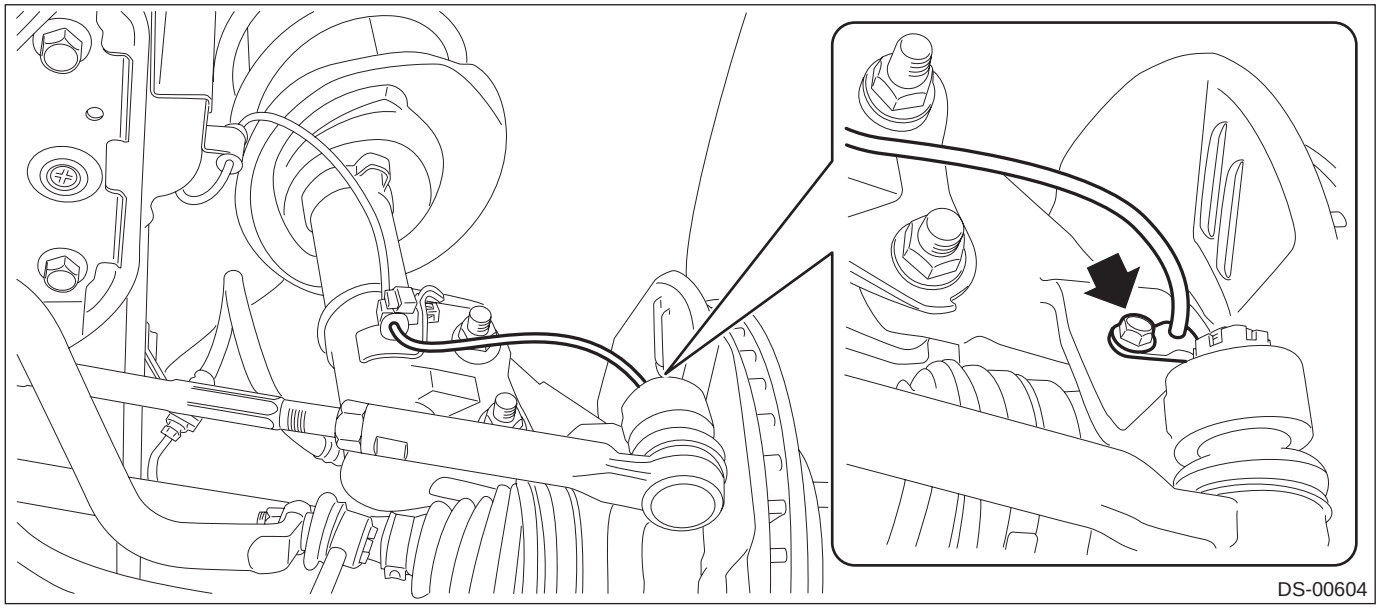
1) Lift up the vehicle, and then remove the front wheels.
2) Remove the nut - axle.

CAUTION:
Do not loosen the nut - axle while the front axle is loaded. Doing so may damage the hub unit COMPL.

(1) Lift the crimped section of the nut - axle.
(2) Remove the nut - axle using a socket wrench while depressing the brake pedal.

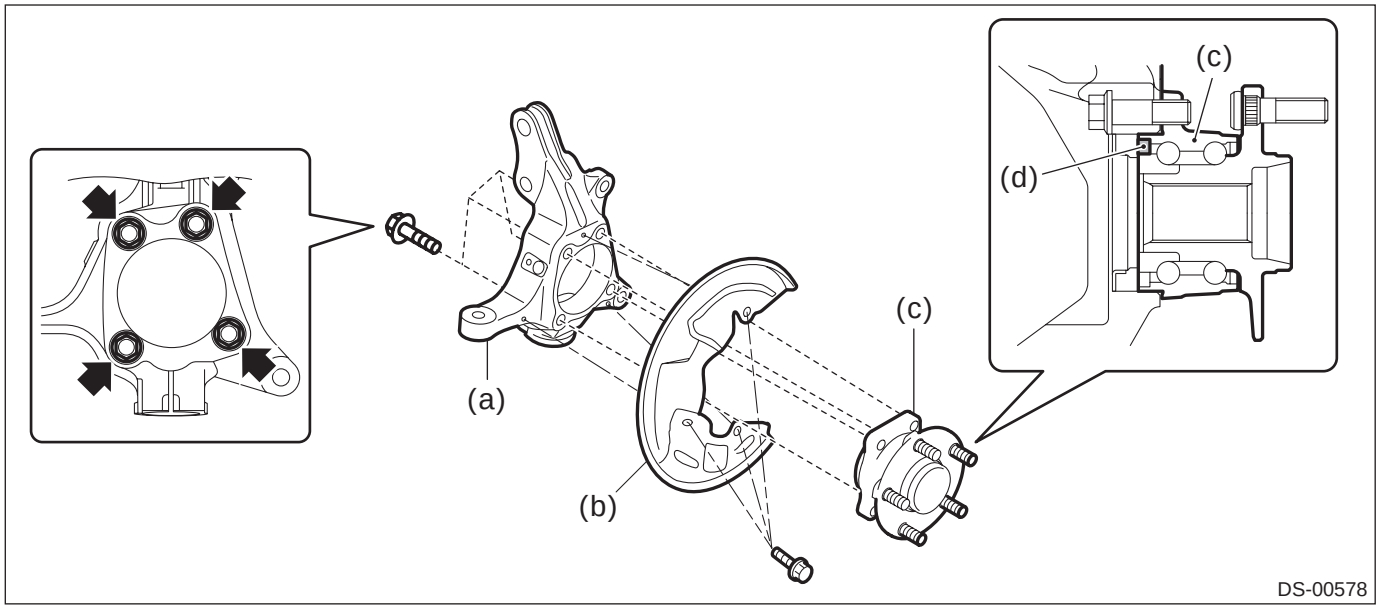


3) Remove the disc brake assembly. <Ref. to BR-25, REMOVAL, Front Disc Brake Assembly.>
4) Remove the disc rotor. <Ref. to BR-22, REMOVAL, Front Disc Rotor.>
5) Remove the bolts, and remove the front ABS wheel speed sensor.



6) Remove the hub unit COMPL - front axle.

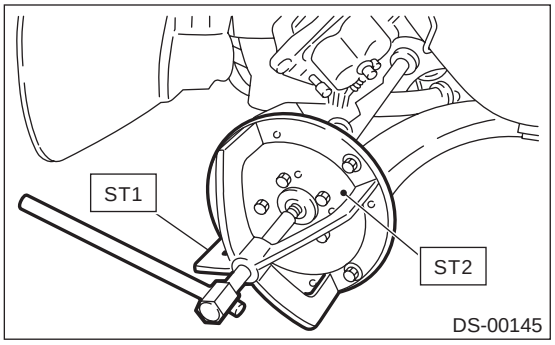
CAUTION:
- **Do not get closer the tool which charged magnetism to magnetic encoder.**
- **Be careful not to damage the magnetic encoder.**



(a) Housing ASSY - front axle
(b) Back plate - front brake
(c) Hub unit COMPL - front axle
(d) Magnetic encoder

NOTE:
If it is hard to remove, use the ST.

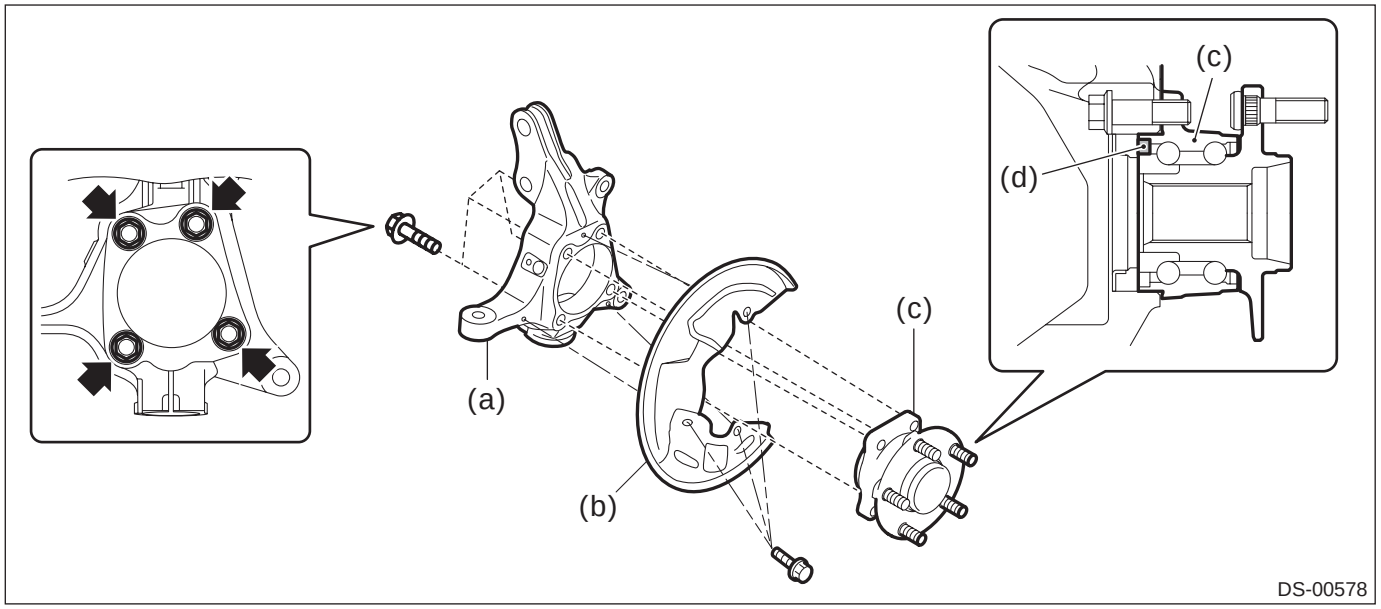
Preparation tool:
ST1: AXLE SHAFT PULLER (926470000)
ST2: AXLE SHAFT PULLER PLATE (28099PA110)



B: INSTALLATION

1) Tighten the back plate - front brake and the hub unit COMPL - front axle to the housing assembly - front axle with bolts.

CAUTION:
- **Do not get closer the tool which charged magnetism to magnetic encoder.**
- **Be careful not to damage the magnetic encoder.**



(a) Housing ASSY - front axle
(b) Back plate - front brake
(c) Hub unit COMPL - front axle
(d) Magnetic encoder

Tightening torque:
Back plate - front brake: 18 N·m (1.8 kgf-m, 13.3 ft-lb)
Hub unit COMPL - front axle: 65 N·m (6.6 kgf-m, 47.9 ft-lb)

2) Install the front drive shaft assembly.

CAUTION:
- **Do not hammer the drive shaft assembly when installing.**
- **Use new nut - axle.**
  (1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.
  (2) Tighten the new nut - axle temporarily.

3) Install the disc rotor to the hub unit COMPL - front axle.
4) Install the disc brake assembly to the housing assembly - front axle.

Tightening torque:
STI model: 155 N·m (15.8 kgf-m, 114.3 ft-lb)
Except for STI model: 80 N·m (8.2 kgf-m, 59.0 ft-lb)

5) Install the brake hose bracket.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

6) Install the front ABS wheel speed sensor.

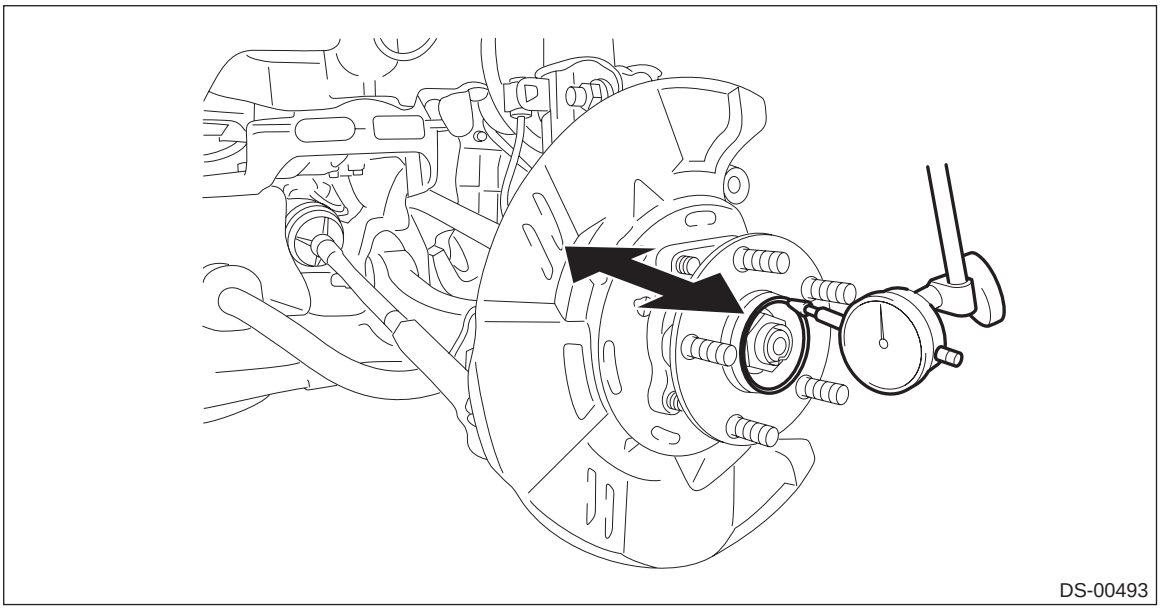
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7) While depressing the brake pedal, tighten new nuts - axle to the specified torque.

CAUTION:
Do not load the front axle before tightening the nut - axle. Doing so may damage the hub unit COMPL.

Tightening torque:
220 N·m (22.4 kgf-m, 162.3 ft-lb)

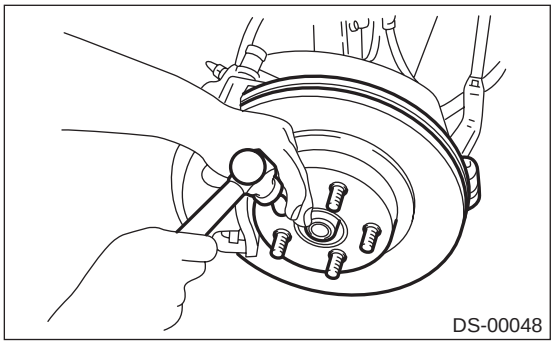
8) Inspect the lean of axis direction using a dial gauge. Replace the hub unit COMPL - front axle if the play exceeds the limit.



DS-00493

Service limit:
Maximum: 0.05 mm (0.0020 in)

9) After tightening the nut - axle, lock it securely.

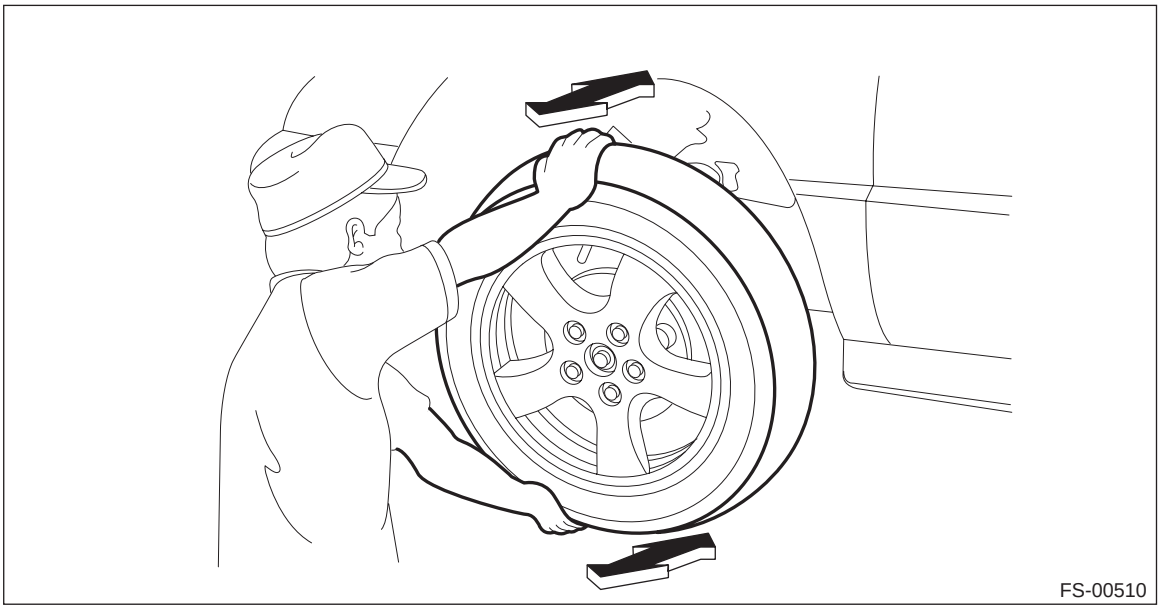


DS-00048

10) Install the front wheels, and perform the following inspections.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

1. Check the wheels for smooth rotation.
2. Check that there is no play by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.



- **Play exists** → Check the hub unit COMPL - front axle. <Ref. to DS-31, INSPECTION, Front Hub Unit Bearing.>

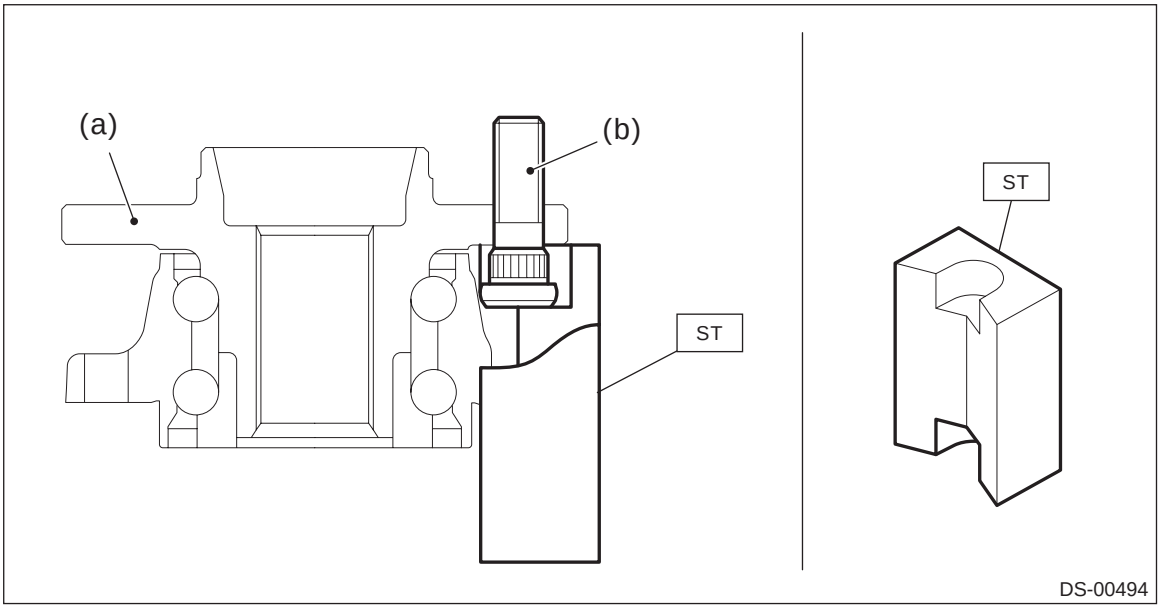
3. Check that there is no play by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.
   - **Play exists** → Replace the ball joint assembly. <Ref. to FS-33, REMOVAL, Front Ball Joint.>

C: DISASSEMBLY

Using the ST or a hydraulic press, push out the bolt - hub (b) from the hub unit COMPL - front axle (a).

CAUTION:
- **Be careful not to hammer the bolts - hub. This may deform the hub unit COMPL.**
- **Do not reuse the bolt - hub.**

Preparation tool:
ST: HUB STAND (28399AG000)



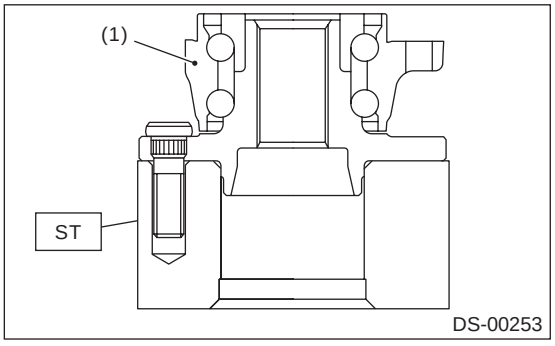
NOTE:
Since the hub unit COMPL can not be disassembled, only bolts - hub can be removed.

D: ASSEMBLY

1) Install the hub unit COMPL to the ST securely.

Preparation tool:
ST: HUB STAND (28099PA080)

2) Using a press, press new bolts - hub until their seating surfaces contact the hub unit COMPL.



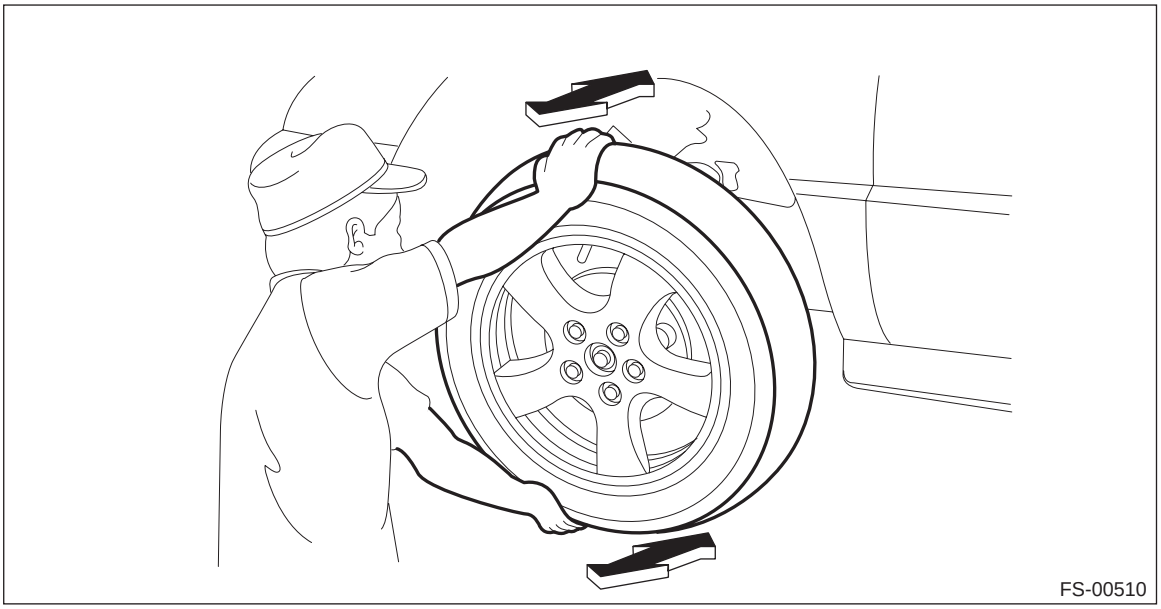
(1) Hub unit COMPL - front axle

NOTE:
Use the 12 mm (0.47 in) dia. holes in the HUB STAND to prevent bolts from tilting.

E: INSPECTION

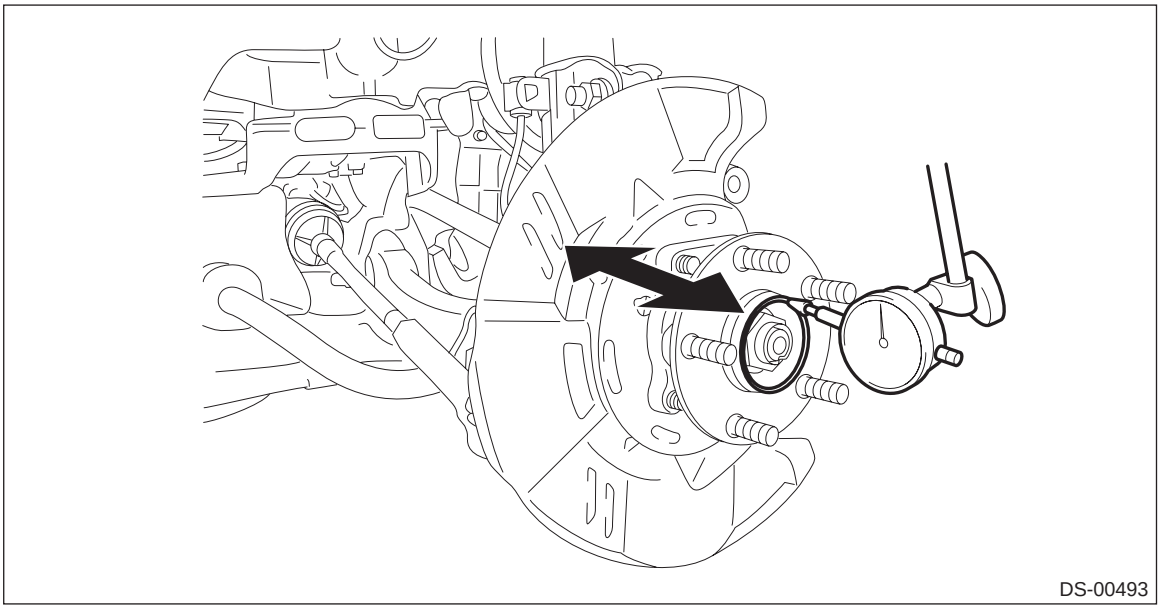
1) Moving the front tire up and down by hand, check there is no play in bearing, and check the wheel rotates smoothly.

CAUTION:
If there is any fault in the bearing, replace the hub unit COMPL.



2) Inspect the lean of axis direction using a dial gauge. Replace the hub unit COMPL if the play exceeds the limit.

Service limit:
Maximum: 0.05 mm (0.0020 in)



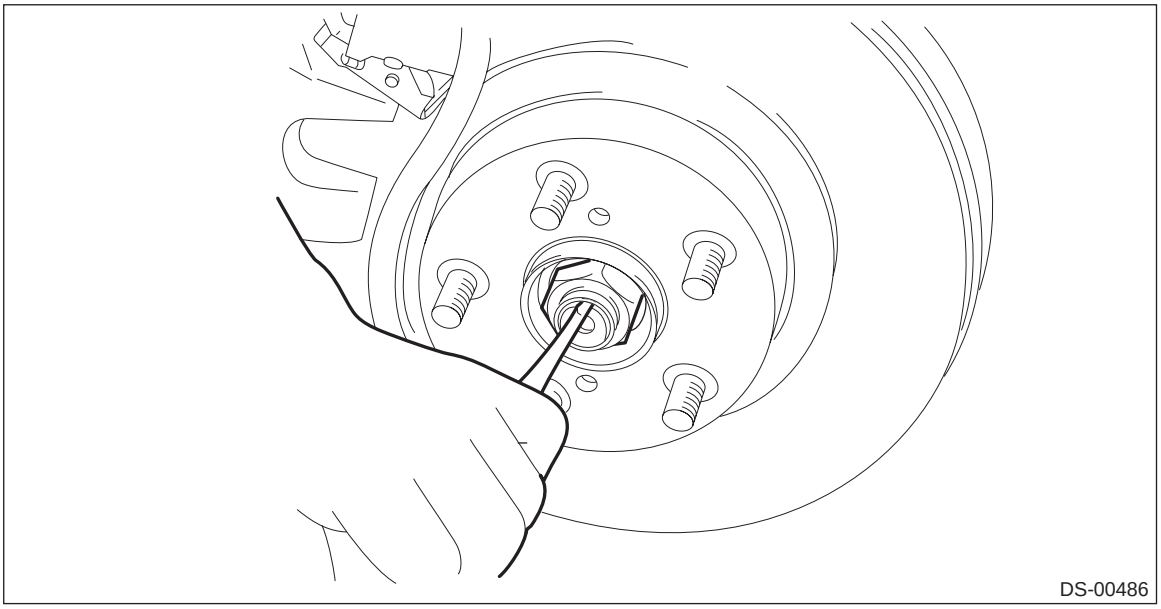
5. Rear Axle

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

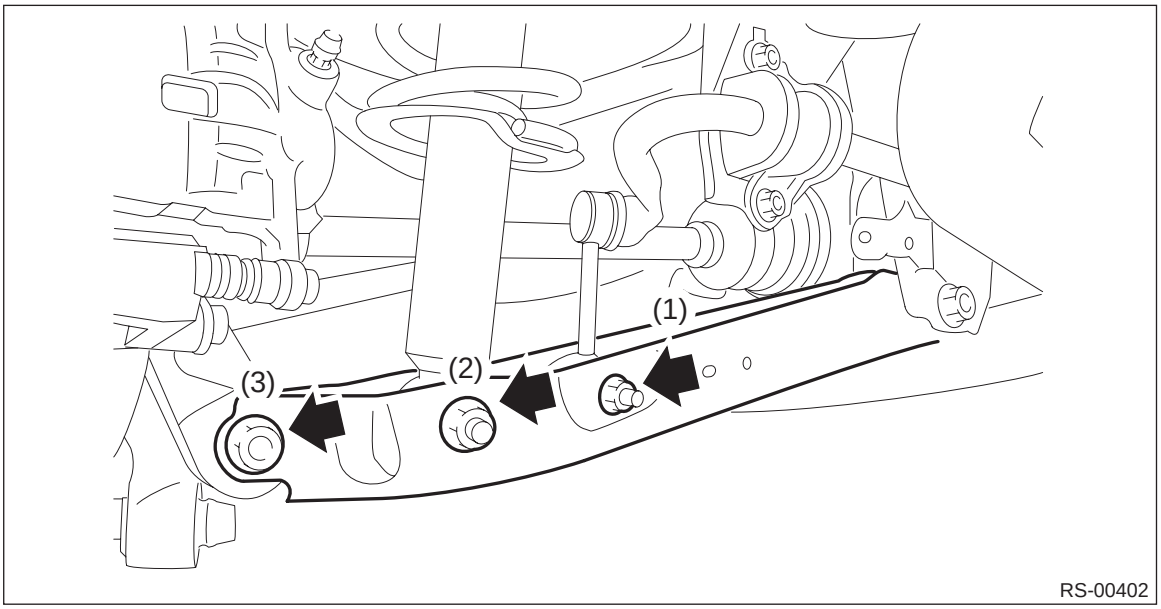
NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the nut - axle.

CAUTION:
Do not loosen the nut - axle while the rear axle is loaded. Doing so may damage the hub unit COMPL.
(1) Lift the crimped section of the nut - axle.
(2) Remove the nut - axle using a socket wrench while depressing the brake pedal.



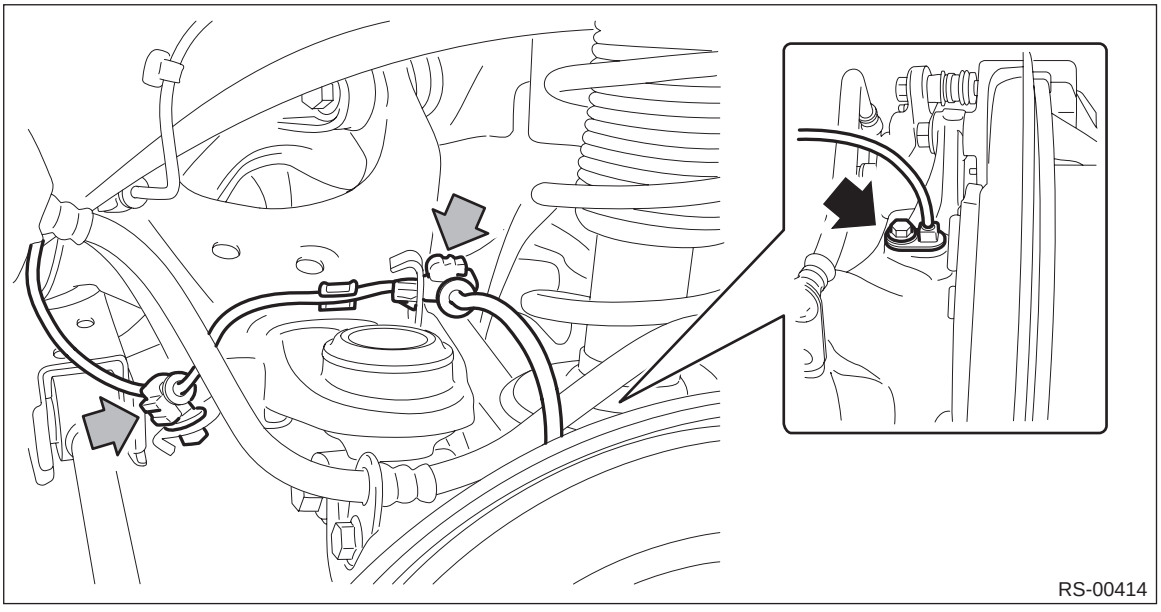
4) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) <Ref. to LI-75, REMOVAL, Rear Height Sensor.>

5) Remove the bolts and nuts, and lower the lateral link assembly - rear.
   (1) Remove the nut and disconnect the rear stabilizer link assembly.
   (2) Remove the bolts from the lower side of rear shock absorber assembly.
   (3) Disconnect the housing assembly - rear axle from the lateral link assembly - rear.

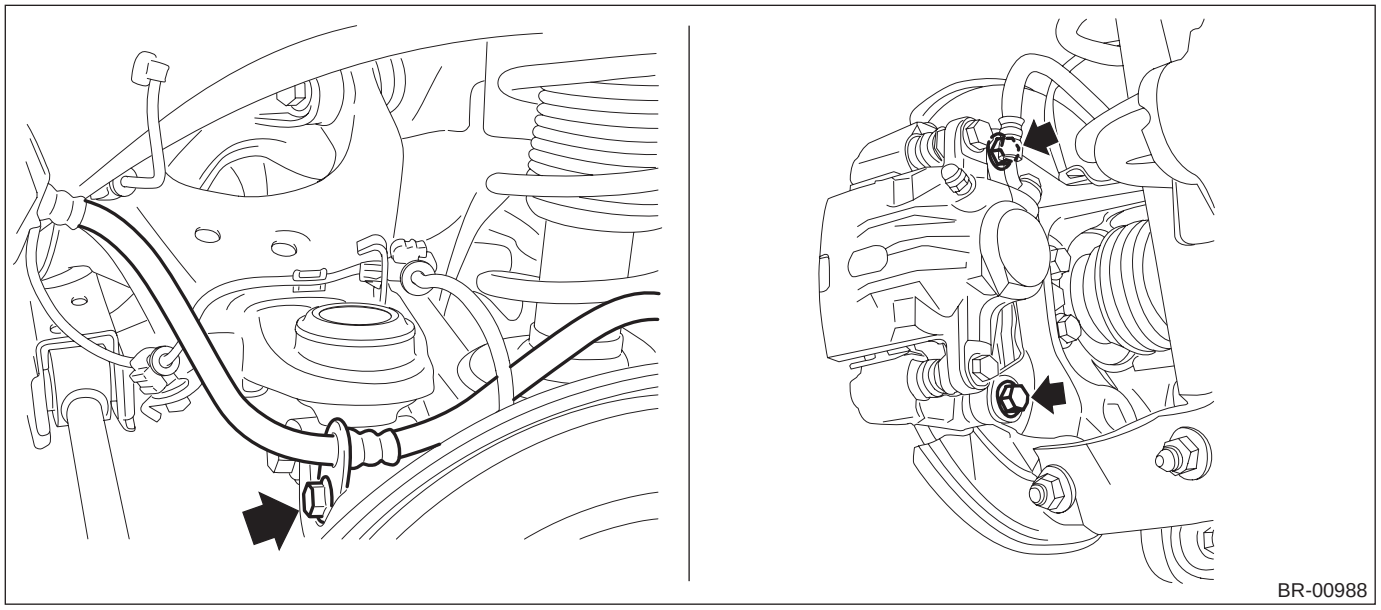


6) Remove the rear ABS wheel speed sensor from the housing assembly - rear axle.
   (1) Remove the bolts, and remove the ABS wheel speed sensor.
   (2) Remove the rear ABS wheel speed sensor harness from the upper arm.

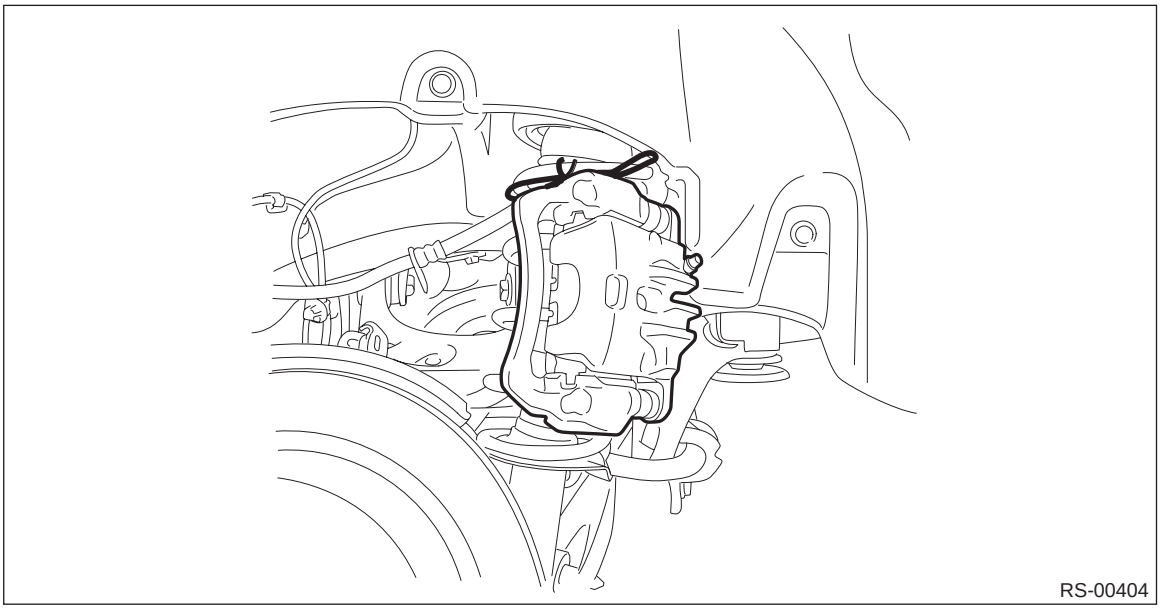
CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**



7) Remove the disc brake assembly.
(1) Remove the bolts and then remove the brake hose bracket and disc brake assembly.



(2) Prepare wiring harnesses etc. to be discarded, and suspend the disc brake assembly from the shock absorber assembly.

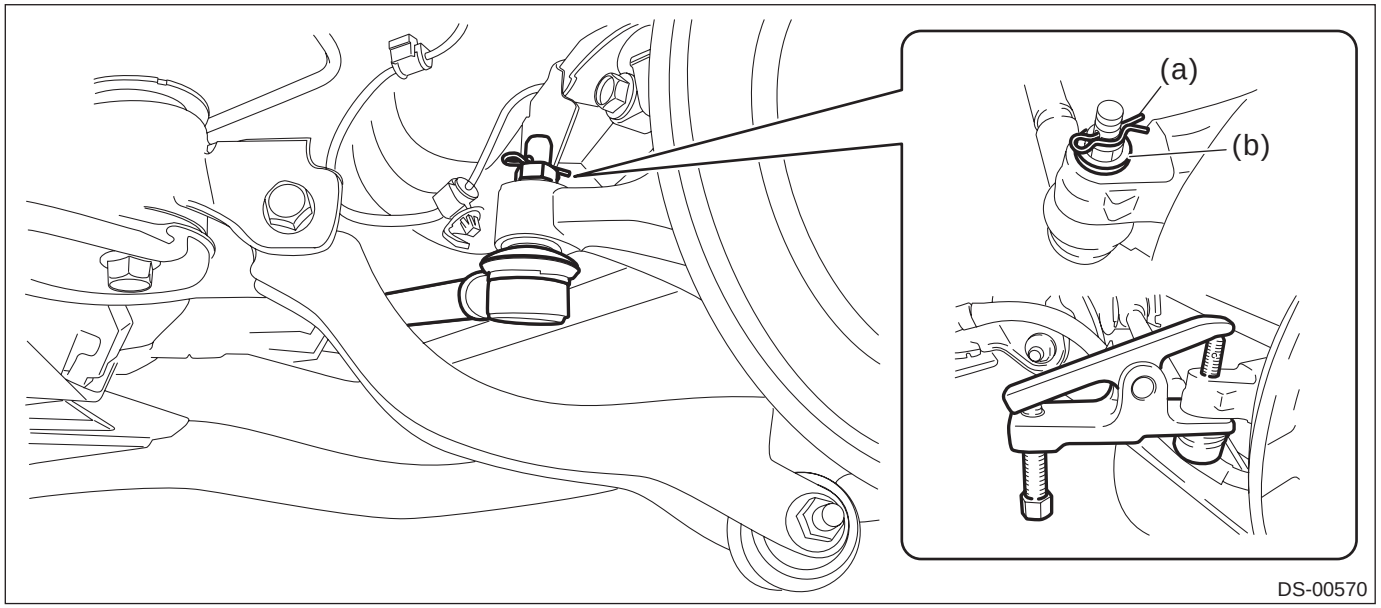


8) Remove the rear disc rotor. <Ref. to BR-39, REMOVAL, Rear Disc Rotor.>
9) Remove the rear drive shaft assembly. <Ref. to DS-64, REMOVAL, Rear Drive Shaft.>

10) Remove the lateral link assembly - front.
(1) Remove the snap pin (a) and nut (b).
(2) Remove the ball joint from the housing assembly - rear axle.

CAUTION:
Be careful not to damage the boot of the joint.

Preparation tool:
Tie-rod ball joint puller

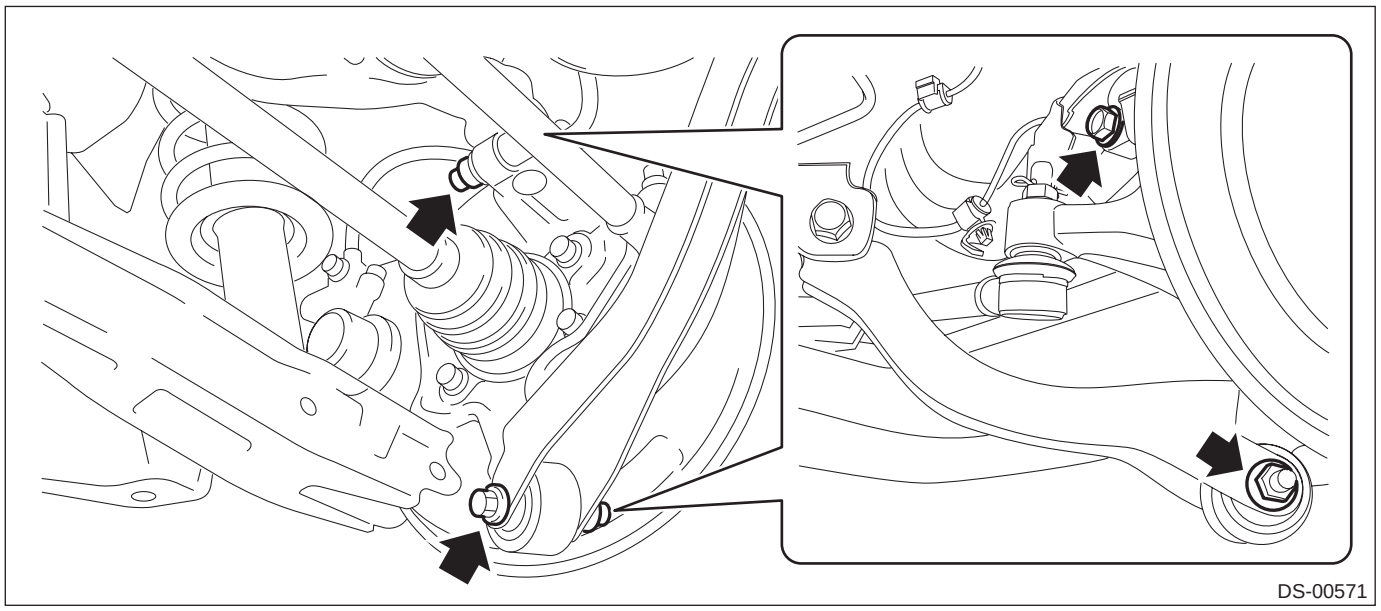


11) Remove the housing assembly - rear axle.

CAUTION:
- **Be careful of the weight of the housing assembly - rear axle.**
- **Be careful not to damage the spline portion of the drive shaft.**

(1) Remove the bolts, and disconnect the upper arm, trailing link and lateral link assembly - rear.

CAUTION:
Be careful not to damage the boot of the joint.



(2) Remove the housing assembly - rear axle.
12) Refer to “Rear Hub Unit Bearing” for removal of the hub unit COMPL - rear axle. <Ref. to DS-40, REMOVAL, Rear Hub Unit Bearing.>

B: INSTALLATION

1) Temporarily tighten the housing assembly - rear axle to the upper arm assembly.
2) Install the rear drive shaft assembly. <Ref. to DS-68, INSTALLATION, Rear Drive Shaft.>

CAUTION:
Do not hammer the drive shaft assembly when installing.
(1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.
(2) Tighten the new nut - axle temporarily.

3) Tighten the rear shock absorber assembly, rear stabilizer link assembly and other links to the specified torque.

Tightening torque:
Rear suspension: <Ref. to RS-3, REAR SUSPENSION, COMPONENT, General Description.>
Rear shock absorber: <Ref. to RS-5, REAR SHOCK ABSORBER, COMPONENT, General Description.>

4) Install the rear disc rotor.
5) Install the disc brake assembly.

Tightening torque:
STI model: 65 N·m (6.6 kgf-m, 47.9 ft-lb)
Except for STI model: 66 N·m (6.7 kgf-m, 48.7 ft-lb)

6) Install the brake hose bracket and rear ABS wheel speed sensor.

Tightening torque:
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
Rear ABS wheel speed sensor: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

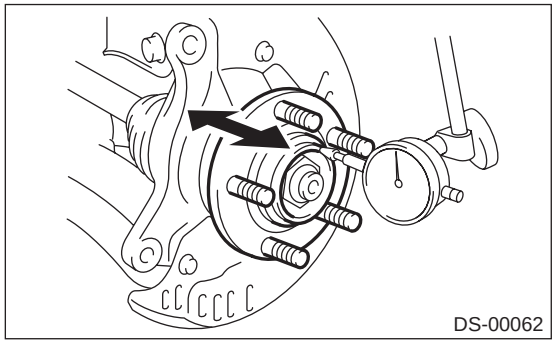
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

8) While depressing the brake pedal, tighten new nuts - axle to the specified torque.

CAUTION:
Do not load the rear axle before tightening the nut - axle. Doing so may damage the hub unit COMPL.

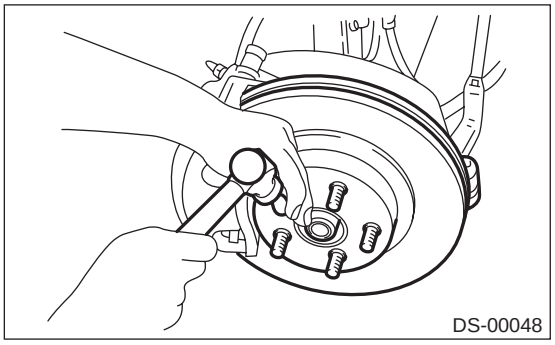
Tightening torque:
190 N·m (19.4 kgf-m, 140.1 ft-lb)

9) Inspect the lean of axis direction using a dial gauge. Replace the hub unit COMPL - rear axle if the play exceeds the limit.



Service limit:
Maximum: 0.05 mm (0.0020 in)

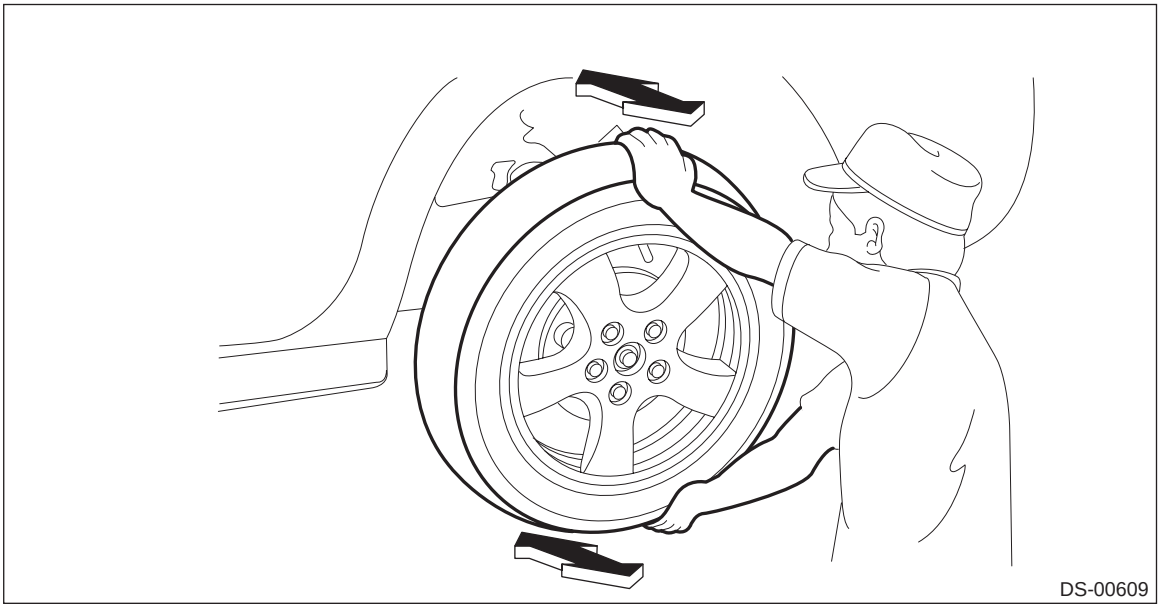
10) After tightening the nut - axle, lock it securely.



11) Install the rear wheels, and perform the following inspections.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

1. Check the wheels for smooth rotation.
2. Check that there is no play by moving the upper and lower portions of rear tire in an axial direction with the brake pedal released.



- **Play exists** → Check the hub unit COMPL - rear axle. <Ref. to DS-47, INSPECTION, Rear Hub Unit Bearing.>

12) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

13) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-17, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

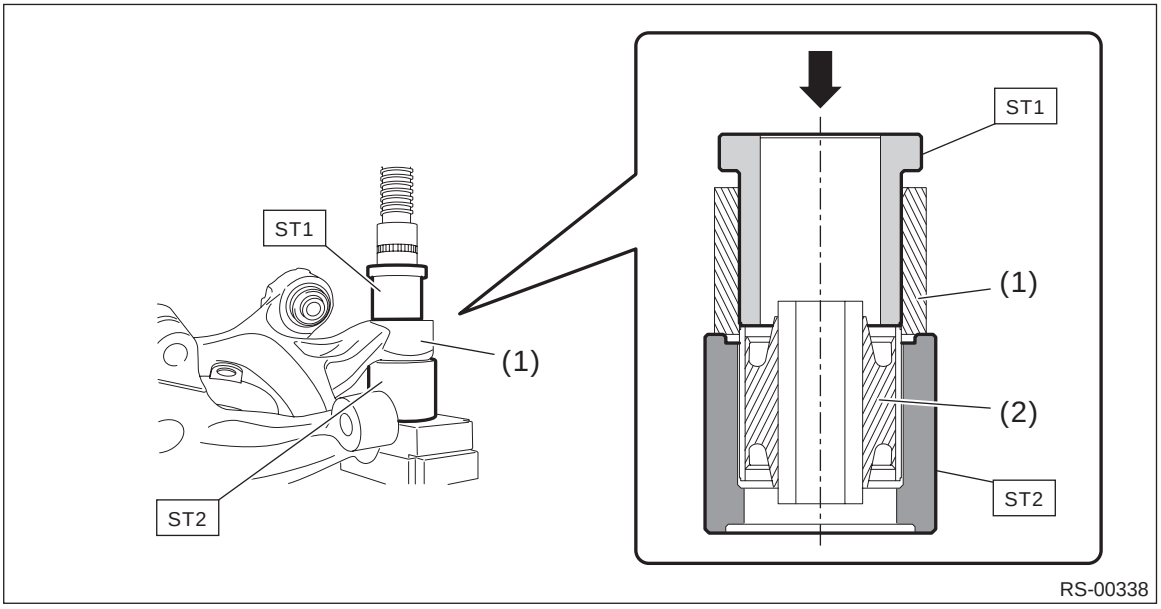
1. BUSHING - REAR AXLE HOUSING

Do not remove the housing assembly - rear axle because the bushing - rear axle housing cannot be replaced. If it is removed, replace the housing assembly - rear axle.

2. BUSHING - TRAILING LINK

1) Remove the housing assembly - rear axle. <Ref. to DS-32, REMOVAL, Rear Axle.>
2) Using the ST and a hydraulic press, push out the bushing.

Preparation tool:
ST1: BUSHING REMOVER (20099FG000)
ST2: INSTALLER & REMOVER (BASE) (20099PA010)



(1) Housing ASSY - rear axle (2) Bushing - trailing link

D: ASSEMBLY

1. BUSHING - REAR AXLE HOUSING

Do not remove the housing assembly - rear axle because the bushing - rear axle housing cannot be replaced. If it is removed, replace the housing assembly - rear axle.

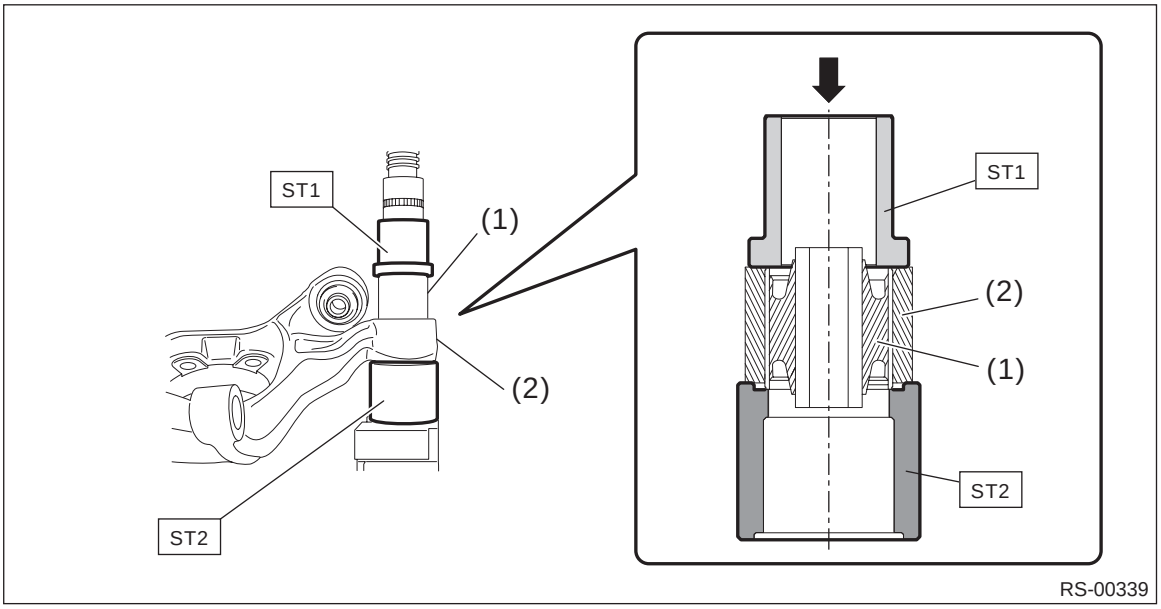
2. BUSHING - TRAILING LINK

1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Perform visual check for damage or bend on the trailing link.
- Visually check the bushing for abnormal cracks, fatigue or damage.

2) Press-fit the bushing using ST and the hydraulic press.

CAUTION:
Make sure to press the bushing straight in.

Preparation tool:
ST1: BUSHING REMOVER (20099FG000)
ST2: INSTALLER & REMOVER (BASE) (20099PA010)



(1) Bushing (2) Housing ASSY - rear axle

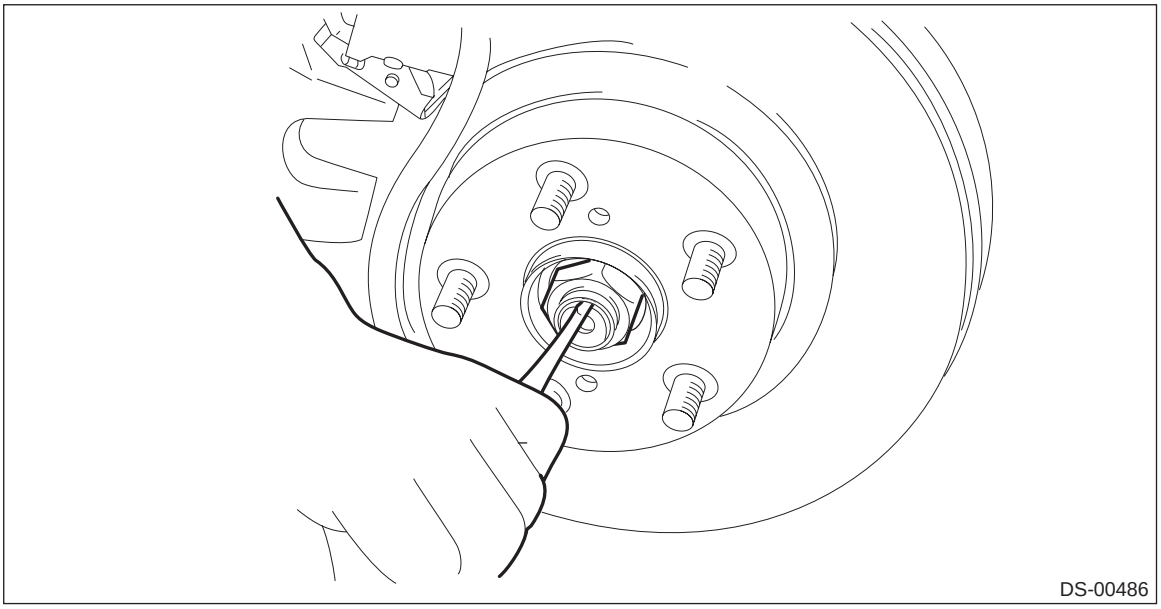
6. Rear Hub Unit Bearing

A: REMOVAL

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the nut - axle.

CAUTION:
Do not loosen the nut - axle while the rear axle is loaded. Doing so may damage the hub unit COMPL.

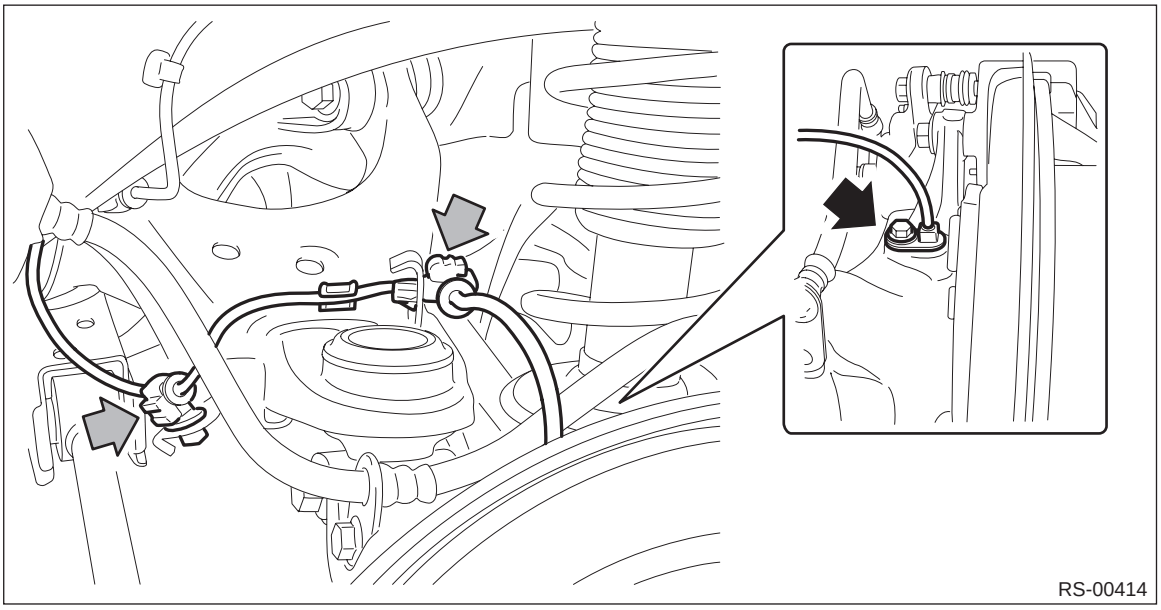
(1) Lift the crimped section of the nut - axle.
(2) Remove the nut - axle using a socket wrench while depressing the brake pedal.



DS-00486

3) Remove the rear ABS wheel speed sensor.
(1) Remove the bolts, and remove the rear ABS wheel speed sensor.
(2) Remove the rear ABS wheel speed sensor harness from the upper arm.

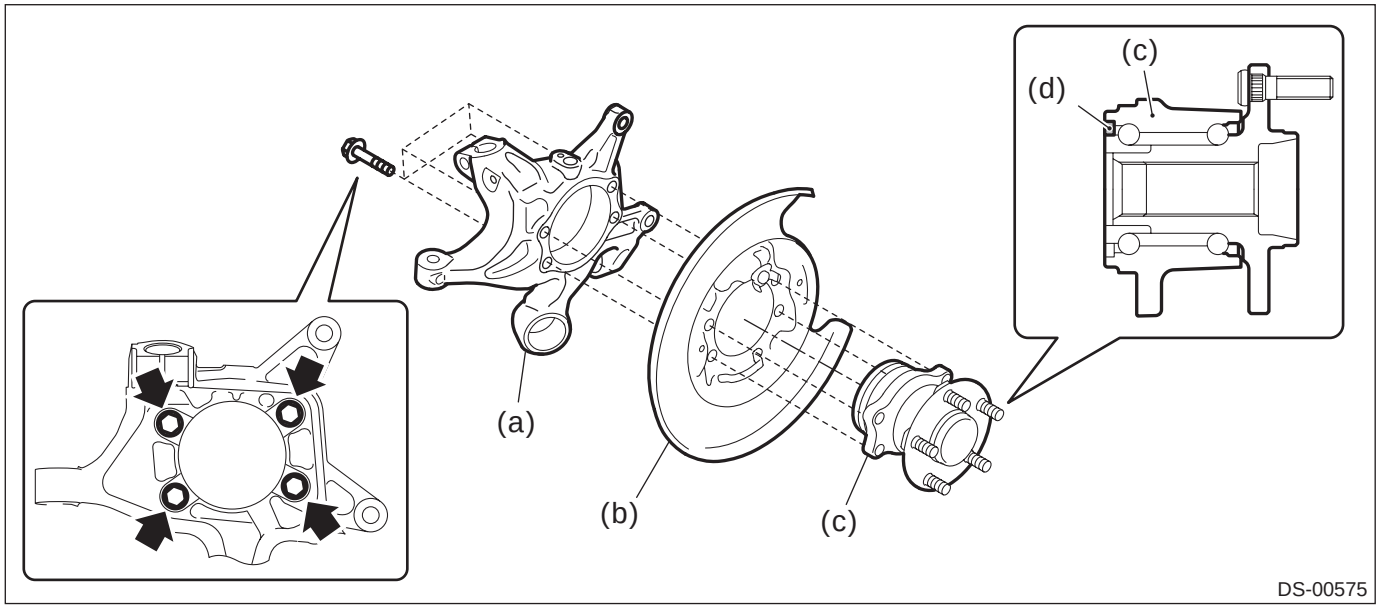
CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**



RS-00414

4) Remove the disc brake assembly. <Ref. to BR-43, REMOVAL, Rear Disc Brake Assembly.>
5) Remove the rear disc rotor. <Ref. to BR-39, REMOVAL, Rear Disc Rotor.>
6) Remove the hub unit COMPL - rear axle.

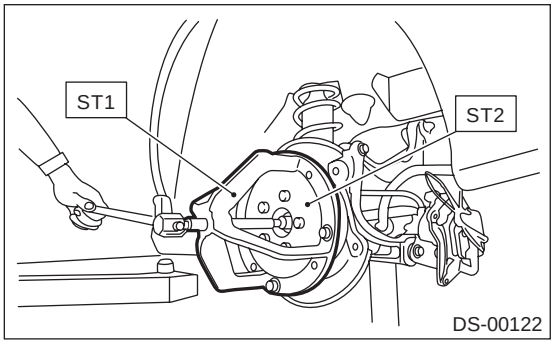
CAUTION:
- **Be careful not to damage the magnetic encoder.**
- **Do not get closer the tool which charged magnetism to magnetic encoder.**



(a) Housing ASSY - rear axle
(b) Back plate - rear brake
(c) Hub unit COMPL - rear axle
(d) Magnetic encoder

NOTE:
If it is hard to remove, use the ST.

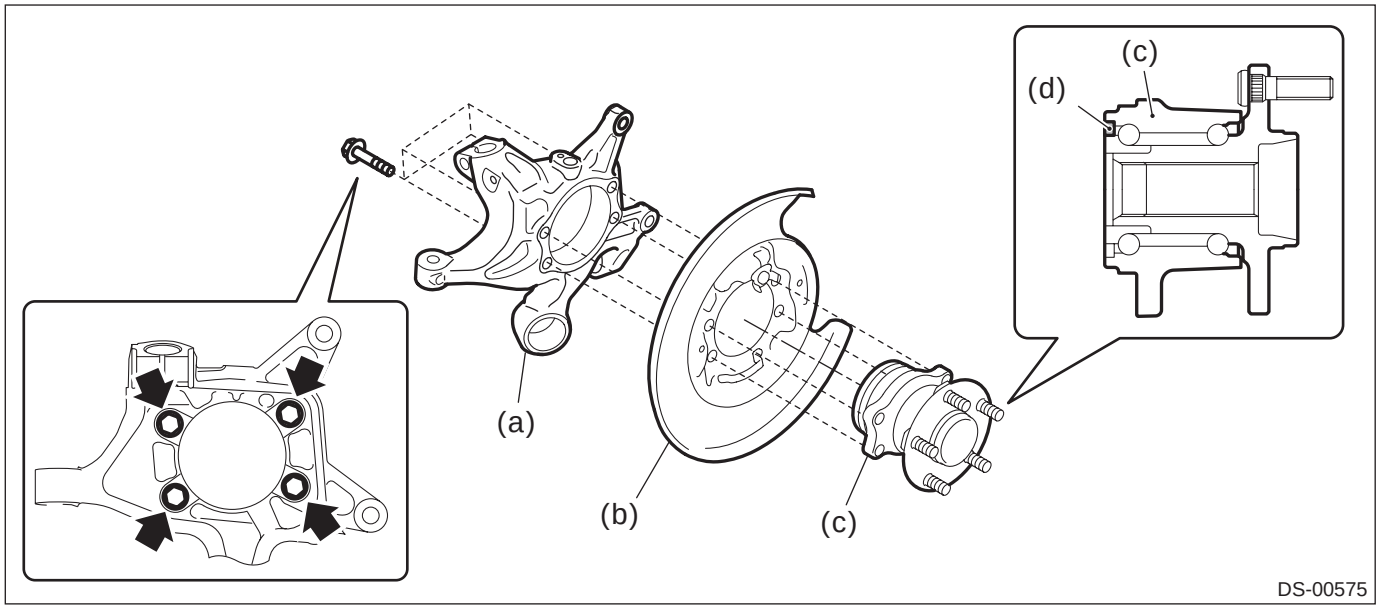
Preparation tool:
ST1: AXLE SHAFT PULLER (926470000)
ST2: AXLE SHAFT PULLER PLATE (28099PA110)



B: INSTALLATION

1) Place the back plate - rear brake between the housing assembly - rear axle and the hub unit COMPL - rear axle, and tighten the bolt.

CAUTION:
- **Do not get closer the tool which charged magnetism to magnetic encoder.**
- **Be careful not to damage the magnetic encoder.**



(a) Housing ASSY - rear axle
(b) Back plate - rear brake
(c) Hub unit COMPL - rear axle
(d) Magnetic encoder

Tightening torque:
65 N·m (6.6 kgf-m, 47.9 ft-lb)

2) Install the rear drive shaft assembly.

CAUTION:
Do not hammer the drive shaft assembly when installing.
(1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.
(2) Tighten the new nut - axle temporarily.

3) Install the disc rotor to the hub unit COMPL - rear axle.
4) Install the caliper body assembly to the housing assembly - rear axle.

Tightening torque:
STI model: 65 N·m (6.6 kgf-m, 47.9 ft-lb)
Except for STI model: 66 N·m (6.7 kgf-m, 48.7 ft-lb)

5) Install the brake hose bracket.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

6) Install the rear ABS wheel speed sensor.

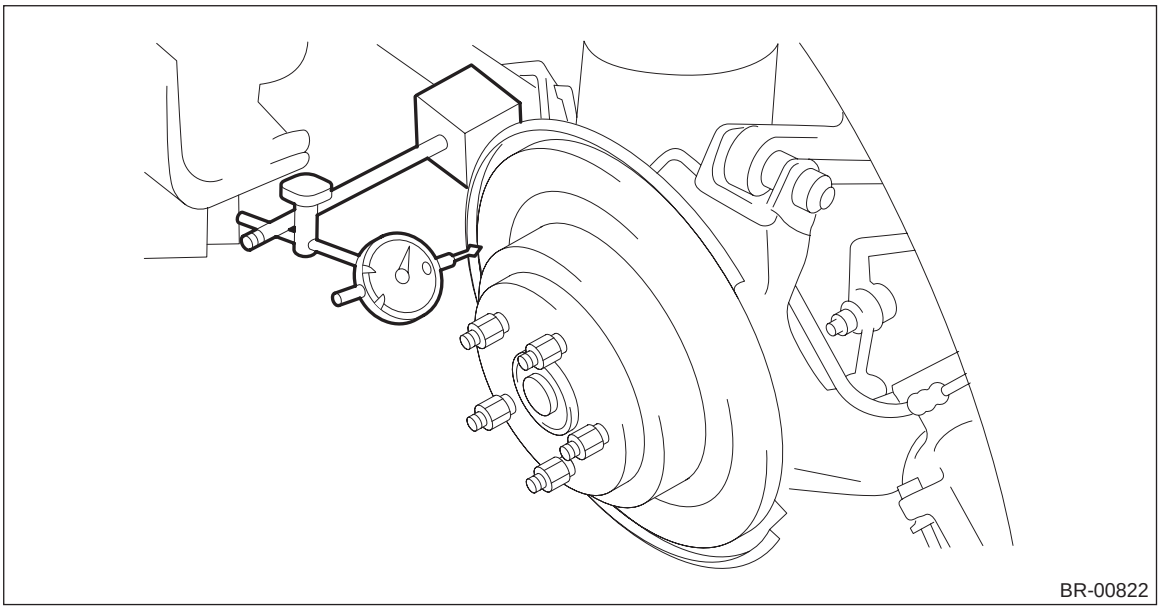
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7) While depressing the brake pedal, tighten new nuts - axle to the specified torque.

CAUTION:
Do not load the rear axle before tightening the nut - axle. Doing so may damage the hub unit COMPL.

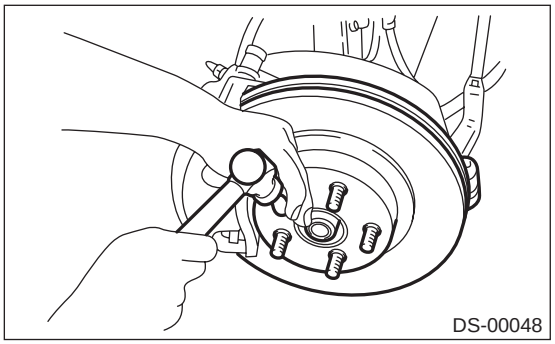
Tightening torque:
190 N·m (19.4 kgf-m, 140.1 ft-lb)

8) Inspect the lean of axis direction using a dial gauge. Replace the hub unit COMPL - rear axle if the play exceeds the limit.



Service limit:
Maximum: 0.05 mm (0.0020 in)

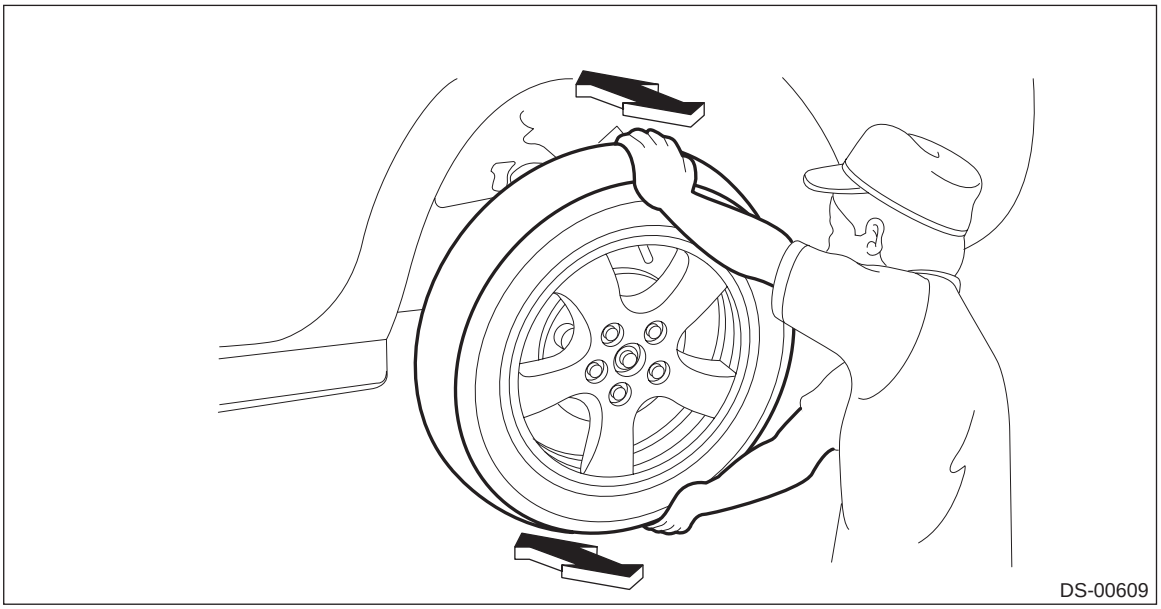
9) After tightening the nut - axle, lock it securely.



10) Install the rear wheels, and perform the following inspections.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

1. Check the wheels for smooth rotation.
2. Check that there is no play by moving the upper and lower portions of rear tire in an axial direction with the brake pedal released.



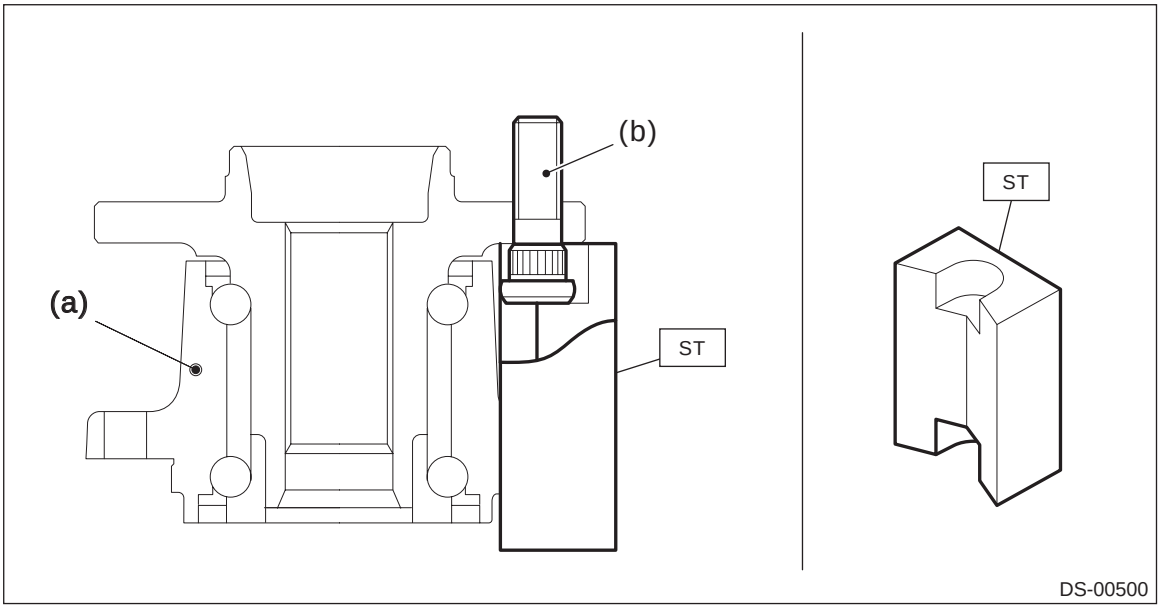
- **Play exists** → Check the hub unit COMPL - rear axle. <Ref. to DS-47, INSPECTION, Rear Hub Unit Bearing.>

C: DISASSEMBLY

Using the ST or a hydraulic press, push out the bolt - hub (b) from the hub unit COMPL - rear axle (a).

CAUTION:
- **Be careful not to hammer the bolts - hub. This may deform the hub unit COMPL.**
- **Do not reuse the bolt - hub.**

Preparation tool:
ST: HUB STAND (28399AG000)

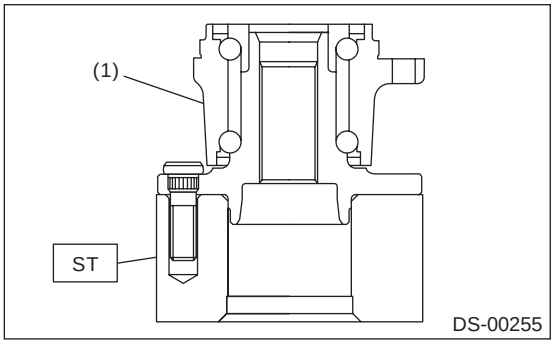


NOTE:
Since the hub unit COMPL - rear axle cannot be disassembled, only bolts - hub can be removed.

D: ASSEMBLY

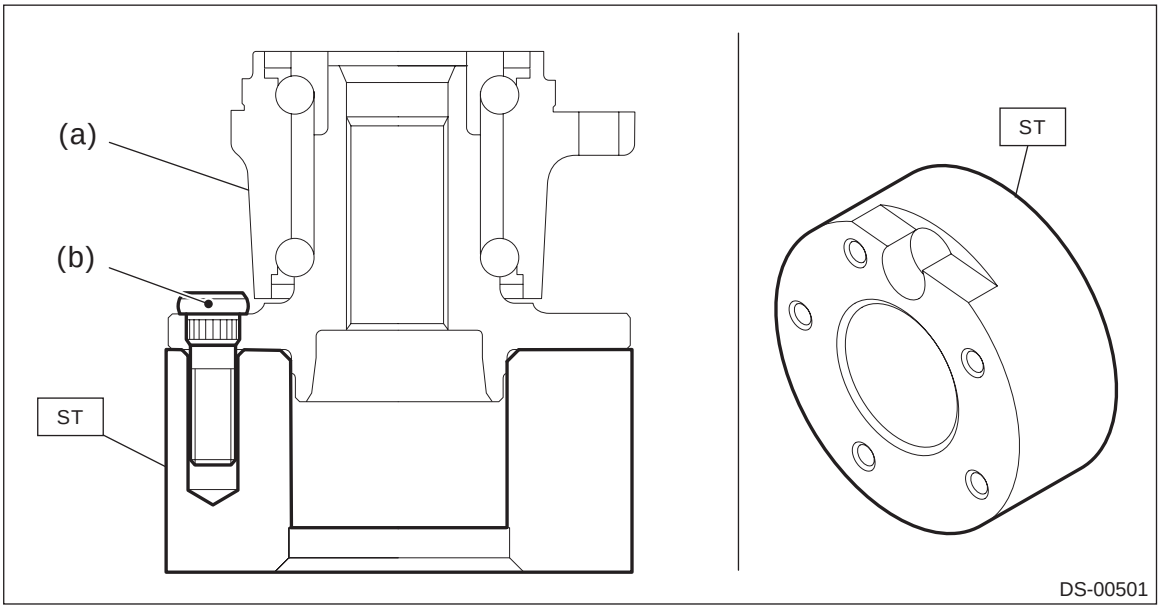
1) Install the hub unit COMPL - rear axle to the ST securely.

Preparation tool:
ST: HUB STAND (28099PA080)



(1) Hub unit COMPL - rear axle

2) Using a press, press new bolts - hub (b) until their seating surfaces contact the hub unit COMPL - rear axle (a).

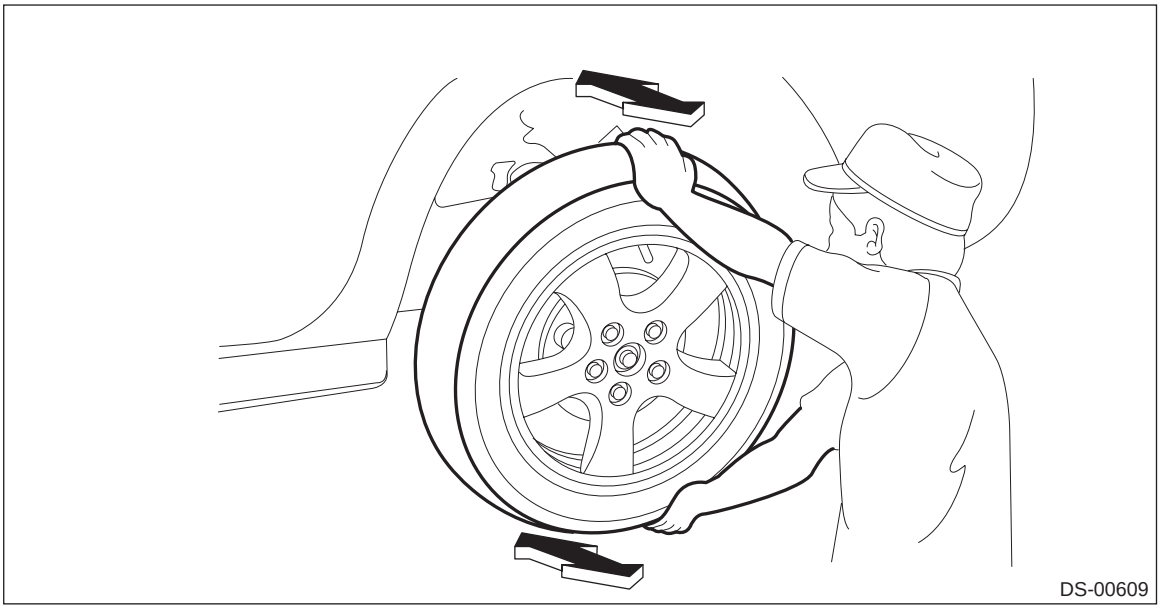


NOTE:
Use the 12 mm (0.47 in) dia. holes in the HUB STAND to prevent bolts from tilting.

E: INSPECTION

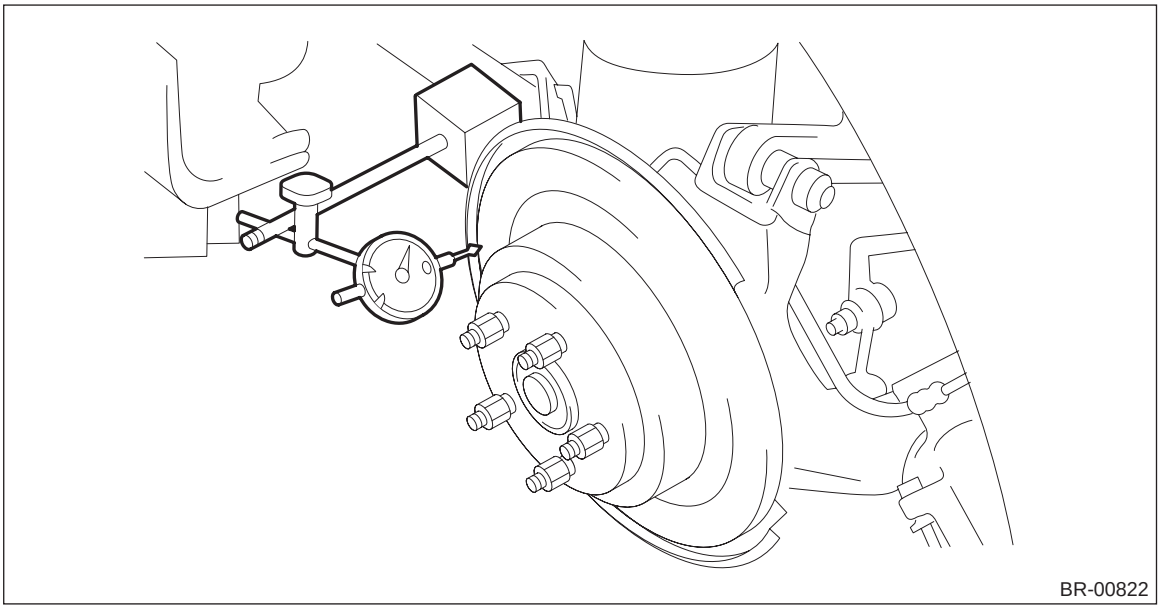
1) Moving the rear tire up and down by hand, check there is no backlash in bearing, and check the wheel rotates smoothly.

CAUTION:
If there is any fault in the bearing, replace the hub unit COMPL - rear axle.



2) Inspect the lean of axis direction using a dial gauge. Replace the hub unit COMPL - rear axle if the play exceeds the limit.

Service limit:
Maximum: 0.05 mm (0.0020 in)



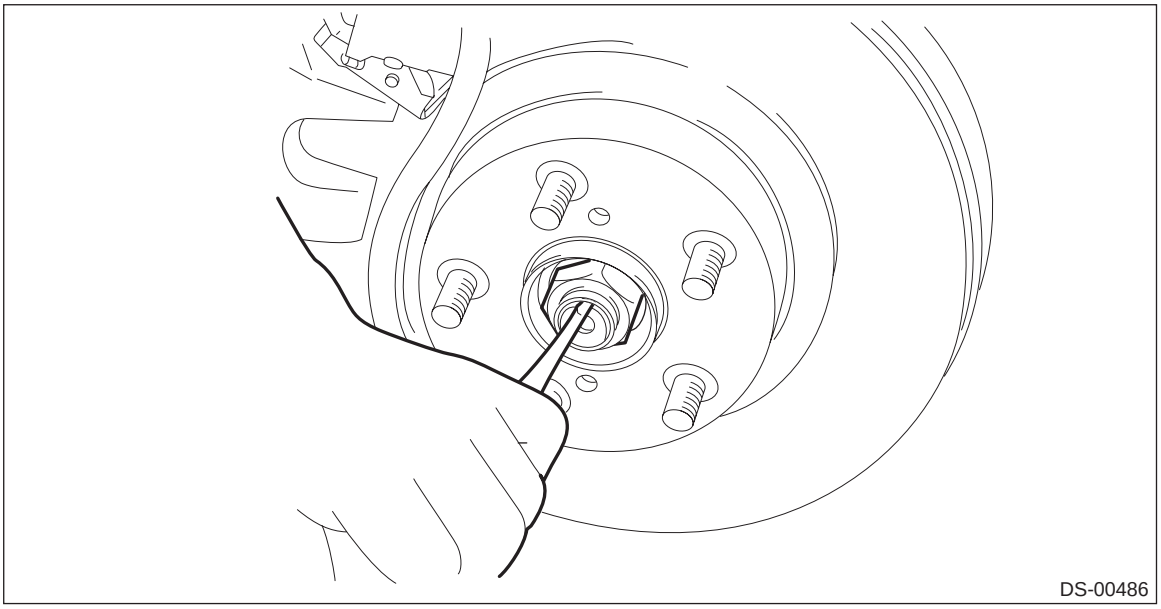
7. Front Drive Shaft

A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the nut - axle.

CAUTION:
Do not loosen the nut - axle while the front axle is loaded. Doing so may damage the hub unit COMPL.

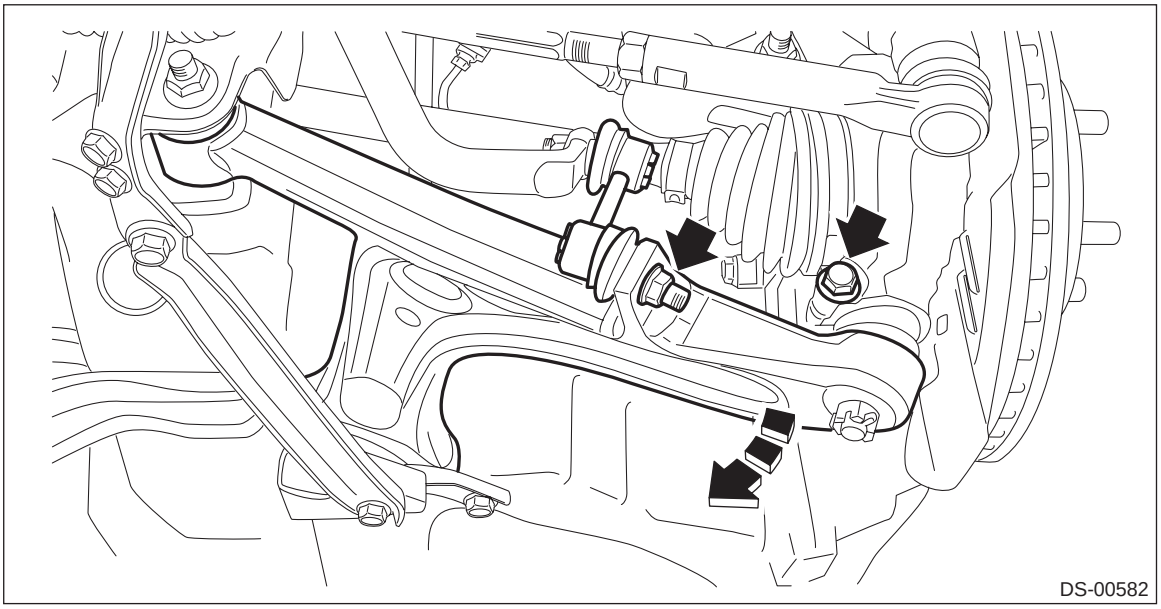
(1) Lift the crimped section of the nut - axle.
(2) Remove the nut - axle using a socket wrench while depressing the brake pedal.



DS-00486

3) Drain the transmission gear oil. (MT model)
4) Drain differential gear oil. (CVT model)
5) Disconnect the ball joint assembly.

(1) Remove the nut and disconnect the front stabilizer link.
(2) Remove the bolts, disconnect the front arm ball joint, and lower the front arm assembly.

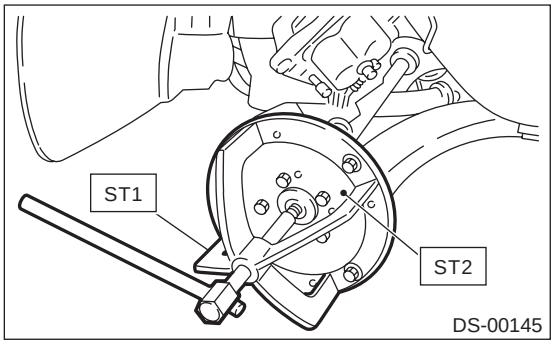


DS-00582

6) Remove the front drive shaft.
(1) Disconnect the housing assembly - front axle from the front drive shaft.

NOTE:
If it is hard to remove, use the ST.

Preparation tool:
ST1: AXLE SHAFT PULLER (926470000)
ST2: AXLE SHAFT PULLER PLATE (28099PA110)



(2) Using a tire lever, remove the front drive shaft from transmission.

CAUTION:
Be careful not to allow the tire lever to damage holder area.

Preparation tool:
Tire lever

B: INSTALLATION

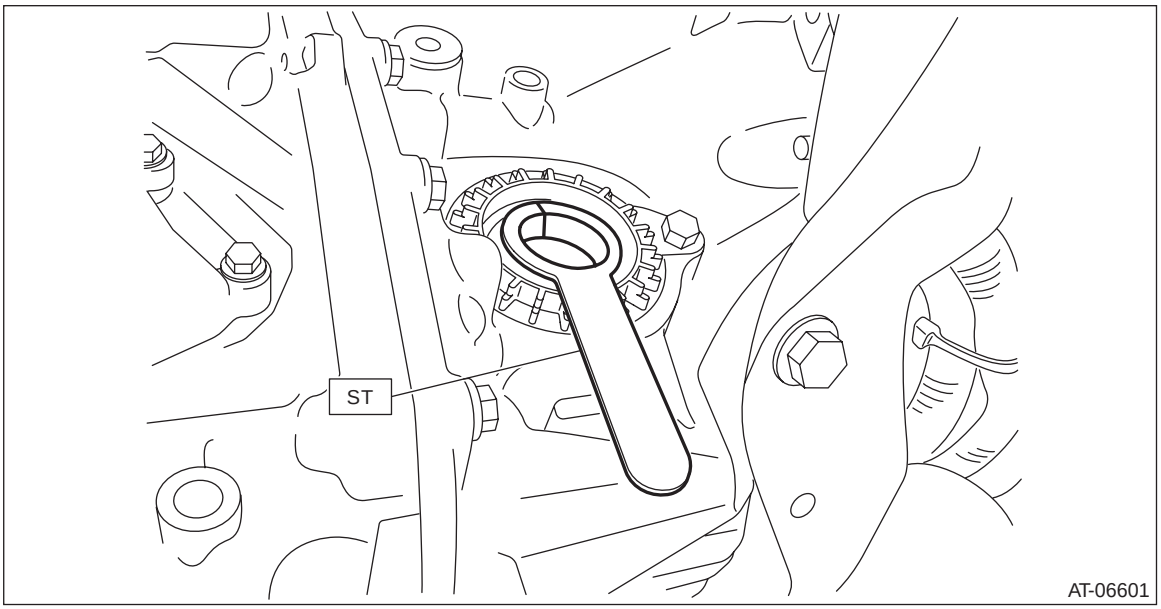
1) Before installation, check the drive shaft assembly. <Ref. to DS-63, INSPECTION, Front Drive Shaft.>
2) Replace the differential side retainer oil seal with a new part.
- MT model: <Ref. to 6MT(TY85)-28, REPLACEMENT, Differential Side Retainer Oil Seal.>
- CVT model: <Ref. to CVT(TR690)-89, REPLACEMENT, Differential Side Retainer Oil Seal.>

CAUTION:
After pulling out the drive shaft assembly, be sure to replace with a new oil seal.
3) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.

CAUTION:
Do not hammer the drive shaft assembly when installing.
4) Tighten the new nut - axle temporarily.

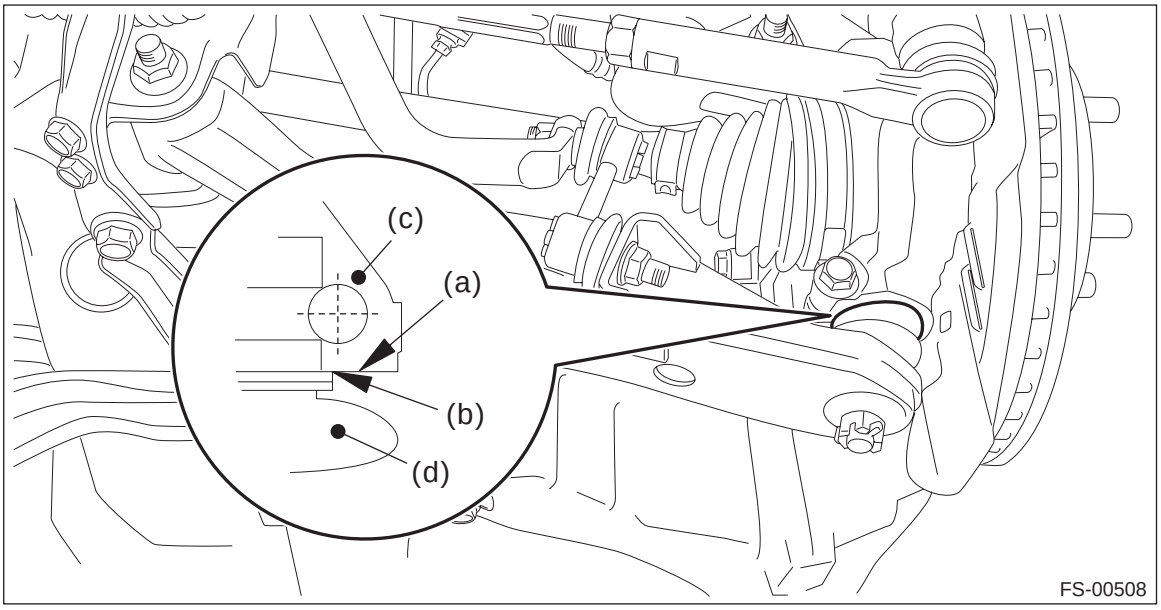
5) Using the ST, install the front drive shaft assembly to the transmission.

Preparation tool:
ST: OIL SEAL PROTECTOR (28399SA010)



6) Install the ball joint assembly to the housing assembly - front axle.

CAUTION:
Before tightening, make sure the bottom surface of the housing assembly - front axle and the stepped section of ball joint are in contact.



(a) Bottom surface of housing ASSY - front axle
(b) Raised section of ball joint
(c) Housing ASSY - front axle
(d) Ball joint

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

7) Install the stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)
8) While depressing the brake pedal, tighten new nuts - axle to the specified torque.

CAUTION:
Do not load the front axle before tightening the nut - axle. Doing so may damage the hub unit COMPL.

Tightening torque:
220 N·m (22.4 kgf-m, 162.3 ft-lb)
9) After tightening the nut - axle, lock it securely.
10) Fill transmission gear oil. (MT model)
11) Fill differential gear oil. (CVT model)
12) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
13) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-15, ADJUSTMENT, Wheel Alignment.>

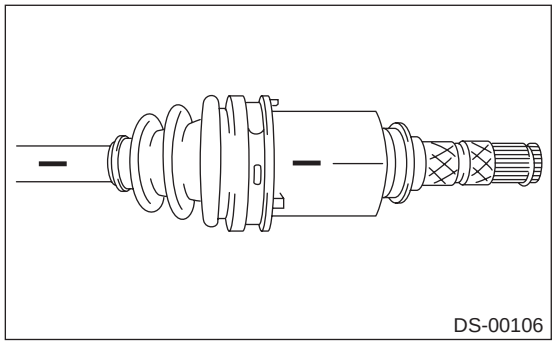
CAUTION:
When the wheel alignment has been adjusted, perform “VDC sensor midpoint setting mode”. <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
14) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-17, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

1. AC + AAR TYPE

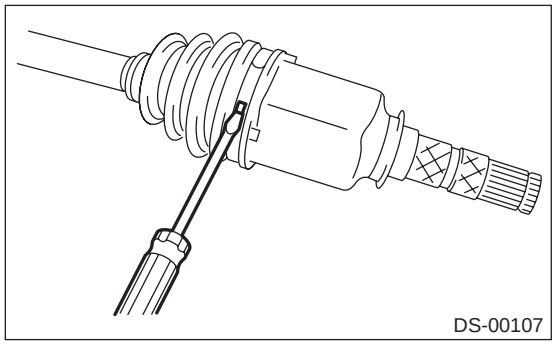
1) Remove the AAR outer race from shaft assembly.

CAUTION:
Be careful not to damage the boot.
(1) Place alignment marks on the shaft and outer race.



DS-00106

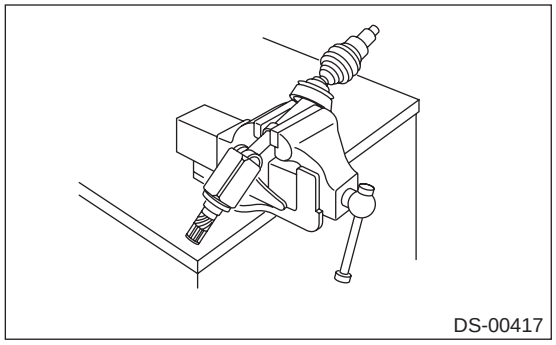
(2) Remove the AAR boot band and boot.



DS-00107

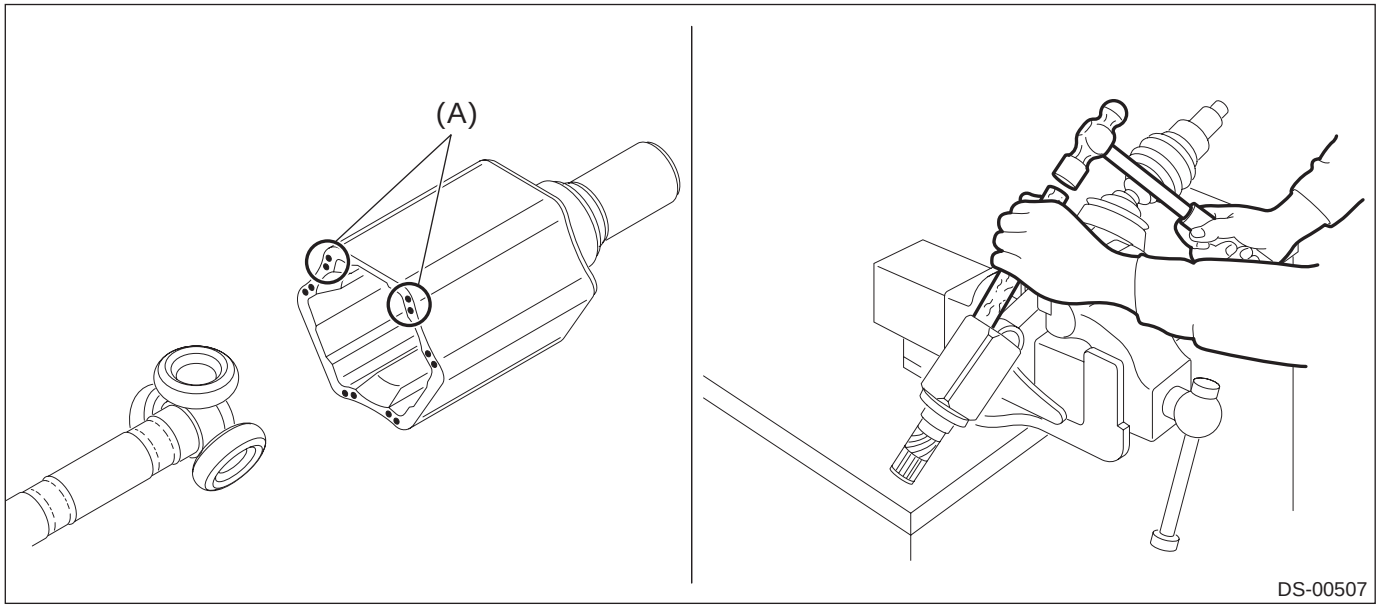
(3) Place the drive shaft between wooden blocks and fix it on a vise.

CAUTION:
Do not set the drive shaft directly on a vise.



(4) Tap the staking are of the outer race alternately with a plastic or wooden bar, and remove one roller at a time.

CAUTION:
- **Tap the staking area (A) of the outer race.**
- **Do not use a metal bar as the outer race may deform.**
- **Be careful not to damage the roller parts.**



(5) Remove the outer race from shaft assembly.

CAUTION:
Make sure to have your associate hold the outer race when removing the third roller to prevent the outer race from falling.

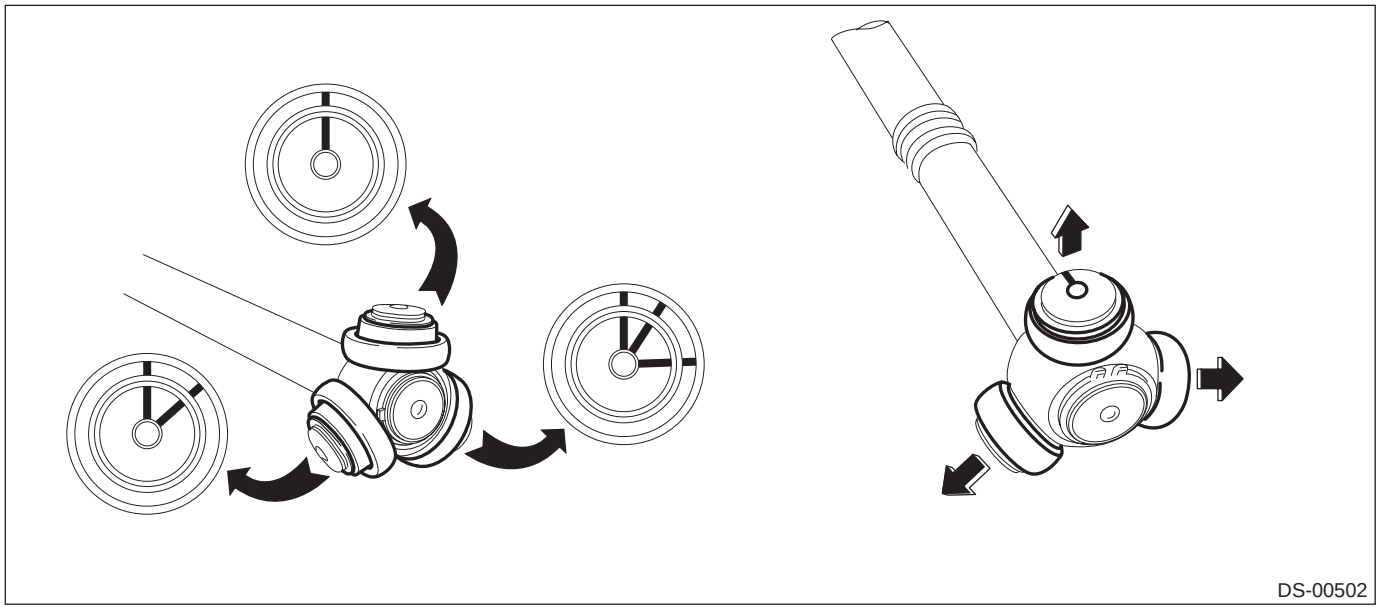
(6) Wipe off grease.

CAUTION:
The grease is a special type of grease. Do not mix with other grease.

2) Remove the roller kit from trunnion.

CAUTION:
Be careful with the roller kit position.

(1) Place alignment marks on the roller kit and trunnion.



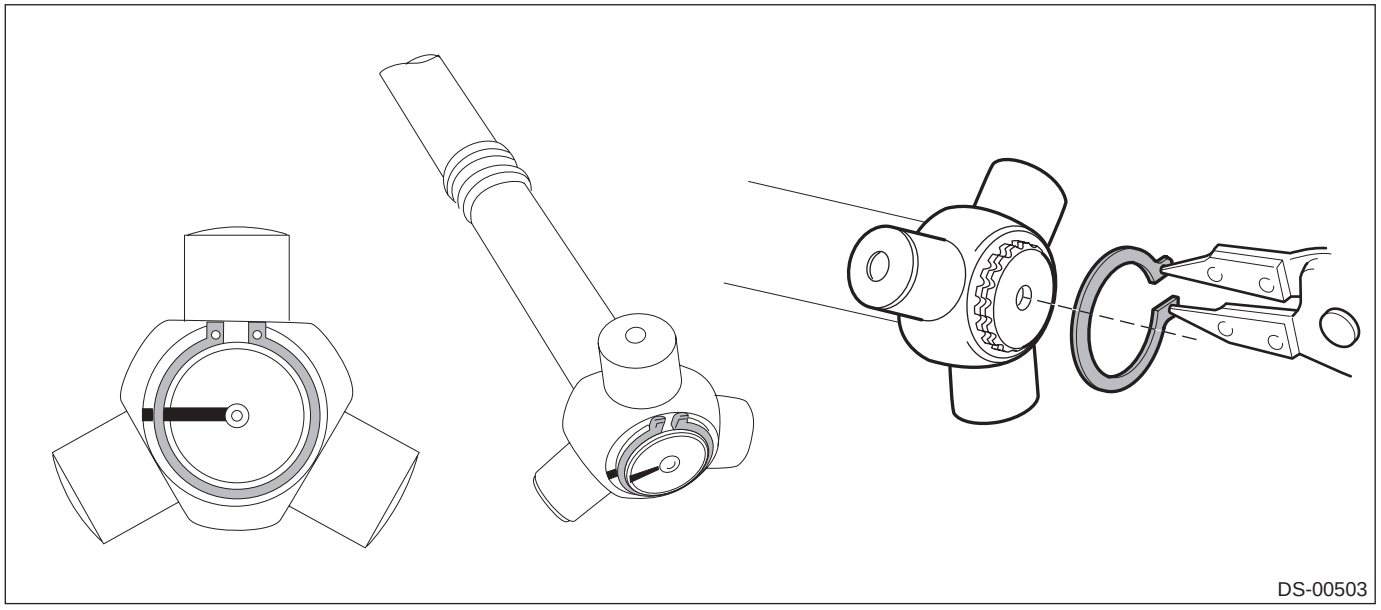
(2) Remove the roller kit from trunnion.

3) Remove the trunnion from the shaft.

(1) Place alignment marks on the trunnion and shaft.

(2) Remove the snap ring and trunnion.

CAUTION:
Be sure to wrap shaft splines with vinyl tape to protect the boot from scratches.

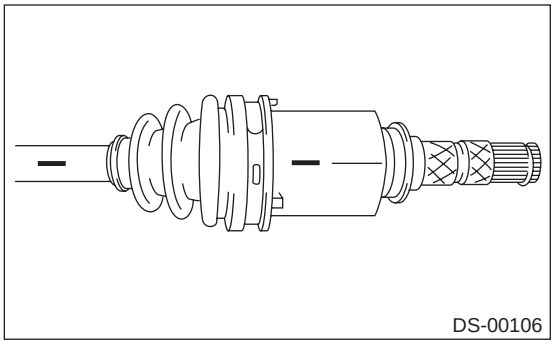


4) Remove the AAR boot.

NOTE:
The AC is a non-disassembly part, so the drive shaft disassembly stops here.

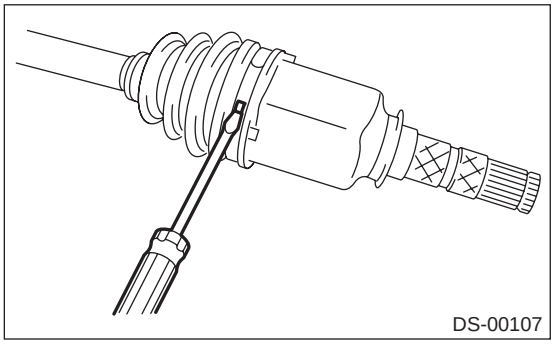
2. EBJ + PTJ TYPE

1) Place alignment marks on the shaft and outer race.

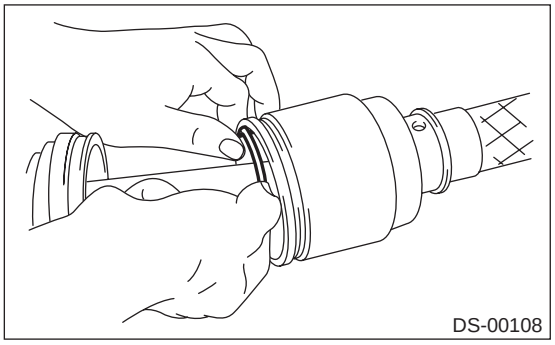


2) Remove the PTJ boot band and boot.

CAUTION:
Be careful not to damage the boot.



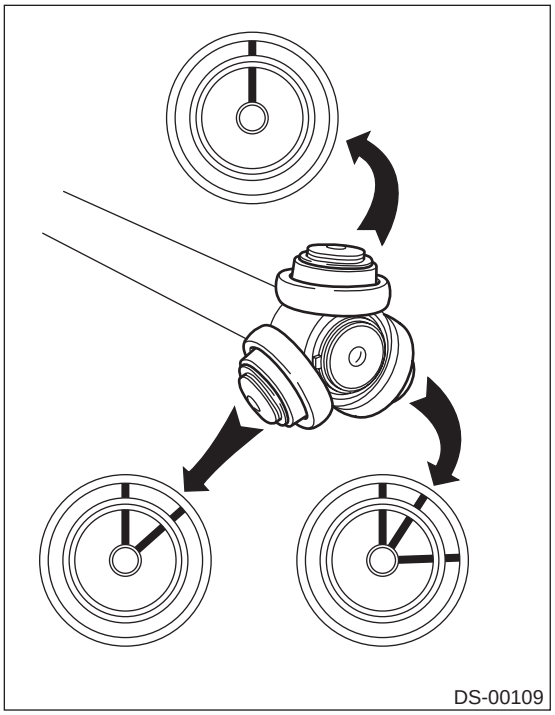
3) Remove the snap ring from PTJ outer race.



4) Remove the PTJ outer race from shaft assembly.
5) Wipe off grease.

CAUTION:
The grease is a special type of grease. Do not mix with other grease.

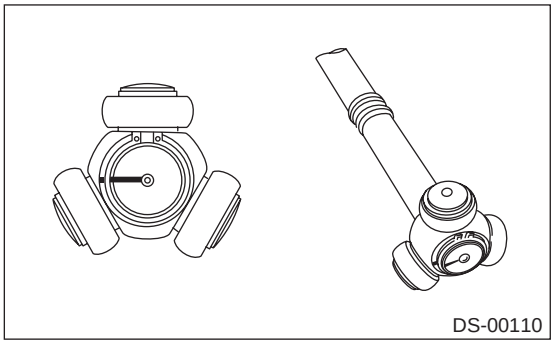
6) Place alignment marks on the roller kit and trunnion.



7) Remove the roller kit from trunnion.

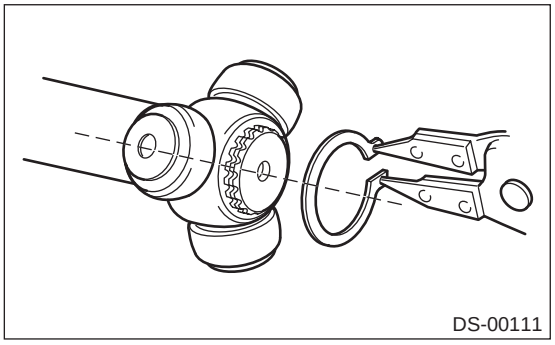
CAUTION:
Be careful with the roller kit position.

8) Place alignment marks on the trunnion and shaft.



9) Remove the snap ring and trunnion.

CAUTION:
Be sure to wrap shaft splines with vinyl tape to protect the boot from scratches.



10) Remove the PTJ boot.
11) Remove the O-ring from the groove of the shaft.

NOTE:
The EBJ is a non-disassembly part, so the axle disassembly stops here.

D: ASSEMBLY

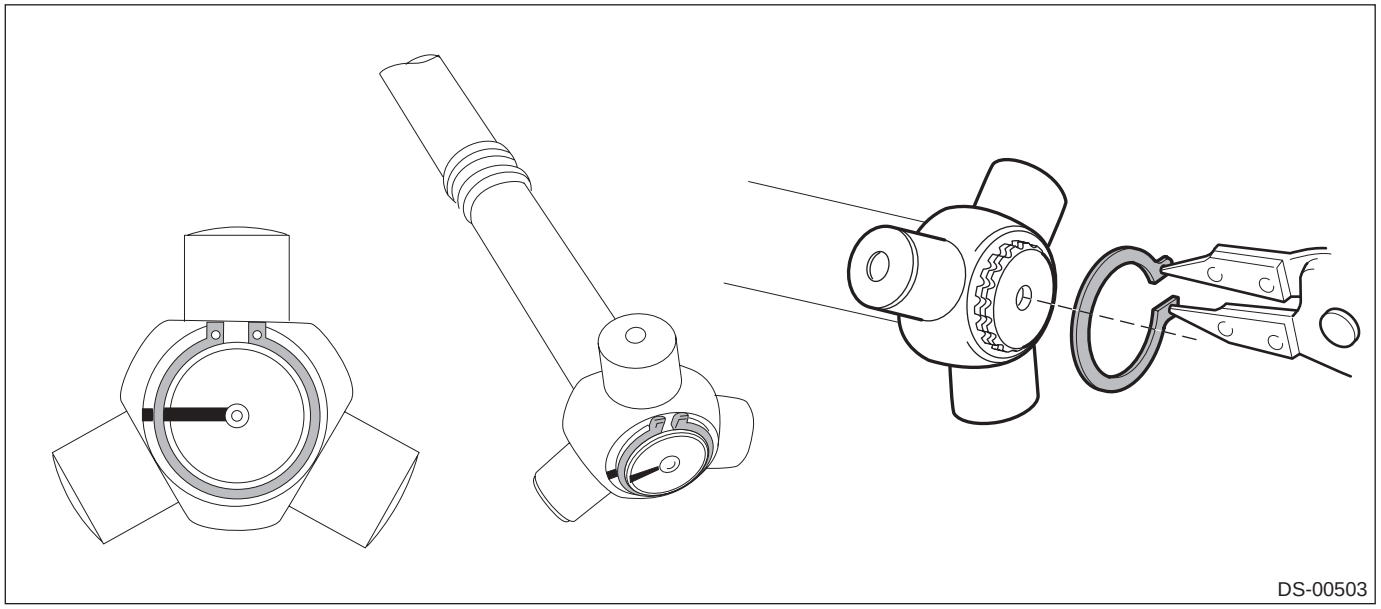
1. AC + AAR TYPE

NOTE:
Use specified grease.

AAR side:
One-Luber C

1) Pass the AAR boot through the shaft.
2) Install the trunnion to the shaft.
   (1) Match the alignment marks, and attach the trunnion onto the shaft.
   (2) Attach the snap ring to the shaft.

CAUTION:
Confirm that the snap ring is completely fitted in the shaft groove.

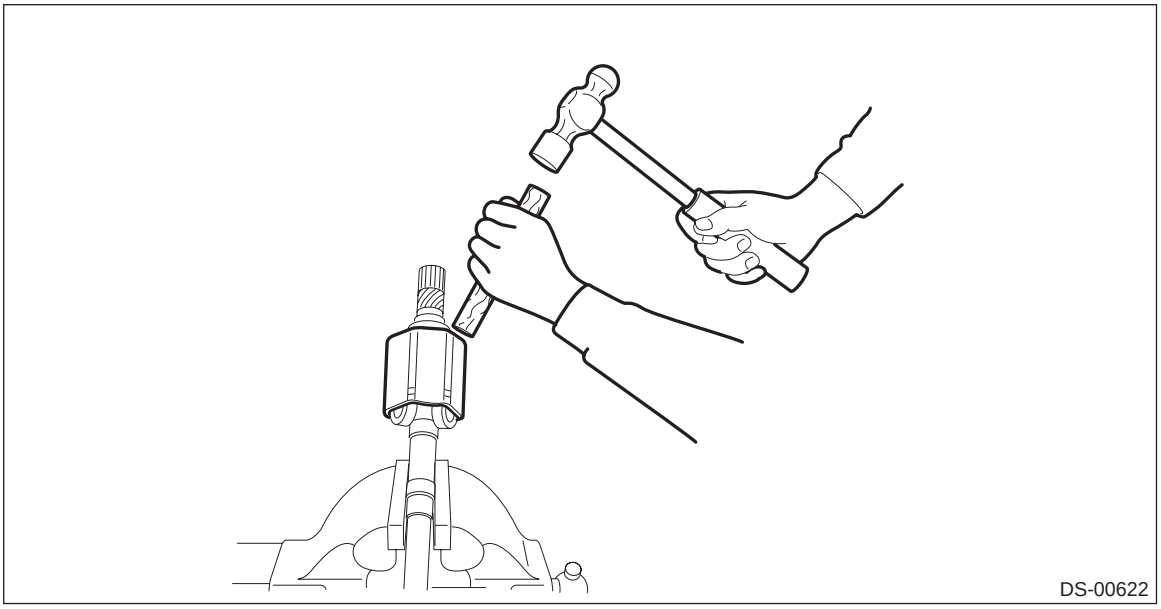


3) Fill 50 to 60 g (1.76 to 2.12 oz) of specified grease into the interior of AAR outer race.
4) Install the trunnion to the roller kit.
   (1) Apply a thin coat of specified grease to the roller kit and trunnion.
   (2) Place the drive shaft between wooden blocks and fix it on a vise.

CAUTION:
Do not set the drive shaft directly on a vise.
5) Align the alignment marks on the shaft and outer race.

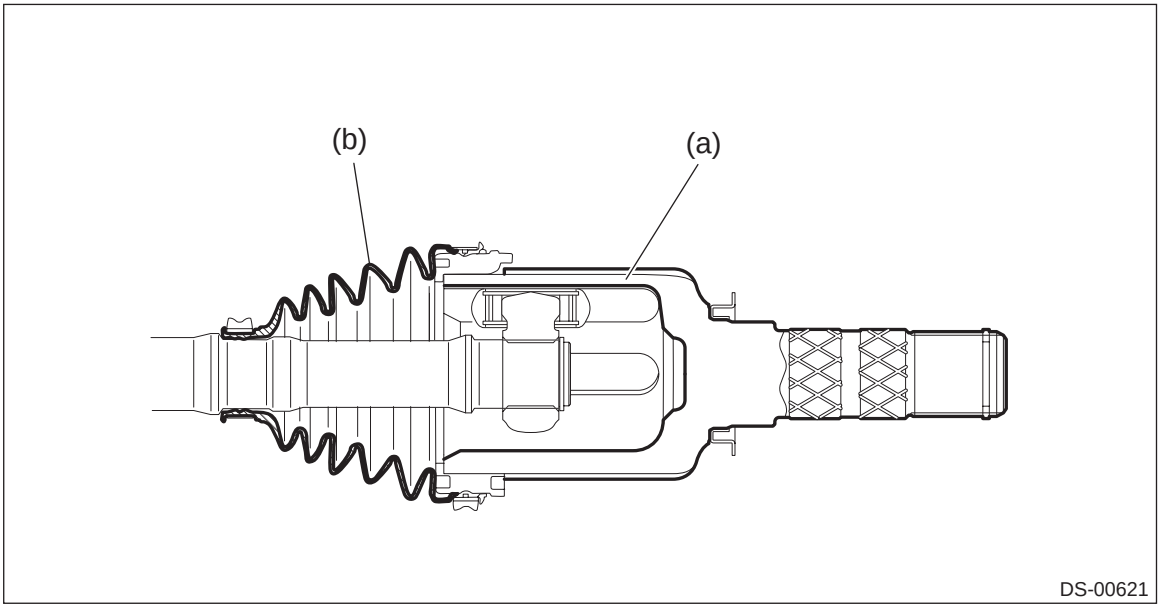
6) Tap the insertion upper part of the outer race alternately using a plastic or wood bar shown in the figure, and then insert the roller one by one.

CAUTION:
- **Do not use a metal bar as the outer race may deform.**
- **Do not tap on the end of outer race (shaft part).**
- **Be careful not to deform the baffle plate.**



7) Apply an even coat of the specified grease 30 to 40 g (1.06 to 1.41 oz) to the entire inner surface of boot.
8) Install the AAR boot taking care not to twist it.

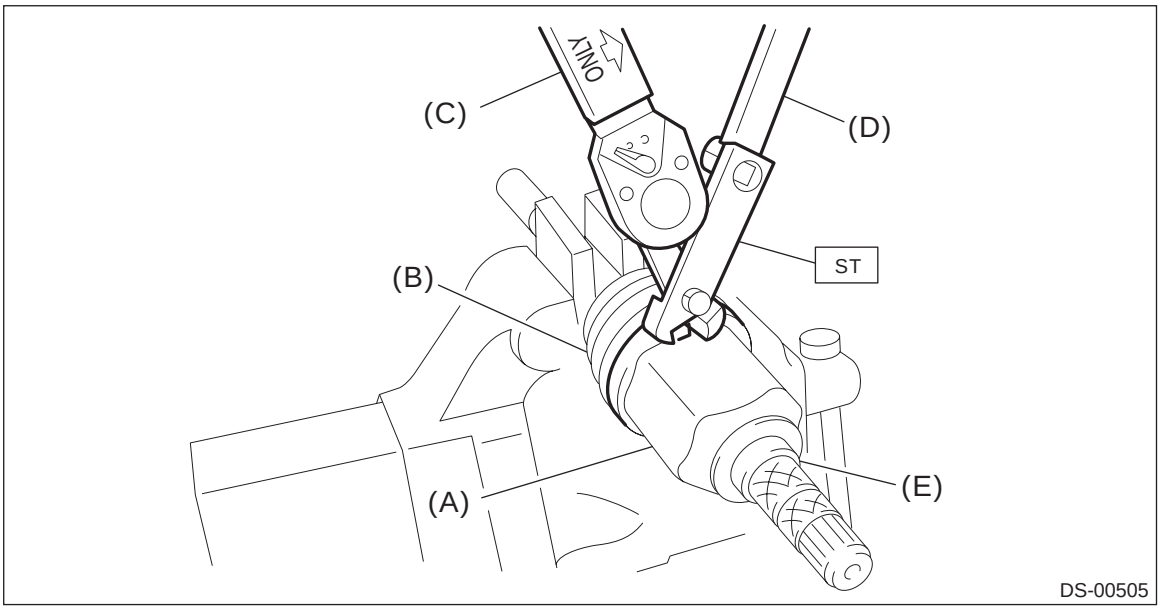
CAUTION:
Do not let grease get on groove of the outer race side.



(a) Outer race
(b) Boot

9) Insert a flat tip screwdriver, etc. between outer race and boot to make pressure inside of boot as high as barometric pressure.
10) Tighten the boot band.
(1) Install the new large boot band and small boot band at the required positions.
(2) Connect the torque wrench and socket flex handle to the ST.

Preparation tool:
ST: BOOT BAND PLIERS (28099AC000)
Torque wrench
Socket flex handle
(3) Use a prepared tool, tighten the boot band.



(A) Large boot band
(B) Boot
(C) Torque wrench
(D) Socket flex handle
(E) Outer race

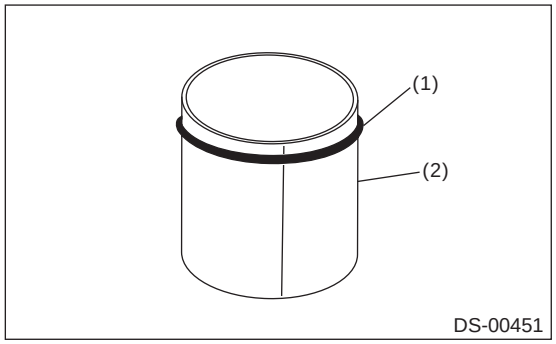
Clearance at the crimped section of the boot band:
Large boot band: 1 mm (0.04 in) or less
Small boot band: 1 mm (0.04 in) or less

Tightening torque:
Large boot band: 178 N·m (18.1 kgf-m, 131.3 ft-lb)
Small boot band: 145 N·m (14.8 kgf-m, 106.9 ft-lb)
11) Extend and retract the AAR repeatedly to provide an equal coating of grease.

2. EBJ + PTJ TYPE

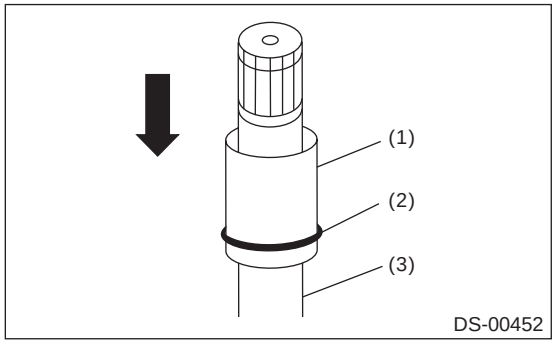
1) Roll up a thick piece of paper to a size where the shaft can pass through, and affix with tape to form a cylinder.
2) Attach a new O-ring on this cylinder.

CAUTION:
- **Always use a new O-ring.**
- **Be careful that the O-ring does not become scratched and that there are no foreign objects attached to it.**
- **Make sure to install the O-ring so that it does not twist as much as possible.**
- **Do not stretch the O-ring to 30 mm (1.18 in) inner diameter or more.**



(1) O-ring
(2) Cylinder made with thick paper, etc.

3) Pass the cylinder material onto the shaft, and slide in the direction of the shaft axis.

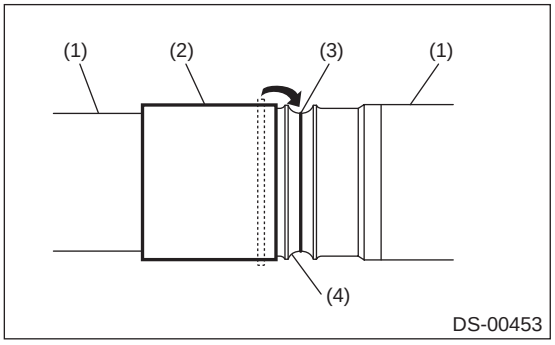


(1) Cylinder material
(2) O-ring
(3) Shaft

4) Clean the shaft boot groove, and wipe off the grease.

5) Slide the cylinder material near the shaft boot groove, and move the O-ring from the cylinder material onto the shaft boot groove.

CAUTION:
- **Attach the O-ring to the shaft boot groove center.**
- **Be careful that the O-ring does not become scratched and that there are no foreign objects attached to it.**
- **Make sure to install the O-ring so that it does not twist as much as possible.**
- **With the O-ring attached, do not wash with kerosene, gasoline, etc.**

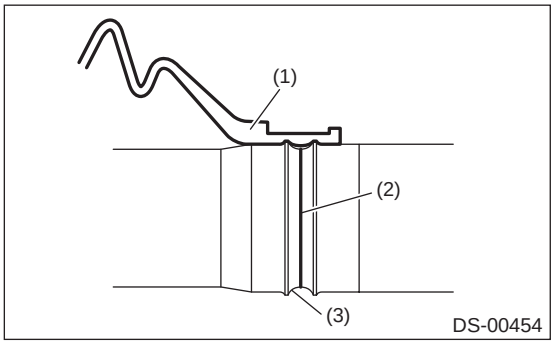


(1) Shaft
(2) Cylinder material
(3) O-ring
(4) Boot groove

6) Pass the PTJ small diameter boot band through the shaft.
7) Wrap vinyl tape around the splines of the shaft.

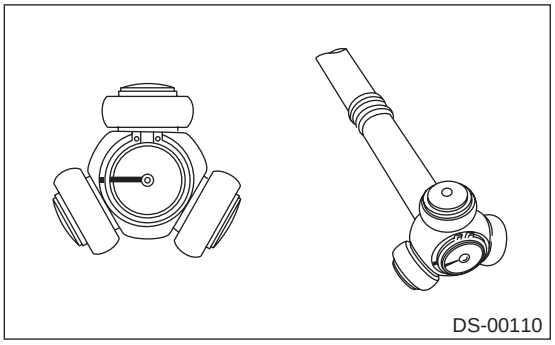
CAUTION:
To prevent damage to the boots, make sure to always wrap with vinyl tape for protection.
8) Install a new PTJ boot.

CAUTION:
Make sure to fit securely on the boot groove of the shaft.



(1) PTJ boot
(2) O-ring
(3) Boot groove

9) Match the alignment marks, and attach the trunnion onto the shaft.



10) Attach the snap ring to the shaft.

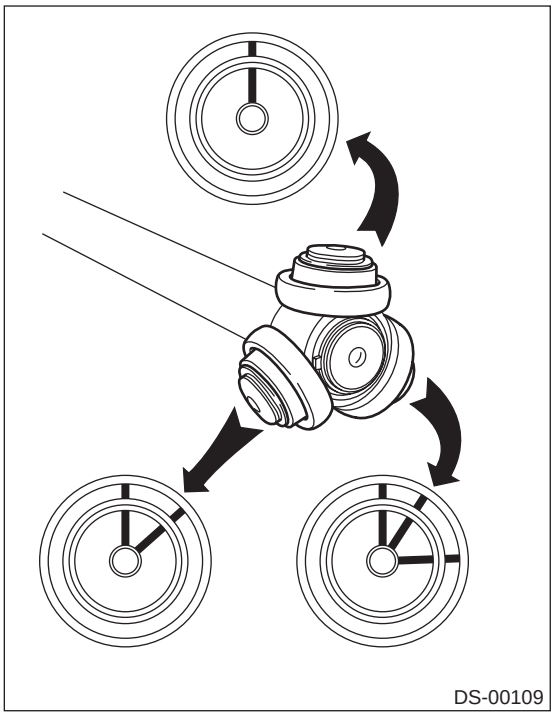
CAUTION:
Confirm that the snap ring is completely fitted in the shaft groove.

11) Fill 100 to 110 g (3.53 to 3.88 oz) of specified grease into the interior of the PTJ outer race.

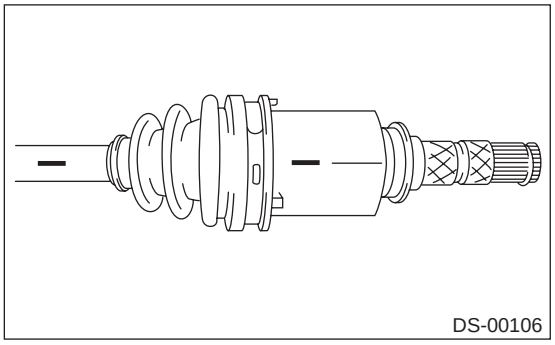
Grease:
NKG302

12) Apply a thin coat of specified grease to the roller kit and trunnion.
13) Match the alignment marks of the roller kit and trunnion, and attach the roller kit.

CAUTION:
Be careful with the roller kit position.



14) Match the alignment marks of the shaft and outer race, and attach the outer race.



15) Install the snap ring in the groove of the PTJ outer race.

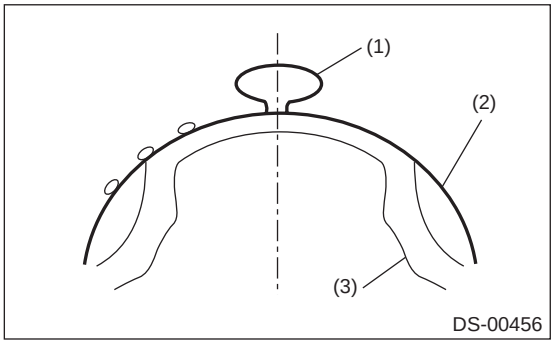
CAUTION:
Pull the shaft lightly and make sure that the snap ring is completely fitted in the groove.

16) Apply an even coat of the specified grease 30 to 40 g (1.06 to 1.41 oz) to the entire inner surface of boot.
17) Attach the PTJ boot taking care not to twist it.

CAUTION:
• Clean the large end of PTJ boot and the boot groove well, and remove the grease and other substances.
• When installing the PTJ boot, position the outer race of the PTJ at center of the stroke.

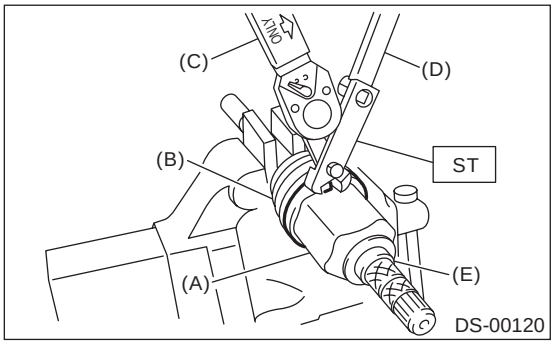
18) Set the new boot band at the specified position.
19) Tighten the boot bands using ST, torque wrench and socket flex handle.

CAUTION:
The large boot band is to be tightened so that the omega shaped part is at the position indicated in the figure below.



(1) Omega shaped part
(2) Boot band
(3) Outer race

Preparation tool:
ST: BOOT BAND PLIERS (28099AC000)



(A) Large boot band
(B) Boot
(C) Torque wrench
(D) Socket flex handle
(E) Outer race

Tightening torque:
Large boot band: 178 N·m (18.1 kgf-m, 131.3 ft-lb)
Small boot band: 145 N·m (14.8 kgf-m, 106.9 ft-lb)

20) Extend and retract the PTJ repeatedly so that grease is spread evenly.

E: INSPECTION

Check the removed parts for damage, wear, corrosion etc. If faulty, repair or replace.

- **AAR and AC:**

Check for seizure, corrosion, damage, wear and excessive play.

- **PTJ (Pillow Tripod Joint)**

Check for seizure, corrosion, damage, wear and excessive play.

- **EBJ (High-Efficiency Compact Ball fixed Joint)**

Check for seizure, corrosion, damage and excessive play.

- **Shaft:**

Check for excessive bending, twisting, damage and wear.

- **Boot:**

Check for wear, warping, breakage and scratches.

- **Grease:**

Check for discoloration and fluidity.

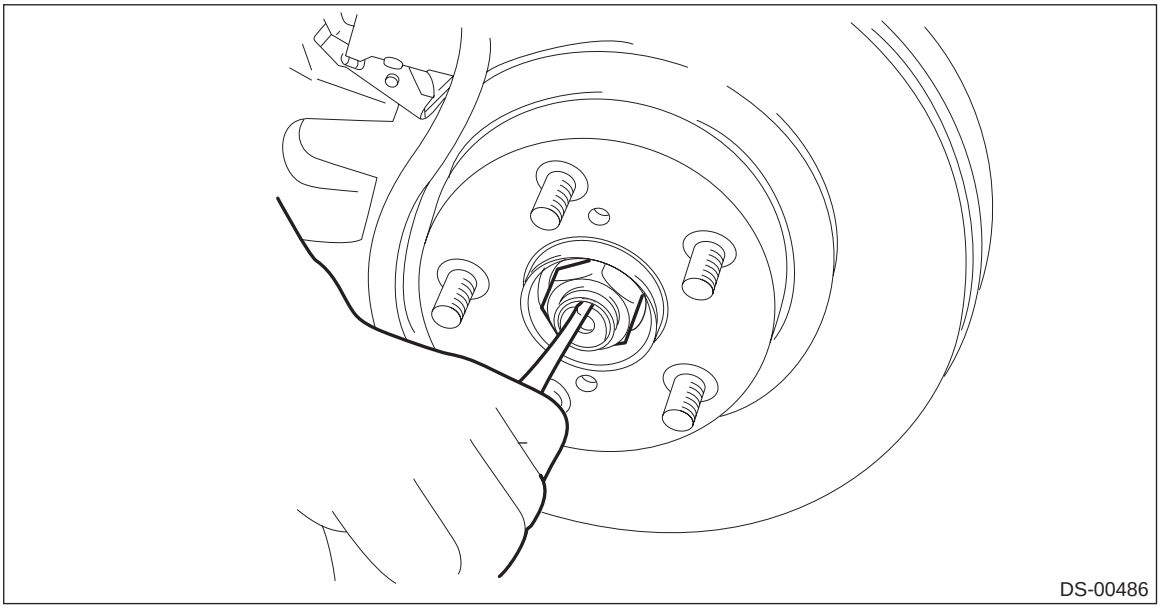
8. Rear Drive Shaft

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the nut - axle.

CAUTION:
Do not loosen the nut - axle while the rear axle is loaded. Doing so may damage the hub unit COMPL.
(1) Lift the crimped section of the nut - axle.
(2) Remove the nut - axle using a socket wrench while depressing the brake pedal.

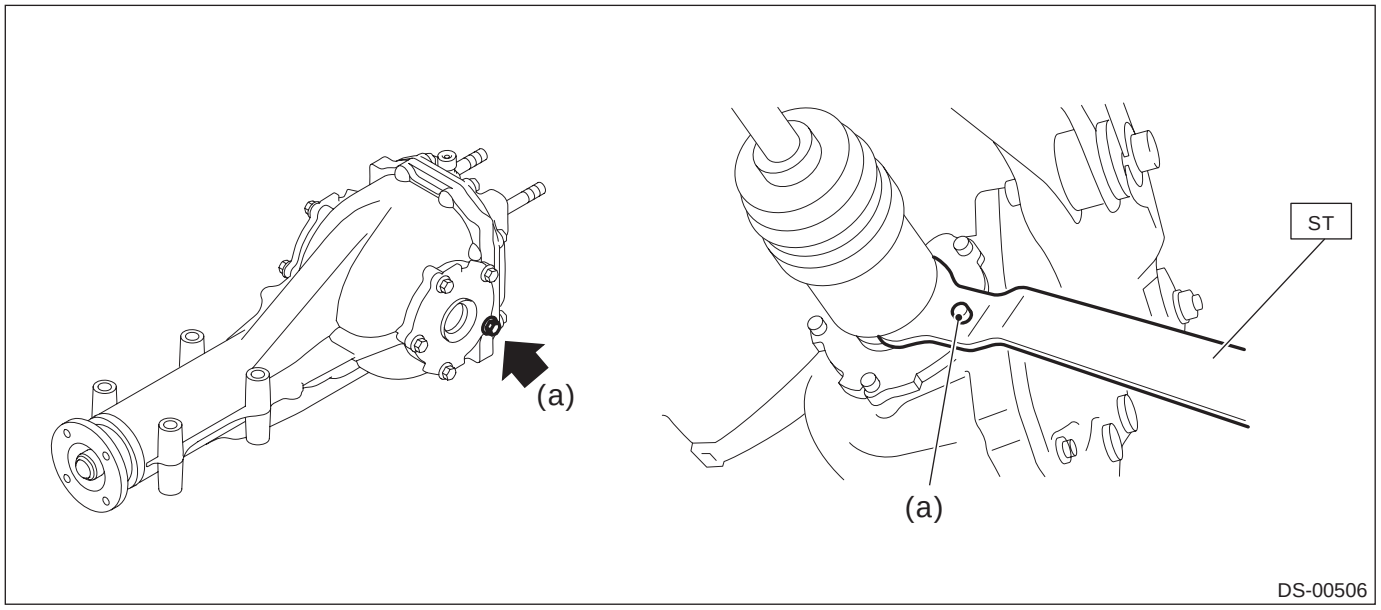


4) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) <Ref. to LI-75, REMOVAL, Rear Height Sensor.>
5) Disconnect the oil temperature sensor connector. (Model with oil temperature sensor)
6) Drain differential gear oil.
7) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>

8) Loosen the joint of rear differential assembly and rear drive shaft assembly.
- T type: Pull out the rear drive shaft assembly by fitting the ST to the bolt (a) as shown in the figure.

CAUTION:
Fit the ST to the bolts as shown in the figure to prevent damage of the side bearing retainer.

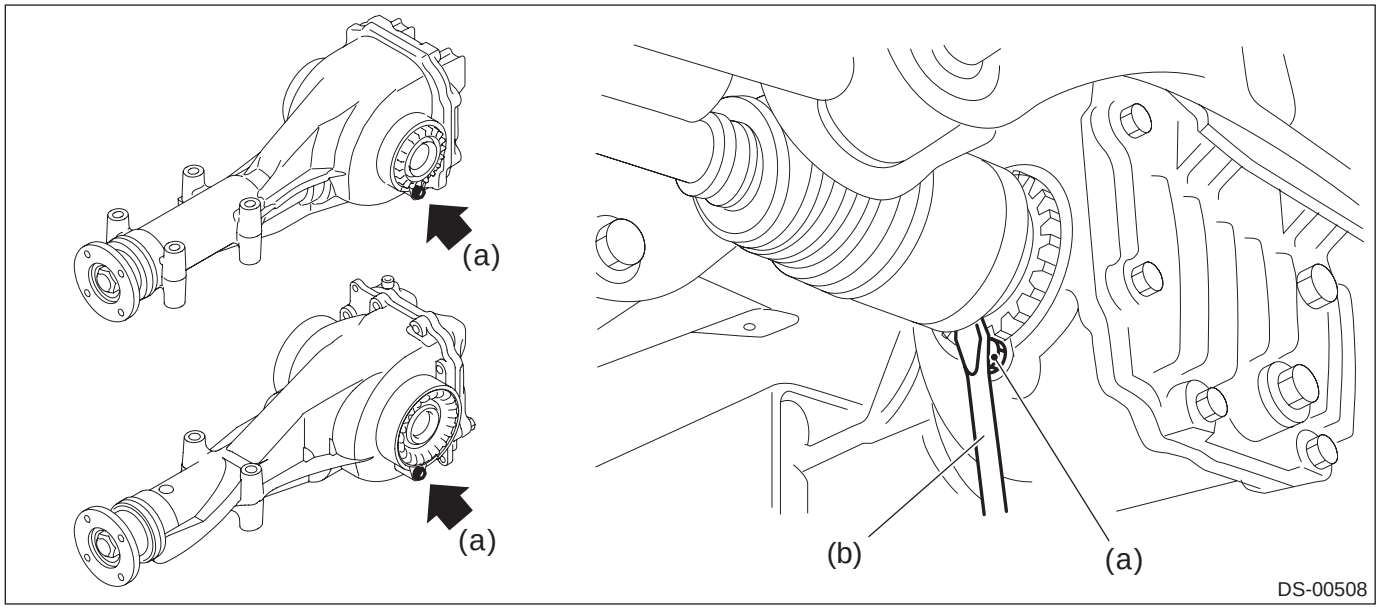
Preparation tool:
ST: DRIVE SHAFT REMOVER (28099PA100)



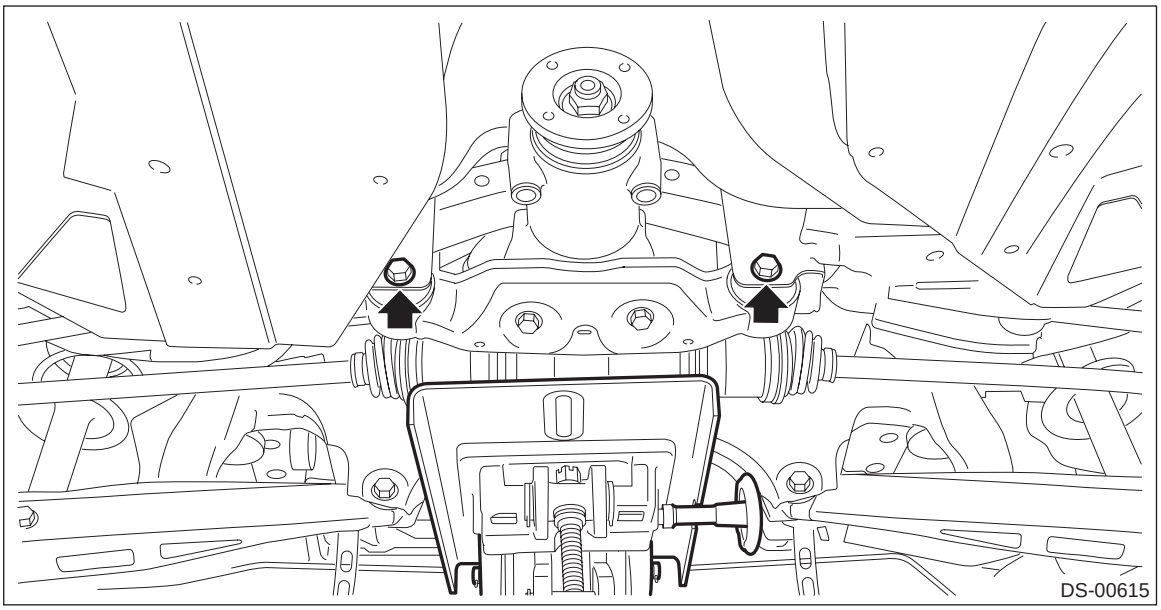
- VA type: Pull out the rear drive shaft assembly by fitting the tire lever (b) to the bolt (a) as shown in the figure.

CAUTION:
To prevent damage to the side bearing retainer, use by placing the tire lever against the bolt as shown in the figure.

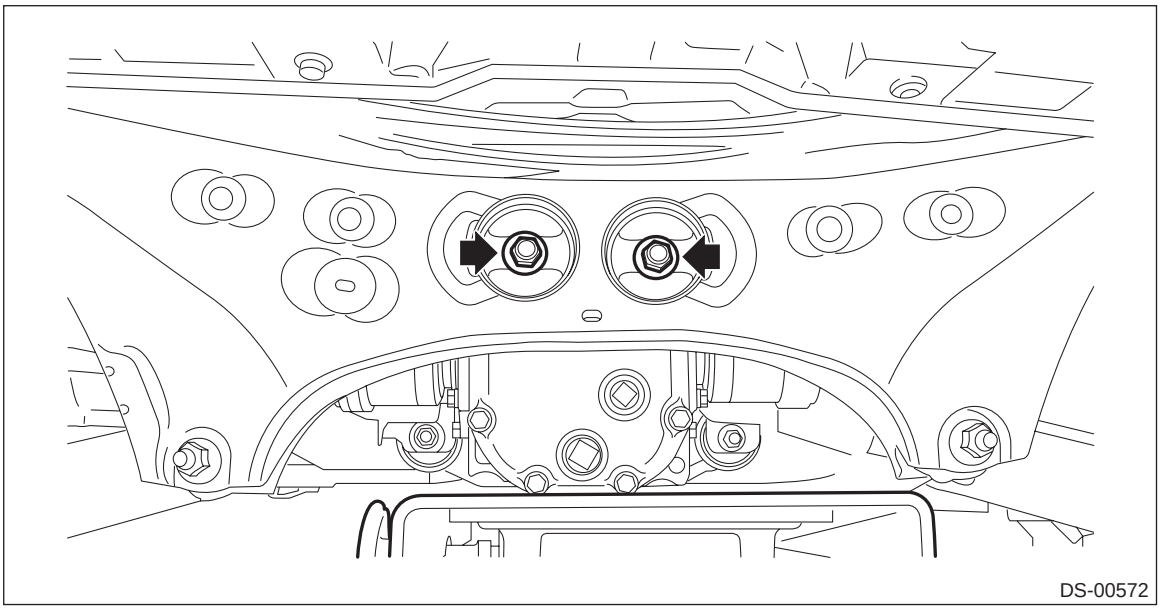
Preparation tool:
Tire lever



9) Remove the installation section of rear differential assembly.
(1) Support the rear differential assembly with a transmission jack.
(2) Remove the bolts which hold the rear differential front crossmember from the rear sub frame assembly.

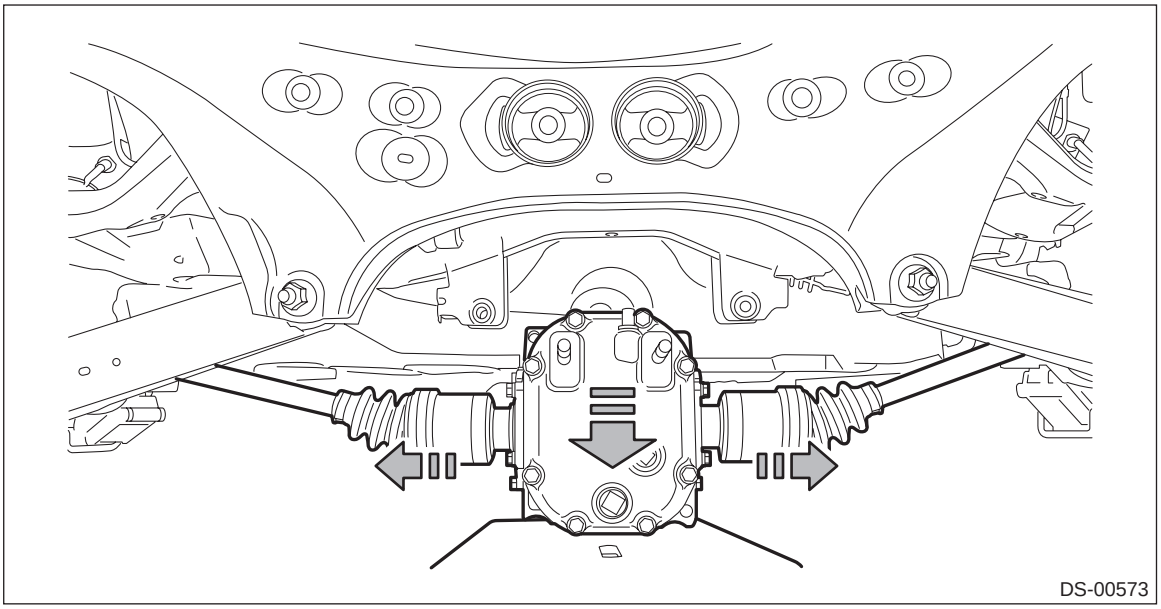


(3) Remove the self-locking nuts which hold the rear differential to the rear sub frame assembly.



10) Completely pull out the rear drive shaft assembly while lowering the rear differential.

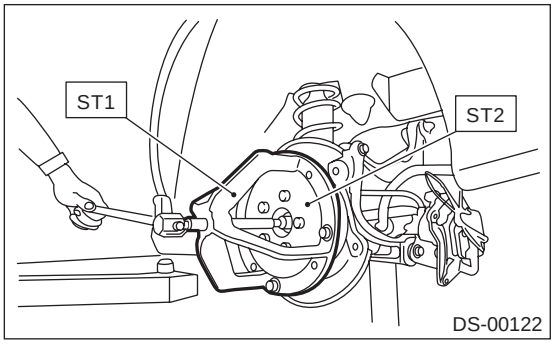
CAUTION:
Pay attention to avoid damaging the boot of drive shaft.



11) Remove the rear drive shaft assembly from the housing assembly - rear axle.

NOTE:
If it is hard to remove, use the ST.

Preparation tool:
ST1: AXLE SHAFT PULLER (926470000)
ST2: AXLE SHAFT PULLER PLATE (28099PA110)

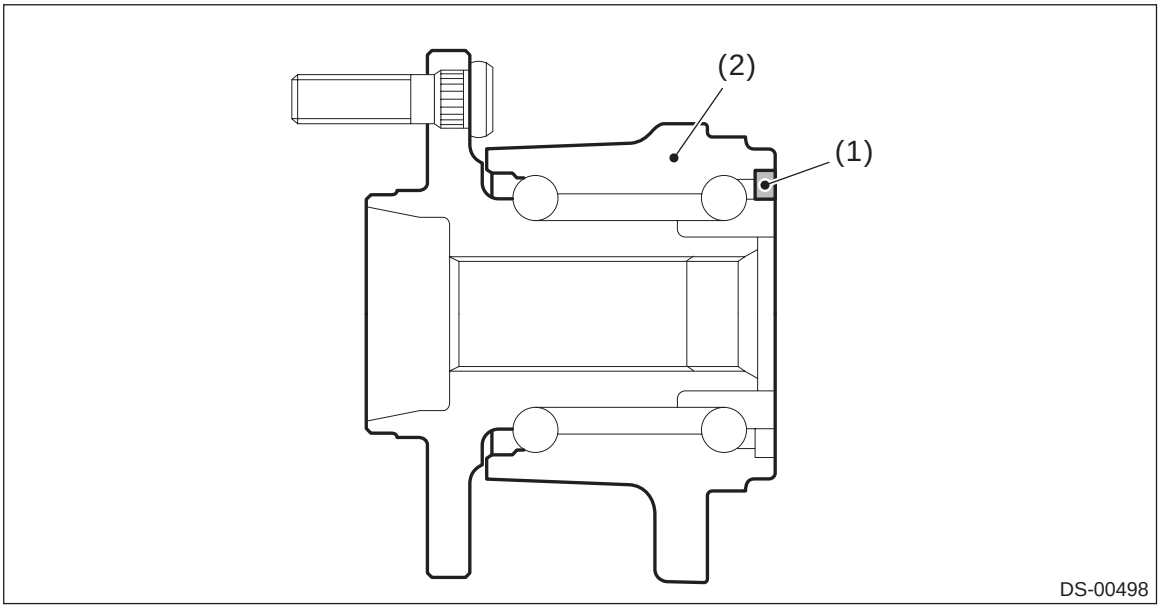


B: INSTALLATION

1) Replace the rear differential side oil seal. <Ref. to DI-55, REPLACEMENT, Rear Differential Side Oil Seal.>

NOTE:
After pulling out the drive shaft assembly, be sure to replace with a new oil seal.
2) Insert the drive shaft assembly into the rear hub spline, and pull it into the specified position.

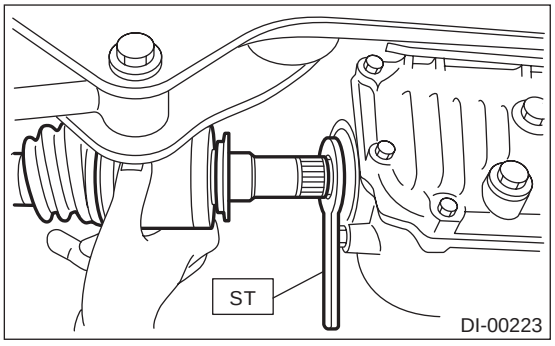
CAUTION:
- **Be careful not to damage the magnetic encoder.**
- **Do not get closer the tool which charged magnetism to magnetic encoder.**
- **Do not hammer the drive shaft assembly when installing.**



(1) Magnetic encoder (2) Hub unit COMPL - rear axle

3) Temporarily tighten the nut - axle.
4) Using the ST, install the rear drive shaft assembly to the rear differential.

Preparation tool:
ST: OIL SEAL PROTECTOR (28099PA090)



5) Install the rear differential assembly to the rear sub frame assembly.

CAUTION:
Be sure to use a new self-locking nut.

Tightening torque:
Differential assembly — bushing - differential: 70 N·m (7.1 kgf-m, 51.6 ft-lb)
Differential assembly — rear sub frame assembly: 110 N·m (11.2 kgf-m, 81.1 ft-lb)

6) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

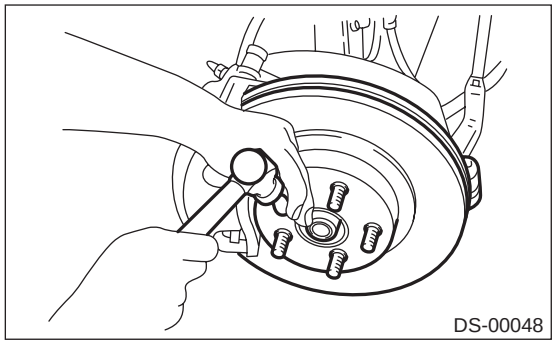
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7) Install the oil temperature sensor connector. (Model with oil temperature sensor)
8) While pressing the brake pedal, tighten the new axle nuts to the specified torque.

CAUTION:
Do not load the rear axle before tightening the nut - axle. Doing so may damage the hub unit COMPL.

Tightening torque:
190 N·m (19.4 kgf-m, 140.1 ft-lb)

9) Lock the nut - axle securely.



10) Fill differential gear oil.
11) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

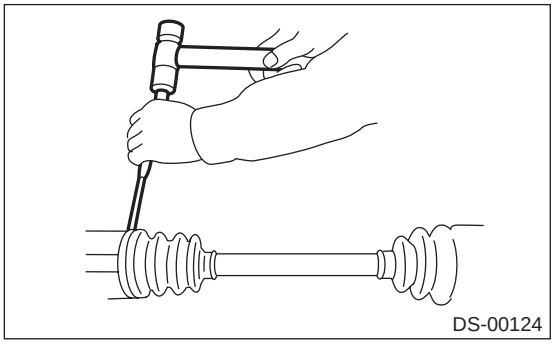
12) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-17, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

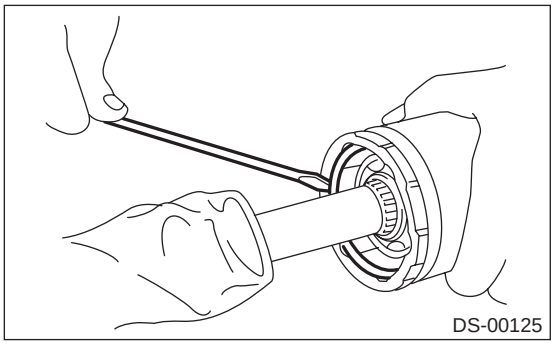
1. EBJ + EDJ TYPE

1) Using a flat tip screwdriver or plier, loosen the boot band on the large end of EDJ boot.

CAUTION:
Be careful not to damage the boot.



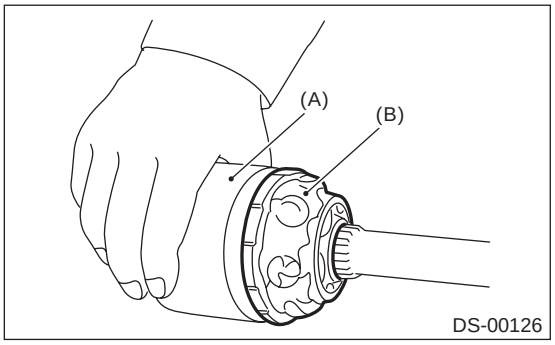
2) Remove the boot band on the small end of EDJ boot in the same manner.
3) Remove the large end of EDJ boot from EDJ outer race.
4) Remove the round snap ring at the neck of EDJ outer race with a flat tip screwdriver.



5) Remove the EDJ outer race from shaft assembly.
6) Wipe off the grease and take out the ball bearings.

CAUTION:
The grease is a special grease (grease for constant velocity joints). Do not mix with other greases.

NOTE:
Disassemble the parts taking care not to lose balls.



(A) Outer race
(B) Grease

7) To remove the cage from inner race, turn the cage by a half pitch to the track groove of inner race and shift the cage.
8) Using pliers, remove the snap ring fixing the inner race to the shaft.
9) Take out the EDJ inner race.
10) Take off the EDJ cage from shaft and remove the EDJ boot.

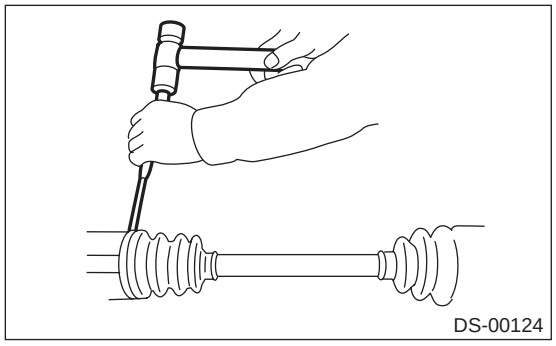
CAUTION:
Wrap shaft splines with vinyl tape to protect the boot from scratches.
11) Remove the EBJ boot using the same procedures as for the EDJ boot.

NOTE:
The EBJ is a non-disassembly part, so the drive shaft disassembly stops here.

2. EBJ + DOJ TYPE

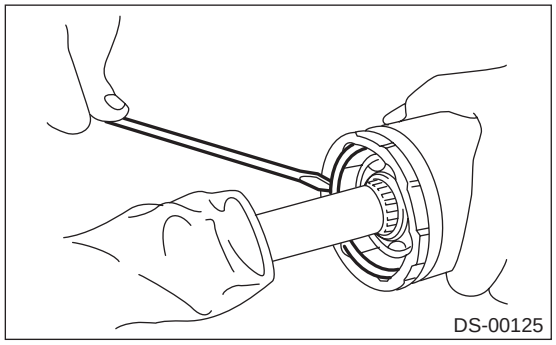
1) Using a flat tip screwdriver or plier, loosen the boot band on the large end of DOJ boot.

CAUTION:
Be careful not to damage the boot.



DS-00124

2) Remove the boot band on the small end of DOJ boot in the same manner.
3) Remove the large end of DOJ boot from DOJ outer race.
4) Remove the round snap ring at the neck of DOJ outer race with a flat tip screwdriver.



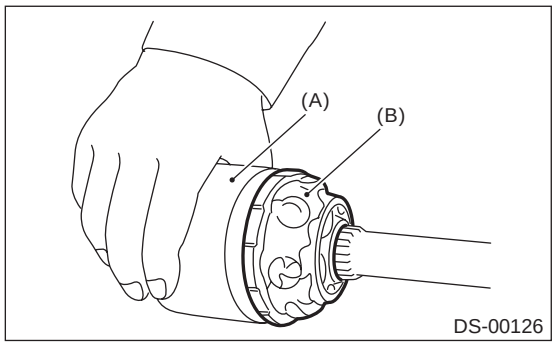
DS-00125

5) Take out the DOJ outer race from the shaft assembly.

6) Wipe off the grease and take out the ball bearings.

CAUTION:
The grease is a special grease (grease for constant velocity joints). Do not mix with other greases.

NOTE:
Disassemble the parts taking care not to lose balls.



(A) Outer race
(B) Grease

7) To remove the cage from inner race, turn the cage by a half pitch to the track groove of inner race and shift the cage.
8) Using pliers, remove the snap ring fixing the inner race to the shaft.
9) Take out the DOJ inner race.
10) Take off the DOJ cage from shaft and remove the DOJ boot.

CAUTION:
Wrap shaft splines with vinyl tape to protect the boot from scratches.
11) Remove the EBJ boot using the same procedures as for the DOJ boot.

NOTE:
The EBJ is a non-disassembly part, so the drive shaft disassembly stops here.

D: ASSEMBLY

1. EBJ + EDJ TYPE

CAUTION:
Wrap shaft splines with vinyl tape to protect the boot from scratches.

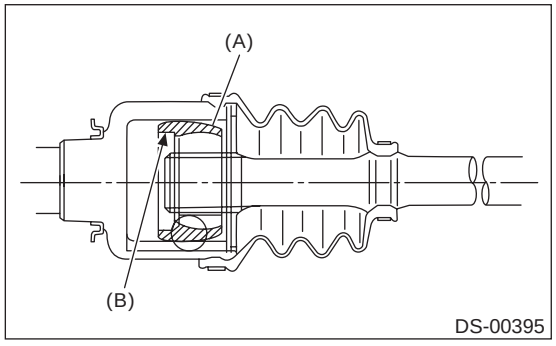
NOTE:
Use specified grease.

EBJ side:
NKG814

EDJ side:
NKG814

1) Install the EBJ boot to the specified position, and fill it with 50 to 60 g (1.76 to 2.12 oz) of specified grease.
2) Place the EDJ boot at the center of shaft.
3) Insert the EDJ cage onto shaft.

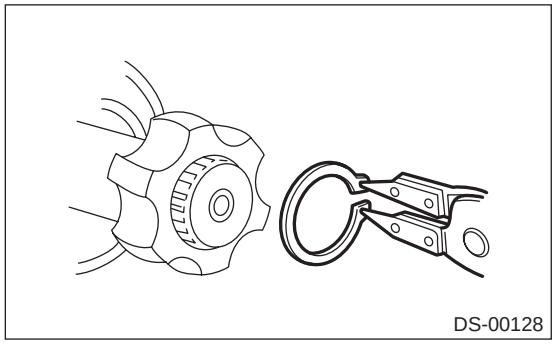
NOTE:
Insert the cage with the cutout portion facing the shaft end, since the cage has an orientation.



(A) Cage
(B) Cutout portion

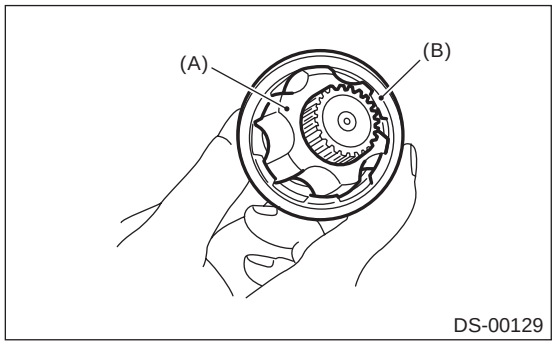
4) Install the EDJ inner race on shaft and fix the snap ring in place with pliers.

NOTE:
Confirm that the snap ring is completely fitted in the shaft groove.



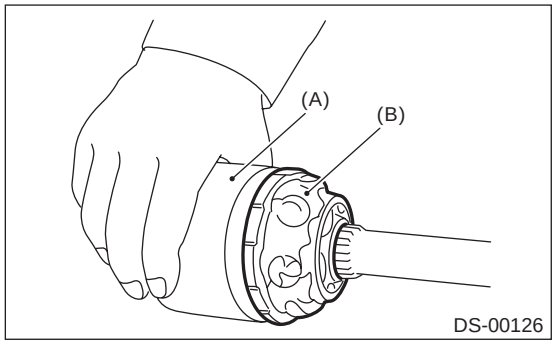
5) Install the cage to inner race fixed upon shaft.

NOTE:
Fit the cage with the protruding section aligned with the track on the inner race, and turn by a half pitch.



(A) Inner race
(B) Cage

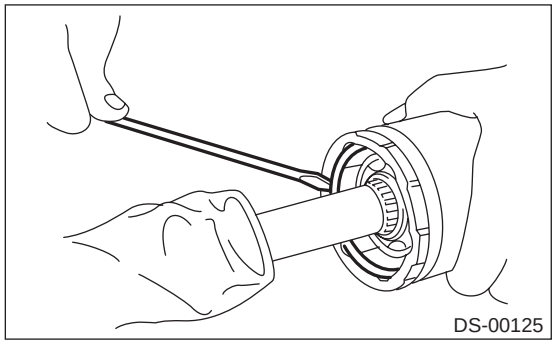
6) Fill 80 to 90 g (2.82 to 3.17 oz) of specified grease into the inner side of the EDJ outer race.
7) Apply a thin coat of specified grease to the cage pocket and ball.
8) Insert the ball bearings into the cage pocket.
9) Align the outer race track and ball positions, and place the shaft, inner race, cage and ball bearings in the original positions, and then fix outer race in place.



(A) Outer race
(B) Grease

10) Install the snap ring in the groove on the EDJ outer race.

NOTE:
- Assure that the balls, cage and inner race are completely fitted in the outer race of EDJ.
- Use care not to place the matched position of snap ring in the ball groove of outer race.
- Pull the shaft lightly and assure that the circlip is completely fitted in the groove.



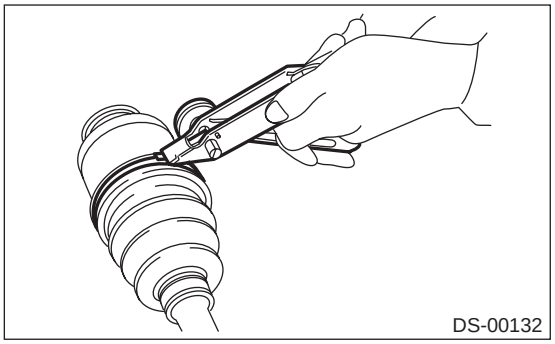
11) Apply an even coat of the specified grease [20 to 30 g (0.71 to 1.06 oz)] to the entire inner surface of boot. Also apply grease to the shaft.
12) Install the EDJ boot taking care not to twist it.

NOTE:
• The inside of the large end of EDJ boot and the boot groove shall be cleaned so as to be free from grease and other substances.
• When installing the EDJ boot, position the outer race of EDJ at center of the stroke.
13) Put a new band through the clip and wind twice in the band groove of the boot.
14) Pinch the end of band with pliers. Hold the clip and tighten securely.

NOTE:
When tightening boot, use care so that the air within the boot is appropriate.
15) Tighten the band using the ST.

Preparation tool:
ST: BAND TIGHTENING TOOL (925091000)

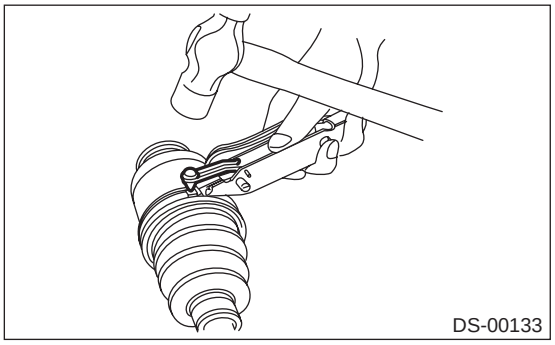
NOTE:
Tighten the band until it cannot be moved by hand.



16) Tap the clip with the punch provided at the end of the ST.

Preparation tool:
ST: BAND TIGHTENING TOOL (925091000)

NOTE:
Tap to an extent that the boot underneath is not damaged.



17) Cut off the band with an allowance of about 10 mm (0.39 in) left from the clip and bend this allowance over the clip.

NOTE:
Be careful so that the end of the band is in close contact with clip.
18) Install the EBJ boot using the same procedures as for the EDJ boot.
19) Extend and retract the EDJ repeatedly to provide an equal coating of grease.

2. EBJ + DOJ TYPE

CAUTION:
Wrap shaft splines with vinyl tape to protect the boot from scratches.

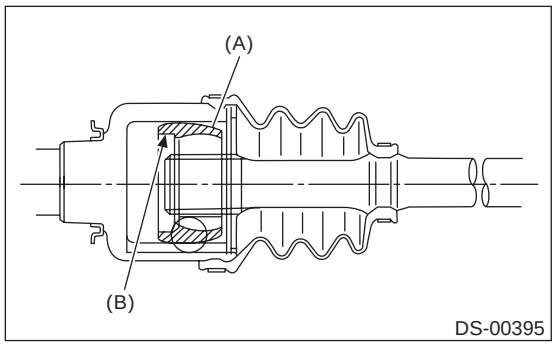
NOTE:
Use specified grease.

EBJ side:
NKG814

DOJ side:
NKG814

1) Install the EBJ boot to the specified position, and fill it with 50 to 60 g (1.76 to 2.12 oz) of specified grease.
2) Place the DOJ boot at the center of shaft.
3) Insert the DOJ cage onto shaft.

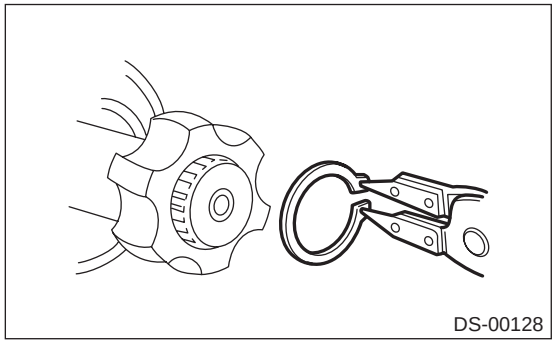
NOTE:
Insert the cage with the cutout portion facing the shaft end, since the cage has an orientation.



(A) Cage
(B) Cutout portion

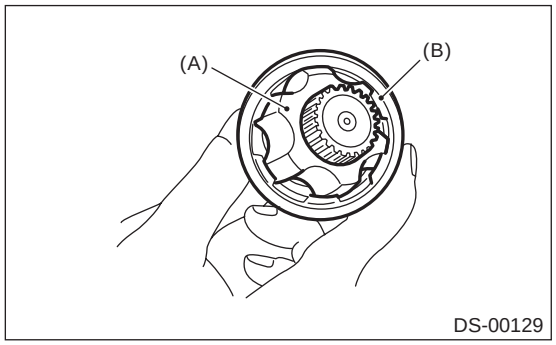
4) Install the DOJ inner race on shaft and fix the snap ring in place with pliers.

NOTE:
Confirm that the snap ring is completely fitted in the shaft groove.



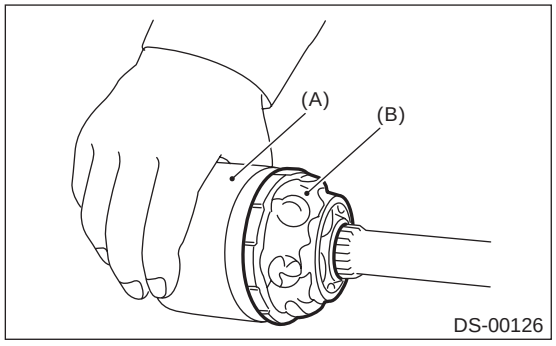
5) Install the cage to inner race fixed upon shaft.

NOTE:
Fit the cage with the protruding section aligned with the track on the inner race, and turn by a half pitch.



(A) Inner race
(B) Cage

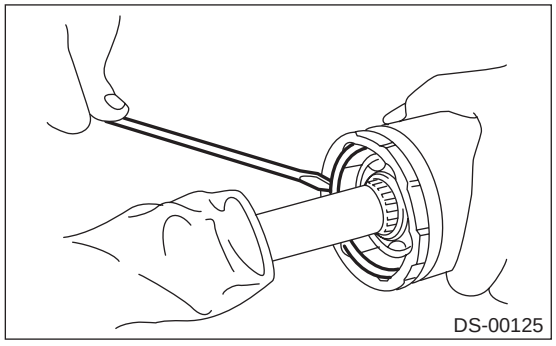
6) Fill 80 to 90 g (2.82 to 3.17 oz) of specified grease into the inner side of the DOJ outer race.
7) Apply a thin coat of specified grease to the cage pocket and ball.
8) Insert the ball bearings into the cage pocket.
9) Align the outer race track and ball positions, and place the shaft, inner race, cage and ball bearings in the original positions, and then fix outer race in place.



(A) Outer race
(B) Grease

10) Install the snap ring in the groove on the DOJ outer race.

NOTE:
- Assure that the balls, cage and inner race are completely fitted in the outer race of DOJ.
- Use care not to place the matched position of snap ring in the ball groove of outer race.
- Pull the shaft lightly and assure that the circlip is completely fitted in the groove.



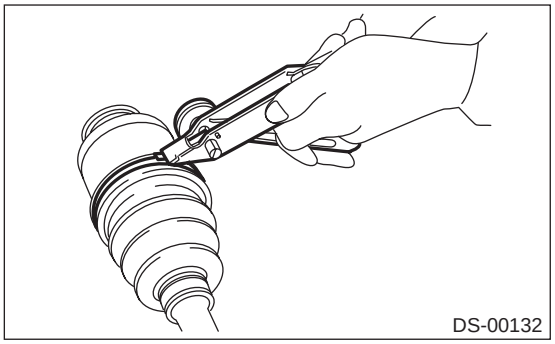
11) Apply an even coat of the specified grease [20 to 30 g (0.71 to 1.06 oz)] to the entire inner surface of boot. Also apply grease to the shaft.
12) Install the DOJ boot taking care not to twist it.

NOTE:
• The inside of the large end of DOJ boot and the boot groove shall be cleaned so as to be free from grease and other substances.
• When installing the DOJ boot, position the outer race of DOJ at center of the stroke.
13) Put a new band through the clip and wind twice in the band groove of the boot.
14) Pinch the end of band with pliers. Hold the clip and tighten securely.

NOTE:
When tightening boot, use care so that the air within the boot is appropriate.
15) Tighten the band using the ST.

Preparation tool:
ST: BAND TIGHTENING TOOL (925091000)

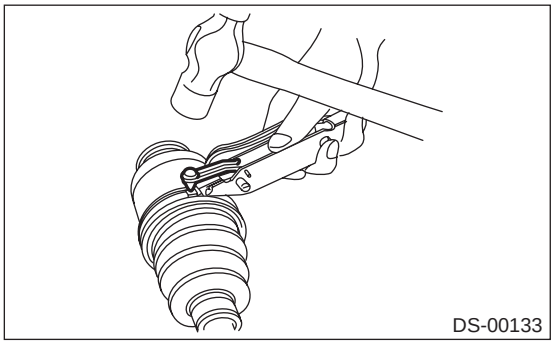
NOTE:
Tighten the band until it cannot be moved by hand.



16) Tap the clip with the punch provided at the end of the ST.

Preparation tool:
ST: BAND TIGHTENING TOOL (925091000)

NOTE:
Tap to an extent that the boot underneath is not damaged.



17) Cut off the band with an allowance of about 10 mm (0.39 in) left from the clip and bend this allowance over the clip.

NOTE:
Be careful so that the end of the band is in close contact with clip.
18) Install the EBJ boot using the same procedures as for the DOJ boot.
19) Extend and retract the DOJ repeatedly to provide an equal coating of grease.

E: INSPECTION

Check the removed parts for damage, wear, corrosion etc. Repair or replace if defective.

- **EDJ (High-Efficiency Compact Double Offset Joint):**

Check for seizure, corrosion, damage, wear and excessive play.

- **DOJ (Double Offset Joint):**

Check for seizure, corrosion, damage, wear and excessive play.

- **EBJ (high-efficiency compact ball fixed joint)**

Check for seizure, corrosion, damage and excessive play.

- **Shaft:**

Check for excessive bending, twisting, damage and wear.

- **Boot:**

Check for wear, warping, breakage and scratches.

- **Grease:**

Check for discoloration and fluidity.

9. General Diagnostic Table

A: INSPECTION

NOTE:
Vibration while cruising may be caused by an unbalanced tire, improper tire inflation pressure, improper wheel alignment, etc.

Symptoms	Possible cause	Corrective action
Noise or vibration from propeller shaft	• Center bearing • Runout of propeller shaft • Loose or gap at connections	Inspect the propeller shaft. <Ref. to DS-15, INSPECTION, Propeller Shaft.>
Abnormal wheel vibration	Wheel is out of balance.	Check the wheel balance. <Ref. to WT-7, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Front wheel alignment	Check the front wheel alignment. <Ref. to FS-10, INSPECTION, Wheel Alignment.>
	Rear wheel alignment	Check the rear wheel alignment. <Ref. to RS-8, INSPECTION, Wheel Alignment.>
	Front strut	Check the front strut. <Ref. to FS-49, INSPECTION, Front Strut.>
	Rear shock absorber	Check the rear shock absorber. <Ref. to RS-30, INSPECTION, Rear Shock Absorber.>
	Front drive shaft	Check the front drive shaft. <Ref. to DS-63, INSPECTION, Front Drive Shaft.>
	Rear drive shaft	Check the rear drive shaft. <Ref. to DS-79, INSPECTION, Rear Drive Shaft.>
	Hub unit COMPL - front axle	Check the hub unit COMPL - front axle. <Ref. to DS-31, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - rear axle	Check the hub unit COMPL - rear axle. <Ref. to DS-47, INSPECTION, Rear Hub Unit Bearing.>
Noise from the underbody	Wheel is out of balance.	Check the wheel balance. <Ref. to WT-7, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Front wheel alignment	Check the front wheel alignment. <Ref. to FS-10, INSPECTION, Wheel Alignment.>
	Rear wheel alignment	Check the rear wheel alignment. <Ref. to RS-8, INSPECTION, Wheel Alignment.>
	Front strut	Check the front strut. <Ref. to FS-49, INSPECTION, Front Strut.>
	Rear shock absorber	Check the rear shock absorber. <Ref. to RS-30, INSPECTION, Rear Shock Absorber.>

VEHICLE DYNAMICS CONTROL (VDC)

VDC

		Page
1.	General Description	2
2.	Relay and Fuse	6
3.	Vehicle Dynamics Control System	7
4.	VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)	8
5.	ABS Sequence Control	17
6.	VDC Sequence Control	20
7.	Yaw Rate and G Sensor	23
8.	Steering Angle Sensor	24
9.	Front ABS Wheel Speed Sensor	28
10.	Rear ABS Wheel Speed Sensor	31
11.	Front Magnetic Encoder	34
12.	Rear Magnetic Encoder	35
13.	VDC OFF Switch	36

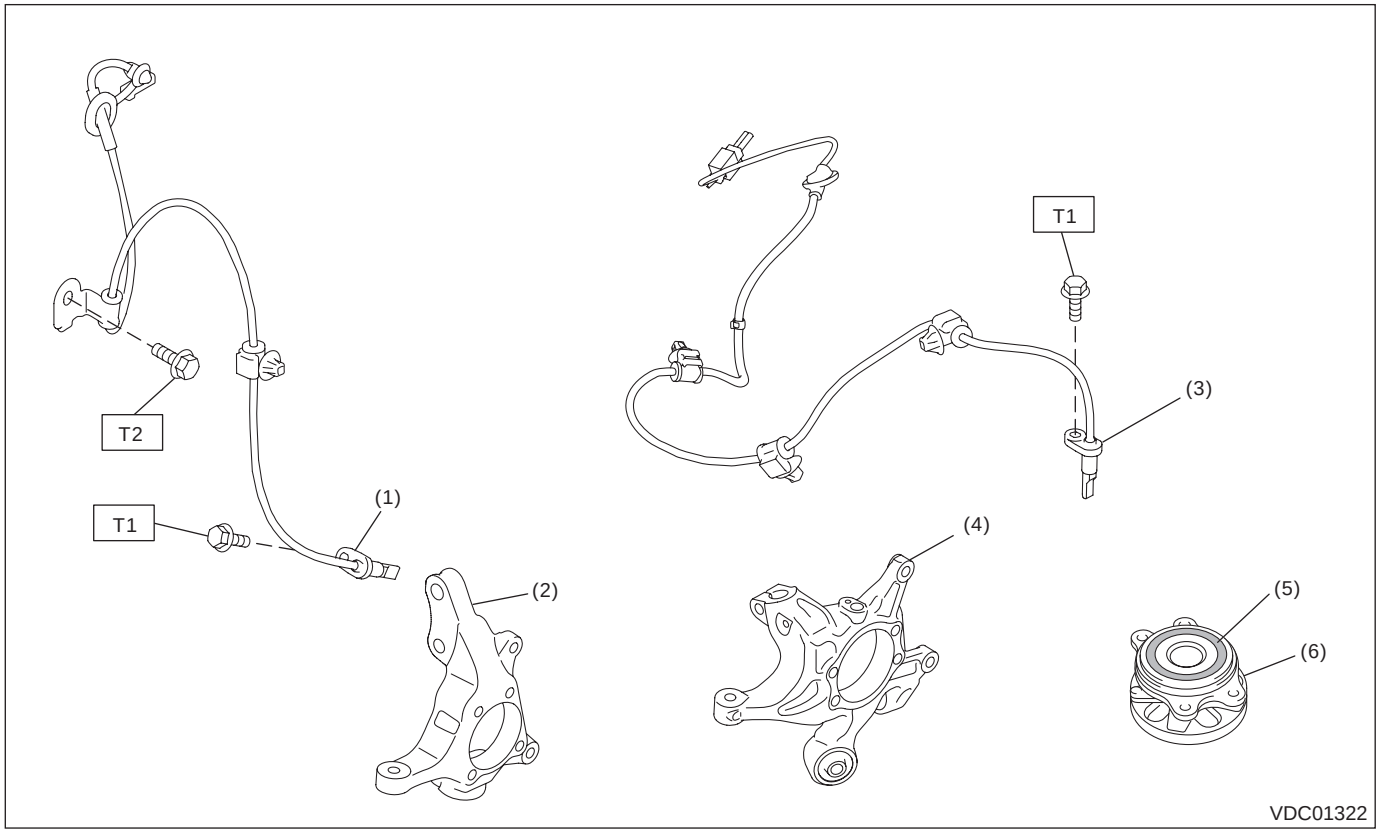
1. General Description

A: SPECIFICATION

Item				Specification or identification
ABS wheel speed sensor	ABS wheel speed sensor gap (for reference)	Front		0.77 — 1.43 mm (0.030 — 0.056 in)
		Rear		0.44 — 1.76 mm (0.017 — 0.069 in)
	Identifications of harness (symbol)	Front	RH	G1
			LH	G2
		Rear	RH	G3
			LH	G4
VDCCM&H/U identification				P1

B: COMPONENT

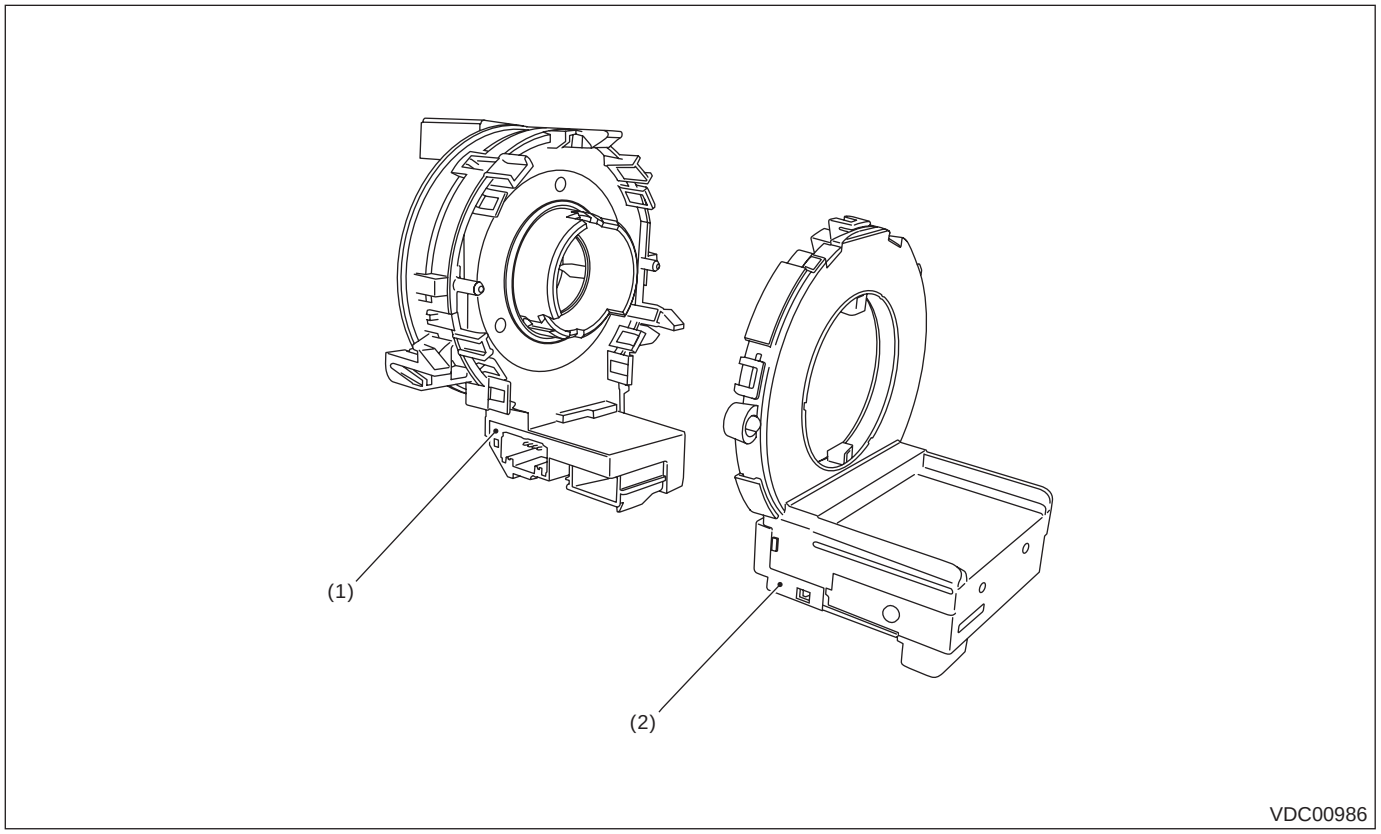
1. ABS WHEEL SPEED SENSOR



(1) Front ABS wheel speed sensor
(2) Housing ASSY - front axle
(3) Rear ABS wheel speed sensor
(4) Housing ASSY - rear axle
(5) Magnetic encoder
(6) Hub unit COMPL

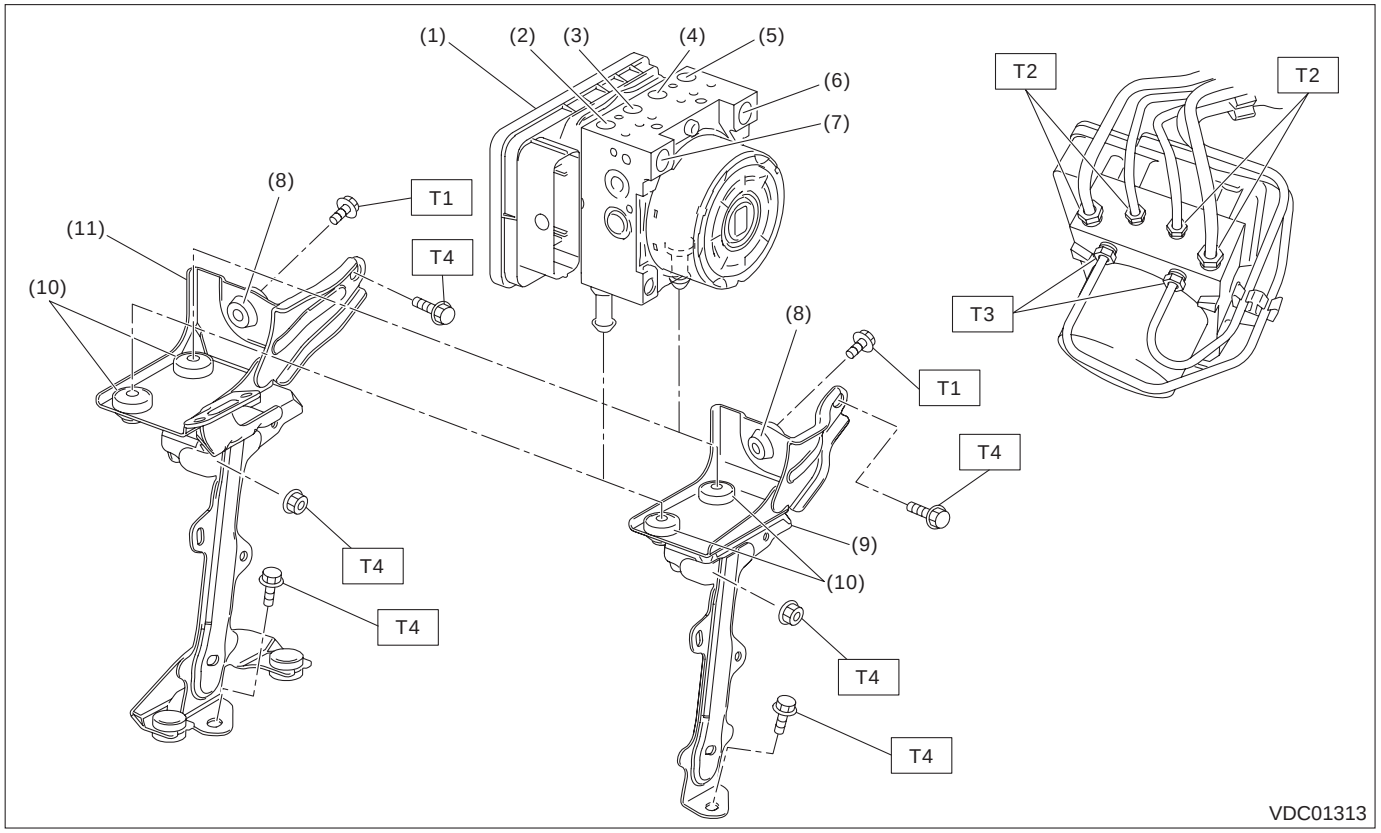
Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 33 (3.4, 24.3)

2. STEERING ANGLE SENSOR



(1) Steering roll connector
(2) Steering angle sensor

3. VDC CONTROL MODULE & HYDRAULIC CONTROL UNIT (VDCCM&H/U)



(1)	VDC control module and hydraulic control unit (VDCCM&H/U)	(7)	Secondary inlet	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Rear RH outlet	(8)	Damper - hydraulic unit	***T1: 7.5 (0.8, 5.5)***
(3)	Front LH outlet	(9)	Bracket - hydraulic unit (STI model)	***T2: 15 (1.5, 11.1)***
(4)	Front RH outlet	(10)	Spacer	***T3: 19 (1.9, 14.0)***
(5)	Rear LH outlet	(11)	Bracket - hydraulic unit (except for STI model)	***T4: 33 (3.4, 24.3)***
(6)	Primary inlet			

C: CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

D: PREPARATION TOOL

1. SPECIAL TOOL

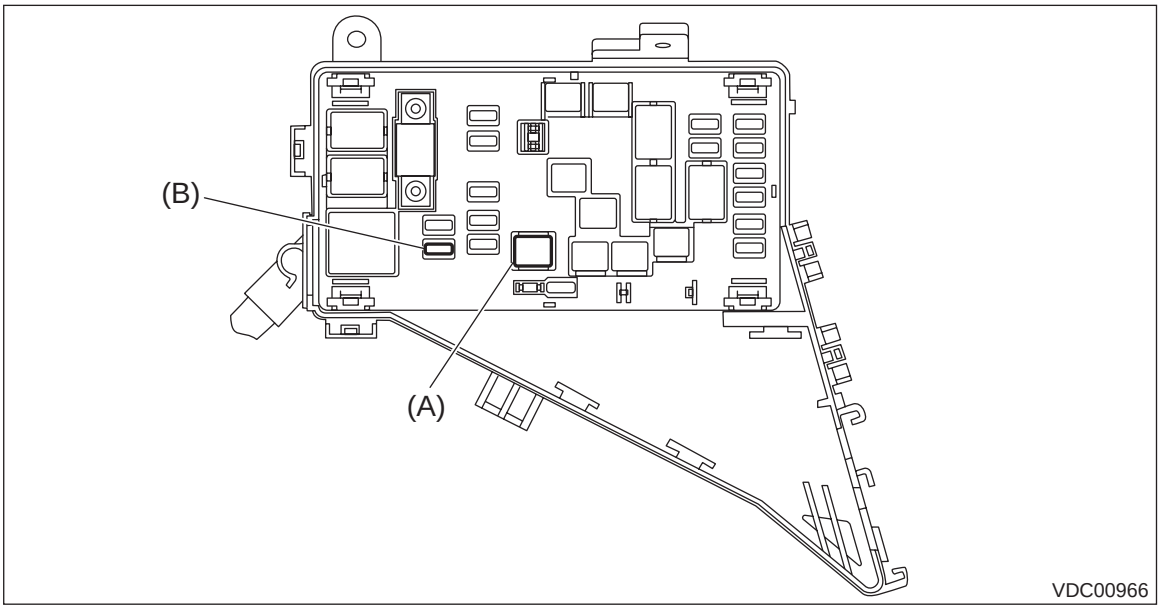
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for setting of each function and trouble-shooting for electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
Pressure gauge	Used for measuring oil pressure.
Oscilloscope	Used for measuring the sensor.
Steering wheel puller	Used for removing the steering wheel.

2. Relay and Fuse

A: LOCATION



Main fuse box	Fuse 40A (VDC CM&H/U)	(A)
	Fuse 30A (VDC CM&H/U)	(B)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-32, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

3. Vehicle Dynamics Control System

A: WIRING DIAGRAM

Refer to “Vehicle Dynamics Control System” in the wiring diagram. <Ref. to WI-416, WIRING DIAGRAM, Vehicle Dynamics Control System.>

B: ELECTRICAL SPECIFICATION

Refer to the Control Module I/O Signal of the “Vehicle Dynamics Control System (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-12, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

Refer to the “Vehicle Dynamics Control System (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-84, INSPECTION, General Diagnostic Table.>

D: NOTE

For operation procedures of each component of the vehicle dynamics control system, refer to the respective section.

- VDC control module & hydraulic control unit (VDCCM&H/U): <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Yaw rate & G sensor: <Ref. to VDC-23, Yaw Rate and G Sensor.>
- Steering angle sensor: <Ref. to VDC-24, Steering Angle Sensor.>
- Front ABS wheel speed sensor: <Ref. to VDC-28, Front ABS Wheel Speed Sensor.>
- Rear ABS wheel speed sensor: <Ref. to VDC-31, Rear ABS Wheel Speed Sensor.>
- Front magnetic encoder: <Ref. to VDC-34, Front Magnetic Encoder.>
- Rear magnetic encoder: <Ref. to VDC-35, Rear Magnetic Encoder.>
- VDC OFF switch: <Ref. to VDC-36, VDC OFF Switch.>

4. VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

A: REMOVAL

CAUTION:
• Avoid unnecessary removal of parts in order to prevent fluid leakage.
• When the VDCCM&H/U components are removed, be sure to perform the installation according to the installation procedures. <Ref. to VDC-10, INSTALLATION, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

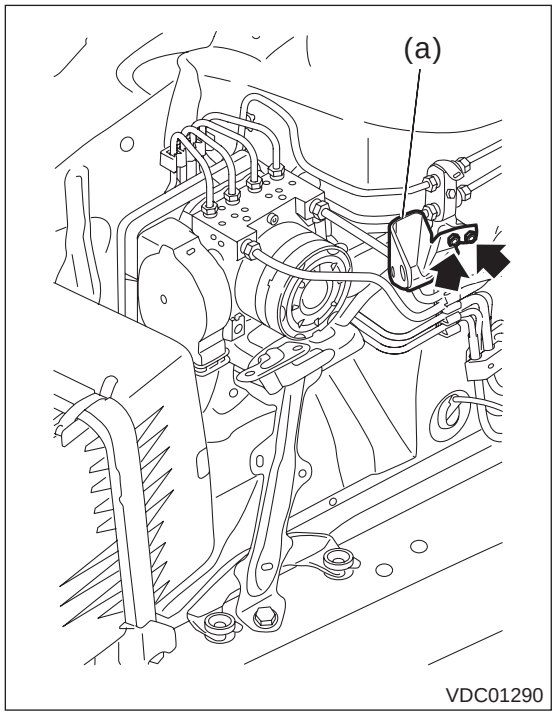
1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.

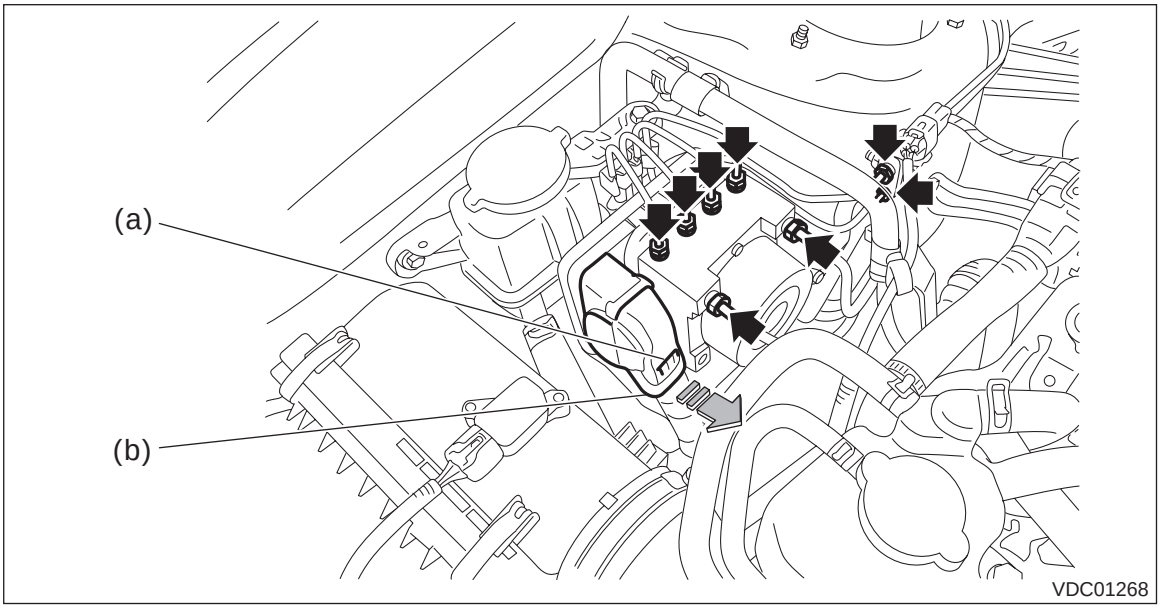
2) Remove the engine control module (ECM). (Except for STI model) <Ref. to FU(w/o STI)-129, REMOVAL, Engine Control Module (ECM).>
3) Remove the chamber assembly. (STI model) <Ref. to IN(STI)-22, REMOVAL, Chamber Assembly.>
4) Remove the VDC control module & hydraulic control unit (VDCCM&H/U).

CAUTION:
• Do not pull on the harness when disconnecting the connector.
• Wrap the brake pipe with a vinyl bag so as not to spill the brake fluid on the painted surface of the vehicle body.
• If brake fluid is spilled on the painted surface of the vehicle body, wash it off immediately with water and wipe clean.

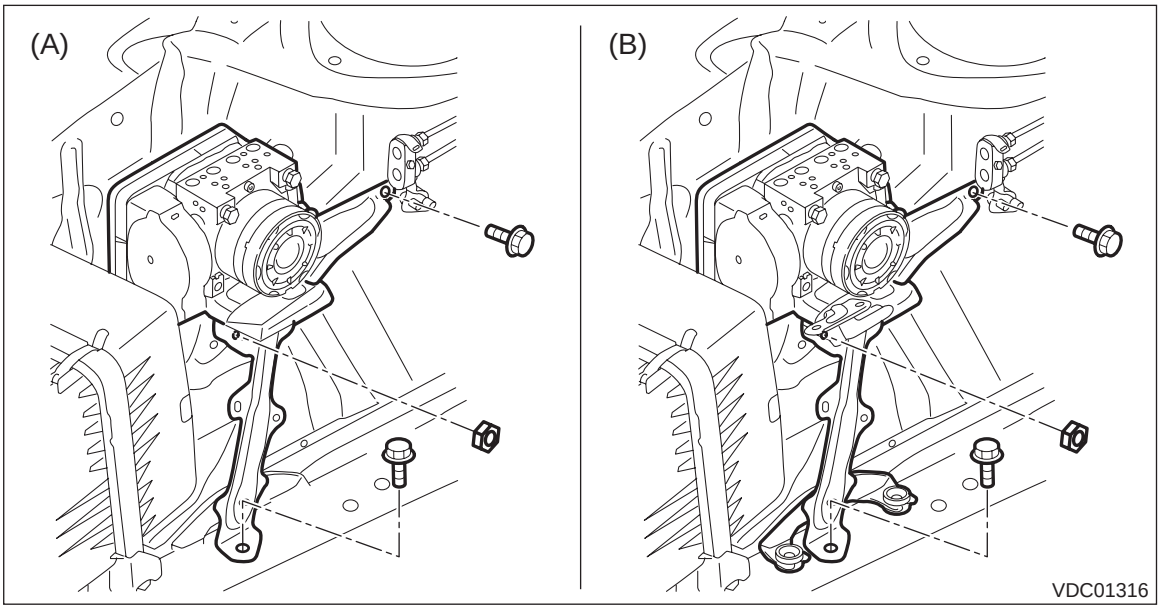
(1) Remove any dirt from around the VDCCM&H/U.
(2) Remove the power steering control module. (Except for STI model) <Ref. to PS-84, REMOVAL, Power Steering Control Module.>
(3) Remove the nuts, and remove the bracket (a) from the bracket - connector front. (Except for STI model)



(4) Pull up the lock lever (b) while pressing the lock button (a) and disconnect the VDCCM&H/U connector.
(5) Separate each brake pipe using a flare nut wrench.

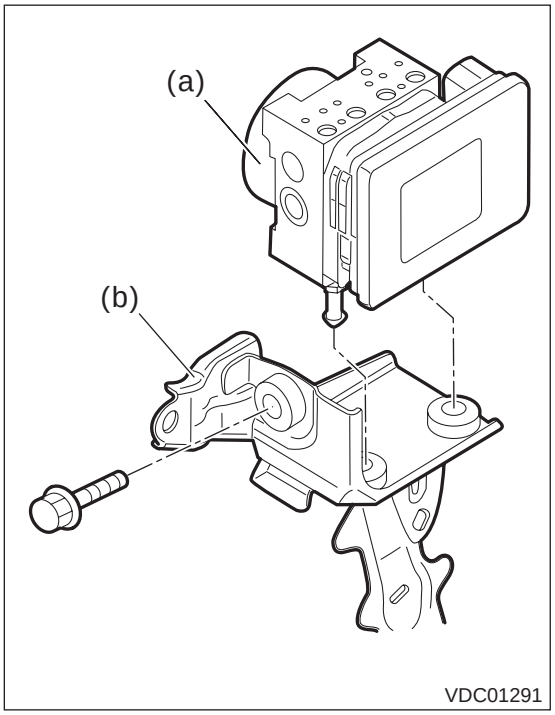


(6) Remove the bolts and nuts, and remove the bracket - hydraulic unit and the VDCCM&H/U.



(A) STI model
(B) Except for STI model

(7) Remove the bolts, and remove the VDCCM&H/U (a) from the bracket - hydraulic unit (b).



B: INSTALLATION

CAUTION:
• When installing the VDCCM&H/U to the bracket - hydraulic unit, make sure that there is no oil adhered to the bolts and the threads of VDCCM&H/U. If the oil is adhered, degrease it carefully before tightening.
• Connect the VDCCM&H/U connector securely.

1) Install the bracket - hydraulic unit and the VDCCM&H/U.
(1) Install the VDCCM&H/U to the bracket - hydraulic unit.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
(2) Attach the bracket - hydraulic unit.

Tightening torque:
33 N·m (3.4 kgf-m, 23.8 ft-lb)
(3) Attach the bracket to the bracket - connector front. (Except for STI model)

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
(4) Install the power steering control module. (Except for STI model) <Ref. to PS-84, INSTALLATION, Power Steering Control Module.>
(5) Connect the VDCCM&H/U connector.
(6) Install each brake pipe using a flare nut wrench.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to VDC-4, VDC CONTROL MODULE & HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.>

2) Install the chamber assembly. (STI model) <Ref. to IN(STI)-22, INSTALLATION, Chamber Assembly.>
3) Install the engine control module (ECM). (Except for STI model) <Ref. to FU(w/o STI)-131, INSTALLATION, Engine Control Module (ECM).>
4) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

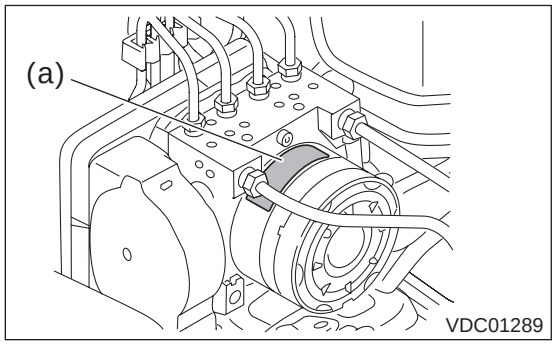
NOTE:
For models other than STI model, connect the ground terminal to battery sensor.
5) Bleed air from the brake system. <Ref. to BR-65, Air Bleeding.>
6) Perform parameter confirmation, selection, and registration.

NOTE:
• When the VDCCM&H/U is replaced with a new part, be sure to perform the selection · registration operation.
• Be sure to use the Subaru Select Monitor for the selection and registration of parameter.
• When the registration has not been performed, the DTC code “Parameter selection error” is detected together with the ABS/EBD/VDC warning light illumination.
(1) Check that the applied model and grade of the relevant vehicle are included. <Ref. to VDC(diag)-18, READ PARAMETER, OPERATION, Subaru Select Monitor.>
(2) On {Confirm on parameter} display, enter the applied model of the relevant vehicle and check if it is correct. If the information is not correct, perform parameter selection and registration. <Ref. to VDC(diag)-17, PARAMETER SELECTION, OPERATION, Subaru Select Monitor.>
7) Perform “VDC sensor midpoint setting mode”. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: INSPECTION

1) Check the identification (a) of the VDC control module & hydraulic control unit (VDCCM&H/U).

NOTE:
For the identification, refer to “SPECIFICATION” in “General Description”. <Ref. to VDC-2, SPECIFICATION, General Description.>



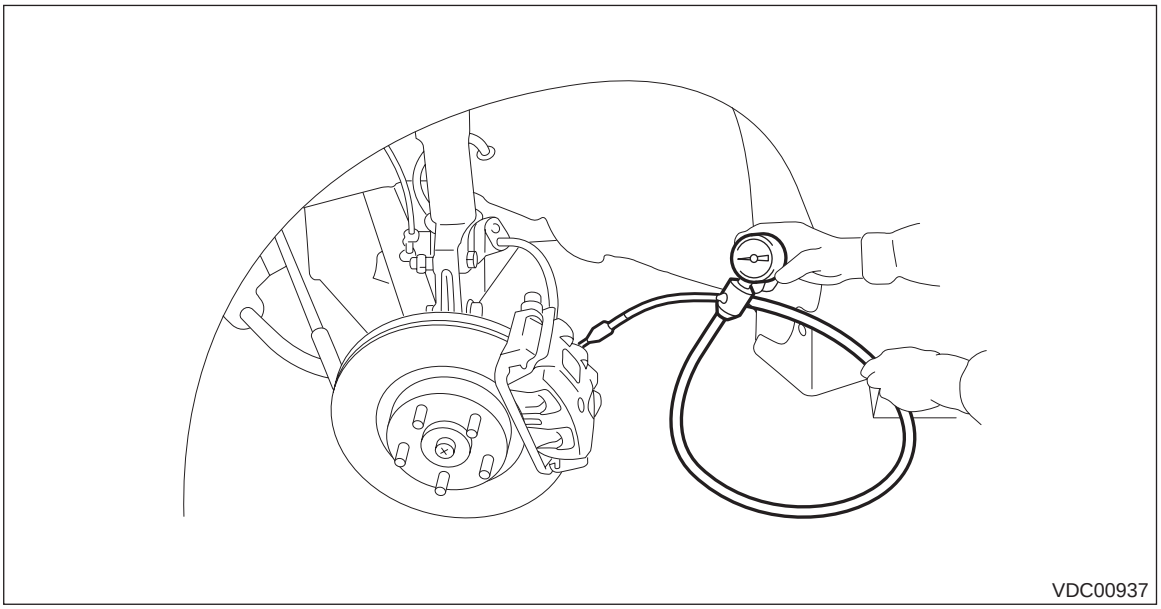
2) Check the condition of connection and settlement of connector, and correct or replace if defective.

1. CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE

1) Lift up the vehicle, and then remove the wheel.
2) Remove the bleeder - screws from the front LH and front RH caliper bodies.
3) Connect two pressure gauges to front LH and front RH caliper bodies.

CAUTION:
• Use a pressure gauge used exclusively for brake fluid measurement.
• Do not use the pressure gauge used for the measurement of transmission oil. Doing so will cause the piston seal to expand and deform.

NOTE:
Wrap sealing tape around the pressure gauge.



4) Bleed air from the pressure gauges and the front LH and front RH caliper bodies.
5) Perform ABS sequence control. <Ref. to VDC-17, ABS Sequence Control.>

NOTE:
When the hydraulic unit begins to work, first the front LH side performs decompression, hold and compression, and then the front RH side performs decompression, hold and compression.
6) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets the standard values. Depress the brake pedal and check that the kick-back is normal, and tightness is normal.

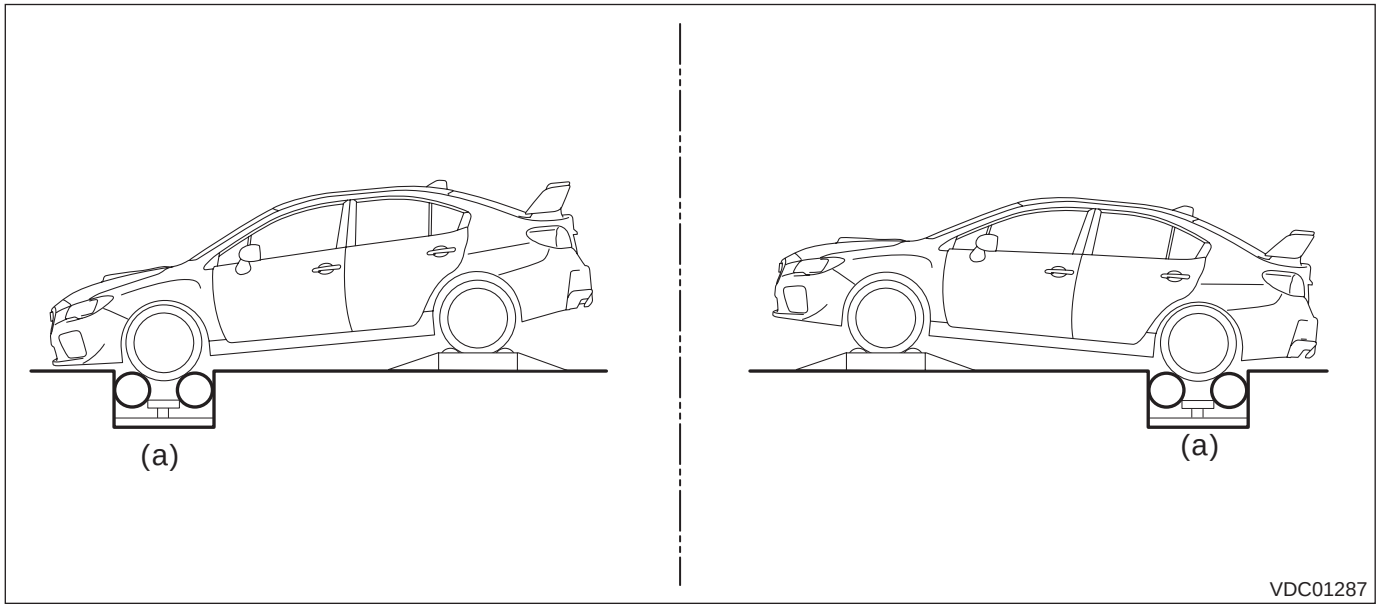
Inspection conditions	Front wheel	Rear wheel
Initial value	3,500 kPa (36 kgf/cm^2, 511 psi)	3,500 kPa (36 kgf/cm^2, 511 psi)
When depressurized	500 kPa (5 kgf/cm^2, 73 psi) or less	500 kPa (5 kgf/cm^2, 73 psi) or less
When pressurized	3,500 kPa (36 kgf/cm^2, 511 psi) or more	3,500 kPa (36 kgf/cm^2, 511 psi) or more

7) Remove the pressure gauge from the front LH and front RH caliper bodies.
8) Install the bleeder - screws of the front LH and front RH caliper bodies.
9) Remove the bleeder - screws from the rear LH and rear RH caliper bodies.
10) Connect two pressure gauges to rear LH and rear RH caliper bodies.
11) Bleed air from the pressure gauges and the rear LH and rear RH caliper bodies.
12) Perform ABS sequence control. <Ref. to VDC-17, ABS Sequence Control.>

NOTE:
When the hydraulic unit begins to work, first the rear LH side performs decompression, hold and compression, and then the rear RH side performs decompression, hold and compression.
13) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets specification. Depress the brake pedal and check that the kick-back is normal, and tightness is normal.
14) Remove the pressure gauge from the rear LH and rear RH caliper bodies.
15) Install the bleeder - screws of the rear LH and rear RH caliper bodies.
16) Bleed air from the brake system. <Ref. to BR-65, Air Bleeding.>

2. CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH THE BRAKE TESTER

1) Set wheels other than the one to measure on free rollers.
2) Prepare for the ABS sequence control operation. <Ref. to VDC-17, ABS Sequence Control.>
3) Set the front wheels or rear wheels on the brake tester (a) and set the gear to neutral.



4) Operate the brake tester.

NOTE:
When any wheel speed reaches 4 km/h (2 MPH), the ABS sequence control stops and ABS operation is returned to the normal control mode.
5) Perform ABS sequence control. <Ref. to VDC-17, ABS Sequence Control.>
6) When the hydraulic unit begins to work, check the following work sequence.
   (1) The front LH wheel performs decompression, hold and compression in sequence, and subsequently the front RH wheel repeats the same cycle.
   (2) The rear RH wheel performs decompression, hold and compression in sequence, and subsequently the rear LH wheel repeats the same cycle.

7) Read values indicated on the brake tester and check if the fluctuation of the values between decompression and compression meets specification.

Inspection conditions	Front wheel	Rear wheel
Initial value	1,000 N (102 kgf, 225 lb)	1,000 N (102 kgf, 225 lb)
When depressurized	500 N (51 kgf, 112 lb) or less	500 N (51 kgf, 112 lb) or less
When pressurized	1,000 N (102 kgf, 225 lb) or more	1,000 N (102 kgf, 225 lb) or more

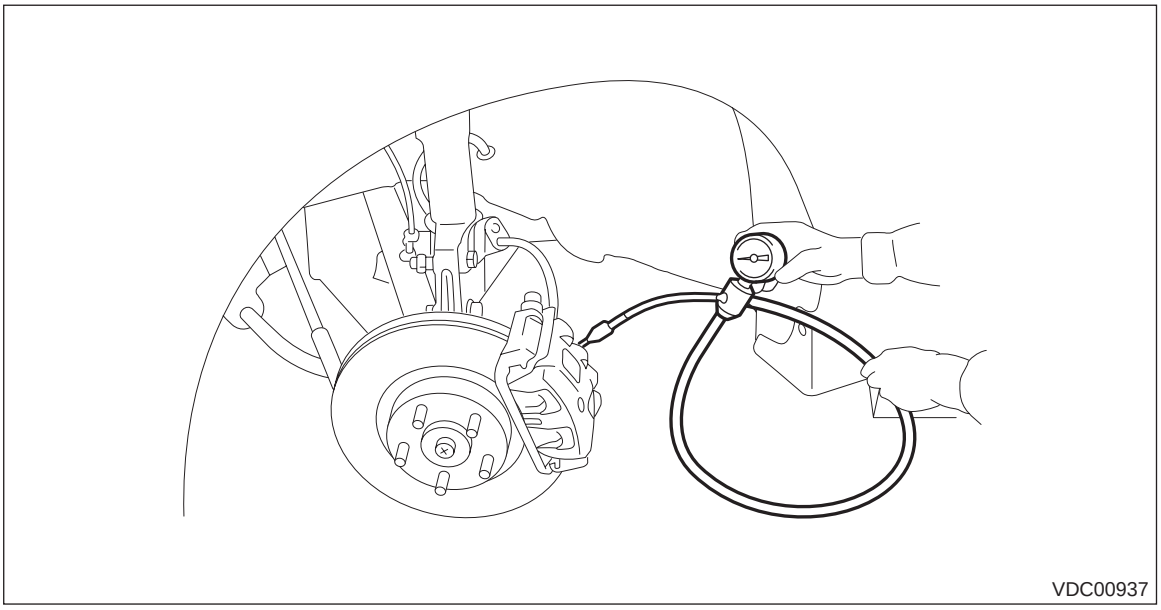
8) After the inspection, depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

3. CHECKING THE HYDRAULIC UNIT VDC OPERATION USING A PRESSURE GAUGE

1) Lift up the vehicle, and then remove the wheel.
2) Remove the bleeder - screws from the front LH and front RH caliper bodies.
3) Connect two pressure gauges to front LH and front RH caliper bodies.

CAUTION:
- **Use a pressure gauge used exclusively for brake fluid measurement.**
- **Do not use a pressure gauge used for the measuring transmission oil pressure, as the piston seal may expand and deform.**

NOTE:
Wrap sealing tape around the pressure gauge.



4) Bleed air from the pressure gauge.
5) Perform VDC sequence control. <Ref. to VDC-20, VDC Sequence Control.>

NOTE:
When the hydraulic unit begins to work, first the front LH side performs compression, hold and decompression, and then the front RH side performs compression, hold and decompression.

6) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets specification. Depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

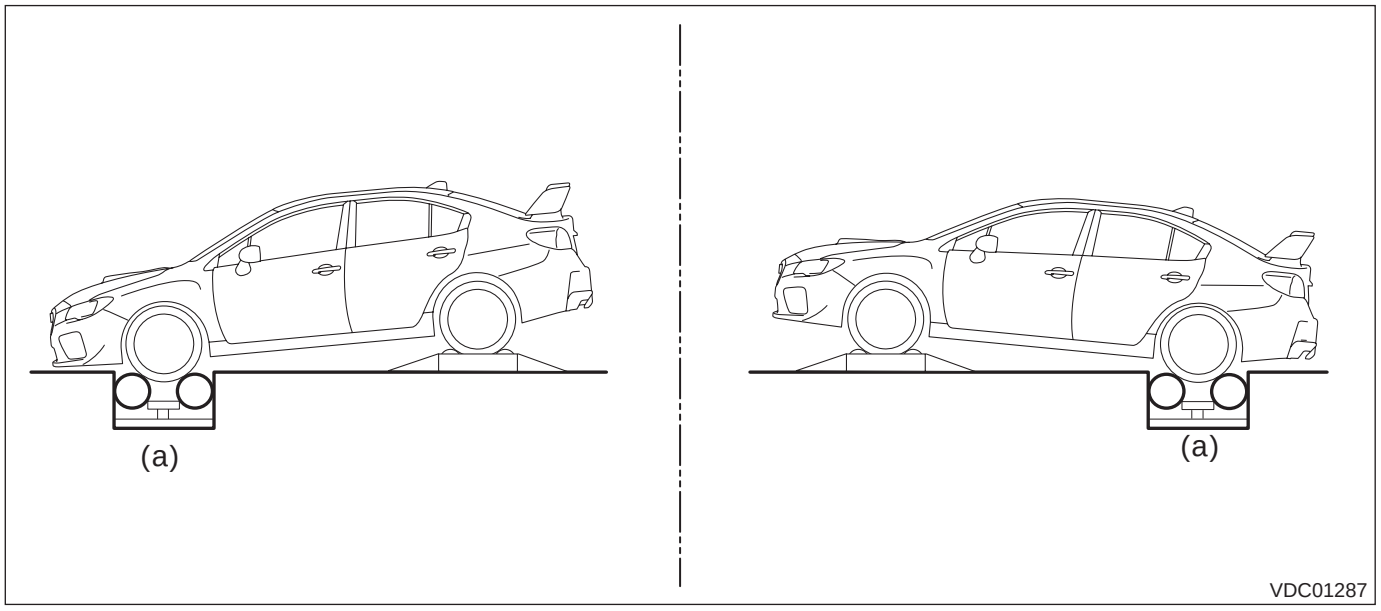
Inspection conditions	Front wheel	Rear wheel
When pressurized	3,000 kPa (31 kgf/cm^2, 441 psi) or more	3,000 kPa (31 kgf/cm^2, 441 psi) or more
When depressurized	500 kPa (5 kgf/cm^2, 73 psi) or less	500 kPa (5 kgf/cm^2, 73 psi) or less

7) Remove the pressure gauge from the front LH and front RH caliper bodies.
8) Install the bleeder - screws of the front LH and front RH caliper bodies.
9) Remove the bleeder - screws from the rear LH and rear RH caliper bodies.
10) Connect two pressure gauges to rear LH and rear RH caliper bodies.
11) Bleed air from the pressure gauges and the rear LH and rear RH caliper bodies.
12) Perform VDC sequence control. <Ref. to VDC-20, VDC Sequence Control.>

NOTE:
When the hydraulic unit begins to work, first the rear RH side performs compression, hold and decompression, and then the rear LH side performs compression, hold and decompression.
13) Read the values indicated on the pressure gauges and check if it is within specification. Depress the brake pedal and check that it is not abnormally hard, and tightness is normal.
14) Remove the pressure gauge from the rear LH and rear RH caliper bodies.
15) Install the bleeder - screws of the rear LH and rear RH caliper bodies.
16) Bleed air from the brake system. <Ref. to BR-65, Air Bleeding.>

4. CHECK HYDRAULIC UNIT VDC OPERATION WITH BRAKE TESTER

1) Set wheels other than the one to measure on free rollers.
2) Prepare to operate the VDC sequence control. <Ref. to VDC-20, VDC Sequence Control.>
3) Set the front wheels or rear wheels on the brake tester (a) and set the gear to neutral.



4) Operate the brake tester.

NOTE:
When any wheel speed reaches 4 km/h (2 MPH), the VDC sequence control stops and VDC operation is returned to the normal control mode.

5) Perform VDC sequence control. <Ref. to VDC-20, VDC Sequence Control.>
6) When the hydraulic unit begins to work, check the following work sequence.
   (1) The front LH wheel performs compression, hold and decompression in sequence, and subsequently the front RH wheel repeats the same cycle.
   (2) The rear RH wheel performs compression, hold and decompression in sequence, and subsequently the rear LH wheel repeats the same cycle.
7) Read values indicated on the brake tester and check if the fluctuation of the values between decompression and compression meets specification.

Inspection conditions	Front wheel	Rear wheel
When pressurized	2,000 N (204 kgf, 450 lbf) or more	2,000 N (204 kgf, 450 lbf) or more
When depressurized	500 N (51 kgf, 112 lbf) or less	500 N (51 kgf, 112 lbf) or less

8) After the inspection, depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

D: ADJUSTMENT

1. VDC SENSOR MIDPOINT SETTING MODE

After installing, replacing or adjusting the following parts, perform the VDC sensor midpoint setting mode.
- Steering angle sensor
- Steering wheel
- Suspension parts
- Wheel alignment
- VDCCM&H/U
- VDCCM&H/U bracket

1) Park the vehicle on a level surface, and set the steering wheel to the neutral position.
2) Connect the Subaru Select Monitor to data link connector.
   (1) Run the “PC application for Subaru Select Monitor”.
   (2) On «Main Menu» display, select {Each System Check}.
   (3) Select {Brake Control System}. When {VDC} is displayed, select the [OK] button.
   (4) From {Current Data Display & Save}, select {Steer Angle Sensor Op}, {Longitudinal G Sensor} and {Lateral G sensor Output}.
3) Check that the steering angle sensor output value is between –10 and 10 deg.
4) Check that output values for the longitudinal G sensor and lateral G sensor are -2 — 2 m/s^2.
5) From {Work Support}, select {VDC sensor midpoint setting mode}, and perform the setting according to the procedure displayed on the Subaru Select Monitor Screen.
6) Drive the vehicle for 10 minutes, and check that there is no system malfunction or the warning light illumination while driving.
7) Make sure that the DTC is not stored.

5. ABS Sequence Control

A: OPERATION

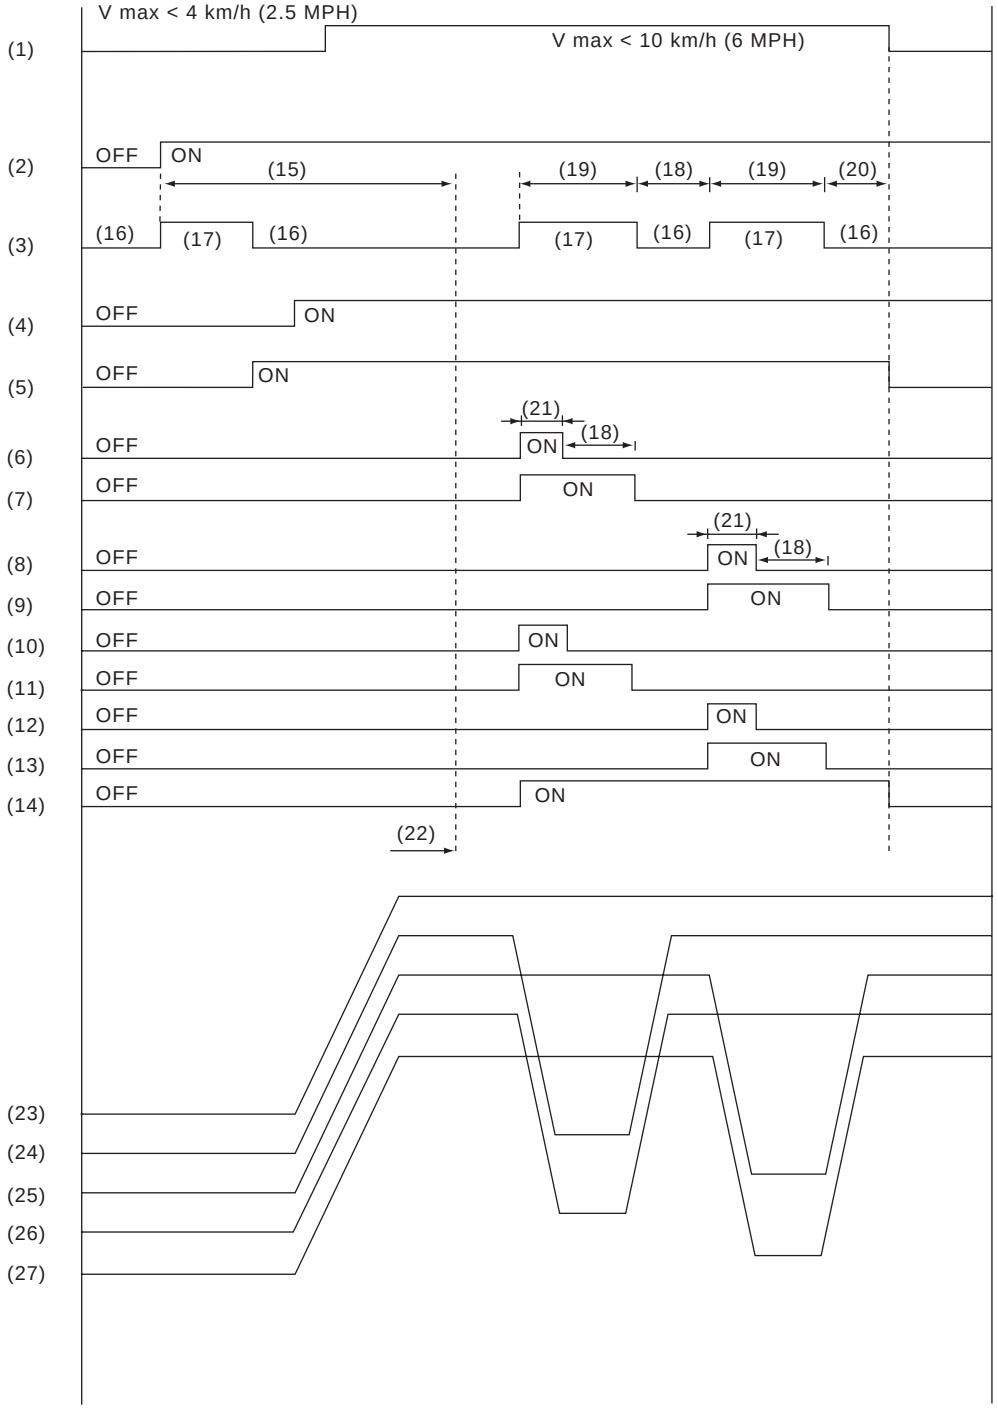
1) While the ABS sequence control is being performed, the operation of the hydraulic unit can be checked using the brake tester or pressure gauge after the hydraulic unit solenoid valve operation.
2) ABS sequence control can be started by the Subaru Select Monitor.

1. ABS SEQUENCE CONTROL WITH SUBARU SELECT MONITOR

NOTE:
In the event of any trouble, the ABS sequence control will not operate.
1) Connect the Subaru Select Monitor to data link connector.
   (1) Run the “PC application for Subaru Select Monitor”.
   (2) On «Main Menu» display, select {Each System Check}.
   (3) Select {Brake Control System}. When {VDC} is displayed, select the [OK] button.
   (4) Select the {Function Check Sequence} from {Work Support}, and select {ABS Sequence Control Mode} when it appears.
2) Follow the procedures displayed in the Subaru Select Monitor to execute the following.
   (1) When using a brake tester, depress the brake pedal with a force of 100 N (10.2 kgf, 22.5 lbf).
   (2) When using a pressure gauge, press the brake pedal so that the pressure gauge indicates 3,500 kPa (36 kgf/cm^2, 511 psi).
3) The brake system being operated is displayed on the Subaru Select Monitor.

2. CONDITIONS FOR ABS SEQUENCE CONTROL

NOTE:
The control operation starts at point A.



VDC01320

(1) All wheel speed
(2) Ignition key
(3) ABS warning light
(4) Switch - stop light

(23) Master cylinder pressure
(24) Front LH wheel cylinder pressure
(25) Front RH wheel cylinder pressure
(26) Rear RH wheel cylinder pressure
(27) Rear LH wheel cylinder pressure

B: SPECIFICATION

1. CONDITIONS FOR COMPLETION OF ABS SEQUENCE CONTROL

When the following conditions develop, the ABS sequence control stops and ABS operation is returned to the normal control mode.

- When the speed of at least one wheel reaches 10 km/h (6 MPH).
- When the brake pedal is released during ABS sequence control and the switch - stop light becomes OFF.
- After completion of ABS sequence control.
- When a malfunction is detected.

6. VDC Sequence Control

A: OPERATION

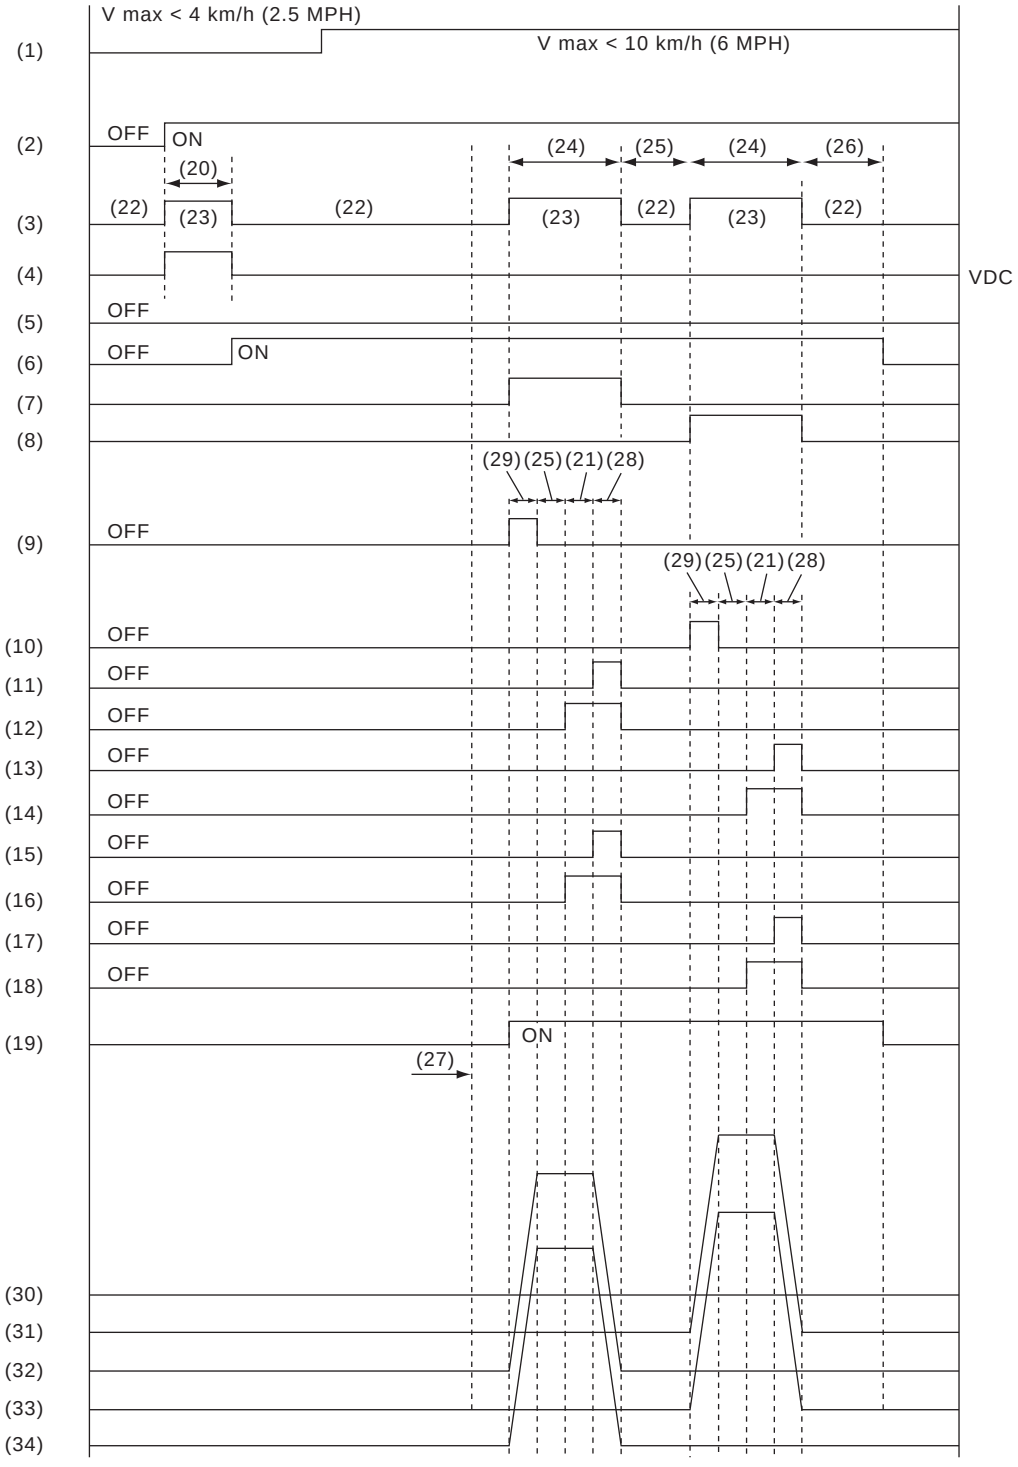
1) While the VDC sequence control is performed, the operation of the hydraulic unit can be checked using the brake tester or pressure gauge after the hydraulic unit solenoid valve is operated.
2) VDC sequence control can be started by Subaru Select Monitor.

1. VDC SEQUENCE CONTROL WITH SUBARU SELECT MONITOR

NOTE:
In the event of any trouble, sequence control will not operate.
1) Connect the Subaru Select Monitor to data link connector.
   (1) Run the “PC application for Subaru Select Monitor”.
   (2) On «Main Menu» display, select {Each System Check}.
   (3) Select {Brake Control System}. When {VDC} is displayed, select the [OK] button.
   (4) Select the {Function Check Sequence} from {Work Support}, and select {VDC Function Check Mode} when it appears.
2) Operate according to the procedures displayed in the Subaru Select Monitor.
3) The brake system being operated is displayed on the Subaru Select Monitor.

2. CONDITIONS FOR VDC SEQUENCE CONTROL

NOTE:
The control operation starts at point A.



(1) All wheel speed
(2) Ignition key
(3) ABS warning light
(4) VDC warning light
(5) Switch - stop light
(6) Valve relay
(7) VDC switching valve 1 front LH
(8) VDC switching valve 1 front RH
(9) VDC switching valve 2 front LH
(10) VDC switching valve 2 front RH
(11) Front LH decompression valve
(12) Front LH compression valve
(13) Front RH decompression valve
(14) Front RH compression valve
(15) Rear RH decompression valve
(16) Rear RH compression valve
(17) Rear LH decompression valve
(18) Rear LH compression valve
(19) Pump motor

(32) Front LH wheel cylinder pressure
(33) Rear LH wheel cylinder pressure
(34) Rear RH wheel cylinder pressure

B: SPECIFICATION

1. CONDITIONS FOR COMPLETION OF VDC SEQUENCE CONTROL

When the following conditions develop, the VDC sequence control stops and VDC operation is returned to the normal control mode.

- When the speed of at least one wheel reaches 10 km/h (6 MPH).
- After completion of VDC sequence control.
- When a malfunction is detected.

7. Yaw Rate and G Sensor

A: NOTE

Yaw rate & longitudinal G and lateral G sensor are integrated with the VDC control module & hydraulic control module (VDCCM&H/U).

B: INSPECTION

1. YAW RATE & LONGITUDINAL G AND LATERAL G SENSOR SIGNAL

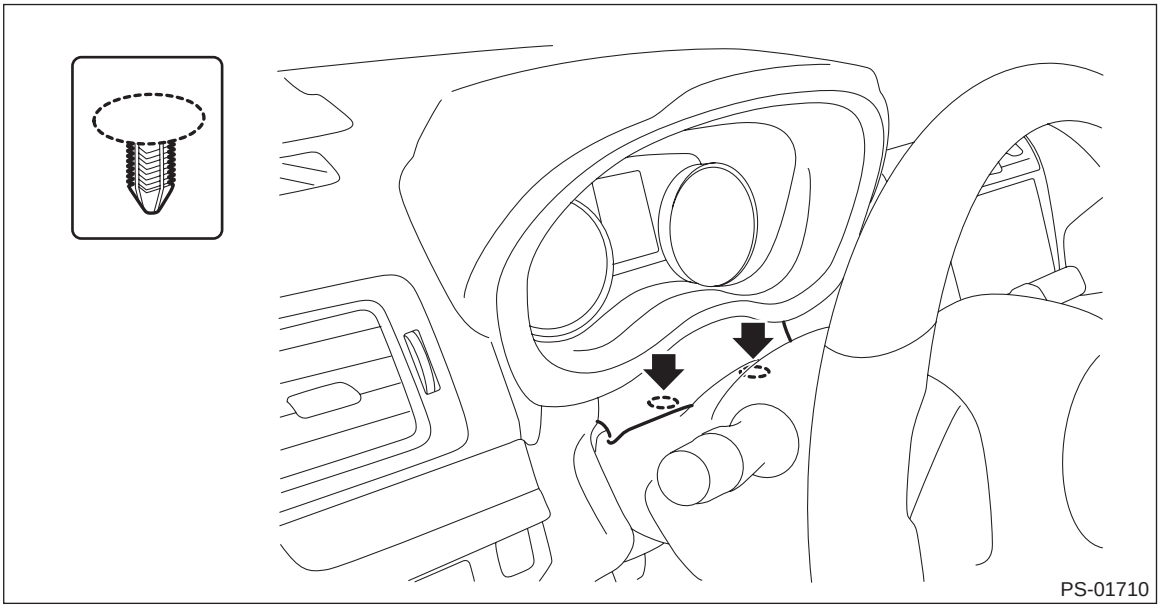
	Step	Check	Yes	No
1	**CHECK YAW RATE & G SENSOR.** 1) Check the installation condition of the VDC control module & hydraulic control module (VDCCM&H/U). 2) Select “Current Data Display & Save” on the Subaru Select Monitor. 3) Read the output of yaw rate & G sensor.	When the vehicle is placed horizontally, are the displayed values –1.5 — 1.5 m/s^2 for longitudinal G and lateral G sensor, and –4 — 4 deg/s for yaw rate sensor?	Go to step **2**.	Replace the VDC control module & hydraulic control unit (VDCCM&H/U).
2	**PERFORM DRIVING TEST.** Drive for approximately 10 minutes, and check that there is no system malfunction or the warning light illumination while driving.	Is there any abnormal movement or the warning light illumination while driving?	Perform the diagnosis according to DTCs for the VDC system. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	G sensor is normal.

8. Steering Angle Sensor

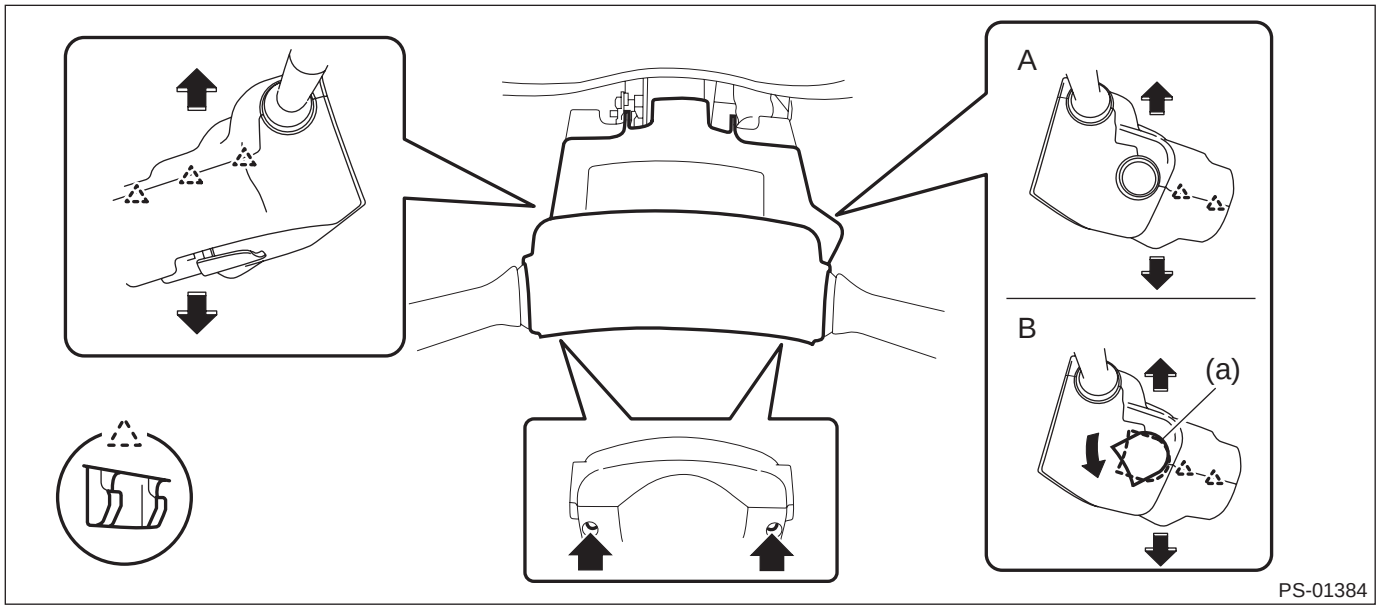
A: REMOVAL

CAUTION:
• If the steering wheel and steering angle sensor are removed, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Before performing service on the airbag module, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" section. <Ref. to AB-9, CAUTION, General Description.>
• Always use the steering wheel puller for removal to avoid deforming the steering wheel.
• If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.
1) Position the front wheels straight ahead.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
3) Remove the driver's airbag module. <Ref. to AB-32, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel. <Ref. to PS-16, REMOVAL, Steering Wheel.>
5) Remove the cover assembly - column.
(1) Remove the clip, and remove the cover - column from the cover assembly - column UPR.



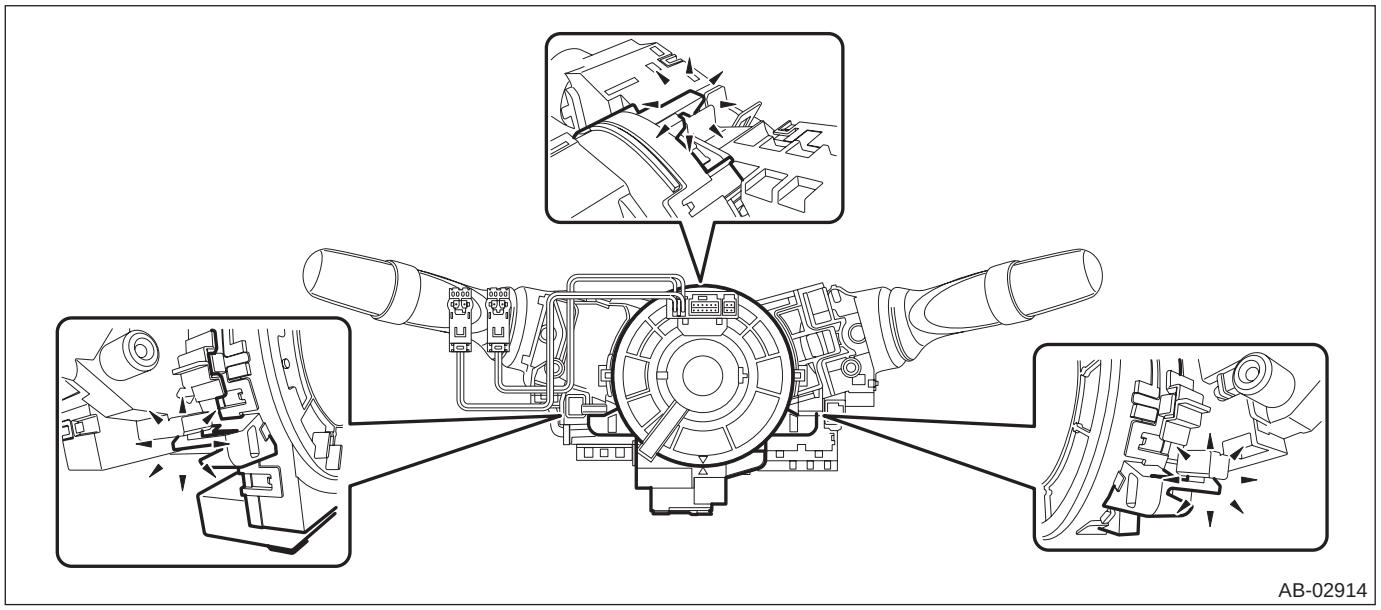
(2) Remove the cap - key cylinder (a). (Model with keyless access)
(3) Release the screw and claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.



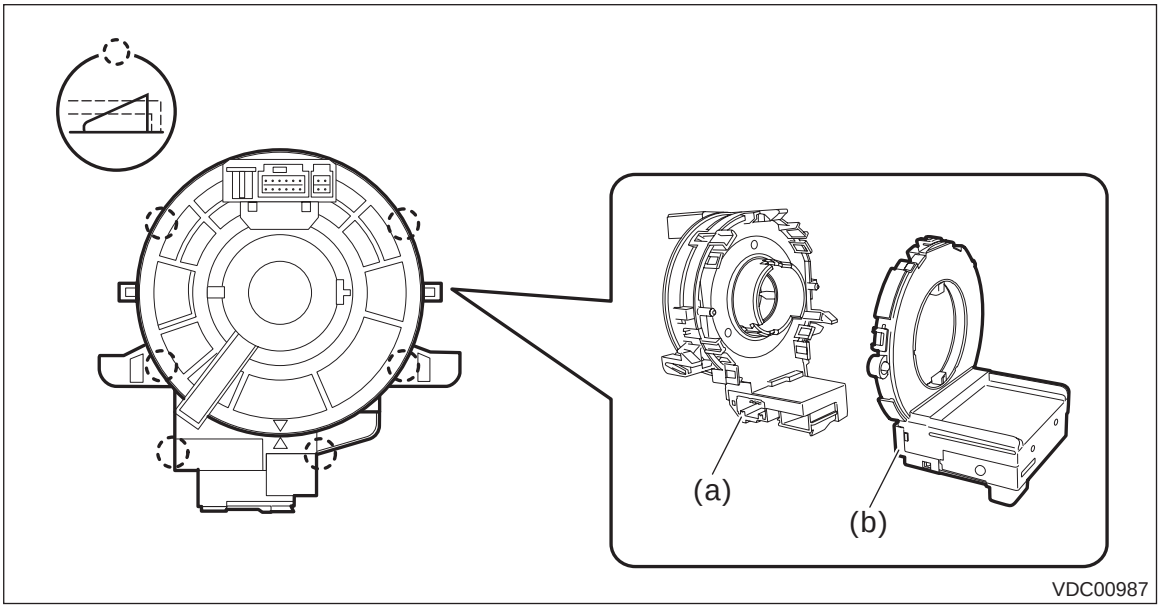
A Model without keyless access B Model with keyless access

6) Remove the steering roll connector.

CAUTION:
Make sure that the steering roll connector is not turned from the original position.
(1) Disconnect the connector under the steering roll connector.
(2) Release the claws and remove the steering roll connector.



7) Remove the steering angle sensor.
(1) Release the claws and remove the steering angle sensor (b) from the steering roll connector (a).

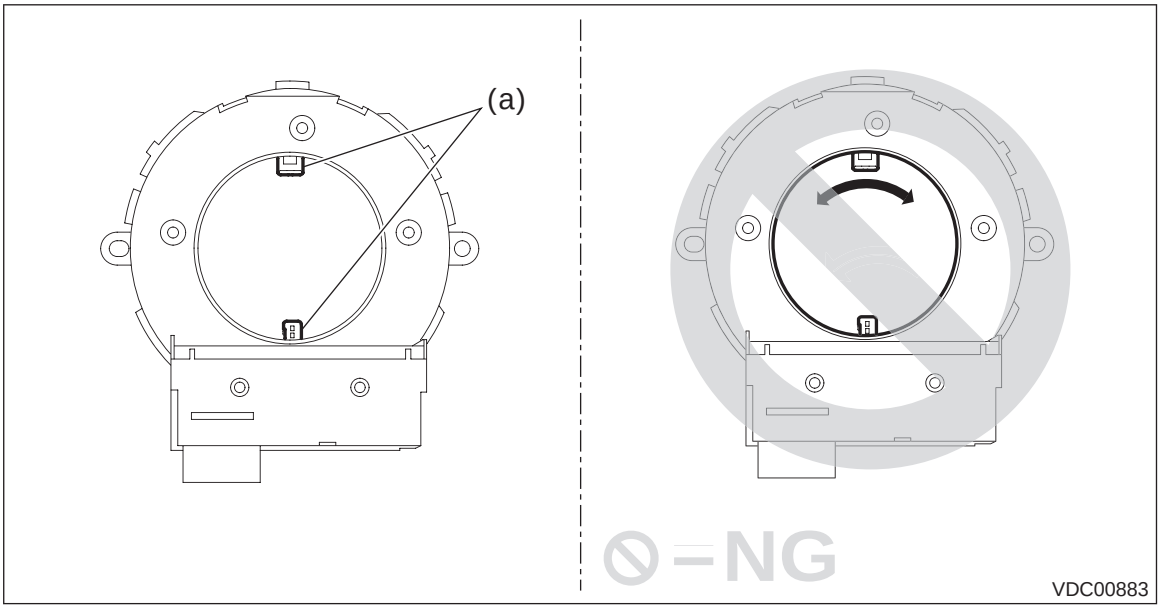


B: INSTALLATION

CAUTION:
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Before performing service on the airbag module, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" section. <Ref. to AB-9, CAUTION, General Description.>

1) Install the steering angle sensor.
(1) Apply grease to the protrusion (a) of the new steering angle sensor.

CAUTION:
Do not rotate the steering angle sensor protrusion.



(2) Align the center of steering roll connector. <Ref. to AB-60, INSTALLATION, Roll Connector.>
(3) Align the position of the protrusion and install the steering angle sensor to the steering roll connector.

2) Install the cover assembly - column.
3) Install the steering wheel.

Tightening torque:
Steering wheel: 39 N·m (4.0 kgf-m, 28.8 ft-lb)

Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
4) Install the driver's airbag module. <Ref. to AB-33, INSTALLATION, Driver's Airbag Module.>
5) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.
6) Perform the neutral position setting of the steering angle sensor. <Ref. to VDC-16, VDC SENSOR MID-POINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

9. Front ABS Wheel Speed Sensor

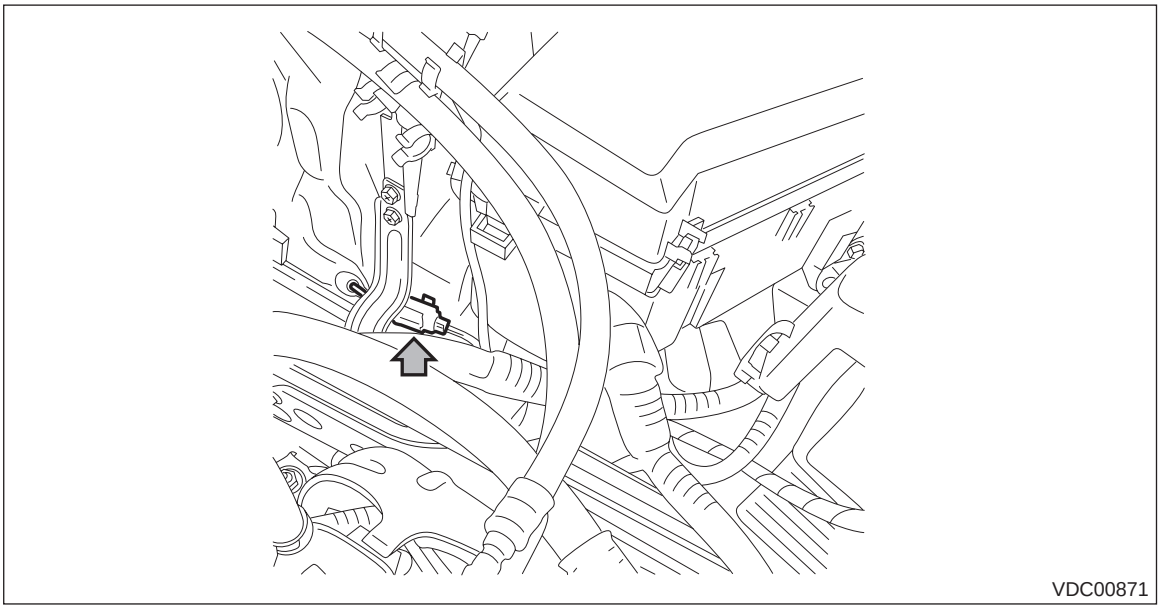
A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle, and then remove the front wheels.
3) Remove the front ABS wheel speed sensor.

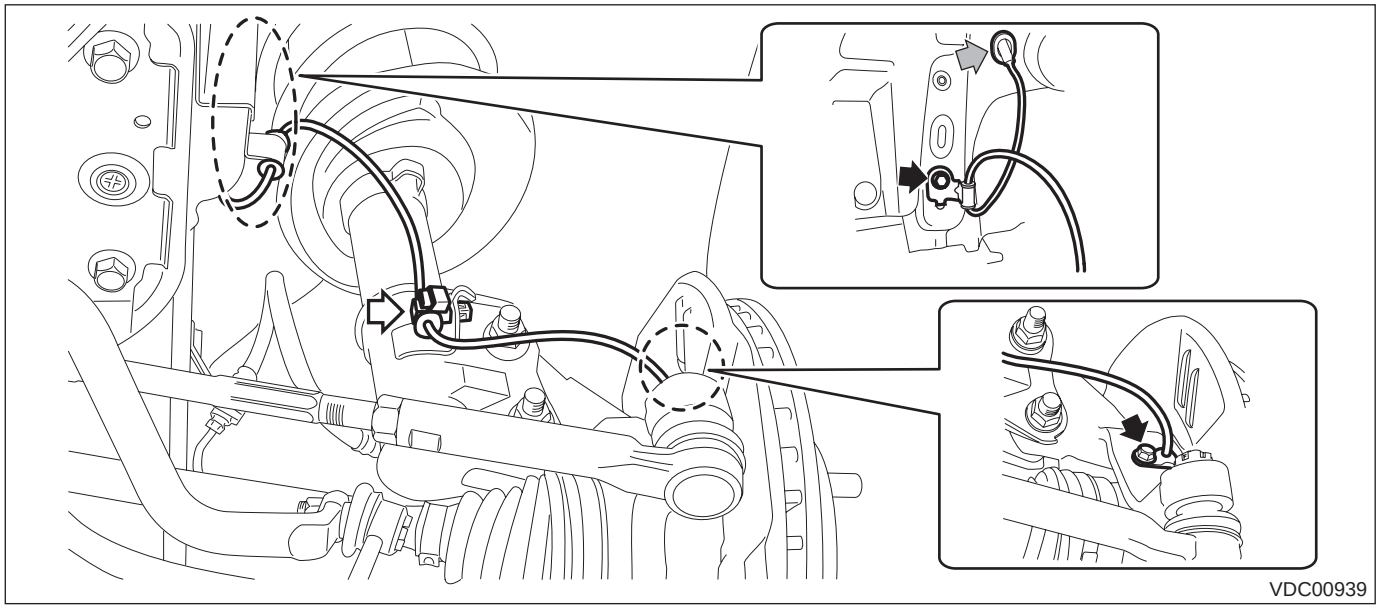
CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**
- **Leave the sensor harness clamp on the vehicle side.**

(1) Disconnect the connector of the front ABS wheel speed sensor in the engine compartment.



VDC00871

(2) Remove each harness clip and grommet.
(3) Remove the bolts, and remove the front ABS wheel speed sensor from the housing assembly - front axle.



VDC00939

B: INSTALLATION

CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**

1) Install the front ABS wheel speed sensor.

Tightening torque:
Front ABS wheel speed sensor: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
Front ABS wheel speed sensor bracket: 33 N·m (3.36 kgf-m, 24.3 ft-lb)

2) Install the front wheels.

Tightening torque:
Front wheel: 120 N·m (12.2 kgf-m, 88.5 ft-lb)

3) Lower the vehicle.

NOTE:
Check if the harness is not pulled and does not come in contact with the suspension or body while operating the steering.

4) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

C: INSPECTION

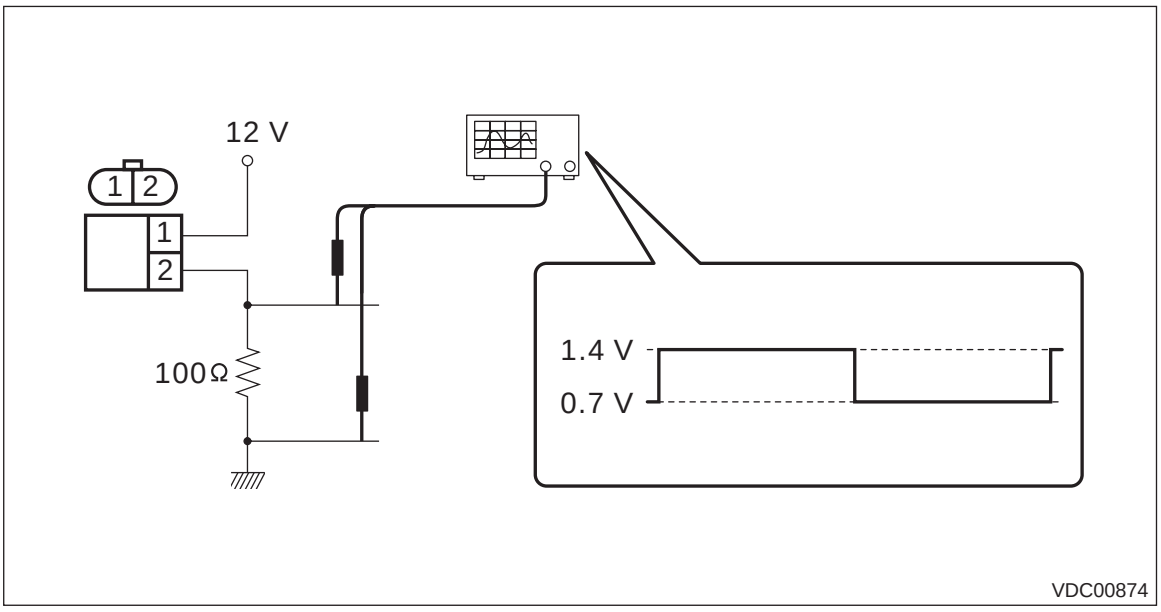
1. CHECK WITH SUBARU SELECT MONITOR

1) Connect the Subaru Select Monitor to data link connector.
   (1) Run the “PC application for Subaru Select Monitor”.
   (2) On «Main Menu» display, select {Each System Check}.
   (3) Select {Brake Control System}. When {VDC} is displayed, select the [OK] button.
   (4) From {Current Data Display & Save}, select {FR Wheel Speed} and {FL Wheel Speed}.
2) Check if the speed indicated on the display changes in the same manner as the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position.
3) If the speed indicated on the display does not change in the inspection, check the ABS wheel speed sensor. <Ref. to VDC-30, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.>

2. CHECK ABS WHEEL SPEED SENSOR UNIT

1) Visually check the tip of the ABS wheel speed sensor for foreign particles or damage. If necessary, clean the tip or replace the ABS wheel speed sensor.
2) Disconnect the ABS wheel speed sensor connector.
3) Check the ABS wheel speed sensor cable for discontinuity. If defective, replace the ABS wheel speed sensor.
4) Connect a 12 V power supply to No. 1 terminal of ABS wheel speed sensor connector, then attach resistance to the No. 2 terminal. Rotate the wheel at about 2.75 km/h (2 MPH), and measure the voltage using an oscilloscope.

Standard value of output voltage:
0.7 — 1.4 V



5) Replace the ABS wheel speed sensor if the inspection result is not within the standard value.

10.Rear ABS Wheel Speed Sensor

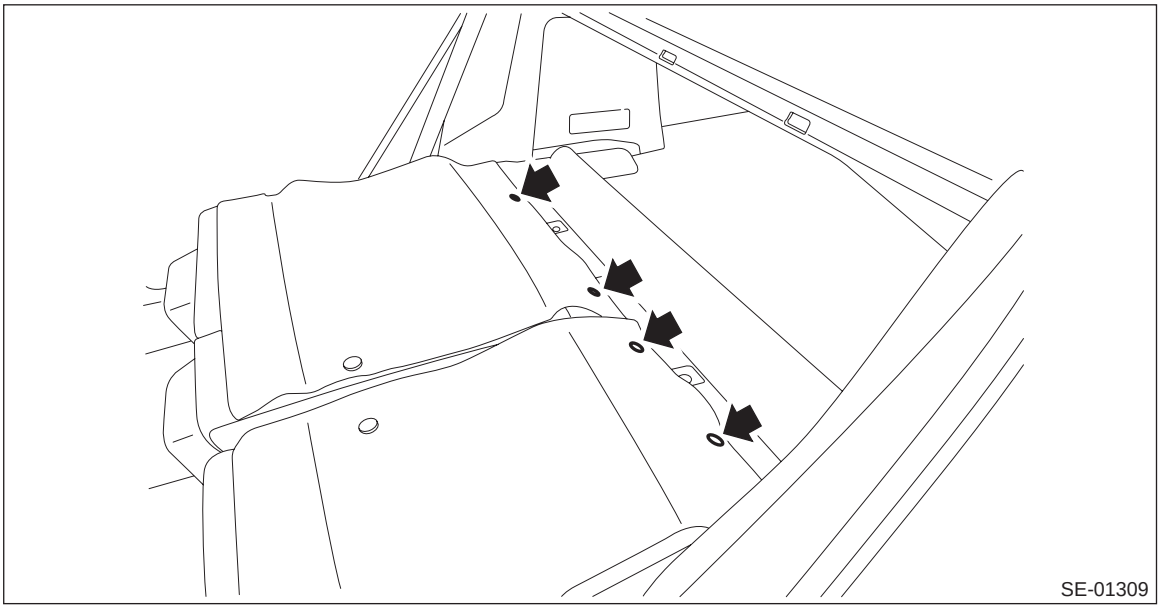
A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the rear ABS wheel speed sensor.

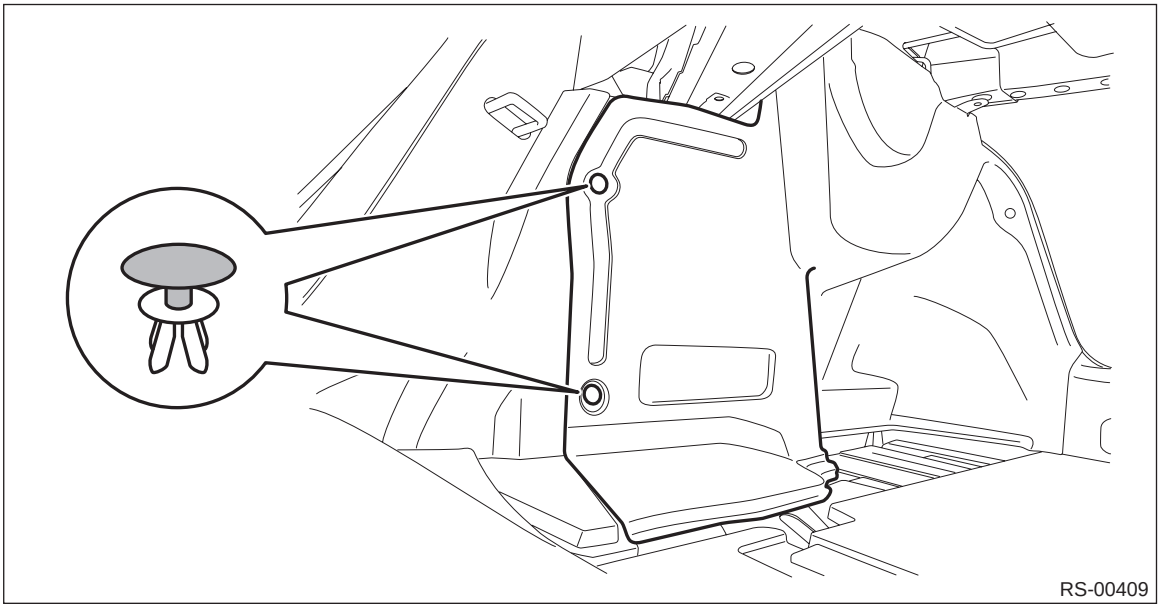
CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**
- **Leave the sensor harness clamp (white arrow) on the vehicle side.**

(1) Take out the trunk mat.
(2) Tilt the backrest assembly of the rear seat forward.
(3) Remove the clips located at the bottom of the cover COMPL - rear backrest LH and RH of the rear seat back.



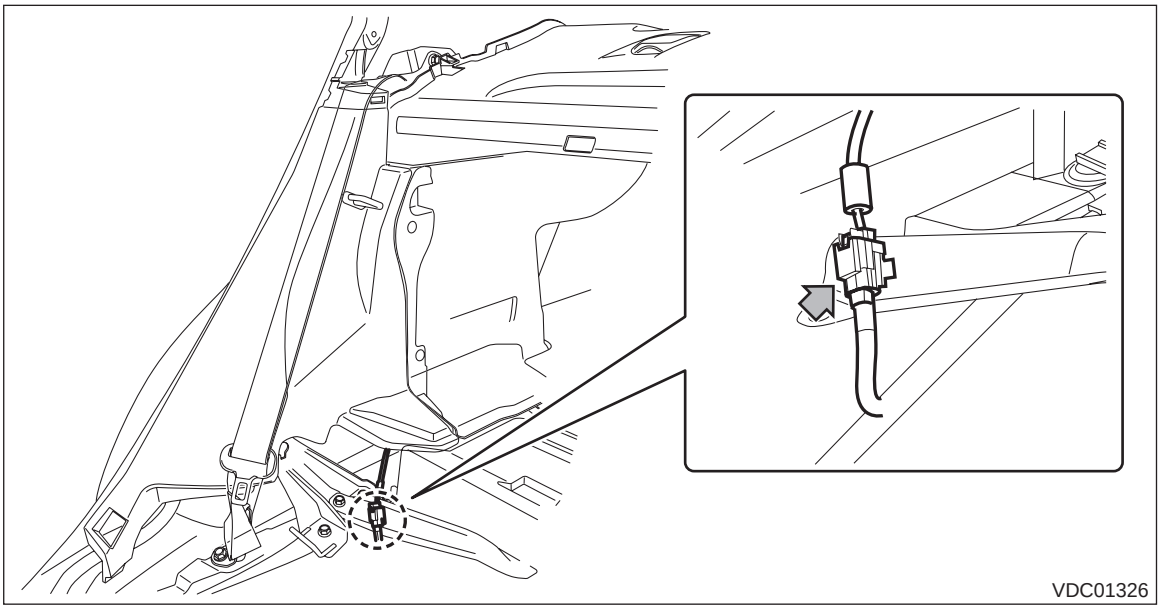
SE-01309

(4) Remove the clips, and turn over the trim panel - trunk side.

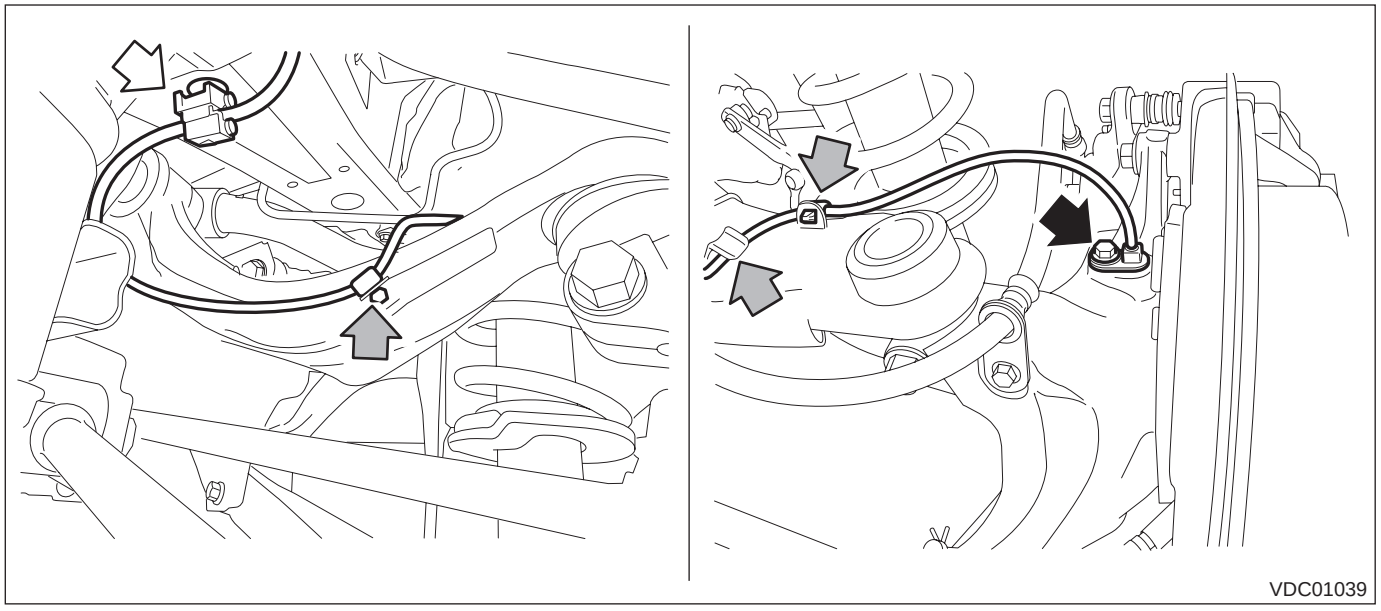


RS-00409

(5) Disconnect the connector of the rear ABS wheel speed sensor.



(6) Remove the grommet from the rear wheel housing, and pull out the connector of the rear ABS wheel speed sensor.
(7) Remove the clip and bolt on the harness clamp, and remove the rear ABS wheel speed sensor.



B: INSTALLATION

CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**
- **Securely install the sensor harness to the rear upper arm assembly bracket.**

1) Install the rear ABS wheel speed sensor.

NOTE:
Check the identification (mark) on the harness to make sure there is no warpage. <Ref. to VDC-2, SPECIFICATION, General Description.>

Tightening torque:
Rear ABS wheel speed sensor: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the rear wheels.

Tightening torque:
Rear wheel: 120 N·m (12.2 kgf-m, 88.5 ft-lb)

3) Lower the vehicle.
4) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

C: INSPECTION

1. ABS WHEEL SPEED SENSOR

For inspection of rear ABS wheel speed sensor, refer to inspection of front ABS wheel speed sensor. <Ref. to VDC-30, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.>

11.Front Magnetic Encoder

A: REMOVAL

Refer to “Front Hub Unit Bearing” for removal, because the front magnetic encoder is integrated with the hub unit COMPL - front axle. <Ref. to DS-25, REMOVAL, Front Hub Unit Bearing.>

B: INSTALLATION

Refer to “Front Hub Unit Bearing” for installation, because the front magnetic encoder is integrated with the hub unit COMPL - front axle. <Ref. to DS-27, INSTALLATION, Front Hub Unit Bearing.>

C: INSPECTION

Visually check the magnetic encoder for any damage. If necessary, replace with a new hub unit COMPL - front axle.

NOTE:
Because the magnetic encoder is integrated with hub unit COMPL, replace the hub unit COMPL with a new part if there is any defect found on the magnetic encoder.

12.Rear Magnetic Encoder

A: REMOVAL

Refer to “Rear Hub Unit Bearing” for removal, because the rear magnetic encoder is integrated with the hub unit COMPL - rear axle. <Ref. to DS-40, REMOVAL, Rear Hub Unit Bearing.>

B: INSTALLATION

Refer to “Rear Hub Unit Bearing” for installation, because the rear magnetic encoder is integrated with the hub unit COMPL - rear axle. <Ref. to DS-42, INSTALLATION, Rear Hub Unit Bearing.>

C: INSPECTION

Visually check the magnetic encoder parts for any damage. If necessary, replace with a new hub unit COMPL - rear axle.

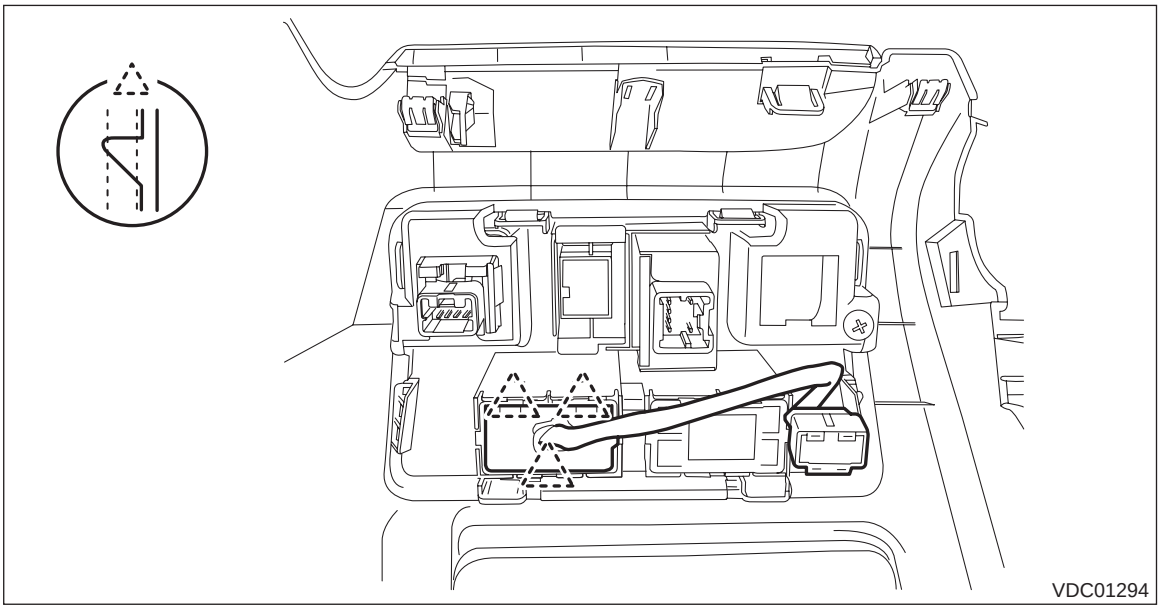
NOTE:
Because the magnetic encoder is integrated with hub unit COMPL, replace the hub unit COMPL with a new part if there is any defect found on the magnetic encoder.

13.VDC OFF Switch

A: REMOVAL

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver OUT. <Ref. to EI-61, REMOVAL, Instrument Panel Lower Cover.>
3) Release the claws and remove the VDC OFF switch.



B: INSTALLATION

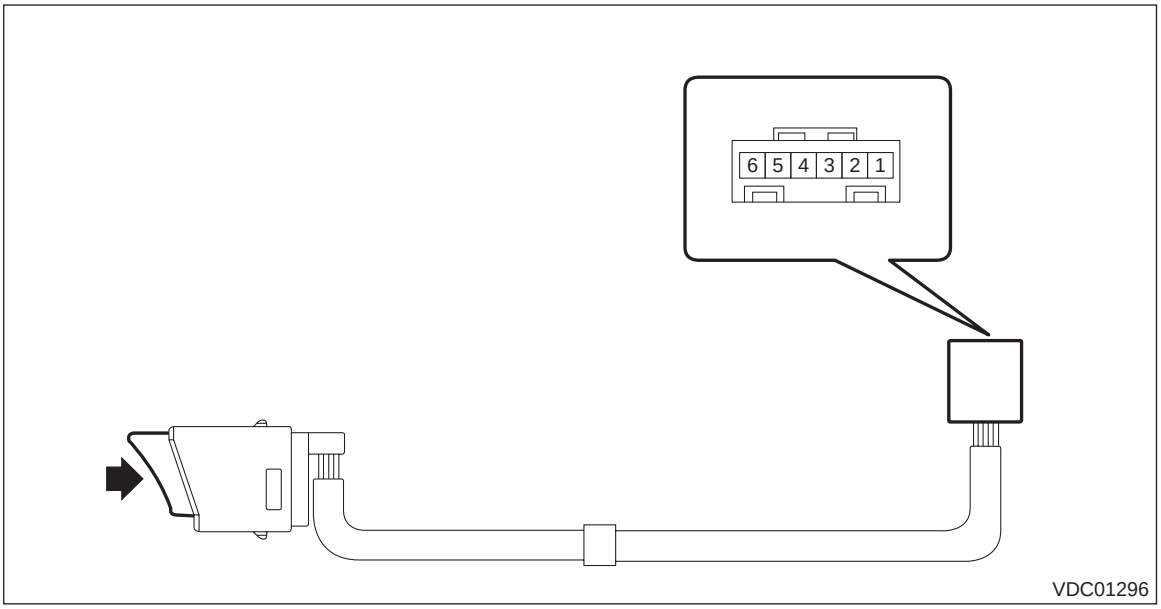
1) Install the VDC OFF switch.
2) Install the cover assembly - instrument panel LWR driver OUT.
3) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

C: INSPECTION

1) Remove the VDC OFF switch. <Ref. to VDC-36, REMOVAL, VDC OFF Switch.>
2) Measure the resistance between the VDC OFF switch terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
2 — 1	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

NOTE:
Replace the VDC OFF switch if the inspection result is not within the standard value.
3) Install the VDC OFF switch. <Ref. to VDC-36, REMOVAL, VDC OFF Switch.>

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

VDC(diag)

		Page
1.	Basic Diagnostic Procedure	2
2.	Check List for Interview	4
3.	General Description	8
4.	Electrical Component Location	10
5.	Control Module I/O Signal	12
6.	Subaru Select Monitor	15
7.	Read Diagnostic Trouble Code (DTC)	21
8.	Inspection Mode	22
9.	Clear Memory Mode	23
10.	Warning Light Illumination Pattern	24
11.	List of Diagnostic Trouble Code (DTC)	42
12.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	45
13.	General Diagnostic Table	84

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
Remove foreign matter (dust, water, oil etc.) from the VDCCM&H/U connector during removal and installation.

NOTE:
- To check the harness for open or short circuits, shake problem spot or connector.
- Refer to “Check List for Interview”. <Ref. to VDC(diag)-4, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to VDC(diag)-4, Check List for Interview.> 2) Before performing diagnostics, check the component which might affect VDC problems. <Ref. to VDC(diag)-8, INSPECTION, General Description.>	Is the component that might influence the VDC problem normal?	Go to step **2**.	Repair or replace each component.
2	**CHECK INDICATION OF DTC.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC using the Subaru Select Monitor. <Ref. to VDC(diag)-21, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to VDC(diag)-19, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>	Is DTC displayed on Subaru Select Monitor?	Record the DTC, time stamp and freeze frame data. Go to step **4**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Go to step **3**.
3	**PERFORM GENERAL DIAGNOSTICS.** 1) Perform the inspection by referring to “General Diagnostic Table”. <Ref. to VDC(diag)-84, INSPECTION, General Diagnostic Table.> 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, OPERATION, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-22, PROCEDURE, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-21, OPERATION, Read Diagnostic Trouble Code (DTC).> 5) Check the DTC is not displayed.	Do the VDC warning light & VDC indicator light, VDC OFF indicator light and ABS warning light go off after starting the engine?	Finish the diagnosis.	Check the combination meter circuit. <Ref. to VDC(diag)-30, ABS WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-31, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-32, VDC OFF INDICATOR LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.>

	Step	Check	Yes	No
4	**PERFORM DIAGNOSIS.** 1) Refer to “List of Diagnostic Trouble Code (DTC)”. NOTE: For the DTC list, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to VDC(diag)-42, LIST, List of Diagnostic Trouble Code (DTC).> 2) Correct the cause of trouble. 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, OPERATION, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-22, PROCEDURE, Inspection Mode.> 5) Read the DTC. <Ref. to VDC(diag)-21, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Repeat step 4 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Check the following item about the vehicle's state.

1. STATE OF ABS WARNING LIGHT

ABS warning light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not come on • When/How long does it illuminate?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When other electrical parts are operating		
	• Part name: • Operating condition:		

2. STATE OF VDC WARNING LIGHT & VDC INDICATOR LIGHT

VDC warning light & VDC indicator light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate • When/How long does it illuminate?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When other electrical parts are operating		
	• Part name: • Operating condition:		

3. STATE OF VDC OFF INDICATOR LIGHT

VDC OFF indicator light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate • When/How long does it illuminate?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START		
	❑ While accelerating	—	km/h

	m) Repaired parts are used: ❑ Yes / ❑ No		
	• Content:		
	n) Others:		

3. General Description

A: CAUTION

1. SUPPLEMENTAL RESTRAINT SYSTEM "AIRBAG"

Airbag system wiring harness is routed near the ABS wheel speed sensor and VDCCM&H/U.

CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness when servicing the ABS wheel speed sensor and VDCCM&H/U.

B: INSPECTION

Before performing diagnosis, check the following items which might affect VDC problems.

1. BATTERY

Measure the battery voltage and check electrolyte.

Standard voltage:
12 V or more

Specific gravity:
1.260 or more

2. GROUND

Check the installation of the ground bolt for VDC.

3. BRAKE FLUID

1) Check the brake fluid level.
2) Check the brake fluid for leaks.

4. HYDRAULIC UNIT

Check the hydraulic unit.
• When using the brake tester <Ref. to VDC-13, CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH THE BRAKE TESTER, INSPECTION, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• When not using the brake tester <Ref. to VDC-12, CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE, INSPECTION, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

5. BRAKE DRAG

Check for brake drag.

6. BRAKE PAD AND ROTOR

Check the brake pad and rotor.
• Front <Ref. to BR-21, INSPECTION, Front Brake Pad.> <Ref. to BR-23, INSPECTION, Front Disc Rotor.>
• Rear <Ref. to BR-38, INSPECTION, Rear Brake Pad.> <Ref. to BR-41, INSPECTION, Rear Disc Rotor.>

7. TIRE

Check the tire specifications, tire wear and air pressure. <Ref. to WT-2, SPECIFICATION, General Description.>

C: PREPARATION TOOL

1. SPECIAL TOOL

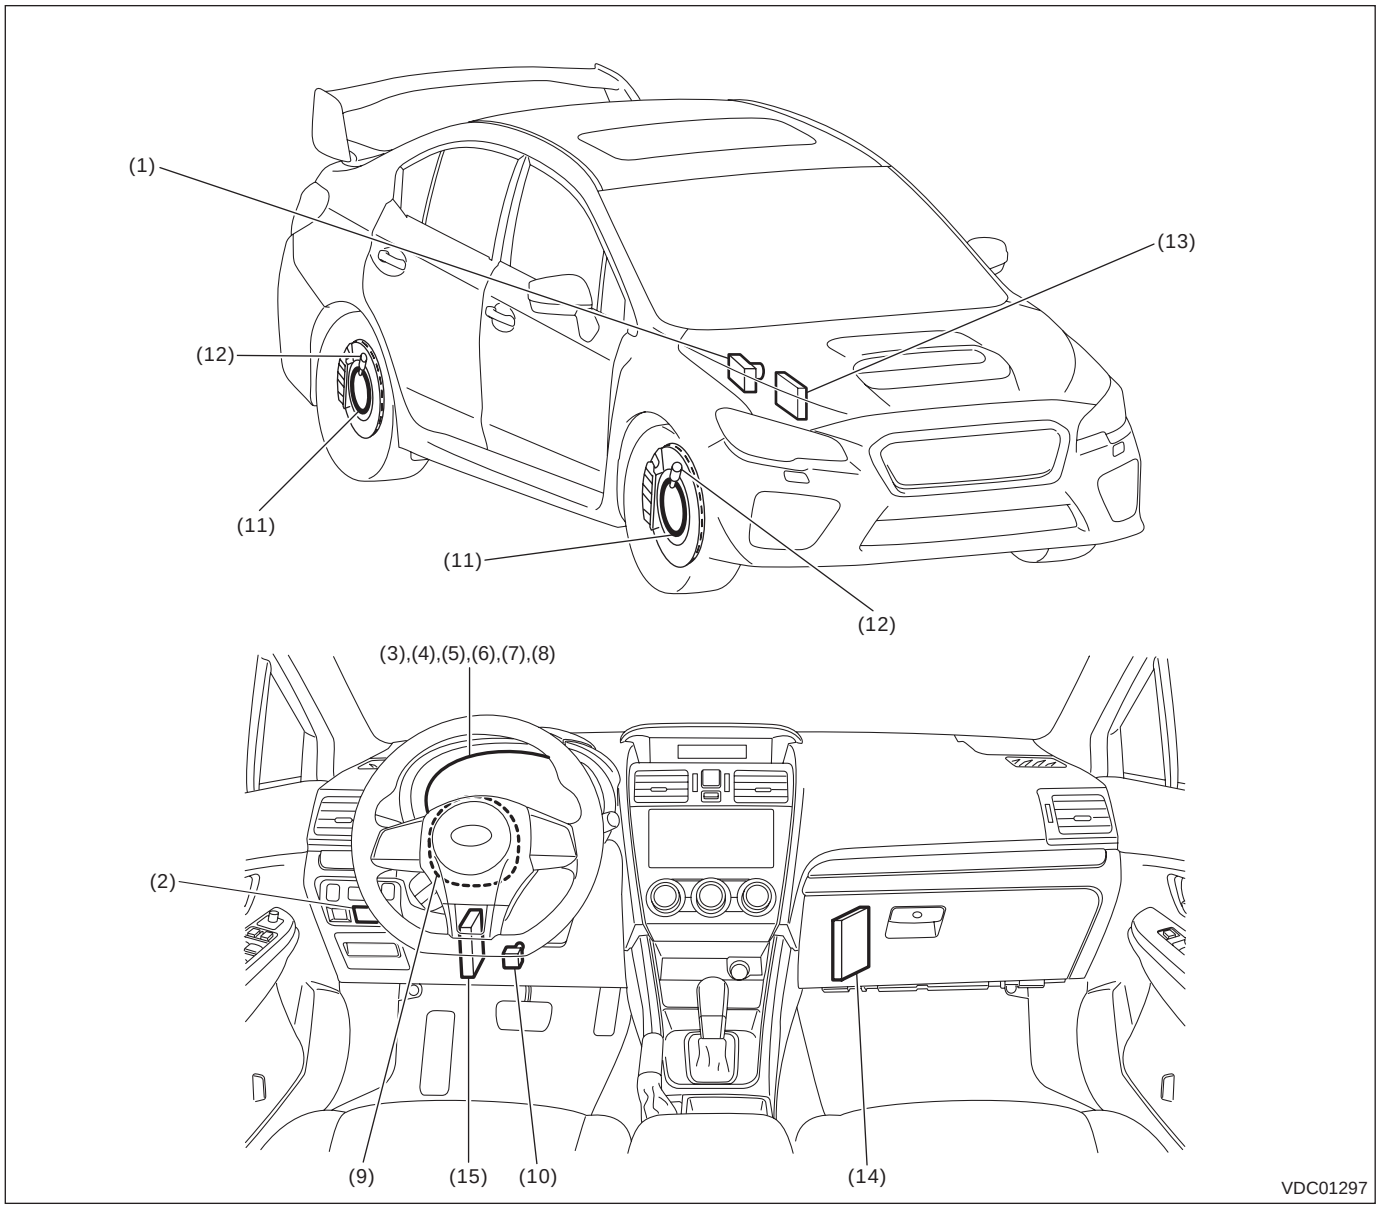
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.

4. Electrical Component Location

A: LOCATION



(1)	VDC control module and hydraulic control unit (VDCCM&H/U)	(6)	VDC OFF indicator light	(11)	Magnetic encoder
(2)	VDC OFF switch	(7)	Hill start assist warning light	(12)	ABS wheel speed sensor
(3)	ABS warning light	(8)	VDC traction mode indicator light	(13)	Engine control module (ECM) (except for STI)

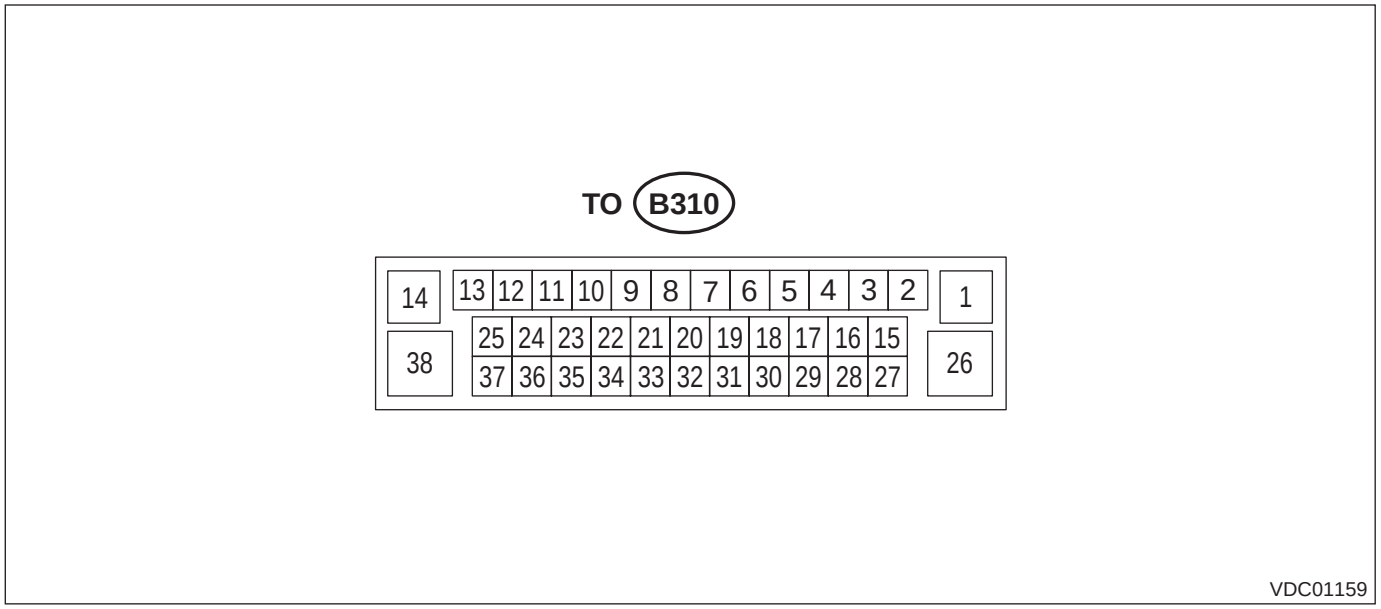
5. Control Module I/O Signal

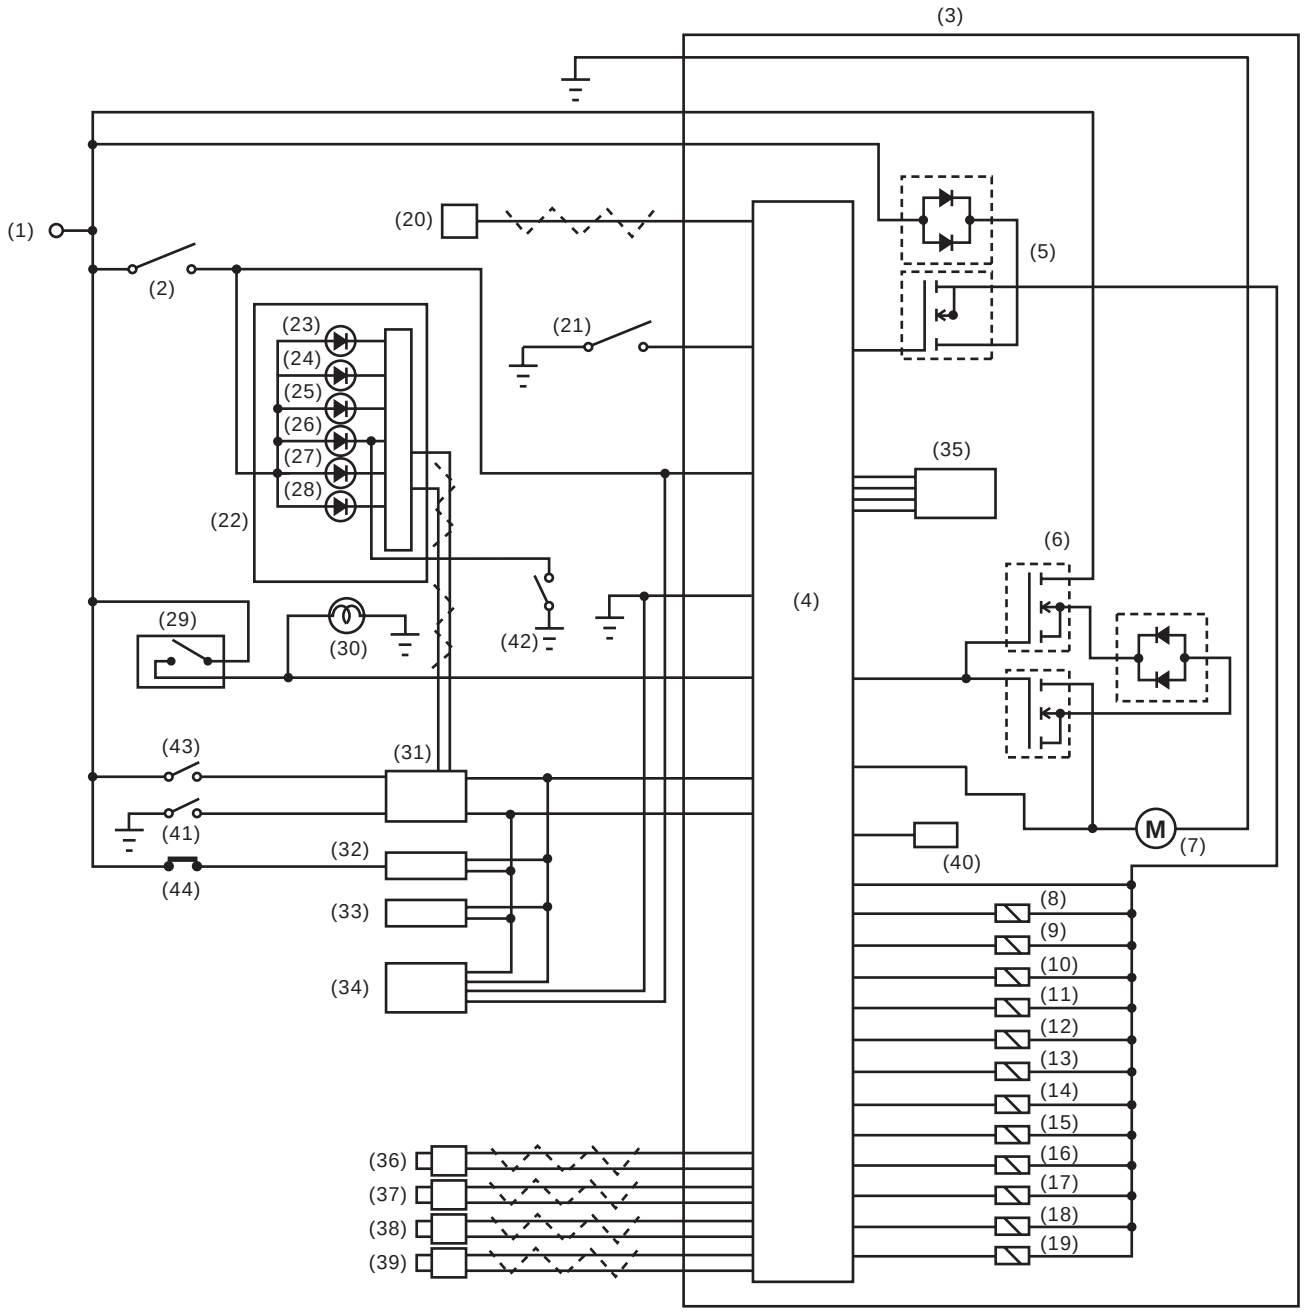
A: ELECTRICAL SPECIFICATION



NOTE:
- Terminal numbers in VDCCM&H/U connector (on the control module side) are shown in the figure.
- When the connector is removed from the VDCCM&H/U, the brake warning light (EBD warning light), ABS warning light, VDC warning light & VDC indicator light, VDC OFF indicator light, and the hill start assist warning light illuminate.

Contents			Terminal No. (+) — (–)	Input/Output signal Measured value and measuring conditions
Power supply			31 — 38	10 — 15 V when the ignition switch is ON.
ABS wheel speed sensor	Front LH wheel	Power supply	12 — 38	0 — 18 V
		Signal	13	7 — 14 mA: Rectangle waveform
	Front RH wheel	Power supply	3 — 38	0 — 18 V
		Signal	2	7 — 14 mA: Rectangle waveform
	Rear LH wheel	Power supply	5 — 38	0 — 18 V
		Signal	6	7 — 14 mA: Rectangle waveform
	Rear RH wheel	Power supply	10 — 38	0 — 18 V
		Signal	9	7 — 14 mA: Rectangle waveform
CAN communication line (H)			36	2.75 — 4.5 V pulse signal
CAN communication line (L)			35	0.5 — 2.25 V pulse signal
Valve relay power supply			1 — 38	10 — 15 V when the ignition switch is ON.
Motor relay power supply			26 — 38	10 — 15 V when the ignition switch is ON.
Stop light switch			27 — 38	1.5 V or less when the stop light is OFF; otherwise, 10 — 15 V when the stop light is ON.
Vehicle speed output signal			30	0 ←→ 12 V pulse
VDC OFF switch			21 — 38	1 Ω or less when the OFF switch is “ON”; 1 MΩ or more when the switch is “OFF”.
Ground			38	—

B: WIRING DIAGRAM



VDC01282

(1)	Battery	(16)	Primary cut solenoid valve	(31)	Body integrated unit
(2)	Ignition switch	(17)	Primary suction solenoid valve	(32)	Engine control module (ECM)
(3)	VDC control module and hydraulic control unit (VDCCM&H/U)	(18)	Secondary cut solenoid valve	(33)	Transmission control module (TCM) (CVT model) Driver's control center differential control module (DCCD) (STI model)
(4)	VDC control module	(19)	Secondary suction solenoid valve	(34)	Steering angle sensor
(5)	Valve relay	(20)	Data link connector	(35)	Pressure sensor
(6)	Motor relay	(21)	VDC OFF switch	(36)	Front ABS wheel speed sensor LH
(7)	Motor	(22)	Combination meter	(37)	Front ABS wheel speed sensor RH
(8)	Front inlet solenoid valve LH	(23)	VDC OFF indicator light	(38)	Rear ABS wheel speed sensor LH
(9)	Front outlet solenoid valve LH	(24)	VDC warning light & VDC indicator light	(39)	Rear ABS wheel speed sensor RH
(10)	Front inlet solenoid valve RH	(25)	ABS warning light	(40)	Yaw rate & G sensor
(11)	Front outlet solenoid valve RH	(26)	Brake warning light (EBD warning light)	(41)	Parking brake switch
(12)	Rear inlet solenoid valve LH	(27)	Hill start assist warning light	(42)	Brake fluid level switch
(13)	Rear outlet solenoid valve LH	(28)	VDC traction mode indicator light	(43)	Back-up light switch (MT model)
(14)	Rear inlet solenoid valve RH	(29)	Stop light switch	(44)	Clutch switch (MT model)
(15)	Rear outlet solenoid valve RH	(30)	Stop light		

6. Subaru Select Monitor

A: OPERATION

1. HOW TO USE THE SUBARU SELECT MONITOR

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

2. READ CURRENT DATA

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

Display	Contents to be displayed	Unit of measure
Trip Count	Total number of ignition switch ON	times
Count	Counter	—
Time Count	Elapsed time after ignition switch ON	ms
FR Wheel Speed	Wheel speed detected by front ABS wheel speed sensor RH is displayed.	km/h or MPH
FL Wheel Speed	Wheel speed detected by front ABS wheel speed sensor LH is displayed.	km/h or MPH
RR Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor RH is displayed.	km/h or MPH
RL Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor LH is displayed.	km/h or MPH
Steering Angle Sensor	Steering angle detected by steering angle sensor is displayed.	deg
Yaw Rate Sensor	Vehicle angular speed detected by yaw rate sensor is displayed.	deg/s
Master Cylinder Pressure Sensor	Brake fluid pressure detected by pressure sensor is displayed.	bar
Longitudinal G Sensor	Vehicle longitudinal acceleration detected by longitudinal G sensor is displayed.	m/s^2
Lateral G Sensor	Vehicle lateral acceleration detected by lateral G sensor is displayed.	m/s^2
Voltage of IGN	Voltage supplied to VDCCM&H/U is displayed.	V
M. Relay monitor Voltage	Voltage applied to the motor relay is displayed.	V
Motor Relay Signal	Motor relay driving signal is displayed.	ON or OFF
Valve Relay Signal	Valve relay driving signal is displayed.	ON or OFF
EBD Warning Light	ON operation of the EBD warning light is displayed.	ON or OFF
ABS Warning Lamp	ON operation of the ABS warning light is displayed.	ON or OFF
VDC Warning Lamp	ON operation of the VDC warning light is displayed.	ON or OFF
EBD Control Flag	EBD operation condition is displayed.	ON or OFF
ABS Control Flag	ABS operation condition is displayed.	ON or OFF
TCS Control Flag	TCS operation condition is displayed.	ON or OFF
VDC Control Flag	VDC operation condition is displayed.	ON or OFF
E/G Control Stop Flag	Engine control command signal is displayed.	1 or 0
E/G torques up Control Stop Flag	Engine control command signal is displayed.	1 or 0
VDC-OFF Light	ON/OFF condition of VDC OFF indicator light is displayed.	ON or OFF
OFF SW Signal	Operation condition of VDC OFF switch is displayed.	ON or OFF
Brake Light Switch	Brake ON/OFF is displayed.	ON or OFF
Clutch switch	Clutch ON/OFF is displayed. (MT model)	ON or OFF
Reverse Signal	Reverse gear ON/OFF is displayed. (MT model)	ON or OFF

3. FUNCTION CHECK

Display	Contents of display	Index No.
ABS Sequence Control Mode	Operate the valve and pump motor continuously to perform the ABS sequence control.	<Ref. to VDC-17, ABS Sequence Control.>
VDC Check Mode	Operate the valve and pump motor continuously to perform the VDC sequence control.	<Ref. to VDC-20, VDC Sequence Control.>
VSC(VDC) Centering Mode	Set the steering angle sensor neutral position, and the lateral G sensor and longitudinal G sensor “0” point.	<Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

4. READ FREEZE FRAME DATA

NOTE:
- Freeze frame data stored at the time of trouble occurrence is shown on the display.
- Each time a trouble occurs, the latest information is stored in the freeze frame data in memory.

Display	Contents to be displayed	Unit of measure
Classification	Recorded trouble code is displayed.	—
Trip Count	Total number of ignition switch ON	times
Count	Counter	—
Time Count	Elapsed time after ignition switch ON	ms
FR Wheel Speed	Wheel speed detected by front ABS wheel speed sensor RH is displayed.	km/h or MPH
FL Wheel Speed	Wheel speed detected by front ABS wheel speed sensor LH is displayed.	km/h or MPH
RR Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor RH is displayed.	km/h or MPH
RL Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor LH is displayed.	km/h or MPH
Vehicle speed	Vehicle speed calculated by VDC control module is displayed.	km/h or MPH
Steering Angle Sensor	Steering angle detected by steering angle sensor is displayed.	deg
Yaw Rate Sensor	Vehicle angular speed detected by yaw rate sensor is displayed.	deg/s
Master Cylinder Pressure Sensor	Brake fluid pressure detected by pressure sensor is displayed.	bar
Longitudinal G Sensor	Vehicle longitudinal acceleration detected by longitudinal G sensor is displayed.	m/s^2
Lateral G Sensor	Vehicle lateral acceleration detected by lateral G sensor is displayed.	m/s^2
Voltage of IGN	Voltage supplied to VDC control module is displayed.	V
Acceleration Pedal Position	Accelerator pedal opening angle is displayed.	%
Engine Speed	Engine speed on malfunction occurrence is displayed.	rpm
Steering angle flag	Whether the absolute angle of the steering angle sensor was determined is displayed.	Recognized or No recognition
EBD Control Flag	EBD control condition is displayed.	ON or OFF
ABS Control Flag	ABS control condition is displayed.	ON or OFF
TCS Control Flag	TCS control condition is displayed.	ON or OFF
VDC Control Flag	VDC control condition is displayed.	ON or OFF
E/G Control Stop Flag	Engine control command signal is displayed.	1 or 0
E/G torques up Control Stop Flag	Engine control command signal is displayed.	1 or 0
VDC OFF Status	ON/OFF condition of the VDC operated by the driver is displayed.	ON or OFF
Brake Light Switch	Brake ON/OFF is displayed.	ON or OFF
Clutch switch	Clutch ON/OFF is displayed. (MT model)	ON or OFF
Reverse Signal	Reverse gear ON/OFF is displayed. (MT model)	ON or OFF

5. PARAMETER SELECTION

CAUTION:
- **Subaru Select Monitor is required for parameter selection.**
- **This function can be used for the replacement part of VDCCM&H/U.**

NOTE:
- When the VDCCM&H/U is replaced with a replacement part, be sure to perform the parameter selection/registration to the VDCCM&H/U using this function.
- To check the applied model, refer to the “Model number plate” attached to the vehicle. <Ref. to ID-2, IDENTIFICATION, Identification.>
- If you entered a wrong applied model, you can re-write it.
- When the registration has not been performed, the DTC code “Parameter” is detected together with the ABS/EBD/VDC warning light illumination.

1) Connect the Subaru Select Monitor.
2) On «Main Menu» display, select {Each System Check}.
3) On «System Selection Menu» display, select {Brake Control System}.
4) When {VDC} is displayed, select the [OK] button.
5) On «Brake Control Diagnosis» display, select {Work Support}.
6) On «Work Support» display, select {Select Parameter}.
7) Check the applied model and option code indicated on the “Model number plate”. <Ref. to ID-2, IDENTIFICATION, Identification.>
8) Enter the applied model of 7-digit alphanumeric characters and press the [Enter] key.
9) When the option code input screen appears after entering the applied model, enter the option code consisting of 4-digit alphanumeric characters, and press the [Enter] key When the option code is 3 digits, add “0” (zero) in front and enter the code as 4 digits.
10) When the confirmation screen indicating the vehicle information appears, check that the correct applied model and grade are displayed and click the [OK] button.

NOTE:
When the displayed applied model and grade are different from those of the vehicle, perform registration operations again after clicking the [OK] button.
11) Execute the Clear Memory Mode after parameter selection and registration operations because the DTC for “Parameter selection error” is memorized. <Ref. to VDC(diag)-23, Clear Memory Mode.>

6. PARAMETER CHECK

NOTE:
The parameter data registered in the VDCCM is shown on the display.
1) Connect the Subaru Select Monitor.
2) On «Main Menu» display, select {Each System Check}.
3) On «System Selection Menu» display, select {Brake Control System}.
4) When {VDC} is displayed, select the [OK] button.
5) On «Brake Control Diagnosis» display, select {Work Support}.
6) On «Work Support» display, select {Confirm on parameter}.
7) On the {Confirm on parameter} display screen, check that the applied model and grade of the target vehicle are included, and click the [OK] button.
8) If the applied model and grade of the target vehicle are not included on the {Confirm on parameter} display screen, perform “parameter selection and registration”. <Ref. to VDC(diag)-17, PARAMETER SELECTION, OPERATION, Subaru Select Monitor.>

7. READ PARAMETER

1) Connect the Subaru Select Monitor.
2) On «Main Menu» display, select {Each System Check}.
3) On «System Selection Menu» display, select {Brake Control System}.
4) When {VDC} is displayed, select the [OK] button.
5) On «Brake Control Diagnosis» display, select {Work Support}.
6) On «Work Support» display, select {Maintenance at the time of ECM replacement}.
7) Select «Reading of parameter: ECM to SSM».
8) Save and close the file.

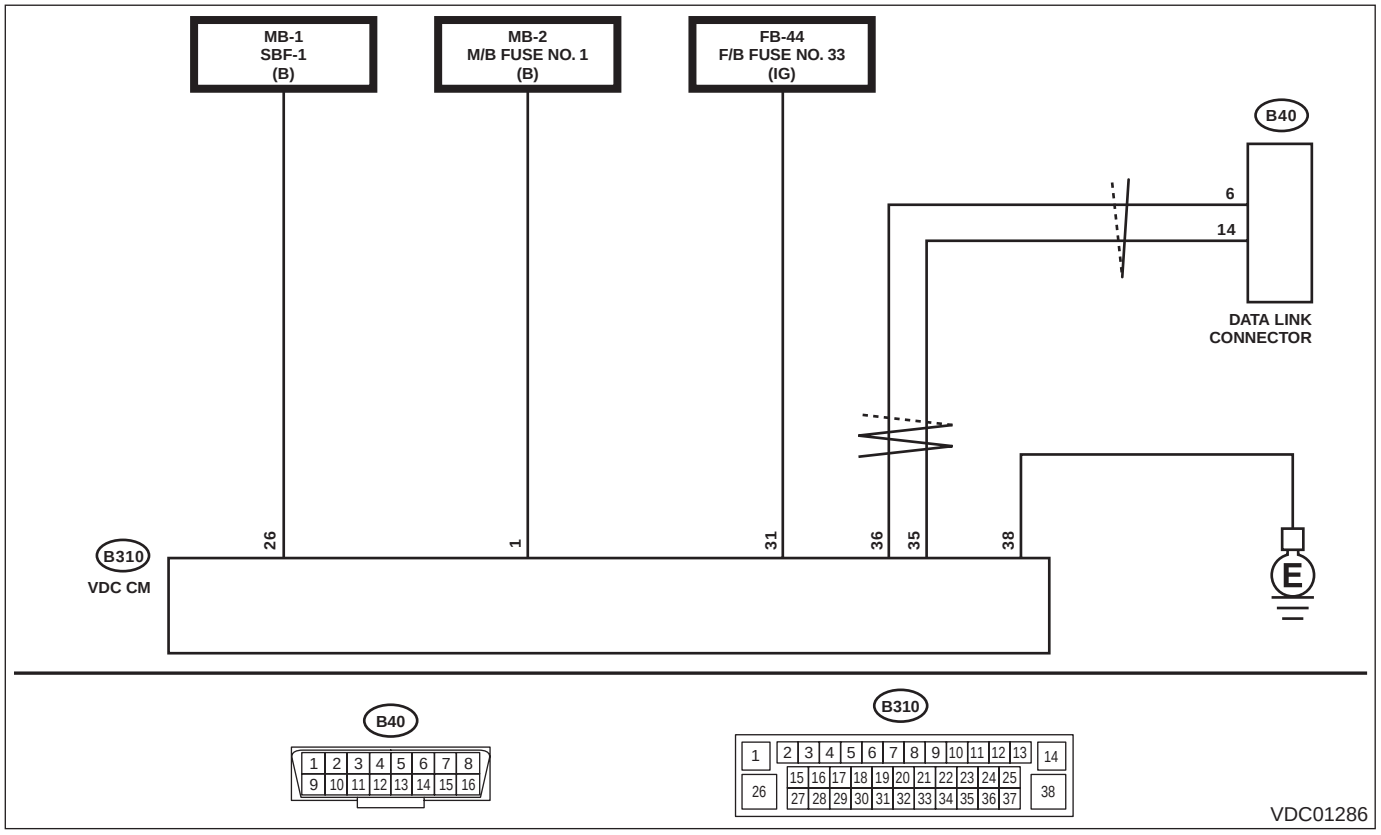
8. WRITE PARAMETER

1) Connect the Subaru Select Monitor.
2) On «Main Menu» display, select {Each System Check}.
3) On «System Selection Menu» display, select {Brake Control System}.
4) When {VDC} is displayed, select the [OK] button.
5) On «Brake Control Diagnosis» display, select {Work Support}.
6) On «Work Support» display, select {Maintenance at the time of ECM replacement}.
7) Select «Writing of parameter: SSM to ECM».
8) Open the file saved in the «Reading of parameter: ECM to SSM» procedure.
9) When the confirmation screen indicating the vehicle information appears, check that the correct applied model and grade are displayed and click the [OK] button.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DETECTING CONDITION:
Defective harness connector
TROUBLE SYMPTOM:
Communication is impossible between VDC and Subaru Select Monitor.
WIRING DIAGRAM:
Vehicle dynamics control system <Ref. to WI-416, Vehicle Dynamics Control System.>



Step		Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select VDC mode using Subaru Select Monitor.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step **4**.
4	**CHECK INSTALLATION OF VDCCM&H/U CONNECTOR.** Turn the ignition switch to OFF.	Is the VDCCM&H/U connector inserted into VDCCM&H/U until the clamp locks onto it?	Go to step **5**.	Insert VDCCM&H/U connector into VDCCM&H/U.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-70, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.

	Step	Check	Yes	No
6	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Check whether communication to VDC system can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Check the DTC in VDC system. <Ref. to VDC(diag)-21, Read Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. (engine OFF) 2) Measure the ignition power supply voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 1 (+) — Chassis ground (–):*** ***(B310) No. 26 (+) — Chassis ground (–):*** ***(B310) No. 31 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **8**.	Repair open circuit in harness between VDCCM&H/U and battery.
8	**CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance of harness between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 38 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **9**.	Repair the open circuit of VDCCM&H/U ground circuit and poor contact of connector.
9	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

• For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
• For details concerning DTCs, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>

8. Inspection Mode

A: PROCEDURE

1) Delete the DTC.
2) Drive the vehicle at least ten minutes. (Reproduce nearly the same condition as occurred when the DTC was recorded.)

NOTE:
Make sure the vehicle is not dragged to one side under usual driving condition.

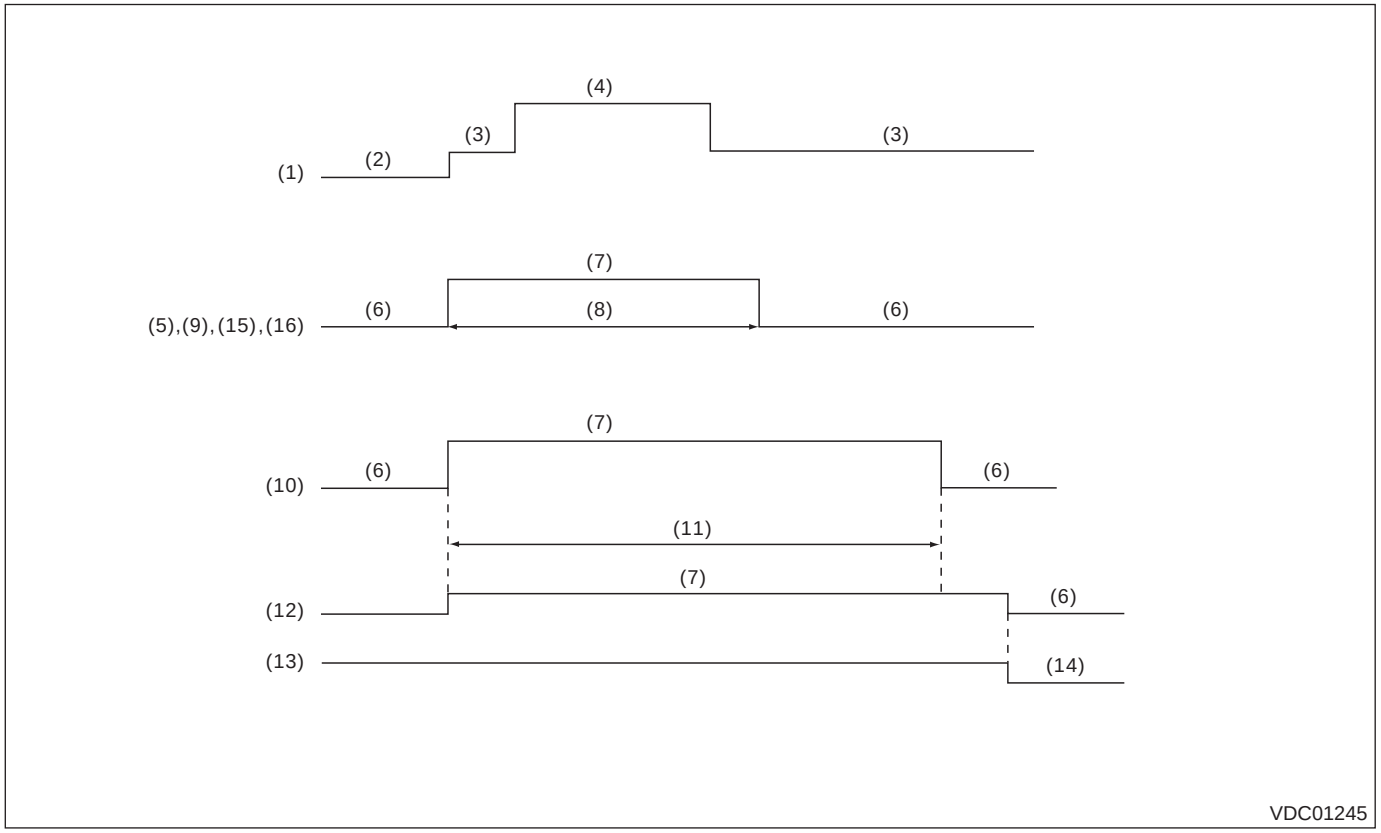
9. Clear Memory Mode

A: OPERATION

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

10.Warning Light Illumination Pattern

A: INSPECTION



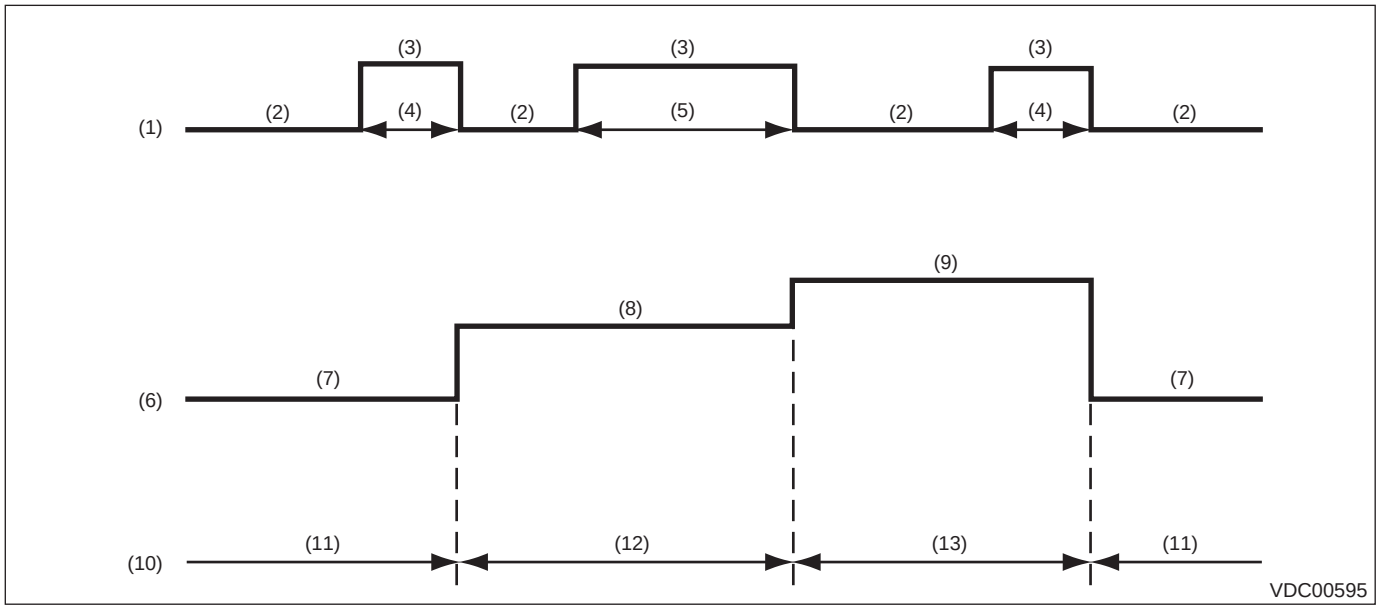
(1)	Ignition switch	(7)	Light ON	(12)	Brake warning light (EBD warning light)
(2)	OFF	(8)	2 seconds	(13)	Parking brake
(3)	ON	(9)	VDC OFF indicator light	(14)	Released
(4)	Engine start	(10)	VDC warning light & VDC indicator light	(15)	Hill start assist warning light
(5)	ABS warning light	(11)	2 seconds or more	(16)	VDC traction mode indicator light
(6)	Light OFF				

NOTE:
Hill start assist warning light always illuminates when the hill start assist is in the OFF mode.

1) When warning lights or indicator lights do not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.
2) When the warning lights or indicator lights remain constantly OFF, check the combination meter circuit. <Ref. to VDC(diag)-28, EBD WARNING LIGHT, ABS WARNING, VDC OFF INDICATOR LIGHT, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-29, HILL START ASSIST WARNING LIGHT DOES NOT COME ON, Warning Light Illumination Pattern.>
3) When the ABS warning light, VDC OFF indicator light, VDC warning light & VDC indicator light, and hill start assist warning light do not go off, check the combination meter circuit or CAN communication circuit. <Ref. to VDC(diag)-30, ABS WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-32, VDC OFF INDICATOR LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-31, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-34, HILL START ASSIST WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.>

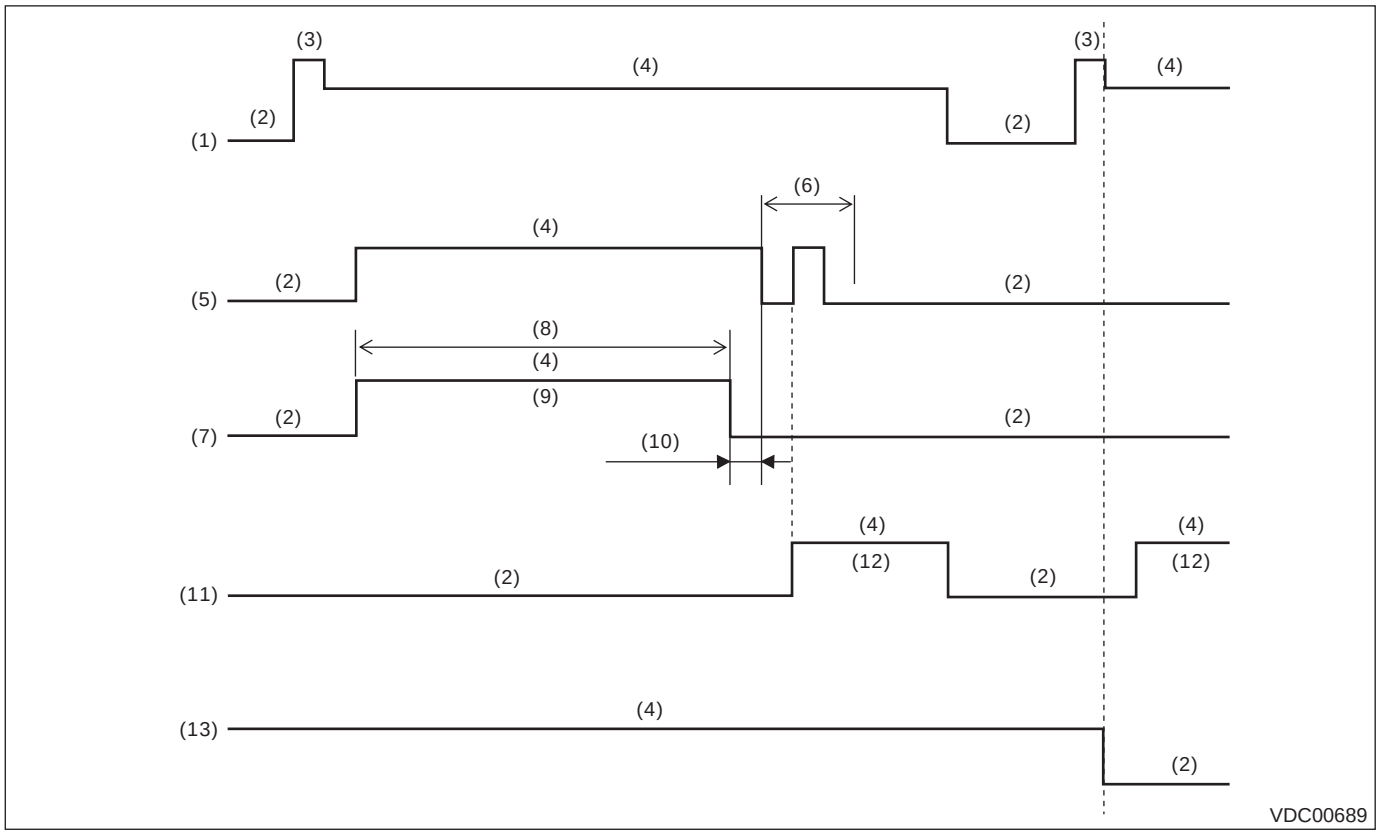
NOTE:
• Even when the ABS warning light and the VDC warning light & VDC indicator light do not go off in 2 seconds after illuminating, the ABS and VDC functions are normal if the warning lights go off while the vehicle is driven. However, while these lights are on, the functions with their warning lights illuminated do not operate.
• It may take several minutes before the VDC warning light & VDC indicator light goes off, if the vehicle is parked under low temperature for a specified time. This is not defective because it is resulted from low engine coolant temperature. Perform the Clear Memory Mode because DTC may be recorded at this time. <Ref. to VDC(diag)-23, Clear Memory Mode.>
• With the vehicle jack-up/lift-up or set on free rollers, when the wheels lock or spin after starting the engine, ABS warning light, and VDC warning light & VDC indicator light may illuminate because VDCCM&H/U detects the abnormal conditions from ABS wheel speed sensor or longitudinal G sensor. In this case, this is not a malfunction. Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.>

4) Warning light illumination pattern at VDC mode change
If illumination patterns of the VDC OFF indicator light and the VDC traction mode indicator light do not match the followings when the VDC OFF switch is operated, check the VDC OFF switch circuit, CAN communication circuit or combination meter circuit. <Ref. to VDC(diag)-38, VDC TRACTION MODE, VDC MODE DOES NOT CHANGE, Warning Light Illumination Pattern.>



(1)	VDC OFF switch	(6)	VDC OFF indicator light and VDC traction mode indicator light	(10)	VDC mode
(2)	OFF	(7)	Light OFF	(11)	Normal mode
(3)	ON	(8)	VDC OFF indicator light and VDC traction mode indicator light ON	(12)	Traction mode
(4)	Less than 2 seconds	(9)	VDC OFF indicator light ON VDC traction mode indicator light OFF	(13)	OFF mode
(5)	2 seconds or more and less than 30 seconds				

5) Warning light illumination pattern at hill start assist OFF mode change
When the VDC OFF switch is kept pressed, VDC OFF indicator light illuminates, then goes off in approx. 30 seconds. If the switch is released in 5 seconds after the light goes off then pressed again in 2 seconds, hill start assist warning light illuminates then mode is changed to hill start assist OFF mode. If hill start assist function ON/OFF does not change, check VDC OFF switch circuit, CAN communication circuit or combination meter circuit. <Ref. to VDC(diag)-40, HILL START ASSIST ON/OFF MODE, VDC MODE DOES NOT CHANGE, Warning Light Illumination Pattern.>



(1)	Ignition key	(6)	Less than 2 seconds	(10)	5 seconds or less
(2)	OFF	(7)	VDC OFF indicator light	(11)	Hill start assist warning light
(3)	Start	(8)	Approx. 30 seconds (until (7) goes off)	(12)	Light ON
(4)	ON	(9)	Light ON	(13)	Hill start assist function
(5)	VDC OFF switch				

NOTE:
Hill start assist warning light always illuminates to inform that the hill start assist does not operate during hill start assist OFF mode.

B: EBD WARNING LIGHT, ABS WARNING, VDC OFF INDICATOR LIGHT, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON

DETECTING CONDITION:
Defective combination meter
TROUBLE SYMPTOM:
When the ignition switch is turned to ON (engine OFF), EBD warning light, ABS warning light, VDC OFF indicator light, and VDC warning light & VDC indicator light do not illuminate.

NOTE:
When pressing the VDC OFF switch for 30 seconds or more, the VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the OFF operation enabled status is restored.

	Step	Check	Yes	No
1	**CHECK OTHER INDICATOR LIGHT.** Turn the ignition switch to ON.	Does other indicator light illuminate soon after “ON”?	Go to step **2**.	Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
2	**CHECK VDCCM.** When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.	Immediately after the ignition switch is turned to ON, is the «EBD Warning Light» ON?	Go to step **3**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	**CHECK VDCCM.** When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.	Immediately after the ignition switch is turned to ON, is the «ABS Warning Lamp» ON?	Go to step **4**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4	**CHECK VDCCM.** When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.	Immediately after the ignition switch is turned to ON, is the «VDC Warning Lamp» ON?	Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: HILL START ASSIST WARNING LIGHT DOES NOT COME ON

DETECTING CONDITION:
Defective combination meter

TROUBLE SYMPTOM:
When the ignition switch is turned to ON (engine OFF), hill start assist warning light does not illuminate.

	Step	Check	Yes	No
1	**CHECK OTHER INDICATOR LIGHT.** Turn the ignition switch to ON. (engine OFF)	Do other indicator lights illuminate?	Go to step **2**.	Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
2	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-70, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-13, Combination Meter.>

D: ABS WARNING LIGHT DOES NOT GO OFF

DETECTING CONDITION:

- Defective combination meter
- Defective engine
- Defective CAN communication

TROUBLE SYMPTOM:

When starting the engine, the ABS warning light is kept on.

	Step	Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDCCM.** Display the current data of VDCCM using Subaru Select Monitor.	Is the «ABS Warning Lamp» ON?	Go to step **3**.	Go to step **5**.
3	**CHECK WARNING LIGHT.** 1) Save the freeze frame data. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.>	Does the ABS warning light go off?	Normal Perform the Inspection Mode to check that the light does not turn ON again.	Go to step **4**.
4	**READ DTC.** Read the DTC after driving the vehicle at 40 km/h (25 MPH) or more.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-70, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-13, REMOVAL, Combination Meter.>

E: VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF

DETECTING CONDITION:

- Defective combination meter
- Defective engine
- Defective CAN communication

TROUBLE SYMPTOM:

When starting the engine, the VDC warning light & VDC indicator light remains lit.

	Step	Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDCCM.** Display the current data of VDCCM using Subaru Select Monitor.	Is the «VDC Warning Lamp» ON?	Go to step **3**.	Go to step **5**.
3	**CHECK WARNING LIGHT.** 1) Save the freeze frame data. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.>	Does the VDC warning light & VDC operation indicator light go off?	Normal Perform the Inspection Mode to check that the light does not turn ON again.	Go to step **4**.
4	**READ DTC.** Read the DTC after driving the vehicle at 40 km/h (25 MPH) or more.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-70, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-13, REMOVAL, Combination Meter.>

F: VDC OFF INDICATOR LIGHT DOES NOT GO OFF

DETECTING CONDITION:

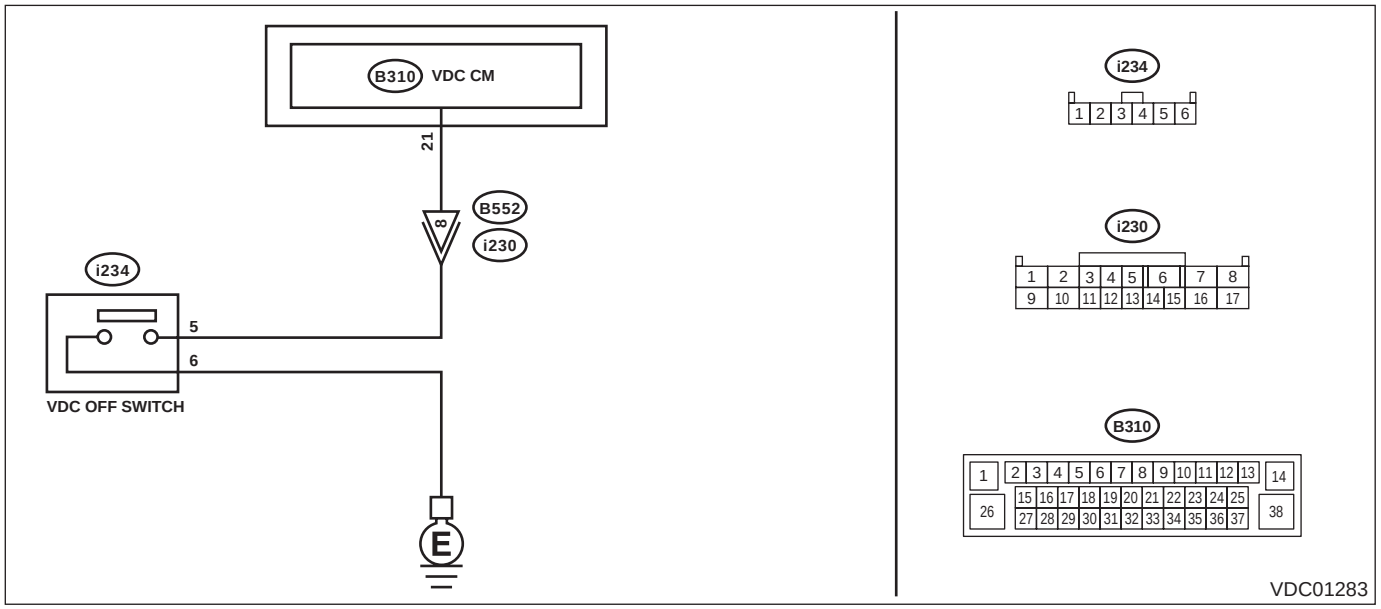
- Defective combination meter
- Defective CAN communication
- VDC OFF switch is shorted.

TROUBLE SYMPTOM:

When starting the engine, VDC OFF indicator light is kept ON.

WIRING DIAGRAM:

Vehicle dynamics control system <Ref. to WI-416, Vehicle Dynamics Control System.>



Step		Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDC OFF SWITCH.** Remove and check VDC OFF switch. <Ref. to VDC-36, VDC OFF Switch.>	Is the VDC OFF switch normal?	Go to step **3**.	Replace the VDC OFF switch.
3	**CHECK VDC OFF SWITCH CIRCUIT.** 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 21 — Chassis ground:***	Is the resistance less than 10 Ω?	Check the VDC OFF switch circuit.	Go to step **4**.
4	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-70, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.

Step		Check	Yes	No
5	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-13, REMOVAL, Combination Meter.>

G: HILL START ASSIST WARNING LIGHT DOES NOT GO OFF

DETECTING CONDITION:

- Defective combination meter
- Defective CAN communication

TROUBLE SYMPTOM:

When starting the engine, the hill start assist warning light continues to illuminate.

Step		Check	Yes	No
1	**CHECK HILL START ASSIST MODE.**	Is the hill start assist OFF?	Normal	Go to step **2**.
2	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-70, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-13, REMOVAL, Combination Meter.>

H: BRAKE WARNING LIGHT DOES NOT GO OFF

DETECTING CONDITION:

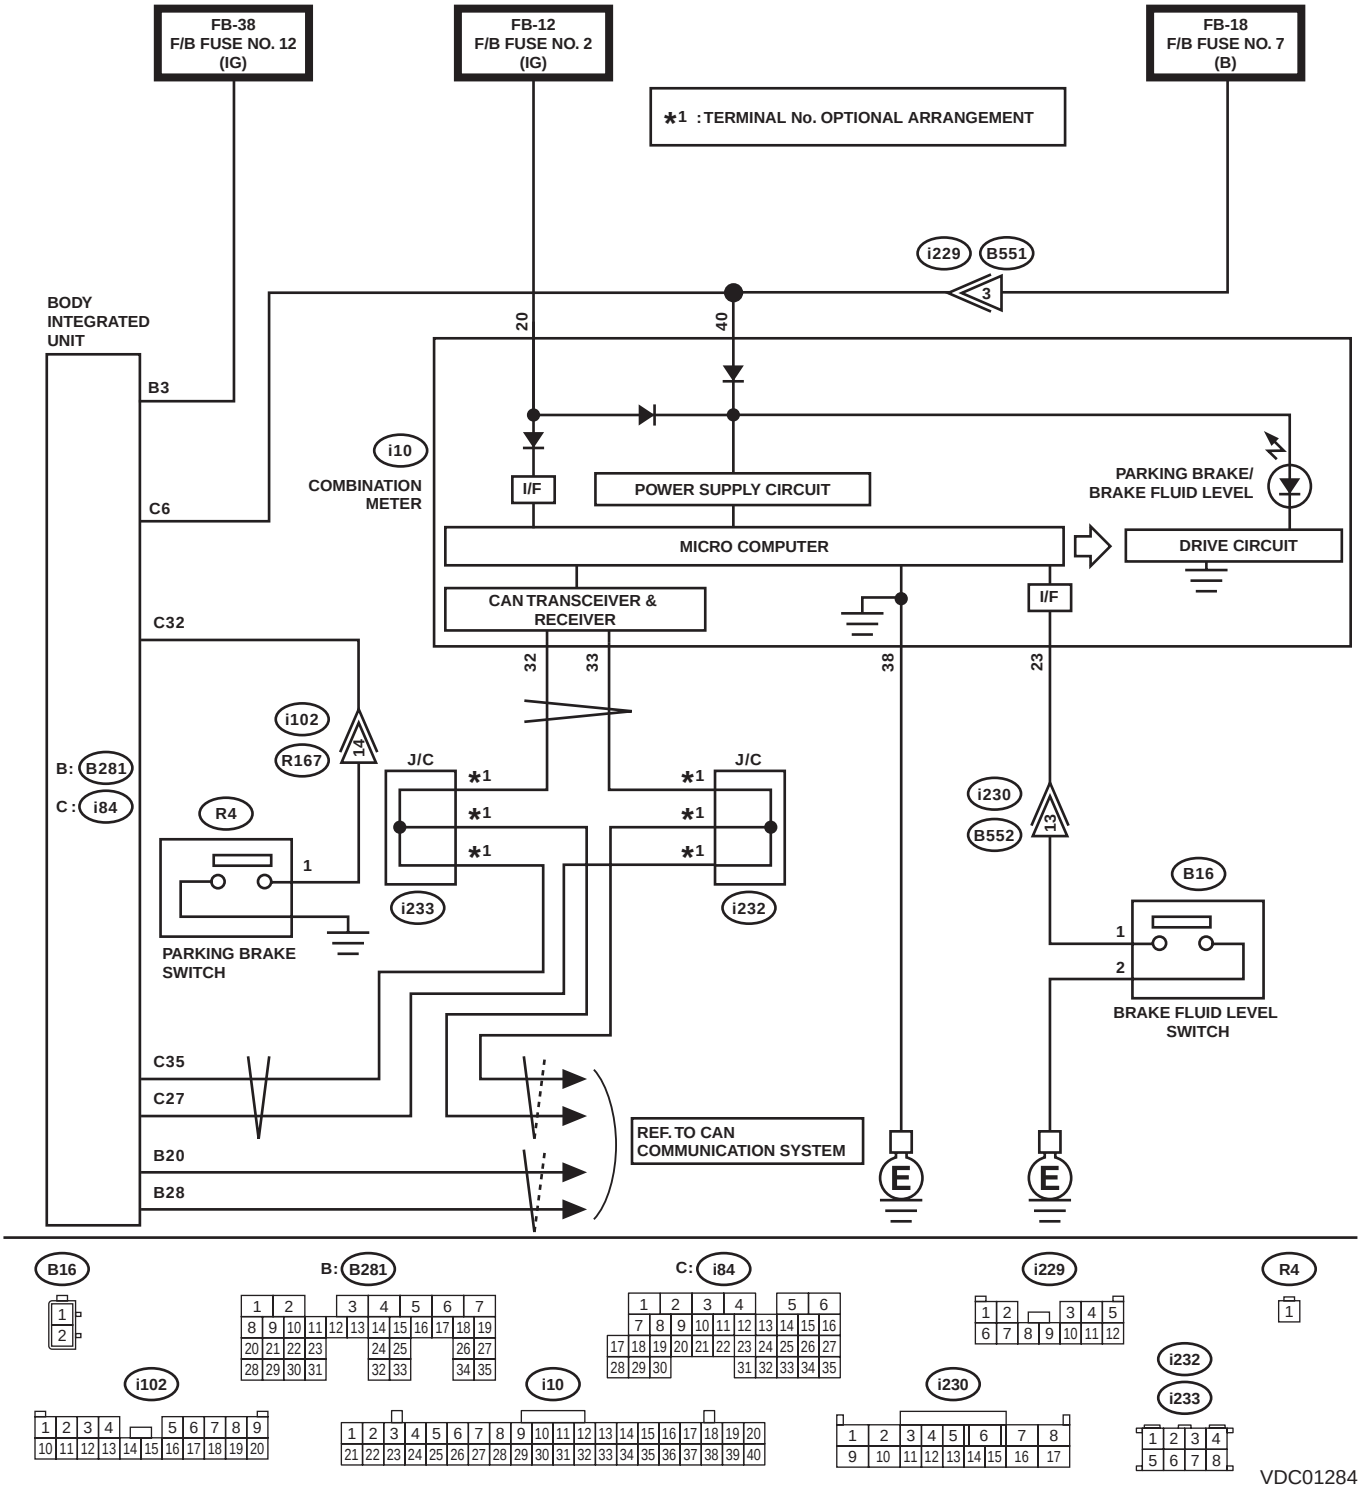
- Brake warning light circuit is shorted.
- Defective sensor/connector
- Defective CAN communication

TROUBLE SYMPTOM:

After starting the engine, the brake warning light remains lit though the parking lever is released.

WIRING DIAGRAM:

Parking brake / brake fluid level warning light system <Ref. to WI-324, Parking Brake / Brake Fluid Level Warning Light System.>



Step		Check	Yes	No
1	**CHECK INSTALLATION OF VDCCM&H/U CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Check that the VDCCM&H/U connector is inserted until it is locked by clamp.	Is the connector firmly inserted?	Go to step **2**.	Insert the VDCCM&H/U connector until it is locked by clamp.

Step		Check	Yes	No
2	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK BRAKE FLUID AMOUNT.** Check the amount of brake fluid in the reservoir tank of master cylinder.	Does the level of the brake fluid amount fall between the lines of "MAX" and "MIN"?	Go to step **4**.	Replenish brake fluid to the specified value.
4	**CHECK BRAKE FLUID LEVEL SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the level switch connector (B16) from master cylinder. 3) Measure the resistance of master cylinder terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the master cylinder. <Ref. to BR-52, Master Cylinder.>
5	**CHECK GROUND SHORT OF HARNESS.** 1) Disconnect the connector (i10) from combination meter. 2) Measure the resistance between combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 23 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the harness between combination meter and brake fluid level switch.
6	**CHECK PARKING BRAKE SWITCH.** 1) Disconnect the connector (R4) from parking brake switch. 2) Release the parking brake. 3) Measure the resistance between parking brake switch terminal and chassis ground.	Is the resistance 1 MΩ or more?	Go to step **7**.	Replace the parking brake switch.
7	**CHECK GROUND SHORT OF HARNESS.** 1) Disconnect the connector (i84) from body integrated unit. 2) Measure the resistance between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i84) No. 32 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **8**.	Repair the harness between body integrated unit and parking brake switch.
8	**CHECK POOR CONTACT OF CONNECTOR.** Check for poor contact of all connectors.	Is there poor contact?	Repair the connector.	Go to step **9**.
9	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-70, List of Diagnostic Trouble Code (DTC).>	Go to step **10**.
10	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-13, Combination Meter.>

I: VDC MODE DOES NOT CHANGE

1. VDC TRACTION MODE

DETECTING CONDITION

- Defective combination meter
- Defective CAN communication
- Defective VDC OFF switch

TROUBLE SYMPTOM:

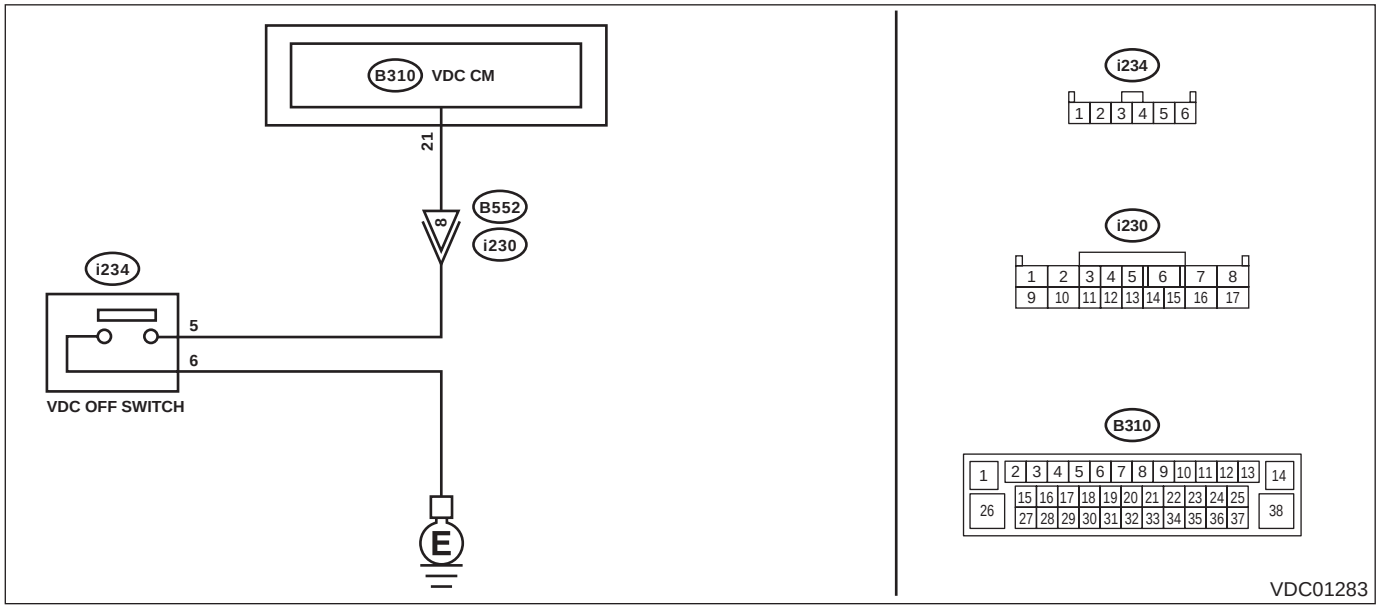
Even when the VDC OFF switch is operated, the VDC traction mode indicator light does not illuminate, or the illumination color does not change. (The VDC mode does not change)

NOTE:

- When the VDC OFF switch is pressed (2 seconds or less), the VDC traction mode indicator light illuminates in green. (Traction mode)
- When the VDC OFF switch is held down (2 seconds or more, 10 seconds or less), the VDC OFF indicator light illuminates in yellow. (VDC OFF mode)
- When the VDC OFF switch is pressed for 10 seconds or more, the VDC traction mode indicator light goes off, and subsequent switch operations are not accepted. When turning the ignition switch from OFF to ON, the OFF operation enabled status is restored.

WIRING DIAGRAM:

Vehicle dynamics control system <Ref. to WI-416, Vehicle Dynamics Control System.>



Step		Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U and VDC OFF switch. 3) Measure the resistance of harness between the VDCCM&H/U and VDC OFF switch connectors. ***Connector & terminal*** ***(B310) No. 21 — (i234) No. 5:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness between the VDCCM&H/U and VDC OFF switch connectors.

	Step	Check	Yes	No
3	**CHECK GROUND SHORT OF HARNESS.** Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 21 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the harness between the VDCCM&H/U and VDC OFF switch connectors.
4	**CHECK HARNESS.** Measure the resistance of harness between VDC OFF switch connector and chassis ground. ***Connector & terminal*** ***(i234) No. 6 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the harness between the VDC OFF switch connector and chassis ground.
5	**CHECK VDC OFF SWITCH.** Check the VDC OFF switch. <Ref. to VDC-37, INSPECTION, VDC OFF Switch.>	Is the VDC OFF switch normal?	Go to step **6**.	Replace the VDC OFF switch. <Ref. to VDC-36, VDC OFF Switch.>
6	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-70, List of Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-9, INSPECTION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-13, Combination Meter.>

2. HILL START ASSIST ON/OFF MODE

DETECTING CONDITION

- Defective combination meter
- Defective CAN communication
- Defective VDC OFF switch

TROUBLE SYMPTOM:

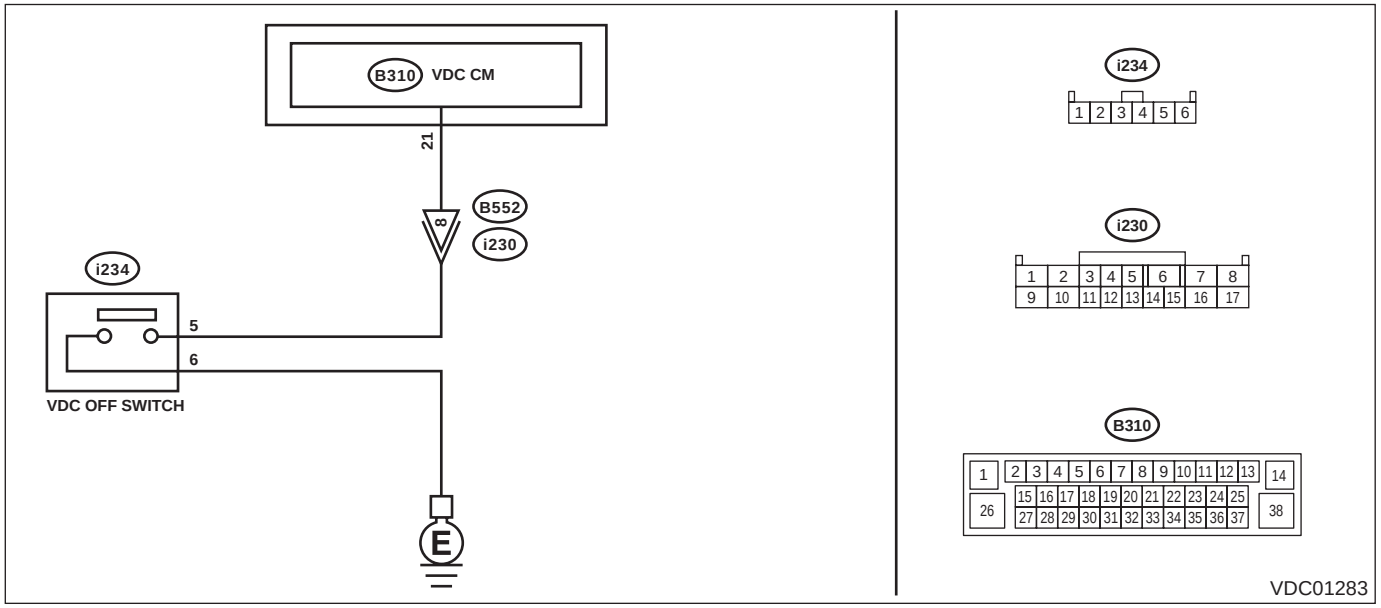
Hill start assist warning light does not illuminate or go off when hill start assist function ON/OFF is changed. (Hill start assist mode does not change.)

NOTE:

- When the VDC OFF switch is kept pressed, the VDC traction mode indicator light illuminates in green at first, then turns yellow, and then goes off in approx. 30 seconds. If the switch is released in 5 seconds after the light goes off then pressed again in 2 seconds, hill start assist warning light illuminates then mode is changed to hill start assist OFF mode.
- Hill start assist warning light always illuminates to inform that the hill start assist does not operate during hill start assist OFF mode.
- When the VDC OFF switch is held down for 10 seconds or more and the VDC traction mode indicator light goes off, if the switch is not pressed again within 5 seconds, subsequent switch operations will not be accepted. When turning the ignition switch from OFF to ON, the operation enabled status is restored.

WIRING DIAGRAM:

Vehicle dynamics control system <Ref. to WI-416, Vehicle Dynamics Control System.>



Step		Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-21, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U and VDC OFF switch. 3) Measure the resistance of harness between the VDCCM&H/U and VDC OFF switch connectors. ***Connector & terminal*** ***(B310) No. 21 — (i234) No. 5:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness between the VDCCM&H/U and VDC OFF switch connectors.

	Step	Check	Yes	No
3	**CHECK GROUND SHORT OF HARNESS.** Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 21 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the harness between the VDCCM&H/U and VDC OFF switch connectors.
4	**CHECK HARNESS.** Measure the resistance of harness between VDC OFF switch connector and chassis ground. ***Connector & terminal*** ***(i234) No. 6 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the harness between the VDC OFF switch connector and chassis ground.
5	**CHECK VDC OFF SWITCH.** Check the VDC OFF switch. <Ref. to VDC-37, INSPECTION, VDC OFF Switch.>	Is the VDC OFF switch normal?	Go to step **6**.	Replace the VDC OFF switch. <Ref. to VDC-36, VDC OFF Switch.>
6	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-70, List of Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-9, INSPECTION, Combination Meter System.>	Is combination meter OK?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-13, Combination Meter.>

11.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Reference
C1211	FR Wheel Speed Sensor System Wire Break/ Excessive Input	Open/high input of front ABS wheel speed sensor RH	<Ref. to VDC(diag)-45, DTC C1211 FR WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1212	FR Wheel Speed Sensor System	Front ABS wheel speed sensor RH signal malfunction	<Ref. to VDC(diag)-48, DTC C1212 FR WHEEL SPEED SENSOR SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1221	FL Wheel Speed Sensor System Wire Break/ Excessive Input	Open/high input of front ABS wheel speed sensor LH	<Ref. to VDC(diag)-45, DTC C1221 FL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/ EXCESSIVE INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1222	FL Wheel Speed Sensor System	Front ABS wheel speed sensor LH signal malfunction	<Ref. to VDC(diag)-48, DTC C1222 FL WHEEL SPEED SENSOR SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1231	RR Wheel Speed Sensor System Wire Break/ Excessive Input	Open/high input of rear ABS wheel speed sensor RH	<Ref. to VDC(diag)-45, DTC C1231 RR WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1232	RR Wheel Speed Sensor System	Rear ABS wheel speed sensor RH signal malfunction	<Ref. to VDC(diag)-48, DTC C1232 RR WHEEL SPEED SENSOR SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1241	RL Wheel Speed Sensor System Wire Break/ Excessive Input	Open/high input of rear ABS wheel speed sensor LH	<Ref. to VDC(diag)-46, DTC C1241 RL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1242	RL Wheel Speed Sensor System	Rear ABS wheel speed sensor LH signal malfunction	<Ref. to VDC(diag)-49, DTC C1242 RL WHEEL SPEED SENSOR SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1311	FR Inlet Solenoid Valve System	Front inlet solenoid valve RH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-51, DTC C1311 FR INLET SOLENOID VALVE SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1312	FR Outlet Solenoid Valve System	Front outlet solenoid valve RH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-51, DTC C1312 FR OUTLET SOLENOID VALVE SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1321	FL Inlet Solenoid Valve System	Front inlet solenoid valve LH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-51, DTC C1321 FL INLET SOLENOID VALVE SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1322	FL Outlet Solenoid Valve System	Front outlet solenoid valve LH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-51, DTC C1322 FL OUTLET SOLENOID VALVE SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1331	RR Inlet Solenoid Valve System	Rear inlet solenoid valve RH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-51, DTC C1331 RR INLET SOLENOID VALVE SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1332	RR Outlet Solenoid Valve System	Rear outlet solenoid valve RH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-51, DTC C1332 RR OUTLET SOLENOID VALVE SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference
C1341	RL Inlet Solenoid Valve System	Rear inlet solenoid valve LH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-51, DTC C1341 RL INLET SOLENOID VALVE SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1342	RL Outlet Solenoid Valve System	Rear outlet solenoid valve LH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-51, DTC C1342 RL OUTLET SOLENOID VALVE SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1351	Normal Opening Valve 1 Malfunction	Secondary cut valve malfunction in VDCCM&H/U	<Ref. to VDC(diag)-51, DTC C1351 NORMAL OPENING VALVE 1 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1352	Normal Opening Valve 2 Malfunction	Primary cut valve malfunction in VDCCM&H/U	<Ref. to VDC(diag)-52, DTC C1352 NORMAL OPENING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1361	Normal Closing Valve 1 Malfunction	Secondary suction valve malfunction in VDCCM&H/U	<Ref. to VDC(diag)-52, DTC C1361 NORMAL CLOSING VALVE 1 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1362	Normal Closing Valve 2 Malfunction	Primary suction valve malfunction in VDCCM&H/U	<Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1411	ECU	VDC control module malfunction	<Ref. to VDC(diag)-55, DTC C1411 ECU, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1412	Parameter Selection Error	VDC control module parameter failure	<Ref. to VDC(diag)-57, DTC C1412 PARAMETER SELECTION ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1413	Power Supply Voltage Failure	Power voltage malfunction	<Ref. to VDC(diag)-58, DTC C1413 POWER SUPPLY VOLTAGE FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1422	VDC Interruption for Engine Convenience	VDC interrupted due to some reasons of the engine	<Ref. to VDC(diag)-60, DTC C1422 VDC INTERRUPTION FOR ENGINE CONVENIENCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1423	Different ECU Specifications	Different VDC control module specification	<Ref. to VDC(diag)-61, DTC C1423 DIFFERENT ECU SPECIFICATIONS, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1424	ECM Failure	Engine control module is faulty	<Ref. to VDC(diag)-63, DTC C1424 ECM FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1431	AT Abnormal	Transmission control module is faulty	<Ref. to VDC(diag)-64, DTC C1431 AT ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

U0126	Lost Communication With Steering Angle Sensor Module	Defective CAN communication	<Ref. to VDC(diag)-83, DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	Lost Communication With Body Control Module	Defective CAN communication	<Ref. to VDC(diag)-83, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	Invalid Data Received From ECM/PCM “A”	Defective CAN communication	<Ref. to VDC(diag)-83, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0402	Invalid Data Received From TCM	Defective CAN communication	<Ref. to VDC(diag)-83, DTC U0402 INVALID DATA RECEIVED FROM TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	Invalid Data Received From Body Control Module	Defective CAN communication	<Ref. to VDC(diag)-83, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0428	Invalid Data Received From Steering Angle Sensor Module	Defective CAN communication	<Ref. to VDC(diag)-83, DTC U0428 INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

12.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC C1211 FR WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT

NOTE:
For the diagnostic procedure, refer to “DTC C1241 RL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT”. <Ref. to VDC(diag)-46, DTC C1241 RL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

B: DTC C1221 FL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT

NOTE:
For the diagnostic procedure, refer to “DTC C1241 RL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT”. <Ref. to VDC(diag)-46, DTC C1241 RL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC C1231 RR WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT

NOTE:
For the diagnostic procedure, refer to “DTC C1241 RL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT”. <Ref. to VDC(diag)-46, DTC C1241 RL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

D: DTC C1241 RL WHEEL SPEED SENSOR SYSTEM WIRE BREAK/EXCESSIVE INPUT

DTC DETECTING CONDITION:

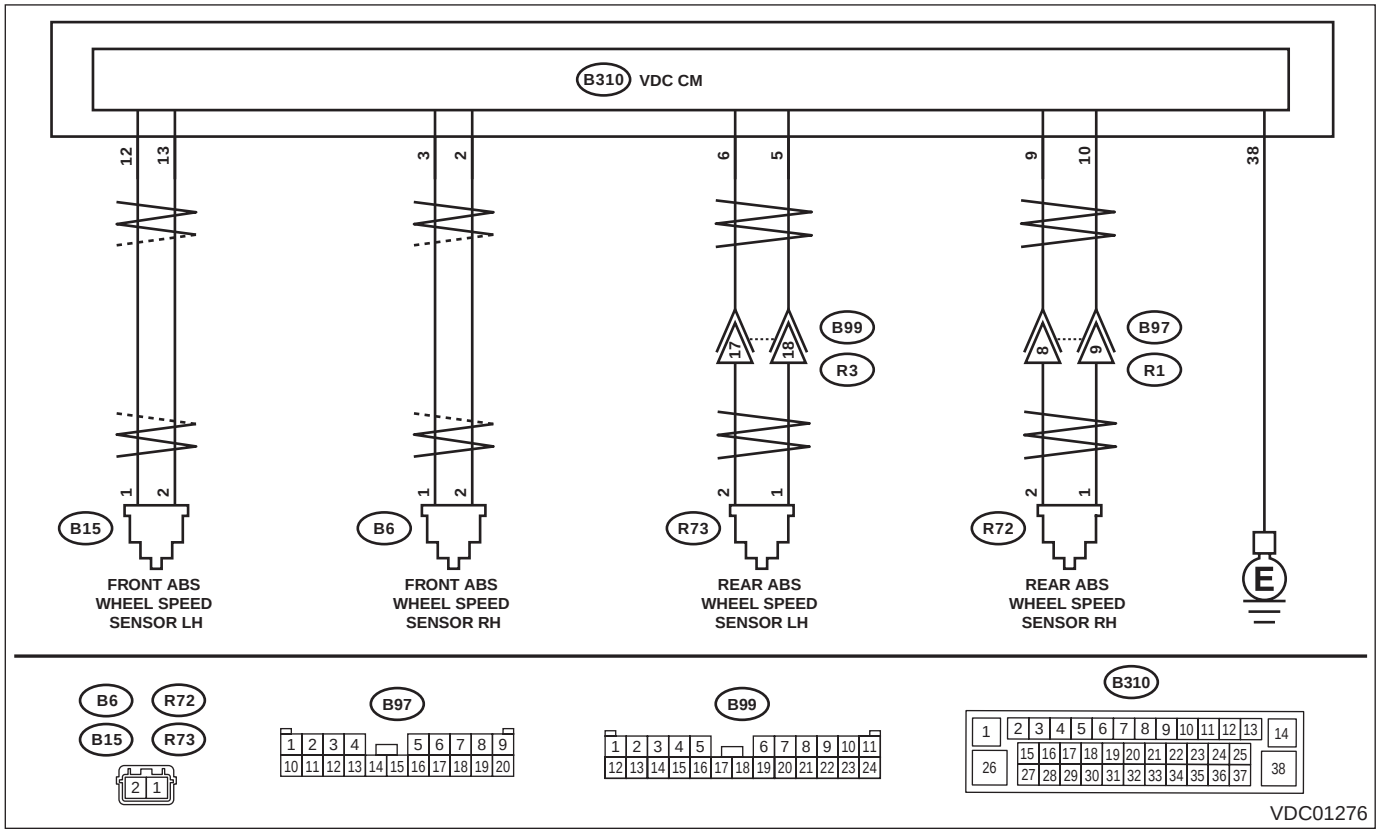
Judge as malfunction when the current value of the wheel speed sensor is out of normal range for a predetermined time or more.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

WIRING DIAGRAM:

Vehicle dynamics control system <Ref. to WI-416, Vehicle Dynamics Control System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTOR.** Check if there is poor contact between VDCCM&H/U and ABS wheel speed sensor.	Is there poor contact?	Repair the connector.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND ABS WHEEL SPEED SENSOR.** 1) Disconnect the connector (B310) from the VDCCM&H/U. 2) Disconnect the connector from ABS wheel speed sensor. 3) Measure the resistance between VDCCM&H/U connector and ABS wheel speed sensor connector. ***Connector & terminal*** ***DTC C1211*** ***(B310) No. 3 — (B6) No. 1:*** ***(B310) No. 2 — (B6) No. 2:*** ***DTC C1221*** ***(B310) No. 12 — (B15) No. 1:*** ***(B310) No. 13 — (B15) No. 2:*** ***DTC C1231*** ***(B310) No. 10 — (R72) No. 1:*** ***(B310) No. 9 — (R72) No. 2:*** ***DTC C1241*** ***(B310) No. 5 — (R73) No. 1:*** ***(B310) No. 6 — (R73) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness connector between VDCCM&H/U and ABS wheel speed sensor.
3	**CHECK GROUND SHORT OF HARNESS.** Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***DTC C1211*** ***(B310) No. 2 — Chassis ground:*** ***DTC C1221*** ***(B310) No. 13 — Chassis ground:*** ***DTC C1231*** ***(B310) No. 9 — Chassis ground:*** ***DTC C1241*** ***(B310) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the harness connector between VDCCM&H/U and ABS wheel speed sensor.
4	**CHECK ABS WHEEL SPEED SENSOR POWER SUPPLY CIRCUIT.** 1) Connect the VDCCM&H/U connector. 2) Connect the ABS wheel speed sensor connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between ABS wheel speed sensor connector and chassis ground. ***Connector & terminal*** ***DTC C1211*** ***(B6) No. 1 (+) — Chassis ground (–):*** ***DTC C1221*** ***(B15) No. 1 (+) — Chassis ground (–):*** ***DTC C1231*** ***(R72) No. 1 (+) — Chassis ground (–):*** ***DTC C1241*** ***(R73) No. 1 (+) — Chassis ground (–):***	Is the voltage 5 — 16 V?	Go to step **6**.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK VDCCM&H/U POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the VDCCM&H/U connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector terminals. ***Connector & terminal*** ***(B310) No. 1 (+) — (B310) No. 38 (–):*** ***(B310) No. 26 (+) — (B310) No. 38 (–):*** ***(B310) No. 31 (+) — (B310) No. 38 (–):***	Is the voltage 10 — 15 V?	Go to step **6**.	Check the generator, battery and VDCCM&H/U power supply circuit.
6	**CHECK ABS WHEEL SPEED SENSOR SIGNAL.** 1) Install the ABS wheel speed sensor. 2) Prepare an oscilloscope. 3) Check the ABS wheel speed sensor. <Ref. to VDC-30, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.>	Is the pattern the same waveform as shown in the figure?	Go to step **7**.	Replace the ABS wheel speed sensor. <Ref. to VDC-28, Front ABS Wheel Speed Sensor.>
7	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-22, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **8**.
8	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

E: DTC C1212 FR WHEEL SPEED SENSOR SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1242 RL WHEEL SPEED SENSOR SYSTEM”. <Ref. to VDC(diag)-49, DTC C1242 RL WHEEL SPEED SENSOR SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

F: DTC C1222 FL WHEEL SPEED SENSOR SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1242 RL WHEEL SPEED SENSOR SYSTEM”. <Ref. to VDC(diag)-49, DTC C1242 RL WHEEL SPEED SENSOR SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

G: DTC C1232 RR WHEEL SPEED SENSOR SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1242 RL WHEEL SPEED SENSOR SYSTEM”. <Ref. to VDC(diag)-49, DTC C1242 RL WHEEL SPEED SENSOR SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

H: DTC C1242 RL WHEEL SPEED SENSOR SYSTEM

DTC DETECTING CONDITION:

- A fault is detected if the time of decompression or hold exceeds the predetermined time.
- A fault is detected if noise of the wheel speed sensor signal is detected.
- A fault is detected if the wheel speed sensor signal is lost, or the wheel speed sensor signal continuously indicates significantly low speed by calculating the difference between maximum speed and minimum speed among the four wheels.
- A fault is detected if the wheel speed sensor signal continuously indicates excessively high or low speed.
- A fault is detected if the wheel speed sensor signal changes irregularly.
- A fault is detected if the wheel speed sensor signal drops cyclically.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

	Step	Check	Yes	No
1	**CHECK OUTPUT OF ABS WHEEL SPEED SENSOR USING SUBARU SELECT MONITOR.** 1) Select “Current Data Display & Save” and “Freeze Frame Data display” on the Subaru Select Monitor. 2) Read the defective ABS wheel speed sensor output.	Does the speed indicated on the current data change in response to the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position? In addition, are the wheel speeds of the freeze frame data for 4 wheels almost the same?	Go to step **2**.	Go to step **7**.
2	**CHECK POOR CONTACT OF CONNECTOR.** Turn the ignition switch to OFF.	Is there poor contact of connectors between VDCCM&H/U and ABS wheel speed sensor?	Repair the connector.	Go to step **3**.
3	**CHECK CAUSE OF SIGNAL NOISE.** Make sure the radio wave devices and electronic components are installed correctly.	Are the radio wave devices and electronic components installed correctly?	Go to step **4**.	Install the radio wave devices and electronic components properly.
4	**CHECK CAUSE OF SIGNAL NOISE.** Check if the noise sources (such as an antenna) are installed near the sensor harness.	Are noise sources installed?	Install the noise sources apart from sensor harness.	Go to step **5**.
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-22, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.
7	**CHECK INSTALLATION OF ABS WHEEL SPEED SENSOR.**	Is the ABS wheel speed sensor installation bolt tightened to 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)?	Go to step **8**.	Tighten the ABS wheel speed sensor installation bolts.

	Step	Check	Yes	No
8	**CHECK ABS WHEEL SPEED SENSOR SIGNAL.** 1) Install the ABS wheel speed sensor. 2) Prepare an oscilloscope. 3) Check the ABS wheel speed sensor. <Ref. to VDC-30, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.>	Does the oscilloscope indicate the waveform pattern like shown in the figure when the tire is slowly turned? Does the oscilloscope indication repeat the waveform pattern like shown in the figure when the tire is slowly turned in equal speed for one rotation or more?	Go to step **10**.	Go to step **9**.
9	**CHECK ABS WHEEL SPEED SENSOR OR MAGNETIC ENCODER.**	Are there foreign matter, breakage or damage at the tip of ABS wheel speed sensor or magnetic encoder?	Remove dirt thoroughly. Also replace the ABS wheel speed sensor or magnetic encoder as a unit with hub unit bearing if it is broken or damaged.	Go to step **10**.
10	**CHECK CAUSE OF SIGNAL NOISE.** Make sure the radio wave devices and electronic components are installed correctly.	Are the radio wave devices and electronic components installed correctly?	Go to step **11**.	Install the radio wave devices and electronic components properly.
11	**CHECK CAUSE OF SIGNAL NOISE.** Check if the noise sources (such as an antenna) are installed near the sensor harness.	Are noise sources installed?	Install the noise sources apart from sensor harness.	Go to step **12**.
12	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-22, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Go to step **13**.	Go to step **14**.
13	**CHECK FREEZE FRAME DATA OF ABS WHEEL SPEED SENSOR USING SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, select “Freeze Frame Data display”. 2) Read the ABS wheel speed sensor output.	Is the ABS wheel speed sensor output different compared with other wheels?	Replace the ABS wheel speed sensor which has a difference. <Ref. to VDC-28, Front ABS Wheel Speed Sensor.> <Ref. to VDC-31, Rear ABS Wheel Speed Sensor.>	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
14	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference. NOTE: Though the ABS warning light may remain on at this time, this is normal. Drive the vehicle at 40 km/h (25 MPH) or more in order to turn ABS warning light off. Be sure to drive the vehicle and check that the warning light goes off.

I: DTC C1311 FR INLET SOLENOID VALVE SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

J: DTC C1312 FR OUTLET SOLENOID VALVE SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC C1321 FL INLET SOLENOID VALVE SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

L: DTC C1322 FL OUTLET SOLENOID VALVE SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

M: DTC C1331 RR INLET SOLENOID VALVE SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC C1332 RR OUTLET SOLENOID VALVE SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC C1341 RL INLET SOLENOID VALVE SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P: DTC C1342 RL OUTLET SOLENOID VALVE SYSTEM

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Q: DTC C1351 NORMAL OPENING VALVE 1 MALFUNCTION

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

R: DTC C1352 NORMAL OPENING VALVE 2 MALFUNCTION

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

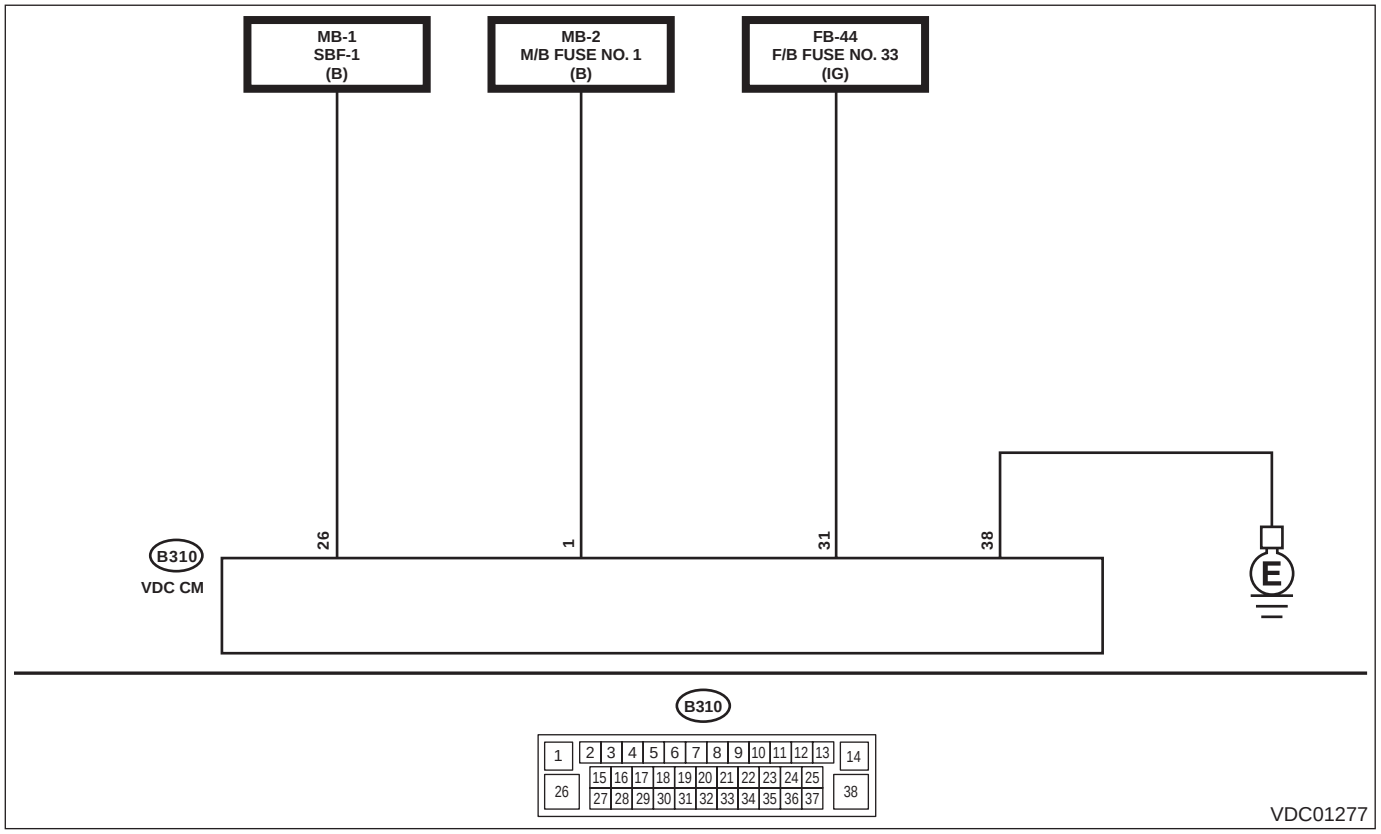
S: DTC C1361 NORMAL CLOSING VALVE 1 MALFUNCTION

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION”. <Ref. to VDC(diag)-53, DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

T: DTC C1362 NORMAL CLOSING VALVE 2 MALFUNCTION

DTC DETECTING CONDITION:
A fault is detected if electrical malfunction judgment is generated for VDCH/U solenoid valve.
TROUBLE SYMPTOM:
- ABS does not operate.
- EBD does not operate.
- VDC does not operate.
- Hill start assist does not operate.

WIRING DIAGRAM:
Vehicle dynamics control system <Ref. to WI-416, Vehicle Dynamics Control System.>



Step		Check	Yes	No
1	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 1 (+) — (B310) No. 38 (–):*** ***(B310) No. 26 (+) — (B310) No. 38 (–):*** ***(B310) No. 31 (+) — (B310) No. 38 (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the power supply circuit.
2	**CHECK VDCCM&H/U GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 38 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the VDCCM&H/U ground harness.
3	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **4**.

Step		Check	Yes	No
4	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-22, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.
5	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

U: DTC C1411 ECU

DTC DETECTING CONDITION:
Judge as malfunction when ECM internal malfunction is detected.
TROUBLE SYMPTOM:
- ABS does not operate sometimes.
- EBD does not operate sometimes.
- VDC does not operate.
- Hill start assist does not operate.

WIRING DIAGRAM:
Vehicle dynamics control system <Ref. to WI-416, Vehicle Dynamics Control System.>

	Step	Check	Yes	No
1	**CHECK VDCCM&H/U GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U and chassis ground. ***Connector & terminal*** ***(B310) No. 38 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **2**.	Repair the VDCCM&H/U ground harness.
2	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of the connector between the battery, ignition switch and VDCCM&H/U?	Repair the connector.	Go to step **3**.
3	**CHECK CAUSE OF SIGNAL NOISE.**	Are the radio wave devices and electronic components installed correctly?	Go to step **4**.	Install the radio wave devices and electronic components properly.
4	**CHECK CAUSE OF SIGNAL NOISE.**	Is there a noise source (such as an antenna) installed near the sensor harness and VDCCM?	Install the noise sources apart from sensor harness and VDCCM.	Go to step **5**.
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-22, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.

Step		Check	Yes	No
6	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

V: DTC C1412 PARAMETER SELECTION ERROR

DTC DETECTING CONDITION:

- A fault is detected if abnormal set value is found on the vehicle model that were given some parameters.
- A fault is detected if 0 point setting compensation of the sensor is not yet performed.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

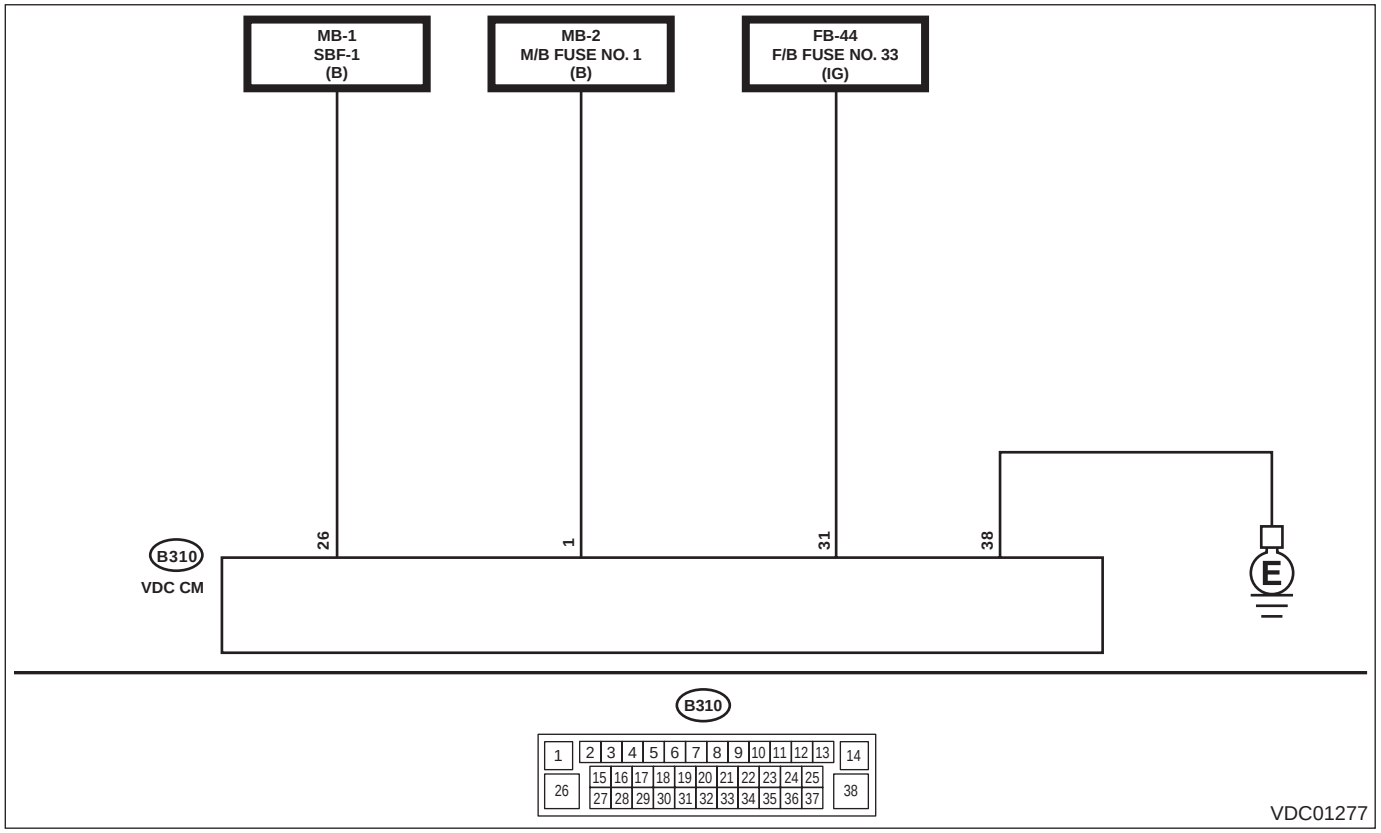
NOTE:
When the VDCCM&H/U is replaced, this DTC may be stored.

	Step	Check	Yes	No
1	**CHECK VDCCM&H/U IDENTIFICATION SYMBOL.** Check the identification symbol attached on the H/U. <Ref. to VDC-2, SPECIFICATION, General Description.>	Is the identification symbol correct?	Go to step **2**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
2	**CHECK PARAMETER SELECTED IN VDCCM.** <Ref. to VDC(diag)-18, READ PARAMETER, OPERATION, Subaru Select Monitor.>	Does the parameter registered in the VDCCM match the relevant vehicle?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Select and register the correct parameter. <Ref. to VDC(diag)-17, PARAMETER SELECTION, OPERATION, Subaru Select Monitor.>

W: DTC C1413 POWER SUPPLY VOLTAGE FAILURE

DTC DETECTING CONDITION:
A fault is detected if the power supply voltage is out of normal range for a predetermined time or more.
TROUBLE SYMPTOM:
- ABS does not operate.
- EBD may not operate.
- VDC does not operate.
- Hill start assist does not operate.

NOTE:
Warning lights go off if voltage returns.
WIRING DIAGRAM:
Vehicle dynamics control system <Ref. to WI-416, Vehicle Dynamics Control System.>



Step		Check	Yes	No
1	**CHECK GENERATOR.** 1) Start the engine. 2) Run the engine at idle after warming up. 3) Measure the voltage between generator terminal B and chassis ground. ***Terminals*** ***Generator terminal B (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the generator.
2	**CHECK BATTERY TERMINAL.** Turn the ignition switch to OFF.	Are the positive and negative battery terminals installed tightly?	Go to step **3**.	Install the battery terminal correctly.

	Step	Check	Yes	No
3	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Disconnect the connector from the VDCCM&H/U. 2) Run the engine at idle. 3) Operate devices such as headlights, air conditioner, rear defogger, etc. which produce an electrical load. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 1 (+) — (B310) No. 38 (–):*** ***(B310) No. 26 (+) — (B310) No. 38 (–):*** ***(B310) No. 31 (+) — (B310) No. 38 (–):***	Is the voltage 10 — 15 V?	Go to step **4**.	Repair the power supply circuit.
4	**CHECK VDCCM&H/U GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 38 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the VDCCM&H/U ground harness circuit.
5	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **6**.
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-22, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

X: DTC C1422 VDC INTERRUPTION FOR ENGINE CONVENIENCE

DTC DETECTING CONDITION:
A fault is detected if engine control prohibition flag from ECM is received.
TROUBLE SYMPTOM:
- VDC does not operate.
- Hill start assist does not operate.

NOTE:
Warning lights go off if the cooperation control of ECM returns.

	Step	Check	Yes	No
1	**CHECK COOPERATION CONTROL FEASIBILITY OF ECM USING SUBARU SELECT MONITOR.** 1) Start the engine, and run the engine at idle approximately 5 minutes. 2) Connect Subaru Select Monitor, and select “Current Data Display & Save”. 3) Check «E/G Control Stop Flag» and «E/G torques up Control Stop Flag» on the display.	Does the «E/G Control Stop Flag» indicate “1”?	Go to step **4**.	Go to step **2**.
2	**CHECK WARNING LIGHT.** Check whether the VDC warning light illuminates after driving for 1 minute or more at a speed of 10 km/h (6 MPH) or more.	Does the VDC warning light illuminate?	Go to step **3**.	VDC is normal. Perform the Clear Memory Mode. NOTE: DTC may be recorded if cranking is performed during driving.
3	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of ECM connector?	Repair the connector.	Go to step **4**.
4	**CHECK ECM.** Refer to the basic diagnostic procedure of ENGINE (DIAGNOSTICS).	Is ECM normal?	Go to step **5**.	Replace the ECM. <Ref. to FU(w/o STI)-129, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).>
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-22, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

Y: DTC C1423 DIFFERENT ECU SPECIFICATIONS

DTC DETECTING CONDITION:
A fault is detected if the vehicle type information obtained from ECM via communication is different from the parameter setting information.
TROUBLE SYMPTOM:
- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

NOTE:
When parameter selection for VDCCM is improper, this DTC may be memorized.

	Step	Check	Yes	No
1	**CHECK VDCCM&H/U IDENTIFICATION SYMBOL.** Check the identification symbol attached on the H/U. <Ref. to VDC-2, SPECIFICATION, General Description.>	Is the identification symbol correct?	Go to step **2**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
2	**CHECK PARAMETER SELECTED IN VDCCM.** <Ref. to VDC(diag)-18, READ PARAMETER, OPERATION, Subaru Select Monitor.>	Does the parameter registered in the VDCCM match the relevant vehicle?	CVT model: Go to step **3**. MT model: Go to step **5**.	Select and register the correct parameter. <Ref. to VDC(diag)-17, PARAMETER SELECTION, OPERATION, Subaru Select Monitor.>
3	**CHECK TCM SPECIFICATION.** Check the TCM specification.	Is the specification of TCM same as vehicle specification?	Go to step **4**.	Replace the TCM. <Ref. to CVT(TR690)-126, Transmission Control Module (TCM).>
4	**CHECK CVT SYSTEM.** 1) Start the engine. 2) Check the DTC in CVT system.	Is DTC of CVT system displayed?	Perform the diagnosis according to DTC. <Ref. to CVT(diag)-32, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK ECM SPECIFICATION.** Check the ECM specification.	Is the specification of ECM same as vehicle specification?	Go to step **6**.	Replace the ECM. <Ref. to FU(w/o STI)-129, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).>
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-22, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.

Step		Check	Yes	No
7	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

Z: DTC C1424 ECM FAILURE

DTC DETECTING CONDITION:

A fault is detected if malfunction judgment flag for the engine system is received from ECM for a predetermined time or more.

TROUBLE SYMPTOM:

Hill start assist does not operate.

	Step	Check	Yes	No
1	**CHECK ECM.** 1) Start the engine. 2) Check DTC of ECM.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-22, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **3**.
3	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

AA:DTC C1431 AT ABNORMAL

DTC DETECTING CONDITION:

A fault is detected if malfunction flag is received from TCM.

TROUBLE SYMPTOM:

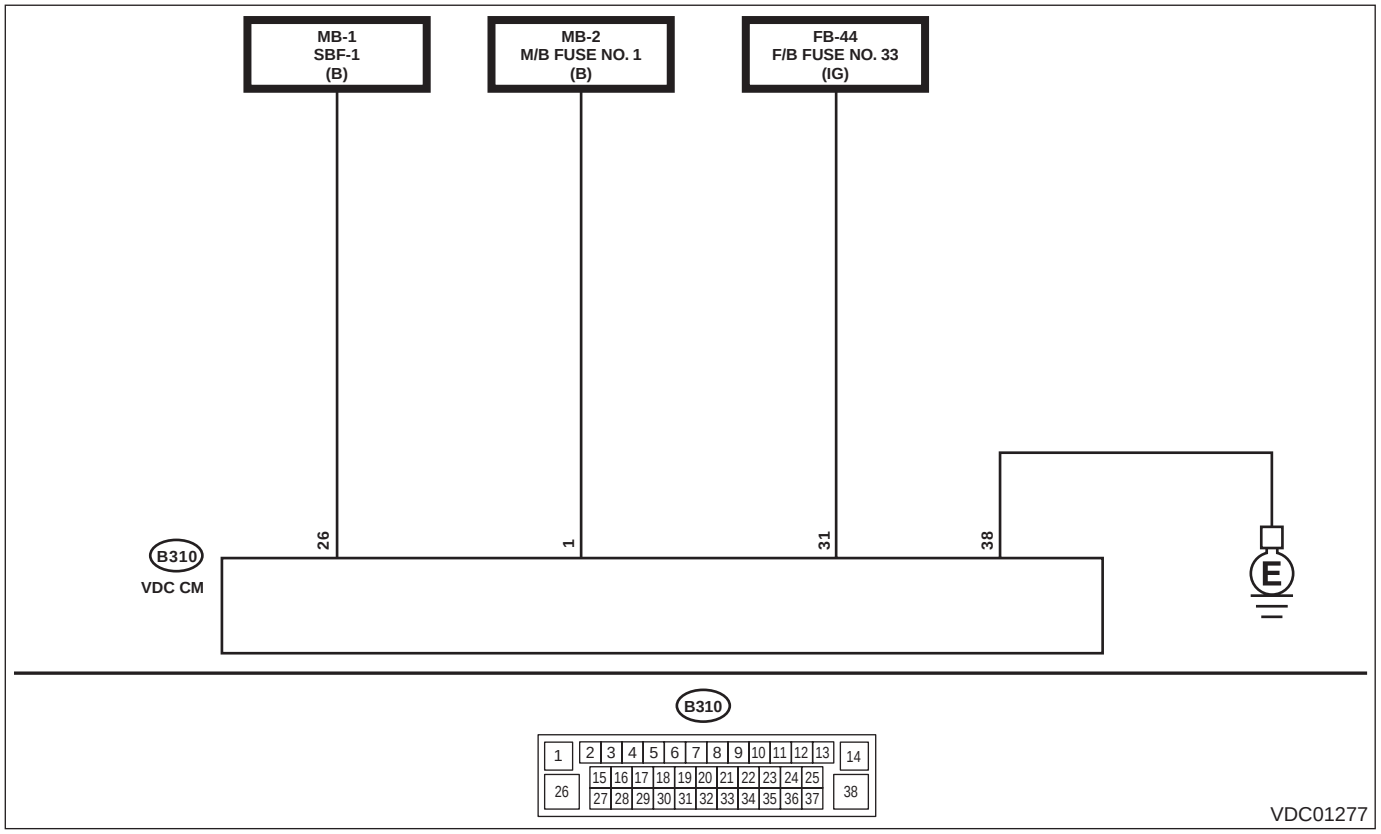
- VDC does not operate.
- Hill start assist does not operate.

	Step	Check	Yes	No
1	**CHECK TCM.** 1) Start the engine. 2) Check DTC of TCM.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to CVT(diag)-32, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) After turning the ignition switch to ON for approx. 10 seconds, turn it to OFF. 3) Turn the ignition switch to ON again. 4) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to VDC(diag)-22, Inspection Mode.> 6) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **3**.
3	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

AB:DTC C1511 VALVE RELAY

DTC DETECTING CONDITION:
A fault is detected if valve relay drive voltage failure is detected.
TROUBLE SYMPTOM:
- ABS does not operate.
- EBD does not operate.
- VDC does not operate.
- Hill start assist does not operate.

WIRING DIAGRAM:
Vehicle dynamics control system <Ref. to WI-416, Vehicle Dynamics Control System.>



Step		Check	Yes	No
1	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 1 (+) — Chassis ground (–):*** ***(B310) No. 31 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the power supply circuit.
2	**CHECK VDCCM&H/U INPUT VOLTAGE.** Calculate the voltage difference measured in step 1. A: (B310) No. 1 (+) — Chassis ground (–): B: (B310) No. 31 (+) — Chassis ground (–):	Is the voltage difference between A and B 2 V or more?	Repair the power supply circuit.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK VDCCM&H/U GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 38 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair the VDCCM&H/U ground harness.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **5**.
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-22, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

AC:DTC C1521 MOTOR RELAY

DTC DETECTING CONDITION:

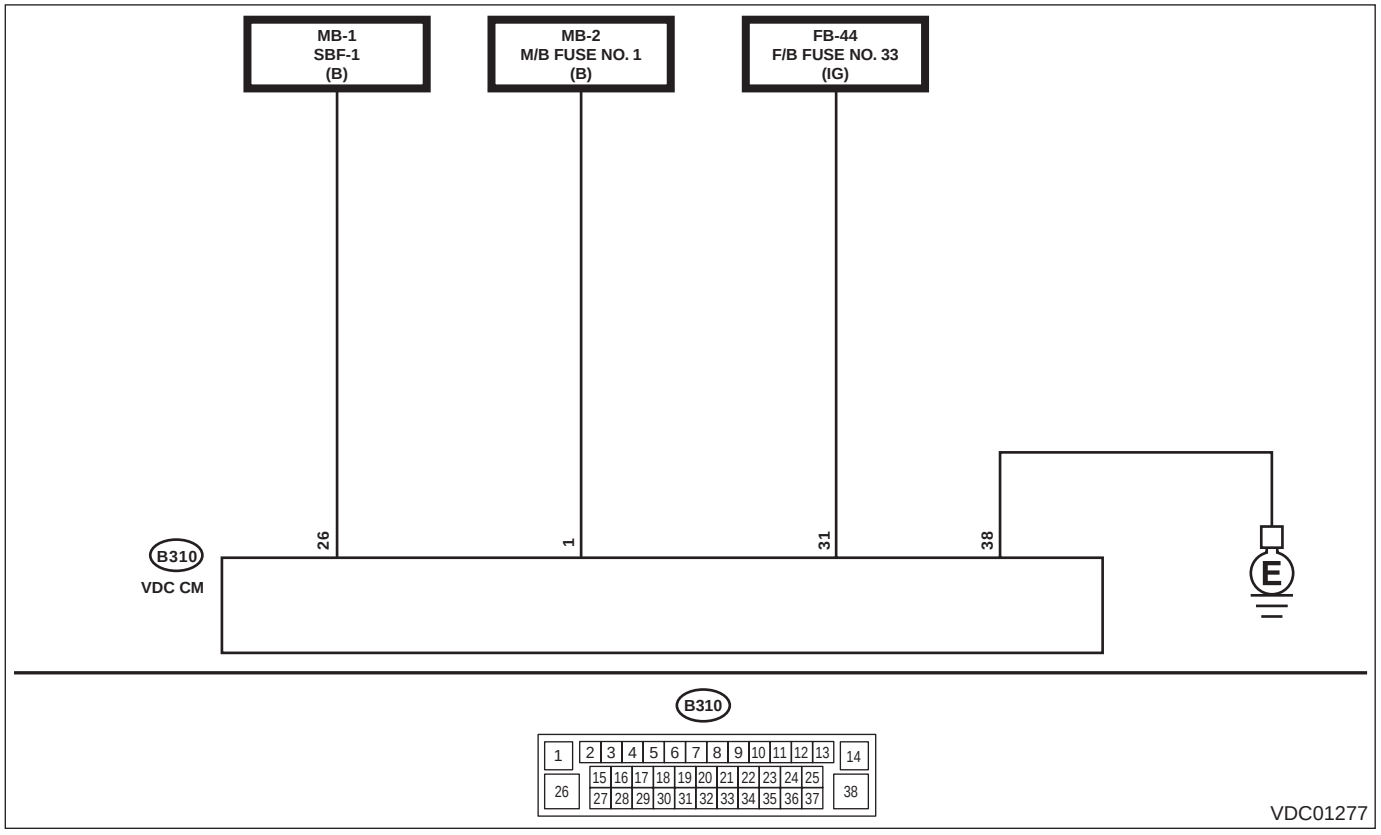
A fault is detected if the pump motor supply voltage becomes significantly low when the pump motor is not driven.

TROUBLE SYMPTOM:

- ABS does not operate sometimes.
- VDC does not operate.
- Hill start assist does not operate.

WIRING DIAGRAM:

Vehicle dynamics control system <Ref. to WI-416, Vehicle Dynamics Control System.>



Step		Check	Yes	No
1	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 26 (+) — Chassis ground (–):*** ***(B310) No. 31 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the VDCCM&H/U power supply circuit.
2	**CHECK VDCCM&H/U INPUT VOLTAGE.** Calculate the voltage difference measured in step 1. A: (B310) No. 26 (+) — Chassis ground (–): B: (B310) No. 31 (+) — Chassis ground (–):	Is the voltage difference between A and B 2 V or more?	Repair the power supply circuit.	Go to step **3**.
3	**CHECK INSTALLATION OF VDCCM&H/U GROUND.**	Is the VDCCM&H/U ground terminal installation bolt installed correctly?	Go to step **4**.	Install the VDCCM&H/U ground terminal installation bolt correctly.

	Step	Check	Yes	No
4	**CHECK VDCCM&H/U GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 38 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the VDCCM&H/U ground harness.
5	**CHECK VDCCM&H/U MOTOR RELAY.** Measure the resistance between VDCCM&H/U terminals. ***Terminals*** ***No. 26 — No. 38:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
6	**CHECK POOR CONTACT OF CONNECTORS.** Turn the ignition switch to OFF.	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **7**.
7	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-22, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **8**.
8	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs. NOTE: Though the ABS warning light, and the VDC warning light & VDC indicator light may remain lit at this point, this is normal. Drive the vehicle at 40 km/h (25 MPH) or more in order to turn off the ABS warning light, and the VDC warning light & VDC indicator light. Be sure to drive the vehicle and check that the warning light goes off.

AD:DTC C1531 BLS OFF FAULT

DTC DETECTING CONDITION:

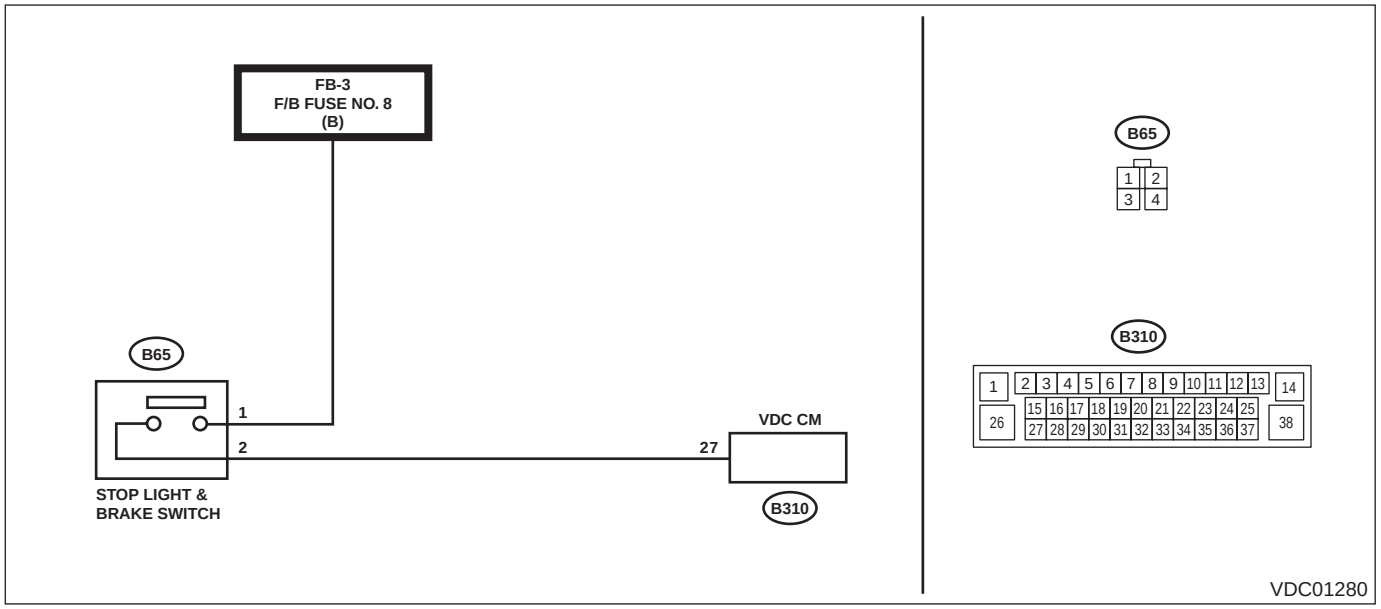
A fault is detected if stop light switch signal is OFF for a predetermined time or more with the pressure signal of the pressure sensor high.

TROUBLE SYMPTOM:

- VDC does not operate.
- Hill start assist does not operate.

WIRING DIAGRAM:

Stop light system <Ref. to WI-401, ENGINE TYPE FA, WIRING DIAGRAM, Stop Light System.>



Step		Check	Yes	No
1	**CHECK STOP LIGHT SWITCH.** 1) Check the stop light switch. <Ref. to BR-77, INSTALLATION, Stop Light Switch.>	Is the installation position of the stop light switch correct?	Go to step **2**.	Adjust the installation position of the stop light switch. <Ref. to BR-77, INSTALLATION, Stop Light Switch.>
2	**CHECK STOP LIGHT SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Measure the resistance of stop light switch terminals. ***Connector & terminal*** ***(B65) No. 1 — No. 2:***	Is the resistance 1 Ω or less when the stop light switch is ON (when pedal is depressed)?	Go to step **3**.	Replace the stop light switch. <Ref. to BR-77, Stop Light Switch.>
3	**CHECK STOP LIGHT POWER SUPPLY.** Measure the voltage between stop light switch terminal and chassis ground. ***Connector & terminal*** ***(B65) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **4**.	Repair the stop light power supply circuit.
4	**CHECK STOP LIGHT SWITCH HARNESS.** 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U and stop light switch. ***Connector & terminal*** ***(B65) No. 2 — (B310) No. 27:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the stop light switch circuit.

	Step	Check	Yes	No
5	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of connector between stop light switch and VDCCM&H/U?	Repair the connector.	Go to step **6**.
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-22, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

AE:DTC C1532 BLS ON FAULT

DTC DETECTING CONDITION:

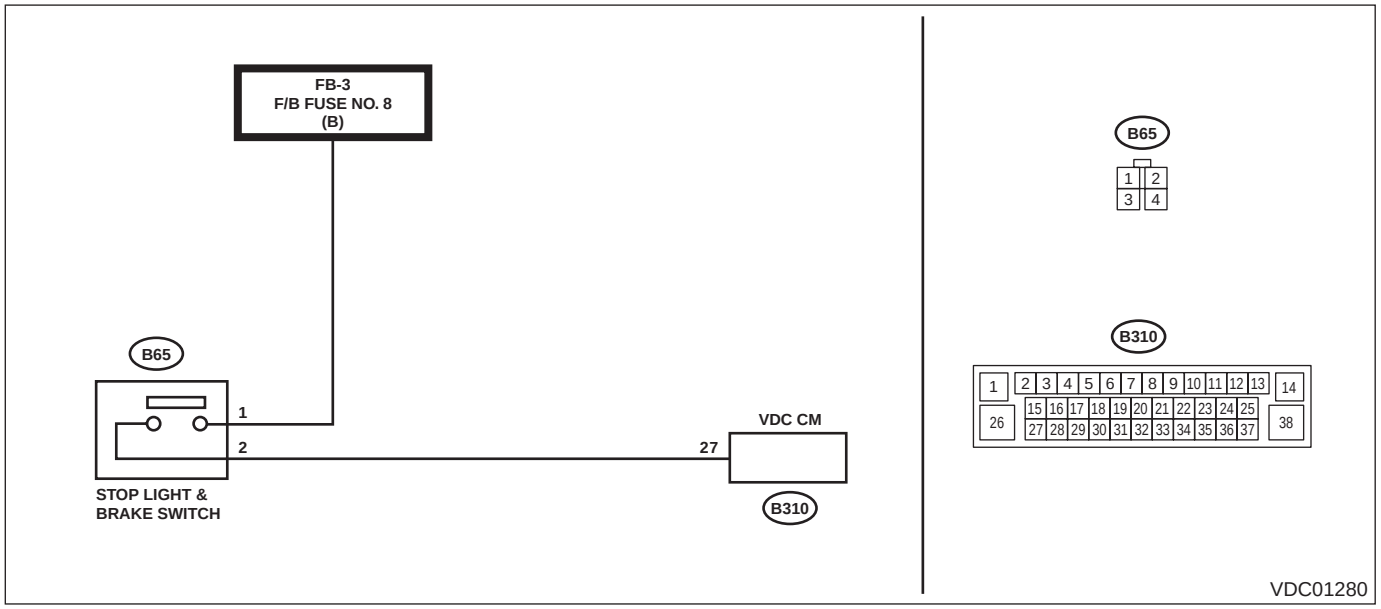
- A fault is detected if a change of the vehicle speed from high to low occurs for a predetermined number of times or more, while a change of the stop light switch from OFF to ON is not detected.
- A fault is detected if stop light switch ON status continues for long time while the vehicle speed is at the predetermined speed or higher.

TROUBLE SYMPTOM:

- VDC does not operate.
- Hill start assist does not operate.

NOTE:
If the pressure sensor is defective, this DTC may probably be recorded in addition to pressure sensor malfunction.

WIRING DIAGRAM:
Stop light system <Ref. to WI-401, ENGINE TYPE FA, WIRING DIAGRAM, Stop Light System.>



Step		Check	Yes	No
1	**CHECK STOP LIGHT SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Measure the resistance of stop light switch terminals. ***Connector & terminal*** ***(B65) No. 1 — No. 2:***	Is the resistance 1 MΩ or more when stop light switch is OFF (when pedal is not depressed)?	Go to step **2**.	Replace the stop light switch. <Ref. to BR-77, Stop Light Switch.>
2	**CHECK STOP LIGHT SWITCH HARNESS.** 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 27 — Chassis ground:***	Is the resistance less than 1 MΩ?	Go to step **3**.	Repair the stop light switch circuit.
3	**INTERVIEW CUSTOMERS.** Make sure that the operation was performed in which accelerator pedal and brake pedal were depressed simultaneously (with depressing brake pedal with left foot).	Were the acceleration pedal and brake pedal depressed simultaneously?	System is normal. (DTC may be recorded if the brake pedal is always depressed while driving.)	Go to step **4**.

Step		Check	Yes	No
4	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-22, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.
5	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.

AF:DTC C1711 STEERING ANGLE SENSOR ABNORMAL

DTC DETECTING CONDITION:

- A fault is detected if the sensor signal value is not correct.
- A fault is detected if the yaw rate sensor signal / lateral G sensor signal change while the sensor signal of steering angle sensor indicates a constant value.
- A fault is detected if the communication status of steering angle sensor is abnormal.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

WIRING DIAGRAM:

Vehicle dynamics control system <Ref. to WI-416, Vehicle Dynamics Control System.>

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY FOR STEERING ANGLE SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from steering angle sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between steering angle sensor and chassis ground. ***Connector & terminal*** ***(B231) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the steering angle sensor power supply circuit.
2	**CHECK GROUND CIRCUIT OF STEERING ANGLE SENSOR.** Measure the resistance between steering angle sensor and chassis ground. ***Connector & terminal*** ***(B231) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair ground circuit in the steering angle sensor.
3	**CHECK STEERING ANGLE SENSOR HARNESS.** 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U and steering angel sensor. ***Connector & terminal*** ***(B231) No. 2 — (B310) No. 35:*** ***(B231) No. 3 — (B310) No. 36:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness between the steering angle sensor and VDCCM&H/U.
4	**CHECK GROUND SHORT CIRCUIT OF STEERING ANGLE SENSOR HARNESS.** Measure the resistance between steering angle sensor and chassis ground. ***Connector & terminal*** ***(B231) No. 2 — Chassis ground:*** ***(B231) No. 3 — Chassis ground:***	Is the resistance 10 Ω or more?	Go to step **5**.	Repair the harness between the steering angle sensor and VDCCM&H/U.
5	**CHECK STEERING WHEEL.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Check the steering wheel for deviation from center.	Is the deviation from the center of steering wheel less than 5°?	Go to step **6**.	Perform the centering adjustment of steering wheel, and perform the VDC sensor midpoint setting mode. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
6	**CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.** 1) Adjust steering wheel to the center position. 2) Connect Subaru Select Monitor, and select “Current Data Display & Save”. 3) Read the «Steering Angle Sensor» displayed on display.	Is the indicated reading of the «Steering Angle Sensor» on the monitor display –10° — 10°?	Perform the VDC sensor midpoint setting mode. Go to step **7**. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Check the installation of the steering wheel and steering angle sensor.

	Step	Check	Yes	No
7	**CHECK STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.** 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-22, Inspection Mode.> 5) Read the DTC.	Is the same DTC displayed?	Go to step **8**.	Go to step **9**.
8	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Replace the steering angle sensor. <Ref. to VDC-24, Steering Angle Sensor.> 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-22, Inspection Mode.> 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **10**.
9	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Temporary poor contact occurs.
10	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	Original steering angle sensor malfunction

AG:DTC C1721 YAW RATE SENSOR ABNORMAL

DTC DETECTING CONDITION:

- A fault is detected if the sensor signal value is not correct.
- A fault is detected if the steering angle sensor signal / lateral G sensor signal change while the yaw rate sensor signal indicates a constant value.
- A fault is detected if the communication status of yaw rate sensor is abnormal.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

	Step	Check	Yes	No
1	**INTERVIEW CUSTOMERS.** Check if the vehicle ran the road with banks or sandy surface (which does not mean a dirt road).	Did the vehicle run the road with banks or sandy surface (which does not mean a dirt road)?	VDCCM&H/U may record DTC when the vehicle ran the road with banks or sandy surface (which does not mean a dirt road).	Go to step **2**.
2	**CHECK INSTALLATION OF VDCCM&H/U.**	Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step **3**.	Repair the defective part. Go to step **3**. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-4, VDC CONTROL MODULE & HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.>
3	**CHECK OUTPUT OF YAW RATE & G SENSOR WITH SUBARU SELECT MONITOR.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Select “Current Data Display & Save” on the Subaru Select Monitor. 4) Read the «Yaw Rate Sensor» displayed on display.	Is the reading indicated on monitor display –4 — 4 deg/s?	Go to step **4**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4	**CHECK OUTPUT OF STEERING ANGLE SENSOR WITH SUBARU SELECT MONITOR.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Select “Current Data Display & Save” on the Subaru Select Monitor. 4) Read the «Steering Angle Sensor» displayed on display.	Is the reading indicated on monitor display –10 — 10°?	Go to step **5**.	Perform the centering adjustment of steering wheel.

Step		Check	Yes	No
5	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-22, Inspection Mode.> 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

AH:DTC C1732 LATERAL G SENSOR ABNORMAL

DTC DETECTING CONDITION:

- A fault is detected if the sensor signal value is not correct.
- A fault is detected if the steering angle sensor signal / yaw rate sensor signal change while the lateral G sensor signal indicates a constant value.
- A fault is detected if the communication status of lateral G sensor is abnormal.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

	Step	Check	Yes	No
1	**CHECK INSTALLATION OF VDCCM&H/U.**	Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step **2**.	Repair the defective part. Go to step **2**. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-4, VDC CONTROL MODULE & HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.>
2	**CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.** 1) Park the vehicle straight on a level surface. 2) Connect Subaru Select Monitor, and select “Current Data Display & Save”. 3) Read the «Steering Angle Sensor» displayed on display.	Is the indicated reading of the steering angle sensor on the monitor display –10° — 10°?	Go to step **3**.	Check the installation of steering angle sensor.
3	**CHECK OUTPUT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.** 1) Park the vehicle straight on a level surface. 2) Connect Subaru Select Monitor, and select “Current Data Display & Save”. 3) Read the «Lateral G Sensor»«Longitudinal G Sensor» displayed on display.	Is the indicated reading of the lateral G sensor and longitudinal G sensor on the monitor display –2 — 2 m/s^2?	Go to step **4**.	Recheck from step 1, and if the problem is not solved, go to next. Go to step **7**.
4	**SET 0 POINT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.** 1) Select “Work Support” on Subaru Select Monitor. 2) Perform the VDC sensor midpoint setting mode. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Is 0 point setting successful?	Go to step **5**.	Recheck from step 1, and when the 0 point setting is not possible, replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

	Step	Check	Yes	No
5	**PERFORM DRIVING TEST.** <Ref. to VDC(diag)-22, Inspection Mode.>	Does the ABS warning light or VDC warning light illuminate during driving? Does ABS or VDC operate abnormally?	Recheck from step 1, and when the warning lights illuminate or improperly operate, replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK OUTPUT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.** 1) Park the vehicle on a level surface. 2) Connect Subaru Select Monitor, and select "Current Data Display & Save". 3) Read the «Lateral G Sensor»«Longitudinal G Sensor» displayed on display.	Is the indicated reading of the lateral G sensor and longitudinal G sensor on the monitor display –1.5 — 1.5 m/s^2?	It results from a temporary noise interference.	Recheck from step 1, and if the problem is not solved, replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
7	**CHECK OUTPUT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.** 1) Remove the VDCCM&H/U installation bolt and bracket. 2) Keep VDCCM&H/U in a horizontal position. 3) Connect Subaru Select Monitor, and select "Current Data Display & Save". 4) Read the «Lateral G Sensor»«Longitudinal G Sensor» displayed on display.	When the VDCCM&H/U is in a horizontal position, is the indicated reading of the lateral G sensor and longitudinal G sensor on the monitor display –1.5 — 1.5 m/s^2?	Check the bracket and brake pipe, and install VDCCM&H/U in a horizontal position to the vehicle.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

AI: DTC C1733 LONGITUDINAL G SENSOR ABNORMAL

DTC DETECTING CONDITION:

- A fault is detected if the communication status of longitudinal G sensor is abnormal.
- A fault is detected if malfunction judgment is generated by self-diagnosis test of the longitudinal G sensor.
- A fault is detected if the longitudinal G sensor signal is out of normal range.
- A fault is detected if the longitudinal G sensor compensation value is out of normal range.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

NOTE:
For the diagnostic procedure, refer to "DTC C1732 LATERAL G SENSOR ABNORMAL". <Ref. to VDC(diag)-78, DTC C1732 LATERAL G SENSOR ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AJ:DTC C1741 PRESSURE SENSOR

DTC DETECTING CONDITION:

A fault is detected if two fluid pressure signals in master cylinder are out of normal range.

TROUBLE SYMPTOM:

- VDC does not operate sometimes.
- Hill start assist does not operate sometimes.

	Step	Check	Yes	No
1	**CHECK STOP LIGHT SWITCH CIRCUIT.** Check stop light switch open circuit.	Is the stop light switch circuit OK?	Go to step **2**.	Repair the stop light switch circuit. NOTE: If there is malfunction in the stop light circuit, DTC may be recorded in the memory.
2	**CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR.** 1) Select “Current Data Display & Save” in Subaru Select Monitor. <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Master Cylinder Pressure Sensor» displayed on display.	With the brake pedal released, is the displayed value 0 — 11 bar?	Go to step **3**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	**CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR.** 1) Select “Current Data Display & Save” in Subaru Select Monitor. <Ref. to VDC(diag)-15, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Master Cylinder Pressure Sensor» displayed on display.	When the brake pedal is operated, does the master cylinder pressure sensor output value on the display changes in accordance with the brake pedal operation?	Go to step **4**.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4	**CHECK PRESSURE SENSOR.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-23, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-22, Inspection Mode.> 3) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.
5	**CHECK OTHER DTC DETECTION.**	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-42, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

AK:DTC C1811 SYSTEM FAILURE

DTC DETECTING CONDITION:
A fault is detected if VDC control status continues for 15 seconds or more.
TROUBLE SYMPTOM:
- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate.

Step		Check	Yes	No
1	**CHECK INSTALLATION OF VDCCM&H/U.**	Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step **2**.	Repair the defective part. Go to step **2**. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-4, VDC CONTROL MODULE & HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.>
2	**CHECK STEERING WHEEL.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Check the steering wheel for deviation from center.	Is the deviation from the center of steering wheel less than 5°?	Go to step **3**.	Perform the centering adjustment of steering wheel, and perform the VDC sensor midpoint setting mode. Go to step **3**. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	**CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.** 1) Adjust steering wheel to the center position. 2) Connect Subaru Select Monitor, and select “Current Data Display & Save”. 3) Read the «Steering Angle Sensor» displayed on display.	Is the indicated reading of the steering angle sensor –10° — 10°?	Go to step **4**.	Check the installation of the steering wheel and steering angle sensor, and replace the parts if necessary.
4	**CHECK OUTPUT OF SENSORS USING SUBARU SELECT MONITOR.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Connect Subaru Select Monitor, and select “Current Data Display & Save”. 4) Read output of sensors displayed on display.	Are the indicated reading of sensor outputs following values? Lateral G sensor: –2 — 2 m/s^2 Longitudinal G sensor: –2 — 2 m/s^2 Yaw rate sensor: –4 — 4 deg/s	Go to step **5**.	Recheck from step 1, and if the problem is not solved, go to next. Go to step **8**.

	Step	Check	Yes	No
5	**SET 0 POINT SETTING OF LONGITUDINAL G SENSOR USING SUBARU SELECT MONITOR.** 1) Select “Work Support” on Subaru Select Monitor. 2) Perform the VDC sensor midpoint setting mode. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Is 0 point setting successful?	Go to step **6**.	Recheck from step 1, and when the 0 point setting is not possible, replace the VDCCM&H/U and steering angle sensor. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> <Ref. to VDC-24, Steering Angle Sensor.>
6	**PERFORM DRIVING TEST.** <Ref. to VDC(diag)-22, Inspection Mode.>	Does the ABS warning light or VDC warning light illuminate during driving? Does ABS or VDC operate abnormally?	Recheck from step 1, and when the warning lights illuminate or improperly operate, replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK OUTPUT OF SENSORS USING SUBARU SELECT MONITOR.** 1) Park the vehicle on a level surface. 2) Connect Subaru Select Monitor, and select “Current Data Display & Save”. 3) Read output of sensors displayed on display.	Are the indicated reading of sensor outputs following values? Lateral G sensor: –2 — 2 m/s^2 Longitudinal G sensor: –2 — 2 m/s^2 Yaw rate sensor: –4 — 4 deg/s	It results from a temporary noise interference.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
8	**CHECK OUTPUT OF SENSORS USING SUBARU SELECT MONITOR.** 1) Remove the VDCCM&H/U installation bolt and bracket. 2) Keep VDCCM&H/U in a horizontal position. 3) Connect Subaru Select Monitor, and select “Current Data Display & Save”. 4) Read output of sensors displayed on display.	When VDCCM&H/U is in a horizontal position, are the indicated reading of sensor outputs following values? Lateral G sensor: –1.5 — 1.5 m/s^2 Longitudinal G sensor: –1.5 — 1.5 m/s^2 Yaw rate sensor: –4 — 4 deg/s	Check the bracket and brake pipe, and install VDCCM&H/U in a horizontal position to the vehicle.	Replace the VDCCM&H/U. <Ref. to VDC-8, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

13.General Diagnostic Table

A: INSPECTION

Symptoms		Main probable cause	Other probable cause
Poor brake performance	Long braking/stopping distance	• VDCCM&H/U • Brake pad • Aeration to brake line • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Master cylinder • Brake caliper • Disc rotor • Brake pipe • Brake booster
	Wheel lock	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Incorrect wiring or piping connections	• Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake caliper • Brake pipe
	Brake drag	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Master cylinder • Brake caliper • Parking brake • Axle and wheels • Brake pedal play	• Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake pad • Brake pipe
	Long brake pedal stroke	• Aeration to brake line • Brake pedal play	• VDCCM&H/U • Master cylinder • Brake caliper • Brake pad • Brake pipe • Brake booster
	Vehicle vertical pitching	• VDCCM&H/U • Road surface (uneven) • Suspension play or fatigue (reduced damping) • Incorrect wiring or piping connections	• Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U.
Poor brake performance	Unstable or uneven braking	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Brake caliper • Brake pad • Road surface (uneven) • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Master cylinder • Disc rotor • Brake pipe • Axle and wheels • Road with crowns or banks • Suspension play or fatigue (reduced damping)

General Diagnostic Table

Symptoms		Main probable cause	Other probable cause
Vibration or noise • When braking suddenly • When accelerating suddenly • While driving on a slippery road	Excessive brake pedal vibration	• Road surface (uneven) • Incorrect wiring or piping connections	• VDCCM&H/U • Brake booster • Suspension play or fatigue (reduced damping)
	Noise from VDCH/U	• VDCCM&H/U (mount bushing) • Defective ABS wheel speed sensor or sensor gap • Brake pipe	• VDCCM&H/U • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U.
	Noise from the front side of vehicle	• VDCCM&H/U (mount bushing) • Defective ABS wheel speed sensor or sensor gap • Master cylinder • Brake caliper • Brake pad • Disc rotor • Brake pipe • Brake booster • Suspension play or fatigue (reduced damping)	• Axle and wheels • Tire specifications, tire wear and air pressures
	Noise from the rear side of vehicle	• Defective ABS wheel speed sensor or sensor gap • Brake caliper • Brake pad • Disc rotor • Parking brake • Brake pipe • Suspension play or fatigue (reduced damping)	• Axle and wheels • Tire specifications, tire wear and air pressures
Engine does not accelerate or goes into a stall when accelerating suddenly or driving on a slippery surface.		• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Master cylinder • Brake caliper • Parking brake • Incorrect wiring or piping	• Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake pad • Brake pipe

General Diagnostic Table

Symptoms		Main probable cause	Other probable cause
Poor change-direction-operation stability of TCS	Deviation to right or left direction	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake caliper • Brake pad • Wheel alignment • Road surface (uneven) • Road with crowns or banks • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Disc rotor • Brake pipe • Axle and wheels • Suspension play or fatigue (reduced damping)
	Vehicle spin	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake pad • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Brake caliper • Brake pipe
Steering wheel drag while driving		• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Incorrect wiring or piping connections • Power steering system	• Brake caliper • Brake pad • Disc rotor • Wheel alignment • Road surface (uneven) • Road with crowns or banks • Suspension play or fatigue (reduced damping) • Tire specifications, tire wear and air pressures
VDC operates while driving normally.		• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Wheel alignment • Road surface (uneven) • Road with crowns or banks • Suspension play or fatigue (reduced damping) • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections • Power steering system	
VDC OFF indicator light does not illuminate when the VDC OFF switch is depressed. NOTE: When pressing VDC OFF switch for 30 seconds or more, VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the previous status is restored.		• Harness • Combination meter • VDC OFF switch

- Except for STI model

Item		Specification	
Size		17-inch	
Type		Floating 2-POT piston type Ventilated disc	
Effective cylinder diameter	mm (in)	42.8 × 2 (1.685 × 2)	
Pad size (Length × Width × Thickness)	mm (in)	130.0 × 53.5 × 11.0 (5.118 × 2.106 × 0.433)	
Pad thickness	mm (in)	Standard	11 (0.43)
		Limit	1.5 (0.059)
Effective disc diameter	mm (in)	261 (10.28)	
Rotor size (O.D. × Thickness)	mm (in)	30 × 316 (1.18 × 12.44)	
Disc thickness	mm (in)	Standard	30 (1.18)
		Limit	28 (1.10)
Disc runout	mm (in)	Standard	—
		Limit	0.05 (0.0020)
Clearance adjustment		Automatic adjustment	

- STI model

Item		Specification	
Size		17-inch	
Type		Opposed 4-POT piston type Ventilated disc (Brembo)	
Effective cylinder diameter	mm (in)	40.0 × 2, 46.0 × 2 (1.575 × 2, 1.811 × 2)	
Pad size (Length × Width × Thickness)	mm (in)	131.8 × 60.5 × 8.9 (5.189 × 2.382 × 0.35)	
Pad thickness	mm (in)	Standard	8.9 (0.35)
		Limit	1.2 (0.047)
Effective disc diameter	mm (in)	268 (10.55)	
Rotor size (O.D. × Thickness)	mm (in)	30 × 326 (1.18 × 12.83)	
Disc thickness	mm (in)	Standard	30 (1.18)
		Limit	28 (1.10)
Disc runout	mm (in)	Standard	—
		Limit	0.075 (0.0030)
Clearance adjustment		Automatic adjustment	

2. REAR DISC BRAKE

- Except for STI model

Item		Specification	
Size		15-inch	
Type		Floating 1-POT piston type Solid disc	
Effective cylinder diameter	mm (in)	38.1 (1.500)	
Pad size (Length × Width × Thickness)	mm (in)	92.0 × 33.0 × 9.0 (3.622 × 1.299 × 0.354)	
Pad thickness	mm (in)	Standard	9.0 (0.354)
		Limit	1.5 (0.059)
Effective disc diameter	mm (in)	250 (9.84)	
Rotor size (O.D. × Thickness)	mm (in)	10 × 286 (0.79 × 12.44)	
Disc thickness	mm (in)	Standard	10 (0.39)
		Limit	8.5 (0.335)
Disc runout	mm (in)	Standard	—
		Limit	0.05 (0.0020)
Clearance adjustment		Automatic adjustment	

- STI model

Item		Specification	
Size		17-inch	
Type		Opposed 2-POT piston type Ventilated disc (Brembo)	
Effective cylinder diameter	mm (in)	40.0 × 2 (1.575 × 2)	
Pad size (Length × Width × Thickness)	mm (in)	76.8 × 45.0 × 9.0 (3.024 × 1.772 × 0.354)	
Pad thickness	mm (in)	Standard	9.0 (0.354)
		Limit	1.2 (0.047)
Effective disc diameter	mm (in)	268 (10.55)	
Rotor size (O.D. × Thickness)	mm (in)	20 × 316 (0.79 × 12.44)	
Disc thickness	mm (in)	Standard	20 (0.79)
		Limit	18 (0.71)
Disc runout	mm (in)	Standard	—
		Limit	0.070 (0.0028)
Clearance adjustment		Automatic adjustment	

3. MASTER CYLINDER

Item		Specification
Type		Tandem
Effective diameter	mm (in)	25.40 (1.00)
Reservoir type		Sealed type
Brake fluid reservoir capacity	cm^3 (cu in)	240 (14.64)

4. BRAKE BOOSTER

Item		Specification	
Type		Vacuum suspended	
Effective diameter	mm (in)	208 + 229 (8.19 + 9.02)	
Brake fluid pressure		Brake pedal force N (kgf, lbf)	Fluid pressure kPa (kgf/cm^2, psi)
When engine is stopped		147 (15, 33)	471 (4.8,68.3)
		294 (30, 66)	1,385 (14.1, 200.8)
When engine is running and vacuum pressure is at 66.7 kPa (500 mmHg, 19.69 inHg)		147 (15, 33)	4,880 (49.8, 707.6)
		294 (30, 66)	9,750 (99.4, 1413.7)

5. BRAKE LINE, BRAKE PEDAL AND BRAKE FLUID

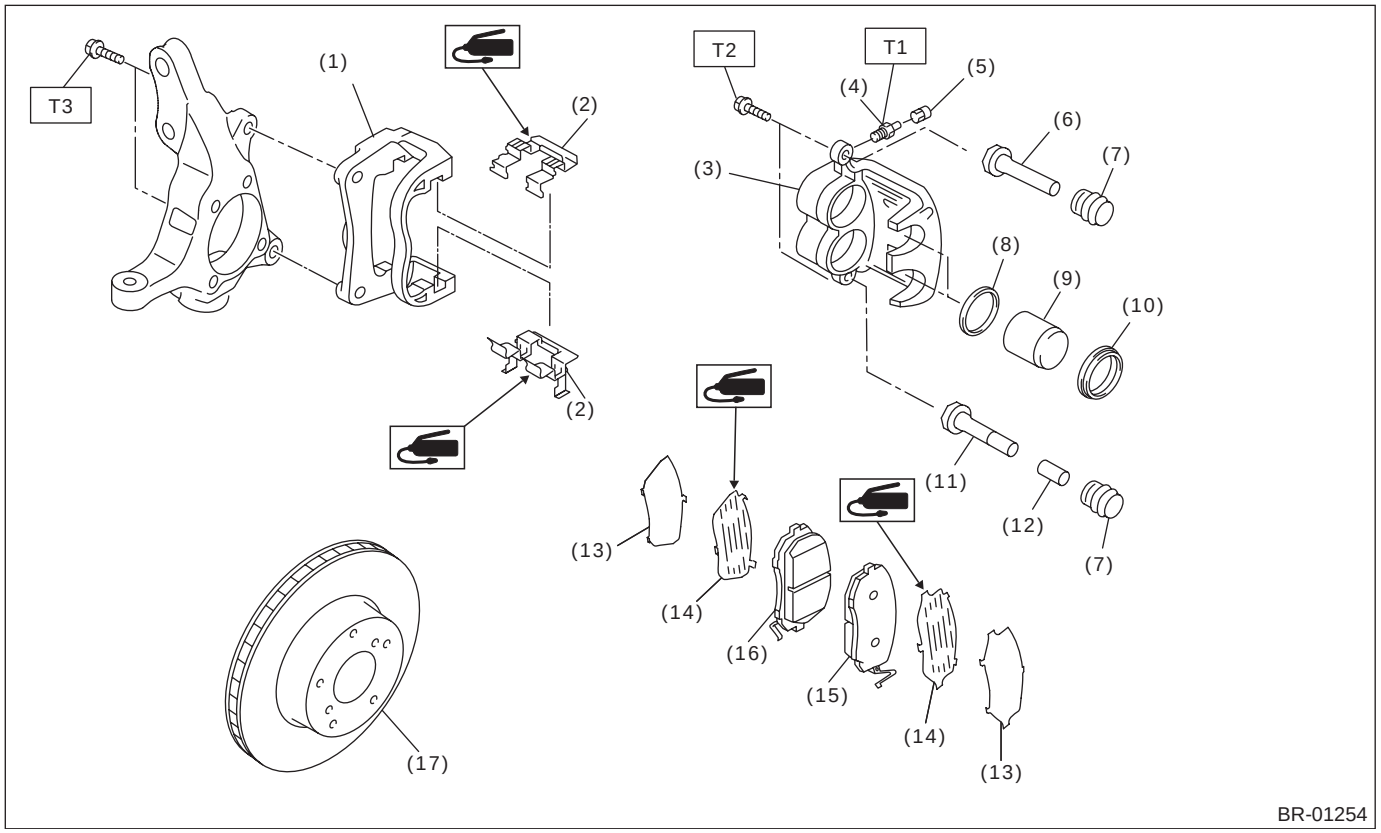
CAUTION:
- **Avoid mixing brake fluid of different brands to prevent fluid performance from degrading.**
- **When filling with brake fluid, be careful not to allow any dust to enter the reservoir.**
- **Use new SUBARU genuine brake fluid when replacing or refilling the fluid.**

Item		Specification
Brake line		Dual circuit system
Brake pedal	Type	Suspended type
	Free play mm (in)	0.5 — 2 (0.020 — 0.079) [When pulling the brake pedal upward with a force of less than 10 N (1 kgf, 2 lbf)]
Brake fluid		FMVSS No. 116, DOT3, or DOT4

B: COMPONENT

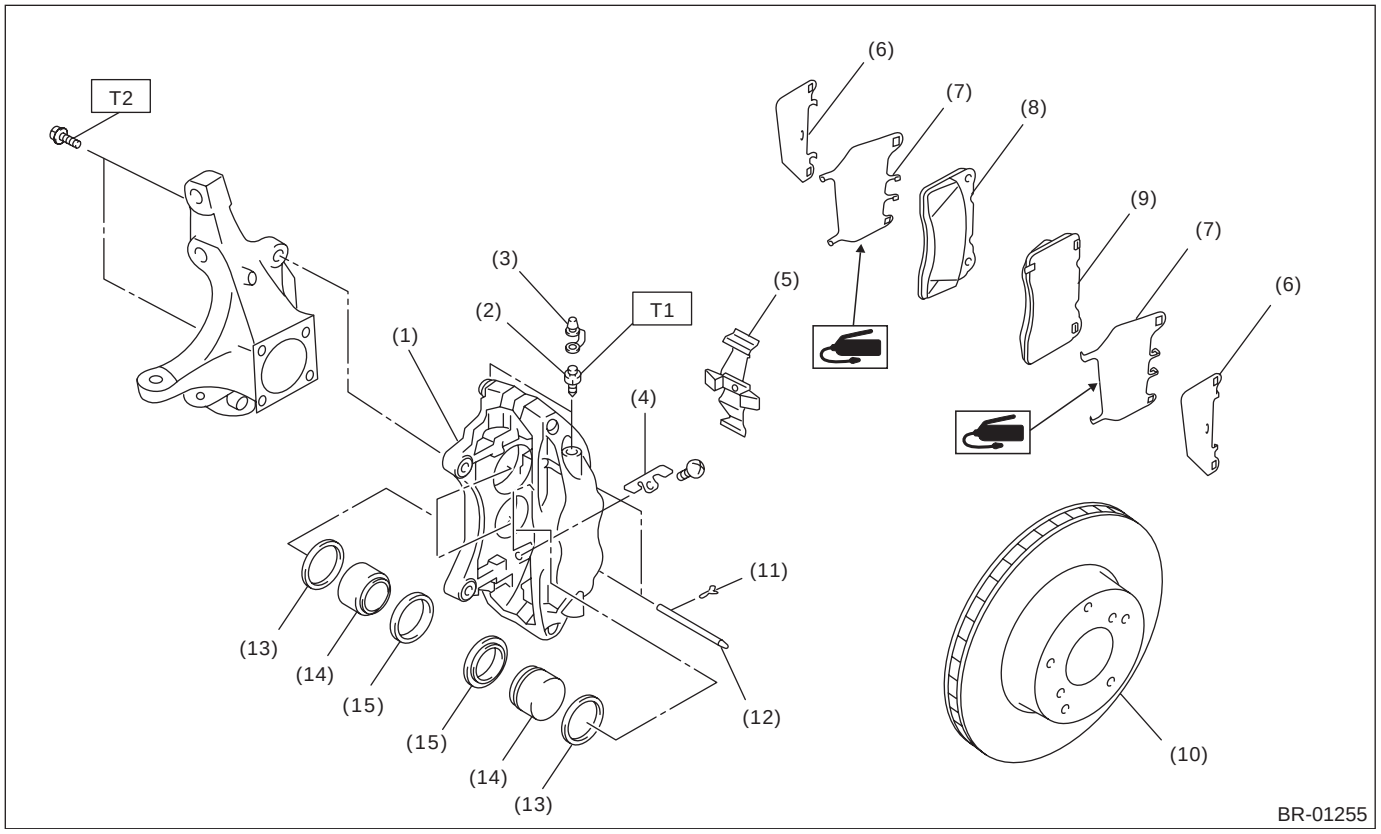
1. FRONT DISC BRAKE

- Except for STI model



(1)	Support - front disc brake	(9)	Piston - disc brake	(17)	Disc rotor (ventilated type)
(2)	Pad clip - front brake	(10)	Piston boot		
(3)	Caliper body	(11)	Lock pin - front brake (silver)	***Tightening torque: N·m (kgf-m, ft-lb)***	
(4)	Bleeder - screw	(12)	Lock pin - bushing	***T1:***	***8 (0.8, 5.9)***
(5)	Cap - bleeder	(13)	Shim - disc brake front outer	***T2:***	***27 (2.8, 20.3)***
(6)	Guide pin - front brake (black)	(14)	Shim - disc brake front inner	***T3:***	***80 (8.2, 59.0)***
(7)	Pin boot	(15)	Pad - disc brake front outer		
(8)	Piston seal	(16)	Pad - disc brake front inner		

- STI model

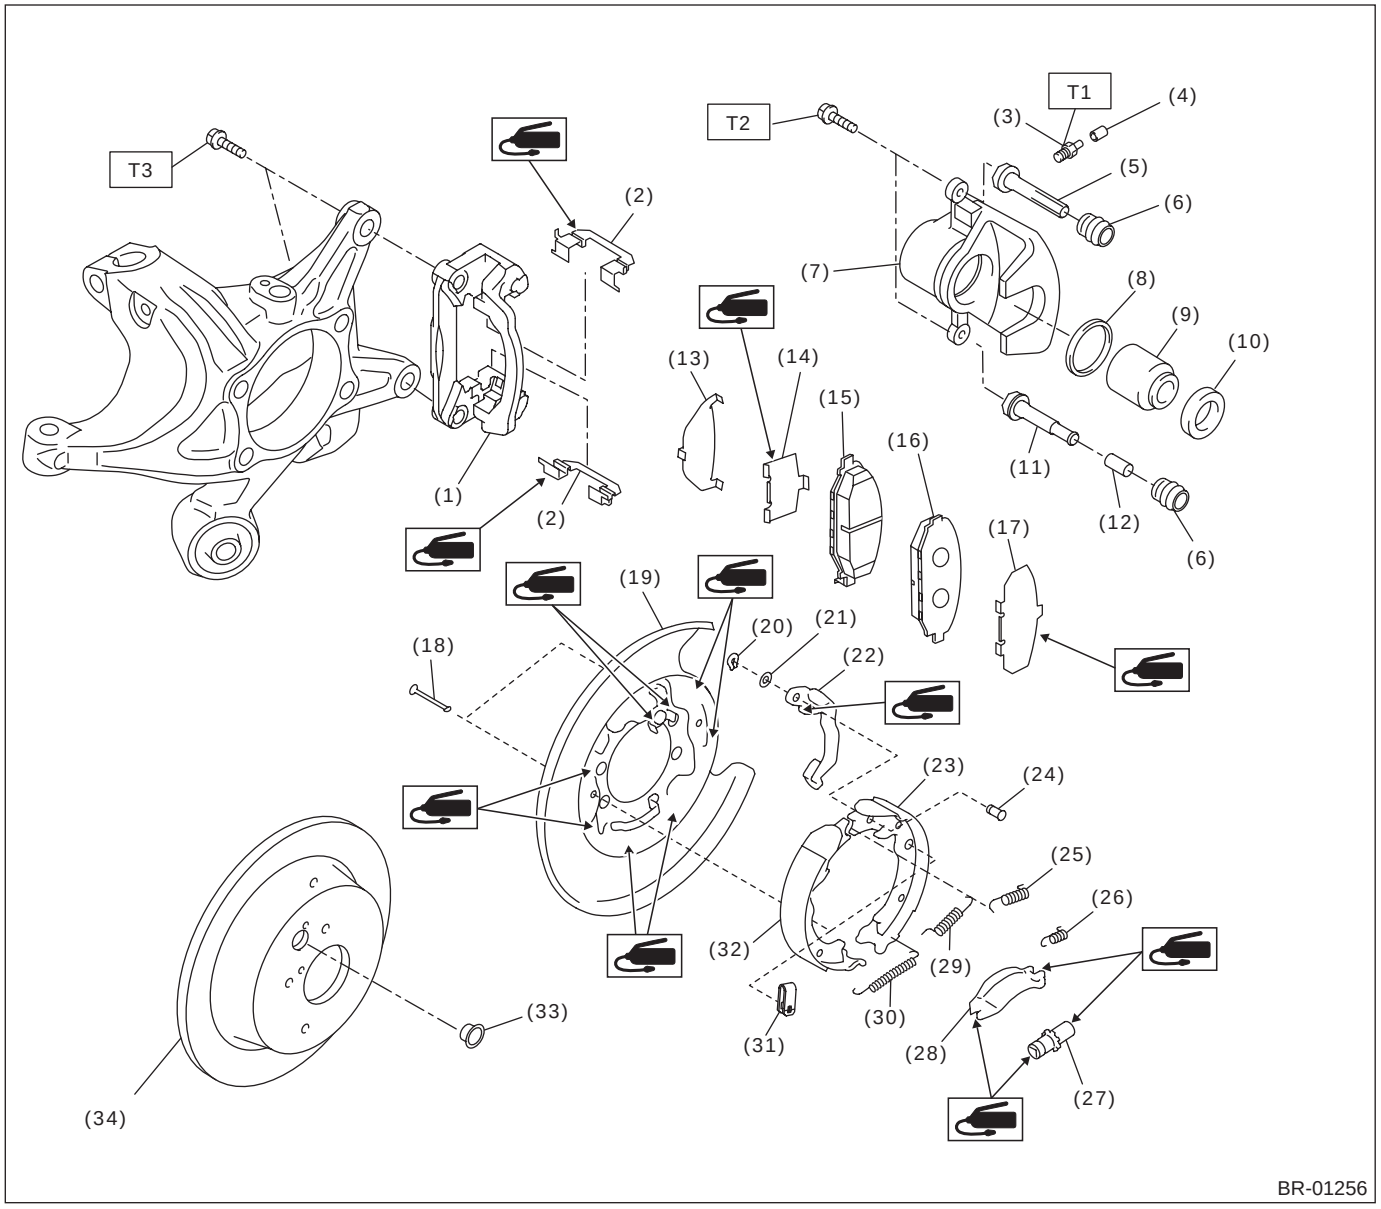


(1) Caliper body
(2) Bleeder - screw
(3) Cap - bleeder
(4) Guide plate
(5) Cross spring
(6) Shim - disc brake front outer
(7) Shim - disc brake front inner
(8) Pad - disc brake front inner
(9) Pad - disc brake front outer
(10) Disc rotor (ventilated type)
(11) Clip - slide pin
(12) Pin - disc brake
(13) Piston seal
(14) Piston - disc brake
(15) Piston boot

Tightening torque: N·m (kgf-m, ft-lb)
T1: 20 (2.0, 14.8)
T2: 155 (15.8, 114.3)

2. REAR DISC BRAKE

- Except for STI model



(1)	Support - rear disc brake	(14)	Shim - disc brake rear inner	(27)	Adjuster ASSY - rear brake
(2)	Pad clip - rear brake	(15)	Pad - disc brake rear inner	(28)	Strut - brake
(3)	Bleeder - screw	(16)	Pad - disc brake rear outer	(29)	Spring - primary shoe return
(4)	Cap - bleeder	(17)	Shim - disc brake rear outer and inner	(30)	Spring - adjuster
(5)	Guide pin - rear brake (black)	(18)	Pin - shoe hold-down	(31)	Spring - shoe clamp
(6)	Pin boot	(19)	Back plate - rear brake	(32)	Parking brake shoe (primary)
(7)	Caliper body	(20)	Retainer - rear brake	(33)	Adjusting hole cover
(8)	Piston seal	(21)	Spring washer - rear brake	(34)	Disc rotor (solid type)
(9)	Piston - disc brake	(22)	Parking lever - rear		
(10)	Piston boot	(23)	Parking brake shoe (secondary)		
(11)	Lock pin - rear brake (silver)	(24)	Pin - parking lever		
(12)	Lock pin - bushing	(25)	Spring - secondary shoe return		
(13)	Shim - disc brake rear outer	(26)	Spring - strut		

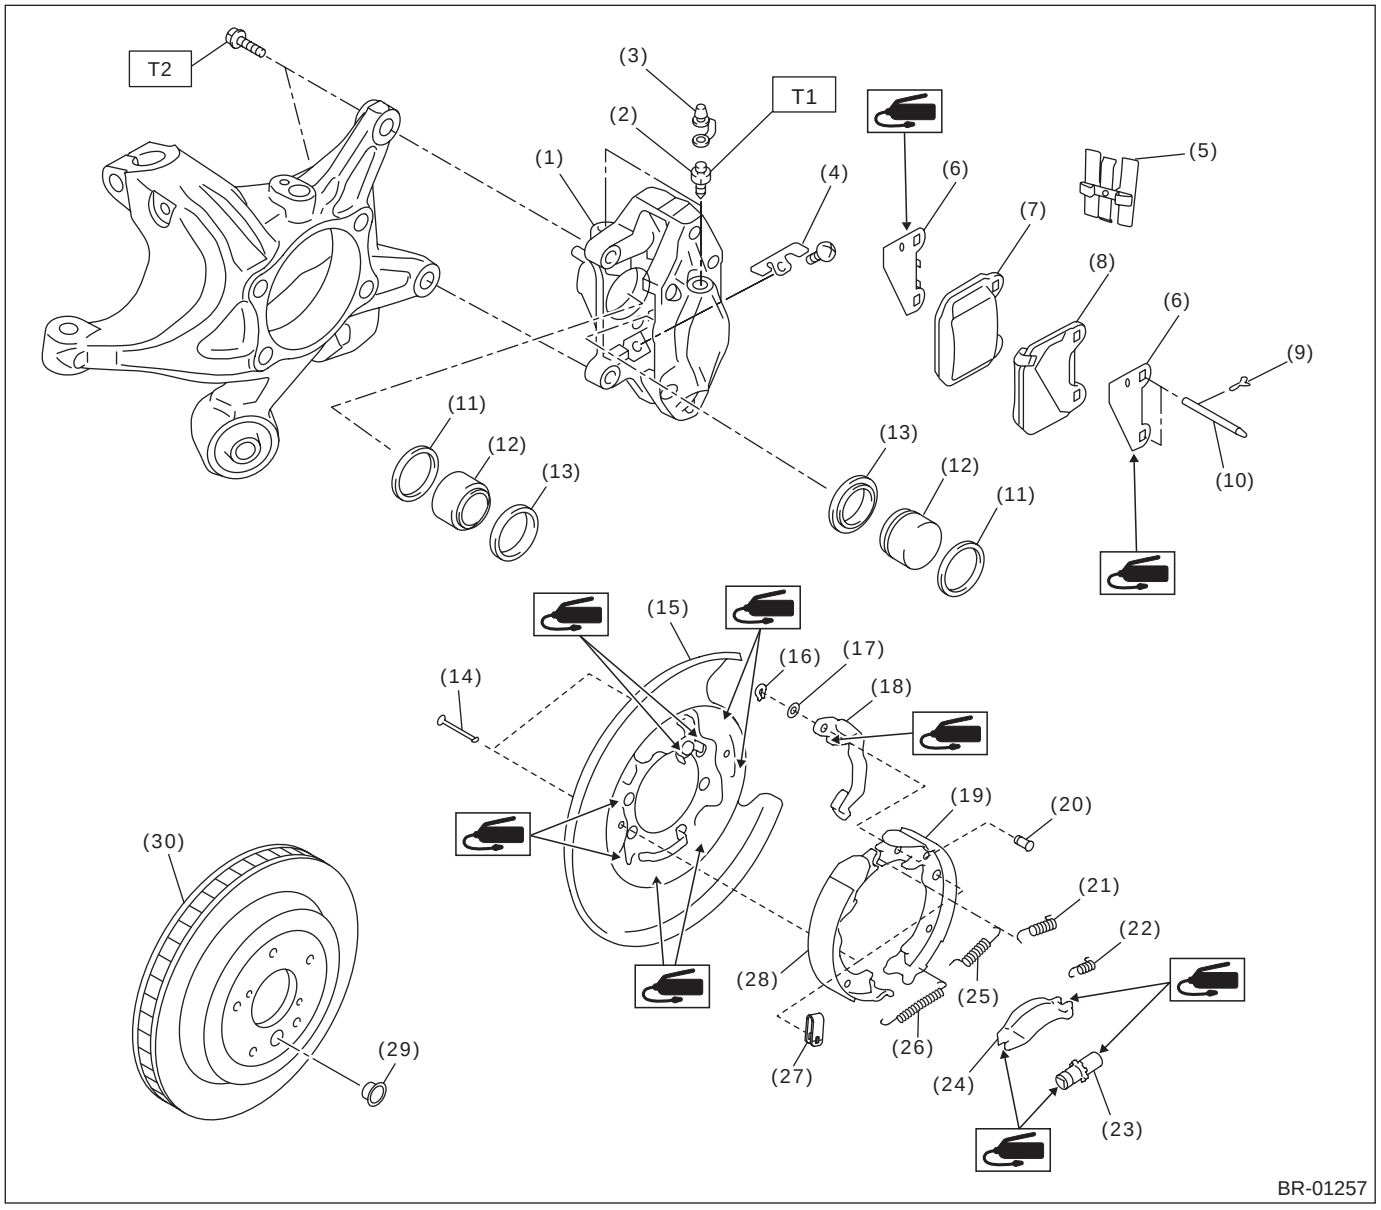
Tightening torque: N·m (kgf-m, ft-lb)

T1: 8 (0.8, 5.9)

T2: 27 (2.8, 19.9)

T3: 66 (6.7, 48.7)

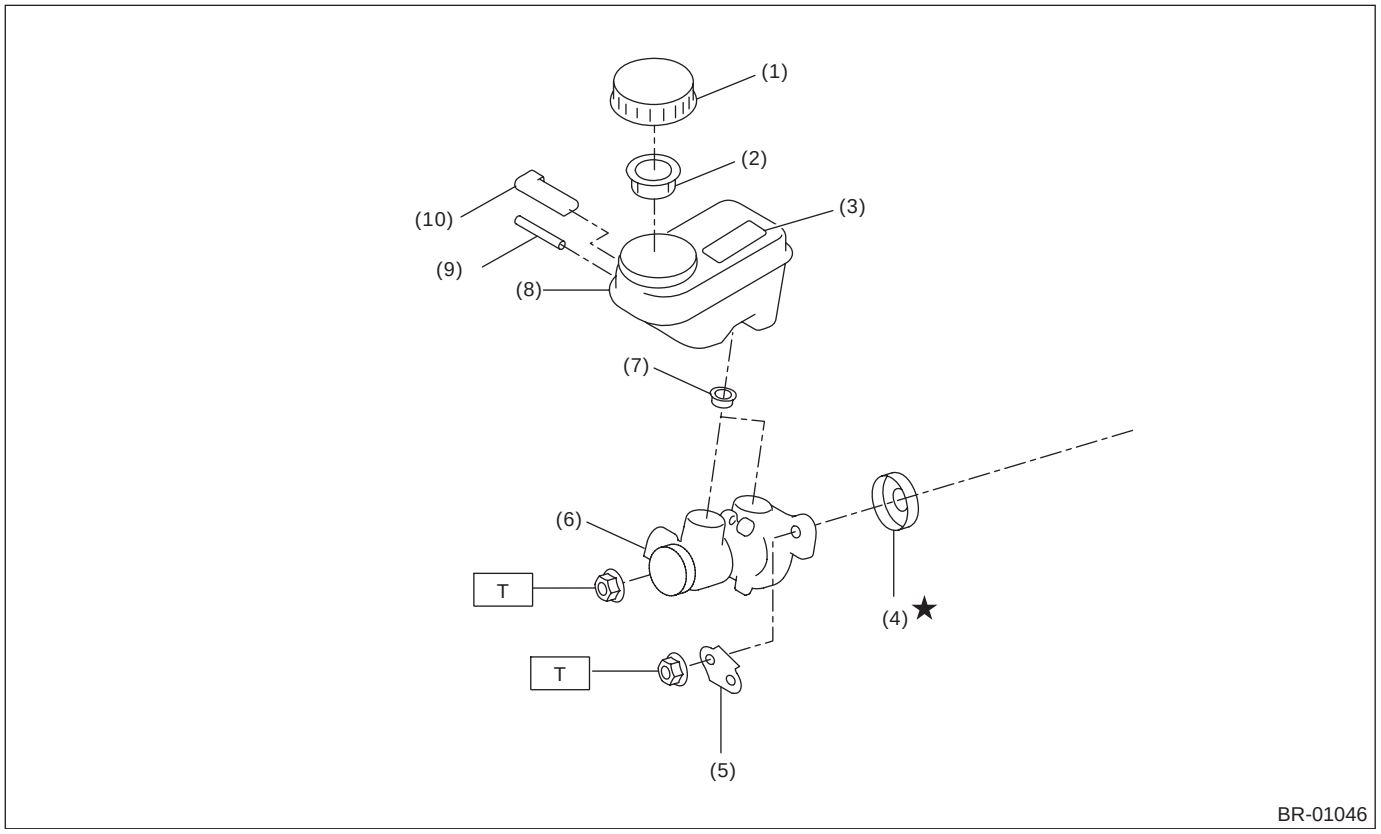
- STI model



(1) Caliper body
(2) Bleeder - screw
(3) Cap - bleeder
(4) Guide plate
(5) Cross spring
(6) Shim - disc brake rear outer and inner
(7) Pad - disc brake rear inner
(8) Pad - disc brake rear outer
(9) Clip - slide pin
(10) Pin - disc brake
(11) Piston seal
(12) Piston - disc brake
(13) Piston boot
(14) Pin - shoe hold-down
(15) Back plate - rear brake
(16) Retainer - rear brake
(17) Spring washer - rear brake
(18) Parking lever - rear
(19) Parking brake shoe (secondary)
(20) Pin - parking lever
(21) Spring - secondary shoe return
(22) Spring - strut
(23) Adjuster ASSY - rear brake
(24) Spring - strut
(25) Spring - primary shoe return
(26) Spring - adjuster
(27) Spring - shoe clamp
(28) Parking brake shoe (primary)
(29) Adjusting hole cover
(30) Disc rotor (solid type)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 20 (2.0, 14.8)
T2: 65 (6.6, 47.9)

3. MASTER CYLINDER

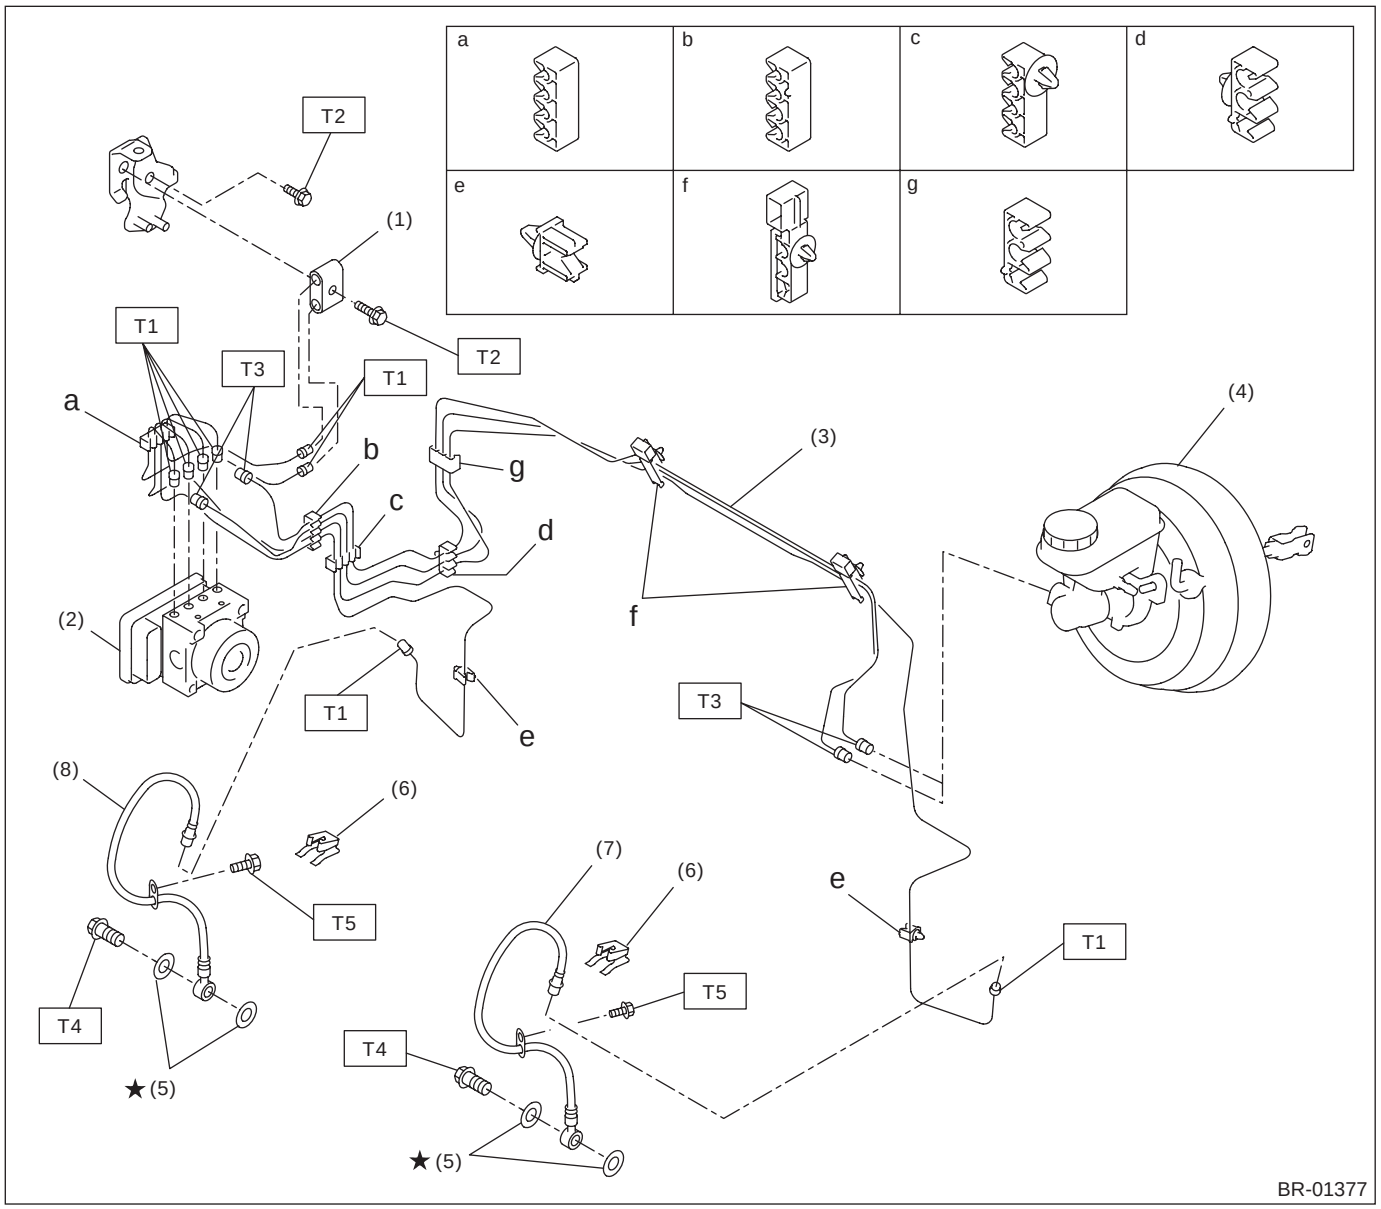


(1)	Cap - reservoir tank	(6)	Cylinder body ASSY
(2)	Filter - master cylinder	(7)	Seal
(3)	Caution label (model with caution label)	(8)	Reservoir tank
(4)	Seal sub ASSY	(9)	Pin
(5)	Bracket - master cylinder	(10)	Level - indicator

Tightening torque: N·m (kgf-m, ft-lb)

T: 13 (1.3, 9.6)

4. FRONT BRAKE PIPES AND HOSES



(1)	Connector - two-way	(5)	Gasket
(2)	VDC control module and hydraulic control unit (VDCCM&H/U)	(6)	Clamp
(3)	Front brake pipe ASSY	(7)	Front brake hose LH
(4)	Master cylinder ASSY	(8)	Front brake hose RH

Tightening torque: N·m (kgf-m, ft-lb)

T1: 15 (1.5, 11.1)

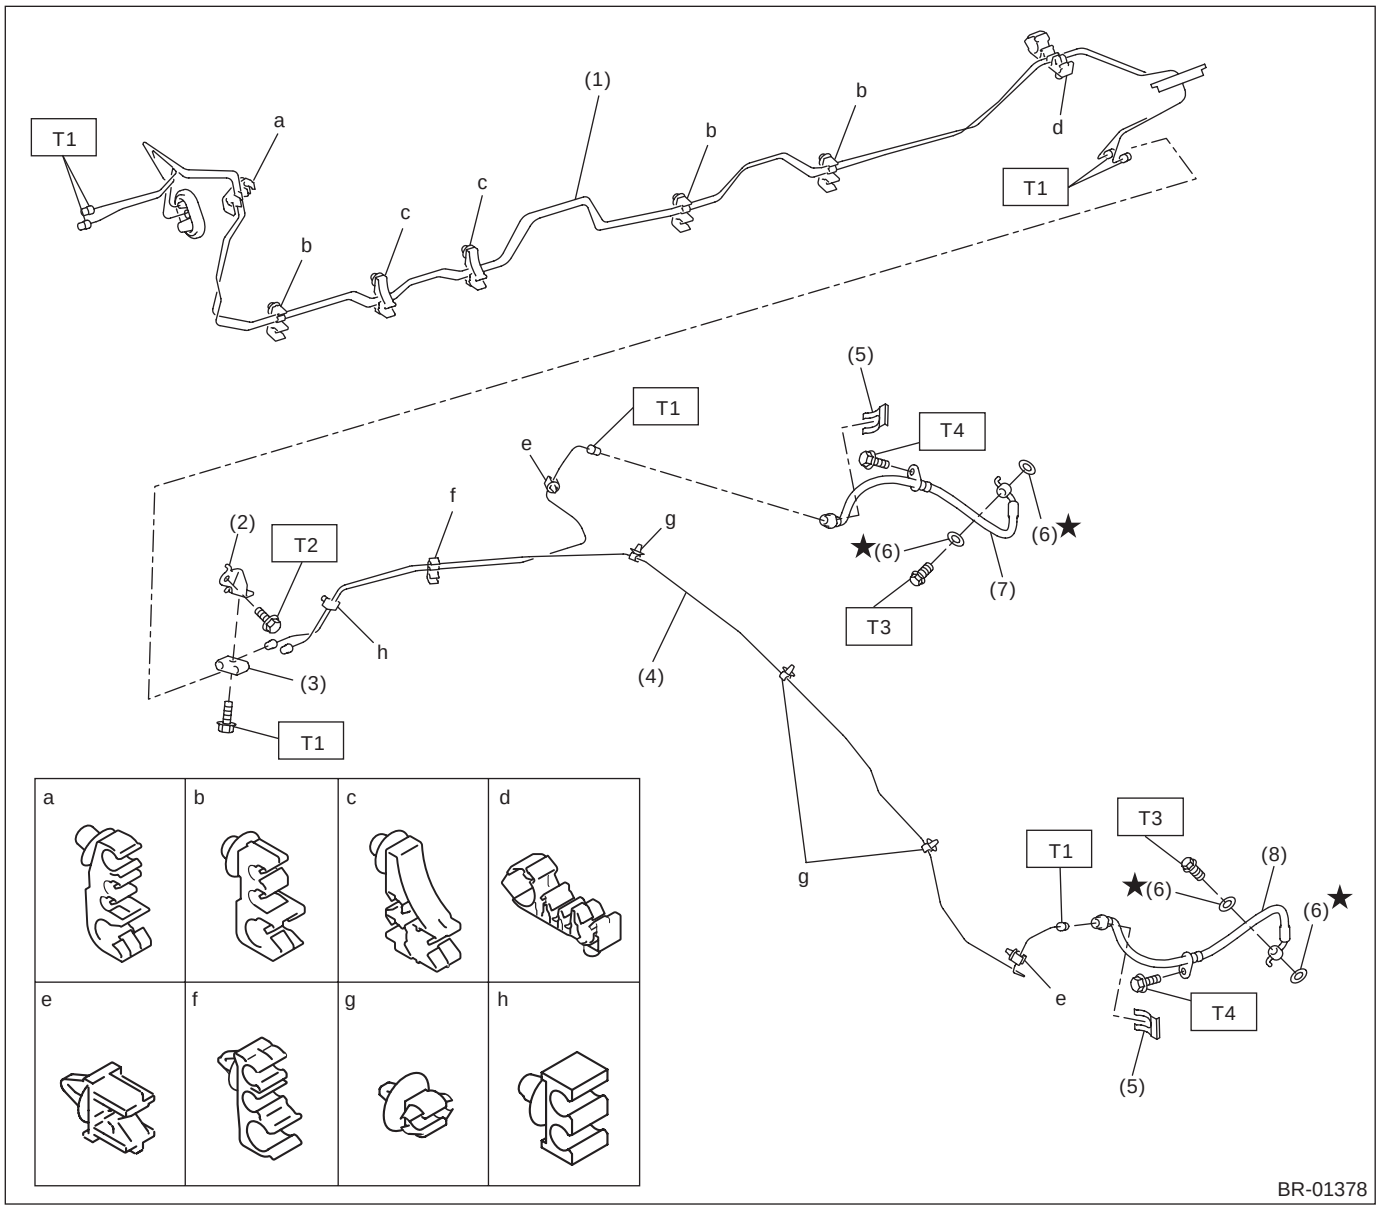
T2: 18 (1.8, 13.3)

T3: 19 (1.9, 14.0)

T4: 26 (2.7, 19.2)

T5: 33 (3.4, 24.3)

5. CENTER AND REAR BRAKE PIPES AND HOSES



(1)	Center brake pipe ASSY	(5)	Clamp
(2)	Bracket	(6)	Gasket
(3)	Connector	(7)	Rear brake hose RH
(4)	Rear brake pipe ASSY	(8)	Rear brake hose LH

Tightening torque: N·m (kgf-m, ft-lb)

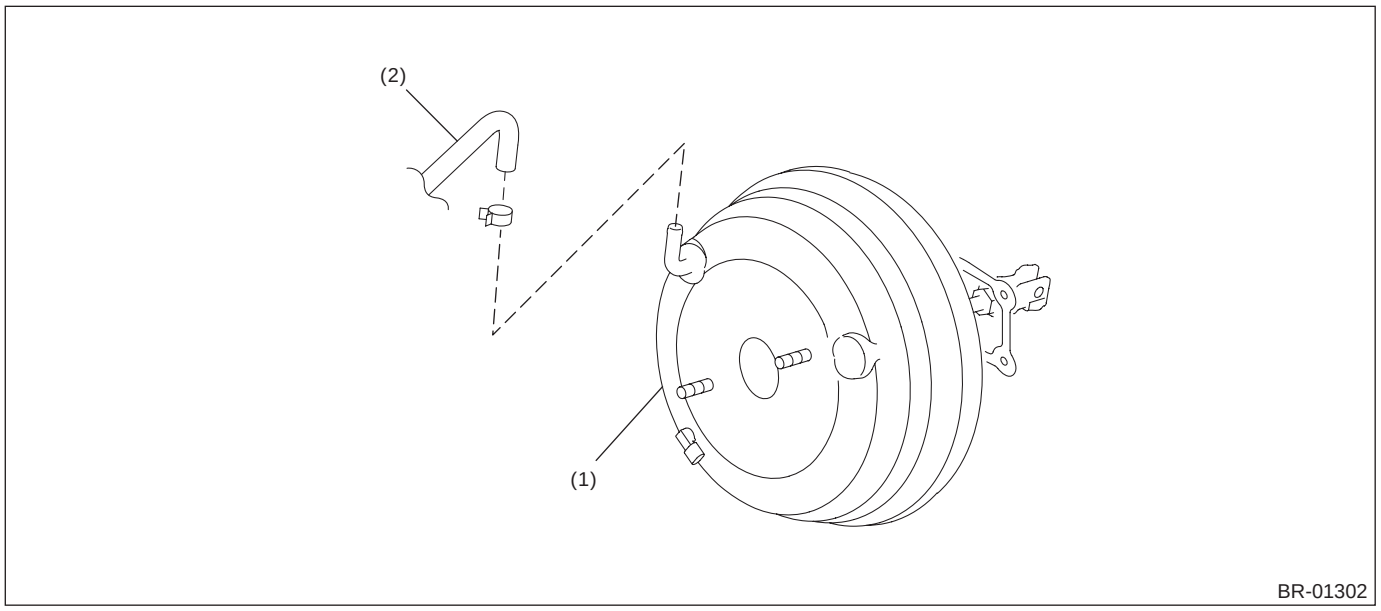
T1: 15 (1.5, 11.1)

T2: 18 (1.8, 13.3)

T3: 26 (2.7, 19.2)

T4: 33 (3.4, 24.3)

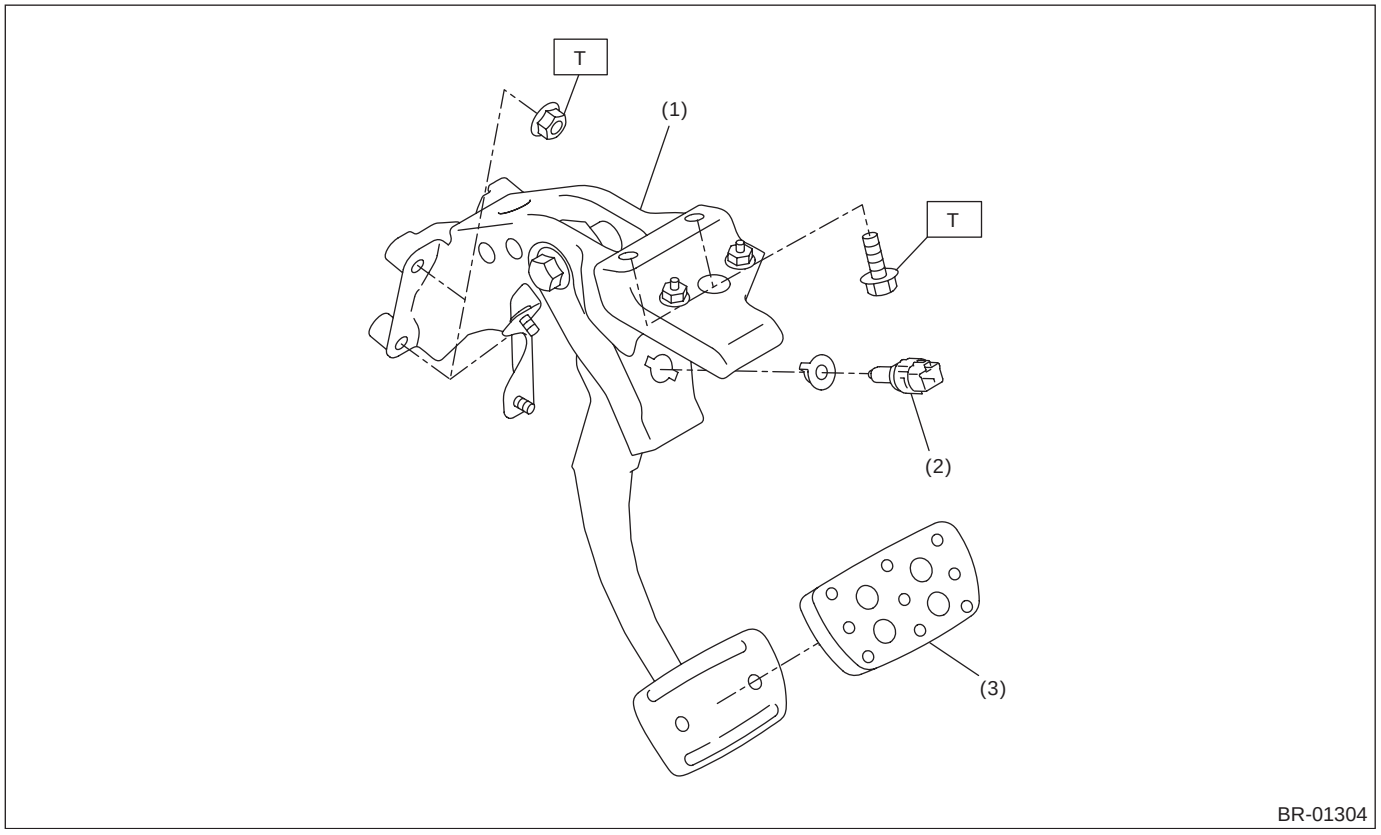
6. BRAKE BOOSTER



(1) Vacuum booster ASSY (2) Vacuum hose

7. BRAKE PEDAL

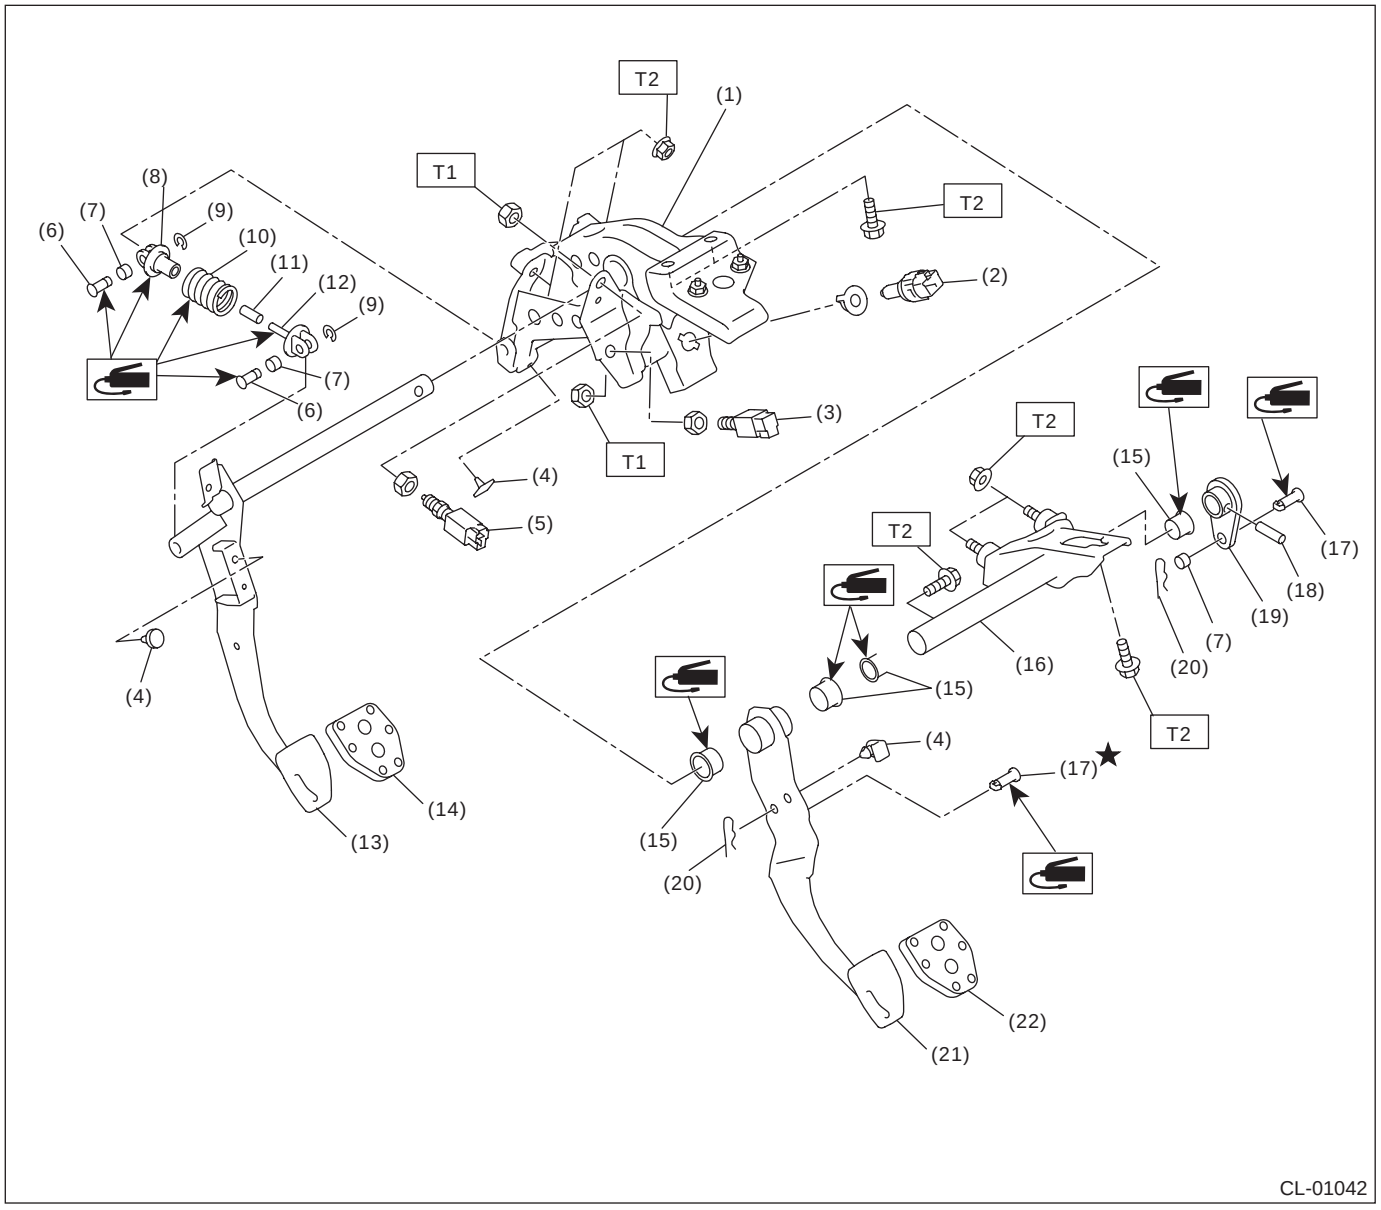
- AT model



(1) Brake pedal ASSY
(2) Stop light switch
(3) Pad - brake pedal (sport type)

Tightening torque: N·m (kgf-m, ft-lb)
T: 18 (1.8, 13.3)

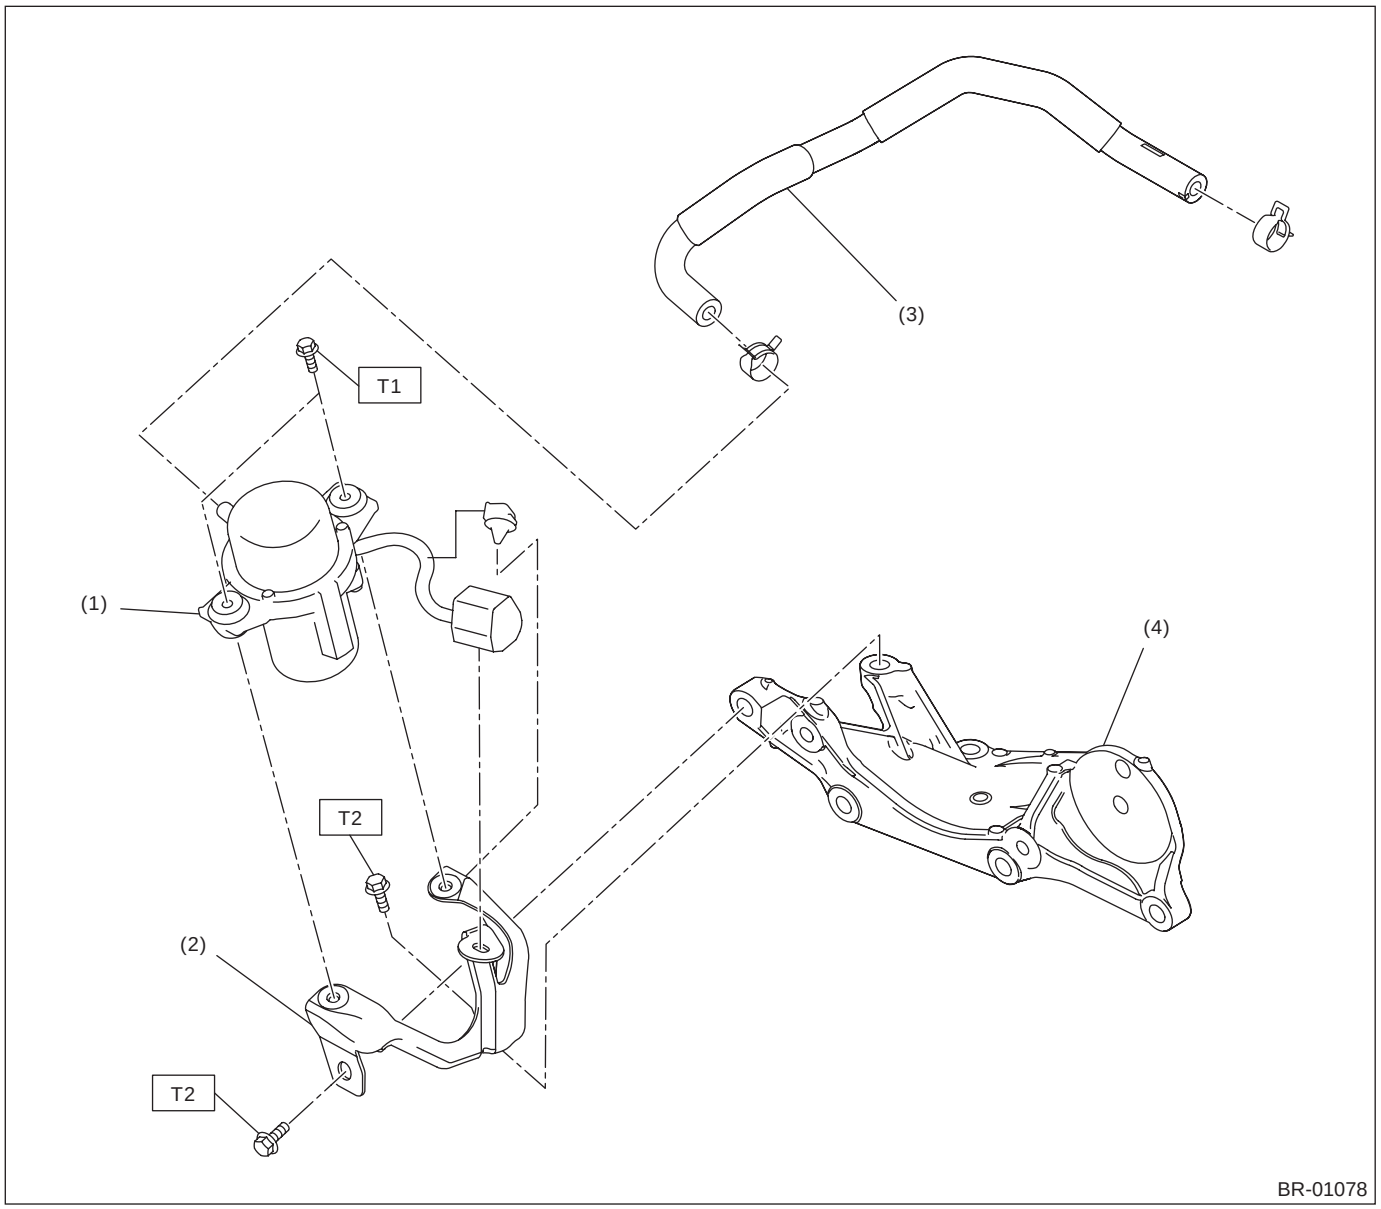
- MT model



(1) Pedal bracket
(2) Stop light switch
(3) Clutch switch
(4) Stopper
(5) Clutch start switch
(6) Clutch clevis pin
(7) Bushing C
(8) Assist rod B
(9) Clip
(10) Assist spring
(11) Assist bushing
(12) Assist rod A
(13) Clutch pedal
(14) Pad - clutch pedal (sport type)
(15) Bushing
(16) Clutch master cylinder bracket
(17) Clevis pin
(18) Spring pin
(19) Lever
(20) Snap pin
(21) Brake pedal
(22) Pad - brake pedal (sport type)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.9)
T2: 18 (1.8, 13.3)

8. BRAKE VACUUM PUMP



(1) Vacuum pump ASSY
(2) Bracket COMPL - vacuum pump
(3) Vacuum hose COMPL
(4) Bracket - generator

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.4 (0.7, 4.7)
T2: 19 (1.9, 14.0)

C: CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Apply grease onto sliding or revolving surfaces before installation.
- Be sure that the surface of brake disc, brake pad or brake shoe is free from grease or oil.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.

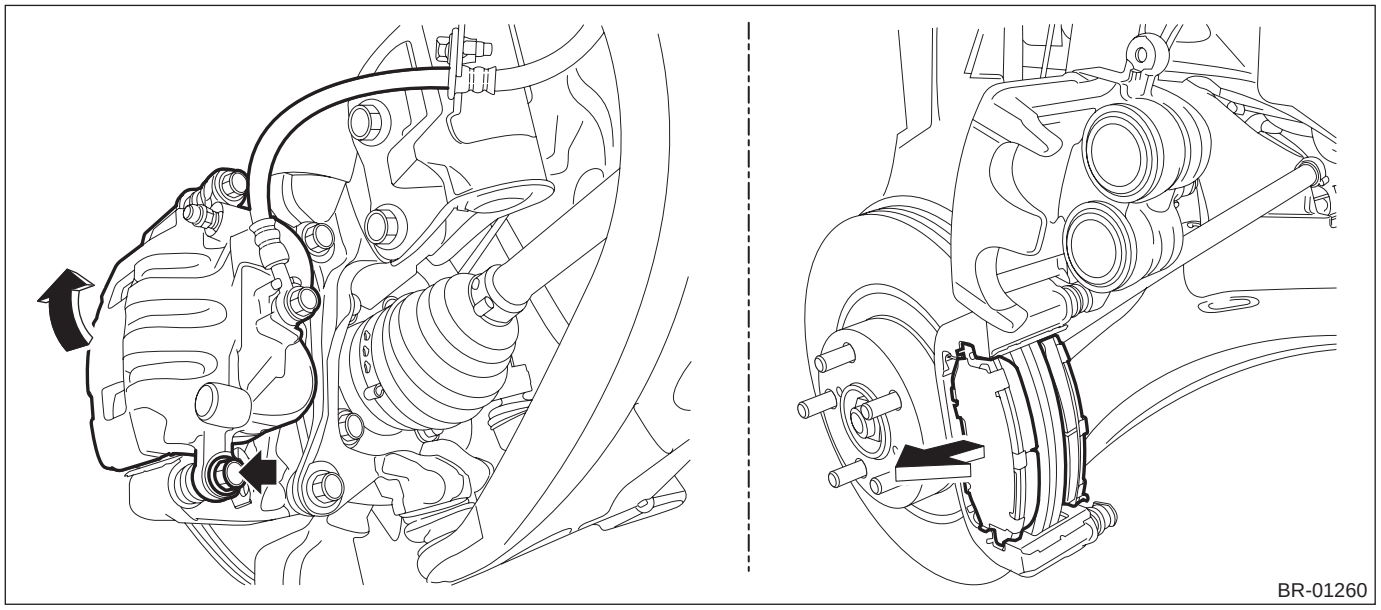
2. Front Brake Pad

A: REMOVAL

1. EXCEPT FOR STI MODEL

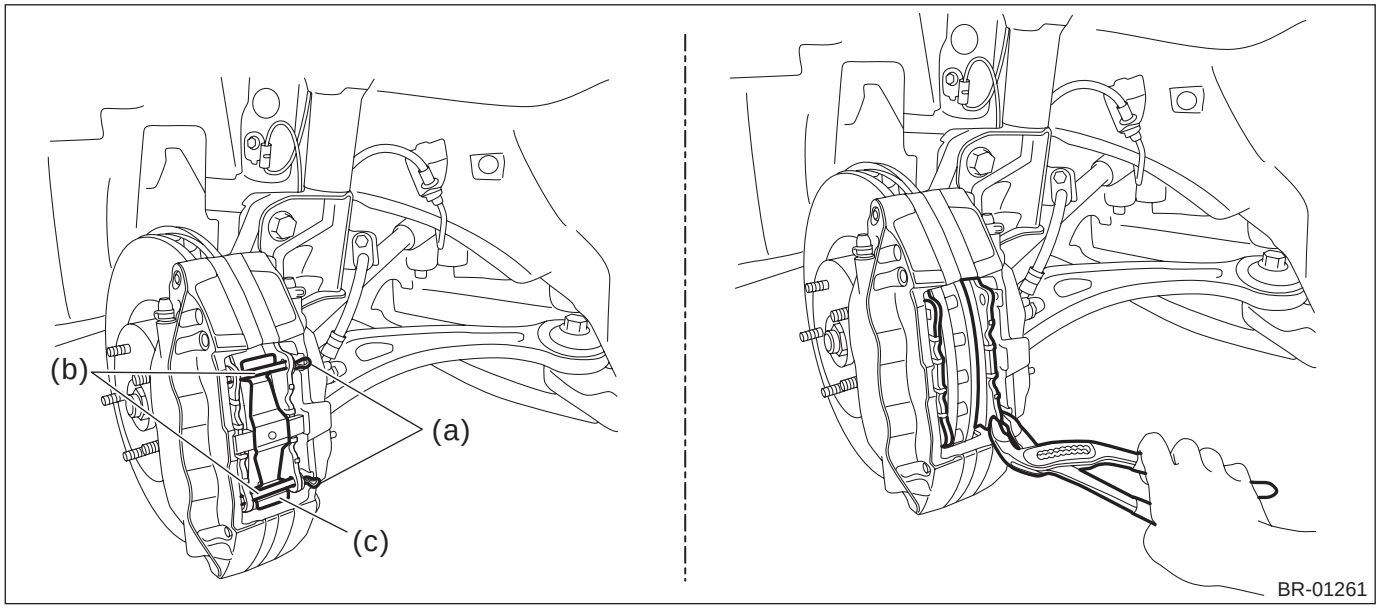
1) Lift up the vehicle, and then remove the front wheels.
2) Remove the pad - disc brake front.
   (1) Remove the caliper bolt on the lower side.
   (2) Raise the caliper body assembly and remove the pad - disc brake front.

NOTE:
Do not disconnect the brake hose from the caliper body assembly.



2. STI MODEL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the pad - disc brake front.
   (1) Remove the clip - slide pin (a), and remove the pin - disc brake (b) and cross spring (c).
   (2) While pushing back the piston with a wrench, remove the pad - disc brake front.

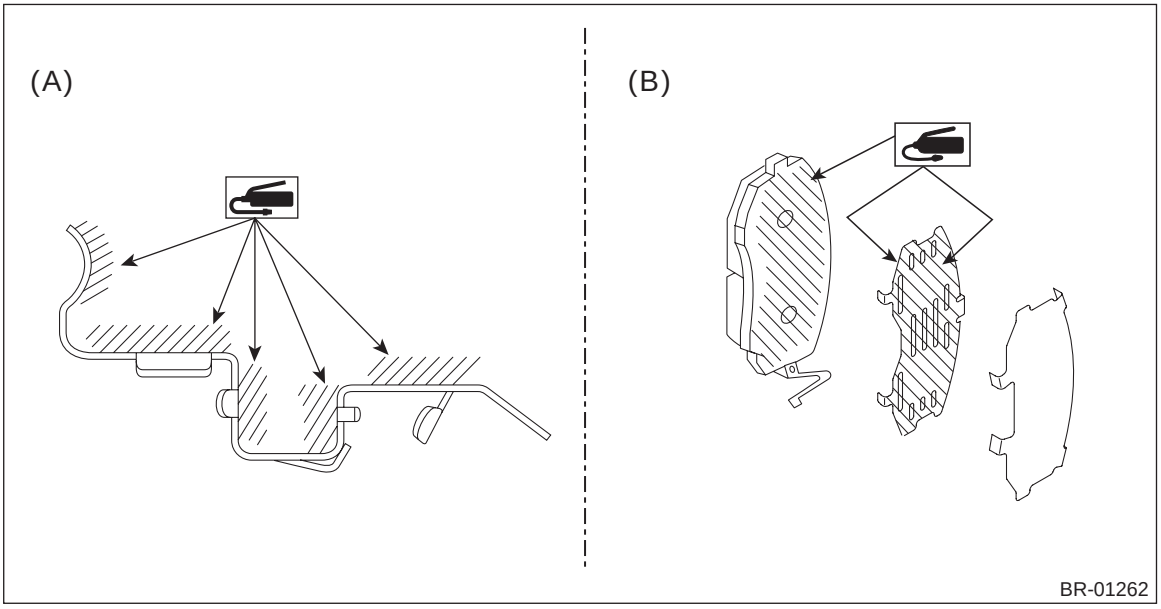


B: INSTALLATION

1. EXCEPT FOR STI MODEL

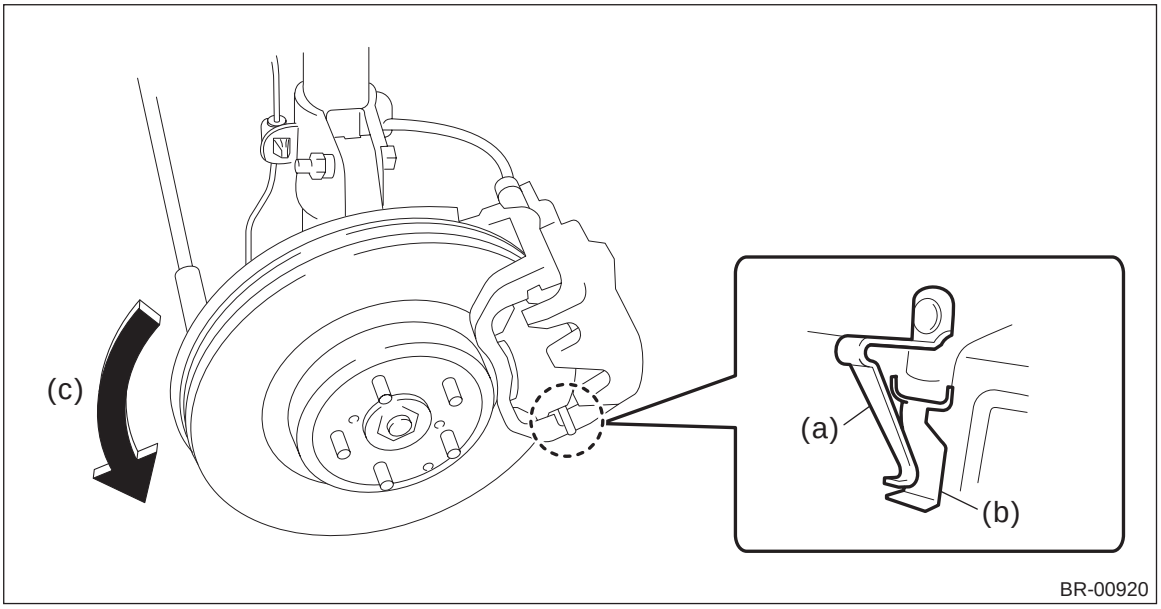
NOTE:
Before installation, remove mud and foreign matter from the caliper body assembly and support - front disc brake.
1) Check the brake pad. <Ref. to BR-21, INSPECTION, Front Brake Pad.>
2) Apply a thin coat of grease to the pad clip, both sides of the shim - disc brake front inner and the shim mounting surface of the pad - disc brake front.

Grease:
Pad clip (A): An item contained in the pad kit or equivalent
Shim and pad (B): An item contained in the pad kit or Molykote AS880N



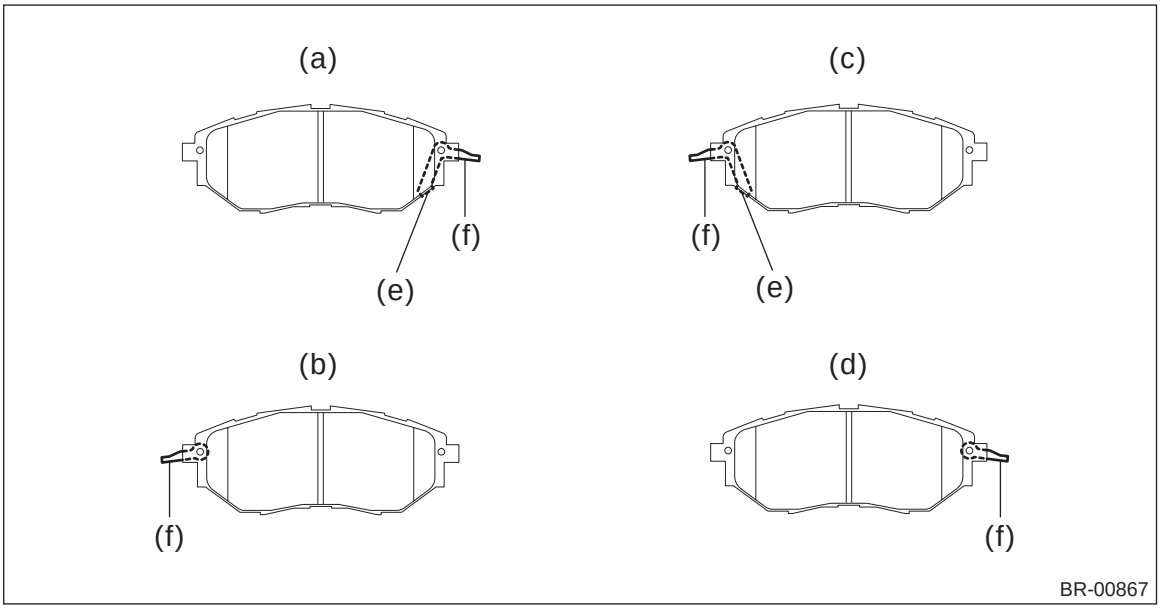
3) Install the pad - disc brake front.

CAUTION:
• Be sure to install so that the pad return spring faces the input side of the direction of disc rotor rotation, as shown in the figure.
• Correctly install the pad return spring to the supporting surface of the pad clip as shown in the figure.
• If the pad return spring is deformed or damaged, replace the pad - disc brake front with a new part.



(a) Pad return spring
(b) Supporting surface of pad clip
(c) Disc rotor rotation direction

NOTE:
Install the pad indicator in proper direction.



(a) LH — IN
(b) LH — OUT
(c) RH — IN
(d) RH — OUT
(e) Pad indicator
(f) Pad return spring

4) Install the caliper body assembly.

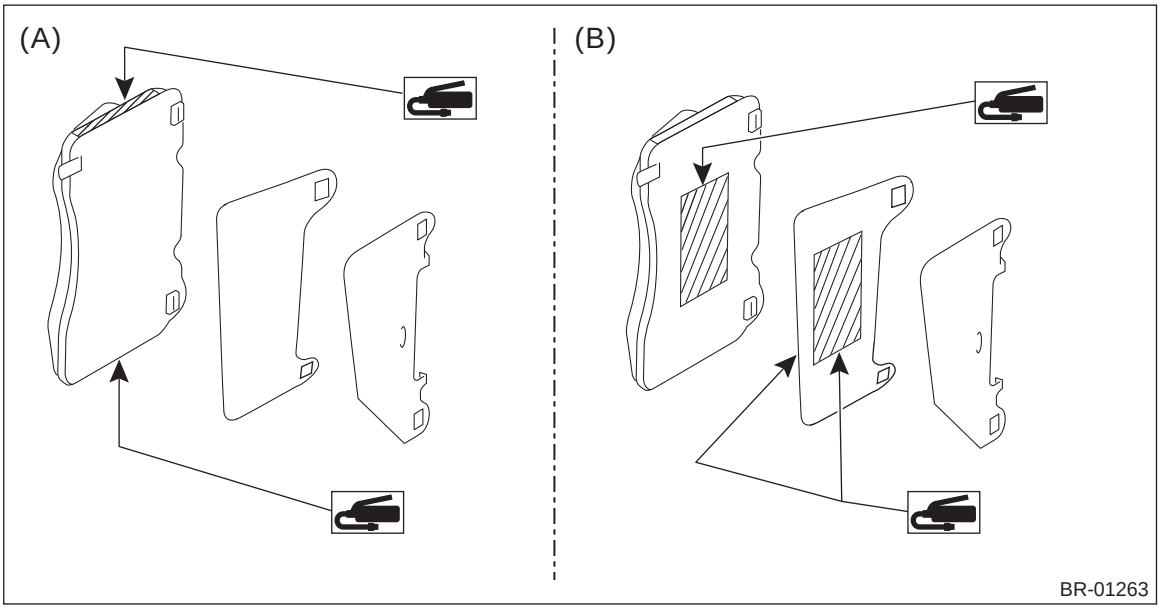
Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)
5) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

2. STI MODEL

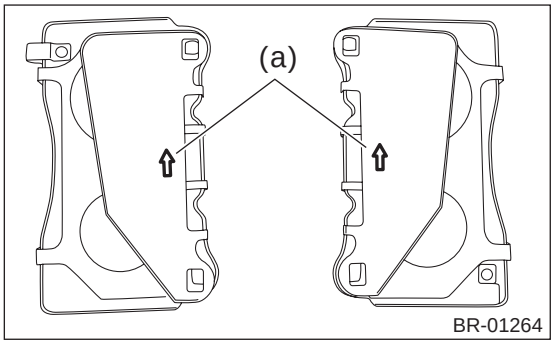
NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Apply a thin coat of grease to the side of the pad - disc brake front, both sides of the shim - disc brake front inner and the shim mounting surface of the pad - disc brake front.

Grease:
Pad side (A): An item contained in the pad kit or equivalent
Shim and pad (B): An item contained in the pad kit or Molykote AS880N



2) Install the pad - disc brake front.

NOTE:
Install so that the arrow (a) faces upward.



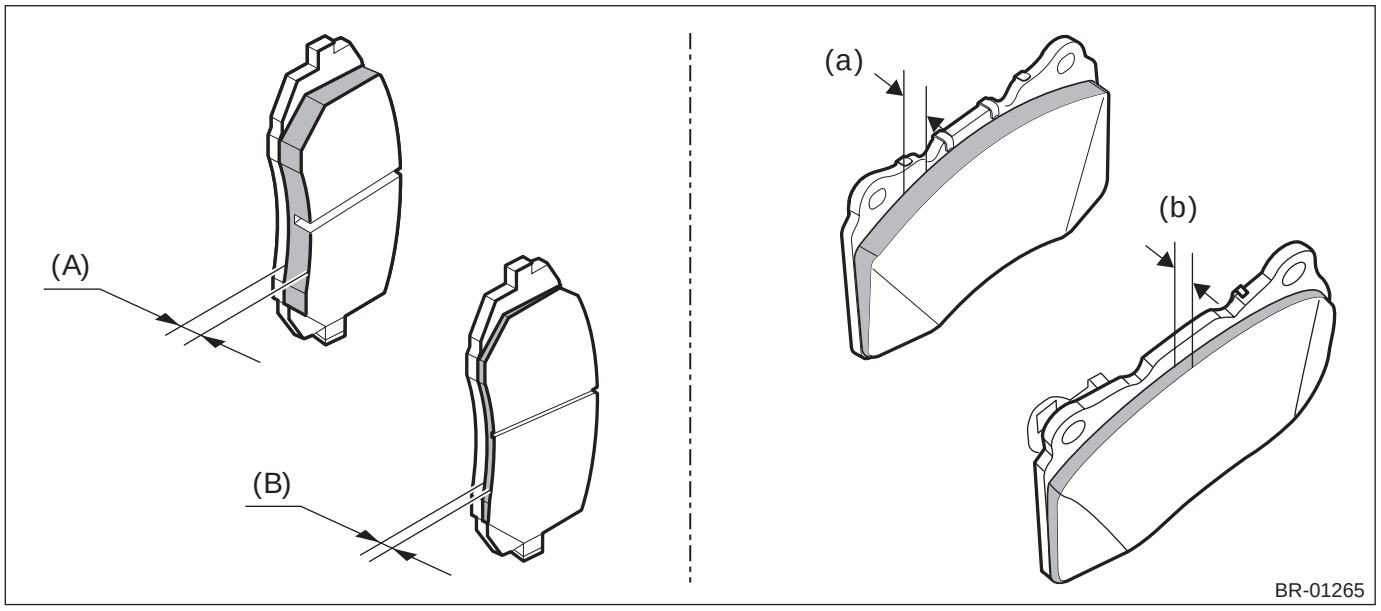
3) Install the cross spring.
4) Install the pin - disc brake.
5) Install the clip - slide pin.
6) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: INSPECTION

1) Check the thickness (A) of the pad - disc brake front.

NOTE:
- Always replace the pads of both wheels and both sides as a set.
- Replace pad clips if they are twisted or worn.
- Replace the pad if there is oil or grease on it.
- Wear indicators are installed on the pad - disc brake front inner and the pad - disc brake front outer, and a squeaking sound is heard if the pad is worn to the limit.



- Except for STI model

	Standard (A)	Wear limit (B)
Pad thickness	11 mm (0.43 in)	1.5 mm (0.059 in)

- STI model

	Standard (a)	Wear limit (b)
Pad thickness	8.9 mm (0.35 in)	1.2 mm (0.047 in)

2) If the wear limit is exceeded in the inspection, replace the pad - disc brake front.

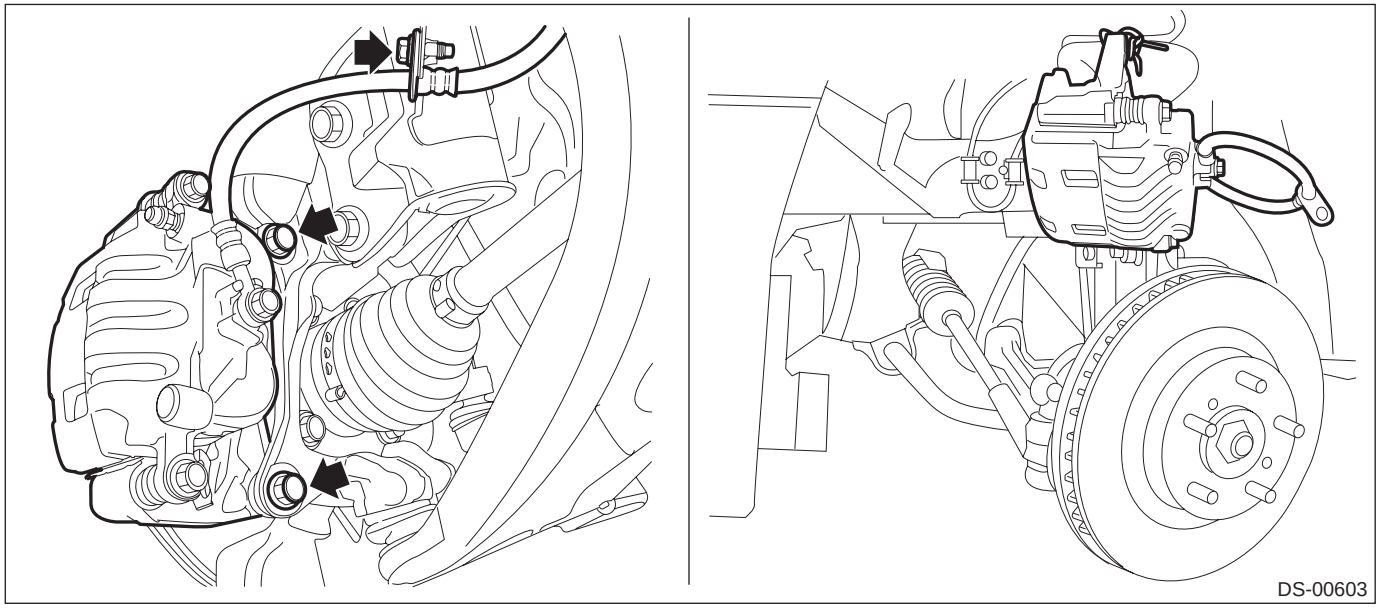
3. Front Disc Rotor

A: REMOVAL

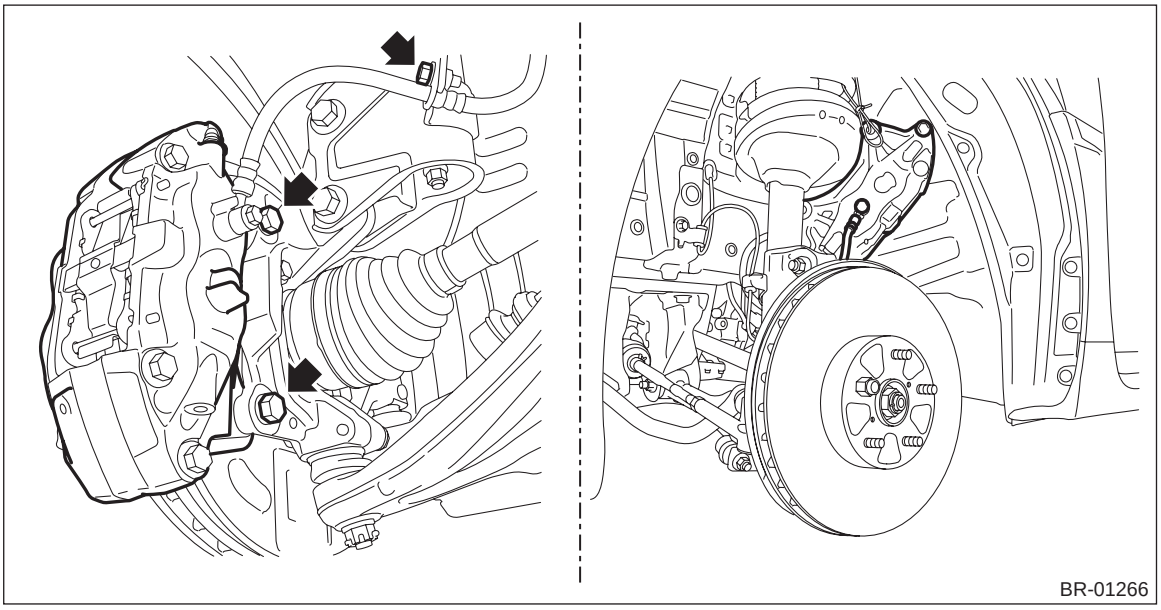
1) Lift up the vehicle, and then remove the front wheels.
2) Remove the disc brake assembly.
   (1) Remove the brake hose bracket.
   (2) Remove the mounting bolt, and remove the disc brake assembly.
   (3) Prepare wiring harnesses etc. to be discarded, and suspend the disc brake assembly from the strut assembly.

CAUTION:
Since the 17-inch (Brembo) caliper body is easily scratched and the paint may be stripped, protect it from being contacted with other parts or tools.

- Except for STI model

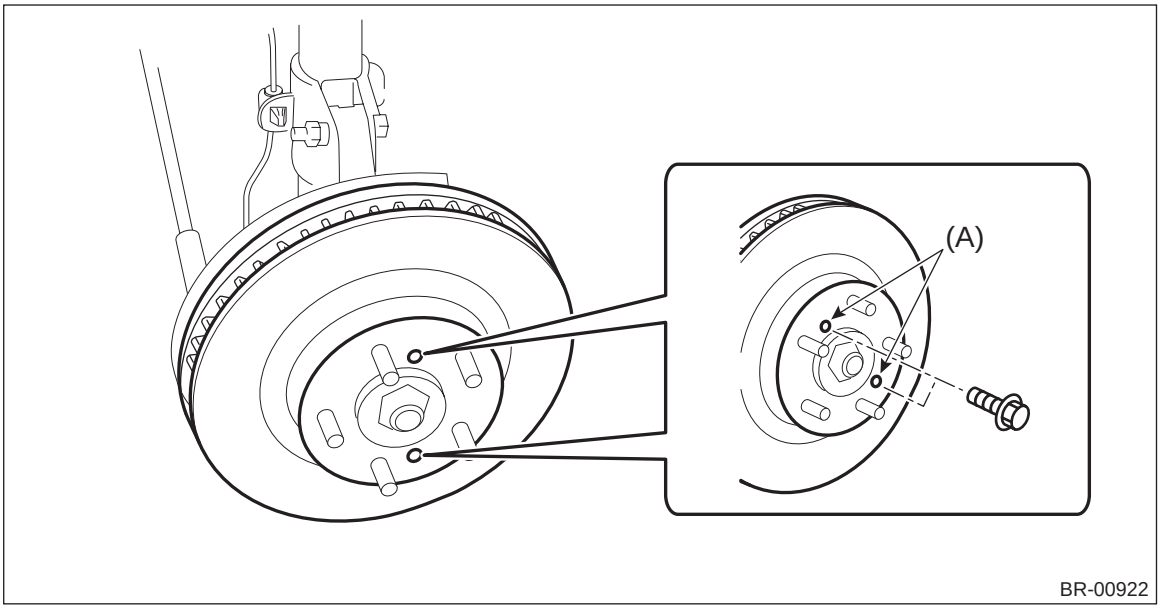


- STI model



3) Remove the disc rotor.

NOTE:
When the disc rotor is difficult to be removed, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.



B: INSTALLATION

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check the front disc rotor. <Ref. to BR-23, INSPECTION, Front Disc Rotor.>
2) Install the disc rotor.
3) Install the disc brake assembly.

Tightening torque:
Mounting bolt (except for STI model): 80 N·m (8.2 kgf-m, 59.0 ft-lb)
Mounting bolt (STI model): 155 N·m (15.8 kgf-m, 114.3 ft-lb)
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
4) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

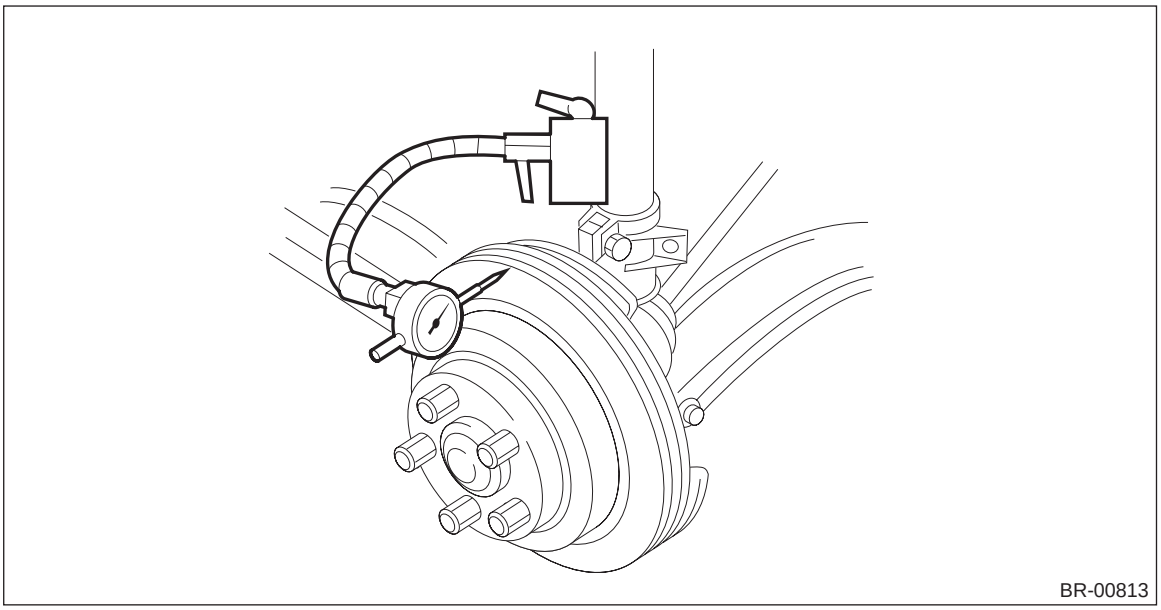
C: INSPECTION

1. DISC ROTOR RUNOUT CHECK

1) Check the hub unit COMPL - front axle for free play and runout before the inspection of disc rotor runout limit. <Ref. to DS-31, INSPECTION, Front Hub Unit Bearing.>
2) Tighten the wheel nuts to secure disc rotor.

3) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the disc rotor runout while rotating the disc rotor.

Disc rotor runout limit
Except for STI model: 0.05 mm (0.0020 in)
STI model: 0.075 mm (0.0030 in)



4) If the disc rotor runout exceeds the limit, resurface the disc rotor.
5) After grinding, check the thickness of the disc rotor. <Ref. to BR-24, DISC ROTOR THICKNESS CHECK, INSPECTION, Front Disc Rotor.>

2. DISC ROTOR THICKNESS CHECK

1) Set a micrometer 10 mm (0.39 in) inward from the disc rotor outer perimeter, and then measure the disc rotor thickness (A).

	Size	Standard	Wear limit	Disc rotor outer diameter
Disc rotor thickness (A)	Except for STI model	30 mm (1.18 in)	28 mm (1.10 in)	316 mm (12.44 in)
	STI model	30 mm (1.18 in)	28 mm (1.10 in)	326 mm (12.83 in)

2) If the wear limit is exceeded in the inspection, replace the disc rotor.

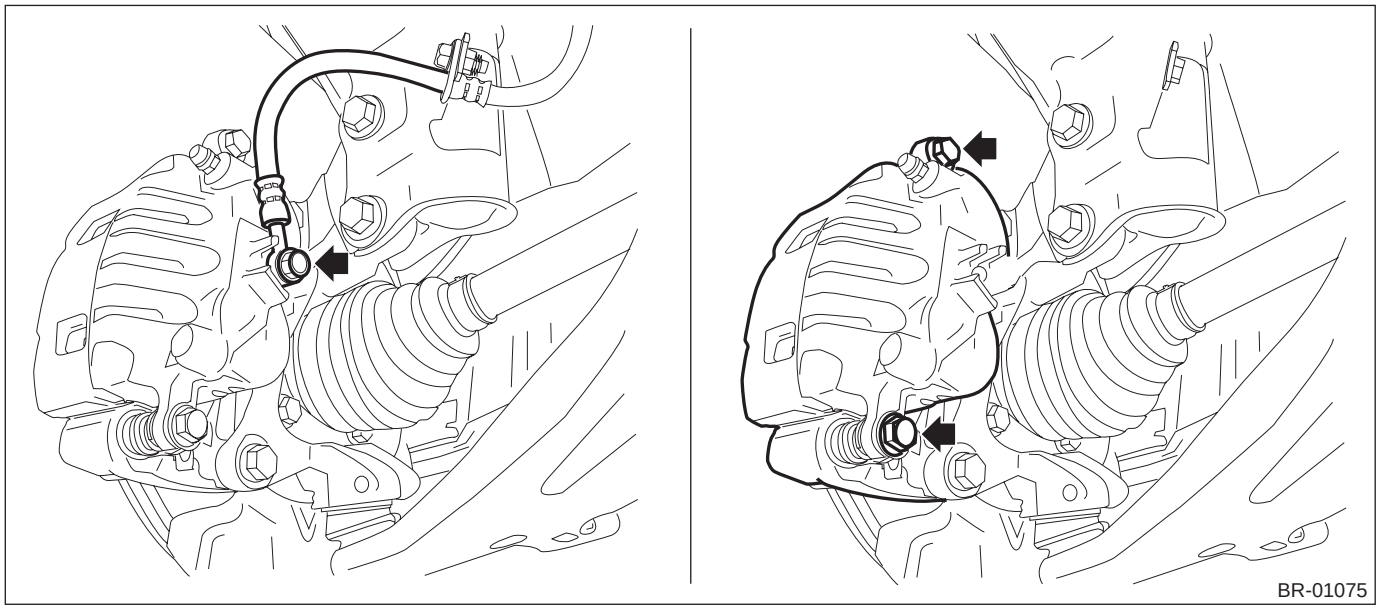
4. Front Disc Brake Assembly

A: REMOVAL

1. EXCEPT FOR STI MODEL

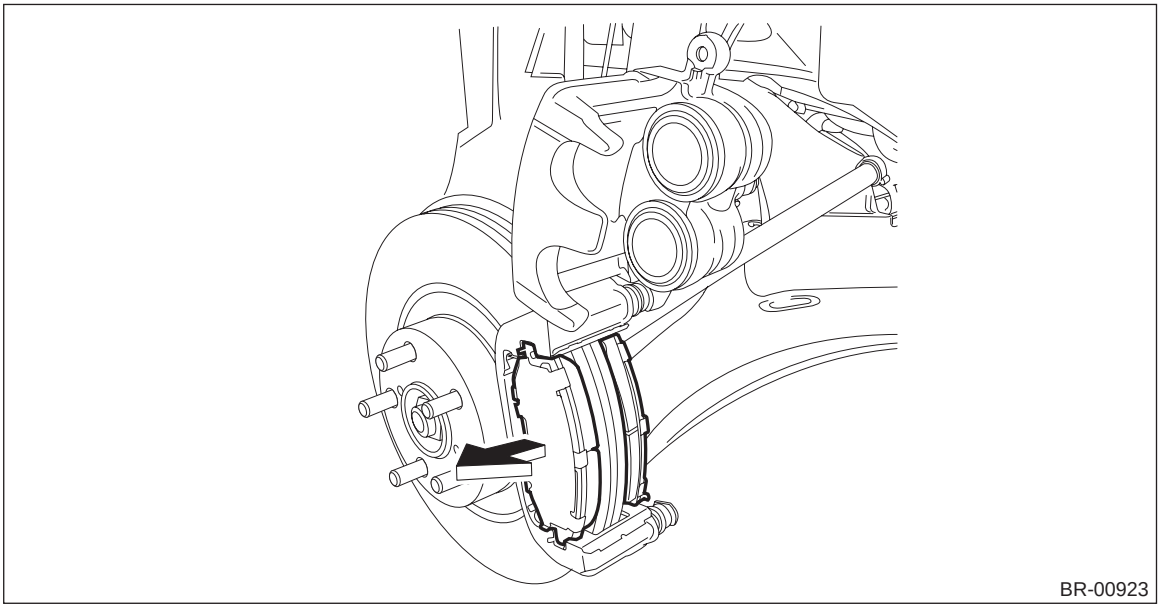
1) Lift up the vehicle, and then remove the front wheels.
2) Remove the union bolt and the caliper bolt, and remove the caliper body assembly.

CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.



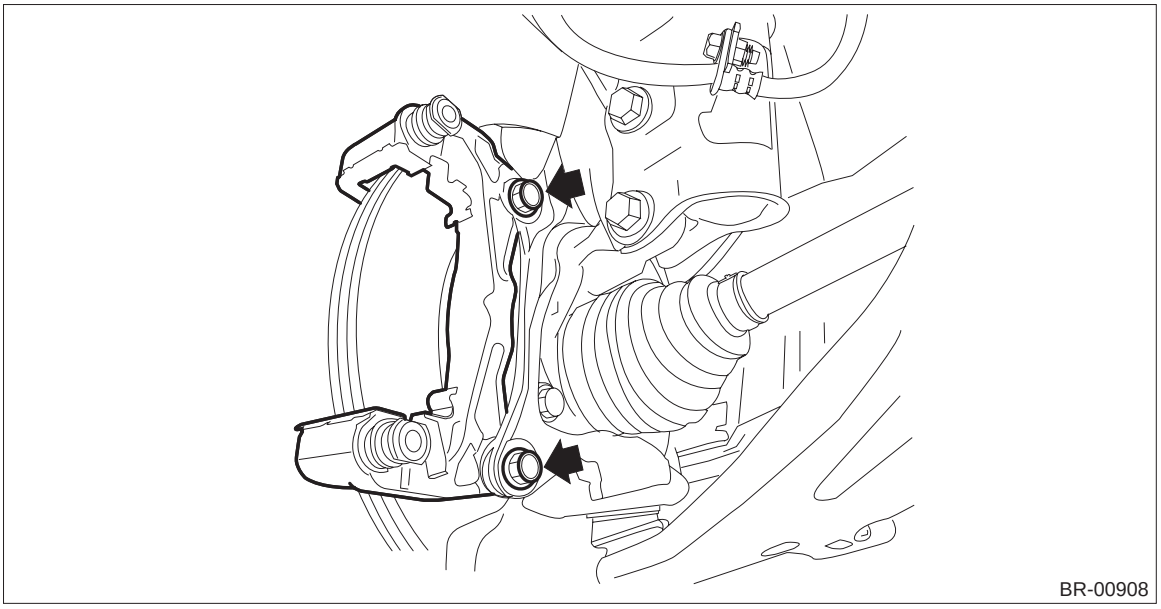
BR-01075

3) Remove the support - front disc brake.
(1) Remove the pad - disc brake front.



BR-00923

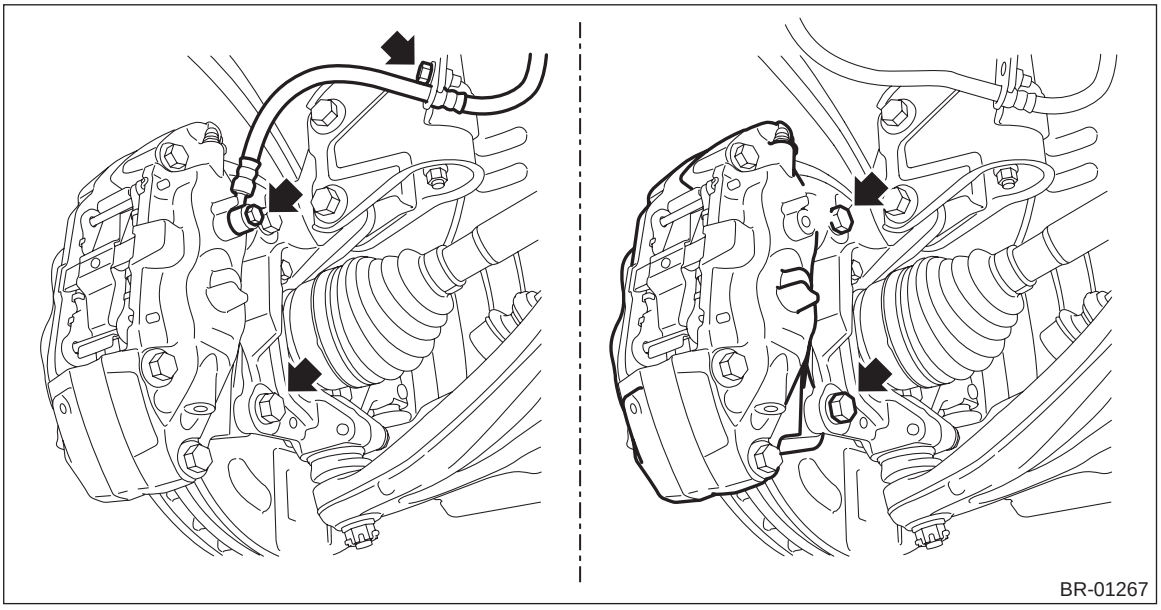
(2) Remove the mounting bolts, and then remove the support - front disc brake.



2. STI MODEL

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Lift up the vehicle, and then remove the front wheels.
2) Remove the pad - disc brake front. <Ref. to BR-17, STI MODEL, REMOVAL, Front Brake Pad.>
3) Remove the union bolt and the caliper bolt, and remove the disc brake assembly.

CAUTION:
• Since the 17-inch (Brembo) caliper body is easily scratched and the paint may be stripped, protect it from being contacted with other parts or tools.
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.

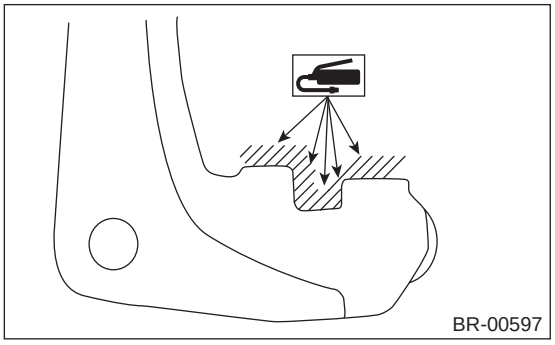


B: INSTALLATION

1. EXCEPT FOR STI MODEL

NOTE:
Before installation, remove mud and foreign matter from the caliper body assembly and support - front disc brake.
1) Check each part. <Ref. to BR-34, INSPECTION, Front Disc Brake Assembly.>
2) Apply a thin coat of grease to the support - front disc brake.

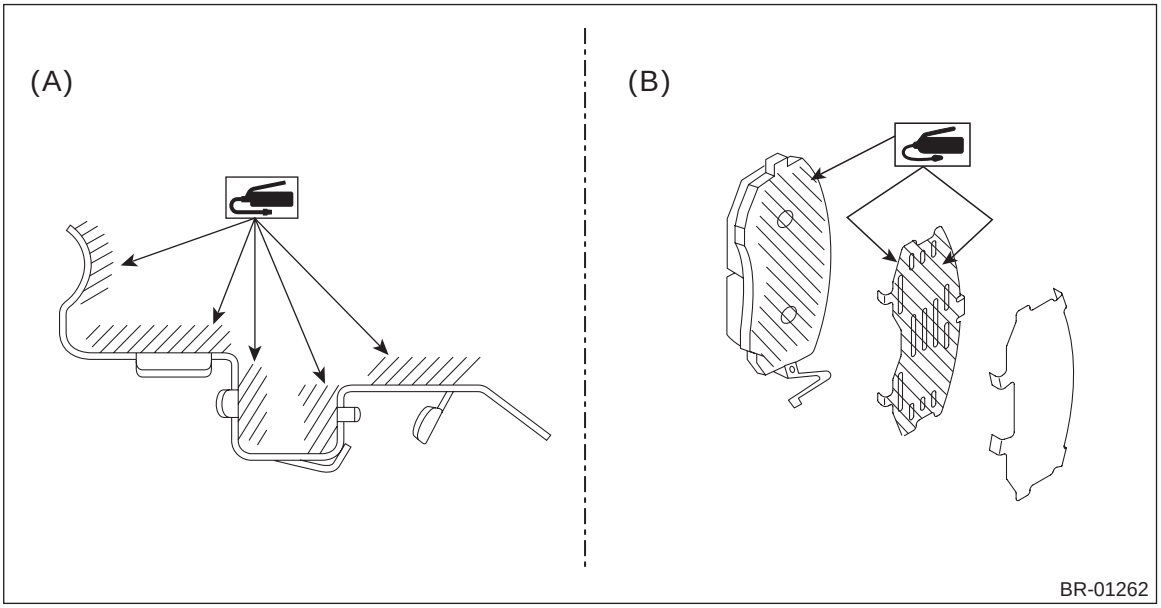
Grease:
Grease contained in the pad kit or equivalent



3) Install the support - front disc brake.

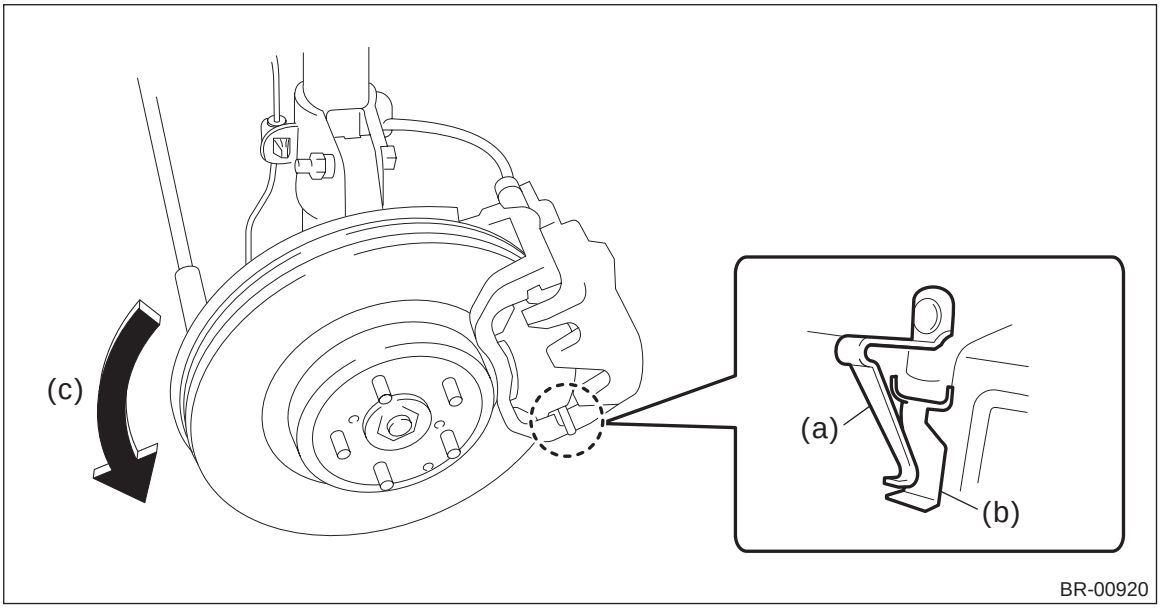
Tightening torque:
Mounting bolt: 80 N·m (8.2 kgf-m, 59.0 ft-lb)
4) Apply a thin coat of grease to the pad clip, both sides of the shim - disc brake front inner and the shim mounting surface of the pad - disc brake front.

Grease:
Pad clip (A): An item contained in the pad kit or equivalent
Shim and pad (B): An item contained in the pad kit or Molykote AS880N



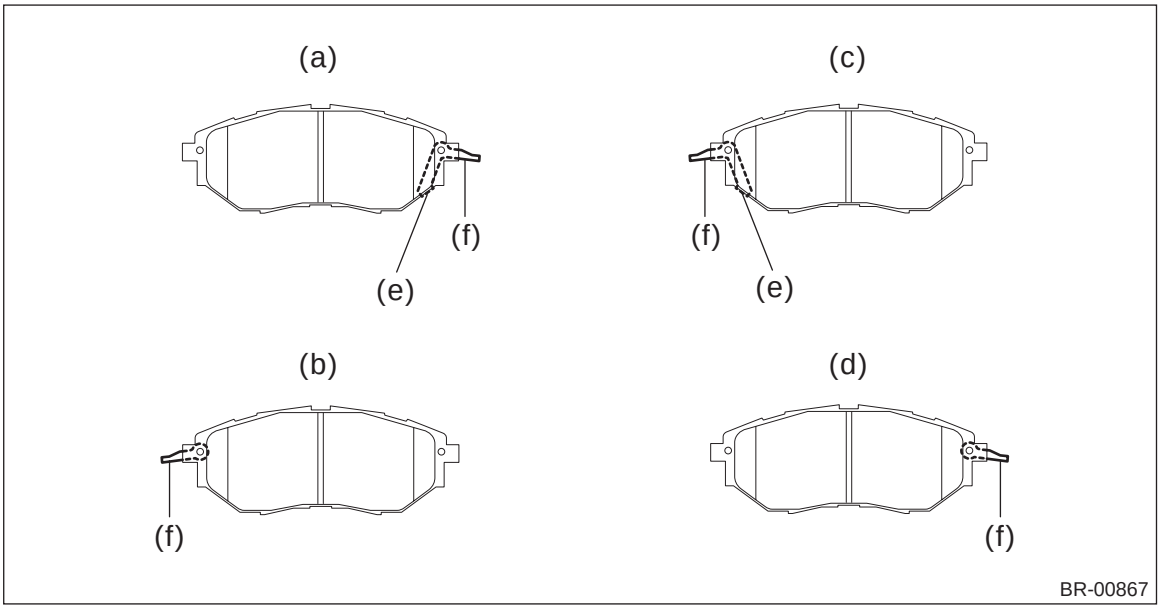
5) Install the brake pad.

CAUTION:
• Be sure to install so that the pad return spring faces the input side of the direction of brake rotor rotation, as shown in the figure.
• Correctly install the pad return spring to the supporting surface of the pad clip as shown in the figure.
• If the pad return spring is deformed or damaged, replace the brake pad with a new part.



(a) Pad return spring (b) Supporting surface of pad clip (c) Direction of brake rotor rotation

NOTE:
Install the brake pad indicator in proper direction.



(a) LH — IN (c) RH — IN (e) Pad indicator
(b) LH — OUT (d) RH — OUT (f) Pad return spring

6) Install the caliper body assembly.

Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)
7) Connect the brake hose using a new brake hose gasket.

Tightening torque:
26 N·m (2.7 kgf-m, 19.2 ft-lb)
8) Bleed air from the brake system. <Ref. to BR-67, BRAKE LINE, PROCEDURE, Air Bleeding.>
9) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

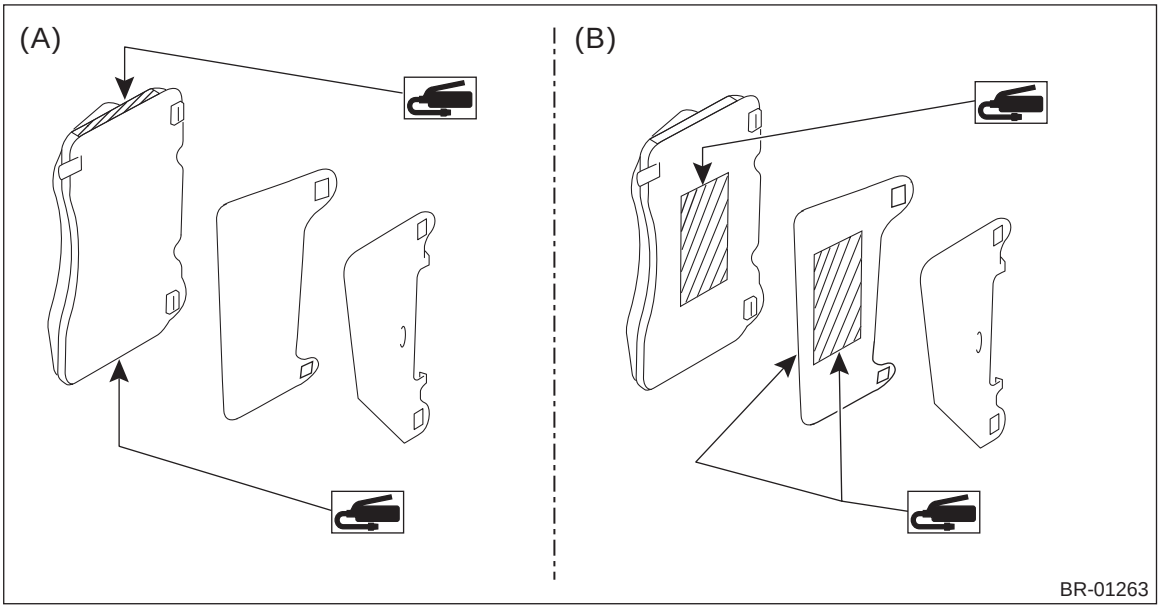
2. STI MODEL

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check each part. <Ref. to BR-34, INSPECTION, Front Disc Brake Assembly.>
2) Install the disc brake assembly.

Tightening torque:
155 N·m (15.8 kgf-m, 114.3 ft-lb)
3) Connect the brake hose using a new brake hose gasket.

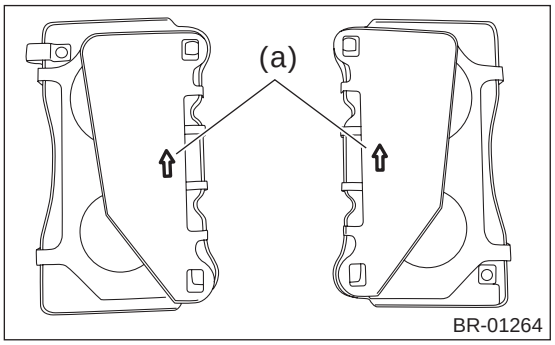
Tightening torque:
26 N·m (2.7 kgf-m, 19.2 ft-lb)
4) Apply a thin coat of grease to the side of the pad - disc brake front, both sides of the shim - disc brake front inner and the shim mounting surface of the pad - disc brake front.

Grease:
Pad side (A): An item contained in the pad kit or equivalent
Shim and pad (B): An item contained in the pad kit or Molykote AS880N



5) Install the pad - disc brake front.

NOTE:
Install so that the arrow (a) faces upward.



6) Install the cross spring.
7) Install the pin - disc brake.
8) Install the clip - slide pin.
9) Bleed air from the brake system. <Ref. to BR-67, BRAKE LINE, PROCEDURE, Air Bleeding.>
10) Install the front wheels.

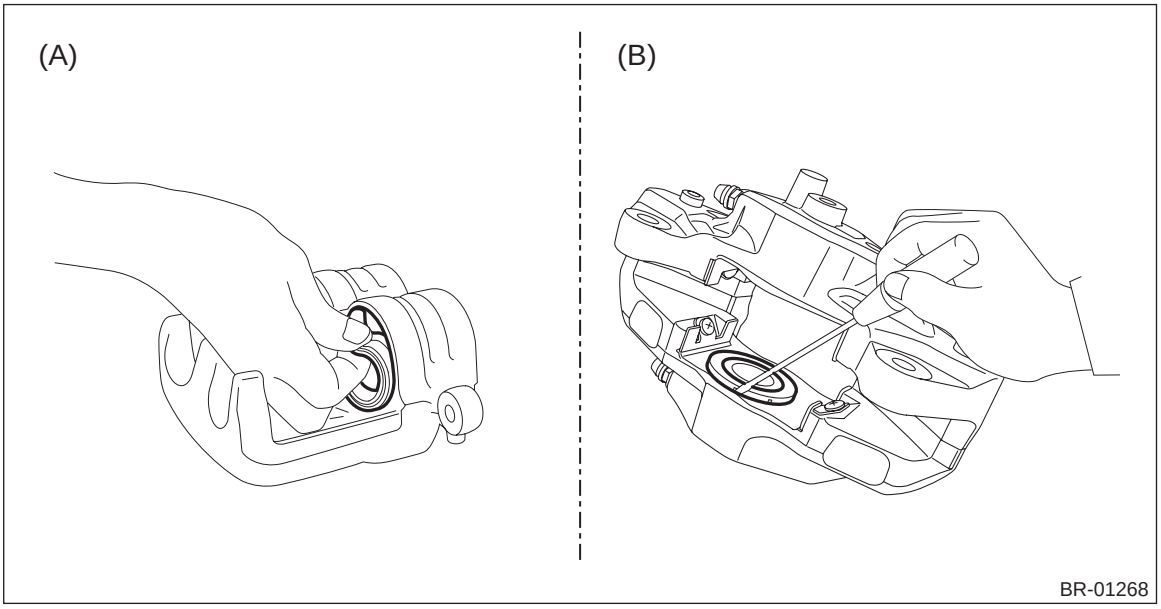
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: DISASSEMBLY

CAUTION:
- **Be careful not to allow foreign matter to enter the brake hose connector.**
- **Since the 17-inch (Brembo) caliper body is easily scratched and the paint may be stripped, protect it from being contacted with other parts or tools.**

1) Remove mud and foreign matter from the caliper body assembly.
2) Remove the piston boot.

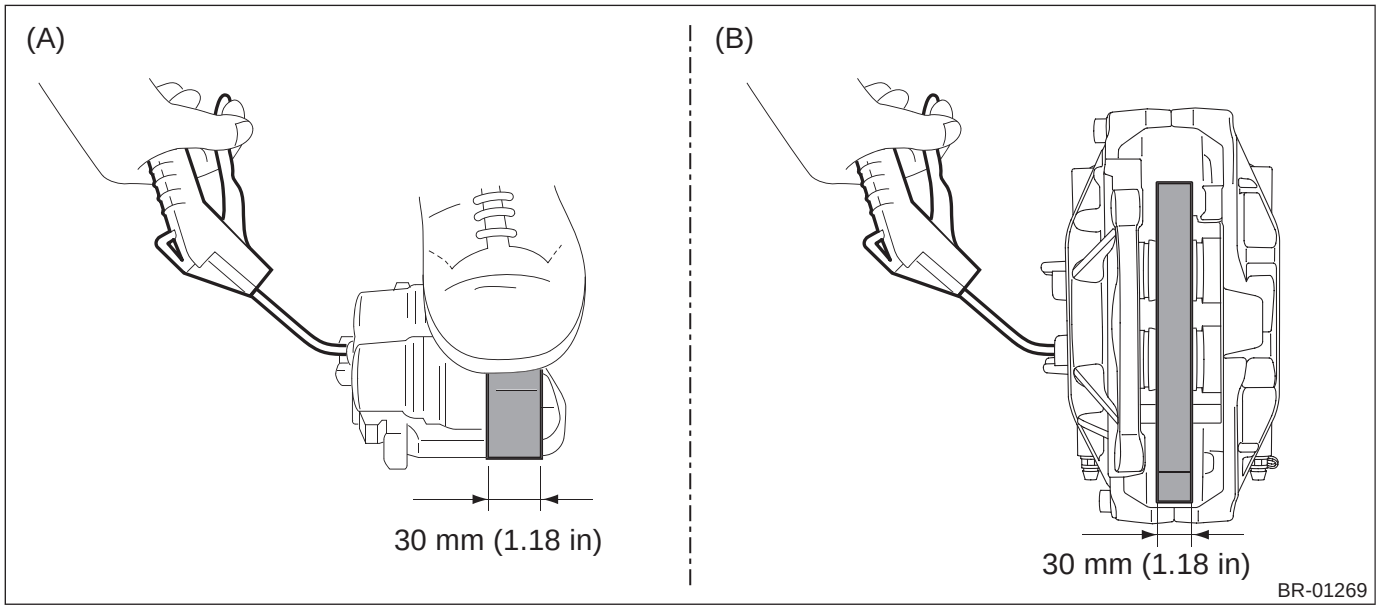
NOTE:
For STI model, remove the four piston boots.



(A) Except for STI model (B) STI model

3) Remove the piston - disc brake.
(1) Place a wooden block in the caliper body as shown in the figure to prevent the piston - disc brake from jumping out and being damaged.
(2) Using an air gun, gradually apply compressed air via the brake hose installation hole to push out the piston - disc brake.

NOTE:
Instead of removing the pistons one by one, remove all pistons at once after adjusting the amount of protrusion evenly using a wooden block.

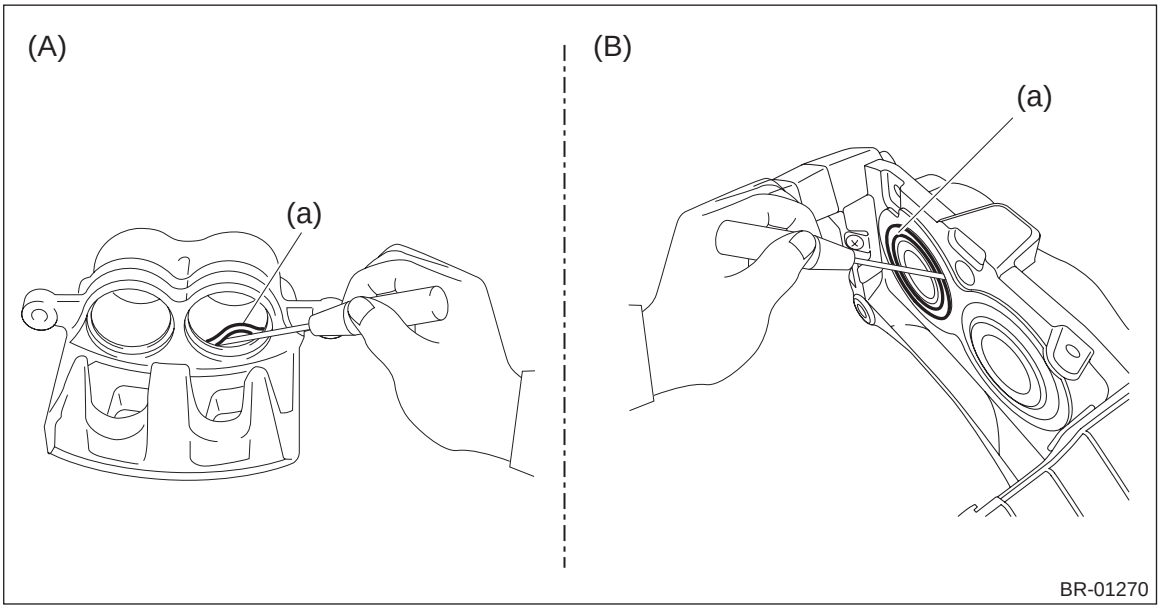


(A) Except for STI model (B) STI model

4) Remove the piston seal (a).

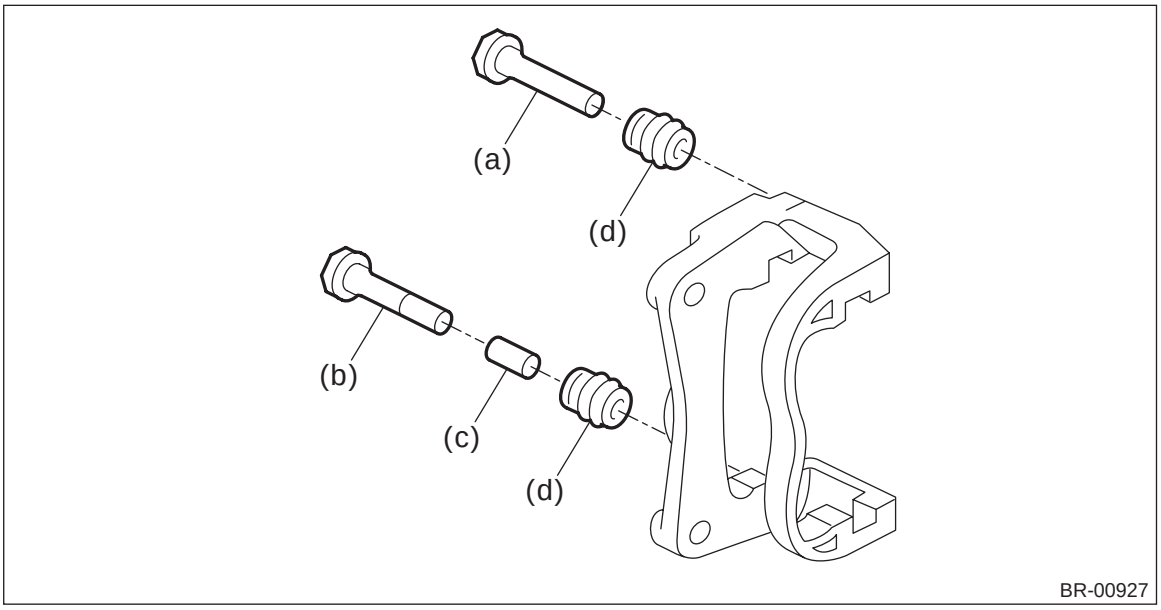
CAUTION:
Do not damage the cylinder and piston seal groove.

NOTE:
For STI model, remove the four piston seals.



(A) Except for STI model (B) STI model

5) Remove each part from support - front disc brake. (Except for STI model)



(a) Guide pin - front brake (black)
(b) Lock pin - front brake (silver)
(c) Lock pin - bushing
(d) Pin boot

D: ASSEMBLY

1) Check each part. <Ref. to BR-34, INSPECTION, Front Disc Brake Assembly.>
2) Clean the inside of the caliper body using brake fluid.

Fluid:
FMVSS No. 116, DOT3 or DOT4

3) Install the piston seal and the piston - disc brake.
   (1) Apply a coat of brake fluid to piston seal and install the piston seal to the groove inside caliper body.
   (2) Apply a coat of brake fluid to the piston sliding part of caliper body and the entire outer surface of the piston - disc brake.

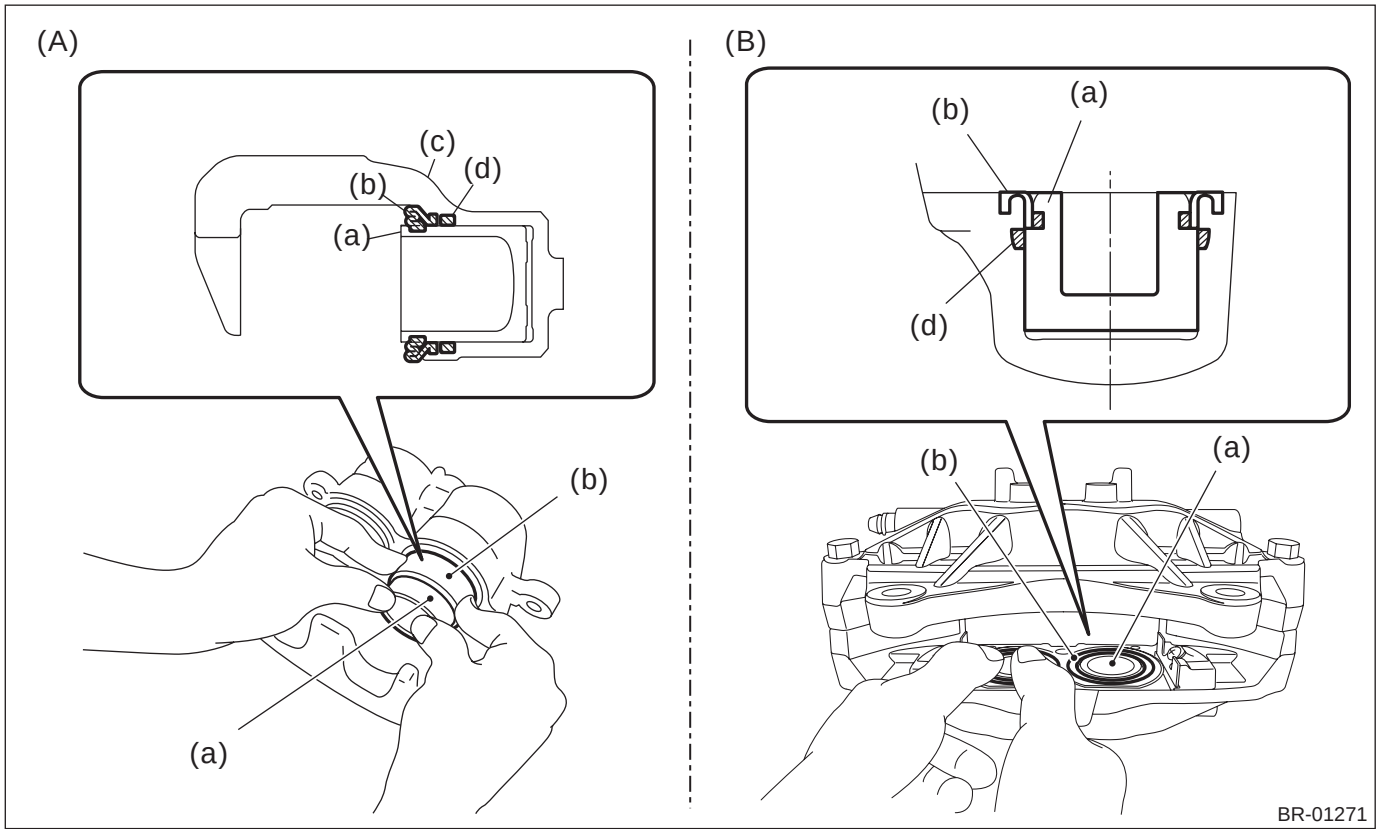
Fluid:
FMVSS No. 116, DOT3 or DOT4

   (3) Apply a coat of grease to the piston boot and fit to the groove on the ends of piston - disc brake.

Grease:
An item contained in the pad kit or Nippon Grease NIGLUBE RX-2

(4) Install the piston - disc brake to the caliper body.

CAUTION:
Do not force the piston - disc brake into the sliding part of caliper body.

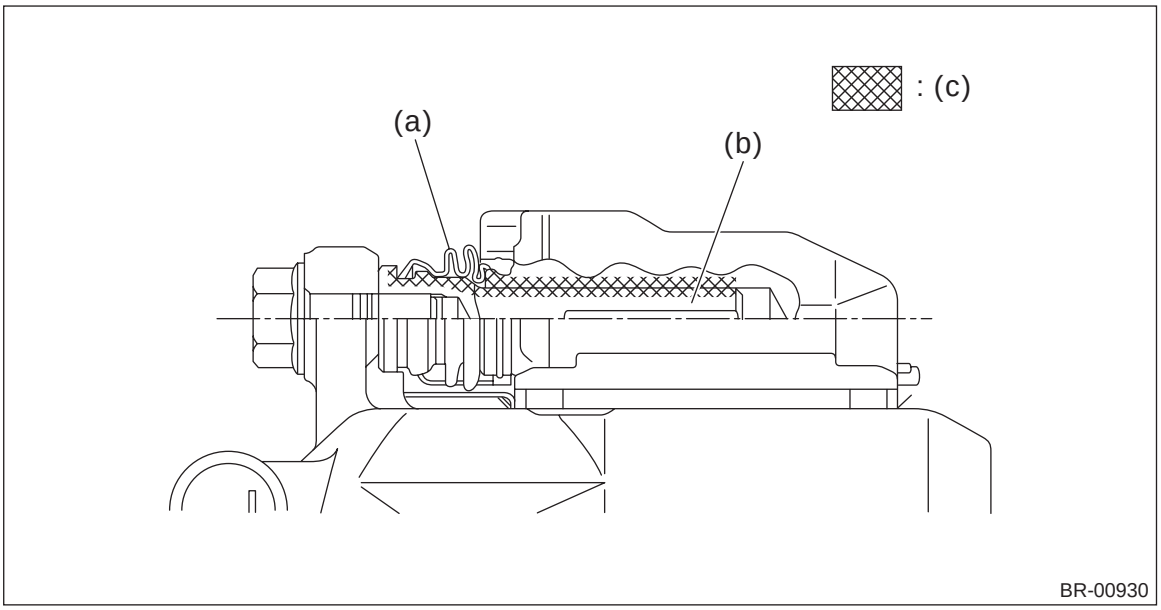


(A) Except for STI model
(a) Piston - disc brake
(b) Piston boot
(B) STI model
(c) Caliper body
(d) Piston seal

4) Apply grease contained in the piston seal kit to the lock pin - front brake, the outer surface of guide pin - front brake, the pin sliding part of the support - front disc brake, and the grooves of pin boot. (Except for STI model)

5) Install the pin boot to the lock pin - front brake and the guide pin - front brake, and insert them into the support - front disc brake. (Except for STI model)

CAUTION:
Insert the lock pin - front brake and guide pin - front brake into specified position, and make sure that they slide and seat properly.



(a) Pin boot
(b) Lock pin - front brake or guide pin - front brake
(c) Grease applied area

E: INSPECTION

1) Check the piston sliding part of caliper body and the piston for uneven wear, damage or rust.
2) Check the rubber parts for damage or deterioration.
3) If faulty is found in the inspection, replace the relevant part.

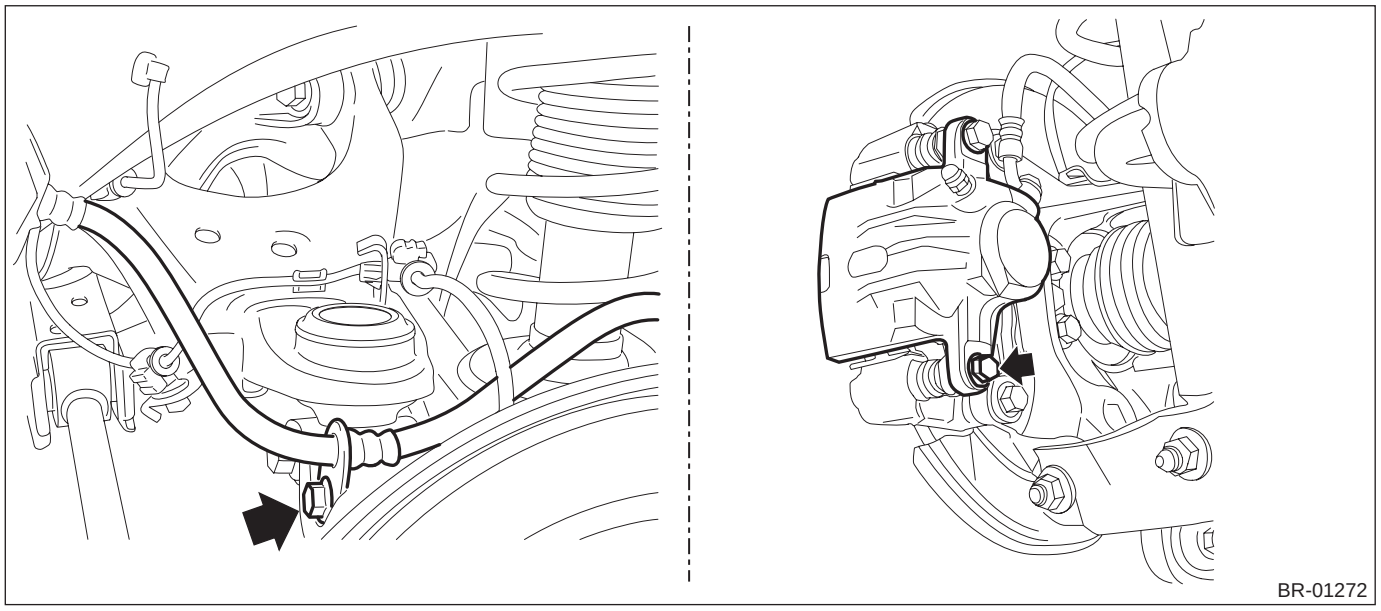
5. Rear Brake Pad

A: REMOVAL

1. EXCEPT FOR STI MODEL

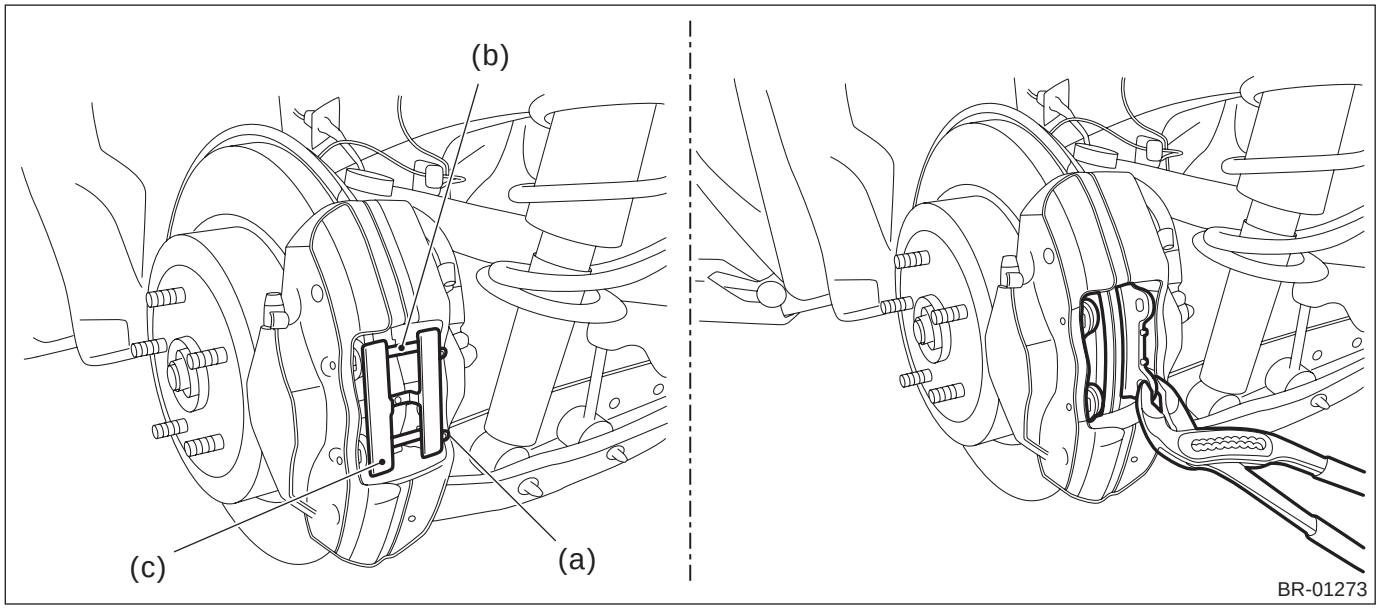
1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the pad - disc brake rear.
   (1) Remove the brake hose bracket.
   (2) Remove the caliper bolt on the lower side.
   (3) Raise the caliper body assembly and remove the pad - disc brake rear.

NOTE:
Do not disconnect the brake hose from the caliper body assembly.



2. STI MODEL

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the pad - disc brake rear.
   (1) Remove the clip - slide pin (a), and remove the pin - disc brake (b) and cross spring (c).
   (2) While pushing back the piston with a wrench, remove the pad - disc brake rear.

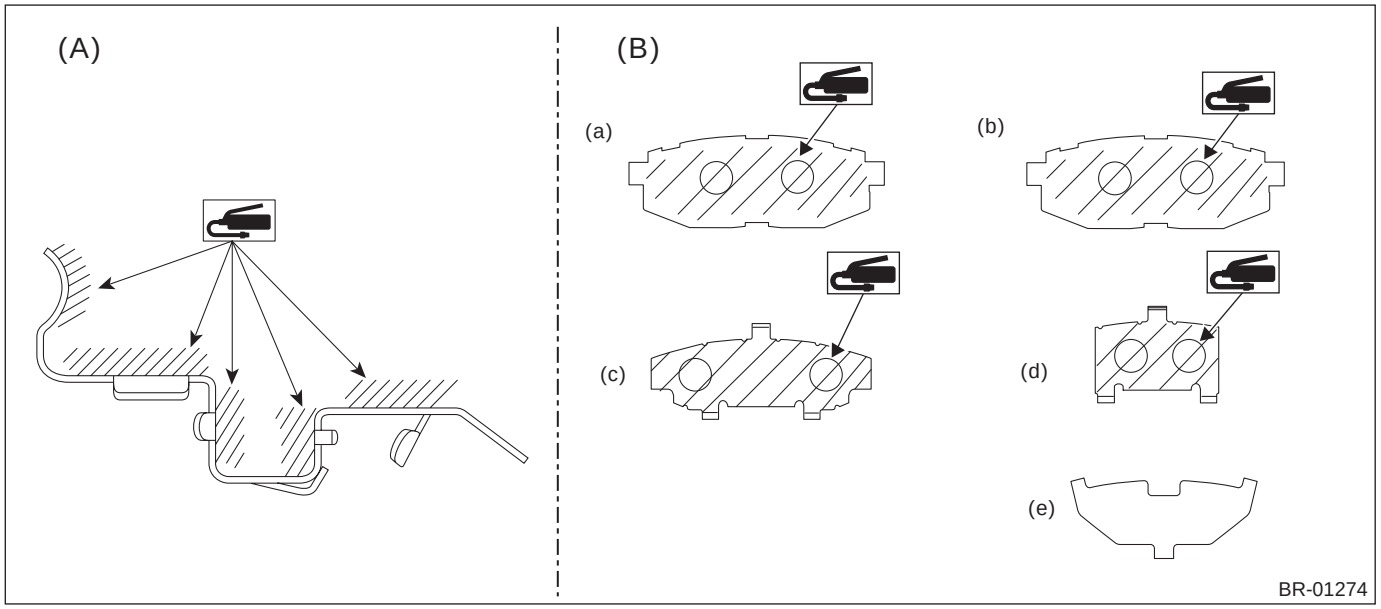


B: INSTALLATION

1. EXCEPT FOR STI MODEL

NOTE:
Before installation, remove mud and foreign matter from the caliper body assembly and support - rear disc brake.
1) Check the brake pad. <Ref. to BR-38, INSPECTION, Rear Brake Pad.>
2) Apply a thin coat of grease to the pad clip, both sides of the shim - disc brake rear inner and the shim mounting surface of the pad - disc brake rear.

Grease:
Pad clip (A): An item contained in the pad kit or equivalent
Shim and pad (B): An item contained in the pad kit or Molykote AS880N



(A)	Pad clip - rear brake	(B)	Remove the pad - disc brake rear and the shim - disc brake rear.		
(a)	Pad - disc brake rear outer	(c)	Shim - disc brake rear inner	(e)	Shim - disc brake rear outer
(b)	Pad - disc brake rear inner	(d)	Shim - disc brake rear inner		

3) Install the pad - disc brake rear.

NOTE:
Install the pad indicator in proper direction.
4) Install the caliper body assembly.

Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)
5) Install the brake hose bracket.

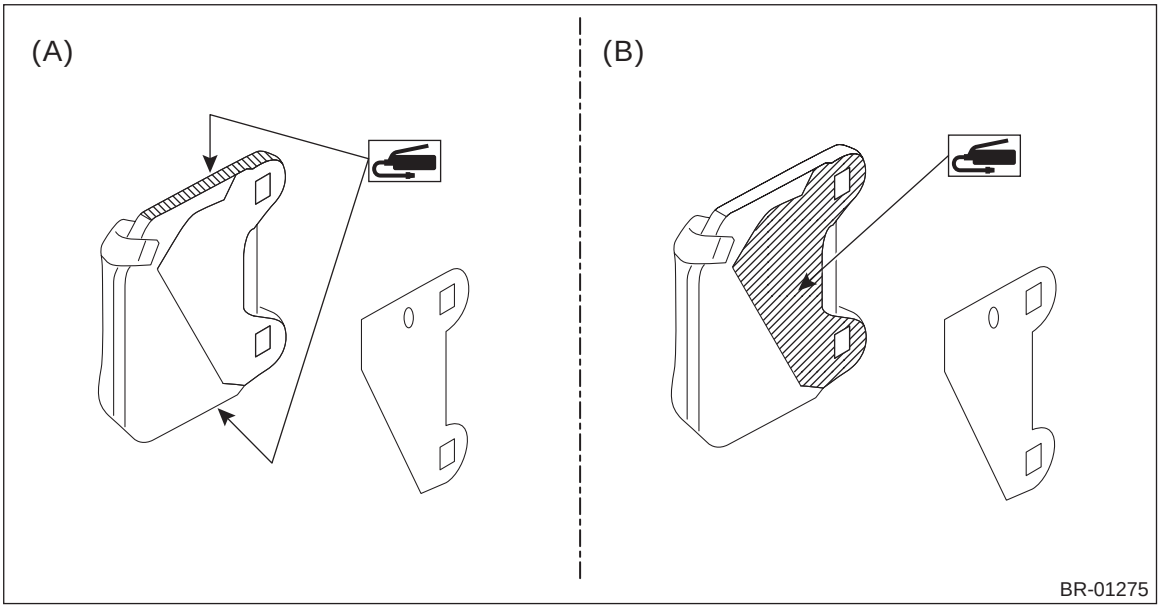
Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)
6) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

2. STI MODEL

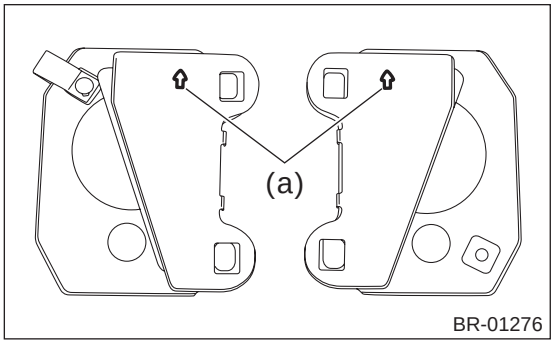
NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Apply a thin coat of grease to the side of the pad - disc brake rear and the shim mounting surface of the pad - disc brake rear.

Grease:
Pad side (A): An item contained in the pad kit or equivalent
Shim and pad (B): An item contained in the pad kit or Molykote AS880N



2) Install the pad - disc brake rear.

NOTE:
Install so that the arrow (a) faces upward.



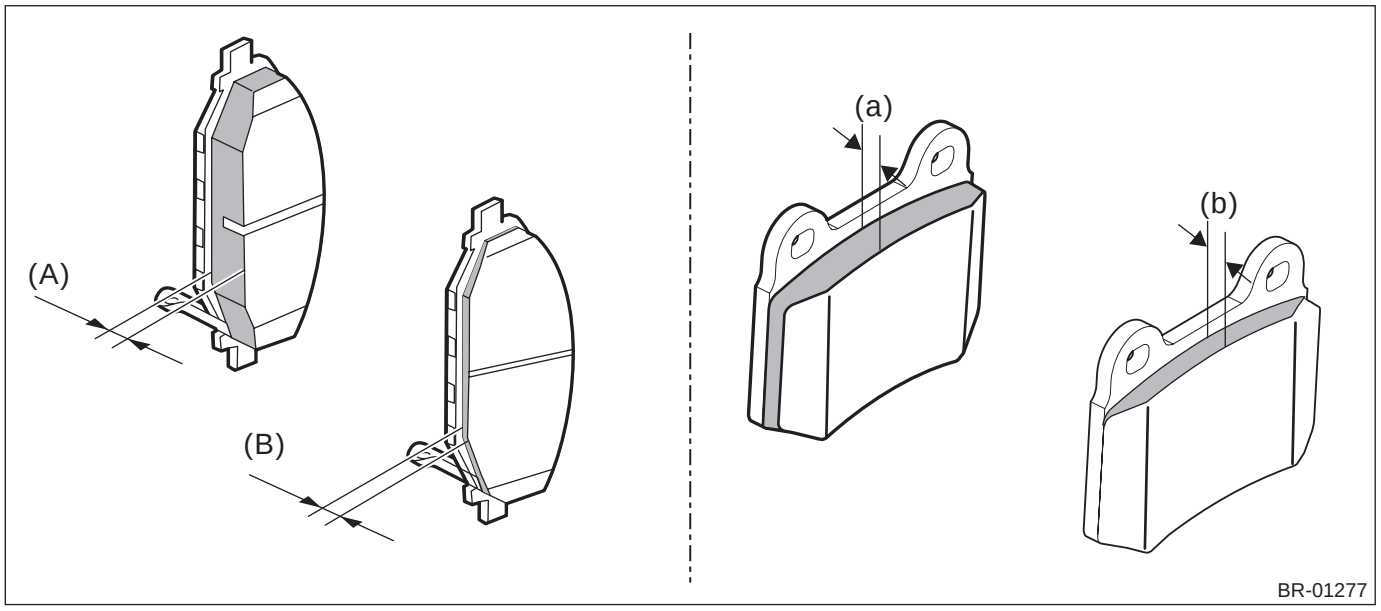
3) Install the cross spring.
4) Install the pin - disc brake.
5) Install the clip - slide pin.
6) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: INSPECTION

1) Check the thickness of the pad - disc brake rear.

NOTE:
- Always replace the pads of both wheels and both sides as a set.
- Replace pad clips if they are twisted or worn.
- Replace the pad if there is oil or grease on it.
- Wear indicators are installed on the pad - disc brake rear inner, and a squeaking sound is heard if the pad is worn to the limit.



- Except for STI model

	Standard (A)	Wear limit (B)
Pad thickness	9.0 mm (0.354 in)	1.5 mm (0.059 in)

- STI model

	Standard (a)	Wear limit (b)
Pad thickness	9.0 mm (0.354 in)	1.2 mm (0.047 in)

2) If the wear limit is exceeded in the inspection, replace the brake pad.

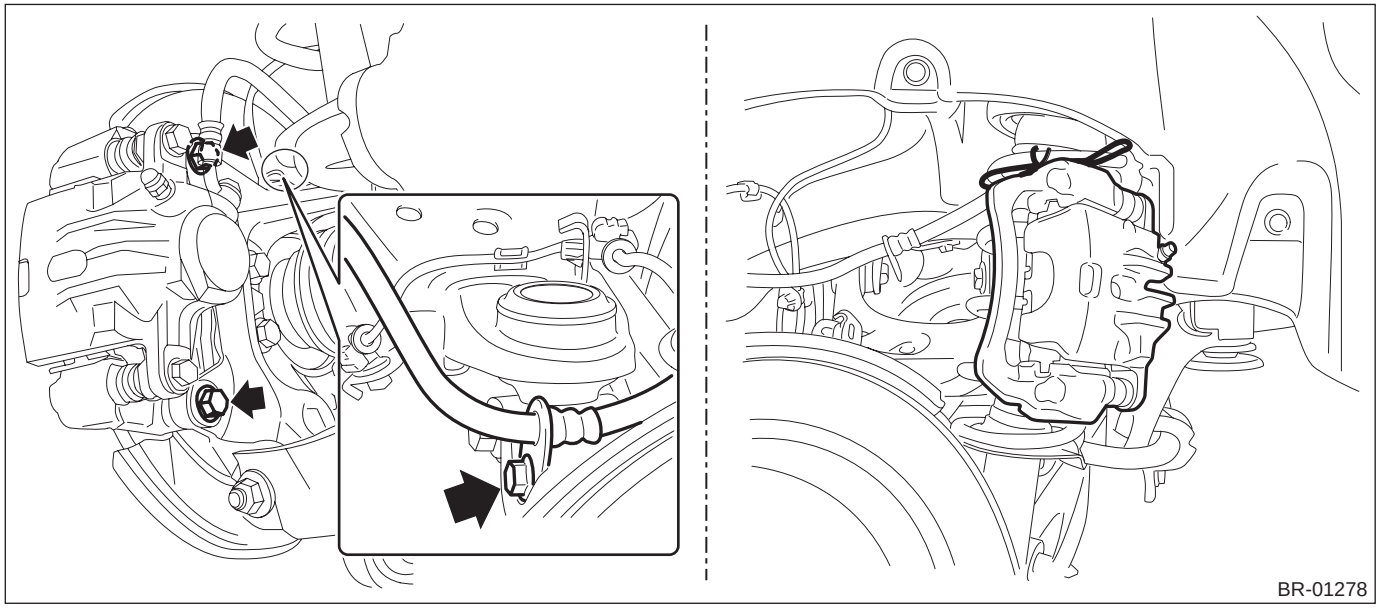
6. Rear Disc Rotor

A: REMOVAL

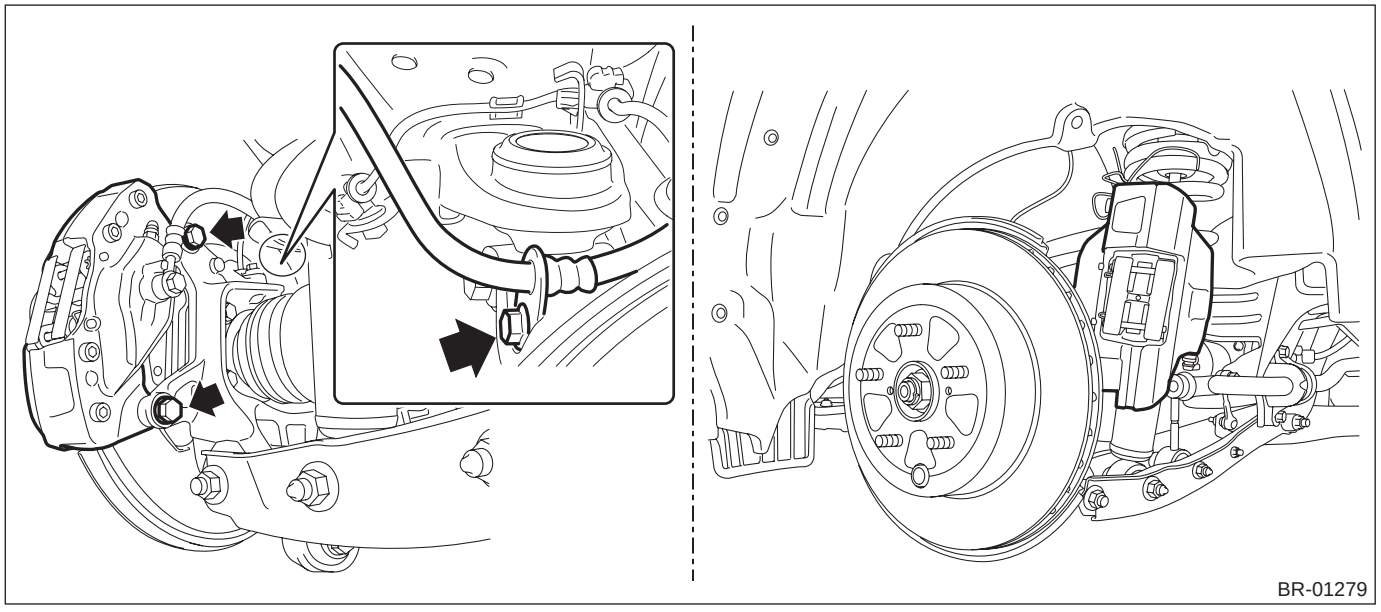
1) Lift up the vehicle, and then remove the rear wheels.
2) Release the lever assembly - hand brake.
3) Remove the disc brake assembly.
   (1) Remove the brake hose bracket.
   (2) Remove the mounting bolt, and remove the disc brake assembly.
   (3) Prepare wiring harnesses etc. to be discarded, and suspend the disc brake assembly from the shock absorber assembly.

CAUTION:
Since the 17-inch (Brembo) caliper body is easily scratched and the paint may be stripped, protect it from being contacted with other parts or tools.

- Except for STI model

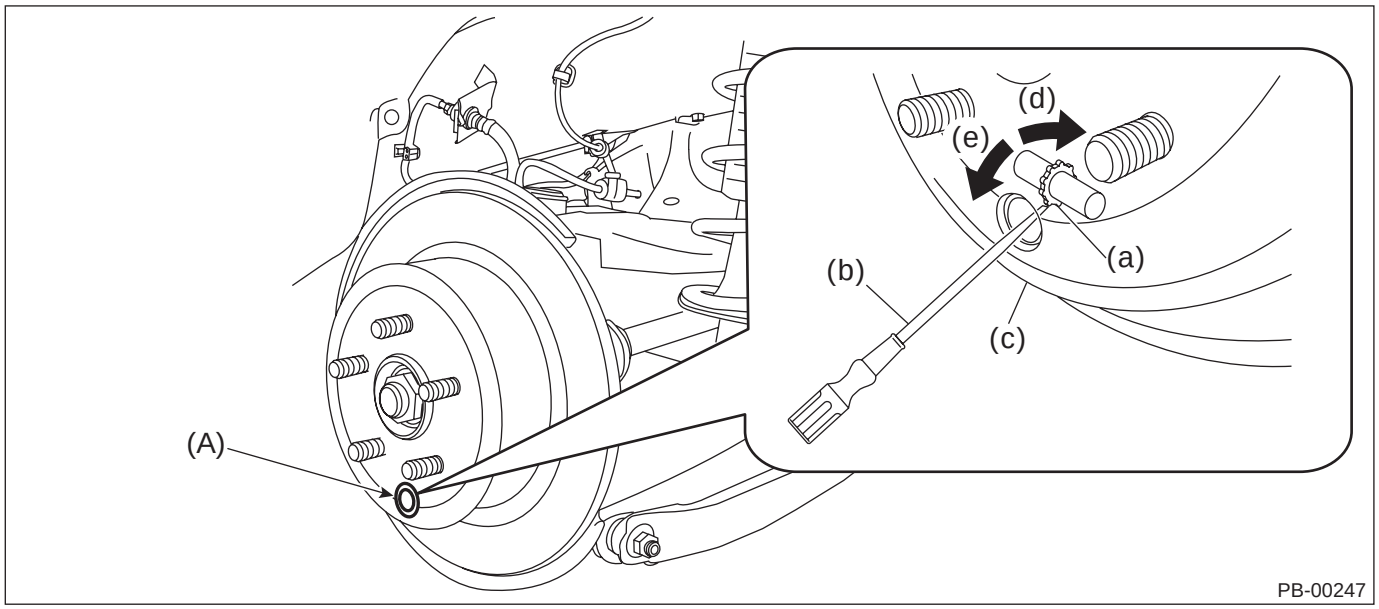


- STI model



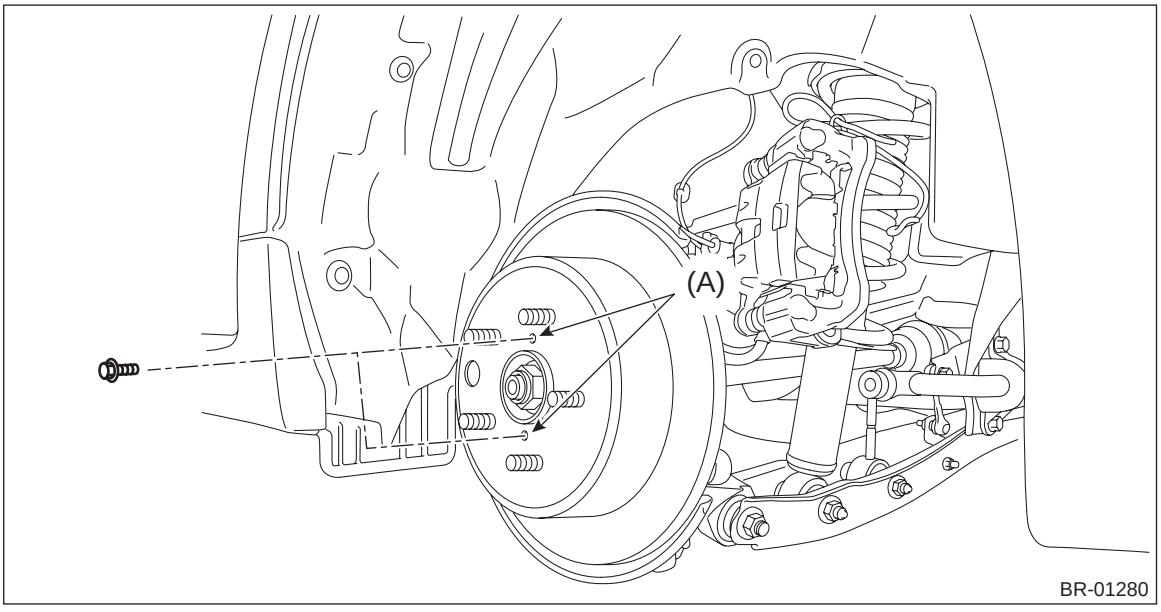
4) Remove the disc rotor.

NOTE:
If it is difficult to remove the disc rotor, perform the following two methods in order.
1. Remove the adjusting hole cover (A), insert the flat tip screwdriver, and rotate the adjuster assembly - rear brake until the brake shoe moves far enough to remove the disc rotor.



(a)	Adjuster ASSY - rear brake	(c)	Disc rotor	(e)	Shorten the adjuster ASSY - rear brake
(b)	Flat tip screwdriver	(d)	Extend the adjuster ASSY - rear brake		

2. When the disc rotor is difficult to be removed from the hub unit COMPL - rear axle, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.



B: INSTALLATION

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check the rear disc rotor. <Ref. to BR-41, INSPECTION, Rear Disc Rotor.>
2) Install the disc rotor.
3) Adjust the parking brake. <Ref. to PB-16, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>
4) Install the disc brake assembly.

Tightening torque:
Mounting bolt (except for STI model): 66 N·m (6.7 kgf-m, 48.7 ft-lb)
Mounting bolt (STI model): 65 N·m (6.6 kgf-m, 47.9 ft-lb)
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
5) Install the rear wheels.

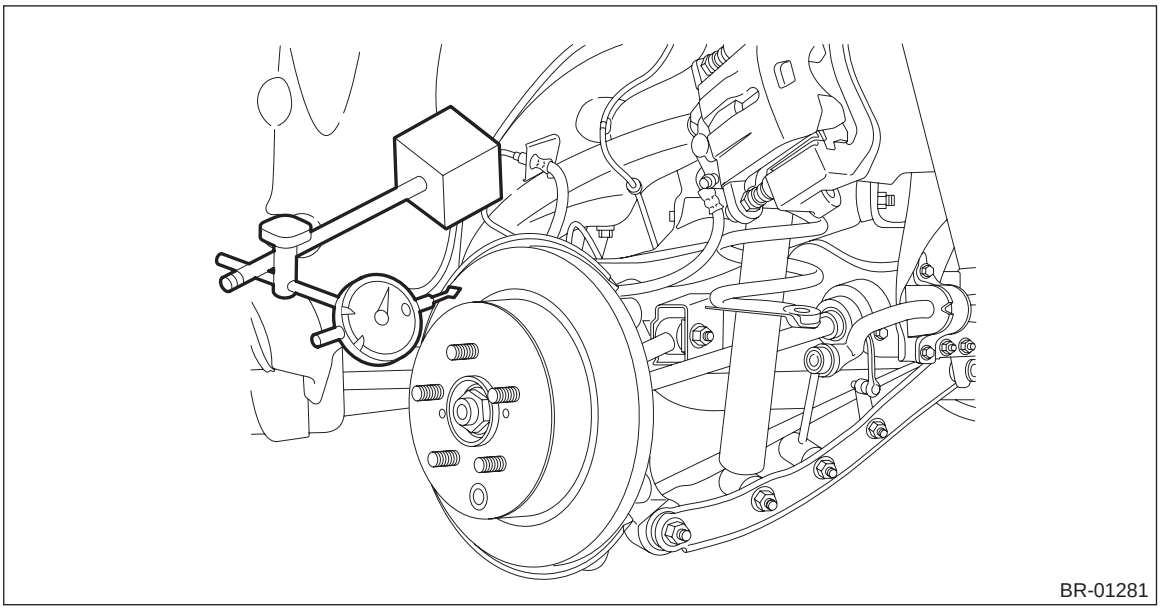
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: INSPECTION

1. DISC ROTOR RUNOUT CHECK

1) Check the hub unit COMPL - rear axle for free play and runout before the inspection of disc rotor runout limit. <Ref. to DS-47, INSPECTION, Rear Hub Unit Bearing.>
2) Secure the disc rotor by tightening the five wheel nuts.
3) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the disc rotor runout while rotating the disc rotor.

Disc rotor runout limit:
Except for STI model: 0.05 mm (0.0020 in)
STI model: 0.070 mm (0.0028 in)



BR-01281

4) If the disc rotor runout exceeds the limit, resurface the disc rotor.
5) After grinding, check the thickness of the disc rotor. <Ref. to BR-42, DISC ROTOR THICKNESS CHECK, INSPECTION, Rear Disc Rotor.>

2. DISC ROTOR THICKNESS CHECK

1) Set a micrometer 10 mm (0.39 in) inward from the disc rotor outer perimeter, and then measure the disc rotor thickness (A).

	Size	Standard	Wear limit	Disc rotor outer diameter
Disc rotor thickness (A)	Except for STI model	10 mm (0.79 in)	8.5 mm (0.335 in)	286 mm (12.44 in)
	STI model	20 mm (0.79 in)	18 mm (0.71 in)	316 mm (12.44 in)

2) If the wear limit is exceeded in the inspection, replace the disc rotor.

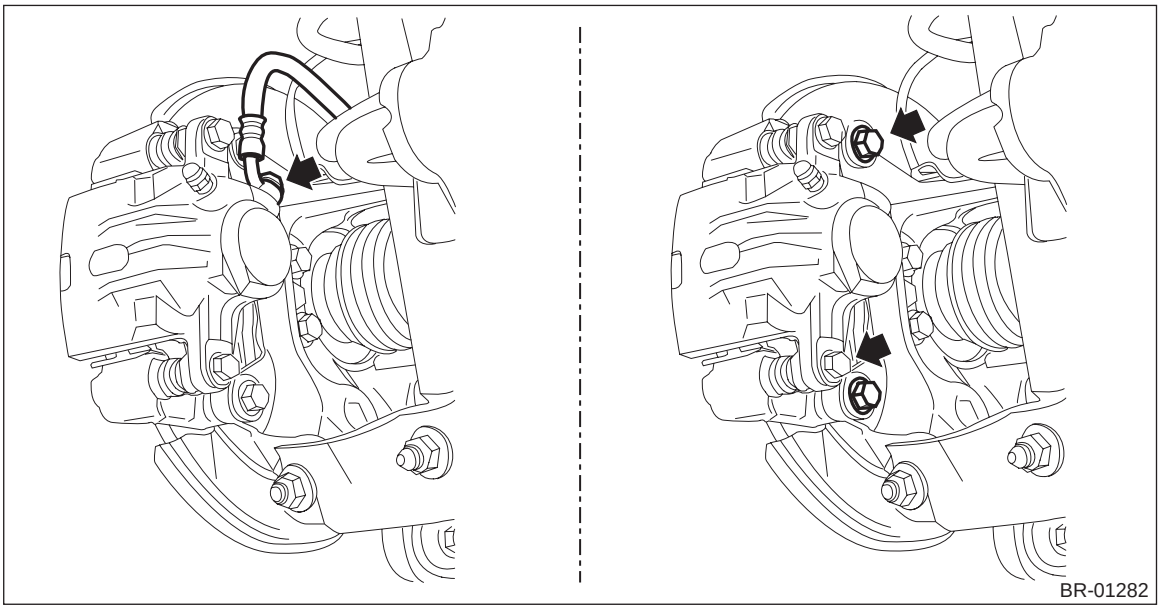
7. Rear Disc Brake Assembly

A: REMOVAL

1. EXCEPT FOR STI MODEL

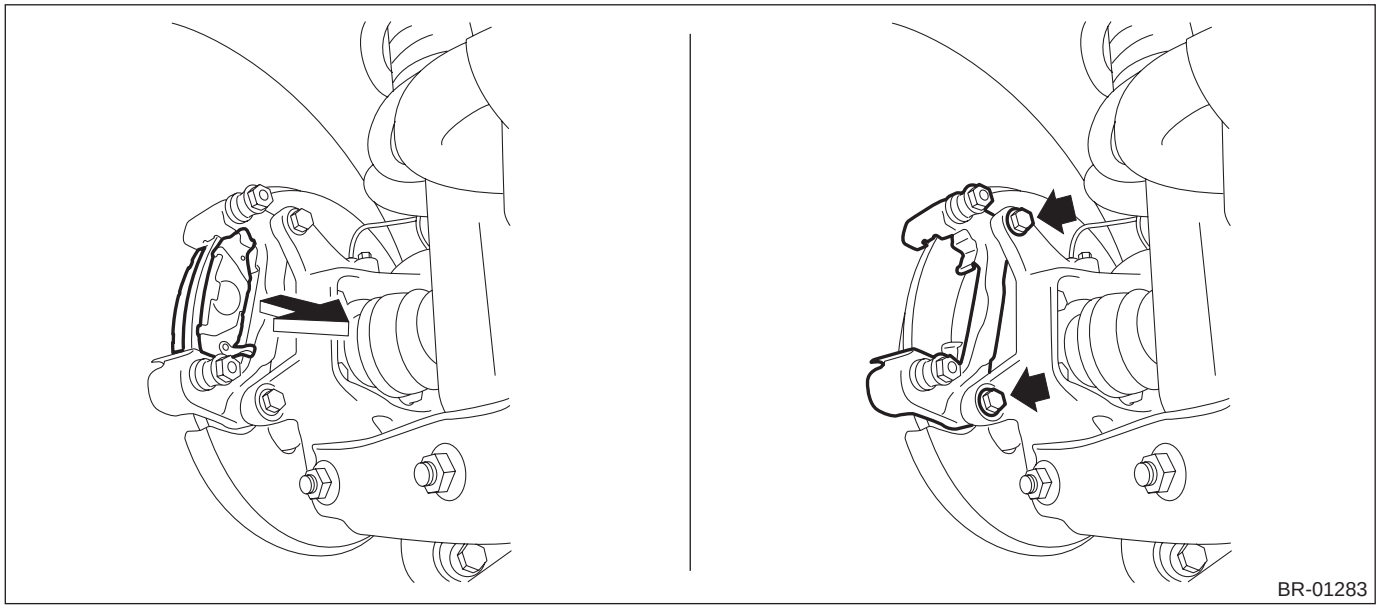
1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the union bolt and the caliper bolt, and remove the caliper body assembly.

CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.



BR-01282

3) Remove the support - rear disc brake.
   (1) Remove the pad - disc brake rear.
   (2) Remove the mounting bolts, and then remove the support - rear disc brake.

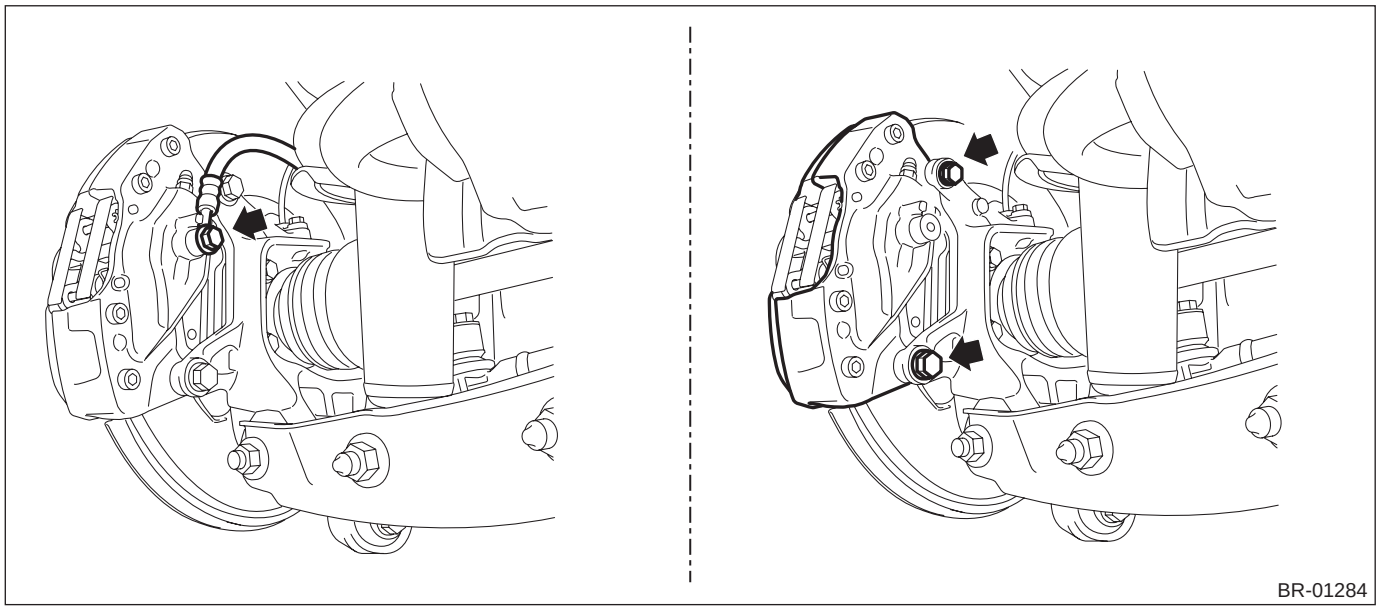


BR-01283

2. STI MODEL

CAUTION:
Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the pad - disc brake rear. <Ref. to BR-35, STI MODEL, REMOVAL, Rear Brake Pad.>
3) Remove the mounting bolts, and then remove the disc brake assembly.

CAUTION:
• Since the 17-inch (Brembo) caliper body is easily scratched and the paint may be stripped, protect it from being contacted with other parts or tools.
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.



BR-01284

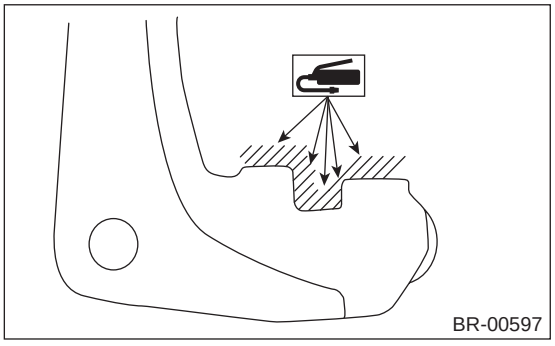
B: INSTALLATION

NOTE:
Before installation, remove mud and foreign matter from the caliper body assembly and support - rear disc brake.

1. EXCEPT FOR STI MODEL

1) Check each part. <Ref. to BR-51, INSPECTION, Rear Disc Brake Assembly.>
2) Apply a thin coat of grease to the support - rear disc brake.

Grease:
Grease contained in the pad kit or equivalent



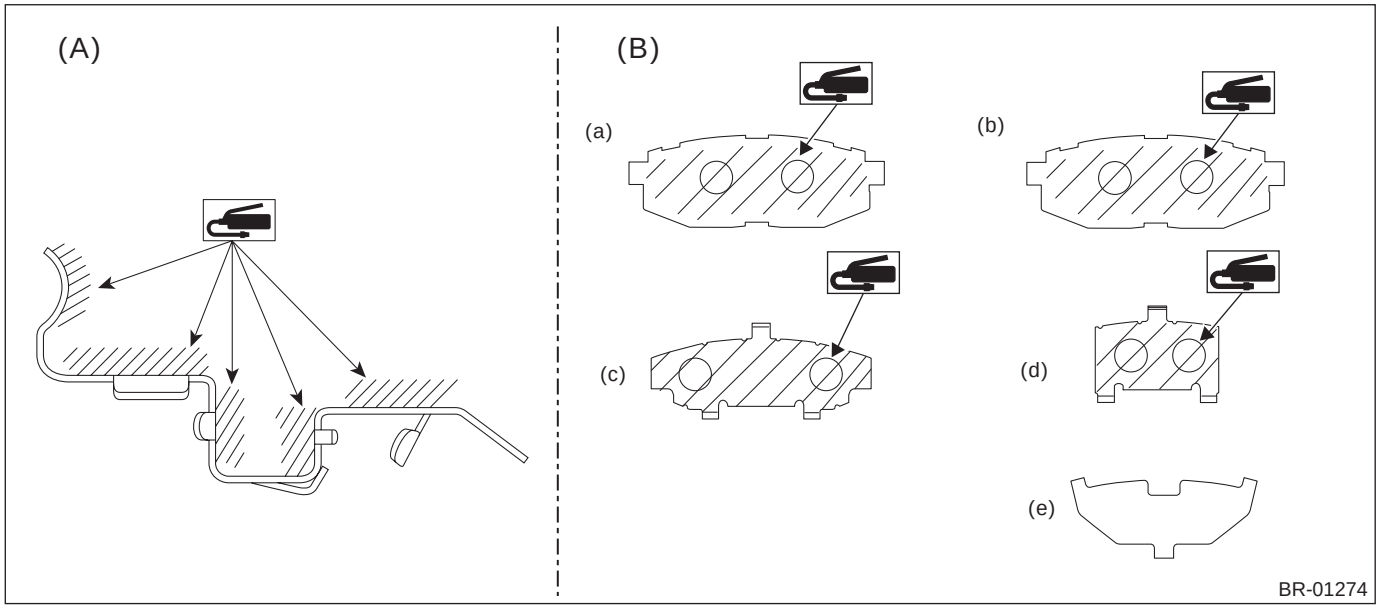
BR-00597

3) Install the support - rear disc brake to the housing assembly - rear axle.

Tightening torque:
66 N·m (6.7 kgf-m, 48.7 ft-lb)

4) Apply a thin coat of grease to the pad clip, both sides of the shim - disc brake rear inner and the shim mounting surface of the pad - disc brake rear.

Grease:
Pad clip (A): An item contained in the pad kit or equivalent
Shim and pad (B): An item contained in the pad kit or Molykote AS880N



(A)	Pad clip - rear brake	(B)	Remove the pad - disc brake rear and the shim - disc brake rear.		
(a)	Pad - disc brake rear outer	(c)	Shim - disc brake rear inner	(e)	Shim - disc brake rear outer
(b)	Pad - disc brake rear inner	(d)	Shim - disc brake rear inner		

5) Install the pad - disc brake rear.

NOTE:
Install the pad indicator in proper direction.

6) Install the caliper body assembly.

Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)

7) Install the brake hose bracket.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

8) Connect the brake hose using a new brake hose gasket.

Tightening torque:
26 N·m (2.7 kgf-m, 19.2 ft-lb)

9) Bleed air from the brake system. <Ref. to BR-67, BRAKE LINE, PROCEDURE, Air Bleeding.>

10) Install the rear wheels.

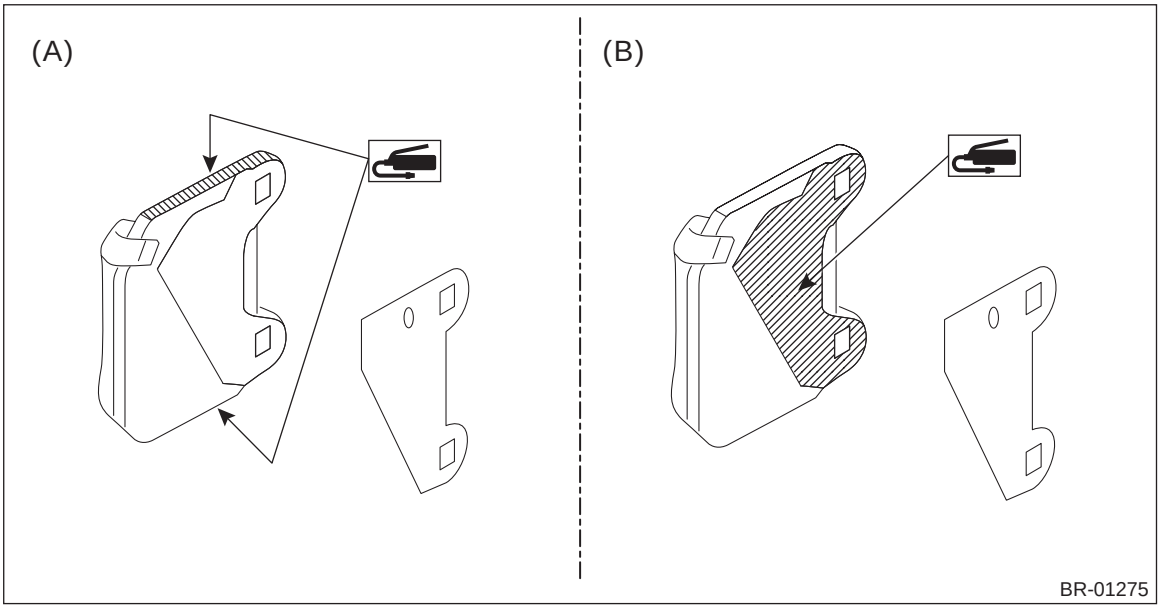
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

2. STI MODEL

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check each part. <Ref. to BR-51, INSPECTION, Rear Disc Brake Assembly.>
2) Install the disc brake assembly.

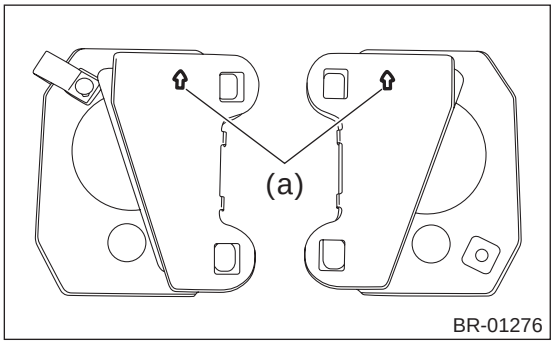
Tightening torque:
66 N·m (6.7 kgf-m, 48.7 ft-lb)
3) Apply a thin coat of grease to the side of the pad - disc brake rear, both sides of the shim - disc brake rear inner and the shim mounting surface of the pad - disc brake rear.

Grease:
Pad side (A): An item contained in the pad kit or equivalent
Shim and pad (B): An item contained in the pad kit or Molykote AS880N



4) Install the pad - disc brake rear.

NOTE:
Install so that the arrow (a) faces upward.



5) Install the cross spring.
6) Install the pin - disc brake.
7) Install the clip - slide pin.
8) Install the brake hose bracket.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

9) Connect the brake hose using a new brake hose gasket.

Tightening torque:
26 N·m (2.7 kgf-m, 19.2 ft-lb)
10) Bleed air from the brake system. <Ref. to BR-67, BRAKE LINE, PROCEDURE, Air Bleeding.>
11) Install the rear wheels.

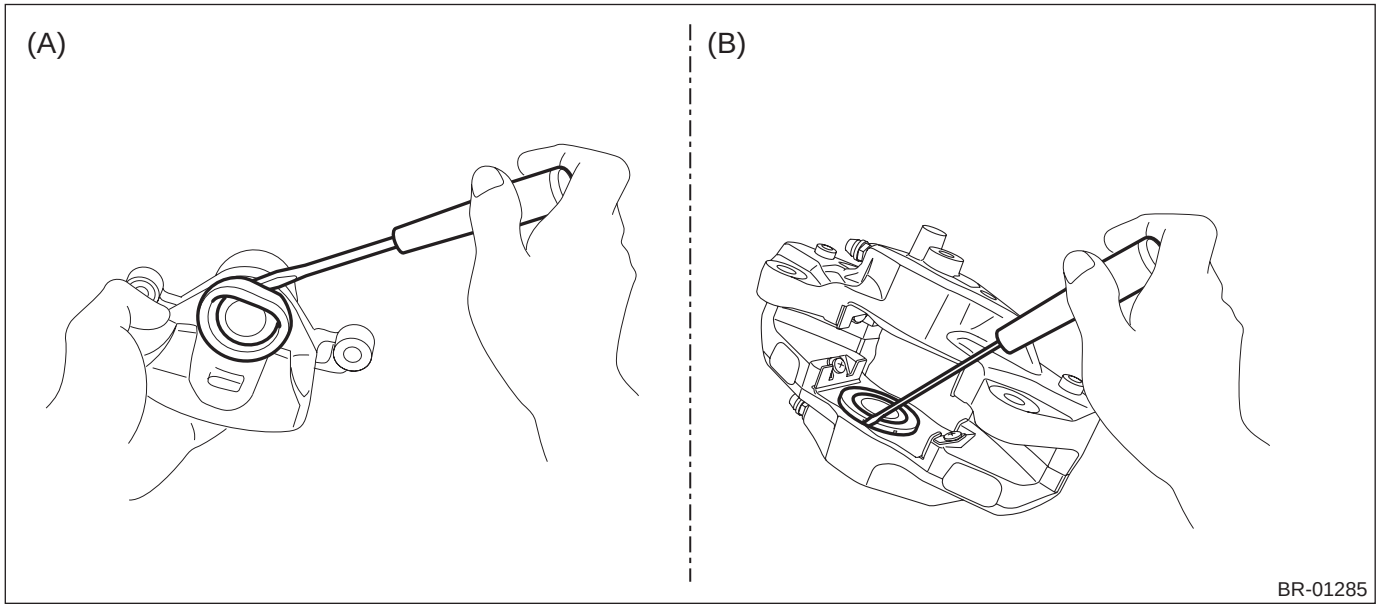
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: DISASSEMBLY

CAUTION:
- **Be careful not to allow foreign matter to enter the brake hose connector.**
- **Since the 17-inch (Brembo) caliper body is easily scratched and the paint may be stripped, protect it from being contacted with other parts or tools.**

1) Remove mud and foreign matter from the caliper body assembly.
2) Remove the piston boot.

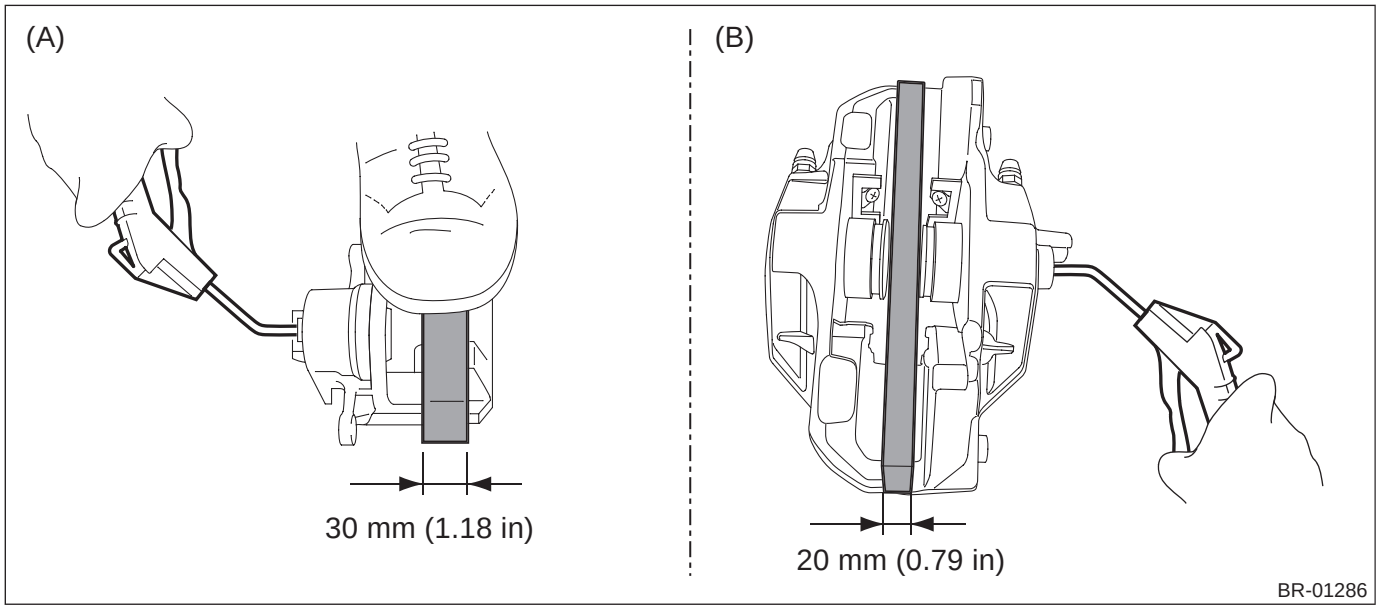
NOTE:
For STI model, remove the two piston boots.



(A) Except for STI model (B) STI model

3) Remove the piston - disc brake.
(1) Place a wooden block in the caliper body assembly as shown in the figure to prevent the piston - disc brake from jumping out and being damaged.
(2) Using an air gun, gradually apply compressed air via the brake hose installation hole to push out the piston - disc brake.

NOTE:
Instead of removing the pistons one by one, remove all pistons at once after adjusting the amount of protrusion evenly using a wooden block.

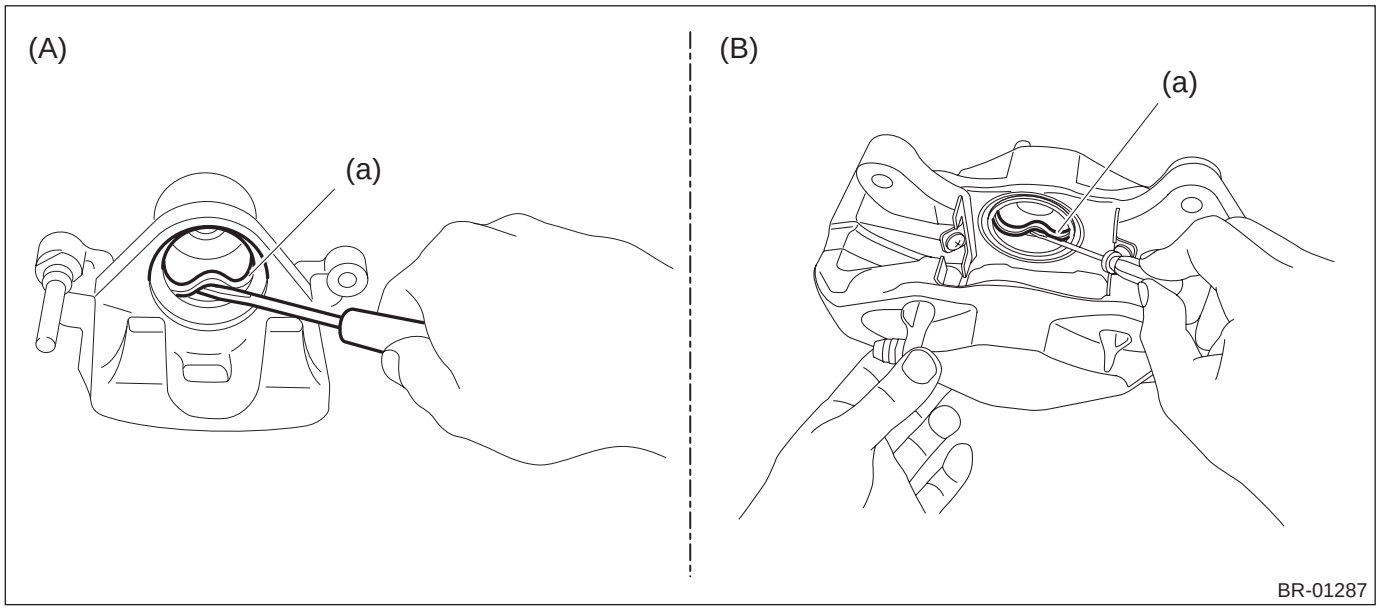


(A) Except for STI model (B) STI model

4) Remove the piston seal (a).

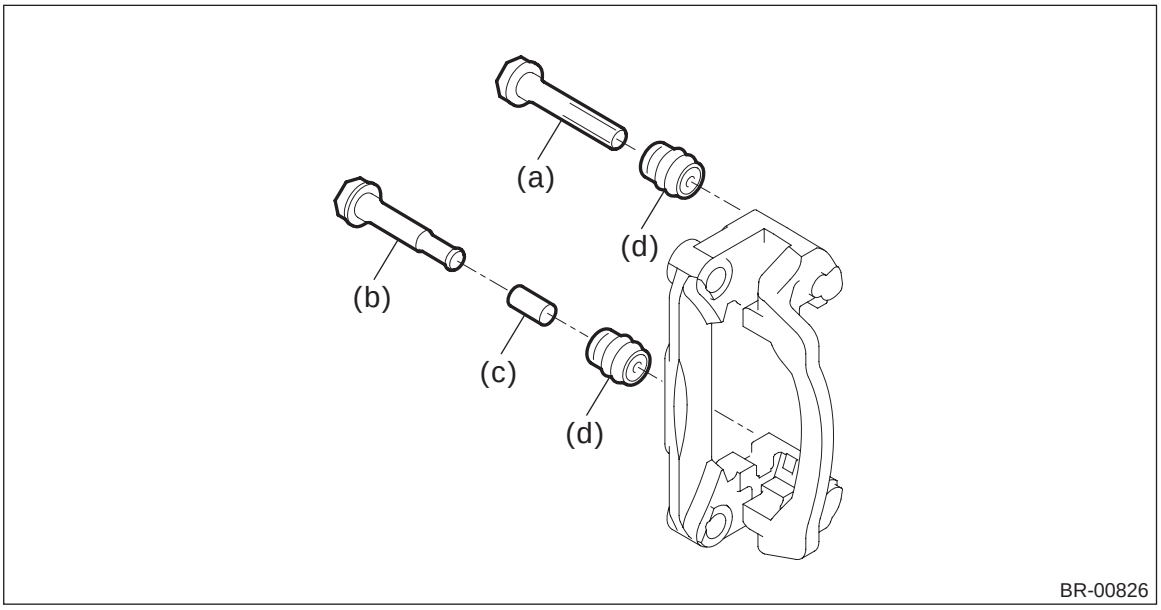
CAUTION:
Do not damage the piston sliding part and the piston seal groove.

NOTE:
For STI model, remove the four piston seals.



(A) Except for STI model (B) STI model

5) Remove each part from support - rear disc brake. (Except for STI model)



(a) Guide pin - rear brake (black)
(b) Lock pin - rear brake (silver)
(c) Lock pin - bushing
(d) Pin boot

D: ASSEMBLY

1) Check each part. <Ref. to BR-51, INSPECTION, Rear Disc Brake Assembly.>
2) Clean the inside of the caliper body using brake fluid.

Fluid:
FMVSS No. 116, DOT3 or DOT4

3) Install the piston seal and the piston - disc brake.
(1) Apply a coat of brake fluid to piston seal and install the piston seal to the groove inside caliper body.
(2) Apply a coat of brake fluid to the piston sliding part of caliper body and the entire outer surface of the piston - disc brake.

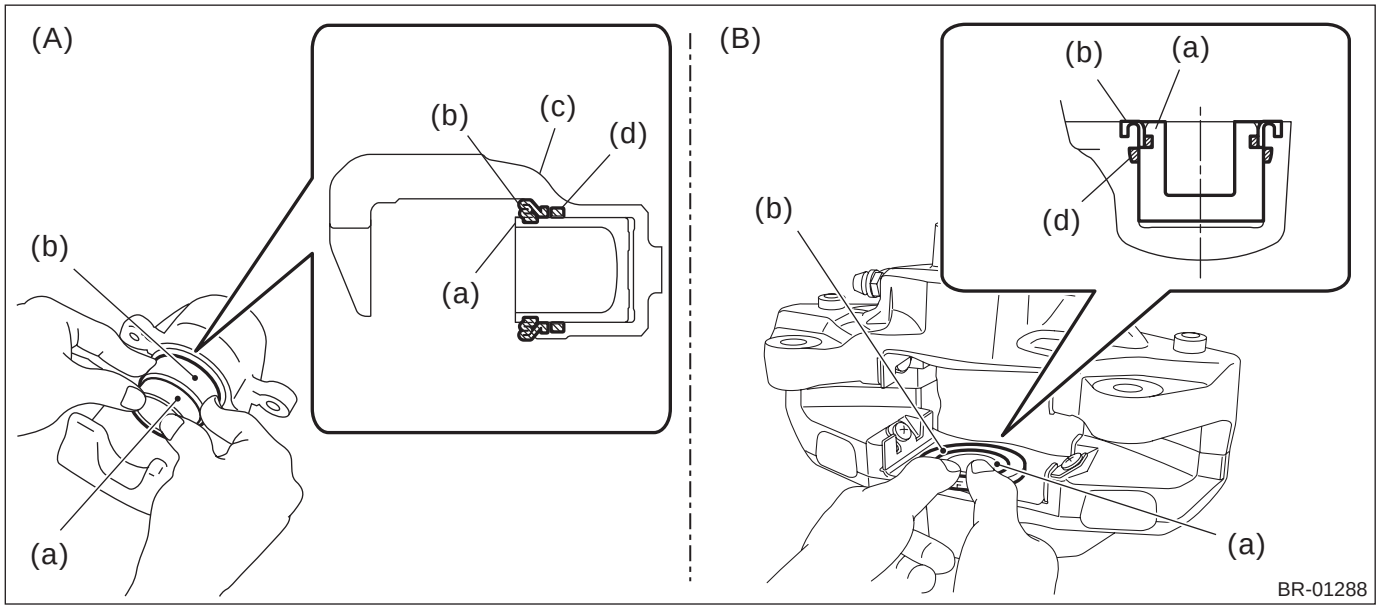
Fluid:
FMVSS No. 116, DOT3 or DOT4

(3) Apply a coat of grease to the piston boot and fit to the groove on the ends of piston - disc brake.

Grease:
An item contained in the pad kit or Nippon Grease NIGLUBE RX-2

(4) Install the piston - disc brake to the caliper body.

CAUTION:
Do not force the piston - disc brake into the sliding part of caliper body.

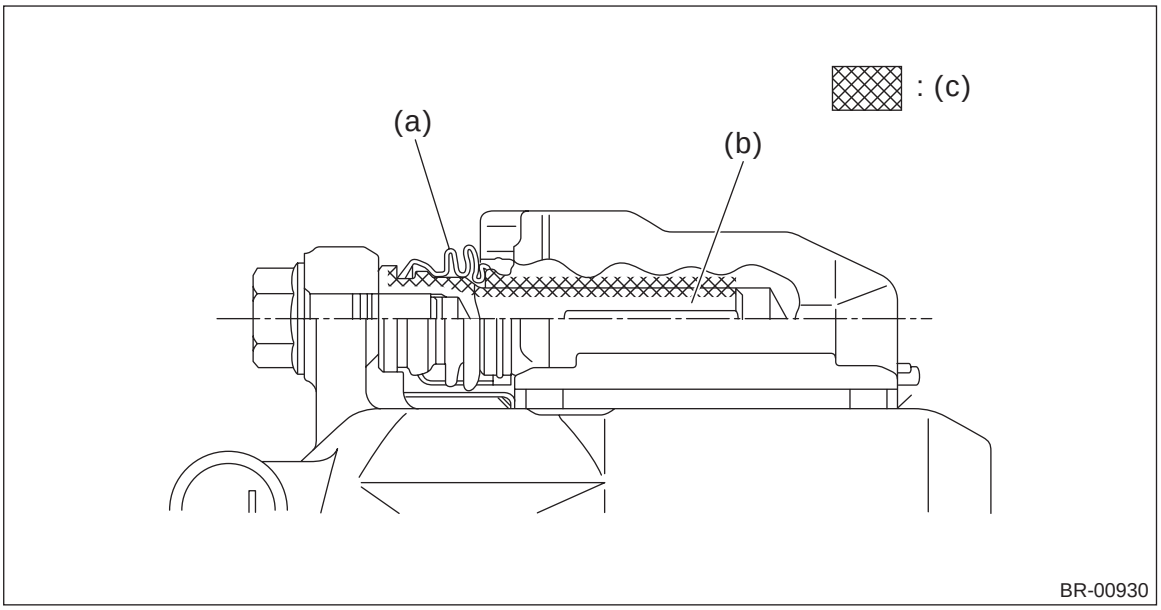


(A) Except for STI model
(B) STI model
(a) Piston - disc brake
(b) Piston boot
(c) Caliper body
(d) Piston seal

4) Apply grease contained in the piston seal kit to the lock pin - rear brake, the outer surface of guide pin - rear brake, the pin sliding part of the support - front disc brake, and the grooves of pin boot. (Except for STI model)

5) Install the pin boot to the lock pin - rear brake and guide pin - rear brake, and insert them into the support - rear disc brake.

CAUTION:
Insert the lock pin - rear brake and guide pin - rear brake into specified position, and make sure that they slide and seat properly.



(a) Pin boot
(b) Lock pin - rear brake or guide pin - rear brake
(c) Grease applied area

E: INSPECTION

1) Check the piston sliding part of caliper body and the piston - disc brake for uneven wear, damage or rust.
2) Check the rubber parts for damage or deterioration.
3) If faulty is found in the inspection, replace the relevant part.

8. Master Cylinder

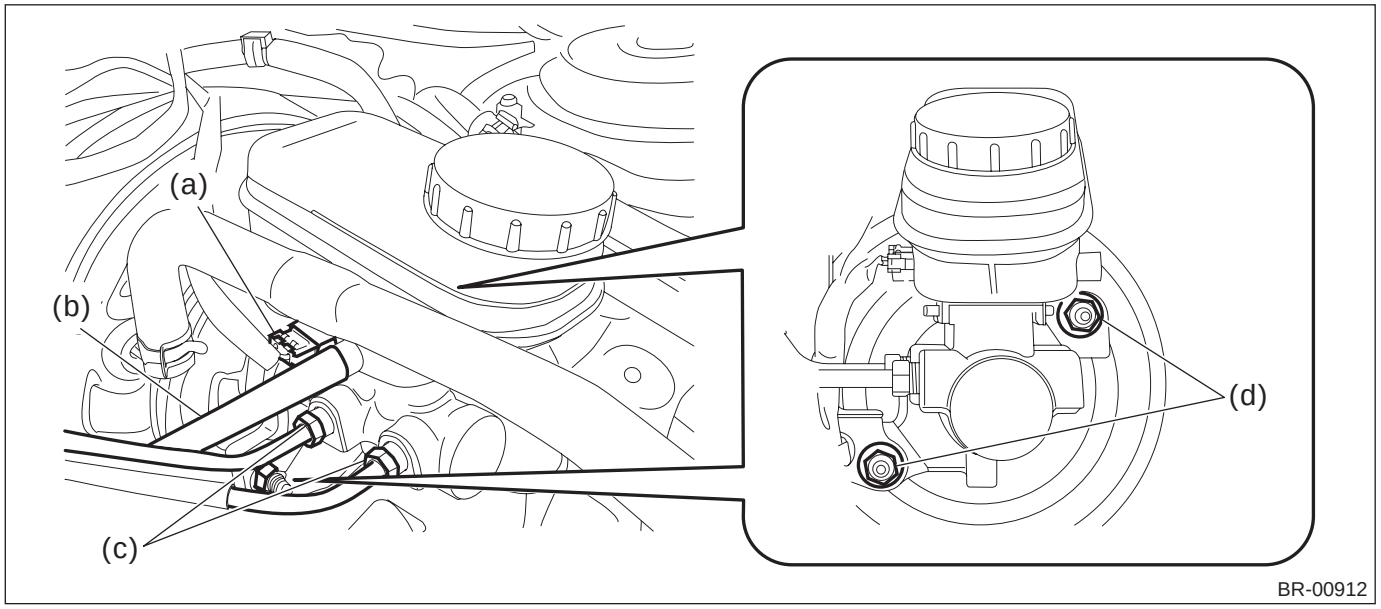
A: REMOVAL

CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.

1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.

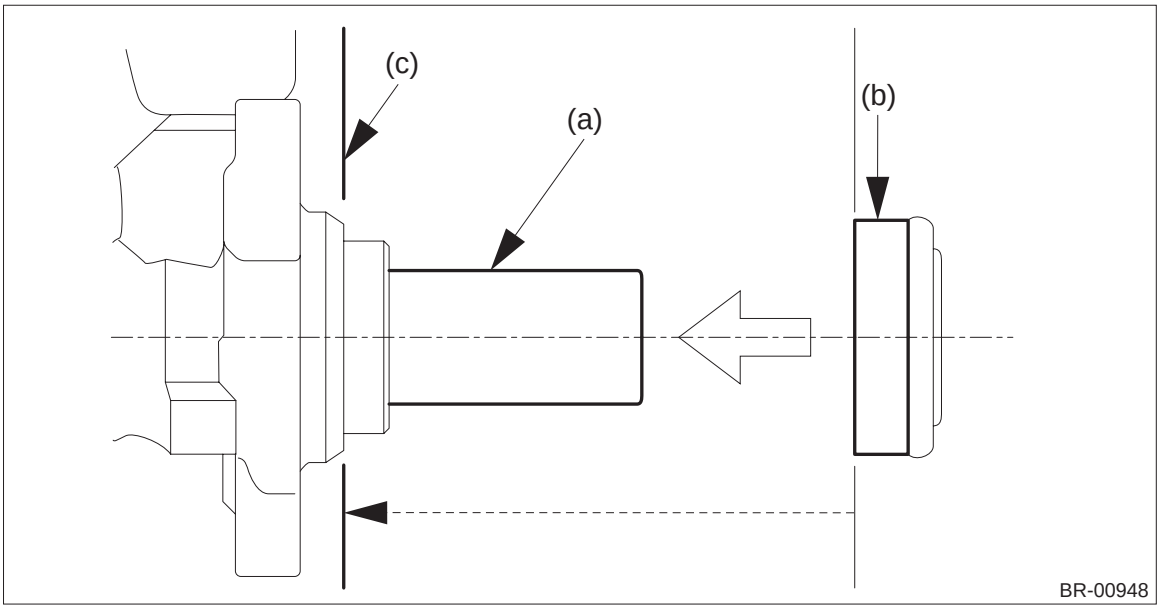
2) Drain brake fluid from the reservoir tank completely.
3) Remove the master cylinder assembly.
   (1) Disconnect the fluid level gauge connector (a).
   (2) Disconnect the clutch hose (b). (MT model)
   (3) Disconnect the brake pipe (c).
   (4) Remove the nut (d), and slowly remove the master cylinder assembly from the vacuum booster assembly.



B: INSTALLATION

1) Replace the seal sub assembly for the master cylinder assembly with a new part.

CAUTION:
Be careful not to install the seal sub assembly in the wrong location.



(a) Primary piston
(b) Seal sub ASSY
(c) Install the seal sub ASSY to this surface.

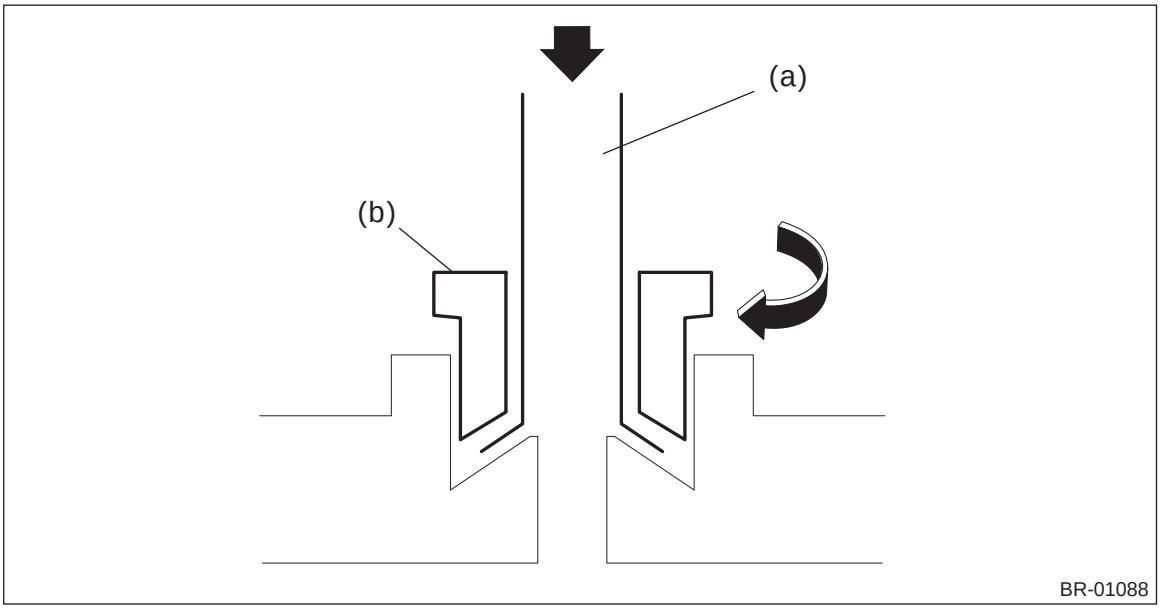
2) Install the master cylinder assembly.

Tightening torque:
13 N·m (1.3 kgf-m, 9.6 ft-lb)

3) Turn and tighten the flare nut (b) by hand while pressing the brake pipe (a) toward the master cylinder assembly side.

CAUTION:
Be careful not to make scratches or other damage to the inside surface of the brake pipe flare.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



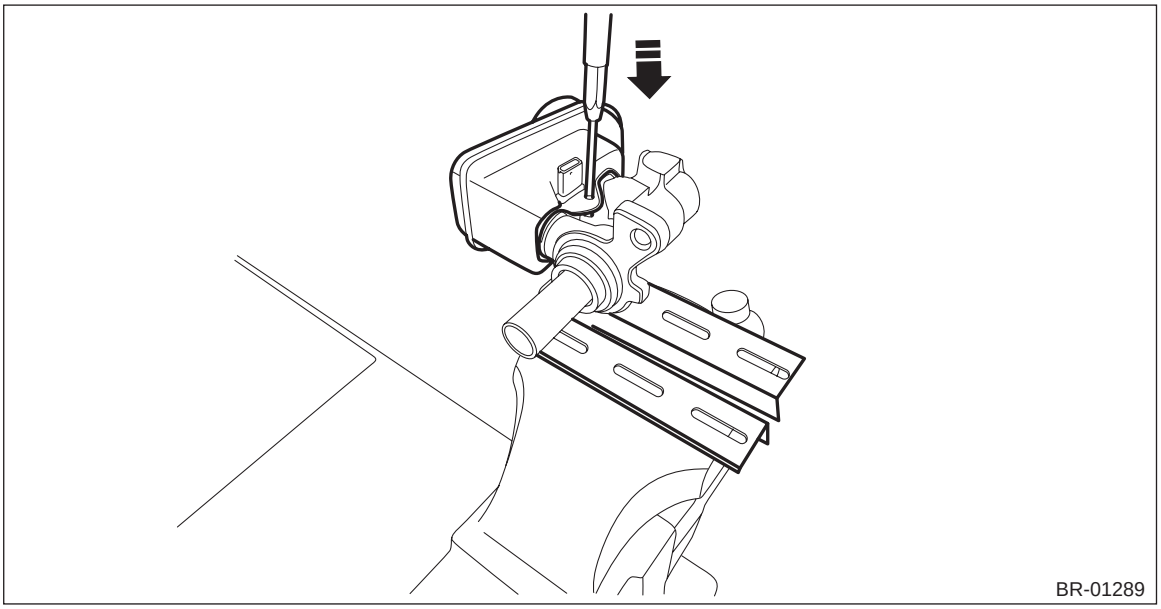
4) Bleed air from the brake system and clutch system (MT model). <Ref. to BR-65, PROCEDURE, Air Bleeding.>
5) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

C: DISASSEMBLY

1) Remove the reservoir tank.

CAUTION:
Be careful not to tighten a vise excessively.
(1) Place the master cylinder assembly between aluminum plates and fix it on a vise.
(2) Drive out the pin using a punch and a hammer to remove the reservoir tank.



2) Remove the seal from the cylinder body assembly.

D: ASSEMBLY

1) Install the seal to the cylinder body assembly.
2) Install the reservoir tank.

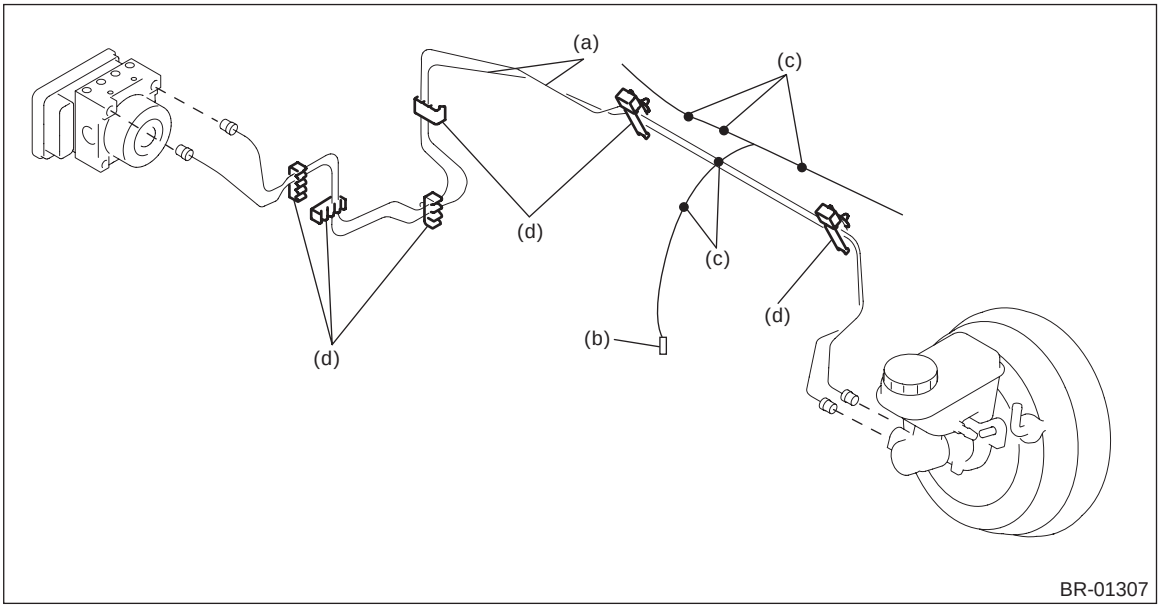
CAUTION:
Be careful not to tighten a vise excessively.
(1) Place the master cylinder assembly between aluminum plates and fix it on a vise.
(2) Drive the pin using a punch and a hammer to install the reservoir tank.

9. Brake Booster

A: REMOVAL

CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Before performing service on the airbag module, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" section. <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-5, BATTERY, NOTE, Note.>

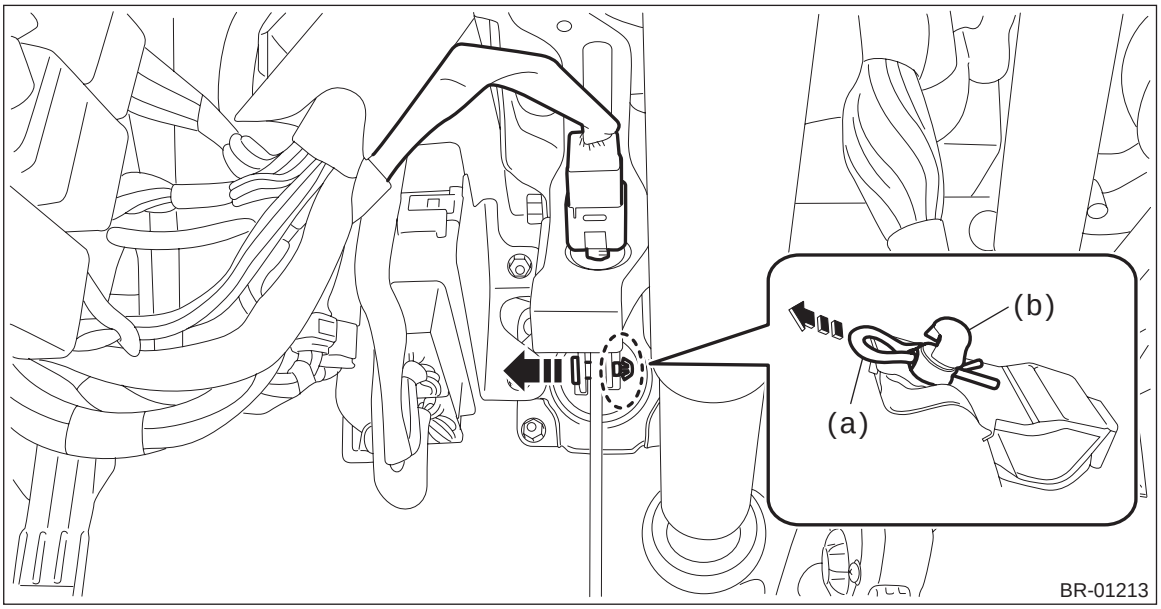
NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Remove the intercooler.
• Except for STI model <Ref. to IN(w/o STI)-41, REMOVAL, Intercooler.>
• STI model <Ref. to IN(STI)-13, REMOVAL, Intercooler.>
3) Disconnect the air conditioner pipe. <Ref. to AC-63, REMOVAL, Hose and Pipe.>
4) Remove the power steering control module. (Except for STI model) <Ref. to PS-84, REMOVAL, Power Steering Control Module.>
5) Remove the vacuum hose.
6) Remove the master cylinder assembly. <Ref. to BR-52, REMOVAL, Master Cylinder.>
7) Remove the brake pipe assembly (a).
(1) Disconnect the starter connector (b) and harness clip (c).
(2) Remove the brake pipe assembly (a) from the pipe clip (d).



8) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-61, REMOVAL, Instrument Panel Lower Cover.>
9) Remove the knee airbag module. <Ref. to AB-25, KNEE AIRBAG MODULE, PROCEDURE, Airbag Connector.>
10) Remove the column assembly - steering. <Ref. to PS-25, REMOVAL, Steering Column.>

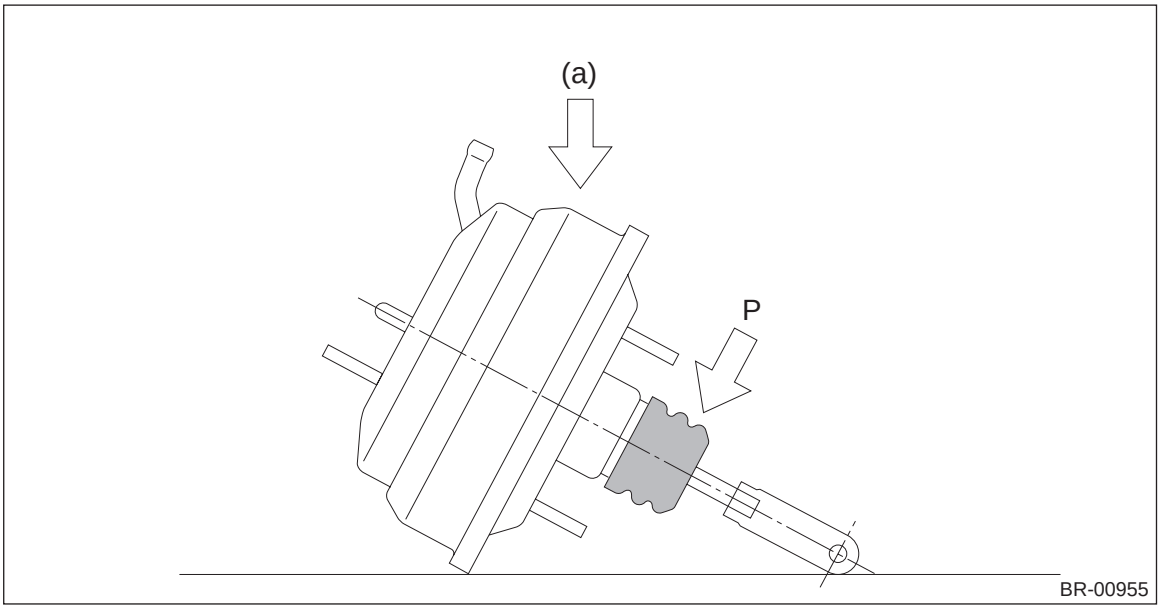
11) Remove the snap pin (a) and clevis pin (b), and remove the operating rod from the brake pedal.

CAUTION:
• Be careful not to apply excessive force to the operating rod when handling the operating rod. The angle may change by ±3°, and it may result in damage to power piston cylinder.
• Do not change the push rod length.

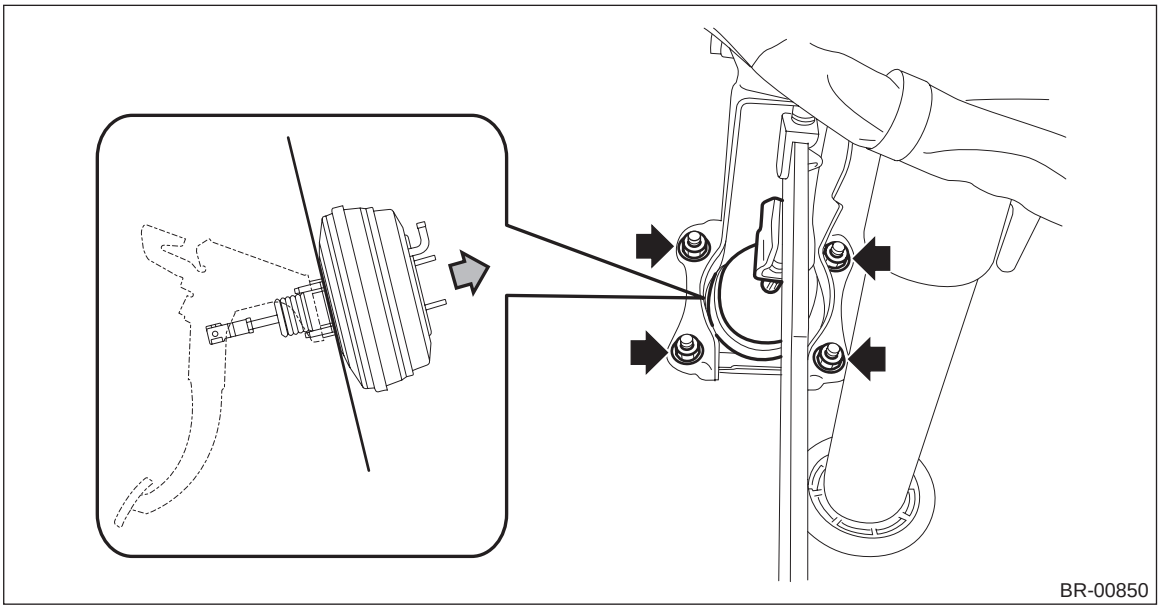


12) Remove the vacuum booster assembly.

CAUTION:
• Do not disassemble the vacuum booster assembly.
• Make sure that the booster shell and vacuum pipe are not subject to strong impacts.
• Be careful not to drop the vacuum booster assembly. If the vacuum booster assembly is dropped accidentally, replace it.
• Be careful when placing the vacuum booster assembly on floor.
• If external force (a) is applied from above when the vacuum booster assembly is placed in this position, the resin portion as indicated by "P" may become damaged.



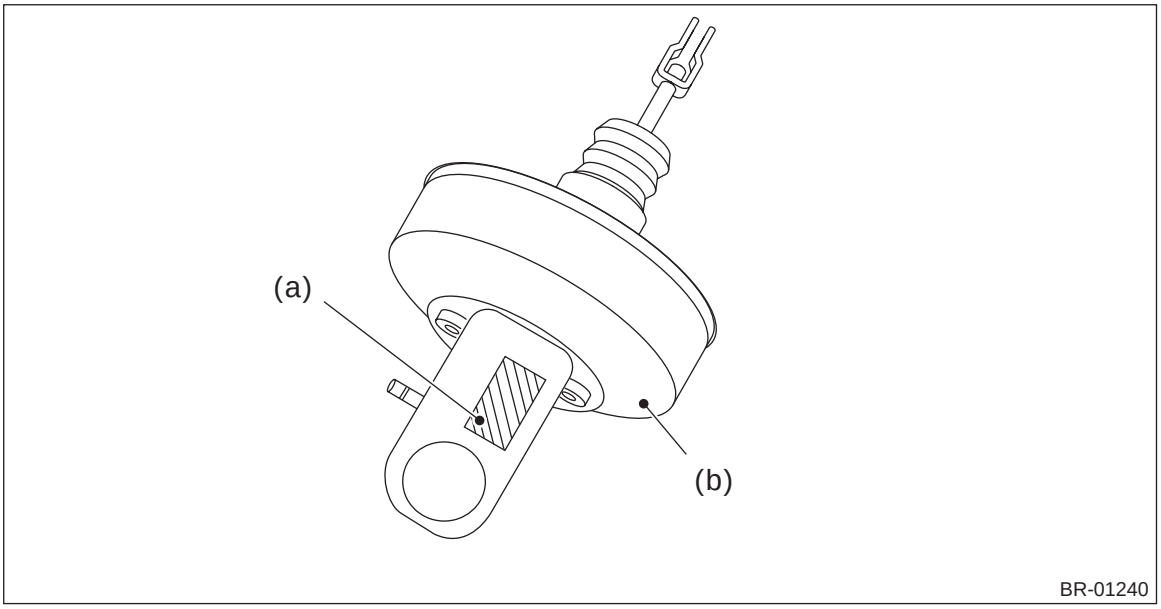
(1) Remove the nuts, and then remove the vacuum booster assembly.



B: INSTALLATION

CAUTION:
• When replacing the brake booster, adhere the label to the position shown in the figure. (C0 model)
• Before performing service on the airbag module, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" section. <Ref. to AB-9, CAUTION, General Description.>

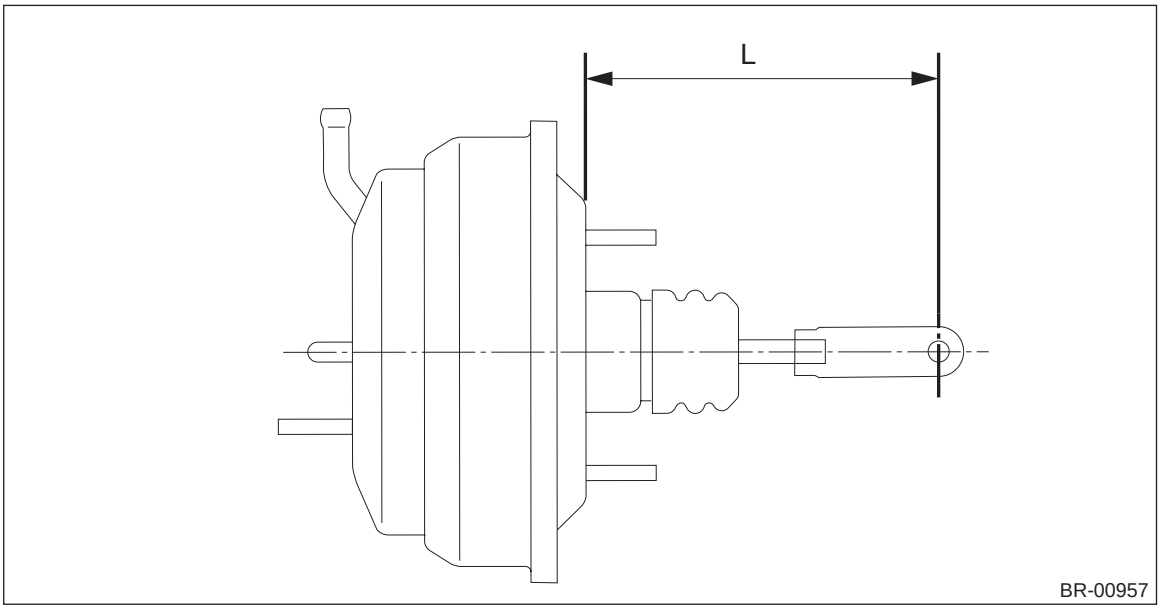
Label:
C0 model
Part No. 25080GA010



(a) Label (b) Brake booster

1) Check and adjust the operating rod of the vacuum booster assembly.
   (1) Measure the length between the vacuum booster assembly mounting surface and clevis pin hole.
   (2) If it is not within the specification, loosen the lock nut, rotate the vacuum booster assembly operating rod to adjust the rod length.

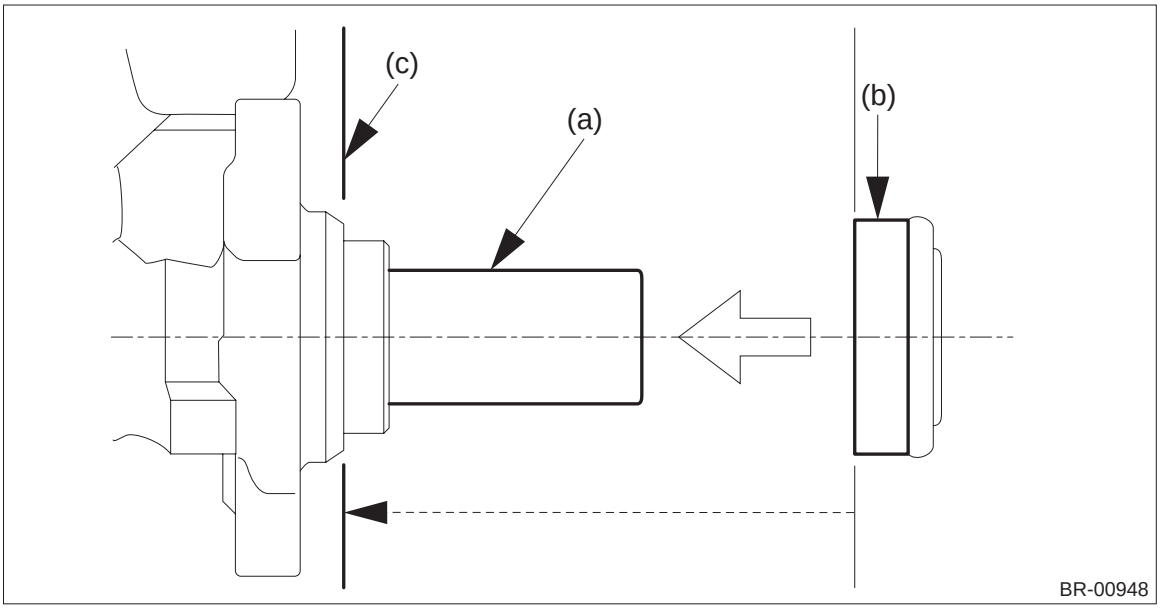
Specification L:
136.3 mm (5.37 in)



2) Install the vacuum booster assembly.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

CAUTION:
• Apply grease to the snap pin to prevent the operating rod from wear.
• Replace the clevis pin with new parts, and apply thin coat of NIGTIGHT LYW No. 2 grease to the clevis pin.
• When installing the master cylinder assembly, replace the seal sub assembly with a new part, and install it to the vacuum booster assembly.



(a) Primary piston
(b) Seal sub ASSY
(c) Install the seal sub ASSY to this surface.

3) Install the column assembly - steering. <Ref. to PS-28, INSTALLATION, Steering Column.>
4) Install the knee airbag module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
5) Install the cover assembly - instrument panel LWR driver.
6) Install the master cylinder assembly. <Ref. to BR-53, INSTALLATION, Master Cylinder.>
7) Install the air conditioner pipe. <Ref. to AC-9, AIR CONDITIONING UNIT, COMPONENT, General Description.>
8) Install the intercooler.
- Except for STI model: <Ref. to IN(w/o STI)-43, INSTALLATION, Intercooler.>
- STI model: <Ref. to IN(STI)-14, INSTALLATION, Intercooler.>

9) Charge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>
10) Bleed air from the brake system. <Ref. to BR-65, PROCEDURE, Air Bleeding.>
11) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.
12) Perform a road test to make sure the brakes do not drag.

C: INSPECTION

1. OPERATION CHECK WHEN NOT USING MEASURING DEVICES

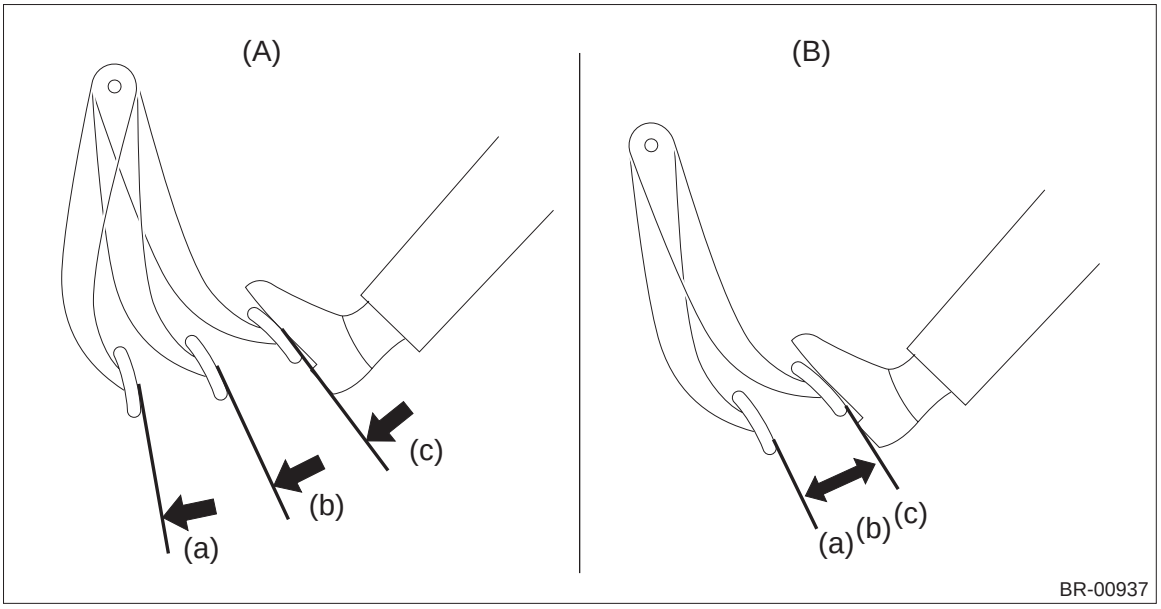
CAUTION:
When checking operation, be sure to apply the parking brake securely.
When an operation check is performed with no measuring devices, a faulty part cannot be identified correctly. But it is possible to identify the outline of the defect by performing the check according to the following procedures.

- **Air tightness check**

1) Start the engine, and idle it for 1 to 2 minutes, then turn it OFF.
2) Depress the brake pedal several times applying the normal pedal force.

NOTE:
The pedal stroke should be the longest at the 1st depression, and it should become shorter at each successive depression.

3) If no change occurs in the pedal height when pressed, the vacuum booster assembly is faulty.



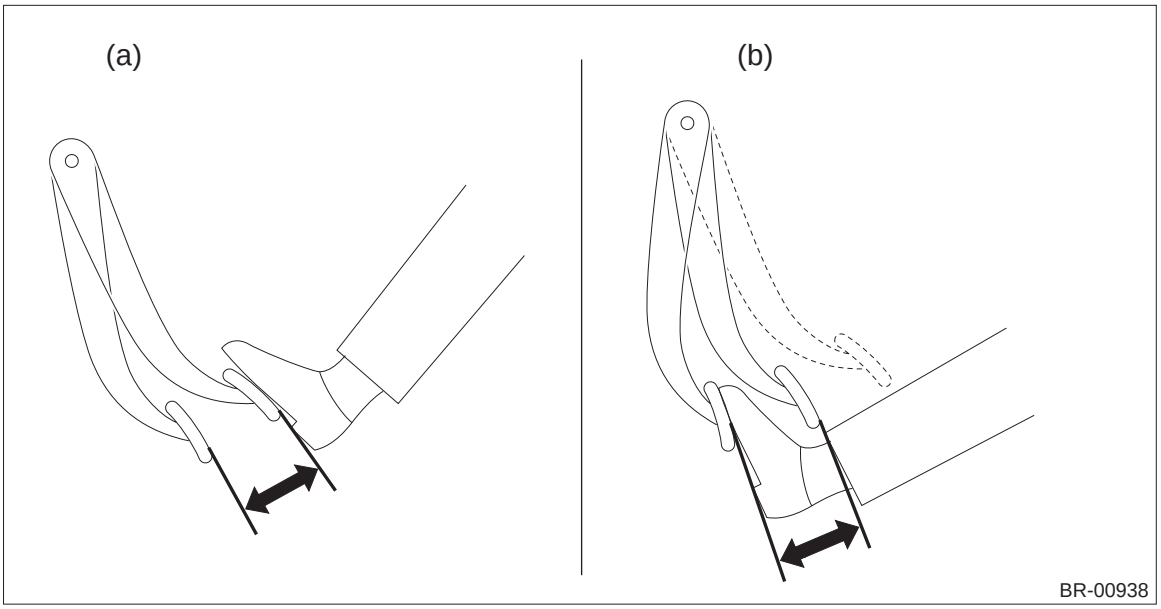
(A) Normal (B) Not OK

(a) 1st (b) 2nd (c) 3rd

NOTE:
- In case of defective operation, inspect the condition of the check valve and vacuum hose as well.
- Replace them if faulty, and perform the test again.
- If no improvement is observed, check precisely with gauges.

- **Check operation**

1) While the engine is OFF, depress the brake pedal several times applying the same pedal force, to check for a change in pedal height.



(a) When engine is stopped (b) When engine is started

2) With the brake pedal depressed, start the engine.
3) As the engine starts, the brake pedal should move slowly toward the floor. If the pedal height does not change, the vacuum booster assembly is faulty.

NOTE:
If a faulty part is detected after inspection, check precisely with measuring devices.

- **Loaded air tightness check**

Depress the brake pedal while the engine is running, and turn the engine to OFF while the pedal is depressed.
Keep the pedal depressed for 30 seconds. If the pedal height does not change, the function of vacuum booster assembly is normal. If the pedal height increases, it is faulty.

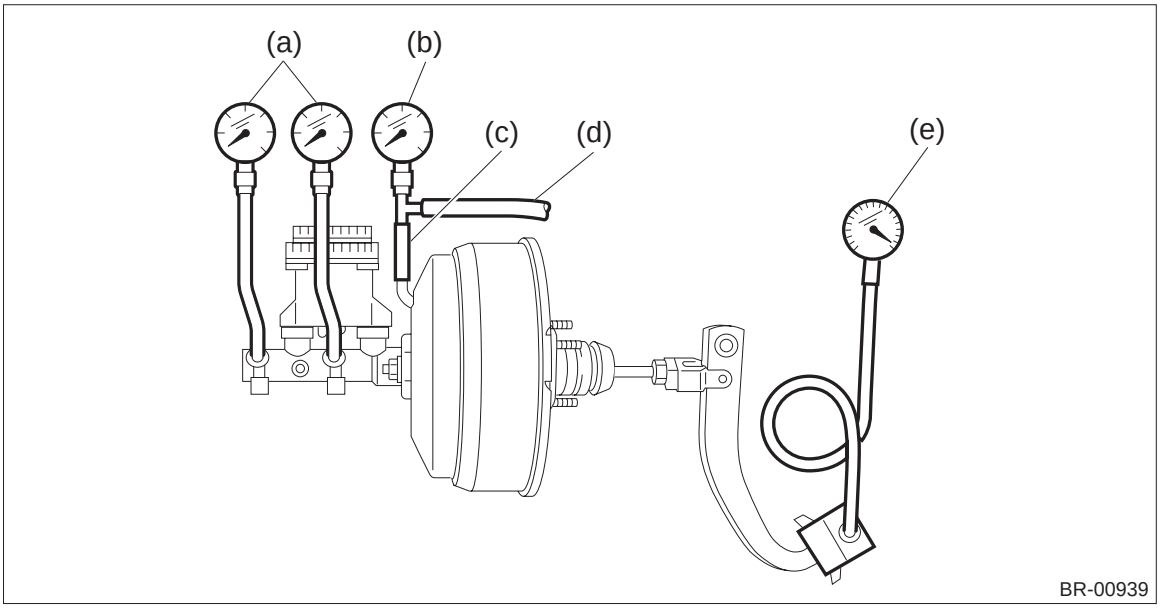
NOTE:
If a faulty part is detected after inspection, check precisely with measuring devices.

2. OPERATION CHECK WHEN USING MEASURING DEVICES

CAUTION:
When checking operation, be sure to apply the parking brake securely.

- **Check with measuring devices**

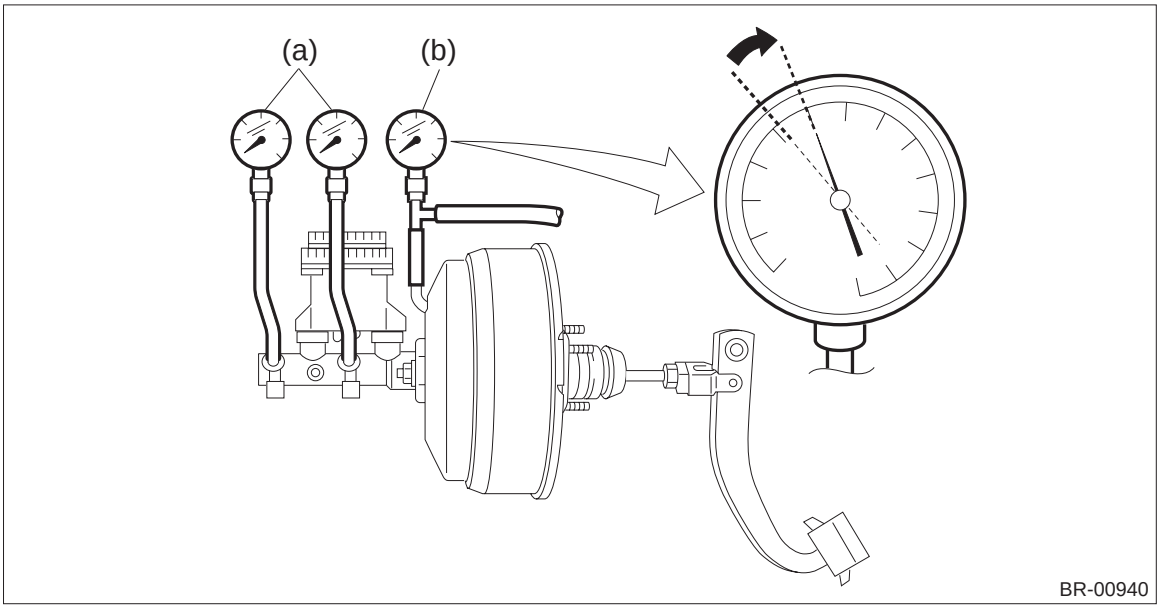
Connect a measuring device as shown in the figure. After bleeding air from the pressure gauge, perform each check.



(a) Pressure gauge
(b) Vacuum gauge
(c) Adapter hose
(d) Vacuum hose
(e) Pedal force gauge

- **Air tightness check**

1) Start the engine and keep it running at idle until vacuum pressure indicates 66.7 kPa (500 mmHg, 19.69 inHg) while the brake pedal is not depressed.



(a) Pressure gauge (b) Vacuum gauge

2) Stop the engine and check the vacuum pressure.
If the value matches the following standard, the vacuum booster assembly function is normal.

Vacuum pressure: standard

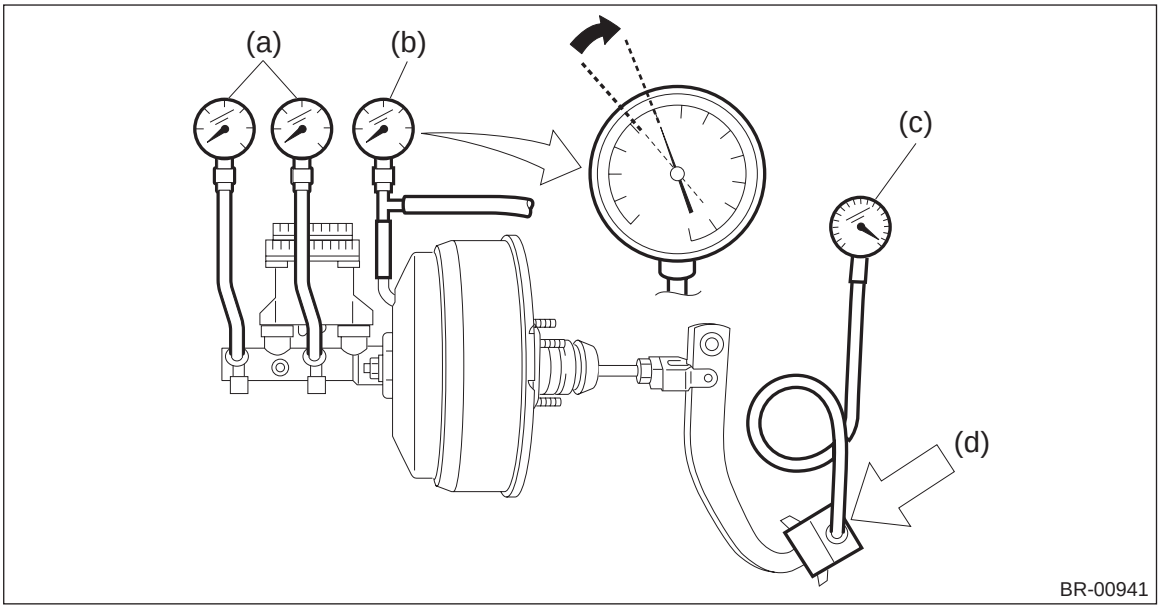
The range of vacuum pressure drop within 15 seconds after stopping the engine is 3.3 kPa (25 mmHg, 0.98 inHg) or less.

If a faulty part is detected after inspection, it may results from one of the following causes.

- Check valve malfunction
- Leak from vacuum hose
- Leak from shell joint section or stud bolt welded section
- Damaged diaphragm
- Leak from valve body seal and bearing section
- Leak from plate and seal assembly section
- Leak from poppet valve assembly section

- **Loaded air tightness check**

1) Start the engine and depress the brake pedal with a pedal force of 196 N (20 kgf, 44 lbf).
2) Keep the engine running at idle and the pedal depressed until vacuum pressure of the vacuum gauge indicates 66.7 kPa (500 mmHg, 19.69 inHg).



(a) Pressure gauge
(b) Vacuum gauge
(c) Pedal force gauge
(d) Depressed

3) Stop the engine and check the vacuum gauge.
If the value matches the following standard, the vacuum booster function is normal.

Vacuum pressure: standard
The range of vacuum pressure drop within 15 seconds after stopping the engine is 3.3 kPa (25 mmHg, 0.98 inHg) or less.

If a faulty part is detected after inspection, refer to “AIR TIGHTNESS CHECK”.
<Ref. to BR-59, INSPECTION, Brake Booster.>
4) If the vacuum booster assembly is faulty, replace it with a new part.

- **Lack of boost action check**

1) Turn the engine OFF, and set the value of the vacuum gauge to “0”.
2) Check the fluid pressure when the brake pedal is depressed. The pressure must be greater than the specification listed.

Brake pedal force: N (kgf, lbf)	147 (15, 33)	294 (30, 66)
Fluid pressure: kPa (kgf/cm^2, psi)	471 (4.8, 68.3)	1,385 (14.1, 200.8)

- **Boosting action check**

1) Set the vacuum gauge reading to 66.7 kPa (500 mmHg, 19.69 inHg) with the engine running.
2) Check the fluid pressure when the brake pedal is depressed. The pressure must be greater than the specification listed.

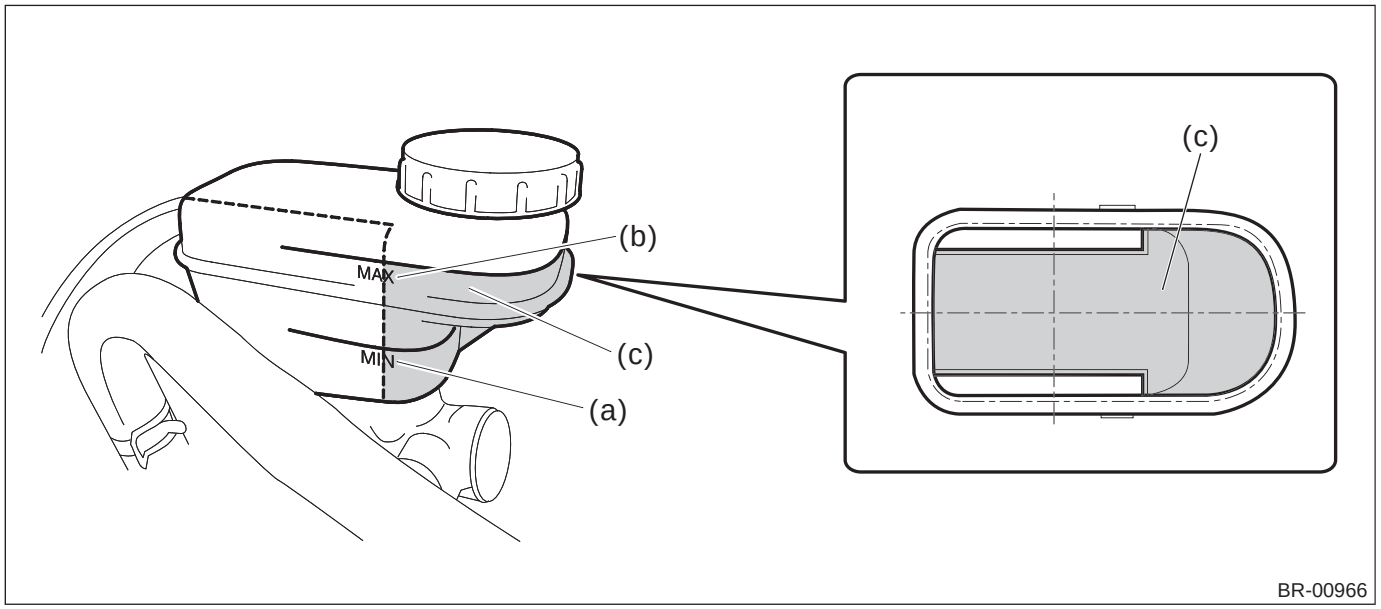
Brake pedal force: N (kgf, lbf)	147 (15, 33)	294 (30, 66)
Fluid pressure: kPa (kgf/cm^2, psi)	4,880 (49.8, 707.6)	9,750 (99.4, 1413.7)

10.Brake Fluid

A: INSPECTION

1) Check that the amount of brake fluid is between the lines of “MIN” (a) and “MAX” (b) from a straight view or within 90° to the right and left forward.
If out of the specified range, refill with brake fluid (c) or drain it.
If the brake fluid level is close to “MIN”, check the brake pad for wear and refill with brake fluid.

CAUTION:
Always check the level using the specified direction because there is a partition in the reservoir tank.



2) Check the fluid for discoloration. If the fluid is extremely discolored, replace with the new fluid.

B: REPLACEMENT

CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
• Avoid mixing brake fluid of different brands to prevent fluid performance from degrading.
• Be careful not to allow dirt or dust to enter the reservoir tank.

NOTE:
• During the operation, keep the reservoir tank filled with brake fluid to prevent entry of air.
• Operate the brake pedal slowly.
• For convenience and safety, perform the work with 2 people.
• The required amount of brake fluid is approximately 500 mL (16.9 US fl oz, 17.6 Imp fl oz) for the entire brake system.
1) Lift up the vehicle.
2) Remove all the wheels.
3) Drain brake fluid from the reservoir tank.
4) Refill the reservoir tank with recommended brake fluid.

Recommended brake fluid:
FMVSS No. 116, DOT3, or DOT4
Perform the same procedure as for bleeding the brake line, until new brake fluid comes out from vinyl tube. <Ref. to BR-65, PROCEDURE, Air Bleeding.>

11.Air Bleeding

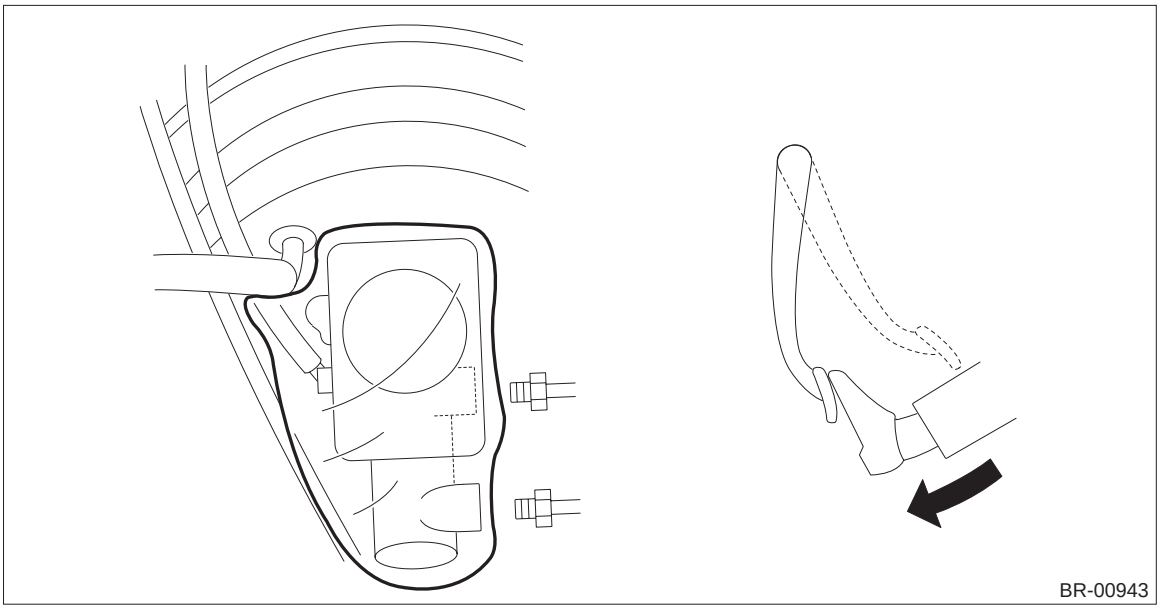
A: PROCEDURE

CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
• Avoid mixing brake fluid of different brands to prevent fluid performance from degrading.
• Be careful not to allow dirt or dust to enter the reservoir tank.

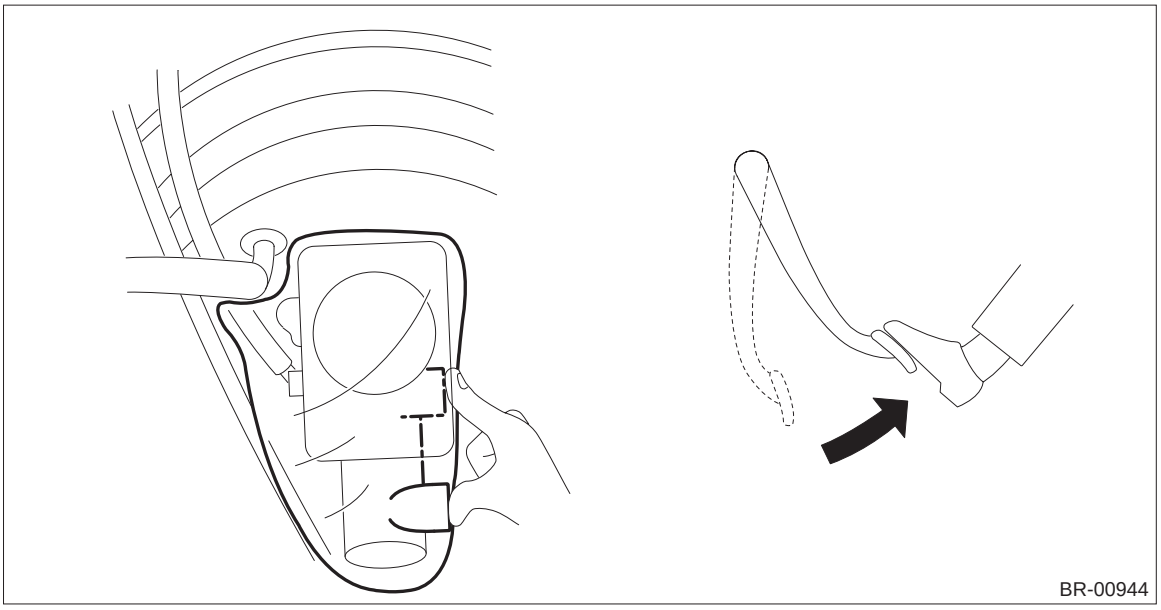
1. MASTER CYLINDER

NOTE:
• When the master cylinder assembly is replaced or the reservoir tank is empty, bleed the brake master cylinder and the clutch master cylinder (MT model).
• If bleeding of the master cylinder assembly is not necessary, omit the following procedures, and perform bleeding of the brake line. <Ref. to BR-67, BRAKE LINE, PROCEDURE, Air Bleeding.>
1) Add the brake fluid to the reservoir tank of the master cylinder assembly.

NOTE:
• MT model: Add the brake fluid until it flows out from the clutch hose nipple.
• Except for MT model: Add the brake fluid up to the MAX level.
• While bleeding air, keep the reservoir tank filled with brake fluid at MIN level or higher to prevent entry of air.
2) Disconnect the brake line at primary and secondary sides.
3) Wrap the master cylinder assembly with a plastic bag.
4) Depress the brake pedal slowly and hold it.



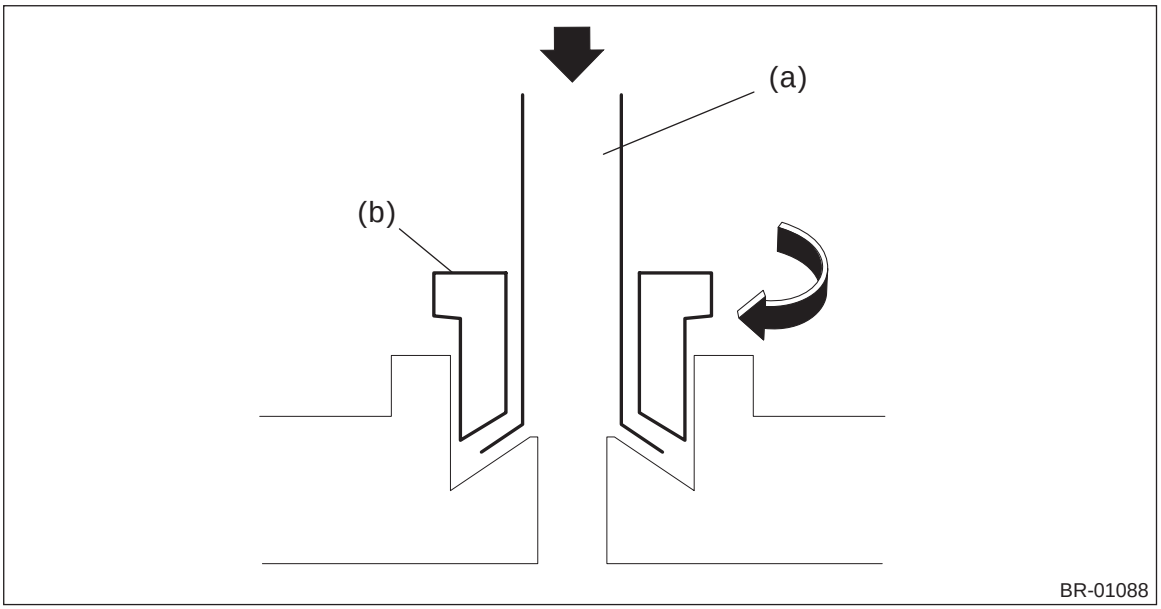
5) Plug the outlet plug with your finger, and then release the brake pedal.



6) Repeat the step 4) and 5) several times.
7) Remove the plastic bag.
8) Turn and tighten the flare nut (b) by hand while pressing the brake pipe (a) toward the master cylinder assembly side.

CAUTION:
Be careful not to make scratches or other damage to the inside surface of the brake pipe flare.

Tightening torque:
Brake pipe flare nut: 19 N·m (1.9 kgf-m, 14.0 ft-lb)

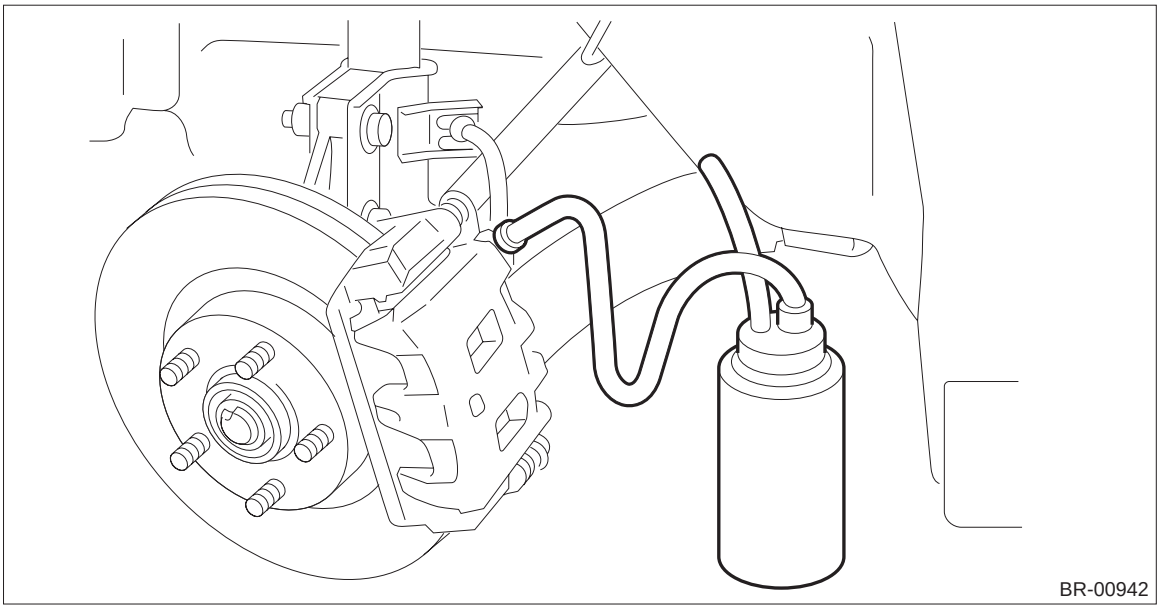


9) Bleed air from the brake line. <Ref. to BR-67, BRAKE LINE, PROCEDURE, Air Bleeding.>

2. BRAKE LINE

1) When the master cylinder assembly is replaced or the reservoir tank is empty, bleed the master cylinder assembly before bleeding the brake line. <Ref. to BR-65, MASTER CYLINDER, PROCEDURE, Air Bleeding.>
2) Fill the reservoir tank of the master cylinder assembly with brake fluid.

NOTE:
While bleeding air, keep the reservoir tank filled with brake fluid to prevent entry of air.
3) Attach one end of the vinyl tube to the bleeder - screw and the other end to the brake fluid container.

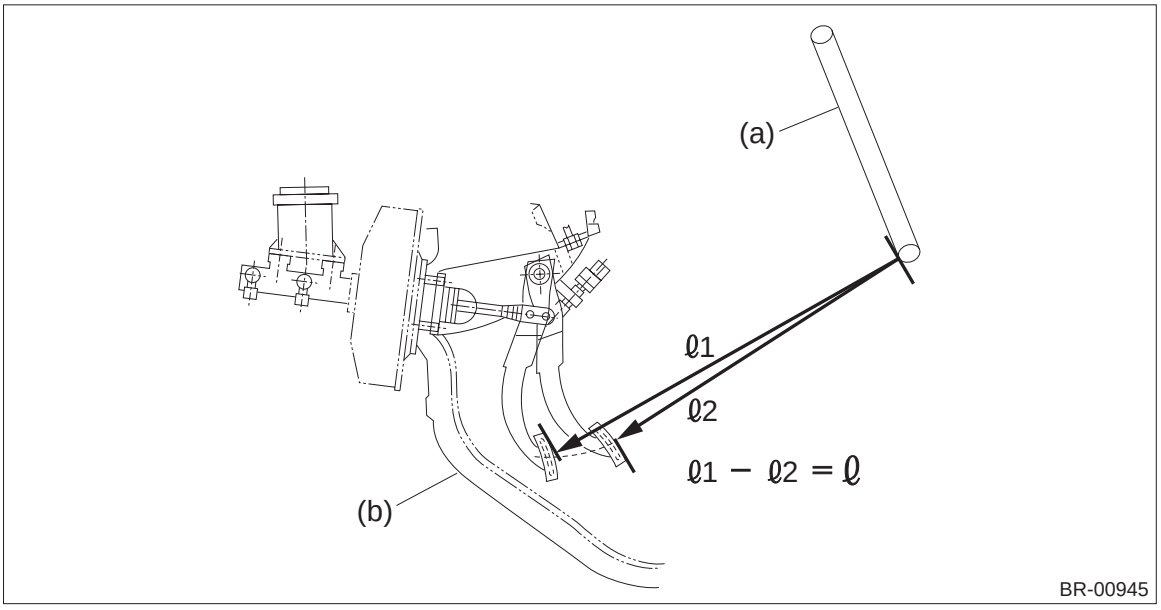


4) Depress the brake pedal several times, and hold it.
5) Loosen the bleeder - screw to drain brake fluid. Tighten the bleeder - screw quickly, and release the brake pedal.
6) Repeat the steps 4) to 5) until there are no more air bubbles in the vinyl tube.
7) Repeat the steps from 2) to 6) above to bleed air from each wheel.

NOTE:
Perform air bleed starting in the order from the farthest wheel cylinder from the master cylinder assembly.
8) Securely tighten the bleeder - screw.

Tightening torque:
Bleeder - screw: 8 N·m (0.8 kgf-m, 5.9 ft-lb)
9) Check that there are no brake fluid leaks in the entire brake system.

10) Check the pedal stroke.
(1) Warm up the engine until the engine speed stabilizes.
(2) Depress and hold the brake pedal with a force of 500 N (51 kgf, 112 lbf).
(3) Adjust the tilt position of the steering wheel to the lowest position.
(4) Measure the distance between brake pedal and steering wheel.
(5) Release the pedal, and measure the distance between pedal and steering wheel again.



(a) Steering wheel (b) Toe board

Specification of pedal stroke:
110 mm (4.33 in) or less when depressing the pedal with a force of 500 N (51 kgf, 112 lbf)

11) If the distance is more than specification, there is a possibility of air being caught in the brake line. Bleed the brake line of all air until the pedal stroke meets the specification.
12) Operate the hydraulic control unit in the sequence control mode. <Ref. to VDC-17, ABS Sequence Control.>
13) Check the pedal stroke again.
14) If the distance is more than specification, there is a possibility of air being caught in the hydraulic unit. Repeat above steps 2) to 9) until the pedal stroke meets the specification.
15) Fill the reservoir tank with brake fluid up to the “MAX” level.
16) Perform a road test and ensure that the brakes operate normally.

12.Brake Hose

A: REMOVAL

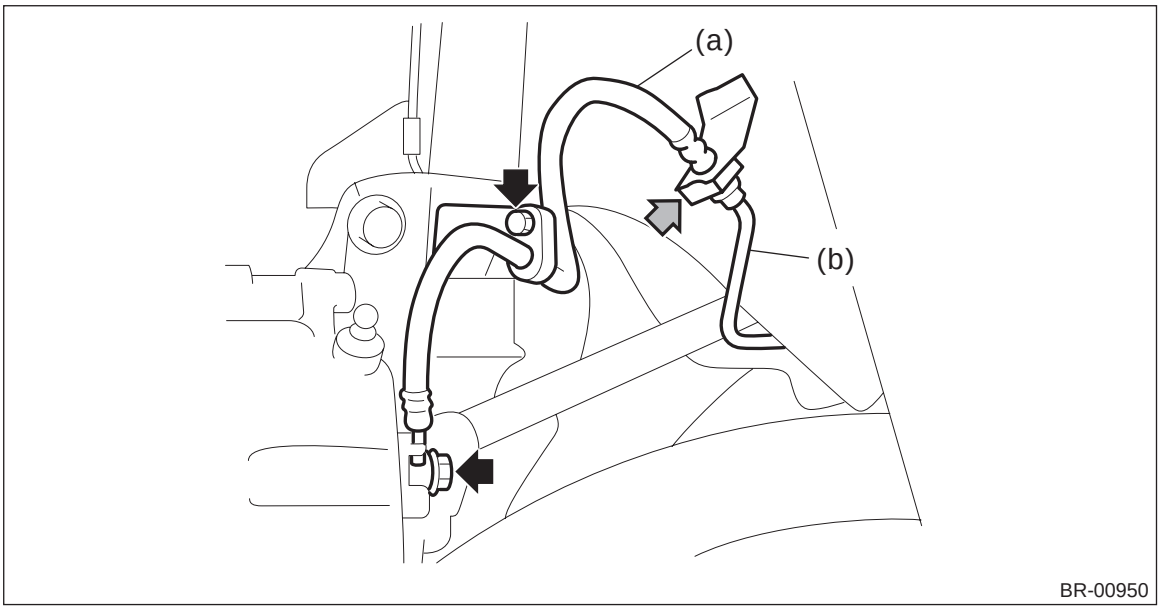
1. FRONT BRAKE HOSE

1) Disconnect the brake hose (a) and the brake pipe (b).

Tools used:

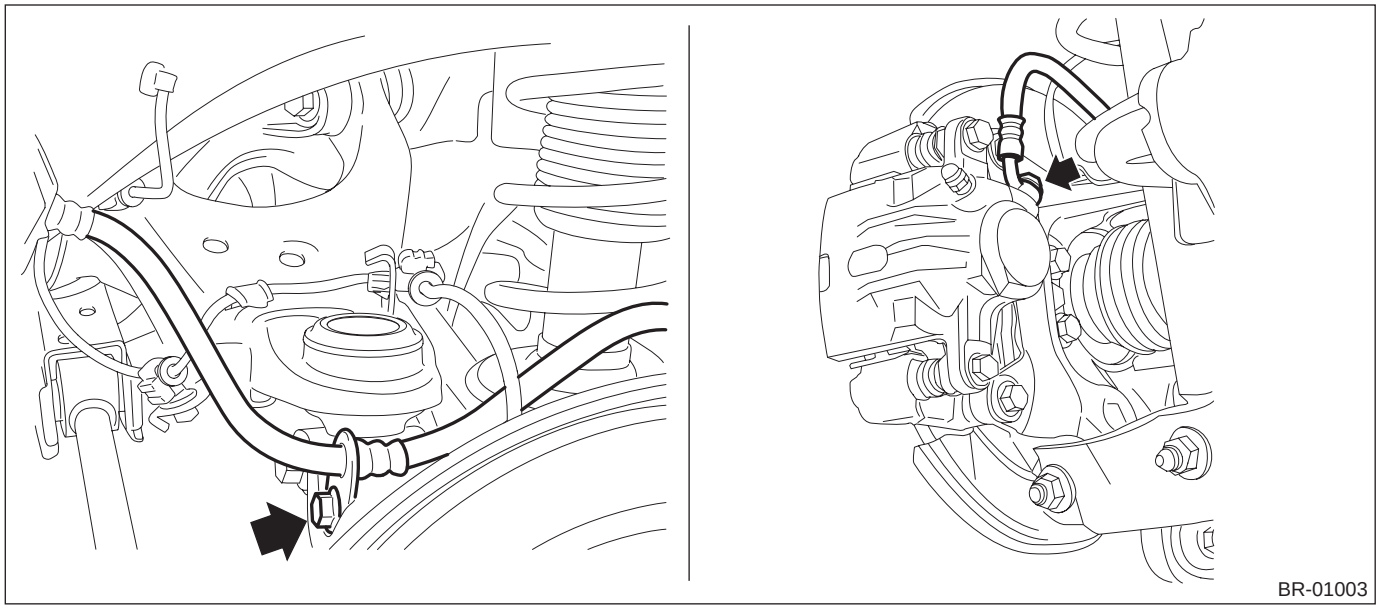
Flare nut wrench

2) Remove the clamp, strut mounting bolt and union bolt, and remove the front brake hose.



2. REAR BRAKE HOSE

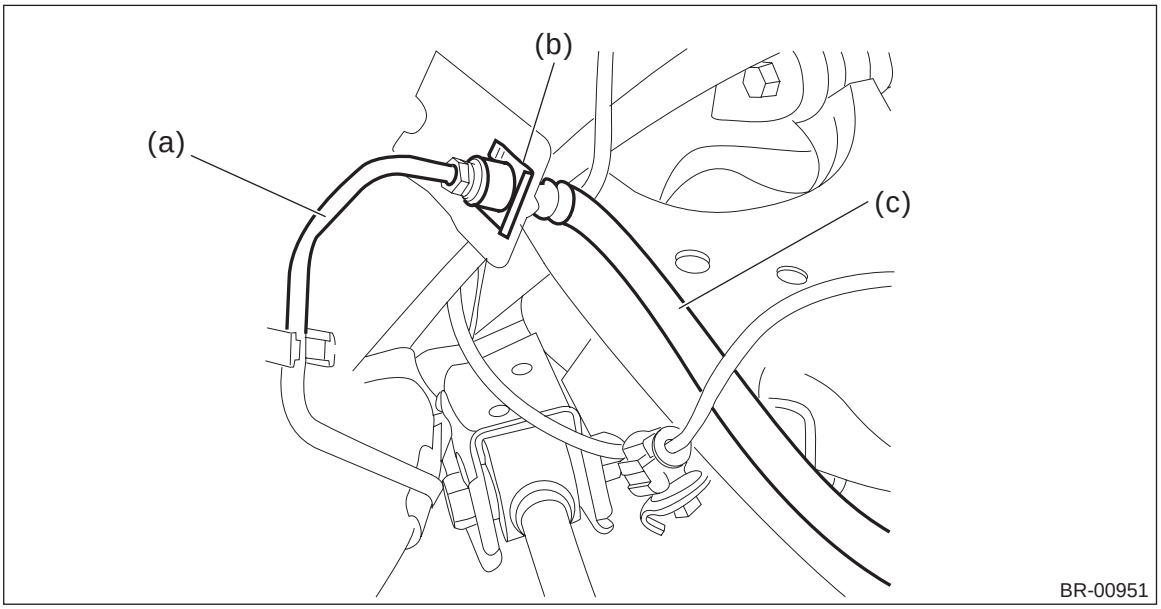
1) Remove the brake hose bracket bolt and union bolt.



2) Disconnect the brake pipe (a).

Tools used:
Flare nut wrench

3) Remove the brake hose clamp (b), and remove the rear brake hose (c).



B: INSTALLATION

1. FRONT BRAKE HOSE

1) Secure the brake hose to the brake hose mount part of strut COMPL.

Tightening torque:
Brake hose: 33 N·m (3.4 kgf-m, 24.3 ft-lb)

2) Connect the brake hose to the caliper body assembly using a new gasket.

Tightening torque:
Union bolt: 26 N·m (2.7 kgf-m, 19.2 ft-lb)

3) Position the disc rotor in straight position and route the brake hose through the hole in the bracket on the wheel apron side.

CAUTION:
Do not twist the brake hose.

4) Connect the brake pipe and the hose, then temporarily tighten the flare nut.
5) Secure the brake hose to wheel apron bracket with clamp.
6) Tighten the flare nut to the specified torque.

Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)

7) Bleed air from the brake system. <Ref. to BR-65, PROCEDURE, Air Bleeding.>

2. REAR BRAKE HOSE

1) Route the brake hose through the hole of bracket, and lightly tighten the flare nut to connect brake pipe.
2) Insert the clamp to secure brake hose.

Tightening torque:
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)

3) Install the brake hose to rear caliper body using a new gasket.

Tightening torque:
Union bolt: 26 N·m (2.7 kgf-m, 19.2 ft-lb)

4) Tighten the flare nut to the specified torque.

Tightening torque:
Brake pipe flare nut: 15 N·m (1.5 kgf-m, 11.1 ft-lb)

5) Bleed air from the brake system. <Ref. to BR-65, PROCEDURE, Air Bleeding.>

C: INSPECTION

Check the hose for crack, interference with other parts, damage, and fluid leakage on connecting sections. If any faulty is found, repair or replace the relevant part.

13.Brake Pipe

A: REMOVAL

CAUTION:
- **Be careful of the following items. Failure to do so may cause the airbag system malfunction.**
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- **Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.**
- **When removing the brake pipe, do not bend.**

NOTE:
The airbag system wiring harness is routed near the center brake pipe.

B: INSTALLATION

CAUTION:
- **Be careful of the following items. Failure to do so may cause the airbag system malfunction.**
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- **Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.**
- **When installing the brake pipe, do not bend.**
- **After installing the brake pipe and hose, perform air bleed.**
- **After installing the brake hoses, make sure that they do not contact the tires or suspension assembly, etc.**

NOTE:
The airbag system wiring harness is routed near the center brake pipe.

Tightening torque:
Front brake pipes & hoses: <Ref. to BR-10, FRONT BRAKE PIPES AND HOSES, COMPONENT, General Description.>
Center & rear brake pipes and hoses: <Ref. to BR-11, CENTER AND REAR BRAKE PIPES AND HOSES, COMPONENT, General Description.>

C: INSPECTION

Check the pipe for crack and damage, and also check the connection for fluid leakage. If any faulty is found, repair or replace the relevant part.

NOTE:
Use a mirror when inspecting back sides and other locations which are hard to see.

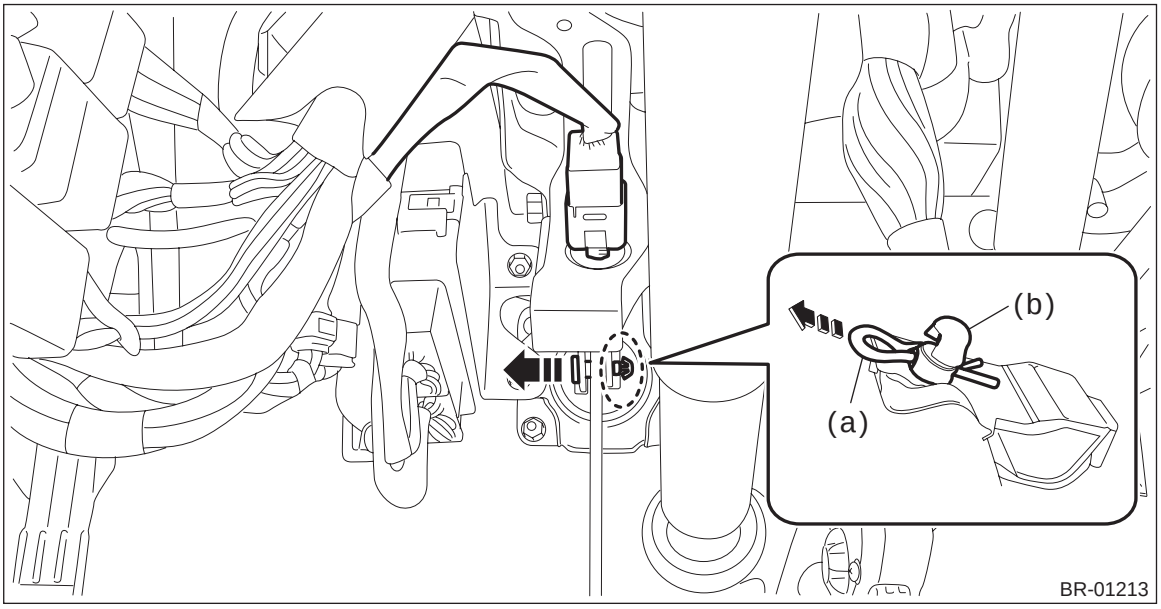
14.Brake Pedal

A: REMOVAL

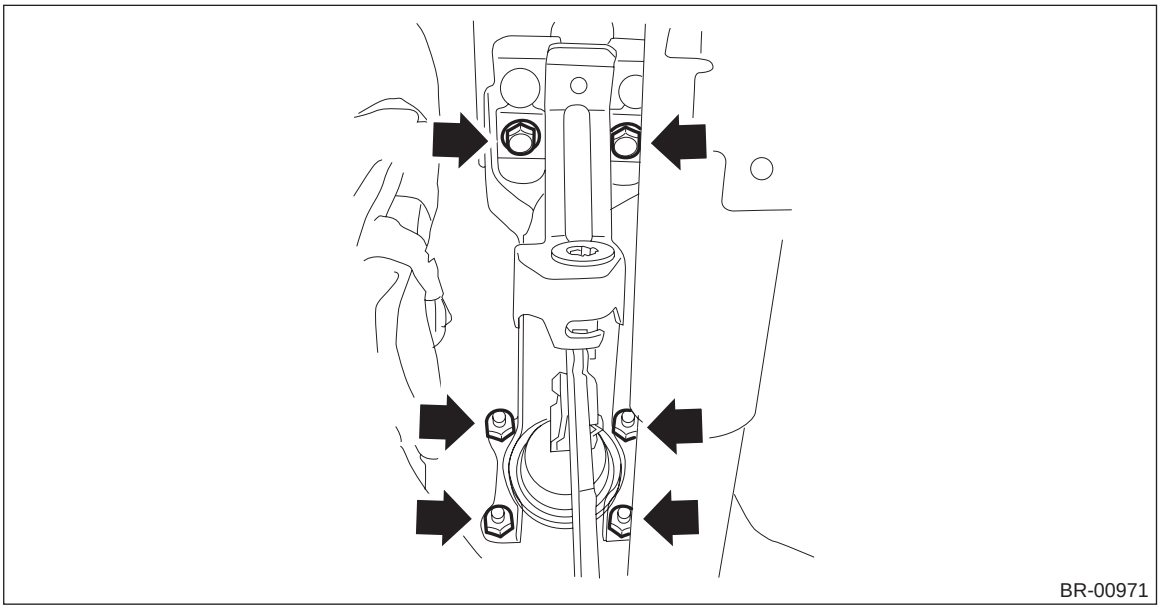
1. CVT MODEL

CAUTION:
Before performing service on the airbag module, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM” section. <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-5, BATTERY, NOTE, Note.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-61, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
4) Remove the column assembly - steering. <Ref. to PS-25, REMOVAL, Steering Column.>
5) Remove the brake pedal assembly.
(1) Disconnect the stop light switch connector.
(2) Remove the snap pin (a) and clevis pin (b), and remove the operating rod from the brake pedal.

CAUTION:
• Be careful not to apply excessive force to the operating rod when handling the operating rod. The angle may change by ±3°, and it may result in damage to power piston cylinder.
• Do not change the push rod length.



(3) Remove the bolt and nut, and then detach the brake pedal assembly.



2. MT MODEL

NOTE:
Brake pedal is integrated with the clutch pedal.
For removal procedures of the brake pedal, refer to Clutch section. <Ref. to CL-31, REMOVAL, Clutch Pedal.>

B: INSTALLATION

1. CVT MODEL

CAUTION:
Before performing service on the airbag module, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" section. <Ref. to AB-9, CAUTION, General Description.>
1) Install the brake pedal assembly.

CAUTION:
- **Apply grease to the snap pin to prevent the operating rod from wear.**
- **Replace the clevis pin with new parts, and apply thin coat of NIGTIGHT LYW No. 2 grease to the clevis pin.**

Tightening torque:
Brake pedal: 18 N·m (1.8 kgf-m, 13.3 ft-lb)
2) Install the column assembly - steering. <Ref. to PS-28, INSTALLATION, Steering Column.>
3) Install the knee airbag module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4) Install the cover assembly - instrument panel LWR driver.
5) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.
6) Check that the brake light operate properly.
7) Check the brake pedal after installation. <Ref. to BR-75, INSPECTION, Brake Pedal.>

2. MT MODEL

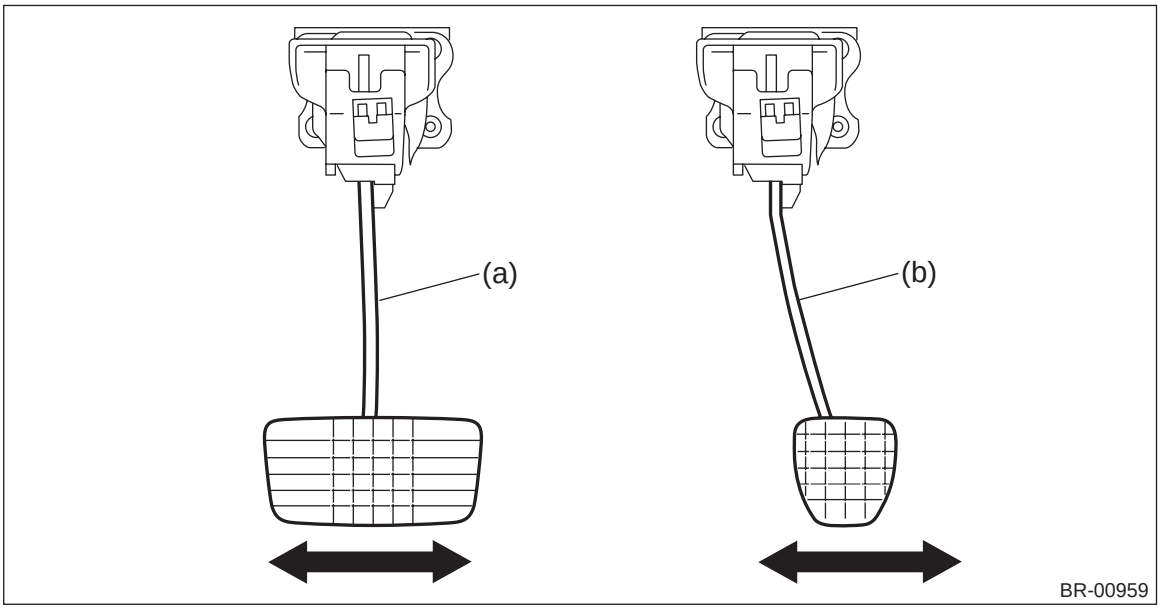
NOTE:
Brake pedal is integrated with the clutch pedal.
For installation procedure of the brake pedal, refer to Clutch section. <Ref. to CL-31, INSTALLATION, Clutch Pedal.>

C: INSPECTION

1) Move the pad - brake pedal in a horizontal direction with a force of approx. 10 N (1 kgf, 2 lbf), and check that the pedal deflection is in the range of specifications.

CAUTION:
If excessive deflection is noted, replace with a new bushing.

Deflection of brake pedal:
Wear limit: 5.0 mm (0.197 in) or less

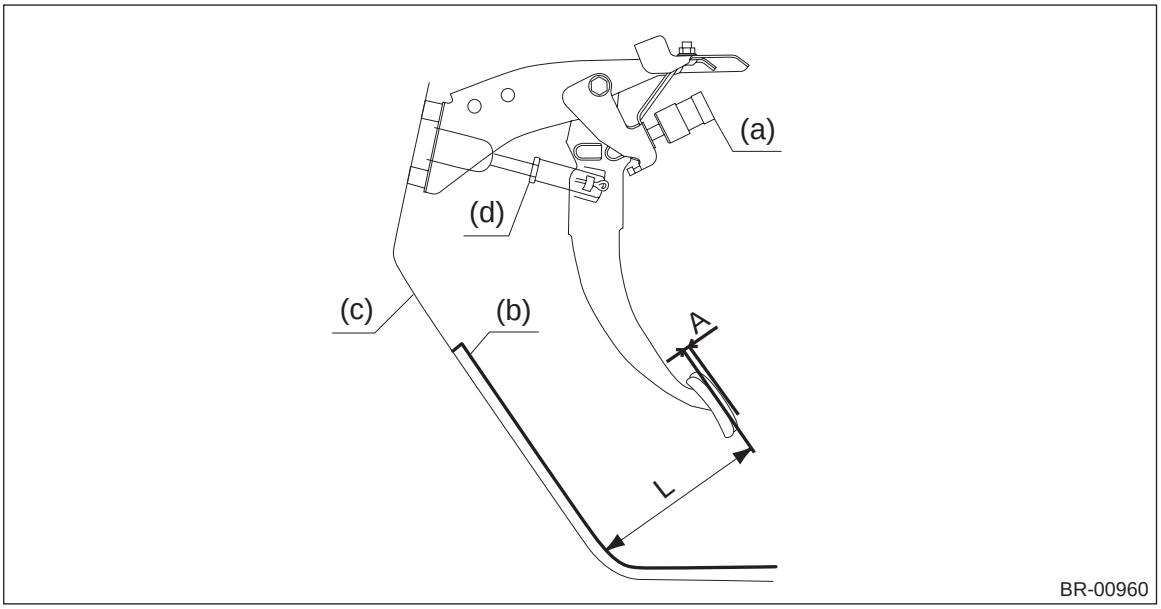


(a) Brake pedal (CVT model) (b) Brake pedal (MT model)

2) Check the position of the pedal pad.

Pedal height L:
140 — 150 mm (5.51 — 5.91 in)

Brake pedal free play A:
0.5 — 2 mm (0.020 — 0.079 in) [When pulling the brake pedal upward with a force of less than 10 N (1 kgf, 2 lbf).]



(a) Stop light switch
(b) Mat
(c) Toe board
(d) Brake booster operating rod

3) If it is not within the specification, loosen the lock nuts of vacuum booster operating rod, and rotate the rod to adjust the pedal height L within the specification.
4) Tighten the lock nut.

Tightening torque:
Operating lock nut: 22 N·m (2.2 kgf-m, 16.2 ft-lb)

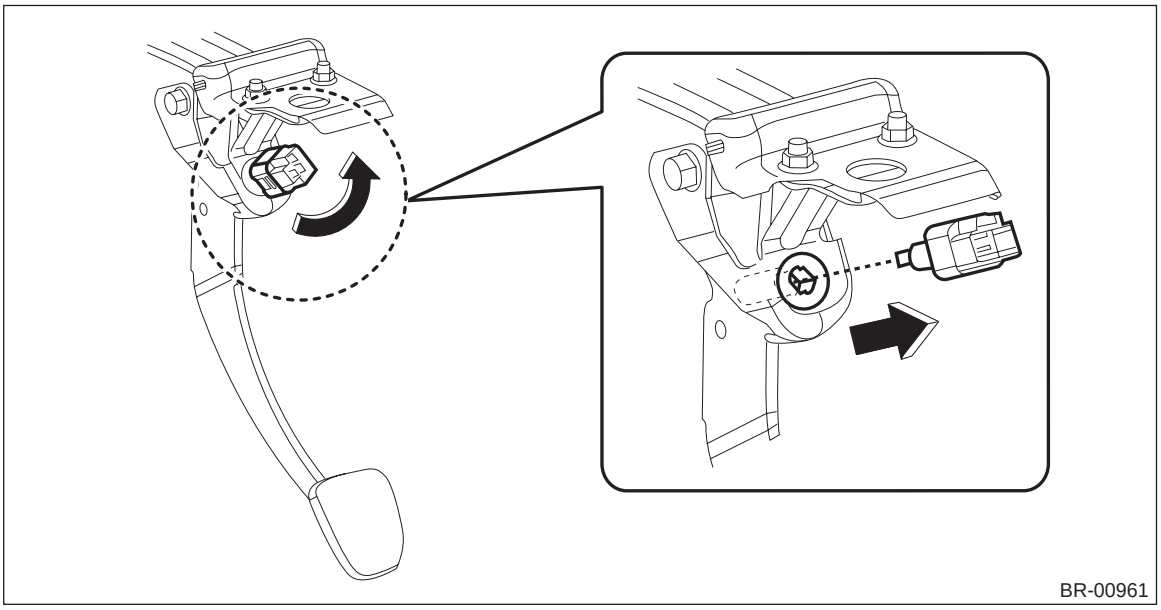
NOTE:
Check the brake pedal height. When adjusting, also adjust the stop light switch.

15.Stop Light Switch

A: REMOVAL

CAUTION:
Before performing service on the airbag module, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM” section. <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
3) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-61, REMOVAL, Instrument Panel Lower Cover.>
4) Remove the stop light switch.
   (1) Disconnect the stop light switch connector.
   (2) Remove the stop light switch by turning it counterclockwise.



B: INSTALLATION

1) Install the stop light switch.
   (1) Adjust the stop light switch position, and then secure the stop light switch by turning it clockwise. <Ref. to BR-80, ADJUSTMENT, Stop Light Switch.>
   (2) Install the stop light switch connector.
2) Install the knee airbag module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the cover assembly - instrument panel LWR driver.
4) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

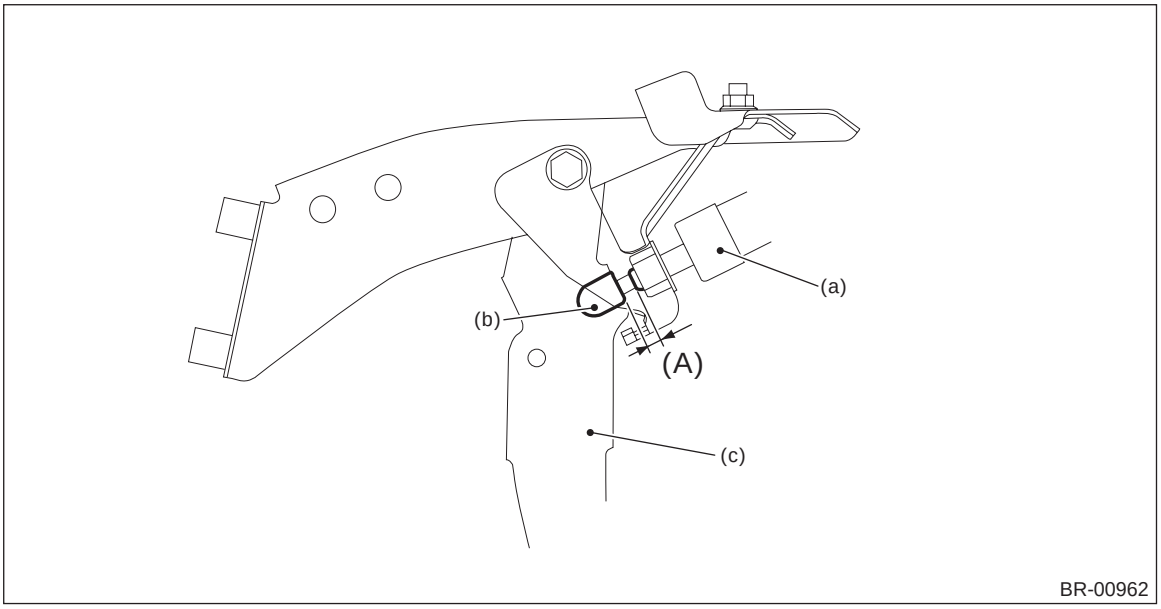
C: INSPECTION

1. CLEARANCE CHECK

1) Measure the clearance between the end of the stop light switch and the stopper.

Specification:

Clearance (A) of the stop light switch: 1 mm — 2 mm (0.04 in — 0.08 in)



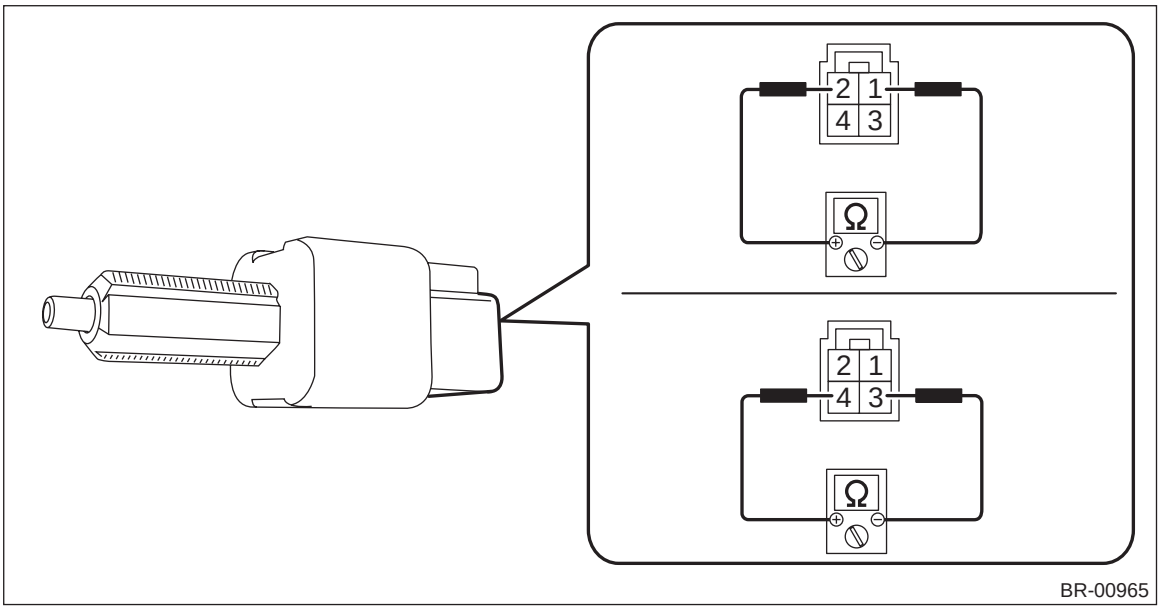
(a) Stop light switch (b) Stopper (c) Brake pedal

2) Adjust the position of the stop light switch if the inspection result is not within the standard value. <Ref. to BR-80, ADJUSTMENT, Stop Light Switch.>

2. INSPECT THE RESISTANCE

1) Disconnect the stop light switch connector.
2) Measure the resistance between the stop light switch connector terminals.

Preparation tool:
Circuit tester



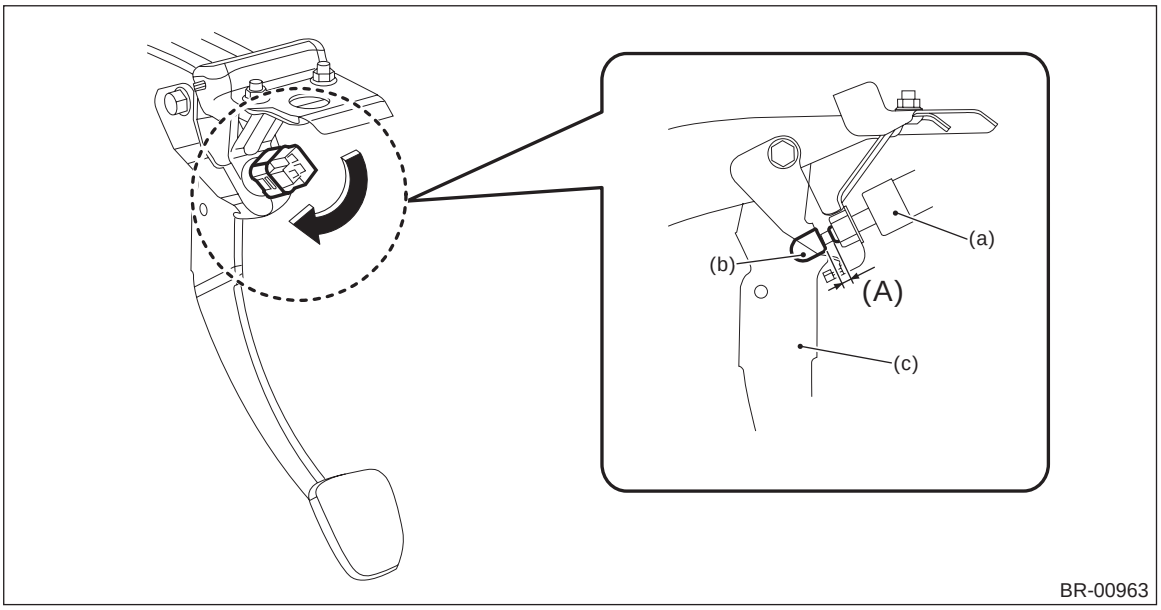
Terminal No.	Inspection conditions	Standard
1 — 2	When brake pedal is depressed	Less than 1 Ω
	When brake pedal is released	1 MΩ or more
3 — 4	When brake pedal is depressed	1 MΩ or more
	When brake pedal is released	Less than 1 Ω

3) Replace the stop light switch if the inspection result is not within the standard value.

D: ADJUSTMENT

1) While pulling up the brake pedal (c) toward you, insert the stop light switch (a) until it reaches the stopper (b).
2) Install the stop light switch by turning it clockwise.

CAUTION:
• Turn the stop light switch clockwise when installing so that it can return backward by approximately 1 mm (0.04 in) and clearance is automatically adjusted.
• When pushing the stop light switch against the brake pedal, do not apply excessive force.
• Tighten the stop light switch with a turning torque of 3.0 N·m (0.3 kgf-m, 2.2 ft-lb) or less.
(If it is hard to turn, reduce the switch pushing force and turn it again.)
• Insert until it contacts the stopper, and make sure that clearance (A) of the end of stop light switch and the stopper is 1 mm — 2 mm (0.04 in — 0.08 in).

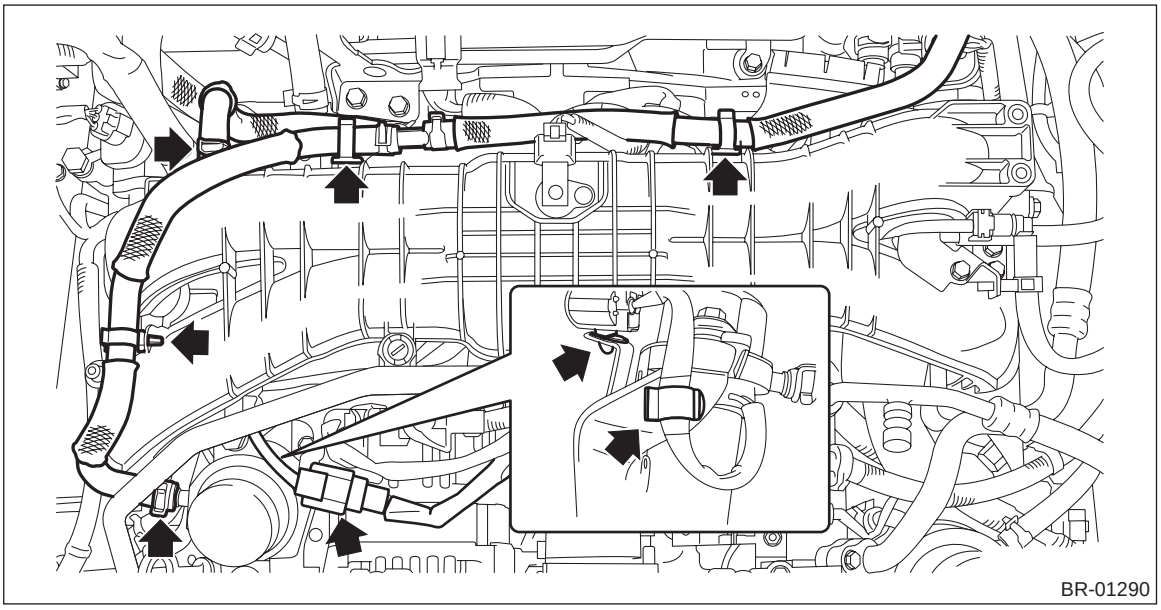


(a) Stop light switch (b) Stopper (c) Brake pedal

16.Brake Vacuum Pump

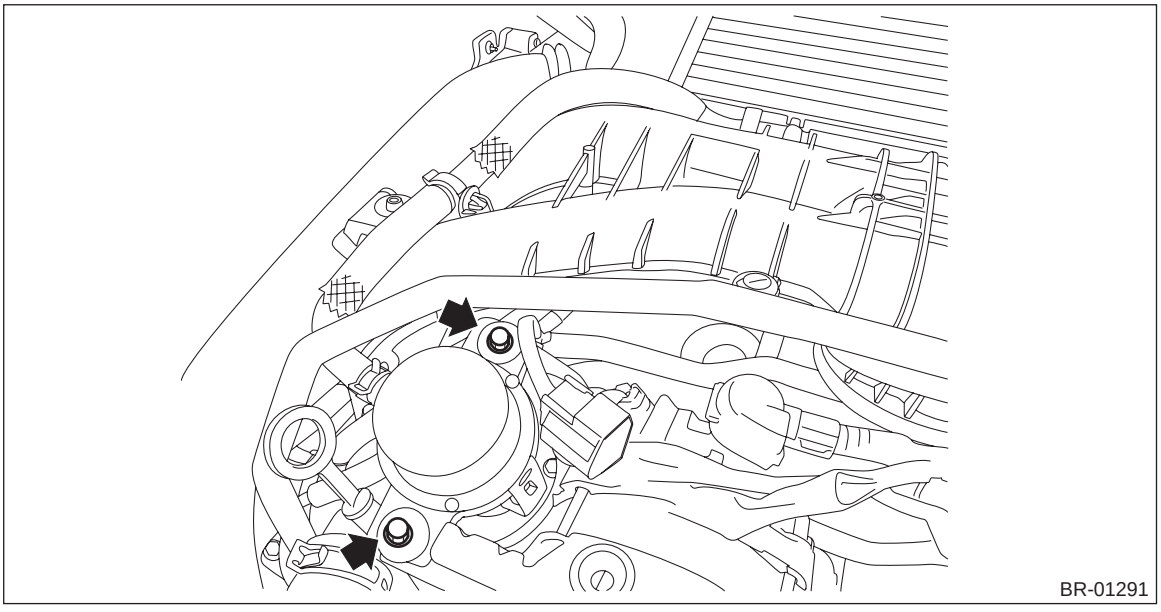
A: REMOVAL

NOTE:
Only other models than STI are equipped with the brake vacuum pump.
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>
2) Remove the vacuum pump assembly.
   (1) Disconnect the connectors of the vacuum pump assembly.
   (2) Remove the vacuum hose COMPL.



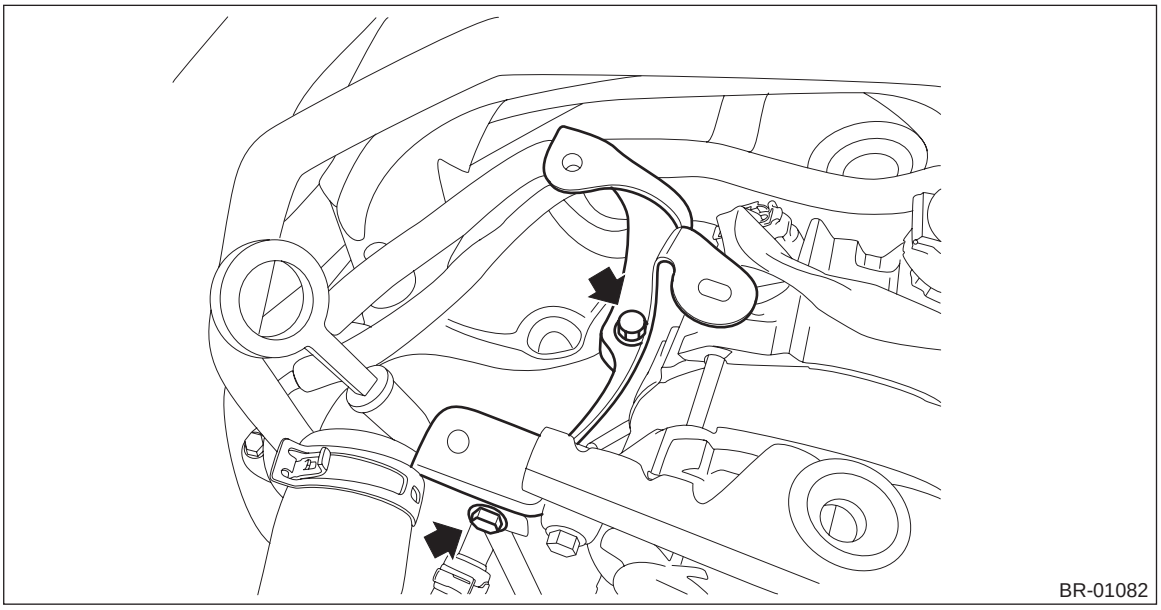
BR-01290

   (3) Remove the bolts, then remove the vacuum pump assembly.



BR-01291

3) Remove the bolts, and then remove the bracket - generator.



B: INSTALLATION

1) Install the bracket - generator.

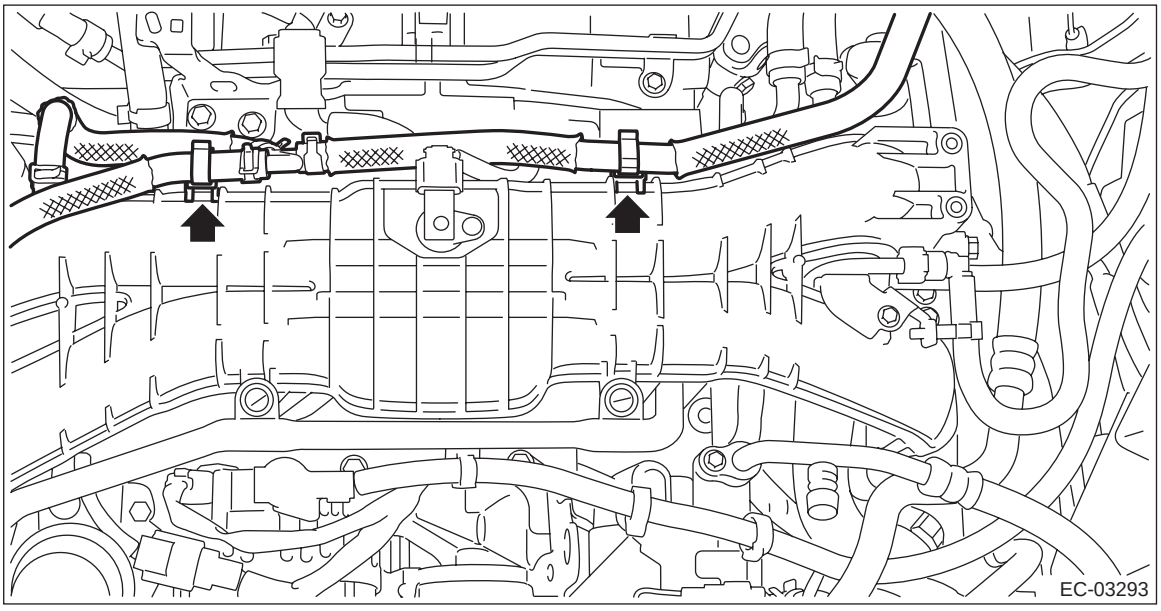
Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

2) Install the vacuum pump assembly.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

3) Install the vacuum hose COMPL.

NOTE:
Install the clip to the position (arrowed) of alignment mark ▼ of intake manifold.



4) Connect the ground terminal to battery sensor. <Ref. to NT-5, BATTERY, NOTE, Note.>

C: INSPECTION

1. BRAKE VACUUM PUMP

Refer to “Read Diagnostic Trouble Code (DTC)” of “BRAKE VACUUM CONTROL”. <Ref. to BVC(diag)-10, OPERATION, Read Diagnostic Trouble Code (DTC).>

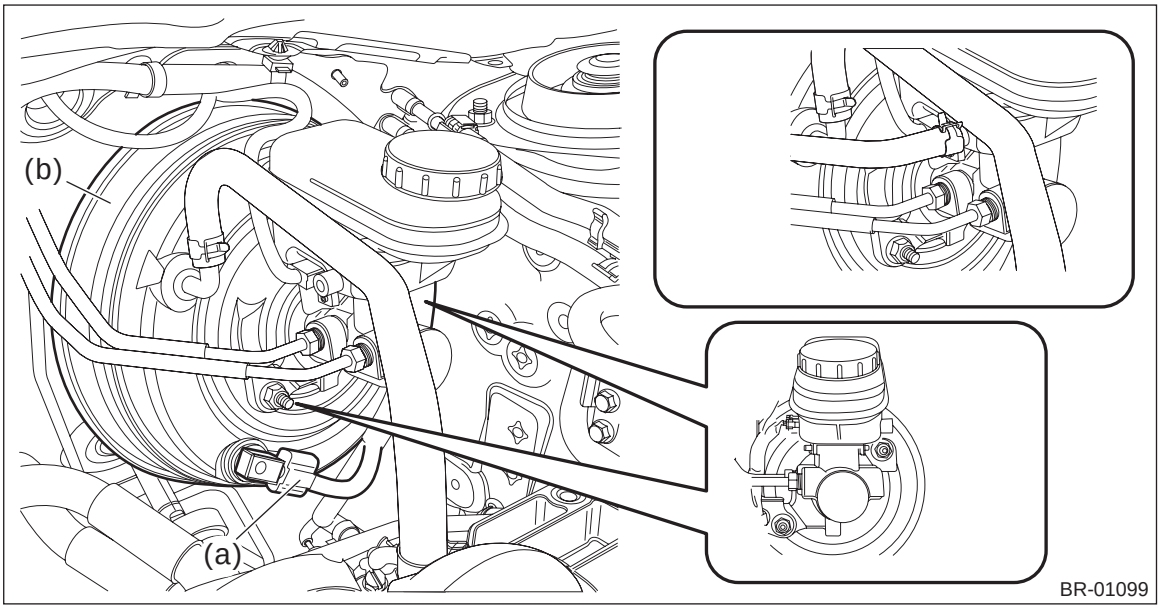
2. VACUUM HOSE

Check to see that air only flows in one direction, when air is blown into or sucked from the hose.

17.Brake Vacuum Sensor

A: NOTE

CAUTION:
• Do not remove the vacuum sensor (a). If removed, replace the vacuum booster assembly (b) with a new part.
• Do not rotate the vacuum sensor (a) when disconnecting the connector of vacuum sensor (a). Otherwise the grommet on the mounting location of the vacuum sensor (a) may be damaged.



18.General Diagnostic Table

A: INSPECTION

	Trouble and possible cause	Corrective action
1. Insufficient braking	(1) Fluid leakage from the hydraulic mechanism	Repair or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(2) Entry of air into the hydraulic mechanism	Bleed air.
	(3) Wear, deteriorated surface material, water or fluid on lining	Replace, grind or clean.
	(4) Improper operation of master cylinder assembly, disc caliper, vacuum booster assembly or check valve	Repair or replace.
2. Unstable or uneven braking	(1) Fluid on lining or rotor	Correct the cause of fluid leakage, and clean or replace.
	(2) Rotor defective	Repair or replace the rotor.
	(3) Improper lining contact, deteriorated surface, deteriorated or worn lining material	Repair by grinding, or replace.
	(4) Deformed back plate	Repair or replace.
	(5) Overinflation of tires	Adjust the air pressure.
	(6) Defective wheel alignment	Adjust alignment.
	(7) Loose back plate or support installation bolt	Tighten to the specified torque.
	(8) Defective hub unit COMPL	Replace.
	(9) Defective hydraulic system	Replace the cylinder, brake pipe or hose.
	(10) Unstable performance of the parking brake	Check, adjust or replace the rear brake and cable system.
3. Excessive pedal stroke	(1) Entry of air into the hydraulic mechanism	Bleed air.
	(2) Excessive play in the master cylinder push rod	Adjust.
	(3) Fluid leakage from the hydraulic mechanism	Repair or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(4) Improper lining contact or worn lining	Repair or replace.
4. Brake dragging or improper brake return	(1) Insufficient pedal play	Adjust play.
	(2) Improper master cylinder return	Clean or replace the cylinder.
	(3) Clogged hydraulic system	Replace.
	(4) Improper return or adjustment of parking brake	Repair or adjust.
	(5) Weakened spring tension or breakage of shoe return spring	Replace the spring.
	(6) Improper disc caliper operation	Repair or replace.
	(7) Faulty wheel bearing	Replace.
5. Brake noise (1) (creaking sound)	(1) Hardened or deteriorated brake pad	Replace the pad.
	(2) Worn brake pad	Replace the pad.
	(3) Loose back plate or support installation bolt	Tighten to the specified torque.
	(4) Loose hub unit COMPL	Tighten to the specified torque.
	(5) Dirty rotor	Clean the rotor, or clean and replace brake assembly.
6. Brake noise (2) (hissing sound)	(1) Worn brake pad	Replace the pad.
	(2) Improperly installed pad	Correct or replace the pad.
	(3) Loose or bent rotor	Retighten or replace.
7. Brake noise (3) (click sound)	Excessively worn pad or support	Replace the pad or the support.

BRAKE VACUUM CONTROL (BVC) (DIAGNOSTICS)

BVC(diag)

		Page
1.	Basic Diagnostic Procedure	2
2.	Check List for Interview	3
3.	General Description	5
4.	Electrical Component Location	6
5.	Engine Control Module (ECM) I/O Signal	8
6.	Subaru Select Monitor	9
7.	Read Diagnostic Trouble Code (DTC)	10
8.	Inspection Mode	11
9.	Clear Memory Mode	12
10.	List of Diagnostic Trouble Code (DTC)	13
11.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	14
12.	General Diagnostic Table	30

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• Subaru Select Monitor is required for reading DTC, reading the current data and clearing the memory.
• Remove foreign matter (dust, water, oil, etc.) from the engine control module (ECM) connector when removing or installing.

NOTE:
• To check the harness for open or short circuits, shake problem spot or connector.
• Refer to “Check List for Interview”. <Ref. to BVC(diag)-3, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to BVC(diag)-3, Check List for Interview.> 2) Check the brake vacuum pump warning light.	Does the brake vacuum pump warning light illuminate?	Go to step **3**.	Go to step **2**.
2	**BASIC INSPECTION.** Check the components which might affect the brake vacuum control. <Ref. to BVC(diag)-5, INSPECTION, General Description.>	Is the component that might affect the brake vacuum control normal?	Go to step **3**.	Repair or replace each component.
3	**CHECK INDICATION OF DTC.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC. <Ref. to BVC(diag)-10, OPERATION, Read Diagnostic Trouble Code (DTC).> 5) Record all DTC.	Is DTC displayed?	Record the DTC, time stamp and freeze frame data. Go to step **5**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(diag)-6, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Go to step **4**.
4	**PERFORM GENERAL DIAGNOSTICS.** Perform the inspection by referring to “General Diagnostic Table”. <Ref. to BVC(diag)-30, INSPECTION, General Diagnostic Table.>	Is result of inspection OK?	Finish the diagnosis.	Go to step **5**.
5	**PERFORM DIAGNOSIS.** 1) Correct the cause of trouble according to the DTC. <Ref. to BVC(diag)-13, LIST, List of Diagnostic Trouble Code (DTC).> 2) Perform the Clear Memory Mode. <Ref. to BVC(diag)-12, OPERATION, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to BVC(diag)-11, PROCEDURE, Inspection Mode.> 4) Read the DTC. <Ref. to BVC(diag)-10, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Repeat step 5 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Check the following items about the vehicle's state.

1. STATE OF BRAKE VACUUM PUMP WARNING LIGHT

The brake vacuum pump warning light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate • When/How long does it illuminate?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH

2. CONDITIONS UNDER WHICH TROUBLE OCCURS

3. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

The airbag system wiring harness is routed near the main relay and ECM.

CAUTION:
• Do not use electrical test equipment on wiring harness and connector circuits of the airbag system.
• Be careful not to damage the airbag system wiring harness.

B: INSPECTION

Before performing diagnosis, check the following items which might affect the brake vacuum control.

1. BATTERY

Measure the battery voltage and check electrolyte.

Standard voltage: 12 V or more

Specific gravity: 1.260 or more

2. BRAKE VACUUM HOSE

Make sure that the brake vacuum hose is not cracked or loose.

C: PREPARATION TOOL

1. SPECIAL TOOL

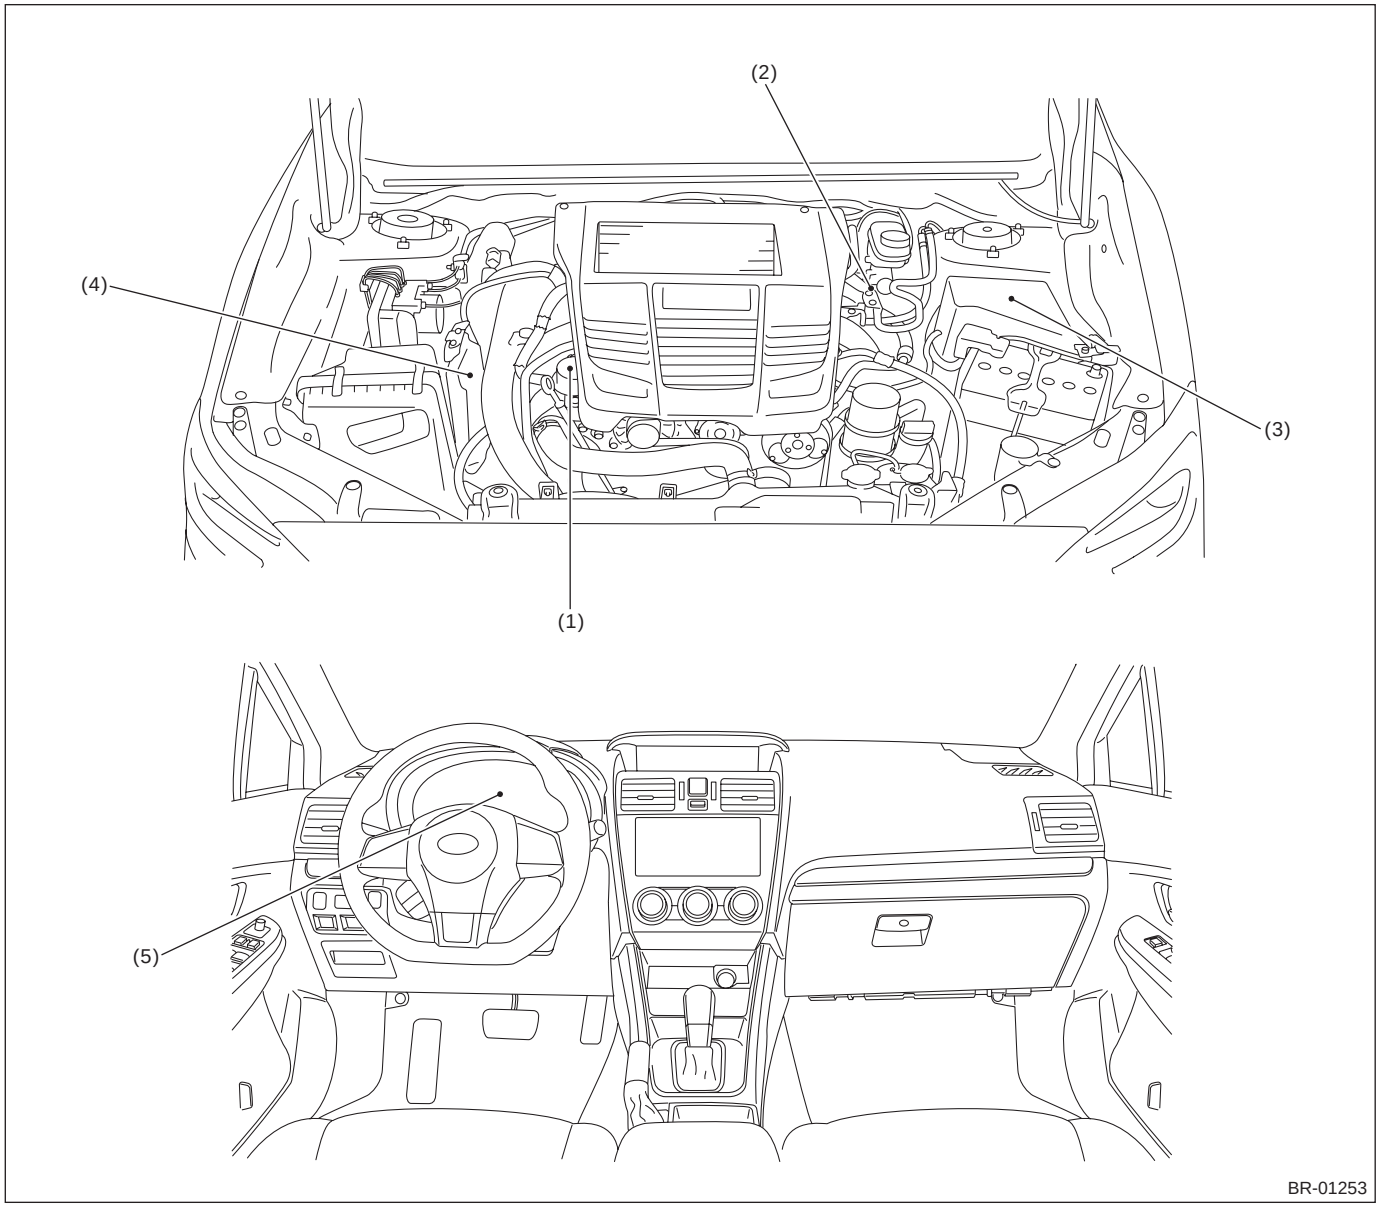
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B022XU0	1B022XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

2. GENERAL TOOL

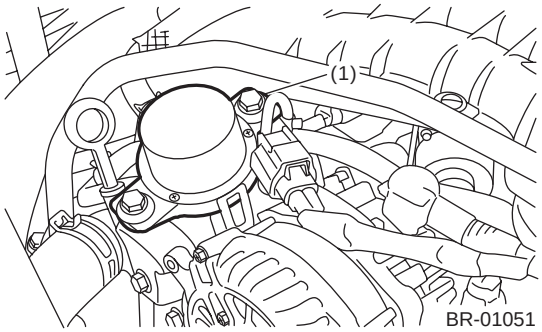
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.

4. Electrical Component Location

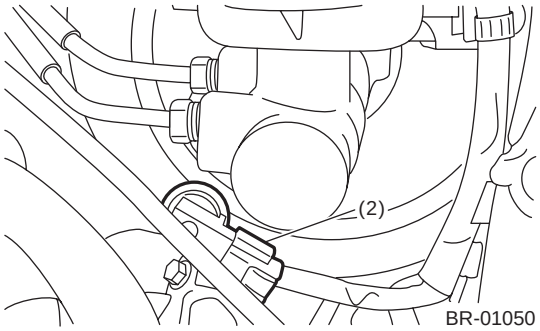
A: LOCATION



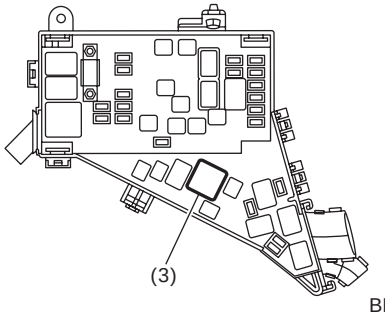
(1) Brake vacuum pump
(2) Brake booster pressure sensor
(3) Brake vacuum pump relay
(4) Engine control module (ECM)
(5) Brake vacuum pump warning light



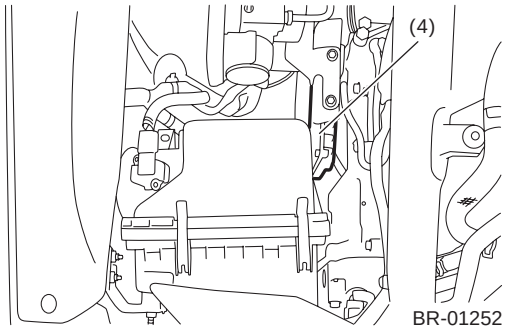
BR-01051



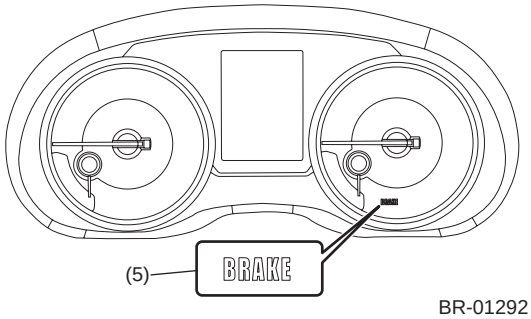
BR-01050



BR-01052



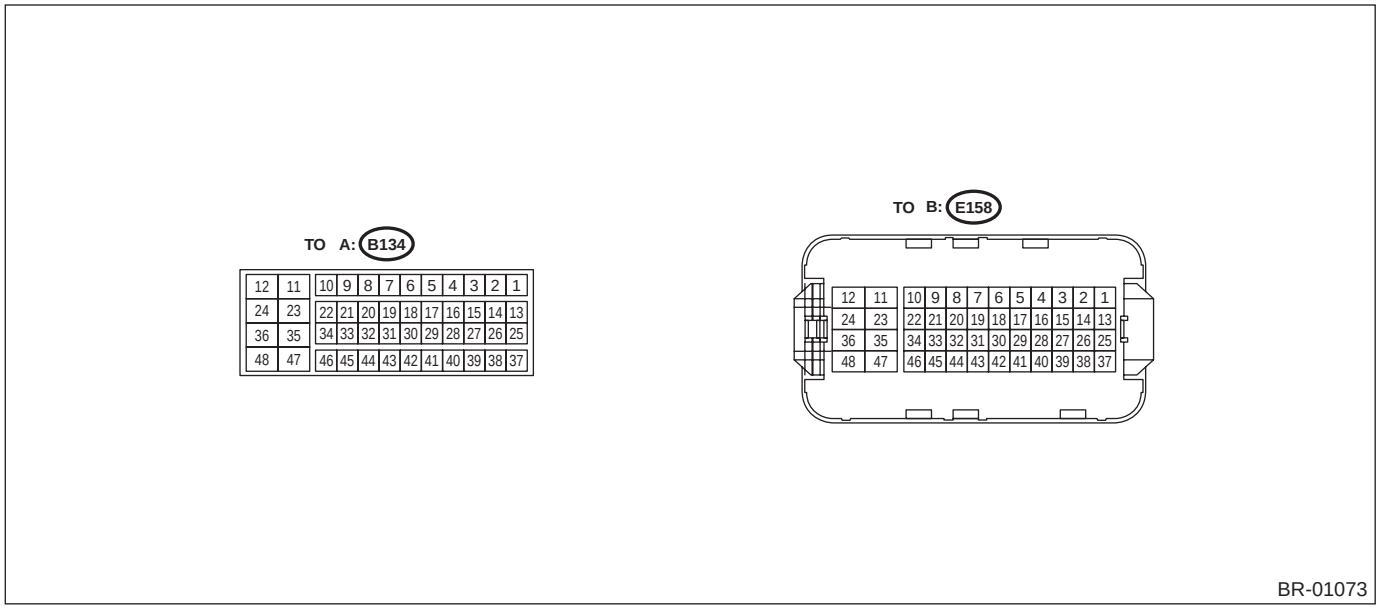
BR-01252



BR-01292

5. Engine Control Module (ECM) I/O Signal

A: ELECTRICAL SPECIFICATION



Description		Connector No.	Terminal No.	Signal (V)		Note
				Ignition SW ON (engine OFF)	Engine ON (idling)	
Brake vacuum sensor	Signal	E158	13	1 — 3.8	1 — 3.8	—
	Power supply	B134	18	5	5	—
	Ground	B134	19	0	0	—
Self-shutoff control		B134	38	0	0	—
Brake vacuum pump	Relay drive	E158	37	10 — 13 (When pump is OFF)	12 — 14 (When pump is ON)	—
				0 (When pump is ON)	0 (When pump is ON)	
	Electric load	E158	1	0 (When pump is OFF)	0 (When pump is OFF)	—
				10 — 13 (When pump is ON)	12 — 14 (When pump is ON)	

6. Subaru Select Monitor

A: OPERATION

1. HOW TO USE THE SUBARU SELECT MONITOR

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

2. READ CURRENT DATA

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
A list of the support data is shown in the following table.

Display	Contents to be displayed	Unit of measure
Atmosphere Pressure	Atmospheric pressure is displayed.	kPa
Brake Booster Pressure	Brake booster pressure is displayed.	kPa
Vacuum Pump Motor	Operation status of vacuum pump motor is displayed.	ON or OFF
Vacuum Pump Motor Relay	Operation status of vacuum pump motor relay is displayed.	ON or OFF

3. SEQUENCE CONTROL MODE

1) Turn the ignition switch to ON (engine OFF) and run the Subaru Select Monitor.
2) On «Main Menu» display, select {Each System Check}.
3) On «System Selection Menu» display, select {Brake Vacuum Pump System}.
4) On «Brake Vacuum Pump System» display, select {Work Support}.
5) On «Work Support» display, select {Function Check Sequence}.
6) When «Sequence Control Mode will be started» is shown on the screen, click the [OK] button.
7) When «Depress Brake Pedal Five Times» is shown on the screen, depress the brake pedal 5 times, and click the [OK] button while the brake pedal is not depressed.
8) Click the [OK] button after the «OK» is displayed.

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

• For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.
• For details concerning DTCs, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to BVC(diag)-13, List of Diagnostic Trouble Code (DTC).>

8. Inspection Mode

A: PROCEDURE

Reproduce the malfunction occurrence condition as much as possible.
Drive the vehicle at least ten minutes.

9. Clear Memory Mode

A: OPERATION

For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

10.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Reference
11	Sensor Output Out of Range	Brake vacuum sensor output error	<Ref. to BVC(diag)-14, DTC 11 SENSOR OUTPUT OUT OF RANGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
12	Compare Error in Other Sensor	Brake booster relative pressure comparison error	<Ref. to BVC(diag)-16, DTC 12 COMPARE ERROR IN OTHER SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
13	Pressure Sensor Signal Freeze	Brake vacuum sensor stuck error	<Ref. to BVC(diag)-19, DTC 13 PRESSURE SENSOR SIGNAL FREEZE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
21	Discrepancy in Relays (On)	Unmatched drive of brake vacuum pump relay and brake vacuum pump	<Ref. to BVC(diag)-22, DTC 21 DISCREPANCY IN RELAYS (ON), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
22	Discrepancy in Relays (Off)	Unmatched drive of brake vacuum pump relay and brake vacuum pump	<Ref. to BVC(diag)-25, DTC 22 DISCREPANCY IN RELAYS (OFF), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
23	Pump Continuous Work	Continuous drive error of brake vacuum pump	<Ref. to BVC(diag)-28, DTC 23 PUMP CONTINUOUS WORK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

11.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC 11 SENSOR OUTPUT OUT OF RANGE

DTC DETECTING CONDITION:
Brake vacuum sensor output error
TROUBLE SYMPTOM:
Brake vacuum pump does not operate.
WIRING DIAGRAM:
Vacuum pump control system <Ref. to WI-413, WIRING DIAGRAM, Vacuum Pump Control System.>

	Step	Check	Yes	No
1	**CHECK BRAKE VACUUM SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the brake vacuum sensor connector. 3) Measure the resistance between brake vacuum sensor connector terminals. ***Terminals*** ***No. 1 — No. 3:*** ***No. 2 — No. 3:***	Is the resistance 15 kΩ or less?	Go to step **2**.	Replace the brake booster. <Ref. to BR-55, Brake Booster.>
2	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM SENSOR CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM and brake vacuum sensor connector terminal. ***Connector & terminal*** ***(B134) No. 18 — (B565) No. 3:*** ***(B134) No. 19 — (B565) No. 1:*** ***(E158) No. 13 — (B565) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between ECM and brake vacuum sensor connector terminal.
3	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM SENSOR CONNECTOR.** Measure the resistance of harness between ECM and chassis ground. ***Connector & terminal*** ***(B134) No. 18 — Chassis ground:*** ***(B134) No. 19 — Chassis ground:*** ***(E158) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the ground short circuit of harness between ECM and brake vacuum sensor connector terminal.
4	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM SENSOR CONNECTOR.** Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 18 (+) — Chassis ground (–):*** ***(B134) No. 19 (+) — Chassis ground (–):*** ***(E158) No. 13 (+) — Chassis ground (–):***	Is the voltage 0.5 V or less?	Go to step **5**.	Repair the short circuit to power supply between the ECM and brake vacuum sensor connector terminal.
5	**CHECK BRAKE VACUUM SENSOR POWER SUPPLY.** 1) Connect the connectors to ECM and brake vacuum sensor. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector terminals. ***Connector & terminal*** ***(B134) No. 18 (+) — (B134) No. 19 (–):***	Is the voltage 4.75 — 5.25 V?	Go to step **6**.	Replace the ECM. <Ref. to FU(w/o STI)-129, Engine Control Module (ECM).>
6	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Depress the brake pedal several times, until the pedal becomes firm. 3) Read the current data of the brake vacuum pressure pump system using the Subaru Select Monitor. <Ref. to BVC(diag)-9, Subaru Select Monitor.>	Is the barometric pressure — brake booster pressure –1 — +1 kPa?	Temporary poor contact occurs.	Replace the ECM. <Ref. to FU(w/o STI)-129, Engine Control Module (ECM).>

B: DTC 12 COMPARE ERROR IN OTHER SENSOR

DTC DETECTING CONDITION:
Error in comparison with other brake booster relative pressure
TROUBLE SYMPTOM:
Brake vacuum pump does not operate.
WIRING DIAGRAM:
Vacuum pump control system <Ref. to WI-413, WIRING DIAGRAM, Vacuum Pump Control System.>

	Step	Check	Yes	No
1	**CHECK BRAKE VACUUM HOSE.** 1) Turn the ignition switch to OFF. 2) Check the status of the brake vacuum hose connection.	Is the brake vacuum hose connected firmly?	Go to step **2**.	Connect the brake vacuum hose.
2	**CHECK BRAKE VACUUM HOSE.** 1) Turn the ignition switch to ON and start engine. 2) Check for leakage from the brake vacuum hose.	Is there a leak from the brake vacuum hose?	Replace the brake vacuum hose.	Go to step **3**.
3	**CHECK BRAKE VACUUM SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the brake vacuum sensor connector. 3) Measure the resistance between brake vacuum sensor connector terminals. ***Terminals*** ***No. 1 — No. 3:*** ***No. 2 — No. 3:***	Is the resistance 15 kΩ or less?	Go to step **4**.	Replace the brake booster. <Ref. to BR-55, Brake Booster.>
4	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM SENSOR CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM and brake vacuum sensor connector terminal. ***Connector & terminal*** ***(B134) No. 18 — (B565) No. 3:*** ***(B134) No. 19 — (B565) No. 1:*** ***(E158) No. 13 — (B565) No. 2:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness between ECM and brake vacuum sensor connector terminal.
5	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM SENSOR CONNECTOR.** Measure the resistance of harness between ECM and chassis ground. ***Connector & terminal*** ***(B134) No. 18 — Chassis ground:*** ***(B134) No. 19 — Chassis ground:*** ***(E158) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the ground short circuit between the ECM and brake vacuum sensor connector terminal.
6	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM SENSOR CONNECTOR.** Measure the voltage between ECM and chassis ground. ***Connector & terminal*** ***(B134) No. 18 (+) — Chassis ground (–):*** ***(B134) No. 19 (+) — Chassis ground (–):*** ***(E158) No. 13 (+) — Chassis ground (–):***	Is the voltage 0.5 V or less?	Go to step **7**.	Repair the short circuit to power supply in harness between the ECM and brake vacuum sensor connector terminal.
7	**CHECK BRAKE VACUUM SENSOR POWER SUPPLY.** 1) Connect the connectors to ECM and brake vacuum sensor. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector terminals. ***Connector & terminal*** ***(B134) No. 18 (+) — (B134) No. 19 (–):***	Is the voltage 4.75 — 5.25 V?	Go to step **8**.	Replace the ECM. <Ref. to FU(w/o STI)-129, Engine Control Module (ECM).>

Step		Check	Yes	No
8	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Depress the brake pedal several times, until the pedal becomes firm. 3) Read the current data of the brake vacuum pressure pump system using the Subaru Select Monitor. <Ref. to BVC(diag)-9, Subaru Select Monitor.>	Is the barometric pressure — brake booster pressure –1 — +1 kPa?	Temporary poor contact occurs.	Replace the ECM. <Ref. to FU(w/o STI)-129, Engine Control Module (ECM).>

C: DTC 13 PRESSURE SENSOR SIGNAL FREEZE

DTC DETECTING CONDITION:
Brake vacuum sensor seizure malfunction
TROUBLE SYMPTOM:
Brake vacuum pump does not operate.
WIRING DIAGRAM:
Vacuum pump control system <Ref. to WI-413, WIRING DIAGRAM, Vacuum Pump Control System.>

	Step	Check	Yes	No
1	**CHECK BRAKE VACUUM HOSE.** 1) Turn the ignition switch to OFF. 2) Check the status of the brake vacuum hose connection.	Is the brake vacuum hose connected firmly?	Go to step **2**.	Connect the brake vacuum hose.
2	**CHECK BRAKE VACUUM HOSE.** 1) Turn the ignition switch to ON and start engine. 2) Check for leakage from the brake vacuum hose.	Is there a leak from the brake vacuum hose?	Replace the brake vacuum hose.	Go to step **3**.
3	**CHECK BRAKE VACUUM SENSOR CONNECTOR.** Check the status of the brake vacuum sensor connector connection.	Is the brake vacuum sensor connector connected firmly?	Go to step **4**.	Connect the brake vacuum sensor connector.
4	**CHECK BRAKE VACUUM SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the brake vacuum sensor connector. 3) Measure the resistance between brake vacuum sensor connector terminals. ***Connector & terminal*** ***No. 1 — No. 3:*** ***No. 2 — No. 3:***	Is the resistance 15 kΩ or less?	Go to step **5**.	Replace the brake booster. <Ref. to BR-55, Brake Booster.>
5	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM SENSOR CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM and brake vacuum sensor connector terminal. ***Connector & terminal*** ***(B134) No. 18 — (B565) No. 3:*** ***(B134) No. 19 — (B565) No. 1:*** ***(E158) No. 13 — (B565) No. 2:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit of harness between ECM and brake vacuum sensor connector terminal.
6	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM SENSOR CONNECTOR.** Measure the resistance of harness between ECM and chassis ground. ***Connector & terminal*** ***(B134) No. 18 — Chassis ground:*** ***(B134) No. 19 — Chassis ground:*** ***(E158) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the ground short circuit of harness between ECM and brake vacuum sensor connector terminal.
7	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM SENSOR CONNECTOR.** Measure the voltage between ECM and chassis ground. ***Connector & terminal*** ***(B134) No. 18 (+) — Chassis ground (–):*** ***(B134) No. 19 (+) — Chassis ground (–):*** ***(E158) No. 13 (+) — Chassis ground (–):***	Is the voltage 0.5 V or less?	Go to step **8**.	Repair the short circuit to power supply in harness between the ECM and brake vacuum sensor connector terminal.
8	**CHECK BRAKE VACUUM SENSOR POWER SUPPLY.** 1) Connect the connectors to ECM and brake vacuum sensor. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector terminals. ***Connector & terminal*** ***(B134) No. 18 (+) — (B134) No. 19 (–):***	Is the voltage 4.75 — 5.25 V?	Go to step **9**.	Replace the ECM. <Ref. to FU(w/o STI)-129, Engine Control Module (ECM).>

Step		Check	Yes	No
9	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Depress the brake pedal several times, until the pedal becomes firm. 3) Read the current data of the brake vacuum pressure pump system using the Subaru Select Monitor. <Ref. to BVC(diag)-9, Subaru Select Monitor.>	Is the barometric pressure — brake booster pressure –1 — +1 kPa?	Temporary poor contact occurs.	Replace the ECM. <Ref. to FU(w/o STI)-129, Engine Control Module (ECM).>

D: DTC 21 DISCREPANCY IN RELAYS (ON)

DTC DETECTING CONDITION:
Drive does not match between brake vacuum pump relay and brake vacuum pump.
TROUBLE SYMPTOM:
Brake vacuum pump does not operate.
WIRING DIAGRAM:
Vacuum pump control system <Ref. to WI-413, WIRING DIAGRAM, Vacuum Pump Control System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** Check the status of the brake vacuum sensor and brake vacuum pump connection.	Are the brake vacuum sensor and brake vacuum pump connected firmly?	Go to step **2**.	Connect the connector.
2	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the brake vacuum pump fuse. 3) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Go to step **3**.
3	**CHECK BRAKE VACUUM PUMP RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the brake vacuum pump relay from relay box. 3) Connect the battery to the brake vacuum pump relay terminals No. 5 and No. 8. 4) Measure the resistance between brake vacuum pump relay terminals. ***Terminals*** ***No. 6 — No. 7:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the brake vacuum pump relay.
4	**CHECK BRAKE VACUUM PUMP RELAY POWER SUPPLY.** 1) Turn the ignition switch to ON. 2) Measure the voltage between brake vacuum pump replay connector and chassis ground. ***Connector & terminal*** ***(B564) No. 5 (+) — Chassis ground (–):*** ***(B564) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair the open or ground short circuit of power supply circuit.
5	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM PUMP RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Measure the resistance of harness between ECM and brake vacuum pump relay connector terminal. ***Connector & terminal*** ***(E158) No. 37 — (B564) No. 8:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit of harness between ECM and the brake vacuum pump relay connector terminal.
6	**CHECK HARNESS BETWEEN THE BRAKE VACUUM PUMP AND BRAKE VACUUM PUMP RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the brake vacuum pump connector. 3) Measure the resistance of harness between brake vacuum pump and brake vacuum pump relay connector terminal. ***Connector & terminal*** ***(B564) No. 7 — (F134) No. 1:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair the open circuit of harness between brake vacuum pump and brake vacuum pump relay connector terminal.
7	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM PUMP CONNECTOR.** Measure the resistance of harness between brake vacuum pump connector and chassis ground. ***Connector & terminal*** ***(F134) No. 1 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **8**.	Repair the ground short circuit of harness between ECM and brake vacuum pump connector terminal.

	Step	Check	Yes	No
8	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM PUMP CONNECTOR.** Measure the voltage between brake vacuum pump connector and chassis ground. ***Connector & terminal*** ***(F134) No. 1 (+) — Chassis ground (–):***	Is the voltage 0.5 V or less?	Go to step **9**.	Repair the short circuit to power supply in harness between the ECM and brake vacuum pump connector terminal.
9	**CHECK BRAKE VACUUM PUMP.** 1) Turn the ignition switch to OFF. 2) Remove the brake vacuum pump. <Ref. to BR-81, REMOVAL, Brake Vacuum Pump.> 3) Connect the battery positive terminal to the brake vacuum pump terminal No. 1, and the negative terminal to terminal No. 2.	Does the brake vacuum pump operate?	Go to step **10**.	Replace the brake vacuum pump. <Ref. to BR-81, Brake Vacuum Pump.>
10	**CHECK BRAKE VACUUM PUMP.** 1) Connect the brake vacuum pump relay. 2) Connect the connectors to the brake vacuum pump and ECM. 3) Turn the ignition switch to ON. 4) Execute the Function Check Mode of the brake vacuum pressure pump system using the Subaru Select Monitor. <Ref. to BVC(diag)-9, Subaru Select Monitor.>	Does the brake vacuum pump operate?	Temporary poor contact occurs.	Replace the ECM. <Ref. to FU(w/o STI)-129, Engine Control Module (ECM).>

E: DTC 22 DISCREPANCY IN RELAYS (OFF)

DTC DETECTING CONDITION:
Drive does not match between brake vacuum pump relay and brake vacuum pump.
TROUBLE SYMPTOM:
Vacuum pump does not operate properly.
WIRING DIAGRAM:
Vacuum pump control system <Ref. to WI-413, WIRING DIAGRAM, Vacuum Pump Control System.>

	Step	Check	Yes	No
1	**CHECK BRAKE VACUUM PUMP RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the brake vacuum pump relay from relay box. 3) Connect the battery to the brake vacuum pump relay terminals No. 5 and No. 8. 4) Measure the resistance between brake vacuum pump relay terminals. ***Terminals*** ***No. 6 — No. 7:***	Is the resistance less than 1 Ω?	Go to step **2**.	Replace the brake vacuum pump relay.
2	**CHECK BRAKE VACUUM PUMP RELAY POWER SUPPLY.** 1) Turn the ignition switch to ON. 2) Measure the voltage between brake vacuum pump replay connector and chassis ground. ***Connector & terminal*** ***(B564) No. 5 (+) — Chassis ground (–):*** ***(B564) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the open or ground short circuit of power supply circuit.
3	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM PUMP RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Measure the resistance of harness between ECM and brake vacuum pump relay connector terminal. ***Connector & terminal*** ***(E158) No. 1 — (B564) No. 7:*** ***(E158) No. 37 — (B564) No. 8:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between ECM and the brake vacuum pump relay connector terminal.
4	**CHECK HARNESS BETWEEN THE BRAKE VACUUM PUMP AND BRAKE VACUUM PUMP RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the brake vacuum pump connector. 3) Measure the resistance of harness between brake vacuum pump and brake vacuum pump relay connector terminal. ***Connector & terminal*** ***(B564) No. 7 — (F134) No. 1:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness between brake vacuum pump and brake vacuum pump relay connector terminal.
5	**CHECK MOTOR GROUND.** 1) Turn the ignition switch to OFF. 2) Disconnect the brake vacuum pump connector. 3) Measure the resistance between brake vacuum pump connector and chassis ground. ***Connector & terminal*** ***(F134) No. 2 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the ground circuit.
6	**CHECK BRAKE VACUUM PUMP.** 1) Turn the ignition switch to OFF. 2) Remove the brake vacuum pump. <Ref. to BR-81, REMOVAL, Brake Vacuum Pump.> 3) Connect the battery to the brake vacuum pump terminals No. 1 (+) and No. 2 (–).	Does the brake vacuum pump operate?	Go to step **7**.	Replace the brake vacuum pump. <Ref. to BR-81, Brake Vacuum Pump.>

Step		Check	Yes	No
7	**CHECK ECM.** 1) Connect the brake vacuum pump, brake vacuum pump relay, and connector. 2) Perform the Sequence Control Mode. <Ref. to BVC(diag)-9, SEQUENCE CONTROL MODE, OPERATION, Subaru Select Monitor.>	Does the brake vacuum pump operate?	Temporary poor contact occurs.	Replace the ECM. <Ref. to FU(w/o STI)-129, Engine Control Module (ECM).>

F: DTC 23 PUMP CONTINUOUS WORK

DTC DETECTING CONDITION:
Malfunction in brake vacuum pump continuous drive error
TROUBLE SYMPTOM:
Brake vacuum pump operates continuously.
WIRING DIAGRAM:
Vacuum pump control system <Ref. to WI-413, WIRING DIAGRAM, Vacuum Pump Control System.>

	Step	Check	Yes	No
1	**CHECK BRAKE VACUUM HOSE.** 1) Turn the ignition switch to OFF. 2) Check the status of the brake vacuum hose connection.	Is the brake vacuum hose connected firmly?	Go to step **2**.	Connect the brake vacuum hose.
2	**CHECK BRAKE VACUUM HOSE.** 1) Turn the ignition switch to ON and start engine. 2) Check for leakage from the brake vacuum hose.	Is there a leak from the brake vacuum hose?	Replace the brake vacuum hose.	Go to step **3**.
3	**CHECK BRAKE VACUUM PUMP RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the brake vacuum pump relay from relay box. 3) Connect the battery to the brake vacuum pump relay terminals No. 5 and No. 8. 4) Measure the resistance between brake vacuum pump relay terminals. ***Terminals*** ***No. 6 — No. 7:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the brake vacuum pump relay.
4	**CHECK BRAKE VACUUM PUMP RELAY POWER SUPPLY.** 1) Turn the ignition switch to ON. 2) Measure the voltage between brake vacuum pump replay connector and chassis ground. ***Connector & terminal*** ***(B564) No. 5 (+) — Chassis ground (–):*** ***(B564) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair the open or ground short circuit of power supply circuit.
5	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM PUMP RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Measure the resistance of harness between ECM and brake vacuum pump relay connector terminal. ***Connector & terminal*** ***(E158) No. 1 — (B564) No. 7:*** ***(E158) No. 37 — (B564) No. 8:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit of harness between ECM and the brake vacuum pump relay connector terminal.
6	**CHECK HARNESS BETWEEN THE BRAKE VACUUM PUMP AND BRAKE VACUUM PUMP RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the brake vacuum pump connector. 3) Measure the resistance of harness between brake vacuum pump and brake vacuum pump relay connector terminal. ***Connector & terminal*** ***(B564) No. 7 — (F134) No. 1:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair the open circuit of harness between brake vacuum pump and brake vacuum pump relay connector terminal.
7	**CHECK ECM.** 1) Connect the brake vacuum pump, brake vacuum pump relay, and connector. 2) Perform the Sequence Control Mode. <Ref. to BVC(diag)-9, SEQUENCE CONTROL MODE, OPERATION, Subaru Select Monitor.>	Does the brake vacuum pump operate?	Temporary poor contact occurs.	Replace the ECM. <Ref. to FU(w/o STI)-129, Engine Control Module (ECM).>

12.General Diagnostic Table

A: INSPECTION

Symptoms		Main probable cause	Other probable cause
Poor brake performance	Long braking/ stopping distance	• Brake pad • Aeration to brake line • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Master cylinder • Brake caliper • Disc rotor • Brake pipe • Brake booster
	Long brake pedal stroke	• Aeration to brake line • Brake pedal play	• Master cylinder • Brake caliper • Brake pad • Brake pipe • Brake booster
	Short brake pedal stroke	• Brake vacuum pump • Brake vacuum sensor • Brake vacuum hose	• Master cylinder • Brake caliper • Brake pad • Brake pipe • Brake booster

PARKING BRAKE

PB

Page

1. General Description 2
2. Parking Brake Lever 4
3. Parking Brake Cable 8
4. Parking Brake Assembly (Rear Disc Brake) 12
5. General Diagnostic Table 18

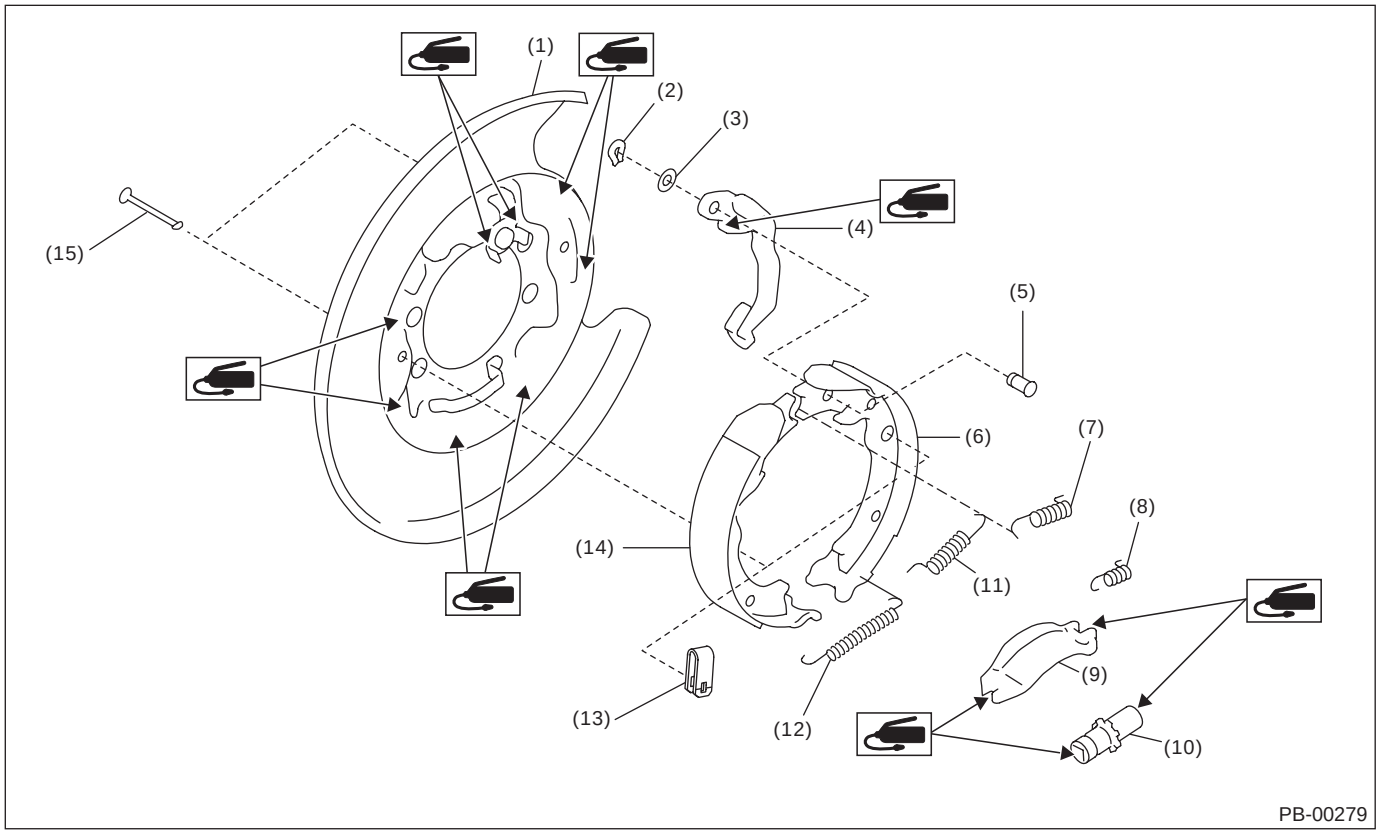
1. General Description

A: SPECIFICATION

Item		Specification	
Type		Drum in disc, duo servo type	
Effective drum diameter	mm (in)	190 (7.48)	
Lining dimensions (Length × Width × Thickness)	mm (in)	165.0 × 30.0 × 3.5 (6.51 × 1.181 × 0.14)	
Inside diameter	mm (in)	Standard	190 (7.48)
		Limit	191 (7.52)
Lining thickness	mm (in)	Standard	3.5 (0.14)
		Limit	1.5 (0.059)
Clearance adjustment		Manual adjustment	
Free play adjusting method		Auto adjuster	
Operation method		Manual lever type	
Lever stroke	Notches/N (kgf, lbf)	7 — 8/200 (20.4, 45)	

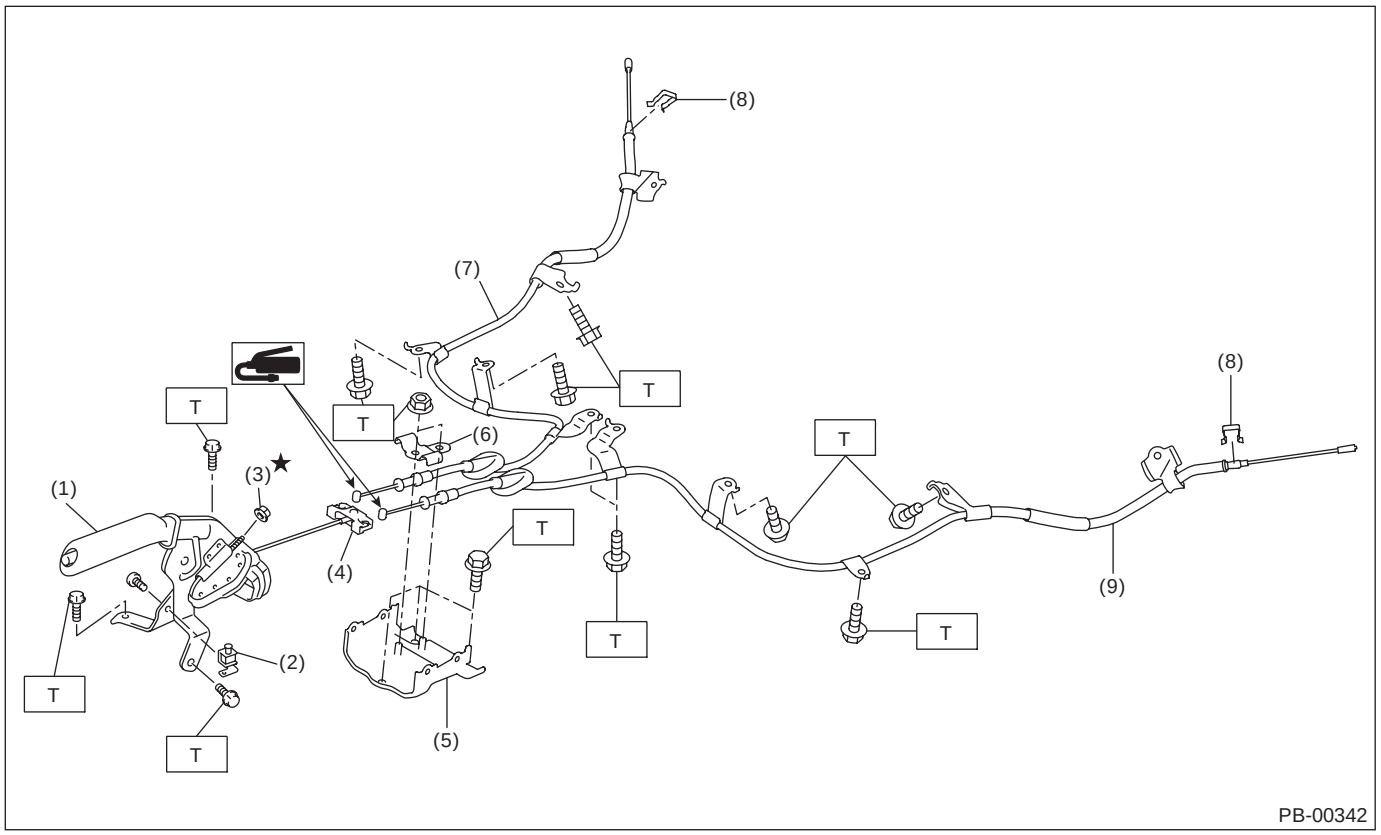
B: COMPONENT

1. PARKING BRAKE (REAR DISC BRAKE)



(1) Back plate - rear brake
(2) Retainer - rear brake
(3) Spring washer - rear brake
(4) Parking lever - rear
(5) Pin - parking lever
(6) Parking brake shoe (secondary)
(7) Spring - secondary shoe return
(8) Spring - strut
(9) Strut - brake
(10) Adjuster ASSY - rear brake
(11) Spring - primary shoe return
(12) Spring - adjuster
(13) Spring - shoe clamp
(14) Parking brake shoe (primary)
(15) Pin - shoe hold-down

2. PARKING BRAKE LEVER & CABLE



(1)	Lever ASSY - hand brake	(5)	Bracket	(9)	Cable ASSY - parking brake LH
(2)	Switch ASSY - hand brake	(6)	Clamp A - hand brake cable		
(3)	Adjusting nut (self-locking nut)	(7)	Cable ASSY - parking brake RH	***Tightening torque: N·m (kgf-m, ft-lb)***	
(4)	Equalizer	(8)	Clamp B - hand brake cable	***T: 18 (1.8, 13.3)***	

C: CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Apply grease onto sliding or revolving surfaces before installation.
- Be sure that the surface of brake disc, brake pad or brake shoe is free from grease or oil.

D: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

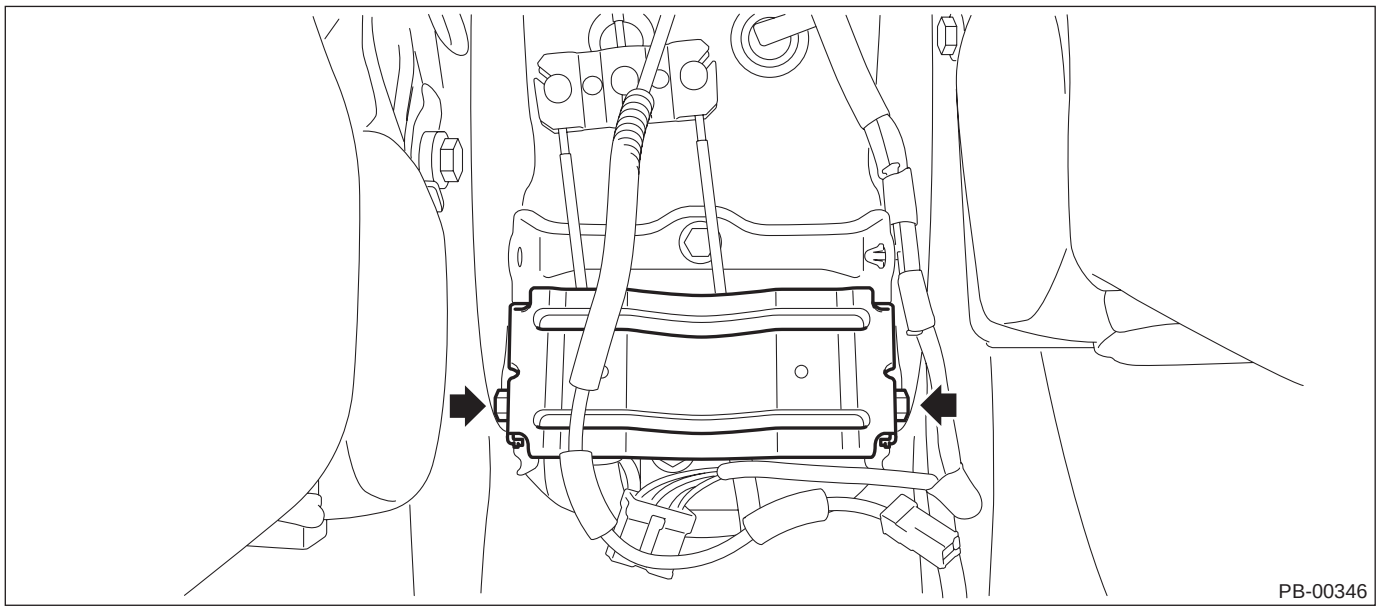
2. Parking Brake Lever

A: REMOVAL

1) Set the wheel stoppers to tires.
2) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

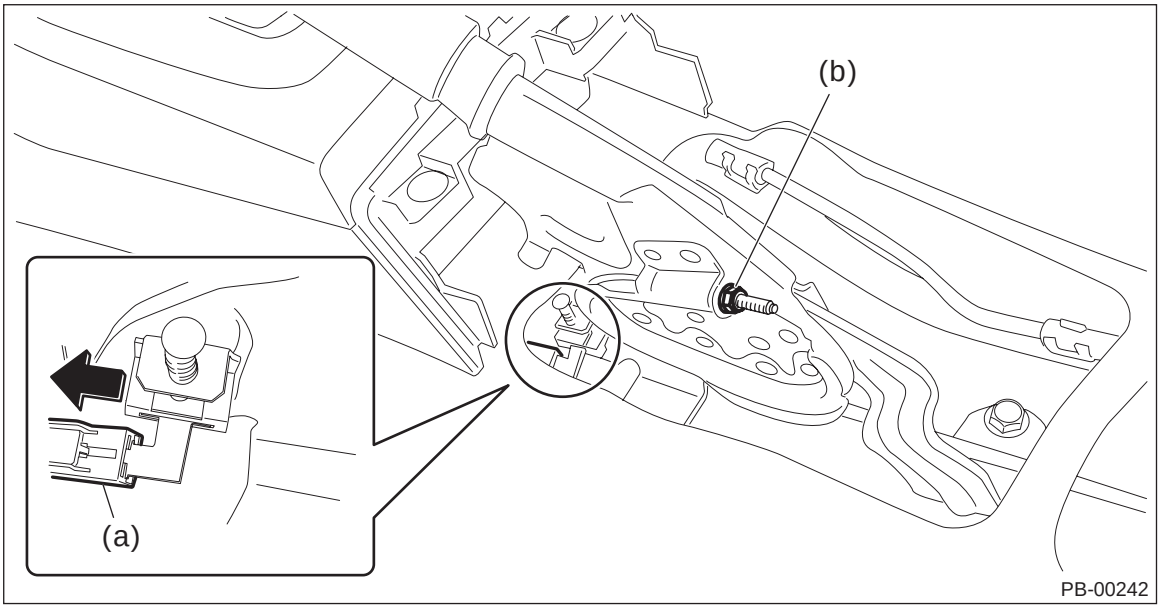
NOTE:
- For models other than STI model, disconnect the ground terminal from battery sensor.
- On CVT models, shift the select lever into “D” before disconnecting the battery ground cable.
- For the power seat, move the seat to the front-most position before removing the battery ground terminal.

3) Remove the driver’s seat. <Ref. to SE-9, REMOVAL, Front Seat.>
4) Remove the console box assembly. <Ref. to EI-67, REMOVAL, Console Box.>
5) Remove the bracket - console box.

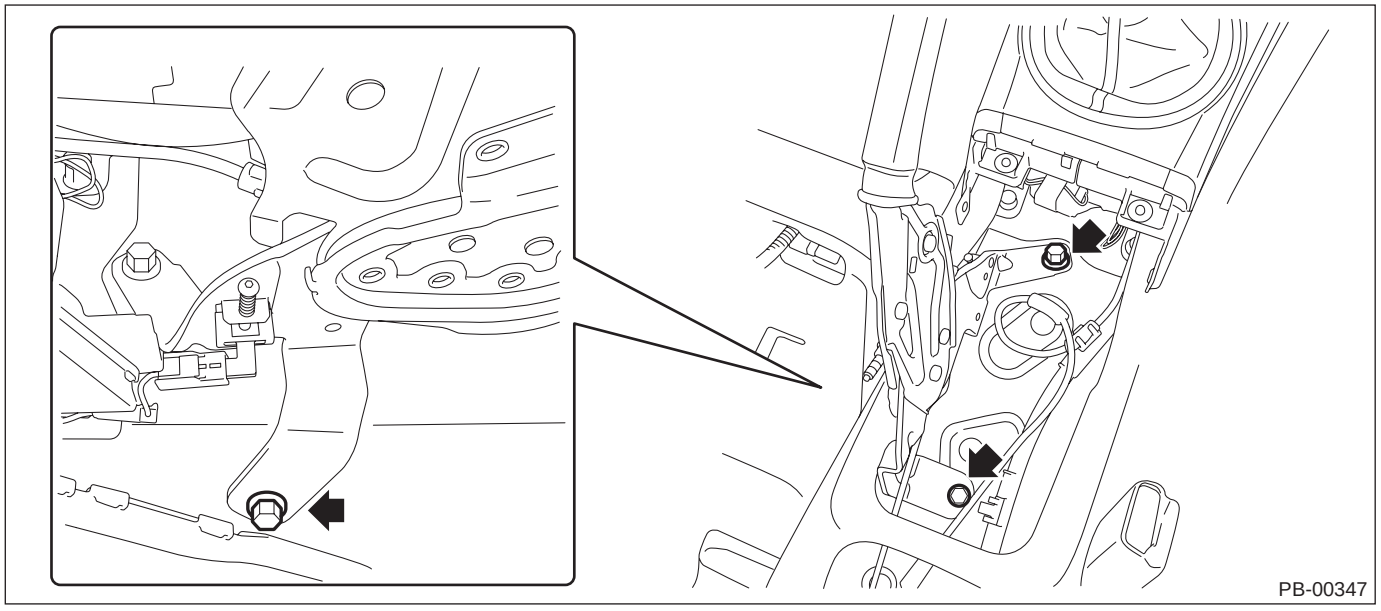


6) Remove the lever assembly - hand brake.
(1) Disconnect the connector (a) of the switch assembly - hand brake.
(2) Remove the adjusting nut (b).

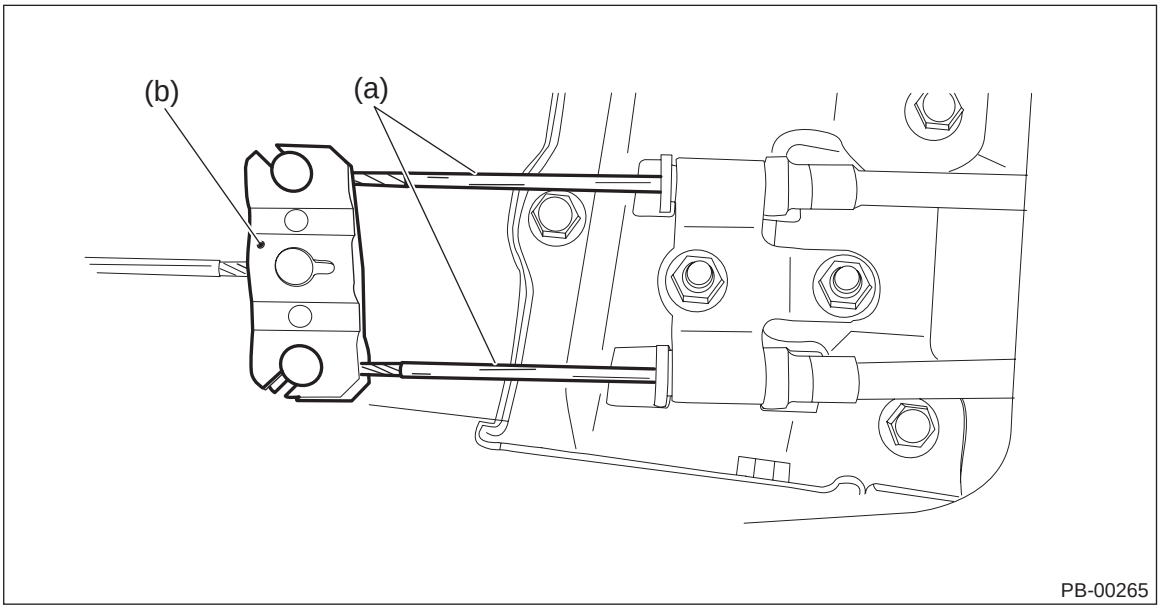
CAUTION:
A self-locking nut is used for the adjusting nut of parking cable. Therefore, replace the self-locking nut with a new one when disassembling.



(3) Remove the bolt, and then remove the lever assembly - hand brake.



7) Remove the inner cable end (a) from the equalizer (b).



B: INSTALLATION

1) Install the inner cable end to equalizer.
2) Install the bracket - console box.

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

3) Install the lever assembly - hand brake.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

CAUTION:
Do not reuse the adjusting nut (self locking nut). Always replace with a new part.

4) Be sure to adjust the lever stroke. <Ref. to PB-7, ADJUSTMENT, Parking Brake Lever.>
5) Install the console box assembly.
6) Install the driver's seat. <Ref. to SE-10, INSTALLATION, Front Seat.>
7) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

C: INSPECTION

1. LEVER ASSY

1) Operate the lever assembly - hand brake 3 to 4 times and fully return the lever assembly - hand brake.
2) While slowly pulling up the lever assembly - hand brake, count the notches.

Lever stroke:
7 to 8 notches when pulled with a force of 200 N (20.4 kgf, 45 lbf)
If it is not within the specified value, adjust the parking brake. <Ref. to PB-16, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

2. SWITCH ASSEMBLY

1) Measure the resistance between the switch assembly - hand brake and chassis ground.

Preparation tool:
Circuit tester

	Switch position	Standard
A	When shaft is free (ON)	Less than 1 Ω
B	When shaft is pressed in (OFF)	10 kΩ or more

If the result of inspection is not within the specified value, replace the switch assembly - hand brake.

D: ADJUSTMENT

Adjust the parking lever stroke. <Ref. to PB-17, LEVER STROKE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

3. Parking Brake Cable

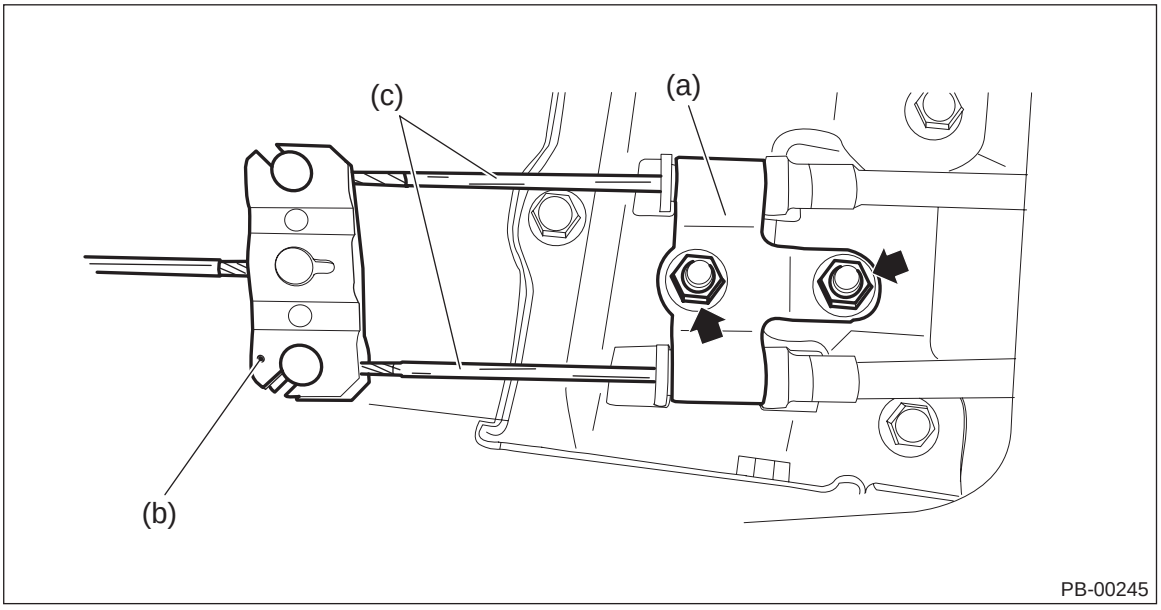
A: REMOVAL

CAUTION:
Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Before removing the rear seat, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM” section. <Ref. to AB-9, CAUTION, General Description.>

1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
- For models other than STI model, disconnect the ground terminal from battery sensor.
- On CVT models, shift the select lever into “D” before disconnecting the battery ground cable.
- For the power seat, move the seat to the front-most position before removing the battery ground terminal.

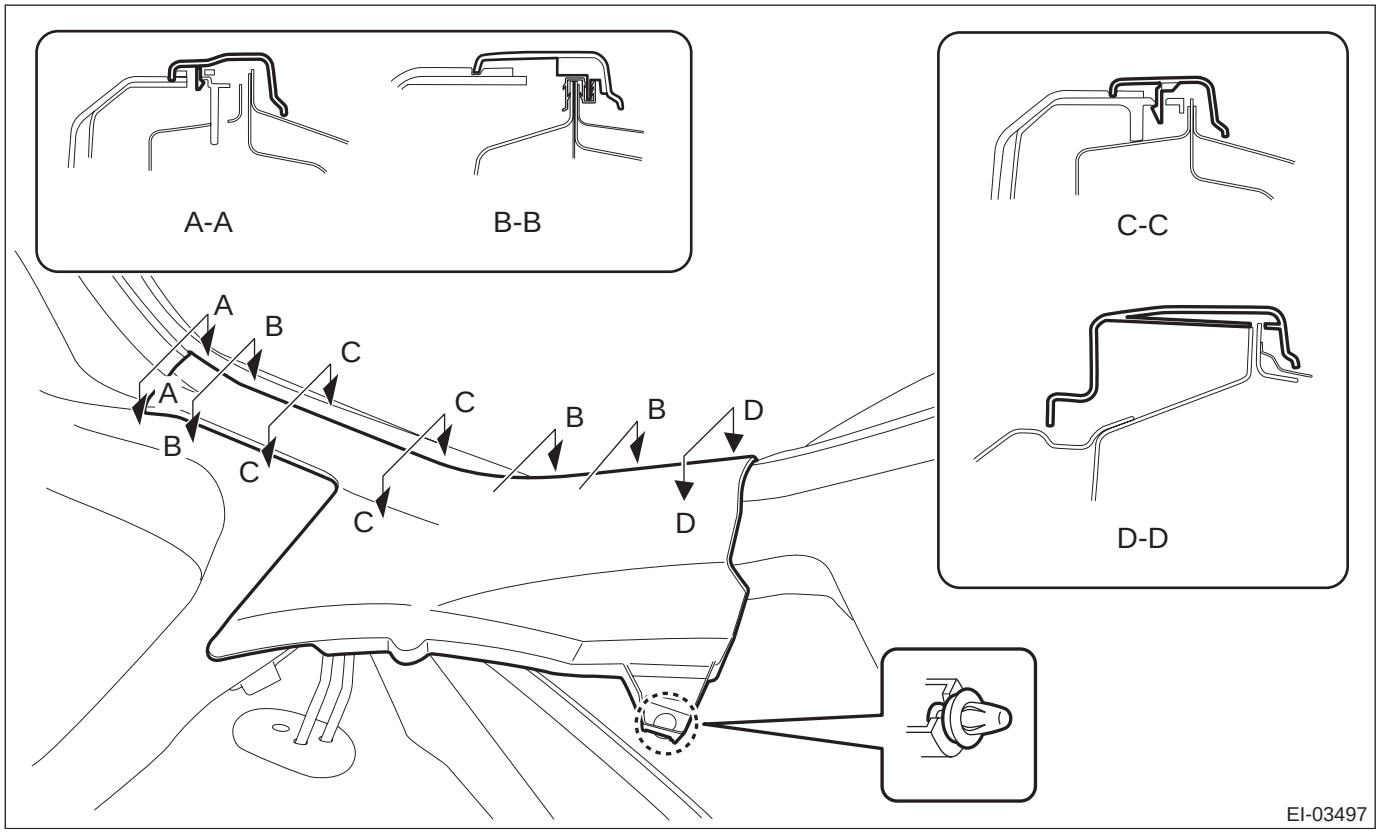
2) Remove the console box assembly. <Ref. to EI-67, REMOVAL, Console Box.>
3) Remove the lever assembly - hand brake. <Ref. to PB-4, REMOVAL, Parking Brake Lever.>
4) Remove the nut and remove the clamp A - hand brake cable (a).
5) Remove the inner cable end (c) from the equalizer (b).



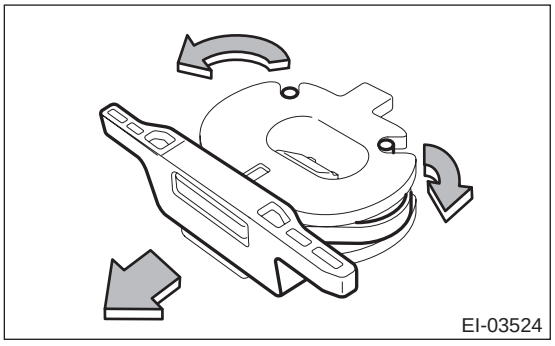
6) Remove the rear seat cushion assembly. <Ref. to SE-29, REMOVAL, Rear Seat.>

7) Release the clips and claws, and remove the side sill covers - rear INN on the left and right sides.

CAUTION:
Do not pull with excessive force. Doing so may damage the claws of the side sill cover - rear INN.



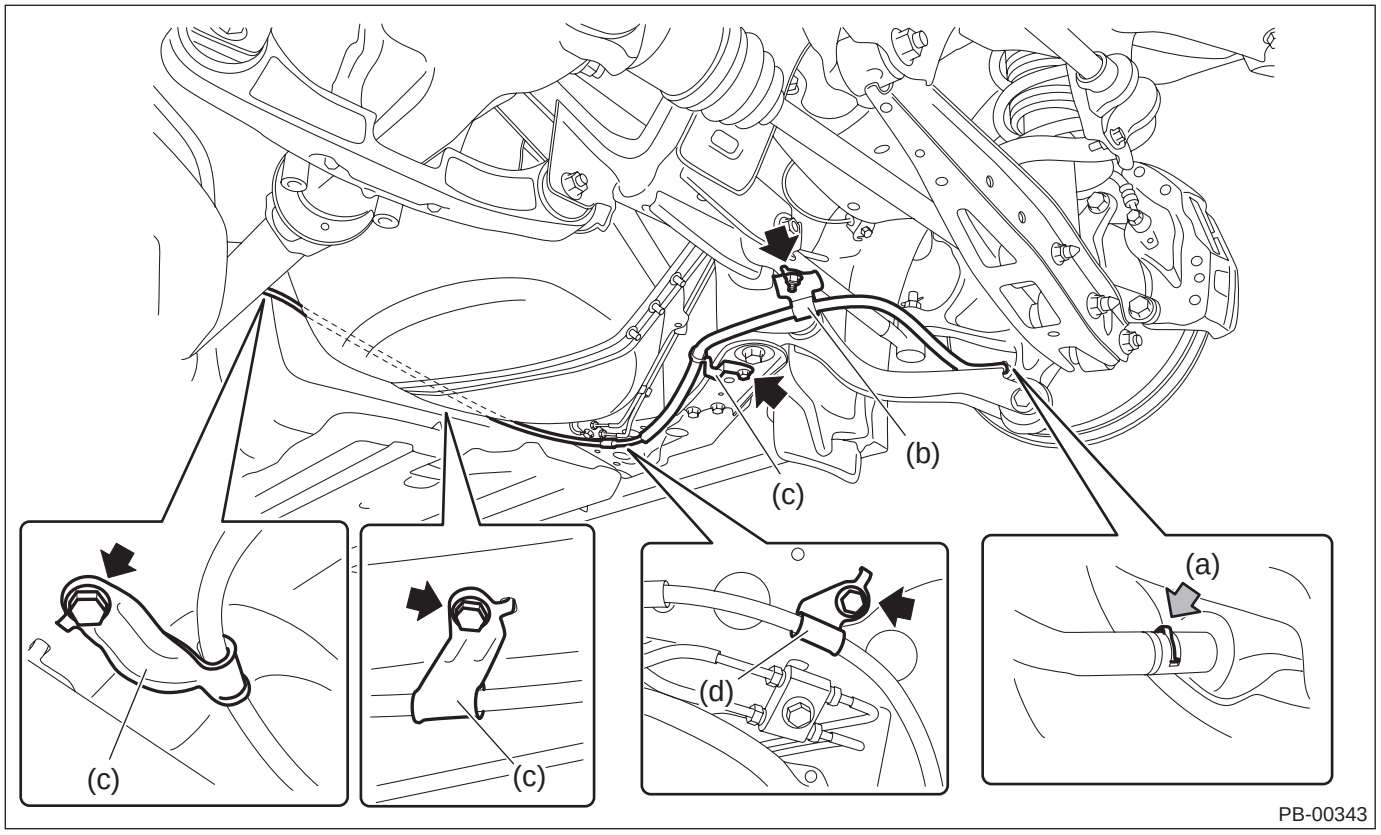
8) Remove the clips and knobs of the hook - seat cushion rear.



9) Turn over the floor carpet and remove the grommet of the cable assembly - parking brake from the rear floor.
10) Lift up the vehicle, and then remove the rear wheels.
11) Remove the fuel tank protector.
- Except for STI model <Ref. to FU(w/o STI)-148, REMOVAL, Fuel Tank Protector.>
- STI model <Ref. to FU(STI)-66, REMOVAL, Fuel Tank Protector.>

12) Remove the exhaust pipe and muffler.
- Center exhaust pipe & rear exhaust pipe: <Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.>
- Muffler: <Ref. to EX(STI)-14, REMOVAL, Muffler.>

13) Remove the propeller shaft assembly. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
14) Remove the cable assembly - parking brake from the lever section of parking brake shoe. <Ref. to PB-12, REMOVAL, Parking Brake Assembly (Rear Disc Brake).>
15) Remove the cable assembly - parking brake.
    (1) Remove the clamp B - hand brake cable (a) from the back plate - rear brake.
    (2) Remove the cable clamp (b) from the lateral link assembly - front.
    (3) Remove the cable clamp (c) from the sub frame support.
    (4) Remove the cable clamp (d) from the rear floor.



B: INSTALLATION

CAUTION:
- **After installing the backrest assembly, make sure that each seat belt operates normally.**
- **Make sure that they are properly secured on each hook on the vehicle side.**

1) Install the cable assembly - parking brake.

Tightening torque:
Cable clamp: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

2) Install the cable assembly - parking brake to the lever section of parking brake shoe. <Ref. to PB-14, INSTALLATION, Parking Brake Assembly (Rear Disc Brake).>
3) Install the grommet to the rear floor.
4) Install the propeller shaft assembly. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
5) Install the exhaust pipe and muffler.
- Center exhaust pipe & rear exhaust pipe: <Ref. to EX(STI)-12, INSTALLATION, Rear Exhaust Pipe.>
- Muffler: <Ref. to EX(STI)-15, INSTALLATION, Muffler.>

6) Install the fuel tank protector.
- Except for STI model <Ref. to FU(w/o STI)-148, INSTALLATION, Fuel Tank Protector.>
- STI model <Ref. to FU(STI)-66, INSTALLATION, Fuel Tank Protector.>

7) Place the floor mat to the original position, and then attach the clip and the knob of the hook - seat cushion rear.
8) Install the side sill covers - rear INN on the right and left side.
9) Install the rear seat cushion assembly.
10) Install the inner cable end to equalizer, and install the clamp A - hand brake cable.
11) Install the lever assembly - hand brake.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

12) Install the console box assembly.
13) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

14) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

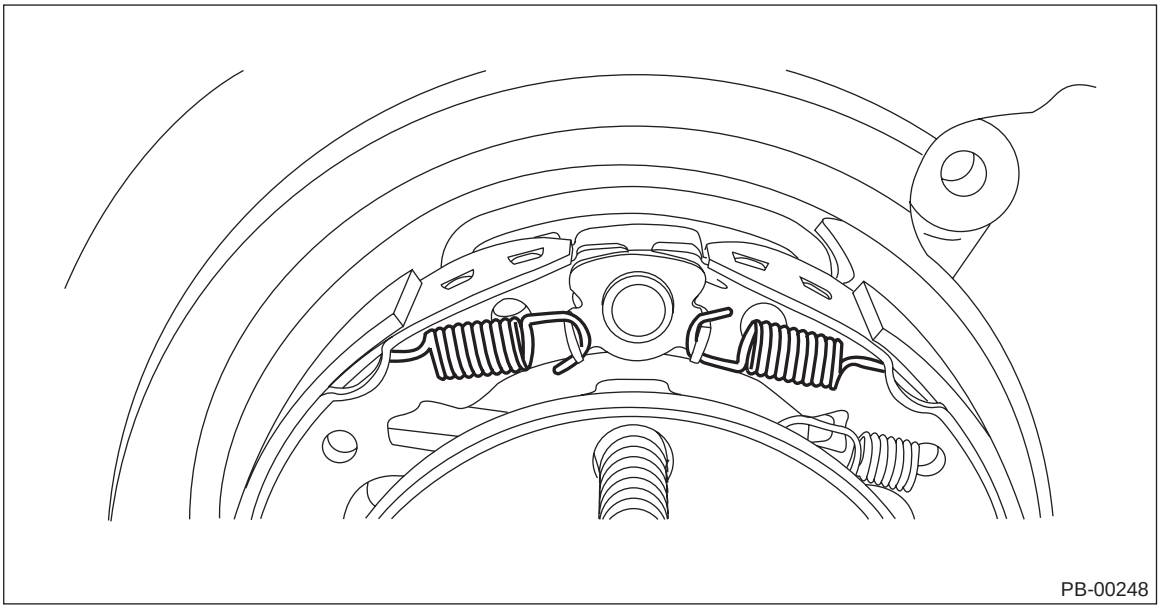
C: INSPECTION

Check the removed cable and replace if damaged, rusty or malfunctioning.
1) Check the cable for smooth operation.
2) Check the inner cable for damage and rust.
3) Check the outer cable for damage, bends and cracks.

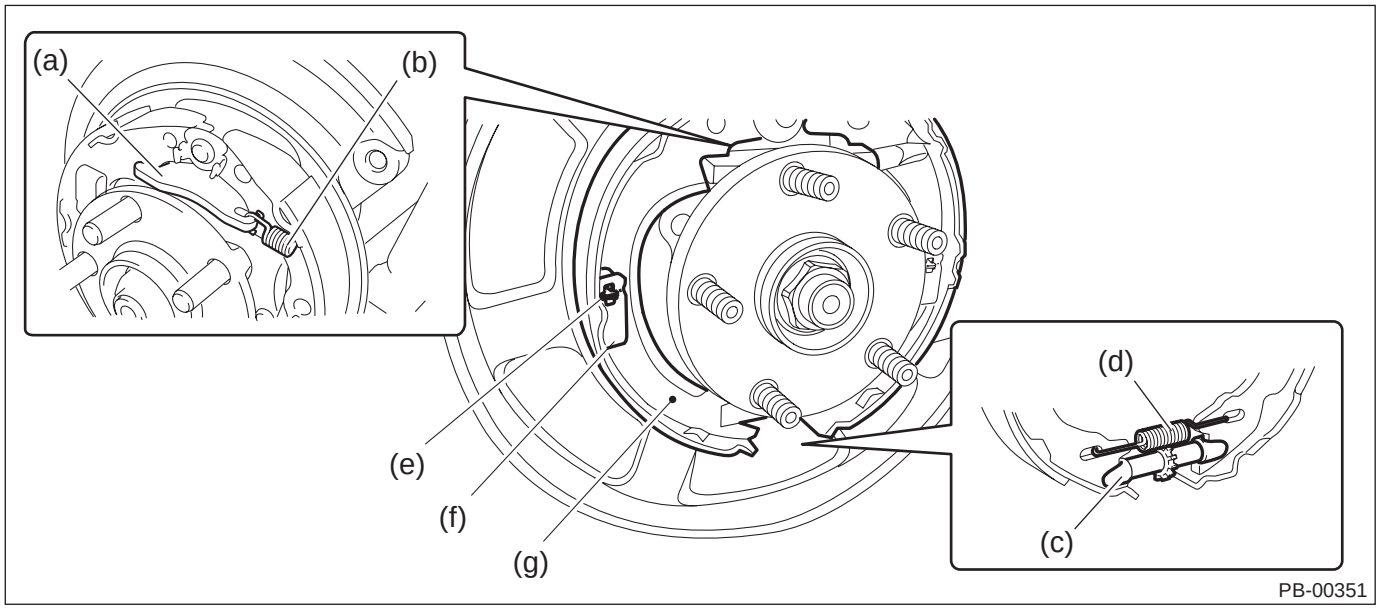
4. Parking Brake Assembly (Rear Disc Brake)

A: REMOVAL

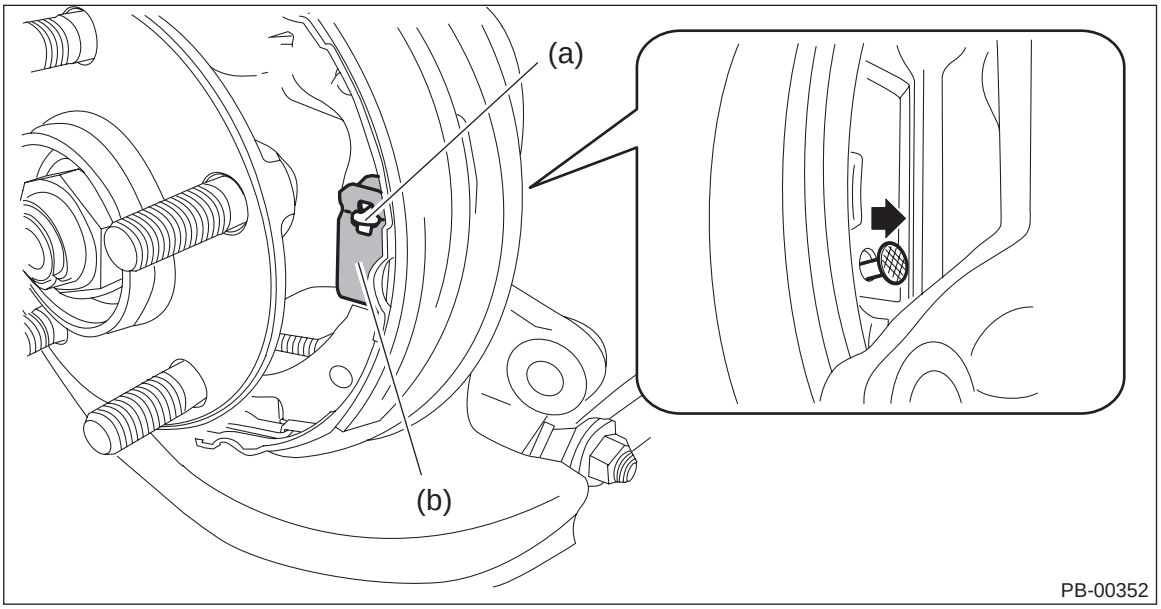
1) Release the parking brake.
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the rear disc rotor. <Ref. to BR-39, REMOVAL, Rear Disc Rotor.>
4) Remove the spring - primary shoe return and the spring - secondary shoe return.



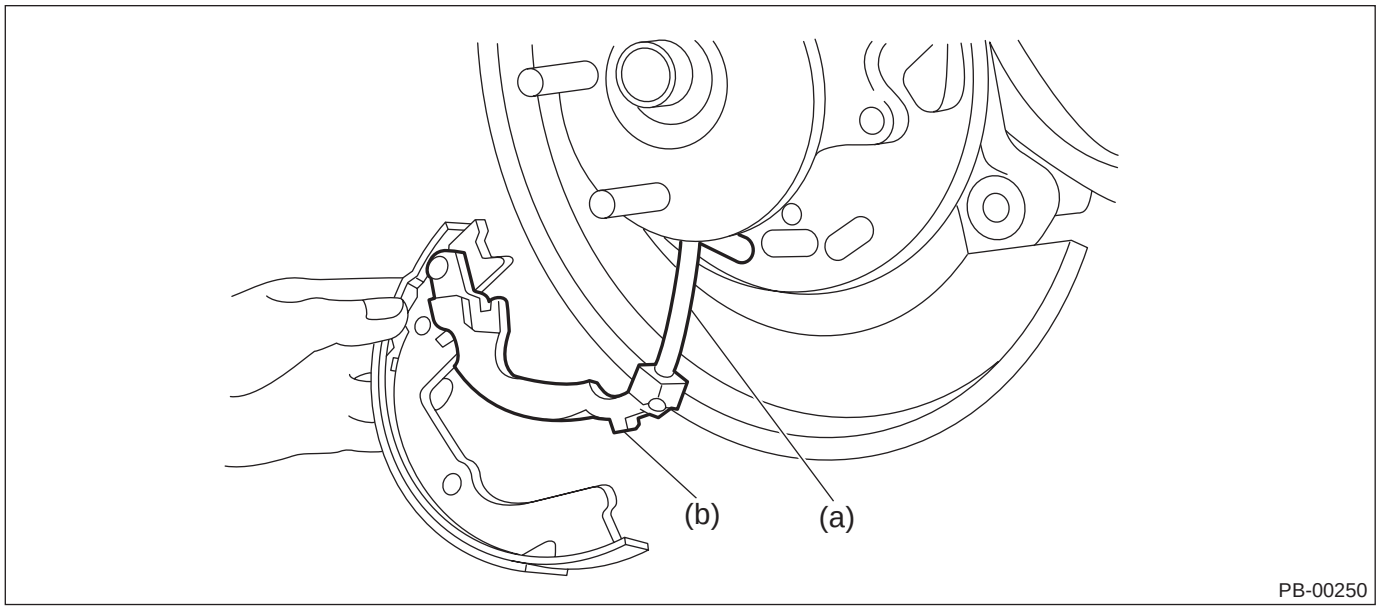
5) Remove the parking brake shoe on the primary side.
   (1) Remove the strut - brake (a) and the spring - strut (b).
   (2) Remove the adjuster assembly - rear brake (c) and the spring - adjuster (d).
   (3) Remove the pin - shoe hold-down (e) and the spring - shoe clamp (f), and remove the parking brake shoe (g).



6) Remove the pin - shoe hold-down (a) and the spring - shoe clamp (b), and remove the secondary side parking brake shoe.



7) Remove the cable assembly - hand brake cable (a) from the parking lever - rear (b).



8) Remove the retainer - rear brake and the spring washer - rear brake, and remove the parking lever - rear and the brake shoe.

B: INSTALLATION

CAUTION:
Be sure the lining surface is free from brake fluid and grease.
1) Apply brake grease to the following locations.

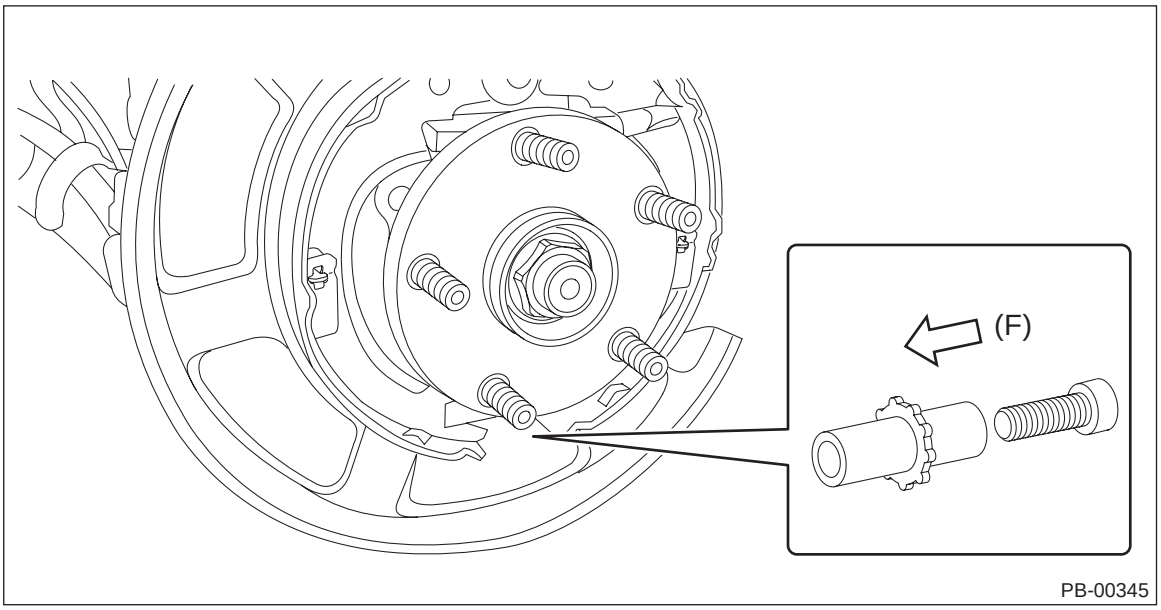
Brake grease:
Molykote44MA or equivalent
- Six contact surfaces of the parking brake shoe rim and back plate - rear brake
- Contact surface of the parking brake shoe and the anchor pin
- Contact surface of the parking lever assembly - rear and the strut - brake
- Contact surface of the parking brake shoe and the adjuster assembly - rear brake
- Contact surface of the parking brake shoe and the strut - brake
- Contact surface of the parking lever - rear and the parking brake shoe

2) Install the parking lever - rear to the secondary side parking brake shoe.

NOTE:
Install the pin - parking lever and spring washer - rear brake to the parking lever - rear, and swage the retainer - rear brake to secure.
3) Install the cable assembly - parking brake to the parking lever - rear.

NOTE:
Check that the cable assembly - parking brake does not fall from the cable guide.
4) Attach the adjuster assembly - rear brake and the spring - adjuster to the primary side and the secondary side parking brake shoes.

NOTE:
Install the adjuster assembly - rear brake with the screw section facing to the direction shown in the figure below.



(F) Left wheel: front side of vehicle,
right wheel: rear side of vehicle

5) Install the parking brake shoes to the back plate - rear brake with the pins - shoe hold-down and the springs - shoe clamp.
6) Install the strut - brake and the spring - strut to the parking brake shoes.

NOTE:
Install the spring - strut so that it comes towards the front side of the vehicle.
7) Install the return springs on the primary side first, and then the secondary side.
8) Install the disc rotor and the disc brake assembly - rear.

Tightening torque:
STI model: 65 N·m (6.6 kgf-m, 47.9 ft-lb)
Except for STI model: 66 N·m (6.7 kgf-m, 48.7 ft-lb)
9) Adjust the parking brake. <Ref. to PB-16, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>
10) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
11) If new parking brake shoes are replaced, drive the vehicle to break-in the parking brake lining.
(1) Drive the vehicle at approximately 35 km/h (22 MPH) or more.
(2) While pressing the button of lever assembly - hand brake, pull the lever assembly - hand brake with a force of 150 N (15.3 kgf, 33.7 lbf).
(3) Drive the vehicle for about 200 m (0.12 mile) in this condition.
(4) Wait 5 to 10 minutes for the parking brake to cool down. Repeat steps (1) through (3) again.
(5) After breaking-in, re-adjust the parking brakes. <Ref. to PB-16, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

C: INSPECTION

1) Measure the inner diameter of the rear disc rotor. If scoring or worn is found on the disc, replace the rear disc rotor.

Disc rotor inner diameter:
Specification: 190 mm (7.48 in)
Service limit: 191 mm (7.52 in)
2) Measure the lining thickness. If it exceeds the limit, replace the brake shoe.

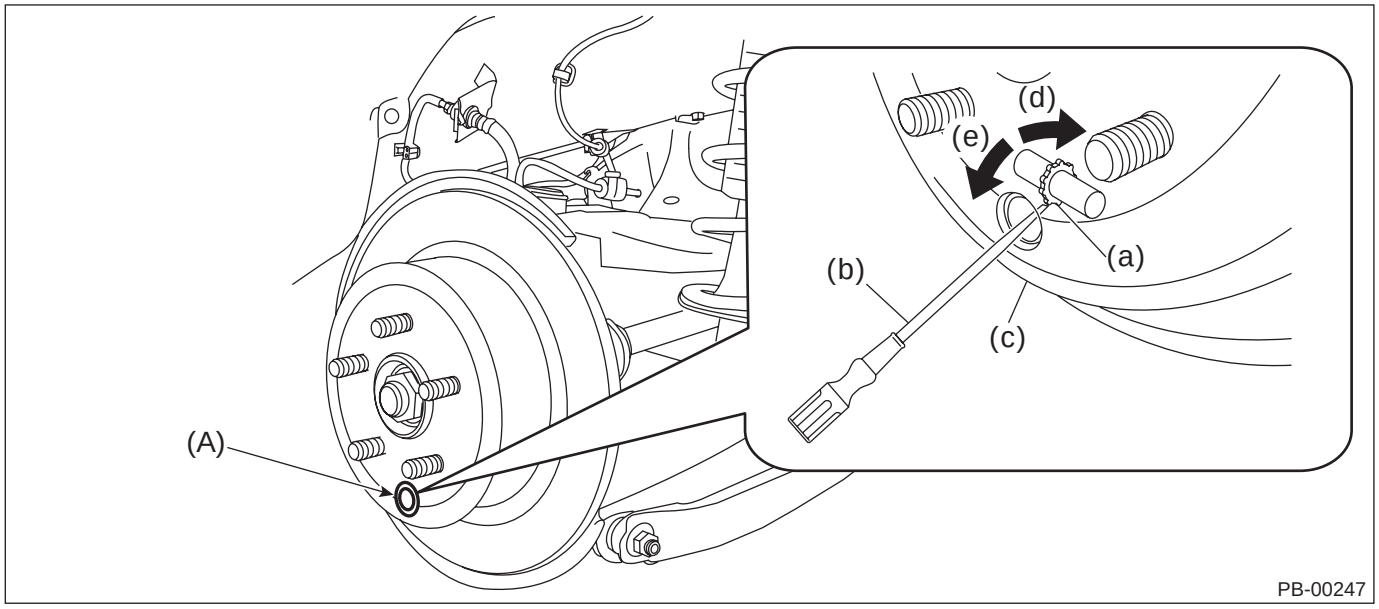
Lining thickness:
Specification: 3.5 mm (0.14 in)
Service limit: 1.5 mm (0.059 in)

NOTE:
Replace the right and left parking brake shoe as a set.

D: ADJUSTMENT

1. SHOE CLEARANCE

1) Return the lever assembly - hand brake completely.
2) Loosen the adjusting nut, and make the cable free.
3) Remove the adjusting hole cover (A).
4) Insert a flat tip screwdriver (b) into the adjustment hole, and rotate the adjuster assembly - rear brake (a) until the disc rotor cannot be turned by hand.



(a)	Adjuster ASSY - rear brake	(c)	Disc rotor	(e)	Shorten the adjuster ASSY - rear brake
(b)	Flat tip screwdriver	(d)	Extend the adjuster ASSY - rear brake		

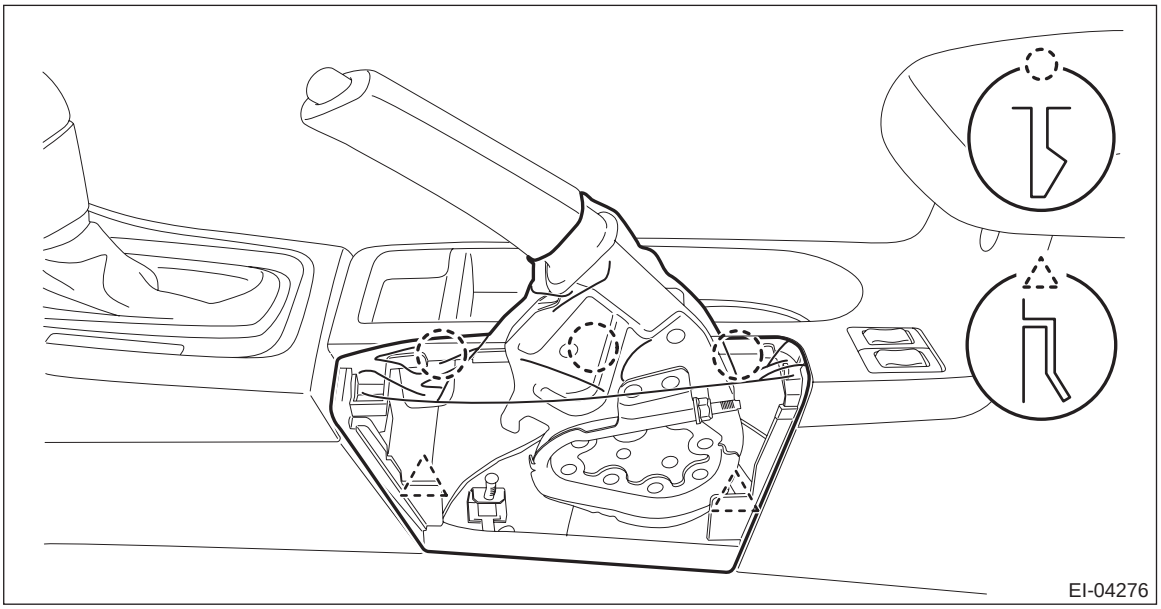
5) Loosen the adjuster assembly - rear brake by 10 notches in the direction of the arrow (e).

CAUTION:
- **Check there is no brake drag.**
- **Make sure that the adjuster assembly - rear brake is loosened by 10 notches. If it is not loosened sufficiently, dragging may occur.**

6) Install the adjusting hole cover to the disc rotor.
7) Adjust the parking lever stroke. <Ref. to PB-17, LEVER STROKE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

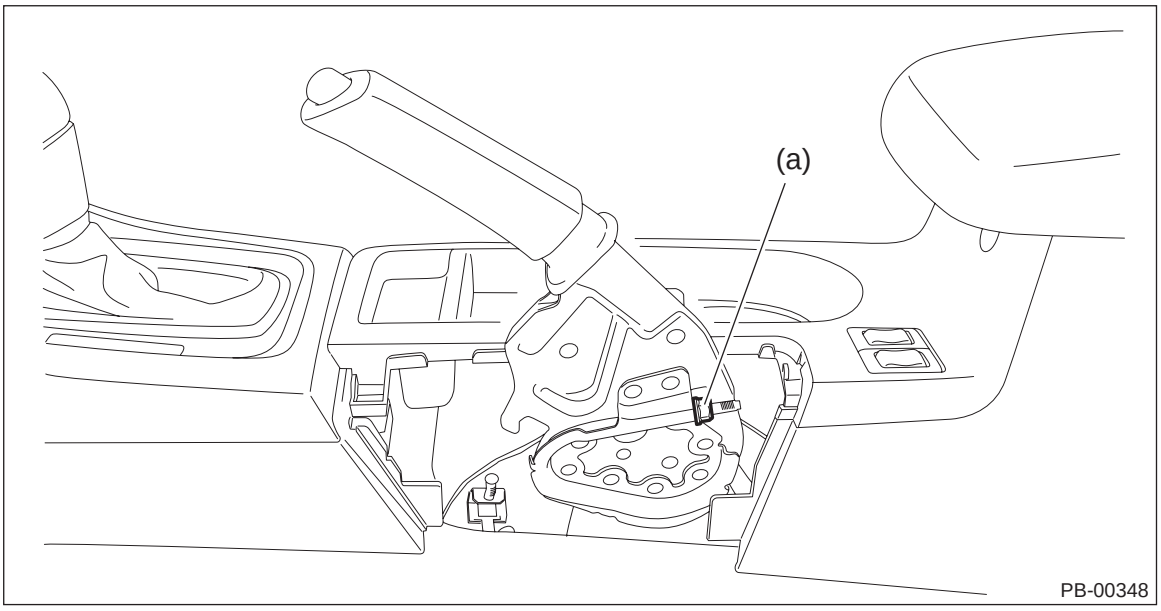
2. LEVER STROKE

1) Adjust the shoe clearance before adjusting lever stroke. <Ref. to PB-16, SHOE CLEARANCE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>
2) Release the claws, and then remove the boot - parking brake.



3) Pull the lever assembly - hand brake hard 3 to 5 times.
4) Turn the adjusting nut (a) until the lever stroke is at the specified value.

Lever stroke:
7 to 8 notches when pulled with a force of 200 N (20.4 kgf, 45 lbf)



5) Check there is no brake drag.
6) Check that the brake warning light illuminates when the lever assembly - hand brake is operated.

NOTE:
The light must illuminate when the first notch is reached after pulling the lever.
7) Install the boot - parking brake.

5. General Diagnostic Table

A: INSPECTION

Symptoms	Possible cause	Corrective action
Brake drag	Lever assembly - hand brake is maladjusted.	Adjust.
	Parking brake cable does not move.	Repair or replace.
	Parking brake shoe clearance is maladjusted.	Adjust.
	Spring - shoe return is faulty.	Replace.
Noise from brake	Spring - shoe return is faulty.	Replace.
	Spring - shoe clamp is faulty.	Replace.

1. General Description

A: SPECIFICATION

1. HYDRAULIC TYPE

Model			STI model
Whole system	Minimum turning radius: m (ft)		5.6 (18.4)
	Steering angle	Inner wheel	36.3°±1.5°
		Outer wheel	32.0°±1.5°
	Steering wheel diameter: mm (in)		369 (14.53)
	Lock-to-lock revolution number		2.5
Gearbox	Type		Rack & pinion type Integral type
	Backlash		0 (automatic adjusting)
	Valve type		Rotary valve
Power steering pump	Type		Vane pump
	Oil tank		Installed on body
	Specific discharge rate: cm^3 (cu in)/rev.		8.5 (0.519)
	Relief pressure: kPa (kgf/cm^2, psi)		8,300 — 9,000 (85 — 92, 1,203 — 1,305)
	Hydraulic fluid control		Engine speed sensitive
	Operation flow rate: L (US qt, Imp qt)		1,000 rpm: 7.5 (7.9, 6.6) 3,000 rpm: 7.3 (7.7, 6.4)
	Revolution speed range: rpm		560 — 9,600
	Direction of rotation		Clockwise
Power steering fluid	Description		SUBARU ATF or ATF DEXRON III
	Capacity: L (US qt, Imp qt)		Oil tank: 0.2 (0.2, 0.2)
			Whole system: 0.7 (0.7, 0.6)

Steering wheel

Free play:	mm (in)	17 (0.67)

Column assembly - steering

Clearance: Between steering wheel and cover assembly - column	mm (in)	4 — 6 (0.16 — 0.24)

Steering gearbox

Sliding resistance:	N (kgf, lbf)	343 (35, 77) or less Difference between right and left sliding resistance: 20% or less
Rack shaft play in radial direction: mm (in)	Right-turn steering	0.4 (0.016) or less
	Left-turn steering	Play in the horizontal direction: 0.6 (0.024) or less Play in the vertical direction: 0.4 (0.016) or less
Input shaft play: mm (in)	In radial direction	0.26 (0.0102) or less
	In axial direction	Without play
Rotational resistance:	N (kgf, lbf)	Maximum allowable value: 21 (2.14, 4.7) or less Difference between right and left rotating resistance: 20% or less

Power steering oil pump

Pulley shaft	Lateral play: mm (in)	0.2 (0.008) or less
	Axial play: mm (in)	0.9 (0.035) or less
Pulley	Groove runout: mm (in)	1.0 (0.039) or less
	Rotational resistance: N (kgf, lbf)	9.22 (0.94, 2.07) or less
Regular pressure (unloaded): kPa (kgf/cm^2, psi)		981 (10, 142) or less

Steering effort (with power steering assist)

At standstill on paved road with engine idling:	N (kgf, lbf)	31 (3.16, 7.0) or less
At standstill on paved road with engine stalled:	N (kgf, lbf)	294.2 (29.9, 66.2) or less

Recommended power steering fluid

SUBARU ATF or ATF DEXRON III

2. ELECTRIC TYPE

Model			WRX model
Whole system	Minimum turning radius: m (ft)		5.4 (17.72)
	Steering angle	Inner wheel	37.5°±1.5°
		Outer wheel	32.9°±1.5°
	Steering wheel diameter: mm (in)		369 (14.53)
	Lock-to-lock revolution number		2.8
Gearbox	Type		Rack & pinion type
	Backlash		0 (automatic adjusting)
Motor (Temperature 20°C (68°F))	Rated voltage: V		12
	Rated torque: N·m (kgf-m, ft-lb)		5.3 (0.54, 3.91)
	Rated revolution speed: rpm		960
	Rated current: A		84
	Rated output: W		537

Steering wheel

Free play: mm (in)	17 (0.67) or less

Column assembly - steering

Clearance: Between steering wheel and cover assembly - column mm (in)	4 — 6 (0.16 — 0.24)

Steering gearbox

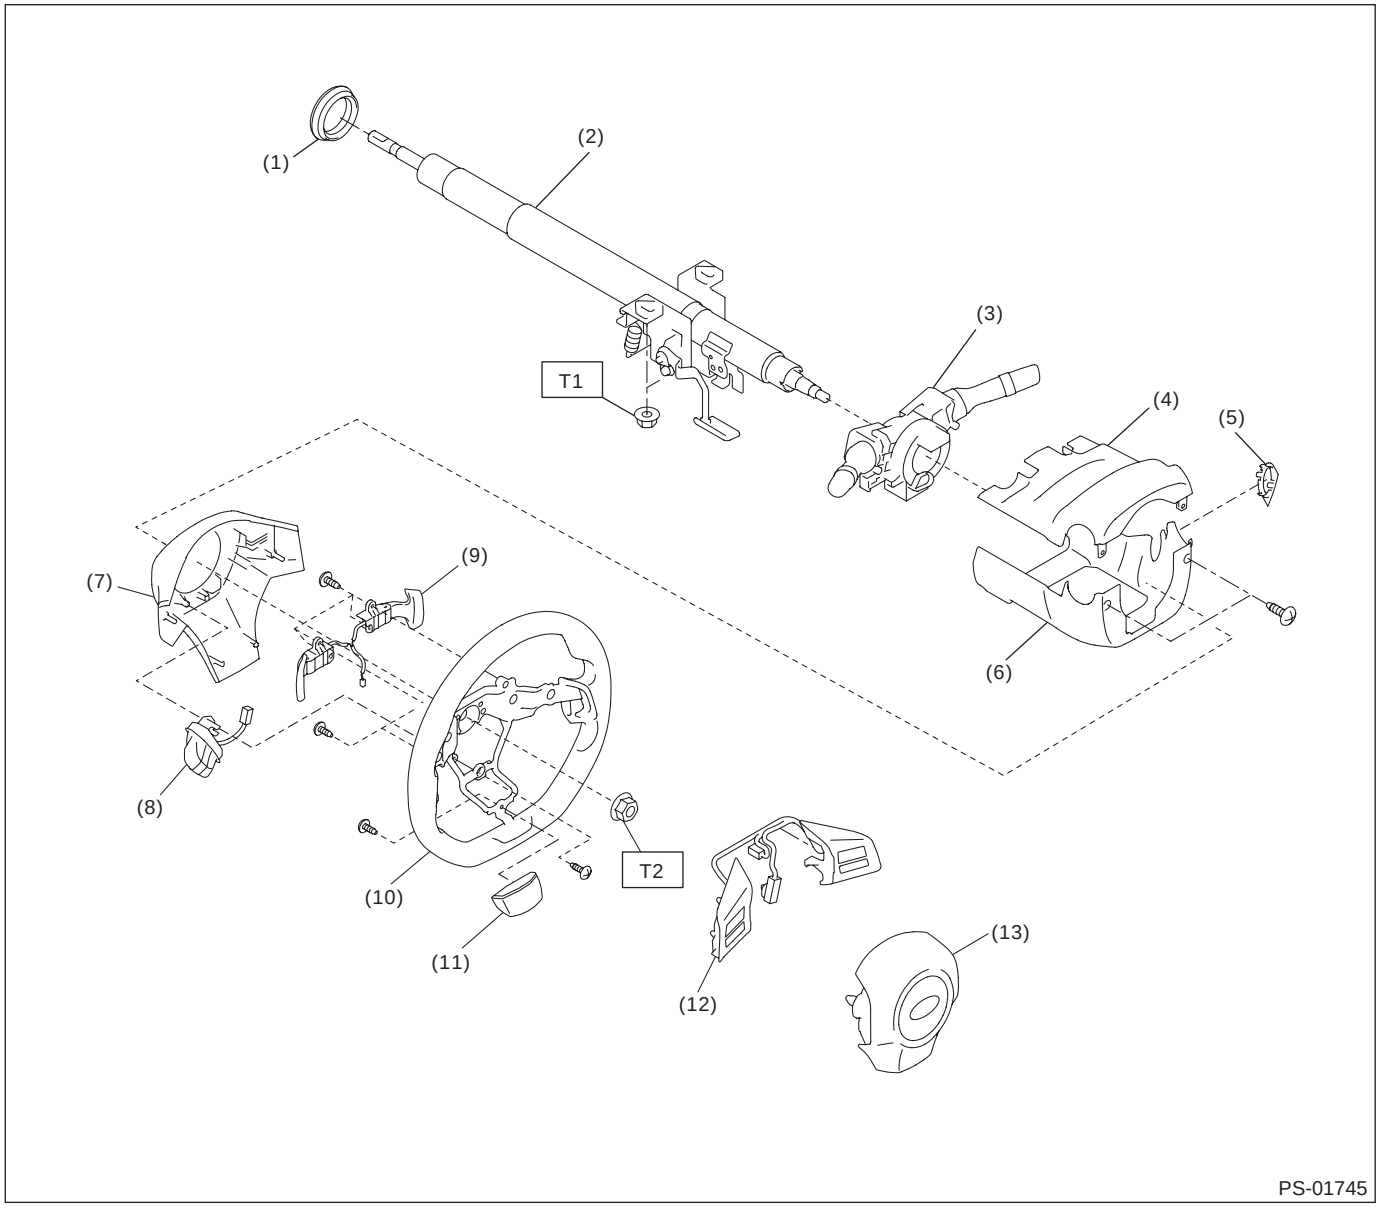
Sliding resistance: N (kgf, lbf)		360 (37, 81) or less Difference between right and left sliding resistance: 20% or less
Rack shaft play in radial direction: mm (in)	Right-turn steering	Play in the horizontal direction: 0.6 (0.024) or less Play in the vertical direction: 0.4 (0.016) or less
	Left-turn steering	0.4 (0.016) or less
Input shaft play: mm (in)	In radial direction	0.18 (0.0071) or less
	In axial direction	0.27 (0.0106) or less
Rotational resistance: N (kgf, lbf)		Maximum allowable value: 18 (1.8, 4.0) or less Difference between right and left sliding resistance: 20% or less

Steering effort (with power steering assist)

At standstill on paved road with engine idling:	N (kgf, lbf)	31 (3.2, 7.0) or less
At standstill on paved road with engine stalled:	N (kgf, lbf)	294.2 (30, 66.2) or less

B: COMPONENT

1. STEERING WHEEL AND COLUMN



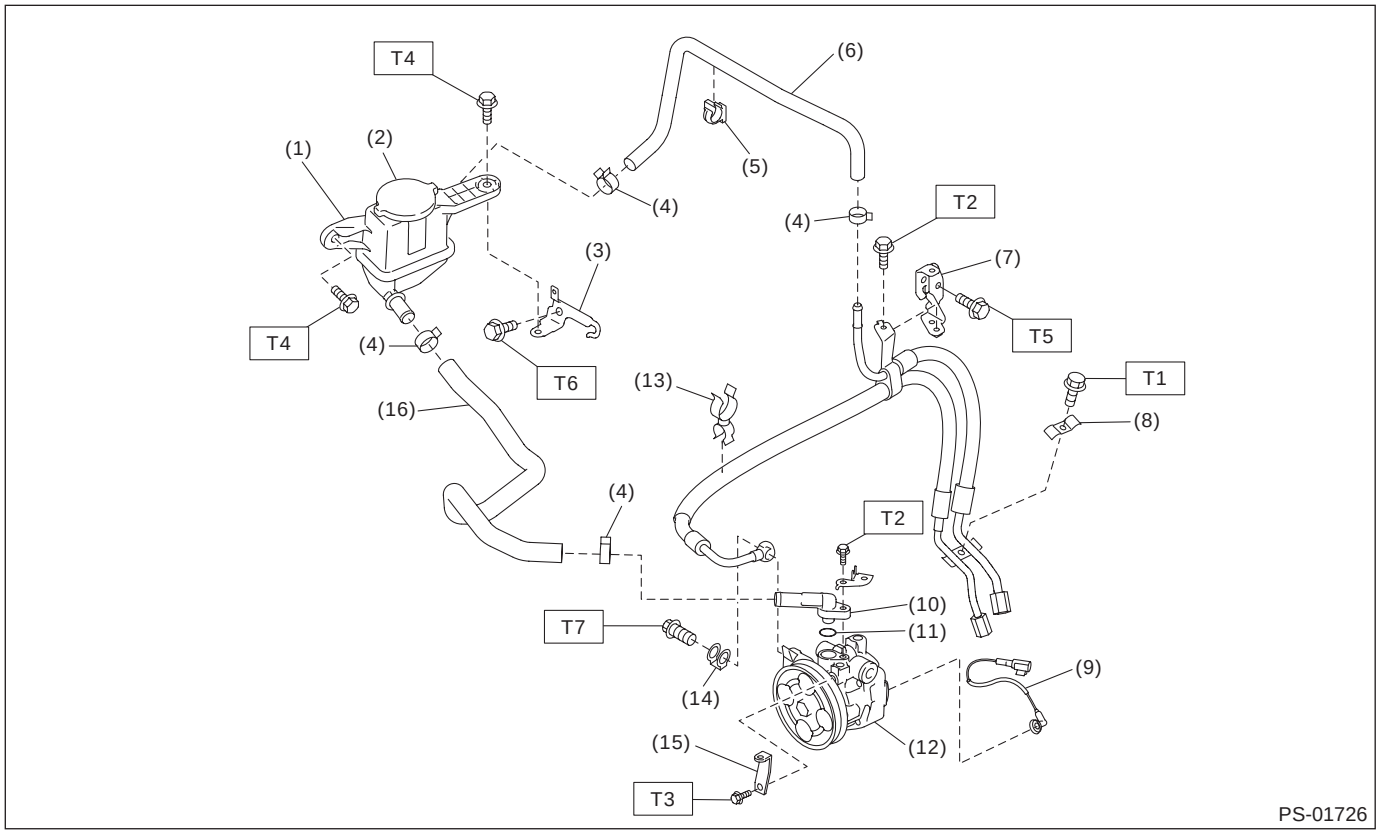
(1)	Bushing	(7)	Cover - steering wheel LWR	(13)	Airbag module
(2)	Column ASSY - steering	(8)	MID switch (multi-information display switch)		
(3)	Switch ASSY - combination	(9)	Paddle shift		
(4)	Cover ASSY - column UPR	(10)	Steering wheel		
(5)	Cap - key cylinder (model with keyless access)	(11)	Cover - spoke		
(6)	Cover ASSY - column LWR	(12)	Satellite switch		

Tightening torque: N·m (kgf-m, ft-lb)

T1: 20 (2.0, 14.8)

T2: 39 (4.0, 28.8)

2. HOSE AND TANK

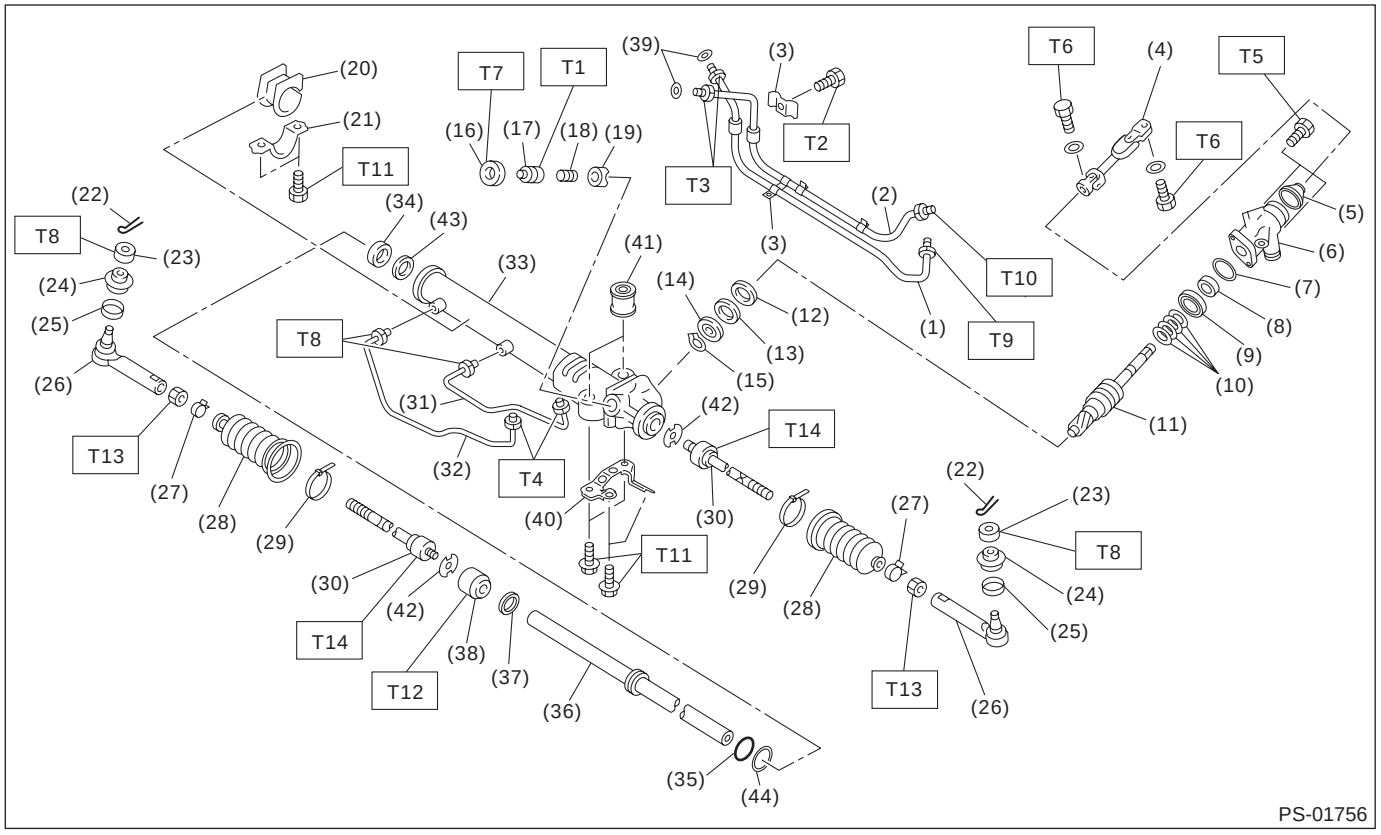


(1) Reservoir tank
(2) Cap
(3) Tank bracket
(4) Clip
(5) Hose clip
(6) Return hose
(7) Bracket - hose
(8) Clamp E
(9) Switch - harness
(10) Suction connector
(11) O-ring
(12) Oil pump
(13) Clip
(14) Eyebolt gasket
(15) Bracket - belt cover
(16) Hose - suction

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 10 (1.0, 7.4)
T3: 11 (1.1, 8.1)
T4: 13 (1.3, 9.6)
T5: 18 (1.8, 13.3)
T6: 33 (3.4, 24.3)
T7: 40 (4.1, 29.5)

3. STEERING GEARBOX

- Hydraulic type

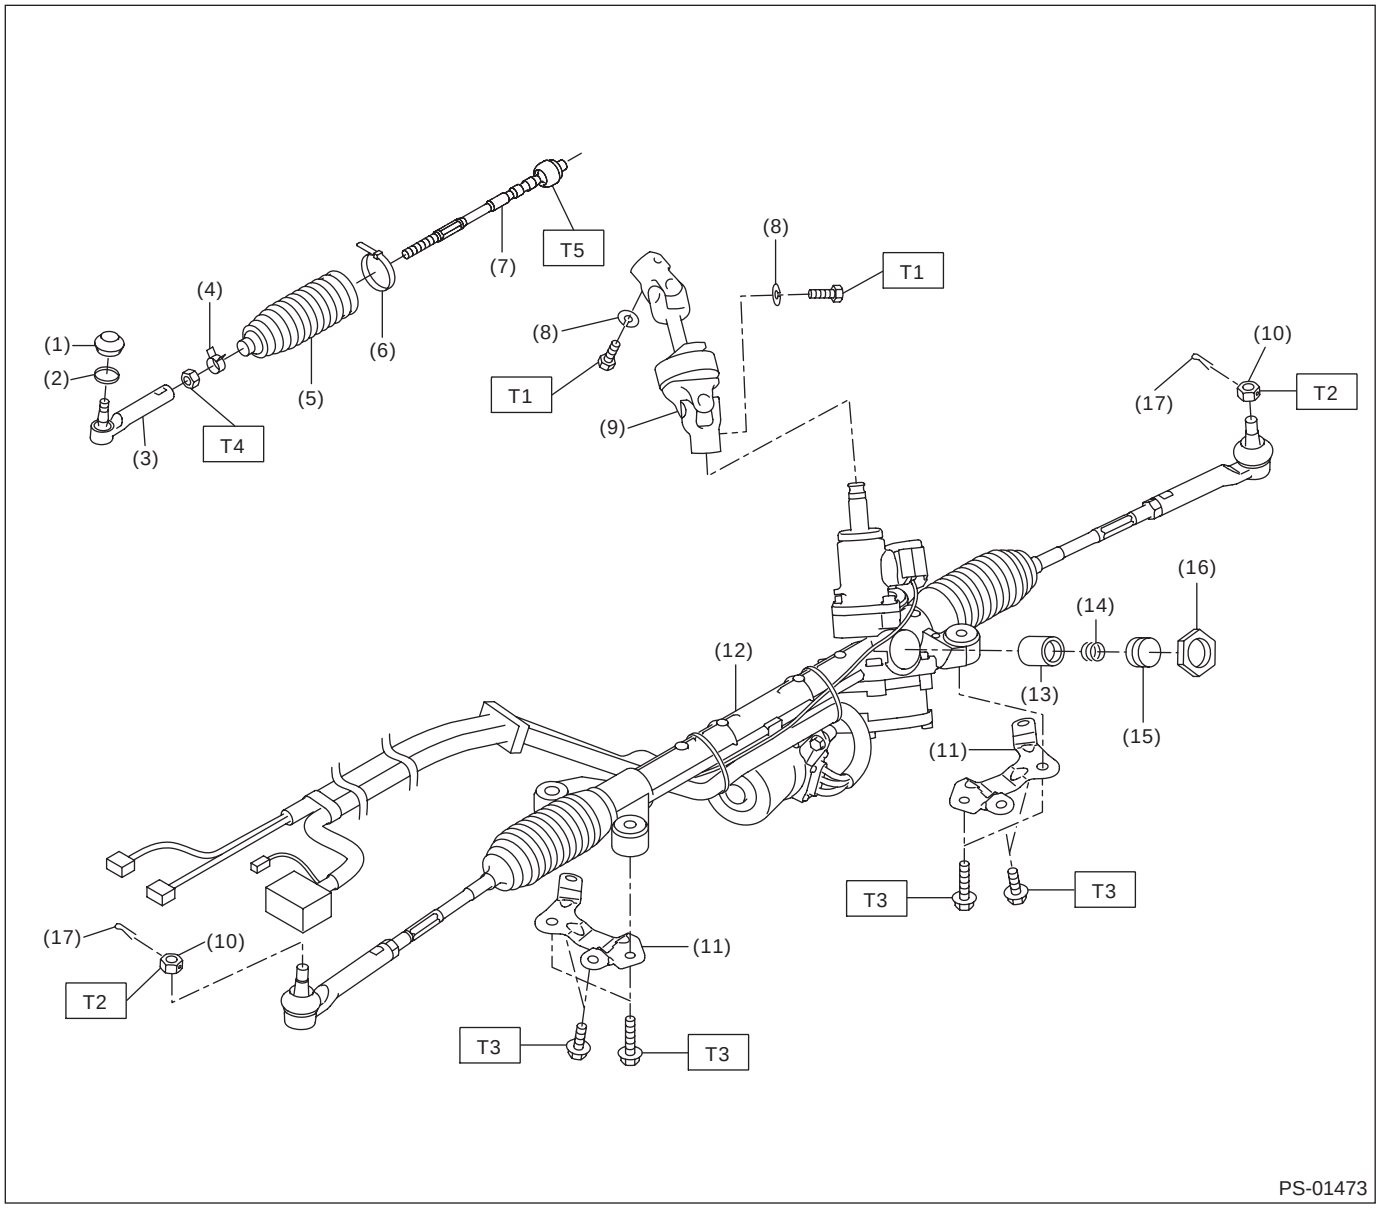


(1)	Feed pipe	(21)	Clamp	(41)	Bushing
(2)	Return pipe	(22)	Cotter pin	(42)	Lock washer
(3)	Clamp plate	(23)	Castle nut	(43)	Back-up ring
(4)	Universal joint	(24)	Dust cover	(44)	O-ring
(5)	Dust seal	(25)	Clip		
(6)	Valve housing	(26)	Tie-rod end		
(7)	O-ring	(27)	Clip		
(8)	Oil seal	(28)	Boot		
(9)	Bushing	(29)	Band		
(10)	Seal ring	(30)	Tie-rod		
(11)	Pinion & valve ASSY	(31)	Pipe B		
(12)	Oil seal	(32)	Pipe A		
(13)	Back-up washer	(33)	Steering body		
(14)	Ball bearing	(34)	Oil seal		
(15)	Snap ring	(35)	Piston seal ring		
(16)	Lock nut	(36)	Rack		
(17)	Adjusting screw	(37)	Oil seal		
(18)	Spring	(38)	Holder		
(19)	Sleeve	(39)	O-ring		
(20)	Adapter	(40)	Stiffener		

Tightening torque: N·m (kgf-m, ft-lb)

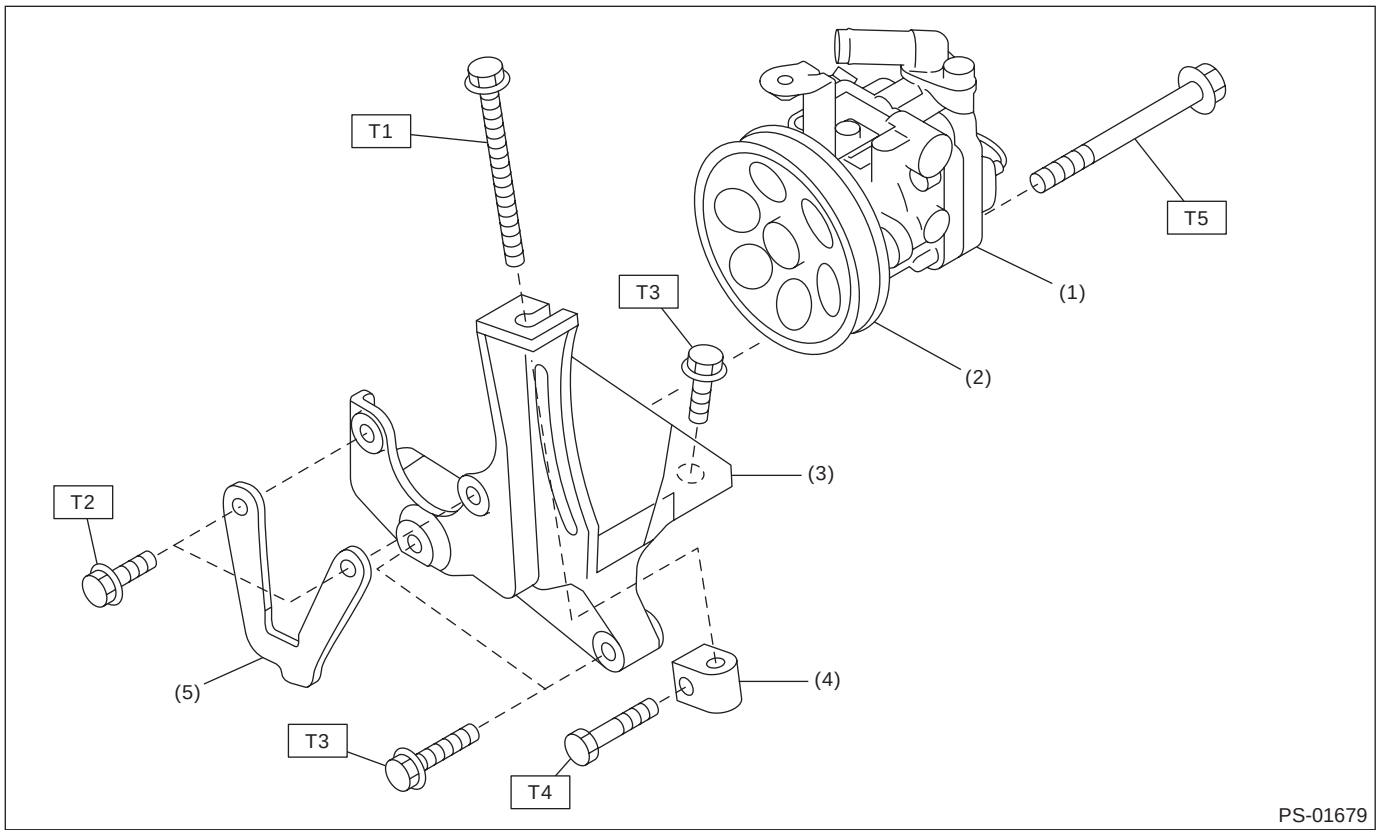
T1:	***Tighten to 5.9 (0.6, 4.4), and loosen by 5 degrees.***
T2:	***9 (0.9, 6.6)***
T3:	***15 (1.5, 11.1)***
T4:	***17 (1.7, 12.5)***
T5:	***20 (2.0, 14.8)***
T6:	***24 (2.4, 17.7)***
T7:	***25 (2.5, 18.4)***
T8:	***27 (2.8, 19.9)***
T9:	***37 (3.8, 27.3)***
T10:	***29 (3.0, 21.4)***
T11:	***60 (6.1, 44.3)***
T12:	***70 (7.1, 51.6)***
T13:	***85 (8.7, 62.7)***
T14:	***93 (9.5, 68.6)***

- Electric type



(1)	Dust seal	(9)	Universal joint ASSY - steering	(17)	Cotter pin
(2)	Clip - boot tie-rod end	(10)	Castle nut		
(3)	Tie-rod end	(11)	Stiffener	***Tightening torque: N·m (kgf-m, ft-lb)***	
(4)	Clip - boot tie-rod	(12)	Steering gearbox ASSY	***T1:***	***24 (2.4, 17.7)***
(5)	Boot - steering gearbox	(13)	Pad - pressure	***T2:***	***27 (2.8, 19.9)***
(6)	Band - boot	(14)	Spring - gearbox	***T3:***	***60 (6.1, 44.3)***
(7)	Tie-rod	(15)	Adjusting screw	***T4:***	***85 (8.7, 62.7)***
(8)	Spring washer	(16)	Lock nut	***T5:***	***90 (9.2, 66.4)***

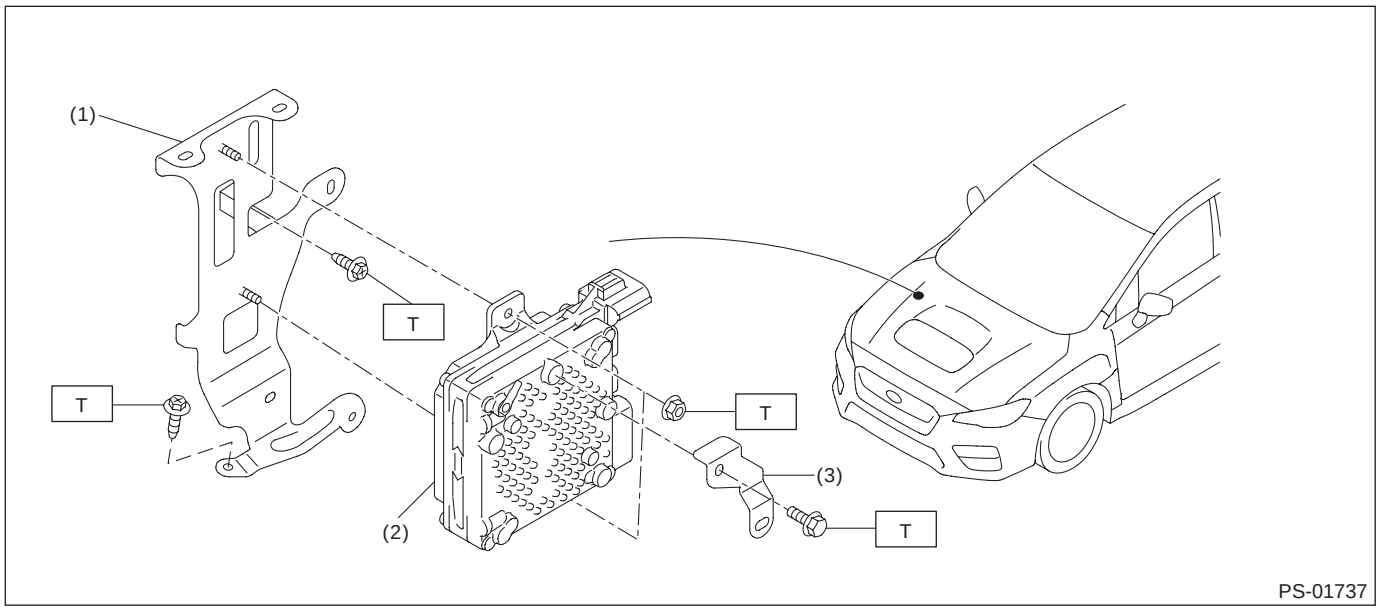
4. OIL PUMP



(1) Oil pump
(2) Pulley
(3) Bracket
(4) Belt tension nut
(5) Washer plate

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.9)
T2: 16 (1.6, 11.8)
T3: 22 (2.2, 16.2)
T4: 25 (2.5, 18.4)
T5: 48 (4.9, 35.4)

5. ELECTRIC POWER STEERING CONTROL MODULE



(1) Bracket - control module
(2) Power steering control module
(3) Harness bracket

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

C: CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VDC sensor midpoint setting mode” of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-925711000	925711000	PRESSURE GAUGE	Used for measuring oil pressure.
 ST-926200000	926200000	STAND	• Used when inspecting characteristic of gear-box assembly and disassembling it. • Used together with BOSS D (34199AG000).
 ST34099AC010	34099AC010	ADAPTER HOSE A	Used together with PRESSURE GAUGE (925711000).
 ST34099AC020	34099AC020	ADAPTER HOSE B	Used together with PRESSURE GAUGE (925711000).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-926230000	926230000	SPANNER	For the lock nut when adjusting backlash of gearbox.
 ST34099PA100	34099PA100	SPANNER	Used when measuring the rotational resistance of gearbox assembly.
 ST-926420000	926420000	PLUG	When fluid leaks from pinion side of gearbox assembly, remove pipe B from valve housing, attach this tool and check fluid leaking points.
 ST34099FA060	34099FA060	PUNCH HOLDER	Used for crimping.
 ST34199FE040	34199FE040	INSTALLER A, B, C	• Used for installing the oil seal to the rack assembly. • INSTALLER A: 34199FE070 • INSTALLER B: 34199FE080 • INSTALLER C: 34199FE090

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34199XA030	34199XA030	INSTALLER & REMOVER	Used for removing and installing the rack oil seal (outer and inner).
 ST34199AG000	34199AG000	BOSS D	• Used when inspecting characteristic of gear-box assembly and disassembling it. • Used together with STAND (926200000).
 ST34199AG040	34199AG040	GUIDE	Used for installing seal ring of rack.
 ST34199AG070	34199AG070	FORMER	Used for forming seal ring of pinion.
 ST34199AG020	34199AG020	GUIDE	Used for installing seal ring of pinion.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34199AG060	34199AG060	GUIDE G (26)	• Used for forming seal ring of rack. • Used together with FORMER PISTON (34199AG080).
 ST34099PA010	34099PA010	OIL SEAL REMOVER	Used for removing oil seal.
 ST34199AG090	34199AG090	INSTALLER & REMOVER	• Used for installing oil seal of valve housing. • Used for installing ball bearing of valve housing. • Used for removing oil seal and ball bearing from valve housing.
 ST34199AG080	34199AG080	FORMER PISTON	• Used for forming seal ring of rack. • Used together with GUIDE G (26) (34199AG060).
 ST34199AG010	34199AG010	INSTALLER	Used for pressing-fit oil seal of gearbox cylinder.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34199FE020	34199FE020	BASE	Used for crimping.

2. GENERAL TOOL

TOOL NAME	REMARKS
Steering wheel puller	Used for removing the steering wheel.
Circuit tester	Used for measuring voltage and resistance.

2. Power Steering System

A: WIRING DIAGRAM

Refer to “Electric Power Steering System” in the wiring diagram. <Ref. to WI-416, WIRING DIAGRAM, Vehicle Dynamics Control System.>

B: ELECTRICAL SPECIFICATION

Refer to Control Module I/O Signal of “POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)”. <Ref. to PS(diag)-9, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

Refer to “POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)”. <Ref. to PS(diag)-2, Basic Diagnostic Procedure.>

D: NOTE

For procedure of each component in the power steering system, refer to the respective section.

- Steering wheel: <Ref. to PS-16, Steering Wheel.>
- Universal joint assembly - steering: <Ref. to PS-21, Universal Joint.>
- Steering column: <Ref. to PS-25, Steering Column.>
- Steering gearbox (hydraulic type): <Ref. to PS-30, Steering Gearbox.>
- Electric power steering gearbox (electric type): <Ref. to PS-56, Electric Power Steering Gearbox.>
- Pipe assembly (hydraulic type): <Ref. to PS-70, Pipe Assembly.>
- Oil pump (hydraulic type): <Ref. to PS-77, Oil Pump.>
- Reservoir tank (hydraulic type): <Ref. to PS-82, Reservoir Tank.>
- Power steering fluid (hydraulic type): <Ref. to PS-83, Power Steering Fluid.>
- Power steering control module (electric type): <Ref. to PS-84, Power Steering Control Module.>

3. Steering Wheel

A: REMOVAL

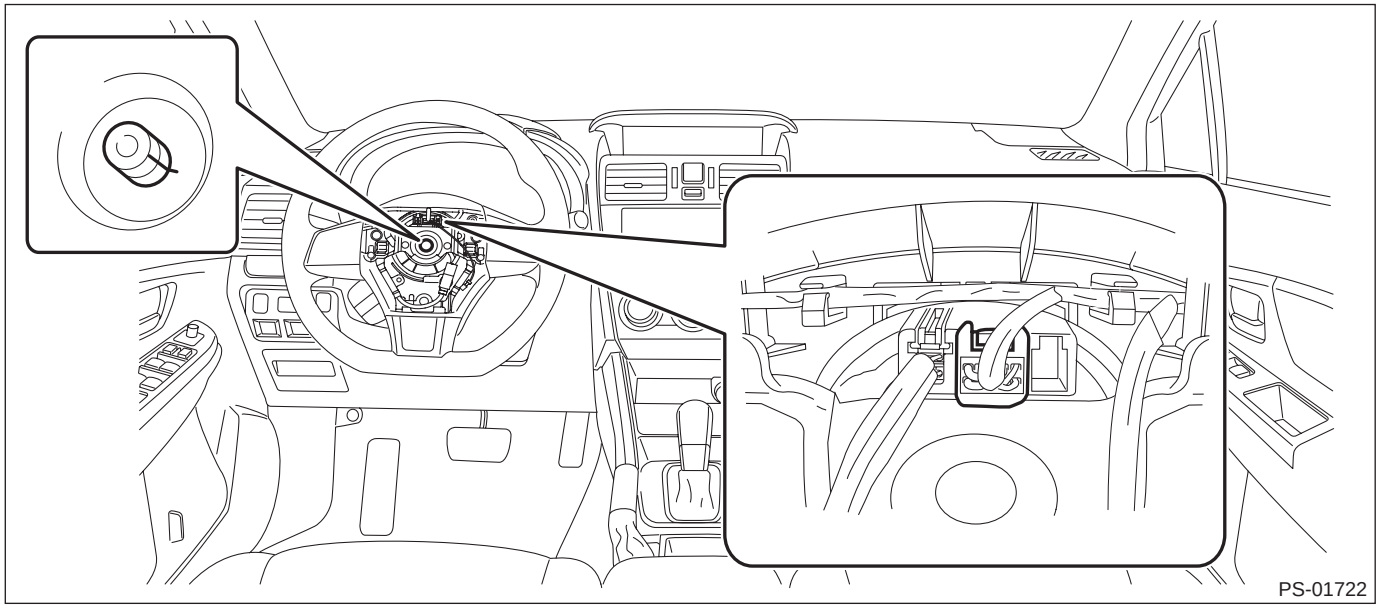
CAUTION:
Before performing service on the airbag module, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM” section. <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Set the tire to the straight-ahead position.
3) Remove the driver’s airbag module. <Ref. to AB-32, REMOVAL, Driver’s Airbag Module.>
4) Remove the steering wheel.

CAUTION:
- **Always use the steering wheel puller for removal to avoid deforming the steering wheel.**
- **If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.**

(1) Disconnect the connector and remove the nut.
(2) Put alignment marks and remove the steering wheel.

Preparation tool:
Steering wheel puller



B: INSTALLATION

CAUTION:
• Before handling the airbag module, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.
• If the steering wheel and steering angle sensor are removed, perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
1) Align the center position of the roll connector. <Ref. to AB-63, ADJUSTMENT, Roll Connector.>
2) Install the steering wheel.

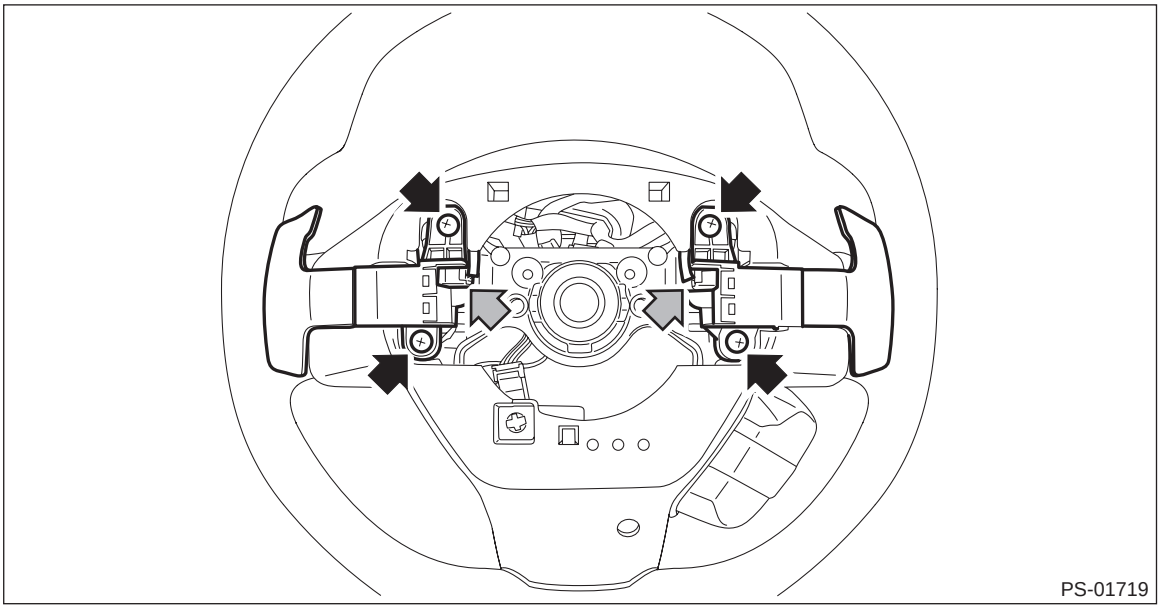
Tightening torque:
Steering wheel: 39 N·m (4.0 kgf-m, 28.8 ft-lb)

Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
3) Install the driver's airbag module. <Ref. to AB-33, INSTALLATION, Driver's Airbag Module.>
4) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

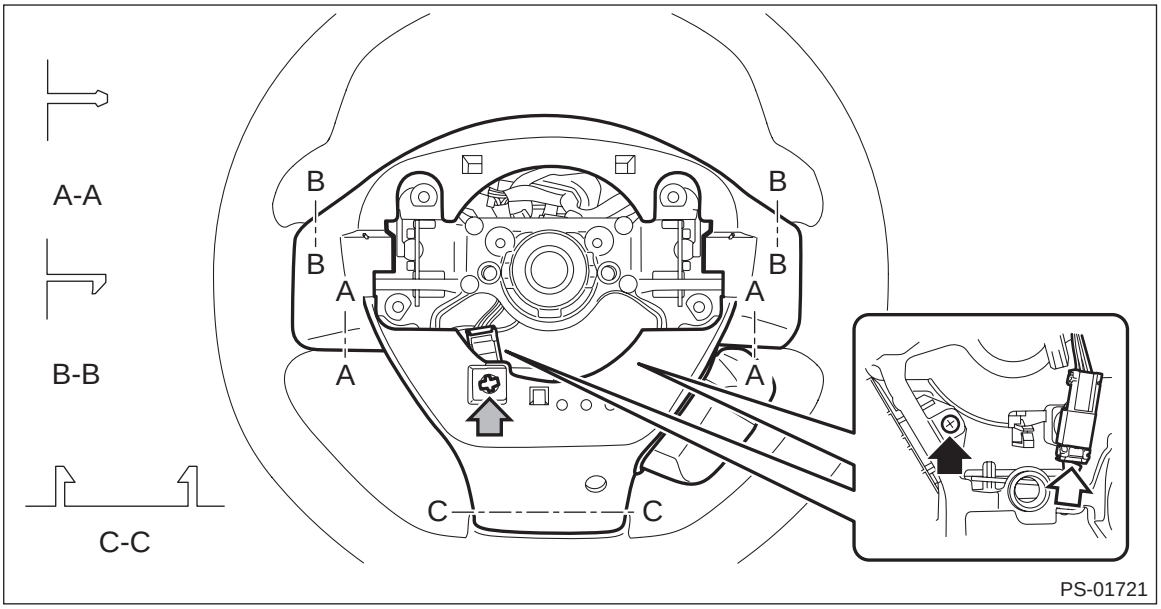
C: DISASSEMBLY

1) Remove the screw, disconnect the connector and remove the paddle shift switch. (Model with paddle shift)

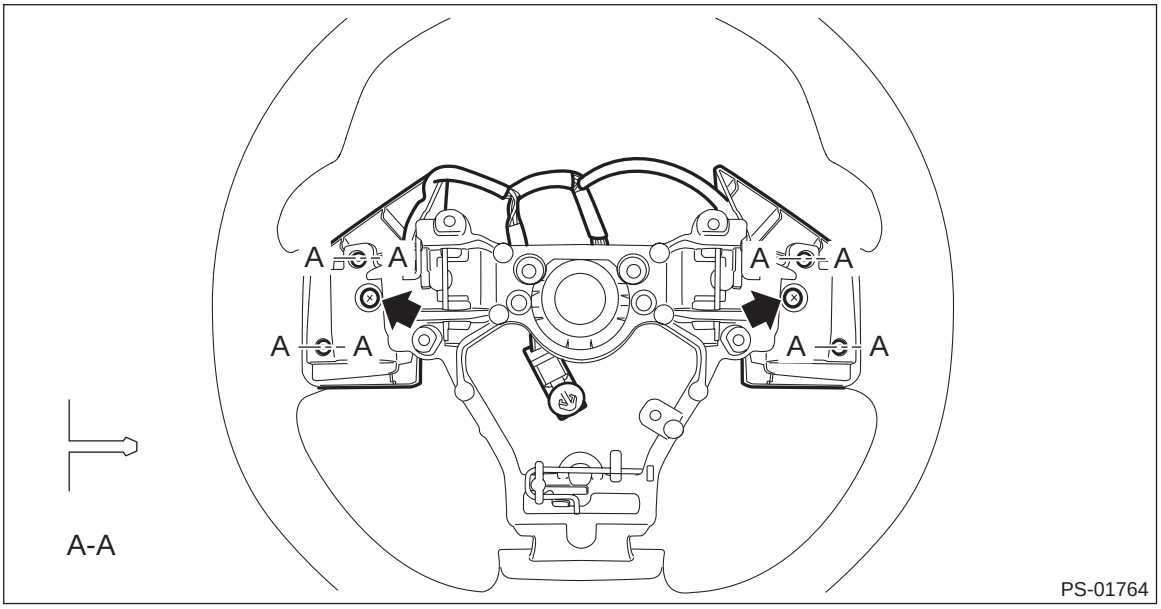


2) Release the claws and clips, detach the cover - steering wheel LWR.

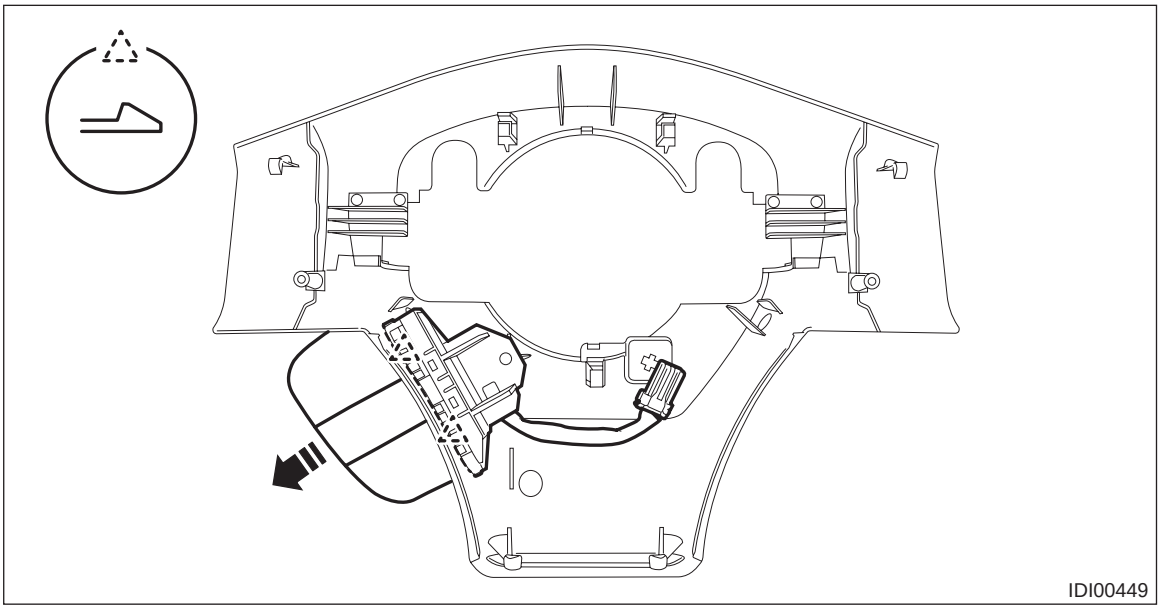
NOTE:
For model with steering switch, remove the connector and screw.



3) Remove the screws and detach the satellite switch.



4) Remove the MID switch.



D: ASSEMBLY

CAUTION:
Securely install the switch. Improper insertion of the pin or claw of the switch may cause improper installation.

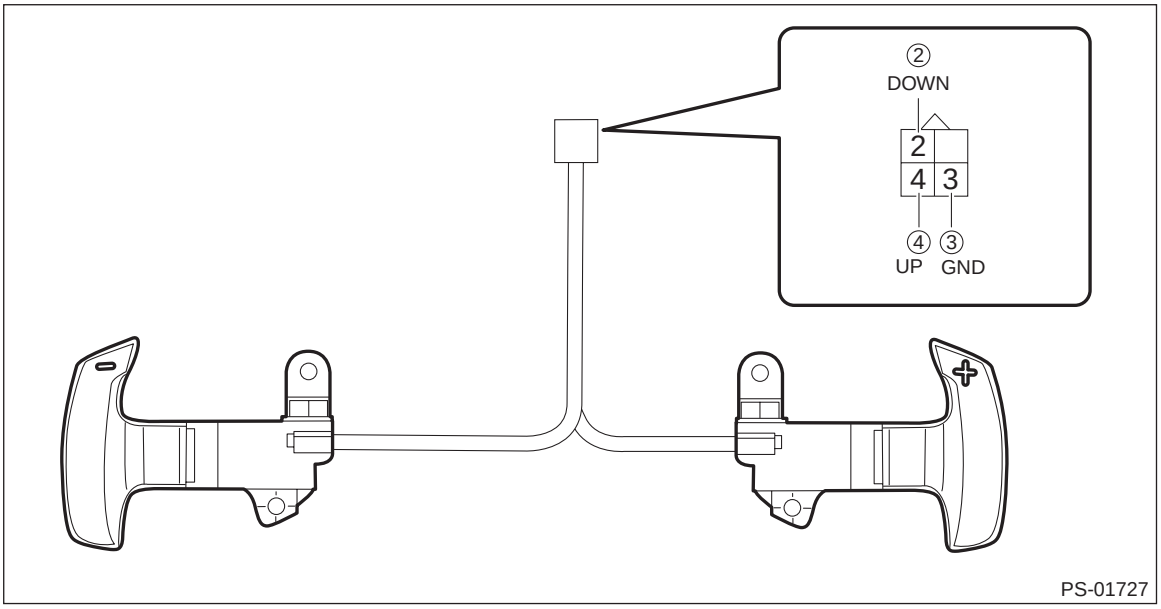
1) Install the MID switch.
2) Install the satellite switch.
3) Install the cover - steering wheel LWR.
4) Install the paddle shift switch. (Model with paddle shift)

E: INSPECTION

1. PADDLE SHIFT SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
3 — 4	Operate the + side of paddle shift assembly and hold it.	Less than 10 Ω
2 — 3	Operate the – side of paddle shift assembly and hold it.	Less than 10 Ω
2 — 3 3 — 4	Do not operate the paddle shift assembly.	Is the resistance 1 MΩ or more?

2) Replace the paddle shift switch if the inspection result is not within the standard value.

2. SATELLITE SWITCH ASSEMBLY

Refer to “Steering Satellite Switch” of “ENTERTAINMENT” section. <Ref. to ET-17, INSPECTION, Steering Satellite Switch.>

3. MID SWITCH

Refer to “Steering Switch” of “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-25, INSPECTION, Steering Switch.>

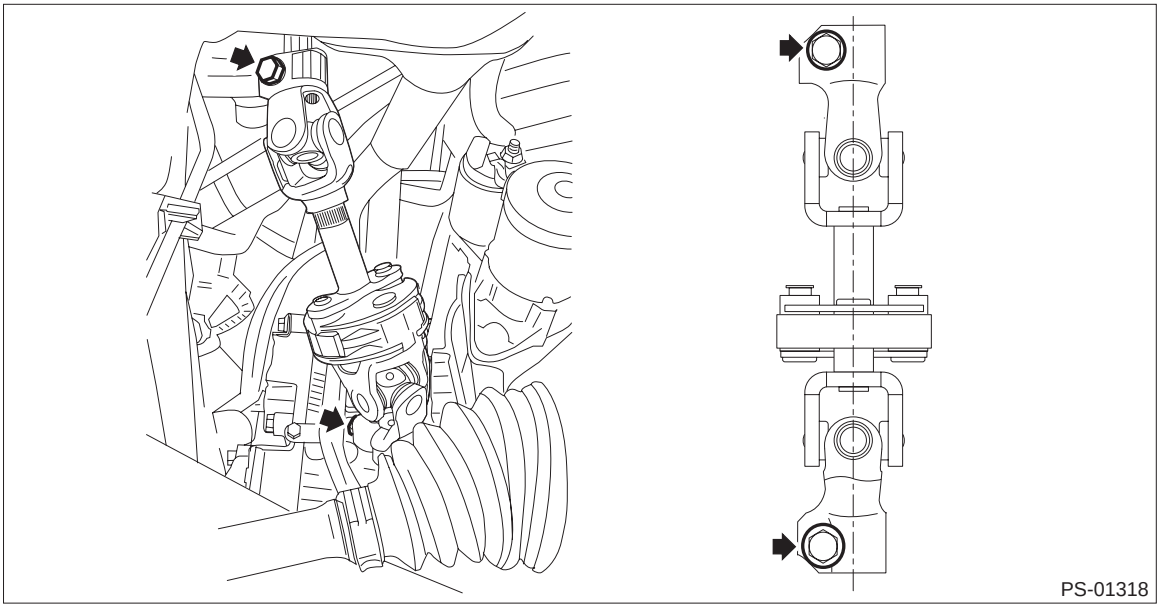
4. Universal Joint

A: REMOVAL

1) Remove the universal joint assembly - steering.
   (1) Place alignment marks on the universal joint assembly - steering.

NOTE:
Place alignment marks on the following positions.
- Between the column assembly - steering and the universal joint assembly - steering
- Between the steering gearbox assembly and the universal joint assembly - steering

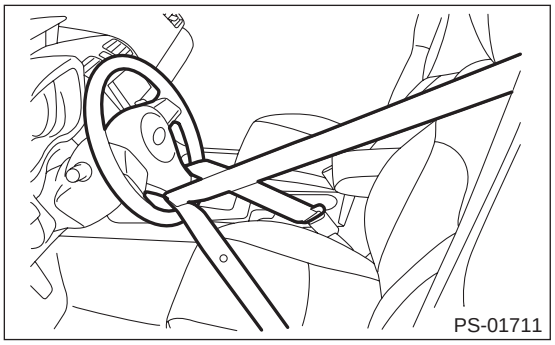
   (2) Remove the bolt, and remove the universal joint assembly - steering.



2) Set the steering column and the driver's seat to the neutral position.

CAUTION:
Always place the tilt lever to the lock position after the steering column is adjusted.

3) Prevent the steering wheel from turning using the seat belt.

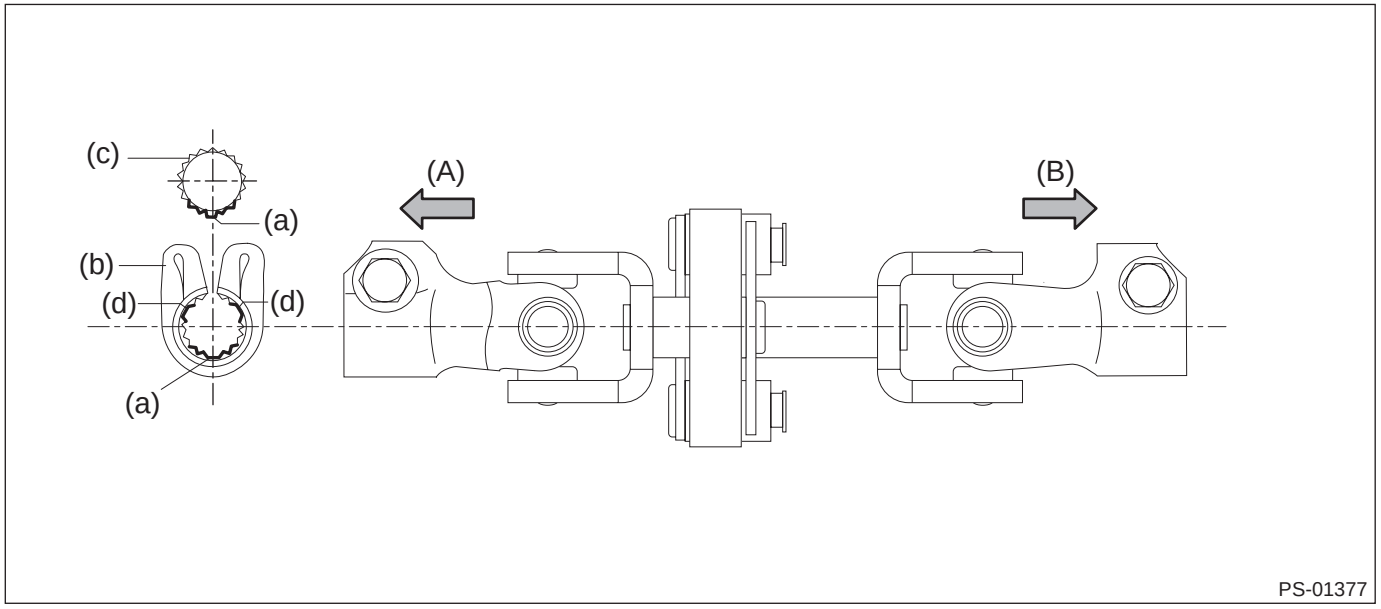


B: INSTALLATION

1) Before installation, check the universal joint assembly - steering. <Ref. to PS-23, INSPECTION, Universal Joint.>
2) Unfasten the seat belt and make the steering wheel turn freely.
3) Install the universal joint assembly - steering to the column shaft.

CAUTION:
• Be sure to align the protrusion section (a) of the column shaft side with the cutout (a) of the serration. If another cutout portions (d) are used for alignment, the bolt of the universal joint assembly - steering cannot be assembled.
• Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy.

(1) Match the alignment marks that have been marked when removing with the column shaft (c) and the cutout portion (a) at the serrations of the yoke (b).
(2) Connect the universal joint assembly - steering with the column shaft.



(A) Column shaft side (B) Gearbox side

(3) Install the universal joint assembly - steering to the serrations of the gearbox assembly by matching the alignment marks that have been marked when removing.
(4) Tighten the bolts on the gearbox side first, and then the column shaft side.

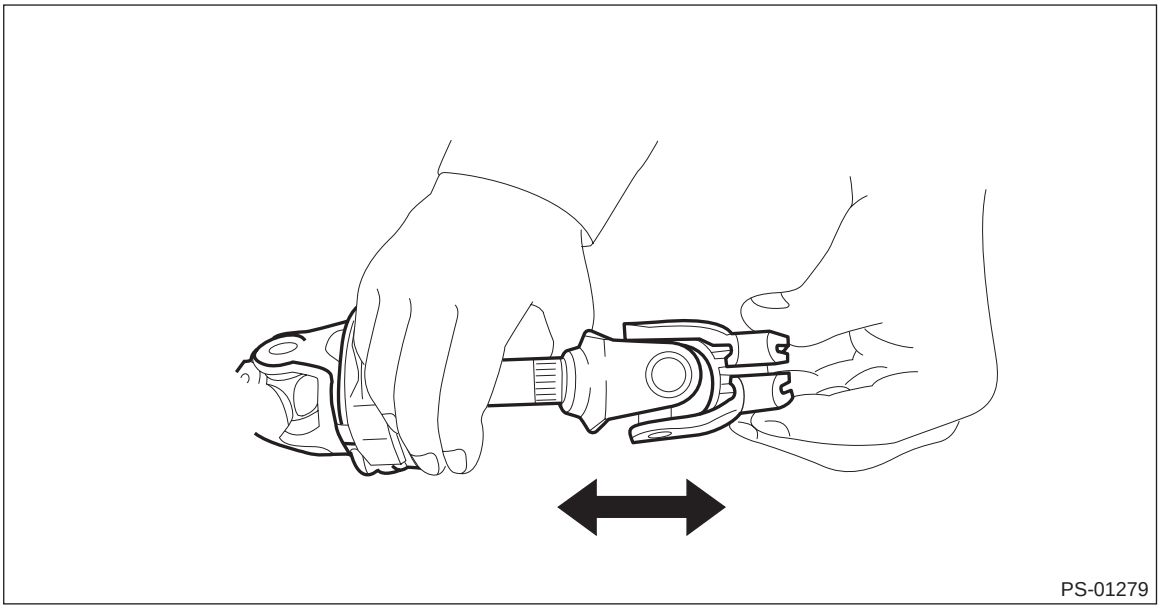
Tightening torque:
24 N·m (2.4 kgf-m, 17.7 ft-lb)

Clearance:
Universal joint assembly - steering coupling to adjacent parts: 15 mm (0.59 in) or more

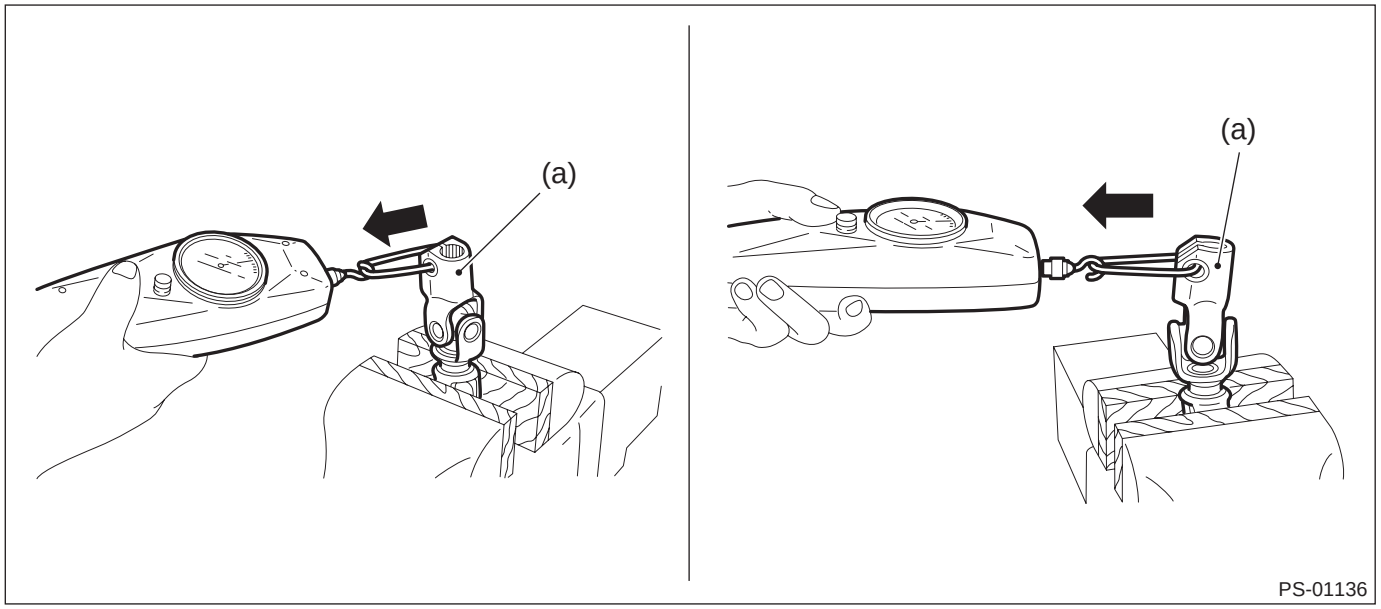
C: INSPECTION

Check for wear, damage or any other faults.
1) Check the universal joint assembly - steering for excessive looseness.

Service limit:
Play of the universal joint assembly - steering: 0 mm (0 in)

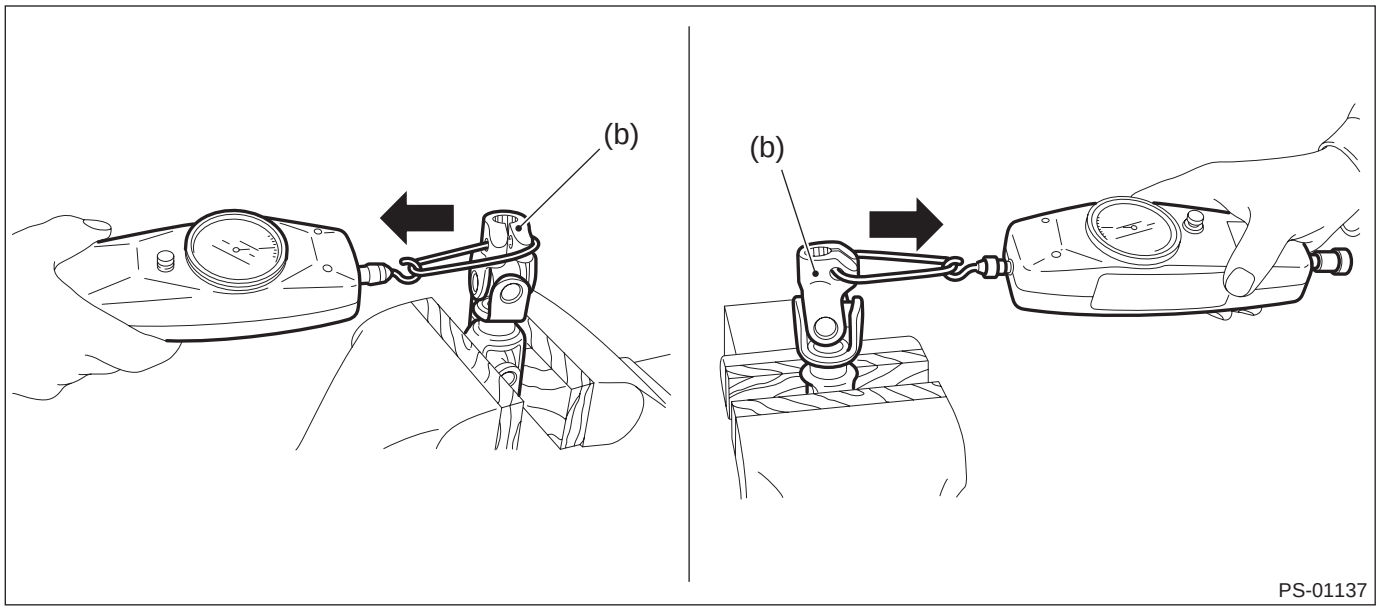


2) Measure the swing torque of the universal joint assembly - steering.
(1) Place the universal joint assembly - steering between wooden blocks and fix it on a vise.
(2) With the yoke (a) of gearbox side facing up, measure the swing torque in two directions.



Service limit:
Maximum load: 3.8 N (0.39 kgf, 0.86 lbf) or less

(3) With the yoke (b) of the column assembly - steering side facing up, measure the swing torque in two directions.



Service limit:

Maximum load: 7.3 N (0.74 kgf, 1.64 lbf) or less

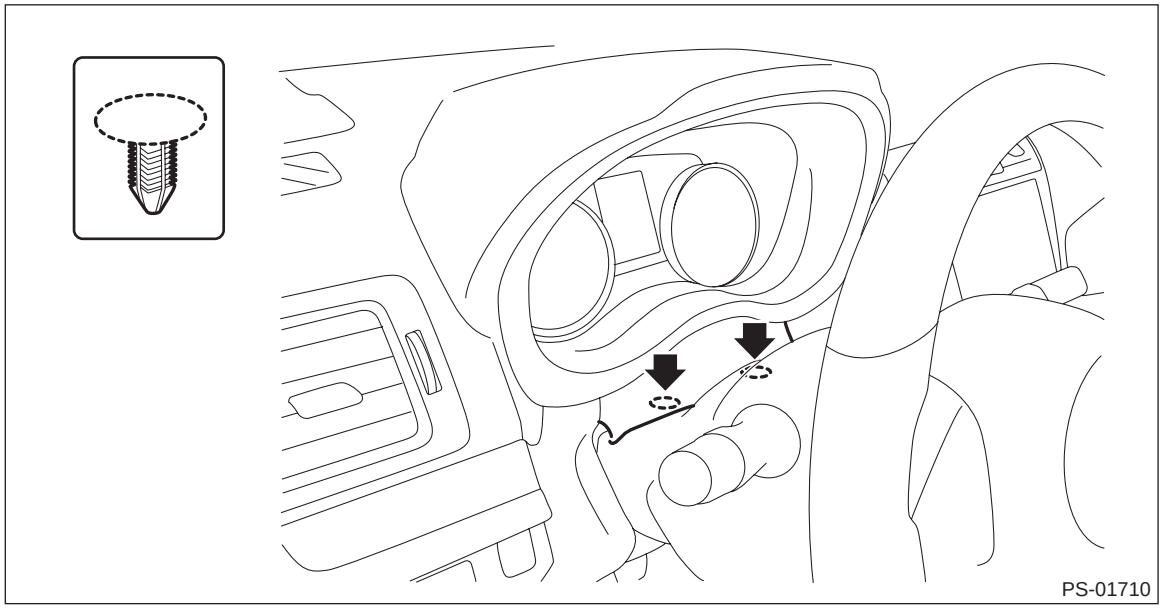
(4) Replace as necessary, if it is found defective.

5. Steering Column

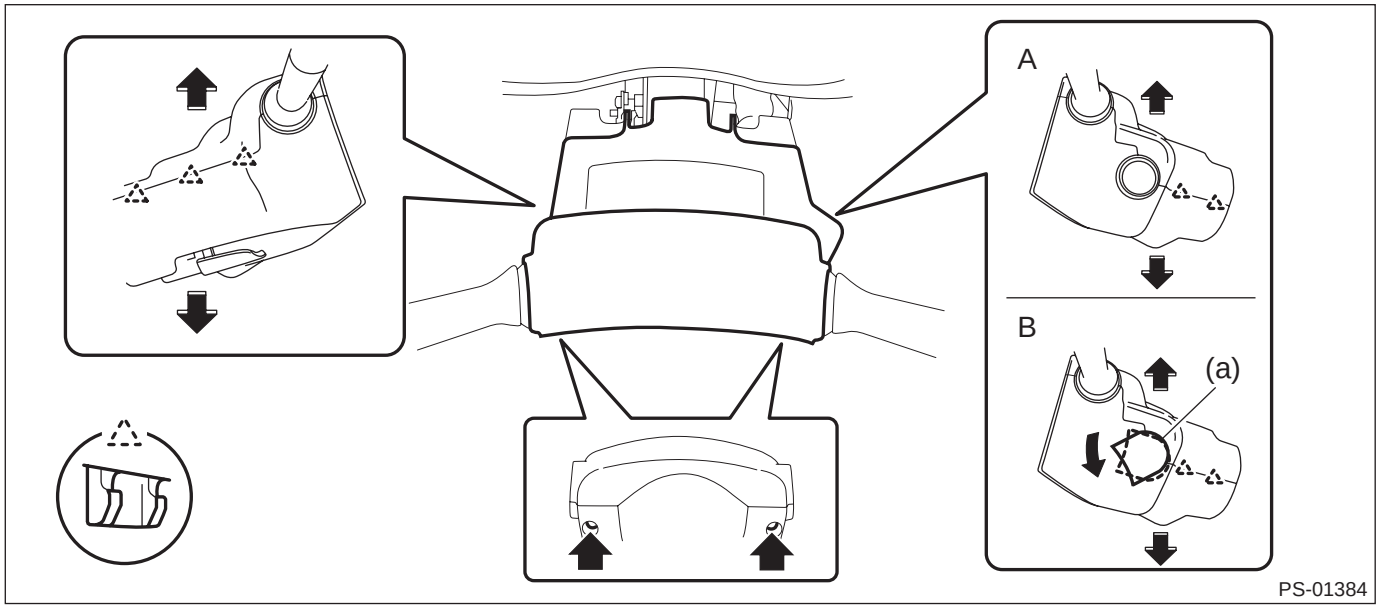
A: REMOVAL

CAUTION:
Before performing service on the airbag module, always refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM” section. <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-61, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-34, REMOVAL, Knee Airbag Module.>
4) Remove the driver’s airbag module. <Ref. to AB-32, REMOVAL, Driver’s Airbag Module.>
5) Remove the steering wheel. <Ref. to PS-16, REMOVAL, Steering Wheel.>
6) Remove the cover assembly - column.
(1) Remove the clips, and remove the cover - column.

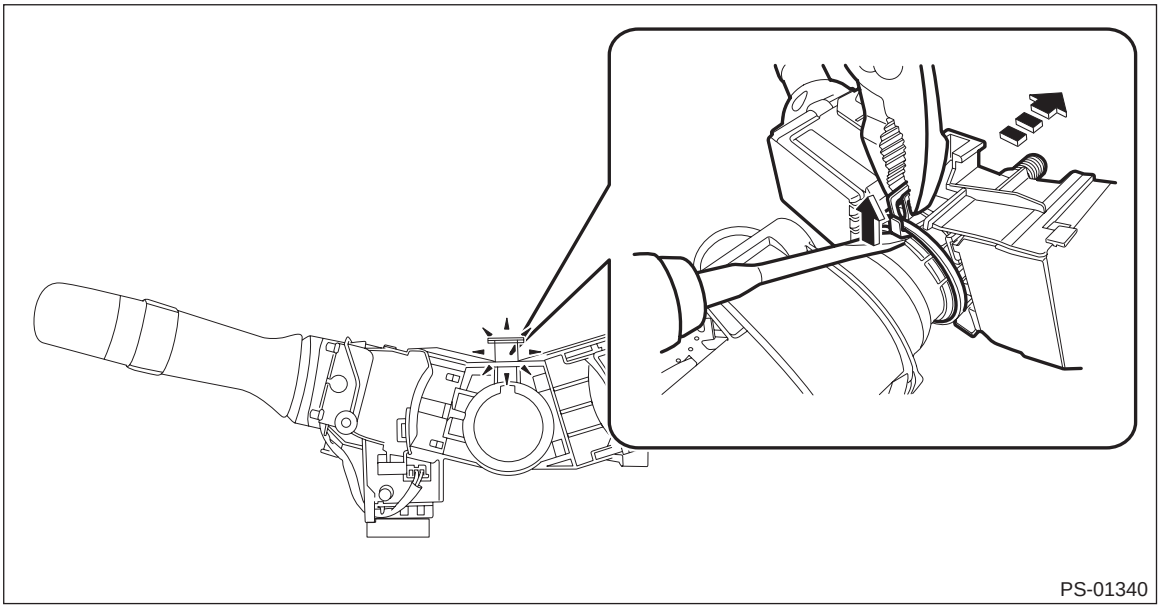


(2) Remove the screws.
(3) Remove the cap - key cylinder (a). (Model with keyless access)
(4) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.



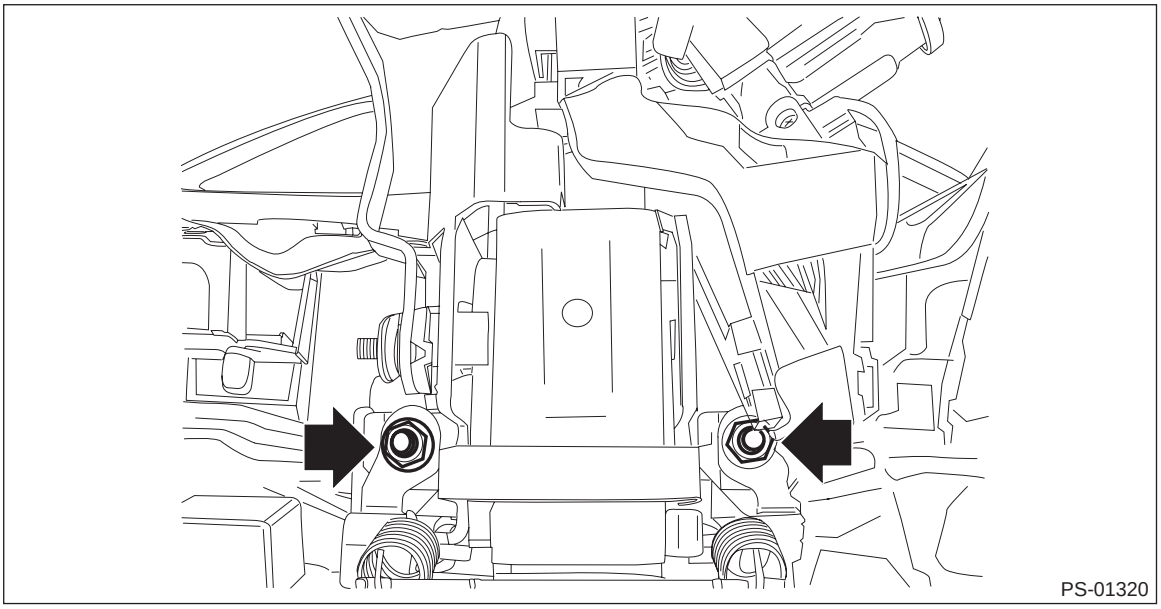
A Model without keyless access B Model with keyless access

7) Remove the switch assembly - combination.
(1) Disconnect the connector, and loosen the clamp to release the claws.
(2) Pull out the switch assembly - combination from the column assembly - steering.



8) Remove all connectors from the column assembly - steering.
9) Remove the universal joint assembly - steering. <Ref. to PS-21, REMOVAL, Universal Joint.>

CAUTION:
To prevent damage to the universal joint assembly - steering and improper steering effort, make sure to remove the universal joint assembly - steering.
10) Remove the nut under the beam COMPL - steering securing the column assembly - steering.

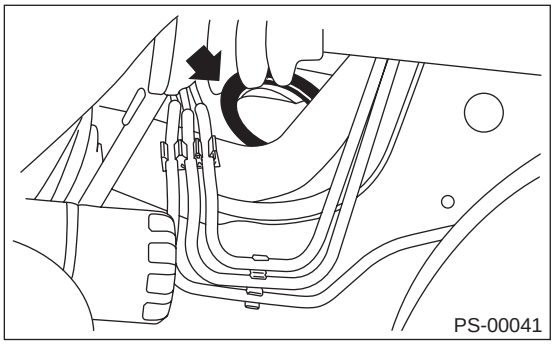


11) Pull out the column assembly - steering from the hole on toe board.

CAUTION:
Do not loosen the tilt lever when the column assembly - steering is not secured to the vehicle.
12) Remove the ignition key lock. <Ref. to SL-64, REPLACEMENT, Ignition Key Lock.>

B: INSTALLATION

CAUTION:
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VDC sensor midpoint setting mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Before performing service on the airbag module, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" section. <Ref. to AB-9, CAUTION, General Description.>
1) Install the bushing to the toe board.



2) Insert the end of the column assembly - steering into the toe board bushing.
3) Tighten the column assembly - steering installation nut located under the beam COMPL - steering with the tilt lever fixed.

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)
4) Install the ignition key lock. <Ref. to SL-64, REPLACEMENT, Ignition Key Lock.>
5) Install the switch assembly - combination.
6) Connect all the connectors under the instrument panel.
7) Install the universal joint assembly - steering. <Ref. to PS-22, INSTALLATION, Universal Joint.>

CAUTION:
• Always install the universal joint assembly - steering after installing the steering column to avoid damage to the universal joint assembly - steering.
• Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy.
8) Install the knee airbag module. <Ref. to AB-34, INSTALLATION, Knee Airbag Module.>
9) Install the cover assembly - instrument panel LWR driver.
10) Install the cover assembly - column.
11) Align the center position of the steering roll connector. <Ref. to AB-63, ADJUSTMENT, Roll Connector.>
12) Install the steering wheel.

Tightening torque:
Steering wheel: 39 N·m (4.0 kgf-m, 28.8 ft-lb)

Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
13) Install the driver's airbag module. <Ref. to AB-33, INSTALLATION, Driver's Airbag Module.>
14) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

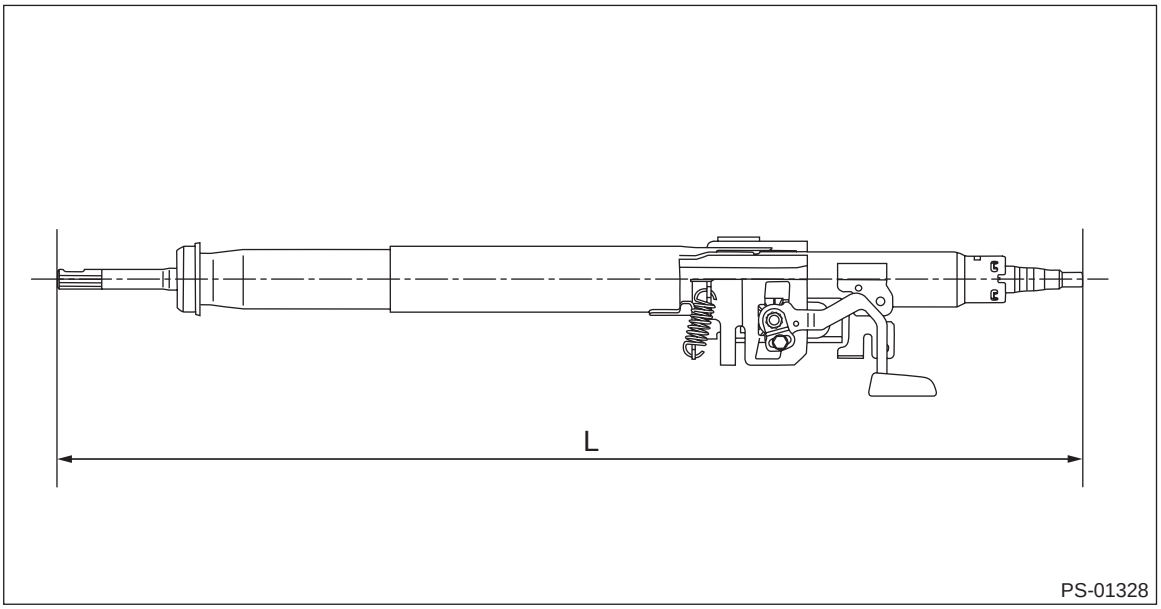
C: INSPECTION

1. UNIT INSPECTION

Check the following items, and if there is anything out of standard value, it is considered to be damaged. If so, replace it with a new part.

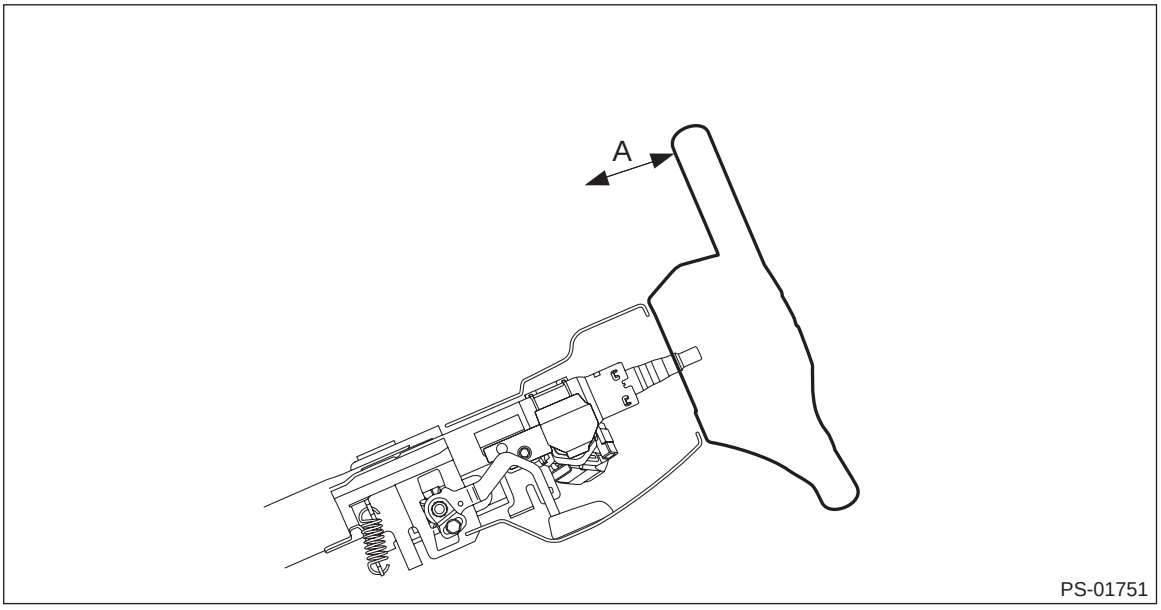
- Measure the whole length of the column assembly - steering.

Standard: Overall length L
Tilt and telescopic column (measure while minimized)
$819.7^{+1.5}_{-1.5}$ mm ($32.27^{+0.059}_{-0.059}$ in)



- Check the steering wheel deflection in axial and vertical directions.

Specification:
Axial deflection A (deflection of steering wheel)
Less than 6 mm (0.24 in)



2. INSPECTION OF AIRBAG SYSTEM

Refer to “AIRBAG SYSTEM” section for airbag inspection procedure. <Ref. to AB-33, INSTALLATION, Driver’s Airbag Module.>

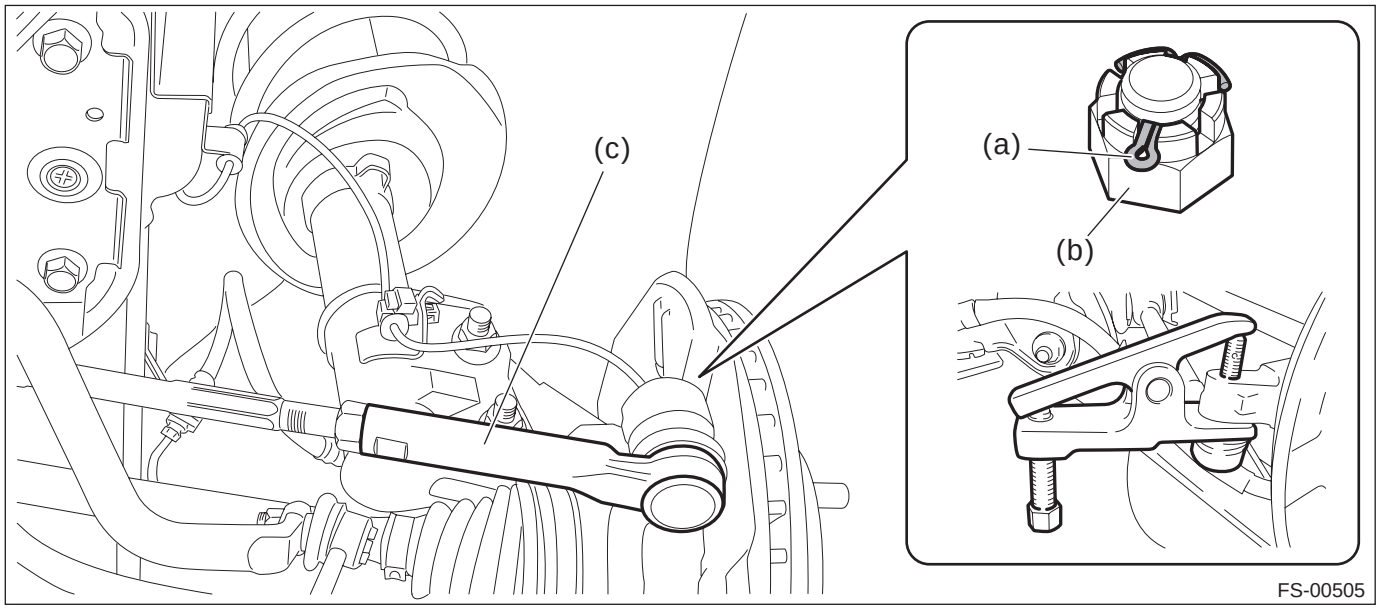
6. Steering Gearbox

A: REMOVAL

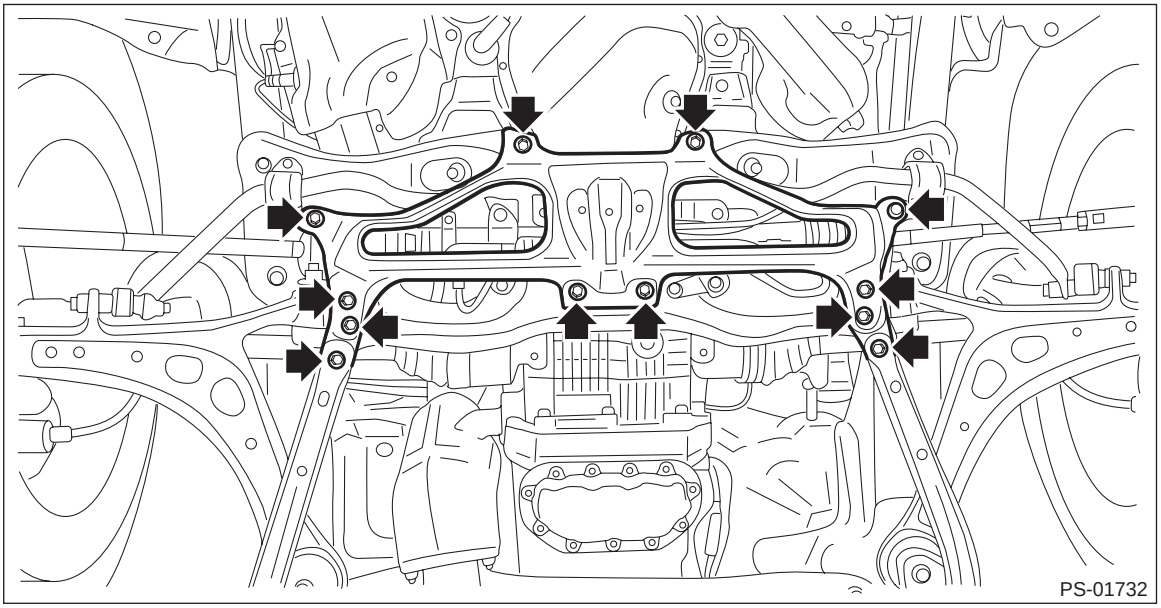
1) Lift up the vehicle, and then remove the front wheels.
2) Remove the under cover - front. <Ref. to EI-21, REMOVAL, Front Under Cover.>
3) Disconnect the tie-rod end.
   (1) Pull out the cotter pin (a).
   (2) Remove the castle nut (b).
   (3) Using a tie-rod end puller, remove the tie-rod end (c).

CAUTION:
Be careful not to damage the boot of the joint.

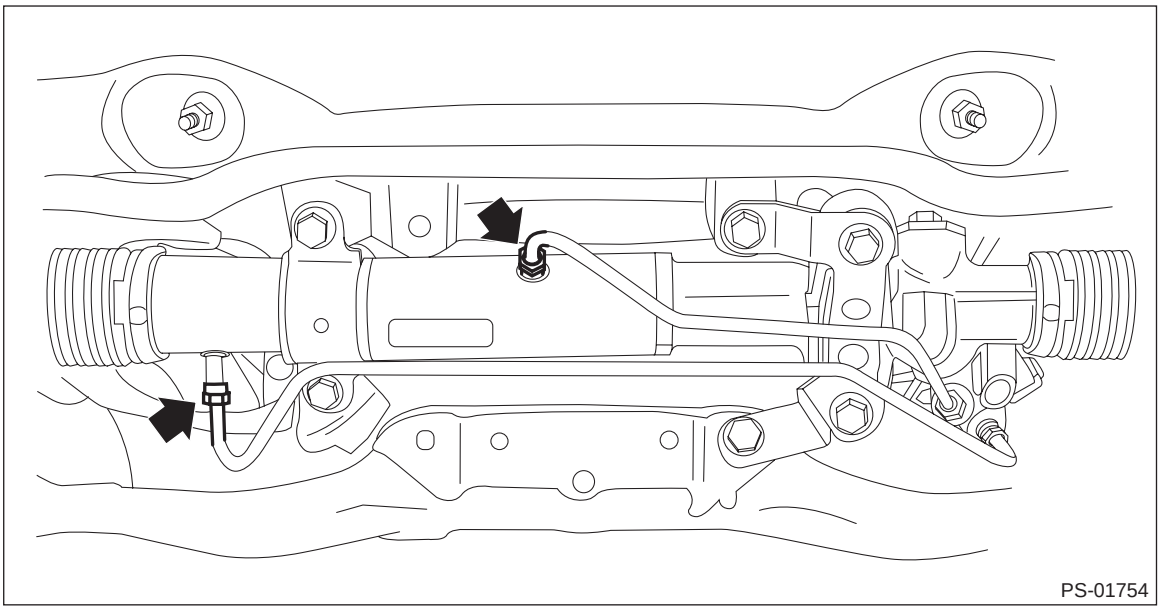
Preparation tool:
Tie-rod ball joint puller



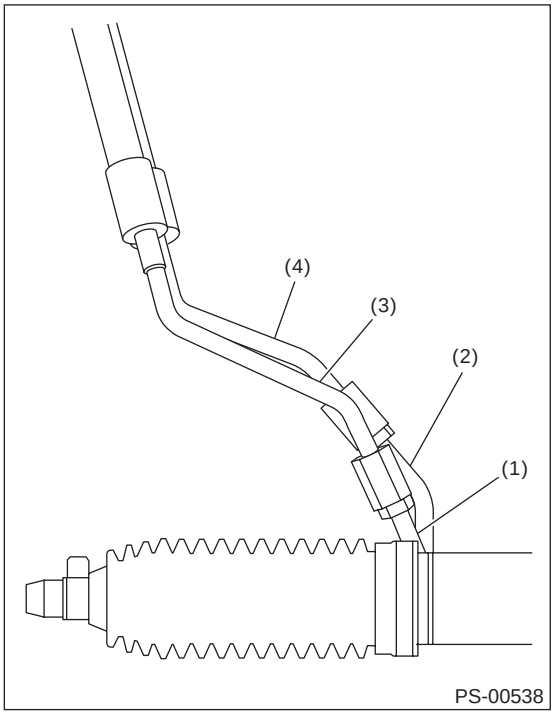
4) Remove the bolt, and remove the front crossmember support.



5) Remove the front stabilizer. <Ref. to FS-31, REMOVAL, Front Stabilizer.>
6) Drain the power steering fluid.
(1) Remove the pipe joint of the gearbox, and connect the vinyl hose to the pipe and the joint.

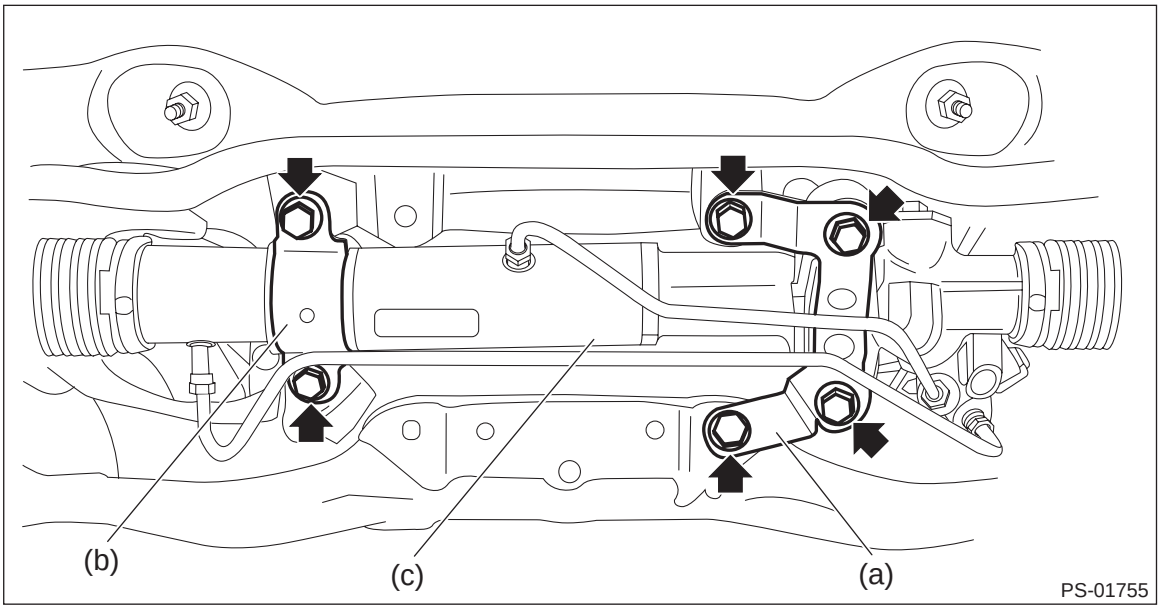


(2) Discharge the fluid by turning the steering wheel fully clockwise and counterclockwise.
(3) Discharge the fluid similarly from other pipes.
7) Remove the universal joint assembly - steering. <Ref. to PS-21, REMOVAL, Universal Joint.>
8) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>
9) Disconnect the feed pipe from the pressure hose first, then disconnect the return pipe from the hose - return.



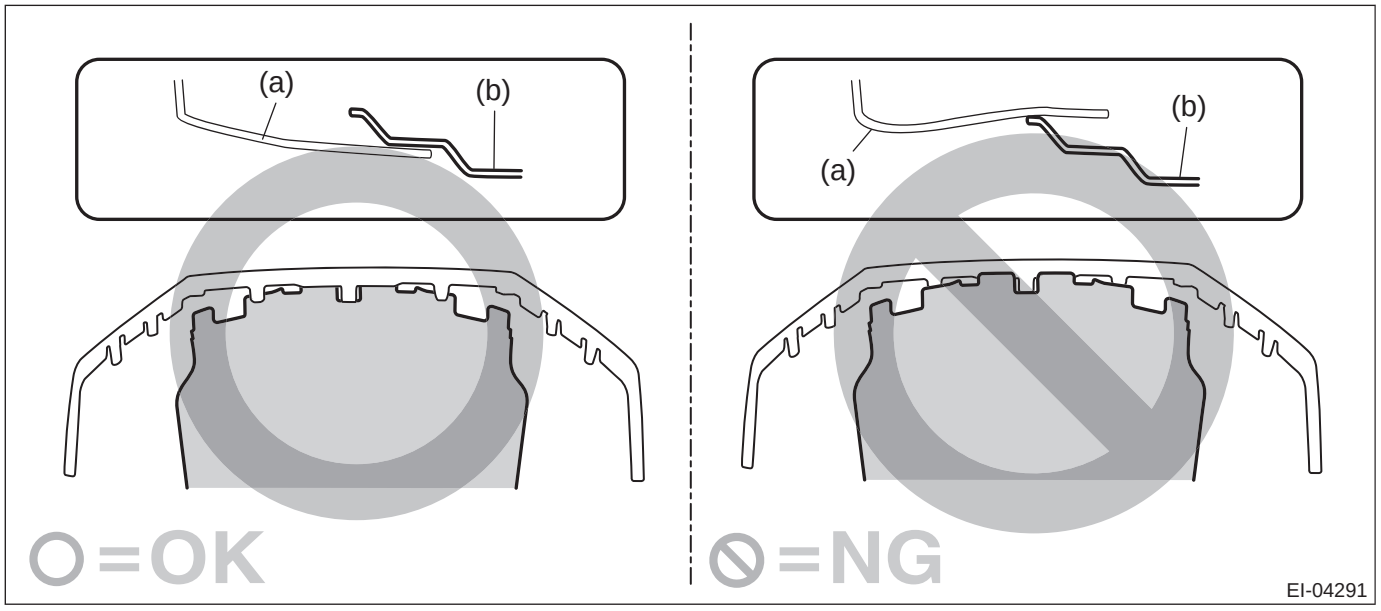
(1) Feed pipe
(2) Return pipe
(3) Pressure hose
(4) Hose - return

10) Remove the bolts securing the gearbox, and remove the stiffener (a), clamp (b) and gearbox (c).



B: INSTALLATION

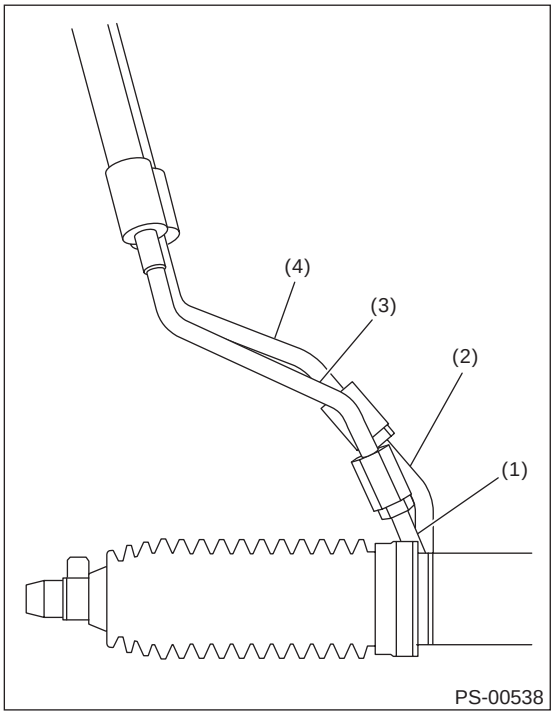
CAUTION:
Install the under cover - front so that the front end of the under cover (b) comes inside the bumper face - front (a).



1) Insert the gearbox into crossmember, being careful not to damage gearbox boot.
2) Install the gearbox to the crossmember through the clamp and stiffener.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

3) Connect the return pipe to the hose - return and then connect the feed pipe to the pressure hose.



(1) Feed pipe
(2) Return pipe
(3) Pressure hose
(4) Hose - return

Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)

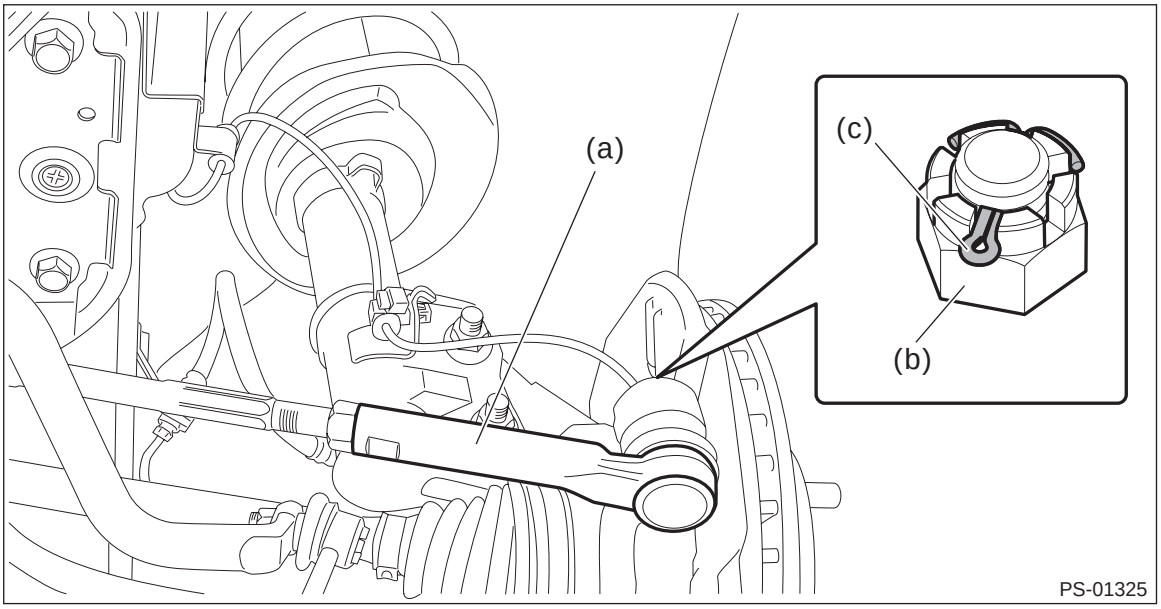
4) Install the universal joint assembly - steering. <Ref. to PS-22, INSTALLATION, Universal Joint.>

5) Connect the tie-rod ends.
   (1) Connect the tie-rod end (a) to the housing assembly - front axle.
   (2) Tighten the castle nuts (b) to the specified torque.

CAUTION:
When connecting the tie-rod, do not hit the cap at bottom of tie-rod end with a hammer.

Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)

   (3) Tighten within the range of 60° so that the cotter pin hole and cutout portion of the castle nut (b) are aligned.
   (4) Insert the cotter pin (c), and bend the tip of the pin to fix it.



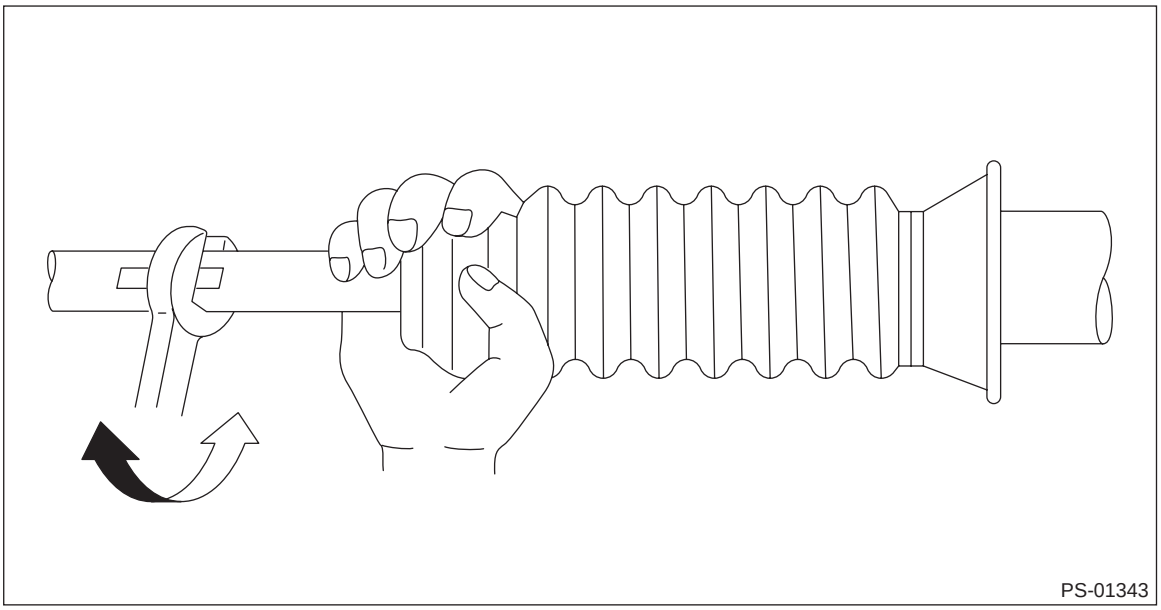
6) Install the front stabilizer. <Ref. to FS-31, INSTALLATION, Front Stabilizer.>
7) Install the front crossmember support.

Tightening torque:
Front suspension parts: <Ref. to FS-4, FRONT SUSPENSION, COMPONENT, General Description.>
8) Install the under cover - front. <Ref. to EI-22, INSTALLATION, Front Under Cover.>
9) Install the front wheels.
10) Lower the vehicle.
11) Tighten the wheel nuts to the specified torque.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
12) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>
13) Pour fluid into the oil tank, and bleed air. <Ref. to PS-83, Power Steering Fluid.>
14) Check for fluid leaks.
15) Check the fluid level in oil tank.

16) Adjust the toe-in and steering angle. <Ref. to FS-17, FRONT WHEEL TOE-IN, ADJUSTMENT, Wheel Alignment.>

NOTE:
When adjusting toe-in, hold the boot as shown to prevent it from being rotated or twisted. If it becomes twisted, straighten it.



17) Tighten the tie-rod end lock nut.

Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)

C: DISASSEMBLY

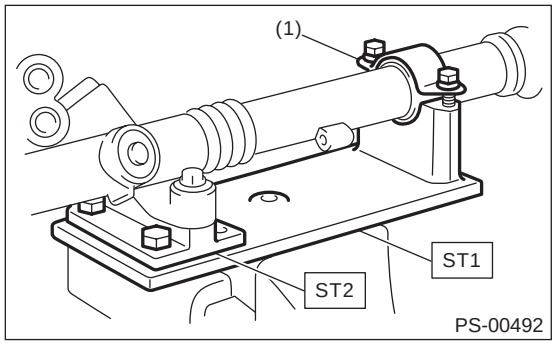
1. RACK HOUSING ASSEMBLY

1) Disconnect the four pipes from gearbox.

NOTE:
Remove the pipes C and D, which are fixed to clamp plate, as a unit.
2) Secure the gearbox removed from vehicle in a vise using ST.

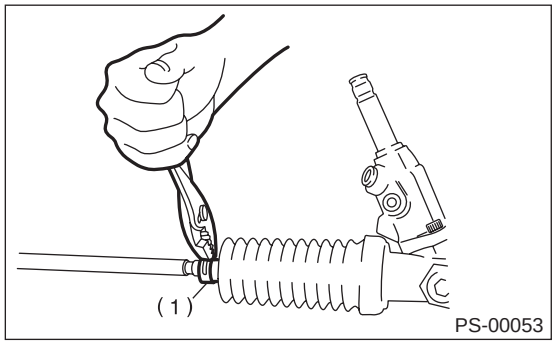
CAUTION:
Using the ST, secure the gearbox assembly in a vise as shown in the figure. Do not secure the gearbox without this ST.

Preparation tool:
ST1: STAND (926200000)
ST2: BOSS D (34199AG000)



(1) Clamp

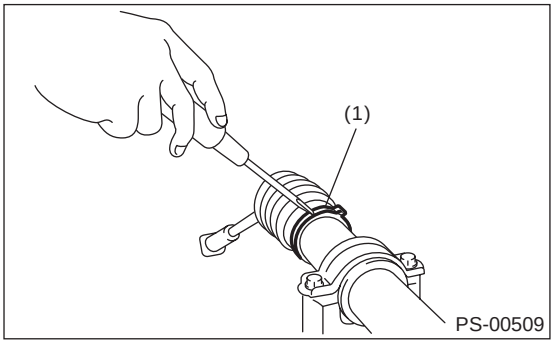
3) Remove the tie-rod end and lock nut from gearbox.
4) Remove the small clip from the boot using pliers, and then move the boot to tie-rod end side.



(1) Clip

5) Using a flat tip screwdriver, remove the band from boot.

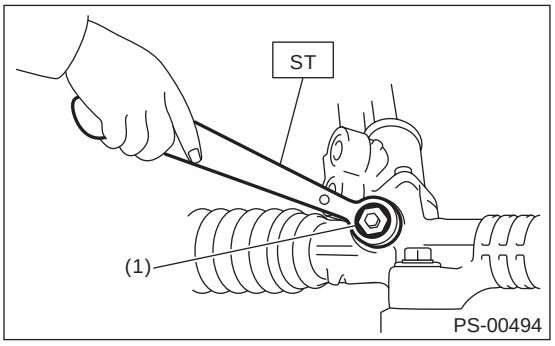
NOTE:
Replace the boot if there is damage, cracks or deterioration.



(1) Band

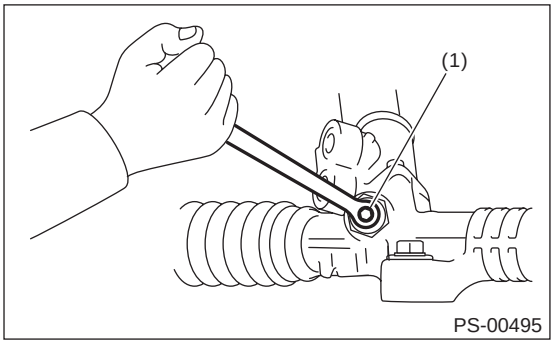
6) Using the ST, loosen the lock nut.

Preparation tool:
ST: SPANNER (926230000)



(1) Lock nut

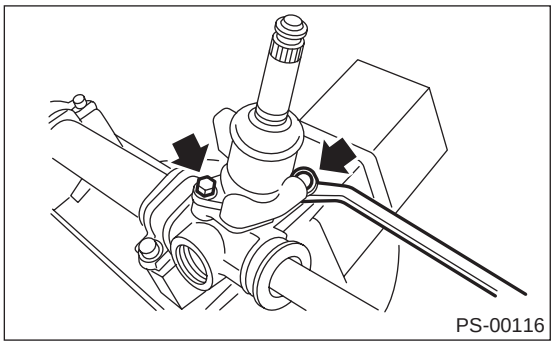
7) Tighten the adjusting screw until it can no longer be tightened.



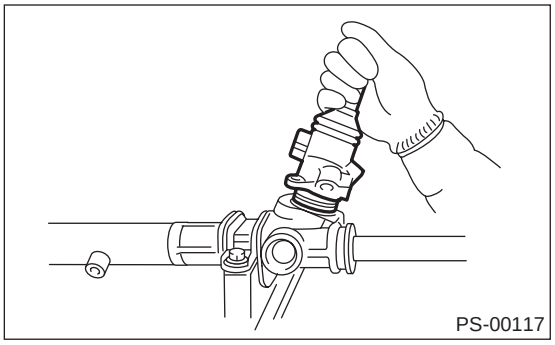
(1) Adjusting screw

8) Remove the tie-rod.
9) Loosen the adjusting screw, and remove the spring and sleeve.

10) Remove the two bolts securing valve assembly.

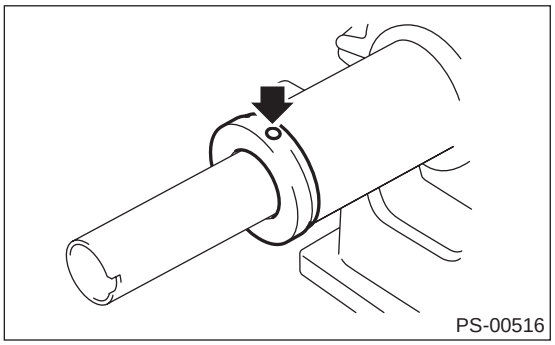


11) Carefully draw out the input shaft and remove the valve assembly.



12) Using a drill, release the crimping of holder.

CAUTION:
Make a hole of 2 mm (0.08 in) depth using a drill with 3 mm (0.12 in) diameter.

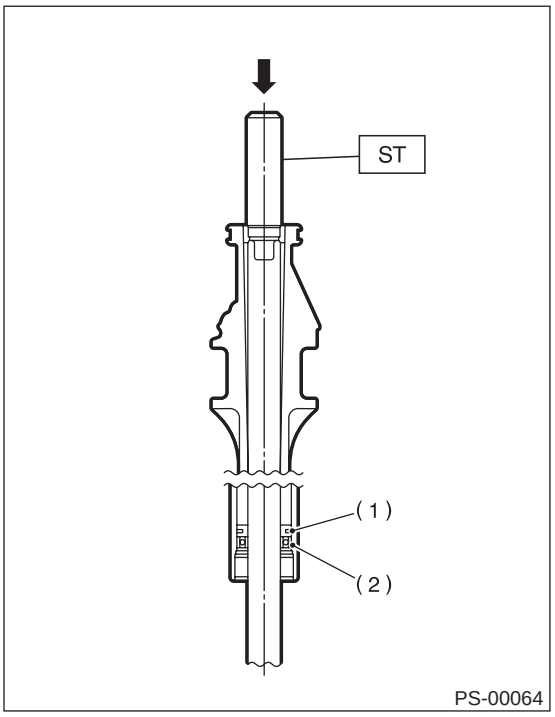


13) Remove the holder.

14) Attach the ST on the valve side of rack, and press out the outer side oil seal and rack while taking care that the rack and the steering body inner surface do not come into contact with each other.

Preparation tool:
ST: INSTALLER & REMOVER (34199XA030)

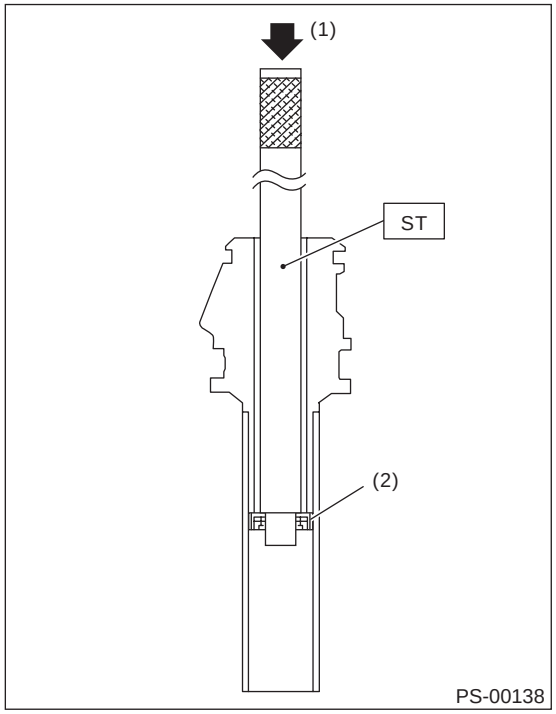
NOTE:
Block the pipe connection of steering body to prevent fluid from flowing out.



(1) Rack piston
(2) Outer side oil seal

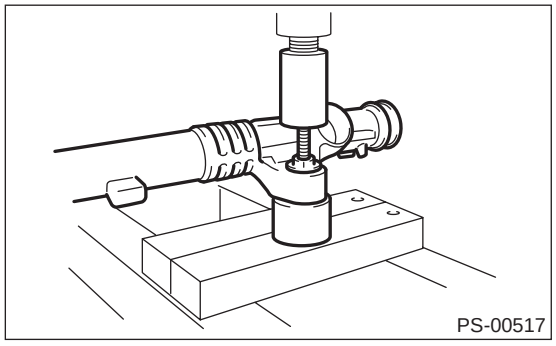
15) Insert the ST from pinion housing side and remove the oil seal and back-up ring using a press.

Preparation tool:
ST: OIL SEAL REMOVER (34099PA010)



(1) Press
(2) Oil seal

16) Using a press, remove the bushing of gearbox installation portion.

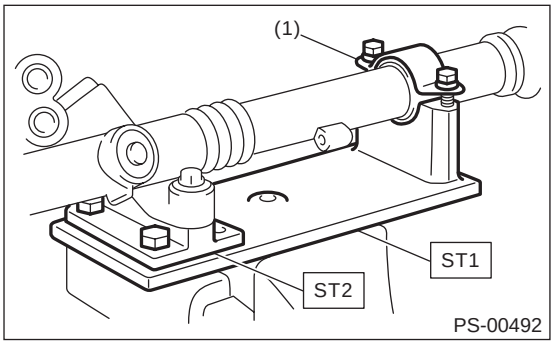


2. CONTROL VALVE

1) Disconnect the four pipes from gearbox.
2) Secure the gearbox removed from vehicle in a vise using ST.

CAUTION:
Using the ST, secure the gearbox assembly in a vise as shown in the figure. Do not secure the gearbox without this ST.

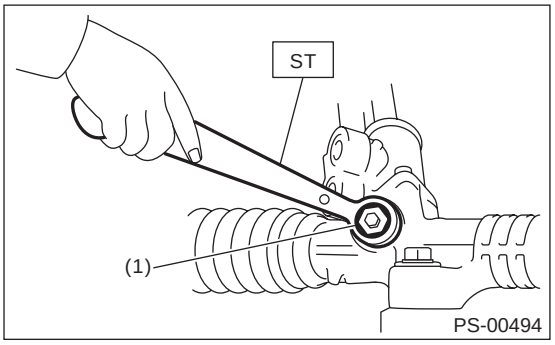
Preparation tool:
ST1: STAND (926200000)
ST2: BOSS D (34199AG000)



(1) Clamp

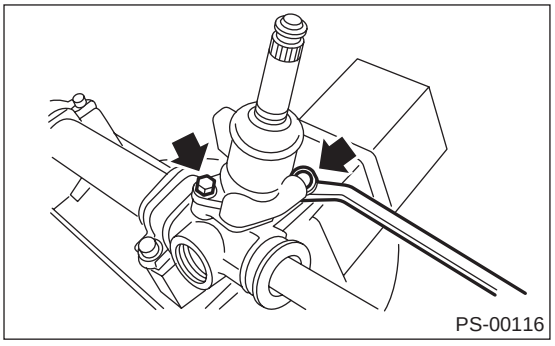
3) Using the ST, loosen the lock nut.

Preparation tool:
ST: SPANNER (926230000)

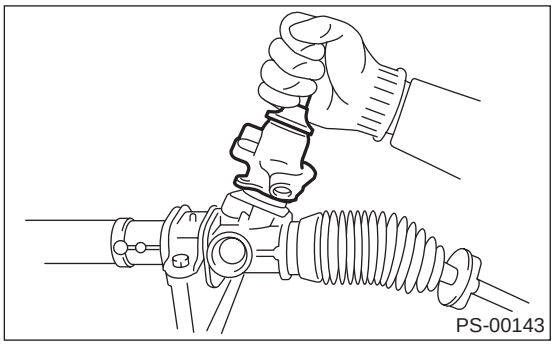


(1) Lock nut

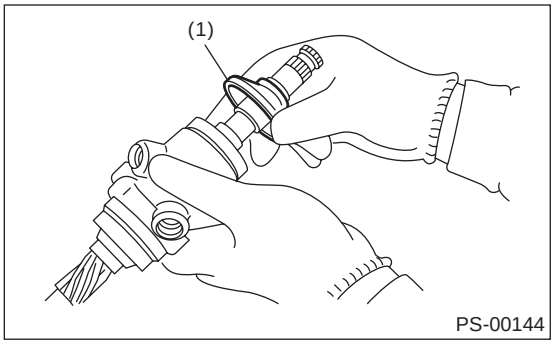
4) Loosen the adjusting screw, and remove the spring and sleeve.
5) Remove the two bolts securing valve assembly.



6) Carefully draw out the input shaft and remove the valve assembly.

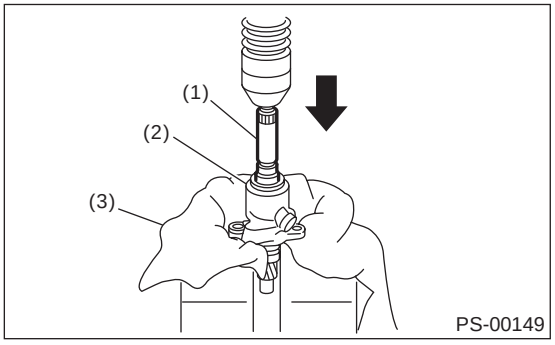


7) Put a vinyl tape around the spline portion, and slide the dust cover to remove.



(1) Dust cover

8) Using a press, remove the pinion & valve assembly from valve housing.

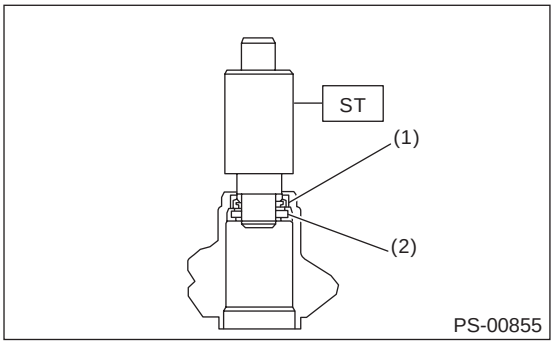


(1) Pinion & valve ASSY
(2) Valve housing
(3) Cloth

9) Using the ST and a press, remove the bushing and oil seal from the valve housing.

CAUTION:
• Do not apply a force to the end surface of valve housing.
• Do not reuse the oil seal after removal.

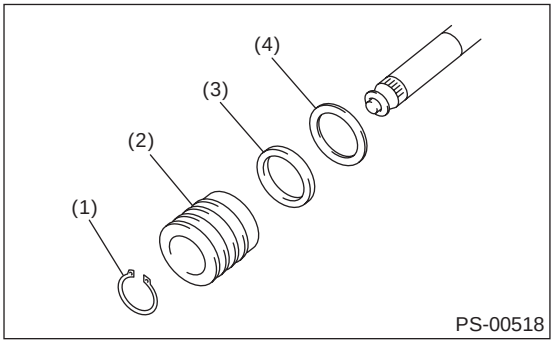
Preparation tool:
ST: INSTALLER & REMOVER (34199AG090)



(1) Oil seal
(2) Bushing

10) Using a snap ring pliers, remove the snap ring, valve, oil seal and back-up washer.

CAUTION:
Be careful not to scratch the pinion and valve assembly.

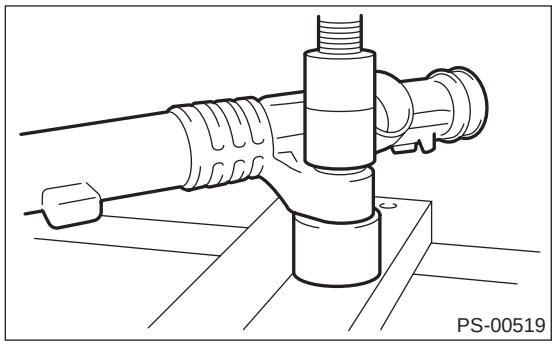


(1) Snap ring
(2) Valve
(3) Oil seal
(4) Back-up ring

D: ASSEMBLY

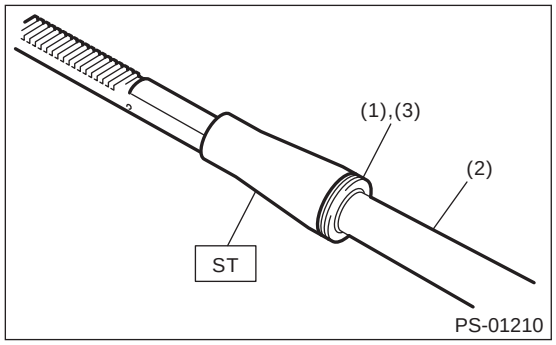
1. RACK HOUSING ASSEMBLY

1) Using a press, install the bushing to gearbox installation portion.



2) Insert the ST to rack.

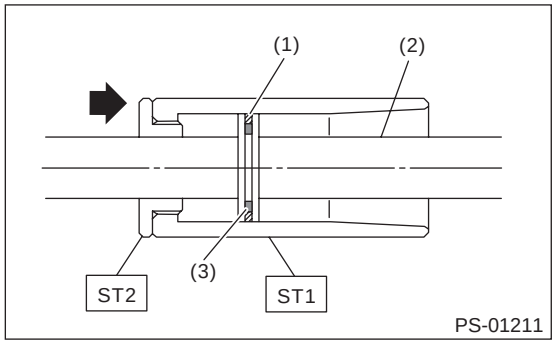
Preparation tool:
ST: GUIDE (34199AG040)



(1) Seal ring
(2) Rack
(3) O-ring

3) Install the seal ring and O-ring to piston portion of rack.
4) Using the ST, form the seal ring properly.

Preparation tool:
ST1: FORMER PISTON (34199AG080)
ST1: GUIDE G (26) (34199AG060)

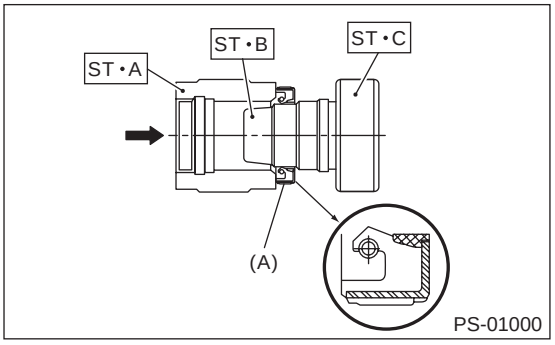


(1) Seal ring
(2) Rack
(3) O-ring

5) Using the ST-A and ST-B, attach the oil seal to ST-C.

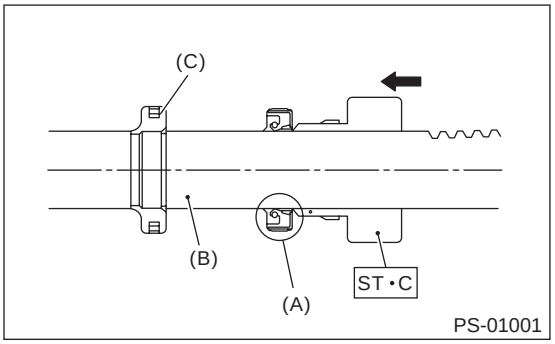
Preparation tool:
ST-A: INSTALLER A (34199FE070)
ST-B: INSTALLER B (34199FE080)
ST-C: INSTALLER C (34199FE090)

NOTE:
Face the oil seal in the direction as shown in the figure.



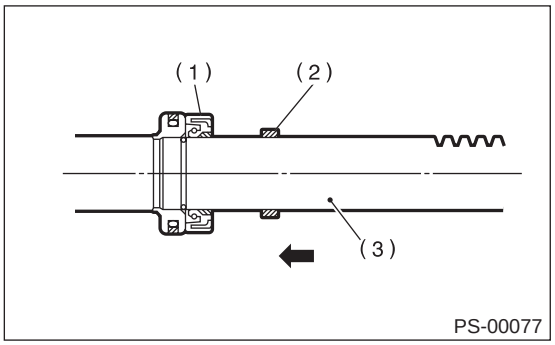
(A) Oil seal

6) Insert the ST-C with oil seal assembled from the gear side of rack. Remove the oil seal from ST-C near piston, and then remove the ST-C from rack.



(A) Oil seal
(B) Rack
(C) Piston

7) Install the back-up ring from the gear side of rack.

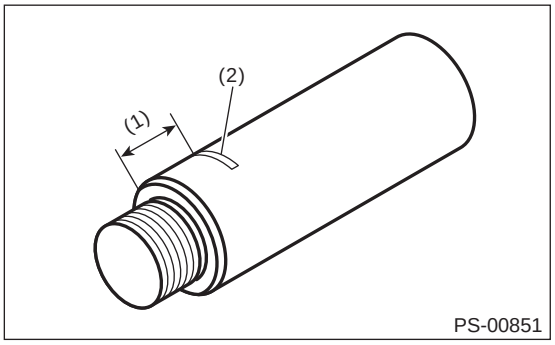


(1) Oil seal
(2) Back-up ring
(3) Rack

8) Check the threaded end of holder and gearbox cylinder end for burrs, damage, etc. Correct if faulty.
9) Apply a coat of grease to the grooves in rack, sliding surface of sleeve and sealing surface of piston. Then insert the rack into steering body from cylinder side.
10) Temporarily tighten a new holder to the gearbox cylinder.
11) Put a mark at the specified position measured from the end surface of ST as shown in the figure.

Specified position:
15 mm (0.59 in)

Preparation tool:
ST: INSTALLER & REMOVER (34199XA030)

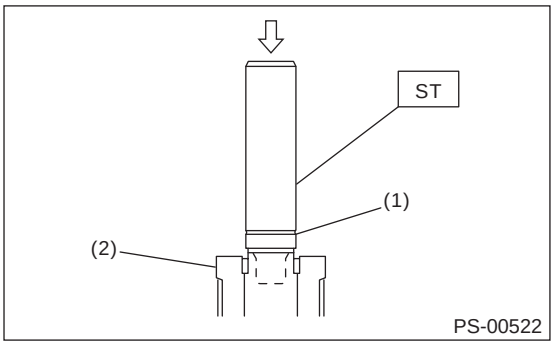


(1) 15 mm (0.59 in)
(2) Place a mark

12) Set the ST to the end of rack.

Preparation tool:
ST: INSTALLER & REMOVER (34199XA030)

13) Using a press, press-fit until the mark on the ST is aligned with the end surface of the holder.



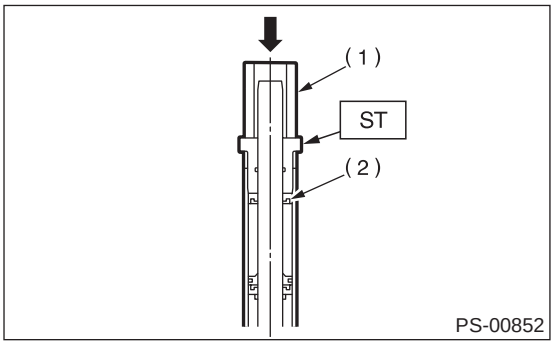
(1) Mark
(2) Holder

14) Remove the ST and holder.
15) Insert the outer side oil seal into the rack using the same procedure as steps 5) and 6).

Preparation tool:
ST-A: INSTALLER A (34199FE070)
ST-B: INSTALLER B (34199FE080)
ST-C: INSTALLER C (34199FE090)

16) Put the ST and pipe through the rack, and press-fit the outer side oil seal using a press.

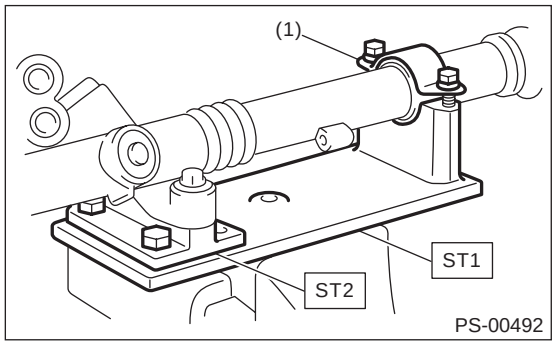
Preparation tool:
ST: INSTALLER (34199AG010)



(1) Pipe
(2) Outer side oil seal

17) Secure the gearbox in a vise using ST.

Preparation tool:
ST1: STAND (926200000)
ST2: BOSS D (34199AG000)



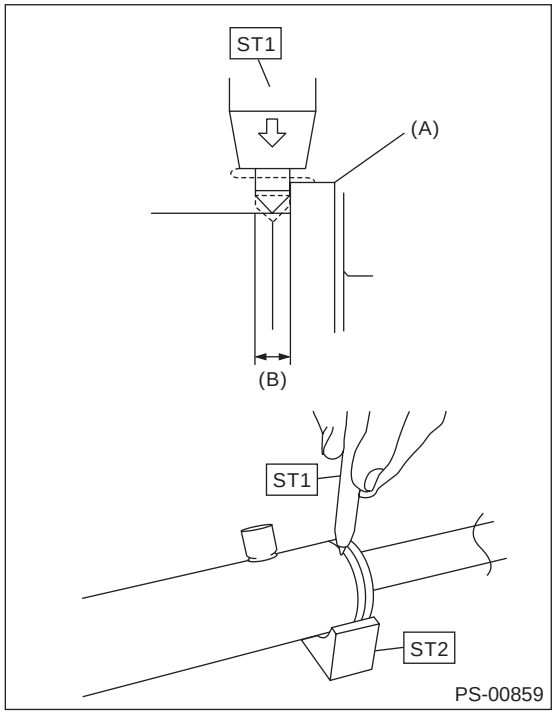
(1) Clamp

18) Tighten the holder.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)

19) Using the ST, crimp so that the diameter of punch hole is 2 — 2.5 mm (0.08 — 0.10 in) and is aligned to the position of 2 mm (0.08 in) from gearbox cylinder end surface.

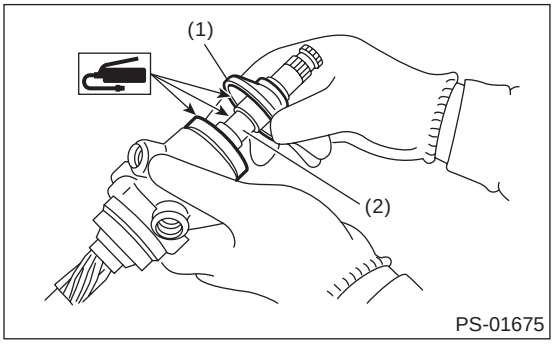
Preparation tool:
ST1: PUNCH HOLDER (34099FA060)
ST2: BASE (34199FE020)



(A) Holder
(B) 2 mm (0.08 in)

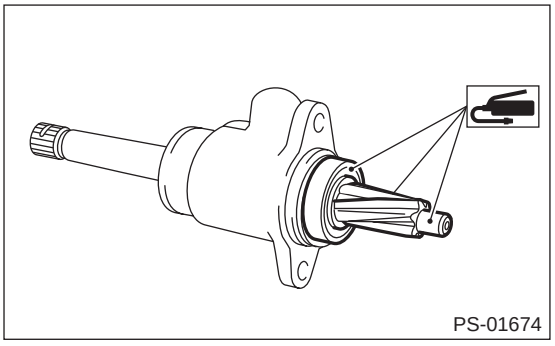
20) Put a vinyl tape around the spline portion and apply genuine grease to the dust cover and fill it to the clearance between pinion shaft and housing, then install the valve assembly.

CAUTION:
Be sure to install the dust cover to groove of shaft.



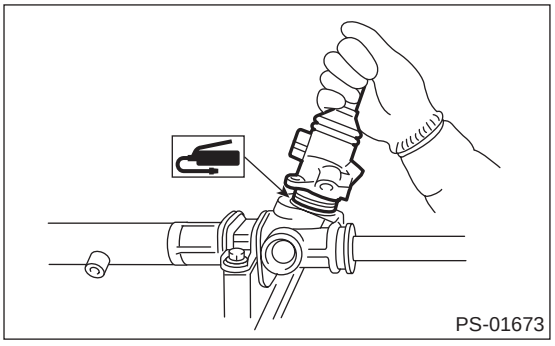
(1) Dust cover
(2) Groove

21) Apply the genuine grease to the edge and body of pinion gear and bearing of valve assembly.



22) Apply grease to a new O-ring and attach it to the valve assembly. Insert the valve assembly into the given place while facing the rack teeth toward pinion.

CAUTION:
Check that the needle bearing is not damaged. Replace with a new steering gearbox if damage is found.



23) Tighten the bolts alternately to secure the valve assembly.

CAUTION:
Be sure to alternately tighten the bolts.

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)

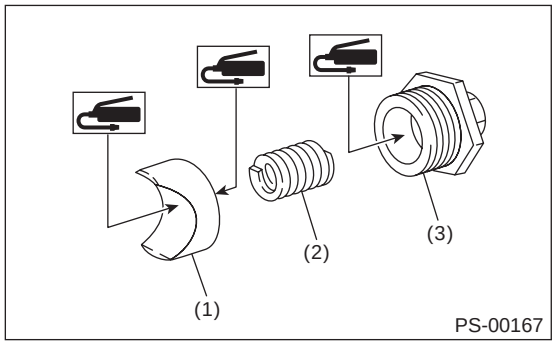
24) Temporarily tighten the tie-rod to the rack end, and then operate the rack from lock to lock for two or three times to make it fit in.

CAUTION:
Operating the rack from lock to lock without installing tie-rods may damage the oil seal. Always install the left and right tie-rods.

25) Apply liquid gasket to 1/3 or more of entire perimeter of adjusting screw thread.

Liquid gasket:
THREE BOND 1102

26) Apply a coat of grease to the sliding surface of sleeve and seating surface of spring, and then insert the sleeve into steering body.
Charge the adjusting screw with grease, and then insert the spring into adjusting screw. Then install on the steering body.



(1) Sleeve
(2) Spring
(3) Adjusting screw

27) Tighten the adjusting screw to the specified torque, then loosen it.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

28) Tighten the adjusting screw to the specified torque, then loosen it 5°.

Tightening torque:
5.9 N·m (0.6 kgf-m, 4.4 ft-lb)

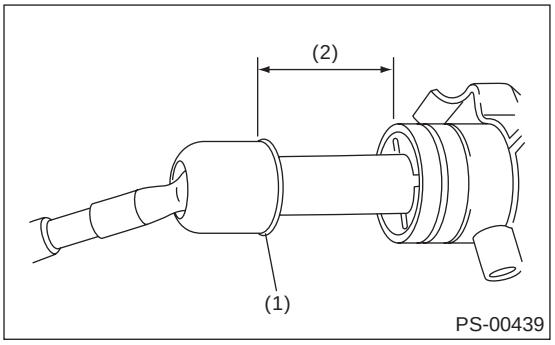
29) Remove the tie-rod.
30) Adjust the turning resistance of gearbox so that it is within specification using adjusting screw. <Ref. to PS-50, LIMIT, INSPECTION, Steering Gearbox.>
31) Attach the lock nut into adjusting screw, and while holding the adjusting screw with wrench, tighten the lock nut using ST.

Preparation tool:
ST: SPANNER (926230000)

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

NOTE:
Hold the adjusting screw with a wrench to prevent it from turning while tightening lock nut.
32) Extend the rack approx. 40 mm (1.57 in) from steering body.
33) Install the tie-rod and new lock washer into rack.

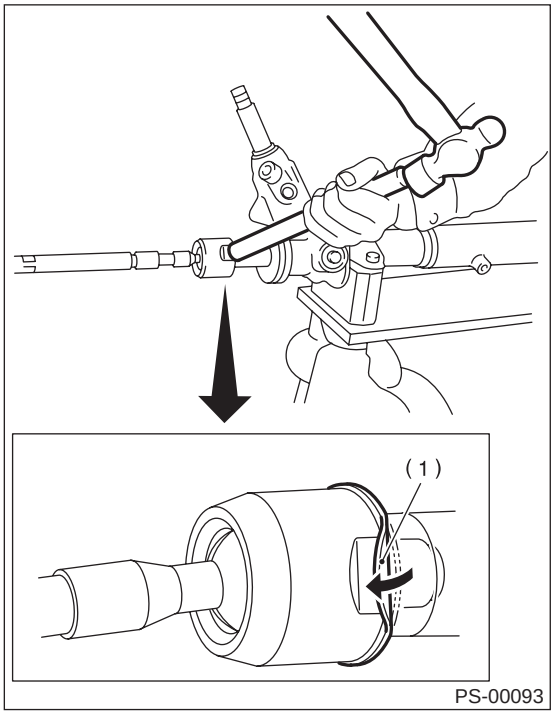
Tightening torque:
93 N·m (9.5 kgf-m, 68.6 ft-lb)



(1) Lock washer
(2) Approx. 40 mm (1.57 in)

34) Bend the lock washer and crimp it.

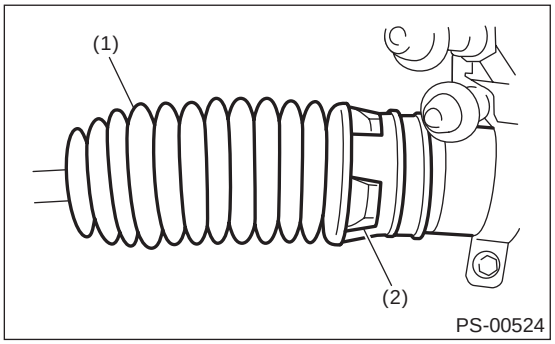
CAUTION:
Be careful not to scratch the rack when crimping lock washer.



(1) Lock washer

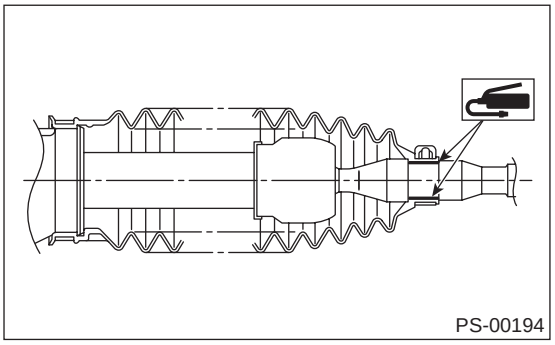
35) Apply a coat of grease to the tie-rod groove, and then install the boot to the housing.

CAUTION:
Right side boot has groove for identification, be sure to install the right and left of boot.

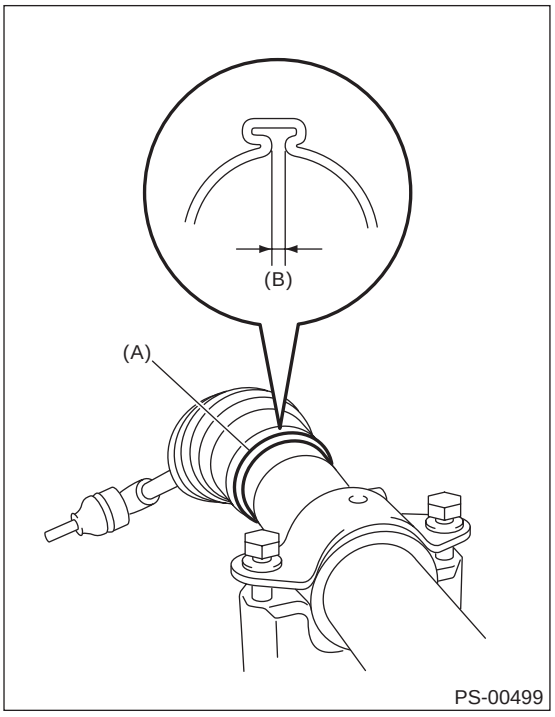


(1) Right side boot
(2) Groove for identification

NOTE:
Make sure that the boot is installed without unusual inflation or deflation.

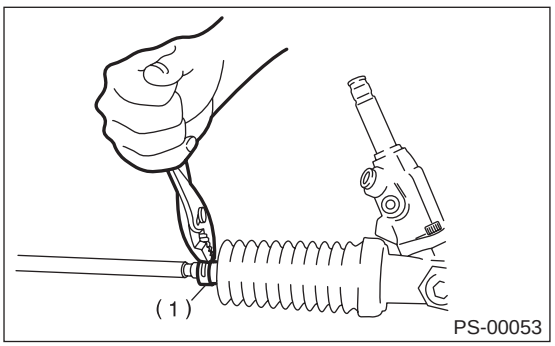


36) Install a new boot band. Using band clamp pliers, crimp it so that the clearance of crimping portion becomes 2 mm (0.079 in) or less.



(A) Boot band
(B) 2 mm (0.079 in) or less

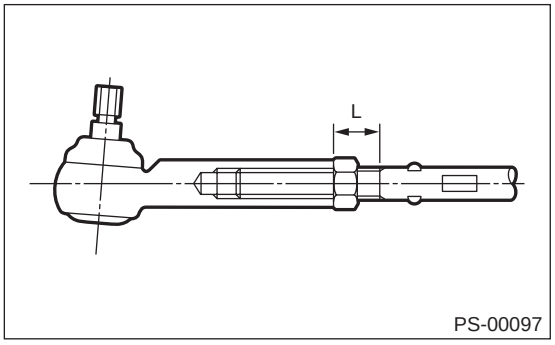
37) Fix the boot end with small clip.



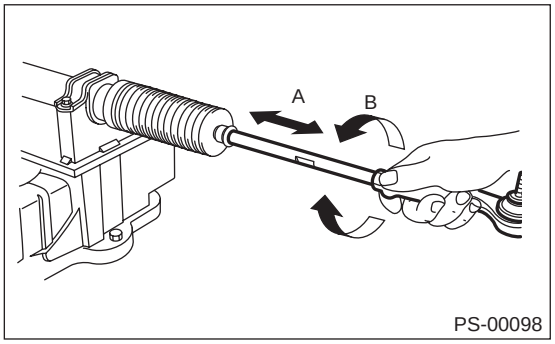
(1) Clip

38) After installing, check that the boot end is installed to the groove of the tie-rod.
39) If the tie-rod end has been removed, screw in lock nut and tie-rod end to the screwed portion of tie-rod, and tighten the lock nut temporarily in a position as shown in the figure.

Installed tie-rod length L:
28 mm (1.1 in)



40) Inspect the gearbox as follows:
"A" Holding the tie-rod end, repeat lock to lock several times as quickly as possible.
"B" Holding the tie-rod end, turn it slowly at a radius several times as large as possible.
Finally, make sure that the boot is installed in the specified position without inflating.



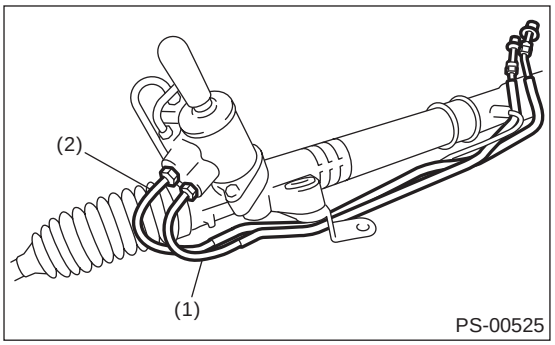
41) Remove the gearbox from ST.

Preparation tool:
ST1: STAND (926200000)
ST2: BOSS D (34199AG000)

42) Install the four pipes on gearbox.
(1) Connect the pipes A and B to the four pipe joints of gearbox.

Tightening torque:
Cylinder side: 27 N·m (2.8 kgf-m, 19.9 ft-lb)
Gear housing side: 17 N·m (1.7 kgf-m, 12.5 ft-lb)
(2) Connect the feed pipe and return pipe to the gearbox.

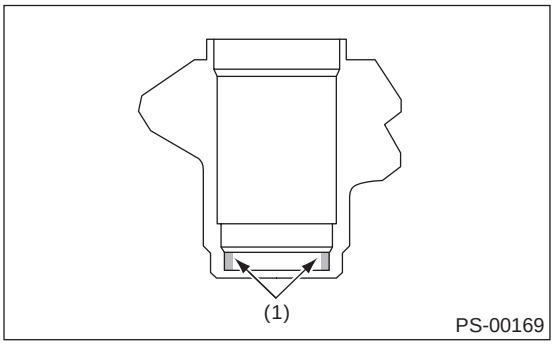
Tightening torque:
Feed pipe: 37 N·m (3.8 kgf-m, 27.3 ft-lb)
Return pipe: 29 N·m (3.0 kgf-m, 21.4 ft-lb)



(1) Feed pipe
(2) Return pipe

2. CONTROL VALVE ASSEMBLY

Specified steering grease:
VALIANT GREASE M2
1) Clean all parts and tools before reassembling.
2) Apply a coat of specified power steering fluid to the inner wall of valve housing.

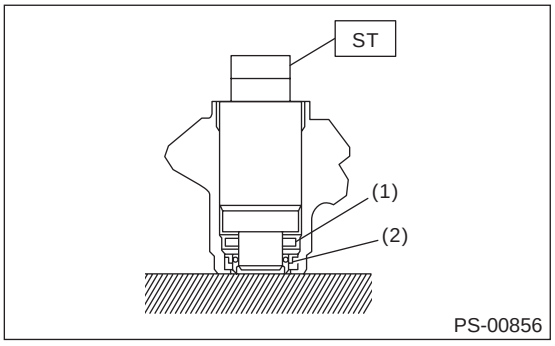


(1) Apply fluid.

3) Apply grease to the oil seal.
4) Verify the direction of oil seal.

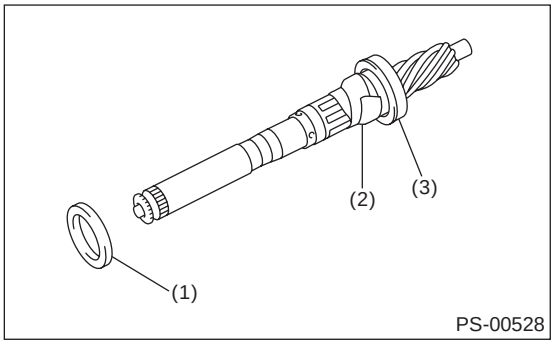
5) Using the ST and a press, install the oil seal and the bushing in valve housing.

Preparation tool:
ST: INSTALLER & REMOVER (34199AG090)



(1) Bushing
(2) Oil seal

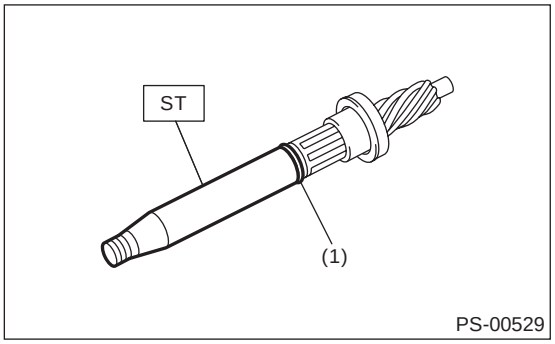
6) Apply vinyl tape to the groove of pinion.
7) Install the wave washer and oil seal to pinion, and then remove the vinyl tape.



(1) Oil seal
(2) Vinyl tape
(3) Wave washer

8) Attach the ST to pinion, and install the seal ring and O-ring.

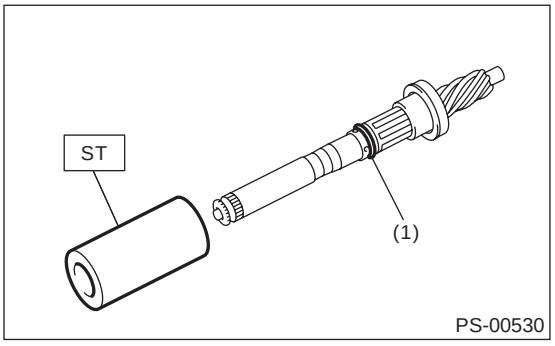
Preparation tool:
ST: GUIDE (34199AG020)



(1) Seal ring and O-ring

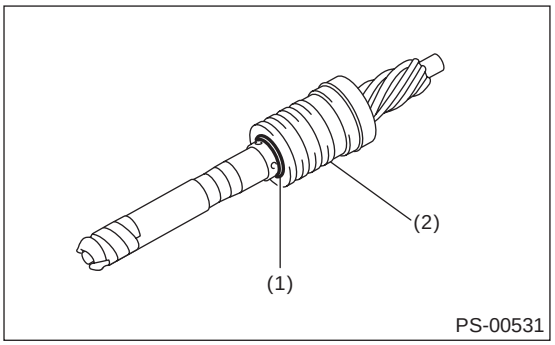
9) Remove the ST GUIDE, and form the seal ring properly using ST FORMER.

Preparation tool:
ST: FORMER (34199AG070)



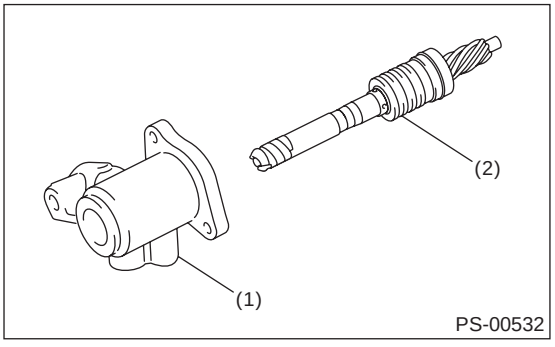
(1) Seal ring

10) Put vinyl tape around pinion shaft spline to protect oil seal from damage.
11) Install the valve to pinion, and install the snap ring.



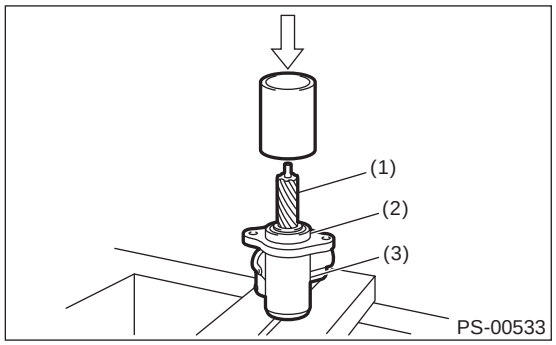
(1) Snap ring
(2) Valve

12) Attach the pinion & valve assembly into the valve housing.



(1) Valve housing
(2) Pinion & valve ASSY

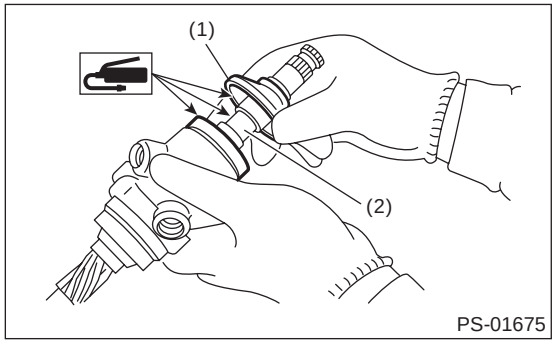
13) Using a press, push the outer race of bearing and press-fit the pinion & valve assembly into housing.



(1) Pinion & valve ASSY
(2) Bearing
(3) Housing

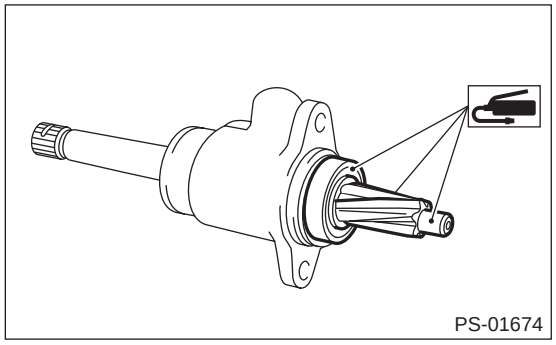
14) Apply the specified grease to the dust cover and fill it to the clearance between pinion shaft and housing.
15) Install the dust cover on valve assembly.

CAUTION:
Be sure to install the dust cover to groove of shaft.

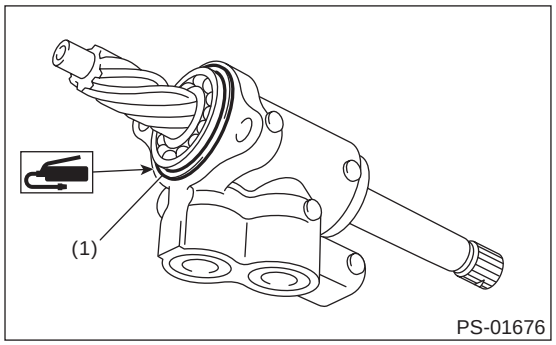


(1) Dust cover
(2) Groove

16) Apply the genuine grease to the edge and body of pinion gear and bearing of valve assembly.



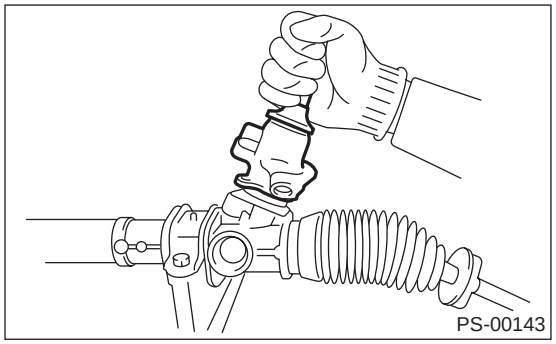
17) Apply grease to a new O-ring and attach it to the valve assembly.



(1) O-ring

18) Insert the valve assembly into the given place while facing the rack teeth toward pinion.

CAUTION:
Check that the needle bearing is not damaged. Replace with a new steering gearbox if damage is found.



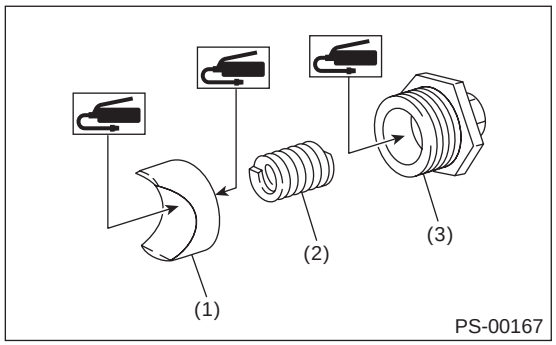
19) Tighten the bolts alternately to secure the valve assembly.

CAUTION:
Be sure to alternately tighten the bolts.

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)
20) Apply liquid gasket to 1/3 or more of entire perimeter of adjusting screw thread.

Liquid gasket:
THREE BOND 1102

21) Apply a coat of grease to the sliding surface of sleeve and seating surface of spring, and then insert the sleeve into steering body.
Charge the adjusting screw with grease, and then insert the spring into adjusting screw. Then install on the steering body.



(1) Sleeve
(2) Spring
(3) Adjusting screw

22) Tighten the adjusting screw to the specified torque, then loosen it.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

23) Tighten the adjusting screw to the specified torque, then loosen it 5°.

Tightening torque:
5.9 N·m (0.6 kgf-m, 4.4 ft-lb)

24) Adjust the turning resistance of gearbox so that it is within specification using adjusting screw. <Ref. to PS-50, LIMIT, INSPECTION, Steering Gearbox.>

25) Attach the lock nut into adjusting screw, and while holding the adjusting screw with wrench, tighten the lock nut using ST.

Preparation tool:
ST: SPANNER (926230000)

Tightening torque (lock nut):
25 N·m (2.5 kgf-m, 18.4 ft-lb)

NOTE:
Hold the adjusting screw with a wrench to prevent it from turning while tightening lock nut.

26) Remove the gearbox from ST.

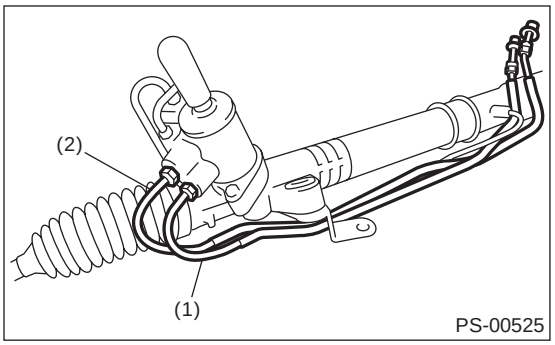
Preparation tool:
ST1: STAND (926200000)
ST2: BOSS D (34199AG000)

27) Install the four pipes on gearbox.
(1) Connect the pipes A and B to gearbox.

Tightening torque:
Cylinder side: 27 N·m (2.8 kgf-m, 19.9 ft-lb)
Gear housing side: 17 N·m (1.7 kgf-m, 12.5 ft-lb)

(2) Connect the feed pipe and return pipe to the gearbox.

Tightening torque:
Feed pipe: 37 N·m (3.8 kgf-m, 27.3 ft-lb)
Return pipe: 29 N·m (3.0 kgf-m, 21.4 ft-lb)



(1) Feed pipe
(2) Return pipe

E: INSPECTION

1. BASIC INSPECTION

1) Clean all the disassembled parts, and check for wear, damage or any other faults, then repair or replace as necessary.
2) When disassembling, check the inside of gearbox for water. If any water is found, carefully check the boot for damage, input shaft dust seal, adjusting screw and boot clips for poor sealing. If faulty, replace with new parts.

No.	Parts	Inspection	Corrective action
1	Input shaft	(1) Bent input shaft (2) Damage on serration	If the bend or damage is excessive, replace the entire gearbox.
2	Dust seal	(1) Crack or damage (2) Wear	If the outer wall slips, the lip is worn out or damage is found, replace it with a new part.
3	Rack and pinion	Poor mating of rack with pinion	(1) Adjust the backlash properly. By measuring the turning torque of the gearbox and sliding resistance of rack, check if the rack & pinion engage uniformly and smoothly with each other. (Refer to “Service limit”.) (2) Pull out the entire rack to allow viewing of the teeth, and check for damage. When abnormality is found in either (1) or (2), replace the entire gearbox.
4	Gearbox unit	(1) Bending of the rack shaft (2) Bending of the cylinder portion (3) Crack or damage on the aluminum portion	Replace the gearbox with a new part.
		(4) Wear or damage on rack bushing	If the free play of rack shaft in radial direction is out of the specified range, replace the gearbox with new part. (Refer to “Service limit”.)
		(5) Wear on input shaft bearing	If the free play of input shaft in radial and axial direction is out of the specified range, replace the gearbox with a new part. (Refer to “Service limit”.)
5	Boot	Crack, damage or deterioration	Replace.
6	Tie-rod	(1) Looseness of ball joint (2) Bend of tie-rod	Replace.
7	Tie-rod end	Damage or deterioration of dust seal	Replace.
8	Adjusting screw spring	Deterioration	Replace.
9	Boot clip	Deterioration	Replace.
10	Sleeve	Damage	Replace.
11	Pipe	(1) Damage to flared surface (2) Damage to flare nut (3) Damage to pipe	Replace.

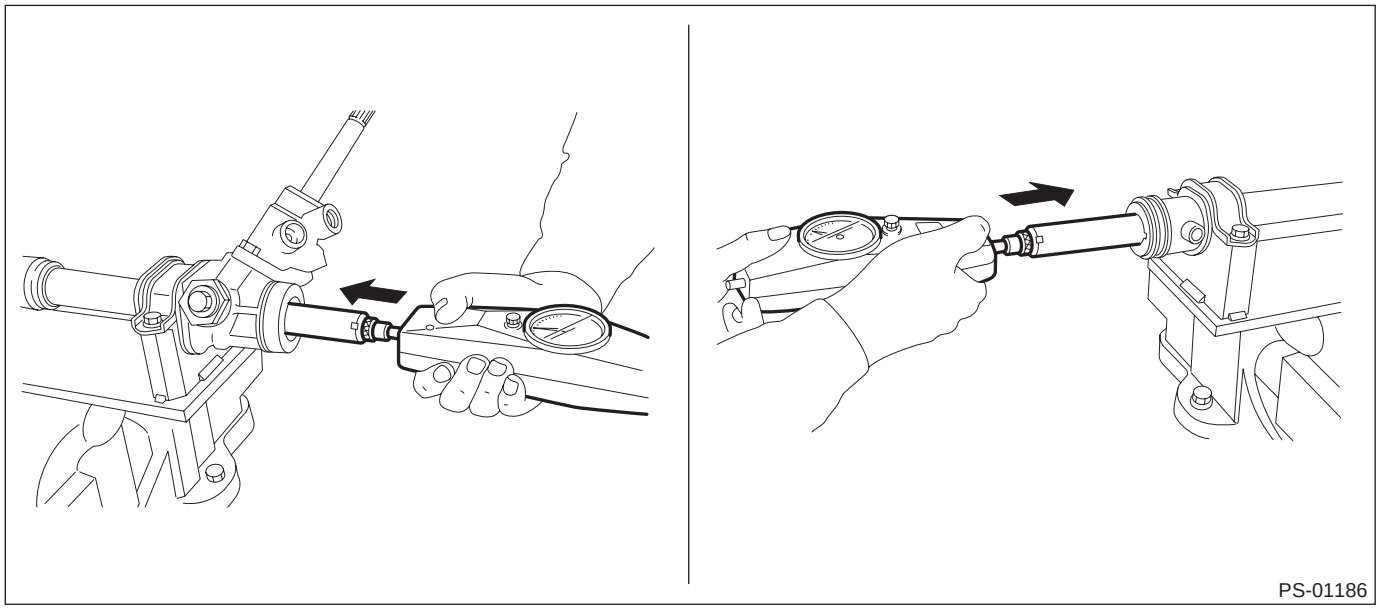
2. LIMIT

Make a measurements as follows. If it exceeds the specified service limits, adjust or replace.

CAUTION:
- **When making a measurement, secure the gearbox in a vise using ST.**
- **When fixing the gearbox in a vise, apply a wooden piece on the flange portion.**

Preparation tool:
ST1: STAND (926200000)
ST2: BOSS D (34199AG000)

Rack shaft sliding resistance

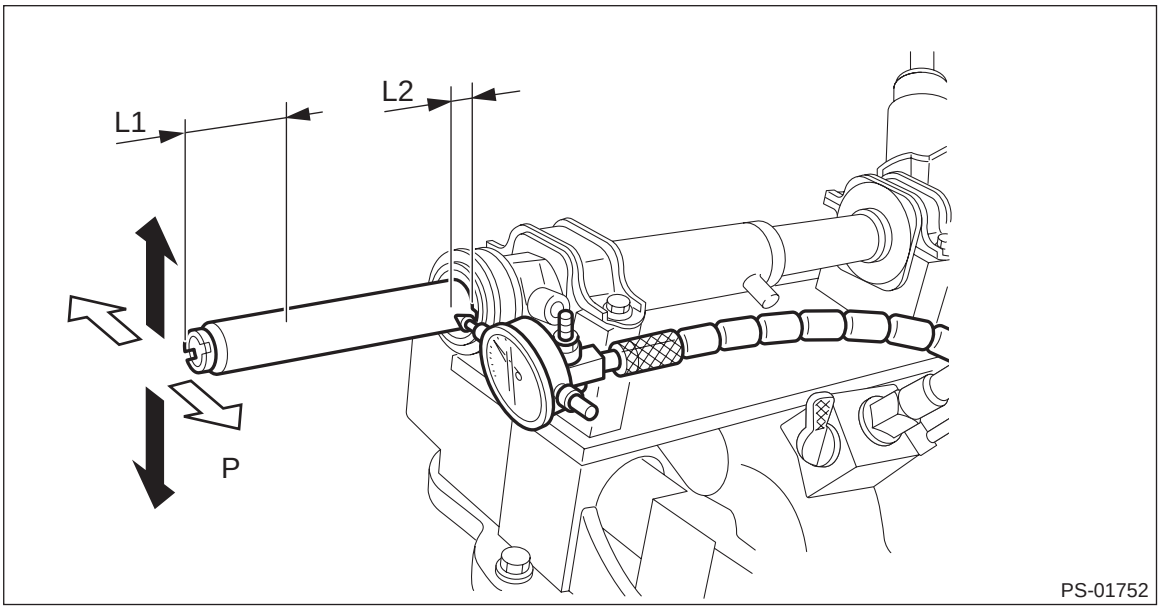


Limit: 343 N (35.0 kgf, 77 lbf) or less

Left/right differential of sliding resistance: 20% or less

Rack shaft play in the radial direction

- **Right-turn steering**



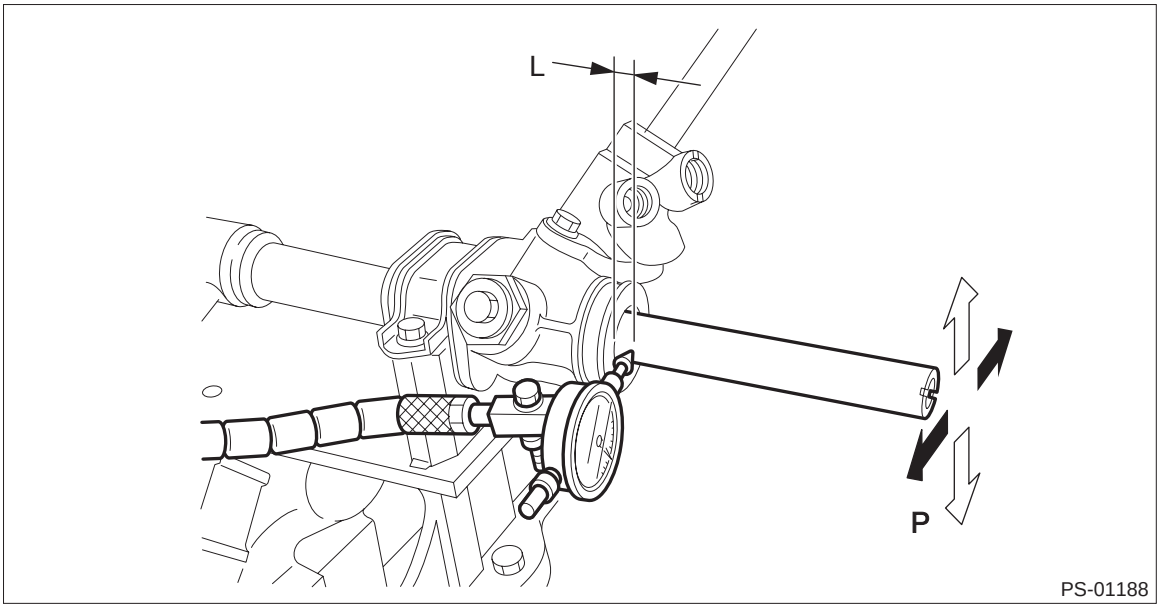
Limit

Direction ⬅ ➡ : 0.4 mm (0.016 in) or less
Direction ⇦ ⇨ : 0.4 mm (0.016 in) or less

Condition

Weighting point
L1: 10 mm (0.39 in)
P: 98 N (10 kgf, 22 lb)
Measuring point
L2: 5 mm (0.2 in)

- **Left-turn steering**

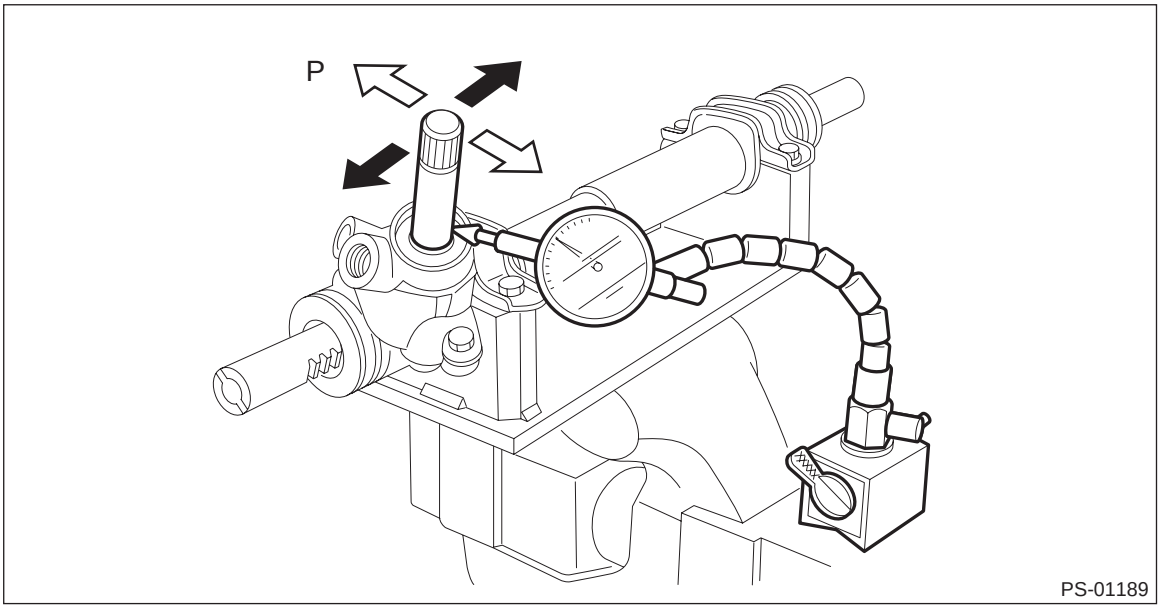


Service limit:
Direction ⇦ ⇨ : 0.4 mm (0.016 in) or less
Direction ⬅ ➡ : 0.6 mm (0.024 in) or less

Condition
L: 5 mm (0.20 in)
P: 98 N (10 kgf, 22 lbf)

Input shaft play

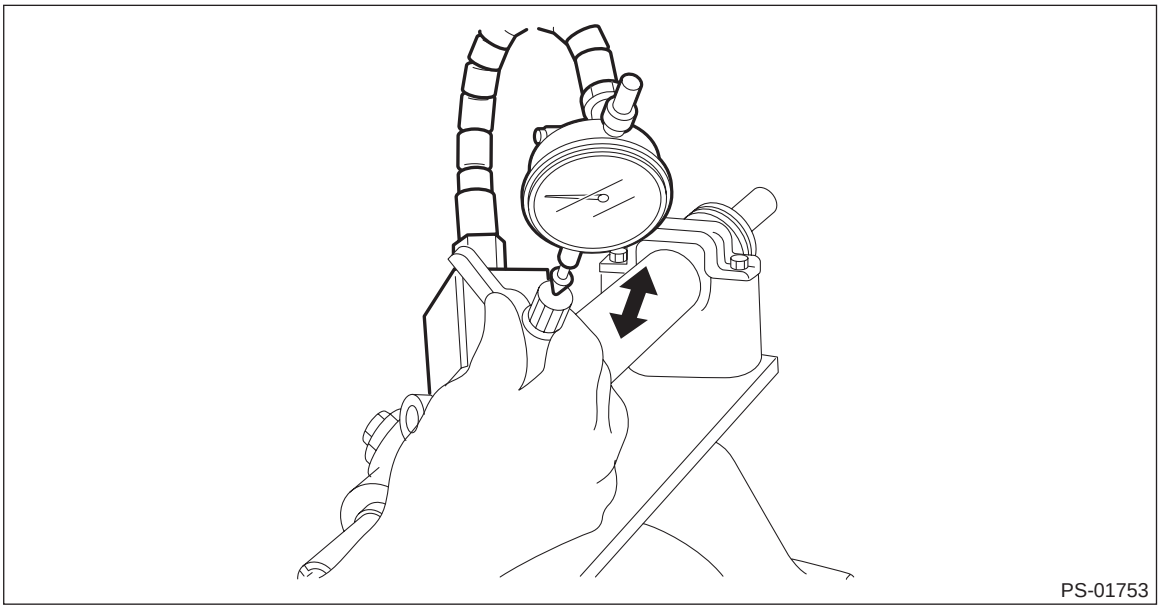
- **In radial direction**



Limit
0.26 mm (0.0102 in) or less

Condition
P: 98 N (10 kgf, 22 lbf)

- **In axial direction**

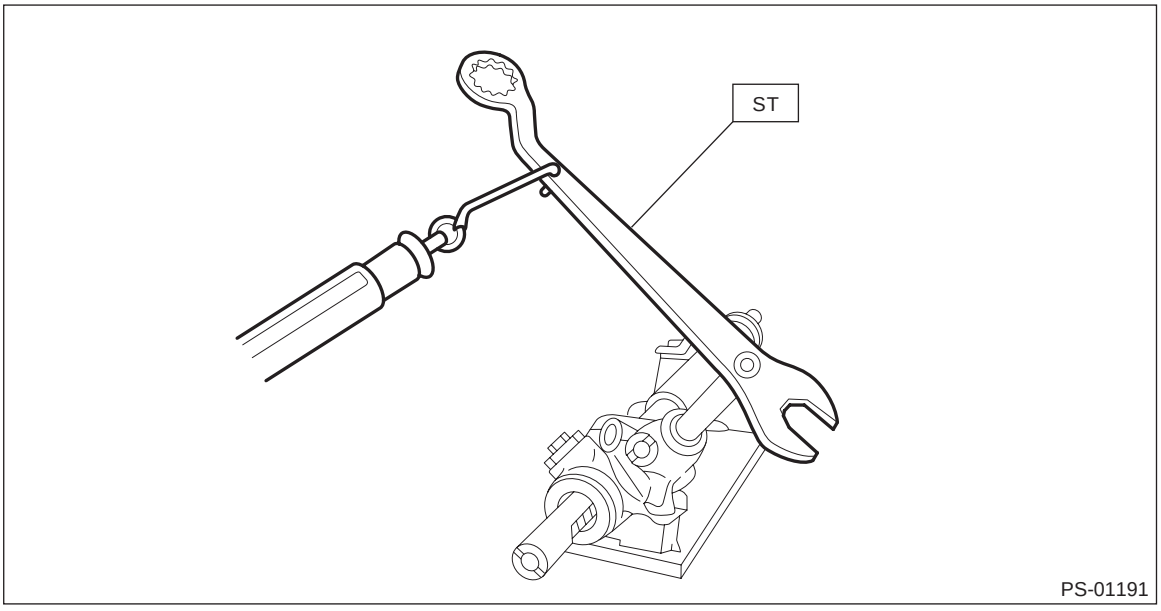


Limit
Without play

Rotational resistance of gearbox

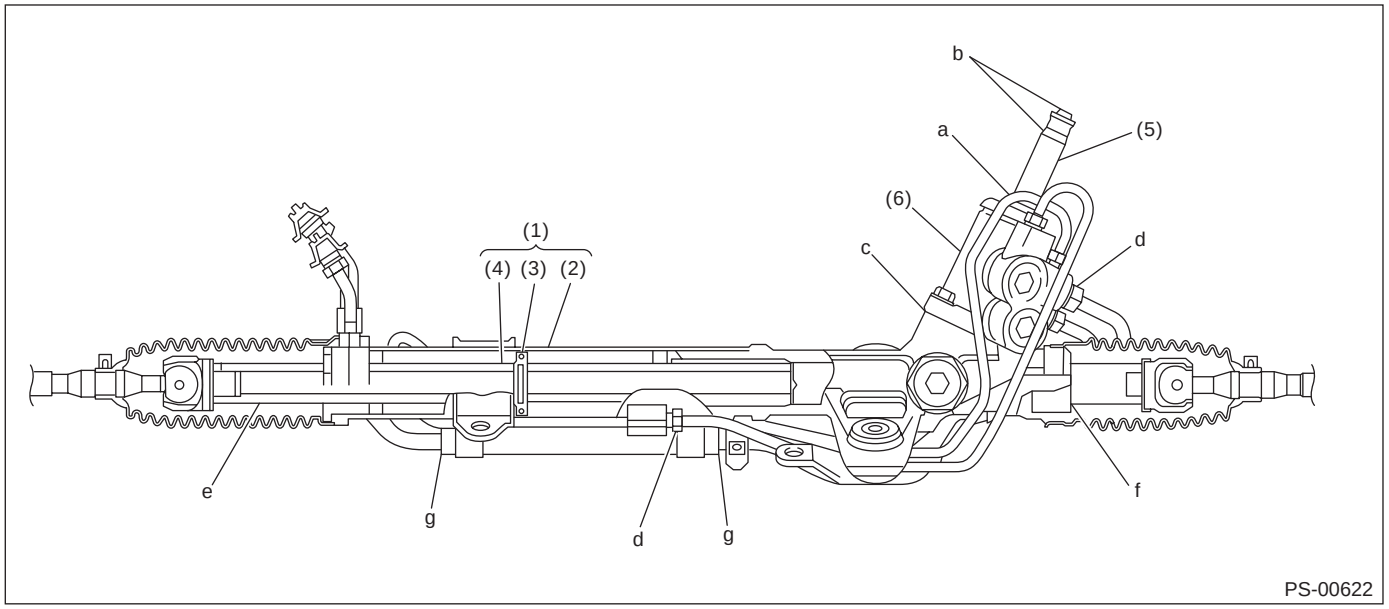
Using the ST, measure the gearbox turning resistance.

Preparation tool:
ST: SPANNER (34099PA100)



Service limit:
Maximum allowable resistance: 21 N (2.14 kgf, 4.7 lbf) or less
Difference between right and left rotational resistance: 20% or less

3. FLUID LEAKAGE



(1)	Power cylinder	(3)	Rack piston	(5)	Input shaft
(2)	Cylinder	(4)	Rack axle	(6)	Valve housing

1) Lift up the vehicle.
2) If a fluid leak is found, clean the fluid completely from the suspect area, and turn the steering wheel 30 to 40 times to the left and right from lock to lock, with the engine running, and check again for leaks immediately, and also after a few hours have passed.
3) Cause and solution for oil leakage from “a”
The oil seal is damaged. Replace the valve assembly or valve housing side oil seal assembly with a new part.
4) Cause and solution for oil leakage from “b”
The torsion bar O-ring is damaged. Replace the valve assembly with a new part.
5) Cause and solution for oil leakage from “c”
The oil seal is damaged. Replace the valve assembly or pinion side oil seal with a new part.
6) Cause and solution for oil leakage from “d”
The pipe is damaged. Replace the faulty pipe or O-ring.
7) Cause and solution for oil leakage from “g”
The hose is damaged. Replace the hose with a new part.
8) If leak is other than a, b, c, d or g, or if oil is leaking from gearbox, move the right and left boots toward tie-rod end side, respectively, with the gearbox mounted to the vehicle, and remove fluid from surrounding portions. Then, turn the steering wheel from lock to lock about 30 to 40 times with the engine running, then re-inspect the leaking area immediately after and several hours after this operation.
(1) Leakage from “e”
The cylinder seal is damaged. Replace the oil seal.
(2) Leakage from “f”
There are two possible causes. Perform the following step first. Remove the pipe assembly B from the valve housing, and close the circuit using ST.

Preparation tool:
ST: PLUG (926420000)
Turn the steering wheel from lock to lock approx. 30 to 40 times with the engine running, then inspect the leaked portion immediately after and several hours after this operation.

- If leakage from “f” is noted again:

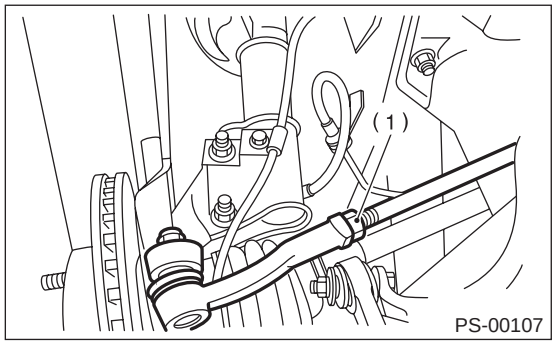
The oil seal of pinion and valve assembly is damaged. Replace the pinion & valve assembly with a new part. Or, replace the oil seal.

- If oil stops leaking from “f”:

The oil seal of rack housing is damaged. Replace the oil seal and back-up ring.

F: ADJUSTMENT

1) Adjust the front toe.
<Ref. to FS-13, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.>



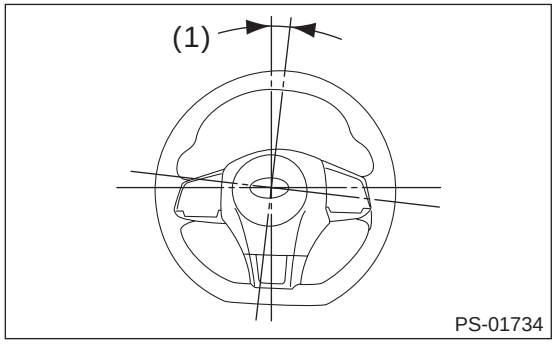
(1) Lock nut

2) Check the steering angle of the wheels.

Standard of steering angle:

Inner wheel	Outer wheel
36.3°±1.5°	32.0°±1.5°

3) If the steering wheel spokes are not horizontal when wheels are set in the straight ahead position, or error is more than 5° on the periphery of the steering wheel, correctly re-install the steering wheel.



(1) 5° or less

4) If the steering wheel spokes are not horizontal with vehicle set in the straight ahead position after this adjustment, correct it by turning the right and left tie-rods in the opposite direction from each other by the same angle.

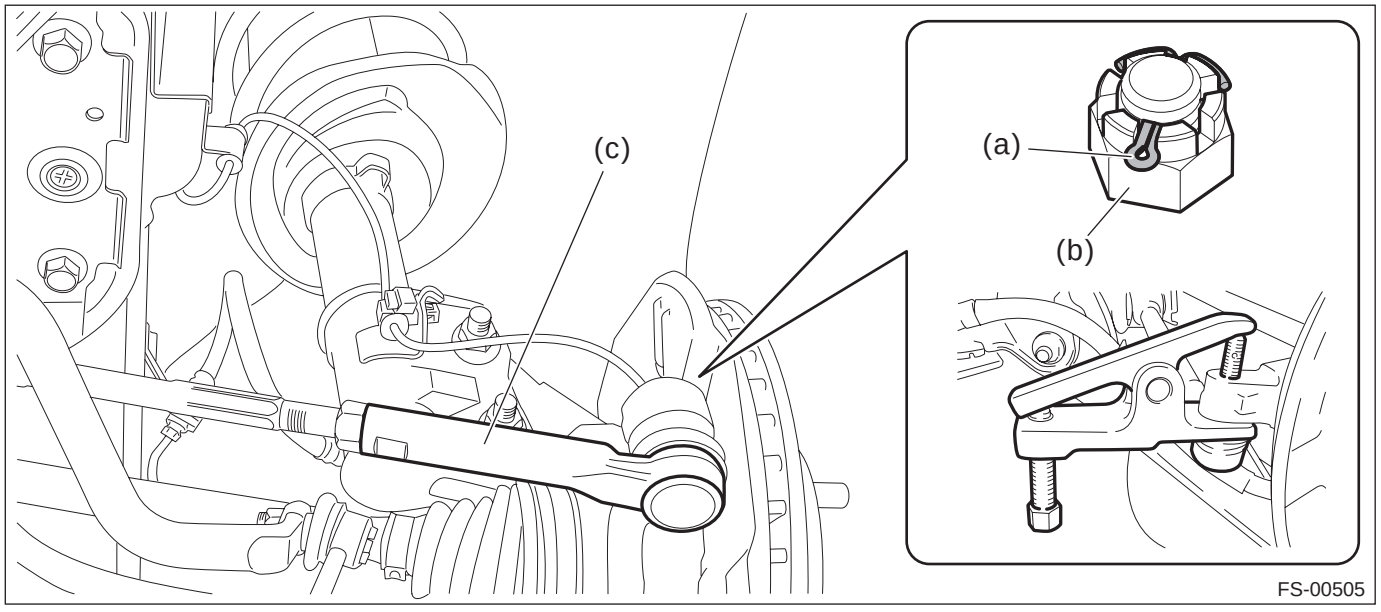
7. Electric Power Steering Gearbox

A: REMOVAL

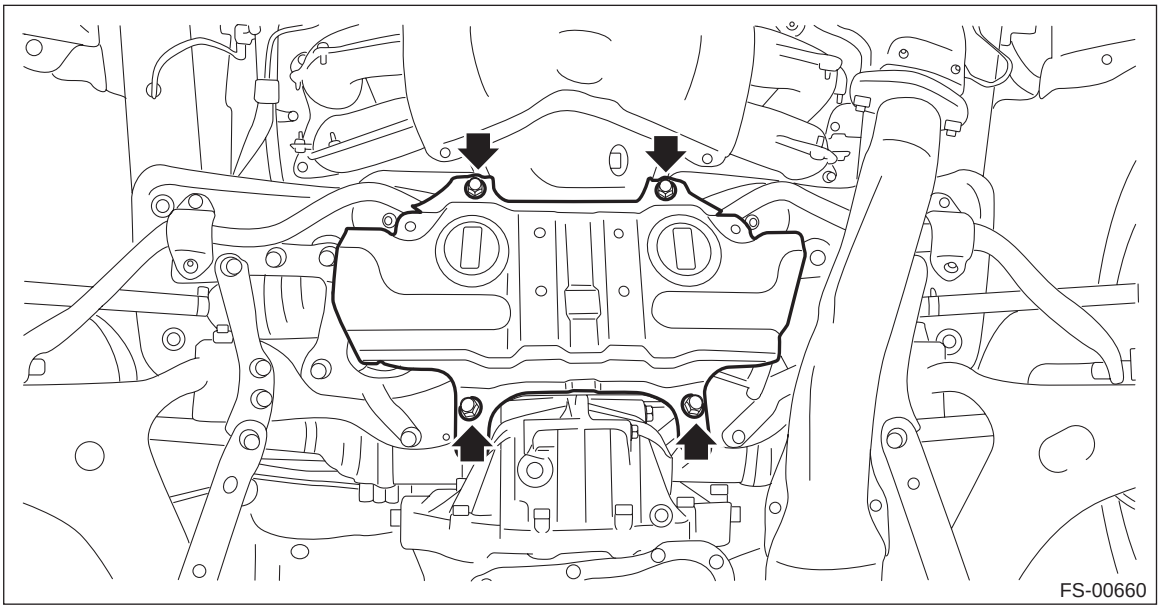
CAUTION:
For electric power steering model, be careful of the following items.
• The power steering control module continues to operate after the engine stops and calculates the temperature in the control module. Therefore, before starting service of the power steering system which requires disconnection of the connector, stop the engine and allow approx. 30 minutes until the control module becomes cold.
• Be careful not to let any foreign matter (dust, water, oil, etc.) enter into the power steering control module connector when removing or installing. If a foreign matter enters, completely remove it.
1) Lift up the vehicle, and then remove the front wheels.
2) Remove the under cover - front. <Ref. to EI-21, REMOVAL, Front Under Cover.>
3) Remove the universal joint assembly - steering. <Ref. to PS-21, REMOVAL, Universal Joint.>
4) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
Disconnect the ground terminal from battery sensor.
5) Disconnect the connector and harness clamp from power steering control module.
6) Disconnect the tie-rod end.
   (1) Pull out the cotter pin (a).
   (2) Remove the castle nut (b).
   (3) Using a tie-rod ball joint puller, remove the tie-rod end (c).

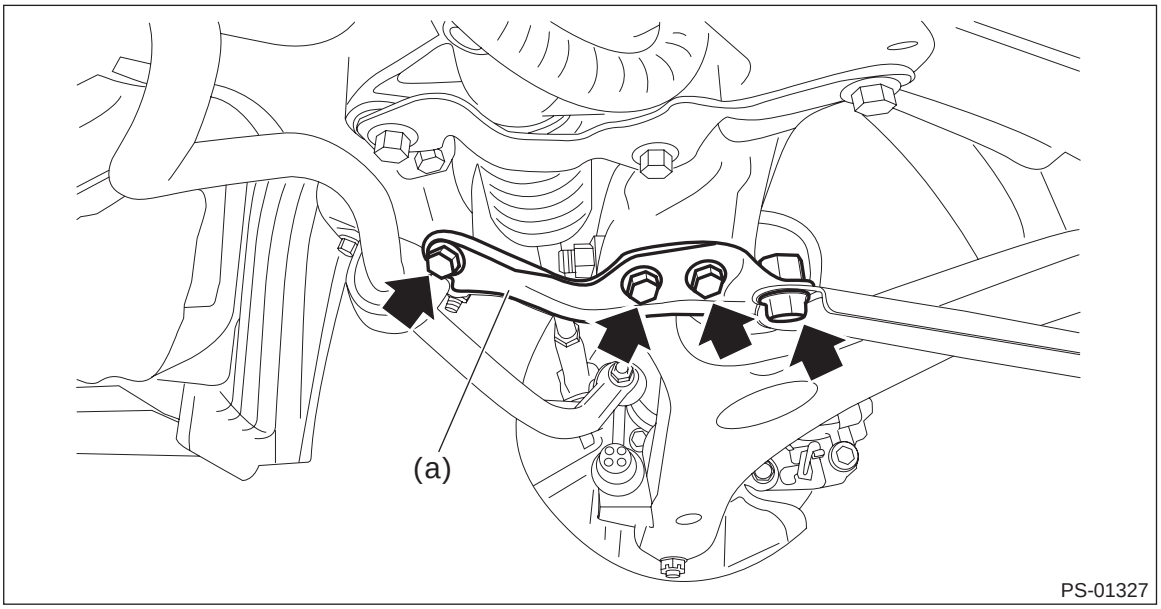
Preparation tool:
Tie-rod ball joint puller



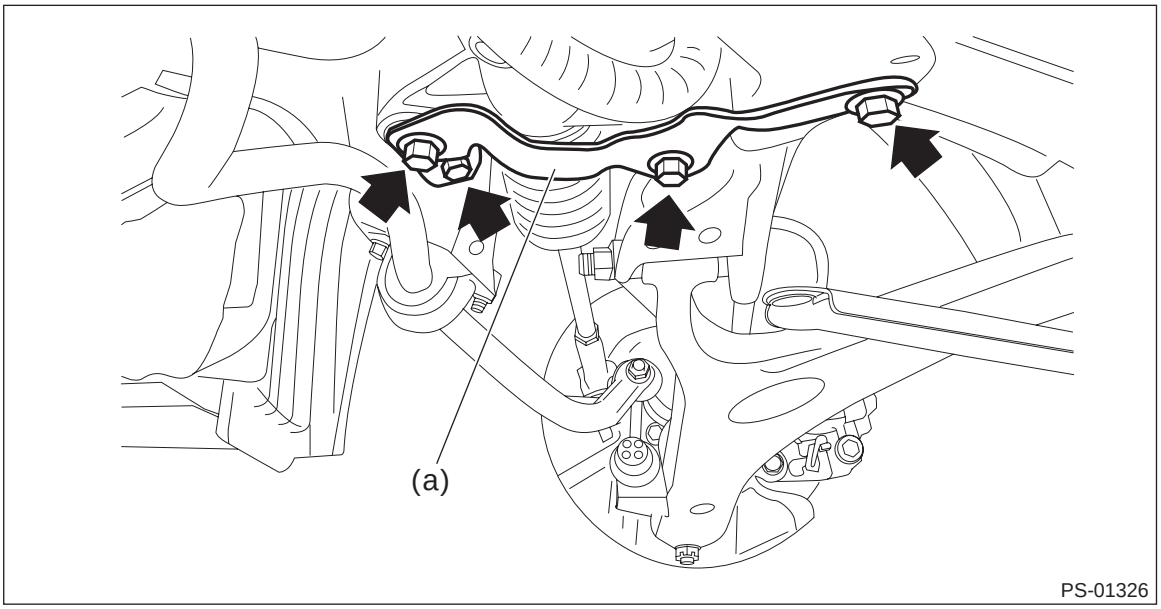
7) Remove the front crossmember support.



8) Remove the front exhaust pipe. <Ref. to EX(w/o STI)-9, REMOVAL, Front Exhaust Pipe.>
9) Remove the support plate - front crossmember (a).

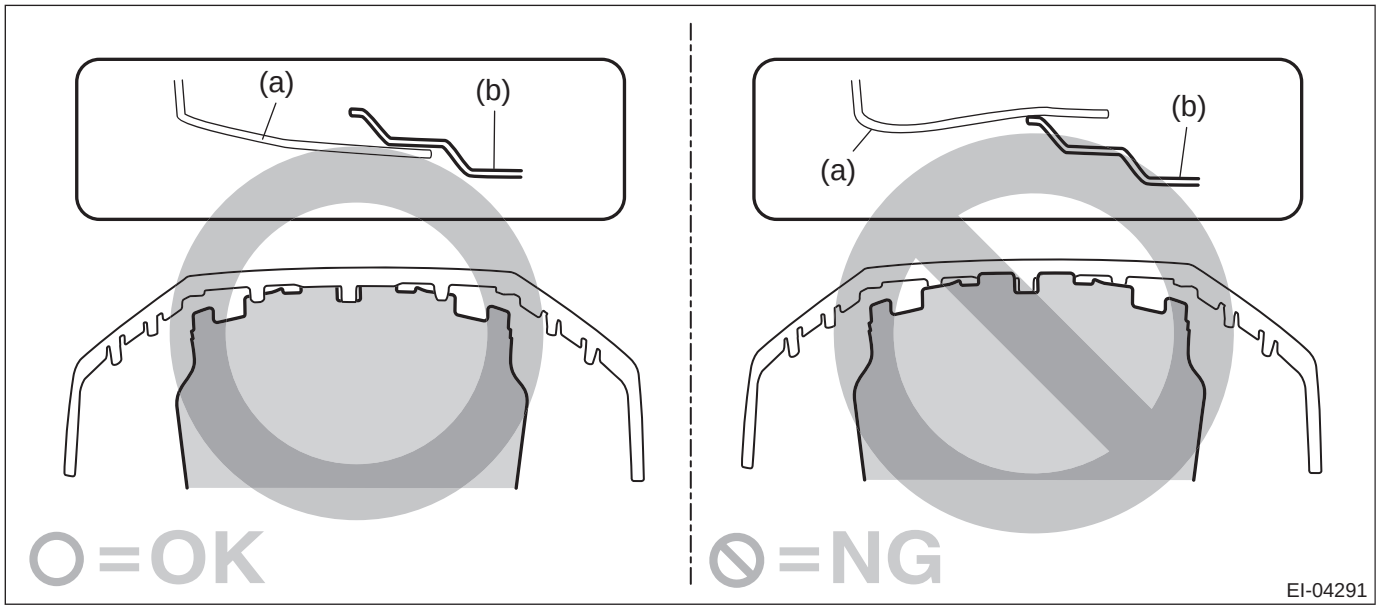


10) Remove the bolts securing the steering gearbox assembly, and remove the stiffener (a) and steering gearbox assembly.



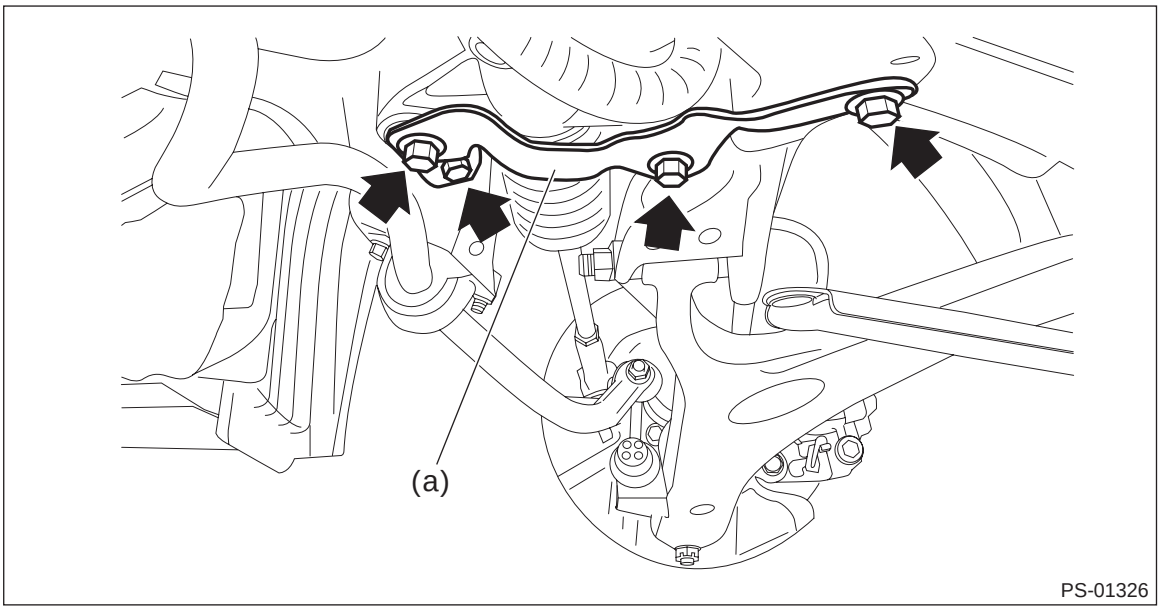
B: INSTALLATION

CAUTION:
Install the under cover - front so that the front end of the under cover (b) comes inside the bumper face - front (a).



1) Insert the steering gearbox assembly into crossmember, being careful not to damage the boot of the steering gearbox assembly.
2) Install the steering gearbox assembly to the crossmember by tightening the bolts through the stiffener (a) to the specified torque.

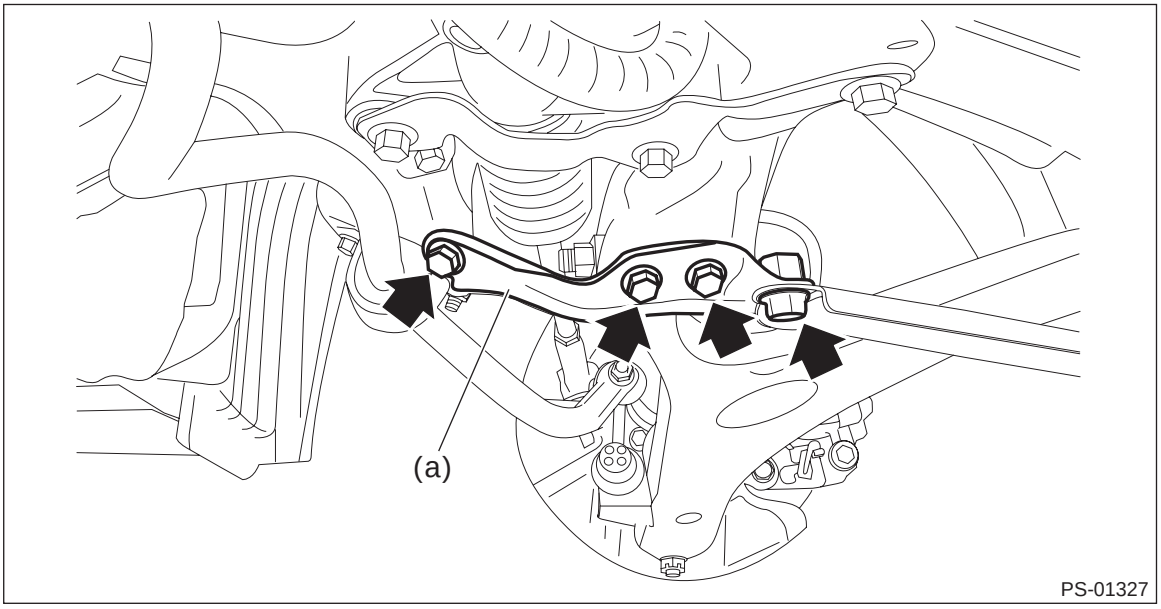
Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)



3) Install the universal joint assembly - steering. <Ref. to PS-22, INSTALLATION, Universal Joint.>

CAUTION:
Tighten the bolts of the universal joint assembly - steering in the order of steering gearbox side and column shaft side.
4) Install the support plate - front crossmember (a).

Tightening torque:
Support plate - front crossmember: 60 N·m (6.1 kgf-m, 44.3 ft-lb)
Front support: 100 N·m (10.2 kgf-m, 73.8 ft-lb)

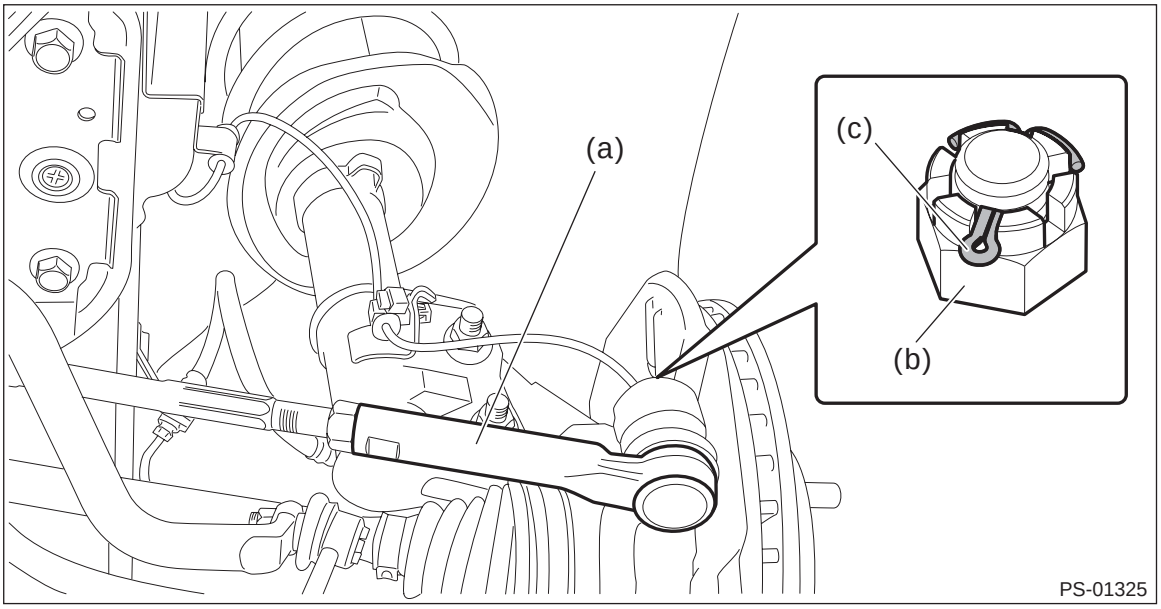


5) Connect the tie-rod ends and knuckle arm.
(1) Connect the tie-rod end (a) to the housing assembly - front axle.
(2) Tighten the castle nuts (b) to the specified torque.

CAUTION:
During connection, do not hit the cap at bottom of tie-rod end with a hammer.

Castle nut tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)

(3) Tighten within the range of 60° so that the cotter pin hole and cutout portion of the castle nut (b) are aligned.
(4) Insert the cotter pin (c), and bend the tip of the pin to fix it.



6) Install the front crossmember - support.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

7) Install the front exhaust pipe. <Ref. to EX(w/o STI)-17, INSTALLATION, Front Exhaust Pipe.>
8) Install the under cover - front. <Ref. to EI-22, INSTALLATION, Front Under Cover.>
9) Install the front wheels.
10) Lower the vehicle.
11) Tighten the wheel nuts to the specified torque.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

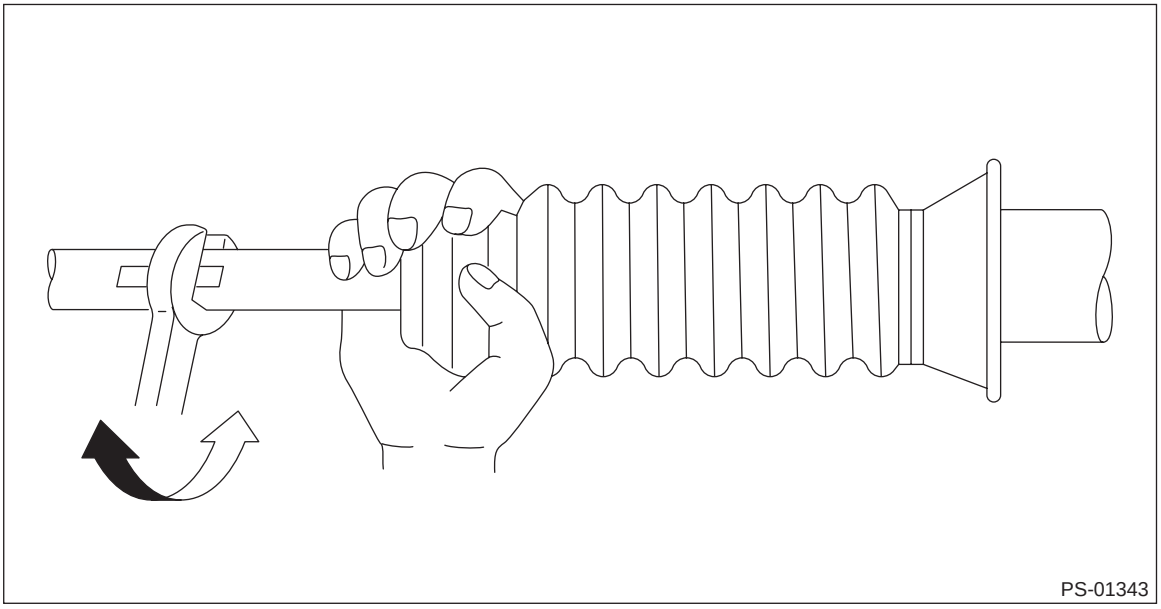
12) Connect the power steering control module harness connector.
13) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
Connect the ground terminal to battery sensor.
14) After adjusting toe-in and steering angle, tighten the lock nut on tie-rod end.

CAUTION:
When the wheel alignment has been adjusted, perform the adjustment of the steering angle sensor. <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

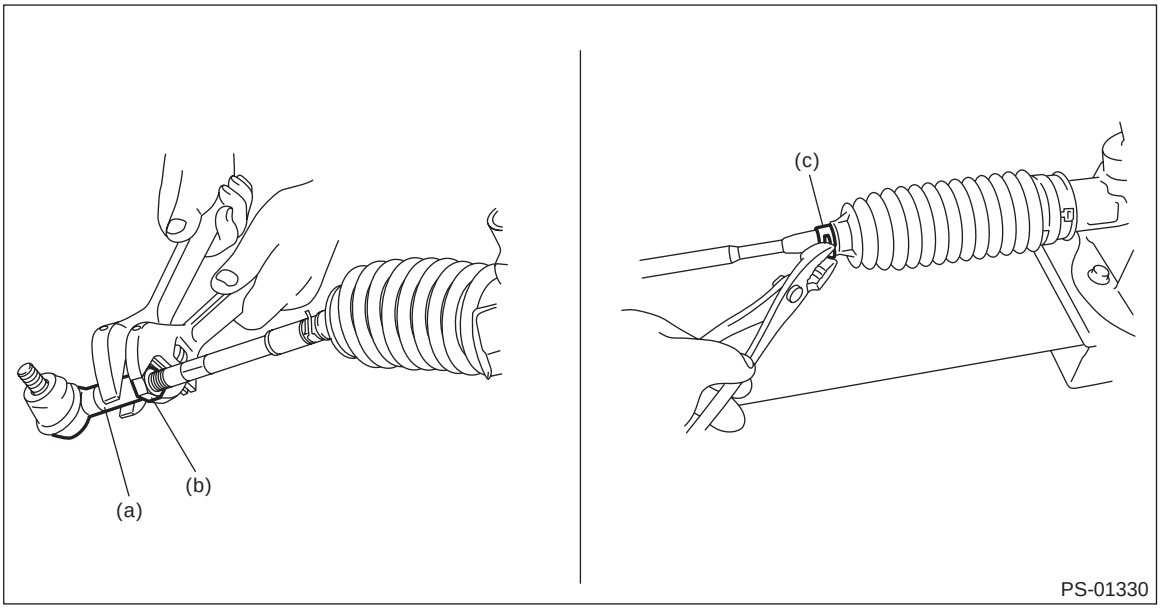
Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)

NOTE:
When adjusting toe-in, hold the boot - steering gearbox as shown to prevent it from being rotated or twisted. If it becomes twisted, straighten it.



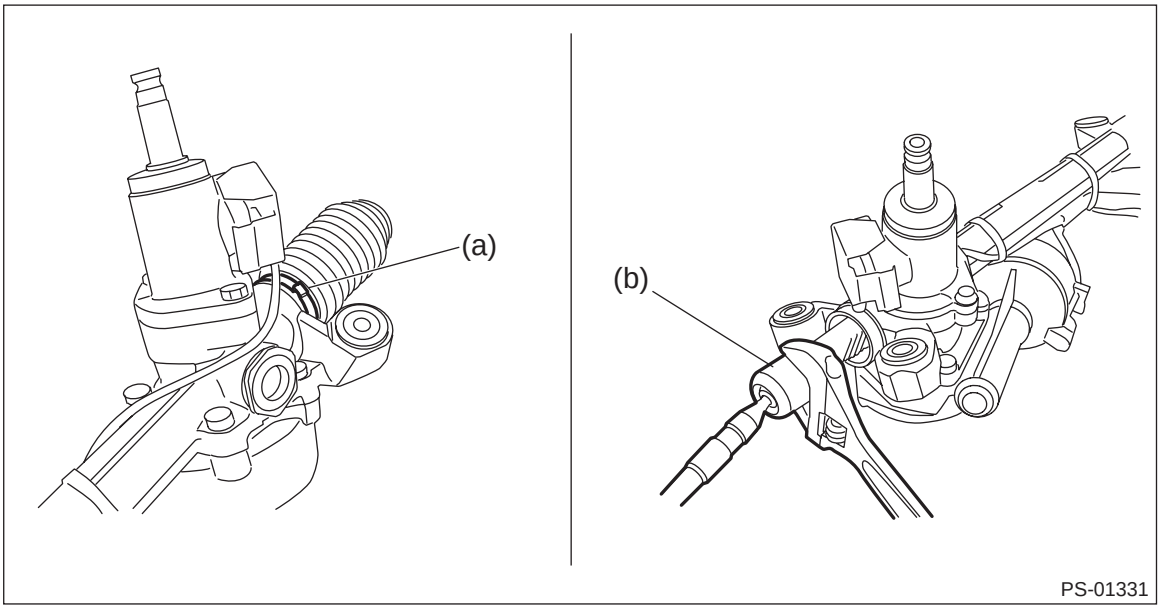
C: DISASSEMBLY

CAUTION:
• Nut for fixing the rack is on the driver's side only. When removing the tie-rod on the passenger's side, turn over the boot - steering gearbox on the driver's side, and fix the rack during operation.
• When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.
1) Remove the tie-rod end (a) and lock nut (b) from the steering gearbox assembly.
2) Remove the clip - boot tie-rod (c) located outside the boot - steering gearbox using the pliers, and then slide the boot - steering gearbox to the tie-rod end side.



3) Remove the tie-rod (b) from the gearbox assembly.
(1) Using a flat tip screwdriver, remove the band - boot (a) from the boot - steering gearbox.

NOTE:
Replace the boot - steering gearbox or the band - boot (a) if there is damage, cracks or deterioration.
(2) Remove the tie-rod (b).



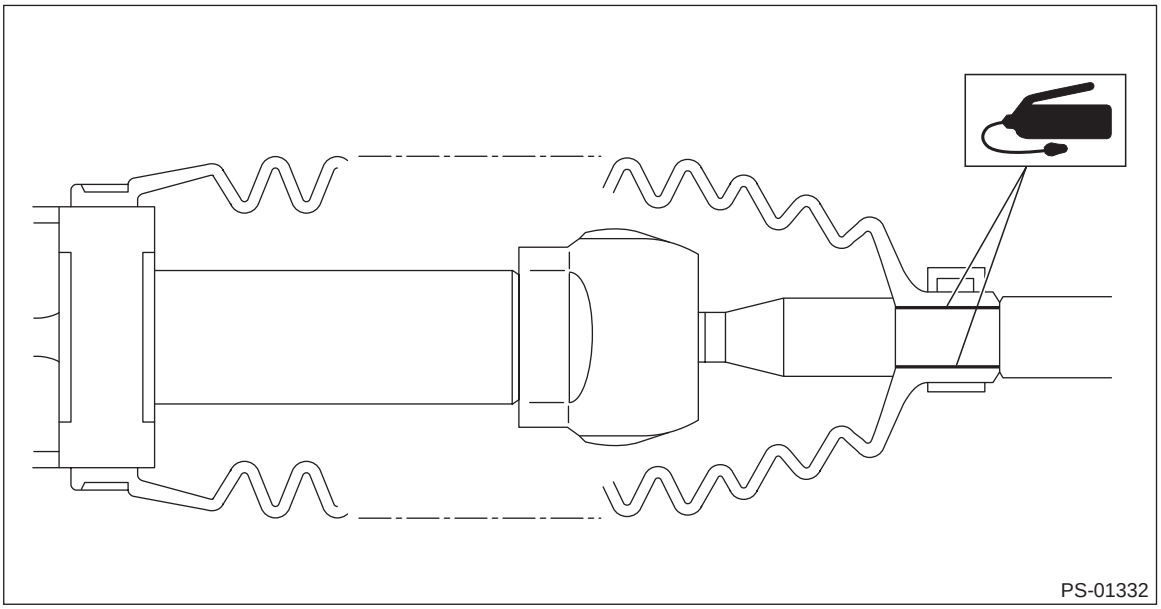
D: ASSEMBLY

1) Install the tie-rod into rack.

Tightening torque:
90 N·m (9.2 kgf-m, 66.4 ft-lb)

NOTE:
Check the mating face of rack and tie-rod for foreign matter such as dust etc.
2) Apply a coat of grease to the tie-rod groove, and then install the boot - steering gearbox to the housing.

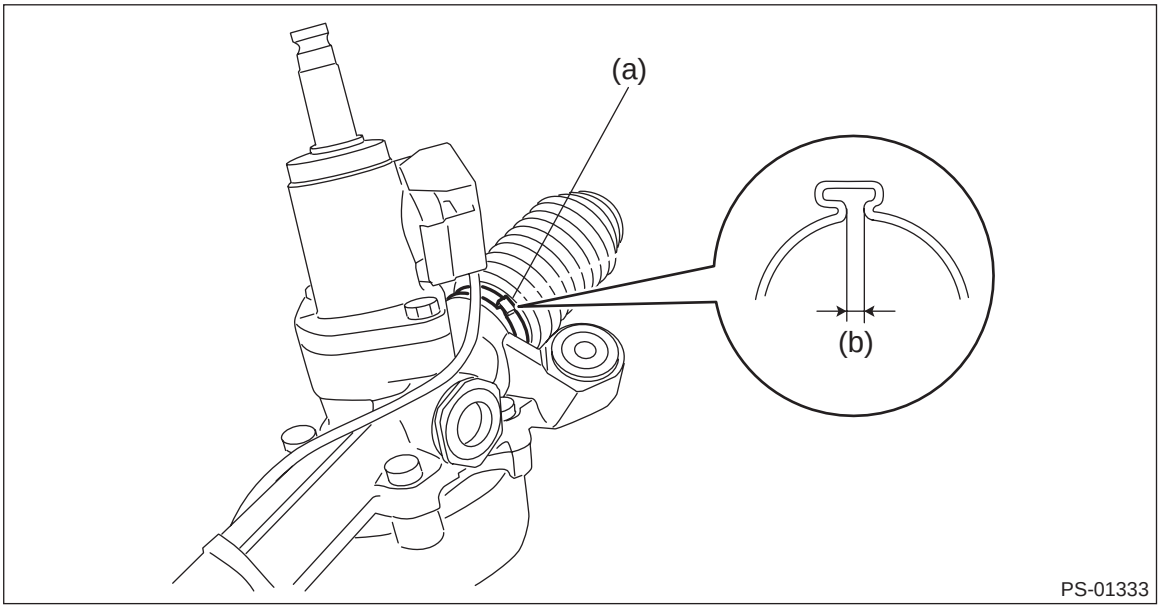
NOTE:
Make sure that the boot - steering gearbox is installed without unusual inflation or deflation.



PS-01332

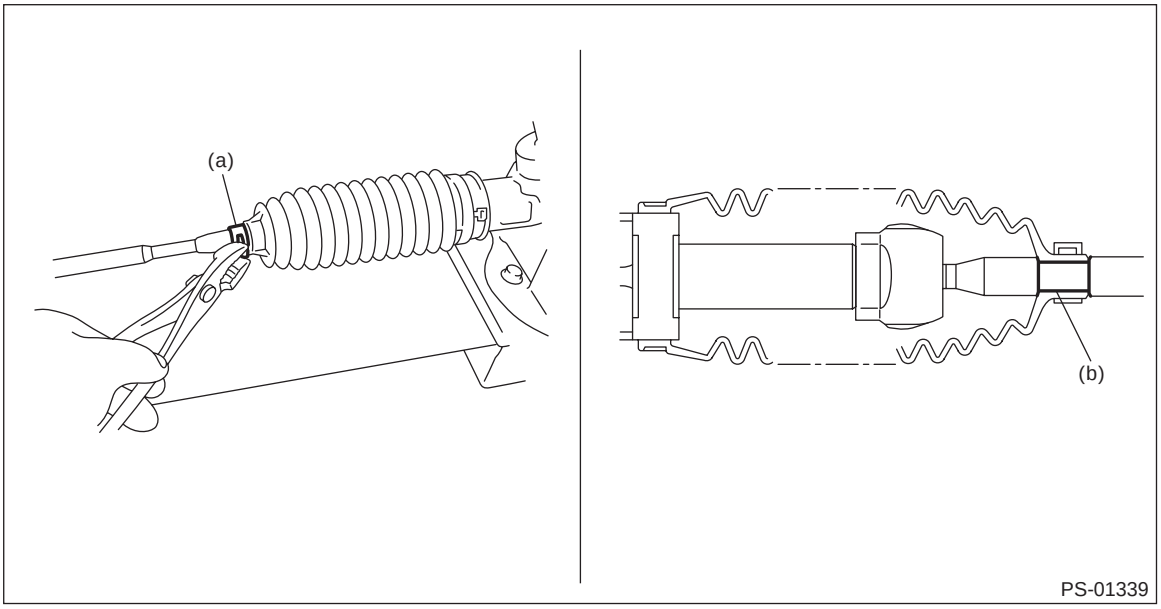
3) Using the boot clamp pliers, crimp the boot so that the clearance (b) of the band - boot (a) crimp portion becomes 2 mm (0.08 in) or less.

NOTE:
Use a new band - boot.



PS-01333

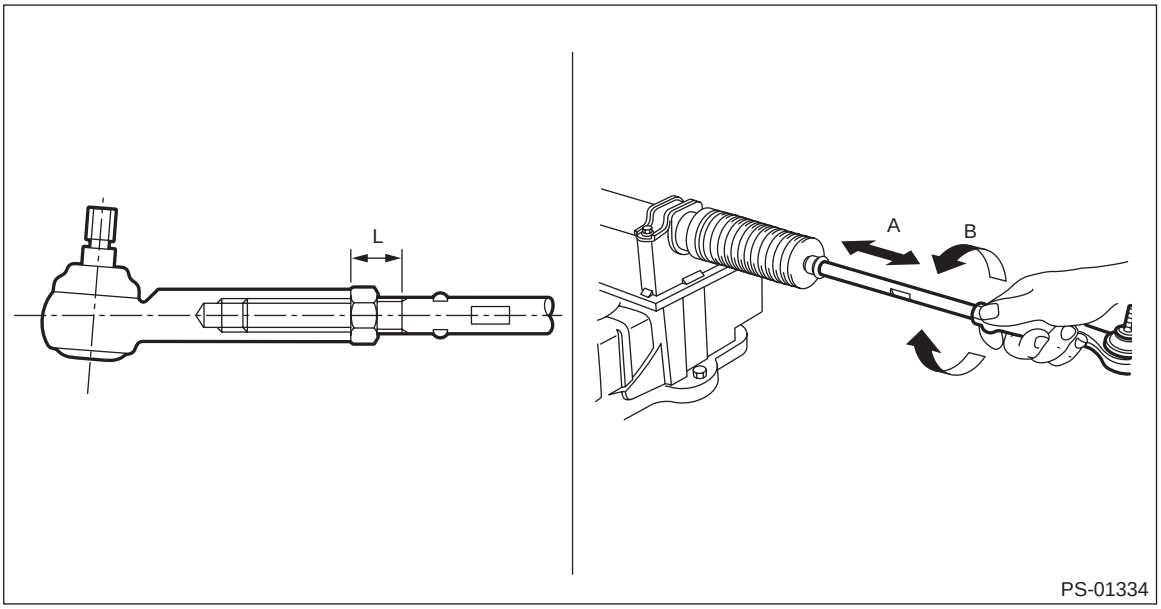
4) Fix the end of the boot - steering gearbox with clip - boot tie-rod (a).
5) After installation, check that the end of the boot - steering gearbox is installed to the groove (b) of the tie-rod.



6) If the tie-rod end has been removed, screw in lock nut and tie-rod end to the threaded portion of tie-rod, and tighten the lock nut temporarily in a position as shown in the figure.

Installed tie-rod length L:
29 mm (1.14 in)

7) Inspect the steering gearbox assembly as follows:
1. “A” Holding the tie-rod end, repeat lock to lock several times as quickly as possible.
2. “B” Holding the tie-rod end, turn it slowly at a radius several times as large as possible.
3. Finally, make sure that the boot - steering gearbox is installed in the specified position without inflating.



8) Remove the steering gearbox assembly from ST.

E: INSPECTION

1. UNIT INSPECTION

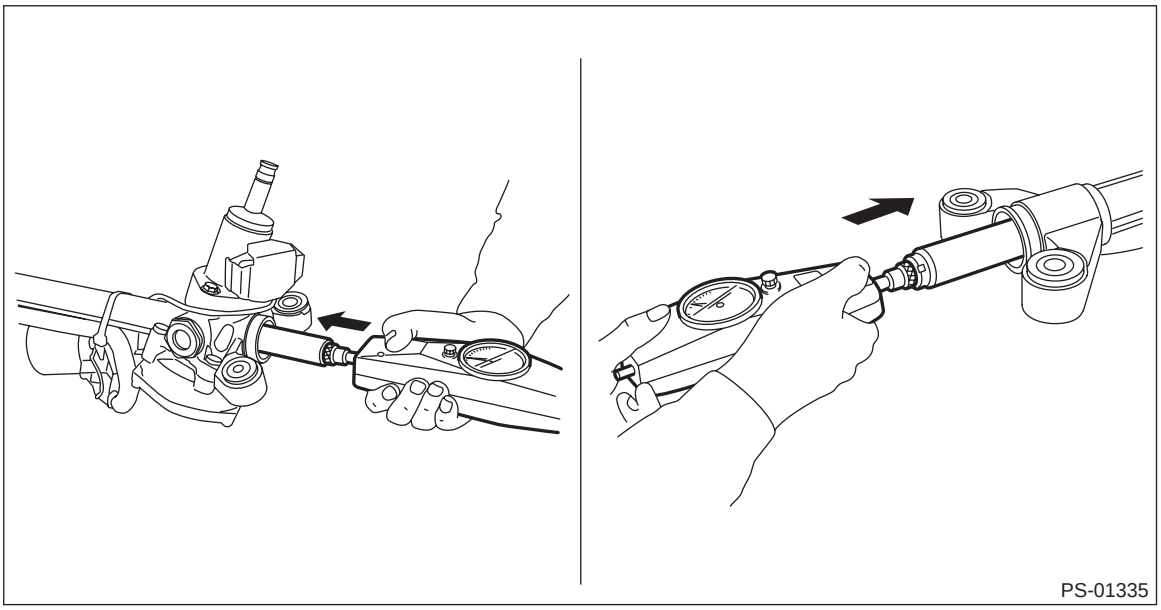
Check components for wear, damage or other faults. Adjust or replace if necessary.

2. LIMIT

Make a measurements as follows. If it exceeds the specified service limits, adjust or replace.

NOTE:
When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.

Rack shaft sliding resistance:
Limit: 360 N (37 kgf, 81 lbf) or less
Left/right differential of sliding resistance: 20% or less

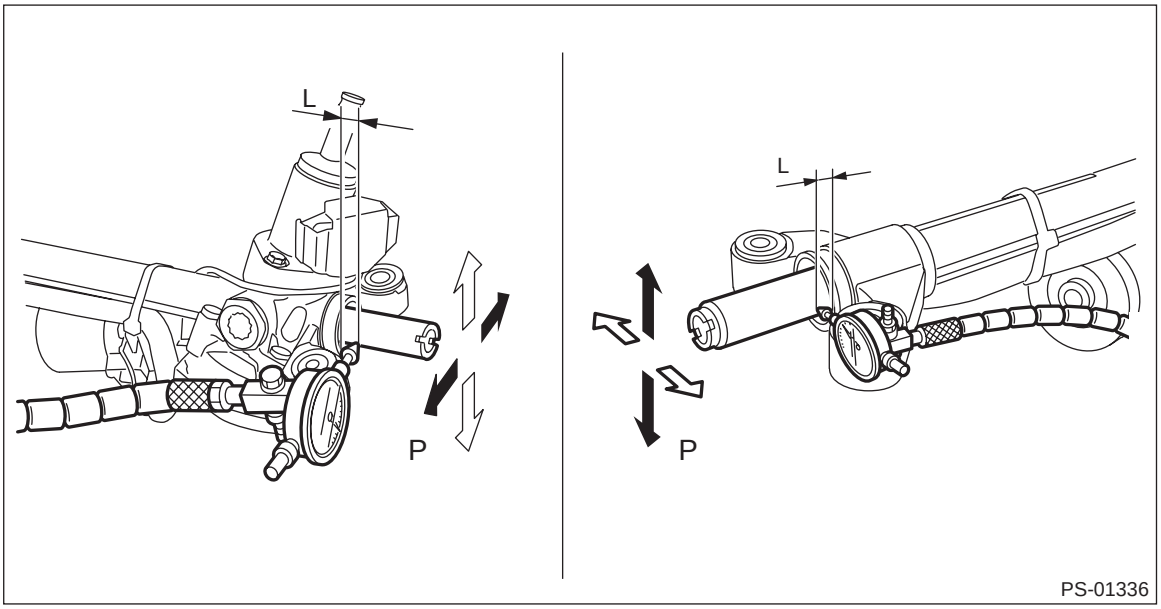


3. RACK SHAFT PLAY IN THE RADIAL DIRECTION

Right-turn steering:
Service limit:
Direction ⬅ ➡ : 0.4 mm (0.016 in) or less
Direction ⇦ ⇨ : 0.6 mm (0.024 in) or less

Left-turn steering:
Service limit:
Direction ⇦ ⇨ ⬅ ➡ : 0.4 mm (0.016 in) or less

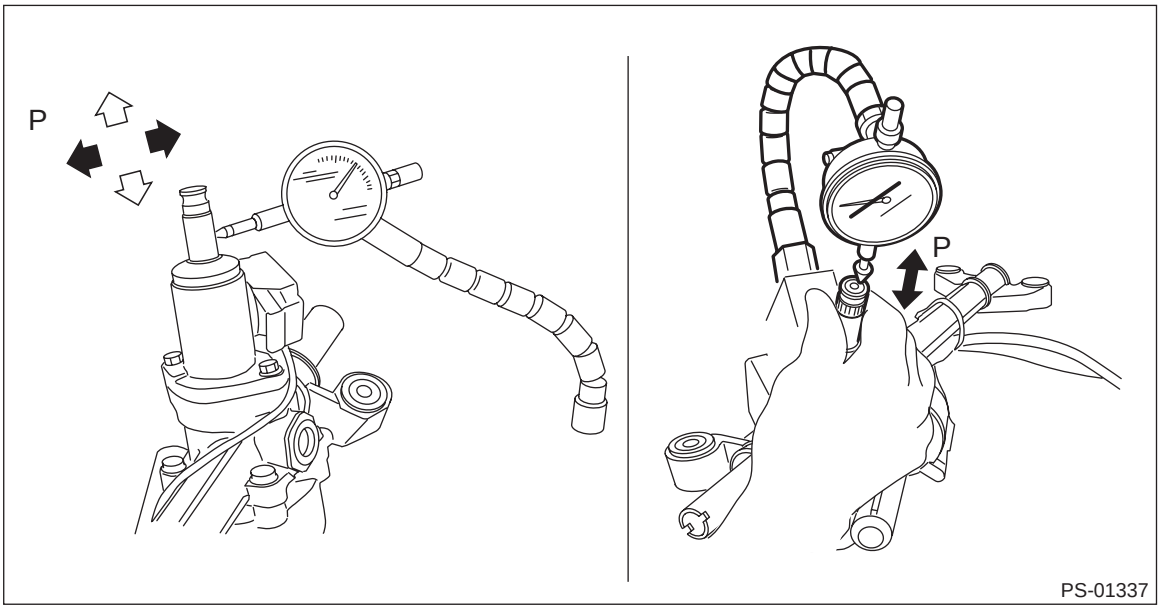
Condition:
L: 5 mm (0.20 in)
P: 98 N (10 kgf, 22 lbf)



4. INPUT SHAFT PLAY

In radial direction:
Wear limit: 0.18 mm (0.0071 in) or less
Condition: P = 98 N (10 kgf, 22 lbf)

In axial direction:
Wear limit: 0.27 mm (0.0106 in) or less
Condition: P = 20 — 49 N (2 — 5 kgf, 4 — 11 lbf)

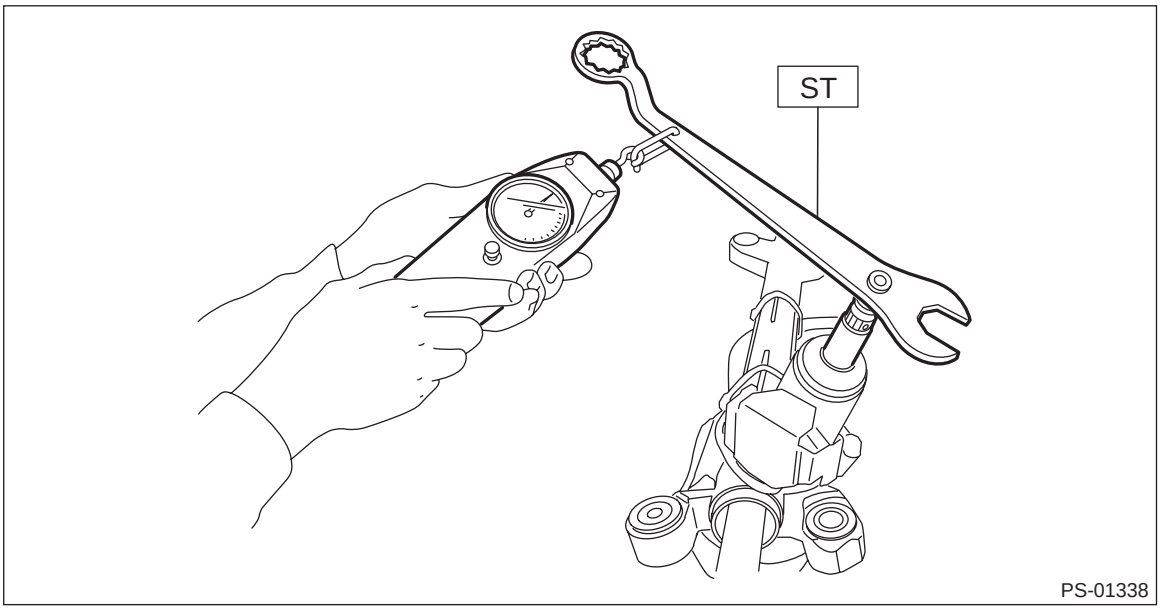


5. TURNING RESISTANCE OF GEARBOX

1) Using the ST, measure the rotational resistance of the steering gearbox assembly.

Preparation tool:
ST: SPANNER (34099PA100)

Service limit:
Maximum allowable resistance: 18 N (1.8 kgf, 4.0 lbf) or less
Difference between right and left rotational resistance: 20% or less



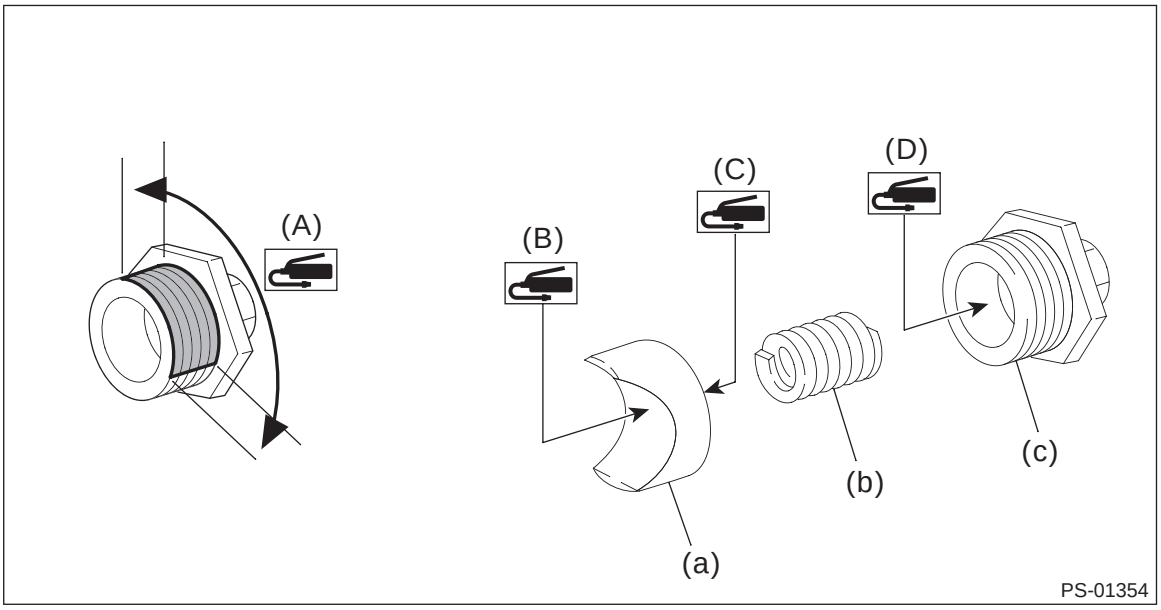
F: ADJUSTMENT

1. GEARBOX BACKLASH ADJUSTMENT

1) Remove the steering gearbox assembly. <Ref. to PS-56, REMOVAL, Electric Power Steering Gearbox.>
2) Loosen the lock nut and adjusting screw.
3) Apply a coat of grease to the sliding surface (B) of the pad - pressure (a) and seating surface (C) of spring - gearbox (b), and then insert the pad - pressure (a) into steering body.
4) Charge the adjusting screw (c) with grease (D), and then insert the spring - gearbox (b) into adjusting screw. Then install on the steering body.

Grease:
Molywhite LS-G
5) Apply liquid gasket to 1/3 or more (A) of entire perimeter of adjusting screw thread (c).

Liquid gasket:
THREE BOND 1102



6) Tighten the adjusting screw to 20 N·m (2.0 kgf-m, 14.8 ft-lb), then loosen it.
7) Tighten the adjusting screw to 20 N·m (2.0 kgf-m, 14.8 ft-lb), then loosen it.
8) Tighten the adjusting screw to 20 N·m (2.0 kgf-m, 14.8 ft-lb), then loosen it by 30°.
9) While fixing the adjusting screw, tighten the lock nuts.

Tightening torque:
45 N·m (4.6 kgf-m, 33.2 ft-lb)

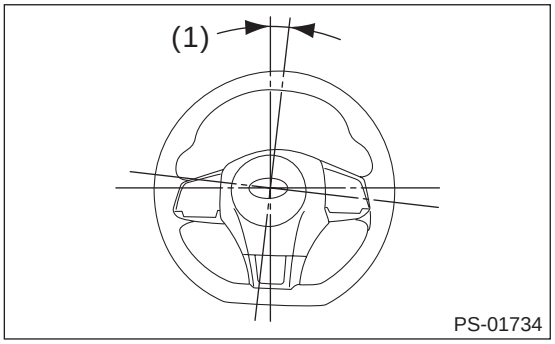
2. FRONT WHEEL ALIGNMENT ADJUSTMENT

1) Adjust the front toe. <Ref. to FS-17, FRONT WHEEL TOE-IN, ADJUSTMENT, Wheel Alignment.>
2) Check the steering angle of the wheels.

Standard of steering angle:

Inner wheel	***37.5°±1.5°***
Outer wheel	***32.9°±1.5°***

3) When the steering wheel is in the following condition, perform the steering wheel installation over again.
- When wheels are set in the straight ahead position, the steering wheel spokes are not horizontal.
- Error is more than 5° on the periphery of the steering wheel.



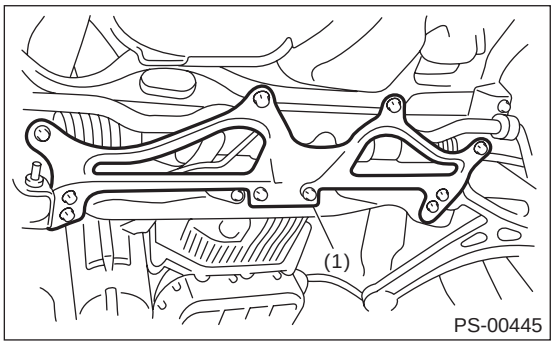
(1) 5° or less

4) If the steering wheel spokes are not horizontal with vehicle set in the straight ahead position after this adjustment, correct it by turning the right and left tie-rods in the opposite direction from each other by the same angle. Also check that there are no abnormal steering effort, failure of the steering wheel to return or other faults.

8. Pipe Assembly

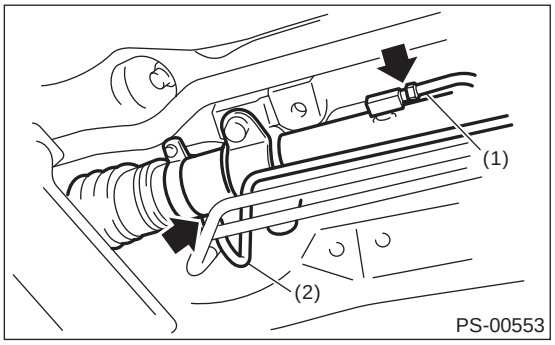
A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the under cover. <Ref. to EI-21, REMOVAL, Front Under Cover.>
3) Lift up the vehicle, and remove the front crossmember support plate.



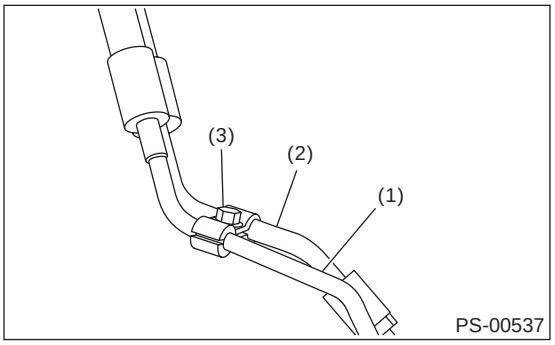
(1) Front crossmember support plate

4) Remove the one pipe joint at the center of the gearbox, and connect the vinyl hose to the pipe and the joint. Discharge the fluid by turning the steering wheel fully clockwise and counterclockwise. Discharge the fluid similarly from other pipes.



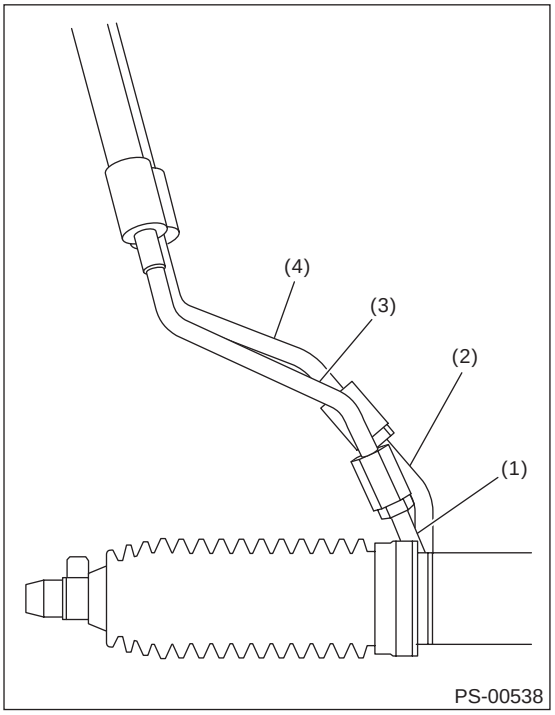
(1) Pipe A
(2) Pipe B

5) Remove the clamp E from return hose and pressure hose.



(1) Pressure hose
(2) Return hose
(3) Clamp E

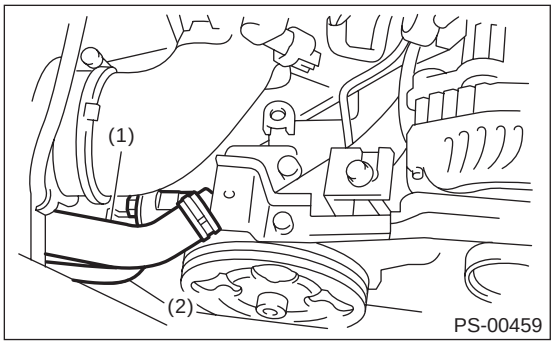
6) Disconnect the return hose from return pipe and disconnect the pressure hose from feed pipe.



(1) Feed pipe
(2) Return pipe
(3) Pressure hose
(4) Return hose

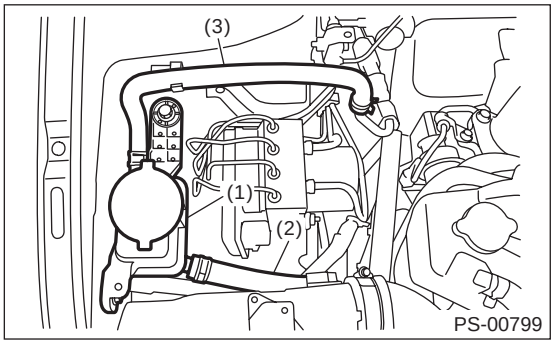
7) Remove the air intake duct. <Ref. to IN(STI)-11, REMOVAL, Air Intake Duct.>

8) Disconnect the suction hose and pressure hose from oil pump.



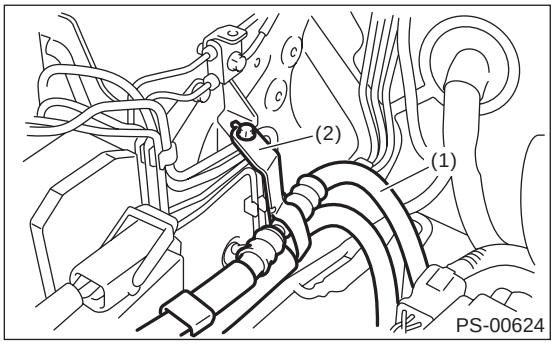
(1) Suction hose
(2) Pressure hose

9) Disconnect the suction hose and return hose from the reservoir tank.



(1) Reservoir tank
(2) Suction hose
(3) Return hose

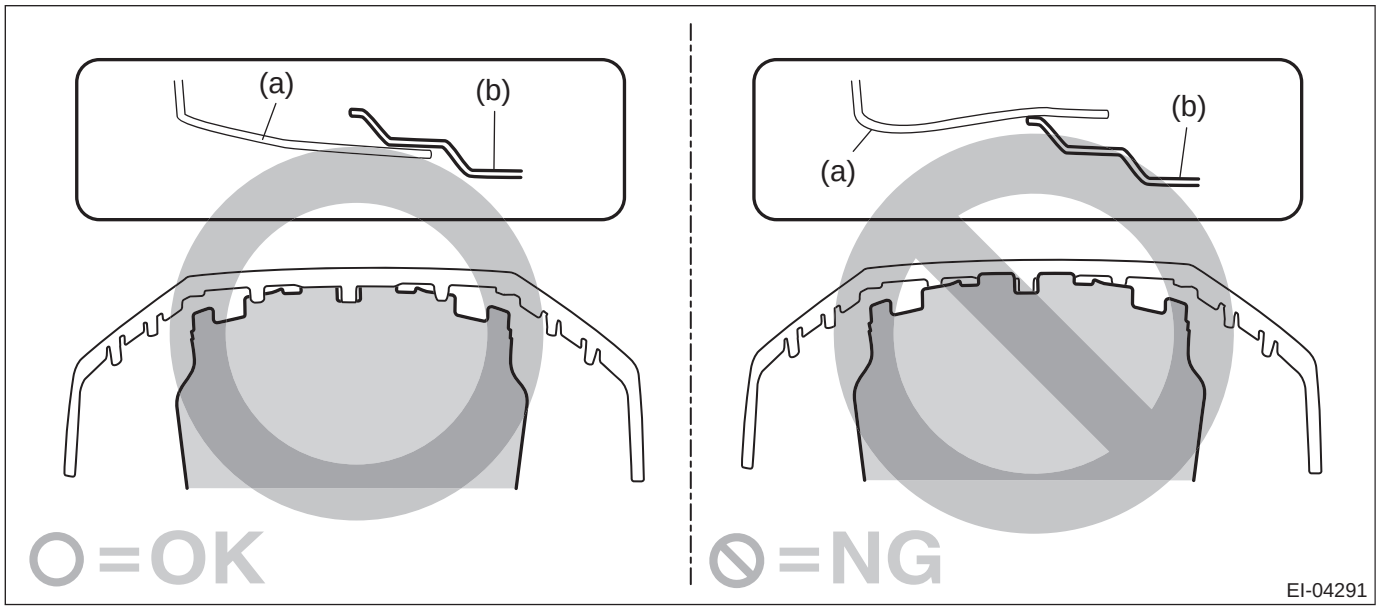
10) Remove the hose bracket and take out the hose assembly from vehicle.



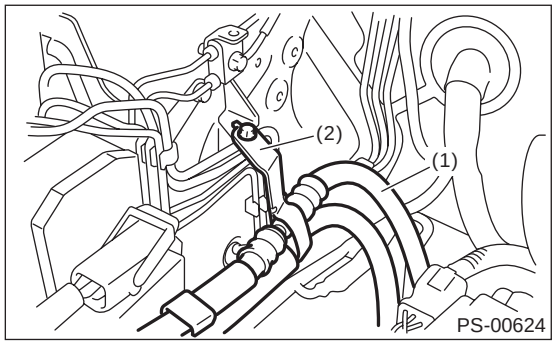
(1) Hose ASSY
(2) Hose bracket

B: INSTALLATION

CAUTION:
Install the under cover - front so that the front end of the under cover (b) comes inside the bumper face - front (a).



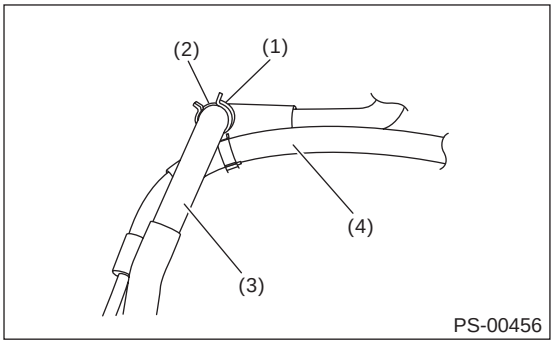
1) Temporarily tighten the hose bracket bolt.



(1) Hose ASSY
(2) Hose bracket

2) Install the plastic clip to the pressure hose and suction hose.

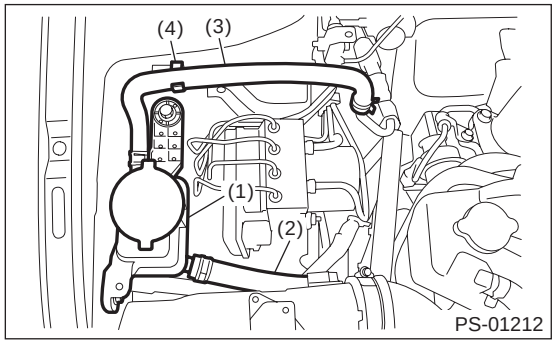
CAUTION:
Align the installation position of the plastic clip with the protector edge of the suction hose.



(1) Plastic clip
(2) Protector
(3) Suction hose
(4) Pressure hose

3) Connect the suction hose and return hose to the reservoir tank.

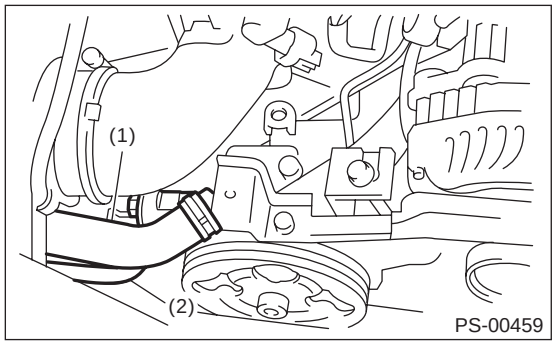
CAUTION:
Firmly insert the plastic clip of return hose to the bracket.



(1) Reservoir tank
(2) Suction hose
(3) Return hose
(4) Plastic clip

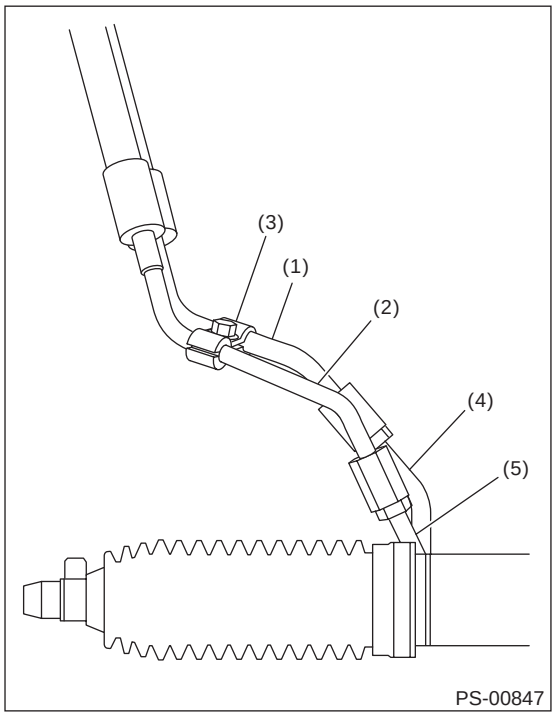
4) Connect the suction hose and pressure hose to the oil pump. Tighten the eyebolt of pressure hose.

Tightening torque:
40 N·m (4.1 kgf-m, 29.5 ft-lb)



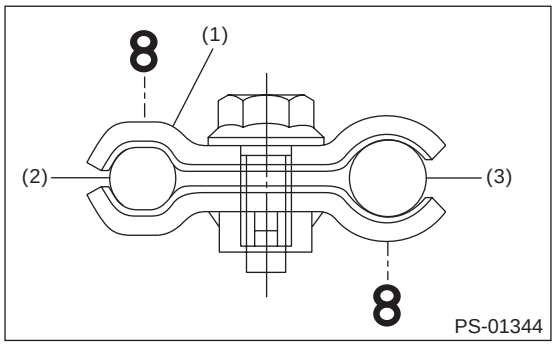
(1) Suction hose
(2) Pressure hose

5) Temporarily connect the pressure hose to feed pipe and return hose to return pipe. Temporarily tighten the bolt of clamp E.



(1) Return hose
(2) Pressure hose
(3) Clamp E
(4) Return pipe
(5) Feed pipe

NOTE:
Make sure that the character “8” on each clamp is positioned on the opposite side, as shown in the figure.



(1) Clamp E
(2) Pressure hose
(3) Return hose

6) Tighten clamp E.

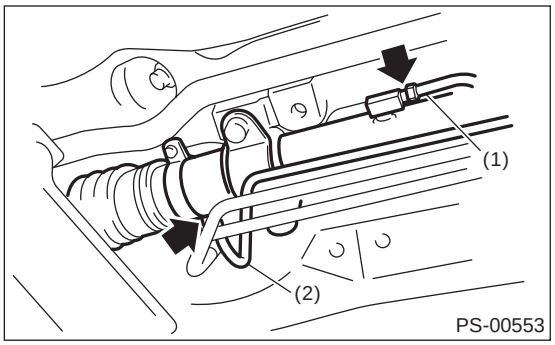
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7) Tighten the pressure hose to feed pipe and return hose to return pipe.

Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)

8) Connect pipes A and B to the four pipe joints of the gearbox.

Tightening torque:
Cylinder side: 27 N·m (2.8 kgf-m, 19.9 ft-lb)
Gear housing side: 17 N·m (1.7 kgf-m, 12.5 ft-lb)

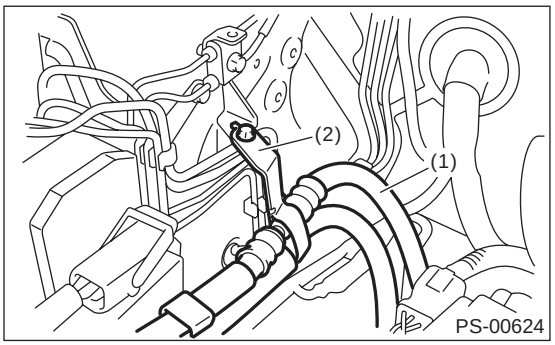


(1) Pipe A
(2) Pipe B

9) Install the front crossmember support plate and jack-up plate.
10) Install the under cover. <Ref. to EI-22, INSTALLATION, Front Under Cover.>
11) Lower the vehicle.

12) Tighten the bolts which hold the hose bracket.

Tightening torque:
10 N·m (1.0 kgf-m, 7.4 ft-lb)



(1) Hose ASSY
(2) Hose bracket

13) Install the air intake duct. <Ref. to IN(STI)-11, INSTALLATION, Air Intake Duct.>
14) Connect the battery ground terminal.
15) Fill with the specified fluid.

CAUTION:
Never start the engine before filling with fluid; otherwise the vane pump may become seized.

16) Finally, check the clearance between pipes or hoses as shown in the figure indicated in “General Diagnostic Table”. <Ref. to PS-94, CLEARANCE CHECK (HYDRAULIC TYPE), INSPECTION, General Diagnostic Table.>

C: INSPECTION

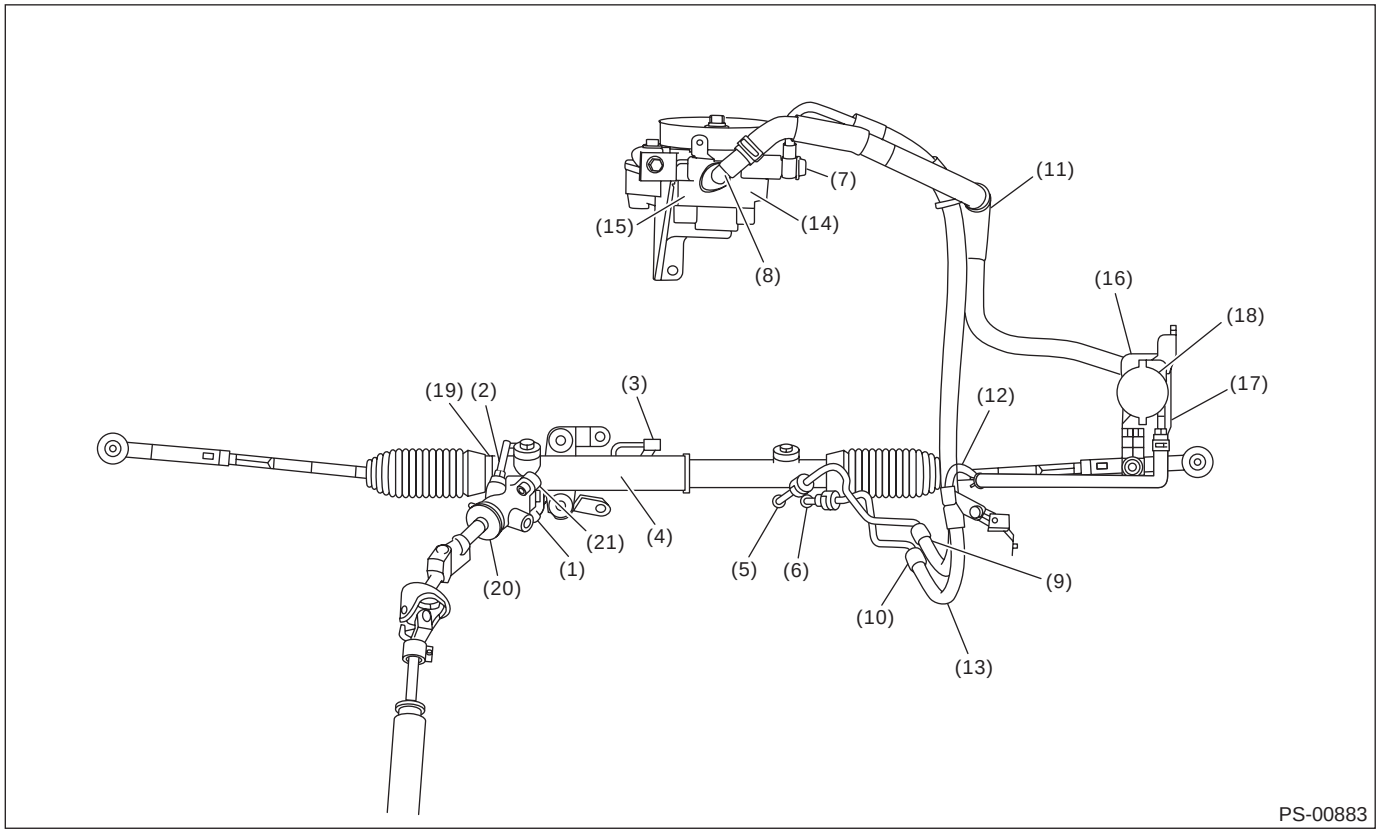
Check all disassembled parts for wear, damage or other problems. Repair or replace the defective parts as necessary.

Part	Maintenance parts	Corrective action
Pipe	• O-ring fitting surface damage • Nut damage • Pipe damage	Replace with a new part.
Hose	• Flare surface damage • Flare nut damage • Outer surface cracks • Outer surface wear • Clip damage • End coupling or adapter deformation	Replace with a new part.

CAUTION:
Although the surface layer materials of rubber hoses have excellent weathering resistance, heat resistance and resistance for low temperature brittleness, they are likely to be damaged chemically by brake fluid, battery electrolyte, engine oil and automatic transmission fluid and their service lives are to be very shortened. Wipe off hoses immediately if any of these come into contact with the hoses.
Since resistances for heat or low temperature brittleness are gradually declining according to time accumulation of hot or cold conditions for the hoses and their service lives are shortening accordingly, it is necessary to perform careful inspection frequently when the vehicle is used in hot weather areas, cold weather areas and a driving condition in which many steering operations are required in short time.
Continuous discharge of the relief valve for 5 seconds or more will reduce the service lives of hoses, oil pump, fluid, etc., due to over heating.

Trouble	Possible cause	Corrective action
Pressure hose burst	Excessive holding time of relief status	Instruct customers.
	Malfunction of the relief valve	Replace the oil pump.
	Poor cold characteristic of fluid	Replace fluid.
Disconnection of the return hose	Improper connection	Repair.
	Loosening of the clip	Replace the hose and clip.
	Poor cold characteristic of fluid	Replace fluid.
Fluid slightly leaking out of hose	Wrong layout, tensioned	Replace the hose.
	Excessive play of engine due to deterioration of engine mounting rubber	Replace the parts if defective.
	Improper stop position of pitching stopper	Replace the parts if defective.
Crack on hose	Excessive holding time of relief status	Replace. Instruct customers.
	Power steering fluid, engine oil, electrolyte adhere on the hose surface	Replace. Be careful during service work.

NOTE:
There are conditions in which a fluid leak is diagnosed, but is not actually leaking. This is because the fluid spilt during the last maintenance was not completely wiped off. Be sure to wipe off spilt fluid thoroughly after maintenance.



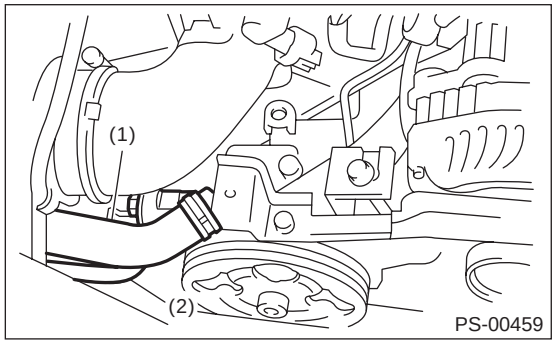
Fluid leaking area	Possible cause	Corrective action
Leakage from the connections of pipes and hoses, numbered (1) through (8) in the figure	Insufficient tightening of flare nut, adhesion of dirt, damage to flare or flare nut or eyebolt	Loosen and retighten. Replace if ineffective.
	Improper installation of hose or clamp	Replace.
	Damaged O-ring or gasket	Replace the O-ring, gasket pipe or hose with new part, if still no improvement, replace the gearbox or oil pump as well.
Leakage from hose (9) through (13) in the figure	Crack or damage in hose	Replace with a new part.
	Crack or damage in hose hardware	Replace with a new part.
Leakage from surrounding of aluminum portion of oil pump, (14) and (15) in the figure	Damaged O-ring	Replace the oil pump.
	Damaged gasket	Replace the oil pump.
Leakage from oil tank, (16) and (17) in the figure	Crack in oil tank	Replace the oil tank.
Leakage from filler neck of (18)	Damaged cap packing	Replace the cap.
	Crack in root of filler neck	Replace the oil tank.
	Fluid level too high	Adjust the fluid level.
Leakage from power cylinder of gearbox area (19) in the figure	Damaged oil seal	Replace the oil seal.
Leakage from (20), (21) in the figure and control valve of gearbox	Damaged packing or oil seal	Replace the faulty parts.
	Damage in control valve	Replace the control valve.

9. Oil Pump

A: REMOVAL

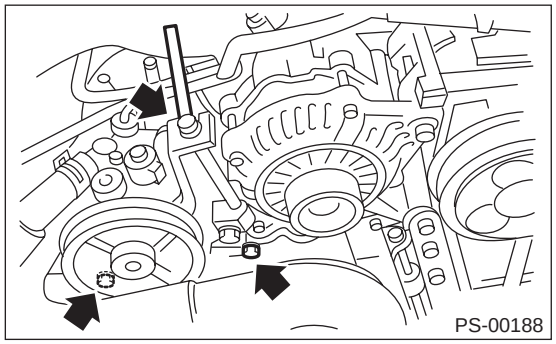
1) Disconnect the ground cable from battery.
2) Remove the V-belts (front side belt). <Ref. to ME(STI)-41, REMOVAL, V-belt.>
3) Disconnect the connector from power steering pump switch.
4) Disconnect the pressure hose and suction hose from the oil pump.

CAUTION:
• Do not allow fluid to come into contact with the pulley belt.
• To prevent foreign matter from entering the hose and pipe, cover the open ends with clean cloth.



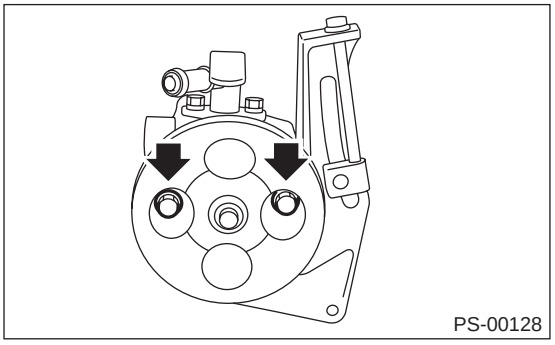
(1) Suction hose
(2) Pressure hose

5) Remove the installation bolt of the power steering pump bracket.

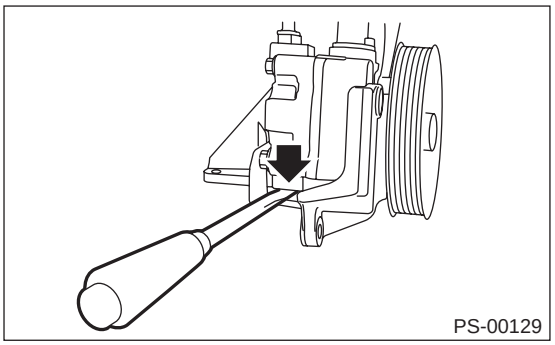


6) Place the oil pump bracket in a vise, and remove the two bolts from the front side of the oil pump.

CAUTION:
When securing the oil pump bracket in a vice, hold the oil pump bracket with the least possible force between two pieces of wood.



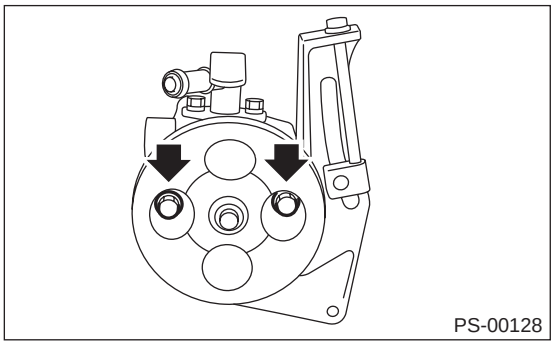
7) Remove the bolt from the rear side of oil pump.
8) Disassemble the oil pump and bracket by inserting a flat tip screwdriver as shown in the figure.



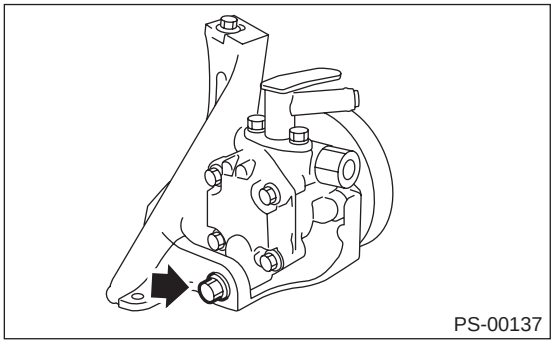
B: INSTALLATION

1) Install the oil pump to bracket.
2) Tighten the bolts which hold the oil pump to the bracket.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

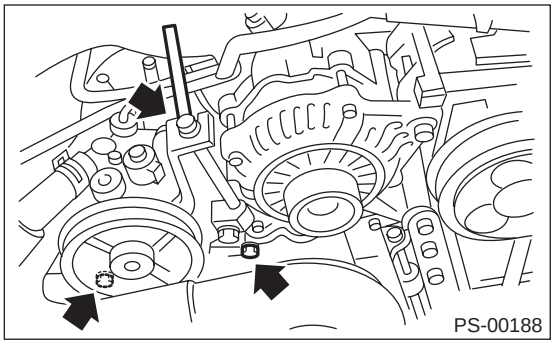


Tightening torque:
48 N·m (4.9 kgf-m, 35.4 ft-lb)



3) Attach the installation bolts of the power steering pump bracket.

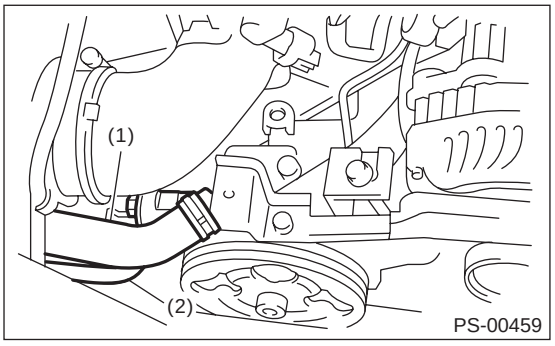
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to PS-8, OIL PUMP, COMPONENT, General Description.>



4) Connect the pressure hose and suction hose.

CAUTION:
Be careful when installing; If the hose is twisted it may come into contact with other parts.

Tightening torque:
Eyebolt
40 N·m (4.1 kgf-m, 29.5 ft-lb)



(1) Suction hose
(2) Pressure hose

5) Connect the power steering pump switch to the connector.
6) After installing the oil pump, fill the oil pump with fluid while rotating the pulley by hand and bleed the air from the oil pump.

CAUTION:
Always fill the oil pump with the fluid to prevent abnormal noise and seizure of the oil pump.
7) Install the V-belts (front side belt). <Ref. to ME(STI)-41, INSTALLATION, V-belt.>
8) Connect the battery ground terminal.
9) Fill with the specified power steering fluid. <Ref. to PS-83, Power Steering Fluid.>

CAUTION:
Never start the engine before filling with fluid; otherwise the vane pump may become seized.

C: INSPECTION

1. BASIC INSPECTION

Perform the following inspection procedures and replace faulty parts.

No.	Parts	Inspection	Corrective action
1	Oil pump (exterior)	(1) Crack, damage or oil leakage	Replace the oil pump with a new part.
		(2) Play of pulley shaft	Measure the radial play and axial play. If any of these exceeds the service limit, replace the oil pump with a new part.
2	Pulley	(1) Damage	Replace the oil pump with a new part.
		(2) Bend	Measure the V groove deflection. If it exceeds the service limit, replace the oil pump with a new part.
3	Oil pump (interior)	(1) Faulty or seized of vane pump	Check the rotating resistance of pulley. If it exceeds the service limit, replace the oil pump with a new part.
		(2) Bend in the shaft or damage to bearing	If the a string is wrapped on the pulley and rotated, and the oil pump emits a noise that is markedly different in tone and loudness from a sound of a new oil pump, replace the oil pump with a new part.
4	O-ring	Cracking or deterioration	Replace with a new part.
5	Bracket	Cracks	Replace with a new part.

2. SERVICE LIMIT

Make a measurements as follows. If it exceeds the service limit, replace with a new part.

CAUTION:

- **When securing the oil pump in a vice, hold the oil pump with the least possible force between two pieces of wood.**
- **Do not set the outside of flow control valve or pulley on a vise; otherwise outside or pulley might be deformed. Select properly sized wood pieces.**

1) Play of the pulley shaft

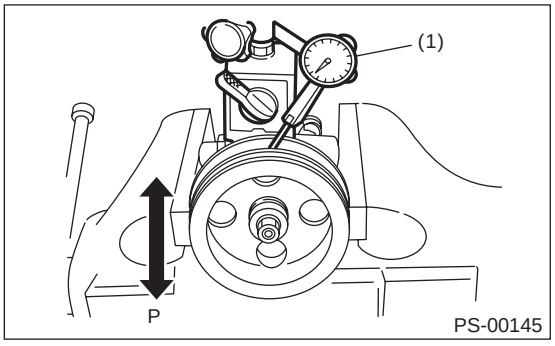
Condition:

P: When applying a force of 9.8 N (1.0 kgf, 2.2 lbf)

Service limit:

Play in the radial direction (direction ⬅ ➡)

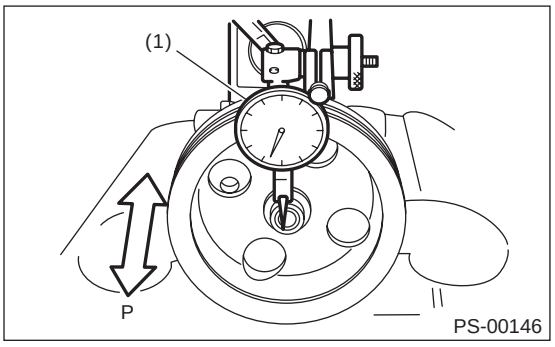
0.2 mm (0.008 in) or less



(1) Dial gauge

Axial play (direction ⇦ ⇨)

0.9 mm (0.035 in) or less

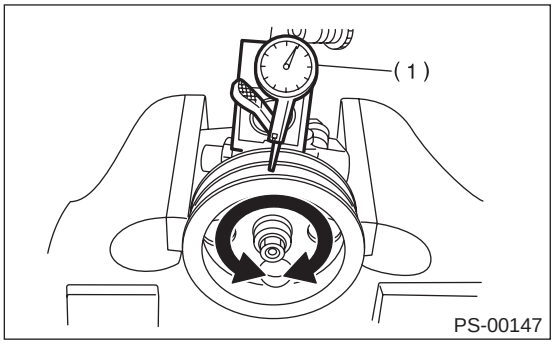


(1) Dial gauge

2) Deflection of the pulley groove

Service limit:
1.0 mm (0.039 in) or less

NOTE:
Read the value on one surface of V groove, set the dial gauge on the other surface, and read the value of the dial gauge.

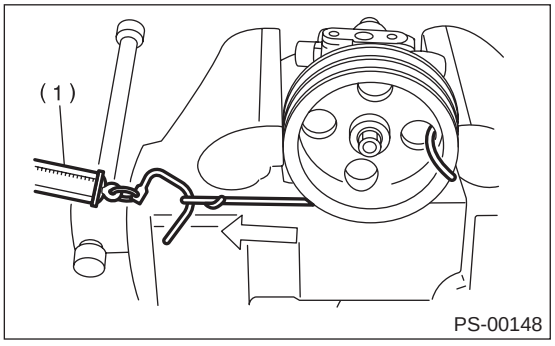


(1) Dial gauge

3) Rotating resistance of pulley

Service limit:
Maximum load: 9.22 N (0.94 kgf, 2.07 lbf) or less

NOTE:
• A rather higher value may be indicated when pulley starts turning.
• Measure the load during rotation to make a judgment.



(1) Spring scale

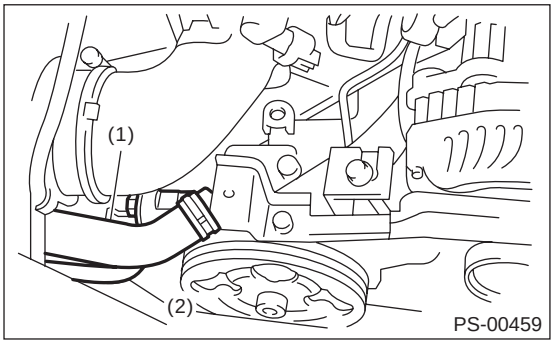
3. HYDRAULIC PRESSURE

NOTE:
• To measure hydraulic pressure correctly, be sure to complete all the items in “INSPECTION”, prior to performing the measurement. <Ref. to PS-87, INSPECTION, General Diagnostic Table.>
• Do not leave the valve of pressure gauge closed or hold the steering wheel at lock for 5 seconds or more in any case, this can damage the oil pump.
• Before attaching a pressure gauge, place cloth at locations where fluid is expected to spill. Wipe off any spilt fluid completely after the measurement.

1) Regular pressure measurement
(1) Connect the ST.

Preparation tool:
ST1: PRESSURE GAUGE (925711000)
ST2: ADAPTER HOSE B (34099AC020)
ST3: ADAPTER HOSE A (34099AC010)

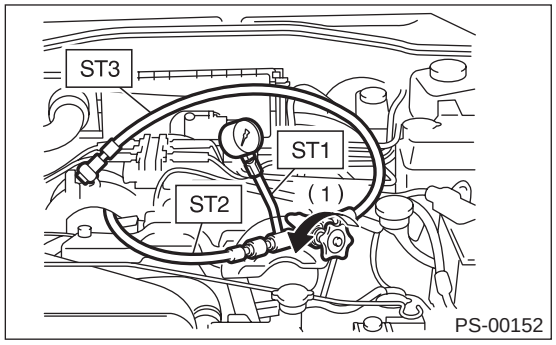
(2) Remove the air intake duct. <Ref. to IN(STI)-11, REMOVAL, Air Intake Duct.>
(3) Disconnect the pressure hose from the pump.
(4) Using the gasket (Part No. 34621AC021) and bolt (Part No. 34620AC010), install the ST2 to pump instead of pressure hose.



(1) Suction hose
(2) Pressure hose

(5) Attach the ST3 to the end of pressure hose which is removed from pump.
(6) Replenish power steering fluid up to the specified level.
(7) Open the valve, and start the engine.
(8) Measure the regular pressure.

Preparation tool:
ST1: PRESSURE GAUGE (925711000)
ST2: ADAPTER HOSE B (34099AC020)
ST3: ADAPTER HOSE A (34099AC010)

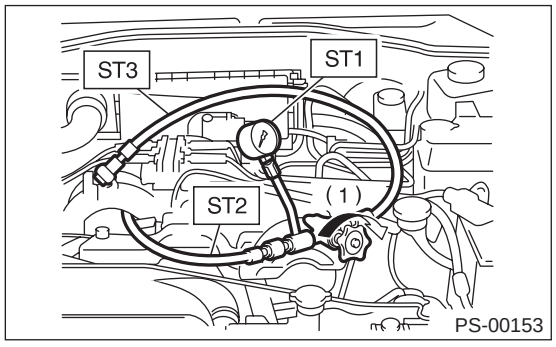


(1) Valve

Service limit:
981 kPa (10 kgf/cm^2, 142 psi) or less
(9) If it is not within the specification, replace the faulty part for the following problems. (Pipe or hose clogged, leaks from fluid line, and mixture of foreign matter in fluid line)

2) Measure the relief pressure.
(1) Using the ST, measure the relief pressure.
(2) Close the valve.
(3) Measure the relief pressure.

Preparation tool:
ST1: PRESSURE GAUGE (925711000)
ST2: ADAPTER HOSE B (34099AC020)
ST3: ADAPTER HOSE A (34099AC010)

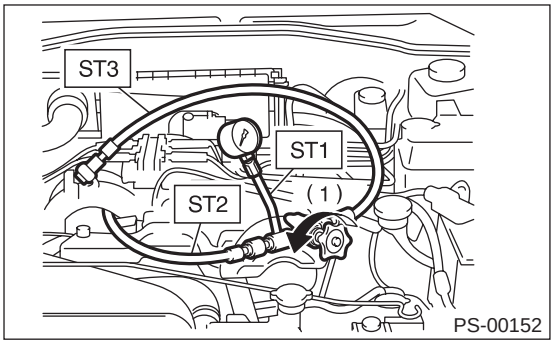


(1) Valve

Service limit:
8,300 — 9,000 kPa (85 — 92 kgf/cm^2, 1,203 — 1,305 psi)
(4) If the torque is not within specified range, replace the oil pump.

3) Measure the operating pressure.
(1) Using the ST, measure the operating pressure.
(2) Open the valve.
(3) Measure the operating pressure of control valve by turning steering wheel from stop to stop.

Preparation tool:
ST1: PRESSURE GAUGE (925711000)
ST2: ADAPTER HOSE B (34099AC020)
ST3: ADAPTER HOSE A (34099AC010)



(1) Valve

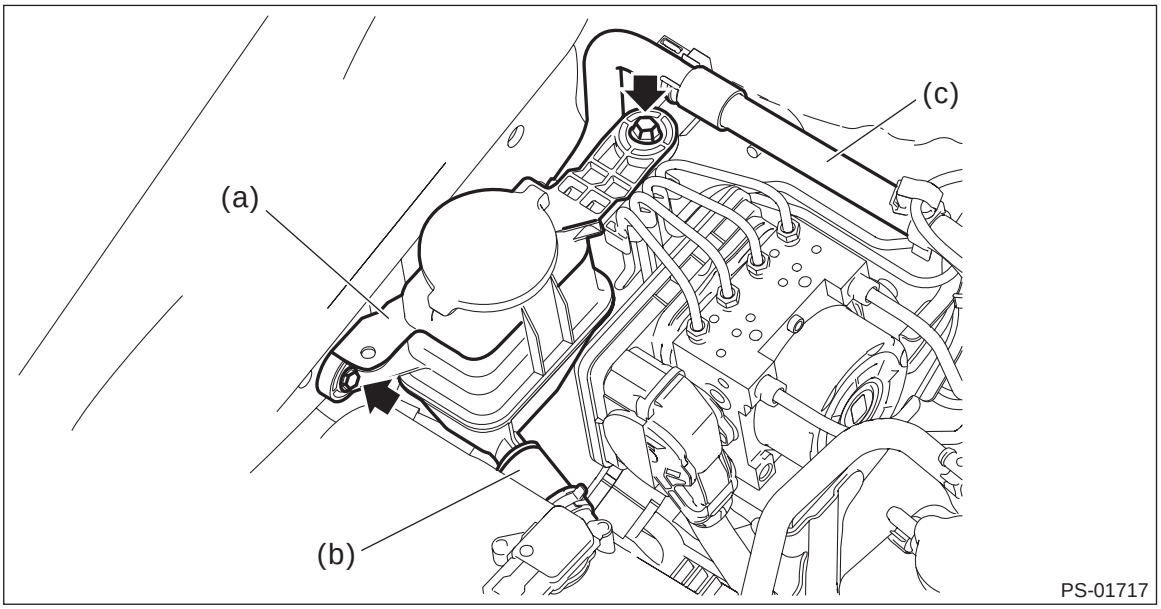
Service limit:
8,300 — 9,000 kPa (85 — 92 kgf/cm^2, 1,203 — 1,305 psi)
(4) If it is out of specification, measure the steering effort. <Ref. to PS-91, MEASUREMENT OF STEERING EFFORT (HYDRAULIC TYPE), INSPECTION, General Diagnostic Table.>
If it is not within specification, replace the control valve itself or control valve and pinion as a single unit, using new parts.

10.Reservoir Tank

A: REMOVAL

1) Drain the power steering fluid.
2) Disconnect the hose - suction and the hose - return.

CAUTION:
Plug the ends of the hose and pipe to prevent foreign matter from entering.
3) Remove the bolt and remove the reservoir - tank assembly.



(a) Reservoir - tank ASSY (b) Hose - suction (c) Hose - return

B: INSTALLATION

1) Install the reservoir - tank assembly.

Tightening torque:
13 N·m (1.3 kgf-m, 9.6 ft-lb)
2) Connect the hose - suction and the hose - return to the reservoir - tank assembly.
3) Replenish power steering fluid up to the specified level. <Ref. to PS-83, INSPECTION, Power Steering Fluid.>

C: INSPECTION

Check the reservoir - tank assembly for cracks, breakage or damage. If a failure is found, replace the reservoir - tank assembly.

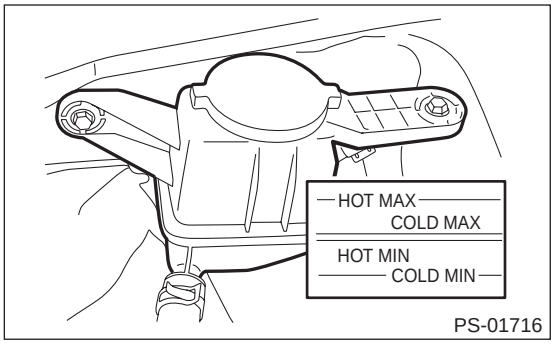
11.Power Steering Fluid

A: SPECIFICATION

Recommended power steering fluid:
SUBARU ATF or ATF DEXRON III

B: INSPECTION

1) Check the power steering fluid for deterioration or contamination. If the fluid is highly deteriorated or contaminated, drain it and refill with new fluid.
2) Check the joints and units for oil leakage. If any oil leaks are found, repair or replace the applicable part.
3) Inspect the fluid level of the reservoir - tank assembly with vehicle on level surface and engine stopped.
If the level is at “MIN.” point or below, add fluid to keep the level in the specified range of the indicator. If at “MAX.” point or above, drain fluid by using a syringe or the like.
(1) When the power steering fluid temperature is 20°C (68°F), check the fluid level on the “COLD” side.
(2) When the power steering fluid temperature is 80°C (176°F), check the fluid level on the “HOT” side.



C: REPLACEMENT

1) Lift up the vehicle.
2) Drain the power steering fluid.
(1) Remove the pipe joint of the gearbox, and connect the vinyl hose to the pipe and the joint.
(2) Discharge the fluid by turning the steering wheel fully clockwise and counterclockwise.
3) Add the specified fluid to the reservoir - tank assembly at “MAX” level.
4) Continue to turn the steering wheel slowly from lock to lock until the bubbles stop appearing on oil surface while keeping the fluid at the level in the step 3).
5) If the steering wheel is turned in a low fluid level condition, air will be sucked into the pipe. If air has entered, leave it for about half an hour and then repeat step 4) again.
6) Start the engine and let it idle.
7) Continue to turn the steering wheel slowly from lock to lock again until the bubbles stop appearing on oil surface, while keeping the fluid at the level in step 3).
Normally bubbles will stop appearing after turning the steering wheel from lock to lock three times.
8) In case bubbles do not stop appearing in the tank, leave it for about half an hour and then repeat from step 3) again.
9) Lower the vehicle, and then idle the engine.
10) Continue to turn the steering wheel from lock to lock until the bubbles stop appearing and change of the fluid level is within 3 mm (0.12 in).
11) In case the following happens, leave it about half an hour and then perform step 7) to 10) again.
(1) The fluid level changes by 3 mm (0.12 in) or more.
(2) Bubbles remain on the upper surface of the fluid.
(3) Grinding noise is generated from oil pump.
12) Check the fluid leakage after turning steering wheel from lock to lock with engine running.

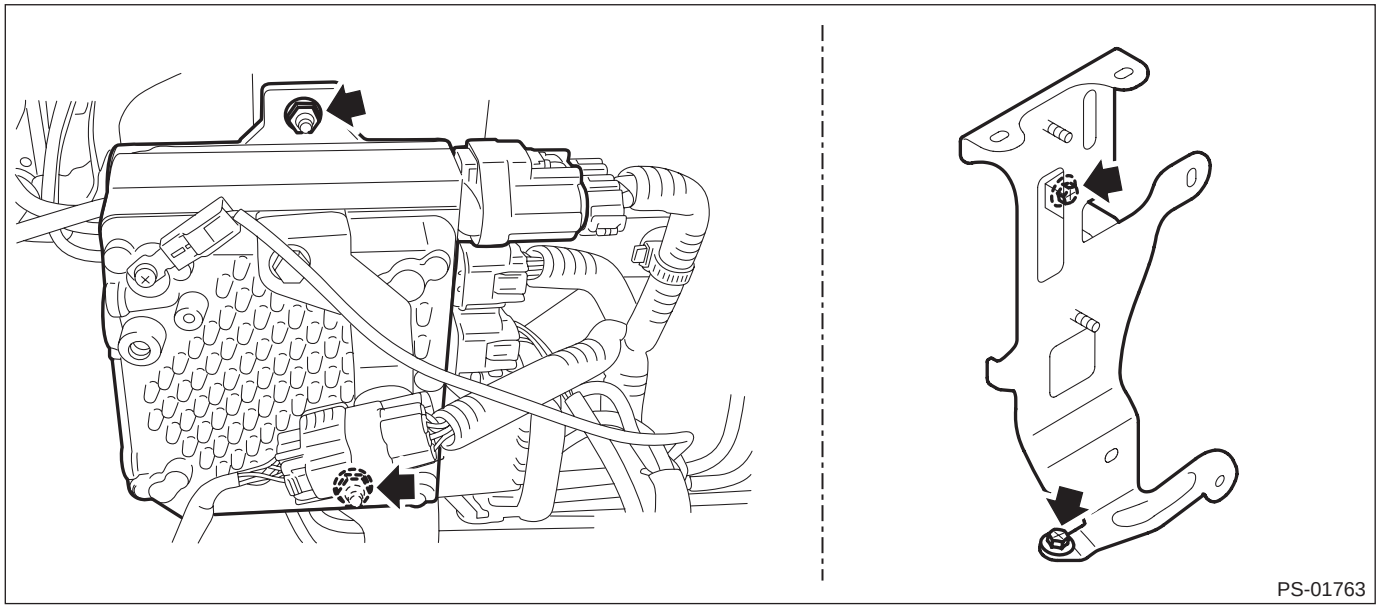
12.Power Steering Control Module

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-5, BATTERY, NOTE, Note.>

NOTE:
Disconnect the ground terminal from battery sensor.

2) Remove the power steering control module.
   (1) Disconnect the connector of the power steering control module.
   (2) Remove the nuts, and remove the power steering control module.
   (3) Remove the bracket - control module.



B: INSTALLATION

1) Attach the bracket - control module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the power steering control module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Connect the harness connector.

CAUTION:
Make sure that the connector is securely locked.

4) Connect the battery ground terminal. <Ref. to NT-5, BATTERY, NOTE, Note.>

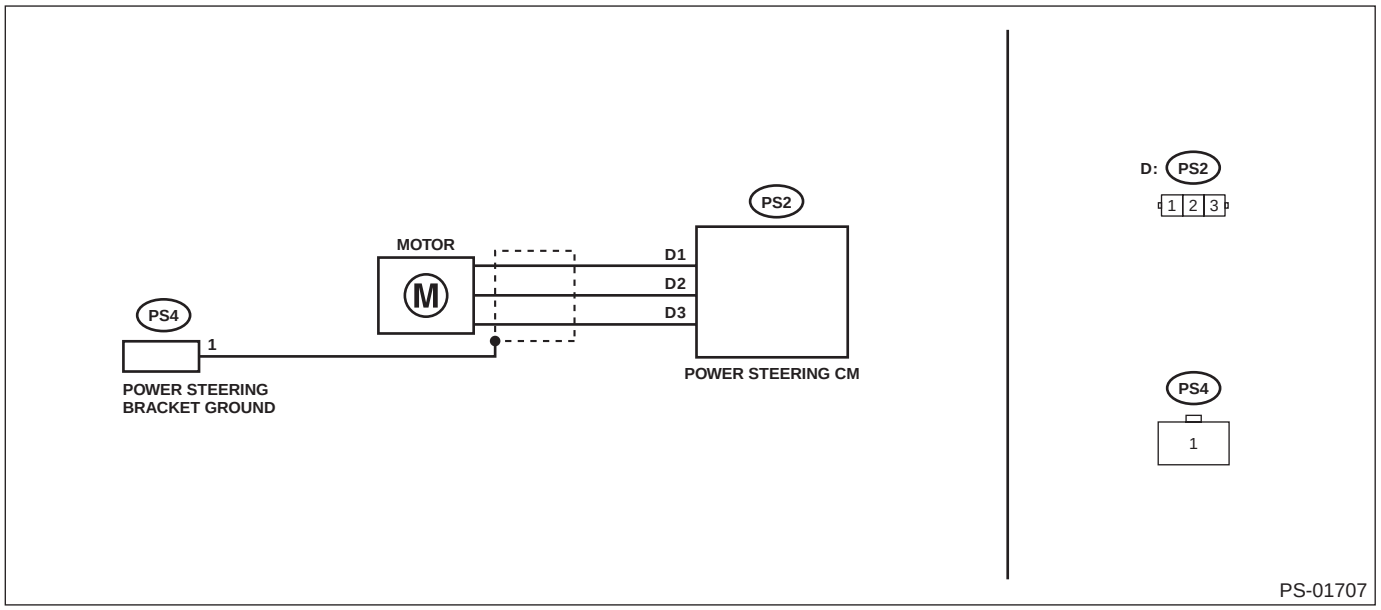
NOTE:
Connect the ground terminal to battery sensor.

C: INSPECTION

1. CHECK MOTOR UNIT

1) Turn the ignition switch to OFF.
2) Disconnect the connector from power steering unit.
3) Using a tester and test harness, check the internal resistance of the harness terminals.

Preparation tool:
Circuit tester

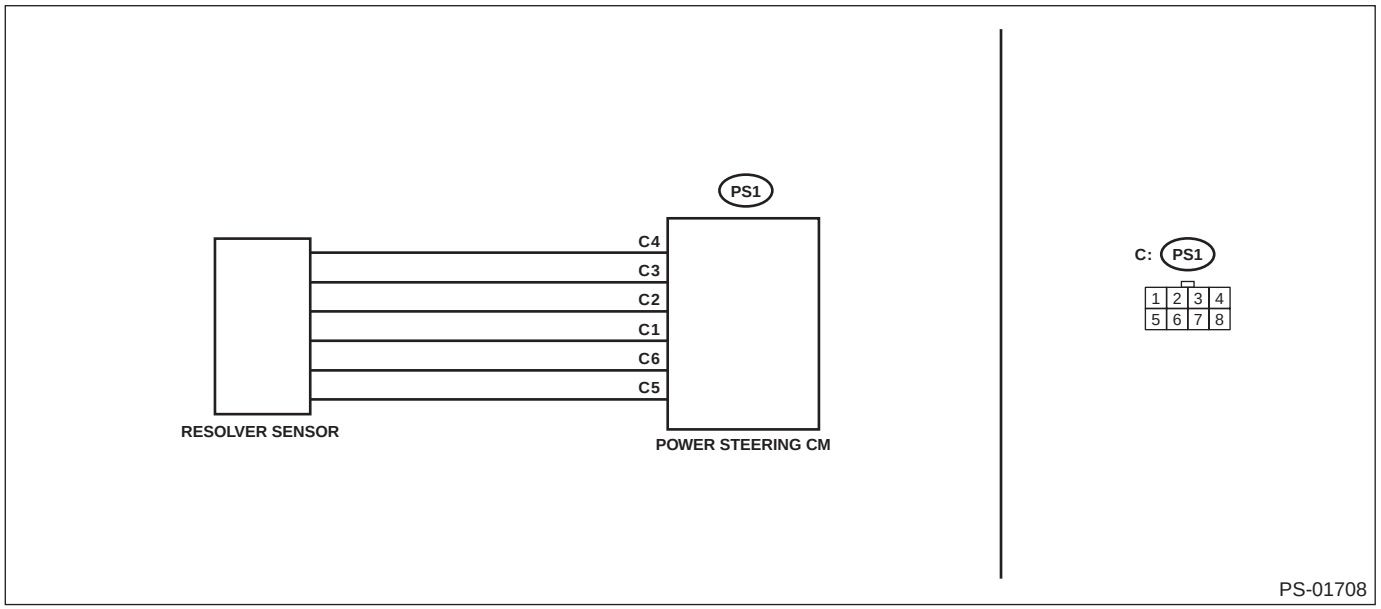


Between connector and terminal	Standard
(PS2) No. 1 — No. 2 (PS2) No. 1 — No. 3 (PS2) No. 2 — No. 3	Less than 10 Ω
(PS2) No. 1 — Steering gearbox body (PS2) No. 2 — Steering gearbox body (PS2) No. 3 — Steering gearbox body	1 MΩ or more

2. PERFORM UNIT CHECK OF RESOLVER SENSOR

1) Turn the ignition switch to OFF.
2) Disconnect the connector from power steering unit.
3) Using a tester and test harness, check the internal resistance of the harness terminals.

Preparation tool:
Circuit tester



Between connector and terminal	Standard
(PS1) No. 1 — No. 2 (PS1) No. 3 — No. 4 (PS1) No. 5 — No. 6	Less than 10 Ω
(PS1) No. 1 — Steering gearbox body (PS1) No. 2 — Steering gearbox body (PS1) No. 3 — Steering gearbox body (PS1) No. 4 — Steering gearbox body (PS1) No. 5 — Steering gearbox body (PS1) No. 6 — Steering gearbox body	1 MΩ or more

13.General Diagnostic Table

A: INSPECTION

- Hydraulic type

Trouble	Possible cause	Corrective action
• Steering effort is heavy in all ranges. • Steering effort is heavy at stand still. • Steering wheel vibrates when turning.	1. Pulley belt • Unequal length of pulley belts • Contact with oil or grease • Looseness or damage of the pulley belt • Poor uniformity of the pulley belt cross section • Pulley belt touches to pulley bottom • Poor revolution of pulleys (except oil pump pulley) • Poor revolution of oil pump pulley	Adjust or replace the faulty parts.
	2. Tire and wheel • Improper tire out of specifications*1 • Improper wheel out of specifications*1 • Tires not properly inflated	Replace or reinflate the tire and wheel. Instruct customers.
	3. Fluid • Low fluid level • Air entry in fluid • Dust entry in fluid • Fluid deterioration • Inadequate warm up of fluid*2	Refill the fluid, bleed air, replace or instruct customer.
	4. Idle speed • Lower idle speed • Excessive drop of idle speed at start or when turning the steering wheel*3	Adjust the idle speed or instruct customer.
	5. Measure the hydraulic pressure. <Ref. to PS-79, INSPECTION, Oil Pump.>	Replace the faulty parts.
	6. Measure the steering wheel effort. <Ref. to PS-91, MEASUREMENT OF STEERING EFFORT (HYDRAULIC TYPE), INSPECTION, General Diagnostic Table.>	Adjust or replace.
	7. Fluid line • Fluid leakage from fluid line	Repair or replace.
• Vehicle leads to one side or the other. • Returning force of steering wheel to center is poor. • Steering wheel vibrates when turning.	1. Tire and wheel • Flat tire • Mixed use of different tires • Mixed use of different wheels • Abnormal wear of tire • Unequal tread remaining • Unequal pressure of tire	Adjust, repair or replace the tire and wheel.
	2. Front alignment • Improper or unequal caster • Improper or unequal toe-in • Loose suspension connections	Adjust or retighten.
	3. Others • Damaged joint assembly • Unbalance of ground clearance • Unbalance of load	Replace or adjust the faulty parts, or instruct customer.
	4. Measure the steering wheel effort. <Ref. to PS-91, MEASUREMENT OF STEERING EFFORT (HYDRAULIC TYPE), INSPECTION, General Diagnostic Table.>	Adjust or replace the faulty parts.

*1 If the tires or wheels are wider than standard, the load to power steering system is increased. Accordingly, in a condition, for example before fluid warms-up, relief valve may work before reaching maximum turning angle. In this situation, steering effort may become relatively heavy. When the measured hydraulic pressure is normal, there is no abnormal thing.
*2 In cold weather, steering effort may be heavy due to increased flow resistance of cold fluid. After warming-up engine, turn the steering wheel from stop to stop several times to warm up fluid. If steering effort reduces normally, function is normal.
*3 In cold weather or with insufficient warm up of the engine, steering effort may be heavy due to excessive drop of idling when turning the steering wheel. Start the vehicle with increasing engine speed than usual. If the steering effort returns to normal, the function operates normally.

- Electric type

Trouble	Possible cause	Corrective action
• Steering effort is heavy in all ranges. • Steering effort is heavy at stand still. • Steering wheel vibrates when turning.	1. Tire and wheel • Improper tire out of specifications • Improper wheel out of specification • Tires not properly inflated	Replace or reinflate the tire and wheel.
	2. Measure the steering wheel effort. <Ref. to PS-92, MEASUREMENT OF STEERING EFFORT (ELECTRIC TYPE), INSPECTION, General Diagnostic Table.>	Adjust or replace the faulty parts.
• Vehicle leads to one side or the other. • Returning force of steering wheel to center is poor. • Steering wheel vibrates when turning.	1. Tire and wheel • Flat tire • Mixed use of different tires • Mixed use of different wheels • Abnormal wear of tire • Unequal tread remaining • Unequal pressure of tire	Adjust, repair or replace the tire and wheel.
	2. Front wheel alignment • Improper or unequal caster • Improper or unequal toe-in • Loose suspension connections	Adjust or retighten.
	3. Measure the steering wheel effort. <Ref. to PS-92, MEASUREMENT OF STEERING EFFORT (ELECTRIC TYPE), INSPECTION, General Diagnostic Table.>	Adjust or replace the faulty parts.

NOTE:
When performing repeated steering operation with the vehicle at standstill, the steering effort may be temporarily heavy because the heat generated in the system activates the power steering protection control. This is not a malfunction caused by the steering system. After a while, it will return to normal steering effort. (In this case, the steering warning light will not come on and there will be no DTC.)

1. NOISE & VIBRATION (HYDRAULIC TYPE)

CAUTION:
Do not keep the relief valve operated for five seconds or more at any time or inner parts of the oil pump may be damaged due to rapid increase of fluid temperature.

NOTE:
• A grinding noise may be heard immediately after the engine start in extremely cold conditions. In this case, if the noise goes off during warm up there is no abnormal function in the system. This is due to the fluid characteristics in extremely cold condition.
• The oil pump normally makes a small whining noise due to its mechanism. Even if a noise is heard when steering wheel is turned at stand still, there is no abnormal function in the system provided that the noise eliminates when the vehicle is driving.
• When turning the steering wheel with the brake applied when the vehicle is parked, a screeching noise may be generated by the brake disc and pads. This is not a fault in the steering system.
• There may be a small vibration around the steering devices when turning the steering wheel at standstill, even though the component parts are operating properly.
Hydraulic systems are likely to generate this kind of vibration as well as working noise and fluid noise because of combined conditions, i.e., road surface and tire surface, engine speed and turning speed of steering wheel, fluid temperature and braking condition.
These conditions do not indicate a problem in the system.
Confirm vibration by applying the parking brake on a concrete surface and turning the steering wheel from slowly to rapidly, in steps.

Trouble	Possible cause	Corrective action
Hiss noise (continuous) While engine is running.	Relief valve emits operating sound when steering wheel is completely turned in either direction. (Do not keep this condition for 5 seconds or more.)	Normal
	Relief valve emits operating sound when steering wheel is not turned. This means that the relief valve is defective.	Replace the oil pump.
Rattling noise (intermittent) While engine is running.	Interference with adjacent parts	Check the clearance. Correct if necessary. <Ref. to PS-75, INSPECTION, Pipe Assembly.>
	Looseness of the installation of oil pump, oil tank, pump bracket, gearbox or crossmember	Retighten.
	Looseness of oil pump pulley or other pulley(s)	Retighten.
	Looseness of linkage, play of steering, improper tightening (looseness) of suspension joint or steering column	Retighten or replace.
	Sound generates from the inside of gearbox or oil pump.	Replace faulty parts in the gearbox or oil pump.
Knocking When turning steering wheel in both directions with small angle repeatedly at engine ON or OFF.	Excessive backlash Loosened lock nut for adjusting backlash	Adjust and retighten.
	Insufficient tightening or play in the tie-rod or tie-rod end	Retighten or replace.
Grinding noise (continuous) While engine is running.	Air in vane pump	Inspect and retighten the fluid line connection. Refill the fluid and vent air.
	Vane pump seizing	Replace the oil pump.
	Oil pump pulley bearing seized	Replace the oil pump.
	Folded hose, flattened pipe	Replace.
Squeal, squeak (intermittent or continuous) While engine is running.	Improper adjustment of pulley belt Damaged or over tensioned pulley belt Unequal length of pulley belts	Adjust or replace. (Replace two belts as a set.)
	Runout or dirty V-groove surface of oil pump pulley	Clean or replace.

Trouble	Possible cause	Corrective action
Sizzling noise (continuous) While engine is running.	Fluid aeration	Fix the faulty part causing aeration. Replace the fluid and vent air.
	Damaged pipe of gearbox	Replace the pipe.
	Faulty inside of hose or pipe Flattened hose or pipe	Repair or replace.
	Abnormal inside of oil tank	Replace.
	Removed oil tank cap	Install cap.
Whistle (continuous) While engine is running.	Faulty pipe of gearbox or faulty hose	Replace the faulty parts of the gearbox or the hose.
Whine or growl (intermittent or continuous) While engine is running (with/ without steering turned).	Looseness of oil pump, oil pump bracket attachment	Retighten.
	Fault inside of oil pump or hose	Replace the oil pump or hose, if the noise can be heard when vehicle is running as well as being stopped.
	Torque converter growl, air conditioner compression growl	Remove the power steering pulley belt and check.
Grinding noise (intermittent) While engine is running (with the steering turned).	Fault inside of gearbox	Replace the faulty parts of gearbox.
	Faulty bearing of the column assembly - steering	Apply grease or replace.
	Occurs when turning the steering wheel with brakes (service or parking) applied.	If the noise goes off when brake is released, it is normal.
Vibration While engine is running (with/ without steering turned).	Engine speed is too low.	Adjust, and notify customer.
	Air in vane pump	Repair faulty part. Vent air.
	Damaged valve in oil pump or gearbox	Replace the faulty parts in gearbox and oil pump.
	Excessive play in steering, looseness of suspension parts	Retighten.

2. NOISE & VIBRATION (ELECTRIC TYPE)

NOTE:
• When turning the steering wheel with the brake applied when the vehicle is parked, a screeching noise may be generated by the brake disc and pads. This is not a fault in the steering system.
• There may be a small vibration around the steering devices when turning the steering wheel at standstill, even though the component parts are operating properly.

Trouble	Possible cause	Corrective action
Rattling noise (intermittent) While engine is running.	Interference with adjacent parts	Check the clearance. Correct if necessary.
	Looseness of linkage, play of steering, improper tightening (looseness) of suspension joint or steering column	Retighten or replace.
	Noise emitted from inside of the gearbox	Replace the gearbox assembly.
Knocking When turning steering wheel in both directions with small angle repeatedly at engine ON or OFF.	Excessive backlash Loosened lock nut for adjusting backlash	Adjust the backlash. When the noise remains after adjustment, replace the gearbox assembly.
	Insufficient tightening or play in the tie-rod or tie-rod end	Retighten or replace.
Grinding noise (intermittent) While engine is running. (While operating the steering.)	Fault inside of gearbox	Replace the gearbox assembly.
	Faulty bearing of the column assembly - steering	Apply grease or replace.
	Occurs when turning the steering wheel with brakes (service or parking) applied.	If the noise goes off when brake is released, it is normal.
Vibration While engine is running. (with/ without steering turned)	Excessive play in steering, looseness of suspension parts	Retighten.

3. MEASUREMENT OF STEERING EFFORT (HYDRAULIC TYPE)

	Step	Check	Yes	No
1	**CHECK STEERING EFFORT.** 1) Stop the vehicle on paved road. 2) Start the engine. 3) Run the engine at idle. 4) Install a spring scale on the steering wheel. 5) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.  PS-01723 NOTE: When turning the steering more quickly than necessary from a direction to the other direction at an engine speed of 2,000 rpm or higher, steering effort may be heavy. This is caused by flow characteristic of the fluid in the oil pump and is not a defect.	Is the steering effort less than 31 N (3.2 kgf, 7.0 lbf)?	Steering effort is normal.	Go to step **2**.
2	**CHECK STEERING EFFORT.** 1) Stop the engine and lift up the vehicle. 2) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.	Is the steering effort less than 15 N (1.53 kgf, 3.4 lbf)?	Go to step **3**.	Perform the backlash adjustment.
3	**CHECK STEERING WHEEL EFFORT.** 1) Remove the universal joint assembly - steering. 2) Measure the steering wheel effort.	Is the steering effort less than 2.26 N (0.23 kgf, 0.51 lbf)?	Go to step **4**.	Replace the column assembly - steering.
4	**CHECK STEERING WHEEL EFFORT.** Measure the steering wheel effort.	Is the difference of steering effort between right and left less than 20%?	Go to step **5**.	Replace the column assembly - steering.
5	**CHECK UNIVERSAL JOINT ASSEMBLY - STEERING.** Measure the swing torque of the joint (yoke on the column assembly - steering side). <Ref. to PS-23, INSPECTION, Universal Joint.>	Is the swing torque of the universal joint assembly - steering less than 7.3 N (0.74 kgf, 1.64 lbf)?	Go to step **6**.	Replace the universal joint assembly - steering.
6	**CHECK UNIVERSAL JOINT ASSEMBLY - STEERING.** Measure the swing torque of the joint (yoke of gearbox side). <Ref. to PS-23, INSPECTION, Universal Joint.>	Is the swing torque of the universal joint assembly - steering less than 3.8 N (0.39 kgf, 0.86 lbf)?	Go to step **7**.	Replace the universal joint assembly - steering.
7	**CHECK FRONT WHEEL.** Check the front wheels.	Does the front wheels have unsteady revolution or rattling, or does the brake drag?	Inspect, readjust and replace if necessary.	Go to step **8**.
8	**CHECK TIE-ROD ENDS.** Remove the tie-rod ends from housing.	Does the tie-rod ends have unsteady revolution or rattling?	Inspect and replace if necessary.	Go to step **9**.

	Step	Check	Yes	No
9	**CHECK GEARBOX.** Measure the rotating of gearbox. <Ref. to PS-50, LIMIT, INSPECTION, Steering Gearbox.>	Is the rotational resistance of the steering gearbox less than 21 N (2.1 kgf, 4.7 lbf)? Is the difference between the right and left rotational resistances less than 20%?	Go to step **10**.	Readjust the backlash, and if ineffective, replace the faulty parts.
10	**CHECK GEARBOX.** Measure the sliding of gearbox. <Ref. to PS-50, LIMIT, INSPECTION, Steering Gearbox.>	Is the sliding resistance of the steering gearbox less than 343 N (35 kgf, 77 lbf)? Is the difference between the right and left sliding resistances less than 20%?	Steering effort is normal. Check the suspension.	Readjust the backlash, and if ineffective, replace the faulty parts.

4. MEASUREMENT OF STEERING EFFORT (ELECTRIC TYPE)

	Step	Check	Yes	No
1	**CHECK STEERING WARNING LIGHT.**	Does the STEERING warning light illuminate?	Read the DTC, and inspect according to it.	Go to step **2**.
2	**CHECK STEERING WARNING LIGHT.** 1) Connect the Subaru Select Monitor, and turn the steering wheel. (One lock to lock) 2) Check the “EPS operation flag” in the current data.	Is the EPS operation flag normal without displaying any DTC code?	Go to step **3**.	If the EPS operation flag is “Assist limitation”, stop the engine for approx. 30 minutes and perform the procedures from step 1 again.
3	**CHECK STEERING EFFORT.** 1) Stop the vehicle on paved road. 2) Set the tire air pressure to the specification. 3) Start the engine. 4) Run the engine at idle. 5) Install a spring scale on the steering wheel. 6) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.  PS-01723	Is the steering effort less than 31 N (3.2 kgf, 7.0 lbf)?	Go to step **4**.	Go to step **8**.
4	**CHECK STEERING EFFORT.** 1) Stop the engine. 2) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.	Is the steering effort less than 294.2 N (30 kgf, 66.2 lbf)?	Go to step **5**.	Perform the inspection or adjustment around the suspension part.
5	**CHECK TORQUE SENSOR OUTPUT VALUE.** 1) Connect the Subaru Select Monitor. 2) Read the output of torque sensor voltage. NOTE: When measuring, place the steering wheel at the center position.	Is the voltage 2.425 — 2.575 V?	Go to step **6**.	Replace the gearbox assembly. <Ref. to PS-56, Electric Power Steering Gearbox.>

	Step	Check	Yes	No
6	**CHECK TORQUE SENSOR OUTPUT VALUE.** 1) Remove the universal joint assembly - steering. 2) Connect the Subaru Select Monitor. 3) Read the output of torque sensor voltage.	Is the voltage 2.425 — 2.575 V?	Go to step **7**.	Replace the gearbox assembly. <Ref. to PS-56, Electric Power Steering Gearbox.>
7	**CHECK TORQUE SENSOR OUTPUT VALUE.** 1) Remove the universal joint assembly - steering. NOTE: Check that the universal joint assembly - steering moves up and down smoothly without installing the bolt. Then tighten the bolts first on the gearbox side and then on the column shaft side. 2) Connect the Subaru Select Monitor. 3) Read the output of torque sensor voltage.	Is the voltage 2.425 — 2.575 V?	Go to step **8**.	Check the universal joint assembly - steering. <Ref. to PS-56, Electric Power Steering Gearbox.>
8	**CHECK STEERING WHEEL EFFORT.** 1) Remove the universal joint assembly - steering. 2) Measure the steering wheel effort.	Is the steering effort less than 2.26 N (0.23 kgf, 0.51 lbf)?	Go to step **9**.	Replace the column assembly - steering. <Ref. to PS-56, Electric Power Steering Gearbox.>
9	**CHECK STEERING WHEEL EFFORT.** Measure the steering wheel effort.	Is the difference of steering effort between right and left less than 20%?	Go to step **10**.	Replace the column assembly - steering. <Ref. to PS-25, Steering Column.>
10	**CHECK UNIVERSAL JOINT ASSEMBLY - STEERING.** Measure the swing torque of joint. (Yoke of column assembly - steering side) <Ref. to PS-23, INSPECTION, Universal Joint.>	Is the swing torque of the universal joint assembly - steering less than 8.1 N (0.81 kgf, 1.84 lbf)?	Go to step **11**.	Replace the universal joint assembly - steering with a new part. <Ref. to PS-21, Universal Joint.>
11	**CHECK UNIVERSAL JOINT ASSEMBLY - STEERING.** Measure the swing torque of joint. (Yoke of gearbox side) <Ref. to PS-23, INSPECTION, Universal Joint.>	Is the swing torque of the universal joint assembly - steering less than 6.8 N (0.68 kgf, 1.54 lbf)?	Go to step **12**.	Replace the universal joint assembly - steering with a new part. <Ref. to PS-21, Universal Joint.>
12	**CHECK FRONT WHEEL.** Check the front wheels.	Does the front wheels have unsteady revolution or rattling, or does the brake drag?	Inspect, readjust and replace if necessary.	Go to step **13**.
13	**CHECK TIE-ROD ENDS.** Remove the tie-rod ends.	Does the tie-rod ends of suspension have unsteady revolution or rattling?	Inspect and replace if necessary.	Go to step **14**.
14	**CHECK BALL JOINT.** Remove the ball joint.	Does the ball joints of suspension have unsteady revolution or rattling?	Inspect and replace if necessary.	Go to step **15**.
15	**CHECK GEARBOX.** Measure the rotating of gearbox. <Ref. to PS-65, LIMIT, INSPECTION, Electric Power Steering Gearbox.>	Is the turn resistance of the steering gearbox less than 18 N (1.8 kgf, 4.0 lbf)? Is the difference between the right and left rotational resistances less than 20%?	Go to step **16**.	Replace the gearbox assembly. <Ref. to PS-56, Electric Power Steering Gearbox.>

Step		Check	Yes	No
16	**CHECK GEARBOX.** Measure the sliding of gearbox.	Is the sliding resistance of the steering gearbox less than 360 N (36.7 kgf, 80.9 lbf)? Is the difference between the right and left sliding resistances less than 20%?	Steering effort is normal.	Replace the gearbox assembly. <Ref. to PS-56, Electric Power Steering Gearbox.>

5. CLEARANCE CHECK (HYDRAULIC TYPE)

This table lists various clearances that must be correctly adjusted to ensure the normal vehicle driving without interfering noise, or any other faults.

Location	Minimum allowance mm (in)
(1) Crossmember to hose ASSY	3 (0.12)
(2) Front exhaust pipe to hose ASSY	15 (0.59)
(3) Front frame side to hose ASSY	10 (0.39)
(4) Master cylinder to return hose	10 (0.39)
